BY His Excellency nife Riget Honorable Sonerset Rtchard, Earl of Belmore, a Member of, Her Majesty's Most Honorable Privy Council in Ireland, Governor and Commander-in-Chief of the Colony of New South Wales, and Vice-Admiral of the same.

## TO ALL TO WHOM THESE PRESENTS SHALL COME, greeting:

Whereas Owey Spencer Evays, of Balmain, in the Colony of New South Wales, surgeon, hath by his Petition humbly represented to me that he is the author or designcr of a certain invention or improvement in manufactures, that is to say, of an invention termed a "Meat-preserving Process," which is more particularly described in the specification which is hereunto annexed; and that he, the said Petitioner, hath deposited with the Honorable the Treasurer of the said Colony of New South Wales, the sum of Twenty Pounds sterling, for defraying the expense of granting these Letters of Registration, as required by the Act of Council, sixteenth Victoria, number twenty-four, and hath humbly prayed that I would be pleased to grant Letters of Registration, whereby the exclusive enjoyment and advantage of the said invention or improvement might be securcd to him for a period of fourteen years: And I, being willing to give encouragement to all inventions and improvements in the arts or manufactures which may be for the public good, and having received a report favourable to the prayer of the said Petition, from competent persons appointed by me to examine and consider the matters stated therein, and to report thereon for my information, am pleased, with the advice of the Exccutive Council, and in exercise of the power and authority given to me by the said Act of Council, to grant, and do by these Letters of Registration grant unto the said Owen Spencer Erans, his executors, administrators, and assigns, the exclusivo enjoyment and advantage of the said invention or improvement for and during the term of fourteen years from the date hercof; to have, hold, and exercise unto the said Owen Spencer Evans, his executors, administrators, and assigns, the exclusive enjoyment and advantage thereof, for and during and unto the full end and term of fourteen years from the date of these presents next and immediately ensuing, and fully to be complete and ended: Provided always, that if the said Owen Spencer Evans shall not within three days after the granting of these Letters of Registration, register the same in the proper office in the Supreme Court, at Sydney, in the said Colony of New South Wales, then these Letters of Registration, and all advantages whatsocver hereby granted, shall cease and becomo void.

In witness whereof I have hereunto set my sign manual, and have caused the present Letters of Registration to be sealed with the seal of the said Colony of New South Wales, at Government House, Sydney, in New South Wales, this fourth day of September, in the year of our Lord one thousand eight hundred and sixty-nine.

## Meat-preserving Process.

SPECIFICATION of a Patent Meat-preserving Process by gas under pressure.
The fresh meat, cut into suitable pieces, well dried with a cloth and free from blood or impurities, to be packed in metal vessels of a convenient size, of strength sufficient to resist the pressure to be employed from within.

The cases or metal vessels may be lined with enamel or water glass, to resist the action of the juices of the meat or of the gas employed, viz., hydrogen, carbonic acid, or carbonic oxide, obtained in the usual manner.

The case being filled with meat, and hermetically sealed, except at cach end, where a tube is to be inserted, is then to be connected by one tube to a gasometer or air-pump, and an antiseptic gas pumped in (to expel the atmospheric air and saturate the meat) until the gas escapes at the other end. This last end is then to be closed, and the gas then pumped into the case until a suitable pressure is attained. The end next the gasometer or air-pump is to be then closed, by cutting off and soldering the tube, and the process is completed.

The inventor claims-

1. That the meat is subjected to no previous chemical process.
2. Introducing enamel or water glass lining to the cases.
3. Forcing in antiseptic gas, as carbonic oxide at a high pressure, and retaining it at that pressure until the contents of the case are required for use.
4. The principal merit claimed is, that of injecting the cases and contents, driving out the air with carbonic oxide gas at a high pressure and retaining it so ; also simplicity and cheapness, charging the case with gas by an ordinary gas machine (after expelling the air), to a convenient pressure.

This is the specification referred to in the annexed Letters of Registration, granted to Owen Spencer Evans, this fourth day of September, 1869.

## REPORT.

Sydney, 10 July, 1869.
SIR,
The application of Mr. Owen Spencer Erans, for Letters of Registration for a "Meat-preserving Process," having been referred to us, we have the honor to report thereon as follows :-

In our opinion, the only proper claim to originality in Mr. Evans' specification, is in the use of certain gases at a high pressure,-the gases themselves, under ordinary atmospheric prossure, being claimed in other patents.

We are doubtful if this difference of pressure be sufficient to found a patent on; our belief being that in England it would not bo accounted sufficient unless it were proved that the gases had some power or efficacy at a high pressure which they were deficient of at low; but this is a purely legal question, which we do not feel competent to decide. If the Crown Law Officers hold that such a distinction is sufficient, we have no further objection to offer to the granting of Letters of Registration.

We have, \&c.,
The Principal Under Secretary.
J. SMITH.

CHAS. WATM.
The Crown Law Officers.-Jons R., 13 July, 1869.
The Under Secretary, Law Department.-B.C., 13 July, 1869, H.H.
To be returned.
Crown Law Offices,
Sydney, 16 July, 1869.
SIR,
Referring to the enclosed application from Mr. Owen Spencer Evans, for Letters of Registration for a Meat-preserving Process, I am directed by the Honorable the Crown Law Officers to state that "unless it were proved that the gases had some power or cfficacy at a high pressure, which they were deficient of at low, the registration could not be granted.

Obviously, this has not been prored to the Examiners, or they would have reported differently. If however such proof were given, probably the distinction would suffice

The Under Secretary,
W. E. PLUNKETI.

Colontay Secretary's Department.
Balmain, 27 July, 1869.

## Dear Str,

I do myself the honor to acknowledge the receipt of your letter of the $20 t h$ instant, in reference to my application for Letters of Registration for my invention termed a "Meat-preserving Process," in which you state that such application cannot be reported upon farourably unless it can be proved that the gases have some power or efficacy at a high pressure which they are deficient of at a low. In reply, I beg to state that the superior efficiency of carbonic oxide at a pressure of two atmospheres or 15 pounds to the square inch, over that at the ordinary atmospheric pressure, is set forth in the following reasons :-

1st. That the process is rendered much more expeditious-a matter of great importance in packing meat in hot weather.

## Meat-preserving Process.

2nd. The more perfect permeation of the gas through the tissues of the meat; as $I$ believe it would be impossible under the ordinary atmospheric pressure to charge or permeate the inner portion of the meat with the gas in such quantities as would prevent decomposition. As a proof of the truth of this hypothesis, I would mention that in salting meat for exportation it is almost impossible to cure meat unless the brine is forced into the meat under a very high pressure.
3 rd . I believe that a single atmosphere of carbonic oxide would be insufficient to preserve meat, but that in using two atmospheres, or gas at a pressure of 15 lbs ., the meat would be impregnated and surrounded with such an amount of antiseptic matter as would effectually prevent all decomposition.
I would further respectfully state that my proposed patent can scarcely interfere with Mr. Lavers', inasmuch as carbonic oxide is a tasteless inodorous gas, whilst the sulphurous gas which he proposes to use in combination with carbonic oxide is stinking in the highest degree. I would therefore submit that Messrs. Smith and Watt should be instructed to reconsider this matter, on the grounds above stated.

I have, \&c.
Henbr Halloran, Esp.,
OWEN SPENCER EVANS.

## Coloniat Secretary's Office:

May be forwarded for the consideration and report of the Board of gentlemen appointed to report on the Petition of Dr. Evans for Letters Patent.-29 July, 1869.

Dr. Smith, B.C., 29 July, /69.-H.H. To be returned.

August 3rd.-We have perused the further papers forwarded to us in this case, including Mr. O. S. Evans' letter of 27th July. Assuming that the phrase "high pressure" used in the specification is to be understood as meaning (in accordance with Mr. Evans' letter) a pressure of not less than 15 lbs . per square inch over and above the atmospheric pressure, we have no further objection to offer to the issue of Letters of Registration.

We think that the above limitation of "high pressure" should be expressed in the patent.
J. SMITH.

CHAS. WATT.

## IMPROVED ARRANGEMENTS OF MECHANISM FOR WASHING AND SEPARATING GOLD, \&c.

## LETTERS OF REGISTRATION to John Hunt, for Improved Arrangements of Mechanism for washing and separating Gold and other Ores, as well as Precious* Stones.

[Registered on the 13th day of September, 1869, in pursuance of the Act 16 Victoria, No. 24.]

BY His Excelmexcy the Rugmt Hoxoratle Somerset Richard, Eanc of Belmore, a Member of Her Majesty's Most Honorable Privy Council in Ireland, Governor and Commander-in-Chief of the Colony of New South Wales, and Vice-Admiral of the same.
TO ALL TO WHOM THESE PRESENTS SHALL COME, greeting:
Wifereas Join Hunt, of Geelong, in the Colony of Victoria, gentleman, hath by his Petition humbly represented to me that ho is the nuthor or designer of a cortain invention or improvement in manufactures, that is to say, of an invention intituled, "Improved arrangements of Mechanism for washing and separating Gold and other Ores, as well as Precious Stones," which is more particularly described in the specification and sheet of drawings which are hereunto annexed; and that he, the said Petitioner, hath deposited with the Honorable the Treasurer of the said Colony of New South Wales the sum of Twenty Pounds sterling, for defraying the expense of granting these Letters of Registration, as required by the Act of Council, sixteenth Victoria, number twenty-four ; and hath humbly prayed that I would be pleased to grant Letters of Registration, whereby the exclusive enjoyment and advantage or improvement might be secured to him for a period of fourteen years: And I, being willing to give encouragement to all inventions and improvements in the arts or manufactures which may be for the public good, and having reccived a report favourable to the prayer of the said Potition, from competont persons appointed by me to examine and consider the matters stated therein, and to report thereon for my information, am pleased, with tho advice of the Executive Council, and in excrcise of the power and authority given to me by the said Act of Council, to grant, and do by these Letters of Registration grant unto the said John Hunt, his executors, administrators, and assigns, the exclusive enjoyment and advantage of the said invention or improvement, for and during the term of fourteen years from the date hereof; to have, hold, and exercise unto the said John Hunt, his executors, administrators, and assigns, the exclusive enjoyment and advantage thereof, for and during and unto the full end and term of fourteen years from the date of theso presents next and immediately ensuing, and fully to be complete and ended: Provided always, that if the said John Hunt shall not, within three days after the granting of these Letters of Registration, register the same in the proper office in the Supreme Court at Sydney, in the said Colony of New South Wales, then these Letters of Registration, and all advantages whatsoever hereby granted, shall ceasc and become void.

In witness whereof, I have hereunto set my sigu manual, and have caused the present Letters of Registration to be scaled with the seal of the said Colony of New South Wales, at Government House, Sydney, in Now South Wales, this thirteenth day of September, in the year of our Lord one thousand eighthundred and sisty-nine.

## Improved Mechanism for washing and separating Gold, \&c.

## SPECIFICATION:

Improved arrangements of Mechanism for washing and separating Gold and other Ores, as well as Precious Stones.
Tre nature of this invention, and the manner in which the same is to be performed, is particularly described and ascertained in and by the following statement (reference being had to the drawings hereto annexed, and to the letters and figures marked thereon) that is to say :-

This invention consists of certain improved arrangements of mechanjsm for washing and separating ores, and has reference only to that class of machines for this purpose which is illustrated in the drawings hereto attached. In these drawings, figure 1 shows vertical sectional view of the whole system of mechanism used in this invention for the purposes above stated. Figure 2 shows vertical sectional view of the washing chambers, showing the water passages and doorway. Figure 3, general plan view. Figure 4, horizontal section of the washing chambers and perforated plate or sieve shown at figure 2. Figure 5, vertical section of the forcing box, showing how water is supplied to the valve.

Figures $6,7,8,9$, and 10 , show detail views of various parts hereafter particularly described.
The same letters of reference denote the same parts wherever they occur in these figures.
A denotes the washing chambers, and $A^{\times}$denotes the partition or division separating one washing chamber or compartment from another; such division or partition proceeding from the bottom of the washing chambers to immediately beneath the bottom of the sieve or perforated plate, immediately above which on the perforated plate or sieve is the low thin partition $A^{2}$ hereinafter mentioned. $B$ denotes the perforated plate or sieve on which the ore is received from the hopper; $C$, the grating at the bottom of the hopper, through which the ore passes on to the perforated plate or sieve aforesaid; $D$, the hopper for supplying the ore or orey matter to be treated; $D \times$, a slide in the hopper to regulate the supply; $E$, water guides for preventing the water rushing direct to that part of the sieve nearest to the for cingbox; $F$, the water passage from the forcing box to the washing chambers; $G$, the valve through which the water passes to the under part of the forcing box. H, I, denotes the system of levers (shown) for giving the requisite motion to the forcing box; $J$, the fly-wheel, to which is fixed a guide slot in which is a sliding pin K (for separate view see figure 6), such pin being thus adjustable, and striking or acting on the end of the system of levers (I) at *. This pin (K) is also supported in a guide (K $\times$ ) (shown at figure 3) fixed to the axle of the fly-wheel. Q, a piece of wood placed across the frame to catch the end of the lever drawn down by the iron weight $1 . L$, franing carrying the mechanism aforesaid. M, the point of discharge from the sieve or perforated plate. N, sliding partition or door, by removing which, water will pass into a separate division, and remain stored, so that the same water can be used over again, where economy of water is a desideratum; but in such case the refuse must be scraped off and not allowed to escape with the water. O, doorways through which the ore is removed from the washing compartments. $P$, the window for the purpose of ascertaining when the machine is full. The dotted lines marked figure $1^{\times}$and figure $3^{\times}$show portions of boxes or cases sunk in the earth, or below the doorways 0 aforesaid, having divisions corresponding to and sufficiently large to contain the contents of each compartment of the washing machive. Although the drawings show the mechanism as provided with a handle for working, it is obvious that it might be worked by connection with a steam-engine, or water-power, or otherwise

The material to be treated is supplied through the hopper $D$, from whence it falls on to the wiro sieve or perforated plate $B$, which is fixed (by screws or otherwise) in its proper position. Here the material is acted upon by means of water, which is injected from the forcing box through the passage 7 , into the washing chamber, by repeated strokes of the forcing box. This lifts the material under treatment, holding it for a time in suspension, and ultimately carrying away with it the waste stuff over the lip or discharge M, whilst the gold and other particles of greater specific gravity than the waste will settle down or precipitate in one or other of the compartments of the washing chamber, according to its specific gravity; the larger particles remaining on the sieve, and the smaller ones falling through into the washing chamber, from whence it can be removed by the doorways or apertures ( $O$ ) provided for the purpose. At that portion of the perforated plate or sieve nearest the hopper, at the length of the first division of the washing chamber, there is placed across the sieve or plate a piece of thin iron or other such-like material, so as to form a low partition, which thus divides the bottoms of ores placed on the sieve or plate (the height of such bottoms to be little less than the height of the partition aforesaid). The ores forming the bottom being too large to pass through the sieve or perforated plate, will to a great extent prevent anything but clean ore passing through, and the same will apply to the ores of less specific gravity, care being taken that the ore which forms the bottom for each division be not of a greater specific gravity than that which it is desired should pass through the plate or sieve into the recciving division below.

The water required for working these machines may be supplied in any convenient way to a receptacle provided for it at the side of the forcing box, and from thence is to be conveyed into the forcing box through valve $G$ (shown figure 5), which it will be noticed opens inward so as to prevent the return of the water when once it has passed through it.

The size of the passages between the forcing box and the respective compartments of the washing chamber are to be proportioned to the quantity of water required in each division. It is considered preferable to construct a "forcing box," and the chamber in which it works, of a length proportioned to that of the washing chambers, with the view to afford, as far as may be, an even distribution of the pressure of the water against the bottom of the perforated plate or sieve aforesaid, whereon the ore to beoperated upon is supplied.

The time required to cause the precipitation of the gold or other matter operated on will, of course, vary according to the nature of the mineral to be washed, and the rapidity of the strokes given. The length of stroke to the forcing-box may be given as one jnch and a quarter.

It is to be here remarked that, although not indispensable to the use of these new improved arrangements, yet for the more efficient working thereof it is preferable to use the grating C, placed at the bottom of the supply hopper, thus interposing between the hopper and tho perforated plate or sieve aforesaid; and also to use a piece of fine canvas, clath, or silk, or similar fabric, placed in the upper part of the sieve, resting

## Improved Mechanism for washing and separating Gold, \&c.

resting on the surface of the water, with the object of preventing the floating of of fine mineral matter; likewise there should be provided a small window of thick glass, as shown in the drawings, in order to allow of its being readily ascertained when the washing chambers are sufficiently full for good working.

Haring thus described the nature of this invention, and the manner in which the same is to be performed, it is to be understood that none of the mechanical arrangements are claimed singly or apart from the objects and purposes of the said invention as herein set forth, but what is claimed is-

1st.-The construction of the washing chamber $A$ and sieve $B$, in two or more parts or divisions, for the purpose of separating the material under treatment according to the specific gravity, substantially as herein described and explained.
2nd.-The use of the fine canvas, cloth, or silk, or other similar fabric, and the use of the part marked $E$, in the manner and for the purposes substantially as herein described and explained.
3rd.-The combination of the various mechanical parts forming my "improved arrangements of Mechanism for washing and separating Ores," substantially as herein described and explained.
This is the specification referred to in the annexed Letters of Registration granted to John Hunt, this thirteenth day of September, 1869.

BELMORE.

## REPORT.

Sir,
Sydney, 12 August, 1869.
Having, in attention to your B.C. Minute of the 4 th instant, examined the plan and specification accompanying the Petition of Mr. John Hunt, for Letters of Registration for "improved arrangements of Machinery for washing and separating Gold and other Ores, as well as Precious Stones," we have the honor to recommend that the prayer of the Petition be granted.

# A NEW AND IMPROVED PROCESS FOR PRESERVING WOOD FROM MOULD OR DECAY. 

## LETVIERS OF REGISTRATION to Louis S. Robbins, for a new and improved process for preserving Wood from mould or decay.

[Registered on the 9th day of October, 1869, in pursuance of the Act 16 Vic., No. 24.]

BY His Exceleency tie Right Honoramle Somersey Richard, Earl of Bejmore, a Member of Her Majesty's Most Honorable Privy Council in Ireland, Governor and Commander-in.Chief of the Colony of New South Wales, and Vice-Admiral of the same.

## TO ALL TO WHOM THESE PRESENTS SHALL COME, greeting:

WHEREAS Lours S. Robbins, of the City, County, and State of Now York, in the United States of America, hath by his Petition humbly represented to me that he is the author or designer of a certain invention or improvement in manufactures, that is to say, of an invention of "a new and improved process for preserving Wood from mould or decay" which is more particularly described in the specification and drawing which are hereunto annexed; and that he, the said Petitioner, hath deposited with the Honorable the Treasurer of the said Colony of New South Wales the sum of Twenty Pounds sterling, for defraying the expense of granting these Letters of Registration, as required by the Act of Council, sisteenth Victoria number twenty-four ; and hath humbly prayed that I would be pleased to grant Letters of Registration, whereby the exclusive enjoyment and advantage of the said invention or improvement might be secured to him for a period of fourteen years: And I, being willing to give encouragement to all inventions and improvements in the arts or manufactures which may be for the public good, and having received a report favourable to the prayer of the said Petition, from competent persons appointed by me to examine and consider the matters stated therein, and to report thereon for my information, am pleased, with the advice of the Executive Council, and in exerciso of the power and authority given to me by the said Act of Council, to grant, and do by these Letters of Registration grant unto the said Louis S. Robbins, his executors, administrators, and assigns, the exclusive enjoyment and advantage of the said invention or improvement, for and during the term of fourteen years from the date hereof; to have, hold, and exercise unto the said Louis S. Robbins, his excentors, administrators, and assigns, the exclusive enjoyment and advantage thercof, for and during and unto the full end and term of fourteen years from the date of theso presents next and immediately ensuing, and fully to be complete and ended: Provided always, that if the said Louis S. Robbins shall not, within three days after the granting of these Letters of Registration, register the same in the proper office in the Supreme Court at Sydney, in the said Colony of New South Wales, then these Letters of Registration, and all advantages whatsoever hereby granted, shall cease and become void.

In witness whereof, I have hercunto set my sign manual, and have caused the present Letters of
Registration to be sealed with the seal of the said Colony of New South Wales, at Government House, Sydney, in New South Wales, this seventh day of October, in the year of our Lord one thousand eight hundred and sixty-nine.

BELMORE.

## A new and improved process for preserving Wood from mould or decay.

A new and improved process for preserving Wood from mould or decay.
Is is a well known fact that the wood when cut down and separated from the roots which supply it with antiseptics, immediately becomes affected by exposure to the heat and the moisture of the atmosphere, the former of which rapidly dissipates the fiuid or sap of the wood, while the latter impregnatcs the woody fibres with substances which the wood while growing by its antiseptics entirely excluded. These alternate actions upon the wood gradually and finally cause it to decay. To prevent this decay of wood is therefore the object of the present invention, and this object is accomplished thereby: The method consists in subjecting the wood to a preservative process by which nearly all of its antiseptics are retained within the same, and for those lost supplying such substances as will prevent their further waste; at the same time closing the pores, and forming such a combination with the fibres of the wood as will effectually prerent the deteriorating effects of either heat or moisture at ordinary temperatures, or of both, upon the same, as hereinbefore alluded to.

Many processes bave been heretofore invented for the preservation of wood, some of which were entircly impracticable, while others were only partially successful; but by none could the wood be sufficiently impregnated or saturated with the preservative compound to insure its preservation for a great length of time, owing to the manner in which the same was applied to the wood.

One form of apparatus for carrying out this improved process is represented in the accompanying drawings. A represents a retort made of any dosired form or size, in which coal tar, resin, or oleaginous substances or compounds are placed and subjected to the action of heat from any suitable furnace. B represents the man-hole in the upper portion of the retort, used in clcausing the same or in changing its contents. CC, a pipe communicating with retort $A$, at or near its top, passing to and communicating with chambers or receptacles, D. E represents the discharge pipe employed for removing the remaining contents after the operation is over.

Heat being applied to retort A, containing the coal tar, \&c., as described, oleaginous vapours are generated therein, which pass out of the same through the connecting pipe CC, into the wood chambers $D$, or into only one of the same, as may be desired. The heat thus applied first causes the surface moisture of the wood to be removed therefrom, taking the form of steam, and condensing on the sides of said chamber, from which it is drawn off through pipes $H$, which may be placed in or near the bottom.

Having thus removed the surface moisture from the wood, it is then thoroughly impregnated and saturated through all its pores and fibres by the oleaginous vapours and heavier products of the distillation until it is made impervious to moisture, and so as to entirely resist the action of the atmosphere, when it may be removed from the chambers D, through the doors MM, when the chambers are again to be charged with wood, and so on as long as may be desired.

In the operation of this process, a temperature of from 212 degrees to 250 degrees Fahrenheit, is sufficient to remove the surface moisture from the wood; but to saturate the same with oleaginous vapours and other products, it is best that the temperature should be raised to 300 degrees Fahrenheit, or higher if necessary.

From the above description it is apparent that by this process the wood may be more completely saturated with the preservative compound than has been or can be done by any of the processes heretofore in use, for the reason that the preserrative compound is caused to penetrate the pores and fibres of the wood in a vapourized state, while in the others it is made to enter in a liquid state; and it is also evident that it is accomplished in an economical, expeditious, effective, and practical manner.

The invention is not linited to any particular form of apparatus, nor to the remoring of the surface moisture from the wood by means of oleaginous vapours as herein described, as there are various ways in which the same can be accomplished with the use of heat.

But what is claimed as new is,-
The process herein described for preserving wood from mould or decay, the same consisting in first remoring the surface moisture from the wood, and then charging and saturating the same with hot oleaginous vapours and compounds substantially as described.

Also, removing the surface moisture from the wood, by means of hot oleaginous vapours, substantially as herein described.

This is the specification reforred to in the annexed Letters of Registration granted to Louis S . Robbins, this seventh day of October, 1869.

## IMPROVEMENTS IN THE CONSTRUCTION OF LAND CULTIVATORS.

LETTERS OF REGISTRATION to David Edwards, for Improvements in the construction of Land Cultivators.
[Registered on the 12th day of October, 1869, in pursuance of the Act 16 Vic., No. 24.]

#### Abstract

BY His Excellency the Rtght Honorable Somerset Rtchard, Eary of Belyore, a Member of Her Majesty's Most Honorable Privy Council in Ireland, Governor and Commander-in-Chief of the Colony of New South Wales, and Vice-Admiral of the same.

TO ALL TO WHOM THESE PRESENTS SHALL COME, greeting:
WHEREAS DAVID EDwands, of Marong, near Sandhurst, in the Colony of Victoria, blacksmith, hath by his Petition humbly represented to me that he is the author or designer of a certain invention or improvement in manufactures, that is to say, of an invention of "Improvements in the construction of Land Cultivators," which is more particularly described in the specification and sheet of drawings which are hereunto annexed; and that he, the said Petitioner, hath deposited with the Honorable the Treasurer of the said Colony of New South Wales the sum of Twenty Pounds sterling, for defraying the expense of granting these Letters of Registration, as required by the Act of Council, sixteenth Victoria, number twenty-four, and hath humbly prayed that I would be pleased to grant Letters of Registration, whereby the exclusive enjoyment and advantage of the said invention or improvement might be secured to him for a period of fourteen years: And $I$, being willing to give encouragement to all inventions and improvements in the arts or manufactures which may be for the public good, and having received a report favourable to the prayer of the said Petition, from competent persons appointed by me to examine and consider the matters stated therein, and to report thereon for my information, am pleased, with the advice of the Executive Council, and in exercise of the power and authority given to me by the said Act of Council, to grant, and do by these Letters of Registration grant unto the said David Edwards, his executors, administrators, and assigns, the exclusive enjoyment and advantage of the said invention or improvement, for and during the term of fourteen years from the date hereof; to have, hold, and exercise unto the said David Edwards, his executors, administrators, and assigns, the exclusive enjoyment and advantage thereof, for and during and unto the full end and term of fourteen years from the dato of these presents next and immediately ensuing, and fully to be complete and ended : Provided always that if the said David

Edwards

## Improvements in the construction of Land Cultivators.

Edwards shall not, within three days after the granting of these Letters of Registration, register the same in the proper office in the Supreme Court, at Sydney, in the said Colony of New South Wales, then these Letters of Registration, and all adpantages whatsoever hereby granted, shall cease and become void.

In wituess whereof, I have hereunto set my sign manual, and have caused the present Letters of Registration to be sealed with the seal of the said Colony of New South Wales, at Government House, Sydney, in New South Wales, this twelfth day of October, in the year of our Lord one thousand eight hundred and sixty-nine.

SPECIFICATION of David Edwards, of Marong, near Sandhurst, in the Colony of Fictoria, blacksmith, for an invention intituled, "Improvements in the construction of Land Cultivators."
My invention consists of certain improvements in the construction of Land Cultivators, whereby I am enabled to produce a machine which will perform the work required to be done by it in a much more effective manner than can be accomplisbed by any other, and that too at a less expense in construction and with greater economy in working. It is so designed that it may be used either for ploughing or scarifying, as may be desired.

Referring to the drawings hereto attached, figure 1 represents perspective view of my machine fitted with teeth as a scarifier, and figure 2 shows plan of same; whilst figures 3, 4, 5, 6, and 7 , show detailed views of some of the parts on a larger scale, including the ploughshares which may be substituted for the scarifying teeth when required.
A. is the centre bar or beam, one extremity of which is connected by a clutch or clasp, B, fitting loosely on the vertical shaft $C$, whilst the other extremity is connected to a cross-bar, $D$, which is attached to the crank-axle, E, of the back bearing wheels, F. From this end of the centre-beam there rise two parallel pieces of iron, $G$, which form the guide for the handle of the lever $H$, the position of which may be adjusted by means of pin, $I$, passing through the perforations made in the guide $G$. This lever is connected to the crank-axle E. To this lever I attach a rod, J, which is connected at its other extremity to another lever, $K$, acting upon fulcrum $L$, and proceeding to the top of shaft $C$, as shown. $M$ are iron bars, bent in the shape shown, to which I attach the teeth, N , by means of square clasps, 0 , and set-screws, P. Q are two pieces of iron haring perforations as shown, for the reception of the straight portion of the draught-link R. $S$ is a key for screwing or unserewing the set-screws.

The drawings represent a four-horse machine in which there are twenty teeth, each placed in a line 3 inches outside the other, and each being at a point about 10 inches behind each other. Now, if a twohorse (or twelve teeth) machine be made, the teeth will require to be a longer distance (say 12 inches) behind each other, although only the same distance outside each other. In order to accomplish this, the angles in the zig-zag bar must be made longer and more obtuse than in the larger machine, so that the centre-beam will be about 6 feet in length, the larger one being about 8 feet.

It will be seen at once that the length of the tecth below the rig-zag bar or centre-beam (as the case may be), as well as the degree of angularity to be given to them can be regulated to a nicety by means of the set-screws $P$ and clasps 0 , whilst by the same means some or all of them may be removed altogether and the ploughshares substituted for them. In this latter case there would be five ploughshares only on one side and four on the other, which are to be so set that they will form the ridge inside the zig-zag bar each turning over the earth towards the opposite side of the machine. In order to accomplish this, it will, be necessary to have those on the right-hand side of the machine made with a left-hand pitch, and those on the left-hand side of the machine with a right-hand pitch.

If my machine be used for working ground close to any growing plant, such as vines, it will be advisable to substitute sledges, as shown in figure 6, for the back bearing wheels, attaching them to the short crank at each end of the axle, and making the axle somewhat shorter, as shown in dotted lines figure 2.

By my method of construction the whole body of the machine may be lifted perpendicularly (and consequently without altering the position in which the teeth or ploughshares may be set relatively to their work) by means of lever $H$, and may be kept in any required position by means of pin I: and the breakage which often occurs in the teeth by reason of that part of them which is held being reduced in size, and in the bars by reason of the perforations usually made therein, is prevented.

Having thus described the nature of my invention and the manner of performing same, I would have it understood that I do not confine myself to the precise details of any of the parts of my machines, so long as the nature thereof be retained; but I claim the position of the teeth $N$ or ploughshares, figure 3 and 4: (or any substitute for them), relatively to each other, and the method of adjusting them and keeping them in position by means of clasps $O$ and set-screws $P$.

The use of sledges, figure 6, as a substitute for the back bearing wheels.
The peculiar construction of the zig-zag bars $\mathbf{N}$, whereby bearings are produced parallel to each other and to the centre-beam, for the purpose of attaching the teeth or ploughshares thereto.

The method of lifting perpendicularly the whole of the working part of the machine, by means of the parts marked $H, X, K$, and $L$.

The combination of mechanical parts around the front wheel, as shown in figure 1.
This is the specification referred to in the annexed Letters of Registration, granted to David Edwards, this twelfth day of October, 1869.

## REPORT.

Sydney, 14 September, 1869.
Sir,
Having compared the revised specification transmitted under your B.C. communication of the 10th instant, with Mr. David Edwards' original description of his "Improvements in the construction of Land Scarifiers," as set forth in the enclosures under cover of the 5 th August last, we do ourselves the honor to rcport that there appears to be no material difference in the two claims.

Tite Under Secretary,
We have, \&c.

# IMPROVEMENTS IN OR APPLICABLE TO MACHINERY FOR DISINTEGRATING OR PULVERIZING MINERALS, ORES, \&C. 

## LETTERS OF REGISTRATION to Thomas Carr, for Improvements in or applicable to Machinery for disintegrating or pulverizing Minerals, \&c.

[Registered on the 3rd day of November, 1869, in pursuance of the Act 16 Vic., No. 24.]

BY Mis Excellency the Right Howorable Somerset Richard, Earl of Belmore, a Member of Her Majesty's Most Honorable Privy Council in Ireland, Governor and Commandor-in-Chief of the Colony of New South Wales, and Vice-Admiral of the same.

## TO ALL TO WHOM THESE PRESENTS SHALL COME, greeting:

Whereas Tromas Carr, of the City and County of Bristol, in the United Kingdom of Great Britain and Ireland, engineer, hath by his Petition humbly represented to me that he is the author or designer of a certain invention or improvement in manufactures, that is to say, of an invention for "Improvements in or applicable to Machinery for disintegrating or pulverizing minerals, ores, clays, chemicals, artificial manures, and various other substances and articles of manufacture, and for mixing or scparating various materials, and for dispersing fluids, semi-fluids, and molten metals, to facilitate or produce chemical or other changes" which is more particularly described in the specification and five sheets of drawings, marked A, B, C, D, and E, respectively, which are hereunto auncxed; and that he, the said Petitioner, hath deposited with the Honorable the Creasurer of tho said Colony of New South Wales the sum of Twenty Pounds sterling, for defraying the expense of granting these Letters of Registration, as required by the Act of Council, sixtecnth Victoria, number twenty-four; and hath humbly prayed that I would be pleased to grant Letters of Registration, whereby the exclusive enjoyment and advantage of the said invention or improvement might be secured to him for the period of fourteen years: And I, being willing to give encouragement to all inventions and improvements in the arts or mandactures which may bo for the public good, and having received a report favouralle to the prayer fis the said Petition, from competent persons appointed by me to examine and consider the mattors stated thercin, and to report thercon for my information, an pleased, with the advice of the Exccutive Councti, thd in excrcise of the power and authority given to me by the said Act of Council, to grant, and do by these Letters of Registration grant unto the said Thomas Carr, his cxecutors, administrators, and assigns, the exclusive cojoyment and advantage of the said invention or improvement, for and during the term of fourteen years from the date hcreof; to have, hold, and exercise unto the said Thomas Carr, his executors, administrators, and' assigns, the cxclusive enjoyment and advantage thereof, for and during and unto the full end and term of

## Improved Machinery for disintegrating or pulverizing Minerals, Ores, \&c.

fourteen years from the date of these presents next and immediately ensuing, and fully to be complete and ended: Provided always, that if the said Thomas Carr shall not, within three days after the granting of these Letters of Registration, register the same in the proper office in the Supreme Court at Sydney, in the said Colony of New South Wales, then these Letters of Registration, and all advantages whatsoever hereby granted, shall cease and become void.

In witness whereof, I have hereunto set my sign manual, and have caused the present Letters of Registration to be sealed with the seal of tho said Colony of New South Wales, at Government House, Sydney, in New South Wales, this third day of November, in the year of our Lord one thousand eight hundred and sixty-nine.

BELMORE.

SPECIFICATION of Thomas Carr, engineer, of the City and County of Bristol, in the Trited Kingdom of Great Britain and Ireland, for an invention intituled "Improvements in or applicable to Machinery for disintegrating or pulverizing minerals, ores, clays, chemicals, artificial manures, and various other substances and articles of manufacture ; and for mixing or separating various materials; and for dispersing fluids, semi-fluids, and molten metals, to facilitate or produce chemical or other changes."
My invention relates to improvements in or upon that machinery for disintecrating and other purposes, for which Letters Patent were granted to me for the United Kingdom, numbered 778 , and dated the twentyninth day of March, in the year of our Lord one thousand eight hundred and fifty-nine.

Firstly.-My improvements relate to a mode of constructing and arranging the cages of the machine so that increased strength may be obtained, and which admits of a ready application of bars or knives (hereinafter described) rotating with one or other of the driving discs (instead of being fixed or stationary), for breaking up such lumps of material as will not pass through the inmost cage ; and this part of my improvements consists in securing the annular disc to the ring connecting the bars of the outer cage carried round by the large disc, or in securing the ring of the outer cage when carrying the annular disc to the large disc, by bolts or screw-nuts, or other suitable means.

Secondly.-My improvements consist in forming the bars of the cages of steel, and of cast-iron, moulded upon cores of wrought-iron in "chill," or other moulds; such compound bars being useful when the machine has to operate upon certain hard materials, and also in making such bars, whether compound or otherwise, of oval, square, rhomboid, or other section, which will give increased strength to resist lateral percussion. This part of my improvements also consists in introducing one or more bars in each cage, so as to come into the spaces between the cages and clear such spaces when the material operated upon is of such character that it tends to adhere to the bars of the cages; also in applying scrapers to the periphery of the outer cage, when required to remove material adhering to the casing or cover. This part of my improvements also consists in producing currents of air where they are required, in combination with the disintegrator machinery, by applying vanes to the periphery of the outer cage.

Thirdly.-My improvements consist in the use of sereral knives, in place of one as hitherto; for breaking up such lumps of material as will not pass between the bars of the inner cage. These knives may be bolted or otherwisc secured together in a ring or rings, so as to give strength and support to each other. This part of my improvements also consists in securing one or more of these kuives, separately or connected by rings, either to the inner or to the annular dise, so as to rotate in a direction opposite to that of the inmost cage, whereby the effective action of the knife or knives will be doubled. These rotary knives can be most conveniently applied when the cages are arranged according to the first part of my improvements. Both the stationary and rotating knives may be secured at varying distances from the axis of rotation.

Fourthly.-My improvements relate to such arrangement of the "cages" of a machine as will give a larger capacity without increasing the length of the bars of the outer cage, and consist in dishing the large outer disc so that the inner disc may run clear in the cavity, and in forming anmular cavities in the inner faces of the discs in which the rings of the cages may run clear, so that' by this means the inner surfaces of the rings and discs are all brought in a line, and the cages are all of the same width, and the bars of the same length.

Fifthly.-My improvements consist in covering the opening to the inner cage by a stationary disc (leaving only sufficient space to allow the ring of the inner cage to revolve clear), provided with an orifice or opening, to which a hopper or spout may be attached, through which the material may be fed to the machine; and in making the cover or casing for the machine (when used) to fit to the edges of the outer cage, leaving ouly clearance for free rotation. By this means the greater parts of the two ends or sides of the ordinary cover are dispensed with, and any tendency in the material to accumulate, cake, and jam between the casing and the machine, is thereby obviated.

Sixthly.-My improvements relate to a mode of lubricating the bearings of the hollow shaft carrying the disc or dises when working in a horizontal position, and consist in forming upon or applying bosses to the shaft (whether stationary or rotating) round or upon which the hollow shaft or shafts revolve, the periphery of which bosses form the bearing surfaces of the hollow shaft, the cavity of which is fillcd with lubricating matter up to the level of the underside of the shaft, and by this means the bearing surfaces are lept constantly lubricated; and as the hole at each end of the hollow shaft is reduced to the size of the centre solid shaft, the lubricating matter is prevented from escaping, and thus.wear and friction is greatly diminished, and oil is economized.

Serinthly.-In ordinary disintegrating machines the bush or bearing of the hollow shaft wears rapidly, and the play in the bearing causes objectionable vibration, and there is no remedy for this defect but new bushes. This part of my invention relates to an arrangement of the hollow shaft or shafts of the disintegrator, so that "brasses" or steps may be fitted therein in two halves, being inserted in holes formed through the hollow shaft from each side, and kept in their places by caps or plates bolted to the shaft.

## Improved Machinery for disintegrating or pulverizing Minerals, Ores, \&c.

By this arrangement the brasses or steps may be tightened by thin packing or screws, without taking the machine to pieces, and thus all objectionable vibration will be prevented. The object of this part of my invention may also be accomplished by making cones on the solid central shaft, and fitting corresponding bushes to slide endways in the hollow shaft, or by forming the cones in the hollow shaft and fitting bosses therein to slide endways for adjustment upon the solid shaft; also, by inserting the bushes or steps in halves in cavities in the hollow shaft, and tightening by set screws, cottars, or wedges. The improvements described under this head may be wholly or partially combined with those described under the sixth part of my invention.

Tighthly. - My improvements relate to combinations and arrangements of the disintegrator, in which the shafts carrying the cages are each mounted in separate journals, so that the frictional speed of tho bearing surfaces will not in any case exceed that due to the simple revolutions of the shafts, instead of being doubled, as in the case of the hollow shaft, by the ordinary arrangement of the disintegrator, owing to the reverse action of the shaft upon which it works; and with these improved arrangements and combinations of the machine, the bearings can be readily cleaned without taking the machine to pieces; and the "brasses" or steps can also be kept at the proper degree of tightincss, and by the same means the shafts will be kept from heating by being fully exposed to the free circulation of the air, instead of one shaft being enclosed by the other, as in the ordinary arrangement.

One of my improved combinations and arrangements consists in placing the central solid shaft in plumber blocks in the ordinary manner, and in mounting the hollow shaft; also in plumber blocks concentrically with the solid shaft which passes through the hollow shaft in the usual manner, but does not touch it, there being a concentric space left between the two shafts. The driving pulleys for the shafts may be both at the back or both in front of the cages, or one behind and the other in front of the cages. If both driving pulleys are in front of the cages, the hollow shaft is connected with ithe inner disc.

Another of my improved combinations and arrangements consists in dispensing with a hollow shaft, and in mounting and keying or otherwise fastening each of the two discs on one end of a separate solid shaft, both shafts being placed with their axis in the same line, and their ends on which the cages are fixed touching each other or nearly so, and one shaft carried in plumber blocks in front, the other in plumber blocks behind the cages.

One driving pulley is placed on the shaft in front, the other on the shaft at the back of the cages, or both shafts may be made to extend beyond the outer plumber blocks or pedestal of the shaft; and a driving pulley may be placed upon this overhanging end of each shaft, this arrangement allowing the driving belts to be readily removed and replaced.

This part of my invention also consists in the combination and arrangement of a disintegrator where one end of the solid and one end of the hollow shaft is in an independent bearing, the other ends of the solid and hollow shafts have their bearing reciprocally in or on the other shaft; or the hollow shaft may have both its boarings independent, and one end of the solid shaft may have its bearing within the hollow shaft as above explained. This combination forms a very simple machine, taking up little space, while it is very convenient for putting on and off the driving belts, as the pulleys are placed upon the ends of the shafts which overhang the bearings. Machines made according to my improvements, hercinbefore described, may be worked with their axis horizontal, vertical, or oblique in position, except such machines as are made according to the improvements described under the fifth head of my invention, which are only intended to work borizontally. The machines may also be made with any required number of cages, which need not necessarily be driven the reverse way, and may be arranged in framing, and be driven or fed in any convenient manner. The improved machines may be used for disintegrating or pulverizing artificial manures, minerals, ores, clays, chemicals, and all animal and vegetable substances and articles of manufacture which are not too toughly fibrous and light, and the machine will reduce the material operated upon into either a coarse or fine powder, according to its nature and the speed at which the machine is driven. It may be used as a pulverizer and mixer, or mixer only (when driven alower and confined in a case) to intimately intermix various ingredients, differing in nature, quality, or colour; or it will act as a separator when unconfined by il casing, and driven at a moderate speed, for scparating substances differing in size, hardness, or specific gravity; and it may be used to disperse molten metal in the form of minute spray, and whereby steel and sportsmen's shot could be made; it may also be used to disperse liquids or semi-liquids, to facilitate evaporation, or effect chemical or other changes.

Figure 1 is a longitudinal clevation in section of a disintegrator, having a solid and hollow shaft rotating in opposite directions. Figure 2 is a cross soctional elevation through the cages on the line A.B., figure 1 looking from the front. Ifigure 3 is a plan view of the ends of the hollow and solid shaft, in the position shown in figure 1; and figure 4 is a cross section on the line CD, figures 1 and 3.

Tigure 5 is a longitudinal clevation in section of another disintegrator; and figure 6 a partial front end view of the centre part of the larger disc.

Figure 7 is a longitudinal elevation in section of a disintegrator where the cages are not shomo.
ligure 8 is a view corresponding to figure 7 , but without fruming, of another disintegrator.
Figure 9 is a longitudinal elevation in section of a disintegrator, with a solid stationary shaft and two hollow shafts rotating thereon ; and figure 10 is an end view of the shafts and bearings.

Figure 11 is a longitudinal elevation in section of another disintegrator, with a solid and hollow shaft rotating in opposite directions. One end of each shaft is carried by an independent pedestal, and tho other oud of each shaft has its bearing in or on the other shaft; and figure 12 is a cross section at $\mathrm{E}-\mathrm{F}$, figure 11.

Figure 13 is an end section, and figure 14 is a longitudinal elovation, of a chill mould for casting bars for the cages of large machines.

Figuro 15 is a longitudinal elevation in section of at disintegrator, with the cages on solid shafts placed end to end ; and figure 16 is a front, and figure 17 a back, eleration of the same.

Figures 18,19 , and 20 are views corresponding respectively to figures 15,16 , and 17 of another disintegrator, having a solid and hollow shaft rotating in distinct and separate bearings.

Figure 21 and figure 22 are views corresponding respectively to the figures 15 and 16 of another modification, with both cages on solid shafts.

## Inproved Machinery for disintegrating or pulverizing Minerals, Ores, \&c.

#### Abstract

In some of the longitudinal sections only two bars in each cage are shown, and in the other views they are either wholly or partially omitted, to avoid confusion in the drawings. The improvements described under the first part of my invention are illustrated by figures 1,2 , and figures 15, 16, and 17 .

In figures 1 and 2 the annular dise (a) is secured to the ring ( $a^{1}$ ) of the outer cage by bolts. I prefer to make (say) a dozen of the bars ( $a^{2}$ ) of the outer cage a little larger than the rest, and to cause the outer ends of these bars to pass through the ring ( $a^{1}$ ) to secure the annular dise (a) by screw-nuts ( $a^{3}$ ) upon the ends of the said bars, as shown. The annular disc (a) is turned to fit the ring ( $a^{1}$ ), as shown ;

 the disc carries the bars ( $a^{4}$ ) of the second cage.In figures 15, 16, and 17, the bars ( $a^{2}$ ) of the outer cage are collected in a ring ( $a^{5}$ ) which fits the largo disc ( $b$ ), and is secured to the large dise by bolts or screw-nuts $\left(a^{3}\right)$, as before explained.

The mode of casting steel or cast-iron upon cores of soft wrought-iron (or other suitable metal that will rivet easily) to form bars for the cages of any required section, according to the second part of my invention, is illustrated by figures 13 and 14.

Figure 13 is a cross scetion of a chill-mould, and figure 14 an inside view of half the mould. The wrought-iron core $(x)$ is first placed within the mould $\left(x^{2}\right)$, as shown, then the two halves of the mould are bolted, or otherwise secured together, and the molten steel or cast-iron is poured in at the gate ( $x^{2}$ ).

The mould can be shaped to give any required section to the exterior of the bar.
Figure 2 illustrates the mode of applying one or more bars $\left(a^{\circ}\right)$ in each cage, to clear the spaces between the cages, and of applying scrapers ( $a^{7}$ ) to clear tho casing ( $y$ ) or vanes ( $a^{7}$ ), to produce currents of air, according to the second part of my invention. The ends of the bars $\left(a^{6}\right)$ are secured in square holes in the rings and discs, and are cranked out into the position in which they are shown by dotted line, as applied to one of the bars $\left(a^{0}\right)$ in figure 1.

The use of several knives instead of one, and placed at different distances from the shaft (c), for breaking up such lumps of material as will not pass between the bars (c $c^{2}$ ) of the inner cage, according to the third part of my invention, is illustrated by figures 1,2 , and 5 .

In figures 1 and 2 , four knives ( $d$ ) are shown bolted at their outer ends to the annular dise ( $a$ ), and secured at thcir inner ends to a ring ( $d^{1}$ ); these knives therefore rotate with the annular disc, in a direction opposite to that of the bars ( $c^{2}$ ) of the inner cage.

In figure 5 four stationary knives (d) are secured at their outer ends to an external ring $\left(d^{2}\right)$, which is bolted to the standard of the framing (A) as shown, and the inner ends of the knives are secured to a ring ( $d^{1}$ ) by rivets or bolts.

Figures 1, 2, and 5 also illustrate the fourth part of my invention for giving a larger capacity without increasing the length of the bars of the cages. It will be seen in these figures that a cavity or dish is made in the large disc (b) for the small disc ( $c^{\top}$ ), and that annular carities are formed in the discs for the rings of those cages requiring it, so that the width of all the cages are uniform. This improvement is partially carried out in the disintegrator, shown by figures 15,16 , and 17 ; the width of the cages increasing from the inncr to the outer cages. The plate or disc and hopper or spout for covering the opening to the inner cage, according to the fifth part of my invention, is illustrated by figures 15 and 16 . The plate and spout or hopper (e) combined is in two halves, secured together by flanges and bolts, and may be bolted to the standard of the framing as shown.

The improved mode of applying the cover or casing ( $y$ ) to the machines, according to the fifth part of my invention, is illustrated by figures 1 and 2 , and figures 18,19 , and 20 . The ring ( $a^{1}$ ) of the outer cage is made, in some cases, of angle iron, to give increased strength and breadth, as shown in figures 5 and 18, and in some cases the discs have hoops ( $a^{8}$ ) applied to them to give increased strength and breadth, as shown in figures 15 and 18; and in other cases the breadth of the discs at their edges is increased. The cover ( $y$ ) (see figures 1, 2, 18, 19, and 20) is made to fit as close as possible without touching the edges of the dises, as shown.

Figure 7 illustrates the mode of carrying out the sisth part of my invention for lubricating. Upon the solid shaft ( $c$ ) two bosses are formed, or two cast-iron or other metal bosses ( $c^{3}$ ) are secured by keys or othcrwise, and the two ends of the hollow shaft ( $b^{1}$ ) are bored out to fit the bosses, as shown, and at each end of the hollow shaft $\left(b^{1}\right)$ a plate $\left(b^{2}\right)$ is secured by set screws $\left(b^{3}\right)$, so as to be oil-tight. The lubricating matter is filled into the hollow shaft (b) by removing the serew plug ( $b^{4}$ ) untilit comes to about level with the under side of the solid shaft ( $c$ ), and by this means the bosses ( $c^{3}$ ) will be kept constantly lubricated.

Figures $1,3,4,5,6,8,9,10$, and 11, illustrate the several modes of carrying into cffect the serenth part of my invention.

In figures 1,3 , and 4 , the hollow shaft ( $b^{1}$ ) has an oblong square hole made across it at each end, in which the brasses or bearings ( $b^{\circ}$ ) are fitted in two halves, and these arc kept in their places by two plates ( $b^{\circ}$ ) secured oil-tight against facings upon the hollow shaft by bolts ${ }^{( } b^{\prime \prime}$ ). The brasses are packed as they wear by their plates of metal, one of which, of equal thickness, is audded to the back of each step as required.

Figures 9 and 10 show another mode of tightening the bearings of the hollow shaft in a machine where both discs ( $b$ and $c^{1}$ ) are formed upon hollow shafts; but as the same arrangement is applicd to both shafts, the shaft $b^{1}$ will only be referred to. It will be secn that two half brasses or steps are fitted into an oblong hole, formed at each end of the hollow shaft ( $b^{1}$ ). The back of cach brass ( $b^{\pi}$ ) has a broad inclined groore in it, in which a wedge ( $b^{8}$ ) fits as shown, and this wedge has a screwed projection that passes through the boss part of the hollow shaft, the projection having a nut upon it by which the wedge can be drawn forward to tighten the brass against the shatt. In this modification, buth dises ( $b$ and $c^{1}$ ) are mounted upon hollow shafts ( $b^{1}$ and $c$ ) which rotate upou a stationary shaft ( $(w)$ carried by the standards of the framing (A). It is obvious that the mode of tightening the brasses, shown by figures 9 and 10, is applicable to machimes where there is a solid and hollow shaft both revolving. At the inner end of the hollow shaft (c), in figure 11, another mode of tightening the brasses is shown. By this arrangenent the brasses ( $b^{5}$ ) are inserted in oblong holes in the end of the shalt in two balves, as in figures 9 and 1.0 , and they are sccured and tightened by set screws ( $b^{5}$ ), the points of which enter holes in the backs of the brasses as showu. Jigures 5 and 6 show the mode of tightening the brasses for the hollow shaft $\left(b^{1}\right)$ by forming cones ( $c^{4}$ ) on the solid shaft ( $c$ ). The brasses ( $b^{b}$ ) for the imner end of the shaft are made in two halves as shown; and they are slided into the shaft to tighten the brasses by set scrers ( $b^{5}$ ) that screw into ears from the brasses, as shown (see figure 6).

## Improved Machinery for disintegrating or pulverizing Minerals, Ores, \&c.

The brass $\left(b^{x}\right)$ for the outer end of the hollow shaft may be made in one piece, and tightened and secured by set screws, as shown.

Figure 8 illustrates a mode of tightening the bushes or brasses, which are made conical on their oxterior, and fit cones formed in the ends of the hollow shaft. The solid shaft (c) in this case is cylindrical, and it is screwed, and the bushes ( $c^{3}$ ) are screwed upon the shaft ( $c$ ), and they are each locked upon the shaft by a lock-screw, hoop, or nut ( $c^{5}$ and $c^{5}$ ). The screw-thread upon the shaft (c) is arranged so that the friction of the rotating hollow shaft ( $b^{1}$ ) upon the bushes ( $c^{3}$ ) will tend to screw them towards and against the lock-nuts. ( $c^{6}$ and $c^{6}$ ). In this arrangement, the bushes are screwed up without taking the machine to pieces, by taking the set screws 1,2 , and 3 , out of the hollow shaft, and inserting a screw, the point of which will enter a slot ( $c^{\text {}}$ ) in the cone bush (there being one in each bush) or a slot in the inner nut $\left(c^{5}\right)$. When this is done, by holding one disc ( $b$ or $c^{1}$ ) and revolving the other, cither of the bushes ( $c^{3}$ ) or the nut ( $c^{5}$ ), one at a time, may be screwed either way upon the shaft ( $(c)$, as required. The outer lock-nut ( $c^{6}$ ) may be held or turned by a suitable screw-key.

In figure 11 a cone bush is used upon the end of the solid shait $\left(b^{1}\right)$, so that its bearing may be tightened in the end of the hollow shaft. The bush ( $c^{3}$ ) can slide on the shaft ( $b^{1}$ ) upou a key, which causes it to rotate with the shaft; and the bush is slided along by means of a screw-nut and loch-nut ( $c^{\bullet}$ ) upon the ond of the shaft as shown.

By fixing or forming bosscs on the central solid shafts, in figures 1,9 , and 11, and arranging the brasses $\left(b^{5}\right)$ to work on these bosses, and by adding oil-tight plates ( $b^{2}$ ), as in figure 7 , to the ends of the hollow shafts, these bearings of the hollow shafts ( ) may be lubricated as illustrated in figure 7.

The beariugs in the hollow shaft in figure 8 may also be lubricated as in figure 7, by adding plates or caps ( $b^{2}$ ), as in figure 7 , to the ends of the hollow shaft.

The eighth part of my improvements is illustrated by figures 18,19 , and 20 , and figures 15,16 , and 17 .

In the disintegrator, shown by figures 18,19 and 20 , the solid shaft (c) is mounted in bearings carried by the standards, as in the ordinary machine; but the hollow shaft ( $b^{1}$ ) is mounted on separate bearings and standards from the framing, concentric with but not touching the solid shaft:

There is a separate standard to steady the fixed knife $(d)$ in this machine, the knifo being bolted to the standard which carries the bearing of the shaft (c), which standard is further from the cages to give a better admission to the central opening.

A separate standard for the knife, with the standard for the shaft further away from the cages, may also be used in machines of the type shown by figures 1 and $\overline{5}$.

Figure 15, 16, and 17 show the machine where a hollow shaft is dispensed with. Each of the discs ( $b$ and $c^{1}$ ) is secured upon one end of a separate solid shaft ( $b^{1}$ and $c$ ); both shafts with their axes in the same line, and with their ends, upon which the cages are fixed, touching each other or nearly so, one shaft in plumber blocks in front, and the other in plumber blocks behind the cages as shown.

Figures 21 and 22 show a machine similar to that represented by figures 15 , 16, and 17, but differently arranged and constructed; being specially recommended for machines of large diameter, and driven at great velocity. The plumber blocks in this case are secured to beams of wood or iron ; but, by preference, to large blocks of stone, built upon and secured to a heavy mass of masonry. The pulleys ( $b^{0}$ and $c^{9}$ ) in these machines are placed upon the overhanging ends of the shafts ( $b^{1}$ and $c$ ) as shown. The discs for the cages are mado of wrought-iron plates, the large disc for each set of cages being riveted to cast-iron bosses ( $b^{\times}$and $c^{\times}$), one of which is secured upon the end of each solid shaft as shown.

In disintegrators of the type shown by figures 15 to 20 inclusive, and in all other types of the machine, where possible, I prefer to make (though not so shown in the drawings) the journals and brasses, both for the inside and outside bearings, of exactly the same size, so that they may be exchanged from top to bottom, and from one journal to the other, as they wear; those brasses wearing the fastest which are nearest the cages.

Figure 11 illustrates that combination and arrangement of disintegrator, according to the eighth part of my invention, where one end of the solid and one end of the hollow shaft have independent bearings in plumber blocks, the driving pulleys ( $b^{9}$ and $c^{9}$ ) being on the ends of the shafts on the outside of the bearings.

The hollow shaft may have ordinary bush bearings; but I prefer the arrangements shown for tightening, or some of the other arrangements for this purpose hereinbefore explained.

The hollow shaft may bave a second independent bearing (as show in dotted line) overhanging into the cage and properly covered, instead of having one of its bearings upon the solid shaft.

The large disc (b) in the above arrangement may be secured to the hollow shaft, and the small disc $\left(c^{2}\right)$ to the solid shaft, if desired.

I have now particularly described the nature of my improvements, and the manner of carrying the same into effect; and claim as my invention the several improvements as hereinbefore described, and illustrated by the accompanying drawings-that is to say, I claim as my invention-

Firstly.-The securing of the annular dise to the ring connecting the bars of the outer cage, or securing the outer cage when carrying the annular dise to the large disc, by bolts or other means, substantially as hereinbefore described and illustrated by the drawings.

Secondly.-The forming of the bars for the cages of cast-iron or steel, with cores of malleable metal; the introduction of one or more bars to clear the spaces between the cages; the applying of scrapers to the outer cage; and the production of currents of air by vanes applied to the outer cage ; each several improvement substantially as hereinbefore described and illustrated by the drawings.

Thirdly.-The use of several knives in the place of one hitherto used for breaking up lumps of material ; and also the use of one or more of these knives, secured to rotate with the inner or annular dise; each improvement substantially as hereinbefore described and illustrated by the drawings.

Fourthly.--The dishing of the dises of the cages, so that greater capacity may be obtained, and so that bars of uniform length may be employed, substantially as hereinbefore described and illustrated by the drawings.
A.D. 1869. No. 224.

Improved Machinery for disintegrating or pulverizing Minerals, Ores, \&c.
Fifthly.-The use of a cover to the mouth of the inner cage, with a spout or hopper applied; and the use of covers or casings made to ${ }^{\text { }}$ fit the outer edges of the outer cage ; each improvement substantially as hercinbefore described and illustrated by the drawings.

Sixthly.-The mode of lubricating the bearings of the hollow shaft, where used in disintegrators, by means of bosses upon the central shaft, substantially as hereinbefore described and illustrated by the drawings.

Seventhly.-The use of cones, brasses, or steps, inserted in two halves in the hollow shaft, in this class of disintegrators, which cones or brasses can be tightened when they wear, substantially as hercinbefore described and illustrated by the drawings.

Eighthly.-The mouncing of the central shaft in plumber blocks, and the hollow shaft concentric with the central shaft in independent plumber blocks; also dispensing with the hollow shaft, and in mounting each set of cages on separate solid shafts placed end to end; also the mounting of one or both ends of the hollow, and one end of the solid shaft, in independent bearings, each of the other bearings being reciprocally upon the other shaft; each improvement substantially as hereinbefore described and illustrated by the drawings.

In witness whereof, I, the said Thomas Carr, have hereunto set my hand and seal, this twentysecond day of May, in the year of our Lord one thousand eight hundred and sixty-nine.

MACHINE FOR MORTISING AND BORING WOOD.

## LETTERS OF REGISTRATION to Edward Greville, for a Machine for mortising and boring Wood.

[Registered on the 20th day of November, 1869, in pursuance of the Act 16 Vic., No. 24.]

BY His Excellency the Right Honorabie Somerset Richatd, Eari of Belmore, a Member of Her Majesty's Most Honorable Privy Council in Ireland, Governor and Commander-in-Chief of the Colony of New South Wales, and Vice-Admiral of the same.
TO ALL TO WHOM THESE PRESENTS SHALL COME, greeting:
WHfreas Edward Greville, of the City of Sydney, in the Colony of New South Wales, hath by his Petition humbly represented to me that he is the assignee of James Merrett and Georgo Gibbs, of Liverpool-street, in the City of Sydney aforesaid, who are tho authors or designers of a certain invention or improvement in manufactures, that is to say, of an invention of a certain Machine for mortising and boring Wood, which is more particularly described in the specification and sheet of drawings which are hereunto annexed; and that he, the aaid Petitioncr, hath deposited with the Honorable the Treasurer of the said Colony of New South Wales the sum of Twonty Pounds sterling, for defraying the expense of granting these Letters of Registration, as required by the Act of Council, sixteenth Victoria, number twenty-four ; and hath humbly prayed that I would be pleased to grant Letters of Registration, whereby the exclusive enjoyment and advantage of the said invention or improvement might be secured to him for a period of fourteen years: And I, being willing to give encouragement to all inventions and improvements in the arts or manufactures which may be for the public good, and having received a report favourable to the prayer of the said Petition, from competent persons appointed by me to examine and consider the matters stated therein, and to report thereon for my information, am pleased, with the advice of the Executive Council, and in exercise of the power and authority given to me by the said Act of Council, to grant, and do by theso Letters of Registration grant unto the said Edward Greville, his cxecutors, administrators, and assigns, the exclusive enjoyment and advantage of the said invention or improvement, for and during the term of fourteen ycars from the date hereof; to have, hold, and exercise unto the said Edward Greville, his executors, administrators, and assigns, the exclusive enjoyment and advantage therecf, for and during and unto the full end and term of fourteen years from the date of these presents next and immediately ensuing, and fully to be complete and ended: Provided always, that if the said Edward Grevillo shall not, within three days after the granting of these Letters of Registration, register the same in the proper office in the Supreme Court at Sydney, in the said Colony of New South Wales, then these Letters of Registration, and all advantages whatsoever hereby granted, shall cease and become void.

In witness whereof, I have hereunto set my sign manual, and have caused the present Letters of Registration to be sealed with the seal of the said Colony of New South Wales, at Government House, Sydney, in New South Wales, this seventeenth day of November, in the year of our Lord one thousand eight hundred and sisty-nine.

## Machine for mortising and boring Wood.

SPECIFICATIONS of a Machine to be called "Merrett and Gibbs' Patent Boring and Mortising Machine," for boring and mortising wood of every description, more particularly applicable for fencing and hurdle-making.
The machine consists of a wooden or iron frame (a). On the top of the frame, from end to end, runs an iron shaft (b), projecting at one end $4 \frac{1}{2}$ inches beyond the frame. On this shaft, and inside the frame, are six or more iron cog mitre wheels (c). On the end of the shaft, outside the frame, is a cast-iron spur cog-wheel (d) and pinion (c). Below this shaft runs another shaft ( $f$ ), also from end to end, projecting at each end. On the right hand end of this shaft is the cast-iron spur-wheel (d) which drives the top shaft by gearing into the pinion (c) placed on the end of the upper shaft (b); and on the left hand cand of the shaft is a fly-wheel (h) attached. On the top of the frame are two iron beds (I) running from end to end, carrying eix or more wrought-iron spindles. Each of these spindles is worked by the mitre cog-wheel (c) on the end of each spindle, with set-screw (s) in the wheel to adjust the same; and at the end of each spindle is a hole () bored up to receive the auger-bit ( $z$ ) or cutter of any description, whatever the work in progress may require The spindles are worked by the mitre-wheel of each spindle gearing into one of the mitre-wheels on the top shaft; and the whole is driven by the spur-wheel and pinion put in motion by crank-handle at the cnd of bottom shaft by manual power, and may be applied to steam or horse power.

A support (MM) slides on the outside of the frame supporting the timber to be bored, made to move by a small cog-wheel ( $N$ ) keyed on a shaft ( $P$ ), on which are two wooden barrels, connected with a foot-board by a rope or chain, to bring the wood in gradual contact with the auger or bit

The frames are kept together by bolts and stays running from side to side with a nut on the outside of the frame.

Improvements.
To do away with the bottom shaft on which the fly-wheel ( $h$ ) at present runs; also the spur-wheel (d) and pinion on the end of the top and bottom shaft, and to supply in their place on the top shaft six or more bevel-wheels.

EDW. GREVILLE,
5 August, 1869.
This is the specification referred to in the amnexed Letters of Registration granted to Edward Greville, this seventeenth day of November, 1869.

## REPORT.

Sydney, 1 November, 1869.
Sir,
The application of Mr. Edward Greville for Letters of Registration for a Machine for boring Wood, invented by Messrs. James Merrett \& George Gibbs, having been referred to us for report, we do ourselves the honor to state that we have examined the plan and specification accompanying Mr. Edward Greville's Petition, and we see no objection to Letters of Registration being granted as desired.

We have, \&e.,

IMPROVEMENTS IN FURNACES FOR SMELTING COPPER ORE, \&c.

## LETTERS OF REGISTRATION to Walter Watson Hughes, for Improvements in Furnaces for smelting Copper Ore, \&c.

[Registered on the 29th day of December, 1869, in pursuance of the Act 16 Vic., No. 24.]

BY Hrs Excellency the Rigift Honorable Somerset Richard, Earl of Bejarore, a Member of Her Majesty's Most Honorable Privy Council in Ireland, Governor and Commander-in-Chief of the Colony of New South Wales, and Vice-Admiral of the same.
TO ALL TO WHOM THESE PRESENTS SHALL COME, greeting:
whereas Walter Watson Hughes, of No. 48, Porchester-terrace, London, in that part of the United Kingdom of Great Britain and Ireland called England, gentleman, hath by his Petition humbly represented to me that be is the author or designer of a certain invention or improvement in manufactures, that is to say, of an invention for "Improvements in Furuaces for smelting copper ore and all other ores," which is more particularly described in the specification and shect of drawings which are hereunto annexed ; and that he, the said Petitioner, hath deposited with the Honorable the Treasurer of the said Colony of New South Wales the sum of Twenty Pounds sterling, for defraying the expense of granting these Letters of Registration, as required by the Act of Council sixteenth Victoria, number twenty-four; and hath humbly prayed that I would be pleqsed to grant Letters of Registration, whereby the exclusive enjoyment and advantage of the said invention or improvement might be secured to him for a period of fourteen years: And 1 , being willing to give encouragement to all inventions and improvements in the arts or manufactures which may be for the public good, and having received a report favourable to the prayer of the said Petition, from competent persons appointed by me to examine and consider the matters stated therein, and to report thereon for my information, am pleased, with the alvice of the Executive Council, and in exercise of the power and authority given to me by the said Act of Council, to grant, and do by tbese Letters of Registration graint unto the said Walter Watson Hughes, his exccutors, administrators, and assigns, the exclusive enjoyment and advantage of the said invention or improvement, for and during the term of fourtcen ycars from the date hereof; to have, hold, and exercise unto the said Walter $1-\mathrm{H}$

Watson

## Improvements in Furnaces for smelting Copper Ore, \&o.

Watson Hughes, his executors, administrators, and assigns, the exclusive enjoyment and advantage thereof, for and during and unto the full end and term of fourteen years from the date of these presents next and immediately ensuing, and fully to be complete and ended: Provided almays, that if the said Walter Watson Hughes shall not, within three days after the granting of these Letters of Registration, register the same in the proper office in the Supreme Court at Sydney, in the said Colony of Now South Wales, then theso Letters of Registration, and all advantages whatsoever hereby granted, shall ccase and become void.

In witness whereof, I have hereunto set my sign manual, and have caused the present Letters of Registration to be senled with the seal of the said Colony of New South Wales, at Government House, Sydney, in Ner South Wales, this twenty-eighth day of December, in the year of our Lord one thousand eight hundred and sixty-nine.
(...s.)

BELMORE.

## SPECIFICATION.

1st. The use of an inclined plane to save labour in moving the ore to be smelted from one end of a furnace, or set of furnaces, to the other end of the same furnaces, or from one kind of furnace in which the ore is calcined to another kind in which it is smelted, by which there is a saving of labour and also of heat, by the pushing of the calcined ore while hot into the reducing furnace.

The designer does not clain the making the floor of the furnace on an inclined plane as a new invention, but he does claim, as a new invention, to make the furnace incline both sideways and lengthways, and to use the incline as a connection between the two furnaces; that is to say, the use of the inclined plane itself in smelting may not be new, but the invention is, the use of it in the particular way of facilitating the delivery of calcined ore while still hot into the furnace required for the next process, that of reducing or smelting.
2. The mode of using the waste heat that escapes from the reducer (as shown and marked No. 4 in the plan accompanying) in calcining the ores which are to supply the reducer. It is not a new invention to utilize the waste heat of a reducer in calcining, as this has been done, by buitding the calciner above the reducer; but the inrention is, the placing the calcining furnaces in this particular position with reference to the reducer, as shown in the plan.
3. The construction of the heat-chamber under furnace (marked No. 3 in the said plan), by which the flame brought from the reducer (marked No. 4 in the said plan) passcs under and heats the floor of furnace marked No. 3 in eaid plan, and then passes over the ore in it.
4. The manner by which the heated gases are drawn from the heat-chamber by a blast of cold air, with which they unite, and the two together meeting with the unconsumed gases from the fuel as they enter the furnace (marked No. 4 in said plan), burst into intense flames.
5. The construction of the reducing furnace (marked No. 4 in said plan), and more particularly, first,-the processes of skimming the slag from the melted ore and of tapping the melted oro are conducted in furnaces (marked Nos. 5 and 6 in said plan), which are separate and distinct from the reducer (marked No. 4 in said plan), and which method has been adopted in order that the cold air which enters the furnaces in these processes may not cool the melted ore in furnace marked No. 4 in said plan; and secondly,-that the melted ore shall be caused to overflow into furnaces marked Nos. 5 and 6 in the said plan, by the ore which is pushed into furnace marked No. 4 in the said plan, from furnace marked No. 3 on the said plan.
6. The plan and construction of the skimming furnaces (marked Nos. 5 and 6 in said plan), and their position, so that the flames pass first over them and to the furnaces marked No. 4 in said plan, the heat-chamber and furnaces Nos. 3, 2, and 1 in said plan.

The new invention here is, placing the fire-grates at the skimming and tapping end of the set of furnaces, so that the hest freshly produced by the fuel is first usod where the greatest heat is required, and then passes on gradually to the processes which require less heat.
7. The combination into one of all the points named, for the purpose of smelting copper and other ores.

The following is a description of the copper smelting furnace, as shown in the plan sentherewith :-
A, B, C, represent three calcining furnaces set at an inclination of about one in six, both lengthways and sidoways.

The ore is first put into A by a hopper through the roof, and after remaining for a certain time, is pushed by men at rabble doors ana into B, and from there to C, where it remains until red hot. It is then pushed into smelting furnace D , and carefully spread all over the boiling metal, causing the latter to overflow into skimming furnaces EE, where the metal is allowed to settle, when the slag is drawn off through $a a$. The metal is not tapped from $b b$ until the furnaces EE are quite full.

The blast is admitted at GG, through small tapered holes (cccc), into fire-places (FE), causing the flame to pass through skimming furnaces EE into reducer D. The waste heat escapes from D into heatchamber $H$, under calcining furnaces $C$, by the flue $S$; it then passes up a number of small openings ( $d d$ ) into CB and A , and away to culvert or chimney.

## Improvements in Furnaces for smelting Copper Ore, \&c.

Hot gases are drawn from heat-chamber $H$, through passages $K K$, by jets of cold air passing rapidly through small tapered tubes, as shown at $M$, in conjunction with blast-pipe $P$; and these jets, coming in contact with the gases, become united with them, and on entering the furnaces at $R$ (in the flue between $\mathbf{E}$ and D ), and meeting the undegenerated gases as they pass from E to D , ignite, and are again used to heat reducer D.

In order to increase the effect of the heat in reducing furnace $D$, it is proposed to contract the flue $S$ leading from furnace $D$ to the heat-chamber $H$, so that the heat shall not readily escape, but shall be subjected to pressure by the use of the blast placed at $G$.

Also, in order to cause the hot gas more readily to be drawn from heat-chamber H into the flue $K$, I propose to regulate the number and size of the small flues (d) leading from heat-chamber (H) into calciner (C), so as to obtain the pressure required.

This is the specification referred to in the annezed Letters of Registration granted to Walter Watson Hughes this twenty-eighth day of December, 1869.

BELMORE.

## REPORT.

Sydney, 26 November, 1869.
Sit,
The application of Mr. Walter W. Hughes for Letters of Regostration for "Improvements in Furnaces for smelting copper ore and all other ores," having been referred to us, we hare the honor to report that we have examined the drawings and specification accompanying the same, and see no objection to the issue of Letters of Registration as prayed for.

We have, \&c.,

## IMPROVEMENTS IN PRESERVING MEAT AND ANIMAL MATTER, AND IN apparatus Employed FOR THAT PURPOSE.

## LETTERS OF REGISTRATION to Thomas Sim, for Improvements in preserving Meat and Animal Matter, and in Apparatus employed for that purpose.

[Registered on the 15th day of January, 1870, in pursuance of the Act 16 Vic., No. 24.]

#### Abstract

BY His Excellency the Rygit Honorable Somerset Ricifard, Earl of Belmone, a Member of Her Majesty's Most Honorable Privy Council in Ireland, Governor and Commander-in-Chief of the Colony of New South Wales, and Vice-Admiral of the same.

## TO ALL TO WHOM THESE PRESENTS SHALL COME, greeting:

WHEREAS Thoxas Snm, of Charleston, South Carolina, United States of America, Doctor of Medicine, hath by his Petition humbly represented to me that he is the author or designer of a certain invention or improvement in manufactures, that is to say, of an invention for "Improvements in preserving Meat and animal matter, and in apparatus employed for that purpose," which is more particularly described in the specification and sheet of drawings which are hercunto annexed; and that he, the said Petitioner, hath deposited with the Honorable the Treasurer of the said Colony of New South Wales the sum of Twenty Pounds sterling, for defraying the expense of granting these Letters of Registration, as required by the Act of Council, sixteenth Victoria, number twenty-four; and hath humbly prayed that I would be pleased to grant Letters of Registration, whereby the exclusive enjoyment and advantage of the said invention or improvement might be secured to him for a period of fourteen years: And I, being willing to give encouragement to all inventions and improvements in the arts or manufactures which may be for the public good, and having received a report favorable to the prayer of the said Petition, from competent persons appointed by me to examine and consider the matters stated therein, and to report thereon for my information, am plensed, with the advice of the Executive Council, and in exercise of the power and authority given to me by the said Act of Council, to grant, and do by these Letters of Registration grant unto the said Thomas Sim, his executors, administrators, and assigns, the exclusive enjoyment and advantage of the said invention or improvement, for and during the term of fourteen years from the date hereof ; to have, hold, and exercise unto the said Thomas Sim, his executors, administrators, and assigns, the exclusive enjoyment and advantage thereof, for and during and unto the full end and term of fourteen years from the date of these presents next and immediately ensuing, and fully to be complete and ended : Provided always, that if the said Thomas Sim shall not, within three days after the granting of these Letters of Registration, register the same in tho proper office in the Supreme Court at Sydney, in the said Colony of New South Wales, then these Letters of Registration, and all advantages whatsoever hereby granted, shall cease and become void.

In witness whereof, I have hereunto set my sign manual, and have caused the present Letters of Registration to be sealed with the seal of the said Colony of New South Wales, at Government House, Sydney, in New South Wales, this fourteenth day of January, in the year of our Lord one thousand eight hundred and seventy.
(L.s.)

## Improvements in preserving Meat and animal matter, \&c.

## SPECIFICATION.

To all whom it may concern, Be it known, that I, Tromas Simr, of Charleston, South Carolina, United States of America, Doctor of Medicine, have invented "Improvements in preserving Meat and animal matter, and in apparatus employed for that purpose," and I do horeby declare that the following is a full and exact description of the said invention, referenco being had to the accompanying drawing, and to the figures and letters marked thereon, that is to say :-
My invention consists, firstly,-in the employment or use of any of the sulphides of carbon, such for instance, as bisulphide of carbon, proto-sulphide of carbon, or carbonylic sulphide, applied in a gaseous form to meat or animal matters from which air has been partially or entircly removed, so that the said gas will be caused to permeate the meat or animal body to be preserved for the purpose named.

My invention consists, secondly,-in the use, in combination with any of the sulphides of carbon, of any suitable product of the destructive distillation of wood or coal.

My invention consists, thirdly,-in novel apparatus for carrying this operation into effect.
It is intended to apply this invention to the preserving of animal food of all kinds, as well as fish, and fish waste, for the manufacture of fertilizers, or any animal matters which it may be desired to keep fresh.

In the accompanying drawings, figure 1 is a plan, partly in horizontal section, of the apparatus under one of the various forms in which it may be made or arranged. Figure 2 is a vertical section thereof, in tho plane indicated by the line $x x$ on figure 1. Figure 3 is a vertical section in the plane indicated by the fine $y y$ on figures 1 and 2. Figure 4 is an eleration of the vat and its accessories hereinafter described.

The meat which is to be preserved, either in whole carcasses or in parts, is suspended from hooks within a vat or receiver (A), from which the air is then exhausted as completely as practicable, through a pipe (b), by an air pump (B), or other means.

The vat $A$ is then rapidly filled with gaseous bi-sulphide of carbon, proto-sulphide of carbon, carbonylic sulphide, or some equivalent gas, either with or without an admixture of phenic acid, methyl, or other product of the destructive distillation of wood or coal. If these are used, I employ them in the proportion of about one ounce thereof to one hundred cubic feet, of the gaseous sulphide of carbon, \&c., but I do not biad myself to these proportions.

The sulphides of carbon may be produced by any of the well known methods. Under the present illustration I cmploy for this purpose a retort (C), which is charged with charcoal and heated to redness.

Sulphur is then introduced through the pipe D, conducting down to a well ( $d$ ), in which the sulphur is burned. The sulphur vapour passing through, or in contact with, the incandescent charcoal, is converted into bi-sulphide of carbon, according to the well known process. This gas is conducted through a pipe (e), into a gas holder (E) of common construction, the lower part of which is in tho first instance filled with water for the purpose of excluding air, the said water boing afterwards drawn off and replaced by the gas.

At the time of introducing the gas into the exhausted recciver, both the gas and the receiver or vat should have a temperature of from $90^{\circ}$ to $120^{\circ}$ Fahrenheit (averaging $104^{\circ}$ ) ; and to iguard against the danger of cooling the meat to an injurious extent by the expansion in vacuo of the gas within the vat, I provide a supply of gas equal to about double the capacity of the vat, and admit it to the latter, instantaneously applying pressure by means of a suitable pump ( P ) in the gas supply pipe ( $6^{\prime}$ ), to make the influx of gas more rapid, and by continued pressure the curing process may be hastened.

The gas holder and the vat can be heated by hot water circulated through the pipes $G, H$, connecting with a reservoir (I), from which the water passes to and through the furnace $F$, and back to the reservoir through the pipe or pipes $J, J$, chambers $H$, around the vat A, receive hot water from the pipe $H$, for the purpose of heating the interior of the vat. Mrepresents a barometer, to indicate the extent of the vacuum. Within the vat $A, N$ is a thermometer to indicate the temperature.

The methyl or other vapour may be applied by placing an open vessel of suitable liquid within the vat A.

The great distinction between this process and others by which it has been attempted to preserve meat by chemical agents is that, by the use of the sulphides of carbon, either with or without phenic acid, methyl, or the product of the destructive distillation of wrod or coal, I effect a complete dialysation of the gases contained within the meat which otherwise would produce putrefaction.

The application of the sulphide in a gaseous form, while it effects the dialysation of deleterious matter, does not remove or injure any portion of the meat which it is desired to preserve; and when the process is completed, no sulphide remains within the meat, but it is all driven off or changed by dialysation; and meat heated by this process is permanently preserved from decomposition, and is not materially affected by atmospheric changes. The effects of this process in these respects are much more lasting than those of othor known processes.

Having thus described the nature of thio said invention and tho manner in which the same is to be performed or carried into effect, I wish it to be understood that I do not limit myself to the precise details of the process, or to the precise details in the arrangement and construction of the apparatus hereinbefore described, as these may be variously modified without departing from the nature and object of the invention; but what I. claim as new, and desiro to be secured to me, is,-

First.-The employment or use, for preserving meat or animal natter, of sulphides of carbon applied in a gaseous form, and made to permeate the matter to be preserved after the latter has been exhausted or partially exhausted of air.

Second.-I claim the use, in combination with sulphides of carbon, of phenic acid, methyl, or other product of the destructive distillation of wood of coal.

## A.D. 1870. No. 227.

## Improvements in preserving Meat and animal matter, \&c.

Third.-I claim the apparatus arranged and constructed to operate substantially as hereinbefore described and set forth.

In witness whereof, I have hereunto set my hand and seal, in the presence of tivo subscribing witnesses, this twenty-sixth day of February, in the year of our Lord one thousand eight hundred and sixty-nine.
Witnesses-
Octayios Kilait.
James. L. Ewin.

This is the specification reforred to in the annexed Letters of Registration; granted to Thomas Sim, this fourteenth day of January, 1870.

BELMORE.

## REPORT.

Sydney, 17 December, 1869.
Sir,
The application of Mr. Thomas Sim for Letters of Registration, for "Improvements in preserving Meat and animal matter, and in apparatus employed for that purpose," having been referred to us, we have the honor to report that wo have examined the specification and drawings accompanying the same, and see no objection to the issue of Letters of Registration as prayed for.

## IMPROVEMENTS IN THE MANUFACTURE OF STEARIC AND OLEIC ACIDS.

# LETTERS OF REGISTRA'TION to Johann Christian August Bock, Peter Taysen, and Thorkild Nicolay Brandt, for Improvements in the manufacture of Stearic and Oleic Acids. 

[Registered on the 15th day of January, 1870, in pursuance of the Act 16 Vic., No. 24.]

#### Abstract

BY His Excellency the Right Honorable Soyersey Richard, Eari of Belmore, a Member of Her Majesty's Most Honorable Privy Council in Ireland, Governor and Commander-in-Chief of the Colony of New South Wales, and Vice-Admiral of the same.

## TO ALL TO WHOM THESE PRESENTS SHALL COME, grecting:

Whereas Johann Christian Avgust Bock, of Copenhagen, in the Kingdom of Denmark, Doctor, and Professor, and Councillor of State, Peter Tatsen, of Leith, Scotland, and Thorkide Nicolay Brasidr, of the same place, have by their Petition humbly represented to me that the said Johann Christian August Bock is the author or designer, and the said Peter Taysen, and Thorkild Nicolay Brandt, are co-proprietors and part assignees of an invention for "Improvements in the manufacture of Stearic and Oleic Acids," which is more particularly described in the specification which is hereunto annexed ; and that they, the said Petitioners, have deposited with the Honorable the Treasurer of the said Colony of New South Wales the sum of Twenty Pounds sterling, for defraying the expense of granting these Ietters of Registration, as required by the Act of Council, sixteenth Victoria, number twenty-four ; and hath humbly prayed that I would be pleased to grant Letters of Registration, whereby the exclusive enjoyment and advantage of the said invention or improvement might be secured to them for a period of fourteen years: And I, being willing to give encouragement to all inventions and improvements in the arts or manufactures which may be for the public good, and haring received a report favourable to the prayer of the said Petition, from competent persons appointed by me to examine and consider the matters stated therein, and to report thereon for my information, am pleased, with the advice of the Executive Council, and in exercise of the power and authority given to me by the said Act of Council, to grant, and do by those Letters of Registration grant unto the said Johann Christian August Bock, Peter Taysen, and Thorkild Nicolay Brandt, their executors, admimistrators, and assigns, the exclusive enjoyment and advantage of the said invention or improvement, for and during the term of fourteen years from the date hereof; to have, hold, and exercise unto the said Johann Christian August Bock, Peter Tajsen, and Thorkild Nicolay Brandt, their executors, administrators, and assigns, the exclusive enjoyment and advantage thereof, for and during and unto the full end and term of fourteen years from the date of these presents next and immediately ensuing, and fully to be complete and ended : Provided always, that if the said Johnnn Christian August Bock, Peter Taysen, and Thorkild Nicolay Brandt, shall not, within three days after the granting of these Letters of Registration, register the same in the proper office in the Suprome Court at Sydney, in the said Colony of New South Wales, then these Letters of Registration, and all advantages whatsoever hereby granted, shall cease and become void.

In witness whercof, I have hereunto set my sign manual, and have caused the present Letters of Registration to be sealed with the seal of the said Colony of New South Wales, at Government House, Sydney, in New South Wales, this fourteenth day of January, in the year of our Lord one thousand eight hundred and seventy.

## Improvements in the Manufacture of Stearic and Oleic Acids.

SPECIFication of Johann Christlan Augugn Bock, of Copenhagen, in the Kingdom of Denmark, Doctor, and Professor, and Councillor of State, Peter TAYSEF, of Leith, Scotland, and Thorkind Nicoray Brandt, of the same place, for an invention entitled "Improvements in the manufacture of Stearic and Oleic Acids."
IT is well known that of all those manufacturers of Stearic Acid who work by distillation, almost every one has his own method of acidification and sulphuric saponification, with a view to decompose the neutral fatty substances.

In my mode of procedure, I can choose any method of acidification and saponification, by sulphuric acid, nitric acid, or hydrochloric acid, either concentrated or diluted by water, by agitation, or by boiling with water until the material is completely decomposed and rendered crystallizable.

The particulars of this acidification and saponification can be dispensed with, because they may be varied in endless ways, by alterations of the quantities of the acids and their strength, and the degree of temperature, or by the duration of the operation, according to the nature of the raw material used.

It is further well known that the fatty acids obtained by the sulphuric acidification and saponification are almost black, and that this black colour constitutes a great obstacle in the manufacture of fatty acids. Great efforts have been made to avoid or decrease this blackness, because it (the blackness) prevents full advantage being taken of valuable qualities of the fatty acids, so that hitherto only a small part of the concrete acids could be extracted by repeated pressure, while the dark substances remained behind in the oleic acid.

In the different methods of acidification and saponification, I totally disregard the black colour of the fatty acids-they may for me become quite black-my purport only is completely to decompose the material, and render it crystallizable.

The fatty acids thus produced might easily be distilled, but it is evident that it would be an immense advantage to avoid distillation altogether, as well as the use of super-heated steam, with their attendant fire risks, great expenses and surveillance, and the well known damage done to the fatty acids by exposing them to high degrees of temperature.

I have succecded in obtaining these desiderata, by removing completely the black substances without distillation, so that the fatty acids become as light-coloured as if they were saponified by lime, and herein consists my invention, which has never been practised by any one before me, and which 1 will now proceed to describe :-

1. When $I$ have completed the decomposition of the fatty acids, which now have a melting point of 48 to 50 degrees Celsius, and which are black or dark, I let them rest from twelve to sixteen hours. During this time a part of the black substances are precipitated in the sulphoglyceric water, and are drawn of along with it by a cock situated at the bottom of the vessel.
2. After this, the fatty acids are removed to another vessel, which ressel is prorided with two leaden tubes for steam, onc open and allowing the steam to escape into the material, the other closed. In this vessel I make the fatty acids boil, partly by free steam and partly by the closed steam pipe; and during the boiling, and while continuing agitation, 1 add an encrgetic oxidizing agent, such as a strong solution in water of one or more of the following substances :-

Bichromate of potassa,
Hypermanganate of potassa,
Hypochlorite of lime,
Nitric acid,
Hydrochloric acid,
Sulphuric acid, and

- Sulphurous acid.

In doing so, I maintain the strength of the solution of the oxidizing agents used, by alternately boiling with closed and open steam for two to three hours. I employ the above-mentioned oxidizing agents in the following proportions :-

| Either $l^{\frac{4}{4} \text { per cent. of bichromate of potash, }}$ |  |  |
| :---: | :---: | :---: |
|  | " | hypermanganate of potash, |
| 2 | " | hypochlorite of lime, |
| 5 | " | hydrochloric acid, |
| 1 | " | sulphuric acid, |
| $1{ }^{\frac{1}{2}}$ | " | nitric acid, |
| 4 | " | sulphurous acid. |

3. The effect of the above operation,-which I can carry out either in a separate vessel or in the same vessel in which the decomposition has taken place,-is, the complete oxidation of the black substances, by which their specific gravity is increased, so that now they may be precipitated.
4. After the agitation and boiling, the fatty acids are again left at rest for twelve to sixteen hours in the vessel, to allow of the precipitation of the black substances.
5. After this, the fatty acids are transferred to another vessel provided with an open steam pipe, and here they are again boiled for two or three hours with water or acidulated water.
6. Seyeral repeated washings by boiling after alternate rests are now sufficient to complete the elimination of all the black substances. The fatty acids are now as pale as if they bad been manufactured by lime saponification, and they have the great advantage that their melting point is raised to 50 to 52 degrees of Celsius.

## Improvements in the Mranufacture of Stearic and Oleic Acids.

7. Then follows the cooling, cold pressure, warm pressure, and the usual procedures.

Having now described my invention and its practical working, $I$ declare that what $I$ claim as my invention intended to be secured by Letters Patent, is my method of proceeding as abore described for the elimination of the black substances, by the agitation and boiling with the chemical oxidizing agents and by the following washings.

In witness whereof, I, the said Jobans Chrissinn Atacss Bocr, have hereunto set my hand and seal, this tenth day of July, in the year of our Lord one thousand eight hundred and sisty-nine.
J. C. A. BOCK.

This is the sjecification referred to in the annexed Letters of Registration, granted to Johann Christian August Bock, Peter Taysen, and Thorkild Nicolay Brandt, this fourteenth day of January, 1870.

## SACCHARATOR.

# LETTERS OF REGISTRATION to Wilson Hardy, for an improved Apparatus for the Manufacture of Sugar, termed a Saccharator. 

[Registered on the 2nd day of February, 1870, in pursuance of the Act 16 Vic., No. 24.]

BY Hif Excellency the Right Honorable Somerset Richard, Earl of Beimone, a Member of Her Majesty's Most Honorable Privy Council in Ireland, Governor and Commander-in-Chief of the Colony of New South Wales, and Vice-Admiral of the same.

## TO ALL TO WHOM THESE PRESENTS SHALL COME, greeting:

Whereas Wilson Hardy, of Mclbourne, in the Colony of Victoria, but at present of Crownstreet, Surry Hills, in the city of Sydney, in the Colony of Now South Wales, hath by his Petition humbly represented to me that he is the author or designer of a certain invention or improvement in manufactures, that is to say, of an invention of "an Improved Apparatus for the Manufacture of Sugar, termed a Saccharator," which is more particularly described in the specification and paper of drawings which are horeunto annexed; and that he, the said Petitioner, hath deposited with the Honorable the Treasurer of the said Colony of New South Wales the sum of Twenty Pounds sterling, for defraying the expense of granting these Letters of Registration, as required by the Act of Council, sixteenth Victoria, number twenty-four ; and hath humbly prayed that I would be pleased to grant Letters of Registration, whereby the exclusive enjoyment and advantage of the said invention or improvement might be secured to him for a period of fourteen years: And I, being willing to give encouragement to all inventions and improvements in the arts or manufactures which may be for the public good, and having received a report favourable to the prayer of the said Petition, from competent persons appointed by me to examine and consider the matters stated therein, and to report thereon for my information, am pleased, with the advice of the Executive Council, and in exercise of the power and authority given to me by the said Act of Council, to grant, and do by these Letters of Registration grant unto the said Wilson Hardy, his executors, administrators, and assigns, the exclusive enjoyment and advantago of the said invention or improvement, for and during the term of fourteen years from the date hereof; to have, hold, and exercise unto the said Wilson Hardy, his executors, administrators, and assigns, the exclusive enjoyment and advantage thereof, for and during and unto the full end and term of fourteen years from the date of these presents next and immediately ensuing, and fully to be complete and ended: Provided always, that if the said Wilson Hardy slall not, within three days after the granting of these Letters of Registration, register the same in the proper office in the Supreme Court at Sydney, in the said Colony of New South Wales, then these Letters of Registration, and all advantages whatsoever hereby granted, shall cease and become void.

In witness whereof, I have hereunto set my sign manual, and have caused the present Letters of Registration to be sealed with the seal of the said Colony of New South Wales, at Government House, Sydney, in New South Wales, this sccond day of February, in the year of our Lord one thousand eight hundred and seventy.

## Saccharator.

## SPECIFICATION.

The Saccharator, or the steam and hot air multitubular-flue saline and saccharine liquid Concentrator, is for the more rapid evaporation of liquids, particularly saline and saccharine solutions.
The apparatus consists of an iron flue, 12 feet high, 6 feet wide, and 3 feet deep, across which run iron tubes about 6 inches apart, and over each other in tiers about 8 inches apart. Underneath each tube, and running longitudinally, is a piece of serrated shect-iron. At the top of the flue is a fan-blast. Towards the top of the flue, and immediately over each tier of tubes, are the liquor pipes, perforated on the underside with numerous small holes, and connected with the liquor-supply cistern or clarificrs.

The iron tubes are connected, each series at alternate ends.
Steam or hot air can be used for heating the tubes, and would onter at the bottom series, and would wind through the whole of the series until reaching the top; it would then make its exit through the top of the flue, and thereby increase the draught within the same.

The liquor on being turned on would pass through the supply-pipes in drops on to the first series of tubes and divide equally over; the same would then drop off the points of the serrated iron on to tho next series, and thence from series to series until finally from the lowest into the receiving coolers.

The fan and steam-jet blast at the top would cause a strong current of air upward through the flue, and carry off the vapour as rapidly as it may be formed.

The incentor purposes applying a hot air blast from beneath upward when required, and in other cases closing the bottom of the flue wholly or partly, and draw off the vapour with the vacuum pump or fan-blast.

The flue may be constructed of masonry, wood, iron or other metal, and may be encased with any non-conducting material or with hollow walls, and be heated by steam, fire, or hot air.

The tubes may be made of iron or other metal of any shape or size.
The size of the apparatus can be extended indefinitely, to suit the purpose for which it may be required.

WILSON HARDY.

This is the specification referred to in the annexed Letters of Registration, granted to Wilson Hardy, this second day of February, 1870.

SPECIFICATION of Lubricator, as referred to in Petition to His Excellency the Governor for Letters of Registration, 22nd December, 1869.
Tre process of lubrication is by applying the oil to the journal or shafting, by means of revolving wheel of hardwood or other material set in framing, and to be laid in keep of axle-box, or otherwise attached according to circumstances.

Brushes to be fixed at front and back of wheel, to regulate the quantity of oil to be applied.
On the outside of the oil tank, springs are to be fixed, to preserve a slight pressure of the feeding wheel against journal or shaft.

The principle claimed in this invention is, the "Iubricating by means of revolving wheel or wheels of any thickness or dimensions feeding the lower surfaces of journal or shafting, the wheels being kept in motion by the action of the journal or shaft."

Sydney, 22 December, 1869.

This is the specification referred to in the annexed Letters of Registration, granted to Frederick Salisbury and James Morten, this ninth day of February, 1870.

## IMPROVEMENTS IN STEAM BOILERS.

LETTERS OF REGISTRATION to William Galloway and John Galloway, for
Improvements in Steam Boilers. [Registered on the 11th day of February, 1870, in pursuance of the Act 16 Vic., No. 24.]

## BY His Excellevcy the Righi Honorable Somferset Ricieard, Eabl of Belmorie, a Member of Her Majesty's Most Honorable Privy Council in Ireland, Governor and Commander-in-Chief of the Colony of New South Wales, and Vice-Admiral of the same.

TO ALL TO WHOM THESE PRESENTS SHALL COME, greeting:
Whereas Willinm Gathoway and Join Galloway, both of Manchester, in the county of Lancaster, England, have by their Petition humbly represented to me that they are the authors or designers of a certain invention or improyement in manufactures, that is to say, of an invention of "Improvements in Steam Boilers," which is more particularly described in the specification and the two sheets of drawings, marked $A$ and $B$ respectively, which are hereunto annexed, and that they, the said Petitioners, have deposited with the Honorable the Treasurer of the said Colony of New South Wales the sum of Twenty Pounds sterling, for defraying the expense of granting these Letters of Registration, as required by the Act of Council sistecnth Victoria, number twenty-four; and have humbly prayed that I would be pleased to grant Letters. of Registration, whercby the exclusive enjoyment and advantage of the said invention or improvement might be secured to them for a period of fourtcen years: And $I$, being willing to give encouragement to all inventions and improvements in the arts or manufactures which may be for the public good, and having received a report favourable to the prayer of the said Petition, from competent persons appointed by me to cxamine and consider the matters stated therein, and to report thercon for my information, am pleased, with the advice of the Erecutive Council, and in exercise of the power and authority given to me by the said Act of Council, to grant, and do by thesc Letters of Registration grant unto the said William Galloway and John Galloway, their executors, administrators, and assigns, the exclusive enjoyment and advantage of the said invention or improvement, for and during the term of fourteen years from the date hercof; to have, hold, and exercise nuto the said Willian Galloway and John Galloway, their executors, administrators, and assigns, the exclusive eujoyment and adrantage thereof, for and during and unto the full cind and term of fourteen years from the date of these presents

## Improvements in Steam Boilers.

next and immediately ensuing, and fully to be complete and ended: Providcd always, that if the said William Galloway and John Galloway shall not, within three days after the grauting of these Letters of Registration, register the same in the proper office in the Supreme Court, at Sydney, in the said Colony of New South Wales, then these Letters of Registration, and all adyantages whatsoever hereby granted. shall cease and become void.

In witness whereof, I have hereunto set my sign manual, and have caused the present Letters of Registration to be sealed with the Seal of the said Colony of New South Wales, at Government House, Sydney, in New South Wales, this tenth day of February, in the year of our Lord one thousand eight hundred and seventy.
(L.s.)

BELMORE.

## SPECTFICATION.

To all whom it may concern: Be it known that we, William Galloway and John Galloway, both of Manchester, in the county of Lancaster, England, have invented "Improvements in Steam Boilers"; and we do herely declare that the following is a full and exact description of the said invention, reference being had to the accompanying drawings, and to the figures and letters marked thereon, that is to say :-

Our invention relates, firstly, to an improved construction of boiler, wherein a communication is established between one water space of the boiler and another water space, by means of conical or tapering water tubes passing across the intervening flue or chamber between the water apaces, and so formed that the flange of the lower or smaller end of such tubes will pass through the hole in the flue which receives the upper or larger end of the tube.

By this arrangement the tubes can be readily fixed in position; for example, in the flues of Cornish boilers, by passing them along inside the upper space of the boiler and through the hole formed in the top of the fiue, to receive the upper end, the flange of such upper end being thus situated on and secured to the outer 'surface of the flue, while the flange of the smaller end is situated on and secured to the inner surface of the flue. By means of such tubes an effectual circulation of the water is maintained in all the water spaces of the boiler, while the tubes, in effectually taking up the heat from the flames of the furnace, greatly increase the steam-producing power of the boiler, and they at the aame time serve to strengthen the flues or chambers in which they are fixed.

Another of our improvements consists in forming, in the flues of Cornish or other boilers, side pockets or water chambers, projecting inwards from the sides of the flues, so that the flames and products of combustion from the furnace, in striking against such side pockets, are diverted and made to intermingle, whereby the consumption of smoke is facilitated, while at the same time an increased heating surface is afforded.

On the accompanying drawings are shown some of the various modes in which our improvements can be applied to steam boilers.

Figure 1, sheet I, shows a longitudinal section; figure 2 shows a sectional plan; figuro 3 shows an end view ; and figure 4 shows an enlarged transverse section on line xx, figure 2 , of a boiler (A), having two firc-grates (BB), opening into one elliptic flue (C). In this flue are fixed the before-described conical or tapering water tubes DD (shown in a detached perspective view at figure 5 ); the smaller ends of the tubes being for this purpose passed from the steam space of the boiler through the holes in the upper surface of the flue, and the tubes secured with their upper flange ( $d^{1}$ ) to the outer surface of the flue, and with their lower flange ( $d^{2}$ ) to the inner surface thereof, as shown. The tubes are by this arrangement capable of being easily and rapidly fixed in position, and are also as easily removed, when defective, to be replaced by new tubes, by simply cutting off the rivet-heads, and withdrawing the tube through the upper hole.

By the arrangement of the tubes as shown, their outer surfaces are brought into intimate contact with the flames from the furnaces, and effectually take up the heat therefrom, thus greatly increasing the steam-producing power of such boilers. The steam generated upon the inner surfaces of the tubes is capable of ascending freely into the steam space above, owing to the inclined position of such surfaces. These tubes also eflect, as before stated, a perfect circulation of the water in the upper and lower water spaces, in addition to which they strengthen the flue against collapsing. It will bo readily understood that such conical water-tubes and pockets may be applied with great advantage to various other constructions of steam boilers, such as upright boilers, elephant boilers, \&c., \&c. ; in fact, to all boilers where two water spaces are capable of being connected together by tubes.

In the sides of the flue $C$ are fixed the before-described side pockets or water chambers $\mathrm{EE}^{1}$, projecting into the flue, as shown, and communicating at the back with the water spacc of the boiler.

Such side pockets may. either be made to project considerably, as at EE, or only slightly, as at EL (shown in a detached perspective view at figure 6). In being employed in conjunction with the conical tubes D, as shown, they effectually direct the flames aud hot gases anong the latter; and if employed alone, without such tubes, they serve to divert the current of such products of combustion, so as to cause them to intermingle effectually, and thereby increase the combustion of smoke, and at the same time they afford very effectual additional heating surface for the production of steam. Such side pockets may cither be arranged as shown on the drawing, or those at E may be employed without those at $\mathrm{E}^{1}$, and vice versa, or they may be arranged in any other manner.

Figure 7, shcet II, shows a transverse section, and figure 8 shows a part sectional plan of a singleflue Cornish boiler (A), with our improvements applied thereto. In this arrangement the conical tubes $D$ are arranged diagonally, as indicated. $E$ are the side pockets, as before; these may also be arranged in a diagonal or sloping position, as at figure 9. Tigure 10 shows a transverse section, and figure 11 shows a longitudinal section of a two-flued boiler (A), in the fiues of which the tubes may either be placed vertically, as at D , or diagonally, as at $\mathrm{D}^{1}$.

## Improvements in Steam Boilers.

Having thus described the nature of our improvements, and in what manner they are to be carried into effect, we wish it to be understood that we do not limit ourselves to the combined use of our improvoments as shown on the accompanying drawings, as each improvement may with equal advantage be employed independently of the other; but what we claim is-

First.-Constructing stean boilers wherein the water spaces are connected by means of conical or tapering water tubes, so formed that the flanges of the smaller ends thereof will pass through the holes formed to receive the larger ends of the tubes.
Sccond.-Constructing steam boilers with flues having side pockets, or side water chambers, substantially as set forth.
Third.-Constructing and using conical or tapering water tubes for steam boilers, such tubes being so formed that the flanges of the smaller ends thereof will pass through the holes formed in the boiler to receive the larger ends of the tubes.
Fourth.-Constructing and using side pockets, or side water chambers, for the flues of steam boilers, substantially as set forth.

In witness whereof, we, the said William Galloway and John Galloway havo hereunto set our hands and seals, this twenty-sixth day of August, one thousand eight hundred and sisty-nine.
WILLIAM GALLOWAY.

This is the specification referred to in the annexed Letters of Registration granted to William Galloway and John Galloway, this tenth day of February, 1870.

A.D. 1870, 10th February. No. 233. PORTER AND COMPANY'S PATENT TILLER.

LETTERS OF REGISTRATION to James Porter and Herbert Perkins, for Improved Tiller.

[Registered on the 11th day of February, 1870, in pursuance of the Act 16 Vic., No. 24.]

#### Abstract

BY His Excellency mie Rreme Honorable Somenset Richard, Earl of Belmore, a Member of Her Majesty's Most Honorable Privy Council in Treland, Governor and Commander-in-Chief of the Colony of New South Wales, and Vice-Admiral of the same.

\section*{TO ALL TO WHOM THESE PRESENTS SHALL COME, greeting:}

Whereas James Porter and Herbert Perkins, both of the City of Sydney, in the Colony of Now South Wales, have by their Petition humbly represented to me that they are the authors or designers of a certain invention or improvement in manufactures, that is to say, of an invention to be known by the name of "Porter and Company's Patent Tiller," which is more particularly described in the specification, description, and the two shects of drawings, marked A and B respectively, which are hereunto annexed; and that they, the said Petitioners, have deposited with the Honorable the Treasurer of the said Colony of New South Wales the sum of Twenty Pounds sterling, for defraying the expeuse of granting these Letters of Registration, as required by the Act of Council, sixteenth Victoria, number twenty-four ; and have humbly prayed that I would be pleased to grant Letters of Registration, whereby the exclusive enjoyment and advantage of the said invention or improvement might be sccured to them for a period of fourteen years: And I, being willing to give encouragement to all inventions and improvements in the arts or manufactures which may bo for the public good, and haring received a report favourable to the prayer of the said Petition, from competent persons appointed by me to examine and consider the matters stated therein, and to report thereon for my information, am pleased, with the advice of the Executive Council, and in exercise of the power and authority given to me by the said Act of Council, to grant, and do by these Letters of Registration grant unto the said James Porter and Herbert Perkins, their executors, administrators, and assigns, the exclusive enjoyment and advantage of the said invention or improvement, for nnd during the term of fourteen years from the date hereof; to have, hold, and cxercise unto the said James Porter and Herbert Perkins, their cxecutors, administrators, and assigns, the exclusive enjoyment and adrantage thereof, for and during and unto the full end and term of fourteen years from the dato of those presents next and immediately ensuing, and fully to be complete and ended: Provided always, that if the said James Porter and Herbert Perkins shall not, within three days after the granting of these Letters of Registration, register the same in the proper office in the Supreme Court at Sydney, in the said Colony of New South Wales, then these Letters of Registration, and all advantages whatsoever hereby granted, slall cease and become roid.

In witncss whereof, I have hereunto set my sign manual, and have caused the present Letters of Registration to be sealed with the senl of the said Colony of New South Wales, at Government House, Sydney, in Now South Wales, this tenth day of February, in the year of our Lord one thousand eight hundred and scyenty.

## SPECTFICATION.

(The drawings accompanying this specification are only given as an illustration of the application of the invention.)
Tye apparatus consists of the following parts. (Tig. 2, Plate 1.)
LL. Lever arms of iron or other.material, hung on iron stanchions or bearing (AA), securely bolted to the deck.

BB. Metal friction wheels fitted to the lever arms.
CC. Slots in the yoke or crank to receive the wheels BB.

DD. A slotted yoke or crank of iron or other material fitted to the rudder-head E , either by means of bolts, keys, or any other approved fastenings.

FF. The blocks to receive the tackles to be rove in this case through sheaves or blocks attached to the deck, or in a combing arranged to enclose the whole apparatus, and from thence on to the barrel of the spindle connected with the steering wheel.

Fig. 2, Plate 1, is a plan showing the position with the helm hard down.
Fig. I, Plate 1, is the side elevation and section through the rudder-head with the helm amidship.
Fig. 1 and 2, Plate 2, show a manner of working the apparatus with the lever arms in a different position, to which the abovo specification equally applies.

Fig. 3, Plate 2, shows the working of a single-action tiller on this principle, with the tiller disconnected from the crank.

Having thus described our invention and the manner of working it, what we wish to claim is-
1st. The arrangement of compound levers acting as described in this specification, whether there be one or more slots or wheels or levers, and whether the action is in a horizontal or in a vertical direction.
2nd. The application of this apparatus with tackles, screws, or toothed wheels to communicate the motion to the levers, attached to any portion of the lever arms, and with the tackles rove in any manner that may be necessary.
3rd. The application of this invention with levers of different lengths, by which means any increase of either power or speed can be obtained.
4th. The application of the above-described arrangement of levers to the steering of ships, with either one or more levers, yokes or cranks, or friction wheels or pins, fixed in the manner and position described, or in any other position as may best suit the conditions of the ship into which it is to be fixed.
5th. That in constructing this apparatus the different constitueut parts may be so altered in form, number, and shape as may be found neccssary.

JAMES PORTER.
HERBERT PERKINS.
This is the specification referred to in the annexed Letters of Registration, granted to James Porter and Herbert Perkins, this tenth day of February, 1870.

BELMORE.

## fitlue of Patent.

This invention to be known by the name of "Porter and Company's Patent Tiller."

## Description.

$\dot{T}$ Tirs is an improved apparatus for steering ships, in which the action of the rudder is governed and directed by one or more tillers amung on pivots on fixed stanchions or bearings, and working in slots in a wroughtiron yoke or crank around the rudder-head, by which means a compound accumulative power is acquired.

The principal advantages of this steering apparatus that Messrs. Porter and Perkins propose to patent are-

1. Increase of power.
2. Increase of speed in communicating the impulse to the rudder.
3. Economy in manufacture.
4. In obviating the possibility of any part carrying away that cannot be refired by an ordinary ship's carpenter.
5. Duplicatcs of erery part of the machine could be carried at a small cost in the ship's s'tores.
6. In the fact that nearly all the strain is taken off the helmsman's hand.
7. That the power communicated to the rudder is an accumulative one, and that the greater the strain ensuing from the rudder being moved through an increasingly large angle with the fore and aft line of keel, the loss the strain is felt by the steersman.
Thus, in the case of a ship close hauled in heavy weather, with her helm more or less over, the tillers, as shown in Fig. 2, Plate I, are in such a position that the strain, with the rudder in this case at an angle of $42^{\circ}$, becomes nearly imperceptible, while with the rudder at an angle of $45^{\circ}$, the whole of the resistance is thrown into the pins, as shown at PP in Fig. 2, Plate I, and the strain is thus completely neutralized.
Thus the startling result is obtained that one man could hold the helm hard down or up in any weather, without feeling the resistance in any perceptible degree.

## Porter and Company's Patent Tiller.

8. That the kicking of the helm, now such a serious source of inconrenience and danger, is completely obviated by the rudder being held more firmly.
9. A great saving in labour is effected, as one man with this apparatus may be able to do the work of at least four with any of the ordinary steering gears.

JAMES PORTER. HERBERT PERKINS.

This is the description referred to in the annexed Letters of Registration, granted to James Porter and Herbert Perkins, this tenth day of February, 1870.

## IMPROVEMENT IN QUARTZ-CRUSHING MACHINERY.

LETTIERS OF RUEGISTRATION to Frederick Beer; for an Improvement in Quartzcrushing Machinery.
[Registered on the 28th day of February, 1870, in pursuance of the Act 16 Vic., No. 24.]

#### Abstract

BY Fis Excelienct the Rigit Honobable Somerset Richard, Barl of Belmore, a Member of Her Majesty's Most Honorablo Privy Council in Ireland, Governor and Commander-in-Chief of the Colony of New South Wales, and Vice-Admiral of the same.

## TO ALL TO WIIOM THESE PRESENTS SHALL COME, greeting:

WHEREAS Frederick Beer, of Sydney, in the Colony of New South Wales, Doctor of Medicine, hath by his Petition humbly represented to me that he is the anthor or designer of a cortain invention or improvement in manufactures, that is to say, of an invention for an Improvement in Quartz-crushing Machinery, which is more particularly described in the specification which is hereunto annexed; and that he, the said Petitioner, hath deposited with the Honorable the Ireasurer of the said Colony of New South Wales the sum of Twenty Pounds sterling, for defraying the expense of granting these Letters of Registration, as required by the Act of Council, sisteenth Victoria, number twenty-four; and hath humbly prayed that I would be pleased to grant Letters of Registration, whereby the cxelusive enjoyment and advantage of the said invention or improvement might be secured to him for a period of fourteen years: And I, being willing to give encouragement to all inventions and improvements in the arts or manufactures which may be for the public good, and having received a report farourable to the prayer of the said Petition, from competent persons appointed by me to oxamine and consider the matters stated therein, and to report thereon for my information, am pleased, with the advice of the Executive Council, and in exercise of the power and authority given to me by the said Act of Council, to grant, and do by these Ietters of Registration grant unto the said Frederick Beer, his cyecutors, administrators, and assigns, the exclusive enjoyment and advantage of the said invention or improvement, for and during the term of fourteen years from the date hereof; to have, hold, and exercisc unto the said Frederick Beer, his executors, administrators, and assigns, the exclusive enjoyment and advantage thereof, for and during and unto tho full end and term of fourteen years from the date of these presents next and immediately ensuing, and fully to be complete and ended: Provided always, that if the snid Frederick Beer shall not, within three days after the granting of theso Letters of Registration, register the same in the proper offee in the Suprome Court at Sydney, in the said Colony of New South Wales, then these Letters of Registration, and all advantages whatsoever hereby granted, shall cease and become void.

In wifness whereof, I have hercunto set my sign manual, and have caused the present Letters of Registration to be sealed with the scal of the stid Colony of New South Wales, at Government House, Sydney, in New South Wales, this twenty-ifth day of February, in the year of our Lord one thousand cight hundred and seventy.

## Improvement in Quartz-crushing Machinery.

## SPECIFICATION.

The said invention consists in connecting with each stamper one or several springs of the requisite resisting power, thus allowing a great reduction to be made in the weight of the head of the stamper, requiring less fall than a stamper descending by its gravitation only, and enabling the one stamper to make with ease from 250 to 300 strokes per minute, whilst those at present in use cannot be worked quicker than 80 strokes per minute. The springs themselres may be single or double elliptical springs, strengthened with leaves as required. Thus for example, whilst a crusbing-stamper with a head of 600 pounds, a 10 -inch fall, and with 80 strokes per minute, is considered the most effective appliance at the present, as exemplified in the Trunkey Creek Quartz-crushing Plant,-with my improvement, one head of 200 pounds weight and two springs of 200 pounds resistance each, a five-inch fall only, will equalize the accumulated momentum or power of stroke; whilst instead of 80 , at least 250 strokes per minute can be obtained, so that with one-half the steam-power (the leverage required to raise the stamper five inches being only one-half), from three to four times the work of one stamper will be obtained; or in other words, one stamper fitted with appropriate springs will perform (assuming the stean-power the same) the work of five or six ordinary ones, as shown by model and photograph.

The steam-reaction wheel or turbine, with two or more arms, is fixed on to the horizontal shaft or asis of the levers raising the stampers alternately, the steam entering at the centre and issuing out on opposite points, at the sides near the ends of the arms, thus giving a direct action in one direction, namely the direction required to raise the stampers as shown by photograph and by the model, which has thus been worked by steam. The wheel is encased in a sort of hood of thin copper-sheeting or other good conducting metal, of ample dimensions, offering a large surface, and which serves as a condensor of the waste steam by air principally. This casing ends below in a worm, by which the steam itself, or condensed to water, reaches a small rescryoir fixed to the uppermost part of the boiler, and from which the boiler is fed, the water entering the boiler by gravitation only, by means of a slowly revolving chambered cock. This hot-water well communicates upwards with the air by a spiral worm, to recondense and reconduct any vapours ascending from the surface of the basin, whilst the water therein remains always at the boiling point. Thus the waste steam is completely condensed (without making a vacuum), partly by surface condensation in the hood by the external air, and partly by the water accumulating in the hot well, the surplus steam being conducted therein by the worm from the hood. Both means of condensation of the waste steam may of course be assisted, if found necessary, by some further surface condensation, either by cold water circulating on the outside of the hot well, or by a shower-bath applied to the hood and reconducting the water to the reservoir from which it was drawn by the centrifugal pump attached to the engine. There is in no way any escape of steam by the ordinary working of the engine, whilst any loss through the safety-valve, by the steam-whistle, \&c., can be made good at once by adding water to the hot well from the cold water encircling it as a bath. The supply of water to be introduced with each revolution of the chambered cock is adjusted to replace the ateam expended in the working of the turbine; thus, for example, the volume of water reintroduced by one revolution of the cock will represent the condensed volume of steam of a given number of revolutions of the turbine, the chamber in the cock being adjusted by $a$ screwbolt at the back, increasing or diminishing the chamber.

I claim to have produced by these various improvements and their combinations an engine or machine for Quartz-crushing purposes, vastly superior in every respect to those now in use.

The following are some of its advantages :-
(1.) With the same steam-power an effect at least fivefold can be obtained, or one stamper can be made to do the work of five, whilst the arms of the reaction-wheel, acting as levers, can be elongated by screwing on sections, or as in telescopes, and thus the power is increased at pleasure.
(2.) By the regulation of the springs with the nut on the screwshaft of the stamper, the amount of force required to crush any particular kind of stone may be adjusted with nicety, without requiring an alteration in the height of the stroke; whilst with a kind of stirrup-iron and screw from the bcam above (not shown in model), the action of the springs may be separately used or entirely suspended; thus the force of the stroke of the stamper alone can be used, or doubled and trebled, \&e., at pleasure, without much trouble or loss of time, by the actions of the springs, without even requiring the stopping of the engine when at work. The use of compressed air, or of a vacuum instead of springs, does not give these advantages, leaving out of question the expense of providing each stamper with an aircylinder, and the difficulty of perfect packing, lubrication, \&c., connected therewith.
(3.) Less bulk and less weight of material, and consequently less expense tbrough carriage, or whilst the heads of the stampers require repair.
(4.) Less original cost.
(5.) Great simplicity in the machinery. Neither cylinders, pistons, nor piston-packings, nor eccentrics, or slide-valves, are required, and the friction of parts is reduced to a minimum; whilst a drum, to act as a fly-wheel, and to carry a belt to drive a circular saw, or a centrifugal pump (if required to assist the complete surface condensation of the steam), may be added to the other side of the driving shaft, and a small cog-wheel fixed at its end to turn with it, by a suitable connection with a proportioned cogwheel and rod, the chambered cock on the boiler.
(6.) The engine is easily repaired, which in the far interior, with hilly country and bad roads, and far from engineering works, is of some moment.
(7.) The machine wastes very little water, as all the steam is continually recondensed, and reintroduced into the boiler; and any water required from the pump to assist surface condensation returns unvapourized to the well, which is of importance in localities where water is scarce, and in dry seasons.

## Improvement in Quartz-crushing Machinery.

(8). A chambered cock turned by a screw, to feed the boiler, is much more simple and cheaper, and requiring scarcely a fraction of the power required with the usual force-pump, with its gearing, crooked water-passages, or with donkey engines.
(9.) The feedwater entering the boiler at the boiling point saves much heat, which where wood only has to be used as fuel is of importance; and as the feedwater enters the boiler from above, the circulation in the boiler is assisted, being in harmony with the principle of con vection of heat in liquids, the coolest particles of water descending by gravitation on the sides of the vessel, and the more expanded ones ascending in the centre.
(10.) The boiler cannot "scale," as the water contains never more carthy particles than when charged for the first time, and no "brining" can occur from any cause, and hence no "blowing off" being required, a matter of importance where otherwise hard or muddy water has often to be made use of, encrusting the boiler rapidly.
I claim to have produced a crushing plant of portable size, and accessible to mining parties with small means, - a kind of prospector's Quartz-crushing Engine, which one horse may move about; the boiler, engine, and stamp-bor, not weighing over one ton altogether; which may moreover be speedily erected, and which will yet crush from five to ten tons of stones per day; or one suitable, if enlarged in its dimensions, for large Crushing Companies.

The cost of making, conveying, and working an engine of my invention, will not exceed one-third of the cost of engine and stampers at present in use, assuming their effect as equal; but where already the expense of an ordinary engine has been incurred, the special advantages of spring-stampers alone may be adopted, and still produce a five-fold effect over the stampers at present in use; and as the springs can easily be changed, an absolute command of size and strength, and consequent power of stroke, independent of the weight of the stamp-head itself, can be had.

The use of very high-pressure steam to work the spring-stampers by a reaction-wheel offers many obvious advantages.

This is the specification referred to in the annexce Letters of Registration, granted to Frederick Beer, this twenty-fifth day of February, 1870.

advantage

## Improvements in the Preservation of Animal and Vegetable Substances.

advantage thereof, for and during and unto the full end and term of fourteen years from the d ate of these presents next and immediately ensuing, and fully to be complete and ended: Provided always, that if the said Richard Jones shall not, within threc days after the granting of these Letters of Registration, register the same in the proper office in the Supreme Court at Sydney, in the said Colony of New South Wales, then these Letters of Registration, and all advantages whatsoever hereby granted, shall cease and become roid.

In witness whereof, I have hereunto set my sign manual, and have caused the present Letters of Registration to be scaled with the seal of the said Colony of New South Wales, at Government House, Sydncy, in New South Wales, this eleventh day of March, in the year of our Lord one thousand eight hundred and seventy.

BELMORE.

## TO ALL TO WHOM THESE PRESENTS SHALL COME, I, Richard Jones, of Botolph-lane, in

 the city of London, merchant, send greeting.Whereas I am desirous of obtaining Royal Lettera Patent for securing unto me Her Majesty's special license that I, my executors, administrators, and assigns, and such others as $I$ or they should at any time agree with, and no others, should and lawfully might, from time to time, and at all times during the term of fourteen years, to be computed from the day on which this instrument shall be left at the office of the Colonial Secretary, make, use, excrcise, and vend within the Colony of New South Wales and its Dependencics, an invention for "Improvements in the Preservation of Animal and Vegetable Substances to be used as Food"; and in order to obtain the said Letters Patent I must, by an instrument in writing under my hand and seal, particularly describe and ascertain the nature of the said inrention, and in what manner the same is to be performed, and must also enter into the covenant hereinafter contained: Now know ye, that the nature of the said invention, and the manner in which the same is to be performed, is particularly described and ascertained in and by the following statement (that is to say):-In the preservation of animal and vegetable substances to be used as food, it is customary to subject the matters to be preserved in cases to heat, in liquid, which in some instances is simply water; in others, it is a solution of muriate of lime ; and in some instances also, it is oil that is so used. The temperature employed in the several instances varies, but generally a heat of from $212^{\circ}$ to $260^{\circ}$ of Fahrenheit is employed; the object of the heat being, by the steam generated in the cases containing the substances to be preserved, in some processes, to drive out from such cases the atmospheric air contained therein and the destructive or decomposing air and gases contained in the tissues of the contained matters to be preserved, and to effect the cooking of the contained matters.

When boiling water is employed as the medium for obtaining the desired heat to the cases containing the matters to be preserved, those cases are often hermetically closed when they are first put into the water, and then, after remaining in the boiling water a time sufficient for the contents thereof to be cooked, the cases are pierced, when the contained air in an expanded state escapes by the opening thus produced. This opening is then closed so as again to seal the cascs, when they are again immersed in the boiling water to complete the cooking; but by this method it is found that the contained matters are very injuriously affected by being very much over-cooked.

When the cases containing the substances to be preserved are boiled in a solution of muriate of lime or other liquid whose boiling-point is higher than that of water alone, there is generally left in the top of each case containing the substances to be preserved a small hole or aperture through which the contained air or gases may escape, and when the contained substances to be preserved are fully cooked, these holes or apertures are hermetically closed, and then the cases with these contained substances to be preserved are again subjected to a high heat for some time; but the result by this method also is that the contained substances are too much cooked.

The object of my improvements is to facilitate the removal of the atmospheric air from the cases containing the substances to be preserved, and of the air and gases in the tissucs of such substances, and also the cooking for the proservation of such substances by the combined or relative use of the exhausting means with the cooking process. For this purpose, the cases (usually formed of tin) containing the matters to be preserved are attached-each by a small pipe baving a tap in it-to a suitable exhaust apparatus, in order that, as desired, a vacuum or partial vacuum may be created in the cases through the pipes connecting them with the exhaust apparatus. The cases thus arranged, in respect of the vacuum apparatus, are also placed in a bath of boiling water, when the tap in each pipe, from a case to the exhaust apparatus, is turned so as to admit of free passage between the interior of cach case and the exhaust apparatus, for (say) one or two minutes, by which the air contained in the cases will be withdrawn therefrom, and wholly or in part from the contained substances, thus getting clear of the greater portion of the decomposing or destructire element in the substances to be preserved before the cooking thereof begins. The taps in the connecting-pipes to the exhaust are then turned off, and the cooking of the contained substances by the heat of the bath then begins, and is continued for (say) from twenty to ninety minutes, according to the size of the case, or the quantity or character of the contained substances to bo preserved, during which time-the heat of the contents of the cases being raised to about a temperature of $212^{\circ}$ Fahrenheit-the air and gases contained in the food arc thus drawn or driven to the outside of the food, when the taps to the respective cascs are again turned, to open a passage to the exhaust apparatue, by which means the remaining air or gas is withdrawn from the substances for food contained in the cases. The taps are then closed, and the cooking is continued until the article is properly cooked, when the taps are turned, to open the passages between the respective cases, and the exbaust and any remaining air is entirely withdrawn. The operation on the contained substances being completed, the connecting tubes from the cases to the exhaust are then separated and closed or sealed.

## Improvements in the Preservation of Animal and Vegetable Substances.

When using a solution of muriate of lime as the medium for receiving the cases and heating the substances contained in such cases, I employ a temperature to such liquid of about $228^{\circ}$ Fahrenheit, and the process is conducted otherwise in a similar manner to when boiling water is used, but for a shorter space of time. The amount of time of boiling, and also of the vacuum, is varied to the contents and size of the cases containing the matters under operition.

The time when and during which the matters under operation in the cases are subject to the action of the exhausting means must also be determined by the amount of moisture which it may be desirable to withdraw from the matters under operation, and whether the article of food is intended to be boiled, roasted, stewed, or otherwise treated. The number of times the contents of the cases may be repeatedly subjected to the action of the exhausting means during the preserving process may be varied, and in some instances it is desirable to have the articles cooked entirely in vacuum.

With roast meats, poultry, game, and others, the liquid juice is withdrawn from the article during the operation for preserving, but it is drawn into and retained in the exhaust means, and the value of it is not depreciated for use.

With boiled or stewed meats, fish, and others, requiring gravy, juice, or sauce in the case with them, such may be added through a small tube from a boiler or other supply containing the same, such tube being provided with a small tap or stop-cock. When the air has been exhausted from the case containing the food to be preserved, the gravy or other liquid required may flow in by the other pipe from a suitable supply. The quantity of such gravy, juice, or sauce may be measured by a gauge or register.

Various methods may be adopted for obtaining the desired vacuum, but that which I find to answer well consists in the use of a pipe descending from a tank to (say) about thirty-two feet into an open well or receiver. This pipe is kept closed by a suitable tap or valre until the tank is filled and closed airtight; then by opening the tap or valve the weight of the column in the pipe will produce the desired extent of exhaustion, or it may be obtained by an air-pump or other suitable means. I am thus enabled to use a tomperature in the heating fluid as low as $212^{\circ}$ Fahrenheit, or even lower, for the necessary cooking of the matters in the cases.

If desired, nitrogen gas or other inert or non-decomposing gas or liquid may be introduced to fill up the cases and prevent injury to them by collapsing.

Having thus described my invention, I would have it understood that I an aware that it has heretofore been proposed to operate on animal and vegctable matters for the preservation of them for food, by the employment of exhausting means in comection with the heating means; but by such method the exhausting means was cmployed to act previously to the cooking process, and such, to the best of my belief, was not found to answer. I do not, therefore, claim the same when separately considered; but what I claim is, the method of operating for the preservation of animal aud vegetable substances to be used as food, by exhausting the air and contained gases from the cases containing the food to be preserved during the operation of heating for the cooking ; also after the desired cooking has been effected; and also the effecting of such cooking entirely under vacuum substantially as described.

And I do bereby, for myself, my heirs, executors, and administrators, covenant with Her Majesty, her Heirs and Successors, that I believe the said invention to be a new invention as to the public use and exercise thereof, and that I do not know or beliere that any other person than myself is the true and first inventor of the said invention, and that I will not deposit these presents at the office of the Colonial Secretary with any such knowledge or belief as last aforesaid.

In witness whereof, I, the said Richard Jones, have hereunto set my hand and seal, this twentysixth day of January, in the year of our Lord one thousand eight hundred and seventy.

## Application of Vulcanized India-rubber Tires to Locomotive Steam-carriages.

## AMENDED SCHEDULE AND DRAWING.

Provision is proposed to be made for the employment of ordinary locomotives, traction-engines, or steam-carriages, on any description of iron or wooden railroad or tramroad whatsoever, by the adaptation of India-rubber tires (either rulcanized or otherwise) to the driving-wheels, aud acting directly upon the surface of said railroads or tramroads; the invention of such adaptation being for the purpose of facilitating the ascent and descent of steeper gradients on railroads or tramroads than has yet been accomplished by steam-carriages or locomotives, on wooden or iron rails or trams, combined with a greater economy in the weight and cost of locomotives, traction-engines, or steam-carriages so adapted, and in the expense of working them.

I therefore claim the application of India-rubber tires (vulcanized or otherwise, or in combination with leather, gutta-percha, or felt, or any or either of those substances) to the wheels of locomotives, traction-engines, or steam-carriages; the said India-rubber tires running on and in direct contact with the surfaces of metal or wooden railroads or tramroads of any description whatsoever.
G. ELPHINSTONE DALRYMPLE.

A.-Surface of any iron or wooden rail or tramroad whatsoever.
B.-India-rubber tire (segment of) running upon, and in direct contact with, the surface A.
C.-Any driving-wheel of any locomotive, traction-engine, or steam-carriage, of which $B$ is the India-rubber tire.
G. ELPHINSTONE DALRYMPLE.

This is the specification and plan referred to in the amnexed Letters of Registration, granted to George Elphinstone Dalrymple, this fourteenth day of March, 1870.

BELMORE.

## REPORT.

> Railway Office, Sydney, 1 December, 1869.

Sir,
We do ourselves the honor to return the enclosed documents having reference to Mr . G. E. Dalrymple's application for Letters of Registration for "an invention for the application and use of Vulcanized India-rubber Tires to the Wheels of Locomotive Steam-carriages for traction upon wooden or metal tramways or railways."

Haring examined the specification and drawings, we have to report that there does not appear to us to be sufficient novelty in the design to justify its being considered as an invention or entitled to protection under the Act of Council 16 Vic., No. 24.

We cannot therefore recommend the prayer of the Petitioner.
The Peincipal Under Secretart.
Wo have, \&c.,
GOTHER K. MANN. JOHN WHITTON.

## FURTHER REPORT.

Department of Public Works, Railway Branch, Engineer's Office, Sydney, 9 February, 1870:
Sir,
We have the honor to report that we see no objection to the issue of Letters of Registration to Mr. G. E. Dalrymple, under his amended specification and plan "for the application and use of Vulcanized India-rubber Tires to the Wheels of Locomotive Steam-carriages.

> We have, \&ce.,

Tife Under Secretart,
Colonlal Secretary's Office.

A.D. 1870, 29th April. No. 237.

## GOLD AND DIAMOND CRADLE AMALGAMATOR.

# LETTERS OF REGISTRATION to George Milner Stephen, for a Gold and Diamond Cradle Amalgamator. 

[Registered on the 30th day of April, 1870, in pursuance of the Act 16 Vic., No. 24.]

#### Abstract

BY His Excellency the Rtget Honorable Somerset Rtchard, Earl of Belmore, a Member of Her Majesty's Most Honorable Privy Council in Ireland, Governor and Commander-in-Chief of the Colony of New South Wales, and Vice-Admiral of the same.

