THE COUNCIL OF EDUCATION TO HIS EXCELLENCY THE GOVERNOR,

SUBMITTING

REPORT UPON THE CONDITION OF THE PUBLIC SCHOOLS FOR 1874.

To His Excellency SIR HERCULES GEORGE ROBERT ROBINSON, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor-in-Chief of the Colony of New South Wales and its Dependencies, and Vice-Admiral of the same.

MAY IT PLEASE YOUR EXCELLENCY,

We have the honor, in compliance with the requirements of the Public Schools Act, to submit this our Eighth Annual Report upon the condition of Public Schools, being that for the year 1874.

I.—COUNCIL.

Since the date of our last Report, no change has taken place in the composition of the Council, the Members being:—

Stephen Campbell Brown, Esquire, M.L.A.

William Augustine Duncan, Esquire.

The Honorable Thomas Holt, M.L.C.

The Honorable John Smith, M.D., M.L.C., President.

The Honorable Sir Alfred Stephen, C.B., K.C.M.G., M.L.C.

The Honorable John Smith, President during 1874, was unanimously re-elected to fill that office for the current year.

II.—GENERAL STATISTICS.

Although not less than fifty schools of various kinds were either temporarily suspended or permanently closed in 1874, there was in that year, as may be seen from the subjoined table, a net increase of forty-eight schools. The total number of new schools established in that period was eighty-six, viz.:—twenty-one Public, forty-seven Provisional, sixteen Half-time, and two Certified Denominational (Roman Catholic). The whole number of schools in operation was 990.*

I.—SCHOOLS.

Year.	Public.	Provisional.	Half-time.	Denominational.	Totals.
1867	288	31	6	317	642
1868	318	103	38	289	748
1869	336	146	61	264	807
1870	359	164	82	241	846
1871	378	181	96	223	878
1872	396	194	101	211	902
1873	400	216	117	209	942
1874	420	244	122	204	990

As in former years, so in the one just expired, the difficulty of procuring sites has either delayed for a time or wholly prevented the establishment of schools in some places where they were urgently needed; and the inability of the residents to contribute with sufficient liberality towards the fixed local quota (one-third) of the cost of buildings, has proved another serious hindrance. The Public School at Pyree, for example, mentioned in our last Report as suspended on account of the want of proper buildings, has not yet been re-opened, no schoolroom having up to the present time been erected by the proprietor who, moreover, declines to alienate a site for the necessary school accommodation, so as to justify the legal expenditure of public funds for the purpose. On this important subject the Council has addressed a strong representation to the Government, urging the expediency of an Act of Parliament (a draft of which the Council prepared and transmitted) similar to the "Sites for Schools Acts" passed in England, and to corresponding enactments in our Railway Acts. The Council would earnestly press this measure on the attention of the Government.

An increase of 8,366 in the number of pupils enrolled is shown by the second table, the total being 100,384. The increase has occurred principally in the Public and Certified Denominational Schools, the enrolment in the former being augmented by 4,871, and in the latter by 2,706:—

2.—PUPILS

Year.	Public.	Provisional.	Half-Time.	Denominational.	Totals.
1867	28,434	783	267	35,306	64,740
1868	34,284	3,113	593	35,930	73,920
1869	37,593	4,788	1,242	37,026	80,649
1870	39,731	5,185	1,445	36,460	82,821
1871	43,494	5,633	2,267	35,919	87,313
1872	46,458	6,673	1,792	33,564	88,487
1873	48,831	7,466	2,209	33,512	92,018
1874	53,702	8,002	2,462	36,218	100,384

While

* Since 1st January, 1875, seven Public Schools, nine Provisional, and one Half-Time have been opened.

Appendix A.

While it is gratifying to find that larger numbers of children have been brought under instruction, there is still serious ground for dissatisfaction in the increasing irregularity of the attendance of pupils. The extent of this decline in regular attendance may be seen from the following tabulated statement:—

PROPORTION OF PUPILS IN AVERAGE ATTENDANCE TO THE AVERAGE NUMBER ENROLLED.

Year.	Public Schools.	Certified Denominational Schools.	All Schools.
	Per cent.	Per cent.	Per cent.
1872	69·3	67·5	68·6
1873	67·	65·7	66·
1874	65·7	64·	65·6

It is difficult wholly to account for this falling off, which however may to a considerable extent be attributed to a variety of causes—such as sickness, bad weather, drought, and harvesting operations. These usually operate singly, each, according to the season, being the principal cause of irregular attendance; but it also happens occasionally that two or more will co-exist, as was the case towards the close of the year, when large numbers of pupils were kept from school on account of the harvest and the prevalence of an epidemic (measles) which has spread throughout the Colony.

It is perhaps necessary to state that, in calculating the number of pupils in average attendance, no allowance is made for the absence of children from any cause whatever.

A slight diminution in the number of free scholars, and a marked increase in the amount of school fees paid (Table 3) are facts worthy of note:—

3.—FEES.

Year.	Public.	Provisional.	Half-Time.	Denominational.	Totals.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1867	14,404 0 10½	162 12 5	18 9 7½	16,134 5 10	30,719 8 9
1868	17,588 8 11	1,099 14 11	77 15 11	15,398 3 9	34,164 3 6
1869	20,658 19 7	1,981 9 9	174 13 8	16,803 10 11	39,618 13 11
1870	21,113 8 10½	2,077 10 6	234 0 10	16,158 3 2½	39,588 3 5
1871	24,824 0 8	2,154 2 3	284 4 3	16,240 14 6	43,503 1 8
1872	27,048 18 11	2,701 4 6	456 9 3	15,787 9 11	45,994 2 7
1873	28,579 15 11½	3,430 15 11	529 16 1	16,406 18 0	48,947 5 11½
1874	31,656 1 7½	3,670 1 11½	769 13 0½	17,440 8 7	53,536 5 2

The number of free scholars was 6,426, being 147 less than in 1873, while the school fees increased by £4,588 19s. 3½d., the gross amount paid being £53,536 5s. 2½d. The improvement in this respect, more marked than in any year since 1871, may be ascribed in some degree to the inquiries carried on through the Council's Inspectors, and to the more systematic manner in which the provisions of section 16 of the Public Schools Act have been carried out. There is, however, undoubtedly still great room for improvement in respect to the payment of school fees,—not as regards the parents who are really unable to pay, but on the part of those who, with no such excuse, nevertheless habitually withhold payment.

III.—PUBLIC SCHOOLS.

Appendix B.

In 1874 the number of Public Schools in operation increased from 400 to 420. This statement however, does not represent the whole number of new Public Schools established in 1874, inasmuch as fifteen of the number open in the previous year were closed, and five others were removed to different classes. Of the forty Public Schools opened in 1874, twenty-one were entirely new institutions, three were old schools re-opened, and sixteen had previously been in operation as Provisional, Half-Time, or Certified Denominational Schools. The shifting of population that continually takes place will probably, for many years to come, render the continuance of several of the smaller Public Schools extremely problematical, and consequently changes such as those above mentioned may be expected to occur with considerable frequency.

Appendix C.

The number of applications for new Public Schools received in 1874 was forty. By these applications, it was sought to provide the means of instruction for 3,749 children, and 747 parents or guardians appended their signatures to a promise to send their children or wards to the schools when established. Twenty-four of these applications were granted, four were declined, and twelve remained under consideration at the end of the year.

IV.—PROVISIONAL SCHOOLS.

Appendix D.

Of the 216 Provisional Schools reported to be in operation in 1873, twenty-one were closed in 1874, twelve were converted into Public Schools, and one into a Half-Time School. To the 182 then remaining must be added forty-seven new schools, eight that were re-opened, and seven transferred from other classes of schools. The total number in operation was consequently 244.

Appendix E.

Applications for aid to seventy-two Provisional Schools were received in 1874. Of these, forty-five were granted, twelve declined, and fifteen stood over for decision in 1875. The number of children for whose instruction provision was to be made by these applications was 1,919, their attendance at the schools being guaranteed by 747 parents or guardians.

V.—HALF-TIME SCHOOLS.

Appendix F.

Appendix G.

Of schools of this class, 122 were in operation in 1874, being a net increase of but five, although the number of new schools was twenty-two. The number of applications for Half-Time Schools was twenty-two, of which fourteen were acceded to, four were declined, and four were not determined at the end of the year.

VI.—INSPECTION.

With the same staff of Inspectors, and generally favourable weather, the number of schools fully inspected in 1874 exceeds but slightly that for 1873, and fewer children were present at the examinations. It is to be observed, however, that in addition to the number of schools or departments reported to have been fully inspected, some others received incidental visits. The appended Table exhibits the number of schools

schools inspected in each District, and the number not visited for the purpose of examining the pupils:—

Districts.	Numbers of Schools or Departments existing.	Number fully inspected.	Number not fully or regularly inspected.
Albury	62	51	11
Armidale	103	63	40
Bathurst	121	58	63
Braidwood	113	111	2
Camden	106	83	23
Cumberland	88	87	1
Goulburn	109	93	16
Maitland	99	82	8
Mudgee	71	59	12
Newcastle	100	87	13
Sydney	110	110	0

VII.—CONDITION OF SCHOOLS INSPECTED.

On this head, very decided improvement is, generally speaking, observable. While the high standard set up in previous years has not been in any respect lowered, the number of schools reaching or surpassing it has sensibly increased. About 34 per cent. of all inspected schools were reported as equal to the standard, and 19 per cent. above it. The Table given below affords information in detail as to the success of the various classes of schools, and also means of comparison with the results achieved in the previous year.

Schools.	Below Standard		Up to Standard.		Above Standard.	
	1873.	1874.	1873.	1874.	1873.	1874.
	per cent.	per cent.	per cent.	per cent.	per cent.	per cent.
Public	44.7	33.3	36.8	37.4	18.4	29.3
Provisional	84.1	78.2	9.3	17.6	6.6	4.2
Half-Time	80.4	38.	9.8	42.4	9.8	19.6
Denominational	63.7	46.5	29.1	39.9	7.2	13.6
All Schools	60.4	45.6	27.2	34.8	12.4	19.6

The improvement indicated in the foregoing Table is corroborated by the results of the examination of the pupils, as disclosed in the subjoined Table of the estimated proficiency of the pupils of all schools:—

ESTIMATED PROFICIENCY OF THE PUPILS.

Subjects taught, and number of Children examined therein.					
	Estimated Proficiency.				
	Good	Fair.	Tolerable.	Moderate to Indifferent.	Totals.
<i>Reading—</i>					
Alphabet	1,057	1,491	1,309	1,413	5,270

While

While it appears from the foregoing statistics that the percentage of pupils satisfying the standard in reading (for example) was 87, as against 85 in 1873, 28 per cent. passed with great credit as against 22. In other subjects also it will be observed that the number of pupils whose proficiency is estimated as "Good" has undergone a considerable increase. This circumstance is the more noteworthy, inasmuch as the greatest numbers of scholars who, during any year, cease to attend school, are as a rule those who have attained the highest degree of advancement in their studies.

VII.—TEACHERS.

The supply of Pupil Teachers continues to be, in general, fully equal to the demand for their services. Applications for appointment in that capacity were received from 193 persons during 1874, and, of that number, 102 succeeded in passing the required examinations as to aptitude for teaching and knowledge of elementary subjects of instruction. The improvement manifested in 1873, as regards the success of pupil teachers actually engaged in schools, was continued last year, the percentage of failures being 16 per cent. only. The corresponding per centages for 1871, 1872, and 1873, were 31, 27, and 21.

The following statistics will give the means of comparison with the results obtained in 1873:—

PUPIL TEACHERS.

	1874.	1873.
Applicants examined	193	179
" successful	102	94
" unsuccessful	91	85
Pupil Teachers promoted from—		
Class IV to Class III	60	76
" III to " II	61	42
" II to " I	48	40
" I to Training School	34	38
Failing to gain promotion	39	56

The work of the Training School was also carried on with great success in 1874. In addition to the 34 First Class Pupil Teachers who were found eligible for admission to the Training School, 41 candidates presented themselves for admission, of which number 8 failed to pass. The course of training was completed by 64 candidates who, after the usual examination, were classified as follows:—

Classification.	Males.	Females.	Total.
CLASS II.			
Section A	8	7	15
" B	6	13	19
CLASS III.			
Section A	8	5	13
" B	7	2	9
" C	4	4	8
Total.....	33	31	64

The examination of Teachers in charge of Schools, prescribed by Article 37 of the Regulations, and of those who applied for promotion, were held as usual, and with results, as may be seen from the following Table, far in advance of those obtained in any previous year:—

EXAMINATIONS UNDER ARTICLE 37.

Probationers advanced to Class III, Section C	33
Teachers advanced to Class III, " B	42
" " " III, " A	49
" " " II, " B	13
" " " II, " A	2
" " " I, " B	1
Total number promoted through examination	145
Number failing to gain promotion	130
Total examined	275

The fact that 145 Teachers (more than half the whole number examined) gained promotion, shows that great efforts towards self-improvement had been general among the whole body during the year. The percentage of failures was 47 only, as against 74 in 1873, and 82 in 1872.

Promotions for good service under Article 39 of the Regulations were granted to the number of 40, as under:—

TEACHERS PROMOTED UNDER ARTICLE 39.

Number advanced from III C to III B	3
" " III B to III A	9
" " III A to II B	20
" " II B to II A	7
" " II A to I B	1
Total of promotions under Article 39	40

The total number of Teachers of all ranks in the service of the Council at the end of the year was 1,464. These were classed as follows:—

Principal Teachers	1,002
Assistant Teachers	158
Pupil Teachers	304

1,464

The

The gross income of Teachers amounted to £146,651 4s. 6¹/₂d., of which the sum of £53,536 5s. 2¹/₂d. was derived from school fees, and the remainder, £92,681 12s. 6d., from salaries paid by the Council. Calculated upon these sums, the average emoluments of Teachers would be £100 3s. 5¹/₂d.

The following table, however, exhibits a much more exact statement of the incomes of Teachers, exclusive of Pupil Teachers:—

Schools.	Salary.	Fees.	Total.
	£ s. d.	£ s. d.	£ s. d.
Public	83 7 2 ¹ / ₂	56 16 8	140 3 10 ¹ / ₂
Provisional	44 6 3 ¹ / ₂	15 0 9 ¹ / ₂	59 7 1 ¹ / ₂
Half-time	63 5 3 ¹ / ₂	12 4 4	75 9 7 ¹ / ₂
Church of England	81 0 5 ¹ / ₂	67 16 11 ¹ / ₂	148 17 4 ¹ / ₂
Roman Catholic	77 0 1 ¹ / ₂	48 11 8 ¹ / ₂	125 11 10
Presbyterian	97 14 4 ¹ / ₂	57 4 6 ¹ / ₂	154 18 11
Wesleyan	91 14 1 ¹ / ₂	71 6 7 ¹ / ₂	163 0 9

IX.—LOCAL SUPERVISION.

Excepting in a few isolated cases, not exceeding three or four in each Inspectoral District, the local supervision still remains the least satisfactory topic connected with the Schools. In the exceptional cases referred to, the Boards discharge their duties with zeal and efficiency; but the general characteristic of the Boards is, that the duty undertaken—where discharged at all—is performed without interest and with little care. Still, signs of improvement in this respect have been noticeable during the past year, giving slight grounds for hope that greater efficiency may be obtained in the future.

X.—FINANCE.

From the appended statement of receipts and disbursements, it will be seen that the following sums were available for the Council's operation in 1874:—

	£	s.	d.
Balance from 1873	12,289	6	10
Parliamentary Vote for 1874	120,000	0	0
Church and School Estates Revenue	1,600	3	4
Total	£133,839	10	2

To this must be added the amount of local contributions in cash (£6,708 18s. 7d.) towards the cost of school buildings, and £53,536 5s. 2¹/₂d. paid as school fees. The whole amount received for Public Instruction was consequently £194,084 13s. 11d.

The principal items of expenditure were the following:—

	£	s.	d.
Salaries and allowances to teachers	94,572	15	11
Buildings and repairs	16,593	2	0
General management	7,681	16	9
Inspection	7,525	10	5
Training	3,457	0	3
Books, printing, and stationery	3,135	15	11
Total	£132,966	1	3

From these details it will be observed that the amount expended exceeds the receipts from the Parliamentary Vote and from the Church and School Estates Revenue. But for the balance brought over from 1873, therefore, the resources at the Council's disposal would have been inadequate to meet the demands arising out of the cost of maintaining existing schools and of establishing new ones. This fact points to the necessity for an increased Vote; and the Council, in anticipation of the need for such augmentation of the Parliamentary grant, has furnished the Government with an estimate of the amount that could be advantageously expended in 1875. This sum, £180,000, would, the Council considers, provide for the higher rate of expenditure for maintenance caused by the increasing numbers of schools, and leave a margin for the additional outlay upon buildings rendered necessary by the numerous applications for new schools, and the increased proportion of the cost of erection which, in certain cases, the Council may deem it expedient to contribute from the public funds.

Summing up the chief points mentioned in the foregoing pages, it may be stated that the number of schools and the number of children brought under instruction have increased, but the attendance is less regular than in preceding years; the payment of school fees has improved; the efficiency of the schools generally, and the proficiency of the pupils in the ordinary school subjects, have been raised; and the various classes of teachers employed by the Council have attained a higher degree of competency, and received a substantial augmentation of their emoluments. Local supervision, with the before-mentioned exceptions, remains in an unsatisfactory state.

We submit this as our Report upon Public Schools for the year ending 31st December, 1874; and in testimony thereof, we have caused our corporate seal to be affixed hereto, this fifth day of April, one thousand eight hundred and seventy-five.

(L.S.) J. SMITH, President.
THOMAS HOLT.
S. C. BROWN.
W. A. DUNCAN.
ALFRED STEPHEN.

W. WILKINS, Secretary.

ALBURY DISTRICT.

INSPECTOR'S GENERAL REPORT FOR 1874.

I HAVE the honor to submit for the information of the Council of Education this General Report upon the condition of the Public, Provisional, Half-time, and Certified Denominational Schools in the Albury District for the year 1874.

Supply of Schools.—During the year Public Schools were brought into operation at Black Range, Coolac, Forest Vale, Mulwala, Tattalia, and Wilcannia; the necessary arrangements made for the establishment of Public Schools at Bungowannah, Hopetield, Jindera, Morebringer, Sandy Creek, and Urana; the Public Schools at Euston and Upper Adelong were re-opened, and Provisional Schools established at Booligal, Cooba Creek, Ferndale, Hillas Creek, and Wandook. Owing to decrease of population the Provisional Schools at Kimo Reef and Mount Patrick were closed; and, in accordance with the provisions of section 28 of the Public Schools Act, the certificate of the Church of England School at South Gundagai was cancelled, on 31st January, 1874.

In reviewing the distribution of schools in this district, and noting the degree to which they supply its educational wants, it may be stated that there were but few localities having a population capable of maintaining an average daily attendance of fifteen pupils, in which, at the close of the year, a Public or a Provisional School was not either in operation or being established. Wherever it could be made known to the people that the number of children of the school ages (four to fourteen years) was sufficient to warrant the establishment of a school of either class, they manifested a commendable readiness in fulfilling the necessary conditions; and the liberality with which, in most instances, the local quota of the cost of school buildings was subscribed may be accepted as practical and satisfactory evidence of the growing desire for education evinced by the residents of even the most outlying and isolated portions of the Colony. In numerous instances indeed the subscriptions of the settlers appeared to be largely in excess of their pecuniary means, and it would be well if, to meet the requirements of newly settled and sparsely populated localities, a larger proportion of the cost of school premises vested in the Council of Education were defrayed from the public treasury.

With respect to Half-time Schools it has to be reported that, notwithstanding their proved usefulness, they are not popular in this district. Parents think that at best children can be only *half* educated in such schools; it is well nigh impossible to disabuse them upon this point, and they necessarily take but little interest in their establishment.

Organization.—The material state of existing schools admits of favourable report. Substantial vested buildings have within the year been erected at Tattalia and Wilcannia; new premises have been provided for the Provisional Schools at Ferndale, Wagra, and Welaregang; and considerable improvements effected in the premises of several Public Schools, chiefly those at Menindie, Tumut, and Wagga Wagga. Several rural schools, however, are still unprovided with residences.

Ninety per cent. of the schools visited were found duly supplied with the necessary educational appliances, but many complaints as to the *quality* of the material supplied by the Council's agent were made by the teachers. In a few schools also, much inconvenience resulted from an edition of some of the school books differing in many details from that previously supplied, having been included in the grants for 1874. The state of repair, equipment, and general organization of the schools in operation for the year may be summarized as follows:—

	Good.	Fair.	Tolerable.	Indifferent.
Public Schools	19	9	4	5
Provisional Schools	1	8	4	4
Half-time Schools	1	1
Certified Denominational Schools	2	2	2
Totals	22	20	10	10

Discipline.—In my general report for 1872, attention is drawn to the fact that, from returns furnished by the teachers, it appeared there were from six to seven hundred children of the school ages residing within a reasonable distance of schools aided or maintained by the State, but who were not in attendance at these schools nor otherwise under instruction. I regret having to report that but little improvement has taken place in this respect within the past two years.

From statistics collected in 1874, it has been found that the number of children similarly circumstanced amounts to 670—equal to 15 per cent. of the aggregate number enrolled for the year in all the schools of the district. There are no doubt several children included in this number who had been under instruction in previous years, and others whose absence was due to the want of decent clothing; nevertheless, it may be confidently asserted that nine-tenths of those included in the return were absent because of the indifference, the ignorance, or the cupidity of their parents. Referring to the condition of such children in a previous report (1871), I gave it as my opinion that the only effectual way by which they could be rescued from the state of barbarism in which they were being brought up was by the enactment of a law making the education of all children residing within a given distance of established schools compulsory. Subsequent experience has served only to strengthen my convictions as to the necessity for such a measure.

But whatever difference may exist as to the merits of a compulsory enactment, public opinion must at the least be unanimous in desiring that no impediments to the progress of primary education be offered by the existing laws of the Colony; and yet it has to be stated that, what is popularly known as the *residence clause* of the *Crown Lands Alienation Act*, has indirectly at least interfered with the instruction of many of the children in country districts. A large proportion of these are conditional purchasers, the "*selections*" in many instances being made at considerable distances from their parents' homes

homes and the nearest schools, with a view to the protection of "grass rights" or other interests. In former years this arrangement made but little difference in the attendance at rural schools, but early in 1874 it was generally believed that the conditions of residence would be enforced more stringently than heretofore. The result was that many children were withdrawn from school that they might be "on their selections" when the Surveyor or other Land Officer visited for inquiry and report.

Having thus briefly referred to the more prominent impediments to the successful working of the Public Schools Act, it is pleasing to add that, as regards the pupils enrolled for the year, the degree of regularity and punctuality noted in former reports has been fully sustained. This is all the more gratifying, as owing to the prevalence of juvenile sickness during the latter part of the year, the attendance at many of the schools in the south-western portion of the district was unusually low.

Viewed as a whole, the government and moral condition of the schools show progressive improvement. The requirements of order, attention, and prompt obedience, have been more generally met than in any former year; complaints of undue or injudicious punishment are rarely heard; and the every-day working of the schools is characterized by an absence of corporal punishment.

• Annex A.

Instruction.—In estimating the pupils' attainments, and appraising the general efficiency of the schools, the standard prescribed by the Council has been uniformly applied. A detailed statement showing the condition of each school is annexed, and may be summarized as follows:—In 19 per cent. the general proficiency ranged from very fair to good; in 39 per cent. it was estimated as fair; and in 42 per cent. it fell below the requirements of the standard. Compared with the results of the previous year, it follows that the percentage of schools in which the requirements of the standard were either exceeded or fairly met has advanced from 40 to 68 of the total number examined, while the proportion below the standard has receded from 60 to 42 per cent. of the whole. The satisfactory measure of progress here indicated is due partly to the increase in the number of trained teachers employed, and to the higher results produced in new schools of two and three years' standing; but chiefly to the diligence and sustained industry evinced by the teaching staff generally. There may indeed be found a few apparently indifferent as to the results of their labours so long as they escape official censure, and others who appear incapable of realizing the moral responsibilities of their office; but the number of either is too small to seriously diminish the measure of praise and commendation due to the teachers as a body for the zeal with which they discharge their very onerous duties.

I would here point out, that much difficulty was experienced during the past year in filling up vacancies caused by the removal or resignation of teachers in rural schools. This, no doubt, was in some measure due to the unattractive surroundings of bush life; but the chief and primary cause was, in my opinion, the small income generally derived by the teachers, and the want of suitable accommodation in the way of residence. In 30 per cent. of the Public Schools in this district, the average income of the teacher is less than £100 per annum; and in the Provisional Schools it does not exceed £65 per annum. Having regard to the high rates of wages or salary ruling in other fields of employment, and to the corresponding increase in the cost of the necessaries of life, it can scarcely be expected that the supply of teachers willing and competent to take charge of rural schools will be found equal to the demand, unless greater inducements in the shape of salary and accommodation can be offered by the Council.

After a careful review, and due consideration of the data afforded by the educational circumstances of this district, I venture to state that a considerable impetus would be given to the working of the Public Schools Act, and the realization of its objects would be greatly expedited, if the administrative powers of the Council were strengthened and sustained by the Legislature in the directions here specified, viz. :—

1. By augmenting the annual parliamentary vote for primary education, so as to provide funds for the erection of public school buildings and teachers' residences where needed.
2. By voting a special sum to supplement the classification salaries of teachers in charge of rural schools, and
3. By amending the Public Schools Act of 1866 so as to make the education of all children of certain ages, and residing within a prescribed distance of any school aided by the state, compulsory.

EDMUND H. FLANNERY,
Inspector, Albury District.

ANNEX A.

SUMMARY of Reports upon condition of Public, Provisional, and Half-time Schools, inspected during the year 1874.

I.—PUBLIC SCHOOLS.

ADELONG :—Visited, 22nd and 23rd June.

Present at examination :—Boys, 57; girls, 47; total, 104.

This school is held temporarily in the hospital buildings. The accommodation is very inadequate, and the out-buildings insufficient, but the material equipment is otherwise liberal, and the organization good. 90 per cent. of the children of school ages in the locality, and not in attendance at other schools, are enrolled; the majority are regular, but many are unpunctual. In its remaining features the moral aspect of the school is pleasing; the instruction is well regulated, and the teaching thorough. The average proficiency is very fair.

ADELONG CROSSING :—Visited, 26th May.

Present at examination :—Boys, 21; girls, 12; total, 33.

The school buildings are in fair repair, but need painting; a weather-shed is also required; viewed as a whole, the organization is reasonably good, but the grounds have lost the neat appearance presented in former years. The attendance is general and fairly punctual, and the requirements of order and attention are tolerably met. The average proficiency is moderate. At date of examination the present teacher had been only four months in charge.

ADELONG, UPPER :—Visited, 18th June.

Present at examination :—Boys, 9; girls, 9; total, 18.

The material state of the school is reasonably good, the supply of working materials adequate, and the general appearance of the premises neat. With one exception, all the children of school ages in the locality are enrolled, and the moral condition is, on the whole, healthy. The average proficiency is moderate.

ALBURY (Primary) :—Visited, 4th, 5th, 6th, 7th August.

Present at examination :—Boys, 67; girls, 52; total, 119.

The school-buildings are much in need of repair, otherwise the organization is reasonably good, and the stock of educational appliances suitable and sufficient. The discipline is healthy and fairly effective; the instruction is carefully regulated, and the average proficiency ranges from fair to very fair.

ALBURY

ALBURY (Infants):—Visited, 5th August.

Present at examination :—Boys, 64 ; girls, 56 ; total, 120.

The gallery accommodation is rather limited for the present attendance, and the interior of school-room needs painting and colouring. In other respects the equipment is complete and the organization appropriate. The attendance is general and well sustained ; the order excellent, and an air of happy contentment pervades the school ; measured by the prescribed standard of proficiency, the pupils' attainments average good.

BALRANALD:—Visited, 27th October.

Present at examination :—Boys, 31 ; girls, 31 ; total, 62.

The schoolhouse is a weatherboard building, in fair repair, but much too small for the present attendance. The general organization is tolerable, and the disciplinary arrangements are fairly effective. The instruction is painstaking, and the average proficiency approaches fair.

BATLOW:—Visited, 17th June.

Present at examination :—Boys, 25 ; girls, 20 ; total, 45.

The schoolhouse is a weatherboard building, in fair repair, but needs painting. Fencing, a weather-shed, and lavatory are also required. The attendance includes 80 per cent. of the children of school ages in the locality. The discipline is fairly effective, the teaching painstaking, and the average proficiency fairly satisfactory.

BLACK RANGE:—Visited, 14th August.

Present at examination :—Boys, 14 ; girls, 16 ; total, 30.

This school is held in a small church building recently erected. It is scantily furnished, the premises are unfenced, and the out-buildings incomplete. The general organization is reasonably good, and the supply of working materials adequate. About sixty-five per cent. of the children of school ages in the locality are enrolled ; the majority are regular in attendance ; and the requirements of order and attention are fairly met. For the time the school has been in operation, tolerable progress has been made by the pupils generally.

BOVNA:—Visited, 20th August.

Present at examination :—Boys, 12 ; girls, 13 ; total, 25.

A slab building, in tolerable repair, fairly furnished, and liberally provided with working materials. Three-fourths of the children in the locality are enrolled, but not more than half of these are regular in attendance. The results of examination indicate a satisfactory degree of progress since last inspection, and the average proficiency approaches fair.

BRUCEDALE:—Visited, 22nd July.

Present at examination :—Boys, 12 ; girls, 11 ; total, 23.

This school is still held in the Wesleyan Chapel, a slab building,—scantily furnished, and unprovided with out-offices. Suitable premises are about being built in a more central position. Not more than half the children of the locality are enrolled ; but in many instances the absentees were fulfilling the conditions of the residence clause of the Crown Lands Alienation Act. The moral condition of the school is otherwise healthy, and the pupils' attainments may be estimated as tolerable.

COOLAC:—Visited, 3rd June.

Present at examination :—Boys, 15 ; girls, 17 ; total, 32.

The schoolhouse is a slab building, roofed with shingles, of rather frail construction, but liberally furnished, and well organized. About 80 per cent. of the children attend regularly, and the general discipline is judicious. Fair proficiency was evinced in the several subjects of instruction.

DENILQUIN:—Visited, 1st and 2nd October.

Present at the examination :—Boys, 70 ; girls, 39 ; total, 109.

The accommodation is limited, and the ventilation of the schoolhouse defective ; otherwise the general equipment is complete, and the whole premises are tastefully kept. About 80 per cent. of the children in the locality are enrolled, and the attendance is regular ; the requirements of order and attendance are fairly met, and the moral tone of the school is pleasing. The general proficiency is up to standard, and fair progress has been made since last inspection. The teacher's residence needs repair.

EDWARDSTOWN:—Visited, 27th May.

Present at examination :—Boys, 19 ; girls, 25 ; total, 44.

The schoolhouse is a substantial slab building, amply provided with furniture and working materials. Fencing, a weather-shed, and lavatory are needed to complete the general equipment. About 70 per cent. of the children in locality are enrolled, but the attendance is irregular. This, in the absence of a more reasonable cause, may be ascribed to the indifference of the parents. The average proficiency is moderate, and but little progress has been made since last inspection, more especially in the senior classes.

EUNONIHAREENYAH:—Visited, 20th July.

Present at examination :—Boys, 11 ; girls, 14 ; total, 25.

Since last inspection the teacher's residence has been completed, and the schoolhouse ceiled. There is an ample supply of educational appliances, and the whole premises are excellently well kept. Many of the children formerly in attendance have been recently withdrawn to comply with the provisions of the residence clause of the Crown Lands Alienation Act. The moral condition of the school is good, the work of instruction is diligently conducted, and the results are fully up to standard.

EUSTON:—Visited, 30th October.

Present at examination :—Boys, 6 ; girls, 13 ; total, 19.

This school was re-opened in June, 1874, and is now held in premises the property of a member of the Local Board. There is a tolerable supply of furniture and working materials, and the organization is as good as circumstances permit. All the children of school ages in the locality are enrolled, the attendance is regular, and the general discipline healthy. Fair progress appears to have been made since the school came into operation.

GOCTP:—Visited, 12th June.

Present at examination :—Boys, 26 ; girls, 32 ; total, 58.

The schoolhouse is commodious, in good repair, and well equipped. A teacher's residence, out-buildings, and fencing are yet needed. 90 per cent. of the children in the locality are enrolled, the attendance is very regular, and the moral tone of the school is healthy. The instruction is duly regulated, the teaching painstaking, and the average proficiency fair. Substantial progress has been made since last inspection.

GUNDAGAI:—

GUNDAGAI:—Visited, 28th May.

Present at examination :—Boys, 25 ; girls, 20 ; total, 45.

The school buildings are old, but in fair repair ; there is an ample supply of educational appliances, and the general organization is good. Owing to the recent opening of two private schools, one of which is held in the Roman Catholic church, and under the patronage of the clergyman, the attendance at date of inspection was comparatively small. The moral tone of the school is healthy, and the results of instruction are fully up to standard.

HAY :—Visited, 22nd and 23rd October.

Present at examination :—Boys, 48 ; girls, 50 ; total, 98.

The school buildings are commodious, but need some minor repairs. A weather-shed and additional accommodation for boarders are also required. The general organization is appropriate, and the premises present a neat appearance. The attendance has been more than doubled since the present teacher took charge, in November, 1873, and is both regular and punctual. Good order obtains, and the moral condition of the school is pleasing. All the prescribed subjects are included in the course of instruction, and the average proficiency ranges from fair to very fair.

HOWLONG :—Visited, 18th September.

Present at examination :—Boys, 11 ; girls, 19 ; total, 30.

The schoolhouse is in good repair, well furnished, and fairly provided with working materials. The general organization evidences a want of neatness and due care. About 60 per cent. of the children in the locality are enrolled ; the discipline is very weak, and the moral tone of the school low. The average proficiency is moderate, and little progress has been made since last inspection. The teacher was removed at the close of the year.

LAKE ALBERT :—Visited, 30th November.

Present at examination :—Boys, 5 ; girls, 6 ; total, 11.

The material state of the school is good, and its organization appropriate. Owing to special causes the attendance was unusually low on date of visit, but, so far as could be judged from the conduct and intelligence of the pupils present, the general management may be regarded as fairly effective.

MOAMA :—Visited, 7th October.

Present at examination :—Boys, 15 ; girls, 14 ; total, 29.

This school is held in a wooden building, vested in Trustees for Sunday School purposes ; it is in poor repair, the premises are unfenced, there are no out-buildings, and the supply of furniture is scanty. The attendance includes 70 per cent. of the children of school ages in the locality, and the general efficiency of the school may be estimated as moderate. The present teacher has been only a fortnight in charge. An effort has been made to raise, by local subscription, the prescribed portion of the cost of vested premises, but the amount realised is insufficient.

MENINDIE :—Visited, 10th November.

Present at examination :—Boys, 13 ; girls, 14 ; total, 27.

A neat and comfortable school-house, fully furnished, and amply provided with working materials. About 80 per cent. of the children of school ages in the locality are enrolled, and the majority are regular in attendance. The general discipline savours of harshness, and the results of instruction may be estimated at tolerable.

MULLENJANDRA :—Visited, 16th December.

Present at examination :—Boys, 11 ; girls, 21 ; total, 32.

The premises are unfenced, the teacher's residence is a mere make-shift, and the supply of school furniture is scanty. The general organization is as good as circumstances permit, the government is judicious and effective, and the average proficiency of the pupils ranges from fair to very fair. 90 per cent. of children present at examination had been promoted since previous visit, and, viewed as a whole, the school, so far as the teacher can be held responsible, takes rank among the most useful in the district. At the close of the year the teacher was promoted to a more important school.

MULWALA :—Visited, 24th September.

Present at examination :—Boys, 12 ; girls, 13 ; total, 25.

This school is held in the English church, a wooden building in tolerable repair, and fairly suitable. The attendance includes all the children of the locality, and is passably regular. Good order prevails, and the moral condition is otherwise healthy. The teaching is painstaking, and the results show a tolerable approach to the requirements of the standard.

NARANDERA :—Visited, 24th November.

Present at examination :—Boys, 20 ; girls, 11 ; total, 31.

A suitable and commodious schoolhouse, in good repair and duly equipped, but needs to be more neatly and carefully kept. About three-fourths of the children of school ages in locality are enrolled, and the attendance is reasonably regular ; in other respects the discipline is weak. But little progress has been made in the several subjects of instruction since last inspection, and the actual proficiency is only moderate.

TATTALLA :—Visited, 8th October.

Present at examination :—Boys, 17 ; girls, 12 ; total, 29.

The school buildings are new, suitable, and well furnished ; but the premises are unfenced and unprovided with lavatory and weather-shed. All the children in the locality attend, and the disciplinary arrangements are passably appropriate ; but the instruction is wanting in intelligent method, and productive of only moderate results.

THURGOONA :—Visited, 13th August.

Present at examination :—Boys, 42 ; girls, 30 ; total, 72.

Apart from the fact that the grounds are losing the exceedingly neat and well ordered appearance presented in former years, the material state and general equipment of the school are all that could be desired, but the residence needs enlargement. The attendance is general, regular, and punctual ; and, in its remaining features, the moral aspect of the school is very pleasing. All the prescribed subjects are included in the course of instruction ; the methods of teaching are skilful ; and the results satisfactory. The average proficiency ranges from very fair to good.

TUMUT :—

TUMUT :—Visited, 9th and 10th June.

Present at examination :—Boys, 60 ; girls, 42 ; total, 102.

The schoolhouse is in good repair, fairly furnished, and amply found in the necessary educational appliances. A weather-shed, lavatory, and residence for the teacher are being built, and when finished the material equipment of the school will be complete. About 80 per cent. of the children not in attendance at other schools in the locality are enrolled, and in all its features the moral aspect of the school is very pleasing. The average proficiency of the pupils ranges from very fair to good.

WAGGA WAGGA (Boys) :—Visited, 15th and 16th July.

Present at examination :—168.

The accommodation is inadequate to the wants of the present attendance, otherwise the organization and general condition of the premises are all that could be desired, and the disciplinary arrangements are judicious and effective. The work of instruction is conducted with zeal, industry, and intelligence ; in the upper classes the course of studies is much higher than the requirements of the standard, and the average proficiency ranges from very fair in the lower grades, to very good in the senior division.

WAGGA WAGGA (Girls) :—Visited, 13th and 14th July.

Present at examination :—95.

An excellent schoolroom, amply furnished and fairly organized. In the lower classes the discipline is comparatively weak, in the higher grades it is effective, and the average results of instruction may be estimated as fair. Geometry is taught to the pupils of the 4th class, and the progress made is very encouraging.

WENTWORTH :—Visited, 2nd November.

Present at examination :—Boys, 21 ; girls, 20 ; total, 41.

The teacher's residence needs enlargement, and the material equipment of the premises is defective as regards fencing and a weather-shed. Owing to the prevalence of measles only half the pupils on rolls could attend the examination, and of these the majority had suffered from this epidemic within the previous month. There was nevertheless sufficient evidence as to the pupils' proficiency to show that the skilful and painstaking teaching noted in previous reports upon the school is still maintained.

WILCANNIA :—Visited, 12th November.

Present at examination :—Boys, 17 ; girls, 13 ; total, 30.

The premises in which the school is at present conducted are very unsuitable for educational purposes, but the necessary buildings are being erected, and will be ready for occupation in January, 1875. Owing to this want of accommodation, and the prevalence of juvenile sickness, the attendance of pupils is relatively small, including not more than 40 per cent. of the children in the locality. The general discipline is ineffective, and the average proficiency barely moderate.

WOOMARGAMA :—Visited, 16th December.

Present at examination :—Boys, 14 ; girls, 15 ; total, 29.

The schoolhouse is a substantial brick building, in good repair, duly furnished, and having a fair supply of working materials. Nearly all the children of the school ages in the locality are enrolled, but many are unpunctual, and the general discipline is weak. Fair progress has been made in reading and writing ; as regards the other subjects of instruction the results are less satisfactory, and the mental powers of the pupils are but partially developed.

II.—PROVISIONAL SCHOOLS.

FERNDALE :—Visited, 16th June.

Present at examination :—Boys 9 ; girls, 13 ; total, 22.

Out-buildings and fencing have yet to be provided, otherwise the material equipment is reasonably good. All the children of the locality are enrolled, and attend very regularly ; in other respects the moral condition of the school is pleasing. Good progress has been made in the more important subjects of instruction, and the average proficiency approaches fair.

KIMO REEF :—Visited, 6th June.

Present at examination :—Boys, 8 ; girls, 9 ; total, 17.

The schoolhouse is suitable, well furnished, and neatly kept. The attendance is general, regular, and fairly punctual ; the discipline is firm, and the moral tone of the school pleasing ; the instruction is productive of moderate results. Owing to the failure of the principal gold mines in the locality the attendance fell off considerably ; and on 1st September the teacher resigned ; since then the school has not been re-opened.

LACMALAC :—Visited, 11th June.

Present at examination :—Boys, 9 ; girls, 12 ; total, 21.

The schoolhouse is in passable repair, but too small for the ordinary attendance ; the general organization is fair, the discipline reasonably effective, and the results of instruction exceed tolerable.

MAJOR'S PLAINS :—Visited, 16th September.

Present at examination :—Boys, 9 ; girls, 7 ; total, 16.

The school is fairly found in furniture and working materials, and its organization is passable. Two-thirds of the children of school ages in the locality are enrolled, but the attendance is fitful and unpunctual. The instruction is fairly regulated and productive of tolerable results.

MOUNT ADRAH :—Visited, 7th December.

Present at examination :—Boys, 2 ; girls, 4 ; total, 6.

The schoolhouse is in reasonable repair, fairly furnished, and neatly kept. Owing to the unpopularity of the teacher the attendance for some time has been exceedingly low, and the attainments of the few present at examination were very limited. The teacher resigned at the close of the year.

TEN-MILE CREEK :—Visited, 15th December.

Present at examination :—Boys, 8 ; girls, 16 ; total, 24.

The want of more suitable school premises is urgent, and steps are being taken to provide them. Nearly all the children of school ages in the locality are enrolled, and the attendance is fairly regular. The moral condition of the school is healthy, and the instruction is productive of tolerable results.

URANA :—

URANA:—Visited, 26th November.

Present at examination:—Boys, 12; girls, 12; total, 24.

This school is held in the English church, a wooden building in fair repair but scantily furnished. The pupils are neat in dress, fairly regular and punctual in attendance, and orderly under instruction. The teaching is painstaking, and the average proficiency moderate.

WAGRA:—Visited, 18th December.

Present at examination:—Boys, 10; girls, 7; total, 17.

A new schoolroom, but scantily furnished and having a limited supply of working materials. The organization is indifferent, and evidences negligence or want of taste; the discipline is feeble, and the results of instruction show only a very moderate approach to the requirements of the standard.

WANDOOK:—Visited, 16th October.

Present at examination:—Boys, 8; girls, 5; total, 13.

The schoolhouse is suitable, in good repair, and fairly furnished; but out-buildings have yet to be provided. The general organization is judicious and tasteful; the discipline is good; and, having regard to the time the school has been in operation, the average proficiency of the pupils is fair.

WANGANELLA:—Visited, 19th October.

Present at examination:—Boys, 7; girls, 12; total, 19.

The schoolhouse is in good repair, suitably furnished, and very neatly kept. Nearly all the children in the locality are enrolled, but the attendance has, during the past six months, been very irregular, owing to many of the pupils being "free selectors," and having to fulfil the provisions of the *residence clause* of the Land Act. The moral aspect of the school is pleasing, the instruction painstaking, and the results range from tolerable to fair.

WONDALGA:—Visited, 19th June.

Present at examination:—Boys, 10; girls, 8; total, 18.

The schoolhouse is a slab building, in tolerable repair, and passably equipped. Two-thirds of the children of school age in the locality are enrolled, and the majority of these attend regularly. The general discipline is fairly effective, and the teaching is tolerably profitable.

III.—HALF-TIME SCHOOLS.

TARCUTTA LOWER:—Visited, 22nd May.

Present at examination:—Boys, 4; girls, 6; total, 10.

The schoolhouse is commodious and in good repair, suitably furnished and well kept. With one exception all the children in the locality are enrolled, the discipline is judicious, and the instruction is marked by fair practical skill. A very fair degree of progress has been made since last inspection.

TARCUTTA, UPPER:—Visited, 21st May.

Present at examination:—Boys, 8; girls, 4; total, 12.

The schoolroom is a mere hut, very poorly furnished, but well provided with working materials. Nearly all the children in the locality are enrolled, and attend regularly. The teaching is skilful, and the results are fairly up to standard.

EDMUND H. FLANNERY,
Inspector, Albury District.

ARMIDALE DISTRICT.

INSPECTOR'S General Report for the year 1874.

DURING the year, twenty (20) new schools have been established in this district, viz., five (5) Public, thirteen (13) Provisional, and two (2) Half-Time; and one hundred and three (103) schools and departments have been in operation for the whole, or part, of the year. Seventy-three (73) of these schools have been working for the whole period; and sixty-four (64) full inspections have been made.

All portions of the district—the Tweed River excepted—have been visited; and careful inquiry has been made of teachers and others, with the view of ascertaining localities where no means of education were provided. As the result of my observations and inquiries, I may state that, except in the case of South Grafton, no large centre of population is to be found unprovided with a school; but in this instance, active measures are now being taken to remedy the want. The railway extension beyond Murrurundi will probably necessitate the establishment of some small schools in various parts along the line, and steps have already been taken for the establishment of a Public School at Doughboy Hollow, where some fifty children of railway workmen and others are to be found. The principal localities in the other portions of the district where Provisional or Half-Time Schools are, or may be, required are:—

<i>Coast District:</i>	
North Creek	Etonswill
Tweed River Junction.	
<i>Table Land:</i>	
Oban	Dural
Duncan's Creek	Chandler
Brian's Gap	Moore Creek
Salisbury	Moonbi.
Mancy's Creek	
<i>Plains:</i>	
Attunga	Stanborough
Currabubula	Table Top
Middle Creek	Rob Roy Gully
Kimberley	Abingdon.

The above localities contain an available school population varying from fifteen to thirty children, and will in most instances require the personal visit of an Inspector before the establishment of schools may be expected. Scattered among the numerous pastoral areas of the district, and on remote "free selections," are to be found groups of children outside the reach of the provisions of the Public Schools Act, and for whose case it appears almost impossible to legislate, unless by a liberal extension of the system of itinerant teaching. In a few instances, very few unfortunately, the children of the station hands receive instruction with those of the squatter; but by far the greater number are, without doubt, growing up in the most utter ignorance.

The

The gross enrolment of pupils in the district for the year was 6,806; for 1873 it was 6,186, showing an increase for the past year of 620. A proportionate increase in the average daily attendance is also observable. These facts afford some ground for satisfaction, as indicating an increased appreciation of the advantages of education; but there still remains an amount of indifference in the minds of parents, the ill effects of which it appears impossible to overcome but by enforcing the school attendance of their children. From information carefully collated by teachers, it is found that there are in the Armidale District nearly 3,000 children of the prescribed school age, and living within reasonable access of the Council's schools, who do not attend thereat. At the most, some 500 of these may receive private instruction; the remainder, as far as their parents are concerned, are growing up in the most wilful and culpable ignorance; and the influence of so unhealthy a leaven on the future of the Colony is anything but encouraging to contemplate. While this state of things points directly to the necessity for compulsory education, it seems to me desirable, in the event of such a consummation, that the number of days fixed for school attendance should be so high as not to appear to give official sanction to a less degree of regularity than is secured at present.

During the past year new vested Public School buildings have been completed at Barraba, Cowper, Gundurimba, and Kitchella Creek; Provisional School buildings at Camden Haven, Dungowan, and Quirindi Creek; and Half-time schoolhouses, though of an inferior description, at Pelican Creek and Tatham. Important repairs and additions have also been made to the following Public School premises:—Alumny Creek, Coraki, Grafton, Kelly's Plains, Rainbow Reach, Rocky Mouth, Ummarra, and Violet Dale. Speaking generally, the condition of the schools of the district, as regards the character of the buildings, state of repair, and accommodation afforded, may be thus estimated:—Public Schools, fair to very fair; Provisional and Half-time Schools, moderate to tolerable; Denominational Schools, tolerable. As a rule, the various classes of schools are fairly equipped, and reasonable care and economy are exercised in the use of the materials supplied.

In their educational aspect the condition of the schools inspected may be regarded as tolerably satisfactory, and improved results of the teaching are perceptible. Sixty-four schools were examined; and of these, eighteen exceeded the requirements of the "Standard," thirty-five fell below, and eleven met those requirements. The remarks made in my last report on the character of the government of schools apply with equal force now:—"While in very many schools the discipline to which the children are subjected is of a healthy character and secures much that is highly important as regards their moral training, it is to be regretted that in comparatively few instances is the order really good. School drill—one of the most effective aids to discipline—is either neglected or not understood, and the marching and various simultaneous class movements are not performed with the necessary uniformity, quietness, and precision." There are fortunately but few teachers against whom even the suspicion of indolence can be raised, while very many have shown themselves earnest and industrious in a large degree; but the success of their teaching is, in the majority of cases, by no means commensurate with the labour bestowed. Until teachers make it their primary aim to secure thorough order and *active, intelligent attention* on the part of the pupils, their instruction will, to a greater or less extent, be wasted.

The experience of the past year strengthens the favourable opinion of the teachers expressed in my previous report; and it is gratifying to note the comparatively large measure of success that has attended the examination of those liable under Article 37 of the Regulations, and of others who voluntarily submitted to examination. During the year 1873, of 21 examinees, only 4 succeeded in obtaining promotion, while 17 failed. During the past year, of 30 teachers examined, 17 passed for a higher classification, and 13 failed. Thus, in 1873, only *nineteen per cent.* of the number examined were promoted, while in 1874 *fifty-seven per cent.* succeeded. All the pupil-teachers examined gained promotion.

In a few instances the character of the local supervision has improved, but in no case is it as thorough as is desirable. Very fair provision is made for effecting necessary repairs and additions to the school premises, but beyond this little is done. The most efficient Boards in the district are those of the Public Schools at Alumny Creek, Euroka, Swan Creek, Ummarra, and Uralla.

Reviewing the foregoing remarks, there is ground for satisfaction as regards the extension of the means of education effected; the improved efficiency of the schools; the generally good character of the teachers and their efforts for self-improvement, as manifested in the comparatively successful examinations passed. On the other hand, it is to be regretted that, owing to the ignorance, persistent selfishness, and indifference of a large number of parents, not more than two-thirds of the available school population of the district receive the advantages of an education placed within their reach. Compulsion may be desirable; but in the meantime much good would be accomplished were the various School Boards and Committees diligently and earnestly to perform the duties assigned them.

J. D. BRADLEY,
Inspector of Schools,
Armidale District.

ARMIDALE DISTRICT.

SUMMARY of Reports upon Public, Provisional, and Half-Time Schools, examined during the year 1874.

I.—PUBLIC SCHOOLS.

ALDAVILLA (P.—V.) :—Regular inspection, 6th August.

Numbers enrolled :—Boys, 37; girls, 21; total, 58.

Numbers present :—Boys, 32; girls, 20; total, 52.

1. No improvement in the material condition of the premises has been effected since last inspection. The schoolroom is much too small for the attendance, and the organization and order are necessarily defective. There is a very fair stock of all requisite working appliances. 2. The attendance is, on the whole, regular and punctual; and, making allowance for the crowded state of the schoolroom, the effects of the discipline may be regarded as very fair. Drill requires greater attention. 3. An improved classification has been made during the year. The methods, as far as observed, appear suitable; but the teaching is not penetrative, from the absence of thorough recapitulation and examination. The average proficiency of the pupils exceeds *tolerable*.

ALUMNY CREEK (P.—V.) :—Regular inspection, 16th October.

Numbers enrolled :—Boys, 26; girls, 17; total, 43.

Numbers present :—Boys, 23; girls, 13; total, 36.

1. Since last inspection, the playground has been fenced in, and a garden has been formed by the teacher. The buildings are in good condition and neatly kept, and the stock of books and apparatus is ample and in very fair preservation. As a whole, the organization may be considered good. 2. The attendance has improved of late, and is marked by a very fair degree of regularity and punctuality. The discipline is effective, and the order and moral tone good. 3. The course of instruction is complete and well regulated, the methods of very fair quality and intelligently applied, and the teaching apparently earnest and energetic. The pupils are very attentive under examination, and, except in 3rd class, work with fair spirit. Their average proficiency is from *fair to very fair*.

BALLINA

BALLINA (P.—V.):—Regular inspection, 3rd November.

Numbers enrolled:—Boys, 27; girls, 25; total, 52.

Numbers present:—Boys, 26; girls, 21; total, 47.

1. The premises generally are in very fair condition, but the desks need fastening securely to the floor. There is a sufficiency of all necessary working appliances, and, otherwise, the organization is fair. 2. The attendance is in general regular, but many of the pupils are unpunctual. The discipline and order, though still defective, have improved since last inspection, and now rate at fair. 3. The teaching has proved more successful than formerly, and greater mental activity is displayed by the pupils. The average proficiency is *tolerable to fair*.

BELLENGER (P.—V.):—General inspection, 25th August.

Numbers enrolled:—Boys, 27; girls, 24; total, 51.

Numbers present:—Boys, 22; girls, 20; total, 42.

1. The premises generally are in very fair condition and carefully kept, but the schoolroom is much too small. There is a sufficiency of working appliances, and, in other respects, the material part of the organization is satisfactory. 2. The pupils, as a whole, are punctual; but only about 60 per cent. of the number enrolled are regular in their attendance, owing, in a great measure, to the bad state of the roads and river crossings. The other features of the discipline are creditable, the government being firm and the moral tone good. 3. The course of instruction is complete, and regulated with very fair judgment. The classification of the pupils, however, is too minute. The methods, as far as observed, are of fair quality; and the teaching appears to have been marked by reasonable zeal and energy. The pupils are attentive under examination, and give evidence of fair mental training. The average proficiency is *tolerable to fair*.

BELMORE RIVER (P.—V.):—Regular inspection, 18th August.

Numbers enrolled:—Boys, 35; girls, 25; total, 60.

Numbers present:—Boys, 31; girls, 22; total, 53.

1. A few repairs of a minor character are needed; but, generally speaking, the premises are in very fair condition and neatly kept. There is a good supply of furniture and apparatus, and otherwise the organization is satisfactory. 2. The attendance is good for the locality, and very fair regularity and punctuality are secured. The government is judicious, and the order and moral tone rate from very fair to good. 3. The course of instruction is complete and fairly regulated, and the classification tolerably judicious. In some subjects, however, the teaching has been too discursive; and, as a rule, the mental training of the pupils has not received a proper degree of attention. The average proficiency exceeds tolerable.

BENDEMERR (P.—V.):—General inspection, 28th April.

Numbers enrolled:—Boys, 26; girls, 17; total, 43.

Numbers present:—Boys, 24; girls, 13; total, 37.

1. The schoolhouse and residence are in very fair repair, but the fences are broken down in places, and the closets dilapidated and too much exposed. The schoolroom is too small, and its shape prevents an advantageous arrangement of the furniture. There is a fair stock of apparatus, but an additional supply of books is needed. 2. Under the present teacher the attendance has increased, and is now permanently above thirty, and the degree of regularity and punctuality appear to be very fair. School drill is not properly carried out, but the other disciplinary arrangements are satisfactory and secure a healthy moral tone. 3. Except that needlework is not taught, the course of instruction is complete, and the documents regulating it are fairly appropriate. The teaching appears energetic and painstaking, and the methods are of fair quality. The average proficiency is tolerable.

BENDEMEER (P.—V.):—Regular inspection, 17th September.

Numbers enrolled:—Boys, 24; girls, 15; total, 39.

Numbers present:—Boys, 18; girls, 12; total, 30.

1. The material condition and organization remain the same as reported above. A want of neatness is observable in the preparation of the lesson documents. The general proficiency of the pupils has improved, and now approaches fair.

BOWLING ALLEY POINT (P.—V.):—Regular inspection, 5th May.

Numbers enrolled:—Boys, 32; girls, 36; total, 68.

Numbers present:—Boys, 17; girls, 24; total, 41.

1. The general condition of the premises is good, and the internal equipment of the school complete. The organization is satisfactory. 2. The attendance is decreasing, owing to the withdrawal of families consequent upon the altered prospects of the mines; but, of the number enrolled, a very fair percentage attend regularly and are punctual. Sensible improvement in the discipline is perceptible, and the moral tone of the school is now good. 3. All the prescribed subjects are taught, and the lesson documents are compiled with very fair judgment. The methods are of fair merit, and the teaching appears painstaking; but the instruction in grammar, arithmetic, and object lessons has not been penetrative. The pupils are very attentive under examination and show reasonable self-reliance—the more satisfactory results being produced in the 1st class. The average proficiency is nearly fair.

BUNDARRA (P.—V.):—General inspection, 12th March.

Numbers enrolled:—Boys, 18; girls, 25; total, 43.

Numbers present:—Boys, 13; girls, 18; total, 31.

1. The premises are suitable and in good repair; and the school is well supplied with furniture, apparatus, and books. The general organization is very fair. 2. The attendance has fluctuated very much of late, but is now steadier and slowly improving. The discipline appears healthy and effective, but the introduction of drill is desirable. 3. The course of instruction is complete and very fairly regulated, and the teaching seems marked by care and industry and fair skill. The average proficiency of the pupils exceeds fair.

CASINO (P.—V.):—Regular inspection, 12th November.

Numbers enrolled:—Boys, 31; girls, 30; total, 61.

Numbers present:—Boys, 15; girls, 21; total, 36.

1. Since last inspection no alteration but for the worse has taken place in the material condition of the premises; and, unless immediate repairs are effected, they will be absolutely unfit for occupation. There is a full supply of furniture, apparatus, and books; otherwise the organization is moderate. 2. The attendance is low for the locality, but those enrolled attend with fair regularity. The discipline appears to have improved somewhat, but the order is still very defective, and the various movements are conducted in a loose and irregular manner. 3. Singing is not taught, but otherwise the prescribed course is followed. The teaching, as far as observed, and judged by results, is mechanical, and does little to develop the mental faculties of the pupils. In most subjects where real teaching is required the results are far from satisfactory. Under examination the pupils yield a passive attention, but are indisposed to work; and in the 3rd class the answering on the subject matter of the reading lesson betrays the most lamentable ignorance. The results in arithmetic throughout the school are but little better. The average proficiency is moderate.

CHATSWORTH

CHATSWORTH ISLAND (P.—V.):—Regular inspection, 3rd December.

Numbers enrolled :—Boys, 35 ; girls, 36 ; total, 71.
Numbers present :—Boys, 26 ; girls, 29 ; total, 55.

1. The buildings are in very fair repair, but need painting, and water-tanks are required. The stock of working appliances is ample, and the general organization very fair. 2. A steady attendance is maintained, and, as a rule, the pupils are regular and punctual. The minutiae of order do not receive sufficient attention, but in the main points there is little room for complaint, and the moral tone of the school is good. 3. The course of instruction is complete and properly regulated, the classification correct, and the teaching marked by industry and fair skill. In the 1st class the results are not satisfactory in reading and arithmetic ; and, in all the classes, indistinct enunciation prevails. The average proficiency approaches *fair*.

CORAKI (P.—V.):—General inspection, 6th November.

Numbers enrolled :—Boys, 20 ; girls, 26 ; total, 46.
Numbers present :—Boys, 19 ; girls, 20 ; total, 39.

1. The schoolroom is new, commodious, and suitable ; and the supply of furniture, apparatus, and books adequate, and, generally speaking, in good condition. The organization is good. 2. The attendance has increased since last inspection, and is satisfactorily regular and punctual. The government is firm and consistent, and the order and moral tone are good. 3. All the prescribed subjects are taught, and the classification of the pupils and compilation of the lesson documents are judiciously made. The teaching is energetic, and the methods, as far as noted, are of very fair quality. The pupils yield a steady attention under examination, and show fair mental training. The average proficiency exceeds *fair*.

COWPER (P.—V.):—General inspection, 25th November.

Numbers enrolled :—Boys, 36 ; girls, 30 ; total, 66.
Numbers present :—Boys, 20 ; girls, 17 ; total, 37.

1. The buildings are new and fairly commodious. The schoolroom is suitably furnished, and its equipment otherwise leaves little to be desired. 2. The attendance is very fairly satisfactory as regards numbers, regularity, and punctuality. The discipline is salutary, but greater vigilance is necessary in the supervision of the pupils. The moral tone of the school is very fair. 3. Singing and needlework are not taught ; in other respects the course of instruction is in accordance with the Council's requirements. The methods, as far as observed, are of fair quality ; and, for the time the school has been in operation, the results of the teaching are reasonably good. The average proficiency approaches *fair*.

EUROKA (P.—V.):—Regular inspection, 3rd August.

Numbers enrolled :—Boys, 22 ; girls, 26 ; total, 48.
Numbers present :—Boys, 20 ; girls, 24 ; total, 44.

1. The premises generally are in good condition and neatly kept. There is a full supply of all requisites, and otherwise the organization is satisfactory. 2. About seven-eighths of the pupils enrolled attend regularly, and the degree of punctuality secured is very good. The discipline is mild but firm and consistent, and the moral tone good. 3. The classification of the pupils and other teaching arrangements are judiciously made, and the methods are in general appropriate, and marked by earnestness and industry in their application. Under examination, the attention of the pupils is well sustained, and in other respects there is evidence of very fair mental training. The average proficiency rates from *fair* to *very fair*.

FEENMOUNT (P.—V.):—General inspection, 24th August.

Numbers enrolled :—Boys, 21 ; girls, 32 ; total, 53.
Numbers present :—Boys, 16 ; girls, 23 ; total, 39.

1. Both schoolhouse and teacher's residence are neat and substantial buildings, and in good repair. Except that another group of desks and some diagrams are needed, the material equipment is good. 2. About three-fifths of the numbers enrolled attend regularly, and very fair punctuality is secured. The order is very fair on the whole, and the pupils are quiet, obedient, and respectful, but they are not made to work with sufficient animation and energy. 3. Singing and needlework are not taught ; otherwise, the course of instruction is complete. The programmes and time-table are fairly arranged, but the methods are of but moderate suitability and efficacy. The average proficiency of the pupils rates at *moderate to tolerable*.

GRAFTON (P.—Primary—V.):—Regular inspection, 2nd, 5th, 6th, and 13th October.

Numbers enrolled :—Boys, 143 ; girls, 97 ; total, 240.
Numbers present :—Boys, 98 ; girls, 74 ; total, 172.

1. Since last inspection the playground has been fenced in, the back playground subdivided, and the space in front of the teacher's residence enclosed and formed into a neat garden. A large weather-shed has also been erected and partitioned off for the separate use of the boys and girls ; shrubs and trees have been planted in the grounds, which will in time improve the appearance of the premises very considerably, and afford shade and shelter from the sun and wind. Except that the wood-work needs re-painting, and that a few minor repairs are required, the material condition of the school is very good. For the present attendance, however, the accommodation is insufficient. The stock of books is at present barely adequate, but in other respects the supply of working appliances is ample. 2. The attendance has steadily increased and is marked by very fair regularity, but many of the pupils are unpunctual. Drill is rather loosely performed, and the various points of order dependent thereon are defective ; as a whole the discipline appears to have retrograded since last inspection. 3. The course of instruction is complete and well regulated, the classification is in general correct, and the lesson documents are carefully and judiciously compiled. The teaching is marked by very fair energy, and, as far as noted, the methods are suitable and fairly applied. The degree of attention shown by the pupils when under instruction is not as satisfactory as it should be, and in many instances a distaste for work is shown. The general proficiency exceeds *fair*.

GRAFTON (P.—Infants) :—Regular inspection, 1st October.

Numbers enrolled :—Boys, 78 ; girls, 89 ; total, 167.
Numbers present :—Boys, 58 ; girls, 59 ; total, 117.

The playground has been fenced in and a weather-shed provided since last inspection. The material condition and organization of the school are now very good. 2. The remarks made on the primary department in reference to regularity and punctuality apply here. The discipline needs to be more vigorous, and greater vigilance should be exercised in the supervision of the children to prevent whispering and other disorderly practices now prevalent. 3. All the subjects prescribed for infant schools are taught, and the classification is judicious. The lesson documents are framed with fair skill, and appear to be duly observed. The teaching is animated and energetic, and with a more perfect discipline would produce very satisfactory results. The average attainments, however, are only *fair*, and the degree of mental training *tolerable*.

GUNDURIMBA (P.—V.) :—General inspection, 9th November.

Numbers enrolled :—Boys, 27 ; girls, 28 ; total, 55.

Numbers present :—Boys, 18 ; girls, 21 ; total, 39.

1. The buildings are new, but too small both as regards the schoolroom and teacher's residence. There is a full supply of apparatus and books, but the furniture is insufficient for the accommodation of the pupils ; the general organization, otherwise, is fair. 2. A very fair attendance of pupils is secured, and the degree of regularity and punctuality is also satisfactory. The discipline is fairly effective, but school drill is not practised. 3. All the prescribed subjects but singing are taught, and the lesson documents are compiled with neatness and tolerable judgment. The teaching seems assiduous, but the pupils are not subjected to searching examination, nor are they compelled to exert themselves sufficiently. The average proficiency approaches *tolerable*.

INVERELL (P.—V.) :—General inspection, 17th and 18th March.

Numbers enrolled :—Boys, 65 ; girls, 85 ; total, 150.

Numbers present :—Boys, 47 ; girls, 60 ; total, 107.

1. The premises generally are in very fair repair and carefully kept, but the schoolroom is much too small for either present or prospective requirements ; steps are being taken, however, to raise funds for the erection of a larger building. There is an ample supply of furniture and apparatus, as far as the capacity of the schoolroom extends, but insufficient for the comfortable accommodation of the children and the effective working of the school. The stock of books is at present low. 2. The attendance of the pupils is not fully satisfactory, but the river and bad roads are hindrances to regularity and punctuality that may fairly be taken into account. The children are clean in appearance, well behaved, and in very fair order. Drill is understood by the assistant teacher, but hitherto has not received sufficient attention. 3. The course of instruction is complete and very fairly regulated. The absence of a 4th class, in view of the importance of the school and the teaching staff, is not a creditable feature. As far as observed, the teaching is energetic, and the methods rate at about very fair. The general proficiency, however, is barely *fair*.

KELLY'S PLAINS (P.—V.) :—Regular inspection, 11th June.

Numbers enrolled :—Boys, 18 ; girls, 19 ; total, 37.

Numbers present :—Boys, 16 ; girls, 18 ; total, 34.

1. Since last inspection the playground—about 11 acres—has been fenced in, and a bell provided. The material condition of the premises in all essential points may now be considered good. There is a good supply of working materials, and otherwise the organization is satisfactory. 2. Seventy-three per cent. of the pupils enrolled attend regularly, and about 90 per cent. are punctual ; but, from no fault of the teacher as far as I can ascertain, about one-third of the children in the locality, of the school age, do not attend. The government is mild, but characterised by greater firmness than formerly, and the order and general tone of the school are good. 3. Needlework is not taught, otherwise the course of instruction is complete, and the documents regulating it are carefully compiled and duly observed. The methods are of fair merit and applied with zeal and industry ; and the results show that considerable improvement has been effected since last inspection. The average proficiency rates at *fair to very fair*.

KEMPSEY (P.—V.) :—Regular inspection, 28th and 31st July.

Numbers enrolled :—Boys, 29 ; girls, 35 ; total, 64.

Numbers present :—Boys, 28 ; girls, 35 ; total, 63.

1. The premises generally are in very fair condition, and afford evidence of care and neatness on the part of the teacher. There is an adequate supply of working materials, and generally speaking the organization is otherwise good. 2. The attendance is steady, and marked by very fair regularity and punctuality. In other respects the results of the discipline are, as a whole, satisfactory, and the moral tone is good. 3. The course of instruction is complete, and regulated with very fair judgment. The classification however is low, and the attainments of the pupils and length of time spent in the several classes call for very general promotion. The methods seem appropriate in the main, and the teaching is marked by earnestness and careful industry. The average proficiency is *fair to very fair*.

LISMORE (P.—V.) :—Regular inspection, 28th October.

Numbers enrolled :—Boys, 27 ; girls, 12 ; total, 39.

Numbers present :—Boys, 22 ; girls, 10 ; total, 32.

1. The material condition of the premises remains the same as reported at the last inspection. A weather-shed and lavatory are much needed. The school is well found in all necessary working appliances, and otherwise the organization is fair. 2. Owing to the unpopularity of the teacher and other causes, not more than half the children of the school age in the locality are enrolled ; and a private school, started some time back, receives as large a share of patronage as the Public School. The discipline appears fair, and the pupils are in general quiet and obedient ; but the various class movements are performed without the necessary uniformity and precision. 3. The instruction is regulated by the usual documents. The teaching is, I believe, painstaking, but to a great extent mechanical. The intelligence of the pupils is not sufficiently trained, and in the more important subjects the results are far from satisfactory. Some of the pupils in 3rd class are altogether unfit for it. The average proficiency is a little above *moderate*.

NUNDLE (P.—V.) :—Regular inspection, 6th May.

Numbers enrolled :—Boys, 42 ; girls, 33 ; total, 75.

Numbers present :—Boys, 25 ; girls, 27 ; total, 52.

1. The buildings are in general in good condition and carefully kept, but need spouting. There is a good supply of all necessary working appliances, and otherwise the organization, as effected by the teacher, is satisfactory. 2. The attendance, which on account of rain was lower than usual on the day of examination, is good for the place, and marked by regularity and punctuality. The discipline is judicious, and the moral tone very satisfactory. 3. The course of instruction is complete and well regulated, and the methods as a whole are of very fair merit. The teaching is earnest, painstaking, and effective. The pupils are attentive and self-reliant under examination ; and their proficiency in reading and grammar is equal to that of any school in the district ; indeed the success with which the former subject has been taught deserves special commendation. The average proficiency of the pupils approaches *very fair*.

PORT MACQUARIE (P.—V.) :—General inspection, 8th and 9th July.

Numbers enrolled :—Boys, 50 ; girls, 38 ; total, 88.

Numbers present :—Boys, 50 ; girls, 38 ; total, 88.

1. The main building is in general in good condition, but the kitchen and out-offices are in need of roof and other repairs. The fencing, also, is very dilapidated. The school is well found in all requisite appliances, and the organization otherwise is good. 2. About 80 per cent. of the school population in the district are enrolled, and of these, about the same percentage are regular attendants. The pupils appear to be punctual, and the order and moral tone are good. 3. All the prescribed subjects are taught, but the classification at present is very defective. The lesson documents are, in general, suitable, but a more judicious arrangement of the oral lessons is necessary. The methods, as far as noted, are of very fair merit, and the teaching seems vigorous and earnest. The average proficiency of the pupils exceeds *fair*.

Note.—For some time prior to the examination, the management of the school has devolved on the assistant teacher, to whom credit is largely due for the present general condition and results.

RAINBOW

RAINBOW REACH (P.—V.):—General inspection, 12th August.

Numbers enrolled:—Boys, 29; girls, 41; total, 70.
Numbers present:—Boys, 14; girls, 17; total, 31.

1. Since last inspection the playground has been cleared and partially fenced, and the premises present a much more inviting appearance than formerly. Except as regards First Books, the stock of working appliances is sufficient and in very fair condition; otherwise, the organization is tolerably satisfactory. 2. Under the present teacher the attendance has almost doubled, and ordinarily a very fair percentage of the pupils are regular. Sickness, however, has made a temporary diminution in the numbers. The order, though still imperfect, shows very sensible improvement on the state of things that obtained under the former teacher; and drill has been introduced with fair results. 3. Nominally, all the prescribed subjects are taught. The lesson documents are tolerably suitable, and appear to have been observed. The methods, in themselves, are not of much account, but there is probability of improvement. The average proficiency of the pupils reaches *tolerable* nearly.

ROCKY MOUTH (P.—V.):—General inspection, 2nd December.

Numbers enrolled:—Boys, 37; girls, 36; total, 73.
Numbers present:—Boys, 26; girls, 23; total, 49.

1. A new schoolhouse has been erected since last inspection. The furniture, however, is insufficient—another group of desks and a book-press being much needed. The other features of the organization are very fairly satisfactory. 2. The attendance, as regards numbers, is not as good as it should be, nor are the pupils satisfactorily regular and punctual. The government is not sufficiently firm and vigorous, and the supervision of the children is rather lax. The moral tone of the school may be regarded as fair. 3. The lesson documents are in general suitable, but the classification is rather low. The teaching seems earnest, but too much is done for the pupils; and too much ground is gone over to admit of thoroughness in the instruction. The attention of the pupils under examination is very fair, their mental training tolerable, and average proficiency nearly *fair*.

SEVEN OAKS (P.—V.):—General inspection, 14th August.

Numbers enrolled:—Boys, 39; girls, 23; total, 62.
Numbers present:—Boys, 24; girls, 17; total, 41.

1. The school-ground has been cleared of weeds and in part brought under cultivation by the present teacher; and he has also repaired most of the fencing, which, at the last inspection, was in a very dilapidated state. Some minor repairs to the buildings and out-offices are still required, and a boat will have to be obtained. The stock of books and apparatus is sufficient, and on the whole in fair condition. The schoolroom, however, wears an untidy appearance from the dusty condition of the maps and diagrams, and the disorderly manner in which the apparatus is left about after use. 2. The attendance has increased, and the pupils, as a whole, are regular and punctual. The government is not sufficiently exacting, and disorderly attitudes and irregular answering are very common faults. 3. The course of instruction is complete and fairly regulated, and the classification is in general judicious. The teaching is marked by industry, and the methods are of tolerable merit. The laxity of the discipline, however, is an obstacle to successful teaching. The average proficiency is *tolerable to fair*.

STRONTIAN PARK (P.—N.—V.):—Regular inspection, 22nd October.

Numbers enrolled:—Boys, 17; girls, 32; total, 49.
Numbers present:—Boys, 16; girls, 28; total, 44.

1. The premises are old and unsuitable, and the furniture of but moderate quality; but steps are being taken for the erection of new buildings on a site recently obtained by the Council. There is a fair supply of books and apparatus, and the organization is as good as can be expected under the circumstances. 2. The pupils as a rule are regular, and the punctuality is good. The government is effective and secures good order, willing and steady attention, and a healthy moral tone. 3. The classification of the pupils and compilation of the lesson documents are fairly judicious. The methods of instruction are fair in themselves, and the teaching is animated and earnest. The pupils show very fair mental training and substantial improvement in their attainments—the average proficiency being *fair to very fair*.

SUMNERLAND (P.—V.):—Regular inspection, 11th August.

Numbers enrolled:—Boys, 21; girls, 34; total, 55.
Numbers present:—Boys, 14; girls, 27; total, 41.

1. Some repairs have been effected since last inspection, and the premises as a whole are in fair condition. There is a sufficiency of working material, and the organization is fair. 2. The government is too indulgent, and the order only tolerable. The habit of whispering is very general, and a few of the younger children are restless to an extent sufficient to disturb the whole school. The attention of the pupils is very weak, being distracted by the most trivial occurrences; and as a rule but little disposition to work is shown. 3. The prescribed course of instruction is followed, and the lesson guides are of fair merit. The teaching seems painstaking, and the methods, as far as observed, are tolerably appropriate; but the defective discipline prevents satisfactory results. The average proficiency is *moderate to tolerable*.

SWAN CREEK (P.—V.):—General inspection, 10th December.

Numbers enrolled:—Boys, 29; girls, 29; total, 58.
Numbers present:—Boys, 28; girls, 26; total, 54.

1. The school is, of its class, one of the best appointed in this district; a kitchen, however, is much needed for the convenience of the teacher. 2. The pupils are very regular and punctual, orderly, obedient, and respectful; and the discipline is satisfactory in all points except drill. 3. All the prescribed subjects are taught, and the lesson documents are compiled with care and neatness. The teaching is earnest and very fairly effective, and the pupils work with greater vigour than is usually found. The average proficiency rates at *fair to very fair*.

TAMWORTH (P.—V.):—Regular inspection, 30th April.

Numbers enrolled:—Boys, 44; girls, 44; total, 88.
Numbers present:—Boys, 32; girls, 30; total, 62.

1. The premises generally are in a very indifferent state of repair, and the schoolroom is much too small for the requirements of the town. There is a very fair supply of furniture, apparatus, and books; in other respects the organization is tolerable. 2. The attendance is decreasing, and many of the pupils appear to be unpunctual. Although some slight improvement in the order is perceptible, the effects of the discipline are still very far from satisfactory. 3. The prescribed course of instruction is followed, and the lesson documents are compiled with fair judgment. The teacher is industrious, but his defects as a disciplinarian render successful teaching impossible. The average proficiency is *indifferent to moderate*, and altogether the school is in a very unsatisfactory condition.

ULMARRA (P.—V.):—General inspection, 11th December.

Numbers enrolled:—Boys, 48; girls, 44; total, 92.
Numbers present:—Boys, 37; girls, 31; total, 68.

1. Since last inspection the schoolroom has been enlarged, but it is still too small for the attendance of pupils. A tank and lavatory have also been supplied, and some general repairs to the residence and out-offices effected. The supply of working materials is very fairly sufficient, but many of the books
are

are much worn. The organization, as a whole, is very fair. 2. The attendance has increased, and the services of a pupil-teacher or assistant are indispensable to the successful working of the school. The discipline is firm and, generally speaking, effective, and the moral tone is good. 3. All the prescribed subjects are taught, and in addition the advanced pupils of 3rd class receive instruction in elementary algebra, Euclid, and Latin. The methods as far as observed are suitable, but in the 3rd class the teaching in some of the more important subjects has not been thorough. The pupils are attentive under examination, and show fair mental training. The average proficiency is *fair*.

URALLA (P.—V.) :—Regular inspection, 21st and 22nd May.

Numbers enrolled :—Boys, 46 ; girls, 42 ; total, 88.
Numbers present :—Boys, 44 ; girls, 38 ; total, 82.

1. The premises are of a superior description, in good repair, and well kept. The schoolroom, however, is not large enough, but the necessary additions will in all probability be effected shortly. In its interior equipment and organization little is left to be desired. 2. About 70 per cent of the number of pupils enrolled are regular in their attendance, and the degree of punctuality is good. The government is mild but firm and effective, and the moral tone is good. 3. All the prescribed subjects are taught, elementary algebra, Euclid, and Latin being added in the case of a few of the more advanced pupils. The lesson documents are judiciously compiled and apparently observed, and the teaching is marked by intelligence and earnestness. The pupils are attentive under instruction, and work with very fair energy. The average proficiency is *fair to very fair*.

VIOLET DALE (P.—V.) :—Regular inspection, 12th June.

Numbers enrolled :—Boys, 35 ; girls, 23 ; total, 58.
Numbers present :—Boys, 25 ; girls, 16 ; total, 41.

1. The playground has been fenced in, and some minor repairs to teacher's residence have been effected since last inspection. The schoolroom is old and too small for the present attendance of pupils ; but the opening of the Public School at Saumarez will lead to the withdrawal of a large number. The furniture is sufficient and fairly suitable, but the desks need securing to the floor. In other respects the organization is fair. 2. About 65 per cent of the number of pupils enrolled attend regularly, and 75 per cent are punctual. In these respects the effects of discipline are not fully satisfactory, nor is the order as good as could be desired—whispering and restlessness being prevalent in 1st and 2nd classes. 3. All the prescribed subjects are taught, and the lesson documents are framed with care and tolerable judgment. The teaching is earnest but not penetrative, and the mental training of the pupils is defective. The average proficiency approaches *tolerable*.

WALCHA (P.—V.) :—General inspection, 24th June.

Numbers enrolled :—Boys, 36 ; girls, 24 ; total, 60.
Numbers present :—Boys, 27 ; girls, 19 ; total, 46.

1. The buildings are suitable, and a bell has been erected since last inspection, but new fencing is much needed. Desks are required for 1st class, and most of the maps are old and unsuitable. In other respects the supply of furniture, apparatus, and books is sufficient and suitable, and the organization is very fair. 2. A steady increase in the attendance has taken place under the present teacher. 75 per cent of the number enrolled attend regularly, but the degree of punctuality is not satisfactory. The government is mild but firm and consistent, and the moral tone of the school is good. 3. The course of instruction is complete and well regulated, and instruction in elementary Latin and Euclid is given to a few of the more advanced pupils. The methods are of very fair merit, and applied with zeal and industry. Under examination the pupils yield a steady attention, and show very fair mental training. The average proficiency is nearly *very fair*.

WALLABADAH (P.—V.) :—General inspection, 8th May.

Numbers enrolled :—Boys, 40 ; girls, 28 ; total, 68.
Numbers present :—Boys, 36 ; girls, 22 ; total, 58.

1. The schoolroom has been enlarged since last inspection and now affords sufficient accommodation for the pupils ; but new and more suitable premises are required. The general organization is very fair. 2. The pupils are regular and punctual. Drill is practised, and its beneficial effects are apparent in a marked degree. The government is firm and judicious, and the moral tone good. 3. All the prescribed subjects are taught, and the instruction is judiciously regulated. The methods, as far as observed, are appropriate ; and, although the average proficiency of the pupils is as yet comparatively low, satisfactory work has been done during the time the present teacher has been in charge. The average proficiency exceeds *tolerable*.

WAMALDA (P.—V.)—General inspection, 23rd March.

Numbers enrolled :—Boys, 9 ; girls, 17 ; total, 26.
Numbers present :—Boys, 8 ; girls, 17 ; total, 25.

1. The buildings are in fair repair. The schoolroom is small, and the furniture rough and not very suitable. The books and apparatus do not appear to have been well cared for, and the stock is low. 2. Fair regularity and punctuality of attendance seem to be secured, but in other respects the results of the discipline are of a low order. 3. Nominally all subjects but singing are taught, and the instruction is regulated by the usual documents, which however are so framed as to be of doubtful utility. Little acquaintance with appropriate methods is shown, and the pupils have received very moderate mental training. The average proficiency is about *moderate*.

WOODFORD DALE (P.—V.)—General inspection, 4th December.

Numbers enrolled :—Boys, 21 ; girls, 17 ; total, 38.
Numbers present :—Boys, 21 ; girls, 15 ; total, 36.

1. The buildings need painting and some minor repairs, but the general condition and organization may be regarded as very fair. 2. The pupils attend with very fair regularity, and are punctual. The discipline is salutary, and the moral tone good. A few of the elder girls, however, are indisposed to work. 3. The course of instruction is complete and well regulated, the teaching painstaking and earnest, and the methods as far as observed fair. The average proficiency approaches *fair*.

WOODFORDLEIGH (P.—V.)—Regular inspection, 18th November.

Numbers enrolled :—Boys, 29 ; girls, 36 ; total, 65.
Numbers present :—Boys, 20 ; girls, 17 ; total, 37.

1. Except that the buildings need painting, the material condition is good. Some additional desks and forms are required, otherwise the organization is very fair. 2. The attendance was lower than usual on the day of examination. Ordinarily it is good, both as regards regularity and punctuality. The discipline is effective, and the moral tone good. 3. The course of instruction comprises all subjects but singing. The lesson documents are suitable, and the teaching is earnest and effective. The pupils are steadily attentive and show very fair mental training. The average proficiency approaches *very fair*.

WYBALLAH

WYRALLAH (P.—V.)—Regular inspection, 10th November.

Numbers enrolled:—Boys, 20; girls, 34; total, 54.
Numbers present:—Boys, 15; girls, 24; total, 39.

1. The premises are still unfenced, and a weather-shed is much needed; the clock also is out of repair. In other respects the material condition is reasonably good and the organization fair. 2. The discipline has improved since last inspection, and the order and moral tone are now fair. 3. All the prescribed subjects but singing are taught. The methods appear of tolerable merit, and the average proficiency of the pupils reaches the same mark. The reading and general answering of most of the pupils are painfully low and indistinct.

II.—PROVISIONAL SCHOOLS.

BRODIE'S PLAINS (Prov.—N.-V.)—General inspection, 19th March.

Numbers enrolled:—Boys, 21; girls, 24; total, 45.
Numbers present:—Boys, 17; girls, 22; total, 39.

1. Both schoolroom and residence are rather small, but may suffice for some time. The furniture is unsuitable, and prevents good organization. 2. The attendance of pupils seems good, both as regards regularity and punctuality. Drill is imperfect, but in general the order leaves little to be desired. The behaviour of the pupils is very satisfactory, and, in essential points, the moral tone is good. 3. The prescribed course of instruction is carried out, but the lesson register is not satisfactorily kept. The teaching seems energetic and painstaking, and, on the whole, produces satisfactory results. The average proficiency is *tolerable to fair*.

CAPE HARROW HILL (Prov.—N.-V.)—General inspection, 21st August.

Numbers enrolled:—Boys, 23; girls, 3; total, 26.
Numbers present:—Boys, 22; girls, 3; total, 25.

1. The building, a slab one, is in tolerable repair; but the furniture is rough, and but moderately suitable. There is a fair supply of apparatus and books, and the organization otherwise is fair. 2. As a whole the pupils attend regularly and with fair punctuality. The order is in some points unsatisfactory; but, generally speaking, the appearance and demeanour of the pupils are pleasing, and the moral tone of the school is fair. 3. Instruction is given in all the prescribed subjects, and the lesson documents are framed with tolerable judgment. The methods are of a passable kind, and the average proficiency of the pupils rates from *tolerable to fair*.

COCKBURN RIVER (Prov.—N.-V.)—Regular inspection, 29th April.

Numbers enrolled:—Boys, 14; girls, 15; total, 29.
Numbers present:—Boys, 13; girls, 15; total, 28.

1. The building is in good repair and suitably furnished, and, in other respects the material part of the organization is satisfactory. 2. The attendance is fairly regular and punctual. The order has very sensibly improved, and the moral tone is now good. 3. The prescribed course of instruction is followed, and the lesson guides are of fair quality. The teaching seems earnest and painstaking rather than skilful, and the average proficiency is *tolerable to fair*.

ENNIS (Prov.—N.-V.)—General inspection, 13th July.

Numbers enrolled:—Boys, 14; girls, 16; total, 30.
Numbers present:—Boys, 13; girls, 16; total, 29.

1. The measures initiated last year for providing more suitable premises with the view of establishing a Public School have been allowed to fall through. There is a sufficiency of books and apparatus, and the organization is fair, under existing circumstances. 2. The attendance of pupils is but moderate for the locality. The government is not vigorous enough, but, on the whole, the order and moral tone are fair. 3. The teaching seems careful, and the methods are of moderate quality, but the pupils are not made to exert themselves sufficiently. The average proficiency is *tolerable*.

GLEN MORRISON (Prov.—V.)—General inspection, 26th June.

Numbers enrolled:—Boys, 17; girls, 23; total, 40.
Numbers present:—Boys, 5; girls, 5; total, 10.

1. The building is fairly suitable, and in good repair, except that some of the window-panes are broken. The furniture is insufficient and unsuitable; the organization moderate. 2. The pupils are irregular and unpunctual, rough and awkward in their demeanour, and otherwise give evidence of the absence of proper discipline. 3. Time-table and lesson programmes, of a kind, are compiled, but are of little use; and the teaching appears to be mainly mechanical. The average proficiency is *moderate to tolerable*.

GOSTWICK (Prov.—N.-V.)—General inspection, 22nd June.

Numbers enrolled:—Boys, 14; girls, 17; total, 31.
Numbers present:—Boys, 6; girls, 13; total, 21.

1. The buildings, which comprise schoolroom and teacher's residence, are of brick, well constructed, and conveniently arranged. There is a good supply of furniture and books, and the apparatus is fairly sufficient for present wants. 2. Ninety per cent. of the children in the district attend the school, and the pupils are, with few exceptions, regular and punctual. The order is very fair in most respects, but marching and other simultaneous movements are not practised. 3. The lesson documents are fairly constructed; and the teaching, though not based on very appropriate methods, is painstaking and moderately effective.

KENTUCKY (Prov.—N.-V.)—General inspection, 19th May.

Numbers enrolled:—Boys, 11; girls, 19; total, 30.
Numbers present:—Boys, 9; girls, 13; total, 22.

1. Since last inspection, suitable out-offices have been provided, and various repairs to school-house and residence have been made. The general condition and organization may now be regarded as fair. 2. Only about fifty per cent. of the available children in the district attend the school; and, from inquiries made, it would appear that this very unsatisfactory state of things is almost entirely due to the indifference of the parents. The pupils are punctual, and the general results of the discipline are satisfactory for the class of school. 3. The time-table and lesson programmes are fairly appropriate, and appear to be adhered to; and the teaching seems intelligent and painstaking. The average proficiency is *tolerable to fair*.

LAWRENCE (Prov.—N.-V.)—Regular inspection, 17th November.

Numbers enrolled:—Boys, 7; girls, 19; total, 26.
Numbers present:—Boys, 6; girls, 14; total, 20.

1. The building is old and, exteriorly, presents a mean and dilapidated appearance; but the cleanliness and neatness of the internal arrangements are in pleasing contrast. There is a sufficiency of all necessary working appliances, and otherwise the organization is fair. 2. The character of the attendance

attendance has improved, both as regards regularity and punctuality. The discipline is fair, and the children are attentive, obedient, and respectful. 3. The lesson documents are compiled with tolerable judgment, the teaching seems painstaking, and the pupils work with better spirit than formerly. The average proficiency rates at *tolerable to fair*.

MORBE (Prov.—N.-V.) :—General inspection, 26th March.

Numbers enrolled :—Boys, 14 ; girls, 19 ; total, 33.
Numbers present :—Boys, 10 ; girls, 15 ; total, 25.

1. The building itself is fairly suitable, but the presence of church furniture prevents a proper organization. Another desk is needed, and a black-board. 2. The pupils appear to be regular in attendance, but unpunctual. They are obedient, and quiet in demeanour, but beyond this the discipline is of poor effect. Drill is not practised, and the general movements are irregular and noisy. 3. Object lessons, singing, and drawing, are omitted from the course of instruction. The time-table is badly compiled and of little service ; no lesson programmes have been prepared, and the principles of classification are not understood. The teaching, though doubtless painstaking, is mainly mechanical, and the average proficiency is *indifferent*.

QUIPOLLY (Prov.—N.-V.) :—Regular inspection, 12th May.

Numbers enrolled :—Boys, 17 ; girls, 10 ; total, 27.
Numbers present :—Boys, 7 ; girls, 8 ; total, 15.

1. The building is hardly large enough, and additional furniture is required. No closets are provided, and the playground remains unfenced. There is a fair supply of apparatus and books, but beyond this the organization is indifferent. Entries in the class roll have not been made with accuracy. 2. A large number of the pupils appear to be unpunctual. The discipline is weak, and the order and moral tone but very moderately satisfactory. 3. The time-table and programmes, though prepared, were not suspended, and are of doubtful utility. The teaching is mainly mechanical, and the amount of mental training exhibited by the pupils small. The average proficiency is *indifferent*.

QUIRINDI CREEK (Prov.—V.) :—General inspection, 11th May.

Numbers enrolled :—Boys, 17 ; girls, 13 ; total, 30.
Numbers present :—Boys, 13 ; girls, 9 ; total, 22.

1. The schoolroom is a substantial building, and sufficient for existing wants. The furniture is sufficient, but the desks are much too high, and are greatly disfigured by ink-stains. The organization is indifferent. 2. Very fair regularity and punctuality are secured. The teacher is a poor disciplinarian, and the order is indifferent. 3. The time-table is imperfect, and no lesson programmes are prepared, and the classification is altogether too minute. The teaching is mechanical, but appears painstaking, and produces *moderate* results.

SOUTH ARM (Prov.—N.-V.) :—Regular inspection, 26th November.

Numbers enrolled :—Boys, 27 ; girls, 22 ; total, 49.
Numbers present :—Boys, 18 ; girls, 15 ; total, 33.

1. Some minor repairs have been effected since last inspection ; but the premises are too small, and in other respects unsuitable for school purposes. There is a fair supply of all requisite appliances, and the organization is satisfactory under existing circumstances. 2. The attendance has increased beyond the limits for a Provisional School. The pupils attend with very fair regularity and punctuality, and are well-behaved and obedient. The order, however, in some minor points admits of improvement. 3. All the prescribed subjects are taught, and the lesson documents are carefully prepared and observed. The teaching is painstaking and earnest, and tolerably skilful ; and the average proficiency of the pupils rates at *tolerable to fair*.

WANDSWORTH (Prov.—V.) :—Regular inspection, 10th March.

Numbers enrolled :—Boys, 9 ; girls, 14 ; total, 23.
Numbers present :—Boys, 4 ; girls, 10 ; total, 14.

1. The premises are in fair repair, and carefully kept. There is a reasonably good supply of furniture, apparatus, and books, and the organization is fair. 2. The attendance is small, but regular and punctual. The pupils are obedient and well-behaved, and, in other respects, the moral tone is satisfactory, though many points of order admit of improvement. 3. All the prescribed subjects, but singing and drawing, are taught, but no proper lesson programmes are prepared. The teaching is intelligent and earnest, and the average proficiency of the pupils *fair*.

WARDELL (Prov.—V.) :—General inspection, 4th November.

Numbers enrolled :—Boys, 17 ; girls, 25 ; total, 42.
Numbers present :—Boys, 15 ; girls, 21 ; total, 36.

1. The building is fair for the place, but not large enough for present requirements, and the furniture is rather rough and unsuitable. 2. The attendance is large enough for a Public School. Six-sevenths of the number-enrolled are regular, and the degree of punctuality secured is good. The discipline is, in general, judicious, and secures very fair order. 3. All the prescribed subjects are taught, and the lesson documents are of tolerable merit, and appear to be observed. The teaching is energetic, and, for the time the school has been in operation, the results are not unsatisfactory. The average proficiency is nearly *tolerable*.

III.—HALF-TIME SCHOOLS.

DONDINGALONG (H.-T.—N.-V.) :—Regular inspection, 4th August.

Numbers enrolled :—Boys, 6 ; girls, 6 ; total, 12.
Numbers present :—Boys, 6 ; girls, 5 ; total, 11.

1. The material condition of the school continues fair, and the organization, as far as the teacher is accountable for it, is good. 2. About four-fifths of the pupils are regular in their attendance, and the degree of punctuality is good. In other respects the discipline is not less satisfactory—the children being very attentive and obedient, and trained to habits of self-reliance and industry. 3. All the prescribed subjects but singing are taught. The classification is appropriate, and the lesson documents carefully compiled and observed. The teaching is earnest, practical, and thorough ; and the average proficiency of the pupils is nearly *very fair*.

SHERWOOD (H.-T.—V.) :—Regular inspection, 4th August.

Numbers enrolled :—Boys, 8 ; girls, 8 ; total, 16.
Numbers present :—Boys, 7 ; girls, 8 ; total, 15.

Since last inspection closets have been provided, and an improved arrangement of the furniture made. The material condition and organization may now be regarded as very fair. 2 and 3. This school is worked in conjunction with Dondingalong, and the remarks on the discipline and instruction made in the report on that school apply here.

J. D. BRADLEY,
Inspector of Schools, Armidale District.

BRAIDWOOD

BRAIDWOOD DISTRICT.

INSPECTOR'S General Report upon Public, Provisional, Half-time, and Denominational Schools, for the year 1874.

1. During the year, 27 Public, 26 Provisional, 46 Half-time, 3 Church of England, and 11 Roman Catholic, in all 113 Schools, have been in operation in this district. With the exception of two that were not in existence when their localities were visited, all the schools were inspected. Wherever an average attendance of from 15 to 20 pupils can be maintained, full-time schools have been established; but thinly peopled places can only be reached and effectively dealt with by itinerant teachers. There are at present 26 of these employed. Their work is arranged so that each group of scholars may obtain an amount of time equal to two and a half hours per day throughout the year. Character of country, distance, and other local circumstances, determine whether the instruction shall be given on alternate days, half-days, weeks, or half-weeks; but experience proves that it is of little practical good to give less time to each group than the amount above indicated. Having but few pupils to manage, a good teacher of a half-time school should, and often does, produce results equal to those obtained in an ordinary public school. Under existing arrangements, the services of an itinerant teacher may be had by any parents if 10 or 12 children can be collected who are unable to reach schools already in operation. Except in the case of individual families that have completely isolated themselves, there is no difficulty, under the provisions, of bringing the means of education to all persons who desire instruction for their children.

2. In townships and places where children's labour cannot be turned to much advantage, the attendance on the whole has been more regular this year than hitherto. Owing, however, to the advance in price of labour, and to the impossibility, in some cases, of obtaining it on any terms, there has been throughout the agricultural and pastoral portions of the district a larger demand than usual for children's assistance. Under this pressure a few parents have detained their children at home for long periods at a time, but the majority have contrived to manage their affairs without serious interruption to school studies. It is not at all an uncommon thing to find pupils in school, from eight years of age and upwards, who have done men's work at milking or other farm labour between 5 and 9 o'clock in the morning, and who have to hurry home after 4 to complete the day's duties. Without their aid in busy times many a farmer would be obliged to sacrifice the fruits of his industry, or to confine his operations within very narrow limits. Looking at this usefulness to the Colony, there is not a more promising and valuable class of children in the community than this large body of boys and girls who, while receiving school instruction, are at the same time being educated in the use of their own hands and in the practical management of dairies, cattle, and crops.

3. At the various examinations there were present 3,212 scholars. These were rigidly tested in accordance with the prescribed standard, and their proficiency in each subject was noted.

In *reading* and *spelling* 888 did well, 1,843 fully met all requirements of the standard, and only 491 fell below. Two years ago I had to report most unfavourably of the progress made in these subjects. More attention seems to have been given to them since, and the results are now reasonably satisfactory. Taking age for age, the girls read and spell much better than the boys.

In *writing*, 454, the majority of whom are girls, have acquired a good formed hand that needs no improvement; 2,311 write legible careful copies; and 447 are not as proficient as they should be.

In *arithmetic*, 535 did good work, 1,557 fully came up to the standard, but 1,120 fell below it. These results show that arithmetic is still a weak subject in many schools. Of the pupils who can be relied on to perform ordinary operations in proportion, practice, vulgar and decimal fractions, interest, and problems involving miscellaneous processes, 18 or 20 of the best are girls, but on the whole the boys are much stronger than the girls in arithmetic. It is uniformly noticeable that the successful teachers of arithmetic are the men who give a great number and variety of examples.

In *grammar*, 122 passed a good examination, 1,237 a fair examination, and 493 did badly. In most schools this subject is taught in an unpractical and aimless way that strips it of all value, either as a mental training or as a check upon ungrammatical speaking and writing.

In *geography* 375 did well, 1,079 answered fairly, and 432 knew very little. The amount of geography required by the standard is so extremely limited that there is no excuse for inaccuracy in this subject.

In Scripture, object-lessons, drawing, singing, Euclid, and algebra, ordinary proficiency was shown.

Summarizing all results, the 111 schools inspected show that, of the fixed maximum of 10,000 marks, 9 Public, 1 Provisional, 5 Half-time, 1 Church of England, and 3 Roman Catholic Schools succeeded in taking the high total of 7,000, or over; that 17 Public, 8 Provisional, 26 Half-time, 2 Church of England, and 6 Roman Catholic Schools obtained between 5,000 and 7,000; and that 1 Public, 15 Provisional, 15 Half-time, and 2 Roman Catholic Schools obtained less than 5,000. On the whole these are satisfactory results, and represent a vast amount of steady, useful teaching throughout the district.

4. There are 95 teachers and 9 pupil-teachers employed. The pupil-teachers have performed their duties faithfully, no complaints of any kind have been made respecting them, and not one has failed to pass the prescribed examination. The regulations issued last year, for providing teachers for small schools, are working well. Young men and women, specially adapted for the isolated and peculiar positions that teachers in remote localities must necessarily occupy, are gradually being selected and drafted off into the bush. Accustomed to the life they must lead there, the solitude, hardships, and privations that make a town-bred teacher dissatisfied, miserable, and useless, have no effect whatever upon them; and, for this reason, when they are put through a course of instruction and technical training, they make, for Provisional and Half-time Schools, the best teachers that have yet come under my notice. As a considerable number of young people are working hard in the upper classes of various schools to qualify themselves ultimately for these positions, the difficulty of obtaining teachers for small schools will gradually become less, and in time will probably altogether disappear.

A statement of the condition of each school inspected is appended hereto.

Braidwood, 28th December, 1874.

J. C. MAYNARD,
Inspector, Braidwood District.

ANNEX A.

SUMMARIES of Reports furnished, during the year 1874, on Public, Provisional, and Half-Time Schools.

Throughout these summaries the technical words used to indicate general or average proficiency have the following relative values:—

- | | |
|---------------|-----------------|
| 1. Excellent. | 6. Tolerable. |
| 2. Very good. | 7. Moderate. |
| 3. Good. | 8. Indifferent. |
| 4. Very fair. | 9. Bad. |
| 5. Fair. | 10. Failure. |

I.—PUBLIC SCHOOLS.

ARALURN (Boys.—V.) :—Inspected, 3rd June, 1874.

Enrolled, 84; present, 72.

1. The material condition is good in all respects. 2. Two-thirds of the pupils are regular. The discipline on the whole is satisfactory. 3. All the prescribed subjects are taught except singing. The attainments of the pupils in Class IV are good in all subjects. For the whole school the mark for reading, grammar, geography, object-lessons, geometry, and Scripture is above the average; the mark for writing, dictation, and arithmetic is well up to the average, that for drawing is below. The general proficiency is *very fair*.

ARALURN

ARALUEN (Girls.—V.) :—Inspected, 4th June, 1874.

Enrolled, 48; present, 38.

1. The material condition is good. 2. Not more than half the pupils are regular. The discipline is satisfactory in all respects. The mark for reading and object-lessons is above the average; the mark for writing, dictation, grammar, geography, singing, and Scripture is up to the average, that for arithmetic and drawing is below. The general proficiency is slightly beyond *fair*.

ARALUEN (Infants.—V.) :—Inspected, 5th June, 1874.

Enrolled :—Boys, 22; girls, 23; total, 45.

Present :—Boys, 18; girls, 17; total, 35.

1. The room is too small, otherwise the material condition is satisfactory. 2. About half the pupils are regular. When not under direct tuition the younger children talk too much, but in other respects the discipline is fair. All the prescribed subjects are taught, and all with average success. The general proficiency is a little beyond *fair*.

ARALUEN WEST (V.) :—Inspected, 11th June, 1874.

Enrolled :—Boys, 74; girls, 75; total, 149.

Present :—Boys, 58; girls, 53; total, 111.

1. Since last inspection a new schoolroom has been built. It is well supplied with furniture, apparatus, and materials. 2. Five-sixths of the pupils are regular, and the discipline is satisfactory. 3. The children have made great progress since last inspection, the reading throughout the school being particularly good. The young scholars have much attention paid to them. The mark for reading, writing, dictation, geography, and object lessons is above the average, and that for arithmetic and grammar well up to the average. The general proficiency is between *very fair* and *good*.

ARALUEN, UPPER (N.-V.) :—Inspected, 12th June, 1874.

Enrolled :—Boys, 19; girls, 24; total, 43.

Present :—Boys, 17; girls, 13; total, 30.

1. The building is in a fair state of repair, and sufficiently well provided with furniture, apparatus, and working stock. 2. Three-fifths of the pupils are regular. They are orderly, fairly attentive, and kindly but firmly governed. 3. All the prescribed subjects are taught except drawing. The mark for reading and dictation is above the average, that for writing, arithmetic, grammar, geography, and Scripture, well up to the average, and that for object-lessons and singing below. The general proficiency is between *fair* and *very fair*.

BATEMAN'S BAY (V.) :—Inspected, 16th July, 1874.

Enrolled :—Boys, 28; girls, 17; total, 45.

Present :—Boys, 23; girls, 15; total, 38.

1. This is a new building, well put up, and well adapted for school purposes. When suitable desks have been provided, and the grounds have been fenced, the material condition will be satisfactory. 2. At present three-fourths of the pupils are regular, and great improvement is shown in punctual morning attendance. The government is firm and consistent, and the discipline fair. 3. Since last inspection very little progress has been made, but under the new teacher the prospects for the future are better. The average proficiency is *tolerable*, a mark for which the teacher now in charge is not responsible.

BEGA (V.) :—Inspected, 24th August, 1874.

Enrolled :—Boys, 52; girls, 48; total, 100.

Present :—Boys, 35; girls, 40; total, 75.

1. The material condition is satisfactory. 2. About two-thirds of the pupils are regular. 3. All the prescribed subjects are taught except drawing. The mark for reading, dictation, grammar, Scripture, geography, and object lessons, is above the average, that for writing and arithmetic up to the average. The general proficiency is *very fair*.

BERGALIA (V.) :—Inspected, 5th August, 1874.

Enrolled :—Boys, 21; girls, 28; total, 49.

Present :—Boys, 13; girls, 22; total, 40.

1. The material condition is good, and the organization and general cleanliness are excellent. 2. Not more than one-third of the pupils are regular. In wet weather it is impossible for the children to attend. The discipline is satisfactory. 3. The spelling in this school is particularly good. The mark for that subject, reading, writing, and dictation is much above the average; that for Scripture and object lessons is up to the average; that for arithmetic, grammar, geography, and drawing, is below. The general proficiency is between *fair* and *very fair*.

BOMRALA (V.) :—Inspected, 16th March, 1874.

Enrolled :—Boys, 78; girls, 55; total, 133.

Present :—Boys, 65; girls, 47; total, 112.

1. The schoolroom is too small for the present attendance. It is well adapted for 70 pupils, and is, for that number, sufficiently supplied with requisite furniture and apparatus. The Local Board have taken steps to erect a new school. 2. About two-thirds of the pupils are regular, and punctual attendance in the morning is now insisted on. The discipline is satisfactory, the government being firm and effective. 3. Judged by age and length of time at school, the pupils are backward. The general proficiency is reduced by the number of new scholars, and by the return of old ones who, under the late teacher, had ceased to attend. The mark for dictation and geometry is up to the average, but that for all other subjects is below. The condition of Class I is *fair*, that of Classes II and III *moderate to tolerable*, that of Class IV *tolerable to fair*. The teacher now in charge is not responsible for these results.

BRAIDWOOD (Boys.—V.) :—Inspected, 19th and 20th October, 1874.

Enrolled, 70; present, 61.

1. Since last inspection the schoolroom has been whitewashed, and the roof repaired. The fences are still in a bad condition, and a pump is needed. 2. About two-thirds of the pupils are regular. The discipline is satisfactory. 3. All the prescribed subjects are taught. The mark for reading, writing, and dictation is above the average; that for arithmetic, object-lessons, singing, grammar, and Scripture, up to the average; and that for drawing and geography below. The general proficiency is between *fair* and *very fair*.

BRAIDWOOD (Girls.—V.) :—Inspected, 20th and 21st October, 1874.

Enrolled, 48; present, 34.

1. Except that the desks are awkward, the material condition is satisfactory. 2. The pupils are orderly and attentive, and the discipline on the whole has improved. 3. All the prescribed subjects are taught. The mark for reading, spelling, and dictation is much beyond the average; that for writing, arithmetic, grammar, geography, object-lessons, singing, and Scripture is up to the average; and that for drawing is below. The general proficiency is between *fair* and *very fair*.

CANDELLO (V.) :—Inspected, 18th August, 1874.

Enrolled :—Boys, 32; girls, 17; total, 49.

Present :—Boys, 24; girls, 13; total, 37.

1. The building and the premises are in good order, and there is an abundant supply of furniture, apparatus, and working materials. 2. Not more than half the pupils are regular; and, owing to distance and to the nature of the country, no better attendance than this can reasonably be expected. The discipline and general management are satisfactory. 3. All the prescribed subjects are taught. The mark for reading, spelling, writing, dictation, and singing, is above the average; that for object-lessons, grammar, Scripture, and geography, up to the average; and that for arithmetic and drawing below. The general proficiency is nearly *very fair*.

COOMA (V.) :—Inspected, 27th February, 1874.

Enrolled :—Boys, 37; girls, 18; total, 55.

Present :—Boys, 34; girls, 18; total, 52.

1. The school is undergoing thorough repair, and extensive additions are being made. When these are complete, the material condition will be good. 2. Five-eighths of the pupils are regular, and punctual attendance in the morning is more insisted on than it was. The discipline has considerably improved. 3. All the prescribed subjects are taught. The mark for reading, spelling, writing, dictation, object-lessons, and Scripture, is up to the average; and that for arithmetic, grammar, geography, singing, and drawing, below. The general proficiency is between *tolerable* and *fair*; but the present teacher has not been long enough in charge to be responsible for these results.

EDEN (V.) :—Inspected, 10th September, 1874.

Enrolled :—Boys, 30; girls, 13; total, 43.

Present :—Boys, 24; girls, 10; total, 34.

1. The school buildings have been repaired and much improved since last inspection; and, except that the residence is too small, the material condition is satisfactory. 2. The discipline is in all respects good. 3. All the prescribed subjects are taught. The mark for reading, spelling, writing, dictation, arithmetic, grammar, object-lessons, singing, Scripture, and geography, is far beyond the average, that for drawing is up to the average, and no subject is below. The general proficiency is *good*.

JEMBAICUMBENE (V.) :—Inspected, 19th May, 1874.

Enrolled :—Boys, 23; girls, 23; total, 46.

Present :—Boys, 19; girls, 21; total, 40.

1. The material condition is reasonably good in all respects. 2. Scarcely half the pupils are regular, and many get late in the morning. Most of the children are very young. The discipline has improved, but there is still room for greater strictness. 3. All the prescribed subjects are taught. The attainments are not high, but ordinary progress has been made since last inspection. The average proficiency is between *tolerable* and *fair*.

KIORA (N.-V.) :—Inspected, 30th July, 1874.

Enrolled :—Boys, 14; girls, 24; total, 38.

Present :—Boys, 8; girls, 16; total, 24.

1. The residence is of a very inferior kind, and there is no water supply; in other respects the material condition of the school is satisfactory. 2. The school was reopened under a new teacher on the day of inspection. The mark obtained for dictation was above the average, that for writing up to the average, and that for all other subjects below. The general proficiency is slightly beyond *tolerable*.

LITTLE RIVER (V.) :—Inspected, 20th May, 1874.

Enrolled :—Boys, 32; girls, 45; total, 77.

Present :—Boys, 24; girls, 32; total, 56.

1. The material condition and the discipline are satisfactory. 2. All the prescribed subjects are taught. The mark obtained for reading, writing, dictation, grammar, object-lessons, drawing, and Scripture, is well up to the average, that for arithmetic, geography, and singing is slightly below. The general proficiency is *fair*.

MAJOR'S CREEK (V.) :—Inspected, 19th November, 1874.

Enrolled :—Boys, 59; girls, 63; total, 122.

Present :—Boys, 44; girls, 49; total, 93.

1. The room is too small for the numbers now attending. Altogether the room is badly designed, lighted, and warmed. 2. Only about half the pupils are regular. No satisfactory reason can be given for this low proportion of regular attendants. The discipline has improved during the year, and the children are under much better control than they were. 3. The mark for reading and writing is above the average, and that for all other subjects well up to the average. The general proficiency is between *fair* and *very fair*.

MERIMBULA (N.-V.) :—Inspected, 7th September, 1874.

Enrolled :—Boys, 20; girls, 18; total, 38.

Present :—Boys, 16; girls, 15; total, 31.

1. The new school is not finished, and the material condition remains as it was last year. 2. The discipline is satisfactory in all respects. 3. All the prescribed subjects are taught except drawing. The mark for reading, spelling, dictation, arithmetic, grammar, geography, object-lessons, and Scripture is much above the average, that for writing and singing is well up to the average, and no subject is below. The general proficiency is *good*.

MONKITTEE (N.-V.) :—Inspected, 11th May, 1874.

Enrolled :—Boys, 20; girls, 15; total, 35.

Present :—Boys, 16; girls, 7; total, 23.

1. The residence has been somewhat enlarged, the building is in a fair state of repair, and there is a sufficient supply of furniture, apparatus, and materials. 2. The irregularity is excessive, and a considerable number of children in the neighbourhood attend no school. 3. All the prescribed subjects are taught except singing. Under examination, the pupils are dull, and answer with but little intelligence. The mark for grammar, object-lessons, and geography is up to the average, but that for reading, spelling, dictation, arithmetic, and drawing, is considerably below. The general proficiency is between *moderate* and *tolerable*.

NELIGEN (V.) :—Inspected, 15th July, 1874.

Enrolled :—Boys, 16; girls, 14; total, 30.

Present :—Boys, 15; girls, 13; total, 28.

1. This is a good building, capable of comfortably accommodating fifty pupils. The outfit is satisfactory. 2. Under the new teacher the pupils are regular, and they attend with greater punctuality in the morning. The discipline is improving, and the school is now in fair order. 3. The attainments in this school have always been low. The work done during the past year has not produced satisfactory results. The mark for reading, writing, and object-lessons is up to the average, but that for all other subjects is below. The general proficiency is slightly beyond *tolerable*. The teacher now in charge is not responsible for this poor mark.

NERRIGUNDAH

NERRIGUNDAM (N.-V.) :—Inspected, 7th August, 1874.

Enrolled :—Boys, 18 ; girls, 16 ; total, 34.
Present :—Boys, 17 ; girls, 15 ; total, 32.

1. The building is in the same condition that it was last year. There is improved punctuality, and the discipline is better in every way than it was. 3. All the prescribed subjects are taught, but none of them are handled with much effectiveness. The mark for Scripture is above the average, but that for all other subjects below. The general proficiency is tolerable.

PANBULA (V.) :—Inspected, 8th September, 1874.

Enrolled :—Boys, 17 ; girls, 29 ; total, 46.
Present :—Boys, 14 ; girls, 25 ; total, 39.

1. Hat-peg and a book-press are much needed, but in other respects the material condition is satisfactory. 2. The discipline has much improved during the year, but increased firmness and consistency in the government would still be advisable. 3. All the prescribed subjects are taught. The mark for dictation is above the average, that for reading, writing, spelling, and singing well up to the average, and that for arithmetic, grammar, geography, object-lessons, and drawing, below. The general proficiency is fair.

QUEANBEYAN (N.-V.) :—Inspected, 20th February, 1874.

Enrolled :—Boys, 43 ; girls, 44 ; total, 92.
Present :—Boys, 43 ; girls, 38 ; total, 81.

1. No improvement has been made in the material condition. 2. The discipline has somewhat fallen off since last inspection, but with the small supply of desks and forms and the defective organization, it is impossible to rule the school properly. 3. All the prescribed subjects are taught except singing. The mark for reading, writing, and geography, is above the average, that for dictation, grammar, object-lessons, and Scripture, well up to the average, and that for arithmetic and drawing below. The general proficiency is between fair and very fair.

TANTAWANGLO (V.) :—Inspected, 19th August, 1874.

Enrolled :—Boys, 17 ; girls, 19 ; total, 36.
Present :—Boys, 17 ; girls, 17 ; total, 34.

1. The material condition is good and the discipline is satisfactory. 2. All the prescribed subjects are taught except singing. Since last inspection, this school has fallen off in attainments. From being one of the best schools in the locality, it has in one year sunk to be below the average. A new teacher is now in charge, and of course he is not responsible for existing defects. The general proficiency is tolerable.

WOLUMLA NORTH (V.) :—Inspected, 17th August, 1874.

Enrolled :—Boys, 17 ; girls, 10 ; total, 27.
Present :—Boys, 15 ; girls, 9 ; total, 24.

1. The material condition is good, and the discipline is satisfactory. 2. The school has recently been placed under a new teacher, and more vigour is observable in the management. 3. All the prescribed subjects are taught. The mark for reading, spelling, writing, and dictation is above the average, and that for all other subjects below. The general proficiency is between tolerable and fair, but the present teacher has not been sufficiently long in charge to be held responsible for this mark.

WOLUMLA SOUTH (V.) :—Inspected, 2nd September, 1874.

Enrolled :—Boys, 29 ; girls, 19 ; total, 48.
Present :—Boys, 28 ; girls, 19 ; total, 47.

1. The building is in a good state of repair, and there is an ample supply of furniture, apparatus, and materials. 2. Several children are irregular in attendance. The discipline is satisfactory. 3. Last year the school passed a very creditable examination; this year it did even better. The mark for reading, spelling, geography, dictation, writing, and object-lessons is much above the average; that for arithmetic, singing, and Scripture, is up to the average, and that for drawing below. The general proficiency is between very fair and good.

II.—PROVISIONAL SCHOOLS.

BELL'S CREEK (N.-V.) :—Inspected, 1st June, 1874.

Enrolled :—Boys, 19 ; girls, 16 ; total, 35.
Present :—Boys, 15 ; girls, 12 ; total, 27.

1. A new building is much needed; the present one is too small and dilapidated. There is a sufficient supply of all necessaries. 2. Two-thirds of the pupils are regular. There is a want of firmness and determination in the government. 3. The attainments on the whole are satisfactory, and the 1st class is particularly well taught. The mark for reading, spelling, writing, dictation, and arithmetic, is much above the average, that for grammar, geography, object-lessons, and drawing, is below. The general proficiency is between fair and very fair.

BETTOWIND (N.-V.) :—Inspected, 8th June, 1874.

Enrolled :—Boys, 17 ; girls, 11 ; total, 28.
Present :—Boys, 11 ; girls, 11 ; total, 22.

1. This is a new building, well put together, and supplied with plenty of furniture and materials. 2. Two-thirds of the pupils are regular, their behaviour is good, and the government is firm and effective. 3. When examined the school had only been opened a few weeks. The attainments of the children are necessarily low at present.

BODALLA (N.-V.) :—Inspected, 6th August, 1874.

Enrolled :—Boys, 9 ; girls, 10 ; total, 19.
Present :—Boys, 7 ; girls, 10 ; total, 17.

1. The building is in a satisfactory state of repair, and is well supplied with necessaries. 2. Not more than half the pupils are regular, and several in the neighbourhood do not attend at all. The discipline is bad. 3. Of seven compulsory subjects only five are attempted. None of the usual lesson documents are kept, and the instruction is not regulated by the Council's standard. The general proficiency is very low, giving an average not beyond indifferent.

BROWN MOUNTAIN (N.-V.) :—Inspected, 20th August, 1874.

Enrolled :—Boys, 15 ; girls, 9 ; total, 24.
Present :—Boys, 12 ; girls, 9 ; total, 21.

1. The building is large and in good repair, and there is a sufficient quantity of furniture and working stock. 2. The discipline is satisfactory. 3. All the prescribed subjects are taught, except singing and drawing. The mark for reading, spelling, and dictation, is above the average; that for writing and geography, up to the average; and that for arithmetic, grammar, and object lessons, below. The general proficiency is fair.

BUNGENDORA

BUNGENDORE (N.-V.) :—Inspected, 20th April, 1874.

Enrolled :—Boys, 12 ; girls, 8 ; total, 20.
Present :—Boys, 12 ; girls, 8 ; total, 20.

1. Except that the small reading-books are much worn, the material condition is good in all respects. 2. About two-thirds of the pupils are regular, but a great number get late in the morning. The discipline is fair. 3. Under examination the children are bright and anxious to answer. Steady progress has been made during the year. The average proficiency is tolerable.

CORROWONG (N.-V.) :—Inspected, 12th March, 1874.

Enrolled :—Boys, 10 ; girls, 19 ; total, 29.
Present :—Boys, 8 ; girls, 16 ; total, 24.

1. The building is in a good state of repair, and there is a sufficient supply of requisites. 2. Half the pupils are regular ; they are clean, fairly attentive, and in tolerably good order. There is a want of vigour and determination in the government. 3. The children are well classed, and the work is honestly and industriously performed. The mark for reading and writing is up to the average, that for all other subjects below. The general proficiency is between small and indifferent.

DANGELONG (V.) :—Inspected, 2nd March, 1874.

Enrolled :—Boys, 17 ; girls, 8 ; total, 25.
Present :—Boys, 13 ; girls, 6 ; total, 19.

1. This is a substantial building, put up by the residents on land vested in the Council. The rooms need flooring, otherwise the material condition is satisfactory in all respects. 2. Two-thirds are regular. The general order is tolerable, and the government is as firm and judicious as can reasonably be expected. 3. At present the attainments of the children are low, giving an average proficiency of moderate.

GINNABROTHERS (N.-V.) :—Inspected, 6th March, 1874.

Enrolled :—Boys, 16 ; girls, 9 ; total, 25.
Present :—Boys, 7 ; girls, 6 ; total, 13.

1. The desks are awkward and badly arranged, and there is but a limited supply of apparatus. In other respects the building and outfit are sufficiently good. 2. Not more than one-third of the pupils are regular. They are talkative and inattentive. 3. The classification is defective. The attainments are unusually low, giving an average between bad and small.

GINNINDERRA (N.-V.) :—Inspected, 17th April, 1874.

Enrolled :—Boys, 5 ; girls, 17 ; total, 22.
Present :—Boys, 5 ; girls, 12 ; total, 17.

1. The room is large, but there is no fireplace, and more sitting and writing accommodation is needed. The school was only incidentally inspected, as the teacher in charge had not been recognized.

HOSKINSTOWN (N.-V.) :—Inspected, 9th February, 1874.

Enrolled :—Boys, 14 ; girls, 17 ; total, 31.
Present :—Boys, 13 ; girls, 14 ; total, 27.

1. The building is in a satisfactory condition, and there is a satisfactory supply of all requisites. 2. The irregularity of the children is excessive, not more than two out of thirty-one pupils attending as they should do. The discipline is fair, but the general tone of the school is calculated to create an impression of unreality and want of business-like earnestness. 3. Some of the prescribed subjects are not included in the course of instruction. The attainments are low, but to a great extent the parents are responsible for this, as children are frequently kept at home for most frivolous reasons. The general proficiency is small.

JEMBAICUMBENE (N.-V.) :—Inspected, 29th May, 1874.

Enrolled :—Boys, 10 ; girls, 14 ; total, 24.
Present :—Boys, 4 ; girls, 11 ; total, 15.

1. The building is in a good state of repair, and, except that there is no apparatus, is sufficiently well fitted out with furniture and materials. 2. Fifteen are very regular. The discipline is satisfactory. 3. The pupils have been admirably taught. Considering age and time at school, the attainments are beyond the average, and the progress made has been sound and unusually rapid. The general proficiency is between fair and very fair.

KIANDRA (N.-V.) :—Inspected, 23rd March, 1874.

Enrolled :—Boys, 20 ; girls, 11 ; total, 31.
Present :—Boys, 18 ; girls, 10 ; total, 28.

1. The building is old and inconvenient, but there is a sufficient supply of furniture and apparatus. 2. About two-thirds are regular, but many get late in the morning. They are somewhat disorderly, and too much talking and restlessness are permitted. 3. Reading, spelling, writing, dictation, and Scripture are taught with tolerable success ; the mark for other subjects is much below the average. The general proficiency is between indifferent and moderate.

MICHELAGO (N.-V.) :—Inspected, 24th February, 1874.

Enrolled :—Boys, 20 ; girls, 8 ; total, 28.
Present :—Boys, 19 ; girls, 8 ; total, 27.

1. The material condition and the organization are satisfactory. 2. Four-fifths are regular. They are quiet, attentive, and orderly. 3. All the prescribed subjects are taught. The mark for spelling, dictation, and geography is above the average ; that for reading, writing, arithmetic, grammar, object lessons, and Scripture well up to the average ; and that for drawing below. The general proficiency is between fair and very fair.

MOOO (N.-V.) :—Inspected, 17th July, 1874.

Enrolled :—Boys, 10 ; girls, 8 ; total, 18.
Present :—Boys, 9 ; girls, 7 ; total, 16.

1. The material condition is fairly satisfactory. 2. Not more than half the pupils are regular, and the attendance in the morning is unpunctual. In most respects the discipline is tolerable. 3. The mark for reading, spelling, writing, and dictation is up to the average ; and that for all other subjects below. The general proficiency is between moderate and tolerable.

MUDMELONG (N.-V.) :—Inspected, 10th June, 1874.

Enrolled :—Boys, 16 ; girls, 16 ; total, 32.
Present :—Boys, 13 ; girls, 14 ; total, 27.

1. There was no fireplace when the school was inspected, but one has been put up since. The material condition is now satisfactory. 2. The discipline is good. 3. The school has only been opened five months, but the progress made during that time has been unusually sound and rapid. The mark for reading, spelling, writing, dictation, and arithmetic is much above the average ; that for grammar and object lessons is up to the average ; and that for geography below. The general proficiency is very fair.

NARRIGA (V.) :—Inspected, 30th April, 1874.

Enrolled :—Boys, 14 ; girls, 20 ; total, 34.

Present :—Boys, 12 ; girls, 15 ; total, 27.

1. The building is in a good state of repair, and there is a sufficient supply of all requisites. 2. Two-thirds of the pupils are regular. They are clean, orderly, and well under control. 3. The attainments are reasonably satisfactory. The progress of the children has been retarded by unnecessary subdivision of classes. The average proficiency is tolerable.

NEW LINE (N.-V.) :—Inspected, 23rd April, 1874.

Enrolled :—Boys, 13 ; girls, 14 ; total, 27.

Present :—Boys, 11 ; girls, 8 ; total, 19.

1. Two new desks and forms are needed, otherwise the building is suitable and well fitted up. This school was visited a few days after it was opened. A few of the children can read a little, but they know nothing else.

NEWSTEAD (V.) :—Inspected, 22nd July, 1874.

Enrolled :—Boys, 13 ; girls, 8 ; total, 21.

Present :—Boys, 10 ; girls, 6 ; total, 16.

1. The building is in a fair state of repair, but the books are worn out, and the schoolroom is untidy and filthy. 2. None of the ordinary lesson documents are kept, and the records are wrong. There is no attempt made to secure order or to enforce discipline of any kind. 3. The attainments are wretched, giving an average between small and indifferent. A new teacher has been placed in charge since the inspection.

NIMITYBELLE (N.-V.) :—Inspected, 3rd March, 1874.

Enrolled :—Boys, 21 ; girls, 16 ; total, 37.

Present :—Boys, 18 ; girls, 10 ; total, 28.

1. The building is reasonably good, and there is a sufficient supply of furniture and apparatus. 2. Less than half the pupils are regular ; the organization is defective ; the pupils are insubordinate, apathetic, and noisy. There is no system in the government, and the general tone is low. 3. Under examination the children show a great want of mental training, and their attainments are very poor. The average proficiency is between small and indifferent. A new teacher has been sent.

PARKWOOD (N.-V.) :—Inspected, 17th February, 1874.

Enrolled :—Boys, 8 ; girls, 11 ; total, 19.

Present :—Boys, 6 ; girls, 10 ; total, 16.

1. The building and outfit are rough, but sufficiently good for existing requirements. 2. About half the pupils are regular ; they are quiet and orderly, but apathetic. 3. The mark for dictation is up to the average, but that for every other subject is below. The general proficiency is between moderate and tolerable.

ROSSI (N.-V.) :—Inspected, 24th September, 1874.

Enrolled :—Boys, 11 ; girls, 16 ; total, 27.

Present :—Boys, 8 ; girls, 14 ; total, 22.

1. This is a newly established school. The building is substantial, and well provided with all necessaries. 2. The children are orderly, attentive, and obedient. 3. During the short time the school has been in existence the children have made good progress. The mark for grammar is beyond the average ; that for reading, spelling, writing, and dictation, well up to the average, and that for arithmetic and geography below. The general proficiency is between fair and very fair.

STONE HUT (N.-V.) :—Inspected, 17th February, 1874.

Enrolled :—Boys, 8 ; girls, 10 ; total, 18.

Present :—Boys, 8 ; girls, 8 ; total, 16.

1. School is held in a comfortable little hut, given for the purpose by the Local Board. There is a sufficient supply of furniture, apparatus, and working stock. Owing to a little care bestowed on his school by the teacher, the inside is not so desolate and comfortless as bush schools are generally found to be. 2. Of 18 enrolled, 14 are regular. The children are orderly, well-behaved, respectful to their teacher, and well under control. The government is firm, but at the same time kind and judicious. 3. The school has been open but a short time, and all the children therefore are in the first class. Their progress, especially in reading, spelling, and writing, has been very rapid. The average proficiency is between fair and very fair.

TUGGRANONG (N.-V.) :—Inspected, 13th February, 1874.

Enrolled :—Boys, 8 ; girls, 10 ; total, 18.

Present :—Boys, 6 ; girls, 7 ; total, 13.

1. The building is in fair repair, and there is a sufficient stock of requisites. 2. The discipline is fair. 3. More than ordinary progress is made in reading, and the mark for writing fully reaches the average for larger schools. The general proficiency is indifferent.

WIANGA (N.-V.) :—Inspected, 22nd April, 1874.

Enrolled :—Boys, 9 ; girls, 7 ; total, 16.

Present :—Boys, 9 ; girls, 5 ; total, 14.

1. The small books are much worn, and a new supply of writing materials is needed, but in other respects the condition of the school, both in regard to building and outfit, is satisfactory. 2. The discipline is tolerable, but more firmness is needed. 3. Under examination the children answer with average intelligence. In reading, writing, arithmetic, and dictation, the attainments are well up to the average, but the mark for grammar and geography is below. The general proficiency is between moderate and tolerable.

III.—HALF-TIME SCHOOLS.

ADAMINIBY (N.-V.) :—Inspected, 24th March, 1874.

Enrolled :—Boys, 11 ; girls, 8 ; total, 19.

Present :—Boys, 4 ; girls, 6 ; total, 10.

1. The building is in a satisfactory condition, and there is a sufficient supply of furniture, apparatus, and materials. 2. The children at Adaminiby are exceptionally irregular. The behaviour in school is good. 3. All the prescribed subjects are taught, except singing and drawing. The attainments of those who have attended with ordinary regularity are satisfactory, and reasonable progress has been made since last inspection. The average proficiency is between tolerable and fair.

BACK

BACK CREEK (N.-V.) :—Inspected, 27th November, 1874.

Enrolled :—Boys, 12 ; girls, 3 ; total, 15.
Present :—Boys, 9 ; girls, 2 ; total, 11.

1. This is a newly established school. The building is sufficiently good for present requirements, and is provided with requisite furniture, apparatus, and materials. 2. About half the pupils are regular. The discipline is satisfactory. 3. All the prescribed subjects are taught, except singing and drawing. The mark for reading is above the average, and that for all other subjects well up to the average. The general proficiency is *fair*.

BEMBOOKA (N.-V.) :—Inspected, 21st August, 1874.

Enrolled :—Boys, 9 ; girls, 6 ; total, 15.
Present :—Boys, 8 ; girls, 6 ; total, 14.

1. The building is good enough for existing wants ; there are sufficient desks and forms, but a supply of apparatus and books is needed. 2. The pupils are very irregular, but the discipline on the whole is better than it was last year. 3. There is also a slight improvement in the attainments of the children, but in every subject the mark obtained was below the average. The general proficiency is between *moderate* and *tolerable*.

BIBBENLUKE (N.-V.) :—Inspected, 18th March, 1874.

Enrolled :—Boys, 10 ; girls, 11 ; total, 21.
Present :—Boys, 8 ; girls, 9 ; total, 17.

1. The building is suitable, and there is a sufficient supply of requisites. 2. Three fifths of the pupils are regular. The discipline is fair. 3. In no subject have the children done as much during the year as might reasonably have been required of them. The attainments are very unsatisfactory, the average proficiency being but *indifferent*.

BOCONNOC (N.-V.) :—Inspected, 25th March, 1874.

Enrolled :—Boys, 8 ; girls, 5 ; total, 13.
Present :—Boys, 3 ; girls, 2 ; total, 5.

1. Proper desks and forms have been provided since last inspection, and the material condition is now satisfactory. 2. Nine out of thirteen attend regularly, but the day of inspection being wet, very few were able to reach school. 3. Those present were regular attendants, and their attainments were reasonably good. The mark for reading and writing was above the average ; that for dictation and arithmetic well up to the average, and that for grammar, object lessons, and geography, below. The general proficiency is slightly beyond *fair*.

BOMBAY (N.-V.) : Inspected, 21st May, 1874.

Enrolled :—Boys, 6 ; girls, 10 ; total, 16.
Present :—Boys, 5 ; girls, 7 ; total, 12.

1. This is a rough little hut, but it answers all purposes reasonably well. 2. Three-fourths are regular. The discipline is fair. 3. All the prescribed subjects are taught, except singing and drawing. The mark for reading, spelling, writing, and dictation is up to the average ; that for arithmetic, grammar, geography, and object-lessons is below. The general proficiency is between *tolerable* and *fair*.

BORO, UPPER (N.-V.) :—Inspected, 25th April, 1874.

Enrolled :—Boys, 10 ; girls, 6 ; total, 16.
Present :—Boys, 10 ; girls, 6 ; total, 16.

1. The material condition is satisfactory, and the room is neat, clean, and well looked after. 2. Three-fourths are regular ; they are attentive, obedient, and well-behaved in all respects. 3. The mark for reading and spelling is above the average ; that for writing, dictation, and grammar, well up to the average, and that for arithmetic and geography, below. The general proficiency is between *tolerable* and *fair*.

BORO, LOWER (N.-V.) :—Inspected, 27th April, 1874.

Enrolled :—Boys, 5 ; girls, 7 ; total, 12.
Present :—Boys, 5 ; girls, 5 ; total, 10.

1. The material condition is satisfactory, and the place is clean and tidy. 2. Nearly all are regular, and their behaviour in school is good. 3. The mark for reading, spelling, and dictation is above the average ; that for writing well up to the average, and that for arithmetic, grammar, and geography, below. The general proficiency is between *tolerable* and *fair*.

BURRA (N.-V.) :—Inspected, 23rd February, 1874.

Enrolled :—Boys, 7 ; girls, 11 ; total, 18.
Present :—Boys, 7 ; girls, 11 ; total, 18.

1. The building and the outfit are sufficiently good for present requirements. 2. Except in harvest time two-thirds of the pupils are regular ; they are quiet, attentive, respectful to their teacher, and in all respects well-behaved. The government is judicious, and the general spirit of the school good. 3. The attainments, considering length of time at school, are very satisfactory, and great progress has been made since last inspection. The average proficiency is *very fair*.

BURRAGATE (V.) :—Inspected, 14th September, 1874.

Enrolled :—Boys, 6 ; girls, 5 ; total, 11.
Present :—Boys, 6 ; girls, 4 ; total, 10.

1. The building is in the same condition that it was last year. 2. The discipline is loose, and the attainments are very unsatisfactory. The mark for every subject is below the average. The general proficiency is between *indifferent* and *moderate*.

CARWOOLA (N.-V.) :—Inspected, 10th February, 1874.

Enrolled :—Boys, 8 ; girls, 4 ; total, 12.
Present :—Boys, 8 ; girls, 4 ; total, 12.

1. The room is rather small, and the desks are unsteady, but in other respects the material condition both in regard to the building and the outfit is reasonably satisfactory. 2. The attendance is very fluctuating ; the discipline is fair. 3. The attainments of the pupils are low. The mark for every subject is below the average. The general proficiency is between *moderate* and *tolerable*.

CATHEART (N.-V.) :—Inspected, 18th March, 1874.

Enrolled :—Boys, 7 ; girls, 7 ; total, 14.
Present :—Boys, 7 ; girls, 6 ; total, 13.

1. The position of the school is not central, but in other respects the material condition is satisfactory. 2. Only half the pupils are regular, and the majority of children in the neighbourhood do not attend at all. If the people were united, a good full-time school might be maintained at Cathcart. 3. The attainments are unsatisfactory. The mark for spelling is up to the average, but that for all other subjects is much below. The general proficiency is *moderate*.

COBARGO

COBARGO (V.) :—Inspected, 12th August, 1874.

Enrolled :—Boys, 13; girls, 15; total, 28.

Present :—Boys, 11; girls, 14; total, 25.

1. The schoolroom is small, but comfortable and sufficiently well provided with requisites. 2. Owing to crooks and distance many pupils are very irregular. The children are attentive and well-behaved, and the work is carried on with patience and carefulness. 3. All the prescribed subjects are taught, except singing and drawing. The mark for reading, spelling, and dictation is above the average, that for writing is well up to the average, and that for arithmetic, grammar, geography, and object lessons below. The general proficiency is *fair*.

COCHRANE'S FLAT (V.) :—Inspected, 11th September, 1874.

Enrolled :—Boys, 6; girls, 5; total, 11.

Present :—Boys, 5; girls, 3; total, 8.

1. The material condition is good in all respects, and the discipline is satisfactory. 2. The population here is not numerous enough to maintain the minimum average, but if the school were closed the few children living in the neighbourhood would have no opportunity of obtaining education. 3. All the prescribed subjects are taught, except singing and drawing. The mark for reading and dictation is up to the average, but that for all other subjects is below. The general proficiency is between *moderate* and *tolerable*. The present teacher, who has but recently taken charge is not responsible for these results.

COLUMBO (N.-V.) :—Inspected, 21st May, 1874.

Enrolled :—Boys, 4; girls, 11; total, 15.

Present :—Boys, 2; girls, 9; total, 11.

1. The desks are somewhat rough and unsteady; otherwise, the material condition is satisfactory. 2. When not hindered by floods, two-thirds are regular. The pupils are orderly and the discipline is satisfactory. 3. All the prescribed subjects are taught, except singing and drawing. The mark for reading, spelling, writing, and dictation is considerably above the average, and that for arithmetic, grammar, geography, and object lessons is well up to the average. The general proficiency approaches *very fair*.

CHARLEYONG (N.-V.) :—Inspected, 27th November, 1874.

Enrolled :—Boys, 8; girls, 13; total, 21.

Present :—Boys, 6; girls, 11; total, 17.

1. The material condition is satisfactory. 2. Rather more than half the pupils are regular. The discipline is sound. 3. All the prescribed subjects are taught, except singing and drawing. The mark for reading, spelling, writing, and dictation is above the average; that for grammar, object lessons, geography, and arithmetic well up to the average. The general proficiency is nearly *very fair*.

CUARY FLAT (N.-V.) :—Inspected, 5th March, 1874.

Enrolled :—Boys, 7; girls, 2; total, 9.

Present :—Boys, 4; girl, 1; total, 5.

1. The building and outfit are good. 2. Half the pupils are regular; they are quiet, obedient, and attentive, and the government is firm and effective. 3. Considering the short time the children have been under instruction, the progress made has been rapid and sound. The average proficiency is between *fair* and *very fair*.

DELEGATE (N.-V.) :—Inspected, 13th March, 1874.

Enrolled :—Boys, 22; girls, 7; total, 29.

Present :—Boys, 15; girls, 6; total, 21.

1. Except that maps are needed, the material condition is satisfactory. 2. About one-third of the pupils are regular. They are quiet, obedient, and well under control. 3. All the prescribed subjects are taught, except singing and drawing. The mark for reading, spelling, and writing is up to the average; that for all other subjects is below. The general proficiency is between *moderate* and *tolerable*.

DENNIS' FLAT (N.-V.) :—Inspected, 1st May, 1874.

Enrolled :—Boys, 4; girls, 9; total, 13.

Present :—Boys, 3; girls, 9; total, 12.

1. The school-building is dingy and uninviting, but it has been put in a tolerable state of repair, and is supplied with all requisites. 2. Ten are regular, and all the children living in the neighbourhood are enrolled. The discipline is good. 3. The pupils have been but a short time under instruction, but their progress is satisfactory. The general proficiency is *fair*.

DURRAN DURRAH (N.-V.) :—Inspected, 18th May, 1874.

Enrolled :—Boys, 8; girls, 12; total, 20.

Present :—Boys, 4; girls, 10; total, 14.

1. The roof leaks, but in other respects the school is in a fair state of repair. The supply of apparatus and furniture is sufficient. 2. There has been an improvement since last inspection in the discipline and general management. 3. The progress made has been reasonably satisfactory. The average proficiency is between *tolerable* and *fair*.

FARRINGTON (N.-V.) :—Inspected, 16th November, 1874.

Enrolled :—Boys, 16; girls, 10; total, 26.

Present :—Boys, 14; girls, 9; total, 23.

1. New desks and forms have been supplied; the outfit of the school is now satisfactory. 2. About half the pupils are regular. The attendance this year is larger than it has hitherto been. The discipline is fair. 3. All the prescribed subjects are taught, except singing and drawing. The mark for spelling and dictation is above the average, that for reading and writing well up to the average, and that for arithmetic, geography, grammar, and object-lessons below. The general proficiency is between *tolerable* and *fair*.

FOXLOW (N.-V.) :—Inspected, 10th February, 1874.

Enrolled :—Boys, 5; girls, 11; total, 16.

Present :—Boys, 5; girls, 9; total, 14.

1. School is held in a comfortable room. There is a sufficient supply of all requisites. 2. Only five out of sixteen are regular. The discipline is fair. 3. All the prescribed subjects are taught, but none of them with great success. The irregularity has been of such a kind as to make it impossible for the teacher to influence more than five or six of his pupils. Judging the school, however, by the few that are regular, the attainments must be called unsatisfactory. The mark for every subject is below the average. The general proficiency is between *moderate* and *tolerable*.

GUNDILLION (N.-V.) :—Inspected, 18th November, 1874.

Enrolled :—Boys, 6 ; girls, 6 ; total, 12.

Present :—Boys, 6 ; girls, 5 ; total, 11.

1. The building is in a good state of repair, and is well fitted out with furniture and apparatus. 2. Most of the pupils are regular, and the discipline is good. 3. All the prescribed subjects are taught, except singing and drawing. The mark for reading, spelling, and mental arithmetic is above the average, and that for all other subjects up to the average. The general proficiency is *fair*.

HAROLD'S CROSS (N.-V.) :—Inspected, 16th November, 1874.

Enrolled :—Boys, 5 ; girls, 7 ; total, 12.

Present :—Boys, 4 ; girls, 7 ; total, 11.

1. This is a very rough little hut, but it meets all existing requirements. There are plenty of working materials. 2. All the pupils are regular, and the discipline is fair. 3. The mark for reading and writing is above the average, that for dictation up to the average, and that for other subjects below. The general proficiency is *fair*.

INGLEWOOD FOREST (N.-V.) :—Inspected, 15th April, 1874.

Enrolled :—Boys, 10 ; girls, 10 ; total, 20.

Present :—Boys, 7 ; girls, 10 ; total, 17.

1. The building is small and not central. Steps are being taken to put one up in a better position. The school is fairly well supplied with requisites. 2. About two-thirds of the pupils are regular. Greater firmness is needed in the government. 3. All the prescribed subjects are taught, except singing and drawing. The attainments are low ; in no subject does the mark approach the average. The general proficiency is between *indifferent* and *moderate*.

JELLAT-JELLAT (N.-V.) :—Inspected, 18th September, 1874.

Enrolled :—Boys, 5 ; girls, 17 ; total, 22.

Present :—Boys, 4 ; girls, 13 ; total, 17.

1. The material condition is satisfactory. 2. The discipline is tolerable in most respects. 3. The mark for every subject is below the average. The general proficiency is between *moderate* and *tolerable*.

JERRADAT GULLY (N.-V.) :—Inspected, 17th November, 1874.

Enrolled :—Boys, 8 ; girls, 8 ; total, 16.

Present :—Boys, 4 ; girls, 7 ; total, 11.

1. The building is in a fair state of repair, and there is a sufficient supply of requisites. 2. About half the pupils are regular. 3. All the prescribed subjects are taught, except singing and drawing. The mark for reading and geography is above the average ; that for writing and grammar well up to the average, and that for object-lessons, dictation, and arithmetic, below. The general proficiency is between *tolerable* and *fair*.

LARBERT (N.-V.) :—Inspected, 11th November, 1874.

Enrolled :—Boys, 16 ; girls, 8 ; total, 24.

Present :—Boys, 11 ; girls, 7 ; total, 18.

1. School is held in a comfortable stone cottage. There is an ample supply of all requisites. 2. About two-thirds of the pupils are regular. The discipline is fair. 3. All the prescribed subjects are taught, except singing and drawing. This school was only opened during the present year, and, considering the short time the children have been under instruction, the attainments are satisfactory. The average proficiency is *fair*.

LARRY'S POINT (N.-V.) :—Inspected, 28th July, 1874.

Enrolled :—Boys, 5 ; girls, 8 ; total, 13.

Present :—Boys, 4 ; girls, 7 ; total, 11.

1. This is a little hut, put up by two or three families, living on the west of Dewa River, to accommodate twelve children residing there. There is sufficient furniture to provide for sitting and writing, and there are plenty of books and other working materials. 2. The attendance is very regular, and reflects great credit upon the parents. Neither work nor rain stops the children, and it is, without exception, the best attended school in the district. 3. The progress made in reading and spelling has been rapid and sound, and the mark for these subjects is beyond the average ; the mark for dictation and arithmetic is up to the average, and that for other subjects below. The general proficiency is between *tolerable* and *fair*.

LIMERILNS (N.-V.) :—Inspected, 11th November, 1874.

Enrolled :—Boys, 13 ; girls, 5 ; total, 18.

Present :—Boys, 6 ; girls, 4 ; total, 10.

1. School is held in a substantial stone hut that answers well all existing requirements. There is a satisfactory supply of furniture, apparatus, and materials. 2. The pupils are regular, and the discipline is sound. 3. This school is worked with that at Larbert, and, in regard to efficiency, is in about the same condition.

M'DONALD'S FLAT (N.-V.) :—Inspected, 23rd February, 1874.

Enrolled :—Boys, 10 ; girls, 7 ; total, 17.

Present :—Boys, 7 ; girls, 5 ; total, 12.

1. The material condition is satisfactory. 2. Eleven pupils are regular. The discipline is good. 3. This school is worked with that at Burra, and is in the same creditable condition. The average proficiency is *very fair*.

MRRINGLO (N.-V.) :—Inspected, 21st August, 1874.

Enrolled :—Boys, 8 ; girls, 6 ; total, 14.

Present :—Boys, 5 ; girls, 6 ; total, 11.

1. This is a neat little school, well fitted up in all respects. 2. It is worked with that at Bembooka, and here, as there, the attainments are considerably below the average in all subjects. The general proficiency is between *indifferent* and *moderate*.

MOUNT ITALY (N.-V.) :—Inspected, 18th November, 1874.

Enrolled :—Boys, 4 ; girls, 7 ; total, 11.

Present :—Boys, 4 ; girls, 7 ; total, 11.

1. This is a large, draughty place, badly provided with furniture, but with a sufficient supply of apparatus and materials. 2. All the pupils are regular, and the discipline is good. 3. The attainments are reasonably satisfactory. The mark for reading, arithmetic, writing, and grammar is well up to the average ; that for dictation, object lessons, and geography is below. The general proficiency is between *tolerable* and *fair*.

MYALLA (N.-V.) :—Inspected, 5th March, 1874.

Enrolled :—Boys, 8 ; girls, 7 ; total, 15.
Present :—Boys, 6 ; girls, 3 ; total, 9.

1. This is a neat, compact, little building, well furnished and fitted up in all respects. 2. Not more than half the children are regular. The discipline is good and the government firm, even to sternness. 3. All the prescribed subjects are taught. Considering the short time the children have been under instruction, the progress made is very creditable to the teacher. The average proficiency is between *fair* and *very fair*.

ORANMEIB (N.-V.) :—Inspected, 17th November, 1874.

Enrolled :—Boys, 11 ; girls, 11 ; total, 22.
Present :—Boys, 8 ; girls, 8 ; total, 16.

1. The building is in a fair state of repair, but there are not sufficient desks. There is a reasonably good supply of apparatus and materials. 2. About half the pupils are regular. They copy and prompt a great deal, and require to be more firmly ruled. 3. All the prescribed subjects are taught, except singing and drawing. The mark for writing and geography is up to the average; but that for reading, spelling, dictation, arithmetic, grammar, and object lessons is below. The general proficiency is between *moderate* and *tolerable*.

POWER'S CORNER (N.-V.) :—Inspected, 13th March, 1874.

Enrolled :—Boys, 16 ; girls, 8 ; total, 24.
Present :—Boys, 6 ; girls, 5 ; total, 11.

1. Judged by the outside, this is an unprepossessing hut, but the inside is lined, and the furniture, though rough, is sufficient for existing wants. 2. Owing to distance and the demand for children's labour, only one-third of the pupils are regular. They are quiet, obedient, and well under control. Considering the short time this school has been opened the attainments are fairly satisfactory. The average proficiency is between *tolerable* and *fair*.

ROSSNEATH (V.) :—Inspected, 15th April, 1874.

Enrolled :—Boys, 11 ; girls, 7 ; total, 18.
Present :—Boys, 11 ; girls, 6 ; total, 17.

1. The school is in a fair state of repair, and is provided with sufficient furniture, apparatus, and materials. 2. Two-thirds of the pupils are regular. There is a want of firmness in the government. 3. This school is worked with that at Inglewood Forest, and is in about the same condition. The average proficiency is *moderate*.

SIX-MILE FLAT (V.) :—Inspected, 18th May, 1874.

Enrolled :—Boys, 10 ; girls, 12 ; total, 22.
Present :—Boys, 5 ; girls, 10 ; total, 15.

1. The school is much out of repair, and is altogether a dingy and comfortless place. There is a sufficient quantity of furniture, apparatus, and materials. 2. Only three pupils can be called regular. The discipline is loose. 3. All the prescribed subjects are taught, except singing and drawing. The mark for writing approaches the average, but that for all other subjects is much below the average. The general proficiency is between *indifferent* and *moderate*.

SNAPHOOK (N.-V.) :—Inspected, 27th July, 1874.

Enrolled :—Boys, 8 ; girls, 15 ; total, 23.
Present :—Boys, 8 ; girls, 14 ; total, 22.

1. This is a rough slab hut, fitted up inside in a very primitive style. 2. The children are somewhat noisy, but they are attentive and respectful to their teacher. 3. The mark for reading and spelling is above the average ; that for other subjects below. The general proficiency is *tolerable*.

STONY CREEK (V.) :—Inspected, 31st August, 1874.

Enrolled :—Boys, 7 ; girls, 7 ; total, 14.
Present :—Boys, 3 ; girls, 6 ; total, 9.

1. This is a good building, well supplied with all requisites. 2. The discipline is satisfactory. 3. The mark for reading is up to the average, but that for all other subjects is below. The general proficiency is between *tolerable* and *fair*.

TARRAGANDAH (N.-V.) :—Inspected, 31st August, 1874.

Enrolled :—Boys, 6 ; girls, 5 ; total, 11.
Present :—Boys, 6 ; girls, 4 ; total, 10.

1. The building and the outfit are satisfactory. 2. The discipline is good. 3. The mark for reading and writing is up to the average ; that for dictation, arithmetic, grammar, geography, and object-lessons is below. The general proficiency is between *tolerable* and *fair*.

TUMBOYE (N.-V.) :—Inspected, 1st May, 1874.

Enrolled :—Boys, 4 ; girls, 9 ; total, 13.
Present :—Boys, 4 ; girls, 8 ; total, 12.

1. This is a comfortable school, containing all necessary furniture and materials. 2. Two-thirds of the pupils are regular. The discipline is good. 3. The spelling and writing are admirable, the reading is good, and the mark for other subjects is beyond the average. The general proficiency is *very fair*.

TOWAMBA (V.) :—Inspected, 14th September, 1874.

Enrolled :—Boys, 7 ; girls, 7 ; total, 14.
Present :—Boys, 4 ; girls, 3 ; total, 7.

1. The building is in good order, and there is an ample supply of all requisites. 2. The discipline is satisfactory. 3. All the prescribed subjects are taught, except singing and drawing. The mark for reading, writing, arithmetic, and grammar is up to the average ; that for dictation, geography, and object-lessons is below. The general proficiency is *tolerable*.

WANDELLA (N.-V.) :—Inspected, 11th August, 1874.

Enrolled :—Boys, 10 ; girls, 9 ; total, 19.
Present :—Boys, 9 ; girls, 9 ; total, 18.

1. This is a small school, put up by the residents, and well supplied with all necessaries. Everything about the place is clean and in order. 2. The government is kind, but wanting in determination. 3. The school has only been established a short time. The children are making average progress.

WARRAGUBBA

WARRAGUBRA (N.-V.) :—Inspected, 1st September, 1874.

Enrolled :—Boys, 14 ; girls, 9 ; total, 23.
Present :—Boys, 14 ; girls, 9 ; total, 23.

1. The building is in good order, and there is a sufficient supply of furniture, apparatus, and materials. 2. The discipline has improved. 3. The mark for reading and writing is up to the average ; that for dictation, object lessons, grammar, geography, and arithmetic, below. The general proficiency is *tolerable*.

WYNDHAM (V.) :—Inspected, 15th September, 1874.

Enrolled :—Boys, 4 ; girls, 13 ; total, 17.
Present :—Boys, 2 ; girls, 10 ; total, 12.

1. Since last inspection a residence has been put up for the teacher. The material condition of the school is in all respects satisfactory. 2. The discipline is very lax ; the children appear to talk at pleasure. 3. The mark for reading is up to the average ; that for all other subjects is below. The general proficiency is *moderate*.

J. C. MAYNARD,
Inspector, Braidwood District.

CAMDEN DISTRICT.

INSPECTOR'S Annual Report for 1874.

I HAVE the honor to submit my annual report for the year 1874. The information contained therein relates to the adequacy of the means of education in the district as regards amount and distribution, the efficiency of the schools inspected, their material condition, organization, and general discipline, the subjects of instruction, moral training, progress of the pupils in learning, and prospects as to future usefulness.

SCHOOLS IN THE DISTRICT.

There are 106 schools in the Camden District, attended during the year by 7,339 scholars, being an increase of ninety pupils since last year. The following statement shows the number of each class of schools on 31st December, and the attendance of scholars :—

45 Public Schools, attended by 2,780 pupils ; average for each school 61.			
21 Provisional	577	"	27.
8 Half-time	127	"	15.
14 Church of England	954	"	68.
14 Roman Catholic	817	"	58.
3 Presbyterian	138	"	46.
1 Wesleyan	56	"	56.