## TO ALL TO WHOM THESE PRESENTS SHALL COME, greeting :

Whereas Georar Minker Stephey, of Sydney, in the Colony of New South Wales, Barrister-at-Law, hath by his Petition humbly represented to me that he is the author or designer of a certain invention or improvement in manufactures, that is to say, of an invention of a "Gold and Diamond Cradle Amalgamator," which is more particularly doscribed in the specification and the sheet of drawings which are hereunto annexed ; and that he, the said Petitioner, hath deposited with the Honorable the Treasurer of the said Colony of New South Wales the sum of Twenty Pounds sterling, for defraying the expense of granting these Letters of Registration, as required by the Act of Council, sisteenth Victoria, number twenty-four ; and hath humbly prayed that I would bo pleased to grant Letters of Registration, whereby the exclusive enjoyment and advantage of the said invention or improvement might be secured to him for a period of fourteen years: And I, being willing to give encouragement to all inventions and improvements in the arts or manufactures which may bo for tho public good, and having received a report favourable to the prayer of the said Petition, from competent persons appointed by me to examine and consider the matters stated therein, and to report thereon for my information, am pleased, with the advice of the Executive Council, and in exercise of the power and authority given to me by the said Act of Council, to grant, and do by these Letters of Registration grant unto the said George Milner Stephen, his executors, administrators, and assigns, the exclusive enjoyment and advantage of the said invention or improvement, for and during the term of fourteen years from the date hereof; to hare, hold, and exercise unto the said George Milner Stephen, his cxecutors, administrators, and assigns, the exclusive enjoyment and advantage thereof, for and during and unto the full end and term of fourteen years from the date of these presents

## Gold and Diamond Cradle Amalgamator.

next and immediately ensuing, and fully to be complete and ended: Provided always, that if the said George Milner Stephen shall not, within three days after the granting of these Letters of Registration, register the same in the proper office in the Supreme Court at Sydney, in the said Colony of New South Wales, then these Letters of Registration, and all advantages whatsoever hereby granted, shall cease and become void.

In witness whereof, I have hereunto set my sign manual, and have caused the present Letters of Registration to be sealed with the seal of the said Colony of New South Wales, at Government House, Sydney, in New South Wales, this twenty-ninth day of april, in the year of our Lord one thousand eight handred and seventy.
(土.s.)
BELMORE.

## SPECIFICATION of the "Gold and Diamond Cradle Amalgamator," invented by Grozge Milner Stepien, Esquire, Barrister-at-law, F.G.S., \&c.

Trrs is an invention for extracting from crushed quartz, or from alluyial deposits, gems, gold, tin-sand, or any other metallic ores or minerals found therein; also for cleansing them from inpurities ; also for crushing calcined quartz, lead ores, and other friable minerals, including clay-balls, cement, and the conglomerate or diamond matrix called cascalho$;$ also for amalgamating gold-dust, and for separating ores and gems from other mineral substances.

The machine may be worked by steam, water, horse, or manual power.
The machine consists of a long open box or frame, on the upper end of which are erected two iron standards in which two spindles revolve, and on which are fixed two iron rollers and cog wheels adjustable to different gauges as required for crushing minerals (and which rollers may be dispensed with when the machine is used in conncetion with a battery of stamps, or at the option of the purchaser). Upon the spindle of the lower roller is fixed at one end a driving pulley and fly-wheel, having a removable winch handle, and on the other end a smaller pulley to be used with a belt for drawing water from a dam, well, or tank, to supply itself, when running water is not auzailable. On the small pulley is a crank-pin, made morable by means of a slot, so as to rock the machine at any desired angle of depression. To this pin is attached a connecting rod, having an adjusting screw or otherwise, to give an eccentric action or throw to the machine, and thereby facilitate the discharge of stoues. This rod moves a lever and axle working in bearings across the box or frame, haring attiached cross bars terminating in iron straps with clips and hinges, so as to clasp the several compartments of the crade, and padlock them securely from depredation. The axle supports either one or a set of three boxes or frames, containing two (or more, if desired) sieves, and an amalgamating pan of copper or iron with cylindrical eads, so as to throw back the mercury and fine gold or gems into the centre of the pan, and so save them from waste or loss, and assist the gold amalgamation. And the whole may be rocked, by means of the several appliances described, at any angle of depression and speed desired. The upper sieve or hopper has a perforated iron plate or coarse wire grating, the sides being at an acute angle, to catch coarsc gold, large gems, \&e. The middle sieve, or gem collector, is made of a finer meshed wire-wove cloth; and beneath it may be used, if desired, a sicve of still finer wire cloth. That gem collector has a slit or opening for the discharge of quartz and other debris, with an adjusting curved slide to close it altogether, if desired; and in it is placed a remorable barrow or set of iron rakes, for assisting the cleansing of the mineral substances, and for preventing the settlement of the same. Beneath the sieve is an iron plate to guide the gold-dust into the amalgamating pan. In the lowest compartment there is.a similar slit or opening for discharging the sand and sludge. It contains the amalgamating pan, in which is placed another removable harrow, or set of spoon-shaped copper teeth. It should receive a charge of mercury when the gold-dust is extremely fine (but in the case of coarse gold it is unnecessary); as the mercury runs from side to side during the process of rocking, and thus comes in contact with the finest particles of gold and amalgamates them. At the end of the box or frame itself is placed a low ripple-board, fixed at au acute angle, so as to arrest any mercury or other minerals, which, through over-charging or accident may have escaped from the machine. At the extremity of the box there is a provisiou for placing blankets until the operator acquires confidence in the perfect performance of the machine.

I claim as my invention the combination of so many separate contrivances in one machine.
I also claim the following as new inventions, viz. :-The principle of the conuecting rod being adjusted at will, and even during the working of the machine, so as to discharge the several compartments at different angles of depression, and with an eccentric motion on one side only : also, the plan of having three or more respective openings for discharge : also, the ship-like form of the machine, which seeures the greatest motion for rocking the stones, $\&$ c., with the least motion for the mercury : also, the working the machine on an axle : also, the principle of the upper roller being adjusted with levers, so as to lift and allow any large or tough mineral to pass through uninjured, and also prevent any damage to the machinery: also, the mode of regulating the amount of discharge from the gem collector by a curred adjusting metallic slide: also, the principle of the mineral substances being thrown against the harrows or rakes, instead of the latter being dragged through the mineral substances: also, the principle of the cylindrical ends of the pan, which sccures the mercury and gold from loss: also, the mode of keeping the mercury in motion, and constantly divided, and the sand from settlement, by the spoon-shaped copper teoth of the harrow or rakes: also, the principle of the bottom of the cradle having a copper or iron pan to facilitate

## Gold and Diamond Cradle Amalgamator.

the cconomical use of mercury: also, the plan of fastening up the entire machine from depredation: also, the principle of setting the box or frame at any angle of inclination, in order to frec it from stones and eludge: also, its facility for taking the quartz from a battery of stamps, and running or other water at a slight elevation, and drawing it from a tank or well : also, the compact mode of packing the machinery within the box or frame itself, and the contrivance of converting the cover or lid into a sluicing box or feeding trough.
G. MILNER STEPHEN.

This is the specification roferred to in the annexed Letters of Registration, granted to George Milner Stephen, this twenty-minth day of $A$ pril, 1870.

## A.D. 1870, 19th May. No. 239.

## A NEW METHOD OF MANUFACTURING A PURE METALLIC PAINT.

## LETTERS OF REGISTRATION to Olof William Blackwood, for a new method of manufacturing a pure Metallic Paint.

[Registered on the 21st day of May, 1870, in pursuauce of the Act 16 Vic., No. 24.]

By His Excellefcy mife Right Honorampe Somerset Ricimizd, Dabl of Belmore, a Member of Her Majesty's Most Honorable Privy Council in Ireland, Governor and Commander-in-Chief of the Colony of New South Wales, and Vicc-Admiral of the same.
TO ALL TO WIIOM THESE PRESENTS SHALJ COME, greeting :
WHEREAS Olof William Blackwood, of Appin, in the Colony of New South Wales, hath by his Petition humbly represented to me that he is the anthor or designer of a certain invention or improvement in manufactures, that is to say, of an invention of a new method of manufacturing a pure Metallic Paint, which is more particularly described in the specification which is hercunto annexed ; and that he, the said Petitioner, hath deposited with the Honorable the Treasurer of the said Colony of New South Wales the sum of Twenty Pounds sterling, for defraying the exponse of granting these Letters of Registration, as requircd by the Act of Comeil, sixtcenti Yictoria, number twenty-four ; and hath humbly prayed that $T$ would be pleased to grant Letters of Registration, whereby the exclusive enjoyment and advantage of the said invention or improvement might be secured to him for a period of fourteen years: And $I$, being willing to give encouragement to all inventions and improvements in the arts or manufactures which may be for the public good, and having received a report favourable to the priyer of the said Petition, from competent persons appointed by me to examine and consider the matters stated therein, and to report thereon for my information, am ploased, with the advice of the Executive Council, and in exercise of the power and authority given to me by the said Act of Council, to grant, and do by these Letters of Registration grant unto the said Olof William Blackwood, his exccutors, administrators, and assigns, the exclusive enjoyment and advautage of the said invention or improvement, for and during the term of fourtcen years from the date hereof; to have, hold, and exercise unto the said Olof William Blackwood, his executors, administrators, and assigns, the exclusive cnjoyment and advantage thereof, for and during and unto the full end and term of fourteen years from the date of these presents next and immediately ensuing, and fully to be complete and ended: Provider alwars, that if the said Olof William Blackwood shall not, within three days after the granting of these Letters of Registration, register the same in the proper office in the Suprome Conrt at Sydney, in the said Colony of New South Wales, then these Letters of Registration, and all advantages whatsoever hereby granted, shall cease and become void.

In witness whereof, I hare hereunto set my sign manual, and have caused the present Letters of
Registration to be sealed with the seal of the said Colony of New South Wales, at Government House, Sydney, in Now South Wales, this nineteenth day of May, in the year of our Lord one thousand eight hundred and seventy.
(L,s.)

## A new method of manufacturing a pure Metallic Paint.

## SPECIFICATION.

The following is the specification referred to in the accompanying Petition of Olof Willian Blackwood to His Excellency the Right Honorable the Earl of Belmore, for Letters of Registration for an Improvement in the Manufacture of pure Metallic Paints, most of which Paints are known in commerce as Roman Ochre, Venetian Red, Black, Raw Trarkey Umber, and Burnt Turkey Umber.
The mode of application is as follows :-
1mo.-The ore is broken into small pieces, and then putt into a cask of water, in which the ore is kept constantly worked about, similar to a brickmaker's mill. It is gradually worked into powder, and all colouring matter, being the pure oxide of iron, dissolves in the water; the granite and silica remains ai the bottom of this cask.

The water is kept running continually from this mill into a tub with a lip, aud any grit or sand that might come from the mill stays at the bottom of this tub. The water which contains the pure colouring matter runs over the lip into is series of receivers, where the colours are allowed to settle. As soon as the water is clear in any of these receivers it is allowed to run off into a large cask, and is again pumped into the mill, to carry off any colouring matter which may remain.

When all the oxide of irou is extracted, the remaining granite or silica is thrown away, as it contains no colouring matters in itself.

The cake marked A, also the bottle marked A, are both the pure oxide of iron extracted from the brown iron ore marked A, known as Roman Ochre.

The cake marked B is the pure oxide extracted from the brown ore maked B.
The bottle marked C is the pure oxide of iron, cxtracted from the red ore C . This is the best Venetian Red.

2mo-By application of heat at different temperatures, these thrce samples of pure oxides are chauged into the various colours contained in the bottles marked D, E, T, G, and H.

Dated at Sydney, this twenty-sixth day of March, one thousand eight huudred and seventy.
OLOF WILLIAM BLACKWOOD.
Appin, New South Wales.
This is the specification referred to in the annexed Letters of Registration, granted to Olof William Blackwood, this nineteenth day of May, 1870 .

## REPORT.

Sydney, 7 April, 1870.
Sir,
The application of Mr. Olof William Blackwood, for Letters of Registration for "a new method of manufacturing pure Metallic Paint," having been referred to us, we have the bonor to report that we have examined the specification and samples accompanyiag the same, and see no objection to the , issue of Lettiers of Registration as prayed for.

> We have, \&e., J. SMITH. JAMES BARNET.

## A.D. 1870, 25th May. No. 240.

# IMPROVEMENTS IN APPARATUS FOR SHEARING OR CLIPPING ANIMALS, 

## \&c.

## LETYERS OF REGISTRATION to James Eglinton Anderson Gwynne, for Improvements in Apparatus for shearing or clipping Animals, \&c.

[Registered on the 25th day of May, 1870, in pursuance of the Act 16 Vic., No. 24.]

BY Hif Excellency the Right Honorable Somerset Richard, Eari of Belmore, a Member of Her Majesty's Most Honorable Privy Council in Ireland, Governor and Commander-in-Chief of the Colony of New South Wales, and Vice-Admiral of the same.

## TO ALL TO WHOM. THESE PRESENTS SHALL COME, grectiug :-

Whereas Iamas Eglinton Anderson Gwinne, of London, in that part of Great Britain called England, Engineer, hath by his Petition humbly represented to me that he is the author or designer of a certain invention or improvement in manufactures, that is to say, of an invention of "Improvements in Apparatus for shearing or clipping Animals, the said Apparatus being also applicable to shaving Skins," which is more particularly described in the specification and sheet of drawings which are hereunto annexed; and that he, the said Petitioner, hath deposited with the Fonorable the Treasurer of the said Colony of New South Wales the sum of twenty pounds sterling, for defraying the expense of granting these Letters of Registration, as required by the Act of Council, sixteenth Victoria, number twenty-four; and hath humbly prayed that I would be pleased to grant Letters of Registration, whereby the exclusive enjoyment and advantage of the said invention or improvement might be secured to him for a period of fourteen years: And I, being willing to give encouragement to all inventions and improvements in the arts or manufactures which may be for the public good, and having received areport favourable to the prayer of the said Petition, from competent persons appointed by me to examine and consider the matters atated thercin, and to report thereon for my information, am pleased, with the advice of the Executive Council, and in exercise of the power and authority given to me by the said Act of Council, to grant, and do by these Letters of Registration grant unto the said James Eglinton Anderson Gwymne, his executors, administrators, and assigns, the exclusive onjoyment and advantige of the said invention or improvement for and during the term of fourteen years from the date hereof; to have, hold, and exercise unto the said James Eglinton Anderson Gwynne, his executors, administrators, and assigns, the exclusive enjoyment and adrantage thereof, for and during and moto the full end and term of fourteen years from the date of these presents next and immediately ensuing, and fully to be complete and ended: Provided always, that if the said James Eglinton Anderson Gwyme shall not, within thres days after the granting of these Letters of Registration, register the same in the proper office in the Supreme Court at Sydney, in the said Colony of New South Wales, then these Letters of Registration, and all advantages whatsoever hereby granted, shall ccase and become void.

> In witness whereof, I have hereunto set my sign manual, and have caused the present Letters of Registration to be sealed with the seal of the said Colony of Now South Wales, at Governmeat Houge, Sydney, in New South Wales, this twenty.fifth day of May, in the year of our Lord one thousand eight hundred and seventy.

## Improvements in Apparatus for shearing or clipping Animals, \&oc.

SPECIFICATION of Tames Eglinton Anderson Gwivne, of London, in that part of Great Britain called England, Kngineer, of a certain invention styled "Improvements in Apparatus for shearing or clipping Animals, the said Apparatus being also applicable to shaving Skins."
Now know ye, that I, the said James Eglinton Anderson Gwyme, do hereby declare that the nature of the said invention, and in what manner the same is to be performed, to be particularly described and ascertained in and by the following statement, that is to say:-

The nature of this invention will be understood by reference to the annexed drawing and the figures and numbers marked thereon. The apparatus consists of a column, 2 , supported by a pedestal or foot, 1 , secured to the ground, the column being capable of turning in the said foot, and the friction being adjustable by means of a set screw, 3 . The head of the column is traversed horizontally by a shaft or pin, 7, carrying a loose socket or boss, on which is momnted a fly-wheol, 6, and a groove pulley. On this pin, at one end of same, a balanced lever, 4, slides, or is movable, and can be fixced thereon in any desired position by means of a set screw. A weight, $e$, at one end of the lever, and susceptible of longitudinal displacement, regulates the balance of the lever and the mechanism in connection therewith, which is arranged at the opposite end of the lever. This upper end which swivels in its place, carries a cross shaft, 14, having a groove pulley, 12 , fixed at one end, and driven by an endless band or gut from the first-named groove pulley. On the other cud of the shaft a large bevel wheel, 13 , is fixed, gearing with a small bevel pinion, 15 , the shaft or rod, 16 , of which runs in a forked supporting bracket, 19 , the forks of which form bearings on the shaft 14. The rod or shaft 16, suspended by the forked bracket 1.9, cam, as will be seen, swing or be turned along with its bevel pinion $1 \overline{5}$, on or round the axis of the spindle 14. The lower part of this rod terminates in a trunkated cone, 20 , fitting in a corrosponding cone socket of another shaft, 21 ; a nut couples the conc and cone socket together, and a pin fitting in a groove completes the security of the locking. The base of this shaft, 21,22 , which participates in the movement of the rod 16 , has its lower end, 22, revolving in a sleeve, 23, forked at the base at $r r$ to form two bearings for a shaft, 26 , worked from the shaft 22 , by a pair of bevel wheels, 24,25 , which are protected from dirt and dust by a case or cover. The other end of the shaft 26 carries a bevel wheel, 28 , gearing with a pinion, 29 , on another shaft, 30 . A bos, $27,31,32,33$, encloses the latter, and fits as a handle on it. The contiuuation, 34 , of this box, which swivels loosely on the former, and forms a sleeve round the shaft 30 , driven by the bevel wheels 28,29 , terminates in a fork, the two sides of which, 42, 47, form the bearings of the shaft 37, carrying the revolving cutter 53 (shown in plan at fig. 7) : a pair of bevel whecls, 30,36 , transmitting motion from the shaft 30 to the cutter shaft 37 , which is forned polygonal for some distance, to allow the wheel 36 to slide on the same while the spring exerts its pressure. One or more machines may be arranged to be worked by power.

By the foregoing description and the accompanying drawing it will be seen that a universal joint system is established. The cutter shaft may be square where the cutter fits on. Part of the sleeve frame is bent down at right augles to the cutter shaft, and has fixed to it at serrated disc or shield, 50 (shown нeparately at fig. 4). As shown at fig. 5, the cutter 53 is sloping or conver at the blades, so that by rotation against the disc the revolving cutter constitutes succesively with the teeth an equivalent to as many pairs of scissors. To fulfil this ottice, it is necessary that the disc and cutcrer should be pressed together by some spring action, and this is done by the spring 42 and the nut 41 , and checkunt, which exerts an end pressure on the cutter shaft against the serrated disc.

The cutter is formed convex, as shown, and the shouldcr against which it is fixed bears against it on two points only, and these at right angles to the projecting cutter bludes, so as to give the latter liberty to find their proper bearing against the serrated disc. The shield 48 prevents the material cut from working into the gear, which is also protected by the cap 44. The spring where its point presses against the cutter shaft may have an oil hole, 3s, as shown. The disc 50 is open, so as to let any wool out that might have got in. It is secured by means of a screw, 51, and vut, 52 . On turning the handle 8 , on the Ay-wheel 6 , motion is communicated to the gearing, and ultimately to the revoling cutier, which is guided flat against the skin of the animal; in shaving, the dise is more or less inclined on the slin. To prevent noise of the gear, the same may be made practically noiseless by any well-known method, such as making use of some kind of frictional gear metal on metal, as shown at fig. 8 , or wood inlaid, as shown at fig. 9 , or iron faced with india-rubber or other suitable material, or the teeth of one wheel may be of soft metal and the other of a composition of hard gutta percha.

What I clain as composing the invention is-
1st. The balance arm with bevel gear swivelling ou the top of same, substantially as described.
2nd. The universal joint arrangement pendant therefrom, substantially as described.
3rd. The cutter aud serrated dise, with the spring irrangement for pressing them together, sub. stantially as described.

4th. The arrangement of closing in of the gear and of the guard 44, sulbstantially as described; 5th. The cmplogment of "noiseless" wheel gearing for the apparatus described.

Witnesses-
JAMES E. A. GWYNNE.
Eidward Marks.
Peter Jensen,
Patent Agent, 89, Chancery-lane, W.C.

This is the specification referred to in the annexed Letters of Registration, granted to James Eglinton Anderson Gwynne, this twenty-fifth day of May, 1870.

## A MEANS OF JOINING THE ENDS OF HOOP-IRON USED FOR BINDING WOOL-BALES, \&c.

## LETTERS OF REGISTRATION to Henry Francis, for a means of joining the ends of Hoop-iron used for hinding Wool-bales, \&c.

[Registered on the lstit day of Tune, 1870, in pursnance of the Aet 16 Vic., No. 24.]

[^1]
## TO ALL TO WHOM THESE PRESENTS SHALL COME, greeting:

Wherreas Hevicy Fraicis, of Cumberland-street, in the city of Sydney, in the Colony of New South Wales, hath by his Petition humbly represented to me that he is the author or designer of a certain invention or improvement in manufactures, that is to say, of an invention of "a means of joining the ends of hoop-iron used for binding wool-bales and other materials," which is more particularly described in the specification and sheet of drawiggs which are hereunto amnexed; and that he, the said Pctitioner, hath deposited with the Honorable the Treasurer of the said Colony of New South Wales the sum of Twenty Pounds sterling, for defraying the expense of granting these Letters of Registration, as requirod by the Act of Council, sixteenth Victoria, number trenty-four; and hath humbly prayed that I would be pleased to granti Letters of Registration, whereby the exclusive enjoyment and advantage of the said invention or improvement might be secured to him for a period of fourteen years: And I, being willing to give encouragement to all inventions and improvements in the arts or manufactures which may be for the public good, and having received a report favourable to the prayer of the said Petition, from competent persons appointed by me to examine and consider the matters stated therein, and to report thereon for my information, an pleased, with the advico of the Executive Council, and in exercise of the power and authority given to me by the said Act of Council, to grant, and do by these Letters of Registration grant unto the said Henry Francis, his executors, administrators, and assigns, the exclusive enjoyment and advantage of the said invention or improvement, for and during the term of fourteen years from the dato hereof; to have, hold, and exercise unto the said Henry Francis, his executors, administrators, and assigus, the exclusive cujoyment and advantage thereof, for and during and unto the full end and term of fourteen years from the date of these prescnts next and immediately ensuing, and fully to be complete and ended: Provided always, that if the said Henry Francis shall not, within three days after the granting of these Letters of Registration, register the same in the proper office in the Supreme Court at Sydney, in the said Colony of New South Wales, then these Letters of Registration, and all advantages whatsoever hereby granted, shall cease and become roid.

[^2]
## SPECIFICATION.

to all to Whom these presents shall come, I, Hfank Francis, of No. 217, Cumberland-street, in the City of Sydney, in the Colony of New South Wales, send, greeting:
WHEREAS I am desirous of obtaining Letters Patent for securing unto me Her Majesty's special Jicense, that I, my executors, administrators, and assigns, or such others as I or they should or may at any time agree with and no others, should or lawfully might from time to time and at all times during the term of fourteen years, to be computed from the day on which this instrument is left at the Office of the Colonial Secretary at Syduey, make, use, exercise, and vend, within the Colony of New South Wales, an Invention "for joining the ends of Hoop-riou used for binding Wool-bales and other materials," and in order to obtain the said Letters Patent, 1 must by an instrument in writing under my hand and seal particularly describe and ascertain the nature of the said invention mhd what manner the same is to be performed: Now know ye, that I, the said Jienry Francis, do hereby declare the nature of the said invention and the manner performed to be particularly described and ascertained in and by the following statement and description (that is to say) :-
"The invention consists in causing hoop-iron to be compressed by presses, rollers, and dies, so that part of the metal is forced above the surface and part below the surface, so that loops are formed that fit into each other, the metal being divided in the direction of its leugth into such proportions to give the greatest strength.
"The loops so formed are to be placed one within the other when used, the double metal forming a loop or space to receive a piece of iron, wood, or other material to be placed into the loop that will cross and interlock the loops together, so that the bands or hoops cannot be drawn apart in the direction of their length.
"I divide the hoop so that it forms these projecting bands or loops on the one side and two on the other, and hare the loops double or two sets of loops on each bond; that two cross pieces are required that act as toggles to secure each hoop. This description is fully shown by the sample herewith: the hoop is joined in the way the inventor desires to obtain Letters Patent.

In witness whereof, I have hereunto set my hand and seal, this twelfth day of May, one thousand eight hundred and seventy.

HENRY FRANCIS.
M. Barlef,

Circular Quay,
Agent for Patentee.
This is the specification referred to in the aunexed Letters of Registration, granted to Henry Francis, this thirty-first day of May, 1870.

# IMPROVEMENTS IN HYDRAULIC LIFTS FOR RAISING FLOATING BODIES. 

## LETTERS OF REGISTRATION to Joseph William Wilson, for Improvements in the construction of Hydraulic Lifts for raising Floating Bodies.

[Registered on the 11th day of June, 1870, in pursuance of the Act 16 Vic., No. 24.]

BY His Excelienct the Right Honorable Somerset Richard, Earl of Belmore, a Member of Her Majesty's Most Honorable Privy Council in Ireland, Governor and Commander-in-Chief of the Colony of New South Wales, and Vice-Admiral of the same.

TO ALL TO WHOM THESE PRESENTS SHALLL COME, greeting:
Whereas Joskph William Wilson, of Craven-street, Strand, in the city of Westminster, in England, Enginecr, hath by his Petition humbly represented to me that he is the author or designer of a certain invention or improvement in manufactures, that is to say, of an invention of "Improvements in the construction of Hydranlic Jifts for raising Floating Bodies," which is more particularly described in the specification and the two sheets of drawings, marked $A$ and $B$ respectively, which are hereunto annexed; and that the said Petitioner hath deposited with the Honorable the Treasurer of the said Colony of New South Wales the sum of Twonty Pounds sterling, for defraving the expense of granting these Letters of Registration, as required by the Act of Council, sixteenth Victoria, number twenty-four ; and hath humbly prayed that I would be pleased to grant Letters of Registration, whereby the exclusive enjoyment and advantage of the said invention or improvement might be secured to him for a period of fourteen years: And I, being willing to give encouragement to all inventions and improvements in the arts or manufactures which may be for the public good, and haring received a report favourable to the prayer of the said Petition, from competent persons appointed by me to examine and consider the matters stated therein and to report thereon for my information, am pleased, with the advice of the Executive Council, and in exercise of the power and anthority given to me by the said Act of Council, to grant, and do by these Letters of Registration grant unto the said Joseph William Wilsoi, his cecentors, administrators, and assigns, the exclusive enjoyment and advantage of the said invention or improvement, for and during the term of fourteen years from the date hereof; to have. hold, and exercise unto the said Joseph William Wilson, his executors, administratore, and assigns, the exclusive enjoyment and advantage thereof, for and during and unto the full end and term of fourteen years from the date of these presents next and immediately ensuing, and fully to be complete and ended: Provided always, that if the said Joseph William Wilson, shall not, within three days after the granting of these Letters of Registration, register the same in the proper office in the Supreme Court at Sydney, in the said Colony of New South Wales, then these Letters of Registration, and all adrantages whatsoever hereby granted, shall cease and become void.

In witness whereof, I have hereunto set my sign manual, and have caused the present Letters of Registration to bo sealed with the seal of the said Colony of New South Wales, at Government House, Sydney, in New South Wales, this eighth day of June, in the year of our Lord one thousand eight humdred and seventy.
(土.s.)
BELMORE.

## SPECIEICATION.

TO ALL TO WHOM THESE PRESENTS SHALL COME I, Joseph Whilar Wilsox, of Cratenstreet, Strand, in the City of Wesiminster, Eagineer, send greeting :
WHEREAS I am in possession of an invention for "Inprovements in the construction of Hydraulic Lifts for raising Jloating Bodics," and have petitioned His Exccllency the Governor General of Neir South Wales to grant unto me, my executors, administrators, and assigns, Letters Patent for the same: Now know ye that I, the said Joseph Willian Wilson, do hereby declare that the following specification fully describes and ascertains the pature of the said invention, and the manner in which the same is to bo performed (that is to say) :-

The chief object of this invention is to provide a facile means of lifting ships out of the water, for the purpose of exposing their hulls to inspection, and retaining them in that position while being cleaned or repaired.

To this end I use a novel construction of hydraulic lift, wherein buoyant vessels take the place of the rams in the columns or hydraulic cylinders heretofore cmployed in the lifting of ships.

My improved arrangement of lift is shown in several views in the accompanying drawings.
In sheet $I$, figure 1 shows the hydraulic lift in longitudinal or side elevation, a portion at the righthand end being in section, to explain the construction of the internal parts. Figure 2 is a plan view of the lift.

Figure 3, sheet II, is a transverse section of the lift on an enlarged scale, showing the connections between the opposite hydraulic cylinders, and the means whereby they are enabled to act upon the ressel that it is desired to raise; and figure 4 is a partial elevation, taken at right angles to figure 3, or in the line 1,2 , of figure 2 (and drawn at a corresponding scale to figure 3, showing the construction of the water tanks, and the means by which motion is communicated to the cross girders which serve to lift the vessel.

In carrying out this invention, I siuk in tho foreshore of the cstuary of a river or other suitable locality two parallel lines of hollow columns or bydraulic cylinders, set at such distance apart as will enable any yessel or ressels which it is desired to raise out of the water to be floated in between them. These cylinders, which are shown in the drawings at $A^{\prime}$, I prefer to make of cast iron, and I determine their number, capacity, and distance apart according to circumstances or the requirements which the hydraulic apparatus is intended to meet: These cylinders will stand up out of the water any desired height, determined somewhat by the height of lift required. At their upper cads all the cylinders of each line are connected together by means of compound hollow longitudimal girders, B B, which are fitted with transverse partitions, $b b$, and bottom plates, $b^{1}$, whercby a large portion of the space comprised within the hollow girders is converted into water tanks. The several tanks formed in cach girder are connected together by horizontal pipes, C C, so as to equalize the height of the water in all the tanks of the series. Each of the cylioders A is provided with one of these tanks, and, leading down from the horizontal pipes
 figure 3 , a vertical recess or hollow rib being cast in the cylinders from end to end thereof to receive them. A. sluice cock or valve is provided at or near the point of junction of the pipes $C$ with their respective pipes $\mathrm{C}^{1}$, for regulating the discharge of water from the tanks into the cylinders. Within each hydraulic cylinder A is placed a floating cylinder, D , of little less diameter than that of the outer cylinder. The ends of this cylinder are closed, but the lower end is fitted with a dise valre, $l$ (see figure 3), which by means of a contral screwed rod, $d^{1}$, working through a cross head, E , at top, and a hand wheel or wheels attached thereto, may be acted on to allow of the admission of water to the floating cylinder, or its discharge therefrom. This cylinder D may be conveniently made of wrought iron, and it should be strengthened, as shown in the drawing, at suitable distances in its length, by cross plates or trusses. Running through the cylinder D , to give great vertical strength thereto, is a pair of columns, $\mathrm{D}^{1} \mathrm{D}^{1}$, of cast iron, which serve to carry at their upper ends the cross head E before mentioned. The ends of the cross heads E of each floating cylinder cuter vertical guides, $\mathrm{E}^{1}$, standing up from the longitudinal girders B , and they thus serve to steady the rising and falling movements of the cylinders D . Pendant from the ends of the cross heads E are link rods, $\mathrm{E}^{2}$, which are made fast at their lower ends to trauscerse girders, F . These girders reach across from one line of lyydraulic cylinders or columns to the other, and are similarly connected at their opposite ends to the cross heads E , by pendant rods, $\mathrm{E}^{2}$. Each pair of floating cylinders carries two of these cross girders, F, and it is upon these girders (over which the ships are floated) that the slips to be lifted are ruised and sustained. In order to balance or compensate for the weight of the fioating cylinders D and their attachments or columns $\mathrm{D}^{1}$, cross heads, E , links, $\mathrm{E}^{2} ;$ and girders, F , counterweights may be used, but I preier for this purpose the buoyancy of a closed air chamber fitted to and secured below the floating cylinder ID. This arrangement is shown in the drawings, where $G$ is a closed air chamber formed of wrought iron and connected to its cylinder D, and stiffened by a continuation of the vertical columns $D^{1}$ to and through the cylinder. By comnecting the tanks with their several cylinders by pipes fitted with cut-off ralves as shown, the filling of esch hydraulic cylinder is made independent of all the others.

The modus operandi of the apparatus is as follows:--The tanks being filled with water from an elerated reservoir or pumping apparatus, and the ship to be lifted being floated into position upon the cross girders, which for the purpose are depressed to the dotted position of figure 1, water is allowed to flow from the tanks into the hydraulic cylinders and passing below the iuner cylinders lift them, until the girders (previously provided with a fixed cradle) rise into contact with the hull of the vessel. The supply of water to the cylinders A is now continued until the vessel has risen to the required clevation. When it is desired to lower the ship again, water is admitted from the outer cylinders A into the inner cylinders $D$, by means of the valves $d$ before-mentioned. The floating power of these cylinders $D$ being thus reduced, they will gradually sink and thereby lower the ship into the water. The water in the cylinders is then to be pumped up again into the tanks, ready for a repetition of the process; and to facilitate this operation, all the cylinders or groups of the cylinders of each line may be connected by syphons with a common main,

## A.D. 1870. No. 242.

## Improvements in Hydraulic Lifts for raising Floating Bodies.

from which the lift pumps will draw. It will be understood that as the filling of each cylinder is independent of the others, the trimming of the ship upon the cross girders may be effected with great facility.

Having now set forth the nature of my invention of "Improvements in the construction of Hydraulic Lifts for raising Floating Bodies," and explained the manner of carrying the same into effect, I wish it to be understood that I claim in the construction of Hydraulic Lifts the means above described, whereby I an cuabled with the use of $a$ head of water to raise ships out of the water and retain them in an elevated position.

In witness whereof, I, the said Joseph William Wilson, have hereunto set my hand and seal, the tweuty-first day of Tanuary, in the year of our Jord one thousand eight hundred and seventr.
J. W. WILSON.

Witness-Fred. Waikdey.
66, Chancery-lane, London.

This is the specification referred to in the annexed Letters of Registration, granted to Joseph William Wilson, this eighth day of June, 1870.

## IMPROVEMENTS IN APPARATUS FOR SUPPLYING THE SYRUP IN THE MANUFACTURE OF AERATED BEVERAGES, \&c.

LETTERS OT REGISTRATION to Edward Hogben and Henry Barrett, for Improvements in Apparatus for supplying the Syrup in the manufacture of Aerated Beverages, \&c.

[Registered on the 13th day of Suly, 1870, in pursuance of the Act 16 Pie., No. 24.]

#### Abstract

BY Hie Excelfevct mie Righi Honorable Somenset hichard, Eari of Belmore, a Member of Her Majesty's Most Honorable Privy Council in Ireland, Governor and Commander-in-Chief of the Colony of New South Wales, and Vice-Admíral of the same.

TO ALL TO WHOM THESE PRESENTS SHALL COME, greeting:
Whereas Edward Hogbes, of Melbourne, in the Colony of Victoria, gentleman, and Hevry Barretr, of St. Helier, in tho Island of Jersey, wine and spirit merchant, hase by their Petition humbly represented to me that they are the authors or designers of a certain invention or improvement in manufactures, that is to say, of an invention of "Improvements in Apparatus for supplying the Syrup in the " manufacture of Acrated Beverages and other liquids, also applicable to other purposes; and in Stoppers "for Bottles for containing such liquids," which is more particularly described in the specification and sheet of drawings which are hereunto annexed; and that they, the sitid Petitioners, have deposited with the Honorable the Treasurer of the said Colony of New South Wales the sum of twenty pounds sterling, for defraying the expense of granting these Thetters of Registration, as requircd by the Act of Council, sistenith Victoria, number twenty-four; and have humbly prayed that I would be pleased to grant Leeters of Registration, whereby the exclusire enjoyment and advantage of the said insention or improvement might be secured to them for a period of fourteen years: And I, being willing to give encouragement to all inventions and improvements in the arts or manufactures which may be for the public good, and haring received a report favourable to the prayer of the said Petition, from competent persons appointed by me to examine and consider the matters stated therein, and to report thereon for my information, am pleased, with the advice of the Executive Council, and in exercise of the power and authority fiven to me by the said Act of Council, to grant, and do by these Lettors of Registration grant unto the said Edsard Hogben and Henry Barrett, their exceutors, administrators, and assigus, the exclusive enjoyment and iedvantage of the said invention or improvement, for and during the torm of fourteon yoars from the date hereof; to have, hold, and esercise unto the said Edward Hogben and Henry Barrett, their excentors, administrators, and assigns, the exclusive enjoyment and adrantage thereof, for and during and unto the full end and term of fourtecn yenrs from the date of these presents next and immediately ensuing, and fully to be complete and ended : Provided always, that if the said Edward Hogben and Heury Barrett shall not, within three dnys after the granting of these Letters of Registration, register the same in the proper office in the Supreme Court at Sydney, in the said Colony of Nev South Wales, then these Letters of Registration; and all advantages whatsocver hereby granted, shall cease and become void.

In witness whereof, I have hereunto set my sign manual, and have caused the present Letters of Registration to be scaled with the seal of the said Colony of New South Wales, at Government House, Sydney, in New South Wales, this thirteenth day of July, in the year of our Lord one thousand eight hundred and seventy.

SPECIFICATION of LDwamb Hogben, formerly of No. 2 Pier Snint Helier, in the Island of Jergey, wine and spirit merchant, but now of Melbourne, in the Colony of Victoria, gentleman, and Menry Barrext, of Saint Helier aforesaid, soda water manufacturer, for "Improvements in Apparatus for supplying the "Syrup in the manufacture of Aerated Beverages and other liquids, also applicable to other purposes;
" and in Stoppers for Bottles for containing such liquids."
Ters invention may be said to consist of two parts-the first having referente to the apparatus for supplying the syrup in the manufacture of aerated beverages and other liquids, and the second having reference to the improved stopper for bottles for containing such liquids; both of which are particularly described and ascertained in and br the following statement, reference being had to the drawiugs heveto attached, and to the letters and figures marked thereon, that is to say :-

The first part; of this invention consists in an improved pump or apparatus for supplying any required quantity of syrup to aerated or other beverages; it is also applicable for other purposes, such as drawing or measuring any required quantity of liquid, or forcing any required quantity of liquid to any required place.

This improved pump or apparatus is constructed as follows:-It has a cylinder or barrel in which works a piston or plunger consisting of a ring or short hollow eylinder furnished with a spindle valve at; the bottom: the rod of this piston passes through a stuffing-box in the covcr of the cylinder in the usual manner; this rod is provided at top with an arm which is jointed to a connecting rod passing down outside the pump body, and is furnished with a regulating bar for altering the length of the stroke of the piston; this regulating bar is attached to a hand lever below the bottom of the pump; one end of this lever works on a pivot or joint, and the other end is free, and serves as a handle for working the pump. A pipe from the syrup receiver is connected by a proper union to the upper part of the pump barrel; this pipe is furnished with a stop cock, and also with a spindle or other valve which opens and allows the passage of the syrup into the pump barrel during the forward stroke of the piston; the lower part of the pump barrel is also provided with a spindle or other valse opeuing during the forward stroke of the piston; both these valves are closed by spiral springs during the backward stroke of the piston, whilst the valve in the piston is closed by a spriug during its forward stroke, and opens during its backward stroke. The base of the pump is provided below the valve in the barrel with a pipe leading to the bottling machine; it has also a projection on one side provided with a union for a pipe which conveys the acrated water from the sodawater machine; in this projecting part is a spindle valve closed by a spring; the spindle of this valve projects below the base of the pump, and when pressed the valve is thereby opened by the lever handle on the completion of the backward stroke of the piston. The seats of the valves are furnished with india-rubber washers, to secure an air-tight joint when the valves are shut.

To make this part of our invention better understood, we will now proceed to describe the same by reference to the accompanying drawing, in which figure 1 is a plan of our improved pump (which works horizontally), and figure 2 horizontal section of same; the same letters in both figures represent similar parts.
$a a$ is the cylinder or barrel, in which works the piston or plunger $b$, consisting of at short cylinder with the spindle valve $c$ at the bottom thereof; $d$, pistou rod passing through the stufling-bor $e$ in the cover $f$ of the cylinder in the usual mannor. From the top of the piston rod projects the arm $g$, jointed to one end of the connecting rod $h$, the other end of the connecting rod being jointed to the regulating bar or link $i$, which fits into a hole in the projecting part $k$ of the hand lever $l l$, and its length mar be adjusted by the thumb-screw $m$. One end of the hand-lever $l l$ works on a joint, $n$, the other end is left free as shown, and serves as a handle for working the pump; o is the pipe from the syrup recciver; $p$, three-way stop-cock of same; $q$, valve in syrup pipe for closing communication with the cylinder during up-stroke of the piston; $r$, valve at the bottom of the cylinder; $s^{1}$, screw end of the pipe $s$ for connecting the pump to the bottling machine; $t$, pipe for conveying the aerated water from the soda-water machine; $u$, spindle value in the projection $v$ of the cylinder for opening and closing the communication between the aerated water pipe and the pump; the spindle $w$ of the valve $u$ passes through the stufling-box $x$, and projects below the base of the pump, as shown.

The action of our improved pump is as follows :-The stop-cock $p$ being turned on, the handle $l l$ is pulled forward, moving with it the piston, which by its forward movement opens the valve $g$, and draws in the syrup, at the same time forcing the syrup in the barrel through the walve $r$ into the pipe $s$. As soon as the piston has completed its forward stroke, the valves $q$ and $r$ are closed by their spiral springs; the piston is then moved backwards by the backward movement of the handle $l$, when the syrup above the piston overcomes the spring of the valve $c$, which opens and allows the passage of the syrup into the lower part of the barrel, ready to be forced into the pipe s by the next forward stroke of the piston. The valves $c$ and $r$ being closed by their springs, as described, the handle $l l$ is pressed against the spindle $u$, and opens the valve $u$, thus allowiog the aerated water to pass into the lower part of the cylinder below the valve $r$ into the pipe $s$, whence it passes with the syrup into the bottling marhine. The required quantity of aerated water having passed through the bottling machine to the bottle, the spindle $w$ is relieved from the pressure of the handle $l l$, when the valve $u$ is closed by its springs, and shats off the aerated water. The same action is repeated for each bottle to be filled. The quantity of syrup diawn in at each stroke of the piston may be increased or diminished by altering the length of the stroke of the piston by means of the adjustable bar $i$ and thumb-screw $m$.

The second part of this invention consists in an improved stopper for bottles containing aerated or gaseous liquids, such as lemonade, ginger-beer, and sodia-water. This stopper is also applicable to non-acrated beverages, in which case the bottle is not quite filled with liquid, space being left for atmospheric air. This improved stopper is constructed of a cylinder or plug of hard wood having a greater specific gravity than water, such as lignum vite or other suitable material. This cylinder or plug is of a diameter slightly less than that of the opening of the neck of the bottle, and of a length exceeding the lieight of the neck of the bottle. Near the lower end of the cylinder or plug and around it is a groove in which is fixed an indian rubber washer, and the cylinder or plug at a short distance above this groove is hollowed out to allow of space for the washer to be forced into in order to pass through the neck of the bottle. To apply this stopper the washer end is inserted in the neck of the bottle, by which the washer is flattened down until

## the manufacture of Acrated Beverages, \&c.

it reaches the part of the bottle below its neck; when the washer expands and recovers its normal position. This stopper closes the bottle when it is filled by the pressure of tho gaseous liquid from within, and the bottle is opened by applying pressure on the top of the stopper from without, by which it is forced down and leaves the mouth of the bottle open.

To make this part of our invention better understood, we will now describe the same by reference to the accompanying drawing, in which figure 3 is an elevation drawn full size, and figure 5 a plan of our improved stopper; figure 4, section of same without washer; figure 6, plan of the washer ; figure 7, elevation of the stopper applied to a bottle, the latter being in scction; and figure S, elevation $\frac{1}{4}$ full size of the bottling machine that we prefer to use in employing our improved stopper. The same letters represent similar parts in all the figures.
$a a$ is the cylinder or plug of wood haring a greater specific gravity than water, such as lignum vite; $b$ is the groove near the lower end of the pluy for receiving the india-rubber washer ; $c$, the plag, being hollowed out as shown at $c^{1}$, to give space for the washer when the stopper is forced into the bottle. To apply this stopper to a bottle, it is forced into the interior of the bottle, which is then filled with the gaseous liquid by the apparatus shown in figure 6 (by preference) in the following manner :-The bottle $d$ being inverted, its neek is placed in the cone $e$ of the apparatus, as shown, and is kept in that position by the holder or block $f$, moved down by pressing the foot on the treadle $g^{1}$ of the rod $g$. The air-pipe $k$ is then moved up through the cone $e$, by means of the lever $i$, until it reaches the bottom of the bottle. The aerated or other gaseous liquid is then forced into the bottle through the pipe $j$ by the ordinary machine or forcepump, and the atmospheric air passes down the air-pipe $h$ and escapes through the valre $k$, which is weighted according to the pressure required. As soon as the bottle is filled the air-pipe is withdrawn, when the stopper falls by its own weight into the neck of the bottle; the bottle is then relieved from the pressure of the holder or block $f$, aud the stopper becomes firmly held by the pressure in the bottle in the position shown in figure 5 , the washer fitting closely against the bottle and preventing all escape of liquid. To open the bottle, the top of the stopper is pressed or struck by the hand so as to overcome the pressure, when the 6topper sinks to the bottom of the bottle by its own weight (as shown in dotted lines, figure 5), leaving the mouth of the bottle open for the outlet of the liquid.

Having now described the nature of our invention and the best means with which we are acquainted for carrying the same into effect, we wish it to be understood that what we claim is,-
ist. The inproved arrangement or construction of apparatus for supplying syrup in the manufacture of aerated beverages and other liquids, and for other purposes, as hereinbefore described, and represented in figures 1 and 2 of the accompanying drawings.

2nd. The peculiar construction of stopper for bottles for containing acrated or gaseous liquids, as hereinbefore described, and shown in figures 3 to 8 inclusive of the accompanying drawings.

This is the specification referred to in the annexed Letters of Registration, granted to Edward Hogben and Henry Barrett, this thirteenth day of July, 1870.

## IMPROVEMENTS IN SEWING BY MACHINERY.

## LETTERS OF REGISTRATION to Charles Frederick Bosworth and Nathan Adolphus Baldwin, for Improvements in the mode of and Apparatus to be used in Sewing by Machinery.

## [Registered on the 29th day of July, 1870, in pursuance of the Act 16 Vic., No. 24.]

BY His Excellency the Riget Hoyorable Somerset Richard, Earl of Belmore, a Member of Her Majesty's Most Honorable Privy Council in Ireland, Governor and Commander-in-Chief of the Colouy of New South Wales, and Vice-Admiral of the same.

## TO ALL TO WHOM THESE PRESEXTS SHALL COME, greeting:

Wherdas Chalies Fhederick Boswonth and Najthy Anoiphus Baldwin, both of Milford in the County of Newharen, United States of America, have by their Petition humbly represented to me that they are the authors or designers of a certain invention or improvement in manufactures, that is to say, of an invention of "Improvements in the mode of and Apparatus to be used in Sewing by Machinery," which is more particularly described in the specification and the three sheets of drawings, marked $A, B$, and C, respectively, which are hereunto annexed; and that they the said Petitioners have deposited with the Honorable the Treasurer of the said Colony of New South Wales the sum of Twenty Pounds sterling, for defraying the expense of granting these Letters of Registration, as required by the Act of Council, sixteenth Victoria, number twenty-four; and have humbly prayed that I would be pleased to grant Tetters of Registration, whereby the exclusive enjoyment and advantage of the said invention or improvement might be secured to them for a period of fourteen years: And 1, being willing to give encouragement to all invontions and improvements in the arts or manufactures which may be for the public good, and having receired a report favourable to the prayer of the said Petition, from compctent persons appointed by me to examine and consider the matters stated therein, and to report thereon for my information, am pleased, with the advice of the Executive Council, and in exercise of the power and authority given to me by the said Act of Council, to grant; and do by these Letters of Registration grant unto the said Charles lirederick lBosworth and Nathan Adolphus Baldwin, their executors, administrators, and assigns, the exclusive enjoyment and advautage of the said invention or improvement, for and during the term of fourteen years from the date hereof; to have, hold, and exercisc unto the said Charles Frederick Bosworth and Nathan Adolphus Baldwin, their executors, administrators, and assigns, the exclusive enjoyment and advantage thereof, for and during and unto the full end and term of fourteen years from the date of these presents next and inmediatcly ensuing, and fully to be complete and ended : Provided always, that if the said Charles Frederick Bosworth and Nathan Adolphus Baldwin shall not, within three days after the granting of these letters of Registration, register the same in the proper office in the Supreme Court at Sydney, in the said Colony of New South Wales, then these Letters of Registration, and all advantages whatsoever hereby granted, shall cease and become void.

In witness whereof, I have hereunto set my sign mamual, and have caused the present Letters of Registration to be sealed with the seal of the said Colony of New South Wales, at Government House, Sydney, in New South Wales, this twenty-ninth day of July, in the year of our Lord one thousand eight hundred and seventy.

## SPECTHICATLON

## Improvements in the mode of and Apparatus to be used in Scwing by Machinery.

This inveution is especislly applicable to the manfacture of straw hats and bonnets, and to those manufactures in which braids or other materials are sewn together, or to other material. Such work is commonly performed by hand, the stitch employed beinir a long one, and of such a character that little or none of the thread appears upon what is usually termed the right side. The sewing-machines herctofore used, without some additions, are practically useless for the purpose, as they sow a scam showing upon the right side a stitrh reaching from one to another of the punctures made by the needle, the whole length of the seam.

The first part of this inveution may be subdivided into four minor parts.
The first improvement consists in a new mode of stitching fabrics by machinery, the distinguishing characteristics of which are that a double thread or bight of thread passes into one surface of a layer or piece of braid or other material, then out again through the same surfice, and then through another layer or piece, and is then secured either by another thread, as in a sluttle stitch, by a loop of another thread, as in what is known as the double-looped stitch, or by a loop of its own thread, as in a crochet stitch.

The second improvement consists-first, in the combination of a roller or its equivalcnt with the needle of a sewing machine and the fceding apparatus, in such manner that a turn or bend is produced in one layer or piece of braid or other material, to cnable the needle to pass into one surface of it and out again through the same surface.

The third improvement consists in the combination of a sewing machine needle, a roller or bending surface, such as is above mentioned, and a contrirance for guiding the needle itself at some points above the material being sewed, thus forcing the needle to pierco the braid or other material at a proper distance from the roller or bending surface.

The fourth improvement consists in the employment in a seving machine, in combination with a roller or bending surface, such as hcreinbefore mentioned, and with any appropriate feeding apparatus, of a necdle having a vibrating movement towards and from the said roller, for the purpose of piercing and carrying the thread through the braid or other material at rarious distances from the said roller or bending device.

In the accompanying drawings, figure $I$, sheet one, is a sectional view of tro layers of braid, and of the roller or bendiug device, illustrating the manner in which the double thread or bight of thread is carried through them by the sewing-machine ncedle. Figures 2, 3, and 4 are similar sectional rietrs illustrating modifications of the stitch. Figure 5 is a front view of a sewing-machine, with our second, third, and fourth improvements attached. Figure 6 is a perspective view of the additional parts applied to the machine for carrying ont the improved mode of stitching fabrics. Similar letters of reference indicate corresponding parts in the several figures $k k^{2}$. Figures I, 2, 3, 4 represent two pieces or layers of braid. $g$ represents the needle, which is of the kind commonly used in sewing-machines, viz, haring an eye near its point; $c$ represents the roller or bending device over which the upper braid $k$ is bent, to enable the needle to enter it on one side and pass out again on the same side, and ihen through the lower piece $k$, as shown in figure 1, carrying its thread through the two pieces of braid in the form of a loop, which is secured by passing the other thread in figures $2,3,4$, or a loop of thread, through it. When the needle is withdrawn the braid is drawn tight, and as the braid is carricd forward by the feed movement its upper piece is drawn down upon the lower one; a bend in a new spot is then to be made in the upper braid, and another stitch taken. The stitch when completed presents the appearance shown at $u^{2}$ in figure 2. The needle and thread mar pass into the braid from one side or surface thereof, and out again on the same side, without perforating the other surface, as shown at $w w$, figures 1 and 2, or it may in its passage perforate the other surface, so that when it is withdrawn the thread shall appear thcreon, as shown at $w$ in figure 4; the object of this part of the invention being to sew braids together without any thread, or with very little thread appearing on the surface of one of the braids, each braid being united to the other by a double thread at the point where the needle perforates both the braids. In scwing braids together it is not necessary that they should be attached to each other at frequent intervale, but it is necessary, or at any rate expedient, in order to avoid the fraying of the stitch on the side that the under or locking thread appcais upon, that the latter thread should be caught and held at frequent intervals; it may thereforo be desirable at times to pass the needle through the lower braid only, as shown at $y y$ in figures 3 and 4, and to make onc or more interlockings of thread as there shown in the lower piece of braid only. These interlockings serve to confine the lower thrend, or the thread that appears below the lower braid, and such interlockings must alternate with interlockings uniting both braids, as shown at $w w$. The machine best adapted for making this stitch is the ordinary shuttle sewing-machine, having applicd to it this roller or bending derice $c$, which constitutes tho second improvement, and also the devices which constitute the third and fourth improvements, which are fully illustrated in figures 5 and 6 . In these figures the shuttle and its operating mechanism are uot shown, as those parts of the machine require no alteration from ordinary constructions, and only those parts are rcpresented which are necessary to illustrate the invention. $a$ is the needle bar, $g$ the needlc, $b^{1}$ the tale-up apparatus, $c^{1}$ the table or surface upon which the goods to be sewn are supported, $b$ the presser-foot for holding the work to the feed apparatus and the table, all of which parts may be constructed in the usual manner. To the presserfoot bar $b^{2}$, or to some other convenient part of the machine, there is attached a frame, $c^{2}$, which carrics the roller $c$ thereinbefore mentioned, the axis of which is at right angles, or nearly so, with the progression or feed movement of the goods. The upper piece of braid $k^{1}$ passes over this roller, then under it, and thence over the other piece of braid $k$, and ihe roller holds the one piece down upon the other. In order to keep the upper braid in position laterally there is an adjustable gauge, $d$, which may bo attached to the frame $c^{2}$; and in order to make the upper braid apply itself closely to the roller $c$, there is supported in tho frame or attached to the presser-foot another bar or roller, $e$, which rests upon the surface of the said braid. It is preferred to attach this bar or roller $e$ to a slide, $e^{1}$, clasping the presser-foot bar $b^{2}$, and

## Improrements in Sewing by Huchinery.

adjustable therenn by a set serew; so that the said bar or roller may be set to adapt itself to different thicknesses of braid. In order to guide the under picce of braid, there way be attached to the table a guide, $j$. In sewing with the contrivance as thus far described, a single piece of braid, $k$, or the braid on the edge of a number of picees already stitched together, is to be introduced under the presser-foot $b$, as shown in figure 6 , and another piece of braid, $k$, is to be passed under the bar or roller $e$, and thence over and under the roller $c$. If $e$ be properly set with reference to the needle, the needle will pass into and out of the upper braid and through the lower one, in the manner illustrated by figures 1 and 9 ; and according to the distance at which the roller is set from the line of motion of the needle, the thread will appear on the upper surface of the upper braid, as shown in firure 4, or will be invisible on the said surface, as shown in figures 2 and 9. When the loop has been passed through the two braids aud secured below the lower one by the locking or shuttle thread, and the needle, las risen out of both pieces, the feed will advance both braids, and in so doing will carry the upper one over the bending roller, so that it may be pierced at a different spot on the next descent of the needle, the feed and roller by their combined action presonting the upper braid properly. The above operation would not, however, be as certain as desirable, owing to the springing of the needile, without a contrivance for guiding the needle. The needle is therefore set so that it will not pierce the upper piece of braid at all unless it be bent or spring over towards the roller on its descent, and there is applicd to the presser-foot or other convenient support a guide such as is shown at $f$, which springs the needle over towards the roller when the needle enters the said guide. $\Delta$ bent piece of metal with a conical hole in it, or a simple surface standing nearly upright but inclining away from the needle at its upper edge, answers the purpose well.

The guide, shown in figures 5 and 6 of the drawings, has two surfaces meeting at an angle or apex, through which the necdle passes. By means of this addition, the needle is forced to pierce in the desired linc, and the operation of sewing is rondered certain. The loope of the needle thread passed through the lower braid are confined by the shuttle thread shown in the drawings, or may be by a looped thread or by a loop of the upper thread, as in crochet-stitch machines, and the stitch is drawn tight when it has passed or just as it is passing away from the rollcr. As the seam is stronger when the thread protrudes through the upper sarface of the upper braid, and as it is desirable that it should show only at long intervals further apart than can be conveniently fod or sewn in a sewing-machine in the interval between one stitch and another, it becomes desirable that there should be a contrivance by the use of which some of the stitches will be made in the lower braid only. In order to do this, the needle is set as before, and tho guide is mounted upon a spring arm, $f^{1}$, which tends to press it against the roller $c$, while au adjustable stop, s (see figure 5), regulates the distance to which it shall approach the roller. Upon the presser-foot bar $b^{2}$ there is mounted, so that it can turn freely, an irregularly polygonal plate, $p$, having secured to it a ratchet wheel, $n$, provided with a detaining parw, $n^{2}$, and with an actuating pawl, $i$, pivoted to a lever, $h$, which is attached by its fulcrum pin $h^{1}$ to the bar $b^{2}$. A pin, $s$, attached to the needle-bar and the lever $h$, are so arranged relatively to each other that cach stroko of the bar shall reciprocate the pawl $i$, and consequently turn the plate $p$. The arm $f^{2}$ bears against the perimeter of the plate $p$, and is pressed with the attached needle-guide $f$ more or less toward the roller $c$, according as a more or less prominent side of the said plate is presented toward it. By shaping the plate $p$ properly, the position of the guide may be so regulated and variod that the needle may be caused to pierce the upper piece of braid at every other stitch, or at every second, third, or greater number of stitehes as desired, so that seams may be sewn like those in figures 3 and 4 ; or, by proper shape and adjustment of the parts, seams may be sewn presenting the upper thread at-intervals above the upper surface of the upper braid, and at other intervals merely entching into the upper braid; or a seam may be sewn having some stitches showing on the upper surface of the upper braid, others catching into the upper braid and not showing, and others still which do not touch the upper braid at all. In sewing such scams, the needle springs away from the roller and is drawn toward it at the time and to the extent desired by the spring guide, the latter being governed by the plate $p$.

The apparatus above described is one for vibrating the needle to and fro in the direction of the line of the seam, and any contrivance that will cause the needle to so vibrate as to pierce or not pierce the upper braid as desired may be substituted for the apparatus specially described.

Where a vibrating needle as thus described is used, the feed apparatus feeds both the upper and lower braids, and presents both braids in such manner, by the aid of the roller $c$, that the needle may either puncture both braids or only one, depending upon the line in which the needle descends. The roller $e$ may rotate or be stationary, but it is preferable that it should rotate, and the bar $e$ and guide $d$ might be dispensed with, and the braid kept in position by the fingers of the operator ; the gist of the invention being to hold one piece of braid in reference to the braid or other material to which it is to be stitched, and in relation to the needle, in such manuer that the needle shall enter and leave the upper braid on the same side thereof, and shall afterward pierce the lower braid or piece of stuff to which the upper braid is to be sewn. As beforc stated, any proper feeding apparatus may be used, but either that conmonly known as the four-motion roughened-surface feed or the wheel feed is preferred. As the braids to be sown are sometimes of considerable thickness, and as one lies on the top of the other, the upper one will be held slightly above the table or platform of the machine. An ordinary feeding-bar will therefore act most effectualy if not entircly on the lower braid; but as the sewing, owing to the great length of the stitches, will be better if the feeding device acts upon both braids, it may be better to use two independent feeding devices, one for each braid, and, when using a four-motion feed, to split the feeding-bar at or about the linc of junction of the braids, thus making two feeding bars, aud to apply a set screw, or some equivalent device, so that the two bars may have their relative heights or levels adjustable tho one to the other, thus causing that bar which acts upon the upper braid to work at the lighest level, so that this braid may be as effectively fed as the lower one. In sewing hat-brins and other curved work, one brajd, viz, that nearest the centre or body of the hat, must of necessity move through a less distance than the other, and in order to make the feed adapt itself to both so as not to wrinkle either, and in order also to regulate the curvature of the sean, one feed should bo made to move at each stitch through a greater distance than the other. This object mar be attained most easily by advancing two feeding bars

## Improvements in Scwing by Machinery.

by the same cam, and by regulating their retreating motion by separate stops, one or both of which may be adjustable, and acting like the adjustable feed regulators well known to constructors of sewingmachines.

The second part of the inreution relates to improvements in that class of sewiug-machines in which the needle is moved in a vertical slide, and consists, first, in the peculiar construction of the mechanism which operates or moves the needle; second, in the peculiar construction and arraugement of a positive take-up; and third, in the peculiar construction of the shuttle-carrier, whereby the shuttle is more steadily held than in carriers of common construction.

In sheets two and three of the accompanying drawings, figure 1 is a side. view of the ncedle-arm, figure 2 a front view of the same. Figures 3 to 10 inclusive illustrate the coustruction and operation of the mechanism for moving the needle. Figures 11. and 1.2 illustrate the take-up, and figures 13, 14, and 15 represent the shuttle-carrier.
$A$ is the arm, within which is arranged in proper bearings a shaft, $B$, driven in the usual manner, to impart motion to the needle-slide C . Upon the end of the shaft B is fixed a plate, D (see figure 3), also seen in section in figure 10 ; a recess E is formed in the face of the plate D , into which a second plate, F , is fitted, and within the recess E and beneath the plate F a second recess, G , is formed, as seen in figure 10 ; and centrally through the reccss $G$ is formed a slot, $H$, also scen in figures 3 and 10 , and through the plate $T$ is formed a slot, 1 , eccentric to the centre of the plate $F$, as denoted in figure 4 , and the said plate $F$ is placed into the recess E of the plate D, as seen in figures 5 and 10 , zo that the slot I in the plate F crosses the slot $H$, as seen in figure 5 . The needle-carrier C is arranged to move vertically within a guide, J , in the usual manner ; a conuecting rod, $K$, is attached to the needle-bar C , denoted in broken lines, figure 2 , and seen detached in figures 9 and 10 , is pivoted to the bar at $L$. A plate, $M$, is formed so as to lie in space $G$ between the two plates F and D , as seen in figures 2 and 10 . A stud, $a$, is fixed to the plate M , so as to pass through the slot H , and upou the outside of the plate F , to the said stud the comecting rod is firmly fixed, so as to practically make the plate M a fixed part of the rod K . Upon the opposite side of the plate $M$, and in line with the point of connection $L$ and stud $u$, is piroted at $d$ a shoe, $N$ (see figures 9 and 10), which said shoe fits into the slot H, and so as to turn freely on its pirot d.

The operation of the needle-driver, thus constructed, is illustrated in diagrams, fiyures 6,7 , and 8 . In figure 6 the needle is represented at its lowest point, the slot $H$ being denoted in broken lines, and the slot $I$ in solid lines, the plate M also in broken lines. Revolving in the direction denoted by the arrow, the slot I rises slowly toward the centre to the position denoted in figure 7 , the shoe being carried over upon its pivot $d$ by the slot $H$, thus passing through about one-third of its full revolution, and rising only so much as the slot I approaches the centre of notion of the piate D , giving sufficient time for the passage of the shuttle through the loop, the slight raising of the needle being given for the purpose of opening the loop for the ready passage of the needle thercthrough. From this point (that is, as denoted in figure 7) the plate continuing its revolution causes the stud $a$ to be carried up, and the operation of the shoe in the slot Hf when arrived at the point denoted in figure 8 raises the needle to its highest point, and in such movement the operation of the shoe in the slot H is to advance the needle faster than the relocity of the plate, so that the stud $a$ when in the position denoted in figure 8 stands in the centre of the slot I , thus making the up movement very quick, nud, continuing its revolution, is in the like manner quickily moved down the stud $a$, quickly adrancing to the slot $I$, as seen in figure 6 . It will be observed that a stud at $d$ to move in the slot $H$ would answer the same purpose as the shoe $N$, yet the operation of the shoe turaing upon the pivot is much more perfect than could be attained by the stud. This construction gives to the needle the most perfect and easy movement; starting slowly from its lowest point to rise, and rising in adyance of the velocity of the machine, it passes easily over its upper dead centre and down to its lowest point, also in advance of the velocity of the machine, and resting nearly or quite stationary while the shuttle passes through the loop. This completes the first improvenent of the second part of the invention.

The second improvement, which relates to the take-up, is illustrated in figures 1, 2, 11, and 12. Tpon the shaft $O$, arranged in proper bearings $P$ on one side of the guide $T$ is fixed an arm, $Q$, extending across the face of the guide, and having in its opposite end an eye, $e$. The shaft 0 extends back so that an arm R (see figure 1), attached to the other cond of the shaft $O$ extends inward and bears against a cam, S, on the shaft B; the said cam is shown detached in figure 11, and is formed so that when the shaft B revolves to operate the needle, as before described, the cam will give to the take-up the necessary movement to slacken or tighten the thread as required. The take-up is illustrated in the diagram in figure 12. Starting from the same point as described for the movement of the needle, the lowest point of the needle is represented at 1 in dotted lines, the take-up also in dotted lines; the eyc being at 2 , the needle rises as the stud $a$ passes through the slot I to the position at 3 , denoted in black broken lines, and whilst the needle is moving this short distance the take-up rises to the position denoted at 4, also denoted in broken black lines, in order to give sufficient thread for the free passage of the shuttle, the loose thread being denoted by broken black lines; the needle then quickly rises to its highest position, denoted in black, the take-up falls to the position denoted at 6 , which draws up the thread; from this point the necdle and take-up move at nearly equal velocity to the position denoted at 7 of the necdle and 8 of the take-up, where the take-up rests until the needle arrives at its lowest point 1. During this last portion of the descent of the needle the take-up rises slightly to the position denoted at 2, sufficient to insure the opening of the loop; thus by the peculiar formation of the cam S , and the take-up working rigidly thereon, a positive and fixed tension is insured, which cannot be attained by dependence resting upon a spring to operate the take-up.

The third inpprovement relates to the construction of the shuttle-carrier, and is shown in figures 13,14 , and 15 , figure 13 , being a top view, figure 14 an edge view, the shattle• being denoted in dotted lines, and figure 15 an end view looking from the rear.

In this class of machines a great difficulty is experienced from the inclination of the shuttle to tip up when the thread is drawn taught, and more particularly is it so when a strong tension is required; to overcome this difficulty is the object of this part of the invention. TT is the shuttle-carrier plate, having its

## Improvements in Sewing by Machinery.

driver $f$ at the rear, its supporting tongues $h h_{\text {extending from the plate below the shuttle, and the return }}$ tongue $i$ formed in the usual manner. From the plate $T$ there is extended over the shuttle in the rear of the joint $i$, another tongue, $m$, so as to form a fulcrum under which the shuttle bears. when the thread is drawn taught, as denoted in dotted lines, figure 14, the point of the shuttle resting upon the return tongue $i$ as the weight, under the tongue $m$ as the fulcrum; therefore, as the weight and fulcrum are both rigid, the power or tension of the thread fails to raise the heel of the shuttle, and this difficulty is entirely overcome.

Having thus fully described the invention, what is claimed as new and useful, and now desired to be secured is,-

First, sewing by machinery with the aid of $a$ roller or guide for guiding the fabric, substantially in the manner and for the purpose set forth.
Secondly, the combination of the slot $I$ in the one plate and the slot $H$ in the other, with a connecting rod, $K$, constructed with its two bearings, $\omega$ and $l$, so as to operate substantially in the manner hercin set forth.
Thirdly, the arrangement of the positive talse-up $Q$ with its cam $S$, formed relatively to the movement of the needle, so as to operate in the manners specified.
Fourthly, the arrangement of the tongue $m$ upon the shuttle-carricr in the position relative to the return tongue $i$, so as to operate as described.

This is the specification referred to in the annexed Letters of Registration, granted to Charles Frederick Bosworth and Nathan Adolphus Baldwin, this twenty-ninth day of July, 1.870.

# IMPROVEMENTS IN THE PRESERVATION OF MEAT AND OTHER ARTICLES OF FOOD. 

# Letyers of registration to Ferdinand Cassel, for Improvements in the Prescrration of Meat and other Articles of Food. 

[Registercd on the Sth day of August, 1870, in pursuance of the Act 16 Vict., No. 24.]

BY His Exubicency $u$ he Riget Honorable Somersef Richabd, Eabl of Belaore, a Member of Her Majesty's Most Honorable Priry Council in Ireland, Governor and Commander-in-Chief of the Colony of New South Wales, and Vice-Admiral of the same.

## TO ALL TO WHOM THESE PRESENTS SHALL CONE, grceting:

WHereas ferdavand Casser, of Cologne, in the Kingdom of Prussia, hath by his Petition humbly represented to me that he is the author or designer of acertain invention or improvement in manufactures, that is to say, of an invention for "Improvements in the Preservation of Meat and other Articles of Food," which is more particulunly described in the specification which is hercunto annexed; and that he, the said Petitioner, hath deposited with the Honorable the Treasurer of the said Colony of New South Wales the sum of Twenty Pounds sterling, for defraying the expense of granting thesc Letters of Registration, as required by the Act of Council, sisteenth Victoria, number twenty-four; and hath humbly prayed that $I$ would be pleased to grant Letters of Registration, whereby the exclusive enjoyment and advantage of the said invention or improvement might be secured to hinn for a period of fourtecu years: And I, being willing to give encouragement to all inventions and improvements in the arts or manufactures which may be for the public good, and having received a report favourable to the praycr of the said Petition, from competent jersons appointed by me to examine and consider the matters stated therein, and to report thereon for my information, am pleascd, with the advicc of the Fixecutive Council, and in exercise of the power and authority given to me by the said Actiof Council, to grant, and do by these Letters of Registration grant unto the said Ferdinand Cassel, his executors, administrators, and assigns, the exclusive enjovmenti and advantage of the said invention or improvement, for and during the tern of fourteen years from the date hereuf; to have, hold, and exercise unto the said Ferdinand Cassel, his cxecutors, administrators, and assigns, the exclusive enjorment and advantage thereof, for and during and unto the full end and term of fourteen years from the date of these presents next and immediately ensuing, and fully to be complete and ended : Provided ilways, that if the said Ferdinand Cassel shall not, within three days after the granting of these Letters of Registration, register the same in the proper office in the Supreme Court at Sydney, in the said Colony of New South Wales, then these Letters of Registration, and all advautages whatsoever hereby granted, shall cease and become void.

In witness whercof, I have hereunto set my sigu manual, and have caused the present Letters of Registration to be sealed with the seal of the said Colony of New South Wales, at Government House, Sydney, in New South Wales, this eighth day of August, in the year of our Lord one thousand eight huudred and seventy.
(L.S.)

## Improvements in the Preservation of Meat and other Articles of Food.

## SPECTEICATION.

## TO ALL TO WHOM IT MAT CONCERN:

BE it known that I, Ferdinand Cassel, of Cologne, in the Kingrdom of Prussia, have invented or discovered new and useful Improvements in the Preservation of Meat and other Articles of Food, and I, the said Ferdinand Cassel, do hereby declare the nature of the said invention, and in what manner the same is to be performed, to bo particularly deseribed and ascertained in and by the following statement; thereof, that is to say:-

In order to preserve meat and other articles of food, the meat or other articles are, according to this invention, coated externally with the oil obtained from the corns of grapes.

The oil may, for this purpose, be applied in various ways, and the meat or other articles may be prepared in various ways before the oil is applied to them. For preserving meat, it is however preferred to proceed as follows:-Tin the case of amimals they should be killed by bleeding them ; that is to say, by letting the blood run away through a cut: to kill the animals by striking them will be less advisable. The bones should then be cut out, and the flesh divided into small pieces of about 10 to 12 lbs ., or smaller, just as is convenient. The fat is also cut away as much as possible, although it is not necessary to entirely get rid of it. The said pieces are then wrapped separately in linen or pieces of cotton, in which they are allowed to stay for from seven to twelve hours, according to their size, until the flesh is perfectly dry on the outside, and till no more moisture is coming from the surface. Then the pieces are strung up separately on cords, and are conted everywhere and very carefully with the oil, the thinner the better. The best way of applying the oil is with a painter's brush, but, it may be done also by dipping the pieces into the oil. In stringing tho pieces upon the cord, the needle and the cord ought to be well wetted with the oil, for the parpose of preserving the place where the hole has been made.

After having been coated with the oil, the pieces are hung up in a dry and lofty airy place, without touching each other, and are allowed to dry for from one to three weeks, according to the climate and temperature. As soon as the pieces have a hard surface or crust all round them, during which process they generally get a whitish colour, and lose about 20 to 25 per cent. of their weight, they are ready to be packed into boxes and be sent anywhere, and they will keep in any climate for a great length of time. During the preparation and the drying of the flesh, all insects and flies, so dangerous to cycry lind of meat, have to be kept amay. To cook meat preserved in the manner abore described, it should first be laid for some time in fresh water, either for one or two days, for the purpose of softening or dissolving the crust, which crust may be eaten just as well as the rest. The longer the meat has been preserved the longer it should lay in fresh water, and it will be very advisable also to put it for some minutes into boiling water before roasting it. Other articles of food, such as eggs and butter, may be similarly prescrved by coating them with the oil obtained from the corns of grapes.
T.o procure the oil, different modes may be adopted. I. will, however; explain two modes by which the oil may be obtained. The corns of the grapes are first ground to a fine powder; the oil may then be obtained either by extracting it chemically or merely by expressing it.

For the purpose of expressing the oil, the meal has to be moistened with warm water and heated for one hour, for the purpose of dissolving the woody parts which surround and contain the oil; after which the meal may be pressed in any well known manner of oil-pressing. The oil at first runs off clear: and clean, but the last oil contains much slime, which, if allowed to stand, will settle down after a time.

For the purpose of extracting the oil chemically, the best way will be to adopt the well-known apparatus of Mr. Lowenberg, and which is so well known that I do not consider it necessary to give a full description of it. It will be sufficient if I say that the extraction with this apparatus is made by the

Both of the means above described of procuring the oil have their adrantages. By expressing, the oil is obtained directly, and very little coloured; but this method does not give much oil, and the last oil expressed contains much slime, which will separate itself only by settling down slowly.

By the other mode of extraction, mearly all the oil cxisting in the corns is obtained, but the oil is very darkly coloured; nevertheless, it is clean and free of all slime.

Having thus described the invention and the manner of carrying it practically into effect, I would have it understood that I claim, under this Patent,-

1. The exclusive right of coating flesh and other articles of food with the oil obtained from the corns of grapes, in order to preserve them.
2. The exclusive right of selling flesh or other articles of food so prepared.

In witness whereof, I, the said Ferdinand Cassel, have hereunto set my hand and seal, this thirty* first day of March, in the year of our Lord one thousand eight hundred and seventy.

FERDINAND CASSEL.
(L.s.)

This is the specification referred to in the annexed Letters of Registration granted to Ferdinand Cassel, this eighth day of August, 1870.

BELMORE.

## REPORT.

Sydney, 16 July, 1870.
Sir,
The application of Mr. Ferdinand Cassel for Letters of Registration for "Improvements in the Prescrvation of Meat and other Articles of Food," hawing been referred to us, we lave examined the specification accompanying the same, and have the honor to report that we see no objection to the issue of Letters of Registration as prayed for.

We have, de.
J. SMITH.

Tref Principal Under Secretary.
CHAS. WATT.

[Registered on the 17 th day of August, 1870 , in pursuance of the Act 16 Vic., No. 24.]

BY His Excemeacy mile Right Hoyorable Somerset Richard, Fime of Bemome, a Member of Her Majesty's Most Honorable Privy Council in Ireland, Governor and Comminder-in-Chief of the Colony of New South Wales, and Vice-Admiral of the same.
IO ALL IO WHOM JEESE PRESENTS SHALL COME, greeting:
WHEREAS Wildam Haldiy and Tsale Cifos, both of the city of Sydney, in the Colony of Now South Wales, Carriage-manufacturess, have by their Potition humbly represented to me that they are the authors or designers of a certain invention or improvement in mannfactures, that is to say, of an invention of a "Triction Brake," which is more particularly described in the specification and sheet of drawings which are hercunto amexed, and that ther, the said Petitioners, have deposited with the Honorable the Treasurer of the said Colony of New South Wales the sum of Twenty Pounds sterling, for defraying the cxpense of granting these Tetters of Registration, as required by the Act of Council, sixteenth Victoria, number twenty-four, and hive humbly prayed that I would be pleased to grant Letters of Registration, whereby the exclusive enjoyment and advantage of the said invention or improvement might be secured to them for a period of fourtcen years: And I, being willing to give encouragement to all inventions and improvements in the arts or manufactures which may be for the public good, and having received a report farourable to the praycr of the said Petition, from competent persons appointed by me to cxamine and consider the matters stated therein, and to report thercon for my information, am pleased, with the advice of the Executive Council, and in exercise of the power and authority given to me by the said Act of Council, to grant, and do by these Letters of Registration grant unto the said William Halley and latac Clyde, their executors, administrators, and assigus, the exclusive cnjoyment and adyantage of the said invention or improvement, for and during the term of fourteen years from the date hereof ; to have, hold, and cxercise unto the said William IIalley and Isaac Clyde, their executors, administrators, and assigns, the exclusive enjoyment and advantage thereof, for and during and unto the full end and term of fourten years from the date of these presents next and immedintely ensuing, and fully to be complete and ended: Provided always, that if the said William Halley and Isaac Clyde shall not, within three days after the granting of these Letters of Registration, recister the same in the proper office in the Supreme Court at Syducy, in the eaid Colony of New South Wales, then these Letters of Registration, and all advantages whatsoever hereby granted, shall cease and become void.

In witness whereof, I have hereunto set my sign manual, and have caused tho present Letters of Registration to be scaled with the scal of the said Colony of New South Wales, at Govermment House, Syducy, in Now South Wales, this seventeenth day of August, in the year of our Lord one thousand eight hundred and seventy.

$$

BELMORE.

## Friction Brake.

SPECIFTCATION of a Friction Brake, proposed to be applied to Carriages of every description, for which, as herein described, and illustrated by the accompanying drawings, the undersigned seek the profection of Letters Patent.
IT is proposed to apply the Friction Brake to the nave or other portion of the hind whecls; to effect which, an angle-iron or other flanged hoop is secured to the nave or hubb, on which the friction strap grips or seizes when the break is applied, and which prevents the staap from rubbing against the hubb when loose.

One end of the friction strap is secured to a cranked stay or bracket on the hind axle, the other end working in a pin at end of short lever, as shown at $c$ in cularged detail on plan. This lever is depressed by means of a spindle, $c c$, and levers, with connecting rods, \&c., as usual, leading to a handle in front for working by the foot. When the short lever $c$, before referred to, is deprossed as above described, tho friction straps on both wheels are driwn tight over the hoops (before described) on the hubb of wheel, causing the wheels to stop altogcther aud drag along the ground, or merely putting an extra drag on them, as may be required, at the option of the driver. The break is returned to its original position (on liberating the haudle), by means of india-rubber spring acting on the back spindle; this effectually stops all rattle or other noise, which is such a great disadvantage in the prescont brake for private carriages.

The spindle $o$ o being continued across in one, the whole distance betwcen the wheols, and turning on its own centre, brings both the brakes into play at the same time, and in action has been proved to have extraordinary power over the wheels, there being no tendency to slip, even on the roughest roads. We therefore claim protection for the application of the friction strap, as above described, believing it to be superior in every respect to the old block brake applicd to the circumfercnce of the wheel.

WM. HALLET \& ISAAC CLYDE,
Carriage-manufacturers, Pitt-street, Sydney.

This is the specification referred to in the annexed Letters of Registration, granted to William Hailey and Isaac Clyde, this serenteenth day of August, 1870.

## IMPROVED METHOD OF EXTRACTING GOLD.

# LETTERS OF REGISTRATION to Frederick Beer, for an improved Method of extracting Gold. 

[Registered on the 24th day of August, 1870, in pursuance of the Act 16 Vic., No. 24.]

BY His Excellency the Rraift Honoramid Somerset Ricifard, Earl of Belmore, a Member of Her Majesty's Most Honorable Privy Council in Ireland, Governor and Commander-in-Chief of the Colony of Now South Wales, and Vice-Admiral of the same.
$T O$ ALL TO WHOM. THESE PRESENTS SHALJ, COME, greeting :
WHEREAS Frederick Beer, of the city of Sydney, in the Colony of New South Wales, Doctor of Medicine, hath by his Petition humbly represented to me that he is the author or designer of a certain invention or improvement in manufactures, that is to say, of an invention for an improved process of separating the Gold from its combination with the sulphites of other metals or minerals called mundic or pyrites, namely, of an invention of an improved method for saving all the Gold now lost (through imperfect amalgamation) with the "tailings," containing arsenical iron pyrites, copper pyrites, antimonial pyrites, and the sulphites of other metals, which said invention is more particularly described in the specification hereunto annexed; and that he, the said Petitioner, hath deposited with the Honorable the Treasurer of the said Colony of New South Wales the sum of Twenty Pounds sterling, for defraying the expense of granting these Letters of Registration, as required by the Act of Council, sixteenth Victoria, number twenty-four, and hath humbly prayed that I would be pleased to grant Letters of Registration, whereby the exclnsive enjoyment and advantage of the said invention or improvement might be secured to him for a period of fourteen years: And I, being willing to give encouragement to all inventions and improvements in the arts or manufactures which may be for the public good, and having received a report favourable to the prayer of the said Petition, from competent persons appointed by me to examine and consider the matters stated therein, and to report thereon for my information, am pleased, with the adrice of the Executive Council, and in exercise of the power and authority given to mo by the said Act of Council, to grant, and do by these Letters of Registration grant unto the said Frederick Beer, his executors, administrators, and assigns, the exclusive enjoyment and advantage of the said invention or improvement, for and during the term of fourteen years from the date hereof; to have, hold, and exercise unto the said Fredcrick Beer, his executors, administrators, and assigns, the exclusive enjoyment and advantage thereof, for and during and unto the full end and term of fourteen years from the date of these presents next and immediately ensuing, and fully to be complete and endcd: Provided always, that if the said Frederick Beer shall not, within threc days after the granting of these Letters of Registration, register the same in the proper office in the Supreme Court, at Sydney, in the said Colony of New South Wales, then these Letters of Registration, and all advantages whatsoever hereby granted, shall cease and become void.

In witness whereof, I have hereunto set my sign manual, and have caused the present Letters of Registration to be sealed with the seal of the said Colony of New South Wales, at Government House, Sydney, in New South Wales, this twenty-third day of August, in the year of our Lord one thousand eight hundred and seventy.

BELMORE.

## SPECIFICATION.

I decompose and remove the sulphites completely, whilst submitting the crushed auriferons ore or rocks, or tailings, to a process of roasting in a reverberatory furnace, by the application of a hot air blast, or by passing also, towards the end of the operation, pure oxygen over the substance.

Oxygen having a great affinity for sulplur and its compounds, enters readily into combination with it, oxidising it, forming sulphurous acil gas and sulphuric acid, leaving the gold intact and frec, as it has but little affinity for this metal.

I line the imuer wall of the fire-place of $a$ reverberatory furnace with a coil of iron tubes, the one and of which opens into the basin containing the mass to be treated, which substance, when lrought by the heat of the fire to an incandescent state, is shut off from the flame and its gascous products by means of a slide. I then drive a current of heated air over it, through the other end of the tube, by menns of a bellows. When almost all the sulphites have been removed by that means, I complete the process, if required ; and, to ensure complete decomposition of all kinds of pyrites, to which the presence of the nitrogen of the air may have been $a$ hindrance, by passing a current of pure oxygen over it.

When treating arsenical iron pyrites, it will be advisable to attach a condensing chamber to the furnace, before the chimney, in order to precipitate the arsenical fumes.

I claim the application of hot air blast and of pure oxygen to the auriferous crushed compounds containing the various sulphites, whilst brought to au incandescent state in a reverberatory furnace, as the principle of my invention of an improved method for the better saring of gold in "tailings" of gold mines, inasmuch as, after this roasting process, all the gold can be obtained by amalgamation; butif I likc, I use super-hented steam as a substitute or supplement to the above process.

FREDERICK BEER, M.D., Ch., O.D.

## Machine for galvanizing Iron.

## SPECIFICATION of a Machine for galvanizing Iron.

The machine, which is fixed in the inside of the galvanizing bath, and the greater part of which when in use is covered with molten metal, consists of circular plates or bars of wrought iron, of a sufficient thickness to prevent warping, fixed together at the ends by bolts and nuts counccted to two wells, also made of wrought iron, and which wells when in use are the only parts of the machine visible, and which are fixed to the circular plates or to the bars of iron before mentioned, as shown in the diagram annexed, giving a perspective view of the machine when not in use.

The principal adrantages to be derived from the use of this machine are, that iron can be galvanized better and speedier with this machine than by any other process, and with a smaller quantity of metal, and consequently a less consumption of fuel, aud is much safer for the workmen employed in the process.
P. T. 0.

This is the specification referred to in the annexed Letters of Registration, granted to James Partridge, this twenty-third day of August, 1870.

BELMORE.

## REPORT.

## IMPROVED METHOD OF CONVERTING INTO MANURE ANIMAL SUBSTANCES AND PRODUCTS.

## Letters of Registration to George Foord, for an Improved Method of converting into Manure Animal Substances and Products.

[Registered on the 3rd day of September, 1870, in pursuance of the Act 16 Vict., No. 24.]

#### Abstract

BY His Excelleacy the Right Honorable Sompreft Richard, Earl of Belmore, a Member of Her Majesty's Most Honorable Privy Council in Ireland, Governor and Commander-in-Chief of the Colony of Ner South Wales, and Vice-Admiral of the same.

## TO ALL TO WHOM THESE PRESENTS SHALL COME, greeting:

WHEREAS Geonge Foord, of St. Kilda, in the Colony of Victoria, analytical chemist, hath by his Petition humbly represented to me that he is the author or designer of a certain invention or improvement in manufactures, that is to say, of an incention of "an Improved Method of converting into Manure Animal Substances and Products," which is more particularly described in the specification which is hereunto amexed; and that he, the said Petitioner, hath deposited with the Honorable the Treasurer of the said Colony of New South Wales the sum of Twenty Pounds sterling, for defraying the expense of granting these Letters of Registration, as required by the Act of Council, sixteen Victoria, number twentyfour; and hath humbly prayed that I would be pleased to grant Letters of Registration, whereby the exclusive enjoyment and advantage of the said invention or improvenent might be secured to him for a period of fourteen years: And I, being willing to give encouragement to all inventions and improvements in the arts or manufactures which may be for the public good, and having received a report favourable to the prayer of the said Petition, from competent persons appointed by me to examine and consider the matters stated therein, and to report thereon for my information, am pleased, with the advice of the Esecutive Council, and in exercise of the power and authority given to me by the said Act of Council, to grant, and do by theso Letters of Registration grant unto the said George Foord, his executors, administrators, and assigns, the exclusive enjoyment and advantage of the said invention or improvement, for and during the term of fourtecn years from the date hereof; to have, hold, and exercise unto the said George Foord, his executors, administrators, and assigus, the exclusive enjoyment and advantage thereof, for and during and unto the full end and term of fourteen years from the date of these presents next and immediately ensuing, and fully to be complete and ended: Provided alvays, that if the said George Foord shall not, within threc days after the granting of theso Letters of Registration, register the same in the proper office in the Supreme Court at Sydney, in the said Colony of New South Wales, then these Letters of Registration, and all advantages whatsoever hereby grauted, shall cease and become void.

In witness whereof, I have hereunto set my sign manual, and have caused the present Letters of Registration to be sealed with the seal of the said Colony of Nem South Wales, at Government House, Sydney, in New South Wales, this first day of September, in the year of our Lord one thousand eight hundred and seventy.
(L.s.)

## Improved Method of converting into Manure Animal Substances and Products.

## SPECIFICATION.

TO ALL TO WIIOM THESE PRESENTS SHALL COME, I, George Foord, of St. Kilda, near Melbourne, in the Colony of Victoria, send greeting:
WHEREAS I am desirous of obtaining Royal Letters Patent for securing unto me Fer Majesty's special license that I, my executors, administrators, and assigns, and such others as $I$ or they should at any time agree with, and no others, should and lavfully might, from time to time, and at all times during the term of fourteen years, to be computed from the day on which this instrument shall be left at the office of the Chief Secretary, mako, use, exercise, and rend within the Colony of New South Wales aud its Dependencies, an invention for "an Improved Method of conrerting into Manure Animal Substances and Products"; and in order to obtain the said Letters Patent I must, by an instrument in writing under my hand and seal, particularly describe and ascertain the nature of the said invention, and the manner in which the same is to be performed, and must also enter into the covenant hereinafter containcd: Now know ye, that the mature of the said invention, and the mamer in which the same is to be pesformed, is particularly described and ascertained in and by the following statement, that is to say :-

The nature of my invention is the conversion of substances of animal origin into valuable and conomic fertilizing agents, in such in way as to render the substances so treated innocuous to health, preventing or arresting putrescent decay, without hindering their after decomposition in the soil, and in fact favouring their ready assimilation by the crop. For this purpose, for every ton of refuse flesh of: sheep or other animals, with or without bones, I take from two to five hundredweight of mineral acid, sulphuric and hydrochloric acids, together or separate, being most suitable; of these, I prefer the employment of sulphuric acid; on account of its relative cheapness in this market, and its peculiar efficiency for my object. I take in such case that kind of sulphuric acid known as oil of vitriol, of full commercial strength, that is to say, oil of vitriol of such a density as to weigh very nearly eighteen pounds six ounces aroirdupois, a litite more or a little less, per imperial gallon, or 1. take weaker sulphuric acid in relatively larger proportion, but I find the acid of the strength and kind mentioned to be more quickiy effective than any other. I place the meat as aforesaid with the acid, in an open or closed wooden or stone vat, or into a vat or vessel of wood or other conrenient material lined with lead. I find open vats or tanks to answer my purpose fully, and, on account of their ready accessibility, to be more convenient than closed vessels. I provide a lead pipe, descending in one of the angles of the vat, coiled on the bottom of the vat, plugged at the extremity of the coil, and perforated in the coiled portion with many small holes. Through this pipe I supply, from a steam boiler, steam at a convenient pressure. Thirty pounds per square inch I find to be a convenient working pressure for the proposed object, although it is not essential to work exactly at the pressure named. During the blowing-up of the steam in the rat, by the means described, the mass is gradually reduced, that is to say, the meat and bone are broken down in their textures, and the fatty substances, when these are present, rise to the top of the semifluid magma which results. After remoring the supernatant fat, the whole of the other constituents of the original meat are found to be reduced to the state of a more or less fluid brown paste, deficient of external organic form and of visible organic structure. The time requisite for this change under the combined influence of the steam and oil of vitriol depends on the scale of the operations, on the proportion and strength of the oil of vitriol used, on the comparative solidity of the animal substances treated, and on other similar and obvious conditions; but, as illustrating this point, I may mention that in a vat of vincty cubic feet capacity, with a charge of a ton of refuse meat, four hours of continuous steaming is amply sufficient for reducing the mass entirely, or almost ontirely, to the pulpy state.

The product of this operation, after the removal of the fat, may now be stove-dried at any temperature short of a carbonizing heat; $200^{\circ}$ Fabrenheit will be found effective for the purpose, and when dried, it will constitute a valuable fertilizing agent, rich in assimilable nitrogen and phosphorus compounds ; or it may be at once mixed with some absorbent substance-with bone-dust or with phosphatic guano; or "sombrerite," for example.

The product thus obtained can also be supplemented in its composition, whenever this is required, by admixture with Chilian nitre, or potash nitre, or with silicate of potash or sulphate of ammonia, or other mineral fertilizers, or other fertilizers not of mineral character or origin, according, in each case, to the special requirement of the soil and crops for which the manure is iutended, and in conformity with modern prevalent views concerning fertilizing agents, and as set forth in works concerning the chemistry of husbandry.

Towards the close of the reduction by oil of ritriol in the mamer just described, if common salt or salt waste, or chloride of potassium or chloride of ammonium, or other soluble chloride, be carefully added to the contents of the vat, hydrochloric acid will be liberated; and, if also sesquinoxide of manganese be added with the salt, there will be also elimination of free chlorine. Such additions, in small proportions, at this stage of the operation, are in certain cases beneficial, especially so when only a minimum quantity of oil of vitriol (say one-tenth the weight of the meat) has been employed; or free hydrochloric acid may be added in place of a soluble chloridc. When these additions are made, the free hydrochloric acid or chlorine conduces to the protection of the product from the attack of insects, and from consequent putrefactive change during the after drying operation. Concerning this point, it is proper to explain that the product obtained as described, even without the additions of chlorides or hydrochloric acid with oxide of manganese, is but little prone to putrefactive change, scarcely at all so after being brought to the dry state; but when only a minimum of oil of vitriol has been used, or when by the after addition of a guano rich in carbonate of lime, the acid has been almost completely neutralized, the mass during the drying operation is more or less subject to the attacks of certain forms of insect life; and to prevent these, the addition of small proportions of salt or its equivalent as indicated, with or without peroxide of manganese, may be practised.

When the waste meat contains bone, or when bone phosphate is afterwards added to the reduced meat, either as phosphatic guano or bone phosphate, the oil of vitriol performs a double function; first, that of reducing the organic texture of the meat in the manner alrcady described, and secondly, that of decomposing the bone phosphate with liberation of soluble bi-phosphate of lime, according to the well known decomposition so commonly practised by the artificial manure maker in the production of the so-called "superphosphate" of commerce.

## Improved Method of converting into Manure Animal Substances and Products.

In the case of employing phosphatic guano as an absorbent and supplement to the reduced flesh manure, it is best to choose those samples of guano which are on the one hand rich in phosphates, but which are at the same time free or almost free from coral debris, marine shells, or other constituents rich'in carbonate of lime. When much lime carbonate is present, it is decomposed by the oil of vitriol in preference to the bono phosphate, and in such case the full benefit of the oil of vitriol is not obtained. However, in all cases in which there are economic reasons for the use of such guano containing carbonate of lime, i. is only necessary to use an excess of oil of vitriol proportionate to the carbonate of lime concerned, allowing in such cases, for the ascertained quantity of carbonate of lime present, an excess amounting to its own weight of oil of vitriol of full commercial strength (specific gravity 1.84 ), which will be a little more than the theoretical proportion for its saturation. In such cases, the oil of vitriol over and above the amount disposed of in the decomposition of the carbonate of lime will go to form gypsum and soluble bi-phosphate of lime, whether from bones in the meat or from the phosphates of bone-ash or guano or other phosphatic material afterwards added in the course of operations.

Although I have mentioned the use of stean blown into the wat for aiding the reducing action of the oil of vitriol, I wish it to be understood that a result virtually the same as that already described by me may be obtained by a direct bottom heat in a suitable lead-lined or stone tank or vessel of earthenware, or of other materials, such as are well known to be suitable, and which are in common use by the chemical manufacturer, for operations in which the use of mineral acids, especially of sulphuric acid, is concerned; or stenm heat may be employed, by use of closed imperforate coils of stcam pipes immersed in the vat, or by a jacketed vessel or vat of material suitable to the special requirement as aforesaid; but in working with a battom heat, or with a stcam jacket, or close coil conducting steam through, but not into immediate contact with tis contents of the vat, or in any of the well-known modes of applying heat, other than that of blowing ste:an into the contents of the vat in manncr hereim first described, it will be advisable to add, from time to time, as much water as will approximately represent that of the condeused steam in those cases in which the vat is blown up by steam, as already in the first instance described.

The method described is applicable for the treatment not only of waste meat, as already mentioned, but also for the treat.ment of cutire carcasses of sheep, oxen, and horses, and indeed, generally for the carcasses of other land animals; in which applications of this method it will generally be found convenicnt and economical to skin such carcasses before treatment in the rat; and it will facilitate operations, if the carcasses are opened, if the skull is cloven by division of the palate at least, and if the thick muscles are scored ; although this outlay of labour, favouring the rapidity of the operation, is not indispeasable; for the combined effect of the acid and steam is such that the carcasses entire, with viscera and offal, are resolved into a supernatant layer of fat, and an underlying dark brown magma, products of the disorganization of the animal fabric.

In addition to the particular uses already specified, the proposed mothod is of the widest application. Whatcyer of auimal origin is susceptible of putrefactive decay can be arrested in any stage of that decay by the proposed treatment; such substances can also be kept for the proposed treatment, until it is convenient to convert them in the manuer described. They can be thus kept by preparatory immersion in a bath of the dilute acid, from which they may be at any time transferred to the converting vat. Cetacea, soals, fish, and the waste of fisheries, may be treated with equal effect by the means as already described for waste meat and for the carcasses of land animals ; and sea-birds, those which yield oil especially, are in like manner available under the proposed treatment.

In describing the nature of my invention, I wish to point out particularly that there are two aspects in which its value and nature may be vicied: lst, hygienic application, that, namely, in which the use of oil of vitriol or other equivalent mineral acid, or equivalent chemical mixture as described, is adopted as a disinfectant, whereby large bulks of animal refuse, blood, offal, slaughter-yard drainage, excreted and animal refuse generally, may be treated, and at the same time rendered innocuous to the public health; and 2udly, its technical application, namely, the use of oil of vitriol, in conformity with economical conditions for breaking domn the structure of organic matters of animal origin, so as to separate the fatty constituents, at the same time reducing all the other constituents to a state fit for manure, and so that the sulphuric acid, wholly or in part, after this first office, conduces to the elimination of soluble phosphates.

In elucidation of this distinction, it is proper to explain that, in the use of carbolic and cresylic acids, of wood kreasote, and of similar disinfectants and deodorants, applyiug them to animal refuse, the after employment of fertilizers of the materials treated with such chemicals is in no way assisted by the presence of the chemicals themselves ; but in my proposed treatment with sulphuric acid or its equivalent as specifici, allhough the putrefactive decay is arrested, and all volatile offensive matters are fixed, the product is peeuliarly suited for gradual decay in the soil, in such a way as to yield plant food to the crop.

In the practice of my invention, which essentially hinges on the use of oil of vitriol, or of equivalent mineral acids, for breaking down the structure of matters of aminal origin, and in the after partial or entire application of the same acin, for eliminating soluble phosphates from ordinary bone phosphates, the mamiral products thus obtained are, in the dry state, so little prone to putrefactive change that, when properly packed, they are unobjectionable as cargo, and thcy may therefore be conveyed by ship or land carriage to any market or agricultural centre in which they happen to be in demand. The proposed method, in fact, promises the means of collecting phosphatic and nitrogenous plant food from broad tracts of grazing lands, and of conveying them in a concentrated form into districts where they will become availablo for raising soils to the arable condition, or for the maintenance of arable soils. The whole carcass collected from grazing lands cin be rendered portable by the method specified, and can be placed at the disposal of arable soils, or any parts of the carcass not in demand for othcr applications can be so disposed of, and at the same time one of the most intolerable burdens attending the treatment of animal wastes can be removed, in conformity with conditions considered necessary for preserving the public health.

In specifying the details illustrating the manuer in which this invention is to be applied and carried out, I wish it to be understood that I do not claim any of the familiar operations therein adapted to the carrying into practice of the aforesaid invention; thus, I do not claim the steam heating or the bottom heating of the vats, nor the addition of oil of vitriol or other acids to bone phosphate for the

## Improved Method of converting into Manure Animal Substances and Products.

elimination of soluble bi-phosphate of lime; neither do I confine my practice to such mechanical and other subsidiary dctails as are above described; but what I claim as my invention is, substantially the use of oil of vitriol or other equivalent mineral acid, such as hydrochloric acid, or of any mixture the acid character of which springs from a foundational use of oil of vitriol, for the treatment of animal refuse and matters of animal origin, whether the amimal matiers be or be not mixed with substances or matters not of animal origin; and 1 claim the use of these for producing manness rich in assimilable nitrogen and phosphorus compounds, and their employment for the proposed object, in a manner according with requirements for the public health.

And I do hereby, for myself, my heirs, cxecutors, and administrators, covenant with Her Majesty, her Heirs and Successors, that I believe the snid invention to be a new invention as to the public use and exercise thereof, and that I do not know or believe that any other person than myself is the true and first inventor of the said invention, and that I will not deposit these presents at the office of the Chiof Secretary with any such knowledge or belief as last aforesaid.

In witness whereof, I have hereunto set my hand and seal, this eighteenth day of July, one thousand eight hundred and seventr.

GEORGE FOORD.
Signed, sealed, and delivered, \}
in the presence of
Errderici G. Moutie,
Sol. and Notary Public, Melbourne.

This is the specification referred to in the annexed Letters of Registration granted to George Foord, this first day of September, 1870.

BELMORE.

## REPORT.

Sydney, 4 August, 1870.
Sili,
The application of Mr. George Foord for Letters of Registration for " an Improved Method of converting into Manure Animal Substances and Products," having been referred to us, we bave examined the specification accompanying the same, and have the honor to report that we see no objection to the issue of Letters of Registration as prayed for.

We have, \&c.,<br>J. SMITH.<br>CHAS. WATT.

Ter Principal Under Secretary.

# IMPROVED METHOD AND APPARATUS FOR OBTAINING A REDUCTION OF TEMPERATURE. 

# LETTERS OF REGISTRATION to John Andrew Edwards, for an improved Method and Apparatus for obtaining a Reduction of Temperature. 

[Registered on the 29th day of September, 1870, in pursuance of the Act 16 Vic. No. 24.]

BY His Excellevcy the Riget Hoyorable Sonfriset Richard, Earl of Belmone, a Member of Her Majesty's Most Honorable Privy Council in Ireland, Governor and Commander.in-Chief of the Colony of New South Wales, and Vice-Admiral of the same.

## TO ALL TO WHOM THESE PRESENTS SHALL COME, greeting:

Whereas Join Andrew Emwards, of Sydney, in the Colony of New South Wales, gentleman; hath by his Petition humbly represented to mo that he is the author or designer of a certain invention or improvement in manulactures, that is to say, of an "Invention for an improved Method and Apparatus for obtaining at Reduction of Temperature by the expansion of air and permanent gas, with a view to the preservation of articles of food, the manufacture of ice, and the cooling of liquids and rooms," which is more particularly described in the specification marked $A$, and the two sheets of drawings marked $B$ and C respectively, all of which are hercunto annexed; and that he, the said Petitioner, hath deposited with the Honorable the Treasurer of the said Colony of New South Wales the sum of Twonty Pounds sterling, for defraying the expeuse of granting thicse Letters of Registration, as required by the Acti of Council, sixteenth Victoria, number twenty-four ; and hath humbly prayed that I would be pleased to grant Letters of Registration, whereby the exclusive enjoyment and advantage of the said iurention or improvement might be secured to him for a period of fourteen years: And $\hat{\text { I }}$, being willing to give encouragement to all invontions aud improvements in the arts or manufactures which may be for the public good, and havivg received a report farourable to the prayer of the said Petition, from competent persons appointed by me to examine and cousider the matters stated therein, and to report thereon for my information, an pleased, with the advice of the Trecutire Council, and in exercise of the power and authority given to me by the said Act of Council, to grant, and do by theso Letters of Registration grant unto tho said John Andrew Edwards, his executors, administrators, and assigns, the exclusive enjoyment and advantage of the said invention or improvement, for and during the term of fourteen years from the date hercof; to have, hold, aud exercise unto the said John Andrew Fdwards, his esecutors, administrators, and assigns, the exclusive enjoyment and advantage thereof, for and during and unto the full end aod term of fourteen years from the date of these presents next and immediately ensuing, and fully to be complete and ended: Provided always, that if the said John Andrew Edwards shall not, within three days after the granting of these Letters of Registration, register the same in the proper office in the Supreme Court at Sydnev, in the said Colonv of New South Wales, then these Letters of Registration, and all advantages whatsoever hereby grauted, shall cease and become void.

In witness whereof, I havo hereunto set my sign manual, and have caused the present Letters of Registration to be sealed with the seal of the said Colony of New South Wales, at Government House, Syduey, in New South Wales, this twenty-sixth day of Soptember, in the year of our Lord one thousand eight hundred and seventy.

## (..s.)

BELMORE.

## SPECIFICATION.

## A.

Particlelars of Metiod ANj Apparayus.
My now arrangement can be worked by hand or by a steam-engine. The compression of air or gas is effected by the hydraulic ram in a large hydraulic cylinder, sphere, or ellipse.

The ram has two outlets, one at the bottom the other at the top; each is fitted with a flange, a junction pipe, and stopcock. A force pump and a bydraulic pump are connected with the lower outlet. A hollow sphere is attached to the upper outlet by the upper junction; it is of much less cubical content than the ram. The upper stopeock beiug opened to allow a free passage of air from the ram to the sphere, water is pumped into the ram by the force-pump driving the air upwards into the sphere and compressing it there. When the resistance of the compressed air becomes too great for the power of tho force-pump, the hydraulic pump is used to complete the comprossion. When the ram is filled with water, all the air it contained at first is compressed into the sphere, where it is confined by a stopcock.

The sphere is then detached from the ram and submerged in a frigorific mixture; it is next connected with a close vessel of cubical content equal to that of the ram, or nearly so, from which the atmosphere has been exhausted. The compressed air is then allowed to enter the vacuum, and it then becomes a cooling medium.

For cooling rooms and liquids, an arrangement may be made by which they may be cooled by the expansion of the air by direct application, or by the expanded air being conveyed in tubes or pipes passing round or through the ressels containing fluids, or round or through rooms.

Steam or any other power, horse, mill, waterfall, water-wheel, windmill, hand-power, may be used for working the apparatus.

Another arrangement of the apparatus may be used. The water being pumped into the ram as before, the air is conveyed by a pipe to the small sphere not affixed to the top of the ram, but placed on the same basement as the ram, or in any conreniont position, and submerged in a cooling misture.

As the compression of the air and heat is gradual, the cooling also of the compressed air is gradual by the cooling mixture, and the cooling is effected almost as rapidly as the heating; when sufficiently cooled, it is passed to the congelator or vessel in which the freezing takes place.

The freezing of water or of articles of food may be effected without the use of an air-pump, butin that case a loss of cooling medium takes place.

Imestration-Diagrabr I.
Suppose the ram to contain twenty cubical feet of atmospheric air and the sphere to contain one cubic foot of the same, when the water has filled the ram, the twenty feet of atmospheric air have been compressed into the smaller sphere, which will then contain twenty-one feet of air; and not only this, but as much sensible heat as is due naturally to twenty-one cubical feot of air; the compressed air is therefore twenty-one times hotter than the atmospheric air. When the smaller sphere with the compressed air is submerged in the cold bath, it parts with its excess of heat, and is rapiuly cooled to the temperature of the atmospliere. It then contains tuenty-one feet of air, but only as much heat as is due to one cubic foot of air.

A ressel (the congelator) containing the water or material to be frozen or cooled is provided. Its cubical content is equal or nearly equal to that of the ram, that is, twenty cubical feet; it is made of iron, with a cover made to be air-tight, and it is corered with a matcrial very slightly couductive of heat, or enclosed in a wooden case rendered slightly conductive of heat. A shallow vessel containing strong sulphuric acid is placed on the floor of the congelator; tho cover being closed, the smaller sphero with the compressed air cooled is attached to it by a junction tube; the stopcock being opened, the compressed air by its expansion passes at once into the congclator aud fills it. The congelator then contains twenty feet of air, the quantity due to its cabical contents, but only as much heat (or nearly so) as is due to one cubic foot of air, that is, it is twenty times as cold as the atmospheric air. The temperature thus lowered converts water to ice, and all matters containing aqueous fluid and within the congelator are frozen almost instantancously.

As soon as the cooled air is brought into comnection with the water in the congelator, the water gives out large masses of vapour; this, if not checked, exerts such pressure on the water's surface as to stop evaporation. Sulphuric acid is not liable to sensible evaporation, and it has a strong affinity for water; it seizes on the water in suspension as vapour and holds it fast, the evaporation goes on, and with it the cooling process.

The man has an escape pipe for the escape of the water that bas been used for compressing the air, and this water is conveyed to a tank, and may be used again for a second compression.

If the air is very much compressed the sulphuric acid may be dispensed with.

## Key to Dragram I.

Let A be a hollow sphere 4 feet 8 inches in diameter, cubical content 20 feet nearly. $B$ be a smaller hollow sphere, 15 inches in diameter, cubical content 1 foot.
$C^{1}$, a force-pump for water, with lever handle.
$\mathrm{C}^{2}$, hydraulic pump.

- D, stopcock admitting or shatting off water from pump.

E , stopeock admitting or confining air in B .
T, escape tube and stopeock.
$\mathbf{G}$, the congelator containing material to be refrigerated and sulphuric acid.
H, union for stopeock.
I, junction tube.
The stopcock $D$ being open, water is pumped through $D$ (open) into sphere $A$, driving the air above it; the pumping is continued till $A$ is filled, $B$ then contains all the air orgivally in $A$, that is, 20 cubic feet +1 foot, its own content; $E^{\prime}$ is then closed, and $B$ detached from $A$ and cooled in a frigorific mixture; it is then connected with $G$ congelator by $H, G$ is then exhausted by use of air pump connected with $\bar{K}$, and $H$ being opened, the compressed air passes into $G$ and congelation ensues, $F$ is opened and the water capes from $A$, and $F$ being again closed, the ram $A$ is again ready for service.

## obtaining a Reduction of I'emperature.

## Inlustration.-Diagram IL.

The sphere is placed on the same basement as the ram. A pipe unites the ram and the sphere. Water being pumped into the ram, the air is compressed in the sphere immersed in the cooling mixture, and when cooled to the temperature of the atmosphere or lower, is conveyed by a pipe to the congelator, and there expanded.

Key ro Diagram MI.
A, the ram.
B , small sphere in vessel M with cooling mixture.
C , connecting pipe with stopcocks $\mathrm{D} \mathrm{D}^{1}$.
E, pipe with stopcock $0 O^{\prime}$ comneeting small sphere with congelator.
FFFEF, guddles for holding vessels with water or articles of food.
Water being pumpod into $A$, the air is driven through pipe $C$ into $B$, and condensed there and cooled by frigorific mixture. $D^{1}$ being ciosed and $O O$ being opened, the cooled air is conveyed to $G$, where it is expanded and becomes the freezing medium.
N.B.-In freezing meat and articles of food, as these contain a comparatively small portion of nqueous fluid, the sulphuric acid is not used.

## Packting Process.

The articles of food having been congelated by the above-mentioned process for preservation, they are packed in ice in cases of wood, rendered non-conductive of heat except of very high temperature. The cases are framed so that tho sides forming the width of the cases fit into grooves in tho longitudinal sides, and the top and bottom into grooves in the four sides, just as the top of a groove box slides into its grooves.

The cascs being framed but not the together, they are submerged in a strong solution of silicate of soda, or of pearlash dissolved in as much water as will hold it in solution, or in a thick mixture of gypsum and water.

The solution is contained in a strong iron vessel, closed on all sides except at a narrow opening of convenient length which is provided with a cover made to fit air-tight. The cover being hermetically closed, the air above the solution is exhausted, and the expansion of the air in the pores of the wood frees it from the pores, and it passes in bubbles to the space above the solution. The atmosphere is then allowed to enter the vessel, and its pressure forces the solution into the empty pores. The wood is then dried, and receives a coat of the solution of silicate of soda; it afterwards las three coats of lime-wash a strong solution of gypsum, and a second coat of solution of silicate of soda.

The cases are then put together with pins of wood prepared in the same mannor as the frames. The articles of food are placed in alternate layers of ice, broken small and shaken into the interstices. The cases being filled, the upper layer of ice is sprinkled with water, the case is put into a close vessel and a blast of freezing air is thrown on it; the contents of the caso are then converted into a solid mass of frozen matter. The cover is affixed and hermetically sealed. I't is then packed in an outer case somewhat larger, prepared in the same way as the inside one, and the space below, around, and above it, is filled up with either finely powdered gypsum, feathers, wood-ashes, sheep's wool, the fur of animals, fibres of bark, dry sawdust, or powdered charconl. The outside of the outer case may be covered with a pigment of bright yellow clay mixed with sizo water, and again conted with a solution of silicate of suda.

Having thus stated the principle of my invention and the arrangement of the apparatus, I declare that I claim specially as my invention-Firstly, the expansion of the compressed air in a vacuum; secondly, the arrangement of the apparatus for cooling compressed air in a cooling mixture after compression and detached from the ram, and also by submersion in a conling mixture during the process of compression; thirdly, the method of rendering wood partially non-conductive.

JNO. A. EDWARDS.
This is the specification, marked A, referred to in the annexed Letters of Registration, granted to John Andrew Edwards, this twenty-sixth day of September, 1870.

## IMPROVEMENT IN QUARTZ-CRUSHING MACHINERY.

## LETTERS OF REGISTRATION to William Edmund Smith and Edward Albert Smith, for Improvement in Quartz-crushing Machinery.

[Registered on the 21st day of October, 1870, in pursuance of the Act 16 Vic., No. 24.]

BY His Exchleency the Rigit Honorable Somerget Richard, Earl of Beimone, a Member of Her Majesty's Most Honorable Priry Council in Ireland, Governor and Commander-in-Chief of the Colony of New South Wales, and Vice-Admiral of the same.

## TO ALI. TO WHOM THESE PRESENTS SHALL COME, greeting:

WItereas Winliam Edmoxd Smitit and Edward Adbart Smity, both of Bathurst, in the Colony of New South Wales, have by their Petition humbly represented to me that they are the authors or designers of a certain invention or improvement iu manufactures, that is to say, of an invention or improvement in crushing Quartz or other hard substances, for extracting Gold therefrom, which is more particularly described in the specification and sheet of drawings which are hereunto annexed, and that they, the said Petitioners, have deposited with the Honorable the Treasurer of the said Colony of New South Wales the sum of Trenty Pounds stcrling, for defraying the expense of granting these Letters of Registration, as required by the Act of Council, sixteenth Victoria, number twenty-four, and bave humbly prayed that I would be pleased to grant Letters of Registration, whereby the exclusive enjoyment and advantage of the said incention or improvement might, be secured to them for a period of fourteen years: And $I$, being willing to give encouragement to all inventions and improvements in the arts or manufactures which may be for the public good, and hapring received a report farourable to the prayer of the said Petition, from competent persons appointed by me to examine and consider the matters stated therein, and to report thereon for my information, an pleased, with the advice of the Executive Council, and in excrcise of the power and authority given to me by the said Act of Council, to grant, and do by these Letters of Registration grant unto the said Willian Edmund Smith and Edward Albert Smith, their executors, administrators, and assigns, the exclusive enjoyment and adrantage of the said invention or improvement, for and during the term of fourteen years from the date hereof; to have, hold, and exercise unto the said William Edmund Smith and Edward Albert Smith, their executors, administrators, and assigns, the exclusive enjoyment and advantage thereof, for and during and unto the full end and term of fourtcen years from the date of these presents next and immediately ensuing, and fully to be complete and ended: Provided always, that if the said William Edmund Smith and Edward Albert Smith shall not, within three days after the granting of these Letters of Registration, register the same in the proper: oflice in the Supreme Court at Sydney, in the said Colony of New South Wales, then these Iretters of Registration, and all advantages whatsoever hereby granted, shall cease and become void.

In witness whereof, I have hercunto set my sign manual, and have caused the present Letters of Registration to be sealed with the seal of the said Colony of New South Wales, at Government House, Sydney, in New South Wales, this eighteenth day of October, in the year of our Lord one thousand cight hundred and seventy.

## Improvement in Quartz-crushing Machinery.

SPECIFICATION of Improvements in Machinery for Crushing Quartz for extracting Gold thercfrom, with Plan annexed.

The plan is drawn to a scale of onc foot to an inch for a large size two stamper battery machine, to be worked by steam power or water power.

All the frame and stampers (iron-shod) of this machine to be iron-bark or bor, barrel cedar wood of this Colony, and all so durable as will last upwards of fifty years. Frame to be fastencd together with wrought-iron plates and nut and screw bolts. Agrceable io scale in plan, the stampers to be each seven feet in length, and the lower end of stamper to be twelve inches square, and shod with wrought-iron, and riveted on the stampers with inch bolts in countersink holes in shoe; the weight of each stamper to be 6 cwt., and the stampers being of an clongated form will strike the quartz with a great momentum, and to be made to crush as much in quantity of quartz with the same power and time as a battery of five stampers in present nse, thereby a great saring in cost of purchase, and also a great difference in weight in conveyance, and no danger of breakage.

Smaller machines to be made to work by horse-power or manual labour.
Horse-power machines to be worked with cog-wheel on end of axle, and attached to a cog-wheel on one cnd of an iron shaft; the other end of shaft to be fitted with a cog-wheel, and to work in a wheel in an iron frame, attached to an axle with a lever. The horses attached to the lover walk round the frame and set stampers in motion.

Machine for manual labour to be worked with cog-wheel on one end of axde to a cog-wheel on a spindle with au iron handle at each end of spindle; the spindle to revolve in plummer boxes, as also the axle of barrel, and to be worked by two or more mon. These machines are very suitable for holders of small claims.

Portable machines most serviceable for prospectors, to be worked by one man, with an iron handle fixed on oue end of axle to set the stampers in motion, to be more fully explained hereafter.

Fig. 1 in plan represents tho front elevation of the aforcsaid machine for crushing quartz. A.Two wood stampers shod with wrought-iron, as shown in fig 5 in plan. B.-Three wood vertical guides for stampers to slide against. C.-Two wood horizontal guides, bolted to vertical guides, for stampers to slide between. D.-Sill wood, vertical guides and diagonal braces bolted to it, and forms lower part of frame. E.-Two wood diagonal braces, to prevent frame from racking. F.-hront of boxes, 4-in. cedar or fir plank. G.-Three wrought-iron plates, 3 in . by t , bolted through into plates back of boses with five 1 -in. nuts and screw bolts in each plate. H.-Two gratings by which the quartz is discharged from boxes, after being crushed and washed out by rush of water from a tank fixed at back of frame. Gratings to be made of brass plate $\frac{1}{4}$ of an in. in thickncss and 2 in . wide, aud a space of $\frac{1}{8}$ of an in. between each plate, and rivetcd together in an iron frame, and to be fixed so the quartz do not go near it till crushed, and to be taken out when required. I.-Two openings above gratings with doors for charging boxes with quartz for crushing. K.-Two wrought-iron knees bolted to sill and diagoual braces. L.-1-in. wrought-iron nut and screw bolts, to secure frame together. W.-Wrought-iron plates 3 in. in thickness and width of sill, and inbedded therein, for crushing quartz upon.

Fig. 2 in plan represents the back clevation of machiue. A.-Two wood stampers, shod with wrought iron. B.-Vertical guides. C.-Horizontal guides. D.-Sill. E.-Diagonal braces. M.Back of boses. N.-Two openings for admitting water into the boses. As the stanpers are up, the water rushes from the openings into the boxes and washes the crushed quartz and gold through the gratings in front of machine on to a copper plate ontside; and runs down the ripple board; the water to be supplied from a tank fixed at back of frame, with pipes, hose or shute; water to supply the tank to be pumped from a well, water-hole, reservoir, or creek. O.-Barrel cedar. P.-Cogs on barrel. R.-Cog on stamper. W.-Wrought-iron plate on sill for crushing quartz upon.

Fig. 3 in plan reprosents the side elevation of the machine-the dotted lines. X shows the frame-work of the machine, barrel, cogs, stampers, sill, and wrought-iron plate, in plain lines, so as to be better shown. A.-Stanper wood, and wrought-iron shod, as shown in fig. 5 . 0 .-Barrel cedar, and to be made in two thickuesses, to admit of axle nad cogs to be imbedded into and bolted together with nut and screw bolts. S.-Wrought-ixou axle, 3 in. square, fixed through barrel, to be turned near each end, to recolve in plummer boses on frame, a ${ }^{3}$-in. hole to be drilled half way of asle, and a bolt to be through axle and barrel, to prevent twisting in barrel. R.-Two cogs on stampers, wood and plated with iron ; the one in plain lines is fixed to the stamper that is raised, the one in dotted lines is fixed to stamper that is down; one stamper is made to fall before the other is attempted to be raised. P.-Four cogs, wood, and plated with brass (that portion that projects the barrel) ; each (two cogs) is imbedded in the barrel and iron axle fixed through them, and forms four cogs on barrel, and so placed in barrel as to raiso each stamper alternately twice during one revolution of the barrel. T.--Plummer boses for axle to revolve in. The barrel to be turned round (by steam or other power) by a crank on one cad of axle (as shown in fig. 4); the opposite end of axle to be of sufficient length so as to couple another battery to the axle; one revolution of the barrel will cause the stampers to make four strikes, and twenty revolutions of harrel per minute will make cighty strikes with the two stampers per minute, at a fall nearly 20 -in. on the quartz; and the stampers being of an clongated weight, will strike the quartz with a great momentum, and estimated to crush between three and four tons of quartz per hour.

Fig. 4 represents the plau of machine, showing barrel, cogs, axle, and crank attached, boses for crushing quartz in, and part of frame of machine. O.- 3harrel. P.-Cogs. V.-Axle. U.-Crank on end of arle. Y.-Plummer boxes. Z.-Two boxes for crushing quartz in, and be lined with thin brass plate.

Fig. 5 in plan showing wood stamper with wrought-iron shoe fixed and fastened to stamper with eight 1 -in. iron bolts, riveted into countersunk holes in sloe. R.-Cog on stamper. D.-Sill. W.-wrought-iron plate, 3 in. in thickness to crush quartz upon.

The scantling of frame and stampers, also iron-work as stated, is for the size of a machine in plan drawn to a scale of 1 foot to an inch; but larger or smaller machines, the scantling of frame, stampers, and also iron-work, will be made suitable for machines agreeable to size and power required.

## Improvement in Quartz-crushing Machinery.

The aforesaid improvements in machinery for crushing quartz consists in the following properties, viz:-

The framework of the aforcsaid machine, and also stampers (wrought-iron shod), vertical guides, horizontal guides, and sill, to be iron-bark or box-wood, cedar barrel, all wood of this Colony, and so durable as will last upwards of fifty years. The iron-work to be all wrought-iron, nut and screw bolts, and plates to secure the frame together and axle and crank.

Also the application and mode of working two stampers to form one battery, and to be made to crush as much in quantity of quartz with the same power and time as a battery of five stampers in present use, thereby a great saving in cost of purchase, and also a great difference in weight in conveyance, and also no danger of breakage.

- Machines to be made to crush any (reasomable) quantity of quartz, agreeable to sizo and power, required; to be worked by steam power, water power, horse power, or manual labour.

Machines for steam or water power, as aforesaid stated, to be made to crush from three to four tons of quartz per hour, horse power from $\frac{2}{2}$ ton to a ton and a half of quartz per hour. Manual labour, suitable for small claim-holders, $\frac{2}{2}$ ton of quartz per hour.

Portable machines, scrvicable for prospectors, would be more likely to benefit the Colony, and be the means of employing labour more so than other speculations.

These portable machines, the frame to be made of wood, and put together with nut and screw bolts, and easily taken apart when required; the two stampers to be wood and shod with irou, to be 3 fect in length, and the weight to be 25 lbs . each. Frame and stampers complete for working, to be not more weight than $1 \frac{1}{4}$ cwt, and can be taken to pieces and put in a pair of wicker hampers, and strapped across a horse or mule's back--tho stampers in one hamper and the frame in the other hamper; and this machine could be putit together in one quarter of an hour, ready for use when required. The hampers to be lined with tin or zinc, and ass soon as a reef is found the hampers would be serviceable across the horse's back to convey water from the nearest creek or water-hole for working the machinc and washing out the gold, and with such a machinc parties might find valuable reefs and know the value of the quartz a few hours after discovery.

These machines, to be made to work by one man and crush tbree to four hundredweight of quartz per hour, and the amount of purchase money but trifling.

Summary of advantages in the aforesaid Improved Quartz-crushing Machinery :-
Durability and strength of materials.
Superior mode of working two stampers in one battery, and so powerful in their operations.
Easily and quickly put together.
Easily repaired when required.
Small in quantity of materials.
Lightness in weight for conveyance, and no danger of breakage.
Small cost of purchase, and could be made and at work in so short a time, and be the means of giving great employment to labour and also open out the Colony.
We make no claim to the invention of stampers, nor to an iron axle, or plummer boxes, or crank, or iron handle, or to extracting or amalganating the gold from guartz when crushed.

Ail we claim as inventors of improvements in quartz-crushing machinery is as follows :-
The application of two stampers to form one battery, and the mode of raising and letting fall the stampers for crushing quartz, as shown and fully described in fig. 3 and fig. 4 in plan annexed.

Bathurst, August 9th 1.870.
WILLIAM EDMOND SMITH.
EDWARD. ALBERT SMITH.

This is the specification referred to in the annexed Letters of Registration, granted to William Edmund Smith and Edward Albert Smith, this eighteenth day of October, 1870.

## REPORT.

#### Abstract

Office of Harbours and Rivers, 23 May, 1870. Sir,

Having in attention to your B.C. minute No. 70-3,521, examined the plan and specification of Improvement in Machinery for crushing Quartz or other hard substances for extracting Gold or other metals therefrom, accompanying the application of Messrs. Wm. Edmd. Smith and Edward Albert Smith for Letiers of Registration to secure the same, we are of opinion that the prayer of the Petition may be granted, as far as regards the arrangement and dimensions of parts shown on the drawings, and the character of the materials described in the specifications.

[^4]
## Improvenent in Quartiz-crushing Machinery.

Application of Messrs. W. E. and E. A. Snith for Jetters of Registration for Improvements in Quartz-crushing Míachinery.
Memo.-The Honorable the Solicitor General having reported that Jetters of Registration, in the modified form recommended in our report of the 23 rd May, in this case ought not to be issued, but recommending that the examiners should report absolutely for or against,-we have now the honor, under the circumstances, to report against the application as it stauds.

The plan generaly is based upon a method of crushing quart\% and other stove long, linown, and extensively (almost miversally) for this purpose practised; but the particular arrangement of materials and parts ik, as far as we are aware, novel; in so far, therefore, as the latter qualities are concerned, the application for Letters of Registration might have been grauted as recommended by us.

As however the specification goes far beyoud the plan, and would secm to imply that other matters and things beyond those shown in the drawings were intended to be patented, we felt bound to make the linitation referred to.

If the applicant strictly confines his specification to a description of the drawings, or such modifications of them as can be clearly understood, we should see no objection to recommending a compliance with the prayer of the Petition.

## IMPROVED METHOD OF TREATING TANNIN-YIELDING TREES, \&c.

## LETTERS OF REGISTRATION to George Alfred Bartleet, for an Improved Method of treating Tannin-yielding Trees, \&c.

 [Registered on the 22nd day of October, 1870 , in pursuance of the Act 16 Vic., No. 24.]BY His Excellenct the Right Hoyorable Somerset Richard, Eart of Belmore, a Member of Her Majesty's Most Honorable Privy Council in Ireland, Governor and Commander-in-Chief of the Colony of New South Wales, and Vice-Admiral of the same.

## TO ATL TO WHOM THESE PRESENTS SHALL COME, greeting:

Whereas George Alfred Bartleet, of Adelaide, in the Province of South Australia, merchant, hath by his Petition humbly represented to me that he is the anthor or designer of a certain invention or improvement in manufactures, that is to say, of an invention for "An Improved Method of treating Tanvin-yielding Trees, Shrubs, and Plants," which is more particularly described in the specification which is hereunto annexed; and that he, the said Petitioner, hath deposited with the Honorable the Theasurer of the said Colony of New South Wales the sum of Twenty Pounds sterling, for defraying the expense of granting these Jetters of Registration, as required by the Act of Council, sixteenth Victoria, number twenty-four; and hath humbly prayed that I would be pleased to grant Letters of Registration, whereby the exclusive enjoyment and advantage of the said invention or improvement might be secured to him for a period of fourteen years: And I, being willing to give encouragement to all inventions and improvements in the arts or manufactures which may be for the public good, and having received a report favourable to the prayer of the said Petition, from competent persons appointed by me to examine and consider the matters stated therein, and to report thereon for my information, am pleased, with the advice of the Executive Council, and in exercise of the power and authority given to me by the said Act of Council, to grant, and do by these Letters of Registration grant unto the said George Alfred Bartleet, his exccutors, administrators, and assigns, the exclusive enjoyment and advantage of the said invention or improvement, for and during the term of fourteen years from the date hereof; to have, hold, and exercise unto the said George Alfred Bartleet, his executors, administrators, and assigns, the exclusive cujoyment; and advantage thereof, for and during and unfo the full end and term of fourteen years from the date of these presents next and immediately ensuing, and fully to be complete and ended: Provided always, that if the said George Alfred Bartleet shall not, within three days after the granting of these Letters of Registration, register the same in the proper office in the Supreme Court at Sydney, in tle said Colony of New South Wales, then these Letters of Registration, and all advantages whatsoever hereby granted, shall cease and become void.

In witness whercof, I have hereunto set my sign manual, and have caused the present Jetters of Registration to be sealed with the seal of the said Colony of New South Wales, at Government House, Sydney, in New South Wales, this twenty-first day of October, in the year of our Lord one thousand eight hundred annd seventy.
(L.S.)

## Improved Method of treating Tannin-yielding Trees, \&o.

## THE SPECIFLOAMION referred to in the foregoing Petition.

Improved method of treating 'Lumin-yieluing Trees, de., for the purpose of producing an extract for the use of Thuners.
Lettens of Registration to George Alfred Bartleet, of Adelaide, in the Province of South Australia, merchant, for an invention for "An improved method of treating Tamun-yielding Trees, Shrubs, and Plants, for the purpose of producing an extract for the use of Thaners."

I propose to operate on the bark, leaves, or other parts of all tammin-yielding trees, shrubs, or phants, containing the tamin matter, and specially those of the mimosa or black wattle, for the purpose of extract-

- ing the tannin matter contained therein, and I proceed as follows:-

1st. I grind in a suitable mill the materials in question to a moderately fine state, preferubly to about the condition of coarse sawdust.

2nd. I subject the materials so ground or ragged to the action of steam or water heated to a suitable temperature in vats or other appropriate vessels, which maceration 1 repeat till all the tanning material has been extracted from the matters under treatment, and the residual woody matters I then press and dry for fuel, or otherwise treat for the manufacture of paper.

3rd. The liquor or infusion of tannin, tamic acid, or other taming agent obtained by the last-named mothod, I then proceed to purify and in part decolourize, by cansing it either to percolate through or thoroughly mix with it by aritation, common fire-clay, or potter's clay, or other suitable carth or minerals, in a state of dry powder, which carries down any suspended matter, as well as a large portion of the colouring matter contained in the liquor or infusion so treated, so as to enable tanners to produco leather of the same colour as that tamed by oak bark.

4th. I proceed to concentrate the purified infusion or liquor thus obtained, by evaporating its water in open pans by steam or other heating agent, or preferably in closed pans or vessels made of copper or other suitable materials, and in which a partial vacuum is sustaincd, such pans or ressels to be beated by steam, water, or other heating agent, and fitted with agitators to provent the extract from burning. The degree of concentration may be varied at pleasure, and either continued till the cxtract has the condegree of concentration may be varied at pleasure, and either continued till the cxtract has the con-
sistency of molasses, when it may be run out into the barrels for use, or the process may be prolonged and the extract subsequently desicented, so as to permit of its being made into blocks.

The extracts so obtained will then be ready for use, and being readily soluble, tanners obtain therefrom not only a liquor of any dosired strength by the addition of more or less water, but a liquor of less colouring properties than that made in the ordinary method.

Having thus described the nature of my invention and the manner of performing the same, I would have it understood that I do not confine myself to the precise details herein set forth and described, so long as the uature of my said invention be retained, but I claim the improved method of treating tanmiuyielding trees, shrubs, and plants, in the manner and for the purposes substantially as herein described and explained.

In witness whereof, I., the said George Alfred Bartleet, have hereunto set my hand and seal, this sixteenth day of August, in the year of our Lord one thousand eight hundred and seventy. Signed, sealed, and delivered by the said George ?

GEORGE ALFRED BARTLEET.
Alfred Bartlcet, in the presence of- $\quad$ -
Chas. Fexy,
Solicitor and Notary Public, Adelaide.

This is the specification referred to in the annexed Letters of Registration, granted to George Alfred Bartleet, this twenty-first day of October, 1870.

BELMORE.

## REPORT.

Sycluey, 23 September, 1870.
Sik,
The application of Mr. Geo. Alfred Bartlect, for Letters of Regisiration for "An improved method of treating Tannin-yielding Trees, Shrubs and Plants, for the purpose of producing an extract for the use of Tamers," having been sefered to $1 t s$, we have examined the specification accompanying tho same, and see no objection to the issue of leetters of Registration as desired.

We have, \&c.,
J. SMITH, M.D.

The Principag Under Secritary.
J. MACFARLANE, M.D.

# IMPROVEMENTS IN TREATING CEREAL AND OTHER VEGETABLE SUBSTANCES, \&c. 

## LETTEERS OF REGISTRATION to Alexandre Manbré, for Improvements in treating Cereal and other Vegetable Substances, \&c.

[Registered on the 22nd day of October, 1870, in pursuance of the A.ct 16 Vict., No. 24.]

#### Abstract

By Hrs Excellency the Right Honorable Somersiet Richard, Earl of Belarore, a Member of Her Majesty's Most Honorable Privy Council in Ireland, Governor and Commander-in-Chief of the Colony of New South Wales, and Vice-Admiral of the same.

## TO ALL TO WHOM IIIESE PRESENTS SHALL COME, greeting:

Whereas alixandre Mavbie, of Brook-street, Spitalfields, in the County of Middlesex, in the Kingdom of England, Sugar-manufacturer, hath by his Petition humbly represented to me that he is the author or designer of a certain invention or improvement in manufacturcs, that is to say, of an "Invention for treating Cereal and other Tcgetable Substances, and Apparatus to be employed for such purposo," which is more particularly described in the specification and sheet of drawings which are hereunto annexed; and that he, the silid Petitioncr, hath deposited with the Honorable the Preasurer of the said Colony of New South Wales the sum of Twenty Pounds sterling, for defraying the expense of granting these Letters of Registration, as required by the Act of Council, sixteenth Victoria, number twenty-four; and hath humbly prayed that I would be pleased to grant Letters of Registration, whereby the exclusive enjoyment and advantage of the said invention or improvement might be secured to him for a period of fourteen years: And $\overline{\mathrm{I}}$, being willing to give cucouragernent to all inventions and improvements in the arts or manufactures which may be for the public good, and having received a report favourable to the prayer of the said Petition, from competent persons appointed by me to cxamine and consider the matters stated thercin, and to report thereon for my information, am pleased, with the advice of the Executive Council, and in exercise of the power and authority given to me by the said Act of Council, to grant, and do by these Letters of Registration grant unto the said Alexandre Manbre, his executors, administrators, and assigns, the exclusive enjoyment and advantage of the said invention or improvement, for and durint the torm of fourteen years from the date hercof; to have, hold, and exercise unto the said Alexandre Manbre, his executors, admimistrators, and assigns, the exclusive enjoyment and advantage thercof, for and during and unto the full end and torm of fourteen years from the date of these presents next and immediately ensuing, and fully to be complete and ended: Provided always, that if the said Alexandre Manbré shall not, within three days after the granting of these Letters of Registration, register the same in the proper office in the Supreme Court at Sydncy, in the said Colony of New South Wales, then these Thetters of Registration, and all advantages whitsoever hereby granted, shall cease and become void.

In witness whereof, I have hereunto set my sign manual, and have caused the present Letters of Registration to be sealed with the scal of the said Colony of New South Wales, at Government House, Sydney, in New South Wales, this tweaty-first day of October, in the year of our Lord one thousand eight hundred and scventy.

## Improvements in treating Cercal and other Fegetable Substances, 8 e.

THE SPECIFICATION containing the particulars of an Invention by Abexandre Manmat, for treating Cercal and other Vegetable Substances, and Apparatus to be employed for such purpose.
Lemens of Registration to Alexandre Manbré, of Brook-strcet, Spitalifelds, in the County of Middlesex, in the Kingdow of England, formerly of 81 Baker-strect, Portman Square, in the said County of Middlesex, Brewer and Sugar-manufacturer, for the "Invention of Inprovements in preparing and treating Cereal " and other Vegetable Substances, oxtracting the starch they contain, and in converting it into fermentable
" saccharine matter, for use in brewing and distilling, in making rinegar, ciner, perry, and other fermented
"drinks; and also for swectening and preserving food, syrup, confectionery, and other useful purposes:
"and apparatus for thus obtainiug and treating saccharine substances."
The nature of the said invention, and the mamer in which the same, so far as regaris the manu-- facturing process comprised in such invention is to be performed, is particularly deacribed in and may be ascertained in and by the following statement:-

1st. In steeping and soaking in water previously to their being ground, barley, rice, maize, wheat, big rye, oats, millet, and other grain and soed containing starch, masticating and grinding the same in water, sifting and separating the husk or slin from the starch, and converting the starch thus produced into fermentable sacchame matter, for the purpose of being used in producing spirit, beer, vinegar, cider, perry, wine, and other fermented drinks; also for making syrups, liqueurs, chocolate, confectionery, pastry, preserves, and for other similar purposes.
2nd. In decorticating chesnut and other nuts containing starch, masticating and grinding the same in water, sifting and separating the husk or slin from the starch, and converting the starch thus produced into fermentable saccharine maiter, for the purpose of being used as above stated.
Ord. In crushing, masticating, aud griuding in water potato, Jerusalem artichoke, mandioca, (otherwise cassara plant), sagus genuina (otherwise sago), and other similar phants and roots containing starch ; sifting and separating the skin, bark, and filaments from the starch, and converting the starch thus produced into fermentable saccharine matter, for the purpose of being used as above stated.
And the machinery or apparatus used for effecting the above objects is, except as hereinafter stated, such ordinary machinery or apparatus as is used for analogous purposes to those bereinafter described by millers, brewers, distillers, potato and rice starch manufacturers, oil and paint manufacturers, and others, treating vegetable substances for similar purposes.

And where proportions by weight are hereinafter referred to, avoirdupois weight is to be understood, except when hereafter otherwise stated.

The process employed, and which is the invention of the said Alcxandre Manbré, claimed is as follows:-

1st. Barley is put into a cistern, the cistern is filled with water so as to cover the grain, the barley is allowed to remain in water until the two ends of the grain can be squeezed together between the finger and the thumb, which shows that it is sulticiently soaked; the water is then let off, and other water admitted to cover the grain, as before, and let off anew to wash the grain from the colouring nitrogenous and other organic and inorganic matter which bas been dissolved during the operation. The barley is then thrown ont of the cistern, and is gradually passed through a plain roller or masticator, to be squeezed or reduced to a pulpy matter, and then conveyed into a grinding mill, together with water in the proportion of from two to four pounds avoirdupois of water for every pound of barley used, so as to obtain a density of from one thousand and seventy to one thousand one hundred specific gravity; and in proportion as the grain is ground in water, the mixture of ground grain and water is conveyed into cylindrical or centrifugal sieve or separator, for the purpose of separating the husk from the starch and water which is conveyed out of the cylindrical or centrifugal sieve, whilst the said mixture of starch and water, of a density of from one thousand and seventy to one thousand one hundred specific gravity, falls into a mash tun or wooden ressel, in which it is kept in motion by means of stirrers, so as to prevent the starch settling at the bottom of the vessel pending its being converted into fermentable saccharine matter as hereinafter described. Wheat, big rice, maize, rye, oats, millet, and other grain and seed containing starch, are treated by the same process of steeping, soaking, squeezing, and grinding in water, the water being in proportion of from two to four pounds avoirdupois weight for every pound weight of grain or seed used, in order to obtain a density of from one thousand and seventy to one thousand ono hundred specific gravity; and in proportion as the grain or seed is ground in water, the mixture of ground graiu and water is conveyed into a cylindrical or ceutrifugal sicve or separator, for the purpose of separating the husk from the starch and water, which said mixture of starch aud water, of a density of from one thousand and seventy to one thousand one hundred specific gravity, falls into a mash tum or wooden vessel, in which it is kept in motion by means of a stirrer, to prevent the starch from settling at the bottom of the vessel, pending its being converted into saccharine matter as hereinafter described.
2nd. The chesnut is subjected to a decorticating apparatus, in order to be skinned off. The skinned chesnut is then gradually passed through a roller or masticator, to be squeezed or reduced to a pulpy matter, and then conveyed into a grinding mill, together with water in the proportion of from two to four pounds weight of water for cvery pound weight of chesnut used, in order to obtain a density of from one thousand and seventy to one thousand one hundred specific gravity; and in proportion as the chesnut is ground in water, the mixture of ground chesnut and water is conveyed into a cylindrical or contrifugal sieve, for the purpose of separating the skin or husk from the starch and water, which misture of starch and water, of a density of from one thousand and seventy to one thousnnd one hundred specific gravity, falls into a mash tun or wooden vessel, in which it is kept in motion by means of the stirrer, to prevent the starch settling at the bottom of the ressel, pending its
being converted into saccharine matter as hereinafter described. All other congenerous and malogous muts containing starch are treated by the same process of skinuing off, masticatiog, squeezing, and grimding in water, the water being in the proportion of from two to four pounds aroirdupois weight for every pound of nuts nsed, so as to obtain a density of from ono tlinusand and serenty to one thousand one hundred specific gravity; and in proportion as the nut is ground in water, the mixture of ground nuti and water is conveyed into a cylindrical or centrifugal sieve or separator, for tho purpose of separating the skin or husk from the starch and water, which nixture of starch and water, of a density of from one thousand and seventy to one thousand one hundred specific gravity, falls into a mash tun, or wooden vessel, in which it is kept in motion by means of a stirrer, to prevent the starch setting at the bottom of the vessel, pending its being couverted into saccharine matter as hereinafter described.
3rd. Potato root is treated by subjecting it to rasping or masticating apparatus, to be reduced to a pulpy matter; and it is then conveyed into a grinding mill, together with water in the proportion of one pound avoirdupois weight of water for every one pound avoirdupois weight of potato, so as to obtain a density of from one thousand and seventy to one thousand one hundred specific gravity; and in proportion as the potato is crushed and ground in water, the mixture of ground potato and water is conveyed into a cylindrical or centrifugal sieve, for the purpose of separating the skin from the starch and water, which mixture of starch and water, of a density of from one thousand and seventy to one thousand one hundred specific gravity, falls into a mash tun or wooden vessel, in which it is kept in motion by means of the stirrer, to prevent the starch settling at the bottom of the vessel pending its being converted into saccharine matter as hereinafter described. Jerusalem artichoke, sago, and mandioca plant, and other congenerous and analogous roots and plants containing starch, arc treated by the same process of rasping, masticating, and grinding in water, the water being in the proportion of from one pound to four pounds avoirdupois weight for every pound weight of root or plant used, so as to obtain a density of from one thousand and seventy to one thousand one hundred specific gravity; and in proportion as the root or plant is ground in water, the misture of ground root or plant and water is conveyed into a cylindrical or centrifugal sieve or separator, for the purpose of separating the skin, bark, and filaments from the starch and water, which mixture of starch and water, of a density of from one thousand and seventy to one thousand one hundred specific gravity, falls into a mash ton or wooden vessel, in which it is kept in motion by meams of the stirrer, to prevent the starch settling at the bottom of the ressel, pending its being conrerted into saccharinc matter as hereinafter described.
In treating barley, rice, maize, wheat, big rye, oats, millet, chesnuts, potato, Jerusalem artichoke, mandioca root, sago, gevuina, and other congenerous and analogous grain, seed, root, plant, nut, and vegetable containing starch, in the manner and by the process above described, the whole amount of starch each of the above-named grain, seed, uut, plant, root, and vegetable contains may be cxtracted; and by subjecting the starch thus extracted to the process of conversion hereinafter described, the whole amount of starch may be converted into pure fermentable saceharine matter, free from gum, mucilage, nitrogenous matter, enpyreumatic oil, and other organic and inorganic matter, thereby rendering the saccharine thus obtained complctely pure and suitable to be used for making beer, spirit, vinegar, cider, perry, grape and fruit wines, and other fcrmentable drinks; and also for making syrups, liqueurs, chocolate, confectionery, pastry, preserres, and other similar purposes, and also for sweetening tea, coffce, cocon, und other dietary and dietetic purposes.

The mamer in which the process of conversion is conducted is as follows:-In a wooden vessel are placed (say) one thousand gallons of any misture of starch and water, of a density of from one thousand and seventy to one thousand one hundred specific gravity, obtained from any of the grain, seed, nut, root, plant, or vegetable, as above stated, or one ton aroirdupois weight of dry sago flour, mandioca flour, arrowroot flour, tapioca flour, potato flour, or any other flour or starch as sold and known in the market, diluted in such $n$ proportion of water as to obtain a density of from one thousand and seventy to one thousand one hundred specific gravitr, and then add to any of the above said misture of starch and water, of a density of from one thousind and screnty to one thousand one hundred specific gravitr, iwo gallons of sulphuric acid, mixing the solution of starch and sulphuric acid together by means of the stirrer. The said mixture of starch and water, acidulated with sulphuric acid, is then introduced, by means of a force pump, in to the convertor from the top, and in a descending direction towards the bottom of the convertor (such convertor to bo lined inside with lead, or any other non-corrosive metal, and provided with inlet and outlet stenm cocks, inlet starch and outlet converted starch cocks, distilling pipe cock, and capable of resisting oue hundred pounds steam pressure to the square inch, by preference in a convertor constructed according to the specification hercinafter described), whilst steam of not less than one hundred pounds pressure to the aquare inch is likewise, and at the same time, introduced into the convertor from the bottom in an ascending direction towards the top, so that the steam which is introduced from the botton of the convertor, through a perforated pipe, meets the starch which is introduced from the top, divides it into millions of particles; at the same time coagulating the gluten and albumen it contains, converting the starch into fermentable saccbarine, and vapouring or passing of in fumes or steam the empyreumatic oil and fatty matters, the conversion of starch and coagulation of gluten and albumen taking place almost immediately, and in proportion as the starch is introduced into the said convertor. When the whole of the misture of starch and water is introduced into the convertor, the cock through which the diluted starch has been introduced into the convertor is shut off, and steam is continued to be blown in so as to raise the temperature in the misture up to 320 Fahrenheit, equivalent to a pressure of six atmospheres, or ninety pounds to the squarc inch; leaving the distilling pipe cock only slightly open, to ailow the empyreumatic oil and fatty matter which had been rapoured or passed off in fumes or steam during the rising of the temperature to be cxhaled and expelled out of the convertor by means of the pressure of steam which escapes through the said distilling pipe, carrying anay out of the convertor the said empyrcumatic oil and fatty matter in proportion as they vapour or pass off in fumes or steam, which takes place at from 270 to

280

## Improvements in treating Cereal and other Vegetable Substances, $\& \circ$.

280 Fahrenheit; hence, by mising the temperature in the mixture to the highor degree of 320 Fahrenheit, not only can the said empyreumatic oil and fatty matters be made readily to vapour or pass off in fumes or stean, and be got rid of, but also the whole of the gum converted into fermentable saccharine will be obtained, which conversion takes place at the temperature of about 275 Fahrenheit; the tomperature of :320 Tahrcoheit is maintained until, by testing with iodine, all the starch is found to be converted; and further, until by testing with silicate of potash or acetate of lead, it is found that there is no dextrine or gum in the saccharified liquid. The saccharified solution is then drawn into a closed wooden ressel called a neutralizing vat, provided with a stirrer, and a large outlet pipe communicating from the top of the vat to a carbonic gas receiver; and at the same time a solution of carbonate of lime--fifty-six pounds of lime dissolved in twenty gallons of water-is introduced for the purpose of neutralizing the sulphuric acid, which solution of carbonate of lime is well mixed with the saccharified solution, by means of the stirrer, to facilitate its combiaation with the sulphuric acid, to form sulphate of lime ; producing, ati the same time, carbonic acid gas, which escapes through the outlet pipe from the top of the neutralizing vat, and is conveyed into a closed wooden vessel full of water, to be purified and cooled, and then into the gas receiver, for the purpose of being used as hereinafter described. The neutralized solution is then passed through bag filters, for the purpose of separating the sulphate of lime and coagulated gluten, albumen, and other foreign matters, which remain in the bars, whist the clear saccharified solution is conveyed to a purifying pan known as the "blow-up pan," for the purpose of separating aud climinating the minute portion of trec lime remaining in solution in the said saccharine solution, by means of the carbonic acid collected into the gas receiver, which is "blown in" in an ascending direction, by a force pump, through a perforated pipe at the bottom of the pan; thus passing through the sacchariue solution, and combining with the remaiuing portion of lime to form carbonate of lime. The saccharinc solution is then again passed through bag filters, to separate the carbonate of lime which remains in the bags, and the purificd saccharine solution is then ready and suitable for immoddiate use; for example, if intended to be used for making spirit and rinegar, it requires to cool the saccharine solution down to from 60 to 6.5 Fahrenheit and set in fermentation as usual. If it is intended to be used for making beer, it only requires to add hops to the saccharine solution, and to subject the mixture of saccharine solution and hops to the process of boiling, maceration, or infusion, as desired, and to cool down from 60 to 65 Fahrenheit, and set in fermentation, as usual ; but if intended for the obtainment of the said saccharinc solution in a solid form, or otherwisc, so as to be hereafter used in and for all the purposes hereinbefore stated, tho following proceedings are adopted:- When the saccharine solution is passed for the first time through bag. filtcrs, for the purpose of separating the sulphate of lime and coagulated glaten and albunen which remaiu in the bugs, the clear saccharine solution is then conveyed to the evaporating pan, for the purpose of evaporating a portion of the water; the evaporation is then procecded with until the deusity of the saccharine solution has risen 25 degrecs by Baume saccharometer ( 1,066 specific gravity). The said saccharine solution, of a density of 25 degrees Baume, is then drawn off, and conveyed into the purifying pan, or "blow-up pan," for the purpose of separating the minute portion of free lime and other organic and inorganic impurities remaining in tho said saccharine solution. To the saccharine solution is then added twouty-eight pounds avoirdupois weight of fine powdered wood charcoal, twenty-eight pounds avoirdupois weight of fine powdered bone charcoal, twentyeight pounds avoirdupois weightit of clay previously well washcd, one half-pound quick lime dissolved in one gallon of water; the mixture is then treated up to J .90 degrees Fahrenheit, during which the purifying arents react on the colouring matter, and other organic and inorganic impurities, and combine with them; carbonic acid is then passed through the mixture, by means of a force pump, as above described, ao as to combine with the lime to form carbonate of lime, and the whole is then drawn off from the pan, and passed through bag filters, to scparatc and clininate the carbonate of lime and conbined purifying agents aud congulated impurities, and then through a bed of charcoal in an ascending direction, to obtain the saccharine colourless. The colourless saccharine is then conveyed to the eraporating pan, and the evaporation is proceeded with until the density has risen to 45 degrecs Baume (about 1,120 specific gravity) ; the saccharine is then put in moulds to cool and harden ; after which it is taken out of the moulds, and when well dried, is passed through a cutting or crushing machine, to be cat into small pieces or lumps, or reduced to powder, as may be required, and is then ready for use.

The description of the construction and mode of operation of the convertor before referred to will now be procceded with :-

A close vessel, usually of wrought or cast iron, and of a cylindrical form, is constructed; it is built up in segments, and by prcference each segment is made semi-cylindrical, and of a convenient length. It is made with external flanges all round, and the flanges of the several segments fit accurately together, and are secured the one to the other by screw bolts. The segments are each covered internally with a sheet of lead, tin, copper, brass, silver, platinum, or other lining metal which will not act injuriously on the liquid with which the boiler or vessel is to be worked, or be injuriously acted on thereby; the edges of these sheets are turned down over the flauges of the segments, and when the segments are fixed together the liniug sheets are firmly clamped between the flanges; the ends of the boiler or vesscl it is preferred to make hemispherical, and also in segments; usually they are made of cast iron, and strengthened with suitable ribs, whilst the cylindrical part of the boiler should be made of wrought irou. The form of the boiler, however, may be varied; but in all cases it should be formed with flanged segments, each covercd with a sheet of lining metal, which, when the segments are fixed together, is firmly clamped between the flanges. In this mauner a lined boiler or ressel, capable of sustaining pressure, is obtained without the use of soldered joints.

And in order that the said invention may be most fully understood and readily carried into effect, the following description of the drawings hereunto annexed is given :-

## Description of the Diamings.

Tigure 1 is a side view of a vessel constructed according to the before-mentioned invention, and adapted for the treatment with heat and high pressure of materials which camot advantageously be so heated in an ordinary iron boiler, on account either of the corrosive action which the materials would have on the iron, or of the discoloration or injurious action which the iron would exert on the matters under treatment. Figure 2 is a plan, figure 3 is a horizontal section, and figures 4 and 5 are vertical sections of the vessel.

## Improrements in treating Cereal and other Vegetable Substances, $8^{\circ} \mathrm{C}$.

The central part of the ressel, as it is represented in the drawing, consists of six semicylindrical parts, a a, each consisting of a curved plate of wrought irou and a frame of angle iron, passing all round its edge, and forged and welded at its corners. Each part is covered with a shect of the lining metal-it - may be lead or other motal which is applicable in the process which it is desired to conduct. The sheet of living metal is beaten to form, so as to make it overlap and fit accurately to the flauges in the manner slown at figures 6 and 7 , which represent full size a plan and a vertical section of a portion of two of the semicylindrical parts where they come together. As the drawing indicates, the parts are held together by screw bolts and nuts; and as at the comers, where four parts meet, the boits caunot be got into the flanges sufficiently close together, clips, $a^{1} a^{1}$, are bolted on to the fianges, and the adjacent cuds of the clips are drawin together by a screw bolt. In order also more effectually to close these corners, pieces, $a^{2} a^{2}$, figure 6 , are cut out of the lining plates of the two adjacent parts, forming a complete cylindrical section, and a single piece of the same metal is introduced in lieu thereof. The ends of the vessel are cast each in four pieces with flanges, over which the lining metal is turned, so that when the parts are bolted together it is mipped between the flanges in the same way as with the other portions of the vessel $l$ is a head of brass or other suitable metal, bolved on to the top of the vessel; in it are fitted safety valucs and cocks for the admission of steam and of the material to be treated ; $c$ is a steam pipe of the same material as the lining metal, or of other material which will not be corroded by or act injuriously on the materials under trentment; d is a draw cock, of brass or other material, fitted to the bottom of the vessel; figure 8 is a side view, and figure 9 a plan on a smailler scale, of a series of such vessels set up conveniently for use.

Having now particularly arcertained and described the nature of the invention in respect of which Letters of Registrntion in the Colony of New South Wales are sought to be obtained, and in what manner the apparatus is to be constructed, and the operations conducted and performed or put in practice, $\mathbf{I}$. hereby, as agentfor and on behalf of the said Alexandre Manbre, hereby declare that what I claim on behali' of the said Alexandre Manbré is-

First:-The process of treating and preparing grain, secd, uuts, roots, plants, and vegetables, and other substances cantaining starch, by decorticating, steeping, sonking, washing, masticating, crushing, and grinding in water, and separating the husk, bark, skin, and filaments, as above described, by which ineans the whole amount of starch they contain can be extracted.
Secondly.-Subjecting the said starch thus obtained to the process of conversion hereinbefore described, whereby pure fermentable saccharine matter can be produced, free from gum, mucilage, nitrogenous matter, empyreumatic oil, and other organic and inorganic matter, suitable for producing beer, spirit, vinegar, cider, perry, wine, and other fermentable drinks; also for making syrups, liqueurs, chocolate, confectionery, pastry, preserves, and other similar purposes; and also for sweetening tea, coffee, cocoa, and other dietary and dietetic purposes.
Thirdly.-Cutting or crushing (or both) the said saccharine when in a solid form, so as to obtain it in small picces or lumps, or in powder, as may be required by the consumer.
lourthly.-Constructing a close lined vesscl or apparatus capable of sustaining a heavy pressure, in in manner hereinbefore described, of flanged parts bolted together, and with a lining of metal sheets secured at their edges betwcen the flanges of the said parts.
It being understood that I do not claim the machinery or apparatus used in the manufacture or operations hereinbefore described, except as regards the convertor, such other machinery being often used by millers, brewers, distillers, potato and rice starch manufacturers, oil and paint manufacturers, and others treating vegetable substances for analogous purposes to those hereinbefore referred to.

In witness whereof, I, the said George Alfred Bartleet, as such agent as aforesaid, and for and on behalf of the said Alexandre Manbré, have hereunto set my hand and seal, this sixteenth day of August, in the year of our Lord one thousand eight hundred and seventy.
Signed, sealed, and delivered by the said George \}
GEORGE ALIRED BARTLEET.
Alfred Bartleet, in the presence of-
Chas. Fern,
Solicitor and Notary Public, Adelaide.
This is the specification referred to in the annexed Letters of Registration granted to Alexandre Maubre, this twenty-first day of October, 1870.

BELMORE,

## REPORT.

Sydner, 23 September, 1870.
Sir,
In the matter of the application of Mr. George Alfred Bartleet, agent of Mr. Alexandre Manbre, for Jetters of Registration for an invention for treating Cereal and other Vegetable Substances, and Apparatus to be employed for such purpose, we have the honor to report that we have examined the drawings and specification accompanying tho same, and see no objection to the issue of Letters of Registra. tion as prayed for.

We have, \&c.,
T. SNTTH.
E. O. MORIARTY.

## A.D. 1870, 4th November. No. 254.

## ATMOSPHERIC SHIP-LIFT.

## LETTERS OF REGISTRATION to James Scott, for an Atmospheric Ship-lift.

[Registered on the 5th day of November, 1870, in pursuance of the Act 1.6 Vic., No. 24.]

BY His Exceldency the Righe Honorable Somersen Richard, Eary of Belmore, a Member of Her Majesty's Most Honorable Privy Council in Ireland, Governor and Commander-in-Chief of the Colony of New South Wales, and Vice-Admiral of the same.
TO ALL IO WHOM THESE PRESENTS SHALT COME, greeting:
WHEREAS Jajms Scotr, of Newcastle, in the Colony of New South Wales, shipbuilder, hath by his Petition bumbly represented to me that he is the author or designer of a cortain invention or improvement in manufactures, that is to say, of an invention of an "Atmospheric Ship-lift," which is more particularly described in the specification and sheet of drawings which are herento annexed, and that he, the said Petitioner, hath deposited with the Honorable the Treasurer of the said Colouy of New South Wales the sum of Twenty Pounds sterling, for defraying the expense of grauting these Letters of Registration, as reguired by the Act of Conncil, sisteenth Victoria, number twenty-four; and hath humbly prayed that I would be pleased to grant Letters of Registration, whereby the exclusive enjoyment and adrantage of the said invention or improvement might be secured to him for a period of fourteen ycars: And I, being willing to give encouragemont to all inventions and improvements in the arts or manufactures which may bo for the public good, and having received a report favourable to the prayer of the said Petition, from competent persons appointed by me to examine and consider the matters stated therein, and to report thereon for my iuformation, am pleased, with the advice of the Executive Council, and in exercise of the power and authority given to me by the said Act of Council, to grant, and do by these Letters of Registration grant unto the said James Scott, bis executors, administrators, and assigns, the exclusive enjoyment and advantage of the said invention or inprovemont, for and during the term of fourteen years from the date hereof; to have, hold, and exercise unto the said James Scott, his executors, administrators, and assigns, the exclusive enjoyment and advantage thereof, for and during' and unto the full end and term of fourteen years from the date of these presents noxt and immediately ensuing, and fully to be complete and conded: Provided always, that if the said James Scott shall not within three days after the granting of these Letters of Registration, register the same in the proper oftice in the Supreme Court at Sydney. in the said Colony of Nev South Wales, then these Letters of Rogistration, and all advantages whatsoever hereby granted, shall cease and become roid.

In witmess whereof, I have hereunto set my sign manual, and have caused the present Letters of
Registration to be sealed with the seal of the said Colony of New South Wales, at Govern-
ment House, Sydney, in Now South Wales, this fourth diy of November, in the year of our
Iord one thousand eight hundred and seventy.
(c.s.)

## Atmospheric Ship-lift.

## SPECIFICATION OF SHIP-LIET.

Tig. l represents a vertical longitudinal section of the proposed sectiomal dock, or substitute for docks and slips, which may be made of either wood or iron.

Fig. 2 is a floor plan of the same; fig. 3 is a transverse vertical section through the dock, with stern view ; fig. 4 shows how any one of the sections may be detached from the others, and placed on the other caisson for cleaning or repairs. This system cousists of any number of caissons of sufficient capacity to lift the largest ship afloat, as A A A. Each of the caissons is acted on by an air-pumping engine, placed either on the shore or erected on the dock as at B, fig. 3. In the bottom of oach is the valve $C$, which being open, admits the water and sinks the dock: the air is allowed to escape through the pipe D juto the main pive E. The whole of the pipes are under the control of ove man. As the dock descends, the empty vertical compartments $F$ carry the weight of the dock; the ship is then admitted and placed on the heel blocks; the engine is set to work; the valves C are opened, when all the caissons A receive an equal amount of air from the pipes $D$, supplied from the engine to the main pipe E ; the bilge blocks $G$ are then bauled in, and the side shores $H$ set up as shown in fig. 3. The whole of the water being ejected, the valyes are close. One or two ships may be under repairs at one time, as shown in fig. 2, and either of them let down without interfering with the work of the other. Fig. 5 is a floor plan of a caisson-dock in one length, of wood or iron. Fig. 6 is a cross-end section, showing the action of the dock in being sunk and clevated by meaps of what I call the new parallel ship-lift motion, as shown by fig. 6. I is a suspended girder of wood or iron, fastened by a hinge connected ou the side of the dock at $K$ and the wharf at $I_{1}$; it is evident K L and MN, being of the same length, must keep the caisson dock in an upright position. The lifting power of this dock may be placed on the wharf 0 , or on the dock, as in fig. 1 and 3 ; the main pipe $P$ supplies all the other pipes along the side of the dock, as shown at $Q$ in fig. 1 and 6 . Fig. 7 represents the parallel motion as applied to a longitudinal section; it is also shown fastened to a hulle or wharf, as in fig. 1 and 7 . Tig. 8 is an end section of a vessel about being raised and kept from canting over, while the caissons are acted upon by menns of the ejection of the water from the dock by the air-pump engine, as applied in fig. 1 ; fig. 7 also shows au equalizing balance weight, as R and S .

In conclusion, what I claim is a new system of ship-lifting, by the atmospheric ejection of the water by the pressure of air equally distributed throughout any number of cajssons, docks, vessels, or compartments under water at the same time. I also claim, as shown by the plans, a system of parallel motion, as herein described, for the better steadiment of caissons, docks, or floating bodies, ascending or descending in the water. I also claim the adoption of the tubular girder pontoon, which may be made without a. bottom, and raised by the pressure of air forcing the water, as in fig. s.

JAMES SCOTT.

This is the specification referred to in the annexed Letters of Registration granted to James Scott, this fourth day of November, 1870.

BELMORE.

## REPORT.

Office of Harbours and Rivers,
Sydncy, 23 September, 1870.
Sin,
Having, in attention to the B.C. minute of the Honorable the Chief Secretary, examined the specification and plans of an invention of an "Atmospheric Ship-lift," accompanying the application of Mr. James Scott for Letters of Registration to secure the same, we have the honor to state that we see no objection to the prayer of the Petitioner being complied with.

We have, \&e.,

E. O MORIARTY.

The Priscipal Under Secretart.
E. C. CRACKNELL.

A.D. 1870, 18 th November. No. 255.

## A NEW COMPOSITION FOR BLEACHING WOOL.

## LETTERS OF REGISTRATION to William Joseph Lande, for a new Composition for bleaching Wool.

[Registered on the 19 th day of November, 1870, in pursuance of the Act 16 Vic., No. 24.]

BY His lixcedengy the Rigify Hoxorable Somenset Ricmard, Eaml of Bemorie, a Memiber of Her Majesty's Most Honorable Privy Council in Treland, Governor and Commander-in-Chief of the Colony of New South Wales, and Vice-Admiral of the same.
TO ALI TO WHOM THESE PRESENTS SEALL COMIE, grceting:
Whereas Wimliay Josepic Landi, of Melbourne, in the Colony of Victoria, commission merchant, hath by his Petition humbly represented to me that he is the author or designer of a certain invention or improvement in manufactures, that is to say, of an inrention intituled, "ancw Composition for bleaching Wool," which ismore particularly described in the specification which is hereunto annexed; and that he, the said Petitioner, hath deposited with the Honorable the Treasurer of the said Colony of New South Wales the sum of Twenty Pounds sterling, for defraying the expense of granting these Letters of Registration, as required by the Act of Council, sixtecnth Victoria, number twenty-four; and hath bumbly prayed that I would be pleased to grant Letters of Registration, whereby the exclusive enjoyment and advantage of the said invention or improrement might be secured to him for a period of fourteen years: And I, being willing to give encouragement to all inventions and improvements in the arts or manufactures which may be for the public good, and laving received a report favourable to the prayer of the said Petition, from competent persons appointed by me to examine and consider the matters stated therein, and to report thereon for my information, am pleased, with the advice of the Executive Council, and in exercise of the power and authority given to me by the said Act of Council, to grant, and do by these Letters of Registration grant unto the said Willian Joscph Lande, his executors, administrators, and assigne, the exclusive enjoyment and advantage of the said invention or improvement, for and during the term of fourtcen years from the date hereof; to have, hold, and exercise unto the said William Joseph Lande, his cxecutors, administrators, and assigns, the exclusire enjoyment and advantage thereof, for and during and unto the full end and term of fourtecn years from the date of these presents next and immediately cosuing, and fully to be complete and ended: Provided always, that if the said William Joscph Lande sball not, within three days after the granting of these Jetters of Reyistration, register the same in the proper office in the Supreme Court at Syduey, in the said Colony of New South Wales, then these Letters
of Registration, and all advantages whatsoever hereby granted, sball cease and become void. of Registration, and all advantages whatsoever hereby granted, sball cease and become void.

In witness whereof, I have hereunto set my sign manual, and bave caused the present Letters of Registration to be sealed with the seal of the said Colony of New South Wales, at Government House, Sydney, in New South Wales, this eighteenth day of November, in the year of our Lord one thousand cight hundred and serenty.
(L.s.)

BELMORE.

SPECIFICATION of Wiliam Josepin Lande, of Melbourne, in the Colony of Victoria, commission merchant, for an invention intituled, "A new Composition for bleaching Wool."
This invention consists of a new composition for bleaching wool, which is made in the following manner :-

I first dissolve sixtecn parts (by weight) of common soap in eighty parts (by weight) of hot water, and to it I ald one part (by wcight), of cyanide of potassium, stirring it up together. This mixture or composition II then allow to cool, when it becomes a congealed mass fit for use.

It can now be placed in bottles or other suitable vessels for containing it.
For the purpose of bleaching wool, it is only necessary to prepare a sufficient amount of water heated to about eighty degrees Tahrenheit, and then add to it a certain amount of my composition, in the proportion (by, weighti) of one of composition to fifty of watcr. The wool is then to be dipped into this solution and allowed to remain for about two minutes, after which it is to be passed through cold water and the process of bleaching is completed.

Having thus described the nature of my inrention and the manner of performing $j t$, I would have it understood that I do not contine myself to the procise details herein set forth and described, such as the precise proportions of the ingredients mentioned, neither do I confine myself to the use of soap with cyanide of potassium, so long as the latter article itself is used for the purpose herein set forth and described, but I claim the use of cyanide of potassium in combination with soap or any other suitable material for the purpose of bleaching wool.

In witness whereof, T, the said William Joseph Lande, have hereto set my hand and seal, this thirteenth day of Scptember, one thousand eight hundred and seventy.
W. J. LANDE.

This is the specification referred to in the annexed Letters of Registration, granted to William Joseph Lande, this eighteenth day of Norember, 1870.

- BELMORE.

## REPORT.

Sire,
Sydney, 10 October, 1870.
Having, in attention to your B.C. minute of the 5th instant, examined the specification of an invention of a yew Composition for bleaching Wool, which accompanied the Petition of Mr. Joseph Lande for Letters of Registration to secure the same, we bave the honor to report that we see no objection to the prayer of the Petition being grauted.

The Pringipal Under Secretary.

We bave, \&e.,<br>E. O. MORIARTI.<br>GOTHER K. MANN.

A.D. 1870, 7 th December. No. 256.

## LOW-PRESSURE FREEZING MACHINE.

## LETTERS OF REGISTRATION to Eugene Dominique Nicolle, and Thomas Sutcliffe Mort, for a Lor-pressure Freezing Machine.

[Registered on the Sth day of December, 1870 , in pursuance of the Act 16 Vic.. No. 24.]

By Phis Escelency the Riget Hovorable Somerset Rtchamd, Earh of Benmore, a Member of Her Majesty's Most Honorable Privy Conncil in Ireland, Governor and Commander-in-Chief of the Colony of New South Wales, and Yice-Admiral of the same.
TO ALI TO WHOM TIIESE PRESENTS SHALL COME, greeting:
Wiereas Tugmar Domintetie Nicomen and Thomas Sutcuree Mory, both of Sydney, in the Colony of New South Wales, have by their Petition humbly represented to me that they are the authors or designers of a certain invention or improvement in manufactures, that is to say, of an invention for obtaining the reduction of temperature by an apparatus styled "Nicolle and Mort's Patent Low-pressure Freezing Machine," which is more particularly deseribed in the specification and shect of drawings which are hereunto ammexed; and that they, the said Petitioners, havo deposited with the Honorable the Treasurer of the said Colony of New South Wales the sum of Twenty Pounds sterling, for defraying the expense of granting these Letters of Registration, as required by the Act of Council, sisteenth Victoria, number twenty-four, and have humbly prayed that I would be pleased to grant Letters of Registration, whereby the exclusive enjoyment and advantage of the said invention or improvement might be secured to them for a period of fourteen ycars: Aud I, being willing to give encouragement to all inventions and improvemonts in the arts or manufactures which may be for the public good, and having received a report farourable to the prayer of the sail Petition, from competent persons appointed by me to cxamine and consider the maters stated therein, and to report thereon for my information, an pleased, with the advice of the Executive Council, and in exercise of the power and authority given to me by the said Act of Council, to grant, and do by these Letters of Registration grant unto the said Eugene Dominique Nicolle and Thomas Sutcliffe Morl, their executors, administrators, and assigns, the exclusive enjoyment and advantage of the said invention or improvement, for and during the term of fourteen years fron the date herenf; to have, hold, and exercise unto the said Fugene Dominique Xicolle and Thomas Sutclifte Mort, their executors, administratiors, and assigns, the exclusive enjoyment and advantage thercof, for and during and unto the full end and term of fourteen years from the date of these presents next and immediately ensaing, and fully to be complete and ended : Provided always, that if the said Eugene Dominique Nicolle and Thomas Sutcliffe Mort shall not, within three days after the granting of these Letticers of Registration, register the same in the proper office in the Supreme Court at Sydney, in the said Colony of New South Wales, then these Letters of Rcgistration, and all advantages whatsoever hereby granted, shall cease and become void.

In witness whercof, I have hercunto set my sign manual, and have caused the present Letters of Registration to be sealed with the seal of the said Colony of New South Walcs, at Government House, Sydney, in New South Wales, this seventh day of December, in the year of our Lord nne thousand eight humdred and seventr.

## Low-pressure Ireezing Machinc.

## SPECIFICATION.

TO ALL TO WHOM THESE PRESENTS SHALL COME, we, EuGene Dominique Nicome and Thomas Sutcliffe Morx, both of Sydney, in the Colony of Nem South Wales, send greeting:
Whereas we are desirous of obtaining Letters Patent for securing unto us Her Majesty's Special Jicense that we, our executors, administratiors, and assigns, or such others as we or they should or may at any time agree with, and no others, should and lawfully might, from time to time, and at all times during the term of fonrteen years, to be computed from the day on which this instrument is left at the office of the Colonial Secretary at Sydney, make, use, exercise, and vend rithin the Colony of New Sonth Wales an jnvention for obtaining the reduction of temperature, by an apparatus styled "Nicolle and Mort"s Pateni; Low-pressure Freczing Machine;" and in order to obtain the said Letters Patent, we must, by an instrument in writing under our hands and scals, particularly describe and ascertain the nature of the said invention, and in what manner the same is to be performed: Now know ye that we, the said Eugene Dominique Nicolle and Thomas Sutcliffe Mort, do hereby declare the nature of the stid invention and the unamer performed to be particularly described and ascertained in and by the following statement and description, reference being had to the drawings hereunto annexed, and to the letters and figures marked thereon, which indicate the parts there referred to and herein particularly explained, that is to say:This machine is based upon the priaciple of liquefaction of ammonia, by affinity, under low pressure, and of its gasification by the remoral of such pressure, whereby the full effect of refrigeration capable of being produced by a given quantity of gasified ammonia is obtained. The construction of the apparatus is simple and inexpensive, and its operation certain and economical; all danger of explosion and escape of ammonia being avoided by the low pressure under which it works.

It is for these combined advantages, which are not found in any other machine for the attainment of cold, that we seek the production of Letters Patent.

Figure No. 1 exhibits a sectional elevation of the whole apparatus at work, spread out, for the purpose of better exhibiting the varions pipes, \&c. It is drawn to a scale of one and a half inches to a foot, and illustrates a medium-sized machine, capable of producing about half a ton of manufactured ice per diem.

A is a multitubular generator complete. It is composed of twenty-two iron tubes, two and a half inches diameter, by three feet long, firmly fitted betwixt two tube-plates in the same mamer as for steam generators, and contains solution of ammonia.
$B$ is a dished wrought-iron plate, to hold the ammoniacal liquor whilst under the action of heat, from a hot water bath or furnace.

C, dome, containing the evaporating dishes, which receive the liquid ammonia from the pump.
1 , eraporating dishes, perforated in opposite radii, to allow the fluid to descend in a cascade, offering during its descent a large evaporating surface, the top plate forming a cover to prevent priming.
$E$, level gauge, indicating the quantity of fluid in the gencrator $A$.
$F$, steam-boiler (which must be fitted with water-gauge, safety-valve, \&c.), flled with water to about four-fifths of its capacity.
$G$, exhausted-liquor delivery pipe, leading to temperature-exchanger $Y$.
H, leed-pipe, conveying the weakened solution injected by the pump No. 2 into the cyaporating dishes $D$.

I, evaporating cylinder, fitted with evaporating pans, similar to those in dome C.
$J$, overflow-pipe, connecting the generator A with the evaporating cylinder I.
$K$, pipe returning the condensed liquor from the desicator M to the evaporating-cylinder J . This pipe is sealed by the liquid stored for thati purpose in the bottom of the cylinder.

L shows the inner pipe of the desiccator $M$, discharging into the evaporating cylinder $I$. This is the discharge end of the pipe $O$.

M, desiccator, composed of a double pipe, one within the other, about seventy feet in length, bent into a spiral, and fitted into an open tank, the latter to receive cold water when necessary. The inner pipe conveys part of the weakened solution from the freezing cistern $i$, , exchanging temperature with the gas which the outer pipe conveys from the generator $A$ to low-pressure reabsorber $P$.

N pipe leading the desiccated gas from the desiccator $M$, to the low-pressure reabsorber $P$, by the pipe $R$.

O, pipe leading part of the weakened solution from pipe $N$. 4 through the desiccator $M$, of which it becomes the inner pipe, and is the same pipe as $L$.

P , low-pressure reabsorber, constructed in a similar manner to the generator A, minus the cymporating pans. The pipes are forty in number, one inch in diameter, and about three feet six inches long. This yessel is filled to about two-thirds of its capacity with a solution of ammonia, and immersed in a runuing bath of cold water. A level gauge similar to gauge E is fitted externally, and indicates the quantily of liquid in the vessel. A pressure-gauge is also fitted at the top of the dome, to show the pressure within.

Q, feed pipe (fitted with regulating cock), terminating in the upper part of the dome of the renbsorber $P$, the end having a rose upon it, which serves to divido the liquid injected into a fine spray.
$R$ is a pipe, a continuation of the pipe $N$, and leads the desiccated gas from the desiccator $M$ into the liquid contained in the reabsorber P. This pipe also terminates with a perforated rose, to divide the gas as it meets the liquid, as before described. At the place shown on the plan, between $N \& R$, a retention valve is fitted, which is also used as a stop valve. This valve opens in the same direction as the gas travelling through the pipe, and prevents the pressure, when the machine is at rest, from returning to the generator $A$.
$\mathbf{S}$, delivery-pipe with regulating cock, for conveying the liquor from the reabsorber $\mathbf{P}$ to the strong liquor reabsorber a $a$.

T, vacuum reabsorber, coustructed in a manner similar to the low-pressure reabsorber $P$, with the exception that the tubes in this vessel are fifty in number, half inch in diameter, and made of pure tin. A. liquid-gauge level indicates the quantity of liquid in the vessel, and a vacuum-gauge indicates the lis. per square inch of vacuum mantaned in the vessel. The liquor in this vessel is kept at two-thirds the height of the tubes.

## Low-pressure Freczing Machine.

U, feed-pipe (fitted with regulating cock), terminating in a rose as before described, which dirides the exhaustod liquor, as it flows into the upper dome of reabsorber $T$, into a fine spray.
$T$, suction pipe for conveying the liquids from the vacuum reabsorber $T$ to the pump $s s$.
X , water tank, filled with cold water, in which the two reabsorbers P \& T are immersed. This wate: is constantly flowing.
$Y$, temperature-exchanger, composed of inner and outer pipes, made of equal lengths of pure tin, about seventy-five feet long, and coiled. Part of the cold weakened solution from the pump No. 2 enters the inner pipe at the top of the coil, on its way to the generator $\Delta$, whilst the hot exhausted liquor enters the outer pipe at the bottom of the coil by the pipe G, on its way to the reabsorber $T$ by the pipe $U$. The two liquors travelling in opposite directions thus exchange temperature.

Z, regulating cock, fitted with a fine wire gauze, to filter the liquor as it is forced through it. This cock connects the generator A with the exchanger Y.
$a$ a, stroug liquor reabsorber, fitted internally with a coil of tin pipe, half-inch diameter, and about twenty fect long. The coil enters at $b l$, and returns at $c c$, having a branch conncetion at $d d$, leading into main vacuum-pipe $m \mathrm{~m}$. The vessel is fitted with liquid level gauge, indicating the liquor at about two-fifths of the capacity of the vessel. This vessel is not absolutely essential to the working of the apparatus, and where ordinary temperatures only are sought, such as are required for ice-making for instance, may be dispensed with; but where extremely low temperatures are required, it is indispensable, overcoming as it docs the necessity for pressure in reabsorber P , and we specially claim it as an invention of great inportance in comection with the process of refrigeration, as, by supplying the liquid therein with dry gas from the low-pressure reabsorber $P$, an increased saturation with gas is induced, which may be continued until the extreme range of cold capable of being produced from ammonia is arrived at, and that without having increased the working pressure. An important point in this arrangement is, as is elsewhere explained, that the warming temperature of the strong liquor in $a$ a carries the weakened solution to evaporate gas sufficient to keep it from materially increasing its own temperature, the gas passing off by the pipe $d d$ into the main gas-pipe $m m$.
$e e$, regulating cock, connecting the low-pressure reabsorber P to the strong-liquor reabsorber $a$ a, by the pipe S . This pipe is fitted with a fime rose.
$g g$, syphon-pipe, immersed in the strong liquor contained in $a$ a, and with which it supplies the freezing-cistern $i i$, by the feed-pipe $k \approx$. This pipe is fitted with a regulating cock.
$h h$, small rose pipe, fitted with stop-cock, to allow and regulate the flow of dry gas coming from the upper dome of the low-pressure reabsorber P , to be combined with the strong liquor in $a a$, which, owing to the reduction of temperature caused by the circulation of the cold liquid through the coil, has power to take up an additional quantity of gas.
$i$, freezing cistern or box, by preference rectangular, made of metal, into which ten freezingtroughs are fitted, each holding one hundred Ifs. of water, in flat tin or other metal moulds, two and a quarter iuches deep, and bathing in a liquid medium, such as solution of chloride of calcium or chloride of sodium, or any other liquid medium having a point of congelation considerably below that of fresh water. These freezing-troughs are constructed and placed so as to compel the concentrated solution of ammonia to travel a considerable distance, and thus offer a large surface for evaporation. To effect this, six small ribs, a quarter of an inch deep, and placed by preference in zig-zag form on the top plate of the trough, which of itself has a fall equal to half an inch towards its extremity. The bottom of the trough is level, so as to keep the water in the tin perfectly level during congelation. The evaporating solution of 'ammonia, after having rum the zig-zag of the top plate, falls on the next trough-plate (which is similarly constructed to the first one, but placed in an opposite direction), and then on the next, and so on, forming a perfect cascade, until it arrives at the bottom plate of the box, where it is delivered through the pipe $n n$ into the water refrigerator. We make a special claim for this cistern, as being thoroughly novel in construction.
$l l$, still-head, leading the gas given off from the strong liquor from the freezing-cistern $i i$ through the main vacuum pipe $m m$, into the vacuum reabsorber $T$.
$n n$, pipe conveying the weakened solution from the freezing-cistern $i i$ into the water refrigerator $q q$.
oo, wooden box enclosing the freezing-cistern $i i$, and having ten small doors, one being placed opposite the aperture of each of the freering-troughs $j j$. A space of tro inches is left betwecn the metallic box and the wooden one, which is filled with wool or any other suitable non-conductor.
$p p$, water-tank (protected externally by non-conductor), containing the water refrigerated in $q q$, and which tank serves as a base to the freezing-cistern and a stand for the donkey pump.
$q q$, water-refrigerator, composed of a double pipe, one inside the other, made of pure tin, the inner pipe containing the water to be cooled, and the outer pipe the weakened solution from the cistern $i$. The length of pipe is about twenty-five fect, and is made to go round the outside of the water-tank. The water and the weakened solution travel in opposite directions, thus causing an exchange of tempera ture with each other, which is regulated by the delivery-cock $r r$, so as to allow water to reach the tank a $32^{\circ} \mathrm{F}$.

A donkey-engine, with force-pumps for pumping the ammoniacal liquor or water, or medium for: imparting cold to any object, completes the machine. This is made to be worked cither by hand-power or steam, or by the pressure of the ammoniacal gas itself, as hereinafter described.
$s s$ is a doulle-acting force pump, constructed in the ordinary way, with the exception that the suction-valves are acted upon by a cam placed on the main shaft, which by suitable levers and rods causes the valves to open and shut at the required time. These pumps should be constructed so as to leave no unnecessary play in the internal part, in order that no liquid or gas shall remain after each expulsion.
$t t$ is the suction-pipe, fixed to the suction-valve, and is provided with a regulating-cock. This pipe is a continuation of the pipe $V$.
$u u$, delivery-pipe, conveying the liquid as pumped into the condensor $v v$, in a five spray, through the top of that vessel.
$v v$, condensor, having a capacity equal to three times that of the engine-cylinder. This vessel may be inmersed in cold water, to carry away the heat engendered in combination of the liquid with the gas.

## Low-pressure Ereezing Machine.

$x x$, exhaust-pipe, leading the exhausted gas from the engine-cylinder 6 to the condensor, through the bottom of the same,
$y y$, suction-pipe, counecting the condensor $v v$ with the suction-valve $z z$.
No. 1, delivery pipe, leading the liquor pumped from the condensor $v v$ into the low-pressure reabsorber $P$, by the delivery-pipe $Q$.

No. 2, single-acting force-pump, comectel with the double-acting pump $s s$, both being driven by an eccentric between friction-rollers, the eccentric receiving a rotary motion by the main sbaft, acted upon by any of the powers mentioved above.

No. 3, suction-pipe, with regulating-cock, connecting the suction-valye of the pump 2 with the delivery-cud of the coil, which is coutained in the strong liquor realssorler at the point oc $c$.

No. 4, delivery-pipe, conveying the weakened solution by brauch-pipes, marked 55 , to the ten-perature-exchanger $\bar{Y}$, and to the desiccator MI, ou its way to the generator A. 'These pipes are fitted with regulating-cocks, to divide the liquor as required.

No. 6, engine, with oscillating cylinder (comnected with the main-sbaft by a crank), haring a capacity equal to four times that of the force-pumps, and receising the compressed cas, which gives the motive power from the generator A, exhausting the same into the condensor $v t$. This engine is fitted in the ortinary way: receiving and erhansting the gas through the trunnions.

## Mode of working the Apparatus.

Jlarrar taken carc, in constructing the sevcral parts of the machine, to avoid using metals which are acted upon by ammonia, such as copper or its alloys, using only wrought-iron, cast-iron, stecl, tin, and lead, and having ascertained that all the vessels, pipes, cocks, and joints are made air-tight, it solution of ammonia of commerce, of a specific grarity cqual to about 0900 is introduced into the gencrator A, to the evel of the top of the upright tubes, by a screrr-phy fitted at top of dome D. The low-pressure reabsorber $P$ is also charged with ammonia of the same strength, by a similar opening, but only in quantity sufficient to show the liquid throe inches abore the boitomn part of the gauge-glass. The vacuumreabsorber T? is purposely left empty, but the strong-liquor reabsorber a a is allowed to fill from the reabsorber $P$, through the pipe $\mathbb{S}$, to one-third of its capacity, when the cock must be shut, and the liguor in the renbsorber P maintained at the level before refcrsed to, riz, about three inches above the bottom part of the gauge-glass. Heat must now be provided; and presuming that steam and hot water bath be used, as shown in the plan, a pressure of steam cqual to 5 thes. on the square inch (which will give a temperature of $225^{\circ} \mathrm{F}$.) will meet all requirements, excepting when extremely low temperatures are sought, when additional pressure in the boiler will be required, which by compelling the liquor to receive additional gas, will accomplish the desired end, even to the furthest limits of cold obtainable from ammonia.

Should haat be obtained by direct application of fire, the furnace must be so arranged as to permit of the heated air only reaching the evaporating tubes. As the ressels containing the solution of ummonia are only partially filled, their remainng capacity is of courso occupied by air, which if not expelled would paralyze the action of the apparatus.

The expulsion of this air is ensily accomplished by the provision made in constructing the vacuumreabsorber IT, in which it will be seen a small cock is placed near the top of the dome, which must be fitted with a fiexible tube, terminating in a rose, minutely pcrforated. The end of this tube must be immersed in a suall vessel containing cold water. At this time (all the coels being shut), on opening this small cock, and also the regulating-cock placed at $h k$, and at syphon-pipe $g g$, and the stop-cock placed on racuum main-pipe, marked *, the air and gas contained in generator A, owing to the pressure caused by the application of heat to that vessel, escapes through the evaporator $I$, and passing on through the desiccator M, opens the retention-ralve, and forcing its way through the cold solution of ammonia in the low-pressure reabsorber P , the gas is absorbed therein, and the air is loft free. The air then passes by the amall pipc $h h$ at the top of the dome, and enters into the stroug-liquor reabsorber $a$ a after passing through the liquid contained in this ressel, and meeting with no outlet in the space abore the liquid, it exercises its pressure on the liquid itsolf, and forces that liquid into the fieezing-cistern $i$, by the syphon-pipe $g$ g. Here it falls through the pipe $\% \%$ (which is the delivery-cnd of the pipe $g g$ ) on the top plate of the cistern, and continues its course into the water-refrigerator $q q$, where it enters the coil of the strong-liquor vessel $a a$ by the branch-pipe $b b$, returning at $c c$, where it runs direct into the pump 2 , by the pipe 3 , the liquor in its fall haring displaced all the air which the vessel and pipes contained. The strong-liquor reabsorber a a, being now emptr, the air has a free circulation, and filting first the freezing-cistern $i i$, it escapes by the still-head $l$ l into the vacuum-main-pipe, where it is led in the racuum-reabsorber $T$, escaping finally by the flexible pipe before referred to, into the water, where every trace of ammonia is absorbed, and the air only allowed to escape. This operation is continued until ail air-bubbles cease to show themselves, and a grinding noise is heard, caused by the vacumm which the gas and the liguor form for each other during their combination. The air being all cxpelled, all the cocks are to be shut, excepting those of the levelgauges. A stream of cold water is now admitted into the tank containing the desiccator M, and into the vat X ; and the heat being mantained in the goncratior A, the gas is driven from the liquor contained in that vessel, and after being cooled and desiccated (the liquid of desiccation returning to the generator by the pipe K), the cold dry gas is absorbed into the low-pressure reabsorler P , causing an increase of liquid and of pressure, and from that time the liquid of the geverator goes on decreasing until all the gas is exhausted ; the level then remains stationary. The pressure indicated by the pressure-gauge need never cxceed about fifteen lis. per square inch for the freezing of water. The regulator $e \sigma$ is now opened, and the concentrated solution of ammonia allowed to flow until it fills one-third of the strong-liquor reabsorber a a. The delivery-cock $Z$, and the regulator $\mathbb{C}$ of the vacuum-reabsorber ' $I$ must now be opened, and the flow of the liquid regulated. The hot exhansted linuor by its own pressuro forces its way through the outer pipe of the temperature-exchanger $\bar{Y}$, until it is delivered into the vacuum-reabsorber $T$, in a fine spray, by the pipe $\bar{U}$; having exchanged its temperature during its travel with the weakened solution from the freezing cistern $i$, which is at that time being forced by the pump 2 into the generator A. The vacuum-reabsorber Thaving been filled with ammonical gas during the expulsion of air: is immediately put into a strong yacuum by the

## Looc-pressure Freczing Macline.

instantaneous absorption of the gas into the exhausted liquor, which latter is allowed to flow until it has reached midway of that vessel, which is its proper level. The exhausted liquid in the generator A haring descended to the level indicated on the plan, the donkey-pump is put in motion, and the liquor which had been sent into the freezing cistern, is pumped out through the inner pipe of the refrigerator $q q$, pussing through the coil in the strong-liquor ressel $a$ a as before explained, and thence transmitted to the generator A, by the two branch pipes marked 55 , one of which becomes the inner pipe of the temperaturc-exchanger $Y$, and the other the inner pipe of the desiccator $M$, both supplying the gencrator A with liquor containing ammonia; the said liquor haring during its travel cooled the exhausted hot liquor from $A$, and desiccated the gas given off therefrom through $M$ by its gradual cooling action, itself arriving at the generator hot and in the best condition for being rapidly evaporated.

The admission of cold water into the dosiccator M can be dispensed with, as the flow of the weakened solution supplied by the pump 2 becomes sufficient to cool both the weakened solution and the gas. It will be seen that by this mode no caloric is wasted, whilst the process of craporation is greatly increased, as little if any disturbance can take place in the generator, owing to the temperature of the solution constantly sent in being steadily maintained.

The regulating-cock $h h$ is now opened, and so set as to allow the absorption of dry gas from the lowpressure reabsorber P into the strong liguor in $a$, in order to maintain a constant pressure in $a a, a$ little under the prossure in reabsorber P. Withont this supply, it, would be soon reduced by the cooling action of the circulating wealkened solution coming from the freezing-cistern.

The ice-moulds having been filled with fresh water, and the solution of chloride of calcium or other medium haring been placed in each trough, the machine is now ready to freeze, only requiring the regulating-cock placed on the syphon $g g$ to be opened to supply the freczing-cistern with the concentrated anmoniacal solution, which when allowed to flow, distributes itself on the top plates of the freezing-troughs, descending as before described. The stop-cock placed on the racuum-main-pipe $n m$, marked ${ }^{*}$, being open, the evaporation of the concentrated solution immediately begins, owing to the pressure being relieved by the free commurication of the cistern with the vacuum-reabsorber T. The gas, in meeting the exhausted liquor, which is continually supplied from the generator A, immediately combines with it by affinity, generating heat, which heat is carried away by the current of cold water supplied in the vat $X$. The pump $s s$ is now set to work, and extracts the recombined liquor in the rcabsorber T , by the pipe V , forcing the same into the condensor $v v$, there to receive an additional cuantity of gas from the generator A, by the exhaust-pipe $x x$, which through its being absorbed under a slight pressure, releascs the pressure under the piston of the engine-cylinder, whilst the full pressure of gas in the generator A acts on the other side of the piston, thus keeping the motion regular and powerful.

The pump $s$ being a double-acting force-pump, withdraws the liquid from the condensor $v v$, by the pipe $y y$, and forces it along the pipe No. 1 into the pressure-reabsorber $P$, through the pipe $Q$, in a fine spray, and there meeting gas under pressure, it is saturated under the influence of that pressure. The combined liquor now falls into the tubes, which being immersed in cold running water, the heat engendered in combination is carricd off, and the liquor is ready to absorb, under its reduced temperature, an additional quantity of the gas supplied from the generator A , as before described.

The heat being maintained in the generator, the concentration of the solution of ammonia in the low-pressure reabsorber P remains constant, its consumption being equal to the supply of liquid and gas. Each organ of the apparatus is equally supplied in proportion to its demand; the regulating-cocks and the liquid level gauge enabling the most accurate adjustment, and the freering within continues as long as the heat is applied to the gencrator.

By the rapid evaporation of the ammomia, caused by the released pressure in the freezing-cistern, the water is soon frozen.

The blocks of ice. being removed, the tin moulds are refilled with the water from the cold water tank $p$ p, which water has been reduced in temperature to about $32^{\circ}$, by exchanging a portion of its heat with the weakened solution from the freezing-cistern $i i$, on its passage through the refrigerator $q q$, and that without interfering with the proper work of the machine, as both congelation and cooling are going on at the same time.

The last evaporation of the ammoniacal solution takes place in passing through the coil of the strongliquor reabsorber $a a$, from whence the strong liquor is delivered to the freezing-cistern. The temperature of the strong liquor in this reabsorber being above that of the weakened solution, causes a further evaporation, and thus reduces the temperature of the strong liquor in $a$ a, thereby rendering the strong liquor capable of absorbing an additional quantity of dry gas, supplied to it by the regulating-cock $h h$, from the vessel $P$.

The exhausted solution is then conveyed by the pump 2 into the geuerator $A$, as before described.
Additional strength may be imparted to the liquor in the machine, by placing liquor of ammonia of commerce in a vessel to which hent can be applied, and counecting the head of such vessel to a guttapercha tubing connected with the air-cock at the head of the racuum-reabsorber T, care being taken to prevent the admission of air. Should the increased amount of gas taken in require the withdrawal of liquor, this may be effected by a draw-off-cock, which for general convenience may be placed at the bottom of the generator A .

When it is desired to produce cold for purposes other than that of ice-making, such as the freezing of meat, the cooling of rooms or liquids, \&c., it will be necessary to elevate the freezing-cistern $i i$ sufficiently to cause the weakened solution coming out at $n n$ to flow by gravitation through a coil in the coldwater tank (which latter must be filled with salt and water, or other suitable medium for carrying cold) back to the head of the coil in the strong-liquor reabsorber $a a$, at the point $b b$. The medium in the tank as cooled can be passed anywhere through pipes or spaces from the bottom thereof, by pump worked off the main shaft of the donkey-engine, being returned to the top of the tank to be again cooled. The circulation of the medium must of course be carricd on so long as the cold is required to be maintained.

For the purpose of applying our apparatus to the carrying of meat or other articles of food on board ship, and to the cooling of rooms or spaces for the reception and continuous preservation by cold of the same or other articles of food on shore, we use the following arrangement, which, on account of its economy, simplicity and novelty, we specially claim :-

## Low-pressure Freezing DIachine.

We take the skin of the ship, or room, or space (talking care to caulk or otherwise make the same watertight), and against the same screw small upright ribs of wood, of about an inch square, at distances of about eighteen inches, making them to wind round the ressel or room; against these ribs we fasten a partition of calico, wood, or shoet iron, filling the space thus made with melted tallor, to which a small quantity of lime may be added, in order to raise its melting point. Any other non-conducting and moisture-repelling substance may be used in lieu of tallow; but in countries supplying meat, a convenient; and economical mode of transport is afforded by the use of it, which would induce its liaving a preference over any other substance. This done, we screv other ribs of wood, of abont the sime thickness, against the face of the ribs before referred to, and against which we then screw light sheet-iron, thereby forming $a$ channel through which to circulate our freezing medium. This medium we introduce from the cold tank to the top of the vessel or space desired to be acted upon, and lead the same to a well at the bottom of the vessel or space, from which the cold medium is pumped up, to the refrigerating-tank, to restore the power it bas lost by abstracting the heat from the surrounding objects on its passage. The divisions through which the medium flows may be made perfectly water-tight, by using a strip of india-rubber between the face of the wooden rib and the shect-iron, wherever ' $九$ joining of the sheets of iron takes place. Galvanic batteries to prevent the oxidation of the iron against which the brine or other medium is sent, ought to
be placed in the supply tank.

It will be obvious that when the foregoing arrangement is no longer required, it can be taken to pieces, the tallow recorered, and the material remain available for lite purposes, ou any other voyage or at
other times.

It may be mentioned that, by increasing the quantity of liquid in the apparatus, as may be required, the weakened solution itself (which is the source of the cold) may be passed direct through pipes or spaces, in lieu of the brine or oiker medium for conveying the cold, and returned to the point pipes or gravitation, or by pump; we however prefer the plan just described, as being the more simple.

It may be also stated that, in lieu of the freezing-cistern $i i$, an evaporating tank or cylinder, fitted with trays or shelves, may be substituted; the exhaust and discharge being after the same manner as is shown in the cistern.

Although our description has reference to a machine of a particular size, we of course clain it in its increased or diminished sizes, its powers being dependent upon the increase or diminution of the several parts. The number and sizes of the pipes, and the sizes of the several ressels, may be varied, without destroying the working power of the apparatus: we have given those which our experience approves.

Cuauts.
Having thus described very fully the several parts of the apparatus known as "Nicolle and Mort's Low-pressure Freezing Machine," and the mode of working the same, and which we claim in its combination as our special invention, we now proceed to state the special claims we make in respect of several parts of the apparatus :-

1st. We specially claim our mode of employing summoniacal gas, under pressure, and released pressure as a motive power.
2nd. We specially clain our mode of reducing the temperature of the water intended for the supply of ice-mioulds.
3rd. We specially claim the direct application of the refrigerated weakened liquor, as a medium for transmitting cold without the aid or intervention of any agent.
4th. We specially claim the arrangement and constructiou of our freczing-cistern.
5th. We specially claim the arrangement of the strong-liquor vessel $a$ a, by which the cold weakened solution, on its return from evaporating or freezing cistern or vessel, exchanges tenperature with the strong liquor next to be craporated, wherely power is given to the strong liquor to absorb more gas, thus converting the vessel into a reabsorber, whilst the pressure exorted in the vessel by the superincumbent gas constitutes a self-acting pump for forcing the strong liquor to any place where it may be required.
6th. We specially claim the mode of fitting-up vessels or rooms for the carrying or reception of meat, or other food, or articles requiring to be secured against moisture and atmospheric influence, or for cooling rooms or spaces.
E. D. NICOLLE.

THOS. S. MORT.
This is the specification referred to in the amexed Letters of Registration, granted to Eagene Dominique Nicolle and Thowas Sutcliffe Mort, this seventh day of December, 1870 .

BELMORE.

## REPORT.

Sir,
Sydney, S October, 1870.
The application of Messrs. Nicolle aud Mort for Letters of Registration for their Invention of a "Low-pressure Freczing Machine," having been referred to us, we have examined the drawings :nd specification accompanying the same, and have the honor to report that we see no objection to the issue of Letters of Registration as prayed for.

We have, dc.,
J. SMITH.

The Princtian Tnder Secretary.

A.D. 1870, 7 th December. No. 257.

## ROCK-BORER.

# LETTERS OF REGISTRATION to Frederick Beer, for an Improvement in Rockboring or Rock-punching. 

[Registered on the 8th day of December, 1870, in pursuance of the Act 16 Vict., No. 24.]

By His Excemexcy rie Right Hovonable Somerset Richard, Earl of Belmore, a Member of Her Majesty's Most Honorable Privy Council in Ireland, Governor and Commander-in-Chief of the Colony of New South Wales, and Vice-Admirnl of the same.
T.O ALL TO WHOM TIIESE PRWSENTS SHALL COME, greeting:

Whereas limederick Beer, of Sydney, in the Colony of New South Wales, Doctor of Medicine, hath by his Petition humbly represented to me that he is the author or desiguer of a certain invention or improvement in manufactures, that is to say, of an invention of an Tmprovement in Rock-boring or Rock-punching, that is to say, of an invention of a machine for making holes for blasting or other purposes into rocks or other hard substances, which invention is more particularly described in the specification and shect of drawings which are hereunto amnexed; and that he, the said Petitioner, hath deposited with the Honorable the Treasurer of the said Colony of New South Wales the sum of Trenty Pounds sterling, for defraying the expense of granting these Letters of Registration, as required by the Act of Council, sixteenth Victoria, number twenty-four ; aud hath humbly prayed that I would be pleased to grant Letters of Registration, whereby the exclusive enjoyment and advantage of the said invention or improvement might be secured to hin for a period of fourteen years: And T, being willing to give encouragement to all inventions and improvements in the arts or mitnufactures which may be for the public good, and having received a report favourable to the prayer of the said Petition, from compctent persons appointed by me to cxamine and consider the matters stated therein, and to report thercou for my information, am plcased, with the advice of the Executive Council, and in exercise of the power and authority given to me by the said Act of Council, to grant, and do by these Letters of Registration graut unto the said Frederick Beor, his executors, administrators, and assigns, the exclusive enjoyment and adrantage of the said invention or improvement, for and during the terin of fourteen years from the date hercof; to have, hold, and exercise unto the said Frederick Beer, his executors, administrators, and assigns, the exclusire enjoyment and advantage thereof, for and during and unto the full end and term of fourteen years from the date of these presents next and immediately ensuing, and fully to be complete and ended: Provided always, that if the said Erederick Beer shatl not, with three days after the granting of these Letters of Registration, register the same in the proper office in the Suprome Court at Sydney, in the said Colony of New South Wales, then those Letters of Registration, and all advantages whatsoever hereby granted, shall cease aud become void.

Th witness whereof, I have heremnto set my sign manual, and have caused the present Letters of Registration to be sealed with the seal of the said Colony of New South Wales, at Government House, Sydney, in New South Wales, this 7 th day of December, in the year of our Lord one thousand eight hundred and seventy.

## Rock-borer.

## SPECIFICATION

Tree said invention consists in furmishing the one end of a strong iron rod, passing through guiding collare, with an appropriate punching tool, such as is suitable for making holes into rocks for blasting or other purposes, and in connecting the other end of the said rod with a powerful spiral spring, or any other kind of spring, or with an air chamber and piston, wherein the air can be compressed, or from whence it may be exhausted or rarified by creating a vacuum. I further fix to the rod or bar a nut or tapet, which is acted upon or raised by a single or by several cams fixed to a shaft running transversal to the rod, and which is prorided by a flywheel. The whole is to be mounted on an universal joint, so that the pointed end of the puncheon-rod can be brought to bear in any direction, downwards, upwards, \&c., in any direction required.

This Rock-borer or Puncheon can be connected by a belt with any motive power, or worked by hand-power alone. The cutting tool is separately adjusted, and can be elongated according to the depth the hole is required to be made, and may be easily exchanged.

I claim to have produced, by these various improvements and their combination, a machine for punching holes into rocks, greatly superior to those now in use, as it is at once simple, portable, effective, and cheap; where hand-power is employed, it is more advantageously expended than in the ordinary way, as at present, by the hammer, \&e., \&e.; it is particularly well suited for drilling holes into rocks, \&c., in underground works, such as coal mines, \&c., and where other machinery is too bulky or costly.

I claim of accumulating or absorbing any given power with springs, or with the elasticity of air, and to direct and concentrate the said accumulated power in one blow to a given point, by means of a suitable chisel or other stone-cutting instrument; but if I like, I create a vacuum in a chamber, and use atmospheric pressure as the power to give the stroke.

JREDERICK BEAR, M.D., C.D., O.1.
This is the specification referred to in the annexed Letiers of Registration, granted to Frederick Beer, this seventh day of December, 1870.

BELMORE.

## REPORT.

Electric Telegraphs, Chief Office, Sydncy, 14 November, 1 s70.
Sir,
We have the honor to certify that we have examined the specification of Dr. Beer, for a RockPapers herewith borer or Rock-puncher, and see no reason why Letters of Registration should not be granted for his invention.

We have, fe.,

## A.D. 1870, 8th December. No. 258.

## IMPROVED QUARTZ-CRUSHING MACHINE.

## LETTERS OF REGISTRATION to William Grey, for an improved Quartzcrushing or Ore-reducing and Amalgamating Machine.

[Registered on the 9th day of December, 1870, in pursuance of the Act 16 Vic., No. 24.]

By His Excellency the Right Honomabie Somerset Richard, Earl of Belmore, a Member of Her Majesty's Most Honorable Privy Council in Ireland, Governor and Commander-in-Chief of the Colony of New South Wales, and Vice-Admiral of the same.

## TO ALL TO WHOM THESE PRESENTS SHAJL COME, greeting:

WHEREAS Wildiam Grey, of the city of Sydney, in the Colony of New South Wales, surgeon, hath by his Petition humbly represented to me that he is the author or designer of a certain invention or improvement in manufactures, that is to say, of an invention of an "Improved Quartz-crushing or Orereducing and Amalgamating Machine," which is more particularly described in the specification and paper of drawings which are hereunto annexed; and that he, the said Petitioner, hath deposited with the Honorable the Treasurer of the said Colony of New South Wales the sum of Twenty Pounds sterling, for defraying the expense of granting these Jetters of Registration, as required by the Act of Council, sixteenth Vietoria, number twonty-four ; and hath humbly prayed that I would bo pleased to grant Letters of Registration, whereby the exclusive enjoyment and advantage of the said invention or improvement might be secured to him for a period of fourteen years: And I, being willing to give encourgement to all inventions and improvements in the arts or manufactures which may be for the public good, and haviug received a report favourable to the prayer of the said Petition, from competent persons appointed by me to examine and consider the matters stated therein, and to report thereon for my information, am pleased, with the advice of the Exccutive Council, and in exercise of the power and authority given to me by the said Act of Council, to grant, and do by these Letiters of Registration grant unto the said William Grey, his exccutors, administrators, and assigns, the exclusive enjoyment and advantare of the said incention or improvement, for and during the term of fourteen years from the date hereof; to have, hold, and exercise unto the said William Grey, his executors, administrators, and assigns, the exclusive enjoyment and advantage thereof, for and during and unto the full end and term of fourteen years from the date of these prescuts next and immediately ensuing, and fully to be complete and ended: Provided almays, that if the said William Grey shall not, within three days after the granting of these Lretters of Registration, register tho same in the proper office in the Supreme Court at Sydney, in the said Colony of New South Wales, then these Lettery of Registration, and all advantages whatsoever hereby granted, shall cease and become void.

In witness whercof, I have hereunto set my sign manual, and have caused the present Letters of
Registration to be sealed with the seal of the said Colony of New South Wales, at Government House, Sydney, in New South Wales, this eighth day of December, in the year of our Lord one thousand eight hundred and seventr.

## (土.s.)

BETMORE.

## Improved Quartz-crushing Machine.

## SPECIFICATION.

Description of an improved Quartz-crushing or Ore-reducing and Amalgamating Machine, invented by William Grey, M.R.C.S.E., of Banks-strect, Sydney, New South Wales.

## Ther Reducer on Crusiner.

In this machine the stamper rods or pistons pass throngh a lower bar and an upper bar ; the lower bar is fitted with a spring bar to each stamper, which the stamper rod passes through; the ends of the spring bar are furnished with hooks; this spuing bar is securely braced to the lower bar ; the stamper rod is fitted with a lifting nut and an upper nut; the upper nut is fitted with a spring bar, similar to the lower spring bar, and sitting loose on the nut, to permit the stamper rod to revolve; the upper spring bar is connected to the lower spring bar by two spiral wire springs, the connection with lower spring bar hooks being made by double screw links; to regulate tension of springs; the stamper rods are lifted by one, two, or three armed lifting cams or wipers acting on the lifting nut in the usual manner.

The trough which conveys the water and the pulverized quartz or ore from the stamper box is sheeted on the bottom across the whole width with sheet glass about one foot wide, on which rest horseshoe magnets connected together, the end poles of the two extreme magnets being connected, if necessary, with a galvanic battery of simple constraction. The trough, discharges into a receiver, from which, if necessary, the stuff is raised to another receiver set on a platform raised a sufficient height from the ground; from this upper receiver the stuff to be treated flows by gravitation in aur through the amalgamator.

## The Amalgamator

is a circular cast-iron pan, of requisite size, with a flat top securcly fixed on, and making waterproof joint. The supply pipe passes through centre of top, and terminates inside the pan, in a conical shape, the base of cone reaching nean to the bottom and side of pan ; the ouiside of cone is fitted at about $\frac{2}{3}$ of its height with a fine wire-rauze sieve, fitting close to side of pan; this sieve is removable if not required for stuff under treatment; the discharge pipes are fitted into top, and are of syphon shape; from these discharge pipes the stuff treated flows as refisc tailings; the top of pan is fitted with a $\frac{3}{4}$-inch screw, for charging pan with mercury; the bottom of pan is fitted with tap, for withdrawal of contents.

## Clanm of Inyentor

I claim, first-An inexpensive and effective method of applying power to the stamper rods, whereby a very rapid and powerful blow is given by the stamper to the stono or ore under treatment; and, as the pressure of the springs on the stamper rods can be regulated at pleasure from fifty pounds up to one ton, the stampers may be of light weight. This power can be incxpensively applied to the machines at present generally in use, and stamper heads weighing from one hundred pounds each substituted for those in use weighing six hundred pounds each, thereby reducing the weight of a twenty-stamper machine by about four tons of metal, and considerably improving the efficacy of the machine.

Second-I claim that the insulated galvanic magnets in the trough arrest at least 90 per cent of the pyrites passing from the stamper box, thereby preventing the mercury in the amalganator from forming a sickened amalgam, by which its amalgamating properties become neutralized, causing great loss of gold and mercury, and necessitating an expensive chemical process to restore the sickened mercury.

Thirdly-I claim an inexpensive and efficacious amalgamator, by which the pulverized ore is by hydrostatic pressure forced under and through a quantity of mercury, in such a manner that every particle of ore treated must come into close contact with the mercury, and so securing the complete amalgamation of every particle of gold in the stuff treated.

WILLIAM GREX.
This is the specification referred to in the annexed Letters of Registration, granted to William Grey, this Sth day of December, 1870.

BELMORE.

## REPORT.

Str,
Syduey, 21. October, 1870.
The application of Mr. Wilham Grey for Teetters of Registration for an "Improved Quartz. crushing or Ore-reducing and Amalgamating Machine" having been referred to us, we have examined the specification and drawings accompanying the same, and have the honor to report thereon as follows :-

Mr . Grey claims three improvements : 1st, the application of spiral springs to stampers, whereby light stampers may do the same work as heavy ones, by reason of the greater rapidity and force of the blows. In our opinion this is an infringement of the patent already granted to Dr. Beer, an extract from which has been sent to us along with Mr. Grey's application. It is true that in Dr. Beer's specification "spiral springs" are not named, but we think that the sole right to apply springs of any sort to stampers so as to increase the rapidity and force of their blows has been conceded to Dr. Beer. We ground our opinion on the following extracts from Dr. Beer's specification :-"The said invention consists " in comnecting with each stampor one or several springs of the requisite resisting power, thus allowing a "great reduction to be made in the weight of the head of the stamper * * * and enabling the "stamper to make with ease from 250 to 300 strokes per minute. One stamper fitted with appropriate "springs will perform (assuming the steam power the same) the work of five or six ordinary ones *** ". Where already the expense of an ordinary congine has been incurred, the special advantages of spring "stampers alone may be adopted, and still produce a fivefold effect over the stampers at present in use; "and as the springs can easily be changed, an absolute command of size, of strength, and consequent ".power of stroke; independent of the weight of the stamper itself, can be had."

## Invproved Quartz-crushing Machine.

Mr. Grey's remaining claims are, (2nd) "Insulated Galvanic Magnets," and (3rd) an "Amalgamator." We think the former to be entirely wrong in principle; but so far as we know, theso claims would not interfere with any existing rights.

We recommend that Letters of Registration be not granted for the specification as it stands at present; but if Mr. Grcy will expunge all that relates to the application of springs to stampers, we see no objection to the issue of Letters of Registration for the remainder.

We have, \&c.,
J. SMITH.

The Prnicipal Under Secretary.
E. C. CRACKNELL.

## FURTHER REPORT.

Sydner, 11 November, 1870.
SIR,
In the matter of Mr. Grey's application for Letters of Registration for Improved Quartz crushing Machinery, which has been referred back to us along with a letter from Mr. Grey, we have the honor to make this further report:-

The question to be decided, namely, whether by the terms of Dr. Beer's registered specification, the sole right to apply springs of any sort to stampers so as to increase the rapidity and force of their blows bas been conceded to Lim, is a legal rather than a scientific one, and should be determined on the usual rules of legal interprctation. We therefore respectfully recommend that the matter be referred to the Crown Law Officers. Should they decide that Dr. Beer cannot claim springs of all sorts, but only such as he has specifically described, then Mr. Grey may have Letters of Registration for his specification as it stands, for undoubtedly there is no specific mention of "spiral springs" iu Dr. Beer's specification.

We have, \&c.,
J. SMITH.
E. C. CRACKNELL. .

## A.D. 1870,14 th December. No. 259.

## IMPROVED HAND POWER MACHINE.

## LETTERS OT REGISIRATION to Arthur Wellesley Parkinson and Joseph Ambrose Robinson, for an Tmproved Hand Power Machine.

[Registered on the 14th day of December, 1870, in pursuance of the Act 16 Vict., No. 24.]

By His Fxchieevcy time Rioht Honorabie Somenset Rycieard, Earl of Beinore, a Member of Her Majesty's Most Honorable Privy Council in Ireland, Governor and Commander-in-Chief of the Colony of New South Wales, and Tice-Admiral of the same.

## TO ALI TO WHOM THESE PRESENTS SHALL COME, grecting:

Whibreas Arthur Wehelshey Pakitsoy and Josem Axhbose Robinson, of the city of Sydney, in the Colony of New South Wales, Esquires, have by their Petition hunbly represented to me iliat they are the authors or designers of a certain incention or inprovement in manufactures, that is to say, of in invention of an "Improved Hand Power Machine," which is more particularly described in the specification and shect of drawings which are hereunto aunexed; and that thoy, the said Petitioners, have deposited with the Honorable the 'Ireasurer of the said Colony of Now South Wales the sum of Threnty Pomps sterling, for defraying the expense of granting these Jetters of Registration, as required by the Act of Council, sixtecenth Victoria, number twenty-four ; and hove lumbly prayed that I would be pleased to grant letters of Registration, whereby the exclusive enjoyment and adrantage of the said inrention or improvement might be secured to tbem for a period of fourteen years: Aud $I$, being willing to gire encouragement to all inventions and improvements in the irts or manufactures which may be for the public good, and having received a report favourable to the prayer of the said Petition, from competent persons appointed ly me to cximine and consider the matters stated therein, and to report thereou for my information, am pleased, with the advice of the Executive Council, and in excrcise of the power and authority given to me by the said Act of Comencil, to grant, aud do by these Letters of Registration grant unto the said Arthur Welleslcy Parkinson and Joseph Aubrose Robinson, their cxecutors, administrators, and assigns, the exclusive enjoyment and advantige of the said invention or improvenent, for and during the term of fourteen years from the date hereof; to have, hold, and exercise unto the said Arthur Wellesley Parkinson and Joseph Ambroso Rohinson, their cxccutors, administrators, and assigns, the cxclusive chjoyment and adrantage thereof, for and during and unto the full end and term of fourteen years froni the date of these presents noxt and immodiately ensuing, and fully to be complete and ended : Provided always, that if the said Arthur Wellesley Parkinson ind Joseph Ambrose Robinson shall not, within three days after the granting of these Letters of Registration, register the same in the proper office in the Supreme Court at Sydner, in the said Colony of New South Wales, then these Letters of Registration, and all adrantages whatsoever horeby granted, shall cease and hecome void.

In wituess whereof, I hare hercunto set my sign manual, and have caused the present Letters of Registration to be sealed with the scal of the said Colony of New South Wales, at Government House, Sydney, in New South Wales, this fourteenth day of Decomber, in the year of our Lord one thousand eight humired and seventy.

## Inproved Hand Power Machine.

## SPECIFICATION OF IMPROVED HAND POWER MACHINE.

Turs specification and the accompanying plans describe an "Improved Hand Power Machine," for which the undersigned seek the protection of Letters Patent, and which consists of a movable double-toothed quadrant, swinging on a centre spindle, marked $A$ on plan, which cau be eithor above or below the main driving shaft B , and which is worked by means of levers C C, with a motion similar to that of an ordinary pump. This quadrant conveys motion to tivo small pinions which rum loose on the main driving shaft B and on which are cast (or otherwise secured) the driving ratchets $D \mathrm{D}$, which arc right and left handed. These ratchets give a rotatory motion to the driving shaft B, through the ratchet palls E E E E, which act on the pall box $H$, keyed or otherwise secured to the driving shaft. When one of the levers $C$ is raised and the stivke commenced, the palls in the 1st pinion come into gear, those in the 2nd pinion nearly liberating themselves and slipping ofer the ratchet as the pinion revolves in the opposite direction to the one in gear. When the end of the stroke is reached and the motion of the pinions reversed, palls in the 2nd pinion come into gear, while those in the lst liberate themselves (and vice versa). By this means a continuous rotatory motion is conveyed to the spindle or shaft B, which can be transmitted to any other machinc, by means of the belt pulley, or by the ordinary universal clutch coupling, as may be required.

The portion of this machine for which we particularly claim the right of protection is the doubletoothed rocking quadrant and the ratchet pinions, for conveying motion to the driving shaft, either with palls (as in plan) or with right and left hand clutclics, as may be found expedient.

The advantages of the machine are:-1st. Its great portability. 2nd. That, owing to the leugth of lover and smallness of pinions, great power is obtained and speed with little libbour ; tho motion being much easier than the ordinary rotatory motion by means of a crauked handle. 3rd. The machine is comparatively inexpensive, and carn be applied to any purpose, and is within the means of small capitalists who cannot afford steam power.

We calculate a machine of the size shown on pian to be equal to 1 horsc-power
The above is a general description of the machine for which we seek protection, to be called an "Improved Hand Power Machine."

PARKINSON AND ROBINSON,
Engineers, Bathurst-street.
Per R. H. D.

This is the specification referred to in the annexed Letters of Registration granted to Arthur Wellesley Parkinson and Joseph Ambrose Robinson, this fourteenth day of December, 1870.

BELMORE.

## REPORT.

Sydney, 17 October, 1870.
Sir,
The application of Messrs. Parkinson and Robinson for Letters of Registration for an "Improved Hand Power Machine," having been referred to us, we have examined the specification and drawings accompanying the same, and we hare now the honor to report that we see no objection to the issue of Letters of Registration as prayed for

The Under Secretary, Colontal Secretahy's Depaltment.

We have, de.
JOHN WHITTON.

## A.D. 1870, 14th December. No. 260.

## SPRING LINK FOR CABLES, \&c.,

## LETTERS OF REGISIRATION to John Evelyn Liardet, for a Spring Link for Cables, \&c.

[Registered on the 14th day of December, 1870, in pursuance of the Act 16 Vic., No. 24.]

By. Hys Excellenct the Right Hovomale Somirsta Ricilard, Eall of Behsore, a Member of Her Majesty's Most Honorable Privy Council in Treland, Gorernor and Commander-in-Chief of the Colony of New South Wales, and Vice-Admiral of tho same.

## TO ALL TO WHOM THESE PRESENTS SHALL COME, greeting:

WHEREAS Toun Eveliyn Linadet of Waverley, near the city of Sydney, in the Colony of New South Wales, Esquire, hath by his Petition humbly represented to me that he is the nuthor or designer of a certain inveution or improvement in manufactures, that is to say, of an invention of a Spring for chaincables and all moorings of whatsoever kind, for ships, buoys, beacons, and other lloating vessels or implements on seas, rivers, and other waters, which is more particularly desuribed in the specification and sheet of drawings which are hercunto amexed; and that he, the said Petitioner, hath deposited with the Honorable the Treasurer of the said Colony of New South. Wales the sum of I'wenty Pounds sterling, for defraying the expense of granting these Letters of Registration, as required by the Let of Council, sixteenth Victoria, number twenty-four; and hath hmmbly prayed that 1 . would be pleased to grant Letters of Registration, whereby the cxclusive enjoynent and advantage of the said invention or improvement might be secured to him for a period of fourteen ycars : And I, being willing to give cucouragement to all inventions and improvements in the arts or manuftetures which may le for the public good, and liaving reccived a report favourable to the prayer of the said Petition, from competent persons appointed by me to examine and consider the matiters stated therein, and to report thercon for my information, am pleased, with the advice of the Exccutive Council, and in exercise of the power and authority given to the by the said Act of Council, to grant, and do by these Letters of Registration grant unto the said Johu Evelyn Liardet, his cxecutors, administrators, and assigns, the exclusive eujoyment and advantage of the said invention or improvement, for and during the tem of fourteen years from the date hereof; to have, hold, and exercise unto the said John Erclyn Liardet, his exceutors, administrators, and 'assigns, the exclusive enjoyment and advantage thercof, for and during and unto the full end and term of fourteen years from the date of these presents next and immediately ensuing, and fully to be complete and ended: Provided always, that if the said John Evelyn Jiardet shall not, within three days after the granting of these Letters of Registration, register the same in the proper office in the Supreme Court at Syduey, in the said Colony of New South Wales, then these Letters of Registration, and all advantages whatsoever hereby granted, shall cease and become void.

In witness whereof, I have hereunto set my sign manual, and have caused the present Letters of Registration to be sealed with the scal of the said Colony of New South Wales, at Government Housc, Sydney, in New South Wales, this fourteenth day of December, in the year of our Lord one thousand eight hundred and seventy.

## Spring Linh for Cables, \&c.

SPECIFICATION of an improved method of securing Cables, Ropes, Chains, and similar articles or substances, of whatever material composed, from the risk of breaking when exposed to sudden strain or tension.
The improved mettod is by inserting into or conuecting with the cable, rope, chain, or other similar article, of whatever material composed, is spring link; and my invention consists of the said spring link, the construction of which I describe as follows :-

The link consists of an open cylindrical cradle, formed by uniting two plates or dises of metal by means of metallic rods or bars, of such thickness, and placed at such intervals from each other as will secure to the cradle the same amount of strength as that of the cable, rope, chain, or other similar article into which it is to be inserted. or with which it is to be comnected, and as will also allow for the compression, expansion, and renction between them of certain elastic dises within the cradle, and heremafter described.

Through the centre of each of the plates or dises so united as aforesaid, there is inserted a metallic rod or piston fastened by nuts, forelocked or otherwise, so as to prevent the pistons coming in riolent contact with each other on a sudden reaction,-in leugth about half the length of the cradle. The inserted extremities of thesc rods or pistons meet in the centre of the cradle, and are each terminated within the cradle by a metal plato or dise and nuts as aforesaid, into which the extremities of the rods or pistons are fastened.

The cud of each rod or piston outside the cradle is furnished with a head, and by means of a hole or aperture; in which the end of each piston can be attached to the cable, rope, chaia, or other similar article, into which the link is to be inserted or shackelled, or with which it is to be connected. Upon each of the rods or pistons are fitted, within the cradle, alternate discs of vulcanized india-rubber or other similar elastic substance, and of wood, so as to secure the full elasticiity of each india-rubber dise, sufficient in number to fill up the space between the inside of the cad plate or disc of the cradle, and the plate or dise at the extremity of each rod or piston. The thickness of the discs of vuleanized india-rubber or other similar elastic substance and of wood, will depend on the amount of strain or tension which it is proposed that the link shall be capable of sustaining.

When the link thus described is inserted into or comected with any cable, rope, chain, or other similar article, the liability of such cable, rope, chain, or other similar article, to break in consequence of sudden strain or tension is diminished. The effect of such sudden strain or tension is to draw the rods or pistons apart from each other, thus giving an increased length to the cable, rope, chain, or other similar article, and the elastic dises within the cradle, by changing their form according to the strain or tension applied, allow the rods or pistons to be thus drawn from each other, and when the strain or tension is removed, the rods or pistons resume their original position. The cradle may be enclosed in a case or left unenclosed, according to circumstances.

The degree of strain or tension to which the cable, rope, chain, or other similar article, into which the link is inserted or with which it is connected is being subjected, may be ascertained by means of . nndicating hands attached to the plates or discs at the ends of the rods within the cradle, and moving outside the cradle as the rods or pistons move within the crade.

In explanation of my invention, a plan is hereunto attached :-
Figure number one is a longitudinal foreshortened drawing of the spring link.
A represents the cylindrical cradle.
B represents the plate or disc at the other end.
The five leiters C represent the ends of five out of the six bars which are visible, connecting the plates or dises at the two cads of the cradle. The sixth bar is hidden from view by the piston rod.
$D$ is one of the rods or pistons which passes through the centre of the plate or disc $B$, and is fastened into a plate or disc $F$, in the centre of the cradle, and there meets a similar rod or piston, $E$, which passes through the plate or disc $B$ B at the other end of the cradle, and is fastened into a plate or dise, F , in the centre of the cradle.

The alternate bands of piuk and yellow represent alternate plates or discs of vulcanized ind:arubber or othersimilar clastic substance, and of wood or other hard substince, titted to the rods or pistons within the cradle $A$.
$G$ represents the head of the rod or piston $D$, outside the cradle, laving in it an aperture by which it may be attached to a cable, rope, chain, or other similar article.

There is a similar rod or piston, H, at the other ead of the cradle.
BB is a plate or dise similar to the plate or dise B at the opposite end of the cradle A.
This is the specification refcrred to in the annexed Letters of Registration, granted to John Evelyn Liardet, this fourteenth day of December, 1870.

## IMPROVEMENTS IN KILNS.

## LETTERS OF REGISTRATTION to Augustus Morand, for Improvements in Kilns.

[Registcred on the 23rd day of December, in pursuance of the Aet 16 Vict., No. 24.]

BY His Excellescy the Rigity Honorabin Sonerset Richand, Eini; of Belmodf, a Member of Her Majesty's Most Hionorable Privy Council in Iroland, Governor and Commander-in-Chief of the Colony of New South Wales, and Vice-Admiral of the same.
TO ALL TO WHOM THESE PRWSENTS SHALL COME, greeting:
Whereas Augustus Morain, of Brooklyn, New York, United States of America, but now of Leeds, Yorkshire, Kingdom of Great Britain, hath by his Pctition humbly represented to me that he is the author or desiguer of a certain invention or improrement in manufactures, that is to say, of an invention entitled "J.mprovements in Kilns for drying, burning, and cooling bricks, and otber articles or substances," which is more particularly described in the specification and sheet of drawings which are hereunto annexed; and that he, the said Pctitioner, hath deposited with the Honorable the Treasurer of the said Colony of New South Wales the sum of Thwenty Pounds sterling, for defraying the expense of granting these Letters of Registratiou, as required by the Act of Council, sixteenth Victoria, number twenty-four; and hath humbly prayed that I would be pleased to grant Letters of Registration, whereby the exclusive enjoyment and advantage of the said invention or improvement might be secured to him for a period of fourteen years: And $I$, being willing to give encouragement to all inventions aud improvements in the arts or manufactures which may bo for the public good, and having received a report favourable to the prayer of the said Petition, from competent persons appointed by me to examine and consider the matters stated thercin, and to report thercou for my information, an pleased, with the advice of the Executive Council, and in esercise of the power and authority given to me by the said Act of Council, to grant, and do by these Letters of Registration grant unto the said Augustus Morand, his esecutors, administrators, and assigns, the exclusive enjoyment and advantage of the said invention or improvement, for and during the torm of fourteen years from the date hereof; to have, hold, and exercisc unto the said Augustus Morand, his executors, administrators, and assigns, the exclusive cojoyment and advantage thercof, for and during and unto the full end and term of fourtecn years from the date of these presents next and immediately ensuing, and fully to be complete and ended: Provided always, that if the said Augustus Morand slaill not, within tinree days after the granting of these Letters of Registration, register the same in the proper office in the Supreme Court at Sydney, in the said Colony of New South Wales, then these Letters of Registration, and all advantages whatsoever hereby granted, shall cease and become
yoid. void.

In witness whereof, I have hereunto set my sign manual, and have caused the present Letters of Registration to be sealed with the seal of the said Colony of New South Wales, at Government House, Sydncy, in New South Wales, this twentieth day of December, in the year of our Lord one thousand eight hundred and seventy.

BELMORE.

## Improvements in Kilns.

## SPECTFICATION

I, Augustus Morand, of Brooklyn, New York, Enited States of America, now of Leeds, Yorkshire, Kingdom of Great Britain, have invented certain improvements in "Kilns for drying, burning, and cooling bricks and other articles or substances."

The said invention relates to a kiln constructed of a series of chambers, by proference arranged in a straight line, in which the articles or substances are dried and burned, and in air chamber, preferably located at the end of the said series, in which the temperature of the air is graduated for the purposes hereinafter mentioned. Each of these chambers is provided with one or more firc-places, and the burning chambers or ovens are also procided with stoke-holes at the top for feeding additional fuel to the fire. The burning chambers or ovens are all connected by flues, constructed and arranged in such a manner that heat may be readily conducted from any one of the chambers to any other one or more of the said series, thereby securing continuity of action in the process of drying and burning the contents of the sereral chambers or ovens forming the tiln. The air chanber is also connected br tlues or passages with each of the said ovens, through which air of auy desired temperature for facilitating the drying, burning, or cooling of the articles or substances, may be forced or drann into and through any one or more of the said burning chambers or ovens. By the peculiar construction and arrangement of the parts of my improved kiln, which will now be more fully described with reference to the drawing, the contents of the kilns are expeditiously and economically dried, burned, and cooled, while the finished bricks, tiles, and other articles, are more uniform and perfect than those burned in the ordinary kilns.

## Description of the Drawifg.

Figure 1 is a ground plan of my kiln.
Tigure 2, a vertical section on the line $x x$, figure 1 .
Figure 3, a vertical section on the line $y y$, figure 1 , looking in the opposite direction.
Figure 4, a transverse rertical scetion on the line $\approx z$, figure 2.
Figure 5 is a transyerse rertical section through the air chamber.
Figure 6, an end view of the kiln.
Figure 7 is a transverse section showing a kiln constructed with outside flues.
Sike letters indicate corresponding parts in the several figures.
$\mathrm{A} \mathrm{A}^{1} \mathrm{~A}^{2} \mathrm{~A}^{3} \mathrm{~A}^{1} \mathrm{~A}^{5}$ are the drying and burning chambers, separated by the walls $a$, with apertures $a^{1}$; $B$, the air chamber, separated from chamber $A$ by the wall $b$, with apertures $b^{1}$; C, the fire-places; $\mathbf{D}$, the stoke-holes; F , horizontal flues or passages, and $e$, passages between these flucs and the chambers and $e^{2}$ dampers; $G$, the stem or smoke flues leiding to the chimncys, and $g$ passages from the chambers to the flues $G$, which flues and passages may be closed by dampers, $f^{f} f^{2} f^{2}$; H, an air tube, with branches $h h^{4} h^{2}$, and cocks or valves, $l^{3} h^{4} h^{6}$. By blowing the air through the branch $h$ the dampers $b^{2}$ in the apertures $b^{1}$ are kept from being injured by intense heat of the burning chambers. I are apertures on one side and J on the opposite side of the burning chambers; $K$, a frame, consisting of braces, $k$, rods, $k^{1}$, bolts, $l^{2}$, and binding plates, $k^{3}$, running the length of the kiln.

The chambers are separated by the permanent division walls $a$ and $b$. The several burning chambers communicate with each other by means of the apertares $a^{2}$, and the air chamber $\operatorname{B}$ communicates with the adjacent chamber A, by means of the apcrtures $b^{1}$, which apertures are opened or closed as desired, the object being to allow the passage of heated air from one chamber to another, or of a current of air produced by artificial means. A man-hole or aperture may be provided in the division walls, for convenience in setting or removing bricks or other articles, which apertures are closed during the drying and burning process. The fire-places C are located on both sides of the kiln, and the process of drying and burning is commenced by means of fires therein, and afterwards the process is assisted by fuel fed through the stoking-holes D . The number of stoking apertures which I prefer to make is about thirty in each chamber. The said holes are provided with covers of any suitable construction. The flues F are employed for conveying the heated air to or from any one chamber of the series. Through these flues a current of air of any desired degree of temperature may be passed from the air chamber or blowing apparatus into any one or all of the chanbers A, for the purpose of increasing the combustion of the fuel, drying the green bricks, or cooling the finished contents of the chambers. If desired, the flues F , figure 7 , at the sides of the kiln, may be substituted for the flues F . The flues EF communicate with the chambers by means of passages, $e$, and may be connected with the exhaust if desirable. The flues $G$ are designed for conveging the vapour, steam, or amoke, from the chambers into a chimney, which may be placed at either end of the kiln, or into chimneys at both ends, or from one chamber to another.

I may also use a chimney at one end and an cxhausting fan at the other end. The said flues are connected with the burning chambers A and air chambers B by means of branch passages. The dampers and valves are employed for regulating and controlling the passage of the heated or cool air through the flues or pipes from, into, or between the chambers. The apertures I and I are temporary openings for the purpose of setting or remoring the bricks or other articles, which openings are closed during the drying and burning process. I prefer to construct the kiln with permanent openings, $i$, extending from the temporary openings $I$, back into the floor of the kiln, to allow a cart to be backed into the kilu a couvenient distance for being loaded. The framework K, composed of the braces, $k$, rods, $k^{1}$, and binding plates, $k^{3}$, and fastenings, $k^{2}$, is designed for strengthening the chambers A, and may be made in any suitable mauner for the purjose.

The bricks, or other articles or substances, being placed in two or more of the chambers adjacent to air-chamber B, the apcrtures IJ in these chambers are closed, and the fires built in the fire-places $C$, chamber A. The dampers which govern the communication with the flues $G$ (excepting those nearest the air chamber) being open, the dampers $f$, chamber A, and adjacent dampers $f^{z}$ are closed, the dampers $f^{2}$, and the other dampers $f^{2}$ being open, to allow the moisture and steam to pass off through the flue $G$ into a chimney, or to be drawn off by an exhaust fan arranged in connection with the flues and dampers. When the bricks in the chamber A are dried, the dampers $f f^{1}$ of the chamber are closed, and the stoking from the top commenced; the fuel thus supplied becoming ignited by the fires in the fire-place C ,

## Improvements in Kilns.

is kept burning until the bricks or other articles are finished. The fire is now lighted in fire-places in chamber $A^{1}$, and the dampers $f^{1}$ of this chamber are opened, to allow the steam and vapours to escape into the flues $G$ as before, the sccond dampers. $f^{2}$ being closed. The remaining burning chambers are successively filled, and the process employed in the chamber A is repeated. When the bricks or other articles or substances in chamber A are sufficiently burned, I assist and control the cooling process by introducing upon the cooling bricks or other articles, by means of a fan or blower, a curront of tempered air from the air chamber B, through the pipe H or the flues and passages leading into the other chambers, and drive the heat from this chamber to chamber $\mathrm{A}^{2}$ through the aperture $\mu^{1}$, or any other of the series, through the flues F or flues substituted therefor. The apertures IJ are now opened, the bricks or other articles removed, and a fresh charge placed in the chamber, when the waste hent of any of the other chambers may be brought back through the said flues, the dampers being properly adjusted to assist in the drying or burning of the contents of the refilled chamber, and the fuel is again fed into the fire-places and then through the stoke-holes; thus a continuous process of drying aud burning is secured. The system of flues and passages perfectly connects all the chanbers, and though these chambers are comnected with each other, by which great economy and expedition in the drying, burning, and cooling of the articles is sccured, but in case it is found necessary to discontinue the operation in any one or more of the burning chambers of the series, the councctions with such chamber may be closed, and the operations in the other chambers be carried on without interruption. If desired, the air chamber B, instead of being built in connection with the chambers A, may be a scparate structure or reservoir, haring communication with them through tubes or passages.

Having fully described my invention, I claim,-
First-A kiln, cousisting of a series of drying and burning chambers $A A^{1} A^{2} A^{3} A^{4} A^{5}$, when said chambers are connected by flues or passages, whereby heat or a current of nir may pass or be forced from one chamber to any other chamber of the series, as hereinbefore described, for the purposes specified.
Second-The air chamber B arranged in communication with the drying and burning chambers, for the purposes and substantially in the manner herein set forth.
Third-The arrangement of the flues, passages, dampers, and valves, whereby an artificial current of air, of any suitable degrec of force and temperature, however produced, may be carried either from the air chamber B, or elsewhere, to or from any one or more of the burning chambers, for the purposes and substantially in the manner described.
Fourth-The arrangement, in combination with the air chamber and the series of drying and buruing chambers, of the pipes or tubes (provided with ralves) for conducting the air from a blowing apparatus to or from any one or number of the chambers, for the purpose and substantially as set forth.

AUGUSTUS MORAND.

This is the specification referred to in the annexed Letters of Registration granted to Augustus Morand, this twentieth day of December, 1870.

BELMORE.

## REPORT.

Syduey, 8 December, 1870.
SIR,
We do ourselves the honor to return the documents bransmitted under your B.C. communication of the 5 th December, No. 95,92 , and to report that, having bad under consideration Mr. Augustus Moraud's application for Letters of Registration for "Improvements in Kilns," we recommend that Letters of Registration be granted in favour of Mr. Morand, in accordance with the plans aud sections accompanying his Petition.

We have, \&c.,

## 1872.

## EXTRAOTS FROM THE VOTES AND PROCEEDINGS OF THE LEGISLATIVE ASSEMBLY.

Votiss No. 25. Fridat, 5 Julx, 1872.

11. Administration of the Land Law:-The adjourned Debate, on the motion of Mr. Cunneen,-
(1.) That a Select Committee be appointed, with power to send for persons and papers, to inquire into and report upon the administration and working of the Crown Lands Alienation and Occupation Acts of 1861 ;
(2.) That such Committee consist of Mr. Farnell, Mr. Robertson, Mr. Stewart, Mr. Driver, Mr. Tunks, Mr. Creed, Mr. Macleay, Mr. Garrett, Mr. Lucas, and the Mover;-
Resumed.
Question put and passed.

## Votes No. 27. Toesday, 9 July, 1872.

20. Administration of the Land Law :-Mir. Driver, on behalf of Mr. Cunneen, moved, pursuant to Notice No. 12, That the Evidence taken by the Select Committee, appointed on the motion of the Honorable Charles Cowper, on the 23rd February, 1866, "to inquire into and report upon the reserves proclaimed under the 4th clause of the Crown Lands Alienation Act, since the passing of the said Act; and also into all applications for such other reserves as have been refused or are not; yet dealt with," be referred to the Committee now sitting "to inquire into and report upon the administration and working of the Crown Lands Alienation and Occupation Acts of 1861."
Question put and passed.

## Votes No. 29. Thursday, 11 Judiy, 1872.

3. Admintstration of the Land Law:-Mr. Burns moved, without previous notice, That the Petition from Mr. David Chrystal, relative to the Tararie and Windomal Stations, presented to this House on 16 th February, and ordered to be printed on 17 th February, 1871, be referred to the Committee now sitting on the "Administration of the Land Law."
Question put and passed.

Voxes No. 47. Tuesdaí, 6 Augubt, 1872.
5. Administration of the Land Law:-Mr. Cunneen, as Chairman, brought up a Progress Report from, and laid upon the Table the Minutes of Proceedings of, and of Evidence taken before, the Sclect Committec for whose consideration and Report this subject was referred on Eth July, 1872, together with Appendix.
Ordered to be printed.

## ADMINISTRATION OF THE LAND LAW.

## PROGRESS REPORT.

The Sblect Commitree of the Legislative Assembly, appointed on the 5th July, 1872, with power to send for persons and papers, to inquire into and report upon the Administration and Working of the Crown Lands Alienation and Occupation Acts of 1861, to whom were referred, on the 9th July, the Evidence taken by the Select Committee on "Reserves under Crown Lands Alienation Act" during the Session of 1865-6, and, on the 11th July, the Petition from " Mr. David Chrystal," relative to the Tararie and Windomal Stations, ordered by the Legislative Assembly to be printed on the 17 th February, 1871,--have agreed to the following Progress Report:-

Your Committce, without delay, proceeded with the inquiry intrusted to them by your Honorable House, and have devoted considerable time to taking the evidence of gentlemen at the head of Departments, and others in the Lands Office, with the view of ascertaining the duties with which they are charged, the manner in which those duties are performed, the organization that exists, and how far it is calculated to secure a consistent, an efficient, impartial, and expeditious administration of the Land laws of the Colony. .

The approaching termination of the present Session prevents your Committee concluding the evidence of the heads of sub-departments, and also from receiving that of a number of gentlemen connected with the material interests of the country, who are supposed to have well considcred our Land systems, practically experienced their operation, and carefully watched their effects on the pastoral, mining, agricultural, and social interests of the Colony.

Your Committee, therefore, in reporting to your Honorable House the evidence taken, recommend that this inquiry be resumed early next Session of Parliamont, and hope it will then be prosecuted to a final result.

## J. A. CUNNEEN,

No. 3 Committee Room, Sydney, 2 August, 1872.

## PROCEEDINGS OF THE COMMITTEE.

## WEDNESDAY, 10 JULY, 1872.

Members Present :-
Mr. Cunneen, 1 Mr. Creed.

In the absence of a Quorum the Mecting called for this day lapsed.

THURSDAF, 11 JULY, 1872.
Members Present:-
Mr. Cunneen,
Mr. Creed.
Mr. Stewart,
Mr. Cunneen called to the Chair.
Entry in Votes and Proceedings appointing the Committee, also entry referring Evidence taken before the Select Committee of Session 1865-6, on "Reserves under the Crown Lands Alienation Act,"read by the Clerk.

Committee deliberated.
Ordered,-What the Surveyor General be summoned to give evidence next Meeting.
[Adjourned to To-morrow, at Eleven o'clock.]

FRIDAY, 12 JULY, 1872.
' Members Present :-
Mr. Cunneen in the Chair.
Mr. Stewart,
Mr. Creed
Entry in Votes and Proceedings, referring the Petition of Mr. Darid Chrystal to the Committee, read by the Clerk.

Printed copies of Petition before the Committee.
P. F. Adams, Esq. (Surveyor General), called in and examined. Witness handed in Report on Public Surveys. (Vide Appendix A 1.)

Witness withdrew.
Committee deliberated.
[Adjourned to Monday next, at Eleven o'clock.]

MONDAY, $15.5 U L Y, 1872$.
Members Present:-
Mr. Cunneen in the Chair.
Mr. Tunks, Mr. Stewart. Mr. Creed,
P. IT. Adams, Esq., called in and further examined.

Witness handed in particulars of Surveyor General's Department. (Vide Appendix A. 2.)
Witness produced several plans, \&c.
[Adjourned to To-morrow, at two o'clock.]

IUUESDAY, 16 JULY, 1872.
Memrbers Present :-
Mr. Cunneen in the Chair.

| Mr. Robertson, |
| :--- | :--- |
| Mr. Tunks, |$|$| Mr. Creed, |
| :--- |
| Mr. Sucas, |

P. F. Adams, Esq., further examined.

Witness withdrew.
Committee deliberated.
Ordered,-That W. W. Stephen, Esq., be summoned to give evidence at the next Mecting.
[Adjourned to Thursday next, at two o'clock.]

## Meamers Present:-

Mr. Cunneen in the Chair.

## Mr. Stewart, Mr. Robertson, <br> Mr. Creed,

W. W. Stephen, Esq. (Under Secretary for Lands), called in and examined.

Witness handed in return of the number of Officers in the Department of Lands. (Vide Appendix B.) Committee ndjourned for fifteen minutes.
Committee resumed ; examination continued.
Witness withdrew.
Committee deliberated and decided to confine the evidonce taken this Session to the Department of Lands.

Ordered, -That W. Blackman, Esq., be summoned to give evidence at the next Mceting.
Re-assembling of the Committee to be arranged by the Chairman
[Adjourned.]

FRIDAT, 19 JULY, 1872.
Members Present:-
Mr. Cunneen,
Mr. Stewart.
In the absence of a Quorum the Meeting called for this day lapsed.

$$

$$

Mr. Robertson.
A. O. Pretious, Esq. (Chief Clerk, Occupation of Lands Department), called in and examined. Witness withdrew.
Committee deliberated.
Re-assembling of the Committee to be arranged by the Chairman.
[Adjourned.]

TUESDAY, 30 JULY, 1872.

## Members Present:-

Mr. Cunneen in the Chair.

## Mr. Stewart,

Mr. Tunks.
Letter from W. Blackman, Esq., respecting a misunderstanding in part of his evidence, and requesting that such part may bo erased, read by the Clerk.

Consideration postponed to the nest Meeting.
E. Du Faur, Esq. (Draftsman, Ocoupation of Lands Department), called in and examined.

Witness produced plan prepared in his office; also book of Index to Runs.
Witness withdrew.
Committee deliberated.
Clerk laid before the Committee a letter from P. F. Adams, Esq., drawing attention to certain alterations which he had made in his evidence,-alterations allowed by the Committee.
[Adjourned to Thursday next, at two o'clock.]
$T H U R S D A Y, 1$ AUGUSI, 1872.
Members Present :-
Mr. Cunneen in the Chair.
Mr. Tunke, | Mr. Stewart.
E. Du Faur, Esq., called in and further examined.

Witness withdrew.
Committec deliberated.
Mr. Blackman's letter further considered.
Resolved,-That Mr. Blackman's request be complied with. Evidence erased accordingly by the Clerk.

Committee decided to meet to-morrow, at 3 p.m., to consider Progress Report.
[Adjourned.]

FRIDAY, 2 AUGUST, 1872.
Members Present:-
Mr. Cunneen in the Chair.
Mr. Stewart,
Mr. Tunks,
Mr. Robertson.
Chairman submitted draft Progress Report. Same read and agreed to.
Committee deliberated.
Re-assembling of the Committee to be arranged by the Chairman.
[Adjourned.]
TUESDAY, 6 AUGUST., 1872.
Members Present :-
Mr. Cunneen in the Chair.
Mr. Tunks, $\quad$ Mr. Stewart.

Committee deliberated.
Chairman read a letter from A. O. Moriarty, Esq., requesting that he may be oxamined before this Committee.

Chairman requested to inform Mr. Moriarty that the inquiry was closed for the present Session.
Chairman also laid before the Committeo a letter from E. Du Faur, Esq., enclosing a tracing of the portion of the map referred to in his evidence, and regretting that the returns asked for could not be furnished in less than three weeks. Tracing to be appended to the evidence.

- Chairman requested to report to the House the Progress Report adopted at last Meeting.

## MINUTES 0F EVIDENCE

TAKEN BEFORE
THE SELECT COMMTTTEE

ON THE

## ADMINISTRATION OF THE LAND LAW.

## FRIDAY, 12 JULY, 1872.

## James augusitine Cunneen, Esq., in the Chair.

Philip Francis Adams, Esq., Surveyor General, called in and oxamined :-

1. Ohairman.] How long is it since you received the appointment of Surveyor General? I was appointed P. F. Adam, Surveyor General in 1868.
2. Had you been long in the department before that? I entered the department as a licensed surveyor in 1854. In 1857 I was appointed district surveyor, having refused the intermediate steps of first and 12 Juls, 1872. second class surveyor. In 1862 I was appointed Acting Deputy Surveyor General, and in 1868 to my present appointment.
3. The Surveyor General is at the head of all sub-departments that deal with the survey of lands? Yes. 4. There is no department of survey or mapping that is not under your control? With the exception of Crown Lands Occupation Branch. There is a draftsman and two assistants who deal exclusively with matters apportaining thereto.
4. How many sub-departments is your establishment divided into? If you could dispense with that part of the evidence to-day $I$ should be much obliged, for I am preparing a chart of the subdivisions of the department, which I propose to lay before the Committee as soou as possible.
5. What is your opinion as to the state of the organization of the department when you were appointed Surveyor Gencral? The organization was very low indeed in 1862, when I was appointed Acting Deputy Surveyor General. There is not very much difference between the organization now and in 1868. The state of the office is better because we have better men, but the system was brought to its present perfection somewhere about 1867.
6. Mr. Oreed.] In fact, from your entrance in 1862 you have been attempting to reorganize the department? I have. In 1865 (that is threc years after I had the opportunity in the office of judging for myself what the state of it was) I wrote the paper which I now put in. [Handed in. See Appendix A1.] 8. You are preparing a document for the Committee, giving useful information? I am-showing the subdivisions of the work, the officers in charge, their salaries, \&c.
7. Do you think it would facilitate the business of the Committee if this were placed before them prior to your examination-in-chief? I do.
8. Under the circumstances do you think it would be desirable to adjourn to a future day? I do.

## Mr. CREED, Mr. TUNKS. <br> Mr. STEWaRT,

 James augustine cunneen, Esq., in the Chair.
## Philip Francis Adams, Esq., Surveyor General, called in and further examined :-

P. F. Adams, 11. Ohairman.] We adjourned the Committee on the last occasion, in order to give you time to preparo certain information. Are you prepared with it this morning? Yes. I produce a diagram, showing the number of sub-departments in the Survey Office, with detailed information respecting each. (IIanded in. See Appendix A 2.)
12. How many sub-departments is the Survey Office divided into? Eight branches, independent of the surveyors in the field.
13. What is the name of the head of each branch? The head of the Roads branch is Mr. Fitzgerald.
14. What are Mr. Fitzgerald's duties? He is in charge of the roads and street alignments, the alionation of unnecessary roads, and in fact all matters connected with roads.
15. The next brauch? The Charting branch, under Mr. Lewis; his duties are dealing with all surveys of alienated lands.
16. Including pre-emptive purchases? No; they are dealt with by Mr. Finch; they are in Mr. Lewis's branch, but Mr. Ninch is the officer who deals with them, under my dircctions. There are only a few special cases now ; perhaps not more than six or seven.
17. What is the next branch? The Compiling branch, under Mr. Willis. His duties are compiling maps generally, and catalogues of county maps. Feature surveys are examined and catalogued in this branch; information and tracings are supplied to surveyors in reference to feature surveys; lithographs and engraving, and printing are also executied in this branch. The next branch is the Miscellaneous, in chargo of Mr. Ellis. It deals with reserves, gold-fields, leases under the Oyster Fisheries Act, Police District maps, land agents' maps, and descriptions of municipal boundaries generally.
18. All reserves? All rescrves.
19. What is the next sub-department? The Lease branch, in charge of Mr. Sangster.
20. MIr. Crecd.] Pastoral leases? No; that is in the Occupation branch of the Lauds Department.
21. What leases are these? Pre-leases, auction and pre-emptive leases, and applications for leaces for mineral purposes other than gold.
22. Chairman.] Does Mr. Sangster deal with all leases? All except squatting leases.
23. What is the next branch? The Deeds branch, under Mr. Healy. The next is the Auction sales branch, under Mr. Hall. The duties of that branch are land sales by auction and all applications for appropriations for special purposes.
24. Mr. Creed.] What are the special purposes? Any land that is granted for any public purpose, such as churches, lunatic asylums, hospitals, and such institutions. The next branch is the clerical branch, under Mr. Landers. The duties of this branch are to deal with all accounts, special correspondence, entry and record of correspondence, record of measurements received, \&c.
25. Who deals with purchases in right of improvements? That is one of the duties of the Charting branch. The officer specially charged with that duty in the Charting branch is Mr. Long.
26. Chairman.] With regard to the survey of conditional purchases, who is charged with the duty of sceing that they are surveyed with the least possible delay? That is my own duty. It is a part of my particular duty to keep the measurements up to time. For this purpose the surveyors send me in progress journals every month; and I redistribute instructions where necessary, and make such arrangements as I can to keep them from falling into arrears.
27. Mr. Orecd.] What is the period allowed by regulation? Six months.
28. From the time they are applied for until they are surveyed? No; from the time the instructions are issued to the surveyor.
29. How soon are the instructions issued? That depends upon circumstances; I should imagine tho average would be about ten days.*
30. As soon as possible? As soon as possible. Many complicated cases are delayed very much sometimes; but, as a rule, I think ten days is about the time.
31. Chairman.] Who sets you in action for the survey of these lands; who places you in possession of the fact that a selection has been made? The officers of the Lands Department.
32. Throughout the country? Yes.
33. How often do these officers forward to you an account of the land it is necessary to survey? That question probably belongs to the Jands Department to answer. They come to us every day in a continuous stream, sometimes three times a day.
34. Mir. Creed.] Do you get them direct from the local land agents? No, we get them from the Iands
Department. Department.
35. Chairman.] Are you aware that there is considerable delay in dealing with them? Sometimes there is. Sometimes it is impossible to get them out for weeks in special cases.
36. Are you aware of some cases where they have been over a year, and then the selector informed that his sclection is on a reserve or elsewhere, where he had no right to make it, after he has made his improvements $?$ I do not recollect a case so long as that; but it is not impossible, because in the first place the application may be made for a portion of a reserve, and the laud agent might not be aware of it, and it is not discovered till the surveyor goes upon the ground. The surveyor might exceed his time from some
particular

[^5]particular reason, the cause of which he is obliged to explain at the end of six months by a memorandum, P. F. Adams, which is placed with the papers and goes to the Minister in explanation of the delay. It is therefore quite possible that the surveyor might not go upon the ground for twelve months. A surveyor, who is paid only for the work he does, cannot be expected to make a long journey that might cost about seven 15 July, 2872 times the price paid for the survey to do an outside portion. But if there have been any suspicion of its being within a reserve then his attention would have been called to it, and as little delay occur as possible.
37. Do you say reserves are made without the land agents being aware of them, so as to inform persons purchasing of their existence? Some reserves arc made by the Crown Lands branch, and some by the Survey Branch, and until they are Gazetted the land agent knows nothing at all about them. The reserves are sometimes made upon the ground, and selection is made in the interval before the land agent receives the Gazetle, or being made aware of the fact. Many mistakes have occurred in that way.
38. It would be impossible for persons purchasing under these circumstances to know whether they were on a reserve or not? No. I do not see how it can be obviated, because the selection is made rery often botween the making of the reserve and notice being sent to the land agent. But as a rule complaints of this sort are rare. I might perhaps point out that the commonest cause of complaint about reserves arises from the inability of the applicants to give a good description themselves, by which their selections can be identified by the land agent; and when a selector unfortunately finds himself upon a reserve there is no help for it ; and very serious inconvenience to many individuals arises out of it.
39. Mr. Creed.] Can you explain how reserves are proclaimed? Individual applications for reserves are dealt with by sending them either to surveyors or Commissioners of Crown Lands for report. Probably nine-tenths or more are now proposed by the Commissioners. In fact, one of the principal duties of the Commissioners of Crown Lands now is to propose new and revise old reserves.
4.0. Chairman.] Were pre-emptive purchases made under the Act from 1865 up to the falling in of the leases? The leases fell in at the end of 1865.
41. When were these pre-emptive purchases surveyed? Within the next year or year and a half.
42. How long after they were withdrawn from conditional purchase or otherwise? No particular interval could be specified. I should imagine they were dealt with within the year, as a rule.
43. But during this year they would be exempt from selection? Yes.
44. And during that year could any person tell whether he was on or off a rescrse;-were they marked on the ground or charted? No.
45. Mr. Thenks.] Was there any other record than the more Gazetting of them?
46. Chairman.] They were scarcely Gazetted at first, were they? I can scarcely recollect at this distance of time how long it was before they were Gazetted.
47. I am speaking of the 640 acres on each block of 25 square miles. These were withdrawn from the operation of the 13th clause of the Act, without being marked on the ground or charted? Yes, there were no means to do either.
48. Could you inform a purchaser at the office in Sydney whether he was purchasing on one of these or not? No, not at that time.
49. Was it possible for any purchaser to know? No, not at that time. But if the applications had been drawn by surveyors or competent persons, and no loose descriptions allowed to be taken-and that insisted upou from the commencement of the Land Act wo should never have had the difficultion we had afterwards.
50. Was that insisted upon? No. The question was brought before Mr. Robertson, and he gave it his serious consideration, and determined that it was utterly impossible to oblige people to get a professional description; there were not surveyors enough in the Colony to do it.
51. Do you not think it would have been better to have inconvenienced a few persons than to have put the administration of the land law into a state of confusion? I can hardly say which would have been the least objectionable alternative. I was under the impression at the time that it was better not to insist upon a professional description.
52. Do you not think it would have been wise to have deferred granting these pre-emptive purchases until they were surveyed? They were not.
53. Do you not think it would have been wise not to have shat them out from the operation of one clause of the Act until they came under the other? The law itself stood in the way. The law gave the lessees the right to take land under pre-emptive right during the currency of their leases, and it was therefore impossible to prevent the alienation of these portions, the law having secured the lessees in their right to purchase.
5il. MF. Creed.] Do you not think that might have been to some extent met by making a regulation that any person making such an application should have marked it roughly on the ground? Tes, that might have prevented a great deal of the difficulty.
55. Chairman.] Was any attempt made by the Ministers of the day to remedy this inconvenience? They had not the power to do it; they had not the surveyors available to define the applications any better than the description the squatter gave hinself. Tuless some competent person was sent to do it, it would havo been impossible to make the applications any more definite.
j6. With regard to these purchases;-were they confined, in compliance with the Act, to one section out of every 25 square miles? Yes.
57. Was that never departed from? I might perhaps give that answer on revision.* As a rule, it was alhered to very strictly, but there may hare been some cases, before the rule was established, in which Ministers took conflicting views of the Act.
58. These were made under the seventh clause of the Crown Lands Alieuation Act? Fes.
59. Do you think there could be any doubt as to the intention of the Act? No, I think it is very plain.

[^6]P. F. Adams, 60. That they should not be taken contiguous to one another? No.

Eisq. 61. That was departed from in 1865 ? Very little.

## is July, 1872. time, but I can give you the information on revision.*

63. Mr. Tunks.] Do I understand that in the case of a squattage consisting of 25 square miles the holder was entitled to make a pre-emptive purchase of 640 acres-Was it imperative that he should take that in the middle of his 25 square miles, or anywhere upon it? Anywhere upon it.
64. Then what would hinder him from taking them consecutively if he had two squattages of that description? That was allowed at one time.
65. The pre-emptive purchase has to be in a particular form; that is to say, in the event of its being bounded by a creek or river there must be only a certain frontage in proportion to a certain distance back? Yes.
66. It would be legal to have two of these selections together on two 25 mile blocks? Yes, I think so.
67. Mr. Creed.] Were the 640 acre lots taken up in squares? No, there was a mean depth of 80 chains, and if it was less than 640 acres the purchase had a mean depth of 80 chains.
68. Chairman.] Would you look to the proviso in the seventh clause of the Act. According to this proviso persons are bound to take their pre-emptive purehases out of each block of 25 square miles, and not other-wise;-is it not so? Yes.
69. Was this principle deviated from. I will give you an instance. Has it been deviated from in a case of this sort: $A$ leases a run of 100,000 acres, that is, four 25 square mile blocks, has he been allowed, instead of taking his pre-emptions on each 25 mile block, to take them contiguous to one another on water-frontage? I do not recollect such a case, but it is possible there may have been. It depends upon how the run was divided into blocks.
7.0. Was there a capricious administration of the Act on that point? I really cannot recollect at this date; it is so long since I have dealt with any case of pre-emptive purchase; but I could produce any orders in the department for your information.
70. Would this refresh your memory;-evidence given by yourself in 1865. It appears from this that for a time the administration departed from the practice of only allowing one pre-emption for each block of 25 square miles? I rather think it did; but $I$ am not quite certain.
71. You state here that it did? Then it was so.
72. Would you look at this memorandum of the Minister of the day, Mr. Robertson, dealing with that clause of the Act;-what date is that? It appears to have been written in 1865.
73. Under this memorandum the former practice of only allowing, according to the law, one pre-emption to be made on each block of 25 square miles was deviated from? It appears to have been so.
74. But now again they maintain the principle of the clause by not allowing it, except on each block? I. believe that was the last ruling. The great bulk of these cases was dealt with on the last ruling.
75. What officer of the Lands Department would be likeliest to give us information respecting the practice now? The practice remained as the last minute decided.
76. Do these minutes over-ride the law without being passed as regulations? They are intended to explain the law-io give the Minister's interpretation of the law. If they clash with it of course it is on his responsibility.
77. Are you aware that the Minister of one year has administered the law differently from the Minister of another ;-Mr. Wilson differently from Mr. Robertson? There was a difference, butat this distance of time I cannot recollect which riew each Minister took.
78. Are you aware whether they did this without passing a regulation which had the eflect of law ? I do not think any regulation passed on the subject. I observe that Ministers are much more in the habit of making regulations than they were.
79. When reserves have been made under the fourth clause of the Act, who has been allowed to apply for them previous to 1865 ? Previous to 1865 , when the information contained in the maps was so deficient that the Government found it impossible to indicate the reserves fast enourh, then the Minister of the day took advantage of the knowledge that the squatters had of the most valuable portions of their runs; as it was impossible to do it by actual survey or examination of the ground they published a notice to the effect that the squatters themselves would be allowed to propose reserves most required for their runs. The object of that was to enable the Gorernment to avail themselves rapidiy of the knowledge of the squatters, and so save the public estate from having the most valuable portions picked up by conditional purchasers, or by the squatters themselves. It was the only alternative they had.
80. What means had they of discovering whether the squatters were applying for reserves because they were necessary for the interest of the public estate, or whether they were doing it for their own interest? That was checked afterwards by the revision of the Commissioners; the Commissioners revised the reserves. 82. They were made before any revision? Yes.
81. And withdrawn from selection? And withdrawn from selection to save the public estate.
82. How were they aware that it was to save the public estato? It was judged to be better to do so, and take the risk of proclaiming a few temporary reserves in error, than to allow the best parts of the country to be alienated from the Crown altogether.
83. Have you any means of ascertaining in your office whether a Crown tenant applied for these reserves in the interest of the public or in his own interest ? Very little.
84. What was it? The information conveyed by the maps was all we had as a rule.
85. Were all these runs mapped? No. A great many of the rivers had been traversed, and as a rule the
reserves were applied for on the rivers. reserves were applied for on the rivers.
88 . But if the runs were not mapped what information could you get from the maps? The feature surveys, if they were in an advanced state, gave us some information, but the information was very slight. It might almost be said we had no menns of judging.