Applications were received and entertained by the Council for the establishment of Public Schools at Gerringong and Campbelltown, and the erection of the buildings will shortly be commenced. Provisional Schools were opened at Sugarloaf Hill, Barrengarry, and Bellawongarah. An application for aid to a Public School at Forest Lodge, near Cambewarra, was not entertained, being too near other schools, and two others, for Provisional Schools, at Woodhill and Broughton Vale, are under consideration. At the close of the year the certificates were withdrawn from the Church of England School at Narellan and the Presbyterian School at Dapto, in accordance with the 28th section of the Public Schools Act, the average attendance of pupils being less than thirty. As regards the amount and distribution of the means of education in the district, I am of opinion that, with the exception of a few very sparsely settled localities, the schools are fairly distributed among the settlers, but in several places the number is in excess of the wants of the people. At Camden, Liverpool, Koggerah, Wollongong, and Jamberoo, there are three schools at each place, and at Appin, Dapto, Bulli, Bankstown, Wilton, Monangle, Brownlow Hill, and Charcoal Creek, there are two schools at each place. One school in each of these localities would be sufficient, and therefore thirteen schools centrally situated would supply the means of education now afforded by thirty-one schools under present arrangements. At Campbelltown there are three schools ; but two of them will be closed when the Public School buildings are completed. In most cases the Council of Education has no power to reduce the number of schools, because the Public Schools Act provides for the support of two, three, or four existing schools in the same locality, so long as the required average number of thirty scholars is maintained at each.

CONDITION OF THE SCHOOLS INSPECTED.

I inspected eighty-eight of the schools in the district during the year, viz. :—

40 Public,
16 Provisional,
2 Half-time,
13 Church of England,
13 Roman Catholic,
3 Presbyterian, and
1 Wesleyan.

As regards the actual condition of the schools, taking into consideration all matters of organization, discipline, and instruction, for which the teachers are responsible, the following statement shows the efficiency of the schools inspected :—

1 school is very good,
2 schools are good,
26 " very fair,
26 " fair,
32 " tolerable, and
1 school is moderate.

From this statement it can be easily shown that the average proficiency is fair for all the schools inspected, and one grade above the results for last year. The average proficiency for the schools inspected last year was only tolerable ; but for this year the results are fair. In looking over the summaries of the reports in the detailed statement appended, it may be observed that the condition of nearly all the Public and Denominational Schools is fair, or very fair, and tolerable for the Provisional and Half-time Schools. With two or three exceptions, all the schools inspected have been managed with more success than last year. The scholars give evidences that intellectual culture is in progress, and generally speaking they are more alive than formerly, quicker to perceive, more inquiring, and in the better schools full of vigorous mental effort. The Council's rules relative to punctuality, cleanliness, and order, receive a considerable amount of attention. In nearly all the schools the cleanliness is satisfactory, but in some cases the late pupils are not inspected before taking their seats. The order is generally creditable, and the punctuality has been much improved. The scholars are obedient, attentive to their lessons, and respectful in their manners. The irregularity in the attendance continues to be a source of complaint among teachers ; but on the whole, the attendance for the year was very fair, being 70 per cent. of the number of pupils enrolled. No allowance is made for sickness or wet weather, and nothing counts as attendance but the actual presence of the pupil. By reckoning the averages in this strictly correct and proper manner, they

they do not show the usual attendance of the pupils in fine weather, wet weather, or when the children are suffering from any epidemic. The object of all statistics is to put facts before the public, from which useful information may be gathered. There are many causes which reduce the attendance of children at school, but in calculating the averages there would perhaps be some advantage in giving the attendance under three phases. In the coast district and table lands of New South Wales, there are not less than eighty wet school days, which reduce the attendance of scholars very considerably, and children are frequently suffering in one part or another from some epidemic. It would perhaps be interesting if the averages were given separately for the dry days, the wet days, and the days when sickness prevails among the scholars. From these results the average for every school day could easily be found.

Of the forty Public Schools inspected, twenty-nine are vested, and eleven non-vested. Five of the vested buildings are constructed of stone, seven of brick, and seventeen of wood. With very few exceptions, the buildings are in good repair. In almost every instance there are suitable playgrounds, out-buildings, and a comfortable residence for the teacher; but for many of the schools lavatories and weathersheds have not been provided. The school grounds, with two exceptions, are all fenced, and the furniture, apparatus, and books are in almost every instance quite sufficient. The vested school buildings are generally sufficient in size, well furnished, and properly ventilated. During the year improvements and important repairs have been made to the schools at Kiama, Toolejoona, Albion Park, Camden, Bulli, Broughton Village, Cumbewarra, Glenmore, Liverpool, Violet Hill, and Wollongong, and the material condition of these schools has been much improved. Of the sixteen Provisional Schools inspected only one is held in a church; two of the schoolhouses are built of brick and fourteen of wood. The buildings are all in passable repair, and the supplies of apparatus and books are generally sufficient; but the furniture is in several cases of an unsuitable kind. The playgrounds are often not enclosed, closets are sometimes wanting, and generally there is no residence for the teacher. The material condition however of the Provisional Schools is improving. As regards the thirty Denominational Schools visited, eight are held in churches. With very few exceptions the buildings are all in fair repair, but in eight cases there is no residence for the teacher. Five of the schoolhouses are of stone, nine of brick, and sixteen of wood. The school-grounds are all fenced, with three exceptions. During the year a Church of England school was erected at Liverpool, and repairs and improvements made to the Church of England schools at Camden, Canterbury, and Macquarie River; and to the Roman Catholic schools at Dapto, Camden, Irishtown, and Menangle; and the Presbyterian school at Charcoal Creek. The supplies of furniture, apparatus, and books are sufficient, and the material condition of all the Denominational Schools is fairly satisfactory.

QUALIFICATIONS OF THE TEACHERS.

There were employed in the Schools of the district at the close of the year:—

102 Teachers,
6 Assistants,
15 Pupil teachers, and
2 Sewing mistresses,
83 are males and
42 females,
62 employed in Public and
38 in Denominational Schools,
21 in Provisional, and
4 in Half-time schools,
64 teachers are married, and in
60 schools their wives teach needlework.

A considerable number of promotions and removals of teachers were made during the year, the result of which has been an improvement in the management of the schools. The teachers are, as a body, exemplary in their conduct, anxious for improvement, patient, industrious, and painstaking in the performance of their important and arduous duties. The following statement shows their classification:—

1 First-class,
20 Second-class,
55 Third-class, and
26 Probationers.

The probationary teachers are all, with two exceptions, employed in the Provisional and Half-time Schools; and in the Public and Denominational Schools there are only twenty-four teachers liable to be examined under Article 37 of the Regulations.

There is scarcely any position under the Government which tends more directly to improve the social well-being of the community than that of the teacher. A good school prevents crime, adds to the security of property, and forms the manners and character of the people. A teacher has much in his power for good or evil, and a great deal of the respect given to his office depends upon himself. "A good schoolmaster," said a Minister of Public Instruction in France, "is a man who ought to know a great deal more than he teaches, in order to teach with intelligence and taste. He must have an elevated mind, to enable him to preserve that dignity of sentiment and manners without which he will never obtain the respect and confidence of parents. He must possess a rare mixture of mildness and firmness, and aware of his rights, he thinks more of his duty, and sets a good example to all."

THE PUBLIC SCHOOL SYSTEM.

The education of the people is so important to the community at large that we cannot devote too much attention to the subject. Civilization and progress demand that every child should acquire the knowledge which is indispensable in social life, and without which intelligence languishes and degenerates. Liberty is certain and steadfast only among people sufficiently enlightened to listen to the voice of reason. A good system of public instruction is one of the best guarantees of order, morality, and social stability. The Public School system of New South Wales has much to recommend it to educationists. One cannot help observing the comprehensiveness of its leading features, and their adaptability to the circumstances of the country. The system is moral, for it inculcates daily a love of truth, honor, justice, and moderation. It is social, for it brings persons of all classes, persuasions, and politics together, to trade together, to legislate together, and sustain one another. It is national, for it prepares the children who attend the schools to be good citizens, obedient to the laws, and loyal to the Sovereign. It is utilitarian, for it encourages economy and industry; rational, for it teaches youth to look for what is true in science and art, and opens the wide universe for contemplation. It is religious, inasmuch as it inculcates a love and fear of God, and a reverence for His name and works, and affords ample opportunities to all children for obtaining separate special religious instruction to make them acquainted with the doctrines and discipline of the Church to which they belong. Such are the principles and the scope of the Public School system, and it only requires the co-operation of all parties to make them permanently effective. The education of a country is usually said to be conducted upon a certain system, and we read and hear of different systems, as the Prussian system, the Dutch system, the English system, the Irish system, the French and American systems. In nearly all such cases the appellation system refers to different objects in the principles of education. Most people when they speak of the word system, instead of referring to a combination of parts, generally apply it to some one idea or characteristic. The peculiar feature of the Prussian system is the compulsory attendance of children at school; of the Dutch system, an elaborate plan of school inspection; of the French system, the great University of France with its Imperial Council of Public Instruction; and to speak of the Irish system is to bring to mind the principle that no child should be compelled to receive any religious instruction of which its parents or guardians disapprove.

No

No doubt every system of school instruction has its characteristic; but the characteristic ought not to be regarded as the system. The Public School system of New South Wales is perhaps more systematic in its parts and working than any other scheme of public instruction. The course of secular teaching, the class-books in use, the classification of the pupils, the organization, the discipline, the inspection, the methods of tuition, the examination of the teachers, their classification and promotion, and the plans of the school buildings, are carried out with the same uniformity of principle in all schools as far as practicable.

FREE SCHOLARS.

It has been frequently remarked that free education is not so much appreciated as that which is paid for, and that if education were paid for wholly by the State it would lessen the self-reliance and independence of the people, and foster a spirit of pauperism. At the present time two-thirds of the education of the people are paid from the public revenue, and no such results have followed. These ideas arise in the minds of those who associate free education with pauperism, the children of the poor being usually educated free; but as each person would pay his quota of the educational expense, he would soon see that the abolition of school fees would not make education free, but merely alter the mode of payment. The fees would be paid as taxes, and the Government would pay the schoolmaster. In schools where half, and in some cases more than half, the pupils are taught free, it is a heavy loss to the teacher, and a loss he has no right to sustain. The people of the Colony have accepted free education to a large extent many years ago, and as it does not appear in any way objectionable to make roads and railways, erect bridges, build gaols and court houses, and do many other works wholly at the public expense, I can see no good reason why the cost of public instruction, the most important and useful of all public works, should not be wholly paid by the State. Education cannot be free—it must be paid for by the people; but the mode of payment in this case is of vital importance. Society has rights, and one is that all children should be educated, to enable them to be intelligent, peaceful, honest, and useful colonists; but before education can be universally diffused, or the teacher raised to his proper position, I am of opinion that the payment of school fees must be discontinued and the salaries of teachers paid wholly from the public funds. At the close of the year there were 908 free scholars attending the schools in the Camden District, but it is not quite correct to call these children free scholars, because their parents pay two-thirds of the cost of their education in the shape of taxation.

The following statement shows the number of scholars who pay no school fees at each class of schools:—

Public Schools	444 scholars.
Provisional.....	193 "
Half-time	38 "
Church of England	91 "
Roman Catholic	123 "
Presbyterian	12 "
Wesleyan	7 "

If these pupils had paid the usual school fee of sixpence each per week during the year, it would have, allowing a month for holidays, augmented the income of the teachers by £1,080 12s. The teachers also suffer considerable loss by some parents not paying the school fees promised.

CHILDREN NOT ATTENDING SCHOOL.

When I inspected each school I made careful inquiry as to the number of children of the educable ages in each locality not receiving school instruction, and I found that there were about 1,100 children in the Camden District not attending school. The average attendance of the scholars enrolled is 70 days per cent. It appears, therefore, that one-sixth of the children of the educable ages in the district are not attending school, and the scholars enrolled are absent about one-third of the school days. This non-attendance and irregularity are very injurious in many ways. The progress of the regular scholars is retarded, the public funds are largely wasted, the work of education is hindered, the discipline is injuriously affected, and the teachers are discouraged and embarrassed in their efforts. The irregular scholars make little or no progress, the country pays two-thirds of the cost of their education, and they get but little or no education. Non-attendance and irregularity should be prevented to a certain extent. No doubt parents have control over their children, but this control is limited. No parent has a right to poison his child, nor to deprive him of food or clothing, and he should not be permitted to allow his child to grow up without school education. It is apparently a hardship for the poor to be compelled to lose the services of their children for a portion of the year; but it is also a hardship for the rich to pay for schoolhouses and teachers, and after all their money is not accomplishing the object for which it was exacted. Although ability to read and write is said to add 25 per cent. to the wages of the working classes, no man ought to keep any one in ignorance for the sake of cheap labour. Martin Luther's opinion on this subject is worthy of notice:—"If a State, in time of war, can oblige its citizens to take up the sword and musket, has it not still more the power, and is it not its duty, to compel them to instruct their children, since we are all engaged in a most serious warfare, waged with the spirit of evil, which rages in our midst? It is my desire, above all things, that every child should go to school or be sent there by a magistrate."

Cousin, in his "Account of German Schools," says,—

"Those who argue against the expediency of universal education are not deserving of an answer. Those who, admitting this, maintain that the supply of education should, like other articles of industry, be left to follow the demand, forget that here demand and supply are necessarily coexistent and coextensive; that it is education which creates the want which education alone can satisfy. Those, again, who, conceding all this, contend that the creation and supply of this demand should be abandoned by the State to private intelligence and philanthropy, are contradicted both by reasoning and fact. All experience demonstrates this. No countries present a more remarkable contrast in this respect than England and Germany.

"In the former, the State has done nothing for the education of the people, and private benevolence more than has been attempted elsewhere; in the latter, the Government has done everything, and has left to private benevolence almost nothing to effect. The English however are the lowest, and the German people the highest, in the scale of knowledge. All that Scotland enjoys of popular education above the other kingdoms of the British Empire she owes to the State; and among the principalities of Germany, from Prussia down to Hesse-Cassel, education is uniformly found to prosper exactly in proportion to the unremitting watchfulness of the Government."

The first feeling that generally arises in the mind of a British subject when he is told that "education should be compulsory" is, that it deprives him of the right and freedom he ought to enjoy under the Constitution, to educate his children as he pleases, a little, or not at all, so that to compel him to educate them appears to be a grievance. There is no doubt but this feeling arises from ignorance of the importance of the question at issue. He does not see that education is protection; it does not appear to him that crime costs more than education; he does not know that education is economy in the public expenditure, not to speak of the social advantages that a good education confers on the community. The United States Commissioner of Education reports that barely one-fifth of 1 per cent. of the crime committed in the country is committed by those who are educated; on the other hand, he says that at least 80 per cent. of all the crime is committed by those who have received no education, or so little that it is valueless for the purposes of life. Compulsory education has enabled Germany and Prussia to disseminate intelligence among the whole people, which we are told is the secret of the recent brilliant victories over France. It is generally admitted that knowledge is power, and that the candidates for prisons and poor-houses are diminishing in proportion as education is diffused among the people.

Dr.

Dr. Fraser, the Bishop of Manchester, in his address at the opening of the new schools at Eccleston, near Preston, in August, 1874, is reported to have said,—“That the state of education was most unsatisfactory and discreditable, and until they could get a more regular uninterrupted attendance from the children, he was afraid they would not be able to wipe away the disgrace that existed among them. If parents would not make the sacrifice voluntarily, he really thought the State ought to step in, *in loco parentis*, and bring to a higher level the present inadequate and miserable amount of culture and education.”

I think most persons who have studied this question carefully will admit that compulsory education is necessary to a certain extent. Many persons cherish the opinion that compulsory education would prevent all the irregularities in the attendance of children at school, and bring all children of the educable ages under instruction, but this is more than could be accomplished. It would be very useful no doubt in compelling some children to attend school, who receive no education under present arrangements, and it could secure a more regular attendance of the scholars enrolled, but it is evident no law could compel children to attend school when they are suffering from sickness, in times of floods, or where there were no schools within a reasonable distance to attend.

Compulsory laws are powerless to secure the attendance at school of children destitute, or limited in the means of subsistence.

School-houses, apparatus, books, teachers, and a compulsory enactment may all be provided; but the pauper and the large family with small means are excluded by necessity from a share in the privileges offered. Germany does not overlook this phase of the case. Means are provided for transforming poor children from their condition of misery and degradation to a condition of neatness and wholesome respectability.

In his description of a visit to a German school, Mr. Kay says,—“The teacher made the children stand up one after another and tell me who their parents were. From them I learned that two were the sons of counts, one of a physician, one of an officer of the royal household, one of a porter, and others of mechanics, artisans, and labourers, who were too poor to pay for their children's education, and whose children were clothed and educated at the expense of the town. In their manners, dress, cleanliness, and appearance, I could discern no striking difference.”

If a practical enactment were passed by the Legislature to the effect that all children of the educable ages, say from six to fourteen years, within 3 miles of a school, should attend school not less than eighty days in each half-year until ten years of age, and sixty days from ten to fourteen years, under a penalty, or the parents to satisfy the authorities that the children were receiving education at home, I think it would increase the number of scholars attending the schools under the Council of Education about 10,000. There would then be perhaps about 7,000 or 8,000 children to whom compulsion could not be applied.

The children not attending school could be easily ascertained by the police officer of the district inspecting the roll books of the schools. The law would require to be carried out in a kind and considerate spirit. The late Prince Consort said,—“This is a delicate question, and it will require the nicest care in handling.”

General Hazen says,—“In Saxony the number of years of compulsory instruction is eight, and for each day missed a day is added, which must be made up before the parent can have control over his child's time. This seems to have worked better than the system of fines.”

An enactment of the Legislature making education compulsory, even if it were not applied with strictness for a time, would be productive of much good.

COST OF EDUCATION.

The total number of scholars who attended the schools in the district in the year was 7,339; and the total annual salaries of the teachers, and cost of inspection and school materials amount to £10,395. Now, if the grants made by the Council for permanent improvements and the erection of school buildings are not taken into account, it will then follow that each pupil who attended the schools in 1874 cost the Council £1 8s. 4d. The total amount of school fees paid during the year was £3,598 11s. 10d., and it follows that the average fee paid by each scholar was 9s. 9½d. Total cost for each pupil, £1 18s. 1½d. From this statement it appears that the Council pays about three-fourths of the cost of each child's education, and the people about one-fourth.

CONCLUDING REMARKS.

The material condition of many of the schools has been improved, and new buildings, repairs, and improvements are in progress. The organization, discipline, and instruction of the schools generally are more satisfactory. The instruction is better arranged, more efficient and progressive in its character. The local supervision of a number of the schools is beneficial; but with regard to many, very little active interest is taken in school matters. Additional schools have been opened, some of the small Denominational Schools have been closed, and the number of pupils has been increased. The demand for well qualified teachers is on the increase; and the total abolition of school fees would, I think, be received by teachers and people as a great boon. Compulsory education would be very beneficial, but it could not be universally applied in this Colony, owing to the sparse nature of the population. There are very few places in the district where schools are required. A summary of my reports upon schools inspected is hereunto appended.

W. MINTYRE,
Inspector, Camden District.

CAMDEN DISTRICT.

SUMMARY of Reports for 1874.

THE following remarks are abridged statements of my detailed reports upon the condition of the Public, Provisional, and Half-time Schools inspected by me during the year 1874. The remarks chiefly relate to the material condition and organization of the schools, the general discipline and moral training, the subjects and methods of instruction, and the progress of the pupils in learning:—

PUBLIC SCHOOLS.

APPEL (V.) :—Visited, 22nd July.

Pupils enrolled :—Boys, 25; girls, 18; total, 43.
At examination :—Boys, 25; girls, 16; total, 41.

A bell and lavatories are still required, and the walls of the closets are in need of repairs, but otherwise the material condition of the school is good. The pupils are not all sufficiently punctual, but in other respects the discipline is passable. The classification of the children is more appropriate than formerly, and the instruction is now systematically arranged. The average attendance of the pupils enrolled is about 62 days per cent. There are no free scholars. The teacher states that he is not aware of any educable children in the neighbourhood not attending school. The management is fairly satisfactory in most respects. The pupils answered 58 per cent. of the questions asked at the examination.

ASHFIELD (N.-V.) :—Visited, 17th December.

Pupils enrolled :—Boys, 40; girls, 23; total, 63.
At examination :—Boys, 27; girls, 11; total, 38.

The material condition of this school is bad, but the Local Board is making arrangements for the erection of suitable school buildings. The instruction and general discipline are satisfactory. The average attendance

attendance of the children enrolled is about 66 days per cent. There are four free pupils. It appears there are not over ten children of the educable ages in the neighbourhood not attending school. So far as examined, the pupils answered about 70 per cent. of the questions asked, and the attainments are very fair.

AVONDALE (V.) :—Visited, 21st October.

Pupils enrolled :—Boys, 28 ; girls, 25 ; total, 53.
At examination :—Boys, 23 ; girls, 18 ; total, 41.

Lavatories, weather-sheds, and repairs to the buildings are required. The general discipline has been improved since last inspection. All the ordinary subjects of instruction are taught except singing, and the teaching is conducted with industry and care. The average attendance of the children enrolled is about 66 days per cent. There are sixteen free pupils. It appears that twenty children of the educable ages in the neighbourhood are not attending school. About 70 per cent. of the questions asked at the examination were answered. The attainments of the pupils are very fair.

ARBION PARK (V.) :—Visited, 23rd October.

Pupils enrolled :—Boys, 50 ; girls, 44 ; total, 94.
At examination :—Boys, 41 ; girls, 36 ; total, 77.

A weather-shed is required, and some small repairs to the roof of the residence ; but in all other respects the material condition of the school is good. The general discipline is satisfactory, and the progress of the pupils in learning for the time under instruction is very creditable to the teacher. The average attendance of the children enrolled is about 68 days per cent. There are fifteen free pupils. It appears upon inquiry that all the educable children in the place are under instruction. About 73 per cent. of the questions asked at the examination were answered. The attainments of the pupils are above very fair.

BURKELEY (V.) :—Visited, 16th October.

Pupils enrolled :—Boys, 23 ; girls, 14 ; total, 37.
At examination :—Boys, 16 ; girls, 11 ; total, 27.

A weather-shed, lavatories, and repairs to the buildings and fencing are required. The general discipline and instruction have been considerably improved during the year. Singing is not taught. There are five free pupils. It appears upon inquiry that there are seven children of the educable ages in the neighbourhood not under school instruction. The average attendance of the children enrolled is about 62 days per cent. 70 per cent. of the questions asked at the examination were answered, and the progress of the pupils in learning is very fair.

BOOLONG (N.V.) :—Visited, 19th March.

Pupils enrolled :—Boys, 34 ; girls, 30 ; total, 64.
At examination :—Boys, 23 ; girls, 23 ; total, 56.

Lavatories, weather-sheds, a book-press, and fencing are required. The residence is too small, but in other respects the material condition of the school is passable. The general discipline is satisfactory, and the instruction is well regulated. Singing is not taught. The average attendance of the children enrolled is 66 days per cent. There are no free pupils. It appears, upon inquiry, that there are nine children of the educable ages in the neighbourhood not receiving school instruction. 70 per cent. of the questions asked at the examination were answered, and the attainments of the scholars are very fair.

BRANDON HILL (V.) :—Visited, 3rd December.

Pupils enrolled :—Boys, 32 ; girls, 22 ; total, 54.
At examination :—Boys, 32 ; girls, 19 ; total, 51.

The buildings are new, substantial, and good ; but a weather-shed, lavatories, and a supply of water are required. The general discipline is satisfactory, and the instruction is well regulated. Singing is not taught. There are six free pupils. It appears, upon inquiry, that all the children of the educable ages in the neighbourhood are under instruction. The average attendance of the children enrolled is 66 days per cent. 70 per cent. of the questions asked at the examination were answered, and the progress of the pupils in learning is very fair.

BROUGHTON CREEK (N.V.) :—Visited, 12th March.

Pupils enrolled :—Boys, 58 ; girls, 58 ; total, 116.
At examination :—Boys, 52 ; girls, 53 ; total, 105.

Lavatories, weather-sheds, and a class-room are required, and the schoolroom needs painting. The general discipline is satisfactory, and the instruction is well regulated. All the subjects prescribed by the Council are taught. The average attendance of the children enrolled is 66 days per cent. There are six free pupils. It appears, upon inquiry, that there are seven children of the educable ages in the neighbourhood not under instruction. 70 per cent. of the questions asked at the examination were answered, and the progress in learning is very fair.

BULLI (V.) :—Visited, 5th August.

Pupils enrolled :—Boys, 44 ; girls, 53 ; total, 97.
At examination :—Boys, 38 ; girls, 45 ; total, 83.

Weather-sheds, a lavatory for the girls, the painting of the buildings, and some small repairs to the plastering of the residence are required. The discipline is effective, and the instruction is well regulated. Singing is not taught. The average attendance of the children enrolled is 67 days per cent. There are four free pupils. It appears there are twenty-one children of the educable ages in the neighbourhood not under instruction. About 80 per cent. of the questions asked at the examination were answered. The attainments of the pupils are good.

BROUGHTON VILLAGE (V.) :—Visited, 6th March.

Pupils enrolled :—Boys, 28 ; girls, 27 ; total, 55.
At examination :—Boys, 24 ; girls, 23 ; total, 47.

The material condition of the school is good, and the general discipline is satisfactory. Singing is not taught. The average attendance of the scholars enrolled is 75 days per cent. There are seven free pupils, and about nineteen children of the educable ages in the locality not receiving school instruction. The pupils answered, so far as examined, about 70 per cent. of the questions asked, and the attainments are very fair.

NORTH BULLI (V.) :—Visited, 7th August.

Pupils enrolled :—Boys, 9 ; girls, 9 ; total, 18.
At examination :—Boys, 9 ; girls, 8 ; total, 17.

Lavatories and a weather-shed are required, but in all other respects the material condition of the school is good. The population has not increased since last year. There are no free pupils. The general discipline is fairly satisfactory. All the subjects of instruction prescribed are taught except singing. The average attendance of pupils is 66 days per cent. It appears there are seven children of the educable ages in the neighbourhood not attending school. About 65 per cent. of the questions asked at the examination were answered, and the attainments are above fair.

BUNDYWALLA (V.) :—Visited, 10th March.

Pupils enrolled :—Boys, 16 ; girls, 17 ; total, 33.
At examination :—Boys, 16 ; girls, 17 ; total, 33.

Lavatories and a weather-shed are wanting, the rooms of the residence require ceiling, and the schoolroom needs a fireplace. The discipline is satisfactory. Singing is not taught. The average attendance of the children enrolled is 75 days per cent. There are no free pupils. I find there are seven children of the educable ages in the neighbourhood not under school instruction. 60 per cent. of the questions asked at the examination were answered, and the progress of the scholars is fair.

CAMDEN (V.) :—Visited, 1st May.

Pupils enrolled :—Boys, 25 ; girls, 21 ; total, 46.
At examination :—Boys, 22 ; girls, 20 ; total, 42.

The buildings have been recently repaired, and the material condition of the school is reasonably good. The children are clean and orderly, attentive to their work, and nearly all punctual. The average attendance of the pupils enrolled is 68 days per cent. There are no free pupils. It appears there are seven children of the educable ages in the neighbourhood not attending school. 70 per cent. of the questions asked at the examination were answered, and the attainments of the scholars are very fair.

CAMDEWARRA (V.) :—Visited, 17th March.

Pupils enrolled :—Boys, 38 ; girls, 35 ; total, 73.
At examination :—Boys, 34 ; girls, 29 ; total, 63.

Lavatories, weather-sheds, and two additional rooms to the teacher's residence are required, but otherwise the material condition of the school is reasonably good. The general discipline is effective, and the instruction is properly regulated. The average attendance of the pupils enrolled is 70 days per cent. It appears that twelve children of the educable ages in the neighbourhood are not attending school. There are six free scholars. About 67 per cent. of the questions asked at the examination were answered, and the attainments of the pupils are nearly very fair.

CAWDOR (N.-V.) :—Visited, 8th June.

Pupils enrolled :—Boys, 35 ; girls, 34 ; total, 69.
At examination :—Boys, 24 ; girls, 28 ; total, 52.

Hat-pegs, lavatories, and a weather-shed are required, but in all other respects the material condition of the school is good. The general discipline is satisfactory. Singing is not taught. The average attendance of the children enrolled is 66 days per cent. There are thirty-two free pupils. I find there are twenty-five children of the educable ages in the neighbourhood not under school instruction. 70 per cent. of the questions asked at the examination were answered, and the proficiency of the scholars is very fair.

COOLANGATTA (N.-V.) :—Visited, 20th March.

Pupils enrolled :—Boys, 27 ; girls, 23 ; total, 50.
At examination :—Boys, 19 ; girls, 20 ; total, 39.

The schoolroom is rather small, and lavatories and weather-sheds are required ; but otherwise the material condition is passable. The general discipline is fairly satisfactory. Singing is not taught. The average attendance of the pupils enrolled is 75 days per cent. There are no free pupils, but it appears that seven children of the educable ages in the neighbourhood are not attending school. 63 per cent. of the questions asked at the examination were answered, and the attainments of the pupils are above fair.

FAIRY MEADOW (V.) :—Visited, 18th September.

Pupils enrolled :—Boys, 32 ; girls, 33 ; total, 65.
At examination :—Boys, 21 ; girls, 21 ; total, 42.

Another desk, lavatories, a weather-shed, and new closets are still required. The general discipline is satisfactory, and the school exhibits progressive improvement. The average attendance of the children enrolled is 60 days per cent. There are six free pupils. It appears that twenty-two children of the educable ages in the neighbourhood are not under instruction. About 70 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is very fair.

GLENMORE (V.) :—Visited, 5th February.

Pupils enrolled :—Boys, 21 ; girls, 20 ; total, 41.
At examination :—Boys, 17 ; girls, 15 ; total, 32.

Lavatories and a weather-shed are required, but in all other respects the material condition of the school is good. The general discipline is still lax. The average attendance of the children enrolled is 67 days per cent. It appears there are only three children of the educable ages in the neighbourhood not attending school. There are ten free scholars. About 50 per cent. of the questions asked at the examination were answered, and the proficiency of the scholars is tolerable.

GLEDSDWOOD (V.) :—Visited, 6th May.

Pupils enrolled :—Boys, 13 ; girls, 9 ; total, 22.
At examination :—Boys, 11 ; girls, 9 ; total, 20.

Some small repairs to the buildings are required. The general discipline has been much improved during the year. Singing and drawing are not taught. The average attendance of the children enrolled is 66 days per cent. There are three free pupils. It appears that seven children of the educable ages in the neighbourhood are not under instruction. 57 per cent. of the questions asked at the examination were answered, and the attainments of the pupils are nearly fair.

JAMBEROO (V.) :—Visited, 24th November.

Pupils enrolled :—Boys, 25 ; girls, 20 ; total, 45.
At examination :—Boys, 18 ; girls, 14 ; total, 32.

The residence is small, lavatories and weather-sheds are required, and the inside walls of the schoolroom are in much need of colouring. The roof of the classroom is leaky, and all the buildings require painting. The general discipline is satisfactory. All the subjects prescribed by the Council are taught. The average attendance of the children enrolled is 77 days per cent. There are no free pupils. It appears that there are seven children of the educable ages in the neighbourhood not attending school. 70 per cent. of the questions asked at the examination were answered. The proficiency of the pupils is very fair.

KIAMA (V.) :—Visited, 30th November, and 1st and 2nd December.

Pupils enrolled :—Boys, 150 ; girls, 88 ; total, 238.
At examination :—Boys, 129 ; girls, 79 ; total, 208.

Owing to the increased attendance of pupils the schoolroom is too small. A weather-shed for the boys, a lavatory for the girls, and a separate schoolroom for the younger children are much needed. The general discipline is satisfactory. In addition to the ordinary subjects, the elder boys are well advanced in Latin, algebra, and geometry. The teachers are very industrious, skilful, and most energetic in the performance of their duties. The school is managed with much success and efficiency, and it is highly beneficial to the district. There are four free pupils. The average attendance of the children enrolled is 66 days per cent. Upon inquiry, it appears there are about twenty children of the educable ages in the town and vicinity not under school instruction. 90 per cent. of the questions asked at the examination were answered, the writing and needlework are excellent ; a number of the elder boys and girls have passed the University Public Examinations, and the attainments of the pupils are very good.

KANGAROO

KANGAROO VALLEY (V.) :—Visited, 3rd March.

Pupils enrolled :—Boys, 21 ; girls, 19 ; total, 40.

At examination :—Boys, 9 ; girls, 6 ; total, 15.

A lavatory and a weather-shed are required, but in all other respects the material condition of the school is good. About one-third of the scholars are not sufficiently punctual, and the want of a bridge on the Kangaroo River causes the attendance to be very irregular ; but the order, cleanliness, and attention are passable. Singing and drawing are not taught. The small number of pupils present was caused by the recent rains and floods. The average attendance of the pupils enrolled is about 55 days per cent. There are six free pupils, and about forty children of the educable ages in the neighbourhood not under school instruction. Since my inspection a Provisional School has been opened in the locality, about four miles distant from the Public School, where thirty-one of the children hereinbefore mentioned as not under tuition now attend. About 50 per cent. of the questions asked at the examination were answered. The management of the school is unsatisfactory. The teacher has been indiscreet in taking an active part in local matters which he should have avoided. He has since been removed.

MARSHALL MOUNT (V.) :—Visited, 22nd May.

Pupils enrolled :—Boys, 23 ; girls, 27 ; total, 50.

At examination :—Boys, 18 ; girls, 19 ; total, 37.

Lavatories, a weather-shed, and a bell are required. The working materials are sufficient. All the subjects prescribed are taught except singing, and the general discipline is satisfactory. The average attendance of the scholars enrolled is 75 per cent. There are no free pupils, but the teacher states that about fifty children of the educable ages in the neighbourhood do not attend school ; 70 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is very fair.

MEROO (N.-V.) :—Visited, 27th March.

Pupils enrolled :—Boys, 20 ; girls, 26 ; total, 46.

At examination :—Boys, 18 ; girls, 24 ; total, 42.

Lavatories and weather-sheds are required, and the residence is rather small. Singing and drawing are not taught. The pupils are clean, orderly, attentive, and respectful in their manners. The average attendance of the scholars enrolled is 75 days per cent. There are no free pupils, but ten children of the educable ages in the neighbourhood do not attend school ; 53 per cent. of the questions asked at the examination were answered, and the attainments of the pupils are tolerable.

MOUNT KEIRA (N.-V.) :—Visited, 17th September.

Pupils enrolled :—Boys, 43 ; girls, 30 ; total, 73.

At examination :—Boys, 16 ; girls, 16 ; total, 32.

Weather-sheds, closets, lavatories, and a book-press are required ; but the working materials are sufficient. The general discipline is satisfactory. The small number of pupils present was caused by mumps, colds, and sickness, afflicting the children. The average attendance of the pupils enrolled is about 60 days per cent. There are four free pupils, but the teacher is not aware of any children of the educable ages in the neighbourhood not under school instruction. All the subjects prescribed are taught with industry, intelligence, and skill. 65 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is above fair.

MULGOA FOREST (N.-V.) :—Visited, 17th June.

Pupils enrolled :—Boys, 30 ; girls, 14 ; total, 44.

At examination :—Boys, 24 ; girls, 9 ; total, 33.

Lavatories, a bell, and better closets are needed, and the supply of working materials is barely sufficient. All the subjects of instruction prescribed by the Council are taught, and the general discipline is passable. There are thirty-one free pupils and six children of the educable ages not attending school. The average attendance of the pupils enrolled is about 70 days per cent. About 55 per cent. of the questions asked at the examination were answered, and the attainments of the pupils are tolerable.

KOGARAH (N.-V.) :—Visited, 17th April.

Pupils enrolled :—Boys, 26 ; girls, 26 ; total, 52.

At examination :—Boys, 22 ; girls, 24 ; total, 46.

There is no residence for the teacher ; and lavatories, a supply of water, and some additional fencing are required. All the subjects of instruction prescribed by the Council are taught, and the general discipline is fairly effective. The average attendance of the scholars enrolled is 66 days per cent. There are four free pupils, and about forty children of the educable ages in the neighbourhood not under school instruction. 60 per cent. of the questions asked at the examination were answered, and the progress in learning is fairly satisfactory.

LIVERPOOL (V.) :—Visited, 16th July.

Pupils enrolled :—Boys, 48 ; girls, 36 ; total, 84.

At examination :—Boys, 42 ; girls, 25 ; total, 67.

A residence for the teacher, lavatories, and a weather-shed, are still required. The working materials are sufficient. The general discipline is satisfactory. All the subjects of instruction prescribed by the Council are taught. There are no free pupils. About ten children of the educable ages in the locality are not under school instruction. The average attendance of the scholars enrolled is 65 days per cent. About 70 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is very fair.

MERNANGLE (V.) :—Visited, 11th May.

Pupils enrolled :—Boys, 18 ; girls, 20 ; total, 38.

At examination :—Boys, 14 ; girls, 11 ; total, 25.

A clock, lavatories, and a weather-shed are required, but in all other respects the material condition of the school is good. All the subjects of instruction prescribed are taught except singing ; but the methods of tuition are not sufficiently efficacious in their character. The pupils are clean, and tolerably orderly and attentive to their lessons. There are about twelve children of the school ages in the neighbourhood not under instruction. The average attendance of the pupils enrolled is about 66 days per cent., and they are nearly all punctual. There are eight free pupils, whose parents are unable to pay fees. 50 per cent. of the questions asked at the examination were answered, and the attainments of the scholars are tolerable.

PEAKEHURST (N.-V.) :—Visited, 23rd April.

Pupils enrolled :—Boys, 19 ; girls, 23 ; total, 42.

At examination :—Boys, 19 ; girls, 23 ; total, 42.

There is no residence for the teacher, but otherwise the material condition of the school and general discipline are fairly satisfactory. The subjects of instruction are those prescribed by the Council, except singing and drawing. There are two free pupils, and the teacher states that about forty children

children of the educable ages in the neighbourhood are not under school instruction. The average attendance of the children enrolled is 60 days per cent., and nearly all punctual. About 60 per cent. of the questions asked at the examination were answered, and the attainments of the scholars are fair.

PICTON, UPPER (V.) :—Visited, 19th August.

Pupils enrolled :—Boys, 24 ; girls, 17 ; total, 41.
At examination :—Boys, 23 ; girls, 16 ; total, 39.

Lavatories and weather-sheds are required, but otherwise the material condition of the school and general discipline are fairly satisfactory. The working materials are sufficient. All the subjects of instruction prescribed are taught. There are seventeen free pupils, and the teacher states that five children of the educable ages in the neighbourhood are not under school instruction. The average attendance of the scholars enrolled is 75 days per cent. 60 per cent. of the questions asked at the examination were answered. The proficiency of the pupils is fair.

LOWER PICTON (V.) :—Visited, 20th August.

Pupils enrolled :—Boys, 60 ; girls, 53 ; total, 113.
At examination :—Boys, 50 ; girls, 49 ; total, 99.

A lavatory, a weather-shed, and some additional fencing are required. All the woodwork of the exterior of the building needs painting. The boys are well advanced in squad drill, and the general discipline is satisfactory. All the subjects prescribed are taught, and the methods of tuition are intelligent, and applied with zeal and industry. There are twenty-eight free pupils, and about ten children of the educable ages in the neighbourhood not under school instruction. 80 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is good.

TOOLEBOOA (N.V.) :—Visited, 6th March.

Pupils enrolled :—Boys, 61 ; girls, 53 ; total, 114.
At examination :—Boys, 41 ; girls, 44 ; total, 85.

Lavatories, a weather-shed, and a bell are required, but otherwise the material condition of the school is reasonably good. There is a comfortable residence for the teacher, and the supply of school materials is sufficient. The pupils are clean and orderly, attentive to their work, and nearly all punctual. All the subjects of instruction prescribed by the Council are taught except singing. There are only four free pupils. The average attendance of the scholars enrolled is 75 days per cent. There are about twenty children of the educable ages in the neighbourhood not under school instruction. About 58 per cent. of the questions asked at the examination were answered, and the progress of the pupils in learning is nearly fair.

VIOLET HILL (V.) :—Visited, 13th October.

Pupils enrolled :—Boys, 27 ; girls, 29 ; total, 56.
At examination :—Boys, 25 ; girls, 27 ; total, 52.

Lavatories, a bell, a weather-shed, and a water-tank are required. A contract has been made for the erection of a verandah, painting the buildings, and supplying additional desks and forms. The apparatus and books are sufficient, and the general discipline is fairly satisfactory. Singing and drawing are not taught. There are fifteen free pupils, and the average attendance of the scholars enrolled is 77 days per cent. There are fourteen children of the educable ages in the neighbourhood not under school instruction. 63 per cent. of the questions asked at the examination were answered, and the attainments of the pupils are above fair.

WESTBROOK (V.) :—Visited, 4th February.

Pupils enrolled :—Boys, 16 ; girls, 22 ; total, 38.
At examination :—Boys, 11 ; girls, 20 ; total, 31.

The buildings are in fair repair, and there is an adequate supply of working materials, but a weather-shed is required. The pupils are clean, orderly, and attentive to their work. All the subjects prescribed by the Council are taught, and the instruction is well regulated. There are five free pupils, and the average attendance of the scholars enrolled is 75 days per cent. Six children of the educable ages in the neighbourhood are not under school instruction. 70 per cent. of the questions asked at the examination were answered, and the progress of the pupils in learning is very fair.

WOLLONGONG (Boys—V.) :—Visited, 9th December.

Pupils enrolled :—Boys, 42.
At examination :—Boys, 36.

A lavatory is still wanting ; the inside walls of the schoolroom require colouring, and the windows need some repairs. The children are clean, orderly, and attentive to their lessons, and the elder boys are well advanced in squad drill. All the subjects prescribed by the Council are taught. There are only two free pupils, but seven boys of the educable ages in the town and its vicinity are not attending school. The average attendance of the scholars enrolled is 77 days per cent. 67 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is nearly very fair.

WOLLONGONG (Girls—V.) :—Visited, 8th December.

Pupils enrolled :—Girls, 60.
At examination :—Girls, 39.

A lavatory is still wanting ; the inside walls of the schoolroom require colouring, and the windows need some repairs. The working materials are sufficient, and the general discipline is satisfactory. All the subjects of instruction prescribed by the Council are taught. There are seven free pupils, but the teacher is not aware of any girls of the educable ages in the town or its vicinity not under school instruction. The average attendance of the children enrolled is 66 days per cent. 60 per cent. of the questions asked at the examination were answered, and the attainments of the pupils are fair. The small number of children present was caused by sickness.

WOLLONGONG (Infants—V.) :—Visited, 3rd November.

Pupils enrolled :—Boys, 23 ; girls, 24 ; total, 47.
At examination :—Boys, 23 ; girls, 19 ; total, 42.

The inside walls of the schoolroom need colouring, and a lavatory and a weather-shed are much required. The ventilation has been improved since last year, and new out-buildings erected. The general discipline is satisfactory, and all the subjects prescribed by the Council are taught. There are six free pupils, and a considerable number of infant children not attending school in consequence of sickness. The average attendance of the pupils enrolled is about 50 days per cent. About 60 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils so far as examined was fair.

WILTON (V.) :—Visited, 28th July.

Pupils enrolled :—Boys, 29 ; girls, 19 ; total, 48.
At examination :—Boys, 26 ; girls, 18 ; total, 44.

A gate, a weather-shed, a lavatory, a book-press, and a supply of water are required. There is a comfortable residence for the teacher, and the stock of apparatus and books is sufficient. The general discipline is fairly satisfactory in most respects, and all the subjects of instruction prescribed by the Council

Council are taught except singing. There are thirty-five free pupils, but no children of the educable ages in the locality not under school instruction. The average attendance of the pupils enrolled is 60 days per cent. About 60 per cent. of the questions asked at the examination were answered, and the progress of the pupils in learning is fair.

WOODSTOCK (N.-V.) :—Visited, 23rd November.

Pupils enrolled :—Boys, 35; girls, 35; total, 70.

At examination :—Boys, 26; girls, 31; total, 57.

Lavatories, a weather-shed, and some small repairs to the roof of the residence are required. The working materials are sufficient, and the general discipline is satisfactory. All the subjects prescribed by the Council are taught, and the instruction is well regulated. There are ten free pupils, and about thirty children of the educable ages in the neighbourhood not under school instruction. The average attendance of the children enrolled is 74 days per cent. 76 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is considerably above very fair.

PROVISIONAL SCHOOLS.

BARGO :—Visited, 11th February.

Pupils enrolled :—Boys, 11; girls, 10; total, 21.

At examination :—Boys, 9; girls, 9; total, 18.

The school is held in a small wooden building in fair repair. The supply of furniture, apparatus, and books is barely sufficient, but the discipline is passable. Drawing is not taught. There are eight free pupils, and seven children of the educable ages in the locality not under school instruction. The average attendance of the pupils enrolled is 66 days per cent. About 50 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is tolerable.

BARRENGARRY :—Visited, 14th August.

Pupils enrolled :—Boys, 12; girls, 14; total, 26.

At examination :—Boys, 9; girls, 8; total, 17.

This school is held in a small wooden building. A lavatory, closets, a weather-shed, and additional school furniture will shortly be supplied. The general discipline is passable. The school has been only a few weeks in operation, and the children are learning the mere elements of reading, writing, and arithmetic. There are no free pupils, but seven children of the educable ages in the neighbourhood are not receiving school instruction. The average attendance of the pupils enrolled is 66 days per cent. About 50 per cent. of the questions asked at the examination were answered, and the progress of the scholars in learning for the short time under tuition may be estimated as tolerable.

BOMADERRY :—Visited, 18th March.

Pupils enrolled :—Boys, 22; girls, 31; total, 53.

At examination :—Boys, 18; girls, 16; total, 34.

There is no residence for the teacher, lavatory nor weather-shed for the children, and the school furniture is of a bad description. The scholars are clean and orderly, and attentive to their work. All the subjects prescribed are taught except singing. There are three free pupils, and seven children of the educable ages in the locality are not receiving school instruction. The average attendance of the pupils enrolled is 71 days per cent. About 60 per cent. of the questions asked at the examination were answered, and the proficiency of the scholars is fair.

BROWNSLOW HILL :—Visited, 10th June.

Pupils enrolled :—Boys, 11; girls, 16; total, 27.

At examination :—Boys, 10; girls, 14; total, 24.

Fencing, closets, repairs to the schoolroom, hat-pegs, and a book-press are required, but the supply of apparatus and books is sufficient. The discipline is satisfactory. Singing and drawing are not taught. There are twelve free pupils, and ten children of the educable ages in the neighbourhood are not receiving school instruction. The average attendance of the scholars enrolled is 75 days per cent. The pupils answered 60 per cent. of the questions asked at the examination, and the progress in learning is fair.

BULLI MOUNTAIN :—Visited, 7th August.

Pupils enrolled :—Boys, 16; girls, 13; total, 29.

At examination :—Boys, 14; girls, 13; total, 27.

Fencing, closets, a weather shed, a lavatory, a book-press, hat-pegs, a bell, and a fire-place in the schoolroom are required. There is no residence for the teacher, but the supply of books is sufficient. The pupils are unpunctual, but they are clean and orderly. Singing is not taught. There are five free scholars, and seven children of the educable ages in the neighbourhood are not receiving school instruction. The average attendance of the pupils enrolled is 66 days per cent. About 50 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is tolerable.

BROOKS POINT :—Visited, 25th July.

Pupils enrolled :—Boys, 13; girls, 7; total, 20.

At examination :—Boys, 13; girls, 5; total, 18.

Fencing, closets, a lavatory, hat-pegs, and a weather-shed are required. There is no residence for the teacher; but the supply of desks, forms, and working materials is sufficient. The children are clean and orderly, and attentive to their lessons. Drawing is not taught. There are eleven free pupils, and only three children of the educable ages in the place not receiving school instruction. The average attendance of the children enrolled is 75 days per cent. About 50 per cent. of the questions asked at the examination were answered, and the progress of the pupils is tolerable.

CORDEAUX RIVER :—Visited, 14th October.

Pupils enrolled :—Boys, 12; girls, 20; total, 32.

At examination :—Boys, 12; girls, 20; total, 32.

Fencing, a kitchen, closets, a bell, a weather-shed, lavatories, and a book-press are required, but the apparatus and books are sufficient. The discipline admits of considerable improvement. Drawing and singing are not taught. There are fifteen free pupils, and eight children of the educable ages in the locality not receiving school instruction. The average attendance of the scholars enrolled is 70 days per cent. About 45 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils ranges from moderate to tolerable.

MOORTIELDS :—Visited, 22nd April.

Pupils enrolled :—Boys, 26; girls, 13; total, 39.

At examination :—Boys, 26; girls, 12; total, 38.

The schoolroom is built of brick and shingles, and in good repair; but there is no residence for the teacher. The working materials are sufficient, and the general discipline is passable. Needlework and singing are not taught. There are eleven free pupils, and all the educable children in the neighbourhood attend

attend the school. The average attendance of the scholars enrolled is 60 days per cent. About 50 per cent. of the questions asked at the examination were answered, and the proficiency of the scholars is tolerable.

SAGGART FIELD:—Visited, 17th July.

Pupils enrolled :—Boys, 10; girls, 11; total, 21.
At examination :—Boys, 9; girls, 11; total, 20.

A lavatory, a weather-shed, a map of New South Wales, and a supply of Scripture lessons are required. The pupils are clean, orderly, attentive, and nearly all punctual. Drawing is not taught. There are nine free pupils, and about fifteen children of the educable ages in the neighbourhood not receiving school instruction. The average attendance of the pupils enrolled is 66 days per cent. The scholars answered about 50 per cent. of the questions asked at the examination, and their attainments are tolerable.

SUGARLOAF HILL:—Visited, 10th July.

Pupils enrolled :—Boys, 15; girls, 12; total, 27.
At examination :—Boys, 11; girls, 6; total, 17.

The schoolroom is built of weather-boards and shingles, sufficient in size and in good repair. There is a comfortable residence for the teacher. The pupils are clean, orderly, and attentive to their lessons. All the subjects prescribed are taught except singing and drawing. There is only one free pupil; but seven children of the educable ages in the locality are not receiving school instruction. The average attendance of the scholars is 58 days per cent. The children are learning the mere elements of reading, writing, and arithmetic. About 50 per cent. of the questions asked at the examination were answered, and the progress in learning is tolerable.

THERESA PARK:—Visited, 11th June.

Pupils enrolled :—Boys, 12; girls, 23; total, 35.
At examination :—Boys, 11; girls, 18; total, 29.

There is no residence for the teacher. The school-building is constructed of wooden slabs and shingles, and in fair repair; but fencing is still required. The supply of furniture, apparatus, and books is sufficient. Singing and drawing are not taught. There are twenty-eight free pupils, and five children of the educable ages in the neighbourhood not receiving school instruction. The children are clean and orderly, and attentive to their lessons. The average attendance of the scholars enrolled is 66 days per cent. About 50 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is tolerable.

THE DAIRY:—Visited, 16th June.

Pupils enrolled :—Boys, 14; girls, 11; total, 25.
At examination :—Boys, 11; girls, 9; total, 20.

There is no residence for the teacher; hat-pegs, a blackboard, a book-press, and windows for the schoolroom are still required. Singing and drawing are not taught. The average attendance of the pupils enrolled is 60 days per cent. There are fifteen free pupils. All the children of the educable ages in the locality are receiving school instruction, excepting a deaf and dumb boy. The pupils are clean, orderly, and attentive to their lessons. About 50 per cent. of the questions asked at the examination were answered, and the progress in learning is tolerable.

TONGARRA:—Visited, 21st May.

Pupils enrolled :—Boys, 13; girls, 21; total, 34.
At examination :—Boys, 10; girls, 20; total, 30.

There is no residence for the teacher. The schoolroom is built of wood, and in fair repair. The supply of furniture, apparatus, and books is sufficient. Singing is not taught. The cleanliness, order, attention, and manners of the children are satisfactory. The average attendance of the scholars enrolled is 66 days per cent. There are fourteen free pupils, and about twenty children of the educable ages in the locality not receiving school instruction. About 50 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is tolerable.

WATTAMALLA:—Visited, 11th March.

Pupils enrolled :—Boys, 15; girls, 14; total, 29.
At examination :—Boys, 12; girls, 12; total, 24.

Lavatories and a weather-shed are required, and the inside walls of the schoolroom need colouring. Singing and drawing are not taught. The average attendance of the scholars enrolled is 66 days per cent. There are only two free pupils, but twenty children of the educable ages in the locality are not receiving school instruction. The general discipline is passable. About 50 per cent. of the questions asked at the examination were answered, and the attainments of the pupils are tolerable.

WEROMBI:—Visited, 15th June.

Pupils enrolled :—Boys, 9; girls, 20; total, 29.
At examination :—Boys, 7; girls, 17; total, 24.

Hat-pegs, a lavatory, a book press, and fencing are required. There is no residence for the teacher. The schoolroom is built of wooden slabs and shingles, and in good repair. Singing and drawing are not taught. The average attendance of the scholars enrolled is 66 days per cent. The pupils are clean, orderly, attentive to their lessons, and respectful in their manners. There are nineteen free pupils, and only three children of the educable ages in the neighbourhood not receiving school instruction. The pupils answered 50 per cent. of the questions asked at the examination, and their progress is tolerable.

WERRIBEBBI:—Visited, 14th May.

Pupils enrolled :—Boys, 9; girls, 12; total, 21.
At examination :—Boys, 7; girls, 9; total, 16.

The schoolroom is new, constructed of wooden slabs and shingles, and in good repair. There is no residence for the teacher, and lavatories are required. The supply of furniture, apparatus, and books is sufficient. The children are clean, orderly, attentive, and respectful in their manners. There are two free pupils, but no children of the educable ages in the locality growing up without school instruction. Singing, drawing, and object lessons are not taught. The average attendance of the pupils enrolled is 66 days per cent. About 45 per cent. of the questions asked at the examination were answered, and the proficiency ranges from moderate to tolerable.

HALF-TIME SCHOOLS.

BELMORE:—Visited, 24th April.

Pupils enrolled:—Boys, 14; girls, 12; total, 26.
At examination:—Boys, 9; girls, 7; total, 16.

Lavatories, a weather-shed, and a book-press are required, but the schoolroom is in good repair. There is no residence for the teacher, but the working materials are sufficient. The discipline is satisfactory, but singing is not taught. The average attendance of the pupils enrolled is 44 days per cent. There are four free pupils, and eight children of the educable ages in the locality not attending school. 60 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is fair.

ESSEX HILL:—Visited, 24th April.

Pupils enrolled:—Boys, 9; girls, 13; total, 22.
At examination:—Boys, 7; girls, 10; total, 17.

Lavatories, a weather-shed, a bell, a book-press, hat-pegs, and some fencing are required. There is no residence for the teacher, but the supply of apparatus and books is sufficient. The discipline is satisfactory, but singing is not taught. There are four free pupils, and seven children of the educable ages in the neighbourhood not attending school. 50 per cent. of the questions asked at the examination were answered, and the attainments of the pupils are tolerable.

W. M'INTYRE,
Inspector, Camden District.

CUMBERLAND DISTRICT.

INSPECTOR'S General Report for 1874.

SEVERAL changes have taken place during the year in the character of the schools in operation, but there has been no increase in the actual number of schools that have been open for the whole or part of 1874 as compared with that of 1873, the number in each case having been 88. Some schools that have been closed for longer or shorter periods—in certain instances for years—have been re-opened, and others have developed from Provisional to Public, while one has declined, after lingering for years with a small attendance, from a Denominational to a Provisional School. The following, opened during the year, are all examples of schools that were formerly under the supervision of the Council, viz.:—Baulkham Hills, Public (formerly Provisional); McDonald Lower, Public; North Rocks, Provisional; Australian Farm, Half-time; and Wiseman's Ferry, Half-time; the Newington and Haslem's Creek Provisional Schools had aid withdrawn from them, and were replaced by the present Haslem's Creek Public School, and the Regentville Provisional became a Public one, while the Portland Head Presbyterian, after having had the certificate withdrawn from it, received aid immediately on the footing of a Provisional School. A new Public School was built and ready for opening, at the close of the year at Rooty Hill, near which a half-caste population resides, for whose behoof mainly the school has been erected, on special representation of its necessity by gentlemen who take an interest in these people. Steps had also been taken for the conversion of the Parramatta Junction Presbyterian School (the only one in the district) into a Public one, but the establishment had not been effected by the end of the year. The following is a list of the schools that have been in operation during 1874, viz.:—

Public	37
Provisional	15
Half-Time	4
Church of England	18
Roman Catholic	12
Wesleyan	1
Presbyterian	1
Total	88

It may be remarked, however, that the foregoing enumeration does not represent all the schools actually under supervision in the district. At the request of the Minister of Instruction, the Parramatta Orphan Schools, consisting of six departments, were added to the above for inspection *twice* in the year, so that, in reality, there were practically a *hundred* schools requiring examination. In fact, ninety-nine reports on inspections of schools in connection with the district were sent in to the Council for the year.

New and suitable brick schoolrooms have been built during the year for the Richmond and Ryde Church of England Schools. An infant school-room and an additional class-room have been added to the Burwood Public School premises, and there were in course of erection at the end of the year a substantial stone schoolroom and residence for the Lower Portland Public School. The material condition of various schools has been rendered more satisfactory by repairs or additions to the premises, or a more complete or suitable supply of furniture being obtained for the use of the pupils. Among these may be mentioned the Hornsby, Leichhardt, Luddenham, Parramatta, Penrith, and Wallgrove Public Schools, the Richmond Roman Catholic, and the South Creek Church of England Schools.

From the difficulty of obtaining an arrangement for the conveyance of a suitable site, the movement for the rebuilding of the Freeman's Reach Public School is still in abeyance, and no definite action has yet been taken for the erection of suitable premises for the Parramatta South Public, although they are urgently required, as the present accommodation is not merely bad, but of a temporary character. Suitable vested buildings are required at the following places, viz.:—Baulkham Hills, Castlereagh, Five Dock, Grono Park, Haslem's Creek, Kellyville, Lane Cove, St. Albans, and St. Mary's. At the latter place a sum of money has been collected as a local contribution, but not sufficient to meet the requirements of Article 2 of the Regulations, and there have been various vexatious delays, which have hitherto prevented the movement from coming to a conclusion. On the whole, progress has been made in the improvement of buildings and the internal fittings of schoolrooms. Generally speaking, however, there is a marked distinction between the material aspect of Non-vested and Vested Public School premises, the former being of a much less satisfactory character than the latter. Nor is this to be wondered at, seeing that such buildings are provided at the entire cost of the people of the locality, whose first aim is naturally to erect a schoolroom of the cheapest and rudest materials, and at the least possible cost to themselves. In some cases too the structure is built to furnish accommodation for religious service in connection with some denomination, in consequence of which the school, although strictly conducted as a Public one, wears a sectarian look, which militates against its success, and tends to give a false conception of Public School principles to many minds in the community. The only effectual cure for these drawbacks in regard to Public Schools would be to cease to establish any Public Schools but those of a vested kind, in future, and gradually make provision for the conversion of those that are now of the Non-vested class. Some slight improvements have been effected in the material condition of a few of the Provisional Schools, but, taken as a whole, they are only moderately satisfactory in this respect.

The absence of lavatories and weather-sheds in connection with many schools calls for remark. It is very desirable that the latter should be provided, to shelter the children from the heat or inclemency of the weather. For various reasons, it is objectionable that the schoolroom should be used for such purposes during play-hours, and it is to be hoped that the members of School Boards will exert themselves to provide the necessary accommodation by the erection of sheds in the play-ground.

Passing

Passing from these general remarks on the material provision made for education, the distribution of the schools in relation to the educational requirements of the district may next come under notice. On the whole, there are but few localities without a school, or which are not so situated as to be within convenient reach of one. There is no considerable centre of population entirely without the means of education, and it is only in a few places—especially on the Hawkesbury or its affluents—where, on account of the sparseness of the population, small schools are required of the Provisional or Half-time kind. This district, from the comparatively fixed character of its population and its early settlement after the establishment of the Colony, affords little scope now for the extension of the means of education, so far as the establishment of *new* schools is concerned; but educational reform or improvement might be effected in various places by the consolidation of rival schools, which are at present competing with each other to the manifest detriment of education. The advantages of large schools over small ones are, or should be, so apparent to any one who thinks on the subject without bias or sectarian prejudice, that it seems almost superfluous to enumerate them. Few persons will doubt but that such schools are more economical in the matter of salaries, and the cost of apparatus and materials; but this may not be considered a matter of much moment. On other grounds, however, large schools are a gain to the community, as they secure the services of abler men as masters, and afford scope for the formation of higher classes, and the giving of a more thorough and complete English education. As a rule, too, the work of teaching is carried on more effectively with large numbers. There is a spirit in *large* schools, not merely of emulation, but of intense mental activity, which rarely exists in *small* schools. The "sympathy of numbers," to adopt the name given by Mr. Stowe to his famous leading principle, is a potent auxiliary in the work of teaching. There will always be, from the nature of the Colony, a large number of *necessarily* small schools; but it seems a pity, from a purely educational point of view, that these should not be reduced to the minimum that is dictated by necessity, and the general good of the country, consulted irrespective of denominational interests. The following are the names of the places or localities in which amalgamations of existing schools would be productive of the beneficial effects indicated in the above remarks, viz.:—Burwood, Kurrajong, Lane Cove, Parramatta, Penrith, Petersham, Richmond, Rouse Hill, Ryde, South Creek, and Windsor.

The average attendance at three out of the four schools in and around Burwood is as follows, for the last quarter of the year:—Burwood Public, 206; Burwood Church of England, 38; and Concord Roman Catholic, 35; the total averages being 279, with an enrolment of 403. The first-mentioned school could accommodate the whole of the pupils attending the three. On the fourth school no remark is offered, as it lies in the Camden district. At Kurrajong one good school is required in lieu of the two Denominational ones there existing. The attendances at these schools for the December quarter were:—Kurrajong Church of England roll, 46—average, 30.8; and Kurrajong Roman Catholic roll, 68—average, 45.6. One school, therefore, capable of accommodating over 100 pupils, would meet the requirements, and prove a great boon to the community. One noticeable feature in the attendance at the Roman Catholic School of this locality is the fact that 36 of the 68 pupils do not belong to the denomination with which the school is connected. At Lane Cove two schools exist, with an aggregate enrolment of 89, and an average of 62.85. One Vested Public School erected between the two would suffice for the wants of the locality.

Petersham is another place with a plethora of competing schools, there being no less than four in and around that locality, with an aggregate enrolment of 353, and an average of 223, for the last quarter of the year. The education of the locality would be much better effected by *one good Public School in a central situation*.

At or near Rouse Hill are the Rouse Hill Church of England and Nelson Roman Catholic Schools, with an aggregate enrolment of 88, and an average of 66, for the last quarter. One school would be more effective and satisfactory. At all the other places named, with perhaps the exception of Parramatta, the educational requirements would be met by one large school.

The following table will exhibit, in a succinct form, the enrolments and averages for the last two years:—

Quarters.	1874.			1873.		
	Enrolment.	Averages.	Percentage.	Enrolment.	Averages.	Percentage.
March	5,806	3,764.58	64.8	5,516	3,731.5	67.6
June	5,806	3,895.29	67.0	5,554	3,642.02	65.6
September	5,794	3,906.0	67.4	5,510	3,845.03	69.78
December	5,821	4,001.46	68.7	5,585	3,884.37	69.5

From this table it will be seen that there has been an absolute increase of enrolment of from 200 to 300 during the year, but that the percentage of attendance has been lower than that of 1873, the mean average for 1874 being 66.9, and for 1873, 68 per cent.

It appears, therefore, that not more than two-thirds of the pupils enrolled attend with regularity; in fact, considerably less than two-thirds of the pupils do so, for the attendances of the irregular pupils go towards making up the average of two-thirds. The annual returns give the aggregate enrolment of children who attended the schools during any part of the year as 7,903, against 7,495 for 1873. As however a certain number of those children probably attended two or more schools during the year, and no means have yet been adopted to ascertain the precise number, it is evident that the aggregate enrolment above given is only an approximation to a correct statement of the fact. The difference between the highest enrolment during any quarter, and the aggregate number is 2,082. It is clear, therefore, that a large number of the pupils must attend with very great irregularity. Allowing a deduction of one-fourth for double or treble entries, there would still be 1,500 children left whose education must be of an exceedingly irregular and therefore imperfect character.

This prevalent and seemingly increasing irregularity of attendance cannot but give rise to grave consideration on the part of all well-wishers to the Colony. The liberality of the Legislature, and the earnest efforts of the Council to promote and secure the education of all children in the country, are equally frustrated to a large extent by this barrier to success. In my previous reports I have alluded to the matter, and pointed out the necessity for the enactment of a compulsory clause as the only effective remedy, and I would now add that further experience and recent discussions have only deepened my conviction on the subject. It will scarcely be denied that the State has a right to interfere with the liberty of the subject when the public good demands it. Law implies limitation, and it becomes necessary, whenever a community suffers detriment from any cause within the scope of law, to interfere with individual liberty or license. This scarcely needs illustration. If the State can step in to prevent a parent from starving his child, surely it has an equal right to see to it that no parent is allowed to rear his children in ignorance, to become drags on progress, if not pests to society. It is the fact that irregularity of attendance is the great obstacle to the complete education of the people, and experience shows that nothing short of legislative interference is likely to effect a remedy.

The right and desirability of interference being conceded, there seems no insuperable difficulty in the way of the application of compulsion. Many so-called difficulties would probably vanish before the touch of practical legislation on the subject; but even if the first steps taken should be of a tentative character, experience would in the course of time show defects and indicate improvements for future legislation on the subject. Compulsion could not operate unless where State-planted schools existed, but it would surely not be unreasonable for the Government to demand that, within a fixed radius of every

every school, all children of a certain age (say, from five to twelve years) should either receive education privately, or at least attend for a period of ten months in the year, unless prevented by illness or some insuperable natural obstacle. The operation of such an enactment would not affect those who already send their children to school with reasonable regularity, but it would serve to secure a tolerable amount of education for many who at present grow up without any, or with so little as to be almost entirely useless. It seems to me that the *practical law-makers* of the Colony should not become *law-breakers* through ignorance, so far as the State can prevent such a result.

The fees for 1874 amounted to £4,615 19s. 3½d., being an increase of £425 over the amount for 1873. This is owing in part to the increased numbers, but more to the fixing of scales throughout the district, and the consequent greater attention being given to the matter. The following table will furnish information on various points indicated by the headings:—

Schools.	No. of Teachers.	Amount of fees for year.	Average share of each teacher.	Lowest amount of fees received by any teacher of a school.	Highest amount of fees received by any teacher.
Public	45	£ s. d. 2,676 5 2	£ s. d. 59 0 4	£ s. d. 8 2 8	£ s. d. 253 16 0
Provisional	15	173 10 4	11 11 4½	1 5 0	26 10 3
Half-Time	2	32 10 8	16 5 4	7 3 7	25 7 1
Church of England	22	1,134 11 3½	51 6 4½	22 11 6	99 1 0
Roman Catholic	14	551 3 4	39 7 4½	14 4 0	60 15 2
Presbyterian	1	39 19 6	39 19 6
Wesleyan	1	36 19 0	36 19 0
Mean average share of each teacher in the district				£46 9s. 2½d.	

In addition to the information contained in this table, it may be stated that 40 per cent. of all schools furnish an income from fees of less than £30 per annum each, that from eight schools are obtained one-third of the total amount of fees, and from one-fourth of all the schools are received over 60 per cent. of the entire sum. From the preceding statements it may be seen that the majority of teachers derive but a small portion of their incomes from fees. This question of fees and their collection by the teacher is a constant source of worry and annoyance to him, and his partial dependence upon them destroys to a large extent his independence. To country teachers, the abolition of fees and payment by a fixed salary would be a great boon, and to those persons who have now to sue *in forma pauperis* for education to their children, it would remove a source of humiliation which is distressing to many persons in necessitous circumstances. There is a novel idea current in the minds of many, that to abolish fees would pauperize the community, and lower the scale of morality throughout the Colony. It is hard to see how this could be, when every parent would receive education for his children as a right, and when each would simply be receiving back, as he is now doing to a large extent, in the form of education from the State, an equivalent for the money which he has contributed to the general funds. Police protection is obtained in the same way; and, on principle, the holders of this opinion, to protect themselves from degradation, should regularly dole out to the policemen on their beat a small sum weekly, to preserve their independence intact.

The following statement will exhibit the position of all schools in the district in relation to the "standard of proficiency," which serves equally as a guide to the teacher in his work and to the inspector in his examination and estimate of the results obtained in each school. Thirty-seven schools, or 42 per cent. were up to the standard, leaving fifty schools, or 58 per cent. below the standard. In 1873 there were only 26 per cent. of all schools that reached "up to the standard," so that, as regards the estimated proficiency of the pupils, there has been decided progress during the past, as compared with the former year. This increased efficiency is in part attributable to certain changes that occurred in the teaching staff of the district, but more to decidedly earnest efforts on the part of many teachers to attain higher results. The annexed statement is given for the purpose of comparison with a similar one in the previous report.

About 42 per cent. reached an average of fair and over. About 23 per cent. reached an average of from tolerable to fair. About 12 per cent. reached an average of from moderate to tolerable. About 23 per cent. reached an average of moderate and under.

As regards the various kinds of schools it may be interesting to note that two out of the four Half-Time Schools, nearly 33 per cent. of the Denominational Schools, and 68 per cent. of the Public Schools, were up to the standard, while none of the Provisional Schools quite reached that mark, although a few of them made creditably close approaches to it.

With respect to the comparative results obtained in the five leading subjects, it may be stated in a word that writing, geography, and reading take rank, in the order named, as affording the most satisfactory results, while grammar takes the next place, and arithmetic the lowest. In fact, of all subjects taught, the last named gives the poorest results.

In conclusion, the condition of the schools and their results may be thus summarized:—The material condition has been improved in various ways, and may be considered on the whole fairly satisfactory; the regularity of the pupils has decreased during the year, having been only 66.9 per cent. instead of 68 per cent. for the previous year; and the average progress has been higher than during 1873; the number of schools in a fairly satisfactory state having increased from 26 to 42 per cent. But, while expressing comparative satisfaction with the proficiency, it must nevertheless be stated that, with greater regularity of attendance, more effective teaching in a considerable number of schools, and the consolidation of existing rival schools in various places, much higher results would be reached than are attained at present in the district.

Hereto are appended the usual summaries of schools inspected during the year.

J. M'CREDIE,
Inspector, Cumberland District.

PUBLIC SCHOOLS.

BADKHAM HILLS (N.-V.): Visited, 20th August.

Numbers present:—Boys, 16; girls, 17; total, 33.

The schoolroom is tolerably suitable, but there is no residence. The present arrangement is intended to be only temporary, until vested premises can be erected, when a suitable site can be obtained. The supply of teaching requisites was somewhat scanty at the date of inspection, but this defect has since been remedied. About two-thirds of the pupils are regular and punctual. They are clean, orderly, and fairly attentive. They exhibit fair self-reliance and accuracy, and the government seems firm and watchful. The prescribed subjects are taught with industry and care; the classification is judicious, and the methods are suitable. Greater animation in the teaching is desirable, but, as a whole, for the time, the results are fairly up to the standard.

BURWOOD

BURWOOD (V.) :—Visited, 17th and 18th September.

Numbers present :—Boys, 132 ; girls, 83 ; total, 215.

The school premises are of excellent character ; they are suitably furnished, and are well kept. When the additions now in progress are completed, the accommodation will meet present requirements. The school is in all respects well organized ; the order and discipline are excellent, and the moral tone is healthy. The course of instruction accords with that prescribed, and the condition of the several classes testifies to the earnestness of the teachers and the thoroughness of their work. The average proficiency exhibited by the pupils of the first and second classes reached very fair, and in the third and fourth classes good. This school is favoured in being under the superintendence of an intelligent, active, and liberal School Board.

CASTLEREAGH (N.V.) :—Visited, 30th April.

Numbers present :—Boys, 20 ; girls, 19 ; total, 39.

The material condition, as respects the premises, is very bad, and there is urgent need for the erection of vested premises, on a suitable site. The furniture is now suitable and sufficient, and the supply of working materials is fairly satisfactory. About two-thirds of the pupils are regular and punctual ; they are fairly orderly and attentive, as well as self-reliant and accurate. The government is firm and watchful, and the school is, generally speaking, in healthy working order, notwithstanding its material drawbacks. The instruction includes all subjects prescribed, the teaching is careful and industrious, and the average proficiency is fair.

COLYTON (V.) :—Visited, 31st March.

Numbers present :—Boys, 14 ; girls, 11 ; total, 25.

Repairs have been effected to the roof since last inspection, but there is still need for further improvements. There is a fair supply of working materials. The pupils are very irregular, and only tolerably orderly, while the attention is of an indifferent character. The government is slack, and the mental power of the pupils is weak. The subjects do not comprise singing ; the instruction is moderately regulated ; and the teaching is defective in energy and thoroughness. The attainments are far from satisfactory, and, as a whole, the school is not in a healthy condition. *The amount of fees for the year was under nine pounds.*

DOBROYDE (N.V.) :—Visited, 21st July.

Numbers present :—Boys, 12 ; girls, 13 ; total, 25.

There is no residence, but otherwise the material condition is fairly satisfactory. The school is badly situated as regards the population of the locality. The condition of the records shows gross carelessness and neglect. The pupils are irregular, and only tolerably orderly or attentive. Their mental effort and self-reliance are feeble, and they do not answer with promptness. The instruction is moderately regulated ; the teaching wants vigour and penetrative force ; and the average proficiency is only about moderate.

DUNDAS (V.) :—Visited, 27th August.

Numbers present :—Boys, 40 ; girls, 37 ; total, 77.

Some slight repairs are necessary, but on the whole the condition of the premises is good. The school is well supplied with furniture and teaching appliances. The pupils are fairly regular and orderly, and the attention is from tolerable to fair. The government is mild, but wanting in energy, and the moral tone is fair. The instruction embraces all prescribed subjects, which are properly regulated, and the teaching is careful, but defective in vigour and penetrative force. The average proficiency is from tolerable to fair. Higher results might reasonably be expected from this school.

DURAL (N.V.) :—Visited, 4th December.

Numbers present :—Boys, 11 ; girls, 21 ; total, 32.

The material condition is, on the whole, fairly satisfactory. The regularity—formerly indifferent—has improved under the present teacher. The pupils are tolerably orderly and attentive. They are slow in answering, and evince but moderate mental power. The subjects embrace all prescribed but singing. The instruction is tolerably regulated, and the methods are of modern kind. The average proficiency is about moderate. The school has been only a short time under the charge of the present teacher.

FIVE DOCK (N.V.) :—Visited, 7th August.

Numbers present :—Boys, 21 ; girls, 16 ; total, 37.

There is no residence, and the closets and wood-work of the school are in need of repair. The furniture is clumsy, and a book-press and suitable provision for water are necessary. The pupils are fairly regular ; they are orderly and attentive, and fairly self-reliant and accurate. The government is vigilant and strict. The instruction includes all prescribed subjects but singing. The methods are suitable ; the teaching is careful and intelligent, and the average proficiency is from fair to very fair.

GRONO PARK (N.V.) :—Visited, 23rd June.

Numbers present :—Boys, 26 ; girls, 18 ; total, 44.

The schoolroom is constructed of slab and bark, and there is no residence. Some additional furniture is required, a book-press especially being necessary ; otherwise there is a tolerable supply of teaching appliances, and the records are correct. The regularity of the pupils is not good. They are orderly and attentive, and show very fair self-reliance and vigour of application. The government is prompt and vigilant ; the instruction is properly regulated ; the methods are suitable, and the teaching is marked by industry and energy. The attainments reach an average of very fair.

HORNSBY (V.) :—Visited, 2nd September.

Numbers present :—Boys, 17 ; girls, 21 ; total, 38.

The residence is too small, but steps have been taken for its enlargement, and for other improvements ; otherwise, the material aspect of the school is satisfactory. The pupils are fairly orderly and attentive, and tolerably self-reliant and accurate. They need greater promptness, however, and more vigorous mental effort. The government is mild, but lacking in energy. The instruction includes all prescribed subjects, and is fairly regulated by the usual guides. The teaching is careful, but wanting in animation and point ; and the average attainments range from tolerable to fair.

HUNTER'S HILL (V.) :—Visited, 14th and 15th August.

Numbers present :—Boys, 46 ; girls, 14 ; total, 62.

The material condition continues very satisfactory. The pupils are clean, orderly, and fairly attentive, as well as self-reliant and accurate. The government is mild. The instructional documents are carefully drawn up, the methods are appropriate, and the teaching is earnest and industrious. The average proficiency is about fair.

KELLYVILLE

KELLYVILLE (N.-V.) :—Visited, 26th June.

Numbers present :—Boys, 18 ; girls, 21 ; total, 39.

There is no residence, and some improvements in connection with the chimney and the lighting of the room are desirable. Some additional furniture is also necessary. About two-thirds of the pupils are regular and punctual. They are clean, and fairly orderly and attentive, as well as self-reliant and accurate in answering. The government seems mild, but fairly effective. The subjects comprise all prescribed. The instruction is tolerably regulated ; the methods are appropriate ; and the teaching is industrious and tolerably effective. The average proficiency is fully tolerable.

LANE COVE (N.-V.) :—Visited, 3rd September.

Numbers present :—Boys, 16 ; girls, 18 ; total, 34.

The school is fairly supplied with apparatus and the usual teaching appliances. The organization is injuriously affected by the circumstances mentioned in the previous report. The pupils are very fairly orderly, attentive, and regular. They are prompt in answering, and manifest a healthy working spirit. The government is mild, but firm and vigilant. The subjects are those prescribed, the methods are suitable, and the teaching is careful and industrious. The average attainments range from fair to very fair.

LEICHHARDT (V.) :—Visited, 26th July.

Numbers present :—Boys, 43 ; girls, 3 ; total, 79.

The school is not centrally situated for the population of the locality. Steps had been taken for the erection of a class-room and other improvements, but they had not been effected at the date of inspection. On the whole the material condition is otherwise satisfactory. About seven-tenths of the pupils are regular, and they are orderly and very fairly attentive. They are fairly self-reliant and accurate, and the government is judicious. The subjects embrace all prescribed, and the instruction is carefully regulated. The teaching is industrious and intelligent, and the average attainments are satisfactory.

LLANDERLO (N.-V.) :—Visited, 7th May.

Numbers present :—Boys, 18 ; girls, 17 ; total, 35.

Additional furniture is required, and the residence needs lining. The school is fairly supplied with teaching materials, and the records are correct. About three-fourths of the pupils are regular. They are fairly orderly and attentive, and answer with fair accuracy and readiness. The government is fairly effective, and the prevailing spirit of the school is pleasing. Singing is omitted from the subjects of instruction, which is judiciously regulated. The teaching is careful and industrious, and the average proficiency is about fair.

LOWER PORTLAND (N.-V.) :—Visited, 10th December.

Numbers present :—Boys, 15 ; girls, 18 ; total, 33.

The material condition is very bad, but new stone vested premises are in course of construction. The proposed residence is quite too small. The pupils are clean, and the general spirit of the school is pleasing. The answering is reasonably prompt in most subjects, and they manifest fair power of application. The government is effective. The teaching is careful and industrious, and the attainments are about fair.

LUDDENHAM, (V.) :—Visited, 21st September.

Numbers present :—Boys, 20 ; girls, 20 ; total, 40.

The school has been supplied with a book-press and suitable desks and forms since last inspection. Some slight repairs are needed, but on the whole the material condition is reasonably satisfactory. The pupils are fairly orderly and attentive, as well as self-reliant and accurate in answering. The government is firm, but needs greater energy and promptness. The subjects embrace those prescribed for a Third Class. Fair skill is shown in the regulation of the instruction, and the teaching is careful and systematic, but weak in animation. The average proficiency is, in most respects, fairly satisfactory.

M'DONALD, CENTRAL (V.) :—Visited, 8th December.

Numbers present :—Boys, 14 ; girls, 9 ; total, 23.

The premises are in fair condition. The school is fairly supplied with teaching requisites, but a book-press and table are needed. About three-fourths of the pupils are regular, but they are only moderately orderly and tolerably attentive. The government is too slack, greater vigilance being requisite. Singing and drawing are omitted from the subjects of instruction. The teaching is industrious, but lacking in point and force. The average proficiency is below the standard, and the pupils possess but little mental power and readiness.

M'DONALD, LOWER (V.) :—Visited, 8th December.

Numbers present :—Boys, 10 ; girls, 7 ; total, 17.

The schoolroom needs plastering, and the hut, called a residence, needs thorough repair and flooring. Otherwise the material condition is fair. About two-thirds of the pupils are regular and punctual. They are clean, orderly, and attentive, and answer with promptness and fair accuracy. The government seems firm and vigorous. The instruction embraces all the subjects prescribed ; the teaching is industrious ; and the results average fair.

NORTH RICHMOND (V.) :—Visited, 28th and 29th May.

Numbers present :—Boys, 33 ; girls, 33 ; total, 66.

In its material aspect this school is on the whole good, but a detached kitchen is necessary for the residence. About two-thirds of the pupils are regular, and they are fairly orderly and attentive, but do not answer with such promptness and accuracy as are desirable. The government is not prompt or vigorous enough. The subjects do not embrace drawing or geometry. The teaching is industrious, but, from lack of animation and energy, not productive of high results. The average attainments range from tolerable to fair.

PARRAMATTA (V.—Infants) :—Visited, 11th November.

Numbers present :—Boys, 70 ; girls, 63 ; total, 133.

The playshed having been converted into a class-room, the accommodation is now more satisfactory. A new playshed and some additional furniture are necessary. The pupils are clean, orderly, and attentive, and more than usually prompt and accurate. The prevailing spirit of the school is pleasing, and the attendance is considerably on the increase. The subjects are those prescribed for infant schools ; the teaching is intelligent and energetic ; and the average proficiency ranges from very fair to good.

PARRAMATTA

PARRAMATTA (V.—Primary) :—Visited, 12th and 13th November.

Numbers present :—Boys, 110 ; girls, 59 ; total, 169.

A lavatory and weather-shed are required for the girls, and the closets need enlarging. There is no teacher's residence, and no proper playground for the boys. Otherwise, the material condition of the school is good, and it is well organized. About three-fourths of the pupils are regular, and they are very fairly orderly. The attention is good, and the general mental effort under examination is very fair. The government is judicious, but needs greater vigilance and promptness in enforcing minor points of order. The subjects embrace all prescribed for a fourth class. The teaching is conducted with energy, and the results show industry and earnestness on the part of the teachers. They may be thus stated :—Lower second class, fair ; upper second, third, and fourth classes, very fair.

PARRAMATTA SOUTH (N.-V.) :—Visited, 29th and 30th October.

Numbers present :—Boys, 55 ; girls, 41 ; total, 96.

The material condition is very bad, and urgent steps are necessary for the erection of suitable vested premises. The pupils are orderly and attentive, and about seven-tenths are regular. They are very fairly self-reliant and accurate, and manifest a healthy working spirit. The discipline is good. The subjects are those prescribed ; the teaching is intelligent and energetic ; and the average proficiency of the first, second, and third class is about fair, that of the fourth being very fair.

PENNANT HILLS (V.) :—Visited, 1st September.

Numbers present :—Boys, 34 ; girls, 27 ; total, 61.

The ravages of the white ant necessitate some repairs to the premises, but otherwise they are in good condition. About three-fifths of the pupils are regular. They are fairly orderly and attentive, but they do not answer with promptness, and their mental effort is not vigorous. The government is mild, but lacks energy. Singing is omitted from the prescribed subjects. The instruction is fairly regulated, and the teaching is industrious, but wanting in force. The results are from tolerable to fair.

PENBITH (V.) :—Visited, 22nd and 23rd April.

Numbers present :—Boys, 68 ; girls, 53 ; total, 121.

A book-press, a table, and some desks and forms are desirable ; otherwise the condition of the schoolroom is satisfactory. The residence is unfit for occupation. About seven-tenths are regular, and they are orderly, and, while under examination, fairly attentive as well as accurate in answering. The government is firm and watchful. All the prescribed subjects are taught, and the instruction is properly regulated. The teaching is conducted with care and energy, and the average proficiency is from tolerable to fair. The present teacher has not been long in charge. A new residence has been built since the inspection took place.

PROSPECT (V.) :—Visited, 19th March.

Numbers present :—Boys, 22 ; girls, 18 ; total, 40.

The addition of a detached kitchen to the residence is necessary, but otherwise the material condition is satisfactory. About two-thirds of the pupils are regular, and they are orderly and fairly attentive. The general spirit of the school is healthy, and the discipline is effective. All prescribed subjects are taught, and the instruction is fairly regulated. The teaching is industrious and zealous, and the average results are satisfactory.

REGENTVILLE (N.-V.) :—Visited, 28th April.

Numbers present :—Boys, 8 ; girls, 22 ; total, 30.

The material condition has been improved by the lengthening of the schoolroom. The pupils are moderately orderly and tolerably attentive. Their mental power is, however, weak, and they do not answer with promptness or much accuracy. The discipline needs greater vigour. The subjects embrace all prescribed but drawing, and the instruction is moderately regulated. The teaching is defective in energy and intelligence, and the average proficiency is about moderate. This school, formerly Provisional, was converted into a Public one during the year.

RICHMOND (N.-V.) :—Visited, 21st and 22nd May.

Numbers present :—Boys, 69 ; girls, 70 ; total, 139.

Since last inspection the desks have been raised on platforms, and an excellent book-press has been furnished, while the out-offices have been improved. The erection of a residence, weather-shed, and lavatory are necessary to complete the equipment of the school, but otherwise the condition is very good. The pupils are clean, orderly, and attentive, and their mental effort is more than usually vigorous. The discipline is good. The subjects embrace all prescribed for the instruction, which is properly regulated. The teaching is marked by energy and industry, and the average proficiency is very fair.

RYDE :—(Infants—V.) :—Visited, 26th November.

Numbers present :—Boys, 32 ; girls, 22 ; total, 54.

The school is fairly supplied with necessary working materials, and otherwise properly equipped for teaching purposes. About seven-tenths of the pupils are regular, and they are orderly and very fairly attentive. The government is effective, and the school is in a healthy working condition. The subjects comprise all prescribed for such schools. The classification is judicious, the teaching is marked by energy, and the average proficiency is very fair.

RYDE (Primary.—V.) :—Visited, 27th November.

Numbers present :—Boys, 39 ; girls, 33 ; total, 72.

The schoolroom is properly furnished and supplied with requisites, but not having been originally built for school purposes, it is not so suitable as is desirable. The residence needs some additions and improvements. About two-thirds of the pupils are regular, and they are very fairly orderly and attentive. They are fairly accurate in answering, and the government seems fairly effective. The instruction includes all prescribed subjects, and is suitably regulated. The teaching is earnest and industrious, and the attainments are fairly satisfactory.

SMITHFIELD (V.) :—Visited, 6th August.

Numbers present :—Boys, 20 ; girls, 14 ; total, 34.

The school has been improved materially by the removal of the partition. The closets urgently need repair, and the erection of weather-sheds is desirable ; otherwise the condition is fairly satisfactory. About two-thirds of the pupils are regular, and they are orderly and fairly attentive, as well as self-reliant under examination. The government is firm and watchful. The subjects are those prescribed ; the teaching is methodical, and marked by earnestness and energy ; and the results are fairly satisfactory.

ST. ALBANS

ST. ALBANS (N.-V.) :—Visited, 7th December.

Numbers present :—Boys, 18 ; girls, 10 ; total, 28.

The material condition is bad, and the erection of new premises is urgently necessary. The school stock is fairly sufficient. About three-fifths of the pupils are regular. They are fairly orderly and attentive, and manifest fair intelligence under examination. The government is mild, but fairly effective, and the prevailing spirit is pleasing. The subjects include all but singing, and the instruction is fairly regulated. The teaching is painstaking and industrious, and the average proficiency is about fair.

ST. MARY'S (N.-V.) :—Visited, 5th May.

Numbers present :—Boys, 16 ; girls, 15 ; total, 31.

No change has yet taken place in the unsatisfactory material condition of this school, although such change is urgently requisite. About two-thirds of the pupils are regular, and they are fairly orderly and attentive. They are tolerably accurate in their answers, and the government is mild, but firm and vigilant. Singing is not taught, but otherwise the subjects accord with the classification. The teaching is careful, the methods are suitable, and the attainments are about tolerable.

WALLGROVE (V.) :—Visited, 26th March.

Numbers present :—Boys, 13 ; girls, 16 ; total, 29.

Various improvements have been effected on the premises since last inspection, but the erection of a kitchen is still desirable. About three-fifths of the pupils are regular. They are clean, orderly, and very fairly attentive, and their answering is spirited and fairly accurate. The discipline is genial and effective, and the prevailing spirit of the school is pleasing. The instruction embraces all the subjects prescribed ; the classification is appropriate, and the teaching is conducted with sustained energy. The average proficiency exceeds fair.

WINDSOR (Infants—V.) :—Visited, 16th June.

Numbers present :—Boys, 30 ; girls, 37 ; total, 67.

Except for the smallness of the room, the material condition might be pronounced good. About three-fourths of the pupils are regular, and they are orderly and very fairly attentive. They answer with reasonable promptness, and manifest fair mental effort. The government is effective. The subjects accord with the standard requirements for infant schools ; the teaching is earnest and methodical, and the results are from very fair to good.

WINDSOR (Primary—V.) :—Visited, 16th, 17th, and 22nd June.

Numbers present :—Boys, 46 ; girls, 45 ; total, 91.

The school is well furnished and supplied with necessary working materials. The premises are good, and in good repair. About three-fourths of the pupils are regular. They are clean, orderly, and very fairly attentive ; and, with the exception of one class, exhibit fair self-reliance and accuracy under examination. The government seems firm and vigilant. The instruction embraces all prescribed subjects. The classification is now appropriate. The teaching is industrious, but needs greater animation and energy to make it thoroughly impressive. The average proficiency somewhat exceeds fair.

PROVISIONAL SCHOOLS.

BLACKTOWN :—Visited, 13th February.

Numbers present :—Boys, 5 ; girls, 13 ; total, 18.

A room of the teacher's residence serves as the schoolroom, which is tolerably suitable, and is moderately supplied with furniture and teaching appliances. The records are tolerably correct. The pupils are clean, and moderately orderly and attentive. They are weak in self-reliance, and do not answer with much accuracy or promptness. The teaching is industrious, but not sufficiently searching or thorough, and the lesson guides are of an indifferent character. The average proficiency is moderate. Owing to the broken weather, the attendance was smaller than usual.

GREENDALE :—Visited, 22nd September.

Numbers present :—Boys, 18 ; girls, 9 ; total, 27.

The material condition of the schoolroom is moderately satisfactory, but it is desirable that the site should be removed further towards Shancamore, so that it may be made to supply, as far as practicable, the place of the school formerly existing there. The records are neatly and correctly kept. The pupils are tolerably orderly and attentive, and exhibit moderate application to work, as well as accuracy in their answers. The government is tolerably effective. The subjects embrace all prescribed for a third class. The teaching is industrious, and the average attainments range from moderate to tolerable.

GUILDFORD :—Visited, 5th August.

Numbers present :—Boys, 11 ; girls, 7 ; total, 18.

The schoolroom, the property of the teacher, is moderately furnished, and fairly supplied with school requisites. The records are correct. The pupils are moderately orderly and tolerably attentive. They are slow in answering, and their power of sustained mental effort is weak. The discipline is mild, but weak. The instruction includes all subjects prescribed for a third class. The teaching is careful, but wants point and vigour, and the results are about moderate.

HASLEM'S CREEK :—Visited, 12th February.

Numbers present :—Boys, 7 ; girls, 9 ; total, 16.

The schoolroom is suitable, but it is not properly furnished, and there are no out-houses. The records are very badly kept. The order is bad, and the attention of the pupils is only moderate. Their answering is neither prompt nor accurate, and they are evidently little accustomed to mental exertion. The classification is erroneous, and the government is slack. The instruction is not properly regulated, the subjects are only partially taught, and the teaching is of a mechanical type. The attainments are very meagre, the average proficiency being small. Aid has since been withdrawn from the school, on account of its proximity to a public one.

KEMP'S CREEK :—Visited, 16th September.

Numbers present :—Boys, 10 ; girls, 8 ; total, 18.

Improvements effected since last inspection render the material condition moderately satisfactory. The returns give a high per centage of regularity. The pupils are fairly orderly and attentive. The government is firm, and the prevailing spirit is fairly pleasing. The instruction is regulated with tolerable skill ; the teaching is marked by care and industry ; and the attainments range from tolerable to fair. On the whole, this school is superior to the majority of schools of its class.

KURAJONG

KURRAJONG SOUTH :—Visited, 28th May.

Numbers present :—Boys, 14 ; girls, 11 ; total, 25.

The material condition, as regards the schoolroom, is fairly satisfactory. The records are incomplete, and incorrect in some respects. The pupils are moderately orderly and attentive, as well as self-reliant and accurate. The government is mild. The instruction is not regulated by the usual documents, and several subjects have been omitted. The teaching seems industrious, but wanting in force and intelligence. The results are barely "moderate." The school was closed for some months, until just before its inspection.

LOWER HAWKESBURY :—Visited, 9th December.

Numbers present :—Boys, 12 ; girls, 15 ; total, 27.

On the whole, the school is tolerably satisfactory as regards the room occupied, and its fittings and teaching stock. The pupils are fairly orderly and attentive, and show tolerable self-reliance, accuracy, and mental effort, under examination. The government is quiet but firm, and the general spirit of the school is pleasing. The subjects embrace all prescribed but singing; the teaching is earnest and painstaking; and the average proficiency exceeds tolerable. This is one of the best of the *Provisional Schools* in the district.

M'DONALD RIVER :—Visited, 7th December.

Numbers present :—Boys, 11 ; girls, 12 ; total, 23.

The roof has been shingled, but the floor needs repair, and there is no closet. Suitable furniture is needed, and the supply of books is scanty, and they are not in good condition. The order is bad, and the attention is poor. The government is feeble. The pupils do not answer with promptness or accuracy, and their power of thought and capacity of expression are feeble. The instruction is badly regulated, and the teaching is marked by little force or intelligence. The attainments are low.

MULGOA :—Visited, 24th September.

Numbers present :—Boys, 14 ; girls, 12 ; total, 26.

The material condition is fairly satisfactory in most respects, and the records are correctly kept. About seven-tenths of the pupils are regular and punctual; they are clean, and fairly orderly and attentive, and they evince fair promptness and mental activity under examination. The government is genial and firm. The subjects embrace all prescribed, and the instruction is tolerably regulated, while the teaching is marked by painstaking earnestness. The average proficiency is from tolerable to fair. This is one of the few *Provisional Schools* that closely approach satisfying the standard. Action is now being taken for its establishment as a Public School.

MULGOA FOREST MOUNTAIN :—Visited, 23rd September.

Numbers present :—Boys, 8 ; girls, 14 ; total, 22.

In its material aspect this school needs considerable improvement: the schoolroom is too small, the furniture is rude, and there are no closets. The pupils are tolerably orderly and attentive, but under examination they evince only moderate accuracy, and their power of thought and expression is feeble. The government is mild. The instruction is moderately regulated, and the teaching is industrious, but wanting in intelligence and vigour. The attainments are low. *The total fees paid in this school for 1874 were 25s.*

NEWINGTON :—Visited, 20th March.

Numbers present :—Boys, 22 ; girls, 15 ; total, 37.

This school has now merged into Haslem's Creek Public School, which is conducted in a more suitable building, and is fitted up with proper furniture. The pupils are tolerably orderly and fairly attentive, but greater vigour is required in the discipline to make the teaching thoroughly effective. The instruction is regulated, and the teaching is marked by industry. The average proficiency is about tolerable.

NORTH ROCKS :—Visited, 18th December.

Numbers present :—Boys, 5 ; girls, 18 ; total, 23.

The schoolroom—constructed of slab and plastered—is tolerably suitable, and is fairly supplied with necessary teaching requisites. The pupils are tolerably orderly and attentive. The government seems firm and watchful, and the tone of the school is promising. The instruction is regulated, the methods are of modern cast, and the teaching is careful and industrious. The average proficiency is about tolerable. The school was only a short time in operation after being closed for some years.

PORTLAND HEAD :—Visited, 14th December.

Numbers present :—Boys, 7 ; girls, 8 ; total, 15.

The supply of furniture and general teaching appliances is fairly sufficient, and the records are correct. The pupils are tolerably orderly and attentive, but only moderately self-reliant and accurate. The government lacks vigour, and there is but little mental life in the school. Singing and drawing are omitted from the subjects of instruction, which is moderately regulated, and the teaching is defective in vigour and intelligence. The average proficiency is nearly moderate.

SACKVILLE REACH :—Visited, 14th December.

Numbers present :—Boys, 14 ; girls, 4 ; total, 18.

In its material aspect this school is fairly satisfactory. The pupils are tolerably orderly and attentive, and moderately accurate. The government is too slack. The subjects of instruction do not embrace singing or drawing. The instruction is moderately regulated, the methods are only partially modern, and the teaching is defective in point and intelligence. The average proficiency is moderate.

THE VINEYARD :—Visited, 10th June.

Numbers present :—Boys, 13 ; girls, 8 ; total, 21.

The material condition is moderate, as regards the schoolroom. There is a tolerable supply of furniture and necessary working materials. The pupils rank low in point of regularity and punctuality; they are neither orderly nor attentive, and make but little effort to answer. The government is slack. The subjects do not embrace singing or drawing, and geography is a failure. The lesson-guides are indifferent, and the teaching is feeble. The attainments are meagre, and but little progress appears to be made. The teacher soon after tendered his resignation.

HALF-TIME SCHOOLS.

AUSTRALIAN FARM :—Visited, 11th December.

Numbers present :—Boys, 14 ; girls, 5 ; total, 19.

THE building is not quite finished, and some more furniture is requisite; otherwise, the material condition is tolerable. About three-fourths of the pupils are regular and punctual. They are fairly orderly and attentive, and are tolerably self-reliant and accurate in answering. The subjects comprise all prescribed but singing; the instruction is regulated with tolerable skill; and the teaching is industrious, and productive on the whole of tolerable results.

UPPER COLO :—Visited, 3rd June.

Numbers present :—Boys, 11 ; girls, 9 ; total, 20.

The school is conducted in a building belonging to the Church of England. Part of the roof needs repair, but otherwise it is in fair condition. About two-thirds of the pupils are regular and punctual. They are clean, orderly, and attentive; the government is firm and prompt; and the prevailing spirit of the school is pleasing. The instruction is properly regulated, the teaching is conducted with energy and zeal, and the attainments are satisfactory.

WHEENEY CREEK :—Visited, 3rd June.

Numbers present :—Boys, 7 ; girls, 10 ; total, 17.

The school is conducted in the room of a private residence occupied by Mr. Geo. It is fairly suitable, but needs more furniture. The records are neatly and correctly kept. The pupils are fairly self-reliant and accurate in answering. The order and discipline are effective, producing animation and heartiness in the school work. The subjects embrace those prescribed for Half-Time Schools, and the instruction is judiciously regulated by suitable programmes. The methods are intelligent, and the teaching is marked by energy. The results give an average of about fair.

WISEMAN'S FERRY :—Visited, 5th December.

Numbers present :—Boys, 5 ; girls, 7 ; total, 12.

The school is conducted in the room of a cottage belonging to Mr. Black; it is fairly suitable and tolerably furnished, and supplied with necessary requisites. About three-fifths of the pupils are regular. They are fairly orderly and attentive, and evince tolerable self-reliance and accuracy. The discipline is fairly effective. The subjects are appropriate, and the instruction is regulated with tolerable skill. The teaching is industrious and tolerably effective, and the average results range from tolerable to fair.

GOULBURN DISTRICT.

INSPECTOR'S General Report for 1874.

I.—MEANS OF EDUCATION.

The whole number of schools or departments comprise 43 Public Schools, 36 Provisional, 15 Half-time, and 15 Denominational; total, 109. Of these, 35 Public, 27 Provisional, 12 Half-time, and 13 Denominational Schools—total, 87—were in operation during the whole of the year; leaving 22 schools, viz. :—8 Public, 9 Provisional, 3 Half-time, and 2 Denominational that were in operation during a portion of the year only. At the end of the year there were 105 schools in operation. Of the 22 schools that were in operation during only a part of the year, 9 were opened during the year; from one (Provisional) aid was withdrawn; in the case of another (Provisional) the Local Committee delayed to take the action necessary to secure the services of a teacher; and the remainder were closed for longer or shorter periods in consequence of the difficulty of securing without delay the services of successors to teachers removed.

Eight (8) schools not in operation during 1873 have been opened, viz. :—

Crookwell, Public—Established.	
Worragele, Public—Re-opened.	
Congola, Provisional	} Established.
Frankfield, Provisional	
Jaugarrab, Provisional	} Re-opened.
Laggan, Provisional	
Manton's Creek, Provisional	} Established.
Tallagandra, Provisional	

This number corresponds with the number of schools that were in operation during 1873, but not during 1874, leaving the total number the same for both years, viz., 109.

The following conversions of schools have taken place :—

Peelwood Provisional, to Public.

Killenamella Provisional, to Wheeo Half-time, to be worked in conjunction with Winducilla Half-time.

The Public Schools formerly in existence at Bangalore and Tucua still remain closed, no proper premises having been provided. Steps have been taken, however, towards the re-establishment of a Public School at Tucua, and also of a Provisional School at Bolong.

Of the places enumerated in my report for 1873 as being educationally destitute, Manton's Creek, Laggan, and Crookwell, may now be struck out, as they have been provided with schools. Of the remainder there is some prospect of providing means of education for Muttbilly, the basin of the Yass River; Berebangalo, the upper course of the Lachlan, and Nowra Hill, Shoalhaven, during 1875, as preliminary measures to that end are now in progress. To the localities still left on the list others might now be added, which have either been taken up by residents since 1873, or of which I could gain no information during that year. Murrumbah, Narrangullen and Cavan, Currucala, Catherine Creek, Gundaroo West, Yarralaw, and Bunnaby may be cited. At Bunnaby indeed, funds were raised many months ago by public subscription, and a schoolhouse built, but the premises have now been vested in a Denominational Committee, and the conditions necessary to obtaining a school under the Council of Education have not been satisfied. A school unconnected with the Council was brought into existence however. Inquiries regarding the other places are in progress. One great obstacle at present in the way of the establishment of schools in such places is the difficulty of providing suitable school premises. As a rule, the residents are few, and are struggling selectors. They can neither muster nor guarantee more than sufficient children for a Provisional School, and are thus compelled to provide school premises and furniture entirely at their own cost. While this deficiency of the means of education is to be found, no change has been made in the economical distribution of existing agency, of which an unnecessary amount still exists in Goulburn, Yass, Berrima, Nuttai, and Taralga.

At

At Burrawang, Numba (Shoalhaven), Terrara, Sutton Forest, and to a less extent at Yass (there being two Denominational Schools there—C.E. and R.C.), parents of various religious denominations still have but one of two alternatives—either to keep their children from a State-aided School altogether, or to send them to a school belonging to a different religious denomination. In some cases the difficulty is partially overcome by a change being made in the management of the school inconsistent with its designation and professed character, viz., the omission of denominational religious instruction. In others the children of parents who, from their appreciation of the value of education, are compelled to adapt the latter of the two alternatives, are obliged to lose a period of instruction varying from half-an-hour to one hour daily, while their schoolfellows of the denomination to which the school belongs are getting "religious instruction." In all such cases the benefits derivable from a properly organized school are lost, and the locality is deprived of that share of expenditure from the public funds on school premises to which it is lawfully entitled in common with other localities.

The number of children enrolled at the end of 1874 (4,898) exceeds the number enrolled at the end of 1873 (4,712) by 186. The exact relation in which this increase stands to the increase in the whole number of children of school age in the district no reliable statistics can be obtained to determine. I estimate, however, that there are in round numbers at least 6,000 children who ought to be under instruction. Three hundred (300) of these may be set down as attending private schools, so that there are still between 800 and 900 children of school age growing up to a greater or less degree in ignorance. A considerable number of these are so circumstanced that they can see their young neighbours go regularly to receive a blessing which it is the State's self-acknowledged duty and intention to bestow upon all, but of which they are deprived by the exercise of that "anti-British" and "tyrannical" power compulsion—victims of persons who either do not understand or else disregard their duties and obligations both as parents and as citizens, and most, if not all, of whom are either short-sighted as not to see, or so foolish as to forget, that they help to pay for the very boon which they *compel* their children to go without. The others are unconsciously *compelled* to submit to this heavy dragweight from the very outset of life, because the means of education have not been provided for them—a state of things which is the result sometimes of the ignorance or indifference of those with whom now rests the duty of taking the initiative in establishing the necessary schools, sometimes of the inability of those persons to provide the premises and furniture required of them under existing Regulations, and sometimes of their isolated position.

II.—SCHOOL FEES.

The increase in the amount of school fees paid is marked, and more than corresponds with the increase of pupils. The total amounts received from this source were—

	£	s.	d.
In 1873	2,940	18	9½
In 1874	3,226	6	11½

The principal increase during 1874 took place in the last quarter of the year. The total amount of school fees for that quarter was £929 6s. 3½d., while the largest quarterly amount ever received before that was £802 0s. 10½d. The amount paid during the last quarter of 1874 was at the rate of £1 1s. 8d. per annum for each pupil in average attendance. This increase has been the result of the introduction by the Council during the latter half of the year of the subjoined uniform scale of fees, and proves that the great majority of the parents appreciate primary education highly enough to be willing to pay at an increased rate for it:—

Scale of school fees.

	s.	d.	s.	d.
For one child from a family, 0 9 weekly, or 8 0 quarterly, in advance.				
For two children	1	3	"	12 0
For three "	1	6	"	15 0
For each additional child ...	0	3	"	2 6

The new scale of fees has then largely subverted one at least of its proper and intended ends—the augmentation of the remuneration of teachers. Still, it has not been productive of unmixed good. Before the introduction of the scale, the arrangements for paying school fees were, as a rule, made by the teachers and the parents, with the occasional interrention of the School Board or Committee. They thus partook of the nature of a private contract. In fixing the sum to be paid as school fees, the scale has imparted to it something of the nature of a special education tax, of which the teachers as public servants are the collectors and recipients. As such a tax the fees are now very commonly looked upon, and in the case of several schools have been objected to as being too high. In most of these cases, and in others in which no formal protest was made, it has happened either that there has been an evasion of the impost or that children have been withdrawn from the school. In either case the teacher suffers pecuniarily. The latter result has been strikingly exemplified in the case of one school (Provisional). At the time of the introduction of the new scale of fees the numbers were so high that a formal application for the conversion of the school into a vested Public School was under consideration. The people and Local Committee protested against the new scale of fees, and rather than, to use their own words, *make themselves and their children paupers* by getting permission for the admission of their children as *free* pupils, they withdrew them from the school, the numbers at which have since been and still are so low that it is questionable whether it will not have to be closed. As a rule, persons, especially those in the country parts, who profess to be unable to pay fees, will not and do not apply to the Local School Board or Committee for a "free order." If they send their children to school at all, they do so in open disregard of the scale of fees, building upon the well-known disinclination of teachers to recover fees under section 18 of the Public Schools Act, or upon their equally well-known desire to *keep up a good average*. It is not at all an uncommon occurrence for a parent to threaten a teacher that if she will not teach his children for less than the authorized fee, he will withdraw them from the school, and so take £1 a month off her salary. Persons of this class are quite as well able to pay, in accordance with the scale, as labourers and others in towns, from whom no word of complaint is heard. Under these circumstances, it is too much to expect that the scale of fees will be strictly or equitably enforced as required in the majority of small country schools, at least for some time to come.

III.—INSPECTION.—CONDITION OF THE SCHOOLS INSPECTED.

Fourteen of the schools were not inspected; seven in consequence of want of time, six because they were not in operation at the time of my visit to the locality, and one because it was not brought formally under the Council when I visited it. The number of schools inspected therefore is ninety-five—ninety-three being *fully* inspected. In these ninety-five schools, 4,378 children were enrolled, and 3,328 were present on the days of inspection. It follows that about sixty-seven out of every 100 of the children enrolled at the schools of the District, but only fifty-five out of every 100 of the children of school age (estimated) in the district were reached by examination. In its bearing on the efficiency of the schools, the inspection was of the same searching character described in my report for 1873. The standard by which the schools were judged was quite as high, and it is gratifying to note that decided improvement has been effected. In 1874, 20 Public Schools, 8 Provisional, 4 Half-time, and 8 Denominational—total, 40, or 43 per cent. of the schools examined—met the test to which they were submitted. The corresponding numbers for 1873 were—17 Public Schools, 5 Provisional Schools, 4 Half-time Schools, and

4 Denominational Schools—total, 30, or 31 per cent. of the schools examined. It will thus be seen that in 1874 the number of schools that were able to satisfy the standard was 12 per cent. more than in 1873. Two causes have been mainly instrumental in effecting this improvement :—

1. *The increasing practical skill and knowledge of their duty and relations possessed by Teachers.*

With regard to the last two particulars, improvement has been effected chiefly in the case of teachers of Provisional Schools, some of whom were formerly even led to believe that a power outside of the Council of Education could dismiss them, and who were consequently over-awed and fettered in the performance of their duties.

2. *The filling of vacancies in small schools by the appointment of Teachers of improved qualifications.*

This has been effected mainly by the carrying out of the scheme commenced last year of training applicants for small schools for a period not exceeding three months. Great care has been exercised in the selection of candidates. For so far nearly all the applicants have been young persons, and the majority of them females. The results produced by those who have been placed in charge of schools are decidedly encouraging. Seventeen persons have been trained in the district during the year—nine at Goulburn Public School, four at Berrima Public School, and three at Gunning Public School; and there is generally no lack of applicants. Still, as a means for providing teachers for small schools, and for keeping such schools in continuous operation, the scheme cannot at all times be worked with the success that is desirable, and for the following reasons :—

- (a.) Applicants cannot well be admitted to training until there is at least a prospect of vacancies for them, and the prospect of vacancies does not, as a rule, occur until about a month before the vacancies themselves, while the applicant's training generally extends over three months.
- (b.) In the case of opening new schools the promoters frequently do not complete the necessary arrangements until months after the time originally promised. Applicants trained with a view to meet the prospective want have in the meantime to be appointed to some other vacancies; and when such schools actually become ready for opening there are probably no candidates immediately available.
- (c.) Under existing arrangements the appointment of a teacher to a Provisional School lies with the Local Committee, and there is no certainty that the Committee will not appoint a teacher of their own selection. Even where Provisional School Committees make application for a teacher, it sometimes happens that there are no eligible candidates of the sex and religious denomination desired by the Committee, immediately available.

The course and standard of instruction prescribed for the schools have not been changed. The great bulk of the pupils have acquired some proficiency in reading, writing, arithmetic, and object lessons; subjects which are required for all the classes. Arithmetic is the weakest subject, less than one-third of the pupils examined in it having exceeded the mark *tolerable*. Vocal music is also prescribed for all the classes, but only a portion of the teachers are able to give instruction in it. In several schools the pupils have been taught to sing with pleasing effect, but in not one instance was a satisfactory knowledge of the theory of music, or ability to read music with fluency, to be found. The consequences of these circumstances are that little better than half the children examined can be regarded as having attained to any positive proficiency in vocal music, and that none properly reached the mark *good*. Grammar, geography, and drawing are prescribed for the classes from the second upwards. Some few teachers omit the last-mentioned subject in consequence of a professed inability to draw. Neglect of grammar and geography has occurred in a few isolated instances; this is inexcusable. Scripture lessons are prescribed for the third and higher classes, and mathematics and Latin for the higher ones. Hence only a comparatively small number of pupils have acquired proficiency in these subjects. In connection with the Scripture lessons, however, the following circumstances have also operated :—

1. In Denominational Schools advantage has been taken of the part of Article 62 of the Council's Regulations providing that "In Denominational Schools it shall not be necessary to use the Scripture Lessons published under the sanction of the Board of National Education in Ireland."
2. In some of the Public and Provisional Schools some of the parents have requested the teachers not to allow the Scripture Lessons to be read by their children nor to be read by others in their presence. Such children have, of course, been exempted from reading the Scripture Lessons, and were not examined in them.

As connected with this matter, it is to be reported that in some of the Denominational Schools the "hour allotted to special religious instruction" is devoted to "ordinary instruction"; it follows therefore that in those schools no religious instruction is given.

On the whole, the discipline of the schools has improved. While undiminished attention has been devoted to cultivating in the pupils right motives and feelings, increased care has been bestowed on those details which, thoroughly and systematically carried out, lose all their apparent irksomeness, and conduce greatly to the economy of time and energy, and to the harmonious and orderly working of the school. The want of a complete and uniform system of school drill is, however, a great want still.

As regards the material condition of the school premises, it is to be remarked that while the energy of some of the local school Boards and Committees has effected considerable improvement, much still remains to be done. Of the localities mentioned in my last report, at which the material provisions were seriously defective, measures towards remedying the defects have been taken at the following :—Collector, Croobyar (Ulladulla), Ulladulla (Boat Harbour), Eling Forest, and Kirkdale; and material improvements have been or are being effected at the following schools also :—Bowral, Goulburn, Gundaroo, Gunning, Kangaloon West, Peelwood, Robertson, and Warragee, Public; Bamarang, Burrageowang, Cottawalla, Cuttycuttygang, Gurrundah, High Range, Kirkdale, Shaw's Creek, Spring Creek (Yass River), Provisional; Springfield, H.T.; Goulburn North, C.E., Sutton Forest, C.E., Terrara, C.E., Yass, C.E., Goulburn Boys, R.C., Taralga, R.C., and Ulladulla, R.C., Denominational. Excellent new vested premises have been opened at Crookwell and Parkesbourne. The material provisions in connection with the following schools are unsatisfactory :—Barrier, Marulan, New Sheffield (Nattai), Public; Bungonia, Tarlo, Provisional; Windellama, Quintego, Richlands, and Yelbraith, Half-time; Goulburn, C.E., Mittagong, R.C., and Shoalhaven, Pres., Denominational.

The small country schoolhouses, Provisional and Half-time mostly, are generally slab and bark buildings, without external appointments; but considering that in the majority of instances they have been provided without any aid from the Council, they are as good as can be reasonably expected.

In the case of a few schools the teachers have contributed by their industry and ingenuity to the ornament or the usefulness of the material provisions. The following may be mentioned :—Crookwell, Bowral, Taralga, and Tarranna, Public; Jannung and Junagarrah, Provisional; and Burrawang, C.E., Sutton Forest, C.E., and Goulburn, R.C., Girls and Infants, Denominational.

Of the local supervision of the schools it is so far satisfactory to be able to report that several of the School Boards and Committees have been re-organized and increased, and that these changes have in several instances effected a revival of energy. One result of this is the improvements to school premises in several localities already referred to. Some of the members of the Crookwell and Goulburn Public School Boards deserve special mention for the public spirit, zeal, and liberality with which they have performed their duties. The supervision of Provisional Schools has been rigidly restricted to the officially recognized Local Committees, and an amount of self-reliance and effort has been developed in consequence. The local supervision of Denominational Schools is still mainly clerical.

SUMMARY—PROSPECTS.

1. The number of children left educationally destitute has not been diminished in any sensible degree, and the distribution of educational agency is so far inequitable that the towns and more densely populated localities are supplied to excess at the expense of the more remote and sparsely populated localities. These defects it would seem not to be possible to remove effectually by any power that can be exercised under existing educational arrangements.

2. Considerable improvements and additions have been made to school property; the schools themselves have made decided advance in point of efficiency; the remuneration of teachers has been slightly increased, and some amount of additional interest and energy has been developed on the part of those entrusted with the local supervision of the schools. On these points, existing conditions are favourable to a future progress corresponding to that of the past.

Summaries of my reports on the schools inspected are subjoined.

Inspector's Office, Goulburn,
23rd January, 1875.

D. S. HICKS,
Inspector.

GOULBURN DISTRICT.

SUMMARIES of Reports on Schools inspected during the year 1874.

I.—PUBLIC SCHOOLS.

BERRIMA (V.) :—Visited, 21st, 22nd, and 25th September.

Numbers enrolled :—Boys, 37 ; girls, 27 ; total, 64.

Numbers present :—Boys, 26 ; girls, 18 ; total, 44.

A pump has been provided. As far as the teacher can be held accountable the general organization is *very good*. The numbers are about stationary. In all main features the discipline is *very fair*. Suitable arrangements have been made for regulating and imparting the instruction, which is of full range, and includes algebra, Euclid, and mensuration, in addition to the subjects required. The general proficiency is *fair* in the first, second, and third classes, and exceeds *good* in the fourth.

BOWNING (V.) :—Visited, 4th May.

Numbers enrolled :—Boys, 18 ; girls, 15 ; total, 33.

Numbers present :—Boys, 13 ; girls, 14 ; total, 27.

Since last inspection the teacher has made some improvements in the material condition. The schoolhouse is uncomfortably small. The numbers are declining. The children enrolled, about three-fifths of those in the locality, are *fairly* regular and *tolerably* punctual in attendance; they are also clean; but they are addicted to many loose and disorderly habits while in school, copying, talking, and prompting being particularly conspicuous. The classification is injudicious and informal. All required subjects except singing are professedly taught, although not duly provided for on the time-table. In most branches the pupils have been prematurely advanced, and almost throughout the teaching has been ineffective. The average proficiency is below *indifferent*.

BOWBALL (V.) :—Visited, 18th September.

Numbers enrolled :—Boys, 27 ; girls, 32 ; total, 59.

Numbers present :—Boys, 20 ; girls, 23 ; total, 43.

The walls have been repaired and recoloured since last inspection, and steps have been taken to make other improvements. Not more than three-fourths of the children of school age in the locality attend. These are *tolerably* punctual and regular. In other respects the discipline has been much improved, and is now *very fair*. Radical changes for the better have been made in the classification, which is now appropriate. All subjects required for the three classes are taught, and with *fair* results. The school has considerably improved.

BURRIER (N.-V.) :—Visited, 4th August.

Numbers enrolled :—Boys, 25 ; girls, 15 ; total, 40.

Numbers present :—Boys, 23 ; girls, 15 ; total, 38.

The building is much out of repair, is most untidily kept, and presents anything but a pleasing appearance. The wall documents are old, defaced, and in some instances incorrect. All children in the locality are enrolled; but as some of them live on the opposite side of the Shoalhaven River, or of some of its tributaries, all of which are rapidly flooded, it is impossible for them to attend constantly. When in school they are given to various disorderly habits, and are not at all well drilled. Singing is not taught, and Scripture lessons have been neglected. The methods are of modern cast, but are practised with only partial effect, the proficiency of the pupils being below *tolerable*.

CHATEBURY (V.) :—Visited, 18th May.

Numbers enrolled :—Boys, 12 ; girls, 13 ; total, 25.

Numbers present :—Boys, 10 ; girls, 13 ; total, 23.

Recent improvements have rendered the material condition *good*. The records are now properly kept. The removal of families from the locality has affected the numbers. Excepting as regards regularity of attendance, which is affected by a variety of causes, but principally by the pupils being kept away to work, the general discipline is *very fair*. The classification is *tolerably* appropriate. The course of instruction includes all required subjects except singing. The range of instruction is proportionate to the age and time of enrolment of the pupils; and the proficiency averages nearly *tolerable*. The second class is very weak.

COLLECTOR (N.-V.) :—Visited, 2nd November.

Numbers enrolled :—Boys, 27 ; girls, 21 ; total, 48.

Numbers present :—Boys, 23 ; girls, 16 ; total, 39.

The school is still conducted in temporary premises, but new vested buildings are in course of erection. Some defects occur in the keeping of the records. Nearly all the children in the locality are enrolled, but the attendance is, from various causes, only *tolerably* regular and punctual. In other respects also the discipline is far from satisfactory. The government still tolerates many loose and disorderly habits on the part of the pupils. Little exception can be taken to the classification or the construction of the instructional documents. The Scripture lessons are read irregularly, but all other required subjects are duly taught. The methods want thoroughness in their application, and the matter of instruction is poor in quality. The proficiency is about *moderate* in each of the three classes. Object lessons, geography, and needlework are exceedingly weak branches.

CROBYAR (N.-V.) :—Visited, 17th and 18th August.

Numbers enrolled :—Boys, 66 ; girls, 36 ; total, 102.

Numbers present :—Boys, 63 ; girls, 35 ; total, 98.

Measures for the transfer of the property to the Council, and the establishment of a properly organized vested school, are in progress. The attendance is about stationary, and is considerably beyond the accommodation provided. The general discipline is *good*, and would be higher but for the absence of a thorough system of drill. The school is appropriately divided into four classes, for which the course of instruction is complete. The range of attainments is reasonably high for the present organization. The methods are modern and developmental, and are practised with care and *very fair* skill. In the third class the proficiency lies between *tolerable* and *fair*, in the second between *fair* and *very fair*, in the fourth it reaches *very fair*, and in the first approaches *good*.

CROOKWELL (V.) :—Visited, 1st December.

Numbers enrolled :—Boys, 28 ; girls, 33 ; total, 61.

Numbers present :—Boys, 23 ; girls, 17 ; total, 40.

Excellent and well-organized premises have been provided. The internal organization is *very good* throughout. The numbers have gradually risen since the opening of the school in May last, and now include about five-sixths of the children of school age in the immediate locality. Difficulties arising from the peculiar circumstances and character of the district affect regularity of attendance ; but as far as the teacher can be held responsible the discipline is *very good*. For upwards of two years there was no proper school in the locality prior to the opening of this one. As a consequence, the teacher has not been able for so far to form any class higher than a second. The course of instruction is complete. The teaching is thorough and educative, and has produced *very fair* results.

CURRAWANG (V.) :—Visited, 13th and 14th October.

Numbers enrolled :—Boys, 43 ; girls, 37 ; total, 80.

Numbers present :—Boys, 38 ; girls, 28 ; total, 66.

The material condition remains as last reported. The records are incomplete in several particulars, and the school stock is short in several items. The cleanliness and tidiness of the room might well be seen to more closely. The teaching power is sufficient, but is still inequitably distributed—too many pupils being left under charge of the assistant. Slackness of work at the mine, the severity of the winter, and prevalent sickness have affected the enrolment and regularity of attendance for some time past. Taken as a whole the general discipline may be considered *good*. A fourth class has been formed—a step warranted by the age and attainments of the pupils. Singing is the only omission from the prescribed course, and elementary Latin and algebra are added. The proficiency is *moderate* in the first and second classes, and *very fair* in the third and fourth.

DALTON (N.-V.) :—Visited, 23rd March.

Numbers enrolled :—Boys, 26 ; girls, 34 ; total, 62.

Numbers present :—Boys, 14 ; girls, 16 ; total, 30.

Two new desks have been provided, but no arrangements for the provision of suitable and properly organized premises have been made. In consequence of the inadequate last supply sent to the school, the stock of materials is very scanty, and the teacher has been put to expense and inconvenience. The classification is unnecessarily minute, and has entailed a loss of time and power. About four-fifths of the children in the locality are enrolled. On the day of inspection the attendance was low from fortuitous causes. The general discipline is *very good*, and the moral tone high. *Fair* progress has been made in drill. Singing is not taught. The pupils' proficiency averages from *fair* to *very fair*.

ELING FOREST (V.) :—Visited, 19th November.

Numbers enrolled :—Boys, 8 ; girls, 18 ; total, 26.

Numbers present :—Boys, 8 ; girls, 15 ; total, 23.

General repairs have been effected, and the material condition is now reasonably satisfactory. The schoolroom is not kept sufficiently clean and tidy. Prevalent sickness and other causes have affected the numbers. The pupils are addicted to loose habits. The discipline as a whole is *very moderate*. The classification (three-class) is suitable in the main, and all subjects required for it are provided for, but the results are almost nothing in some branches, and are below *moderate* on the average. The pupils' mental effort and culture are very low. A change of teachers has taken place since last inspection.

GOULBURN (Boys.—V.) :—Visited, 14th, 15th, 16th, 17th, and 18th December.

Numbers enrolled :—115.

Numbers present :—84.

Since last inspection the rooms have been put in good order and repair. The fencing is broken in several places, and the drainage is defective. The general aspect is somewhat naked. More shade is badly wanted on the play-ground. The government is quiet, vigilant, and firm. In all main features the discipline is *very good*. The instruction is properly regulated, and is imparted with system and skill. Geometry to Euclid Book III, algebra to quadratics, mensuration of superficies, and elementary Latin, are added to the subjects required for a school of four classes. The range of instruction, though not quite so high in some branches as last year, is fully commensurate with the age and time of enrolment of the present pupils. The general proficiency approaches *very fair* in the second class, reaches *very fair* in the first class, and exceeds *very fair* and *good* in the third and fourth respectively. The pupils are attentive, and answer with spirit and intelligence.

GOULBURN (Girls.—V.) :—Visited, 9th, 10th, and 11th December.

Number enrolled :—95.

Number present :—67.

General repairs have rendered the material condition satisfactory. The playground fence is out of repair. Some omissions occur in the records. The numbers have declined somewhat. The pupils are clean, mannerly, and in *very good* order. Punctuality of attendance, however, is decidedly unsatisfactory. Suitable instructional arrangements are in force, and are properly represented. The matter of instruction is in some branches wanting in substance, and in the more intellectual branches greater care needs to be taken that the pupils acquire a thorough knowledge of principles. The proficiency slightly exceeds *fair* on the average. Arithmetic is very weak.

GOULBURN (Infants.—V.) :—Visited, 7th and 8th December.

Numbers enrolled :—Boys, 103 ; girls, 90 ; total, 193.

Numbers present :—Boys, 77 ; girls, 62 ; total, 139.

The rooms have undergone general repairs, and are now in satisfactory material condition. The available space is insufficient for the large and increasing attendance. The internal organization has been much improved, and is now satisfactory. Unpunctuality and other defects are observable in the discipline, which, as a whole, may be rated *fair*. Scripture lessons have been added to the course. The instruction is suitable in kind and quality, and is imparted on approved methods, with results ranging from below *fair* in the first class to *good* in the fourth. The department is managed with attention and zeal, and is in a progressive state.

GULLEN (V.) :—Visited, 5th June

Numbers enrolled :—Boys, 19; girls, 41; total, 60.
Numbers present :—Boys, 11; girls, 21; total, 32.

New vested premises have been opened. Teacher's residence, weather-shed, and lavatory would complete the material provisions. The premises might well be kept with more cleanliness and taste. About four fifths of the children in the locality are enrolled, and only one-half of these attend regularly. Punctuality is also very defective. The government is feeble and ineffective. The division of the school is nominally three-class, but the classes are split up in a systemless and unnecessary way. All required subjects are professedly taught, but the proficiency is only from *indifferent* to *moderate*. The methods are of no definite character.

GUNDAROO (V.) :—Visited, 3rd November.

Numbers enrolled :—Boys, 20; girls, 14; total, 34.
Numbers present :—Boys, 16; girls, 13; total, 29.

A small room has been added to the teacher's residence. The discipline has been improved, and is now *tolerably* satisfactory. The attendance is rather low for the locality. The classification of the pupils, and the regulation of the instruction may be regarded as satisfactory. Singing is not taught. In the other branches the proficiency averages *moderate*. Geography is particularly weak, and the attainments generally are of very limited range.

GUNNING (V.) :—Visited, 18th and 19th March.

Numbers enrolled :—Boys, 49; girls, 59; total, 108.
Numbers present :—Boys, 46; girls, 48; total, 93.

In view of the increasing numbers additional accommodation is urgently needed, the present building being already over-crowded. A lavatory, a porch, shade on the playground, and verandah to the residence are also badly wanted. The general internal aspect of the premises is very pleasing. The over-crowded state of the building militates somewhat against the attendance. The discipline is *good* throughout. Suitable instructional arrangements are in force, and the school business is carried on with energy, care, and skill. The proficiency of the pupils ranges from *fair* to *very fair*. A change of teachers has taken place since last inspection, and two pupil teachers have been added to the staff.

KANGALOOON (N.-V.) :—Visited, 5th March.

Numbers enrolled :—Boys, 24; girls, 19; total, 43.
Numbers present :—Boys, 19; girls, 14; total, 33.

Hot-pegs, a lavatory, and the inscription, "Public School," are wanted. The records are defective in several particulars. Excepting as regards punctuality of attendance, which is affected by the peculiar character and circumstances of the locality, the general discipline is *good*. The classification is appropriate. The instruction is properly regulated and imparted, and produces *fair* results.

KANGALOOON WEST (V.) :—Visited, 4th March.

Numbers enrolled :—Boys, 25; girls, 16; total, 41.
Numbers present :—Boys, 16; girls, 15; total, 31.

Since last inspection a good detached kitchen has been erected; but the stable has been destroyed by fire. The schoolroom wants recolouring. From various causes, most of which are beyond the teacher's control, the attendance has been very irregular. The pupils are clean and in *very fair* order. Singing has been omitted of late, and the oral subjects generally are weak and of narrow range. On the whole the proficiency of the pupils is from *moderate* to *tolerable*. The classification has been corrected. The revival of a more vigorous tone in the general management is greatly to be desired.

MARULAN (N.-V.) :—Visited, 9th September.

Numbers enrolled :—Boys, 10; girls, 19; total, 29.
Numbers present :—Boys, 4; girls, 15; total, 19.

The premises are in a very dilapidated condition. The records are in a defective state. The numbers fluctuate, and at the time of inspection were low. The pupils are neither regular nor punctual in attendance, and are inclined to be talkative and unsteady. An appropriate classification obtains. Singing, drawing, and analysis of sentences are omitted. In the other branches the proficiency averages *over moderate*.

MITTAGONG, LOWER (V.) :—Visited, 15th September.

Numbers enrolled :—Boys, 15; girls, 12; total, 27.
Numbers present :—Boys, 12; girls, 7; total, 19.

Recent improvements have rendered the material condition well nigh complete. The garden formed by the former teacher is not now well looked after. The school stock is not neatly arranged. The removal of families from the locality has affected the numbers. The government is weak and vacillating. School drill has been neglected, and the discipline is now but *indifferent*. The time-table is not properly followed, and the pupils are not kept well employed. The instruction is wanting in thoroughness and substance. The actual proficiency is only *moderate*.

MITTAGONG, UPPER (V.) :—Visited, 3rd March.

Numbers enrolled :—Boys, 33; girls, 22; total, 55.
Numbers present :—Boys, 10; girls, 8; total, 18.

The property is now better looked after than formerly, but more attention is still required to the cleanliness of the schoolroom. The records are defective in some particulars. Owing to the peculiar character and the circumstances of the locality, the attendance is easily affected by bad weather. As a consequence the numbers fluctuate, and the punctuality of attendance and the general progress of the school are considerably interfered with. As regards order, cleanliness, and moral tone, the discipline is *very fair*. The classification is now *fairly* appropriate. Drawing is not provided for, and the oral lessons are very weak. The average proficiency is barely *moderate*. To render the instruction effective, educative modes of explaining, illustrating, and questioning on it, would need to be studied and practised.

MOOROOWOOLEN (V.) :—Visited, 10th September.

Numbers enrolled :—Boys, 32; girls, 19; total, 51.
Numbers present :—Boys, 23; girls, 12; total, 35.

Since last inspection the ground has been paled in, and other minor improvements to the premises have been made. The school stock is short in several items. A few minor omissions occur in the records. The removal of families from the locality has lowered the numbers. The pupils are addicted to some loose habits; the discipline requires to be firmer and stricter. Singing is the only prescribed subject not taught. *Fair* results have been achieved in the other branches.

MOSS VALE (V.) :—Visited, 2nd March.

Numbers enrolled :—Boys, 31 ; girls, 29 ; total, 60.
Numbers present :—Boys, 28 ; girls, 24 ; total, 52.

The residence is inconveniently small, and the schoolroom requires to be recoloured and protected from damp. The general internal organization is *good*. The enrolment keeps up, but the attendance has been affected by bad weather for some time past. In all main features the discipline is *good*. Singing is omitted, and in the other branches the range is limited by the standard. The average proficiency approaches *fair*. The low average age of the first class, recent promotions, unavoidable irregularity of attendance, and recent removals of several of the oldest pupils, have unfavourably affected the attainments.

MUMMEL (V.) :—Visited, 12th June.

Numbers enrolled :—Boys, 14 ; girls, 18 ; total, 32.
Numbers present :—Boys, 14 ; girls, 16 ; total, 30.

The fences are broken down in places. The school buildings are in the condition last reported, and are well furnished and stocked. With one exception, the records are properly kept. All children in the locality are enrolled. The discipline is *good* throughout. Under the present teacher a system of elementary drill has been introduced with beneficial results. The course of instruction has been completed by the addition of singing. The arrangements for ensuring systematic and progressive instruction are satisfactory, and are intelligently set forth in the required documents. The methods are modern, and are applied with care and attention to details. The pupils are attentive, industrious, and thoughtful, and their proficiency averages *very fair*.

MURRUMBATMAN (V.) :—Visited, 6th May.

Numbers enrolled :—Boys, 18 ; girls, 19 ; total, 37.
Numbers present :—Boys, 6 ; girls, 9 ; total, 15.

A weather-shed has been erected since last inspection ; but a tank, a bell, and the inscription "Public School" are wanted. Five-sixths of the children in the locality are enrolled. On the day of inspection the attendance was affected by the inclemency of the weather ; but ordinarily it is marked by *very fair* regularity and punctuality. The pupils are clean, mannerly, and, although still rather slow, in *good* order. A third class is now in existence, and the course of instruction has been correspondingly extended. A subdivision of the second class is a defect in the classification, and has caused a loss of time and power, and thus unfavourably affected the results of examination. Singing and drawing are not taught. In the other branches the proficiency is *tolerable*.

MYRTLEVILLE (V.) :—Visited, 18th May.

Numbers enrolled :—Boys, 9 ; girls, 10 ; total, 19.
Numbers present :—Boys, 7 ; girls, 9 ; total, 16.

A well has been recently sunk. The admission register is not properly kept. So many families have left the locality that there are not now more than sufficient children for a good half-time school. Punctuality is only *moderately* satisfactory. The other features of the discipline are *tolerable*. The course of instruction has been extended to include Scripture lessons, but singing and drawing are still omitted. The time-table has been remodelled, and is now *tolerably* suitable, as also are the programmes of lessons. The methods still tend to be individual and mechanical. They have done but little in the way of developing emulation, sympathetic effort, or mental power. The general proficiency averages *moderate*. Arithmetic, grammar, and object lessons are very weak branches. The teacher has had to work under discouraging circumstances for some time past.

NEW SHEFFIELD (N.-V.) :—Visited, 16th September.

Numbers enrolled :—Boys, 39 ; girls, 28 ; total, 67.
Numbers present :—Boys, 30 ; girls, 21 ; total, 51.

Since last inspection the teacher has had to vacate the residence attached to the schoolhouse, which is a Wesleyan church, and in the same material condition last reported. The records are not kept regularly posted up. Three-fifths of the school-going children in the locality are enrolled. Regularity of attendance is *fairly* satisfactory, but several of the pupils are unpunctual. The government continues weak, and but partially effective. The discipline as a whole is but *moderately* satisfactory. The classification is appropriate, and the instructional documents are now *tolerably* well calculated to subserve their intended ends. All required subjects up to a third-class standard are taught, but the matter of instruction is wanting in substance and comprehensiveness. The attainments are of easy range. The general proficiency ranges from *moderate* in the first class to over *tolerable* in the third. The general provisions are far below the requirements of the place, and the local action necessary, in order to obtain a suitably organized school, yet remains to be taken.

NORWOOD (N.-V.) :—Visited, 25th November.

Numbers enrolled :—Boys, 21 ; girls, 14 ; total, 35.
Numbers present :—Boys, 10 ; girls, 6 ; total, 16.

A portion of the wall of the porch has fallen in, and the defects in the material condition previously pointed out still exist. The inscription "Public School" is wanted. More care and neatness are required in the keeping of the premises. All children in the locality are enrolled, and ordinarily attend regularly. At the time of inspection the attendance was affected by the prevalence of eye-blight. As a whole the discipline is *tolerable*. Satisfactory instructional arrangements are in force. All required subjects are taught. The proficiency is *tolerable* in the first and third classes, but exceeds *fair* in the second. There has been a change of teachers since last inspection, which necessitated the closing of the school for some time.

NOWRA (V.) :—Visited, 21st and 22nd July.

Numbers enrolled :—Boys, 51 ; girls, 34 ; total, 85.
Numbers present :—Boys, 42 ; girls, 29 ; total, 71.

Minor improvements have been made in the premises. The internal organization is *good* generally. A good attendance is maintained. Increased attention is given to the details of discipline, which is now *very fair*. The pupils are judiciously divided into four classes. Singing by ear and all other required subjects are taught by modern methods. Geometry is a weak branch, but on the average the proficiency is from *fair* to *very fair*.

PARKESBOURNE (V.) :—Visited, 28th October.

Numbers enrolled :—Boys, 18 ; girls, 21 ; total, 39.
Numbers present :—Boys, 17 ; girls, 17 ; total, 34.

The school buildings are neat rubble stone structures, comprising schoolhouse and a detached two-roomed teacher's residence. A classroom, school bell, weather-shed, and lavatory, would complete the material organization. The whole premises are neatly and carefully kept. The enrolment comprises nine-tenths of the children in the locality. The discipline is *very good*. The pupils are judiciously classified, and carefully taught all required subjects. The proficiency is *very fair* in both classes. The pupils are very attentive, and are trained to exert themselves and think.

ROBERTSON

ROBERTSON (V.) :—Visited, 9th March.

Numbers enrolled :—Boys, 22 ; girls, 26 ; total, 48.
Numbers present :—Boys, 16 ; girls, 19 ; total, 35.

The interior aspect of the school has been greatly improved by a proper arrangement of the school apparatus. A few minor defects occur in some of the records ; otherwise, the internal organization is satisfactory. Continuous wet weather and other causes have unfavourably affected the numbers. A system of drill is carried out, and the general discipline is *good*. The classification has been remodelled on proper principles. The instruction is regulated with *fair* judgment, and is imparted with diligence and care. The proficiency is *fair* in all three classes. Radical changes for the better have been effected, and the school is now in a *very fair* state of efficiency.

ROSLYN (V.) :—Visited, 26th November.

Numbers enrolled :—Boys, 16 ; girls, 12 ; total, 28.
Numbers present :—Boys, 16 ; girls, 12 ; total, 28.

The ground has been enclosed. The only material want is a water supply. The internal organization is *good*. All available children are enrolled. They are regular and punctual in attendance, clean, mannerly, and in *fair* order. The instruction includes all required subjects, is of satisfactory range, well chosen, and carefully imparted. The proficiency is *fair* in the first and second classes, and *very fair* in the third. There have been changes of teachers since last inspection.

TARAGO (N.-V.) :—Visited, 15th October.

Numbers enrolled :—Boys, 18 ; girls, 8 ; total, 26.
Numbers present :—Boys, 13 ; girls, 9 ; total, 22.

Several improvements have been made in the furniture and in its arrangement since last inspection. The enrolment includes nine-tenths of the children in the locality. From various causes beyond the teacher's control the regularity of attendance has been unfavourably affected for some time past. The discipline is *good*, and the moral tone high. Singing and drawing are omitted. The attainments are of easy range, but are commensurate with the pupils' age and time of enrolment in the several classes. The results are *fair*, and have been achieved by earnest and careful work.

TARALGA (V.) :—Visited, 20th May.

Numbers enrolled :—Boys, 25 ; girls, 25 ; total, 50.
Numbers present :—Boys, 12 ; girls, 13 ; total, 25.

The material condition remains as last reported. The internal organization is *good* throughout. About half the children in the locality belong to the school, and, except during harvest time, they attend regularly. On the day of inspection the attendance was low on account of bad weather. The pupils are clean and mannerly, and have been taught elementary drill. The general discipline has improved, and is now *very fair*. The instructional arrangements are satisfactory on the whole, and are set forth in the required documents, which are compiled with exemplary neatness and tolerable judgment. Singing by ear is taught to the second and third classes, and all the other required subjects to the whole. Modern methods are practised, but the instruction is still lacking in substance. The average proficiency slightly exceeds *tolerable*.

TERRANNA (N.-V.) :—Visited, 16th October.

Numbers enrolled :—Boys, 23 ; girls, 18 ; total, 43.
Numbers present :—Boys, 24 ; girls, 18 ; total, 42.

A lavatory and weather-shed are badly wanted. The school stock wants renewing in some items. All children in the locality are enrolled, but severe weather, sickness, and other causes have lately unfavourably affected the regularity of attendance. In some respects the discipline might well be more exacting ; it is *tolerable* on the whole. The classification has been corrected, and is now fairly appropriate. The instruction includes all required subjects, but is wanting in thoroughness in some branches. Too much is taken for granted, and too much has been attempted. The general proficiency is between *tolerable* and *fair*.

TOMERONG (N.-V.) :—Visited, 10th August.

Numbers enrolled :—Boys, 22 ; girls, 8 ; total, 30.
Numbers present :—Boys, 21 ; girls, 7 ; total, 28.

No alteration in the premises. The records are in a very backward and defective state. There are no programmes of lessons. The pupils include nearly all the children of the locality, but are irregular and unpunctual in attendance. The government is very feeble, and the general discipline and the moral tone are consequently unsatisfactory. The classification is informal and unnecessarily minute. For some time past the school has been conducted with but very little regularity or system—the result mainly of the teacher's ill health. The attainments of the pupils are of very limited range ; their proficiency averages only *moderate*. Singing is not taught.

TOWRANG (N.-V.) :—Visited, 11th November.

Numbers enrolled :—Boys, 19 ; girls, 16 ; total, 35.
Numbers present :—Boys, 11 ; girls, 8 ; total, 19.

The material condition is unchanged. In several minor particulars the records are defectively kept. Some of the required wall documents are wanting. Punctuality is defective. The discipline as a whole is *tolerable*. The numbers include all available children, but the new scale of fees has recently lowered the attendance. The instruction is suitable in kind, and is imparted in such a way as to produce *tolerable* results. The temporary closing of the school for a portion of the year prior to the present teacher's entry on duty has affected the standard of attainments as well as the actual proficiency. Singing is not taught.

WARRAGEE (N.-V.) :—Visited, 28th July.

Numbers enrolled :—Boys, 18 ; girls, 18 ; total, 36.
Numbers present :—Boys, 15 ; girls, 14 ; total, 29.

Under an arrangement to hold for twelve months, this school has recently been reconstituted after the lapse of a considerable period, and is now conducted in premises which may be regarded as suitable for a temporary provision. With one exception the records are in a satisfactory state. At the time of inspection only about one-half of the children in the locality were enrolled, and some of these were very young. This is mainly the result of the existence of a competing private school. For so far the attendance has been punctual and regular. The general discipline is promising. The pupils have been judiciously classified, and suitable arrangements have been made for the regulation of the instruction. All required subjects are taught. Modern methods are intelligently practised, but there has not been sufficient time for the teaching to have borne much fruit. The average proficiency in the work gone over is about *fair*.

II.—PROVISIONAL SCHOOLS.

BAMARANG (V.) :—Visited, 3rd August.

Numbers enrolled :—Boys, 15 ; girls, 9 ; total, 24.
Numbers present :—Boys, 15 ; girls, 7 ; total, 22

Two acres of Crown land have been secured for school purposes, and the people have erected a suitable schoolroom. The furniture is barely sufficient. A few defects occur in the records. All the children in the locality are enrolled, but late wet weather and farming operations have materially interfered with the regularity and punctuality of attendance. Some of the pupils are given to whispering, but generally they are obedient, quiet, mannerly, and orderly. An appropriate two-class division of the pupils is made, and all required subjects are taught except singing. Methods of modern type are practised. They are fairly suitable, and produce *tolerably* satisfactory results.

BERELLAN (N.-V.) :—Visited, 28th July.

Numbers enrolled :—Boys, 12 ; girls, 18 ; total, 30.
Numbers present :—Boys, 11 ; girls, 15 ; total, 26.

The windows are in need of repair, and the school stock requires renewing in some items. In several of the minor particulars the records are incomplete. The locality cannot be regarded as a "remote and thinly-populated" one in the meaning of the Public Schools Act. The numbers are about stationary. The obedience of the pupils should be prompter. In other respects the discipline is *fair*. The school is properly divided into three classes. Singing and Scripture lessons are omitted from the prescribed course. Teaching is carried on more systematically than formerly, and the average proficiency of the pupils has risen to nearly *fair*.

BUNDANOON (N.-V.) :—Visited, 17th November.

Numbers enrolled :—Boys, 20 ; girls, 20 ; total, 40.
Numbers present :—Boys, 17 ; girls, 16 ; total, 33.

Blinds for the windows and two new desks have been provided, but hat-pegs are still badly wanted. There are some minor defects in the records. Objections to the new scale of fees have affected the attendance of late. There are sufficient children permanently settled in the locality for a Public School, and nearly all belong to the school. The government, though mild and cheerful, is insufficiently firm and exacting. A third class has been formed within the year, and the course of instruction has been correspondingly extended excepting that analysis of sentences is not taught. The results of examination average *tolerable*.

BUNGONIA (N.-V.) :—Visited, 11th September.

Numbers enrolled :—Boys, 14 ; girls, 9 ; total, 23.
Numbers present :—Boys, 7 ; girls, 4 ; total, 11.

The school buildings are in very bad repair, and also in a very untidy state. There has not been sufficient care taken to keep up a proper stock of requisites. Nearly all children in the locality are enrolled, and of these one-half are regular in attendance. Sickness affected the attendance at the time of inspection. The discipline is only *moderate*. Special religious instruction is still given in a manner contrary to the Council's regulations. Scripture lessons, analysis of sentences, singing and drawing, are omitted from the course. The proficiency of the pupils averages *moderate* in the first class and *tolerable* in the second. The teaching lacks thoroughness.

BURRAGOWANG (V.) :—Visited, 18th November.

Numbers enrolled :—Boys, 16 ; girls, 14 ; total, 30.
Numbers present :—Boys, 13 ; girls, 13 ; total, 26.

Necessary furniture has been added. The schoolroom is inconveniently small. A few defects occur in the records. All available children are enrolled, and attend with *tolerable* regularity and punctuality. Several of them give too little attention to cleanliness and tidiness, and speaking generally they are slow and awkward in their manner, and are not at all well drilled to proper school habits. The time-table is unsuitable, and there are no programmes of lessons. Developmental methods are not well understood, and as a consequence the mental culture and proficiency of the pupils are low. The latter is below *moderate*. Drawing is not taught.

CARRICK (V.) :—Visited, 12th November.

Numbers enrolled :—Boys, 14 ; girls, 17 ; total, 31.
Numbers present :—Boys, 12 ; girls, 17 ; total, 29.

A two-acre site of Crown land has been secured for school purposes, and the people have erected on it a good slab and bark building, which is divided into a schoolroom and a teacher's residence of two apartments. The furniture is suitable, nearly sufficient, and in good order. The school is sufficiently stocked. Five-sixths of the children in the locality are enrolled ; they are regular and punctual in attendance, clean, mannerly, and in *good* order. The regulation of the instruction is provided for on the required documents with fair judgment. The pupils are properly classified. Modern methods are practised ; all required subjects except singing are taught, and the results of instruction approach *fair* on the average. In some subjects the range of attainments is low, but this is the result of the school having been closed for some months prior to the present teacher's taking charge of it in May last.

CHAIN OF PONDS (V.) :—Visited, 25th March.

Numbers enrolled :—Boys, 17 ; girls, 15 ; total, 32.
Numbers present :—Boys, 6 ; girls, 4 ; total, 10.

The material condition remains as last reported. The day of inspection was wet, hence the low attendance. Cleanliness, order, and tone are secured, indicating firmness, vigour, and vigilance in the government. Singing and drawing are omitted, but in the other branches the attainments are *fair*. The standard in the third class for reading and geography is low, and the oral subjects are relatively weak throughout.

COTTAWALLA (V.) :—Visited, 30th November.

Numbers enrolled :—Boys, 22 ; girls, 17 ; total, 39.
Numbers present :—Boys, 13 ; girls, 13 ; total, 26.

The material organization has been rendered satisfactory for present requirements. About four-fifths of the children in the locality are enrolled, and these are very irregular in attendance. The pupils are still given to several objectionable habits. A suitable three-class division of the pupils obtains. The instruction is not well regulated, and the pupils' attainments are uneven. Singing and drawing are omitted. Results ranging from *moderate* in the first and second classes to upwards of *tolerable* in the third are produced.

CUTTYCUTTYGANG :—

CUTTYCUTTYGANG :—Visited, 28th May.

Numbers enrolled :—Boys, 17 ; girls, 15 ; total, 32.

Numbers present :—Boys, 16 ; girls, 14 ; total, 30.

A slab and bark unfloored building has been erected by the people on a piece of Crown land, suitably situated. The furniture is barely sufficient, only *moderately* suitable, and not well arranged. Some of the records are incorrectly kept. The pupils include about three-fourths of the children in the locality. Nearly all of them are punctual, and three-fourths of them attend regularly under ordinary circumstances. They have not been drilled, and are sometimes inclined to be unsteady and talkative, but they are clean, tidy, tractable, and mannerly. Except singing and drawing, all required subjects up to a third class standard are duly provided for. Speaking generally, the matter of instruction is suitable, but owing partly to the classification being too low, and partly to the adoption of individual and rote methods, the instruction fails of results commensurate with the amount of care and labour bestowed on it. The general proficiency is *moderate* in all the classes.

FRANKFIELD (N.-V.) :—Visited, 29th October.

Numbers enrolled :—Boys, 25 ; girls, 17 ; total, 42.

Numbers present :—Boys, 23 ; girls, 16 ; total, 39.

The school premises are private property. The schoolhouse is a good slab and bark building, and is suitably furnished. Various defects occur in the keeping of the records. All children of school age in the locality attend, and most of them regularly. The government is cheerful and *very fairly* effective. The division of the school (two-class) is appropriate, and all required subjects are taught. Methods of modern cast are practised, and with *fair* results.

GARRETT'S FLAT :—Visited, 6th March.

Numbers enrolled :—Boys, 12 ; girls, 22 ; total, 34.

Numbers present :—Boys, 10 ; girls, 20 ; total, 30.

Additional lighting and book-shelves have been provided. The records are incomplete in several particulars. All children of school age in the locality are enrolled. The discipline is *fairly* satisfactory. A second class now exists, and the classification may be considered suitable. The instruction is not properly regulated, there being neither time-table nor programmes of lessons. Object lessons, singing, and drawing, have been omitted by the present teacher. In the other branches the proficiency averages something over *tolerable*. The present teacher took charge but a short time before the inspection. The defects are mainly the result of his inexperience.

GRABBER GULLEN (N.-V.) :—Visited, 9th June.

Numbers enrolled :—Boys, 16 ; girls, 15 ; total, 31.

Numbers present :—Boys, 6 ; girls, 11 ; total, 17.

The building has been re-whitewashed. The property generally is neatly kept. With the exception of the daily report book and quarterly return none of the records can be said to be complete. The leaf of the observation book containing my last report has been torn out. The class-roll has been incorrectly marked. Both the enrolment and the attendance have been seriously affected by the prevalence of whooping-cough. The pupils are very unpunctual, but they are generally clean, and in *tolerable* order. The actual classification is *tolerably* appropriate, but it is not properly represented on the records. There are no programmes of lessons, and the time-table is very defective. Scripture lessons are omitted from the course of instruction. The attainments are very low throughout ; in some branches a mere blank. A change of teachers has been made since last inspection.

GREENWELL POINT (N.-V.) :—Visited, 29th July.

Numbers enrolled :—Boys, 17 ; girls, 13 ; total, 30.

Numbers present :—Boys, 12 ; girls, 10 ; total, 22.

The schoolroom is in the condition last reported, and is sufficiently furnished and stocked. In all main features the discipline is *fairly* satisfactory. Excepting that the first class is unnecessarily divided, the classification is appropriate. All required subjects are taught on modern methods, and with results averaging *fair*. A change of teachers has been made since last inspection.

GURRUNDAR (N.-V.) :—Visited, 11th June.

Numbers enrolled :—Boys, 14 ; girls, 18 ; total, 32.

Numbers present :—Boys, 8 ; girls, 15 ; total, 23.

A teacher's residence has recently been erected, and new and suitable desks and forms have been provided. The records are defectively kept, and some of them are in arrear. The enrolment includes all children in the locality, but the attendance is very fluctuating. The discipline as a whole ranks about *tolerable*. The classification is now appropriate, and the general instructional arrangements are *tolerably* suitable. Singing, drawing, and Scripture lessons are omitted. In the other branches the proficiency ranges from *small* in the second class to between *indifferent* and *moderate* in the first. Average, *below indifferent*.

HIGH RANGE :—Visited, 24th September.

Numbers enrolled :—Boys, 14 ; girls, 8 ; total, 22.

Numbers present :—Boys, 12 ; girls, 8 ; total, 20.

The general organization and discipline are *fairly* satisfactory. The school is appropriately divided into three classes, which are taught all required subjects except singing and analysis of sentences. Explanatory methods are practised. The results of examination are between *tolerable* and *fair*. Attention has been carefully directed to the remedy of defects disclosed last year.

JACQUA (N.-V.) :—Visited, 23rd October.

Numbers enrolled :—Boys, 16 ; girls, 13 ; total, 29.

Numbers present :—Boys, 15 ; girls, 12 ; total, 27.

The premises are rented by the committee. They are fairly suitable, and comprise a room for the teacher's use as well as a schoolroom. The latter is sufficiently and suitably furnished, but the desks were badly arranged. The stock of apparatus is rather scanty. With one exception the records are properly kept. All children of school age within reach are enrolled. Two-thirds of them attend regularly, and nearly all are punctual. They are also clean and generally mannerly and tractable, but they are not well drilled to school movements, and to habits of prompt and sustained attention and obedience, self-reliance and order. There are minute and unnecessary divisions of the classes, and the classification does not hold for all subjects. The teaching is mainly individual, and rote work is largely practised. Except in mere mechanical and pure memory work, the proficiency is very low, and the average is only *indifferent* on the whole. The actual attainments of the pupils are considerably below the standard.