[^7]89. Have you any knowledge of the quantity of land withdrawn from purchase by reserses-the number P. F. Adsme, of acres in round numbers? About five millions of acres. 90. What was the total number of reserves? About 2,159.
91. Were there not a num
92. These were all withdrawn from selection? Yes; they were at first, but they were very soon revoked. 93. How is the public to know a reserve that has been revoked from one that has not? The land agents maps and the Gazette form the only means the public car have. Without survey of all the reserves the public will never be able satisfactorily to determine that question.
94. Do you think a person coming into any of the offices could get the information, cither in the principal office in Sydney or in the local offices, as to whether land has been reserved, or whether it has been reserved and revoked? If the land agent is well up in his business and notes his maps-reads the Gazette carefully and notes everything that affects the question-a conditional purchaser ought not to be in any very great difficulty.
95. Are you aware that the agents gencrally throw the onus on the purchaser? Some land agents, of course, arc less intelligent than others, and perhaps less encrgetic, and they may do so; but they are not justified in doing it.
96. In Sydney, in all cases, when reserves have beei made for water supply, have yon been in a position, when they were proclaimed, to know whether there was water on them at all or not? No.
97. I refer to those made on the application of the Crown tenants? No, we could not tell. Many were made and afterwards withdrawn when found to contain no water.
98. You say there was a rush for these reserves about 1865? Yes; the whole squatting country, embraciug some one hundred millions of acres, fell out of lease suddenly. The departments had never recovered the rush caused by the Land Act in 1862. Surveyors were scarce-never sufficiently numerouis to carry on the ordinary work-and when the leases fell out the resources of the departments were atterly inadequate to grapple with the question of reserves.
99. Do yon think any Minister, aware for four years before that this would happen in 1865, ought to have left it for the last moment to make provision for it? It was not supposed that the number of conditional purchasers would increase,--on the contrary, that they would decrease, and that the surveyors would be available;-but instead of that they kept increasing. We had notanything like the number of surveyors then ready for an emergency that we have now; we did not train them ourselves; we had to depend upon outside supply. Such a question as that could be much better met now. In fact the rush of mineral leases now coming into the office would have entirely collapsed the department ten years ago. It is a much greater strain upon the department than the Land Act, or the leases falling out.
100. Was there no provision made for the falling in of the leases in 1865, before the actual time approached? I am not sure whether in the Crown Lands Occupation branch they instructed their Commissioners or not. It was scarcely a matter for survey.
101. The mineral leases is an unforeseen energency? Entirely.
102. These reserves were not unforesecn;-they were contemplated under the law $P$ Yes.
103. And no provision was made for them? No sufficient provision, and there was no means of making it. There was no means of getting the necessary professional assistance to do it.*
104. Was there not sufficient time for four years before to reorganize the stafl so as to be equal to it? All the surveyors we could get to pass the examination, and all we could train, were required to carry on the regular duties of the department under the increasing requirements of the Laud Act.
105. Aro you aware that under the law it is necessary that a list of all reserves made should be laid before Parliament? Yes.
106. Are you aware whether that was complied with? I am not sure. The list was prepared ; but I had nothing to do beyoud that; the laying it before Parliament was not in my department.
107. If it was not laid before Parliament would you look upon that as a violation of the law? I suppose so, but I never considered the question.
108. Is it the practice nov to make reserves without their being marked on the ground or charted? The practice is for the Commissioner to send the best description he can, accompanied, I believe; by $a$ sketch, to the officer in charge of the occupation of Crown Lands-the officer who represents the Chief Commissioner before that office was abolished. These reserves are proclaimed immediately, and appear in the Gazette, and are then sent to my office to chart; and the information now is generally so clear that if we have a map of the locality at all-if it is not a blank space on the map-we can apply the description and chart the reserve ; but that ends the action. We do not, as a rule, mark the reserves upon the ground.
109. When do you chart them-before or after proclamation? After.
110. Then it is impossible for a purchaser, either from the chart or any marks on the ground, to know where they are? The Commissioner's tree is marked.
111. There is no marking when they are proclaimed ? None.
112. And selectors, howerer cautious, may go and settle down, and not be aware till the surveyor comes and informs them that they are on a reserve? That has frequently boen the casc.
113. Mrr. Creed.] How does the surveyor find it out? The surveyor in the first instance satisfies himself that the conditional purchase will not interfere with a reserve. If he found it did do so he would report the circumstance.
114. Chairman.] That is the practice now? Yes; but the inconveniences are rery much modified now to what they were.
115. There have been some timber reserves proclained on the Murray River? Yes.
116. At whose recommendation? The Commissioucrs and surveyors chiefly.
117. When they were gazetted were they marked on the ground? No.
118. Were they charted? They were charted as soon after they were proclaimed as possible.
119. When they were proclaimed were they on the local charts? No; they were not charted until after proclamation.
120. Are you aware that a great nimber of persons have purchased on these rescrves, and have received notice to quit their selections? I do not think there are many; I an not quite certain; but it is probable, as the same thing applies to these as to other reserres.
P. F. $\Delta$ dams, 121 . Do you remember that in 1865 you stated that the law, in respect to pre-emptive purchases, had been Esq. departed from for a time, and returned to again? I have an indistinct recollection of it.
122. Would you look at question 296 of your evidence on that occasion, and your answer. Fon state

15 July, 1872. there that it had been departed from, and returned to again? No doubt that is a correct answer. 123. Does the practice still prevail, in any case, of allowing the Crown tenant to apply for these reserves instead of the proper officer recommending them? I do not know. That does not belong to my department; it comes within the province of the officer in charge of the Occupation branch.
124. Are any of the runs of the Colony under pastoral lease surveyed? A great many are being surveyed by licensed surveyors employed by the lessees themselves under the 18 th regulation under the Occupation Act.
125. Are these surveys of runs reliable? They are fairly reliable. They are cxamined in my office to seo that everything is correct, as far as we can judge from the plans, and then sent back to the Occupation branch for dealing with in connection with their maps.
126. Are all the maps in the Occupation branch public property, for the inspection of the public? That is a question I can scarcely answer. Until a plan, made at the expense of the lessec, is adopted in the office it may be regarded as private property, and I doubt much whether an officer would be justified in showing it to the general public.
127. What have public officers to do with taking charge of private property? Under the 1Sth regulation the plan is paid for by the lessee, and until it is adopted for the purpose of granting his lease it is his property.
128. Are not those who have their runs surveyed required to file a copy of the survey in the office? Not that I am arrare of. The plan sent in is retained, I believe.
129. Are you aware that when persons wish to take up country they refuse to show them maps in the Occupation branch that would give them information? Not that I am aware of. However, on that subject, evidence could be taken from the officer in charge ; but I should think every information is given that the public could possibly expect.
130. When runs are advertised in the Government Gazette to be sold by auction, do you think these advertisements are reliable? I have no means of judging; but I should think they are.
131. Would you be surprised, if you were living 300 miles away and travelled to Sydney to take an advertised run up, to find that there was no such run in existence? I hardly think such a case could occur unless by some entire mistake.
132. Do you think that if the Government are in the babit of advertising runs, and having them put up to auction twice by Richardson and Wrench, and then advertising them for a third time as being open . to be taken up on sclection, and only when the Government has been paid for it, ascertaining that they have not got it, it would be an exiraordinary piece of administration? It would.
133. Would you look at this (No. 23, a description in the Supplement to the Gazette of 16th April, 1865, No. 69) ;-would you think it an extraordinary thing if after this description had been published for three months, and the public deceived by it, it should be found on paying in their money that no such run existed, and that the Government could not give a lease of it? I do not understand how such a state of things could occur, unless through a mistake.
134. Would you look at this chart of the Salt Lake Run ;-do you recognize that chart. What part of the Survey Office was that chart prepared in? This is prepared in the Crown Lands Office.
135. Would that be prepared from actual survey? The Darling River frontage has been surveyed, but, not the Salt Lake block; that is a back block. I should imagine the state of things described by you must have arisen from the length of the frontage having been in some way or other misunderstood, and that the Salt Lake block never existed at all.
136. Why advertise it thrice in the Gazettc and thus deceive the public? That is the consequence of the crror, however it came about. I should imagine it was a very old description. Being a frontage run to the Darling it must hare been done a long time ago, when the Commissioners were not as well up to their work as they are now.
137. Who would be able to throw some light on this? Either Mr. Pretious or Mr. Du Faur, of tho Occupation branch. It is entirely out of my department. I have no doubt the case can be explained.
138. How do you account for their advertising it? No doubt it was done on the best information they had.
139. Would not their information be very bad? Very bad. A great many of the descriptions of old runs are not worth the paper they are written on.
140. Bad is the best, I suppose? No; some of the descriptions are very good, where the Commissioners were intelligent men-as good as measurements almost; but a great many are something like that-very inaccurate. The Commissioners were not surveyors and guessed the distances; they had no better means of doing it.
141. What provision is there in existence for the survey of mineral leases? Do you mean under ordinary circumstances?
142. Under the present administration, since the strain has come upon the department? The northern district, where the leases for tin are being applied for, is under the charge of Mr. District Surveyor Grenves, and all applications for mineral leases are sent to him as soon as we can issue them. He has a large staff of surveyors-I think now 22-specially employed on the survey of leases; and he distributes the work as his judgment indicates. He proceeds to the spots where there are disputes, and decides upon and deals with them.
143. Are they able to follow up these surveys quickly after the money has been paid in? No; the rush for leases has entirely out-stripped every endeavour we can make for the survey.
144. Is not any extra exertion made to meet this pressure by employing surveyors from the neighbouring Colonies? We have still a few more than we can employ. The dificulty in employing a greater number than we have is that we must be guided by the date of the application, and measure accordingly. If we were to put on three or four surveyors to one creek we might find the prior applications had not been attended to, and that overlaps would occur. That is tho only difficulty we have had so far ; otherwise, we might have measured a great many more. The supply of surveyors has been quite equal to the demand up to this time.
145. Mr. Creed.] There is no regulation necessitating the applicant marking on the ground the place where his selection is intended to be made? No.
146. Do you not think that would be advisable-that it would tend to prevent disputes? Certainly. If a P. F. Adams, regulation of that kind was enforced a technical description also could follow, and if a technical deseription were enforced there would be no difficulty found in putting the descriptions together.
147. What do you think would be the objection to such a regulation? The difficulty the public would 15 July, 1872 . have in being obliged to employ surveyors to make a technical description.
148. Do you not think that such a proviso as this would meet the case; that persons making applications for mineral leases-say 40 or 80 acres-should mark the corners of the ground by posts, and in the event of their having marked of a surplus the next applicant should have the cboice of taking the surplus so marked off, or that it should be included and paid for in the lease of the first applicant? Yes, I think a regulation of that kind would work very well.
149. You think some regulation for marking the ground would be advisable? It would be an advantage no doubt. In such a rush as we are now dealing with it would be a very great advantage. In fact your propossl is very similar to that in force on the gold-fields.
150. Chairnan.] Have you, with a view of trying to indicate where gold and mincral areas might be established, made any attempt at a geological survey? No. If the Government had been guided by my report in 1865 the tin discoverics would probably have beeu made sooner.
151. Have the Government taken any steps to carry out your recommendations with regard to a geological survey? It was considered, but the expense was thought to be too great.
152. Nothing was done? Nothing was done.
153. In your present system of sarvey is the feature survey in any way shown so as to indicate the description of country to purchasers of land, whether alluvial or forest, and so on? The surveyor gives a general description on the feature surver. It is not attempted accurately to indicate the formation or the soil; it is rather a general description of the country through which he passes.
154. Dfr. Orecd.] Is there any provision under the present system of survey by which the geological formation is roughly reported to the head office? No. The surveyors are expected to show the formation; but they, as a rule, know nothing further than the general descriptions of sandstone, grarite, trap, and so on.
155. That is reported? Tes.
156. Do you not think it would be an adrantage to the country that some regulation should be issued requiring staff surveyors-I do not suppose it could apply to licensed surveyors-to collect geological or mineral specimens for some institution? The difficulty would be that from their want of knowledge of the subject they would collect an enormous quantity of useless matter. In that way I think the services of one field geologist would be worth all that the surveyors could do-that is, one man thoroughly competent to classify country.
157. Still you think there might be something useful done by the surveyors doing what they could? Some of them who have a taste for geology have given me some very valuable information. I tried to foster a taste for it among the young surveyors by giving my collection to the Government on condition that they would fit up a room with cases and display them.
158. Do you not think there is a great want of geological or mineral institution? I think our advantages in that respect might be improved. The University offers very good opportunities ; and at one time a number of young men in training in the Survey Department had an hour's time twice a week to attend Professor Thomson's lectures, but with the exception of two they all left off at the end of one term, and $I$ have never been able to get them to do it since.
159. Xou think that the employment of a gentleman for the geological survey of the country would tend to bring the mineral districts more gradually under development, and prevent these tremendous rushes and consequent overwork of the department at special times? I think much might have been done within the last six years if one or two field geologists had been employed to sketch out the localities in which minerals might be sought. But I think the greatest advantage for the least money would have been derived from adopting my recommendation in 1865, that the Rer. Mr. Clarke's knowledge should be made available.
160. Chairnan.] Were any steps taken to give effect to that recommendation? None that I know of. The matter was considered, but nothing was done. The cost involved in carrying out my report was considered to be too great then.
161. What is the general state of the charts, maps, aud lithographs in the Survey Department generally, and in the local land offices? I have some maps here-I cannot put them in, as they are maps in use, but I will show them to the Committee-which will give a geueral idea of the state of the maps in the office. I have several classes of maps-some good and some bad. The local land offices are tolerably well supplied ; I think, considering the data we have to supply the maps from, very little fault can be found with them.
162. Have you maps that will show distinctly and uumistakeably to the public all the lands that are open to sale in the Colony, irrespective of reserves of all kinds and other lands not open? I should not like to answer that question entirely in the affirmative, because I am afraid our maps are not so good as they they ought to be. Here is a specimen of one of the worst maps. (MIap of the Connty of Gloucester produced.)
163. You consider that a faulty map? This is about one of the most faulty maps wo have.
1.64. Could you point out to the Committee its deficiencies? The surveys are very old, and there aro a great many errors in them. The map is urgently in want of recompiling; but the recompiling will not be satisfactory without a rery large quantity of resurvey-very expensive survey. In fact, to make a good map of that it would be far better and almost as cheap to triangulate the county.
165. The surveys on the map ;-are they not reliable? The material from which the map is compiled is defective.
166. Is not reliable? Is not reliable.
167. Are there many of the surveys that hare been made in the field unveliable? A great many. The nincteen original counties contain the worst errors. We have a much better system beyond the old settled districts. We are making maps now based entirely on recent survevs, done by efficient officers, and under proper control. I can show you as an instance of that the maps of Forbes and Monteagle. (Map of County of Monteagle proluced.) That is a much better map. The reserves on this are very plainly marked, and a copy of it is in the land agent's office. From this district there are very ferw complaints. 168. Is this one of your best maps? No; this is an average map-there are very few bettor. In fact, I would not say there is a better mapp in the office. But as a sample of the most useful map I should show
P. F. Adams, you a map now in compilation; it is imperfect, but I have had it brought, as it illustrates a particular class of survey. (IIap of the County of Forbes produced.) That map has been compiled from survey done under
special direction of the district surveyor, by a very competent surveyor. The outside of the countr bas
$16 \mathrm{July}, 1872$. been traversed round entirely, and a great many of the internal surveys connected with the outside boundaries. I do not think that map will cver show any serious errors hereafter. Every map made without triangulation is liable to be upset hereafter, and they all follow the same course, being condemned after having been in use for seven or eight years, or longer, according to the accuracy of the original data.
169. Does the first map exhibited show all the land open for sale? Yes, but on a very small scale; too small almost to be intejligible.
170. Do your maps generally show the lands sold, the lands reserved, and the lands open for sale, so that there can be no mistake? Our best maps on a larger scale do.
171. Your maps generally? Some of them fall very far short of it; some are worn out or indistinct from wear, and some faulty in construction.
172. Could a person who wishes to purchase laud, ascertain from your maps without any trouble all the land open for sale? As a rule he cam, but in some cases the maps are not so perfect as they ought to be. 173. In cases of reserves, where reserves are proclaimed as withdrawu from sale but not charted? Whero they are not charted the maps cannot show them.
174. Then the map cannot show what land is open for sale? Not in these cases, but they are very few. Here is a map which shows every portion of land as clearly as any map can show it. (Map of the County of Wentworth produced.)
175. How long is land reserved from sale before it is charted? I could hardly say.
176. A considerable time? No, it may be done in a week, or it may from some cause be held back for a longer period; but the head of the branch would be able to give you that answer directly without any difficulty.
177. In the case of reserves it may be years? No, it cannot be. The head of the brancle will tell you what is his oldest case in band.
178. Does that map show reserves that have been proclaimed and afterwards revoked? A new map would not show them. This map is too new to hare any revoked rescrves upon it ; but an old map would slow if there had been any revocation. As a rule they are obliterated and the new one put in.
179. Have you introduced photo-lithography into the Survey Offico in order to multiply maps and introduce cheap ones for the public? The difficulty in that respect is explained in my report of 1.86\%.
The use we can make of photo-lithography is so small without triangulation that we hardly employ it nt all.
180. What provision is made for the inspection of the public maps by the public who wish to purchase land? It is not nearly so good as I desire to see it. In the first place a great many of our maps are not in a sufficient state of perfection to publish, and I do not like to put forth maps that are so faulty that the public can point out palpable errors in them.
181. They would only mislead? No, they would hardly mislead, but they are imperfect and not accurate. 183. Is the state of the maps and charts such that a stranger landing here from California, or elsewhere, can walk up and ascertain where all the lands open for sale can be obtained? No; and never will be until we get some system of gencral survey into operation.
183. Do you not think that should be the object that should be aimed at in any compilation of maps ? Without the data we cannot do it. Owr weak point is, that we are continually finding that our best maps must be recompiled and revised. A map does not last, as a rule, more than ten years, before it is found that it cannot be charted upon any longer. We have several maps now in the office that we can searcely chart upon on account of the erroneous data on which they were compiled; and that has obtained for a long series of years. I do not think any other British colony is in so backward a state. We have been surveying for seventy years aud have never gone beyond the first stage, and we cannot get out of the present state without a heavy expense.
184. In 1865 did you write a Report on Public Surveys, which was laid before Parliament? I did. I think it specified as clearly as possible the state of the public maps; and I hoped very much that something would be done to alleviate it.
185. You state in that report that the public maps are unreliable? Yes.
186. Have the Government taken any steps to remedy this? The cost of the remedy has always been a har to the Government adopting it.
187. They have not taken prompt action? No.
188. You have represented also in this paper that the public maps do not show the lands still for sale? Yes; but in a somewhat lesser degree.
189. There has been no remedy applied? No ; beyond a better and more careful system of compiling; the remedy, in full, is only to be found in survey before selection, and that under trangulation, as in Victoria. That is the only method by which the matter can be comprchensively and completely dealt with.
190. You state in that document that our system of survey is most unsatisfactory and worse than that in any other British colony of half the population? I belicve it to be the fact still, because since I wrote that report several improvements have been made in adjoining colonies.
191. Have they adopted the system you recommended in your report in 1865, for the production of cheap and reliable maps? Yes; but that cannot be done here under the present Land Act; selection before survey prevents it.
192. Have any steps been taken in compliance with your recommendation for the production, on a large scale and at a cheap rate, of parish maps? That can only be done under triangulation, and so far tho Government hare never been able to afford the money to commence triangulation as it should be done.
193. What is your opinion of the surveys in the field, irrespective of the offices? We have some very good surveyors now. Some of the natives of the colony have turned out as surveyors equal to any in the world.
194. Mrr. Tunks.] The map you first drew our attention to you said was very defective? Fes.
195. It is also very old ? It is an old map, based upon very old surveys.
196. What do you call old in this country? Some of these surveys were no doubt made as far back as 1814, I believe.
197. Laud at that time was of little consequence? Yes.
198. There was a different state of things? Yes, and a different state of surveys. It is said the old P. F. Adams, surveyors gencrally adopted a link more in the chain to give good measure.
199. You state to the Committee that it would be expensive to produce a better state of things in your department? Yes.
200. Will you give us some idea what you mean by expensive? That map that I pointed out as an illustration of a good style of map cost in survey $£ 1,3 \tilde{5} 0$, and in compilation $£ 150$; that is roughly estimating the cost. It is possible to go on completing that map from time to time by the process of charting the measurements as they come in ; and I have reasouable hopes that even if no triangulation is applied to that map it will be a very long time before it is found so inaccurate as to require recompilation.
201. I rather wish to direct your attention to the department than to a particular map? There aro twenty counties to which I should like to apply that style of survey.
202. Putting asido the cost, would they be so reliable as to be beyond dispute hereafter? No.
203. Then would it not be cheaper in the end to adopt some improved system of getting the data? lt. would; I am firmly convinced of that.
204. What is about the expense of the department to the public altogether? About $£ 70,000$ a year.
205. To accomplish an improved system of surveying what would be the annual increase of expense, supposing we were to extend it over a few years? The expense, I estimate, of making twenty new maps as good as the one I have just referred to would amount to about $£ 25,000$ in survey and compilation.
206. What would be the cost of doing the same work by triangulation? I should think that a county might be triangulated from an independent base for about $£ 2,000$; the principal triangles could be laid down. But this would not include the necessary feature surveys to make perfect maps, which can only be arrived at by surveying the parish boundaries in connection with the triangulation. I should estimate the additional cost at about $£ 2,000$ per county, but such maps would be entirely satisfactory, and could be issued in any quantity on a large or small scale by photo-lithography. In round numbers the total cost of a system under which the public could be supplied with perfect information would be about $£ 180,000$, but the expenditure could be nore economically made by spreading it over a number of years, the work being of a character that would not bear forcing quickly on-only a few of the many surveyors that pass the examinations would be suited to such employment; -but if we began, assistants could be trained in it with great advantage.
207. In the event of the public bearing that cost would it cnable us hereafter to multiply maps to meet demands continually arising. Seeing that the maps are always undergoing change, would we by any improved process be cnabled to reproduce these maps at a low price? Yes, it would enable us to engrave. We have engraved a few maps now, but I almost wish we had not tried it. A map once on copper is capable of reproduction to any extent. We should then be able to keep our maps charted up to date of issue on the copper.
208. Would not such maps as these be useful for the delineation of any geological information that might be made known to us by professional men of that kind? Yes, very.
209. Are you aware what system is pursued by what are called the Commissioners of Agriculture in America, for furnishing information as to the purchasing and taking up of land in that country? The process, when I was in the United States twenty years ago, was this:- The land was first subdivided into portions 6 miles square, and further divided into blocks of 1 mile square; and posts set up for the quarter sections; and nothing more was done by the Federal Government. The land was then sold if not previously pre-empted.
210. That was a system which enabled an immigrant or intending resident to obtain reliable information in an authorized way-calculated to assist him in settling down upon the land? Tes. The question was brought to my notice shortily after I came to this Colony by the Surveyor-General (then Sir Thomas Mitchell), who questioned me a great deal upon the American system; but I could not advise its adoption, neither did he think it desirable to adopt it. The good land here is so small in comparison to the desert that it would not operate well.
211. Has not recent discovery shomn that we have been mistaken as to the quantity of desert land in the interior, as represented by explorers? It is a question of degree. If our land were worth 5 s . an acre all round it would pay to survey it on the American system, but if not, that system would be of no adrantage to us.
212. As regards these surveys, are any you have in your department now such as could be relied upon in after years? Do you mean capable of being connected with a triangulation?
213. Tes? Yes; a great many of our best surveys would drop into a triangulation without difficulty ; but if they had been done under a triangulation all extensive surveys would be positively bound up in the triangulation in such a way that no error could pass the office; the errors would be eliminated in the construction of the map, never to creep in again.
214. Is it not a fact that in litigation about land now one licensed surveyor has given evidence as to the direction of boundaries while another has pointed them out in another way? Yes; and each may be right according to his own conscience. Where the magnetic needle is used, with no reference to true meridian, there will always be $a$ doubt until we adopt some system of survey.
215 . It is within you experience that your department has suryeycd the same land over again? There have been one or two cascs.
216. Mr. Creed.] The American system would involve a large outlay because it would necessitate such a quantity of land to be surveyed to give people a suitable choice? Yes, the geodetic lines would involve the inclusion of such an enormous quantity of unprofitable land.
217. Mir. Tunlcs.] Would not that be the case under any general system? No, a triangulation would go on from hill-top to hill-top, and having once fixed the points all over the country it is not difficult to pick them up in survey afterwards. But a geodetic survey of lines to extend all over the colony would be complete survey throughout and include the bad land with the good.
218. Mi: Oreed.] It would be much more expensive than triangulation? Yes.
219. You consider that the ouly remedy for the faulty maps is resurvey? Yes, the remedy I would propose would be a triangulation of the Colony, and the construction of county and parish maps based uponit. 220. You would require a resurvey before you could do it, and the cheapest form of resurvey would be a triangulation? Yes. It need not be an entire resurvey, because many of the old surveys would fall in again; but the whole of the parish boundaries would have to be resurveycd; and if that were done the maps could be engraved.
P. F. Adame, 221. Does not a different system from that you have mentioned prevail in some of the States of America? Esq. No, all the land is at first under the Federal Government, but large grants are made over by the Federal Government to the States Governments, and they deal with these grants as they please, being out of the jurisdiction of the Federal Government.
222. You said that the cost of the survey of the county of Forbes was $£ 1,350 ;$-does that mean merely chaining the boundaries? The principal features are shown.
223. None of this survey was for purposes of occupation? Yes, a certain quantity; but I should not think more than perhaps about a sixth of the survey was survey for alienation. Selection before survey prevents us from ever presenting to the public a perfect set of maps. A number of selectors may go and take up country that a stranger wishes to purchase, and when he gets there he may find the maps are behind the fact ; it is impossible to keep them up.
224 . In ordinary cases the selections would be charted in about scven months? Yes, that would be more than the average time.
225. At all events there is evidence of the ground being occupied? A. month is allowed for the selector to go upon the ground; after that there is evidence of occupation.
226. There is not the same objection with regard to the selections that there would be in regard to reserves? No.
227. Mr. Thunks.] In what way would marking land by trees be a guarantee of anybody having taken it up; ;-would it not be open to anybody to mark a few trees to mislead pcople? The description would be taken as evidence to the exclusion of the marked tree.
228. Mr. Creed.] You say the faultiness of the maps was caused by erroneous data ;-where did they come from-you do not get erroncous data now? Not now. But the cost of reconstructing these maps by recent and more perfect survey would be almost as great as a triangulation, and there would be no comparison of the advantages of the one over the other.
229. Would you recommend a general triangulation? Yes; I should like, in the first instance, to see the triangulation brought from Lake George, where a base is in progress, to the county of Cumberland, and to get the county of Cumberland triangulated first. The Government has no map of the county of Cum. berland; we have nothing but the parish maps, and they are so very inaccurate that we cannot re-compile them.
230. With regard to the local maps in the hands of the land agents, you say they are generally good? They represent the originals as fairly as could be expected.
231. Of course these get out of date ;-what provision is there for ronewing them? They are sent down occasionally, as the land agent may sec fit, to be filled up and corrected.
232. Do you not think it would be better to have some regulation, that at some periods of the year the maps should be sent down, irrespective of the land agent's - opinion-say there should be duplicate maps, one to remain with the land agent while the other was in Sydney being charted-that they should be alternated? It is only a question of cost. That would be a very good arrangement indeed; in fact it was tried at one time. At present the land agent sends back the old map and gets a new tracing.
233. There is an interregnum when there is no map at the local land office? It is only about a week. The new map is generally prepared in advance. It is very seldom the land agent sends his map to be charted up, and then it is a week away.
234. If the land agent seldom sends down his map there is a long period during which it is unreliable? A great many land agents note their maps very carefully themselves, and by doing so guard against errors, for want of their being charted up.
235. There is no regulation which renders the charting up of these country maps part of the duty of the

Survey Office? We send for them occasionally if we think the maps must be out of date, and rerise them. But as a rule the land agent is before us in requesting a new map.
236. Mr. Tunks.] Any difficulty in this respect would be effectually met if we were to adopt the system of triangulation and engraving-all the alterations would be on the plate? Yes, and we could have as many maps as we might think proper, up to date. They could be kept up to date within twelve months of the selection on the ground at any rate ; perlaps closer than that. Fivery facility would be given.
237. Chairman.] Will you look at this circular from the Surveyor General's Office, dated in November, 1861. Is the fourth paragraph of that complied with now, with respect to the local offices? I am not quite sure ; I think it is not complied with, because it has been found better to issue new tracings to the land agents. But that information you will get direct from the head of the branch.

TUESDAY, 16 JULY, 1872.
的rsent:-

## James augustine cunneen, Esq., in the Chatr.

Philip Francis Adams, Dsq., Surveyor General, called in and further examined :-
P. F. Adams, 238. Chairman.] How many acres do you estimate as being reserved for convenience of water supply and otherwise? As near as I can estimate, something like $5,000,000$ of acres. 239. Could you inform the Committee whether these reserves were made at the instance of the pastoral tenants? Originally a great many of them were ; hut I believe they have nearly all been revised by the Commissioners of Crown Lands. But the matter is not in my department; it belongs to the Crown Lands Occupation Branch, under Mr. Pretions.
240. What information could Mr. Ellis give concerning reserves; -is he at the head of that branch? He 240. What information could Mr. Ellis give concerning reserves; - is he at the head of that branch? He
could not give you much more general infornation than I can give, but he could give every detail in veference to the practical working of the branch, and probably some good suggestions might be derived from
bis examination. bis examiuation.
241. Have all these reserves been made since January, 1862, when the present land laws came into P. F. Adams, operation? They have all assumed their present form since 1862. A great many of them are portions of old reserves.

Esq.
242. NIr. Robertson.] Were there not large reserves made, including the Murray River Reserve, anterior to 16 July, 1872. the land law? Yes.
243. What was the extent of the Murray River Reserve? About 650,000 acres.
244. What was the principle on which these reserves were made; -was there a proportionate amount of frontage reserve to each rim? Yes, not to exceed a, fifth of the frontage.
245. Then I presume thesc reservations do not exceed a fitth of the frontage? They do not anything like equal a fifth.
246. Chairman.] How are the public, who wanted to purchase land, to know where these reserves existed? By the description published in the Gazette.
247. Were they charted or marked on the ground when proclaimed? No, only referred to a local object, and connected with it by a rough measurement given by the Commissioner.
248. Those that were not made on the recommendation of a Commissioner? A description was supplied with them all endeavouring to the besti of their ability to describe the land locally on the ground.
249. Was it described so that you could tell in the Sydney office where the reserves existed? No; they could only tell by going on the ground.
250. The description was of little use? It saved the selector from getting on to a reserve if he provided himself in the first instance with the Gazette description of the reserves in the locality.
251. Do you think it usual for a rural population of this country to be furnished with Gazettes? No; hut they ought to make themsclves acquainted with the matter before they go on to the ground.
252. Could you furnish the Committee, if it is in your department, with the number of conditional purchases that have been made on these reserves throughout the country? It would be a very difficult question; I do not know how it could be got at without going throngh many thousands of papers. I will consider the question and endearour to give an approximate estimate.*
253. What is the state of the present survey in the field-the actual surveyors in the field ;-in what state is that department now? They were filirly out of arrears within the last twelve months.
254. Mr. Robertson.] With regard to these reserves, has it not been the practice of the department to rescind unnecessary reserves for water supply? Yes, they are rescinded as soon as the Commissioners report that they are unnecessary. Numbers have been rescinded.
205. The proclanation of these rescrues was a temporary provision lest the land should be taken up permanently by individuals to the detriment of the public estate? Yes, decidedly. The original proclama. tion was a temporary mensure, adopted under very great pressure, and revocable as soon as the department was in a position to deul with the question definitely. All these have since been dealt with I think. Evidence on that point can be got from the Occupation branch.
256. Chairman.] How are the public informed when a reserve is revoked? By Gazette notice. The land agent's map is corrected by obliterating all the revoked reserves.
257. There is no other more popular way of informing the public than the Gazette? No. The land agents are supposed to correct their maps on receipt of the Guzette, and to note their maps so that the public examining them may be informed.
${ }_{2}^{258}$. Is there any inspection to know whether they do so? No.
259. Are all your land agents, or the great majority of them, capable of charting? Pretty fairly. I do not think the public have much ground to complain of that now. There was some ground of complaint at first. I always advocated from the very first that an inspector of land offices should be sent round to examine them.
260. Mr. Robertson.] It was provided for on the Estimates, and struck off by Parliament? Yes.
261. MLr. Tunks.] There is another kind of reserves included in grants made at some period in the history of this Colony? Fes; at a very early period reserves of 100 feet were made along the waters of the harbour.
262. And navigable waters? And navigable waters.
263. Have we any means of ascertaining these reserves, except the grant itself? No; the plans do not show them. When it is necessary to ascertain whether they have been reserved or not we refer to the general register of grants.
264. Can you inform the Committec of the date of the order for maling this kind of reserve? August, 1828.
265. Have you adopted any regulation as to the disposal and management of this kind of reserves? No; it: is in accordance with the judgment of the Minister of the day how questions arising on these reservations may be dealt with.
266. DLr. Robertson.] Under the Land Act of 1861? Yes.
267. It is not a regulation but an Act of Parliament? Yes.
268. Mr. Itunks.] Every Minister determines these matters according to his own peculiar views? There is some slight difference in the ruling of the Ministers, but as a rule they concur pretty nearly in one object.
269. Do we include this lind of roserve in land sold under the Alienation Act of 1861? Yes, it is included now.
270. And in any land sold since that time? Yes; the reservation reads as follows:-"And all land within 100 fect of high-water-mark on the sea-coast, and every creek, harbour, and inlet of the sea."
271. It is castomary for the Minister to appoint a Board to report upon applications for rescission of these reserves? They are reported on by the Engineer-in-Chicf for Harbours and myself.
272. Do you report upon them all over the conntry? Yes.

[^8]P. F. Adams, 273. In the event of an application of the kind bcing made at Newcastle, or on the River Murray, would

Esq. it be part of your duty to examine it? I think I might say the grants containing these reservations are almost confined to the waters of Port Jackson; there are one or two only at the Hunter, and one or two at 16 July, 18i2. Port Macquarie, and a few of the oldest settlements of early date.
274. At any rate it would be part of your business to report upon them at Newcastle? Yes.
275. Hare you, as one of the Board, made any rogulations to guide you in this matter, or is every case determined upon its own particular features. In other words, is any provision made for the public in determining upon the sale of these reserves? We take for our guidance the last Ministerial decision on the subject, and report as nearly in accordance with it as we can; submitting the case for the Minister's approval.
276. Is it regarded in your department that orners of land have an absolute right of purchase in these reserves? No.
277. No regulations have been issued from your department to guide you as to the course to be taken in this matter? No; the Ministers' decisions we have before us very fairly deal with the question.
278. Did not Mr. Forster do something in the matter? I think Mr. Forster's is the last decision.
279. Could we get a copy of that? I cam obtain it, I think, from the Lands Department.
280. MIr. Robertson.] The particular kind of reservations now spoken of were made, I think you said, in special cases during one period in the bistory of the Colony? Yes.
281. There have not been any made for many years? No.
282. And they are usually only on the salt-water frontages? That is all.
283. And the rescrvations haring been made, the Land Act of 1861 says, in the 12 th clause, that the Government may sell these lands at an appraised ralue? Yes.
281. Supposing a proprietor of one of these blocks of land, with a reservation of this kind made upon it; desires its rescission, what steps does he take? Ie applies to the Minister for Lands for permission to purchase.
255. What does the Minister do? He refers it for the report of the Engineer-in-Chief for Harbours and myself.
2s6. As to what? Whether it should be sold or not in part, or in toto.
287. What do you do? We proceed to the ground.
288. You examine into it, and you report whether or not it ought to be sold? Yes.
289. Do the Ministers uniformly accept your report? No.
290. There have been instances where they have not accepted your report? Yes. As a rule they accept our report, for we have occasionally asked for an expression of opinion from the Minister before we dealt with cases in which we thought the public interest might be prejudiced.
291. How many cases of the rescission of this kind of reservation have there been altogether-how many rescissions? I have no separate record in my office. The information could, perbaps, be supplied from the Department of Lands.
292. In what proportion of them has the Minister differed from the Board? I cannot recollect his differing from the Board in more than three cases.
293. Do you remember what cases they were? M. F. Josephson, $72 / 1444$, misl. ; Thomas Brooks, 69/2526, misl. ; Captain Norric, 71/5360. Tho papers can be obtained from the Under Secretary for Lands.
294. Substantially, the Board's recommendations have been adopted, except for reasons which you can give in each case? Yes.
295. What is the nature of your own duties? Perhaps it would be a good illustration to give you my ordinary day's work-how I divide my day: When I come to the office in the morning I deal with all the papers that may have been received, probably most of them the day before, that are not marked "urgent." If they are marked "urgent" they are dealt with immediately on reccipt. That generally occupies me until 11 o'clock. At 11 o'clock the public come in, and I have only a very few intervals from that time until 3 o'clock in which I can proceed with any of my actual work. If I have not done it before 11 o'clock I do not get much opportunity of doing it until after 3 . Then from 3 o'clock until the time I leave the office I set apart to deal with the professional part of the work. It very seldom gets more than an hour a day, which is entirely too little to deal with such an important subject. I am occupied the greater part of the day in purely administrative work. Of course $I$ do not wish to say that work can be separated from my office; I do not think it is possible to do that; but I find I am not able to give the attention which the professional part of the work requires. I may instance that while I was Deputy Surveyor General, though I was dealing with roads and reserves and many other very important questions, yet I did not see so many people as I do now, and my time was very much more at the disposal of the professional branch. I consider the department is suffering very much from unavoidable want of attention to that jart of the work. When I took office as Surveyor General the work was not half what it is now; and if it had not been for the system I instituted in the office during the years I was Deputy Surveyor General, I should never have been able to carry on.
296. MIr. Tunks.] I wish to ask whether the authority of the Board has not altered with regard to reserves on navigable waters? I think Governments have been of late years less inclined to deal with the question as a right on the part of the individual. They are more iuclined to treat them as actual reserves, not as simple reservations.
297. That is to say, the Board, after holding the opinion for several years that the owners of adjoining lands had an undoubted right to purchase, irrespective of any public advantage, have been disposed of late to take a different view? There has been no change in the view I have taken of it; but I am inclined to think that on the first institution of it the Board took a more favoumble view towards the applicaut than they do now.
298. In your opinion would it be necessary to establish some certain rules as to the disposal of this kind of public property? No; I think it is very fairly dealt with now for the public interests under the decision on which we are now acting.
299. Is it not within your knowledge that the necessary accommodation for the public is only provided now by agitation on the part of some interested persons, and that other places, where the requirements of the public are not so apparent, are altogether neglected in the disposal of this kind of property? The Crown having a right to the reservation, unless members of the public feel aggrieved at not haring the right to use the reserve, the Govermment does not feel itself called upon to take steps in the matter. In such cases as that the public are left to raise the question.
300. Otherwise the public interests receive a very cursory kind of attention? If our attention is called P.F. Adams, to any public want we deal with it, but we do not seek cases. The public are gencrally perfectly able to represent their own interests.
301. What opportunity have the public of knowing anything of these matters, except the notice in the 16 July, 1872 .

Gazette, which very few see? I understood you to refer to cases where no applications were made on the part of the individual, but where the public required the reserve.
302. I do not think I made myself understood exactly. I wish the Committee to be informed what provision has been made in this examination with regard to the future requirements of the public? If we are dealing with an application which we consider may in the future prejudice the public interest we do not recommend the alienation. Beyond that our duties do not go.
303. Then as to whether the future requirements of the public are attended to or not depends upon some one taking action on each application? The public must make all their wants known to us. But in dealing with any case, if we have any suspicion that the public interests are likely to be interfered with, we refuse the application, stating our grounds for doing so. The public have a very good opportunity of asserting any claims they may have to the land when the notice appears in the Gazette.
301. As a matter of fact is not the case determined before it appears in the Gazette-You have given your decision before the notice is given? But that decision cannot be ratified until the time has expired within which the public are allowed to lodge objections.
305. Mrr. Creed.] Have you any plans showing reserves of this class-uawigable shore reserves, as we may call them-so that we may see those that are still the property of the Crown and those that have been alienated? They are to be seen upon the maps of the waters of the barbour that we chart upon. I may say, perhaps, that I am at present ongaged on a trigonometrical survcy of the harbour, for the purpose of putting together all matters which are dealt with under the 9th and 1.2th sections of the Act-that is, the reclamation and rescission of water-frontages-in order that we may have a perfect record of the alienations and applications made under it. This map will have to be plottcd on a very large scale, so large that the ordinary process of compilation would be entirely unsuited. The surveys could not be put together to make a general map, and I found it necessary to obtain authority to measure a short base and make a triangulation of the harbour. I hope in time, if I can continue the survey-if the money is available-to have a very fine engraved map of the harbour, and to publish shcets on a large scale that will show every house and building fronting the harbour, and also the wharf-lines.
306. MIr. Jucas.] Do you think that in the alienation of these water-frontage reserves the pubiic intercst is sufficiently carcd for? I think so. We take care to the well informed as to the Ministor's riews upou the subject before we go into the cases, and we refer to him very often.
307. Hare any reserves been dedicated to trustees for public purposes in different localities along the harbour? I cannot answer that question. The Under Secretary would be able to afford you that information. After the measurement is made my office ceases.
308. You do not know of your own knowledge whether any such reserves bave been made for bathingplaces, wharves, and so on? I think they have. The process was initiated in my office with that intention. 309. Is it not by appraisement that these reserves are valued before alienation? Yes, in every case.
310. What is your opinion as to the value obtained by this system? It is very much below what it ought; to be.
311. Are you not of opinion that in many instances land has been alienated on the shores of Port Jackson for a tenth of its value? I can hardly say a tenth; but I think I may safely say the arards of many of the arbitrators have been much less than half the fair value.
312. Can you tell us what Mr. Wentworth paid for being allowed to reclaim land at the foot of Druittstreet? $£ 50$ for 2 acres or 9 perches-at the rate of £24 6s. 4d. per acre.
313. Could you also give the different blocks alienated, with the locality, the quantity, the name of the purchaser, and the price received for these rescinded water-frontage reservations? I can give a return shewing them, and the prices per acre paid; also the extent of frontage in each casc, with dates of alienation on rescision. Schedule herewith of the cases. (See Appendix A4.)
314. Could you suggest any other means of arriving at the value of these properties, other than appraisement? There is none under the law.
315. I am not speaking of the law. I look upon it that the proceedings of this Committee are to be used for the purpose of amending the law, and I should like to hear your opinion as to any other means of arriving at the value of the public lands? I think the report of a qualified officer, sworn, would be better and fairer to the public interest than any appraisement you will ever get.
316. An officer responsible to the Minister? Yes.
317. Of course you would have him sworn in all cases? Yes.
318. Would you have one or two officers? I think it should be cither one or three.
319. That would not be very expensive? No.
320. Would it be more expensive than the present system? Yes.
321. How are the appraisers paid now? $£ 1$ 1s. for each portion, when not more than two are together; if more than two, £2 10s. for the whole.
322. Will you give us the average cost of appraisements now, and what they would cost upon your proposed plan? I would not alter the present fee, but I would propose, from the peculiar nature of the service, to have it done by salaried officers of the department, and pay them the fee in addition to their salary.
323. These officers, who would then become public appraisers, could perform other duties? Yes. I should recommend some of the salaried surveyors to do the duty; but I should certainly also recommend that they should have an extra fee for it, for to put such a duty on a man and not pay him anything extra would be very unjust.
324. $\operatorname{AIF}$. Tunks.] There would be great temptation? Decidedly.
325. Mr. Lncas.] If your plan were carried out the surveyors of the different districts would be the officers to make appraisements? I only referred to the valuation of alienations of water-frontage under the Alienation Act.
326. Do you think the surveyors would be the best persons to appoint? If all cascs of appraisement were to be valued by surveyors I do not think it would work well. The duties of surveyor and appraiser are very wide apart; and so many individual qualifications are required in the one that are not required in the other that I do not think it would work generally.
P. F. Adams, 327. MIr. Creed.] The officers would be special appraisers, and be paid by feess in each case? Fes, something
Esq. of that kind. of that kind.
$16 \mathrm{July}, 1872$
328. Mr. Lucas.] You have given some evidence with reference to reserves;--have any of these reserves been abolished ? A great many.
329. Do you know whether the Yanco Reserve has been revoked? The Yanco Reserve is intact as far as the improvement of the creek extended.
330. Have there been any reserves abolished on the Morago Run? That is in the Occupation branch of the Crown Lands. I do not recollect It is most likely they have.
331. Chairman.]. With regard to survey in the field, do you think there is any possibility of pushing that on so as to anticipate in some degree the demand for land, instead of being in arrears? The ovil of being in arrear will always exist under the present Tand Act. It is the principle of the Act to provide against the necessity of cnomous surveys beforebund ; therefore the principle of survey before sale and the Act are incongruous.
332. Land surveyed is preferred by selectors if they can get it? We have an enormous quantity of land survcyed, so much so that within the last two years I have been obliged to put a stop to the measurement of land in anticipation of sale, except in cases where the surveyor is supplied with a bona fide application from a responsible person.
333. At whose application has all this land been surreyed? It has been going on for thirly yeara.
334. Is it not a fact that a great deal of the land suvveyed before the passing of the Land Act was of inferior quality? Yes, a great deal.
335. How do you account for so much inferior land being surveyed while alluvial soils on river-frontages have not been surveyed? The want of field inspection and foresight on the part of the higher branch of the department.
336. Do you not think any selector, if he had his choice, would rather take a hundred neres already surreyed than an unsurveyed lot? Certainly, if all things were equal; I mean if the same circumstances apply they would rather have it measured than unmeasured.
337. ilf. Lucas.] If the measurement happened to run in the tracks in which they wanted to take up laud ? Just so.
338. ㅍ⒌ Creed.] Having got their land they want it surveyed as quickly as possible, and if they could get exactly the land they choose they would like to have it surreyed beforehand? Yes; in that case they would prefer to have the land measured.
339. But they prefer being free to choose land in the special spot they like, which would be incompatiblo entirely with previous survey? Yes.
340. Ohairman.] It is the custom now by proclamation to withdraw lands from sale without their being marked in the chart? There is no such thing as proclamation of a sale until the land has been survered.
341. I mean that land is reserved from sale by proclamation without being marised on the ground or charted? Yes.
342. Could you suggest any means by which the public conld identify these lands, and so be prevented from conditionally selecting them only to be turned off afterwards? That is a subject that has occupied a great deal of my attention for years, and I find it impossible to meet the difficulty without a very large amount of surrey. The cost of zurvey has been so great that no Government has undertaken it. I estimate it would cost about $£ 22,000$ to mark the reserves.
343. Mr. Lucas.] The reserves made in 1865? Not the reserves made in 1865, but all the reserves that are remaining unabolished and in their present modified form.
344. Chairnan.] The $5,000,000$ of acres reserved that you have mentioned? Yes.
345. Could you inform the Committee how many acres have been reserved as timber reserves? Approximately about 820,000 acres, in addition to the $5,000,000$.
346. What is the total area of the pastoral districts? Upwards of $170,000,000$ of acres.
317. Mr. Lucas.] Where are these timber reserves situated? In almost all parts of the Colony. The largest reserves bave been made in the Murray and on the Queensland Border, on the Clarence and Richmond Rivers.
348. How many acres of the reserves made in 1865 have been surveyed? Very few. The frontages have been defined in number of them representing some 250,000 acres. It would be unnecessary to do more than mark the frontages, and extend the side lines about a mile back in any case, even if money was voted for the special purpose of marking out these reserves.
349. Chairnann.] Can you adopt here the custom of producing an annual report, showing the progress of aurvey, the land surveyed, the land applied for, and so forth, as it has been adopted in the other Colonies? No.
350 . A report, something analogous to that presented by the Post Office or the Council of Education, showing the work accomplished? The books within the last few years would scarcely admit of such a return being compiled without a great deal of trouble; but the books, as we are now using them in the ners form we have adopted, will provide for that.
351. Would you favour the Committec with your opinion as to the capability of the present Survey Departmont to meet the requirements of such an establishment in a new country, pointing out its short-coxnings and any suggestions you may be able to give for remedying them? If the Committee would allow me to write the answer to that question and put it in as an A ppendix I should prefer it. (See Appendix.*) I have already, so far back as the year 1865, laid before the public a very plain statement of the shortcomings of the department at that time, and how it would be likely to be in a few years. I am happy to say my forebodings have not been realized, and the department is really in a better state than I ever expected it to be in at this date. In 1865 we had ouly thirty-nine county maps; we have now 95 ; and most of those we have prepared since 1865 have been maps of the country in which the great bulk of the reserves were made in 1865 . The maps we had then to mark them on were scarcely worthy of the name. I can show you a sample. (An old map of the Mhurrumbidgee Pastoral District exhibited.)
352. Are forfeited selections in your department? We put them up to auction.
$35 \%$.
*Note (on recision) :-As the reply to this question will occupy some time, and involve correspondence, besides being very unwell, I have sent my eridence, with incurring the necessary delay.
353. Has the administration varied with respect to these since the passing of the Land Act? I think not. P. F. Adams, Any matter of administration would be better understood and replied to by the officers of the Lands Department.
354. Are you aware whether forfeited selections were ever exempt from reselection? Yes.
$16 \mathrm{July}, 1872$
355. Was not that a variation of the first practice? Yes; but it is solong ago that the facts have escaped my memory.
356. Under what regulation or order or memo. were these lands withdrawn from being reselected ? I cannot recollect now.
357. Are you aware of any clause in the Act which authorizes them to be oxempt from reselection? direct authority. The 20 th section states that after Gazette notification they may be sold at auction.
358. Could you furnish the Committee with the order or memo. of the Minister that ordered this chango of practice ; -is that in your department? It is not; but I think I could furnish it. (See Appendix A.5.) I am not prepared to be examined on that question.
359. $3[r$. Oreed.] At the present time forfeited selections are open to reselection? Fes.
360. Chairman.] Could you inform the Committee for how long after the Alienation Act came into force these forfeited selections were allowed to be reselected? About a year and 9 months, during which time it. was considered optional with the Government.
361. Do you think the withholding of these forfeited selections from reselection would lead to an abuse of the Land Act by persons using dummics to select land, and thus exclude it from free selection? It would be liable to that abuse.
362. Mr. Creed.] Have you reason to believe it has occurred? It is exceedingly probable. It must hare occurred no doubt; but I am not aware of its having occurred to any prejudicial extent.
363. Are you aware whether at present persons are allowed to select measured portions of more than 320 acres? I have tried to ascertain if there is such a case, but I have not becu able to find it yet.
364 . What officer would be able to give us that information;-who is charged with the Selection branch in the Sydney office? Mr. Blackman is the officer. in charge of the Alienation branch in the Department of Lands.
365. Chairman.] Are the pre-emptive leases within yours or the Under Secretary's branch? The administrative part is with the Under Secretary and the professional part is with me. The greator part of the action is taken in my office as being inseparable from the maps.
366. What is the practice now with regard to surveying pre-leased lands? The public survey them themselves; we do not pretend to survoy them. It is not desirable that auything so ephemeral as a lease of that kind should be surveyed at the public cost. The maps would never be perfect; they would always be liable to erasures and changes, and nothing would ever be definite.
367. What is the meaning of the technical terms used in respect to them-." defined"" and "non-defined" pre-leases? The "defined" are those over 640 acres, the area being sufficient to show on our maps by it temporary noting of the position of the boundaries. The " non-defined" our maps would not permit of 368. Do you survey the 640-acre pre-leases? No, we do not survey any pastoral leases.
369. Do you give leases of them in the department? Yes, and indicate their position on the map.
370. Do you give leases of less than a section? Yes; those are the non-definied leases.
371. Has it been the practice of the department to allow a pre-lcase within a pre-lease? Yes.
372. lis that the practice now? No. In consequence of the decision of the Supreme Court in the case of Chisholm v. Macauley, in 1869, the practice was abandoned.
373. Mr. Oreed.] Supposing there were two persons-one who has had Crown Land prior to the Act of 186.1, and another who has obtained it under the Act of 1861 ;-who would have the prior right to the preemptive? The original one I should think.
374. Ohairman.] Could you give the Committee any information respecting the delays in the issue of deeds? I do not think there is anything to complain of now. As far as my office is concerned I am not aware that any delay of more than a few weeks can possibly occur.
375. Is it the practice in case of a selector making additional selections to charge a deed-fee for every additional selection instead of giving one deed for the whole purchase? The practice has always been to demand a separate deed-fee; and I think, considering the tronble additional conditional selections give in the office, it is not too much to ask.
376. Could you in any way account for the great delay that takes place in opening roads in the country. Are you aware that there are an immense number of people waiting for means of communication? That arises from the Act under which we proceed. The Act is very imperfect, and several attempts have been made to amend it, but they have not succeeded. There is no part of the Lands administration that requires more amendment than the Road Act. I might suggest to the Committee obtaining the cridence of Mr. Fitzgerald, who is in charge of the Roads branch of the Survey Office now.
377. Do you not think it highly necessary in a new country that wherever the population settles down roads should immediately follow them? As a matter of survey we do attend to that as far as possible. The delays you refer to I think only occur where roads have been applied for passing through alienated lands. Where the public estate is untouched there is no dificulty in securing the roads, and the surveyors have instructions to do so.
378. Could you briefly state to the Committee your opinion of the working of the present Crown Lands Alienation Act, as regards its effect upon the country, and its capabilities and its effect upon the people, from your experience of its working? My opinion of the Act has remained unchanged from the very first-that it was introduced as a strong remedy for a very great evil. That evil principally arose from the want of lands surveyed to meet the demand-a demand which it is rery difficult to anticipate in a country where the good land is so scattered and the population so much diffused. Almost any land law short of the one wo have now in force would fail to give the public satisfaction in this Colony; and I think that notwithstanding individual cases of hardship under the Act it has been a very great success.
379. Mr. Oreed.] With regard to proclaimed agricultural areas, what is your opinion? That has alvays had my most favourable consideration.
380. Do you not think that system would be liable to abuse? I think the probability of abuse is very much over-rated.
381.

Nots.-At this date (23rd July) there are 152 cases in hand for noting names of purchmsers on the maps (scarcely one week's work.) In preparation of deeds there are 216 cases ou hand (nbout a month's work). This land was thrown into arroalg through the uncortainty of the arrival of the present Governor, forms printed in the name of the late Governor not being available. The branch will bo out of arrears again in 6 or 7 weeks.
P. F. Adams, 381. Abuse in this way, that by influence, we will not say what or where, reserves might be proclained on Esq: land not suitable, and land suitable for agriculture kept for pastoral purposes? I. think to prevent such abuso as that the matter should be dealt with on a very large scale ; that the areas should depend upon the natural capabilities of the country; that individual interests should in no way be considered; that whole runs
should be absorbed and dealt with by compensation or otherwise, as the Goverument may decide, and the area surveyed and dealt with as an agricultural area.
382. Do you not think taking a radius round the present townships would meet the case? A. radius is a very bad system.
383. I do not mean to make a circle of it, but take a radius and then make a square agricultural areasquare the circle, in fact. Do you not think that would be better than proclaiming large areas of country in particular districts? No. I think where the most land bas becn alienated under the Act, and where the population has settled in the closest communities, and where the settlement has been most successful, has been in areas specially suited by nature for the purpose and that could have been, under an efficient survey system, surveyed and subdivided and formed into tho same class of settlement that has sprung up under the Land Act. But at the time of the passing of the Jiand Act of 1861 the requirements of tho public could only have been met by free-selection before survey, or by the proclamation of large agriculturial areas, and a very large additional expenditure in survey. The present system of survey would have been utterly inadequite to have met them. The present Land Act is the consequence of a bad system of survey; in fact, nothing else would have met the requirements of the country but that Act at the time.
384. Would areas proclaimed round the towns in the present old districts, as they are called, and in other districts containing a sufficient number of inhabitants to be proclaimed old districts, meet the requirements? In addition to largo agricultural areas it would be a valuable additional facility to reserve also the land round the towns for agricultural purposes.
385. What you mean by agricultural areas is, that they should be something like the old districts proclaimed by the Orders in Council?' My ideas of agricultural areas are, that they should be large areas on the slopes of the table-lands, where agriculture is possible and probable. I would keep the squatting country for squatting purposes and not allow it to be interfered with.
386. Has your experience of selections, which have been taken up out of the old proclaimed districts -proclaimed in I 847 , I mean-led you to the opinion that there are other districts which should be proclaimed in the same way? I think a great many of the 1847 districts might be modified rather than the principle be extended.
387. Some decreased and others made larger? Yes; but this question I am afraid is coming too late. The system of agricultural areas could not now be adopted. At the time of the Land Act, from the dispersion of the population, the enormous country to be dealt with, and the restricted means at the disposal of the Surrey Department, it was impossible to have inaugurated it then, and I. think it would be as difficult to do it now.
388. With regard to the pastoral districts of the Colony there are sales of land by auction-land is put up for sale as applied for by any person wishing it to be measured and put up by auction? Yes; but wo now demand a deposit, for we have found the system work very prejudicially. Land is applicd for to be measurod for sale by auction by some unprincipled applicants, who do not mind putting the public to expense, simply to prevent its sale by conditional purchase. Several large areas have been measured at the application of pastoral occupants who have not purchased sufficient to warrant the measurement.
389. In what way would that prevent selection? The difficulty the selector would have in ascertaining whether the land was purchased or not. The applicant would profess to have purchased it, and seeing it measured might deter the selector from taking it up.
390. In addition to that would it not tend to prevent selection by this land being measured in 320 -acre blocks? As a rule the applications are made for 320 -acro blocks, and when that is the case we subdivide them in places where they are sure to sell.
391. In cases where a large area of country has been measured, supposing a man selects one block, and another is measured and not sold, has he a right to a pre-cmptive lease on that? Yes.
392. Do you not think that sale by auction under these circumstances is more or less a farce ;-I mean that there is no competition? Sometimes there is competition.
393. Very rarely? Not rarely.
394. Is not the land put up by auction generally land which the person applying for it thinks is not likely to create competition at the time when ho puts it up, and that he is likely to get it at the upset price? I. do not thinks that follows.
395. Do you not think that if there is likely to be competition he gets it under the improvement clause, or by dummy solection? I have no doubt there are dummy selections, and land has been often improved in order to secure it, but a aquatter has a perfect right to improve with the object of purchasing.
396. The auction portions are put up with the intention of buying land to secure a run? The squatter
cannot secure it in any other way without improvements, and he therefore applies to have it sold by auction, and purchases it.
397. Do you not think that for every $£ 100$ worth of land sold on a pastoral lease, the value of the run to the public is reduced to a greater extent than $£ 5$ a year. Would it not be better to borrow money, and pay interest, than to sell the public estate in this way? That depends upon the judgment which is ased in the selection. We have control over the action of the surveyors, and we do not allow them to measure to the injury of the public estate. There are numbers of measurements that are made and never paid for ; the surveyor measures them at the instance of a particular squatter, and we cancel the measurements when we get them and do not pay for them.
398. What is your reason for refiusing your approval? If we see that any undue command of the public estate would follow from the alienation in the form proposed.
399. How do you judge of that? By the appearance of the maps.
400. The allowance or disallowance of the sale of land by auction rests with you? Yes. If the surveyor measures at the instance of the applicant he does it entirely on his own responsibility. As a rule, if it is put up to auction he is paid. In some cases, however, we do not pay the surveyor until the land has been put up to auction and a certain quantity sold, if wo have any doubt about the bona fides.
401. Are not the sales of land by auction likely to give command of their runs to the present possessors, to the prejudice of other persons coming after them? Not if it is judiciously measured and dealt with subsequent
subsequent to the measurement ; if proper reserves are left for the approach to water from the back P. F. Adams, country I do not think the run is prejudiced to an extent that would warrant the Govermment in refusing to sell the land.

## Esq.

402. Chairman.] Do you survey blocks for sale by auction, as required by the applicant, or as you think 16 July, 1872 . wise yourself? We measure them only in accordance with the practice of the deparimont; the applicant is not allowed to mark out his own boundaries.
403. Do you survey land in blocks of 500 or 5,000 acres, or any quantity that may be applied for? Yes, if the deposit is paid. We have applications for blocks of 15,000 acres.
404. What is the rate of the deposit? Sixpence an acre. It is as near as possible the cost of the survey on the ground, and goes part of the way to cover the office expenses. Of course that is not the average cost of survegs in general, but it is rather above the aycrage cost of that class of survey.

## THURSDAY, 18 JULY, 1.572.

## 31tesent:- <br> Mr. CREED, $\mid$ Mr. ROBERTSON, <br> Mr. STEWART, <br> Mr. I'UNKS.

## James augustine cunneen, Esq., in the Chair.

William Wilberforce Stephen, Esq., called in and examined :-
405. Chairman. $]$ You are Under Secretary for Lauds? Yes.
406. How long have you been in the department? I have been in the Civil Scrvice about twenty years, W. W. nearly the whole of which time has been in the Lands Department.
407. How long have you been Uuder Secretary? About eighteen months.
408. Could you inform the Committec how many sub-departments the Lands Office is divided into, 18 July, 1872. cxclusive of the Survey Office? It is divided into seven branches, including the Stock branch, which is, however, more a distinct branch of itself, under the control of the Lands Department.
409. Will you give the Committee the name of each officer in charge of thesc sub-departments? The Surveyor General gave me to understand that the question would be asked, and I have had a statement prepared, which I can hand in. From this it will appear that the Alienation and Lease branch is under Mr. William Blackman ; the Ministerial and Roads, Bridges, and Ferries, which includes also the Goldfields, under Mr. Henry Osborne Rich; the Miscellaneous branch under MIr. Lindsay G. Thompson; the Record branch under Mr. G. E. Herring; the Deeds branch under Mr. Charles A. Thurlow; the Auction and Statistical branch (which is a sort of sub-branch of the Alienation branch) under Mr. W. C. Edwards; and the Stock branch under Mr. Bruce.
410. What do the duties of the Stock branch consist of? The inspection of sheep and cattle, and all matters connected with stock throughout the Colony, including the business under the Brands and Impounding Acts.
411. Will you hand in the document you refer to, that it may appear as an Appendix to your evidence? Yes. (Handed in. See Appendix B1.)
412. Who is in charge of tho branch which deals with forfeited selections? Mr. Blackman.
413. Could you give the Committee any information as to the different manner in which forfeited selections werc dealt with between 1862 and 1865-Are you aware that they were differently dealt with? Yes; there has been a good deal of clanging about with regard to these forfeited selections.
414. Are you aware that from 1862 till 1803 they were allowed to be reselected? I think that was the first course decided upon-that they were opon to re-selection-that was for about a year or eighteen months after the passing of the Land Act.
415. Do you remember that from 1863 to 1865 they were not allowed to be reselected, under Mr. Wilson's administration, I think? Yes, that was from October, 1863, to August, 1865.
416. Have you formed any opinion as to the effect of these forfeited selections being excluded from re-selection-any opimion as to the effect that had on the taking up of land. Have you reason to know that when they were no longer allowed to be reselected, parties took them up by dummies, and forfeited them, in order to shut them out from reselection? Yes, I know it from my ofticial experience. I remember that some time ago the question was brought under consideration, when they used to be put up to auction, and were excluded from reselection. It was in Mr. Robertson's time, I think, that the first stir was made about it, in consequence of some letters from Mr. H. A. Thomas, of Saumarez, Armidale. It appeared that he had taken up some dummy selections, evidently with the view of getting them put up to auction, and thus sccuring them, knowing that people would not compete against him.
417. MIr. Robertson.] What correspondence was there between Mr. Thomas and myself? I am speaking from memory. He complained that, intermediately between the time of his taking up these selections and their being declared forfeited, the practice of the department had changed; be complained of their being allowed to be reselected. This change took place in August, 1865.
418. He complained of my throwing them open to reselection? Fes.
419. Chairman.] Could you furnish the Committee with the Ministerial authority by which the practice was varied-by which they were shat out from reselection? I can supply it. (See Appendix B2.)
420. Mr. Robertson.] Was that in Dr. Wilson's time? Yes; this was in March, 1866. Ta November, 1866, a change was again made, and they were allowed to be reselected, in pursuance of a resolution passed by the Legislative Assembly.
421. You are aware that the Act uses the word "may," and not "shall," on this point, and thercfore whichever action the Minister took was in accordance with the law? Yes.
422. What are you doing in mineral lands just now $P$ Is it true that the practice of keeping a register of all the selections for mineral purposes has been discontinued? It has been discontimued temporarily.
423. Since when? For some three or four months.
424. Have any instructions been issued to that effect? No, except that J represented to the Minister that it was impossible to keep it up. Before, the applications used to be entered at onec on their receipt,
W. W. but in consequence of the tremendous influx of applications, and the complaints of delay, we bave recently Stephen, Esq. sent them on immediately to the surveyors, learing the registering to be done when there is time to do it.
$\overbrace{18 \text { July }}$ 1827 The mere entry is of no use, unless it includes the descriptions, which the miscellaneous register did; and the impossibility of entering so many long descriptions, without causing great delay, led us to abandon the practice.
425. After the office closed ati $40^{\prime}$ 'clock might not these have been entered by extra time;-would not the importance of the matter have warranted it? I hope to be able to say that the register will be soon kept up as formerly, because we are going to adopt that plan,--allow work to be done overtime, and put on one or two more clerks to keep it up. The truth is the mining lease work takes up nearly the whole time of the Miscellaneous branch.
426. Has any application been made to the Minister for assistance? Yes; and I have now got it sanctioned.
427. When will you be able to get this register kept up? In the course of three weeks or a month.
4.28. Could you not do it quicker? I hardly think so. For people wanting information, however, there is always the original application to refer to. It is not quite clear to the Minister that the public should be allowed to refer as they like to this register. They go searching through it to see what land other persons have taken up.
429. Is it not of great importance that people wishing to apply for land should know what land has been taken up? I do not think any person looking at the register could tell exactly what land has been taken up, in consequence of the looseness of the descriptions.
430. Chairman.] It is the practice at present, is it not, to allow mineral lands to be purchased at the local offices, but not leased? Illose are mining conditional purchases, other than gold, under the Alienation Act.
431. You do not allow the deposit of 5 s . at the local offices? No.
432. What is the reason? It is according to the Regulations under the Act. The Regulations say, you must go to the Lands Department, after having paid the first year's rent into the Treasury, and produce the Treasury receipt.
433. Would it not facilitate matters to allow them to do this at every local office? I do not think it would. Applications would have to come to our office in Sydney, and be sent to the surveyor.
434. What clause in the Act makes it imperative that mineral leases shall be taken up in Sydney? That is under the Occupation Act-the first subdivision of the twenty-second clause-where it says that persons may on application to the Minister obtain in writing an authority to select.
435. Mr: Roliertson.] It is an open authority for leasing, not specifying the land. When the applicant has found it he marks it and has it registered in the office in Sydncy. That is not so with purchased land.
When he purchases lind he tenders lis money at the moment ; but this is a kind of authority to search
for land? Yes. He gets an "authority to select," accompanying which is the form of application to be used when he has fixed upon the land he wishes to take up under that authority.
436. Do you think there would be any objection to allowing these leases to be taken up in the various districts? I think it would be much more satisfactory to the persons applying; but I do not think that it would expedite their knowing whether their applications were entertained or not, because they would have to come down to the Surveyor General.
437. Until you get the surveyor's report you cannot deal with the application? No.
435. If they were applied for at the local offices you would receive them every week? Yes; that is presuming the samc course were to be adopted as with regard to conditional purchase applications.
439. And I suppose you send them on to the surveyore as they come in? Yes.
440. Therefore, at the very worst, it could only make a week's difference-a week in what takes some months to get through? Two or three months:
441. That is the greatest difference? They would have also to keep registers at the local offices as well as in Sydney.
442. MIr. Oreed.] The leave to select by the Minister is merely a formal thing;-is it not? Yes, perfectly formal. Still it is necessary under the regulations.
443. The Minister does not give leave to select a partieular piece of land? No.
444. And in fact it might be dispensed with without making any real difference, if a man were to hand in his application instead of applying for leave to select? Yes, if he tendered his money he might get his land, without all the rigmarole of obtaining authority to select, \&e.
445. A man coming to the office to take up a lease applies for leave to select, and, haring got that, applies within ten minutes for the land he has chosen? Fes, immediately afterwards, if he likes.
446. Do you not think a great many speculative selections are takeu up at the bead office in Sydvey? Tes.
447. And these speculative selections are taken up on some slight information, gained you don't know how? Yes. They find out what other people are doing-men who are known to be acquainted with the country well-and they follow suit. That is the reason why I Baid I do not think that the public ought to have access to the register; they trade upon other people's applications; they put in applications for lands next to those taken up by well known persons.
448. Do you not think that having these applications made ouly at the head office in Sydney gives opportunity for slarp speculators, with agents or correspondents over the country, to forestall the real owner of the information? Yes.
449. It gives an undue advantage to sharp men of business over our friend "Stupid," who finds the mine? No doult it could be made to work that way.
4.50. Men who find minerals, having to come to Sydney to take up the land, make so many inquiries that they let out their secret? Yes; or others telegraph to their agents in Sydney, which is nearly as bad. The original finder may oftem be forestalled.
451. Have you an idea that information sent by telegraph is sometimes made use of improperly? I should be sorry to say that I have such an idea. The telegraph besides is not in my department.
452. You have grave suspicions on the point? I cannot say that; I have heard it mentioned, but only unofficially.
453. DIFr. Thuns.] I would feel obliged by your informing me what is the process gone through when a person wishes to take up a mineral Jease ? The intending applicant goes to the Treasury, pays his 5 s. per
acre for whatever extent of land he wants to take up ; he then comes down to the Lands Department, pro-
W. W. duces his receipt from the Treasury, and fills up a form applying for leave to select; he then, under the Regulations, gets a formal "anthority to select" from the Minister; with this, is the form to be used in making the application, containing a plan for the description of the land, and other particulars as to how 18 July, 1872 to fill it up. As soon as he gets this authority to select (i.e., if he is ready with his description) he fills in his application, lodges it at the counter, and the clerk puts down the time when it is received, and hands it to the head of the branch, by whom it is passed on to the Survey Office, and from there it is sent on to the surveyor for measurement.
454. How does he ascertain whether the land is available? It is very seldom he can do so until the surveyor has measured it; but in some cases, where the descriptions are given very definitely, it can be scen at once.
455. Are there any maps? There are general maps, ahowing pre-enptive leases, and so on.
456. Are these mineral leases marked on the maps in any way? They are being marked as fast as they can.
457. In the event of a speculator obtaining information of other people's doings, the first thing he would have to do, if he wished to make use of it, would be to pay his money into the Treasury? Fes.
458. Is there any mode of getting money back? You have raised a very difficult question, which is now under consideration of the Minister. The late Minister held that in no case should any rent be refunded, but that it the land which the applicants wished for was already taken up he could select land elsewhere, during the twelve months, for which the authority holds good.
459. In the event of a bona fide application, is there any means at present by which the depositer can receive his money back if other claimants are found to have a prior claim? Not at present.
460. Then the mere chance selector has to run the risk at present? Yes.
461. AIj. Creed.] Is not the money paid for leave to select? Yes.
462. And a person having got the leave to select has got the thing he paid his money for? He has not got it at the time, but can directly afterwards.
463. If he applies for certain land and it is not available he still possesses his right to select, which is what he has paid for? Yes.
464. So that he really cannot say he has not got what he paid his money for? No.
465. Mfr. Tunks.] Is that always the case? -Take a case:-Fou employ a man to prospect for tin; he sends you word he has made a certain selection, but half an hour before you get to the office to take it up another person selects the same land-what is the value of the right of selection after the opportunity is gone? The man who comes first, after having obtained the necessary authority, and lodges his description, gets the land.
466. Then the other man's claim, under the circumstances, appears to be worthless? It is worthless as far as that particular land is concerned. My own opinion is, however, that the money paid does not actually become rent until the lease begins to run. There is i regulation which says the money shall be taken as rent from the date when the lease is granted or talien up.
467. Mr. Creed.] Do you think applications of this kind, made without the persons applying knowing whether the land is available are likely to lead to great complication? I think so; complications have in fact arisen already.

- 468. Chairman.] What is the practice of the department now with regard to allowing conditional purchases on measured portions of more than 320 acres? They are not allowed; the land must be taken as measured.

469. Are you aware whether, in or about. 1865 , a variation took place in the administration of the Act under the 7 tl section, with regard to pre-emptive purchases on blocks of 25 square miles of leased land ? I am aware there was some change made.
470. Are you aware that previous to 1865 they were bound to select their pre-purchases one on each block of 25 square miles, and that in 1805 they were allowed to deviate from that by selecting them contiguous to each other? Yes. Previously to 1865 the practice was as above stated. I believe it was in 1865 that a decision was given by which the practice was altered.
471. Could you furnish the Committee, if such a document exists, with the Ministerial minute or memorandum under which this variation took place? There is such a document, and I shall be prepared to furnish jt. (See Appendix B 3.)
472. With regard to the making of reserves for water purposes;-are you aware that before 1865 they were only allowed or proclaimed upon the recommendation of the Commissioners or Surveyors, or some other officers of the department? I cannot speak positively, from memory, as to that, because it so happened that that particular work never at that time came before me in any way; it was generally managed I believe by the Chief Commissioner of Crown Tands and the Surveyor General; but I know some years ago the squatters used to apply for numerous reserves.
473. What is the practice now ; are they only made on the recommendation of ano officer of the Government? Yes.
474. Therefore the practice has varied? Fes; we often have applications now from private individuals to make rescrves, but they are never acted upon without reference to the local Commissioners or surveyors.
475. Are you aware that under the Crown Lands Alienation Act, before any water reserve is established, under the fourth section it is required by law that schedules of them should be laid before Parliament? Yes.
4 76 . Are you aware that that practice was departed from in 1865 , when a large number of rescrves were made? I can simply say, from memory, that there was a statement to that effect, but I cannot say from my own oflicial knowledge, for certain.
476. If such a variation in the administration took place about that time, upon any Ministerial anthority, could you place it in the hands of the Committee? Ies, I hare no doubt I can.*
477. What is the practice at present in the department with regard to allowing a pre-lease within a prelease? That practice was done away with by a decision of Mr. Forster's some four years ago. It used to be the custom to grant a pre-lease within a pre-lease; it is not now.
478. There has been a contradictory administration in that respect? Yes.
479. Could you furnish the Committee with the Ministerial anthority for this departure from the original practice of the department? Yes. (Sec Appendix B4.)
W. W. 481. What branch of the department deals with the leases of runs? That is the Chief Commissioner's branch, or the Occupation branch as it is called now ; the work in connection with pastoral runs is managed solely by the officer in charge.
480. Is that department in connection with the Administrative branch, or with the Surveyor General's department? In connection with the Administrative brauch. They have two or three draftsmen there compiling boundaries of runs.
481. Do you in your department deal with runs of which the leases have been put up to auction and not bid for, under the 17 th section of the Occupation Act? No, they are dealt with in the Occupation branch.
482. Could you afford the Committee any information as to the number of acres that has been taken up under the 13th clause of the Alienation Act? Ies, I could obtain the information.
483. Would you furnish to the Committee a return of all lands purchased conditionally in the respective years since the passing of the Land Act? Yes, such a return will of course include not only conditional purchases under the 13 th section of the Alienation Act, but also lands conditionally purchased under the 14th, 19th, 21st, and 22nd sections. (See Appendix B5.)
484. Could you include in that return approximately the quantity of land that has been forfeited after selection? Yes, I think I could give a very reliable estimate.
485. What is your opinion as to the advisability of granting pre-leases. Do you find very great difficulty in the office in dealing with them? I must say they are difficult to deal with. There is unavoidable delay very often.
486. Was it this difficulty that induced a different policy to be adopted, not allowing a pre-lease within a pre-lcase? I cannot say. It was done without any reference to me at all; I was not then Under Secretary.
487. Are the pre-leases ever surveyed? Not regularly surveyed. Those containing 640 acres and over are defined by lines, or geographical features.
488. Could you give any opinion upon the cause of the general complaints that exist of business being delayed longer than is desirable in the Lands Department; that the decisions upon cases are delayed beyond what is considered a reasonable time? Do you mean any particular cases?
489. No, generally? I think that the main reason is, in the first place, the magnitude of the department, and the number of hands through which different papers must go before they can be subuitted in a proper shape for decision, and with full information as to facts, and also previous decisions on similar questions. We often have cases of dispute between squatters, who have improved to some extent, aud free-selectors, who have selected the land containing the improvements. They expect apparently, in many instances, an answer in a week or a fortnight; but of course it is impossible for the Minister to give a decision on ex parte statements, without referring to bis officers. Sometimes an appraisement has to be made, and it takes three or four months before a decision can be given properly, having regard to the claims of both partics. There are also many complaints of delay in granting pre-leases; but the Lands Department is dependent upon the Survey Office. The lands in virtne of which such leascs are applicd for have to be measured, and it takes two or three months to do that, after which the plaus have to be charted ; and it is not till after they are charted that it can be told whether the land is available. We always send applicants a letter saying the applications have been received, and will be dealt with, without delay, as soon as the department is in a position properly to do so.
490. Could you make any suggestions to the Committee, with a view to the reorganization of the administrative part of the department under you,-a reorganization that would tend to greater facility in the despatch of public business? That would require a good deal more consideration than I have been able to give it yet. A great improvement has been effected in the details of the management of the office since 1867 by the amalgamation of the clerical branches of the Survey Office and the Lands Oflice. There used to be a set of clerks in the Survey Office to carry on part of the correspondence with the public; but in Mr. Iitzpatrich's time an amalgamation was effected, and the Surveyor Gencral now only corresponds with the surveyors, and the Lands Dopartment with the public and ifs own officers, such as the Gold Commissioners, Land Agents, and others. And where papers used to be entered in one large register, that rork is divided now among the branches of which I have handed in a statement, and each paper is handed to and registered by the particular branch to which it belongs. There are so many sub-branches and so many different registers. That has facilitated the work inmensely; so much so that although the work has increased nearly three-fold we have only about the same number of clerks as previously to the amalgamation above referred to.
491. What is the practice between the head office in Sydney and the local land offices with respect to conditional selections;-what is the method of setting the proper persons in action in order to get them surveyed and titles granted? That is provided for in the regulations. The local land agents receive applications every Thursday and send downevery Monday following the applications themselves, and a weekly abstract embodying full particulars. These, when received, are entered in the conditional purchase register; then they go, as mining lease applications do, to the Surveyor General, who sends them to the surveyors to report, and if not already measured for survey, if not objectionable. Till after that has been done we can do nothing. The great cause of delay is in getting the survey completed and this is no doubt unavoidable.
492. You have no information in your office, in the shape of charts or any other documents, that would show a stranger landing in the Colony what land is actually open to selection, and what has been reserved ? I think from the maps in the Survey Office a stranger can get a good deal of information as to what land is open and what has been taken up. A great many reserves are marked upon the maps.
493. We have it in evidence that the majority of reserves were proclaimed and were neither charted nor marked on the ground. In that case would you have any other information that would enable a purchaser to know whether he was on a reserve? No.
4.96. Mr. Tunks.] Would delay in these matters be inevitable from the large extent of country occupied by so few people? Yes.
494. We could not expect surveyors to be everywhere, to answer the inguiries of every free sclector all over this immense country? Quite so. When the surveyors get applications to survey they may be engaged quite at the other end of the district. The delay is unavoidable. Even after the survevors have surveyed the land it is some time before they can go to bead quarters and plot the surveys.
495. Chairman.] Do you know that larger pre-leases are dealt with differently from smaller ones; pre
w. W. leases of 640 acres and more are what you term "defined" and the others are " not defined." Why this Stephen, Esqdifference? Because there is not time to define all these small portions. They are Gazetted, and if there $\overbrace{\text { ? }}^{\text {P }}$ is any particular land which is not available the parties are told to take it east, west, north, or south, as 18 July, 1872. the case may be, of the land in virtue of which the lease is granted.
496. In the case of a lease of 640 acres the leaseholder pays $£ 2$ ? Yos, at the rate of $£ 2$ per section. They pay $£ 1$ for any small quantity below 320 acres.
497. Mr. Crecd.] The holders of pre-leases seem to set a high value on them ;-if their rights are interfered with they make a good deal of complaint? Yes; but I was surprised to find how comparativaly.fow have been granted, fiom a returia made the other day.

WIDDNESDAY, 24, JULY, 1872.

## 臽tesent:-

## Mr. FARNELL,

## Mi. ROBERTSON,

 Mr. STEWART.
## JAMES AUGUSTINE CUNNEEN, Esq., in ThE Cinar.

Mr. William Blackman called in and examined:-
501. Chairman.] What position do you hold in the Lands Department? I am over the Conditional

Mr. W.
Purchase and Pre-lease branch.
502. Does that include auction sales? No.
503. Do all conditional purchases that are made at the country offices come to you? Yes.
504. How long after they are made at the country office do they come to you? The land agents are bound to forward them immediately. If they do not do so they are called upon for an explanation.
505. What do you mean by immediately? Bv the first post.
506. How do you deal with them then? They are registered and eutered in our books in full, and then they are sent up-stairs to the Charting branch, in order to be sent to the various surveyors.
507. Iow long does it take to do that? A good deal depends upon the amount of work that happens to be in the Charting branch. There is no delay in the Conditional Purchase branch-they are all sent off to the Survey Department the same day they are received.
50 S . Have you any idea how long it is, as a gencral rule, from the time they reach the Sydney office till they are sent on to the surveyors? I have known a great many to be sent in threc or four days; sometimes a week; sometimes ten days; perhaps sometimes a little longer.
万09. Where does the delay happen when a conditional purchase is not finally dealt with for many montbs, sometimes years, after it has been applied for? There are no conditional purchase cases that I recollect that go beyond the twelve months; and that is only in extreme cases.
510. Are you aware of any cases in which a conditional purchaser, much longer than twelve months after he has made his selection, has been notified that he has purchased on a reserve or on land that he had no right to purchase on? I think there are very few cases.
511. Are you aware of any? I do not recollect one at the present time.
512. Would you be surprised if there are dozens of cases in which the selector has been a long time on the land and made considerable improvements before he was told the land was not open to selection? I. know there have been cases.
513 . Would you be surprised if there were dozens of such cases in which a man has been told that after being twolve months or longer on the land? Fes, I should be rather surprised.
514. What means have you, when a deposit is offered to you for a conditional purchase, of knowing whether the ground it is offered for is public property and open to selcction? The deposit is always - offered to the land agent; there is never a deposit offered in the Lands Office.
515. What means have they at the land agents' offices of knowing that the land a conditional purchaser requires has not been reserved or otherwise withdrawn from sale? The means they have of knowing are really very imperfect. They have skeleton maps, and they are kept informed of the land open for selcction as well as the Survey Department can keep up with the immense amount of work it throws upon them. It is only after the applications have been sent to the surveyor aud he has verified the descriptions on the . ground that it can be really known.
516. How many years have you dealt with the conditional purchases? I have been about twelve months in the Conditional purchase branch.
517. Are yon aware that certain lands, other than those excluded from conditional purchase in the 13th clause, have from time to time by the Administration been withdrawn from conditional purchase? I am not.
518. Are forfeited selections included in the lands excepted in the 1.3 th clause? No; forfeited selections are not, I believe, mentioned in the 13 th clause.
519. Are you aware that they were at one time excluded from conditional purchase? Yes.
520. Are you aware of any other lands excepted? No.
521. Chairman.] If any person applies to have laud measured in blocks of more than 320 acres, and states that he wishes to purchase it at auction, is it surveyed? I have nothing to do with cases of that kind ; that is a question for the Surveyor General. As fur as my knowledge goes land is not nurveyed in blocks larger than 320 acres.
522. Are you not aware that larger quantities of land were measured before the Ict came into operation, in larger blocks than 320 acres, and are still unsold: 1 am not aware of that.

Mr. W.
Blackman
-n
24 July, 1872
523. With regard to pre-leases-are you aware of any caprice in the administration of these pre-leasescontradictory administrations by different Ministers at diffcrent times? Except on the point of granting a pre-lease within a pre-lease I do not recollect any particular difference.
24. What difference in the administration bas taken place with regard to this? For seven or eight years, if I do not mistake, when a man took up a pre-lease, if a conditional purchaser selected within that prelease his conditional purchase cancelled the lease of not only the amount he selected but three times that extent in the pre-lease. The present practice is thatit a pre-lease is indefeasible except against selection.
525. A pre-lease cannot be takeu within a pre-lease? No.
526. When was this change rade? The pre-lease branch has been about six months under my charge; but I think the practice was changed at the time of the case of M'Aulay 2 . Chisholm.
527. IIfr. Robertson.] When the Judges gave a decision, and virtually put a new clause in the Land Act? Yes.
528. Chairman.] Could you furnish the Committee with the minute or circular by which this variation in the administration took place? I will endeavour to do so. (Sec Appendix.)
529. Do you not think the effect of this preventing the taking of a pre-lease within a pre-lease is to shut out conditional purchasers from the large pre-leases taken on account of the old grants, because freeselectors generally like to take up land where they can have a pre-leasc? It might hare that effect on thoso pre-leases if they could go elsewherc.
530. Afr. Robertson.] I suppose you are aware that under the Orders in Council provision was made for pre-mptive leases-that was the word used under the Orders in Council and under the Act of 1861 ! Yes.
531. Under the Orders in Council was it not a provision that on a new purchase being made on land under pre-emptive lease, a proportionate pre-cmptive lease followed to the new purchaser out of the land under lease to the previous holder? I cannot say that I am aware of that.
532. Was not that the practice under the Act of 1861 until it was altered in consequence of the decisiou of the Supreme Court? Yes.
533. Does not the Act of 1861 provide for such a case;-docs it not say that where there are two claimants for the same pre-emptive lease under circunstances of this kind it may be sent to arbitration? Yes.
534. Chairman.] Are you aware that under the Orders in Council pre-leases existed at all? I cannot say that I am.
535. Mr. Robertson.] I think you were not in the office then? I was not.
536. When did you first enter the Jands Department? In 1859.
537. What office did vou hold then? I was in the Record branch.
538. You were not likely then to know anything about these pre-emptive leases? No.
539. Chairman.] Could you furnish the Committee with a return of the number of acres pre-lensed in virtue of purchases of above 320 acres, and also a return of the number of acres pre-lcased on account of purchases of 320 acres or less? I will examine the books and see how far they will enable me to do so. (See Appendix.)
540. Could you also furuish the Committee with the total number of applications for pre-leases? I think so. 541. With regard to conditional purchasos at the local land offices are you acquainted with the practice and means in the hands of the local land agents to carry out the Crown Lands Alicnation Act? Yes.
542. How can they distinguish the reserves, when they are neither charted nor marked on the ground, from land that is open to conditional purchase? I do not sec how they can. All that devolves afterwards upon the Survey Department.
543. Conditional purchase does not wait for them-it gocs a-head? The land is taken subject to measurement.
544. Have the local land agents any means of informing a man whether he is selecting on land resorved or not? They bave means, but not in all cases of a reliable character. They cannot positively assure a nan whether he is on a reserve or not. They have skeleton maps, and they get as much information as possible from the Survey Department as to what land is taken up.
545 . AIr. Robertson.] They have the Gazette from which they can see what land is reserved? Yes.
546. Chairman.] Do they generally inform conditional purchasers of these matters, or let them find out for themselves? The land agents give them as much information as they possibly can. I believe they do all in their power to aid them.
547. Are they in a position, when a conditional purchascr pays his money, to say he can have the land he applies for? They are not.
548. Ifr. Robertson.] The conditional purchaser has the opportunity of seeing the Guzette at the post office and Court-bouse of the district? Yes.
549. Chairman.] Do you think the rural population of this country generally read the Gazette? I think all those in any way interested in it do; I have known many cases in which it appeared to me they were very well aware of what was in the Gazette.
550. Is it in your department to deal with pre-emptive purchases? No.
551. What means have you in the central or local offices to prevent two persons from purchasing the same land? Whenever there are two applications made on the same day, caractly at the same time, for what is known to be the same land, they have to go to the ballot.
552 . Have not cases come before you in which land has been sold and deeds given to a second purchaser, although it had been previously purchased and occupied by another? Not that I am aware of.
553. Is it possible such cases may happen? I do not think it possible.
554. Could you suggest, from your practical information, any means by which greater assurance could be given to pre-lease holders-a more secure tenure in these leases? It always struck me that the prelease system was a great boon to the free selector and to all partics that hare taken advantage of it; I do not see how any more secure tenure could be given without excluding the land from sale or conditional selection. I could not suggest anything, except that you might inereaso the area of a conditional purchase, and let it be taken at a less price.

THURSDAY, 25 „ULY, 1872.

## 排esent:-

## Mr. ROBERLSON, Mr. TUNKS. Mr. STEWAR'T,

## James augustine cunneen, Esq., in the Chatr.

Albert Owen Pretious, Esq., examined:-
555. Chairman.] Fon are the head of the Occupation brancls of the Crown Lands Department, are you not? A.o. Pretious, Yes.
556. With what duties is your office charged? The duties heretofore performed by the Chief Commissioner of Crown Liands, which include all matters comected with pastoral runs.
557. Will you mention particularly the specific duties which come under your office? The protection of all material on Crown Lands-timber, stone, and all other matcrial.
558 . What else? The granting of leases for special purposes under tho Occupation Act, called special leases.
559. What would you call leases for special purposes? Such as ferries, saw-mills, limekilns, quarries.

560 . What other duties have you to perform? The prosecution of trespassers on Crown Land. I may say that under the head of pastoral runs is included all transactions connected with the pastoral interest of the Colony; all transactions in which the Government have any concern with the whole of the pastoral tenants, the adjustment of rents and assessment, determination of boudaries, transfers of the right of Ieaso, \&c.
561. All pastoral leases in pastoral districts ;-is that it? Yes, I give this as a detail of my first statement. 562. You deal with the assessment and appraisement of rents? The determination of rents and assessments, fixing boundaries, and the transfer of interests in pastoral leases. These are the three great points ; of course there are many minor points, as the subdivision of runs, the survey of runs when applied for, and so forth. The department also deals with and has charge of the parish reserves, reserves for water-supply, reserves for the formation of tanks and wells, for travelling stock, and reserves for other special purposes. 563. Abont how many have you subordinate to you in your department? There are thirteen at head quarters-nine clerks, three draftsmen, and one Crown Land's bailiff. In the pastoral districts there are nine Commissioners, six bailifts, and nine camp-keepers. Perhaps in reply to that question I might also eay that I have more than 200 Crown Land bailifis, who are members of the police force, but who take their instructions from me in referenco to all Crown Lands matters; that is, I have a police officer at every station in the Colony, holding authority, as Crown Iand bailift, to prosecuie trespassers, to report about unlicensed occupation, and so on. That is a matter I have instituted since I have had charge of the department; it is a new affair altogether.
564. Who is at the head of your survey of runs-the map department? The chief draftsman-Mr. Du Faur.
565 . Is he connected with the Survey Department, or an officer under your imnediate supervision? He is not connected with the Survey Department at all, but is under my immediate supervision; in fact it has been arranged within the last few days that all the licensed surveyors in maters connected with the survey of runs should receive their instructions direct from me, as it is found practically that reference through the Surveyor General only causes delay, and is unnecessary.
566. What is the first action taken in your office when any person requires to lease a run-a run wanted to be taken up before you ofter it to the public;-is it applied for by tender? Yes. The first action on the tender is taken by the Tender Board.
567. Of whom does the Teuder Board consist? Of three officers- the Surveyor General, the Under Secretary for Lands, and the Principal Uuder Secretary. I may mention, perhaps, that it always was, and I think-although it may be hardly proper for me to express an opinion-it should continue to be the practice for the officer in charge of the Occupation department to be one of the members of the Board. The present arrangement arose from the fact that Mr. Moriarty was for a time Chicf Commissioner as well as Ender Secretary, and as the nembers of the Tender Board were always heads of departments it became necessary to appoint an officer not comncted with the Jands Department to be on the Board.
568 . When this Board deals with a tender - ? They do not deal with the tenders in any way.
569. What action do they take? The tenders are deposited in a box kept iin the office of the Minister for Lands, and the lender Board open them on the first Tluesday in each month, or rather they onght to do so, but do not regularly, and grave complications, as I have pointed out to the Under Sccretary, may arise from the fact. These officers have no special interest in the tenders; neither of them has any control of the business, and very often, therefore, it is overlooked, and the Board do not meet on the proper day, although they receive notice of it. When they meet they open the box, of which each member has a key, so that the box can be opened only in the presence of the three officers. The tenders then, which are supposed to represent the whole number put into the box during the month, are entered in a memorandum-book, numbered and initialled by the members of the Board, who also sign a certificate of the number of tenders opened, and the premium offered in each.
570 . In regard to cases where there wre more than one tender for one run? The Board have nothing to do with that. The tenders are then handed to me, and pass a preliminary examination in the office. If they are objectionable on any grounds, or are not prepared or sent in in accordance with the regulations, they are summarily declined. Of course the regulations specify that certain things shall bo done when tenders are sent in-the deposit must be paid, the description must be specific and clear, and the tender must be made in the form prescribed by the Act. If the tenders are open to any patent objection of this character I direct them to be placed in a schednle, and each is minuted separately, and sigoed by me with a recommendation that they should be declined.
571 . Is it for any particular fault or for every informality you decline them? For every informality for which the regulations expressly declare they shall be decined. The regulations state they shall bo made in a certain form; if they are not made in that form that is a reason for their rejection. The regulations say in deposit of $£ 2$ 10s. must be paid into the Treasury; if that money is not paid the tender must be declined; we have no option.
572. Iras it always been the practice that the money has been paid into the lroasury? Les; we receive a report from the Treasury that it has been paid.
573.
A.O. Pretious, 573 . Is that always the case? Although the regulations require that the amount shall be paid into the Esq. Treasury by the tenderer, yet if cheques or cash are enclosed with the tender we take upon oursclves to act as agent for the applicaut, and to lodge the moncy in the Treasury, and the tender is dealt with as if the money had been paid as provided by the regulations.
574. What officer is responsible for any moneys received in that way in the Occupation branch? I am responsible for everything, but of course the Tender Board first see whether the moneys are reccived, and hand me over the tenders, with a note on each tonder as to whether there is any cash or cheque with it.
575. Have complaints reached the office as to money so paid in not having been accounted for to the persons who forwarded the money? There were complaints of delay in accounting for such moneys. I am not aware of any complaints beyond that. No deposit has been sent in that I am aware of that has not been duly accounted for.
576. Wero these moneys always paid by the officer in the Occupation branch who received them into the Treasury? They were always paid ultimately into the Treasury.
577. What do you mean by ultimately;-are they paid anywhere else before they are paid into the Treasury ? They are not now; they were.
578. Are these payments dealt with differently now by the Occupation branch from what they were formerly? I only know that it was clicited, I presume by the inquiry that was made, that the deposits of this kind were paid to the private credit of the late Chief Commissiouer prior to their being paid into the Treasury. I do not know that of my own personal knowledge.*
579. Would that be in violation of the regulations? The receipt at all of deposits in the office is, to a certain extent, a riolation of the regulations.
580. Consequently a mal-administration of the Act? It might be termed so in a very technical sense, but only so. I suppose the public or the parties interested would consider they were hardly dealt with if their tenders were declined because they had not an agent in Sydney who could take their cheque to the Bank and pay the money into the Treasury.
581. How long is it generally from the time the deposit is received in that form until the person who makes it is informed whether he shall get the run for which he tenders or not? Jit may be a long time, but the receipt of the deposit is always notified to hin within a very short time after the tenders are opened by the Board.
582. Sometimes years? Of course the ultimate rejection or receptiou of the tender may be outstanding
for a long time for a long time.
583. Sometimes for years? Sometimes for years.
584. And during that time where were the moneys-were they ever during those years lying to the credit of anybody instead of being in the Public Treasury? They were never lying for any length of tinie I believe. The late Chief Commissioner had no public account, and the moneys paid in in that way werc passed to his private account instead of to a public account. (See ante for explanation as to this account.) ธ55. Was it then the Treasury that took action in the matter-Did any persons who had deposited this money for leases ask why their cases were not decided upon, and then upon iuquiry at the Treasury find that their money had not been paid in there? I am unable to state whether any particular case of that kind occurred or not; these moneys were never paid into the Treasury through me; they were alrays paid through the accountant of the office.
586. lis the accountant in the Occupation branch authorized by the regulations to receive moneys? No, he merely paid in the money, acting as agent for the parties, for the Chief Commissinuer.
587. Acting as agent for the Chief Commissioner? Yes, and for the parties.
588. By whom was he constituted the agent? The Chief Commissioner I suppose would ask the accountant to do any business of the kind for him at the Treasury. It seems to me if we were to hold by the strict letter of the regulations, if a person sent a cheque with a tender, we should be obliged to decline that tender. The regulations provide that the money shall be paid into the Treasury by the tenderer, but we never strain the law to take such a technical objection as that. If a man send a cheque with his tender we consider we can act as his agent and pay the cheque into the Treasury, getting the Treasurer's receipt for it.
589. In the cases where that was not done-where the money was not paid into the Treasury-what was the arrangement? The deposits were always paid into the Treasury, but I believe in some cases the payment was detained for some time.
590. Is it not the fact that the Treasurer was called upon for certain moneys that had not been paid in by the Occupation branch;-have you any record of those sums? The Inspector of Accounts from the Treasury came to examine the accounts of the Occupation branch during the late Chief Commissioncr's time.
591. What was the result of that examination? The result was, as I understood, that it was found that sereral sums had been detained to his credit for some time, but were ultimatcly paid to the Treasury.
592. During this time the persons who wanted runs had never obtained their leases? It would not affect the obtaining the leases at all.
593. That was the fact, was it not? No, because in cases where the tenders were reported on, and where they were ripe for disposal the deposit would hare been paid.
594. I mean when persons were waiting for leases where was their money? I am not in a position to say. 595. Who in your office could give an account of this matter. I suppose it can be traced in your office how all sums were 'paid for rents or deposits on runs, and when they were paid into the Treasury? There was at that time no record ; there is now.
596. There was no record kept? No; the moneys were handed to the late Chief Commissioner, and the office knew nothing of when they were paid into the Treasury.
597. How long did that state of things exist? I. hardly know.
598. That state of things no longer exists? It no longer exists.
599. Mr. Robertson.] Was it regular for this money to come into the hands of the Chief Commissioner at all? In one sense it was irregular, because the regulation provides that the deposit shall be pais into the Treasury ; but, as I have stated before, the department has never taken that teehnical objection ; it considers that if a party cncloses a cheque that is a virtual compliance with the regulation.

[^9]600. Is it the practice in all departments of the Government, if money comes to a wrong office to send it A. O.Pretious, at onec to the Treasury? It always is now.
601. Has it not always been the practice as the proper course? Certainly.
602. Was there ever any warrant for any other course? I am not aware of any.

25 July, 1872.
603. Mr. Tunks.] Several persons may send in money for the same run in the usual way? Yes.
604. If the money were paid into the Treasury, and it took years to settle the difference, what mode was there of getting the money out of the Treasury? Parties whose tenders were declined were advised that their tenders were declined, and informed that the moncy could be obtained on application at the Treasury.
605. It would not be included in the Consolidated Revenuc? It used to be kept in suspense account; now, I believe, it is carried to revenue.
606. Was there not some such difficulty as that at the time alluded to, when the Chief Commissioner paid this money into his account ; was it not done with a view to facilitate public business to some extent? I am not prepared to say.
607. Chairman.] Could you fumish the Committee with a return showing all the amounts of money received by the Occupation branch since 1861, but not paid into the Treasury according to the regulations, hat paid'to some person's private credit? I bave no means of furnishing such a return.
608. Was there no account kept of this money received into a public department by any book-keeper, cashier, or other officer? They are not moneys that are properly paid into the department, and therefore they are not passed into our books in any way.
609. MLr. Robertson.] The law says, does it.not, that this moncy shall be paid into the Treasury, and the Treasurer's receipt shall be appended to the tenders? Yes.
610. That is what the law says? Yes.
611. But people in the country have from ignorance been in the habit of sending money, often in notes, sometimes in cheques, appended to their tenders !' Yes.
612. And the department of the Chief Commissioner has been in the habit of seading these on to the Treasury? Yes.
613. That, I presume, was for the conrenience of these people, but what occurred was, that this money, coming pinned on to, or enclosed with, these tenders, did not go to the Treasury. The question was asked you just now by the Chairman whether a book was kept in which these amounts were entered. I apprehend a book is never kept for the entry of irregularities? Certainly not; there are certain moneys payable to the department by law, and entries are of course made of all these pnyments in the books of the offico. 614. But that was not the case with these payments? No.
615. Money was received by the late Chief Commissioner, was it not, for the purpose of these tenders; and the Commissioner, for the convenience of the tenderers, and on behalf of the Government, received this money, which should have been transmitted direct to the 'Ireasury. Now I want to know, in justice to this late Chief Commissioner, whether this practice had not gradually grown up and practically been permitted, and whether he did not periodically once a week or once a month send this moncy to the Treasury. Was not that practically the case? I believe that was the case.
616. And that was an irregularity which like other irregularities grow at last to be a serious evil? Yes.
617. Was not that the manner in which this irregularity grew up? I believe it was. I have little knowledge of anything connected with these irregularities, because all moneys handed by me to the Chief Commissioner were subsequently paid into the Treasury-through the accountant.
6.18. So far as you know this is the position of the matter: Jhe money in connection with these leases should, according to law, be paid direct to the Treasury, but ignorant people, or poople unacquainted with the law, have been in the habit of sending this money to the Chief Commissioner, and the Chief Commissioner then periodically sent in a cheque to the Treasury for these moneys; -was that so? Yes, that was about the way it was done.
619. And when this practice had grown, and at length many weeks passed before the money was paid into the Treasury, and inquiry took place; but ultimately the Chief Commissioner did pay all the money that was due? Everything so far as I am aware.
620. Chairman.] Do I understand you to say that according to the regulations this money ought to have been paid into the Treasury by the person applying for the run? Yes; the exact provision in the regulation is that each tender should be accompanied by a receipt, showing that the money has been paid into the Treasury.
621. Did the department violate this regulation? I had better perhaps read this regulation.
622. I would rather you gave a direct answer to my question? I havo endeavoured to explain twice already; we did consider ---
623. If you will allow me;-did the department comply with the regulation that required the payment of the deposit into the Treasury, or did they not? They did not, and do not; and I think it undesirable they should.
624. You think it desirable the regulation should be put aside? I do not in its spirit, but I do not think a mere technical difficulty should be placed in the way of the tenderer.
625 . Do you not think it unfair to parties in the country to have their money in a Bank to the private account of a public officer, when the property for which it, was paid in for is not open to lease? It never is so now.
626. Has it not been so? I believe it was so once.
627. Do you not know, as a fact, that many cases of that sort have been brought under your notice? I do not know that they have been under my notice in particular.
628. Are you aware whether your predecessor at the head of the department ever acted in the way I have stated, contrary to the regulation? I am aware that it was the custom of iny predecessor in the dopartment to accept a cheque in a tender, or cash in a tender, as a sufficient deposit in terms of the regulations, and that such cheque or such cash was not the certificate specified by the regulations.
629. Was it any part of his duty to be a receiver of money on account of runs? No.
630. And when he received this money was it not his duty to pay it into the Treasury? Certainly.
631. Did he always do so ? J. think the late inquiry elicited that be did not always do so immediately, although he did so ultimately.
6i32. Was that on the action of some person who had deposited moneys, and could not get a satisfactory settlement
A.O.Pretious, settlement, or was it done by a voluntary act of the department, or of the head of it? $I$ am not awarc. I do not at present recollect what was the first cause of that inquiry, whether it was from a private source or otherwise. I know less of that inquiry, and less of the cause of that inquiry, than perhaps any person, though I may have been supposed to hive known a good deal of it. I have not seen the papers to this day. 633. Was there any Ministerial authority to the head of this department for recciring this money, instead of requiring the Treasury reccipt, which was required by the regulations? *
634. There were no new regulations? No new regulations.
635. Then if this was done it was done contrary to regulation and without Ministerial authority? It was done contrary to regulation and without Ministerial authority ; at the same time, as I said before, I consider that an objection of that kind would be merely a technical one.
636. Mir. Tunks.] The practice has grown up? Yes. It would be very annoying to a man in the country, if he had no agent in town, and instend of paying the money to the hreasnry, sent cash or a cheque with his tender, to be informed that his tender had been rejected because he had not sont the Treasury certificate ; he would think he had complied with the regulation virtually, if not to the letter.
637. Chairman.] Was not this practice calculated to mislead the public if they found that there was a regulation by which their money could be recoived at the department? I think not. I may state now that I usualiy receive money I have no business to receive.
638. How do you deal with it? If they send down the stamp duty with an instrument of transfer, if I. were to send it back to the person in the country, because I had not received it through the Commissioner for Stamps, he would think I took a technical objection, and that it was mere official rod tape. I therefore send it to the Commissioner to be stamped and get it back from him. I do so on my own authority. If I were instructed to the contrary I must send these trausfers back to the persons in the country, and it would necessitate the employment by them of a lawyer or agent. Persons do not know what declarations they have to make, and to facilitate business I send a form of declaration, and tell the party what to do. If he sends a proper declaration with the stamp duty I get it done for him, and in doing so I serve the individual and facilitate the public business.
639. Mr. Tunks.] If you'did not do so you would multiply the business by correspondence? Yes; and no doubt give offence ; people would say it was red tape.
640. Chairman.] We are not dealing now with stamp duties? I am morely saying that this is a precisely similar matter; it is a matter where we do not act in strict accordance with the letiel of the regulation.
641. Who keeps the account of this money in your office? It does not pass through our books.
642. Fou receive this money, but it does not pass through your books? Yes, because it is not properly money collected by the office.
643. Are they moneys received on account of the public revenue? They pass through the Stamp Office. 644. Are they moneys received on account of the public revenue? Not by me.
645. You receive them? I reccive them not on account of the public revenuc but on account of the parties interested.
646. Do they go to their credit? They go to their credit when they go to the Stamp Office.
647. Are they not payments to you for some stamps necessarily asked? Not used by me as a public officer. 648. Do you act otherwise than a public officer in that department? In that respect I do.
649. To what limit; do you put any limit as to which you act otherwise than as a public officer, or do you act generally as the private representative in individual cases-or is it general, that all the public may benefit by it? All the public may benefit so far as any documents going through my office are concerned. I act precisely similarly as I do with reference to the teuders for runs.
650. But the tenders for runs when they come to that office are to be dealt with as public moneys? I do not deal with them as public moneys.
651. Do you pay them to the public account? Not as a collector of public rerenue. I pay them into the Treasury as agent for the parties interested.
652. Mr. Robertson.] They give you a Treasury receipt? Yes.
653. Chairman.] Do you act as agent for any parties? For all parties who have business with the department, and to whom my non-icting would be an inconvenionce, and, in my opinion, a discredit to the department.
654. Would you act as the agent of these parties in any matter, or would you confine it to any business in your department; where would you draw the line? I never act for my own benefit.
655. That is not the question; you aay you act as a private agent? In this particular.
656. In what cases do you act as a private agent for parties outside the office? In all cases where parties, instead of sending Treasury certificates of the payment of deposit or documents duly stamped, send me cash or cheques instead.
657. And you kecp no account in your office of these moneys that you have so received? All the account that is leept is that it is entered into a memoraudum-book, which is initialled by an officer in the departmont, and immediately paid into the Treasury, or into the office of the Commissioner of Stamps. I do not receive these moneys as a collector of public revenue. I could not put them into my accounts, which are audited at the Treasury every month. These matters do not go into my books, and could not.
658. Do you not think this acting in a double capacity, as a public officer and as a private agent, may beget jealousy in persons who deal with your office,-1)etween those for whom you act as agent and those for whom you do not? I act for anyone who asks me; I never refuse.
659. But still do you not think it is an anomaly for a public officer to act also as a private agent? In a certain sense I adinit 1 do act as a private agent, but I should be very glad to be relieved of all trouble on that score; only I think it would be very, to sary the least, discourteous to the Crown tenants, whon I. am supposed to represent with the Government, to return their cheques and to say you must pay them yourselves into the Troasury. It would be acting in an unbusiness-like way.
660. Conld you not suggest how that could be done by a proper cashier, who could keep proper accounts of moneys received in your department? The money is taken account of at the 'Treasury and by the Commissioner of Stamps.
661. Is there any entry in your office to show when the money is received there, and when it was paid
into the Treasury? In the mattor of tenders for runs there is this check that the members of the Tender A.O. Pretious, Board know what money is received each month. On each tender the amount is noted.
662. Was that always the case? That was always the case, and immediately after the receipt in my office of a tender, with the cash within twenty-four hours thereafter, the tender shows that the deposit has been 25 July, 1872. paid into the Treasury, because the certificate attached to the tender is filled up in the Treasury, and any tender in my office can be examined at any moment to see that the certificate is filled up.
663. How long is it since this practice has been established? Ever since I have been in charge of the department.
664. Was it so before? I do not know that the payments were made so immediately as at present.
665. Still you are aware that this noting by the persons who opened the tenders was no check, and that tho money did not go into the Treasury, notwithstanding its being noted by the Board? I do not see what other check there could be. The check could be on the tender itself; the certificate would be filled up at the Treasury.
666. Notwithstanding, when another gentleman was at the head of the department the money was not always paid into the Treasury ;-was it? Not so promptly as it is at present. Not immediately.
667. And this was not discovered at the Treasury until some person who had paid in money made inquiries respecting it? I think not.
668. And you hare no more check now than you had then? Wo have a memorandum-book, showing all amounts received which are not collections of public revenue pertaining to the department; amounts not received by me as a collector of public revenue. This is the transfer-book, or Theasury memorandumbook, of the payment of cash or cheques to the Treasury.
669. On what account are the moneys paid to you that you reccive now as agent for private individuals? Deposits on teuders, rents, stamp duty money. I think these are all the items that could come to me.
670. Do you receive these sums of money respectively as a Government officer, or as private agent for these individuals? As the private agent, but; contingent certainly on my position as a Government officer.
671. Who are you responsible to for these sums of money;-to your principal, for whom you act as agent, or to the Government? I hold myself respousible to both. At the same time with regard to one, that is to say the principal, it is a responsibility $I$ am not bound to accept.
652. But which you undertake? Which I undertake for the convenience of the Crown tenant.
673. Did the former head of the department receive the moneys which he had called to account for not paying into the Treasury as agent for the depositor or as a Government officer? The late head of the department, I think, made no difierence as to his collections proper and moneys received on private account. Perhaps I had better say that there are certain collections proper to the department, payable to the department under the regulations. These are fees on the transfer of runs, fees for timber licenses, and enrolment fees on the issue of pastoral leases. The regulations prescribe that these three items should be collected by the department, and accomnted for to the 'lreasury by the department; and in respect of those three items I am a public accountant in terms of the Audit Act.
674. But in respect to other moneys? In respect to other moneys I do not reccive them as a public accountant at all. I simply am the medium of transfer to the Treasury for the public convenience.
675 . But do not the regulations require that these moneys should go direct to the Treasury from the depositor, and thus avoid this agency? Yes; but even persons who have been Crown tenants for years will often, if they are late with their rent, or from other circumstances, send their money direct to the department, perhaps with a request for remission of finc or penalty, or defect of forfeiture.
676. What is the reason that it is so long from the time that the money is paid in for these runs before it is decided whether the tenderer shall hare them or not? The money can scarcely be said to be paid in for the runs; it is only a sort of instalment-a guarantee for bona fides.
677. What is the reason that, in many cases, so long a time elapses before the parties are informed whether they can have the runs for which they apply or not? Principally, the reason is, that the boundaries of older tenures remain as yet undefined, and until the boundaries of older tenures are determined it would be impossible for the Govermment to definitely either accept or decline a tender for the new country.
678. Who has the determination of these older tenures? The department.
679. What is the delay in defining these boundaries? Many of these claims to lease start from old descriptions sent in in the year 1848, when the country was of little value, and people were not in the habit of describing definitely their claims to lease.
680. Does it not often happen that these holders of older tenures stand in the way of new occupiers, by running stock on land they have no right to, and that they shut out new comers by pretending that they have a right? No such rights are ever admitted, unless they can be established by the claims to lease; no right acquired by occupation only is considered of any value.
681. Do you not find that the occupants of older tenures often pay for land represented to be a certain quantity, while they really hold double the quantity? In many cases I believe it was so.
682 . Have not many persons been willing to pay rent for this land that they hold over and above their proper quantity, and has it not been allowed? Possibly.
683. When these are defined these squatting tenures, or whatever their designation may be, are they charted or measured on the ground? They are described so as to be capable of identification on the ground.
684. Who describes them? They are described ultimately by the department; in the office in most cases. 685. In the office? Yes; sometimes by the Commissioner roughly, and revised in the department. Sometimes, of coursc, we have a survey, which defines them.
686. Are they charted ? Sometimes they are charted.
687. Have you any charled before being surveyed? No; we could scarcely chart them before survey; what is technically called charting is the result of survey, but we have many maps which are illustrative of run boundaries-sketch maps as they are called.
688. Is there any reliance to be placed on these? Sometimes more than on survey maps.

6S9. Where are the descriptions, from which you derive these sketch maps, obtained? Descriptions of old runs were published in the Government Gazette under and in pursuance of Her Majesty's Orders in Council of 9 March, 1847.
$345-\mathrm{E}$
A.O.Pretious, 690. What conrenience have you in a public office for the public to inspect maps to enable them to know Esq. . what land is leased and what remains to be leased? Every facility is afforded.

25 July, 1872 691. What facility have the public in the way of charts? There are many charts of different parts of the country.
692. I mean as to the whole of the pastoral districts. Have you any map of the whole of the country, showing what lands are under lease, and what remains to be leased? Not with regard to the whole country.
693. With regard to those parts of the country where you advertise runs for sale-that Messrs. Richardson and Wrench advertise for sale as pastoral runs? For the most part we have them.
694. Are these reliable? Yes; not absolutely, perhaps, but reliable sufficiently for all practical purposes. 695. Are you aware that sometimes rums are advertised for public sale for three months in the Government Gazette,- the description given after they have been twice put up to auction, and there has been no bid for them, - the money has been paid for them, and the department find that they have no such run-after a man has travelled perhaps two or three hundred miles from the country to pay his deposit? There is no necessity for a man to travel down from the country to pay his deposit.
696. He can do so if he thinks fit? Certainly.
697. How do these mistakes of advertising runs you do not possess happen? It is not that runs are advertised we do not possess; it is perhaps found on receipt of fullerinformation that there is not sufficient country to satisfy the applicants.
698. Why do you not ascertain that before you deceive the public by advertising runs which have no existence? The cases you speak of are rery exceptional ; and with a large business, a large department, with between 3,000 and 4,000 runs, the boundaries of all of which have to be looked after, it is quite possible such mistakes may occur. I believe one has occurred.
699. What run may that be? I do not remember the name; I remember the name of the agent of the party who applied for it.
700. Do you remember a run named Salt Lake;-is that the run you refer to? I do not remember the name of the run.
701. Are you aware that that run was advertised three months in the Gazette, and the description given? I am not aware; I could easily ascertain.
702. Will you look at the Gazette of 16 th April. 1869 , among the descriptions-No. 23 ;-under this number a run named Salt Lake is described? (Jhe witness referred to the Gazette.) Yes.
703. Are you aware that that run was advertised for three months in the Gazette, and twice offered at public auction? I have no doubt it was.
704. And afterwards again advertised, application made for it, and the applicants informed that no such lease could be given-that no such run as described existed? It is quite possible, very probable, and nothing unusual. I do not say it is usual, but an occurrence of that kind is one to be anticipated.
705. Have you a chart of that run in your office? I am not aware whether we have or not.
706. How many acres is it there described as containing? 64,000 .
707. Do you recognize that (handing a diagram to the witness) as taken from documents in your office? Yes; this is entirely obsolete.
708. Is this diagram taken from any map or chart in your office? This is a diagram prepared in the office.
709. How is it that this diagram represents the run as 41,000 acres, and this description as 64,000 acres? Because it was found upon inquiry that the latter area was not available.
710. Why did you not ascertain that before it was offered to the public? Because, if we stopped to get in this desert such explicit information with regard to every tenure,- that we could state absolutely the number of acres each contained,-nine-tenths of the country would have been closed to the people, and half the rent would hare been lost to the Government for many years past. We do not pretend to accuracy in such matters; it is not like selling freehold land in a city.
711. Do you pretend to an approximation;-is the business carried on in such a way that you can ascertain whether you have what you sell or not? Ordinarily. In 99 cases out of 100 the area estimated would correspond with the approximate area sold to the lessee; in the one case there might be a discrepancy, and such discrepancy in my opinion is inevitable in a large business conducted by few officers, scattered over a territory half as large as Europe.
712. Do you not think it would facilitate the proper performance of public business to do less and to do it perfectly;-to have people to describe their own runs where the department cannot do it? These mistakes occur from the fact that people were allowed to describe their own runs. We accept tenders for land under these descriptions.
713. These runs you advertise on your own motion; why do you do it until you are sure you do it correctly? They are runs taken up by tender, described by parties interested, who volunteer to pay rent, supposing the area to be as described; and, in order to secure the revenue to the Crown, we have not thought it necessary to make a too strict investigation as to areas, but have put them up under the areas which the parties tendering supposed to exist in the locality indicated by the tender. Otherwise, it would be necessary to keep back these runs, and the revenue arising from them of course would be lost.
714. You admit that in the Occupation branch runs are advertised three times in the Governnent Gazelte, according to law, and that when applicd for you find that you have no such runs to let? I do not admit it as a rule; I admit that it has happened as an exception.
715. Are the charts all open to the public for inspection? All charts which are complete, and which afford reliable information are open.
716. You give every information to the public by the charts you show? Every information; but we desire at times to withhold information where parties wish apparently to arrive at some incorrect information, and to be misled. We then state to them that the map in the office is incorrect. Some parties are unwilling to admit that it is so. They may have some special object to serve.
717. You admit that they are incorrect? If they are incorrect we state the fact.
718. Such as they are, they are public property? Yes, and I have never refused the sight of a plan or map in the office to any person, and I am not aware that it ever has been refused.

## TUESDAY, 30 JULY, 1872.

## 

## Mz. STEWART, | Mn. TUNKS.

## James augustine cunneen, Esq., in the Chair.

## Eccleston Du Faur, Esq., examined :-

719. Chairman.] What position do you hold in the Lands Department? I am draftsman in the Occupation of Crown Lauds Office.
E. Du Faur,
720. What are thie duties with which a draftsman is charged there? It is alnost necessary that I should ask you to allow we to explain how I came into the office, for I am the first who undertook the drafting 30 July, 1872. duties in that office. I entered the office in a clerical position; I went over from the Survey Office, where I was a draftsman, and very soon found that in my opinion professional ability brought to bear on the state of the boundaries as recorded in that office would be very well spent. Instead of dealing with the pastoral tenures simply by description, I considered that an attempt should be made to illustrate them by maps. Such maps it was necessary should be compiled for that purpose-the existing maps in the Surveyor General's Office not being adapted to it. I set to work to compile these maps to illustrato runs-so to illustrate, by degrees, as far as practicable, the boundaries of all the runs in the colony-when I found clashings, errors, or something wintelligible in the written descriptions of the tenures. I submitted them to the head of the office, and steps were taken to clear them up by showing plainly to the lessees the confusion that existed in the recorded descriptions-asking them whether such confusion really existed on the ground-suggesting modification or arrangoment of the boundaries, and requesting either their concurrence in our suggestion, or any modification which they might wish ; but insisting that such settlement must be arrived at in order that we might have proper descriptions on which the office would be justified in preparing formal leases. In that business I have been occupied only between three and four years with the result that $T$. have now nearly two-thirds of the runs in the Colony described with boundaries that are beyond any dispute at all, and upon which we can issue leases; whereas, under the old system (with which I am not finding fault; it was a system which arose many years ago before the geography of the Colony was much known) it was impossible, in the great majority of casee, to issue formal leases under the Great Seal at all. It is in these duties that I am engaged-in the compilation of maps by my own hand; the investigation of all existing descriptions; the suggestion of the settlement of aisputes; and the clerical work comected therewith.
721. Do you prepare mapss within squatting districts? I took the labour without being asked to do so. To give the Committee an idea of how the work is done I have bere a map of a small portion of one of the pastoral districts (producing a map.) In that portion of the district every run is shown here. Although the boundaries are not generally marked on the ground they are all described in accordance with that map in such a way that we can issue formal leases, and if the lessees desire to have their boundaries marked on the ground, instructions can be issued to a surveyor to so mark them without any possibility of a dispute arising ; because these boundaries have been clearly illustrated, and the effect of these illustrations of boundaries has been explained to each lessee. The points on which they depend have been ascertained by survey, and the lines simply projected therefrom ; and the consent or assent of the lessees to these final definitions of boundaries have been obtaiued in their own handwriting.
722. Before you chart such runs are they occupied? Generally. Most of these runs have been occupied, eay from 1852, 1854, or 1858, but they have been occupied comparatively haphazard. They are often described as one tailing on to another, or as one at the back of auother, without any marks on the ground.
723 . Are all of the runs on the plan occupied runs? Every run there is under a lease, or promise of lease, with the exception of a few runs that are forfeited. That map is ready for lithographing for public use, except that there is one run still in dispute, which will have to be settled either by consent with adjoiniug lessees, or by arbitration, and one I shall yet have to touch upon.
723. All occupied, and payigg rent? All that arc not forfeited paying rent. I cannot say whether they all have actually stock upon them.
724. Does your mapping in this way proceed or follow the occupation and leasing? Leases or promises of lease were, in most cases, given many years ago, -ach portion of the country being described as adjoining other country. My attempt was to put these described boundaries into a shape which the lessees could understand, so that they would attach their names to descriptions or diagrams in witness that they consented to them.
725. Have any of them been cver surveyed? Some of them-[interruption]-and then that we should be able to deal with the vacant Crown Lands of the Colony, tracts of land lying between those already taken up, aud that proper rents should be obtained for them.
726. How do you arrive at correct boundaries without survey? We have correct-perfect almost you may call then-surveys of the main frontages of the Colony. We have surveys also of subsidiary featuresfeatures in the back country.
727. Do you think a surveyor sent on the ground would decide that these were correct? He would for all practical purposes consider them so. On the frontage we have the position of marked trees; the terninal points of this run (pointing to map), and he knowing that the frontage between these points ( $A$ and $B$ on lithograph) was seven miles, and that the run weut back seven miles, would -
728. How do you ascertain that the run goes back seven miles without survey? From description; and I could draw that as well as a surveyor ; by reference to this the difference is between this line and this (pointing to the plan), which depends upon another feature.*
729. 

* Note (on revision) :-This paragraph is not intelligible without explanation, mid does not convey the sense of my reply I endeavoured to illustrate by pointing to map that, "by reference to these lines (the north boundaries of Jarangara, Nalt Lake, and Cutpy Runs) of known iength from a known point on the Darling River, and to the east boundary of Titululta Run (situated at a known digtance east of a marked tree in natural fenture, the litululta Swamp, which lad beon counected by survey with the Great Ana Branch Creek, which is comected at other points with the Darling River, I was able), by compila(iun, to ascertain with suflicient accuracy for all practical purposes the length of north boundary of Tulrigo Run, viz., the balance of distance between the frontages, ufter sllowing for the defined leugths of the other lines, and to calculate the area balane of distance between the frontages, uiter allowing for the dcfined leageths of the other linus, and to caiculate the area in ncoordance with that map.
E. Du Faur, 730. Do you know the area of each of these blocks? Yes.

Esq. 731. Jt is not stated in the map? No, the map is not absolutely complete.
$\overbrace{30}$ July, 1872. lication.
733. Before this block is surveyed? Yes; if the block is seven miles by seven we know that the area is forty-nine square miles; if it is a square block, if rhomboidal, we know the augles, and can calculato the area previous to survey.
734. Have you any list which would show the area of any of these runs? (The witness referred to a book.) I have an index of all ruus in the Colony, which I prepared in connection with the Drafting branch.
735. Have you an index to Tarangara; - what is the area of that? 54,000 acres is the area of that. We call them estimated areas, and they would come out on the ground a few hundred acres, more or less. Any of the areas I state in this book I feel confident would be found to be correct within a few hundred acres. 736. What is the arca of Cutpy? The area of Cutpy, as shown, is 60,000 acres, but this run is an exemplification of the awkward boundaries existing under some descriptions; and I. made a suggestion to the lessee, who holds both Cutpy and the adjoining run, Illengerry, that he should permitus to modify the boundaries, as shown by dotted lime from C to D (on litbograph, if prepared).
787. Who occupies Cutpy? Mr. Scott, of Parra.
738. Who leases Illengerry? That is one of his too. (The witness pointed out on the map the several rums held by Mr. Scott.)
739. Salt Lake;-what is the area of that? 52,500 acres, as shown there.
740. Who occupics it? Mr. Scott, of Parra.
741. How did he take up this Salt Lake? It was originally his run, by transfer, many years ago, and he forfeited it. It was then, previous to the time I have spoken of, when I commenced looking into these boundaries, advertised as a forfeited run for salc. It was passed at auction, adrertised a second time and passed. Then, in the early part of 1870 , when the run was open to solection, Mr. Scott applied for it. He was informed that the run (having been Gazetted under the old description prepared by the Commissioner, with little geographical knowledge from inspection on the ground-a very rough description) it had been found subsequently necessary to refer to the Commissioner for some definite information respecting the points on which the run depended; that is, the actual distance on the frontage between the trees marked broad-arrow orer v and broad-arrow over vi (pointing out the position on the map)-so that we might know the extent of frontage between them, -because, from the data before me, I had reason to believe the area given to me in the original description of 64,000 acres was incorrect. But as Mr. Scott held the adjoining run we wished him to agree with the Government, in the first instance, as to the boundaries of the existing runs.
742. Was this done after you had advertised it in the Gazettc? Yes; after it had been advertised. It was advertised in the Gazette in 1868 or 1869 ; no one took any notice of it, and the run was not purchased at auction. In the meantime I commenced this labour in the Cromil Lands Office, of bringing these matters formard as clearly as possible
743. Did you refuse to lease it to him on the description as published in the Government Gazette? We did not refuse to lease to him ; but a letter was written to him, which is as follows: - (The witness read the same. Fide Appendix C1.) That was our communication to him about six weeks or so-I forget the exact date*-after his selection, when the case had been looked into; and about a month after that letter Mr. Scott was furnished with a diagram of runs, showing what I may call my reading of existing descriptions, and asking him whether he was satisfied with that reading, and if he was satisfied with the reading of the descriptions of the runs under his occupation-that was, the amount of the country available for the forfeited run of Salt Lake, which he had selected.
744. Was the description given in the Gazette an incorrect one? It was correct, but it was simply too vague, and the area was incorrect
74.5. If not incorrect why did you not act on it? Because the area was incorrect. I was perfectly convinced that there was not the area estimated by the Commissioner.
746. Did Mr. Scott refuse to pay rent for that area? No; Mr. Scott took no exception to the action we took at all. The letter was followed shortly after by a diagram in that shape (the witness produced a diagram), explaining to him the proposed settlement of his boundarics, and the area available for Salt Lako, and he has never expressed any dissatisfaction of the office.
747. Have you granted him a lease of it? Mr. Scott has recently died without returning the diagram to the office with his final approval.
748. Was this run advertised in the Gazette to be put up to auction under the ordinary description? Yes, under the ordinary description, as depending on the back boundaries of another run.
749. How often was it advertised in the Gazette under this description? It was advertised in 1869 and 1870.
750. For a month on each occasion-is not that the practice-before the sale is to take place? Yes.
751. Mr. Tunks.] Would old description convey the idea better than "ordinary" description? Yes. By old description I mean the description originally prepared by the Commissioner, when the run was first granted in 1854.
752. In the meantime a change in the law has taken place, which renders it necessary to proceed in another way, as I understand, and you stuck by the old description in this case? I do not understand the question. Until the investigation into the accuracy of these descriptions, in the case of this run and in that of many hundreds of other forfeited runs, there was only one description, but in the progress of information as to the geography of the Colony, not from pressure outside, but for its own necessities, the department desired to correct errors that were inseparable from the system of describing runs, which aroso at a time when little comparatively was known of the geographical features of the Colony. The office felt it to be necessary to do their best to bring these old descriptions into some form so definite that disputes, many of which had arisen in the more settled parts of the Colony, might not take place on a future date, when these more distant parts of tho country become more settled and more valuable.
753. Chairman.] Why not do this before the runs are advertised in the Gazette, and these wrong descriptions are given to the public? Because, as I thought I had made clear, these descriptions were published before any such idea had occurred to anyone. This iclea had originated with myself. Mr.

Moriarty

* See dates given in subsequent examination.