JANNUNG (V.) :—Visited, 13th August.

Numbers enrolled :—Boys, 13 ; girls, 11 ; total, 24.

Numbers present :—Boys, 13 ; girls, 11 ; total, 24.

Hat-pegs have been provided since last inspection. The internal organization is as good as circumstances will permit, and in fact good judgment as well as ingenuity. Two families in the neighbourhood are kept away from the school. The discipline is *very fair*, and the moral tone healthy. The instruction is properly regulated, and includes all required subjects up to a third class standard. It is imparted with system, care, and thoroughness, and produces *very fair* results.

JANUGARRAH (N.-V.) :—Visited, 19th August.

Numbers enrolled :—Boys, 14 ; girls, 10 ; total, 24.

Numbers present :—Boys, 14 ; girls, 10 ; total, 24.

A neat, well-built, suitably furnished schoolhouse, on an eastern spur from the Currcobilly Range, attended by the families of several selectors. Aid has but recently been granted. The general discipline and moral tone are promising. An appropriate two-class division of the pupils has been made, and all required subjects are taught. For the time the school has been opened satisfactory progress has been made. The actual proficiency of the pupils is *tolerable* on the average.

KIRKDALE (N.-V.) :—Visited, 30th October.

Numbers enrolled :—Boys, 16 ; girls, 9 ; total, 25.

Numbers present :—Boys, 13 ; girls, 7 ; total, 20.

No change has been made in the premises, which are quite unsuitable. Some of the school records and the programmes of lessons are incomplete. The time-table requires remodelling. The enrolment includes all available children, who attend very regularly, and are generally punctual. In all other respects the discipline is *fair*. The classification is still too minute. No provision is made on the time-table for teaching drawing or Scripture lessons. In the remaining branches the average proficiency exceeds *tolerable*.

LAGGAN (N.-V.) :—Visited, 2nd December.

Numbers enrolled :—Boys, 13 ; girls, 18 ; total, 31.

Numbers present :—Boys, 8 ; girls, 11 ; total, 19.

The schoolroom is inconveniently small, but otherwise tolerably suitable. Another desk, bookshelves, and hat-pegs are badly wanted. There are no external appointments. The stock of records is incomplete. At the time of inspection the attendance was affected by farming operations, and in some cases the teacher's best efforts have proved insufficient to overcome the ordinary negligence of the parents in the matter. All available children are enrolled however. As regards order, obedience, and attention, the discipline is *very fair*. All required subjects up to a third-class standard, except drawing, are provided for with fair judgment. The average proficiency exceeds *tolerable*.

MIDDLE ARM (V.) :—Visited, 3rd December.

Numbers enrolled :—Boys, 14 ; girls, 9 ; total, 23.

Numbers present :—Boys, 11 ; girls, 6 ; total, 17.

At the time of inspection the present teacher had been only two weeks in charge of the school, and had made no changes in the organization. The school remains in the material condition last reported. The time-table requires remodelling, to adapt it to a required amended classification. Programmes of lessons and other required wall documents are wanting. The stock of records is incomplete. The school stock requires to be more neatly arranged. Four-fifths of the children in the locality are enrolled, and the remainder are promised. On the day of inspection the attendance was low, from an accidental cause, but ordinarily is regular and punctual. The government is cheerful and vigilant, and the general discipline *very fair*. The pupils were not examined.

MUMMELL (N.-V.) :—Visited, 3rd June.

Numbers enrolled :—Boys, 20 ; girls, 14 ; total, 34.

Numbers present :—Boys, 7 ; girls, 6 ; total, 13.

The material condition remains as last reported. The school stock is short in several items ; the records are very incomplete ; and neither programmes nor other wall documents are provided. All children in the locality are enrolled, and, during the greater part of the year, would seem to attend with *fair* regularity. At the time of inspection the majority were said to be away picking corn. The pupils are addicted to whispering, and some of them to copying, but they are generally mannerly and subservient to command. Singing, drawing, and Scripture lessons are omitted. The oral lessons are extremely weak, and in arithmetic the pupils have been prematurely advanced. The average proficiency falls below *moderate*. Rote work is largely resorted to, and the teaching has been, to a considerable extent, individual. As a consequence, the mental effort and culture of the pupils are both low. The defects pointed out at last inspection remain, and the school has deteriorated. The teacher's illness and absence from duty, and the consequent interruption to the school work, are the excuse advanced, and may be accepted to some extent.

PEELWOOD (N.-V.) :—Visited, 29th May.

Numbers enrolled :—Boys, 33 ; girls, 29 ; total, 62.

Numbers present :—Boys, 26 ; girls, 19 ; total, 45.

The building is falling into disrepair, but measures are in progress for the establishment of a vested Public School. The schoolroom is not kept clean ; the furniture is badly arranged ; and the school stock is very scanty, has been abused, and is scattered about the room. The records are incomplete in various particulars. Nearly all children in the locality attend. Punctuality and regularity of attendance are, on the whole, *fairly* satisfactory, but the pupils are very boisterous and noisy, and, in some instances, not sufficiently clean. Order, too, is lax. There are only two classes ; there should be three. The programmes of lessons are mere transcripts from the Standard of Proficiency. Object lessons and geography have been very much neglected, and singing and drawing are not taught at all. The proficiency in the other branches is below *moderate*. Considerable energy is infused into the general management, but it is erratic, and much of it is wasted in mere bustle.

Note.—Since the inspection the school has been converted into a Public School.

PRJAB (N.-V.) :—Visited, 27th November.

Numbers enrolled :—Boys, 11 ; girls, 16 ; total, 27.

Numbers present :—Boys, 7 ; girls, 12 ; total, 19.

Another desk is badly wanted. Internally, the school is fairly well organized. All available children are enrolled. Much more life and energy have been thrown into the government and general management. In all main features, the discipline is now *fairly* satisfactory. The pupils are appropriately divided into three classes, and are taught all required subjects, except singing and drawing. Rote work is still mixed up with the teaching to an undue extent. The results of examination are below *tolerable*.

REDGROUND :—

REDGROUND :—Visited, 2nd December.

Numbers enrolled :—Boys, 16; girls, 15; total, 31.
Numbers present :—Boys, 15; girls, 10; total, 25.

The material condition remains as last reported. Omissions occur in the keeping of the records. All available children are enrolled, and ordinarily attend with very *fair* regularity. They are also punctual and clean. When in school, however, they are much given to talking and copying. The classification is much too high, and is far from judicious. The Scripture lessons, singing, and drawing, are omitted. Rote work is still mixed up to an unnecessary extent with explanatory teaching. The pupils are very dull over their work, and low in mental power. Their attainments are considerably below the requirements of the standard and the entries in the lesson register. The general proficiency is below *indifferent*.

SHAW'S CREEK :—Visited, 8th September.

Numbers enrolled :—Boys, 14; girls, 20; total, 34.
Numbers present :—Boys, 6; girls, 14; total, 20.

The schoolhouse has been floored. Additional desk accommodation is badly wanted. In various minor particulars the records are imperfect. In consequence of the severity of the weather and prevalent sickness, and from various minor causes, both the enrolment and the attendance have been rather low for some time past. The government is vigilant, cheerful, and fairly effective. The late irregularity of attendance has been allowed to interrupt, in some matters to an unnecessary extent, the regularity of the instruction. Object lessons and geography have suffered most from this cause. In each of the two classes the general proficiency is *tolerable*.

SPRING CREEK (Yass River—N.-V.) :—Visited, 5th May.

Numbers enrolled :—Boys, 13; girls, 14; total, 27.
Numbers present :—Boys, 11; girls, 13; total, 24.

The people have erected on private property a slab and bark house of two rooms—a schoolroom and teacher's residence. The ground is unenclosed, and there are no external appointments. The pupils include all children in the locality except one family, and are regular and punctual in attendance, clean, and in *good* order. They are appropriately classified, and are taught all required subjects except singing and drawing. For the time the school has been in operation, the instruction is of satisfactory range. The proficiency is *fair* in arithmetic, grammar, and geography; *tolerable* in reading, writing, and dictation; and *small* in object lessons; average, *tolerable*. Of late the teacher has not shrunk from his duty in the mode of conducting the school, which is now worked as a Public School.

SPRING FLAT (Tallagandra—N.-V.) :—Visited, 5th November.

Numbers enrolled :—Boys, 17; girls, 15; total, 32.
Numbers present :—Boys, 14; girls, 15; total, 29.

The school has but recently been established. A good schoolhouse and a hut for the teacher's use have been erected, and the ground has been enclosed. The necessary funds were raised by public subscription "*towards the erection of a Provisional School at Tallagandra, Gundaroo,*" but the whole premises have now been vested in Denominational Trustees, not one of whom belongs to the recognized School Committee. The residents and locality are thus deprived of the advantage of the Council's supplementing the local contributions. At the time of inspection the school stock had not been received, so that the internal organization was very imperfect. The teacher had, however, made *tolerably* suitable temporary arrangements. The pupils enrolled include eight-ninths of the children of school age in the locality. Three-fourths of them are regular in attendance, and they are clean, mannerly, and obedient. The general discipline is promising. In consequence of the want of the necessary books and other appliances, the pupils were not examined.

TARLO (N.-V.) :—Visited, 15th May.

Numbers enrolled :—Boys, 13; girls, 14; total, 27.
Numbers present :—Boys, 10; girls, 12; total, 22.

The material condition is bad; the building is positively unsafe. Many inaccuracies of detail occur in the keeping of the records. The discipline has improved, and is, on the whole *fair*. Punctuality is still a defective point. The existing division of the pupils (two class) is appropriate. The pupils are attentive; but for so far only little has been done in the way of a proper development of their mental faculties. The results of examination are *moderate*.

WATERLAND (Run of Water—N.-V.) :—Visited, 23rd April.

Numbers enrolled :—Boys, 8; girls, 10; total, 18.
Numbers present :—Boys, 5; girls, 7; total, 12.

School is held in a Primitive Methodist chapel, and the church furniture is utilized for school purposes. Book-shelves and hat-pegs are badly wanted. The stock of apparatus is scanty and untidily arranged. Of the records, the admission register is the only one in a satisfactory state. The others give clear evidence of carelessness and neglect. Under ordinary circumstances all the children in the locality are enrolled, but at the time of inspection several families were kept away by whooping-cough. The pupils are slow, but in other respects the discipline is *tolerably* satisfactory. The arrangements for regulating the course of, and the mode of imparting, the instruction, are all seriously defective. The time-table is next to useless, and there are no programmes of lessons. Object lessons, singing, and drawing, are entirely omitted, and the teaching in grammar and geography is all but worthless. The teaching consists mainly of rote work, and neither secures real effort on the part of the pupils nor leaves sufficient positive impress on their minds and habits. The average proficiency is little above *indifferent*.

YARRUNGA :—Visited, 11th March.

Numbers enrolled :—Boys, 15; girls, 14; total, 29.
Numbers present :—Boys, 14; girls, 14; total, 28.

Hat-pegs and a table have been provided since last inspection. Nearly all the children in the locality are enrolled. They are still trained to habits of order, cleanliness, obedience, and attention. Object lessons are omitted for the first class, and singing and drawing altogether. A second class has been formed, and the general proficiency ranges from *fair* in it to *very fair* in the first. With few exceptions, the pupils still work industriously and thoughtfully. A change of teachers has taken place since last inspection.

III.—HALF-TIME SCHOOLS.

UPPER GUNDAROO (N.-V.) :—Visited, 4th November.

Numbers enrolled :—Boys, 11; girls, 10; total, 21.
Numbers present :—Boys, 7; girls, 9; total, 16.

The school is worked in conjunction with Sutton H.-T. Some minor defects occur in the records. There are still no programmes of lessons, and others of the required wall documents are wanting. The enrolment includes nearly all available children, and the several features of the discipline are *tolerably* satisfactory. The classification is adapted to the attainments of the pupils. Object lessons and drawing are omitted. The proficiency is *moderate* in each of the two classes.

SUTTON

SUTTON (N.V.) :—Visited, 4th November.

Numbers enrolled :—Boys, 7 ; girls, 5 ; total, 12.
Numbers present :—Boys, 6 ; girls, 5 ; total, 11.

Hut-pegs and book-shelves are badly wanted. The records are defective in several of the less important particulars. The furniture and apparatus are not suitably arranged, and the latter is very scanty. An unsanctioned reading-book has been in use. Nearly all available children are enrolled, and regularity of attendance is *fairly* satisfactory. The other features of the discipline are *tolerable*. The pupils are appropriately divided into two classes. Of the subjects required for these, object lessons are omitted in the first class and drawing in the second. The general attainments of the pupils are *tolerable* in the first class, and *moderate* in the second.

MULLENGULLENGA (N.V.) :—Visited, 22nd October.

Numbers enrolled :—Boys, 7 ; girls, 4 ; total, 11.
Numbers present :—Boys, 6 ; girls, 4 ; total, 10.

This school is worked in conjunction with Windellama H.-T. The Bronte Church of England building is still used, and is in the condition last reported. Some defects occur in the records. Nearly all available children are enrolled. In all main features the discipline is *fair*. The classification is too high, and individual instances of mis-classification occur. The pupils' attainments are of limited range ; the average proficiency is about *moderate* ; the pupils are slow and dull.

WINDELLAMA (N.V.) :—Visited, 22nd October.

Numbers enrolled :—Boys, 10 ; girls, 3 ; total, 13.
Numbers present :—Boys, 9 ; girls, 3 ; total, 12.

The material condition is still seriously defective. The records and instructional documents are in a very incomplete state. The premises are not neatly kept. Nine-tenths of the children in the locality are enrolled, and attend with *fair* regularity and *tolerable* punctuality. In other respects the discipline is *fair*. Singing and drawing are omitted. Rote work has given place to some extent to explanatory methods, which, however, are not well understood or effectively practised. The attainments are very uneven. The best results are produced in the more mechanical branches. The pupils' mental culture is low. The average proficiency approaches *fair*.

NEW BRISTOL :—Visited, 12th August.

Numbers enrolled :—Boys, 6 ; girls, 10 ; total, 16.
Numbers present :—Boys, 6 ; girls, 9 ; total, 15.

No change in the school premises. All children of school age in the locality are enrolled, and attend regularly and punctually. They are generally willing and mannerly, but are wanting in self-control, and require to be thoroughly drilled. There are two classes, an arrangement adapted to the attainments of the scholars. The instruction is properly regulated and carefully imparted. The average proficiency of the pupils is between *tolerable* and *fair*.

NORTH HUSKISSON :—Visited, 11th August.

Numbers enrolled :—Boys, 8 ; girls, 10 ; total, 18.
Numbers present :—Boys, 6 ; girls, 10 ; total, 16.

The premises are in the condition last reported. The stock of working materials is hardly sufficient. Nearly all children in the locality are enrolled. They are reasonably regular, and generally punctual in attendance. When in school the pupils are inclined to talk, and have not yet been drilled to act in concert in obedience to understood orders, yet they manifest a willing and obedient spirit, and are mannerly. Suitable instructional arrangements are in force. Teaching is conducted with system, diligence, and care. The pupils' general proficiency rises from *tolerable* in the second class to upwards of *fair* in the third. Singing is the only prescribed subject not taught. The school is worked in conjunction with New Bristol H.-T., 12 miles distant. The road between the two is difficult, dreary, and frequently dangerous. The regularity with which the teacher has discharged his duties under these circumstances, and in the face of all weathers, is deserving of special notice.

QUIALEGO (N.V.) :—Visited, 21st October.

Numbers enrolled :—Boys, 4 ; girls, 10 ; total, 14.
Numbers present :—Boys, 2 ; girls, 8 ; total, 10.

A wooden floor and hat-pegs are badly wanted. All children in the locality are enrolled, and they attend regularly and with *fair* punctuality. In point of order and general demeanour they have improved. The general discipline is now *fairly* satisfactory. Suitable instructional arrangements are in force. Results varying from *tolerable* in the first class to *moderate* in the second have been achieved.

SPRINGFIELD (N.V.) :—Visited, 12th October.

Numbers enrolled :—Boys, 7 ; girls, 6 ; total, 13.
Numbers present :—Boys, 4 ; girls, 3 ; total, 7.

The school is taught in conjunction with Quialego H.-T. The building now occupied is a substantial structure, fairly well organized and furnished. All the children of school age in the locality are enrolled, and are tolerably regular and punctual. In its main features the discipline has improved, and is now *fair*. The pupils are appropriately classified, and are taught all required subjects except singing and drawing. The average proficiency is *tolerable*. Grammar, geography, and object lessons are weak branches.

RICHLANDS (N.V.) :—Visited, 27th May.

Numbers enrolled :—Boys, 6 ; girls, 9 ; total, 15.
Numbers present :—Boys, 4 ; girls, 6 ; total, 10.

This school is worked in conjunction with Yelbraith H.-T. The condition of the schoolroom remains as last reported, and is quite unsatisfactory. Some defects occur in the keeping of the records. All children within reach of the school are enrolled, and two-thirds attend regularly. The details of discipline are properly attended to, and elementary drill is taught. Singing and drawing excepted, all subjects required for the classification (three-class) are taught. The methods are of approved kind, and the proficiency of the pupils reaches *fair* in the first class, and exceeds it in the second and third. The teaching has been systematic and continuous, although no programmes have been constructed. A change of teachers has taken place since last inspection.

YELBRAITH (N.V.) :—Visited, 27th May.

Numbers enrolled :—Boys, 7 ; girls, 10 ; total, 17.
Numbers present :—Boys, 5 ; girls, 7 ; total, 12.

The building is in the state last reported. Some defects occur in the keeping of the records. Nearly all children in the locality attend. The discipline is *very fair* throughout. The pupils are judiciously divided into two classes, all subjects required for which are taught except singing and drawing. The general character and arrangements for carrying on the instruction are the same as at Richlands. The mental culture and general proficiency of the pupils are *fair*.

D. S. HICKS,
Inspector.
MATTLAND

MAITLAND DISTRICT.

INSPECTOR'S General Report upon Schools for 1874.

THE number of schools in this district at the close of 1873 was eighty-three (83), comprising eighty-seven (87) departments, since when the following additions and reductions have been effected. A superior Public School of three departments has been established in West Maitland; the proposed Public School at Greta will be opened in a week or two; and another at Scone is in course of erection. Provisional Schools have also been established at Park, Stockyard Creek, Waverley, Belltrees, and Rouchell Brook, but those of the three latter places and Vera are temporarily closed for lack of teachers. In consequence also of diminutions in their attendance, the Blandford P. has lapsed; the Singleton P., Morpeth C.E., and East Maitland R.C., have been reduced to the rank of schools of one department; and the certificates of the Bishop's Bridge C.E., Hinton C.E., Paterson C.E., and West Maitland Pres., have been withdrawn. The Wesleyan School of West Maitland has also been voluntarily closed in favour of the local Public School. To guard against misapprehension, however, it should be stated that except in one case, that of Paterson C.E., such reductions have been made only in places where schools were in excess; and it may be confidently affirmed that they have been fraught with beneficial results, educational and economical.

The number of schools now (December, 1874) enrolled in this district is seventy-eight (78) consisting of eighty-two (82) departments, classed as follows:—Public, thirty-two; Provisional, twenty-two; Half-time, six; Church of England, twelve; and Roman Catholic, ten. These are widely distributed among the first and the second class centres of the population; and they afford the means of education to a large proportion of the children of school age. Further school extension, however, is needed, and efforts have been made to promote such extension, but with only partial success, the chief bar to progress being the difficulty of getting the small, isolated, and newly settled communities of free selectors to erect and furnish suitable schoolhouses at their own expense. Another difficulty also is that of deciding as to the permanent settlement of such communities; otherwise they might reasonably be accorded the same pecuniary advantages as are given to those applying for Public Schools. Notwithstanding such hindrances, however, the steady progress which school extension has made during the year affords ground for satisfaction and hope; for not only have six schools been established and four others provided for, but applications also for the formation of schools at Paterson, Upper Falbrook, and Dartbrook have been favourably considered, and inquiries instituted as to the establishment of small schools at Murray's Run, Giant's Creek, Sandy Creek, First Creek, Owen's Gap, Elliston, Goorangoola Creek, Lostock, and Peshurst. It is also gratifying to remark that, when the educational claims of these last-named places have been satisfied, there will be very little scope for further school extension in the district.

The year has been favourable to the work of inspection. All the schools in the district have been visited, except those of Stanhope, Knockfin, Webber's Creek, and Stockyard Creek, the numbers and kinds of the inspections being as follows:—Nineteen general, sixty-three regular, six ordinary, and ninety-three incidental, which last were confined to forty-one schools only. These general and regular have involved investigations into the material, moral, and intellectual condition of the schools, and the results of such have been measured by the usual high standards.

The total number of schools or departments that have existed in the district during the whole or part of the year is ninety (90), of which eighty-two have been in operation the whole year, and eight (8) a part thereof.

The material condition of the schools continues to improve; but, owing in some measure to the non-vested character of three-fourths of the school properties, and to the difficulties of raising funds to defray the cost of effecting necessary repairs and additions, the improvement is not so speedy and complete as could be desired. There is much to be done, however, in matters of detail before the material organization of the schools can be pronounced satisfactory. Many of the schools are without water-tanks, washing appliances, and bells; and in sixteen instances the out-office accommodation is either inadequate or absolutely wanting. In no instance is provision made for the physical training of the scholars, and in three only (Singleton P., Wollombi P., and St. Paul's C.E.) are weather-sheds erected for their health and comfort. It is gratifying to report, however, that there are but few schools that do not afford more than adequate accommodation for the available attendances, and whose interior appointments are not in keeping with existing requirements; the highest type, as yet, of material organization being that of the West Maitland Public School—the style, design, and structure of whose buildings are of superior merit. Good buildings have also been erected for the West Maitland R. C. (Boys), and Greta P. Schools; and others are in course of erection for the Scone Public School. In addition to these improvements, twelve school buildings have undergone important repairs and alterations, and steps have been taken to re-organize the Public Schools of Millfield, Ellalong, and Muswell Creek. New and larger buildings are needed for the Public Schools of Bishop's Bridge, Cessnock, Lochinvar, Oswald, and Murrurundi; but there is at present little prospect of funds being locally raised towards the cost of their erection, owing in great measure to the growing popular feeling that it is the office of the State to effect such improvements by the agency of indirect taxation; and whatever may be the moral worth of such a feeling, it obviously originates from the indisposition of some people to give subscriptions, and the repugnance of others to collect them. Classifying the schools according to the character of their material organization, forty-four (44) rank from fair to very good, and the rest (38) from moderate to tolerable.

The character of the attendance is neither satisfactory nor encouraging, and is very little better than that described in last year's report. During this year 6,432 scholars have been enrolled, and the average quarterly enrolments and daily attendance have been only 5,140 and 3,347 respectively. These latter numbers however would have been respectively $1\frac{1}{2}$ and $3\frac{1}{2}$ per cent. higher had it not been for the epidemic among children in the months of February and March. It thus appears that, exclusive of the known 500 or 600 children for whom schools are not yet provided, and of those who go to no school at all, there are not fewer than 3,085 others deriving little permanent benefit from the schools around them. Comparing the daily attendances with the annual and quarterly enrolments, the rates of regularity are 52 and 65 per cent. respectively, rates that would disentitle schools to the receipt of State aid under the Revised Code in England. The significance of these facts, moreover, is heightened by two others; first, that in the 1st, 2nd, 3rd, and 4th (or highest) classes, the percentages of pupils are 44, 31, 21, and 4, respectively; and secondly, that the respective average ages of such classes are 7, $9\frac{1}{2}$, 11, and 13 years. As to the value of such averages of attendance and of ages may be quoted the following forcible remarks of the Rev. James Frazer:—"It appears to me that a fundamental fallacy lies at the root of any inferences drawn either from averages of attendance or averages of age. You get your average, but it is not a true representation of the facts of the case. The result of one boy's having attended school 200 days in the year, while another has only attended 50, is not the same, nor anything like the same as if each had attended 125 days. Two girls leave school, one at seven the other at thirteen years of age; the average is ten; but will any one tell me that the same effect, socially and intellectually, is the same as if each child had stayed at school till she was ten? In the latter case a good school being given, both girls would have been decently educated, sufficiently so perhaps (?) for their station in life."

The state of the attendance, as exhibited on the days of inspections, and as compared with last year's results, is as follows:—

	1873.	1874.
Number of Public Schools inspected	40	60; increase, 50 per cent.
Number of Denominational Schools inspected.....	28	22; decrease, 11·4 per cent.
Number of Public School children examined.....	1,458	2,139; increase, 46 per cent.
Number of Denominational School children examined	1,722	1,381; decrease, 20 per cent.

The disciplinary condition of the schools continues to improve, pleasing evidence of which is afforded by the promotions of seventeen teachers to higher grades of classification, two of whom were highly deserving of special recommendation. In this particular and in their order of merit, the different classes of schools stand thus:—(1) Public, (2) Denominational, (3) Provisional and Half-time. In fifty-one (51) schools, eleven (11) of which are Public Schools distinguished for their high moral character, the discipline ranks from fair to very good; in the rest (31) from moderate to tolerable, which latter marks are applied to results below the standard requirements. There are very few schools, however, in which the discipline is not in fair accordance with the teachers' grades of classification; and but very few in which moral defects result from the teachers' unpardonable negligences. Some of the schools are in a sleepy condition, and are managed by persons who have either not been trained to their work or who are feebly constituted for governing and educating children,—feeble in tact, energy, and enthusiasm, in firmness of purpose, and in promptness of attention; or in that spirit which is sternly intolerant of disorder, waste of time, or laxities in speech and in manners. In connection with this matter of discipline should be mentioned that an instructor has been appointed to give lessons in military drill in the schools of Maitland, Morpeth, and Hinton; and that the good effects of such lessons are gradually manifesting themselves in the conduct and bearing of the pupils. It is hoped also that the benefits of such instruction will be gradually extended to the schools of Singleton, Muswellbrook, and other like populous townships.

In five-sixths of the schools the prescribed course of instruction is complete, and is regulated with fair average skill; in the rest, however, it is marked by the entire or partial absence of object lessons, singing, drawing, and sewing, in consequence of the untrained or unmarried condition of the teachers. The classification of the scholars is in most instances of very fair merit, but the promotions of pupils to the higher divisions is not as rapid as could be wished, because of the irregularity of attendance, or of feebleness in the discipline and the teaching. There are only eight schools with fourth classes, to which are given lessons in geometry, algebra, mensuration, or Latin; and in fourteen others, chiefly small Provisional Schools, third classes have not yet been formed. The methods of instruction are of different degrees of merit, ranging from moderate to good; and are applied with similar degrees of zeal, painstaking, and efficiency, the average of which is on the whole fair. In several instances the teaching is not sufficiently instructive and educative: it appeals too little to the understanding of the pupils, and leaves them too frequently with inadequate power to do what is of paramount importance—to teach themselves. In others, however, the empirical character of the teaching is more or less counterbalanced by the earnestness and the steady perseverance of the teachers. Speaking generally, the intellectual character of the schools has improved, and would certainly have shown to better advantage had the teachers spent more time in the examination of their classes on the matter of their past lessons. Last year, the percentage of the schools in which the average proficiency was up to and above the prescribed standard was 21; this year it is 32.

During the year there have been five examinations of teachers, and it is gratifying to report that most of them have succeeded in gaining higher grades of classification. Four teachers have gained promotion for continued good service, and three others for the improved condition of their schools. There has been, however, but one instance of a teacher voluntarily presenting himself for examination, which does not speak well for the studiousness or ambition of his brethren. Considering them as a whole, the teachers of this district are respectable and trustworthy, and among them are men of considerable energy and ability.

The local supervision of the schools is of much the same defective character as that described in former reports. There are still very few instances of Local Boards either visiting their respective schools in a regular and official manner, or of voluntarily exerting themselves to effect material improvements, to increase the attendance of scholars, or to make the teachers comfortable and contribute to their happiness. The Local Boards of Denominational Schools have in general but a nominal existence, the powers and duties of such bodies being almost exclusively confined to the clergymen, some of whom manifest a pleasing interest in their work, more particularly that relating to the attendance of the scholars.

Summing up, the material condition of the schools in general is fair and progressive; the moral tone of them is healthy, improved, and promising; and the character and results of the instruction are tolerably satisfactory and improved. The district is very fairly well provided with the means of education; but the character of the attendance is unsatisfactory and unimproved, and requires to be effectually dealt with.

East Maitland, 18/1/75.

J. S. JONES,
Inspector.

MAITLAND DISTRICT.

SUMMARY of Reports upon Public Schools inspected in 1874.

ABERDEEN (N.-V.) :—Visited, 29th October, 1874.

Numbers enrolled :—Boys, 24; girls, 28; total, 52.
Numbers present :—Boys, 23; girls, 25; total, 48.

1. This school is held in a church, and its material organization is but moderate. Water-tank, lavatory, weather-shed, and additional desks are needed. 2. Two-thirds of the pupils are regular and punctual; fair order is maintained, and the government is healthy, fair, and improved. 3. The prescribed subjects are taught, except sewing; the instruction is appropriately regulated, and the teaching is earnest, animated, and tolerably skilful. 4. The attainments are improved, tolerable, and promising.

ABERGLASSLYN (V.) :—Visited, 27th July, 1874.

Numbers enrolled :—Boys, 30; girls, 15; total, 45.
Numbers present :—Boys, 28; girls, 10; total, 38.

1. The material organization is moderate; book-press, hut-pegs, additional apparatus, and bell needed. 2. The attendance is irregular, unpunctual; the government is feeble; and the prevailing tone is but moderately satisfactory. The school fees are low and precarious, and carelessly exacted. 3. The course of instruction is very elementary, and ill-regulated; the teaching is mechanical and feeble, and the intellectual progress of the pupils is unsatisfactory. 4. The attainments are indifferent.

BISHOP'S BRIDGE (N.-V.) :—Visited, 16th June.

Numbers enrolled :—Boys, 30; girls, 19; total, 49.
Numbers present :—Boys, 20; girls, 15; total, 35.

1. The material condition and organization are moderate; the supply of furniture is improved; and that of apparatus tolerably adequate; and the school records are pretty well kept. 2. The discipline is healthy, improved, and fair. 3. The instruction is earnest, fairly well regulated, and tolerably intelligent, but not adequately vivid and impressive. 4. The attainments are tolerable and improved.

BLANDFORD (P.—N.-V.)

Closed at the date of my visit.

BRANXTON

BRANXTON (V.) :—Visited, 16th and 19th October.

Numbers enrolled :—Boys, 37 ; girls, 35 ; total, 72.
Numbers present :—Boys, 30 ; girls, 30 ; total, 66.

1. Lavatory and weather-shed are greatly needed ; otherwise the material aspect and organization are satisfactory. 2. The attendance is punctual and tolerably regular, the discipline healthy and effectual, and the moral tone pleasing. 3. The course of instruction is complete, and well regulated, and the teaching is zealous, painstaking, and skilful. 4. The attainments are, on the whole, very fair and promising.

BROKENBACK (V.) :—Visited, 24th June.

Numbers enrolled :—Boys, 27 ; girls, 25 ; total, 52.
Numbers present :—Boys, 11 ; girls, 21 ; total, 32.

1. Weather-shed, water-tank, and lavatory are needed ; otherwise, the material organization is satisfactory. 2. One-half of the attendance is regular and very fairly punctual ; the general aspect is neat and clean ; and the discipline is of very fair merit. 3. The prescribed subjects are taught except singing ; the occupation of the pupils is appropriately regulated, and the teaching is diligent, painstaking, and very fairly intelligent. 4. The attainments are improved, and from fair to very fair.

CAMTSIE (V.) :—Visited, 5th June.

Numbers enrolled :—Boys, 18 ; girls, 24 ; total, 42.
Numbers present :—Boys, 10 ; girls, 15 ; total, 25.

1. Bell, water-tank, and lavatory are needed ; otherwise the material organization is improved and satisfactory. 2. The attendance is low and irregular, but reasonably punctual ; the government is intelligent ; and the disciplinary aspect of the school very fair. 3. The course of instruction is complete and appropriately regulated, and the teaching is zealous and painstaking. 4. The attainments are from tolerable to fair. 5. The school fees are low and badly paid.

CRESSNOCK (N.V.) :—Visited, 17th June.

Numbers enrolled :—Boys, 13 ; girls, 16 ; total, 29.
Numbers present :—Boys, 9 ; girls, 13 ; total, 22.

1. New school buildings are greatly needed, the present schoolhouse being uncentral, too small, and inadequately appointed. 2. The attendance is low, irregular, and tolerably punctual ; the government is sound and intelligent ; and the moral tone is fair. 3. The prescribed subjects are taught, except sewing ; and the instruction is painstaking, fairly skilful, and well regulated. 4. The attainments are improved, and nearly fair.

DUNMORE (V.) :—Visited, 23rd April.

Numbers enrolled :—Boys, 39 ; girls, 30 ; total, 69.
Numbers present :—Boys, 36 ; girls, 23 ; total, 59.

1. Water-tank, lavatory, weather-shed, and fencing of play-ground are greatly needed ; otherwise the organization is satisfactory. 2. Three-fifths of the attendants are regular and punctual, and a steady increase in the numbers has necessitated the appointment of a pupil teacher. The government is firm and intelligent ; the pupils are clean, orderly, and well-behaved, but wanting in zeal and self-possession. The moral tone is very fair. 3. The course of instruction is complete, and appropriately regulated. The methods are of fair merit, and the teaching is diligent and painstaking. 4. The attainments range from tolerable to fair. General results about "very fair," as far as the teacher is responsible.

ELLALONG (N.V.) :—Visited, 12th February.

Numbers enrolled :—Boys, 21 ; girls, 17 ; total, 38.
Numbers present :—Boys, 19 ; girls, 15 ; total, 34.

1. The material condition is neglected and unsatisfactory, the roof leaky, the supply of furniture inadequate, and the playground without bell, lavatory, or weather-shed. 2. The attendance is low and unpunctual, but fairly regular ; and the discipline is healthy, tolerable, and promising. 3. The prescribed subjects are taught, except singing. The instruction is tolerably well regulated, but the classification is low in point of age ; and the teaching, though diligent and promising, is stiff and mechanical. 4. The attainments are moderate.

FALBROOK (V.) :—Visited, 24th March.

Numbers enrolled :—Boys, 13 ; girls, 13 ; total, 26.
Numbers present :—Boys, 6 ; girls, 7 ; total, 13.

1. The material condition is unsatisfactory ; repairs to schoolhouse, teacher's residence, and out-offices greatly needed. There is neither bell, lavatory, weather-shed, nor book-press. 2. The discipline is healthy and fair. 3. The prescribed subjects are taught, except singing, but drawing and object-lessons are neglected. The occupation of the pupils is fairly well regulated, and the teaching is earnest and tolerably intelligent. 4. The attainments are tolerable.

FISHERY CREEK (V.) :—Visited, 21st April.

Numbers enrolled :—Boys, 28 ; girls, 14 ; total, 42.
Numbers present :—Boys, 27 ; girls, 12 ; total, 39.

1. The material condition has been much improved by additions and repairs, and is now of fair merit. Sufficient care is not bestowed upon the books, slates, and school records—the condition of the latter being unsatisfactory. 2. The government is feeble, the conduct of the scholars partially satisfactory, and the character of the school-work languishing. The moral tone is barely tolerable. 3. The prescribed subjects are taught, the classification is defective, the programmes of lessons are in abeyance, and the teaching is feeble and but moderately skilful. 4. The attainments are moderate.

GOSFORTH (V.) :—Visited, 28th July.

Numbers enrolled :—Boys, 17 ; girls, 17 ; total, 34.
Numbers present :—Boys, 15 ; girls, 17 ; total, 32.

1. The material condition and organization are improved and fair. Additional furniture has been provided, and a water-tank is in course of construction. 2. The attendance is fairly punctual, but low and irregular. The government is sound ; very fair order is maintained ; and the pupils are clean and well-behaved. 3. The course of instruction is complete and well-regulated ; and the teaching is painstaking and tolerably skilful. 4. The attainments are tolerable.

HINTON (V.) :—Visited, 28th and 29th May.

Numbers enrolled :—Boys, 57 ; girls, 42 ; total, 99.
Numbers present :—Boys, 32 ; girls, 16 ; total, 48.

1. The material condition and organization have been greatly improved ; class-room, lavatory, and additional out-offices needed. 2. The disciplinary condition of the school is good and promising. 3. The prescribed subjects are taught, except singing ; the methods are of very fair merit ; and the teaching is zealous and painstaking. 4. The attainments are only tolerable, for which the present teacher is not responsible.

LAGUNA (V.) :—Visited, 18th February.

Numbers enrolled :—Boys, 12 ; girls, 19 ; total, 31.

Numbers present :—Boys, 10 ; girls, 13 ; total, 23.

1. Material defects have been in great measure remedied. Bell, water-tank, and weather-shed are still needed. The organization is fair. 2. Seven-ninths of the attendance are regular and punctual ; the pupils are clean and orderly ; and the moral tone is very fair. 3. The course of instruction is complete and well-regulated, and the teaching is earnest, painstaking, and fairly skilful. 4. The average proficiency of the pupils is nearly fair.

LOOHINTAR (N.-V.) :—Visited, 13th and 16th July.

Numbers enrolled :—Boys, 21 ; girls, 14 ; total, 35.

Numbers present :—Boys, 13 ; girls, 14 ; total, 27.

1. New school buildings are needed ; the present site is unsuitable, and the character of the playground unsatisfactory. The supply of apparatus and furniture is very fair. 2. The attendance is low, unpunctual, and irregular. The school work is not performed with the requisite vigour and regularity ; the condition of the school records is very unsatisfactory, and the disciplinary condition of the school is little better than moderate. 3. The prescribed subjects are taught, but sewing is neglected ; the classification is ill-defined, and the instruction carelessly regulated. The teaching is tolerably intelligent, but is otherwise unsatisfactory. 4. The attainments range from moderate to tolerable, and the general condition of the school is low and unsatisfactory.

EAST MAITLAND (V.) :—3rd, 4th, 5th, 6th, and 10th November.

Numbers enrolled :—Boys, 106 ; girls, 80 ; total, 186.

Numbers present :—Boys, 86 ; girls, 61 ; total, 147.

1. Lavatory, drainage of playground, and repairs to fence and schoolroom windows, are needed to render the material condition and organization satisfactory. 2. The attendance is punctual and fairly regular, and has increased 40 per cent. since the last inspection. The government is mild, firm, and intelligent ; the school work is performed with pleasing quietness, cheerfulness, and vigour ; military-drill is steadily progressing ; and the general disciplinary condition of the school is very good. Latin, algebra, and geometry are taught in addition to the prescribed subjects ; the instruction is well regulated ; the classification is high and judicious, and the teaching is zealous, painstaking, and intelligent, and much improved in animation and vigour. 4. The average proficiency is good.

WEST MAITLAND (Boys.—V.) :—Visited, 8th, 9th, 10th, and 11th December.

Numbers enrolled :—Boys, 213.

Numbers present :—Boys, 182.

1. The school building is a superior, well-ventilated structure ; and the schoolroom is well appointed, but somewhat defectively planned and lighted. A weather-shed is urgently needed ; otherwise the playground is well appointed. 2. The attendance is rapidly increasing, and is very near the maximum ; the punctuality is very good, and the coefficient of regularity three-fourths. The aspect of the pupils is clean, cheerful, and respectable ; and the disciplinary character of the school is very good. 3. Latin, geometry and algebra are extra subjects ; the instruction is well regulated, and of high range and intelligence. 4. The average proficiency of the pupils is good ; and the general condition of the school is highly satisfactory.

WEST MAITLAND—(Girls.—V.) :—Visited, 14th and 15th December.

Numbers enrolled :—Girls, 117.

Numbers present :—Girls, 78.

1. The material condition and organization are of first-class character, and the schoolroom is better planned and lighted than the boys'. The absence of a weather-shed injuriously affects the attendance. 2. The government is intelligent and firm ; very good order obtains ; the pupils are clean, cheerful, and respectable in appearance, and the moral tone is on the whole good. 3. The course of instruction is complete and well regulated ; the profitable occupation of the pupils is vigorously sustained ; and the teaching is animated, painstaking, and intelligent. 4. The average proficiency ranges from fair to very fair. Considering that the school has been but recently established, and that many of the scholars are from private schools, the general condition of the school is satisfactory and promising.

WEST MAITLAND (Infants.—V.) :—Visited, 16th and 17th December.

Numbers enrolled :—Boys, 85 ; girls, 55 ; total, 140.

Numbers present :—Boys, 61 ; girls, 34 ; total, 95.

1. The schoolroom is defectively planned, and too small for the attendance. Book-press, desks, and weather-shed are greatly needed ; otherwise the organization is good. 2. The attendance is punctual, and steadily increasing ; the government is mild and judicious ; good order obtains, and the pupils are on the whole clean, decently attired, cheerful and well-behaved. 3. The instruction is appropriate and well regulated and the teaching is zealous, industrious, and intelligent. 4. The average proficiency is nearly very fair.

MILLFIELD (N.-V.) :—Visited, 18th June.

Numbers enrolled :—Boys, 23 ; girls, 29 ; total, 52.

Numbers present :—Boys, 13 ; girls, 23 ; total, 36.

1. New school buildings and furniture urgently needed ; the present material condition and organization being very unsatisfactory. 2. The attendance is irregular and unpunctual, and the school-work is feebly performed ; otherwise, the disciplinary condition is fair. The school fees are low and badly paid. 3. The prescribed subjects are taught except singing, and the instruction is fairly well regulated, but the classification is low, and the teaching feeble and unimproved. 4. The average proficiency is a little over moderate.

MORPETH (V.) :—Visited, 20th, 21st, and 22nd October.

Numbers enrolled :—Boys, 91 ; girls, 73 ; total, 164.

Numbers present :—Boys, 80 ; girls, 61 ; total, 141.

1. Weather-sheds, lavatory, and better out-offices needed ; material organization otherwise highly satisfactory. 2. The attendance is very punctual and considerably increased. The appearance and general conduct of the pupils is highly satisfactory, the government is mild and firm, and the disciplinary character of the school is excellent. 3. The course of instruction is complete, well regulated, and of high range, Latin, algebra, and geometry being included. The classification is high ; and the teaching is superior in point of zeal, tact, painstaking, and intelligence. 4. The average proficiency approaches very good.

MURRUBUNDI

MURRUMUNDI (V.) :—Visited, 10th and 11th September.

Numbers enrolled :—Boys, 45 ; girls, 39 ; total, 84.
Numbers present :—Boys, 38 ; girls, 31 ; total, 69.

1. The material condition, aspect, and organization are very unsatisfactory and neglected. The supply of working materials is tolerably adequate. 2. The attendance has increased, but is neither satisfactorily regular nor punctual ; and the teaching staff is inadequate. Considering material deficiencies, the disciplinary condition is fair in the upper classes and moderate in the lower. 3. The prescribed subjects are taught except singing, and the teaching is earnest, painstaking, and tolerably intelligent. Geography, arithmetic, object lessons, and sewing, are feeble subjects. 4. The average proficiency is tolerable.

MUSWELL CREEK (N.-V.) :—Visited, 26th October.

Numbers enrolled :—Boys, 28 ; girls, 15 ; total, 43.
Numbers present :—Boys, 21 ; girls, 14 ; total, 35.

1. New buildings urgently needed—present site central, but otherwise unsuitable. School requisites fair in quality and quantity. 2. The disciplinary condition of the school is tolerable. 3. Course of instruction complete ; lesson documents of moderate merit ; methods mechanical, and the teaching earnest, but stiff and feeble. 4. Average proficiency of the pupils moderate.

OSWALD (N.-V.) :—Visited, 26th August.

Numbers enrolled :—Boys, 25 ; girls, 23 ; total, 48.
Numbers present :—Boys, 22 ; girls, 17 ; total, 39.

1. Schoolhouse old, small, ill-ventilated, and unsuitable. New buildings and larger playgrounds greatly needed. Supply of school requisites fair. 2. Attendance irregular and unpunctual, order and cleanliness fair, conduct of pupils improved, school work feebly performed ; moral tone tolerable. 3. Course of instruction complete, but of low range ; lesson documents very fair ; classification low and injudicious ; teaching apparently earnest, but feeble, and not satisfactorily profitable. 4. Average proficiency moderate, arithmetic, grammar, and geography, indifferent.

ROUGHIT (V.) :—Visited, 8th September.

Numbers enrolled :—Boys, 40 ; girls, 17 ; total, 57.
Numbers present :—Boys, 36 ; girls, 12 ; total, 48.

1. Material condition and organization good ; schoolroom too small for three classes ; playground improved. 2. Attendance well maintained and punctual ; government healthy and intelligent ; order very fair ; appearance and conduct of children fair. 3. Course of instruction complete and appropriately regulated ; teaching earnest and tolerably intelligent. 4. Average proficiency approaching fair.

SINGLETON (Primary-V.) :—Visited, 11th, 12th, and 13th August.

Numbers enrolled :—Boys, 47 ; girls, 32 ; total, 79.
Numbers present :—Boys, 37 ; girls, 29 ; total, 66.

1. Schoolroom too small ; lavatory needed ; material condition and organization good ; school records not kept with requisite precision and accuracy. 2. Attendance comparatively low ; punctuality very fair ; school work feebly performed ; disciplinary condition otherwise very fair. 3. Course of instruction complete except in singing ; standards of proficiency laxly observed ; classification somewhat low and ill-defined ; lesson documents not strictly observed. Teaching fairly intelligent, but not satisfactorily stimulating, impressive, and profitable. 4. Attainments low and unsatisfactory.

SINGLETON (Infants.—V.)

Temporarily closed.

STANHOPE (V.)

Not inspected for want of opportunity.

SUGARLOAF (V.) :—Visited, 25th June.

Numbers enrolled :—Boys, 30 ; girls, 22 ; total, 52.
Numbers present :—Boys, 16 ; girls, 15 ; total, 31.

1. Material condition and organization fair and improved ; supply of furniture and apparatus very fair. 2. Attendance tolerably regular, and reasonably punctual. School work somewhat feebly performed. Disciplinary condition otherwise very fair. 3. Course of instruction complete ; lesson documents very fair, but not strictly followed. Teaching fairly intelligent, but not adequately thorough and profitable. 4. Average proficiency tolerable and inadequate.

VAGY (N.-V.) :—Visited, 2nd and 3rd June.

Numbers enrolled :—Boys, 30 ; girls, 24 ; total, 54.
Numbers present :—Boys, 23 ; girls, 20 ; total, 43.

1. Material condition and organization improved and tolerable. Additional furniture needed. 2. Attendance very fairly punctual, but irregular. School fees low, and badly paid. Appearance and conduct of pupils very fair. School work somewhat feebly performed. 3. Course of instruction complete and fairly well regulated, but of low range. Teaching earnest and tolerably intelligent, but not sufficiently rigorous and impressive. 4. Average proficiency nearly tolerable.

WAILALONG (V.) :—Visited, 13th May.

Numbers enrolled :—Boys, 29 ; girls, 29 ; total, 58.
Numbers present :—Boys, 21 ; girls, 25 ; total, 46.

1. The material condition and organization are improved, and very fair. Aspect neat and clean. 2. Attendance punctual and tolerably regular ; government healthy and intelligent ; pupils clean, orderly, and well-behaved. Moral tone good. 3. Course of instruction complete and well regulated ; methods of very fair merit ; and teaching zealous and painstaking. 4. Attainments of pupils from fair to very fair.

WAREWORTH (V.) :—Visited, 22nd September.

Numbers enrolled :—Boys, 30 ; girls, 23 ; total, 53.
Numbers present :—Boys, 16 ; girls, 18 ; total, 34.

1. Material condition and organization superior ; weather-shed and water-tank needed. 2. Attendance punctual, but irregular and decreasing. Government firm and judicious ; pupils clean and orderly, but wanting in vigour and zeal. Disciplinary condition good. 3. Course of instruction complete, singing excepted ; classification and lesson documents appropriate, and teaching zealous and painstaking. 4. Average proficiency of pupils nearly fair.

WOLLOMBI

WOLLOMBI (V.) :—Visited, 19th, 20th, and 22nd June.

Numbers enrolled :—Boys, 41 ; girls, 39 ; total, 80.

Numbers present :—Boys, 29 ; girls, 30 ; total, 59.

1. The material condition is very fair, the supply of school requisites adequate, and the organization good. 2. Attendance punctual and tolerably regular ; government mild and judicious ; general appearance and conduct of pupils pleasing ; and disciplinary condition very good. 3. Course of instruction complete and well regulated ; teaching intelligent, zealous, and painstaking. 4. Average proficiency of the pupils good in general.

SUMMARY of Reports upon Provisional Schools inspected in 1874.**BARRAMIE CREEK (N.-V.) :—Visited, 13th March.**

Numbers enrolled :—Boys, 17 ; girls, 5 ; total, 22.

Numbers present :—Boys, 13 ; girls, 4 ; total, 17.

1. Schoolhouse tolerably suitable but inadequately furnished. Supply of apparatus moderate. 2. Attendance fairly regular and punctual ; government tolerably intelligent ; appearance and conduct fair ; moral tone promising and tolerable. 3. Course of instruction complete except in sewing, of inferior range, and not properly regulated. Teaching earnest and diligent. 4. Average proficiency of the pupils tolerable.

BELLEVUE (N.-V.) :—Visited, 23rd November.

Numbers enrolled :—Boys, 13 ; girls, 11 ; total, 24.

Numbers present :—Boys, 9 ; girls, 9 ; total, 18.

1. Schoolhouse commodious and suitable ; supply of furniture inadequate ; school records better kept. 2. Attendance very punctual but irregular ; government improved and fair, and disciplinary condition of the school improved and fair. 3. Course of instruction complete, fairly well regulated, and of second class range. Teaching earnest and painstaking, improved, and tolerably effective. 4. Average proficiency tolerable and improved.

BULGA (N.-V.) :—Visited, 23rd September.

Numbers enrolled :—Boys, 14 ; girls, 14 ; total, 28.

Numbers present :—Boys, 11 ; girls, 11 ; total, 22.

1. Schoolhouse commodious and suitable ; supply of furniture adequate, but clumsy and inferior, and interior aspect somewhat dingy and untidy. Organization reasonably tolerable. 2. Attendance tolerably regular and punctual, and disciplinary character of the school fair and improved. School fees low and laxly exacted. 3. Course of instruction complete, except in singing and drawing. Lesson documents not satisfactorily complete or well observed. Teaching earnest, painstaking, and tolerably skilful, but low in range. 4. Average proficiency tolerable.

CAERGWELLE (N.-V.) :—Visited, 4th June.

Numbers enrolled :—Boys, 11 ; girls, 21 ; total, 32.

Numbers present :—Boys, 8 ; girls, 20 ; total, 28.

1. Schoolhouse commodious and suitable, and stock of furniture and apparatus tolerably sufficient, but desks badly arranged. Record of attendance not reliable. 2. Discipline empirical and barely tolerable in efficiency. 3. Course of instruction very elementary ; classification inappropriate, and teaching feeble and indifferently skilful. 4. Average proficiency small.

CUAN (N.-V.) :—Visited, 20th November.

Numbers enrolled :—Boys, 21 ; girls, 13 ; total, 34.

Numbers present :—Boys, 16 ; girls, 12 ; total, 28.

1. Schoolhouse far too small, and stock of furniture insufficient. 2. Attendance fairly regular but unpunctual ; order moderate, government empirical and lax ; and general moral tone unsatisfactory. 3. Instruction very elementary and ill regulated ; classification confused, and teaching very feeble and unskilful. 4. Average proficiency small.

DOYLE'S CREEK (N.-V.) :—Visited, 11th March.

Numbers enrolled :—Boys, 8 ; girls, 19 ; total, 27.

Numbers present :—Boys, 7 ; girls, 12 ; total, 19.

1. Schoolhouse commodious and suitable, but ill-ventilated. Additional furniture needed. Supply of working materials adequate. 2. Attendance tolerably punctual, but low and irregular. Pupils clean and tidy in appearance, docile and well behaved, but shy and awkward. Discipline tolerable and promising. 3. Course of instruction intelligently regulated and complete except in singing and drawing. Teaching painstaking. 4. Average proficiency tolerable but only of second class range.

GREENFORD (N.-V.) :—Visited, 3rd June.

Numbers enrolled :—Boys, 18 ; girls, 19 ; total, 37.

Numbers present :—Boys, 15 ; girls, 16 ; total, 31.

1. Schoolhouse commodious and suitable, residence comfortable, and supply of furniture and other requisites fair. Arrangement of desks objectionable. Aspect clean and comfortable. 2. Two-thirds of attendance regular, but not satisfactorily punctual. Pupils clean and well behaved ; government mild and effective ; class movements somewhat irregular. 3. Prescribed subjects taught except singing ; lesson documents of fair merit, but not strictly observed, and classification low in point of age. Teaching earnest, but feeble and moderately skilful. 4. Average proficiency moderate.

HOWE'S VALLEY (N.-V.) :—Visited, 16th February.

Numbers enrolled :—Boys, 15 ; girls, 12 ; total, 27.

Numbers present :—Boys, 11 ; girls, 8 ; total, 19.

1. Schoolroom too short, and book-press and lat-pegs needed ; material condition and organization otherwise tolerable. 2. Attendance tolerably regular and punctual ; appearances neat and clean ; conduct and character of pupils tolerable ; moral tone promising. 3. Course of instruction complete, except in singing and drawing ; very elementary and defectively regulated. Teaching earnest and diligent, but feeble and empirical. 4. Average proficiency moderate.

KAYUGA (N.-V.) :—Visited, 25th March.

Numbers enrolled :—Boys, 16 ; girls, 21 ; total, 37.

Numbers present :—Boys, 5 ; girls, 10 ; total, 15.

1. Schoolhouse commodious but ill-ventilated ; playground too small ; water-tank, lavatory, and additional furniture needed. Organization moderate. School materials carelessly arranged. 2. Two-thirds of attendance regular and tolerably punctual ; appearances clean but untidy ; conduct and character of pupils moderately satisfactory ; school-work feebly performed, and details of discipline overlooked. 3. Prescribed subjects professedly taught except singing and drawing. Instruction very elementary, and lesson documents laxly observed. Teaching apparently earnest, but feeble and empirical. 4. Average proficiency indifferent.

KNOCKFYN

KNOCKFYK (N.-V.) :—Visited, ———

Not inspected, for want of opportunity.

MIDDLE CREEK (N.-V.) :—Visited, 18th November.

Numbers enrolled :—Boys, 22; girls, 16; total, 38.

Numbers present :—Boys, 15; girls, 10; total, 25.

1. Schoolhouse central and superior, and stock of material appliances fair and improved. Water-tank and washing appliances needed. 2. Attendance well maintained, fairly regular, and punctual; appearances clean and cheerful; government mild and judicious; moral tone fair. 3. Prescribed subjects taught except singing, and of third-class range. Occupations of pupils tolerably well regulated, and teaching zealous and painstaking and moderately skilful. 4. Average proficiency from moderate to tolerable.

MOONAN BROOK (N.-V.) :—Visited, 21th November.

Numbers enrolled :—Boys, 19; girls, 13; total, 32.

Numbers present :—Boys, 13; girls, 13; total, 31.

1. Schoolhouse commodious and suitable, and supply of furniture tolerable but badly arranged and inferior. Schoolroom walls disfigured with miscellaneous newspaper prints. 2. Attendance of fair merit; government healthy and empirical; pupils clean and well-behaved, but school-work feeble and class arrangements inappropriate. 3. Instruction very elementary and ill-regulated. 4. Average proficiency indifferent.

MOUNT THORLEY (N.-V.) :—Visited, 25th February.

Numbers enrolled :—Boys, 13; girls, 21; total, 34.

Numbers present :—Boys, 9; girls, 14; total, 23.

1. Material condition and organization fair; aspect clean and comfortable. Book-press, hat-pegs, and water-tank, needed. 2. Attendance tolerably regular, but unpunctual; appearances neat and clean; government mild and tolerably intelligent; conduct and character of pupils tolerable; and order fair. 3. Prescribed subjects taught except singing and drawing; instruction of second-class range, and teaching earnest and painstaking. 4. Average proficiency moderate.

MOUNT WILLS (N.-V.) :—Visited, 17th June.

Numbers enrolled :—Boys, 12; girls, 18; total, 30.

Numbers present :—Boys, 7; girls, 13; total, 20.

1. Schoolhouse suitable and improved, and supply of working materials fair. Additional furniture, water-tank, and out-offices needed. 2. Discipline healthy and fair. 3. Course of instruction complete, except in singing, and tolerably well-regulated. Teaching animated and improved. 4. Average proficiency tolerable.

PARK (N.-V.) :—Visited, 17th November.

Numbers enrolled :—Boys, 11; girls, 15; total, 26.

Numbers present :—Boys, 7; girls, 9; total, 16.

1. Schoolhouse suitable and supply of furniture and apparatus tolerably sufficient. Desks not properly arranged. Organization reasonably tolerable. 2. Attendance fairly regular and punctual; appearances clean and comfortable; discipline empirical but promising; and general moral tone tolerable. 3. Instruction very elementary, but tolerably well regulated; teaching earnest and promising. 4. Average proficiency somewhat beyond indifferent.

QUORROBOLONG (N.-V.) :—Visited, 23rd June.

Numbers enrolled :—Boys, 16; girls, 14; total, 30.

Numbers present :—Boys, 8; girls, 8; total, 16.

1. Material condition and organization reasonably tolerable. Schoolroom windows in need of glazing. 2. Attendance tolerably regular but not satisfactorily punctual. Appearances neat and clean; pupils docile and well-behaved, but wanting in animation and vigour. Moral tone healthy and tolerable. School fees poorly paid. 3. Prescribed subjects taught; and instruction tolerably well regulated, but elementary and of second class range. Teaching empirical, but zealous and painstaking. 4. Average proficiency barely tolerable.

ROSEBROOK (N.-V.) :—Visited, 22nd May.

Numbers enrolled :—Boys, 10; girls, 19; total, 29.

Numbers present :—Boys, 4; girls, 12; total, 16.

1. Schoolhouse small, old, and dilapidated; supply of furniture and other school requisites tolerable, but schoolroom encumbered with extraneous furniture. Class roll entries unsatisfactory. 2. Attendance irregular and unpunctual; appearances fairly neat and clean; disciplinary condition of the school otherwise moderate. 3. Instruction very elementary; classification low and ill-defined, and teaching feeble and mechanical. 4. Average proficiency small.

STOCKYARD CREEK (N.-V.) :—Visited, ———

Not inspected for want of opportunity.

SUMMERHILL (N.-V.) :—Visited, 6th June.

Numbers enrolled :—Boys, 16; girls, 19; total, 35.

Numbers present :—Boys, 11; girls, 11; total, 22.

1. Material condition and organization improved and tolerable. Water-tank needed. School records better kept. 2. Attendance tolerably regular but not satisfactorily punctual. Appearances neat and clean; government mild and tolerably effective; school work wanting in vigour. Moral tone improved and tolerable. School fees low and poorly paid. 3. Course of instruction complete except in Scripture lessons, since included. Programmes of lessons almost useless. Teaching earnest but feeble, and moderately intelligent. 4. Average proficiency moderate. Arithmetic and geography, small.

VERE (N.-V.) :—Visited, 10th March.

Numbers enrolled :—Boys, 18; girls, 10; total, 28.

Numbers present :—Boys, 13; girls, 7; total, 20.

1. Schoolhouse commodious and tolerably suitable, but somewhat uncentral. Supply of furniture and other requisites moderate. Water-tank greatly needed. 2. Attendance tolerably regular but unpunctual. Discipline tolerably effective. School fees low and poorly paid. 3. Instruction very elementary and feebly regulated. Classification low in point of age. Teaching earnest but feeble and empirical. 4. Average proficiency indifferent.

WEBBER'S CREEK (N.-V.) :—Visited, ———

Not inspected for want of opportunity.

WINGEN (N.-V.) :—Visited, 17th November.

Numbers enrolled :—Boys, 13; girls, 13; total, 26.

Numbers present :—Boys, 9; girls, 11; total, 20.

1. Material condition and organization improved and tolerable. External aspect inferior. 2. Attendance tolerably regular and punctual; government judicious; order fair. Moral tone healthy. 3. Prescribed subjects taught; classification appropriate; lesson documents tolerable, and teaching painstaking and moderately skilful. 4. Average proficiency somewhat over moderate.

WYBONG (N.-V.) :—Visited, 18th March.

Numbers enrolled :—Boys, 15 ; girls, 18 ; total, 33.
Numbers present :—Boys, 10 ; girls, 6 ; total, 16.

1. Schoolhouse superior and commodious, and residence comfortable. Supply of furniture and apparatus adequate, and school records apparently well kept. Water-tank needed. 2. Attendance tolerably regular and punctual, appearances very neat and clean ; government mild and judicious ; and disciplinary aspect of the school very fair. 3. Prescribed subjects taught except singing, sewing, and drawing ; occupation fairly well regulated ; and the teaching painstaking and diligent, but only moderately skilful. 4. Average proficiency from moderate to tolerable.

III.—HALF-TIME SCHOOLS.

DAIRY ARM (N.-V.) :—Visited, 19th February.

Numbers enrolled :—Boys, 12 ; girls, 8 ; total, 20.
Numbers present :—Boys, 6 ; girls, 4 ; total, 10.

1. Schoolhouse tolerably suitable, but supply of furniture and apparatus inadequate ; water-tank and out-offices needed ; organization indifferent. 2. Attendance irregular and tolerably punctual ; discipline feeble and moral tone moderate. 3. Instruction elementary and ill-regulated ; teaching feeble and moderately skilful. 4. Average proficiency moderate.

WATAGON CREEK (N.-V.) :—Visited, 19th February.

Numbers enrolled :—Boys, 8 ; girls, 9 ; total, 17.
Numbers present :—Boys, 6 ; girls, 4 ; total, 10.

1. Material condition and organization moderate ; additional apparatus needed. 2. Attendance irregular and unpunctual ; appearances tolerably neat and clean ; pupils tolerably orderly and well-behaved, but wanting in vigour and animation ; moral tone tolerable ; school fees poorly paid. 3. Instruction elementary and of second class range ; programmes of lessons not in use ; home lessons neglected ; teaching feeble and but moderately skilful. 4. Average proficiency low and unsatisfactory ; teacher not long in charge of the school.

JUNCTION CREEK (N.-V.) :—Visited, 19th November.

Numbers enrolled :—Boys, 4 ; girls, 9 ; total, 13.
Numbers present :—Boys, 4 ; girls, 9 ; total, 13.

1. Schoolhouse too small and stock of furniture inadequate ; organization otherwise tolerable. 2. Attendance of very fair merit ; appearances neat and clean ; fair order and diligence maintained ; conduct and character of pupils fair ; moral tone fair and promising. 3. Prescribed subjects taught ; instruction tolerably well regulated ; home lessons neglected ; teaching zealous and moderately skilful. 4. Average proficiency from moderate to tolerable.

SPARKES CREEK (N.-V.) :—Visited, 19th November.

Numbers enrolled :—Boys, 7 ; girls, 5 ; total, 12.
Numbers present :—Boys, 6 ; girls, 4 ; total, 10.

1. Material condition and organization tolerable. 2. Attendance reasonably regular and punctual ; appearances neat and clean ; pupils docile and well-behaved ; government judicious ; moral tone fair. 3. Instruction complete and well regulated ; home lessons neglected ; teaching zealous and moderately skilful. 4. Average proficiency from moderate to tolerable.

MERANNIE CREEK (N.-V.) :—Visited, 9th September.

Numbers enrolled :—Boys, 11 ; girls, 10 ; total, 21.
Numbers present :—Boys, 9 ; girls, 9 ; total, 18.

1. Out-offices and water-tank needed ; organization otherwise tolerable. 2. Attendance of pretty fair merit, and disciplinary condition of the school tolerable. 3. Prescribed subjects taught ; instruction fairly well regulated ; home lessons neglected ; teaching earnest and tolerably intelligent, but somewhat feeble in secondary subjects. 4. Average proficiency from moderate to tolerable.

WOODBURN (N.-V.) :—Visited, 9th September.

Numbers enrolled :—Boys, 7 ; girls, 9 ; total, 16.
Numbers present :—Boys, 4 ; girls, 6 ; total, 10.

1. Material condition and organization tolerable. 2. Attendance tolerably regular ; appearances fairly neat and clean ; character and conduct of pupils fair ; disciplinary condition of the school pretty fair. 3. Prescribed subjects taught ; instruction appropriately regulated, and teaching tolerably skilful. 4. Average proficiency tolerable.

MUDGEES DISTRICT.

INSPECTOR'S Report for the year 1874.

I HAVE the honor to submit, for the information of the Council of Education, my report on the general condition and prospects of primary education in the Mudgees District during the year 1874.

The number of schools on my district list at the end of the year was seventy-one. Of these, forty were Public, twenty Provisional, four Half-time, three Church of England, and four Roman Catholic Schools. Three of the Provisional Schools may be considered as permanently closed. Of the seventy-one schools in the district, sixty-six were in operation in December. All the schools were visited in course of the year, and most of them two, three, and four times. The schools at Bourke, Breeza, Dandaloo, Gongolgon, Mobellah, Sally's Flat, Lower Thron, and Newrea, were not "regularly inspected," as they were not in operation when I visited their respective neighbourhoods. The Cullenbore Public School was not examined, because the teacher declined to submit to the examination prescribed by the Council. It was, however, open during the year as a private school. The following new Public Schools were opened during the year, viz. :—Gulgong—boys, girls, and infants ; Wilbertree ; and Mobellah or Home Rule. Provisional Schools were opened at Coomber, Gundy, Narrango, Wollar, and Newrea, and Half-time Schools at Nubryglyn and Beri Creek. Schools had been in operation some years ago at Nubryglyn and Newrea but had been long closed for want of sufficient attendance. There is now a fair prospect that these schools will be kept in permanent operation. The Provisional Schools at Pyramul, Ponto, and Urbry were, on application of the inhabitants, converted into Public Schools. A similar application has been made by the residents of Coolah, but the matter has not yet been finally dealt with. It nearly always occurs that expense, inconvenience, and delay arise in having these transfers completed ; and for this reason, as well as for those pointed out in previous reports, I would again urge the desirableness of having Provisional Schools erected when possible on Crown lands. No delay in changing them from one class of school to the other need

need then take place. In most parts of the district good school sites are available, and if the people would only make use of the advantages they now have, much future inconvenience might be avoided. It may not be amiss to refer here to the causes that often retard the opening of schools in places occupied by free selectors. Disputes as to the best position are of constant occurrence. Frequently one or two of the more active and pushing residents endeavour to have the school placed so as to suit their own convenience, paying little regard to the wants of others. The regulation requiring a part of the cost to be subscribed locally operated as a kind of check on this abuse; all the inhabitants being expected to subscribe, the interests of all have generally to be considered in the final decision. As it is probable the local quota will be dispensed with in future, I can plainly foresee the Council will require to use much caution in building rural schools. Attempts no doubt will be made to induce the Council to build where the general interests of the locality have not been recognized, and in places where the number of children will not warrant the outlay. It is evident that the proposed alteration will give a new impulse to the extension of schools, but at the same time it must of necessity largely increase the cost of the Education Department. To guard against putting schools in unnecessary competition with each other, and to prevent wasteful expenditure, I think the District Surveyors ought to have general directions, as they proceed with their work, to mark off suitable school sites, six or eight miles apart, and in positions likely to become centres of population. These gentlemen have very good opportunities of knowing the localities likely to attract a population, and can better determine the distance between proposed schools than an Inspector. A good deal of a country Inspector's time is taken up in inquiries of this kind, and after all he is not in the best position to advise the Council as to the most eligible sites. Should the Council determine to pay the whole cost of building and repairing schools, it will bring us one step nearer to the adoption of compulsory education in some form or other. I have no desire to offer any extended remarks on a question about which the public mind appears so much divided, and which at present belongs so much to the realm of politics. It cannot, however, be out of place for me to say, that from personal observation of the carelessness and apathy which parents manifest with regard to the education of their children, that some legislative enactment to enforce attendance appears necessary.

The Provisional Schools at Dandaloo and Breeza were closed about the middle of the year, in consequence of low attendance. This reduction of the numbers was brought about by some of the families going out to select land for themselves or for others. The great desire for the acquisition of land which marked the course of the year 1874 tended a good deal to scatter the population, and I have no doubt prevented the establishment of schools in some of the small townships in this district. Were it not for this cause, I believe schools would have been established at Cobborah, Demison Town, Baradine, and some other places. However, I have reasonable grounds to hope that the wants of these places will be provided for before the close of the year now entered on. Active steps have been taken towards establishing schools at Camboon and Gunnebene. The movement towards getting a school at Wallgett seems at a standstill. New schools have been built at Wilbertree, Gunnedah, and Brewarrina. The former was opened in August last, and the latter two are now ready for occupation. No schools under the supervision of the Council existed at these places. The schools at Dubbo, Guntawang, and Wee Waa have been removed from the old dilapidated buildings to new and suitable ones. Important additions have been made to the Wellington Public School, and the necessary local exertion has been made to effect some important repairs and improvements to the schools at Warren, Molong, and Narrabri.

Applications for aid to Provisional Schools at Jew's Creek and Taleumbah were declined in consequence of no suitable buildings being provided.

With regard to the adequacy of the means of education in this district, it may be stated that existing schools fairly meet the wants of the people in towns, on the diggings, and in most of the farming localities where the population is tolerably well concentrated. There are several places where Half-time Schools might be opened with advantage, but I am sorry to say that, as a rule, the people do not favour these schools much. The coldness evinced towards Half-time Schools is, I believe, more the result of prejudice, and an attachment to old modes of doing things, than to any reasonable or well-founded conviction of their inefficiency. The fewness of the Half-time Schools in my district does not enable me to cite examples in support of this opinion. By far the largest portion of the district is exclusively pastoral, and there are hundreds of children, whose parents are employed on the stations, who have no means whatever of obtaining the merest rudiments of knowledge. How these poor children are to be reached is a problem not easy of solution. The proprietors of these magnificent estates might do something to assist their employes in giving an education to their children. There are some of the adjoining stations on a sufficiently large scale, and not too far apart to have Half-time Schools established on them; but, as a rule, the proprietors take little interest in matters of education, and I cannot hope that much will be done for the advancement of the system in this way.

In my report for last year I referred to the difficulty of providing fairly qualified persons to take charge of small schools. I have experienced less difficulty this year in supplying the demand. It must be admitted that some of the persons accepted are not well qualified, yet in most cases they exhibit a tolerable aptitude for the work, and are, as a rule, of an improving class. Three of the teachers so selected were, after a fair trial in small schools, deemed eligible for admission to the Training School, Sydney. The regulation by which an Inspector is empowered to send applicants for employment to a good Public School for a short course of training has been attended with considerable advantage. Of course this training cannot be expected to extend to any degree the attainments of the candidates, yet it gives them a fair idea of organization, discipline, and improved methods of teaching. The delays in furnishing returns, and the mistakes made by untrained teachers in keeping the school records, are also much lessened by this preliminary preparation; but at best this is only a poor substitute for the regular course of training in the Council's Model School. In connection with this subject, I beg to invite attention to the growing necessity of prescribing some kind of periodical examination for teachers of Provisional Schools. That this is necessary will appear from the fact that in 1873 there were 216 Provisional Schools in operation, and of course that number has increased in 1874. In the Mudgee District alone 12 untrained teachers were appointed. Three of these being appointed to Public Schools will of course be required to undergo examination in accordance with Article 37 of the Regulations, but it will be seen that the larger number was appointed to schools in which examination is not compulsory. Should matters go on in this way, it is easy to see that in a few years a large proportion of the teachers will be untrained and uncertificated. Such a result must necessarily lower the status and lessen the influence of the teaching profession. Besides, the younger and more promising teachers in these schools would be largely benefited by being compelled to study for examination. Admission to the Training School might be made a reward to those who pass creditably. I do not undertake to say what range of knowledge these examinations should embrace, or whether they should be made compulsory every year or not; but I do say that something of the kind is a necessity, in order to maintain the vital principle of improvement in these small schools. There are few situations in which a young man has less incentive to study than in that of teacher of a Provisional School. From the isolation of his position, the absence of persons of reading and culture, and the want of books, he is apt to fall into mental lethargy, and ultimately to exhibit more interest in the breeding of a horse or the make of a saddle than in the doctrine of proportion or the solution of a problem in Euclid.

In material condition the schools are steadily improving. The necessity of enclosed grounds, laboratories, and weather-sheds, is now very generally recognized by School Boards. In the earlier part of the year commendable local exertion was made in several places to provide these necessary appendages to good organization. In the latter part of the year a stand-still policy was everywhere apparent, as it is expected the Government will take on its own shoulders the whole burden of equipping schools. With two exceptions—Merriwa and Crudino—the Vested Public Schools are in from fair to good material condition.

condition. The Non-vested and Denominational Schools are in a less satisfactory state; and the material condition and organization of the Provisional Schools are, as a rule, very inferior. The exceptions are—Gundy, Wee Waa, and Coolah. All the Public and Denominational Schools are suitably furnished, and possess a good supply of working appliances. In many of the Provisional Schools the furniture is badly constructed, and of the roughest kind. However, in this particular a regular improvement is taking place, and a few of the more recently erected schools are decently fitted up.

It is pleasing to be able to report that the number of children attending the schools is increasing. The number enrolled in December, 1873, was 3,233, and in December, 1874, it was 3,875,—showing an increase little short of 20 per cent. This result must be regarded as highly satisfactory, and, taken in connection with the number of new schools opened, and those ready to be opened, affords proof, if proof were necessary, of the adaptability of the Public Schools Act to meet the educational wants of the Colony. Notwithstanding what may be said to the contrary, one cannot travel anywhere without seeing the great benefits arising from the passing of this Act. If we consider how the population has been dispersed the last few years by the operation of "free selection," the wonder will be, not that we have not done more, but that we have been able to do so much as to keep pace with the wants of the people. Although the rapid spread of schools is encouraging, yet there is great reason to feel dissatisfied with the regularity of the pupils. All teachers complain that this is the greatest obstacle to improvement; so it is, but the teachers themselves are not always blameless on this score—more could be done by them to secure regular attendance. The causes of irregular attendance have been so often adverted to, that it is unnecessary for me to reiterate them. Their number and effect are in no way abated, but rather seem to increase. In 1873 the average attendance was 69 per cent. of the number enrolled, whilst in 1874 it was only 66 per cent. Besides the irregular attenders, there are hundreds of children within the vicinity of the schools who never enter them. When the State provides schools in which violence is done to no one's conscience, I think the parents should be compelled to send their children. I know that many people dislike compulsion in education, but the fact is a large amount of our social fabric has compulsion for its basis. If a man will not pay his lawful debts he is compelled to do so; and I cannot see why, if parents will not voluntarily discharge their natural obligations to their children, they should not be compelled also. It may be stated that the same causes which render attendance unsatisfactory operate prejudicially against punctuality. However, owing to greater strictness on the part of the teachers, some improvement is noticeable. In a few of the best schools the punctuality is very good; in other respects the moral aspect of the schools is generally creditable. Habits of cleanliness, order, and attention are carefully cultivated, and the pupils are respectful in their demeanour towards their elders, and kindly in their intercourse with each other. The modes of government vary considerably in efficiency, but in all cases right motives are appealed to. Only one complaint of undue severity reached me during the year.

There are only a few schools in the district in which the whole range of subjects prescribed by the Council is not taught, and these are Provisional or Half-time Schools, the subjects omitted being singing and drawing. The rudiments of algebra and geometry are taught in four Public and in two Denominational Schools. A little Latin is also taught in a few schools.

The marks assigned for reading are no higher than those obtained in 1873. However, there is no falling off, and I believe I applied the prescribed test more strictly than previously. In the matter of spelling many of the teachers considered the examination rigorous. Increased readiness in giving the meaning of words is apparent.

Good progress has been made in writing, both on slates and on paper. Immediately after admission the pupils commence writing on slates, and before they are fit for removal from the first class they can generally write words fairly on slates, and make a decent attempt at writing short sentences from dictation. Writing on paper is generally commenced when the pupils reach the second class—sometimes before. The number writing on paper at examination in 1873 was 1,087, of which 593 were marked as from fair to good; whilst in 1874 there were 1,367 writing on paper, of which 847 were estimated from fair to good. In marking the writing I was particularly careful to examine every page of the copy-books right through, and the extra attention thus bestowed on the subject has been well repaid by the neatness with which the copy-books are kept and the improved style of penmanship.

The result of my examinations in arithmetic during the year show little increase in the percentage that could pass the standards. In the simple rules the percentage is about the same as in previous years. In the compound rules fair improvement is observable, whilst in the higher rules fewer pupils were presented for examination, but with a higher percentage of "passes."

There is no improvement in the modes of teaching, or in the state of proficiency in the subject of grammar. There are not more than a dozen schools in the district in which grammar is taught in an intellectual, interesting, or profitable manner. Indeed, I hold it as a waste of time to attempt to have grammar taught in many of the Provisional Schools. With few exceptions, the teachers have a very imperfect knowledge of the subject themselves—they get hold of the hard technicalities, and rattle them out under the mistaken idea that they are teaching the grammar of the language. I was rather amused some time ago by a teacher giving a very learned lecture on "dentals," "labials," and "consonants," to a class of children scarcely able to read the First Book. It is useless to expect teachers to impart knowledge which they have not got. It will be understood that these remarks do not apply to all the Provisional Schools.

In geography the proficiency is somewhat higher than in grammar, but still there is ample scope for improvement. Nearly all the schools are well supplied with excellent maps, but greater use could be made of them in imparting geographical knowledge to the pupils. In a few of the best Public Schools, and in two Denominational Schools, geography is well taught.

The number receiving object lessons has largely increased, whilst the pupils' knowledge of the subjects brought under their notice is fairly satisfactory. I have some doubts whether the benefits supposed to accrue from these lessons are realized or not. Without undervaluing the amount of useful information that may be imparted by means of these lessons, I am of opinion that there is a good deal of false show about them. We hear day after day the same lessons, and the same stereotyped round of questions taken from such works as "Luke's Object Lessons." In these lessons, where one would least expect it, there is a great amount of routine and mechanical teaching. For my own part, I place much greater value on soundness and thoroughness in dealing with reading, writing, and arithmetic, than on a superficial and showy acquaintance with object lessons. I have reason to believe that in some schools in which good marks are got for object lessons, little or no attention is paid to them until a few weeks before the annual examination, and then the pupils are rigorously "crammed" to pass. No teacher could treat the subjects above named in a similar manner without the certainty of absolute failure. I have made it a rule to discourage routine teaching of object lessons from text books, and have advised teachers to frame their lessons on "common things" by which the pupils are surrounded.

The Scripture lessons are read in all the Public, and in the Provisional Schools having a third class. As the reading of them is confined to the third and higher class, the great bulk of the children do not use them, and consequently, as far as the schools are concerned, have no opportunity of becoming acquainted with anything like the formal teachings of the Scriptures. There are few of the Public Schools visited regularly by the clergyman for the purpose of imparting special religious instruction. The hour assigned for reading the Scripture lessons is spent in a more drowsy and spiritless manner than any other portion of the school day. Perhaps some of the parents object to their children reading the lessons, and the teacher is precluded from giving explanations of the text, and thus the whole thing becomes, for teacher and pupils, dull, uninteresting, and monotonous. It opens a field for wide speculation to say how far the religious element in our school system is capable of training a people to be "wise unto salvation." It cannot be doubted that the discipline of a good school, regularly submitted to for a few years, the obedience

obedience to rule, and the training to habits of order and decorum, must exercise a silent but perceptible force on the formation of character, and go a great way in preparing the youth of the Colony for the proper discharge of citizenship. Many earnest friends of education think this is not enough, but the question remains—"How is the State to make provision for a larger amount of religious instruction without arousing 'the war of sects?'"

With regard to the other subjects of the "prescribed course," there is little calling for special remark; they are taught with varying success in different schools, but with much the same results as in previous years.

The teachers of this district are, as a rule, a hardworking and respectable body of public servants. As might be inferred from the remoteness of the district, and from the remarks made in other parts of this report, there is a wide gap between the really good teachers and the few very inferior; but it may be safely said that nearly all have evinced a desire to discharge their duties efficiently.

Local interest in the schools has been more active than heretofore; it was most active in the earlier part of the year. In most places members of the Boards attended at the examinations, and meetings were held afterwards.

From this report it will be seen that schools are extending rapidly; that a very respectable accession has been made to the number of pupils attending them; but that great irregularity of attendance still prevails. Although I have not been able to speak in very decided terms of advancement in attainments, yet I am satisfied that in the great majority of schools a very fair amount of work has been done during the year; and although many of them did not reach the state of proficiency contemplated by the standard, it should be borne in mind that several have been only recently opened, that in these schools the great bulk of the pupils had no regular instruction previously, and that their teachers are new to the work.

Inspector's Office, Mudgee,
1st February, 1875.

G. O'BYRNE,
Inspector of Schools.

MUDGEE DISTRICT.

DETAILED STATEMENT of the Condition of Schools in the Mudgee District, examined during the year 1874.

I.—PUBLIC SCHOOLS.

BOGGABBI (V.) :—Regular inspection, 23rd November.

Numbers enrolled :—Boys, 19 ; girls, 26 ; total, 45.

Numbers present :—Boys, 15 ; girls, 19 ; total, 34.

The material state and organization of this school are very satisfactory. Want of weather-shed is the only defect. The master has formed a flower garden which is in good condition, and tends to give the premises a neat and cheerful aspect. The whole discipline is judicious and effective. The instruction embraces all the prescribed subjects, and is well regulated. Appropriate methods are applied; and the master is earnest in his work. The proficiency is tolerable. The bad state of the teacher's health has lowered the results.

BOURKE (N.-V.) :—Visited, 10th June.

The teacher had left a few days before my arrival in the town. The attendance had dwindled down to some six or eight pupils. The master was a very well qualified man, but these unsatisfactory results were brought about by his unwillingness to settle down to the monotony of teaching young children. A new teacher has since been appointed, and seventy-five pupils are now enrolled. The premises are rented, and a new school is urgently needed in this town.

BURRUNDULLA (P.—N.-V.) :—Regular inspection, 26th February.

Numbers enrolled :—Boys, 23 ; girls, 11 ; total, 34.

Numbers present :—Boys, 17 ; girls, 8 ; total, 25.

The eastern wall of the schoolhouse and the out-offices require some repairs. With these exceptions the material condition and organization remain the same as in former years, and may be regarded as fair. A falling off in the attendance is noticeable, but a satisfactory proportion of those enrolled attend regularly and punctually. Cleanliness is well attended to, and the whole discipline is firm and effective. All the prescribed subjects have a place in the routine of the school. For their ages the pupils are intelligent and self-reliant. The methods are good, and the classification appropriate. The proficiency in arithmetic is very creditable. The attainments range from fair to very fair.

COONAMBLE (V.) :—Regular and general inspection, 1st and 2nd June.

Numbers enrolled :—Boys, 23 ; girls, 21 ; total, 44.

Numbers present :—Boys, 17 ; girls, 19 ; total, 36.

The site of the school is sufficiently central, but it is subject to floods. During the floods in the earlier part of the year the grounds were submerged and the fences swept away. The teacher, unaided, collected and re-erected the fence in very good style. He has laboured hard in other respects to repair the ravages made by the flood. Excepting that the premises require painting, the school may be said to be in a fair state as regards material condition. It is poorly supplied with working materials. Regularity and punctuality are very good. The government is vigorous, securing good discipline and a pleasing tone. The prescribed subjects are taught, and the instruction is well regulated. The methods are fairly intelligent and applied with well sustained zeal. The average proficiency is tolerable.

COONABARABEAN (V.) :—Regular inspection, 29th May.

Numbers enrolled :—Boys, 37 ; girls, 34 ; total, 71.

Numbers present :—Boys, 29 ; girls, 24 ; total, 53.

The teacher's residence is too small, and a weather-shed is wanted. A good supply of water has been secured since last inspection. Taken as a whole, the material condition may be regarded as very fair, and the internal organization good. The discipline secures good order and attention. The pupils are regular and punctual, and the attendance is rapidly increasing. The methods are suitable, but do not seem to have been so industriously applied as in previous years. The average proficiency is tolerable.

CRUDINE (V.) :—Regular inspection, 3rd March.

Numbers enrolled :—Boys, 22 ; girls, 10 ; total, 32.

Numbers present :—Boys, 15 ; girls, 7 ; total, 22.

The grounds are unfenced, and no out-offices have yet been provided, although the attention of the School Board has frequently been directed to this defect. In other respects the material condition and organization are reasonably good. The pupils are irregular and unpunctual. Fair order is maintained, but the pupils are indolent and wanting in self-reliance. Except singing, the prescribed subjects are attempted. The classification is correct, but the instruction has not been well regulated, and as a consequence the teaching is disursive and in a measure inoperative. The proficiency exceeds moderate.

CUDGROONG (N.-V.) :—Regular inspection, 2nd August.

Numbers enrolled :—Boys, 15 ; girls, 9 ; total, 24.

Numbers present :—Boys, 11 ; girls, 7 ; total, 18.

The material organization of the school is fair. The ground has been fenced since last inspection. The furniture and supply of books fairly meet the present requirements. The classification is passable, but

but the routine of the school is badly regulated. The prescribed subjects are attempted; little progress however has been made in any of the subjects save reading and writing. The methods are low in point of merit, and weakly applied. The attainments are indifferent.

DURBO (V.):—General and regular inspection, 20th March and 10th November.

Numbers enrolled:—Boys, 94; girls, 73; total, 167.
Numbers present:—Boys, 74; girls, 50; total, 124.

This is a new school, pleasantly situated, neat in appearance and structure, excellently furnished, and possessing a good supply of apparatus and working materials. The defects are want of sheds and fences. These defects are now being remedied. The classification is faulty, and the order is susceptible of a good deal of improvement. The government is rather harsh. The school presents a favourable aspect as regards cleanliness of pupils and premises. The methods are of an approved kind, and are vigorously applied. The teaching staff is not sufficient. The attainments are nearly tolerable.

GUKTAWANG (V.):—General inspection, 22nd May.

Numbers enrolled:—Boys, 15; girls, 24; total, 39.
Numbers present:—Boys, 9; girls, 14; total, 23.

The school is a new brick structure, well designed, suitably furnished, and well supplied with all the appliances for successful teaching. The old residence has also undergone a thorough repairing. The attendance is low and irregular. The average attendance is not nearly one-half the children residing in the neighbourhood. Punctuality is only tolerable, and cleanliness is fair. As a whole the discipline is weak. The prescribed subjects are taught, and the methods are appropriate, but, from want of thoroughness, fail to produce satisfactory results. The school has not progressed during the year, and the attainments are barely moderate.

GULGONG (Boys—V.):—General inspection, 16th and 17th July.

Numbers enrolled:—Boys, 69.
Numbers present:—Boys, 62.

This is a new school in excellent material condition, suitably furnished, and possessing a good supply of working materials. As I have found on other diggings, the punctuality and regularity cannot be commended. The general discipline may be regarded as fair; it would be better were it not for the inadequacy of the teaching staff. The prescribed subjects are taught; the classification is appropriate, the methods are intelligent, and the attainments tolerable.

GULGONG (Girls—V.):—General inspection, 20th and 21st July.

Number enrolled:—Girls, 71.
Number present:—Girls, 63.

In material condition and organization this school is similar to the boys department. About 70 per cent. of the pupils enrolled attend regularly; punctuality is bad. Cleanliness is satisfactory, and in other respects the discipline is passable. All the prescribed subjects are taught; the classification is pretty good; the instruction is properly regulated, and the methods, though not of high order, are industriously applied. The proficiency exceeds tolerable.

GULGONG (Infants—V.):—General inspection, 17th and 21st July.

Numbers enrolled:—Boys, 44; girls, 25; total, 69.
Numbers present:—Boys, 36; girls, 22; total, 58.

The material condition of this school is excellent; it is fairly furnished, and well supplied with requisites for teaching. About five-eighths of the pupils enrolled attend regularly; punctuality is bad. The school presents a clean and tidy appearance. The general discipline may be stated as fair. All the subjects for an infants school are taught. Some minor defects are noticeable in the classification. The instruction is properly regulated, and the methods, which are suitable, are applied with fair zeal and industry. The attainments range from moderate to tolerable.

HARGRAVES (V.):—Regular inspection, 28th April.

Numbers enrolled:—Boys, 27; girls, 29; total, 56.
Numbers present:—Boys, 19; girls, 22; total, 41.

If a playshed and lavatory were provided, the material condition and organization of this school would be very good. The furniture and apparatus are ample and in good condition. Three-fourths of the pupils are regular and punctual. The pupils are rather noisy when entering and leaving school; in other respects the discipline is very fair. The prescribed subjects are taught; the classification is sound; the instruction is carefully regulated, and the teaching is conducted with praiseworthy zeal. The teacher deserves great credit for the habits of study he has created amongst the elder pupils. The attainments are fair in the first and second classes, and approach very fair in the third class.

HILL END (Boys—V.):—Regular inspection, 30th April, and 1st May.

Numbers enrolled:—Boys, 111.
Number present:—Boys, 98.

In material condition the school remains the same as formerly. The playground is badly situated; lavatories and sheds are much needed. Internally the school is well organized, and possesses a fair supply of working appliances. Ten-thirteenth of the pupils are in regular attendance, but punctuality is indifferent. Cleanliness, order, and attention are very fair, and the government is judicious. The prescribed subjects are taught, and the methods are suitable. The course of instruction is well arranged, and the classification is appropriate. The average proficiency approaches fair.

HILL END (Girls—V.):—Regular inspection, 1st and 4th May.

Numbers enrolled:—82.
Numbers present:—70.

The material condition of the school is defective in the same particulars as the boys department. The internal organization is good. The pupils are somewhat irregular and very unpunctual. Cleanliness is reasonably satisfactory, and very fair order is maintained. The pupils are slow, diffident, and display little power of thought. All the prescribed subjects are taught, but the proficiency of the third-class in arithmetic and dictation is very unsatisfactory. The instruction is fairly regulated, but the classification is faulty in several respects. The teaching appears industrious, although it has failed to produce satisfactory results. The average proficiency is tolerable.

HILL END (Infants—V.):—Regular inspection, 5th May.

Numbers enrolled:—Boys, 58; girls, 49; total, 107.
Numbers present:—Boys, 44; girls, 36; total, 80.

The defects in the material condition referred to in the reports on the other departments exist in this; otherwise the condition is good. Desk accommodation for one class is required. The discipline is kind and judicious. The usual subjects are taught. The average proficiency is nearly fair.

ILFORD

ILFORD (N.-V.) :—Regular inspection, 11th February.

Numbers enrolled :—Boys, 27 ; girls, 25 ; total, 52.
Numbers present :—Boys, 23 ; girls, 22 ; total, 45.

The site of this school is very unsuitable. The material condition and organization are indifferent. A new school in a suitable position is much wanted. Cleanliness is passable, and order and attention may be regarded as tolerable. The prescribed subjects are taught, but the teaching is defective in skill and vigour. About two-thirds of the pupils attend regularly ; punctuality is unsatisfactory. The average proficiency exceeds moderate.

IRONBAKES (V.) :—Regular inspection, 16th March.

Numbers enrolled :—Boys, 34 ; girls, 37 ; total, 71.
Numbers present :—Boys, 28 ; girls, 28 ; total, 56.

A verandah to the residence, a shed, and a supply of water have been provided during the year. The fence affords little protection to the grounds, and consequently the teacher has no encouragement to plant trees or flowers. The school has an adequate supply of working materials, and is excellently furnished. The general discipline is very fair ; the instruction carefully regulated, and the teaching energetic and painstaking. The average proficiency is fair.

LAWSON'S CREEK (N.-V.) :—Regular inspection, 17th and 22nd September.

Numbers enrolled :—Boys, 12 ; girls, 18 ; total, 30.
Numbers present :—Boys, 6 ; girls, 9 ; total, 15.

The building in which the school was held last year had to be abandoned as untenable, and that intended for the teacher's residence is now used as a schoolhouse. It is too narrow, but in other respects is moderately suitable. The furniture and working materials are fairly sufficient. The attendance is marked by great irregularity. Order and attention are very fair, but the pupils are shy and wanting in self-reliance. Singing is not taught. The instruction is regulated by the usual documents, and the methods are tolerably intelligent. The discipline and tone of the school have improved under the present teacher. The proficiency is moderate. A new school is wanted at this place.

MERRIWA (V.) :—Regular inspection, 31st August.

Numbers enrolled :—Boys, 35 ; girls, 34 ; total, 69.
Numbers present :—Boys, 29 ; girls, 29 ; total, 58.

The schoolhouse and teacher's residence are in an extremely bad state of repair. There is no place in the district where a new school is so much wanted. The furniture is old, badly made, and insufficient. The attendance has considerably increased, and about five-sixths of the pupils enrolled attend regularly. Cleanliness, order, and attention may be regarded as fair. The instruction is carefully regulated, and the methods are intelligent. The average proficiency is between moderate and tolerable. The presence of a larger number of very young children lowered the results.

MOLONG (V.) :—Regular inspection, 17th March.

Numbers enrolled :—Boys, 47 ; girls, 31 ; total, 78.
Numbers present :—Boys, 27 ; girls, 15 ; total, 42.

The material condition of this school is tolerable ; some necessary improvements are about to be made. The school is well furnished, and has a good supply of working materials. The pupils and premises are very clean. Owing to the prevalence of whooping-cough, the attendance was low and irregular about the time of examination ; the results were lowered from the same cause. The general discipline is very fair, and the moral tone pleasing. The prescribed subjects are taught, and the instruction is well regulated. The average proficiency exceeds tolerable. A pupil teacher is wanted.

MUDGE (Boys.—V.) :—Regular inspection, 14th and 15th April.

Numbers enrolled :—Boys, 90 ; total, 90.
Numbers present :—Boys, 59 ; total, 59.

New fences are required. The town goats make raids on the premises, and destroy the plants and flowers the teachers have endeavoured to cultivate. The material condition of the schoolroom may be regarded as very fair ; it is well furnished, has a good supply of working materials, and affords fair accommodation for the pupils in attendance. The school stands high as regards cleanliness, regularity, and punctuality. The general discipline is very fair, and the tone of the school pleasing. Besides the usual subjects, the rudiments of Latin, algebra, and geometry are taught. The classification is sound and the methods are suitable, but more thoroughness is desirable. The proficiency ranges from tolerable to fair.

MUDGE (Girls.—V.) :—Regular inspection, 14th and 15th April.

Numbers enrolled :—Girls, 104 ; total, 104.
Number present :—Girls, 78 ; total, 78.

The schoolroom is low, badly ventilated, and too small for the attendance. A new school is a necessity. It is well furnished, and possesses a good supply of working materials. So far as the teacher is responsible the organization is good ; the discipline is also good. Cleanliness is a very pleasing feature in the school. The prescribed subjects are taught. The attainments are fair in the second and third classes, and very fair in the fourth class.

MUDGE (Infants.—V.) :—Regular inspection, 20th April.

Numbers enrolled :—Boys, 70 ; girls, 66 ; total, 136.
Numbers present :—Boys, 62 ; girls, 58 ; total, 120.

The accommodation is by no means adequate, and a new infant school is required. Desk accommodation for the head class is necessary. Regularity and punctuality are satisfactory. Cleanliness is well attended to. The prescribed subjects are taught. The classification is appropriate, the instruction is regulated by programmes which evince fair judgment, and the methods range in point of skill from tolerable to very fair. The teaching does not seem to have been so earnest as in previous years. The average proficiency is tolerable.

NARRABY (V.) :—Regular inspection, —

Numbers enrolled :—Boys, 27 ; girls, 23 ; total, 50.
Numbers present :—Boys, 17 ; girls, 14 ; total, 31.

This is a good commodious schoolhouse, but out of repair ; contracts for repairing it have been entered into. The whole premises present a bare and cheerless appearance, and there is not the slightest protection for the children from sun or rain. The pupils attend badly, but in other respects the discipline is fair. The instruction accords with the prescribed course ; the classification is appropriate, and the methods are suitable and appear to be industriously applied. The average proficiency exceeds tolerable.

PIECELAY CREEK (V.) :—Regular inspection, 6th February.

Numbers enrolled :—Boys, 29 ; girls, 26 ; total, 55.
Numbers present :—Boys, 23 ; girls, 20 ; total, 43.

The school will soon have to be enlarged to accommodate the increasing attendance. As regards state of repair, organization, and material structure, it ranks as good. The records are very carelessly kept

kept. Regularity and punctuality are tolerable. Fair order is maintained, but the pupils do not display much self-reliance. The classification is uneven, and a few of the pupils in the third class have been pushed on to study subjects with which they are unable to cope. The standards prescribed by the Council have not been adhered to. Except singing, the usual subjects are taught. The average proficiency is between moderate and tolerable. A new teacher has since been appointed, and the school is doing well.

PONTO (V.) :—Regular inspection, 19th March.

Numbers enrolled :—Boys, 17 ; girls, 19 ; total, 36.

Numbers present :—Boys, 10 ; girls, 13 ; total, 23.

The school has been transferred from the list of Provisional Schools. Both it and the residence are too small. The light and ventilation are not good. The teacher has given a great deal of attention to the planting of trees and flowers, and in this respect the grounds present a striking contrast to those surrounding most rural schools. Some additions have been made to the furniture, and the requisites are sufficient. The pupils attend irregularly ; this in a great measure is unavoidable, as the parents live on both banks of the Macquarie, which river has been very high during the greater part of the year. The pupils are tolerably clean, and the discipline effects fair order. The prescribed subjects are taught, and the attainments range from moderate to tolerable.

PYRAMUL (V.) :—Regular inspection, 4th March.

Numbers enrolled :—Boys, 20 ; girls, 24 ; total, 44.

Numbers present :—Boys, 18 ; girls, 20 ; total, 38.

This has been transferred from the list of Provisional to that of Public Schools. Although some improvements have been made to the schoolhouse, yet the material condition remains indifferent. There are no out-offices, and the ground is unfenced. The furniture is short in supply, and of bad construction. The school is fairly found in working appliances. Seven-eighths of the pupils attend regularly, and punctuality is pretty good. Cleanliness, order, and attention are pretty good, and the general tone of the school is satisfactory. The usual subjects are taught with fair skill and commendable industry. The average proficiency is between moderate and tolerable.

RYLSTOVE (V.) :—Regular inspection, 9th February.

Numbers enrolled :—Boys, 41 ; girls, 23 ; total, 64.

Numbers present :—Boys, 30 ; girls, 19 ; total, 49.

Both schoolroom and residence require to be enlarged. There is no class-room, nor is there any protection for the children from the weather. A supply of water and a lavatory are also needed. The school is well furnished, and fairly supplied with working materials. About five-sevenths of the pupils enrolled attend regularly, and punctuality is reasonably satisfactory. The pupils are generally clean and respectably clad. The interior of the school should be whitewashed, and the furniture and the floor should receive more careful dusting. The pupils are orderly and attentive, but their self-reliance needs strengthening. The instruction is properly regulated, and the attainments are tolerable in first and second classes, and fair in third class. A pupil teacher is wanted.

SPRINGFLAT (N.-V.) :—Regular inspection, 16th September.

Numbers enrolled :—Boys, 17 ; girls, 17 ; total, 34.

Numbers present :—Boys, 12 ; girls, 11 ; total, 23.

The material condition and organization may be regarded as fair. The residence is too small. The school is fairly furnished, and well supplied with the necessary working materials. Nearly four-fifths of the pupils enrolled are in average attendance ; punctuality is unsatisfactory. The pupils are clean, orderly, and attentive ; the government is judicious. Singing is not taught. The instruction is tolerably well regulated ; the methods are modern, but should be applied with greater zeal and thoroughness. The proficiency is nearly tolerable.

TAMBAROORA (V.) :—Regular inspection, 29th April.

Numbers enrolled :—Boys, 26 ; girls, 23 ; total, 49.

Numbers present :—Boys, 18 ; girls, 19 ; total, 37.

Some repairs have been made, yet, as a whole, the premises present a bare and cheerless aspect. Internally the school is fairly organized, and is well found in working appliances. The general discipline is fair ; some faults noticed at previous inspections have disappeared. The pupils are better classified than formerly, and a creditable number of promotions have been made during the year. The average proficiency is tolerable.

TURON, UPPER (V.) :—Regular inspection, 13th February.

Numbers enrolled :—Boys, 32 ; girls, 24 ; total, 56.

Numbers present :—Boys, 26 ; girls, 18 ; total, 44.

The material condition and organization of this school are good. Cleanliness, order, and attention are fair. Improvement in regularity and punctuality is needed. The prescribed subjects are taught, and the instruction is properly regulated. The methods are not skilful, but are applied with care and industry. The average proficiency is tolerable.

UARDRY (N.-V.) :—Inspected, 27th August.

Numbers enrolled :—Boys, 17 ; girls, 18 ; total, 35.

Numbers present :—Boys, 13 ; girls, 11 ; total, 24.

This school has been transferred from the Provisional list. The material condition has been improved in some respects. In wet weather the school is nearly unapproachable, the site being on black soil, liable to floods ; it is damp and unhealthy. A better site has been secured, and all arrangements made for the erection of a new school. About five-sevenths of the pupils are in regular attendance. The discipline secures fair order and attention. The usual subjects, except singing, are taught. The teaching is painstaking, but displays little skill or vigour. The proficiency exceeds moderate.

WARREN (V.) :—Regular inspection, 18th and 19th June.

Numbers enrolled :—Boys, 17 ; girls, 28 ; total, 45.

Numbers present :—Boys, 17 ; girls, 19 ; total, 36.

The material condition and organization of this school are very fair. The only defect is want of protection for the pupils from sun and rain ; steps have been taken to secure this desirable end. The pupils attend well, and cleanliness is satisfactory. Although the discipline is not firm enough, yet the children are well behaved. The classification is too minute ; the methods are only tolerable, but they are very industriously applied. The school has made fair progress during the year. The average proficiency is fair.

WILBERTSFE (V.) :—Regular inspection, 8th October.

Numbers enrolled :—Boys, 19 ; girls, 16 ; total, 35.

Numbers present :—Boys, 16 ; girls, 14 ; total, 30.

This school was brought into operation in August. The building is new, and in accommodation fairly meets the requirements of the locality ; it is well furnished, and possesses a fair supply of school requisites.

requisites. Steps should be taken to provide a supply of water. Three-fourths of the pupils attend regularly and punctually. Cleanliness is satisfactory, and the discipline is fair. Singing and drawing are not taught. The instruction is properly regulated, and the methods intelligent. The proficiency is between indifferent and moderate.

WELLINGTON (V.) :—Regular inspection, 11th and 12th March.

Numbers enrolled :—Boys, 86; girls, 46; total, 132.
Numbers present :—Boys, 78; girls, 34; total, 112.

The schoolroom has been enlarged, and now affords good accommodation for the rapidly increasing attendance. When play-sheds are provided the material condition will be complete. The school is well furnished, and there is a good supply of working appliances. Nine-thirteenths of the pupils attend regularly, and little fault can be found with the punctuality, although many of the children have to walk long distances to school. Cleanliness is well attended to; the discipline and tone of the school are extremely good. In addition to the prescribed subjects, the rudiments of geometry and algebra are taught. The classification is sound, the instruction well regulated, the methods good, and the teaching zealous and effective. The growing importance of this school rendered it necessary to appoint an assistant and a pupil teacher during the year. The proficiency ranges from fair to very fair.

WINDEYER (V.) :—Regular inspection, 2nd March.

Numbers enrolled :—Boys, 14; girls, 22; total, 36.
Numbers present :—Boys, 1; girls, 11; total, 12.

The building is in a fair state of repair, but the playground is covered with a dense undergrowth of scrub. The position of the school is not central, and does not meet the requirements of the larger portion of the population. The attendance is very irregular, and owing to the prevalence of an epidemic it was particularly so on the day of examination. Punctuality is decidedly bad, and the teacher is to blame for not exhibiting more firmness in dealing with this part of the discipline. Cleanliness is tolerably satisfactory, and little exception can be taken to the general demeanour of the pupils. The prescribed subjects are taught, the instruction is poorly regulated, and the teaching is defective in vigour and thoroughness. The proficiency is moderate.

II.—PROVISIONAL SCHOOLS.

COOMBER (N.-V.) :—General and regular inspection.

Numbers enrolled :—Boys, 15; girls, 10; total, 25.
Numbers present :—Boys, 10; girls, 10; total, 20.

The schoolhouse is a rough slab building, very indifferently furnished and badly organized. The routine of the school is not regulated by a time-table or programmes of lessons, and the teaching has not been in accordance with the Council's standards. It is only fair to mention that the supply of books had only been received a few days before my visit, and that the school has been only a short time under the Council. The pupils are tolerably regular and punctual, but cleanliness should receive more attention. Although quiet and respectful, the pupils have little knowledge of the order that should pervade a school. The master is inexperienced, and the methods are mechanical. The proficiency is very indifferent.

CARROLL (N.-V.) :—Regular inspection, 20th November.

Numbers enrolled :—Boys, 10; girls, 10; total, 20.
Numbers present :—Boys, 5; girls, 8; total, 13.

As regards material condition and organization this school is in a very satisfactory state. The attendance is low and irregular, and the school does not seem to receive much support. The teacher is in a weak state of health, and has frequently to delegate her duties to her daughter. The discipline secures tolerable order and attention. Cleanliness is a pleasing feature of the school. The average proficiency exceeds moderate.

COOLAH (N.-V.) :—Regular inspection, 3rd September.

Numbers enrolled :—Boys, 18; girls, 18; total, 36.
Numbers present :—Boys, 13; girls, 15; total, 28.

The schoolroom and teacher's residence are under the same roof; the building is not large enough for both purposes. It is in fair condition, and some necessary additions have been made to the furniture. Cleanliness is fair, and order tolerable. Seven-ninths of the pupils are regular and punctual. The teacher is untrained, but he discharges his duties with system and industry. Fair progress is being made. Application has been made to convert it into a Public School.

DUNGAREE (V.) :—Regular inspection, 10th August.

Numbers enrolled :—Boys, 15; girls, 11; total, 26.
Numbers present :—Boys, 6; girls, 11; total, 17.

The material condition and organization are very indifferent. The portion of the building assigned to the teacher for residence is wholly unsuitable. The school is well supplied with requisites and moderately furnished. Four-fifths of the enrolled number attend regularly; punctuality needs improvement. Singing and drawing are not taught. The classification is appropriate, and the instruction is well regulated. The methods do not display much skill, but they are applied with untiring industry. The average proficiency is tolerable.

GONGOLGAN (N.-V.) :—Incidental inspection.

The school had been closed for some months for want of a teacher. The schoolroom is tolerably suitable and moderately furnished; the supply of school materials is pretty good. A site for a new school has been applied for, and about £100 of local subscription guaranteed. In passing I was fortunate to procure a teacher and have the school re-opened.

GUNDY (N.-V.) :—General inspection, 17th October.

Numbers enrolled :—Boys, 9; girls, 16; total, 25.
Numbers present :—Boys, 6; girls, 12; total, 18.

This school has only recently been brought into operation. The building is new, well furnished, and in excellent condition. The Council's grant of books had not arrived, and consequently the teaching was unsystematic. The proficiency is very indifferent.

LIMESTONE FLAT (N.-V.) :—Regular inspection, 4th August.

Numbers enrolled :—Boys, 9; girls, 14; total, 23.
Numbers present :—Boys, 9; girls, 9; total, 18.

The material condition and organization are tolerable. The supply of requisites is sufficient for present requirements. About four-fifths of the pupils are regular; punctuality and cleanliness are fair. The discipline secures tolerably good order and attention. Singing is not taught. The methods are of moderate skill, and applied with fair industry. The average proficiency is nearly tolerable.

MERRENDEE (N.-V.) :—Regular inspection, 14th October.

Numbers enrolled :—Boys, 19 ; girls, 13 ; total, 32.
 Numbers present :—Boys, 13 ; girls, 7 ; total, 20.

The material condition of the school is indifferent. The supply of furniture is tolerable, and that of books very fair. Two-thirds of the pupils attend regularly and punctually. The general discipline is good. The methods are intelligent and vigorously applied. The attainments range from fair to very fair. Satisfactory progress has been made during the year.

NARRANGO (N.-V.) :—General inspection, 11th August.

Numbers enrolled :—Boys, 9 ; girls, 7 ; total, 16.
 Numbers present :—Boys, 9 ; girls, 6 ; total, 15.

This school has been brought into operation during the year. The building is very fair, and answers well for a school. It is pretty well supplied with furniture and school requisites. The pupils are clean and tidy ; they attend tolerably well. The school is very noisy, considering the small attendance. The methods are unskilful, but the teaching is industrious. The attainments are between indifferent and moderate.

SPRINGFIELD (N.-V.) :—Regular inspection, 21st May.

Numbers enrolled :—Boys, 19 ; girls, 27 ; total, 46.
 Numbers present :—Boys, 7 ; girls, 12 ; total, 19.

The material condition of this school is tolerable. A supply of water for the use of the pupils is much wanted. The school is badly furnished, but the supply of books and slates is sufficient. The attendance is irregular and unpunctual. Not one-half the children within easy distance of the school attend. More attention should be paid to cleanliness. The instruction is regulated by the usual guides ; the classification is moderately judicious, but the teaching is feeble and wanting in penetrativeness. The proficiency is a little above indifferent.

TREE CREEK (N.-V.) :—Regular inspection, 25th May.

Numbers enrolled :—Boys, 12 ; girls, 14 ; total, 26.
 Numbers present :—Boys, 9 ; girls, 12 ; total, 21.

The material condition and organization of this school remain in a fairly satisfactory state. The supply of furniture and working materials is sufficient. The discipline effects very fair order, and the tone of the school is pleasing. The prescribed subjects are taught ; the methods are of fair merit, and earnestly applied. The average proficiency exceeds fair.

WEB WEA (V.) :—General inspection, 26th November.

Numbers enrolled :—Boys, 14 ; girls, 17 ; total, 31.
 Numbers present :—Boys, 8 ; girls, 11 ; total, 19.

This school has been erected since last inspection. It is substantial, roomy, and well ventilated ; it is also well furnished, and has a good supply of working materials. The government effects very fair order and attention. The pupils are clean and well-behaved. The instruction is regulated by the usual guides, and the methods are of tolerable merit. The average proficiency is between tolerable and fair.

WOLLAR (N.-V.)

Numbers present :—Boys, 11 ; girls, 14 ; total, 25.

The school was visited for the purpose of reporting on the application for aid—it had been in operation as a private school for some time. The building is occasionally used as a Roman Catholic church. In material condition and accommodation it is very fair. At the time of my visit the supply of books was insufficient ; the Council's supply has since been received. The classification does not appear to be based on any well defined principle—the leading defect is over-minuteness. The teaching is painstaking, but defective in tact and vigour. The proficiency is very indifferent.

III.—HALF-TIME SCHOOLS.**GOODRICH (N.-V.)** :—Regular inspection.

Numbers enrolled :—Boys, 15 ; girls, 25 ; total, 40.
 Numbers present :—Boys, 11 ; girls, 18 ; total, 29.

The school is held in a church. The grounds are unfenced, and there are no out-offices. The building affords ample room, and is generally suitable. The furniture, which is of indifferent construction, is not sufficient. The supply of working materials is short. The pupils attend with tolerable regularity, but punctuality needs increased attention. Cleanliness and order are fair. Except singing, the prescribed subjects are taught, and the instruction is tolerably well regulated. The attainments range from moderate to tolerable.

OBLEY (N.-V.) :—Regular inspection, 18th March.

Numbers enrolled :—Boys, 10 ; girls, 5 ; total, 15.
 Numbers present :—Boys, 8 ; girls, 4 ; total, 12.

This is a very commodious schoolhouse ; it is occasionally used by the different Protestant denominations as a church. The desk accommodation and the supply of working materials are insufficient. Cleanliness and order are fair. The attendance is not regular, and the inhabitants do not seem to have confidence in the Half-time system. The classification is tolerably good, and the methods fairly appropriate. The proficiency exceeds moderate.

BERI CREEK (N.-V.) :—General inspection, 20th October.

Numbers enrolled :—Boys, 9 ; girls, 11 ; total, 20.
 Numbers present :—Boys, 6 ; girls, 5 ; total, 11.

The schoolhouse is new and in very fair condition. Out-offices are wanted. The furniture is rough, but in fair supply. Books and other school requisites are badly wanted. The classification is not good, and the routine of the school is not properly regulated. The discipline is fair. The attainments are small.

NUBRYGLYN (N.-V.) :—Regular inspection, 19th October.

Numbers enrolled :—Boys, 9 ; girls, 3 ; total, 12.
 Numbers present :—Boys, 8 ; girls, 3 ; total, 11.

The material condition and organization of this school are bad. A fair proportion of the pupils are in regular attendance. Cleanliness, order, and attention are fair. The instruction is badly regulated, and the school records are in an unsatisfactory state. The methods are tolerably intelligent, and the attainments are very indifferent.

G. O'BYRNE,

Inspector, Mudgee District.

18th January, 1875.

NEWCASTLE DISTRICT.

GENERAL REPORT FOR THE YEAR 1874.

DURING the year just ended seven new schools were established; three existing schools were changed from Public to Half-time; one Half-time was converted into a Public School, and two were closed; two additional departments were formed out of the Newcastle R. C. School; and the certificate was withdrawn from the R. C. School at Clarence Town. The number of schools or departments in existence at the close of the year was:—

Public	53
Provisional	15
Half-time	16
Church of England	10
Roman Catholic	6
Total	100

The number of schools or departments in operation during the whole year was 82; the number in operation during a part of the year only, 17; not in operation during the year, 1. The number fully inspected was 87; the number not fully inspected was 13, of which 4 were opened during the last quarter. 9,701 children are returned as entered on the school records for the whole year; but the ordinary attendance enrolled at the times of inspection was 5,910, of which 4,409, or 75 per cent., were present. In some of the mining townships, especially Wallsend, Waratah, and Plattsburg, the accommodation available is very inadequate to their several requirements; but this defect has been or will soon be removed in the case of the two last mentioned, while in that of the first, definite arrangements are now in progress for the erection of an additional room which, it is expected, will abundantly provide for present emergencies, and render the working of the establishment more convenient, harmonious, and effective than it has been for some time past. At Finocce a new schoolroom was erected; at Kincumber entirely new and fairly suitable premises were provided; at Taree a fine room was added to the previously existing one; at Raymond Terrace new buildings are now approaching completion; at Newcastle South and Woolla Woolla the erection of new and commodious rooms is about to be undertaken; and, altogether, throughout the district improvements in the material condition of the schools have been more or less general. Stockton, a rising township on the north bank of the Hunter, opposite Newcastle, is, owing to certain complications of which the Council is cognisant, still without a school. New buildings are badly needed at Gosford, Markwell, Nelson's Plains, Thalaba, Wyong Creek, Glenmore, Willow Point, Clarence Town, and in the case of Miller's Forest and Raymond Terrace R.C. Schools. The chief centres of population are Newcastle, Stockton, the Collieries, the Williams, Port Stephens, Cape Hawke, the Manning, and Brisbane Water. These tracts contain an estimated aggregate of nearly 27,000 inhabitants; and it is satisfactory to be able to state that, as a rule, the great majority of the children of school age are under instruction, though their attendance is, in numerous instances, very irregular. There are few localities in this considerable extent of territory which have not their schools, and very few children indeed who are debarred by distance or insuperable physical difficulty from the important advantages conferred by them. And it is a noteworthy circumstance that the parents in general manifest an earnest solicitude for the education of their children, regard the existence of a school as an indispensable condition of settlement or continued residence, and often exhibit a commendable spirit of energy and self-sacrifice in seeking to provide one. Sickness and unfavourable weather were prevalent at times during the year, and exercised a depressing influence both on the numerical strength and general efficiency of the schools. In agricultural areas, farming operations interfere periodically, owing to the struggling circumstances of the parents, and their natural desire, not only to save the expense of hired labour, but to give their children an early insight into the details of what, in the vast majority of cases, will be their own occupation also. Another, though not frequent, cause of small and irregular attendance is the tendency to misunderstandings between parents and teachers; and in these cases, I am not at all disposed to throw the entire blame upon the former, being aware that some of the latter are thoughtless, frivolous, and intermeddling, addicted to gossiping and other kindred habits, and devoid of becoming circumspection in their social intercourse and general comportment. The average number enrolled in each school visited was nearly 70; and the number present at examination, 50.

The material condition of the schools inspected may be set down as nearly fair, their moral tone as from very fair to good—a result due in considerable measure to the services of the drill instructor employed by the Council for the schools of Newcastle and the neighbouring towns, and also to the efforts of many teachers, which in this direction were perhaps more diligently applied during the past year than previously. Their efficiency, judged by examination, varies from tolerable to fair. As before remarked, sickness and wet weather materially interfered with the working of almost all at different periods; and such having been the case, the proficiency indicated, though exhibiting no advance as a whole on the average of the preceding year, may nevertheless be regarded as reasonably satisfactory. The fact that five schools more exceeded the standard and seven less went below it speaks well for the general progress of the greater number.

In conclusion, I have only to observe that most of the schools of this district are doing steady, earnest, and fairly effectual work; and that as far as the teachers' services in the past afford a criterion of future success—their efforts being the main conditions—the character for efficiency and usefulness heretofore borne by our Primary Schools will be well sustained during the year upon which we have now entered. Detailed statements respecting the condition of each school inspected will be found appended hereto.

20th January, 1875.

WM. DWYER,
Inspector.

DETAILED STATEMENT showing the condition of the Public, Provisional, and Half-time Schools, inspected in 1874, as regards—

1. Their material condition.
2. Their moral character.
3. The subjects and methods of instruction.
4. The proficiency of the pupils.

PUBLIC SCHOOLS.

BANDON GROVE:—Visited, 10th August.

Present at examination —Boys, 14; girls, 7; total, 21.

1. The premises have been partially repaired, and are now fairly suitable and in good condition. The school is pretty effectively organized. 2. The discipline manifests considerable improvement, and the moral aspect of the school is very fair. 3. The subjects accord with the standard, and are suitably arranged; the methods are fairly intelligent, skilful, and effective. 4. The average proficiency ranges from tolerable to fair.

BARRINGTON:—Visited, 23rd October.

Present at examination:—Boys, 9; girls, 11; total, 20.

1. The condition of the premises is in all respects moderate, and the organization of the school about tolerable. 2. The moral tone of the school is fair. 3. The instruction is fairly suitable, reasonably well arranged, and imparted with passable care, intelligence, and skill. 4. The average proficiency is about moderate.

BLUE

BLUE GUM FLAT :—Visited, 17th December.

Present at examination :—Boys, 11 ; girls, 10 ; total, 21.

1. The premises are in fair condition and well kept, but in need of painting and other slight improvements. The school is cheerful, airy, and well organized. 2. The moral tone is very fair. 3. The occupation is suitable, and properly regulated ; the instruction fairly intelligent, judicious, and effective. 4. The average proficiency exceeds tolerable ; and the general character of the school is about fair.

BOORAL :—Visited, 27th August.

Present at examination :—Boys, 22 ; girls, 22 ; total, 44.

1. The premises are suitable, in good condition, well supplied with requisites, and effectively organized. 2. The moral tone of the school is good. 3. The occupation is appropriate and well arranged ; the instruction fairly skilful, intelligent, and effective. 4. The average proficiency is fair.

CLARENCE TOWN :—Visited, 29th and 30th July.

Present at examination :—Boys, 44 ; girls, 36 ; total, 80.

1. The premises are very old, in bad repair, defectively ventilated, and altogether insufficient for the requirements of the district. The school is fully provided with furniture and other requisites, and the organization, as a whole, is effective. 2. The moral tone of the school is very good. 3. The subjects are suitable and well arranged, and the methods are intelligent, judicious, and effective. 4. The average proficiency is very fair, and the general character of the school good.

CUNDLEPTOWN :—Visited, 10th September.

Present at examination :—Boys, 28 ; girls, 19 ; total, 47.

1. The building and premises need some repairs and improvements, but are in essential respects substantial, suitable, and carefully preserved. The school is very effectively organized. 2. The moral tone of the school is very fair. 3. The subjects are appropriate, and arranged with care and judgment, though not with satisfactory precision ; the methods are skilful, intelligent, and effective. 4. The average proficiency approaches very fair.

CROKI :—Visited, 24th September.

Present at examination —Boys, 31 ; girls, 23 ; total, 54.

1. The ventilation is defective, and a verandah is much needed ; otherwise the premises are in good condition, and the school is properly organized. 2. The moral tone of the school is good. 3. The subjects are appropriate and well arranged ; the methods intelligent, earnest, and fairly effective. 4. The average proficiency is very fair nearly.

CROOM PARK :—Visited, 7th August.

Present at examination :—Boys, 17 ; girls, 13 ; total, 30.

1. The premises are in fair condition, and reasonable suitable ; and the school is well provided with furniture, apparatus, and books. 2. The moral tone is fair. 3. The subjects are fairly appropriate and suitably arranged ; the methods are passably skilful and effective. 4. The average proficiency is nearly fair.

DINGO CREEK :—Visited, 15th October.

Present at examination :—Boys, 14 ; girls, 13 ; total, 27.

1. The ground is neither enclosed nor provided with out-offices. The buildings are passably suitable, and the school is moderately well organized. 2. The moral aspect of the school is fair. 3. The occupation is fairly appropriate and suitably arranged ; the instruction is tolerably intelligent and earnest, but wanting in judicious application. 4. The average proficiency slightly exceeds moderate.

DUMARESQ ISLAND :—Visited, 11th September.

Present at examination :—Boys, 13 ; girls, 10 ; total, 23.

1. The room is small and badly ventilated, and the teacher's house leaky and uncomfortable, but the premises, as a whole, are in fair condition and carefully kept. The school is effectively organized. 2. The moral tone of the school is very fair. 3. Except singing, the subjects agree with the standard and are duly arranged ; the methods are intelligent, reasonably judicious, and effective. 4. The average proficiency exceeds fair, and the general character of the school is very fair.

DUNGOG :—Visited, 4th August.

Present at examination :—Boys, 23 ; girls, 24 ; total, 47.

1. The playground is without shade, but otherwise the premises are suitable and in good condition, and the school is effectively organized. 2. The moral tone of the school is good. 3. The occupation is appropriate and well arranged, the instruction judicious and fairly effective. 4. The average proficiency exceeds fair.

EAGLETON :—Visited, 1st December.

Present at examination :—Boys, 11 ; girls, 13 ; total, 24.

1. Some repairs and improvements are needed, but the premises are, for the most part, in good repair, suitable and sufficient, and the school is well organized. 2. The discipline betrays some laxity, and the moral tone is only tolerable. 3. The subjects accord for the most part with the standard, and are arranged with tolerable care and judgment. The methods are intelligent and appropriate, but not energetically applied. 4. The average proficiency slightly exceeds moderate.

GHINNI GHINNI :—Visited, 17th September.

Present at examination :—Boys, 11 ; girls, 20 ; total, 31.

1. The premises are suitable, in very good condition, and the school is very effectively organized. 2. The moral tone of the school is very fair. 3. The subjects are suitable and properly arranged ; the methods fairly intelligent, skilful, and well applied. 4. The average proficiency is nearly fair.

GOSFORD :—Visited, 10th December.

Present at examination :—Boys, 13 ; girls, 18 ; total, 31.

1. The building is insufficient and unsuitable ; and the premises generally are considerably out of repair. Under the circumstances the school is fairly organized. 2. The moral tone of the school is fair. 3. Except singing and drawing the course of instruction accords with the standard, and is arranged with fair skill and care. The teaching is intelligent fairly judicious, and effective. 4. The average proficiency ranges from tolerable to fair, and the general character of the school is fair.

HENHAM :—Visited, 26th November.

Present at examination :—Boys, 7 ; girls, 8 ; total, 15.

1. Slight repairs are needed, but the premises are fairly suitable ; and the general organization is effective. 2. The moral tone is very fair. 3. The subjects are fairly appropriate and suitably arranged. The

The instruction is intelligent, and, as far as witnessed, reasonably impressive and effectual. 4. The average proficiency exceeds tolerable. More than half the ordinary numbers were absent, on account of rain, in the early part of the week.

HAMILTON (Primary):—Visited, 16th and 17th November.

Present at examination :—Boys, 61 ; girls, 56 ; total, 117.

1. Want of a lavatory is the only serious defect in the material condition. The school is suitable, in excellent repair, and well found in furniture and appliances. 2. The moral tone is fair. 3. The subjects for the most part accord with the standard, and are arranged with passable care and judgment in the requisite guides. The instruction is reasonably skilful and effectual, but somewhat deficient in energy and spirit ; it is, however, reasonably appropriate and impressive. 4. The average proficiency exceeds fair, and the general character of the school is very fair.

HAMILTON (Infant):—Visited, 17th and 18th November.

Present at examination :—Boys, 44 ; girls, 46 ; total, 90.

1. The accommodation is wholly inadequate to the requirements, and the organization is consequently defective, but as far as the requisite means are available it is passable. 2. The moral tone is fair. 3. The subjects are appropriate, and arranged with reasonable care and skill. The teaching is intelligent, earnest, and, under the circumstances, fairly applied. 4. The average proficiency exceeds tolerable, and the general efficiency of the school is above fair.

HANBURY (Primary):—Visited, 6th to 11th May.

Present at examination :—Boys, 71 ; girls, 35 ; total, 104.

1. The premises are substantially in good condition, but some repairs and renovation are necessary. The school is efficiently organized. 2. The discipline appears to have suffered considerable relaxation of late, and the moral aspect of the school is not above fair. 3. The subjects are suitable and properly arranged ; the methods intelligent and applied with fair skill and effect. 4. The average proficiency is nearly fair, and the general character of the school may be considered very fair.

HANBURY (Infant):—Visited, 13th May.

Present at examination :—Boys, 41 ; girls, 51 ; total, 92.

1. The room is awkwardly situated, and otherwise open to objection, but passably sufficient for present wants. It is suitably furnished, and pretty well found in all requisite appliances. 2. The discipline is weak, and the moral tone only moderate. 3. The subjects are appropriate, but not satisfactorily arranged. The methods are intelligent, but not impressive. 4. The average proficiency approaches tolerable.

KINCUMBER :—Visited, 14th December.

Present at examination :—Boys, 15 ; girls, 15 ; total, 30.

1. The building is new and fairly suitable, and the school is well provided with furniture and other requisites. 2. The moral tone is fair. 3. The subjects are suitable and arranged with fair care and skill, the methods tolerably intelligent and appropriate. 4. The average proficiency exceeds moderate.

LAMBTON (Primary):—Visited, 24th April to 5th May.

Present at examination :—Boys, 93 ; girls, 85 ; total, 178.

1. The school is effectively organized and in good condition, but the ventilation is deficient and the accommodation inadequate. The premises in general need repairs. 2. The pupils are somewhat unsteady, and some of them addicted to noisy habits, but, judged as a whole, the moral aspect of the school is very fair. 3. The subjects accord with the standard, are properly arranged, and taught with reasonable skill and effect. 4. The average proficiency approaches very fair.

LAMBTON (Infant):—Visited, 22nd April.

Present at examination :—Boys, 104 ; girls, 74 ; total, 178.

1. The site is low and damp, but the premises are suitable and in good condition, and the school is well organized. 2. The moral tone is fair. 3. The subjects are appropriate and suitably arranged, the methods reasonably intelligent and skilful. 4. The average proficiency is moderate.

MARLEE :—Visited, 14th October.

Present at examination :—Boys, 14 ; girls, 9 ; total, 23.

1. The premises are suitable and in good condition, and the organization of the school is appropriate and effective. 2. The moral tone is very fair. 3. The subjects are fairly suitable and well arranged, the methods reasonably intelligent, careful, and judicious. 4. The average proficiency is nearly fair.

MINMI :—Visited, 20th August.

Present at examination :—Boys, 18 ; girls, 23 ; total, 41.

1. The ground needs fencing and the building repairs, but the accommodation is moderately sufficient for present wants. The general organization is fairly effective. 2. The moral tone of the school is fair. 3. The occupation is appropriate and suitably arranged ; the instruction, as witnessed, is fairly earnest and intelligent, but, judged by the results, its effects are meagre. 4. The average proficiency exceeds moderate.

MINIMBAH :—Visited, 4th September.

Present at examination :—Boys, 21 ; girls, 9 ; total, 30.

1. The site is unpleasant, and the schoolroom small and unsuitable, but a new one has since been erected in a more advantageous position. The general organization is tolerable. 2. The moral tone of the school is very fair. 3. Except singing, the prescribed subjects are taught and properly arranged ; the methods are fairly intelligent and skilful. 4. The average proficiency is nearly fair.

MITCHELL'S ISLAND :—Visited, 18th September.

Present at examination :—Boys, 27 ; girls, 33 ; total, 60.

1. The premises are in good order, well situated, fairly sufficient and suitable, and the school is very fairly organized. 2. The moral tone is fair. 3. The subjects are fairly suitable, and, for the most part passably arranged ; the methods are mechanical, but earnest and painstaking. 4. The average proficiency is nearly fair.

MONKERAL :—Visited, 27th October.

Present at examination :—Boys, 13 ; girls, 11 ; total, 24.

1. The premises are in all respects tolerable, and the organization of the school is moderately effective. 2. The moral tone is tolerable. 3. The subjects are suitable, and arranged with passable care and skill ; the methods are tolerably intelligent and painstaking. 4. The average proficiency is nearly tolerable.

MosQUITO

MOSQUITO ISLAND :—Visited, 19th November.

Present at examination :—Boys, 20 ; girls, 18 ; total, 38.

1. The building is in good condition, but without a verandah, and the playground is poorly shaded. The school is effectively organized. 2. The moral tone of the school is fair. 3. The subjects are appropriate and suitably arranged ; the methods, as witnessed, are fairly suitable and effective. 4. The average proficiency varies from moderate to tolerable.

NELSON'S PLAINS :—Visited, 23rd July.

Present at examination :—Boys, 16 ; girls, 16 ; total, 32.

1. The schoolroom is low and barely sufficient, but in tolerable repair and passably organized. A residence has been provided for the teacher. 2. The moral aspect of the school is fair. 3. The prescribed subjects are taught and fairly arranged ; the instruction is reasonably intelligent, appropriate, and effective. 4. The average proficiency approaches fair.

NEWCASTLE (Primary) :—Visited, 23rd to 25th June.

Present at examination :—Boys, 110 ; girls, 65 ; total, 175

1. The walls need colouring, the window-sashes painting, and the entire premises some repairs and renovation, but the schoolroom is suitable, sufficient, and very effectively organized. 2. The discipline is suitable and judiciously applied, and the moral tone of the school excellent. 3. The occupation is appropriate and skilfully arranged, and the instruction is imparted with satisfactory intelligence and effect. 4. The average proficiency exceeds good, and the general efficiency of the school is very good.

NEWCASTLE (Infants) :—Visited, 26th June.

Present at examination :—Boys, 65 ; girls, 51 ; total, 116.

1. The room and its organization are in every respect suitable, and the stock of appliances is appropriate and abundant. 2. The moral tone of the school is excellent. 3. The instruction is appropriate, judiciously arranged, and effectively imparted. 4. The average proficiency ranges from very fair to good, and the general character of the school is very good.

NEWCASTLE SOUTH :—Visited 28th May to 5th June.

Present at examination :—Boys, 149 ; girls, 109 ; total, 258.

1. The premises are very unsuitable, but arrangements are now completed for the erection of new ones to be vested in the Council. The organization is as full and effective as, under the circumstances, it can be rendered. 2. The moral tone is good. 3. The subjects accord with the standard, are suitably arranged, and imparted by earnest and judicious methods. 4. The average proficiency is nearly very fair, and the general character of the school may be considered good.

ONYXEMBAH :—Visited, 10th July.

Present at examination :—Boys, 24 ; girls, 26 ; total, 50.

1. The building is small, but in good condition and passably suitable, but not kept with satisfactory neatness. The organization is fairly effective. 2. The moral tone is fair. 3. The subjects are suitable, but their arrangement for the quarter was not completed. The methods are fairly intelligent, and passably effective. 4. The average proficiency approaches tolerable, and the general character of the school is above fair.

OXLEY ISLAND :—Visited, 16th September.

Present at examination :—Boys, 19 ; girls, 22 ; total, 41.

1. The premises are well situated, in fair condition, and cleanly kept, but the playground is destitute of shade. The school is tolerably well organized. 2. The moral tone of the school is very fair. 3. Except singing and drawing the subjects accord with the standard, and are fairly arranged ; the instruction, as a whole, manifests improvement, and though still deficient in skilful application its general character is promising. 4. The average proficiency is very nearly tolerable, and the general efficiency of the school nearly fair.

PLATTEBURG :—Visited, 23rd and 24th November.

Present at examination :—Boys, 93 ; girls, 66 ; total, 159.

1. The building is insufficient and unsuitable, but new premises are nearly completed. Under the circumstances the organization is fairly effective. 2. The moral tone of the school is very fair. 3. The classification is unsuitable, and the occupation, to some extent, injudiciously advanced ; but the lesson guides are prepared with reasonable care and skill. The methods in themselves are tolerably intelligent, earnest, and appropriate, but not applied with satisfactory discernment and experience. 4. The average proficiency ranges from moderate to tolerable, but, allowing for irregular attendance and other hindrances, the general character of the school may be considered fair.

RAYMOND TERRACE :—Visited, 21st July.

Present at examination :—Boys, 16 ; girls, 14 ; total, 30.

1. The premises are unsuitable and badly situated, but new ones are in course of erection. Under present circumstances the organization is passable. 2. The moral tone of the school is good. 3. The occupation is appropriate, and arranged with reasonable care and skill ; the instruction is intelligent, fairly judicious, and effective. 4. The average proficiency varies from tolerable to fair, and the general character of the school is fair.

REDBANK :—Visited, 15th September.

Present at examination :—Boys, 15 ; girls, 16 ; total, 31.

1. The site is inconvenient and unpleasant, and the fences are very insecure ; but the schoolroom and its equipment are, as a whole, tolerable. 2. The moral tone of the school is very fair. 3. The subjects are fairly appropriate and tolerably well arranged ; the methods reasonably intelligent, skilful, and effective. 4. The average proficiency is nearly tolerable.

SRAHAM :—Visited, 24th July.

Present at examination :—Boys, 11 ; girls, 12 ; total, 23.

1. The premises are well situated, in fair condition, and passably suitable ; and the school is tolerably well organized. 2. The moral tone is fair. 3. The subjects are fairly appropriate, and reasonably well arranged ; the methods tolerably intelligent, earnest, and effective. 4. The average proficiency exceeds moderate.

TARBEE :—Visited, 30th September and 1st October.

Present at examination :—Boys, 49 ; girls, 24 ; total, 73.

1. Since last inspection the accommodation has been considerably enlarged and improved, and is now equal to the requirements of the place. The organization is effective. 2. The moral tone of the school is good. 3. Except singing and Scripture lessons the prescribed subjects are taught, but their arrangement

arrangement for the quarter was not completed at the time of inspection. The instruction is appropriate and reasonably judicious, but, owing to local circumstances, not so effective as formerly. 4. The average proficiency approaches very fair, and the general character of the school is nearly good.

TINONEE :—Visited, 2nd October.

Present at examination :—Boys, 26, girls, 21; total, 47.

1. The schoolhouse is new, suitable, and sufficient, but not properly protected from the weather on the western side. The general organization is fair. 2. The moral tone is very fair. 3. The subjects are appropriate, but their arrangement was not complete, the time of inspection having been in this case and that of the preceding school in the first week of the quarter. The instruction is careful, fairly judicious, and effective. 4. The average proficiency exceeds fair.

TOMAGO :—Visited, 16th July.

Present at examination :—Boys, 14; girls, 4; total, 18.

1. The premises are suitable and in good condition, and the school is fairly provided with furniture and appliances. 2. The moral tone of the school is tolerable. 3. The subjects are fairly appropriate, and reasonably well arranged; the methods are, as a whole, mechanical, but earnest and tolerably effective. 4. The average proficiency exceeds tolerable.

TELEGHERRY :—Visited, 29th October.

Present at examination :—Boys, 24; girls, 21; total, 45.

1. The walls of the schoolroom need lining and colouring, but its general organization is reasonably effective, and the condition of the premises is fairly satisfactory. 2. The moral tone is tolerable. 3. Except singing and drawing the prescribed subjects are taught, and arranged with, for the most part, moderate care and skill. The teacher is kind and gentle with the children, but the actual instruction wants the more important attributes of success. 4. The average proficiency is nearly tolerable—an improvement upon the results of the preceding examination.

THALABA :—Visited, 6th August.

Present at examination :—Boys, 18; girls, 15; total, 33.

1. The buildings are of a rude character, but somewhat improved by recent repairs. The organization is in all respects moderate. 2. The discipline wants energy, and the moral tone is only moderate. 3. The subjects are fairly suitable and passably well arranged, the methods are appropriate in themselves, but want energy in their application. 4. The general proficiency exceeds moderate.

WALLSEND (Primary) :—Visited, 18th, 19th, 26th March, and 2nd April.

Present at examination :—Boys, 115; girls, 65; total, 180.

1. The accommodation is insufficient for the requirements of the place, but the premises are in excellent condition, and the school is very effectively organized. 2. The moral tone of the school is excellent. 3. The subjects are appropriate, and skilfully arranged; the methods intelligent, judicious, and effective. 4. The average proficiency varies from very fair to good, and the general character of the school is very good.

WALLSEND (Infant) :—Visited, 27th March.

Present at examination :—Boys, 56; girls, 55; total, 111.

1. The accommodation is far too small for the numbers, and the ventilation is defective. The organization, as a whole, is incomplete; but these defects are about to be removed. 2. The moral tone of the school is good. 3. Geography is not taught; but the other subjects accord with the standard, and are suitably arranged. The instruction is intelligent, judicious, and effective. 4. The average proficiency exceeds fair, and the general character of the school is very fair.

WARATAH :—Visited, 13th July.

Present at examination :—Boys, 24; girls, 15; total, 39.

1. The schoolroom—a temporary one—is old, unsuitable, in bad condition, and inconveniently situated. Under the circumstances, the organization is tolerable. New premises are now available. 2. The moral tone is fair. 3. The subjects are suitable and arranged with fair judgment; the methods are tolerably intelligent and well applied. 4. The average proficiency exceeds moderate.

WILLIAM TOWN :—Visited, 3rd December.

Present at examination :—Boys, 16; girls, 18; total, 34.

1. The premises are central, suitable, in good condition, and well preserved. The organization of the school is effective. 2. The moral tone is fair. 3. The occupation is suitable and properly arranged, and the methods are earnest, reasonably skilful, and painstaking. 4. The average proficiency approaches fair, and the general character of the school is nearly very fair.

WINGHAM :—Visited, 12th October.

Present at examination :—Boys, 37; girls, 27; total, 60.

1. The accommodation is very inadequate, and the house is unprotected by verandahs or otherwise shaded—a circumstance which makes both school and residence very uncomfortable. The stock of furniture, apparatus, and books is tolerable. 2. The moral tone of the school is fair. 3. The instruction is appropriate, but its arrangement for the quarter was not completed; the teaching is zealous, skilful, and effective. 4. The average proficiency is fair.

WOOLA WOOLA :—Visited, 29th September.

Present at examination :—Boys, 24; girls, 20; total, 44.

1. The building is old, in bad repair, insufficient, and unsuitable; but arrangements are made for the erection of a new one. The stock of furniture and appliances is fair, and the general organization reasonably good. 2. The moral tone is very fair. 3. Singing excepted, the prescribed subjects are taught and arranged with satisfactory care and skill; the instruction is fairly intelligent and judicious. 4. The average proficiency is fair.

YAYPO :—Visited, 9th October.

Present at examination :—Boys, 7; girls, 11; total, 18.

1. The premises are in fair condition, suitable, sufficient, provided with good furniture and apparatus, and in general fairly organized. 2. The moral tone is fair. 3. The occupation is suitable and properly arranged, the instruction fairly intelligent and skilful. 4. The proficiency ranges from fair to very fair.

PROVISIONAL SCHOOLS.

DINGO CREEK :—Visited, 13th October.

Present at examination :—Boys, 11 ; girls, 9 ; total, 20.

1. The condition of the premises and the organization of the school are barely tolerable. 2. The moral tone is tolerable. 3. The subjects are fairly suitable and passably arranged ; the instruction is mechanical, but moderately earnest and effective. 4. The average proficiency is nearly moderate.

ERINA :—Visited, 15th December.

Present at examination :—Boys, 15 ; girls, 12 ; total, 27.

1. The building is tolerably suitable and in passable repair, but inadequately furnished. The stock of apparatus and books is tolerable. 2. The moral tone is fair. 3. The occupation is suitable and fairly arranged, the instruction tolerably intelligent and painstaking. 4. The average proficiency is nearly tolerable.

HARRINGTON :—Visited, 25th September.

Present at examination :—Boys, 9 ; girls, 10 ; total, 19.

1. The site is pleasant, the building in fair condition and reasonably sufficient, and the organization tolerable. 2. The discipline is weak, and the moral tone only tolerable. 3. The subjects are fairly appropriate and well arranged, but the instruction is mechanical and uninteresting. 4. The average proficiency is below moderate.

KIMBRICKI :—Visited, 21st October.

Present at examination :—Boys, 6 ; girls, 12 ; total, 18.

1. The room is insufficient and in bad repair, and the organization only indifferent. 2. The discipline is of small value, and the moral aspect of the school moderate only. 3. The occupation is suitable in kind, but badly arranged and unskillfully conducted. The instruction is mechanical and ineffectual. 4. The average proficiency is very moderate.

OAKENDALE :—Visited, 27th July.

Present at examination :—Boys, 11 ; girls, 7 ; total, 18.

1. The schoolroom is in fair condition, reasonably sufficient and suitable, and provided with a moderate stock of furniture, apparatus, and books. 2. The moral tone is fair. 3. The subjects are appropriate, and arranged with tolerable care and skill ; the methods are passably judicious and effective. 4. The average proficiency is tolerable.

TEBRIGAL :—Visited, 15th December.

Present at examination :—Boys, 4 ; girls, 6 ; total, 10.

1. The site is indifferent, but the building is in good repair, sufficient and suitable ; the school is fairly organized. 2. The moral tone is fair. 3. The occupation does not fully accord with the standard, but is suitable, as far as it goes, and fairly arranged. The methods are intelligent and reasonably effective. 4. The average proficiency is nearly fair.

WYBONG CREEK :—Visited, 18th December.

Present at examination :—Boys, 8 ; girls, 8 ; total, 16.

1. The schoolroom is insufficient, unsuitably placed, entirely unfit for its present purpose, and very poorly organized. 2. The moral tone is tolerable. 3. The occupation is fairly suitable and arranged with moderate adherence to the prescribed forms ; the methods are painstaking, but otherwise of small value. 4. The average proficiency varies from moderate to tolerable.

HALF-TIME SCHOOLS.

BOULAMBUGLE :—Visited, 31st August.

Present at examination :—Boys, 3 ; girls, 7 ; total, 10.

1. The premises are in tolerable condition, passably suitable, and reasonably well provided with furniture and apparatus. 2. The moral tone is fair. 3. The subjects are appropriate, but not fully arranged ; the methods are reasonably intelligent, but not satisfactorily effective. 4. The average proficiency is slightly above moderate.

BULLADELAH :—Visited, 31st August.

Present at examination :—Boys, 11 ; girls, 10 ; total, 21.

1. The room is passably suitable and sufficient, and the stock of furniture and apparatus tolerable. 2. The moral tone is fair. 3. The subjects are suitable, but not properly arranged ; the methods are intelligent and tolerably judicious. 4. The average proficiency is a little over tolerable.

BROOKFIELD :—Visited, 5th August.

Present at examination :—Boys, 11 ; girls, 5 ; total, 16.

1. The buildings are old and considerably out of repair ; but the schoolroom is in moderate condition and tolerably well furnished for present wants. 2. The moral tone is very fair. 3. The subjects are suitable and fairly arranged ; the methods intelligent, skilful, and reasonably effectual. 4. The average proficiency exceeds tolerable.

GLENMORE :—Visited, 12th August.

Present at examination :—Boys, 6 ; girls, 9 ; total, 15.

1. The building is a rough one, but in moderate condition and passable for the place. The organization is also passable. 2. The moral tone is tolerable. 3. The subjects are suitable and fairly arranged, the methods tolerably intelligent and painstaking. 4. The average proficiency is tolerable.

GLENWILLIAM :—Visited, 31st July.

Present at examination :—Boys, 11 ; girls, 5 ; total, 16.

1. The situation is low, and the building dilapidated and uncomfortable ; but steps have been taken for improving the latter. The school is fairly provided with furniture and appliances. 2. The moral tone is very fair. 3. The subjects are suitable and properly arranged, the methods intelligent and effective. 4. The average proficiency exceeds fair.

LANSDOWNE :—Visited, 22nd September.

Present at examination :—Boys, 4 ; girls, 6 ; total, 10.

1. The building is reasonably suitable, in good condition, and tolerably well provided with furniture, apparatus, and books. 2. The moral tone of the school is very fair. 3. The subjects are appropriate and suitably arranged, and the instruction is fairly skilful and effective. 4. The average proficiency exceeds fair.

JOHN'S RIVER :—Visited, 23rd September.

Present at examination :—Boys, 5 ; girls, 5 ; total, 10.

1. The building and appointments are fairly suitable ; and the school is reasonably well found in requisites. 2. The moral tone of the school is fair. 3. The occupation is suitable, but not arranged with satisfactory care and precision ; the instruction is fairly appropriate, and under the circumstances passably effective. 4. The average proficiency is moderate.

M'LEAN RIVER, UPPER :—Visited, 3rd September.

Present at examination :—Boys, 10 ; girls, 4 ; total, 14.

1. The building is passable as regards condition, suitability, and general organization. 2. The moral tone is very fair. 3. The subjects are appropriate and fairly arranged ; the methods, reasonably intelligent and effective. 4. The average proficiency is tolerable.

M'LEAN RIVER, LOWER :—Visited, 3rd September.

Present at examination :—Boys, 8 ; girls, 7 ; total, 15.

1. The material character of the school is tolerable. 2. The moral tone is very fair. 3. The instruction is suitable, and properly arranged ; and the methods are earnest and fairly effective. 4. The average proficiency ranges from tolerable to fair.

UNDERBANK :—Visited, 11th August.

Present at examination :—Boys, 10 ; girls, 7 ; total, 17.

1. The condition of the building and its general organization are tolerable. 2. The moral tone of the school is fair. 3. The subjects are suitable, and arranged with passable care and skill ; the methods are tolerably intelligent and effective. 4. The average proficiency is from tolerable to fair.

MYALL RIVER, LOWER :—Visited, 1st September.

Present at examination :—Boys, 14 ; girls, 25 ; total, 39.

1. The building is awkward in shape and insufficient in size, but tolerable as to condition and organization. 2. The moral tone is tolerable. 3. The subjects are fairly appropriate and passably arranged ; the methods are mechanical, but as a whole earnest and moderately effective. 4. The average proficiency exceeds moderate, and the general character of the school is tolerable.

MYALL RIVER, UPPER :—Visited, 2nd September.

Present at examination :—Boys, 9 ; girls, 11 ; total, 20.

1. The premises are moderately suitable, and the school is passably organized. 2. The moral tone is fair. 3. The occupation is reasonably appropriate and moderately well arranged ; the methods are earnest and tolerably effective. 4. The average proficiency and general character of the school may be considered tolerable.

WOLLONBA RIVER :—Visited, 8th September.

Present at examination :—Boys, 7 ; girls, 11 ; total, 18.

1. The building is rough and unsuitable, but intended only to meet a temporary want ; the stock of furniture and appliances is moderate. 2. The moral aspect of the school is fair. 3. The subjects are fairly appropriate and passably arranged ; the methods are mechanical, but moderately earnest and effective. 4. The average proficiency exceeds moderate.

WILLOW POINT :—Visited, 7th September.

Present at examination :—Boys, 9 ; girls, 6 ; total, 15.

1. The building is a very inferior slab one, in poor condition, and, except as a temporary makeshift, wholly unsuitable. The furniture is clumsy, and the general organization lax and ineffective. 2. The moral tone is tolerable. 3. The subjects are passably suitable, but their arrangement is not satisfactorily precise ; the methods are mechanical, but moderately intelligent and effective. 4. The average proficiency is moderate.

WARD'S RIVER :—Visited, 26th October.

Present at examination :—Boys, 5 ; girls, 5 ; total, 10.

1. The building and appointments are fairly suitable, and the school is pretty well provided with furniture and other requisites. 2. The moral tone of the school is fair. 3. The subjects are fairly suitable and well arranged ; the methods passably intelligent, earnest, and effective. 4. The average proficiency approaches tolerable.

JOHNSON'S CREEK :—Visited, 26th October.

Present at examination :—Boys, 6 ; girls, 3 ; total, 9.

1. The condition and suitability of the building and the organization of the school are tolerable. 2. The moral tone is very fair. 3. The subjects are appropriate and suitably arranged ; the methods are intelligent, passably skilful, and fairly effective. 4. The average proficiency is about fair.

SYDNEY DISTRICT.

INSPECTOR'S General Report upon the condition of Public, Provisional, and Certified Denominational Schools for the year 1874.

At the beginning of the year 1874, 110 schools were in operation in this district. These included thirty-six Public, two Provisional, and seventy-two Certified Denominational Schools. During the year a Public School was opened in Devonshire-st, the certificates were withdrawn from St. Leonards C. E. Girls', and Double Bay R. C., on the ground of small attendance ; St. Andrew's Pres. was voluntarily closed by the Denomination ; the Public School in Jamison-street lapsed, and Tempe Provisional and St. Leonards Pres. were converted into Public Schools. The schools now in operation therefore comprise thirty-eight Public, one Provisional, and sixty-eight Denominational—in all, 108 schools.

All these schools were regularly inspected during the year, besides being incidentally visited with tolerable frequency. We are thus enabled to speak with some confidence on their condition and management. The regular inspections were minute and searching, extending in some instances over several days, and comprised a patient investigation into the material, disciplinary, and instructional arrangements of each school.

Not

Not only was an effort made to arrive at the attainments and progress of each pupil, but attention was especially directed to estimate as nearly as practicable the value of the teaching as a means of intellectual culture, and as an agent in forming sound mental habits.

Existing schools make fair provision for the educational wants of the district. In former reports we have pointed out localities where the number of schools might be conveniently reduced. Such a result would not only lessen the cost of education, but materially add to the efficiency and usefulness of the remaining schools. Public Schools are required at Surry Hills, Waverley, Darlinghurst, Double Bay, Balmain West, Darlington, Haymarket, and other centres of population throughout the city.

In a majority of the schools the organization is good. The schoolhouses are built on approved models, and liberally provided with the best educational appliances; the instruction is judiciously regulated, and the pupils are classified with a due regard to their ages and capabilities. Four-ninths of the Public Schools are conducted in temporary premises, and in no instance is the organization of an unexceptionable character; the chief defects being bad sites, insufficient school accommodation, and inferior furniture. Similar defects characterise two-fifths of the Denominational Schools. Minor material improvements have been effected in several instances, additional rooms have been erected or are in course of erection in connection with the following schools:—Marrickville, William-street, Balmain C.E., Parramatta-street R.C., St. Philip's C.E.

Viewed in relation to discipline, the schools show to advantage as compared with their condition in this respect in previous years. In most instances a mild but firm government obtains; corporal punishment is seldom resorted to, good order is maintained, and the conduct of the pupils is marked by a modest, subdued, and respectful demeanour. Where the discipline has been found defective, it has arisen with few exceptions from a feeble or vacillating government.

The average quarterly enrolment of pupils has been 12,437. Of these, 12,417 were present at the inspections. The attendance was in the earlier part of the year injuriously affected by wet weather, and towards the end by scarlatina and measles. These causes operated to make the average lower than usual. Under ordinary circumstances the pupils attend with fair regularity.

The methods of teaching in common use are suitable and effective. They are either analytic, synthetic, or both, according to the subject treated. They are applied with earnestness, vigour, and skill. Where they are accompanied by appropriate questioning and supplemented by searching examination at the close of the lessons the best results are produced. Mere didactic teaching is seldom met with, and rote learning is becoming a thing of the past. The course of instruction pursued not only adds to the knowledge of children, but, what is of far higher importance, develops their intellectual faculties and enables them to think. The intelligence and mental culture of the pupils form important elements in estimating the efficiency of the teacher's labours.

Of the subjects of instruction, reading, writing, drawing, object lessons, and needlework, are taught well; Scripture, geography, music, and trigonometry, very fairly; arithmetic, grammar, mensuration, Latin, fairly; dictation, English composition, algebra, geometry, tolerably.

Judged by the standard, seven Public Schools are below its requirements, sixteen satisfy them, and sixteen exceed them. Of Denominational Schools, twenty-five are below, thirty-seven up to, and eight above the standard. In 1873, forty schools were below the standard; in 1874, thirty-three.

It will thus be seen that progress is being made. Indeed it may be stated that, whether as regards organization, discipline, or instruction, the schools of the district evidence improvement.

Of the teachers it may be stated that they are respectable, intelligent, and reasonably well trained for the work. A few are behind the requirements of city schools, but the great bulk are doing earnest, faithful, and efficient service. The labours of the pupil-teachers, numbering 166, can hardly be too highly spoken of. These young persons are passing through the Training School at the rate of about thirty per annum, and are gradually occupying the more important schools of the Colony. The very best results may be anticipated from the satisfactory manner in which the pupil-teacher system is being developed.

Little can be said in favour of the local supervision of our schools. In about half-a-dozen it is active and beneficial; in the remainder it is of a nominal character.

In the report for last year attention was invited to the large number of children—between four and five thousands—that attended no school at all. Nothing has been done to alter this state of things. As already suggested, the best remedy, in our opinion, would be found in the establishment of several free schools, and it is much to be desired that some amendment may be made in the Public Schools Act to allow of this being done. There are several localities in and around the city where free schools are urgently needed. We have indicated some in our report for 1873. It appears to us that if such schools were brought into existence, the question of free education would be reasonably well met, in this district at least.