Moriarty had often thought it necessary, but was unable to see his way to have it carried out. I saw the E. Du Faur, necessity of it when I was in the Survey Office, and exchanged into the department where I am with the determination I would see these run boundaries put into better order if they could be.
754. Is it the fact that Mr. Scott could not get a lease of Salt Lake, as described in the Gazette? He 30 July, 1872. las got a promise of lease.
755. It thought you said just now he is dead? Ycs, but he had been told that he could have Salt Lake, as originally described, for it turned out that it was possible to carry out the old description, and the only difficrence is that the area is not so great as it was estimated in the old time. His representatives hold the documents.
756. Then in the meantime he has no lease of it? He has the promisc.
757. In the meantime is there any revenue derived from it? Yes, he has paid the rent of it.
758. Hie has paid the rent of all the run? He paid his deposit in 1870 , when selecting the run. I could not speak from recollection, for that question does not rcfer to my part of the department, as to whether he paid the whole rent for 1870 .
759. Did you ever inform him he could have a lease of it? Yes, certainly; we told him in June, 1870, by one of these printed forms, showing the arrangement of his adjoining runs. We told him in the terms of this printed form-"For your approval of the boundaries as thus shown;-I would request you to be good enough to return this document to the office with your acceptance cndorsed thercon, when, should no unforscen difficulty present itself, a formal lease will if desired be prepared in your favour."
760. You did refuse to lease this property as it was advertised in the Gazette? No, we did not.
761. You did not lease it when it was applied for? Not immediately.
762. Did you inform him he could have the deposit money back? Yes.
763. Why dill you inform him to that effect if you were desirous of leasing the public cstate? We only gave him the option of withdrawing it at present.
764. Why should he withdraw at all; why should he not pay for the public estate if he were enjoging it? That was not my business; I did not write that paragraph.
765. But why, if he was occupying this estate, was he invited to take back his money when he was willing to pay rent? We asked him to gire us at little time to get information.
766. Did he not act on your invitation in the Gazette to take up this country? Yes, on the invitation from the department.
767. Why then did you want to refund him his money? I can only repeat that the Gazette to which you refer was published before the investigation into these incongruous descriptions had taken place; when this investigation did take place we asked him to let us settle his own runs before we crented possibly confusion in existing tenures by granting him a fresh one. 1t was a matter of a few weeks.
768. He was willing to pay the rent, and was satisfied with his bouudaries;-was he not? We could not tell. 769. Did he ever complain? No, but the routine action required that on acceptance of his applicatiou for the run we should issue a formal authority to occupy the run.
770. Mfr. Tunks.] If you had leased the quantity of land you then supposed there was, he would have had a valid complaint against the Government? Yes, under ignorance, and inevitable iguorance from the previous system of describing boundaries, there was supposed to be 64,000 acres.
771. How much was there? ' 52,500 acres. If knowing that, I had issued an authority to occupy 64,000 acres I should have done wrong.
772. Chairman.] Why advertise it if the department was aware? The department was not aware.
773. Why advertise it unless the department was aware? Many years past-long beforc I came into the department-the Government advertised many of these runs with their estimated areas.
774. And leased them? And gave promises of leases of them with estimated areas, and in some cases with very erroneously estimated areas. The action I took afterwards was to correct these areas. Estimates they were only.
775. Are they not estimates now? They are estimates now, but estimates that we feel certain of within the limits of a few hundred acres.
776. Are there many such cases as Salt Lake, in which runs lave been advertised in the Gazette by the department, and the public have been deceived by being refused leases when they have paid the deposit? No, I do not know any cases where the public have been deceived. I know there have been hundreds of cases of runs that were forfeited during the dopressed times of the pastoral intevest.
777. Were there many cases in which the department-it does not matter who was at the head of it at the time, but since the passing of the Land Act of 1861-have advertised the descriptions of runs and put them up to auction, and afterwards have not been in a position to lease those runs as described? The department has modified the descriptions.
778. That is not what I want. First answer my question and then give any explanation afterwards. Are there many cases since the present land law cane into force in which the Government has advertised, as the law requires, in the Gazette, forfeited runs and the descriptions of them; has put them up to auction, and then bas not been in a position to lease them as described. Are there many such cases? Are there many cases in which the Government -
779. I wish you to answer that question-yes or no? Are there many such cases as I have described? There were a large number of cases in which the Government did advertise -
780. I beg your pardon; are there many cases of the sort I have described? In which the Government adrertise runs which they were not able to sell -...
781. I will put the question again as I put it before? (Ihe Shorthand-writer read the preceding question.) No.
782. Will you furnisk the Committce with a list of all such cases as have happened since the 1 st January, 1862 ? I will endeavour to do so. (Vide Appendix.) Will you allow me to make an explanation respecting the question you put to me just now. The boundaries of all the ruus that were forfeited previous to 1868 or 1869 were advertised under the old descriptions-the original descriptions prepared by the local Commissioners,-or in many cases as drawn out by the original applicants for the runs. When this investigation took place into the boundaries, I submitted to the late Chief Commissioner of (Irown Lands the advisability of withdraving the chief part of these runs from auction sale, or from being ofen to selection, until such time as I was able to look individually into the merits of their descriptions, and modify them or correct them in such a manner that the department might not, when they were leasing
E. Da Faur, each individual run, be possibly laying the foundation of future disputes. That recommendation was not Esq. carried out; the whole batch of runs were not withdrawn from selection; but I set to work as hard as I could to look into all these cases, and to revise them all prior to the demand for them arising with the public. During the last few weeks I think we have leased more than a hundred such runs, every one of which was only slightly modified from the old description, but put into such terms that when we were leasing them we knew we were leasing something we understood and the areas of which were correct. And in many cases, after the date of a run being first offered for sale by anction, the revision had taken place in my department, and the run was advertised the second time under the revised description-not the same as the first, not widely different, but so modified that we could abide by it, and could illustrate it. 783. Have the department advertised a run named B- $\qquad$ ? There were two rums named Birrie and Bulubula, on the opposite side of the Darling River, that were applied for at the same time as Salt Lake.
784. Who applied for these? Mr. Scott.
785. You were not in a position to lease these runs, as described in the Cazettc? No; they were held back for a few weeks.
786. You were not in a position to lease these runs, as described in the Gazette? It was not considered advisable to do so by the Chief Commissioner.
787. Has he leased these runs? Yes.
788. Have you been in a position to lease them? Long since we sent a form to him; shortly after (sec dates given in subsequent examination) we sent out the Salt Lake diagram.
789. Does he now stand in tho same position with regard to these as he does with regard to Salt Lake? Yes, he leases Birrie and Bulubula.
790. Just now you stated that he has not a lease of Salt Lake? No, I do not. He has the promise of lease; we have accepted his rent.
791. On the contrary, did you not invite him to withdraw his deposit? That was in April, 1870, but in the August following we offered him it formal lease of it. (See dates given in subsequent examination).
792. Did he take it up then? He has paid rent since.
793. Has he had a lease? Not a formal lease. It is not the practico to issue formal leases, except on special request of lossees.
794. Has he paid rent, and is he in every sense a leaseholder and a rent-payer? I could not say positively. I have not the data with me.
795. Would you be surprised to find that he has not? I should be very much so ; but this does not come under my branch of the work.
796. Why, if he were paying rent, did you invite him to take back his deposit-why did you not retain it on account of his rent? That was in 1870; we are now nearly in August, 1872.
797. Mfr. Tunks.] In adjusting the old descriptions, with a riew to the improved system, has it been your experience that the descriptions, as originally furnished, contained more land actually than was described? In some cases to an enormous extent--in some to a trifling extent. Sometimes the estimate was in excess; sometimes insufficient.
798. Chairman.] In cases in which a pastoral tenant occupies a larger area than he pays rent for, and another applies to lease this portion that he does not pay rent for, how do you deal with them? It is the practice of the department-the reading of the laws under which we act-that the lessee holds a promise from the Crown of the land described in his authority to occupy. The estimate of area is not the basis on which his rent is fixed, but the examination of the land by the proper authorities within the boundaries described. Therefore an erroncous estimation of area has never been held to justify the taking away of any portion of a run if the points of its boundaries were definitely established by its description.
799. If the tenant paid rent for 25,000 acres, and occupied 100,000 , would you not lease the 75,000 acres, or any portion of it, to anybody else willing to take it? It has been decided by several Ministerial -
soo. Would you do that or not? No. I should like to add to that simple " no," not if the land in excess of his estimated area was clearly included in the boundaries which Government had authorized him to occupy.
801. Then in such a case would you not deprive the public revenue of income from this 75,000 acres of such a run? It is impossible for me to answer such a question by either "yes" or "no," without explanation. I can answer it "no," because the rent of sueh a run was not supposed to be fixed on its area, but on examination of the country, within its described boundaries, by duly authorized persons. Thercfore the discovery of an error in the estimated area does not necessitate that the whole of the country under occupation is in excess of that on which the rent was fixed by personal examination of it by the proper nuthority.
802. Mir. Turnks.] Is it not the fact that some years ago persons were permitted to squat upon these lands by paying merely a license? Yes, previous to 1847 , I think-long before my time-under the Orders in Council.
803. Supposing you discover that some person has a very large excess of quantity to that described by him, is not that assessed in the ordinary way as to the value of the run after five years? The old licenses were brought under the Occupation Act of 1861, and were inspected by the Commissioncr, or by a duly appointed appraiser, who assessed their fair aunual value, which was the rent to be yearly paid on them in lieu of the previous rent and assecssment under the Orders in Council.
804. Then in that case the public interests had been protected after the valuation? After the expiration of the promise to lease, under the Orders in Council, the great bulk of which expired in the years 1864 and 1865 . I refer to the old fourteen years leases. The runs were inspected by the proper authorities and the fair annual value was fixed upon them, according to the quality and extent of the land, so far as a man could ascertain it by visiting the run and riding over it, inspecting its boundarics and character.
805. Chairman.] Do not you think it a hard case that the present holder of such a run as I hare described shall enjoy four tines as inuch land as he pays for, while another, who is willing to pay for what the first is paying no rent for, is refused the run? I must beg to be allowed to dispute that the prosent holder is in such a case enjoying four times the country he is paying for, because I have already explained that it is expressly understood that rents are not fixed upon this vague cstimated arca.
806. In cases where rent is paid, and a run is estimated to contain 25,000 acres, when in fact the teuaut
occupies 100,000 acres, why is not the overplus leased to some one else? If he occupies it without any E. Da Faur, authority the Commissioners are instructed to repress any such illegal occupation. 807. Does the department allow any person to occupy land he does not pay for? Certainly not. 803. Does the department allow persons to occupy a greater quantity than they pay for? The depart- 30 July, 1878. ment may be in ignorance of the true areas of some of the runs, and it must be so until the work I have commenced is completed.
\$09. Are all the ofticial lists of these areas-such as we have laid before Parliament-reliable? They are as reliable as the knowledge we possess of the conntry will permit; they are improving in accuracy every year.
s10. They may be reliable or they may not be. We will take the returns that have been laid before Parliament by the Crown Lands Department. I find here a return of a rua called Sandholes, in the Gwydir District? That is 31,400 acres ; I can rely upon that, as it is the result of actual survey; we know that to within 100 acres.
811. Forest Block, in the same district? Forest Block, I cannot say exactly what its area is. That is one of the original Commissioner's estimates.
812. It states in the return laid before Parliament that it contains 61,000 acres? It is not filled in in my list, because I have not yet reached that part of the district in my examination.
8.13. Is this correct? That area is such as the Commissioner estimated by inspecting the country and travelling over it.
814. Have we a right to believe this run contains what it is represented to contain? Certainly, but it may on actaal survey be found to contain either more or less.
815. If that run were found to contain 161,000 acres would you let the occupant retain that 161,000 as you do now? I may mislead you by answering a question in which you say, "If this rum were found to contain 161,000 acres."
816. You cannot state what it does contain? No.
817. Can you state whether this return of the acrenge is correct or not? I. cannot state that it is absolutely accurate, for it is only the result of estimates formed by the Commissioners riding over the run on horseback.
81.8. He is charged rental on 61,000 acres? He is charged rental on the country described in a documont issued to him by Government, authorizing the occupation of the run.
S19. And that description is an indefinite acreage? No; for convenience-sake the Commissioners were instructed to furnish the department with their estimates of how much country there was in any run that was taken up.
820. Mr. Stetuart.] Have you any idea as to how they estimated it? The practice was to ride a horse from one marked tree to another on the frontage, and if the country had five miles frontage and five miles back, that, of course, would give twenty-five square miles.
821. Did they measure it by the time the horse tonk to do the distance? Yes.
822. Ohairman.] Have many of these described areas been corrocted by actual survey? Yes, a large number of them.
823. When did their correction commence-since the passing of the Crown Lands Alienation Act? Yes, most of the corrections have taken place since that time; indeed, I may say much later-within the last four or five years.
821. Can you prepare, for the information of the Committee, and append to your evidence when it is sent to you for revision, a return showing all the runs in the Bligh and Lachlan Districts, with their estimated areas, and the areas as corrected by actual survey? I will do so. (Vide Appendix.)
825. AIr. Stewart.] Which of the whole of the districts are most accurately surveyed? I should say about two-thirds of tho Bligh District. The Murrumbidgee is carefully surveyed, but I know little of that district.
826. Ohairman.] Do you think a great number have been corrected by survey? A very great number. During the last three years we have corrected, and corrected definitely, so that we are absolutely sure of the arcas of the ruus, fully 2,000 .
827. Being so corrected have you not some account which will show you at a glance the difference between the areas formerly estimated and the corrected areas? No, not at a glance; it would have to be elaborated from the whole of the papers.
828. Would you have to go through the whole of these papers in order to arrive at the difference? Yes; but I. have the papers so arranged that I shall be able to give the Committee the information they desire without any serious interruption to the performance of my ordinary duties.
829. Is it not desirable that you should have something more business-like as a record than a heap of papers? I think I may call this book as business-like a record of the runs as could be kept.
830 . Will that book show the difference between the areas estimated and the actual areas corrected by survey? No.
831. Then for this information would you have to search through these papers in the case of every run? No, I should not do that ; I should have to take one of the old printed lists, published for the Parliament previous to 1867, and compare that with my list, giving you the result without turning over every individual paper.
832. Are the areas in this book arrived at by actual survey, or given by the applicant? By actual survey, or plotted by computation from known frontages, and back lines of definite length and bearing-in the same way as the surveyor draws his plan after he has measured the ground, with definite distances.
833. Have yon every run in the Colony that is actunlly surveyed, entered in that book? Yes, I have every tenure, and every forfeited run, and every rum open to selection in that book.
834. Are the areas there estimated, or from actual survey? From actual survey or reliable projection ; they are entered, as I get them, from time to time, by actual survey, or by reliable projection.
835. Mir. Stewart.] If that book happened to be burued oc lost it would take an immenso deal of trouble to replace it ? No; the whole thing could be re-produced from papers.
836. Would it not be safer to have it in duplicate, each volume to be kept in a different office? No doubt it would be safer to have all our documents in duplicate, but if our office were to be burned down the whole thing would go together. Still the local Commissioners could re-produce most of the documents comected with each tenure.
E. Du Faur, 837. These charts of runs afford facilities for the description of boundaries of free selections? I do not chart alienations that have taken place within the limits of a run, as I an working with only one assistant, but my ultimate object, as submitted to the late Chief Commissioner, in commencing this work was, that
30 July, 1872 . every run paper should have a map of its boundaries placed within it, on tracing linen, on the same scale as the alienation maps in the Surveyor General's Office, so that if any one wanted to know for any purpose, or if Govermment wanted to know, for the purpose of re-assessing any rau, the amount of alienation that had taken place therein, the tracing would only have to be compared with the map in the Surveyor General's Office, and the answer would be obtained at once.
838. It would save a great deal of trouble in many cases? Of course it would. I am working almost single-handed and cannot do everything at once, but it was one of the ideas I submitted at ine commencement.
839. Chairman.] What facilities have you in the office for the public viewing all your maps and plans with the view of seeing what country has been taken up and what country remains to be taken up? If any gentleman comes into my office, and asks me for information whether there is any vacant country in any particular locality, I produce my map, if I have a map of that locality, and give my opinion whethor there is vacant country or not. I then say, "It will do you no harm to tender for that country; I cannot, at five minutes notice, with reference to some parts of the Colony, say whether there is vacant country, but if you think there is, or have information making you suppose there is, put in your tender and we can look into it and give you a definite reply."
840. Have you any maps to assist those who apply? Fes, I have scores of these maps.
841. Are all the maps you have open to the public? All the maps are open to the inspection of the public, and any gentleman wishing for information respecting any portion of a district of which a map exists, or any group of runs therein, has only to ask, if it is not previously offered to him, and in a few days he can have a tracing of the country he is desirous of learning about.

IIIURSDAY, 1 AUGUS'T, 1.872.
推resent:-
Mr. CCNNEEN,
Mr. TUNKS.

## James augustine CUNNEEN, Esq., ix mie Chair.

Eceleston Du Faur, Esq., further examined :-
E. Du Fsur, 842. Chairman.] The assessments are conducted by the Occupation branch ? Will the Committee allow

Esq. me, before they commence my examination on any other subject, to produce the official documents with reference to the Salt Lake case, on which I was examined on a former occasion.
1 Ang., 1872, 843. Do you wish to hand them in? If desired; but I will give you a resumé of the action in the case :Salt Lake, Birrie, and Bulubula Runs were applied for by Mr. Scott. His application was received on the last day of March, 1870. He was informed on the 1st June of the reference to the Commissioner on certain points, in the terms of the letter which I submitted on a former occasion. He was never informed, as has been stated, that the Govermment did not know whether there was such a run as Salt Lake. The Commissioner's report was received on the 19th July, 1870; on the 4th Augusi, 1870, a diagram had been completed of the Salt Lake Run, involving the preparation of a number of other diagrams for adjoining lessees. On the 19 th September a diagram was prepared of Birrie, and of Bulubula, involving the preparation of diagrams for six other lessees-these being sent out simultaneously. The two diagrams for Mr. Scott were forwarded to the care of Mr. William Hanson, who at that time was acting as his agent. We give, by printed notice, a term of three months to lessees, during which to return these documents, either approved, or with their objections. We received no reply from Mr. Scott for some months. On the 2nd January, 1871, Mr. Scott wrote to the office, stating that he had heard from our local Commissioner that diagrams had been prepared for him, and issued, but that he had never received them. We wrote to Mr. Hanson, on the 16th January, drawing his attention to this fact, and asking that they might be forwarded to Mr. Scott; we never received any reply to that lettor. After waiting for some months, we wrote to Mr. Scott on Ist June, 1871, informing him to that effect generally, and asking whether in the interim he had received the diagrams. On the 21st June, 1871, we received an answer from Mr. Scott in the negative, saying that he had received neither of them. We then prepared fresh diagrams; one of which we sent to the care ofthe local Commissioner, and the other to the brother-in-law, I believe, of Mr. Scott, the Revd. Mr. Milne, who had called in the meantime respecting it. This was handed to his care, both of them being noted as duplicates of those which had been sent to the care of Mr. Scott's agent, through whom they had miscarried. These diagrams were returned in the usual course, and further action, which is apart from the matter before the Cominittee, was taken on them. The diagrams, which were issued from our office on the 4th August, and 19th September, were, unless Mr. Scott raised some objections totally unforseeen, equivalent to promises of leases of the three runs he had sclected. It was solely from the nondelivery of these official documents by his agent that Mr. Scott did not from a week after the dates of those diagrams hold those runs. I was asked whether the Government have gone without rent for these runs. In consequence of the action of the department I was unable to give a decided answer, it being a matter not connected with my present duties; but I have since made inquiry, and I find that the rent for these runs was received for the latter portion of 1871 and for 1872 . If any rent was lost between August, 1870 , and the middle of 1871, it was not due to any neglect or delay on the part of the officc, nor to any ignorance on its part in the matter, but solely to the non-delivery of the documents, which were sent out on a former date -the abovenamed dates, 4 th August and 19th September, 1870.
844. Mi. Tunks.] Will the statement just made give us such an explanation of the circumstances as will enable persons reading the evidence to understand the case? I. should think so.
845. Chairman.] Have you any lithographic system in operation in the Occupation of Jands branch? Not in our office; we have not had any occasion to use it at present. I am just thinking of applying to the Surveyor General to assist me in taking the first steps towards lithographing such of our maps as are in a sufficiently complete state to bo so lithographed.
846. Mur. Iunks.] If you had overtaken the work in your department in this particular you might then
apply lithography? Yes, I have a number of maps, which, as far as the settlement of boundaries is concerned, E. Du Faur, are ready for lithography; but I am single-handed almost, having only one assistant, and have not the mechanical strength to prepare the maps in the style and with the detailed information I should desirc. 817. Is additional mechanical strength in your department necessary? Unless the public very much 1 Aug., 1872 . wanted the maps I would rather it should be deferred till the press of work absolutely necessary to be attended to was less, in order that I might superintend their completion.
848. You wish to supervise thesc things yourself? Personally; 1 would like to do almost everything connected with them mysclf.
849. Fou have not made any representation to the Government that additional assistance is necessary? Not officially. I have talked the matter over with the offeer in charge of the department as to whether there was any necessity for the issue of these maps sooner than the time I thought they might be prepared by the existing staff.
850. If these maps were in a condition to be lithographed and furnished at a low rate to Crown tenants, would it not he advantageous? I. think so; in many cases it would show at once there was no vacant country left, and people would not need to trouble themsolves to make fresh applications; and every lessee might eventually have an official lithograph, showing the boundaries of his runs as unmistakeably settled. But I wonld point out that the reason why nothing of that kind has been issued from my office hitherto is, that our work proceeds step by step. I ask a tenant are yon satisfied with the boundaries of your run as we have shown them ; I ask his neighbour on each side, and so on. There may be one or two objections here and there to the illustration or the partial revision of descriptions enranating from the office, which may be fatal to a scheme more or less affecting a good many adjoining runs, and therefore, though $I$ bave perhaps a dozen maps larger than the one exhibited here completely charted up with runs, there are here and there questions still open, still under discussion with the lessees, which prevent my publishing such a map as this, which shows perhaps 120 runs. T. cannot publish this one, because two or three cases are not yet settled. I could only publish it in detached pieces; that is why $I$ want to delay such publication, unless the public reguire these maps very urgentily, and cven then I should have to publish them with somo blank spaces, showing the cases not yet settled. I may add, if you will allow me, that I consider as I have devoted a great deal of attention and trouble to this preparation of run maps, on a system which originated cutiroly from myself, that I am justified in objecting to giving wholesale tracings of them to any one,-although I never refused a tracing of a run or group of runs, with a dozen others (if required and revised) adjoining, to illustrate any case, to any one who applies for it in the office;-but I object to these maps in their incomplete state being open to any person to trace, for a person so tracing would not, unless myself or my assistant were standing over him, be able to understand which portion of the map was complete, which awaiting replies from lessees, and which subject still to dispute, and these unreliable, or only partially reliable, tracings would get about, as they have on former occasions, owing to private lithographers publishing run maps of the Colony, which I think the department which prepared them should for its own credit have the first right of doing. A surveyor some years since prepared a rough map of the runs in the North Lachlan District-which was subsequently privately lithographed in Melbourne-a map which had not been officinlly recognized as absolutely correct, by illustrating the different claims to lease; but many of the holders of runs in that district appear to look upon that private lithograph as affording a more correct illustration and title to their runs than the descriptions they possess, while many of the latter, under which alone they hold those runs, are at variance with the lithograph. 851. Chairman.] Are not these maps kept in order to enable the public to ascertain what country is vacant? Yes, that is one of their objects, though only a subsidiary one; and the public on application are shown such maps as may exist of any district respecting which they desire information.
852. Why not allow the public to have tracings? The public are supplied with tracings.
853. I thought you said just now you refused to let the public take tracings because they might be published and get into the hands of private individuals? I said private lithographers. I refuse to let them trace them themselves, as none of the maps are yet complete, and might only mislead them. Here is one portion of a pastoral district (producing a map), in which there is still much vacant land up to the north and west, and a great deal of land open to selection; and a few questions as to boundaries of existing runs still pending. I submitted officially to the head of the department that I should not allow any one to trace that, or any map in its entirety, but if any person says, "Are any of these runs open to selection; I want the information for a client of mine," I tell him, "Yes; and if you like I will send a tracing to your address to-morrow," or at some other time, according to the state of the business of the office. I only yesterday received an application respecting this map (most of this country having been recently unoccu-pied-pointing to the back country to the south of the Darling River), asking me to furnish information of all the country that might be taken up between the Barwon River and the Pastoral District boundary. I answered the gentleman that he should have it.
854. Do you charge for these tracings? No; and no one is allowed to do so in the department by a special order from the late Chicf Commissioner, of which I submitted the adyisability myself. I recommended that no one connected with the department should on any protence, after office-hours or otherwise, furnish tracings for which he should receive a fee; that if a tracing were required it should, if possible, be supplied at the carliest convenience of the department; and if urgently required it is done inmediately. 855. Have you any maps or plans of runs in the office which you consider private property, and to which the public have no right of access? Cnder the 1Sth clause of the Regulations of the Crown Lands Occupation Act of 1861 lessecs may have their runs surveyed at their own cost; they pay the surveyor, and the plan is sent in for examination by the Surveyor General as to its professional accuracy, and then referred. to our office as to the correctness of the representation of the claims to lcasc. These maps may be considered the private property of the lessees, for they pay for them and they have the right to ask for them. In very few cases do they do so; when they do they are never refused; the maps are returned to them as their private proporty. The Survoyor General, for his information, and myself, for my information, and for record in the office, keeping full tracings.
856. Are these tracings which you keep open to the public if they require then? Of course they are open to the public, the same as others; but supposing action to be pending thereon, owing, as is very often the case, to such plans, representing, perhaps, only the lessee's view of his claims, which conflict with other claims, or are not in accordance with those recorded in the official descriptions, then until the necessary action has been taken by the department on the private work of these lessees, I do not consider that they are open to the public; at the same time I seldom refuse people who desire to see these plans.

345-F

Eni Du Faur, 857 . Do you not consider it of more importance that the public convenience should be consulted than the convenience of any one individual in dealing with public property? I. do not consider that these plans when they first come into the office are public property ; they are the property of the person who pays for

## 1 Aug, 1872. them.

858. You get them for public purposes? Yes, so far as the Government, as landiord, is concerned-not for the use or benefit of individuals of the general public.
859. Do you not think it advantageous to let the public have the benefit of them? They do get the benefit of them, but occasionally there may be a case where I point out that the matter is under action in the department, and that the maps must not be looked upon as public property until the questions are settled which have been illustrated by private work of the lessees.
860. Afr. Stecart.] When a map is published in an incomplete form it is apt to mislead the public? No doubt.
861. That was the case with reference to the map published in Melbourne? Yes.
862. Chairman.] The assessment of pastoral runs is conducted in the Occupation branch ;-is it not? Yes. 863. Has it struck you that there is a great difference between the valuation of runs in 1865 and the late valuation? I may premise that this is merely clerical work, which I have not much to do with, only incidentally; but taking an interest in my office I always see what is done every year, and am acquainted with the general increase or decrease in the value of pastoral property each year when the appraisements come in.
863. Have you noticed that the appraisements are very capricious? I have indeed; the appraisements of 1865 seemed to me as capricious as anything could be, and they have in some cases been so since. The rents of runs, as appraised in 1865, have been very much altered-increased in some few cases; but I am sorry to say in most cases they have decreased. But I. must point out that 1865 was a time in the Colony, as is, I think, known to all of us, of considerable pastoral prosperity compared with the years 1869 and 1870, which were times of depression.
864. In what respect of depression. Are you aware of the price of stock in those respective years? When I speak of depression I refer to the indication of it, shown by the fact of people throwing up runs, forfeiting country they had paid rent for for many years.
865. Are you aware that stock brought higher prices in 1870 than in 1865? That is a matter I have not gone into. I was referring to what actually comes under my notice--the occupation of the country.
866. The value of stock has nothing to do with the estimated value of a run? No; I should think it was scarcely taken into consideration. The capacity for carrying stock and the capacity for fattening it forms the basis of the calculation.
867. Are you aware that there is a great decrease in the income from the runs appraised in 1870, as compared with that derived from those appraised in 1865 ? Yes, I know there was an cnormous decrease.
868. Could you in any way form any opinion as to the cause of this, or was there any good reason for it? To a certain extent I have attributed it to what I mentioned before, the difference between the state of the pastoral interest, if I may call it so, at those different times ; but I may mention that 1865 was a year in which a large proportion of what are called old runs, held under the Orders in Council for fourteen years' leases, which expired that year, were brought under the Crown Lands Occupation Act of 1861 . I.t was the year in which appraisements under that Act took place for the first time generally throughout the Colony. There had been a large number of runs in Manero and one or two isolated portions of other districts so appraised, but 1.865 was the year when such appraisements took place generally, to the extent of some 1,500 tenures.
869. There is a reduction of nearly $£ 40,000$ on the ammal income from ruus appraised? I am not aware of the figures; they have passed out of my mind.
S71. Mr. Tunks.] Would free selection influence this matter? Tes; I was going to state that it must be borne in mind that in some districts, as for instance that of Murrumbidgee, some runs were wholly oblite-rated-others rendered comparatively valueless as pastoral leaseholds,-owing to alienations which have taken place within them, and to the consequent pre-emptive leases.
870. The liability of the run to that would operate independently of the actual sales of land? Yes; if there was a prospect within the next few years of much land in a run being taken up by free selectors, of course its present value must be reduced.
871. Chairman.] The Crown tenant has the privilege of having his run re-assessed? Yes, and the privilege is very frequently taken adrantage of.
872. Therefore, an assessor would value the run as it then was, not as it might be? No; but I should like to express that in cases where the continuance of a run as a pastoral leaselold is liable to much curtailment by alienation, its present value must be affected in that it is less worth any tenant's while to incur the outlay necessary to improve it, and to increase its capability for carrying stock.
873. If the pastoral tenant paid an assessment upon sheep and cattle, as he did formerly, instead of having the run appraised, do you not think the revenue must necessarily have increased from 1865 to 1870 with the increase of stock? Under the Orders in Council, in basing the assessment on stock there were no means, as far as I know, for ascertaining, reliably, what amount of stock there werc on runs generally. I omitted to state that previous to 1848 a declaration was required from licensees as to amount of stock depastured by them. A ron when taken up was supposed to be assessed by the local Commissioner, generally as being capable of carrying the minimum anount of 4,000 head of sheep, or 640 head of cattle. On that assessment the tenant paid $£ 20$, besides the minimum rent of $£ 10$, but there was no cridence that there were 4,000 sheep on the run at the time; and when the run came to be appraised subsequently it may have been found that there was not the country that would carry 4,000 shecp in general seasons, and perhaps that it would not carry any, in its unimproved state, in many seasons. But $I$ may add that it is the duty of our Commissioners or appraisers, when appraising, to estimate the capability of runs and the amount of stock which they can carry in ordinary seasons, and to report thereon. Estimated pastoral capability in unimproved state is a portion of the report attached to the appraisement, against which they put down so many head of cattlo or sheep. And the appraiser of course fixes the annual value of each rum in proportion to his estimate of its grazing capabilities.
874. What was the charge of assessment per thousand on cattle under the 27th Victoria-the late Asscssment Act? I ought not to have forgotten it, but it is a matter with which I hare not laad anything to do for several years past.
875. Who generally issues the instructions to the appraisers? The Minister for Lands; the appraisers E. Du Faur, 87. Who generally issues the local Commissioners. When the number of runs in any particular district are not in excess of that which such officer can be expected to visit and value during the season, in some years, especially every fifth ycar, we have a large number, as many as 1,500 runs, to appraise in one year, and it then has been 1 Aug., 1878. found necessary to appoint appraisers on behalf of the Crown from among gentlemen who are not permanent officers. These appountments, of course, rest with the Minister for Lands, and the instructions to these appraisers are issued under his signature. They used to be issued under the signature of the Chief Commissioner, but they are now signed by the Minister for Lands, and printed instructions are issued to the appraisers in each district or portion thereot with which they are entrusted.
876. Wave you formed any opinion as to the manner in which appraisements affect the general revenue, or as to their efficiency or wisdom; or could you suggest any other way of arriving at the value of a run than by appraisement? I consider it a very difficult question indeed; one that requires a great amount of local knowledge as well as intelligence to deal with. What would rule well in one district would not be at all applicable in another; and it appears almost impossible, so far as I have studied the question, to lay down iny particular rule; you must leave the matter to the judgment of the gentlemen appointed and the Commissioners in the different districts. The character of the districts being so totally different we find that the idoas of those gentlemen as to the value of a country, or of its pastoral capability, may differ very widely. One gentleman appraising on one side of a river, which forms the boundary of his district, may, as has been sometimes shown by the results, have a different idea of the ralue of country, which is of the same general character with comntry on the other side of the river, and the result is that the runs on the two sides of the river are appraised at widely-different comparative values. But they are gentlemen who are sworn, or rather who make declarations to do their duty, and that they are uninterested either directly or indirectly in the runs they appraise.
877. You are not prepared to suggest any improvement on the present mode of valuing the pastoral property of the country? No, I think it would be presumptuous on my part, not having visited much of the interior of this Colony; and my knowledge of Victoria, dating many years back, when I did not think much on the subject, would not justify me in doing so.
878. MIr. Tunks.] One person is appointed to value these runs? Yes, by the Government; he reccives instructions to appraise perhaps 70,80 , or 120 runs, according to their size, and whether they lie conveniently together.
879. Would it be practicable, in your view of things, to have more than one to do this duty-to visit the runs at the same time? In practice there almost always is morc than one now, and this fact may afford some clue to the reduction-in fact does, lithink, aftord some clue to the reduction which took place in the appraisements of runs subsequent to those made in 1865 . In 1865 it was a comparatively new system to most lessees. The Government appointed their own officers and other gentlemen to appraise, and these gentlemen gencrally appraised by themselves, and fixed what we have a right to suppose they considered the fair annual value of the runs. There were many complaints against them. Some people's ideas of the value of country differed considerably from those of the appraisers, and when the time for appraisement came round again, the tenants, who had taken objection to former appraisements, and many other tenants, when the Crown had appointed an appraiser on its behalf, appointed another on their behalf, and the two appointed an umpirc. So that practically at the present time I may say in four cases out of five there are three gentlemen occupied in appraising every run.
880. If a run is appraised at a very low rent thie occupant would not object to that? No, we do not find such to be the case.
881. Am I right when I say I have heard that the Minister in some way has reduced the valuation on some runs? I am not aware of that. If you can state any case it might refresh my nemory. There were cases in which appeals were made from Mr. Rodd's appraisements in the Bligh District. Very great exception was taken to his appraisements, which were much in excess of the appraisements of other runs in the same district, made by others.
882. Was not a refund of the assessment made in the case of Euroka, after the appraisement was arrived at by the appraiser? Yes; as far as I recollect the circumstances of the case, on the evidence that was given, an order was made for the reappraisement of that run, and the result of that reappraisement was that the previous one was condemned as excessive by the gentlemen appointed to reappraise the run, and then a refund of what had been paid in excess of the sum fimally fixed was made to the lessee.
883. Would submitting these runs to auction be $a$ mode of dealing fairly with the public interest-would the runs realize more money in that way? If you could take a dozen or fifty good runs, and submit them to auction, I do not doubt that they would realize what would seem fabulous prices as compared with the present appraisements, because there are so many people who particularly want them, and no runs of the class I refer to are so submitted to auction without stock; but I do not say that the price that would be renlized at auction on a limited supply being brought into market, would be a fair estimate of their value ; a very different result would probably be obtained if the whole of the runs of the Colony could be submitted to public competition in an unimproved state, as they are now supposed to be appraised. .
S86. Under the law have these Crown tenants the right of renewal every five years, or does the land revert to the Crown absolutely? That is a question upon which I think I should bardly be called to express an opinion. They had the promise of a lease for five years from the expiration of the promise under the Orders in Council; then the right of renewal for five years more, on condition of improvement. The Act as I read it is silent after that, and the wording as to renewal might be construed differently by different people.
884. Does anybody on behalf of Government examine the runs with a view to the value of improvements upon them? Appended to every report on appraisement is stated the amount of alienation and reservation, and the description of improvements on the run, and the rough probable value of such improvements, according to the appraiser's opinion, with any general remarks he may see fit to add.
885. Then, notwithstanding the improvements, that have been made on them, the runs produced less in 1870 than in 1865 ? The instructions are definite-to report the grazing capabiities and the value of the run in an umimproved state.
886. Every time? Hitherto.
887. Then it is the grass only that is valued ; any improvenents are not taken into account? The improvemonts are not taken into account at present.
E. Du Faur, 891. Chairman.] Do you think it is reasonable that the Crown tenants should have a right to appoint an

The value of some of the runs has been so much increased by the enormous expenditure of private money . upon them that I think they cannot fairly be called public property altogether.
892. That expenditure is not taken into account in the assessment? No, it is not taken into account in the appraisement.
893. Are you aware that in South Australia Mr. Goyder was appointed to value all tho runs in that Colony? Yes.
894. His valuation, independently of any other appraisers, was acted upon? Yes; I have heard so.
895. Are you aware that that resulted in a very large increase in the revenue from Crown Lands? Yes, I have heard it so stated.
896. Have you formed an opinion as to whether it would be wise or unwise to appoint a general appraiser-a Govermment officer, who would act independently of the 'Government and independently of the Crom tenant, and uniformly to some extent? One officer could not do it. No one man could deal with such a question in a country so extensive as this.
897. Say then one for each pastoral district? We have twelve pastoral districts.
898. Have you formed any opinion as to whether it would be wise for the Govermment to appoint one or two valuers, who would act independently of all influences, and in whose appointment the tenant would have no voice? I have not studied that question at all.
899. Mr. Tunks.] Are you aware whether the valuer on behalf of the tenant makes a statutory declaration? Yes, when the tenant appoints an appraiser as well as the Government they proceed to appoint an umpire. 900. Do they all make a statutory declaration as to their willingness to perform their duty fairly, and as to having no interest in the question at issue? It is the umpire who has to decide the final result, and he makes a statutory declaration.
901 . Does the valuer on behalf of the Crown make a deciaration? Yes, I think he does; in the Court that is held by the Government appraiser the appraiser on behalf of the tenant makes his declaration that he has no interest in the matter.
902. And that he will do justice? I do not remember the words of the declaration.
903. Chairman.] Could you suggest to the Committee any step in the direction of a reorganization that would improve in any way the carrying out of the business in the Occupation branch? I am not aware of any necessity for it. I cousider that we have for some years past been progressing step by step towards the settlement of every boundary in the Colony, the bringing forward of cvery vacant piece of land into occupation if the public will pay any rent at all for it. It is not: a work that could be done in a year or two; and I am sorry to say not, as I thought it could, in three or four. I think it may take threc or four years more.
904. Has the Occupation branch any control over surveyors in the field to measure runs? No; the surveyors act under instructions from the Surveyor General. Of course the special information communicated to them comes from the Occupation Office. The Surveyor General issues instructions, receives plans, and has them examined as to their professional accuracy in plotting.
905 . Would it facilitate the business if you had surveyors under the Occupation branch to provent circumlocution? That system has just been inaugurated in the office. Instead of preparing descriptions of what is required to be surveyed, sending them to the Surveyor General, his haring them copied and sending them to the surveyor, our office now addresses the surveyor directly, or rather under cover to the Surveyor General, who despatches the instructions, and we keep a copy. The surveyor transmits his plan and report to our office, and we send them to the Surveyor General, when we can spare them, for examination. There is as lititle delay over these matters as can be avoided, but the scasous in New South Wales are very much against our doing what we should like each year. I have cases which have been standing over two or three scasons, because the state of the country would not allow of a surveyor going on to it to advantage; and sometimes their services are not available when required in isolated and far distant localities.
906. Do you think there is a great portion of the public lands of the Colony occupied by Crown tenants for which they pay no rent? No, I do not know of any. We have Commissioners, one of whose standing instructions has been to repress the illegal occupation of Crown Lands.
907. Do you think there is much country used as what may be termed over-holdings, where partics hold larger quantities of land than they are generally considered to hold? No, not now.
908. Was it under Ministerial authority that the refund was made in the Euroka case? Tes; a refund could not be made, cxcept under Ministerial authority.
909. Can you tell the Committee how the amount was arrived at- the sum of $£ 900$, which was refunded? The refund took place in something like the fourth year of the tenancy; therofore there was the difference between the first and second appraisement to be multiplied by four, I believe.
910. Have any complaints reached your cars from Crown tenants, that for runs in the same description of country, and with the same stock-bearing capability, tenants on one run pay 50 per cent. more than those upon another? I have heard such complaints, and the inequality has struck myself, of course, as it would anyone else who looked into the matter, and that is one of the difficulties I have pointed out. Two different appraisors may have different views; they may be cqually honest men; they may be eflually desirous of doing their duty, - but the conclusions they arrive at may be at variance.
911. Fow do you account for the fact-if such a case or a number of cases can be shown-that the same Commissioner has valued runs of the same description, in the same kind of country, with the same stockbearing capacity, malking a difference of 50 per cent. in the valuation? In the same year?
912. In the same year? I certainly should not be able to account for that. I should like to hear the Commissioner's report upon that as to whether he did consider the country of the same pastoral capability and character. As yon stated at the previous meeting of the Committee that you should wish to ask me questions about the appraisements, I brought a report from a gentleman who was appointed as an appraiser, in reply to a query which originated from myself, how it was that in one year he assessed 16,000 acres at a certain rent, and the next year a run adjoining it, of three times the area, at a similar rent only. He wrote a very full report, and said it was altogether a mistake for us in Sydney to imagine that area was such a vital element in the appraisement of runs; that 16,000 acres-I do not pretend to quote his words-in a certain position may 手e very much more valuable than an almost adjoining run of a hundred square miles. 913. Mave you anything further to suggest to the Committeo? No, I have nothing that I know of to suggest; but I would crave permission from the Chairman of the Committee to make a few remarks respecting one or two points which have been brought forward.
914. Mr. Stewart.] To what end? I feel it necessary to premise that I cannot help feeling confident in E. Da Faur, my own mind that the cases brought forward, apparently to the discredit of the department-such as the Salt Lake case-and the implied refusal or the alleged inaccessibility of our office maps to the publiccould only have originated with some person who felt himself aggrieved in some manner, and who had been connected with that Salt Lake case, and with the office in seeking such unlimited access to the maps as is, for the reasons I have stated, disallowed.
915. What do you refer to? To the questions about the accessibility of the maps to the public.
916. Chairman.] Do you object to any questions put to you? I do not object at all. I think I was able .on a former day, and especially to-day, with the official documents I brought forward, to show to the satisfaction of the Conmittec--and I hope I succeeded in doing so-that the officer in that Salt Lake case was not to blame, but that the agent who had been appointed by the lessee to look after his interests neglected to do so. I should be sorry to say that he suppresscd the documents, but they miscarried through his hands and caused the apparent delay in the office, which was ignorant of their having so miscarried, and did not take action while in anticipation of hearing, from the lessee; we never wrote to him direct until we received his letter on 2nd Jinuary, 1871, and he never made any complaint. When the circumstances of that case, as proved by official documents, are coupled with the alleged maccessibility, if I may call it so, of our maps, I can only feel convinced in my mind that the suggestion of these two questions came from one person ; and I feel it my duty to mention that I had on one occassion to take steps with that gentleman; whether they were right or wrong it is not for me to say, but I think I should not have acted as a man or an Englishman if I had not done as I did. I was obliged to take steps which I suppose may be considered very audacious on the part of a Civil Scrvant, viz., to order him out of my room, for what I told him plainly I considered an impertinent liberty, which I would not stand from any one, he having, in my absence, come into my office,--though told by my assistant I was only temporarily absent in the adjoining room, -aud having taken a map from my shelves-a map I bad patiently explained to him two or three hours previously, nlthough my assistant was instructed never to give them without l was by to explain them. My assistant said he would fetch me immediately, but without permission this gentloman took down the map, and I found him with a companion, and the map spread out on a table, and, if my recollection serves me fightly, taking a rough tracing of it. I told him I considered it an impertinent liberty which I ought not to submit to from any one, and that I did not intend to do so; that it would not be permitted by any person in a private capacity, and I did not see why I should permit it in my public capacity. I took possession of the map, replaced it in its proper place, and told the gentleman I must really finish my conference with him in the hall.
917. Mr. Stewart.] Did he get no permission from anyone in the office? No.
918. Chairnan.] Did he ask any? No.
919. What map was this? I cannot recall it at this moment.
920. Conld you produce it to the Committee? I should have to think long before I could be, if I could be at all, positive which was the exact map; it was two or three years ago.
921. Will you try and refresh your menory, and produce the map to the Committee? I will try.
922. Can you inform the Committee of what country this was a map? No; it was an ordinary pastoral map, in course of compilation, and incomplete.
923. Of what district? I cannot recollect at the present moment.
924. Who was this gentleman? The gentleman whose name I have already mentioned-Mr. William Hanson.
925. In what capacity was be acting? He was acting as agent for some person. I leave the Committee to draw their own conclusions from this narrative; and I now ask the Committee, in kindness to me, and in justice to the department which I represent, as I feel perfectly assured that they can have no wish, except to got the fullest information respecting the department-the whole truth on matters -
926. It will be unnecessary for you to premise what the Committee wish to do? That may be out of place. I would, however, under the circumstances, trespass one step further on the kindness of the Committee by asking them to allow me to submit to them the names of a few of the pastoral lessees -holders of many and of single runs-who have most constantly frequented my office during the last four years, since I commenced my attempt to invostigate the uncertainties and confusion connceted with the boundaries of runs, as previously described. And I would most respectfully request them, in justice to the department in which I have now spent some years, and for which I do not hesitate to state, that (in the words of the late Chicf Commissioner of Crown Lands) I have "expended not merely an amount of zeal but most of my private time and energies, not limited by consideration of the mere requirements of my position,"-to permit any number they may think fit of those gentlemen to be summoned before them to give evidence of what in their opinion has been the conduct, during those years, of the branch of the Occupation Office which has been placed under my charge.

## ADDENDUM.

I can offer a suggestion which would tend to hasten the completion of the work I huve undertaken in respect to tho nceurate determimation of run-boundaries, viz., the issue of authority to the Department to carry out the survey of such bounduries, within such portions of districts ns it may from time to time be considered desirable to thus deal with, the expenso of such surrey to be partially borne by the lessees.

I suggested the advisability of this course to the late Secretary for Lands (the Honorable Mr. Wilsou), who was pleased to concur thercin, mad inserted a clause in his proposed Land Bill (a copy of which I have not at hand), which would have tha offect of emporering the Goverument to call upon lessees, giving them 6 months notice, to pay on the 31st December following, together with their nnnual rental, a sum not exceeding $£ 10$ for ercry $2 \overline{5}$ square miles of country in their occupation, in consideration of which the Government would mark the boundarics of such runs in nceordunce with the boundaries as prelininarily determined by the action of the Department.

I have erery reason to believe that tho course suggested would give general satisfaction to the leaseholders, who would obtniu reliable surveys of their boundaries at a far less cost than that which so muny of them at present incur, while to tho Gorcrnment the outlay incurred on its part would yield far more than commensurate benefit-in the final definition of boundaries
 country, to which, as alienation increases in those parts, future measurements could be connected.

I should be happy, if called upon to do so, to explain my views on this subject more in detail, and to discuss them, if necessary, with the Surveyor General.

# ADMINISTRATION OF THE LAND LAW. 

## APPENDIX.

## [To Evidence given by P. F. Adams, Esq., Survmor General.]

(A 1.)
The Deputy Surteyor General to The Surveyor General.
Surreyor Geucral's Office,
Sydney, 6 July, 1865.
Sir,
The delays and difficultics experienced in carrying out the provisions of the Crown Lands Alienation Act of 1861, together with the annually increasing number of employes in that branch of the Survey Department which deale exclusively with maps, lead to a consideration of the subject, with u view to ascertainixg hors it is that so numerous a staff of officers, who, in zeal and ability, will compare most fivourably with those of any of the public departments, cannot keep down the arrears of work, which are now as great as they were two years ago, without any probability of thcir becoming much less ; while, at the same time, in the face of all this expenditure, the gencral maps are wearing out faster than they can be prepared, with tho prospect that in 1866 the squatting districts will be open to conditional purchase before proper maps can be prepared on which to chart the measurements. It is true that, under the Act abore-mentioned, the goneral maps, in consequence of the continual reference to them rendered necessary, do not last more than half the time they did formerly; still it is very evident that this is not the cause of the present state of the department, aud certainly no reason for tho non-production of maps in such numbers as to keep the department coustantly supplied with them, and at the sume time to allow the public to participate in them at a triffing cost. the real cause is that the gencral maps are not sufficiently reliable to admit of their publication; lithographs of a few hare been completed, but, with the exception of a few more in course of recompilation, nothing further can be done at present.

This stricture does not apply to plans of individual portions measured for sale, nor does it affect titles so long as the original surveys are preserved; neither is the unsatisfactory state of the public maps nttributable to errors of conatruction, which care and skill might rectify, but to the defective data from which they were originally prepared, arising from the following circumstances, viz.:-

First,-From the use of the magnetic meridian, an obviously uneuitable basis, constantly changing, subject to local and secular variations, governed by laws so inscrutable that no rules can bo laid down to regulate the direction of future sirveys, so that even an approach to accuracy might be arrived at in putting together, in the form of a general map, the work of different surseyors, performed with different instruments, without adjustment to a gencma standard, and extending over a number of jears, during which no record has been kept of the eecular variation of the needle.
Secondly, -From the defective nature of the old surveys of leading fentures (chiefly rivers and ranges), which are taken, in the absence of any other dnta, as the busis of our county maps, while very few of them were made with a view to their application to such purpose, being, wore properly speaking, sketches rather than surveys, mado many years ago, at a time when only a rough approximation to the geogruphical character of the country was required, and when the ralue of the land was considered scarcely worth the cost of a good surver.
Thirdly,-From a practice which obtained anongst in number of surveyors, from twenty to thirty years since, while engaged in marking out large grants, where, instend of making the usual allowance for going up and down the hills, they contented themseives with giving what was called "good measure," or rather adding an extra link or so to the chuin, and making the measurement therewith, without any other allowance. Such a system, it need searecly be added, has given rise to errors that can neither be corrected nor amended by any means short of resurvey.
The general maps bcing compilations of the surreys, old and new, put together as the skiil and tact of the compiler may suggest, are, from the reasons already detailed, always subject to discrepancies and overlappings when newer and more roliable work comes to be applied to them; so that after an existence of perhaps seven or eight years as an office record, the map becomes obsolete, and a new compilation is commenced, based upon such more reliable work.

Furthermore, as the efficiency of the mups depends so entirely upon the skill of the draftemen who compile them, instead of upon the accuracy of the data from which they are to be compiled, it is found unaroidable to employ many of the most skilful officers in the capacity of compiling draftsmen, very much to the detriment of the ordinary conduct of the office.

Sufficient has been said to show how little satisfaction can be expected from the present system, under which reliable maps can only be obtained after the whole of the land bas been alienated, or at least measured; in fact, reversing the order in which they should come before the public, who are more interested in learning what lond there may be still for sale than what has been sold.

How it happens that, after an experience of sixty yoars, the surveys of this Colony are foind to be in such an etate, or why, in all this time, they have ncrer advanced a step beyond the method of measuring out land adopted by James Meelan, the first Colonial Surreyor, nt a period when neither the requirements of the Colony called for nor its resources admilited of a better system, is not for me to inquire into; but it is sufficient to say, that erery other British Colony of one-fourth of the imporfance of New South Wales has adopted either one or other of the great modern improvements in surveyinggeodetic or trigonometric.

Considerable progress having been made during the last seven or cight years in one or both of the abore systems in Victoria, I was induced to apply for and obtained authority to visit Melbourne, in conjunction with my visit to the Southern Districts, and to endcavour, from personal examination, to form an opinion of their merits and applicability to the wanta of this Colony, as well as to judge of many other improvements in the methods of dealing with the public lands, said to bo far in advance of the ajstem pursued in this Colony.

Before quitting this very unpleasnnt task of pointing out defects in the conduct of the department in which $I$ have adranced so successfully, I do most earnestly protest against the continuance of the system now in usc-a system not only most unsatisfactory in its present state, both to the public und to those immediately concerned therein, but one which tends vnstly to increase and multiply the labours of the department. Dach year that passes by bears not only its own share of desultory labour, and adds to tho number of obsolete maps, but increases by its quota the nmount of compilation to be done over and over again each time the maps have to be rccompiled. Some of the county maps have now becn so reconstructed four timacs, having thus cost ulmost ns much as a triangulation of the aren, and the production of a map the accuracy of which could not be impeached, and which might have been produced in great numbers at a small advance upon the cost of engraving and printing.

Taking ndrantage of the permission granted to me by Mr. Secretary Wilson to risit the Colony of Victoria, I arrived in Melbourne on the 11th July, and waited upon the Ministers for laands and Works, and was by them introduced to the executive officers of their departments, through whose kindness I. was, during the following week, without, I hope, trespassing too much upon their time, made acquainted with those subjects by my inquiries upon which I considered the Survey Department of this Colony might possibly be most bencited. These were, in the first place, turned to the trigonometric and geodetic surreys, and to the esstem through which these operations of $n$ highly scientific character are brought into practical usc ; and I found thati the trinagulation had advanced so far as to divide those portions of the territory in which the physical features of the country would admit of it (amounting io about two-thirds of the Colony) into triangles, the sides of which vary from twenty to sixty miles in length; and in those localities in which surveys and alienation are being most actively pressed (perhaps one-fourth of the Colonr) these primary triangles are again split, up into others, becoming smaller and smaller, until a net-work of fixed points, sufficient in number to check the accuracy of the most detailed survey, is thrown over it.

The geodetio survey is based upon the triangulation, and although conducted upon the most 'thoroughly acientific principles, is an operation of a more practical character, its object being to trace out upon the actual surfnee of the groned, the boundaries of the areas to be subdivided by contrnct, thus confining the usual incongruities of ordinary practical survey within fixed and known limits.

Up to the present time the sum of $£ 35,000$ appears to have been about the cost of this triangulation, including so much of the commencement of the geodetic survey as was, unavoidably, without practical result. This expenditure has extended through a period of five or six years, and in consequence of the heavy expenditure incurred during the early part of it, in clearing hills and mensuring the base line, I cunnot but think that a more judicious selection could have bcen made in the position chosen for the commencement of the work. Taking it as a whole, howerer, the amount is not great, when weighed against the permanent advantages resulting from a system of measurement monder which all perceptible error in survey can be eliminated. Economically it will be for a few ycars before any direct saving will result, although land is being brought forwardfor alle under this system at half the cost of the scattered mensurements unaroidable in New South Wales.

The computations, and also the supervision of the surver partics carrying on the triangulation and laying out the geodetic lines, are under the dircction of the Colonial Astronomer, the duties of the Survey Department commencing only with the measurement of the land for salc.

The geological survey of Victoria has been undertaken principally to identify and establish the areas in which gold and valuable minerals may be sought, and to place before the public the result in a practical form. To do this it was neceesary that the boundaries of cach space occupied by a different geological formation should be traced on the ground, and shown upor maps varying in scale according to the importance of the formation under consideration, the amount of survey and detail varying accordingly.

Next in importance comes photo-lithography, which is principally used in reducing and printing the plans of large areas which have been subdivided by contract, its great adrantage being rapidity of production, in example of which I was informed that as many as $4 \overline{7} 0$ separate plans were, on one occasion, reduced and completed ready for printing off the stone, in the short space of six weoks, by the photographer and one assistant.

I also found that engraving on metal, and printing from its impression transferred to stone, was employed where large issues of maps were required.

With reference to the operation termed in this office "charting," and to the compilation of new maps-a subject which has engaged much of our attention lately, with a view to overcoming arrears, and devising some system by which the greatly increasing labour of compiling may be reduced-I may state that I was unable to derive any information or suggestion of value from the practice of Victoria; the system of eurrey by triangulation and geodetically tracing out upon the ground the boundaries of areas to be subdivided, having practically done away with futare compilation as soon as the first map is made; and charting (after the position of large blocks of measurcments had been accurately determined by geodetic survey) is merely an operation of reducing and transferring from one map to another on a smaller senle.

The same almost may bo said of the preparation of deeds, under a system of division of large areas into parishes, sections, and portions for alienation, the whole of which arc marked out at the same time, and the relative positions of which are so well known, that the deed has hittle to do beyond expressing the fact thatio title is given to a certain portion of land, not to be mistaken for any other, through the fact of there being no other portion to which the same number or numbers of conterminous portions could possibly apply.

The practice of preparation of deeds is very simple and inexpensive. A blank form of deed being filled up from the plan complete, as a draft, and carefully examined, a copy on parchment deed form is then made, from which a second copy is prepared (one being for delivery and the other for record) by a second person, so that the socond copy and draft only have to be compared, unless errors ure detected. The draft copr is then filed away for record in the Survey Office. The cost of engrossing is eight-pence each. The drawing of diagrans on deeds is simplified in the same manner, as no connections or names of adjoining proprietors have to be shewn, all that is required being caro and aecuracy in entering the distances (no bearings are used) the numbers of adjoining portions, and the north point. Dnder such a complete system of survey only could so simple a method be adopted. The cost of such diagrams is only five-pence eacla.

The duties of the Surveyor General are almost exclusively of a professional chameter; and, as a matter of economy, I think his lnbours are well bestowed in thus attending so entirely to the supervision of the numerots staff of officers under his direction. The administrative duties of the department are performed by the Assistant. Commissioner of Lands and Survey, who is also an officer of the Survey Department.

There aro eleven district surveyors, assisted in their offices by an equal number of draftemen, the daties of which officers are to see that surveys (coulract or otherwise) are properly performed, and that the plans sent in are sufficiently complete to allow of their being at once photographed for printing when received in Melbourne; any further errors which may bo discovered in the final examination (in Melbourne) being corrected upon the stone after the transfer of the photograph.

The roads of all classes are under the control of the Commissioner for Roads, being thus entirely distiuct from the Survey Departuent. In Victoria the ronds may be readily managed thus, becanse the surseys are mueh more recent than in New South Wales, and lave been carried out with atrict regard to the probable future requirements of the country in roads; whereas, in this Colony, three-fourths of the alienated land had passed from the Crown in the early duys of the Colony, before steps were taken to anticipate this want.

Before quitting the subject of my investigation into the system of survey adopted in Victoria, I must testify to the courtesy und kindness of the heads of the Survey, Mining, and Geological Departments of that Colony, and that of their oflicers with whom I was in communication,-all those gentlemen having crinced a desire to give me the fullest insight I could require into the working of their respective branches, and haring taken pleasure in pointing out means for my obtaining much valuable information, which I conld not otherwise have obtained.

The superiority of the system adopted in Victoria, compared to that in use in this Colony, is most strikingly exemplified in the wonderful expansion to which it has proved equal in all its parts. Any other system than this combiantion of triangulation and geodetic survey must have broken down, and probably utterly failed in production, under the amount of pressure that has been put upon the depurtment by the land legislation of the last few years, during which it has been called upou to bring forward for sule or lease more land than had been previously alienated since the commencement of the Colony. This expansive power is entirely duc to the perfection of the whole arrangements, from the triangulation dome to photo-lithography and the preparation of deeds; nll the operations and details of the system dovetail, as it were, into cach other, and promote its main objects-accurncy and despatch; the arrangements of each brauch being designed to meet, by additional assistance (of ordinary character only, or of picee-work), any amount of pressure that may be brought upon it. Again, all measurements zuade under triangulation can be placed geographically in their true position by means begond dispute; and the maps prepared from such data may be engrnved at once, published, and distributed without any foar that future measurements may detect errora which had proviously escaped notice, and this at a cost little exceeding that of the engraving, paper, and printing.

Having, in the commencement of this papor, pointed out the most prominent evils resulting from want of proper system in the conduct of our surveys in New South. Wales, and having now shewn the corresponding advantages which are derived in Victoria from the opposite course adopted there, it now remains to be shewn how far any of these advantages may be applicable to the surveys of this Colony.

It is beyond a doubt that a generul triangulation, similar to that: of Victoria (but omitting the geodetic survey), would be the most effectual remedy for past shortcomings, and the most perfect safeguard against a future recurrence of the evils complained of; and although its cost, in the first instance, would be heary (not less than $£ 10,000$ per annum for a period of fifteen or twenty years), still the outlay would be repaid in time, tlirough the increased facilities that would be given to the alicantion of land, and, on that account, the oxpense might perhaps be fairly met by loan.

A great work like this should not, however, be set on foot without means being taken to ensure the provision for the whole or greater part of the necessary expenditure, as required; becnuse a stoppage in the work while in progreas would involve noti only a loss of all that had been done in it, but also of the current work of the Survey Department, which, from the commencernent of the new system, would have to be conducted on a different principle, in anticipation of the triangulation.

Beyond the expense and delay of a general triangulation it would be necessary for the Surreyor General, or the officer who would be held responsible to the Covernment for the conduct of the worl, to procced to England, for the selection of two officers capable (from precious employment in triangulation) of being entrusted with the principal field and office work (past expericnce in the selection of twelve surveyors in 1855 pointing to the uncertainty of the result of eelection, cvon when made by officers of the greatest Europenn experience, in choosing persona suitable to the requirements of this Colony); also it must be borne in mind that the cost of a triangulation of New South Wales would exceed by four times that of 交ictoria, as the difliculties and expenses increase in a greater ratio than the area to be surveyed. If, however, in consequence of the delay and expense of a general triangulation it should be determined to take somo remedial steps only, short of such triangulation, in order that the system of engruved parish maps might bo adopted at once, I would confine myself to recommendations more within the present means of this Colony, and propose to adopt the following modifed system of trigonometric surver.

I would propose commencing with four of the counties, the maps of which are in the worst state of confusion, and to measure a basc in cach, with just sufficient accuracy to enable a triangulation to be extended over its aren, fixing points thereby, whenever practicable (two miles apart, or thereabouts) ; and during the progress of this preliminary work, the survey of parish boundaries could also be carried out in direct connection with the trinngulation. This done, we should have the outline of parigh maps accurately determined, and the meuns at hand of checking the accuracy of all measurements wade within their boundaries, either past or in anticipation; and consequently, all diffieulty removed to the production of maps (indisputably correct), upon any scale and in any numbers that might be found most suitable to the public convenience.

The principle of kecping up parisl mape, on a harge scale, for general use, is not now, and was ndrocated by Mr. J. S. Adam, in his eridence to the Board of Inquiry, instituted by Mr. Secretary Wilson to inquire into this department, as one which would be most satiffactory to the public; but its adoption, without triangulation, was not recommended, owing to the impossibility of joining them together afterwards into county maps. For example, the surveys of Cumberland are so compiled (and most useful maps they have proved to be), but it las been found wholly impossible to join them; and from this cause, and no other, the Colony has ramained to the present day without a map of its most important countr, and must probubly remain so until a trigonometric survey of it is carried out. Tbe cost of a recomnilation of the county with the necessary new survey would equal the cost of a triungulation.

To carry ont the eystom now recommended, and to cnable the department, by proceeding with four counties at a time, at once to grapple vigorously with its present dificulties, would inrolve an increase to the present establishment, as shown on the Schedule marked $\Lambda_{\text {ppendix " }}$ " " to this paper.

This increased expenditure to the already cnormous cost of the Survey Department will occupy some years in the production of positirely economic results in the reduction of the present, alienation stafi of the department, but will soon prove a eouree of satisfaction to the public, whewever cheap and accurate maps can be abundantly produced; not only from that fact itself, but from the saving of labour in the office which is now deroted to the ahost hopeloss task of compiling mapz (which will in time become obsolete), and which might then be directed to current work now so much in arrear, and therefore productive of so much dissatisfaction.

Of the geological surrey, the advantages gained in Victoria have been great, in directing mining enterprise to the localities in which it could be most adrantagcously enployed; and of its appreciation by the mining commumity, forming a large section of the Victorian public, I can bear testimony; but I fear that the cost (which in Victoria appears to have been from $£ 50,000$ to $\mathbb{x}^{6} 60,000$ ) would debar its adoption in this Colopy in any such extensive or complete form. A grent deal, however, might be attained-perhaps sufficient for present requirements-if the labours of the Reverend W. B. Clarke could be reduced to a practical form, accompanied by illustrations and maps gcologically coloured. These labours appear to embrace an examination of all the principal geological features of the Colony, made at different times, throughout the period of lis residence; and if the work is as complete as I have every reason to belicve it to be, it could not be replaced by geological survey costing less than $£ 10,000$ or $£ 15,000$.

The time and means at the disposal of the reverend gentleman are wholly inadequate to utilize the information collected by him; and nothing short of his whole time for two or three years devoted to it will prevent the lapse of these valuable labours, which have cost the country some $£ 5,000$, an nmount, however, which falls short of thcir value (if such can be fairly estimated) ; and these data, if made arailable in the form recommended, would considerably reduce the necessity for services of a like character in future, and would for the present stand in the stend of a geological surrey.

It is a matter of regret that so little geological knowledge is to be found amonget the surveyors in this department, especialiy those who hare been educated in the Colony; and now that the principle of trnining our future cuployés has become cstablished it would be a matter of great moment if the means of obtaining some knowledge of this science were available to the juniors during their probation in this office, in the shape of an instructive collection of minerals and fossils, and books of reference and instruction. In the crent of a triangulatiou being carried out, a certain amount of geological knowledge might be insisted upon, sufficient to cnable them to observe festures and collect characteristic specimens, from which a skilful geologist, could point out the formation of the country so examined.

Photo-lithography is so little adspted to the method of survey at present in use that thero would not be employment enough to warrant its introduction at present for the Survey Department alone; but in connection with the Department of Public Works and the Government Printing Establishment, I feel conrinced that a considerable saving might be effected by its introduction. The cost of apparatus and chemicals would be about $£ 200$ or $£ 300$, and a bujlding wibl the necessary light, \&c., would probably cost $£ 500$. The subsequent expense of carrying it on would be very trifling. Engraving on metal, for the same reason, cannot be brought into general use, but there is employment for an engraver, and it is recommended that an engagement should be cutered into with a suitable person.

I submit the result of my inquiries in reference to the preparation of deeds, withont any recommendation as that is a branch of the department with which I have so little to do, that I feel diffident in offering an opinion.

Before closing this paper, I cannot but remark on the manifest advantages resulting in Victoria from the separation of the professional and udministrative duties; the former being contered in the Surveyor General, nnd the latter in the Assistant Commissioner for Lands. In this department the professional oversight does not form the principal duty of cither the Surveyor General or myself; and in consequence of the amount of administrative duties falling upon each of us it is only to be expected that the action in many cases is not so prompt or complete as it wonld be if the duty devolved upon one alone.

I have, de.,
P. F. ADAMS,

Deputy Surreyor General.

## APPENDIX A.

## Somedtie.

[Io Evidence given by P. F. Adams, Esq., Surveyor General, 15 July, 1872.]
SURVEYOR GENERAL'S DEPARTMENT.

## (A 3.)

Decision on "Grangle " Case.-65/20320:
I oannor think that so large a claim for frontage should be allowed to purchasers by pre-emptive right. The interpretation of the Act alluded to by the Depaty Surveyor General, was going quito far enough in favour of the lesseholder. There will be no objection to sllow him to amend his applications and apply for the usual quantite of land in such cases allowed, but it must be taken having some reasonable regard to a proper proportion of back land to frontage.

JOHN ROBERTSON.

## REPORT of Deputy Surveyor General upon the application of representatives of the late Thomas Parnell to purchase under

 pre-emptive right, in virtue of Tulcumbah Run, District of Liverpool Plains.Applicatron was made in 1862 for three portions of 160 acres each, , on the above run, the arca of which is about 112 squarc miles, conferring a pre-ernptive right to four portions of 640 acres each, and one of 307 acres.

The descriptions furnished by the applicants are too vague to determine, previously to the issue of instructions to surrey, whether or not some of these portions may be upon the ame block of twenty-five square milos. It is therefore suggested, in order to carry out the provisions of the Act, without incurring the expense and delay of repeated reference to the surveyor, that he should be instructed to submit to the lessees, for their approval (in writing), an approximate subdivision of the run (or tracing thereof furnished to him by this department), such as he may consider most desirable. In such subdivision each of tho three 160 acres, if their position shall be auch as to allow of thoir alienation, muist be situated in a separate block of twenty-five square miles. Such course would prevent the possibility of any disputes in "tho erent of the present or futuro occupante claiming an extension of their "pre-cmptive right in virtue of any other imaginary subdivision of the run, and would in this and similar cases strictly carry out the provisions of the "Crown Lands Alienation Act of 1861."
(For the Surveyor General)
P. F. ADAMS,

30th August.
Let this be seen, in the first instance, by the Chief Commissioner of Crown Lands.-M.F., B.C., 1st Scptember.

I alwars foresam the utmost diffoulty in giving effect to tho limitation of the pre-emptive right provided for in the present Act, which renders it nccossary that a subdivision of every holding should be agreed upon, for tho purpose of determining in what position the pre-emptive selection to the extent of one square mile out of every twenty-fire should be permitted.

The suggestion of the Deputy Surveyor Gencral will not meet the difficulty, as comparatively few of the runs in the Colony boing surveyed, it will, in the great majority of cases, be impossible for the Surrey Department to furnish sith a tracing of the run, on which he could frame a project of subdivision into blocks of twenty- ine square miles.

The precise contents and shape of most of the runs in respect to which the question is likely to arise are hardly known, even to the occupants, with sufficient certainty for a scheme of division to be framed which would at once meot the views of the claimant at the time, and preclude any subsequent applications of himself or his successors inconsistent with it, It must be borne in mind that the clause in question does not give the pre-emptive right, but limits that right as previously and still existing under the Orders in Council and the contracts thereunder (which are under the Constitution inviolable); in so far, therefore, as the limitation is not effectual, the right remains as before.

I do not see how it would be practicablefor the Government, much less any of its subordinate officers, to enforce upon the lossee of a run any particular mode of subdivision. The most that can be done in the mattor will be, as it seems to me, to require applicants to be prepared to supply the surveyor with a project of subdivision, on his proceeding to make the survey, which could, if in accordance with the Act, be adonted in dealing with the applications under measurement, and referred to in case of subsequent applications baing made. In effect,', I think the difficulty may be got over by throwing upon the claimants the necessity of making their claims in such a shape as that the law will admit of their being complied 'with, and, though this course is not free from objections, in no other way.

It may have been the intention of the Legislature merely that the purchases out of a run should have the proportion of not moro than one twenty-fifth of its total area, irrespective of situation, but I do not think the wording of the clause 7 of the Alionation Act as passed, will admit of such an interpretation being acted upon. The words are-"One portion and no more, sic., out of each block of twenty-fire squarc miles," and I do not see how the expression "out of" can be made to signify in proportion to whatever the intention may have been.
A.O.M.
B.C., 19 Jan., 1865.

Or the two proposals, I think that of the Deputy Surveyor Goneral is the more practicable, but I think that either of thern would be attended with endless routine and correspondence, and would be ultimately unsatisfactory.

I have a strong impression that what was intended by the Act was to declare that the pre-emptive purchase right might osed to the 640 acros in proportion to each block of twenty-five square miles, and I would urce the Government to cut the knot of the difficulty, by practically declaring that to be their interpretation of the law, and acting on it sccordingly. As, howerer, it is a matter of great moment, it may be only right to take legal advice.

No other interpretation that has occurred to me can be carried out in an intelligible form.
-
M.F., 27 Jan.

For my euccessor:-J.B.W., 30 Jan.

I have read and considered the minutes of the Under Secretary for Lands, the Chief Commissioner of Crown Lands, and the Deputy Surveyor General, and am disposed to think the difficulty intended to be dealt with will best be met by the sugrestion of Mr. Fitzpatrick, to the effect that in cases of this clnes, where the land is not taken up in blocks of twenty-five squarc miles, one portion, not exceeding 640 acros pre-omptive right, should be allowed for every twenty-five square miles of a run, without reference to blocks.

The regulations made immediately at the time of the passing of the Act would seem to indicate that a principle of that kind was intended.

No public inconvenience can arise from dealing with the matter in this way, for should land that ought not to be sold be applied for, the Surveyor Gencral has only to point out that such is the case, and the application could be refused

I note the statement of the Chief Commigsioner of Crown Lands-that he "always foresaw the utmost difficulty in giring effect to the limitation of the pre-emptive right provided for in the prosent Act." I feel sure Mr. Moriarty musti have intended to have limited his "always," so as not to go back to a period anterior to the paseing of the Act, for, as the difficulty only arises from the intention of its framer being insufficiently stated, I feel sure that Mr. Moriarty would, if he had foreseen it whilo yet in time to make the correction, have called attention to the matter.

The cases may go on in accordance with this decision.
JOHN ROBERISON.
Inform Surveyor General by letter, and then Chief Commissioner of Crown Lands.-M.F.
Decision in accordance with which pre. pur. cases have been acted on since February, 1866.

## Draft Instructions.

## Memo.

The Honomble the Minister for Lands has determined that the seventh section of the Alienation Act of 1861, and the regulations thereunder, shall bo read to rostrict pre-emptive right to one portion and no more out of every block of 25 square miles that tho run may contain, and that no measurement shall be made bcyond one portion of not exceeding 640 acres in each five miles of river frontage, or a proportional qunntity out of cach leaschold or portion of leasehold of less than that area.

Submitted for the approval of the Honorable the Minister for Lands.-(For the Surreyor General.)-P.F. Adays, 2 Feb.
Approyed, J.B.W.-2 Feb., 1866.

(Circular.)
Surveyor General's Office, Sydney, 5 October, 1863.
Sir,
Some misapprehension having arisen as to whether lands conditionnlly selected and forfeitcd under the Crown Lands Alienation Act are open to re-selection by second parties as conditional purchases, I have to inform you, in order that suoh desiring purchasers may be advised, that no such reselections can be entortained, as the lands will be brought to sale by auction without even their being again open to conditional purchase.
The Crown Lands Agent at
I have, \&c.

This circular was issued during the Ministry of Mr. Robertson, and aigned by the then Surveyor Gencral, or some person authorized by him ; but that the records do not show.-P.F.A.
(B1.)
[Ib Evidence given by W. W. Stephen, Esq., Under Secretary for Lands, 18 July, 1872.]
DEPARTMENT OF LANDS.
Under Secretary-W. W. Stephon. Chief Clerk-

Nors.-I cannot trace any decision, written by Mr. Secretary Wilson himself, as I was under the impression I could when replying to the question of the Chairman of the Committee; but the accompanying letter is suffcient evidence that the practice was changed under authority from him.-W.W.S., 24 July.
"The Under Secretary for Lands to The Surreyor General.
" Department of Lands,
"Sydnoy, March, 1866.
"Sir,
"In forwarding to you the enclosed copy of an opinion, given by the Honorablo the Attorney General, upon the question as to whether lands conditionally purchased and forfeited should be open to re-selection, or be sold by auction, I am directed by the Secretary for Lands to request that, in accordance with the decision already conveyed to you personally, you will cause a circular to be addressed without delay to the land agents, instructing them in accordance with such opinion.
"I have, \&c.,
"MICHI. FITZPATRICK.
" (Opinion.)
"I Hate perused all the papers sent hercrith, including the opinion of my predecessor, Mr. Attorney Gencral Darvall. The question raisod is one of considerable difficulty, but after full consideration of it I huve arrived at the conclusion that lands conditionally purchased, and subsequently duly declared forfeited by reason of their being abandoned by the purchasera, are not open to conditional purchase a seeond time, if the Government determine that such lands shall after their forfeiture be sold. By the 20th section of the Crown Lands Alienation Act it is enacted, that lands so forfcited may be sold at auction. If it were intended by the Iegislature to leare such lands, on their forfeiture, in the same position merely as other lands which had never been conditionally purchased, that object would havo been accomplished without the insertion of those words at all. It is a rule of law, in the interpretation of statutes, that effect must if possiblo be given to overy word in a statute, and cffect cannot be given to tho words at the end of the 20th section without holding them to mean that the forfeiture gires the Government the absolute power to sell by auction without hindrance from any quarter. Tho Government could not hiave such absolute power, if, in the interval between the declaration of forfeiture and the day appointed for the sale by auction, anyone could conditionally purchase the land about to be sold. Under these circumstances it appears to me, that although the Government may, if they think fit, permit lands once conditionally purchased and afterwards forfeited to be conditionally purchased again, they are not bound to do ao; and if they determine to sell the forfeited lands by auction, they cannot be prevented taking that course by anyone claiming the right to make a conditional purchase before the actual sale by auction. In all cases of forfeited conditional purchases it therefore, as it seems to me, rests in the discretion of the Government to determine whether the lands forfoited shall remain open to conditionnl purchase again or be sold by auction without permitting them to be subject any further to sucl conditional purchase. With reference to the contradictory circulars issued by the late Secretary for Lands, Mr. Robertson, of which Mr. Thomas complains, I am of opinion, apart altogether from the policy or propriety of the course taken by Mr. Robertson, that as it was quite competent to the Government to allow the lands in question to be conditionally purchased a second time any such conditional purchase mado after the second circular must be regarded as valid. In future in each casc of forfeiture the Government have, as alrendy stated, the power to determine whether the lands shall be sold by auction, and porhaps the policy of the Act would be most faithfully and satisfactorily carried out by the Government deciding in all cases of forfeiture that tho forfcited lands should be sold by auction, so as to withdraw from the Minister what might be regarded as a dangerous discretionary power.-J.ML., A.G., 24 February, 1866 ."
(B3.)
Pre-emptive purchases under the 7th clatse of the Crown Lands Alienation Act. Decision of the Minister for Lands (Mr. Robertson) in January, 1865.
I mafe read and considered the minutes of the Under Secretary for Lands, the Chicf Commissioner for Crown Lands, and the Deputy Survegor Gencral, and am disposed to think the difficulty intended to be dealt with will best be mot by the suggestion of Mr. Fitzpatrick, to the effect that in cases of this class, where the land is not talsen up in blocks of 25 square miles, one portion not exceeding 640 acres pre-emptive right should be allowed for every 25 square miles of a run without reference to blocks. The regulations made immedintely at the time of the passing of the Act would seem to indicate that a principle of that kind was intended. No public inconvenicnce can arise from dealing with the matter in this wny, for should land that ought not to be sold be applied for, the Surreyor General has only to point out that such is the case, and the application could bo refused. I note the statement of the Chief Commissioner for Crown Lands that he "alwars foresaw the utmost diffeulty in giving effect to the limitation of the pre-emptiro right provided for in the present Act." I feel suro that Mr. Moriarty must have intended to have limited his "always" so as not to go back to a period anterior to the passing of the Act, for as the difficulty only nrises from the intention of its framer being insufficiently stated, I feel sure that Mr. Moriarty would, if he had foreseen it, while get in time to make the correction, have called attention to the matter. The cases may go on in accordance with this decision.

JOHN ROBERTSON.
(B4.)
Pre-leases ıoithin prior pre-lease.
Extract from a decision given by Mr. Secretary Forster on 7 th September, 1869.
There appears to me no special reason why the new purchaser's right, which stands unon similar grounds to that of Barber, should be held superior or prevail against priority.--W.F.

A letter, in accordance with tlie abore decision, and approred by Mr. Forster, was written to Mr. Barber, as follows :-
" Department of Tands,
"Sydney, 13 Norember, 1869.

#### Abstract

"Sir, "With reference to your letter of the 7 th June last, protesting against certain selectors being allowed to take their pre-emptire leases, which they claim in right of their couditional purchases, out of the land leased to jou in right of your 1,700 acres near Yass, I am directed to inform you that as there does not appear to the Secretary for Lands to be any special reason why the new purchaser's right, which stands upon similne grounds to that of yours, should be held superior, no further subdivision of the land will be anthorized, and that therefore your leases will stand.

"M. FITZPATRICK."

## CHURCH AND SCHOOL LANDS.

## No. 1.

Captaly Dune to Mr. W. Newcoambe.
Paterson River, Woodville, 4 October, 1870.
Sir,
Being desirous of purchasing 130 acres of lot No. 6, Church and School land leased by me, containing my homestead (without competition), I have addressed an application to the Surveyor General maclosod. in compliance with the provisions of the "Crown Lands Alienation Act of 1861 ," under which the lessees of Church and School lauds are now permitted, I believe, to purchase their improved lands, and would feel obliged by your forwarding the application to the Surveyor General, which I cuclose, should it be in proper form, of which do me the favor to lei me know.

> I have, \&c.,

Lessee of lot No. 6, 1,220 acres,
county Durham, parish Butterwick.

Mr. District Surveyor Hendersou is requested to report on the value of the improvemente, and to state whether ho considers it advisalle to subdivide the whole or any portion of this land.-Robt. D. Firzeerali) (for Surveyor General), 25 October, 1870.

May now be returned to Mr. District Surveyor Henderson for bis early report.-R. D. Firzoeralid (f̛or Surveyor General), 13 December, 1870.
[Enclosure to No. 1.]
Application for the purchase of improved Church and Sthool Lands.
Paterson River, Woodrille, 4. October, 1870.

Sir,
Having erected the improvements detailed below, and which 1 estimate to be worth $£ 270$, I havo the honor to apply that I may be permitted to purchase, without competition, under the provisions of the "Crown Lands Alienation Act of 1861," the Church and School lands on which they stand, and which are described hereunder.

The improvenents roferred to are in my posecssion.
The Surveyor Gencral, Sydney.
I bave, \&c.,
J. H. DUNN.

Description of Land:-
One hundred and thirty aeres, being portion of lot. No. 6, Church and School land, comnty of Durham, parish of Butherwick, which I lease.

The 130 acres I desire to purchase is bounded on the north by Powell's land, on the west by the Yaterson River, on the sonth by A. Drycre lot and a lagoon, and on the east by portion of lot No. 6.
J. H. DUNN.

## No. 2.

## REPORT.

The 2,256 acres Church and School cstate, in the parish of Wolfingham, in the county of Durham, leased to Beresford Hudson, whose lease expires on the 13th of June, 1871:-
Contaras little arable land; not more than 20 acres on the river-side is now available. However, as specifleation grazing land it is better than tho average of the neighbourhood. It is very mountainous and well herewith. timbered. It is scarcely probable that an average price of $£ 1$ per acre will be obtained, but sufficient of it will probably be sold to jusify its subdivision for sale.

21 March, 1871.
P. Hf. HENDERSON,

District Surveyor.

Mr. Licensed Surveyor Haughton is requested to tender for this subdivision.-Robr. D. Firz. aeralid (for Surveyor General), 29 March, 1871.
[Enclosure to No. 2.]
Spectriontrox for subdivision of the Charch und School estate of 2,256 acres of land, in the parish of Wolfingham, in the county of Durham, leased to Beresford Hudson to 13th Jume, 1871 :-
A roas is to be reserved along tho river, being the river-side road to West Mnitland through this land. Also, a road to the bost fording-place of the River Hunter, and a road northerly up the mountains from the river-side road to Mungbung.

The land to be divided into grazing portions according to quality, to average 200 acres, except from the river half a mile back, which may be divided into portions, to arerage about 80 acres.

21 March, 1871.
P. H. HENDERSON,

District Surreyor.

## No. 3.

Repont on 9000 acres Church and School estate, in the parish of Middlehope, county of Durham, leased to Timothy Nowlan to 30th September, 1870; renewed for a year.
Truss cstate consists entircly of grazing land of less than arcrage goodness. The part poar the Paterson River derives valuc from its having water-frontage and its procimity to settlement, and is worth more than $£ 1$ per acre ; the rest will probably, owing to its position, realize $£ 1$ per acre. It is well timbered, suficiently watered, stony (sandstone rock) and poor. I. enclose a specification for its subdivision.
P. H. HENDERSON,

21 March, 1871.
District Surreyor.
Mr. Licensed Surveyor Haughton is requested to tender for this subdivision--Rowr. D. Fit\%geball (for Surveyor General), 29 March, 1871.
[Enclosure to No. 3.]
Srecrficamon lor subdivision of the Church and School estate of 950 acres, in the parish of Middlehope, in the county of Durham, leased to Timothy Nowlau :-
The land west of the road to the Paterson township from Maitland to be dirided into four portions, haring equal frontages to tho west side of that road by lines running from it westerly.

The land east of that road to be divided thus :-A road I chain wide to be reserved westerly from the eite of the ancient punt crossing-place of the Paterson River, along the south boundary of Swam's 175 acres to the south-west corner of that land, and thence westerly (a little north of west to keep on good ground) to thic Paterson Road. Also, a roserve for water-ing-place of with the road 5 chaing frontage to the river at the crossing-piace, extending back westerly from the river about 10 chains to the site of the old road, and incinding the lock-up site.

The land sonth of this road to be divided into three portions, having about equal frontages to the rood and the river.
The land north of the rescrved road, and bounded on the eust by Swann's land, and on the west by the Paterson Lioad, to be designed so as to make a reserve for a watering-place at the lagoon, a small camping-place on the road adjacent thereto, and about ton country tradesmen's lols.

21 March, 1871.
P. H. HENDERSON,

District Surver.

## No. 4.

Report oin Church and School estate in the parish of Middlehope, in the county of Durham, containing about 500 acres, part leased to Felix Wilson to 31 st Mirch, 1871, and part formerly to John Robson, whose lease bas cxpired.
Thes land is almost all grazing land, of medium quality. Small patches near the river might be cultivated, but they are of insignificant extent. The land fronting to the river is of value on account of
24. March, 1871.

## ?. H. HENDERSON, <br> District Surveyor.

Mr. Hanghton is requested to measure according to the enclosed tracing, and charge at the same rate as the tender made for the adjoining survey.-Robt. D. Tirzamald (for the Surveyor General), 11 April, 1871.
[Wheloswe to No. 4.]
Spectificatiox for the subdivision of the Chureh and School estate, about 500 aceres, in the parish of Middlehope, in the countr of Durham :-
Trus land to be subdivided, using the lines by which it was formerly leasel, but further subdividing by making the Paterson Road a division line. So that there will be eight portions-four on enell side of the roard, having about equal frontage to it ; those on the east side of the road, fronting also on the river, and on the west ruming back to the V.R. (now sold). Access miest be left to the lands in the V.R. by a road, from the Paterion Road, desigued to lead into the road reserved in the subdirision of the Y.IV.

24 March, 1871.
P. II. HENDERSON,

District Surreyor.
Mr. Nowlan applied to have the road suggested by Mr. Henderen to :m :long the cast boundary of the V.R. left out, and the Surreyor General approved of Mr. Nowlan's application.

No. 5.

## Mr. John MrPhie to The Sulveyor General.

> Iona, Butterwick, 24 Marci, 1871.
$S_{i r}$,
I havo the honor to apply for the sale by auction of lot 7 of the lands known as Church and Form of AppliSchool Lands, now occupied by me at this place.

As I am placed at great inconrenience from the uncertainty of my present tenure, I desire that the sule should take place with as little delay as possible.

## 1 am, \&c. <br> JOHN M‘PHIE.

It is recommended that Mr. District Surveyor Henderson be instructed to report, and applicant informed of the action taken.-Robert D. Hirzaerald (for Surveyor General), 10 April, 1871.

Approved.-J.B.W., 17 April.
Mr. J. MPhie was informed, in accordance with above minute, on the 19 th $A_{1}$ pril, 1871 , in reply to above letter.
[Enclosure to No. 5.]

Sir,
Having orected the improvements detaided below, and which I estinate to be worth Le5to, I hove the honor to apply that I may be permitted to purchase, without competition, under the provisions of the "Crown Lands Alienation Act of 1861 ," the Crown lands on which they stancl, and which are described hereunder.

The improvements referred to are now in my possession.
The Surveyor General.
1 have, \&c.,
JOHN MCPHIE.
Dwolling-Lousc, barn, dairy, outhouse, fencing.
Description of Land :-
County of Durham, parish of Butterwick: Lot 7, Church and School lands, on the left bank of the Paterson River, contnining 1,140 acres, one-half of which, from east to west, on the south line of fence, is the part I desiro to purchase.

Mr. Newcombe,-Has Mr. MPlie paid up all rents due?-C. B. 1 B'GG, 8 November, 1870.
Mr. M'Phie's rent is paid up to 8 November, 1870.-W.N.
The Under Secretary for Lands, T.C., 16 November, 1870.
Mr. District Surveror Henderson is requested to report on this application.-R. D. FitzGebaid (for Surveyor General), 22 Norember, 1870.

No. 6.
Memo. of Surveyor General.
In the re-survoy of portions 1 to 4 of the Church and School estate, in the parish of Middlehope, county of Durham, Mr. Licensed Surveyor Haughton is requested to extend the north and south boundaries of the aforesaid portions from the Paterson River back to the east boundary of the Fillage Reserve now subdivided, and not to reserve the 1-chain roaid along tho above-mentioned east boundary, as suggested by Mr. District Surveyor Henderson. He is also requested to divide the land situated between the rond leading from Maitland to Paterson and the Fillage Reservo into two portions, and to obliterate the lines Apparato marked $\times \times \times \times$ thus on the anmexed tracing. $\times$

> P.T. ADAMS.
> \& May.

## No. 7.

Mr. F'. Rexnolds to The sechetaliz for Lisnis.
Tocal, Paterson,
22 May, 1871.
Sir:
I havo the honor to request that that portion of the Church and sciooilauds in the parish of Butterwick, Paterson River, known as lot 6 , and occupied as lessee by Captain Dunn, may be at once subdivided and offored for sale by public auction as soon as the lease expires.

> Fours, \&c.,
T. REYNOLDS.

No. 8.
Mr. Lifeisied Surveyor Hiaughton to Tee Surveyor General.
East Maitland, 27 May, 1871.
Sin, honor to transmply to your B. of en in the county of Jurham, measured for sale in May, 187.1.

These portions are numbered from 1 to 23 inclusive, the areas being as follows:-81a. 1r. 16p.,

 Ir. 18p., 8a. 1r. 16p., 8a. 2r. 32p., 9a. 1r. 21p., 10a. Or. 6p., 10a. 2r. 12p., 10a. 3r. 39p.

Portions 1 to 4 , and 11 to 23 inclusive, are undulating open forest land, richly grassed. Portions 5 to 10 inclusive are undulating open forest land, well grassed, but, without permanent water.

Either of the portions 21, 22, or 23 , can be rescrved as a watcring-place and camping-place, as suggested by Mr. District Surveyor Henderson, if considered advisable.

I have, \&e.,
J. B. HAUGHION,

Licensed Surreyor.

## No. 9.

Reporr on J. H. Dunn's application for pre-emptive purchase, Church and School lands, county of Durham, parish of Butterwick:-
The cottage, valued at $£ 150$, and the barn at $£ 30$, are the only ones of the improvements for which Mr. Dunn applies for a right of pre-emption, for which under any circumstances $l$ should consider such indulgence might be granted ; but under present circumstances do not think the whole of such a character as should entitle the lessee to compliance with his application.

For the improvements are the remains of buildings erected solely for the purpose of occupsing and working the land profitably during the currency of the lease, aud are only such as I should expect to find on the land at the termination of the lease.
P. H. HENDERSON,

District Surveyor,
1.6 June, 1871.

No. 10.
Repont on the Church and School estate of 1,220 acres in the parish of Butterwick, county of Durham, lately leased to John H. Dunn :-
Thrs estate consists of about 200 acres of land, which should realize an average price of $£ 4$ per acre if sold by itself, some of it being allovial land of the best quality. The rest of the estate is grazing land of average medium quality; some, perhaps half of it, might be sold scparated from the alluvial land at $£ .1$ per acre.

If the estate could be divided so as to make each portion of it contain some allurial land, with its fair proportion of grazing land, without the portions being of such a form as to make fencing extravagantly expensive, the land would probably all be sold, and realize an average price of $£ 1$ per acre. But the form of the estate renders this impossible.

Otherwiso, the rich land might be cut up so as to induce keen competition for the most desirable portions, and sold so as to realize so much that the residue which would be great might be offered at such a reduced price as would ensure its ready sale, and realize au average price of £l per acre on the whole. But this would not be in my opinion a desirable way of dealing with the land at present.

But the best way of disposing of the estate would be to offer all of it in one block for sale at $£ 1$ per acre, at which price I have reason to believe it would be purchased, and thus at less expense realize more than by any other means. Should this fail, the estate may afterwards be subdivided.

When offered for sale, roads of access from the road from Woodville to Paterson should be reserved to Powell's 100 acres, Dwyer's 60 acres, and Morgan's 25 acres.

## P. H. HENDERSON,

District Surveyor,
17 June, 1871.

After full consideration and inquiry $I$ am compelled to admit that the sale of the 1,200 acres in one block will be the most advantageous to the estate; the design however is submitted for the consideration of the Honorable the Minister for Lands.-P.F.A., 24 June.

Surveyor General,-Would this land not sell if divided by an east and west line from Dwyer's north-east corner, as I am of opinion 1,220 is too large a block ?-J.B.W., 2 July.

Mr. D. S. Henderson, for further report.-P.P.A., 4 July.
See my B.C. of 14th July, No. 21.-P. H. Hzanderson, District Surveyor.

## [Enclosures.]

James Powell, 100 acres. • Date of grant, 30 th June, 1823.
Bounded on the north by Dum's farm, bearing east 50 chains 50 links; on the enst by a line bearing south 20 chains; on the wouth by a line bearing west to Pateraon River; and on the west by Paterson River.

William Montague Manning, 60 aeres. Granted $2 \boldsymbol{\pi}$ th December, 1845.
Bounded on the south by a line east 33 chains; on the east by a line north $19^{\circ}$ chains 50 links; on the north by a line bearing west to Paterson River; and on the west by that river,-being the land promised to the late Anthony Dwyer, on or before the 16th June, 1823, and advertised as Iot No. 7 in the Govermment notice dated 10th Februarr, 1840.

James Cohen, 92 acres. Granted 31st October, 1843.
Commencing at the wostern extreme of the south boundary-line of Addison's 50 -acres occupancy, and bouuded on the north by that boundury-line, bearing east 24 chains, and a continued cast line of 6 chains; on the east by a eouth line of 38 chains and 40 links, dividing it from cluureh property; on the south by a west line of 20 chains and 75 links to the Paterson River; and on the west by that river upwurds to the western extreme of the south boundary. line of Addison's occupancy aforesaid,being the land originaliy located by R. Whitmore, and sold to James Coheu.

## B. Lee, 76 acres. Granted 19th August, 1843.

Bounded on the north by a line bearing east 35 chains; on the east by a line bearing south 25 chains; on the south by a line hearing west to the Paterson River; and on the west by that river.

## William Peagam Coleman, 25 acres. Granted 12th March, 1842.

Commencing at the western extrome of the south boundary of Anthony $D_{\text {wyer's }} 60$-ucre occupancy, and bounded on the north by 13 chains and 50 liuks of that boundary-line, bearing cast; on the enst byr line dividing it from Morgan's 25 acres, bearing south 20 chains and 50 links; on the south by a west line of 11 chains and 75 links to Puterson River; and on the west by that river upwards to the western extreme of the south boundary-line of A. Dwyer's oceupncy aforesaid, -bbeing the land originally ocempied by Thomas Addison, but now granted to the snid W. P. Coleman.

Alexnuder Livingstione, 25 acres. Granted 23 rd November, 1841.
Commencing at a point 13 chains and 20 links cast of the westorn extreme of the south boundary-line of A. Dwyer's 60 acres occupaney, and bounded on the north by 12 chains and 25 links of that boundary-line, bearing east; on the cast by 20 chains and 50 links of a line bearing south, dividing it from church property; on the south by 1.2 chains and 25 links of the north boundary-line of Whitmore's occupancy, bearing west; and on the west by a line bearing north 20 chains 50 links to the point above described,-being the land originnlly occupied by Thomans Addison, and now granted to the said Alerander Livingstone.

Dunn's lease of 1,220 acres, from Church and School estate. Granted 2nd Angust, 1850. No. 6 on plau.
Commencing at the oastern extreme of the north boundary-line of Powell's 100 acres grant, and bounded on part of the north by an cast line of 125 chains; on the west by a south line of 82 chains; on part of the south by a west line of 145 chains to land claizaed by Colen; on part of the west by the boundaries of land claimed by Cohen, bearing north 1 chain 75 links west 6 chains by the cast boundary of line of Morgan's 25 acres, benring north 20 chains 50 links by 9 ehains of the sonth boundary of line of Dryer's 60 acres bearing east, and by the east boundary-line of Dwyor's grant, bearing north 19 chains 50 links; on the residue of the south by the north boundary-line of Dwyer's grant, bearing west 24 chains 40 links to Paterson River; on part of the west by the Paterson River upwards to the western extremity of the south boundary-linc of Powell's grant ; on the residue of north by that boundary-line, bearing east 63 chains; nud on the residue of the west by the east boundary-line of Powell's grant, bearing north 20 chains to the enstern extremity of the north bomarary-line aforcsaid.

Jolm M•Phie, 1,140 acres. Lease from Church and School estate, dated 2nd August, 1848.
Commencing at the south extreme of the cast boundary-line of land clnimed by Lee as Binder's grant, and boundel on the weat by that line, bearing north 42 chains 22 links, and is continued nortll of 36 chains 50 links; on the north by an east line of 145 chains, dividing it from No. 6; on the east by a south line of 78.70 ; and on the south by a west line of 140 chains to the south extreme of the enst boundary-line of land claimed by thee.

## No. 11.

## Report on J. M'Phie's application.

The improvements in respect of which John MPhie applies to be allowed to exercise a pre-emptive right, are for the most part such as have been erected for the purpose profitably-the land during the currency of the lease; and are ouly such as should be expected to be found thereon at the expiration of the lease. But in addition to the buildings so erected, Mr. M'Phic has lately erected $\Omega$ new house, worth about $£ 150$, since he entertained the expectation of boing allowed a pro-emptive right on account of improvements.

The indulgence of pre-emptive right, if granted at all, appears to me to be intended for the relief of such as have during the currency of their leases, and before it was resolved to sell the Church and School estates, erected more valuable inprovements, in the expectation of renewing their leases, than they would otherwise hare crected, and not to enable a leaseholder to wrest land from the estate by the crection of improrements thereon.

Viering the matter in this light, I do not consider John MCPhie entitled to the indulgence he seeks, but recomnend that the whole of the land be offered for sale at auction.

## P. H. HENDERSON, <br> District Surveyor,

17 June, 1871.

Refont on the Church and School estate of 1,140 acres in the parish of Butterwich, county of Durham, lately leased to Joln MPhie.
Arowe the northern boundary this estate consists of grazing land of average medium quality. And along tho southern boundary are swamps, around which swanps is rich allurial soil. These swanps and
the arable lands in their vicinity are especially valuable in seasons of drought; in very wet seasons the land suffers from inundation. The estate is vell suited for subdivision, and may be divided so as to give in each portion a share of land fit for culture.

The whole should be readily sold and renlize more than $£ 1$ per acre.

P. H. HENDERSON, District Surveyor,<br>17 June, 1871.

Mr. Licensed Surveyor Haughton is requested to tender for this subdivision.--Robt. D. Fitzzerbath (for Surveror General), 18 July, 1871.

> [Encloswr in No. 12.]

Sprocification Sor subdivision of 1,140 acres of Church and School land, in the parish of Butierwick, country of Durham, lately leased to Johm MrPhic:-
A pontron of 5 acres, to include the Public School at Iona, to be measured in the south-west corner, with frontage to the Paterson Road. 2nd. A portion to be cnt off the eastern end of the estate, of sufficicnt area (probably about 400 acres) to include Mr. M'Phie's homestead. The rest of the land to be divided into seven portions, somewhat as shown on the tracing* hercrith.

A rond casterly will be required from the road from Woodville to Patcrson, to the rond from Paterson to Hinton, to gire access to the sereral portions, not necessarily along any old track but, wherever is most suitable.

The land is easy to survery.
P. H. HENDERSON,

District' Surreror.

No. 13.
Captann Duna to Tur Secretari for Jands.
Patorson River,
20 June, 1871.
Sir,
I have the honor to apply for the purchase of lot No. 6, Church and School estate, parish of Butterwick, county of Durham, 1,220 acres, now leased by me at the upset price, £1 per acre.

I have, dc.,
J. H. DUNN.

No. 14.
W. M. Arnotid, Esq., M.I_A., to The Secretary for Lands.

Sydney, 24 June, 1871.
Sir,
In reference to the intended sale of lot 6, Church and School lands, Butterwick, I desire to call your attention to the circumstance of the boundary-lines of my adjacent property, which is highly cultivated as garden, pleasure-grounds, and orchard, being unfenced. As I shall be liable to the trespass of bush cattle as soon as the present tenant removes, I apply to have the charge of this land until it is sold, to enable me to lieep up an old temporary fence running from $m y$ land to Powell's grant, and I. shall be willing to pay a nominal weekly rent if it is thonght desirable.

I have, \&e.
W. M. ARNOLD.

The lease expires on the 11th July, and I. am informed the present: oceupant is now removing, so $I$ shall feel obliged by an carly repirs.

Henry Dunn's lease expires on the 11th July, 1871; amnual rent, £80. Mr. Armold herein applies to lease the same from the expiration of Dunn's lease, and to pay rent up to the day of intended sale.

It is submitted as to what rent could be asked, and also as to whether such lease could be granted without offcring it for lease at anction. The land will be ready for sale on or about the I5th September next. Mr. Arnold's motive for wishing to lease the land is stated in his letter of 26th June.-C. B'ce., 4.Julr, 1871. Surreyor Geneml.

If it can be shown that no injustice to Captain Dum, who I have reason to believe is still residing on the land, would accrue, I should recommend Mr. Arnold's application to hold possession till the date of sale, nt 2 rent of $£ .111 \mathrm{~s}$. per week, which is about the present rent paid, till the 11th instant, by Captain Dumn.-P. F. Adans, 5 July.

I have been informed by Captain Dumn that he obtained from His Fxcellency the Governor permission to occupy the land to the day of sale.--P. H. Hendenson, District Surveyor.

Mr. Dunn, the late lessee, haring made an application to continue his lease till the land is sold, at the late rent, his application was approved as in all similar cases.-J.B.W., J.1. July.

## No. 15.

## 

Woodville, 26 June, 1871.

## Mr Dear Str,

Before learing Sydney I addressed an official letter to you respecting some Church and School No. 14. lands adjoining my residence hero, asking to be allowed the charge of this land (lot 6) at a nominal weekly rent, from the 11th July, the day on which the present lense expires, till the time of sale. The boundarylines between this land and my gardon and orehard and other ground is either entirely mufeoced, or so insufficently fenced that it will require constant attention to the old paddock-fences outside to keep the bush eattle away. I cuclose a little sketch, showing the fonces to which I. allude. I. hope my application soparate Appm. will be granted, so that I may protect inyself from trespass of cattle, which would be rery danaging to me. "ix e. The present tenant is a Mr. John H. Dum, but I may mention that though he is the only tenant known to the Governmenti, I am a co-lessee with him in respect of the laud lying bctween me and the road at the back. The reason of my now writing is to request that, Mr. Dunn may not be allowed to remove any of the feucing which divides the land lying between my land and Powell's from the bush at the back, as, in that case both my land and Powell's will be open to all bush cattle, and it would be simply impossible for us to keep them out. Powell's land is under cultivation, aud mine is highly improved with orchards, yarden, and ormamental planting, and Mr. Dum can have no claim to this fencing as he found it on the land when he leased it from the Goverument twenty-one years aro, so that you may inagine it is of litile value, except for temporarily protecting the cultivated lands from trespass of stock. The reason why I suppose he intends removing it is, that he has already talen away a quantity of fencing, equally valueless, and las been for some time past, and is now daily engaged in removing all the old buildings and building materials from the laud. I understand it is the intention of the Gorermment to sell this land as soon as it can be surveyed and advertised, and I would earnestly request, in view of the great inconvenience to the adjoining proprictors, whose land is unfenced on the boundary-liue with this Church and School land, that it may be submitted for sale with as little delay as possible. There are uow no crops on the Church and School land, and I suppose the survcyor might at once begin the survey and marking out of roads, \&c., and if the survejor came into the spot at once it might be left to him to determine what feucing should be left for the temporary protection of the lauds adjoining. It would also be very desirable that it should be sold at once, because otherrise it would be impossible to get the necessary fencing done before next winter, thus losing a whole year.

Under these circumstances, Ihope I an not asking too much in thus specially directing your attention to a matter which will cause me and others so much damage if left umattended to.

I remain, \&c.,
W. M. ARYOLD.

No. 16.
Mr. Ticeasmb Sumpteor ILachaton to The Surtevor Generar.
Fast Maitland,
27 June, 1871.
Sir.
In reply to your letter of instructions of the 11th April, I have the honor to transmit a plan of See No. 4. 1.3 portions of Chureh and School land in the parish of Wolfingham, in the county of Durham, numbered B.c. from 1 to 13 inclusive, containing 87 a . Or. Sp., 83 a , Or. $12 \mathrm{p} ., 81 \mathrm{a} .0 \mathrm{r} .30 \mathrm{p}, 81 \mathrm{a}$. 1r. 1.6p., $175 \mathrm{a} .1 \mathrm{r} .32 \mathrm{p} .$, Separate appen 150a. 1r. 36p., 146a. Or. 32p., 151a. Or. 2Sp., 296a., 189a., 211a. 1r., 180a. 1r. 36p., and 165a. 1r. 20p., dix F. measured for sale in June, 1871.

Portions 1 to 4 consist of well grassed spurs leading from the main range to the river. Portion 4 contains about 20 acres of good agricultural land.

The remaining portions consist of broken ranges, well grassed and timbered,-portion 11 being the most level and best grasser,--portion 9 being the worst, and very scrubby in parts.

I found it impossible to obtain a practicable road through the Church and School land from the river towards Munybung, as mentioned in Mr. Henderson's specification, but $I$ hare surveyed the nearest obtainable one through Mr. Hudson's 2,000 acres.

Should this road not be required, portions 1 to 4 have access to Maitland, and the remaining portions to the Patersou.

T have, \&c.
T. B. HAUGHTON.

Ticensed Surreyor.

## No. 17. <br> Captaty Dum to The: Txder Secremary fon Jindos

Paterson, 6 July, 1.871.
Sir,
As the lease of the Church and School land held by me will expire on the 11 th instant, I bog to request that I may be allowed to remain in possession until the land is sold by the Government, on consideration of my paying rent at the same rate as that paid by me during the past yoar.

I beg also to state that having been a tenant of the Crown on this property for 28 years, and being nearly 80 years of age, I ain desirous of still keeping possession, and wonld request permission to be allored to purchase tho whole, or half, at £1. per acre.

1. have, \&c.
J. H. DUNN.

Submitted in conuection with Mr. W. M. Arnold's application to lease the same laud.-P.F.A.
The application to purchase at $£ 1$ per acre without competition cannot be recommended.-P.F.A., 12 July.

Approved.-J.B.W., 12 Tuly.

No. 18.
W. M. Arnoly, Esq., M.L.A., to The Sifrveyon Generan.

7 July, 1871.
My Dear Sir,
I have requested my son to inquire as to the result of my application, left with you, which you kindly promised to see attended to without delay, to rent the Church and School land, lot 6, from the expiry of the present lease until they are sold. The lease will have expired next Wednesday (1.2th). The lessee, Mr. J. H. Dunn, has already removed his dwelling and all materials of any value about the place, and is now living at a small farm be bought at Woodville-three miles away. There are no crops on the Church and School ground requining protection from the trespass of cattle, and I hare already explained that as the dividing-lines between my orchard and garden (and Powell's cultivation) and the land formerly cultivated by Dunn are either entirely unfenced, or so insufticiently fenced as to be no protection against cattle, we are in constant danger day and night of baving our property destroyed by the trespass of numberless bush cattle. The only way in which we can protect ourselves is by keeping up the old fences, dividing the Church and School cultivation land from the bush, and it is chiefly for this purpose that I am auxious to be able to take charge of them from the moment the present tenancy expires. Already we have bad cattle breaking through these old fences and finding their way into my orchard, and you can imagine the discomfort of keeping up this constant look-out, chiefly at night, to prevent destruction to trees and plants that have cost me years and money to bring to their present state.

You suggested that I should offer £ 10 per annum for the use of the land in the interval referred to. In my application I said "a nominal rent," by which I intended to conver such rate as the Minister might consider fair under the circumstances.

May I beg your kind assistance in getting the matter attended to before my orchard is destroycl.
Yours, \&c.,
W. M. ARNOLD.

No. 19.
Tife Underi Secretary for Jands to Captain Dunn.
Department of lands, Sydney, 13 July, 1871.
Sir, and School lands situated at Butterwick, I am directed to inform you that Mr. Secretary Wilson has approved of your being allowed to continue the lease of the land in question at a rent of $£ 1$ 1.ls. per week, hitherto paid by you, until the same is sold.

I am, \&c.,
W. W. STEPHEN.

No. 20.
Thr Under Secrftary for Lands to W. M. Arnold, Esq., M.L.A.
Sydney, 13 July, 1871.
Sir,
Referring to your letter of the 7 th instant, respecting your application for lot 6 of Church and School lands, situated at Butterwick, I am directed by the Secretary for Lands to inform you that Captain Dunn, the late lessee of the land in question, having made an application to continue the lease at a rent of $£ 1 \mathrm{lls}$. per week, until the same is sold, being the same rent hitherto paid by him, his application was approved, as in all similar cases.

Your application therefore cannot be entertained.
J. have, \&c.,
W. W. STEPHEN.

## No. 21.

Report on the Church and School estate of 1,220 acres, in the parish of Butterwick, in the county of Durham :-
If my proposal to sell this estate in one block is not adopted I do not think that the probability of * See minuto or selling the whole will be much affected by dividing it as proposed * by the Honorable the Minister for zon No. 10.

I would propose that the line of division should be a line from Dwyer's north-east corner easterly to the road from Paterson to Hinton, and thence south-easterly along that road to the boundary of the estate. A further division might be made by a line easterly from the south-east corner of Powell's 100 acres to the eastern boundary of the estate.

Thus the middle portion will be bounded on the north by an east and west line, the south boundary of Powell's 100 acres and its prolongation easterly; on the west by the Paterson River; on the south by the north boundary of Dwyer's 60 acres and its prolongation easterly (crossing the Woodville and Paterson Road) to the Paterson and Hinton Road, and by that road south-easterly to the bonndary of the estate; and ou the east by part of the eastern boundary of the estate.

The roads of outlet previously recommended, viz, from Powell's 100 acres, Dwyer's 60 acres, and Morgan's 25 acres, to the Woodville and Paterson Road, to be reserved

> P. H. HENDERSON, District Surveyor, $$
14 \text { July, } 1871 .
$$

Mr. L. S. Haughton may subdivide according to the design, at a reduction of 10 per cent. on scale fees, if he can commence the survey at once aud forward the plans without delay. Reply immediately.P.F.A., 19th July.

C. B. B'ga, 13 Scptember, 1871.

No. 30.

Jargs, 25 Augusi, 1871.
Sili, separate cover, the plan** of two portions of land, part of the Church and School estate, measured by me for sale.
2. The land on the rivel-frontage is of small area, but admirably adapted for agricultural purposes, but is subject to frequent and heary inundations, which very much deteriorate its value. After crossing

The Paterson and Woodville Roads, and going back, the country is thinly grassed and thickly timbered, and is of but little value either for grazing or agriculture.
3. The timber consists of gum, ironbark, apple, box, and oak, of indifferent quality, the land having been cleared of its good timber for fencing and other purposes.
4. The improrements consist of fencing and a few huts to the value of $£ 100$ on No. 1 , and of $£ 50$ on No. 2. The fence on the dividing-line between lots 6 and 7 was erected by Messrs. Dunn and M'Phee, but is in a wretched state of repair, and almost valucless. Mr. Reynolds erected the fence on the north of lot 6 , but it is some 40 links north of the line at the S.E. corner of his 1,300 acres.
5. There is an aboudauce of water on the frontage, but very little back, except in wet seasons. The beds of tho lagoons are on about the same level as the summer level of the Paterson River.
6. In measuring the roads through thesc portions I have, as a rule, adopted the centre of the existing track as the centre of mine, and have only deviated when I thought it would be an improvement. I may say that the fences on the Patersou and Woodville and the Hinton and Paterson Roads do not follow closely the present tract, or I should have adopted them as side-lines, but as the old roads have been very much improved in places I followed then in preference to the others. I marked the road from tho S.E. corner of Powell's 100 acres, as it is the best and shortest one. The land from the N.E. corner of Powell's to the Paterson is low and swampy, liable to imundations, and a road there would be inpassable nine months out of the twelve. I also marked and staked out a rond to Dwyer's (now Arnold's) 60 acres, and reserved one from Morgan's 25 acres to the main road. An inspection of the plan will show that this road rill remain impassable, unless means are taken to drain off the lagoon waters, but it is the only one that can be reserved without interfering with private property. I believe that Morgan's 25 acres, Addison's 25 acres, and Cohen's 95 acres, are now the properity of one person, so that present road will give access to Morgan's without necessitating the crossing of the lagoon.
7. In ruming the external boundarics of these portions I closely followed the old marked lines, and found my corners by intersection, but the dividing-line hetween lots 6 and 7 was run by my own needle. I had considerable difficulty in fixing the N.W. corner of the village reserve, as nearly all the old marked trees have been removed. All those lines have boen marked and re-marked by different surreyors, and persons interested in this and the adjoining lands, many years ago: but very few of the trees now remain, is they were felled for firewood and fencing stuff. The boundaries on the west were pointed out to me by Mr. Arnold in person ; there is nothing to mark the back line of Dwyer's 60 acres but the remains of an old fence, which Mr. Arnold informed me bad been laid down by Mr. G. B. White's direction, and extended along the back line, as originally marked.
S. I consider the valuc of the laud to be $£ 1$ per acre.
9. These portions have leen marked out in aceordance with the regulations.

I have, de.
WM. I. VERGE,

- Licensed Surveyor.

Mr. Brownigr, -The north boundary of A. Dwyer's (now Mr. Arnold's) 60 acres, is given on original plau as 2 tijo links, but Mr. Verge shows it only 2290 links, but the description gives an indefinite length; but it commences from tho south-west corner, and gives the length of the south homndary as 33 chains ; the plans $\mathrm{C} 44,1096$ and $\mathrm{H} 22 \mathrm{a}, 663$ show it 34.50 links. I cannot pass the jlian without authority until the length of the south boundary has been ascertained by survey, as the other grants on the south of Mr. Arnold's land also depend on it.-T.H.L., 9 Sep., 187. 1.

Mr. Verge has been instructed to make a re-survey of Mr. Arnold's 60 acres.-C. B. Bug., 9) Scpt, 1871.

No. 31.
Min. Ghales Revaojas to The Slechetamy yon lasds.
Sydney, 25 August, 1871.
Sir, I hase the honor to make apprication to have lot 6 of the Church and School estate, parish of Butterwick, county of Durham, subdivided into four lots, as per accompanying design, viz,, 一that portion separato Appenwest of the road lcading from Dunmore Bridge to Paterson P'unt to be divided into two lots, adopting the dx H . present dividing-line to the road. The land between the two roads in one lot; and the land on the eastern side of the rond, leading from Paterson to Hinton, in another:--thus adopting the divisions formed by the road already proclaimed and fenced. As an adjoining proprietor, I am desirous of purchasing, if this plan be carrici out; but it will not be in my power to do so if the present survey (into two lots) be idhercl to, and I feel confident that better prices will be realized by adopting my proposal.

> Ihave, ece,
> CHARLES Reynolds,
> per Frane Remonds,
> Tocal, Patersou.

The opinions expressed differ so widely on this subject that 1 have great difficulty in coming to a conclusion, and, if this proposal be adopted, and it turned out that only the two frontage portions sold, I should feel that, it would have been wiser to have adhered to the original dexign. If the Honorable the Minister for Innds approves, I would suggest that the question be referred to the surveyor on the spot, and let him use his judgment from the evidence on the spot-P?.F.A., 25th.

Approved.-J.B.W., 28 August.

No. 32.
Nr. hacensed Sliveyor Verge to I'lie Surveyon Gencraf.
Sise,
Largs, 1 September, 1871.

In accordance with your instructions of the 31st August, I have the honor to submit the followiug report on the enclosed application, made by Mr. C. Reynolds for the subdivision of lot 6 of the Church and School estate, parish of Butterwick.

1. That it would be advisable to subdivide the land into smaller areas as it would excite a livelier competition at the sale.
2. That since I forwarded iny plan and report to the office of this land, as measured aud marked out by me, a great deal of dissatisfaction appeass to exist at the portions being so large, and some, who no doubt would willingly buy, will be debarred from doing so on thatitaccomt.
4, having no permanent water, and being very the enclosed tracing, would sell readily, but portion No. 4, having no permanent water, and being very poor and scrubby at its S.E. corner, I think it would be advisable to part by the line alrcady measured, and throw one portion into No. 3, aud the other, together with that part of No. 3, cut of by the extension of the southern boundary of No. 1 , into the latter portion, unless Mr. Reynolds, whose properity it partially adjoins, is willing to buy.
3. That in the tracing furrisilied in the first iustance, for the subdivision of this land into three portions, the greater part of the land on the eatsteru side of the Paterson and Hinton Road was thrown into one block (No. 8), which not only necessitates a great deal of additional fencing, but also, as this land is of inferior quality, I think a difficulty would be experienced in disposing of it.
4. That the subdivision of these portions, as proposed by Mr. Reynolds, would suit admirably, if he would guarantec the purchase of No. 4; otherwise, I would most respectfully suggest the plan proposed by myself, or that they should remain as already measured.
5. have, \&ce.
W. गे. VERGE,

Unless full and sufficient guarautee, or a deposit of $£ 484$, being equal to the value of the portion of land east of the road from Hinton to Paterson, is made by Mr. Reynolds, as an earnestio of his jutention to become the purchaser to that extent at auction sale, I cannot recommend auy departure from the design dividing the land into two portions only.-P. F. Adams, 6 September.

Churcie and School Tiands.
No. 2. (1871.)
Land Sale List.
Armicriss and Conditions of Sale held by public auction, at Maitland, on the thirtietly doy of October, 1871, commencing at eleven o'clock, under the direction of the Agent for the Sale of Crom Lands at that place (acting for and on belalf of Her Majesty the Queen), of the following portions of dund advertised by the Ministier for Tands on the twenty-seventh day of Soptcimber, 1871, in conformity with existing regulations, of which those more particularly necessary to be noticed are as follows, viz.:-1.t.- Each lot wili be put up for sale at the price stated in the ndrertisement, and the bidder of that sum, or the highest bidder above it, will be dechared the pureluser, provided he shall immediately pay down a deposit of not less than twenty-five per cent. on the amount of the purchase money, and sign the Sale-list, thereby binding himself to the observance of all the conditions of eale. Should the purchaser or his agent refuse to pay the required deposit, the lot shall be forthwith put up again to competition, when the bid of the person so refusing to pay shall not be accepted for the lot in question.
2nd.-The balance of the purchuse money is to be paid to the Agent for the Sale of Crown Lands, or to the Treasurer in Sydney, within three calendar months from this date, or the deposit will be forfeited, and the land again opea for sale or selection.
3rd.-Inmodiatiely after the bidedings on each lot are concluded, and before another lot is put up, the manc, place of residence, and calling of the purchaser will be entered by the Agent in the Sale-list. If previous to such entry any question or dispute arise between the seller and bidders, or amongst the bidders themselves, the lot in question shall be put up again ; subsequently to such entry no dispute whatever can be admitted.
thin.-Deeds of Grant will be completed and issued in each case as soon as practieable after payment in full of the purchaso moner, and will be delivered to the grantecs by the Surreyor General, on payment of the regulated fee of $\mathfrak{E l}$ on cach lot, which will be required to be paid on completion of the purchase. Wach lot will be granted to the purchaser by deed poll, under the hund of Jis Execllency the Governor and the Great Scal of the Colony, to be held in free and common socare, subject to the payment of a quit-rent of one peppercom yearly, if demanded, and subject to such other reservations as may be deemed expedient for the pablic benefit.
ith.-If the officer holding the sale, or other person acting on belalf of the Government, shall have reason to belicve that any lot will not obtain its fuir value, or shall otherwise have just causo to withdraw the sume from the sale, he shall have full power to do so at any time preriously to its being actually sold.
Gith.-Persous having affixed their signatures to the Sale-list in token of their having become purchasers (or agents for pur chasere) of the lots to which their nignatures are respectively so affixed, will be held to have previously obtained all necossary information, and not to be entitled to allege ignoranee or any other cnuse for their not fulfiling all and every obligation iueumbent upon them by these articles and conditions.

## Declaration.

$W$ e, whose signatures are attached to the lots respectively purchased by us, do heroby acknowledge that we are the purehasors (or agents for purchasers) of the same; and we do each of us sevcrally for ourselves (or on behalf of our constituents) uudertake to make payment to the officer appointed to receive the same, of the remainder of the purclane money of the said lots respectively, within three calendar monthe from the dite of these presents, and to fulfil all and each of the forcgoing articles and conditions; and failing our doing so, we do further acknowledge that we thereby forfeit all and every claim to the said lot or lots, and to the deposits which wo hare paid. Jn witness whereof, we have, on the day aud year above-written, severally signel our mames against the descriptions of each lot respectively purchased by us.

coUntry Iots.

Thesc being Church and School lands are not open to selection after auction.

## No. 39.

## John Nowlan, Esq., M.L.A., to The Secretary for Lands.

Union Club, Sydney,

27 September, 1871.
Sir,
I have the honor to acknowledge receipt of your letter of yesterday, iu reply to mine of 25 th instant, informing me that the Church and School land, 950 acres, parish of Middlehope, county of Durbam, lately leased to me, could not be offered for sale in two lots, as the land had been already surveyed and was ready to be advertised.

I now have the honor to request that this block of land may be advertised in three lots, and will give my reasons for making such application more fully than I had time to do on the 25th.

I may first mention that this land has been in the occupation of my late father and mysself for a period of nearly fifty years ; that it is bounded by my own land on the west and north, and that on the east it gives access to the Paterson River, to my property. It is therefore of more value to me than it can be intrinsically to any one else. Had it been possible to purchase portions of the Church and School estate by appraisement, I should have been prepared to pay any appraised value which might have been placed upon this land, but knowing that it had only been litherto disposed of by public auction, I refrained from making any proposal for its purchase and was content to abide by the ussual mode of cutting up Crown lands, but when $I$ learned, as stated in my first letter, that it was determined to offer the 1,280 acres Church and School land, parish of Buttervick, in two lots for sale, which was of superior quality to the 950 acres, parish of Middehope, I at once applied to have that also put up under this uiser and better considered arrangement, and $I$ cannot, Sir, feel satisfied with the answer you have given to my request.

I would now beg to bring uuder your notice the following facte, viz., that the land on the west side of the Maitland and Paterson Road, in the Middlehope block, comprising 772 acres, is of inferior quality grazing land, without permanent water; that it would be more valuable put up in one lot than subdirided, as it
now is, into four, masmuch as the fencing of these narrow strips would cost a considerable proportion of the value of the land; and that so far from depreciating the bona fide price of the land it must be enhanced by being advertised in one lot. With regard to the land on the eastern side of the Paterson Road, the southern portion from Evans's boumdary on the south to the water rescrve on the north, about 76 acres, fronting the Paterson River, is also poor light grazing land, without any alluvial frontage, but is valuable to me as giving my own land access to the river ; the northern portion, extending from the road to water reserve on the south, to southern boundary of lot 4 on chart, on the north about 128 acres, is of similar character, except a small portion at the northern end, which is better grazing, has no permanent water upon it, and over its chief area has no natural capability for being artificially watered. This piece of land has been most ridiculously cut up into 8,9 , and 10 acre lots, by way of affording suitable homesteads for country tradesmon (who by the way always establish themselves in the villages). No one could make a living on the land, the very fencing of which would cost more than its ralue. This piece adjoins the farm of my neighbour, Mr. John Swan, who would be willing to pay an advance on its intrinsic value were it possible to purchase it privately. I also beg to draw your alttention to the mode in which the 2,000 acres Church and School land, parish of Wolfingbam, leased by Mr. Beresford Hudson, has been subdivided, which, except on its froutage, is not worth intrinsically 10 s. per acre. This block bas been elaborately subdivided into small lots, which, except on the river-frontage, caunot be made available by themselves for grazing purposes, contrasting unfavourably with the planizadopted in division of the 1,280 acres, parish of Butterwick, into two lots, which, from their contiguity to the properties of landholders in the locality,-Messrs. Reynolds, Arnold, \&c.,--is sure to realize its fair value.

I contend, Sir, that the Govermment have no right to speculate upon obtaining a fictitious price for land through the probable action of persons who may harbour vindictive feelings towards a neighbouring proprietor, to whom the land is of more value, from its situation, than it can be to any one else, and who, although willing to pay a full value for it, considers it a hardship to be placed in the position to be compelled to pay an exorbitant price by any oue who may owe him a grudge.

Trusting that you will give my application your favourable consideration,

> I have, de.,
> JOHN NOWLAN.

Inform Mr. Nowlan that I cannot recommend His Excellency the Governor to agree to his request, as the object in dividing the land for sale is to realize as much as possible for the Church and School estate. All the land which has been surveyed for sale has been divided with this object in view.-J.B.W., 28 September.

No. 40.
The Under Secretary for Lands to Joun Nowlan, Esq., M.L.A.
Department of Lands,
Sydney, 28 September, 1871.
Sir,
In reference to your letter of the 27 th instant, respecting the subdivision of the 950 acres of No. 89. Church and School lands in the parish of Middlehope, county of Durham, lately leased by you, and which you now desire having offered for sale in three blocks instead of two, as requested in your former communication, I am directed to inform you that the Secretary for Lands has decided that he cannot recommend His Excellency the Governor to agree to your request, as the object in dividing the land for sale is to realize as much as possible for the Church and School estate.
2. I am also to add that all the land which has been surveyed for the Church and School estate for sale has been divided with this object in view.

I have, \&c.,<br>W. W. STEPHEN.

No. 41.
John Nowlan, Esq., M.L.A., to The Secretary for lianjs.
Union Club, Sydney,
29 September, 1871.
Sib,
I regret that I did not receive the letter written by your instructions, in reply to mine of 27 th No. 80. instant, in time to acknowledge its rcceipt yesterday within oftice hours.

I am informed that you cannot recommend His Excellency the Governor to agree to my request, that the 950 acres Church and School land, parish of Middlehope, should be advertised in three lots, the object in subdividing it into a number of lots being to realize as much as possible for the Church and School estate.

I am further informed, that all the land which has been surveyed for the Church and School estate, for sale, has been divided with this object in view.

In the first place, I regret that you cannot recommend His Excellency to agree to this land being advertised in three lots, after receipt of my letter of 27 th instant, but without that powerful aid I feel it No. 38. my duty to bring the matter under the notice of His Excellency myself, and I have, therefore, the honor to request that you will do me the favour to withhold the advertisement of this land from to-day's Gazette, until the pleasure of His Excellency be known on this subject. This will not interfere with the date of sale, because there will be ample time between Wednesday's Gazette of 4th proximo, and the 30th of October, the date I am informed you have determined that these lands shall be sold.

With regard to the latier portion of your letter, informing me that all the Church and Schoollands surveyed for salc have been subdivided in such a way as to realize as much as possible for the estate, although I have no doubt that this was your intention, I would respectfully beg to assert that such has not been done with regard to the 950 acres, parish of Middlehope-1,280 acres, parish of Butterwick2,000 acres, parish of Wolfingham,--and I assert this from a personal knowledge of these lands, superior to
that of auy of your officials, who may or may not have inspected and reported on them. If the lands in Middlehope and Wolfingham have been properly subdivided then a great crror bas been committed in subdiriding the 1,280 acres in Butterwick, and if the mode of subdivision of the Butterwick land is most desirable for the interest of the estate, then a great blunder has been made in cutting up the lands in Middlehope and Wolfingham, according to present plans.

## I have, de., <br> JOHN NOWIAN.

Inform Mr. Nowlan that there is no necessity to withhold the adrertisement, as should His Excellency so instruct, it can be withdrawn.-J.B.W., 29 Sept.

No. 42.
Thee Undeil Secretaby for Laxus to John Nowlak, Eise., M.L.A. Department of Lands,

Sydney, 29 September, 1871.
Sir,
In refercnce to your letter of to-day, requesting that the 950 acres of Church and School land lately uoder lease to you may be withheld from sale until the matter has been referred to His Excellency the Governor, I am directed to inform you, that the Secretary for Tands docs not consider it necessary to withhold the advertisement, as should His Excellency so instruct it cau be withdrawn at any moment before the day of sale.

I have, \&e.
W. W. Stephen.

## No. 43.

Joun Nowlan, Esq, M.J.A., to The Secretary for Lands.
Union Club, Syduey,
30 September, 1871.
Sir,
After leaving my letter of yesterday morning at your oflice, I. learned accidentally that the advertisement for sale of Church and School lands in parishos of Middlehope, Wolfingham, aud Butterwick, which I had your assurance, on the 26th instaut, should not be published until the Gazette of Friday, the 29 th instant, in order that time should be given for the consideration of my proposal, that the 950 acres, Church and School estate, parish of Middlehope, should be advertised in two lots in accordance with the plan adopted in the subdivision of the 1,280 acres, parish of Butterwick, had already appeared in a Supplement to the Gazettc of Wednesday, 27th. On returning with this Supplement to the Department of Lands, to seek an explanation of this extraordinary proceeding, I was assured by Mr. Brownrigg that he was equally surprised with myself, and that he could not understand how such could be the casc, as, by your dircction, given in my presence, he had personally instructed the proper authorities at the Government Printing Office that the advertisement of these lands should be held over till the Gazettc of the 29th (Friday), aud that your signature had not been obtained, authorizing the advertisement at the time at which it professed to be, as for Wednesday, 27 th, Gazettc.

Now, Sir, it appears to me a monstrous anomaly, that the instructions of a Minister of the Crown, charged with the management of such an important Department as yours, given through the proper officer, should be set aside by some other authority within the Department, the Minister being made to appear to authorize a certain course which he deliberately and most distinctly ordered should not be taken.

I have the honor to request, Sir, that you will investigate this matter, involving as it does an apparent breach of faith on your part with me. I have not now time to address you on the subject of your final decision with regard to my application made in my letter of 2Sth instant, and delivered to me vivá voce, after your interview with His Excellency jesterday afternoon, but I hope to have the honor of doing so as early as possible.

Thave, de.,
JOHN NOWLAN.
Upon inquiry at the Government Printer's, as requested by the Honorable the Minister for Lauds, I find that the adrertisement of the Church and School lands under reference was not issucd to the public until Friday, the 29th instant, although, to save time, they were in type the Thursday previous.-W.C.E., 2/10/71.

Inform Mr. Nowlan that the advertisement alluded to was not published till Friday, 29th ultimo.J.B.W., 3 Oct.

No. 44.

The Under Secretary for Lands to John Nowlan, Esq., ML.A.
Department of Lands,
Sydney, 12 October, 1871.
Sir,
In reference to your letter of the 30 th ultimo, complaining that the adrertisement of the No. 43. Church and School lands, in the parishes of Middlehope, Wolfingham, and Butterwick, have appeared in a Supplement to the Gazette of Wedsesday, 27 th September last, instead of appearing in the Gazette of the following Friday, as requested by you, I am directed to inform you that the advertisement in question was not published until Friday, the 29 th ultimo.
I. have, de.,
W. W. STEPHEN.

No. 47.
Mr. G. Townshend, Sinot, to Ihte Colonlat Secremary.
Trevallyu, Gresford, 23 October, 1871.
Sin,
Great dissatisfaction is felt in these parts at the way that the Church and School lands in the parishes of Middlehope and Butterwick are laid out, and advertised for sale at Maitland on the 30th of this month, patting it out of the jower of many persons who are desirous of obtaining small farms to get them, in which form the said land would bring much more than as now apportioned out. It is rumoured that some secret and undue influence bas been used to get them so allotted.
$\qquad$
G. TOWNSHEND, SENOR.

The Under Secretary for Lands, B.C., 26 October, 1871,--II.H.
No action can be takeu on this letter; as it was only received by me the day after the sale. May be put away.-C.B.B., 6 November, 1871.

Approved.-J.B.W., 29 December.
No. 48.

Colonial Secretary's Oflice, Sydney, 26 October, 1871.
Scr,
1 am directed by the Colonial Secretary to acknowledge the receipt of your letter of the 23rd No.47. instant, complaining of the manner in which the Church and School lands in the parishes of Middlehope and Butterwick are laid out, and advertised for sale on the 30th of this month, and to inform you that your communication has been brought under the notice of the Sccretary for Lauds.

I have, \&c.,
HENRI HALLORAN.

> No. 49.
> Police Superintendent Moursset to 'Ihe Livspector General, of Pohice.
> Police Department, Superintendent's Office,
> $\quad$ East Maitland Station, 80 October, 1871.

Sra,
I have the honor to report that it only came under my notice this morning that two lots of land, marked $A$ and B in the attached tracing,* and described in the accompanying Government Gazette, * Soparate were for sale this day at Maitland. They would be very desirable for a police barrack, and through Appendix $k$. Sir James Martin were withdrawn from auction for that purpose, and to enable me to request; that you will be good cnough to communicate with the Lands Department with the view of having them so reserved.

I have, \&e.,
E. V. MORRISSEIL,

Superintendent.
As this matter will admit of no delay, and the Honorible the Attorney General has aheady communicated with the Honorable the Minister for Lands on the subject, I beg to send the papers to him direct, with a request that he will sanction the appropriation for police purposes of the lots marked Enclosod in A and $B$ in the accompanying plan; or if both cannot be allowed then the lot $B$ would be the best.- above loter. J. M‘Lerme, I.G.P.
B.C., Under Secretary for Lands, 1 November, 1871.

Submitted. The Surreyor General should perhaps report in the first instance--5 November.
[Enclosure to No. 49.]

## SALE at the police office, Maithand,

On Monday, the 30th day of October, 1871.
COUNTRY LOTS.

These being Church and School lands are not open to selection after auction.
No. 50.
Police Superintendent Morrisset to The Atmorney Gentral.
Police Department,
Superintendent's Office, N.E. District, East Maitland, 30 October, 1871.
STr,
I have the hobor to state that I only yesterday becume acquainted with the fact that some public land, situated on the Paterson, was to be offered for sale to-day by public auction.

Some of the land would be most suitable for a police paddock, the want of which has long been felt in Maitland; and as there is not sufficient time to communicate with the Honorable the Minister for Lands on the subject, I shall feel very much obliged if you will hare the goodness to cause a portion of the land (the blocks marked on the chart A and B) to be withdrawn from sale until the IIonorable the Minister for Lands can be conferred with.

I trust the urgency of the case will be considered a sufficient excuse for thus addressing you instead of bringing the matter under notice through the Inspector General of Police, to whom I have to-day written.

I have, \&c.,
E. V. MORRISSET,

Superintendent of Police.
Honorable Secretary for Lands.-J.M., Attorney General, 7 Nor., 1871.
The Under Secretary for Lands, B.C., 10 Nov., /71.-W.E.P.
No. 51.
Mr. Licensed Surveyor Verge to Tee Surveyor General.
Largs, 31 October, 1871.
Sir,
I have the honor to report, in compliance with your memo. of the 13th September, that the amount of land claimed and occupied by Mr. Arnold comprises an area of $17 \frac{1}{4}$ acres. The amount of land held by Mr. Dunn has an area of $1,202 \frac{3}{4}$ acres.

I have, \&c.,
W.S. VERGE, L.-S.

It is recommended that Captain Dumn be requested to pay into the Treasury the sum of £23 Os. $2 \frac{2}{3}$ d., boing the amount of rent due for the lease of 1,2023 acres of Church and School land in the parish of Butterwick, county Durham, from the 12th July, 1871, to the 29th October, 1871, and that Mir. Arnold be also requested to pay the sum of six shillings and ten pence half-penny, being the amount of rent due for the lease of $17 \frac{1}{4}$ acres in the same locality for the same period.-R. D. Frizaerald (for Surveyor General), 28 November, 1871.

## No. 52.

## Mr. If. Reyvolds to The Secretary for Lands.

Tocal, Paterson, 31 October, 1871.
Sir,
I have the honor to request that you will inform me, on what grounds the portions of Church and School lauds, lot 1 A, 81a. 1r. Op., and lot 2 B, 83a. 2r., adjoining this estate, parish of Middlehope, county Durham, were withdrawn from sale at the last moment, and without any notice being previously given?

I also take this opportunity of requesting that you will lease to me these lots until they are again put up for sale.

The result of yesterday's land sale proves the absurdity of the manner in which the 1,280 acres, Church and School lands, parish of Butterwick, was divided, and which prevented my being able to purchase land of consequence to my late father's property adjoining,-the large block of 800 acres only realizing $£ 1$ per acre.

I have, \&c.,
F. REYNOLDS.

Inform Mr. Reynolds that they were withdrawn on public grounds, and that they cannot at present, at least, be leased.-J.B.W., 4 Nov.

No. 53.
Mr. Licensed Suryeyor Vrige to The Suryeyor General.
Largs, 31 October, 1871.
Sir,
I have the honor, in accordance with your instructions of the 8th August, to forward, under mentruction by b.c. separate cover, a plan of seven portions of land measured for sale, part of the Church and School estate, seprate Appendis Butterwick.
2. This land is more suitable for grazing than agricultural purposes, for what arable land there is is subjected to inundation, and as the land lies very low the water cannot be discharged into the Paterson River unless at low tide, and being also the watershed of the numerous gullies, \&c., in the ncighbourhood, it is very rarely dry.
3. A road has been measured and marked through these portions from the Woodville and Paterson to the Hinton aud Paterson Roads, boing an old road known as Burdie's track, and leading to Scaham; but as the latter would not give access to the inprovements on portiou No. 9 , except in very dry seasons, I find it necessary to reserve another road, 50 links wide, through portion No. 8 , and along its western boundary. I have also marked a road from the eastern boundary of No. 9 to its northern boundary, being the road from Iinton to the Paterson, and one from the south-west corner of the 5 acres measured from the Iona School to the northern boundary of portion No. 3, being the road from Woodville to the Paterson.

In measuring the latter roads I have adopted the centre of the existing track as the centre of my road aurvey, and although it cuts off a portion of the south-east corner of Lee's 84 acres, as will be seen by reference to the plan, still this road has already been proclaimed and in use some time.
4. The bearings of the lines of the southern boundarics of portions 4, 5, and 6, are south-easterly, those of 7,8 , and 9 , north-easterly, but the present survey does not in any way depart from the recognized boundaries of the adjacent properties, with the exception of that at the sonth-east corner of portion No. 9 , where there is a slight difference in favour of the owner of the adjoining property. These side lines have been erected very many years, and the fenced lines of Brown's 61.5 acres are at right angles to each other, as will be seen on the plan. The only marked trees in existence, and which I carefully followed out, point out the lines as already traced.
5. The surreyor, who measured and cut up the south-western part of the V. R. of Butterwick, and which has since been sold, encroached upon the adjoining Church and School estate, and a portion of the latter has been disposed of as forming part of the Village of Butterwick. This will be better understood by referring to my plan.
6. There is permanent water in every portion.
7. The timber consists of gum, box, ironbark, apple, and oak, but is of littlo value.
8. The improvements on portions Nos. $3,4,5,6,7,8$, consist of fencing and a few wretched huts, and are merely of nominal value. Those in No. 9 I consider to be worth $£ 320$.
9. T. consider the value of portions $3,4,5,6,7,8$, to be each worth $£ 15$. per acre, and No. $9, £ 1$ per acre; the latter of less value, as a much greater area of it is under water; and also the land on its northern boundary is very poor.
10. I am very sorry to report that the instructions for the survey of lots 6 and 7 of the Church and School estate, Butterwick, were accidentally destroyed by a bush fire, which partially burnt my camp. I have, \&e.,
W. II. VERGE, L.-S.

It appears from this plan that the portions Nos. 1, 12, 13, 14, 19, measured by Mr. L. S. Mackay in 1856, and sold in 1857, embrace a long narrow strip of Church and School land, containing an aroa of nearly 4 acres, being 38 chains long by a meau depth of 1 chain; I have therefore passed the plan, subject to your approval.-T.H.L., 8/1/72.

No. 54.

## Mr. Johr MacPine to The Secrmtary for Lands.

Woodville, 6 November, 1871.
SIR,
Haring erected the improvements detailed belor, and which I estimate to be worth $£ 320$, I have the honor to apply that I may be permitted to purchase, without competition, under the provisions of the "Crown Lands Alienation Act of 1.861," the Crown lands on which they stand, and which are described hereunder.

The improvements referred to are now in my possessiou.
I. have, \&c.,

JOHN MacPHIE,
Lessce of the land.
Wature of Improvements.
House, yard, barn, stable, coach-house, cow bales, and kitchen.
Description of Land.
County of Durham, parish of Butterwich, 320 acres.
This is an application for Church and School lands. Inform Mr. MacPhie that it cannot be purchased under the 8th clause, but must be sold at auction, and, his lease being up, will shortly be advertised for sale. He will receive due notice when it is to be offered.-W.W.S., 13 November.

No. 55.

Tge Inspector Grnhrat of Ponice to The Principal Unoer Secretary.<br>Police Department; Inspector General's Office,<br>Syduey, 16 November, 1871.

Sir,
With reference to two allotments of land, described in the margin, part of the Church and B. No. 2, 88e.2r.,
paterson. School estate, which have been withdrawn from sale as eligible and valuable as a police paddock, I have the honor to request that the appropriation for that purpose may be authorized, and should there be any difficulty in reserving the land for such a purpose, perhaps a lease might be granted at some small rental, as the land would be very raluable to this Department.

I hare, \&c.
TNO. McLTERIE,
Inspector Aeneral of Police.
The Under Secretary for Jands, B.C., 20 Nov.; 1871.-H.H.

No. 56.
Tite Under Secretary for Jiands to Mr. F. Rexnoids.
Department of Lands,
Sydney, 18 November, 1871.
Sir,
In reference to your letter of the 31st ultimo, requesting to know why lots $A$ and $B$ of the sale of Church and School lands held at Maitland on the 30 th of last month were withdrawn from sale, I am directed to inform you that the land in question was withdrawn from sale on public grounds.
2. I am also to apprise you that your reguest to lense the lands cannot at present becomplied with.

I have, \&c.,
W. W. STEPHEN.

## No. 57.

## Mr. G. Townshend, Sentor, to Tile Cohontay Secretaty.

Trevallyn, Gresford,
20 November, 1871.
Str,
I have to acknowledge the reccipt of your letter of the 26 th ultimo, informing me that you had sent my letter, addressed to you, containing remarks as to the way that the Church and School lands in the parishes of Middlehope and Butterwick were allotted, and to be sold on the 30th following, to the Minister for Lands, as the proper person to receive such a communication. When $I$ wrote my letter I was perfectly aware of that; but, knowing that letters lave been atopped from going to their proper destination, I thought that by sending you one of the same tenor and date I should make quite sure that the Government would be made fully aware, and in due time be able, if they thought fit, to alter the arrangement of the sale.

Now that the sale has taken place you must see, as do the public, that as the land in Butterwick was sold in two large blocks-one bringing $£ 2$ 13s. per acre, the other only $£ 1$ per acre (the upset price), both lots being of nearly equal quality-that the loss to the country is very likely about $£ 1,000$, possibly more, as the land in Middlehope (sold on the same day), on the opposite side of the river, of no better quality, brought up to $£ 5$ an acre. It was well known before the sale, and it has been proved by the result of it, that even forest land in that locality is much sought after, and, if fairly and properly apportioned out, will sell well for far more than the upset price. Nearly all of that sale proves that assertion.

Very genoral indignation is expressed at public property being so sacrificed, and the Government are much blamed for it. I heard a clergyman say that it was a most dishonest transaction. This is not the only thing done in the neighbourhood deserving of reprehension. I allude to grants by Government of $£ 95$ and $£ 240$, for repairing the crossing-places from Gresford to Lostock on the Paterson, and Eccleston on the Allyn Rivers. I wrote to the then Minister for Lands (Mr. Sutherland) before the money was granted, representing that the claims were not fair ones. I also wrote to the present Minister (sending him copies of my letters to his predecessor), but neither gave me any reply. Besides those grants, one of $£ 360$ has lately been given for a bridge over a creek close to the township of Paterson, and $£ 25$ per mile from Dunmore Bridge to the Paterson Punt ( 8 miles), as a road allowance, that being £200, and that to be spent in one year on a road equal to any English squire's drive. I do not see how so much money can be fairly spention it. I heard that a gontleman had suggested that trees should be planted on each side, which, if done by private means-not out of the public purse-would be well; and as I often travel that road I should like to cnjoy the beauty and shade of them.

## I have, \&ce.,

G. TOWNSHEND, SEmor.

## W. Carron, Esq., to The Secrithary for Lasds.

Grafton, 28 December, 1871.

Str,
I have the honor, in accordance with your instructions of
numbered to report that on my arrival in Grafton I at once proceeded to consult with the local surveyor, and as soon as horses conld be procured, and other necessary arrangements made, in company with Mr. Surveyor Donaldson I first proceeded to examine three reserves already made, situated on the south side of the Clarence River, at distances varying from ten to thirty miles from Grafton in different directions, and to note the timber trees now growing on them. A list of the prevailing trees on each of these reserves is appended to this report.

1st. The reserve at Glen Ugie, situated about ten miles from Grafton, and consisting entirely of hardwood: The trees of spotted-gum, grey-gum, and iron-bark, are very fine, with tall straight trunks of various sizes, and every indication of furnishing a large supply of excellent timber when required. The trees of mahogany and forest-oak on some portions are exceptionally fine.

This reserve is situated in an excellent position, of easy access from South Grafton, and on undulating, barren, stony, ridges; hardly any of it at all fit for cultivation. It is surrounded by great quantities of good timber, from which a large supply may be obtained for a long time to come if cut under restrictions.

2nd. The reserve at the Coldstream : The timber here is, a great deal of it, very fine and like that at Glen Ugie; consists principally of hardwood, but containing a greater variety of valuable woods. The iron-bark, stringy-bark, spotted-gum, and forest-oaks are very fine and abundant, as well as water-gum and white tea-tree. It is well situated near the Coldstream, of easy access to situations where timber is likely to be required for various purposes. The soil consists of barren stony ridges and moist flats; is not at all likely to be required for agricultural purposes, there being abundance of land of a much better quality in the vicinity, with a quantity of excellent timber surrounding it,-enough to furnish a large supply for some years if it is not allowed to be destroyed by barking so extensively, as is practised in some places where ten trees are destroyed by taking a piece of bark from each, when one would have furnished the whole if it were felled.

3rd. The reserve at Chambigne Creek, which containe a great many valuable brush timbers, such as daphnandra micrantha, or light yellow wood, olea paniculata or marble-wood, Grevillea robusta, or silkyoak, and several other less known but equally useful woods, as well as a very large supply of iron-bark, spotted-gum, stringy-bark, and other hard woods on some portions of it.

This reserve is in a very good position, being centrically situated in a district where a large demand for timber is likely to arise as the population and traffic to the table-land of New England increase.

4th. An additional reserve on the range dividing the waters of the Urara and Nymboi Rivers, in close proximity to that at Chambigne Creek: It contains a good quantity of pine and small cedar, for which this reserve is chiefly recommended. The timber is no doubt of excellent quality, judging from the situation where it is growing. On this reserve are also large quantities of daphnandra, cryptocarya, and eugenia, with other varieties of bush timbers, as well as several species of Eucalyptus on other portions of it.

5 th. A small reserve of about sixty acres at the Pine Ridge, six or seven miles from North Grafton, containing a good many of the more valuable timber trees, which a few years ago were so plentiful in the vicinity of the town, and which are now all cleared away; this being the only spot where a reserve of these trees can be made within many miles of Grafton, and although the greater part of the larger timber trees has been cut out, there are a great many trees of various kinds which in the course of a few years will be valuable if allowed to stand, consisting of cedar, silky-oak, marble-wood, light yellow wood, and the finest trees within many miles of' Flindersia, Greavesii, or Bulboro, a tree which is always confined to small areas, and the timber, although it has not been much used, probably on account of its hardness, is very highly spoken of by those who have tried it.

Many valuable timber trees which a short time ago were so plentiful in and around Grafton aro now almost entirely cleared away; indeed, there are several species of which not a treois left in this neighbourhood, and some others, such as dysoxylon Fraseramum, rose-wood, harpullia pendula, tulip-wood, castannspermum australe, bean-tre, have only here and there a solitary representative left.
*235-

So completely have they disappeared in the course of a few years that cargoes of timber are now being brought from the Richmond River to supply the local saw-mille, which are working where the finest timber trees that could be desired of the same description were a short time ago so abundant, but which have been all burned off or destroyed in other ways.

I hope, however, in conjunction with Mr. Surveyor Donaldson, to be able to select some good reserves higher up the river, and will report further on those as soon as the situations are chosen.

I have, \&c.
W. CARRON.

## W. Carron, Erq., to The Under Secretary for Lands. <br> Botanic Gardens, Sydney, 2 A.pril, 1872.

Sir,
Referring to your letter of the 10th February last, respecting the numbers attached to the lists of timber trees contained in the reserves in the Clarence District, I have the honor to state that the 3, 4, 11. surveyors' numbers-three, four, and eleven, on these lists-have reference to the numbers of the reserves ${ }^{3} 1 a, 1^{6}$. gazetted on the 15 th of September, 1871 , folio 1565 ; ; umbers $11 a$ and 15 are provisional numbers on the surveyor's plan, as there are additional reserves not yet gazetted.

I beg further to add that in consequence of the flooded state of the country, and my being employed in the scrubs at some distance from the public roads, I did not receive your letter till a fem days before my departure for Sydney on the 31st ultimo.

LINDSAY G. THOMPSON,
For the Under Secretary.

No. 6.
Mr. Henry Mannivg to The Secretary for Lands.
Nelligen, 7 June, 1872.
Srr,
I have the honor to report to you that, in pursuance of the anthority conveyed to me in the No. 5 .
letter of the Under Secretary for Lands, dated this day, I have selected the portion of Crown Lands here- Receevired $10 \cdot 15$, under described, for the purpose of working copper, riz. : 40 acres, county of St. Fincent, parish of Murrengenberg, situated at the fall of the Buddawang Mountain; commencing at a trec marked $X$, bounded on the north by a line west; on the west by a line south; on the south by a line east; and on the east by a line north to the point of commencement. This land will be pointed out to the local Surveyor.

I have, \&c.
HENRY MANNING.

No. 7.
Treasury Receipt.
New South Wales.
The Treasury, 10 June, 1872.
Recerfed from T. Casey, R. Casey, Goodenough, and others, the sum of $£ 10$ sterling, for deposit on application for authority to select 40 acres for mineral purposes in two 20 acre blocks.
W. NEWCOMBE,
£10.
Pro Treasurer.

## No. 8.

Mr. Menry Mannivg to The Secretary for Lands.
Sydney, Phœnix Wharf,
10 June, 1872.
SIr,
On the 7th instant I waited at the Lands Office to select mineral land adjoining the land claimed by certain prospectors, named J. Casey, R. Casey, J. Goodenough, C. Saunders, J. Livingstone, W. H. Johnson, Tweedie, and Weston, but found that their application was so informal that up to a late hour that application was held back, and thus the boundaries from which to start from were withheld from the public, and I thus failed to obtain cortain lands as sought for.
I. have since applied for the identical land, as claimed by prospectors abovenamed, and have delivered to your office the Treasury receipt for $£ 10$ to secure 40 acres, as comprised in my application; and I now beg to protest against the alienation of this land to anyone but myself, my application being the first legal one in your possession.

I have, \&c.,
HENRY MANNING.
Mr. Unwin ;-What do you know about this?-L.G.T., 10 June, 1872.
I. simply declined to receive any applications for the land described in Casey's telegram, pending some decision as to whether his selection should be dated from the receipt of his telegram; and I told the gentlemen present that they might describe from Casey if they liked, but that I considered Casey's selection was made.-J.S.U, 19 June, 1872.

## No. 9.

Refort on the Case, with decision of The Secretary for Lands thereon.
Department of Lands, Sydney, 19 June, 1872.

The matter of Mr. Manning's complaint is not apparent from his letter.
The facts of the case are as follows :-
On the 5th instant, Casey \& Co. sent a telegram to this Department, describing a portion of 40 acres at the Buddawang Ranges, Braidwood District, which they desired to select for mineral purposes, and on the same date they transmitted a tolegraph money-order for £10 in payment for the first year's rent.

Through some mischance this money-order was not paid into the Treasury until the 10th instant, but as the Government were all the meantime in possession of the money it was thought that the mere omission to lodge it in the Treasury ought not to prejudice Casey \& Co.'s claim to the lease of the land; so their selection was accepted as made at 3.50 p.m. on the 7 th instant.

Mr. Manning's selection of the same land, duly made, was received at $10.15 \mathrm{n} . \mathrm{m}$. on the Sth instant, and he claims that it should take precedence of Casey \& Co.'s, on the ground that it was the first legal one lodged,--the illegality of Casey \& Co.'s consisting in the fact that the deposit of $£ 10$, though actually in the hands of the Government, had not at the time been lodged in the Treasury.

Casey \& Company not having complied with the 60th section of Regulations, under the Crown Lands Occupation Act, and Mr. H. Manning having complied, he is entitled to prior right of selection.J.S.F., 21 June, 1872.

No. 10.
The Under Secretart for Laxds to Casey \& Party.
Department of Lands,
Sydney, 29 June, 1872.

## Gentiemen,

Referring to your telegram of the 5th instant, applying for a lease, for mincral purposes, of 40 acres at the Buddawang Ranges, near Braidwood, I am directed to inform you, that Mr. Henry Manning has protested against your application being entertained, on the ground that it was not legally made, and that it describes land which he duly selected on the 8th instant.
2. I am to add, that the Minister for Lands has, after consideration of the matter, decided that through your failure to comply with the 60th section of the Crown Lands Occupation Act, Mr. Manning is entitled to prior right of selection.

I have, \&c.
W. W. STEPHEN.

No. 11.
The Under Secretary for Lands to Mr. Henry Manning.
Department of Lands, Sydney, 29 June, 1872.
Sir,
Referring to your letter of the 10 th instant, in which you protest against the granting of a lease for mining purposes to Messrs. Casey \& Company of 40 acres at tho Buddarang Ranges, near Braidwood, on the ground that your application for the same land was the first legal one lodged in this Department, I am directed to inform you, that the Honorable the Minister for Lands has decided, that as Casey \& Company did not comply with the 60th section of the Regulations under the Crown Lands Occupation Act, you are entitled to prior right of selection.

I have, \&c.,
W. W. STEPHEN.

# MINERAL LEASE SURVEYS. 

(REPORT FROM SURVEYOR GENERAL.)

Ordered by the Legislative Assembly to be printed, 28 June, 1872.

Wins the Surveyor General please to furnish a report on the number of Surveyors employed in the measurement of mineral leases,-and what progress is being made in the surveys?-J.S.F., 24/6/72.

Report herewith.-P.E.A., 25 June.

## The Surveyor General to The Under Segretary for Lands. <br> Mineral Lease Surveys, New England.

The undersigned Surveyors and Licensed Surveyors are employed under Mr. District Survegor Greaves. in the measurement of Mineral Leases in the New England District, viz. :-

| A. Dewhurst | Staff Surveyor. | R. L. Murray. | Licensed Surveyor. |
| :---: | :---: | :---: | :---: |
| H. V. Evans |  | E. Sanderson | do. |
| W. N. Digby | Licensed Surveyor. | B. C. Garland | do. |
| W. H. Readett |  | W. A. Shoobert | do. |
| J. M. Simpson | do. | T. H. Goodwin | do. |
| W. Drummond | do. | H. Hosie......... | do. |
| W. Christie | do. | A. Francis | do. |
| H. C. Allport |  | R. H. Mathews | do. |

Messrs. Simpson, Drummond, and Dewhurat, having other work on hand, are only partially employed on mineral leases.

Employment has been offered to Messrs. Chamberlain, Clements, Cooper, Sharp, Cook, Dangar, Davis, and some others, but only the two first named have responded, making a total of sixteen efficient surveyors beyond the ordinary requirements of the district, the work having heretofore been carried out by Messrs. Digby, Drummond, and Simpson only.

The services of an officer as clerk and drafteman have also been afforded Mr. Greaves, to assist in office-work.

Herewith are forwarded two of Mr. Greaves' progress reports.
I have reason to be satisfied with the progress that is being mado up to the present; but if rain sets in I fear that the surveys will fall behind, and the demand continue to increase, as the result of a few weeks' washing will probably add to the already existing anxiety to select.

The quection of additional assistance in the drafting branch has already been brought under the notice of the Honorable the Minister for Lands, and authority given to employ temporary assistance when the rush of work comes in from the surveyors; and the only question remaining undecided is where to find room for them to work, the building and branch office being already full.
P. F. ADAMS.
B.C., 25 June, 1872.

## - Mr. District Survexor Greaves to The Surfeyor General.

District Survey Office, Armidale, 9 June, 1872.

## SIR,

I have the honor to report, for your information, on the general state of the surveys of the mining leases at the several stannaries in this district.
2. Oban, being the oldest stannary where leases are still being applied for, I shall mention it first in this report. Mr. Licensed Surveyor Christie has been instructed to carry out all surveys in this locality, which embraces the Mitchell River and tributaries, the Henry River, and that portion of the
eastern fall of the table-land between Shamon Vale and Mount Mitchell. Mr. Christie has not been many weeks in this district, but has already surveyed a good many leases in the neighbourhood of the Henry River, where his services were most required, and will work his way to Oban proper, and the lower: part of the Mitchell or Sara River. I am in hopes that Mr. Christie will be able to keep the work under without the assistance of another surveyor.
3. A.t Cope's Creek I have employed, in the survey of leases, Mr. Surveyor Evans and Licensed Surveyors Murray and Allport. Mr. Licensed Surveyor Sharpe has received instructions to proceed there also, and will be employed in the lower portion of the tin-bearing locality where leasos bave been lately taken up. These gentlemen will then be stationed at convenient distances apart, and ready to attend to auy urgent instructions I may require.
4. Already a great deal of work has been performed at Cope's Creek and neighbourhood, and the plans are being prepared for trausmission. I hope in a day or two to send in a large number of leases to be finally approved and dealt with. Mr. Evans has been very constant in his work, and since their appointment has received good help from both Mr. Murray and Mr. Allport. I am glad to be able to report that there are no arrears here, and, with Mr. Sharpe's assistance, I hope to be able to keep the work well under, although large areas are being daily applied for.

At Middle Creek, about 5 milcs from Cone's Creek, I have stationed Mr. Licensed Surveyor Garland; he will be able to carry out the rest of the surveys on that creek withont assistance, Mr. Licensed Surreyor Simpson haring done a deal of work there. I have been obliged to let Mr. Simpson go to another portion of the district where he had other urgeut work to perform; but his services will not be altogether lost in the survey of mineral leases.

5 . Mr. Licensed Surveyor Goodwin was the first surveyor sent to the Glen after I. had made a survey of the first leases applied for; this gentleman has been employed in the Valley on the most urgent work, and has made very great progress. Mr. Shoobert, whose short illuess threatened to cause delay, induced me to ask you to send Mr. Surveyor Dewhurst in his stead. Mr. Dewhurst has been so employed, and has assisted greatly in pulling up the arrears that threatened to accumulate. Mr. Shoobert having entirely recovered, is being employed at Tent Hill, about 6 miles from Wollington Vale, and will work towards Strathbogie. The surveys are pretty well in hand at the Glen and Tent Hill, and auy urgent work is soon overtaken.

So soon as I can obtain the services of such surveyors as are required, I purpose locating another at Tent Hill.
6. At Maryland, Licensed Surveyors Digby and Drummond hare performed a deal of work on Ruby Creek and other tributaries of the Clarence, and have hitherto been quite able for the demand upon them. Some plans from each of these gentlemen are being sent in.

The state of the surveys at Margland I consider very satisfactory. Mr. Drummond for a short time, in order to complete sorne urgent work near Tenterfield and Brassington Creek, will leave the field where he now is, but will return in the course of a few weeks.
7. I now come to the Mole and tributaries of the Dumaresq, which is the latest field discovered. I am sorry to report that notwithstanding the number of surreyors whom you have directed me to offer employnent to, I have not yet succeeded in being able to get oue to go to either of these places; but I hope in a few days to be able to send Mr. Mathews, who has completed the surveying of some leases in the district ncar Bendemere. I shall require four surverors, so soon as they can be induced to come, for the Mole and table-laud between the Glen and Dumaresq River, and I think there is every probability of getting as many as I require in the course of a week or two.
8. Mr. Francis, whom I had directed to the heads of the Severn and Bald Nob Creek, near Glen Innes, has arrived at Grafton, and being unable to get carriage from there has been detained some weeks. I hope, however, to hear that he has commenced work.

9 . I have but recently returned from Maryland, the Glen, and Mole, where I have been employed pegging out leases where there threatened to be disputes. Thave one of these to submit to you, in which you have asked for my report, on representations made to you before my visit.
10. During my stay at Maryland I. observed three men stealing tin from surveycd leases on Herding Yard Creek; they however left when I ordered them off, and did not again appear during my visit; but I have to day been informed that they had returned, and threatened violence to the manager of the Company, on whose ground they were "fossicking", when ordered off. I immediatoly placed myself in communication with you on the subject of "fossicking", on leased lands; and I would suggest, as a remedy, that some police protection be extended to Maryland ; and I think it would be desirable to give the like protection to Oban, the Glen, and Cope's Creek, at all of which places there is a rapidly increasing population.
11. I visited Stanthorpe, and saw Mr. Gregory, the Commissioner in charge of the Quennsland stamaries, respecting the surreys that would be required in satisfaction of the claims on the border. We had a pleasant couversation over the matter, and agreed that the surveyors employed should have notes of each others survers, and that the boumdary, as at present marked, should act as a base to work upon.
12. Mr. Blake, the draftsman, whom you hare appointed to assist me in my office, has arrived and commenced his duties.
13. In a few days I purpose preparing a report on the character of the several stannaries, with an opinion of the richness of each.

Thave, \&c.,
W. A. B. GREAVES, D.S.

Mr. District Surveyon Greates to Tire Surteyor Generati.
District Survey Office,
Armidale, 17 May, $18 \% 2$.

I have had in view for some time the importance of frequent communications with you respecting the management of surveys of the several tin mines, and the progress made ly the surveyors emplo yed in measuring leases, but my attention has been so much called to active duty in the field that I hare been unable to attend to my own desire in this jatter.
2. Since the date of my previous report: a good deal of land has been taken up for tin and copper mining (principally tin), extending over very large portions of country east and west of the main north road botween Glen Imes and Tenterfield. The following are the names of the localities :-

Bald Nob Creek, near Glen Jnnes;
Hogg's Creek and Scyern Rirer, near Dundee ;
The Glen, and Tent Hill, near Wellington Vale ;
Grampian Hills, near Strathbogie ;
Table-land Ranges between Glen Creek and the Mole River ;
On the Mole :
On Reedy Creek, a tributary of the Dumaresq Boundary Ranges, north of Tenterfield Creek, at Bassington Creek, Bolivia;
At Boorolong, near Armidale; and
Hall's and Orrabar Creeks, near Manilla.
3. Of the several stamaries named, rich lodes or veins have been found at Hogg's Creek, The Glen, Tont Hill, Grampiau Hills, and Table Ranges, and of the older stannaries, at the MacIntyre River, Cope's Creek, and Oban, besides very rich deposits of alluvial or stream tin at all the tin-bearing localities named.
4. Nine surveyors are at present engaged in the measurement of mineral leases, as follows :- Mr . Evans and Licensed Surveyors Allport and Murray, at Cope's Creek; Mr. Dewhurst and Licensed Surveyor Goodwin, at the Glen; Licensed Surveyors Drummond and Digby, at Maryland; Mr. Simpson, at Hogg's Creek; and Mr. Matthews, at Hall's Creek. Mr. Licensed Surveyor Cook has not arrived, although instructed some time ago to proceed to Mitchell River and Oban; Mr. Licensed Surreyor Shoobert, instructed to the Glen, has been too ill to undertake any duty, but is now convalescent. These two officers have disappointed me very much, and caused considerable delays in the districts assigned to them. Licensed Surveyors Garland and Cbristio, whom I have just received your permission to employ, will proceed to Middle Creck, near Inverell, and to Strathbogie.
5. I have requested permission to employ two more surveyors, but havo not as yet received your favourable reply ; these I propose to send to the Mole and Table-land Ranges, while Mr. Digby, whom I hope soon to recall from Maryland, will proceed to Bolivia. I shall still want some one in Mr. Cook's place if that gentleman does not accept his appointment.
6. This may seem a large staff of surveyors to employ at one time, but I fecl convinced I can give each at least six months employment, and they will have plenty to do to keep the work under ; and it is very important that the leaseholders should be put in posscssion of their claims before the end of Septem. ber next, at which time they will be called upon to renew their leases; and by delays in surveying, nany may be called upon to pay rent who have no claims at all, by reason of their interests clashing with previous leases for the same land. I shall be glad to receive the names of two surveyors for the Mole and Table-land Rauges, and one in Mr. Cook's place, for the Mitchell River.
7. Plans of surveys of the Elamore and Newstead stannaries have been forwarded to you, and the chief portion of the surreys at Oban. The leases issued to the end of March have for the most part been measured, and considerable progress made with those of much later dates. My chief aim has been to get the leases marked on the ground as quickly as possible, leaving preparation of plans till an opportunity is afforded; whenever application has been made for copies of plans by the public, sketches have been supplied.
8. The anxiety of applicants for mineral leases is abated whenever I am cuabled to give information that they are the first applicants; and I have invariably found no urgent desire on the part of those whose leases aro not in dispute, for very urgent survey, and this induces me to again urge the early issue of instructions as a means of appeasing popular clamour.
9. It would be impossible to over-estimate the good that will result from this discovery of tin ; occupation will be found for thousands of persons in a most lucrative employment. Even at tho present moment labour is at a discount; shepherds and stockmen arc leaving their places to take up tin land, and I am doubtful if the Colony at the present time possesses half the labouring men that will be required to work these mines.
10. I am looking out for sites for Reserves for Villages wherever there is a likelihood of a future population.

I have, \&c.,
W. A. B. GREA YES.

## NEW SOUTH WALES.

# MINERAL LEASE SURVEYS. 

(REPORT FROM MR SURVBYOR GREATES-NORTHERN DISTRICT.)

Ordered by the Legislative Assembly to be printed, 9 August, 1872.

## Mr. Disteict Subfeyor Greaves to The Surveyor General.

District Survey Office,<br>Armidale, 28 July, 1872.

Sir,
I do myself the honor to report, for your information, on the progress made in the surveying of mineral leases.
2. Since the date of my last report to you six additional surveyors have arrived in the district and been employed in the measurement of mineral lands in the localities where their services were the most urgently required; this makes eighteen-the number of surveyors employed exclusively in the surveys of mineral leases.
3. Of the six additional surveyors sent into the field, two have proceeded to the Table-land Rangeb, two to Cope's Creek, and one each to Wellingrove and Shannon Vale; so that at the different stannaries the surveyors are located thus :-At "Cope's Creek," Messrs. Evans, Murray, Garland, Allport, Clements, and Russell; at the "Glen"-Mesers. Chard, Chamberlow, and Mathews; at "Dundee"-Messrs. Simpson, Francis, and Sanderson; at "Oban"-Mr. Christie; and at "Maryland"-Messrs. Drummond and Digby.
4. Mr. Dewhurst and Mr. Readett have both been called away to perform other urgent work in this district; and their services have been lost in the measurement of leases.
5. I have been disappointed in not obtaining the services of Mr. Sharpe, who should have joined my staff two months ago ; and in Mr. Liddell, who has had ample time to report himself. I am, however, glad to be able to report to you that I consider very satisfactory progress has been made, and that I have done all that lay in my power to push on the surveyors. I am not aware of any complaints from any quarter of unnecessary delays; at the same time, I am alive to the fact that there is a desire to have every lease surveyed.
6. The recent regulations, making the measurement of all areas equal in proportion on the frontage to creeks and water-courses will have a very equitable and beneficial effect, and will considcrably reduce the labour and expenses connected with the mineral lease law, and bo likewise a great saving to the Revenue in the cost of surveys.

There is a prevailing opinion that a well-defined description will take priority of a vague one, if represented to the Minister, and I am sorry to find it gaining ground; hitherto, I have not had much difficulty, and have made every allowance for the scramble there has been for land, chiefly through the Telegraph Department and by agents. I trust it will receive no support.
7. I have already forwarded to you plans of leases on Cope's and Middle Creeks, The Glen, Tent Hill, Oban, and Table-land Ranges, and I hope now, that so much work has been done, that those surveyors who have done the most work will at once send on their plans.
8. Extensive as is the mineral land leased in the localities named in this and my previous reports, new discoveries have been made and leases applied for to work both tin and copper, but chiefly tin, at Furricabad, Shannon Vale, and Skeleton Creek, near Glen Innes; Guy Fawkes and Kangaroo Hilla, between Armidale and Grafton; Sandy Creek, near Booralong; at Ollera; at Bundarba, on Paradise Creek; and Gwydir River, near Beverly; and on Myall and Doonboy Crceks; at Winterbourne, near Walcha; and Swanbrook, near Inverell; so that I shall require still a considerable addition to the present staff of surveyors, and shall be glad if you can obtain the services of at least four, to whom I will guarantee at least six months' employment, as all the mineral land has by no means been yet applied for; and I anticipate considerable increases in the demand for other lands."
9. I had intended writing you a report on the character of the different mines, but my duties have not as yet allowed me to do so, although I am ansious you should possess the information I have acquired by my position; but I hope to devote my attention to it after I have visited Glen Innes, where I am about to proceed to arrange some disputes and give evidence in a case where several persons have been charged with stealing tin from surreyed leases.
10. The work of my office has considerably increased, and a large portion of my time is devoted to giving information to those who wait upon me ; and sometimes I am unable to attend to any other duty till after the office closes, and at times not even then. Mr. Blake (draftsman) is very kind in rendering me assistance, and I find him very accurate in his work; and I wish I could report as favourable of the other (clerical) assistance you have been good enough to allow me during the present press of work.

I have, \&c.,

# ALLEGED ENCROACHMENT ON MR. CLOSE'S PROPERTY, WOLLOMBI. 

Nó. 1.
E. C. Close, Esq., to Thr Secretary for Lands.

Ellalong, 28 Junc, 1871.
Sir,
About three months ago I refenced the greater part of my north boundary of Josephson's 2,000 -acre grant at Quorobolong, and knowing well how much annoyance results from encroachments on Government land, and on the property of others, I gave my fencers positive instructions to keep their line within the marked trees, and inside the old fence. This Mr. Surveyor Biden was made aware of by them.

In measuring the free-selections of Thomas Howard about a fortnight ago, on the north boundary of the grant abovenamed, at the south and east corner of the said selection, he has thought fit to place the road between the selections and me, 36 links in on my property from the original marked trees, which stand plainly visible before him, within a foot of which my new fence now stands.

In acting thus I believe Mr. Licensed Surveyor Biden to be actuated by ill feeling towards me. There was no necessity for the act on his part, as there is plenty of Government land outside my marked trees and fence for a road equally as available for the purpose as that inside. This is not my first complaint I have made in your office against Mr. Biden. As surveyors have much power in their hands, which with the malicious may be exercised tyrannically, in order to put a stop to such practice I beg of you to have this measurement investigated and reported on immediately-first by the Land Agent of this district, in order that the marks on the trees may be fully recognized before any defacement can take place.

As the measurement of Mr. Biden now stands, my fences may be pulled down, as they have been before in this district, by any mischievous person, while my tenants and myself are left without a remedy.

I beg of you to make the inquiry I seek in this case (and I think it demands the fullest); and believing you will see justice done and injustice punished,

I have, \&c.,
E. C. CLOSE.

May be referred to the Surveyor General as to charges against Mr. Biden.-W. W. Steriere, B.C., 7 July, 1871.

Mr. Fitzgerald,-As to a previous complaint on the part of Mr. Close against Mr. Maitland for a supposed encroachment.-P.F.A.

The whole case-that of the road from Mulbring to Millfield-has long been settled, and the com. plaint was, I think, only verbal to the Surveyor General.-R.D.F., 17 July, 1871.

Mr. Maitland measured across this portion, and I want to compare the measurement with this com. plaint.-P.T.A., 19 July.

The plan is lost.-T.H.L., 21 July, 1871.
Referred to Mr. Biden, for report.-P.F.A., 22 July.

No. 2.
Mr. Licensed Surteyor Biden to Tiee Surfetor General.
Singleton, 3 July, 1871.
Sir,
I have the honor to transmit herewith plan* of a portion of 40 acres, No. xevi, parish of
A enclosed. the 13th section of the "Crown Lands Alienation Act, 1861," and measured and marked on the 15th June, 1871, under instructions quoted in the margin. $\dagger$

+ Instractions
B.C. 4 Feby., /il,
on application o
At time of survey applicant was resident, having effected improvements worth $£ 25$, by the erection Thomas Howard, of a house and partial clearing.
herewith

WM. D. BIDEN, Licensed Surveyor.

Memo.-To ask whether the fence is the boundary, or whether it is some few links inside the portion, as stated in a letter by Close.-24 July, 1871.
[Enclosure to No. 2.]
[Alienntion Act,
Section 13.]
C. P., No. $71 / 171$.

Land Agent's No. 3 of 1871.
Application by Thomas Howard for the Conditional Purchase, without competition, of 40 acres unimproved Crovon Land, under section 13 of the Lands Alienation Act of 1861 .
Rechived by me, with a deposit of tilo, this 19th day of January, 1871, at 11 o'clock.
J. M. BROOKS,

Agent for the sale of Orown Lands at Wollombi.

I sm desirous of purchasing, without competition, under the 13th section of the "Crown Lands Alienation Act of 1861," the portion of unimproved Crown Land hereunder described, containing 40 acres; and I herewith tender the sum of d10, being a deposit at the rate of five shillings (5s.) per acre on the area for which I apply, and on which it is my intention to reside.

To the Agent for the sale of Crown Lands, Woliombi.

Allalong.
Description:-
County of Northumberland, parish of Quarrybylong, 40 acres, joining the northern boundary of Josephson's (now Close's) 2,000 acres, and near a farm rented from E. C. Close, Esq. (a portion of Josephson's 2,000 acres), by Androw Phillips, known as the Vineyard.

Mr. Biden, to measure, if unobjectionable.-E.T., for Sur. Genl., B.C., 4 Feb., 1871.
Received, 13 February, 1871.-W.D.B.
Report, 3 July, 18/1/62.-W.D.B.
No. 3.
Memorandum of Surveyor General, and Mr. Licensel Survexor Biden's report.
Charting Branch, 24 July, 1871.
Memorandum of subjects requiring explanation or completion in connection with the survey and plan of
No. 96 of 40 acres, parish Quarrybylong, county of Northumberland, transmitted by Mr. L.-S.
Biden, letter No. 7,162 of 3rd July, and on which Mr. Biden's report in explanation is requested.
Subject.

Mr. Biden will be good enough to say how he assured himself that the fence shown on the above plan is the boundary (as originally surveyed) of Charles Close's 2,000 acres.
Representations by letter have been made to the effect that the fence is some distance within the measurement, and if that is the case the road cannot be 1 chain wide, and the portion will also be deficient in area.
P.F.A., 25 July.

From the S.W. corner of Josephson's (now Close's) 2,000 acres to the N.W. corner, as fenced, I have carefully measured and find $79 \cdot 24$ chains.
From the N.W. corner, as fenced, I run a line due E., passing yery close to the original marked trees (a section line) put on arriving where Howard wished his land laid out. I put his S.W. corner in the existing fonce, because that gave the exact 76 links wanted in width, and should, as I think, satisfy fully any just claim as regards the 2,000 acres. The fence here follows the extreme northern limit of the belt of marked trees.
The southern boundary of the 2,000 acres runs, according to Mr. Close, somewhat S . of E.
The northern boundary cannot thercfore run $N$. of E . The north fonce is crooked, and is outside the section line.
My field notes are as follows:-

From N.E. corner of Green Mount 79.24 N. from peg to S. corner.
A.t the S.E. comer of No. 97, i.e., 40 chains farther on, the fence is ouly 37 links further north, and it afterwards returns to the southward. This crooked line is not the original line but has been marked at some more recent period.
W. D. BIDEN, Licensed Surveyor.

2 September, 1871.

Noted, 5 September, 1871.
The explanation given does not appear to be very clear. The line now shown as bearing E. $1^{\circ} \mathrm{N}$. is shown on plan as due $E$, and also on the plan of the portions measured the fence has been omitted.

Mr. Biden will be good enough to send in a sketch (on a longer scale), showing the relative position of the fence, as now existing, and the southern boundary-line of the two portions (Nos. 96 and 97), together with a further explanation as to the matter of encroachment.-P. F. Adnans, 20 September.

Sketch appended, which will, I believe, explain fully.-W M. D. Biden, 30 September, 1871.
No. 4.

# No. 4. <br> E. C. Close, Espo, to The Secretary for Lands. 

Ellalong, 26 July, 1871.
My dear Sir,
I wrote you officially some time weeks, charging Mr. Licensed Surveyor Biden with making an encroachment for a road on my property of 36 links within my original marked tree line, Josephson's 2,000 acre grant, Quorobolong.

I must insist upon an inquiry being made into this casc, and if it be found that I have not strictly adhered to the original marked trees, where the aforesaid encroachment is made, and to the line of fence of my predecessors, which for about fifty years has been in existence, I an willing to defray the whole cost of the inquiry; but if, on the other hand, it be found that Mr. Biden has iguored the old marks (plainly visible) and has substituted a new line to suit his own purposes, let the survey be altered, and Mr. Biden saddled with the cost of the inquiry. This is but fair. From my knowledge of Mr. Biden I. am aware that his course must be checked. I can assure you that I had quite anticipated his line of conduct months ago, and was therefore prepared for it, and I fully intend to see this affair well sifted.

If the original marks are to be ignored at will of any malicious person the Government may cmploy there can be no longer any security to property, and the anomaly will be, that the Government which ought to protect property should employ persons capable of altering at will its original land-marks and render its very ownership an annoyance and bugbear to the possessor.

If you please I will write you officially, stating my willingness to pay for the inquiry I seek if my line of fencing is not in accordance with the original marks. I however trust you will grant the inquiry, for I am satisfied that the sudden checking of the course of conduct of which I have complained will be attended with good results.

I remain, \&ce.,
E. C. CLOSE.

Mr. Fitzgerald.-J.B.W., 29 July.
Mr. Close appears to be under an impression that the (Government must abide by crooked lines. I think not. A straight one is implied in the deed, and notwithstanding the old survey may have been erroncously marked on the ground, it appears to me that Mr. Close must abide by the straight line. However, if he questions the surveyor's determination of that line, and is willing to bear the expense of testing it if Mr. Biden is correct, I see no objection. The question is submitted.-P. I. Adays, 12 September.

Approved.-J.B.W., 12 September.

Mr. Licensed Sinveyor Biden to The Surveyor Gieneral.
Mangrove,
Singleton, 31 July, 1871.
Sur,

No. 6.
The Under Secmetary for Lands to E. C. Ciose, Esq.
Department of Lands,
Sydney, 22 August, 1871.
Sir, Biden, in measuring Thomas Howard's selections on the north boundary of Josephson's 2,000 acres grant
at Quorobolong, placed the road betweon those selections and your property 36 links in on the latter, from the original marked trees, I am directed to inform you that, after inquiry into the matter, it is considered that you are in error, and that there is not sufficient reason to justify the Government in incurring the expense of a re-survey of the above-mentioned grant, which appears to be the only way of proving to you that you are mistaken, or removing any doubt in the matter.
2. I am, however, to state, that if you are willing to deposit the cost of such re-survey thero will bo no objection to another surveyor being employed, and if it should be found that the facts are as alleged by you the money will be refunded.

I have, \&ce,<br>W. W. STEPHEN.

## No. 7.

12. C. Close, Esq., to The Sechetarj for Lands.

Morpeth, 2 s August, 1871.
Stis,
I am in receipt of a letter of 22 nd instant from your department.
In looking into the papers connected with Joscphson's 2,000 acres grant; at Quorobolong, I find that this property has been in possession of my predecessors and myself sineo 1825, and that the deed was issued in 1834, the property having passed from Thurlow to Joscophson, and from Josephson to Wiseman, and from Wiseman to Palner, I believe before the last-mentioned date. The fonces I am aware were not new of all the lines in 1834.

That there has always been a question as regards the true position of the pin of the south and cast coruer of this grant I will not deny, but as the Goverument have adopted the only tree bearing the requisite original surveyor's marks, the question as to the identity of the tree is settled. If the Government takes for granted a tree in in disputed position and adopts it, how much the more should they be bound to adopt a line of trees and a fence in accordanco therewith, which has always been in an undisputed position, and never before questioned?

No doubt it is the duty of the Government to protect its officers, but had I not good grounds for the charge I have mado against Mr. Biden I should not have brought it; : ind if the Government will not respect a line so long established and abide by it, I propose that Mr. G. B. White, the surveyor who originally surveyed the grant, be requested to examine and report upon the position of my fence, and the correctness of Mr. Biden's survey. If his line, at the point 1 complain of (south-east corner of Howard's velection), is nearer the original marks than my fence, 1 am content to pay Mr. White's expenses, but if it be found that his survey is assisted by ill will, and not in accordance with the marked trecs, then let him pay the expenses.

If, in thicse days of sapping and ring barking, the old fences and undisputed boundaries are not to be considered, no man is safe in re-fencing his lines, and I repeat I was urgent with the men who refenced my property that they should keep within the marked tree line, and Mr. Biden was made aware of the fact.

You would obligo by letting me know the amount of deposit required, and I will forward my cheque.
I have, dic.,
E. C. CLOSE.

No. 8.
E. C. Cjose, Esq., to The Secretany for Lands.

Ellalong, 26 September, 1871.
Sirn,
I beg to forward you a statement made by Henry Jackson, one of the fencers who put up the Enclosed. line of fencing whereon my complaint against Mr. Licensed Surreyor Biden is founded, and I beg fo you to take it into careful consideration.

My father, his employer, was not a man to eneroach on Government or other lands, or to pay his soryants for so doing.

I an aware that the Government considers it a duty to protect its servants, but its protection should be moderated. In this case I caunot, on cither private or public grounds, put up with manifest injustice, and if a careful consideration is not given to my charge I must tale, at whatever cost, such courso as shall gain me redress, and punish the offender eisewhere, if possible.

I am aware Mr. Biden bas made written charges against me to Government of having taken more land in Quorobolong than I have a right to. I can only reply that I meroly hold such laud as my prede. cessors held within plainly marked surreyor's lines, and land I have been iustructed by the Surveyor Gencral to onclose.

I beg to say that in this cesse Mr. Biden is a gross liar, and if his charge against me is inquired into he will be found unfit for further employment under Government.

If persons utterly devoid of truth or honesty are allowed, in the face of acknowledged land-marks of forty years standing and upwards, to make alterations spitefully at will, when will proprietors be safe? Where will be the finality?

I demand justice at the hands of the Government, and if this, my last appeal, is not taken into consideration, I shall apply no more to Government, but shall take any other course which my legal advisers may decm fitting for my case.

I have, \&c.,
E. C. CLOSE.
[Enclosuro

## [Enclosure to No. 8.]

I, Henry Jackson, of Cessuock, farmer, hereby make the following statement:-
Willian Cox and I were employed through Mr. D. Kennedy, overseer of the late E. C. Close, Eequire, on or about the 1st March, 1841, to fence about a mile of three-railed fouce, being the western portion of the north boundary of Josephson's 2,000 acre grant, Quorrobolong, which work was soon after completed by us.

Our instructions were to fence the line straight between the marked trees, which we carefuly adhered to, as may now be seen. At this time there was but one marked line, and though the marks were not then new, no mistake was or could possibly bo made in the erection of the fence.

The west boundary of Josephson's grant was fenced, and the fencing was not new when our job commenced, and the remainder of the north line, exclusive of that we did, was erected prior to our being employed.

Ihare been requested by Mr. Close to inspect and report on the position of his new fence with reference to its bearing on our old line and the original marled trees. I do not find bis new line more than 3 inches out in any place from the original line, which was most carcfully and correctly placed; and for thirty years, during which time I have never left the distriet, I have never heard it questioned before.

I have seen a peg at the south-east cornor of Howard's sclections, 24 feet 7 inches nouth from a grey-gum stump, which I identify as one of the original marked trees, ipon which we fenced 8 inches south of Mr. Close's new fence; and I am satisfied that if the said peg means nnything it represents an encroachment on Mr. Ciose to more than, the extent first abovenamed, as Mr. Close's line at this point is in upon himself and nearer the tree on his side than that on the Govermnent side, 18 fect north of Mr. Close's fence.

I find most of the marked trees on the Govermment side destroyed, and the marks consequently gone.
1 have been employed fencing and running boundary-lines for more than thirty-five years, and if required am prepared to swoar to the correctness of this statement.
his
HENRY $\times$ JACKSON. mark.

The foregoing has been rend to Henry Jackson, and be thoroughly understands the purport thercof, and has affixed his nark thereto this twenty-sixth day of September, 1871 , in presence of,-

WILLIAM WHEELIRR.
HENRY CHARLES WHEELER.

## No. 9.

Memo. of the Subveyor General.
Surveyor General's Office,
Sydney, 2 October, 1871.
After perusal of the letter I do not see that Mr. Close's further communication throws more light on the subject otherwise than bringing evidence to show the great age of the marked line he has fenced upon, and showing that he is determined on endeavouring by every means in his power to force the Government to abide by that line, although it must be a crooked one, for I do not gather from Mr. Close's letters that he disputes the accuracy of Mr. Biden's determination of the straight line, but blames him for not adopting the crooked one. Crooked lines of undoubted identity have often been adopted when the fencing was worth more than the land involved, and there was nothing else in question; but in this case the land has been conditionally purchased up to the straight line; and it appears that notwithstanding the possibility of the original surveyor being in error the law would uphold the conditional purchase as measured by Mr. Biden. Possibly the Honorable the Minister for Lands might desire the case to be more fully explained to Mr. Close, who appears to think that the surveyor has been actuated by bad feeling only.
P. T. ADAMS,

Approved.-J.B.W., 3 Oct., 1871.

No. 10.
The Under Sechitary for Lands to E. C. Close, Esq.
Department of Lands,
Sydney, 31 October, 1871.
Sir,
In reference to your letter of the 28 th August last, and previous correspondence, respecting your complaint against Mr. Licensed Surveyor Biden for having made an encroachment for a road in your property of 36 links, within your original marked land tree line (Josephson's 2,000 acres grant at Quorobolong), I am directed to inform you, that you appear to bo under the impression that the Government must abide by a crooked line, a vicw in which the Minister for Lands cannot concur, as a straight one is implied in the deeds; notwithstanding the old survoy may have been erroneously marked in the ground, the straight line is the one which may be adhered to.

If, however, you question the surveyor's determination of that line, and are willing to bear the expense of testing it if Mr. Biden is correct, Mr. Secretary Wilson has no objection to this being done.

Should Mr. Biden prove to be in error the cost will either be borne by him or the Government.

No. 13.

## Mr. District Suryeyor Evays to The Surveyor Grnerad.

East Maitland,<br>14 February, 1872.

$S_{\text {IR }}$,
In obedience to your instructions of January 13th, I have the honor to report on the complaint see No. 12. of Mr. E. C. Close, that Mr. Licensed Surveyor Biden has in his survey of Howard's conditional purchase (portions 96 and 97 , parish Quarrybylong, county Northumberland) encroached on the northern boundary of Josephson's 2,000 acres (now Mr. Close's property), and to forward a plan* of the same.

I have adopted the corners pointed out by Mr. Close, and connected them by straight lines, and find, in reference to the alleged encroachment, that the south-western corner of No. 96 should be 33 links to the south, to be exactly on the boundary-line; the south-western corner of No. 97 should be 08 links to the south, to be exactly on the boundary-line; and the south-castern corner of No. 97 should be 15 links further north, to be exactly on the boundary-line; and therefore at that corner there js an encroachment represented by 0975 of an acre-nearly $1-10$ th.

From my examination of this work I see no reason to suppose that Mr. Biden was actuated by malicious motives in placing the south-eastern corner of portion No. 97 within Mr. Close's fence; it would appear to me that having adopted the fence as the correct line at the southern corners of portion No. 96, he produced the line to determine the south-eastern corner of No. 97 , and notwithstanding that it carried him within the fence he adopted it as the correct boundary.

There were what appeared to be old marked trees along the fence, which was placed between the trees as nearly as possible; part of the fence was new, but it is in the position of the old one, which it replaced, as can be seen by the old post-holes.

I find that the western boundary of the 2,000 acres is less, and the eastern more than $80^{\circ} 00$. I also measured across the land in two places, near the centre, with results shown on the plan.

THOMAS EVANS,
District Surveyor.

No. 14.

No. 14.
E. C. Chose, Esq., to Ilhe Sechetary for Ilaids.

Ellalong, 19 Mirch, 1872.
Srin,
It is now nearly two months since Mr. District Surveyor Evans made a survey of my boundary-lines-Quorobolong,-for which I deposited with you $£ 10$, and I deem it but fair to me that some plan and final determination of the Government should be forwarded me.

Three surveyors have tried their hands on my north line, viz., Messrs. White, Biden, and Evans, and none agree. On my south line seven surveyors have run the line and none agree, viz., Messrs. White, Charlton, Rodgers, Maitland, Mylecharnne, Biden, and Evans. No doubt the description in my deeds implies straight lines, but it will be indeed most difficult to find a surveyor with either eye or instrument to mark fairly the lines implied, as the foregoing will show.

It will indeed be interesting to me and the public to know where the miserable bungling of the Survey Department is to end, and what the wisdon of the Government will determine under the circumstances.

Hoping you will without delay furnish me, with the plan and your final determination in this case,-I have, 8 c ., E. C. CTOSE.

No. 15.
Tef Surveror Geverati to The Secretary for Lands.
Mramo.
Me. T. C. Close charges Mr. Licensed Surveyor Biden with making an orroneous survey of two portions, conditionally purchased by Howard, wilfully to his prejudice.

Mr. Biden's report, in explanation of this charge, appeared satisfactory, but Mr. Close conld not bo convinced, and demanded an entive re-survey, by another authority; therefore he was requested to deposit f10, the estimated cost of such work.

Mr. District Suryeyor Evans was instructed to act, and his report is now submitted, from which it appears that any error that Mr. Biden may have committed has been more in farour of Mr. Close than otherwise, for the result of striking the true line shows that by Mr. Biden's measurement Mr. Close loses about 58 rods of fencing and 14 perches of land, and gains about 114 rods of fencing and 1 rood 35 perches of land, thereby showing a balance of property in his favour. I therefore submit that Mr. Close has failed to show any intention on the part of Mr. Biden to injure him.

It is often found necessary in doaling with measurements adjoining old grants to take a liberal view and give the owner the benefit of any doubt that may exist as to the true position of old marked boundaries, especially when that doubt could only be, as in this case, fully elucidated by extensire survey, involving in this case not only more than the value of both land and feacing in dispute, but exceeding the whole deposit paid by the conditional purchaser:

Legally, I belicve that Mr. Close has no claim, and can be obliged to remove his fence to the line struck by Mr. Evans, without return of his deposit, Mr. Close having failed to show animus on the part of Mr. Biden; and further, that his survey was more favourable than strict accuracy would confer.

However, as I have every reason to believe that Mr. Close has acted in good faith, and as Mr. Biden was not perfectly accurate in his measurement, I would recommend that he be allowed the option of the return of the $£ 10$ deposited by him, coupled with the condition of his removing his fence to the tree line, as now struck by Mr. Erans; or othervise, that the $£ 10$ be retained, and the boundary of the conditional purchase set back the few links necessary to exclude the fencing; and on condition of Mr. Close paying the amount which it will be necessary to refund to the conditional purchaser, or other costs that might be consequent upon the amendment of that measurement.

Iti does not appear that any purchase or deed is necessary to cover the small portion of land that would under this arrangement be handed over to Mr. Close.
P. F. ADAMS.

Surveyor General's Office,
26 March, 1872.
Submitted.
Approved.-T.B.W., 6 April.

No. 16.
The Under Secretary for Lands to F. C. Caose, Esq.
Department of Lands,
Sydney, 7 May, 1872.
Sin,
With reference to your charge aminst Mr. Jicensed Surveyor Biden, for making an erroncous survey of two portions conditionally purchased by Howard, Nos. 96 and 97 , parish of Quarrybylong, I am directed by the Minister for Lands to inform you that on the report of the re-survey by Mr. District Surveyor Evans, it appears that any crror Mr. Biden has committed has been more in your favour than otherwise, and that you have failed to show any intention on the part of him to injure you. However, as there is every reason to believe that you have acted in good faith, and as Mr. Biden was not perfectly accurate
in the measurement, the option is allowed you of the return of the deposit made by you of $£ 10$, on condition of your removing your fence to the tree-line, as now struck by Mr. Evans, or otherwise, that the £10 be retained, and the boundary of the conditional purchase set back tho few links necessary to exclude the fencing, and you paying the amount which it will be requisite to refund to the conditional purchaser, or other costs that might be consequent upon the amendment of that measurement.

I have, \&c.
W. W. STEPHEN.

No. 17.
E. C. Close, Esq., to The Secretary for Lands.

Ellalong, 18 May, 1872.
Sir,
I am in receipt of yours of 7 th instant, and consider the decision therein contained both arbi- No. 16. trary and unjust. Why am I to suffer for the bungling and inaccuracies of the Survey Department?

In placing the £10 for re-survey I did so on the promise of the Surveyor General of being allowed 81 chains in the width of my property at the point disputed, which have not been allowed. I was present when Mr. Evans chained across from the point disputed due south to the other side of my land, and I wanted between my fences 20 links of 81 chains. Thus Mr. Biden has encroached upon me 56 instead of 36 links.

On my south boundary Mr. Biden has accused me of having within the bounds of Josephson's grant about 5 acres in excess; this encroachment (if any) was made by order of the Surveyor General, for the north boundary of the road "Mulbring to Millifield," along my south side line, and was measured by Mr. Surveyor Mylecharane, and the road opened by Mr. Biden. This encroachment Mr. Evans's survey reduces to $1 \frac{1}{2}$ acre. This so called encroachment of mine the Surveyor General authorized me to fence, and I fenced.

If the Surveyor General would produce Mr. Biden's line from south and east corner of Howard's selection to Palmer's grant he would find Mr. Biden to encroach upon me within the old line there from 2 to 3 chaius-Mr. Evans only 60 links. On the opposite side, at Forbes's north and east corner tree, Mr. Mylecharane's line is only about 6 links from said tree in upon me, Mr. Erans 18 links, Mr. Biden 68 links. Please weigh the proportions and say whether fair play exists here, and then tell me who is safe with all this disgraceful botching and bungling?

You state there is every reason to believe I have acted in good faith. You know I have done so, and I am certainly well rewarded. The very appearance of honesty one would think should weigh down a proved inaccuracy in face of incontestable land-marks. If the Government acted fairly my fences, if wrongly placed, should all be shifted at the public expense, as all have the Government surveyors' marks, both original and recent, to justify their position. The other expenses I have been put to in this affair should also be repaid me.

I have, \&c.,
E. C. CLOSE.

Refer to Surveyor General.-J.S.F.
The Surveyor General.-W.W.S., B.C., 27 May, 1872.

## No. 18.

## Memo. of Surveyor General.

I hape no reason to alter my previous recommendation. Mr. Close has very nearly 1 chain more in width than his deed allows him, and grumbles because he does not get the full chain. I was aware that the grant was wider than the mile, but as the corners were undoubtedly original I did not advise any reduction to the actual area, and only stipulated for a straight line joining the two corners; beyond this the Government could not go, for Howard, the conditional purchaser, has selected land up to the boundary of the grant, and there is no excuse for keeping him out of it, even if it were desirable to do so.

I should be glad if the Honorable the Minister for Lands would look over the plans and papers in this case, as he may not be aware of its peculiarities, or, perhaps, I may add, those of Mr. Close cither.

## P. F. ADAMS, <br> 30 May.

After a perusal of these papers I'am of opinion that Mr. Close has nothing to complain of, and the matter should rest as decided. The objections appear to be frivolous.-J.S.F., 26 June, 1872.

# COMMONS REGULATION BILL. 

(PETITION AGAINST-IRUSTEES AND COMMONERS OF WILBERFORCE COMMON.)

Ordered by the Legislative Assembly to be printed, 25 June, 1872.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.
The Petition of the undersigned Trustecs and Commoners of the Wilberforce Common, County of Cumberland, New South Wales,-

## Respectfolin Showetil:-

That your Petitioners have observed that a Bill has been introduced into your Honorable House by the Honorable Member for New England, Samuel Henry Terry, Esquire, to regulate Commons.

That in the opinion of your Petitioners the proposed enactments of such Bill are objectionable in the following particulars:-

First.-Your Petitioners are of opinion that the proposed appointment and election of five Trustees is excessive, three being quite sufficient for the management of any Common.
Secondly.-Your Petitioners are of opinion that the election of such Trustees so frequently as once in every three years will lead to unnecessary trouble and inconvenience, will occasion much uncertainty and mismanagemeni, and have the effect to a great extent of destroying the independence and efficiency of the Trusteeship. Your Petitioners boliere it would be much preferable if only one out of three Trustees retired every three ycars by rotation,eligible for re-election.
Thirdly.-Your Petitioners objcct to the power given by the fifteenth clause to the Trustees to surrender the Commons to any adjacent Municipality.
The Wilberforce Common, vosted as it now is, aud has been for a number of years past, has been found most useful in supplying the settlers with grazing for their cattle, and timber for firewood, fencing, and building purposes; it is a place of refuge in times of floods, and it would be a great loss and calamity if it were cver parted with to any Municipality which might change its present uses to others not so advantageous to the Commoners.

Your Petitioners would also point out that the power given by the eleventh clause for general meetings of Commoners to amcud and repeal by-laws will be found inconsistent with the twenty-first clause, which empowers the Trustees to make such by-laws.

Four Petitioners are further of opinion that the Trustecs ought to have power to grant leases for seven years instead of five years as provided by the said Bill.

Your Petitioners are of opinion that the present Act to regulate Commons is sufficicnt for all practical purposes, and that the proposed Bill is no improvement upon its provisions.

Your Petitioners therefore humbly pray your Honorable House not to pass the aaid Bill, or to modify aud alter it to meet the objections of your Pctitioners.

And your Petitioners will ever pray.

## Regulations for Gold Mining upon Crown Lands.

## Former Regulations repealed.

1. All Regulations hitherto in forec for the management of the Gold Fiolds of Now South Wales are hereby repealed: Provided that any existing intercst or privilege shiall not be affected by these Regulations.

## Explanation of terms.

2. The following terms in inverted commas, except where the context may otherwise indicate, shall bear the meanings sct against them respectively:-
"Commissioner"-The Commissioner residing nearcest to, or appointed to act in the matter of, my chaim, share, or other matter or thing which shall be the subject of nny question or dispute, or of mything required to bo done under these Regulations.
"Commissioner in Charge"-Any Commissioner intrusted with the general superintendence of a Gold District, whether Northern, Southern, or Western.
"Registrar"--The Mining Registrar residing nearest to any claim, share, or other matter or thing which shall be the subject of any question or dispute, or of anything required to lo done under these Regulations.
"Claim"-Any nathorized holding whatsoever.
"Amalgamated claim"-Two or more claims united and forming one claim, on which the labour otherwise necessary for each is concentrated.
"Temporary amalgamation"-Two or more claims, upon any one of which the labour required upon each claim is concentrated for their common benefit.
"Prospecting"--Searching for gold in any new and untried locality.
"Protection area"-Ground nuthorized to be ticmporarily occupied for purposes of prospecting.
$12-\mathrm{A}$
"Prospecting claim"-A claim allotted, by way of reward, for the discovery of gold within a protection area, and not subject to labour conditions.
"Frontage system"-A mode of working and occupation, in regard to deep sinking, in operation within a certain area.
"Protected aren"-Ground temporarily held on an undeclared or declared frontage lead, or on tunnclling ground, while searching for gold.
"Prospecting protected area"-Au area held for prospecting purposes on a declared lead under the Frontage Regulapurpos
tions.
"Frontage claim"-A claim within a frontage protected area and subject to the Frontage Regulations.
"Block claim"-An ordinary allurinl claim allotted under the Frontage Regulations.
"New ground"-Any unoccupied Crown Lands not previously worked for gold.
"Working party"-Any miner or mine"s actually working in and occupying a claim, whether on their own account or as representatires of any other authorized person or persons.
"Tested and absudoned ground"-Ground upon which three or more ehafts bare been bottomed and tried, and then abandoned.
"Water-right"-The right to eonvey, by merns of a race, a specified quantity of water to any locality, or tho right to a apecified quantity of water in its natural place or clannel.
"Storm water"-Water collected by temporary drainage, and not permanent in a creck, riser, lagoon, lake, or artificial reservoir.
"Catch drain"-A drain for catching and conveying stormwater.
"Lead" shall mean any auriferous deposit following a progressive course, or in successive patches, at any depth below the surface.
Singular shall mean plural, or plural singular, in all cases where the contest renders such reading necessary.
"Mincr"-Any person holding a miner's right.

## Alluvial Workings.-Prospecting Areas.

Prospecting protection areans.
(Form of Application- -Schcdute A.)
3. Any miner or party of miners desirous of prospecting shall be entitled to a protection area, and on the discovery of parable gold therein to a prospecting clain, as horeinafter provided.

## Mode of marking.

4. The boundaries of all such protection areas shall be marked at aach corner by a post, not loss than three (3) fect in height above the ground and three (3) inches in diamcter, set in an $L$ trench 6 fect long and 6 inches deep,-such posts to be kept visible at all times during the occupancy of such protection area.

Registration.
(Form of Certificate,-Schedule B.)
5. Every protection area, as well as the name or names of the holders, shall be registered within fourteon dars after marking, and a copy of the certificate of such registration kept constantly posted on the ground.

## Extent of protection arens and prospecting claims.

6. Prospectors, previous to their discovering payable gold, shall be protected in holding an area of 300 feet in length by a width of half a mile, provided they are searching for gold at a greater distance than half a mile from nuy existing gold-working of the same character; at a greater distanco than 1 mile they shall be protected in holding an area of 400 feet in length with n width of half a mile; at a greater distance than 3 miles they shall be protected in lolding an area of 500 feet in length with a width of half a mile ; at a greater distance than 5 miles they shall be protected in holding an area of 600 feet in length with a width of half a mile,-so long as such prospecting protection area shall continue to be worked in a boní fide manner by not less than two men; and on obtaining payable gold such protection area shall be reduced to a claim of the following dimensions, viz. :-

At not less than $\frac{1}{2}$ a mile ................. 300 by fect. 300

Such claim to be held as a reward without labour conditions.
No prospecting protection arca shall be allowed within half a mile of the boundary of any other of a similar charncter.

## Ordinary Alluvial Claims.

Extent of ordinary alluvial ctaims under 60 feet.
7. The extent of a claim in new and dry alluvial ground, where the depth of sinking does not exceed 60 feet, shall be as follows:-

And when the depth of siaking exceeds 60 feet and does not exceed 100 feet, the extent of claims shall be as follows:-

|  | feet. | fect. |
| :---: | :---: | :---: |
| For one miner | 90. by |  |
| For two miner | 140 | 40 |
| For three do. | 170 | 17 |
| For four do. | 200 | 200 |
| Forfive do. | 220 | 220 |
| For six do. |  | 210 |

## Fxtent of wot alluriat claims under 00 feet.

And in wet alluvial ground, when water other than surface water exists and necessitates slabbing throughout, or in rocky ground requiring blasting for 20 feet in the sinking of the shaft, when the depth of sinking does not exceed 60 feet, the extent of a claim shall be as follows, tiz. :-

|  | fcet. feet. |
| :---: | :---: |
| One miner | 90 by 90 |
| Two miners | 140 " 140 |
| Three do. | .170 \# 170 |
| Four do. | . 200 " 200 |
| Fire do. | . 220 : 220 |
| Six do. | . 240 " 240 |

Such claims, when practicable, shall be marked" off in a rectangular form. When from any cause it slanll be impructicable to take the claims in the form nbovementioned, a departure from that form may be sanctioned, and such area of ground may be allolted by the Cominissioner as will give to each minor
or working party the prescribed or any less area: Provided that in no iustance shall a claim exceed in length trice its breadth.

Claims faken up as dry and proving wet-how worked, and rice versa.
8. Any clnim taken up as dry sinking and proving to be wet, shall be worked in accordance with the prorisions relating to wet sinking, and may be held by the same number of shareholders as if it were dry sinting; and any claim taken up as wet sinking and proving to be dry, shall be held by the same number of miners as required by the provisions relating to dry sinking.

Mode of marking.
9. All ordinary alluvial claims shall be marked in accordance with General Regulation No. 177.

## Test of the depth.

10. The bottoming of three or more shafts shall be a sufficient testi of the depth of alluvial ground, unless the Commissioner shall sunction a further testing.

## Sluicing Claims-

Extent of claim.
11. Thearea of asluicing claim in tested and sbandoned ground of any depth shall be one acre for every mile of race formed and cat for the purpose of working such ground, and capable of conveyiug at least one ground sluico-head of water. Such claim shall be effectively worked, when practicable, by at least one man for each nere up to four acres, and one man for every two additional acres: Provided that, no sluicing claitu shall exceed in extent ten acres.

Area when water is purchased.
12. The extent of a sluicing claim worked by water purehased or hired from the omners of water-races shall be as follows :-

For one man. $\qquad$ Half an acre.
" two men One acre.
"three men ........ One and a l
$"$ four men ....... Lwo acres.
Such claims to be marked in a rectangular form: Provided that in no instance shall any such claim exceed in length twieo its breadth.

## Area in conncetion with machinery.

13. Where steam or water power is employed for the purpose of raising water for sluicing purposes, the cxtent of a sluicing claim in comection therewith shall be one acre for each horsepower of the machinery, or for each horse employed in driving such machinery; and when other works of an expensive nature, such as dans, reservoirs, or tail-races, shall have been constructed in connection with sluicing claims, the extent of sueh claims shall be one acre for every $£ 50$ so expended: Provided that in no instance shall any claim described in this regulation exced in extent ten acres, or be held in conjunction with any other claim held under theso Regulations.

## Mode of application. <br> (Schedules C and D.)

14. Any mincr, or party of miners, desirous of taking up any sluicing claim described in the foregoing Regulations, shalt make appliention, in writing, to the Mining liegistrar, to register such claim, describing the position and situation of the ground ; and shall also post a notice on some conspicnous place on the proposed claim, and at the Minjing Registrar's office. If within fourteen clear days from the time when such application was lodged and notico posted as aforesaid, no valid objection shall have been made and upbeld, the Mining Registrar shall issue the necessary cortificate of registry. In the erent of objection haring been made, the Commissioner shall inquire into and detcrmine the maiter.

## Tested and Abandoned Ground Fixtent of claims.

15. The extent of an ordinary claim in tested and abandoned ground ahall be as follows :-

Where steam or water power is employed.
Where steam or water power is employed, or horses used for the purpose of driving machinery in working tosted and abandoned ground, the cxtent of the claim in conuection therewith for any miner or party of miners slaall bo one acre for every $£ 50$ expended in such machinery : Providel that no such clain shall exceed in area ten acres. The onus of the proof of expenditure shall rest with the applicant.

## Frontage System.

Frontage defined.
16. The frontage system shall be held to be the right to search for a supposed and follow a specified lead of gold at such depth within a defined frontage protected area as by these Regulations may be hercinafter provided.

## Claims when to be marked under frontage eystem.

17. All ullurinal ground within one mile of any allurial proicction prospecting area shall be marked and held as protected areas on an undeclared lead: Prozided that this shall not apply to ground, the depth of which has prefionsly been ascertained to be less than that required to bring it under the operation of the frontage system.

Depth of frontago defued.
18. In dry alluvial ground of 100 fect in depth, or in wet nlluvial ground where water other than surface water exists aud necessitaies slabbing throughout, or rocky ground requiring blasting for 20 feet in tho sinking of the shaft, at a depth of ( 0 fect all claims. shall be worked under the fronlage system.

## Extent of frontare protected areas.

19. The length of a frontage protected area in dry allurial ground, except as hercinufter provided for, shall be on the following scale, viz. :--
fect. - fuct. feet

100 in depth and not exceeding $150-50$ fort each
Excooding 150 in depth and not excecding 200-60 minc

| $"$ | 200 | $"$ | $250-70$ |  |
| :--- | :--- | :--- | :--- | :--- |
| $"$ | 250 | $"$ | $"$ | $300-80$ |

$"$
$"$

In wet alluvial or rocky ground :-
Exceeding 60 in depth and not exceeding 100-50

| $"$ | 100 | $"$ | $"$ | $150--60$ | $"$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| $"$ | 150 | $"$ | $"$ | $200-70$ | $"$ |
| $"$ | 200 | $"$ | $"$ | $250-60$ | $"$ |
| $"$ | 250 | $"$ | $"$ | $300-60$ | $"$ |

Tho width of a froutage protected area shall be half-a-mile, until gold shall have been struck therein, except as hereinafter provided.

## Extension of width of protected arca

20. Upon a written application, signed by a majority of the holders of protected arcas on any decleared lead, the Comuis. sioner may declare an extension of the width of the protected urea on such lead to one mile, such extension to commence at a distance not less than 410 yards below the last gold producing shaft on the lead: Provided that the wings of no other existing lead bo cneroached on or any other prior right affected thereby.

Mode of marking on undeclared lend.
21. The mode of marking a protected area on an undechared lead shall be by the ereciion of a post not less than 3 fect in height and 3 inehoy in diameter at either end of the protected urea, along the supposed line of lead.
Frontage not to take effect in diry ground under 100 feot-In wet ground, under 60 feet. Blook claims how taken.
22. When the sinking in new ground shall bo found not to reach $a$ depth of 100 feet in dry ground, or 60 feet in wet or rocky ground, of which the bottoming of threc or more shafts on the supposed line of lead shall bo a sufficient test, unless the Commissiouer shall specially sanctionafurther testing, all marking on the supposed line of lead shall be null, and the ground shall then be open for taking up claims in the block form, the frontageholders haring a preference, to solect their claims in rotation nccording to their priority of occuparion on the supposed lead: Provided that cach mincr shall lave the rights to include in his block claim auy shaft which may have been surk by him to a depth of at least two-thirds of the depth of the noarest prospecting shaft, on the same lead or workings.

Froutage gystem when in operation.
23. When any miner or party of miners in an allurinl prospecting protection area shall strike payable gold at the depth required to bring the ground under the operation of the frontage system, the lead shall be decmed to be declared to the extent of one mile on each side of the prospecting protection area, and all protected areas previousty held on such lead shail be cancelled (crecpt prospecting protection areas), and the holders thercof shall be entitled to occupy protected areas accordiag to their priority of occupation on such lead, exceyting where the holder or holders of any protected area may hure sunk a shaft at least two-thirds of the depth of the prospecting-shaft, in which casc he or they way retain the protected area in which such shaft is situated.

## Date of declaration of lead.

24. The discovery of payable gold in auy alluvial clain at the depth required to bring the ground under the frontage system, shall within seven days be reported hy the discoverer to the nearest Mining Registrar, who shabll register the same and forthwith report it to the Commissioner, and the date of such discovery shall be held to bo the date of declaration of such lead, except as hereinafter provided by regulation No. 25.

## Commissionor may or may not declare lead.

25. When among ordinary alluvial clams, or where leads haro been declared nad the declaration rescinded, the depth of sinking at whid payable gold is discovered shall be foumal to
reark 1.00 feet, it shall be in the discretion of the Commissioner either to declare a lead under the frontage-system, and to determine the point at which such lead shall commence, or to refuse the declaration of such lead.

## Base line, how leid down. <br> (Schedule E.)

26. As soon as practicable after the declaration of a lead, a baso line shall be laid down by the Commissioner from either boundary of the prospectiog profected area, along the supposed course of such lead, on which line the length of the protected areas shall be marked and numbered consecutively; and such protected areas slall be taken up according to the priority of occupation on the undeclared lead, and registered within four clear days after the laying down of the base line as aforesaid. Cross lines shall niso be laid down by the Commissioner, as nearly as possible at right-angles with the base line, at; cach boundary of the protected areas, and the extremity of such boundaries shall be marked by posts, not less than three feet in height and three inchos in diameter: Provided always that before laying down any such base line the Commissioner slaall deternine that payable gold as alleged has been discovered by the prospectors.

## Effective working of ciaims required

27. The working of all protected areas on a duly declared lead shall be effectively commenced and carried on continuously ufter the expiration of three clear days from the time of surrey and allotmont, for half a mile in advance of the last shaft producing payable gold at cither end of the lead.

## Occupation of non-working claims.

28. On the other protected ureas upon a declared lead, the position of which does not require them to be so worled, and on all protected areas on an undechared lead, overy shareholder, or his representative to the full number required by the dimensions of the protected arca, must be present from 9 till 11 o'clock a.m. daily.

- Vorfeiture.

29. Any miner absenting himself from his protected area on the non-working portion of a dechared lead, or an undeclared lead, between the hours of 9 and 11 a-m. daily, shall forfeit the same.

## Base line may be altered

30. If the actual couree of the lead be found to differ matorially from the course of the baso line, and if the majority of the sharcholders affected thercby make an application in writing to the Commissioner, a new base line shall be laid down by him from cither boundary of the prospecting area, or from any protected wrea on the lead where one or anore shafts have been bottomed, and the probable course of the lead ascertained, and protected areas shall be marlied and nllotted on the altered base line according to their order on the former line.

## Dipergenco Inow effeted.

(Schedute F.)
31. When in consequence of the divergence of a lead as aforesaid it shall become necessary to alter the base line, it shall be effected in the following manner: The new base line shatl deriate from the original base line at the nearost boundary to the prospecting protected areib of the protected area in which such divergenee oceurs; and from the cross line marking such boundury on the side towards which the divergence inclines, 200 feet from the point of divergence, a line shall be drawn parallol to the new base line upon which that protected area shall be measured and marked, the cross boundury of which in the progressive direction of the lead shall form a right anglo with such line and with the now base line, and all succeeding protected areas shall be marked on the new base line in their progressive order, and the cross boundary lines shall intersect the base line at right angles, and shall be parallel to each other.

## Hxtension of lead.

32. All protected areas on the line of a declared leud within a distanec of one mite from the last shaft producing payable gold on such lead, shiall be deemed to be protected areas on that leatd, and shall bo held, marked, and defined, as required under Regula. tion No. 26; and all protected areas taken up in advance of any base line of declared leat, and which would, by the extension of the base line, come within the wings of such loud, must be marlsed in tike manner as on an undeclared load, in continuance of the base line, and will be held to be protected areas in contimuation of such declared lead.

Flay when to be hoisted.
33. Upon payable gold being struck on the lead in any protocted area, the holders thereof shall cause a red flag to be hoisted to indicate the course of such lead. The holders of such protected area must give orery information as to the course of the lead, and must allow their shaft to be entered by any pereon haring the witten authority of the Commissioner.

## Ferlod allowed for proving fidth of sead.

34. The holders of any protected area bottoming on tho lead shall be allowed twenty-eight clear days to prove the breadth of the lead. The claim shall then be marked off to the prescribed width. In case the shaft and the drive of the holders shall be without the claim closen, they may retain such shaft and drive for tho working of the claim; and such slaft or drive shall not be taken possession of, except by consent of the original holders.

## Width of frontage-claims.

35. The width finally to bo allotted for a frontage claim, after the gold shall hare been struck therein, shall be 200 fcet (except as hereinafter prorided), unless the deptlh of sinking slaall bo found to exceed 100 feet, after which an additional width of 10 fect shall be allotted for every 50 fect in depth.

## Mode of marking of frentage clatm.

36. For the purpose of marking off a frontage claim, a base line shall be laid down as nearly as possible in the actual direction of the lead, in the centre of such claim, to which the eide lines shall be parallel; and in the case of the alteration of the base line, upon which the lengtio of the frontage protected areas mpon the lead hare been marked, from its original direction, the holders of the protected area in which such divorgence occure shall be entitled to so much of the lead in length as is included within their upper and lower cross boundary-lines, and to their superficial area within those lines in any form that may be requisite, always when practicable taking the permanent base line as the centre of the claim.

Wings of lead to be held in reserve.
37. When a frontage clnim has been marked off, the remainder of the frontage protected area of which it formed a portion ahall be held in reserve until the adjoining clain in the progressive direction of the lead shall have been marked off.

Frontage-claim how marked.
38. The boundarics of all frontage claims shall be murked and defined in accordance with the provisions of Gencral Regulation, No. 177.

## l'rospecting protected area on deelared lead.

39. Any miner or party of miners desiring to take up a pros. pecting protected aren on a declared lead, may do so at a distance not less than half a mile in advance of the last shaft producing payable gold ; aud be or they may mark out and hold in ench prospecting protected area an additional area for each man employed thereon, so long as the entire extent shall not exceed 400 fect along the line of lead.

## How lead to be taken up within the wings of another lead.

40. When a junior lead shall have becn traced to the outer boundary of the protected areas of a senior lead, the Commissioner may, if he zees fit, order that the protected areas on the supposed progressive course of such junior lead be thenceforth conditionally registered; claimants for protected areas on such supposed course, so conditionally registered, shall be exempt from being present daily on the said junior lead by posting a cortificate of such registration on the protected area of such cortificate of such registration on the protected area of such
junior lead adjoining the protected areas of the senior load, and at tho Mining Registrar's Office; and when the frontage claims upon the senior lad shall have been mariked off, and the remainder of their protected areas are open for occupation, such registered claimants ehall have a right to protected arcas on the supposed progressive course of such jumior lead in the order or the priority of their registration on such jumior lead.

## Junction defnel.

41. A convergence of two or more leads shall be considered to have tnken place when such leads shall hase joined and formed one lead, and the point of junction shall be deemed to be the point at which two lines driwn along the centres of such leads towards their conflucnce orjunction and produced shall interscet cach other, such centres being understood to mean the respective centres of those portions of the confluent leads which, after the last bends in such leads respectively prior to their confluence, flow towards each other.

Oceupation of claims at convergence of leads.
42. In the event of a convergence of leads the preference at and onward from the junction slall be given to the holders of prolected areas on the lead first declared.

## Block-chims within a frontage proiected area how applicd for

(Form of Application.-Schectules $G$ and II.)
43. The right to select block claims within a frontage protected area may be registered until tho frontage-area shall be open for occupation. Such applications must describe, as accurately as possible, the position of the claims so applied for: Provided that the actual applicants for any block claim shall post a notice of such application in a conspicuous position at one of the cxtremities of the frontage-area in which it is applied for, and prior to such registration shall have been prescent, to the full number of miners requived by the dimensions of the claim, on
such extremity of the frontage-area for two clear days, from 9 a.m. to 11 a.m., and the applicants or their representatives shatl further be present for the same period from'day to day, until the frontage-area shall be open for occupation according to theis priority of registration.

Form of block-clains.
44. The area and form, when practicable, of block claims on a frontage-lead shall be the same as that of the adjoining frontage claim, and shall be occupied and worked by the same number of men.

Tracing juntor leads
45. When any oiker icads shall have been traced to the boundary of, and aro likely, in the opinion of the Commissioner, to exist within a frontago protected area, in which upplications for block claims shall have been registered as before provided for, such applications shall be held in abeyance, pending the determination of the existence of such leads as aforesaid; the registeren applicants for protected arcas on such leads respectively shall lave the prior right, and the applications for block clainis shall theu be cancelled in so far as they may be found to interfere with the occupation of such leads.
Hoiders of protecfed areas assisting prospectors exempt from occupation.
46. On an undeclared lead, and on the portion of a declared lead, the working of which is not required, holders of protected areas who may dosire to assist the holders of a prospecting area in their search on the same lead shall when so employed be excmpt from the daily occupation of their protected areas, by notice in writing being sent by the holders of such prospecting area to the Yining Registrar of such arrangement having been made, and by a copy of such notice being posted on the protected area furmishing steh Inbour.

## Survey of frontare claims and protected areas.

(Schedute 1.)
47. In a district where a Mining Surreyor has been appointed, all measurements of frontage claims shall be performed by that officer, who shall be paid in adrance by the claimholders or holders of protected areas for such surveys according to tho scale of fees in the amnexed Schedule, marked $I$, and such survey shall in all cases precede registration.

Business allotments held withiu wings of leal.
48. When a line of road or strect for business sites shall be requisite within the rings of a lead, the Commissioner may sanction such occupation at the risk of the occupiers, who shall not be entitled to any compensation for their improvements, and must racate their allotments, if required, should the lead be found therein.

Declaration of lead to be rescinded when abandoned.
19. When any declared lead shall have been abandoned for twenty-one clear days, the declaration of lead shall be deemed to be resciuded. The decharation of a leat on which the number of shafts actanlly at work during the twenty-one preceding days shall not exceed five, shail aiso be deemed to be reseinded; but the hoklers of any claims then working on such lead shall be entitled to retain their frontage.

## Cases not provided for.

50. The Jolding of frontage-claims will, with referenco to any question not herein provided for, como within the terms of tho general regulations tor ordinary claims.

## Tunnelling.

## Extent of mrotected aren.

51. I'umellin gground shall be held to be that portion of any Crown Lands containing lills, benches, or plateaux, in which an auriferous drift lics bencath cither a basultic formation or a superincumbent strutum of conglomerate, and where adjuccnt valleys are of such a depth is to be below or on a level with such drift: On such ground the extent of protected arca allowed to each mincr shall be 50 fect frontage, with a width across the hill, bench, of platean not excecding one mile.

1rotested area how marked.
52. The boundary-lines of the protected arca occupied by any one party musi be parallel to cach other, and marked by posts 8 feet in height above the surfite, and not lees than 3 fuches in dianeter, phased aloug cach lite so that cach succeeding post shal bo in riew from the one preceling it.

## Tunncts.

53. Each parly of miners shabll drive their tunnels wibhin their own parallels.

Mode of procedure on striking payable gold.
54. When payable gold shall have been struck, the holders of the protected area shall hoist a red flag over the pluce where it is found, and elinll be allowed 28 days to prove the breadth of the lead.

Extent of claim and how marked of.
55. At the expiration of 28 days alter the hoisting of the flag, the width of the protected area shali be reduced to 250 feet; such reduced width with the entire length of the areat betreen the parallels shall bo hold by the party us a claim, and the width shail be finally marked by two lines of posts correspondiug with those on the side lines; the angles shall be right angles, and ench cornor post shall be sct in an $L$ trench 6 feet loug and 6 inches deep.

Walls of tunvel protected.
56. When a claim shall have beon finally marked off, the posts on the remainder of the protected area shall be withdrawn, and the ground open for occupation, excepting 20 feet on each side of the walls of sueh part of any tunnel as may bo vutside the boundary of any claim held in comuction therewith.

Tunuel may be used by tro or more working pirties.
57. I'wo or more working parties may by agreement use the same main tunnel or any portion thercof: such agreement must be registered in the office of the Mining Registrar.

## legistration.

5s. All protected areas held on tumelling-ground must be rugislered withiu seven days from tho date of occupation.

## Claims in Rivers or Creeks.

## Extent of claim.

50. The extent of a claim in a river or creck, in the direction of the course of the stream, shall be 100 fect for esch miver employed thereon, cxtending across the whole bed of such river or creck, and shall bo marked ati cach extremity of the claim by posts not less thun 3 fect in height and 3 inches in diameter. Posts of similar dimensions shall also be creeted on either bank above flood-mark parallel to such posts as aforesaid, for the purpose of asecrtaining their former position if washed away.

Fload-race to be formed.
60. Every holder of a clain in a river or creek shall form and maintain a sufficient flood-race through or past such claim, and shall be cotitled to maintain the matural level of the water at tho hend of his clais, proviled that no prior right shall be injured thereby, but shall have no further right to any tailwater after it shall have passed his works.

Dam many be constructed.
61. Any mincr taking up a claim in a river or creck shall bo permitted to construct a dana at the upper end of his claim for the purpose of tarning the sircam into his flood-race, und may uxtend such flood race forany distance beyont his claim as may be nceessary for the effectual working of the sume; prorided that no prior right shable be injured thereby.

## Dam when to be removed.

62. No dam or obstruction in the cotrse of any niver or creck shall be permitted to interfere in any way with the working of such river or creck, and must be removed or lowered by the lolder thereof as the Commissioner may direct.

## Quartz Claims. <br> Extent of claims.

63. The extent of clums on the line of any fuartz reet or yoin slall be as follows :-
For one miner, 50 feet in length, $\left\{\begin{array}{l}\text { with a width of } 100 \text { yards }\end{array}\right.$
100 ? oneach side of the base-line.

and so ou for any additioninl number of mincrs.
The clain of each working party to be contiguous to or at a distance of not less than 50 feet from that of any other working party, und shall be marked by posts of not less than 3 feet in hright above the ground and 3 inches in diameter, at each corner set in an L trenel, and on the basc-line at each ond of the chuim set in a $T$ trench, such prosts to be at all times expused to view. Aud the holders of such claims ehall be entitled to all gold within their defined boundaries.

## Prospectiug protection areas may be taken up.

64. Any miner or party of miners at a distance not less than 2 miles from the nearest quarta working, may mark off a proiection area of 100 yards along a supposed line of quartz reef or viil wifh a width of 200 yards, and on discovery of puyable gold sucl protection area shall be allotted to the discorerers as at claim as hereinafter provided.
Fergistration of discorery of gold.-Commissioner to lay off base line.
65. On any quartz reef or vein, the holder of the cluim or prospecting protection area in which gold may first have been struck shall forthwith report such discovery to tho Mining

Registrax, who shall register the simme and inform the Commissioner of such registration. The Commissioner shall as soon as practicable proceed to the locality, and having satisfied himself of the truth of the discorery shall lay down a base-line on the supposed coursc of the reef or vein, and shall allot the clains thereon, commencing with that of the prospectors or discoverers, according to their priority of occupation, numbering the same; and no further sinking shall bo commenced until the Cormmissioner shall have so laid off the claims, nor shall any person be entitjed to the ground he mny have marked previous to the arrivil of the Commissiouer, but merely to the priority of right on the line of reef derived from such marking,-except when the holder or holders of any claim may have sunk a shaft at the holder or holders of any claim may have sunk a shaft at
least two-thirds of the depth of the prospecting shaft, in which case he or they may retain the claim in which such shaft is situated. Tho Comnissioner may at any time alter the course of the base-line, on a written application signed by a majority of the claimholders on such rect or vein.

Lnbour conditions when reet is not payable.
66. Until a clain upon a quartz reef or vein shall have been prored payable, only one-half of the number of miners to whom it shall have been allotted need be omployed thereon. When it it shall been proved to be payalle, the whole number must be employed in such claim so long as it continues to be payable, the test for which shall be the quantity of gold obtnined from the last crushing ; when it ceases to be paynble only onc-half of the whole number of miners need be employed upon it until it again proves to be payable. The onus of the proof that the claim is not payable slall rest upon the ehareholders: ?’rovided that mining for alluvial gold only, within the boundaries of a quartz claim shall not entitle the holders to the reduction of quartz cham shall not entitle
labour under this regulation.

Reef when doemed to be payable.
67. A claim upon a quartz reef or vein siall bo deemed to be payable when the quantity of gold oblained from such claim shall be equal in value to the curront rate of wages for every weck each miner of the working party shall have been employed theroon or in conuection therewith, exclusive of the working oxpenses; such working espenses shall not include more than 10 per cent. of the cost of any horse or horses, or of any machinery in use and actually required to facilitate the working of the said claim, nor any wages paid to a hired represontative.

## Claims then abandoned.

68. The plaut and all chattel property on and in comection with a quartz clain which hus been abandoned or forfeited shall be deemed to be the property of the person who shail have crected or purchased the eame.

## Registration of claims. <br> (Schecule J.)

69. Clains on quartz reefs or veins shall be registered within four dnys after the base line shall have been laid down und tho claims allotted. All transfers and sub-divisions of shares shall be registered in like manner.

## Water-rights.

highth to cut and construct races, dums, sc.
70. Any miner or party of miners may, subject to the provisions of these Regulations, cut, construet, and use races, dams, and rescrroirs, for gold-mining purposes, through and upon any Crown Tands, and may take or divert water from any spring, lake, swamp, or stream situate on, or flowing through, spriag, lake, swanp, or stream situate on, ore for gold-mining
or adjoining Crown Linds, and use such water for purposes or for general public use. And the right to cut, construct, and use races, dums, and reserfoirs, and to take and divert water as aforesaid, shall be termed a water-right.

## Classes of watel-rights.

71. Jights to divert water shall be of four classes, viz.:River and creek water-rights, ground sluicing water-rights, water-rights authorizing the holders to convey water on to a Gold lield for eale for gold-mining and general purposes, and motive power water-rights.
Mode of application for permission to cut or conetruct ruces, dams, \&c. (Syohelules K .) (Schertules 3.)
72. Any miner or party of miners intending to dirert and use water for cold-mining or gencral purposes, and to cut a race and construct dams or reservoirs in connection therewith, slal gine in tho schedules hcreto amexed, marked K ; and every such notice shall set forth the name or mumes of the river, creek, or other source from which the water is to bo obtained, particularizing with sufficient accuracy the point in such river, creek, or other souree from whence the water is to bo direrted, tho quantity of water in slnice-heards requircd, the number of dams (if niy) in which such water is to be stored and their situation, the probable length of the race and its intended course; and every such notice shall also contain the name or notice delivercd to the Mining Registrar as nforessid shall be
posted and kept posted for fourtecn clear days consecutively by the applicant or upplicants at the source or sources from which the water is intended to be obtained, and also at the proposed onward extremity of the race, and in a conspicuous position at the office of the Mining Registrar; and the delivery and posting of such notices as aforesaid shall be deemed to be an occupation or sufficient title to the ocenpation of such waterdams or races (except as against the holder or holders of a prior right or prior rights, or until the registration of the same shall have becn refused) ; and al the expiration of the fourteen days aforesaid, if no cijection shall lave been lodged and upheld, the Mining Registrar shali issuc to the applicant or applicants n certificato in the form in the Schedules heroto annexcd, marked I, setting forth fully the vature, extent, and description of the right or privilege applied for; but if objection shall have been mar? to such applieation, the Registrur shull yefuse to issue such cortificate until the applicant or npplicants siall have obtained from the Commissioner an order for possession in his or their farour.

## For use of rater in natural chaunel.

73. Applications for the right to use water in its natural clannel for river workings, shall be made, objections determined, and certificates issued, in the manner prescribed for water rights in Regulation No. 72.

## Hace may be altered or extended on application.

74. Any miner or party of miners registered for any water-right shall not be limited in the use thereof to the particular locality for which such right was originally registered, but may use or divert the same for gold-mining purposes in any other locality, and may in like manner alter the head of his or their race: Provided always that when any such miner or party of miners may require to extend a race or watcr-course beyond the point for which he or they were originally registered, or to alter the head of such race, it shall be done in accordance with the prorisions set forth in the foregoing regulation: Aud provided further, thut the head of any race cut for the purpose of diverting water as aforesaid, shall not be slifted, or the alteration in the course thercof allowed, to the prejudice of any existing right. The alteration in the hend or course of any race shall not affect the priority of right attached to such race.

## Sluice-heads defined. How gauged.

75. A box sluice-head shall be a volume of water 1 inch by 12 inches; a ground sluice-head shall be a volume of water 3 inches by 12 inches, and shall be gauged in the following mauner :-A box 6 feet in length and 12 inelocs in wilth, with a scale of inches marked on the immer side nt the lower end, shall be placed as nearly as practicable to the head of the race, having a fall or inclination not exceeding 6 inches in the entire length of it; and the gange of waker as above specified shall be taken at the mouth of the box where the water is discharged. When the length of the race sluall excced 1 mile, discharged. When the length of the race suall exceed 1 mile,
the width of tho box may be incroased half an inch for each mile.

## Quautity of water.

76. Tho quantity of water to which any person or persons shall be entitled under one water-right, for his or their own use for sluicing purposes on any claim, shall not in any case exceed two ground sluice-heads.

## Priority of water-rights.

7ל. The priority of water-rights derived from a conamon source shall be determined by the date of registration; and in case of failure of water-supply the person last registered shall forego his rights during such failure of water as against the person previously registered, and so on in rotation as the supply diminishes: Provided always that the holder of a water-right in the bed of a stream shall liave a preference orer tho holder of a water-right whereby the water of such stream is diverted from its natural cours.

Quantity of water to be left running in the bed of a stream.
78. In all river-beds and rumning creeks from which water is diverted for gold-mining purposes, there shall at all times be left running at leasi one ground sluice-head for general use when required.
liaces protected.
79. Any miner or party of miners occupying a xace or thilrace for the convegance of water for gold-mining purposes shall be entitled for the protection of such race to a width of 10 feet on each side of the raec, measuring from the centre thercoft; Provided always that when the depth of a cutting exceeds 1.2 feet, or when a tumuel is required, the width shall be 20 feet on each side of such race, measuring from thic centre thereof.

## Water divorted for sale or hire.

80. Any miner or party of miners who may cut or construct $n$ race for the purpose of diverting water from uny river or stream for conveyance to any Gold Field, for sale or hire for roldmining purposes or general public usc, shall not be restricted in the quantity of water they shall so divert: Provided that in prior right shall be prejudiced or any injury of a privale or
public nature shall be caused thereby, and provided that when called upon he or they shall satisfy the Commissioner that the entire quantity of water so diverted is being actually sold and disposed of by him or them in a bond fide manner; and any water so conveyed, in execss of the quantity that is being so sold and disposed of, shall when the Commissioner shall so direct be allowed to flow in its natural channel.

3ight to seli and let water.
81. Any holder or holders of a water-right under these Regulations emporering him or them to divert water, and to out, construct, and use water-races, dams, and rescrvoirs, may sell and dispose of the right to the whole or any portion of such water, or let the use for a stated period.

Water in race or dam deemed a chattel interest.
82. The property and interest in any race, dam, or rescrvoir, and in the water contained therein or flowing in or through any race, shull be cleemed to be a chattel intercst, and the owner or owners may recover in a summary way any sum of monoy due in respect of any water supplied from any such race or resorvoir.

Water uscel for motive power.
83. Anymperson or persons who may desire to divert water from any river or stream to bo used as motive power for crushing, puddiing, or other machinery, shall be permitted to do so, and shall be entitled to such a quantity of water as he or they may require for such puypose: Prorided that such water is not required for gold-mining or gencral public use.

## Water-right when to torminate.

8J. The right to any wator under any water-right shall terminate whonever the water so held shall be discharged into avy naturai stream or watercourse.

## Water not to be taken from dam

85. No person or persons shall take water from uny dam, reservoir, or race, without the consent of the owner.

## Water not to be polluted.

86. No person shall suffer sludge or other noxious matter to flow into or otherwise pollute the water in any dam, reservoir, or race, or shall injure the banks of any dam, reservoir, or race or shall othermise danage the same respectively, or the works connected therewith.

## Original line of race may be atered.

87. If by reason of any natural impediment it sladl be impracticable, or attended with unforeseen diffeulty or expense to cut a ruee according to the line originally designed therefor, it siall bo lawful for the holder of the right to eat the said race having first obtained the permission of the Commissioner to devinte in the cutting of such race so tar from such originally designed line as shall be necessary to aroid the effects of such impediment; provided that no prior right be affected thereby.

## Right to construct race through other clainas.

88. Any miner or party of mincrs shall be entitled to cut and construct any race, tail-race, or drain for gold-mining purposes through any clain or claime hold by any other miner or party of miners, or under, over, or across any other race, tail-race, ov drain: Provided always that such first-mentioned race, tail race, or drain be cut, constructed, timbered, framed, and formed in such a manner as not to injure the claim, race, tail-race, or drain through or across which it may be cut or constructed.

## Owner of race to :onstruet bridges over roads, \&cc.

80. If any race shall intersect any road, whether such road shall have becn proclaimed or not, or any footway, or cross any canal or mece, the owner or owners of such first-mentioned race slall at his or their own expense, construct a good and substantial aqueduct, bridge, footway, or roadway over the same ; cach roadway or bridge shall bo 12 feet wide, and cach footway 4 fect
wide. wide.

## Water when not used to fiow in natural channel.

90. The owner or owners of a wator-right, when not using the water held under such right, shall, if required by the Commissioner so to do, turn off the watcr at the head of his race into its natural channel.
night to hired water.
91. Any person or persons hiring water from the owners of any water-1race, dam, or reserroir, shail Juve no right to such water. after it shall have passed his or their works, but such right of water shall revert to the original owners.

## Repair of race.

92. When a race is in such an inefficient state of repair as to canse a waste of water, the Commissioner may order the water to be turnel out at the bead of such race until the defectiro portion is made good.

Water supply.
93. No poreon shall be allowed to form or cut any race drain or funnel from any spring or swamp, exceptat a distance of not less than 109 yards from any race, drain, or tumnel, which stall have been previously cut or formed, and from which any occupied race derives its supply of water, unless with the writien consent of the owner of such lasti-mentioned race, drain, or tumel.

## Iabour conditions.

91. Any miner or party of miners laving obtained the regis tration of $n$ water-right under the foregoing regulation, shall within fourtcon days from the date of such registration commence to form and cot such race, and having commenced shall not unnceessarily stop work during the formation thereof, and shall employ labour at the rate of (2) two men for evory three miles of the length of the proposed race, under pain of forfecicure of such right: Provided that, in the event of forfeiture, any portion of such race actually cut at the date thereof shall be paid for by the applicant for forfeitare, and the value thereof shall be determined by the Cominissioner.

## Forfesture.

95. A water-right, race, dam, or reserroir will be liable to forfeiture, without compensation, if it shall without good cause be left unused or suffered to remain out of repair for a continuous period of six months, or become from imperfect conatruction or neglect dangerous, or in any way a nuisauce to the public.

Tail-rnees how appiled for.
96. Any miner or party of miners slanll be entitled to cut and construct a tail-race in connection with their clain, by making application in the manner prescribed for other maces: nevertheless no person shall be cntitied to occupr any greater length of tail-race than is necessary for the offective working of his claim: Provided that no prior right be injured thereby, and always provided that shonld any other claimholder wish to uso such tail-race for the same purpose, he mas do so by paying to the owners thereof a fair share of the cost of construction, and also by contributing af fair share of the cost of keeping the said tail-race in repair.

## Dams and Reservoirs.

Dams and reservoirs how constructed and held.

## (Form of Application.-Schedule MI.)

97. Any miner or party of miners who may be deairous of constructing a dmo or reservoir for gold-mining purposes, other than in connection with the right to divert water from a river or stream, shall be permitted to do so, and he or they shall be deemed to possess an exclusive right to nll water therein collected and stored.
Such dam or reservoir may be constructed and held under the following conditions, viz.:-
98. That the intended site of such dam or rescrvoir shall be marked out at cach anglo with posts not less than 3 incles in diamoter, and slanding not loss than 3 fect above the surface of the ground.
99. That the applicant shall lodge with the Mining Registrar notico of applieation, in accordance with the Schedule horounto conucxed, marked $M$, for the registration of such dam or rescrioir, setting forth the situstion of the proposed site thereof, and the area of ground that it is intended to occupy; copies of such notice shall also be posted and maintrined in a conspicuous place on the proposed site, and also at the office of the Mining Registrnr, for fourteen consecutive days.
100. That no such dam or reservoir shall be allowed to be constructed in any position where it may be found that any other dam or reserroir, or claim or holding, could or might be injuriously affected thereby, or whero it might cause on injury of a public or private nature.
101. That such dam or reservoir slall be substnutially constructed, and subject to the approval of the Commissioner.
Objections to construction to be heard by Commissioner.
(Schedule N.)
102. Any person or persons objecting to the construction and registration of such dam or reservoir, slanll, within fourteen days from the dato of the notice as described, lodge in writing with the Commissioner a notice objecting to the issue of a certificate of such registration, and stating the grounds of litis or their objections; and the Commissioner shall hear and determine such objections.

## Owner of dam may construct enteh-racea

99. Any miner or party of miners who may construct $a$ dam or rescryoir as hereinbefore provided, shall be allowed to form and cut catch-races to gather and convey water into such dam or eservoir, procided application be made to register such races and objections heard and determined in the form and manner set forth with regard to water-rights.

Forfeiture of dam.
100. Any miner having obtained a certificate of registration of a dam or reservoir who shall fail to commence its construction in a bonê file manner, within fourteen days after such authority shall be granted, or any miner who, having so commenced to construct any dam or reser roir, shall umecessarily suspend labour thercon, shall forfeit the same, but shall be entitled to receive compensation from the applicant for forfeiture for the work actually performed at the date of such forfeiture, or having completed the same shall cease to use or uphold it for a period of six months, shall forleit such dim or reservoir, without compensation.

Commissioner to endorso certfficate of water-right.
101. All certificates of registration of water-rights, dams, and reservoirs shall be nathorized and endorsed by the Cormmissioner' before jesue to the applicants.

Branch race.
102. In the event of any person refusing to give permission to cut a branch race through his claim for the distribution of water, the Commissioner shall have power to hear the case, and grant or refuse permission to construct the same: Provided that compensation be allowed for any estimated damage.

## Itansfer of race, \&c.

103. The transfer or assigmment of any race, share, or interest therein, shall not affect any rightion privilege attached to such race: Provided that any such transfer or assignment shall have been duly registered at the Mining Registrar's Office, and a memorandum thereof made upon the back of the original certificatc.

Two rights may run through same race.
101. To give increased facility in working claims, and to prevent unnecessary waste of water, any two or more water-rights may ruu through one race, provided that the rights amalgamated follow in rotation, and be distributed according to priority of registration; such amalgamation to be registered.

## Rigbt to divert water for working bed of stream.

## (Sckedule L.)

105. Any person desirous of diverting the course of a perma nent stream for working the bed thereof as a river-claim, shall first give notice of his intention to the Commissioner and to all parties working in or occupying claims adjoining the proposed line of diversion; notice of such iutended diversion shall be posted and maintained for a period of fourteen clear days, at the points proposed for the commencement and termination of sucb diversion, and also at the Registrar's Office. And if no valid objection be made thereto, and upheld by the Commissioner within the aforesaid period, the Registrar may issue a certificate of registration.

## Water-races.

Races through private Iands.
106. In all cases where application is mado to the Government to authorize the passage of water for gold-mining purposes, or the passage of any water or liquid discharge from gold-mining operations through frechold land, the party making such application slatl pay into the hands of the Commissioner in charge the amount of compensation to be paid to the possessor of such lands, before the authority applied for shall bo granted.

## Mode of arbitration.

107. The amount of compensation in any casc of application for anthority to cut a water-race through frechold land shall be determined as follows:-The party applying for such authority shall cause a notice in writing to be served upon the possessor of the land, setting forth with reasomable certainty the direction of the proposed race, cotting, or other menns of effecting the passage of water-the quantity of land proposed to be taken or used-the time for which the same will be required-and the amount of compensation which such applicant is willing to pay; and shall require the possessor of such land, if dissatisfied with the amount offered, to appoint, within soven days from the service thercof, by writing, an arbitrator on his behalf, to assist in determining the amount which shall bo paid as such compensation, and within the same period to forward the said appointment to the Commissioncr in charge; and the party giving such notice ahall, within the same perion, by writing under his hand, appoint an arbitrator on his bohnli, and forward such appointment to the Commissioner in charge; and every such appointment shall be deemed to be a submission to arbitration on the part of the person signing the same, and the award of the arbitrators so appointed shall be final.

After consent, arbitration to proceed,
108. After the appointment of arbitrators in any case, neither party shall have power to revoke the same withont the consent of the other, nor shall the death of either party operate as a revocation; and if either party shall neglect, within the said period of seven days after the service of the said notice, to
appoint an arbitrator, the other party, haring himself appointed an arbitrator, may appoint such arbitrator to and on behalf of both partics, and such arbitrator may proceed to hear and determine the matters so referred, and lis amard shall be final.

## Propision in certain cascs.

109. When each party shall have tuppointed an arbitrator, and either of such arbitrators shall, before the detcrmination of the matters so referred to them, dic, or refuse or become incapable to act, the party by whom such nrbitrator was appointed may, by writing under his hand, appoint another person in his stead; and if he fail so to do for the space of seven days after notice from the other party requiring lim so to do, the surviring arbitrator may procecd ex parte.

## Umpire to be appointed.

110. When each of the parties shall appoint an arbitrator, such arbitratiore shall, before entering upon the consideration of the matters referred to them, by writing under their hand appoint an unpire; and in case the said arbitrators shall fail to make their award, in writing, within fourteen days after the day on which the last of them was appointed, the matters referred shall be detcrmined by such umpire, whose arward shall be final.

Costs of arbitration.
111. The costs of arbitration and award shall be in the discretion of the arbitrator, arbitrators, or umpire, as the case may be.

## Arhitration to commence de noth in certain enses.

112. If a single arbitrator or an umpire die, or mefuse or become incapable to act, before he shall liare made his award, or shall fail to makc such award within ten days after his appointment, then the matters referred to him shall be again reforred to arbitration as if no former reference had been made.

Award to be in writing.
113. The award shall in all cases be in writing, and shall be delivered to the Commissioner in charge within fourteen days from time of making the same, and may be made a Rule of Court on the application of either purty.
Permission to carry water through'Crown Iands to be used on private lands.
114. Application for permission to carry through Crown Lands water for gold-mining purposes, to bc used upon alienated lands, may be made to the Commissioncr by any holder of a miner's right, in like mamer as prescribed in respect to the conveyance of water for use upon Crown Lands; and if the Secretary for Lands sanction such application, the Commissioner in charge shall issue the necessary "permit," which shall hare in all respects the like offect as if granted in connection with the working of Crown Lands; and any holding thereunder shall be deomed to be $n$ "claim" within the meaniug of the Act.

## Business Allotments, Residence Areas, and Machinery - Sites. <br> Fistent of business allotment.

115. The holder of a business license shall be entitled to an allotment of ground having a frontage of 22 yards by a depth of 55 yards, as hereinafter prorided. The owner or occupier of any such business site shall erect or cause to be erected improvements thereon to the value of $£ 10$, within fourteen dars from the date of taking possession thereof. When the days rom the date of the ing pos by the holder of a business license may be situnte in a position detached from any street or roadway, the area to be allotted shall be 1 acre. The Commissioner may in any case under special circumstanecs permit a different form of mensurement and allot a less area.

## Allotment how taken up.

## (Schcdules 0 \& $P$.)

116. Whereveralarge influx of population may be anticipated, the Commissioner shall mark off, or cause to be marked off, $n$ site for a strect or streets in a convenient situation, but not likel to be auriferons-such strect or streets to be 1 chain wide-and shall mark the allotments for business places along such strect or streets; and after such site has been marked off it shall be reserved for the holders of business licenses only; and no holder of a miner's right shall be allowed to occupy any of such allotments for the purpose of residenco, except such as had prected improvements of the value of $£ 10$ previous to the marking off of the same as aforesaid; and, to entitle any holder of a busiuess license to oecupy any of such allotments for of a busiuess license to occupy any of such allotments for
business purposes, ho shall first cause his application for a business allotment to be registered by the Mining Registrar, who shall give a certificate of such registration, in the form of Schedules hercunto annexed, marked $O$ and $P$.

## Rogistration of nllotment.

117. The person so applying shall produce to the Mining Registrar his busincss license for the time being, whereupon the Registrar shall register the owner thereof for only one allotment
under such business license, and the allotments alall be solecteal by the holders of business licenses, nud allotted by tho Commissioner according to the priority of such registration.

Street to be marked before occupation.
118. When the Commissioner shall commence to lay off a line of strect, no holder of a business license shall take possession of or occupy any allotment on such strect until the same is properly marked off by the Commissioner.

Mincr's residence aren.
110. Erery holder of a miner's right shall be entitled to hold an area not exceeding one quarter of an acre of land for the purpose of residence.

Search for gold on business or residence areas.
120. Whencrer any lusiness allotment or miner's residence area may be supposed to contain deposits of gold, any miner may enter upon such allotment or aren for the purposes of searching for gold, upou payment to the holder of the allotment or area of such amount by way of compensation for injury to the holding as may be duly determined by the Commissioner.

## Right-of-way not to lo obstructed.

121. No residence area shall be allowed in any position where it will obstruct, the right-of-way to any other holding or mining tenement:

Mnchincry sites.
(Form of Apptication.-Schedutc Q. Certificate--Schedulc R.)
129. Any miner or party of miners, or any company, may apply for permission to take possession of and occupy as a site for the erection of, or as a site on which they lave alrendy erected machinery for crushing quartz, stone, or cement, for puddling, or for any other purpose, and the aroa of such site shall not exceed 2 acres; such application must be posted on the proposed site, and also at the office of the Mining Registrar, for fourteen consceutive days from the date of application, at the expiration of which period, should no objection be lodged with the Cominissioner, the Mining Registrar shall issuc the cortificate of registration. All objections to such application to bo determined by the Commissioner. Reservoirs, dams, and water-rights may be held in conjunction with machinery sites.

## Land reserved.

123. The Commissioner may for public purposes temporarily withhold any land from occupation, und no person shall take up any claim or holding whatever on such land until such reser. ration be reroked.

## Leased Tracts.

## Descriptions of leases.

124. Leases of nuriforous tracts will be granted for any period not excceding 15 years, under the conditions hereinafter pro vided, and shall bo of the following descriptions, viz. :-

Teases of alluvial ground;
Leases on quartz reefs and vcins; and
Leases in the beds of rivers or ruming streams.

## Alluvial leness.

125. Leases of alluxial ground will bo granted in all tested and abandoned workings of any depth, in new alluvial ground of a greater depth than 300 feet, and in ground of any depth on any Gold Field that may have boen prochuimed for a longer period than five years, when the alluvial deposits contain a quantity of water so great in to render neccseary the employment of steam machincry, or where it is necessary to cu expensive head or tail meces, or where throughout the greater portion of the tract applied for $\AA$ basaltic or rock formation requiring blasting intervencs betreen the surface and the supposed auriferous drift, or where, from ant other circumstances, ordinary claims could not be worked with profitable results and the aren of such leases shall not excecd 25 acres, at an amnual rental of $£ 1$ per aere

## Leases on guartz recfa

126. Leascs on quartz reefs or veins will be granted, of an area not exceeding 25 acres.

## Iense of river bed.

1.27. Leases of from 100 to 1,000 yards of a river-bed or running stream will be granted at an annual rental of $£ 1$ per 1.00 yards.

Mode of application.
(Form of Application.-Schedule S. Certifcate.-Schedule T.)
128. Any applicant for an auriferous lease, being the holder of a miner's right, shall apply for such lease in the following manner:-
(1.) He shall erect posts not less than 3 inches in diameter and not less than 3 feetabove the surfice of the ground in the case of a quartz reof or vein at cach end of the
portion of such reef or rein; in the case of the bed of a river or stream on the banks at either cxtremity of the portion applied for; and in the case of alluvial ground at cach angle of the ground applied for, with notice posted thereon of intention to apply for buch lease,-such notice to contain the date of the posting thereof, the mane of the applicant or the names at any wo of the applientes, the description of lease to be applied for, and the arca thereof.
(2.) He shall within four dirys from the posting of such notices as a foresaid lodge his application for the lease with the Commissioner, together with the rent for one fear in adrance for the proposed lease, and the fee for the survey of the same, on receipt of which the Com. missioner shall forthwith issue to such npplicant a certificate in trjplicate in the form hereunto annexer?, marked T, two of which eertificates the applicand shall as soon as practicable atlix to any two of the shall as soon as practacable atix to any two of the
posts marting the area of the proposed lease as aforeposts marking the area of the proposed lease as afore-
said, and shall affix the third in a conspicuons place said, and shat affix the third in in co
on the office of the Mining Registrar.

## Mode of objection.

129. AJI objections to applications for leases shall be made in writing, and lodged with the Commissioner within fourteen days from the date of the aflixing of the certificates as aforcsaid, at the expiration of which period the Commissioner shall appoint a time and place for the invertigation of any objections that may have been so lodged. The application for tho lease, together with the rent and fee for survey as per undertogether with the rent and fee for survey as per under-
mentioned scale, and the procedings taken at such investigation mentioned scale, and the procecdings taken at such investigation
(if any) shall be forwarded by the Commissioner, as soon as possible therenfter, to the Commissioner in charge of the Gold jistrict in which such proposed lensecl tract is situated, who shall forthwith transmit sueh appliention to the Minister for Lands, with a report as to the advisability of granling or refusing the lease applied for. No objection will be entertained after the expination of fourteon clear days as aforesaid.

## Ground prevlously occupicd.

130. No lease will be granted of any ground that is required for any public purpose, or that is in the actual authorized oecupation of any person, except the applicant shall previously have obtained the written consent of such person to include such ground within the proposed lased tract.

## Requirements to be compliod with.

(Statutory Declaration.-Schedule U.)
131. At the expiration of the fourtoen days, if no objection shall have been lodged as aforcsaid against the granting of the proposed lease of any ground, the applicant shall make a statatory declaration, in the form in the Schedule hereunto ammexed, that he has complied with all tho requirements of the regulations set forth with regard to applications for leases; and the Commissioner may then permit its immediate occupation, subject to the decision of the Government as to the granting of such lease. Where an objection has been lodged, the ground will be leld in reserve, pending the decision arrived at with regard to it.

## Marking. Occupation.

132. Any applicant for any lcase shall mark out the ground for the lease in respect of which he shall apply, in such manner as shail be preseribed by the regulations rolating to the partieular leasc required; and in case any person who shall not previously havo been in lawful ocenpation of sach ground shall at any time thereafter, until the application for the lease shall be refused, enter upon, occupy, or in any way interfere with such ground, such entry, occupation, or interference shull be deemed a case of trespass or encroachment, and such applicant may procecd therefor, and for any damage in respect of such tirespass or encroachment, in manner provided by the 14th, 15th, and 16th clauses of the Gold Fields Act of 1866.

Labour conditions. Lessec kubject to Gemeral Regnintions.
133. The Commissioner in charge shall, when authorized by the Government so to do, issue the lease and forward the mame to the Comnissioner for delivery to the applicant; and the conditions imposed in such lease shall be as follows :-
(1.) That the annual rental slaill be paid in adrance.
(2.) Mhat labour shall be employed on the leased tract within fourteen days from the receipt of the lase by the applicaul-at the rato of two men for 4 acres or any less area, and one man for every 2 additional acres or portion thereof, in the case of allurial ground and quartz recfs or viens; six men for the first 400 yards or less portion, of the hed of a river or stream, and one man for every additional 100 yards,-such men to be kept constantly employed in accordance with the Gencral Regulations.
(3.) That the lessce shall be subject to the provisions of the General Regulations in force from time to time during the continuance of such lease, except us regards forfeiture and labour conditions.

## Registration of lease,

134. Upon receipt of the lease by the applicant, he shall forthwith register the same with the Mining Registrar, in a book to be kept by him for the registration of leases.

## Lensed tracts-how marked.

135. Quartz leases shall be marked upon a basc-line, and shall be contiguous or at a distance of not less than 24 yards from each other ; should that distance not be prescrved, they will be measured as if marked in conlignity, and no marking or occupation of the interrening ground when less than 24 yards on the base-lino shall be acknowledged or registered until the on the base-tno shall be acknowledged or registered until the
leased tracts hare been surroyed and their boundaries officially leased tracts hare bech surroyed and their bomdaries officially
defined. Jeases shall be marked upon the base-line in the proportion of 24 yards for cach acre, by a width of 200 yards. Allurinl tracts shall be measured in a rectangular form, and such measurement shall in no instance exceed in length twice its breadth.

Claim may bo converted into lensed tract and existing lenses brought under these hugulatious.

## (Statutory Declaration.—Schedido U.)

136. The occupant or occupants of any mining claim will be permitited to consert the same into a leased tract, on application to the Commissioner, and payment of one year's rent in advance and the fee for survey, but withont the preliminary posting of notices and certificate, provided that a statutory declaration is made by them to the effect that. anch clajm has been occupied and worked in a bond fide mimnner for a continuous period of six months previous to the application for its conversion into a lease; and such lease, when granted, shall be subject to the conditions npplying to other leased tracts. Existing leascs, on paynent of a fec of $£ 1$ for survey description, may, on application in a similar manmer, bo exchanged for leases under these Regulations.

## Relaxation of labour conditions.

137. The labour conditions of any leased tract may be relaned or suspended by registration, authorized by the Commissioner in charge, for any period not cxceeding three months, on a statutory declaration being made by the applicant of the circumstances rendering such suspension of labotur indispensable. Such registration slall be also recorded in the local Registrar's Office.

## Mode of cancelifing lease.

138. Any miner or party of miners desirous of occupying any claim or leasehold within an area beld under leasc, the conditions of which shall not have been complied with, shall make a written application for the same to the Commissioner, and ahail in such application state the grounds upon which it is made, and shall also, on the same date, sorve a copy of such application, with the grounds upon which it is made, upon the lessee, or any two lessees, or the Manager of any Company holding a lease of the area of which the lease is sought to be cancelled; and the Commissioncr shall, at the expiration of six clear days from the time of his receipt of such npplication, or as soon after the expiration of six clear days as may be practicable, call upon such lessee, or lessecs, or Mauager, to show cause why such lease should not be cancelled, and the Commissioner shall forward a copy of the proceedings, with his report on the case, 1.0 the Cammissioner in charge, who, if sufficient cause shall not be shown, shall then take the proceedings necessary to procure the cancellation of the lease, and when cancelled the applicants shall have a prior right to a claim, or claims, or leasehold, within or of the said area.

## Reut

139. The rent of all leased tracts to be paid for each year in advance; if not paid within one montla after the rent has become due the leaseholdors shall pay a fine of 25 per cent. additional, and if not paid within three months 50 per cent. additional, and if not paid within six months the lease shall be forfeited. Leased tracts may also be cancelled for non-fulfilment of labour conditions.

## Survey Fees for Leased Tracts

## Drainage Regulations.

## Drainage rates authorized.

140. The owner of any machine worked by stenm, which is employed in dra wing water from any mine, shall, under the following circunstances and subject to the following conditions, be entitled to receive from the owners of neighbouring claims benefited by the said machine such sums of money by way of contribution to the expense of lifting water as is hercinafter provided.

## Rates-how proportioned.

141. The principle on which drainage rates shall be charged to each claimholder shall be by equitably proportioning, according to the areas held by each whose workings are on or below the datum water-level, the ascertained monthly expenditure incurred in working and maintaining such drainage appliance, together with interest not exceeding 50 per cent. per nnnum on the amount of capital expended on the purchase, ercetion, or construction of any such drainage appliance.

## Machine-how worked.

142. The owner of such machine shall keop his drainage appliance continuously at work, if necessary, and shall at all times maintain such in an effcient state, so as to prevent the water from rising in the claims of persons paying drainage rates; but no holder of such machine shall bo held lisble for any damage caused to any claim through the sudden stopping of his drainage appliance, if it can be proved that such stoppagc was necessary or caused by an accident to such appliance, and that the necessary repairs were made and drainage rcsumed that the nccessary repairs were made
with the utmost despatch by the owner.

## Amount bettled by arbitration.

143. The amount which shall be payable to the owner of such machine by claim holders bencited by the same shall be assessed by arbitration.

## Period fixed for which drainagerates are payable.

144. All drainage ratos imposed under these Regulations shall be fixed for any period not exceeding six calendar months, and shall become due once a month, nud be payable to the owner of the machine or to his order.

Rates-when due.
145. The amount of drainage rates upon each claim assossed as aforesaid shall be the sum which the owners of the claim are liable to pay, and shall be due on the first Monday in every month. In default of punctual payment, such person will, in addition to being liable to be proceeded ngaiust in the ordinary manner for debt, be subject to a penalty for a breach of these Regulations.

## Exemption from paying rates

146. The owner of any claim which is being worked above the datum water-level, and no work being carried on below the said level, shall be exempted from paying any drainage rates. And any claim shall be deemed at work below the datum waterlevel in which work shall have been done below the said waterlevel at any time during the month for which a drainage rate is claimed, and unless notice is served upon the orner of such machine that the work is being carried on above the datum water-lerel.

## Claims not effectively traled.

147. The holder of any such machine shall not be allowed to charge drainage rates for any claim or claims not cffectively baled by the said machime.

## Amount of fees cictermined.

148. The holder of any machine shall furnish a list of the holdors of the claims from which he claims drainage rates to the Registrar ; and the Registrar, on receipt of the written decision of the arbitrators or their umpire, or the private agreement made between the owner of such machine and any claim holder, shall cause to be served upon the orners of the claim assessed a notice setting forth the amount of drainage rate imposed on any such claim, and the rate so notified shall be the rate charged or claimed on account of any such claim.

## Notice of discontinuance.

149. Any person receiring drainage coutribution shall, should it be his intention to discontinue drainge operations, give at least two months' notice to the drainees of his intention so to do, otherwise he will be liable for the damage done by any mero voluntary sudden stoppage.

## Agreements to be binding on both partles.

150. Any agreement entered into between the owner of any such machine and any claimholder shall be binding on both parties and persous claiming under them, provided such agreements shall have been registered with the Registrar.

## Datum wator-level

151. The datum water-level shall be the level at which the water has been reached during the sinking of any sha Ct , such level to be asccrtained and fixed by the Mrining Surveyor.

## Rates due to most effectual machine.

152. Should the right to drainage rates of any elaimant be objested to by any other machine owner, or should two or more machine owners claim dranture rates from the same portion of any line, the drainage rates shall be allowed to the machine owner whose machine drains the most effectually.

## Break, how dealt with.

153. Wherever a break may occur in any claim obstructing the drainage of claims beyond, it shall be lawful for the drainors or the holders of claims adjoining to sink or drive in any such claim for the purpose of removing any such obstruction, provided such work ehall be perfectly secured so as not to damage the clain so worked; and no claim-owner may olject to such work being done in his claim.

## Survey.

## Surveyor to be appointed.

154. Mining Surrcyors shall be licenserl surreyors, and may bo appointed to special districts, the boundaries of which shall be clearly defined and published in the Government Guzette. Erery Mining Survoyor so appointed shall be required to kecp, an office in such part of his district as the Commissioner in charge may direct, and shall keep such oflice open for the transaction of business not lese than two hours during each working day. The Mining Surveyor shall survey all mining claims except alluvial block claims within his district.

## Surveyor to register apppications.

155. Tpon receipt by the Mining Surveyor of a certiffeate of application for the surver of a mining tenement, he shall enter in a book to be kept for that purpose the particulars of such application, and each such entry shail be numbered in the order and dated of the day and hour on which the certificate was delirered and received by him.

## Survcyor to indorse certificate.

156. The Mining Surveyor shall indorse apon the certificate the date and hour on which it was delivered to him, and the number of the entry made as aforesaid in his book respecting it ; and such cortificate so indorsed shall, after survey of the tenement, be returned to the applicant for the tevement or his agcnt.

## Surveyor to name time for surrey

157. At the time of the delivery to him of the certifiente of application, the Mining Surreyor shall appoint a time for making a survey of the tenement referred to in such cortificatc.

## Survey to be connected.

158. Every survey of a mining tenement shall be connected with some fixed point in the survey of some other mining tenement, or in some Government suryey.

## Mode of survey

159. Within fourteen days from the date on which the certificate shall have been returned to the applicant, the Mining Survejor shall make surrey of the tencment, and make a plan and tracing of the tenement so surveycd in duplicatc, together with a report, also in duplicate, containing a fuil and accurate description of all the boundary and connecting lines, and stating the nature, extent, and locality of such tenement, and whether such tevement will or will not interfere with any other tenement or with the rights of the holders of any other tenement, and stating the date of surver, and by whom made, with the approximate depth of sinking wilhin such tenement; and such plan and report in duplicate shall be signed by the Mining Surveyor, and he shall furnish one of the said plans and one of the said tracings and one of the said reports to the applicant or his agent, and shall relain the other in his office for production when required.

## Suryesor to make locality maps.

160. The Mining Surveyor shall make locality maps showing the various portions of his district, and on which shall be laid down, from actual survey, all lines of quartz reefs or allurial workings, with their bearings and names delineated thercon, and also all surveyed claims on quartz recfs or leads, with the number of each claim and its extent; and cach map shall be kept as a record map, and shall be plotted to a scale of not more than 5 chains to an inch; and all tenements subsequently surveyed shall be plotted from time to tine upou such locality maps. He shall efluce any abandoned tenements that may be delineated thereon with red lines.

Surveyor to lay down buse line.
161. The Mining Surveyor shall, by the direction of the Commissioner, lay down tho baso line and crosa lines of all quartz-reefs within his district, and of all declared frontage leads, and shall alter any basc line and mark off all claims upon a frontage-lead in accordance with these Regulations.

Surveyor to make office plans.
162. The Mining Surreyor shall prepare an office plan of all quartz rects and deelared frontage-lends of which he may have laid domn the bese-line; and shall delineate the claims or protected areas thereon, numbering the same; and shall subsequently mark on such oflice plant, from time to time, all claims upon such declared frontage-leadis as they may bo finally marked oft.

## Surveyor to make piau of encronchment.

163. The Mining Survepor, when required so to do by the Coumissioner, shall make in surface or underground survey of any mining tenement. If in surface encrouchment is the subject of complaint, he shall furnish a plan showing the position of the pegs defining the claims of the disputants, aud the number of square feet oncronched upon (if any). If an underground encroachment, he shal make a survey of all main levels, or cross-drives, necessary for the purpose required; and should it appear that any gold-bearing quartz or auriferous earth hus been remored by the defendants, ho shall calculate the quantity so removed, cither in tons or cubic feet; and shall tost the value of such stone or curth, and make an estimate in accordance therewith.

## Survegor suljeet to Commissioner.

164. The Mining Survesor shall be subject to the orders of tho Commissioner.

## Surveyor's fees. <br> (Schedule I.)

165. The Mining Surveyor ahall be entitled to demand and roceive fees for his own use for the surrev of mining tenements, in accordance with the scale in the Schedule hereunto annexed, marked I, and shall not demand any fees in excess. The fees stated include the furnishing of plan, tracing, and report in duplicate.

## Surveyors to be Registrars.

166. When a Miuing Surveyor is stationed on any particular Gold Fiold he shall also be Xifining Registrar for such Gold Ficld, and may appoint a deputy, with the consont of the Commissioner-in-charge, whose acts shall be held to be those of the Registrar.

## Registration.

Appointment of Mining Registrar.
167. Twery Clerk of Petty Scssions shall be ex officio a Mining Registrar under these Regulations, unles3 some other person be duly appointel to the office.

## Assistant may be appointed.

168. The Registrar, or his assistant approved of by the Commissioner, shall perform and discharge the sercral duties hereundor dofined, aud such duties performed and dischargod by the assistant shall be decmed to have been done by the Registrar.

## Office hours.

169. The Registrar's Office shall bo kept open to the public daily (Sundays and public holidays excepted), from 10 o'clock a.m. to 1 o'clock p.m., and from 2 o'clock p.m. to 4 o'clock p.m., cxcept Saturdnys, when the hours shall be from 10 o'clock a.m. to 1 o'clock p.m. And such hours shall be notified to the public by a proper notice, placed in some conspicuous position on the outside of the office, and the Registrar or his assistant shall be in attendunce at the office during the hours so appointed and notified ns aforesaid.