To sum up:—The organization has improved; the discipline is healthy; the attainments indicate an advance on those of previous years; the teachers are earnest, diligent, and fairly efficient; and generally it may be stated that primary education is making good progress in the district.

EDWIN JOHNSON.
JAMES W. ALLPASS.

Inspectors' Office,
13th January, 1875.

ANNEX.

DETAILED Statement of the condition of Public and Provisional Schools in the Sydney District, visited during the year 1874.

The remarks under head 1 relate to the material condition of schools; under 2, to their moral character; 3, to the subjects and methods of instruction; 4, to the proficiency of the pupils.

PUBLIC SCHOOLS.

BALMAIN:—Visited, 25th, 26th February and 2nd, 3rd March.

Numbers present:—Boys, 183; girls, 127; total, 310.

1. With the exception of insufficient accommodation, the school is in satisfactory material condition. 2. The school is well organized, the pupils are under excellent discipline, and their moral tone is very satisfactory. 3. The instruction is prosecuted with intelligent method, and the course comprehends all the subjects prescribed by the Council. 4. The proficiency of the pupils is as follows:—First class, tolerable to fair; second class, fair; upper second class, fair to very fair; third and fourth classes, very fair; fifth class, very good+.

BALMAIN (Infants):—Visited, 26th February and 3rd March.

Numbers of pupils present:—Boys, 79; girls, 86; total, 165.

1. The school is conducted mainly in the class-room. The lavatory is occasionally used for the babies. The accommodation is unsuitable and insufficient. There is a fair supply of working appliances. 2. A good attendance is maintained. The pupils are reasonably regular and punctual, neat and clean in person, and well behaved. The government is mild, intelligent, and effective. The moral aspect of the school is healthy and pleasing. 3. The classification is affected by exceptional circumstances; insufficient accommodation is perhaps the one that has to be most studied and provided against. The methods are those usually practised in the better infant schools; the teaching is earnest, painstaking, and fairly skilful. 4. The attainments are fair.

BOTANY:—

BOTANY :—Visited, 25th August.

Numbers present.—Boys, 30; girls, 33; total, 63

1. The school premises are good, they are suitably furnished and are fairly well kept. 2. The organization is correct, and the discipline effects fair order. 3. The highest class is a third, and for a school of the kind all the subjects prescribed are taught. 4. The proficiency of the pupils ranges between fair and very fair.

BOTANY ROAD :—Visited, 11th February.

Numbers present :—Boys, 88; girls, 52; total, 140.

1. The material condition of this school is as good as can be expected in the circumstances. As a makeshift, the schoolroom, though small, does tolerably well. There is a sufficiency of educational appliances. 2. A fair attendance is secured. The pupils are reasonably regular and punctual. Drill is taught with fair success. The government is somewhat feeble. A few of the elder boys are inclined to be forward and disobedient. With this exception, the order and general discipline may be regarded as fairly satisfactory. 3. Very fair judgment is shown in the classification of the pupils. The instruction embraces all the prescribed subjects, is well arranged, and imparted with painstaking and a fair degree of earnestness. The methods are modern, but require to be applied with greater skill. The school is divided into four classes. The average proficiency is fair.

BOURKE-STREET (Boys) :—Visited, 12th–13th May.

Number present :—127.

1. The schoolroom is a fair one, but it is badly furnished. There is a sufficiency of desks, but they are of a very unsuitable and rickety description. Owing to the character of the site, there is no proper playground, and the out-offices are badly situated. 2. Excepting some cases of faulty classification, the organization is passable. The discipline is bad, the children being in some instances very disobedient. 3. The pupils are instructed in the prescribed subjects, and the teaching is earnestly prosecuted. 4. As a whole the pupils are fairly proficient, but in the upper class, a fourth, the results are but barely tolerable.

BOURKE-STREET (Girls) :—Visited, 13th March.

Number present :—120.

1. The schoolroom is commodious, clean, and neatly arranged. Additional desks are needed; those in use are of inferior construction. The seats also are bad. There is a fair supply of apparatus. 2. The attendance has largely increased. The pupils are regular, punctual, and clean; good order is maintained. The government is mild, but firm and effective. 3. The classification is appropriate; the lesson documents are arranged with fair judgment; the methods are suitable, and are diligently applied. 4. The following is the proficiency of the several classes :—First, fair; second, very fair; third, fair; fourth, fair+.

BOURKE-STREET (Infants) :—Visited, 14th May.

Numbers present :—Boys, 86; girls, 85; total, 171.

1. The schoolroom, though somewhat small, is on the whole a suitable one. Want of proper recreation space is a serious detriment to the school. 2. The children are under healthy and effective discipline. 3. The instruction is modern, methodical, and intelligent. 4. The proficiency of the children ranges between tolerable and fair.

CAMPERDOWN :—Visited, 28th May.

Numbers present :—Boys, 41; girls, 21; total, 62.

1. A lavatory and a weather-shed are pressing requirements; the playground needs to be drained and the fences and the woodwork of the windows painted. The desk accommodation is insufficient; with these exceptions, the organization and material condition of the school are satisfactory. 2. A certain degree of irregularity characterizes the attendance. Wet weather prevented many of the pupils being present at the examination. With few exceptions they are punctual and clean. The government is vigorous and effective, securing good order and a healthy moral tone. 3. The instruction accords with the prescribed course, and is judiciously regulated. The methods are appropriate, and are applied with earnestness, diligence, and skill. 4. The following is the proficiency of the several classes :—Second, very fair+; third, very fair (nearly); fourth, very fair.

CAMPERDOWN (Infants) :—Visited, 28th May.

Numbers present :—Boys, 19; girls, 19; total, 38.

1. It would be an advantage were the portion of the room in which the infants are taught screened from view. On the whole the instructional appliances are tolerably suitable. 2. The discipline is healthy. 3. The instruction, which is of the kind usual in infants' schools, evidences painstaking. 4. The proficiency is fair.

CLEVELAND-STREET (Boys) :—Visited, 8th, 9th, 10th September.

Number present :—309.

1. The schoolroom is in very good repair, and is abundantly provided with suitable educational appliances. 2. The attendance has undergone a considerable diminution. Three-fourths of the pupils attend regularly and with commendable punctuality. Other features of the discipline are not less satisfactory. The pupils present a clean and neat appearance, are subdued in demeanour, well conducted, and in excellent order. 3. Except that promotions are unnecessarily frequent, fair judgment is exhibited in the classification. The instruction is of full range, regulated with very fair ability, and imparted by modern methods. The teaching would appear, however, to lack life and thoroughness. 4. The proficiency of the several classes is as follows :—First, tolerable to fair; second, fair; upper second, very fair; third, very fair+; upper third, barely tolerable; fourth, tolerable+; fifth, fair.

CLEVELAND-STREET (Girls) :—Visited, 27th August, and 1st, 2nd, 3rd September.

Number present :—293.

1. The school premises are well furnished and in good repair. 2. The organization is of a very satisfactory character, and the pupils are excellently disciplined. 3. Subjects of instruction for a school having a fifth class are taught in an effective manner. 4. The average proficiency of the whole school reaches very fair, in the fourth it is good, and in the fifth class good+.

CLEVELAND-STREET (Infants) :—Visited, 26th and 27th August.

Numbers present :—Boys, 211; girls, 150; total, 361.

1. The school premises, whilst of excellent character, afford but insufficient accommodation to the number of pupils in attendance, and a class-room is a marked want. 2. Both as regards organization and discipline the school is in a very satisfactory state. 3. The school course includes all branches usually taught in good infants' schools. 4. The average proficiency reaches very fair.

DEVONSHIRE-STREET :—

DEVONSHIRE-STREET :—Visited, 4th June.

Numbers present :—Boys, 85 ; girls, 47 ; total, 132.

1. This school is held in rented premises belonging to the Congregational denomination. The building is a new one, and when the enlargements, now in course of erection, are completed, the material condition of the school will be satisfactory. 2. The organization accords with usual plans. The government is feeble and vacillating ; as a result, the pupils are restless and persistently noisy. The moral tone of the school is affected by the lax government. 3. The teaching is prosecuted in a methodical manner, but it is wanting in effect. 4. The results as ascertained by examination are :—First class (babies) from fair to very fair ; upper first, approaching tolerable ; second, fair ; third, tolerable +.

FORT-STREET (Boys) :—Visited, 18th, 19th, 20th, 23rd, 24th, 26th, 27th, and 30th November, 1st, 2nd, 3rd, and 4th December.

Number present :—450.

1. The school premises are, on the whole, in good condition, and they are well kept. 2. The organization of the school is excellent. The pupils are under very effective government. They manifest marked industry, and a pleasing earnestness to excel when under test. 3. In stating that the prescribed subjects are taught, it must be noticed that the range taken is of much wider scope than what obtains in our ordinary schools. Exclusive of the more usual branches of instruction, the programme for the fifth class embraces higher arithmetic, mensuration, algebra, trigonometry, Euclid (6 books), Latin grammar, and Cæsar. 4. The general proficiency of the whole school approaches very good ; that of the fifth class is excellent.

FORT-STREET (Girls) :—Visited, October 20th, and November 6th, 10th, 11th, 12th, 13th, 16th, 17th, and 18th.

Number present :—337.

1. The material condition of the school is thoroughly satisfactory. The furniture is sufficient, and the appliances ample. 2. The discipline is highly effective. The moral tone of the school is excellent. 3. Judicious arrangements are made for the instruction of the classes in the prescribed subjects. 4. The proficiency in the first and second classes reaches very fair ; in the third and fourth, to good nearly ; and in the upper fourth and fifth classes the ascertained results range between good and very good.

FORT-STREET (Infants) :—Visited, 29th, 30th September, and 6th October.

Numbers present :—Boys, 218 ; girls, 163 ; total, 381.

1. The rooms in which the children of this department are taught are clean, lofty, and well-ventilated, but the spaces in front of the galleries are too small, and afford insufficient desk-room. There is a good supply of apparatus, books, and maps. 2. The children are orderly and well governed ; for their years they manifest satisfactory attention to instruction. 3. The usual branches are included in the school course. 4. The average proficiency exceeds very fair.

GLEBE :—Visited, 8th, 9th, and 10th June.

Numbers present :—Boys, 117 ; girls, 81 ; total, 198.

1. The premises are good, well kept, and well found in appliances. The school is properly arranged and organized. 2. Inclement weather reduced the attendance during the examination ; ordinarily it is about thirty more. Satisfactory discipline is maintained. 3. Instruction in the ordinary branches is regulated by judicious lesson-guides, and the school work is prosecuted in an earnest manner. 4. The average proficiency of the pupils approaches very fair. The highest class is a fourth.

GLEBE (Infants) :—Visited, 8th June.

Numbers present :—Boys, 82 ; girls, 57 ; total, 139.

1. The schoolroom is small, but is in all other respects well adapted to teaching purposes. It is liberally found in working materials, and presents a clean, neat, and cheerful appearance. 2. The late unsettled weather has operated unfavourably on the attendance. About seven-ninths of the pupils attend regularly. They are punctual, clean, fairly subdued in demeanour, and well behaved. 3. The full Infants' School Course is observed. The methods are appropriate, and are applied with fair earnestness and industry. 4. Fair results have been produced.

JAMIESON-STREET :—Visited, 15th June.

Numbers present :—Boys, 65 ; girls, 44 ; total, 109.

1. This property does not belong to the Council. In every sense the school premises are unsuitable, and they are also in very bad repair. 2. The school is under effective discipline, and the moral tone is pleasing. 3. All the subjects prescribed for a school of three classes are effectively taught. 4. The average proficiency exceeds very fair. The school has since been closed, and, as they could not be accommodated in the Fort-street Schools, most of the pupils have entered the C.E. School at St. Philip's.

MANLY :—Visited, 4th March.

Numbers present :—Boys, 44 ; girls, 20 ; total, 64.

1. Lavatories and a weather-shed for the use of the boys are required ; otherwise the schoolroom is commodious, in fair repair, and sufficiently found in working material. The organization, as a whole, is fairly satisfactory. 2. The attendance is but moderately regular, and is affected by exceptional circumstances. Perhaps the most noticeable of these is the migratory character of a large number of the residents. Many of the pupils attend the school for short periods, and then remove from the neighbourhood. This perpetual change in the composition of the pupils exercises a very injurious influence on the discipline of the school and the attainments of the pupils. As regards punctuality, there is little to complain of. The pupils are also in fair order, and tolerably well behaved. The government however is hardly strict enough. 3. Fair judgment is shown in the classification. The instruction is regulated by the usual guides, and imparted with painstaking, fair energy, and fair intelligence. 4. The average proficiency ranges between tolerable and fair. Scripture is not taught, by request of the parents of the pupils.

MARRICKVILLE :—Visited, 28th October and 3rd November.

Numbers present :—Boys, 99 ; girls, 69 ; total, 168.

1. Excepting that the primary schoolroom is much too narrow, the buildings are of excellent character. The newly erected infants' room is not only a valuable addition to the accommodation, but it is certainly one of the best rooms in the district. In all respects the school is well found in appliances, and the organization is correct. 2. The punctuality of the pupils is somewhat unsatisfactory ; in other respects the discipline is effective. 3. The subjects prescribed for a school of four classes are taught intelligently. 4. The average proficiency ranges between fair and very fair.

NEWTOWN :—Visited, 7th May.

Numbers present :—Boys, 69 ; girls, 39 ; total, 108.

1. The school is conducted in premises belonging to the Congregational body. The schoolroom is in very fair repair, spacious, and fairly found in educational appliances. 2. The attendance is marked by fair

fair regularity. The pupils are tolerably punctual, reasonably clean, and in fair order. The government is inclined to be vacillating and feeble. 3. The instruction accords with the prescribed course, except that French is substituted for geometry. Fair judgment is shown in the compilation of the lesson documents. The methods are in the main modern, and although applied with seeming earnestness and industry, are wanting in vigour, elasticity, and penetrativeness. 4. The proficiency is fairly up to the demands of a fourth class.

NEWTOWN (Infants):—Visited, 7th May.

Numbers present:—Boys, 40; girls, 27; total, 67.

1. The space allotted to the infants is much too limited; this is the more felt because no provision can be made for desks. The playground is exceedingly small. The movement for better school premises will, if successful, remedy the defects noted. 2. The children are under good discipline, and the moral tone of the school is healthy. 3. The teaching is judiciously regulated. 4. The proficiency of the pupils approaches fair.

NORTH SYDNEY.—Visited, 8th October.

Numbers present:—Boys, 24; girls, 26; total 50.

1. Extensive repairs are necessary to the premises, fences, and out-houses. The material aspect of the school is far from satisfactory, and unless the present non-vested buildings are speedily put into repair the erection of new vested premises will be requisite. 2. The pupils are fairly orderly and attentive. The discipline is fairly effective, and the general tone of the school is healthy. 3. The subjects embrace all prescribed for a third class. The classification is injudicious in respect of divisions in classes; the instruction is properly regulated, and the teaching is marked by energy and industry. 4. The average proficiency is from fair to very fair.

PADDINGTON (Boys):—Visited, 28th and 29th April.

Number present:—149.

1. The school is in excellent material condition and well organized. 2. Wet weather interfered with the attendance on the days of examination. Under ordinary circumstances, it is about four-fifths of the number enrolled. The pupils are punctual, clean, and in good order. The government is firm and effective. 3. The instruction embraces all the required subjects, and is judiciously regulated. The methods of teaching are appropriate, and are applied with earnestness, energy, and skill. 4. The proficiency of the several classes is:—First, fair; second, very fair to good; upper second, very fair to good; third, good; fourth, very fair to good.

PADDINGTON (Girls):—Visited, 28th and 29th April.

Number present:—129.

1. The school premises are excellent in kind, and the educational appliances are ample and good. The school is well organized. 2. The pupils are under good discipline. 3. The instruction is complete as regards the subjects to be taught, but in some respects the range taken is too low for a metropolitan school. 4. The average proficiency is about fair.

PADDINGTON (Infants):—Visited, 5th May.

Numbers present:—Boys, 105; girls, 76; total, 181.

1. In all respects the material state of this school is good. 2. The school is well organized and healthily disciplined. 3. The instruction is intelligent and rigorous. 4. The pupils are very fairly proficient in the subjects taught them.

PITT-STREET:—Visited, 6th May.

Numbers present:—Boys, 38; girls, 24; total, 62.

1. The want of a playground is a marked defect in the organization of this school. Suitable desks are also badly needed; in all other respects the supply of furniture and apparatus is sufficient. 2. In the circumstances, a fair attendance is maintained. The pupils are clean, punctual, and tolerably regular. Fair order is secured, but the government needs to be a little more strict. 3. Having regard to the smallness of the attendance, the classification is high. The instruction is of full range, and is regulated with very fair ability. Modern methods are employed. 4. The results of the teaching may be summarized thus:—Second class, moderate; upper second, tolerable; third, fair; upper third, fair +.

PITT-STREET (Infants):—Visited, 6th May.

Numbers present:—Boys, 30; girls, 22; total, 52.

1. The arrangements for the instruction of this department are unsatisfactory. The space allowed is too small, and the children are merely divided from the primary classes by a curtain. There is no playground, and the closets are in close proximity to the schoolroom. As the property does not belong to the Council there is no present remedy for the stated defects. 2. The order is at best about fair. 3. The subjects taught in Infants Schools are provided for in the programmes, but the methods of instruction do not appear to be very effective. 4. The proficiency averages tolerable.

PYRMONT:—Visited, 5th March.

Numbers present:—Boys, 75; girls, 52; total, 127.

1. The school is conducted in temporary premises. The building is much too small, is in a bad situation and in bad repair. The out-buildings are of the most wretched character. There is a fair supply of educational appliances, but the general material condition of the school is most unsatisfactory. 2. Considering the defective character of the school premises, a fair attendance is maintained. The pupils are regular, punctual, and in very fair order. The government is mild, and otherwise judicious. The moral tone is healthy. 3. The number of classes might be conveniently reduced; the instruction is of full range up to the requirements of a fourth class, is intelligently arranged, and imparted by modern methods. 4. The average proficiency is fair.

PYRMONT (Infants):—Visited, 5th March.

Numbers present:—Boys, 47; girls, 27; total, 74.

1. The building is small, badly ventilated, in wretched condition, and is altogether unimprovable. So far as the area of the room will allow, the appointments are sufficient, and the organization is passable in the circumstances. This property does not belong to the Council. 2. The children are in some respects unsatisfactorily controlled. 3. Prescribed subjects are taught. 4. The proficiency of the pupils is slightly above tolerable.

ST. LEONARDS:—

ST. LEONARDS :—Visited, 17th September.

Numbers present :—Boys, 77 ; girls, 54 ; total, 131.

1. The building is a substantial stone structure, but it is not large enough to properly accommodate the pupils in attendance ; noticeable wants are a lavatory, weather-shed, and a proper supply of water ; the school is well furnished and satisfactorily organized. 2. The moral tone of the school is of very fair character, and the children are fairly punctual and orderly. 3. The highest class is a third ; all the subjects prescribed for a school of the kind are taught ; the instruction is but fairly educative. 4. The average proficiency is fair ; the teacher has since been removed.

SUSSEX-STREET :—Visited, 11th June.

Numbers present.—Boys, 46 ; girls, 32 ; total, 78.

1. The schoolroom is suitable, and it is properly furnished ; there is no playground, and the closets are badly situated. 2. The pupils are very fairly disciplined. 3. The teaching is earnest and painstaking, but not correspondingly abiding in its results. 4. The proficiency ranges between tolerable and fair ; the highest class is a third.

SUSSEX-STREET SOUTH :—Visited, 11th June.

Numbers present :—Boys, 43 ; girls, 33 ; total, 76.

1. The approach to the school is bad ; the schoolroom is commodious, clean, and cheerful-looking ; the supply of working materials is sufficient ; and the organization as a whole may be described as reasonably satisfactory. 2. Of late the attendance has been much lower than usual, owing to rainy weather ; in general, however, it is marked by irregularity, the average number present not exceeding two-thirds of those enrolled ; otherwise, the pupils are punctual, clean, and neat ; good order is maintained ; the government is judicious and effective, and the prevailing tone is pleasing and healthy. 3. All the specified subjects are taught under fairly satisfactory conditions, due regard being had to a correct classification of pupils, and to a proper arrangement of the lesson documents ; the methods are appropriate, and are applied with vigour and skill. 4. The proficiency is as follows :—First class, very fair to good ; second class, good ; third, very fair. Good work is done in this school.

WATSON'S BAY :—Visited, 19th May.

Numbers present :—Boys, 36 ; girls, 14 ; total, 50.

1. This property belongs to the Marine Board ; the schoolhouse is in satisfactory condition, but the fences are much broken and there is no weather-shed. 2. The school is satisfactorily organized, and the pupils are under fair discipline. 3. The course accords with what is prescribed for a school of three classes ; the instruction is wanting in thoroughness. 4. This school is considerably below the requirements of the standard ; the average proficiency ranges between moderate and tolerable.

WILLIAM-STREET (Boys) —Visited, 9th, 10th, 11th, 12th, 13th March.

Number present :—232.

1. The schoolhouse is in good repair and suitably furnished. All necessary outbuildings are provided. The school records are badly kept. 2. The discipline is of fair character. 3. The classification is bad : this is especially true of the junior classes, many of the pupils of which are only fit for the baby department. The instruction is poorly regulated, the lesson documents being well nigh worthless. 4. The attainments of the several classes may be described thus :—1st, indifferent ; 2nd, moderate ; upper 2nd, barely moderate ; 3rd, barely tolerable ; 4th, tolerable to fair. In point of efficiency the school is much below the standard.

On receipt of the report of which the foregoing is a summary, the Head Master was called upon to explain. His reply was submitted to the Inspector for such remark as he might deem necessary ; and ultimately the whole correspondence was referred to the Examiner, whose report thereon is as follows :—

"1. As regards the charge of incorrect rolls and fee account books, it is tolerably clear that, at the time of inspection, these records were not entirely accurate. Mr. Murray, however, is not, in my opinion censurable for employing his subordinates in marking the rolls and constructing programmes, so long as he designed by this course to give the junior teachers a knowledge of their future duties ; and it is, I believe, customary in other schools to commit the calling of the roll and the collection of fees to the teachers of the various classes. The error at William-street really lay in the want of effective supervision, but the inflamed state of Mr. Murray's eyes, about the time of inspection, must have rendered a close scrutiny of the records difficult. 2. The allegations as to unsound classification have not been wholly disproved. There is reason to believe that pupils have been placed in classes for which they were unfitted ; but how far this course was forced upon the Head Master by removal of one of his staff, and by other circumstances which he could not control, does not appear. I have no doubt that he acted for the best in this matter. 3. The mode of reckoning the 'quarter of enrolment' with a view of estimating the proficiency is in my opinion erroneous, and can only be held safe and just when a pupil has attended regularly, or passably so, during the quarter. 4. In the matter of the time table the evidence is conflicting. In view of the classification I am of opinion that Mr. Murray acted for the best. 5. The question of proficiency is one much more difficult to settle, although, at first sight, no difficulty appears. Mr. Johnson's statement that he adhered to the curriculum for the quarter shows consideration for the teachers, for, had he chosen, he might have taken a wider range ; indeed, with the *scope* or *matter* of the examination little fault can be found. But Mr. Murray takes exception to the *mode* of examination, and it is here that the element of uncertainty lies. It is undeniable that the difficulties of examination may quite unintentionally be greatly intensified, and the ratio of answering lowered by the manner of the examiner, by his mode of presenting the questions, and by the limitation of the time allowed for thought. Although these are really points of consequence in this case, the Council has no data upon which to proceed to a satisfactory conclusion ; indeed, the evidence of unbiassed witnesses—witnesses accustomed to rapid oral questioning, and to the habits of classes under examination—would be the only conclusive testimony, and when, to the unsolved doubts upon this point, we add the unusually early date at which the examination was held, the precarious attendance through adverse weather, the inflamed eyes of the master, the comparatively feeble powers of the assistant, the close and searching character of the examination, the admitted existence of defects, and the earnest desire expressed by Mr. Murray to rectify them, it is impossible to avoid the conclusion that the Inspector's recommendation is, under the circumstances, too severe. It is admitted that the school is not equal to standard requirements, but this would scarcely necessitate the punishment of summary removal from office."

WILLIAM-STREET (Girls) :—Visited, 11th, 12th, 13th, and 16th March.

Number present :—213.

1. The schoolroom is a good one. At present the accommodation is insufficient for the attendance, but a large classroom is in course of erection. There is a plentiful supply of working appliances. In the circumstances, the organization is very good. 2. The tone of the school is very pleasing. The government is very effective, and the pupils exhibit marked industry when under test. 3. The subjects prescribed for a school of four classes are treated in a methodical and intelligent manner. 4. The proficiency in the several classes is as follows :—2nd and 3rd classes, fair ; 4th, very fair to good.

WILLIAM-STREET

WILLIAM-STREET (Infants) :—Visited, 9th, 10th, and 11th March.

Numbers present :—Boys, 135 ; girls, 124 ; total, 259.

1. The school premises are fairly commodious, and in good repair. There is a sufficient supply of working appliances, and the organization is unexceptionable. 2. The pupils are well-behaved and under good control. Inclement weather affected the attendance during the examination. 3. The instruction is of a kind suited to young children, and the subjects prescribed are treated in an effective manner. 4. The average proficiency reaches very fair ; in the highest class the results are good nearly.

BOTANY HEADS (Provisional) :—Visited, 21st May.

Numbers present :—Boys, 15 ; girls, 4 ; total, 19.

1. The schoolroom is exceedingly small, but is the only one available for the purpose. It is provided with as much furniture and apparatus as it can conveniently hold. 2. About four-fifths of the pupils attend regularly. This attendance may be regarded as good when it is considered that some of the children have to travel long distances. The pupils attend with commendable punctuality, are clean and neat in person, subdued and modest in demeanour, and well-behaved. 3. Too much anxiety is manifested to push the children through the classes. All the prescribed subjects are taught, and the instruction is regulated with passable judgment. Little opportunity was afforded for observing the methods, but they appear to be of tolerable worth ; they are applied with earnestness and industry. 4. The proficiency of the several classes may be summarized, thus :—First, tolerable ; second, tolerable ; third, tolerable to fair.

TEMPE (Provisional) :—Visited, 14th October.

Numbers present :—Boys, 21 ; girls, 20 ; total, 41.

1. The school is held in the Wesleyan chapel. The building is unsuitable and badly furnished, but commodious and well-appointed. Vested premises are ready for occupation, and the school will shortly be reorganized. 2. The government is effective, and in all matters of discipline the teacher, Mr. McLean, has induced a marked improvement upon that previously obtained. 3. The pupils are properly classified, and their instruction is judiciously regulated. The subjects prescribed for a school of three classes are intelligently treated. 4. The average proficiency reaches fair+.

Council of Education Office,
17th March, 1875.JOHN M. GIBSON,
Accountant.

1875.

NEW SOUTH WALES.

REPORT

OF THE

COUNCIL OF EDUCATION

UPON THE CONDITION

OF THE

CERTIFIED DENOMINATIONAL SCHOOLS

FOR

1874.

Presented to both Houses of Parliament, in pursuance of the Act 30 Vic. No. 22, sec. 27.

SYDNEY: THOMAS RICHARDS, GOVERNMENT PRINTER.

1875.

THE COUNCIL OF EDUCATION TO HIS EXCELLENCY THE GOVERNOR,

SUBMITTING

REPORT UPON DENOMINATIONAL SCHOOLS FOR 1874.

To His Excellency SIR HERCULES GEORGE ROBERT ROBINSON, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor-in-Chief of the Colony of New South Wales and its Dependencies, and Vice-Admiral of the same.

May it please your Excellency,

We have the honor, in compliance with the requirements of the Public Schools Act, to submit this our eighth Annual Report upon the condition of Certified Denominational Schools, being that for the year 1874.

The number of Certified Denominational Schools in operation during 1874 was 204, being a net decrease of five. In 1873 the number of existing schools of this class was 209. Of these, the undermentioned were closed in 1874:— Appendix A.

- Bathurst—Presbyterian.
- Kent-strect—Presbyterian.
- Yass—Presbyterian.
- St. Leonards—Presbyterian.
- Portland Head—Presbyterian.
- Parramatta—Wesleyan.
- Hinton—Church of England.

Certificates were granted to the Roman Catholic Schools at Lambton and Gulgong.

Appendix B.

As usual, the general condition of Certified Denominational Schools is described in our Report upon Public Schools, but further information as to the several schools inspected is contained in the appended detailed reports of the Inspectors. A Return showing the number of pupils enrolled and in average attendance, together with the amount paid for school fees, is also appended. Appendix C.
Appendix D.

The amounts paid to the different classes of Certified Denominational Schools from the Church and Schools Estates Revenue were the following:—

Church of England	£509 7 0
Roman Catholic	184 9 5
Presbyterian	94 0 11
Wesleyan	80 15 8
	£868 13 0

We submit this our Report upon the Certified Denominational Schools, for the year ending 31st December, 1874; and in testimony thereof, we have caused our corporate Seal to be affixed hereto, this fifth day of April, one thousand eight hundred and seventy-five.

(L.S.)

W. WILKINS,
Secretary.

J. SMITH, President.
THOMAS HOLT.
S. C. BROWN.
W. A. DUNCAN.
ALFRED STEPHEN.

APPENDIX A.

ATTENDANCE of Children at the Denominational Schools, as certified by the Local Boards, for the Quarter ending 31st December, 1874, or for the last Quarter of that year during which the Schools were in operation.

Name of School.	Number of Children on Rolls.								Attendance.			Expenditure from Public Funds.					Local Contributions.		Total.				
	Boys.	Girls.	Total.	Church of England	Roman Catholic.	Presbyte- rian.	Wesleyan.	Others.	Boys.	Girls.	Total.	Salaries.	Books and Apparatus.	Travelling Expenses and Forage.	Buildings, Rent Fur- niture, &c.	Buildings, Furniture, &c.	School Fees.

APPENDIX C.

INSPECTORS' Reports upon Certified Denominational Schools inspected in 1874.

- | | |
|----------------------|---------------------|
| ALBURY DISTRICT. | GOULBURN DISTRICT. |
| ARMIDALE DISTRICT. | MAITLAND DISTRICT. |
| BRADWOOD DISTRICT. | MUDGEE DISTRICT. |
| CAMDEN DISTRICT. | NEWCASTLE DISTRICT. |
| CUMBERLAND DISTRICT. | SYDNEY DISTRICT. |

ALBURY DISTRICT.

SUMMARY of Reports upon the Certified Denominational Schools inspected during the year 1874.

ALBURY (R.C.) :—Visited, 11th and 12th August.

Present at examination :—Boys, 86.

The schoolhouse has been put in thorough repair, and provided with the furniture necessary to its complete equipment. There is an ample supply of working materials, and the premises, as a whole, present an improved and neat appearance. The attendance is reasonably regular, and the general discipline fairly healthy; the instruction is duly regulated, and the average proficiency of the pupils is fair.

ADRLONG (R.C.) :—Visited, 8th December.

Present at examination :—Boys, 28 ; girls, 7 ; total, 35.

The furniture needs repairs—a lavatory and weathershed have yet to be provided, and the general organization is defective in some minor points. The number of pupils enrolled for the year has been comparatively small, and of these, many are unpunctual—otherwise the discipline is healthy; the instruction is judiciously regulated; and the average proficiency of the several classes is fairly satisfactory.

COROWA (C.E.) :—Visited, 21 September.

Present at examination :—Boys, 26 ; girls, 22 ; total 48.

The school buildings are commodious and well designed, but much in need of painting and other repairs. There is an ample supply of educational appliances, and the whole premises are carefully kept. About sixty per cent. of the children of school ages in the locality are enrolled; the attendance is only tolerably regular, and the requirements of order and attention are but partially met. The instruction is duly regulated, and the average proficiency of the classes ranges from tolerable to fair.

JUGIONG (R.C.) :—Visited, 1st June.

Present at examination :—Boys, 20 ; girls, 19 ; total, 39.

Since last inspection, the schoolhouse has been repaired, and additional furniture provided. Three-fourths of the children in the locality are enrolled, and, apart from the irregularity of the attendance, the discipline is very fairly effective. Good progress has been made in the several subjects of instruction, and the actual proficiency averages very fair.

TUMUT (R.C.) :—Visited, 15th June.

Present at examination :—Boys, 20 ; girls, 14 ; total, 34.

More suitable school premises are needed, but the supply of furniture and working materials is sufficient. Owing chiefly to the recent change of teachers, the attendance on day of inspection was comparatively small. The general discipline is vigorous and effective; the work of instruction is diligently conducted, and the methods of teaching are calculated to strengthen the mental powers of the pupils. The actual proficiency is moderate, but for this the present teacher is in no way responsible.

EDMUND H. FLANNERY,
Inspector, Albury District.

ARMIDALE DISTRICT.

SUMMARY of Reports upon Certified Denominational Schools examined during the year 1874.

I.—CHURCH OF ENGLAND SCHOOLS.

FREDERICTON (C.E.) :—Regular inspection, 7th August.

Number enrolled :—Boys, 32 ; girls, 31 ; total, 63.

Number present :—Boys, 25 ; girls, 27 ; total 52.

1. School is held in the C.E. place of worship, a building not unsuitable in most respects, but indifferently furnished; the seats especially being cumbersome, and of inconvenient length. The stock of working materials is adequate; in other respects the material part of the organization is fair. 2. Very fair regularity and punctuality are secured, but in other points the effects of the discipline are not satisfactory. The attention of the pupils is unsteady, and the habit of whispering prevails among the younger children. Greater animation and energy need to be exercised in conducting all the school operations. 3. The course of instruction is complete, and regulated by the usual documents. Judged by results, the methods are not of a high order. In all but the mechanical branches, the proficiency of the pupils is much below the standard that should be reached. The average proficiency approaches *tolerable*.

KEMPSEY EAST (C.E.) :—Regular inspection, 29th July.

Number enrolled :—Boys, 25 ; girls, 22 ; total, 47.

Number present :—Boys, 21 ; girls, 16 ; total, 37.

1. The schoolhouse—the C.E. place of worship—is fairly suitable; but the furniture, which serves for both church and school, is old and ungainly. There is a sufficiency of working appliances in very fair condition. In other points the organization is fair. 2. Many of the elder pupils are irregular in their attendance. The discipline in general is fair, but greater energy on the part of the teacher is necessary to secure satisfactory activity and industry among the pupils. 3. Singing is not taught, but otherwise the prescribed course of instruction is followed. The methods, as far as noted, are not unsuitable, but the teaching lacks vigour and penetrativeness; and the pupils, as a rule, are indisposed to exert themselves. The average proficiency is *moderate to tolerable*.

TAMWORTH (C.E.) :—General inspection, 1st May.

Number enrolled :—Boys, 35 ; girls, 24 ; total, 59.

Number present :—Boys, 28 ; girls, 18 ; total, 46.

1. The schoolroom is commodious and suitable, cleanly kept, and in very fair repair. Since last inspection now out-offices have been provided. The supply of furniture, apparatus, and books, is fully adequate to existing requirements. 2. As far as can be the case in the absence of drill, the order is good. The government is mild, but reasonably firm and judicious. 3. The lesson documents are carefully compiled, and appear to have been observed; and the methods employed are, generally speaking, appropriate, and applied with fair intelligence and energy. The pupils are attentive under examination, and evince tolerable mental training. The average proficiency exceeds *tolerable*.

II.—ROMAN CATHOLIC SCHOOLS.

ARMIDALE (R.C.) :—General inspection, 14th September.

Number enrolled :—Boys, 44 ; girls, 34 ; total, 78.

Number present :—Boys, 34 ; girls, 27 ; total, 61.

1. Various improvements have been effected since last inspection; and, except that the school is rather badly located, the material condition is now very fair. There is a full supply of furniture, apparatus, and books, and the organization is satisfactory in its other features. 2. The children are punctual, very orderly, obedient, and respectful. In these points, as in others, the condition of the school is in marked contrast to that in which it was found at the previous inspection. 3. Singing is omitted; otherwise the prescribed course is followed, with the addition of elementary Latin, Euclid, and French, for the more advanced pupils of 3rd class. The classification is fair, but the numbers preponderate in the lower grades. The instruction is well regulated, and the methods are of very fair quality, and marked by intelligent and energetic application. The average proficiency of the pupils rates from *fair to very fair*.

GRAFTON

GRATTON (R.C.) :—Regular inspection, 15th October.

Number enrolled :—Boys, 65 ; girls, 43 ; total, 108.
Number present :—Boys, 48 ; girls, 25 ; total, 73.

1. The material condition and organization continue fair. The erection of a new school-house is contemplated. 2. The discipline has improved since last inspection, though still weak in some points. 3. The classification is on the whole correct, and the preparation of the various lesson documents and the methods of teaching, as far as noted, are of fair merit. The pupils are attentive under examination and work with fair energy, and the results of instruction are an improvement on those of last year—the average proficiency being nearly *fair*.

III.—PRESBYTERIAN SCHOOL.

KEMTSEY WEST, (Pres.) :—Regular inspection, 30th July.

Number enrolled :—Boys, 43 ; girls, 37 ; total, 80.
Number present :—Boys, 26 ; girls, 33 ; total, 59.

1. The building is suitable and in very fair repair, but another closet is much required. The general appearance of both schoolhouse and residence is creditable alike to the teacher's taste and industry. The material organization of the school is rendered defective by the unsuitableness of the furniture and the presence of several cumbersome articles required in connection with the use of the building as a place of worship. 2. The attendance is steady, and has increased under the present teacher. Very fair regularity is secured, but a large number of the pupils are unpunctual. The order has improved sensibly since last inspection, but is not yet precise enough, especially in regard to what should be the simultaneous movements of the pupils. The moral tone is fair. 3. The lesson documents are framed with care and neatness. The classification is, however, still too minute, and the instruction too individual in its character. The teaching, however, is earnest and painstaking, and the average proficiency of the pupils *tolerable*.

IV.—WESLEYAN SCHOOLS.

CARR'S CREEK (Wes.) :—Regular inspection, 20th October.

Number enrolled :—Boys, 15 ; girls, 20 ; total, 35.
Number present :—Boys, 10 ; girls, 15 ; total, 25.

1. A four-roomed residence has been provided for the teacher since last inspection, and the school-room has been enlarged. The fences are still in a dilapidated state, and give the premises an untidy appearance. The stock of working materials is ample, and the organization is fair. 2. The attendance has been low of late, on account of sickness. Ordinarily the pupils are very fairly regular and punctual. The discipline secures quietness and obedience, but the attention of the pupils is not active enough. The moral tone is fair. 3. All the prescribed subjects are taught; the teaching, however, lacks vigour and penetrativeness. The average proficiency is *moderate to tolerable*.

ULMARRA (Wes.) :—General inspection, 27th November.

Number enrolled :—Boys, 23 ; girls, 24 ; total, 47.
Number present :—Boys, 19 ; girls, 16 ; total, 35.

1. The schoolroom is used as a place of worship by the Wesleyan body, whose property it is. The furniture is not suitable, the desks being much too high and the seats large and clumsy. There is a sufficiency of books and apparatus. In other respects the organization is moderate. 2. A large number of pupils are unpunctual. The order is indifferent, and some of the younger pupils are so talkative and restless as to disturb the work of the whole school. 3. Singing is not taught, and, as far as results are concerned, the same may be said of object-lessons. The time-table and lesson programmes are tolerably appropriate, but the teaching is inanimate, and produces indifferent results in those subjects where mental training is required. The pupils are tolerably attentive under examination, but do not exert themselves. The average proficiency is *moderate*.

J. D. BRADLEY,
Inspector of Schools,
Armidale District.

BRAIDWOOD DISTRICT.

SUMMARIES of Reports furnished on Certified Denominational Schools during the year 1874.

I.—CHURCH OF ENGLAND SCHOOLS.

BRAIDWOOD :—Inspected, 26th October, 1874.

Enrolled :—Boys, 43 ; girls, 25 ; total, 68.
Present :—Boys, 39 ; girls, 20 ; total, 59.

1. The school is in a good state of repair, and is well supplied with all requisites. 2. The discipline is satisfactory. 3. All the prescribed subjects are taught, except singing. The mark for spelling, reading, dictation, and geography is above the average, that for writing, arithmetic, grammar, and object-lessons, well up to the average, and that for drawing below. The general proficiency approaches *very fair*.

CANBERRA :—Inspected, 16th February, 1874.

Enrolled :—Boys, 26 ; girls, 20 ; total, 46.
Present :—Boys, 26 ; girls, 18 ; total, 44.

1. New desks have been provided since last inspection, and the material condition is now satisfactory. 2. Three-fourths of the pupils are regular. Except that the children are somewhat inattentive, the discipline is fair. 3. All the prescribed subjects are taught, and the work of the school is carried on honestly and with industry. The attainments are of an average character, and the progress made since last inspection is reasonably satisfactory. The general proficiency is between *tolerable* and *fair*.

MORUYA :—Inspected, 29th July, 1874.

Enrolled :—Boys, 45 ; girls, 42 ; total, 87.
Present :—Boys, 38 ; girls, 33 ; total, 71.

1. The material condition is good in all respects. 2. In quietness, attention, and general order, the school has somewhat fallen off since last inspection. 3. During the past year this school was closed three months for want of a teacher, and, owing mainly to this circumstance, the attainments of the pupils are not relatively as high as they were. All the prescribed subjects are taught. The mark for reading, writing, and geography is up to the average, but that for all other subjects is below. The general proficiency is between *tolerable* and *fair*, but the present teacher has not been long enough in charge to be held responsible for this mark.

II.—ROMAN CATHOLIC SCHOOLS.

ARALUEN :—Inspected, 9th June, 1874.

Enrolled :—Boys, 69 ; girls, 61 ; total, 130.

Present :—Boys, 60 ; girls, 54 ; total, 114.

1. The building is in a good state of repair, and is well supplied with all requisites. There is the same defect in organization that was noticed last year. 2. Not quite half the pupils are regular. Except that too much talking is allowed, the discipline is fair. 3. The prescribed subjects are taught, except drawing. The reading throughout the school is very satisfactory, and the condition of the upper 2nd class, numbering twenty-nine pupils about eight years of age, is most creditable to the teachers. In all the classes average progress has been made. The general proficiency is *fair*.

BEGA :—Inspected, 25th August, 1874.

Enrolled :—Boys, 38 ; girls, 36 ; total, 74.

Present :—Boys, 35 ; girls, 27 ; total, 62.

1. The school and the residence are in good condition, and there is a sufficient supply of furniture, apparatus, and working materials. 2. The discipline is satisfactory, and the government firm and effective. 3. All the prescribed subjects are taught. The mark for reading, spelling, dictation, writing, singing, geography, and object lessons is above the average, that for arithmetic and grammar up to the average, and that for drawing below. The general proficiency is *very fair*.

BRAIDWOOD :—Inspected, 27th and 28th October, 1874.

Enrolled :—Boys, 80 ; girls, 61 ; total, 141.

Present :—Boys, 67 ; girls, 48 ; total, 115.

1. The material condition is satisfactory in all respects. 2. The discipline has much improved during the year ; the pupils are now orderly, attentive, and well under control. 3. All the prescribed subjects are taught, except singing and drawing. The condition of the 1st class and the 4th class is highly creditable to the teachers. Throughout the school the mark for every subject is above the average. The general proficiency is between *very fair* and *good*.

BUNGENDORE :—Inspected, 21st April, 1874.

Enrolled :—Boys, 27 ; girls, 14 ; total, 41.

Present :—Boys, 24 ; girls, 14 ; total, 38.

1. The material condition is satisfactory. 2. Three-fourths of the pupils are regular, and they are more punctual in the morning than they were. The discipline has improved in all respects. 3. All the prescribed subjects are taught, except singing. The mark for dictation is above the average, that for reading, spelling and writing up to the average, and that for grammar, object-lessons, geography and arithmetic below. The general proficiency is between *tolerable* and *fair*.

COOMA :—Inspected, 26th February, 1874.

Enrolled :—Boys, 35 ; girls, 15 ; total, 50.

Present :—Boys, 26 ; girls, 13 ; total, 39.

1. The school is sufficiently large, but is much out of repair, and is but imperfectly supplied with furniture. 2. The children talk too much, and are excessively inattentive. 3. All the prescribed subjects are attempted except singing. During the past two years this school has been closed for considerable periods, and the children have suffered in consequence of the frequent change of teachers. Both in discipline and attainments the school has greatly fallen off since it was inspected in 1872. The mark this year, for every subject, is below the average. The general proficiency is between *moderate* and *tolerable*.

JEMBAICUMBENE :—Inspected, 12th May, 1874.

Enrolled :—Boys, 31 ; girls, 33 ; total, 64.

Present :—Boys, 24 ; girls, 27 ; total, 51.

1. The building though new, is rough, badly lined, very cold in winter, and altogether untidy and cheerless. There is a sufficient supply of all requisites. 2. About half the pupils are regular, but many get late in the morning. The discipline is satisfactory. 3. All the prescribed subjects are taught except singing. The mark for dictation is above the average ; that for reading, writing, grammar, and geography up to the average ; and that for object lessons, arithmetic, and drawing, below. The general proficiency is slightly beyond *fair*.

MORUYA (Boys) :—Inspected, 20th July, 1874.

Enrolled :—47.

Present :—34.

When visited, this school was not in regular working order. Speaking generally, the school was in a very unsatisfactory condition. A new teacher is now in charge.

MORUYA (Girls) :—Inspected, 21st July, 1874.

Enrolled :—49.

Present :—46.

1. The material condition is satisfactory. 2. Only about half the pupils are regular. The discipline is sound. 3. All the prescribed subjects are taught except singing. The mark for reading, spelling, dictation, grammar, geography, and object lessons is above the average, and that for all other subjects well up to the average. Considering the amount of work thrown upon the teacher by four classes, the state of the school is highly creditable to her. The general proficiency is *very fair*.

NERRIGUNDAH :—Inspected, 7th August, 1874.

Enrolled :—Boys, 21 ; girls, 11 ; total, 32.

Present :—Boys, 17 ; girls, 10 ; total, 27.

1. The building and outfit are satisfactory. 2. The children are not punctual in the morning ; there is far too much talking allowed in school ; and the discipline generally has fallen off since last inspection. 3. The children in class III show considerable ability, and answer with accuracy, but the pupils in the lower classes are not relatively so well trained. The mark for reading is above the average ; that for dictation, arithmetic, and geography, is up to the average ; and that for other subjects is below. The general proficiency is between *fair* and *very fair*.

QUEANBEYAN :—Inspected, 12th February, 1874.

Enrolled :—Boys, 28 ; girls, 19 ; total, 47.

Present :—Boys, 19 ; girls, 12 ; total, 31.

1. The building and furniture are in a satisfactory condition. 2. Not more than half the pupils are regular, and the unpunctuality in the morning is excessive. The children talk, copy, and lounge about, and the discipline in every way is loose. The government is feeble, and the whole spirit of the school depressing. 3. Partly owing to irregularity and partly to want of vigour and determination in the teaching, the attainments are very poor, and the progress made since last inspection is unsatisfactory. The average proficiency is between *indifferent* and *moderate*. A new teacher has been placed in charge.

REIDSDALE :—Inspected, 1st June, 1874.

Enrolled :—Boys, 29 ; girls, 30 ; total, 59.

Present :—Boys, 24 ; girls, 26 ; total, 50.

1. The building is old and shabby, draughty and uncomfortable, but there is a fair supply of apparatus. 2. Owing to distance and the demand for children's labour, not more than half the pupils are regular. The discipline is good. 3. All the prescribed subjects are taught except singing and drawing. The attainments are of an average character, giving a general proficiency approaching to *fair*.

J. C. MAYNARD,
Inspector, Braidwood District.

CAMDEN DISTRICT.

CERTIFIED DENOMINATIONAL SCHOOLS.

SUMMARY of Reports for 1874.

THE following remarks are abridged statements of my detailed reports upon the condition of the Denominational Schools inspected by me during the year 1874. The remarks chiefly relate to the material condition and organization of the schools, the general discipline and moral training, the subjects and methods of instruction, and the progress of the pupils in learning.

CHURCH OF ENGLAND SCHOOLS.

ASHFIELD :—Visited, 17th December.

Pupils enrolled :—Boys, 58 ; girls, 26 ; total, 84.

At examination :—Boys, 37 ; girls, 14 ; total, 51.

A residence for the teacher and weather-sheds are required, but the supply of furniture, apparatus, and books is sufficient. The pupils are clean, orderly, and attentive to their work, but not all sufficiently punctual. All the prescribed subjects are taught. The average attendance of the pupils enrolled is 64 days per cent. There are no free pupils, but eight children of the educable ages in the locality are not under school instruction. The pupils answered, so far as examined, about 70 per cent. of the questions asked, and the proficiency in very fair.

CAMDEN :—Visited, 29th April.

Pupils enrolled :—Boys, 47 ; girls, 29 ; total, 76.

At examination :—Boys, 42 ; girls, 28 ; total, 70.

The buildings have been painted, hat-pegs supplied, and a portico erected since last inspection, but lavatories and weather-sheds are still required. There is a comfortable residence for the teacher. The government and general discipline are satisfactory. All the prescribed subjects are taught. The average attendance of the pupils enrolled is 70 days per cent. There are seven free pupils, but the teacher is not aware of any C.E. children of the educable ages in the town or vicinity not under school instruction. 70 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is very fair.

CAMPBELLTOWN :—Visited, 8th June.

Pupils enrolled :—Boys, 39 ; girls, 26 ; total, 65.

At examination :—Boys, 26 ; girls, 17 ; total, 43.

A class-room, a lavatory, and a weather-shed, are required. The books are much worn, and additional apparatus needed. The government is lax, and the general discipline is unsatisfactory. Singing is not taught. The average attendance of the pupils enrolled is 66 days per cent. There are nine free pupils, and about twenty children of the educable ages in the locality not under school instruction. About 50 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is tolerable.

CANTERBURY :—Visited, 25th June.

Pupils enrolled :—Boys, 36 ; girls, 23 ; total, 59.

At examination :—Boys, 28 ; girls, 19 ; total, 47.

The schoolroom and closets have been put in proper repair, and hat-pegs supplied since the last inspection, but lavatories and weather-sheds are required. There is no residence for the teacher, but the working materials are sufficient. All the prescribed subjects are taught, and the general discipline has been improved since last year. There are thirteen free pupils, and fifteen children of the educable ages in the neighbourhood not under school instruction. The average attendance of the scholars enrolled is 66 days per cent. 60 per cent. of the questions asked at the examination were answered, and the proficiency is fair.

DAPTO :—Visited, 22nd October.

Pupils enrolled :—Boys, 34 ; girls, 26 ; total, 60.

At examination :—Boys, 31 ; girls, 21 ; total, 52.

Lavatories, a weather-shed, more hat-pegs, and the painting of the buildings are required, but the working materials are sufficient. The general discipline is fairly effective in most respects. Singing is not taught. The average attendance of the children enrolled is 60 days per cent. There are thirteen free pupils, and seven children of the educable ages in the locality not receiving school instruction. 62 per cent. of the questions asked at the examination were answered, and the progress of the pupils in learning is fair.

ENFIELD :—Visited, 26th June.

Pupils enrolled :—Boys, 34 ; girls, 32 ; total, 66.

At examination :—Boys, 10 ; girls, 7 ; total, 17.

The desks have been repaired, a kitchen built, and the rooms of the residence papered since the last inspection. The erection of lavatories is in progress. The small attendance of scholars at the examination was caused by the wet morning. The working materials are sufficient. The average attendance of the children enrolled is 66 days per cent. There are no free pupils, but ten children of the educable ages in the locality are not attending school. The scholars answered about 50 per cent. of the questions asked at the examination. The teacher has been only a few months in charge of the school, and the attainments of the pupils are tolerable.

FOXGROUND :—Visited, 3rd December.

Pupils enrolled :—Boys, 32 ; girls, 19 ; total, 51.

At examination :—Boys, 21 ; girls, 16 ; total, 37.

Lavatories and weather-sheds are required, but in all other respects the material condition of the school is reasonably good. The furniture, apparatus, and books, are sufficient, and the general discipline is fairly effective. Singing is not taught. The average attendance of the scholars enrolled is 70 days per cent.

cent. There are no free pupils, but fifteen children of the educable ages within a reasonable distance of the school are not attending. The scholars answered, so far as examined, about 50 per cent. of the questions asked, and their proficiency is tolerable.

LIVERPOOL :—Visited, 15th July.

Pupils enrolled :—Boys, 52 ; girls, 40 ; total, 92.
At examination :—Boys, 47 ; girls, 33 ; total, 80.

A schoolroom and out-buildings of brick and chingies have been erected since last inspection ; but fencing, lavatories, a bell, weather-sheds, and a new residence for the teacher, are much needed. Three more forms and additional hat-pegs are required. The general discipline has been improved since last year. All the subjects of instruction prescribed by the Council are taught, and the elder boys are well advanced in squad drill. The average attendance of the pupils enrolled is 66 days per cent. There are eleven free pupils, and about twenty C.E. children of the educable ages in the town and vicinity not under school instruction. 70 per cent. of the questions asked at the examination were answered, and the proficiency of the scholars is very fair.

LOD'S FORST :—Visited, 1st September.

Pupils enrolled :—Boys, 29 ; girls, 22 ; total, 51.
At examination :—Boys, 22 ; girls, 17 ; total, 39.

Lavatories and a residence for the teacher are required ; but otherwise, the material condition of the school is fairly satisfactory. The children are clean, orderly, and attentive to their lessons. All the prescribed subjects are taught. There are seven free pupils, and about forty children of the educable ages in the neighbourhood not under school instruction. 60 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is fair.

MACQUARIE RIVER :—Visited, 20th May.

Pupils enrolled :—Boys, 24 ; girls, 21 ; total, 45.
At examination :—Boys, 22 ; girls, 19 ; total, 41.

Lavatories, a weather-shed, a closet for the girls, a chimney for the residence, a bell and hat-pegs, are required, and the buildings are in much need of painting. The supply of furniture, apparatus, and books, is sufficient, and the general discipline is satisfactory. The average attendance of the children enrolled is 73 days per cent. Singing is not taught. There are five free pupils, and about forty children of the educable ages in the locality not under school instruction. About 60 per cent. of the questions asked at the examination were answered, and the proficiency is fair.

NARELLAN :—Visited, 8th May.

Pupils enrolled :—Boys, 16 ; girls, 23 ; total, 39.
At examination :—Boys, 14 ; girls, 22 ; total, 36.

The material condition of the school is in all respects reasonably good. The pupils are punctual, clean and orderly, and attentive to their lessons. All the subjects prescribed are taught. There are nineteen free pupils, but only three children of the educable ages in the neighbourhood not attending school. The average attendance of the children enrolled is 60 days per cent. About 70 per cent. of the questions asked at the examination were answered, and the attainments of the pupils are very fair.

WOLLONGONG :—Visited, 16th September.

Pupils enrolled :—Boys, 70 ; girls, 48 ; total, 118.
At examination :—Boys, 60 ; girls, 33 ; total, 93.

Lavatories, weather-sheds, and a bell are required, but otherwise the material condition of the school is good. The supply of furniture and working materials is sufficient. The children are clean and orderly, attentive, and respectful in their manners. All the subjects of instruction prescribed are taught. The average attendance of the children enrolled is 80 days per cent. There are no free pupils, and the teacher is not aware of any C.E. children of the educable ages in the town or vicinity growing up without instruction. 70 per cent. of the questions asked at the examination were answered, and the progress of the scholars in learning is very fair.

WOONONA :—Visited, 6th August.

Pupils enrolled :—Boys, 29 ; girls, 23 ; total, 52.
At examination :—Boys, 21 ; girls, 17 ; total, 38.

Weather-sheds, lavatories, a new kitchen, and a bell, are required, and all the buildings need repairs. The furniture, apparatus, and books, are sufficient. Singing is not taught. The children are clean and orderly, and more attentive than formerly. The average attendance of the scholars enrolled is 54 days per cent. There are three free pupils, and nine children of the educable ages in the locality not receiving school instruction. About 60 per cent. of the questions asked at the examination were answered, and the attainments of the pupils are fair.

ROMAN CATHOLIC SCHOOLS.

APPIN :—Visited, 21st July.

Pupils enrolled :—Boys, 20 ; girls, 18 ; total, 38.
At examination :—Boys, 19 ; girls, 16 ; total, 35.

The schoolroom needs painting ; there are no lavatories, and the weather-shed requires roofing. There is a comfortable residence for the teacher, and the supply of furniture, apparatus, and books is sufficient. The general discipline has been improved under the present teacher, and all the subjects of instruction are taught. The average attendance of the pupils enrolled is about 75 days per cent. There are eleven free pupils, but no children of the educable ages in the locality growing up without school instruction. The pupils answered 50 per cent. of the questions asked at the examination, and the proficiency is tolerable.

BARGO :—Visited 24th July.

Pupils enrolled :—Boys, 14 ; girls, 13 ; total, 27.
At examination :—Boys, 14 ; girls, 13 ; total, 27.

Lavatories, fencing, hat-pegs, a table, two chairs, and a book-press are required. There is a residence for the teacher, and the desks, forms, apparatus, and books, are sufficient. The general discipline is passable, but singing is not taught. The average attendance of the pupils enrolled is 90 days per cent. There are eleven free pupils, and all the children of the educable ages in the neighbourhood are receiving school instruction. About 50 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is tolerable.

CAMDEN :—Visited, 30th April.

Pupils enrolled :—Boys, 19 ; girls, 29 ; total, 48.
At examination :—Boys, 14 ; girls, 21 ; total, 35.

The buildings have been repaired since last inspection, and the furniture, apparatus, and books, are sufficient. The general discipline is fairly effective, and all the prescribed subjects are taught. The average

average attendance of the scholars enrolled is 60 days per cent. There are twelve free pupils, and thirteen children of the educable ages in the town and vicinity not receiving school instruction. Fifty per cent. of the questions asked at the examination were answered, and the attainments of the scholars are tolerable.

CAMPBELLTOWN :—Visited, 18th June.

Pupils enrolled :—Boys, 57 ; girls, 55 ; total, 112.
At examination :—Boys, 48 ; girls, 37 ; total, 85.

The material condition of the school is reasonably good, and the general discipline is satisfactory. The furniture is not of modern construction, but the supply of apparatus and books is sufficient. All the prescribed subjects are taught. The average attendance of the children enrolled is 66 days per cent. There are no free pupils, but there are ten R. C. children of the educable ages in the town and vicinity not under school instruction. Seventy per cent. of the questions asked at the examination were answered, and the attainments of the pupils are very fair.

CHARCOAL CREEK :—Visited, 9th September.

Pupils enrolled :—Boys, 30 ; girls, 37 ; total, 67.
At examination :—Boys, 25 ; girls, 23 ; total, 48.

A residence for the teacher, lavatories, a bell, and a weathershed are required ; but the supply of furniture, apparatus, and books is sufficient. The general discipline is passable in most respects ; but singing is not taught. The average attendance of the scholars enrolled is 75 days per cent. There are eleven free pupils, and six children of the educable ages in the locality not receiving school instruction. Fifty-three per cent. of the questions asked at the examination were answered, and the attainments of the pupils are tolerable.

DARTO :—Visited, 28th October.

Pupils enrolled :—Boys, 22 ; girls, 19 ; total, 41.
At examination :—Boys, 21 ; girls, 16 ; total, 37.

Lavatories, a weather-shed, and a supply of water, are required ; but the stock of furniture, apparatus, and books, is sufficient. The government and general discipline of the school are good, but singing is not taught. There are eight free pupils, but no children of the educable ages in the neighbourhood are growing up without school instruction. The average attendance of the pupils enrolled is 63 days per cent. About 75 per cent. of the questions asked at the examination were answered, and the proficiency of the scholars is above very fair.

IRISHTOWN :—Visited, 25th February.

Pupils enrolled :—Boys, 34 ; girls, 29 ; total, 63.
At examination :—Boys, 22 ; girls, 21 ; total, 43.

Lavatories, hat-pegs, another closet, and weather-sheds, are required ; but the furniture, apparatus, and books, are sufficient. There is a comfortable residence for the teacher, and the general discipline is passable ; but singing is not taught. The average attendance of the scholars is 66 days per cent. There are twenty-four free pupils, and twenty children of the educable ages in the locality not receiving school instruction. About 50 per cent. of the questions asked at the examination were answered, and the proficiency is tolerable.

LIVERPOOL :—Visited, 10th February.

Pupils enrolled :—Boys, 31 ; girls, 40 ; total, 71.
At examination :—Boys, 30 ; girls, 25 ; total, 55.

There is a comfortable residence for the teacher, and the buildings are in fair repair, but need painting. The supply of working materials is sufficient, and the general discipline has been much improved during the year ; but singing is not taught. The average attendance of the scholars enrolled is 70 days per cent. There are seventeen free pupils, but the teacher states there are no R.C. children in the town or vicinity growing up without school instruction. 57 per cent. of the questions asked at the examination were answered ; the attainments of the pupils are nearly fair.

MENANGLE :—Visited, 9th May.

Pupils enrolled :—Boys, 26 ; girls, 17 ; total, 43.
At examination :—Boys, 22 ; girls, 16 ; total, 38.

Lavatories and weather-sheds are still required ; but the working materials are sufficient, and the buildings are in fair repair. The pupils are clean and orderly, and more attentive than formerly ; singing and drawing are not taught. The average attendance of the pupils enrolled is 66 days per cent. There are no free pupils ; but ten children of the educable ages in the neighbourhood are not receiving school instruction. 57 per cent. of the questions asked at the examination were answered, and the attainments of the pupils are very fair.

THE OAKS :—Visited, 15th May.

Pupils enrolled :—Boys, 26 ; girls, 26 ; total, 52.
At examination :—Boys, 18 ; girls, 20 ; total, 38.

There is no residence for the teacher, and lavatories are required ; but otherwise the material condition is good. The general discipline is fairly effective, but singing is not taught. The average attendance of the scholars enrolled is 66 days per cent. There are ten free pupils, and only three children of the educable ages in the neighbourhood not receiving school instruction. 60 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is fair.

ROCKY POINT :—Visited, 16th April.

Pupils enrolled :—Boys, 13 ; girls, 20 ; total, 33.
At examination :—Boys, 11 ; girls, 20 ; total, 31.

A residence for the teacher, lavatories, a weather-shed, and some additional hat-pegs, are required ; but the schoolroom is in good repair, and the furniture, apparatus, and books, are sufficient. The general discipline admits of considerable improvement, and singing and drawing are not taught. The average attendance of the scholars enrolled is 66 days per cent. There are twelve free pupils, and ten children of the educable ages in the locality not receiving school instruction. About 50 per cent. of the questions asked at the examination were answered, and the attainments of the scholars are tolerable.

SPANIARDS HILL :—Visited, 13th May.

Pupils enrolled :—Boys, 25 ; girls, 18 ; total, 43.
At examination :—Boys, 21 ; girls, 12 ; total, 33.

Fencing, lavatories, and a weather-shed are required ; but the supply of working materials is sufficient. The pupils are clean and orderly, but wanting in attention. All the prescribed subjects are taught, but the methods of tuition are defective. The average attendance of the scholars enrolled is 62 days per cent., but they are not sufficiently punctual. There are fourteen free pupils, and six children of the educable ages in the locality not under school instruction. 40 per cent. of the questions asked at the examination were answered. The attainments of the scholars are only moderate.

WOLLONGONG —

13

WOLLONGONG :—Visited, 8th September.

Pupils enrolled :—Boys, 53 ; girls, 5 ; total, 58.

At examination :—Boys, 31 ; girls, 1 ; total, 32.

Lavatories, a bell, and weather-shed are required ; but the furniture, apparatus, and books, are sufficient. The teacher's residence is rather small, and the roof needs some repairs. The general discipline is fairly satisfactory, but singing is not taught. The average attendance of the scholars is 66 days per cent. There are three free pupils ; but no R.C. children of the educable ages in the town or vicinity not receiving school instruction. 62 per cent. of the questions asked at the examination were answered, and the attainments of the scholars are above fair.

PRESBYTERIAN SCHOOLS.

CAMPBELLTOWN :—Visited, 3rd February.

Pupils enrolled :—Boys, 27 ; girls, 25 ; total, 52.

At examination :—Boys, 21 ; girls, 14 ; total, 35.

A weather-shed, lavatories, hat-pegs, repairs to the windows, another closet, and an additional room for the teacher's residence, are required. The general discipline has been improved since the last inspection, but singing and drawing are not taught. The average attendance of the scholars is 60 days per cent., and they are nearly all punctual. There are no free pupils, and only three Presbyterian children of the educable ages in the town and neighbourhood not receiving school instruction. About 53 per cent. of the questions asked at the examination were answered, and the attainments of the scholars are tolerable.

CHARCOAL CREEK :—Visited, 11th September.

Pupils enrolled :—Boys, 17 ; girls, 31 ; total, 48.

At examination :—Boys, 14 ; girls, 26 ; total, 40.

A weather-shed, a lavatory, and a bell are required ; but the buildings are in fair repair, and the furniture, apparatus, and books, are sufficient. All the prescribed subjects are taught. The average attendance of the pupils enrolled is 75 days per cent., but they are not all punctual. There are no free pupils, but eight children of the educable ages in the locality are not attending school. 50 per cent. of the questions asked at the examination were answered, and the attainments of the scholars are tolerable.

DAPTO :—Visited, 27th October.

Pupils enrolled :—Boys, 16 ; girls, 15 ; total, 31.

At examination :—Boys, 12 ; girls, 12 ; total, 24.

A lavatory, a weather-shed, a bell, a clock, a book-press, and repairs to the closets, are required. The side walls of the schoolroom need colouring, the windows are in bad repair, the seats are too short, and the residence needs repairs to the roof and new locks to the doors. The discipline is unsatisfactory, and drawing is not taught. The average attendance of the scholars enrolled is 74 days per cent., but they are very unpunctual. There are twelve free pupils, but no children of the educable ages in the locality growing up without school instruction. 45 per cent. of the questions asked at the examination were answered, and the proficiency of the scholars is between moderate and tolerable.

WESLEYAN SCHOOLS.

ROCKY POINT :—Visited, 31st August.

Pupils enrolled :—Boys, 31 ; girls, 28 ; total, 59.

At examination :—Boys, 22 ; girls, 24 ; total, 46.

A residence for the teacher, a bell, lavatories, and roofing for the weathershed are required, but the supply of furniture, apparatus, and books, is sufficient. Arrangements have been made to repair the windows and colour the inside walls of the schoolroom. The general discipline is tolerably satisfactory, but the instruction is very superficial and the methods of tuition defective. Singing is not taught. The average attendance of the pupils enrolled is 66 days per cent. There are seven free pupils, and twelve children of the educable ages in the neighbourhood not receiving school instruction. 47 per cent. of the questions asked at the examination were answered. The proficiency of the scholars is barely tolerable.

W. MINTYRE,

Inspector, Camden District.

CUMBERLAND DISTRICT.

Summaries of Reports on Denominational Schools for 1874.

CHURCH OF ENGLAND SCHOOLS.

BURWOOD :—Visited, 23rd July.

Numbers present :—Boys, 20 ; girls, 26 ; total, 46.

The premises are in need of repair, but the school is fairly supplied with furniture and necessary teaching appliances. Nearly two-thirds of the pupils are regular, and they are orderly and fairly attentive, and evince fair accuracy under examination. The government is firm. The instruction is regulated and includes all the subjects enjoined by the Council. The methods are suitable, and the teaching is characterized by industry and care. The average proficiency is fairly satisfactory.

CABRAMATTA :—Visited, 17th September.

Numbers present :—Boys, 15 ; girls, 17 ; total, 32.

The site is not central. Repairs effected since last inspection have improved the material conditions now, on the whole, tolerable. About two-thirds of the pupils are regular, and they are tolerably orderly and attentive. The discipline is too slack, and the pupils do not manifest much accuracy, or apply themselves with vigour to their work. The subjects do not embrace object lessons, singing, or drawing ; the occupation is faulty, and the teaching wants intelligence and point. The results average from moderate to tolerable.

CASTLE HILL :—Visited, 3rd December.

Numbers present :—Boys, 31 ; girls, 26 ; total, 57.

The playground is too small, but otherwise the material condition is fair. The pupils are fairly orderly, and on the whole very fairly attentive. Their answering is fairly accurate, but their self-reliance needs fostering. The government is mild, but needs sustained watchfulness. The subjects of instruction are those prescribed ; the methods are suitable ; and the teaching is marked by industry and care. The average proficiency is fairly satisfactory.

COBBITY :—

COBBITY :—Visited, 18th September.

Numbers present :—Boys, 17 ; girls, 13 ; total, 30.

The material condition of the school is reasonably satisfactory. About seven-tenths of the pupils are regular. The first class is very disorderly, but the second and third are tolerably orderly and attentive. The government needs greater promptness and vigilance to restrain and prevent disorder. The subjects are tolerably regulated, and they are those prescribed. The occupation of the pupils is tolerably provided for, and the methods and teaching are moderately effective. The average proficiency is from moderate to tolerable. More earnest self-reliant effort on the part of the pupils and more vigorous teaching and discipline are necessary to raise the attainments.

EMU :—Visited, 27th April.

Numbers present :—Boys, 26 ; girls, 14 ; total, 40.

The residence, schoolroom, and out-offices, are all in need of repair. The entire premises require painting, and a play-shed, and a tank, together with spouting for the buildings. About three-fifths of the pupils are regular, and they are tolerably orderly and fairly attentive. They are tolerably correct in their answers, and the government is mild but tolerably firm. The subjects embrace all required for the classification. The teaching is industrious, but wanting in penetrative force; and the average attainments range from moderate to tolerable.

KURRAJONG :—Visited, 27th May.

Numbers present :—Boys, 12 ; girls, 12 ; total, 24.

The erection of a detached kitchen is still desirable, but otherwise the material condition is fair. Two-thirds of the pupils are regular, and they are fairly orderly and attentive. They are tolerably self-reliant, but slow in answering; and their mental effort is not vigorous. The government is mild, but wanting in energy. The instruction comprises all the subjects required; and the teaching is industrious, but lacking force. The average proficiency is about tolerable. The attendance, on account of the state of the weather, was smaller than usual.

PARRAMATTA :—Visited, 6th and 7th November.

Numbers present :—Boys, 66 ; girls, 39 ; total, 105.

The material condition of the school is satisfactory. Two-thirds of the pupils are regular; and they are, on the whole, fairly orderly and attentive, as well as self-reliant and accurate under examination. The government is firm and watchful. The instruction embraces all the required subjects, and is properly regulated. The teaching is industrious and systematic; and the results are fairly satisfactory.

PARRAMATTA, NORTH :—Visited, 4th and 6th November.

Numbers present :—Boys, 69 ; girls, 38 ; total, 107.

Weather-sheds have been erected since last inspection. The general condition is satisfactory. About three-fourths of the pupils are regular, and they are now fairly orderly and attentive, as well as self-reliant and accurate. The government is now fairly effective. The subjects accord with the prescribed requirements, the instruction is regulated, and the teaching is energetic and fairly intelligent. The average attainments are fairly satisfactory.

PENNANT HILLS :—Visited, 26th August.

Numbers present :—Boys, 17 ; girls, 16 ; total, 33.

The general condition of the premises is satisfactory. The state of the records indicates neglect. About three-fifths of the pupils are regular. They are only tolerably orderly or attentive, and their answering is neither prompt nor of an accurate character. The government appears to want promptness and vigour. The instruction includes all the subjects; and programmes are drawn up, but not faithfully adhered to in all cases. The teaching is defective in penetrative force, and the average proficiency is only about tolerable.

PETERSHAM :—Visited, 29th and 30th July.

Numbers present :—Boys, 56 ; girls, 51 ; total, 107.

There is no residence. The material condition is, on the whole, satisfactory. About two-thirds of the pupils are regular, and they are fairly orderly and attentive, but more earnest application to work is desirable; and an inclination to mutter and talk needs correction. The government is mild, but wants vigour and energy. The subjects embrace all prescribed, but object lessons are omitted in the upper classes. The classification is low, about three-fifths of the pupils being in the first class. The teaching is defective in vigour, especially in the upper classes; and the attainments are not, taken as a whole, satisfactory, the average not being beyond tolerable.

PITT TOWN :—Visited, 18th June.

Numbers present :—Boys, 17 ; girls, 21 ; total, 38.

The material condition is, on the whole, tolerably satisfactory, but the records are incorrect in various particulars. About seven-tenths of the pupils appear to be regular, and they are tolerably orderly, but only moderately attentive. The government needs sustained vigilance and firmness. The instruction includes all required subjects but singing, and it is moderately regulated by the necessary guides. The teaching needs thoroughness and penetrative force to render it effective. The average proficiency is from moderate to tolerable.

RICHMOND :—Visited, 20th May.

Numbers present :—Boys, 36 ; girls, 27 ; total, 63.

The residence is damp and unhealthy, and the schoolroom is not a good one, but a new brick building is in course of erection. The school is fairly supplied with necessary teaching appliances. About two-thirds of the pupils are regular, and the order and attention are fair. They are fairly self-reliant and accurate under examination. The discipline is fairly effective. All the required subjects are included in the instruction, which is regulated with fair skill. The teaching is conducted with industry and care, and the average results reach about fair.

ROUSE HILL :—Visited, 25th June.

Numbers present :—Boys, 17 ; girls, 21 ; total, 38.

There is a good residence, but the schoolroom is in need of repair, and the furniture requires renewing; otherwise the material condition is satisfactory. About seven-tenths of the pupils are regular, but they are only moderately punctual. They are tolerably orderly and attentive, as well as self-reliant and accurate. The government is mild. Singing is omitted from the subjects of instruction. The methods are suitable, and the teaching is industrious and fairly careful. The average proficiency is tolerable.

RIDE :—

RIDE :—Visited, 30th November.

Numbers present :—Boys, 39 ; girls, 36 ; total, 75.

The schoolroom is now, commodious, and suitable, and the residence is being enlarged and put into proper repair. Some of the desks are badly constructed, but on the whole the school is fairly supplied with teaching requisites. About two-thirds of the pupils are regular, and they are fairly orderly and attentive, but need greater power of sustained application to work. The government is mild and fairly effective, but would be improved by greater vigour. All the subjects prescribed are taught ; the lesson documents are neatly constructed, and the teaching is industrious and painstaking. The average proficiency is fair.

SEVEN HILLS :—Visited, 18th March.

Numbers present :—Boys, 21 ; girls, 17 ; total, 38.

The schoolroom is suitable, and is fairly furnished with necessary requisites. The records are incomplete in one or two particulars. About two-thirds of the pupils are regular, and they are tolerably orderly and attentive. They are only moderately self-reliant and correct under examination. The government wants vigour and watchfulness. The instruction embraces all the subjects prescribed, and is regulated by the usual documents, but they are not closely adhered to in all subjects. The teaching needs greater force and thoroughness, and the average proficiency is only moderate.

SOUTH CREEK :—Visited, 6th May.

Numbers present :—Boys, 53 ; girls, 32 ; total, 85.

A new closet has been erected since last inspection, and the premises are in fair repair. The furniture is insufficient, and of inferior quality. About two-thirds of the pupils are regular, and they are fairly orderly and attentive, as well as accurate under examination. The government seems vigorous and watchful. The subjects include all those prescribed, except singing. The classification is low. The teaching is conducted with energy, and the average attainments are nearly fair.

WILBERFORCE :—Visited, 19th June.

Numbers present :—Boys, 27 ; girls, 27 ; total, 54.

The teacher's residence needs repair, but in other respects the material condition is fair. The school is fairly supplied with necessary teaching appliances. The pupils are clean, orderly, and fairly attentive, and they show tolerable self-reliance and accuracy under examination. About two-thirds of them are regular. The discipline is mild, but fairly firm and effective. The prescribed subjects are taught, and the instruction is regulated ; the classification is appropriate ; and the teaching is conducted with animation and energy. The average attainments are tolerable.

WINDSOR :—Visited, 12th June.

Numbers present :—Boys, 34 ; girls, 32 ; total, 66.

The schoolroom is in fair condition, but the teacher's residence is in need of repair, and the walls of the schoolroom require white-washing. About seven-tenths of the pupils are regular, and they are fairly orderly and attentive. They are tolerably self-reliant and accurate, but do not manifest such readiness in answering as is desirable. The government seems mild, but somewhat impulsive. The subjects embrace all prescribed, the methods are suitable, and the teaching seems industrious, but wanting in force. The average results are nearly fair.

CASTLEREAGH (Wesleyan) :—Visited, 29th April.

Numbers present :—Boys, 28 ; girls, 16 ; total, 44.

There is no residence, but several minor improvements have been effected since last inspection, and the school is fairly furnished with teaching appliances. About two-thirds of the pupils are regular. They are tolerably orderly and fairly attentive. The government is mild. The instruction is regulated, and comprises all required subjects, and the teaching is industrious and tolerably effective. The average proficiency is about tolerable.

PARRAMATTA JUNCTION (Presbyterian) :—Visited, 6th March.

Numbers present :—Boys, 18 ; girls, 16 ; total, 34.

In its material aspect the general condition and circumstances of the school have undergone no alteration since last inspection. About two-thirds of the pupils are regular, and they are fairly attentive, but only moderately orderly. They exhibit but little mental activity under examination. The government seems firm, but needs greater vigilance. The subjects do not embrace singing or drawing. The instruction is moderately regulated, and the teaching is industrious, but only moderately effective in most subjects. The average results are "moderate." This is the only Presbyterian school in the district, and application has now (1875) been made for its conversion into a Public one.

ROMAN CATHOLIC SCHOOLS.

PARRAMATTA :—Visited, 15th September.

Numbers present :—Boys, 16 ; girls, 21 ; total, 37.

The schoolroom is only moderately suitable, and the furniture is insufficient. The school is tolerably furnished with necessary teaching appliances. About two-thirds of the pupils are regular, and they are moderately orderly and attentive, but neither prompt nor accurate in their answering. The government needs promptness and vigour. The instruction embraces all the subjects prescribed for the classification. The teaching wants point and vigour, and the attainments are low, being only from "indifferent to moderate." The present teacher has not been long in charge of the school.

CONCORD :—Visited, 22nd July.

Numbers present :—Boys, 27 ; girls, 7 ; total, 34.

The internal arrangements of the school continue as at the previous inspection. The residence is too small, and not in very good repair, and a book-press and table are necessary. About two-thirds of the pupils are regular, but they are only tolerably orderly and attentive, and only moderately accurate. They are listless and apathetic, and few appear to care to answer. The discipline is slack. The subjects accord with the requirements of the Council. The methods are tolerably suitable, but are not applied with energy ; the teaching lacks animation and vigour ; and the results average about moderate.

KURRAJONG :—

KURBAJONG:—Visited, 26th May.

Numbers present:—Boys, 16; girls, 9; total, 25.

The desk accommodation is insufficient, and a suitable book press is required. The closets are in need of repair, and greater care is necessary in keeping the records. The pupils are very irregular, the average for the previous quarter having been only about 55 per cent. They are tolerably orderly and attentive, but are only moderately self-reliant and accurate, and their power of mental effort is weak. The government is only moderately effective. The instruction embraces all prescribed but singing. The classification is not judicious. The teaching is of a mechanical character, and the average proficiency is about moderate.

LANE COVE:—Visited, 3rd September.

Numbers present:—Boys, 25; girls, 13; total, 38.

The furniture is clumsy and insufficient, and the supply of materials is tolerable. The records are incomplete and incorrect in several particulars. About two-thirds of the pupils are regular, but they are only moderately orderly or attentive. They appear little inclined to mental exertion, and their answering is neither prompt nor accurate. The government is not strict enough. The instruction embraces all the subjects, but the classification is indifferent, and the methods are of similar quality. The teaching is pointless and unintelligent, and the results give an average of barely moderate.

NELSON:—Visited, 24th June.

Numbers present:—Boys, 18; girls, 16; total, 34.

In its material aspect this school may be regarded as tolerably satisfactory. About three-fourths of the pupils appear to be regular, but they are only moderately orderly or attentive, and their answering is neither prompt nor thoughtful. The government is not sufficiently strict. Singing is omitted, but otherwise the subjects accord with the Council's requirements. The teaching is defective in intelligence and vigour, and the average proficiency is not satisfactory, being less than moderate.

PARRAMATTA:—Visited, 3rd November.

Numbers present:—Boys, 44; girls, 43; total, 87.

There is no residence, but the schoolroom is large and airy, but new closets have been erected since last inspection. The furniture, except two desks, is of a clumsy and unwieldy character. The lavatories need covering in and suitable entrances thereto, the present arrangement of passing through the school to reach them being very objectionable. About two-thirds of the pupils are regular and punctual. They are orderly and very fairly attentive. The government is fairly effective, and the prevailing spirit of the school is pleasing. The instruction is regulated, and includes all the subjects prescribed. The teaching is careful and industrious, and the results are about fairly satisfactory. The attendance at this school has much decreased, owing to the opening of another school close to it under ladies of a religious order.

PENRITH:—Visited, 24th July.

Numbers present:—Boys, 31; girls, 32; total, 63.

Since last inspection a rough slab closet has been provided for the boys, but the other one is in bad repair. In other respects the material condition remains the same as it was last year. About two-thirds of the pupils are regular, and they are fairly orderly and attentive, but only tolerably self-reliant and accurate. The government is mild, but needs greater energy and vigilance. The instruction comprises all the subjects enjoined by the Council, and is regulated by the usual guides. The teaching is conducted with industry, but needs greater vigour. The average attainments are about tolerable.

PETERSHAM:—Visited, 24th July.

Numbers present:—Boys, 18; girls, 13; total, 31.

Except as regards the smallness of the teacher's residence, the material condition is fairly satisfactory. About two-thirds of the pupils are regular, and they are fairly orderly and attentive. They are tolerably accurate under examination, but do not exert themselves to answer with promptitude. Singing is omitted, but all other subjects prescribed are taught, and the instruction is regulated. The teaching is careful, but needs greater application on the part of the pupils to render it effective. The attainments reach an average of from tolerable to fair.

RICHMOND:—Visited, 19th May.

Numbers present:—Boys, 27; girls, 42; total, 69.

Additional furniture has been provided since last inspection, but otherwise the material condition continues the same. Two-thirds of the pupils are regular and punctual. They are fairly orderly and attentive, as well as accurate in answering. The discipline is mild but firm. The instruction is regulated, and embraces all required subjects. The teaching is careful and industrious, and is productive of results that average about fair.

RYDE:—Visited, 1st December.

Numbers present:—Boys, 25; girls, 19; total, 44.

The schoolroom is too small; otherwise the material condition is fair. About seven-tenths of the pupils are regular, and they are orderly and fairly attentive. They apply themselves to work with industry and vigour. The government is firm and effective. All prescribed subjects are taught, and the instruction is regulated by the proper documents. The teaching is intelligent and energetic, and gives an average proficiency of from fair to very fair.

VILLA MARIA:—Visited, 13th August.

Numbers present:—Boys, 20; girls, 28; total, 48.

The schoolroom is a good one, and the material condition, generally speaking, is fairly satisfactory. About seven-tenths of the pupils are regular, and they are orderly and attentive, as well as very fairly self-reliant and accurate in their answers. The government is prompt and firm. The subjects accord with the Council's requirements; the methods are intelligent, and the teaching is conducted with energy. The average proficiency is nearly very fair.

WINDSOR:—Visited, 11th and 18th June.

Numbers present:—Boys, 58; girls, 34; total, 92.

The teacher's residence is too small, and it as well as the out-offices are in need of repair; otherwise the material condition is satisfactory. About three-fourths of the pupils are regular, and they are very fairly orderly and attentive. They show considerable animation and readiness in answering, and the government is firm. The instruction is regulated, and embraces all the subjects prescribed. The classification has improved since last inspection, but is still marked by the majority of the pupils being in the first class. The teaching is industrious and careful, and the results are fairly satisfactory.

GOULBURN DISTRICT.

SUMMARIES of Reports on Denominational Schools inspected during the year 1874.

I.—CHURCH OF ENGLAND SCHOOLS.

BURRAWANG :—Visited, 10th March.

Numbers enrolled :—Boys, 30 ; girls, 38 ; total, 68.

Numbers present :—Boys, 26 ; girls, 33 ; total, 59.

None of the material improvements pointed out as necessary at last inspection have been effected. The schoolroom and playground are not kept with sufficient regard to neatness. The records are defective. Wet weather has interfered with the regularity of the attendance—at no time a very satisfactory feature of the school. Want of punctuality and other loose habits among the pupils indicate weak discipline. All required subjects are proportionately provided for on the prescribed instructional guides. In some branches, however, the matter of instruction has been poor, limited and ill-arranged. The results are uneven ; they average *tolerable*. For the teaching to become impressive and effective, it would need to be conducted with energy more judiciously directed and regulated.

GOULBURN :—Visited, 23rd to 26th February.

Numbers enrolled :—Boys, 92 ; girls, 62 ; total, 154.

Numbers present :—Boys, 59 ; girls 42 ; total, 101.

The premises are in the same dilapidated state last reported, and the new schoolhouse is still only in course of erection. The defective arrangements for the management of the first class having been rectified, the general internal organization is now *very good*, considering the exceedingly defective material provisions. Accidental causes affected the attendance at, and previously to the time of inspection. The government is vigorous and healthy, and the discipline is *very fair* on the whole, a great improvement being observable in the first class. The whole instructional arrangements are satisfactory, and the course is complete. In algebra and geometry, the matter of the lessons exceeds the requirements of the standard, and in other subjects is up to them. The proficiency is *fair* in the first and second classes, *very fair* in the third, and *good* in the fourth.

NORTH GOULBURN :—Visited, 27th March.

Numbers enrolled :—Boys, 32 ; girls, 36 ; total, 68.

Numbers present :—Boys, 25 ; girls, 26 ; total, 51.

A tank has been provided, and other material improvements are in progress. Several of the desks and forms are unsuitable in their present condition, and a book press is badly wanted. Much valuable space is taken up by school furniture unsuitable and unavailable for school purposes, and Denominational books are left in various places about the school. The attendance is numerous, but somewhat fluctuating. The government is weak and wavering, and, as a consequence, the children have fallen into loose and disorderly habits. All subjects required for the third class are provided for. The teaching is not well distributed, is superficial in character, not well regulated, and not productive of anything like satisfactory results. The proficiency of the pupils is below *moderate*, and the general results fall to *indifferent*.

SUTTON FOREST :—Visited, 20th November.

Numbers enrolled :—Boys, 38 ; girls, 22 ; total, 60.

Numbers present :—Boys, 26 ; girls, 19 ; total, 45.

Lavatory, weather-shed, and water supply are badly wanted. The school is sufficiently furnished and stocked, and is well kept. Under ordinary circumstances the school, the only one in the township, secures the enrolment of a large majority of the children. Of late, however, the attendance has been seriously interfered with by the prevalence of an epidemic. Ordinarily the attendance of a considerable number of the pupils is very irregular, in spite of the teacher's best efforts to remove the evil. As far as he can be held responsible, the general discipline is *good*. The pupils are properly divided into three classes, but the first class is unnecessarily split up. The instruction is well regulated ; the course includes all required subjects, except singing, with elementary Latin added for the third class. The average proficiency is *tolerable*. Dictation exceedingly weak. The causes of these low results are somewhat complex.

TERRARA :—Visited, 27th July.

Numbers enrolled :—Boys, 19 ; girls, 30 ; total, 49.

Numbers present :—Boys, 14 ; girls, 27 ; total, 41.

A class-room has been added within the year. With one exception, the records are properly kept. From various causes the numbers are lower than usual. The children enrolled attend with fair regularity and punctuality. In other respects the discipline has become somewhat lax, and is only *tolerably* satisfactory. Little exception can be taken to the classification and general instructional arrangements. The course of instruction is complete ; the methods employed are of modern caste, but are not practised with the consecutiveness and thoroughness necessary to the accomplishment of high results. The pupils' attainments are of very easy range, and their general proficiency averages only slightly above *tolerable*. Recent promotions account in part for the comparatively low results.

YASS :—Visited, 30th April and 1st May.

Numbers enrolled :—Boys, 89 ; girls, 64 ; total, 153.

Numbers present :—Boys, 73 ; girls, 49 ; total, 122.

The school premises are in the unsatisfactory state last reported, but repairs are about to be commenced. These, however, will fall far short of rendering the material organization complete and satisfactory. A good residence has been provided for the teacher. Some of the school movements are unduly noisy, but as a whole the discipline is *very fair*. All required subjects up to a fourth class standard are taught, and elementary algebra is added. Teaching is carried on with energy and diligence, and produces results varying from *fair* to *very fair* throughout. A temporary diminution of the teaching power increased the difficulty arising from an otherwise very imperfect organization.

II.—ROMAN CATHOLIC SCHOOLS.

BERRIMA :—Visited, 23rd September.

Numbers enrolled :—Boys, 17 ; girls, 22 ; total, 39.

Numbers present :—Boys, 14 ; girls, 19 ; total, 33.

The condition and tenure of the premises remain as last reported. The numbers have been below the required minimum for the last three quarters, the average for the nine months being only 26.8. The discipline is now *fair*, and the moral tone is healthy. A fourth class has been recently formed. All required subjects are taught. The instruction is carefully imparted. The results approach *fair* on the average.

GOULBURN (Boys):—Visited, 22nd and 23rd June.

Number enrolled:—63.

Number present:—66.

There has been no change in the school premises since last inspection, but a residence for the teacher has been provided in a separate part of the town. The opening of St. Patrick's College and other causes have somewhat effected the attendance, which, however, is still reasonably numerous. The boys are now more orderly and subject to control, and generally manifest a becoming demeanour. The discipline is *very fair*. Excepting one boy, who receives separate lessons in elementary mathematics and Latin, no material has been left in the school for any class higher than a 3rd. The only defect in the classification is the existence of a lower division in the 1st class, the pupils of which are only fit for the infants' school. Singing excepted, all subjects required for the classification are taught. The teaching is on modern methods, and produces on the average *fair* results. The 1st class is very weak, and reduces the mark for the whole school.

GOULBURN (Girls' and Infants'):—Visited, 15th to 18th June.

Numbers enrolled:—Boys, 39; girls, 138; total, 177.

Numbers present:—Boys, 19; girls, 84; total, 103.

The material condition and general organization remain as last reported. The proper method of keeping the records is now adopted. The stock of appliances is sufficient and in good condition. Amongst them are several useful diagrams drawn by the teachers themselves. The recognised teaching power is barely sufficient, but that actually brought into requisition is far more than adequate. The employment of persons neither paid nor recognised by the Council is still persisted in. The numbers keep up, but prevalent sickness has interfered with the regularity of attendance. Last year's inspection, backed up by incidental revisitation and advice, has had the desired effect upon the discipline, which is now *good* throughout. In the infants' school the improvement is particularly marked. Form and colour lessons have been added to the infants' school course, but the theory of music is not taught to the girls. The character of the instruction has sensibly improved. It is more educative in its tendency, and is imparted with increased skill. This, combined with more effective discipline, has considerably raised the general proficiency of the pupils, which now exceeds *fair* on the average in both branches of the school.

MITTAGONG:—Visited, 17th September.

Numbers enrolled:—Boys, 22; girls, 19; total, 41.

Numbers present:—Boys, 19; girls, 19; total, 38.

The building, a Roman Catholic Church, has not been altered in any way since last inspection. The internal organization has been corrected. Within the last three months the attendance has slightly increased. The school is conducted throughout as a Public School. The majority of pupils belong to Protestant Churches, and the only special religious instruction given is Protestant. The government has become far more circumspect and judicious. The general discipline is *fair*. Suitable instructional arrangements are in force, the matter of the instruction is generally suitable, and the results achieved are *fair*. The school is rising from the low and precarious state in which it has been for two years past, but to continue it as at present conducted, under the name of Roman Catholic School, is simply an anomaly.

TARALGA:—Visited, 21st May.

Numbers enrolled:—Boys, 25; girls, 17; total, 42.

Numbers present:—Boys, 16; girls, 14; total, 30.

A well has been sunk since last inspection. The Council's property is damaged through the want of proper bookshelves. The records are defective in some particulars. The removal of some families has lowered the attendance of late, but the children enrolled attend with *fair* regularity except at harvest time. They are also *tolerably* punctual, mannerly, and clean. They have yet to be trained to render prompt and sustained obedience. The classification may be considered appropriate, and the regulation of the instruction suitable. Modern methods are adopted, but they are practised with only partial effect. The first class is relatively in the most efficient state. The attainments of the whole average below *tolerable*.

ULLADULLA:—Visited, 20th August.

Numbers enrolled:—Boys, 27; girls, 28; total, 55.

Numbers present:—Boys, 25; girls, 27; total, 52.

The school has been lined, and hat-pegs have been provided. In some items the school stock is short. The records are defectively kept in some particulars. The enrolment keeps up, but the attendance has not been satisfactorily regular. In other respects the general discipline is *good*. The classification still tends to be over minute. All subjects required for the three classes are provided for, except singing and drawing; but object lessons have been somewhat neglected of late. The average proficiency approaches *very fair*.

YASS (Boys):—Visited, 27th and 28th April.

Number enrolled:—69.

Number present:—58.

The building and premises remain as last reported. The teaching power is barely sufficient for the attendance. There is an amount of unnecessary noise, as well as some unsteadiness in connection with the school operations, particularly in the lower classes; apart from this defect, the discipline is *very fair*. There are four classes,—an arrangement justified by the attainments of the elder pupils, but not well adapted to the present teaching power. The work of the school is carried on with diligence and very fair skill. All required subjects except singing are taught, and elementary algebra and mensuration are added. On the average the proficiency exceeds *fair*, but in the fourth class nearly reaches *good*.

YASS (Girls):—Visited, 29th April.

Number enrolled:—52.

Number present:—60.

Hat-pegs, three new desks, and a book press have been added. Some omissions occur in the records, and the construction of the programmes was in arrear. The numbers are about stationary. The attendance is regular and *fairly* punctual. The discipline as a whole is *tolerable*. The pupils are not kept continuously and profitably occupied; and a considerable share of work is deputed to a mistress unrecognized by the Council. The course of instruction is complete. The teaching is least effective in the branches requiring skilful explanatory treatment. The proficiency is *tolerable*.

III.—PRESBYTERIAN SCHOOL.

SHOALHAVEN:—Visited, 23rd and 24th July.

Numbers enrolled:—Boys, 46; girls, 23; total, 69.

Numbers present:—Boys, 43; girls, 22; total, 65.

The material condition remains unchanged. The internal organization is as good as is possible under the circumstances. The attendance of pupils is numerous, punctual, and for the locality *very fairly*.

fairly regular. The general discipline is *very good*. Singing is not taught; but to the other prescribed subjects up to a fourth class standard, elementary algebra and Latin are added. The instructional arrangements are judiciously devised and clearly set forth. The teaching is careful, thorough, and educative. The pupils' attainments are of full range, and their proficiency averages from *very fair to good*. The school is in a *good* state of efficiency.

D. S. HICKS,
Inspector.

MAITLAND DISTRICT.

SUMMARY of Reports upon Certified Denominational Schools for 1874.

I.—CHURCH OF ENGLAND SCHOOLS.

BISHOP'S BRIDGE (N.V.)

Finally closed on the 31st January, 1874.

BROKE (N.V.) :—Visited, 24th September.

Numbers enrolled :—Boys, 32; girls, 35; total, 67.
Numbers present :—Boys, 27; girls, 24; total, 51.

1. Material condition improved, and very fair supply of furniture, fair in quantity and quality; water tank, lavatory, and weather-shed needed; organization tolerable. 2. Attendance not satisfactorily regular and punctual, fair order maintained, government tolerably intelligent, but not exacting enough; moral tone tolerable and improved. 3. Prescribed subjects taught, lesson documents very fair, and teaching earnest, but wanting in thoroughness. 4. Average proficiency moderate.

BUCHANAN (N.V.) :—Visited, 26th June.

Numbers enrolled :—Boys, 27; girls, 25; total, 52.
Numbers present :—Boys, 21; girls, 19; total, 40.

1. Schoolhouse commodious, lately repaired, and tolerably suitable; weather-shed and lavatory needed; supply of school requisites fair. 2. Attendance fairly punctual, but irregular and below the minimum; disciplinary condition of the school tolerable and promising. 3. Prescribed subjects taught, except singing and sewing; classification and lesson documents of fair merit, and teaching earnest, animated, and tolerably skilful. 4. Average proficiency tolerable and promising.

DENMAN (N.V.) :—Visited, 30th November.

Numbers enrolled :—Boys, 19; girls, 32; total, 51.
Numbers present :—Boys, 11; girls, 23; total, 34.

1. Material condition and organization fair, and aspect clean and respectable. 2. Attendance fairly regular and punctual, appearances clean and comfortable, government mild and fairly effective; moral tone fair. 3. Prescribed subjects taught, instruction fairly well regulated, and teaching earnest, painstaking, and tolerably skilful. 4. Average proficiency tolerable.

HINTON (N.V.)

Certificate withdrawn in October.

JERRY'S PLAINS (N.V.) :—Visited, 21st September.

Numbers enrolled :—Boys, 37; girls, 30; total, 67.
Numbers present :—Boys, 23; girls, 15; total, 38.

1. Material condition and organization improved and tolerable. 2. Discipline tolerably effective. 3. Instruction appropriate and fairly well regulated, and teaching earnest and diligent, tolerably intelligent, but wanting in vigour and vivacity. 4. Average proficiency moderate to tolerable.

EAST MAITLAND (N.V.) :—Visited, 30th April and 1st May.

Numbers enrolled :—Boys, 71; girls, 56; total, 127.
Numbers present :—Boys, 67; girls, 26; total, 83.

1. Supply of water, lavatories, additional hat-pegs, and out-offices, still needed; material organization otherwise satisfactory. 2. Attendance 20 per cent. less than that of last year; two-thirds regular, and very fairly punctual. Discipline mild, and fairly intelligent, but not vigilant and exacting enough. Moral tone of the school fair. 3. Course of instruction complete, and of third-class range. An hour and a half weekly occupied in imparting special religious instruction, and three and a half hours in the teaching of history, etc. Programmes of lessons, classification, and supervision of silent lessons partially satisfactory. Teaching earnest and diligent, but not vigorous and impressive enough. 4. Average proficiency tolerable. Arithmetic, grammar, geography, and spelling, weak subjects.

WEST MAITLAND (St. Mary's, N.V.) :—Visited, 28th and 29th April.

Numbers enrolled :—Boys, 58; girls, 35; total, 93.
Numbers present :—Boys, 26; girls, 16; total, 42.

1. Material condition, aspect, and organization improved and very fair. Out-offices very unsatisfactory. Lavatory and weathershed needed. 2. Attendance tolerably regular, and very fairly punctual, but 56 per cent. less than last year's. Government mild, intelligent, and improved, but still not stimulating and exacting enough in the lower classes. Moral tone very fair. 3. Prescribed subjects taught; lesson documents of very fair character; methods, tolerably intelligent; and teaching, earnest and diligent. 4. Average proficiency, nearly tolerable.

WEST MAITLAND (St. Paul's) :—Visited, 8th and 9th October.

Numbers enrolled :—Boys, 33; girls, 26; total, 59.
Numbers present :—Boys, 28; girls, 24; total, 52.

1. Schoolroom commodious, and supply of working materials adequate. Bell, water-tank, and lavatory, draining of play-ground, and repairing of fence, windows, desks, and teacher's residence needed. Material aspect and condition neglected and unsatisfactory. 2. Attendance irregular and unpunctual, and 46 per cent. less than last year's average. Pupils not satisfactorily neat and clean in their persons, zealous, and industrious, but better regulated in their movements and demeanour. Moral tone barely tolerable. 3. Course of instruction complete; lesson documents satisfactory, but classification low. Methods of fair merit, but the teaching not satisfactorily impressive and effective. 4. Average proficiency moderate.

MORPETH (N.V., Primary) :—Visited, 5th May.

Numbers enrolled :—Boys, 18; girls, 16; total, 34.
Numbers present :—Boys, 15; girls, 16; total, 31.

1. Material character and organization satisfactory; supply of school requisites adequate, and general aspect pleasing. 2. Attendance tolerably regular and fairly punctual, but languishing and below

below the minimum. Government firm and intelligent; appearances neat and clean; order and conduct of pupils very fair; moral tone healthy and very fair. 3. Course of instruction complete, of 3rd class range, and well regulated; classification somewhat low in point of age; character of the teaching, very fair in general. 4. Average proficiency, from fair to very fair.

MORPETH (Infants—N.V.) :—Visited, 6th May.

Numbers enrolled :—Boys, 26; girls, 27; total, 53.

Numbers present :—Boys, 18; girls, 20; total, 38.

1. Schoolroom clean and commodious; material condition good, and supply of school requisites ample. 2. Attendance fairly punctual, but irregular and decreasing. School fees low and precarious. Promotions to Primary Department retarded. Government mild and judicious, but younger pupils not satisfactorily quiet, orderly, and attentive. Moral tone tolerable. 3. Instruction appropriate, but incomplete. Teaching earnest and diligent, moderately skilful and animated. 4. Average proficiency, moderate.

MOSWELL BROOK (N.V.) :—Visited, 27th October.

Numbers enrolled :—Boys, 62; girls, 58; total, 120.

Numbers present :—Boys, 46; girls, 47; total, 93.

1. Material condition and organization, fair and improved. Weather-shed and lavatory needed. 2. Attendance punctual but irregular; appearances neat and clean; government mild and intelligent, and moral tone of the school very fair. 3. Prescribed subjects taught except singing; lesson documents of very fair merit, and teaching zealous and painstaking, but rather feeble in the lower classes. 4. Average proficiency tolerable. General condition of the school improved and promising.

PATERSON (N.V.)

Certificate recently withdrawn.

SCONE (N.V.) :—Visited, 30th October and 16th November.

Numbers enrolled :—Boys, 55; girls, 50; total, 105.

Numbers present :—Boys, 44; girls, 43; total, 87.

1. Schoolroom commodious and now more suitable, adequately appointed, clean, but in need of repair. Weather-shed, lavatory, and water tank needed. 2. Attendance irregular, but very fairly punctual, appearances neat and clean, government fairly intelligent, but not sufficiently firm and exacting. Discipline of lower divisions rather feeble, moral tone tolerable and promising. 3. Instruction complete, and of 3rd class range; lesson documents of very fair merit, methods tolerably intelligent, and teaching earnest and diligent, but not sufficiently vigorous, impressive, and profitable. 4. Average proficiency moderate to tolerable. Present teacher but recently appointed.

SINGLETON (N.V.) :—Visited 24th and 25th August.

Numbers enrolled :—Boys, 73; girls, 38; total, 111.

Numbers present :—Boys, 38; girls, 16; total, 54.

1. Material condition and organization good. 2. Attendance well maintained, punctual, and tolerably regular; appearances clean and comfortable; most of the pupils docile and well behaved, but not sufficiently zealous, self-reliant, and painstaking; moral tone very fair in general. 3. Course of instruction complete, and of 3rd class range; lesson documents very fair, but classification rather low; teaching earnest, diligent, and tolerably intelligent, but not adequately spirited and impressive. 4. Average proficiency from moderate to tolerable.

WOODVILLE (N.V.) :—Visited, 22nd April.

Numbers enrolled :—Boys, 19; girls, 13; total, 32.

Numbers present :—Boys, 17; girls, 13; total, 30.

1. Material condition and organization fair, and aspect of schoolroom improved. 2. Attendance reasonably punctual, but low and irregular; government healthy and intelligent; moral tone from fair to very fair. 3. Course of instruction complete and of 3rd class range; classification fair, and the occupation of the pupils better regulated; methods fair, and teaching earnest, diligent, and improved. 4. Average proficiency nearly fair.

II.—ROMAN CATHOLIC SCHOOLS.

BLANDFORD (N.V.) :—Visited, 11th September.

Numbers enrolled :—Boys, 32; girls, 34; total, 66.

Numbers present :—Boys, 21; girls, 19; total, 40.

1. Fencing, lavatory, water-tank, and weather-shed unprovided; material organization otherwise very fair. 2. Attendance fairly punctual, but irregular and decreasing. Fair order maintained, but pupils not satisfactorily diligent, self-reliant, and painstaking, and personally neat and clean. Moral tone tolerable and retrogressive. 3. Prescribed subjects taught, except singing and sewing; character of classification and lesson documents fair. Teaching tolerably intelligent, but not satisfactorily painstaking and vigorous. 4. Average proficiency moderate.

LOCHINVAR (N.V.) :—Visited, 7th July.

Numbers enrolled :—Boys, 18; girls, 17; total, 35.

Numbers present :—Boys, 18; girls, 17; total, 35.

1. This school is held in a church, the furniture and services of which occasionally interfere with the routine. Supply of furniture and apparatus adequate; desks and seats clumsy, and maps carelessly kept. Material organization objectionable. Suitable school buildings needed. 2. Attendance increased, tolerably regular, but unpunctual. Moral tone of the school in most respects fair. 3. Prescribed subjects taught, except drawing. Instruction tolerably intelligent and well regulated, but the classification low. 4. Average proficiency tolerable and promising.

EAST MAITLAND (N.V.—Boys) :—Visited, 7th May.

Numbers enrolled :—Boys, 49.

Numbers present :—Boys, 41.

1. Material condition and organization very fair; supply of school requisites adequate, and interior aspect neat and clean. Lavatory and weather-shed unprovided. 2. Attendance punctual and tolerably regular; government intelligent and firm; most of the pupils orderly and well behaved, but wanting in spirited energy. Moral tone very fair in general. 3. Course of instruction appropriately regulated and complete, except in singing. Special religious instruction given twenty minutes daily. Classification rather low in point of age. Teaching earnest and painstaking, fairly intelligent, but wanting in liveliness and vigour. 4. Average proficiency tolerable.

EAST

EAST MAITLAND (N.V.—Girls):—Visited, 8th May.

Numbers enrolled:—Boys, 13; girls, 37; total, 50.

Numbers present:—Boys, 11; girls, 26; total, 37.

1. Material condition, aspect, and organization, very fair; supply of school requisites adequate
2. Attendance reasonably punctual and tolerably regular; government intelligent and firm; moral tone, fine. Supervision of playground neglected. 3. Prescribed subjects taught, except singing; classification and lesson documents fair; teaching feeble in the oral subjects, and the progress of the youngest pupils unsatisfactory. 4. Average proficiency, moderate.

WEST MAITLAND (N.V.—Boys):—Visited, 21st, 26th, 27th and 28th May.

Numbers enrolled:—148.

Numbers present:—102.

1. Schoolroom commodious, suitable, but in need of whitewash; supply of furniture adequate; desks old and clumsy, and hat-pegs very inconveniently placed. Condition of out-offices and playground fence bad. Premises not uniformly neat and clean. 2. Attendance tolerably regular, but unpunctual. School fees laxly exacted. Government mild and intelligent, but not uniformly strict and vigilant in details of management. Discipline of lowest class still too lax. Moral tone from fair to very fair. 3. Prescribed subjects taught, including geometry, algebra, and bookkeeping. Lesson documents appropriate, but classification low in point of age. Teaching earnest, diligent, and of fair average skill. 4. Average proficiency fair. Attainments of lowest class below the standards.

WEST MAITLAND (N.V.—Girls):—Visited, 14th, 15th, 16th, 17th July.

Numbers enrolled:—81.

Numbers present:—72.

1. Larger playground, lavatory, bell, and suitable hat-room needed; schoolroom commodious, and admirably neat and clean. Organization very fair. 2. Attendance fairly regular, but unpunctual and too low for the teaching staff. Government intelligent, but not uniformly strict and vigilant; supervision of playground feeble, and school operations not uniformly quiet and orderly. Copying and prompting still too prevalent. Appearance and demeanour of pupils pleasing. 3. Prescribed subjects taught; classification low in point of age, otherwise appropriate; lesson documents very fair, and teaching earnest and diligent, but not adequately spirited and impressive in the second and third classes. 4. Average proficiency tolerable.

WEST MAITLAND (N.V.—Infants):—Visited, 22nd, 23rd, and 24th July.

Numbers enrolled:—Boys, 50; girls, 72; total, 122.

Numbers present:—Boys, 45; girls, 69; total, 114.

1. Material condition good; schoolroom clean, airy, and commodious; appointments adequate; playground too small and unsuitable. 2. Attendance well maintained and fairly regular, but unpunctual. Government healthy, but not sufficiently firm and exacting. Whispering, restlessness, and copying, too prevalent in the lower divisions. Moral tone barely fair. 3. Instruction appropriate, and classification fairly intelligent. Character of the teaching tolerable. 4. Average proficiency tolerable.

MORPETH (N.V.):—Visited, 11th and 12th May.

Numbers enrolled:—Boys, 41; girls, 46; total, 87.

Numbers present:—Boys, 35; girls, 36; total, 71.

1. Lavatory and additional hat-pegs needed; material organization otherwise satisfactory. 2. Attendance punctual, but irregular; government healthy and intelligent; order very fair, and appearances clean and comfortable. Moral tone very fair. 3. Instruction complete, of third class range, and judiciously regulated. Teaching zealous and animated, but not adequately impressive and profitable throughout. 4. Average proficiency tolerable.

MCSWELL BROOK (N.V.):—Visited, 28th October.

Numbers enrolled:—Boys, 35; girls, 21; total, 56.

Numbers present:—Boys, 33; girls, 16; total, 49.

1. Weather-shed and lavatory needed; material condition, aspect, and organization, satisfactory
2. Attendance punctual, but not satisfactorily regular; appearances neat and clean; government mild and intelligent; moral tone healthy and very fair. 3. Prescribed subjects taught, except singing; lesson documents appropriate, but classification rather low in point of age. Teaching zealous, painstaking, and very fairly intelligent. 4. Average proficiency fair.

PHOENIX PARK (N.V.):—Visited, 4th August.

Numbers enrolled:—Boys, 24; girls, 17; total, 41.

Numbers present:—Boys, 19; girls, 11; total, 30.

1. Site low, and affected by floods. Schoolroom too small and ill ventilated. Supply of school requisites tolerably sufficient. Organization moderate. 2. Attendance tolerably regular, but unpunctual, and school fees low and poorly paid. Discipline feeble and moderately effective. 3. Prescribed subjects taught, except singing; occupation of the pupils moderately well regulated; teaching moderately skilful. 4. Average proficiency moderate; condition of school languishing.

SINGLETON (N.V.):—Visited, 13th, 14th, and 17th August.

Numbers enrolled:—Boys, 62; girls, 80; total, 142.

Numbers present:—Boys, 42; girls, 57; total, 99.

1. Material condition, aspect, and organization, good. 2. Attendance well maintained; three-fourths thereof regular and very fairly punctual. Government mild and intelligent; appearances clean, and comfortable, and pupils docile and well-behaved, but not sufficiently animated and industrious. Disciplinary aspect, improved and very fair. 3. Prescribed subjects taught, except singing; lesson documents appropriate, but classification too minute, and also low in point of age. Teaching tolerably intelligent, but feeble in the lower classes. 4. Average proficiency from moderate to tolerable. Grammar, geography, and arithmetic, weak subjects.

III.—PRESBYTERIAN SCHOOLS.

WEST MAITLAND (N.V.):—Visited, 12th November.

Numbers enrolled:—Boys, 28; girls, 14; total, 42.

Numbers present:—Boys, 20; girls, 4; total, 24.

1. Material condition, aspect, and organization very fair and improved. 2. Attendance reasonably punctual, below the minimum, and 75 per cent less than last year's. Discipline healthy and fair. 3. Prescribed subjects taught, except singing and sewing. Teaching zealous, animated, and painstaking. 4. Average proficiency moderate.

IV.—WESLEYAN SCHOOLS.

WEST MAITLAND (N.V.) :—Visited, ——

No inspection. School closed, 31st March.

MUDGEE DISTRICT.

DETAILED Statement of the condition of Denominational Schools in the Mudgee District, examined during the year 1874.

I.—CHURCH OF ENGLAND SCHOOLS.

CASSILIS :—Regular inspection, 28th August.

Numbers enrolled :—Boys, 22; girls, 16; total, 38.

Numbers present :—Boys, 9; girls, 6; total, 15.

Materially considered, this school is in very fair condition. It is well furnished and supplied with school requisites. The attendance has gradually fallen off, and has been below the required minimum for a considerable time. The pupils are reasonably clean, orderly, and attentive. The methods are of average merit, but, owing to the irregular attendance, the attainments do not come up to the standard. The proficiency is a little above moderate.

MUDGEE (Primary) :—Regular inspection, 17th, 18th, and 19th August.

Numbers enrolled :—Boys, 56; girls, 53; total, 109.

Numbers present :—Boys, 49; girls, 39; total, 88.

The material condition and organization are good. The attendance is regular and punctual. Cleanliness is very satisfactory. The government is firm, judicious, and effective. The rudiments of Latin, geometry, and algebra are taught, in addition to the usual subjects. The classification is good, and the instruction well-regulated. Marked improvement has been made in singing and sewing. The methods are good, and applied with zeal and energy. Notwithstanding this, the attainments are not quite equal to what they were last year. The average proficiency approaches very fair.

MUDGEE (Infants) :—Regular inspection, 30th July.

Numbers enrolled :—Boys, 68; girls, 47; total, 115.

Numbers present :—Boys, 57; girls, 39; total, 96.

The school has been enlarged, and in other respects the material condition has been improved. Charts and illustrations, usually found in infant schools, are wholly wanting. The supply of books is adequate to present requirements. The usual subjects are taught, and the instruction is tolerably well-regulated. Nine-thirteenths of the pupils are regular; punctuality is pretty good. The general discipline is fair. In the lowest class it is difficult to secure attention. The methods are only tolerable, but seem to be industriously applied. The average proficiency exceeds moderate.

II.—ROMAN CATHOLIC SCHOOLS.

GULGONG :—General inspection, 8th and 9th October.

Numbers enrolled :—Boys, 70; girls, 90; total, 160.

Numbers present :—Boys, 49; girls, 63; total, 117.

The school is a large bark building, formerly used as a church. It is rendered somewhat substantial by being lined with pine boards. Additional furniture is required. The supply of books is also limited. Lesson registers are not kept. About four-sevenths of the pupils attend regularly; the punctuality is by no means good. The discipline has improved very much of late; good order is now maintained in all the classes, excepting the first. The methods are tolerable, and earnestly applied. The proficiency is tolerable.

HILL END :—Regular inspection, 5th and 6th May.

Numbers enrolled :—Boys, 51; girls, 61; total, 112.

Numbers present :—Boys, 37; girls, 40; total, 77.

Weather-sheds and a lavatory are wanted; in other respects the material condition is good. The furniture is badly arranged, and the supply of working materials is not sufficient; many of the pupils are without copybooks. About seven-twelfths of the pupils attend regularly, but punctuality is decidedly bad. Cleanliness should receive more attention. The government should be more active and vigorous. The prescribed subjects are taught, and the instruction is properly arranged. The methods are tolerably suitable, and appear to be industriously applied. The proficiency is nearly tolerable.

MUDGEE :—Regular inspection, 16th and 21st April.

Numbers enrolled :—Boys, 70; girls, 67; total, 137.

Numbers present :—Boys, 57; girls, 53; total, 110.

The schoolroom is far too small for the attendance, and a dilapidated hut, very badly furnished, has to be used by the junior pupils. This part of the school is in charge of the pupil teacher, and it is badly supplied with books. The main schoolroom is in good condition and well furnished. The playground and out-offices are not in a satisfactory state. The pupils are regular and punctual; good order is maintained, and the discipline is thoroughly effective. The rudiments of Latin, algebra and geometry, are taught, as well as the usual subjects. The methods are good, and the work is carried on with well-sustained zeal. The average proficiency exceeds fair.

WELLINGTON :—General inspection, 13th March and 16th October.

Numbers enrolled :—Boys, 30; girls, 32; total, 62.

Numbers present :—Boys, 24; girls, 27; total, 51.

The school is conducted in an old store; it affords fair accommodation for the attendance, and is moderately furnished. The supply of working material is not sufficient. The pupils are tolerably regular and punctual. The discipline is tolerably good, and the tone of the school has improved. The teaching is industrious, but it wants method and thoroughness. The average proficiency is between moderate and tolerable.

Inspector's Office, 18th January, 1875.

G. O'BYRNE, Inspector,
Mudgee District.

NEWCASTLE DISTRICT.

DETAILED STATEMENT showing the condition of the Certified Denominational Schools inspected in 1874, as regards,—

1. Their material condition.
2. Their moral character.
3. The subjects and methods of instruction.
4. The proficiency of the pupils.

DUNGOE (C.E.) :—Visited, 3rd August.

Present at examination :—Boys, 22 ; girls, 16 ; total, 38.

1. The premises are in fair condition, reasonably suitable, and provided with a passable stock of furniture and other appliances. 2. The moral aspect of the school is fair. 3. The occupation is appropriate, and arranged with passable care and neatness, but the instruction wants vigour and judgment. 4. The average proficiency is below moderate.

GOSFORD (C.E.) :—Visited, 11th December.

Present at examination :—Boys, 8 ; girls, 11 ; total, 19.

1. The building is old and a good deal out of repair, but cleanly kept and reasonably suitable. The furniture is of a tolerable description, and answers reasonably well for present wants. The stock of apparatus and books is fair. 2. The moral tone of the school is very fair. 3. The occupation is suitable and properly arranged ; the instruction, judged by results, is fairly judicious and effective. 4. The average proficiency varies from tolerable to fair.

HENHAM (C.E.) :—Visited, 27th November.

Present at examination :—Boys, 12 ; girls, 12 ; total, 24.

1. The building is in tolerable condition ; but the ground, fences, and out-buildings are unsatisfactory. The organisation has been slightly improved, but, as a whole, it is still ineffective. 2. The moral tone of the school is about fair. 3. Except singing and drawing, the prescribed subjects are taught, and arranged with passable care and skill. The instruction is mechanical as a whole, but earnest, painstaking, and passably effective. 4. The average proficiency is nearly tolerable. Several children absent on account of rain in the early part of the week.

KINCUMBER (R.C.) :—Visited, 16th December.

Present at examination :—Boys, 3 ; girls, 12 ; total, 15.

1. The site is convenient and pleasant ; but the building is small, uncomfortable, awkward and poorly organised. 2. The discipline is very weak, and the moral tone of the school only moderate. 3. Most of the prescribed subjects are professedly taught, but subject to no arrangement ; the methods are of small value. 4. The proficiency is very moderate.

MILLER'S FOREST (C.E.) :—Visited, 2nd December.

Present at examination :—Boys, 20 ; girls, 24 ; total, 53.

1. The premises are reasonably suitable, sufficient, and in good condition ; the general organisation is tolerable. 2. The moral tone is tolerable. 3. The subjects, for the most part, accord with the standard, and are tolerably well arranged. The teaching was feeble and mechanical ; but the teacher (since dead) was in bad health. 4. The average proficiency exceeds moderate.

NEWCASTLE (C.E.—Christ Church) :—Visited, 6th to 9th July.

Present at examination :—Boys, 86 ; girls, 71 ; total, 157.

1. The premises are in good condition, and, in all particulars except the playground, which is wholly inadequate, equal to present requirements. The organization of the school is good. 2. The moral tone of the school is very good. 3. The prescribed subjects are taught, and the requisite instructional documents prepared with care and judgment. The methods are skilful and effective. 4. The actual proficiency is fair, and the general character of the school very fair.

NEWCASTLE (C.E.—St. John's) :—Visited, 15th May.

Present at examination :—Boys, 26 ; girls, 21 ; total, 47.

1. The premises are in fair condition, and the school-room is suitable and reasonably well organized. 2. The discipline is feeble, and the moral tone of the school very moderate. 3. The subjects are appropriate, and regulated with passable care ; but the methods want animation, energy, and skill. 4. The average proficiency slightly exceeds moderate.

NEWCASTLE (R.C.—Boys) :—Visited, 18th and 19th June.

Present at examination :—Boys, 88.

1. The room is fairly suitable, amply sufficient, in good condition, and well provided with furniture and apparatus. 2. The moral tone of the school is very fair. 3. The subjects are suitable, and fairly arranged ; the methods are intelligent and judiciously applied. 4. The average proficiency approaches very fair.

NEWCASTLE (R.C.—Girls) :—Visited, 15th to 17th June.

Present at examination :—Boys, 44 ; girls, 164 ; total, 208.

1. The premises are advantageously and pleasantly situated, in very good condition, suitable, sufficient, and well appointed. The school is very effectively organized. 2. The moral tone of the school is very good. 3. The subjects are suitable, and properly arranged ; the methods judicious and effective. 4. The average proficiency exceeds fair, and the general efficiency of the school varies from very fair to good.

RAYMOND TERRACE (C.E.) :—Visited, 22nd July.

Present at examination :—Boys, 26 ; girls, 24 ; total, 50.

1. The premises are in good condition, well situated, and adequately supplied with furniture and apparatus. The general organization is effective. 2. The moral tone of the school is very fair. 3. The subjects are suitable, and carefully arranged ; but the methods evince a want of skill and vigour. 4. The average proficiency approaches tolerable.

RAYMOND TERRACE (R.C.) :—Visited, 17 July.

Present at examination :—Boys, 22 ; girls, 20 ; total, 42.

1. The building is old, and in bad repair, but kept with commendable cleanliness and care ; the organization is tolerable. 2. The moral tone is tolerable. 3. The subjects are suitable and reasonably well arranged, but the methods want skill and vigour, and fail to produce satisfactory results. 4. The average proficiency is moderate.

STROUD (C.E.) :—Visited, 28th October.

Present at examination :—Boys, 20 ; girls, 17 ; total, 37.

1. The fences are insecure, and the schoolroom walls need colouring ; but otherwise the premises are suitable and substantial. Better furniture has been provided, and the organization is now fairly effective. 2. The discipline is feeble and unsystematic, and the moral tone only tolerable. 3. The prescribed subjects are taught, and arranged in the requisite guides, but these are not constructed with satisfactory care and neatness. The instruction is deficient in vigour and skill. 4. The average proficiency is nearly tolerable.

UPPER BENDOLBA (C.E.) :—Visited, 13th August.

Present at examination :—Boys, 21 ; girls, 22 ; total, 43.

1. The building is very dilapidated, indifferently suitable, and poorly provided with furniture, but the stock of apparatus and books is reasonably sufficient. Repairs have since been effected. 2. The discipline is injudicious, unsystematic, and of small effect, and the moral tone is only moderate. 3. The subjects are suitable, and arranged in the requisite guides ; the methods are of superficial cast, wanting in interest and well directed skill, and failing to produce satisfactory results. 4. The average proficiency slightly exceeds tolerable.

WALSSEND (C.E.) :—Visited, 21st August.

Present at examination :—Boys, 30 ; girls, 34 ; total, 64.

1. The interior appearance of the room is dingy, and the playground needs a shed and lavatory ; the furniture and apparatus are fairly suitable and sufficient ; and the general organization of the school is reasonably effective. 2. The moral tone is very fair. 3. The prescribed subjects are taught, and fairly arranged ; the methods are intelligent, and reasonably judicious. 4. The average proficiency is nearly fair.

SYDNEY DISTRICT.

DETAILED Statement of the condition of Certified Denominational Schools in the Sydney District inspected during the year 1874.

THE remarks under head 1 relate to the material condition of schools ; under 2, to their moral character ; 3, to the subjects and methods of instruction ; 4, to the proficiency of the pupils.

BALMAIN (C.E.) :—Visited, 16th February.

Numbers present :—Boys, 68 ; girls, 65 ; total, 133.

1. A weather-shed has yet to be provided, and the windows are still in a state of disrepair. The schoolroom affords fair accommodation, is fairly furnished, and fully found in working materials. 2. A tolerably numerous attendance is secured. The pupils are regular, punctual, clean, and in very fair order. The government is mild but firm, and effects a healthy moral tone. 3. The classification is too much in detail : there are too many divisions. All the prescribed subjects are taught. 4. Up to the requirements of a third class, the proficiency is fair.

BALMAIN (R.C.) :—Visited, 7th October.

Number present :—Boys, 34.

1. The material condition as regards the schoolroom is satisfactory, and the furniture is serviceable, but of a clumsy description. There is no proper playground, and the out-offices are of indifferent character. 2. The pupils are fairly orderly and attentive, but they do not answer with sufficient promptness, and their power of mental effort and sustained application to work is weak. The discipline needs greater energy to render it effective. 3. The subjects taught do not include object lessons or singing. The instruction is tolerably regular and the methods are suitable, but the teaching wants vigour and point. 4. The results are not satisfactory, the average proficiency being only from moderate to tolerable. The attendance is low for so populous a locality. The average attendance for 1874 was only slightly above the required minimum of thirty.

BOTANY (Wesleyan) :—Visited, 12th February.

Numbers present :—Boys, 21 ; girls, 12 ; total, 33.

1. A supply of water, a lavatory, and a weathershed have yet to be provided. The schoolroom, which is used as a chapel, is in fair repair, and passably found in furniture ; its internal appearance is far from neat or orderly. Some of the records are in arrears. 2. The pupils are unpunctual in attendance, but fairly regular. Several are untidily dressed. In behaviour, they are talkative, noisy and ill-mannered. Drill is not taught ; the government is feeble and ineffective ; the moral tone is low. 3. The classification is bad. The instruction is of full range, but poorly arranged. The methods are mechanical and ineffective. 4. The school is taught in three classes, of which the highest is the third. The proficiency ranges from small to indifferent.

CAMPERDOWN (R.C.) :—Visited, 10th February.

Numbers present :—Boys, 17 ; girls, 18 ; total, 35.

1. The schoolhouse is in fair repair, but the interior is dingy and uninviting. The furniture is clumsy but sufficient. On the whole, the school is properly organized. 2. With the exception that the punctuality of the pupils is very unsatisfactory, the discipline is effective. The children are clean, orderly, and well-behaved. 3. The instruction is judiciously regulated, and deals with the subjects prescribed for a school of three classes. 4. The proficiency ranges between tolerable and fair.

CHIPPENDALE (Wesleyan) :—Visited, 19th and 20th May.

Numbers present :—Boys, 86 ; girls, 76 ; total, 162.

1. A weather-shed is urgently needed ; hat-pegs too are required for the use of the younger children. With these exceptions, the material state of the school is very fair. 2. The attendance is tolerably numerous, and marked by fair regularity. The pupils are also punctual and clean. While their behaviour is fairly quiet in the classes, it is marked at times by much unsteadiness. The government needs to be more firm and strict. 3. Fair judgment is shown in the classification ; the lesson documents are fairly compiled ; the methods are of modern cast, and are applied with diligence and a tolerable degree of skill. 4. The proficiency of the several classes is : First, tolerable ; second, fair ; upper second, tolerable ; third, tolerable.

CHRIST CHURCH (C.E.) :—Visited, 4th and 5th August.

Numbers present :—Boys, 130 ; girls, 64 ; total, 194.

1. The schoolroom is commodious and pleasant. It is in very good repair, and well found in furniture and the other usual educational appliances. Suitable out-buildings are provided. 2. The attendance is marked by fair regularity. The pupils are also punctual and clean. Their behaviour is marked

marked by much boisterousness; noise and disorder is very prevalent, and the school movements are loosely and noisily performed. 3. The instruction includes all the prescribed subjects, geometry excepted. It is regulated with tolerable judgment. The methods are of mixed character, but only moderately suitable. They are applied with fair zeal and industry. 4. The following is the proficiency of the several classes:—First, indifferent; second, fair; third, barely moderate; fourth, tolerable.

CHRIST CHURCH (C.E.—Infants) —Visited, 4th August.

Numbers present.—Boys, 77; girls, 40; total, 117.

1. The interior of the schoolroom is dingy and uninviting, otherwise the material condition of the school is good. The organization is of the kind used in infants' schools. 2. There is room for improvement in the punctuality of the children. Fair order is obtained, and, as a whole, the tone of the school is healthy. 3. The instruction is carefully prosecuted. 4. The proficiency of the pupils reaches fair.

COOK'S RIVER (C.E.) :—Visited, 21st July.

Numbers present :—Boys, 53; girls, 30; total, 83.

1. The schoolhouse is commodious, and in fair repair; it is sufficiently found in working material. The desks are old, much worn, and ink-stained. All necessary out-buildings are provided. 2. Seven-tenths of the pupils attend regularly; this is not satisfactory. The government is mild; corporal punishment is seldom inflicted, perhaps less so than the general character of the discipline would seem to warrant. Fair order, however, is maintained, and the moral tone of the school is healthy and pleasing to a fair extent. 3. The classification is correct in the circumstances. Very fair ability is displayed in the compilation of the lesson documents. The methods are modern, and are applied with earnestness, very fair energy, and considerable painstaking. 4. The following is the proficiency of the several classes.—First, fair; second, fair; third, very fair (nearly).

COOK'S RIVER (C.E.—Infants) :—Visited, 21st July.

Numbers present :—Boys, 36; girls, 30; total, 66.

1. Excepting the want of desks, the material condition of this school is satisfactory. 2. The organization is correct, and the discipline is very fairly effective. 3. The pupils are classified with judgment, and their instruction in the prescribed subjects is effectively regulated. 4. The proficiency in the several classes averages tolerable.

COOK'S RIVER (R.C.) :—Visited, 10th February.

Numbers present.—Boys, 26; girls, 19; total, 45.

1. The school is held in a portion of the church. A fair supply of inferior furniture is provided. In other respects the material condition of the school is indifferent. 2. The attendance may be regarded as fair for the neighbourhood. The pupils are fairly regular and tolerably punctual. With few exceptions, they are clean and becomingly attired. The government is mild, and effects fair order. Drill is not taught, the result is, the movements of the pupils are loosely performed. 3. The time-table provides for the teaching of all the prescribed subjects, but there is reason to believe that object lessons, singing, and drawing, are taught in a desultory manner. The methods are moderately suitable, but need to be applied with greater vigour, earnestness, and skill. 4. The proficiency of the first-class is moderate; of the second, moderate to tolerable; and of the third, moderate to tolerable.

DARLINGHURST (C.E.) :—Visited, 22nd and 23rd April.

Numbers of pupils present :—Boys, 64; girls, 31; total, 103.

1. A large and superior class-room has been erected since last inspection. Excellent accommodation is now provided, and full facilities are afforded for the efficient carrying on of the work of instruction. The school buildings are in good repair and well kept. 2. A good attendance is maintained. The pupils are regular, punctual, and in very fair order. The government is mild and effective and the moral tone healthy. 3. The classification is judicious; the instruction is well regulated; the methods are appropriate, and are applied with earnestness, diligence, and skill. 4. The following is the proficiency of the several classes :—First, fair; second, very fair +; third, good to very good.

DARLINGHURST (C.E.—Infants) :—Visited, 22nd April.

Numbers present :—Boys, 51; girls, 40; total, 91.

1. Viewed materially, this school is in good condition. The schoolroom is sufficiently spacious, well-lighted, well-ventilated, and is liberally supplied with appliances for carrying on the work of instruction. It is clean and cheerful-looking. 2. The attendance continues to increase. It is marked by more than ordinary regularity. The pupils are punctual, neat-looking, and well-conducted. 3. Fair judgment is shown in the classification. The instruction is passably arranged, and imparted with earnestness and diligence. 4. The proficiency is fair.

DOUBLE BAY (C.E.) :—Visited, 30th July.

Numbers present :—Boys, 48; girls, 42; total, 90.

1. An important addition has been made to the schoolroom by including a portion of what was formerly the teacher's residence. The accommodation now afforded is sufficient to meet the requirements of the denomination for some time to come. The school is well found in working materials, and its internal appearance is clean, neat, and inviting. The closets are in unpleasant proximity to the schoolhouse, and their condition in point of cleanliness is unsatisfactory. A urinal has yet to be provided. 2. A little more than two-thirds of the pupils attend regularly. They are very fairly punctual, present a neat, cheerful appearance, are subdued in demeanour and well behaved. 3. Fair judgment is shown in the classification; the instruction includes all essential branches, is intelligently arranged, and imparted by suitable methods. 4. The following is the proficiency of the several classes.—First, nearly tolerable; second, fair to very fair; third, fair to very fair.

DOUBLE BAY (C.E.—Infants) .—Visited, 30th July.

Numbers present :—Boys, 49; girls, 25; total, 74.

1. The schoolroom is a good one, and it is properly furnished and supplied with *matériel*. 2. The government is healthy, and the moral tone of the school sound. 3. The usual infants' school course is observed. 4. The average proficiency is very fair.

DOUBLE BAY (R.C.) :—Visited, 12th February.

Numbers present.—Boys, 24; girls, 15; total, 39.

1. The school is held in a temporary church. The building is very fairly suitable, and its furniture and appliances meet requirements. The school is properly organized. 2. By dint of signalling and threatening the teacher managed to obtain fair order, the normal character of the government is, however, problematical. 3. The instructional arrangements are somewhat injudicious. The subjects prescribed for a school of three classes are included in the course. 4. The proficiency ranges between moderate and tolerable.

ENSKINE-STREET (Presbyterian) :—Visited, 24th July.

Numbers present :—Boys, 28; girls, 33; total, 61.

1. The premises are in excellent condition. The schoolroom is well-appointed, and the supply of material is ample. 2. The pupils are under fair control. 3. Their classification is injudicious, and the educational range, low. 4. The highest class is a second; the proficiency does not exceed tolerable.

GLEBE (C.E.) :—Visited, 7th August.

Numbers present :—Boys, 55; girls, 35; total, 90.

1. This school is taught in suitable and well-conditioned premises, the furniture is however of very inferior kind. 2. The organization is of passable worth, and the pupils attend with fair punctuality. Judged by the demeanour of some of the pupils, the discipline must be regarded as lax. The moral tone of the school is tolerably satisfactory. 3. The subjects prescribed for a school of three classes are taught, so far as plan goes, systematically, but certainly not effectively. 4. The average proficiency of the pupils is slightly in excess of moderate.

HAYMARKET (R.C.—Boys) :—Visited, 6th August.

Number present :—143.

1. Lavatories, a urinal, and a book-press have been provided since last inspection. The furniture is sufficient in quantity, but of inferior quality. Of other working materials there is a reasonable supply. The organization has improved, and may now be pronounced fairly satisfactory. 2. Three-fourths of the pupils attend regularly, and with fair punctuality. They are clean in person, tidily dressed, and tolerably well-behaved. Fair order is maintained. 3. The classification is tolerably judicious. The instruction, which is of full range up to the requirements of a third class, is regulated with fair ability, and based on modern methods. 4. The proficiency of the several classes may be thus summarised :—First, tolerable to fair; lower second, moderate; second, fair; third, fair to very fair.

ELIZABETH-STREET (Hebrew) :—Visited, 26th ———.

Numbers present :—Boys, 49; girls, 27; total, 76.

1. The school is conducted in the Odd Fellows' Hall. The schoolroom is commodious, well-lighted, and well ventilated. It is sufficiently provided with furniture and apparatus of a suitable kind. Some of the books are in bad condition. All necessary out-buildings are provided. 2. Three-fourths of the pupils attend regularly. Less than the usual number were present on the day of examination, owing to rainy weather. The pupils are fairly punctual and clean; in all other respects the discipline is very unsatisfactory. 3. Moderate judgment is shown in the classification. The instruction is tolerably well regulated. The methods are suitable in the abstract, but owing to defective discipline, fail to realize adequate results. 4. The attainments of the several classes may be described thus :—First, very fair; upper first, fair; second, tolerable to fair; upper second, fair+; third, fair+.

KENT-STREET NORTH (R.C.—Boys) :—Visited, 28th July.

Number present, 114.

1. The schoolhouse is a substantial stone building; its interior walls, however, much require pointing and colouring, and the floor is in need of repair. 2. The organization is correct, and the pupils are fairly orderly and well-behaved. 3. The teaching is appropriately regulated, and intelligently prosecuted. 4. The results are :—First class, fair+; Second, tolerable to fair; third class, fair.

KENT-STREET NORTH (R.C.—Girls) :—Visited, 28th July.

Number present :—117.

1. The schoolroom is a new brick building, spacious, fairly lighted, and well ventilated. Its immediate proximity to the street is a disadvantage. The desks are old and cumbersome; those used by the younger children are altogether unsuitable. The remaining furniture is of a passable character. There is a sufficiency of apparatus and books. 2. About eleven fourteenths of the pupils attend regularly; the punctuality is indifferent. With few exceptions the pupils are clean. Fair order is maintained. The government is mild, and tolerably effective. 3. The instruction embraces all the subjects prescribed for a school of three classes. It is fairly arranged, and imparted by suitable methods. 4. The proficiency of the pupils may be thus summarised :—First class, tolerable to fair; second, tolerable to fair; third, fair.

KENT-STREET SOUTH (R.C.—Boys) :—Visited, 19th and 20th March.

Number present, 106.

1. The schoolroom is a good one, and is suitably furnished with furniture and working appliances. This school is under the disadvantage of having no playground. 2. The children are under good discipline. 3. The subjects prescribed for a school of four classes have been intelligently treated. 4. The average proficiency slightly exceeds fair.

KENT-STREET SOUTH (R.C.—Girls and Infants) :—Visited, 19th March.

Numbers present :—Boys, 26; girls, 79; total, 105.

1. The school is held in a church. The furniture is unsuitable; other features of the organization are necessarily unsatisfactory. There is no playground. 2. The attendance has declined, and is marked by much irregularity. The pupils are tolerably punctual, fairly clean, and in very fair order. The government has improved in firmness, and is now reasonably effective. 3. Fair judgment is shown in the classification. The instruction is based on tolerably intelligent guides, and is imparted with industry and a fair degree of skill. 4. The proficiency of the several classes is :—First, very fair; upper first, fair; second, very fair; third, tolerable to fair.

NEWTOWN (C.E.) :—Visited, 17th July.

Numbers present :—Boys, 47; girls, 32; total, 79.

1. A lavatory and a playshed have not yet been provided. There is a sufficiency of furniture, apparatus, and other school requisites. The schoolroom is clean, and its appointments are orderly arranged. Proper attention is devoted to the keeping of the records. 2. A fair attendance is secured, but it is characterised by much irregularity. The pupils are tolerably punctual, clean, and, with few exceptions, well behaved. The government is mild, moderately firm, and effects fair order. 3. The pupils are classified with tolerable judgment. Fair ability is displayed in the lesson documents. The methods are in the main modern, but need to be applied with greater vigour, intelligence and skill. 4. The attainments of the several classes may be described thus :—First, tolerable; second, tolerable to fair; third, tolerable.

NEWTOWN (C.E.—Infants) :—Visited, 17th July.

Numbers present :—Boys, 28; girls, 32; total, 60.

1. Owing principally to the deep verandahs round the building, the schoolroom is not well lighted, and this, together with the dingy cast of the interior, gives the room an uninviting appearance. 2. The routine usual in infant schools is observed. The attendance is of fitful character; those children who are reasonably regular in attendance are fairly punctual. The discipline is quiet and effective. 3. The instruction is judiciously regulated. 4. The proficiency of the pupils averages fair.

NEWTOWN

NEWTOWN (R.C.) :—Visited, 23rd September.

Numbers present :—Boys, 47; girls, 49; total, 96.

1. The material condition of the school is satisfactory. The organization is correct. 2. The attendance, which has improved, is marked by reasonably good punctuality. The pupils are tidy in person, orderly, and well behaved. The moral tone of the school is healthy. 3. The teaching evidences a careful intelligence in the treatment of the several branches of instruction. 4. The results of the examination in the first and second classes average between very fair and good; in the third class the proficiency reaches good nearly.

NEWTOWN (Wesleyan).—Visited, 29th July.

Numbers present :—Boys, 53; girls, 17; total, 100

1. There is no weathershed, and the closets are badly situated. In other respects the school premises are of satisfactory character. There is a sufficient supply of fairly suitable furniture, and the working appliances meet the requirements of the school. The general organization is of passable worth. 2. The government is weak. The punctuality of the children is unsatisfactory, and the same may be said of the behaviour of the elder boys. 3. The course of instruction for a school of three classes is observed. In the primary classes the teaching has been very ineffective. 4. The proficiency is as follows :—First class (infants) ranging between tolerable and fair; second class moderate+; third slightly in advance of indifferent.

PADDINGTON (C.E.) :—Visited, 23rd July.

Numbers present :—Boys, 34, girls, 24; total, 58.

1. Except that the windows are much broken, the schoolhouse is in a fair state of repair. It is fairly found in working appliances. 2. The attendance is about stationary. Eleven-sixteenths of the pupils attend regularly; the punctuality is satisfactory, and the other features of the discipline are fairly healthy. 3. The classification is fairly judicious; the instruction embraces all the subjects prescribed for a school of three classes; the methods are for the most part modern, and are applied with painstaking and a fair degree of skill. 4. The attainments of the several classes are :—First, very fair; second, fair to very fair; third, fair+.

PADDINGTON (R.C.) :—Visited, 12th May.

Numbers present :—Boys, 43; girls, 49; total, 92.

1. The school is held in a portion of the church. The accommodation is very inferior, and is much hampered by the presence of church furniture. The schoolroom is very dirty, and the internal arrangements are wanting in neatness and order. There is an insufficiency of desks; a lavatory and a supply of water are badly needed. 2. The attendance is about stationary. The pupils are tolerably regular and moderately punctual. Several are far from clean. The government is feeble and ineffective, and the order bad. 3. A passable classification obtains. All the required subjects are taught, but the range of instruction is low. The methods are mechanical and unskilful. 4. The following is the proficiency of the several classes :—First, indifferent; second, moderate; third, indifferent.

PARRAMATTA-STREET (C.E.) :—Visited, 11th and 13th August.

Numbers present :—Boys, 94; girls, 77; total, 171.

1. On the whole the school premises are in good condition. The schoolroom is well arranged and furnished. There is a good supply of material. The organization is correct. 2. The government is effective, and the order maintained throughout the school is very good. 3. The school is arranged in four classes. The prescribed subjects are treated in an earnest and intelligent manner. 4. The average proficiency is fair.

PARRAMATTA-STREET (C.E.—Infants.) :—Visited, 11th August.

Numbers present :—Boys, 72; girls, 56; total, 128.

1. The schoolroom is suitable, in good repair, and properly found in educational appliances. 2. A fair attendance is maintained. The pupils are tolerably regular, fairly punctual, clean, and well-behaved. The government is mild, and effects very fair order. The discipline and tone of the school have improved. 3. The usual infants' school routine is followed. The pupils are classified with tolerable judgment; the instruction is moderately well regulated; the methods are modern, and are applied with fair zeal and industry. 4. The average proficiency is barely tolerable.

PARRAMATTA-STREET (R.C.—Boys) :—Visited, 2nd and 3rd June.

Number present :—111.

1. The material condition of the premises is unsatisfactory, but new buildings are in course of erection. The furniture is of fair worth; there is a proper supply of working appliances. 2. On the whole the children are punctual, and about five-sevenths of them attend regularly. The order, general discipline, and moral tone are of fair worth. 3. The subjects prescribed for a school of four classes are taught. 4. The proficiency averages fair.

PARRAMATTA-STREET (R.C.—Girls) :—Visited, 3rd June.

Number present :—70.

1. The school building is old, in indifferent repair, and badly situated. The furniture is also old and unsuitable. There is a sufficiency of apparatus. The records are neatly kept. Measures are in progress for the erection of new buildings. 2. A tolerable attendance is secured, but it is marked by considerable irregularity; the pupils are also very unpunctual; they are reasonably clean in person; their behaviour, although somewhat unsteady at times, is passable on the whole. The order may be estimated as fair. The government needs to be more strict. 3. The classification is faulty. The instruction is regulated with fair judgment; the methods are modern, but require to be applied with greater earnestness and intelligence. 4. The proficiency of the several classes may be thus summarized :—First, fair; second, fair; third, moderate.

PARRAMATTA-STREET (R.C.—Infants) :—Visited, 2nd June.

Numbers present :—Boys, 75; girls, 50; total, 125.

1. The school is conducted in a portion of the girls' schoolroom. The accommodation is utterly insufficient. There is a tolerable supply of working appliances. The organization may be described as passable in the circumstances. 2. Five-eighths of the pupils attend regularly. So great an amount of irregularity constitutes a serious hindrance to effective teaching. The pupils are but moderately punctual, several of them are untidy in appearance. For this the teacher cannot justly be held responsible. Very fair order is maintained, and the government is mild, judicious, and effective. 3. As far as possible the ordinary infants' school course is observed. The instruction is well arranged, well prepared, and imparted with earnestness, energy, and intelligence. 4. The proficiency ranges between fair and very fair.

PLYMOUTH

PYRMONT (C.E.) :—Visited, 21st April.

Numbers present :—Boys, 70 ; girls, 47 ; total, 117.

1. A lavatory and a weather-shed have still to be provided ; in other respects the school is in good repair, fairly furnished, and orderly arranged. 2. The attendance has largely increased under the present teacher. The pupils are clean in person, neatly attired, punctual, and fairly regular in attendance. Other features of the discipline are less satisfactory. The government is deficient in vigour and firmness ; drill is imperfectly carried out ; the school movements are wanting in precision ; and generally it may be stated that the pupils have yet to acquire habits of attention and prompt obedience. 3. The classification is unnecessarily minute—there are too many classes. The instruction is in some respects badly arranged ; too much is attempted, and a closer adherence to the standards is desirable. 4. The proficiency of the several classes is :—First, tolerable to fair ; upper first, tolerable ; second, barely tolerable ; third, tolerable+.

PYRMONT (R.C.) :—Visited, 23rd January.

Numbers present :—Boys, 40 ; girls, 26 ; total, 66.

1. The schoolroom is commodious, well lighted, and in good repair, but the playground is by no means a suitable one. The school is well organized. 2. The children are clean, orderly, and attentive, evidencing to the healthy character of the government. 3. The course of instruction is judiciously regulated—it includes what is expected in a school of three classes. 4. The results are fair.

RANDWICK (C.E.) :—Visited, 23rd July.

Numbers present :—Boys, 31 ; girls, 18 ; total, 49.

1. The schoolhouse is substantial, and in good repair. It is suitably furnished, and its appliances are ample ; the organization is good. 2. The average attendance is reasonably satisfactory. The children are under very fair control, and the tone of the school is healthy. 3. The instruction is treated in a painstaking manner and with tolerable skill. 4. The highest class is a third. The average proficiency is fair.

REDFERN (C.E.) :—Visited, 1st April.

Numbers present :—Boys, 79 ; girls, 50 ; total, 129.

1. Materially the school is in good condition ; it is fairly organized : the records are correctly kept. 2. The attendance has declined. The pupils are fairly regular and punctual, reasonably clean, and in very fair order. The government appears to have improved in firmness, and is now productive of a tolerably sound moral tone. 3. The classification is low for the attendance. All the specified subjects are taught up to the requirements of a third class. The instruction is regulated with passable judgment, and imparted with diligence and a tolerable degree of skill. 4. The following is the proficiency of the several classes :—First, tolerable ; second, tolerable to fair ; upper second, tolerable ; third, fair to very fair.

REDFERN (Infants—C.E.) :—Visited, 1st April.

Numbers present :—Boys, 93 ; girls, 61 ; total, 154.

1. The schoolhouse is in good condition and satisfactorily appointed. The routine agrees with that usual in infants' schools, and in all respects the organization is correct. 2. The government is mild and fairly effective. 3. The instruction deals with the prescribed subjects ; these are treated with earnestness and fair method. 4. The average proficiency slightly exceeds fair.

ST. ANDREW'S (C.E.) :—Visited, 15th and 16th July.

Numbers present :—Boys, 55 ; girls, 35 ; total, 90.

1. The school premises are commodious, and properly supplied with apparatus and necessary appliances. Playsheds are much required, and the playground urgently needs draining. 2. The attendance is fitful, the ordinary average not exceeding five-eighths of the number of pupils enrolled. There is much disorder in the school, and many of the children exhibit an exceedingly rude demeanour. The government appears to be somewhat wanting in nerve and tact. The moral tone of the school is unsatisfactory. 3. The course of instruction provides for the treatment of the subjects prescribed for a school of four classes. 4. The average proficiency of the pupils does not exceed tolerable.

ST. ANDREW'S (Infants—C.E.) :—Visited, 15th and 16th July.

Numbers present :—Boys, 61 ; girls, 42 ; total, 103.

1. The schoolroom is sufficiently commodious, but is only partially divided from the primary department. It is reasonably well provided with suitable educational appliances. The playground is badly drained, and is unprovided with a weather-shed ; the closets, too, are in close proximity to the school buildings. 2. The attendance is comparatively small, and is marked by much irregularity. The pupils are otherwise punctual and clean. Very fair order is maintained, and the government is mild, judicious, and effective. 3. The usual infants' school course is followed. The teaching is intelligently arranged, and imparted by suitable methods. 4. The average proficiency approaches very fair.

ST. JAMES'S (Boys—C.E.) :—Visited, 22nd, 26th, and 27th October.

Number present :—106.

1. The premises are good and well appointed, and all the school arrangements agree with prescribed plans. 2. The pupils attend with satisfactory punctuality, and five-sixths of them with regularity. They are under excellent control, and exhibit orderly and industrious habits. The moral tone of the school is very pleasing. 3. The children are judiciously classified, and their instruction is effectively regulated. The teaching is of modern cast, and has been earnestly and intelligently prosecuted. 4. The highest class is a fourth. The average proficiency of the whole school exceeds very fair.

ST. JAMES'S (Girls—C.E.) :—Visited, 21st October.

Number present :—67.

1. The schoolroom is a good one, and is amply supplied with working appliances. A correct organization obtains. 2. The school is organized in three classes : the routine is of approved character. The pupils are under excellent control, and the moral aspect of the school is healthy. 3. The teaching is of full range up to the requirements of a third class. The methods employed evidence painstaking. 4. The average proficiency reaches very fair.

ST. JAMES'S (Infants—C.E.) :—Visited, 13th October.

Numbers present :—Boys, 111 ; girls, 78 ; total, 189.

1. This school is taught in a good and well appointed room, and the organization agrees with that usual in well regulated infants' schools. 2. The average attendance equals nearly three-fourths of the enrolment. Most of the pupils are punctual : they are tidy in appearance, and as a whole, orderly in conduct. 3. The lesson programmes provide for a proper treatment of the prescribed subjects, but the teaching power of the school staff has been injudiciously distributed, and far too much work has been thrown upon a young pupil teacher. 4. The proficiency of the children averages slightly above fair.

St.

ST. LEONARDS (Boys—C.E.) :—Visited, 24th September.

Number present :—75.

1. The condition of the premises and the appointments of the school are alike satisfactory. The organization is unexceptionable. 2. In most instances the pupils are punctual in attendance, and somewhat over three-fourths of them attend with regularity. Their behaviour and industry evidence that they are under good discipline. The moral tone of the school is very good. 3. The lesson guides ensure a correct treatment of the prescribed subjects of instruction, and with the exception of arithmetic in the second and third classes, the school exhibits satisfactory educational results. 4. The highest class is a third. The average proficiency reaches very fair, nearly.

ST. LEONARDS (Girls—C.E.) :—Visited, 29th September.

Number present :—18.

1. The schoolhouse is a good one, but the furniture is both unsuitable and insufficient. The organization is of inferior character, and but moderately approximates to what obtains in the Council's Schools. 2. The average attendance for the year has seldom exceeded eighteen. The children are clean, orderly, and well behaved. 3. They have been instructed in subjects prescribed for a first and a second class, but the lesson guides are of indifferent worth. The methods of teaching have but a moderate agreement with those exhibited in our ordinary schools, yet in the range of instruction taken satisfactory work has been done. 4. The average proficiency is fair. On account of the small attendance, this school has since been closed.

ST. LEONARDS (R.C.) :—Visited, 21st May.

Numbers present :—Boys, 60 ; girls, 41 ; total, 101.

1. Excepting that there are no weather-sheds, and that the girls' out-office is on the boys' playground, and is approached in full view of the boys, the material condition of the school premises is satisfactory. 2. The organization is of the usual kind ; satisfactory order is maintained, and the pupils are very fairly attentive and industrious when under instruction. 3. The highest class is a third. 4. The average proficiency reaches fair.

ST. MARY'S (Boys—R.C.) :—Visited, 25th and 26th March.

Number present :—91.

1. The schoolroom is commodious and in good repair : it is provided with furniture of an inferior kind. The desks are very old, cumbrous, much hacked, and almost useless. A lavatory and a weather-shed are standing wants. The records are correctly kept, and most of the other features of the organization are satisfactory. 2. A tolerable attendance is maintained, but it is marked by considerable irregularity. The pupils are fairly punctual, tolerably clean and well behaved. The government is strict, and effects very fair order. The moral tone of the school is healthy. 3. Very fair judgment is shown in the classification. The instruction embraces all necessary branches, is regulated by the usual documents, and imparted with fair earnestness, industry, and intelligence. 4. The proficiency of the several classes is :—First, fair ; second, fair to very fair ; third, nearly fair ; fourth, tolerable.

ST. MARY'S (Girls—R.C.) :—Visited, 25th, 26th, 27th March.

Number present :—113.

1. The material condition of the school premises is satisfactory. Excepting many instances of faulty classification in the head class, the organization is correct. 2. The pupils are but fairly punctual, and their attendance is very fluctuating. They are well behaved, and the order witnessed was satisfactory. 3. The highest class is termed a fourth ; its attainments contradict such a designation. As a whole, the range of instruction in the several classes falls below that in other metropolitan schools. 4. The average proficiency is about tolerable.

ST. MARY'S (Infants—R.C.) :—Visited, 30th March.

Numbers present :—Boys, 59 ; girls, 54 ; total, 113.

1. The schoolroom is much too narrow, and the gallery and furniture are very unsuitable. The organization is passable in the circumstances. 2. The children are very unpunctual and irregular in attendance ; they are exceedingly restless and noisy ; the discipline is very weak. 3. The range and quality of the instruction is inferior to the standard and kind aimed at in other metropolitan infants' schools. 4. The estimated proficiency of the children in the subjects treated is slightly in advance of tolerable.

ST. PHILLIP'S (C.E.—Boys) :—Visited, 16th June.