## Registrar to koop books, \&ce.

170. The Registrar or his assistant shall do and perform, in respect of mining tenements within his district, all such acts as are by these Regulations required to be done and performed by a Registrar; and to enter in books to be kept by him, all registrations of whatever kind, and to issuc certificates in the forms in the Schedules hereunto annexed, and to furnish when required copies under his hund of any document or any entry in any book in his custody as Regietrar ; and shall be responsible for the safc custody of all books, papers, and records connectod with the oflice of Mining Registrar.

Neglect of Registrar shall not ittiate titlo.
171. The title to any claim or other mining tenement shnil not be vitiated by renson of the non-performance within the preseribed time of any act, matter, or thing required by these Regulations to be done by the applicant for such clain, or other mining tencment, if such applicant can prove that the nonporformance as aforesaid was caused by the neglect or default. of the Mining Registrar.

Copice of noticos to be posted.
172. Copies of all notices given in conformity with these Regulations shall be posted by the Kegistrar at his office, and exhibited on the outside thereof during office hours and the currency of such notices.

## Registration fees.

173. There shail be paid to tho Registrar, in respect of the several registrations and other duties mentioned in these Regulations, the fees set forth in the annexed Scleedule, which fees the Registrar may demund and receive for lis own use provious to making any registration.

Non-registration.
174. Non-registration within the prescribed time shall not be deemed a breach of these Regulations, and shall not bar the excreise of any privilege, if good and sufficient causo shall be shown for such doluy to the satisfaction of the Commissioner.
Orjginal registration."
175. In all cases where the original registration of a claim shall be ontered in the register, or a certificate of sueh registra. tion issued by the Registrar, such entry and certificate shall contain the names of all the claimholders in each claim so registered.

## Schedule of Fees to be demanded and received by Mining Registrars. <br> 176.

## General Regulations.

## Claim how marked and taken prossession of.

177. Any miner or party of mincrs may take possession of any mining tenement (except where otherwise spocially provided for) by fixing in the ground firmly, at each comer of the claim, a post notless than threcinchesin diameter, projecting above the surface of the ground not less than three feet, and set in $L$ tronches, 6 feet long and 6 inchos deep along each boundary-line: : Provided that no other person or persons is or are then in possession or occupation thereof; but in the event of any other minor or mincrs being so in possession, and claiming a right thereto, the first-ramed party slall apply to the Commissioner to inquire into such dispute ; but in no case slall any person take forcible possession of, or commence to work in any claim after his right to take possession thereof has been disputed, without forfciting all right and title which he may have acquired thercin.

> Indication post, where permitted.
178. In all cases where it shall be impossible, from the discharge of earth or rock from any claim, or from any other cause, to maintain any boundary-post in its position, an iron peg may be driven into the ground where such post should be maintained, and connected by measurement with a post placed in the nearest and connected by measurement with a post placed in the nearest position that such post can bo maintainco, with, a bourd attached
thereto, on which the words "Indication Post, - feet in direction from boundary" shall be legibly written, stating actual distance and bearing from such peg.

## Discovery of gold to be reported.

179. The discovery of nayable gold in any prospecting area shall be immediately reported to the Mining Registrar, who shall register and forthwith report the same to the Commissioner.

Mode of trking possession.
180. At the time of marhing out a cinim or protected area (execpt where otherwise prorided), each miner for whom such claim is so markel, or his representative, shall be present on the ground; and such representative will not be permitted to represent in such chaim or protected area more than the share or interest of onc principal. No objection to the mode of taking possession or marking of any clam or protected area will be entertained after the expiration of three clear duys from suelt marking.

Ground marled off in excess.
181. When ground is occupied or marbed off in excess of the extent authorized by these Regulations, except when otherwise provided for, any miner may apply to the Commissioner for such provided for, any miner may apply to the Commissioner for such of the claim it shall be taken, and may take possession of the samo when authorized by the Commissioner as a clain in the mode hercinbefore delined: Provided always that the original oceupant or occupants shall be entitled to retain such part of such ground as contains his or their shaft.

Claims to be effectively worked.
182. All claims must be effectively and continuously worked, except where otherwise provided for, after the expiration of three clenr days from the timo of occupation.

## Shares held under miner's right.

183. Any miner may hold by virtuc of his miner's right one, or more than one, claim or share in any cluim: Provided that each and every such ciaim or share shall be fully represented by labour according to these Regulations.

## Agent may be appointed.

(Form of Appointment.--Siledulc V.)
184. Any person holding any share or interest in any claim or any holding whaterer undor these Regulations, may appoint an agem, in writing, whose acts shall be held to be those of his primipnal: Provided the nane and address of such agent he registered with the 3lining Registrar.

Claims not to be forfeited through absenve of represcitative, without
due notice to owner.
1.85. If nuy miner who may be engaged or employed to ropresent any interest or share in any claim shall absent himself from the claim or otherwise neglect to represent such interest or share, the same shall not be forfeited, unloss within three clear days after notice of such absence or neglect shall have been served on the owner or his agent, the owner's interest or share be not fully represented in conformity with the Regulations Tn case the owner or his agent cannot be found, such notises shall be posted on the claim and at the Wining Registrar's Offen for three clear days, which notices ehall be held to be equivalent to service upon such orner or agent: Provided that on an undeciared frontage lead and the non-wrorking portion of a declared lead, one day's notice to the employer of the absence of his representative shall be deemed sufficient.

No forfeiture unless specialls provided for.
186. No claim, or share in a claim, shall be declared to be forfeited that may be held by virtuc of a miner's right, for any act or omission for which forfeiture is not specially provided by these Regulations.
on-compliance with labour conditions entailing forfeiture.
187. The owner or owners of any claim or share in a claim, or any person holding any intercst in any mining claim, neglecting to work or cause to be worked such claim or share in a claim or interest, or to employ the labour thereon that masy be required by these Regulations for seven clear working days after ocelupation, or at any time after work shall hare been commenced thercon, shall forfeit all title to and interest in such chim, share, or interest, unless such owner or owncrs shall prove their exemption from labour on such claim, share, or interest, under any of the provisions of these Regralations.

## Alsence from protected arca.

18s. Any miner, or party of miners, holding a protected area or share in a protected arei on a frontage lead in which work is not required to be done, neglecting to be present, on their respective areas every working day between the hours of 9 a.m. and 11 n.m., shall forfeit such protected area, or share in such protected area.

## Cornpensation in case of forfoitare.

189. When the riglet title, or intorest in any claim is declared to be forfeited, it shall be lawful to have the interest of the late holder of such right, title, or interest in such claim in any road, shaft, drive, tunnel, timber, mining plant, or other matcrials, absolutely beneficial to the applacunt in conncetion with such right, title, and interest, valued by a Commissioner and tro assessors; and the amount of such valuation, together with the cost of estimating the same, shall, within forty-eight hours, be paid to the original orner ; and euch payment shall be a condition precedent to putting the applicant in
possession of euch right, title, or interest in the said claim And provided that in all cascs where the interest of any sharehoder in any claim shall by any means become forfeited, such forfeiture shall be deemed to extend to and include only sute share, portion of a share, or interest in the said clain, not subjent to a lien, as the sharcholder incurring sueh forfeiture actually holds at the time such forfeiture is declared by the Commissioner.

## Working sbareholder abstnt.-Working share forfeited.

190 . In the crent of the working portion of $\pi$ sharo being forfeited, or of the working shareholder or his representative being absent therefrom for six days, or refusing to work the claim in an efficient manner, the liability to work it shall foll upon the Jolder for the time being of the slecping portion of such share which shalt have beon last transferred; aud in default of the holder of such last timansferred sleeping interest working such share and paying all liabilities duc in respect theroff, ho shall forfeit his intercst therein; and in everg such case the holder of the next last transferred sleeping portiou of said share shall work or pay the expenses of working the for: feited portion of such share and liabilities due in respeet thercol'; and such work or payment shull entitlo the person making such payment or nerforming such work to be put into possession of the portions of the share so forfeited, and to be registered in respect of the same; and in the erent of the holler of the next Just transferred sleeping interest in such share faiting to work such share or make such payment he also shall forfeit his interest, and so on in like manner nutil the whole of the said share slall hare been forfeited, or uutil the forfeited portions or portion shall be taken up aud worked.

## Lien.

(Form of Lien Ticket.-Scheduto W.)
191. The holder of any mining tenement, or share or interest thercin, may give a lien upon the same as security for the due payment of any debt; and upon the production to the Registrar of the miner's rigit or business license of the lienor and lienec, and the execution by them of a lien ticket, in the form prescribed in the Schedule hercunto amexcd, marked W, duly attested, the Registrar shall register a lien upon the mining tenement, slure, or interest, and shali then issuo to the lience a duplicate of the lien ticket; and every such lien registered as aforesaid shall be a specific clarge upon sueh mining tenement, share, or interest, uatii the debt shall lave been paid in fall; and if more than one lien has beon effected on any mining tenement, share, or intcrest, such liens shall take precedence according to the date of their respective registrations: Prorided that upon the delivers to the Registrar by the licnor of a certificatc duly signed by the lienee and attested, that the debt or liability for which such lien was held has been fully discharged, the Registrarshall forthwith rancel such lien : Prorided also, that in the erent of such lienor failing to redeem such share or interest at maturity, the anid lience may cause the same to be sold by public Ruction, ufter having adrertised the same in the nearest newspapor and posted a copy of such advertisement on a conspicuous part of the mining tenoment; and the lience shali stand possessed of the proceeds of such sale, upon tuast to pay ull costs consequent on such defanlt, then to pay the debt secured by the licn, and the balance (if any) shall be -paid to the lienor. The lienor sholl be entitled to redeom at any time before sale, upon payment of debt and expenses incurrent; but in case of any sale under the powers herein contained, the Registrar shall, upon production of the lien ticket, accompanied by a statutory declaration of default having been made in the payment of the money sceured thereby, and the miner's right of the purchaser, register such purchuser as the holder of such mining tencment, share, or iuterest, in licu of the lienor: Proviled also that a lience shall not be held to be a co-partner in any mining partucrship in which he may hold any lien, save and except what is contained in those Regulations in reference to certain conditions of torfeiture, in which caso sung lienee, upon registration therein provided for, shall become responsible for such miuing tenement, share, or interest.

## Lien for amount due.

192. No lien aball have the effect of absolutely resting in the lience an interest aud property in any claim or mining tenement begond the amount then actually due by the lienor to the lience.

## Transfer.

(Form of Transfer.-Schedules X. Certificate.-Sckcalks Y:)
193. Ary miner or papty of miners having forfeatot or abandoned any quartz or other gold workings ahaill be at liberty to retain possession of any quartz, stone, ccment, lailings, ol other aubstance containing gold (the produee of such workings) that may have been raised at the time of the forfeiture or abandomment, provided such quartz, stone, cument, tailings, or any other substance, shall be stacked; and the Mining Registrar shull,-upon applieation being made to him, register the same.

## Commissioner may issue injunction.

211. The Commissioner may, upon the application of any persons elaiming to be legully or equitably interested in any Inad, chaim, or holding whatever, or in his own diseretion, and upon such terms as he may consider just, by order under his
hand, enjoin and prohibit any person named in such order from encroaching upon, occupying, using, or working such land, claim, or holding,--or from sceling for, washiug out, extmeting, or removing any earth or auriforous substance from such fand, claim, or holding,-or from selling or disposing, or otherwise interfering with such land, claim, or holding, or anything appertaining or belonging thereto, or any sbare or interest therein respectively,-or doing any actor thing whereby the right, title, or interest of such applicant in or to the same might be affected. or interest of such applicant in or to the same might be affected.
And every such order shall operate and be in foree for such a period as shall be named therein, unless the same shall be sooner revoked or discharged by the Commissioner making the sanee, or by any Judge or competent Court.

## No trespres altowel on elaim under injunction.

212. Whenever the Commissioner shall by injunction prohibit auy party from working any claim, and such party sland, in obedience to such injunction, be absent from the said claim, until such injunction be withdrawn or expire by eflluxion of time no person shall trespass upon, occupy, or interfere with such claim.

## Commissioner may appoint Manager and Receivor.

## (Form of Appintment.-Schedule DD.)

213. The Commissioner may, upon the application of any party to any suit or appeal, by order under his hand, appoint some fit and proper person to be a Manager, under whose direction any claim, share in a chaim, or interest may be worked, used, or held ; ond, on a similar application, he may also appoint, a Receiver, who shall receive any gold, quartz, or other valuable material, the produce of any such claim, share in a claim, or interest; and may direct all persons interested in, employed upon, or in auy way claiming occupation, possession, or use of such claim, share in a claim, or interest, to deliver up poesession of all gold, quartz, or other valuable matorial, the produce of such claim, share in a claim, or interest, to such Receiver. And the costs and expenses attendant thereon shall be deemed to be costs in the cause.

## Roads, \&c., may be constructed oyer Grown Lands.

214. Any miner or party of miners, being the holder or holders of any claim, may use any unoccupied Crown Lands, and may, through or upon such Crown Lands, make or construct such roads, tramways, tumnels, adits, or drains as shall aid in carrying on the operations of such miner or miners in the effectual working of such clnim; and such miner or miners shall be entitled to occupy for the construction of such roads, tramways, tunnels, adits, or drains respectively, a width of ground on each side of the centre of such roads, trammays, tunnels, adits, or drains as may be determined upon by tie Commissioner to be requisite for the proper efficiency and security of the same; and no person shall mine upon or under, or otherwise interfere with, such areas: Proviled always that such roads, trammays, tumels, adits, or drains shall not obstruct any public thoroughfare, or cause any injuries of a public or private nature.

## Roads, \&c., may te constructed orer other claims.

215. The Commissioner may make on order for the construction of such road, way, or race orer any claim, or such tumnol, adit, or drain through any claim, as may be necessary for the effectual working of any other cinim, or for supplying any other elaim with fresh air, or for any public purpose: Provided that no damage or obstruction to the working of any claim over or through which such passage is authorized will be cnused thereby.

## Miner reaching water-level to pay proportion of machinery.

216. When a miner or party of minera in simking a shaft within the limits of their chaim shall reach the water-lerel, or so much water as would prevent or interfere with the effective morking thereof, if the said chaim sball be affected or liable to be affected by the same flow or body of water as any other claim or claims contiguous thereto, he or they slatl contribute with the owner or owners of euch other claim or claims a montble proportion of the machinery und labour necessary to free and seep free such clain or claims from water to a workablo extent.

## Non-payment of cally to be considered as lien.

217. The non-payment of calls made for the purpose of defraying the expenses of working any claim, where no deed of partnership exists, made upon any shareholder in such claim, payable by such person, shall entitle the other shareholders to a preferent lien apon the share or interest in the clam in which such expenses are owing until such calls shall have been paid.

Disposat of waste.
218. Wvery miner or purty of miners working a claim shall make provision for the disposal of the detritus, dirt, waste, workings, or refuse of the said claim, so that the same shall not
be an inconvenience, muisance, or obstruction in any public thoroughfarc, river; or creek, or in any manner occasion any public or private dumage.

## Retention of sludge from machinery to be provided for.

219. Where nachinery, either horse or steam, is omployed, the owner or owners thereof shall construct an embankment for the purpose of retaining the sludge, not more than 100 yards from the site of such machinery, unless in the opinion of the Commissioner it can be more conveniently carried off by drainage without causing injury to any private or public interest.

## Accumntation of sludge

220. No person or persons slallcauso or permit sludge, tailings, or water to flow from his or their claim, dam, or machinery, or to accumalate so as to cause injury or obstruction to any public road or thoroughfare, or any other inconvenience or damage of a public or private nature; and no person or persons shall be permitted to hold, place, construct, or erect any machine, water-dam, bank of earth, or building of any sort, on, upon, or over any creek, so as to impede the passage of water or sludge in any channel or creek.

Props not to be removed.
221. No person shall remove any props or timber, the removal of which may endanger the workings of any other claims.

## Ventilation.

(Statutory Declaration.-Schedule C.)
222. When the underground works of two or moreclaims communicate with each other, so as to afford the means of ventilation, such rentilation shall not be obstructed by the owner or owners of any one of such clains without the written consent of the occupants of any claim or claims affected thereby.

## Declaration to be made on loss of miner`a right, \&c.

223. When uny person loses his winer's right, or a certificate of transfer, or other document by virtue of which he holds any claim, share, or portion of a share, or lien, he may mako a statutory declaration of such loss, and such declaration shall be received in lieu of the said miner's right, certificate of transfer, or other document.

Pust, \&c., not to be removed or altered.
224. No person shall alter the position of any trench, nor remove any post from a claim or holding in the occupation of any other person, nor deface, destroy, or remove any notice posted in accordance with these Regalations, nor interfere with any mark or boundary; neitber shall he post any notices to which he may not be entitled under these Regulations.

Commissioner to maze temporary orders.
225. The Commissioner may make such temporary orders, not inconsistent with the Gold Fields Act and Regulations, for regulating the mode of washing at any stream or waterhole, or the disposal of sludge, tailings, or refuse, as he may consider necessary to prevent publicinjury.

## Prop jortfonate cost of works.

226. When any sace or tunnel shall have bectl cut, or other work performed by whiph the working of any claim may be facilitated, erory porson bonefited thereby shall pay such proportionate share of the cost of such operations as may be duly assessed by the Commissioner.

## Commissioner may order additional timbering

227. Upon complaint being made to the Commissioner that ans shaft or underground workings are not sufficiently timbered, and that joss of life or injury to any adjacent claim may be occasioned thereby, the Commissioner shall cause an cxamination of such workings to be made by two competent miners; and if jt shall appear that such timbering is insufficient, he slanll order such additionat props or other timbering in the said workings as he may consider necessary.

## Forieiture shall only affect interest of person incurring forfeiture.

298. In case the clain or other mining tenement, share, or interest held by any person or persous shall be forfeited, such forfeiture shall ouly affect the interest then held by the person or persons incurring such forfeiture, and shall not extend to any portion of interest previously disposed of by transfer or by way of lien; and any person being pat into possession of a forfeited claisa, or other mining tonement or share or part thercof, shall be so put in posscssion subject to all liabilities and encumbrances affecting the same respectively, and also subject to any conditions registored by the Recistrar, and to the rules of any Company under which such chaim or other mining tenement or Company under which such cham or othe
interest may respectively have been held.

## Miner to hold and produce miner's right.

229. Every person who sturl be engaged in mining for gold shall take out a miner's right, such miner's right to be produced for inspection when demanded by the Commissioner or by any pereon duly authorized in that behalf in writing by the Commissioner.

## Miner employed in work for common good.

230. Any miner employed in a tunnel, adit, siaft, race, or other work constructed by agreement for the common benefit or use of any number of claims, including his own, shall, while engaged in such tumel, adit, slarlit, race, or other work, he considered as representing his claim; and during the continumuce of such tork the claims for which the same is being performed may be registered as held in reserve for such labour as caunot be profitably emplnyed thereon.

Commisssioncr must sanction possession of forfcited chaim.
231. No person shall take possession of any claim or any mining tenement or interest whatsoever held under the provisions of the Gold Fields Act of 1866 by any other person, without having first been put in possession of the same by the Comnissioner.

Compensation paid for mining on ground previously occupied.
232. If it shall be proved that the ground occupied by any dam, machine, race, reservoir, or business site contains auriferous enrth or guartz, or gold in combination with any material, in payalle quantities, the owner of such dau, machine, race, reservoir, or business site may be compelied to leave or remove from the same: Prorided that adequate compensation for such learing or remoral shall be first paid ly the person desirous of working the ground. Such compensation to be determined by a Commissioner.

## Coummissiover to mako sanitary arrangenents.

233. Every holder of a business or residence site, or the occupier of a tent, shall be required to keep the ground around the anme in such a state of cleanliness as not to become a public nuisunce; and no porson shall deposit any filth or offonsive substance in a place where the same may become a public nuisance, and, in addition to any penalty imposed for a breach of this Regulation, shall remore the same at his own expense when ordered to do so by the Commissioner; and the Commissioner may order the romoval of any slaughter-yard or piggeries at the expense of the owners, and may prohibit the exercise of any noisome or unwholesome trade.

## Agreements to be binding on possessor of forfeited share.

234. Whaterer mutual agreements and cngagements may be entered into by tho shareholdors of any clnina for the working enterat into by tho sharehodars of any chain for the working
thereof, sball be binding upon any one taking possession of a forfeited or abandoned share or interest in sucli claim.

## Decision of majority to be binding.

235. All agreements or rules made by two-thirds of the share. holders in any claim or mining interest for the management or working of the same, shall be bincling upon the whole number working of the same, shall be binling upon the whole number
of the shareholders in the said claim or interest, provided that such rules are not contrary to these Regulations.

## Junior to emplay ropresentative.

(REPORTS ON NORTHERN, FOR 1871.)

$$
\text { Ordered by the Tegislative Assembly to be printed, } 26 \text { June, } 1872 .
$$

The Commissioner, Noritiery Golm District, to Tile Undra Secretary for Lands.
Gold Commissioner's Office
Armidale, 31 January, 1872.
Sn,
The year 1871 has been marked by an cxtraordinary advance in all mining intereste in the Northern Districts.

I propose to review seriatim the proceedings and prospects at cach location where a sufficient number of persons are at work to entitle it to such consideration.

The Denison Gold Field, Moonan Brook, although very limited as regards population, possesses reefs reported to be very rich, and large leases have been taken out and are being worked by men of capital and energy ; it is situated some 30 miles from Scone.

Hanging Rock, Nundle, and Bowling Alley Point are in much the same state as when I. reported last. A new quartz vein (the Moonlight Reef) has been found, and a lease taken out. A lease also has been applied for, for the purpose of working a lode of antimony. This lode being within the limits of a proclaimed Gold Field, the application has been sent in through me, on the Auriferous Tract System, as it is believed the granting of mining leases other than gold, under clauses 11 and 22 of Crown Lands Occupation Act, is not practicable on proclaimed Gold Fields.

Bingera (Upper and Lower), Iroubark, Crow Mountain, se.-Within the last week I have received official intimation of the discovery of a quartz reef at Upper Bingera of extraordinary richness: my informant, the Acting Clerk of Petty Sessions, speaks of it in the highest terms. The recfs ou Lower Bingera are at present not being worked, awaiting the advent of machinery. Operations at Ironbark are also, from the same cause, nearly at a standstill ; whilst at Crow Mountain, gold I am informed has been discovered in large quantities. The post town for the latter place is Barraba.

Rocky River, \&c.-I have not much of interest to report concerning this locality. About the middle of the year, gold was found after sinking some 120 feet on the ridge at the back of Sydney Flat, and a line of shafts commenced immediately. This discovery, at the urgent instauce of the miners, and in terms of the Regulations, was proclaimed under the frontage system, and the base line laid down. This is the only instance of the adoption of the frontage system in this district, for which, under existing circumstances, it is certainly not adapted.

Oban, situated on the Anu, a tributary of the Mitchell, one of the heads of the Clarence River, has sprung into great importance lately. Some time in October it was discovered that stream tin, called by the mincrs black sand, could be collected in such quantities as would render it likely to prove a very profitable undertaking. The result was, as you are aware, a rush of applications to your department for mineral leases. Oban is not a proclaimed Gold Field, and therefore this course was practicable. Lately the lode has been discovered in one at least of these leases, and it is unquestionally enormously rich. I anticipate $a$ very large increase of the population at Oban in the course of the next month or two.

In the latter part of the year rich quartz veins were discovered on the Little River, and several leases have been applied for. There are at present something like 150 men engaged in this locality. The country is of the most precipitous character, and the oriminal vein is intersected by the Newton Boyd Road, about 40 miles from Grafton.

Timbarra, Lunatic, Perseverance, \&c.--The first-named locality is nearly deserted, most of the miners having left for the reefs. At Lunatic and Perseverance Reefs, only a mile or two apart, a great deal of work has been done, as also at Boorook, a reef much nearer Tenterfield. On these reefs a number of leases have been taken out, and some thousands of tons of quartz stacked ready for crushing. The difficulties encountered in obtaining first-class machinery for this purpose have much retarded the advancement of the district. I am glad to report that several crushing machines are now in the course of erection, and when once operations are fairly started $\mathbf{I}$ anticipate large returns of gold.

The new Act and Regulations now being framed for the government of the Gold Mines will doubtless give a fresh impetus to this highly important interest. I regret the fact that this district is not represented on the Commission at present assembled.

The clerical duties connected with my office have multiplied exceedingly, and have now become so onerous that I take this opportunity of urging on the Honorable the Minister for Lands the advisability of appointing a permanent clerk. I have been compelled for months to employ a clerk at per diem. Notwithstanding this, the work increases, and I am unable to travel as frequently as I could desire to the distant portions of ney district, which in many instances leads I believe to great loss.

In conclusion, I would point out the necessity of making provision, in the new law, for the legal settlemont of mining disputes on Crown Lands not proclaimed as Gold Fields.

I have, \&e.
J. BUCHANAN,

Commissioner in Charge,
Northern Gold District:

The Commissioner, Northern Goid Drstrict, to Tife Under Sechetany for Lands.
Gold Commissioner's Office,
Armidale, 22 April, 1872.
Sm,
Adverting to Mr. Robert Forster's letter of the 9th March last, together with Mr. Secretary Wilson's minute thereon, and other correspondence, all having reference to the necessity of proclaiming certain localities within the Northern District as Gold Fields under the Act 30 Vic. No. 8, I do myself the honor to inform you that I have, in compliance with instructions, visited all the places named, and now beg to submit my Report.

## Little River.

2. Herewith I beg to enclose a tracing of the Gold Field Reserve which I recommend for this locality. The description is as follows:-County of Gresham, on the Boyd or Little River. The Crown Lands within the following boundaries: Commencing on the left bank of the Boyd or Little River, at a point half a mile east of Wintervale House (Sweeney's Station); and bounded ou part of the west by a line north to the range dividing the waters of the Boyd River from those falling into Cunglebung Creek; on the north by that range oasterly to a point due north of the confluence of Chandler's Creek with the Boyd River; on the east by a line south, crossing Boyd River, to a point 2 miles south of the confluence of Chandler's Creek; on the south by a line distant 2 miles from, and parallel with, Boyd River upwards ; and again on the west by a line north 2 miles to the point of commencement.
3. This is a small reserve, but I think, for the present, it is quite sufficient for the requiremonts of tho place. It can of course be extended should it be found necessary to do so.
4. I think it very desirable, both in the interests of the miners on the river and that of the inhabitants of the township, that a post office should be established at Buckurumbi, Nymboi River, as early as possible.

## Solferino.

5. This Field, I observe by a late Gazette, is already procaimed; it is therefore unnecessary for me to state the boundaries I would have recommended. Having gone over the ground, I may be permitted to express an opinion that the area, as now laid down, appears to me to be in excess of the requirements of the place. The locality is certainly a very promising one, and contains many very rich quartz veins, but the population is at present limited,- I estimate it at about three hundred. Immediately the leases now applied for are granted, there will doubtless be a large increase to this number.
6. I would recommend that a post office be established at the township as early as possible. I also recommend the appointment of a Mining Registrar. These are both much required.

## Boorak, Lanatic, \&c.

7. On visiting these places, I found, in consequence of the large discoveries of tin ore in the neighbourhood of Maryland, that the population had been considerably reduced. Boorak is at present the most thriving locality, and possesses some rich quartz leads. There did not appear to be any desire on the ground to have these diggings proclaimed as Gold Fields. I think, until the population increases, it would be as well to refrain from doing so.

Without considering the valuable nature of the tin ores discovered all over New England, and the enormous quantity of country taken up as mineral leases, I cannot refrain from expressing my opinion that there is a rich future in store in gold-mining for the Northern District. The number of leases applied for, and under consideration, is far in excess of what it ever was before; the revenue derived has, in consequence, marched pari passu. I believe, in the course of the next six months the population engaged in mining generally will be quadrupled, and that the prosperity of the Northern Districts generally will be far in advance of what it ever yet has been.

I have, \&c.,
J. BUCHANAN.

# NEW SOUTH WALES. 

# GOLD FIELDS. 

# (REPPort on westren, ror isil) 

Ordered by the Legislative Assembly to be printcd, 26 June, 1872.

The Commissioner, Westeen Gohd Flelds, to The Under Secretary for Lands.

Western Gold Fields Office,<br>Bathurst, 22 April, 1872.

STR,
I do myself the honor, for the information of the Honorable the Minister for Lands, to submit my Report upon the Western Gold Fields, for the year 1871.
2. My unavoidable absence from Bathurst during the early part of this year, and pressure of business, both in the Office and on tho several Gold Fields under my charge, has prevented me from presenting this Report at an earlier period, although the delay is so far advantageous, that it will enable me to refer to the unprecedented development and advancement in the prosperity of the Western Gold Fields, during the past three months.
3. It would render this Report too voluminous were I to attempt to enter into a detailed description of each Gold Field in this. District, but in the annexed Return Ihave shown the number of business licenses and miners' rights issued for each Field, which is a fair criterion of those employed in mining and business pursuits respectively. The total population I have estimated in accordance with the above retirn, the proportion of women and children being greater on the older than on the more recently discovered Gold Fields, where the miners as a rule have nothad a sufficient time to settle down with their families. I also append a list of quartz-crushing machinery, but having no corresponding return for the previous year I am unablo to show the increase under this head.
4. By the first return, it will be seen that 14,173 miners' rights, and 912 business licenses were issued for 1871, as against 7,367 miners' rights, and 364 business licenses, for 1.870 , being an increase of 6,806 miners' rights and 548 business licenses for the past year.
5. The number of applications for leases of auriferous tracts for the same period was 516 and 223 respectively, being an increase of 293 for 1871 over 1870 ; and I may add that, for the present year, up to this date, 11,029 miners' rights and 547 business licenscs have already been issued, and 686 applications for leased tracts lodged in this Office, exclusive of those received at the several Gold Fields under the Amended Regulations since the lst April, the number of which cannot yet bo ascertained, being an advance of the total for the previous year.
6. The gross collections for the Western Gold Fields were $£ 10,64 \mathrm{I} 7 \mathrm{7}$. 6 d . in 1871, as against $£ 5,99513 \mathrm{~s}$. 6 d . in 1870 , being an increase of $£ 4,64514 \mathrm{~s}$. Od. for 1871 . For this year, up to the present time, $£ 12,000$ have been received, being more than the whole collections for 1871 .
7. With the exception of the valuable alluvial discoveries at Gulgovg and Curragong, in the Districts of Mudgee and Forbes respectively, the attention of miners, and more cspecially capitalists, has been principally directed to quartz-mining; and among the many discoveries of auriferous quartz-reefs in all portions of the Western Districts, those at Hill End stand prominently forward, and, by their extraordinary, and in this Colony, unprecedented, yields of the procious metal, have created quite a furore in mining matters, and led to the formation of numerous Companies for working them and developing the neighbouring reefs in every direction. That a belt of country permeated by rich reefs and veins exists, extending from Chambers's Creek on the Macquarie River, to Avisford on the Meroo, is satisfactorily proved, and the hundreds of leased tracts taken up on this line show the faith of the miners in the remunerative character of these reefs. Many of these, however, are applied for for purely speculative purposes, and are being
hastily formed into Companies, in many instances without any indications or prospects that would induce a bona fide party of miners to undertake their development. Notwithstanding all this, however, there is ample room for legitimate speculation in quartz-mining in this and other portions of the Western Gold Fields, and the introduction of so much capital to be expended in this branch of industry cannot but be of material advantage to the community in opening out new sources of national wealth. A.t Sofala, Tuena, Gulgong, and at Caloola and Chesher's Creek in the immediate vicinity of Bathurst, and indecd in every part of the Western Districts, valuable discoreries are also being made, almost daily, of auriferous reefs. There seems, indeed, to be everywhere a perfoct rage for prospecting, and reefs old and new are being taken up and re-occupicd in every direction. This must result in mining being carried on in a more systematic manner than hitherto; and, with the aid of capital, our reefs, which have as yet been worked out comparatively near the surface, will be tested to a greater depth, and it is worthy of remark that the rich and apparently inexhaustible finds at Hill End have been found below the average depth at which our reefs have been generally proved.
8. The discovery of rich alluvial leads at Gulgong and Curragong, which are found at a considerable depth, and extend in all probability for many miles, has developed a new feature in our alluvial Fields and imparted to them a permanence not hitherto possessed. There is every prospect of a continuous yield from these Fields for many years, and no doubt similar discoveries will be made in the adjacent country, much of which is of the same formation.
9. As the gold escorts are not now in comection with this department, I am unable to show the comparative returns for 1870 and 1871, but I gather from the published statements that an increase of over 50 per cent. has already accrued for the first quarter of this year, and the proportion will doubtless increase with each succeeding quarter.
10. The question of Gold Fields management haring been exhausted by the Reports of two separate Commissions, I will not euter upon that topic, except to say that the defects of the present system, so forcibly pointed out in these Reports, are more prominently displayed every day, and the dissatisfaction of the miners and those embarking capital in gold-mining increasing against the present mode of detcrmining mining disputes, from the enhanced value of the property to be protected or awarded by the decisions of the unpaid and irresponsible Magistracy acting on the Gold Fields as a final Court of Appenl in mining matters. The miners as a body are anxiously looking for legislation on this important point.
11. In conclusion, I cannot but look forward to a great future for the mining interests in this Colony, and especially the Western Districts, where the gold-bearing country seems almost unlimited in extent, and is developing riches far beyond any previous conception of its resources.

I have, \&c.,
WHITTINGDALE JOHNSON, Commissioner in Charge for the Western Gold Fields.

## NEW SOUTH WALES.

# MR. E. H. HARGRAVES. <br> (PETIIION AS TO THS CLAIMS FOR DISOOVERY OF GOLD IN THE COLONY.) 

Ordered by the Lefistative Assembly to be printed, 26 June, 1872.

To the Honorable the Legislative Assembly of New South Walcs, in Parliament assembled.
The humble Petition of Edward Hammond Hargraves, of Norahrille, Coorambong,-

## Showenti:-

(1.) That your Petitioner having, whilst in Califormia, made a close observation of the external features and geological structure of the gold-producing districts there, became impressed with the idea that certain portions of New South Wales, situated in the Great Dividing Range, and with which he had been previously well acquainted, were also of an auriferous charactor, and tbat he returned to the Colony for the express purpose of discovering a Gold Ficld.
(2.) That immediately after his arrival in Sydner, on the 27 th January, 1851, your Petitioner procecded to the interior, and on the 12th of F'cbruary following sueceeded in discovering gold in payable quantities, and, from the indications there met with, satisfied himself of the existence of 300 square miles of auriferous country.
(3.) That in April, 1851, your Petitioner entered into negotiations with the Government of New South Wales, respecting the terms on which he would disclose and make available the discovery he had effected; and that in the course of these negotiations the Colonial Secretary expressly promised, in an official communication, that your Petitioner's remuneration for such discovery "should depend entirely on its nature and ralue when made known, and that the Government would be disposed to give the subject its most liberal consideration."
(4.) That upon receipt of this commumication, your Petitioner at once, by order of the Government, proceeded to the spot, and pointed out the aurifcrous localities to the Government Geologist, who had been for several months making a geological survey of the District, and immediately afterwards initiated thousands of persons in the mode of seaching for and separating the gold-all of which was done by your Petitioner at his own expense, and without participation in the gains.
(5.) That at that period the Colony of Victoria formed a portion of New South Wales, and consequently, as your Petitioner respectfully submits, was, both then and after its separation, bound by the agreement made between your Petitioner and the Government to contribute to the reward promised to your Petitioner, in its fair proportion, according to the benefits directly accruing to it from the discovery that profitable Gold Fields existed in the Great Dividing Range conmon to both Colonies.
(6.) That this discovery developed itself with enormous rapidity orer New South Wales and Victoria, and other Australian Colonics, and has proved itself to New South Wales and Victoria alone, a source of wealth to the amount of $£ 200,000,000$ sterling, and upwards.
(7.) That after the separation of Victoria from New South Wales, the latter Colony awarded and paid to your Petitioner,-18ily, the sum of $£ 500$, as payment of expenses; 2ndly, the sum of $£ 5,000$; 3 rdly, the sum of $£ 4,500$; and referred your Petitioner to the Victorian Government for such further reward as that Colony was bound, under the stipulation above referred to, to award your Petitioner, commensuratcly with the benciits it had derived from the Gold Discovery.
(S.) That in 1853, your Petitioner was furnished by the Governor General, Sir Charles Fitz Roy, with a letter of introduction to Mr. La Trobe, the then Dieutenant-Governor of Victoria, strongly recommending to his consideration your Pelitioner's claim on the Government of Victoria, on the grounds hereinbcfore stated.
(9.) That Mr. La Trobe immediately acknowledged the justice of your Petitioner's claim, and recommended it to the most farourable consideration of the Legislative Council of Victoria. A Select Committce of that Honorable House, to whom the matter was referred, at first recommended that a sum equal to what had becn already yoted by the Legislature of New South Wales should be presented to your Petitioner on the part of Victoria; and your Petitioner having the fullest confidence that the Council would carry out this recommendation in its integrity, left Syduey on a visit to England, where he extensively diffused information respecting the A.ustrilian Gold Fields, and thereby, he belicves, induced multitudes to emigrate thither.
(10.) That neither the hopes which your Petitioner entertained of being liberally dealt with by the Victorian Gorernment, or the expectation of a large number of the Members of the Parliament of this Colony, as expressed at the time, have been realized; and should they be realized at any future period, the sum to be given to your Petitioner will barely reimburse him for his expenses and the losses incurred by him during the last twenty-one years, in endeavouring to obtain a settlement of his claims, as originally allowed, from the Government of Victoria.
(11.) That your Petitioner respectfully submits that he has not been rewarded commensurately with the magnitude and importance of his services, as originally stipulated for by him with the Government of this Colony, as above stated.
(12.) That the Legislature of this Colony have liberally rewarded the Rer. W. B. Clarke for his services in assisting the development of the Gold Discovery, and without any such previous contract having been entered into between him and the Government as that to which your Petitioner has above referred; that gentleman having received,-1st, $£ 1,000$ from the Government of this Colony; 2ndly, $£ 1,000$ from Victoria; 3rdly, an annuity from this Colony of $£ 300$ per aunum ; and 4thly, the sum of $£ 3,000$ in lieu of the said annuity. And your Pctitioner hopes that he will be dealt with in the same liberal spirit by the Government of this Colony, in accordance with the plain justice of his claim and the immense magnitude and importance of the results of his discovery, and that his present application may be (irrespective of Victoria) favourably considered and finally settled.
(13.) That your Petitioner would further draw the attention of your Honorable House to the new and vast development of the auriferous resources of the Colony which is taking place at present, and which will immensely enhance and at the same time firmly establish the prosperity which the Colony has enjoyed since the epoch of the Gold Discovery; and further, to the immense benefits indirectly flowing therefrom, and which, although really attributable to it, are incapable of being accurately ascertained.
(14.) That your Petitioner has been informed that the sweepings of the Sydney Mint, now accumulated, have been estimated at the value of about $£ 4,000$,-a sum which, as it cannot be distributed amongst those who, from time to time, have sent their gold to the Mint to be coined or operated upon, will fall into the Public Treasury of the Colony; and your Petitioner would point to this large and unexpected addition to the Revenue as a further and interesting illustration of the benefits directly accruing to the Colony from the Gold Discovery.

Your Petitioner, therefore, humbly prays that your Honorable House will take the premises into your consideration, and take such steps in the matter as to your Honorable House may seem just.

And your Petitioner will ever pray, \&c.
E. H. HARGRAVES.

Dated at Sydney, this 25th day of June, 1872.

Legrslative Assembly.

# DISCOVERY OF GOLD. 

(PETITION-MESSRS. WILLIAM TOM, JOHN H. A. LISTER, AND JAMES TOM,

Ordered by the Legislative Assembly to be printed, 27 Junc, 1872.

To the Honorable tho Legislative Assembly of the Colony of New South Wales.
The humble Petition of William Tom, the younger, of Rob Roy, Guyong, in the Colony of New South Wales, farmer,-John Hardman Australia Lister, of Guyong, aforesaid, farmer,-and James Tom, of Melbourne, in the Colony of Victorit, settler,-

## Showert :-

That early in the month of February, 185l, Mr. Edmund Hammond Hargreaves arrived at what is now known by the name of the " Guyong Inn," situate about 24 miles from Bathurst, on the Wellington Road. He arrived at the inn, and informed Mrs. Lister (the mother of your Petitioner John Hardman Australia Tister), and your Petitioner John Hardman Australia Lister, that he was on his way
to Wellington in search of gold, whereupon your Petitioner John Hardman Australia Lister showed him to Wellington in search of gold, whereupon your Petitioner Tohn Hardman Australia Lister showed him some stones, which your Petitioner John Hardman Australia Lister supposed to indicate the presence of auriferous matter, and which your Petitioner John Hardman Australia Lister had brought from the Turon
and Macquarie Mountains and River, and which had been picked up by him in lis peregrinations in search and Macquarie Mountains and River, and which had been picked up by him in lis peregrinations in search of gold in those localities. After some conversation with your Petitioner John Hardman Australia Lister, Mr. Hargreaves gavo up the idea of going to Wellington; and it was agreed between him and your Petitioner John Hardman Australia Lister that they should become partners or colleagues in searching for gold; and accordingly, on the 12th February, 1851, your Petitioner John Hardman Austrulia Lister and Mr. Hargreavos commenced their search, and your Petitioner John Hardman Australia Lister took Mr. Hargreaves to a part of the country within three or four miles of what now bears the name of Ophir, on the Jewis Ponds Creek, where Mr. Hargreaves washed several pansful of earth, from which he obtained four or five minute specks of gold, thus verifying an opinion long before entertained that this was a gold country. Having proceeded thus far, the next olject which your Petitioner Johu Hardman Australia lister and Mr. Hargreaves had in view was, the discovering a payable or working gold field. After this, your Petitioner Joln Hardman Australia Lister and Mr. Hargreaves determined to further prosccute their inquiries for a payable gold field, and to proceed down the Macquaric River and thoroughly examine the crecks in the neighbourhood of Ophir; and not boing acquainted with the bush or the country they were about to explore, they agreed with your Petitioner. James Tom, who knew the whole of the country well, that he should join them in their search, with the full understanding that cach person was to share alike in any benetits to be derived from their joint exertions, to which he consented; and after cxplaining to him the method of washing gold, your Petitioners John Hardman Australia Jister and James Tom started with the said Mr. Hargreares on their journey, and after being engaged some days on their search, returned without having made the discovery of a working gold field. This journey being over, Mr. IIargreaves prospected no more in the Lewis Ponds and Ophtir neighbourhood, but probably thinking a gold ficld might; be found about Wellington, he made a journey thither, and after a lengthened exploration of that district he returned to Guyong without having met with any success. On his return to Guyong, Mir. Hargreaves informed your Petitioners he was obliged to return home, and your Petitioner James Tom having to go to Adelaide on business, it was arranged that your Petitioner William Tom should take his place and continue, in company with your Petitioner John Hardman Australia Hister, the inquiries in seruch of gold, your Petitioners having determined, if possible, to ascertain if Australian soil would pay for: working. When Mr. Hargreaves was about to start from Guyong, he told your Petitioners that as soon as he arrived home he would make a tour to Moreton Bay, and give the whole of that part of the Colony a thorough search, and that if he did not succeed in finding gold in payable quantities he would go to California immediately on his return; but if he did succeed in finding gold he would let your Petitioners lonow as quickly as possible after the discovery. Your Petitioners made a similar promise to Mr. Hargreaves, as to informing him of the success of their scarch. Upon this understanding your Petitioners and Mr. Hargreares parted.

This agreement having been made between your Petitioners and Mr. Hargreaves, your Petitioners John Hardman Australia Lister and William Tom- started from Guyong on the morning of the 7 th of April, 1851 ; and from the circumstance of a piece of gold having been picked up some time previously at a place now known by the name of the Fitz Roy Bar, your Petitioner William Tom suggested to your Petitioner John Hardman Australia Lister the importance of making a good search on that Bar; and the suggestion being approved of, your Petitioners William Tom and John Hardman Australia Lister repaired thither, and upou arriving at the place, your Petitioners turned out their horses, and after partaking of some refreshments, which they had with them, commenced searching for gold; and after looking for about ten minutes, your Petitioner William Tom succeeded in finding a piece of gold worth about £2 7s. This circumstance encouraged your Petitioners to prosecute their search further, and induced them to go into the mountains around the nest morning for the cradle, which had been made by your Petitioner William Tom on a previous occasion, for the purpose of prospecting, and hid by him. About 2 o'clock the same day your Petitioners commenced working at the Bar, and by sun-down had accumulated about 30 s. worth of gold dust, besides a nugget weighing about a quarter of an ounce. The next day your Petitioners collected about 300 grains weight of gold, and the day after about $£ 2$ worth. In prosecuting their labours your Petitioners carried the soil they dug up to the cradle in two 3 -bushel bags.

As your Petitioners had now succeeded in ascertaining that the ground would pay for working, they determined upon proceeding down the creek to see if they could find any pieces or lumps of gold, in case any were exposed to view from the washing away of the soil by the water. Accordingly they saddled their horses and proceeded to where a tributary creek emptied itself into the main creek, and your Petitioner John Hardman Australia Lister picked up a piece of gold immediately at the junction of the two creeks, which weighed eight sovereigns. John Hardman Australia Lister first sam this piece of gold while sitting on horseback ; it was held above the ground, a portion of it being wrapped round the root of a tree. Your Petitioners' provisions being by this time exhausted, they were obliged to return home to Guyong the following day.

Your Petitioners communicated the result of their search to Mr. Hargreaves at the earliest opportunity they had, according to the agreement made between them, before alluded to; and considering themselves indebted to him for a knowledge of how to procure gold by the use of the tin dish, your Petitioners placed in his hands all the gold they had procured as before stated, in order that he might, on behalf of your Petitioners and himself, disclose the discovery made by your Petitioners to the Government, as his discretion and sense of honor might dictate. The money arising from the sale of gold we had procured was received by Mr. Hargreaves, and by him divided equally between your Petitioners and himself. Your Petitioners respectfully submit to your Honorable House that this fact shows conclusively the fact of the agreement between your Petitioners and Mr. Hargreaves, and the understanding that any profit arising from the gold actually discovered was to be shared between Mr. Hargreaves and your Petitioncrs as partners in the business.

While your Petitioners admit that Mr. Hargreaves, as a partner with your Petitioners, was entitled to participate in the profits of the gold actually found in the course of their search, by virtue of the agreement between them before referred to, they respectfully submit to your Honorable House that they themselves were primarily entitled to be considered as such real and bond fide discoverers of such gold field, because they actually discovered such gold field in Mr. Hargreaves absence from the spot where the discovery was first made.

In the year 1853 the then Government of the Colony made a grant to your Petitioners, upon the foregoing facts being brought to their knowledge, of $£ 1,000$, of which your Petitioners each received a third part; this is the only sum ever received by your Petitioners from the Government for their discovery.

Your Petitioners entrusted the prosecution of their claim upon the then Government of the Colony to Mr. Hargreaves; and they have every reason to believe, from facts which subsequently came to their knowledge, that he did not fairly represent your Petitioners share in the discovery, but that he gave an unfair prominence or importance to his own exertions to the prejudice of your Petitioners.

As a further reason in support of your Petitioners claim as the discoverers of the first payable gold field in Australia, they beg to state, for the information of your Honorable House, that during ihe time Mr. Hargreaves and themselves were engaged in their searches for gold your Petitiouers themselves paid Mr. Hargreaves exponses cousequent upon such search, and they did so in virtuc of the agreement between themselves and Mr. Hargreaves before referred to. These expenses your Petitioners have never been repaid.

Your Petitioners have been informed a grant was made to Mr. Hargreaves, in or about the year 1853, of a large sum of money as a reward for his being the first or sole discoverer of a payable gold field, and that such sum fras duly paid to him.

Your Petitioners have delayed bringing their claim before your Honorable House until the present time, solely that time might be given for the development of the resources of the gold fields of Australia, and in order that their value might be ascertained; and they submit that now the extent and value of such gold fields are fully known, they have a fair right to present their claims to your Honorable House as the first discoverers of the same as producing gold in payable quantities, and as being the persons by whose means the public attention was directed to the subject.

Your Petitioners therefore humbly pray that your Honorable House will be pleased to appoint a Committee to consider the prayer of this their Petition, and to report to your Honorable House whether or not your Petitioners are entitled to be considered the rcal and bona fide discoverers of the first payable gold field in Australia ; and, if necessary, that your Petitioners may be at liberty to give evidence before such Committee in support of their claims, and may be heard by counsel in support thereof, either at the Bar of your Honorable House or before such Committee.

And your Petitioners, as in duty bound, will ever pray, \&c.
WILLIAM TOM, Junr.
J. H. A. LISTER.

JAMES TOM,
(By his Agent,-~William Tox, Junr.)

NEW SOUTH WALES.

# COURT OF APPEAL IN MINING DISPUTES.  

Ordered by the Legislative Assembly to be printed, 3 May, 1872.

To the Honorable the Speaker and the Mombers of the Legislative Assembly of the Colony of New South Wales, in Parliament assembled.

The humble Petition of the undersigned, the Miners of Gulgong, in the said Colony,Respectrdley Showeti: -

That after mining disputes have been settled by the Commissioner they are subject to appeal, and which Appeal Court in numerous instances is presided over by two unpaid Magistrates, who may bo (and frequently are found to be) totally unacquainted with mining matters, and by their decisions cause great distress and suffering to your Petitioners.

Your Petitioners therefore humbly pray that you will be pleased to abolish the present Court of Appeal, and institute one in lieu thereof that shall be presided over by a thoroughly competent Mining Judge, assisted by a jury of Miners.

And your Petitioners, as in duty bound, will ever pray.

## Legislatite Assembly.

# GOLD CLAIM AT GULGONG. <br> (PETTTION--CERTAIN GOLD MINERS AT GULGONG.) 

Ordered by the Legislative Assembly to be printed, 8 July, 1872.

To the Legislative Assembly of New South Wales.
The Petition of the undersigned, William Capewell, Seton Flucker, Edward Corran, Robert Grosser, and I. Gillespie,-

## Hombly Shioweth :-

1. That your Petitioners held possession of a certain Gold claim, known as the First Block west off No. 19, Black Lead, and situated at Gulgong, in this Colony.
2. That the first three mentioned Petitioners held possession of the said clain ever since the 13 th October, 1871, up to the 26th June of this year.
3. That one Turner Williams, who originally held possession with the first three mentioned Petitioners of the said claim, duly transferred his share in the claim to the two last-montioned Petitionera, who occupied their respective share up to the 26 th June last.
4. That your Petitioners in January last summoned Messrs. Angrove, Corklan, Deane, and Bardon for trespass on their said claim, and that the Gold Commissioner, T. A. Browne, Esq., and two Assessors, after having heard the evidence of both complainants and defendants upon oath, decided in farour of the complainants-your Petitioners.
5. That the defendants appealed against the said decision, and that the appeal was heard before Henry Tebbutt and M. A. McDonald, Esquires, Her Mnjesty's Justices of the Peace for this Colony.
6. That your Petitioners at the Appeal Court gave evidence on oath as to the facts of their title, their possession of the claim, and the trespass of the defendants.
7. That the said Justices, without calling for any evidence on behalf of the defendants, nevertheleas gave a verdict in favour of the defendants, and reversed the decision of the Commissioner and Assessors, holding that, as tho fourth shareholder, Turner Williams (who had gone away after having transferred to the two last-mentioned Petitioners) was not personally present when the frontage was blocked off on the 9 th January, the titie of your Petitioners was valueless.
8. By this decision the said Justices, without asking the defendants to show the least shadow of a title, nevertheless gave them a gold claim as against your Petitioners, who were actually in possession, and who, moreover, had $n$ legal decision as to their title in their favour.
9. That not a particle of cyidence was produced before the said Justices of any title in the defendants to the said claim, and yet the said Justices take away the clajm from your Petitioners, the possessors, and give it to the defendants.
10. Your Petitioners submit to this Honorable House that such a decision is repugnant to the laws of England, in direct opposition to all natural law and equity, and at variance with the laws of any part of the civilized world.
11. That after the said decision in the Appeal Court, your Petitioners, by counsel's advice, nevertheless kept possession of their claim in order to compel the defendants to take an action for trespass against your Petitioners, and by so doing put the defendants on the proof of their title, if they had any
title.

12: But the defendant:s summoned your Petitioners under the 20th section of the Gold Fields Act, 12: But the defendants summoned your Petitioners under the 20th se
13. The first of these summonses, wherein James Bardon (one of the defendants in trespass before mentioned) was complainant, and Willian Capewell, one of your Petitioners, was defendant, was heard at Gulgong, before Henry Tebbutt and Lester S. Donaldson, Esquires, Justices of the Peace, and although it was admitted on the record that your Petitioner, William Caperell, had never been defendant in trespass before, but, on the contrary, complainant, yet the said Justices fined your Petitioner in the sum of one shilling and costs of Court,-holding that the Appeal Court having given a decision against jour Petitioners, your Petitioners ought to quit possession of their chaim, and that, in defnult, your Petitioners were guilty of
trespass committed twice, all at once trespass committed twice, all at once.
14. Your Petitioners call the attention of this Honorable Housc, that the Appeal Court of Gulgong assumes to itself more extensive and most unwarrantable jurisdictions beyond that which is exercised by the Supreme Court of the realm; and that the Justices of the said Court, so far from confining themselves within the jurisdiction given to them by the Gold Fields Act, which only enables them to order the abatement of a trespass, or to pronounce that no trespass has been committed, they pretend to confer and grant indefeasible titles to property against the world, -they take awny property from the possessor, and give it to a stranger, who has neyer shown any title whaterer to that property, and to crown all they punish the possessor if he dares remain on his property, at the instance of the same stranger.
15. That your Honorable House will not consider that your Petitioners are guilty of exaggeration, for that the two decisions here mentioned, as well as other decisions from the said Justices and equally glaring, abundantly prove what is here asserted.
16. That your Petitioners therefore by unjust and illegal decisions have been deprived of their gold claim, in their possession for nive months, to which claim they are justly entitled.
17. That by their occupation of a claim for so long a timo your Pectitioners have wholly eshausted their means, and are therefore unable to apply to other Courts for redrcss.
18. That it is improbable that any legal remedy exists, for in the equally glaring case of Packer $v$. Jones, the Judges of the Supreme Court unanimously decided that no statutory prohibition did lie agaiust the Appeal Court, and that no redress could be had for any wrong committed by the Justices of that Court, as long as that wrong was committed within their jurisdiction.
19. Your Petitioners therefore lumbly pray that this Honorable House will cause inquiry to be made into the intolerable grievances your Petitioners have suffered from the Justices of the Appeal Court, or to make such order as this Honorable House will deem fit, so as to euable your Potitioners to reclaim their property, of which they have been so unjustly aud so illegally deprived.

And your Petitioners will ever pray.
[Here follow 5 Signatures.]

## Legislative Assembly.

# FOOT AND MOUTH DISEASE. 

areport from inspector of stock as to outbrbak or, in catter mporthid in "parrainatta.")

Ordered by the Lregislative Assembly to be printed, 18 June, 1872.

## OUTBREAK of Foot and Moutif Disease in Catile by the " Parramatta," from London.

Ture vessel came into Port Jackson on 30th November, and was boarded in Neutral. Bay on the 18t December by Mr. V. S. Pottie and Mr. Inspector Yeo.

There were 12 head of cattle and 28 sheep on board.
The cattle were consigned as follows :-1 Hercford and 1 short-horn bull to Messrs. Smith Brotbers, for Mr. Taylor, Maitland; 2 short-horn bulls to Mr. E. Vickery; 1 short-horn cow, Messrs. Gilchrist, Watt, \& Co.; 1 short-horn cow and bull, Mr. J. De V. Lamb, for Mr. E. King Cox ; 2 short-horn cows, Messrs. Fraser and Anderson; 2 short-horn cows, Dr. Tenkins; and 1 short-horn cow, Mr. Binnie.

All the catile, except Mr. Cox's bull, Mr. Binnie's cow, and Messrs. Gilchrist, Watt, \& Co's. cow, were in excellent condition. Mr. Cox's bull, although poor, looked healthy ; Messrs. Gilchrist's cow wab thin and appeared nervous ; and Mr. Binmie's cow was very thin, unthrifty, mud evidently in bad health.

Both cows had been milked on the royage, which of course accounted for their lowness in condition. These cows and one of Dr. Jenkins's were afflicted with a cough, which the cattleman accounted for by saying that the covering over the caitle had been removed a few days before they came in.

The cattle were landed on the lst December, and as there were three head then in quarantinetwo short-horn bulls belonging to Mr. Lee, and one of Messrs. Gilchrist, Watt, \& Co's., which had arrived by the "Ben Lomond "-there was only room for nine of the caltle by the "Parramatta," at Dawes' Point. Three of that shipment-Messrs. Fraser and Anderson's two cows, and Mr. Cox's heifcr-were therefore sent to the temporary quarantine at Washington Wharf. The cattle taken to Daves' Point were Dr. Jenkins's two cows ( $1 \& 2$ ), Mr. Binnie's cow (3), Messrs. Gilchrist, Watt, \& Co's. cow (4), Mr. Cox's young bull (5), one of Mr. Vickery's bulls (6), Mr. Taylor's short-horn bull (7), Mr. Vickery's other bull (8); Mr. I'aylor's Mereford bull (9), Messrs. Gilchrist, Watt, \& Co's. short-horn bull (10), by the "Ben Lomond;" and Mr. Lee's two short-horn bulls (11\&12), by the same ressel; and they stood in the order in which they are here mentioned, commencing at the northern end of the building. They were in the charge of J. W. Yates. He had been at this duty ever since the Imported Stock Act came into force.

2nd and 3rd.-Satw day and Sunday.
Nothing particular was noticed with regard to the cattle, except that Mr. Bimnio's cow and one of Dr. Jenkins's coughed occasionally. Some of them did not cat their hay, but they all took their allowance of bran. It is usually the case that cattle do not eat thoir hay well, especially the lucerne, for a few days after they leave the ship.
4th.-Monday.

Fates reported Mr. Taylor's Hereford bull (No. 9) as of his feed, and Mr. Yeo directed him to ask Mr. Pottic, who had that morning to attend to Mr. Binnie's cow, to look at this bull. Mr. Pottic looked at the bull butidid not cxamine him particularly, and said he was only suffering from the effects of the voyage and change of climate. He reported Mr. Binnie's cows as infected in the lungs.
5th.-Tuesday.

Mr. Taylor's bull was decidedly sick. He was feverish, frothed at the mouth, and panted very much. Mr. Pottie carefully examined him, and pronounced him suffering from congestion of the lungs and disense of the intestines-vexing him and making him dash his head about-and attributed his lameness to his standing on board ship.

That night Yates reported to Mr. Yeo the state the bull was in.
6th.-Wednesday.

Mr. Taylor's Hereford bull and Mr. Binnie's cow had both improved. Mr. Pottie attended and gave them medicine, and dressed the bull's feet. Messrs. Gilchrist, Watt, \& Co's. cow appeared feverish and excited, with considerable discharge from her mouth and nose. Her mills had a very bad smell.

## 7th. -Thursday.

Mr. Binnie's cow and M.r. Taylor's bull improved, but the latter still very lame.
Messrs. Gilchrist, Watt, \& Co's. cow was worse. Her nose was sore, her eye very feverish, the tongue blistered, her teats very inflamed, and she kept champing her jaws and smacking her lips. Her breath had a very bad smell.

Messrs. Gilchrist, Watt, \& Co's. bull, by the "Ben Lomond," standing next to Mr. Taylor's sick bull this afternoon, showed symptoms of ailing. Mr. Pottie's attention called to the symptoms of the sick cattle being like those of "Foot and Mouth," but he eaid that he did not think it was that disease.

## 8th.—Friday.

This morning Messrs. Gilchrist, Watt, \& Co's. bull, by the "Ben Lomond," very sick; he was panting and blowing, and very much purged; his breath was very fetid. Later in the day there was a great discharge from his mouth, which was covered with sores, more especially on the gums. On his nose also there were sores, and his testers and feet were very much inflamed. He kept moving and shifting his feet, as if in great pain, when made to stand up, and when moved showed symptoms of severe lameness.

Messrs. Gilchrist, Watt, \& Co's. cow was also very sick with symptoms similar to those noticed in her the day previously, but in a more aggravated form.

Mr. Taylor's Hereford bull was not so well, and was still very lame.
Binnie's cow was improving.
Mr. Pottie's attention was again called to those cattle, as exhibiting symptoms of "Foot and Mouth," when he again said he did not think it was that disease ; but upon the cattle being taken nut and shown to him separately, oue after another, he altered his mind, and pronounced Gilchrist, Watt, \& Co's. bull to be infected with Foot and Morth disease, and their cow and Mr. Taylor's Hereford bull to be suffering from inflammation of the lungs.

The case was reported to the Minister for Lands, who, accompanied by Dr. Cox, visited the Quarantine, and examined all the cattle affected. He directed Mr. Pottie, who was present, and pointed out the symptoms of the disease, to attiend the cattle, and administer the necessary medicines.

On the 9th Mr. Lee's roan bull became infected, and on the 13th Mr. Taylor's short-horn bull and Mr. Cox's cow were attacked.

In some of the cattle the disense ran its course in four days, while in others they were sick for fourteen. First symptoms of the attack were, very bad breath, purging, soreness in feet and restlessness, with feverish eye.

## Cause of the outbreak.

As the Foot and Mouth disease ordinarily runs its course in fourteen days, the presumption as to the cause of the outbrenk at first was, that some of the cattle had been affected on the roynge, and that the successive cases had kept up the infection till they were landed. This idea was, however, entirely upset by several of the passengers by the vessel, who were stockowners, and therefore well acquainted with .stock, stating, on inquiry, that they had seen the cattle every day, and that none of them had been ailing during the voyage in any way, much less had they been affected with Foot and Mouth disease. The Captain and butcher made a similar statement, and its correctness is borne out by the fact that most of the animals have been affected with the discase since they landed.

The disease could not therefore have been introduced by infection conveyed by animals which were diseased when they left, nor by others on the vessel which had successively been infected by cattle affected on learing England.

Again, it bas been said that the outbreak was caused through the cattle heing placed in sheds which were placed in a confined position and badly ventilated. To this the reply is, first, that the situation, although confined and rather low-lying, was a very cool one, receiving, as it does, the full force of the north-east, north, and north-west winds, as well as the sea-brecze, and when the doors of the sheds were kept open, as they were during the day, and a current of air passing from end to end of the building over the animal's heads they had more fresh air, and the temperature of the stalls was cooler than in some of the stables in town, where imported cattle are generally lrept. During the first fer days the cattle were in quarautine the weather was very hot, and they exhibited symptoms of oppression, but not more than imported cattle do on landing.

In shipping cattle from the northern parts of Queensland to New Caledonia, cattle have over and over again suffered five times more from heat and confinement than it is erroneously assumed these cattle did in the quarantine-sheds without setting up any such disease as that from which the cattle by the "Parramatta" suffered, and there is little doubt but that these very cattle suffered a great deal more from heat and confinement when crossing the line than they did in the Sydney quarantine, without originating Foot and Mouth disease. Farther, I have never heard of any thoroughly authenticated case of Foot and Mouth disease breaking out in an nnimal without its coming into contact with tho infection; and if bad ventilation, or even that combined with any other improper treatment, would cause an outbreak of this disease, there would be innumerable cascs of its doing so, for it is anything but rare for cattle to bo subjected to such treatment ; and as there are no such cases on record it must be assumed that outbreaks of this disease never occur except from infection.

Professor Armatage's opinion is very decided on this point. He says (page 1.58):-"Vesicula aphtha, on the contrary, is highly contagious, occurring but once as a rule in the lifetime of an animal, belonging to a class of eruptive fevers dependent upon the introduction of an animal poison to the system, and commumicable from animals of one kind of species to those belonging to another."

Besides, although none of the cattle, when examined by the veterinary surgeon, exhibited any decided symptoms of Foot and M.outh disease, sereral of them showed symptoms of ailing, such as slight fever and coughing, which, as the Foot and Mouth disease afterwards actually broke out among them, must be put down as the premonitory symptoms of that disease.

The cause of the outbreak must therefore be looked for in infection ; and, if so, the next question is how it was conreyed to the cattle.

First.-It is possible, but not at all probable, that some malicious person on board the ship, fur the sake of revenge, or from shcer malevolence, made up his mind to give the cattle the disease, procured and preserved some of the virus from a diseased animal in England, and infected Mr. Taylor's bull the day before the cattle were landed. Although this is possible it is too improbable to be entertained without some good grounds for doing so.

Second.-The next and most likely mode in which the infection might have been conveyed was by the fodder, and there is very little doupt but this was the real vehicle by which it reached the cattle. The fodder may have become infected either by a diseased beast standing over the hay, when in the field or in the stack-yard, before it was stacked, the infected bay being put into the stack and thence cut out into the truss. Some diseased animal may have stood over the hay after it was trussed, infected the hay in the truss through the virus saturating the hay with the saliva flowing from its mouth.
It is very easy for any one who has seen ani animal in that particular state of disease, when the saliva is flowing in large quantities from its mouth, to conceive how quickly any hay or straw over which it was standing would become thoroughly saturated with the saliva, and of course thoroughly infected; and we can conceive of no more ccrtain mode of preserving the virus, so as to carry it all over the world, than by saturating the hay or straw in this way, and packing it in the middle of a truss, there to remain dormant till aggain exposed to light and heat. It is also evident that the same thing would happen, although less frequently with trussed hay over which a diseased beast had stood. That any of the hay or straw put on board the "Parramatta" might, in either of these ways, have become infected, there was every probability when we recollect how prevalent the disense was at Home when the fodder was shipped; and thero is little doubt but that this was the case with some of the fodder on board the "Parramatta." In fact, the danger from the fodder was foreseen when the Act was framed, and all fodder of every description is, by it, prohibited from being landed. It was scarcely to be anticipated, however, that such a case as the present could occur, i.e., that there should be infected fodder on board a vessel all the voyage, and that it should be only given to the cattle, as it must have been, a day or two before they landed. It may have been that moro of the fodder than that which infected Mr. Taylor's bull had tho germs of the disease in it, but that through the coldness of the altitude througld which the ship passed during the four or five weeks of her voyage, previous to approaching Australia, or for some other cause they did not vivify, and the cattle escaped the disease till the ship approached the coast of this Colony and came into a warmer latitude. But if the supposition be correct that there was infected fodder being supplied to the cattle as the vessel was approaching this Colony, there was still another reason besides, that of its being opened in a warmer climate,-for the spores of the infection coming into vitality and infecting the cattle. About that time the engine was set to work to distil water, and being situated close by the cattle the heat from it was very much felt by them, and while it was at work they were, "it was said, breathing the atmosphere of a hothouse," and of course just the very temperature best adapted for propagating this disease.
A.B., per G.S.Y., 18/6/72.

## HORSE BREEDING.

(PETITION FOR LEGISLATION ON TIIE SUBJECT-GERTAIN PERSONS INTERESTED.)

Ordered by the Lcgislative Assembly to be printed, 25 June, 1872.

To the Honorable the Legislative Assombly of New South Wales, in Parliament assembled.
The humble Petition of the undersigned Breeders and Employers of Horses, and other persons interested therein,-

## Respectfully Showetit to Your Honorable House,-

That your Petitioners observe with regret and alarm that the horse stock of this Colony has become greatly deteriorated through the practice of neglected and indiscriminate breeding, and that the pastures of the country are becoming seriously encumbered by herds of horses alike superfluous in number and worthless in quality.

That your Petitioners cannot disguise from themselves that as a consequence of such neglect the former high reputation of this Colony, in India and elsewhere, for the supply of horses for exportation has become, to a great extent, forfeited, and that a valuable source of wealth to the country has been thereby largely diminished.

That your Petitioners are convinced that these evils might be arrested by judicious legislation, and that such legislation would be productive of most advantageous results to horse breeders of all classes and degrees, as well as to those requiring horses for use, and to the Colony at large.

Your Petitioners respectfully suggest to your Honorable House that these objects would be effected by the imposition of a special tax of such annual amount as would render it iuexpedient to retain inferior animals for breeding, and by enactments authorizing and encouraging the destruction of all wild or unbranded horse stock.

That your Petitioners, without presuming to name any amount of tax as fit to be imposed by your Honorable House for the above purposes, respectfully intimate that they are prepared to submit to an annual impost of,-say five shillings per hoad of mares, fillies, and colts beyond the age of one vear, and not rendered incapable of brceding, and to the appropriation of the amount raised thercby partly to the encouragement of improved horse breeding, and partly in aid of the public general revenue of the Colony.

Your Petitioners therefore humbly pray your Monorable Flouse to take the matter of this Petition into your consideration, and to adopt such measures for attaining the objects they have in view as to your wisdom shall seem best.

And your Petitioners will ever pray, \&c., \&c.

# SYDNEY SEWERAGE AND WATER SUPPLY. <br> (FIFTEENTH ANNUAL REPORT OF MUNICIPAL COUNCLL-1871.) 

```
:
```

Thie Town Clerk to The Under Secretary, Coloniar, Secretary's Derartment.
Town Clerk's Office,
Sydney, 13 February, 1872.
Sir,
I have the honor, by direction of the Right Worshipful the Mayor, to forward herewith, for the information of tho Parliament of Now South Wales, the Fifteenth Annual Report from the Municipal Council of Sydney, of their proceedings under the Water and Sewerage Acts during the year 1871.

I have, \&c.,

CHAS. H. WOOLCOTT,
Town Clerk.

## FTFTEENTI ANNUAL REPORT of the Municipal Council of the City of Sydney, of their proceedings under the Water and Sewerage Acts.

The Municipal Council of the City of Sydney have the honor to furnish, for the information of the Parliament of New South Wales, a Report of their proceedings during the year 1871, in connection with the Watcr and Scwerage Works of the City, together with Statement of Receipts and Expenditure during that period:-

## $W_{\text {ateh }}$

The engines and the machinery at Botany have been constantly at work throughout the year, excepting for a few hours occasionally, when the reservoirs at Paddington and in Crown-street have been signalled full.

In the carly part of the year it was found necessary to strengthen the foundation of the western engine under the crank end of beam. This was effectually done by inserting a massive block of stone, and the engine has since worked continuously without any signs of weakness.

A new crank pedestal, with brasses and new bed plates, have been provided for the eastern engine, to replace those which have been fractured for some years. Cast-iron shields and plates, with bolts and nuts to strengthen the masoury foundations under the pedestals of the eastern and middle engines, have also been procured, and these repairs will be effected and the castings placed in positions at the earliest opportunity.

There have not been any fractures on the line of 30 -inch main, or to any of the other mains, reported during the year.

The quantity of water which appears by the registers at the Botany engines to have been pumped into the low-level reservoir has been nine hundred and nine millions four hundred and seventy-three thousand seven hundred and sixteen $(909,473,716)$ gallons, and into the high-level reservoir, four hundred and fourteen millions seven hundred and thirty-five thousand five hundred and fifty-two (414,735,552) gallons, making together thirteen hundred and twenty-four millions two hundred and nine thousand two hundred and sixty-eight ( $1,324,209,268$ ) gallons, and being on an average of twenty-five millious four hundred and sixty-five thousand five hundred and sixty-two ( $25,465,562$ ) gallons weekly. This shows a decrease on the supply of the previous year of two hundred and seventy-six millions one lundred and sixty-eight thousand four hundred and twenty-eight ( $276,168,428$ ) gallons, and is accounted
for from the fact that the resources of the tunnel from Lachlan Swamp have, under different management from previous years, been better developed, and a much larger area of the City has been supplied by gravitation from that source. It is cstimated that the quantity of water passing from the tumnel into the City mains is one and a half millions daily.

There bas been no scarcity of water felt during the year, and the supply through the Corporation mains has been abundant and continuous.

The mains have been extended through the City and Suburbs for a length of two miles and one hundred and ninety-seven (197) yards, as detailed in Appendix A. During the year three hundred and sixtyfour (364) houses in the City and two hundred and thirty-eight (238) houses in the Suburbs have been connected, making a total of fifteen thousand three hundred and forty-eight ( 15,348 ) in the City and two thousand nine hundred and forty ( 2,940 ) in the Suburbs; or a grand total of cighteen thousand two hundred and eighty-eight $(18,288)$ houses (irrespective of the Government Buildings and Public Institutions in the City) supplied from the Lachlan aud the Botany Swamps.

The annual contracts for the supply of coal, valves, mains, and general stores have been satisfactorily carried out.

In the previous yearly Report it was stated that attention was being directed to the extension of the means for utilizing the rainfall on the Botany Watersheds, and a copy of a Report from the late City Engincer, detailing the nature of the works necessary for the purpose, was appended. In the early part of the year instructions were given for the necessary plans and specifications for the construction of the large rescrvoir recommended to be made at Lachlan Swamp, to the northward of the Randwick Road. In the course of the surreys and borings necessary for the detailed plans of the areservoir, it was found that the data upon which former recommendations and estimates had been based was altogether erroneous as regarded the depth of excavation required to reach the foundation for the proposed dam ; and the City Engineer, after the most thorough and careful examination of the nature of the swamps at the point referred to, advised the Councll that the construction of the intended reservoir was impracticable, and the work was therefore abandoned.

As the result of the experimental borings on the Lachlan Swamp, in the vicinity of the old enginebouse, was found to be so different from what had been represented, it was thought desirable to thoroughly explore the entire Water Reserve as well as the gathering ground to Botany, including the Church and School lands. With this view, two parties have been continually employed in making borings at various places over this area, and the result of the operations over an extent of two thousand nine hundred and fifty-seven ( 2,957 ) acres actually explored, has been to prove the existence of an immense bed of sand, with an average depth of 80 feet below water level.

Experiments are now being made to ascertain the quantity of water that can be drawn from tubular wells of certain diameter and depth, sunk in the sand. One of these wells is now being constructed at the Randwick Road. It is of cast iron, 5 feet in diameter, and has been sunk to a depth of sixty-three (63) feet. It is intended to reach a depth of eighty-four (84) feet, when the quantity of water which it will yield will be tested by a chain-pump which is provided, and will lift thirty thousand ( 30,000 ) gallons per hour.

As it has been found that no correct plan or survey of the grounds and existing works at Botany has been made, and that no plan was procurable of the district lying between Randwick, Long Swamp, and Botany, showing the general features of the country with the swamps, levels, \&c., the necessary steps for supplying the deficiency have been taken, and the work is far advanced.

## Sewerage.

The main sewers throughout the City have been in perfect working order during the year. No additions have been made to them.

Two thousand and sixty-three $(2,063)$ yards of stoneware branch drains have been laid in the sereral localities described in Šchedule B.

During the year five hundred and ninety-seven (597) houses have been connected with the sewers, making a total of six thousand and seven ( 6,007 ) houses.

The question of providing some more satisfactory system of drainage for the City and Suburbs has received considerable attention and given occasion for some ausiety. The Government has been solicited to join in the appointment of a Special Commission to inquire into this important matter, and it is understood that a measure, dealing with the subject, will shortly be introduced for the consideration of Parliament.

## Receipts and Expendifure.

The Amnual Statement of Receipts and Expenditure on account of the Water and Sewerage Works for the year 1871, certified by the City Auditors, is attached hereto.

MICL. CHAPMAN, Mayor.
Adopted by the Municipal Council, this 13th day of February, a.d. 1872.
CHAS. H. WOOLCOTT., Town Clerk.

STATEMENT showing the Annual Amount of Money paid from the Public Treasury for making new Streets and Sewers in the City of Sydney, during the period from 1853 to 1870 , inclusive.

## Legislative Assembly.

# SEWERAGE AND WATER SUPPLY. 

(Statement, showing amount due to government by sydney municipal council.)

Ordered by the Legislative Assembly to be printed, 12 June, 1872.

FURIIIER REIURN to an Order made by the Honorable the Legislative Assembly, dated 18th April, 1871, That there be laid on the Table of this House,-
"A Return coutaining an Annual Debtor and Creditor Statoment of the " amount of money due to the Government by the Municipal Council of
" the City of Sydney, on account of Sewerage and Water Supply for the
" City, Port, and Suburbs of Sydney ; such statement to particularize,-
" (1.) The debentures sold, either for carrying on the works or for taking up
"debentures which had matured; their currency in each case; the rate
" and amount of interest, commission, and charges severally payable thereon,
" and the net cash received; together with the amount of such money
" expended by the late City Commissioners, and the amount handed over to
" the present City Council, respectively.
" (2.) The amount of money annually retained by the Government from
"the Parliamentary Vote as or in the nature of endowment of the City
" of Sydncy, together with the amount of money paid by the City Council
"as interest on or for taking up debentures.
" (3.) The amount of money annually expended for Sewerage and Water
" Supply in the City of Sydney and the various suburban Municipalities or
" suburbs respectively.
" (4.) The annual income of money from Sewers and from Water Supply
" from the City, Port, and Suburbs of Sydney, respectively, from the date
" of the appointment of the late City Commissioners to the 1st January
" last.
" (5.) The probable annual amount, in detail, of rates which might be
"recovered from Government and Public buildings, provided they were
" liable as private buildings to bo rated.
" (6.) The annual amount of money paid from the Public Treasury for
" making new streets and sewers in the City of Sydney during the above-
" named period.
" (7.) A copy of the Correspondence between the Government and the City
"Corporation on the above subjects.
" (8.) The amount transferred, either annually or otherwise, by the Council
" of the City of Sydney, from the Sewerage and Water Funds, or either of
"them, to the City Fund, and by what authority."
To which was ordered to be added, on 21st December, 1871,-
" A Statement showing the situation and approximate area and valuc, on
" the 1st January last, of all landed property, either within or without the
"City, which has been granted, or otherwise handed over by the Govern-
" ment, to the Municipal Council of Sydney; also, the terms on which, and
" the purposes for which, such lands are held by the Corporation."
(In completion of Return laid upon the Table of the Assembly on 2nd May, 1872.)
(Mr. Tunks.)

# SEWERAGE AND WATER SUPPLY. 

## The Town Clerf to The Under Coloniar Secretary.

(No. 72/159.)
Town Clerk's Office,
Sydney, 22 April, 1872.
Stir,
I have the honor, by direction of the Right Worshipful the Mayor, to transmit heremith, in compliance with the request contained in your letter of the 28 th November last, certain information specified in clauses Nos. $3,4,5$, and 8 of a Return called for by an Order made by the Legislative Assembly, in connection with the Sewerage and Water Accounts between tho Government and the Municipal Council.

With regard to clause 7 of the Return in question, I may state that I do not find that any correspondence has passed between the Government and the Corporation on the subject of theso accounts, heyond ordinary application from this Office, from time to time, for the advance of moneys under the reveral Appropriation Acts for Sewerage and Water purposes.

I have, \&c.,
CHAS. H. WOOLCOTT,
Town Clerk.

The Under Secretary for Finance and Trade.-B.C., 27 April, 1872. H.H.
(Nos. $3 \& 4$.

## Legislative Assembly.

# Hackney carriages and cabs. <br> (PETITION AS TO POSITION UNDER MUNIOIPAL COUNCIL-CAB OWNERS AND DRIVERS.) 

Ordered by the Legislative Assembly to be printed, 20 June, 1872.

To the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled. The humble Petition of the undersigned Proprietors of Hackney Carringes and Cabs, and Drivers
thereof,_SHowert :-

That your Petitioners are proprietors of hackney carriages and cabs plying for bire within the Municipal District of the City of Sydncy, or drivers thereof, and as such are compelled, before they can so ply for hire, to apply ycarly to the Municipal Council of the said City of Sydney, and obtain and pay for

That in the early part of the present year your Petitioners severally duly applied to the said Municipal Council, and obtained and paid for such licenses to ply for hire as aforesaid.

That at the time such licenses were severally obtained and paid for, a scale of fares, which your Petitioners were allowed to charge any passengers or travcllers by such hackney carriages and cabs, had been fixed by the said Municipal Council, and given to your Petitioners.

That shortly after such payment of the license fees as aforesaid, and without any previous notice to your Petitioners, a new scale of charges, purporting to have been fixed by the said Municipal Council, reducing the charges allowed to be made at the time of the payment of the said license fees, was issued to your Petitioners.

That in consequence thereof, your Petitioners forwarded a Petition to the said Municipal Council, praying them to take the matter into consideration, and to allow them to charge, for the current year, the fares to passengers and travellers by their carriages and cabs which had been fixed by the said Council at the time of the payment of their said license fees, but that the said Municipal Council have not answered such Petition or offered your Petitioners any relief.

That your Petitioncrs have been informed and beliesc that some of the members of the said Municipal Council are proprietors of, or largely interested in, the omnibuses running within the said Municipal District, and, as such, obtain for the drivers of such omnibuses special liceuses to run in different directions, and to and from different places, on special occasions, to the great wrong and detriment to your
Petitioners. Petitioners.

That several of your Petitioners have been sumnoned, at the instance of the said Municipal Council, to the Police Courts of the said City of Sydney, and there fined as for substantial offences against the socalled By-laws of the said Council, for acts or omissions of the most trivial character, which were either necessitated by circumstances or the result of pure and unavoidable accident, and have also-had their licenses to ply for hire cancelled or suspended by the said Municipal Council.

That prior to the control and management of hackney carriages and cabs within the City of Sydney being in the said Municipal Council, the same were in the hands of the Inspector General of Police of this Colony; and your Petitioners humbly submit that, under the circumstances above set forth, such control and management, and the application for and granting of licenses, and payment of the fees therefor, should again be placed in the hands of the said Inspector General of Police.

Your Petitiouers, therefore, humbly pray that your Monorable House will take this their Petition into your fayourable consideration, with a view to the initiation of such measures for the relief of your
Petitioners in the premises as to your Honorable House may seem mect. Petitioners in the premises as to your Honorable House may seem meet.

And your Petitioners will ever pray, \&e.

Proceedrics of the Council and Coramittces-preservation of order at Council mectings-dutics of officers and servante, se.

## Mectings of Council. Ordmary mectings.

1. The Council shnll meet nt the Council Chamber, Gerringong, for the despatch of business, and shall fix the day and the hour for holding the regular meetinge by resolution; and in case
such day shall happen to be a public holiday, the mecting shall be held on such other day as the Mayor may appoint.
Election of Chairman in absence of Mayor.-Adjournment for want of a quorum.
2. If at any mecting of the Council the Mayor be absent at the expiration of fifteen minutes ufter the time appointed for holding such meeting, the Aldermen then present shall proceed to elect from among themselves a Chairman for such meeting. Whenever there shall be an adjournment of any such meeting for want of $a$ quorum, the names of the members present shall be taken down, and shall be recorded in the minute-booik.

## Order of Business.

Busimess at ordinary meetings.
3. The following shall be the order of business at all meetings of the Council other than special meetings :-
(1.) The minutes of the last preceding meeting to be read, corrected if erroneous, and, after being confirmed by the Council, shall be signcd by the Mayor or presiding Alderman. So discussion to be permitted on such minutes, except as to whether they are correct.
(2.) Petitions (if any) to bo presented and dealt with.
(3.) Correspondence to be read, and, if necessary, ordered upon.
(4.) Reports from Committees, and minutes from the Miayor (if any), to be presented and ordered upon.
(5.) Questions as to any matters under the jurisdiction or within the official cognizance of the Council, to be put and replied to ; and statements as to any facts, matters, or circumstances requiring attention by the Council or any of its Committees or officers, to be made.
(0.) Motions of which notice has been given to be dealt with in the ordor in which they stand on the business paper.
(7.) Orders of the day to be disposed of as they stand on the business paper.

## Business may be dealt with out of regular order

Prorided that it shall be competent to the Council ati any time, by resolution, without notice, to eutertain any particular motion, or to deal with any particular matter of busincss, out of its regular order on the busincss paper, without any formal suspension of this section; also, and in like manner, to direct that any particular motion or matter of business slall have precedence at a future meeting.

## Business at special meetings.

4. At special mectings of the Council, the business--after the minutes shall bave been read and verified, which shall be done in the same manner as at an ordinary meeting-shall be taken in euch order as the Mayor, or the Aldermen at whose instance such special mecting shall have been called, may have directed.

## Busidess paper for ordinary meeting-how preparcd.

5. The business paper for every meeting of the Council, other than a special meeting, shall be made up by the Council Clerk not less than two nor more than three days before the duy appointed for such mecting. He shall enter on such business paper a copy, or the substance of every notice of motion, and of cevery requisition or order as to business proposed to be transactecl it such mecting, which ho shall have received, or shall have been requirod or directed so to cnter, in due course of law, as hereinafter provided. Ercry such entry shall be made (subject to the provisions of section 3 of this "Part" of these By-laws) in the same order as such notice, requisition, or direction shall have been received.

## Business payer for special meeting.

6. The business paper for each special meeting shall contain only such mutters as shall have been specially ordered to be entered thereon by the Mayor or Aldermen calling such meeting.

Summons to merabers.
7. The summons to wacmbers of the Council for every meeting thereof shall be prepared from the busincss paper for such mecting, and shall embody the substance of such business paper.

How business paper is to be disposed of.
8. The business paper for cach mecting of the Council shall at such meeting be laid before the Mayor or Chairman, who shall make n note upon such busincss paper of the mode in which each matter entered thercon has been dealt with, and such business paper so noted shall be a record of the Council.

Notices of motion, \&c., to be numbered as received, and preserved until mattor disposed of, unless withdrawn before business paper is inade $\mathfrak{a p}$.
9. All notices of motion, and all requisitions from Aldermen, and directions from the Mayor as to the entry of any particular matters of business for the consideration of the Council at its then noxt or any future meeting, ehall bo numbered by the Council Clerk as they are reccived; and each such notice, requisition, and direction shall be preserved by such Clerk until after the mattor to which it relates fhall have been disposed of, and the record in the minute-book of the manner in which such matter has been so disposed of shall have beon duly verified, as required by section 3 of this "Part" of these By-laws: Prorided, lowever, that the person giving or forwarding any such motice of motion, requisition, or direction to the Council Clerk, shall be at liberty to withdraw the same at any time before the making up of the business paper.

After business paper made up, all notices, \&c., to be the property of the Council.
10. After the business paper shall have been made up as aforcsaid, all the said notices of motion, requisitions, and dircctions, as to which entries have been made thereon, shall be the property of the Council, and shall not be withdrawn, ultered, or amended, without leave having been first obtained from the Council for such withdrawal, alteration, or amendment.

## Motions and amendments.

## Motions-how to be mored.

11. Except by leare of the Council, motions shall be mored in the order in which they etand on the business paper, and if not so mosed or postponed shall be struck from such business paper, and be considered to have lapsed.

## Absence of proposed mover.

12. No motion, of which notice shall have been entered on the business paper, shall, except as hercinafter provided (soe s. 20), be procceded with in the rosence of the Alderman by whom such notice shall havo been given, unless ly some other Alderman producing a written authority for that purpose from the first-named Alderman.

## Motion to be seconded.

13. No motion in Council shall be discuesed unless and until it.be seconded.

Anlendment may be moved.
14. When a motion in Council shall hare been made and secouded, any Alderman shall be at liberty to move an amendment thereon; but no such amendment shall be discussed unless and until it be seconded.

Motious to be in writing-only one amendment at a time.
1.5. No motion shall be discussed until it shall have been reduced into writing.
16. No second or subsequent amendment shall be taken into consideration until the previous amendment or amendmonts shall have been disposed of.

Ameadel question bluding on Council.
17. If an amendment be carried, the question as amended thereby shall become itself the question, and the Council shall to all intents and purposes be bound by such amendment as if it were the original question.

How subsequent amendments may be moved.
18. If any amendment upon an original question shall be negatived, then a further amendment may be moved to the question to which euch first-mentioned amendment was moved, and so on. Provided that not more than one question and one proposed amendment thereof shall be before the Council at any one time.

## Motions for adjournment.

19. No discussion shall be permitted on any motion for adjonrnment of the Council; and if upon the question being put on any such motion the same be negatived, the subject then under consideration, or the next in order upon the business paper, or any other on such paper that may be allowed precedence, shall be discussed bofore any subsequent motion for adjournment shall be receivable.

Requisitions from Aldermen-low to be dealt with.
20. Every requisition by an Alderman that any particular matter of business be brought before the Council, shall be regarded and treated as a notice of motion by such Alderman that such business be taken into consideration by the Council; and he shall be called upon in due order to move that such business be so considered, or to malse any other motion which he may think fit in reference thereto which shall be consistent with the notice of such business and with good order. And if such Aldermen be absent, or if being present; and so called upon, he shall make no such motion, then it shall be open to any other Alderman to make such motion. And when any such motion shall havo been made, it shall be dealt with in precisely the same manuer as if notice thercof had been given, subject however to any objection which may exist as to its not being in accordance. with thenotice actually given of euch business or with good order. And if no motion shall be made in reference to such business, the entry relating thereto shall be struck from the business paper.

## Orders of the Day.

of what Orders of the Day shall consist.
21. The orders of the day shall consist of any matters other than motions on notice, which the Council shall at a previous meeting thercof have directed to be taken into consideration, or which the Mayor or any Committee of the Council shall have directed to be entered on the business paper for consideration.

## How they are to bedealt with.

22. Section 20 of this "Part" of these By-laws shall be considered applicable to orders of the day, and the Alderman who has the usual charge of, or who has previously moved in refer ence to the particular business to which any such order of the day relates shall be the person called upon to move: Provided that as to any order of the day entered as aforesaid by direction of the Mayor, such Mayor may move or may arrange with any Alderman to move, and may in such case call upon the Alderman with whom he has so arranged.

## Petitions.

petitions to be respectfully worded.
23. It shall be incumbent on every Aldemman presenting a pelition to acquaint himself with the contents thercof, and to ascertain that it docs not contain language disrespectiful to the Council. The nature and prayer of erery such petition shall be stated to the Council by the Alderman presenting the same.

Peititions-how reccived.
24. All petitions shall be reccived only as the petitions of the parties signing the eame.

How Petitions are to be dealt with,
25. No motion shall, unless as hereinafter prosided, be permissible on the presentation of a petition, except that the sume be received; or that it be received and roferred to one of the permanent Committees hercinafter mentioned, or that it be received and that its consideration stand an order of tho day for
some future meeting : Provided, however, that if auy Alderman shall have given due notice of a motion in reference to any petition, and such petition shall have been presented before such Alderman shall have been called upon to more such motion, the said motion shall, if otherwise unobjectionable, be considered in order.

## Correspondence.

## Duties of Maror as to Correspondence.

20. The Mayor shnll have the same duty in reference to letters addressed to the Council, beforc directing the same to be read, as by section 23 of this "Part" of these By-laws is imposed upon Aldermen presenting petitions. The Mayor shall direct as to the order in which ail correspondence shall be read, and no letter addressed to the Council shall be prosented or read by any Alderman. If the Mayor be absent, and shall not hare examined any such letters addressed to the Conncil, or huve given any such dircctions as aforcsaid, then the duties imposed by this section shall derolve upon the presiding Alderman.

## Section 25 to apply to letters.

27. Section 25 of this "Part" of these By-laws shall be considered as fully applicuble to letters addressed to the Council as to petitions.
Letters sent not to be discussed, but every letter may be subject of motion.
2s. No discussion shall be permitted in reference to any letters which have been written and sent by the Mayor or by any officer of the Council, and copics of which may be read to such Council: Provided, however, that any notiec of motion, consistent with good order, may be entertuined with reference to any such letters whether rend or not, or with reference to any letters addressed to the Council, which the Mayor or presiding Alderman may not have ordered to be read as aforesaid.

## Reports from Committees and Minutes from the Mayor.

## Form of Report.

29. All reports from Committees slall be written on foolscap paper, with a margin of at least onc-fourth of the width of such paper, and shall be signed by the Chairman of such Committee, or, in lis absence, by some other member of the same. Maysor's Minates.
30. The Mayor shall have the right of directing the atitention of the Council to any mutter or subject within its juristiction or official cognizance, by a minute in writing. Every such or oftcial cognizance, by a minute in writing. Every such the sume margin as a report from a Committee, and shall be signed by such Mayor.

How Reports $\&$ e., are to be deait with-Duties of Chairman, ©e., in certain cases.
31. No motiou alall (unless as hercinafter provided) bo permissible on the presentation of a report from ai Committee or a minute from the Mayor, except that the same be received, or that it be received and that its consideration stand an order of the day for some future mecting: Provided, howerer, that if any Alderman shalk have given due notice in reference to any such report or minute, or if an order for the consideration of such report or minute shall bave been entered among the orders of tho diny, sucl motion or order may, if otherwise unobjectionable, be moved or considered in due course. And whenerer any such report or minute cmbodies any recommendation which camot legally be carriod out without due notice, and it is nevertheless desirable that such report or minute shall be definitely ordered upon during the meeting of the Council at which such report or minute is presented, it shanll be the duty of the Chairman or member of such Committeo signing such report, or of such Mayor, as the case may be, to give or transmit to the Council Clerk such a notice of motion, requisition, or direction as aforessid, as will enable such Council Clerk to make the neccssary entry on the busincss-paper, and to give such due notice.

## Questions and Statements.

## Limitations as to questions and statements.

32. No question or statement shall be allowed to be put or made which is inconsistenit with good order, or is not in strict accordance with the requirements of section 3 of this "Part" of these By-laws.

Notice to be given.
33. Sufficient notice of every question shall be given to the person who is cxpected to reply thereto, to allow for the consideration of such reply, and, if necessary, for a reference to other persons or to documents.

## Answer not compulsory

34. It shall not be compulsory upon any person questioned as aforesaid, to answer tho question so put to him.

> Question to be put without argunent, \&c.
35. Every such question must be put categorically, without any argument or statement of fact.

## Similar prorisions as to statements.

36. Every such statoment mast be mude without argument.

No discussion on question, \&e. Rights of objection and of subsequent motion reserved.
37. No discussion shall be permitted as to any such question or as to any reply or rofasal to reply thareto, or as to any such statement, at the time when such question is put, or such reply or refusal to reply is given, or such statement is made : J'rorided, however, that nothing herein contained shall prevent the taking of any objection as to any such question or statement being out of order, or shall prevent the discussion, after due notice, as horcinbefore provilled, of any matters properly arising ont of or relating to any such question, or reply, or refusal to reply, or any such statement as aforesnid.

## Order of Debate.

Mode of addressing the Counch, sec.
38. Every Alderman who shall make or second any motion, or shall propose or second any amendment, or shall take any part in any debate or discussion, or shall put or reply to any question, or shall make any statement, or shall in any other way or for any other purpose address obscrvations to the Council, shall while so doing stand up in his customary place (unless he shall be prevented from so doing by reason of some bodily infirmity), and chall address himedf to the Mayor or other Chairman then presiding: Provided that in the case of a question, euch question may, by permission of such Mayor or Chairman, be put directly to the Alderman or officer to be questioned, and may be replied to in like manner. But in every such case, the question so put and the answer thereto shall be subject to every legnl objection on the ground of disorder or irrelevaney. And all members of the Comecil shall, on all occasions when in such Council, address and speak of each other by their official designations, as Mayor, Chairman, or Alderman, as the case may be.

Speaker not to be intcrrupted if in order.
39. No Alderman shall be intcrrupted while thus speaking, unless for the purpose of calling him to order as-hereinafter provided.

## Limitations as to number of speeches, \&c.

40. Every mover of an original motion shall have a right of general reply to nll observations which may have been made in reference to such motion, and to any amendinents mored thereon, as well as a right to speak upon erery such amendment. Every Alderman other than the mover of such original motion shall have a right to speak once upon such motion and on every amendurent thereon. No Aidcrman shall speak oftener than once upon any question other than a question of order, unloss when misropresented or misuuderstood, in which case he shall be permitted to explain without adding any further observations than may be necessary for the purposes of such application.

## Mover and seconder.

41. An Alderman who has moved any motion or amendment shall bo considered to have sjoken thereon; but an Alderman who shall have seconded uny such motion or umendment without any further obscrvation than that he seconded the same, shall be at liberty to speak on such motion or amendment.

## Spenker not to digress, \&c.

42. No Alderman shall digress from the subject under discussion, or shall makepersonal reflections on, nor impute improper motives to, any other Alderman.

## Adjoumment of debate.

43. A debate may be adjourned to a later hour of the day or to any other day specified, and the Alderman upon whose motion such debate shall hare been so adjourned shall be entitled to pre-audience on the resumption of the same.

## Mayor to denide as to pre-audience.

44. If two or more Aldermen rise to speak at the same time, the Mayor or Chairman shall decide which of such Aldermen suall be first heard.
Alderman may require question to be stated, sc., under certnin restrictions.
45. Any Aldernan may request the question or matter under discussion to be read or stated for his information, or may require the production of any records of the Council bearing upon such question or matter which are readily accessible: Provided, however, that no such request or requisition shall bo so made as to interrupt the discussion ; also, that if such request or requisition sindi appear to the Mayor or Chairman not to have been made bond fide, it shall not be complied will.

Mayor or Chairman may move or second motion, \&c.
46. The Mayor or Chairman may more or second any motion or amendinent, or put any question, as provided for by section 3 of this "Part" of these By-laws, and such Mayor or Chairman shall have the same right as any other Alderman to speak once upon every such suhject or amendment. The Mayor or Chairman shall rise when so speaking (unless pretented by some bodily iufirmity from so doing), but shall be considered as still presiding.

## Questions of Order.

Mayor or Clairman to tecide points of order.
47. The Mayor or Chairman shall preserve order, and his decision on disputed points of order or practice slall be final, except in so far as the same may, be questioned as in the manuer hercinafter provided.

Acts of disorder.
48. Every member of the Council who shail commit a brench of any section of this "Part" of these By-laws, or who shall more or attempt to more any motion or amendment embodying auy matter as to which the Council has no legal jurisdiction, or who shall in any other way raise or attempl to raise any question, or shall address or attempt to address the Council upon any subject which the said Council has no legal right to entertain or to discuss, or who shall use any other language which according to the common usage of gentlemen would be held disorderly, or who shall say or do anything calculated to bring the Comacil into contempt, shall be out of order.

## Mayor, \&e., may call member to order.

49. The Mayor or Chairnan may, without the interposition of any other nember of the Council, call any Alderman to order, whenever in the opinion of such Mayor or Chaiman there shall be necessity for so doing.

## Any member may raise queation of order

50. Every member of the Council shall have the right of calling the attention of the Mayor or Chairman to any motion, amendment, statement, argument, or observation moved, used, or made by any other member which such first-named member may consider out of order.

## Mode of proceeding thereon.

51. A member called to order shall withdraw while the question of order is being discussed and decided upon, unless specially permitted to offer an explanation, retractation, or apology; but on obtaining such special permission such member may explain, retract, or apologize for the matter or remark alleged to have been out of ordor. And if such cxplanation, retractation, or apology be deemed satisfactory, no further discussion on the question of order shall be permitted. If any member on being called to order shall ask such permission to explain, retract, or apologize as aforesaid, the Mayor or Chairman may of his own authority grant or refuse such permission, .as he may think fit, unless any member shall require the sense of the Council to be taken on this question. In such case it shall be the duty of the. Mayor or Chairman to take the sense of the Council at once and without discussion as to whether such permission shall be granted; and when any such explanation, retractation, or apology shall have boen mado or offered by permission of the Mayor or Chairman, the latter shall in like manner decide, or if required so to do shall take the sense of the Council as to whether such explanation, retractation, or apology, is considered sufficient. If such permission be refused, or if such explanation, retractation, or apology be considered insulficient, the question of order shall be considered and deciaded before any further business is procceded with: Provided that if such Mayor or Chairman slanll have decided the question of order before any member shall have required the sense of the Council to be taken in reference thereto, such question of order shall not be reopened; and proxided further, that nothing herein contained shall be held to affect the right of such Mayor or Chairman to decide finally, as hereinbefore provided, upon any such point of order, after the same shall have been discussed.

Decision of points of order.
52. The Mayor or Chairman when called apon to decide points of order or practice, elall state the provision, rule, or practice which he shall deem applicable to the case, without discussing or commenting upon the same.

Motions out of order to be rejected-Members to explain, retract, or apologize, \&c.
53. Whenever it shall have been decided, as aforesaid, that any motion, amendment, or other matter, before the Council, is out of order, the same shall bo rejected : and whenever anything said or done in Council by any Alderman shall be similarly decided to be out of order, such Alderman shall be called upon by the Mayor or Chairman to make such explanation, retractation, or apology us the caso may require.

## Penalties for persisting in disorderly conduct.

54. Any member of the Council who shall have been called to order, and who, niter having been twice directed to withdraw as aforesaid, shall refuse to do so, or who shall persist in any line of conduct, or argument, or of observations which shall have been decided as aforesaid to bo disorderly, or who shall refuse to make such explanation, retractation, or apology as aforesaid when required so to do, or who shall be guilty of niy other act of disorder as defined in section 48 of this "Part" of these By-lawe, and shall refuse to make such explanation, retractation, or apology as a majority of the Aldermen then present slall
consider satisfactory, slanll be liable, on conviction for the first offence, to a penalty of not less thau ten shillings nor more than fire pounds; and on a second conviction for the like offence, he shall be liable to a peralty of not less than one pound nor more than ten pounds; and on $a$ third conviction, and for every further conviction for the like offence, he shall be liable to a penalty of not less than two pounds nor more than twenty pounds.

## Power of Council ns to laying down Genoral Rules, sc.

55. Any Alderman who is dissatisfied with the decision of the Mayor or Chairman on any such question of order or practice, may by motion on notice respectfully worded invite the Council to lay down a different rule or principle for the determination of any similar questions of order or of practice which may thereafter arise. Any rule or principle thus laid down sladl be binding upon all partics unless and until it bo rescinded, but shall hare no retrospective operation: Provided rescinded, but shalhire no retrospective ola
however, that nothing herein contained mall be held to bind any Mayor or Chairnan to put any motion to the Council which in his opinion is contrary to lave.

## Mode of Toting.

## How questions are to be put.

56. The Mayor or Chairman shall put to the Council all questions oa which it shall be necessary that a vote be tuken, and shall declare the sense of such Council thereon. And he shall be at liberty to put any such question as often as may be necessary to enable him to form and declare his opinion as to the opinion of the majority.

Division.-Penalty for refusing to vote.
57. Any Alderman shall be at liberty to call for $\Omega$ division. In such case the question shall be put first in the affirmative and then in the negative, and the Aldermen shall rote by show of hands, and the names and rotes of the Aldermen present shall be recorded. Any Alderman who shall be present when a dirision is called for, and shall not rote on such dirision, not being disabled by law from so voting, shall be liable for every such offence to a penalty of not less than ten shillings nor more than five pounds.

Protests.
Mode of protesting.-Protest to be recorded, but may under certain circumstances be expunged.
58. Every member of the Council (the Mayor included) may protest against any resolution or vote by the Council. Notice of the intention so to protest must however be given at the mocting when such resolution is passed or such rote is arrived mocting and the protest iteelf must be hnuded or sent to the Council Clerk not later than seven days after such notice. Thio Council Clerk shull enter crery such protest in the minute-book; but if, in the opinion of the Council, it be inconsistent with the truth or disrespectfully worded, it may (by resolution or notice) be ordered to be expronged. In such case the expunction shall be made by drasing is perpendicular line with the pen through the entry of such protest, with a refcrence in the margin to the resolution ordering such expunction.

## Committees of the Whote Council.

## Rules applicable to business in Committee.

59. The following sections of this "Part" of these By-laws shall (except as hercin excepted) be taken to apply to the conduct of business in Coramittee of the Whole Council, namely, sections 14 (except that it shall not be necessary that any motion or amendmeat in Committee shnll be seconded), 15, $1.6,17,18$, $38,39,42,44,45,46,47,48,42,50,51,52,53,54,56$, and 57 .

Disorderly conduct in Committee.-Rofusal to volc.
60. Whencrer any momber of the Council shall, while tho Council is in Committee of the Whole, be considered guilty of an offence against good order within the meaning of section $5 \%$ of this "Purt" of these By-laws, it shall be competent to any Alderman to move that the Council resume its sitting, and that such matter be reported; and if such motion be carried, such matter shall be reported accordingly, and an entry of such report shall be made in the minute-book. And whenever any Alderinan shall have failed to rotc on any occasion in Comuittee of the Whole Council, as required by section 57 of this "Part" of these By-lars, the fact shall be reported to the Council, and such report on such fact shall be duly recorded in the minute-book: Provided that in the case of an Alderman failing to vote as aforesaid, no epecial motion that the Council resume its sitting shall be necessary; but it shall be the duty of the Chairman of such Committee of the Wholo in making his report of the procecdings in such Committee, whenever such report may bo made, to include in such report a statement of such failure to rote as aforesaid, and of the question as to which such Alderman has so fuiled to rote.

Divisions in Committec on points of order may be reported.
61. Whenever a decision upon any question of order shal ${ }^{1}$ have been given by the Chairnan of a Committec of the Whole Council, under the propisions of section 47 of this "Part" of
these By -lams, any Alderman may more that such decision bo embodicd in the report to the Council of the proceedings in such Committee; and if such motion be carried, such decision shall be so conbodied in such report whenerer the same shall be made.

## How progress may be reported, icc.

62. Any Alderman may, at any time during the sitting of a Committee of the Whole Council, move that the Chairman report "progress" or "no progress" (as the case may bc), and that lenve be asked to sit agnin at a later period of the same day or on any future day, or that no leave be asked to sit again; and if such motion be carried, the Council shall resume its sittings, and a report shall be made accordingly, but no discussion slall be permitted on any such motion; and if the same be negatived, the subject then under consideration shall be discussed before auother such motion shall be receivable.

Reports of procecdings in Committee.-Want of quorum in Commiltec.
63. All reports of proceedings in Committee of the Whole Council shan be made to the Council viza voce by the Chairman of such Commitiee; and a report of such procecdings shall bo made in erery case, except when it shall bo found, on counting the number of members during the sitting of any such Committec, that there is not a quorun present. In the latter case the sitting of the Council shall be resumed without any motion for that purpose, and the procedings in Committee shall be considered to have hapsed: Prorided that in making any such report as aforesaid, it shall not be necessury to report any such proccedings in extenso, but only to static tho result, general eflect, or substance of such procedings.

## How reports are to be denlt with.

64. All such reports of procecdings in Committee of the Whole Council shall be recorded in the minute-book; but except as hereinafter mentioned wo such report shall be considered as adopted by the Council, nor alall any such application as aforesuid for leave to sit again be considered to have been granted by such Council, until a motion shall haro been made and passed for such adoption or for the granting of such lease. And every such motion for the adoption of a report, or for the granting of leare as aforesaid, and the order of debate on such motion, shall be subject to nul the same rules as other motions in Council and tho order of debate on such other motions: Proviled however, that where a report shall have been made under section 60 of this "Purt" of these By-laws of disorderly conduct in Committec, or under section 57 of this "Part" of these By-laws of failare to rote on division, or of any decision in Committec upon any question of order, such report shanl, so far as it relates to such facts, be regarded and recorded as a statement thercof, and to that extent shall not, unless for the correction of a manifest error, be interfered with upon any pretext whaterer.

Calls of the Council.
How call of the Council may be ordored.
65. A call of the Council may be ordered by any resolution of which due notiec shall hare been giren, for the consideration of any motion or matter of busincss before such Council.

Such call compulsory in ecrtain cases.
66. There shall, without any special order to that effect, be a call of the Council for the consideration of every motion which may be made undor section 5 万̄ of this "Part" of these By-laws, and of every motion for the rescission of any resolution, order, or decision of such Council.

## Mode of proceeding.

67. The call shall be made immediately bofore the motion or business for which sucle call has been ordered or is required to be made by the last preceding section shall be moved or considered. Such enll shull be made as follows :-The Council Clerk shull cull the natnes of all the Mombers in their alphabetieal order; each member present shall anewer to his name as so called, and if any memberg are absent, a record shall be made of such nbsence. But if leave of absense to any such member shall have previously been granted, or if such an excuse in writing shall havo been forwarded to the Mayor or Council Clerk as a majority of the Council then present shall consider satisfactory, such absent member shali stand excused, and a record shall be made of such excuse, and of the reasons for the same.

Penalty for absence without legal excuse,- Further call when question adjourned.
68. Any member of the Council who, having had notice of such eall of the Comeil, shall not answer to his name as aforesaid, or who being absent shall not be legally excused as aforesuid, or who if absent and not so excused shnill fail to show that by reason of cxtreme illness or any other sufficicnt eause he has been unable to send an exense in writing as aforestid, or who losving answered to his namo ns aforesaid shall not be present when a vote is taken on the motion or business as to which such cull has been made as aforessid, shall for crery such offence be liable to a peualty of not less than ten shillings nor more than fire pounds: Prorided that if the consideration of crery such
motion or matter of business be adjourned to a future day, there shail be a further call on the resumption of such consideration; and the provisions herein as to penalties for absence shall havo reference to such further call; and if there shall be more than one adjournment, this proviso shall bo taken to extend to the resumption of the consideration of such motion or matter of busincss after every such adjournment.

Standing and Special Committees.
Standing Committces.
69. There shall be four Standing Committees, namely, a Bylaws Committee, a General Comnittee for Works, a Finance Committee, and a Committee for General Purposes. Thlese Cornmittees chall be appointed crery year at the first meeting of the Council which shall be holden after the election of the Mayor.

By-laws committec.
70. The By-laws Committee shall prepare for the consideration of the Council, drafts of all such By-laws as may bo required for the good goyernment of the Municipality. . They shall also watch over the administration of the By-laws and of any statute of which the operation has been or may be extended to the Municipality, and shall take euch steps as may be necessary for the prevention or punishment of offences against such Bylaws or statutes, and for the preservation of public henith, order, and decency.

Committee for Works.
71. The Gencral Committeo for Works shall have the general direction of all works ordered or sanctioned by the Council, and the general inspection of all strecte, roads, ways, bridges, public rescrres, and other public places under the care and management of the Council. They shall also inquire and report from time to time as to such improvements or repairs as they may think necessary, or as they may be directed by resolution of the Council to inquire into and report upon.

They shull inquirc and report from time to time as to all matters which they may consider to affect or to be likely to affect the finances of the Mrunicipality, and as to such matters or subjects of the like nuture as they may be directed by resolution of tho Council to inquire into and report upon.

Committee for Gencral Purposes.
73. The Committee for General Purposes shall take cognizance of cvery matter, subject, or question within the jurisdiction of the Council, not coming within the prorince of one or otber of the before-mentioned Standing Committees, and shall from time to time inquire into and report upon any such subject, matter, or question as they may think necessary, or as they may be directed by resolution of the Council to inquirc into and report upon.

Special Committees.
74. Special Committees may consist of any number of members, and may be appointed for the performance of any duty which may be lawfully intrusted to a Committec, and for which, in the opinion of the Council, a Special Committee ought to be appointed. And no Standing Committec shall interfere with the performance of any duty which may for the time-being hare been intrusted to any such Special Committce. The appoint ment of cvery such Special Committec shall be made by resolution, and it shall be incumbent upon the morer of such resolution to enbody thercin a statement of the dutios proposed to be intrusted to such Special Committee. The mover of any auch resolution may name therein such members as, in lis opinion, oulght to constituto such Committee, or he may propose that ought to constituto such Conmittee, or he ne members to bo such Committeo consist of a certain number of members to bo
appointed by ballot, and in the hatter case, or if an amendment to the effect that such Special Committee be appointed by ballot be carried, each member then presont shall receive a list of all the members of the Council, from which listi he shall striko out all names but those of the persons of whom, in his opinion, such Speciul Committec ought to be composed. And the Mayor or Chairman shall examine such lists, and shall declare the result. And in the event of its becoming neccssary, through an equality of rotes, to decide as to which of tro or more Aldermen shall of votes, to decide as to which of Mayor or Chairman shall so decide.

## Chairman of Committee.

75. Ercry Committee of which the Mayor shall not bo a member shall elect a permanent Chairman of auch Committec within seven days after their appointment.

## Term of service in Committec.

70. Appointments to the By-laws Committce, the Gencral Committee of Works, the Finance Committee, aud the Committco for General Purposes, shall bo for the whole municipal ycar. The appointment of crery Special Committeo shall bo considered to enduro until the daties for which such Committee have been appointed shall havo been fully performed: Pro-
vided, however, that nothing herein contained shall be held to affect in any way the right of such Committec to remove any Chairman of such Committee, or to appoint another such Chairman in his stead, or to militate agaiust the general prorisions as to Committees, in sections 109 and 110 of the Municipalities Act of 1867; and linat so much of this By-law as relates to the appointment, powers, and duties of Committees slall be read and interpreted in comection with such last-mentioned general provisions.

## Comaittee Mcetion, how held

77. The Council Clerk shall call a meeting of any Committee whenerer requested to do so by the Chairman, or any two members of such Comnittec.

Records of transactions in Committer
78. The Chairman of eacll Stauding Committeo may make or cause to be made in a book to be kept by him for that purpose, memoranda of all the trausactions of such Committee; which book he shall, on ceasing to be such Chairman, hand orer to his successor.

## Expenditure.

Except in emergent matters, cost of all work to be estima'ed before underthinen.
79. With the exception of emergent matters, hereinafter specially provided for, no work affectiag the finds of the Municipality shall be undertaken until the probable expense thereof shall have been first ascertained by the Council.
Emergent matters and necpssary current expense--Hxpenses autharized to
be reported.-Outlay to bein accordauce with orders of the Council.
80. For emergent matters and for necessary current expenses during the intervals which may clapse between the meetings of the Council, ontiays to the following extent may be incurred:-

1. By order of the General Committec for Works, or of the Mayor and one Member of such Committee, for repairs or emergent worlss, to the extent of five pounds.

JOHN ROBERISON.

## BY-LAWS.

## Standing Orders.

1. The Council shall meet for the dispateh of business at the hour of Il s.M. on every alternate Thuraday; but if it shall happen to be a public holiday, then the mecting shall be held on such other day as the Mayor shatl appoint.
2. If at the expiration of fifteen minutes after the time appointed for holding any legally convened mecting of the Council the Mayor shall be ubsent, any Alderman present may, be electod Chairman for that particular mecting.
3. The Mayor may take part in all the proceedings of the Council, and slull preserve order, and on any disputed point of order his decision shall be final.

## Order of business.

4. The business of the Council shall be conducted in the following order:-
(1.) Reading, correction if necessary, and confirmation of the minutes of the preceding meeting.
(2.) Reading of official correspondence.
(3.) Presentation of petilions.
(4.) Reports from Committees and minutes fiom the Mayor to be dealt with.
(5.) Questions on matters under the official cognizance of the Council to be put and replicd to; and statements upon matters which may require the attention of the Council or any of its Commitces or oflicers shall be made: Provided that notice shall be given of all such questions as require for their answer a detailed reference to the books.
(6.) Mrotions of which due notice hus been given shall be considered in the order in which they stand on tho business paper, unless the Alderman giving such notice waives his right in favour of any other motion, whon such suspended motion shall be considered as standing in the position of the one taken up.
(7.) Orders of the day,-That is any matters which a previous mecting of the Council, or any of its Com mittees, or the Mayor, shall have directed to be placed on the business paper, as necessarily arising out of the procecdinge of a former meeting.
5. All motions duly proposed shall be puit by the Mayor, and the sense of the Council shall be declared by him.
6. Every such motion shall be put, first in the aflirmative and then in the negative, as often as the Mayor shall deem necessnry to euable hin to ascertain which side has the majority.
7. If more than one momber rises to speak at the same time the Mayor shall decide which is entilied to the priority.
8. Immediately after the minutes of the previous mecting are road, the question as to correctucss shall be put, and no discussion thereon shall be permitted execpt as to point of necuracs.
9. When correspondence is being rend, and objection taken by any Alderman to any word or sentence iherein, such correspondence shall be handed round to each Alderman present to form his own opinion thereon, when such letter or letters shall be received and read or rejected as the majority shall decide.

## Rules of debate.

10. Every member when speaking to any motion or question shall stand up and address the Chuir.
11. When the Mayor rises to address the Council every nember slall sit down, but he shall not interrupt $n$ speaker unless it be to set him right as to the question before the Council or call him to order.
12. No member shall digress from the subject under debate, nor make personal reflections ou members, nor impute improper motives to them.
13. No member shall speak more than fifteen minutes whon moving any motion or amendment, unless by permission of the Council; seconders or other speakers shall be confined to ten minutes.
14. Except in Committee no momber shall apeak more than once upon the same motion, unless by way of explanation when misunderstood or misrepresented : Provided thate every member shall have the right to speak once on every amendment, the mover of the principal motion only having the right of reply.
15. When the mover of any motion has made his reply, the question shall be at once put and a vote taken.
16. When any member uses an expression which is linble to be applied offensively to any other member, the Mayor shall require him to withdraw such expression and make a satisfactory apology to the Council.
17. When a question of order arises, the person who was speaking shall sit domn until the point has been debated and decided. No other business shall be allowed to interrene.
18. Any member may require the motion under discussion to be read at any time during the debate, jet so as not to interrupt any other member when speaking
19. Any debate may be adjourned to any specific time or day, and the member upon whose motion the adjournment takes place shall be entitled to commence the resumption of the subject.

## Questions of order

20. Any member using offensive langunge or otherwise disturbing the proceedings of tho Council, who when called to order refuses to retract or apologize, shall retire while the question is being discussed, and, should he still be contumacious, shall be liable to a penalty of not more than fire pounds nor less than one pound for the first offence, and for the second offence to a penalty of from two pounds to ten pounds, and for the third offence from four pounds to twenty pounds, to be recovered under section 193 of the Municipalities Act of 1867.
21. Every member shall have the right to call the attention of the Mayor to nny subject, argument, or observation, made or used by any other member, which he shall consider a brcach of good order.
22. Should any Alderman be dissatisficd with any rule or principle of order, as laid down by the Mayor, he shall have the right to invite the Council by motion on notice to consider the subject and to lay down a different rule or principle for the determination of eimilar questions in future. Such rule or principle shall be binding on all parties, unless it shall bo found to involve matters contrary to law.
23. As every member has the right to divide the Council or Committec of the Whole on any motion or question put from the Chair, an entry of such dirisions shall be made in the mimute book, and every member present must record his vote.
24. No business transucted at auy mecting of the Council shall be binding upon any of its members or ollicers, unless the 104th section of the Municipalitics Act of 1867 has been complied with.

## Motions.

25. Notices of motion must bear the signature of the member forwarding it. No motion shall be considered which has not been given in at least four days before the time of meeting.
26. When a motion has been duly moved and seconded, it becomes the property of the Council or Committee, and camnot be withdrawn without leave.
27. When a motion is before the Conncil, any amendment thereon shall not be discussed until after it is seconded and placed before the Council in writing.
28. Only one amendment upon a motion or question shall be before the Council at the same tine; and if the amendment is carried, it shall form part of the original question, and may be subject to further amendment, but shonld the amendment be negatived then another amendment may be moved.
29. No motion the effect of which would be to rescind or counteract nny resolution which has been passed by the Council, shall be entertained unless a Call of the Whole Council is made for that purpose, when if the question is negatived it shall not be again introduced for a perind of three months.
30. A motion for adjournment, shall be put at onec, and if negatived shall not be again put until half an hour has elapsed.

## Petitions.

31. When a petition has becn prosented, the member in whose charge it is must be able to report to the Council that its language is respectfn].
32. No debate or action shall be taken upon such petition except referring it to a Committee, unless due notice has been given thercof.
33. No petition slall be received unlese at least one signaturc is written upon the sheet containing such petition.

## Committees.

31. In Committees of the Whole the Gencral Rales of the Council shall be observed, except as regards the number of times of speaking.
32. Frery Committee of which the Mayor is not an elected member shall choose its own Chairman, who shall be the convener thereof, and shall direct the Council Clerk to call meetings whenover he shall think proper.
33. No report from Committecs shall be presented to the Council unless signed by the Chairman thereof,
34. Every report from a Committec shall be signed by its Chairman.
35. All reports of Committees shall be fairly written on foolscap paper, with convenient margin for binding.
36. No report from Committee shall be adopted without notice in the usual way.
37. There shall be three Standing Committees, cach consisting of three members, viz.:-a Finance Committec, a Committeo of Works, and a Committee for General Purposes.
38. There shall also be a By-lar Committee, which shall be a Special Committee for the year.
39. The Standing Committees shall be appointed by the Council at its first meeting after the election of Mayor, and any vacancies occurring therein during the year shall be filled by the Coumcil.
40. The Council may at any time appoint Specinl Committees for the consideration of any matters which do not fall within the immediate control of any of the Standing Committees.
41. Every member proposing a Select Committee must propose himself as one of its members.
42. Erery Committee shall keep minutes of any evidence of facts taken before it, and every report brought up shall havo appended thereto the substance of such eridence.

## The Finance Committee.

46. The Mayor shall (ex officio) be Clairman of the Finance Committee, which shall have charge of all matters relating to the finances of the Council; and no accounts affecting the corporate funds shall be disposed of until such Committee has examined and reported thereon.
47. The Mayor and Finance Committee may, during the interral of regular meetings, authorize the expenditure of any sum not exceeding five pounds.
48. All drafts upon the corporate funds shall be signed by the Mayor and one or moro Aldermen as the Council may appoint and shall in all cases be countersigned by the Council Clerk.
49. The autographs of persons authorized to sign cheques with a copy of the resolution of Council appointing them, shall be furnished to the Bank at latest on the day following such appointment.

## Committee of Works.

50. The Works Committee shall have the oversight of all works ordered by the Council, all necessary improvements to roads, streets, ways, or bridges, and shall report upon all matters connected herewith; and no action shall be taken or expenditure incurred thereon until such report inas been ndopted by the Council.
51. No payments of accounts relating to matters under the cognizance of the Works Committee shall be paid until such Committee has reported them colrcet.
52. The Committee of General Purposes shall have charge of all sanitary regulations, purchasing office furniture, and all other matters which may arise that do not come under the direct cognizance of the other Committees or are not apecially referred to a Select Committec.

## Miscellaneous.

53. On no account shall tenders sent into this Council or to nny of its Committees be opened or the covers thereof disturbed until the Council or such Committee are in sitting prepared to consider them.
54. In cases of emergency arising from flood or fire, such members as can be suddenly called together by the Mayor, or Council Clerk, or Chairman of any Committee, as the nccensities of the case may be, shall be empowered to expend any sum not exceeding twenty pounds.
55. Ail emergency expenditure slall be reported on at the then next meeting of the Council.
56. Before any proposed by-law affecting the general interests of the body corporate shall be adopted by the Council, fourteen days notice thereof shall be given, during which time it shall bo open for public inspection at the office of the Council during oflice hours.
57. Whenover the Council is adjourned for want of a quorum, the hour of such adjournment and the names of the members present shall be entered on the minutes.
58. The Council Clerk sball generally assist the Mayor in executing all orders or directions of the Council, conduct all official correspondence, have charge of all records nud the cor porate seal, and be responsible for the safe custody of the same.
59. The corporato senl shall not be aflixed to any document except by vote of Council; and every impression thereof shall be verified by the siguature of the Mayor and Council Clerk
60. Any member may enter a protest against auy decision of the Council, prorided he there and then gives rerbal notice of his intention so to do, and forwards the same in writing to the Couwcil Clerk within fourteen days theroafter, or hands it in at the then nest meeting of Council whether special or regular.
61. No Alderman or officer of the Council shall be accepted as sceurity for any of its officers.
62. The Clork shall prepare and lay before the Council a quarterly report of all moneys received and expended during tho term, and also showing the Bank balance.
63. No election to any paid office of the Council shall tako place until after fourtecn days' notice shall have been given in an newspaper circulating in the locality.
64. Unless as profided by law, no officer of the Council sball be at liberly to exhibit the records of the Council to any person not an Alderman without a special order from the Council.
65. When any motion cmbraces several propositions, it may, by resolution of Council, be subdivided, and each proposition considered separately or collectively as the case may require.
66. The members of every Committes of whinh the Mayor is not a member ehall elect their permanent Chairman within seven days after their appointment.
67. The Council Clerk shall call a meeting of any Committee when requested to do so by its Chairman or any two of its nombers.
68. No part of any or all of these By-laws or Standing Orders shall be taken or construed so as to interefere with the rights or privileges of the Mayor or Aldermen which hare been by law established.
69. No motion which has been entered on the business paper shall be withdrawn without the leave of the Council.
70. Any one of theso Standing Orders may, in case of omergency, be suspended: Provided that such suspension does not interfere with any of the directions given in the Municipalities Act of 1867.
71. When any such suspension is voted, no business other than that for which such suspension is made shall be discussed therounder.

When any strect, roal, or lane las been definitely marked off, the W $\begin{aligned} & \text { Wrks Comnittee or the Surveyor shall cause }\end{aligned}$ posts to be placed at the corners of the intersections thereof, learing for every street of one chain wide a carriage-way of forty-two feet and for every road or street other than sixty-sis fect wide such width of carringe-way as such Committee or Surreyor shatl deem necessary.
92. Any person who shall open any drain or sewer, or remore or cause to be removed any turf, clay, sund, soil, gravel, stone, or other material, in or from any part of any road, or footway, or other public place within the Municipality, without leave or other public place within the Muncipanty, without leave
from the Council, or who shall in nyy way wantonly damage any such road or footway, shall forfeit and pay for cvery such offence a sum not excceding ten pounds nor less than fire shillings.
93. If any person after the publication of these By-laws shall erect or canse to be erected any building or other structure on any parl of any ronl, street, or may, such person or persons shall be compelled to remore such building or structure, or any part of the same which may be found to obstruct or prevent the eren alignment of ench street, road, or way. And if the same is not remored within seren days afler notificution from the Council, the person or persons to whom such ohstructions belong shall pay all costs and charges incurred by the Councit in recoring the same, in addition to thenalty of not more than ten pounds nor less than five pounds. Provided that the Council, if they sec fit, anay, instead of remoring such obstruction, proceed by action of trespass against the person causing such obstruction or encroachment or the person in charge such obst
94. The Worls Committee, or any person acting under their authority, may at any time stop the traffic on any road, street, or lave, for the purpose of repairing or making the same or any part, thereof, or for any necessary purpose; and any person who shall offent against this By-law, either by riding or driving A. Hereon, or by removing or destroying any fenco or other obstruction which may be placed thereon for the purpose of suspending the traffic, shall forfcit and pay a penalty not exceediug ten pounds.
95. Any driver or rider who shall negligently or wilfulls injure or cause to be injured any herb, whether of wood or stone, or any pathway, by riding of driving or permitting any horse or other animals to stand thereon, shail forfecit and pay a penalty not excceding two pounds nor less than one shilling.
96. Any person damuging any road, street, or lane, or any portion thereof, by trailing stone or timber thereon, or who shail sulifer any timber or stone to trail over the sides of any wheeled rehicle, so as to occupy a greater space than the
brealthe of the cort or ilray upou which it may be drame, shall forleit and pay at stm not exceeding two pounds nor less than one shilling.
97. When any road, strect, or lame has been formed, and the pathways put in order, the owners of all beuses or other structures ablitting thereon shall so arrange the roofs of such structures, by spouting or otherwise, as shall prevent the rain from flowing therefrom on to such pathway; and any owner or occupant who shall refuse or neglect to carry out the provisions of this $13 y$-law shall forfeit and pay for every such offence, after dise notice given, any sum not exceeding fire pounds.
98. Nothing contained in any of these By-laws shall be taken to refer or be applied to the driving of any travelling flocks or herds of eattle or other animale, provided the same be not negligenily driven.
99. Thic Works Committce, Committee of General Purposes, or any Special Committee or officer uppointed by the Council, may cexercise all such powers and authority as is conferred by tho various sections of the Municipalities Act of 18167 , in all such matters as may from time to time be by resolution of Council referred to their superrision and control.
100. Wherever the word "Aayor" oecurs in these By-laws, as directing to be done or as being directed to do any matter or thing, the same shall apply to and be understood to mean any Alderman appointed by the Council to ast as Mayor for the time being
101. All fines and penalties for any breach of these By -laws siall be recorerable only by process, ns directed by section 103 of the Mumicipaities Act of 1867 .
102. All drains or sewers communicating with auy public drains or sewers shall from time to time be repairel and cleansel under the inspection and direction of the Council, at the costs and charges of the occupiers of the houses, buildings, lands, and premises to which the said privato sewers or drains shatl respectively belong ; and in case any person shall meglect to repair and cleanse, or cause any such such prirate drain or sewer to be repaired and clennsed, according to the directions of the said Council, he shall forfeit and pay for every such offence any sum not exceeding fire pounds.

## Stimeragr: and Dranage.

1. It shall not be lawful for any person, without notice to the Council, or otherwise than according to euch plans and directions as such Council may make and give, to make or branch any private drain or sewer into any of the public drains or sewers, or into any drain or sewer communicating therswith; and in case any person or persons shall make or branch any prirate drain or sever into any of the snid public drains or semers, or into any drain or serer commanicatiug or to communicato therewith, without such notice or otherwise than as aforesaid, every person so offending shall for overy such offence forfeit and pay any sum not exceeding fifty pounds.
2. Every owner or occupier of land in, adjoining to, or near any street, if such land slanl be so situated that surface or storm water from or upon the same shinll overfiow, or shall tend maturally if not otherwise discharged to overflow any footway of such street, shali within seren days nextiafter the service of notice by the Council for that purpose, construct and lay from such point upon such land being near to the footway as shall be specified in such notice by plan appended or othorwise, and higher in level than the bottom of the chamel at the outer edge. of the footway to the said channel, and through, under, and transversely to the footway, and lseep in good condition such cosered drain or trunk as and subjectit to the inspection of the Council or its proper offecrs; and in default of compliance with any sucin notice within the period aforesaid, or with the prorisions of this section, such owner or occupier shall forfeit any payment not esceeding fire pounds. And if withim seren days after such conviction such owner or oceupier shall still have fuiled to comply with such notice, or be ctherwise in default as aforesaid, ho shall forfeit and pay any sum not less than one pound nor more than ten pounds; and for every further such offence he shall forfeit and pay any sum not less than two pounds nor more than twenty pounds. And every such owner or occupier who elnall still have made defnult as aforesaid for more than seven days after such second or any future conviction, shall be held guilty of a further offence within the meaning of this section.

I hereby cextify that these By-laws were duly jnssed by this Council.

Municipality of Penrith.
JAS. J. RILAX,
Mayor.

MUNICIPALITIES.
(MUNICIPAL DISTRICT OF SORTH ILLAWARRA-BY.IAWS.)

Colonial Secretary's Office,
Sydney, 104h March, 1872.

## MUNICIPAL DISTRTOT OF NORILH ILLAWARRA.

## Br-lats.

Tun following amonded By-laws, made by the Muncipal Council of North Cllawarra, for the establishment of Tolls, and for the proper collection and management thereof, at certain Toll-bars crected or to be erected on tho main road of the Norlh Illawarra Municipal District, having been confirmed by His Excelfency the Administrator of the Government, with the advice of the Execative Council, are published in accordance with the requirements of the Municipalities Act of 1867.

JOHN ROBERISON.

Nortil Imawarra Toll-dars.

## Tolls established.

1. Tolls to the sevoral amounts hereinafter prescribed shall be demanded, paid, and taken at the several toll-gates or tollbars mentioned and described in Schedule A hereto.
2. The Council of said Municipality shall have power to appoint by resolution a collector for said toll-gate or toll-bar, or to lease or let the same by public auction or by private contract, or otherwise to appoint, lease, or let, re-lease, or re-let as abore, and as often as it may be necossary, and for any period not exceeding three years, and to fix the upset price at which the said toll-gate or toll-bur slanll be leased or let; and in case a collector is appointed, he shall be removable by a like resolution.