Number present, 88.

1. The schoolroom is a superior structure, of good design, commodious and airy ; it occupies, however, an objectionable site, being in the midst of noisy thoroughfares. There is an abundant supply of educational appliances, in a very fair state of preservation. As a whole, the organization is decidedly good. 2. Fully three-fourths of the pupils attend regularly ; the punctuality is also satisfactory ; the pupils are clean and becomingly attired ; they are subdued in demeanour and quietly behaved ; very fair order is secured ; the government is mild and effective, and the moral tone is healthy. 3. Very fair judgment is shown in the classification ; the instruction embraces all the subjects prescribed for a third class, is properly devised, and imparted by suitable methods. 4. The proficiency of the several classes is as follows :—First, fair ; second, very fair to good ; third, very fair.

ST. PHILLIP'S (C.E.—Girls) :—Visited, 17th June.

Number present, 89.

1. Additions are being made to the schoolroom, which is too small for the attendance. When the work is completed the girls will have premises in keeping with the other departments. 2. The pupils exhibit a pleasing appearance and demeanour ; they are orderly, and also fairly industrious. 3. The teaching is effectively regulated, and so far as the requirements of a third class are concerned all the prescribed subjects are taught. 4. The proficiency approaches very fair.

ST. PHILLIP'S (C.E.—Infants) :—Visited, 16th June.

Numbers present :—Boys, 121 ; girls, 111 ; total, 232.

1. The schoolroom is commodious, and well suited to its uses ; its appointments are good ; the organization presents the features required in an infants' school. 2. The pupils are clean and neat in appearance, and very fairly orderly in their behaviour. 3. The methods of instruction are suited to children of tender age, and the school course includes all the usual branches. The proficiency approaches very fair in the several classes.

SURREY HILLS (C.E.) :—Visited, 15th and 16th October.

Numbers present :—Boys, 61 ; girls, 36 ; total, 97.

1. The main building has been shingled and fitted with spouting since last inspection. The playground is small, but in most other respects the material condition of the school is fairly satisfactory. 2. The discipline is slack ; the government needs greater promptness and vigilance to render it effective
in

in forming and maintaining good orderly habits among the pupils. The want of thorough disciplinary power is chiefly the weak point in the school. 3. The instruction is regulated, and includes the subjects prescribed for a third class standard. The teaching seems industrious and earnest, but is not productive of satisfactory results on the whole. 4. The proficiency may be thus stated:—First class, nearly tolerable; second class, nearly fair; third class, tolerable. The average of the school is from tolerable to fair.

SURRY HILLS (C.E.—Infants):—Visited, 15th October.

Numbers present:—Boys, 42; girls, 45; total, 87.

1. The schoolroom is a suitable one: it is properly furnished, and the necessary out-buildings are provided. 2. The pupils are properly classified, they are under good control, and their demeanour is pleasing. 3. The usual infants' school course is observed. The teaching evidences methods of fair worth. 4. The average proficiency slightly exceeds tolerable.

SURRY HILLS (R.C.—Boys):—Visited, 22nd July.

Number present, 136.

1. The schoolroom is underneath the church, is damp, badly lighted, and badly ventilated. The desks are old, cumbersome, and unsuitable; there is a fair supply of apparatus and books; proper closet accommodation is urgently needed. 2. But two-thirds of the pupils attend regularly; they are tolerably punctual, and, with few exceptions, clean. Fair order is maintained, but not without much effort on the part of the teacher. 3. There are too many classes, otherwise the classification is fairly judicious. All the prescribed subjects are taught up to the requirements of a third class. The instruction is properly arranged, the methods are appropriate, and are applied with earnestness, painstaking, and a fair degree of skill. 4. The proficiency of the several classes is as follows:—First, fair; upper first, fair to very fair; second, fair to very fair; upper second, tolerable to fair; third, very fair.

SURRY HILLS (R.C.—Girls):—Visited, 22nd July.

Number present, 72.

1. The schoolroom is in the basement of a church; it is low-pitched, and being much below the level of the road is damp and badly lighted. The playground is unfit for use in even moderately wet weather; as a whole the material condition is very unsatisfactory. The schoolroom arrangements are passable in the circumstances, and the organisation is of fair worth. 2. The attendance is fluctuating, and does not exceed seven-twelfths of the enrolment; want of punctuality on the part of the children is a marked defect. The pupils are neat and clean in person, and their demeanour is pleasing. Fair order is maintained. 3. The course of instruction includes the subjects prescribed for a school of three classes. 4. The proficiency approaches fair.

SURRY HILLS (Wesleyan):—Visited, 17th March.

Numbers present:—Boys, 110; girls, 42; total, 152.

1. Except that a lavatory is urgently needed, the organisation of this school is good. 2. The attendance is numerous and is gradually improving. The pupils are regular, fairly punctual, and clean. Fair order is maintained, and the moral tone of the school is decidedly healthy. 3. The instruction is of full range up to the requirements of a third class, is regulated by the usual guides, and based on intelligent and effective methods. 4. The proficiency is as follows:—First class, tolerable to fair; second, fair to very fair; third, very fair+. The teaching is educative in its character.

SURRY HILLS (Wesleyan—Infants):—Visited, 17th March.

Numbers present:—Boys, 47; girls, 43; total, 90.

1. The material condition of the school premises is good. 2. The children are very fairly punctual in attendance, and with a few exceptions they are neat in appearance. They are excessively restless, and by no means orderly. 3. The instruction includes all the prescribed infants' school subjects. Undoubtedly it is methodically imparted, but the work done is not abiding. 4. The results are but tolerable.

TRINITY (C.E.):—Visited, 27th May.

Numbers present:—Boys, 52; girls, 36; total, 88.

1. The material condition of the school is very fair, and is perhaps as good as can be expected in the circumstances. The schoolroom is reasonably commodious, and very fairly appointed. 2. Ordinarily the attendance is rather irregular; on the day of examination it was unfavourably affected by rain. The pupils are fairly punctual and clean. Tolerable order is maintained. 3. A judicious classification obtains, the instruction is of full range up to the requirements of a third class, and is fairly regulated; the methods are modern, and diligently applied. 4. The proficiency of the several classes is:—First, nearly fair; second, fair; third, very fair.

TRINITY (C.E.—Infants):—Visited, 27th May.

Numbers present:—Boys, 53; girls, 45; total, 98.

1. The educational appliances of this school are ample, and little exception can be taken to its material condition. 2. The attendance on the day of inspection was influenced by continuous rain. The children are very fairly punctual; their appearance is satisfactory, and they are fairly orderly. 3. The ordinary subjects are taught. 4. The proficiency reaches tolerable.

VICTORIA-STREET (R.C.—Girls):—Visited, 24th March.

Number present, 59.

1. The schoolroom is commodious, cheerful, and liberally provided with working appliances. Care and neatness characterize the keeping of the school records. Viewed as a whole, the organization may be regarded as very fair. 2. About five-sixths of the pupils attend regularly. Fair punctuality is observed; very good order is maintained; and the moral tone of the school is excellent. 3. All the prescribed subjects are taught; the instruction is judiciously regulated; the methods are appropriate, and are applied with earnestness, industry, and very fair skill. 4. The attainments of the several classes are:—Second, fair; lower third, nearly fair; upper third, very fair.

VICTORIA-STREET (R.C.—Infants):—Visited, 24th March.

Numbers present:—Boys, 39; girls, 44; total, 83.

1. The schoolroom is suitable, and sufficiently found in teaching appliances. 2. Prevalent sickness among the children reduced the attendance at the inspection. Very fair punctuality is obtained; the children are neatly dressed, and manifest orderly habits and a cheerful demeanour. 3. The instructional course is of full range, and the teaching is regulated by proper lesson guides. 4. The average proficiency reaches fair.

WATERLOO (C.E.):—Visited, 18th March.

Numbers present:—Boys, 57; girls, 43; total, 100.

1. Materially the school is in fair condition. 2. A fair attendance is maintained, but it is marked by irregularity. The pupils are punctual and clean. A considerable amount of restlessness characterizes the

the conduct of the younger children, and the drill is loosely performed. The general order, however, may be regarded as fair. The government is slightly deficient in firmness. 3. Moderate judgment is evinced in the classification; the instruction is fairly regulated; the methods are of modern cast, but are not applied with judgment or effect. The teaching is altogether too suggestive; too much is done for the pupils, and the result is that they make little effort to answer and less to think. 4. The attainments of the several classes are:—First, indifferent to moderate; second, tolerable to fair; third, barely tolerable.

WATERLOO (C.E.—Infants) :—Visited, 18th March.

Numbers present:—Boys, 39; girls, 44; total, 83.

1. The school premises are in fairly satisfactory condition, and there is a suitable supply of furniture and working appliances. 2. The attendance is much lower than usual, by reason of sickness. The punctuality is fair, and the pupils are clean and orderly. 3. The full infants' school course is observed; the methods used are intelligent and appropriate. 4. The proficiency is fair.

WATERLOO (R.C.) :—Visited, 20th May.

Numbers present:—Boys, 72; girls, 51; total, 123.

1. The school is held in a portion of the R.C. Church. In the circumstances the organization is satisfactory. The building is very exposed and draughty, so much so that it frustrates attempts to keep the school area in an orderly state. The furniture is sufficient and of fair worth. 2. The pupils are fairly punctual, but the regularity of quite one-third of them is of very unsatisfactory character. Very fair order is maintained. 3. The classification of the elder children is too high: the teacher has been informed that the ages and attainments of the pupils in the head class do not warrant him in terming it a Fourth Class. Since the inspection, it may be remarked, the Council has issued a scale of fees based on the number of children attending a school belonging to a given family. Previously it was the undesirable custom, in this and a few other schools in the district, to charge the pupils according to the class they were in; a high and faulty classification was frequently the result. 4. Up to the standard of a school having a Third Class, the average proficiency of the pupils approaches fair.

WAVERLEY (C.E.) :—Visited, 11th May.

Numbers present:—Boys, 32; girls, 36; total, 68.

1. The schoolhouse is substantial, in good repair, and has the necessary out-offices attached. 2. Owing to prevalent sickness among children the attendance for the past month has not exceeded two-thirds of the enrolment; previously it was three-fourths. The pupils are under good discipline. The moral tone of the school is healthy. 3. The subjects prescribed for a school having a third class are treated methodically; the continued absence of the pupil teacher through sickness has told sensibly on the attainments of the younger pupils, nevertheless the importation of a larger amount of energy into the teaching generally might have induced higher average results. 4. The average proficiency of the children, as ascertained by the examination, does not exceed tolerable. In the third class it reaches fair.

WAVERLEY (R.C.) :—Visited, 22nd September.

Numbers present:—Boys, 34; girls, 49; total, 83.

1. The school premises are in a satisfactory state. 2. The attendance is of fluctuating character, but the punctuality is fair. The children are prone to disorderly habits, nor do they evince a proper amount of application and industry. 3. The prescribed subjects are taught. 4. The proficiency does not exceed moderate.

WAVERLEY (Presbyterian) :—Visited, 24th February.

Numbers present:—Boys, 32; girls, 26; total, 58.

1. The condition and appointments of this school are of fair character. The organization is passably correct. 2. The pupils manifest a satisfactory demeanour, and also orderly habits. They attend with very fair punctuality, and their general attendance is satisfactory. Wet weather affected the attendance on the day of inspection. 3. The subjects prescribed for a school having a Third Class are taught. 4. The results are slightly above tolerable.

WOOLLOOMOOLOO (Presbyterian) :—Visited, 17th February.

Numbers present:—Boys, 64; girls, 47; total, 111.

1. The schoolroom is a good one, and the furniture and appointments are suitable and sufficient. The position of the room in which the infants, numbering some seventy, are taught, is bad. Situated under the principal room and altogether below the level of the main street, nothing but the fall of the ground to the back lane saves it from being a cellar. There is no proper ceiling or anything to deaden the sounds above, and at times the teaching is carried on under great distraction. 2. The pupils are very fairly punctual, and they are clean and properly behaved, but irregularity is a standing defect. The attendance is ordinarily less than two-thirds of the enrolment, and on the day of inspection it was some twenty lower than usual, arising, the teacher thought, from the previous day being a wet one. 3. The prescribed subjects for a school having a third class are taught in a methodical manner, but the results are not correspondingly satisfactory. 4. In the infants' division the proficiency ranged between fair and very fair, in the primary classes it was slightly above tolerable.

Sydney: Thomas Richards, Government Printer—1875.

1875.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

PUBLIC SCHOOLS ACT.

(PETITION OF INHABITANTS OF NEWCASTLE)

Ordered by the Legislative Assembly to be printed, 25 June, 1875.

To the Honorable the Members of the Legislative Assembly, in Parliament assembled
The Petition of the undersigned inhabitants of the Electorate of Newcastle,—
HUMBLY SHOWNETH:—

1. That having heard that a proposal to amend the Public Schools Act of 1866 is in contemplation, your Petitioners desire, with the earnestness of religious conviction, to have Denominational Schools for the education of their children.

2. That the present Public Schools Act does not indeed directly destroy Denominational Schools but that by refusing such help as it freely gives to Public Schools it inflicts a heavy penalty upon all who on grounds of Christian faith, necessarily require Denominational Schools.

3. That those who seek the Denominational Schools, viz., Roman Catholics and the majority of the Church of England, are so large a proportion of the whole population that it would be unjust to refuse them a satisfaction which is one of conscience.

4. That the number of those who are satisfied with the Public Schools Act is also so great that no Denominationalist seeks to withhold from them their fair proportion of help out of the common purse. The intolerance and sectarianism are all on the side of the Secularists.

5. That speaking of a public measure in the abstract, and without reference to motives, your Petitioners cannot but characterize the allotment of money contributed by a whole population in favour of one section of it as oppressive, and a blot on the legislation of a free Country.

6. That Denominationalists are ready to submit to Government inspection the results of their teaching in secular subjects, and have confidence that the value of these results and the economy of their establishments will be acknowledged by the Council of Education as at least equal to anything attained elsewhere.

7. That we the undersigned pray that your Honorable House will take this statement into consideration, and should any change be made in the Public Schools Act of New South Wales, that you will apportion pecuniary aid equitably between Denominationalists and Secularists, and thereby satisfy the just demands of all sections of the community.

And your Petitioners will ever pray, &c., &c.

1875.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

PUBLIC SCHOOLS ACT.

(PETITION OF SYNOD OF EASTERN AUSTRALIA.)

Ordered by the Legislative Assembly to be printed, 6 May, 1875.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Memorial of the Synod of the Presbyterian Church of Eastern Australia,—

RESPECTFULLY SHOWETH :—

That the Synod of the Presbyterian Church of Eastern Australia during its last session agreed that a copy of the following deliverance be laid before the Parliament and Government of this Colony, viz. :—

That this Synod is of opinion that the Parliament of this country should secure to its people certain fundamental rights in the education of the rising generation :—

- 1st. That the Word of God, the Bible in its entirety, being unparalleled in excellence and the alone supreme standard of morality, should be used in every Public school for the moral training and for the general information and education of the young.
- 2nd. That each school district should have the right of selecting by means of a locally elected Board its own teachers, that teacher being a certified public teacher, in which case no unworthy man, whose character or principles were opposed to the views of the great majority of the district, would be thrust upon the people to the detriment of education.
- 3rd. That a public common undenominational school system accords most with the wants of our country and the demands of the age, but this Synod is strongly opposed to a purely secular system as being radically atheistic, and can only approve of a limited freeness and compulsion.

Your Petitioners therefore humbly pray that your Honorable House will take the premises into consideration, and legislate in accordance therewith.

And your Petitioners, as in duty bound, will ever pray.

Sydney, New South Wales,
November 16th, 1874.

ISAAC MACKAY,
Moderator of Synod.
DUNCAN MINNES,
Synod Clerk.

1875.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

PUBLIC SCHOOLS ACT.

(PETITION OF ELECTORS OF THE HUME.)

Ordered by the Legislative Assembly to be printed, 30 June, 1875.

To the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled
The Petition of the undersigned inhabitants of the Electorate of The Hume,—

HUMBLY SHOWETH :—

1. That having heard that a proposal to amend the Public Schools Act of 1866 is in contemplation, your Petitioners desire, with the earnestness of religious conviction, to have Denominational Schools for the education of their children.

2. That the present Public Schools Act does not indeed directly destroy Denominational Schools, but that by refusing such help as it freely gives to Public Schools it inflicts a heavy penalty upon all who, on grounds of Christian faith, necessarily require the Denominational Schools.

3. That those who seek for Denominational Schools, viz., Roman Catholics and the majority in the Church of England, are so large a proportion of the whole population that it would be unjust to refuse them a satisfaction which is one of conscience.

4. That the number of those who are satisfied with the Public Schools is also so great that no Denominationalist seeks to withhold from them their fair proportion of help out of the common purse. The intolerance and sectarianism are all on the side of the Secularists.

5. That speaking of a public measure in the abstract, and without reference to motives, your Petitioners cannot but characterize the allotment of money contributed by a whole population in favour of one section of it as oppressive, and a blot on the legislation of a free Country.

6. That Denominationalists are ready to submit to Government inspection the results of their teaching in secular subjects, and have confidence that the value of those results and the economy of their establishments will be acknowledged by the Council of Education as at least equal to anything attained elsewhere.

7. That in laying this statement before your Honorable House, it will be perceived that it is the desire of your Petitioners to see some amendment of the Public Schools Act, which will apportion pecuniary aid equitably between Denominationalists and Secularists, and thereby satisfy the just demands of all sections of the community.

Your Memorialists humbly pray that your Honorable House will carefully consider the above Petition, and grant such relief as may be sufficient.

1875.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

PUBLIC SCHOOLS ACT.

(PETITION OF RESIDENTS OF TUMUT.)

Ordered by the Legislative Assembly to be printed, 5 July, 1875.

To the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned inhabitants of the Electorate of Tumut,—

HUMBLY SHOWETH :—

1. That having heard that a proposal to amend the Public Schools Act of 1866 is in contemplation, your Petitioners desire, with the earnestness of religious conviction, to have Denominational Schools for the education of their children.

2. That the present Public Schools Act does not indeed directly destroy Denominational Schools, but that by refusing such help as it freely gives to Public Schools it inflicts a heavy penalty upon all who, on grounds of Christian faith, necessarily require the Denominational Schools.

3. That those who seek for Denominational Schools, viz., Roman Catholics and the majority in the Church of England, are so large a proportion of the whole population that it would be unjust to refuse them a satisfaction which is one of conscience.

4. That the number of those who are satisfied with the Public Schools is also so great that no Denominationalist seeks to withhold from them their fair proportion of help out of the common purse. The intolerance and sectarianism are all on the side of the Secularists.

5. That speaking of a public measure in the abstract and without reference to motives, your Petitioners cannot but characterize the allotment of money contributed by a whole population in favour of one section of it as oppressive, and a blot on the legislation of a free Country.

6. That Denominationalists are ready to submit to Government inspection the results of their teaching in secular subjects, and have confidence that the value of those results and the economy of their establishments will be acknowledged by the Council of Education as at least equal to anything attained elsewhere.

7. That in laying this statement before your Honorable House, it will be perceived that it is the desire of your Petitioners to see some amendment of the Public Schools Act which will apportion pecuniary aid equitably between Denominationalists and Secularists, and thereby satisfy the just demands of all sections of the community.

Your Petitioners therefore humbly pray that your Honorable House will refuse to sanction the withdrawal of aid from Denominational Schools.

And your Petitioners will ever pray.

1875.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

PUBLIC SCHOOLS ACT.
(PETITION OF INHABITANTS OF THE UPPER HUNTER.)

Ordered by the Legislative Assembly to be printed, 7 July, 1875.

To the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned inhabitants of the Electorate of Upper Hunter,—

HUMBLY SHOWETH :—

1st. That having heard that a proposal to amend the Public Schools Act of 1866 is in contemplation, your Petitioners desire, with the earnestness of religious conviction, to have Denominational Schools for the education of their children.

2nd. That the present Public Schools Act does not indeed directly destroy Denominational Schools, but that by refusing such help as it freely gives to Public Schools it inflicts a heavy penalty upon all who, on grounds of Christian faith, necessarily require the Denominational School.

3rd. That those who seek for Denominational Schools, viz., Roman Catholics and the majority in the Church of England, are so large a proportion of the whole population that it would be unjust to refuse them a satisfaction which is one of conscience.

4th. That the number of those who are satisfied with the Public Schools is also so great that no Denominationalist seeks to withhold from them their fair proportion of help out of the common purse. The intolerance and sectarianism are all on the side of the Secularists.

5th. That speaking of a public measure in the abstract, and without reference to motives, your Petitioners cannot but characterize the allotment of money contributed by a whole population in favour of one section of it as oppressive, and a blot on the legislation of a free Country.

6th. That Denominationalists are ready to submit to Government inspection the results of their teaching in secular subjects, and have confidence that the value of those results and the economy of their establishments will be acknowledged by the Council of Education as at least equal to anything attained elsewhere.

7th. That in laying this statement before your Honorable House, it will be perceived that it is the desire of your Petitioners to see some amendment of the Public Schools Act, which will apportion pecuniary aid equitably between Denominationalists and Secularists, and thereby satisfy the just demands of all sections of the community.

Your Petitioners therefore pray your Honorable House to take the subject into consideration.

And your Petitioners will ever pray.

[Here follow 215 signatures.]

1875.

LEGISLATIVE ASSEMBLY,

NEW SOUTH WALES.

PUBLIC SCHOOLS ACT.

(PETITION OF RESIDENTS OF YASS PLAINS.)

Ordered by the Legislative Assembly to be printed, 19 July, 1875.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned inhabitants of the Electorate of Yass Plains,—

HUMBLY SHOWETH :—

1. That having heard that a proposal to amend the Public Schools Act of 1866 is in contemplation, your Petitioners desire, with the earnestness of religious conviction, to have Denominational Schools for the education of their children.

2. That the present Public Schools Act does not indeed directly destroy Denominational Schools, but that by refusing such help as it freely gives to Public Schools it inflicts a heavy penalty upon all who, on grounds of Catholic faith, necessarily require the Denominational Schools.

3. That those who seek for Denominational Schools, viz., Roman Catholics and the majority in the Church of England, are so large a proportion of the whole population that it would be unjust to refuse a satisfaction which is one of conscience.

4. That the number of those who are satisfied with Public Schools is so great that no Denominationalist seeks to withhold from them their fair proportion of help out of the common purse. Intolerance and sectarianism are all on the side of the Secularists.

5. That speaking of a public measure in the abstract, and without reference to motives, your Petitioners cannot but characterize the allotment of money contributed by a whole population in favour of one section of it as oppressive, and a blot on the legislation of a free Country.

6. That Denominationalists are ready to submit to Government inspection the results of their teaching in secular subjects, and have confidence that the value of those results and the economy of their establishments will be acknowledged by the Council of Education as at least equal to anything attained elsewhere.

7. That in laying this statement before your Honorable House, it will be perceived that it is the desire of your Petitioners to see some amendment of the Public Schools Act, which will apportion pecuniary aid equitably between Denominationalists and Secularists, and thereby satisfy the just demands of all sections of the community.

And your Petitioners therefore pray that your Honorable House will see fit to amend the Public Schools Act in the direction indicated.

And your Petitioners will ever pray, &c.

[Here follow 262 signatures.]

1875.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

PUBLIC SCHOOLS ACT.
(PETITION OF INHABITANTS OF GOULBURN.)

Ordered by the Legislative Assembly to be printed, 24 July, 1875. A.M.

To the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned inhabitants of the Electorate of the city of Goulburn,—

HUMBLY SHewETH :—

1. That having heard that a proposal to amend the "Public Schools Act of 1866" is in contemplation, your Petitioners desire with the earnestness of religious conviction to have Denominational Schools for the education of their children.

2. That the present Public Schools Act does not indeed directly destroy Denominational Schools but that by refusing such help as it freely gives to Public Schools it inflicts a heavy penalty upon all who, on grounds of Christian faith, necessarily require the Denominational School.

3. That those who seek for Denominational Schools, viz.,—Roman Catholics and the majority in the Church of England, are so large a proportion of the whole population that it would be unjust to refuse them a satisfaction which is one of conscience.

4. That the number of those who are satisfied with the Public Schools is also so great that no Denominationalist seeks to withhold from them their fair proportion of help out of the common purse. The intolerance and sectarianism are all on the side of the secularists.

5. That speaking of a public measure in the abstract and without reference to motives, your Petitioners cannot but characterise the allotment of money contributed by a whole population in favor of one section of it, as oppressive and a blot on the Legislation of a free country.

6. That Denominationalists are ready to submit to Government inspection the results of their teaching in secular subjects, and have confidence that the value of those results and the economy of their establishments will be acknowledged by the Council of Education as at least equal to anything attained elsewhere.

7. That in laying this statement before your Honorable House it will be perceived that it is the desire of your Petitioners to see some amendment of the Public Schools Act which will apportion pecuniary aid equitably between Denominationalists and Secularists, and thereby satisfy the just demands of all sections of the community.

Your Petitioners therefore humbly pray that your Honorable House will take the matter into your favorable consideration.

And your Petitioners, as in duty bound, will ever pray.

EDUCATION.

No. 1.

THE REV. G. GURNEY TO THE COUNCIL OF EDUCATION.

Parsonage, Emu,
24 September, 1874.

GENTLEMEN,

Since the late meeting respecting "Education" there has been such a marked change in the tone of the *teacher* at Emu Church of England Certified Denominational School (Mr. Justelius)—he has been so abusive and impudent whenever I have made any inquiries respecting the school, or mentioned any complaints—that I *can no longer work with him*. The school is going down very fast, and the children being taken to Penrith, to the great hurt of the school. Now I have no desire to *injure him* or his large family, but I think, as he is a *Wesleyan*, and has repeatedly expressed his wish that the school could be converted into a Public School, I do not think he is likely to do justice to the school and the denominational interests committed to his charge. Under these circumstances I think he ought to be removed, and the school placed under the charge of a Church of England teacher, as provided by the Act. I think it would be better for all parties, and give Emu Denominational School a fair change and no favour. I say that I have no wish to injure the teacher, though I can no longer work with him, but think that at this particular juncture, when there is a talk about these small schools, that I can only have fair play with a Church teacher for a Church Denominational School.

I have, &c.,
GEORGE GURNEY,
Chairman of Local Board.

B.C., Inspector of Cumberland District.—*Very urgent*.—Be good enough to state if you can recommend an arrangement whereby Mr. Justelius may be removed from this school, and an eligible teacher appointed.—E.J., 30/9/74.

B.C., Secretary.—It would appear from the teacher's letter, hereto annexed, that he is "not a member of the Wesleyan Church, but at present a member of the Church of England." Mr. Justelius cannot therefore be removed from the Emu C.E. School on the ground stated by the Rev. G. Gurney.—J. M'CREDIE, Insp., Cumb. District, 5/10/74.

No. 2.

MR. E. JUSTELIUS TO THE INSPECTOR OF SCHOOLS, CUMBERLAND DISTRICT.

Cert. Denom. C.E. School,
Emu, 3 October, 1874.

SIR,

I have the honor to acknowledge your memorandum of 2nd inst., in which you inform me that it has been stated that I am a Wesleyan, and *not* a proper person to continue in charge of a Denominational Church of England School. You also request me to state to what religious denomination I belong.

I most respectfully beg to state that I was brought up in the Lutheran Church, but since my marriage have mostly attended the Wesleyan Church, and since I came to Emu I and my family have regularly attended the services in the Church of England, and I am a pewholder in the Church of England, and I have occasionally attended the Wesleyan services here, at times when there has been *no* service in the Church of England. My children have regularly attended the C.E. Sunday-school here, and I have also been a teacher in the C.E. Sunday-school here. I have for the last nine months *not once* been to the Wesleyan church, nor have my family. About the same time ago, at the desire of Rev. Gurney, I withdrew my children from the Wesleyan Sunday-school, where they occasionally had attended, *only* on such occasions when there was no Sunday-school in the Church of England here. I and my family have since regularly attended the Church of England, and *no* other Church. I have communicated in the Church of England here, and have had two children baptized here by Rev. Gurney. I therefore beg to inform you, in answer to your memorandum, that I am *not* a member of the Wesleyan Church, but at present a member of the Church of England. Rev. Gurney has repeatedly expressed his satisfaction with the manner in which I conduct the religious instruction in the day-school.

I therefore most respectfully beg to submit that I cannot see that the 40th clause of the Public Schools Act has been infringed by my appointment to this school.

I have, &c.,
EDWARD JUSTELIUS.

No. 3.

THE ACTING SECRETARY TO THE COUNCIL OF EDUCATION TO THE REV. G. GURNEY.

Council of Education Office,
Sydney, 30 September, 1874.

REV. SIR,

I am directed by the Council of Education to acquaint you that your letter, dated 24th September instant, upon the subject mentioned below, is under consideration, and that a further communication respecting it will be addressed to you as soon as the Council has arrived at a decision in the matter.

I have, &c.,
E. JOHNSON,
(For Secretary.)

SUBJECT:—Requesting removal of teacher, Mr. Justelius.

No. 4.

4

No. 4.

THE ACTING SECRETARY TO THE COUNCIL OF EDUCATION TO THE REV. G. GURNEY.

Council of Education Office,
Sydney, 9 October, 1874.

REV. SIR,

With reference to your letter of 24th September ultimo, in which you request that, as Mr. E. Justelius is a Wesleyan, he may be removed from the Certified Denominational Church of England School at Emu, and a member of the Church of England appointed in his stead, I am directed by the Council of Education to acquaint you that a communication has been received from Mr. Justelius, in which he alleges that he is not a Wesleyan, but a member of the Church of England.

I have, &c.,
E. JOHNSON,
(For Secretary.)

No. 5.

THE REV. G. GURNEY TO THE COUNCIL OF EDUCATION.

Parsonage, Emu,
13 October, 1874.

GENTLEMEN,

I have your note of the 9th instant. I much regret that Mr. Justelius has claimed to be a member of the Church of England after two years profession of another persuasion.

I now respectfully claim under the 10th clause of the Education Act of 1866, that the Inspector be instructed to make inquiries *here*, for the matter is so *notorious* that the very idea of his being a member of the Church of England is laughed at.

I am sure, gentlemen, that you will grant me this very reasonable request.

I remain, &c.,
GEO. GURNEY.

P.S.—I do not think that Mr. Justelius would on his oath claim to be a churchman—he was educated a Lutheran.—G.G.

B.C., Inspector of Cumberland District.—Be good enough to hold the necessary inquiry in order that it may be ascertained to what religious denomination Mr. Justelius belongs.—E.J., 22/10/74.

No. 6.

THE REV. G. GURNEY TO THE COUNCIL OF EDUCATION.

Parsonage, Emu.

GENTLEMEN,

Should you grant my very reasonable request respecting the religious persuasion of our teacher, viz., that inquiry be made on the spot, I would further suggest that I be allowed to nominate a gentleman to assist the Inspector in the inquiry, and that due notice be given of the time of the Inspector's visit.

I have, &c.,
GEORGE GURNEY.

No. 7.

THE ACTING SECRETARY TO THE COUNCIL OF EDUCATION TO THE REV. G. GURNEY.

Council of Education Office,
Sydney, 22 October, 1874.

REV. SIR,

I am directed by the Council of Education to acquaint you that, in accordance with the request contained in your letter dated 13th October instant, the District Inspector has been instructed to hold the necessary inquiry, in order that it may be ascertained to what religious denomination Mr. E. Justelius, teacher of the Certified Denominational Church of England School at Emu, belongs.

I have, &c.,
E. JOHNSON,
(For Secretary.)

No. 8.

THE INSPECTOR OF SCHOOLS, CUMBERLAND DISTRICT, TO THE SECRETARY TO THE COUNCIL OF EDUCATION.

EMU, C.E.—Investigation into charge against the teacher.

HEREWITH are forwarded the statements which were made at the above investigation on the 7th instant, together with all other papers in my possession relating to the case.

2. From these documents the following facts may be gathered on perusal:—

(1.) Mr. Justelius is proved to have belonged to the Church of England at Bankstown, from which he was removed to Emu C.E. school. This is clearly shown in annex A.

(2.)

- (2.) It is also stated explicitly in annex B, by the Rev. A. S. Swift, the Wesleyan Clergyman of the locality, that Mr. Justelius is *not a member of the Wesleyan Church*, as has been alleged in Mr. Gurney's original letter of the 24th September last.
- (3.) It is admitted by Mr. Gurney that Mr. Justelius has communicated once in the Church of England at Emu, and it appears to me that Mr. Gurney has failed to prove that Mr. Justelius is *not a member of the Church of England*, which he claims to be.

3. I am of opinion, therefore, that the Council should decline to remove Mr. Justelius from the Emu C.E. school.

4. I may add that the Rev. J. Vaughan was present, *ex gratiâ*, during the investigation, and that he concurs with me in thinking that Mr. Gurney has quite failed to prove his case.

J. M'CREIDIE,

Sydney, 14 November, 1874.

Inspector, Cumberland District.

[Enclosures.]

Emu Plains C.E. School,
7 November, 1874.

STATEMENTS made at an inquiry into a charge preferred by the Rev. G. Gurney, B.A., against Mr. Justelius, teacher of the above school, of being a Wesleyan.

Rev. G. Gurney's statement.

MR. JUSTELIUS was appointed I believe in June, 1872, bringing his appointment with him, no mention of sect being made therein, and no previous information of his arrival being given to me. I first heard of his arrival by being told that he was at the station. Mrs. Justelius told Mrs. Gurney some few weeks after arrival that both she and her husband were Wesleyans. Her words were, "Why, Mrs. Gurney, both myself and my husband are Wesleyans," to which Mrs. Gurney replied, "Mr. Gurney does not know that." Mr. Justelius afterwards explained to me that he was baptized and educated a Lutheran, but joined the Wesleyans when he married his wife. His father-in-law and mother-in-law confirmed that statement, saying in effect that he ought to be grateful to Mr. Gurney for allowing him to remain a teacher here, he not being of the Church of England denomination. On receiving little kindnesses he has expressed himself more gratified, inasmuch as he was not of my denomination. He told me himself in my house this: that the Rev. Mr. Middleton, a Wesleyan Clergyman, advised him to attend the Church services while a teacher of the school, but that he should not have accepted the appointment. Mr. Wood, a Wesleyan, stated that he thought the Council should not have made the appointment. A dispute had arisen about Wood's boy learning the C.E. Catechism, to which that gentleman had objected under the belief that Mr. Justelius was being persecuted by me, by being required to attend the Church service instead of the Wesleyan. After an interview between him, Mr. Justelius, and myself, he was satisfied, and withdrew his objection. Previous to this meeting, Mr. Justelius had openly left the Church, joined the Wesleyans, and said he would never return again. On my assurance that I had not asked for his removal under the 10th clause of the Act he returned to the Church. His children have attended the Wesleyan Sunday-school as often, if not oftener, than the Church one, and occasionally have left the Church entirely for the Wesleyan. Up to this present moment he has never stated to me that he is a *bonâ fide* churchman, but always has allowed that he was not of my denomination. Mr. Payer, a member of the Board, said to me yesterday, that as he could not be present to day, he desired me to say that his impression was, that he was a Wesleyan. Mr. Justelius states in his letter that he is *at present* a member of the Church of England, which implies that he was not always or invariably one. He has not taught in the Church of England Sunday-school for nearly a year. He withdrew from his post and said that he would not teach again. He says that he has only attended the Wesleyan Church when there was no service in the Church of England. This I deny, for he has openly attended when there was service in the Church of England here. It appears to me that the question at issue is: "Is he or is he not a member of the Church of England?" He was not compelled to teach in the Sunday-school, but invited to assist therein according to usual custom.

Cross-examined by Mr. Justelius: You told me that you were born and educated a Lutheran, and when you came to the Colony your preferences led you to the Wesleyans, to whom your wife belonged, and that you joined them when you married her, and had continued with them up to the time of your coming here; I understood you that you attended the Wesleyan Church as a member thereof; your words were, that you "joined the Wesleyan Church when you were married;" I do not know if by "joining," you meant being a member of the Wesleyan Church; I presented you to the Bishop as a seatholder and not as a member of the Church of England; being a seatholder, you were a fit and proper person to sign the consecration petition to the Bishop; you communicated once in the Church of England here since you came; you came on your own authority; I have already said that you led me to believe that you were a Wesleyan up to the time of your coming here.

GEORGE GURNEY.

Mrs. Gurney, being called, stated:—I was speaking to Mrs. Justelius, and saying that I was sorry Rev. Mr. Somerville had left, as Mr. Gurney and he had got on well together; I am not sure what remark was then made, but Mrs. Justelius then said: "I am sorry, for my husband and myself are both Wesleyans."

Cross-examined by Mr. Justelius: I don't remember anything that happened on the first Sunday you were here; I do not remember saying to you that I hoped you were not Wesleyans.

EMILY A. GURNEY.

Statement of Mr. Justelius.

I WOULD beg to state, in the first place, that I adhere to all the statements contained in my letter of 3rd October last. I never told Mr. Gurney that I was a member of the Wesleyan Church at any time. When I came to Emu I was requested by the Rev. Mr. Gurney to teach in the Sunday-school, and I continued so to do until he, in the presence of Mr. Wood, said he thought it better for me not to continue teaching in the Sunday-school. He also said that he would send for me to attend when he was absent, which he has done several times, and I have always acceded to his request. I beg to reiterate that I am not a member of the Wesleyan Church, and I claim to be a member of the Church of England. I attended the Church of England at Bankstown for twelve months before coming to Emu, and communicated there, as is shown by the note now handed in from the Rev. W. J. Gunther, of Parramatta, dated 6th November inst. I was originally trained under the Denominational Church of England Board at St. James's C. E. School, which I entered on the recommendation of the Bishop himself. Herewith.

Cross-examined by Mr. Gurney: I left the Sunday-school before meeting you at Mr. Woods, at your recommendation; I did attend the Wesleyan Church for a few Sundays about that time; I cannot remember whether my children left the Church of England Sunday-school about that time; I did not say that I would not return to the Church unless you had not written to ask for my removal; I have been under the Council of Education since 1st June, 1871, and then belonged to the Church of England; I don't remember what I entered myself as to religion in the last Census return: Mrs. Justelius was entered in the Census as a Wesleyan, as far as I remember; probably I entered myself as a Protestant; I am a *bonâ fide* member of the Church of England; I don't remember the exact date of my joining the Church of England; I at one time belonged to the Lutheran Church; I was baptised in the Lutheran Church; I have been confirmed by a Bishop of the Lutheran Church, but not by one of the Church of England; I was married by a Wesleyan clergyman; I think four of my children have been baptised by clergymen not belonging to the Church of England, and three by the Church of England clergymen; my wife held a sitting in the Wesleyan Church, and I attended when there was no Church of England service; I don't remember stating to any one since coming here that I belonged to the Wesleyan Church; Rev. Mr. Middleton never said to me that I should not have accepted the charge of this school; Mr. Wood never said to my knowledge that the Council did wrong in appointing me to this school; I never said to any one that I would not attend again at the Church of England service, or not let my children do so.

EDWD. JUSTELIUS.

Statement

Statement of Mr. William Henry Wood.

I AM residing on Emu Plains, and am a farmer. I never said to Mr. Gurney that the Council was wrong in appointing you to this school. You are not, to my knowledge, a member of the Wesleyan Church, to which I belong. Mr. Gurney told me lately, I think, that he would remove you, or that he would do his best for your removal. I objected to my boy learning the Church of England Catechism, because I thought Mr. Gurney was persecuting you. You never to my knowledge said to Mr. Gurney, in my presence, that you would not return to the Church unless he (Mr. Gurney) would abstain from asking for your removal.

Cross-examined by Rev. Mr. Gurney: I think you have been persecuting Mr. Justelius since he came here on several occasions; I think that you were persecuting Mr. Justelius by coming into the school and insulting him before the children; I remember the meeting at my house; I saw Mr. Justelius about that time several Sundays in the Wesleyan Church; I did not hear it reported about that time that Mr. Justelius had said that he would not return to Church again; I never heard you say anything at that time about asking for the removal of Mr. Justelius; it is quite likely that the Church of England service was going on when I saw him in the Wesleyan Church.

W. H. WOOD.

Statement of Mrs. Justelius.

I DID not tell Mrs. Gurney that you were a Wesleyan, but I said that I was one. On the first Sunday, after coming here, Mrs. Gurney said she only hoped we were not Wesleyans.

ISABELLA JUSTELIUS.

[Annex A.]

The Rev. W. J. Gunther to Mr. Justelius.

St. John's, Parramatta,
6 November, 1874.

My dear Sir,

I received your note yesterday, in which you ask me to certify that you attended the services of the Church of England and the Holy Communion when you resided at Bankstown. In answer I beg to say that you attended the services regularly, took an interest in Church matters, and I find from my note-book attended the Holy Communion.

I regret I cannot remember how many times the Holy Communion was celebrated between June 1, 1871, and June 1, 1872, nor how many times you were present.

I am, &c.,
W. J. GUNTHER.

[Annex B.]

The Rev. A. S. Swift to John M'Creddie, Esq.

Emu Plains, 6 November, 1874.

Dear Sir,

Understanding that Mr. Justelius's position as teacher of the Church of England Denominational School here is likely to be seriously affected on the alleged ground of his being a Wesleyan, I deem but justice to him to state what my position enables me to do, viz., that first, he is not a member of our Church; nor secondly, an attendant on our public ministrations.

During the seven months and more of my location here I have but once exchanged civilities with him, and never once seen him at our service.

I am, &c.,
ALFRED S. SWIFT.

No. 9.

THE REV. G. GURNEY TO THE COUNCIL OF EDUCATION.

Parsonage, Emu,
16 November, 1874.

GENTLEMEN,

May I submit the following remarks upon the late inquiry under Mr. Inspector M'Creddie.

1. That Mr. Justelius never denied my statement made at the opening of the proceedings in any material respect.
2. That in a letter read by Mr. M'Creddie Mr. Justelius stated that he was at present of the Church of England.
3. *That, while he remembered putting down his wife and family (at the late Census) as Wesleyans, he could not remember what he had entered as his denomination.
4. That Mr. Wood, the only witness called by Mr. Justelius, was and is a Wesleyan, and had stated previously to me, in presence of my wife and daughter, that he would say nothing to injure Mr. Justelius.
5. That Bankstown was a Provisional Church of England School, and service held in the school-room which easily accounted for the teacher's attendance at service of Mr. Gunther.
6. That if Mr. Justelius were an undoubted and *bona fide* member of the Church of England, would his only witness be Wesleyan to prove it?
7. If Mr. Justelius had never been impudent and insulting to me how came it that under the threat of law proceedings he wrote an abject apology?—Copy on the other leaf.
8. That while there is but one certified school upon this side the river there are at least 130 to 150 children of school age.

*NOTE.—Might not an inquiry be made, or an answer demanded?—G.G.

No. 10.

THE ACTING SECRETARY TO THE COUNCIL OF EDUCATION TO THE REV. G. GURNEY.

Council of Education Office,
Sydney, 2 December, 1874.

REV. SIR,

I am directed by the Council of Education to acquaint you that the Council has had under consideration the Inspector's report upon an inquiry which has been held in consequence of your request for the removal of Mr. E. Justelius, the teacher of the Certified Denominational Church of England School at Emu, on the ground that he is not a member of the Church of England.

2.

7

2. I am further directed to state that it does not appear from the nature of the evidence taken at the investigation that the Council would be justified in removing Mr. Justelius from his present position on the ground that he is not a member of the Church of England.

I have, &c.,
E. JOHNSON,
(For Secretary.)

No. 11.

THE ACTING SECRETARY TO THE COUNCIL OF EDUCATION TO MR. E. JUSTELIUS.

Council of Education Office,
Sydney, 2 December, 1874.

Chairman's request for your removal.

THE Council, having had under consideration the report of the Inspector on the investigation recently held with reference to the Local Board's allegation that you are not a member of the Church of England, is of opinion that the evidence is not sufficient to sustain the allegation, and has therefore declined to remove you on the ground assigned by the Board.

E. JOHNSON,
(For Secretary.)

No. 12.

THE ACTING SECRETARY TO THE COUNCIL OF EDUCATION TO THE INSPECTOR OF SCHOOLS, CUMBERLAND DISTRICT.

Council of Education Office,
Sydney, 2 December, 1874.

EMU, C.E.—Chairman's request for removal of teacher, Mr. Justelius, your B.C. No. 74-1,186, dated 14th November.

THE Revd. Mr. Gurney has been informed that it does not appear from the nature of the evidence taken at the inquiry conducted by you with reference to the above matter that the Council would be justified in removing Mr. Justelius from his present position, on the ground that he is not a member of the Church of England.

E. JOHNSON,
(For Secretary.)

No. 13.

THE INSPECTOR OF SCHOOLS, CUMBERLAND DISTRICT, TO THE SECRETARY TO THE COUNCIL OF EDUCATION.

EMU, C.E.—Additional papers in recent inquiry.

THESE papers are forwarded to be placed with those already forwarded.

It will be observed that they are contradictory of certain statements of Mr. Gurney.

J. M'CREIDIE,
Inspector, Cumberland District, 17/11/74.

Mr. E. Justelius to the Inspector of Schools, Cumberland District.

C.C.E. School, Emu, 14 November, 1874.

Sir,

I have the honor to enclose certificates from my father and mother-in-law, contradicting that part of Revd. Gurney's statement at the late inquiry, where he stated that they told him, in effect, that I ought to be grateful to Mr. Gurney for allowing me to remain as teacher here, I not being of the same denomination, namely, the Church of England.

I have, &c.,
ED. JUSTELIUS.

Sydney, 12/11/74.

I HAD no conversation whatever with the Revd. Mr. Gurney concerning the religious opinions of Mr. Justelius, and never said either in effect or otherwise, that Mr. Justelius ought to be grateful to the Revd. Mr. Gurney for allowing him to remain a teacher at Emu, he not being of the same denomination, namely, the Church of England.

ISABELLA BOLES.

Sydney, 12/11/74.

I HAD no conversation with the Rev. Mr. Gurney, particularly about the religious persuasion of Mr. Justelius, and certainly deny that I ever said to the Revd. Mr. Gurney, or anyone else, that Mr. Justelius ought to be grateful to the Revd. Mr. Gurney for allowing him to remain a teacher at Emu, he not being of the same denomination, namely the Church of England.

JAMES BOLES.

No. 14.

THE REV. G. GURNEY TO THE COUNCIL OF EDUCATION.

Parsonage, Emu,
14 December, 1874.

GENTLEMEN,

I beg to acknowledge the receipt of your note respecting the denomination of Mr. Ed. Justelius, and to thank you for the trouble you have taken in the matter.

I should not have addressed you again *at present*, had not a circumstance occurred this morning which renders the removal of the teacher imperative, in my opinion.

He,

He, this morning, during the first hour, insulted me most grossly. He called me a liar, a scoundrel, and told me that I was not worthy to wear the black coat of a clergyman; called three boys out of the school while I was hearing them read the Bible; tried to tear one of the school records out of my hand, shook his fist in my face, and said that if I had been outside he would have treated me in another way; interrupted me by walking up and down the school, and making a noise with his feet; and then walked out of the school. His conduct was more like one mad than anything else.

I trust that for the interest of the district he may be removed to another post. The best Church families have retired from the school, and others would leave if only they were able to meet with another school nearer than Penrith. Several of those near to the Nepean have gone there.

The numbers are also so very much reduced, being only thirty, and that including six of his own children. I am quite convinced that a new school teacher would have a chance of a very good school. There is no other Government school here, but when one is built by the *Council* I would offer no opposition to the close of our Church school; but till then I consider myself bound to do all in my power for the *morale* and efficiency of the institution, which are now suffering under the present master.

I have, &c.,

GEORGE GURNEY,

Chairman of Local Board.

Note respecting the three boys being called out. I was hearing the class read from the Bible. He came to the door and called the three oldest boys out. I went to the door and told him that they must return or I would at once leave. They then returned.—G.G.

This is not, by many, the first time I have suffered abuse from the teacher, but is almost invariably the case now, more or less gross.—G.G.

Were I not the clergyman, I would not hold office as a member of the Board one hour longer to submit to such abuse.

No. 15.

THE ACTING SECRETARY TO THE COUNCIL OF EDUCATION TO THE REV. G. GURNEY.

Council of Education Office,

Sydney, 31 December, 1874.

REV. SIR,

In acknowledging the receipt of your letter of the 14th December instant, I am directed by the Council of Education to acquaint you that in consequence of the representations contained in your communication, the Council has decided to remove Mr. Edward Justelius from his position as teacher of the Certified Denominational Church of England School at Emu.

I have, &c.,

E. JOHNSON,

(For Secretary.)

No. 16.

THE ACTING SECRETARY TO THE COUNCIL OF EDUCATION TO MR. E. JUSTELIUS.

Council of Education Office,

The Council has decided to make arrangements for your removal from your present position as teacher of the above school.

E. JOHNSON,

(For Secretary.)

No. 17.

THE REV. G. GURNEY TO THE COUNCIL OF EDUCATION.

Parsonage, Emu,

2 January, 1875.

GENTLEMEN,

I thank you for your kind interest in the matter of Mr. Ed. Justelius, and feel great relief in consequence of your decision to remove the teacher.

I am the only member of the Local Board who ever visits or takes any interest in the affairs of the school, and the only one who is brought into contact with Mr. E. Justelius.

I feel that you have arrived at a just and wise decision. As a clergyman of the denomination in question (Church of England) I could not resign my post, nor refuse for long to visit the school, and yet I could not after his behaviour work with him for the benefit of the school. His behaviour for many months past has been extremely insulting as well as violent, and such conduct could not but have a very injurious influence upon the minds of the children, as well as hold up the office of both Minister and Local Board to contempt.

I have, &c.,

GEO. GURNEY.

No. 18.

THE REV. G. GURNEY TO THE COUNCIL OF EDUCATION.

Parsonage, Emu,

2 January, 1875.

I THINK it but right to inform the Council of Education that since the receipt of their decision Mr. E. Justelius and his son have been from *house to house* of all denominations with a petition in hand to enlist the sympathies of the people in his favour.

G. GURNEY.

MR. W. H. WOOD TO THE SECRETARY TO THE COUNCIL OF EDUCATION.

Emu Plains, 2 January, 1875.

Sir,

I beg to inclose a memorial, signed spontaneously by all the householders on Emu Plains. I also beg to certify that all the signatures are genuine and signed by none but *bonâ fide* householders and resident within the school district of Emu Plains.

I have, &c.,
W. H. WOOD.

[Enclosure.]

To the Secretary, Council of Education, Sydney,—

Emu Plains, 1 January, 1875.

Sir,

We, the undersigned inhabitants of the District of Emu Plains, have heard with regret that the Council have determined to remove Mr. E. Justelius, teacher of the Church of England school here.

We would respectfully request the Council to reconsider the matter, as we have every confidence in Mr. and Mrs. Justelius as teachers.

No. 20.

THE SECRETARY TO THE COUNCIL OF EDUCATION TO THE INSPECTOR OF SCHOOLS, CUMBERLAND DISTRICT.

Council of Education Office,
Sydney, 5 January, 1875.

EMU, C.E. :—Proposed removal of teacher, Mr. Justelius.

The Council has decided to remove Mr. Justelius from the above school in consequence of his insulting conduct towards the Rev. G. Gurney, Chairman of the Local Board. Be good enough therefore to submit a recommendation with a view to his removal as early as practicable.

W. WILKINS,
Secretary.

No. 21.

THE REV. G. GURNEY TO THE COUNCIL OF EDUCATION.

Parsonage, Emu,
7 January, 1874.

GENTLEMEN,

I shall feel obliged if in carrying into effect your decision to remove Mr. Justelius from Emu, you would kindly appoint such a teacher as, being a member of the Church of England, you might in your wisdom deem fit.

I am, &c.,
GEORGE GURNEY.

B.C., Inspector of Cumberland District.—Be good enough to state if you can arrange for the appointment of an eligible teacher to succeed Mr. Justelius?—W.W., 11/1/75.

B.C., Secretary.—I am unable to arrange to place another teacher instead of Mr. Justelius at Emu Plains. With reference to B.C., No. 75/34, I would also remark that I am unable to provide for the removal of Mr. Justelius. It does not appear that the teacher has been communicated with respecting the alleged "insulting conduct"; and lest there should be some oversight in the matter, I think it right to point this out. It seems to me that no decision should be arrived at without first calling upon the teacher for his version of the affair.—J. M'CREDIE, Inspector, Cumberland District.

No. 22.

MR. G. H. JOHNSON TO THE SECRETARY TO THE COUNCIL OF EDUCATION.

76, Devonshire-street, Strawberry Hills,
21 January, 1875.

Sir,

Having been led to infer from information I have received that there is a school at Emu Plains requiring a master, I have the honor herewith to offer myself as a candidate. I have written to the Rev. Mr. Gurney on the subject, who has sent me in reply the note attached to this application.

Trusting that his note will be favourably acknowledged, and awaiting your reply,

I have, &c.,
G. H. JOHNSON.

367—B

[Enclosure.]

[Enclosure.]

The Rev. G. Gurney to Mr. G. H. Johnson.

Parsonage, Emu,
20 January, 1875.

Dear Sir,

I have your note and that of Mr. Vidal, who also mentions the name of Mr. Wilkins.

I am prepared to accept your appointment should the Council think fit to propose you, or to entertain your application, which I presume has already been sent in. You can make any use you think fit with this note to secure the approval of the Council, or, if necessary, I am prepared to write to the Council in your favour.

Yours, &c.,
GEORGE GURNEY.

No. 23.

THE SECRETARY TO THE COUNCIL OF EDUCATION TO MR. E. JUSTELIUS.

Council of Education Office,
25 January, 1875.

Complaints preferred against you by the Rev. Mr. Gurney, Chairman of Local Board.

THE Council is in receipt of a communication from the Rev. George Gurney, Chairman of the Local Board, complaining that you behaved towards him in a most insulting manner on the morning of the 14th December ultimo. Mr. Gurney states—

"He, this morning, during the first hour insulted me most grossly. He called me a liar, a scoundrel, and told me that I was not worthy to wear the black coat of a clergyman; called three boys out of the school while I was hearing them read the Bible; tried to tear one of the school records out of my hand; shook his fist in my face and said that if I had been outside he would have treated me in another way; interrupted me by walking up and down the school and making a noise with his feet, and then walked out of the school."

The Council has therefore instructed me to call upon you for such explanation as you may be in a position to furnish with reference to the charges preferred against you by the Rev. Mr. Gurney.

W. WILKINS,
Secretary.

No. 24.

THE REV. G. GURNEY TO THE SECRETARY TO THE COUNCIL OF EDUCATION.

Parsonage, Emu,
27 January, 1875.

MY DEAR SIR,

A Mr. G. H. Johnson has applied to me for the post of teacher at Emu Church of England C. D. School. Mr. Canon Vidal has also written me in favor of Mr. Johnson's application.

I am willing to accept Mr. Johnson should the Council nominate him. I am satisfied that a very good school can be got together by an efficient teacher. The situation is good, the school large, and the teacher's residence commodious and in very good order.

I trust the Council will not delay their appointment, as Mr. Justelius's conduct is so offensive towards me that I am unable to take any active part in the well being of the school during his stay.

I remain, &c.,
GEORGE GURNEY.

No. 25.

MR. E. JUSTELIUS TO THE SECRETARY TO THE COUNCIL OF EDUCATION.

Certe. C.E. School,
Emu, 28 January, 1875.

SIR,

I have the honor to acknowledge the receipt of your memorandum of the 25th instant, containing complaints preferred against me by the Rev. G. Gurney, Chairman of the Local Board.

I most respectfully beg to assure the Council that all the charges contained in your memo. are unfounded. I most emphatically deny having insulted Mr. Gurney, as stated in your memorandum.

On the morning referred to in your memo. Mr. Gurney came into the school, saying, "I am come to give religious instruction." I answered, "Very well, sir," and handed him the Bible. He then told the children to pay attention, as he wished to speak to them about the fence of the churchyard being broken down. I then stepped forward, and said, "Please, sir, I cannot allow you to speak to the children about the fence during school hours." He then, turning towards me, said, "Hold your tongue you impudent fellow; this is my hour and I can use it as I please." I then replied, "Most certainly not; you are at liberty to give the religious instruction but I will not allow either the Council's regulations or the Public Schools Act to be infringed, because they provide that the school time must either be used for religious or secular instruction, and I cannot allow any of the school time to be taken up for any other purpose without the sanction of the Council." He then said, "I tell you that you are an impudent boy who dare to speak in such manner to a clergyman." I then answered, "I am sorry to say some clergymen are not very particular how they speak to those they think beneath them in position." I never mentioned the word "scoundrel," nor did I call Mr. Gurney a liar; nor did I make any noise with my feet by walking up and down.

During the time Mr. Gurney was in the school Mrs. Justelius in a very gentle manner called me out, when Mr. Gurney called out to her, "Hold your tongue you impudent woman." I then told Mr. Gurney that but for his position as Chairman of the Local Board I would not allow him to speak to my wife in such manner. I did not leave the schoolroom until Mr. Gurney left, and then at his request to go outside to look at the fence; nor did I shake my fist in his face as alleged.

I

I respectfully beg to say that Mr. Gurney's statement is simply untrue, which can be proved by the scholars who attended on the 14th ultimo.

Mr. Gurney has told me that he will use every means in his power to have me not only removed but dismissed.

On the morning in question Mr. Gurney smelt very strongly from spirits and chlorodyne, and I attribute his excited state of mind to over-indulgence. His medical adviser has told me that his over-indulgence in chlorodyne is affecting his intellect and will drive him mad; and several of his parishioners have told me they attribute his treatment towards me to partial madness. He so far forgot himself lately, when I complained to him of one of his children, that he struck me forcibly with his fist in the presence of two gentlemen, which matter I have been advised to lay before the Bishop.

I have been compelled to seek the protection of the law against his eldest son for beating my small children when I have been away from home. I have, since I came to Emu, endeavoured to do my duty to the best of my ability, and believe I have the sympathy of the whole community here.

My predecessor, Mr. Paul, was tormented and persecuted by Mr. Gurney until he was actually compelled to leave against his own wish, and against the wishes of the people.

I got on very well with Mr. Gurney until I found out that he sent my little children privately to the public-house for grog for his use, and my remonstrance with him against such conduct was the cause of the first ill-will on his part towards me and mine.

I declare solemnly that what I have stated in this letter is in strict accordance with truth, and I now leave myself in the hands of the Council, feeling confident I will receive justice and consideration, which I can never expect from the Chairman of the Local Board here.

I have, &c.,
EDWARD JUSTELIUS.

P.S.—“I forgot to mention that on one occasion I said to Mr. Gurney, ‘I consider you are not fit to be a clergyman when you send to the public-house on a Sunday morning for grog.’—E.J.”

No. 26.

THE REV. G. GURNEY to THE COUNCIL OF EDUCATION.

Parsonage, Emu, 1 February, 1875.

GENTLEMEN,

I much regret that I have to lay another complaint against Mr. Justelius. As he is to be removed to another school I should much prefer keeping silence, but he is so misrepresenting matters and spreading such false reports that in self-defence I am compelled to take this course.

On the evening of the 25th January ultimo my son George had a dispute with his two sons, and under great provocation George gave them each a box on the ears. His sons have often struck my boys. Now, I much regret such proceedings, and would have prevented it had I been present, or made him apologize *at the time, if I had been asked*; but Mr. Justelius took the law into his own hands, and rushed at my son horsewhip in hand. George retired behind me, and then passed within my Mr. Justelius was so excited that in his efforts to get at my son, and escape from his brothers-in-law, that he left his coat and then his waistcoat in their hands. He then tried to enter my gates, but my daughter stood in the way to keep the fastening down. At this stage he shook his fist at her and said, “I will give it you when I get you outside.” Before retiring he offered to fight me, called me liar, snotty wretch, and said, “You preach on Sunday, but are a devil on Monday.” His next step was to take out a summons against my boy, and ask leave of you to close the school on Friday to watch the case, which did not come on. He stated to Mr. Wynne, lessee of the railway bridge, that he came quietly up to me to ask my interference, and that my answer was a blow between the eyes, but that he thanked God he had sufficient resolution to restrain himself from returning the blow. I never raised my hand to him or any man in my life to strike. I am “*no striker*.” My son, wife, and daughter were all present and can bear me out as to the truthfulness of this statement. Had he got at my boy my belief is that he would have dealt him a blow from which he would not have recovered easily. He has gone in again to-day to take out another summons if the Clerk of the Bench will give it.

On Friday last, the 29th, he came and asked me to allow the 25th to be as though it had not been. Had he withdrawn the charge about me (*i.e.*, the charge of striking Justelius) I would have agreed but he would not give the contradiction in writing. I asked him, “Dare you say that I struck you?” His reply was, “I was so excited I do not know or remember what did take place. I believe you did not,” and stated that he would take his oath that he did not tell the lessee of the bridge as reported, but he would not write anything down, and so the interview ended. On Saturday last I sent my boy to say that I was willing, in the interests of peace, to erase the 25th from my memory. I would have done so had he only remained quiet. But he tried to get my son to sign a document in an underhand way, which he had previously stated in the town he would make as public as possible. When he asked my son to sign the paper he said, “It is nothing to do with your father.” I never in my life witnessed such an exhibition of temper as Mr. Justelius displayed on Tuesday last.

The petition he sent in to you lately from Emu was signed by people who *as a rule* did not belong to either church or school. I am willing to account for every signature if only I am given an opportunity.

As a general rule signatures to petitions are easily obtained, and one or two of note may account for the rest.

I have, &c.,
GEORGE GURNEY.

THE REV. G. GURNEY to THE COUNCIL OF EDUCATION.

Parsonage, Emu,
3 February, 1875.

GENTLEMEN,

Mr. Justelius was in Sydney all day on February 2 (yesterday), and left the school in the hands of his wife. I gave him no permission, nor do I know of any person—entitled to give such permission—having been applied to.

This seems to me as very irregular.

I have, &c.,

GEORGE GURNEY,
Chairman of Local Board, Emu Ch. of Engd. Cd. Denl. School.

No. 27.

THE SECRETARY TO THE COUNCIL OF EDUCATION to THE INSPECTOR OF SCHOOLS, CUMBERLAND DISTRICT,
FOR inquiry and report as to grounds upon which Mr. Justelius's removal is deprecated and his retention is desired.

Very urgent.—2/2/75.

W.W.

B.C., Secretary,—

1. Fifty-one signatures are affixed to this petition in favour of Mr. Justelius. Of these, *thirty-five* belong to the Church of England, *twelve* are Wesleyans, *three* Presbyterians, and *one* Roman Catholic. There being no other school in the locality but the Emu C. E. one, *persons of all denominations are interested in the school and the teacher.*

2. From Annex B it will be seen that the petitioners represent thirty-nine children in attendance at the Emu C. E. School, the number enrolled therein being for last quarter forty-six. It appears therefore that nearly all the parents of pupils have signed the petition, and they are all, I believe, *bonâ fide* residents of Emu Plains.

3. I visited Emu Plains yesterday, and met a number of the petitioners (17), whose statements as to the grounds on which they signed the petition are appended hereto in Annex B, and require, I think, no comment from me beyond this, that they were taken down singly with the most scrupulous care, each one being called in as required, and Mr. J. T. Ryan, a member of the Local Board, being present as well as Mr. Wood. Neither of these gentlemen *were* allowed to take part in the proceedings by asking questions, &c.

4. I met the persons whose statements are given in Annex A in Mr. Wood's house. To have conducted the inquiry in the schoolroom would have necessitated the closing of the school, and would have brought the petitioners into collision with Mr. Gurney, which in the circumstances it was, I think, well to avoid.

J. M'CRENIE, Inspr., Cumbd. Dist., 4/2/75.

Emu, 3 February, 1875.

STATEMENT of persons who signed the petition in favour of Mr. Justelius, of Emu C. E. School, dated 1 January, 1875.

(1.) *Mr. James T. Ryan* :—My reason for signing the petition was this, that I do not believe any schoolmaster could agree with Mr. Gurney. From all I could glean from the people, I believe that Mr. Gurney is in the wrong in his disputes with Mr. Justelius. The former teacher—Mr. Paul—left because of his disagreeing with Mr. Gurney. I am a member of the Emu C. E. Local Board.

JAMES T. RYAN.

(2.) *Mr. John Haydon* :—Until a fortnight ago I was one of the churchwardens in connection with the Emu Church of England. My opinion was in favour of Mr. Justelius, because my child got such good learning from him at the school. Though I am a churchman, I think Mr. Gurney is in the wrong in his disputes with Mr. Justelius; and it is, so far as I can learn, from intercourse with the people, the general opinion. I therefore signed the petition in his favour.

JOHN HAYDON.

(3.) *George Henry Dempsey* :—I signed the petition in favour of Mr. Justelius, because I believe Mr. Gurney to have been in the wrong in his disputes with him from my own personal knowledge. My orchard is close to the church and school, and when in it I heard them disputing one day. I then heard Mr. Gurney make use of words that I thought very improper for a clergyman. Mr. Gurney then called Mr. Justelius a "rascal" or a "scoundrel,"—I am not sure which. I went away at once lest I should be called as a witness and did not hear any more. The general opinion is that Mr. Gurney is in fault. It is horri-fying to me to hear my children rehearse what takes place between the Minister and schoolmaster. I am a Roman Catholic.

G. H. DEMPSEY.

(4.) *Mr. Wm. Wagstaff* :—I signed the petition because I thought Mr. Justelius to be a proper man for Emu C. E. school. I am of opinion that the schoolmaster is in the right and Mr. Gurney in the wrong in the disputes that have taken place between them. He had a good schoolmaster, Mr. Paul, here before, and he was not satisfied until he got him shifted. The common opinion among the people is that Mr. Gurney should be removed and not Mr. Justelius. I belong to the Church of England.

WILLIAM WAGSTAFF.

(5.) *Mr. Isaac Innes* :—I live at Emu Plains, am a member of the Church of England, and have four children attending the school. I signed the petition in favour of Mr. Justelius, because I firmly believe that Mr. Gurney is in the wrong in his disputes with the teacher. They have both talked to me about their disputes, and I believe Mr. Gurney to be in the wrong. I have only heard one person speak in favour of Mr. Gurney in the matter; all but that one whom I have heard speak about these matters are against him (Mr. Gurney.)

ISAAC INNES.

(6.) *Wm. Ellison* :—I live at Emu Plains, and am a member of the Church of England. I signed the petition because I thought Mr. Justelius was being removed on account of being incompetent, and I did not think him so. I thought it had been represented to the Council that the people wished his removal, which I knew not to be true. I have heard about the quarrels between the teacher and Mr. Gurney, and I am of opinion that if a fresh teacher came here to-morrow he could not agree with Mr. Gurney. In fact I think no one could do so. I believe him to be insane, judging from his acts. It is the common opinion that he (Mr. Gurney) is quite in the wrong.

WILLIAM ELLISON.

(7.)

(7.) *Daniel Upton* :—I live at Emu Plains, and go to the Church of England there. I think Mr. Gurney is in the wrong, so far as I have heard and can judge of the disputes between them. I believe that the most of the people are in favour of Mr. Justelius. The former teacher, Mr. Paul, and he (Mr. Gurney) often disagreed, and it was reported that he went away on that account.

DANIEL UPTON.

(8.) *Mrs. Charles Beasley* :—I live at Emu Plains and attend the Church of England there. I have three children attending school, and two more ready to go as soon as this disputing is settled. I signed the petition because I think Mr. Justelius is in the right and Mr. Gurney in the fault in the quarrels that have taken place between them. I am perfectly sure of this from what my eldest daughter, who is fifteen years old, has told me when she has come home from school. All that I have talked with about it take the part of Mr. Justelius. My husband is now in Queensland. If another teacher came I believe he would not agree with Mr. Gurney.

SARAH BEASLEY.

(9.) *Mark Towle* :—I live at Emu Plains, and am a Baptist, but my children attend the Church of England and go to the school. I signed the petition in favour of Mr. Justelius because I believe Mr. Gurney to be in the wrong and Mr. Justelius to be right. The general opinion of the people is, I think, that Mr. Gurney is not a fit and proper person to be over any school. I keep a store and have dealings with Mr. Gurney, and have stopped his credit because I can't trust him. He takes a large quantity of chlorodyne. He has had as many as 3½ dozens of bottles of chlorodyne—some of them costing 3s. 6d. each—in five weeks or thereabouts, and I believe he takes it to excess.

M. TOWLE.

(10.) *Jacob Innes* :—I live at Emu, and attend the Church of England there. I have three children at school. I signed the petition because I think Mr. Gurney is in the wrong in the disputes between him and the teacher. The general opinion agrees with mine. If anyone needs removal it is Mr. Gurney.

JACOB INNES.

(11.) *James March* :—I live at Emu, am a churchman, and have got a grandson at school. I signed the petition because I think Mr. Gurney is in the wrong in the quarrels between him and the teacher. My grandson is fourteen years old, and he told me not long ago that Mr. Gurney kicked up a great row with Mr. Justelius in the school. All that I have heard speak about these things are against Mr. Gurney.

JAMES MARCH.

(12.) *William Poll* :—I live at Emu, and go to the Church of England; I have three children at school. I signed the petition because I thought Mr. Justelius to be in the right, and not Mr. Gurney, in their disputes. My children used to come home and tell me about them. All that have spoken to me about them believe Mr. Justelius to be in the right. If any one is to be removed I think it should be Mr. Gurney.

WILLIAM POLL.

(13.) *Wm. Lucas* :—I live at Emu, and am a Wesleyan. The former teacher, Mr. Paul, left, I believe, through the interference of Mr. Gurney. Mr. Justelius is liked by the people generally. From what I have heard I believe Mr. Gurney has the sympathy of scarcely any one on Emu Plains, and I believe, in common with nearly all here, that Mr. Gurney is wrong in his interference with Mr. Justelius. I therefore signed the petition in the latter's favour.

WM. LUCAS.

(14.) *John Ryan* :—I live at Emu Plains, and belong to the Church of England. I signed the petition because I believe from what I have heard that Mr. Gurney is in fault in the disputes with Mr. Justelius. I have never heard any one defend Mr. Gurney in the matter. The former teacher, Mr. Paul, could not agree with Mr. Gurney, and left in consequence.

JOHN RYAN.

(15.) *John Bissland* :—I live at Emu, and am a Wesleyan. I had two children at school until lately. I signed the petition, because I thought highly of Mr. Justelius as a teacher and a man, and considered Mr. Gurney's conduct towards him to be wrong. The general impression is that his conduct is deserving of censure, and that he is unworthy of his high office. In my opinion he is insane.

JOHN G. BISSLAND.

(16.) *Jonathan Mullis* :—I live at Emu, and am a Wesleyan. I have two children at the Emu C. E. School. I signed the petition in Mr. Justelius' favour, because I heard that Mr. Gurney was keeping annoying him, and thought he (Mr. G.) was wrong. This is the general opinion of people here. My children have told me several times of quarrels between them in the school.

JONATHAN MULLIS.

(17.) *Wm. Henry Wood* :—I live at Emu, and belong to the Wesleyan Church. I signed the petition because I know Mr. Gurney to be in the wrong, from his own talk to me. I have every confidence in Mr. Justelius as a teacher and a gentleman, and I believe it is the general impression about here that Mr. Gurney is totally unfit for the position he occupies. My boy has repeatedly come home and spoken of the disturbances in school caused by Mr. Gurney. He told me that Mr. Gurney called Mr. Justelius a liar one day. I believe that several children have been taken away from the school on account of Mr. Gurney's conduct.

W. H. WOOD.

Mr. E. Justelius to Mr. Inspector M'Credie.

Cert. C. E. School, Emu, 3 February, 1875.

Sir,

In compliance with your request, I have the honor herewith to furnish you with the number of children who attend this school, belonging to each of the householders who signed the petition against my removal.

No. 28.

THE REV. G. GURNEY TO THE COUNCIL OF EDUCATION.

Parsonage, Emu,
3 February, 1875.

GENTLEMEN,

A meeting took place at Mr. Woods', a Wesleyan, Mr. M'Credie in the chair. None of those in my favour were allowed to enter the room. The people assembled first at the school and then retired to Mr. Woods', Mr. M'Credie (Inspector) stating that it was more than his place was worth to hold it in the school without the permission of the Council.

I consider that it is not the part of an Inspector to attend such party meetings or to help a political or sectarian movement against the Chairman of the Local Board. I consider it my duty to inform the Council of such proceedings. Mr. Justelius took an active part in the late election in favour of Mr. Ryan, denouncing me at a meeting held here at a public-house. I recorded my vote in favour of Mr. Shepherd, but otherwise attended no meetings and influenced no voters.

I remain, &c.,
GEORGE GURNEY.

P.S.—Mr. Wood was in the chair, but Mr. M'Credie arranged everything.—G.G.

No. 29.

MR. E. JUSTELIUS TO THE SECRETARY TO THE COUNCIL OF EDUCATION.

Cert. C.E. School,
Emu, 4 February, 1875.

SIR,

I have the honor to request that the Council will be pleased to permit me to close this school for *one* day next week, for the purpose of attending at the Police Court, Penrith, in an assault case between myself and the Rev. G. Gurney, and in which case I am the plaintiff.

I have, &c.,
EDWD. JUSTELIUS.

No. 30.

THE REV. G. GURNEY TO THE COUNCIL OF EDUCATION.

Parsonage, Emu,
5 February, 1875.

GENTLEMEN,

On the evening of the 3rd instant I wrote to Mr. Justelius for his authority for leaving his school all day on Tuesday, the 2nd, for Sydney. The same evening, he gave written reply that a member of the Local Board had given permission. On the morning of the 4th I wrote for the name of the member of Local Board, but received no reply till he had sent a note or message to Mr. J. T. Ryan, and received a note from that gentleman in reply. He then wrote to say that the name of the member of Local Board was J. T. Ryan, Esq.

I then wrote to ask if the permission was given *prior* to his going to Sydney, and in writing; after waiting (30) thirty hours and no reply I conclude, as I have all along suspected, that he left his post hurriedly at 6 in the morning of Tuesday without any authority.

Being the Chairman of Local Board, his duty was clearly to apply to me (living as I do within a stone's throw) in the first instance, but this he did not, nor did he acquaint me of his having gone, or his intention previously to go.

I am satisfied in my own mind that he has not acted properly on this occasion.

I am, &c.,
GEO. GURNEY.

No. 31.

THE SECRETARY TO THE COUNCIL OF EDUCATION TO MR. E. JUSTELIUS.

Council of Education Office,
Sydney, 9 February, 1875.

Your letter, dated 4th February instant, requesting permission to close school for one day.

The Council has granted you permission to close the above school for one day during the current week, for the purpose mentioned in your letter. Be good enough to report to this office the day on which you were absent from your duties.

W. WILKINS,
Secretary.

MR. E. JUSTELIUS TO THE SECRETARY TO THE COUNCIL OF EDUCATION.

Certe. C.E. School, Emu,
10 February, 1875. 7 p.m.

SIR,

I have the honor to acknowledge your memo. of 9th instant, received this moment, intimating that the Council has been pleased to grant me permission to close this school for one day during the current week.

Friday being the only Court day during this week, and being summoned to attend an investigation to be held in this school on that day, I shall not be able to take advantage of the permission given, but must postpone the Court business until some other future day.

I have, &c.,
E. JUSTELIUS.

No. 35.

REPORT OF SIR ALFRED STEPHEN AND S. C. BROWN, ESQ.

Emu Plains C. E. School.—Complaint of the Rev. G. Gurney against the teacher—E. Justelius.

THE first charge is in substance that Mr. Gurney went to the school on 14th December last for the purpose of giving religious instruction there, and that he was obstructed by the teacher's interference, gross abuse, and insolence, extending even to the shaking of his fist in Mr. Gurney's face, calling him a liar and scoundrel, trying to tear one of the school-books out of his hand, walking noisily up and down the room, &c. The whole of this is denied by the teacher.

We examined one witness, a lad of 15, called by Mr. Gurney; three boys and one girl, aged respectively 14, 10, 13, and 10, called by Mr. Justelius, and were addressed by both parties.

Mr. Ryan, a Member of the School Board, was present during the investigation. The children were examined separately.

Not one of the witnesses heard the word scoundrel, nor saw Justelius shake his fist, or walk noisily in the room. Nor did they hear a certain threat which Mr. Gurney's letter mentions.

But, in effect, they all agree in the following version of the scene: Mr. Gurney commenced, after announcing that he came to give religious instruction, by a complaint respecting the church-yard fence, which he accused Justelius's sons of having broken, saying that they took the grass for their father's horse. An altercation ensued; Justelius, who is evidently a very excitable person, observing that Mr. Gurney's only right there was to give religious instruction, or that *that* was not religious instruction. In the course of the dispute, Mr. Gurney having taken up the school *Fee* Book by mistake, supposing it to be the *Visitors'* Book, and insisting on its being the latter, Mr. Justelius tried to take the book from him, and during the struggle, which ended by the tearing of the book, or about that time, Mr. Justelius used the grossly offensive words which follow. He said that if Mr. Gurney persisted in calling the book the *Visitors'* Book he told a lie, or, according to one of the lads, he must be a liar. He also said that Mr. Gurney wore a black coat, but had a blacker heart beneath it.

It is impossible that such language as this, addressed to the clergyman and Chairman of the School Board, can be characterized otherwise than as in the highest degree improper. On the other hand, large allowance must be made for a teacher whose children were charged in the school with stealing, and who had, in presence of all assembled, been called an impudent person, and threatened with suspension, as Justelius was that morning by Mr. Gurney. Scarcely a month had elapsed, moreover, since the termination of an inquiry, instituted at Mr. Gurney's instance, on the latter's complaint, that Mr. Justelius was a Wesleyan, the object of which was to effect the teacher's removal. The charge turned out to be utterly without foundation. And we conceive that, under such circumstances, even had there been no ill-feeling between them existing of an earlier date than September last, Mr. Gurney is seriously to blame for commencing another cause of quarrel; and especially for introducing it in the school hours, before the children. That in fact such an ill-feeling did exist, we gather from Mr. Gurney's own letter, referring to some statements reflecting on him, or on a member of his family, made in that year, or said to have been made by Mr. Justelius.

We think it a duty to add, as the papers in the case conclusively show, that the teacher is highly approved of and supported in the district; and that the parents almost unanimously (those who represent thirty-nine of the children having signed a petition to that effect) would much regret his removal. Our own conclusion is, that the version of the unfortunate disturbance, which we have stated to have been given by the witnesses examined, is a correct one in substance; and that, however censurable Mr. Justelius may be for the language into which he was betrayed, it would not be just to remove him.

The second charge made by Mr. Gurney is founded on an occurrence, not affecting Mr. Justelius's conduct as a teacher, but relates entirely to an altercation which took place on the evening of the 25th ultimo, in some open ground adjoining Mr. Gurney's residence, and which commenced, it seems, in a disturbance or quarrel between the children of the parties. Upon the whole, we thought it expedient to
enter

enter on this charge also, as it imputes to the teacher not only most offensive language towards Mr. Gurney, but also an unbecoming threat to his daughter, and an attempt to enter that gentleman's gate in order to commit an assault.

We deeply regret to say that the evidence on this charge was so conflicting as to render it impossible for us to arrive at any conclusion perfectly satisfactory to our own minds. Mr. Gurney's son, a young gentleman of 17, who attends the Glebe Point classical school, and the daughter, a girl aged 15, who gave her evidence calmly, and with apparent truthfulness, confirmed their father's representation substantially throughout. Two brothers-in-law of Mr. Justelius's, on the other hand, named William and James Bowles, utterly contradicted the Gurneys in every particular; and even declared that the only violence exhibited on the occasion was by Mr. Gurney, who struck Mr. Justelius on the chest without provocation. If we applied the established legal rule, that every complainant must establish his case by preponderating testimony, we should be compelled to say of the present that it was "*not proven*." But as Mr. Justelius has initiated proceedings before the Penrith Bench, we abstain from pronouncing any opinion on the facts. It is not improbable that his complaint, therefore, may—on the same principle to which we have adverted—be dismissed as unsubstantiated. We have ourselves no doubt that both Mr. Gurney and Mr. Justelius were exceedingly excited; so that each may unconsciously exaggerate, or even (possibly) invent matters. And the painful contradictions mentioned by us may perhaps be explained—to some extent at least—by the supposition that the two sets of witnesses really refer to different points of time.

15th Feby., 1875.

ALFRED STEPHEN.
S. C. BROWN.

No. 36.

THE REV. G. GURNEY TO THE COUNCIL OF EDUCATION.

Parsonage, Emu.

18 February, 1875.

GENTLEMEN,

When Sir Alfred Stephen and S. C. Brown, Esq., were down here on the 12th instant, I stated that *one* of my *witnesses*, Richard Wynne, was not present, being away at Narellan. Sir Alfred told me to get his evidence and forward it by post. Mr. Wynne returned yesterday to the toll over the Nepean River, Emu and Penrith, and this morning I wrote at his dictation the accompanying, which he signed in the presence of myself and my son George. Its value consists in this, that the statement entirely contradicts the statement of his two brothers-in-law, the Messrs. W. & J. Boles, who stated that I hit him in the *chest*; and Mr. Justelius's statement to me in my house, sworn to by my daughter, as stated in my note February 1, that to the best of *his* recollection I did not hit him at all, which was of course the only true statement. My children—George, 17, now in eighteenth year, and Florence Clifton Gurney, 15 in November last year—both being present, stated most distinctly that I did not strike him. My wife and my second son were also prepared (as I stated to you) to swear the same, and I am quite sure that none of them would tell an untruth even to shelter their father; and I again assert that *I never* struck him; and I am quite sure no one who knows my disposition would believe it for one moment.

You may say why should his brother's statement be doubted. Does not the reason suggest itself? Have they not indeed tried to prove too much for their brother-in-law? I think it manifest. Would a clergyman without any provocation strike a *man* deliberately, as the brothers-in-law state, and as an answer to a very proper request, if it was as they stated? My belief is that the man is a very *wicked man*, and at times I think not in his right mind. Mr. Justelius has told Mr. Squires, of Penrith, that Sir Alfred Stephen said to *me* during the inquiry: "Is that the way you preach the Gospel?" Did Sir Alfred say so; if so, to what did it refer? He is making other false statements as to what took place, and I am not inclined to follow and contradict him. Surely justice will soon overtake him. I do not wish him to be ruined; but the further he proceeds matters become more serious, and from the Council I shall, I fear, have to appeal to the law, a last resort, and one which as a minister I abhor.

I have, &c.,

GEORGE GURNEY.

P.S.—One more word: When Mr. Justelius took out a summons against my boy on the 27th January, why not take one against *me*? Why pass over the graver and neglect the greater offence? He has not taken one out against me at all.

I am more than ever convinced that the five children who gave evidence in school were told what to say. I will never rest till I find out the truth.

[Enclosure.]

Nepean Bridge, Penrith,
18 February, 1875.

I, RICHARD WYNNE, lessee of the Nepean Bridge (toll), state as follows:—That on the 27th day of January ultimo Mr. Ed. Justelius, Teacher of Emu C. of E. Denoml. School, said as follows:—"I have just taken out a summons against George Gurney (the younger) for beating my boys." * * * "I would not have done so, but when I went to Mr. Gurney to ask him to chastise George he struck me a blow *as hard as he could between the eyes*." I said I am surprised at Mr. Gurney doing so—I can scarcely credit it—when he replied, "I had two gentlemen present who witnessed it," and further, "I thank God I was prevented from retaliating."

I, Richard Wynne, am prepared to state the above on *oath* if required.

RICHARD WYNNE.

Signed in presence of,—

REV. G. GURNEY and } Witnesses to signature.

THE SECRETARY TO THE COUNCIL OF EDUCATION TO MR. E. JUSTELIUS.

Council of Education Office,
Sydney, 19 February, 1875.

Charges preferred against you by Rev. G. Gurney.

HAVING carefully inquired into the charges preferred against you by the Rev. G. Gurney, the Council is of opinion that you are not deserving of removal from your present position on account thereof. I am, however, to caution you as to the necessity for avoiding the use of discourteous or improper language towards members of the Local Board.

W. WILKINS,
Secretary.

No. 38.

THE SECRETARY TO THE COUNCIL OF EDUCATION TO THE REV. G. GURNEY.

Council of Education Office
Sydney, 20 February, 1875.

REV. SIR,

I have the honor, by direction of the Council of Education, to acquaint you that, after full and careful inquiry, the Council is of opinion that Mr. E. Justelius is not deserving of removal from his present position as teacher of the Certified Denominational Church of England School at Emu, on account of the charges preferred against him in your letters dated respectively 14th December last and 1st February instant.

I have, &c.,
W. WILKINS,
Secretary.

No. 39.

THE SECRETARY TO THE COUNCIL OF EDUCATION TO THE REV. G. GURNEY.

Council of Education Office,
Sydney, 26 February, 1875.

REV. SIR,

With reference to your letter of 18th instant, I am directed by the Council of Education to transmit herewith a copy of the report brought up by Sir Alfred Stephen and S. C. Brown, Esq., on the charges preferred by you against Mr. Justelius, teacher of the Certified Denominational Church of England School at Emu. This course is adopted in order that you may see that the point referred to in your communication under notice was not decided by the Council.

I have, &c.,
W. WILKINS,
Secretary.

No. 40.

THE REV. GEO. GURNEY TO THE COUNCIL OF EDUCATION.

Parsonage, Emu,
February 22, 1875.

GENTLEMEN,

I regret that I am unable to accept your decision as final on my two notes, dated respectively Dec. 14 and Jan. 1, and most respectfully inform you that I am compelled to appeal to the Bishop to take up the matter.

I have been requested to forward you the enclosed petition.

I have, &c.,
GEO. GURNEY, B.A.

[Enclosure.]

To the Council of Education, Macquarie-street, Sydney,—
Gentlemen,

We, the undersigned heads of families, and others attending divine worship at St. Paul's Church of England, Emu, having heard with sorrow and indignation of the meeting lately held at the private residence of Mr. W. H. Wood, Emu, a Wesleyan, and attended chiefly by members of that persuasion, in the presence of the Government Inspector of Schools, and from which all were excluded who would not sign a certain petition in the interest of Mr. Justelius, at present teacher of the Church of England Certified Denominational Church of England School, Emu, beg to state as follows:—

- (1.) That, in our humble opinion, the presence of the Inspector at such a one-sided meeting is highly injudicious, as calculated to impair his usefulness and injure his reputation for fair dealing.
- (2.) That we consider ourselves bound in self-defence to state, that the teacher now in charge of the school at Emu does not possess our confidence as an instructor of youth, and that in consequence we are unable to send our children to the said school.
- (3.) That some of us have been obliged to withdraw our children from the school in consequence of the improper language used by the said teacher in the presence of our children, and reported to us by them on their return home.
- (4.) That we consider the teacher's conduct to our Minister as grossly insulting,—degrading, as affecting his own position as a teacher,—and injurious as regards the morals of the pupils under his charge.
- (5.) That his conduct during the late election of a Member for Parliament was most unbecoming a teacher, calculated to degrade the calling to which he belongs, and promote ill-feeling amongst the parents of his scholars.
- (6.) That, whilst we might speak our minds more freely as to our opinion of his late behaviour, we content ourselves with stating that so long as he remains in charge of the above-mentioned school our children shall not attend that institution.

No. 41.

THE REV. G. GURNEY TO THE COUNCIL OF EDUCATION.

Parsonage, Emu,
5 March, 1875.

GENTLEMEN,

I am no lawyer, and consequently unable to handle your report as would one learned in the law, but as the judgment given by you affects me very seriously—yea, painfully, for it affects my veracity, (upon which it appears to me to reflect),—I may be pardoned if, knowing as I and many others do, that “they have spoken against me with lying lips”, I endeavour to throw additional light upon the subject, by correcting a few mistakes into which the Council have fallen, and supply other information bearing directly upon the matter, though not yet noticed.

And here allow me to say that you have not given the matter that sifting which you yourselves would have demanded had you been in my position.

I lay this down as a fact indisputable: That in judgment No. 1 on my letter, December 14, 1874, either I or Mr. Justelius have lied; and in your report No. 2 on my letter, 1st of February, 1875, that either I, my son (late of the Collegiate School, Glebe Point), and daughter, or Mr. Justelius and his two brothers-in-law, have lied; and however painful the reflection, or however difficult the approach to a decision, I think you are bound to attempt it, by weighing the motives, the temptations, and the effects of the possible issues or results.

Your remarks about the failure of the first charge, and the indelicacy of making another so soon after, are entirely beside the mark. What was the first charge referred to? That the teacher was a Wesleyan. I repeat the charge, and it was only because that he lied that it was not proved, and that I was too truthful. Both the teacher and only witness lied.

If of any denomination, Mr. Justelius is a Wesleyan. His father, mother, brothers and sisters in law are all Wesleyans. His family and wife are Wesleyans; and he told me, and Mrs. Justelius told Mrs. Gurney, that when they were married he joined the Wesleyan persuasion, and was in connection with them during the six years of his residence at Paddington. Enquire of Jarret, of the “Royal Oak,” or Garrett of the butcher’s shop, near the “Royal Oak,” if he was not known as a most quarrelsome man during the time he lived near them employed as a “hide scraper,” or tanner of hides for the tannery, and if he did not attend the Wesleyan Chapel. That he had attended while *here* the Sacrament *once*, and once only, proves nothing, or that he had two children baptised in my church, for he held a Church of England post, he eat church of England bread, lived under a Church of England roof, rent free; had every kindness shown him by the Church of England minister, and the only *school testimonials* that he ever received (and I think ever will) collected and subscribed by myself and daughters, and as he was then pleased to say, that he never met with a more kind and liberal minister, and even told the children in my presence (which I did not care for) that they never had or could have a more generous or kind friend. But to return: had he gone to the Wesleyans to baptise his children (two out of nine, seven being baptised in the Wesleyan Church), would it not have rather unpleasantly compromised his position and have furnished me with a proof (which *unlike* his own word, and repeated assertions for two years) could not be denied, because furnished in black and white.

And besides the custom is common in the country. Some Wesleyans attending the chapel have an *idea* that Wesleyan baptism is not valid. Others do so for the sake of Wesley’s example. Others because they themselves were, and their other children were, and they not being bitter in their antipathies, or extreme in their views, prefer to do so to the end, for they retain a love of the *Mother Church*, and live from other than theological motives. Can you dispute this? In England in the rural districts it is more than common—almost invariable. I am not extreme; but if so, it is extreme *in the liberal sense*. I would like, if possible, the exchange of pulpits where practicable. I say this because I have been unjustly accused of *persecuting Mr. Justelius* for his *Wesleyan views and sympathies*. The census last taken will convince you. When asked how he signed he would not reply. He remembered how he had entered his wife and family as Wesleyans, but forgot when asked how he answered for himself. *Mr. Inspector suggested probably a Protestant*, and he adopted it. He told me that he *was*, in the face of my whole family, and never denied it till the 10th clause was appealed to. Ask in Paddington, where he was employed in preparing hides for the *tannery*, and was known as a most quarrelsome person, so much so that at last no person could look over the dividing-fence of his yard without a threat of Court work. His family were called by a very appropriate expression which I will not adopt here. When Mrs. Lowe, down here, told the Justelius’ of it, he denied the whole most positively, and threatened her with an action for slander and lies. But he knew better, for the young ——— were down here and confirmed every word. He has every Wesleyan in the place with him. With Mr. Gunther, only six months a provisional school, the service was held in the schoolroom, so of course he attended. He was also on trial, so to speak, after six years not under Council. Why did he leave ——— Church of England School? My impression is quarrelsomeness. I may be wrong; but how otherwise account for his six years’ disconnection with the Board, during which time he was very poorly off?

Your

Your report says six. "Five children were examined," all of whom attended the Wesleyan Church and Sunday-school (except one Beasley), concerning whom I will only write he had been better without her. Rayner (the one called in by me) was one of the five called in, and one of the *twelve on his list*. Mr. Justelius had these names on a list. Why?—because he knew he could trust them; and if you will let me see you I will say more, but not here, *about them*.

Now, gentlemen, you accuse me of *ill-feeling*. I have *none* towards Mr. Justelius. I cannot *respect* him after his behaviour, or hold further communication with him, but my worst enemies would hardly accuse me of ill-feeling in your sense. I would do him a good turn to-morrow if I could without the sacrifice of truth or character, but please remember he has called me a *striker*, and has *denied everything he has done*, or so coloured it as to make it appear quite different.

But you say great allowance must be made for a teacher, and who was called an *impudent fellow*, and his children accused of *stealing*. The latter I take first. The charge of stealing is simply ridiculous. The grass was taken, he allowed, by himself and son James, the latter having since cut his hand severely in cutting the said grass, but the *grass is common property*, all who choose being allowed to take it; but you still say the fence was broken. I never saw it. The rails were simply left down, being removed to admit of the grass being more easily passed through. This is *all*, and even this I said not *wilfully* but *carelessly*; and if Mr. Justelius had not interfered all would have been settled in a few words. "*Impudent fellow*" is rather a *mild* mode of addressing one who had shaken his fist in my face, threatened me with different treatment had I been outside, and called me vile and wicked names, and was even then interrupting me when the class were reading the Bible, stamping so loud as to have been heard over at my house, and caused the occupants to come out to see what was up. The threat of suspension after all this was so far justifiable, and I think ought to have been put in execution; and I venture to say that any one of you, being in my position, would have done it. The word "*scoundrel*" was *distinctly heard at the parsonage*, and loud language. I ask you, gentlemen, would you ever again enter the school were you in my place? You have given over the school to him virtually; and all who do not think with him, including nearly all the *Church of England* who used it, have for the present withdrawn from it. I was the only member of the Board who could find time to attend. It is generally so, I think, in small country districts. One member acts and does all, but now he might spit in my face—*deny the fact*. The children *dare* not support me, and so he has *all to himself*, but not for the good of the school, or even himself ultimately.

But may say all this is very well, but it does not leave the master a truth speaker. Does this astonish you? I do not think many down here would be. The story of the snake is too well known to be denied. The habit of romancing is given him by nearly all. But you say he has the confidence of parents representing 39 children. Not so. I venture to say that not one is really satisfied with him in that sense. I asked one why he signed? His reply is:—"I was misled as to the object, and told it would not injure you." (D. Upton.) Another is asked, not from any desire to injure you, or particular liking to Mr. Justelius, but to make it a Public School; and so it goes on. A large number signed the petition out of ill-feeling towards me, but perfect indifference to the teacher, of whom they knew little or nothing. You, gentlemen, ought to live here for a few months in the year, and you would know more. I can say safely for *Mr. Ryan* that the morning after he lost the election he wrote me to take his name off the seat. I voted for Major Shepherd. Ask him about this. I never influenced one vote, or left my house to speak to any about the elections, or cared much which way they went. Mr. Justelius attended his meetings and Paul's public-house—spoke in conjunction with Wood against me in a most disgraceful manner, and was rewarded by *Mr. Ryan's support*.

The Wesleyan clergyman voted for Mr. Ryan. The clergyman from Mulgoa did also. He is of the same lodge as Mr. Ryan. The Rev. J. Vaughan and I gave our votes to Major Shepherd, and this one vote of ours alienated the whole Ryan family, and that embraces in its connections nearly all Bunu.

Now your report on the letter of the 1st January, I need hardly say again that there was most awful lying on one or the other side. It is folly to try and say it may be accounted for by the two sets of witnesses referring to different periods. This supposition, however painful to acknowledge, is simply impossible. I need hardly say that I never struck him; and you will remember that I asked you to put the witnesses on oath. The mere weight of numbers is nothing. You arranged for three on each side, or others could be called, but you must weigh the motives, the probable effect of the truth being spoken, the appearance of the witnesses, their interest in the issue, or that of those for whom they spoke. I know Sir Alfred and his coadjutor S. C. Brown, Esq., felt that Florence Gurney spoke the truth. You say in your report, "who gave her evidence with calmness and with apparent truthfulness." And as regards my son George, I never knew him to tell a lie. As a child he never slept at night if during the day he had unintentionally misled me. Even though the consequences might be serious to himself, he always considered punishment more welcome than untruthfulness. But ask Thomas J. Bowyer, M.A., Principal of the Collegiate School, Glebe Point, what reliance may be placed on George Gurney's word. *Failure* would not permanently hurt me. On the other side the consequences ought to be instant *dismissal*,—that is, if all were to prove true, and were that your judgment, I should be found, I hope, the first to say, "give him another trial," and you would see that I had no ill-feeling. When false witnesses stand up they never agree. Examine the witnesses: *Two* say the blow was deliberate in the *chest*, and that I took hold of his *coat* (the coat was not on him when he came up to me, and I had the baby even after he did reach me, and it was for fear of his striking the baby it was taken out of my arms). But further he told me (and Florence heard him) that he did not remember he was so excited, but so far as he *did* I did not strike him. He told *Mr. Wynne* that the blow was with all my might *between his eyes*. One brother saw the whip held over my head; the other, James, did not see it. James left very early, and saw, he said, no more.

William Boles there throughout heard no abusive language throughout on either side; both say I struck him without any provocation. Now, gentlemen, examine all this: Does it agree?—and if it proves anything does it not prove too much. On the other side you own there is calmness and apparent truthfulness, and in the main as much agreement I think as three witnesses called one by one—two *vidé voce*, and one written weeks before; and yet they agree, so much so as to suggest the thought, perhaps they refer to different periods: No, no!

Moreover, Mr. Justelius has not taken the matter into Court. I never thought he would, because there is with some a difference between an oath and a mere assertion—a foolish and pernicious distinction. As a crime against God they are in every respect equal—though the law can punish one and not the other. Gentlemen, this matter must be sifted, because it is not pleasant for a gentleman

gentleman and a clergyman to have things laid to his charge which are utterly false—a wicked and cruel conspiracy. And Mr. Justelius tells people—and employs the whole of the Sabbath in doing so, that the Council believe all to be lies, and that (in proof thereof) they will not remove him. I must ask the Bishop to inquire further for me. Is the report correct in saying William and James Boles the Gurneys in every particular? No person that I have spoken to believe it to be true that I struck Mr. Justelius, and without provocation? Messrs. William and James Boles both agree that Mr. Justelius wanted to fight me. Did this contradict the Gurneys? Would the excitable E. Justelius take a deliberate blow from me without returning it? Would a clergyman strike another too without provocation? All agree that Mr. J. came whip in hand, except James Boles, and no wonder he did not, for he made off very quickly for the horse—(taken away by the younger Justelius, a very quiet and old horse.) No; I and others think that he might not witness his brother make or attempt an assault which he found he could not prevent. I, my whole family agree, was not excited—never more calm;—there was no need to be excited on our part. Mr. Justelius had a cause, and this is his only excuse, if any could justify such conduct. Then his children were boxed in the ears—not very badly,—and when one of the two was boxed (I am told) the other said, "You dare not touch me." Mr. Justelius's children have often struck mine; and on one occasion one of them laid Willie Gurney down and pressed his knees into his chest till he was almost black in the face. I do not uphold these acts, but who can at times prevent boys from being boys—striking each other? Ask Georgy's school boys at the Glebe school is George a quarrelsome fellow? Ask the chief matron—ask the Principal himself.

I have, &c.,
GEO. GURNEY, B.A.,
Chairman of Local Board, Emu.

No. 42.

THE SECRETARY TO THE COUNCIL OF EDUCATION TO THE REV. G. GURNEY.
Council of Education Office,
Sydney, 11 March, 1875.

REV. SIR,

I am directed by the Council of Education to acquaint you that the Council has had under notice your letter of 22nd February ultimo, together with a communication signed by certain residents of Emu, in further reference to your complaints against Mr. Justelius, teacher of the Certified Denominational Church of England School at that place.

2. In reply, I am instructed to state that the Council sees no sufficient reason to reopen this question.

I have, &c.,
W. WILKINS,
Secretary.

No. 43.

THE SECRETARY TO THE COUNCIL OF EDUCATION TO THE REV. G. GURNEY.
Council of Education Office,
Sydney, 12 May, 1875.

REV. SIR,

I am directed by the Council of Education to acquaint you that the Council has had under notice your letter, dated 15th March last, in reference to the report furnished to the Council by Sir Alfred Stephen and S. C. Brown, Esq., respecting your charges against Mr. E. Justelius, teacher of the Certified Denominational C.E. School at Emu.

2. In reply, I am instructed to state that, having given the matter due consideration, the Council sees no ground for receding from the decision embodied in the report in question.

3. I am at the same time to point out that you are mistaken in supposing that the report imputes falsehood to you or to any of your witnesses. On the evidence, as it stood in respect to the occurrence in the school-room, the writers of the report could not find the teacher guilty of the charges preferred against him; but they censured him severely for his language on the occasion. And the conclusion arrived at in regard to those charges is quite consistent with the belief, that you preferred them in good faith; although from the excitement of the scene you may have been mistaken as to the facts.

4. These remarks apply also with equal force to the complaint respecting the occurrence or occurrences at the garden gate. As implied in their report, Sir A. Stephen and Mr. Brown never doubted that your version of the affair may have been substantially accurate. But the evidence was too conflicting to justify the expression of a decided opinion; and moreover, the question seemed to be more proper for decision by a legal tribunal.

I have, &c.,
W. WILKINS,
Secretary.

No. 44.

THE REV. G. GURNEY TO THE COUNCIL OF EDUCATION.

GENTLEMEN,

I have just received the enclosed note from Mr. Justelius. I consider that he has acted in a grossly insulting manner to Mr. Thos. Player, by removing his name from the list of members of Local Board, affixed by command to the wall of the school.

Mr. Player was appointed on the 13th October, 1872. Mr. Justelius was informed of his appointment in the usual way, and Mr. Player's name was added to the list by him on his receiving the usual notice of such appointment, and so soon as I was myself notified thereof.

Mr.

Mr. Player's name has been on the board in the school for many months past. Was there during the recent disputes and subsequent inquiries. The list was pointed out by me to Sir A. Stephen, and I think read by him on the occasion of his and Mr. S. C. Brown's recent visit of inquiry. Mr. Player has been recognized by Mr. Justelius as a member of the Local Board, and as such appealed to to sign school documents. Mr. Player was the first person appealed to by Mr. Justelius, after the recent "occurrence at my gates." But as Mr. Player did not take the same view as Mr. Justelius did of that matter, or believe his report as then given—hence Mr. Justelius' dislike to his appointment, his subsequent mention of his name to the children in ridicule, and last his unauthorized removal of his name from the notice board.

I, as Chairman, appeal to the Council against such behaviour of the teacher. Mr. Player is a very worthy and highly respected gentleman, and well deserving of a place on the Board. But the question is, is the teacher to take the law into his own hands, and remove his name without authority?

I am, &c.,
GEO. GURNEY, Ch.L.B. of C.C.E.D.S., Emu.

P.S.—Mr. Player is at present from home. As Mr. Player's name *might* have been accidentally omitted, as Chairman I replaced it, hoping the hint would be taken, and no further insult be offered to him, especially during his absence from home. But the teacher's note shows that it was *designedly* omitted by him, without any authority—a very grave offence. The other names stand on the list by the same authority and proceeding as that of Mr. Player.—G.G.

[Enclosure.]

Mr. Edward Justelius to The Rev. G. Gurney.

Certified C.E. School, Emu,
17 May, 1875.

Rev. Sir,

I noticed this morning that the name of Mr. Thos. Player has been during Saturday or Sunday added to the list containing the names of Local Board.

I beg to inform you that I have received instructions not to recognize any additional alleged members on the Local Board until I receive official notice from the Council of such appointment, and I can, therefore, not allow the name of Mr. Player to remain on the list before I receive intimation from the Council of his appointment.

I am, &c.,
EDWARD JUSTELIUS,
Teacher.

No. 45.

THE SECRETARY TO THE COUNCIL OF EDUCATION TO THE REV. G. GURNEY.

Council of Education Office,
Sydney, 27 May, 1875.

REV. SIR,

I am directed by the Council of Education to acknowledge the receipt of your letter, without date, in which you represent that the teacher of the Certified Denominational Church of England School at Emu has removed Mr. Thomas Player's name from the list of Members of the Local Board, suspended in the schoolroom.

2. In reply, I am instructed to state that it is found that Mr. Justelius was not, as you allege, informed of Mr. Player's appointment "in the usual way," or furnished with "the usual notice of such appointment," inasmuch as no communication as to Mr. Player's recognition by the Council as a Member of the Local Board has yet been addressed to him.

3. As it appears, however, that Mr. Player has been duly appointed as a member of the Board, the teacher has been apprised of his recognition by the Council, and instructed to place his name on the list of members posted in the schoolroom.

I have, &c.,
W. WILKINS,
Secretary.

No. 46.

THE REV. G. GURNEY TO THE COUNCIL OF EDUCATION.

Parsonage, Emu,
28 May, 1875.

GENTLEMEN,

I much regret the tone of your Secretary's note (May 27). So far as I am concerned Mr. Justelius was informed of Mr. Player's appointment in the usual way, through Chairman of Local Board, on the receipt of notice from the head of his denomination, *who himself* communicated with the Council.

That the Council failed to notify their *recognition* of the appointment to the teacher in no way *diminished* the force of the insult offered to the Member of Local Board, nor justifies the behaviour of the teacher.

I cannot believe that the Council *approves* of the teacher's conduct towards Mr. Player, though they fail to notice the same in their reply.

I am, &c.,
GEORGE GURNEY.

No. 47.

THE REV. G. GURNEY TO THE COUNCIL OF EDUCATION.

Parsonage, Echu,
28 May, 1875.

GENTLEMEN,

I acknowledge your communication, and will only say that there were not two occasions referred to by the two sets of witnesses. We both spoke to the same and *only* matter, viz., that at the gate, on which occasion only were we *all* present.

Yours, &c.,
GEO. GURNEY.

No. 48.

THE SECRETARY TO THE COUNCIL OF EDUCATION TO THE REV. G. GURNEY.

Council of Education Office,
Sydney, 8 June, 1875.

REV. SIR,

I am directed by the Council of Education to acknowledge the receipt of your letter, dated 28th May ultimo, on the subject mentioned below, and to acquaint you that it has been duly submitted for the Council's consideration.

I have, &c.,
W. WILKINS,
Secretary.

Respecting the removal of Mr. Player's name from the list of Members of the Local Board by the teacher.

1875.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

EDUCATION.

(CERTIFIED DENOMINATIONAL SCHOOL, DUNGOG.)

Ordered by the Legislative Assembly to be printed, 15 July, 1875.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 7 July, 1875, That there be laid upon the Table of this House, a Return showing,—

- “(1.) The average daily attendance of pupils at the Certified Denominational School, Dungog, for the week ending the 5th March, 1875.
- “(2.) A similar Return for the quarter ending the 26th March, 1875,—The classification of the Teacher of such school under the Council of Education.”

(*Mr. W. Watson.*)

THE SECRETARY, COUNCIL OF EDUCATION, to THE UNDER SECRETARY, DEPARTMENT OF JUSTICE AND PUBLIC-INSTRUCTION.

Council of Education Office,
Sydney, 12 July, 1875.

SIR,

I am directed by the Council of Education to acknowledge the receipt of your letter of the 10th July instant, No. 75-4787, in which, by direction of the Honorable the Minister of Justice and Public Instruction, you transmit a copy of an order of the Legislative Assembly for certain information respecting the Certified Denominational Church of England School at Dungog.

2. In reply, the Council desires me to forward herewith the information applied for in your communication.

I have, &c.,
W. WILKINS,
Secretary.

Average daily attendance of pupils at the Certified Denominational Church of England School at Dungog, for the week ending 5th March, 1875	19.6
Average daily attendance of pupils at the same school, for the quarter ending 26th March, 1875	30.8
Classification of Teacher, Class III, Section C.			

W. W.

1875.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

RETURN (*in part*) to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 4th June, 1875, That there be laid upon the Table of this House,—

- “ (1.) The number of Children who have in each year, since 1866, received
“ Free Education in the Schools under the Council.
- “ (2.) The number of Children in the Denominational and Public Schools
“ respectively.
- “ (3.) The number of such Children in each year in the Church of England
“ Schools, Roman Catholic Schools, Presbyterian Schools, and Wesleyan
“ Schools.”

(*Mr. Dibbs.*)

COUNCIL OF EDUCATION.

THE ACTING SECRETARY TO THE COUNCIL OF EDUCATION TO THE UNDER SECRETARY, DEPARTMENT OF JUSTICE AND PUBLIC INSTRUCTION.

Council of Education Office,
Sydney, 30 July, 1875.

SIR,

Adverting to your letter of the 10th June last (No. 75/4049), requesting certain information respecting free education in schools under the Council of Education, and to your memorandum of this day's date, enclosing question to be asked by Mr. Dibbs in the Legislative Assembly, regarding the same subject, I am directed to state, for the information of the Honorable the Minister of Justice and Public Instruction, that in consequence of pressure of work in the Council's office it has been found impossible to proceed with the preparation of the desired particulars.

2. It may be explained, that in order to obtain these particulars it will be necessary to search the separate returns of all the schools under the Council's supervision since the year 1867; and as these returns are put away with the other records of this office a very considerable amount of trouble and labour will have to be incurred in searching for the required details.

3. It will therefore be impossible to furnish replies to Mr. Dibbs's question before the closing of the present Session of Parliament; but I am to intimate that, if desired, the information as to free education in the Council's schools for last year (1874) can be readily supplied.

I have, &c.,

GEORGE MILLER,
For Secretary.

THE SECRETARY TO THE COUNCIL OF EDUCATION TO THE UNDER SECRETARY, DEPARTMENT OF JUSTICE AND PUBLIC INSTRUCTION.

Council of Education Office,
Sydney, 5 August, 1875.

SIR,

With further reference to your letter of 10th June last, respecting a return of the number of free scholars in the schools under the supervision of the Council of Education, since the year 1866, I am now directed to transmit herewith, for the information of the Honorable the Minister of Justice and Public Instruction, the required details for the years 1873 and 1874.

2. I am further to state, that in view of the large amount of time and labour which would be involved in procuring all the information requested by Mr. Dibbs, as already explained in my letter of 30th ultimo, the Council trusts that the enclosed return will be deemed sufficient.

I have, &c.,

W. WILKINS,
Secretary.

NEW SOUTH WALES.

SYDNEY FREE PUBLIC LIBRARY.

(REPORT FROM TRUSTEES FOR 1874.)

Presented to both Houses of Parliament, by Command.

THE TRUSTEES OF THE FREE PUBLIC LIBRARY, SYDNEY, to THE MINISTER OF JUSTICE AND
PUBLIC INSTRUCTION.

12 March, 1875.

SIR,

I have the honor to present to you the Report of the Trustees of the Free Public Library, for the year 1874.

The Free Public Library has now completed its fourth year of existence, during which period the use that has been made of it by the public has fully justified the anticipations of those who assisted at its foundation and vindicated the wise liberality of the Legislature in its maintenance.

The Institution, owing to a special cause, to which reference will presently be made, was only open for eleven months of the past year, and after the deduction of Sundays and public holidays, it was on 280 days open to the public. During this period no fewer than 127,400 volumes have been used, averaging about 455 volumes daily. The number of readers who signed their names on entering the Library during the eleven months it was open, is 57,962, averaging 207 daily; but this does not represent, by at least one-fourth, the actual number of visitors who availed themselves of the advantages offered by the Institution, as the limited staff at the disposal of the Trustees will not admit of one man being kept constantly at the door to take the names of visitors, and many readers have a great objection to the irksome process of signing their names, and avoid doing so whenever they can.

The building not having been repaired or painted in any part since a time long prior to the purchase of the property in September, 1869, it became necessary, as the Trustees pointed out in their report of last year, to have the interior of the Institution thoroughly cleaned and painted. Important repairs to the outer portion of the building were also urgently required; and the parapet wall was reported to be in a dangerous condition. A light gallery has been thrown across the north end of the Library, making a communication between the east and west galleries, and in addition to the advantage of greater facilities of access to the books it has provided additional shelf accommodation for nearly 5,000 volumes.

The painting has been neatly executed, and the repairs properly completed; the whole of the work has been carried out under the direction of the Colonial Architect.

To effect these repairs, &c., the Library was necessarily closed from the 11th March to the 11th April, and about 16,000 volumes had to be removed from their places on the shelves and in the Gallery, and again replaced in their respective order.

During the past year the Library has been enlarged by 1,730 volumes and 301 pamphlets, making the total number 25,175 volumes and 1,376 pamphlets,—in all 26,551.

The Trustees, carrying out the arrangements which, in their last report, they informed the Government that they had made, instructed Messrs. Trübner & Co., their agents in London, to send out by the earliest opportunity a limited selection from the latest books published in Europe and America, as soon as funds could be placed at the disposal of the Agent General in England. The first shipment under this arrangement arrived in July last, and by each succeeding mail a choice selection has been regularly received. This arrangement gives to the Library the advantage of possessing the newest publications, and appears to be very much appreciated by a large number of readers.

It is a satisfaction to the Trustees to be able to state that the abstraction and mutilation of books has almost ceased; a few volumes have at various times during the year been taken out of the Library, and after a space of time clandestinely returned to the shelves, or laid upon the tables; but, as a caution to those who abuse the privilege granted to them, the Trustees may remark that they have, with the assistance of the Detective Force, prosecuted to conviction a visitor to the Institution who had at various times removed several volumes, and, having obliterated the Library stamps, had offered the books for sale.

At the close of their last annual report the Trustees informed you that the establishment of a "Lending Branch," in connection with the existing Institution, had formed the subject of frequent and serious consideration on their part. During the past year the matter has again occupied their attention, and from their further observation and augmented experience of the use made of the present Library, they have arrived at the conclusion that, in the interests of higher education, it is desirable that this project should be carried out with the least possible delay. With this object they have devised a scheme, which has already been submitted to you for approval, and which, after considerable hesitation, and a careful consideration of the means employed in Institutions of a like character in Europe, the Trustees deem practicable and sufficient. It is proposed that there shall be two distinct establishments, worked and conducted under one head. The one will be a Free Reference Library, from which books, under no circumstances, will be lent out; the other will be a "Lending Branch," for the circulation only of books, the title to the use of which for limited periods, and under special conditions, will be gained by the permission of the Trustees under effective guarantees as to the safe custody, proper care, and restitution of the books. The Trustees have spared no pains in devising a scheme which will, they humbly hope, largely minister to public convenience, and in no way imperil public property.

I have, &c.,

CHARLES BADHAM,
Chairman.

APPENDIX A.

RETURN of the number of Volumes in the Library on the 31st December, 1874,—showing additions during the year, with average number of Books of each Class used by Readers, and replaced on the shelves by the Attendants, for eleven months during the year 1874.

APPENDIX B.

ARRANGEMENT of the Books in the Free Public Library, Sydney.

THE presses of the Library are numbered in consecutive order,—the classes to which the books belong being specified on the top thereof. The shelves of the presses are lettered with the alphabet, and the books upon the shelf of every press are numbered from 1 upwards. Every book bears a small label with the number of the press, letter of the shelf, and its number on the shelf.

An inventory is provided for each class, arranged according to subjects, with authors added,—cross references being giving to books containing information appertaining to the same class but necessarily placed in a different compartment. The books so referred to are shown in the volume column by a cypher.

Guide to find a Book.

If a reader wants "The Early Years of H.R.H. the Prince Consort," (by Lieut.-Gen. O. Grey), he will find the work under class "Biography," in press 8, shelf A, book 12.

A general Catalogue, arranged according to authors only, is issued for sale to the public.

APPENDIX C.

LIST OF OFFICERS:—

Trustees:—

The Rev. Charles Badham, D.D., Professor of Classics and Logic in the University of Sydney (*Chairman*.)

NEW SOUTH WALES.

SYDNEY GRAMMAR SCHOOL.

(REPORT, &c., FOR 1874.)

Presented to Parliament, pursuant to Act of Incorporation, 18 Victoria.

THE SECRETARY TO THE TRUSTEES, SYDNEY GRAMMAR SCHOOL, to THE MINISTER OF JUSTICE AND PUBLIC INSTRUCTION.

Sydney Grammar School,
5 July, 1875.

SIR,

I have the honor, by direction of the Trustees of the Sydney Grammar School, to transmit to you, for the purpose of being laid before the Parliament, the following Report of their proceedings, and the progress of the School, during the year 1874.

At a meeting of the Trustees, held on the 19th of January, Professor Pell was unanimously re-elected Chairman of the Board for the current year.

At the February meeting the Trustees unanimously re-elected the Honorable George Allen Vice-Chairman of the Board. The Trustees also accepted tenders to the amount of £144 for the completion of the south wing into class-rooms, and during the year the sum of £849 5s. 6d. was expended in substantial improvements and repairs.

At the June meeting the following resolution was passed in reference to the payment of School fees, viz.,—"That, in future, if any School fee be in arrear for more than twenty-one days after the commencement of the quarter, the boy be not allowed to return to the School until the fee be paid."

At the same meeting it was also decided that the meetings of the Trustees should be held monthly, on the first Monday of each month, at 4 p.m.; and the following by-laws with regard to the regulations and discipline of the School, drawn up by the Masters, were approved by the Trustees, viz. :—

"The Masters of the School have resolved to abolish the daily detention at 4 p.m., and to substitute for this punishment a weekly detention from 9.30 to 11.30 a.m. on Saturday morning.

Whenever any boy is reported for misconduct, or habitual idleness, one or more bad marks (according to the nature of the offence) will be affixed to his name.

"Any boy who shall have five such bad marks affixed to his name in any one week, or eight bad marks in two consecutive weeks, will have to attend upon the following Saturday. Such attendance will be strictly enforced, and no excuse, except on account of serious illness, will be accepted. In the case of those who have conscientious scruples against attending on Saturday the punishment of detention will be commuted for an imposition of 300 lines in the upper, and 150 lines in the lower, school.

"There will be a daily detention at 12.30 for all boys who fail to prepare their home-lessons.

"A. B. WEIGALL,

"Head Master."

On the 3rd August Mr. Wolrige was appointed, on probation, an Assistant Master, at a salary at the rate of £150 per annum.

At the December meeting a letter was read from the Honorable Sir Wm. Macarthur, resigning his trusteeship of the School, which vacancy has since been filled up by the appointment of W. C. Windeyer, Esq.

The number of pupils in attendance during the year averaged *316½, being an increase of 23 over the previous year, and the maximum yearly average since the foundation of the School.

The Trustees are quite satisfied with the state of discipline and efficiency of the School.

The amount of the whole income and expenditure of the School during the year will be found in the annexed Appendix.

I have, &c.,

W. H. CATLETT,

Secretary.

APPENDIX.

* The number in attendance during the quarter ending 18th June, 1875, was 399.

NEW SOUTH WALES.

UNIVERSITY OF SYDNEY.

(REPORT FOR 1874.)

Presented to Parliament, pursuant to Act of Incorporation, 14 Vic. No. 31.

REPORT of the University of Sydney, for the year ended 31st December, 1874.

1. In accordance with the provisions of the Act of Incorporation, the Senate of the University has the honor to transmit to the Honorable the Minister for Justice and Education the report of its proceedings during the year 1874.

2. Twenty students passed the statutory examination and were admitted to Matriculation in Lent Term.

3. Exemption from attendance on lectures was granted to Mr. J. Debenham, an Undergraduate of the first year.

4. The following degrees were conferred after examination, viz.:—M.A.—P. A. Cooper, B.A., J. Coutts, B.A., F. D. Kent, B.A., G. Knox, B.A., G. Sly, B.A., J. J. Teece, B.A.

B.A.—J. J. M. Beatty, E. J. Butler, W. Edmonds, F. Freehill, T. Hill, G. Hurst, R. Kay, J. Morrice, J. Perry, T. Powell, J. Robertson, F. Sheridan, J. Waterhouse.

LL.D.—J. White, LL.B.

M.D.—W. F. Clay, M.B., R. T. Jones, M.B.

5. The following candidates passed the examination for Degrees at the close of Michaelmas Term, viz.:—M.A.—M. Clune.

B.A.—W. Lee, W. Chisholm, J. Oliver, A. Dawson, G. E. R. Jones.

6. The Scholarships and Prizes were awarded as follows, viz.:—"Cooper" Scholarship for proficiency in Classics, J. Oliver. "Barker" do. for proficiency in Mathematics, not given. "Deas Thomson" do. for proficiency in Physics, W. Chisholm. "Lithgow" do. for general proficiency in the second year, T. Butler. "Levey" Scholarship for general proficiency in the first year, G. Renwick. "Gilchrist" do. (tenable by a graduate at the Universities of Edinburgh or London), G. Hurst. "University" do. for general proficiency, 3rd year, W. Chisholm. 2nd year, 1st year, G. B. Allen, N. Russell. The "Belmore" medal for proficiency in Geology and Practical Chemistry, with especial reference to Agriculture, was awarded to E. J. Butler. Professor Pell's medal for Mathematics at the B.A. examination—E. J. Butler. Professor Smith's prize for Physics at the class examinations—J. Oliver.

7. For the public examinations in Michaelmas Term there were 277 candidates, viz.:—Fifty-five senior males, eight senior females, and 169 junior males and forty-five junior females. Of these, 118 were examined at the following centres, viz.:—Mudgee, Young, West Maitland, Grafton, Singleton, Goulburn, Gunning, Kiama, Adelong, and Wagga Wagga. Thirty-six senior males, four senior females, 102 junior males, and twenty-nine junior females received certificates. The number of candidates is in excess of that of previous years, and the Senate desires to record with satisfaction the increasing popularity of these examinations, especially in the country districts. Of the results, the Examiners report that of the candidates who failed to pass, a large proportion was as usual rejected on account of bad spelling. That, in the English language, the same deficiency was found as before, the parsing defective, the explanation of the meaning of words far from satisfactory, and the knowledge of the syntax and of the idioms of the language so scanty as to show that this branch of study, which might so easily be made at once attractive and useful, had been generally neglected by teachers. That in the French language a very small proportion of the candidates passed; the greater number failing alike in translation, inflections, and composition. That the same remarks apply in some degree to the Latin language, and that generally speaking the candidates who passed a satisfactory examination were those who also took up Greek, and the candidates in Greek were generally successful, though their number was small. That in Mathematics there was a marked improvement, and the result satisfactory. That in Geography and History there was some improvement; but that in the latter subject there was great deficiency, especially among the seniors. That in Chemistry one or two candidates displayed a satisfactory knowledge.

The prizes at the public examinations were awarded as follows, viz.:—"Fairfax" for junior females—

M. à Beckett, }
K. Carney. } seq.

"University," for senior males—J. D. S. M'Lardy. "University," for junior males—H. Murray.

8. A communication was received by the Senate, from William Macleay, Esquire, notifying his intention to leave his library and collection of Natural History to the University. The conditions of bequest, as contained in an extract from his will, were—that they should be held in trust for the promotion and advancement of the science of Natural History, and the instruction of the inhabitants of the Colony.

Provision was also made for the maintenance of a Curator, who was to be a person of education and competent acquaintance with the science. With this view, a sum of £6,000 was appropriated; the annual income from which, after investment in public stock in the Colonies or good mortgages, was to be applied for that purpose. Mr. Macleay's munificent offer was accepted by the Senate, subject to the conditions specified by him.

9. A sum of money having been raised for the purpose of perpetuating the memory of the late Reverend John West, Editor of the *Sydney Morning Herald*, the subscribers, through the medium of Sir Alfred Stephen, made a proposition to the Senate that the memorial should take the form of a gold medal, to be awarded annually to the greatest proficient at the Senior public examination. It was decided that the amount £200 when invested in Government debentures should be handed over to the University.

10. The Senate has further to announce the very munificent donation of £1,000 from Mrs. Maurice Alexander, as an endowment to the University, and with a view of perpetuating her husband's name. Mrs. Alexander's proposition, which has been accepted by the Senate, is—that a bursary should be founded to enable a student whose means would be otherwise insufficient, to prosecute his studies as an undergraduate of the Sydney University, and that he should reside in one of the Affiliated Colleges or some other place approved of by the authorities of the University. Mrs. Alexander declared that the object of the foundation was to place the advantages of a University education within the reach of persons living in the country. Further, that students whose parents were resident in Sydney should not be eligible for the bursary. To obviate the necessity of attendance in Sydney for examination, it has been provided that candidates should be required to pass the Senior public examination at any of the places in the Colony where public examinations are held, in those subjects which are taken as equivalent to the examination for Matriculation. The amount of the donation, £1,080, has been invested in ten Government debentures of £100 each, bearing interest at 5 per cent.

11. In accordance with the provisions of the Act incorporating the Alfred Hospital, the Directors laid before the Senate the plans and elevations of the proposed buildings; also a plan of the grounds, showing the reservation made for the Medical School. The plans were approved, but assent was reserved, failing the production of a scheme for the drainage of the ground, as specially provided for in the Act.

12. Two By-laws were passed during the year, copies of which are appended (A.)—the first, exempting candidates for B.A. who should have no desire to devote themselves specially to Natural Science from an examination in Geology, Mineralogy, and Practical Chemistry, and rendering those who should have passed the first and second yearly examinations in Chemistry and Experimental Physics qualified for their Degree as far as Natural Science was concerned; further, allowing candidates who, at the second year, should have exhibited marked proficiency in any one of the three schools of Classics, Mathematics, or Natural Science, to devote themselves in the third year exclusively to the subjects of that school, and to be examined for B.A. in them only. The second by-law provides for an alteration in the scholarships and prizes.

13. At the first meeting of the Senate held in Lent Term, the Honorable Edward Deas Thomson, C.B., was unanimously re-elected Chancellor of the University, his term of tenure of office having expired.

At the same meeting the Reverend Canon Allwood, B.A., was re-elected Vice-Chancellor.

14. An account showing the receipts and expenditure of the University during the year, duly certified by the Auditor, is hereto appended (B).

APPENDIX A.

BY-LAW I.

"To obtain the degree of B.A., candidates shall pass a satisfactory examination in the following subjects, viz.:—1. The Greek and Latin languages—2. Mathematics and Natural Philosophy—3. Chemistry, Experimental Physics, Geology, and Mineralogy.

"Provided always that no candidate may elect to be exempted from examination in either the Classical or the Mathematical schools, unless he shall have obtained at least a second class place in that school at the second yearly examination. Candidates who have passed the second yearly examination, and have displayed a marked proficiency in any one of the three schools, may, on the recommendation of the Examiners, be allowed to attend lectures during the third year in that school only, and to be examined for the degree of B.A. in that school only.

"All persons who have passed the ordinary examination for degrees shall be admissible for Honors in the Classical, Mathematical, and Natural Science schools.

"The candidates in each school shall be arranged in classes and order of merit. The most distinguished candidate for honors in each of the aforesaid schools shall, if he possess sufficient merit, receive a prize of ten pounds."

BY-LAW II.

"In addition to the private foundations, viz., the 'Barker,' 'Deas Thomson,' 'Cooper,' and 'Lithgow' Scholarships—each of the annual value of £50, and the 'Levy' Scholarship, of the annual value of £35, there shall be three University Scholarships, each of the value of £50, payable out of the public endowment.

"The above scholarships tenable for one year, shall be awarded, after examination, in the following manner:—To undergraduates of the first year, three scholarships for general proficiency, viz., two University scholarships and the 'Levy' scholarship. To undergraduates of the second year, three scholarships for general proficiency, viz., two University scholarships, and the 'Lithgow' scholarship founded in 1864. To undergraduates of the third year, three scholarships, viz.:—1. For proficiency in Classics, the 'Cooper' scholarship founded in 1857. 2. For proficiency in Mathematics and Natural Philosophy, the 'Barker' scholarship founded in 1853. 3. For proficiency in Chemistry and Experimental Physics, the 'Deas-Thomson' scholarship founded in 1854."

APPENDIX B.

NEW SOUTH WALES.

ST. JOHN'S COLLEGE.

(BY-LAWS.)

Presented to Parliament, pursuant to Act 21 Vict. No. 11.

ST. JOHN'S COLLEGE WITHIN THE UNIVERSITY OF SYDNEY.

In pursuance of the power vested in us by the Act passed in the twenty-first year of the reign of Her present Majesty, intituled "*An Act to incorporate St. John's College as a College within the University of Sydney*," we, the Rector and Fellows of St. John's College, for the purpose of carrying into effect the provisions and objects of the said Act, do hereby revoke the several By-laws and Rules heretofore made by us, and do, instead thereof, establish the several By-laws and Rules which are contained in the Schedule hereto signed at the end thereof by the present Rector of the said College.

In witness thereof, we hereunto affix our corporate seal, this thirteenth day of October, in the year of our Lord one thousand eight hundred and seventy-four.

By order of the Council,

ROGER BEDE VAUGHAN, D.D.,
Rector.

BY-LAWS OF ST. JOHN'S COLLEGE.

MEMBERSHIP.

1. The ordinary members of St. John's College, in addition to the Rector, the Vice-Rector, Fellows, Lecturers, and students, shall consist of those who, having been students thereof, continue to keep their names on the books; together with such persons as the Rector and Fellows shall admit to honorary membership.

2. Every person, having been a student, whose name is no longer on the College books, may, by leave of the Rector and Fellows, have his name restored.

ADMISSION OF STUDENTS.

3. Residence in College shall not be a necessary condition of membership. Students of St. John's College may be either resident or non-resident.

4. Persons desirous of becoming students of the College shall, if required so to do, produce letters as to character from a Clergyman, and from the Principal of the College or School where the applicant has studied.

5. The name of every student admitted into the College shall be registered in a book provided for that purpose.

6. All students residing in the College shall either have matriculated or be preparing for matriculation at the next ensuing examination for that purpose.

7. The names of resident students shall not be entered in the College Register until they shall have matriculated.

8. Any student failing to pass the matriculation examination shall cease to reside in the College, but may be re-admitted prior to the next matriculation examination, if he shall intend again to present himself for examination.

9. Every student, on being entered on the College Register, shall sign the declaration marked B in the Appendix hereto.

10. Non-resident students, with a view to matriculation, and members of the College having graduated in the University, shall have the same privileges, and shall be subject to the same discipline, except in point of residence, as the resident students.

TERMS AND VACATIONS.

11. The Collegiate terms and vacations shall be the same as those of the University. The Easter recess shall not be considered a vacation.
12. During Term time all resident students shall reside in, and all non-resident students shall attend daily at, the College.
13. The Rector, or in his absence the Vice-Rector, may grant to any student temporary exemption from the preceding rule.
14. Resident students wishing to remain in the College during vacation may do so with the consent of the Rector, and under such regulations as the Rector may establish.

RELIGIOUS EXERCISES.

15. All resident students shall attend morning and evening prayers, mass, and all public services in the College Chapel.
16. Students shall approach the Sacraments at least once in each term.
17. A record shall be kept of the attendance of the resident students at Chapel, and also of their reception of the Sacraments.
18. All students, whether resident or non-resident, shall receive gratuitous and systematic instruction in the doctrines and practice of the Catholic Church.
19. The Rector, with the sanction of the Visitor, shall determine the text-books for such instruction; and every student must provide himself therewith, and attend all lectures on these subjects.

GENERAL INSTRUCTION.

20. Lectures, when deemed by the Rector necessary, shall be given on the subjects of the University course.
21. The course of philosophy commonly distributed into logic, metaphysics, and ethics, shall be taught within the three years of the ordinary University curriculum; and all students, whether resident or not, shall attend the lectures on these subjects.
22. Modern history shall be taught in the College; and the lectures thereon shall be so arranged as to comprise the entire course within the period of the University curriculum. Attendance at these lectures shall be obligatory on all students.
23. Stated hours shall be set apart for private study; and, during the hours so assigned, silence shall be observed by all students.
24. An examination shall be held annually, at a time to be appointed, on the subjects of College instruction other than those taught at the University lectures; and the result of such examination shall be reported at a meeting of the Council.

LIBRARY.

25. The Library shall be open to Members of the College, under such regulations as may be made by the Rector and Fellows.

MEALS.

26. Resident students shall take their meals together in the College Hall, at stated hours, due notice whereof shall be given.
27. No visitor, or non-resident member of the College, shall be admitted to the College Hall without a special invitation from the Rector.

ROOMS.

28. No student shall have more than one room, except by permission from the Rector, and by paying such extra sum as the Rector and Fellows may determine.
29. The furniture of each room shall be provided by the occupant at his own cost, unless otherwise agreed.
30. Any student's room may, at any time, be visited by the Rector, or by any officer to whom the Rector may have delegated authority, who may order the removal of anything therein which he may deem objectionable.

DISCIPLINE.

31. The College gates shall be closed at a stated hour every evening, after which no resident Student shall be outside the College precincts without the permission of the Rector or, in his absence, of the Vice-Rector.
32. Every resident student shall be within the College grounds before the gates are closed; in default thereof, he shall be liable to such penalty as the Council may determine.
33. Visitors to the students may be admitted within the College, subject to such regulations as the Rector may establish.
34. Leave of absence from the College for a portion or for the whole of a night may be granted to any student by the Rector or, in his absence, by the Vice-Rector; but in either case only for very urgent reasons.
35. The academic dress shall invariably be worn by all students and officers of the College in Chapel, hall, and at lectures, and likewise within the precincts of the College or University, except during recreation.
36. The Rector shall have power to expel students, subject to an appeal to the Council.
37. Every student shall repress to the utmost of his power every word and deed of an irreligious or immoral or dishonorable character, or any conduct in the slightest degree unworthy of a Catholic gentleman.

FEES.

3

FEES.

38. The ordinary fees from members shall consist of an admission fee and of annual fees.
 39. The admission fee shall be the same for all students, whether resident or not.
 40. The annual fee for resident students must cover the expenses of room, board, service, lectures, and tuition.
 41. The annual fee for non-resident students must cover the charges for lectures, tuition, and any other College privileges for which the Council may require a fee.
 42. An annual fee shall be payable by all other members (except Fellows and Officers) to entitle them to keep their names on the College books.
 43. The amounts of all College fees shall be fixed by the Council, and paid to the Officer appointed to receive them.
 44. All fees are to be paid in advance; and a Schedule thereof shall be exhibited in the public Hall.

SCHOLARSHIPS.

45. Persons desirous of founding Scholarships or free places within the College for any special purpose, may do so upon any conditions not repugnant to the objects for which the College is established.
 46. Where the Founder shall not have directed the special application of any such Scholarship, the Council shall have the right to do so.
 47. Candidates for Scholarships who shall be admissible to the College under By-law No. 4 shall be examined by at least three Examiners, of whom the Rector shall be Chairman—the others being nominated from time to time by the Council.
 48. The Examiners shall vote for the candidate who shall exhibit the greatest proficiency in the subject or subjects of examination; and the Rector shall report, in writing, at the next meeting of the Council, the result of such examination, and the Council shall award the Scholarship accordingly.
 49. Due notice shall be given of all such Scholarships, and of the time and place of examination.

COUNCIL.

50. The meetings of the Council shall be held at the College, or at some place in Sydney, at such times as shall be appointed for that purpose.
 51. The Rector may at any time, without requisition, convene a special meeting of the Council.
 52. A special meeting of the Council shall be convened by the Rector upon the written requisition of one clerical and two lay Fellows.
 53. Of ordinary meetings every Fellow resident in Sydney, or within 50 miles thereof, shall receive at least two days' written notice; and of special meetings, at least one day's written notice.
 54. At all meetings the Rector, or in his absence the Vice-Rector, shall preside.
 55. All the proceedings of the Council shall be entered in a journal; and at the opening of each meeting the minutes of the previous meeting shall be read, and (unless the then meeting shall be an adjourned meeting) confirmed. In the case of meetings adjourned, the confirmation of the minutes shall be deferred until the next ordinary meeting.
 56. No motion (other than of a merely formal character) shall be made at any meeting unless notice of such motion shall have been given at a previous meeting; but this requirement may be dispensed with in any case where the meeting shall unanimously consent thereto.
 57. Whenever any question shall be submitted by the Chairman for the vote of the meeting, every Fellow present shall vote thereon.
 58. If any Fellow shall, without leave of the Council, be absent from three consecutive ordinary meetings thereof, his office of Fellow shall thereupon become vacant: Provided that, for the purposes of this rule, every adjourned meeting shall be reckoned as part of the original or principal meeting, and not as distinct therefrom.
 59. Upon any vacancy occurring amongst the Fellows, candidates for the vacant office shall be nominated at the next meeting of the Council; and, whether opposed or not at such meeting, they shall be submitted for election at the next ensuing meeting, and their election shall depend upon the result of the votes taken in reference thereto.
 60. No person who has been elected by Fellowship shall take his seat at the Council Board until he has signed the declaration marked A in the Appendix hereto.
 61. The annual certificate required by the Colleges Endowment Act, 18 Victoria, No. 37, section 5, shall be under the hands of any two Fellows.

THE SEAL.

62. The Seal of the College shall be in the custody of the Rector, and shall not be affixed to any document except by order of the Council.

ST. JOHN'S COLLEGE.—RULES AND REGULATIONS.

HORARIUM.

63. The Horarium shall be fixed from time to time by the Rector, under the sanction of the Council.

ANNUAL EXAMINATION.

64. The Annual Examination of Students, under By-law No. 24, shall take place at the beginning of Lent Term.

LIBRARY.

LIBRARY.

65. The Library shall be under the immediate charge of a Librarian appointed by the Council; and he shall be responsible for the custody of the books, and the carrying out of all regulations in respect of the Library.

66. The names of all donors of books, with the number of volumes given, shall be entered in a register to be kept in the Library.

67. No person shall borrow any book from the Library except upon application to the Librarian, who shall, upon delivery of the book, enter in a register the borrower's name and the date of delivery; and afterwards, on the return of the book, the date of return.

68. No more than three volumes, borrowed from the Library, shall be in the possession of the same person at any one time.

69. Any person having borrowed a book from the Library shall, on request of the Librarian, return the book forthwith; and in every other case, in or before the last week of each Term: in default, the borrower shall pay to the Librarian a fine of one shilling per week for each book so long as it shall be detained beyond the time limited.

70. Books of reference shall on no account be removed from the Library.

71. Any person who shall deface or otherwise injure books belonging to the Library shall be required by the Librarian to replace each book so defaced or injured by another of the same edition and of equal value, or to pay the price of such book.

72. Silence shall at all times be observed in the Library.

73. Persons using books in the Library shall return them, after being used, to their proper places on the shelves.

74. No person who shall fail to comply with any of the Library regulations shall be allowed to borrow books from the Library.

75. The Librarian shall from time to time, and specially when necessary, report to the Council (through the Rector) any cases of non-compliance with the Library regulations.

76. All fines paid to the Librarian shall go to form a Library Fund, in respect of which the Librarian shall account to the Council.

77. The Librarian shall make an annual inspection and return of all books belonging to the Library.

78. Persons not members of the College may, upon delivery to the Librarian of a written permission from the Rector, Vice-Rector, or any of the Fellows, have access to the Library during Library hours.

MEETINGS OF THE COUNCIL.

79. The ordinary meetings of the Council shall be held on the first Tuesday in the respective months of February, May, August, and November, in each year.

ROGER BEDE VAUGHAN, D.D.,
Rector.

APPENDIX.

A.

The Form of Declaration to be made by Fellows.

I, _____, solemnly and sincerely declare that I am a member of the Roman Catholic Church, and that as long as I shall hold the office of Fellow of Saint John's College within the University of Sydney, I will continue a member of that Church.

Signed by the said _____, on this _____, 18____, in my presence,— _____ }
Rector.

B.

The form of Declaration to be made by Students, whether resident or non-resident, and other members of the College, except the Rector, Vice-Rector, and Fellows.

I, _____, solemnly and sincerely declare that I am a member of the Roman Catholic Church, and that as long as I shall be a member of Saint John's College within the University of Sydney, I will in all respects conform to the statutes, by-laws, and rules of the said College.

Signed by the said _____, on this _____, 18____, in my presence,— _____ }
Rector.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

FACULTY OF MEDICINE, SYDNEY UNIVERSITY.
(PROCEEDINGS OF EXAMINERS AFFECTING THE DEAN.)

Ordered by the Legislative Assembly to be printed, 12 July, 1875.

THE REGISTRAR, SYDNEY UNIVERSITY, TO THE UNDER SECRETARY OF PUBLIC INSTRUCTION.

University of Sydney,
7 July, 1875.

SIR,

In transmitting replies to the queries submitted in your memorandum of the 3rd instant, I have the honor, by direction of the Senate, to forward for the information of the Honorable the Minister of Public Instruction the following resolution which was passed at a meeting of that body held this day:—

“The Senate is of opinion that the meeting of Examiners referred to had not been so convened as to constitute a regular meeting of the Board of Examiners, and that the resolutions passed at such meeting do not appear to be within the scope of the official duties of that Board.”

I have, &c.,
HUGH KENNEDY,
Registrar.

MEMO. for the Under Secretary of Justice and Education.

Legislative Assembly.

Questions for Wednesday, 7 July, 1875.

Answer I.—Examiners in the Faculty of Medicine in the University of Sydney:—

Professor Smith, M.D., Dean,
H. G. Alleyne, M.D.,
G. Bennett, M.D.,
S. Boyd, M.D.,
J. C. Cox, M.D.,
P. S. Jones, M.D. (absent in England),
F. N. Manning, M.D. (absent in England),
A. Renwick, M.D.,
A. Roberts,
E. Bedford.

Answer II.—The following is a letter addressed to the Senate by Dr. Bennett:—

“To the Chancellor and Senate of the Sydney University.

“Sydney, 10 June, 1875.

“Gentlemen,

“I have the honor to inform you that the Examiners of the Faculty of Medicine held an adjourned meeting on the 9th instant, to consider a speech recently delivered by the Dean of the Faculty of Medicine, in the Legislative Council.

“After full deliberation and with much regret, the resolutions, of which copies are herewith enclosed, were passed unanimously.

“I have, &c.,
“GEORGE BENNETT, M.D.,
“Chairman.”
“Resolutions.

“ Resolutions.

“ I.—Believing that a sound and liberal course of study is the only true foundation for the successful and humane treatment of disease, we desire to express our dissent from certain views contained in a speech delivered by Professor Smith in the Legislative Council on the 13th ultimo. We consider that these views tend to disparage the advantages of scientific education, to undervalue the necessity for steady and persevering application in the acquisition of professional knowledge, and to diminish confidence in the conscientious efforts of the authorized examining bodies to provide a class of medical practitioners possessing the highest educational attainments, and sufficiently numerous to meet the demands of human suffering.

“ II.—That a copy of these resolutions be forwarded to the Chancellor and Senate of the University, and to Professor Smith.

“ G.B.”

Answer III.—The following correspondence has passed on this subject:—

“ G. Bennett, Esq., M.D.

“ University, 5 July, 1875.

“ Sir,

“ With reference to your letter of the 10th ultimo, transmitting certain resolutions of the Examiners of the Faculty of Medicine in this University, I have the honor to request that you will have the goodness to furnish me with the names of the gentlemen present when those resolutions were passed. As this information is required for the Legislative Assembly on the 7th instant, may I request the favour of a reply at your earliest convenience.

“ I have, &c.,

“ HUGH KENNEDY,

“ Registrar.”

“ The Chancellor and Senate of the University.

“ Sydney, 5 July, 1875.

“ Gentlemen,

“ I have the honor to enclose a memorandum agreed to at a meeting of the Examiners in the Faculty of Medicine held on the 2nd instant. I also enclose copy of a letter received from Professor Smith on the 17th ultimo, and beg to state that the Examiners present at the meeting held on the 9th ultimo at which the resolution forwarded to you under date 10th June, were as follows:—Dr. G. Bennett, Dr. Cox, Dr. Renwick, A. Roberts, Esq. Those absent were:—The Dean of the Faculty, not summoned; Dr. Boyd, confined to bed by illness, but concurring in the resolutions; Dr. Alleyne, otherwise engaged, but concurring in the resolution; Dr. Manning, absent in England; Dr. Jones, absent in England; E. Bedford, Esq., absent through ill health, but concurring in the resolutions.

“ I have, &c.,

“ G. BENNETT, M.D.,

“ Chairman.”

“ MEMORANDUM.

“ WE, the undersigned, Examiners in the Faculty of Medicine, beg to acknowledge the letter of Professor Smith of the 15th ultimo, and to thank him for the explanatory observations it contains; but while we are deeply gratified to learn that he has no desire to depreciate the great importance of scientific education as a basis for medical practice, we feel ourselves unable to modify the resolutions referred to, as bearing upon his published speech kindly furnished to us by himself.

“ GEORGE BENNETT.

“ SPROTT BOYD.

“ JAMES C. COX.

“ ARTHUR RENWICK.

“ ALFRED ROBERTS.”

“ University, 15 June, 1875.

“ G. Bennett, Esq., Chairman of the Meeting of Medical Examiners.

“ Sir,

“ I have the honor to acknowledge receipt on 12th instant of your letter of 10th, enclosing copy of resolutions adopted by the Examiners of the Faculty of Medicine, at a meeting held on the 9th instant.

“ It was probably not expected or desired that I should give any reply in the shape of defence or criticism; but I think it right to offer some observations on these resolutions, for the further consideration of the Examiners.

“ In the first place, I beg to assure the Examiners that, in opposing the Medical Bill, I had no thought whatever of disparaging medical education, and I took an early opportunity of disclaiming in the Council any such intention, as soon as it appeared that some of my remarks had been misunderstood. But it may be replied that, granting the absence of INTENTION, the language used by me did convey such disparagement, at least by implication. That evidently is the belief of the Medical Examiners. They consider that my ‘views tend to disparage the advantages of scientific education,’ and they contrast my supposed views with their own, in these terms—‘Believing that a sound and liberal course of study is the only true foundation for the successful and humane treatment of disease, we desire to express our dissent from certain views contained in a speech delivered by Professor Smith, &c.’

“ It is here implied, though not distinctly asserted, that something in my speech shows that I do not believe ‘that a sound and liberal course of study is the only true foundation, &c.’

“ I should have been glad if the Examiners had pointed out the passages in my speech that led them to this erroneous conclusion; but I cannot be far wrong in supposing that they occur in the course of the following argument against the Bill. I stated that the public ‘cannot be effectually protected against ignorant and unqualified men, because, among other reasons, there is ignorance and unskilfulness within

within the profession as well as out of it.' The Examiners, I suppose, will not be prepared to controvert this proposition, but they appear to assume that I hold that the AMOUNT of ignorance is much the same inside the profession as outside, and that therefore preliminary medical education is of no avail.

"That there is no ground for such an assumption clearly appears from what follows:—'That such ignorance should be found OCCASIONALLY in the profession (though it is to be hoped not frequently) is not greatly to be wondered at.' There it is put in so many words that ignorance is the exception, not the rule. Medical practitioners themselves are not always so lenient in their judgment. By mere accident the other day my eyes fell upon the following passage in the *Lancet*, from the pen of their medical correspondent in New Zealand:—'Most of the professional men who have been long in the Colonies are sadly behind the day in their practice. Many are grossly ignorant of the practice of medicine and surgery, and it is wonderful how they ever obtained their qualifications.' In my speech I go on to explain why 'occasional ignorance is not to be wondered at, and here is probably one of the statements from which the Examiners have drawn their wrong inferences. I state that 'the treatment of disease is, up to the present time, more of an art than a science.' If the Examiners dissent from the proposition, I would suggest a simple test: let each take at random the prescriptions he has given on any one day, and arrange under two heads the various drugs prescribed, to wit, those selected on any well-defined scientific principles, and those selected empirically, because he or some other person has found by experience that such drugs have done good in similar cases. If the latter class do not greatly outnumber the former, it will be a very exceptional day's work. To say that the treatment of disease is more of an art than a science is not to disparage medical education. It is an art that ought to be pursued in a scientific spirit and by scientific methods, and it requires all the previous training that can be bestowed; but my line of argument was to show that, after books and lectures and examinations had done their utmost, there was something more required to make a skilful practitioner—keen powers of observation, and an insight which there is no impropriety in calling 'a kind of divine gift,' and if these be wanting the medical man has mistaken his vocation. Education will do a great deal, and I have not denied that it 'is the only true foundation for the successful treatment of disease,' but on the foundation there must be reared a superstructure of personal experience; and if nature has denied sound judgment and discrimination the medical practitioner will never be 'qualified,' however many letters he may have the legal right of appending to his name.

"I trust the Examiners will now be satisfied that I do not hold the views which they have attributed to me, and that nothing in my speech, fairly interpreted, countenances such views. But if unfortunately I have not succeeded in removing erroneous impressions, I must let the matter rest without further explanation or discussion; and I must remind the Examiners that in the Legislative Council I am bound to speak and vote according to my convictions, and not as a representative of the medical profession. If the Senate of the University should think that the views I have expressed in my place in the Council are inconsistent with my office as Dean of the Faculty of Medicine in the University, I shall be glad if they will relieve me from the duties and responsibilities of that office. I have already given them an opportunity of doing so.

"I have, &c.,
"J. SMITH."

"G. Bennett, Esq., M.D.

"University of Sydney,
"8 July, 1875.

"Sir,

"Your letters of the 10th ultimo and 5th instant, enclosing resolutions passed by certain members of the Board of Examiners in the Faculty of Medicine in this University, were brought under the consideration of the Senate at the monthly meeting, and I am instructed to transmit to you the following resolution which was passed on that occasion:—'The Senate, having had under their attention the several communications from Dr. Bennett, dated the 10th June and 5th July, regret that anything should have occurred to disturb the harmony which up to the present time has happily subsisted between the Dean of the Faculty and the gentlemen constituting with him the Board of Examiners in Medicine, but they do not feel called upon to take any action upon the circumstances in question.

"I have, &c.,
"HUGH KENNEDY,
"Registrar."

1875.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

ORPHAN SCHOOLS.
(STATISTICS.)

Ordered by the Legislative Assembly to be printed, 1 June, 1875.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 20 April, 1875, That there be laid upon the Table of this House,—

- “ (1.) A Return of the average daily number of children in the Protestant Orphan School at Parramatta in the year 1874.
 “ (2.) The number of children who died in 1874.
 “ (3.) The number of boys and number of girls apprenticed from the Institution in 1874.
 “ (4.) An account in detail of needlework performed by the girls in 1874.
 “ (5.) A detailed account of any work or labour performed by the boys.
 “ (6.) The total cost in detail of the whole establishment for the year 1874, to be given under the several headings as follows:—Amount paid for salaries, maintenance, clothing, medical attendance, furniture, crockery, &c., fuel, light, forage, and all other miscellaneous expenses not included under the above heads, costs of repairs, building, improvements, &c., made for and on account of the establishment, under the order of the Minister for Works or of the Colonial Architect.
 “ (7.) All other charges or expenditure, of whatsoever kind, in connection with the establishment, entered in detail.
 “ (8.) The like Returns for the year 1874, of the Roman Catholic Orphan School.”

(*Mr. Davies.*)

ORPHAN SCHOOLS.

No. 1.

RETURN of the average daily number of Children in the Protestant Orphan School at Parramatta, in the year 1874.

Boys.	Girls.	Total.
150	100	250

ANNIE O. PRINGLE,
Matron.

No. 2.

RETURN showing the number of Children who died in 1874.

Boys.	Girls.	Total.
1	2	3

ANNIE O. PRINGLE,
Matron.

No. 3.

RETURN showing the number of Boys and number of Girls apprenticed from the Institution in 1874.

Boys.	Girls.	Total.
9	7	16

ANNIE O. PRINGLE,
Matron.

No. 4.

An account in detail of work performed by the Girls, in 1874.

15 chemises.	85 blouses.
330 pinafores.	2 pairs flannel drawers.
82 petticoats.	176 sheets.
60 nightgowns.	163 pillow-cases.
21 hoods.	16 do. ticks.
8 aprons.	22 bed do.
114 collars.	45 „ quilts.
154 handkerchiefs.	37 towels.
27 shirts.	13 bags, 1 for apprentices.

ANNIE O. PRINGLE,
Matron.

No. 5.

A DETAILED account of any work or labour performed by the Boys.

2 boys	employed as pupil teachers.
2 "	" daily as monitors.
1 boy	" as boatboy.
2 boys	" daily in garden.
20 "	(aged 9 to 13) employed daily in cleaning dining-rooms, dormitories, schoolrooms, lavatories, &c.
4 "	employed as officers' servants.
20 "	(aged 10 to 13) employed in garden and about grounds every Friday.
20 "	(aged 11 to 12) " weekly in-washing verandahs, &c., girls' side.
30 "	(aged 7 to 11) " every Saturday in cleaning about grounds.
1 boy	employed daily as woodcutter.
1 "	" as post-boy and messenger.

The following quantities of vegetables were grown in the boys' garden for the use of the establishment:—

1,780 lbs.	turnips.	300 lbs.	pease.	50 doz.	apples.
250 "	broad beans.	60 "	radishes.	20 "	nectarines.
1,920 "	cabbage.	20 "	chess.	150 "	peaches.
480 "	cauliflower.	120 "	grapes.	12 "	figs.
112 "	onions.	336 "	potatoes.	20 "	oranges.

NOTE.—These vegetables were grown in a garden worked by the boys only. The vegetables for the regular supply of the establishment are grown in a separate garden.

ANNIE O. PRINGLE,
Matron.

No. 6.

THE Total Cost, in detail, of the whole Establishment, for the year 1874, to be given under the several headings, as follows:—Amount paid for salaries, maintenance, clothing, medical attendance, furniture, crockery, &c., fuel, light, forage, and all other miscellaneous expenses not included under the above heads; costs of repairs, buildings, improvements, &c., made for and on account of the Establishment, under the order of the Minister for Works or of the Colonial Architect.

	£	s.	d.
Salaries	1,120	17	6

1875.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

GOVERNMENT ASYLUMS FOR INFIRM AND DESTITUTE.

(REPORT FROM BOARD RELATIVE TO EXPENDITURE FOR 1874.

Ordered by the Legislative Assembly to be printed, 10 June, 1875.

THE SECRETARY TO THE BOARD, GOVERNMENT ASYLUMS, TO THE PRINCIPAL UNDER SECRETARY.

Board of Government Asylums,
Sydney, 8 June, 1875.

SIR,

I am directed by the Board of Management of the Government Asylums for the Infirm and Destitute to transmit, for the information of the Honorable the Colonial Secretary, returns of the expenditure of the above Institutions for the year 1874, and a comparative return of the expenditure for the twelve years, 1863 to 1874 inclusive, and to request that, as has been customary, they may, with this report, be laid before Parliament.