## Sureties for collector.

3. Tvery such collector or lessee slall find two sureties to the satisfaction of the Mayor, and to such a sum as the Council shall determine, for the faithful performance of his duty-

## Paynent and recovery of tolls.

4. All such tolls shall be paid to tho respective collectors thercof, to be appointed as aforesaid, in such several amourts for the respective animals or vehicles ns orro specified in Schedule $B$ hereto; and if any person liable to the payment of sach toll, other than those exempted from toll as hercinafter provided, shall, after demand thereof, neglect or refusc to pay any suelh toil, the collector, lessec, or other person lawfully in charge thereof, may prerent such person, or any such horsc, beast, cattle, carringe, or other velicle in respect of which any such toll is puyable, from passing to, through, or by, or from being toin is puyable, from pasing to, through, or by, or from being
ridden, led, or driven through or by such toll-gite or toll-bur.

## Excmption from toll.

5. No toll shall be demanded or taken by virtue of this Bylaw for any horses or carriages belonging to, or conveying or attending, or going to conrey or attend, or returuing from having conreyed or attended the Governor ; or of or from any of IIer Majesty's officers or soldiers, being in proper staff or regimental or military uniform, dress or undress, for any horso ridden or any horse or carriage then employed by such oflicer
or soldier upon or for Her Majosty's scrvice, or returning from such employment; or of or from any member or any Corps of Voluntcers going to or returning from exoroise as such, for any horse ridden by such member ; or for any gun-carriage, waggon, or other velicle belonging to any such Corps, or then boing employed cxclusircly for the purpose of the same, or returning from such employment and not otherwise employed; or for any horses, carriage, or othervelicle of or belonging to the Govornment or to the Comeil of the Municipal District, and then employed in the scrvice of the said Goverament or Council ; or of or from any member of the Police Force being on actual duty, or prisoners under the charge of such member of the Police Force, or for any horse or carriage exclusively cmployed in carrying such nomber of the Police Force or prisoner or their baggage respectivels, or returning from such employment and not otherwise employel; or for or in respect of any horse, beast, carringe, or other vehicle exclusively employed in conveying the Post Office mails, and not othcrwise cmployed; or of or from any person going to or returning from attending at a funeral ; or for or in respect of any horee, beast, carriage, or other or for or carrying any clergyman in the discharge of his duty; velicle carrying any elergymau in the discharge of from their
or any other person or persous going to or returning fromer or any other person or persolus going to or returni, of the person
proper chureh, chapel, or other place of worship, of the or persons riding or driving the same, on Sundays, Christmas Day, or Good Friday, for any horse or prirate vehicle ridden or driven by such member or jerson; or for any animal driven or going daily to or from water or fecd; or for any lorse, carriage, or other vehicle which shall only cross the road beyond any of the said toll-gates or toll-bars, or shall not pass on any such road above the distanco of two hundred yards: Provided always that every such member as aforesaid of any Volunteer Corps, or of tha Police Force, slatl bave his dress and accoutrements according to the regulations of such Corps or Force for the time being.

False claim of exemption.
6. If any person shall claim or take the benefit of auy of the exemptions from toll hereinbefore mentioned, not being entitled to the same, he shall on conviction forfeit and pay for every such offenco a penalty of not less than one pound nor more than five pounds.

## Evasion of toll:

7. If any perion shall, with any horse, cattle, beast, or carriage, go off or pass from any strect or rond through or over any land or ground near to or adjoining thereto (not being a public highway, and such person not bcing the owner, occupier, or servant, or one of the family of the owner or occupier of such ground), with intent to evade the payment of any toll payable under this part of these By-laws,-or if any orncr or occupier of any such land or ground shall knowingly or wilingly permit or suffer any person (except as a foresaid), with any horse, cattle, beast, or carriage whatsoever, to go or pass though or over such land or ground with intent to crade anty such toll,-or if auy person shall give or receive from any porson other than a collector of such tolls, or shall forge, counterfeit, or alter any note or ticket hereby directed to be giren, with intent to evade the payment of any such toll or any part thereof,--or if any person shall fraudulently or forcibly pass through or by any such toll-gate or toll-bar with any horse, cattle, beast, or carriuge, or shail leave upon such street or road auy horsc, cattle, beast, or carriage whatsocver, by reason whereof the payment of any toll shall be avoided or lessened, or shall take off or cause to be taken off any hore or other beast or cattlo from any carriage, either before or after having passed through, by, or orer any such toll-gate or toll-bar, or having passed through or by the same shall afterwards add or put any horse or other beast to any such carriage, and draw therewith upon any part of such street or road so as to incrense the number of horses or other beasts drawing the said carriage after the same shall have so passed, whereby the payment of all or any part of the toll shall or may be eraded,-or if any persou shall do any other act whaterer in order or with intent to evade the payment of all or any of euch toll and whereby the same shall be evaded, every such person shall for every such offence forfeit and pay any sum not less than five shillings nor more than five pounds.

## Toll-board.

8. The By-law Commitlee shall cause to be put up and continued on some conspicuous part of or near each such toll-gate or toll-bar as aforesaid, so that the same shall be risible to public view, a table painted in distinct and legible black letters at least two inches in length and of a breadth in proportion, on a board with a white ground, containing at the top the name of the toll-gate or toll-bar at which tie sume slall be put up, and also containing a list of the tolls payable thercat respectirely, distinguishing the several tolls and the different sorts of animals or velhicles for which they are to be paid; and the said Committee shall also cause to be prorided tickets denoting the payment of the toll, and on such scyeral tickets shall be specified the name of the toll-gate or toll-bar at which the same shall be delivered, and one of such tickets shall, if demnnded, bo delivered gratis by the collector to cvery person paying any toll.

## Collector's board-Offences by Toll-collector.

9. The toll-collector at each such toll-gate or toll-bar as aforesaid shall place or cause to be placed on some conspicuous part of or near such toll-gate or toll-bar, and so that the same shail appear to public view, his christian-name and surname printed in black on a board with an white ground, each of such letters of such name to be at least two inches in length and of a breadth in proportion; and such board shall be and remain at such toll-gate or toll-bar during the whole of the time during which the person whose name shall be expressed thereon shall be on duty thereat; and if any such collector shall not place such board and keep the same there during the time he shall be such collector as aforesaid, or shall demand and take a greater or less toll from any person than he shall be authorized to do by virtue of this Part of these By-lams, or shall demand and take a toll from any parson or persons who shall be exempt from the payment thereof and claim such exemption, or shall
refuse to permit or suffer any person or persons to read, or shall in anywise hinder any person or persons from reading theo inscriptions on any board put up or kept hereunder, or slall refuse to tell his christian-mame and surname to any person or persons who shall demand the same on being paid the said folls or any of them, or shall in answer to such demand give a filss name or names, or shall refusc or when required ounit to give the person paying the toll a ticket denoting the payment the person paying the toll a ticket denoting the payment
thereof and naming and specifying the toil-gate or toll-bar att which the same has been delivered, or upou the legal toll being paid or tendered shall unnecessarily detain or wilfilly obstruct, hinder, or preveut any passenger from passing through or by such toll-gate or toll-bar, or shall make use of any scurrilous or abusive language to any passenger,-every such collector shall on conviction forfeit and pay for crery such offence a penalty not excceding fire pounds.

Collector to keep accounts.
10. Every such collector or lessee of tolls shanl keep and render such accounts of nll his receipts for such tolls as the render such accounts of all his receipts for such tolls as the
Council or the Finance Committec thercof may from time to time direct and require, and slall pay over all such reccipts at sucb times and to such officer of the Council as the said Council may from time to time direct.

JOHN ROBERISON.

## BY-LAWS.

## PART I.

Proonedinas of tha Conncil and Committecs-preservation of orler at Council mectings-duties of officers and servants, \&c.

## Mretinas of time Councit. <br> Ordinary Areetings.

1. The Council shall meet for the dispatch of business at the lour of half-past seven p.m. on every alternate Wednesday unless such day shall happen to bo a public holiday. In the latter case the meeting shall be beld on such other day as the Mayor may appoint.

Wlection of Chairman in absence of Mayor.-Aajournment for want of quorum.
2. If at any mecting of the Council the Mayor be absent at the expiration of twenty minutes after the time appointed for holding such mocting, the Aldermen then present shall proceed to clect, from among themselves, a Chairman for such Mecting: and in the event of a quorum not being present at such meetlug within half an hour after the time appointed for the holding of such meeting, the names of the Aldermen then present shall be entered in the minute-book by the Council Clerk, and the meeting shall stand adjourned.

Order of Business.

## Business of ordinary Mectings. ${ }^{\text {² }}$

3. The following shall be the order of business at all meetings of the Council other than special neetings:-
4. The minutes of the last preceding mecting to be read, corrceted if crroncons, and verified by the signature of the Mayor or otlacr Chairman. No discussion to be permitted on such minutes, except as to whether they are enrrect.
5. Correspondence to be read, and, if necessary, ordered uрон.
6. Tetitions (if any) to be presented and dealt with.
7. Reports from Committecs, and minutes from the Mayor and Council Clerk to be prosented and ordered upon.
8. Questions as to any matters under the jurisdiction or within the official cognizance of the Council, to be put and replicd to ; and statements as to any facts, matters or circumstances requiring attention by the Council or any of its Committees or officers, to be made, or any other special business.
9. Payments to be authorized.

Business may be dealt with out of regular order.
Provided that it shall be competent to the Council at any time, by resolntion, without notice, to entertain any particula motion, or to deal with any partieular matter of business, out of its regular order on the lusiness paper, without any formal suspension of this section; or such particular motion or lusiness may be adjourued to a later bour of the day, or to any other day specified; and the Alderman upon whose motion such debate shall have been so adjourned shall be entitled to pre-audience on the resumption of the same.
4. No member shall speak on any motion or amendment longer than five minutes, without the consent of the Council.

Business paper-how prepared.
5. The business paper for every meeting of the Council shall be made made up by the Council Clerk, and delivered to the Mayor and Aldermen, or left at their respective residencos, at least twenty four hours before the time appointed fur such mecting. The Council Clerk shall enter on such business paper a copy, or the substance of every notice of motion proposed to be entertained at such meeting, which he shall have received.
Notices of motion, §e., to be numbered as received, and preserved until matter disposed of.
f. All notices of motion, \&c., for the consideration of tho Comncil at its next meeting, shall be numbered by the Counci Clerk as they shall be received, and entered on the business
paper according to their number, and each notice shall bo preserved by such Clerk until after the matter to which it relates shall haye been disposed of.

## Motions and Aitendments

7. All notices of motion shall be in writing, dated and sigued by the Alderman proposing the same previous to being handed to the Council Clerk, and shall not be withdrawn from the business paper without the leave of the majority of the Council.
8. No motion thle effect of which if carried would be to rescind any motion which has already passed the Council, shall be entered on the business paper, untess : "Call of the Whole Council' has been duly made and granted for that purpose.
9. A Call of the Council may le ordered by any resolution of which due notice shall have been given, for the consideration of any motion or matter of business before such Council.

## Absence of proposed mover.

10. No motion of which notice shall have been entered on the business paper, shall be proceeded with in the absence of the Alderman by whom such notice shall have been given; unless, by some other Alderman producing a written authority for that purpose from such first-n:med Alderman.

Motion to be seconded.
11. No motion in Council shall be discussed until it be scconded.

## Amendments may be maved.

12. When a motion in Conncil shall have been made and seconded, any Alderman shall he at liberty to move an amendment thereon, but no such amendment shall be discussed until it be seconded.

Motions for adjournment.
13. No discussion shall be permitted on any motion for adjournment of the Council ; and if, upon the question being put on any such motion, the same be negatived, the subject then under consideration, or the next in order on the business paper, or any other on such paper that may be allowed precedence, shall be discussed before any subsequent motion for adjou'mment shall be receivalise.

## Obdels of the Day.

Of what orders of the day shall consist.
14. The orders of the day shall ennsist of any matters other than motions on notice, which the Council shall at a previous meeting thereof have dirented to be taken into consideration. or whicll the Mayor or any Committee of the Council shall have directed to be entered on the busincss paper for consideration.

## Petitione.

Petitions to be respectfully worded.
15. It sthall be iucumbent on every Alderman presenting a pctition to acquaint himself with the contents thercof, and to asecrtail that it dues not contain language disrespectful to the Council. The nature and prayer of cevery such petition shall be stated to the Council by the Alderman presenting the same; and all petitions shall be received only as the petitions of the parties signing the same.

## How petitions are to be dealt with.

16. No motion shall, unless as hereinafter provided, be permissible on the presentation of a petition, except that the same be received, or that it be received and referred to one of the permanent Committees hereinafter mentioned; or that it be received, and that its consideration stand an order of the day for some future meetiug: Provided, however, that if any Aldcrman slall have given due notice of a motion in reference to any petition, and such petition shall have been presented before such Alderman shall have been called upon to move such motion, the said motion shall, if otherwise unobjectionable, be considered in order.

## Reforta from Committees and Mintites flom the Mayon.

## Form of Report.

17. All repnrts from Committees shall be written on foolscap paper, and shall be signed by the Clairman of such Committec, or, in his absence, by some other member of the same.
How reports, fc., are to be dealt with.-Dutics of Chairman, §c., in certain cases.
18. No motion shall be permissible on the presentation of a report from a Committee or a minute from the Mayor, except that the same be received, or that it be received and that its consideration stand an order of the day for some future meeting: Provided however, that if any Alderman shall have given due notice in refcrance to any such report or minute, or if an order for the consideration of such report or minute shall have been entered among the orders of the day, such motion or order may be moved or considered in due coursc.

## Order of Debate

## Mode of addressing the Council, g'c.

19. Every Alderman who shall make or second any motion or shall propose or second any ametidment, or shall take any part in any debate or discussion, or shall put or reply to any question, or shall make any statement, or shall in auy other way or for any other purpose, address observations to the Conucil sball, while so doing, stand up in his customary place (unles be shall be prevented from so doing by reason of some bodily infirmity), and shall address himself to the Mayor or other Chairman then presiding: Provided that in the case of a ques tion such question may, by permission of such Mayor or Chairman, be put directly to the Alderman or offiecer to be questioned, and may be replicd to in like manner; but in cvery such case the question so put and the answer thercto shall be such case the question sn put and the answer thercto stiall be
subject to cvery legal objection on the ground of disorder or suthect to every legal objection on the ground of disorder or
irrelevancy. And all members of the Couucil sladl, on all irrelevancy. And all members of the Council sliad, on all
occasions when in such Council, address and spak of cach other by their official designations, as Mayor, Chairman, or Alderman, as the case may be.

# MUNICIPALITIES. 

(MUNICIPAL DISTRICT OF WEST BOTANY.-BY-JAWS.)

绝resenteo to 誛ariantent, pursuant to Gtt 3l Jitt. \&o. 12, sec. 158

Colonial Secretary's Office,
Sydncy, 27 th March, 1872.

## MUNICIPAL DISTRICT OF WEST BOTANY.

## By-laks.

The following amended By-laws mado by the Mmicipal Conncil of West Botany, for the regulation and licensing of public and other velicles, \&e., amb the ilrivers and conductors of passengerecarrying vehicles, within the Municipality,-having been confirmed by Ifis Excellency the Administrator of the Government, with the adviec of the Exceutive Council, are published in accordance with the requirements of the Municipalities Act of 1867.

JOHN ROBERTSON.

Amended Br-laws of the Municifality of West Botany.
Wheresas it is desirable that amendments should be made in the By-laws for the regulation and licensing of public and other velicies, omnibuses, cars, hackncy carriages, and the drivers and conductors of passenger-carrying vehicles, now in force: Be it therefore enacterl by the Mutricipal Council of West Botany, in pursuance of the powers in them vested in that behalf.

1. No vehicle slall ply or be used for hire within the Municipality of West Botany, muless the same be duly licensed in the manner hereiuafter described. Before any license for plying a vehicle or to drive or conduct the same shall be granted, the party requiring such license shall obtain from the Council the party requiring such icense shall obtain from the Council Clerk, free of charge, a requisition in the form of the Schedule
hereunto annexed marked with the letter A, or to the like hereunto annexed marked with the letter $A$, or to the hike
effect, and duly fill up and sign the same and deliver it to the Comeil Clerk; aud in the case of drivers or conductors, shall also ohtain a certificate from two resprectable householders, to the effect that the applicant is of good character and competent to act as such driver or conductor as the case may be.
2. No license shall be granted it respect of any veliche which in the opinion of the Mayor and two Aldermen who slanll be appointed by a resolution of the Council of the said Municipality, is unsafe, or in bad repair, or otherwise unfit for the accommolation and conveyance of passengers therein.
3. Jicenses for proprictors, drivers, and conductors of vehicles shall be in the form contzined in the Schedule hereunto annesed, marked with the letter 3 , or to the like effiect, nud any person plying, ariving, or conducting any vehicle for hire with passengers without such license shall be deemed guilty of a breach of these By-laws.
4. Bvery license granted under these By-laws shall be under the common scal of the Council of the said Municipality, and signed by the Mayor and countersigned by the Council Clerk, upon production of a certificate signed by the Mayor and Aldermen who shall be appointed as aforcsaid, and shall be in forec from the date of nuch liecnse until the 31st day. of December next ensuing, suhject to the comditions in section 19; and no such license shall include more than one vehicle: Provided that where tho licensed veliclo shall be under repair if the proprietor shall so desire he may be permitted to substitute
another for a period to be then specified and indorsed on the license, signed by the Mayor and conntersigned as aforesaid For every such license there shall be paid to the Council of the said Municipality, for the benofit of the town fund, the several rates set forth in the Schedule hurcunto amexed marked with the letter C .
5. No liecnse shall be granted to any person to drive any passenger carrying vehicle who shall be under the are of eighteen years.
6. All licenses shall be made out by the Council Clerk and numbered consecutively.
7. The person in whose name a license shall appear to have heen obtained shail be prima facie decmed to be the owner of the veliele in respect of which the same shall have been taken out.
8. The Mayor and two Aldermen aforesaid shall, as often as they may deem it necessary, cause an inspection to he made: of all or any licensed vehicles, and of the hamess, horse, or horses ; aud if any such vehicles, harness, horice, or horses shall at any time lo found lyy the suid Aldermen to be unfit for use, the Mayor may caneel the liense uf such vehicle.
0 . Whenever the word "velicke" shatl be used in these Bylaws, the same shall be miderstood to apply to either an ommibus. car, hackney carripge, or cal); and an "omnibus" shall he meant to be a velicle unou four wheels drawn by two or more horses: and a "car" a vehicle upon two whecls; aud a "hackney carriage" shall mean a vehicle upon four whects drawn by two or more horses; and a "mab," a rehicle upon two whecls for which a hackner carriage license has heen taken two whects for which a hackney carriage icense hasply to carts. drays, or vans, plying for hire.
9. Ihat all vehicles lieensed to enrry passengers shall be provided with suitable carriage-lannps to burn candles, one to be fixed on each side of the driver's box, and a third one insid of all omniluses and closed conches; and that the same shall be lighted not later than one hour aftor smidow, and kept burning while the vehicles are on the stand or running the strects cither with or without passengers,
10. That when any carriage is submitted for inspection by the owner or other applicant with $n$ view to obtain a license the Mayor and Aldermen appointed by the Council to that
duty, shall then determine upon the number of passengers the vehicle shali be permitted to carry, and give a certificate to thiat effect, such number to be mentioned in the licenso.
11. That the number of passengers the vehicle is licensed to carry, and the legal fare. shall be painted or printed in legible characters, and affixed within and without the vehicle in such places as the Mayor and inspecting Aldermen shall in such
direct.
12. The Municipal Council may from time to time appoint a person as Inspector, during the pleasure of the Municipal Council, of all licensed vehicles plying for hire within the Municipality of West Botany, and such Inspector shall every three months examine all such vehicles, and report to the Mayor, and shall at all times see that as far as possible these By-laws are duly observed.
13. No owner, driver, or conductor of any such vehicle, or any other person, shall obstruct any such Inspector in the execution of his duties.
14. No licensed rehicle shall be drawn through any part of the Municipality of West Botany, whilst plying for hire, at a walking pace, nor at a pace faster than a trot.
15. No driver shall, except whilst standing on his appointed stand, permit his vehicle, with or without horses, to stand in any part of the Municipality longer than may be necessary for loading or unloading, or for taking up or putting down passengers, nor shall cause any obstruction in any part of the Municipality of West Botany.
16. Every vehicle on its arrival at any such public stand, shall be drawn to the ond of, and be the last of the rank of any vehicles that may be then on such stand; and at every public stand all vehicles shall be arranged only in single rank, and shall leave the stand in due rotation within twenty minutes after each other; and if after twenty minutes from the starting of the previous one, the one next in succession occupying the first place in the line be not prepared to start, it shall be drawn to the last place on such stand, and so on with each succeeding vehicle in its order to make way for the one which is then prepared to start ; but should none of the vehicles in the rear start, it shall be compulsory for the first on the rank to proceed on the journey.
17. The owner or driver of any liecnacd vehicle shall not permit the same to stand or ply for hire within the Municipality of West Botany, except at or from an appointcil stand.
18. The Mayor for the timo being shall have power to cancel or suspend the license of any owner, driver, or conductor who shall have been convicted twice within a period of threc months for any offence under these By-laws. No driver or condnctor of a licensed velicle shall lend or part with his license, nor shall the propurietor of any such vehicle employ an unlicensed person as the driver or conductor thereof.
19. All vehicles whilst parsing tbrough any portion of the Municipality of West Botany between the hours of sunset and sunrise, shall carry a light in some conspicuous place on the off side of such rehicle.
20. For every offence against the provisions of thesc By-linqs, the offender sliall be liable to, and pay a penalty of not more the offender shall be liable to, and pay a penalty of not more
than five pounds nor less than five shillings, to be recovered in a summary way before any Justice of the Peace.

5. Questions as to any matters under the jurisdiction or within tho official cognizance of the Council to be put and replied to; and statements as to any facts, matters, or circumstances, requiring attention by the Council or uny of its Committees or offcers, to be made.
6. Motions of which notice has been given, to be dealt with in the order in which they stand on the business paper.
7. Orders of the day to be disposed of as they stand on the business paper : provided that it shall be competent to the Council, at any time, by resolution, withont notice, to
entertain any particular motion, or to deal with any par ticular matter of basiness out of its regular order on the busivoss paper, without any formal suspension of this section; also, and in like manner, to direct that any particular motion or matter of business shall hare precedence at a futuro meeting.
8. At special mectings of the Council, the business, after the minutes shall have been read and verified, which shall be done in the same manner as at an ordinary meeting, shall be taken in such order as the Mayor or the Alderman at whoee instance such speciul meeting shall hare been called, may have directed.
9. The business paper for every meeting of the Council other than a special meeting shall be made up by the Council Clerk, not less than two nor more thun threo days before the day appointed for such meeting. He shail enter on such business paper a copy or the substance of every notice of motion, and of overy requisition or orler as to business proposed to be transacted at such meeting, which he shall have received, or shall have been required or' directed so to enter in due course of law, and as hereinafter provided. Every such entry ahall bo made (subject to the provisions of section 3 of this Part of theso By-laws) in the samio order as euch notice, requisition, or direction shall have been received.
10. The business papcr for each special meeting shall contain only such matters "ts shall have been specially ordered to be entered thereon by the Mayor or Alderman calling such meeting
11. The summons to members of the Council for every meeting thereof shalt bo prepared from the business paper for such meeting, and shall cmbody the substance of such business papor.
12. The business paper for each meeting of the Council shall at such meeting be laid befors the Moyor or Chairman, who shall make a note upon such business paper of the mode in which each matter entered thereon has been dealt with; and such business paper so noted sholl be a record of the Council.
13. All notices of motion and all requisitions from Aldermen and directions from tho Mayor as to the entry of any particular matters of business for the consideration of the Council at its matters of business for the consideration of the Council at its
then next or any future meeting, shall be numbercd by the Council Clerk ns they aro received; and etch such notice requisition, and direction shall be preserved by such Clerk until after the matter to which it relates shall have been disposed of and the record in the Minute Book of the manner in which
such matter has beon so disposed of shall have been duly verified, as required by section 3 of this part of these By-laws: Provided however, that the person giving or forwarding any such notice of motion, requisition, or direction to the Council Clerk, shall be at liberty to withdraw the same at any time before the making up of the busincss paper.
14. Aftor the business paper shall have been made up as aforesaid, all the said notices of motions, requisitions, and directions us to which entries havo been made thereon shail be the property of the Council, and shall not be withdrawn, altered, or amended, without leave haring been first obtained from the Conncil for such withdrawal, alteration, or amendiment.

## Mhotions and Amendments.

11. Except by leave of the Council, motions shall be moved in the order in which they stand on the business paper, and if not so mored or postponed shall be struck from sach business paper and be considered to hare lapsed.
12. No motion of which notico shall have been entered on the business paper shall, except as hereinafter provided, be proceeded with in the absence of the Alderman by whom such notice shall hare been giren, unless by some other Alderman producing a written authority for that purpose from such firstnamed Alderman.
13. No motion in Council shall be discussed unless and until it be seconded.
14. When a motion in Council shall have been made and seconded, any Alderman shall be at liberty to move an amendment thereon, but no such amendment shall be discussed unless and until it be seconded.
15. No motion or amouament shall be discussed until it shall have been reduced into writing.
16. No second or subsequent amendment shall be taken into consideration until the previous amendment or amendments shall have been disposed of.
17. If an amendment be carried, the question as amonded therebs shall become itself the question before the Council, whercupon any further amendment upon such question may be mored.
18. If auy amendment-either upon an original question or upon any question amended as aforesaid-shall be negatived, then a further amendment may be moved to the question to which such first-mentioned amendment was moved, and so on ; provided that not more than one question and one proposed amendment thercof shall be before the Council at any one time.
19. No discussion shall be permitted on any motion for adjournment of the Council; and if, upon the question being put on any such motion, tho same be negatived, the subject then under consideration, or the nest in order on the business paper, or any other on such paper that may be allowed precedence, shall be discussed before any subsequent motion for adjournment shall be receivable.
20. Every requisition by an Alderman that any particular matter of business be brought before the Council, shall be regurded and treated as a notice of motion by sueh Aldcrman that such business be taken into consideration by the Council; and he shall be called upon in due order to more that ench business be so considered, or to make any other motion which he may think fit in reference thereto which shall be consistent with the notice of such business and with good order. Aud if such Alderman be absent, or if being present and so called upon he shall make no such motion, then itslall be open to any other Alderman to wake such motion; and when any such motion shall have been made, it shall be dealt with in precisely the same manncr as if notice thereol had been given, subject, however, to any objection which may exist as to its not being in accordance with the notice actually given of such business or with good order; and if no motion shall be made in roference to such business, the entry relating thereto shall be struck from the business paper.

## Orders of the Day

21. The orders of tho day shall consist of any matters, other than motions of notice, which the Council shall, at a previous mecting thereof, have directed to be taken into consideration, or which the Mayor or any Committee of the Council shall have directed to be entercd on the busincss paper for consideration.
22. Section 20 of this Part of these By-laws shall be considered applicable to orders of the day; and the Alderman who has the usunl charge of, or who has previously moved in reference to, the particular business to which any such order of the day relates, shall be the person called upon to move: Provided that, as to any order of the day entered as aforesaid by direction of the Mayor, such Mayor may arrange with any Alderman to move, and may in such case call upon the Alderman with whom he has so arranged.

## Petitions.

23. It shall be incumbent on overy Alderman presenting a petition to acquaint himself with the contents thercof, and to ascertain that it docs not contain language disrespectful to the

Council. The nature and prayor of every such petition shall be stated to the Council by the Alderman presonting the same.
24. All petitions shall be received only as the petitions of the partics signing the same.
25. No motion shall, unless as hereinafter provided, be permissible on the presentation of a petition, except that the same be received, or that it be received and referred to one of the permanent Committees hereinafter mentioned, or that it be received and that its consideration stand an order of the day for sorne future mecting: Provided however, that if any Alderman shall have given due notice of a motion in refercuce to any petition, and such petition shall hare been presonted before such Alderman slall have been called upon to move such motion, the said motion shall, if otherwiee unobjectionuble, be considerod in order.

## Correspondence.

26. The Mayor shall have the same duty in reference to letters addressed to tho Council before directing the same to be read as by section 23 of this Part of these 13 r -laws is imposed upon Aldermen presenting petitione. The Mayor shall direct as to the order in which all correspondence shall be read; and no letter addrossed to the Council shall be presented or read by any Alderman. If the Mayor bo absent, and shall not bave examined any such letters addressed to the Council, or hare given any such directions as aforesaid, then the duties impoeed by this section shall devolve upon the presiding Alderman.
27. Section 25 of this Part of these By-laws shall be considered as fully applicable to lettere addressed to the Council as to petitions.
28. No discussion shall be permitted in reference to any letters which lare been written and sent by the Mayor, or by any oflicer of the Council, and copies of which may be read to such Council: Provided howerer, that any notice of motion consistent with good order may be entertained with reference to any such letters whether read or not, or with refercuce to any letters addressed to the Council which the Mayor or presiding Alderman may not have ordered to be read as aforesaid.

Reports from Committees and Minutes from the Mayor.
29. All reports from Committees shall be written on foolscap paper, with a margin of at least one-ixith of the width of such paper, and shall bo signed by the Ohairman of such Conmittee, or, in his absence, by some other nember of the same.
30. Tho Major shall have the right of directing the attention of the Council to any matter or subject within its jurisdiction or official cognizance by a minute in writing. Every such minute shall be writien upou paper of the same kind and with the same margin as a report from a Coinmittec, and shall be signed by such Mayor.
31. No motion shall (unless is hereinafter provided) be permissible on the presentation of a report from a Committee or a minute from the Mayor, except that the same be received, or that it be received and that its consideration stand an order of the day for some future mecting: Provided however, that if any Alderman shall have giver due notice in reference to any such report or minute, or if an order for the consideration of such report or minute shall have been entered among the orders of the day, such motion or order may, if otherwise unobjectionable, be moved or considcred in duc course. And whenever ans such report or minute embodies any recommendatiou whicl cannot legally be carried out without due notice, and it is nevertheless desirable that such report or minute shall be definitely ordered upon during tho mecting of the Council at which such report or minute is presented, it shall be the duty of the Chair man or member of such Committce signing such report, or of such Mayor, as the case may be, to give or transmit to the Council Clerk such a notice of motion, requisition, or direction as aforesaid as will enable such Council Clerk to make tho necessary entry on the business paper and to give such due notice.

## Questions and statements.

32. No question or statement shall be allowed to be put or mado which is inconsistent with good order, or is not in strict accordance with the requirements of scetion 3 of this Part of these By -laws.
33. Sufficient notice of every question shall be given to the person who is expected to reply thereto, to allow for the consideration of such reply, and, if necessary, for a reference to other persons or to documents.
34. It shail not be compulsory upon any person questioned as aforesaid to answer the question so put to him.
35. Every such question must be put categorically, without any argument or statement of fact.
36. Every such statement must be made without argument.
37. No discussion shall be permitted as to any such question, or as to any reply or refusal to reply thereto, or as to any such statement, at the time when such question is put, or such reply or refusnl to reply is given, or such statement is made: Provided
however, that nothing herein contained shall prevent the taking of any objection as to any such question or statement being out of order, or alall prevent the discussion, after due notice as hereinbefore provided, of any matters properly arising out of or relating to any such qucstion, or reply, or refusal to reply, or any such statement as aforcsaid.

## Order of debate.

38. Every Alderman who shall make or second any motion, or shall propose or second any amendment, or shall talke any part in any debate or discussion, or shall put or reply to any question, or shall make any statement, or shall in any other way or for any othor purpose address observations to the Council, or for any other purpose address obscrvations to the cound,
shall, while so doing, tand up in his customary place (unless he shall be provented from so doing by reason of some bodily infirmity), and shall address himgelf to the Mayor or other Chairmay then presiding: Provided that, in the case of a question, such question may, by permission of such Mayor or Chairman, be put directly to tho Alderman or offiecr to be questioned, and may be replied to in like manner; but in every such case the question so put and the answer thercto shali be subject to every legal objection on the ground of dis. order or irrelevancy; and ali members of the Council shall, order or irrelevancy; and accasions, when in such Council, ndidress and speak of cuch other ly their official desiguations, as Mayor, Chairman, or Alderman, as the chso may be.
39. No Aldorman ahall be jnterrupted while thus speaking, unless for the purpose of calling lim to order as hereinafter provided.
40. Every mover of an original motion shall have a right of general roply to all observations which may have been made in reference to such motion, and to any amondments moved thercon, as well as a right to speak upon ercry such amendment. Every Alderman, other than the mover of such original motion, shall have a right to speak once upon auch motion, and on every amendment thercon. No Aldorman shall epeak oftener than once upon any question other than a question of order, unless when misrepresented or misunderstood, in which case he shall be permitted to explain without adding any further observations than may be necessary for the purposes of such explanation.
41. An Alderman who has moved any motion or amendment 4h. An Aderman who has moved any motion or amendment who shall have seconded any such motion or amendment, without any further observation than that ho seconded the same, shall be at liberty to spenk on such motion or amendment.
42. No Alderman shall digress from the subject under discussion, or shall make personal reflections on nor impute improper molives to any other Alderman.
43. A debate may be adjourned to sny other day specified; and the Alderman upon whose motion such debate shall have been so adjourned shall be entitled to pro-sudience on the resumption of the sume.
44. If two or more Aldermen rise to spenk at the same time, the Mayor or Clairman ehall decide which of such Aldermen shall be first heard.
45. Any Aldorman may request the questiou or matter under discussion to be read or stated for his information, or may upon such question or matter which are readily accessible: Prorided howover, that no such request or requisition shall be Provided howover, that no such request or requisition shall be materially to interrupt the discussion; alfo, that if such request or requisition shall appear to the Mayor or Chairman not to havo been mado bonca fide, it shall not be complied with.
46. The Mayor or Chairman may move or second any motion or amendment, or put any question, as provided for by section 3 of this Part of theso By-laws; and such. Mayor or Chairman ehall have the same right as any other Alderman to speak once upon every such subject or amendment. The Mayor or Chairman shall rise when so speaking (unless prevented by some bodily infirmity from so doing), but shall be considered as still presiding.

## Questions of order.

47. The Mayor or Chairman shall preserve order, and his decision on disputed points of order or practice shall be final, except in so far as the same may be questioned as in the manner hereinafter provided.
48. Every Member of the Council who shall commit a breach of any aection of this Part of these By-laws-or who shall move or attempt to move any motion or rmendment embodying any mattor us to which the Council bas no legal jurisdiction,or who shall in any other way raise or attompt to raise any question-or shall address or attempt to nddress the Council upon any subject which the said Council has no legal right to ontertain or to discuss-or who shall use any other language which according to the common usage of gentlemen would be held disorderly-or who shall say or do anything calculated to hold disordorly-or who shall say or do anything calce.
bring the Counci mo May or Chairman may, without the interposition of any other member of the Council, call any Alderman to order, whenerer, in tho opinion of such Mryor or Ohnirman, there shall be a necessity for so doing.
49. Every member of the Council shall have the right of calling the attention of the Mayor or Chairman to any motion, amendment, statement, argument, or observation, moved, used, or made by any other member which such first-named momber may consider out of order.
51 . A member called to ordcr shall withdraw while tho question of order is being discussed and decided upon, unless specially permitted to offer an explunation, retractation, or specially permitted toing but on obtaining such special permission, such member may explain, rotract, or apologize for the matter or remark alleged to have been out of order. And if euch explanation, retractation, or apology be deemed satisfactory, no further discussion on the question of order shall be permitted. If any member on being called to order shall ask such permission to explain, retract, or apologize as aforesaid, the Mayor or Chairman may of his own authority grant or refuse such permission as he may think fit, unlcss any member slall require the sense of the Council to be taken on this question. In such case it shall be the duty of the Mayor or Chairman to tako the sense of the Council at once, and without discussion, as to whether such permission shall be granted.
And when any such explanation, retractation, or apology shall have been made or offered by permission of the Mayor or Chairman, the latter shall in like manner decide, or if required so to do shall take the sense of the Council, as to whether such explanation, retractation, or spology is considered sufficient.
If such permission bo refused, or if such explanation, retractation, or apology be considered insufficiont, the question of order shall be considored and decided before any further business is proceeded with.
Prorided that if such Mayor or Chairman shall have decided the question of order before any member shall have required the sense of the Council to be taken in reference thereto, such question of order slall not be reopened.
And provided further, that nothing herein contained shnll be hold to affect the right of such Mayor or Chnirman to decide finally, as hereinbefore provided, upon any such point of order after the same shall have been discussed.
50. The Mayor or Chairman, when callea upon to decide points of order or practice, shall state the provision, rule, or practice which he shall deem applicable to the case, without discussing or conmenting upon the same.
51. Whenever it, shall have been decided as aforesaid that any motion, amendment, or other matter before the Council is out of order, the eame shall bo rejected; and whencver anything said or done in Couucil by any Alderman shall be similurly decided to be out of order, such Alderman shull be called upon by the Mayor or Chairman to make such explanation, retractation, or apology as the case may require.
52. Any member of the Council who shall have been called to order, and who after having been twice directed to withdraw as aforesaid, shall refuse to do so-or who shall persist in any line of conduct or argument or of observations which shall have bcen decided as aforesaid to be disorder ly-or who sual refuse to make auch explanation, retractation, or apology as ather act
when required so to do-or who shall be guilty of any othe of disorder, as defincd in section 48 of this Part of these By-laws, and shall refuse to make such explanation, retractation, or apology as a majority of the Aldermen then present shall consider satisfactory-shall be liable on conviction for the first offence to a penalty of not less than ten shillings nor more than five pounds; and on a second conviction for the like offence, he shall be liable to a penalty of not less than ono pound nor more than ten pounds; and on a lhird conviction, and for every further conviction, for the like offence, he shall be liable to a penalty of not less than two pounds nor more than twenty pounds.
53. Any Alderman who is dissatisfied with the decision of the Mayor or Chairman on any such question of order or of practice may, by motion on notice, respectfall $y$ worded, invite the Council to lay down a different rule or principle for the determination of any similar questions of order or of practice which may thereafter arise. Any rule or principle thus laid down shall be binding upon all parties unless und until it be rescinded, but shall have no retro-active operation: Provided lowever, that nothing herein contained shall be held to bind any Mayor or Chairman to put any motion to the Council which in his opinion is contrary to law.

## Mode of voting.

56. The Mayor or Chairman ehall put to the Council all questions on which it shall be necessary thatit a vote be taken, and shall declare the sense of such Council thereon; and he shall be at liberty to put any such question as often as may bo necessary to enable him to form and declare his opinion as to the opinion of the majority.
57. Any Alderman shall be at liberty to call for a division. In such case the question shall be put first in the affirmative and then in the negative ; and the Aldermen shall vote by show of handa, and the names and votes of the Aldermen present shall be recorded. Any Alderman who shall be present when a division is called for, and shall not vote on such divisionnot being dissbled by law from so voting-shall be liable for every such offence to a penalty of not loss than ten shillinga every such offence to a penal
nor more than five pounds.

## Protests.

58. Every member of the Council (the Major included) may protest against any resolution or rote by tho Council. Notice of the intention so to protest must however be given at the meeting when such resolution is passed or such vote is arrived at, and the protest itself must be handed or sent to the Council Clerk not later than seren dars after such notice. The Council Clerk not hater than secren dars after such notice.
shall enter every such protest in the Minuto Book; but if, in shall enter erery such protest in the Minute book: but if, in
the opinion of the Council, it be inconsistent with the truth or disrespectfully worded, it may (by resolution on notice) be ordered to be expungod. In such case the expunction shall be made by drawing a perpendicular lino with the pen throngh the entry of suely protest, with a refcrence in the margin to the resolution ordering such expunction.

## Conmiltees of the Whole Council.

59. The following sections of this Part of these By-laws shall (except as is herein excepted) be taken to apply to the conduct of busincss in Committee of the Whole Council, namely :-Sections 14 (except that it shall not be pecessary that any motion or amendment in Committee shall be seconded), $15,16,17,18,38,39,42,44,45,46,47,48,49,50,51,52,53$, 54,56 , and 57 .
60. Whenever any member of the Council shall, while the Council is in Committee of the Whole, bo considered guilty of an offence against good order within the meaning of section 54 of this Part of these By-laws, it shall be competent to any Alderman to move that the Council resume its sitting, and that such matter be reported. And if such motion be carried, such matter shall be reported accordingly, and an ontry of such report shall be made in the Minute Book. And whenever any Alderman shall have failed to rote on any occasion in Committee of the Whole Council, as required by section 57 of this Part of these By-laws, the facts shall bo reported to the Council, and such report on such facts shall be duly recorded in the Minute Book: Provided that, in the case of an Alderman failing to vote as aforesaid, no special metion that the Conncil resume its sitting shall be necessary; but it shall be the duty of the Chairman of such Committee of the Whole, in making his report of the proccedings in such Committee, whenerer such report may be made, to include in such report a statement of such failure to vote as aforesaid, and of the question as to which such Alderman has so failed to vote.
61. Whenever a decision upon any quostion of order shall have been given by the Chairman of ac Committec of the Whole Council, under tive provision of section 47 of this Part of these By-lams, any $\Delta$ lderman may move that such decision be embodied in the report to the Council of the proceedings in such Committee; and, if such motion be carricd, such decision shall be so cmbodied in such report whenerer the same shall be made.
62. Any Aldcrman may, at any time during the sitting of a Committee of the Whole Council, move that the Chairman report "progress" (or "no progress," as the case may be), and that leare be nsked to sit again on any future day; or that no leare be asked to sit ngain. And if any such motion be carricd, the Council shall resume its sittings, and a report shall be made accordingly. But no discussion shall be permitted on any such motion; and if the same be negatived, the subject then under consideration shall be discussed before another such motion sball be receivable.
63. All reports of proceedings in Committee of the Whole Council shall be made to the Council, vita voce, by the Chairman of such Committec; and a report of such proceedings shall be made in every case, except when it sholl be found on counting the number of members during the sitting of any such Committee that there is not a quorum present. In the latter case, the sitting of the Council slanll bo resumed without any motion for that purpose, and the proceclings in Committec shall be considered to have lapsed. Provided that, in the making of any such report as aforesaid, it shall not be necessary to report any such proccedings in extenso, butionly to state the result, gencral effect, or substance of such proceedings.
64. All Euch reports of proceedings in Committee of the Whoie Council shall be recorded in the Minute Book; but, except as hereinafter nentioned, no such report shall be considered as adopted by the Council, nor shall any such application, as nforesaid, for lenre to sit again, be considered to have been granted by such Council, until a motion shall have been made and passed for such ndoption or for the granting of such lenve. And every such motion for the adoption of a report, or for the granting of leare, as aforesaid, and the order of debate on such motion, shall be subject to all the same rules as other motions in Council, and the order of debate on such other motions. Provided however, that where a report shall have been made Provided however, that where a report shall hare been made
under section 60 of this Part of these By-laws of disorderly under section 60 of this Part of these By-laws of disorderly
conduct in Committec, or under 57 of this Part of these Bylaws of failure to vote on dirision, or of any decision in Committee upon any question of order, such report shall, so far as it relates to such fants, be regarded and recordel as a statement thereof; and to that extent shall not, unless for the correction of a manifest error, be interfered with mon any pretext whaterer.

## Calls of the Council.

6.5. A call of the Council may be ordered, by any resohtion of which due notice shall have been given, for the consideration of any motion or matter of business beforc such Council.
66. There shall, without any special order to that eflect, be a call of the Council for the consideration of every motion which may be made under section 55 of this Part of these By-laws, and of every motion for the rescission of uny resolution, order, or decision of such Council.
67. The call shall be made immediately before the motion or business for which such call has beeu ordered or is requirod to be made by the last preceding section shall be mored or considered. Such call shall be made as follows :-The Comecil Clerk shall call the names of all the members in their alphabetical order; each member present shall answer to his name as so called; and if any members are absent a record shall be made of such absence; but if lenve of absence to any such member shall inare previously been granted, or if such an excuse in writing shall have been forwarded to the Mayor or Council Clerk as a majority of the Council then present shall consider satisfactory, such absent member silail stand excused, and a record shall be mado of such excuse and of the reasons for the same.
68. Any member of the Council who, haring had notice of such call of the Council, shall not answer to his nume as aforessid,or who being absent shall not be legally excused as aforesaid,-or who, if absent and not so excused, shall fail to show that, by reason of extreme illness or any other sufficient cause he has been unable to send an excuse in writing as aforesaid,-or who, haring answered to his name as aforcsaid, shall not be present when a rote is taken on the motion or business as to which such call has becu made as aforesaid,-shall for cyery such offence be liable to a penalty of not less tian ton shillings nor more than five pounds. Provided that, if the consideration of every such motion or matter of business be adjourned to a future day, there shall be a further call on the resumption of such consideration; and the provisions hercin, as to penalties for absence, shall hare reference to such further call. And if there shall be more than one adjournment, this proviso shall be taken to extend to the resumption of the consideration of such motion or matter of business after every such adjournment.

## Standing and Special Committees.

69. There shall be three Standing Committees, namely, a By-luw Committee, a Committec for Works, and a Finance Comnittec. These Committees shall be reappointed every year, at the first meeting of the Council which shall be holden after the election of the Mayor.
70. The By-law Committee shall consist of the whole Council, and the Committee for Works and Finance of three members of the said Council.
71. Tho reappointment of the three said Committees as aforesaid shall be by resolution of the Council.
72. The By-law Comaittec shall prepare, for the consideration of the Council, drafte of all such By-laws as may be required for the good government of the Municipality. They shall also watch over the administration of the By-laws, and of any statute of which the operation has becn or may be extended to the Municipality; and shall toke such ateps as may be necessary for the prevention or punishment of offences against such Bylaws or slatutes, and for the preservation of public health, order, and decency.
73. The Committee for Works shall have the general direction of all works ordered or sanctioned by the Council; and the general inspection of all strects, roads, ways, bridges, public reserves, and other public places under the care and management of the Council. They shall also inquire and report, from time to time, as to such improvements or repairs as they may think necossary, or us they may be directed by resolution of the Council to inquire and report upon.
74. The Finance Committee shall examine and cheek all accounts, and shall watch gencrally over the collection and expenditure of the municipal revenues. They shall inquire and report, from time to time, as to all matters which they may consider to affect, or to be likely to affect the finances of the Municipality, and as to such matters or subjects of the like mature as they may be directed, by resolution of the Council, to inquire and report upon.
75. Special Committees may consist of any number of members, and may bo appointed for the performance of any duty which may be lawfully entrusted to a Committec, and for which, in the opinion of the Comacil, a Special Committee ought to be appointed; and no Standing Committee shall interfore with the performance of any duty which may for the time being have beon cntrusted to ans such Special Committec. The appointment of every such Special Committec shall be made by resolution, after due notice ; and it shall be incumbent on the mover of such resolution to embody therein a statement of the duties proposed to be entrusted to such Special Committee.
76. Erery Committee of which the Mayor shall not be a member shall elect a permanent Chairman of such Committoe within seven days after their appointment
77. Appointments to the By -law Committee, the Committee of Works, and the Finance Committec, ehall be for the whole
mumicipal year. The appointment of every Special Committee shall bo considered to endure until the duties for which such shammitteo have been appointed shall have been fully performed. Provided however, that nothing herein contained shall be held to affect in any way the right of such Committoe to remore any Chairman of such Committee, or to appoint another such Chnirman in his stead, or to militate against the gencral prorisions as to Committces in sections 109 and 110 of the Municipalities Act of 1867; and that so much of this By-law as relates to the appointinent, powers, and duties of Committecs shall be read and interpreted in connection with such lastmentioned general provisions.
78. The Council Clerk shall call umeeting of any Committee whenerer requested so to do by the Chairman or any two nembers of such Committee.
79. The Cuairman of each Stauding Committec shall make, or cause to be made, in a book to be kept by him for that purpose, memorandar of all the transactions of such Committce, which book he shall, on ceasing to be such Chairman, hand over to his suceessor.

## Expenditure.

80. With tho exception of omergent matters hercinafter specially provided for, no work affecting the funds of the Municipality shall be uudertalion uatil the probnble expense thereof shall have been first ascertained by the Council.
81. For repairs or emergent works, the Mayor and one momber of the Committec for Works shall have authority to expend to the extent of two pounds, during the intervals which may elapse between the mectings of the Council: Provided that in cvery case a detniled report, in writing, of erery such outlay shall be lnid before the Council at its next neeting, such report to be signed by the Mayor and the member of Committee by whom such outlay shall have been nuthorized; also, that such outhay shall only be permissible in reforence to matters coming strictly within the jurisdiction or functions of tho Conncil, and that no outlay involving a disobedience or erasion of any order or resolution of such Comecil shall, on any pretence, be thas authorized.
82. All accounts and demands of money against or from the Council shall be examined and reported on by the Finance Committee, before any order shall be made for payment of such accounts or demands.
83. No payment shall be so ordered unless there shall be a certificate or memorandim from the Committec, from the Mayor, or from the Officor of the Council to whom the direction or guardianslip of such expenditure properly belongs, showing that the demand is a legitimate one and has been duly anthorized or inquired into. It shall be the imperative duty of the Finanee Committec to see that this requirenent is fulfilled, or to report specially as to the reasons for its non-fulflment, before recommending payment: Provided howerer, that such special roport as last thercin mentioned may be embodied with the report by which payment of the amount in question is recommonded : Provided also that, in casos of special expenditure under scetion 82 of this Part of these By-laws, the report directed by that section to be laid before the Council shall, if the outlay shall have been lawfully incurred, be decmed a sufficient certificate.

## Common seal and records of the Council.

84. The common seal shall be in the custody of the Mayor ; or if found more convenient, it may, by resolution of Council, be placed in charge of the Council Clerk, and shall be kept in such secured form as the Mayor may direct.
85. The common seal shall not be attached to any paper or document unless the same be signed by the Mayor, or in case of his absence or illness by two aldermen duly authorized by resolution of Council.
86. The Treasurer shall keep such books of account, and such records, statements, and memoranda of receipts and expenditure, in such manner and form as the Council may from time to time diroct. It shall be the duty of the Finance Committee to imspect all such books of account, records, etatements, and memorands, from time to time, to ascertain that the same are properly kept, and to report at once to the Council uny act of neglect or appearance of inefficiency which they may have discoveror in the kecping of the same; also, to roport to the Council, from time to time, any changes which such Committee may think advisable in the mode of keeping the accounts.
87. The minute book, letter book, and all rate and ussessment books, books of account, records, statements, and memoranda of receipts and expenditure, clectoral rolls and other records relating to electiong, business papers, reports front Comniitecs, minutes from the Mayor, petitions, letters on municipal business addressed to the Council, or to the Mayor, or to any Oflicer or servant of the Council, orders, reports, returns, ant memoranda relating to municipal business, drawings, maps, plans, contracts, specifications, agreements, and ull other books and papers connected with the business of the Council, shall be deomed recorls of the Conncil. All such records other then the minute book and other books, nud other than clectoral rolls and other records relating to elections, shall be numbered and
filed in duc order, and shall be duly registered by the Council Clerk in a book to bo kept by him for that purposo. Upon tho face of every document thus registered to which thero is any reference in the minute book, there shall be a note of the page wheroin it is so referred to; and when any order bas heen made by the Council, or a report has been brought up by any Commilitec thereof in reference to any docuncent so registered as aforesaid, a note of such order or report shall be made upon such document. It shall be the duty of the By-law Committee to inspect tho records from time to time to ascortain that the same are properly kept as aforesaid, and to report at once to the Coumcil any act of neglect or appearance of inefficiency which they inay discover in the keeping of such records.
88. No member or officer of the Council shall be at liberty to take any impression of the corporate seal, or to show, lay open, or expose any of the books or records of the Council to any person other than a member of the same, without leave from such Council, except as otherwise provided by law. Any member or officer of the Council who shall be guilty of a brench of this section shall be lisble on conviction, for the first offence, to a penalty of not less than fire shillings nor more than two pounds; for a second oficnce, to a penalty of not less than one pound nor more than ten pounds; and for a third and cvery subsequent offence, to a penalty of not less than five pounds nor more than twenty-five pounds.
89. Any pereon removing any such book or other record of the Council as aforessid, from tho Council Chamber, or the place where by direction of the Council such book or other record is usually kept, without leuve for such removal having been first obtained from such Council; or without other lawful cause for such removal, as hereinafter provided, shall, for every such offence, be liable to a ponalty of not less than ten shillings nor more than ton pounds. And nothing hercin contained shall be held to affect the further liability of uny person who shall have removed such book or other record as aforesaid, and shall not hare returned the same, to prosccution for stcaling such book or record, or to any action at law for detention of tho same, as the circumstances of the case may warrant: Provided that leave for tomporary removal of a book or other record may bo granted to the Council Clerk or the Treasurer by the Mayor, in order that such Clerk or Treasurer may post up entries, prepare returns, or perform any other duty which it may be necessary that he ahould perform ; also, that the Mayor, or the Chairmani of any Committee, or any Alderman acting for any such Chairman, may temporarily remore any record necessary for the preparation of a minute or a report, or for the purposes of any prosecution or suit at law by, against, or at the instance of the Council; but in all such cases such Clerk, Treasurer, Mayor, Chairman, or Alderman, as the case may be, shall give a receipt under his hand for excry document so removed, and every such recoipt shall be carefully preserved amone the records until the book or other record to which it refers shall have been returned, when such receipt shall be destrojed: And provided also, that the Mayor, Council Clerk, or other officer of the Council who may be subpenaed to produce any book or other record of the Council in a Court of law, shall have the right to remove auch book or other record for the purpose of obeying such summone, but shall return such book or record as speodily as may be, and shall, before removing the same, leave at the Council Chamber a receipt for such book or other record as aforesnid. And every such person so temporarily remoring any book or other record of the Council as aforesaid, shall be legally responsible for the safe leeping and return of the same.
90. Any person destroying, defacing, or altering any record of the Council, shall for every such offence be liable to a penalty of not less than five pounds nor more than fifty pounds.

## Officers and servants.

91. No appointment to any permanent office at tho disposal of the Council shall tuke place until public notice shall have been given as hereinafter prorided, inviting applications from qualified cundidates for the same.
92. All tenders for permauent office shall be opened in public and considered in private, and shall be finally decided by ballot, in such mode as may at the time be determined on, whenever there is more than one condidate for such permanent office.
93. All bonds giren by officers or serrants of the Council for the faithful performance of their duties, shall be deposited with the Mayor, Attorncy, or Bankers of the Corporation, as the Council may order; and no officer or sersant of the Council shall be received as surety for any other such officer or servant.
94. The Council Clerk, in addition to the duties which by the Municipalities Act of 1867, or by tho present or any other By-laws thercunder, he may be required to perform, siall be the Cicre of all Revision Courts held in the Manicipality under the prorisions of the said Municipalities Act. IIe shall also, under the direction of the Mayor, conduct all correspondence Which may be necessary on the part of the Council. Ho shall likewise have charge of ail the records of such Council, excep such books or docunents as may (as hereinafter provided) bo entrusted to any other oflicer, and shall be responsible for the
safe keeping of such records. He chall generally asgist the Mayor in carrying out the orders of tho Council and the duties Mayor in carryin
of Buch Mayor.
95. The Treasurcr shall hare clarge of auch books of account and other records of the Council as are mentioned in section 87 of this part of these By-laws, and shall be responsible for the safe keaping of the same. Any other officer of the Council may bave any other records thereof committed to his charge by an order of the Council, and in such case shall be responsible for the safe keeping of such records.
96. Tho Mayor shall oxercise a general supervision over all officers and servants of the Corporation, and may order the preparation of any such return or statement, or the giving of any such explanation or information by any such officer or serrant as ho may think necessary, unless such return or statement shall have been already prepared, or such explanation or information already given, and such return, statement, explanation, or information, is on record as hereinbefore provided; or unless the Council shall thave expressly forbidden or diapensed with the preparation of such return or statement, or the giving of such explanation or information. All such returns or statements as aforesaid shall be in writing, and shall be rocorded. All such explanation or information may, except as hereinafter provided, be either rendered viva voce or put into writing as the Mayor may direct.
97. All complaints against officers or servants of the Corporation must bo in writing, and must in cvery case be signed by the person or persons complaining, and no notice whatever shall be taken of any complaint which is not in writing or is anonymous. All such complaints may be addressed to the Mayor, who immediately upon tho receipt of any such complaint, and without laying the same before the Council, shall have power to investigate the same. And if any such complnint be made to the Council or to any member or officer thereof, it shall be referred to and investigated by the Mayor before it shall be in any way (otherwise than by such reference) ordered upon or dealt with by such Council. Provided that every report, explanation, and information which may be made or renclered in roference to every such complaint shall be in writing. And such Mayor shall state in writing the result of every such investigntion, and his opinion as to what order (if any) ought to be made in connection therewith. And such complainti, with all reports, explanations, and information as aforesaid in conncection therewith, and the Mayor's statement as aforesaid thereon which shall bo holden after the Mayor shall have made such atatement, and shall be duly recorded : Provided further that nothing hercin contained shall be held to affect in any way the special powers conferred on the Mayor by section 152 of the Municipalities Act of 1867 , or any other special power which now is or hereafter may be conferred by statute upon such Major.

## Miscellaneous.

98. No leave of absence shall be granted to the Mayor or to nny Alderman otherwise than by resolution of the Council adopted after due notice.
99. Whencver it is decided that any work shall bo executcd or any materials supplied by contract, tenders for the execution of such work or the supply of uuch material shall be called for by public notice as hereinafter proxided.
100. A draft of.every intended By-law shall be in the office of the Council for at least seven days before such draft shall be taken into consideration by such Council, and shall be open to tho inspection of any ratepayer who may desire to inspect the same; and public notice shall be given, as hereiuafter provided, that such draft is so lying for inspection.
101. Whenever a motion for the rescission of any order, resolution, or vote of the Council shall have been negatived, no other motion to the same effect shall be pernissible until a period of three months shall have elapsed from the time of negativing such first-mentioned motion. Provided that nothing herein contained shall be held to prohibit the reconsideration and amendment of any by-law which may have been submitted to the Governor for confirmation, and may have been remitted to the Council with suggested amendunents of the same; or the passage after due notice, as hereinbefore provided, and in due course of law, of any By-law for the repeal or amendment of any other By-law.
102. Whenerer the consideration of any motion or matter of business shali haro been interrupted by reason of a quorum not having been present, the resumption of such consideration may be ordered by resolution of the Council after due notice; and such consideration sball in such case be resumed at the point where it was so interrupted as aforesaid.
103. Such suits or informations for the enforcement of penaltios for or in respect of breaches of the Municipalities Act of 1867, or of any By-law made thereunder, or of any statute the operation of which may have been extended to the Municipality, as may have been directed by the Council, or by the By-law Committee, or by the Mayor, to be commenced or laid, shall bo so commenced or laid as follows, namely:-When against a member of the Council, or an Auditor, or any officer of the Corporation, by the Council Clerk, uuless such Council Clerk shall be the officer to be proceeded against, and in such case by any other person named by the Council for that purpose; when against any other person, by the ollicer to whom the carving out of the statutory prorision or By-law imposing the penalty sought to be enforecd has been entrusted; and if there shall be no such offer, then by such officer or person as shall shall be no such oficer, then by such ollicer or person as shal
bo appointed for that purpose by the Council, or the By-law Committee, or the Mayor, as the case nny be, on directing such such suit or information as aforesaicl. And no such suit shall be brought or information laid as aforesaid against any member of the Council or Auditor, except by order of such Council; nor shall any similar proceeding be taken against any offecer of the Council, except on the order of such Comacil or of the Mayor, nor against any other person, execpt upon tho order of the Council or of the Mayor, or of the By-law Committee; and no such suit shall be directel to bo brought, nor shall any such information be directed to be laid as aforesaid, except on an express resolution of the Council, in any case where tho bringing of such suit or the laying of euch information will be adverse to any provious direction by such Council, or where on the trial or hearing of any such suit or information the same shall have been dismissed on the merits. Provided that, in any such case, the conduct or prosecution of any such suit or information may, on the order of the Council, be entrusted to any attorncy.
104. In all cases where pnblic notico is or shali be required to be given, by any By-law, of any appointinent, resolution, hat, order, or reguation done, made, or pussed, or proposed to be made, done, or passed by the Council, or by any Committee thereof, or by the Mayor or any officer of the sniil Council, such notice ahall be given and published by posting the eame on or near the outer-door of the Council Chambers for the spaee of seven days, and by advertising the same in some nowspaper circulating in the Municipality, if it should be found decirable.
105. In all cases not herein provided for, resort shall be had to the rules, forms, aud usages of the Legislative Assembly of New South Wales, so far as the same are applicable to the proceedings of the Council.
106. Any eucle section or sections of this Part of these By-laws, or any portion or portions of such sections or section as are not hercinalter excepted, may be suspended by resolution, on notice, at any meeting of the Council. Prorided that there sluall be a distinct statement in crers such resolution, and in tho notice of the motion whercon the same shall lise been adopted, for the purpose for which such suspension is required; and that for every separate matter or business ns to which such suspension is so required, there shall be a separate resolution as aforesaid. And provided also, that the following sections hercof shall never be suspended, nor Elall any one of them, nor any portion of any such section be auspended, on any pretence whatsocver, namely :-Sections $5,6,7,8,9,20,21,22,23,25,26,27,28$ $29,30,31,34,38,39,42,44,47,48,49,50,51,53,54,55,56$, $57,58,59,60,61,64,65,66,67,68,69,70,71,72,73,74,75$, $81,82,83,81,85,86,87,88,89,90,91,95,98,99,100,101$, 104, 106, 107 , and 108.

Made and passed by the Council of the Municipnl District of Nowra, this elerenth day of April, in the year of our Lord ono thousand eight hundred and seventy-two.

HENRY MOSS,
Mayor.
Charles C. Colfahas,
Council Clerk.

## PARTI.

Procrrdings of the Council and Committees-preserration of order at Council meetings-dutice of officers and servants; \&c.

## Meetings of the Council.

## Ordinary Meetings.

1. The Council shall meet for the dispatch of business at the hour of cight o'clock, p.m., on every alternate Monday, unless such day elaall happen to be a public holiday. In the latter case the meeting shall be held on such other day as the Mayor may appoint.

Election of Chairman in nlsence of Mayor. Adjournment for want of quorum.
2. If at any meeting of the Council the Mayor be absent at the expiration of fiftecu minutes after the time appointed for holding such mecting, the Aldermen then present shall proceed to clect, from among themselres, a Chairman for such meeting. Whenever thero shall be an adjournment of any such mecting for want of a quorum, the names of the members prosent shall be taken down, and ehall be recorded in the Minute Book.

## Order of Business.

## Business of Ordinary Meetinge.

3. The following shall be the order of buriness at all meetings of the Council other than special meetings :-
4. The minutes of the last preceding mecting to be read, corrected if erroncous, and verified by the signature of the Mayor or other Chairman. No discussion to be per mitted on such minutes, except as to whether they are correct.
5. Petitions (if any) to be prosented and dealt with.
6. Correspondence to be read, and, if necessary, ordered uроп.
7. Reports from Committees, and minutes from the Mayor (if any), to be presented and ordered upon.
8. Questions as to my matters under the jurisdiction or within the official cognizance of the Council, to be put and replied to; and statements as to any facts, matters, or circurnstances requiring attention by the Council or any of its Committees or officers, to be made.
9. Motions of which notice has been given to be dealt with in the order in which they stand on tho business paper. 7. Orders of the day to be disposed of as they stand on the business paper.

Business may be dealt with out of regular order.
Provided that it shall be competent to the Council, at any time, by resolution, without notice, to entertain any particular motion, or to deal with any particular matter of busincss, ont of its regular ordor on the business paper, without any formal susponsion of this section; also, and in like mauner, to direct that any particulur motion or matiter of business shall have precedence at a future meeting.

## Business at spectal mectings.

4. At special meetings of the Council the business, after the minutes shall have been read and verified-which shall be done in the same manner as at an ordinary meeting-shall be taken in such order as the Mayor, or the Aldermen at whose instance such special meeting shall have been called, may have directed.

## Business puper for ordinary meeting-how prepared.

5. The business paper for every meeting of the Council, other than a special mecting, shall be made up by the Council Clerk, not less than two nor more than three days before the day appointed for such meeting. He shall enter on euch basiness paper a copy or the substance of every notice of motion, and of every requisition or order as to business proposed to be transacted at such meeting which he shall have received, or shall have been required or directed so to cnter, in due course of haw, and as hereinafter provided. Every such cutry shall be made subject to the provisions of section 3 of this Part of these Bylaws, in the same order as such notico, requisition, or direction shall have been reecived.

Business paper for sprecial meeting.
6. The business paper for each apocial meeting shall contain only such matters as shall have been specially ordered to be entered thereon by the Mayor or Aldermen calling such meeting.

## Summons to members.

7. The summons to members of the Council for overy meeting thereof shail be propared from the business paper for such meeting, and shull embody the substance of auch business paper.

## How business paper is to be disposed of.

8. The business paper for each mecting of the Council shall, at such meeting, be laid before the Mayor or Chairman, who sball make a note upon such business paper of the mode in which cach matter entered thereon has been dealt with; and such business paper so noted shall be a record of the Council.

Notices of motion, \&c., to be numbered as receired, and preserved until matter disposed of; nuless withdrawn before business paper made up.
9. All notices of motion, and all requisitions from Aldermen, and directions from the Mayor as to the entry of any particular matters of business for the consideration of the Council at its then next or any future meeting, shall be numbered by the Council Clerk as they are received; and each such notice, requisition, and direction shall be preserved by such Clerk until after the matter to which it relates slall havo been disposed of, and the record in the Minute-book of the manner in which such matter has been so disposed of shall have been duly verified as required by section 3 of this Part of these By-laws: Provided, however, that the person giving or forwarding any such notice of motion, requisition, or dircction to the Council Clerk, shall be at liberty to withdraw the same at any time before the making up of the business paper.
After business paper made up, all notices, \&c., to be the property of the
10. After the business paper shall have been made up as aforesaid, all the said notices of motions, requisitions, and directions, as to which cntries have been made thereon, shall be the property of the Council, and shall not be withdrawn, altered, or amended without leave having been first obtained from the Council for such withdramal, alteration, or amendment.

## Motions and amendments.

Motions-how to be moved.
11. Except by leave of the Council, motions shall be moved in the order in which thes stand on the business paper; and if not so moved or postponed shall be struck from such business paper, and be considered to have lapsed.

## Absence of proposed mover.

12. No motion of which notice shall have been entered on the business paper shall, except as hereinafter provided, be procceded with in the absence of the Alderman by whom such notice shall have been giren: unless by some other Alderman producing a written anthority for that purpose from such firstnamed Alderman.

Motion to be seconded.
13. No motion in Council shall be discussed unless and until it be seconded.

## Amendments may be moved.

14. When a motion in Council shall have been made and scconded, any Alderman shall be at liberty to move an amendment thereon, but no such amendment shall bo discussed unless and until it be seconded.

## Motions and amendments to be in writing

15. No motion or amendment shall be discussed until it shall bave been reduced into writing.

## Ouly one amendment at a time

16. No second or subsequent amendment shall be taken into consideration until tho previous amendment or amendments shall have been disposed of.

## Ameuded question-further amendment may be moved thereon

17. If an amendment be carricd, the question as amended thereby shall become itsclf the question before the Council, wherenpon any further amendment upon such question may be moved.

## How exbsequent amendments may be moved.

18. If any amendment, cither upon an original question or upon any question amended as aforesaid, shall be negatived, then a further amendment may be moved to the qucstion to which such first-mentioned amendment was mored, and so on ; procided that not more than one question and ono proposed amendment thereof slall be before the Council at any one lime.

## Motione for adjourament.

19. No discussion shall be permitted on any motion for adjourmment of the Council; and if, upon the question being put on any stich motion, the same be negatived, the subject then under consideration, or the next in order on the business paper, or any other on such paper that may be allowed precedence, shall bo discussed before any subsequent motion for adjournment shall be receivable.

Requisitions from Aldermen how to be dealt with.
20. Every requisition by an Alderman, that any particular matter of business be brought before the Council, shall be regarded and treated as a notice of motion by such Alderman that such business be taken into consideration by the Council. And he shall be called upon in due order to move that such busincss be so considered, or to make any other motion which he may think fit in reference thereto, which shall be consistent with the notico of such business and with good order. And if such Alderman be absent, or, if being present and so called upon, he shall make no such motion, then it shall be open to any other Alderman to make such motion. And when any such motion shall hare been made, it shall be dealt with in precisely the same manner as if notice thereof had been given, subject, however, to any objection which may exist as to its not being in accordance with the notice actually given of such business or with good order. And if no motion shall be made in referonce to such business, the entry relating thercto shall be struck from the business paper.

## Orders of the day.

## Of what orders of the day shall consist.

21. The orders of the day shall consist of any matters, other than motions on notice, which the Council shall at a previous meeting thereof have directed to be taken into consideration, or which the Mayor or any Committee of the Council shall have directed to be entered on the business paper for consideration.

How they are to be dealt with.
22. Section 20 of this Part of these By-laws shall be considered applicable to orders of the day. And the Alderman who has the usual charge of, or who has previously moved in reference to, the particular business to which any such order of the day relates, shall be the person cailed upon to move: Provided that as to any order of the day entered as aforesaid, by direction of the Mayor, such Mayor may arrange with any Aldcrman to move, and may in such case call upon the Alderman with whom he has so arranged.

## Petitions.

Petitions to be respectfully worded.
23. It shall be incumbent on every Alderman presenting a petition to acquaint himself with the contents thercof, and to ascertain that it does not contain language disrespectful to the Council. The nature and prayer of every such petition shall be stated to the Council by the Alderman presenting the same.

## 1'etitions-how received.

24. All petitions shall be received only as the petitions of the parties signing the same.

## How politions are to bo dealt with

25. No motion shall, unless as hereinafter provided, be permissible on tho presentation of a petition, except that the same be received, or that it be received and referred to one of the permanent Committces hercinafter montioned; or that it bo reccived, and that its consideration stand an order of the day for some future meeting: Provided, however, that if any Alderman shall have given due notice of a motion in reference to any petition, and such petition shall have been presented before such Alderman shall have been called upon to move such motion, the said motion shall, if otherwise unobjectionable, be considered in order.

## Correspondence.

Duties of Mayor as to correspondence.
26. The Mayor shall have the samo duty in reference to letters addressed to the Council, before directing the same to be read, as by section 23 of this Part of these By-laws is imposed upon Aldermen presenting petitions. The Mnyor shnll direct as to the order in which all correspondence shall be read, and no letter addressed to the Council shall be presented or read by any Alderman. If the Mnyor be absent, and shall not have examined any such letters addressed to the Conncil, or have given any such directions as aforesaid, then the dutios imposed by this section shall devolve upon the presiding Alderman.

## Soc. 25 to apply to letters.

27. Section 25 of this Part of these By-laws shall be considered as fully applicable to letters addressed to the Council as to petitions.
Lettere sent not to be discussed, but overy letter many be subject of motion.
28. No discussion shall be permitted in reference to any letters which have been written and sent by tho Mayor, or by any officer of the Council, and copies of which may be read to such Council: Prorided, howerer, that auy notice of motion, consistent with good order, may be ontertained with reference to any such letters, whether read or not, or with reference to any letters nddressed to the Council, which the Mayor or presiding Alderman may not havo ordered to be read as aforesaid.

## Reports from Committees and Minutes from the Mfayor.

## Form of report.

29. All reports from Committecs shall be written on foolscap paper, with $\Omega$ margin of at least one-fourth of the width of such paper ; and shall be signed by the Chairman of such Committee, or, in his absence, by nome other member of tho same.

## Mayor's minute.

30. The Mayor shall have the right of directing the nttention of the Council to any matter or subject within its jurisdiction or official cognizance, by a minute in writing. Every such minute shall be written upon paper of the same kind and with the same margin as a report from a Committee, and shall be signed by such Mayor.

How reports, \&e., are to be dealt with. Duties of Chnirman, \&c., in certnin cascs.
31. No motion shall (unless as hereinafter provided) be permissible on the presentation of a report from a Committee or a minute from the Mayor, except that the same be received, or that it be received and that its consideration stand an order of the day for somo futuro mecting: Provided, however, that if suy Alderman shall have given due notice in reference to any such report or minute, or if an order for the consideration of such report or minute shall have been entered among the orders of the day, such motion or order may, if otherwise unobjectionable, be mored or considered in due course. And whenever any such report or minute embodies any recommendation which connot legnally bo carried out without any due notice, and it is, neverthcless, desirable that such report or minute shall be definitely ordered upon during the meeting of the Council at which such report or minute is presented, it shall be the duty of the Chairman, or member of such Committec signing such report, or of sucli Mayor, as the casc may be, to give or transmit to the Council Clerk such a notice of motion, requisition, or direction as aforessid, as will enable such Council Clerk to make the necessary ontry on the business paper, and to give such due notice.

## Questions and statements.

## Limitntious ns to questions and statements.

32. No question or statement shall be allowed to be put or made which is inconsistent with good order, or is not in strict necordance with the requirements of section 3 of this Part of these By -laws.

## Notica to be given.

33. Sufficient notice of erery question shall be given to the person who is expected to reply thereto, to allow for the consideration of such reply, and, if necessary, for a reference to other porsons or to documents.

Ancwer not compulsory.
34. It shall not bo compulsory upon any person questioned as aforesaid to answer the question so put to him.

Question to be put without argument, \&c.
35. Every such question must be put categorically, without any argument or statement of fact.

## Similar provision as to statements.

36. Every such statement must be made without argument.

No discussion on question, \&c. Rights of objection, and of subsequont motion, reserved.
37. No discussion shall be permitted as to any such question, or as to any reply or refusal to reply thereto, or as to any such statement, at the time when such question is put, or such roply or refusal to reply is given, or such statement is made: Provided, howerer, that nothing herein contained shall prevent the taking of any objection as to any such question or statement being out of order, or shall present the discussion, after due notice, as hereinbefore provided, of any matters properly arising out of or relating to any such question, or reply, or refusal to reply, or any such statement as aforcsaid.

## Order of debate.

Mode of addressing the Councii, \&e.
38. Every Alderman who shall mako or second any motion, or shall propose or second nny amendinent, or shall tako any part in any debate or discussion, or shall put or reply to any question, or shall mnke any statement, or shall in any other way, or for any other purpose, address observations to the Council, shall, while so doing, stand up in his castomary place (nnless he shall bo prevented from so doing by reason of somo bodily infirmity) and shall address himself to the Mayor, or other Chairman then presiding: Provided that in the case of a question, such question may, by permission of such Mryor or Chairman, be put directly to the Aldcrman or officer to bo questioned, and may be replied to in like manner; but in overy such casc the question so put and the answer thereto shali be subject to every legal objection on the ground of disorder or irrelevancy. And all members of the Council shall, on all occasions, Then in such Council address and spenk of each other by their oflicial designations, as Mayor, Cbairman, or Alderman, as the cuse may be.

Spanker not to be interrupted, if in order.
39. No Alderman shall be interrupted while thus speaking, unless for the purpose of calling him to order, as hereinafter provided.

Limitations as to number of speeches, \&c
40. Etery mover of an original motion shall have a right of genoral reply to all obscrvations which may have been made in reference to such motion, and to any amendments moved thereon, as well as a right to spak upon every such amendment. Every Alderman, other than the mover of such original motion, shall have a right to speak once upou such motion, and on every amendment thercon. No Alderman shall speak oftener than once upon any question other than a question of order, unless when misrepresented or misunderstood, in which case he elall be permitted to explain, without adding ony further obscrvations than may be necessary for the purpose of such explanation. And no Alderman shall be allowed to apeak at any one time longer than fifteen minutes.

## Mover and seconder.

41. An Alderman who has moved any notion or amendment shnll bo considered to have spoken thercon; but an Alderman who shall hare seconded any such motion or amendment without any further obserration than that ho seconded the same shall be at liberty to speak ou such motion or amendment.

## Speaker not to digress, \&c.

42. No Alderman shall digress from the subject under discussion, or shall make personal reflections on, nor impute improper motives to, any other Alderman.

## Adjournment of debate.

43. A debate may be adiourned to a later hour of the day, or to any other day specified; and the Alderman upon whose motion such debate shall have been so adjourned shall bo entitled to pre-audience on the resumption of the same

## Mnyor to decide as to pro-audience.

44. If tiwo or more Aldermen rise to speak at the same time, the Mayor or Chairman shall decide which of such Aldermen shall be first heard.

Alderman may require questions to be stated, \&e., under certain restrictions.
45. Any Alderman may request the question or matter under discussion to be read or stated, for his information, or may require tho production of any records of the Council bearing upon such question or matter which are readily accessible : Provided however, that no such request or requisition shall be so made ns to interrupt any other Alderman when speaking; or materially
to interrupt the discussion. Also, that if any such request or requisition shall appear to the Mayor or Chairman not to hare been made bond fide it shall not be complied with.
Mayor or Clairman not to move or second motion, \&e., but mny addrefs Council thereon.
46. The Mayor or Chairman shall not move or second any motion or amendment, nor put any question, as provided for by section 3 of this Part of these By-lams, except as is further provided for by section 38 of tho same. But such Mayor or Chairman shall have the same right as any other Alderman to speak once upon every such subject or amendment. The Mayor or Chairman shall rise when so spenking (unless prevented by some bodily infirmity from so doing), but shall be considered as still presiding.

## Questions of order.

## Mrayor or Chairmnn to decide points of order.

47. The Mayor or Chairman shall preserve order, and his decision on disputed points of order or practice shall be final, except in so far as the same may bo questioned, as in the manner hercinafter provided.

## Acts of disorder.

48. Every member of the Council who shall commit a breach of any section of this Part of these By-laws, or who shall move or attempt to more auy motion or amendment embodying any matter as to which the Council has no legal jurisdiction, or who shall in any other way raise or attempt to ruise nuy question, or shall address or attempt to address the Council upon any subject which the said Coumcil has no legal right to entertain or discuss, or who shall use any other language which according to the common usage of gentlemen would be held disorderly, or who shall say or do anything calculated to bring the Courcil into contempt, shall be out of order.

Mayor, \&c., may call Member to order.
49. The Mayor or Chairman may, without the interposition of any other member of the Council, call any Alderman to order, whenever, in the opinion of such Mayor or Chairman, there shall be a necessity for so doing.

## Any Member may raise question of order.

50. Erery member of the Council shall bave the right of calling the attention of the Mayor or Chairman to any motion, amendment, statement, argument, or observation moved, used, or made by any other member which such first-named member may consider out of order. .

## Mode of proceeding thereon.

51. A member called to order shall withdraw while the ques. tion of order is being discussed and decided upon, unless specially permitted to offer an explanation, retraction, or apology ; but on obtaining such special permission such momber may explain, retract, or apologize for the matter or remark alleged to have been out of order. And if such explanation, retractation, or apology be deemed satisfactory, no further discussion on the question of order shall be permitted. If any member, on being called to order, shail ask such permission to explain, retract, or apologize as aforesaid, the Mayor or Chairman may of his own authority grant or refuse such permission, as he may think fit, unless any member shall require the sense of the Council to be taken on this quastion. In such case it shall be the duty of the Mayor or Chairman to take the sense of the Council, nt once, and without discussion, as to whether such permission shail be granted. And when any such explanation, retractation, or apology shall have been made-or offered by permission of the Mayor or Chairman, the latter slatll in like manner decide, or, if required so to do, shall take the sense of the Council, as to whether such explanation, retractation, or apology in considered sufficient. If such pormission be jefused, or if such explanation, retractation, or apology be considered insufficient, the question of order sball be considered and decided before any further busivicss is proceeded with : Provided that if such Mayor or Chairman shall have decided tho question of order before 'any momber shall have required the sense of the Council to be taken in reference thereto, such question of order shall not be rc-opened. And provided further, that nothing herein contnined sball be held to affect the right of such Mayor or Chairman to decide finalls, as hereinbefore proridod, upon any such point of order, after the same shall have been discussed.

## Decision of points of order

52. The Mayor or Chairman, when called upon to decide points of order or practico, shall state the provision, rule, or practice which he shall deem applicable to the case, without discussing or commenting upon the same.

## Motions out of order to be rejected. Mem

53. Whenever it shall have been decided as aforesaid that any motion, amendment, or other matter before the Council is out of order, the same shall be rejected; and whenever any
thing said or done in Council by any Alderman shall be simuilarly decided to be out of order, such Alderman shall be called upon by the Mayor or Chairman to make such explanation, retractation, or apology us the case muy require.

## ramalties for persisting in disorderly conduct.

54. Any member of the Council who shall have beon called to order, and who, after haring been twice directed to withdraw as aforesaid, shall refuse to do so, or who shall persist in any line of conduct or argument, or of observations, which shall have been decided as aforesaid to be disorderly, or who shall refuse to mako such explanation, retractation, or apology as aforesaid, when required so to do, or who shall bo guilty of any other act of disorder, as defined in section 4 S of this Part of these Bylaws, and shall refuse to make such explanation, retractation, or apology as a majority of the Addermen then present shall consider satisfactory, shall be liable, on conviction, for the first offence, to a penalty of not less than ton shillings nor more than five pounds; and on a second conviction for the like ofionce ho shall be liable to a penalty of not less than one pound nor more than ten pounds; aud on the third conviction and for every further couriction for the like offence, he shall be liable to a penalty of not less than two pounds nor more than twenty pounds.

Power of Councll as to laying down general rules, \&o.
55. Any Alderman who is dissatisfied with the decision of the Mayor or Chairmau on any such question of order or of practive may, by motion on notice, respectfully worded, invite the Council to lay down a different rule or principle for the determination of any similar questions of order or of practico which may thereafter arise. Any ruie or principle thus laid down shall be binding on all parties, unless und until it be rescinded, but shall have no retroactive ojperation: Provided, however, that nothing herein contained shall be held to bind any Mayor or Chairman to put any motion to the Council which, in bis opinion, is contrary to law.

## Mode of roting.

## How questlones are to be put.

56. The Mayor or Chairman shall put to the Council all questions on which it shall be necessary that a vote be taken, and shall declare the sense of such Comail thereon; and he shall be at liberty to put any such question as often as may bo necessary to enable him to form and declare his opinion as to the opinion of the majority.

Dlvisions.- $\mathbf{l}$ 'enalty for refusing to vote.
57. Any Alderman shall be at liberty to call for a division ; in such case the question shall be put first in the affirmative and then in the negative; and the Aldermen shall rote by show of hands, and the names and votes of the Aldermen present shall be recorded. Any Aldermen who shall be present when a division is called for, and shall not voto on such division, not * being disabled by law from so voting, shall bo linble for every such offonce to a penalty of not less than ten shillings nor moro than five pounds.

## Protests.

Mode of protesting. - 1 rotest to be rocorder, but may, under certain circumstances be expunged.
58. Every member of the Council (the Mayor included) may protest agsinst any resolution or rote by the Council ; notice of the intention so to protest mast, howerer, be given at the meeting when such resolution is passed or such vote is arrived at, and the protest itself must be handed or sent to the Council Clerk not later than seven days after such notice. The Council Clerk shall enter every such protest in the Minute-books ; but if, in the opinion of the Council, it be inconsistent with the truth, or diarespectfully worded, it may (by resolution on notice) be ordered to be expunged. In such case the expunction shall bo mado by drawing a perpendicular line with the pen through the entry of such protest, with a reference in the margin to the resolution ordering such expunction.

## Committees of the whole Council.

Inles applicable to business in Committee.
59. The following sections of this Part of these By-linws shall (except as is herein excepted) be taken to apply to the conduct of business in Committee of the whole Council, nauclysections 14 (excopt that it shall not be necessary that any motion or amendment in Committec shall be seconded), 15, 16, 17, 18, $38,39,42,44,45,46,47,48,49,50,51,52,53,54,56$, and 57 .

Disorderly conduct in Committec.-Refusal to vote.
60. Whenever any member of the Council shall, while the Council is in Committee of the whole, be considered guilty of an offence against good order within the measing of section 541 of this Part of theso By-laws, it shail be competent to any Alderman to move that the Council resume its sitting, and that such matter be reported; and if such motion be carrica such matter shall be reported necordingly, and an ontry ol such report shall be made in the Minute-book; and whenever any Alderman
hall have failed to vote on any occasion in Committee of the whole Council, as required by section 57 of this Part of these By-haws, the facts shenll be reported to the Coumcil, and such report on such facts shail be duly recorded in the Minute-book : Provided that in the case of an Alderman failing to roto as uforceaid, no special motion that the Council resume its silting shall be necessary, but it shall be the duty of the Chairman of such Committee of the Whole, in making his report of the proceedings in such Commiltee, whenever such report may be made, to include in such report a statement of such frilure to vote as aforesaid, and of the quostion as to which such Alderman has so failed to vote.

Decisions in Committec on points of order may be reported.
61. Whonerer a decision upon any question of order shall have bten given by the Chairmun of it Committee of the whole Comeil, under the provision of scetion 47 of this Part of these By-haws, any Alderman may more that such decision be cabbodied in the report to the Council of the proceedinus in such Committee; and if such motion be carried, such decision ehall be so embodied in such report, whonerer the same shall be mado.

## How progress may be reported, sc

62. Any Alderman may at any timo during the sitting of a Committee of the whole Council more that the Chairman repori progress (or no progress, as the case may be), and that learo bo asked to sit agnin nt a later period of tlae same day, or on any further day; or that no leave be asked to sit again; and if any such motion be carrich, tho Council shall resume its siltings, and a report shall be made accordingly; but no discussion shail be perinitted on any such motion, and if the same be negatived, the subject then under consideration shall be discussed before another euch motion shall be receirable.
reports of proceeciings in Committio-Want of quorum in Committee.
63. All reports of proceedings in Committee of the whole Council shall be made to the Council viea voce by the Chairman of such Committeo; and a report of such proceeding shall be made in every case, except when it shall be found, on counting the number of members during the sitting of any such Committec, that there is not $n$ quorm present. In the latter case, the sitting of the Council shall be resumed without any motion the sitting of the Councis shall be resumed without any motion
for that purpose, and the procedings in Committec shall be for that purpose, and the proceedings in Committee shall be
considered to have lapsed: Provided that in the making of any such report is aforesaid, it shail not be necessary to report my such procecdings in extenso, but only to state the result, general eflect, or substance of such proceedings.

## How reports are to be denlt with.

64. All such reports of proccedings in Committee of the whole Council shalt be recorded in the Minute-book; but, excopt as loceinafter mentioned, no euch report shall be considered as adopted by the Council, nor shall any such application as aforesaid for leare to sit again be considered to hase beou granted by such Council, until a motion shall have been made and passed for such adoption, or for the granting of such leare. And every such motion for the adoption of a report or for the granting of leave as aforesaid, and the order of debate on such motion, shall be subject to all the same rulos as other motions in Conncil, and the order of debate of such other motions: Provided, however, that where a report shall hare been made under section 60 of this Part of these Br-laws, of disorderly couduct in Committee, or under section 57 of this Part of these Br -laws, of failure to vote on dirision, or of anr decision in Conumittee upon any question of order, such report shall, so far as it rolates to such licels, bo regarded and recorded as a statement thereof; and to that extent shall not, unless for the correction of a manilifest error, be interfered with upon any jrotext whatever.

## Calls of the Councie.

How call may be ordorel.
G5. A c:lll of the Council may be ordered by any resolution of which due notice shall have been given for the consideration of any motion or matter of business before such Council.

## Such esil compulsory in certain cases.

(if. There shall, without any specinl order to that effect, be a aill of the Council for the consideration of overy motion which may be made under section 55 of this Part of these By-laws, and of every motion for the rescission of any resolution, order, or docision of such Council.

## BY-LAWS.-PART I.

## Regulation of proceedings.

 Days of ordinary Mecting.1. The Council shall meet evcry alternate Monday at the hour of half-past seven in the evening, or on such other day and at such hour as may by resolution of the Council be from time to time appointed.

Course of procedure.
2. The following shall be the course of procedure at such meetings, viz,:-
(1) The reading and confirmation of the minutes of the previous meeting.
(2) The rending of official correspondence.
(3) The presentation of petitions.
(4) Reports brought up from Committees.
(5) Motions of which notice has been given.
(6) Orders of the day.
(7) Such other business as may lawfully be brought before the Council.

## Petitions.

3. All petitions shall be reccived as the petitions of the persons signing the eame only; and it siall be incumbent on every Alderman presenting a petition to acquaint himself with the Alderman presenting a petition to acquaint himself with the language disrespectful to the Council. The nature and prayer of every such petition shall be stated to the Council by the Alderman presenting the same.

How Petitions aro to be dealt with.
4. No motion stall, unless as hercinafter provided, be permissible on the presentation of a petition, except that the same be reccived, or that it be received and referred to one of the permanent Committecs hereinafter mentioned, or that it be roccived and that its consideration stnud an order of the day for some future meeting: Prorided howerer, that if any Alderman shall have giren due notice of a motion in reference to any petition, and such petition shall have becu presented bofore such Alderman shall hare been called upon to move such motion, the said motion shall, if otherwise noobjectionable, be considered in order.

Major to preserve order.
5. The Mayor slall preserve order and may at any time call to order any Alderman who may appear to him to be outi of order.

Calls to order.
6. Any Alderman may at any time call the attention of the Mayor to any Alderman being out of order or to any other point of order.

Mayor's decision on points of order final.
7. Jivery point of order shall be taken into cousideration immediately upon its arising, and the decision of the Mayor thereon shall be conclusive.

Mayor may take part in proceedinge.
8. The Mayor may take part in all the proceedings of the Council.

## Questions put by Mayor.

9. The Mayor shall put all questions first, in the aflirmative and then in the negative, and may do so as often as may be necessary to cuable him to determine the sense of the Council thereon; and thereupon he shall declare his decision, which shall be final.

## Mayor to deciale as to pre-audience

10. If two or more Aldermen rise to speak at the same time, the Mayor or Chairman shall decide which of sach Aldermen shall be first heard.
No Alderman to speak trice on the same Question or amendment, except in Commttlee.
11. No Alderman shall speak twice on the same question unless in Committec, or in explanation where he shall have been misrepresented or misunderstood: Provided that any Alderman, although having previously spoken, may spenk once on very amendment, and that the mover of every question shall always have the right of final reply.

Spesker not to digress, de.
12. No Alderman shall digress from the subject under discussion, or shall make personal reflections on nor impute improper motives to any other Alderman.

No Alderman to speak for more than fifteen minutes.
13. No Alderman to speak upon any motion or amendment for a longer period than fifteen minutes without the consent of the Council.

Acts of disorder.
14. Every member of the Council who shall commit a breach of any section of this part of these By-laws,-or who shall move or attempt to move any motion or amondment embodying any matter as to which the Council has no legal jurisdiction,-or who shall in any other way raise or attempt to raise any question, or shall address or attempt to address the Council upon any subject which the said Council has no legal right to eutertain or diseuss, -or who shall use any language which according to the common usage of gentlemen would be held disorderly,-or who shall say or do anything calculated to bring the Council into contempt,-shall be out of order.

## Debute may be adjourned.

15. A debate may be adjourned to a latel hour of the same day or to anothor day.

Alderman adjourming debate entitled to precedence on resumption.
16. The Alderman upon whose motion any debate chall be ndjoumed shall be entitler to precedence on the resumption of the debate.
17. The Conncil shall vote by show of hands, but any Alderman may divide the Council on any question, both in full Council or in Committee of Whole, in which case erery Aldermsn there prosent shall be compelled to vote; and all divisions shall be entered in the minute-book.
18. Any member may require the question under discussion to be read for his information at any time during the debate, but not so as to interrupt any other member whilst speaking.

## How amendments to be put.

19. When a motion in Council shall have been made and seconded, any Alderman shall be at liberty to movoan amendment thercon; but no such amendment shall be discussed unless and until it be seconded. No motion or amendment shall be discussed until it shall luave been reduced into writing. If an amendment be carricd, the guestion as amended thereby shall become itself the question before the Council, whercupon any further amendment upon such quastion may be moved. If any amendment, either upon an original question or upon any question amended as aforessid, shall be negatived, then a further amendment may be moved to the question to which such first-mentioned amendment was moved, and so on, provided that not more than one question and one proposed amendment thercof shall be before the Council at any one time.

## Adjournments.

20. Auy motion for adjournment, if seconded, shall be immediately put without discussion; but if such notion be negatived, it shall not be cormpetent for uny member to make a similar motion, unless by the consent of the Council, until thirty minutes ehall have clapsed from the period of moving the motion which shall have been so negatived.

## Motions must be seconded.

21. No notice shall-be taken by the Mayor or presiding Alderman of any motion unless it be seconded.
22. All notices of motion shall be in writing, dated and signed by the Alderman proposing the same previous to being handed to the Council Clerk, and shall not be withdrawn from the business paper without the leare of the majority of the Council.

Council Clerk to give notice of Committee Meetings.
23. The Council Clerk shall call a meeting of any Committee when requested so to do by the Chairman or any two nembers of such Committee.

6. The Mayor or Presiding Alderman shall, on every motion made and seconded, put the question first in the affirmative and then in the negative, and then declare the result to the meeting ; and if any dispute or misunderstanding shall arise as to the declared result, the Mayor or Presiding Alderman shall be entitled to put the question again, and so often as may be
necessary, in order to enable him to declare definitely by the show of hands whether the motion has been carried or negatived.
7. At every mecting of the Council the minutes of the procoedings of the previous meeting shall be read by the Council Clerk, and after confirination by the rote of the majority of the Council present shall be signed by the Mayor or Presiding Alderman.
8. Then reports from Committees shall be received ; but these shall not be taken into consideration or adopted, unless after due notice has been given at a previous meeting or to the Council Clork not less than four duys bofore the meeting.
9. Every momber shall stand when speaking, and ehall alduress the Mayor or Presiding Alderman; and in course of a debate if any question or order sball arise, it shall immediately be taken into consideration, and be disposed of by the Mayor or Presiding Alderman.
10. Except in Committee, no member shall speak twice on the same question; if he has been misrepresented or misunder. stood, he may, if he thinks proper, brietly make such explanations as may bo necessary : Provided that the mover shall be allowed to reply, and that every merober elall have the liberty of speaking once on every amendment as well as on the original motion.
11. No member shall speak upon any motion or amendment for a longer period than fifteen minutes, without the consent of a majority at least of the members prosent at the time; and he shall not digress from the matter under discussion, or make pereonal reflections on members, or impute improper motives.
12. If any member shall make use of any expression, or so conduct himself that his words or actions shall be taken, construcd, or held by a majority of tho members present to be offensive to the Council or to any member thereof, he shall be called to order by the Mayor or Presiding Alderman, and by him required to withdraw the objectionable expression, and him required to withe for having used the same or for having sonducted himself in such manner as to give cause of offence; conducted himself in such maluer as to give cease of offence;
any member neglecting or refusing to withdraw any objectionany member neglecting or refusing to withdraw any objection-
able expression or antisfactorily apologize when called upon so able expression or sntisfactorily apologize when called upon so
to do by the Mayor or Presiding Aldermun, Bhall forfeit and pay a penalty of not less than ten shilliuge and not more than one pound.
13. A debate may be adjourned to a later hour of the same day or to another specified day, and the member upon whose motion any debate shall be adjourned shall be entitled to precedence on the resumption of the debate.
14. It shall be competent for any member to divide the Council on any question, both in full Council and in Conmittecs of the Whole Council; and upon auch division those who are in the affirmatire shall pass on the right hand of the Mayor or Presiding Alderman, and those who are in the negative shall pass on to his left hand; and no member after dividing shall leave his place till the names of all the members shall be taken down by the Council Clerk or some person officiating for him.
15. Any member may require the question or subject under discussion to be read, or the substance thereof explained to him, at any time during the debate, but not in such a way as to interrupt any member while spouking or to unduly protract the proceedings.
16. No leave of absence shall be granted to the Mayor or to any Alderman, otherwise than by a resolution of the Council after due notice.
17. Any momber of the Council who, haring had notice of a Call of the Council who being absent shall not be legally excused, or who if absent and not so excused, shall fail to show that by reason of extreme illncss or any other sufficient cause he has been unable to send an excuse in writing, shall for every such offence bo liable to a penalty of ten shillings.
18. Whencver it is decided that any work shall be executed or any material supplied by contract, other than provided by Bylaw 34, tenders for the execution of such work or the supply of such material shall be called for by public notice, as hereinafter provided.
19. In all cases where public notice is or shall be required to be given by any By-law of any appointment, resolution, act, order, or regulation done, made, or passed by any Committoe thereof, or by the Mayor or any officer of the Council, or of the said Council, such notice shall be given and published by posting the same on or near the outer door of the Council Chambers for the space of seren days, and by advertising the same twice in some newspaper circulating in the district.
20. If at any meeting of the Council the Mayor be absent at the expiration of 30 minutes after the time appointed for holding such mecting, the Aldermen then present shall proceed to elect a Chairman for such meeting. Whenever thare shall be an adjournment of any such meeting for want of a quorom, the names of the members present shall be taken down and shall be recorded in the Minute Book.

## Motions.

21. After the reading of correspondence and the presentation of reports and petitions, euch motions as may be in the Motion Book shall take precedence of all other business of the day, and shall be taken up in the order in which they are in the Motion Book.
22. Any number of amendments may be proposed on a motion before the Council; and when more than one amendment is moved and seconded, the last smendment shall be first; put to the meeting, or in the reverse order in which they were moved, until the the whole are disposed of, when the original motion shall be put to the meeting and the result declared by the Mayor or Presiding Alderman.
23. Any motion for adjournment, if seconded, shall be immediately put without any discussion; and if negatived it shall not be competent to put a similar motion until five minutes at least shall have elapsed from the tince of moving the one which had been negatived; but no notice shall be taken by the Mayor or Presiding Aldorman of any motion unless it has been
seconded.
24. Notico of motion shall be given to the Council Clerk at any meeting of the Council, or not less than four days before the meeting of the Council at which the motion is intended to be made: Provided that no motion of which notice shall have been given as aforesaid shall be made, except at an adjourned mecting, unless notice thereof setting forth in general terms the purport of such motion shall have been given by the Council Clerk to each member of the Council in the summons issued by him for the meeting of the Council.
25. The Council Clerk shall enter in a book to be kept for that purpose, and to be called the "Motion Book," all notices of motion, in the order in which they are received.

## Petitions.

26. No discussion shall take place on the presentation of any petition without notice of motion given after its reception.

## Committees.

27. No Committee of the Council shall consist of less than three members, and the Chairman or a majority of every Committee shall summon the Committee, and may direct the Council Clerk to call meetings whenever they may corsider it necessary or expedient.
28. The appointment of Special Committees ahall continue wntil the specific duty for which they were appointed aball hare been discharged, provided that such Committee may at any time be dissolved by vote of the Council.
29. The rules affecting the Council shall be observed and be in force in any Connmittee, with the excoption of the rule limiting the number of times of speaking; and every report of a Committee shall be signed by the Chairman thereof.

## Offeers.

30. No officer shall be appointed until a general outline of his duties and the amount of salary shall be approved of by the Council ; and no appointment of any kind shall take place until one weok's notice at least shall have been given in one or more of the local papers, inviting applications for the same.
31. Every officer or serrant of the Council, who, by reason of his office or cmployment under the Council, shall be entrusted with the custody or control of any moners, shall give security, to the satisfaction of the Council, in the sum of not less than $£ 50$, for faithfully and duly accountiang for tho samo.
32. Any officer or servant of the Council who shall be entrusted with the receipts of nny moneys for the Council shall not hare or retain in his hands any sum at any one time exceeding ten pounds of any such moners. Any such officer or servant offending against this By-law shall forfeit and pay a penalty of not less than two pounds and not more than twenty pounds.
33. In cases where security shall be required by the Municipalities Act of 1867, the sureties offered slaall be approved of by the Council before they arc accepted as surety-any of its members, or any porson holding ollice under the Council; and in all cases in which sceurity for the due and faithful performance of any duty or contract is required, the expense of preparing such security shall be borne by the person or persons giving the same. 34. No work affecting the funds of the Corporation shall be undertaken until the probable expense shall be first ascertained and authorized to be executed by the Council; and before any motion shall be made for the payment of any such works, the accounts slall bo examined and passed by the Finance Committee: Provided that in the event of any day labourer being discharged by a majority of the Improvement Committee, such majority shall have power to authorize the Mayor to pay the amount actually due to such labourers, or any of them, by cheques drawn in the usual way on the Bank account ; and any such payment shall be confirmed at the ensuing meeting of the Council: Provided further that, in cnses of emergency, the Tmprovement Committee may nuthorize the expenditure of any sum not exceeding three pounds, and such expenditure shall be reported to the Council at its next mecting, and the reasons given why the authority so to expond became necessary.
34. The 'Treasurer's account shall be laid before the Council by the Mayor or Presiding Alderman at every alternate meeting of the Council, or oftener if required.
35. No officer appointed by the Council shall be at liberty to show, lay open, expose, or give any information of any of the books, papers, records, or any other documents or vouchors bolonging to the Council, to any ono not a member of the Council, without permission from the Council, except always as may be otherwise provided by law.
36. Any alterations proposed to be made in the By-laws, or any new By-law proposed to be added, shall requiro the same notice to be given and proceedings taken thereon as in the case of motions.
37. No clection to any paid office at the disposal of the Council shall take place until after seven clear days notice shall be given in oue or more newspapere, inviting applications for the same.
38. The Council Clerk shall have, under the supervision of the Mayor at the Council Chambers, control and charge of all charters, deeds, mumiments, and records of the Corporation or relating to the property thereof.
39. The common seal shall be kept at the Council Chambers, and the Mayor shall have the custody of the eame and shall aflix it to all documents creating obligations on the Corporation, in the presence of the Council Clerk; but for the purpose of offcially authenticating documents the Mayor may alone allix the seal.
40. Any one or more of the standing orders of Council may be suspended at any meeting of the Council (for that mecting only), in case of emergency : Provided that a majority of members present consider it necessary.
41. The order of the day shall include all business of which due notice has been given and all matters arising out of former meetings of the Council; any motion entered on the motion book; and the Aldcrman haring given notice of the same boing absent, and no othor Alderman deputed to bring forward such motion when the business is called in order, such motion shall be struck out.

I hereby certify that the foregoing By-laws consisting of forty-two clauses, were duly passed by the Municipal Council of the Municipal District of Tenterfield, on tite 15th day of April, in the year of our Lord one thousand eight hundred and soventy-two.

THOMAS WELBURN, Mayor.
M. O'Biren, Council Clerk.

By-raws for the better enabling of the Council of the Municipal District of Tonterficld to collect Rates.

1. Tho rates shall be levied and collected half-yearly, and shall be held to be due and payable on such days as the Council shall by resolution from time to time appoint.
2. All persons liable to pay any rates or assessments shall pay the amount, within any such period that the Council have directed by a resolution, into the office of Council Clerk, during the office hours, that is to sary, between the hours of 10 a.m. and p.m. on Mondays.
3. It ghall be the duty of the Council Olerk to furnish the Mayor of the Municipality, from time to time, with a list of the names of all persons who are in default within the meaning of section 176 of the Municipalities Act of 1867.
4. It shall be the duty of the Mayor of the Municipality to issue distress warrants against defaulters, after such default shail in manner aforessid have been reported to him, and to cause such warrants to be enforced: Provided that this By. law ehall not prevent such othor procecdings being taken for the recovery of overdue rates or assessments as a majority of the Council shall from time to time decm necessary.
5. The Briliff of the Municipality shall be appointed by a resolution of the Council, and may at any tine be removed in a similar way.
6. The Bailiff shall find security to the Mayor--himself in $\mathbf{e f s}^{5}$, and two sufficient surcties in $£ 25$ each-for the faithful performance of his duty.
7. It shall be the duty of the Bailiff to make all levies by distress for the recovery of rates, in the manner hereinafter prorided.
8. Any person whosoerer who shall interrupt, interfere with, or obstruct the Bailiff of the Council, or his deputy, or any of bis nessistants, in the execution of any warrant to distrain, or in the execution of his or their duty under such warrant, or under any of the provisions of the Municipalities Act of 1867, or under any of these By-laws, or in the performance of any matter or thing which he or they are authorized by law to do, shall forfeit and pay a penalty of not less than twenty-five pounds nor more than fifty pounds.
9. All lovies and distresses shall be made under warrant, in the form or the effect of the Schedule hereunto annexed and marked with the letter $A$, under the hand of the Mayor and seal of the Municipality.
10. It shnll be lawful for the Bailiff or his deputy, and such assistants as he may take with him, to enter into any part of the building, texements, or other property, in respect of which such bute or rntos shall have been levied as aforessid, and to distrain the goods therein or thereon, and to remain in or upon such building, tenement, or other property, in charge thoreof, until payment; and if the sum for which such distress shall have been mado or taken, shall not have been paid on or before the expiration of five days from the date of making such distress, it shall be lawful for such Bailiff or his depaty to causo the goods or other proporty so distrained on, or a suisicient portion thereof to be sold by public auction, on the premises, or at some public place within the Municipality, to be appointed for that purpose by the Council ; and the surplus (if any) that may rensin, after deducting the amount distrained for, together with expenses, over on demand to the owner of the goods so sold.
11. The Bailiff, on making a distress as aforessid, may impound or otherwise secure the distress so made, of what nature and rind soever it may be, in such part of the land or premiscs chargeable with the rate, or in such other place as shall be most fit and convenient for this purpose ; and it shall be lawful for any person whatsoever, nfter the expiration of the five dayb hereinbefore mentioned, to come and go to and from such part of the said land and premises where any distress shall be impounded and secured as aforesaid, in order to view and buy, and in order to carry off and remove the same on account of the purchaser thereof.
12. The Bailiff ehall hand orer to the Council Clerk all proceeds of such distresses, within forty-eight hours after having reccived the same.
13. If the Bailiff shall neglect or refuse faithfully to perform any of his duties, or slall make any bad use of the powers entrusted to him, or shall neglect to pay over the moneys reccived by him as such Bailiff, within the time hereinbefore mentioned, he shall forfeit and pay a penalty of not less than one pound not more than ten pounds.
14. The Bailiff may, with the sanction in writing of the Mayor of the Mfunicipality, authorize, by writing under his hand, any person to act temporarily as his deputy; and the person thas authorized shall hare and exercise all the powers of the Bailiff imoelf but the Boiliff and his suretics shall in every case be held responsible by the Council for the acts of such deputy.

Made and passed by the Municipal Council of the Municipal District of Tenterfield, on the fifteenth day of April, in the year of our Lord one thowsand eight hundred and seventy-two.

THOMAS WELBURN,
M. O'Brien,

Council Clerk.

Warrant of distress against Tenant actually rated and occupant

## To and his Absistants:

Wherras the person whose name appears in the Schedule hercunder written has been rated by the Municipal Council of the Municipal District of Tenterfield in respect of the property also appearing in the said Schednle, at the sum and for tho purpose set down opposite his or her name: And whereas the said sum was and still is due and payable on account of suoh rate, and default haring beon made in the payment thereof to the Treasurer, although demand has been made as is required by law' : 'These are therefore to authorize you forthwith to make distress of the goods and chattcls in the first place upon those of the person nanied in the Schedule, if he or she be then resident in the said premises and have any goods and chattels there, and in case of a change of posscssion, then upon the goods and chattels of any person who shall then be the occupier thereof, or upon the goods and clattels of the porson in posscesion of the said premises so appearing in the said Schedule at the time of executing the warrant: And if within the space of fivo days after the mating of such distress the said sum of money days after the making of such which the person was so rated ns set opposite to his or her name at which the person was so rated as
aforesaid ahall not be paid together with costs, that then you do sell the said goods and chattels of the person so by you distrained, and out of the money arising by such sale you retain the sum so due and owing for the premises in the same Schedule mentioned, and occupied by the party whose goods you shall havo sold, together with costs, reudering to him or her the overplus, and that you certify to me, on or before the day of , what you shall have done by virtue of this Warrant.

Schrouler A.

Given under my hand, and under the common seal of the Mayor, Aldermen, and Citizens of the Town of Tenterfield, at the Council Cbambers, this day of , A.D. 187

Mayor.

1. The Council shall, within the Municipality, hare the care, construction, and management of all roads and public streets and public thoroughfares within the Municipality, which may have been or may horeafter be duly proclaimed or marked out or in actual public use as such.
2. In any strcet or road, where it may be deemed necessary to cut or fill up to a greater dopth than 3 feet, the Council shall cause a plan and section, showing the proposed cuttinge and filiings, to be exhibited at the Council Chambers for seven days, for the information and inspection of ratepayers, and notify the same in one or more of the local newspapers; and no objection thoreto shall be eutertained by the Council, unless made within twenty-one dnys after such notice shall have unless made.
3. No person shall encroach beyond the building-line in any street or lane, by the erection of houses, verandalis, door-steps, streces, or any other obstructions whatsoever, without consent of the Council.
4. No driver, earter, or other person shall wilfully or negligently do or suffor, or cause to be done any damage or injury to the culverte, curbstones, gutters, or pathway of any street or roadway.
5. Any pereon whosoever who shall wilfully drive, lend, or ride any horse or cattle or any other animal along any pathwry (except in crossing such pathway to or from any premises adjoining the same), or shall permitany horse or catitle to stand upon any pathway or any part thereof within the Munieinality, ehall forfeit and pay a peralty of not loss than fire shillings nor more than five pounds.
6. No person shall be allowed to alter, cut up, or destroy the pathways or ronds, or to remove stone, loam, sand, gravel, or any other substanco whatsoever from any of the roads or streets of the Municipality, without tho authority of the Council.
7. No person shall be allowed to obstruct any road, street, or public thorougbfare within the Municipality, by building materials, drays, carts, or anything calculated to obstruct or hinder free passage, without the sanction of the Council in writing ; and no person shall be allowed to leave waterholes or excavations for cellars or other purposes unfenced or in such a manner as to be dangerous to passors-by; and at all places where buildings are being carried on, or where any obstruction to the danger of passers-by exists, the person causing such obstructions shall be required to provide lights on either side and beep the same lighted from sunset to sunrise.
8. If any person or persons shall dripe or cause to be driven any cart or other vehicle with any night-soil, or shall take away or remore any noisome matter in any cart or other vehicle, through or in any of the streets, roads, or public places within the said Municipality, between tho hours of 6 o'clock in the morning and 10 at night, or shall fill any cart or other carringe so as wilfully to turn orer or cast any night-soil or other caffensive matter in or upon or near any of the said strcets or public places, or shall deposit or cast out the night-soil hercinbefore described from such carts as aforesaid nearer to any street, rond, or dwelling-place than shall be directed by the said Council, or shnll allow any such carts to stand nearer to any road, street, or dwelling-place than shall be directed by the said Council, he shall for every such offence forfeit and pay a penalty of not less than one pound and not more than ten pounds; and in case the person so offending cannot be apprehended, then the owner of such cart or other vehicle in which such night-soil or offensive matter shall be put or placed, and also the employer of the person offending, shall bo liable to pay and forfoit such penalty as aforesaid.
9. Any person who shall form, dig, or open any drain or sewer in any part of the lanes, ronds, streets, or thoroughfares within the Manicipality, or shall move or cause to be moved any turf, clay, sand, soil, gravel, stone, or other material, without leave first had been obtained from the officers or persons having lawful charge of such lanes, roads, streets, or thoroughfares respectively, or who shall wantonly breale up or otherwise damage any part of the said lanes, roads, streets, or thoroughfares, shall on conviction forfeit and pay for every such offence a penalty of not less than than one pound nor more than five pounds.
10. The Council or any officer appointed by them may, after one month from the date of the publication of these By-laws in the Government Gazette, upon due notice, direct the removal of any fenco or other obstruction or encroachnent in and upou any lane, rond, street or thoroughfare under the management of the Council; and such notice shall be serred personally, or at the usual or last-known placo of nbode of the person who made or caused to be made such obstruction or encroachment, or any party who may be in charge of the same or to whom tho same may belong.
11. In any case whore service of notice for the removal of any obstruction as aforesaid, the same shall not be removed within such reasonable time ns the Council shall appoint, it shall be lawful for the Council to direct tho remoral of tho same, at the cost of the person by or to whom the eame shall have been made, or any party who may be in charge or to whom the same may belong: Prorided that the expenses thereby incurred shali not exceed the sum of twenty pounds; and in any case where the obstructions or encroachments can not be recroved unless at a greater cost than twonty pounds, it shall be open to the Council either to direct such remoral and to pay all costs thereof abore twenty pounds from the Municipal funds, or to proceed by action of trespass against the person who shall make or cruse to be made such obstructions or encroachments, or who may be in charge thercof.
12. Any person who shall ride or drive through any lane, road, street, or public place, negligently, carelessly, or furiously, to the common danger of the public, shall forfeit and pay a eum not less than ten shillings nor more than five pounds.
13. Upon representation by any two'respectable householders, that the house, premises, yard, closet, or drains of the adjoining premises are a nuisance or offensive, the Mayor and any two Aldermen shall cause an inspection to be made of the promises complained of; and if any such premises shall be found to be a nuisance or otherwise offensive, notice in writing shall be given to the proprictor or resident of such premises, that if within seven days after such notice the nuisance shall not be removed, tho proprietor or tenant of the aforcsaid premises shall be liable to a penalty of not less than one pound nor more than ten pounds.
14. Upon representation by any tro respectable householders that the house or premises adjoining is onc of ill-fame, it shall be lawful for the Mayor and any two Aldermen to cause the resident of such houso to furnish to the Council a list of the names, sex, birth-place, and occupation of all the inmates of the said house; and upon non-compliance with the request, or if upon consideration the Mayor and any two Aldermen still consider the house to be one of ill-fame, the Mayor shisll cause a notice in writing to be serred on such householder or resident, to discontinue and abate the said house of ill-fame within fortyeight hours after the receipt of such notice, othorwise to bo liable to a penalty not exceeding one pound for every day or part of a day which such house of ill-famo shall remain unabated within the Municipality.
15. Any person who shall cast any filth, rubbish, or any dead animal, or any aninal with intent of drowning, into any public watercourse, zewer, water-hole, or river, or creek, or canal, or shall obstruct or direct from its channel any such sewer, canal, or watercourse, shall forfcit and pay a sum of not less than one pound nor more than five pounds, and shall pay the costs of removing such fith or obstructions, or of restoring such watercourse or canal to its proper chamel, not exceediug fifty pounds in the whole.
16. Any person who sball wash or cause to be washed any wool, hides shins, or otherwise, in any creek or watercourse within the Municipality, shall forfeit and pay a penalty of not less than one pound nor more than ten pounds.
17. It shall not be lawful for uny person whomsoever to suffer any kind of swine, or any horse, ass, mule, sbeop, goat, or cattle belonging to him or under his or her clarge, to stray or go about, or be tethered or depastured in any lane, road, or street within the said Municipality ; and any person who shall so offend shall forfeit and pay, in respect of every such animal, a sum not less than five sbillings nor more than two pounds: Providing that after due inquiry shall have been made, and the owner thereof cannot be discovered, it shall be lawful for the said Council, or any officer belonging to tho said Council, to destroy any swine or gonts so straying and injuring property of any description: Provided further, that the Council, or any officer or officers appointed by them, may impound any swine, horse, ass, mule, shcep, goat, or cattle found straying, or going about, or depasturing in any lane, road, or strect within the Municipality.
18. If any person shall haul or draw, or cause to be hauled or drawn, upon any part of the streets, roads, or public places, any timber, stone, or other thing otherwise than upon wheeled carriages, or shall suffer any timber, stone, or other thing which shall be carried principally or in part, upon wheeled carringes, to drag or trail upon any part of such street or public place, to the injury thercof, every such person so offending shall forfeit and pay for every such offence a sum not less than five shillings and not more than two pounds, orer and above the damages occasioned thereby; and it shall be lawful for any constable or any other person to lay an information against any person whom he shall find in the act of committing any such offence.
19. If any person shall in any strect or road, throw, cast, or lay, or shall permit or suffer to be thrown, cast, or laid or to remain, any ashes, rubbish, offal, dang, soil, dead animal, blood, or other filtu or annoyance, or any matter or thing, in or upon the carriage-way or foot-way of any such street or road, or shall kill, slanghter, dress, scald, or cut up any beast, swine, calf, sheep, lainb, or other cattle, in or so near to any of the eaid streets or roads as that any blood or filth shall run or flow upon or over or to be on any such earriage or foot way, shall forfeit and pay a sum not less than ten shillings nor more than forty shiillings.
20. All fines, penalties, and forfeitures incurred under any of thesc By-laws may be recorered in a summary way beforo any two Justices in Petty Sessions, according to the provisions of the Act 14th Victoria No. 43 and the Acts therein adopted.
21. That it shall and may be lawful for nuy ratepayer residing within the Municipality to give such information as may bo necessary for the conviction of any party or parties who may ride or drive any horse, cattle, or vehicle upon the footpath of this Municipality.
22. In any By-lsms of this Municipality, any words in the singular number shall be taken to import the plural number, and any words in the plural number shall also be taken to import the singular number, and nuy words in the masculino gendor shall be taken to include the feminine gender, unless the same shall be repugnant to the construction thereof.

Made and passed by the Municipal Council of the Municipal District of Tenterficld, on the 15th day of April, one thousand eight hundred and seventy-two.

THOMAS WELBURN,
M. O'Brier, Council Clerk.

# MUNICIPALITIES. 

(MUNICIPAL DISTRICT OF RYDE-BY-LAWS.)

Colonial Scerotary's Office,
Sydney, 18th July, 1872.

HENRY PARKES.

No. 1.
General duties of the Mayor or presiding Alderman.

1. The Mayor or Presiding Alderman shall preserve order, and his decision on all disputed points of order shall be final ; but he is to state his decision without argument or comment.
2. The Mayor or presiding alderman may take part in all the proeeedings of the Council.
3. The Mayor or Presiding Alderman shall put all questions and declare the sense of the Council thereon.
4. If two or more members rise to speak at the same time, the Mayor or Presiding Alderman shall decide which member is entitlect to pre-audiencc.
5. The Mayor or presiding Alderman may, without waiting for the interposition of any member of the Council, call to order any momber proceeding to speak a second time on the same question (except in explanation, and without introducing any now matter). The member introducing a motion to have the right of reply; and avery member shall have the liberty of speaking once on every amendment, as well as on the original motion.
6. The Mayor or Presiding Alderman shall, on every motion made aud seconded, put the question first in the affirmatirc and then in the negative; and lie may do so as often as may be necessary to enable him to form and declare his opinion from the show of hands as to which party has the majority.
7. Evory member shall stand when speaking, and shall address the Chair.

## Mertings.

8. The Council shall mect for the dispatch of business at the hour of half-past seven, p.m., on every alternate Friday, unless such day shall happen to be a public holiday. In the latter case the mecting shall be held on such other day as the Mayor may appoint.
9. If the Mayor be not present within fifteen minutes after the time nppointed for the meeting of the Council, an Alderman shall be elected Chairman for the time being.
10. In the months of March and Scptomber in each year, the Mayor shall lay. before the Council for its adoption the Ireasurcr's account for the previous half-year duly audited; but should any Auditor not attend for the purpose of auditing the nccounte when required by the autitiority of the Mayor to do so, or refuse to certify to the correctness of the account, unless he can prove to the satisfaction of the Council that the account is incorrect, he shall pay a fine of $\mathcal{E} 5$, to be recovered in a summary way before any two Justices of the Pence the aid fine to carried to the credit of the municipal funds.
11. The first business at cvery regular meeting of Council shall be the reading, confirmation, and signing the minutes of the proceedings of the last preceding meeting.
12. After the minutes of the last preceding meeting are sigued, reports from Committees shall take precedence of any other business, but shall not be considered or adopted without
due notice thereof due notice thereof.
13. The presentation of petitions and reading of correspondence shall be next in order of business after the consideration of reports.
14. Whenever any matter of order nrises, it ahall be taken into immediate consideration.
15. No momber shall deviate from the subject under debate, or make personal reflections upon any other mamber.
16. No member shall speak on any motion or amendment longor than ten minutes, withont the consent of the Council.
17. No member shall make use of any expression capable of being applied offensively to any other member.
18. A debate may be adjourned to a later hour of the eame day, or to another day specified.
19. The member upon whose motion any debate shall be adjourned shall be entitled to pre-audience on the resumption of the debato.
20. The Council shall vote by show of hunds, but any Alderman may divide the Council on any question both in fuli Conncil or in Committee of the Wholo, in which cnse every Alderman then present shall vote, and any such Alderman who slall refuse or wilfully fail to vote shall be liable to a penalty not exceeding $£^{5}$, to be recovered in a summary way before any two Justice of the Peace; and all dirisions shall be entcred in the Minute Book.
21. Any member may require the question under discussiox to be read for his information at any time during the debate, but not so as to interrupt any other member whilgt speaking.
22. After the presentation of reports and pctitions, the reading of correspondence and the reception of notices of motions shail take precelence of all other business of the day.
23. Any number of amendments may bo proposed on motion boforo the Council, and if seconded the question shall first be put on the last amendment and then on the next preceding amendment, and so on in the inverse order in which they are moved, except when such motions or amendments shall relate to financial matters, in which case the lowest sum shall be put first and so on to the highest.
24. Any motion for adjournment, if seconded, shall be immediately put without discussion, but if such motion be negatived it shall not be competent for any member to muke a like motion until the lapse of a quarter of an hour.
25. It shall be incompetent to gire notice of motion for the rescinding of any resolution on the same day on which such resolution shall have been passed by the Council.
26. No notice shall be taken by the Mayor or Presiding Alderman of any motion unless it be seconded.
27. All notices of motion shall be in writing, dated and signed by the Alderman proposing the eame, previous to being handed to tho Council Clerk, and shall not be withdrawn from the buiness paper without the leave of the mujority of the Council
28. No motion the effect of which if carried would be to rescind any motion which has already passed the Council shall be entered on the business paper, unless a Call of the Whole Council has been duly made and granted for that purpose.
29. A Call of the Council may be ordered by any resolution of which due notice shall hare been given, for the consideration of any motion or matter of business before such Council.

## Petitions.

30. On the presentation of a petition, no debate shall take place until notice has been given in the usual manner, and the only question that can be entertained by the Council on the day of its presentation shall be that the petition be received, or that it be referred to a Committec.
31. It shall be incumbent on any Alderman presenting a petition to aequaint himself with the language thercof, and to report to the Council that he considers it unobjectionable.
32. All petitions shall be reccived only as the petition of the parties signing the same.

## Committees.

33. Besides such Special Committees as may from time to time be found necessary, there khall be two Standing Committees, namely, a Fiuance and an Improrement Committee. The Standing Committees shall be appointed by resolution of the Council, within thirty days after the election of the Mayor for the municipal year.
34. The By-laws as to the proceedings of mectings of the Council shall be observed in a Committee of the Whole Council, except the rule limiting the times of spanking.
35. Every Committee of which the Mayor alall not be a member shall elect a perwavent Chairman of such Committec, and such Chairman may direct the Council Clork to call meetings whenerer he shall think it expedient.
36. Every report of a Committee shall be signed by the Chairman thereof.
37. No work affecting the funds of the Municipality shall be undertaken until the probable expense be first asccrtained by the Council; and all accounts to be paid by the Council shall be examined by the Finance Committee and reported on by them before any warrant shall be issued for the payment thereof: Provided that, in cases of emergency, the Mayor, with the assent of any three Aldermen of different Wards, may authorize the cxpenditure of any sum not exceeding £20; and such expenditure shall be reported to the Council at its next eitting.
38. In cases where security is required by the Municipalities Act of 1867, no security shall be acsepted otherwise than by a vote of the Council.
39. No oflicer or servant appointed by the Council shall be at liberty to show, lay open, or expose any of the books, papers, or records of the Council to any person not a member of the Council, without leave from the said Council, except us prorided by law.
40. The common seal shall not be aflixed to any document without the express authority of the Council, and every impression thereof shall be verified by the signatures of the Mayor and Council Clers.
41. The seal of the Municipality, and all charters, deeds, and records of the Council, shall be kept in the custody of the Council Clerk, unless the Council shall otherwise order.

## No. 2.

Collection and enforcement of Rates.

1. All rates made and authorized by the Council shall be paid within the time prescribed by the Act, at the Office of the Council Clerk, Ryde, during office hours, on Mondnys, Wednesdays, and Fridays, between the hours of 10 o'clock a.m. and 4 o'clock p.m.
2. The Council Clerk shall prepare, at such times as may be ordered by resolution of the Council, a list of the names of all persons whose rates are unpaid at the expiration of the time fised for payment of the same, and the Mayor shall take immediate proceedings, either by summons or by tho issuc of distress warrants, against all defaulters.
3. The Bailif' shall be appointed by resolution of the Council, and shall be at any time removable by a like resolution, and shall give such security as the Council shull approve of for the faithful performance of the duties of such office.
4. The Bailiff shall make all levies and distresses for the recosery of rates under the warrant of tie Mayor, such warrant to be made in accordance with the form in the Schedule hereto annesed marked A.
5. The Bailiff shall be paid for entry and lery made under these By-laws, according to the annesed Schedule marked B.
6. At the time of making a distress the Bailiff shall forthwith make out a written inventory, in the form or to the effect of the Schedule annexed narked C, which inventory, sball be delivered to the occupant of the land or premises, or the ownor of the goods so distrained, or to some person on his or her behalf, resident in the place where the distress has been made; and in case there shall be no person at such place with whom such inventory can be left as aforesaid, then such inventory shall be posted in some conspicnous part of the land or premises on which the distress has becn made, and the Bailiff shall deliver a copy of such inventory to the Council Clerk for the information of all parties concerned.
7. It shall be lawful for the Bailiff, and such assistants as he may require, to enter into any part of the land, building, tencment, or other property in respect of which a warrant has been issued for the recovery of any rate or rates as aforesaid, and to distrnin the goods therein or thereon, and to remain in such building, tenement, or other property in charge thereof; and if the sum for which distress shall have been made or taken shall not be paid on or before the expiration of five days, it shall be lawful to sell the goods so distrained or a sufficient portion thereof, by public auction, either on the premises or at such other place within this Municipal District as the said Bailiff may think proper to remove them to for such purpose; and the surplus (if any) that may remain after deducting the sumn distrained for, together with the expenses attendant upon such distress, shall be paid over on demand to the orner of the goods so sold: Provided always that nothing hercin contained as to the time of sale shall apply to any crop of cercals, fruit, or regetables which may be growing at the time when such distress shall be made.
8. The Bniliff when making a distress as aforesaid may impound or otherwise secure the dislicess so made, of what nature porlind oerer it mar be in such places or in such part of the or kind soever it may be, in such places or in such part of the land or premises chargeable with the rate as shall be most fit and convenient for such purpose; and it shall be lawful for any person whatsoever, after the expiration of the five days hercinbefore mentioned, to come and go to and from such place or part of the snid land and premises where any distress ahall bo innpounded and recured as aforesaid, in order to riew and buy, and in order to carry off and remove the samo on account of the purchaser thereof.
9. The owner of any goods so distrained upon may by writing direct and specify the order in which they shall be successively sold, and the said goods and clatelels shall in such case be put up for sale according to such direction.
10. The Bailiff shall hand over to the Council Clerk all procecds of such distresses as soon as possible after such sale, also the cony of every inventory and account of every such sale or sales. 11. The Bailiff with the sanction of the Mayor may authorize any person to act temporarily as his deputy, and the person thus uuthorized shail have and excrcise for the time being all the powers of the Bailiff himself; but the Bailiff and his sureties ginall in every case be held responsible for the act of such deputy.

11. A clear space of seven feet six inches in width shall be kept through the sheds at the said wharfs for tho convenience of passengers passing to and from the steamers, in which said space no goods of any kind whateoever shall be placed.
12. No person slall be allowed to bring to or pat in any wharf, house, or other buildings erected for public use or convenience, any horse or other animal, or to uso such wharf, convenience, any horse or other animal, or to use auch wharf,
house, or or other buildings for any purpose other than that house, or or other buildings for
for which the same was crected.
13. No timber, frewood, or any other description of goods whatsoever shall be allowed to remain on the wharfs more than forty-eight hours.
14. No rubbish, cinders, ballast, shells, animal or regetable matter, shall be landed on the said wharfs cxcept in bags, baskets, or casks, and such articlos shall be taken away within twenty-four bours after landing the same.

## Penalty.

Any person offending against any of these By-luws for the regulation of the public wharfs aforessid shall for every such offence forfeit and pay a sum not less than ten shillings nor more than five pounde, to be recovered in a summary way before any Justice of the Peace.

Made and passed by the Council of the Municipal District of Ryde, this fifteenth day of September, 1871.

EDWD. TERRY, Mayor.

# GOVERNMENT ASYLUMS. 

(REPORT FROM BOARD, RELATIVE TO EXPENDITURE FOR 1871.)

Ordered by the Legislative Assembly to be printed, 5 July, 1872.

The Secretary to the Government Asthums for the Infiray and Destitute to The Principal Under Secretary.

Board of Government Asylums,<br>Sydney, 28 June, 1872.

Sir,
I am directed by the Board of Management of the Government Asylums for the Infirm and Destitute to transmit, for the information of the Honorable the Colonial Secretary, Returns of the expenditure of the Government Asylums for the Infirm and Destitute for the year 1871, and a comparative Return of the expenditure of those Institutions for the years 1863 to 1871 , imelusive, and to request that (as has been customary) they may, with this Report, be laid before Parliament. The Board desire me to call attention to the following facts connected with the management of the Asylums, as brought out in these Returns:-

1. The average number in the three Asylums during the year 1871 was,-

| Males... | $\ldots$ | $\ldots$ | $\ldots$ | $\ldots$ | $\ldots$ | 858 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Females | $\ldots$ | $\ldots$ | $\ldots$ | $\ldots$ | $\ldots$ | 207 |
|  |  | Total | $\ldots$ | $\ldots$ | $\ldots$ | 1,065 |

The increase in the daily average over the numbers in the three Institutions during the previous year was 68 persons, and the accommodation at the disposal of the Board is altogether inadequate to mect the increasing demands for admission.
2. The Asylum at Hyde Park is confined to fomales, and has now 220 inmates, being 20 in excess of the number the building is fairly entitled to hold. The old Volunteer Quarters, which were handed over to the Board in November, 1870, are atill in the same uninhabitable condition in which they were vacated nineteen months ago. If these premises were putinto propor condition, and a portion of them converted into a residence for the Matron, the probable requirements for female accommodation would be satisfied for some time to come.
3. The Parramatta Asylum for old men has, at this time, 274 inmates, being 44 in excess of its 274. 44. proper number; and the premises are incapable of affording any increased accommodation.
4. The Siverpool Asylum, including the separate hospital (a rented building, accommodating 80 inmates), is, at this time, much over-crowded, having no less than 670 inmates. A temporary wooden building, to hold about 80 old men, has been applied for to relieve the main building until the new wing, for which $£ 5,000$ has been placed on the Estimates for 1872 , is erected.
5. The total expenditure was $£ 11,96098$. , that is at the rate of $£ 114 \mathrm{~s}$. 7 . d . per head per annum; this is lower than the expenditure of the preceding year by $1 \mathrm{~s} .1 \frac{3}{4} \mathrm{~d}$. per head, and less than the average of the last 8 years by $£ 26 \mathrm{ss}$. $6 \frac{3}{4}$ d. per head.
6. The Board trust that in view of the increasing demands for shelter, which through the hardships attending the occupation the development of our mining industry is sure to bring with it, the enlarged accommodation, to which they have adverted, may be proceeded with with as little delay as possible.

I have, \&c.,
FREDERIC KING, Secretary.

Comparstive Rexurn of the Expenditure of the Government Asylums for the Infirm and Deatitute, for the years 1863 to 1871.

| Year. | Average No. of Inmates. | Salaries. |  | Ratione. |  | Clotbing. |  | Contingencies. |  | Total. |  |