The Board desire to call attention to the following facts connected with the management of the Asylums, as brought out in these returns.

The number of admissions, discharges, and deaths in the three Asylums were as follows:—

	In Asylum, 31st December, 1873.			Admitted, 1874.		Discharged, 1874.		Died, 1874.		In Asylum, 31st December, 1874.		
	Males.	Females.	Total.	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.	Total.
Sydney.....	...	213	265	...	198	...	52	...	228	...
Parramatta.....	258	341	...	292	...	49	...	258
Liverpool.....	604	745	...	565	...	160	...	624
Totals.....	862	213	1,075	1,086	265	857	198	209	52	882	228	1,110

The total number of applicants for admission during the year was 1,608; of these 1,351 were admitted, and 257 refused as ineligible for various reasons.

The average number of inmates of the three Asylums during the past year was—

Sydney (Females)	227
;	Parramatta (Males)	262
	Liverpool (do.)	651
					913

Total 1,140

Showing an increase on the numbers of the previous year of forty-four persons, viz., eight women and thirty-six men.

The number and per centage of deaths, and the average age of the inmates who have died in the Asylums during the past year, were as follows:—

	Deaths.	Per centage.	Average.
Sydney—Females	52	22.90	64
Parramatta—Males	49	18.70	69
Liverpool— do.	152	23.34	66
Total	253	21.64	66

while the per centage of deaths for the twelve years, 1863 to 1874 inclusive, has been as follows:—

Sydney—Females	21.30
Parramatta—Males	17.75
Liverpool— „	26.74
Total.....	21.93

When it is considered that the admissions are principally old men and women who have been reduced by want, neglect, or disease, to almost a dying state, and frequently are persons who, having been inmates of the Sydney Infirmary or other country hospitals, where every possible means have been resorted to to keep them alive, and when nothing more can be done for them, are admitted into the Asylum to die, the number of deaths, twenty-one out of every hundred, cannot be deemed excessive.

The ages of deceased inmates, as given by themselves, were as follows:—

	Years.									Total.
	Over 20.	Over 30.	Over 40.	Over 50.	Over 60.	Over 70.	Over 80.	Over 90.	Over 100.	
Sydney—Females.....	2	2	6	5	11	18	6	1	1	52
Parramatta—Males	1	3	6	10	21	7	1	...	49
Liverpool— do.	4	7	13	19	35	42	26	5	1	152
Total	6	10	22	30	56	81	39	7	2	253

In reference to the much larger per centage of deaths at the Liverpool Asylum, as compared with that at Parramatta, the Board desire to repeat the statement made in their report for 1873, that on account of the conveniences connected with the Liverpool Asylum, as a rule all very infirm persons, as well as all admissions from the Sydney Infirmary, are sent to the Liverpool instead of to the Parramatta Asylum. In fact the Liverpool Asylum may be considered the convalescent hospital of the Colony.

The total expenditure for the maintenance of the above 1,140 paupers for the past year, including salaries to staff, rations, medical comforts, medicines, clothing, &c., has amounted to £15,405 18s., showing an average expenditure per head of £13 10s. 3¼d., or 18s. 11¼d. per head more than that for the previous year; this may be accounted for by the increased price of provisions and clothing, the small increases to salaries, and also to the necessarily more expensive treatment of inmates in the new hospital wing at Liverpool, which has been converted very much into a receiving hospital, where patients from the Infirmary and other hospitals throughout the Colony are taken in. The expenditure for medicines alone amounted to £211 9s. 10d., while that for 1873 was £121 8s. 3d., thereby swelling the contingencies by £90 1s. 7d.

As compared with the average cost per head, £13 1s. 4¼d. for the previous eleven years, the past year shows an increase of 8s. 10¼d. per head on the entire expenditure.

During the year 1874 the Board were compelled to seek authority to expend the sum of £246 18s. 2d. on the Hyde Park Asylum in re-roofing, and thereby utilizing the Volunteer quarters for the use of the old women, and the sum of £86 18s. 8d. at the Liverpool Asylum in various repairs; these two sums, amounting to £333 16s. 10d., have not been included in the returns of expenditure, as the work belonged properly to the Public Works Department, and did not legitimately fall upon the vote for the maintenance of the inmates.

The dining-hall of the Hyde Park Asylum is damp, dark, ill-ventilated, and uncomfortable; frequent applications have been made to have the necessary improvements effected but without effect.

The kitchen at Parramatta is totally inadequate for the proper cooking of the food for the inmates of that Institution; a new one is much needed.

A bakery has been erected at the Liverpool Asylum during the last twelve months, which has proved a success in regard to the quality of the bread, and is expected to prove more economical.

The roof of the north wing, which is covered with earthenware tiles, has proved a great failure, the wet penetrating the roof in all directions to the great injury of the walls and ceilings, and discomfort of the inmates; the substitution of slates has been promised by the Colonial Architect.

I have, &c.,
FREDERIC KING,
 Secretary.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

PERFORMANCE OF WORKS AT GLADESVILLE
HOSPITAL.

(REPORT FROM COLONIAL ARCHITECT.)

Ordered by the Legislative Assembly to be printed, 19 July, 1875.

THE COLONIAL ARCHITECT TO THE UNDER SECRETARY FOR PUBLIC WORKS.

[Extract.]

Department of Public Works,
Colonial Architect's Office,
Sydney, 29 June, 1875.

SIR,

Having read the Report, dated 28th January last, by the Medical Superintendent of the Hospital for Insane at Gladesville, for the year 1874, I regret to find that it contains a repetition of disparaging statements as to the attention of my department to the wants of the establishment, which were examined and fully refuted in my report of 13th September, 1873.

2. The first allusion which would appear to imply a reflection on my department is as to the amount of energy and expedition displayed by Mr. Tucker in preparing buildings for the reception of patients at his establishment at Cook's River, consisting, I may observe, of building, in four months, temporary accommodation for 68 patients. In my report of September, 1873, I stated that Mr. Tucker possessed advantages which prevented any comparison of his work, or its mode of execution, with that undertaken by the Government. That gentleman was untrammelled in all his arrangements, he was able to make contracts with whom he pleased, was subject to no supervision or control, and was allowed to provide accommodation of a character which was absolutely refused to be accepted at the Government establishments. The facilities for execution of work at Cook's River were moreover far beyond those at Gladesville.

3. Dr. Manning says that, "taking into consideration the slow progress of all works undertaken under immediate Government supervision, the arrears which still exist in the Colonial Architect's Department, &c.," he was constrained to propose the arrangement for removal of a portion of the patients. Dr. Manning seems to have made the alleged rapid and energetic execution of work by Mr. Tucker a standard by which to judge this department and the performance of Government works generally. I must repeat that the work at Cook's River was of an ephemeral character, the buildings were of the most economical description, to meet a special demand and to last a limited time only; on the other hand, all the additions and improvements at the Gladesville Asylum are of a substantial and durable character, every facility being afforded to the medical officers to vary their opinions and have alterations effected during the progress of the works. I do not admit that the progress of work at the Gladesville Asylum has been slow, taking into account the situation of the establishment and the strict supervision exercised to ensure sound and faithful workmanship. At the date of Dr. Manning's report there were in this department no arrears of work at the Gladesville Asylum, and that gentleman was not in a position to make such an accusation with regard to this part of my duty. One paragraph in the report states that the accommodation at Gladesville "is even more deficient in kind than in quantity, a large part of the dormitories are of wood, without attached day-rooms and without any of the necessary offices." To this I can only reply that any deficiency in the *kind* of the accommodation is entirely attributable to the medical officers themselves, as no works have been carried out without frequent consultations with them, and with their entire approval at the time. The statement that "a large part of the dormitories are of wood" conveys a very erroneous impression of the facts; there are no dormitories entirely of wood; those to which I apprehend allusion is made are constructed of galvanized iron, and only lined with wood for the comfort of the inmates. So far from these forming a large part, I should suppose they do not comprise more than one-fourth part of the sleeping accommodation of the establishment, the remainder being of stone. The Medical Superintendent has constantly asked for more accommodation, but I am not aware that the necessity for more single sleeping-rooms specially has been before brought under notice.

4. Instructions have been given by the Government for preparation of plans for a Lunatic Asylum to be erected at Callan Park, and preliminary surveys with that view have been made; but the pressure of business in the office has prevented the completion of a design which demands great time and consideration.

5. A contract for a new laundry, kitchen, and store was taken, not in 1872 as stated by Dr. Manning, but in May, 1873, and the contract time expired in July last. This was the time fixed by the contractor, but it was known from the first that it was insufficient for the quantity of work and the conditions under which it was to be executed. The work had to be done so as not to interfere with the working of the Asylum, consequently the buildings could not be carried on simultaneously; the new store had to be built and occupied before the old one could be taken down, its site being intended for the new kitchen; this site, however, was afterwards altered at Dr. Manning's request, which necessitated the preparation of fresh plans, &c. The old laundry and wash-house had to remain until the new one was so far completed as to admit of its being used, and the new laundry could not be finished while the old one was standing. These facts will serve to show some of the difficulties under which contractors and officers of this department labour in carrying out work at this institution.

6. All the works asked for by Dr. Manning, namely,—enlargement of engine-house, engineer's residence, two cottages for officers, and gatekeeper's lodge (which, although the money is not yet available, are already in hand), also smithy, stabling, coalshed, &c.,—for all these provision has been made on the Estimates for 1875. An estimate of cost of residence for Medical Superintendent was made, but is not included in the Estimates submitted to Parliament. Instructions have been received to prepare plans for temporary accommodation to be erected on the grounds adjoining Gladesville Asylum, but no money has yet been provided for the purpose, and I have not yet been able to complete the required design.

7. I am sorry to learn that the Medical Superintendent has so unfavourable an opinion of the earth-closet system as applied to this establishment. No one who knows the condition of and constant complaints against the old privies will deny that they were an immense improvement upon the system previously in use. I fear that if they be abandoned, the water-closets which Dr. Manning proposes to substitute for them will be productive of evils which will counterbalance the inconvenience of the earth-closet system: the disposal and utilizing of sewage, experience has proved not to be so simple a matter as is assumed in this report.

8. I have endeavoured, for my own vindication, to show that many of Dr. Manning's statements are much exaggerated, and others not borne out by the facts. I have done this in some detail, because, if unanswered, these statements, by repetition, might be received as accurate. As the Report of the Medical Superintendent will be printed and laid before Parliament, I beg to request that, in justice to me, this, and my previous letter of 13th September, 1873, to which I have referred, may be attached to it and laid before the Assembly at the same time.

I have, &c.,

JAMES BARNET,
Col. Archt.

Copy annexed.

The Colonial Architect to The Under Secretary for Public Works.

Department of Public Works,
Colonial Architect's Office,
Sydney, 13 September, 1873.

Sir,

In attention to the instructions of the Minister for Public Works, forwarding for my full report a minute by the Honorable the Colonial Secretary upon an accompanying Report by Dr. Manning, wherein the efficiency of this department is called in question,—

2. I do myself the honor to state that I shall be able, I believe, to show to the satisfaction of the Minister for Works that, so far from the movements of this department, as regards works at the Gladesville Asylum, having been slow and dilatory, the attention of myself and officers to the wants of this institution have been unremitting, and that we have endeavoured to anticipate its requirements; that the greater portion of the improvements and additions have been provided at my instance, and that all despatch has been used consistent with the necessity for obtaining preliminary authority, carrying out the works by contract after competition, and the obstruction to workmen occasioned by the nature of the establishment and its occupants. I may add that, as the views of the officials are rarely matured when the works are undertaken, it has almost always been found necessary during their progress to alter and modify them, of course causing delay.

3. As regards the proposition which has called forth the imputations I am now endeavouring to rebut—to transfer a portion of the patients from Gladesville to a private asylum, in consequence of the want of accommodation at the former—I would point out that no suggestion as to the necessity for additions has been made by Dr. Manning to me, nor, as far as I am aware, to the Government, nor has any proposal by him to provide on the forthcoming Estimates for further accommodation been referred to me; but although thus in ignorance of the views of the Medical Superintendent as to the wants of the establishment, I ventured on my own knowledge of the probabilities of the case, and to remedy what I considered to be an oversight by Dr. Manning, to suggest a vote of £3,500 for 1874.

4. Dr. Manning refers to "the last additions made to the Gladesville Hospital," which, "although the accommodation was urgently needed, were not fit for occupation, and indeed were not occupied until two years from the time at which the contract was taken." Dr. Manning's recollection of the circumstances must have been strangely at fault when he instanced this case as showing the delay attributable to my department. In 1870, notwithstanding that a number of patients had been removed to the temporary Asylum recently built on the Vineyard Estate at Parramatta, it was found that further accommodation was necessary, and Dr. Manning proposed to transfer patients to the private Asylum at Cook's River, of Mr. Tucker, who was to erect buildings for their reception, which it was alleged he could do more quickly than a Government Department; his buildings however it was found were to be of 4½-inch brickwork and galvanized iron, a kind of construction which the Medical Board refused to accept even for temporary purposes at Gladesville. The Colonial Secretary (Mr. Cowper) rejected the proposal to transfer patients, and directed that buildings of a cheap and temporary character, but sufficiently substantial, should be erected at Gladesville, a plan strongly opposed and protested against by Dr. Manning. A contract was in November made with Mr. J. B. Elphinston, a most efficient contractor, who was to complete by the June following; but as the work proceeded repeated applications were made by Dr. Manning for alterations, all tending to more elaborate construction, and finally resulting in converting what was intended to be a temporary structure into a substantial and permanent addition to the Asylum, more perfect in construction and

and arrangement than any part of the original buildings. Although these alterations and the manner in which they occurred occupied much time, still by pressure of this department and the exertions of the contractor the contract time was but slightly exceeded. It was several months after the building was completed and ready for occupation, as far as this department was concerned, before it was occupied, as the Medical Superintendent considered a substantial wall to be necessary to prevent the building being overlooked, and this could not be erected until arrangements were made by the Government for procuring an Act of Parliament enabling them to purchase adjoining land, the property of Mrs. Isler. I quote in confirmation the following extract from Dr. Manning's printed Report, dated 1st March, 1872. "Towards the close of the year some of the dormitories of the new wing of the hospital were opened for the accommodation of the patients, and a temporary relief was thus obtained. The rest of the buildings, which have been fit for occupation for some months, remain unused until the privacy which will admit of their occupation is secured by the purchase of an adjoining property and the erection of the necessary fences."

5. There are at Gladesville two temporary buildings, one now occupied as a church and by patients, the other used as a room for recreation of the inmates; these were erected for dormitories, and for a time furnished accommodation for 150 patients. For relief of present most pressing wants, I would suggest that these buildings might, at all events until some other steps are adopted, be again used for their original purpose; they would provide for about —, and probably render unnecessary any transfer to private establishments. A chapel and recreation room could be formed by enclosing the large sheds in the airing grounds, which need not prevent their use for purposes of shelter.

6. With exception of the building referred to in the 4th paragraph, comparatively little has been done since Dr. Manning's taking charge towards providing additional accommodation for patients; the works carried out have been principally for improvement of the water supply, erecting dining-rooms for attendants, and gardener's cottage, and ordinary repairs and alterations of a minor character. Dr. Manning's demands, although numerous and frequent, have been in the main for such works and for improving the accommodation and providing furniture. A contract is now in progress for a new kitchen, a steam laundry, stores, and workshops.

7. To show that there has been no want of care on my part for the needs of these establishments, and that I have exhibited some interest in providing for and carrying out as far as was in my power such improvements as seemed to be desirable, it is necessary that I should furnish some particulars as to what has been done since my appointment. In addition to a great deal of my own personal attention, one of the Clerks of Works in the office was placed in immediate superintendence of the works, and a large portion of his time has been devoted to them; as a further precaution, a Foreman of Works has for some years been stationed at Gladesville exclusively, to see the works there properly and diligently carried out. I forward returns showing the amounts voted, the various contracts taken, and the annual expenditure since the year 1861 inclusive. These show the nature of the contracts and by whom they were undertaken, giving in general terms a *résumé* of what has been done towards improving and meeting the wants of these institutions, and showing that the attention of my department to them has been continuous. I also forward a report from the Clerk of Works, Mr. Coles, as to the description of the works, and the circumstances under which they have been carried on. Since the year 1861, it will be seen that £73,715 has been expended at Gladesville, £35,549 at the Parramatta Asylum, £1,568 upon the Asylum for Imbeciles at Newcastle, and for the Receiving House at Darlinghurst £7,328, making a total expenditure through my office upon the Lunatics Institutions during the 12½ years, of £118,160.

8. It has always been difficult to find room for the extended accommodation constantly called for in these institutions, and at Gladesville, up to the retirement of Dr. Campbell, the continual increase of patients was met, at a large cost, by adding to and extending the dormitories and single rooms. Amongst other works at this place for the initiation of which I can claim the credit are those for improving and rendering nearly unfailling the supply of pure water, a benefit which only those who are aware of the former state of things can fully appreciate,—by completing an extensive system of underground tanks, enlarging the reservoir at the creek, providing steam pumping machinery with its adjuncts and constructing drinking fountains in the yards, constructing a large bathing-place with rooms and enclosure in a bay of the Parramatta River, providing improved water-closets, fresh-water baths, &c. Many of these improvements were discouraged by the Superintendent, and their failure predicted; the baths, especially, were unused for a long time, the old imperfect arrangements being preferred. The water supply works have proved entirely successful, but to ensure that result it was considered desirable that they should remain under my management for some time after completion. I have refrained from going at length into the works carried out by me at Gladesville, and I have said nothing of those at Parramatta, where extensive additions have been made and the accommodation largely increased, nor of the other asylums, but I trust I have instanced enough to prove that there has been no want of a zealous desire to meet and even to anticipate the wants of these institutions.

9. Reverting to the imputations that the works at these asylums have been carried out slowly by my department, I can affirm that there has never been any delay but such as the circumstances of the case necessitated, and I believe that most of the larger contracts will compare in this respect without disadvantage with those undertaken for private individuals; but it should be remembered that there are many causes of delay peculiar to the mode of proceeding indispensable for Government works, such as the various references required before a work can be contracted for; the necessity for public competition; and the almost invariable acceptance of the lowest tender, by which incompetent contractors are not unfrequently obtained, who are a cause of great trouble to the department and much detriment to the works. Moreover, a quality of work and perfection of structure and arrangement are required of a Government Department which are but rarely looked for by others, and the head of a department being at hand, and responsible for all real or imagined shortcomings, and not unfrequently for changes of views, is compelled to take unusual preliminary precautions. I can venture to say that, under similar circumstances, and subject to no greater restrictions than those imposed on private individuals, my department can carry out works as expeditiously, as cheaply, and at least as satisfactorily, as respects design, arrangement and execution.

I have, &c.,
JAMES BARNET,
 Col. Archt.

1875.

NEW SOUTH WALES.

HOSPITAL FOR THE INSANE, GLADESVILLE.

(REPORT FOR 1874.)

Presented to Parliament by Command.

THE MEDICAL SUPERINTENDENT OF THE HOSPITAL FOR THE INSANE, GLADESVILLE, TO THE COLONIAL SECRETARY.

Lunacy Department,
Hospital for the Insane, Gladesville,
28 January, 1875.

SIR,

I have the honor to submit a Report on the Hospital for the Insane, Gladesville, for the year 1874, with the usual statistical tables.

On December 31st, 1873, the number of patients in hospital was 561, of whom 267 were males and 294 females.

The total number under care during the year was 873—453 males and 420 females—and the average daily number resident was 581.

The number discharged was 267, of whom 92 had recovered, 22 were relieved, and 153 were not improved.

The deaths during the year were 55, of whom 40 were males and 15 females.

The number of patients in hospital on December 31st, 1874, was 304 males, 247 females; total, 551.

These results are set forth in a tabular form in Appendix A, Table I.

The admissions during the year have been 16 in excess of the number admitted during any previous year in the history of the institution.

The character of the cases admitted was even more unfavourable than during the preceding year. 23 were epileptics, 23 idiotic or congenitally imbecile, 19 were suffering from general paralysis, 25 were upwards of 60 years of age, in 30 cases there was known and pronounced hereditary tendency to the malady, and in no less than 71 cases the malady was stated in the papers sent with the patients to have existed upwards of 12 (twelve) months.

The whole of these cases, with perhaps an occasional exception, as well as a number of others, were quite incurable when admitted.

Five of the cases were transferred from other asylums.

Of the patients re-admitted—a total of 50—12 had been previously discharged to the care of friends while still insane, 1 was a re-transfer from the Lunatic Asylum, Parramatta, and 3 had been discharged from the Parramatta Asylum, having been previously transferred thither from this institution.

The number of relapses, therefore, in patients discharged from Gladesville was 34, and of these, 15 were women, who from the troubles incident to the puerperal state are peculiarly liable to a recurrence of their malady.

The average length of time which the relapsed cases were absent from hospital was 2 years and 10 months, the longest being 19 years, and the shortest 3 weeks.

Of the total admissions, 205 came to the hospital through the Reception House, where all the slighter cases and those due to temporary alcoholic excess were weeded out and discharged.

The milder cases from the up-country districts do not pass beyond the up-country gaols, whence a large number are discharged,—the more persistent and chronic cases only being sent to hospital.

The total number of admissions into the Reception House during the year was 240.

A large number of cases from one cause or other reach the hospital direct from the Sydney and other gaols; and it is a melancholy fact that out of the total number of admissions during the year, 37 only have been sent to the hospital by friends under the Act 7 Victoria No. 14, sec. 11 of the Lunacy Statutes. The whole of the remainder have been sent through the gaols and the police. For this, the present condition of the Lunacy Statutes—a sad relic of the barbarous ages—is mainly responsible. The harm that is done by technically treating lunacy as an offence against the law, and dragging these unfortunate creatures through the Police Court and gaol, is incalculable.

I have pleasure, however, in again testifying to the general cleanliness, to the freedom from bruising or injury, and to the satisfactory bodily condition in which the patients have in the large majority of cases reached here. It is only right that such a fact should be placed on record, to the credit of the officers of gaols and to the police charged with their transit.

The discharges during the year include 92 who had recovered, giving a percentage, calculated upon the admissions, of 29.48—a result less satisfactory than has been obtained in any year since I have had charge of the institution.

Of the cases discharged as relieved, 8 males and 13 females were discharged to the care of friends under bond for their safe keeping and peaceable behaviour, and one male escaped and was not subsequently retaken.

Of the total number (153) discharged as not improved, 28 males and 15 females were transferred to the Lunatic Asylum, Parramatta, 1 male and 72 females to the Licensed House for Lunatics at Cook's River, and 19 males and 17 females to the Asylum for Imbeciles at Newcastle. One male, a congenital imbecile, was removed under bond by his friends.

The patients transferred to the Lunatic Asylum, Parramatta were, as a rule, those suffering from chronic insanity, and so far quiet and cleanly in habits that they could be allowed to sleep in associated dormitories, of which the non-criminal part of that asylum consists.

The cases sent to Newcastle were, with one exception, cases of congenital idiocy or imbecility, and were for the most part children. The Newcastle Asylum is so much in the city, its recreation grounds and even its offices and wards are so overlooked, that it is deemed advisable, except in particular cases, to admit the patients for whom it is intended into this institution first, and to forward only such as are fairly quiet and manageable. As these cases are almost invariably incurable, this course is not calculated to raise the percentage of recoveries on the admissions in this hospital, but it has advantages which more than counterbalance this statistical drawback.

At the close of July the Colonial Secretary, after lengthened correspondence and inquiry, assented to an arrangement made with Mr. G. A. Tucker, of Bay View House, Cook's River, by which he was to erect the necessary buildings, and receive 68 female patients in addition to the 32 Government patients already under his care. At the end of November, Mr. Tucker, who had displayed great energy and who had prepared the buildings with unusual expedition, reported them ready for occupation, and on December 1st the patients were removed from Gladsville to his care.

The buildings, which are of weatherboard on brick piers, consist of ten single rooms, each with a minimum space of 800 cubic feet; associated dormitories, with a minimum space of 600 cubic feet; day and dining rooms of such dimensions as are approved by the English Commissioners in Lunacy; with all necessary offices, bath-rooms, &c. They are comfortably fitted and furnished, and well adapted for the temporary accommodation of insane patients.

Although the system of farming out the insane is one which I hold to be wrong in principle, and which even under the most favourable circumstances is open to many and well-founded objections, I have advocated its adoption by the Government in the present instance from reasons of expediency.

Taking into consideration the slow progress of all works undertaken under immediate Government supervision, the arrears which still exist in the Colonial Architect's Department, the overgrown size, the awkward arrangement and the crowded condition of the existing asylums, and the expense which would have been incurred in establishing and working a new asylum on a small scale for female patients, I was constrained to recommend to the Government the arrangement which has now been approved of, and which has afforded a great relief to the female division of this institution, as well as increased the comfort of the patients who were removed, at a cost which, considering the present high price of labour and building materials must, I think, be regarded as very reasonable.

The deaths during the year have been larger than usual in proportion to the average number resident, shewing a percentage for both sexes of 9.46.

The mortality among the female patients was, as in former years, much below that among the males, the percentage on the numbers resident being 4.98 as against 14.28.

Of the total 55 deaths which occurred, 12 died in a less period than one (1) month from the date of admission; 1 was only in hospital a short three hours, 1 less than two days, and 1 three days. These and others were dying when admitted, and might more humanely have been allowed to finish their careers elsewhere. Fortunately no accidental death or suicide has occurred, and it has not been deemed necessary to hold an inquest in any case of death during the year.

The general health of the patients has not been satisfactory. Notwithstanding the abundant diet and the free use of vegetables, milk, and fruit, cases of *purpura*, due to the vitiated atmosphere of the over-crowded dormitories, have been very numerous. *Carbuncles* and *boils*, due mainly I believe to the same cause, have been very troublesome; a fatal case of *erysipelas* occurred, and another of *pyæmia*; and an epidemic of *scarlet fever*, commencing in August during the prevalence of westerly winds, prostrated upward of 60 patients and 16 of the attendants and nurses. Happily none of the cases were fatal, but the epidemic was not only the cause of great anxiety in itself, but in the serious loss of service on the part of valuable and trained attendants, several of whom did not recover the strength and energy necessary for the full performance of their duties for some time.

On a general review of the work of the Hospital for the year, the result, especially when compared with former years, cannot be pronounced satisfactory. A year in which the recoveries have been fewer the deaths more numerous, and disease more prevalent than during any preceding year under his management, does not afford a pleasing retrospect to a Superintendent, and suggests an inquiry into the causes of such a falling-off in the results of care and treatment.

The unsatisfactory nature of this year's statistics may no doubt, to some extent, be attributed to the unfavourable character of the cases admitted, but the overcrowded condition of the hospital has, I am sure, been in no small degree responsible, both for the increase in the number of deaths and the decrease in the number of recoveries. By a reference to Appendix A, Table 3, it will be seen that, excluding the year 1869, which was in many respects exceptional, and in which the altered arrangements of the hospital and the establishment of a new régime materially affected the statistics, the percentage of recoveries has been lower or higher in proportion as the hospital has been more or less overcrowded. In 1870, with 493 as the average number resident, the recoveries were over 38 per cent. on the admissions. In 1871, when the average number resident was 513, the percentage fell to 33. In 1872, when through the establish-
ment

ment of the Newcastle Asylum the average number fell to 487, the percentage of recoveries rose to 44, and it fell again to 33 in 1873, when the average number had again risen to 525. During the past year, with an average number of 581 resident, the percentage has fallen to 29.

Without attaching an undue importance to statistics extending over such a short period as six years, or dealing with them in any partial way, I cannot but state that I think the inference I have drawn from them is correct; and, apart from them, it is not difficult to imagine that overcrowding would be especially deleterious in its influence on both the mental and physical health of the patients, as well as destructive of that order and discipline which are so essential to the successful management of an institution of this character. With reference to this subject, Dr. Isaac Ray, the Nestor of Psychological Medicine in America, has, after a lifetime spent in hospitals for the insane, thus expressed himself:—"When a hospital intended for 200 patients is made to receive 300, they excite and disturb one another—dangerous and even murderous collisions become unavoidable; the means of ventilation are deficient; and, consequently, the air of the house is loaded with effluvia calculated to produce disease; the officers, who need the utmost strength and serenity of mind in performing their allotted work, are constantly filled with apprehension; and the result of it all is that the hospital fails to accomplish that degree of comfort and restoration which it otherwise would. Let it be distinctly understood, therefore, that to place a patient in a hospital already full is to inflict a positive injury on many for the doubtful chance of benefiting one."*

This hospital contains accommodation for a maximum number of 450 patients only. The average number resident during the year has been 581; and before the removal of 68 female patients to the Cook's River Asylum, which did not take place until December 1st, the total number of patients in hospital was 606. The transfer to Cook's River of 68 women rendered the accommodation in the female division sufficient, but at the end of the year the male division contained 304, instead of its proper number, 200; and the extra number crowded every dormitory, corridor, and passage, besides invading the rooms set apart for reading, recreation, and religious service.

The accommodation is even more deficient in kind than in quantity. A large part of the dormitories are of wood, without attached day-rooms, and without any of the necessary offices; and the "single rooms" intended for dormitory accommodation for one patient each are sadly deficient in number.

On December 31st, 1868, the total number of insane persons in Asylums in the Colony was 1,230. On December 31st, 1874, it was 1,588. At the former period the number of single rooms was much below the proper proportion, and the number for male patients has diminished since that date, 6 having been erected at Newcastle and 8 demolished at Parramatta as unfit for habitation, although the number of patients has increased by a total of 358, of whom two-thirds are males.

The present need of single rooms at Gladesville is most urgent. A number of patients whose condition is such that as much for their own welfare as for the safety and comfort of others they should be lodged apart, are now obliged to pass the night (I will not say to sleep) in associated dormitories. One dormitory (at times a perfect pandemonium) and several corridors are filled with patients every one of whom ought properly to be in "single rooms." And it is impossible at times to find "single rooms" for acute cases, in which quiet, undisturbed rest at night is the main requirement to ensure recovery. With such a state of things at night, and with the excitement produced by overcrowded wards by day—with the absence of all indoor associated amusements, owing to the rooms for this purpose having been occupied as dormitories—and with a painful feeling on the part of Superintendent, officers, and staff, that the hospital is retrograding in its usefulness and position, owing to overcrowding, despite all their efforts and anxieties—it is not to be wondered at that the percentage of recoveries has fallen to 29.

The following statement shows the total number of insane persons in the Colony on December 31st, 1874, the distribution amongst the respective institutions, and the increase in the total upon that of 1873, viz. :—

	M.	F.	Total.	
In Hospital for Insane, Gladesville	304	247	551	
Lunatic Asylum, Parramatta	Free	493	199	692
	Convict	24	7	31†
	Criminal	35	1	36‡
Asylum for Imbeciles, &c., Newcastle	115	49	164	
Licensed House for Lunatics, Cook's River	8	106	114§	
Total	979	609	1,588	
Total number on December 31st, 1873	942	584	1,526	
Increase during the year	37	25	62	

The early period at which this Report is presented has prevented a continuation of the table given last year, and showing the proportion of insane to population in each year since 1863 in New South Wales as well as in England and Victoria.

The Report of the English Commissioners for 1873-4 has not yet reached me, and the estimated return of the population of this Colony at the end of last year has not yet been issued from the Registrar General's Department.

A continuation of this table I shall hope to present in subsequent Reports.

Judging from the estimated return of the population of the Colony on June 30, 1874, it is possible that the proportion of insane to population has not greatly increased, but the increase is in itself a large one, and as similar if not larger increases must be expected with each yearly increase of population, the disposal of this growing number of persons requiring hospital accommodation is a question (especially in the present condition of the asylums) calling for the gravest consideration and the most prompt and energetic measures.

The estate at Callan Park, purchased early in last year, has not yet been utilized, and although the sum of £75,000 has been voted for the erection of a new asylum thereon, no decided steps have yet been taken to provide this much needed institution.

The

* "Contributions to Mental Pathology," by Dr. Isaac Ray, 1873.

† British convicts still at charge of Imperial Treasury.

‡ Confined under Criminal Lunacy Act, 24 Vict. No. 19, N.S.W.

§ 100 of these are maintained at the Government expense.

The contracts taken during the year 1872 for new laundry, kitchen and store, at Gladesville are not yet completed, but the store is now occupied, although only partly furnished, and it is hoped that the laundry and kitchen may be in use in the course of the next three months. At the close of the year contracts were taken for a gate-keeper's lodge, and cottages for the chief attendant and dispenser. Tenders have also been accepted for some additions to the engine-house and a cottage for the engineer, whose constant presence at the waterworks is very desirable.

The main requirements, apart from further accommodation for patients, are a residence for the Medical Superintendent, stables, cart sheds, straw store, matting rooms, &c.

In my Report for the year 1869 I noted that earth-closets had been fitted throughout the male division and in part of the female division of the hospital, and I reported that, though an improvement on the old cesspits, they could not be considered, on the whole, as a success. The experience of five years bears out fully the opinion I then expressed. They are a decided improvement on cesspits, but they entail great labour and trouble; they are never without more or less offensive odour, encourage the breeding of swarms of flies, and, except with the greatest care, would be an unbearable nuisance. I am unaware of any large institution in the Colony where they have been so successfully worked as here, and where such trials have been made of the different modes of applying the earth. Various mechanical contrivances made in the Colony and imported from England have been employed, and some specimens of Moule's closets sent out specially from England by the Agent-General at my request have been found very efficient in action. On the establishment of a new asylum, however, I unhesitatingly recommend water-closets in preference to them in any situation where a full and efficient water-supply can be obtained; and I believe that sewage, carried away by water can, under most circumstances and in most situations, be as readily utilized for fertilizing purposes as when mixed with earth in the earth-closet system.

In Appendix C will be found a very valuable report on earth-closets, by the Superintendent of an English asylum.

The increase during the last few years in the number of Chinese patients whilst the Chinese population has been for a long time past rapidly diminishing, calls for some remark. The number of Chinese patients in the Asylums at present is 48, viz.:—Gladesville 8, Parramatta 39, and Newcastle 1.

The Chinese population of the Colony, which in 1861 was 12,988, had fallen in 1871 to 7,220, the decrease being 5,768, or 44·41 per cent.* The Registrar General informs me that he has no means of estimating with exactness the Chinese population at this date, but that he has reason to believe that the diminution in numbers is still continuing. Taking 6,500 as the present estimate—one probably much above the truth—we have one insane Chinaman to every 135 of the Chinese population,—nearly three times the proportion for the population of the Colony generally. This enormous proportion is no doubt partly due to the exodus of our Chinese population, who have left behind them their insane in hospital, partly to the fact that Chinese patients very rarely recover when sent to hospital, whilst they live to an average age there, and partly to the fact that a large part of the present Chinese population is made up of the unsuccessful, the improvident, and the more hopeless classes, the stronger-minded and successful having departed with their gains to China. The recoveries among Chinese patients during the last six years has not averaged 12 per cent. on the admissions, whilst the total recoveries have averaged over 36 per cent. The number of Chinese admitted during the last six years into this hospital and the Parramatta Asylum together has been 32, a total out of all due proportion to the Chinese population.

Early in the year, the purchase of a property adjoining the hospital, and for which arrangements had long been in progress, was completed. Considerable improvements were, as soon as possible, effected, a road at the back of the hospital was closed; the laundry and wood-yard enlarged; a new main entrance formed; and a paddock ploughed, levelled, planted and laid out as a cricket ground, with bowling green and other means of out-door amusements. A house purchased with the property has been repaired and enlarged to form a residence for the Assistant Superintendent.

The religious services have, as in former years, been conducted with regularity, and with all the decorum possible, although the room used for the purpose is now used also as a dormitory. I have again, as in former years, to record the cordial co-operation of the Chaplains in the work of the institution, and to express my appreciation of the readiness with which they have at all times responded to extra calls for their assistance.

The amusements have, as in former years, not been neglected. The fortnightly dances were continued during the earlier winter months, and the Queen's Birthday was celebrated by a ball on a larger scale than usual. Magic lantern entertainments, with new lanterns and gas apparatus kindly given by a friend, were repeatedly held, and at these, on several occasions, Mr. Alfred Cane most kindly undertook all the labour of preparation and exhibition, and lent a number of slides. Various musical, dramatic, and other entertainments were also held, and I am indebted to many kind friends, among whom I would particularize Messrs. Lees, Webster, Craven, Cavanagh, and Wilson, for assistance on these occasions.

During the latter part of the year the over-crowding of the male division of the hospital compelled me to occupy the amusement room as a dormitory, and since that time I have been obliged to discontinue all the indoor associated amusements, and most reluctantly to decline repeated offers of musical and other entertainments made by gentlemen and ladies who have on former occasions left most pleasant recollections of their visits. In October the largest and most successful out-door entertainment which has yet taken place at the hospital was given, through the kindness of a number of ladies and gentlemen resident in the neighbourhood. The whole arrangements were made by a committee of ladies, and the time fixed so as to celebrate the sixth anniversary of my taking charge of the hospital as Medical Superintendent. Athletic sports, aunt sally, swings, fire-balloons, a merry-go-round, Punch and Judy, a grand display of bunting, plenty of music, and a most liberal tea, with attendant et ceteras, made up a most attractive programme, and were thoroughly enjoyed by a larger number of the patients than had ever been previously brought together in this manner. Two days afterwards the attendants, nurses, and staff of the hospital were entertained at a dance given under the same auspices. Later in the year two steam-boat excursions to Middle Harbour afforded a great treat to a number of patients and visitors.

In all the entertainments given at the hospital, Mrs. Darvall, of Ryde, has taken a most kind and active interest. I have especially to thank her for donations of money, for several loads of fruit, and most of all for an active sympathy which makes her presence at the hospital always a pleasure.

This

* Report on Statistical Results of Census of 1871, by the Registrar General.

This hospital is looked upon by many as entirely a Government institution, and as such having no need of assistance from private benevolence; but, as has been well pointed out by Dr. Dewolf in the case of a kindred institution at Halifax, in Nova Scotia:—"It only requires a moderate degree of attention to lead one to admit that while the essentials for care and comfort are due from the Public Treasury, there are yet many, "very many, desirable and important aids to recovery which are more properly provided by benevolent "individuals."*

In providing for the recreation, exercise, and amusement of the patients, in making the wards more home-like and pretty, in erecting aviaries and filling them with occupants,—the "essential extras" of an hospital of this character—private benevolence may, indeed I think should properly co-operate with the public charity. That this has been in a great degree recognized, the above record of facts and the appended list of donations serve to testify; and, whilst expressing my hearty thanks to kind friends who have by their gifts and their active help at concerts and other amusements shown a sympathy with the objects of the institution, I cannot but express a hope that in the future these private contributions towards the comfort, the happiness, and the recovery of the insane—a class whose claims are superior to many others—may increase both in number and value.

The following gifts have been received during the year:—Miss C., £20; Mrs. & Miss W., £5; Mrs. Darvall, £3; Mr. J. Paterson, £1; Mr. Kynaston, £1; The Revd. Father Joly, 2 calves; Dr. Creed, a pair of young cranes and an eagle; Mr. Isler, a Kangaroo; Mrs. Manson, 10 bantam fowls; Captain Truscott, several bags of cocoa-nuts; Mrs. J. Frazer, box of young pines; Mr. Charles Brady, mulberry-cuttings; Mr. Henry, vine-cuttings; Union Club, illustrated papers, &c., a large donation (monthly); Mr. Ernest O. Smith, illustrated papers, &c. (monthly); Australian Club, illustrated and other papers (several packages); Mr. C. Wilson, illustrated papers, &c. (several packages), and copies of *Sydney Mail* and *Punch* each issue; Mr. Grafton Ross, Mr. Henry Wager, Dr. Hall Palmer, Mrs. Brown (Hunter's Hill), Miss Leigh (Hunter's Hill), Mr. R. A. A. Morehead, Mr. Stephen Greenhill, Mr. Charles Cowper, Messrs. S. C. Bown & Company, Mrs. Charles Thorne, Mr. Edey Manning, and Mrs. Vickory, large packages of illustrated and other papers; Mr. S. T. Leigh, almanacs and portraits in *Sydney Mail* series; Mr. William Buchanan, G.P.O., large quantities of foreign and other newspapers; Dr. Strong, two boxes of books; the proprietors of the New South Wales *Good Templar*, several packages of that publication; Anonymous, several packages of illustrated and other papers. From Mr. C. Moore, of the Botanic Gardens, and from Mr. Duff, during Mr. Moore's absence from the Colony, I received several gifts of cuttings, plants, and seeds for the hospital garden, besides a large tortoise and a pair of Egyptian geese. Last, but not least, I have to acknowledge the receipt from the proprietors, free of all charge, of copies of every issue of *Bathurst Free Press*, *Bathurst Times*, *Burrangong Argus*, *Burrangong Chronicle*, *Clarence and Richmond Examiner*, *Deniliquin Chronicle*, *Dubbo Dispatch*, *Goulburn Herald and Chronicle*, *Grafton Observer*, *Illawarra Mercury*, *Kiama Independent*, *Maitland Mercury*, *Monaro Mercury*, *Newcastle Chronicle*, *Newcastle Pilot*, *Queanbeyan Age*, *Richmond River Express*, *Riverine Grazier*, *Social Reformer*, *Southern Argus*, *Wagga Wagga Express*, *Wagga Wagga Advertiser*, *Western Examiner*, *Western Post*, and *Yass Courier*—gifts most welcome and most cordially appreciated by the patients.

I have, as in former years, to acknowledge the ready, active, and most efficient assistance of the staff under my directions, who are called on to perform the most trying and arduous duties, and of whom, as a body, it is difficult for me to speak in terms too eulogistic.

In concluding my Report, I must crave indulgence for its meagreness and want of interesting detail, owing to the short time which I have been able to avail myself of in its preparation. The statistical tables on which it is in great part a comment could not be commenced until January 1st, and, owing to their elaborate nature, could not be completed for some time, and it was necessary for me to forward my Report at an earlier period than usual.

I have the honor to be,

Sir,

Your most obedient servant,

F. NORTON MANNING,

Medical Superintendent.

* Sixteenth Annual Report of Hospital for the Insane, Halifax, 1873.

TABLE III.—Showing the admissions, discharges, and deaths, with the mean annual mortality and proportions of recoveries per cent., since the 1st January, 1869.

SUMMARY OF THE TOTAL ADMISSIONS, 1869-70-71-72-73-74.

	Male.	Female.	Both Sexes.
Percentage of cases recovered	30.46	35.67	32.40
" relieved	5.18	5.67	5.36
" not improved	26.90	22.47	25.25
" dead	13.70	6.18	10.91
" remaining	23.76	30.01	26.08
	100	100	100

* A large proportion of these were re-admitted, but not relapsed cases. Some were re-transfers from other institutions for the insane and others had been discharged to the care of friends whilst still insane.

TABLE V.—Showing the causes of death during the year 1874.

Cause of Death.	Males.	Females.	Total.
CEREBRAL DISEASE.			
Apoplexy and paralysis	5	1	6
Epilepsy and convulsions	4	4
General paresis	11	11
Maniacal and melancholic exhaustion or decay	3	1	4
Inflammation and other diseases of the brain, softening, tumours, &c.	5	5
THORACIC DISEASE.			
Inflammation of the lungs, pleura and bronchi	4	2	6
Pulmonary consumption	1	4	5
Disease of the heart and blood-vessels	3	1	4
ABDOMINAL DISEASE.			
Inflammation and ulceration of the stomach, intestines, peritoncum
Dysentery and diarrhoea	2	2
Albuminuria	1	1
Cancer	2	2
Erysipelas	1	1
Carbuncle	1	1
Pyæmia	1	1
General debility and old age	1	1	2

C.

EXTRACT from the Journal of Mental Science, July, 1874, page 304. Public Asylum Reports for 1873.

THE Court of Quarter Sessions of the Worcester County Asylum requested to know, among other things, why earth-closets could not be adopted throughout. To this we are indebted for a long report from Dr. Sherlock, in which, besides matter in reference to their bathing arrangements, we have a very full and valuable account of the experience of earth-closets in Lunatic Asylums, as to which information was collected from many sources. We think this *resumé* by Dr. Sherlock so valuable that we append it in full:—

"Twenty-seven asylums were using water-closets, but in several of them earth-closets had been tried and found not to answer, as at Northampton, Somerset, and Surrey, and the Superintendents reported unfavourably of them in comparison with water-closets. In twenty-five asylums the Superintendents reported that earth-closets were in use. In two asylums—Broadmoor and Shrewsbury—they were said to be in use in all situations; ten confined their use to out-of-door situations, seven to ground-floor wards only, two to ground and first floor wards only, and four used earth commodes of various construction in special departments. Thirteen of the Superintendents where earth-closets are in use reported unfavourably of them, while the Superintendents of five asylums where they are in use stated that they answer well."

The Superintendents of nearly all the asylums where earth-closets have been in use state that they require more care and attention than water-closets; and the majority of them speak of them as emitting most offensive odours if the least neglect be permitted. In several asylums where they have been in use they have been replaced by water-closets. In the last report of the Isle of Man Asylum, dated July, 1873, the following paragraph occurs:—"Water-closets have been substituted for earth-closets throughout the asylum. The desirability and advantage of this change no words of mine can express."

The Superintendent of Broadmoor Asylum reports that the experiment with earth-closets has there "been a very complete one. The result has proved that they are a shocking nuisance in-doors, and to be avoided wherever the water supply and sewerage are reasonably good." In the pamphlet published and circulated by Moule's Patent Earth-closet Company testimonials from these two last-named asylums are given, speaking favourably of their suitability by the Clerk of Works; but subsequent experience has proved them unsuitable, and the Superintendents of Berks, Caterham, Cobey Hatch, Leavesden, and Rainhill report equally unfavourably of them, and in Kent they have been replaced by water-closets in all the wards, and their use confined to out-of-doors situations. The weight of evidence appears to your Superintendent to prove clearly that they are less effectual than water-closets, that they require much greater attention and care, that they are frequently very offensive and pollute the atmosphere, and that their use should be confined to airing-courts. In constructing a new asylum, some of the objections to their use can be partially removed by placing earth-closets in situations where they can be charged with dry earth and the soil removed from outside of the building; but where the closets are placed, as in this asylum, in exposed situations, much inconvenience and nuisance would arise from the filling and emptying process.

"If the earth-closets were fixed on the first floor wards, considerable inconvenience would result from having daily to carry earth for their supply through the wards occupied by the patients, and this would be much more inconvenient and undesirable in female wards, where men would daily have to enter at an early hour. Where earth-closets are in use it is absolutely essential in an asylum to provide some paid labour for the daily attention and supervision of providing them with dry earth and removing the contents of the tanks. It is also necessary to have some provision by means of which dry earth may be procurable at all seasons for the supply of the closets, and this must entail considerable expense in erecting a building for storage of earth during the summer, or of constantly having some artificial means of drying earth during the winter. The product of the use of water-closets is equally applicable to land in the form of sewage, and at present this is constantly carried out, and entails no charge for labour, and appears to be equally valuable as a fertilizing agent.

"Since the last visit of the Committee several members of the Board, accompanied by the County Surveyor and your Superintendent, visited the Shrewsbury Asylum, where earth-closets were known to be in use both in ground floor and first floor wards. Without exception the whole of these closets were more or less offensive, and some of them painfully so, although it had been attempted to overcome the nuisance by the copious use of chloride of lime, a strong odour of which could be readily perceived everywhere. In the first floor wards, where shoots were employed to conduct the soil to tanks or vaults on the ground underneath, this was specially the case, and much inconvenience was stated to frequently arise from the earth and soil in its passage downwards adhering to the inside of the shoot. In several of the earth-closets examined the deposit of dried ashes upon the pan was accompanied with the rising of so much dust as must necessarily soil the dress of any person using the closet; probably, however, this would be less likely to occur were earth or clay in use. In reply to our inquiries it was reported that in the morning when the tanks or vaults were being emptied from the outside, a most offensive odour was found to enter and penetrate into the building, owing to a back draught from the outside through the pipes. It was said to be perceptible for some considerable time afterwards. In a sanitary point of view your Superintendent is therefore forced to report upon earth-closets very unfavourably, not only in respect of those as seen at Shrewsbury, but in many other asylums of the country where they have been seen and inspected by him.

"The Commissioners in Lunacy, also, in reply to your inquiries, stated that they were less serviceable for asylum use than water-closets, and were found not to answer so well. So far as the examination extended, the members of your Board concluded that they were equally liable to get out of order as water-closets, and several were found without earth or ashes, some acting imperfectly, and a few not at all."

1875.

NEW SOUTH WALES.

AUSTRALIAN MUSEUM.

(REPORT FROM TRUSTEES, FOR 1873.)

Presented to Parliament, pursuant to Act 17 Vict. No. 2, sec. 9.

REPORT OF THE TRUSTEES OF THE AUSTRALIAN MUSEUM, FOR THE YEAR ENDING
31st DECEMBER, 1873.

TO HIS EXCELLENCY THE GOVERNOR-IN-CHIEF,—

1. The Trustees of the Australian Museum have the honor to submit to your Excellency this their twentieth Annual Report.

2. They have to express their great regret that the presentation of this Report should have been, from circumstances within the knowledge of the Government, delayed to so late a period of the present year.

3. The Museum has been open to the public daily (Sundays excepted), and has been visited during the year by about 60,000 persons. This estimated number has been derived from a careful examination of the Visitors' Book, which displays throughout an obviously gross and culpable exaggeration. The false entries during the year amount to a total of nearly 180,000, and on one particular day alone the number of visitors falsely entered exceeded 3,700. The total number of visitors for the year 1873 estimated and returned by the late Curator and Secretary was 239,829, which is about 100,000 in excess of the total population of Sydney and its suburbs for that year.

4. The Trustees regret they cannot afford any trustworthy information in regard to the exchange of specimens with foreign Museums or with private individuals, because the late Curator and Secretary has failed to record them. The donations to the Museum have gradually fallen off, and are of less amount and value than those of preceding years. A list of donations of which a record has been preserved is appended. (*Appendix No. 2.*)

5. Several scientific works have been added to the Museum Library, but a list of them cannot be appended, as no record has been kept by the late Secretary.

6. The taxidermists have been employed during the year in mounting specimens, and in preserving the exhibits from decay.

7. The vacancies at the Board during the past year have been—by death, Dr. Macfarlane, President of the Colonial Medical Board, an official Trustee; and by the retirement of His Excellency the Governor, Dr. Alleyne, and Alexander Oliver, Esquire, elective Trustees. Dr. Macfarlane was succeeded by Dr. Alleyne, now President of the Colonial Medical Board, and Dr. Bellisario was elected to fill one of the vacancies caused by the retirement of the elective Trustees. Archibald Liversidge, Esquire, Professor of Geology in the University of Sydney, was nominated to fill one of the two vacancies remaining at the end of the year.

8. The Trustees have to state that the funds at their disposal are insufficient to meet more than the actual expenses involved in the maintenance of the existing collection; and that it is impossible, without further endowment, to enlarge or improve in any great degree that portion which is now open to public inspection.

9. They also deeply regret to have to report that, on or about the 25th of December last, a robbery of a singular character of the valuable gold specimens given by the Government was effected. The Trustees respectfully but earnestly urge that further inquiries may be instituted by the Government.

10. The contents of the Appendices are, No. 1—abstract of the receipts and payments of the Trustees on account of the Museum, for the year ending 31st December, 1873; and No. 2—list of donations with the names of the donors, during the same period.

A. W. SCOTT, M.A.,
Chairman.

CHAS. ROBINSON,
Acting Secretary.

(T.S.)

APPENDIX No. 2.

LIST OF DONATIONS TO THE AUSTRALIAN MUSEUM DURING THE YEAR 1873.

MAMMALS.		PRESENTED BY
A small and rare species of Flying Fox, from the Solomon Islands (<i>Pteropus</i>).....	}	Dr. J. C. Cox, F.L.S., &c., &c.
A Phalanger (<i>Cuscus</i>) from the Solomon Islands		
A Porcupine (<i>Hystrix setosa</i>)		
A young Kangaroo (<i>Macropus major</i>)		
A Monkey (<i>Cercopithecus</i>).....		
A Wallaby (<i>Petrogale nanthopus</i>)	}	Charles Moore, Esq., F.L.S., Director of the Botanic Gardens, Sydney.
The head of an Indian Stag		
A Flying Squirrel (<i>Belideus sciureus</i>)		
A Native Cat (<i>Dasyurus viverrinus</i>)		The Hon. Lady Robinson. Mr. J. Green. Master G. Campbell.
BIRDS.		
A Swamp Cuckoo (<i>Centropus phasianus</i>)	}	Mr. J. Wheeler.
A Silver Pheasant (<i>Phasianus</i>)		
A Brush Turkey (<i>Talegalla lathami</i>)		
A White Ibis (<i>Threskiornis struthipectnis</i>)		
A Macaw		
An Australian Bustard (<i>Eupodotis australis</i>)	}	Chas. Moore, Esq., F.L.S., &c., Director of the Botanic Gardens, Sydney.
A Shining Grackle (<i>Calornis metallica</i>)		
A Gull from North Australia		
Two Torres Strait Pigeons (<i>Carpophaga luciuosa</i>).....		
A Scaly-breasted Parrakeet (<i>Trichoglossus chlorolepidotus</i>)		
An Owl (<i>Strix delicatulus</i>)		
A Pigeon		
A Cormorant (<i>Phalacrocorax sp.</i>).....		
A Goatsucker (<i>Agotheles nova hollandia</i>)		
REPTILES.		
Two Night Lizards (<i>Phyllurus platurus</i>)	}	Miss Bradley. Mr. Chas. Bell. Mr. Chas. Blakefield. Mr. E. W. Rudder. Mr. R. Ross. Mr. Hargraves. Wm. Forster, Esq., M.L.A. Mr. W. Strathan. Mr. Wm. Moore. Mr. A. L. Callett. Mr. Percy Wells. Dr. Hankey, F.R.G.S. Mr. E. Sellers. Mr. R. Thatcher. E. S. Hill, Esq., C.M.Z.S.
A Lizard (<i>Diplodactylus ornatus</i>)		
A Lizard (<i>Hinula</i>) from Molong		
A collection of Blind Snakes (<i>Typhlops</i>).....		
A Night Lizard (<i>Phyllurus platurus</i>)		
A Snake (<i>Diemenia superciliosa</i>)		
A Green Tree-snake (<i>Dendrophis punctatula</i>).....		
A Snake (<i>Brachysoma diadema</i>)		
A Spine-tailed Lizard (<i>Phyllurus platurus</i>).....		
Two Blind Snakes (<i>Typhlops</i>)		
A Sea-snake (<i>Pelagus bicolor</i>)		
A small Green Tree-snake (<i>Dendrophis punctatula</i>)		
A Snake (<i>Hoplocephalus signatus</i>)		
A Green Tree-snake (<i>Dendrophis punctatula</i>).....		
A Slow-worm or Blind Snake (<i>Typhlops</i>)		
A Snake (<i>Hoplocephalus sp.</i>).....		
BATRACHIANS.		
A Frog (<i>Hyla aurea</i>)	}	Mr. John Cohen. Mr. J. A. Norton.
A Frog (<i>Pseudophryne australis</i>)		
FISH.		
A rare Fish (<i>Orthooryscus mola</i>)		Mr. H. Moor, of Ulladulla.

MOLLUSCA

MOLLUSCA AND CRUSTACEANS, &c.

PRESENTED BY

A miscellaneous collection of Shells, &c. &c.	Mr. J. E. Tassnidge.
A Fresh-water Cray-fish (<i>Potamobius sp.</i>)	Master J. Stewart.
A Crinoid Star-fish, from the Clarence River Heads	Mr. Pegus.
A Sea-egg or Echinus, allied to the genus <i>Spatangus</i>	E. S. Hill, Esq., C.M.Z.S.
A Crustacean	Mr. R. C. Want.

GORDIIDÆ, &c.

A Hair-worm (<i>Gordius</i>)	Mr. O. Rossbach.
A Worm (<i>Mermis sp.</i>)	Mr. E. B. Daley.

ETHNOGRAPHICAL SPECIMENS.

A "Tally-stick"	Mr. F. A. Dibbs.
An Iron Spear-head, from Wales	The Right Rev. the Bishop of Bathurst.

LEPIDOPTERA.

A Moth	Dr. Milford.
A Moth (<i>Antheræa eucalypti</i>)	Hon. Henry Parkes, M.L.A.

ARACHNIDÆ.

Spiders, &c., in spirits of wine	} The Right Reverend Dr. Turner, Bishop of Grafton and Armidale.
A Spider (<i>Habronestes sp.</i>)	

SPECIMENS OF GEOLOGY AND MINERALOGY.

A series of specimens of Tin Ore	Mr. W. Langley.
Specimens of Compact Oolitic Limestone from Cooma	Mr. Campbell, District Surveyor.
Specimens of Wolfram	Mr. Thos. Flanders.
A collection of Rock Specimens from the Long Drive Tunnel at Wimbledon	Miss T. M. Lean.
Specimens of Tin from "The Ancient Briton" Tin Mine	} Mr. J. Harris, E.C.
Lignite from Lal-Lal, Victoria	
A specimen of Tasmanian Coal	Mr. J. Orange.
Specimens of Copper Ore, green and blue Carbonate	} Professor Liversidge, University of Sydney.
Specimens of Quartz, Ironstone, &c., from the Diamond-drift of Bingera; also, specimens of Tin-stone, Pyrites, &c.	
Specimens of Minerals, Precious Opal, &c., &c.	Mr. J. Garvey.
A fragment of Opal from Gulgong	Mr. R. Scott.
Specimens of Wood-tin from Grenfell	

FOSSIL REMAINS.

A fragment of a molar tooth, and portion of the anterior half of first left upper incisor tooth of a <i>Diprotodon</i> , from Young	} Dr. G. Bennett, F.L.S.
The tibia of a Moa (<i>Dinornis sp.</i>)	
A fossil Shell	Mr. S. S. Samuels.
Fossil Bones from Gulgong	Mr. L. F. Plunkett.

BOOKS AND PAPERS.

Mammalia, Recent and Extinct: an Elementary Treatise for the use of the Public Schools in the Colony of New South Wales. By A. W. Scott, Esq., M.A. ...	} The Author.
A Catalogue of the described Diurnal Lepidoptera of Australia. By G. Masters...	
The Transactions of the Entomological Society of New South Wales, Part fifth of Vol. II; containing descriptions of numerous Australian Coleoptera, new to Science. By Wm. Macleay, Esq., F.L.S., &c.	} The Author.
Fossil Mammals of Australia: a Review of Professor Owen's papers on this subject, reprinted from the <i>Sydney Mail</i> . By G. Krefft, F.L.S.	

PAINTINGS.

An Oil Painting by A. Claxton, representing an imaginary section of the Diving Cave at Varau, one of the South Sea Islands	} Lady Dowling.
A Painting in oil—Portrait of Dr. Townson, LL.D.	

Australian Museum.

EDWARD P. RAMSAY,
Curator.

1875.

NEW SOUTH WALES.

AUSTRALIAN MUSEUM.

(REPORT FROM TRUSTEES FOR 1874.)

Presented to Parliament pursuant to Act 17 Vict. No. 2, sec. 9.

REPORT OF THE TRUSTEES OF THE AUSTRALIAN MUSEUM, FOR THE YEAR ENDING
31st DECEMBER, 1874.

TO HIS EXCELLENCY THE GOVERNOR-IN-CHIEF,—

The Trustees of the Australian Museum have the honor to submit to Your Excellency this their twenty-first Annual Report.

The Trustees have to express their deep regret that circumstances have occurred during the past year which disclosed an utter want of care and attention in the discharge of his duties on the part of Mr. Krefft, their Curator and Secretary, and which resulted, after repeated acts of disobedience to the lawful orders of the Trustees, in the removal of that officer from his position, and in the closing of the Institution to the public for a short period. It will be necessary, in order to explain and vindicate the course which the Trustees felt themselves compelled to adopt, and for the information of your Excellency, to furnish the history of these transactions in their proper order.

At the beginning of the year some of the Trustees became aware that specimens of gold to the value of £70 had been stolen from the cabinets of the Museum in which they had been deposited for exhibition. A special meeting was called, on requisition signed by three of the Trustees, and was held on the 6th of January, for the purpose of investigating the matter, and the Curator then reported the theft to the Board. While the Board was engaged in the prosecution of this inquiry, a communication was received from the Hon. the Colonial Secretary, conveying his doubts of the propriety of the proposed investigation as a possible frustration of the efforts of the police to bring the offenders to justice. On this intimation being made to the Board, it was decided to leave the matter in the hands of the police; and up to the present time no one has been prosecuted for the offence, nor has the gold been discovered, or its loss in any way accounted for.

At the usual monthly meeting, held on the 5th of March, the Trustees were informed by one of their number that indecent photographs had been seen in the workshop of the Museum. The photographs, some of which were of the most indecent character, were produced, and an immediate inquiry into the matter was instituted. One of the taxidermists (Henry Barnes) stated that he had, by Mr. Krefft's orders, taken from fifty to sixty copies of these indecent pictures. The Curator denied the statement, and asserted that he was the victim of a conspiracy on the part of the servants of the Institution.

On the 4th of June the attention of the Board was called to the circumstance that numerous statements reflecting upon the character and conduct of Mr. Krefft were contained in the evidence given before the Select Committee of the Legislative Assembly, which had been appointed on the 24th day of February, 1874, for the purpose of inquiring into and reporting upon the condition and system of management of the Museum.

It appeared by this report that certain charges had been preferred against some of the Trustees by the Curator. Among other accusations it was alleged that some of the Trustees had used their position for the benefit of themselves, and to the injury of the Institution. After a long and patient Parliamentary investigation, during which a number of the Trustees and all the officers and servants of the Museum were examined, and the Select Committee inspected the Institution, it was found that there was no truth in these or in any other of the charges which had been made against the Trustees by the Curator. The evidence adduced before the Select Committee tended to show that work had been done in the Institution for two of the Trustees (Mr. Parkes and Sir Alfred Stephen), but no evidence was called to establish the fact that either of these gentlemen was aware of the circumstance. And the Select Committee expressly reported that the Curator himself had ordered the work to be done, and that the preponderating evidence given before the Committee showed that he was a most unfit man for a position of trust.

It thus became the imperative duty of the Trustees to institute an immediate rigid inquiry into the conduct of the Curator and the general management of the Institution; and it was resolved at the meeting on the 4th of June, before alluded to, that a special meeting should be held on the 11th June. The Curator was instructed to call such meeting, and in the meanwhile to obtain twenty-four copies of the report and evidence of the Select Committee, and to furnish a copy to each of the Trustees.

Six members of the Board attended the special meeting of the 11th of June, but the Curator having absented himself and locked up the Board-room, the meeting was held in a small room usually appropriated to one of the taxidermists. As none of the members present had received from the Curator a written notice convening the meeting, there was reason to suppose that none had been issued. It was therefore resolved—(1) not to proceed with the business for which the meeting was appointed; (2) that the disobedience of orders and contempt exhibited by the Curator demanded some immediate action on the part of the Trustees; (3) that a special general meeting should be called for the 16th June, for the purpose of taking into consideration the conduct of the Curator on this occasion; and also to carry out the object for which the present meeting had been specially called.

Twelve Trustees attended the special meeting, held on the 16th June, when it was unanimously resolved—“That Messrs. Rolleston, Alleyne, Hill, and Liversidge should be appointed a sub-committee to inquire into the following charges against the Curator, namely :—

- “ 1. Drunkenness.
- “ 2. Proposing to the Barneses to bring a false charge against a man named Tost.
- “ 3. Permitting indecent photographs to be taken in the Museum.
- “ 4. Selling photographs through the servants of the Institution.
- “ 5. Getting furniture made for himself in the Museum out of Museum material.
- “ 6. Ordering the servants of the Museum to make cases and set up specimens with Museum material for private individuals.
- “ 7. Taking receipts from Robert Barnes for work done under the name of William Bradley, with the view of deceiving the Board of Trustees.
- “ 8. Maliciously breaking up a fossil jaw lent to the Museum by Dr. Bennett.
- “ 9. Sending away, as donations in his own name, valuable specimens, the property of the Museum.
- “ 10. Making a false return of the numbers of visitors.
- “ 11. Making a false statement in writing to the Colonial Secretary respecting an attendance of a deputation of the Trustees.
- “ 12. Disobeying the orders of the Trustees given at the last ordinary monthly meeting.”

The next monthly meeting was held on the 2nd of July. The Curator asked for an adjournment for a week. On the Trustees requiring the minute-book they were informed by a message from Mr. Kreffit that it was in Mrs. Kreffit's room, and could not be sent. The chairman of the sub-committee (Mr. Christopher Rolleston) reported that the committee had held three meetings—that the Curator had been supplied with copies of the charges, and repeatedly invited to attend, the second meeting having been adjourned specially to enable him to be present. He, however, refused to attend. At the third meeting the committee, in the prosecution of their inquiry, desired to pass through the Museum. The Curator was applied to for the keys, but he refused to give them up, alleging as the reason for his refusal that it was after 4 o'clock, and the only way to that portion of the premises was down the cellar. Under the circumstances the committee desired to take the opinion of the Board as to the expediency of continuing the inquiry. After much deliberation it was resolved that an application should be made to the Minister of Justice and Public Instruction, under whose department the Museum had been placed in accordance with the altered departmental arrangements of the Government at the commencement of the year, for the services of a sergeant and two members of the Police Force to take charge of the Institution, the Museum not being considered safe under the circumstances.

The Curator refused to attend the adjourned meeting held on the following day, and again declined to send the minute-book, which, as the Trustees subsequently learned from a letter written by the Acting Principal Under Secretary to the Curator on the 3rd of July, had been sent by the Curator to the Honorable the Colonial Secretary without any authorization whatever or consultation with the Trustees.

On the 4th of July the Trustees handed the temporary charge of the Museum over to the Secretary of the Police Department. Before doing so, however, they carefully examined the internal condition of the several parts of the building appropriated for the uses of the Museum, in order to render secure the fastenings of the various windows and doors, which they found very defective and insufficient. They considered that this insecure and unsatisfactory condition of the premises must have existed for a considerable period, and it was evident that, with such careless supervision, any person feloniously disposed could enter the building by the north and west windows into the store room, and pass freely up the stairs, thus gaining an easy access to the cases in which the specimens of gold were deposited, as well as to other valuable exhibits. The key of the Board-room door, leading to the passage behind the show-cases in the old building, and to the stairs communicating with the cellar below, was found to have been removed, although it was seen by the Trustees in the lock the day before.

Fourteen members of the Board were present at the adjourned meeting held on the 7th of July, when it was resolved that, considering the unsatisfactory manner in which the duties of Secretary had been performed, Mr. Kreffit should be suspended from that office; and Mr. Charles Robinson was appointed temporarily to perform the duties of Secretary. At this meeting it was determined that the inquiry already instituted should be proceeded with and completed, and that Mr. Kreffit should be again desired to attend.

In accordance with this determination, the Curator was informed that the inquiry by the sub-committee would be proceeded with on the 13th, and he was invited to attend on that day. He replied that he had forwarded to the Honorable the Attorney General a full statement of his case, and the reasons why he declined to be tried by a tribunal of judges who had ill-will against him. The Honorable the Attorney General informed the Board, of which he was an *ex-officio* member, that he had received a communication from the Curator, which he had returned to him unread. The Curator, on being again requested to attend the Board meeting, sent a reply that he was ill in bed of a bad cold. On being requested by letter from the chairman (Mr. W. A. Duncan) to send the petty cash book, letter book, exchange book, the twenty-four copies of the Select Committee Report, which he had applied for and received, and a number of keys, or to state where they could be found, the Curator sent the petty cash book only. On being further applied to, the Curator sent a message, that he did not know whether the articles were in the Board-room or not—that they might be down in the rooms he was barred out of—and that when he was about he might be able to get them. It was thereupon unanimously resolved, that in the event of the Curator neglecting to hand over the missing books, papers, and keys, before 3 p.m. of the 17th July, the matter should be referred to the next Board meeting, with a view to his dismissal. In reply to a letter from the Acting Secretary,

Secretary, the Curator forwarded a number of keys, books, and papers on the 17th, but the articles specified were not included; and the Board thereupon suspended Mr. Krefft from his office as Curator.

The Honorable the Minister of Justice and Public Instruction was informed on the 18th July that the Trustees were prepared to re-open the Museum to the public, if the protection of the police were continued. On the 31st of July the attention of the Honorable the Minister of Justice was again called to the subject, and he was invited to reply to their letter of the 18th, which still remained unacknowledged. To this communication no reply was received.

The sub-committee appointed to inquire into the charges against the Curator brought up their report, together with the evidence and minutes of proceedings, on the 6th of August, and it was adopted on the 13th of the same month. This report and evidence are appended. (*Vide Appendix 4.*)

Having carefully read and anxiously considered the report and evidence received from the sub-committee, the Trustees felt that there was no alternative left to them but to dismiss Mr. Krefft from his office as Curator and Secretary, and that determination was arrived at on the 20th of August by a majority of ten votes to two,—after Mr. Krefft had been called upon to show cause why he should not be dismissed. On the following day Mr. Krefft was informed of his dismissal, and required to give up possession of his apartments to the Trustees on or before the 31st of that month. Mr. Krefft, not having on that day vacated the rooms occupied by him, the Board, on the 1st of September, again requested him to give up possession, when he replied, that he refused to give up possession until the Government confirmed his dismissal.

Mr. Krefft, being still in possession on the 8th of September, the Trustees resolved to apply to the Honorable the Minister of Justice and Public Instruction to authorize the police to give effect to the decision of the Board by removing Mr. Krefft from the Museum buildings, and they appointed a deputation to explain to him the necessity for prompt action, in order that the Museum might be reopened to the public with the least possible delay. The interference of the Government was thus sought only because the Museum property, although vested in Trustees, was public property, and because the Trustees did not feel it to be their duty to incur any personal liability in a matter in which they were only acting as the guardians of valuable public property. On the 14th of September the Trustees were informed by the Under Secretary to the Department of Justice and Public Instruction that the services of the police could not be authorized for the purpose desired by the Trustees, and it was intimated that as the Trustees had throughout the inquiry acted independently of the Government, and had of their own authority resolved to dismiss the Curator, the Government did not feel called upon to assume the responsibility of giving effect to a decision to which they had been no party.

The Trustees feel constrained to express their surprise and regret that the Government had not thought fit to assist them in the performance of the duty of protecting the valuable public property entrusted to their charge, and to inform the Hon. the Minister of Justice that they had acted throughout this business independently of the Government, because they had been advised that they were entitled and bound to do so in accordance with the Act of Incorporation.

The Trustees having ascertained that Mr. Krefft was storing in the Museum cellar large quantities of fuel, and of provisions and other supplies, with the avowed object of setting the Trustees at defiance, determined that it was their imperative duty in the interests of the public to effect the immediate removal of Mr. Krefft from the Museum buildings, and they thereupon authorized, by writing under their common seal, one Charles H. Pearl to remove Mr. Krefft, his family, and effects from the Museum premises. Mr. Krefft's ejection from the premises was effected without violence on the 21st of September, and Mr. E. P. Ramsay was appointed Curator on the 22nd. On the appointment of the new Curator, the Trustees were enabled to dispense with the assistance of the police, and to re-open the Museum to the public on the 24th of September.

The Honorable the Minister of Justice was apprised of the appointment, by the Trustees, of Mr. Ramsay, on the 23rd of September, and on the 24th the Under Secretary to the Department of Justice intimated that no salary could be paid to the Curator whose appointment had not been sanctioned by the Government. The amount appropriated by Parliament for the salary of the Curator, which had up to that time been paid to the Trustees, has been withheld by the Department of the Treasury, although application for the payment of the sums due have been made in the ordinary course.

From the tenor of the communication addressed to the Trustees from the Department of Justice on the 24th of September, the Board concluded that the Honorable the Minister of Justice was not aware that the question as to the power of the Trustees in regard to the appointment of the Curator had been previously mooted, and that the Government, acting under the advice of the Crown Law Officers, had determined that the power of appointment was vested in the Trustees, and they accordingly caused a copy of the following letter to be transmitted to him:—

Colonial Secretary's Office,
Sydney, 28 April, 1864.

Sir,

Referring to your letter of the 20th instant, and previous communications relative to the appointment of a Curator to the Australian Museum, I am directed by the Colonial Secretary to inform you that the Crown Law Officers, who have been consulted on the point, have advised that the office of Curator should be left in the hands of the Trustees of the Australian Museum.

I have, &c.,
W. ELYARD.

The Acting Curator, Australian Museum.

On the 22nd of September the late Curator and a member of his household caused legal proceedings to be instituted in the Supreme Court against one of the Trustees, who was present at the Museum on behalf of and under instructions from the Board of Trustees, when Mr. Krefft and his family were ejected from the premises. The Board requested the Minister of Justice to direct the Crown Solicitor to defend these actions on the part of the Trustees, seeing that any verdict which might be recovered by the plaintiffs would have to be satisfied out of the endowment, or in default levy might be made by the Sheriff upon the public property committed to the care of the Trustees. In reply to this application the Trustees were informed that the actions appeared to be against Mr. Hill and not against the Trustees in their corporate capacity, and that neither the endowment nor the public property committed to the care of the Trustees could be rendered available for any verdict which might be recovered in these actions. From this communication the Board inferred that the Minister declined to direct the Crown Solicitor to defend the actions, and they drew his attention to the fact that Mr. Hill acted on the occasion in question on behalf of and under instructions from the Board of Trustees in its corporate capacity. The

The action brought by the late Curator against Mr. Edward S. Hill was tried before His Honor Mr. Justice Cheeke and a jury of four, and resulted in a verdict of £250 against the defendant, who has since obtained from the full Court a *Rule Nisi* for a new trial, but the ultimate result of that action cannot be known for a period of several months. The other action, brought by Miss Macintosh, was abandoned by her on condition that she should not be called on to pay any costs, and the solicitor consented to this arrangement as it saved expense to the Museum, and because it was manifest that the plaintiff had not the means of paying any costs.

It was not until some weeks after the suspension of Mr. Krefft that the Trustees obtained possession of the bulk of the records now in their custody. All the books and papers of the Institution had been removed from the Board-room, their proper place of custody, to the private apartments of Mr. Krefft. Much important correspondence which had been entrusted to his care cannot now be discovered. The records returned were badly arranged, exceedingly defective, and on the whole of small importance.

The additions to the Museum by way of exchange with foreign scientific institutions have been of little value. While on this subject the Trustees may be permitted to express their unfeigned regret that any such communication as that addressed by the late Curator to Professor Agassiz, bearing date August 8, 1871, should have ever emanated from the officer of a body devoted to the cause of science. The distinguished attainments and lofty position in the world of science of the illustrious Professor, now no more, entitled him to the most respectful consideration on the part of all scientific societies. And the Trustees deeply lament that the character of the Australian Museum should be lowered in the estimation of the world by such a letter addressed to such a man.

The Trustees cannot pass from the history of the transactions connected with the occupation of his office during the past year, by the late Curator, without an expression of their profound conviction that they have not received from the Executive Government such assistance in the maintenance of the character and efficiency of this important Institution as they had a right to expect. In dealing with the conduct of this officer it was clearly and distinctly shown to the satisfaction of a committee of the Trustees, presided over by a high officer of the Government—and the circumstances were communicated to the Government—that the late Curator had been guilty of drunkenness during office hours, and of consequent incapacity—that he had permitted indecent photographs to be taken in the Museum—had attempted to prefer false charges of theft—that he had deceived the Trustees by the insertion of fictitious names in receipts for work alleged to have been done—that he had sent away as donations in his own name the property of the Institution—that he had grossly falsified the entries in the Visitors' Book—that he had deliberately made a false statement to the Colonial Secretary respecting the attendance of a deputation of the Trustees—and that he had persistently disobeyed the instructions of the Trustees, and endeavoured to frustrate their exertions for the preservation of the public property so grievously imperilled by his occupation of office. But from first to last the Trustees have been compelled to act upon their own responsibility, and, as far as the action of the Executive Government is concerned, have been left entirely unprotected.

Advantage was taken of the closing of the Museum in July last to employ the undivided labour of all officers and servants of the Institution in the preservation of the collection. As the keys of many of the cabinets and compartments were persistently withheld by the late Curator, the Trustees were compelled to cause the locks to be broken open in order to save valuable collections from destruction.

The Museum has been open daily to the public (Sundays excepted) from the beginning of the year to the 14th of July, and from the 24th of September until the 31st of December. The number of persons who have visited the Museum during the last stated period is 17,187. Owing to the systematic falsification of the Visitors' Book, by the late Curator, there is no means of ascertaining correctly the number of visitors during the first half of the year.

The Trustees regret that they have been unable to enrich the collection by the purchase of additional specimens, and that they have been unable to carry out desirable improvements for want of sufficient funds. They have enforced the utmost retrenchment in the management of the Institution, which is consistent with the maintenance of the collections in a proper state of preservation; but during the last six months they have been compelled to pay numerous debts incurred by the late Curator without reference to the Trustees. This unauthorized expenditure has been most wasteful and excessive, and some of it was incurred by the late Curator solely for his own personal advantage. Accounts have been presented to the Trustees for debts contracted by the late Curator subsequent to his suspension. The action of the Government in withholding the salary appropriated by Parliament for the payment of the Curator has still further limited the efficiency of the Institution, and the legal proceedings in which the Trustees have been involved have caused considerable embarrassment.

The Assistant Curator (Mr. Masters) resigned his situation early in the year, and his office still remains vacant. The remaining staff of the Institution have been employed in the conservation of the collection, and in mounting the few specimens acquired during the year by donation or otherwise.

The vacancies in the Board of Trustees, existing at the close of 1873 and arising during the present year, have been filled up by the election of Archibald Liversidge, Esquire (Professor of Geology in the University of Sydney), Alfred Roberts, Esquire, James Norton, Esquire, H. C. Russell, Esquire, B.A. (Government Astronomer), and Patrick Mackay, Esquire. The Trustees accepted the resignation of the Rev. W. B. Clarke with extreme regret. His long connection with the Institution, in the success of which he had uniformly taken a lively interest—his valuable services not merely in its direction and government but to science generally—and his high European reputation, all combined to make the severance of his official connection with the Museum an event deeply to be deplored.

The Appendices contain,—

- I. An abstract of the receipts and payments of the Trustees on behalf of the Museum for the year ending on the 31st of December, 1874.
- II. A list of books purchased for the Museum Library out of the Endowment Fund during the same period.
- III. A list of donations to the Australian Museum from 1st of October to 31st of December, 1874.
- IV. Copies of the Report and Evidence from the Sub-Committee appointed to inquire into certain charges against the Curator.

The Trustees have the honor to submit this their Report for the year 1874, and in testimony thereof have caused their corporate seal to be hereunto affixed this fourth day of February, 1875.

A. W. SCOTT, M.A.,
Chairman.

Gray, Hand-list of Seals.
Haeckel, Anthropogenie.

CHAS. ROBINSON,
Acting Secretary.

APPENDIX No. 3.

LIST OF DONATIONS TO THE AUSTRALIAN MUSEUM FROM 1st OCTOBER TO THE
31st DECEMBER, 1874.

MAMMALS.

PRESENTED BY

A Monkey (*Semnopithecus sp.*)..... }
A Monkey (*Cercopithecus sp.*)..... } The Director of the Botanic Gardens,
Two Native-dog Pups (*Canis dingo*)..... } Sydney.
A Native Bear (*Phascogaleos cinereus*) Dr. J. C. Cox, Sydney.
Two young Leopards (*Leopardus pardus*) Capt. Payne, from Calcutta.

BIRDS.

An Emu, young (*Dromaius nova-hollandia*) Dr. J. C. Cox, Sydney.
A new species of Parrot (*Cyclopsitta macleayana*) 2 spms. }
A new species of Honey-eater (*Glyciphila subfasciata*) }
Two specimens of a small Wood Swallow (*Artamus minor*)..... } Mr. R. Broadbent, from Cardwell,
Two specimens of dusky Honey-eater (*Myzomela obscura*) } Queensland.
A Yellow-bellied Fly Catcher (*Micræca flavigaster*) }
A Dragon Bird (*Pitta strepitans*) northern variety..... }
A Yellow Honey-eater (*Ptilotis flava*) }
A Rock Warbler (*Origma rubricata*) } Mr. Thorpe, Sydney.
A Goose (*Anser sp. (young)*) } The Director of the Botanic Gardens,
A Penguin (*Spheniscus minor*) } Sydney.
A Crested Penguin (*Eudyptes chrysoloma*) } W. H. Hargraves, Esq., Sydney.
A species of Honey-eater (*Xantholis sp.*) } Mr. Thorpe, Sydney.
Two Cape Pigeons (*Daption capensis*) } W. H. Hargraves, Esq., Sydney.

BIRDS EGGS.

Four specimens of the eggs of the Red-eyebrowed Finch (*Estrela temporalis*) }
Three specimens of the Blue Wren (*Maturus cyaneus*) }
Four specimens of the Fairy Martin (*Lagenoplastes ariel*) } Master Gribbin, Woolloomooloo.
Two specimens of the Soldier Bird (*Myzantha garrula*) }

FISHES.

FISHES.

A Port Jackson Shark (<i>Cestracion phillipii</i>)	James, Norton, Esq., Sydney.
The Rostrum or snout of a large Sword Fish (<i>Pristis sp.</i>)	G. McCoull, Esq., Goulburn.
A rare or new Fish (Fam. <i>Bleenniidae</i>)	Inspector Seymour, Sydney.
A Pipe Fish (<i>Syngnathus sp.</i>) from Fiji	Dr. Corrie, H.M.S. "Pearl."

REPTILES.

A Tree Snake (<i>Dendrophis punctulata</i>)	E. S. Hill, Esq., Sydney.
A Lace Lizard (<i>Hydrosaurus varius</i>)	Mr R. Mawdsley, Sydney.
A Diamond Snake (<i>Morelia spilotes</i>)	Mr. J. Clark, Sydney.
A variegated Black Snake (<i>Hoplocephalus variegatus</i>)	Mr. Williams, Canterbury.

MOLLUSCA.

Two specimens of a new species of Land Shell (<i>Gupa sp.</i> allied to <i>Pupa grandis</i>) ...	W. H. Hargraves, Esq., Sydney.
A Shell (<i>Pelecaria scutellata</i>)	Dr. Corrie, H.M.S. "Pearl."
Two specimens of new Land Shell (<i>Helix planibasis</i>)	Dr. J. C. Cox, Sydney.
An Octopus (<i>Sepia sp.</i>)	} Dr. Corrie, H.M.S. "Pearl."
Three specimens of a Squid (<i>Loligo sp.</i>)	
A collection of fifty-four species of Land Shells	} From Jamaica. } Wm. Roy, Esq., Jamaica.
A collection of 6 species of Freshwater Shells	
A collection of twenty-eight species of Sea Shells	
A collection of four species of Sea Shells	

CRUSTACEANS, &c.

A Crustacean (<i>Squilla sp.</i>)	Mr. J. Tilley, Sydney.
A large Crab	Mr. Emerson, Sydney.
A King Crab (<i>Limulus sp.</i>)	Mr. Rudd, of steamer "Kembia."
A Crustacean (<i>Squilla sp.</i>)	Inspector Seymour, Sydney.
A Hermit Crab (<i>Pagurus sp.</i>)	Dr. Corrie, H.M.S. "Pearl."
A Swimming Crab (<i>Thalamites</i>)	Inspector Seymour, Sydney.
A large piece of Red Coral (<i>Tubipora musica</i>)	Dr. Black, S.S. "Somerset."

FOSSIL REMAINS.

Portion of the under jaw of species of <i>Diprotodon</i>	Thos. Buckland, Esq., Milchester.
--	-----------------------------------

MINERALS, &c.

Specimens of Slate from Goulburn	W. Douglass, Esq., Goulburn.
Specimen of Iron Pyrites and Lead from the Upper Hunter	G. S. Stokes, Esq., Hunter River.
Clay stained with Plumbago from Mount Gotthardt	J. P. Christie, Esq., Queensland.

EDWARD P. RAMSAY,
Curator.

APPENDIX No. 4.

REPORT of the Sub-Committee appointed by the Trustees of the Australian Museum on the 16th of June, 1874, to inquire into certain charges against the Curator.

THE Committee held a meeting, to make arrangements for the conduct of the inquiry, and Mr. Rolleston, on the 24th of June, invited the attendance of the Curator at the meeting convened for the 29th. The Curator replied to that communication on the 25th, stating—"I have no wish to obstruct in any way what the Trustees consider to be their duty; but as I do not know yet who my accusers are, and as I have not even received a specification of each charge, I cannot reply to them. Mr. Scott has sent me a memorandum, stating that I am accused of drunkenness, of bribery, &c., but in such general terms that it is really impossible to refute these accusations. I now most respectfully request that you will be good enough to forward me a specification of the charges, as I had reason to expect from the Board, namely: Name of accuser, place where the offence was committed, date and hour when it was committed. I shall then be able to reply to them." On the 26th Mr. Rolleston forwarded to the Curator a copy of the statement of charges referred to the committee. On the 29th the Curator returned this statement, reiterating his objection, that he had "not been supplied with a specified list of these charges," intimating that he should not be in attendance, and requesting that all communications on the subject might be made to him in writing.

At the meeting of the committee, held on the 29th of June, Mr. Rolleston was elected chairman, and a secretary was appointed. It appearing from the statement of the messenger that, in the absence of the Curator, and during his (O'Grady's) attendance upon the committee, the Museum was left to the care of a boy, the investigation was not further proceeded with on that date.

In attention to instructions from the committee, the secretary communicated to the Curator an expression of their regret at his absence, and invited his attendance on the 30th, intimating that they had adjourned the meeting in order to give him time to reconsider the course he proposed to take, and at the same time informing him that the committee would proceed with the inquiry at the hour named whether he were present or not. The secretary remained a short time in the Board-room to write summonses for the witnesses and to perform other clerical business. When the committee re-assembled on the 30th the Curator was not in attendance, but they found a letter from him, addressed to the Trustees "who may require the Board-room key," in which he stated that he had left the key with the porter, "but I shall be obliged to you if you will be good enough to return the Board-room key, and not allow strangers to remain in the room afterwards, as was done yesterday." The evidence of two witnesses was taken. It appearing from their evidence that one of the doors of the Museum had been frequently left open at night—sometimes all night—the committee asked the witnesses to accompany them through the building, and point out the door in question. The messenger was directed to ask for the key, and after a short absence he returned with a message from the Curator to the effect that the Museum was locked, and that Mr. Krefft refused to give up the keys. The committee, however, were shown a way to the back of the premises by the stairs conducting to the basement under the Museum, and they inspected the doors in question. Under the circumstances, and having regard to the refusal of the Curator to attend, the committee resolved to remit the inquiry to the Trustees.

The Trustees having determined that it was expedient to complete the inquiry, the committee resumed the investigation on the 13th of July, having previously again desired the attendance of the Curator. To that invitation the Curator replied, "I have forwarded the Honorable the Attorney General a full statement of my case, and the reasons why I decline to be tried by a tribunal of judges who have ill-will against me—who have shown this ill-will on previous occasions—who insisted that I should supply the men I then accused with a list of my charges, duly specified and signed by me—and who now decline to accord the same privilege to myself; I can only meet men of the same stamp whom your sub-committee have arraigned against me on oath, and in a properly constituted law court."

The committee have not been supplied by the Curator with copies of the report of the Select Committee and the Minutes of Evidence appended thereto.

The committee have examined the following witnesses:—Michael O'Grady, Philipp Brack, Mrs. Brack, Helen Gillespie, Henry Barnes, Robert Barnes, J. A. Thorpe, Denis Mulqueeny, George Masters, James Macnamara, James C. Cox, Esquire, M.D., A. W. Scott, Esquire, M.D., James Chapman, and George Bennett, Esquire, M.D.

CHARGES.

CHARGES.

I.—*Drunkenness.*

THE testimony of the servants of the Museum in regard to this charge points to the conclusion that the Curator was habitually intemperate during the last few years, ending about Christmas time, but Dr. Bennett, who has had a long and intimate connection with the affairs of the Museum, avers that he knows of no single instance in which the Curator has been intoxicated. The witness Philipp Brack is employed at the Botanic Gardens. He and his wife lived on the Museum premises for about six weeks, ending 10th November last year, and their evidence relate wholly to that period. So far as the committee have any knowledge of these persons, or could judge from their demeanour, they appear respectable and trustworthy, but it will be seen from the evidence that they represent the conduct of the Curator towards them as being extremely arbitrary. Macnamara is an old man who attends to the front garden of the Museum a few days in the month, and who, in addition to his wages, has enjoyed the privilege of free quarters on the premises.

Clara Brack states: Mr. Krefft was very often drunk, and in a very bad state too; he was very seldom sober during the time I was here, especially after the men had left in the evening; about 9 o'clock he began to roam about with the candle, and went through the Museum very often; I have seen Mr. Krefft so drunk that he stood against a little shed here, and could not move away from it; one Sunday morning my little boys were plucking some thistles for his little boy's rabbits, and he was so drunk that he rushed out at them; he tumbled after them as well as he could, shouting and raving all the time like a madman; I cannot fix the date; I have seen him drunk often enough, but I cannot say whether it was in the presence of anybody else; I have seen him very much drunk in the presence of Mrs. Krefft in his dining-room; what I saw I saw accidentally; I never looked after him; when I saw him sick here one morning I knew that he was very bad at the time; he was tremendously drunk that morning; he was vomiting over the fence; he could not stand straight; once I found the candle behind where the pigs were; he generally went there to have a sit down, after he was so that he could not travel about much.

Philipp Brack states: I have frequently seen Mr. Krefft drunk—always in the evening; I have seen him a good many times, when I came home, standing behind in the premises there where it is not fit to be mentioned before gentlemen, spuing up, and I have seen him raving about the place; at first going off I did not take any notice, but when he began to tramp on me I could see that it was nothing but the intoxication speaking out of him; as soon as I got dressed on a Sunday morning he got me to go down William-street to fetch him beer; I always brought him a quart of English ale; I have not brought him more than one quart on the same Sunday morning; I could not say whether he wanted it for his dinner or not; I never saw him the worse for liquor in the morning.

Helen Gillespie states: I have been a servant of the Institution five years ending last May; I have seen Mr. Krefft in a state of intoxication mostly every day; I carried away the empty bottles from the Board-room; I cleared the place every morning; there had been ale, brandy, and gin in the bottles; sometimes it was got in in cases; I went for small quantities sometimes—sometimes the men went for some; sometimes he could walk about; sometimes he would go up and lie down in his bedroom; I have often seen him drunk; I cannot call to mind any particular time; I cannot remember any particular time; I cannot remember the day of the month.

Henry Barnes states: I cannot say that I have seen him (meaning the Curator) under the influence of drink early in the morning, but I have in the afternoon, and occasionally at night; on several occasions I have seen him unfit for his duty; he was intoxicated when we fetched the whale from Botany; he caught a death adder on the road; he fell down on two or three occasions, and had to be lifted up; I have seen many a man taken up (meaning by the police) who was not so bad as Mr. Krefft was; I have seen Mr. Krefft drunk about the Museum premises during working hours; I should say it (meaning the Curator's intemperance) has been going on for five or six years, as near as I can remember; it seemed to be growing upon him a little before the disturbance in connection with the Institution; it was a subject of conversation amongst us (meaning the employes); we have often said one to the other, "Mr. Krefft is drunk again"; I cannot name any particular day, as I never kept the date; I can name one particular night—the night I came to take his little boy to see a magic lantern exhibition; that must be seven or eight months ago.

Robert Barnes states: I have often seen him under the influence of drink; I have seen it at all hours of the day—frequently; more so of late than it was a few years ago; but I have known it ever since I have been here, that is for six or seven years; I went to get ale for him very nearly every day; I used to have to go to Hughes', to Tighes', to Roberts'; in fact I have been sent nearly all over Sydney to see where I could get the best and cheapest ale; I have been sent in Museum time as well as my own time; on the 23rd of December he was very drunk; he staggered back off the road a little and fell down into a hollow; there he lay and could not get up; I had to assist him up; ten or eleven months ago a party went out to Botany; when Mr. Krefft came home he was dreadfully drunk—after 5 o'clock; he was not ordinarily sober on the premises; I have seen him throwing up in the cellar.

J. A. Thorpe states: I cannot say that he was always sober; but I cannot say that I have seen him what I call drunk; I have very frequently seen him under the influence of drink; perhaps he came under my notice less than any man in the establishment; the room which I work in is rather isolated; sometimes I have known him to be for a week or ten days without coming into my own room at all.

Michael O'Grady states: I have frequently seen him the worse for liquor; it might be three or four days in the week; I have seen him so from 11 o'clock in the morning; sometimes he was not able to look after his business; I have seen him so often this eight or nine years that I could not mention any particular number of times; I found the candle close to the window-curtains still alight, and he was lying on the floor amidst a whole lot of spue; that was eight or nine years ago; I have seen him in the spirit-room so drunk that he could not get out of it; this was some twelve months ago; since Christmas time he has kept himself more correct than he was before.

Denis Mulqueeny states: Mr. Masters saw a death adder on the road and sang out; Mr. Krefft immediately made me pull up; he then got off the van and picked up the death adder and put it in a bag; when Mr. Krefft was in the cart the horse moved and he fell; he was not on his seat properly at the time; Mr. Krefft had had a drop to drink, but I could not notice that he was not steady; he was jolly; I always saw him jolly and pleasant when he succeeded in getting anything like this; when a man steps down off a cart and catches a death adder he is not drunk; he had had some drink; one of them said to me, "You know he was drunk;" I said I could not swear he was drunk.

George Masters states: He was not as you may say unfit to do his duty; but during the last two or three years it was a very rare thing to see him sober; the habit has grown upon him for the last two or three years; Krefft got beastly drunk; he was not able to get in and out of the vehicle; he fell down on the broad of his back before he got in; when he got out after a death adder he went down on all fours, and the first grab he made at it his hand went five or six inches to the back of it; he was obliged to be helped into the cart again, and would have fallen down again if it had not been for one of the Barneses; he fell back once on to the stinking whale; very frequently he was only just able to walk about the place; you might see his men running out with square bottles for his beer any time during the day.

James Macnamara states: I have slept on the premises for the last six years; I have never been absent a single night, and I never saw the Curator intoxicated; it is 9 o'clock before I come home to the Museum; my time was very short at the Museum.

James C. Cox, Esq., M.D., states: I came in here at 11 o'clock one day; he was sitting on a chair at the table and was quite stupid with drink; he had scarcely any clothes on—a white shirt, a pair of trousers, and socks; I spoke to him a good deal about it, but he was so stupid that I could make nothing of him; I came here about three months afterwards at about 4 o'clock in the evening; I found him trying to get up the stairs; he was perfectly under the influence of drink; it is over two years ago.

A. W. Scott, Esq., M.A., states: I was acquainted with his habits previous to the last six or seven years, but I never knew him to be tipsy; I have had it hinted to me, and I have suspected it myself, not from seeing him, but from that peculiar breath which a person has who takes very strong drinks; but certainly I have never seen him in the state you mention.

George Bennett, Esquire, M.D., states: Not in one single instance have I seen the Curator unfit to discharge his duties from drinking; I have seen him at all hours of the day, and even occasionally at night, and under circumstances of great excitement, but I never saw him in one single instance intoxicated.

II.—*Proposing to the Barneses to bring a false charge of theft against a man named Tost.*

Much evidence was given in regard to the circumstances under which Tost left the Museum, which may be valuable as throwing light upon the management of the Institution, and the relation of the employes to the Curator. The only evidence, however, which bears directly upon the charge specifically referred to the committee is that of the Barneses.

Henry

Henry Barnes states: Mr. Kreffit suggested that we should go down and search Tost's house for property belonging to the Museum; I understood that Tost had some property belonging to the Museum in his house; Mr. Kreffit wished me to go with him to search Tost's house, and he told me to take something belonging to the Museum with me, and in case of our not finding any stolen property I was to drop it in the house, so that it might be found and Tost be apprehended for stealing; I am prepared to make such a statement on oath in any court in the world; I did not inquire of the Curator why he asked me to do that, and I did not obey him; what he said to me was this—"You take something with you belonging to the Museum, and in case we do not find anything, drop it secretly in his house so that it can be found;" so that it could be found and Tost convicted; Mr. Kreffit did not say what was to be dropped; I suppose he meant that he or I was to find it, or the detectives.

Robert Barnes states: On the morning that Tost was to be tried by a sub-committee appointed for the purpose, Kreffit came down to my shop, which was in the cellar, and said to my brother—"I am going to get two detectives," or "I have got two detectives to search Tost's house; and I want you to take something belonging to the Museum, and in case we do not find anything belonging to the Museum there to drop it in his house;" I would swear that Mr. Kreffit invited my brother to drop something in Mr. Tost's house; he said on one occasion—"We must crush Tost; Tost has lots of charges against me and against you too."

The taxidermist affirms that Henry Barnes told him of the proposal to bring a false charge against Tost three or four years ago. The messenger alleges that the Barneses told him the day after it happened—see also Robert Barnes's evidence—and the late Assistant Curator states that he heard of it from the Barneses on his return from Western Australia, about three years and a half ago.

III.—*Permitting Indecent Photographs to be taken in the Museum.*

The direct evidence in support of this charge is given by Henry Barnes, who states that he knows nothing more of the photographs than he told the Select Committee of the Legislative Assembly, and that the evidence he then gave was perfectly true. He says—"I took them for Mr. Kreffit; they were lent to me by Patterson, the herbalist, to show to Mr. Kreffit, who he said was a friend of his."

The taxidermist says: I do not know by whose orders they were taken; but I have seen Henry Barnes frequently bringing them through my room to take to Mr. Kreffit; he said that he was going to Mr. Kreffit with them; I never saw them in Mr. Kreffit's possession.

The messenger states: "I have not seen them in his hands; but I have seen them on the desk where you (meaning the chairman) are sitting, on the Board-room table, in the room beneath, and in the work-shop; that was long before they were shown to the Trustees."

The evidence of the late Assistant Curator on this point is: "The first indecent photographs I ever saw in my life Mr. Kreffit showed me in this very room; I saw them frequently afterwards, when they were being printed, and were lying about the steps in the sun; and Mr. Kreffit was passing backwards and forwards at the time."

In opposition to the testimony of these witnesses it will be remarked that Dr. Bennett observes: "The first time I saw them was here; Mr. Kreffit has shown me an immense number of photographs of all descriptions, but I never saw nude figures in his possession, except the photographs of natives; I was somewhat surprised when I saw them here, because they are things he might have shown to a medical man."

IV.—*Selling Photographs through the Servants of the Institution.*

The evidence in support of this charge is extremely meagre, and the facts, if proved, are not such as would warrant any severe censure upon the Curator.

V.—*Getting Furniture made for himself in the Museum out of Museum materials.*

The testimony in regard to this charge appears to have reference to the conduct of the Curator some five years ago, and to which the sub-committee, to whom was referred the investigation of the charges in regard to Tost, then censured him. (*Vide* Robert Barnes' evidence, and Mr. A. W. Scott's evidence.)

VI.—*Ordering the Servants of the Museum to make cases and set up specimens with Museum materials for private individuals.*

The taxidermist states that he set up a wallaby for Mr. Parkes, and a duck and a ring-tailed opossum for Sir Alfred Stephen; and the late Assistant Curator alleges that a case of humming birds was prepared for Mr. Kreffit by Mrs. Tost. Dr. Bennett says: "I never knew an instance of cases being set up for private individuals"; and the practice seems to have been exceptional.

VII.—*Taking receipts from Robert Barnes for work done in the name of Wm. Bradley, with the view of deceiving the Board of Trustees.*

Robert Barnes alleges that the evidence he gave on this point before the Select Committee of the Legislative Assembly is true. The bills were made out by his nephew in the name of Wm. Bradley, and receipted by him. Mr. Kreffit suggested that another name should be used, but Barnes fixed upon the name of Bradley.

Dr. Cox says: "I remember accounts being frequently presented to the Board meetings for payment in the name of Wm. Bradley"; but he did not know at the time that Wm. Bradley represented one of the Barneses.

The practice appears to have been known to the taxidermist; and the late Assistant Curator states, that on one occasion "Mr. Kreffit told Robert Barnes to make me a dozen setting boards"; and he said—"Get Bradley to make out your bill; he is your man, Bob."

VIII.—*Maliciously breaking up a Fossil Jaw, lent to the Museum by Dr. Bennett.*

Robert and Henry Barnes state:—That Mr. Kreffit broke up the jaw with a hammer and bradawl; and they agree in stating that the Curator swore that Professor Owen should not get the restored jaw perfect. The Curator appears to have made a similar statement to Dr. Cox who, however, thought that he was a good deal under the influence of liquor at the time; and also to Mr. Masters. Dr. Bennett states, that the Curator told him of the breaking of the jaw; that there could not have been a wilful destruction of the fossil, inasmuch as it was important in the interest of Mr. Kreffit's reputation as a naturalist that the fossil should reach Professor Owen in as good a condition as possible.

IX.—*Sending away in his own name valuable Specimens, the property of the Museum.*

Robert Barnes, whose duty it appears to be to pack the cases, states, that five casts of the lower jaw of the diprotodon, and he thinks ten casts of crocodile's head have been sent to different parts of Queensland and to Melbourne. He also enumerates the skull, and a large portion of one of Gray's whales, two or three casts of all the limbs of the diprotodon in the Museum, and describes in general terms numerous other exportations.

Dr. Cox refers to certain alleged donations not authorized by the exchange committee or the Board; to a collection of valuable fishes, presented by him to the Museum, on behalf of Mr. Wood, which the Curator sent to Günther; to a donation of birds, sent by the Curator to Selater; to donations of frogs; a large donation of btrachians, sent to Günther; and to a cast of teeth of the ceratodus, which appear from the Proceedings of the Zoological Society and from Nature to have been forwarded by Mr. Kreffit in his own name. Mr. Scott also states, that the Ibis, the Annals and Magazine of Natural History, the Proceedings of the Zoological Society and Nature, invariably acknowledge donations from and publish thanks to the Curator, and not to the Trustees. Dr. Bennett refers to the donation of birds, as a case which had been dealt with by the Board at his instance some years ago.

The last meeting recorded in the exchange book, is dated August 26th, 1872, and it has not been confirmed. The manner in which that book has been kept precludes the committee from exonerating the Curator from the charges preferred. The evidence of Dr. Cox, Dr. Bennett, and Mr. Scott, in regard to the authorization of exchanges, may be useful in placing that department of the Institution on a more satisfactory basis. The committee hope to be able to obtain the annual report of the Museum, containing a list of the specimens presented, and those collected by Mr. Masters on his different trips; and it may be expected that a comparison of these with the specimens now in the Museum, will throw much additional light on this branch of the inquiry.

X.—*Making a false return of the number of Visitors.*

The visitors' book was in charge of the messenger, who states:—That he was told by the Curator to enter a larger number in the book than the number of visitors who actually attended; and he points to instances, where he says he has done this in obedience to Mr. Kreff's orders, and to entries of the same character in the handwriting of the Curator himself. Helen Gillespie states:—That she has heard Mr. Kreff tell the messenger to put down a good number, whether correct or not. That was always the practice while she was employed in the Museum; and the evidence of the taxidermist shows that he had heard of the practice of putting down a larger number of visitors in the visitors' book than the number who attended. Dr. Bennett recollects an occasion recently, when the Curator tried to get the visitors' book from O'Grady, and states that he told Mr. Kreff he had no right to take it.

XI.—*Making a false statement in writing to the Colonial Secretary respecting the attendance of a deputation of the Trustees.*

This charge is supported by the evidence of Dr. Cox, who alleges that Dr. Alleyne, Captain Onslow, and himself, were appointed to wait upon the Government, for the purpose of asking them to put a certain sum of money on the Estimates for the making of cases. The Colonial Secretary appointed a day, and the hour was fixed for 11 o'clock, but Dr. Cox states that the first intimation he received of that appointment was upon his return home at 1.30 p.m., or two hours and a half after the time fixed for the interview. A second appointment was made by the Colonial Secretary, when Dr. Cox attended and waited for some time, but neither the Curator nor any other member of the deputation attended. On each of these occasions letters were written at the instance of the Colonial Secretary to the Curator, complaining of the failure on the part of the deputation to keep their appointment. When Dr. Cox came to the Museum to inquire how it was that the deputation had not attended, he states that the Curator showed him a letter to the Colonial Secretary in reference to his (Dr. Cox's) alleged non-attendance, which contained statements that were perfectly untrue, and which Mr. Parkes knew to be so. The letter which the Curator showed him was an impression taken by a copying-press. The correspondence—not even Mr. Parkes's letters—was never produced to the Board.

XII.—*Disobeying the orders of the Trustees given at the last ordinary monthly meeting.*

The acts of disobedience to which the attention of the committee has been specifically directed are within the knowledge of the general body of Trustees, and the grounds upon which the charge rests are stated in the minutes of the Board meetings. The committee, however, were formally apprised of the facts by the evidence of Mr. Scott, within whose personal knowledge they were. He states: "I attended a meeting of the Trustees of the Museum, at which orders were given to the Curator to obtain copies of the Report of the Select Committee of the Legislative Assembly, appointed to inquire into the management of the Museum, from the Government Printing Office, and also to issue notices to the Trustees to attend at a subsequent date in order to take that report into consideration; he did not comply with the orders; I attended on the day appointed, but did not receive any notice from the Curator; I found the Board-room locked; I, in conjunction with the other Trustees present, then sent O'Grady with a message for the key from Mr. Kreff; Mrs. Kreff said that her husband had gone out, and that she could not find the key; the key not being forthcoming, after waiting for some time, we decided to go into the taxidermist's room, and there we held our meeting; that was a clear act of disobedience on the part of Mr. Kreff, and Mr. Kreff, in my opinion, is guilty of disobedience in not sending copies of the Report of the Select Committee."

GENERAL.

The committee were not desirous of extending the inquiry to other points than those expressly referred to them; but in the progress of the investigation statements were made in regard to certain circumstances affecting the conduct of the Curator and the interests of the Museum in so important a degree as to require that attention should be directed to them.

The Bracks, for example, appear to have occupied free quarters on the Museum premises, and to have had fuel and light at the expense of the Institution for a period of about six weeks, when, following upon a written notice in the handwriting of the Curator, they were rejected. The minute book contains no record which shows that the Curator was authorized by the Board to invite these persons to live on the premises, and to deal with the Museum property in the manner described by them in their evidence. Mrs. Brack states that she was ordered by Mrs. Kreff to charge the vegetables which she bought for consumption in the Curator's household, in the bill for pigs food, to be submitted to the Trustees. The Brack's distinctly affirm that the doors of the Museum were often left open at night. Helen Gillespie and the late Assistant Curator state that they have found the doors of the Museum open when they have come in the morning; but, on the other hand, James Macnamara states that he never saw them left open.

From the evidence of Robert Barnes, J. A. Thorpe, Gillespie, and O'Grady, it appears that about two years ago a numerous collection of specimens—including two lions, a spotted leopard, two or three small deer, a large reindeer or elk, a pony, &c.—were thrown out into the paddock and burned. R. Barnes states that the Curator spoke of these things as "rubbish," but the taxidermist alleges that the skins were good, and that of almost all of them the Museum has not duplicate specimens. The committee are unable to discover any record in the minute book to show that the destruction of these specimens was reported to the Trustees, or authorized by them. Gillespie also speaks of a large destruction of papers and books about the time of the investigation by the Select Committee.

The taxidermist states that he could have perfectly preserved the large sun-fish, brought to the Institution in December, 1871, and that he did not succeed because he was not allowed by the Curator. The testimony of Mr. Masters and of the servants of the Institution is to the same purport. Dr. Cox states that he paid Mr. Kreff 20s. 6d. for tubs and buckets used in the attempted preservation of the sun-fish, and also £3 6s. for extra labour—Mr. Kreff having rendered him an account charging him with those items. The evidence of the two Barneses, Thorpe, O'Grady, Masters, and Macnamara conclusively establishes, in the opinion of the committee, that neither tubs nor buckets were used in the attempted preservation of this fish, and that no extra labour was employed. O'Grady states that he received 5s. for what he did towards the preservation of the fish; but the other persons employed upon the work state that they received nothing beyond their ordinary wages. The committee having observed a statement by the Curator at page 103 of his evidence before the Select Committee that tubs were buried with the sun-fish, took measures to have the spot examined, and the contents of the hole dug out. One half of the breast bone of the fish, a large quantity of fibrous substance, supposed to be the remains of the fish, and two battered tin cases, containing specimens of fish, which had been preserved in spirits, were found in the hole, but no trace of tubs or buckets could be discovered.

The attention of the committee was called to an entry upon the minutes, under date June 5, where the word "not" has been interpolated before the word "carried," and the words "there being no seconder" added afterwards. Mr. Scott says, "These words have evidently been added afterwards," and "the minute book is written up with an interpolation which is meant to deceive, and it is a very inaccurate minute throughout." Dr. Bennett says: "It appears to me that the word 'not' has been written in since, and that the words 'there being no seconder—G.K.' have been added afterwards. I was present when these minutes were read. Exception was taken to them as being incorrect."

The late Assistant Curator alleges that Mr. Kreff did little or no Museum work; that he only attended to the mineral collection during the last eighteen months, and did not touch any of the birds, shells, or insects. Mr. Scott says, "On my first appointment as Trustee I was highly satisfied with the Curator's conduct, as regards the energy displayed by him in furthering the interests of the Institution; but latterly, say for the last two or three years, I have observed a very great falling off, not only with respect to the exhibits, but also in the exertions made by the Curator in obtaining specimens, or I should rather say in looking after the Institution." Dr. Bennett, on the other hand, states: "As far as I could judge of Mr. Kreff, I should say he is a very hard working and efficient Curator, of high scientific attainments. From what I have recently seen and heard, I do not think that he is fit to take the charge of an establishment; but I think he would work well under any competent director who could control him. I do not think he is fitted by temper, and he is wanting in method. He would work remarkably well under any other man, and that is the case with many foreigners. Under Pittard he worked remarkably well."

CONCLUSION.

Your committee having carefully considered the evidence adduced in regard to the several charges submitted to them, have arrived at the following conclusions:—

I. *Drunkenness.*—The weight of the testimony points to many instances of irregularity on the part of the Curator in this respect; and your committee are of opinion that at least on two occasions he has been drunk during office hours, and then incapable of performing his duty.

II. *Proposing to the Barneses to bring a false charge of theft against a man named Tost;* and III. *Permitting indecent photographs to be taken in the Museum.*—Your committee see no reason to doubt the evidence in support of these charges.

IV. *Selling photographs through the servants of the Institution;* and VI. *Ordering the servants of the Museum to make cases and set up specimens with Museum materials for private individuals.*—Your committee do not, in the light of the facts before them, regard these charges as being of any great importance.

V. *Getting furniture made for himself in the Museum out of Museum materials.*—Your committee see no reason for re-opening the matters referred to in this charge, the Trustees having already adjudicated upon it.

VII. *Taking receipts from Robert Barnes for work done under the name of William Bradley, with the view of deceiving the Board of Trustees.*—Your committee are of opinion that the irregularity charged has been practised, but the object of it has not been disclosed.

VIII. *Maliciously breaking up a fossil jaw, lent to the Museum by Dr. Bennett.*—The fact of breaking the jaw has been sufficiently established. Your committee are of opinion that it was unnecessarily broken, but there is no evidence of malice.

IX. *Sending away as donations in his own name, valuable specimens, the property of the Museum.*—The evidence under this head goes to prove that many specimens have been sent from the Museum, of which no record has been kept, and for which no authority appears to have been given by the Trustees.

X. *Making a false return of the number of Visitors.*—Your committee are of opinion that this charge has been clearly proven by the entries in the visitors' book, some of which are in the Curator's own handwriting.

XI. *Making a false statement in writing to the Colonial Secretary respecting the attendance of a deputation of the Trustees.*—Your committee also consider that this charge is clearly established.

XII. *Disobeying the orders of the Trustees, given at the last ordinary monthly meeting.*—This matter is within the knowledge of the Trustees, and the committee do not consider it necessary to offer any opinion in regard to it.

Your committee desire to call the attention of the Trustees to the circumstances elicited in the course of their inquiry affecting the conduct of the Curator, and the management of the Institution, on some points which were not included in the charges placed before them—circumstances which are set forth in preceding paragraphs headed "General."

Your committee think it right to state, in conclusion, that they have no reason whatever to doubt the general accuracy and truthfulness of the statements made by the witnesses whom they have examined.

Your committee herewith submit the minutes of their proceedings, correspondence, documents, and evidence.

CH. ROLLESTON.
E. S. HILL.
ARCHD. LIVERSIDGE.
H. G. ALLEYNE.

Australian Museum, Sydney, 5th August, 1874.

APPENDIX No. 4.

MINUTES OF EVIDENCE.

MONDAY, 29 JUNE, 1874.

Present:—

H. G. ALLEYNE, Esq., M.D.,		PROFESSOR LIVERSIDGE,
E. S. HILL, Esq.,		CHRISTOPHER ROLLESTON, Esq.

Michael O'Grady was called in and examined:—

1. *Chairman.*] You are the messenger here? Yes.
2. You have charge of the Museum at the present time, have you not? Yes.
3. Is the Curator now on the premises? No; he is out.
4. What time did he go out? About three-quarters of an hour before the Trustees came.
5. *Dr. Alleyne.*] At what hour was that? He went away at about 2 o'clock.
6. *Chairman.*] Then you are in sole charge of the institution? Yes. Mrs. Krefft is in her house.
7. *Mr. Hill.*] In her private apartments? Yes.
8. *Dr. Alleyne.*] She is not an officer of the establishment? No.
9. *Chairman.*] Did Mr. Krefft leave any message? He told me if any of the Trustees came I was to go up to Mrs. Krefft for the key. When Mr. Krefft went out, a messenger came down to tell me that I was wanted up. I then got a letter for the Chairman, and the key of the room; and I was told that I was to admit the Trustees to the Board-room, but that I was not to admit anybody else.
10. There would be no use in sending for Mr. Krefft? No; he is not here.
11. Did Mr. Krefft give any reason for absenting himself? No.
12. *Mr. Hill.*] Did you know that he was going? He came in and told me.
13. Told you what? That he was going out.
14. But he left no message? Only what I have said about the key.
15. *Chairman.*] Is there no one in the institution with you? Mr. Thorpe is in his workshop.
16. *Mr. Hill.*] He can have no supervision of the institution while he is there? No.
17. Is there no one else in charge? Only the boy whom I have just called to the desk.
18. The institution is left to take care of itself at present? Yes; excepting that there is the boy there.

M. O'Grady.
29 June, 1874.

I certify that this is a correct statement of the evidence given by me before the Sub-committee of the Trustees, on the 29th June, 1874.

MICHAEL O'GRADY.
24/7/1874.

TUESDAY, 30 JUNE, 1874.

Present:—

H. G. ALLEYNE, Esq., M.D.,		E. S. HILL, Esq.,
		PROFESSOR LIVERSIDGE.

CHRISTOPHER ROLLESTON, Esq., IN THE CHAIR.

Mrs. Philipp Brack was called in and examined:—

19. *Chairman.*] Have you been in any way connected with the Museum? I have been living here a Mrs. P. Brack short while.
20. In what capacity? If you will allow me, I will explain. Mr. Krefft came to my husband, who was employed in the Gardens, and asked him to come and live at the Museum. We were very comfortable, and I never wished to leave the place where we were living; but Mr. Krefft came several times, and was very coaxing; he sent me a basketful of eggs, and some kind of grain which he had got out from Germany; he sent me some honey; and he promised all that was good if we would come and live at the Museum. At last I consented, and we came to the Museum to live. He told my husband that he would try to get £100 a year granted for him to live at the Museum, and he told him that he ought to give notice to leave the Gardens; but my husband said that he would not give notice to leave the Gardens, because he had a very good billet there.
21. *Mr. Hill.*] When you say the Gardens, do you allude to the Botanic Gardens? Yes. My husband said he did not like to leave there. Mr. Krefft promised to make us very comfortable, and in fact they did all they could to make us comfortable. He had my husband to build a kitchen for my comfort, put up an oven, and did all that he could. They gave us free coke and coal, and wood and kerosene, and we had the house rent-free. He promised my husband all that —
22. Did he promise your husband all that in your presence? No, but he fulfilled it all to me. When we were living here about a fortnight, Denis, the New Guinea pig, had young ones, and Mr. Krefft seemed anxious to rear the litter; he kept feeding them with orange-peel, sugar, and other things. I said to him—“If you want to keep them, let me rear them; I am sure that way won't do; that does not agree with giving the young ones milk to suck; I have reared many in the Colony, and I will rear them.” He said—“Very well; rear them.” In the evening he and Mrs. Krefft came up, and Mr. Krefft gave me half a sovereign to buy them

- Mrs. P. Brack. them food. Mrs. Krefft told me that the greengrocer came round once or twice a week, and I was to get what I wanted. I said I could get what I wanted from the markets, which I did. The first bill I made out in the way Mrs. Krefft told me. It was 10s., and she said—"Lump it for pig's food." I gave her the bill. I put it all down for pig's food—10s. I was planting some vegetables here in the garden for Mr. Krefft. I told her when the second money was wanted, and she said—"Make me out the bill, and I will get you some more money." I said—"Am I to put the vegetables on the same bill as pig's food? You told me it was to be laid before the Board. Do they pay you for the vegetables too?" Mrs. Krefft said—"Oh, never mind; you do just as you did before, and bring me the bill." But I did not do it; I did not like to do it. About ten minutes afterwards Mr. Krefft sent Robert Barnes, who told me it was too much trouble for me—that I was not to bother with the pig any longer. Two or three days afterwards O'Grady came with a message saying that the Trustees did not approve of any one living there, and that I should shift as soon as possible. I said—"O'Grady—you tell Mr. Krefft if he is a man let him face my husband. He ran after my husband for six months to get him to come here. I will not shift. The Trustees know nothing about it." In the evening he sent Robert with directions that I should shift before 8 o'clock in the morning. I said—"Robert, I could not." He sent Robert and O'Grady with a written notice to say that we should be shifted by 8 o'clock the next morning, or he would turn the water off and lock the approaches. He had had three keys made for our convenience for the back gate. He sent word that I should not have any more wood, or coke, or light. My husband went down to Mr. Krefft in the evening, and said that if he would pay him for all that he had done here he would go that night. Mr. Krefft asked him what he wanted, and my husband said that he considered he had earned £5 here. Mrs. Krefft then sang out—"Starve them out. Lock the approaches. Turn the water off!" My husband wanted to get £5 from him; but Mr. Krefft said that he would not give him one fraction, and said that we must leave by to-morrow morning. As we had a written notice, we thought we were compelled to go. It was raining as fast as it could, and the parcels delivery man would not take our things away.
23. *Chairman.*] How long had you been with Mr. Krefft? Six weeks. I reared the little Denises.
24. You were paid by Mr. Krefft—not the Trustees? I was not paid. He only promised that we should have coke, wood, and house free. He promised my husband if he would leave the Gardens he would get the Trustees to give him £100 a year. He said that the Trustees wanted to give him a secretary; he said he would not hear of it; but that he would rather have a man about the place to look after the tools and such things. My husband wanted to leave the Gardens, but it is a lucky job he did not.
25. With reference to the money paid for food for the pigs—did you pay the money yourself;—Mrs. Krefft, I think you said, gave you 10s.? Mr. Krefft gave me 10s.
26. To do what? To buy pig's food.
27. Did the pigs belong to Mr. Krefft or to the Museum? To the Museum.
28. And you bought the pigs food with the 10s.? Yes, and the vegetables went into the same account.
29. In the account you gave Mrs. Krefft was the pig's food in excess of the vegetables, or was the amount for the vegetables in excess of that for the pig's food? The pig's food came to 6s. 9d. and the vegetables the rest.
30. And Mrs. Krefft told you to lump them altogether? Yes. At first I did not know that the money belonged to the Museum. The second time Mrs. Krefft told me she wanted the bill to lay before the Trustees; and I said—"I wonder that you should put the vegetables into the bill then." I passed a remark about the vegetables going into the same bill with the pig's food, and that was the cause of our leaving.
31. *Dr. Alleyne.*] As a matter of fact, all the vegetables did go into the bill with the pig's food? All the vegetables that I bought for Mrs. Krefft, during the time I was at the Museum, went into the bill for pig's food.
32. *Chairman.*] How long is it since you were here? We left about eight months ago.
33. During the time you were here was Mr. Krefft always quite steady and sober? No; Mr. Krefft was very often drunk, very often intoxicated, and in a very bad state too.
34. Are you speaking of during the time you were here? Yes, during the time we were here. I know it more than my husband does, because, as I was here all day, I saw more of him; but my husband has often seen him the worse for drink.
35. On the premises? On the premises; and twice the Museum door was left open. I told Mrs. Krefft that the Museum door was left open.
36. You mean that the door was left open at an improper time? Left open all night. After the men left the Museum, Mr. Krefft generally roamed about. He left the back door of the Museum open. One time I mentioned it to Mrs. Krefft, and she said—"I must tell Mr. Krefft," and in the afternoon she came and told me it was a lie. The second time the door was left open I told her, and I said—"Now it is not a lie, for I saw Mr. Krefft shut it." She said that it was very strange; and in the afternoon she told me that Mr. Krefft had left it open for the purpose of airing some specimens; but she said that I was not to mention it to the men. My husband shut the Museum door several times himself. He was afraid that the children might get in. We have two little boys, and boys are mischievous sometimes.
37. Do you know whether Mr. Krefft had been out on those occasions when you say you saw him drunk? I do not know. What I speak of was when he was at home. I did not see him away from the premises.
38. During the six weeks you were there, on how many occasions did you see him under the influence of drink? I could almost say every day. He was very seldom sober during the time I was here, especially after the men had left in the evening. As soon as the men left in the evening Mr. Krefft commenced with his conduct, and about 9 o'clock he began to roam about with the candle. He went through the Museum very often. He left it open very often, and the room where Bob is working, that was very frequently left open at night. My husband never meddled with that. He only shut the Museum door when he found it open. I have seen Mr. Krefft so drunk that he stood against a little shed here, and could not move away from it. One Sunday morning my little boys were plucking some thistles for his little boy's rabbits, and he was so drunk that he rushed out at them. He tumbled after them as well as he could, shouting and raving all the time like a madman.
39. What time in the day was this? About 11 o'clock one Sunday morning.
40. Can you fix the date exactly? I cannot.
41. Did you see him then? Yes; he came up to the place and told me that I was not to allow my children in front of the Museum, that they would draw all the young blackguards round there. I knew then that he did not know what he was saying. When my husband came, I said—"See what Krefft is

- up to." Mr. Krefft stood on the staircase with a glass of ale in his hand. He would not give my husband any satisfaction. He said—"If you don't like it you can go." When Mr. Krefft spoke to me on the subject, I said—"Mr. Krefft, you are nobody." He had been following my husband for six months to get him to come here; but when my husband came here, Mr. Krefft never showed his face to him.
42. How was your husband employed all the time? In the Botanical Gardens.
43. During the time you were living here? Yes.
44. What advantage did Mr. Krefft get by obtaining your husband and you to live here? I do not know at all.
45. Did you help in the work of the house at all? Mrs. Krefft used to send me on messages during the day, but I did not do any work in the house. When he asked my husband here, he said that Mrs. Krefft liked to go out sometimes, and that she wanted to have a person here that she could trust until she came back again. I reared the little pigs, did a lot of jobs, and grew vegetables.
46. You did? Yes, I helped.
47. *Mr. Hill.*] Your husband grew the vegetables in his spare time? Yes.
48. *Chairman.*] Is your husband still in the Gardens? Yes.
49. *Dr. Alleyne.*] You spoke of the doors of the Museum being opened;—did you see that yourself? Yes.
50. They were left open during the night? Yes.
51. You say that from your own knowledge? I have seen them open.
52. *Professor Liversidge.*] Which door do you speak of? The back door.
53. *Dr. Alleyne.*] Which door is that? The door leading out in front of the little place where I used to live.
54. *Chairman.*] Not the front door? No.
55. *Dr. Alleyne.*] The door leading into the stone area? The door leading into the garden like—the back door next to Thorpe's room.
56. Could any one have got from the door to which you allude all over the building? I think so.
57. They could have got inside the building at all events? Yes. The door I speak of is the main door. When I looked in what I saw was like an elephant.
58. *Chairman.*] Was the door fastened from the inside or the out? I have seen O'Grady locking it from the inside of an evening, and Mr. Krefft opened it from the inside.
59. When Mr. Krefft was in the state which you describe as drunkenness, did he appear openly to any of the other people employed on the premises? It was before the people arrived in the morning.
60. The occasions you have described were before the men arrived in the morning? Yes.
61. Have you seen Mr. Krefft drunk before any of the servants of the institution? I cannot say. I have seen him drunk often enough, but I cannot say whether it was in the presence of anybody else. I have seen him very much drunk in the presence of Mrs. Krefft.
62. Could he walk straight? When I saw him very much the worse for liquor he laid down.
63. Where was that? In the dining-room.
64. In his own room? Yes.
65. It is about eight months since you left? Yes.
66. And you were here about six weeks? Yes; it might have been a little more, but it would not be less.
67. It would be about the beginning of last summer, I suppose? About that. I could not tell you the week or the month.
68. You noticed that Mr. Krefft was drunk particularly on the Sunday morning that he threatened your children? Yes. One of my little boys is six years old and the other going on for nine. Mr. Krefft nearly frightened him into fits—the poor little fellow was trembling nearly all day long after it.
69. *Dr. Alleyne.*] Was it the violence of Mr. Krefft's manner that frightened him? Yes. He told him that he would break his bones.
70. Were your children giving him any annoyance at the time? None whatever. My husband sent my boy round for thistles for Mr. Krefft's little boy's rabbits. Mr. Krefft happened to be at the front door. He was tremendously drunk that morning. He hunted my little boy away from the front, and came tumbling after them as well as he could. He told him he would draw all the young blackguards in front of the Museum, and that he would break every bone in his body.
71. You are sure that Mr. Krefft was drunk then? I am sure he was.
72. *Chairman.*] Did you ever see him in this state of intoxication at the back of the premises amongst the men at any time? They did not work in the little house behind. What I saw, I saw accidentally. I never looked after him. When I saw him sick here one morning I knew that he was very bad at the time. He was tremendously drunk that morning.
73. *Dr. Alleyne.*] What do you mean by being very sick? I do not like to express it.
74. *Mr. Hill.*] Was he vomiting? Yes, he was vomiting over the fence—he could not stand straight then.
75. *Dr. Alleyne.*] What fence do you refer to? The fence towards the school.
76. You have often seen men drunk in the streets? Yes.
77. Do you form your opinion that Mr. Krefft was drunk by comparing what he did with what you have seen drunken men do in the streets? Yes. Generally in the evening after the men had left he came into our place, and you could almost see then that he was very much the worse for liquor. When he left, he commenced roaming about the place. Once I found the candle behind where the pigs were. He generally went there to have a sit down, after he was so that he could not travel about much.
78. *Chairman.*] Your husband has seen him in this state as well as yourself? Not at the time that I have seen him. He can answer for what he has seen.
79. *Dr. Alleyne.*] Were you a servant of Mrs. Krefft, performing household duties? I had nothing at all to do with that.
80. *Mr. Hill.*] During the time you were here, were any of the people taking photographs? I cannot tell. I have not seen them.
81. *Chairman.*] You were not here when a man of the name of Tost was employed at the Museum? No.

This is a true statement of the evidence given by me before the Sub-committee of the Trustees, on the 30th of June last.

CLARA BRACK.
24/7/1874.
Philipp

Mr. Philipp Brack was called in and examined :—

- Mr. P. Brack. 82. *Chairman.*] Your name is Philipp Brack? Yes.
83. You were at one time residing on these premises, were you not? I was.
- 30 June, 1874. 84. When was that? In October last.
85. You were employed by the Director of the Botanic Gardens? I was.
86. And you continued to work for Mr. Moore when you resided here? I did.
87. What brought you to reside here? Because I got acquainted with Mr. Krefft. I had been doing some work some time previous to that, and Mr. Krefft had been asking me if I would come to live on these premises. He said that he wanted a man that he could depend upon to look after the premises in case he wanted to go out of an evening, and on that condition I came here. I did not consent to come at once; but after three or four weeks time, when he had been urging me to come, I consented to come; he promised me a great deal—a house to live in, and wood and coal to burn; and all that he requested of me was that I should keep Mrs. Krefft's garden in order. On those conditions I came to these premises.
88. It was free lodging to you, in fact? I thought it was a great advantage to me.
89. How long did you remain? Between six and seven weeks. I think it was in the latter end of September that I came here, but I am not quite sure.
90. What time did you come here of an evening, and what time did you leave here in the morning? I was at my work in the Gardens at 6 o'clock in the morning, and I left it to come here at 6 o'clock in the evening.
91. Did you come home to dinner? Only sometimes.
92. During the time you were here did you ever observe Mr. Krefft drunk? Frequently.
93. At what time? Always in the evening.
94. Can you specify any particular circumstances on any of these occasions on which you say you saw Mr. Krefft drunk? I have seen him a good many times when I came home standing behind in the premises there, where it is not fit to be mentioned before gentlemen, spuing up, and I have seen him raving about the place. At first going off I did not take any notice, but when he began to tramp on me I could see that it was nothing but the intoxication speaking out of him.
95. This was after you returned home in the evening? Always. I never was here in the day-time, except occasionally at 1 o'clock.
96. Were you here on Sundays? On Sundays. As soon as I got dressed on a Sunday morning he got me to go down William-street to fetch him beer.
97. At what time? At church time—between 11 and 12.
98. And what may you have brought him on those occasions? Always a quart of English ale.
99. Have you brought up more than one quart on the same Sunday morning? I did not.
100. You do not know whether he wanted it for his dinner or not? I could not say; it was not my business to inquire.
101. At the time you came home at nights the men employed in the Museum had left? They had always left.
102. Were you the only other man on the establishment? Yes; excepting the old gardener, who used to come and sleep here of an evening. He always locked up the gates. My sons were here too.
103. What was the old gardener's name? Mr. Mac something.
104. *Mr. Hill.*] Macnamara? I could not say exactly, but he goes by the name of "Mac."
105. *Chairman.*] During the time that you were living here have you observed that the doors of the Museum were left open at night? I have, frequently.
106. During the whole night? During the whole night; and I have been myself at 11 o'clock at night and shut them, when the wind was banging them backwards and forwards. I have gone and shut the back door that leads into the Museum. The workshop door was frequently open.
107. *Mr. Hill.*] That is in the yard? Yes. I shut the back door of the Museum twice.
108. *Chairman.*] Are you aware that the doors have been open all night? I have shut them. I have found them open on a Sunday morning.
109. Was that before Mr. Krefft was up? Yes, before Mr. Krefft was up.
110. Was anybody else on the premises at that time? Not to my knowledge, except myself and my family.
111. O'Grady does not sleep on the premises? I never heard of his doing so.
112. *Mr. Hill.*] Did your wife at any time call your attention to the fact of the Museum doors being opened? I said to my wife—"There is the door open again; I had better go and shut it."
113. Was the door which you speak of a door leading into the Museum? Yes, the door leading into the Museum.
114. Leading all over the premises in fact? Yes.
115. When you have given your evidence will you show us that door? Yes.
116. The door opens from the inside? I could not say whether the door opens from the inside or the outside. I have never examined the door, but I have seen it open, and I have shut it.
117. Do you remember your children being very much frightened one Sunday morning by Mr. Krefft? I do. His children had two or three little rabbits, and I was cleaning out the basket they were kept in. I told my little boy to go in front of the Museum and get some thistles for the rabbits; and almost directly after he had left me, the boy came back almost in a fit, and Mr. Krefft came roaring after him like a wild bull. He said why did I send my children, and I said, "For thistles." He was almost raving mad. I spoke a few words to him; and he said—"If you don't like it you can leave." I said—"Is that the way you are going to serve me, after coaxing me here and making me break up my home?" He got worse and worse every day. He sent O'Grady to tell us that the Trustees did not approve of my living here. I did not take any notice of that; and in a day or two he sent me this written notice to quit the Museum. (*Notice read.*)
118. *Chairman.*] Is that dated? Yes; 10 November, 1873.
119. *Mr. Hill.*] You left the next day? I was forced to sleep on the floor all night. My things were out in the yard, and it was so wet that the man would not take them away. I and my children were forced to sleep on the floor until the man was able to take my things away.
120. *Chairman.*] During the time you lived here were you supplied with fuel—coals and wood? I was. I wanted to buy some; and he said—"Nonsense, man. I don't want you to buy anything. You can get everything here—coke, coals, wood, and kerosene for your light, and everything that you require."

121. You had all these things during the time you were here? I had.
122. Were they Mr. Kreffit's private property, or did they belong to the Museum? That I cannot tell.
123. Had you any reason to think that the fuel and light were the property of Mr. Kreffit or that they were paid for by the Museum? I believe that Mr. Kreffit was supplied by the Museum with coal and all these things; and I do not believe that he would buy them expressly for me.
124. *Mr. Hill.*] Did he say where he got the coals from? The coals were down in the cellar, and the wood was lying in the yard.
125. They came out of a common heap? Yes.
126. Did you notice where the kerosene came from? Mrs. Kreffit mostly brought it up in a bottle. I could not tell where she got it from.
127. *Dr. Alleyne.*] When you got this notice from Mr. Kreffit, did he tell you then that he gave you the notice to quit because the Trustees disapproved of your being here? He gave me that notice first by O'Grady by word of mouth, and then he sent the written notice. When he gave me notice by O'Grady, I went to him, and I said—"You have sent me notice that the Trustees do not approve of my being here. I am not going to shift out of the premises before you pay me for the work I have done for you."
128. He did say that the Trustees did not approve of your living here? He said—"Never mind the Trustees."
129. Did he tell you that the Trustees did not approve of your living here? He did not tell me that personally. He sent word with Mr. O'Grady that the Trustees did not approve of my living here. I went to him then, and told him if the Trustees did not approve of my living here, would he pay me for what I had done. He said—"What is your charge?" I said "I broke up my home to serve you, and I have done a good bit of work here for you. The least I can charge you is £5." At that he sprang up as if he wanted to murder me, and his wife sang out—"Lock up the approaches. Shut off the water on them. Starve them out."
130. *Chairman.*] Did you get anything from Mr. Kreffit for your services? I did not.
131. What had you done? I had done a good bit of work in my own time of an evening. On Saturdays we always knocked off at 4 o'clock in the Gardens, and I worked on here till night. I did a good bit of work in the evenings, and on Sunday mornings I did work mostly to comfort my own place. He ordered me to put up a kitchen, to break down a boiler there was there, and put up a fire-place for a stove he bought for me. He said—"There is plenty of wood in the Museum; carry it up and make a good comfortable home for yourself."
132. *Dr. Alleyne.*] You said you saw Mr. Kreffit drunk and vomiting over the fence? Yes, here in the back.
133. Was there anything else in his conduct or manner besides vomiting, which led you to suppose that he was drunk? Yes. When he began to get a spite against us, as he could not revenge himself on me, he always treated my poor children as if they were animals, and he shouted and roared about them as if he were a mad bull.
134. On any particular day that you saw him vomiting over the fence, was there anything else that occurred which led you to suppose that he was drunk,—anything besides that sickness,—anything in his general conduct or behaviour? —
135. Could he not stand steadily? He could always manage to stagger about.
136. *Mr. Hill.*] He staggered about? Yes.
137. But still kept on his feet? Yes.
138. *Chairman.*] Was this in the morning? I observed this in the evening. I never saw him the worse for liquor in the morning.

This is a correct statement of the evidence given by me before the Sub-committee of the Trustees, on the 30th of June last.

PHILIPP BRACK.
24/7/1874.

I wish to explain a former portion of my evidence, by stating that while I was living on the Museum premises, I signed a receipt for work done by M'Duggan. That work was trenching in Mr. Kreffit's private garden; I received that money on behalf of M'Duggan, whom I had employed for Mr. Kreffit, and I paid it over to him. For myself, I did not receive one farthing.

PHILIPP BRACK.
24/7/1874.

Mrs. Philipp Brack was further examined:—

139. *Chairman.*] Where did you get your coal and wood and your light from when you lived here? I got the coal and coke from the cellar out of the same heap where Mrs. Kreffit used from. There was very little wood at the time at the Museum, but while there was any I used of it. When that was all gone I used to take some of the branches that had fallen from the trees.
140. You did not find yourselves in coal? No, it was found for us by Mr. Kreffit.
141. You do not know whether it was his private property, or whether it belonged to the Museum? I believe it did, because Mrs. Kreffit came in when I had too little fire, and she said—"Keep a good fire to make the place dry, and let the Museum pay for it."
142. What did you burn? Kerosene.
143. Where did you get it? Very often Mrs. Kreffit brought up a bottle from the cellar where Helen lighted the lamps.
144. You never bought any oil while you were here? No; Mr. Kreffit made out that he had full power to give as he liked, and I never thought there was anything wrong.

This is a correct statement of the evidence given by me before the Sub-committee of the Trustees, on the 30th June last.

CLARA BRACK.
24/7/1874.

[The Committee went to view the southern door of the Museum, pointed out to them by the two preceding witnesses as that which they had found open at night. Vide Minutes.]

Michael

Mr. P. Brack.
30 June, 1874

Mrs. P. Brack.
30 June, 1874

Michael O'Grady was called in and examined :—

- M. O'Grady. 145. *Mr. Hill.*] When the Trustees left the Board-room and inquired of you for the keys, you said that the Museum door was locked? Yes.
- 30 June, 1874. 146. And that Mrs. Krefft had the keys? Yes.
147. I then asked you to go up and ask Mrs. Krefft to send us down the keys, saying that we wanted to go through the Museum? Yes.
148. You went up-stairs? Yes.
149. Whom did you see? Mrs. Krefft.
150. Whom else? I saw Mr. Krefft—Mr. and Mrs. Krefft.
151. You asked for the keys and said that the Trustees wanted them? Mrs. Krefft brought out the cellar keys. I said—"They want the keys of the back door" because I knew that you wanted to go to the back. She went in and spoke to Mr. Krefft. I heard his voice then. He came out and said—"Who is it wants the keys?" "The Trustees," said I. He said—"The Trustees?" and I said "Yes." He said—"Go down and tell them it is after 4 o'clock, and the Museum is locked." That was Mr. Krefft's message to me.
152. *Chairman.*] And you came down and delivered that message? Yes.
153. *Mr. Hill.*] Did anything else happen up there? No.
154. You saw Mr. Krefft yourself? It was Mr. Krefft who gave me word.
155. That it was after 4 o'clock, that the Museum was locked, and what else? He told me to tell the Trustees that the Museum was locked. He asked me who wanted the keys. I said—"The Trustees;" and he said—"Go you and tell the Trustees the Museum is locked."

I certify that this is a correct statement of the evidence given by me before the Sub-committee of the Trustees, on the 30th of June, 1874.

MICHAEL O'GRADY.
24/7/1874.

MONDAY, 13 JULY, 1874.

Present :—

H. G. ALLEYNE, Esq., M.D., | E. S. HILL, Esq.,
PROFESSOR LIVERSIDGE.

CHRISTOPHER ROLLESTON, Esq., IN THE CHAIR.

Miss Ellen Gillespie called in and examined :—

- Miss E. Gillespie. 156. *Chairman.*] You have been a servant of this institution, have you not? Yes, I have.
157. For how long? Five years ending last May.
158. What hours were you employed in the Museum? I came at 9 o'clock in the morning, went away for an hour for dinner, then came back and stopped until 4 o'clock in winter-time and 5 o'clock in summer-time.
159. You did not sleep on the premises? No; I went home to my sister's to sleep.
160. You have been employed in the institution five years, you say? Yes.
161. Has Mr. Krefft been Curator of the Museum all that time? Yes; he was here before I came.
162. *Mr. Hill.*] You say your duties at the Museum were from 9 o'clock in the morning until 5 o'clock in the evening—were there any occasions on which you remained here later at night? Yes, I have often been told not to go home at 5 o'clock. When Mr. Krefft had company I have often been here until 9 or 10 o'clock at night; on one or two occasions I have been here until 1 o'clock in the morning.
163. *Chairman.*] Then, in addition to your services to the Museum, you were required to render services to the Curator's family? Yes, after the Museum had closed of an evening.
164. Were you paid entirely by the Museum? Yes, I understood that I was paid out of petty cash, every Saturday evening. Mr. Krefft gave me a cheque for a guinea every Saturday before I went home.
165. You got your wages every Saturday? Yes.
166. At the rate of a guinea per week? Yes.
167. Did you ever get anything else in the way of payment? Yes; sometimes I have had half a sovereign for a Christmas box; sometimes I had 2s.; sometimes 1s. 6d.; but these latter sums were for extra labour.
168. Were you employed in washing and cleaning the Museum? Yes; I used to wash the floors and stairs, and dust the glass cases. I sometimes had to look after the people when the Museum was open.
169. Was Mr. Krefft constantly in the Museum looking after things? No, he was not; sometimes I did not see him there during the whole day.
170. Did you ever see him in a state of intoxication? Yes, mostly every day.
171. Unfit to do his duty? Yes, mostly every day he was in a muddle.
172. He might be in a muddle, and it might not have been caused by drinking too much? I do not know. I know I carried away the empty bottles.
173. Where did you carry the empty bottles from? From there. [*Witness pointed to the south-east corner of the room.*] I cleared the place every morning.
174. What had been in the bottles? Ale, brandy, gin.
175. Do you know where it was obtained—did you get it? Sometimes it was got in in cases. I went for small quantities sometimes; sometimes the man went for some.
176. Did you ever see Mr. Krefft in such a state as to be unfit to do his duty? I have seen him lying in bed up-stairs.
177. At what time of day? In the afternoon—after dinner.
178. Did he dine late? 1 o'clock.
179. Then you mean you saw him in bed after 1 o'clock? Yes.
180. Was he violent under these circumstances? Yes, he was very cross. I never answered him back again, but just kept quiet, as I wanted to remain in my situation.
181. And this, you say, was frequently? Yes, frequently.
182. Can you name any particular day, or any particular circumstances connected with his drinking? Yes. One day Mrs. Krefft called me in and said the master was sick; she told me to bring the floor-cloth or flannel and wipe it up. Mr. Krefft then went to bed, and I did not see him any more. 183.

Miss
E. Gillespie.

13 July, 1874.

183. Do you recollect what day that was? No.
184. How long ago is it? About eighteen months ago.
185. What hour of the day was it? It was about 11 o'clock.
186. Do you recollect the occasion when the Curator of the Museum and some of the men, I think, went to Botany to look after a whale? Yes; it was on the 23rd of last December.
187. Were you at the Museum when the party returned? I remained here until 7 o'clock, when Mrs. Krefft told me not to stop any longer; she thought there was something the matter. O'Grady and I were here all day. I went home about 7 o'clock.
188. You did not see Mr. Krefft that evening? No.
189. *Mr. Hill.*] You did not see him at all? No, not at all that evening. That was the night before Christmas Eve.
190. You were not here when he came home that night? No; I went home at 7 o'clock.
191. At the times that you have seen him drunk, could any of the other employés of the institution have seen him? Yes, they could all see him equally as well as I could.
192. In what part of the institution could they see him? In the cellars below, often, when he was drunk.
193. When you speak of his being drunk, was he helplessly drunk—could he walk about? Sometimes he could walk about; sometimes he would go up and lie down in his bed-room. I have often seen him drunk.
194. You have said that you have often seen him drunk—can you call to mind any particular time? No.
195. But you have occasionally seen him drunk? Yes.
196. And on those occasions, if any one else besides the employés had been down below they could have seen him? Yes.
197. That is to say, if the public had had access to the room he was in they could have seen him drunk? Yes, they could have seen him.
198. *Chairman.*] You cannot name any other time in particular when he was drunk? No, I cannot remember any particular time; I cannot remember the day of the month.
199. *Dr. Alleyne.*] Do you remember any particular time when any one besides yourself saw him drunk? The men must have seen him drunk.
200. Do you recollect any person in particular who saw Mr. Krefft at the time you thought he was drunk? I cannot name any person in particular; the servants were always going backwards and forwards, but I never had any conversation with them.
201. *Chairman.*] Was Mr. Krefft generally kind and civil to you? Yes, he was generally civil.
202. Had you any quarrel with him, or did you entertain any ill-feeling towards him? I never in my life had a quarrel with him.
203. Did you ever complain to anybody that Mr. Krefft was in the habit of getting drunk, or mention the circumstance to anybody? I mentioned it to Mr. Masters often. He said he could not think how anybody could stop here.
204. Mr. Masters was then employed in the institution? Yes, he was.
205. Have you mentioned it to any of the others? Yes, I often mentioned it to O'Grady.
206. *Mr. Hill.*] You have mentioned it to one of the Barneses? Yes.
207. *Chairman.*] Have you ever said anything to Mr. Krefft himself on the subject? Never.
208. *Mr. Hill.*] Why did you not say anything to him? I was too much afraid he would turn me out.
209. *Chairman.*] Have you ever seen anything wrong going on in the Museum in consequence of the state that Mr. Krefft was in? Anything wrong in the building?
210. Yes; any improper use made of the specimens, for instance? No; I do not understand much about specimens; I never bothered myself with those things.
211. You have not observed any injury done to the Museum specimens? Yes. He took two lions, and a rocking-horse, and a little grey pony, and burned and destroyed them in the paddock. I remarked at the time that it was very foolish of him.
212. Was he quite sober when he did that? I cannot say. He was going about, at any rate.
213. You cannot say he was tipsy? No, I cannot say. He might be drunk, and I not notice it.
214. Do you remember some people of the name of Brack living here? Yes.
215. Were they quiet respectable people? Yes, they were very quiet people.
216. Did you ever observe any of the doors of the Museum open when you came in the morning—I mean doors that ought not to have been open? Yes; several mornings that great door at the back was open. I remarked to the man that it was very wrong. He said he fastened all the doors before he went away on the previous evening. That was before the Bracks came to live here.
217. *Mr. Hill.*] Next to Thorpe's room? Yes.
218. The door going into the yard? Yes. I said it was awful. I often wondered how it could get open. I dare not say anything to Mr. Krefft about it lest he should have abused me.
219. *Chairman.*] Was it O'Grady's duty to close and fasten the doors? Yes; I have helped him to do it often.
220. Perhaps it was yours and O'Grady's fault that the doors were open? No; we used to see that all the doors were fastened every evening. I have sometimes called on the Barneses to help me. If they were left open it was not our fault, but Mr. Krefft's. Mr. Krefft had keys to open them himself. He often had candles and sat smoking away.
221. Then the doors must have been opened by him after you had closed them? Yes. I often found the public entrance door open in the morning, with the key in it. We used to hang the keys on a nail before leaving. Sometimes when I have come to the Museum of a morning I have found it open, and the lamp, candles, paper, ink-bottles, scissors, and other things lying about.
222. *Mr. Hill.*] You were speaking just now about some lions, horses, or ponies being burned. Since the inquiry before the Select Committee of the Legislative Assembly do you recollect any other articles or animals or documents being burned? Since that inquiry commenced I have been taking papers by the apronful and burning them. From the time of the inquiry until I left they were burning papers and books.
223. Since which inquiry do you mean? Since the inquiry at the Legislative Assembly.
224. *Chairman.*] Are you still employed at the Museum? No; he sent me away in April or May.
225. Who sent you away? Mr. Krefft. One morning he gave me a cheque for two week's wages, and said

- Miss Gillespie. said he did not require my services any longer. I never came back. I never made any inquiry as to why I was dismissed.
226. Did he not tell you why he dispensed with your services? No, he did not.
227. And you have not been on the premises since? Never, unless I was sent for by a written order.
228. That is since April? Since April.
229. He gave you a week's pay in advance? Yes.
230. *Mr. Hill.*] That was some time after the Barneses were suspended? A long time after they were suspended. I could not think why Mr. Krefft sent me away, unless it was because I could not tell any lies.
231. *Chairman.*] Did Mr. Krefft suggest to you to give any evidence or information that was not true? Nothing but the gold robbery that happened, about the men coming back to work on the premises again.
232. Do you know anything of that gold robbery? No, I know nothing whatever about it. The first I heard of it was on the morning after the robbery. When I came to the Museum O'Grady told me that the doors had been smashed open. The gold was quite safe when I left on the previous evening.
233. Did you give Mr. Krefft any reason to suppose that you had any suspicion of him? No, not the slightest reason.
234. Had he always been civil towards you? Yes, very civil. He never did treat me badly. He used to scold me and domineer over me a bit. He was a hot-tempered man; but I never took any notice of that—I always obeyed his orders.
235. But you suddenly got paid a week's wages in advance and notice to go? Yes.
236. And you did not ask him why he sent you away? No, I did not ask him the reason; I went away.
237. What did you think was the reason? I suggested that it was because I would not tell lies.
238. You gave evidence before the Select Committee appointed by the Legislative Assembly? Yes, I did.
239. And was it before that Committee that Mr. Krefft wished you to give evidence that was not true? It was after that. The inquiry had been going on a good deal before he sacked me. It was something that occurred with respect to the Barneses one day. He called me in; but I could not tell for what reason he called me in.
240. You say you suspected that he turned you away because you would not tell lies. What was it he asked you to say, and before whom did he ask you to say it? There was a meeting here one day, and Mr. Krefft was asking questions as to the evidence given that day by the Barneses before the Committee of the Legislative Assembly. He wanted to know if they came back to the Museum in an excited state, throwing their hands about, and I said no, they did not. They were not excited more than usual. I do not know whether it was for that I was turned away.
241. *Mr. Hill.*] Then you are speaking now with reference to the evidence which you gave concerning the Barneses when he told them to wait outside until he came from the Assembly? Yes.
242. It was at that particular time when the Barneses were waiting for Mr. Krefft to come back from the Assembly? Yes.
243. *Chairman.*] You were usually paid your wages in money, not by cheque? Always by cheque.
244. A cheque signed by any of the Trustees of the Museum? No; signed only by Mr. Krefft. He paid me out of petty cash, as I understood. I gave him a receipt every week. At the monthly meeting I believe the Trustees signed my monthly cheque. He had that to himself, and I was paid out of petty cash every week.
245. *Dr. Alleyne.*] Can you read? I can read, but cannot write.
246. How do you know the cheques were not signed by any of the Trustees? They had only "Gerard Krefft" on them.
247. You mean to say you understand his signature? Yes, I understand his signature.
248. And there was no other signature but his on the cheques? No, there was only the one signature.
249. *Chairman.*] Do you know anything of a man named Tost who was employed in the Museum some years ago? He was dismissed from the institution a month before I came here.
250. Do you know why he was dismissed? I heard that there had been a row, but I never made any inquiries. I heard that he was treated very badly.
251. From whom did you hear it? From the Barneses and O'Grady. I knew nothing of it personally.
252. Did you ever hear what the bad treatment consisted of? I heard something about a conspiracy; that things were put in Tost's shop, and then a policeman was sent for to take charge of them as stolen property.
253. *Dr. Alleyne.*] The fact is you know nothing about the matter? Not personally.
254. *Mr. Hill.*] Do you know how long it was after Tost had gone that you heard this? I had been here about three months when I heard about the row.
255. And how long have you been here? I have been here five years last May.
256. *Chairman.*] Did you ever hear anything about the Curator breaking a fossil jaw? I never heard anything about it. I saw something about it in the paper lately.
257. Had you ever anything to do with the visitors' book? Yes, I always stood at the door when O'Grady was sent with a message anywhere. I used to call upon the visitors to enter their names. When any passed without doing so I used to put down the number.
258. *Mr. Hill.*] Suppose there were forty—did you ever register a large number like that? Sometimes "forty" has been put down when only two or three passed.
259. Whenever forty passed you put down forty? Yes; I have sometimes seen O'Grady put down 200.
260. Did he do that by instructions? Yes, he was told to do it by Mr. Krefft.
261. Did you ever hear Mr. Krefft tell him to do it? Yes.
262. What did Mr. Krefft tell him? He told him to put down a good number; to never mind its being correct, but to let it be a good number.
263. Could you point out any instance where this has been done in the visitors' book? No, I could not point it out in the book.
264. How long ago is this? It has been going on ever since I came here.
265. Constantly? Yes, constantly.
266. *Mr. Hill.*] It has been a continuous thing? A continuous thing.
267. *Dr. Alleyne.*] Do you mean to say that the practice has been not to put down the real numbers of visitors, but to put down imaginary numbers, to make the public believe that the institution was largely visited? Yes, that has always been the practice.

268. *Chairman.*] You have no ill-feeling towards Mr. Kreffit? None whatever.
 269. Would you come back to the institution if he were to ask you? Yes, I would.
 270. Who is doing your duty now? A little boy.
 271. Did you have charge of the Museum stores when you were here? No; I used to make the fires in the offices, and trim the lamps.
 272. Were the stores belonging to the Museum and those belonging to Mr. Kreffit kept separate;—how did you know whether you were using Mr. Kreffit's stores or not? The coal was all kept in one place. Mrs. Kreffit took charge of the kerosene oil. When I wanted any she gave me a little out, and locked up the other again. I do not know who paid for it.

Miss F.
Gillespie.

13 July, 1874.

This is a correct statement of the evidence given by me before the Sub-committee of the Trustees, on the 13th instant.

her
HELEN + GILLESPIE.
mark

25/7/1874.

Henry Barnes called in and examined:—

273. *Chairman.*] You have been employed in the Museum for some time? Yes.
 274. *Mr. Hill.*] As what? As taxidermist.
 275. As a modeller? No, as setter-up of skeletons.
 276. You are the photographer, not the carpenter? The photographer and the modeller.
 277. *Chairman.*] During the time you were here did you ever observe the Curator under the influence of drink? Yes.
 278. At what hours, or what time in particular? Well, I have seen him at pretty nearly all hours of the day—at different times.
 279. At different times—early in the morning? I cannot say that I have seen him under the influence of drink early in the morning; but I have seen him under the influence of drink in the afternoon, after dinner, and occasionally at night.
 280. Has he on those occasions been unfit to do his duty? On several occasions I have seen him unfit for his duty.
 281. Do you recollect his going to Botany last Christmas Eve after a whale? Yes.
 282. Were you with him? Yes.
 283. Was he intoxicated then? Yes.
 284. Was he intoxicated before he left the Museum? No.
 285. Was he intoxicated before he returned? Yes.
 286. How did he get back? He came back in a spring van.
 287. With the whale? Yes, with the whale; it was a small whale.
 288. Did he not catch a death-adder on the road? Yes.
 289. You were with the Curator on that occasion? Yes.
 290. What time did you leave the Museum to go to Botany? As near as I can remember, it must have been between 10 and 11 o'clock in the morning.
 291. What time did you leave Botany to return home? It was in the evening, just upon dark.
 292. *Mr. Hill.*] It was in the long days? Yes.
 293. And you left Botany just between light and dark? Just between light and dark.
 294. What time did you get to the Museum? I think it was about half-past 7 o'clock.
 295. What part of Botany did you go to—La Perouse's monument? Yes, La Perouse's monument. It was across Botany Bay that we got the whale.
 296. What time was it when you started from La Perouse's monument? I cannot exactly say the hour; it was between light and dark.
 297. How long did it take you to come to the Museum? It must have taken us about an hour and a half.
 298. Did anything happen on the road? Yes; on the road we saw a death-adder; the wheels of the cart passed close by it.
 299. Whereabouts was that? I cannot tell you the spot exactly.
 300. Was it half-way, a third of the way, or a fourth of the way from Sydney? It was some distance before we came to the toll-bar.
 301. You say you started at dark, and yet saw a death-adder on the road? I may have made a mistake in the time we started. I cannot tell the hour exactly; it was still light enough to see the death-adder.
 302. However, you all came home together. What condition were you in? Perfectly sober.
 303. What condition were the others in? Perfectly sober.
 304. Was Mr. Kreffit sober? No; they were all perfectly sober saving Mr. Kreffit; the van-man was not perfectly sober.
 305. Do you know the van-man's name? Yes; his name is Dennis Mulqueaney.
 306. *Chairman.*] Do you know where he lives? No.
 307. *Mr. Hill.*] Do you know where he can be found? He can be found upon the van-stand.
 308. Mr. Kreffit was in the cart? Yes.
 309. Did he get in and out of the cart himself? I do not know.
 310. *Chairman.*] Were you in the hotel at Botany? No.
 311. You took your dinner with you? We took some food with us.
 312. Did you get anything to drink at all of an intoxicating nature? No; Mr. Kreffit got me some water with lemon-juice squeezed into it.
 313. That is all you had? That is all I had, but I saw plenty.
 314. *Mr. Hill.*] Plenty of what? Whiskey.
 315. *Dr. Alleyne.*] What did you see on that occasion that led you to think that Mr. Kreffit was drunk? He fell down two or three times, and had to be lifted up.
 316. Do you mean that he fell down as you have seen drunken men in the streets fall down, and that he had to be picked up again in the same manner as you have seen men in the streets picked up? Yes.

H. Barnes.

13 July, 1874.

- H. Barnes.
13 July, 1874.
317. *Mr. Hill.*] Did you go out from the Museum in the van? Yes, in the spring-cart.
318. Did Macdermott go with you? No; we went across the bay in his boat.
319. Did you take the whiskey with you, or was it supplied by any one? No; it was drunk in Macdermott's house.
320. Was any part of the spirits taken out in the cart? I think Mr. Krefft took a little brandy.
321. And the whiskey was supplied afterwards? Yes.
322. *Dr. Alleyne.*] It was supplied after you got back from the opposite shore of Botany Bay? Yes; whether Mr. Krefft had any before we went over I could not say.
323. *Mr. Hill.*] If Macdermott gave Mr. Krefft a glass of whiskey, would that keep him drunk until he got back to the Museum? He had more than one glass.
324. How do you know? I was in the house and saw him.
325. How long did you stop there? About an hour and a half or two hours.
326. Were there any strangers in the house? Not inside; two gentlemen rode up.
327. Who were they? I do not know.
328. Did they join you in the drinking? No.
329. They came up to the house and went away? Yes.
330. And there were no other persons there besides your own party? No.
331. Do you know Ben James or Mr. Spence? No, I do not know them; but they may have been there.
332. Were they there? There were two gentlemen rode up, but I cannot tell their names; they came up to ask the road to Banks's hotel.
333. Were they on horseback? I could not be certain whether they were on horseback or in a vehicle.
334. What state was Macdermott in? He was, I should say, very drunk.
335. At the time when Krefft was there? Yes.
336. *Dr. Alleyne.*] I presume you know when a man is drunk—and when you talk about a man being drunk, I suppose you mean he is in such a state that if seen in the streets he would be taken up by a policeman? I have seen many a man taken up who was not so bad as Mr. Krefft was.
337. *Chairman.*] Did you ever see Mr. Krefft drunk about the Museum premises on other occasions? Yes.
338. During working hours? Yes.
339. So drunk that he could not walk straight? Well, I have seen him reel a bit; of course he could walk; but I have never seen him worse than he was at Botany.
340. Was this a matter of frequent occurrence do you say? Well, I have seen it pretty frequently.
341. Have you any ill-feeling against him? Not the slightest.
342. *Dr. Alleyne.*] When you say pretty frequently, how often do you mean? Well, I cannot say how often.
343. *Chairman.*] Has this been a matter of long standing, or has it occurred recently? I should say it has been going on five or six years, as near as I can remember.
344. Did you ever say anything to Mr. Krefft about it? No.
345. Did you ever say anything to the Trustees about it? Never.
346. Has it been growing upon him? It seemed to be growing upon him a little before the disturbance in connection with the institution.
347. Was he violent when under the influence of drink? He generally seemed to be in a better temper on those occasions.
348. And you were rather glad to see him in that state? Oh no.
349. *Dr. Alleyne.*] When you speak of Mr. Krefft's being drunk, I want to understand whether you mean that you are sure he was drunk in the popular sense of the term? At Botany do you mean?
350. No, at any time. A man may take a little more brandy than is actually good for him; but it is another thing to be drunk in the ordinary sense of the term—so drunk that he cannot perform his ordinary duties? Yes, that is what I mean.
351. *Mr. Hill.*] When Mr. Krefft was in that state had the other employés of the institution an opportunity of seeing him? Yes.
352. Did they see him? Yes.
353. Did they make remarks about it? Yes.
354. *Chairman.*] It was a subject of conversation amongst you? Yes; we have often said one to the other, "Mr. Krefft is drunk again."
355. *Mr. Hill.*] Besides the day you were at Botany, could you specify any other day on which he was drunk? I cannot name any particular day, as I never kept the date. I can name one particular night; but of course that was after hours, and was in this place—on the Museum premises.
356. *Chairman.*] What night was that? The night I came to take his little boy to see a magic lantern exhibition.
357. You cannot tell us the date? I cannot tell you the date.
358. How long ago is it? It must be seven or eight months ago.
359. Do you know anything about some indecent photographs that were exhibited here? Yes.
360. Do you know anything more in connection with those photographs than you stated in evidence before the Select Committee of the Legislative Assembly? No, I cannot say that I do know anything more about them.
361. You told the Select Committee all you knew about them? Yes.
362. And what you told them was perfectly true? Perfectly true.
363. You knew a man named Tost who was formerly employed in the Museum? Yes, I knew him very well.
364. How long were you in the Museum with him? I was in the Museum with him for some years.
365. Was there any cause for ill-feeling between the Curator and Mr. Tost? At one time they seemed to be on very good terms; but before Tost left the institution there was some disturbance got up between them.
366. Do you know what that disturbance was about? Mr. Krefft charged him with taking things away from the Museum.
367. Mr. Krefft charged him? Yes, he found things in Tost's basket as he was going out, or something of that kind.

368. Was that long before Tost was sent away? No.
369. I think you told the Select Committee of the Legislative Assembly that Mr. Krefft had suggested something to you in connection with Tost;—can you tell us what that was? Yes; Mr. Krefft suggested that we should go down and search Tost's house for property belonging to the Museum. 18 July, 1874.
370. Mr. Krefft had reason to suppose that Tost had been making away with property belonging to the Museum? I understood that Tost had some property belonging to the Museum in his house. Mr. Krefft wished me to go with him to search Tost's house, and he told me to take something belonging to the Museum with me, and, in case of our not finding any stolen property, I was to drop it in the house, so that it might be found and Tost be apprehended for stealing.
371. You told that to the Select Committee of the Legislative Assembly? Yes.
372. *Dr. Alleyn.*] Are you prepared to make a statement on oath to that effect before a Court of Justice? I am prepared to make such a statement on oath in any Court in the world.
373. *Chairman.*] Did you inquire of the Curator why he asked you to do what you have stated? Not a word.
374. Did you obey him? No, I did not.
375. *Mr. Hill.*] Did Mr. Krefft preface his request by any explanation, or make any remark at the time as to why he wished you to do it? No. I have stated all he said to me.
376. What was it he said? "You take something with you belonging to the Museum, and in case we do not find anything, drop it secretly in his house so that it can be found."
377. So that it could be found by whom? So that it could be found, and Tost be convicted.
378. *Chairman.*] Then Mr. Krefft was anxious to get rid of Tost? Yes.
379. *Mr. Hill.*] Who do you suppose was to find what you were asked to drop? Mr. Krefft did not say; I suppose he meant that either he or I was to find it, or the detectives.
380. Since that time you have been on your guard about everything? I have never entertained any very high opinion of Mr. Krefft since. I thought that if ever he took a dislike to me he might perhaps try and serve me in the same way.
381. But you still kept on good terms with him? Yes, I kept on good terms with him.
382. *Chairman.*] The result was that Tost was dismissed? Yes; the result was that he was dismissed without the search.
383. Had you any reason to believe that the charges preferred against Tost by the Curator were not true—that is, did you believe Tost to be an honest man? Well, so far as I know, he always seemed to be pretty honest.
384. You had no occasion to suspect him of taking anything belonging to the Museum? No, I never saw anything dishonest in him.
385. It was the general remark amongst the employés of the institution that he had been ill-treated? It was generally understood in the Museum that he had been ill-treated.
386. *Mr. Hill.*] Did Mr. Krefft ask you, or did he get you, to sign any document in connection with this matter? In connection with Tost's dismissal?
387. Yes; did you sign any document in connection with it for anybody? I may have done so; I do not very well recollect.
388. For what purpose? I have not the slightest idea.
389. *Chairman.*] Was there any one present at the time you were asked by the Curator to drop something in Tost's house? Only my brother.
390. He was there and could testify to the same thing? He was just standing by in the shop.
391. I think you told that before the Select Committee of the Legislative Assembly? Yes.
392. *Professor Liversidge.*] Had you any reason to suspect that Tost took glue, nails, and other things that were Museum property home with him? As far as I recollect of the matter, it was in this way: as Tost was going out, Mr. Krefft took the basket from him, and brought it into the Museum and examined it.
393. You did not see any glue and things in the basket? Yes, I saw nails, and screws, and so on.
394. So far as you know, Mr. Tost did not take those things? Mr. Tost may have taken those things. I have frequently seen him going in and out with his basket. Whether he intended to steal the things or not I do not know.
395. What I want to know is whether you have ever seen him take things away in his basket? No. I have seen him taking his basket away.
396. *Mr. Hill.*] The particular one that you saw Mr. Krefft take away from him? No, not the basket he had when Krefft met him.
397. Did you see him with that basket at any other time? Frequently.
398. It was his own property? I cannot say whether it was his own basket or the Museum basket.
399. *Professor Liversidge.*] Did you see Tost take away those things which Mr. Krefft told you he had taken? No.
400. *Dr. Alleyn.*] Did Tost bear the character of being an honorable man, or was he a disreputable man? I have never heard anything bad against his character.
401. So far as you know, he was always considered to be an honest and decent man? He was always considered so.
402. Do you consider that at the time Krefft examined his basket he was a thief? No.
403. *Chairman.*] Were you present or employed at the packing of any bones for England, from the Museum? Yes.
404. When? It must have been about the month of October, 1873.
405. What was it you packed? It was a large jaw of a diprotodon—a restored jaw.
406. Was that the last thing you packed? It was the only one. We did not exactly pack it. At least, I did not exactly pack it; but I was present at the packing.
407. How was it packed, and what was it packed in? It was packed in a brandy-case.
408. Was not the jaw too large for the case? Yes.
409. And how did you make it fit? We did not do anything to it—Mr. Krefft made it fit.
410. How did he make it fit? He broke it up with a hammer and bradawl.
411. What did he do that for—could he not have got a larger case? Yes, he could have got a larger case.
412. Did he say anything at the time? I do not know whether he said anything at that time, but I know he said that Professor Owen should not get it perfect.
413. So with the hammer and bradawl he smashed it up? Yes, he smashed it up. 414.

- H. Barnes. 414. What was the size of the box it was put in? I think the brandy-case was made to hold about a dozen bottles.
- 19 July, 1874. 415. By how much larger was the jawbone than the case? In the height I think the brandy-case was seven or eight inches; the highest part of the jaw must have been over ten or eleven inches.
416. And what about the length of it? I think it went in in the length.
417. It was in the height that it was too much for the case? Yes.
418. You are quite sure he said that Professor Owen should not get it perfect? Quite certain.
419. Was your brother with you at the time—or who was with you? Only my brother.
420. Tell us again what Mr. Krefft said? If I must use the word, he swore.
421. *Dr. Alleyne.*] You must give us the exact words he used, as far as you can recollect them? He said—“I’ll be damned if Professor Owen shall get it perfect.” I won’t say he used the words at the time we were packing it, or a little while before we commenced it.
422. *Mr. Hill.*] When this bone got into your possession what was it intended for? To be mended and then to have a cast taken of it.
423. To repair it or glue it? To stick it together, and then to take a cast of it.
424. Did you make any additions to it with clay or cement to make it perfect? Yes, I made the top part of the ramus and the back part of the condyle with clay for the model.
425. When that was done it was considered complete for moulding? Yes.
426. Then what did you do? I took the moulding.
427. And then what? The clay part falls off after the moulding is taken—it is no good.
428. Did the clay or bone part fall off? It was only the clay.
429. Then it was not the clay part but actually the bone that was broken? Yes, it was the fossil itself.
430. *Dr. Alleyne.*] How did you get the cast of the condyle? I modelled it.
431. From what? From a drawing.
432. Did you have the bone of a smaller animal to model it from, or did you model it from a drawing, or a sketching, or pencilling? Principally from a sketch, and as near as I could think of myself.
433. *Chairman.*] Who made the sketch? It was, I think, out of one of Professor Owen’s books. I remember now there was a cast of one of the condyles.
434. *Dr. Alleyne.*] Where was the cast got from? From the Museum.
435. What was it made from? That I do not know—it was made before my time.
436. *Chairman.*] You are the photographer here? Yes.
437. You gave evidence before the Select Committee of the Legislative Assembly respecting some indecent photographs? Yes.
438. Have you anything to add to what you stated to the Committee on that occasion—you got them from Dr. Patterson, I think you said? Yes, I got some from Dr. Patterson, and one from a gentleman named Abbey, and some were Mr. Krefft’s own private property.
439. Patterson was a herbalist—not a regular doctor? He was a herbalist, but he used to go by the name of Dr. Patterson.
440. You are speaking of a man who was convicted of procuring abortion for a woman, and who was sentenced to gaol? Yes, that was the man.
441. Did you take copies of the photographs? Yes.
442. Did you take them for your own amusement, or what did you take them for? I took them for Mr. Krefft.
443. Did Mr. Krefft tell you to take them? Yes. They were lent to me by Dr. Patterson to show to Mr. Krefft, who, he said, was a friend of his.
444. Did you ever do work out of the institution for other people? Yes.
445. For whom? Well, I have principally worked for Dr. Cox.
446. I think you were questioned very largely upon that point before the Select Committee of the Legislative Assembly? Yes.
447. And you told the Committee all you knew about it? I told them all that occurred.
448. Did you sell any of the photographs you spoke of? No.
449. You were not employed by Mr. Krefft to sell any of the photographs on his account or on account of the institution? Yes, he employed me and my brother at one time to sell photographs.
450. What were they photographs of? It was a view I took on the occasion of the laying of the foundation stone of Captain Cook’s statue.
451. *Mr. Hill.*] That is the view you took from the roof? Yes.
452. *Chairman.*] What did you do with the proceeds of the sale? Gave them to Mr. Krefft.
453. *Mr. Hill.*] I think you gave evidence before the Select Committee of the Legislative Assembly to the effect that you were ordered by the Curator to make cases and set up specimens for other people? Yes. Set up specimens?
454. Yes? No, I did not give any evidence about setting up specimens.
455. Did you give any evidence about your having used material belonging to the Museum for other people? Yes.
456. Did you use the property of the Museum for other people? Yes.
457. *Chairman.*] Are you still on the Museum staff? Yes.
458. And are you paid? Yes.
459. Do you work here? No, I work at home.
460. Under whose directions? Under Mr. Krefft’s directions.
461. *Dr. Alleyne.*] When did you last receive directions from him? About a fortnight or three weeks ago.
462. What work were you doing? Setting up skeletons.
463. What work are you doing now? I am setting up a wallaby now.
464. Who told you to do that? Mr. Krefft.
465. When did you receive instructions to set up the wallaby? About a fortnight ago it was brought to us; it might not be quite a fortnight.
466. *Chairman.*] Who brought it to you? O’Grady.

This is a correct statement of the evidence given by me before the Sub-committee of the Trustees, on the 13th instant.

HENRY BARNES.
25/7/1874.

Robert

Robert Barnes called in and examined:—

467. *Chairman.*] How long have you been employed in the Museum? About seven years and a half.
468. In what capacity? General assistant and carpenter.
469. You have had frequent opportunities of seeing the Curator, I suppose? Yes.
470. Did he occasionally go into your room to see you at work? He used to come into our shop almost every day.
471. Any particular hour of the day? No, he would come in at all hours.
472. In any of his visits did you ever observe anything peculiar about him? I have very often seen him under the influence of drink.
473. How did he exhibit it? By not speaking properly—by not walking properly. I can tell when a man has got drink in him.
474. You say he could not speak or walk properly? Not as a sober man should do.
475. What hour of the day was this? I have seen it at all hours of the day.
476. Not very seldom, but very frequently? Frequently.
477. More so of late than it was a few years ago? Well, it has been more so of late than it was a few years ago; but I have known it ever since I have been here,—that is, for six or seven years.
478. Have you any idea what it was he took which brought about such a state of things? His principal drink was ale.
479. Did you ever go to get ale for him? Yes, very nearly every day.
480. Where did you go for it? I used to have to go to Hughes's, to Tigue's, to Roberts's; in fact, I have been sent nearly all over Sydney to see where I could get the best and cheapest ale. I have been to Peate & Harcourt's amongst other places.
481. At what time of the day were you sent on these errands? In Museum time, as well as in my own time.
482. You have been sent all over Sydney to see where you could get the best and cheapest ale? Yes, I have.
483. *Mr. Hill.*] I suppose you never tried the Colonial ale? Yes; that was what I was sent down to Peate & Harcourt's for.
484. Used you to pay for the drink as you got it? I used to pay for the draught ale, and the bottled ale that I got from Roberts's I paid for; I generally paid when I went to the retail houses; at other places I used to tell them to send up the cask.
485. Did Mr. Krefft pay for it? He used to give me the money.
486. And you were constantly employed in going about to get ale? Yes; it is part of my duty to go with messages.
487. Can you call to mind any particular occasion when the Curator was more than usually in a state of beer? I have seen him very far gone frequently.
488. Can you call to mind any particular day or instance? On the 23rd of December he was very drunk, but he was not on the premises at the time.
489. Where were you then? We were out at Botany.
490. Was your brother with you? Yes, and Mr. Masters also.
491. What time did you go out? We started from the Museum between 10 and 11 o'clock, I think.
492. Was Mr. Krefft drunk then? No, he was quite sober then.
493. When was it he began to exhibit signs of drunkenness? After we got the whale, about half-past 3 or 4 o'clock. He went into Macdermott's place and left us outside; and about three-quarters of an hour afterwards he sent for us to go inside to have something to drink. When we went inside we saw a whiskey bottle on the table. He asked us to have some, but we declined. He then gave us some water with some lemon-juice in it.
494. Was Mr. Krefft tipsy at that time? Yes, he was very drunk.
495. How did you get him home? We brought him home in the van.
496. Did you put him into the cart? We did not put him in.
497. Did anything happen on the road home? Just outside the enclosure at Botany, Mr. Krefft was trying to get into the cart over the offside wheel, and Maedermott was trying to shoulder him up. He would not have that, so he passed round by the horse's head, and stopped just where I was sitting; he staggered back off the road a little and fell down into a hollow; there he lay and could not get up; I had to assist him up.
498. You got him home safe? Yes, we got him home safe.
499. Was he able to get out of the cart without assistance? I assisted him out of the cart at the steps.
500. Can you call to mind any other occasion on which Mr. Krefft made a similar exhibition of himself? Yes. It must be some ten or eleven months ago; there was a young German friend of his who had come from the Fijis, and was stopping with him; and the day the young gentleman went back to the Fijis, a party went out to Botany, and when Mr. Krefft came home he was dreadfully drunk.
501. What hour of the day was that? It was after 5 o'clock when he came home.
502. *Chairman.*] On both of the occasions you have mentioned he got drunk when he was away, but he was ordinarily sober when he was on the Museum premises? Oh no; I have seen him throwing up in the cellar.
503. *Mr. Hill.*] Do you mean he was throwing brickbats about? No; he was vomiting.
504. *Dr. Alleyne.*] Did you attribute that to drunkenness—you know what is meant when a man is said to be in a state of drunkenness? I have seen him in all stages.
505. *Mr. Hill.*] You never saw him dead drunk—so drunk that he could not move? I never saw anybody so drunk that they could not move.
506. *Chairman.*] Did you know a man named Tost? Yes.
507. Do you know any circumstances in connection with his leaving the Museum? Yes.
508. Will you tell us what they were? One morning Mr. Krefft called me and my brother, and O'Grady, and old Mac, I believe, into a room underneath this Board-room; he also called Mr. Tost. He had Mr. Tost's tool-basket on the table, and before us all he accused Mr. Tost of taking this tool-basket away with screws, nails, glue, and things like that, belonging to the Museum. Tost did not deny it, and said that he always took his basket home and fetched it back again. There was a good deal of disturbance. Krefft wanted Tost to apologize to him, and threatened to suspend him if he did not. Tost said that Krefft should

R. Barnes.
13 July, 1874.

- R. Barnes. should apologize to him. With that, I believe, Tost took his hat and coat and went up-stairs. He suspended himself, I believe. There was then an inquiry about it, and Tost was dismissed.
- 13 July, 1874. 509. Was there anything unfair in the charges against Tost, so far as you know? There was nothing unfair in the charge that was tried here—in the charge that was tried before the Board.
510. *Mr. Hill.*] How do you mean tried before the Board? Nothing unfair at the Board.
511. At the Board you never were consulted? Yes, I was a witness.
512. What was the result of the inquiry? The result was that Tost got dismissed.
513. *Chairman.*] Was it generally supposed that Tost was unfairly charged? No.
514. Were you present at the packing up of a bone that was to be sent to England? Yes.
515. *Mr. Hill.*] Do you know anything with reference to a request that was made by Mr. Krefft that something should be deposited in Tost's house? Yes.
516. Just state what it was? On the morning that Tost was to be tried by a sub-committee appointed for the purpose, Krefft came down to my shop, which was in the cellar, and said to my brother—"I am going to get two detectives," or "I have got two detectives to search Tost's house, and I want you to take something belonging to the Museum, and in case we do not find anything belonging to the Museum there, to drop it in his house."
517. What other observation did Mr. Krefft make at the time? He made no other observation, so far as I can remember.
518. Now, if you were brought before a Court of Justice would you swear that such a thing took place? I would.
519. Would you swear that Mr. Krefft invited your brother to drop something in Tost's house? I would swear that he did do so. He said on one occasion—"We must crush Tost; Tost has lots of charges against me, and against you too."
520. And he told you that you must assist in crushing Tost? Yes; he said that to three of us on the stairs.
521. You are quite positive as to that? Quite positive.
522. You are sure he did not mean the words to apply to anything else? No; it was all about Tost. He told us that Tost had brought many charges against him, and many charges against us, and that we must assist him in getting Tost out.
523. Did you take anything to drop in Tost's house, as requested? No; nothing.
524. Did you tell any one about this? I think I told O'Grady about half an hour after it occurred.
525. *Dr. Alleyne.*] What kind of charges did Tost bring against Krefft and you and your brother? I do not know that he brought any charges against Mr. Krefft. We only knew what Mr. Krefft said to us. I do not know whether he did actually bring any charges. Mr. Krefft said that Tost had brought charges against him.
526. *Chairman.*] Had you any dread of Tost as to anything he could say against you? I had no particular dread, but I thought he might say something against me.
527. *Dr. Alleyne.*] What charges did Mr. Krefft say that he was bringing against you and your brother? He did not mention the charges that Tost was bringing against us, but he mentioned the charges that Tost had brought against him.
528. *Mr. Hill.*] Do you remember any property belonging to the Museum being burned? Yes; there were two lions, bears, tigers, leopards, antelopes, monkeys, and a Shetland pony, that used to be exhibited in the Museum.
529. What were they destroyed for? I do not know. They were all burned.
530. Were they destroyed before they were burned? Well, the pony was taken out of the Museum and put on a stand for Mr. Krefft's little boy to ride on. It was a Shetland pony that had been given by Mr. Burt.
531. *Chairman.*] What were the lions destroyed for—were they lousy or full of moths? No. Thorpe said he could make fine exhibits of them. The lions were set up—Mr. Tost set them up himself.
532. *Mr. Hill.*] Were they skeletons or skins? Skeletons and skins too.
533. Were they all burned? All except the jaws.
534. *Chairman.*] Did Mr. Krefft assign any reason for burning them? No, except that he said they were all rubbish.
535. *Mr. Hill.*] Were any books or papers destroyed? I have at times burned lots that were thrown away as rubbish.
536. *Chairman.*] Have you any ill feeling against Mr. Krefft? None whatever; I have no ill feeling against any man alive.
537. Did he always treat you well? I cannot say that he has always treated me well; but I have no ill feeling against him—I make allowance for his bad temper.
538. Have you done any work for people outside the institution, and given receipts for it in anybody else's name? Yes.
539. By whose orders? Mr. Krefft's.
540. You gave evidence to that effect before the Select Committee of the Legislative Assembly? I did.
541. Did you tell the Committee all that you knew about that, or is there anything further that you can add? I can add nothing further; it is well known that I used to sign cheques for work done here for "William Bradley."
542. Is the man you represented alive? I never knew William Bradley.
543. You recollect a Bradley? Yes, it was James Bradley.
544. Did you ever speak to him about using his name? No.
545. What suggested to you the name of Bradley? I do not know; it was the first name that came into my head.
546. Did Bradley ever do any work for you? We were boys together, and used to work together.

This is a correct statement of the evidence given by me before the Sub-committee of the Trustees, on the 13th instant.

ROBERT BARNES.
25/7/1874.

TUESDAY,

TUESDAY, 14 JULY, 1874.

Present:—

H. G. ALLEYNE, Esq., M.D., | EDWD. S. HILL, Esq., J.P.,
PROFESSOR LIVERSIDGE.

CHRISTOPHER ROLLESTON, Esq., IN THE CHAIR.

Robert Barnes was called in and further examined:—

547. *Chairman.*] You say that you adopted the name of "William Bradley" just as you would any other name which might occur to you at the moment? Yes. R. Barnes.
548. What was the reason why your own name was not attached to these papers? Mr. Kreffit said it would not look well for me, being in the employment of the Trustees of the Museum, to be signing my own name to bills for work done out. This was work I did in my own time. 14 July, 1874.
549. For private individuals? No; for the Museum—making bird-stands, glass boxes, or doing any other little jobs.
550. *Mr. Hill.*] Then do I understand that you were working here all day for the institution, and you had the privilege of working after-hours, but as it would not look well for you to be working all day and all night too, you put in another name? Yes; Mr. Kreffit gave me these little jobs to do, because he knew that I had a large family, and could do them as well as anybody else.
551. Who suggested that you should adopt another name than your own? Mr. Kreffit; but he did not suggest the name Bradley.
552. Did he suggest that you should adopt any name other than your own? He did.
553. What words did he use? As near as I can remember, he said—"Don't send the bills in in your own name; it does not look well; put in any other name."
554. Did you do so? Yes.
555. Did you give him a receipt in the name of Bradley for money which he paid you? Yes, always. I used to sign them here myself.
556. Who made out the accounts? My nephew.
557. Who made out the accounts for yourself? I never gave any for myself.
558. You got your own wages without an account, and your nephew made out the accounts for the work done in the assumed name of Bradley? Yes.
559. These accounts appear in your nephew's writing? Yes.
560. Who receipted the accounts? I did; I receipted it "Wm. Bradley" myself.
561. You received the amount and gave the receipt? Yes.
562. Did you ever give any other accounts to Mr. Kreffit for work done in your own name? We were here working over-time at the time of the Exhibition.
563. I mean, did you give any accounts in your own handwriting? None.
564. You do not recollect giving any accounts in your own handwriting? No.
565. These accounts, which appear receipted by Bradley, are in your nephew's handwriting, receipted by you;—is that clear? That is clear.
566. *Chairman.*] Did you prepare a case for some fossil bones that were to be sent Home? No; it was a brandy-case.
567. It was about the premises? It was down in the spirit-room.
568. Had you anything to do with the packing of this bone or these bones? I nailed the lid on.
569. What was it? The restored fossil jaw-bone of a diprotodon. We have a cast of it in the Museum now.
570. About what size? With the ramus and all it would be about 14 inches deep.
571. Was the brandy-case a case for holding a dozen bottles? Yes.
572. Was the case big enough to receive the bone? No.
573. In what way was the case too small—in height? It was wide enough.
574. How did you get the lid on to the box—did you reduce the specimen? I did not reduce it.
575. What was done to make the box hold it? It was broken.
576. By whom? By Mr. Kreffit.
577. With what? With a hammer and bradawl. The bradawl was chiefly used to pick the wires out.
578. Did he say why he used this force in breaking the thing up? I do not know if there was any reason. He said he would be damned if Professor Owen should get it in any other state than what he had it in, and my brother remarked that Professor Owen would not be able to put that together.
579. Was the Curator sober? He was competent to know what he was doing. He had had a glass, but he knew what he was about.
580. It was not done under the influence of a glass? He would not allow us to make it according to the figure of Professor Owen at all. We had to make the skeleton with eleven ribs; Professor Owen's has thirteen. He would not allow us to work the upper skull according to the cast we have inside here, according to the figures of Professor Owen. It was Mr. Kreffit's impression that the diprotodon was a very large bear or wombat, that is, a species of bear or wombat. The form of the skull resembles a bear's skull.
581. *Mr. Hill.*] In this diprotodon which you were restoring, you first secured the true bone together? Yes, out of thousands of fragments.
582. You made that one whole? Yes, what there was of it.
583. The other parts you restored with clay? We modelled the ramus and condyle with clay—portions of the ramus and the whole of the condyle.
584. You did that to make a mould for the model? —
585. Was there any portion of the clay attached to it when you were packing it up? No; the clay falls right off as soon as we have done with it.
586. You are quite sure that there was no clay on it? Nothing to speak of.
587. You are sure also that it was the fossil bone that was broken up by Mr. Kreffit? Yes.
588. You are certain of that? Quite confident of it.
589. Was that in the original joinings where it was put together by you? —
590. *Professor Liversidge.*] Or did he form fresh fractures? Yes, or it would have been easier to put together than we had it to do, because we had to find the small pieces of the bone out of thousands of pieces. 591.

- R. Barnes.
11 July, 1874.
591. In picking up this bone did you fill the spaces up? Yes, with a whole apronful of bones that Mr. Krefft sent up from the cellar.
592. How did you know that they were portions of a diprotodon? Because they came from Dr. Bennett. We fetched all the bones from Dr. Bennett's; they were all mixed up together—pieces of ribs, skulls, jaw, vertebra. We had to separate them to find portions of the jaw. We took what we wanted from this heap, and after we had done with them put the others back again.
593. *Dr. Alleyne.*] You said that you made this diprotodon according to the cast inside;—what cast inside were you referring to? This is not a cast. It is a model that we have made.
594. When you said a cast inside, what were you referring to then? It had been a bear's head—not a diprotodon's.
595. The cast inside was the head of a native bear? Yes.
596. Is that what you mean? Yes.
597. One of the native bears, such as we have got in the bush now? Yes.
598. You were making then, as I understand you, the skull for this supposed diprotodon from the pattern of what is ordinarily called a native bear? Yes, we modelled from a native bear's skull.
599. You were not modelling from the figure or the cast in the Museum? No; nothing more than the teeth and the native bear's skull. It is mostly all manufacture.
600. *Mr. Hill.*] Did you make the cast resemble that of the native bear you were doing it from? Yes, with the exception of the teeth. The lower jaw is from the original diprotodon jaw.
601. The lower jaw was really diprotodon? Yes.
602. And you made something to fit the diprotodon from a bear's head? Yes; to fit the diprotodon lower jaw.
603. And could you make it fit it? Yes.
604. Could you make a bullock's head fit it? Yes.
605. *Chairman.*] You were generally employed in carpentry work in the Museum? Many years ago, in Post's time. The carpentering was stopped then.
606. Did you do work for persons outside the Museum when you were employed here? Yes.
607. By whose direction? I did work for the Museum by Mr. Krefft's direction. I have done private work for Dr. Cox, but I have not done much—a few picture-frames.
608. On the premises? No; at home.
609. Out of material belonging to the institution? No; my own material.
610. Dr. Cox paid you? His money paid for everything.
611. Was the Curator in the habit of getting furniture made for himself on the premises by yourself or any of the employés? He has had a good many things made that he has always told me to make. I have made three tables and a clothes-press which is now up-stairs in his private room. It was to have come into this place to hold papers.
612. A press which he ordered you to make to hold papers has gone up-stairs? Yes.
613. Have you ever been ordered by the Curator to make up specimens for private individuals and send them away? I have packed specimens for Dr. Bennett.
614. Anybody else? Not that I can remember.
615. What were these specimens? A good many of them were the bones we got from Dr. Bennett, and other little things. I have taken small cases. I do not know what Mr. Krefft has put into them. Mr. Krefft has packed them himself.
616. You did not take notice with what—you did what you were ordered by the Curator? Anything he told me to do I did. I pack up nearly everything that goes away.
617. Were many things sent away from the Museum elsewhere? Lots and lots of things.
618. Were they sent out of the Colony, or in the Colony? Out of the Colony. I should suppose they have been for ships.
619. Were they specimens belonging to the Museum? Yes; such as casts and bones. We have sent five casts of the lower jaw of the diprotodon away, and I think ten casts of crocodile's head.
620. *Dr. Alleyne.*] Where did you send them to? That I cannot say. To different parts of Queensland, I think, and to Melbourne.
621. Not sent to Europe? There were lots of things sent to Europe. I have seen the addresses on them.
622. *Mr. Hill.*] When you packed these cases you would know the contents of them? Yes. I have packed a whale's head—the skull of one of Gray's whales.* We sent two or three casts of the whole of the diprotodon, all the limbs, all that we have got. The ribs and things are all modelled.
623. Have you got a diprotodon in this institution in the bone? No, only a copy of one.
624. You cannot send models of things which you have not got in existence? We can if we make models and send casts of them.
625. To whom were these specimens sent or addressed that you packed? I cannot say.
626. You cannot say to whom the packages were addressed? Mr. Krefft sent one lot down to the steamer to Professor M'Coy, Melbourne. I paid the freight and got the receipt.
627. Do you recollect anything addressed to any one else in any other part of the world? No. I have often sent cases addressed to Professor Owen.
628. *Chairman.*] Were they addressed as coming from the Curator, Mr. Krefft, or from the Trustees of the Australian Museum? He did not put the address on in that way. I make the cases and Mr. Krefft addresses them.
629. *Mr. Hill.*] Has there been any marsupial animals packed in these cases? The cases have contained birds, genus homo, skeletons, skulls, reptiles, fishes. I cannot remember at this moment.
630. Do you recollect anything now beyond what you have said in the shape of moulds and casts of fossils? I cannot recollect particular cases.
631. You distinctly remember taking a package down to the steamer for Professor M'Coy, of Melbourne, and paying the freight;—about what time was that? Some three or four months before Christmas.
632. Last Christmas? Yes. We took a lot on board the French man-of-war when she was here.
633. *Chairman.*] The "Atalante"? I do not know. We took them to a gentleman I think of the name of Lieutenant Mudge.
634. *Mr. Hill.*] And about that time you sent a case to Professor M'Coy? Somewhere about that time. It was about the time when we took two or four legs down to the Exchange.
635. *Professor Liversidge.*] You took portions of the casts of the diprotodon down? Yes. 636.

* NOTE (on revision):—A large portion of the skeleton of the whale also went away in the same case.

636. *Mr. Hill.*] That identifies the time? About that time.

637. Is there anything else that you desire to say to the committee about any of these matters—anything which you have forgotten? No.

638. Do you wish to retract anything? The only thing that I should like to say is in justification of myself. Mr. Kreffit accuses me of taking complaints to the Trustees, which I utterly deny. I never went to the Trustees in my life until I was suspended, and I asked them to attend the meeting to see that I got fair play. I never spoke to the Trustees before that. Dr. Bennett says I did on one occasion, but I deny it. I never took complaints to any of the Trustees.

This is a correct statement of the evidence given by me before the Sub-committee of the Trustees, on the 14th instant.

ROBERT BARNES.

25/7/1874.

R. Barnes.

14 July, 1874.

J. A. Thorpe was called in and examined :—

639. *Chairman.*] You have been employed in the institution for a considerable time? Between five and six years. J. A. Thorpe.

640. In what capacity? Taxidermist.

641. In the course of that time you have had frequent opportunities of conversation with the Curator? Yes.

642. Daily, I suppose? Every week at least.

643. Was he at all times sober and in a competent state for the performance of his duties? I cannot say that he was always sober, but I cannot say that I have seen him what I call drunk. I have very frequently seen him under the influence of drink.

644. What do you call drunk? He can always stand and talk, but there is that in his manner which shows that he has been drinking heavily.

645. Was this early or well on in the day? Generally towards 3 or 4 o'clock in the afternoon—sometimes before that.

646. How did it show itself? Usually in a flushed appearance, in a laughing strange manner. I can hardly describe it.

647. Was he violent in his manner or conduct towards yourself at all? No.

648. Or towards any of the other servants of the institution? Yes, I have seen him very violent.

649. But perhaps they had been doing wrong? I do not know.

650. You cannot say that it was entirely from his having taken too much? I did not always attribute Mr. Kreffit's violence to his having taken too much liquor.

651. You do not? No.

652. He was naturally impetuous, was he? Yes, naturally very violent; and I think he has often been so when he has had no occasion to be so.

653. You think that was infirmity of temper? Yes, I do.

654. Then you cannot say that as a rule he has been unfit to discharge the duties of Curator of the Museum? Perhaps he came under my notice less than any man in the establishment. The room where I work is rather isolated from the rest, and he does not take any particular interest in my branch of the business. He took more interest in bones, fossil remains, and things of that kind that were being set up in the workshops by the Barneses. Sometimes I have known him to be for a week or ten days without coming into my room at all, but I have frequently seen him pass to the workshops during that time. He would not be under my notice at all.

655. Were you here in the time of a man named Tost? No; I succeeded Mr. Tost.

656. You know nothing personally of the circumstances under which he was discharged? No, only from hearsay.

657. Did you know Mr. Tost? No.

658. What did you hear of Tost—was he in good repute here? The men told me that he had not had fair play. They told me that it would be better to keep myself to myself.

659. Who cautioned you? O'Grady and the Barneses.

660. What did they say? They said that Mr. Tost had not had fair play, and one of the Barneses—it was Harry Barnes—told me that Mr. Kreffit told him to put something in Mr. Tost's house, and that a detective was to find it there. That was the purport of what he told me.

661. Was this told to you on your first coming to the Museum? No, I do not think it was. I think it was a year or eighteen months after that I heard it.

662. That would be about four years ago? It must be three or four years ago since I heard it first. I have heard it frequently repeated since.

663. Have you yourself been on good terms with the Curator? Yes, on very good terms; until about the time of the gold robbery, or since I gave evidence before the Select Committee. That was about the first time that Mr. Kreffit began to be cantankerous with me.

664. What did you attribute that change in Mr. Kreffit's conduct to? I could not say, unless it was that he was offended at what I said before the Select Committee; but what I said there was the truth, and I am willing to take my oath upon it.

665. *Dr. Alleyne.*] Did Mr. Kreffit suspect you of being concerned in the gold robbery? No.

666. *Chairman.*] Were you one of the party who went to Botany to get a whale? No.

667. Were you at the Museum on the Christmas Eve? I was here, at the Museum.

668. Did you see the Curator on that day? I do not think I did.

669. Either in the morning or evening? I do not recollect seeing him.

670. Were you here when the party returned from Botany with the whale? No. The day Mr. Kreffit left with the party to get the whale—I think it was on the Tuesday—he came to me and asked me to see that O'Grady, the messenger, was at his post. He said—"Thorpe, you will be good enough to see that O'Grady is at his place. I won't trust him at his place alone. You need not work to-day, but you can go and see that he is at his post." I walked about the Museum all that afternoon, and I saw that O'Grady was always there.

- J. A. Thorpe. 671. *Mr. Hill.*] At the door? Yes.*
672. Did you see the gold specimens there that day? No, I did not.
- 14 July, 1874. 673. You did not look into the cases? Not for three weeks before.
674. Was O'Grady perfectly sober on that day? Yes. I never saw him otherwise. I do not know that he drinks.
675. *Chairman.*] Have you observed the Barneses at all the worse for liquor? I have known Henry Barnes to be the worse for liquor, but not recently. I have not seen Robert Barnes the worse for liquor.
676. Have you seen Henry Barnes the worse for liquor recently? Not for the last two years. I think he turned teetotaler then, and I have not seen him the worse for liquor since.
677. Have you been required by the Curator to make up specimens for private individuals during your employment here? Yes, on a few occasions.
678. Only on a few occasions? Only on a few occasions.
679. Will you name the persons for whom you set up specimens, if you know them? I set up a wallaby for the Honorable Henry Parkes, and a duck and a ring-tailed opossum for Sir Alfred Stephen.
680. The practice has not been a very common one? Not with me.
681. It has been exceptional? Yes, exceptional.
682. Had you anything to do with taking photographs? No.
683. Do you know anything of any indecent photographs being exhibited about here? I have seen them.
684. Do you know by whose orders they were taken, or who were responsible for their being here? I do not know by whose orders they were taken, but I have seen Henry Barnes frequently bringing them through my room to take them to Mr. Kreffit. He said that he was going to Mr. Kreffit with them. I never saw them in Mr. Kreffit's possession.
685. Were they sold outside? I never knew them to be; I never saw the indecent ones outside.
686. Do you know whether any photographs were sold? Only from hearsay.
687. What did you hear were sold? I have heard that some photographs of Captain Cook's statue, taken at the time the Duke of Edinburgh laid the foundation stone, were sold to the value of 7s. 6d.
688. You do not know of anything else? No.
689. Do you know anything of the visitors' book? No, nothing more than what I have heard O'Grady say, that he had to put down a larger number than the actual number of persons.
690. A larger number than absolutely came in? Yes.
691. When did you hear O'Grady say that? I have heard it almost from the time I came here; I have heard that that has been the practice in the institution.
692. *Mr. Hill.*] You got your wages every week? No, every month.
693. Did the Barneses get theirs at the same time? I believe so.
694. Do you know as a fact that they did? Yes.
695. Do you know any particulars with reference to the Barneses getting wages for extra work and giving a receipt at the same time? No; I have heard one of them say that he signed in the name of William Bradley.
696. What was his object? He said—"I do not sign my name for these things." We were talking once about his working overtime, and I was saying that he made up a nice little sum. "But" said he, "William Bradley gets this." He said that in a joke, and in explanation he said that he signed "William Bradley" instead of his own name.
697. You never saw the signature? No, nor did I ever see him sign it.
698. Since the beginning of the Inquiry by the Select Committee of the Legislative Assembly what has Mr. Kreffit's conduct been towards you—since you gave your evidence? At first he began by raving and roaring like a bull at me, speaking to me as if I were a dog. I told him that a little of that would go a long way. I told him, the first time, that I had not been used to being talked to in that way. I was very much annoyed, but I did not give him any impudence, and since then I have seen very little of him. He has been almost invisible for the last three or four months.
699. *Professor Liversidge.*] Why did he roar at you—had you done anything wrong? No, I had not. In the first instance I misunderstood him. He told me to lock a door. It was blowing very hard, and I did not understand what he said. I used to leave work with Masters at 4 o'clock, but Mr. Kreffit made me stop till 5.
700. *Mr. Hill.*] Did he explain to you the reason you were to stop? No; all that he said was that the Trustees were frequently here after 4 o'clock, and that when they asked for me I could not be found.
701. Did he tell you that it was an order of the Trustees that one if not both of you were to stay? No. At the time he made me stay I was very unwell, and I had very disagreeable work to do. The stench was frightful from the decomposed animals upon which I was working.
702. *Chairman.*] Had you anything to do with the attempted preservation of the sun-fish? Yes.
703. Why did you not succeed in preserving it? I was not allowed to do so.
704. By whom were you not allowed? Mr. Kreffit.
705. For what reason? I think it was from some ill feeling between Mr. Kreffit and Dr. Cox.
706. What grounds have you for thinking so? Mr. Krent said that he was not going to have specimens brought from the Trustees to be preserved and then to be taken out of the place—he was not going to let them make a convenience of the institution. That was the purport of what he said, but I do not say that those were his words. I understood that the fish was to leave the institution either temporarily or permanently.
707. Did you make any attempt to preserve the fish? I was working at it for three or four days, and it was then ordered to be taken away by the Health Officer. The fish became very offensive.
708. If prompt steps had been taken for its preservation in the first instance, could it have been preserved before it arrived at that stage of putrefaction? Yes. I have done lots of fish. It is a branch of taxidermy that I take a great interest in, is stuffing fish. When the intestines and stomach were taken away nearly all that would be left would be cartilage, and the only part that would be liable to stink would be the passage from the throat. If I had had a couple of gallons of carbolic acid for a disinfectant, and had diluted it in water and sprinkled it over the fish, it would have kept well enough. A hole was dug in the paddock,

* NOTE (on revision):—On that day O'Grady went to his dinner, as usual, at 12 o'clock. On his return, at 1 o'clock, I went home, and returned a few minutes before 2. I state this in consequence of seeing, in a note on revision of Mr. Kreffit's evidence before the Select Committee of the Legislative Assembly, a statement that O'Grady and I both left at 1 o'clock on the day in question, and did not return for an hour and a half.

paddock, and the old man was employed to wheel the flesh into the hole. When I spoke to Mr. Krefft he J. A. Thorpe. said—"You will never do that fish. Why do you persist in it? Don't you hear that the people are complaining all round the neighbourhood about the stench?" I said—"Mr. Krefft, it is not this, but it is ^{the} putrid mass in the hole." 14 July, 1874.

709. *Mr. Hill.*] Where was the hole? Near Mr. Weigall's fence.

710. About south-east from your back door? Yes. I said—"If you will allow the man to put a few shovelfuls of earth over each coating of flesh it won't stink." He said "Oh no; let it be; we will stink Weigall out."

711. *Chairman.*] The Health Officer came and had the whole thing removed? Yes.

712. What was done with it? The parcels delivery carts took it away.

713. It was not buried in the grounds? Not the skin and the portions to be made into the specimen. They were not buried, but the refuse and offal only.

714. Were the tubs and buckets buried with this putrid flesh? There were no tubs and buckets that I saw. None were required.

715. *Mr. Hill.*] Did the vans that carted away the skin take away the buckets? No; there were none here.

716. Under any circumstances none were used? No.

717. Not to take up the flesh in? No; it was shovelled up and thrown into an old wheelbarrow and wheeled away.

718. Not for the liquid? There was no liquid used. There was no disinfectant—no spirits of wine, until half the skin was thrown into the tank, which of course spoiled it at once.

719. *Chairman.*] If proper steps had been taken there would have been no nuisance in the neighbourhood? None whatever.

720. It was designedly done on the part of Mr. Krefft, so that the sun-fish should not be preserved? That is the plain truth of the matter.

721. He had an idea that Dr. Cox was to take away the specimen? I had that idea, but I have heard since that it would have been only temporarily taken away.

722. Was it a valuable specimen? Very valuable.

723. Have you got one in the Museum? No, not one. I believe that one that was spoilt in preserving was sold the other day for twenty or thirty pounds to go to Melbourne. That was a painted specimen. It only showed the shape.

724. You are perfectly satisfied you could have made a very valuable specimen of it if you had been allowed your own way? I am certain of it. I only wanted three men for three days. That would have been plenty—allowing me to direct them and work myself.

725. Were you not allowed any men at all? I was allowed three at first until we got some of the weight of the flesh removed. Then Harry was called away to do photographs; then Robert; and then I was left with O'Grady.

726. If the whole strength of the institution had been left to the work until it was done, the fish could have been perfectly preserved? There is no question about that. If the fish had been decomposed at the time it came I should have said so, because it was a great deal of trouble.

727. *Mr. Hill.*] I see here a note on revision—"The tubs bought at Lassetter's were purchased after the putrid fish had been buried, and the tubs with it. I had to replace them." Do you recollect anything now of any tubs being buried with the putrid fish? There were no tubs used; and I am almost certain there were none buried. I did not superintend the covering up of the hole where the fish was buried. If there are any tubs in that hole they were put there by design, for they were not used.

728. Could you point out the hole? Yes.

729. *Chairman.*] Was any extra labour outside the Museum obtained to assist you in curing the sun-fish? None whatever. There were no strangers about the place at all. I do not know whether Mac, the gardener, is considered one of the staff. He was assisting in wheeling the stuff away.

730. *Dr. Alleyne.*] Do you know how much money extra he got paid for that? He told me that he got nothing. I never received a shilling for anything extra that I did here. All that I got extra was for specimens of natural history that I sold to the Trustees for the Museum. I never got anything for overtime.

731. *Mr. Hill.*] You have never had anything for overtime or any donations? No; and I have been here at work until 10 o'clock at night. If a specimen comes in, I always consider it my duty to try and save it.

732. Do you know of any stuffed specimens belonging to the Museum that have been destroyed or burnt? Yes.

733. Will you mention any? Two lions, one spotted leopard, two or three small deer, one very large red reindeer or elk, I forget which, with horns—I do not know whether the horns were taken off and kept or not—one fox, one horse, and one or two bears.

734. *Professor Liversidge.*] What bears—native bears? Foreign animals—black bears.

735. *Chairman.*] What were they destroyed for? I wanted Mr. Krefft to let me stuff them over again. I have restuffed a great many specimens. The only fault with them was that they were badly done. The skins were good. There is one specimen in the Museum, the civet cat, that I brought in out of the rain off a heap of rubbish. When I showed it to Mr. Krefft he would hardly believe it was the one which had been thrown out.

736. Were there other specimens besides those which you have described? Of most of them we have not got duplicate specimens.

737. *Mr. Hill.*] We have not got a specimen of a reindeer? No, not one of the kind which was destroyed. I am not sure whether that was an elk or a red deer; it was set up by Becker.

738. You mean to say that these animals were destroyed? Yes; the lions had been very badly done.

739. When did this occur? Two years ago—perhaps more. There was a great quantity of things destroyed.

740. *Chairman.*] Were they got rid of to make room for other specimens? No. These underground cellars are very spacious. Mr. Krefft wanted the cellars cleared out, and he had the whole lot pitched out.

741. Do you know whether that was done by direction of the Trustees or not? No.

742. Did you remonstrate against the destruction of these specimens at all? Yes.

- J. A. Thorpe. 743. To Mr. Krefft? Yes. Mr. Masters could corroborate what I say about that. He has often heard me express a wish to do the lions. I wanted to make one thorough good lion out of the two. One of the lions had a portion of the mane missing; but the two lions would have made one very excellent specimen.
- 14 July, 1874. 744. When you reconstituted with Mr. Krefft against the destruction of these lions, what did Mr. Krefft say? He said I should not do them.
745. *Mr. Hill.*] But you did succeed in setting up one civet cat? Yes.
746. Do you recollect anything of a horse that was burned? Yes; a small Timor pony.
747. *Chairman.*] Have you any knowledge of the destruction of any papers in connection with the Museum by the Curator? Only from hearsay. It was recently, I believe.
748. *Mr. Hill.*] What did you hear they consisted of? I have seen Mr. and Mrs. Krefft in here (the Board-room) on one or two occasions, with the floor strewed with papers. The woman who was discharged from here told me that they were taken out in clothes-baskets and burnt. R. Barnes told me so too. It was done about the time of the inquiry.
749. What was the woman's name? Helen Gillespie.
750. When you say the time of the inquiry, you allude to the inquiry before the Committee of the Legislative Assembly? Yes.

I certify that this is a correct statement of the evidence given by me before the Sub-committee of the Trustees, on the 14th instant.

J. A. THORPE.
24/7/1874.

Michael O'Grady was called in and examined:—

- M. O'Grady. 751. *Chairman.*] You are the messenger here? Yes.
- 14 July, 1874. 752. And have been so for twenty years? Yes.
753. Have you been employed in the same capacity from the first? Yes.
754. What are your hours? From 9 till 4 in winter, and from 9 to 5 in summer.
755. You keep the visitors' books? Yes.
756. Do you see that every one who enters the institution puts his or her name down in the visitors' book? Yes; and for those who cannot do it I do it, and I have orders from Mr. Krefft to put down a good number.
757. Have you been in the habit of reporting to Mr. Krefft at the end of the day the number of visitors who have come during the day? No, not until about a month or six weeks ago, then he desired me to give him a return on paper.
758. Did he ever inquire about the numbers you put down in the book? Frequently so; and I told him when it was a dull day, and he would tell me to put down a good number to-day.
759. Why did you do that? Because Mr. Krefft told me to do so. He said the place must go ahead. There might be a dull day, and he has seen only a few names down, and he has taken up the pen, and in his own handwriting shown me how to do it. He would say—"Do it that way."
760. Has he shown you in the book? Yes.
761. You do not put down the names of imaginary people? No.
762. Can you show us any of these entries? Yes.
763. Will you get the books in which they are to be found? I will.
- Witness produced visitors' books for 1871 and 1872, and pointed out particular entries made by him to swell the numbers. He was directed to find some of the entries which he said had been made by the Curator.*
764. Were you a servant of the Museum at the time that Tost was here? Yes.
765. Do you know anything of the circumstances which led to Mr. Tost's dismissal? Yes; I heard.
766. I ask you as to your own personal knowledge? Not of my own personal knowledge. Mr. Krefft accused him of stealing glue and screws and nails. That was the first I heard of his dismissal. He was a very hot-tempered man.
767. Who was? Tost was; in fact he put on his cap and went away himself. Mr. Krefft wanted him to apologize and he would not.
768. Was there any inquiry into the charges which Mr. Krefft preferred against him? There was.
769. By the Trustees? Yes.
770. And the result was they condemned him? He was dismissed.
771. Was Tost supposed to know anything of the disparagement of the Curator, or the Barneses, or anybody upon the establishment;—was he in possession of any knowledge that was prejudicial to them or their character? He was in the knowledge of something about the private affairs of Mrs. Krefft. I believe it was through that that some ill-feeling was got up. Tost said something to his wife, and that is how this ill-feeling got up.
772. *Mr. Hill.*] Was that before they were married? Yes.
773. *Chairman.*] Did you ever hear anything from Tost against the Curator, or the Barneses, or any other persons employed in the Museum? No.
774. How came it to your knowledge that Tost knew things in connection with Mrs. Krefft? I heard him speak of it.
775. Was Tost supposed to have been ill-treated by the Trustees in dismissing him, or by the Curator in getting him dismissed? By the Curator in getting him dismissed.
776. Have you any suspicion that the charges made against Tost by the Curator were true—have you any knowledge that he took things away from the Museum? I always considered Tost an honest man until Mr. Krefft shewed me an old basket with six or eight nails and six or eight screws and a bit of glue in it. He said—"Look at this." He used it for bringing this report against Tost for robbery. It seemed to me that he was watching to catch him at something.
777. You believe Tost to have been an honest man? Yes. Mr. Krefft gave him permission to work about the place, and he used to go in and out. Whether the nails and screws were his own property I cannot say.
778. Were you present on any occasion on which Mr. Krefft told the Barneses, or either of them, to take something from the Museum and place it in Tost's house? I was not, but I heard it from the Barneses that Mr. Krefft wanted them to do it, but they would not do it.
779. When did you first hear that such had been the case? About five years ago. 780.

780. Was that soon after Tost was discharged? No.
781. When did you first hear it? About the day after it happened they told me.
782. How could you fix the day when this was told you as being the day after it happened? They told me the day after. They said it was a very cruel thing, and they would never depend on Mr. Krefft again.
783. But you only know that by hearsay? Yes, from the Barneses.
784. But you always believed Tost to be an honest man? Yes.
785. Did Mr. Krefft ever say anything to you about him? Not a word, excepting once on the stairs. Mr. Krefft said to me and the Barneses—"If you don't crush the old man he will have us all out." That was pending the inquiry by the Trustees.
786. Into the charges that Mr. Krefft had brought against Tost before the Trustees? Yes. He said—"Say anything; you must crush him."
787. You think that he was led to this by something which Tost knew which was prejudicial to his wife? Yes.
788. You only suppose so? I only suppose so, but I am almost sure that that is what it was. They had some hot words about it.
789. Had Tost anything to say against the Barneses—their insulting or other conduct—in the Museum? I never heard.
790. Have you ever signed any statement to the effect that you believed Tost to be a dishonest man? I do not think I did. I cannot say—I have signed so many papers for Mr. Krefft.
791. Can you call to mind the fact that you signed a paper to the effect that you believed that Tost was a dishonest man? No. I often sign papers for Mr. Krefft.
792. Did you sign papers for Mr. Krefft without knowing what they were about? No, I did not.
793. Then if you had signed a paper of this kind you would have remembered it? I believe I should.
794. You have signed many papers for Mr. Krefft? Yes.
795. You have always read them? As well as I could see them. Sometimes I had not my glasses with me, and I could not see perfectly well, and then he read them for me.
796. *Mr. Hill.*] You could see what you were going to sign? Yes.
797. You do not recollect the fact that you did sign a paper to the effect that Tost was a dishonest man? I recollect signing a paper about nails and screws—I signed a paper to that.
798. To show that you saw him take out a basket with nails and screws? Yes; about half a dozen nails and half a dozen screws.
799. *Professor Liversidge.*] You saw Tost take the basket away with these things? No, I did not. Mr. Krefft brought the basket to me.
800. *Chairman.*] Was this paper you signed to show to the Trustees? I suppose so.
801. It was a constant habit of yours to increase the number of visitors to the Museum, as you say, by Mr. Krefft's orders? Yes.
802. It was a daily habit? It was a daily habit. He used to say—"Be sure now, O'Grady, and have a good number." Sometimes when there would be a good number of visitors in the day I would come in and tell him that there was such a number during the day. I would tell him that to keep him quiet.
803. Do you know anything of the destruction by Mr. Krefft of any papers or specimens belonging to the Museum? I have seen specimens destroyed—lions and a grey pony, but papers I have not seen; but I heard from the girl who was here that she was carrying away apronsful to be burnt. I have not been allowed into the Board-room since Christmas.
804. *Mr. Hill.*] What do you know about the specimens? Two lions were burnt, a little pony horse was made a rocking-horse for the child, and when that was destroyed by the child it was cut up and burnt. The two lions used to be under the stairs.
805. Do you remember a sun-fish being brought here to be preserved? I do.
806. *Chairman.*] Did it make a great stink? Not while I was at it.
807. Were you helping? Yes, for about two hours.
808. Why did you go away? I was called away. He said—"I don't want that cursed thing done." He paid down 5s. for this. He said—"Charge 5s. for yourself," and I did.
809. What was that for? For what I did. I saw no more of the sun-fish. It was carted away two or three days afterwards.
810. *Mr. Hill.*] Was there any out-door labour employed? No.
811. What did you take the flesh away with? He rolled it away and threw it into a hole.
812. In what? A wheelbarrow.
813. What about the tubs and buckets you used? I never saw any.
814. None were ever buried? Not that I saw.
815. During the time that an attempt was being made to cure this fish, were there any tubs or buckets used? None whatever.
816. The fish was taken away by old Mac in a wheelbarrow? Yes, and thrown into a hole close up to Mr. Weigall's fence.
817. You know the hole? Yes.
818. Has it been covered up since? Yes.
819. How deep is it? I could not say.
820. Could you point out the spot? I dare say I could.
821. Within a foot or two? Yes.
822. *Chairman.*] When Mr. Krefft gave you orders to increase the number of people entered in the visitors' book was he sober? Sometimes he would not be, others he would.
823. Have you ever seen him the worse for liquor? Frequently.
824. What do you call frequently? Very often.
825. How many days in the week? I did not take particular notice of the days. It might be three or four days.
826. Early in the morning or late? I have seen him so from about 11 o'clock.
827. Was he able to go about and look after his business? Sometimes he was not.
828. And this was frequently you say? Yes, I have seen him so often this eight or nine years that I could not mention any particular number of times.
829. Can you state any particular time or particular circumstances? I could. When I was living here, one morning between 2 and 3 o'clock I heard a great noise. I got up to see what it was, and it was Mr.

14 July, 1874.

M. O'Grady
14 July, 1874. Krefft very drunk getting in through the window. I waited. He was fumbling for some time lighting a candle, and when he lighted it he stumbled up-stairs. I waited a little time, and then I went up to see if the candle were out. I found the candle close to the window—curtains still alight, and he was lying on the floor amidst a whole lot of spue. I put the candle out and came away.

830. Could you say when that was? Eight or nine years ago, before he was married.
831. Could you bring to mind recently any time when he was found in that state? I have seen him in the spirit room during business hours, so drunk that he could not get out of it. I told him such and such a gentleman wanted to see him, and he would say—"Say I am out, O'Grady; say I am gone to the Government Printing Office."
832. When was this? Some twelve months ago. Since Christmas time he has kept himself more correct than he has been before.
833. Were you out with him on the Christmas Eve at Botany, looking after a whale? No, I was not.
834. You did not see him on that day? No; I saw him go out, but I did not see him when he came back.
835. Do you remember some people of the name of Brack living here? Yes.
836. What character do they bear? I believe they are very steady proper people. The man works in the Gardens.
837. You never saw them otherwise? No.
838. They were not employed at the Museum by the Trustees? Not by the authority of the Trustees; but they were employed by Mr. Krefft regulating portion of his garden.
839. Do you know why they left? I do not. I heard that it was something they said about pigs' food, but whether that is correct or not I do not know.
840. Whom did you hear it from? From Mrs. Brack herself.
841. But you believe they were honest, decent, respectable people—sober and trustworthy? Yes.
842. How long were they here? About six weeks, I think.
843. And you understood from Mrs. Brack that she was turned out because she said something about the pigs' food? Something about the pigs' food costing so much, and something about vegetables.
844. Were you ever engaged in selling photographs here? Never.
845. Have you ever seen any photographs? I have.
846. Of what kind? Photographs of the Prince laying the foundation-stone; and I heard that Robert and Henry Barnes were sent out to sell them, and they gave the money to Mr. Krefft.
847. Have you seen indecent photographs about the place? I have.
848. Whom did they belong to? I heard that they were Mr. Krefft's.
849. Whom did you hear that from? Henry Barnes.
850. Were they sold? No.
851. You had no hand in selling any of these things? None whatever.
852. Nor in taking the photographs? No, I had nothing at all to do with them. I saw these smutty pictures, and I spoke to Barnes about them. He said Mr. Krefft authorized him to do it. Afterwards I saw them again, and spoke to him about it, and he said that Mr. Krefft authorized him to do them for Mr. Creed.
853. Did you see them in Mr. Krefft's possession? Not in his hands; but I have seen them on the desk where you are sitting. I have seen them on the Board-room table, and in the room beneath, and in the workshop.
854. Was this before they were shown to the Trustees? Yes, many a day.
855. When Mr. Krefft saw them was he surprised to see such nasty things about? I do not know. I never knew from Mr. Krefft anything about them. I only heard from the Barneses that they were done for him.
856. *Mr. Hill.*] Did you ever hear Mr. Krefft refer to them in any way? Never.
857. You never saw him nearer to them than here? No.
858. *Chairman.*] Are you considered to be a sober man yourself? I am not a teetotaller, but no man ever saw me drunk.
859. You remember an inquiry being made by the Trustees for the minute-book? Yes.
860. You were sent up by the Trustees to the Curator to ask for it? Yes.
861. What were you told? I was told it was in Mrs. Krefft's bed-room, and that Mrs. Krefft was too ill to be disturbed.
862. Are you aware that that book was ever out of the building when it was said to be in Mrs. Krefft's room? No.
863. Have you ever seen it taken out of the building or brought into the building? No.
864. You know nothing about it more than that you have seen him write it at the Board-room table? No.
865. Do you wish to add anything in explanation? No.

I certify that this is a correct statement of the evidence given by me before the Sub-committee of the Trustees, on the 14th of July, 1874.

MICHAEL O'GRADY.
24/7/1874.

THURSDAY, 16 JULY, 1874.

Present:—

H. G. ALLEYNE, Esq., M.D., | E. S. HILL, Esq.,
PROFESSOR LIVERSIDGE.

CHRISTOPHER ROLLESTON, Esq., IN THE CHAIR.

Denis Mulqueaney called in and examined:—

- D. Mulqueaney.
16 July, 1874. 866. *Chairman.*] What is your occupation? Driving a furniture-van.
867. Have you been some time in that occupation? About thirteen years.
868. On the 23rd of December last did you accompany Mr. Krefft and some other persons connected with the Museum to Botany to fetch a whale? Yes. 869.

D.
Mulqueoney.
16 July, 1874

869. Can you tell us what happened on that occasion? I saw nothing happen, at least not very much.
870. What hour did you leave the Museum? I cannot exactly tell you; I think it was about 9 o'clock in the morning.
871. Where did you go to? We went out to Botany Heads.
872. Is that where La Perouse's monument is? Yes.
873. There you stayed? Yes, I stopped there.
874. Did you get the whale? The others went to the other side of the bay, and fetched the whale back with them in the evening.
875. *Mr. Hill.*] The skeleton of the whale I suppose it was, pretty well cleaned? Yes, it was pretty clean.
876. *Chairman.*] And you got it on your van? Yes.
877. About what time did you return to Sydney? It was just before dusk, I think.
878. Who was with you on your trip home? There was Mr. Krefft and the two Barneses, and Mr. Masters—I think that was his name.
879. Were they all sober? Well, they had a drop of drink, some of them; I had a drop myself too—not out of the way though.
880. *Dr. Alleyne.*] Did the Barneses have a drop of drink? I only saw one of them take a drop.
881. *Chairman.*] Which of them? I think it was Robert.
882. *Dr. Alleyne.*] How much did he take? I cannot say. We took it in a bottle.
883. Do you think he took half a bottle? Oh no, the bottle was not full.
884. Do you think he drank a glass? I do not know; he had the bottle to his mouth; but how much he took I do not know.
885. There is a great difference between a glass and two glasses and a bottle;—you say he did not drink the whole bottle because the bottle was not full? There was not much in it.
886. Do you think there were two glasses in it? There might have been.
887. Do you think there were three glasses? I know that I finished it, anyhow.
888. Was the bottle half-full when Barnes got it? I think not more than a couple of glasses; it is a long time ago, and of course I did not take sufficient notice to recollect it.
889. But you finished the bottle? Yes, I finished it.
890. They could not have drank half a bottle of brandy then? Oh no; it was not brandy.
891. *Mr. Hill.*] What was in the bottle—whiskey? It was hard stuff.
892. *Chairman.*] You all came home pretty steady? Yes.
893. Did anything happen on your way home? Yes; Mr. Masters saw a death-adder on the road, and sang out there was a death-adder. Mr. Krefft immediately made me pull up; he then got down off the van, and went and picked up the death-adder—put it in a bag. My horse was a bit fidgety and would not stand quiet, and one of the Barneses ridiculed me for not being able to keep the horse steady; the horse would not stand steady, and when Mr. Krefft was in the cart, the horse moved, and he fell; he was not on his seat properly at the time.
894. *Mr. Hill.*] Did Mr. Krefft get this thing in the bag then? Yes.
895. *Chairman.*] Mr. Krefft at that time was quite steady and sober? Well, he had had a drop of drink, but I could not notice that he was not steady; he was jolly; I always saw him jolly and pleasant when he succeeded in getting anything like this; he went out with me a few times before, and I always saw him very agreeable and pleasant when he succeeded in getting anything.
896. Was he lifted in and out of the van? Well, one of the men went down to open the bag for him; my van has a very awkward step, and Mr. Krefft is a very heavy man, and the man assisted him into the cart again.
897. But he was not what you call very drunk then? He was not indeed; I do not call a man drunk until he is falling; when a man steps down off a cart and catches a death-adder he is not drunk.
898. *Dr. Alleyne.*] You do not call a man drunk until he is falling? He was capable of catching the death-adder any how. On another occasion when he went out with me, there was a man with us who fired at a black snake in a pool of water, just off Long Bay Road. Krefft told him not to kill the snake, and he pulled it out of the water on to dry land, and then he picked the snake up.
899. *Chairman.*] You came to the Museum when you returned home with the whale? Yes, as far as the steps outside.
900. And Mr. Krefft and the Barneses, and Masters got out? Yes.
901. Was Mr. Krefft helped out, or did he get out of the van himself? He got out himself I think; I saw no one take hold of him; some one may have given him a hand down; I did not notice.
902. You saw no more of him? I saw no more of him until the next morning when I came to the Museum to be paid.
903. You have been out with Krefft on previous occasions? I have; one of the men generally engaged me on the stand.
904. *Mr. Hill.*] You brought the whale skeleton home with you, and delivered it here, and you delivered all the parties here? Yes.
905. Did I understand you to say that Mr. Krefft had had some drink—that he was under the influence of drink? Well, he had had some drink.
906. Do you know where he got it? Well, they had some in the boat, I expect.
907. After they had returned in the boat to the tower, how long did they remain there? Well, it might have been an hour or an hour and a half.
908. Do you know the man who lives there? He is a countryman of mine; his name is Macdermott, I think.
909. Did Macdermott go over in the boat with Mr. Krefft? I cannot tell you.
910. It was his boat? Yes, it was his boat.
911. And they were away over an hour? Yes.
912. Did you see Macdermott before you started away? Yes.
913. Was he pretty full? He was just jolly, that was all.
914. You were paid for your services the day after you delivered the specimen here? The next morning.
915. Since this unpleasantness in connection with the Museum commenced—that is, during the last week or two—has Mr. Krefft spoken to you on the subject? I have never spoken a word to him since that.

- D. Mulqueoney. 916. And you never saw any one connected with the Museum since? No, except the men that are here—not Mr. Krefft.
917. What did they say? Well, they talked about many things.
- 16 July, 1874. 918. *Dr. Alleyne.*] Can you mention anything they talked about? One of them said to me one day—"You know he was drunk." I said I could not swear he was drunk—that if I was put on my oath I could not say he was drunk; if he had been drunk he could not have got off the van and picked up a death-adder.

Witness did not attend to revise his evidence.

Mr. George Masters called in and examined:—

- Mr. G. Masters. 919. *Chairman.*] Your name is George Masters, I think? Yes.
920. You were at one time employed in the Museum as Assistant Curator? Yes.
- 16 July, 1874. 921. For how long were you employed in that capacity? For nine years and nine months.
922. How long is it since you left? Four months I think it is.
923. Was Mr. Krefft Curator of the Museum all the time you were connected with it? He was appointed Curator a month before I was appointed Assistant Curator.
924. Have you noticed Mr. Krefft's habits at all;—when you were in the institution was he always steady and able to do his duty? I cannot say that he was always steady; he was pretty boisterous at times.
925. Was he frequently unsteady? Very frequently.
926. Was he ever unfit to do his duty? Well, he was not as you may say unfit to do his duty; but during the last two or three years it was a very rare thing to see him sober.
927. Early or late in the day? Generally after 10 or 11 o'clock in the morning.
928. Do you know what he took? No, I do not.
929. Have you ever seen him quite unfit for his duty? Not in the Museum, but I have out; he has been very bad in the Museum, but he has been able to walk.
930. Did that habit grow upon him latterly, or was it less so or more so than formerly? More so than formerly, especially during the last two or three years.
931. When you have come to the institution in the morning have you ever found any of the doors left open? Yes.
932. Did you ever hear of the doors being left open? I one morning heard of the back door being left open—Thorpe's door; it was said to have been left open all night.
933. Did you generally enter the Museum that way? Up till last Christmas I always did.
934. *Mr. Hill.*] How did you get in at the door? I always had a key of the back gate.
935. But how did you get in at the back door? It was generally open when I came at 9 o'clock. Sometimes when it was not open I used to go round by the cellars and up into the hall.
936. On that particular occasion when you found Thorpe's door open, they were rather astonished to find that you had got in? O'Grady and Ellen were.
937. Did you speak about the door being open or not? I did not.
938. *Chairman.*] Are you aware whether many specimens were sent out of the Museum without the knowledge of the Trustees, either to Europe or elsewhere? I think there must have been a very great many sent away. I have the annual reports of the specimens that were presented to the Museum, and I have a list of things which I collected on different trips.
939. Then a great many things to your knowledge were sent out of the Museum? A great many must have been. I know from what are here now, and the numbers contained in the annual reports of additions made to the Museum, that many must have been sent away. I know by the exchange committee's report that many were sent away, and many other things not specified in it must also have been sent away.
940. *Dr. Alleyne.*] What reason have you to suppose that specimens were sent away, except those sent away under the direction of the exchange committee? In the annual report there is a printed list of everything sent away; there is also a list of things presented as donations; and there was also in it a list of things that I have collected myself; and a great many things sent away to different people have not been entered one way or the other. I know there is not a tenth part of what I collected in the place now—I am certain of that.
941. *Chairman.*] Did you make any remark about the things going away from the Museum? No; it had nothing to do with me.
942. *Mr. Hill.*] Will you refer now to the list you have with you? I have a list of things that I collected, and it will be an easy matter to compare the list with the things that are now in the Museum. For instance, on my first trip to King George's Sound I brought back fifty-four specimens of *Antechinus fuliginosus*. Two years after, when I was down again, eleven were brought. Previous to that Mr. Darnley was collecting at King George's Sound for Mr. William Macleay, and I believe he sold all he collected to the Museum. There is another rare animal that I obtained—that is, the *Tarsipes rostratus*. I brought thirty specimens of that animal back with me on my first trip.
943. Where did you bring them from? King George's Sound.
944. And how many do you say you brought? Thirty.
945. *Chairman.*] Were you sent there by the Museum to collect? Yes, on two different occasions.
946. Did you bring thirty animals back with you on one occasion, or thirty altogether? On my second trip I did not get any of the *Tarsipes*.
947. Will you now refer to the wombats in your list? In the Tasmanian collection—I think it was in 1867—there were seven skins, two skeletons, and two skulls of wombats, brought from Tasmania.
948. Did you on any other occasion go there for wombats? No; that is all I brought from there.
949. Did you bring any from anywhere else? Only one, from Port Lincoln, South Australia.
950. On that occasion, when you went to South Australia, did you bring back any specimens of that rock wallaby? Any one who will look over these lists of mammals that I have collected will see that I collected an enormous lot.
951. *Chairman.*] Were you always on good terms with Mr. Krefft? On very good terms always.
952. From the time you first came to the institution till the time you left? I never had a word with him all the time I was in the place.
953. Had you any ill-feeling towards him? Not at the time I left, but I have now.

954. What has occasioned the change of feeling? It is principally in consequence of statements he made to the Select Committee of the Legislative Assembly, and one thing or other. I think he tried to make out that the only thing I did in the place was simply to look after insects. Ninety out of every hundred labels in the place have been written by myself. The printed labels on the mammals I got done, and Mr. Krefft never even corrected a proof; and every label has been put on by myself—he never put a single thing in its place.

Mr.
G. Masters.
16 July, 1874.

955. You think that in giving his evidence before the Committee he depreciated your services to the institution? Undoubtedly he did.

956. And whilst you were connected with the Museum you had no ill-feeling towards Mr. Krefft? None at all. He used to be on very friendly terms with me, and would put himself out of the road to shake hands with me when I came to the place. Behind my back he was just the other way. I only know that of course from hearsay. I named all the specimens before I sent them into the Museum. You will see my original labels to every one of them—meaning mammals and birds.

957. *Chairman.*] Are you aware of any specimens belonging to the Museum being destroyed or burned? I never saw any destroyed or burned.

958. Or books or papers? No.

959. *Mr. Hill.*] Do you recollect two big lions that used to be here? I do.

960. Where did they go to? I do not know. They disappeared. I heard that they were burned, but I did not see them burned.

961. *Dr. Alleyne.*] Was there any occasion when specimens had to be renamed, from the incorrectness of your classification? I never heard of a single instance. The birds are there, and the animals are there for any one to refer to. Mr. Krefft mentioned something about my having received some money for a collection that I made. I should like to explain that the only money I received was £25 for the Tasmanian collection. I should be glad if the Chairman would read this letter which I received on the occasion. [*Witness handed the letter to the Chairman.*]

962. *Chairman.*] Are you aware whether Mr. Krefft sent away many valuable specimens from the Museum, to Europe or elsewhere, during the time you were connected with the institution? I am not. I know that many things have been sent away, but I do not know how they have been sent.

963. How do you know that many things were sent away? By missing the specimens. I was here every day, and was continually working amongst them.

964. *Dr. Alleyne.*] You do not know any particular occasion on which things were sent away? No, I do not.

965. Do you know of any specimens having been set up for private persons? Yes.

966. For whom? A wallaby was set up for Mr. Parkes—that was done in the place; and a case was made in the place for it. The same with an opossum that was set up for Sir Alfred Stephen; and a case of humming-birds was also prepared for Mr. Krefft by Mrs. Tost.

967. *Chairman.*] Did you know the man Tost? I did, well.

968. What character did he bear in the institution? Very good, so far as I know.

969. What opinion had you of the man? Very good. I knew him long before he came here. I have known him for seventeen years. I knew him before he came from Hobart Town. He has got a very good situation at Melbourne now.

970. You never knew him to be guilty of peculation? Never.

971. Are you aware of the circumstances under which he was discharged? I was away at the time; I heard of it afterwards.

972. *Mr. Hill.*] You were out collecting specimens for this institution at the time? Yes, I was in Western Australia at the time. I heard Krefft's version of the affair when I got back, and I also heard Tost's version. I would believe Tost before I would believe Mr. Krefft, because from the years I have known him I believe him to be a perfectly honest man.

973. *Chairman.*] Then from what you knew of him you think he was improperly accused? I do undoubtedly.

974. Do you know anything of some indecent photographs that were taken in the institution? I have frequently seen them.

975. Were they sold, do you know? I have heard so.

976. By whom have you heard they were sold? By the Barneses—not the indecent ones, but some others.

977. What were they photographs of? I think it was the celebration of the laying of the foundation stone of Captain Cook's Statue, or something of that kind. The first indecent photographs I ever saw in my life Mr. Krefft showed me in this very room. I saw them frequently afterwards, when they were being printed and were lying about the steps in the sun; and Krefft was passing backwards and forwards at the time.

978. Were they his own property, do you know? I cannot say; I believe they were.

979. Do you know anything of a fossil jaw that was sent Home to Professor Owen? No, I know nothing of that.

980. Was it sent away after you left the institution? I do not think it was after; I think it was about a week or two before; I only heard of it.

981. What did you hear about it? I heard that Mr. Krefft smashed it.

982. From whom did you hear that? One of the Barneses told me. Mr. Krefft told me he did not think it would ever get Home safe.

983. *Dr. Alleyne.*] It has been stated in evidence that Mr. Krefft made a proposal to one of the Barneses to take some property from the Museum or from some other place and leave it in Tost's house, with a view to sending the police afterwards to discover it and raising a criminal charge against him: do you know anything of that? I heard of it some years ago.

984. You do not know anything about it? Only from hearsay; it is three years and a half ago, I dare say.

985. After Tost left the Museum? Yes.

986. From whom did you hear of it first? From one of the Barneses.

987. Did you ever hear Mr. Krefft allude to it in any way? Never.

988. How long was it after Tost had left that you heard of it? I forget how long it is since Tost left; it must be five years or more.

- Mr. G. Masters.
16 July, 1874.
989. You heard of it about eighteen months after he left then? Yes; considerably more than three years ago; I cannot say the exact time.
990. *Mr. Hill.*] After the information you received on that point, after what you heard from the Barneses, were you requested or told to look out for anything—to be careful what you did? No.
991. Did you take any note of the thing, as if it had been done? I believe it had been done.
992. From what the Barneses told you you believed it had been done? Yes; but I do not think it formed any part of the circumstances which led to Tost's dismissal; everybody knows what he was dismissed for.
993. *Chairman.*] Have you any objection to tell us why you left the Museum—why you resigned your appointment? No objection at all.
994. What were the circumstances;—will you tell us? I received a better appointment, with a salary of £100 a year more.
995. That was the sole cause of your leaving? That was the sole cause—nothing more.
996. You were offered £100 a year more? Yes. It will be for my life. Mr. Macleay told me at the time that he was going to appoint a Curator—that in fact he was going to advertise for one.
997. And Mr. Macleay offered to give you £100 a year more than you had been getting at the Museum, and to make the appointment for life? Yes.
998. You had no quarrel with Mr. Krefft at all? Never in my life.
999. *Mr. Hill.*] Have you given evidence with reference to that whale trip to Botany? No.
1000. *Chairman.*] Were you one of the party? Yes.
1001. Did any circumstance of a peculiar nature occur on the trip? Krefft got beastly drunk; that was the principal thing of the day, I believe.
1002. Where did he get beastly drunk? In the first place he took a bottle of brandy away with him; I think he drank a third of that; after that he got to Macdermott's, where he stayed drinking whiskey for about three hours.
1003. *Dr. Alleyne.*] That was after he got back from the other side of the bay? Yes, after he got the whale.
1004. *Chairman.*] Did you come home with him? I did.
1005. Was he able to get in and out of the vehicle? He was not. He fell down on the broad of his back before he got in. When he got out after a death-adder he went down on all-fours, and the first grab he made at it his hand went five or six inches to the back of it. He was obliged to be helped into the cart again, and would have fallen down if it had not been for one of the Barneses. He fell back once on to the stinking whale.
1006. *Dr. Alleyne.*] You are quite certain that his not being able to move about was occasioned by drink? Yes, I know Krefft too well.
1007. *Chairman.*] There was no suspicion of his having had a sunstroke? Oh no; I have been out with him too often for that. He fell down as soon as he got out of Macdermott's; he would have fallen out of the cart ever so many times if he had not been supported behind.
1008. That was the day before Christmas Day? It was on the 23rd of December.
1009. Did you see Mr. Krefft the day before Christmas Day? I did; he came into my room complaining that he had a frightful headache through Mac's whiskey. He said that Mac's whiskey was too strong.
1010. Did you see him again in the afternoon? Yes, I saw him in the back yard looking at the pigs. He seemed to me to be pretty well on then.
1011. Did you see him on Boxing Day, the 26th of December? Yes, I saw him at the Museum with Detective Lyons. He was standing at the table near the door leading out into the front street.
1012. *Mr. Hill.*] It was the day before Christmas Day you went to Botany for the whale? No, it was the 23rd of December.
1013. *Dr. Alleyne.*] Then it was not Christmas Day, but the 24th that you saw him looking at the pigs? Yes; on that day I first heard of the gold being stolen. [This is a mistake, as it was on the 26th I first heard of it.] It was on the 23rd that we were at Botany; and it was about that time that a reward (meaning the reward offered by the Government, which said on or about the 23rd. The gold was there on the 24th) was offered for the recovery of the stolen gold. It was on the 24th that Mr. Krefft came into my room complaining of a headache through Mac's whiskey. I was naming some butterflies in a case opposite to the place where the gold specimens were. I looked at the gold specimens, and wondered whether they had been dug as they were, or run together afterwards.
1014. *Mr. Hill.*] What time of day was that? Between 10 and 11 o'clock.
1015. *Dr. Alleyne.*] You saw the gold specimens there on that day? Yes.
1016. Was Mr. Krefft sober on the 24th? That was the morning he came to me complaining of a headache. He passed through in the afternoon, but I did not see him to speak to; he went out with somebody to look at the pigs.
1017. You saw no more of him that day? I saw nothing more of him until Boxing Day morning.
1018. What state was he in on the morning of Boxing Day? He was in a frightfully agitated state then. His face was working all over, as if he had strings to his muscles and they were being drawn about by some one. He was talking to Detective Lyons, in the new wing. They were standing at the back of the case close to the door. He said to me—"I suppose you have come to console with us about the gold." I said "What gold?" He said, "All the gold has been stolen." It was quite news to me—I had heard nothing about it.
1019. *Chairman.*] Have you yourself any suspicion as to how that gold disappeared? I have had a suspicion from the very first; but I have no proof.
1020. Would you care to state what your suspicion was? Perhaps you will excuse me. I know the gold was there on the 24th.
1021. Were you connected with the institution when a sun-fish was obtained from Manly? Yes.
1022. Had you anything to do with the attempt to preserve it? I had not. I saw the men at work at it.
1023. Did you see it when it came? Not when it came; but I saw it after it was delivered, lying on the ground in the paddock.
1024. At that time was it in such a condition that it might have been perfectly well preserved? Yes; after the inside was once taken out it was perfectly good; it would have kept another week.
1025. *Mr. Hill.*] It was all cartilage? Yes, it was like a lot of suet.

1026. *Chairman.*] Do you know how it was that it became a nuisance and was ordered away? No. I heard many different tales about it.
1027. But it did not come within your knowledge? No. I saw the men at work at it several times; I saw a hole dug for it to be wheeled into.
1028. Was it a valuable specimen? I should think so; it was the first I had seen.
1029. If proper care had been taken it might have been preserved? There would have been no difficulty in perfectly well preserving the fish; what was left after the inside was taken out was more like gristle.
1030. Did you ever hear Mr. Krefft say anything about the fish—why he would not preserve it? No.
1031. *Mr. Hill.*] I asked you just now about some animals. You say you missed two lions;—did you miss any other animals? I remember a little pony, but I do not know what became of it.
1032. Do you remember a reindeer? I remember a large reindeer that used to be here.
1033. Do you know what became of it? I do not.
1034. Do you remember a civet cat that was here? No.
1035. How many kangaroos were there originally? Ten old ones and one young one (*Petrogale xanthopus*.) There are only ten down in the list; but there were ten adults and one young; the young one is there now.
1036. *Chairman.*] Do you know a person named Bradley who used to work for the Museum? No.
1037. Have you ever heard of the name mentioned? I have.
1038. Under what circumstances? The first time I ever heard of it was one day when I wanted some setting-boards made for setting butterflies and moths. Mr. Krefft told Robert Barnes to make me a dozen setting-boards, and he said to him—"Get Bradley to make out your bill; he is your man, Bob." Barnes made the boards. That was the first I ever heard of the name, but I have heard a great deal since.
1039. Why was the name of Bradley adopted? I do not know.
1040. Did you inquire why Barnes was to use the name of Bradley? No, I did not address him at all.
1041. I understood you to say it was overtime work? Yes, the boards were made in overtime.
1042. Did you ever ask Mr. Krefft why he used the name of Bradley? I have never mentioned the subject to him.
1043. What was it he stated exactly? I forget the exact words, but it was something to this effect: "Bradley is the man who will make out your bill" or "Charge them to Bradley." It was something of that kind.
1044. Did you understand what it meant? Not at the time.
1045. Were you afterwards made acquainted with it? After the evidence given before the Select Committee of the Legislative Assembly.
1046. Not until then? Not until then.
1047. *Dr. Alleyne.*] You spoke of a particular occasion when Mr. Krefft was, in your opinion, without doubt drunk: has it been of frequent occurrence, or was that an exceptional occasion? He was worse then than I had ever seen him before. Very frequently he has been only just able to walk about the place, and if you went within a yard or two of him the smell from him was enough to convince any one that he was in liquor.
1048. *Mr. Hill.*] Did this occur at particular times of the day? First thing in the morning he would appear all right. You might see his men running out with square bottles for his beer any time during the day.
1049. You had no opportunity of seeing him after 4 o'clock? I went home at that hour.
1050. *Chairman.*] Who went out with the square bottles for beer? Robert Barnes and O'Grady.
1051. Where did they principally go to? To Hourigan's. I used to take a run home myself between 11 and 12 o'clock in the morning, and I have frequently met Barnes or O'Grady coming up with a square bottle, and frequently in the afternoon also; in fact, ever so many times during the day they had the bottle.
1052. *Mr. Hill.*] How do you know that what they went for was not for themselves? Simply because they do not drink.
1053. They did drink at one time, did they not? I think Harry Barnes used to drink at one time.
1054. But not during the last year or two? No, during the last year or two I do not think he has touched a drop.
1055. *Dr. Alleyne.*] Has he always appeared a respectable man? So far as I know; I did not see much of him, as our work was not done in the same shop.
1056. If the Barneses had been thieves, I suppose you would have heard of it? I never heard of anything against them. Krefft used to stick up for them through thick and thin.
1057. *Mr. Hill.*] In the taxidermist's room—that was your room—were the cases at the back all full or nearly so? With insects do you mean?
1058. With insects? One cabinet was empty.
1059. Do you know what is in the cabinets in this room where we are now sitting? At one time they used to be full of European birds.
1060. What became of the birds? The greater part of them were mounted; some were too bad to mount, and they were burned; others were put in large boxes down below.
1061. You believe the cabinets to be all empty now? I think so. They were at one time full of papers.
1062. *Mr. Hill.*] You say you recollect something of that sun-fish? I saw it several times.
1063. Were the men employed at it using tubs and buckets? I do not know.
1064. Do you know how the men conveyed the fish away as it was cut up? They conveyed it away in a wheelbarrow.
1065. Do you know where it was buried? Close to Weigall's fence.
1066. Do you know anything of the tubs or buckets that were buried with the fish? I never heard anything of the kind until I saw the printed evidence.
1067. Could you point out the spot where the fish was buried? Not within a few yards.
1068. Do you think the men who wheeled it there could point out the spot? I should think so.
1069. You know nothing of the tubs? No.
1070. *Dr. Alleyne.*] Did you actually see the waste of this fish wheeled away in a wheelbarrow? Yes, I was looking at it several times, and saw Mac busy wheeling it away.
1071. *Mr. Hill.*] Was a hole dug for the purpose of burying it? Yes, it was dug for that purpose; but there were no tubs or buckets used during the time I saw the fish.
1072. Do you recollect anything connected with the visitors' book at all? No. 1073.

- Mr. G. Masters.
16 July, 1874.
1073. You had nothing to do with that, and know nothing of it? Nothing whatever.
*At his own request, witness was permitted by the Committee to make the following statement:—*Some eighteen months ago I was out shooting at Homebush, and I shot a lark which had only three toes on each foot. I told Mr. Krefft about it, and he said he should like to see it. I brought it to him, and on looking at it he said it would be a grand thing to send to Darwin, and asked me if I would give it him. I said I would give it him; and he then said he would write to Mr. Darwin explaining the circumstances under which it was got. He afterwards told me that he had written Darwin a long letter, and had sent the bird by post. Some few months afterwards, when I thought a sufficient length of time had elapsed to permit of an answer being received, I asked him if he had heard anything. He said that Darwin had received it and was highly pleased with it. One day after that I was in the Board-room with Mr. Krefft; he pulled out one of the drawers for something, and the first thing I noticed was the very bird which he said he had sent to Darwin. It was a lark that had no hind toes.
1074. *Dr. Alleyne.*] Do you know what became of the bird afterwards? No; I never let him know that I saw it.
1075. *Mr. Hill.*] Did you ever hear of it afterwards? No.
1076. *Chairman.*] Did Mr. Krefft work a good deal amongst the specimens himself? Scarcely ever. He used to shift the things about a good deal from one part of the place to another, but he did very little actual work—certainly not in arranging the cases and naming the things.
1077. What was he usually employed in doing? He used to be in the Board-room the greater part of his time—certainly doing nothing connected with Museum things—such as arranging specimens or anything of that kind. The mineral collection was about the only thing he put his hand to during the last eighteen months. For years he has never put a bird into the cases—never put a name to a single bird. And I always looked after everything for the taxidermist.
1078. *Mr. Hill.*] At one time, when donations were made to the Museum, it was the practice to put the donor's name to the specimen;—do you know why that plan was discontinued? I do not know.
1079. *Chairman.*] Who set up the specimens of the mammalia? Mr. Thorpe.
1080. Did he set them up specially under Mr. Krefft's directions? Oh no; I generally used to look out everything for him.
1081. In your time you used to do that? Yes.
1082. Without reference to Mr. Krefft? Without reference to him. At any time we had anything to set up he would say—"Send for Thorpe to mount it." Sometimes I would say we had sufficient.
1083. Skeletons? That was all Barnes's work.
1084. You had nothing to do with the work every month? Every month I used to make out a list of everything that had been mounted or set up. The greater part of the year photographing was going on—fully six or eight months every year. Only six small skeletons were mounted during last season; and two were taken to pieces and remounted.
1085. *Mr. Hill.*] Who has been naming all the insects in the cases? I think I have named every one of them. No one had anything else to do with them but myself; no one touched any of the birds, shells, or insects, but myself.
1086. The birds, shells, and insects were entirely under your care? Yes; every label is in my own handwriting.
1087. *Dr. Alleyne.*] You were not competent to set up the skeletons of the mammalia? No.
1088. Nor were the Barneses competent to do it, I suppose, except under instructions? Well, I do not know; I think they were. I think Harry Barnes is capable of setting up any skeleton without instructions. In fact he set them up without any instructions from Mr. Krefft; he could take them home and mount them.

I certify that this is a correct statement of the evidence given by me before the Sub-committee of Trustees, on the 16th instant.

GEORGE MASTERS.

Mr. James Macnamara called in and examined:—

- Mr. J. Macnamara.
16 July, 1874.
1089. *Chairman.*] Are you employed in the Museum? Very seldom; about five or six days in the month I am employed.
1090. By whom? By Mr. Krefft.
1091. On what duty? Only to keep the place clean.
1092. Keep the garden in order and that sort of work? Yes.
1093. How long have you been engaged in that work for Mr. Krefft? About six years.
1094. Do you remember a large fish, called a sun-fish, being brought here? Yes.
1095. What had you to do with it? Well I hadn't much to do with it; I was for a few days helping the men.
1096. What was your part of the duty? The same as the rest of the men—cutting away the fish.
1097. And what did you do with what you cut away? We buried it.
1098. Where did you bury it? In the paddock.
1099. Can you find the place? No, I cannot.
1100. Did you dig the hole? I did.
1101. How deep? I suppose about 5 feet—4 or 5 feet.
1102. *Mr. Hill.*] As deep as yourself? No.
1103. *Chairman.*] It was a good big hole? Yes.
1104. Did you fill the hole with the fish? Oh no.
1105. Was there much of a smell? There was; I got sick over it.
1106. How did you carry the fish to the hole—what did you carry it with? It was cut up in pieces, and we pulled it to the hole with a crook.
1107. Did you wheel it in a wheelbarrow? No; I pulled it with a crook all along.
1108. Did you use any tubs, buckets, or barrels? I did not see anything of the kind; there might have been some there.
1109. *Dr. Alleyne.*] Do you say you may have put something in a tub or barrel and not know? I did not say I did; I said I did not know that buckets or tubs had been used.
- 1110.

1110. *Chairman.*] Did you cover in the hole again? I did.
1111. Were there any tubs, or buckets, or wheelbarrows buried in the hole along with the fish? Not to my knowledge.
1112. *Dr. Alleyne.*] Did any one help you to cover the hole up? No; I covered it up myself.
1113. *Mr. Hill.*] Did you convey all the fish to the hole and put it in and then cover it up? I helped the men to put it in.
1114. *Chairman.*] You helped what men? There were the two Barneses.
1115. You did not wheel any of the fish at all? No, I did not; I had no wheelbarrow.*
1116. Did the others wheel any? Not to my knowledge. I did not see anybody wheel any. We had a crook and pulled it along the paddock to the hole.
1117. *Mr. Hill.*] And you could not find that hole? I could not.
1118. Where do you live? I sleep at the Museum; I am working now for the Honorable Deas Thomson. I left there to come here.
1119. *Dr. Alleyne.*] Can you remember the spot where the fish was? I cannot.
1120. Was it before this door? It's no use asking any of those questions; it was in some part of the paddock.
1121. Was it in a part of the paddock near to the Public School? It was in the paddock.
1122. Was it in the middle of the paddock? I cannot swear it, it is so long ago.
1123. Can you tell us the spot within a few hundred yards? I cannot tell you the spot at all.
1124. *Mr. Hill.*] Was it over by Mr. Weigall's school fence? It was about that way I think somewhere.
1125. You work in the garden, prune the trees, and so on? Yes.
1126. What wages do you get? I get 6s. a day.
1127. To work here? Yes.
1128. How many days do you work here? Sometimes seven, sometimes eight, sometimes ten days in the month.
1129. You are not discharged from here? No, I sleep here still.
1130. Do you know any man working down in the cellars now? I do.
1131. How long has he been here? He may have been here five or six weeks.
1132. Does he sleep here? No.
1133. Do you know his name? No.
1134. *Chairman.*] How long do you say you have been employed about the place? About six years.
1135. In the course of that time did you ever see Mr. Kreffit in a state of intoxication? I never did, for my time was very short at the Museum. When I am out at work at other places it is 9 o'clock before I come home to the Museum.
1136. Do you sleep on the premises? Yes, I have slept on the premises for the last six years; I have never been absent a single night.
1137. And you never saw the Curator intoxicated? Never.
1138. Did you ever see the doors of the institution open at night? Never. I locked the front gate every night, and I was never later than 9 o'clock or half-past 9.
1139. Have you slept on the premises during the whole six years? During the whole six years.
1140. You know the Barneses well? Yes.
1141. Did you ever see either of them tipsy? I did not.
1142. Are you on good terms with the other people employed in the institution? Yes, with every one of them.
1143. You remember some people of the name of Brack living here? Yes, I think he lived at the back somewhere.
1144. Was he a quiet, sober, steady man? He was; I never saw him anything else.
1145. Where do you work when you are not employed here? For the last fourteen years I have occasionally worked for the Honorable Deas Thomson. I have worked sometimes for Mr. Macleay and other people.

This is a correct statement of the evidence given by me before the Sub-committee of the Trustees, on the 16th instant.

his
JAMES + MACNAMARA.
mark.

24/7/1874.

MONDAY, 20 JULY, 1874.

Present:—

H. G. ALLEYNE, Esq., M.D.,
ED. S. HILL, Esq., J.P.,

PROFESSOR LIVERSIDGE,
CHRISTOPHER ROLLESTON, Esq.

H. G. ALLEYNE, Esq., IN THE CHAIR.

James C. Cox, Esq., M.D., was called in and examined:—

1146. *Chairman.*] What is your name? James Charles Cox.
1147. You have known Mr. Kreffit for a long time? I have, for many years.
1148. It has been stated by some persons examined before the Select Committee of the Legislative Assembly that he has been habitually intemperate;—do you know anything of his habits in that respect? You refer, I presume, to within the walls of the institution?
1149. No, not specially. I ask you as to your knowledge of his habits generally? I have seen Mr. Kreffit twice very drunk in this institution.
1150. In the house? Once was in this Board-room. I came in here at 11 o'clock one day. He was sitting in the chair at the table, and was quite stupid with drink. I roused him up. He looked up. He had scarcely any clothes on—a white shirt, a pair of trousers, and socks. He asked me not to take any notice of him. I said—"Kreffit, if you get into this state I wish you would keep out of the way of the Trustees."

J. C. Cox,
Esq., M.D.

20 July, 1874.

*NOTE (on revision):—I really forget whether there was a wheelbarrow or not.

J. C. Cox,
Esq., M.D.
20 July, 1874.

Trustees. You had much better go up into your room." I spoke to him a good deal more about it; but he was so stupid that I could make nothing of him. He began to cry so that I went away. I came here about three months afterwards, at about 4 o'clock in the evening. I came here to consult some books. It was after the doors were shut. I found him trying to get up the stairs outside the room here as I was going out. He was perfectly under the influence of drink.

1151. *Mr. Hill.*] Up-stairs to his own room? Yes, he was going up the stairs.

1152. *Chairman.*] How long ago was this? It is over two years ago.

1153. What time of the day was it, do you remember? The first time was about 11 o'clock in the morning. I came straight from my own house here. The other time was shortly after the doors were shut in the afternoon, shortly after 4 o'clock.

1154. *Mr. Hill.*] Were any of the employes present at either of those times? O'Grady was present, I think, when I was going out of the door, but I am not sure.

1155. Do you know of any charges connected with old Tost—anything about leaving goods in his place? Not further than that I was told so.

1156. How long ago? I never heard of it until this matter was brought before the Legislative Assembly.

1157. You heard something about it then? I did.

1158. Did you hear it from anybody connected with the institution? I believe one of the Barneses told it to me.

1159. That is the first you heard of it? Yes.

1160. Did you hear it from Thorpe or Masters, or any of the others, since that time? Yes; I heard Masters speak of it.

1161. What did he say? I heard him speak of the fact—that it was a rascally thing, that affair about old Tost, the Curator having tried to induce persons to put things into his house.

1162. Did he say anything in reference to the time—as to how long it was since he heard it? No.

1163. Do you know anything about any indecent photographs taken at this establishment? No. The first time I ever saw any here was at the Board meeting when they were produced by the Barneses.

1164. You did not see any a year or two ago when they were lying about this table? No.

1165. You have not seen them in the hands of any private individual? No; that is the first time I ever saw them.

1166. Have you heard of anything in the shape of furniture being manufactured in this establishment other than for the institution? I heard of it at the time when the investigation was made into the conduct of Tost. It was then spoken of, about furniture being made here for Mr. Krefft and Dr. Belisario.

1167. Did you know it as a fact that Dr. Belisario had something made here? Yes; from the investigation made in Tost's case.

1168. That was before he was a Trustee of the institution? Yes; I believe it was quite without Dr. Belisario's knowledge that Tost made it here.

1169. Do you know what the article was? It was a book-case, I understood.

1170. Do you know of your own knowledge of anything else that was made or set up for any other parties? Only the restoration of the diprotodon bones.

1171. Sir Alfred Stephen and Mr. Parkes had something done? I was not aware of it until I saw it in the printed evidence.

1172. Do you know anything connected with a man of the name of Bradley who used to work for this institution—anything about work done in the alleged name of Bradley? I never knew that Bradley represented one of the Barneses until I saw it in evidence, but I remember accounts being frequently presented at the Board meetings for payment under that name.

1173. Do you recollect anything connected with the fossil bone belonging to some one else other than the institution—Dr. Bennett's bone? I do; I remember the circumstance quite well.

1174. Do you know what animal it belonged to? I understood the diprotodon.

1175. What part? Part of the head.

1176. Did you see it? Yes; when first sent here to be restored.

1177. Did you see it after its restoration? I did.

1178. After its restoration with the clay? I saw it perfect. I saw it a day or two before it was packed up and intended to be sent away.

1179. Did you see it packed up? No.

1180. Did you see anybody packing it? No.

1181. Did you see anything connected with its being broken to pieces? Certain statements were made to me about it.

1182. By Mr. Krefft? By Mr. Krefft himself.

1183. What were these statements? I went in with Mr. Krefft to see it after it was restored in the workshop, and I was very pleased with the execution of the work. I thought it was a very great success, and that it was very creditable to the Barneses, and I said so to Mr. Krefft. "Work of that kind will astonish Owen, being done in the Colonies." He said—"Don't you fancy that Owen shall see that. I will be damned if he shall ever see it in that state that you and I see it in." I said—"Oh, nonsense, man! Don't talk in that way." The fact is, that I believe on that day he was a good deal under the influence of liquor, and he was talking in the most braggadocio loud manner.

1184. You had that idea from his appearance? Yes, from his appearance and manner of speaking.

1185. Did he state at any time how it was broken? He did not. I had one other conversation with him on the matter previous to this, which to my mind is an important matter. I was walking across the Race-course with him, and I was talking to him about these fine bones that Dr. Bennett had received. I was talking about an article by Mr. Flower, I think the name was; and he said to me—"If I can only get those bones out of old Bennett, I will get them photographed and measured before they are sent Home. I will send the photographs and measurement Home, and take the wind out of Professor Owen's sails." That was his expression.

1186. When this conversation occurred between you and Mr. Krefft, did anybody else hear it? That man Robert Barnes was close by when the conversation in the workshop took place.

1187. He could have heard it? I believe he could, because Mr. Krefft spoke in such a loud tone.

1188.

J. C. Cox,
Esq., M.D.
20 July, 1874.

1188. You are perfectly sure that you are not mistaken? I am perfectly sure that I am correct.
1189. *Mr. Hill.*] It was the lower portion of the skull? Yes; there was also the upper jaw replaced standing with it.
1190. What did that upper jaw consist of? It appeared to me to be modelled from white plaster.
1191. What was it a model of? It was an exact representation, as he showed me at the time, of the skull of the native bear.
1192. The wombat or the bear? It was the bear, not the wombat.
1193. *Chairman.*] You mean the animal that we call the native bear? Yes, the native bear.
1194. *Mr. Hill.*] In the comparative anatomy of the native bear and the diprotodon, did he show you anything in particular connected with the condyle? Yes, I remember him explaining something of the sort, but I did not take much notice of it.
1195. Was the upper part of the cranium which you presume to be the native bear—was that much smaller in proportion than the diprotodon—did he make that cast by comparison? I understood him to say that it was ordered to be made by comparison with the skull of the native bear.
1196. Did he show you any particular feature? I do not know that he did. I may state that it was in consequence of my being told subsequently that that head had been smashed up before it went Home that I thought it my duty to mention the matter to Dr. Bennett.
1197. And you did so? I did so. I understood afterwards from Dr. Bennett that Mr. Krefft himself told Dr. Bennett that it was broken before it went Home—that it had to be broken with the lid of the case.
1198. Do you recollect anything else that Dr. Bennett said: that he had another case of bones—that he would take good care that none came here? He told me that distinctly; he told me that on board the "Challenger" one day, and on another occasion also.
1199. *Chairman.*] Dr. Bennett said so? Yes.
1200. *Mr. Hill.*] That, although those bones might be broken, he had a couple of cases of bones from the same place, and he would take care that none came to the Museum? Yes, I recollect him telling me that distinctly.
1201. *Chairman.*] What did you infer from that remark? I inferred that he had been made rather a tool of.
1202. You did not see the breaking up of the bone itself? I did not.
1203. You did not see the box it was packed in? No, I did not. One of the Barneses mentioned to me that it was a shame that, after all his work and care in setting up that specimen, Mr. Krefft should have broken it up before he sent it Home, and it was in consequence of that that I informed Dr. Bennett of it.
1204. Do you know anything about the Curator sending away at any time valuable specimens, or specimens belonging to this institution, in his own name? In the evidence given by Dr. Bennett before the Select Committee of the Legislative Assembly, he says, in his answer to question number 1995—"We have perfect casts in the Museum of the restored jaw, and we have already exchanged specimens with Melbourne." In regard to that, I beg to state that I am on the exchange committee, and I believe I have attended every meeting of the Trustees held at the Museum since that was set up, and no such thing as these exchanges with Melbourne was ever mentioned at the Board meeting, nor was it done with the sanction of the exchange committee.
1205. You mean to say that if what Dr. Bennett has there stated is correct, these things were sent away without any instructions from the exchange committee whatever? Yes.
1206. *Mr. Hill.*] Dr. Bennett also says that they wanted them in Queensland and a great many other places? He does.
1207. *Chairman.*] Who else is on the exchange committee besides yourself? The exchange committee consisted of Mr. W. J. Stephens, Dr. Bennett, and myself. Mr. W. J. Stephens is not now a Trustee, but was then I believe.
1208. Was any proposal to make these exchanges ever at any time brought before the exchange committee? Never. The exchange committee has never been summoned—certainly not for the last twelve months.
1209. It could be no fault of the exchange committee if their opinion was not asked? It could not; and I was anxious to clear myself on that point.
1210. The fact is that Mr. Stephen was not a Trustee at the time, and you were never summoned? Mr. Stephen was a Trustee at that time, I believe.
1211. They must have been sent away, if they were sent away at all, without any reference to the exchange committee? Yes.
1212. *Mr. Hill.*] Did Dr. Bennett subsequent to the time when he made this statement that these things had been already exchanged with Melbourne, say that he knew of the specimen being broken, or that he expected it would be broken? No. I may mention that the exchange committee was ordered by the Board at my request not to send anything away until the specimens were submitted to a general meeting of the Board. I did that for special reasons which had come under my notice.
1213. Some questions were asked of Dr. Bennett as to when he expected to hear from Professor Owen;—have you seen any letter from Professor Owen on the subject? Dr. Bennett read me a portion of a letter on board the "Challenger" one day, in which he said something about being very much pleased with a piece of a jaw that had arrived Home.
1214. Do you know anything as to the date of that letter from Professor Owen, or as to whether it was an acknowledgment of these diprotodon bones? I could not possibly tell. I have since ascertained by a printed circular, headed "A few letters and testimonials from distinguished men of science, addressed to Mr. Gerard Krefft, Curator and Secretary of the Australian Museum," that a letter has been received from Professor Owen. In this circular there is a portion of a letter dated "British Museum, 13th April, 1874," which reads as follows:—
- Dear Bennett,—One of the anticipated pleasures of my return from Egypt was the sight and grasp of the very interesting fossils announced in your letters which my son forwarded to me at Cairo; I have now had that pleasure with a portion of a jaw, &c.* * * * My best regards and good wishes to Krefft. The Museum will owe much to his energy and devotion. As soon as our new Museum is ready to enable us to sort out our accumulated stores, Sydney shall have my first selection of duplicates.—RICHARD OWEN.
1215. There is no record of these specimens having been sent? No; no committee meeting was called.
1216. Do you know of any other cases? Yes. There is one which I may specially mention, because it gave me a very great deal of anxiety and grief. About nine months ago or over, a Mr. Wood brought me from

J. C. Cox,
Esq., M.D.

20 July, 1874.

from Queensland a most beautiful can of fishes. I brought them to Mr. Krefft, and I asked him to take any out of them that were of use to the Museum. He took them all out, and he found one which he said was quite a new fish. He kept that. But he also found some very fine specimens of another fish of which he said he had not such good specimens. He also took one or two specimens of a third kind, which he said he would value very much for the Museum. I was not at the Board meeting which was held subsequently to my having given this donation in Mr. Wood's name, and I came and asked Mr. Krefft why he had not given me the usual form of thanks for Mr. Wood. He told me that he thought they would be more useful at Home, and that Günther would figure and describe them properly, and that he had sent them to Mr. Günther. I certainly was very vexed indeed at the time about it, and I declared that I never would give any more donations to the Museum unless there were some means of recording them in a proper record book.

1217. Is there a proper book for exchanges? When I was appointed a member of the exchange committee, at the first meeting to which I was summoned, to my surprise, there was no minute-book at all. I was appointed in 1862. The committee consisted of Dr. Bennett, Dr. Cox, and Mr. W. J. Stephens.

1218. What is the last record in that book? The last record in this book is a minute about four pages long; it has never been confirmed, and there has not been a meeting since apparently; it is dated August 26, 1872.

1219. *Chairman.*] The presumption is, then, that there has been no meeting since that time? No. I may mention also that there are several meetings recorded here, but there are no signatures to show that they have been approved of in any way. They appear to me to be all written in the same ink and the same style.

1220. *Mr. Hill.*] Whose writing are they in? Mr. Krefft's writing. There was a very extensive exchange since this meeting. Mr. Krefft submitted the specimens direct at the meeting of the Board of Trustees. I happened to come in after the exchange had been approved of. I stated at the time that the articles had not been submitted to the exchange committee; and Dr. Bennett said that he had looked over them, and they were wanted to be sent away immediately. The Board approved of their being sent away, and I believe it was a very proper exchange. They were for a person who had been waiting a long time for insects.

1221. *Chairman.*] From that book (the exchange book) it would appear that there has been no meeting of the exchange committee summoned since August, 1872? None since then.

1222. Therefore, all the exchanges made since that time, with the exception of those made directly by the Board of Trustees, as has just been mentioned, have been made without any authority whatever? Certainly without any authority from the exchange committee.

1223. *Mr. Hill.*] Do you know of any property of this Museum sent to other parts of the world by Mr. Krefft in his own name? I do. If you will look at the Proceedings of the Zoological Society for 1869, you will see that there is mentioned a very fine donation of birds to Mr. Selater—over thirty species. From the description, I have no doubt that those birds consisted of a can of birds which I saw in this room. I went on board a vessel called the "Chance" to get some shells from Captain Macgregor, who had some for me, and had sent for me. When I went on board he told me that he had two cans of birds and things for the Museum, and he asked me to tell any of the officials, if I saw them, to send down for them. I at once came up and asked Mr. Krefft to send for them. He did send for them; and a couple of days afterwards he told me he had got the birds. He said—"We may as well have a look at them," and he pulled them out on a tray. There was one bird which was very beautiful—black and yellow—which he said was new, and which we both admired. It is described as *Gracæala Krefftii*. It is figured in the Proceedings of the Zoological Society for 1869.

1224. *Chairman.*] Does it say in the article you refer to where the bird came from? It says something about a donation from Mr. Krefft, sent, I think, at the request of Mr. Buttrey.

1225. *Mr. Hill.*] Mr. Buttrey was part owner of that ship? I do not know—I never heard of the name. My attention was called to the fact by seeing the announcement of this large donation in Mr. Krefft's name in the Proceedings of the Zoological Society. In the Proceedings of the Zoological Society for 1868 you will see mentioned a large donation of frogs in Mr. Krefft's name to the British Museum. In the Proceedings of the Zoological Society for 1863 you will also find mentioned a large donation of Batrachians sent to Mr. Günther.

1226. Do you recollect reading at this table a month ago something about a jaw or teeth of the *Ceratodus* in a fossil state? There is a mention of it in *Nature*. The notice to which you refer is about a donation of a cast of teeth of *Ceratodus*.

1227. That was sent from Mr. Krefft? Yes; the notice acknowledges the receipt of it.

1228. Do you recollect any collection of animals made by Mr. Masters being sent away from here—any *Antechinus* or *tarcipes*: do you recollect any being specially ordered to go away by the exchange Committee? The only *Antechinus* that I knew about being sent away were given by Mr. Krefft to my brother, Mr. Edward King Cox, when he was going to England. When my brother was going aboard, I asked Mr. Krefft if he would give him a few letters of introduction to the German institutions, as he was anxious to see the best collections of wool and other things that were on view. Mr. Krefft called at my house with those letters, and he brought a bottle containing what my brother told me were rats which Mr. Krefft had left for him. I did not see them. I saw the bottle, and my brother was directed to give some of them to Professor Peters. But as my brother did not go to Germany as he had intended, he sent the bottle with its contents, as Mr. Krefft gave it to him, to Professor Peters. My brother sent it through his agent, Mr. Edward Stavenhagen, in London. In his examination, at questions 3459 and 3465, Mr. Krefft was asked, "You sent a bottle containing a large number of small mammals, or some sort of animals, Home by Mr. Edward King Cox;—did you not?" He replies, "Yes, Dr. Cox did, with the permission of the exchange committee." He is asked, "Where had they been got?" and he answered, "I must have bought them at some time or other." Again he is asked, "You are sure you purchased the whole of these things with your own money?" He replied, "I have no doubt they must have been mine—I buy lots of things." In a note, added on revision, he says, "The bottle contained a mixture of small marsupials of the genus *Antechinus*, and some mice (or rodents). They were collected for me by Mr. Keper, of Port Stephens; some came from Port Denison. I paid for them, and gave them to Dr. Cox, with letters to Professor Dumeril, of Paris, to Professor Peters, of Berlin, and to Professor Kaup, of Damstadt. These gentlemen never mentioned anything about them, and no return was made." That is perfectly false.

These

These things were never submitted to the exchange committee, and I had nothing whatever to do with them. I desire to lay before the committee my brother's letter, dated "Darling Point, May 28th, 1874." He says: "In answer to yours, I have to state that Mr. Krefft called at your house the evening before I left for England in 1871. He gave me letters of introduction to several persons whose names I cannot now recollect; at the same time he gave me a bottle containing what he called 'rats.' The bottle was a small one. He asked me to take it to Europe and give one of the specimens from the bottle to certain of the persons to whom he gave me letters of introduction, and I was to give two (I think it was) to Professor Peters, of Berlin. I did not go to the various places to which those letters were addressed, so the bottle with its contents, as Mr. Krefft gave it to me, was sent through my agent, Mr. Edward Stavenhagen, to Professor Peters." I was particularly anxious to clear up this matter. I now produce the exchange book. There is no such transaction as that of which Mr. Krefft speaks, on record.

J. C. Cox,
Esq., M.D.

20 July, 1874.

1229. Is there anything else you would like to state with reference to this matter? No.

1230. Do you know of anything that went from this Museum to the frigate "Atalante?" No, I do not. I heard that things went, but I do not know positively. That was the Spanish frigate, was it not?

1231. No, the French frigate. Do you know of anything that was sent from this Museum on board Her Majesty's ship "Challenger?" Not of my own knowledge. One of the officers told me that a very fine series of photographs were sent.

1232. As a donation from the Museum? I understood it was from Mr. Krefft.

1233. What were they photographs of? I do not know. I did not pursue the subject.

1234. Do you know anything of the charge of making a false return in the visitors' book? I only know what I have been told.

1235. Do you know of any particular occurrence in reference to a written statement to the Colonial Secretary, when you were to have met him? I do.

1236. Will you please state what you know? Prior to the 19th of September, 1873, the Board appointed, if my memory serves me right, Dr. Alleyne, Captain Onslow, and myself to wait upon the Government for the purpose of asking them to put a certain sum of money on the Estimates for the making of cases. The Colonial Secretary appointed a day on which he would meet the deputation. When I got home at 1-30 p.m. I found a message left at my house to say that the deputation was to meet the Colonial Secretary, I think it was at 11. It was then past the time, and I could not possibly attend. I believe none of the other deputation attended. I called on Mr. Krefft and asked him about it. He told me that he had made it all right, and he wrote this letter in explanation to the Colonial Secretary. The fact was that the Colonial Secretary had written back rather a sharp letter, commenting on the fact that the deputation had not treated him with respect in not having kept the appointment. Mr. Krefft asked for another appointment, and I asked him to let me know when I was to attend, in good time. He sent me a written notice to be there on a certain day. I went there. I had to see Mr. Parkes on other public business. When I had finished my business I said to him—"I believe I am to call upon you again in a few minutes as a member of a deputation from the Museum;" and he said, "I believe you are." I went into the ante-room, where I waited a very long time; but as nobody came I went away. I came to the Museum and I asked Mr. Krefft why he had not come, for I thought then that it was his duty to attend with the deputation. He told me that he thought it was not. At a subsequent meeting of the Board, I moved that in future the Secretary should attend all deputations. However, Mr. Krefft had got another letter from the Colonial Secretary, complaining in very strong terms of the deputation not having attended. I said, "Mr. Krefft, I was there, and waited a very long time." He said, "By Jove, I did not know that. I have written this letter in explanation." He showed me the letter, the copy of which was in a book and was taken by a copying-press. It was a long letter. This (*referring to a letter in the letter-book*) is not the letter at all.

1237. Does that purport to be the letter? Yes. The letter to which I refer was in a large copying-press book. I said, "That won't do. Mr. Parkes knows quite well that I was at the Colonial Secretary's Office. What you have stated there to the Colonial Secretary is perfectly untrue, and he knows it." He said that he thought he would have time to rush down to the Colonial Secretary's Office and get the letter probably before Mr. Parkes had seen it, and he would write another one. I presume this letter is the other letter he wrote. These letters were never produced before the Board, not even Mr. Parkes's letters.

1238. *Chairman.*] He accused you of not attending on a certain day when you were actually there? He did. I would not complain so much of the deputation falling through, but when a letter came from the Colonial Secretary, complaining of it, and when I saw a false statement sent in reply, I thought it my duty to take notice of it.

1239. *Mr. Rolleston.*] Those letters of complaint never came before the Board? They were never laid before the Board to my knowledge as Mr. Krefft said that he would do in those letters.

1240. Do they appear in the minute-book at all? They are not there as far as I know.

1241. *Chairman.*] Is it the fact that you have been charged with the price of certain galvanized tubs, presumed to have been used in the attempted preparation of the sun-fish? It is quite true.

1242. What is the sum which you were charged for the tubs? 20s. 6d.

1243. Have you paid it? I paid it to Mr. Krefft.

1244. Were you charged any money for labour employed for the preparation of this fish? I was, in the account which Mr. Krefft rendered me; and I insisted in reimbursing every expense in this matter to the Trustees; he includes a charge of £3 6s. for extra labour. I may state that when I sent the sun-fish here I authorized Mr. Krefft to get any amount of labour he wished if he would provide it.

1245. *Mr. Rolleston.*] Are the tubs specifically mentioned in that charge? They are—tubs and buckets, 20s. 6d. Some reference has been made to an advertisement which appeared in the newspaper. If you will allow me I will read the letter he published:—"Will you kindly allow me to invite those gentlemen who desire to see my original correspondence with Dr. Cox and others, to call at the Museum before 12 o'clock to-morrow morning? I shall be happy to exhibit to them orders to skin and to seal for the doctor's benefit; and shall also produce the original receipt for extra labour anent the sun-fish which Dr. Cox repudiates." Then he quotes this: "The sun-fish labour receipt runs thus:—Sun-fish expenses, extra labour, &c., £3 6s. Received the above sum of £3 6s.,—MICHAEL O'GRADY."

1246. What is the date of it? December 30, 1871.

1247. Is it a fact that you gave orders to skin things and sell them at the Museum for your benefit? It is not. When this letter was published I went to my solicitor's, and asked him to send one of his clerks along and see these things, as it was publicly put in the papers. He came to the Museum before 12

J. C. Cox,
Esq., M.D.

20 July, 1874.

o'clock, and Mr. Krefft was out. He asked for these things, and he could not see them. He called back again at 1 o'clock, and Mr. Krefft was not at home; he could not see them. I insisted upon his getting a view of them; he was to go until he saw them. He came here at 3 o'clock, and he waited until Mr. Krefft came home. The result was that I got a letter from my solicitors informing me that the orders referred to by Mr. Krefft did not relate to the sun-fish or the Museum. When I was leaving my house in Phillip-street to go to where I now reside I had a very fine lot of birds, and I thought that I should not have room for them; I wrote to Mr. Krefft about them, and I now quote this letter from the printed circular of letters and testimonials to which I have already referred:—

My dear Krefft.—I forgot to speak to you the other day about my birds. I have a good number of really good skins, but I am going to move to a house in Macquarie-street, where I shall not have so much room as I have here for such things, and I would like to sell them. What would be best to do with them? They are in strong cases, and I think they might be sent to London or elsewhere and sold. I fancy if you wrote to Williams or Selater, and said you wanted them disposed of for a friend, they would not see them sacrificed. I would at once send them by Pickford & Co. to them or anywhere about. What shall I do? I would offer to the Museum for sale, but I fear you have no funds to spare. Yours sincerely, JAMES C. COX, Phillip-street.—I shall have to sell one of my cabinets of shells also, which I should like to see in the Museum.

That was a private letter to Mr. Krefft; it had nothing to do with the Museum whatever. Mr. Krefft has published it evidently to indicate that I wanted to sell things. The order to skin is this:—

My dear Krefft.—Please have this bird skinned for me early to-morrow. Yours sincerely, J. C. Cox.

In 1866 I was out shooting with my brother one day at Greystances. A bird got up and I shot it; it was a bird that I never saw alive before. I brought it here and left this note. Mr. Krefft said that the bird was common to the north, and that it had got out of some fellow's cage. He threw it on one side, and I thought no more of it. These are the orders which he has announced to the public, and which I have been supposed to give to skin and to sell. As it was put by Mr. Krefft, it would appear that the orders were to skin and to sell the sun-fish.

1248. *Mr. Hill.*] Is there anything more that you would like to add? I may perhaps draw your attention to the sun-fish, as it is a matter of importance to me. This last sun-fish was caught on the 4th of December, 1871. On the 16th I and other gentlemen had subscribed together and bought it from Skinner. He would not give it up, excepting on certain conditions. I could not promise those conditions, but I told him if the Board liked to do it they could. It was sent here; and this unfortunate man was kept here waiting from 4 o'clock in the morning until 9 o'clock before he could get it in. On the 15th of December he writes to the *Herald*:—

Will you allow me to say a few words regarding a large fish about to be presented to the Museum, and which has caused much annoyance in this neighbourhood?

1. There is no shed of any kind in which specimens which a dozen men cannot lift may be preserved.
2. There are only three men available for such labour, and they must necessarily neglect the work in hand when gigantic objects arrive for preservation without notice.
3. All fish should be secured at once, and not carried about till they are rotten. In fact, large specimens, such as the last "sun-fish," should not be brought into the city.
4. If worth having they should be preserved where they are caught.

That is the first attack that Mr. Krefft began to make about it. The fish was here on Thursday, Friday, Saturday, and Sunday. He got Dr. Dansey, the Health Officer, to visit it on Saturday. On the 18th December Mr. Wall wrote to the *Herald*:—

It has been publicly stated that the sun-fish, purchased by the Trustees of the Australian Museum, has been, after all the expense and labour incurred, thrown over the South Head, the fish having rendered the neighbourhood intolerable.

In the cause of science, I very much regret the fact that the opportunity of preserving so fine a specimen has been lost. I was more fortunate with the sun-fish previously caught, which, after seven days exhibition, I succeeded in preserving in a most satisfactory manner; and some years since I articulated the whale now in the Museum, performing the work down the harbour, thus preventing any such offence as that which has led to the loss of the sun-fish.

My long services at the Museum have obtained for me a retiring allowance; but in the cause of science, my services are always freely at the disposal of the Trustees and the public.

In the *Herald* of the 20th December, Mr. Krefft wrote:—

Will you allow me a word in explanation of Mr. W. S. Wall's unfounded statements in this day's *Herald*.

1. The sun-fish removed by the Inspector of Nuisances from the Museum-yard was not purchased by the Trustees.
2. Having no money to attempt its preservation, the Museum could not be at the loss of a single penny, the owners supplying the necessary funds. Only in case of success would the specimen have been presented to this institution.
3. Science lost nothing by the fish, it being well known; and all that was worth having of it were its intestinal worms; these have been secured.
4. The sight-seeing public will probably be afforded an opportunity to admire the "fat" and "carefully painted" caricature of a small sun-fish shortly to be exhibited. The fortunate owner states it cost him £40, of which the taxidermist who stuffed it received £25. Our condemned fish being about six times the bulk of the specimen referred to would have cost £150 to preserve at the above rate, and would have driven me to the "top of King-street."
5. Specimens mounted and "preserved" to Mr. Wall's satisfaction would never satisfy my own demands. I must have the animals true to nature. I disapprove of paint in particular, because it covers a multitude of sins.
6. There are many whales in the Museum. In fact it is the most famous collection of whales in existence; and every specimen as it now stands was mounted by a native of this city, Mr. Henry Barnes, who is a perfect genius in this branch of taxidermy. Mr. Wall certainly articulated the whale to which he refers in the first instance; and when it was about tumbling down he had to take it to pieces again. I discovered it scattered over the Museum grounds, and buried under heaps of rubbish, and at my request it was re-mounted inside the old building where Mr. Wall's "long services" had left "plenty of space" for specimens.

7. I hope Mr. Wall will long enjoy his pension which he received principally because his health had suffered when masecrating the whale, and I also hope that the Government will show the same consideration to his successors.

8. Comparisons are odious. Those who remember the good old times when a few thousand persons visited the miscellaneous collection in College-street may come and judge for themselves."

I must also beg the attention of the Committee to a second letter, signed "Subscriber," published in the *Herald* of the same date. The writer says:—

Allow me to correct an error into which Mr. Wall, and I believe the public at large, have fallen, regarding the purchase from Skinner, for our public Museum, of the large sun-fish recently captured near Manly. Being given to understand that the funds at the disposal of the Board of Directors of the Museum were inadequate to the procuring of this fine specimen, a number of gentlemen subscribed the sum of £10, which was given to Skinner on condition that he would send it to the Museum and permit of its being preserved, which he consented to do, on condition that the specimen when preserved should be returned to him for a short time to exhibit for his benefit. Accordingly, the fish was sent to the Museum on those conditions; but the sanction of the Trustees would of course have to have been obtained to comply with the latter proposal. I should like therefore to know what possible business it is of a public servant of a public institution to dictate to us our business as to what price we should give for the sun-fish or any other fish, as stated in his letter of Saturday. It was evident from the very first that every obstacle was to be placed in our way, and it first showed itself by Skinner's offer to take the fish early in the cool of the morning to the Museum being refused; not even at 8 o'clock would the Curator permit

the

the gates of the grounds to be opened to take the fish in, even after Skinner's arrangement to do so, but was detained till 9 a.m. before the doors were opened to him to deposit the fish in the paddock. The next obstacle showed itself in the want of hands, and although Mr. Krefft was authorized by me of the gentlemen who had taken most trouble in procuring the fish to get hands, and he would have them paid for, not a man could be procured. It then became most noxious to the public; no wonder, but was it owing to the want of Museum accommodation; and were the noxious odours sufficient to justify the loss of the skin of the fish? To get rid of the flesh and refuse of the fish, the Curator engages a man to dig a hole about 3 feet deep and 5 feet wide, which, according to his statement, occupied a full day, and accordingly into this pit the obnoxious refuse was thrown; but fancy our astonishment to learn on the following Monday, after the fish had been sent to the Museum, this pit was left open with its filthy putrid mass still exposed and not covered up, because, as the Curator told our informant, he intended to bury the whole mass of the fish in it, thereby clearly demonstrating its already determined destination. It so happens that at the same time that the fish is to be preserved the putrid bones of a great whale are being boiled by the side of the fish, causing more stench than half a dozen such fishes; but not a complaint is made against it. May we ask, in justice to ourselves, what means were used in order to arrest decomposition or to destroy the obnoxious odour produced by the fish, and we venture to assert that had a few pints of carbolic acid been used for this purpose and the putrid mass in the pit covered up, the fish would have been at this moment preserved and fit to be exhibited to the public. However, we beg to dedicate the further consideration of this subject to the Board of Management; but fear that the treatment of specimens sent to the Museum in such a way will not encourage the development of our objects of natural history.

J. C. Cox,
Esq., M.D.
20 July, 1874.

In the *Herald* of 22nd December, Mr. Krefft published this reply:—

The remarks which "A Subscriber" addressed to you regarding the sun-fish are incorrect, and the conclusions arrived at are totally wrong.

1. Public servants have public duties to perform, and I for one will not be muzzled by the silly threat of the writer to tell "the Directors" of my misdeeds in preventing the expenditure of their money.

2. Let people be liberal with their own, but let them not think that the Museum is a "curiosity shop" and that I am "Barnum," ready at a moment's notice to supply six "mermaids" and such like for the benefit of itinerant showmen.

3. If "A Subscriber" wanted a favour, and was ready to pay for it, why did he not ask the proper authorities—"the Trustees of the Museum," not one mind, but the Board, instead of putting me in a false position? Why was not a cheque for £25 sent to me to cover expenses? If this had been done Mr. Thorpe the taxidermist would have been able to secure the skin, though, of course, unfit to be turned into a specimen. It would have done, however, as a sort of apology for the real thing, and been as good as Mr. Wall's artistic production of an impossible fish, now on view. People who go to such "shows" are not particular; "they pay their money and have their choice."

4. With regard to my refusing admittance, or keeping that "pet fisherman" waiting too long, I can only say that he bullied me, and threatened, like "A Subscriber," with the vengeance of the "Directors." I could not open because the porter had the key, and Skinner's carman had arranged to come at 9 o'clock, the hour when the men arrive.

5. To oblige "A Subscriber's" informant I advanced more money out of my own pocket for preserving material, labour, and disinfecting fluid, than the whole of the "subscribers" put together paid for their fish. I also told "A Subscriber's" friend that a few pints of carbolic acid would not have any effect on two tons of rotten fish; nor would a hundred weight of that stuff save it. He promised to send some, but did not.

I am determined not to saddle the Trustees with my outlay, and I hope the "subscribers" are prepared to pay me, as I have the promise of one of them to refund me every penny. So much for my supposed obstructions.

6. Had I any desire to trick the subscribers I could have had Mr. Seymour at the gate in the "cool of the morning," when Skinner forced his way in against my will, and without my knowledge. I hope that person will be brought up yet for trespass.

7. All further talk about the preservation of the fish is useless, because it was declared rotten by the Health Officers of the port and of the City. I knew it was so, and our taxidermist thought so too, but being very obliging he worked away till he got ill; he had to leave off on that account, as Dr. Fortescue, who attended him, will testify.

8. It was the skin which was carted off; and "Subscriber's" remarks about the hole dug are simply foolish. The pit was 8 x 10, and 4 feet deep, and if it had not been so large could not have contained all the refuse. Dr. Dansey condemned the skin in particular, though Mr. Thorpe pleaded for it. The doctor was inspecting "our beautiful drainage system" when he scented the unfortunate skin, and sternly said,—"Take it away at once, or you will be fined." My money being all expended, and no subscriber near, I had to submit.

9. "Subscriber" had a "nose" only for the whale which never offended my neighbours, because bones do not rot. The smell was not worse than "Circular Quay smell." Perhaps "Subscriber" is not aware that the Museum is indebted to his "informant" for that certainly valuable skeleton which crippled our small resources, and made the sun-fish a perfect "white elephant" in a high state of decomposition to the Museum.

10. I have done with sun-fishes for a while, and in the mean time ordered a small one, well preserved, from England. Should other (less experienced) fishermen come across one, I hope they will communicate with me direct.

11. With a merry Christmas to the "Subscribers," and an assurance that with the return of pure air all my wrath has vanished,—

I remain, &c.,

GERARD KREFFT.

This is a correct statement of the evidence given by me before the Sub-committee of the Trustees of the Museum, on the 20th instant.

JAMES C. COX.

Michael O'Grady was called in and examined:—

1249. *Mr. Hill.*] I think you were asked at a former meeting of this committee to produce one of the visitor's books to show us an instance of the manipulation you accused Mr. Krefft of? Yes.

1250. Have you the book here? Yes.

1251. Will you point out the cases to which you refer? Yes; on Thursday, April 17, 1873, there is an entry of fifty-six visitors.

1252. In whose handwriting? Mr. Krefft's—twenty-one visitors, ten ditto, two ditto.

1253. Are there any more? Fourteen visitors.

1254. On the same date? Yes. Twenty-three ditto,—John Hall and two friends,—R. Pillan and two friends. Here again twenty-five visitors, two ditto.

1255. Here are ten, fifteen, twelve, twenty-one, thirteen, eighteen, twenty-five visitors, on the same day? Yes.

1256. In the continuation of that entry on the next page was any explanation given to you why it should be done that way? I would not be able to say that there was on that particular day, but I have been often told that that was the style to do it in, and he would come and do it.

1257. On this particular occasion, or any other, were these people admitted into the Museum? No, they were not.

1258. Not any of them? Not one of them.

1259. Now show other specimens of fictitious entries? Monday, 29th September, 1873, ten visitors—two ditto.

1260. Were any remarks made when those were entered? No.

1261. Show another? December 26th, 1873. On this day I was not on duty at the book.

1262. The book was taken away? I was sent away. It was the day after the gold was stolen. I only know his handwriting. Robert Barnes was left at my post.

1263.

Michael
O'Grady.

20 July, 1874.

- Michael O'Grady.
20 July, 1874.
1263. How do you know that Robert Barnes was there? He was left at my place. Ten visitors, two ditto, six ditto, ten ditto, nineteen ditto, five ditto, four ditto, C. J. Jacobs and four others, 100 visitors, 200 visitors, 150 visitors, R. S. Hall and twenty visitors.
1264. In that visitors' book, which you generally have the custody of, have these people to whom you have referred been in the Museum at all? The ones that I know of have not.
1265. These are put down for what? To make the book tell up.
1266. To swell the numbers? Yes.
1267. To show that there was a large number of visitors to this Museum? Yes.
1268. *Chairman.*] When they have not been here at all? No.
1269. *Mr. Hill.*] When did you see Mr. Krefft last? I saw him on Friday, when he wanted me to sign a paper.
1270. Who brought the books down? I did.
1271. Who called you up? The boy.
1272. Where was Mr. Krefft? In the bedroom above.
1273. Was he dressed? He was.
1274. He gave you these books to take down to the Board room? Yes.
1275. And wanted you to sign the receipt? I reckoned them, and I told him there were forty-four books. He said—"O'Grady, I want you to take down some more. He gave me some papers and wanted me to sign for them. I said—"I will do no such thing." Mr. Krefft said—"You will have to do it." I said—"I will do no such thing. I will bring them down to Mr. Robinson, the Secretary."
1276. You saw Mrs. Krefft? Yes.
1277. Was she dressed? Yes.
1278. Did she come out and speak to you? She did.
1279. Had you seen her on other days? Yes, on other days when I was sent up by the Trustees. I saw her the day I brought the petty cash book down. Mrs. Krefft gave it to me at the door.
1280. Was Mr. Krefft in bed then? I cannot say. I did not see him.
1281. Since that day and last Friday have you seen Mrs. Krefft? I saw her on Saturday, and got some money that was due to me.
1282. Where did you see her? Up in her bedroom.
1283. Dressed? Yes.
1284. You have not seen her down stairs? No.
1285. Have you seen Mr. Krefft out since then? Yes, on Thursday. He was going out at 9 o'clock in the morning.
1286. Did you see him on the day of the election? No, not that I can call to mind.
1287. You have not seen him since Saturday? No.

This is a correct statement of the evidence given by me before the Sub-committee of the Trustees on the 20th instant.

MICHAEL O'GRADY.
27/7/1874.

WEDNESDAY, 22 JULY, 1874.

Present:—

H. G. ALLEYNE, Esq., M.D., | E. S. HILL, Esq., J.P.,
PROFESSOR LIVERSIDGE.

CHRISTOPHER ROLLESTON, Esq., IN THE CHAIR.

Alexander Walker Scott, Esq., called in and examined:—

- A. W. Scott, Esq.
22 July, 1874.
1288. *Chairman.*] You are one of the Trustees of the Museum, and have been so for some years, I believe? Yes, I have been a Trustee for some time, and am one now. I wish to state that I attend to give evidence here to-day at the request of the Trustees, not having been duly summoned. I state this lest it may be said that I attended without being summoned to give evidence voluntarily.
1289. You have taken great interest in the management of this institution, I believe? Yes, I have.
1290. And you have been very regular in your attendance upon the Board meetings? I should say that of all the Trustees I have been one of the most regular attendants—I have scarcely been absent half-a-dozen times since I was re-elected a Trustee, so far as my memory serves me.
1291. The conducting of the business of the Museum by the Curator and Secretary has continually been under your observation? Yes.
1292. Have you had reason to be satisfied with what you have seen of the management? On my first appointment as Trustee I was highly satisfied with the Curator's conduct, as regards the energy displayed by him in furthering the interests of the institution. But latterly—say for the last two or three years—I have observed a very great falling off, not only with respect to the exhibits but also in the exertions made by the Curator in obtaining specimens, or, I should rather say, in looking after the interests of the institution.
1293. That is within the last two or three years? Yes, about that time—I cannot specify the time exactly.
1294. Can you account for that falling off in any way? I can only account for it in this way: Mr. Krefft seemed to interest himself principally in certain favourite objects of his own—that is, in organic fossil remains of mammals of rare fish and such things; and he was besides constantly keeping up a trifling correspondence with people unconnected with the Museum.
1295. Then you attribute the falling off in his efficiency rather to that than any other cause? That was the cause, so far as I know. For instance, he entered into a very long controversy with Dr. Morris about some species of entozoa. He then, for the first time, took up the study of a subject of which he of course was thoroughly ignorant, mistaking the head of an animal for the tail. That occupied a considerable portion of his time to the detriment of the Museum and neglect of the specimens.
1296. Might not a man of active mind and temperament have done all that, and still have performed his duties efficiently? Certainly he could, but in my opinion Mr. Krefft did not do so.

1297.

1297. Have you ever suspected any other reason for the falling off in his efficiency in the performance of his duties? I cannot say that I have. A. W. Scott,
Esq.
1298. Have you ever seen him tipsy? No, I have not. But I have not associated with Mr. Krefft for the last six or seven years. I was acquainted with his habits previous to that; but I never knew him to be tipsy. 22 July, 1874.
1299. And you do not suspect that his want of efficiency latterly has been caused by his drinking habits? No, I do not; except from what has appeared in the evidence taken before the Select Committee of the Legislative Assembly.
1300. Were you ever a member of the exchange committee of the Museum? Never.
1301. Then you are not acquainted with the system under which exchanges were conducted? I am acquainted with the system under which the Trustees directed that exchanges should be conducted. Nothing was to leave this Museum, of any kind, without the sanction of the exchange committee, and afterwards confirmed by the Board of Trustees.
1302. Are you aware whether things have been sent away from the Museum without the sanction of that committee? I am aware that in one instance specimens were produced before the Board for transmission to Europe, and those specimens were never shown to Dr. Cox, who was one of the exchange committee, and happened to be absent; Dr. Bennett then took upon himself to recommend that the specimens should go Home, without consulting Dr. Cox.*
1303. *Professor Liversidge.*] Were there only two members on the exchange committee? Only two members, so far as I am aware.
1304. Have you been in the habit yourself of exchanging specimens with the Museum? Never, to the best of my belief. I have given a great number of specimens to the Museum.
1305. Have you ever received anything from the Museum? During the eight or nine years I have been Trustee I have received a few small shells only, which Mr. Masters collected at Adelaide. Mr. Masters gave them to me himself; but I do not know whether they belonged to him or to the Museum.† I invariably refused to receive specimens from the Museum—that is, specimens of vertebrated animals or insects.
1306. Have you ever had work done for you at the Museum by the servants of the institution? Not that I am aware of. By-the-by, Barnes came and assisted me to take the measurements of some skulls of dolphins and whales for my treatise on Seals and Whales. I have had no carpentry or taxidermist's work done for me.
1307. *Mr. Hill.*] You have occupied the attention of one or two employes of the institution in taking the measurements of some porpoises and whales? That is all.
1308. Have you had work of any other kind done in this institution? I do not remember it—I may have had; if so, it must have been very trifling. I have had photographs given to me, similar to ones which Mr. Krefft had previously sent to Europe.
1309. *Chairman.*] Of what description? Of the teeth of the *Thylacinus cynocephalus*, or Tasmanian Tiger; the teeth of the *Sarcophilus ursinus*, or Tasmanian Devil; and also of one or two skulls and skeletons of whales.
1310. Then I am to understand that you were never witness to Mr. Krefft's being drunk on the Museum premises at any time? No. I have had it hinted to me, and have suspected it myself, but not from seeing him, but on account of that peculiar breath which a person has who takes very strong drinks. But certainly I have never seen him in the state you mention.
1311. Were you a member of the Board of Trustees at the time the man Tost was discharged? Yes.
1312. And you concurred in Tost's dismissal? Yes, he was dismissed at our recommendation.
1313. Have you had reason since to change your opinion with reference to Tost's guilt, with reference to the charges that were laid against him? I have had no reason to change my opinion as regards the justice of Tost's dismissal; but I have had great reason to change my opinion with respect to Mr. Krefft's conduct on that occasion.
1314. Conduct towards Tost, do you mean? I mean his charges against Tost, and Tost's charges against him.
1315. On what grounds have you changed your opinion with respect to Mr. Krefft's share in the transaction? If you have no objection, I will just refer to the report of the committee, which was read in evidence before the Select Committee of the Legislative Assembly. In their report the Museum committee say, "Your committee, from the high respect they have hitherto entertained, have much pain in reflecting upon the conduct of the Curator; but they now feel it to be their duty to recommend the discharge of the carpenters employed in the Museum, feeling convinced, from the evidence adduced, that the cases, fittings, and other cabinet work required for the Museum would be better and more cheaply obtained by public tender; that the building and valuable collections would be less endangered by fire from shavings and other inflammable materials; and that the attention of the Curator and his assistants would thus be more confined to the legitimate objects of this institution." It was brought out in the evidence of several parties, and also in the evidence of Mr. Krefft himself, that Mr. Krefft had had made, by Tost, some very fine furniture for himself; for instance, the bookcase which is now in his own private room. The reason which Mr. Krefft gave to us was this: That Tost was indebted to him for a considerable amount of money; and that he, Mr. Krefft found the plate-glass for each of the wings of the bookcase. He said he thought the bookcase that had been constructed by Tost would scarcely be of greater value than the sum that Tost was indebted to him for privately. But it turned out afterwards that Tost had paid his debt to Mr. Krefft by partly using Museum timber and other materials, and making them up in Museum time.
1316. *Dr. Alleyne.*] Did it turn out that there was any evidence of Tost having used material belonging to the Museum? It came out in evidence before us; but Tost was not charged with that; he was charged with having made furniture for a gentleman who was not then a Trustee, and entirely free from blame, but the committee considered Mr. Krefft's conduct deserving of censure.

1317.

* I have seen in Dr. Bennett's evidence before the Select Committee of the Legislative Assembly, p. 80, par. 2018, that a cast of the jaw of the diprotodon made at our Museum was sent to Melbourne; and I also read in the *Herald* a report of the speech delivered by Mr. Walter Cooper, wherein he says that Mr. Krefft gave to the "Challenger" specimens of natural history belonging to the Museum,—both of which are at direct variance with the exchange system.

† Mr. Masters, at my request, came to my house to see if any of my duplicate specimens would be of use to the Museum. He took away some, and left in my cabinet the few shells alluded to.

- A. W. Scott,
Esq.
22 July, 1874.
1317. What I want to understand is, whether it came out in evidence that Mr. Krefft allowed Tost to use the materials belonging to the Museum to make the book-case with? Yes, it came out that he winked at it.
1318. He knew it? Knew it; undoubtedly he did.
1319. *Chairman.*] Since that time have you had reason to know or suspect that the property of the Museum has been used for private purposes by the Curator, or by any one else with his consent and connivance? I should be sorry to say what I think; I do not know anything personally; it came out in the course of the investigation that he had allowed other things to be made.
1320. That is six or seven years ago? It is four or five years ago.
1321. Do you know anything about some indecent photographs that were exhibited, and of which there was some notice taken in the evidence given before the Select Committee of the Legislative Assembly? I know nothing more than this: That I was one of the Trustees who were present when Captain Onslow brought a policeman to take charge of the negatives of those indecent photographs.
1322. At the Board meeting? At the Board meeting.
1323. You know nothing further than that? Nothing more; I saw them myself.
1324. You are not aware of any photographs having been sold by any of the employés of the institution? Except from being told so; I know nothing of it personally.
1325. And beyond the large piece of furniture you speak of, you are not aware of any other furniture having been made up of Museum material, by permission of the Curator? I have heard of it, but I know nothing personally.
1326. Do you know anything of receipts for money having been taken, signed in a false name? Not beyond what came out in evidence.
1327. Do you know anything with reference to the breaking up of a fossil jaw, which was ordered to be sent Home? Nothing whatever. I never heard of it until I was told so.
1328. Do you know anything of Mr. Krefft having sent, in his own name, donations to private persons, and not in the name of the Trustees? I know it in this way: I am a pretty constant reader of the proceedings of the Zoological Society, the Ibis, the Annals and Magazine of Natural History, and of a publication called "Nature"; and in these publications I have frequently seen announcements of donations made by the Curator of this Museum to persons at Home.
1329. That circumstance would not of itself prove that he gave them entirely in his own name, ignoring the Museum altogether, as his name would naturally appear as an officer of this Museum? The announcements have invariably contained thanks to the Curator, not to the Trustee of the Museum.
1330. It is only from that circumstance that you have reason to think he has given those things in his own name, rather than in the name of the Trustees? Yes.
1331. It was a rule of the institution, I think, that donations to be sent away should be reported to the Trustees? Yes. First to the exchange committee, and then submitted to the Trustees at their meeting for confirmation.
1332. Are you aware whether those specimens to which you have just alluded were so reported? I have heard one of the exchange committee state that they were not reported, that the donations were not made through the exchange committee. I have only heard so; I am not a member of the exchange committee myself. I know they were not reported to the Trustees at any meeting at which I was present.
1333. Might I ask who it was that stated so? I have heard Dr. Cox say so.
1334. Do you remember in any of your numerous attendances at meetings of the Board of Trustees any report having been made of more donations having been sent with the sanction of the exchange committee? No, not of the donations I allude to.
1335. I suppose if such a report had been made it would have been set forth in the minute-book? Mr. Krefft never put anything in the minute-book, except in general terms. As I stated in my evidence before the Select Committee of the Legislative Assembly, the minute-book contained garbled statements throughout.
1336. *Dr. Alleyne.*] When anything was reported as having been done, either by the Curator or by the exchange committee, was it not expected that it should be recorded in the minute-book? It is not only expected to be done, but it was ordered that it should be done. But it never was done. I have pointed it out over and over again at the Board meetings.
1337. *Chairman.*] Is it to be assumed then, that if those donations do not appear to have been given, by the minute-book, that they were given without the consent of the Trustees or exchange committee, or any other authorized power? I should say so most decidedly.
1338. Do you know anything in connection with the visitors' book, and the additions of large numbers of names beyond those of the persons who actually visited the Museum? A few years ago I was appointed as one of the Trustees to draw up the annual report. There were three of us appointed. Mr. Stephens was one; I forget who the other Trustee was. But Mr. Stephens and I attended in this room, when Mr. Krefft drew up a report and presented to us for our approval. Without referring to any part of that report, except that relating to the number of visitors to the Museum, I have simply to remark that Mr. Krefft gave in a very large number, which terminate with "one" or "two"—that is, so many thousands, so many hundreds, and "one" or "two." I pointed out the absurdity of it to Mr. Stephens; and I also remarked that it was impossible for O'Grady to keep any accurate return, particularly at holiday times, when people crowded in in large numbers. Mr. Krefft then said that O'Grady divided them in batches—twenty in this batch, and twenty in another, and so on, and then entered the numbers in the book; and so he was able to make up the very accurate return which terminated with "one" or "two." Upon that I hesitated to sign the report in the matter of the number of visitors, but which I at length did—not to cause delay.
1339. Was that last year's report? No; it is two or three years ago. I saw the absurdity of the whole thing, and refused for some time to have anything whatever to do with it.
1340. Did you yourself examine the visitors' book at the time? No; I believed the entries to be wholly inaccurate.
1341. Have you seen any entries in that book since? No, never looked at the book.
1342. Were you one of several Trustees who were asked to form a deputation to the Colonial Secretary? No; I have heard Dr. Cox repeatedly mention to the Board something with reference to a letter to the Colonial Secretary.
1343. But you were not one of the Trustees appointed as a deputation? No.
1344. You attended a meeting of the Trustees of the Museum, at which orders were given to the Curator to obtain copies of the Report of the Select Committee of the Legislative Assembly, appointed to inquire
into

into the management of the Museum, from the Government Printing Office; and at which meeting orders were also given to Mr. Krefft to issue notices to the Trustees to attend at a subsequent date, in order to take that report into consideration? Yes, I was present on that occasion. A. W. Scott,
Esq.

1345. You remember those orders being given? Perfectly well; and I distinctly remember hearing Mr. Krefft say he would comply with the orders. 22 July, 1874.

1346. Did he comply with them? He did not.

1347. Did you appear at the Museum at the day appointed for holding the adjourned meeting? I did.

1348. In consequence of that arrangement? In consequence of that arrangement.

1349. Did you receive any notice from the Curator of that special meeting? I did not.

1350. What was the state of things you found when you came to the Museum? I found this Board-room locked. I, in conjunction with the other Trustees present, then sent O'Grady with a message for the key from Mr. Krefft. Mrs. Krefft said that her husband had gone out, and that she had not got the key, and could not find it. We then decided to wait for some time, in the hope that the key would be obtained, that we might get into the Board-room. The key not being forthcoming after waiting for some time, we decided to go into the taxidermist's room, below the staircase of the new building, and there we held our meeting. Five other Trustees besides myself attended. I was put into the chair.

1351. On the part of Mr. Krefft it was a clear disobedience of the orders of the Trustees at a previous meeting? Yes. I may add that I have not received a copy of the evidence taken before the Select Committee of the Legislative Assembly. Mr. Krefft is guilty of disobedience in not sending copies as ordered, in my opinion.

1352. Orders which, in your opinion, could not have been misunderstood? In my opinion they could not possibly have been misunderstood.

1353. At the meeting held on the 5th of June, it was moved by Mr. Macleay, seconded by Captain Onslow, that a special meeting should be called for the following Thursday, at the usual hour, for the appointment of a sub-committee to inquire into the charges that had been brought against Mr. Krefft, and that motion was carried. Then Dr. James C. Cox moved that copies of the evidence given before the Select Committee of the Legislative Assembly be obtained and forwarded to the Trustees as soon as possible? I remember that perfectly well.

1354. In the minute-book it states that Dr. Cox's motion was not carried, as there was no seconder? I remember that it was carried. (*The minute-book was here handed to witness.*)

1355. You recognize that as the Curator's entry upon that point? Yes, I recognize it as his handwriting. I also remember it being read by himself at one of our meetings.

1356. *Professor Liversidge.*] A statement has been made about certain things having been sent on board the "Challenger;"—do you know anything of that? I know nothing more than what I have seen in the papers, or rather in the speech of Mr. Walter Cooper.

1357. Do you know of anything having been sent on board the "Arcona," a German ship? No, I am not aware of anything. The gift, if any, has never been reported to the Trustees.

1358. *Chairman.*] Do you know of any things having been set up for Dr. Bennett? Not personally; nothing further than what I have heard Mr. Krefft talk about himself.

1359. Do you know whether the Curator was in the habit at all of receiving money for specimens set up for private individuals? I do not.

1360. *Mr. Hill.*] Have you received any information from Her Majesty's ship "Challenger," that they could have afforded the Museum any valuable specimens? I have not received any information myself, as a Trustee, nor has the matter been mentioned at the Board.

1361. You have not heard from any of the officers that the "Challenger" could have afforded this institution many valuable presents? I have heard nothing of the kind whatever.

1362. You do not know anything personally of the German ship that was here? No, nothing whatever.

1363. Have you ever heard, or do you know of your own knowledge, anything connected with specimens, the property of this Museum, having been destroyed in the yard? I cannot say precisely of my own knowledge that they have been destroyed; but I know that many specimens are missing.

1364. Is it within your recollection that we had two very large lions here? Yes; they are missing.

1365. Do you remember any tigers or panthers that we had? I remember one or two, at the least.

1366. Do you recollect a reindeer that was in the institution? I think I do.

1367. Do you remember a civet cat we had? I think there was one, but I cannot say positively.

1368. Do you recollect anything of a pony that was presented by Mr. Burt? I do not know who presented it, but I recollect the pony well. I recollect it from this circumstance: that the word pony was spelt "poney"; I pointed out to Mr. Krefft that the word was spelt wrongly. I also know there was such an animal from Mr. Krefft's own little publication called "The Guide to the Museum"; the pony is there mentioned as being a South African pony. It is missing now, and I have been told that it has been destroyed.

1369. *Chairman.*] You do not know anything personally of the destruction of property belonging to the Museum? Not personally, but I have often spoken to Mr. Krefft about articles that have been missing. When Mr. Masters returned after a collecting tour we always had a list of the articles he collected laid before the Board; and after a few of our monthly meetings, it might be, when I inquired about the duplicate specimens, they were not to be found. Either the exchange committee had given them away, or some other reason was assigned for their absence. But I do not know personally how they went.

1370. *Mr. Hill.*] Do you know of any other animals, or other specimens missing from this institution? I cannot think of any at the present moment.

1371. In addition to the evidence you have given before this committee and before the Select Committee of the Legislative Assembly, is there anything else you wish to state as regards the institution or Mr. Krefft? Do you wish me to enter into an explanation with regard to the charges he has made against me.

1372. No, not in addition to that—not in addition to the evidence you have already given upon that point; but do you wish to make any addenda or further explanation? I do not remember anything at this moment. I may say that it was at the request of the Trustees at both meetings which have been referred to that I sent in writing to Mr. Krefft a request that the proceedings of those meetings should be duly entered in the minute-books. He has not done that. I think he says that they were only memos., and in lieu of them he has entered a long rigmarole, which is not true in my opinion. There is another small matter I may be permitted to refer to. Mr. Krefft has more than once in his evidence, and in letters, stated

A. W. Scott, Esq., stated that the Barneses were recommended for dismissal after the Tost inquiry. I beg to state that the two Barneses were never recommended for dismissal; they were only prohibited from being employed as carpenters, and were to be kept at their proper work—that of taxidermists. I merely state this, because Mr. Kreffit lays great stress upon what he says was a recommendation for their dismissal on account of their bad behaviour—they were only discharged as carpenters.

22 July, 1874.

1373. *Chairman.*] I understood you to say the Museum committee felt it their duty to recommend the discharge of the carpenters? Yes; which means, that they were not to be employed as carpenters, and all the tools were directed to be sold; they were taxidermists, and it was recommended that they should be discharged from their work as carpenters; they were held at the time in high estimation by Mr. Kreffit.

1374. Do you know anything of the sun-fish that was destroyed? Nothing whatever.

1375. *Dr. Alleyne.*] You say you recollect that at the meeting of the Trustees, held on the 5th of June, a motion was moved by Dr. James C. Cox, and carried, to the effect that copies of the evidence taken before the Select Committee of the Legislative Assembly should be obtained and forwarded to the Trustees as soon as possible? I remember it perfectly well.

1376. Do you recollect whether the motion was carried unanimously? Yes, unanimously.

1377. There was not a dissentient voice? Not then; I think Dr. Bennett was in the chair.

1378. *Chairman.*] No, I was in the chair? Oh, yes. No, there was not a dissentient voice. (*The minutes of the meeting held on the 5th June were placed before the witness.*)

1379. *Dr. Alleyne.*] Is the entry of the minute to which you have just referred, an accurate entry of the proceedings, of the motions that were carried at the meeting? It is perfectly correct as far as the word "carried," but not correct so far as it contains the inserted words "not," "there being no seconder." These words have evidently been added afterwards. It is an interpolation.

1380. Are you an expert in handwriting? I cannot say I am; but the addition of these words is too palpable altogether.

1381. So far as your experience goes in such matters do you believe it to be an interpolation? Certainly I do.

1382. And therefore equivalent to a fraudulent entry? I will not use so strong a term as fraudulent, but it is evidently meant to deceive; and, as I have over and over again stated, it is another example of what has taken place in many of the entries previously made in this book. In fact the book is garbled.

1383. *Mr. Hill.*] You have a perfect recollection of that meeting? A perfect recollection.

1384. The motion in the entry is followed by the words "not carried";—do you recollect that when the motion was before the Trustees I spoke in favour of some copies of the evidence taken before the Select Committee of the Legislative Assembly being procured, and that I stated that I had not read the evidence, and authority was given to Mr. Kreffit to procure copies—that is after the motion was carried—I said it would be of no use his sending the reports the day before our next meeting, as it would take us a week to read them? Yes, he promised to send them.

1385. And that he would take good care to forward them on the following day? He said he would.

1386. Now, Mr. Kreffit having promised to send those Reports of the Select Committee of the Legislative Assembly, do you think a proper record in the minute-book would have read as the actual entry reads? If he had sent them?

1387. No; if he did say he would send them do you think it is a proper record? The record is an improper one, if that is what you mean.

1388. The motion in favour of procuring copies of the evidence was carried, and after it was carried Mr. Kreffit promised to get the reports and forward them to us, not at an early date, but next day; after his having done that, do you not think that his writing up the minute-book as he has done is a libel, or an attempt to deceive? It is as I have stated before—the minute-book is written up with an interpolation which is meant to deceive, and it is a very inaccurate minute throughout.

1389. And it does not present the true state of facts? I do not recollect that he promised to send them on the following day, but I think he said he would send them at an early date.

1390. *Dr. Alleyne.*] At all events you understood that the motion was carried? It was unanimously carried.

1391. *Chairman.*] I think I understood you to say that the records of the proceedings of the Board of Trustees, as they appear in the minute-book, have been irregularly and imperfectly kept from the time you became a member of the Board? I have considered so for several years past.

1392. You had frequently to find fault with the manner in which that part of the business was conducted? Yes, and on several occasions I have had the minutes altered. I have brought the matter before the Trustees, and they have ordered them to be altered.

1393. Have you ever drawn the attention of the Board of Trustees to that fact? Yes.

1394. Have you ever proposed any remedy? I proposed that we should have a secretary, as the Curator was wholly incapable, in fact not desirous, of keeping proper minute-books, and I was met with the question: "How would you pay his salary?"

1395. You are aware that the records of that meeting, to which we have been referring just now, are not signed by the chairman of the meeting? I am quite aware of it.

1396. Do you remember the cause assigned for it—why exception was taken? Yes; several of the Trustees at a subsequent meeting took exception to the minutes, as they considered the records to be wholly inaccurate, and in fact untrue.

I certify that this is a correct statement of the evidence given by me before the Sub-committee of the Trustees on the 22nd instant, marginal alterations being accepted and adopted.

A. W. SCOTT.
27th July, 1874.

THURSDAY, 23 JULY, 1874.

Present:—

H. G. ALLEYNE, Esq., M.D., | E. S. HILL, Esq.,
PROFESSOR LIVERSIDGE.

CHRISTOPHER ROLLESTON, Esq., IN THE CHAIR.

J. A. Thorpe was called in and examined:—

1397. *Mr. Hill.*] You recollect my making some inquiries with reference to the place where the sun-fish was buried? Yes.

J. A. Thorpe.

1398. As to whether you could find the spot? Yes.

23 July, 1874.

1399. Subsequently I gave you instructions, to accompany the Barneses, to examine that spot for what? To find the place where the sun-fish was buried. You told me to see the Barneses that night, and tell them that you would want them the next morning.

1400. Did I tell you to look for any particular thing? Yes, for the sun-fish.

1401. What else? I was not to tell the Barneses what you wanted them for until they came.

1402. And when they did come, to put them at work at the place where they expected to find the sun-fish? Yes.

1403. Were you told to look for anything else? For tubs and buckets.

1404. That were what? That were said to be buried in the hole where the sun-fish was buried. We went and dug up the place, and all that was found was the bone produced, and part of the fish.

1405. Do you recognize this as the bone that came out of the sun-fish? I recognize that as half the breast-bone.

1406. Who sawed it? I helped to saw it; it was frightfully hard.

1407. Do you recognize it by anything else? Yes, by the turbercular surface of the bone.

1408. Do you know that this is the bone? Yes, I could swear to it on oath; and there is no moral doubt that this other stuff was some stringy part of the fish.

1409. Do you know what became of the other half of the bone? Yes; it was taken away with the skin. When we began to manipulate the fish it was cut into halves. We cut each fin off, and we cut right through from the mouth to the breast.

1410. Did you split it in half? Yes, in half; from the mouth down the belly to the tail.

1411. In doing that it was necessary to cut the only bone in the fish? Yes.

1412. The piece of bone you produce now is one half of the bone? Yes.

1413. What else did you find in that hole? There was nothing but an old tin; I think it has been an old packing-case.

1414. Did you find any stinking fish in the hole in the tin case? No; only the kind of fish now produced.

1415. Did you find any ling fish in the tin? No.

1416. You did not examine the hole particularly? No. There is a tin out there.

1417. What remuneration did you get extra for preserving the fish? Nothing.

1418. Did you work overtime? Yes.

1419. You got no extra pay? None whatever.

1420. Were you at any loss? No.

1421. Was there any extra labour employed, excepting of persons who belonged to the institution? None, unless it was Mac, the gardener.

1422. Tell us who were there? The two Barneses, Macnamara, O'Grady, and myself.

1423. You did not get a fraction of extra wages? Not a fraction—I never did.

I certify that this is a correct statement of the evidence given by me before the Sub-committee of the Trustees, on Thursday, the 23rd of July, 1874.

J. A. THORPE.

Robert Barnes was called in and examined:—

1424. *Mr. Hill.*] You recollect going with Thorpe into the paddock to dig out the place where you thought the sun-fish was? Yes.

R. Barnes.

1425. What day was that? Yesterday, the 22nd.

23 July, 1874.

1426. Did you find the place? Yes.

1427. What did you find there? I found two tins of fish.

1428. What fish? It appeared to me to be like salmon or pike. I did not examine it much. It appeared like preserved fish in spirits—spirit specimens.

1429. In what sort of cases was it? Tin packing cases—about 2 feet long, about 10 inches high, and about a foot broad.

1430. How many cases did you find? Two.

1431. What did they contain? Both contained fish.

1432. What else did you find there? We found this stuff on the table, which is supposed to have been fish, and this breast-bone of the fish.

1433. How do you know that is the breast-bone of the fish? I would almost swear on my oath that it is. I helped to cut it.

1434. Do you recognize it by anything else—Has that been cut with a saw? Yes. Here is some of the skin on it.

1435. What are these skins like—crystals? Yes; some are very rough like a file.

1436. How many rib-bones or other bones were there? There are no bones but the breast-bone and the teeth. We did not examine the fins.

1437. Did you find a quantity of this cartilage? There is a tremendous lot of it.

1438. What depth did you go? To the bottom of the hole.

1439. How deep was the bottom? One side might have been 2 feet, and the other side 2 feet 6.

1440. Two to three feet? Yes.

1441. And in that hole you found part of the breast-bone which you helped to saw, and this cartilage? Yes.

- R. Barnes. 1442. And also two tins of what appeared to be fish? They were spirit specimens. I know by the colour of them.
- 23 July, 1874. 1443. Do they smell badly? They smelled like an old spirit specimen.
1444. What was the condition of the cases you found them in? They are very rusty and battered about.
1445. Did they look like old cases? Yes.
1446. Old, worn-out, useless cases? No, not like that.
1447. Were they straight and new? No; they were crooked and bent in—they were battered.
1448. Did you work any extra time in the attempted preservation of this fish? No.
1449. Did you get any extra pay over and above your ordinary pay? No.
1450. Did you receive any fee or anything? Nothing at all. I only received my wages.
1451. This is the only bone you found in that fish? Yes.
1452. How do you account for the other half of the fish? It was sent away in the cart, and the skin was sent away with it in the cart.
1453. You sent the skin away with the other part of the bone to it? Yes.
1454. Were there, to your knowledge, any tubs or buckets used in the curing of that sun-fish? No.
1455. No galvanized iron or other tubs and buckets used at all? No; there was no occasion for them.
1456. Were you there the whole time the fish was being cured? I was.
1457. Working there all the while, you would have an opportunity of seeing what was used? Yes.
1458. And there were no tubs or buckets? No.

I certify that this is a correct statement of the evidence given by me before the Sub-committee of the Trustees, on Thursday, the 23rd of July.

ROBERT BARNES.

25/7/1874.

Henry Barnes was called in and examined:—

- H. Barnes. 1459. *Mr. Hill.*] You went, under the superintendence of Thorpe, to find the hole where it was supposed the sun-fish was buried? Yes.
- 23 July, 1874. 1460. What did you say before that about finding the place? We said that we could find it.
1461. You went to the place? Yes.
1462. You dug a hole there? Yes.
1463. Tell us what you found? We found two square tins of fish which appeared to be like salmon, and what appears to be the fibre of the fish or of banana roots, I do not know which, and what we supposed to be the breast-bone, or the half of it, of the large fish; that is all we found.
1464. What depth did you go down? From 2 feet 6 to 3 feet.
1465. And in that hole you found these two tins, containing what you supposed to be salmon? They look like preserved salmon.
1466. Were they new tins? No; battered.
1467. Was the lid on them? No; they had been cut open.
1468. Is there any fish in the tins now? There were when we dug them out.
1469. Were they fish that had bones? We did not examine them.
1470. Could you not see with your naked eye? Undoubtedly; they had bones of course.
1471. Do you know this bone? Yes.
1472. What do you know of it? I know that we took it out of the hole.
1473. What does it belong to? The sun-fish.
1474. How do you know that? I cut it in two.
1475. Cut the whole of it? No we took it turn about.
1476. Take the bone in your hands and say what it has been cut with? With a hand-saw.
1477. Do you recognize it at all as part of the bone of the sun-fish? Yes, I could swear to it.
1478. How many ribs or other bones had it? That is the only bone.
1479. The only bone that you saw in that fish? Yes.
1480. Is this the fibre you suppose to be like banana fibre? Yes.
1481. Is it anything like the cartilage of the sun-fish? Not now.
1482. Do you think it is? That I cannot say.
1483. Is there plenty of it there? Yes.
1484. These two tin cases you allege contain fish? Yes, scaly fish.
1485. What is the size of these cases do you say? As near as I can guess, they are 2 feet long, and about 10 inches broad and deep.
1486. Were you at work at that sun-fish all the time it was being cut up and manipulated? Yes.
1487. Had you any overtime to it? No.
1488. You worked in your ordinary time? Yes.
1489. Did you get any present or extra pay for what you did? No.
1490. Did you get anything at all given to you besides your wages? No.
1491. No money extra for working at that fish under any circumstances at all? No, under no circumstances at all.
1492. *Chairman.*] Was there any extra labour employed in connection with that attempt to preserve the sun-fish? None whatever, with the exception of Macnamara the gardener.
1493. *Mr. Hill.*] Who were present assisting at the cutting up of the sun-fish? There were Thorpe, my brother, myself, and O'Grady for a short time.
1494. *Chairman.*] What was Macnamara doing there? He was wheeling away the refuse.
1495. Were there any tubs or buckets employed in the preparation of this sun-fish, or to carry away the flesh? None that I saw.
1496. How was it carried away then? In the barrow, and we had a can—a round can, about 2 feet 6 inches high and about 20 inches across; that was the only tin.
1497. Was it a galvanized bucket? No, a round specimen-can.
1498. What became of that? I believe the same can is in the garden now.
1499. Was it a galvanized tub, or anything of that kind? No.
1500. *Mr. Hill.*] Had the can a handle to it? No.

1501. In digging this hole did you discover anything besides these tin boxes, this fibre, and the fish-bone? *H. Barnes.*
No. 23 July, 1874.
1502. No tubs, or buckets, or anything of that sort? No.
1503. *Dr. Alleyne.*] Did you find the tall can that you have spoken of in the hole? No.
1504. *Mr. Hill.*] Is that in the garden now? I do not know. It was a short time afterwards. It was used in the garden afterwards.
1505. That can was not buried? No.
1506. *Chairman.*] You found no tubs at all in the hole? No.
1507. Nothing but these old tin boxes? No.
1508. And you say that nothing of the kind was used in the attempted preservation of the fish? No; the flesh was taken away with the barrow.

I certify that this is a correct statement of the evidence given by me before the Sub-committee of the Trustees, on Thursday, the 23rd of July, 1874.

HENRY BARNES.
25/7/1874.

James Macnamara was called in and examined:—

1509. *Mr. Hill.*] At the time that you were taking away the sun-fish, you have stated, I think, that there were no buckets or tubs used? Yes. *J. Macnamara.*
23 July, 1874.
1510. Did you work over-time at that? Only the same as the rest.
1511. Did you get any extra pay? No.
1512. No present? No.
1513. No money? Nothing at all.
1514. Did you get anything given to you? Nothing at all.
1515. *Dr. Alleyne.*] You got nothing beyond your ordinary wages? No.
1516. You get two guineas a month? It is according to the work. Sometimes I might get three. I get paid at the rate of 6s. a day.
1517. How many days were you employed in connection with the sun-fish? Three or four days—perhaps two or three—I could not say how many.

I certify that this is a correct statement of my evidence given before the Sub-committee of the Trustees, on the 23rd of July, 1874.

his
JAMES + MACNAMARA.
mark.

James Chapman was called in and examined:—

1518. *Mr. Hill.*] You are a member of the Police Force? Yes. *J. Chapman.*
23 July, 1874.
1519. You are one of the police stationed here in charge of the Museum alternately with others? Yes.
1520. Within the last few days or nights have you seen the Curator go out? On Saturday night last I did.
1521. What date was that? On the 18th.
1522. Going out from the institution? Yes.
1523. At what time? About half-past 6 o'clock.
1524. Was any person with him? Mr. Cooper.
1525. How do you know it was Mr. Cooper? He gave his name to the servants as Mr. Walter Cooper.
1526. They went out together? Yes.
1527. What time did they return? Mr. Kreffit returned about twenty minutes to 10 o'clock.
1528. Alone? Yes, alone.
1529. Did he make any remark to you? Yes.
1530. And you know that Mr. Cooper sent up his name? Yes.
1531. But did not go up-stairs? Yes, he did.
1532. They came down together? Yes.
1533. They went away together? Yes, and Mr. Kreffit came home at half-past 9 or twenty minutes to 10 o'clock.
1534. Since you have been in charge of the institution have you seen Mr. Kreffit go out at night before that time? Once before.
1535. Do you recollect the day? No; it was about four or five nights before the 18th.
1536. Do you know what time he went out, and how long he remained away? He left between 8 and 9 o'clock, and he did not return until after I had been relieved.
1537. At what time were you relieved from duty? At 10 o'clock.
1538. Have you seen Mr. Cooper frequently here? Yes, several times; once the night before, and two or three times in the day-time.
1539. Have you ever seen Mr. Cooper or Mr. Kreffit bring a book home, or a parcel about the size of that minute-book? No, I never saw either of them with a parcel. I take my turn here on duty with others.
1540. Since you have been on duty here have you seen any medical man coming to attend the family? I have seen Dr. Milford come here several times.
1541. In the day-time? Yes; not at night.
1542. Do you know of any one being sick in the establishment? I have heard that Mrs. Kreffit was ill, and I heard also that Mr. Kreffit was ill in bed. At half-past 1 o'clock yesterday I heard Mr. Kreffit on the stairs talking to the postman who brought some letters. He was up and dressed yesterday when the postman came.

I certify that this is a correct statement of the evidence given by me before the Sub-committee of the Trustees, on the 23rd of July, 1874.

JAMES CHAPMAN.
21/7/1874.

George

George Bennett, Esq., M.D., was called in and examined :—

- G. Bennett, Esq., M.D. 1543. *Chairman.*] The committee have been anxious to obtain the benefit of your evidence in consequence of your long and intimate connection with the affairs of the Museum, and we thought that you probably could throw some light upon matters now in question. You are aware that it was considered desirable, at a meeting of the Trustees, held in the course of last month, to make some investigation into the charges against the Curator, which came out in the evidence taken before the Committee of the Legislative Assembly? Yes.
- July, 1874. 1544. And that a sub-committee was appointed for the purpose? Yes; I was in the chair at the time it was proposed and carried.
1545. You have had frequent communication with the Curator? Yes.
1546. Have you ever observed, or have had reason to believe, that he has been unfit to discharge his duties from drinking? Not in one single instance that I have seen.
1547. Have you ever heard of his having been so? I never heard of it until it was brought forward at the Committee of the Legislative Assembly. I have seen him at all hours of the day, and, during the last twelve months, even occasionally at night, and under circumstances of great excitement, but I never saw him in one single instance intoxicated. I have seen nothing more than the usual excitement which is perceptible in all Germans and foreigners on occasions.
1548. Do you know anything in connection with the second charge which is preferred against him—that of proposing to the Barneses to bring a false charge against a man named Post? I was present on the committee of investigation; and the whole of the evidence may be seen on the minutes of the Museum.
1549. Had you reason to believe that that man was falsely charged? Not at all. I considered that Mr. Krefft was to blame in many instances, and we reprimanded him; and it was arranged that Post should be dismissed, but he resigned in the mean time.
1550. Do you know anything of indecent photographs referred to in one of the charges? No. The first time I saw them was here. Mr. Krefft has shown me an immense number of photographs of all descriptions, but I never saw nude figures in his possession, except the photographs of natives.
1551. You never saw them until they were brought forward here in the Board-room? No; and I was somewhat surprised at it, because they are things he might have shown to a medical man. I have a great number of nude figures, but not so indecent as one of those; but there are similar photographs from the Pompeii collection. They can be purchased on the Continent but not in England, because they won't allow them to be landed there.
1552. Do you know whether it has been the practice of the servants of the institution to make and set up cases for private individuals out of Museum time and materials? It is very seldom if ever done. In fact I never knew an instance of its being done.
1553. Do you know anything of a practice which has been charged against the Curator, of taking receipts from one of the men employed, under the assumed name of Bradley? I am not aware of that at all. I never heard of it before.
1554. Do you know anything of a fossil jaw that was sent here to be put together to go Home? Yes; that was my property. I lent it to the Museum to make a cast for the Museum.
1555. That is the jaw of the diprotodon? Yes; considered by Mr. Krefft a new diprotodon. The jaw was much smaller. Owen considers it may be a female, but he won't allow it to be another species.
1556. Was it a perfect specimen when you sent it here? No; it was all in fragments.
1557. But there was sufficient of it to allow of its being put together? That was rather an extraordinary case. The jaw was very imperfect, but the Curator managed to get nearly all the pieces and to form a perfect jaw. It was a surprising piece of ingenuity.
1558. *Mr. Hill.*] Whose ingenuity? Mr. Krefft's.
1559. In restoring that jaw? Yes.
1560. *Chairman.*] The fossil was set up for yourself? It was set up to make a cast of it for the Museum, and then the original pieces were to be sent Home to Professor Owen.
1561. Did you see it when it was packed, or being packed, to be sent away? No, I saw it when it was ready to be packed.
1562. Did you hear of it being smashed? Yes; Mr. Krefft told me of it himself. He said that it would arrive at Professor Owen's broken. He said, "Owen will find it in pieces when it arrives Home. Owen will never see that jaw perfect, but he will be able to restore it again." Then he told me he did not put in the upper restored part because the box was not large enough to contain it.
1563. He had broken or reduced it? Yes, in packing; in knocking down the lid of the case. After that Dr. Cox told me of it. He said that he would bet me a new hat that it would arrive broken. I said I knew that it would because Mr. Krefft had told me.
1564. Do you know in what state it has arrived Home? Professor Owen simply mentions that it had arrived.
1565. That is the purport of the letter you received from Professor Owen? Yes; the letter was written on the 13th of April.
1566. Have you got the letter here? No, I have not, but you can see it at any time. He does not mention it further than that he had received it. (*The witness subsequently brought the letter and handed it to the Chairman.*)
1567. You have no reason to suppose that there was a wilful destruction of the fossil? There could not be. I had already sent photographs of it Home, and from the photographs Professor Owen said that he did not consider it would be a new species. His letter does not mention more than that he had received the jaw of which the photographs had been sent before; but Mr. Krefft considered that when he saw the original he would think it was a new species. Mr. Krefft could have no object in breaking it, because he would in that way be destroying his own chances of Professor Owen confirming his opinion.
1568. You have no reason to suppose that it was broken on purpose? No. I considered that it would go to pieces because of the number of minute fragments of which it was composed, and the plaster might have been bad.
1569. The jaw was in fact your property? Yes.
1570. It was not sent by the Museum? No; we have casts in the Museum. I went up to Queensland entirely to assist Professor Owen in this large work of his on fossil mammals. I brought down a large collection of fossils which I sent to Mr. Krefft that he might look at them. He said, "Many of them are

23 July, 1874.

are very valuable; don't let them go to Owen until we get casts of them for the Museum." For the last year and a half I have been receiving fossils. They have been brought here so that the Museum could have casts of them before sending them Home to Professor Owen. They have always been brought to the Museum; and the skeleton in the Museum has been principally set up from them.

1571. *Mr. Hill.*] Is that the one that is called *Bennettii*? Krefft calls it so; but it is not acknowledged yet as a new species by Owen. It ought to be labelled *Diprotodon australis* at present.

1572. Do you know of any casts that have been made from the many bones you have sent here? I know that a great many have been made. The one labelled *Bennettii* was made from several of them.

1573. In regard to that diprotodon, do you know what the upper jaw was prepared from? A good deal of that diprotodon was made from the original casts and a good deal was restored.

1574. Do you know what the upper part of the cranium was like? I do not know anything about that. I only know about the lower jaw.

1575. Was there anything peculiar in the formation of that lower jaw which caused Mr. Krefft to associate it with any other animal? Yes; but that is merely Mr. Krefft's opinion.

1576. Do you know of any other animal from which he made a cast to fit that lower jaw? I think the wombat.

1577. You sent in the fossil bone, the lower jaw of the diprotodon, and Mr. Krefft associated with it here, to make it a whole, the upper part of the cranium of what you think was the wombat? Yes.

1578. How can you get at the form of a skull if you have only the lower jaw? If you put the lower jaw of the koala or native bear with the lower jaw of this diprotodon, you will see that they are very much alike.

1579. You believe it is a connecting link between the wombat and the koala? Yes.*

1580. Your letter from Professor Owen does not state the condition in which the jaw had arrived? No. In another letter, acknowledging the receipt of another fossil I sent, Professor Owen alludes to that being in pieces; but in regard to this he simply says that he has received the jaw of the diprotodon.

1581. Do you know anything as to the practice which the Curator has carried out of sending donations away out of the Museum to other countries? Yes; under the exchange committee.

1582. Are you aware that he ever sent donations away from the Museum in his own name? I am not aware that he has, excepting that instance of Mr. Buttrey's, which I brought before the Board of Trustees here myself some years ago.

1583. You are not aware that he has made it a practice of giving things away belonging to the Museum in his own name? No, except in the way of exchange.

1584. You have been a member of the exchange committee? Yes, almost from the first.

1585. Who were with you on that committee? Mr. Stephens and Dr. Cox.

1586. Were there three members obliged to be present? No, one or two would be sufficient to form a quorum, or to sign a memorandum that would be sufficient. The meeting would be arranged to take place here at 4 o'clock. Sometimes Dr. Cox would not be here, and then I would run over the specimens and sign the memorandum, and when that was signed by Dr. Cox or Mr. Stephens it would be sufficient.

1587. Was there an exchange-book kept? Latterly.

1588. Within how long? The last twelve months. We arranged that there should be an exchange-book, and that it should be signed by those present at the meetings.

1589. Is that the exchange book now before you? Yes.

1590. Was that invariably used? The entry on the second page is signed by me. The entry on the eleventh page is signed by two of us.

1591. Was it invariably used at the exchange committees? Yes, always.

1592. And everything entered in it? Yes.

1593. But no one member authorized exchanges—two were required? I think one, because to some of the entries I see my signature only.

1594. You think then that two could do it? Yes.

1595. Have you yourself exchanged specimens with the Museum? Never. I never sell or exchange them—never in my life. I have a great aversion to it.

1596. You have never had anything from the Museum, either by way of exchange or otherwise? No.

1597. Have you ever had anything done by the employés of the Museum in setting up specimens? Never in any instance. I have lent them my specimens to make casts from for the Museum, and then they were packed up and sent to the wharf, and I have paid the freight in every instance.

1598. You have at different times lent specimens to the Curator of the Museum to take casts from? Yes, fossils; for the last two years I have done that.

1599. Before you sent them away to England? Yes; any that he thought of sufficient value to retain casts of for the Museum he could have for that purpose, but I wished Professor Owen to have the originals. They were produced here at the meetings of the Trustees. To save time and trouble I used to have them sent up here, and they were unpacked when I came. Mr. Krefft would then select those specimens which he thought valuable for casts, and if there were duplicates he retained them. I have a very large collection now which has not yet been sent Home.

1600. *Mr. Hill.*] Fossils? Yes.

1601. Since the noise that has been made about the breaking of that fossil bone you have not sent any here, have you? No.

1602. Since that row about the breaking of the bone you mentioned to me that you would never send any fossils here again? Yes.

1603. And you have kept to that by sending them Home? Yes, by the last mail steamer I sent some.

1604. *Chairman.*] Do you know whether any specimens from the Museum were sent on board the "Atalante"? I do not know.

1605. Not with the knowledge of the exchange committee? No.

1606. Or of the Trustees, as far as you know? I should say not.

1607. Nor to the "Challenger" or "Arcona"? I sent some fossil bones to the "Challenger"—a didunculus and other birds, my own property.

1608. *Mr. Hill.*] It was alleged in the Assembly that the ship got presents from the Trustees? The only presents

* NOTE (on revision).—It is my opinion that the skeleton of the koala will compare with the diprotodon as far as regards the head and vertebrae, but the extremities approximate to those of the wombat.

G. Bennett,
Esq., M.D.
23 July, 1874.

- presents they got from Mr. Krefft were photographs of the New Guinea natives. They were his own property.
1609. *Chairman.*] There is nothing that you have been instrumental in exchanging that has not gone through the exchange book? Nothing. And the exchanges are generally published in the reports.
1610. Were you present at the meeting of Trustees, when the Curator was instructed to obtain from the Government Printing Office twenty-four copies of the Reports of the Select Committee? No; I was not present at that meeting.
1611. Were you one of the Trustees who were appointed or invited to wait upon the Colonial Secretary? No; I was not.
1612. You know nothing of it? No. I recollect Mr. Krefft asking me whether I thought he ought to go, and told him that he had better inquire whether it was proper for him to attend the meeting or not.
1613. You were not at the Museum on that day? No.
1614. The Curator has been unwell;—has he not? I have not been attending him. He sent for Dr. Milford. I attended Mrs. Krefft in her confinement, and that is the reason I was not here on the 2nd of July. I was up all night.
1615. Has Mr. Krefft been too ill of late to attend to his duties? I think it would have been much better for him had he gone away altogether. He has been very depressed and very excitable.
1616. Has he been down to you to consult you on any matters in connection with this inquiry? No; I would not listen to him in that respect. One day I was seeing Mrs. Krefft, when he told me about the minute-book, and I told him the best thing you can do is to do what you are ordered and send it.
1617. Did you ever see this minute-book, excepting on the table of the Board-room? Never.
1618. Did Mr. Krefft consult you at all as to the manner in which he should fill up the proceedings of the Board meeting of the 5th June? No, he never consulted me about filling it up on any date. I would not interfere in the matter.
1619. Did you ever see this minute-book at all? No; with the exception of one instance, when I asked to refer to that matter of Mr. Macleay's, about the birds of Australia. I went to look on that occasion at the date, and to see whether they were returned or not.
1620. Will you look at this entry on the minutes of 5th June, respecting Reports of the Select Committee. What is your opinion of that entry;—do you think that the word "carried" was the original entry, and that the word "not" before it has been written in since? It appears to me that the word "not" has been written in since, and that the words "there being no seconder.—G.K." have been added afterwards. I was present when these minutes were read. Exception was taken to them as being incorrect.
1621. Have you reason to think that Mr. Krefft has done his duty honestly, and efficiently to the Museum? It is difficult to judge on every occasion. I have not been so much in the Museum as to judge of that. As far as I could judge of Mr. Krefft, I should say he is a very hardworking and efficient curator, and of high scientific attainments. From what I have recently seen and heard, I do not think that he is fit to take charge of an establishment; but I think he would work well under any competent director who could control him. I do not think he is fitted by temper, and he is wanting in method. He would act remarkably well under any other man, and that is the case with many foreigners. They work better under control. Under Pittard he worked remarkably well.
1622. You think that Mr. Krefft's shortcomings are attributable in some measure to the lax supervision of the Trustees? I think a great deal so; and to the want of some one to superintend him.
1623. *Mr. Hill.*] The want of some one to bring him to book occasionally? Yes.
1624. *Dr. Alleyne.*] You think he is incompetent to take charge of the establishment? To be at the head of it. His services and knowledge of natural science will be very valuable to the institution. I think you will never get anyone to work like him.
1625. You said the matters in regard to Tost are on record? They ought to be. There was a Sub-committee appointed—Mr. Scott, Dr. Macfarlane, and myself. We investigated the matter and took evidence. The report was sent in to the Trustees.
1626. *Mr. Hill.*] You were the medical attendant of Mrs. Krefft when the misfortune occurred? Yes.
1627. Did you see her on the following day? Yes.
1628. Was Dr. Milford called in? Not at that time.
1629. Did you see Mr. Krefft on the following day? Yes; I think I saw him on the following day. I did not always see him when I saw Mrs. Krefft.
1630. What state of health was he in on that day? He was very depressed altogether.
1631. Do you know whether Dr. Milford was attending him at all? Yes, that very afternoon I think it was. The day that Mrs. Krefft was confined he sent for Dr. Milford to see him.
1632. Are you aware that he wrote a long letter to the Board on that day? No, I am not.
1633. Are you aware that Dr. Milford sent a certificate down here to say that he was completely prostrated, and wanted a week? I heard so.
1634. Would you think a man was completely prostrated who was able to take a pick-axe and break open the place the next day? Not unless he had had a good night's rest.
1635. Did you see Mr. Krefft on that particular day down stairs in the hall of the institution, when he went to resist the constables or the men on that day? No.
1636. Do you recollect when he went to seize the visitors' book, when O'Grady took it from him, and you said, "Do not be a fool"? I heard some confusion, and when I went down I saw him trying to get the book from O'Grady. I recollect that perfectly, and I told him he had no right to take that book.
1637. You said, "Don't be a fool" and "Leave it with him"? Yes.
1638. Did you see anybody else here at that particular time, when you advised him not to carry out that intention? No; I was leaving the building.
1639. Did you see Mr. Walter Cooper? I hardly know him by sight.
1640. Did you see him? No.
1641. It was at your instance that that book was given back to the messenger? Yes.
1642. Did you ever see the minute-book, or any of the written books, off the establishment? Never in any single instance.
1643. Do you remember the copying-press letter-book? Yes.
1644. How long is it since you saw that book? It is some time since. I have never seen it out of the establishment.
1645. Mr. Krefft refers to you in regard to his health. He says in his letter if you were there you could tell how ill he was. Were you attending him at that time for anything in particular? No. 1546.

1546. Do you know anything of him then? Excepting that he was depressed, and was suffering from a severe cold. G. Bennett,
Esq., M.D.

1547. Within the last few days have you heard of or attended Mr. Krefft for diphtheria? No, Dr. Milford is attending him. 23 July, 1874.

1548. Are you attending the little boy? No; they brought him down to me, and he appeared to me as if whooping-cough was coming on. I have not seen him since.

I certify that this is a correct statement of the evidence given by me before the Sub-committee of the Trustees, on Thursday, the 23rd instant.

GEORGE BENNETT, M.D.,
25/7/1874.

1875.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

AUSTRALIAN MUSEUM.

(OPINION OF CROWN LAW OFFICERS RESPECTING APPOINTMENT OF CURATOR.)

*Ordered by the Legislative Assembly to be printed, 20 April, 1875.***MEMORANDUM for the Minister of Justice as to whether the appointment of Curator of the Australian Museum is vested in the Trustees or in the Executive Government.**

By the 7th section of 17th Vict. No. 2, the Trustees have full power to appoint all officers and servants of the Museum, and have the entire management and superintendence of the affairs, concerns, and property of the Museum; and, as if these powers were not sufficiently large and comprehensive to enable the Trustees effectually to discharge their duties, there is an extraordinary provision, making it lawful for the Trustees, in all cases not provided for in the Statute itself, to act in such manner as shall appear to them best calculated to advance the objects of the Institution. It is now contended that, since the passing of the Constitution Act, the power of appointment of their officers and servants has been taken away from the Trustees of the Museum; and that the appointment to all public offices under the Government, whether salaried or not, is vested in the Governor.

The first question to be considered is, whether the Curator of the Museum is, in the meaning of this provision, the holder of a public office; and as he is neither appointed by the Government nor engaged in a department of public employment over which they have any control or superintendence—as they have nothing whatever to do with the management of the affairs, concerns, and property of the Museum—I cannot see how he is to be regarded as the holder of a public office, within the meaning of this section.

It would be clearly an inaccurate form of expression to describe a Professor in Sydney University as a public officer. He is individually in no kind of communication with any department of the Government, is in no way under their control, and has no knowledge of any other superintendence or management than that exercised by the Senate, which has full power to appoint and dismiss all professors, tutors, officers, and servants belonging to the University (14 Vic. No. 31, sec. 8), and has the entire management and superintendence over the affairs, concerns, and property of the University. And it appears to me that the relation of the Curator to the Trustees is precisely that of a Professor to the Senate of the University. The powers of the Trustees are as nearly as possible those which the University Incorporation Act bestows upon the Senate. I am clearly of opinion that the office of Curator of the Australian Museum is not one of those offices the right to appointment to which by the Trustees of the Institution has been in any way affected by the 37th section of the Constitution Act.

I am also of opinion that the Trustees, having the entire management of the affairs, concerns, and property of the Institution, and having full power of appointment of all officers and servants of the Museum, had necessarily, if they were satisfied of the delinquency of any officer or servant, the power of dismissal; and that this power is in no way (nor could be in any way) affected by their consenting to the confirmation of their appointment by the Governor: their powers are under the Statute, and can only be affected by some other Act of Parliament. In this case the Trustees appear, after mature consideration, and as the result of an elaborate investigation undertaken by themselves, to have been satisfied that there was evidence that the Curator was a person of habitually intemperate habits, that he had proposed to bring a false charge of theft of public property against a servant of the Museum; that he had permitted indecent photographs to be taken in the Museum; that he had falsified documents to deceive the Trustees, and made false returns in the visitors' book of the Museum. These are only some of the charges contained in the Report of the Sub-committee (sent herewith) appointed by the Trustees on the 16th June, 1874, to inquire into certain charges against the Curator.

I do not think it can be contended that if the Trustees, who have the entire management of the Institution, and who are authorized to act in such manner as shall seem to them best calculated to advance the objects of the Institution, were satisfied that these or any such charges as these were established, they had not the power, for the protection of the public property and public character of the Institution, to dismiss the servant against whom such charges were, in the judgment of the Trustees, established.

I am clearly of opinion that the Trustees, and the Trustees alone, had the power to dismiss the Curator.

March 26, 1875.

WILLIAM B. DALLEY,
Attorney General.

Curator of Australian Museum—as to whether the appointment is vested in the Executive Government or in the Trustees.

WE are of opinion that the office of Curator ought to be left in the hands of the Trustees of the Museum.

The Trustees are incorporated by the Act 17 Vic. No. 2,—the 7th section of which gives the Trustees full power to appoint all officers and servants of the Museum. It was contended, however, by the late Government, as we collect from the accompanying papers, that the 37th section of the Constitution Act (18 and 19 Vic. c. 54) placed the appointment of Curator in the hands of the Governor and Executive Council—either as repealing the 17 Vic. No. 2, s. 7, or on the ground that it was a new office with a salary separately voted by the Parliament, the appointment to which ought therefore to be in the hands of the Government instead of the Trustees. This latter ground we do not think of sufficient weight; for the Curator, when appointed, is clearly an officer of the Museum within the 7th section already referred to, and as such under the direction of the Trustees. Unless, therefore, the 7th section is repealed by the 37th section of the Constitution Act, the appointment must still rest with the Trustees. Now, if the 7th section be repealed, the 5th section of the same Act, which provides for the filling up of vacancies in the Board of Trustees, must be also repealed, for the 37th section of the Constitution Act applies to unsalaried, as well as salaried, officers. There are similar provisions also in the Act incorporating the University (14 Vic. No. 31); and we hardly think that it would be contended that the appointment of a Professor—supposing even a Professor to a new department—has been taken out of the hands of the Senate, and transferred to the Government. The election of a member of the Senate to fill a vacancy, between the passing of the Constitution Act and the passing of the 24 Vic. No. 13 would if Mr. Cowper's view were correct be void.

We are, therefore, of opinion, independently of all considerations that might affect the proper management of the Institution, that the 37th section of the Constitution Act has not taken away from the Trustees the power of appointing to any office under their direction.

The Trustees, we think, suggest the proper course to be followed, viz. :—That the amount of the Curator's salary should be placed on the Estimates as an addition to the Endowment Fund; but whether that course be pursued, or the salary voted annually, we think that, by law, the appointment is vested in the Trustees.

JAMES MARTIN,
Attorney General.

PETER FAUCETT,
Solicitor General.

11th November, 1863.

1875.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

GERARD KREFFT.

(PETITION OF.)

Ordered by the Legislative Assembly to be printed, 5 July, 1875.

To the Honorable the Speaker and the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The respectful Petition of the undersigned the Curator of the Australian Museum,—

HUMBLY SHOWETH:—

That your Petitioner is a loyal subject of Her Majesty the Queen.

That your Petitioner is a duly appointed Government servant, and that his appointment as such could only be made by His Excellency the Governor, with the advice of the Executive Council.

That your Petitioner was so appointed, on the 5th May, 1864, to the office of Curator of the Australian Museum, with a salary of five hundred pounds per annum and quarters, and at the recommendation of the Board of Trustees.

That the Trustees, under paragraph 9 of their Annual Report for the year 1864, distinctly state that your Petitioner's appointment had been subject to the approval of His Excellency the Governor and Executive Council, and that your Petitioner can only be dismissed from his office by the same authority.

That the salary of your Petitioner is subject to a yearly vote by your Honorable House, and that it is not derived from the Museum Endowment Fund, over which the Trustees have absolute control.

That the Trustees can appoint and dismiss any officer paid out of this fund, and that the Professors of the University can be dealt with in the same manner, because their salary is not subject to a yearly vote of Parliament.

Your Petitioner desires to draw the attention of your Honorable House that he has held his office of Curator for a period of nine years; that he had been previously appointed Assistant Curator, and at Mr. Pittard's death Acting Curator.

That the Trustees had applied to the Government to be allowed to appoint a Curator on this occasion, but that Mr. Cowper's Law Officers decided that, in accordance with the Constitution Act, His Excellency the Governor, with the advice of the Executive Council, could alone appoint.

Your Petitioner begs to state that the Trustees themselves have acknowledged your Petitioner's zeal and ability, and that no charges of any kind were brought against him, except such as transpired first at a Committee appointed by your Honorable House to inquire into the management of the Museum.

That these charges were brought by inferior servants; that your Petitioner refuted these charges, but that some of the Trustees, hostile to your Petitioner, desired to inquire into them.

That your Petitioner declined to be tried by his enemies (a section of the Trustees and their willing servants), with whom the charges generated.

That he demanded a defined list of them, with the names of his accusers, but that this was refused.

That the Trustees printed the evidence taken before them, which is of a most libellous character, at Her Majesty's Printing Office, and circulated it; but that they refused a copy of the evidence to your Petitioner, who was able to prove it utterly false.

That the Trustees considered they had the right to dismiss your Petitioner, and that the section hostile to him did so.

That they did not give notice to the Members of the Government who have seats on the Board, but that they dismissed your Petitioner forthwith.

That the Government, when appealed to by the Trustees to sanction their action, refused to have anything to do with their illegal proceedings.

That the Trustees then demanded the assistance of the police to remove your Petitioner, but that this was also refused by the Government.

That the Trustees then drew up a paper ordering a man named Charles Pearl to remove your Petitioner and his family, goods, and chattels, from the Museum premises; that Mr. E. S. Hill, a Magistrate of the Colony, engaged a number of pugilists, and ordered them to break into your Petitioner's private apartments; that Mr. Hill had no warrant or any authority whatever to act as he did, but that he nevertheless caused your Petitioner to be ejected into the public street, with his family, servants, and visitors.

That your Petitioner brought an action against Mr. Hill for trespass, in the Supreme Court of the Colony, and gained a verdict with £250 damages, the Counsel for the defendant distinctly stating to His Honor the Judge that your Petitioner continued to receive his salary, which was not true.

That the Trustees still retain your Petitioner's salary for the month of August, 1874, and that your Petitioner has not received any pay since that time.

That your Petitioner has the right to order the payment of his salary to any agent, and that he desired the Treasury to pay it into the Trustees' account, who had always paid him with their cheque monthly when your Petitioner was paid out of their endowment as Assistant Curator. On this account only was the cheque payment continued, and when your Petitioner demanded direct payment at the Treasury he was informed that this could not be done then.

When applying to the Minister for Justice, your Petitioner was informed that his case was *sub judice*, and nothing could be decided.

Your Petitioner did not bring an action against the Trustees, but only against Mr. E. S. Hill, for trespass, and the learned Judge distinctly laid it down that Mr. Hill acted wrong; that your Petitioner's appointment rested solely with His Excellency the Governor and Executive Council, and that by the same authority only your Petitioner could be dismissed.

The defendant, Mr. E. S. Hill, has obtained a *rule nisi*, but the argument whether he is to have a new trial has not come on, having been twice postponed.

Your Petitioner and his family have suffered great hardship through this delay of the law, and your Petitioner prays your Honorable House to cause his salary to be paid by the Treasury, because it must be clear to your Honorable House that your Petitioner remains a duly appointed Government servant until His Excellency the Governor, with the advice of the Executive Council, have dismissed him.

Your Petitioner desires to point out to your Honorable House that, through the printing at the Government Printing Office of the slanderous and false evidence taken before the Trustees' illegal sub-committee at the Museum, your Petitioner's reputation has greatly suffered; but for this your Petitioner would have been able to support his family comfortably. The Trustees were well aware of the damage done to your Petitioner's character and to his honorable name; but, not satisfied with that, they have sent into your Honorable House two Annual Reports full of false statements, one of which is not even dated, and is not the Report submitted to the Board of Trustees. The Report for 1874 is also full of misrepresentations; and, by attaching the libellous and false statements of a number of insubordinate servants to a public document without giving your Petitioner an opportunity to prove them utterly without foundation, the Government has deeply wronged an old and faithful public servant, who now approaches your Honorable House and prays for speedy redress and the payment of the arrears of his salary.

Your Petitioner's wife is laid upon a bed of sickness; the clothes even she urgently requires, and which remain in your Petitioner's rooms at the Museum, are refused to her (under some paltry excuse) by Mr. E. S. Hill, a Magistrate of the Colony, who, it appears, has usurped all the powers of the Corporation, which has no right to delegate their authority to individual members, for the special purpose, it appears, to irritate a poor sick woman, who has already lost two children through the persistent worry of these unfeeling and vindictive men.

Your Petitioner appeals to every husband and father of your Honorable House to assist and obtain speedy redress for all the wrongs your Petitioner has suffered, and he prays that before all other things your Honorable House will take steps to secure to him the salary voted by your Honorable House.

And your Petitioner will ever pray, &c., &c., &c.

GERARD KREFFT,

Curator of the Australian Museum; Fellow of the Linnean Society of London; Fellow of the Royal Society of New South Wales; Corresponding Member of the Royal Society of Tasmania; Honorary Master and Fellow of the German Academy of Frankfort-on-Maine; of the Royal Geographical Society of Saxony; of the Malac Zoological Society of Frankfort-on-Maine; of the Society Humanitaire of Bordeaux; of the Naturalists Society of Hamburg, Bremen, and Frankfort; of the Imperial Geological Society of Austro-Hungary at Vienne; and of the Zoological Society of London; and Chevalier of the Order of the Crown of Italy; holder of two Gold, two Silver, and three Bronze Medals awarded for exhibits in the Colony, France, and England.

Australian Museum Curator's Temporary Office,
230, Palmer-street.
Sydney, 11th May, 1875.

1875.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

AUSTRALIAN MUSEUM.

(CORRESPONDENCE, &c., RESPECTING APPOINTMENT AND DISMISSAL OF CURATOR.)

Ordered by the Legislative Assembly to be printed, 11 May, 1875.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 12 November, 1874, That there be laid upon the Table of this House,—

- “ (1.) Copies of all Minutes, Correspondence, and other Papers relating to the appointment and dismissal of the late Curator of the Museum, Mr. Gerard Krefft.
- “ (2.) Copies of the Report of a Committee of the Trustees of the Australian Museum, appointed by the Board of Trustees to investigate certain Charges made against the late Curator, and of the Evidence taken before the said Committee on that inquiry.
- “ (3.) Copies of the Minutes of all Meetings (Special and General) of the Board of Trustees, from the appointment of the aforesaid Committee of Inquiry until the final dismissal of Mr. Krefft.”

(Captain Onslow.)

SCHEDULE.

NO.	PAGE.
1. Acting Curator and Secretary to Colonial Secretary, forwarding copy resolution passed at Special Meeting of Trustees of Australian Museum, respecting appointment of Curator. 8 January, 1863	3
2. Same to same, requesting reply to No. 1. 10 March, 1863	3
3. Principal Under Secretary to Secretary, Crown Law Offices, requesting opinion of Law Officers as to appointment of Curator. 3 November, 1863	3

33. Under Secretary, Department of Justice, &c., to Acting Secretary, in reply to No. 26. 7 October, 1874	14
34. Acting Secretary to Under Secretary, Department of Justice, &c., further in reply to No. 27. 28 October, 1874 ...	14
35. Acting Secretary to Under Secretary, Department of Justice, &c., forwarding copies of minutes of all Meetings (Special and General) of Board of Trustees from appointment of Commission of Inquiry until final dismissal of Mr. Krefft. Enclosure D 10 February, 1875	14

CURATOR, AUSTRALIAN MUSEUM.

No. 1.

THE ACTING CURATOR AND SECRETARY, AUSTRALIAN MUSEUM, to THE COLONIAL SECRETARY.

Australian Museum,
Sydney, 8 January, 1863.

SIR,

By direction of the Trustees of the Australian Museum, I have the honor to enclose a copy of a resolution passed at a special meeting of the Board, held this day, and to request that you will have the goodness to communicate to me the decision of the Government, for the information of the Trustees.

I have, &c.,
GERARD KREFFT,
Acting Curator and Secretary.

COPY of a resolution passed at a special meeting of the Trustees of the Australian Museum, held this day,
January 8th, 1863.

Moved by Alfred Roberts, Esq., seconded by William Macleay, Esq., and carried unanimously,—

That notwithstanding the exertions of the Acting Curator, the state of the Museum urgently requires the services of a Curator.

That a letter be addressed to the Honorable the Colonial Secretary, requesting to know whether the amount voted by the Legislature for the salary of a Curator will be paid by the Executive to such person as may be appointed by the Trustees.

That previous to taking any measures for the selection and appointment of a Curator, the Trustees are willing to submit their proposed course of proceeding for the information of the Government.

I certify this to be a correct copy from the Minutes of the Board.

Australian Museum,
January 8, 1863.

GERARD KREFFT,
Acting Curator and Secretary.

No. 2.

THE ACTING CURATOR AND SECRETARY, AUSTRALIAN MUSEUM, to THE COLONIAL SECRETARY.

Australian Museum,
Sydney, 10 March, 1863.

SIR,

By direction of the Trustees of the Australian Museum, I beg to call your attention to the letter which I had the honor to address to you by desire of the Trustees on January 8th, A. C. and to request the favor of an answer at your earliest convenience, because the interests of the Institution, as already pointed out, might necessarily continue to suffer, so long as the office of Curator, for which the Parliament has made the necessary provision, shall remain vacant.

I have, &c.,
GERARD KREFFT,
Acting Curator and Secretary.

No. 3.

THE PRINCIPAL UNDER SECRETARY to THE SECRETARY, CROWN LAW DEPARTMENT.

Colonial Secretary's Office,
Sydney, 3 November, 1863.

SIR,

Besides the endowment provided for in the Act of Incorporation of the Australian Museum, and a supplement to such endowment of £200, the Legislature has voted a sum of £700 as salary for a Curator for some years past. A vacancy having occurred in this office, a question has however been raised as to whether the power of appointment rests with the Executive Government or with the Trustees of the Museum, and I am directed by the Colonial Secretary to request that the Crown Law Officers will favor him with their opinion on this point at their earliest convenience.

2. A printed copy of the correspondence which has passed on this subject between the Trustees and this office is enclosed for the information of the Crown Law Officers.

I have, &c.,
W. ELYARD.

Vide Correspondence—
Re appointment
of Curator in
1862.

No. 4.

No. 4.

THE UNDER SECRETARY, CROWN LAW DEPARTMENT, to THE PRINCIPAL UNDER SECRETARY.

Crown Law Offices,
Sydney, 11 November, 1863.

SIR,

Having submitted your letter of the 3rd instant, with its enclosure, respecting the vacancy of the office of Curator of the Australian Museum, and requesting the Law Officers' opinion as to whether the appointment rests with the Executive Government or with the Trustees of the Museum, I am directed to forward you the accompanying copy of the Honorable the Attorney General, and the Solicitor's General opinion thereon.

Dated 11 November, 1863.

I have, &c.,
W. E. PLUNKETT.

No. 5.

OPINION OF THE CROWN LAW OFFICERS.

Curator of Australian Museum—as to whether the appointment is vested in the Executive Government or in the Trustees.

We are of opinion that the office of Curator ought to be left in the hands of the Trustees of the Museum.

The Trustees are incorporated by the Act 17 Vic. No. 2, the 7th section of which gives the Trustees full power to appoint all officers and servants of the Museum. It was contended however by the late Government, as we collect from the accompanying papers, that the 37th section of the Constitution Act (18 and 19 Vic. c. 54) placed the appointment of Curator in the hands of the Governor and Executive Council—either as repealing the 17 Vic. No. 2, s. 7, or on the ground that it was a new office with a salary separately voted by the Parliament—the appointment to which ought therefore to be in the hands of the Governor instead of the Trustees. This latter ground we do not think of sufficient weight, for the Curator, when appointed, is clearly an officer of the Museum within the 7th section already referred to, and as such under the direction of the Trustees. Unless therefore the 7th section is repealed by the 37th section of the Constitution Act, the appointment must still rest with the Trustees. Now, if the 7th section be repealed, the 5th section of the same Act, which provides for the filling up of vacancies in the Board of Trustees, must be also repealed, for the 37th section of the Constitution Act applies to unsalaried as well as salaried officers. There are similar provisions also in the Act incorporating the University (14 Vic. No. 31), and we hardly think that it would be contended that the appointment of a Professor—supposing even a Professor to a new department—has been taken out of the hands of the Senate and transferred to the Government. The election of a member of the Senate to fill a vacancy between the passing of the Constitution Act and the passing of the 24 Vic. No. 13, would, if Mr. Cowper's view were correct, be void.

We are therefore of opinion, independently of all considerations that might affect the proper management of the Institution, that the 37th section of the Constitution Act has not taken away from the Trustees the power of appointing to any office under their direction.

The Trustees we think suggest the proper course to be followed, viz., that the amount of the Curator's salary should be placed on the Estimates as an addition to the Endowment Fund—but whether that course be pursued, or the salary voted annually, we think that by law the appointment is vested in the Trustees.

JAMES MARTIN,
Attorney General.
PETER FAUCETT,
Solicitor General.

11th November, 1863.

No. 6.

MINUTE THEREON.

RE-SUBMITTED, as it is understood that the Trustees wish some answer to their letter of the 10th March, 1863. Mr. Cowper's answer to a question in the Assembly on the 26th June, 1863, explains what he proposed.

The opinion of the present Law Officers has since been taken, and their report is enclosed. In November last it was decided to let the matter rest for the present.

18th April, 1864.

W.F.

No. 7.

THE ACTING CURATOR, AUSTRALIAN MUSEUM, to THE COLONIAL SECRETARY.

Australian Museum,
Sydney, 20 April, 1864.

SIR,

The Trustees of the Australian Museum have directed me to call your attention to my communications, dated January 8th and March 10th, 1863, and to request the favour of an answer at your earliest convenience.

I have, &c.,
GERARD KREFFT,
Acting Curator and Secretary.

Communicate opinion of Crown Law Officers.—W.F., April 20th, 1864.

No. 8.

5

No. 8.

THE PRINCIPAL UNDER SECRETARY TO THE ACTING CURATOR, AUSTRALIAN MUSEUM.

Colonial Secretary's Office,
Sydney, 28 April, 1864.

SIR,

Referring to your letter of the 20th instant and previous communications, relative to the appointment of a Curator of the Australian Museum, I am directed by the Colonial Secretary to inform you that the Crown Law Officers, who have been consulted on the point, have advised that the office of Curator should be left in the hands of the Trustees of the Museum.

I have, &c.,
W. ELYARD.

No. 9.

THE CHAIRMAN OF TRUSTEES, AUSTRALIAN MUSEUM, TO THE COLONIAL SECRETARY.

Australian Museum,
Sydney, 5 May, 1864.

SIR,

I have the honor to acknowledge, on behalf of the Trustees of the Australian Museum, the receipt of your communication of April 28th, 1864, and to express their gratification that the Executive Council has recognized as a principle the proposition which they have long maintained, that the appointment of Curator to the Australian Museum is vested in the Trustees alone.

I have further to report that the Trustees have taken immediate action in the matter by electing Mr. Gerard Krefft to the vacant post, with an annual salary of £500 (five hundred pounds).

The Trustees would further call attention to the fact that, according to the arrangements which they have thus been enabled to make,—a reduction of two hundred pounds (£200) is made upon the annual vote, and beg your favourable consideration to their request that an equal sum be placed upon the annual Estimates, as an addition to the endowment, in order that the Trustees may, by the employment of efficient collectors, be enabled to make the collection as complete as possible, both directly by procuring the Australian forms in which the Museum is still deficient, and indirectly by supplying an abundance of specimens for exchange with similar Institutions in other parts of the world.

As the course of action naturally indicated by the amount of the vote in question (£700) has been to some extent abandoned by the Trustees, they feel that some explanation is due to the Government of the grounds upon which they have acted in the reduction of the proposed salary, and the appointment of Mr. Krefft as Curator.

It has appeared from various evidence that the services of a really distinguished Professor in the various branches of Physiology could not be secured for the proposed salary, especially when the payments are dependent upon the annual vote.

It is also believed to be impossible that any one can perform the incompatible duties of Curator and Lecturer, and that either the care of the collection will be absolutely in the hands of subordinates, owning no sufficient responsibility, or that the lectures will have to be discontinued.

Holding their duties at the present time (in accordance with the abovementioned views) to be limited to the appointment of Curator, they have had no hesitation in immediately electing Mr. Gerard Krefft, who has now been in sole charge of the Museum since August, 1861 (having been also engaged as Assistant since June, 1860), and has during the whole of this period given the most satisfactory evidence of energy, ability, and enthusiasm in his work.

And since Mr. Krefft is to perform as Curator only a portion of the services intended to be secured by the proposed salary of seven hundred pounds (£700), they have thought themselves warranted in reducing this by the sum of two hundred pounds per annum.

I have, &c.,
E. DEAS THOMSON,
Chairman.

No. 10.

MINUTES OF THE COLONIAL SECRETARY THEREON.

IN accordance with the recommendation of the Trustees, I also recommend the appointment of Mr. Gerard Krefft to be Curator of the Australian Museum. But it appears to me, in announcing that Mr. Krefft has been elected, the Trustees make use of a term which implies something more than is contained in the opinion of the Attorney General, any such election, in fact, having no validity until confirmed by the Executive Council.—W.F., 1 June, 1864.

I also concur in the recommendation as to salary which, of course, does not rest with the Trustees, but has to be determined by the Government. The question as to supplementing the endowment will be considered in preparing the Estimates.—W.F., 2 June, 1864.

No. 11.

MINUTE PAPER FOR THE EXECUTIVE COUNCIL.

Colonial Secretary's Office,
Sydney, 3 June, 1864.

IN accordance with the recommendation of the Trustees, I recommend the appointment of Mr. Gerard Krefft to be Curator of the Australian Museum. But it appears to me, that in announcing that Mr. Krefft has been elected, the Trustees make use of a term which implies something more than is contained in the opinion of the Attorney General, any such election in fact having no validity until confirmed by the Executive Council.

I also concur in the recommendation of the Trustees that the salary of the Curator should be paid at the rate of £500 per annum, instead of £700, as hitherto.

The question that a sum of £200 in consequence of the reduced salary be placed upon the annual Estimates as an addition to the endowment will be considered in preparing the Estimates.

WILLIAM FORSTER.

The Executive Council having considered the subject herein set forth concur in the opinion of the Honorable the Colonial Secretary, and advise that Mr. Gerard Krefft be appointed Curator of the Australian Museum, with salary at the rate of £500 per annum.

ALEX. C. BUDGE,
Clerk of the Council.

Min. 64/21, 6th June, 1864. Confirmed, 14th June, 1864. 16 June, /64, Approved.—J.Y.

I see no reason at present for recommending an additional endowment of £200 a year.—W.F.,
Sep. 30, 1864.

No. 12.

THE PRINCIPAL UNDER SECRETARY to THE CHAIRMAN OF TRUSTEES, AUSTRALIAN MUSEUM.

Colonial Secretary's Office,
Sydney, 30 June, 1864.

SIR,

With reference to your letter of the 5th ultimo, I am directed to inform you that His Excellency the Governor, with the advice of the Executive Council, has been pleased to approve of the appointment, by the Trustees of the Australian Museum, of Mr. Gerard Krefft, to be Curator of that Institution.

2. Mr. Forster also concurs in the recommendation of the Trustees that the salary of the Curator should be paid at the rate of £500 per annum, instead of £700, as hitherto.

3. The question that a sum of £200, in consequence of the reduced salary, be placed upon the Annual Estimates as an addition to the endowment, will be considered in preparing the Estimates.

I have, &c.,
W. ELYARD.

No. 13.

THE CHAIRMAN OF TRUSTEES, AUSTRALIAN MUSEUM, REPORTING RESOLUTION, &c.

Australian Museum,
2 July, 1874.

SIR,

I am desired by the Trustees to submit to you copy of a resolution passed at the meeting this afternoon, namely:—

“That for the protection of the Museum an application be made to the Minister for Justice for the services of a sergeant and two members of the Police Force to take charge of the Institution, the Museum not being considered safe under present circumstances.”

I am to request, at the same time, that you will be good enough to take such steps as may be necessary with this object.

I have, &c.,
C. ROLLESTON,
Chairman.

Immediate. The Colonial Secretary.

I have conferred with the Attorney General, who was present at the meeting of Trustees, and he thinks this course desirable.—G.W.A., 3/7/74.

Approved. Mr. Fosbery will select men specially for this purpose. In the meantime every respect is to be paid to Mr. Krefft and family.—H.P., 4/7/74.

Immediate. I.G. of Police. U.S. Law Dept., 4 July, 1874.

No. 14.

THE ACTING PRINCIPAL UNDER SECRETARY to THE INSPECTOR GENERAL OF POLICE.

Colonial Secretary's Office,
Sydney, 4 July, 1874.

SIR,

At the instance of the Minister of Justice and Public Instruction, and in pursuance of a resolution passed by the Trustees of the Australian Museum of the 2nd instant, I am directed by the Colonial Secretary to request that you will immediately send a sergeant and two other members of the Police Force to take charge of the Museum.

2. I am desired to request that you will select men specially for the above purpose, and that instructions be given that in the meantime every respect be paid to Mr. Krefft and his family.

I have, &c.,
WM. GOODMAN.

No. 15.

No. 15.

THE ACTING PRINCIPAL UNDER SECRETARY TO THE UNDER SECRETARY, DEPARTMENT OF JUSTICE AND PUBLIC INSTRUCTION.

Colonial Secretary's Office,
Sydney, 4 July, 1874.

SIR,

In reply to your blank cover communication of the 3rd instant, forwarding a letter from the Chairman of the Trustees of the Australian Museum, in which is embodied a resolution passed by the Trustees on the 2nd instant, I am directed by the Colonial Secretary to state, for the information of the Minister of Justice and Public Instruction, that the Inspector General of Police has been instructed to send immediately a sergeant and two other members of the Police Force to take charge of the Museum.

2. Instructions have at the same time been given, that the men are to be selected specially for the above purpose, and also that in the meantime every respect is to be paid to Mr. Krefft and his family.

I have, &c.,
(For the Under Secretary),
WM. GOODMAN.

No. 16.

THE ACTING SECRETARY, AUSTRALIAN MUSEUM, TO THE MINISTER OF JUSTICE AND PUBLIC INSTRUCTION.

Australian Museum,
Sydney, 18 July, 1874.

SIR,

I have the honor to inform you, by direction of the Trustees of the Australian Museum, that at the meeting of the Board of Trustees, held at the Museum yesterday afternoon, Gerard Krefft, Esq., was suspended from his office as Curator and Secretary of the Museum.

I am also instructed to inform you that the Trustees are now prepared to admit the public to the Museum, provided that the protection of the police be continued.

I have, &c.,
CHAS. ROBINSON,
Acting Secretary.

Urgent. Colonial Secretary.—G.W.A. The Principal Under Secretary, B.C., 21st July, 1874.—W.E.P. The Inspector General of Police, for report whether the police are still in attendance, and, if not, whether their services can be conveniently continued.—H.H., B.C., 11th September, 1874. Immediate.

No. 17.

THE ACTING SECRETARY, AUSTRALIAN MUSEUM, TO THE MINISTER OF JUSTICE AND PUBLIC INSTRUCTION.

Australian Museum,
Sydney, 31 July, 1874.

SIR,

I have the honor, by direction of the Trustees of the Australian Museum, to invite your attention to the second paragraph of my letter of date the 18th instant, namely, "That the Trustees are now prepared to admit the public to the Museum, provided that the protection of the police be continued."

The Trustees are very desirous of re-opening the Museum to the public, but having regard to the safe custody of the specimens, they do not feel that they can properly do so in the present position of the Institution, unless their request for the continued attendance of the police be complied with.

I am instructed to request the favour of a reply at your earliest convenience.

I have, &c.,
CHAS. ROBINSON,
Acting Secretary.

The Colonial Secretary, with whom is the letter referred to.—G.W.A., 31/7/74.
The Principal Under Secretary.—W.E.P., B.C., 1st August, 1874. Submitted, 13/8/74.

No. 18.

THE ACTING SECRETARY, AUSTRALIAN MUSEUM, TO THE MINISTER OF JUSTICE AND PUBLIC INSTRUCTION.

The Australian Museum,
Sydney, 20 August, 1874.

SIR,

I have the honor to inform you that the attention of the Trustees has been drawn to the conduct of Mr. Gerard Krefft, as an officer of this Institution, and that after mature consideration they have deemed it their duty to dismiss him from the office of Curator and Secretary to the Australian Museum.

I enclose the following documents:—

1. Copy of the Report of the Sub-committee appointed to inquire into certain charges against the Curator. "A." *
2. A printed copy of the evidence taken before that Committee. "B." *
3. Copy of evidence taken before the Board of Trustees on the 17th ultimo, together with an account for wages paid to one John Milne. "C."

I have, &c.,
CHAS. ROBINSON,
Acting Secretary.

[Enclosure.]

* For Enclosures A and B see Appendix No. 4 attached to Report on Australian Museum for 1874, laid on the Table on 9th April, 1875.

[Enclosure.]

C.

Adjourned Monthly Meeting of the Trustees, Friday, 17th July, 1874.

Present:—

W. Macleay, Esq., M.P.,		Professor Liversidge,
Ed. S. Hill, Esq., J.P.,		James C. Cox, Esq., M.D.,
A. W. Scott, Esq., M.A.,		George Fortescue, Esq., M.D.,
H. G. Alleyne, Esq., M.D. (President of the Medical Board),		Christopher Rolleston, Esq. (Auditor General).

W. A. Duncan, Esq., Collector of Customs, in the Chair.

J. A. Thorpe was called in and examined:—

Chairman.] What is your name? John Thorpe.

You are the taxidermist? Yes.

You were asked, I believe, by Mr. Hill to try these keys? Yes.

Did you find that they would open the doors of the taxidermist's room? Neither of them would.

Did you try the smaller keys? Yes; I know what they belong to.

Are they the keys that have been in use in the Department? No.

What are they? Duplicate keys of the side-cases—the wall-cases.

We understand that there are some drawers that are supposed to contain specimens that cannot be opened—did you try any of them? No, I did not.

Mr. Hill.] When you went to examine this place did you take a policeman with you? Yes; the policeman came with me, and saw that they would not fit.

You were requested to take a policeman with you? Yes.

Chairman.] Do you know to what doors these two large keys belong? I do not; they never came under my notice before.

Did you find that these keys would open any of the drawers? I did not.

[*Witness was directed to ascertain if the keys would open the recesses under the lepidoptera cases, and to report to the Trustees. He subsequently returned and reported that they would not.*]

I certify that this is a true copy,—

August 20, 1874.

CHAS. ROBINSON,
Acting Secretary, Australian Museum.*In the handwriting of Mr. Krefft.*

RECEIVED from Mr. Gerard Krefft the sum of one pound ten shillings sterling, for two weeks' wages cleaning up back premises and repairing fence, &c.

JOHN MILNE.

June 20th, 1874.

In the handwriting of Dr. Cox.

I CALL special attention to this a/c., and recommend that inquiry be made into it before being paid.

J. C. Cox.

I certify that this is a correct copy,—

August 20, 1874.

CHAS. ROBINSON,
Acting Secretary, Australian Museum.

John Milne was called in and examined:—

Mr. Hill.] What is your name? John Milne.

Are you the party I saw in the cellar one day? Yes.

Were you knocking nails out of cases? I could not say.

What did you tell me when I asked what you were doing? I said that Mr. Krefft sent me in to break up boxes, as it was a wet day, and I could not work in the garden.

Whose garden? Mr. Krefft's garden.

What did I ask you about this other garden? I told you that M'Namara worked in that garden.

What did you say when I wanted to know whose man you were? I said that I was Mr. Krefft's man, and that I signed a note for my money.

On that day you said that you did not work in that room ordinarily? Yes.

You were there because it was a wet day? Yes. I said that I was Mr. Krefft's man, and that I wrote a receipt for my wages every Saturday night.

What wages did you work at? 15s. a week.

And your food? Yes.

What is your ordinary occupation in this Institution? I do not do anything in the Institution but carry wood and water.

What is your ordinary occupation? Just to assist in the kitchen, work in the garden, clean the knives and boots, and so on.

What do you do for the Institution? Nothing but sweep out the hall.

What hall? The hall down below.

You do nothing up here—nothing in the flower-garden? No.

You do nothing but for Mr. Krefft and his family? No.

You never obey any orders of the Trustees? No; I do not know anything about them.

Dr. Cox.] You know M'Namara? Yes, I know him.

Does he live on the premises? He sleeps here.

Mr.

Mr. Scott.] After we saw you in the cellar, who has been working in the front garden? M'Namara.
Mr. Rolleston.] Do you understand that you are the servant of the Museum or the servant of Mr. Krefft?
 The servant of Mr. Krefft.

I certify that this is a correct copy,—

August 20, 1874.

CHAS. ROBINSON,
 Acting Secretary, Australian Museum.

No. 19.

G. KREFFT, ESQ., to THE COLONIAL SECRETARY.

Australian Museum,
 Sydney, 22 August, 1874.

SIR,

Having been dismissed by the Trustees of the Australian Museum from the office of Curator of that Institution, which I have held for upwards of nine years (having been nearly fourteen years in charge of the Museum as Assistant and Acting Curator), and believing that such dismissal cannot take effect until it has been confirmed by His Excellency the Governor, with the advice of the Executive Council,—I do myself the honor to lay before you the whole facts of the case, in order that His Excellency and the Council may be fully informed of the same before they decide, and in the hope that I may be allowed some opportunity of replying to the charges made against me, after those charges and the evidence in support of them have been furnished to me. Some time in the month of May last, I gave evidence before a Select Committee of the Legislative Assembly appointed to report upon the Australian Museum, in the course of which inquiry certain statements were made by some of the witnesses, reflecting upon me, but the charges contained in which statements I afterwards in my further evidence explained, as I believe, to the satisfaction of the Committee.

After the inquiry was closed, the Trustees of the Museum being desirous of re-investigating the charges brought against me at the Committee, a special meeting was ordered by the Trustees to be called, but not receiving the necessary requisition to do so, as required by the by-laws, I could not send out the circulars, and I thought that the meeting had lapsed. It appears, however, that six Trustees *did* meet on the 11th of June, and that they called for a special meeting for the 16th of June, "to take into consideration the conduct of the Secretary in disobeying the orders given to him by the Board, &c., &c., &c." The necessary requisition, calling the meeting and defining the purpose for which the meeting was convened, having been lodged with me, bearing the signature of three Trustees, I called such a special meeting for 3 o'clock on the 16th of June.

On this day it was the intention of the Board to investigate "certain charges," said to have been brought against me, but I pointed out that no charges were on record, and after having done so I was requested to retire, and on my return was informed that A. W. Scott, Esq., had been directed "by the Board" to furnish me with a copy of the charges. Mr. Scott did so, and the list was left by me with a member of the Board, from whom I have not been able to receive it back, because the gentleman is out of town at present. The various accusations were enumerated in very general terms, as far as I remember, in the following manner:—

1. Drunkenness.
2. Bribing servants of the Museum.
3. Making false statements in writing to the Colonial Secretary.
4. Maliciously breaking a fossil jaw lent to the Trustees by Dr. Bennett.
5. Causing the carpenters to make furniture for his (the Curator's) own benefit.
6. Telling a man named Barnes to put some Museum property into the house of a man named Tost to convict him of theft.
7. Ordering the messenger to make false returns of the number of visitors to the Museum.
8. Paying money to a man under a false name.
9. Sending away valuable specimens without the order of the Trustees.
10. Insubordination.
11. Allowing work to be done for Trustees of the Museum.
12. Ordering the Museum photographer to take indecent pictures, and selling photographs for his own benefit.

These are, as far as I can remember, the charges brought against me, and which the Trustees desired to investigate; the name of my accusers and the date when, or the place where, the supposed irregularities took place could not be ascertained. The sheet was signed "A. W. Scott," but I do not think that Mr. Scott was the author of the charges. A sub-committee was appointed to investigate these charges, and having been invited to attend a meeting of the same by Mr. Christopher Rolleston on the 24th of June, I applied to him for a definition or particulars of the charges. Mr. Christopher Rolleston is a public servant of long standing, and I expected to receive a satisfactory reply, because every public servant in my position is entitled to receive his charges specified, and he has the privilege of replying to them in writing. This appears to be the opinion of some of our best legal authorities, and I have been strictly advised by three gentlemen of the legal profession, and by several Members of the Legislative Assembly to request to be furnished again with a specification of the charges, and with the name of my accuser or accusers, and the date when and the locality where the supposed irregularities were committed. I was also advised to ask for a copy of the evidence which the Trustees had printed and which they distributed *only* to the members present at the last meeting of the Board. On or about the 14th day of August I received a letter dated the 13th of August, written by direction of the Trustees, signed Charles Robinson, Acting Secretary, that at a meeting of the Trustees held that afternoon the following resolution had been agreed to:—

"That Mr. Gerard Krefft be called upon to show cause why he should not be dismissed from his office of Curator and Secretary of the Australian Museum."

Mr. Robinson, in forwarding the resolution, said also, "that he was instructed to inform me that any communication I desired to make should reach the Trustees on or before 3 o'clock on Thursday next, 20th instant."

I replied on the 19th, requesting the Trustees to furnish me with the defined grounds of accusations against me, and with a copy of the evidence taken before the Sub-committee appointed to investigate the charges upon which the same were founded, as it would be impossible for me to show cause, as requested, without those documents. I also stated that as soon as I received them I would write, showing, as I believed, sufficient cause, why I should not be dismissed from my office of Curator and Secretary of the Australian Museum. In reply to this letter I received the following communication:—

Sydney, 20 August, 1874.

Sir,

I have the honor to inform you that the Trustees having had under consideration the Report of the Sub-committee and the evidence taken before it, in regard to certain charges reflecting on your conduct as an officer of this Institution, have this day resolved as follows—

“That Mr. Gerard Krefft be dismissed from his office of Curator and Secretary.”

You were furnished by A. W. Scott, Esq., in June last, with a copy of the charges referred to, and also by Christopher Rolleston, Esq., in his letter inviting your attendance at the meetings of the Sub-committee.

The Trustees have arrived at the determination, which it is now my duty to communicate to you, from a conviction that most of the charges remitted to the Sub-committee for investigation have been proved, and they consider that the irregularities which you have committed are of so serious a nature that no milder alternative was left to them.

I am instructed to say, that the Trustees require you to give up possession of your apartments to them on or before the 31st day of August instant. Mr. Thorpe, the taxidermist, is authorized to receive the keys.

I have, &c.,
CHAS. ROBINSON,
Acting Secretary.

Gerard Krefft, Esq., Australian Museum.

I believe that I will be able to show “ample cause” why I should not be dismissed from my office of Curator and Secretary of the Australian Museum, provided the Trustees will furnish me with the evidence taken before the Sub-committee. At the same time I deeply regret that charges which are not yet proved, and which the Trustees class only as “irregularities,” should be visited upon me, a faithful public servant for a period of fourteen years, with the utmost severity. I repeat again that I very much regret the consequences of this inquiry, which certainly was not of my seeking, because I only had the welfare of the Institution at heart.

Ready at any time to offer an apology for my shortcomings, I humbly request that before deciding upon this matter the Executive Council will call upon the Trustees to furnish the Council with the evidence upon which they have acted, and that I may be allowed an opportunity of offering my defence to my explanation of any charges that may be brought against me.

I have, &c.,
GERARD KREFFT,
Curator of the Australian Museum.

The Under Secretary, Law Department, B.C., 28 Aug., /74, for the U.S.—W.G.

No. 20.

THE ACTING SECRETARY, AUSTRALIAN MUSEUM, to THE MINISTER OF JUSTICE AND PUBLIC INSTRUCTION.

The Australian Museum,
Sydney, 8 September, 1874.

SIR,

I have the honor to inform you that at a meeting of the Trustees of the Australian Museum, held this day, the following resolutions were unanimously passed:—

The Trustees having after full inquiry arrived at the conclusion that the conduct of Mr. Krefft has been such as to require his dismissal, and having dismissed him accordingly, and Mr. Krefft having refused to leave the premises of the Museum, it is resolved:—

- 1st. That an immediate application be made to the Minister of Justice and Education to authorize the police to give effect to the decision of the Board by removing Mr. Krefft from the Museum buildings.
- 2nd. That it is the duty of the Board to keep the property of the Museum under seal until Mr. Krefft's removal.
- 3rd. That a copy of the above resolutions be immediately forwarded to the Minister for Justice and Education, and a deputation, consisting of Jas. Nerton, Esq., and Alfred Roberts, Esq., be appointed to wait upon the Minister for Justice and Education to explain to him the necessity for prompt action in order that the Museum may be re-opened to the public.

I am further instructed to inform you that the deputation will wait upon you on Thursday, 10th instant.

I have, &c.,
EDW. PALMER,
Acting Secretary.

Will receive deputation at 11 o'clock a.m., to-morrow.—G.W.A., 9 Sept., /74.
Very urgent. Inform the Acting Secretary, 9/9/74.

11

No. 21.

THE UNDER SECRETARY, DEPARTMENT OF JUSTICE AND PUBLIC INSTRUCTION, to THE ACTING SECRETARY,
AUSTRALIAN MUSEUM.

Department of Justice and Public Instruction,
Sydney, 9 September, 1874.

SIR,

In acknowledging the receipt of your letter of yesterday's date, forwarding copy of certain resolutions passed by the Trustees of the Museum respecting removal of Mr. Krefft, I am directed by the Minister of Justice and Public Instruction to inform you that he will receive the Deputation named at 11 o'clock a.m. to-morrow, Thursday, 10th instant.

I have, &c.,
W. E. PLUNKETT,
Under Secretary.

No. 22.

THE INSPECTOR GENERAL OF POLICE to THE PRINCIPAL UNDER SECRETARY.

Police Department, Inspector General's Office,
Sydney, 14 September, 1874.

POLICE have been stationed at the Museum since the 4th of July last and still there.

This requires a relief of three constables, who can be ill spared from their ordinary duties in the city.

If it be decided to re-open the Museum I conclude some responsible person would be placed in charge, and in that event, I understood from one of the Trustees, the further attendance of the police would not be requisite.

EDMUND FOSBERY,
Acting for I.G.P.

B.C., Principal Under Secretary. The Under Secretary, Department of Justice, B.C., 15th September, 1874.—H.H.

No. 23.

THE UNDER SECRETARY, DEPARTMENT OF JUSTICE AND PUBLIC INSTRUCTION, to THE TRUSTEES,
AUSTRALIAN MUSEUM.

Department of Justice and Public Instruction,
Sydney, 14 September, 1874.

GENTLEMEN,

I have the honor to acknowledge receipt of your letter of 8th September, with a copy of resolutions by the Trustees of the Museum, in reference to the dismissal of Mr. Krefft from his office as Curator, and his removal from the Museum buildings.

I am directed by the Minister of Justice and Public Instruction to say that the matter has engaged the serious attention of the Government, and that the services of the police cannot be authorized for the purposes desired by the Trustees.

The Trustees have throughout the inquiry acted independently of the Government, and have of their own authority resolved to dismiss the Curator, and the Government do not feel called upon to assume the responsibility of giving effect to a decision to which they have been no party.

I am further to intimate that it is the intention of the Government to introduce into Parliament a Bill to deal with the subject of the future management of the Museum.

I have, &c.,
W. E. PLUNKETT,
Under Secretary.

No. 24.

THE ACTING SECRETARY, AUSTRALIAN MUSEUM, to THE UNDER SECRETARY, DEPARTMENT OF JUSTICE
AND PUBLIC INSTRUCTION.

Australian Museum,
18 September, 1874.

SIR,

I am directed by the Trustees of the Australian Museum to acknowledge the receipt of your letter of the 14th instant, and to express their surprise and regret that the Government have not thought fit to assist the Trustees in the performance of the duty of protecting the valuable public property entrusted to their charge.

I am further instructed to inform you that the Trustees have acted throughout this business independently of the Government, because they have been advised that they were entitled and bound to do so in accordance with the Act of Incorporation.

I have, &c.,
CHAS. ROBINSON,
Acting Secretary.

SIR,

In reply to your letter of the 23rd instant, submitting a letter received by you from the Acting Secretary to the Trustees of the Australian Museum, stating that the assistance of the police at the Museum would not be required after Saturday the 26th instant,—I am directed to inform you that the withdrawal of the police from the Museum is approved of by the Colonial Secretary.

I have, &c.,
H.Y. HALLORAN.

No. 29.

THE UNDER SECRETARY, DEPARTMENT OF JUSTICE AND PUBLIC INSTRUCTION, TO THE ACTING SECRETARY, AUSTRALIAN MUSEUM.

Department of Justice and Public Instruction,
Sydney, 24 September, 1874.

SIR,

I am directed by the Minister of Justice and Public Instruction to inform you, that the attention of the Government has been drawn to a paragraph in the *Sydney Morning Herald* of Tuesday last, reporting that the Trustees have caused the forcible ejection of Mr. Gerard Krefft from the Museum premises, of which proceeding no intimation has been made to the Government by the Trustees. I am to remind you that that gentleman was appointed to the office of Curator with the approval of the Governor and Executive Council, and that his dismissal has been determined upon by the Trustees independently of the Government, and without their approval having been sought.

I

13

I am also to acknowledge the receipt of your letter of 23rd instant, informing the Minister that the Trustees have appointed Mr. Edward P. Ramsay to the office of Curator, in the room of Mr. Krefft.

I am to intimate that no salary can be paid to any such officer for whose appointment the sanction of the Government has not been obtained, as in the case of the previously appointed Curator.

I have, &c.,
W. E. PLUNKETT,
Under Secretary.

No. 30.

THE UNDER SECRETARY, DEPARTMENT OF JUSTICE AND PUBLIC INSTRUCTION, TO THE UNDER SECRETARY FOR FINANCE AND TRADE.

Department of Justice and Public Instruction,
Sydney, 24 September, 1874.

SIR,

I am directed by the Minister of Justice and Public Instruction to forward, for the information of the Colonial Treasurer, the accompanying copy of a letter which has been addressed to Mr. Charles Robinson, Acting Secretary of Australian Museum, respecting reported ejection of Mr. Gerard Krefft from Museum premises, and in reference to appointment of Mr. Edward P. Ramsay to the office of Curator of the Australian Museum, in the room of Mr. Krefft.

Dated 24th September, 1874.

1 October, 1874.—W.E.P. To be returned.

No. 32.

THE ACTING SECRETARY, AUSTRALIAN MUSEUM, TO THE MINISTER OF JUSTICE AND PUBLIC INSTRUCTION.

Australian Museum,
Sydney, 2 October, 1874.

SIR,

I have the honor, by direction of the Trustees of the Australian Museum, to intimate that legal proceedings have been commenced by the solicitors of Mr. Krefft, and of Miss Hannah M'Intosh, a member of the household, against Mr. E. S. Hill, one of their number, for action alleged to have been taken by him in the ejection of the late Curator and his family from the Museum premises.

I am instructed to request that you will be pleased to direct the Crown Solicitor to defend these actions on the part of the Trustees, seeing that any verdict which may be recovered by the plaintiffs will have to be satisfied out of the endowment, or, in default, levy may be made by the Sheriff upon the public property committed to the care of the Trustees.

I have, &c.,
CHAS. ROBINSON,
Acting Secretary.

Obtain, by search, particulars of actions reported to have been commenced.—G.W.A., 5/10/74.

The actions brought by Mr. Krefft and Miss M'Intosh appear to be against Mr. Hill and not against the Trustees in their corporate capacity. Neither the endowment nor the public property committed to the care of the Trustees can be rendered available for any verdict which may be recovered in these actions.—G.W.A., 6/10/74.

Prepare letter.—6/10/74. Acting Secretary informed.—7/10/74.

[Enclosure.]

D.

THE AUSTRALIAN MUSEUM.—MINUTES OF MEETINGS.

Australian Museum,
Sydney, 11 June, 1874.

SPECIAL general meeting, held this day by order of the Trustees at the last ordinary monthly meeting of the 4th June instant.

Present:—

A. W. Scott, Esq., M.A., in the Chair.	
H. G. Alleyne, Esq., M.D.,	W. Macleay, Esq., M.P.,
A. Liversidge, Esq.,	Arthur Onslow, Esq., Capt., R.N.,
Edward S. Hill, Esq.	

The Secretary being absent, the Board-room locked, and the key not to be found, the meeting had to be held in a small room usually appropriated to one of the taxidermists.

As none of the members present had received from the Secretary a written notice convening the present special meeting, there is reason to suppose that no notices to other Trustees had been issued. It appears therefore that the orders given to the Secretary at the last ordinary monthly meeting, namely, to call a special meeting for this day, and to immediately furnish each Trustee with a copy of the Report and Evidence taken before the Select Committee of the Legislative Assembly on the management of the Australian Museum, have not been complied with.

It was resolved,—

"That this meeting under such circumstances declines to proceed with the business for which it was appointed.

"That the disobedience of orders and contempt exhibited by the Secretary demand some immediate action on the part of the Trustees.

"That

"That a special general meeting should be called for the earliest possible day, namely, Tuesday next, the 16th of June, for the purpose of taking into consideration the conduct of the Secretary on this occasion, and also to carry out the object duly specified at the ordinary meeting aforesaid, and for which the present meeting was appointed.

"That the Chairman be requested to issue the requisite notices to all of the Trustees, and to the Secretary of the Museum.

"A. W. SCOTT.

"Confirmed,—W. A. DUNCAN, Chairman—14/7/74."

A letter from Mr. A. W. Scott to the Secretary of the Museum, dated 12th June, 1874, was also read, as follows:—

"By desire of the Trustees present at the special meeting of the 11th June, 1874, I transmit you a minute of the proceedings of that date, and have to request that it be duly entered upon the minute-book of the Museum under your care as Secretary, and laid before the next ordinary monthly meeting, for confirmation or otherwise."

The minutes and letter, of which the foregoing is a correct copy, were read by me at the adjourned monthly meeting of the Trustees, held on the 15th instant, and are here transcribed in obedience to the resolution passed at that meeting.

The signature of Mr. W. A. Duncan was affixed in token of their confirmation.

CHAS. ROBINSON,
Acting Secretary.

July 16th, 1874.

Special Meeting, 16th June, 1874.

Australian Museum,
Sydney, 16th June, 1874.

SPECIAL meeting, held this day to take into consideration certain charges against the Curator.

Present:—

<p>Dr. Bennett, M.D., F.L.S., &c, in the Chair, A. W. Scott, Esq., M.A., William Macleay, Esq., M.L.A., &c., H. G. Alleyne, Esq., M.D. (President of the Medical Board), E. S. Hill, Esq.,</p>	<p>Captain Onslow, R.N., Dr. Cox, M.D., A. Liversidge (Professor, Sydney University), C. Rolleston, Esq. (Auditor General), P. F. Adams, Esq. (Surveyor General), Dr. Belisario, M.D., G. Fortescue, Esq., M.B.</p>
--	---

It was proposed by Captain Onslow, and seconded by Mr. Hill, "That Messrs. Rolleston, Alleyne, Hill, and Liversidge, be appointed to inquire into the following charges against the Curator, namely:—

- 1st. Drunkenness.
- 2nd. Proposing to the Barnes's to bring a false charge of theft against a man named Tost.
- 3rd. Permitting indecent photographs to be taken in the Museum.
- 4th. Selling photographs through the servants of the Institution.
- 5th. Getting furniture made for himself in the Museum, out of Museum material.
- 6th. Ordering the servants of the Museum to make cases, and set up specimens with Museum material for private individuals.
- 7th. Taking receipts from Robert Barnes for work done under the name of William Bradley, with the view of deceiving the Board of Trustees.
- 8th. Maliciously breaking up a fossil jaw, lent to the Museum by Dr. Bennett.
- 9th. Sending away as donations in his own name, valuable specimens, the property of the Museum.
- 10th. Making a false return of the number of visitors.
- 11th. Making a false statement in writing, to the Colonial Secretary, respecting the attendance of a deputation of the Trustees.
- 12th. Disobeying the orders of the Trustees, given at the last ordinary monthly meeting."

Carried unanimously.

It was proposed by Dr. Cox, and seconded by Captain Onslow, "That the committee be empowered to employ a shorthand-writer."

Carried unanimously.

W. A. DUNCAN,
Chairman—14/7/74.

A letter, dated 17th June, 1874, from Mr. A. W. Scott, to the Secretary of the Australian Museum, was read as follows:—

"By desire of the Trustees present at the special meeting of the 16th June, 1874, I transmit you a minute of the proceedings of that day, and have to request that it be duly entered in the minute book of the Museum, under your care as Secretary, and laid before the next ordinary monthly meeting of the Trustees for confirmation or otherwise."

The minutes and letter, of which the foregoing is a correct copy, were read by me at the adjourned monthly meeting of the Trustees, held on the 15th instant. They were then confirmed and signed by the Chairman, and are here transcribed, in obedience to a resolution passed at that meeting.

CHAS. ROBINSON,
Acting Secretary.

July 16th, 1874.

Meeting,

Meeting, 2nd July, 1874.

Australian Museum,
2 July, 1874, 4 p.m.

Present:—

The Honorable Geo. A. Lloyd, The Honorable J. G. L. Innes, W. A. Duncan, Esq., W. Macleay, Esq., Dr. J. C. Cox,	E. S. Hill, Esq., Professor Liversidge, Dr. Alleyne, A. W. Scott, Esq., C. Rolleston, Esq.
---	--

Mr. C. Rolleston was moved into the chair.

A letter was read from the Curator, asking for an adjournment of the meeting for a week.

The minute-book was sent for, but an answer was returned that it was in Mrs. Krefft's room, and could not be sent.

The Chairman presented the following Progress Report from the Sub-committee appointed to inquire into the charges against the Curator:—

“The Trustees appointed at the last monthly meeting to inquire into certain charges preferred against the Curator, beg to report that they have held three meetings—the first, to make preliminary arrangements for the conduct of this inquiry, at which it was determined to meet at the Museum for the purpose of examining witnesses, on Monday, the 29th ultimo, at 3 o'clock, p.m.

“Notice of this meeting was given by the Chairman to the Curator by letter, dated 24th June, to which an answer was received, asking for specific charges as to the time, date, and place, to which the Chairman replied, forwarding a copy of the charges preferred against the Curator by the Trustees at their last meeting.

“On the Monday morning the Chairman received a written intimation from Mr. Krefft that he did not intend to be present.

“The Trustees met at the time appointed, but found that the Curator had left the Institution; they, after some discussion, determined to postpone the examination of witnesses to the following day, in order that Mr. Krefft might have an opportunity to reconsider his decision, and directed that Mr. C. Robinson, the gentleman engaged to act as Secretary, and to take down the evidence, inform the Curator of their intention to proceed with the inquiry on the following day, whether he were present or not, and again to invite his attendance.

“The Trustees met at the Museum at 3:30 p.m. on Tuesday, and took the evidence, herewith submitted, in the absence of the Curator, who declined to put in an appearance.

“As the result of the Inquiry in the absence of the accused must be unsatisfactory, the Members composing the Board wish to remit the question as to the expediency of continuing the inquiry under such circumstances to the consideration and determination of the Trustees.

C. ROLLESTON,
Chairman.”

“2nd July, 1874.”

After much discussion it was proposed by Mr. E. S. Hill, and seconded by Mr. Duncan,—“That for the protection of the Museum an application be made to the Minister for Justice and Public Instruction for the services of a sergeant and two members of the police, to take charge of the Institution, the Museum not being considered safe under present circumstances.”

Carried.

The Chairman to communicate this resolution to the Minister for Justice.

[Meeting adjourned to To-morrow, at 4:30 p.m.]

Confirmed,—
W. A. DUNCAN,
Chairman.

The minutes, of which the foregoing is a correct copy, were read by me at the adjourned monthly meeting of the Trustees, held on the 15th instant. They were then confirmed and signed by the Chairman, and are here transcribed in obedience to a resolution passed at that meeting.

CHAS. ROBINSON,
Acting Secretary.

16th July, 1874.

Adjourned Meeting, 3 July, 1874.

Australian Museum,
3 July, 1874, 4:30 p.m.

Present:—

The Honorable J. G. L. Innes, W. A. Duncan, Esq., Professor Liversidge, Dr. Alleyne,	Dr. Cox, W. Macleay, Esq., Ed. S. Hill, Esq., A. W. Scott, Esq.,
---	---

C. Rolleston, Esq.

Mr. Rolleston reported that he had forwarded by letter to the Honorable the Minister for Justice a copy of the resolutions passed yesterday; and that he had called at the Law Offices and found that the letter had been marked off by the Minister to the Colonial Secretary, but had not yet gone on.

The minute-book was sent for, but the Curator sent a letter refusing to attend, and declined to send the books.

Moved

Moved by Mr. Duncan, seconded by Dr. Cox, "That the Museum be closed to-morrow at 11 o'clock till further notice, and given in charge to the police, subject to the Colonial Secretary's approval."

Such Trustees as may be present to see this done.
Meeting adjourned till Tuesday next at 4 o'clock.
The Curator to be informed.

Confirmed,—
W. A. DUNCAN,
Chairman.

The minutes, of which the foregoing is a correct copy, were read by me at the adjourned monthly meeting of the Trustees, held on the 13th instant. They were then confirmed and signed by the Chairman, and are here transcribed in obedience to a resolution passed at that meeting.

16 July, 1874.

CHAS. ROBINSON,
Acting Secretary.

Australian Museum,
4 July, 1874.

In accordance with the resolutions of the Board of Trustees of the Museum, passed at the adjourned meeting of Friday, the 3rd instant, the following Trustees, namely, Messrs. Hill, Liversidge, Cox, and Scott, attended at 11 o'clock a.m., being the hour appointed, for the following purposes, namely:—

- 1st. To carefully examine the present internal condition of the several parts of the building appropriated, for the uses of the Museum, in order to render secure the fastenings of the various windows and doors which give access to the different apartments, so that the property of the Museum should be amply protected before being handed over to the police authorities.
- 2nd. And to hand over temporarily the Museum and its contents for protection into the custody of the police, who were applied for by the Trustee through the Minister of Justice, and approved of by him, and sanctioned by the Colonial Secretary.

The Trustees now beg to lay before the Board at their next adjourned meeting a minute of their proceedings of this day.

The Trustees carefully examined the fastenings of the doors and windows of the store and spirit rooms, both below stairs, and ascertained them to be in a very defective state. One of the windows, that pointing to the north, of the store-room in the new building, was without a bolt, this having been taken off, and was only fastened by a wooden button, which could be readily displaced. Another window, pointing to the west, had a small iron bolt, but was found by the Trustees wide open, affording an easy entrance to any person desirous of so doing.

The Trustees understand that these windows were constructed by the Colonial Architect on the principle of revolving on centre pivots, and that they have been altered to their present form of opening by hinges by the orders of Mr. Krefft. The Trustees also found the store-room door wide open and very ill-provided with fastenings.

The Trustees consider that this insecure and unsatisfactory condition of the premises must have existed for a considerable period.

In the store room the Trustees found a man engaged upon some wood work, who gave his name and address as John Miln, of 75, King-street, and who stated that he was ordered some three weeks ago by Mr. Krefft to dress upon wet days some packing case boards, and this being a rainy forenoon he had resumed work without orders, for he had found the store-room door wide open and went in and out at his own pleasure. He also said he was employed by Mr. Krefft as a gardener.

The passage stair which leads from below to within the old Museum and gives access to the back of the show cases was wide open, the only protection, a wooden grating, being removed. This grating is unprovided with fastenings, unless a small billet of wood, thrown on it, could be considered as such, and could with ease be removed from below, and thus admit any one into the old Museum where the missing gold was kept.

It became, therefore, very evident to the Trustees that with such careless supervision any person, feloniously inclined, could enter the building by the north or west windows into the store-room and pass freely up the stairs, thus gaining an easy access to the cases in which the specimens of gold were deposited, as well as to other valuable exhibits. The Board-room door, leading to the passage behind the show cases in the old building and to the stairs communicating with the cellar below, had the key removed, although it was seen by the Trustees in the lock the day before.

The wretched condition of the various fastenings of the doors and windows of the establishment having been ascertained, and a determination having been arrived at by the Trustees to have them properly secured, the duty of delivering over the keys and property of the Museum to the Police authorities devolved upon Dr. Cox and Mr. Scott, as Messrs. Hill and Liversidge had to leave in consequence of previous important engagements.

Mr. Fosbery, shortly after the departure of Messrs. Hill and Liversidge, arrived, bringing with him official instruction from the Colonial Secretary to take over the charge of the Museum from the Trustees, in accordance with the desire expressed in their application made to and approved of by the Minister of Education.

Mr. Fosbery requested that labor and materials should be provided by the Institution, so that the doors and windows should be securely barred to the satisfaction of the police, before taking possession of the keys and property of the Museum.

The Trustees therefore instructed Mr. Thorpe, in the presence of Mr. Fosbery, to send for the Barneses and see that they, under the supervision of the police, efficiently secured the various entrances within the building.

The Trustees likewise directed the workmen to use screws instead of nails, to avoid creating any noise, so that Mrs. Krefft should not be disturbed during her illness.

Mr. Fosbery requested that when the police officer who accompanied the workmen was satisfied that the security of the property was assured, the keys of the establishment should be placed in a sealed envelope, and then delivered over to him or his agent, which duty the Trustees entrusted to Mr. Thorpe.

The Trustees then left, having placed the Museum under the charge of the police.

ED. S. HILL.
ARCHD. LIVERSIDGE.
A. W. SCOTT.
JAMES C. COX.

Confirmed,—W. A. DUNCAN, Chairman.

The document, of which the foregoing is a correct copy, was read by me at the adjourned monthly meeting of the Trustees, held on the 15th instant. It was then confirmed and signed by the Chairman, and is here transcribed in obedience to a resolution passed at that meeting.

July 16th, 1874.

CHAS. ROBINSON,
Acting Secretary.

Monthly Meeting, 7 July, 1874.

Present :—

<p>The Honorable J. G. L. Innes (Attorney General), W. A. Duncan, Esq. (Collector of Customs), Dr. Belisario, Dr. Bennett, James Barnett, Esq. (Colonial Architect), Dr. Cox, Wm. Macleay, Esq., M.P.,</p>	<p>Ed. S. Hill, Esq., Professor Liversidge, Capt. Onslow, R.N., M.P., A. W. Scott, Esq., M.A., Dr. Alleyne (President of the Medical Board), Dr. Fortescue, and Christopher Rolleston, Esq. (Auditor General), in the Chair.</p>
--	--

The Board met at 3 o'clock p.m. Objection was taken that while several members of the Board had been summoned to attend at 3 o'clock p.m., the adjournment from the last meeting was until 4 o'clock p.m., and that therefore the proceedings of this meeting between 3 and 4 o'clock were irregular.

Dr. Alleyne moved and the Attorney General seconded, "That the meeting do now commence *de novo*."

Agreed to.

The Chairman read the minutes of the meetings held on the 5th and 16th of June. Several members of the Board objected that the minutes as read were not correctly recorded.

Mr. Macleay moved and Captain Onslow seconded, "That the minutes be not confirmed."

Agreed to.

Captain Onslow moved and Mr. Scott seconded, "That having regard to the unsatisfactory manner in which the duties of Secretary have been performed, Mr. Krefft be suspended from his office as Secretary."

The resolution was agreed to.

The Attorney General and the Collector of Customs did not vote.

Mr. William Macleay moved and Dr. Cox seconded, "That Mr. Charles Robinson be appointed temporarily to perform the duties of Secretary."

Agreed to.

On the motion of Dr. Alleyne, the Acting Secretary was instructed to write to the Postmaster General, requesting him to direct that all official correspondence addressed to the Trustees of the Australian Museum, or to the Secretary of the Australian Museum, be delivered to the Acting Secretary.

The Chairman desired some expression of opinion on the part of the Board, as to whether the inquiry, which the Sub-committee had been appointed to conduct into certain charges respecting the conduct of the Curator, should be proceeded with or not. The Curator had been repeatedly requested to attend the meetings of the Sub-committee, but had not attended. As chairman of the Sub-committee he felt that it would be extremely undesirable to proceed with that inquiry in the absence of the Curator, unless it were upon some formal resolutions passed upon the subject by the Trustees to the effect that it is still desirable to continue the inquiry.

Captain Onslow moved and Mr. Macleay seconded, "That the inquiry already instituted be proceeded with and completed."

The Attorney General moved and Dr. Alleyne seconded that the following words be added to the motion, "And that in addition to the written list of charges already furnished to the Curator, he be referred to the evidence given before the Select Committee, and that Mr. Krefft be again apprised of the fact of the inquiry, and be again desired to attend."

The words proposed to be added were so added, and the resolution as amended was agreed to.

The Chairman read a letter from Mr. Ed. P. Ramsay, dated July 6th, 1874, and applying for appointment to the office of Sub-curator.

Mr. Scott moved and Captain Onslow seconded, "That Mr. Hill be empowered to appoint persons to take a catalogue of the exhibits in the Museum."

Agreed to.

The meeting stand adjourned until Wednesday, the 15th instant, at 3 o'clock, p.m.

Confirmed,—
W. A. DUNCAN,
Chairman.

CHAS. ROBINSON,
Acting Secretary—15/7/1874.

Wednesday,

Adjourned Meeting, held Wednesday, 15 July, 1874.

Present:—

The Attorney General (The Hon. J. G. L. Innes, M.L.C.), The Collector of Customs (W. A. Duncan, Esq.), The President of the Medical Board, (H. G. Alleyne, Esq., M.D.),	Archibald Liversidge, Esq. (Professor of Geo- logy, &c., Sydney University), A. W. Scott, Esq., M.A., James C. Cox, Esq., M.D., Captain Onslow, R.N., M.P., Edward S. Hill, Esq., J.P.
--	---

Mr. Duncan was moved into the chair.

The Acting Secretary read the minutes of the last meeting and they were confirmed.

The Acting Secretary read minutes of meetings held on the 11th of June, the 16th of June, the 2nd of July, the 3rd of July, and the 4th of July, which were severally confirmed. He also read certain letters from Mr. Scott, attached to them.

It was moved by Mr. Scott and seconded by Captain Onslow that these minutes and letters be entered in the minute-book.

Agreed to.

The Acting Secretary reported that the cheques which had been handed to him to pay to the employes of the Institution had been declared by the Bank to be informal, inasmuch as they had not been countersigned by the Secretary. The salaries had however been paid, and no inconvenience had arisen.

It was moved by Captain Onslow, and seconded by Mr. Hill, "That the Chairman be requested to write a letter to the Bank of New South Wales, intimating that Mr. Chas. Robinson has been appointed Acting Secretary, and has been authorized to countersign cheques of the Museum, bearing the signature of the Trustees, in lieu of Mr. Gerard Krefft, the Curator, as heretofore."

Agreed to.

A letter to the above effect was thereupon written by the Chairman and posted to the Manager of the Bank of New South Wales, George-street.

The following correspondence was read by the Acting Secretary:—

1. Copy of letter to Mr. E. P. Ramsay, informing him that his letter of date July 6th, 1874, had been laid before the Board.
2. Copy of a letter dated July 8th, 1874, from the Acting Secretary to the Postmaster General, requesting "That all letters addressed to the Trustees of the Australian Museum, or to the Secretary of the Australian Museum," might be delivered to the Acting Secretary.
3. Copy of a letter, date 10th July, 1874, from the Secretary to the Post Office acceding to the arrangement proposed.
4. Copy of a letter, dated July 8th, 1874, from Acting Secretary to the Curator, informing him of the terms of the resolution suspending him from his office as Secretary, passed at the last monthly meeting; adding, "That his services in the capacity of Secretary will not for the present be required by the Trustees," requesting the Curator to forward to the Acting Secretary "any official correspondence intended for the Trustees, which might come into his possession," and enclosing cheque for £41 13s. 4d.
5. Letter from Curator, dated July 8th, 1874, acknowledging receipt of letter last-named, and enclosing a receipt for cheque.

The Secretary reported that, by direction of Mr. Hill he, on the 10th instant, applied to the Curator by letter, for the letter book, exchange book, and petty cash book; and that on the 11th instant he had received the following reply from the Curator, dated July 11th, 1874:—

"I received your two notes of the 10th instant. With regard to the books you require of me, I beg to point out to you that I was turned out of my rooms by the Trustees without a moment's notice, and that I shall hand over to them every book or other property belonging to the Museum as soon as I am at liberty to collect them."

Some members of the Board desiring to have the second letter of the Curator received on the same date, the Acting Secretary reported that that letter was in reply to one from him, informing the Curator that the Sub-committee would meet on the 13th instant to proceed with the inquiry, respecting charges against him, and inviting his attendance. Mr. Krefft's reply was dated July 11th, 1874, and was as follows:—

Dear Sir,

Will you kindly inform the Chairman of the Sub-committee that I have forwarded the Honorable the Attorney General a full statement of my case, and the reasons why I decline to be tried by a tribunal of Judges who have ill-will against me; who have shown this ill-will on previous occasions; who insisted that I should supply the men I then accused with a list of my charges duly specified and signed by me; and who now decline to accord the same privilege to myself. I can only meet men of the stamp whom your Sub-committee have arraigned against me on oath, and in a properly constituted law Court; and

CHAS. ROBINSON, ESQ., &C.

I remain, &c.,
GERARD KREFFT.

The Attorney General said that he had received a communication from Mr. Krefft, which was probably the statement referred to in that letter; observing that that statement was addressed to the Trustees, he returned it to the Curator unread.

The Chairman directed the messenger to request the attendance of the Curator in the Board-room.

The messenger returned with the answer that "Mr. Krefft was in bed with a bad cold, and could not attend." He also handed in a letter from the Curator.

The Chairman then sent the following note to the Curator by the messenger, whom he directed to wait for an answer:—

15th July, 1874.

Sir,

I am requested by the Trustees to obtain from you the petty cash book, the letter book, the exchange book, twenty-four copies of the Report from the Select Committee, and a number of keys, which are wanting. If you cannot leave your room, will you be good enough to state where they can be found.

W. A. DUNCAN,
Chairman.

The messenger returned and delivered to the Chairman half-a-sovereign, the petty cash book, and a number of accounts, particulars of which were entered therein.

The Chairman directed the messenger to ascertain where the articles referred to were to be found, and to ascertain whether they were in the Board-room or not. The

The messenger returned with the following reply:—"Mrs. Krefft says Mr. Krefft does not know whether they are in the Board room or not. They may be down in the rooms that he is barred out of; when he is about he may be able to get them."

It was unanimously resolved, on the motion of Captain Onslow, seconded by Dr. Cox, "That the Acting Secretary be directed to write to Mr. Krefft, requesting him to hand over to the Acting Secretary the missing books, papers, and keys, before 3 p.m. on Friday, 17th July; and to inform him that, in default of this being done, the matter will be referred to the next Board Meeting, with a view to his dismissal."

Mr. Hill explained what he had done in regard to taking a numerical catalogue of the specimens in the Museum. He had obtained the necessary clerical assistance, and had been in daily attendance at the Museum. The work was now so far advanced that the public might be admitted to all parts of the Institution hitherto thrown open to them. The Curator had been applied to for all the keys of the Museum, but all the keys had not been handed over, and he had therefore been unable to complete the catalogue. Among the missing keys were those giving access to the taxidermist's rooms, and the recesses under the lepidoptera cases had not been examined.

A letter, dated 15th July, and a printed statement enclosed therein, handed in from Mr. Krefft at an earlier period of the meeting, were read by the Acting Secretary.

The Acting Secretary was directed to obtain minute books, stationery, &c.

The following requisitions were handed in and read:—

No. 1.

"Australian Museum, 15 July, 1874.

"We, the undersigned, Trustees of the Australian Museum, beg to recommend Alfred Roberts, Esq., to fill the vacancy caused by the retirement of His Excellency the Governor, as Elective Trustee, on account of his scientific and literary attainments.

"A. W. SCOTT.
W. A. DUNCAN.
JAMES C. COX.
ARTHUR ONSLOW.
ARCHIBALD LIVERSIDGE."

No. 2.

"We, the undersigned, Trustees of the Australian Museum, propose Mr. James Norton, for ballot as a Trustee, in consideration of his scientific attainments.

"JAMES C. COX.
ARCHIBALD LIVERSIDGE.
ARTHUR ONSLOW.
W. A. DUNCAN.
A. W. SCOTT."

"Australian Museum, 15th July, 1874.

Confirmed,—

CHAS. ROBINSON,
Acting Secretary—17/7/1874.

W. A. DUNCAN,
Chairman.

Adjourned Meeting, Friday, 17 July, 1874.

Present:—

Wm. Macleay, Esq., M.P.,
Ed. S. Hill, Esq., J.P.,
A. W. Scott, Esq., M.A.,
H. G. Alleyne, M.D. (President of
the Medical Board),

W. A. Duncan, Esq. (Collector of Customs),
Professor Liversidge,
James C. Cox, Esq., M.D.,
Geo. Fortescue, Esq., M.B.,
Chris. Rolleston, Esq. (Auditor General).

Mr. Duncan was called to the chair.

The minutes of the last meeting were read by the Acting Secretary, and confirmed.

The Acting Secretary read the following correspondence:—

1. Letter, dated 16th July instant, from Acting Secretary to the Curator, requesting him to hand over the exchange book, letter book, and all other books, papers, and documents, the property of the Institution; also all the keys of the Museum, and informing him that, in the event of refusal or neglect, the matter would be brought forward at the next Board meeting, with a view to his dismissal.
2. Letter from the Curator, dated 17th July instant, to the Trustees, stating that he complies "with the demand of the Trustees by handing over to Mr. Chas. Robinson such books, papers, documents, and keys as so demanded, as far as he is able to do so, from the rooms at present at his disposal, intimating at the same time that there may be some others which he has not been able at present to collect, which, should he find, he would at once forward as directed."

The Acting Secretary pointed out the books, papers, and keys which the messenger had placed in the room ten minutes before the hour of meeting.

Mr. Hill said that the keys sent in were simply a bunch of duplicate keys, made originally for the cases. There were none which would open the door of the taxidermist's room, and to give access to other parts of the building, where there were valuable specimens. We should have completed the numerical catalogue some days ago but for the want of those keys.

Dr. Alleyne pointed out that the 24 copies of the Report obtained by the Curator from the Government Printing Office, for distribution to the Trustees, had not been distributed, nor were they among the books and papers sent in.

Dr. Cox said that letter-book containing the correspondence taken by the copying-press was not among the papers; he considered that it was important that that book should be in the hands of the Trustees.

It

It was unanimously resolved, on the motion of Dr. Alleyne seconded by Mr. Hill, "That the Curator has not complied with the request of the Trustees, contained in the letter of the Acting Secretary of the 16th instant, inasmuch as he has not produced the original keys of the Institution, nor the keys of the taxidermist's rooms and of certain drawers, nor has he produced the letter-book and certain other documents, known to be in his possession."

J. A. Thorpe was called in and examined with respect to the keys sent by the Curator.

It was resolved, on motion made by Mr. Hill and seconded by Mr. Macleay, "That Mr. Krefft be suspended forthwith from his office as Curator of the Australian Museum."

Mr. Rolleston did not vote.

It was unanimously resolved, on motion made by Mr. Hill and seconded by Mr. Rolleston, "That the Acting Secretary inform Mr. Krefft of his suspension, and request him to hand over, without further delay, the keys of the Museum, and the papers and books belonging to the Institution, still retained by him."

It was unanimously resolved, on motion made by Dr. Cox and seconded by Mr. Scott, "That the Acting Secretary be instructed to inform the Minister for Justice and Public Instruction of the suspension of the Curator, and also to state that the Trustees are ready to open the Museum, provided police protection be continued."

Mr. Hill reported that in that part of the building, the keys of which were not forthcoming, there was a large and valuable collection of insects which ought to be examined to prevent their destruction. The taxidermist informed him they were in danger of being spoiled for want of air, or of being destroyed by insect life.

Mr. Scott said, that he had seen dermestès crawling about in some of the cases, and they would quickly destroy insect specimens.

It was unanimously resolved, on motion made by Mr. Macleay, "That Mr. Hill be empowered to take any steps which may be necessary for the due preservation of the specimens."

Dr. Cox called attention to the item of 30s. put down in the petty cash book for the wages of a man named Milne. He had certified the account as being correct; but he objected to the payment of the amount, for it now appeared that Milne was not in any way a servant of the Museum, but was simply employed by Mr. Krefft for his own personal advantage and convenience.

John Milne was called in and examined as to whether or not he had been employed upon work for the Museum.

The Chairman read a letter from the Acting Secretary respecting the remuneration to be paid to him.

It was unanimously resolved, "That the Acting Secretary be paid by fees from the date of his appointment until the end of the present month, namely, at the rate of one guinea for his attendance at each meeting, and that after that date his salary be fixed at two guineas per week."

It was unanimously resolved, on motion made by Mr. Hill, seconded by Mr. Macleay, "That the Acting Secretary be instructed to request the Postmaster General to send all letters addressed to the 'Curator' to the Acting Secretary."

The meeting stands adjourned until Tuesday next, at 3 p.m.

Confirmed.—

GEORGE BENNETT, M.D.,
Chairman.

CHAS. ROBINSON,
Acting Secretary—21/7/74.

Adjourned Monthly Meeting, held on Tuesday, 21 July, 1874.

Present:—

E. S. Hill, Esq., J.P.,

Professor Liversidge,

A. W. Scott, Esq., M.A.,

H. G. Alleyne, Esq., M.D.

Wm. Macleay, Esq., M.P.,

George Bennett, Esq., M.D.,

James C. Cox, Esq., M.D.,

Dr. Bennett was called to the chair.

The minutes of the last meeting were read and confirmed.

The following correspondence was read:—

1. A letter, dated July 18th, from the Acting Secretary to the Minister of Justice and Public Instruction, informing him of the suspension of the Curator; and also, that the Trustees are prepared to re-open the Museum to the public if the protection of the police be continued.
2. A letter, dated July 18th, from the Acting Secretary to Mr. Krefft, informing him that the Trustees had suspended him from his office as Curator, and that the Trustees require him to hand over, without further delay, the keys of the Museum, and all papers and books belonging to the Institution, still retained by him. Mr. Thorpe, the taxidermist, would receive anything he might have for the Trustees.
3. A paper entitled "copy of medical certificate," with a memo. at the foot, signed "A. Krefft."
4. A letter, dated 20 July, from Mrs. Krefft, asking to be put in possession of a washing-copper and other articles, her private property.

Mr. Hill reported that, as the missing keys of the Institution had not been delivered up, he had called in the assistance of a locksmith and picked the locks. The rooms had been opened to-day and were now being examined. From the close atmosphere in these rooms the specimens were in danger of being spoiled.

Dr. Cox called attention to the insecure state of the building by reason of the east and west windows being open, excepting in so far as they had been temporarily barred by the Trustees. Those windows ought to be permanently closed, as access to all parts of the Institution could be had through them.

The

The Chairman remarked that those windows had been for a long time in this state.

Mr. A. W. Scott pointed out that many articles, the property of the Institution, were missing from the Board room, where they had been ordinarily kept.

It was unanimously resolved, on motion made by Mr. Macleay and seconded by Dr. Cox, "That in the event of the Government acceding to the request of the Trustees for the continuance of police protection, Mr. Hill be appointed to make all necessary arrangements for the opening of the Museum to the public."

The meeting stands adjourned until Thursday, the 30th instant, at 3 o'clock, p.m.

CHAS. ROBINSON,
Acting Secretary—30/7/1874.

Confirmed,—
W. A. DUNCAN,
Chairman.

Adjourned Monthly Meeting, Thursday, 30 July, 1874.

Present:—

The Attorney General (The Hon. J. G. L. Innes),	Wm. Macleay, Esq., M.P.,
The Collector of Customs (W. A. Duncan, Esq.),	Edward S. Hill, Esq., J.P.,
	A. W. Scott, Esq., M.A.,
	James C Cox, Esq., M.D.,
	Geo. Fortescue, Esq., M.D.

W. A. Duncan, Esq., was called to the chair.

The minutes of last meeting were read and confirmed.

The following letters were read:—

1. Trübner & Co., London, June 9, to Trustees, advising shipment of case of books per mail steamer "Hindustan," and enclosing invoice.
2. Rev. W. B. Clarke, M.A., July 21, 1874, requesting leave of absence from Board meetings for six months from the present date, on the ground of ill health.
3. Secretary to the Post Office, July 22, 1874, acceding to arrangement proposed in letter of 17th instant, that letters or newspapers intended for the Curator, the Secretary, or the Trustees of the Museum, be forwarded to the address of the Acting Secretary.
4. Mr. Krefft to Mr. E. S. Hill, July 22, 1874, asking to be permitted to use the cellar for domestic purposes.
5. Mr. E. S. Hill to Mr. Krefft, July 22, 1874, informing him that as the Museum was still in charge of the police he has no discretion in the matter; but offering to hand over any articles the private property of Mr. Krefft.

The Acting Secretary was instructed to write to the Rev. W. B. Clarke, and to inform him that the Trustees had granted the leave of absence applied for, and also to express their sympathy with him.

The Acting Secretary reported that shortly before the hour of meeting to-day, Mr. Krefft had sent down 124 vols. of books, a tin box (locked), and a small case of ten specimens of marine telegraphic cable: These articles were pointed out to the Trustees. He also reported that he had obtained from the agent of the P. & O. Co., the case referred to in Trübner & Co.'s letter. The case was addressed "Gerard Krefft, Esq., Australian Museum," and Mr. Krefft had claimed it from the messenger. The case was opened in the presence of the Board, and its contents were found to correspond with Trübner & Co.'s invoice, which states that the goods were shipped by them "on account and risk of Trustees of the Australian Museum, Sydney." Date of invoice, June 8, 1874. Amount, £6 8s. 2d.

Some conversation took place respecting the re-opening of the Museum to the public. The Attorney General suggested that extra assistance should be employed to enable that to be done. Mr. Hill stated that most of the keys of the Institution were still retained by Mr. Krefft, who was now under suspension, and if the public were to be admitted in the absence of police protection the Trustees would have no guarantee for the safe custody of the specimens.

It was resolved, on motion made by the Attorney General, "That the Acting Secretary be instructed to write to the Minister of Justice and Public Instruction, calling attention to the letter of the 18th instant, and requesting an answer at his earliest convenience."

Mr. Hill reported that the Sub-committee appointed to inquire into certain charges against the Curator had concluded the inquiry so far as taking evidence was concerned, and would be in a position to report to the next monthly meeting of the Board. He had also finished the catalogue of the specimens and of the books in the library.

Some conversation took place with regard to the printing of the evidence taken by the Sub-committee.

The Attorney General thought that the evidence ought to be printed. Mr. Macleay did not consider it necessary that the evidence should be printed.

It was resolved, on motion made by Mr. Macleay, seconded by Mr. Scott, "That the Sub-committee be requested to have the evidence printed, and that the Acting Secretary be instructed to request the Minister for Justice and Public Instruction to obtain the necessary authority for the printing of the evidence confidentially at the Government Printing Office."

CHAS. ROBINSON,
Acting Secretary—6/8/74.

Confirmed,—
W. A. DUNCAN,
Chairman.

Monthly Meeting, Thursday, 6 August, 1874.

Present:—

The Colonial Treasurer (the Hon. G. A. Lloyd),	Wm. Macleay, Esq., M.P.,
The Attorney General (the Hon. J. G. L. Innes),	Capt. Onslow, R.N., M.P.,
The Auditor General (Chris. Rolleston, Esq.),	Geo. Bennett, Esq., M.D.,
The Collector of Customs (W. A. Duncan, Esq.),	Ed. S. Hill, Esq., J.P.,
	James C. Cox, Esq., M.D.,
	A. W. Scott, Esq., M.A.,
	Archibald Liversidge, Esq., Professor, Sydney University.

Dr. Belisario.

W. A. Duncan, Esq., was called to the chair.

The minutes of last meeting were read and confirmed.

Payment of the following accounts was authorized, and cheques were signed for that purpose:—

	£	s.	d.
Acting Secretary, salary to 31 July	14	14	0
J. A. Thorpe, monthly wages	12	10	0
H. Barnes, "	12	10	0
R. Barnes, "	10	0	0
M. O'Grady, "	10	0	0
J. Macnamara, "	1	10	0
Petty cash for July	6	10	0
" August	6	10	0
York } Clerks employed upon numerical catalogue	10	10	0
Clarke }	8	8	0
Edwin Burton, shorthand writing	21	7	0
Chas. Robinson, "	37	7	0
J. Goulde, British birds	9	9	0
Reading & Co., stationery	4	7	6
W. Maddock, books	1	17	8
S. M. Herald, advertising	2	7	2

Letters were read, as follows:—

1. Acting Secretary to Rev. W. B. Clarke, July 31, informing him that the Board has granted six months' leave of absence, and expressing sympathy.
2. Acting Secretary to Minister for Justice, &c., July 31, inviting attention to Acting Secretary's letter of 18th respecting re-opening of the Museum, and requesting a reply at earliest convenience.
3. Acting Secretary to Minister for Justice, &c., requesting authority for printing of evidence taken before the Sub-committee appointed to inquire into certain charges against the Curator.
4. Under Secretary to the Minister for Justice to the Acting Secretary, August 1, informing him that instructions have been given to the Government Printer for the printing of the evidence as requested.
5. E. P. Ramsay to the Trustees, July 28th, requesting an answer to his letter of July 6th, offering his services as Assistant Curator.
6. Gerard Krefft to Trustees, enclosing key of tin box sent in by him with a number of books at last meeting.
7. Gerard Krefft to Collector of Customs, respecting three cases of natural history per "John Knox" from New Zealand.
8. Gerard Krefft to the Trustees, August 6, claiming to be put in possession of any letters, parcels, or cases addressed to him, either in his own name or as Curator of the Australian Museum.
9. Rabone, Feez, & Co., to Acting Secretary, August 5, requesting that three cases of natural history, marked MG, per "John Knox," may be handed to them; and enclosing copy of a letter from Julius Haast, Christ Church, N.Z., advising them of the shipment of said cases, and requesting them to forward cases by first opportunity to the Museum Goddefroy in Hamburg.
10. Geo. Palmer to E. S. Hill, July 20, applying for employment in the Museum.

In regard to the three cases of natural history, referred to in the correspondence, the Acting Secretary reported that three cases, marked MG, as described by Messrs. Rabone, Feez, & Co., and their correspondent, Julius Haast, had been brought to the Museum. They bore no address, but entries had been passed for them by the Customs House Agent of the Trustees, because he had seen them mentioned in the manifest as being consigned to the Australian Museum. The cases were now in the Board-room, and had not been opened.

It was unanimously resolved, on motion made by Mr. E. S. Hill, seconded by Mr. Rolleston, that the three cases, marked MG, be returned to the Queen's Warehouse, in charge of the Collector of Customs—Rabone, Feez, & Co. to be informed.

The Acting Secretary was instructed to inform Mr. Ramsay, in reply to his letter read this day, that the Trustees regret that they are unable to entertain his proposals at present.

A letter from M. de Robillard, addressed to Dr. Bennett and Wm. Macleay, Esq., as Trustees of the Australian Museum, was deferred for consideration to a future day.

A ballot was taken for the election of Trustees. Alfred Roberts, Esq., and James Norton, Esq., were each elected by a unanimous vote.

The Acting Secretary reported the work given out to Henry and Robert Barnes during the month.

The following donations were reported, and letters of thanks were signed by the Chairman:—A flying squirrel (*Belideus sciurus*), by the Hon. Charles Campbell, The Pines, Newtown; a beaver rat (*Hydromys chrysojaster*), by Mr. Crichton, Kiandra; a brush turkey (*Tallegalla Lathamii*), from the Botanic Gardens; a black swan (*Cygnus atratus*), from the Botanic Gardens; a mandarin duck (*Aise galericulata*), from the Botanic Gardens.

Mr.

Mr. Edward S. Hill brought up a report of the numerical contents of the Australian Museum, with an appendix, both dated August 5; and they were read by the Acting Secretary.

It was unanimously resolved, on motion made by Mr. Rolleston, and seconded by Mr. Macleay, "That the Report now read be received, and that the thanks of the Trustees be given to Mr. Hill for the labour he has bestowed upon the work."

Mr. Hill expressed his acknowledgments, and presented the inventories which had been prepared under his direction.

Mr. Rolleston, as chairman of the Sub-committee appointed to inquire into certain charges against the Curator, desired to be informed whether the Sub-committee would be held harmless in the event of legal proceedings—whether in fact the report would be accepted as confidential and privileged?

Discussion ensued.

Mr. Rolleston, understanding that the Trustees were prepared to accept responsibility in regard to the inquiry made by the Sub-committee, and to receive the report as confidential, handed the document to the Chairman.

The report was read by the Acting Secretary.

It was unanimously resolved, on motion made by Mr. Macleay, and seconded by Captain Onslow, "That the report now read be received, and that the thanks of the Board be given to the sub-committee."

Mr. Macleay moved that the meeting be adjourned until Three o'clock to-morrow, for the consideration of the report.

Mr. Scott seconded the motion.

The Attorney General moved, by way of amendment, that the meeting adjourn until this day week.

The Colonial Treasurer seconded the amendment, and it was agreed to by six votes to five.

Printed copies of evidence taken before the Sub-committee were distributed.

The meeting stands adjourned until Thursday next, the 13th instant, at Three o'clock.

Confirmed,—

W. A. DUNCAN,

Chairman.

CHAS. ROBINSON,

Acting Secretary—13/8/1874.

Thursday, 13 August.

Present:—

The Attorney General (The Hon. J. G. L. Innes),	Professor Liversidge,
The Colonial Treasurer (The Hon. G. A. Lloyd),	Edward S. Hill, Esq.,
The Collector of Customs (W. A. Duncan, Esq.),	Wm. Macleay, Esq., M.P.,
The Surveyor General (P. F. Adams, Esq.),	James C. Cox, Esq., M.D.,
	George Bennett, Esq., M.D.,
	Alfred Roberts, Esq.,
	A. W. Scott, Esq., M.A.

The minutes of last meeting were read and confirmed.

The following correspondence was read:—

1. Letter from the Hon. Charles Campbell, August 8, to W. A. Duncan, Esquire, stating that W. G. O'Neill, of Queanbeyan, was the donor of the flying squirrel for which a letter of thanks had been sent to him.
2. Letter from Acting Secretary to Rabone, Feez, & Co., Aug. 7, informing them that the three cases of natural history, per "John Knox," had been returned to the Queen's warehouse.
3. Acting Secretary to E. P. Ramsay, Aug. 7, intimating that the Trustees were unable to entertain his proposal for appointment to the office of Assistant Curator at present.
4. Acting Secretary to Alfred Roberts, Esq., informing him that he had been elected a trustee in the room of His Excellency the Governor.
5. Acting Secretary to James Norton, Esq., informing him that he had been elected a trustee.

The Chairman reported that he had delivered the three cases of natural history, per "John Knox," to Messrs. Rabone, Feez, & Co., they having satisfied him that they were entitled to receive the same.

The Acting Secretary reported that the framed photograph, "View in Venice," had been returned to Mr. J. R. Clarke, the owner of it, and he produced Mr. Clarke's receipt for the same.

A letter of thanks was signed by the Chairman, to W. G. O'Neill, Esq., for his donation of a flying squirrel.

The Acting Secretary, by direction of the Chairman, read the evidence given before the Trustees, on the 17th July, by John Milne, and Milne's receipt for 30s., appended thereto.

The Acting Secretary read the report from Sub-committee appointed to inquire into certain charges against the Curator.

Mr. Scott moved, and Mr. Macleay seconded, "That the report now read be adopted."

Discussion ensued.

Mr. Lloyd moved, "That the further consideration of the matter stand over to this day week."

Dr. Bennett seconded the motion.

The motion for adjournment was negatived. Ayes, 2; noes, 6. Ayes—Mr. Lloyd and Dr. Bennett. Noes—Professor Liversidge, Mr. Hill, Mr. Macleay, Dr. Cox, Mr. Roberts, Mr. Scott.

The motion for the adoption of the report was agreed to. Ayes, 6; noes, 3. Professor Liversidge, Mr. Hill, Mr. Macleay, Dr. Cox, Mr. Roberts, Mr. Scott. Noes—Mr. Innes, Mr. Lloyd, Dr. Bennett.

Mr. Hill moved, "That the Curator be dismissed from the Institution."

Mr. Macleay seconded the motion; and, in doing so, suggested that perhaps the more regular course would be to first call upon Mr. Kreffit to show cause.

Conversation ensued on this point, and finally it was unanimously resolved, on motion made by the Attorney General, seconded by the Colonial Treasurer, "That Mr. Gerard Kreffit be called upon to show cause why he should not be dismissed from his office as Curator and Secretary of the Australian Museum"—the Curator to be informed that he must reply before 3 o'clock on Thursday, the 20th.

The

The Attorney General moved, and the Colonial Treasurer seconded, "That the Curator be informed that he can have a copy of the evidence taken before the Sub-committee if he desires it."

The motion was negatived. Ayes, 3; noes, 6.

The meeting stands adjourned until 3 o'clock on Thursday next.

CHAS. ROBINSON,
Acting Secretary—28/8/1874.

Confirmed,—
W. A. DUNCAN,
Chairman.

Adjourned Monthly Meeting, Thursday, 30th August, 1874.

Present:—

The Collector of Customs (W. A. Duncan, Esq.),	James C. Cox, Esq.,
The Auditor General (Christopher Rolleston, Esq.),	Wm. Macleay, Esq., M.P.,
Captain Onslow, R.N., M.P.,	Edward S. Hill, Esq.,
George Bennett, Esq., M.D.,	James Norton, Esq.,
Alfred Roberts, Esq.,	Professor Liversidge,
	A. W. Scott, Esq., M.A.,
	George Fortescue, Esq., M.B.,

H. G. Alleyne, Esq., M.D.

The Collector of Customs was called to the chair.

The minutes of last meeting were read and confirmed.

The following correspondence was read:—

1. Acting Secretary to Gerard Krefft, August 13, calling upon the Curator and Secretary to show cause why he should not be dismissed.
2. Gerard Krefft to Trustees, August 19, asking to be supplied with the defined grounds of accusation, and the evidence taken before the Sub-committee appointed to inquire into his conduct.
3. Letter from J. Grey to the Manager, Albion Park, August 9, respecting a donation of the head of a guard-fish and a specimen of the trigger-fish.
4. Acting Secretary to J. Grey, August 30, informing him that the donations of which he apprised the Trustees in his letter of the 9th had not yet come to hand.
5. J. A. Henderson, North Creek, Ballina, August 4, 1874, to the Curator, stating that he had forwarded a case containing one bottle of small snakes, lizards, and beetles, also 338 land shells, and asking that a gallon of spirits of wine might be sent to him.
6. A letter from John Dudderidge to the Trustees, enclosing an account for hay, bran, and corn.

Mr. Rolleston moved and Dr. Bennett seconded, "That the Curator be supplied with a copy of the evidence taken before the Sub-committee appointed to inquire into his conduct."

Mr. Hill moved and Mr. Macleay seconded the following amendment, "That all the words after the word 'that' be omitted, with a view to the insertion of the following words 'Mr. Gerard Krefft be dismissed from his office as Curator and Secretary.'"

Discussion ensued.

The amendment was agreed to on the following vote: Ayes, 10; noes, 2,—namely: Ayes: Captain Onslow, Mr. Roberts, Dr. Cox, Mr. Macleay, Mr. Hill, Mr. Norton, Professor Liversidge, Mr. Scott, Dr. Fortescue, and Dr. Alleyne. Noes: Mr. Rolleston and Dr. Bennett.

On the motion of Mr. Roberts, it was unanimously resolved, "That the Acting Secretary be instructed to inform the Minister for Justice and Public Instruction of the course the Trustees have considered it necessary to take in regard to the dismissal of the Curator and Secretary, and to furnish him with a copy of the report of the Sub-committee and evidence taken before it, and also with a copy of Milne's account, and the evidence taken before the Board on the 17th of July last."

On the motion of Mr. Macleay, seconded by Dr. Fortescue, it was unanimously resolved, "That the Acting Secretary be instructed to acquaint Mr. Krefft with the fact of his dismissal, and the grounds upon which the Trustees have felt it their duty to come to that determination, Mr. Krefft also to be required to give up his apartments on or before the 31st day of August instant."

The Acting Secretary explained that it was necessary that he should leave Sydney on urgent business, but that he could arrange for the efficient and satisfactory performance of the duties of his office during his absence.

It was unanimously resolved, on motion made by Mr. Roberts, that one month's leave of absence be granted to the Acting Secretary.

Mr. Roberts draw attention to the importance of providing secure locks to the doors and cases of the Museum, in view of its being re-opened to the public, and—

It was unanimously resolved, on motion made by Dr. Cox, seconded by Mr. Scott, "That Mr. Hill be empowered to see that proper locks be put upon all cases and doors of the Museum."

The meeting stands adjourned until Thursday next, the 27th instant, at 3 o'clock p.m.

CHAS. ROBINSON,
Acting Secretary—27/8/1874.

Confirmed,—
A. W. SCOTT,
Chairman.

1875.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

PROGRESS REPORT

OF THE

SYDNEY CITY AND SUBURBAN SEWAGE AND HEALTH BOARD,

APPOINTED 12 APRIL, 1875,

TO INQUIRE INTO AND REPORT AS TO THE BEST MEANS OF DISPOSING OF THE
SEWAGE OF THE CITY OF SYDNEY AND ITS SUBURBS,
AS WELL AS OF PROTECTING THE HEALTH OF THE INHABITANTS THEREOF.

ADOPTED 4 MAY, 1875.

ORDERED BY THE LEGISLATIVE ASSEMBLY TO BE PRINTED,
6 May, 1875.

SYDNEY: THOMAS RICHARDS, GOVERNMENT PRINTER.

THE PRINCIPAL UNDER SECRETARY TO THE CHAIRMAN OF THE SYDNEY CITY AND SUBURBAN SEWAGE
AND HEALTH BOARD.

Colonial Secretary's Office,
Sydney, 28 April, 1875.

SIR,

With reference to the matters laid before the Colonial Secretary by a deputation from the Sewage and Health Board on the 21st instant, I am now directed to communicate to the Board the following additional instructions which the Government have determined to give for their guidance.

2. Numerous representations having been made respecting the sickness and death alleged to have been occasioned during the last few months by the unclean state of the city, and by the pollution of the waters of the Harbour by the sewers and drains, and it being certain, whatever the cause, that an unusual amount of sickness, and an unusual number of deaths have recently occurred, I am desired to request that the Board will, at their earliest possible convenience, make such inquiries as will enable them to advise the Government as to the immediate and temporary measures that should be taken—if any are possible—to prevent or mitigate these evils.

3. In consideration of the importance of this matter, the Colonial Secretary trusts that the Board will report upon it without delay, leaving for more mature consideration the general question of the best method to adopt for draining the city and suburbs and disposing of the sewage matter.

4. More detailed instructions will be furnished from time to time respecting the general inquiry entrusted to the Board.

5. Mr. Robertson desires me to request that the Board will determine the number of members that shall form a quorum.

I have, &c.,
HENRY HALLORAN.

THE SYDNEY CITY AND SUBURBAN SEWAGE AND HEALTH BOARD.

PROGRESS REPORT.

To the Honorable the Colonial Secretary,—

SIR,

Having been instructed by you to advise the Government, as soon as possible, as to any measures which might be immediately adopted for removing or mitigating the evils said to have arisen in Sydney and the suburbs from defective drainage and other causes, we lose no time in presenting this Progress Report.

1. In the very earliest stages of our inquiry, a state of things was revealed of so revolting and dangerous a kind that we determined at once to confine our attention at first to the one point which is the subject of this Report.

2. We find that, of 5,400 closets supplied with water from the Sydney water mains, 4,700 are directly connected with the mains. The certain consequence of this most unusual arrangement is, that the water supplied to the inhabitants for household purposes is polluted with matter which some high authorities consider too offensive to be admitted even into the public sewers. The fact that such contamination has occurred has been known since May, 1874, and some of the particulars of the case which came to light during that month have been described in the public Press. The subject is not a pleasant one, but we think it desirable to review the matter in all its revolting details, for the purpose partly of exciting in the public mind a wholesome state of dread and disgust.

3. In the month of May, 1874, in consequence of information received, the Inspector of Nuisances visited a house in Castlereagh-street. He found the discharge pipe of the water-closet completely choked up, the pan full of solid and liquid matter, the supply cock open, so that there was a free and direct communication between the pan of the closet and the water-pipe which supplied several houses. Having drawn off a tumblerful of water from a tap in an adjoining yard, used for household purposes, he found it to contain solid fecal matter. Subsequent examination showed that the water-pipe was partly choked up with similar matter, and the water supplied to several adjoining houses was found to have been thus polluted. The Inspector is of opinion, moreover, that some of the contents of this closet must have found their way into the mains, so that it is impossible to say how far the pollution extended. Those of the public who read the accounts that appeared in the public Press of this affair, no doubt regarded it as an unforeseen and singular accident, and that measures would of course be immediately taken to render it quite impossible that anything so horrible and so dangerous should occur again. Unfortunately, however, it appears that it was not an accident at all, but a necessary and obvious result of the existing arrangements. There was nothing exceptional in this case but its magnitude. It was a particularly aggravated case, and was therefore, as far as we know, the first to be detected. Similar accidents, if they can be called such, on a small, we hope on a very small scale, must be of frequent if not daily occurrence. They form part of the regular routine of the Sydney Water Supply.

4. Before proceeding with our narrative of events relating to this very unpleasant subject, we will describe how it is that the water in the mains is contaminated with what ought to be sewage matter. We are informed that the water supply is now continuous—that the water is never, except under exceptional circumstances, cut off by day or by night. We have the best evidence, however, that it is a matter of daily occurrence that the water is cut off from particular mains for purposes of repair or of making new connections. When this takes place the water retiring from the main produces a very powerful suction,—sufficient, in some cases, to raise water

water from 20 to 25 feet. We are also informed by Mr. Bell, although it does not appear in the evidence, that it frequently happens, when a large quantity of water is drawn from the mains for watering the streets, or other purposes, that a similar powerful suction takes place in the upper parts of the mains. If the valves or cocks directly connecting the water-pipes with the pans of closets were always closed, and were perfectly water-tight and air-tight, even under high-pressure, no harm would arise; but plumber's work is not always perfect, and the best is liable to get out of repair. We have evidence also that it very frequently happens that the communication between the water-pipes and the pan of the closet is left open, either through carelessness or under the mistaken idea that a useless waste of water will purify the closet. Whenever the water is turned off from a main—and this, we repeat, is a matter of daily occurrence—that main sucks at all the closets directly connected with it, with a pressure in some cases sufficient to raise water out of a well 20 feet deep. If the plumber's work is not perfect, or if the cock is left open, the foul air from the pan of the closet must be drawn into the water-pipes, and contaminate the water which the inhabitants drink. This *must* happen daily. If any such closet should be choked, and the pan be full—and such a contingency can hardly be regarded as an extraordinary one—at the time when the water is shut off from the main, then the contents of the pan of the closet, whatever they might be, would necessarily be drawn into the water-pipes, for the benefit not only of the inmates of that particular house, but of the neighbourhood generally. We repeat, and we think the matter cannot be too strongly expressed or too often insisted upon, until a perfect remedy has been applied, that the water mains of Sydney are daily sucking with all their might at the water-closets. It appears in the evidence that about 100 cases have occurred within the last year in which the contamination of the water in this way has been actually observed, and it is probable that a much larger number have occurred which have not come under the notice of the public officers, and a still larger number in which a deadly contamination has been produced without any apparent taint or discolouration.

5. Ever since the matters upon which we are now reporting have been under our notice, we have felt that there should not be a single hour's unnecessary delay in taking measures to prevent the wholesale poisoning of the inhabitants which at present prevails; at the same time we have endeavoured to look at the matter calmly, and have abstained from reporting to the Government until we feel ourselves in a position to do so firmly and definitely.

6. It may, perhaps, be the opinion of ignorant persons that the contamination of water in the manner described, however distasteful and disgusting, is not particularly dangerous to the public health. We have therefore obtained the evidence of Dr. MacLaurin, showing that it is the general and received opinion amongst medical men that the contamination of water used for household purposes by fecal matter is productive of many fatal diseases, and is supposed to be the readiest means by which epidemic and infectious diseases are conveyed from one to another. The members of the medical profession who are members of this Board having unanimously concurred in Dr. MacLaurin's statements as to the generally received opinions of the profession on this point, we did not think it necessary to take any further medical evidence.

7. The opinion of medical men on this matter is not founded upon any theory, but is the result of observation. A passage on this subject, extracted from Parkes "Practical Hygiene"—a work of high authority—will be found appended (*vide* Appendix H), and the valuable evidence of Dr. MacLaurin confirms it. We call particular attention to the fact that water may be so contaminated by the foul air from a closet as to be dangerous to health and life, although perfectly pure in taste and appearance. Such water, as appears by Dr. MacLaurin's evidence, may create some dangerous diseases, and it may be the means—indeed, is supposed to be the readiest means—of communicating other diseases.

8. In order to ascertain what has already been done by the City authorities in this matter, we have taken the evidence of the Mayor, of Messrs. Aldermen Chapman and Goold, and of the Town Clerk. The accident in Castlereagh-street occurred in May, 1874. Mr. Bell sent in a Report dated 2nd July, urging the matter upon the attention of the Council (*Appendix A*), and a further report estimating the cost of the proposed alteration, dated 30th July, 1874 (*vide Appendix B*). The Water Committee sent in a Report dated 25th

August,

August, 1874 (*Appendix F*), recommending that no new connections should be made with closets except through the means of cisterns, which, if properly arranged, prevent all danger. On 9th of September a minute was passed, instructing the City Solicitor to prepare a by-law to enable the Council to enforce the use of cisterns in cases of new connections (*Appendix E*). It does not appear that any such by-law is absolutely necessary, for Mr. Bell informs us that in such cases he has practically no difficulty, and that all new connections are now of a safe kind. On November 20th instructions were given to Mr. Bell to furnish the City Solicitor with particulars for the proposed by-law (*Appendix C*). Mr. Bell tells us that he obeyed this instruction without delay. It appears that no such by-law has yet been submitted. We cannot learn that anything more has been done in the matter, except that a fresh set of Instructions to Licensed Plumbers was drawn up, relating to the subject of this Report which will be found in *Appendix G*; and a plan with an estimate of the cost of a cistern for the purpose of which we are speaking, which is approved of by Mr. Bell, was obtained.

9. We learn from the evidence of Mr. Chapman, confirmed by that of Mr. Goold and by that of the Mayor, that the Council were advised that they have, under the existing law, no power to interfere with existing connections with the mains, nor does it appear that it was even suggested that the gravity of the evils brought to light rendered it desirable that they should endeavour to obtain greater powers through the intervention of the Legislature. We are told by Mr. Chapman,—and he says that, in reference to these matters, he expresses the general feeling of the Council,—that they had no heart to apply to the Government for any such purpose, having experienced so much discouragement in former applications to the Government for assistance of any kind.

10. Having given, as far as we are able, a description and history of the whole case, we now go on to the consideration of the measures which, in the opinion of the Board, should be adopted to put an end to the abominations which we have described. We feel much fortified by the firm attitude assumed in this matter by the Mayor and Messrs. Chapman and Goold, especially as Mr. Chapman tells us that their evidence expresses, as we have said before, the general feeling of the Council.

11. Mr. Chapman proposes that an Act should be passed at once, giving the Council greater powers, and amongst other things requiring that the water should at once and without notice be cut off from all closets directly connected with the mains, and that at the end of one year the landlord of every house where approved connections have not been adopted should be heavily fined. In this opinion the Mayor and Mr. Goold concur, except that they think it would be expedient to give three months notice before cutting off the water; that is, that the water should be cut off three months after the passing of the Act, the fine for neglecting to establish approved connections to be inflicted at the end of an additional nine months.

12. The question as to the time which would be required to make these alterations, and the effect on the health and convenience of the inhabitants which would be produced by cutting off the water from closets, leaving them to be cleaned by buckets or otherwise, has received the anxious consideration of the Board. With respect to the time which would be required, we refer you to the evidence of Mr. Chapman, perhaps as good an authority on such a subject as any in the Colony. His opinion is that the necessary changes could not be effected in less than a year; and it would be of course useless to enact that anything should be done which, with the appliances at hand, could not be done. To cut off the water from the closets at once, or at any time before the end of a year, would of course occasion in many cases great inconvenience, but no such inconvenience should be considered for a moment in comparison with the intolerable evils at present existing. Temporary arrangements might be made at a small expense in each individual case, which, without danger to the purity of the water in the mains, would greatly diminish the temporary inconvenience.

13. We therefore recommend that an Act be passed as soon as possible to the following effect:—

- (1.) That the City Municipal Council be empowered to cut off the water from all closets directly connected with the water-mains, or which, in the opinion of the City Engineer, or other authorized officer, are connected in any such manner as to endanger the purity of the water, immediately after the passing of the Act.
- (2.)

- (2.) That within one year from the passing of the Act every such closet shall be required to be connected with the mains with the intervention of cisterns approved by the City Engineer, or other authorized officer, and of such a construction as, in the opinion of the said Engineer or other authorized officer, shall secure the water from pollution by any solid, liquid, or gaseous matter.
- (3.) Owners of houses failing to comply with the above requirement to be heavily fined, a minimum fine being fixed.
- (4.) Any person connecting, or causing to be connected, any closet with the mains otherwise than as provided, or without authority re-establishing any connection cut off by the authorized officers, or tampering with any connection legally effected, so as to destroy, or diminish, or endanger its efficiency, to be heavily fined.
- (5.) That the City Engineer be authorized to allow, during twelve months from the passing of this Act, temporary arrangements to be made for cleansing closets by water from the mains, provided that there shall be no direct communication between the mains and the pan of any closet.
- (6.) That the City Council be empowered to make regulations to prevent, as far as possible, the use of water in any cistern directly connected with a closet from being used for any other purpose than supplying that closet.

14. In recommending the Government to procure legislative interference in this matter, we feel bound to call their attention to the complaints appearing in the evidence appended to this Report, and which indeed have been notorious for years past,—that the efficiency of the law in abating nuisances has been seriously diminished by the mistaken leniency of certain Magistrates, in inflicting wholly inadequate penalties even in flagrant cases. It is stated that during the recent panic as to the health of the city this evil has disappeared, or has much diminished, but we fear that if the complaints to which we are alluding are well founded, that with the abatement of the panic the evil will recur.

15. Many grave allegations are also made respecting the conduct of Magistrates. It is stated that, in prosecutions for allowing nuisances, Magistrates not on the roster, and from the nature of their occupations interested in the cases brought before the Bench, take their seats and interfere with the efficient enforcement of the law. We have not had time, even if it came within our province, fully to investigate this matter, but we think it desirable that the Government, if they determine to adopt our recommendations, should take it into consideration whether it may not be desirable to make provision that the intentions of the Legislature respecting the abatement of the evils which form the subject of this Report should not be liable to be frustrated in the manner alleged to have occurred in other cases.

16. We have refrained from reporting to you until we feel in a position to make the most unhesitating recommendation of immediate and decisive action; at the same time we do not pretend that our inquiry and report, even upon this part of the subject submitted to us, are so full and exhaustive as we might have made them if the urgency of the case had admitted of further delay.

17. Although the evils to which we now draw your attention have probably been the cause, for a long time past, of much sickness and death, we cannot, for obvious reasons, attribute the excessive mortality of the last few months to this cause alone. These evils have existed for years, and are local. The unusual sickness and mortality have existed for a few months only, and have extended, we believe, over a large part of the Australian continent.

18. Appended to this Report will be found all the documents relating to the subject under consideration which have been submitted to us, and which appear of sufficient importance to be laid before you; also the minutes of the evidence taken before us, with the exception of a portion of the evidence of one witness, which we think it better to withhold for the present, for it relates to a disputed point not especially connected with the matter in hand, and which we have not had time to investigate fully.

19. The state of things revealed by this Report is not an agreeable one, but from our point of view it is not quite so disagreeable as it at first appears.

20. That a wide-spread pestilence has not desolated Sydney is a proof of the general well-being of the inhabitants and of the healthiness of the climate. A similar pollution of the water supplied to any of the great towns of Europe would, we believe, have been followed by some terrible pestilence.

21. Now that this, which is probably the most serious of the preventible evil influences affecting the health of the inhabitants of Sydney, is brought to light, and will no doubt be speedily removed, we may fairly hope for a sensible improvement in the general health.

22. In concluding this Report on one single subject capable of being dealt with immediately and independently of any general scheme of drainage, we wish to draw your attention to the difficulties which will attend any further inquiries by this Board as at present constituted. By a very great effort we have brought our inquiry upon this, our preliminary subject, to a speedy termination; but we feel that we are working under disadvantages which will materially delay and *diminish the value* of any future inquiries in which we may engage. The calm and deliberate thought and discussion which questions of this kind require, especially on the part of the Chairman, who is supposed to direct the deliberations, is scarcely possible—or possible only under great disadvantages—in the presence of a Board so large as this, however excellent its constitution in other respects.

23. There will also, with so large a Board, be a most unusual expense attending this inquiry. We do not consider that any such expense should be considered, if the large number of the Board tended to increase the value of its labours. On the contrary, however, there is no doubt that this large number, and consequently large expense, will operate precisely in the opposite direction.

24. There are several pressing matters requiring immediate consideration, and some upon which it is desirable that the public should be assured by immediate inquiry; and we are desirous in every way in our power to carry out promptly the wishes of the Government, but we should be glad before proceeding further to be informed whether it is your wish that we should go on in face of the drawbacks to which we now draw your attention.

Board Room,
Sydney, 4th May, 1875.

M. B. PELL,
Chairman.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SYDNEY CITY AND SUBURBAN SEWAGE AND HEALTH BOARD.

FRIDAY, 23 APRIL, 1875.

Present:—

M. B. PELL, Esq.,
 E. O. MORIARTY, Esq.,
 HON. J. B. WILSON,
 P. F. ADAMS, Esq.,
 H. G. ALLEYNE, Esq., M.D.,

F. BELL, Esq.,
 G. F. DANSEY, Esq.,
 CHAS. WATT, Esq.,
 HON. J. SMITH,
 W. C. BENNETT, Esq.

M. B. PELL, Esq., B.A., IN THE CHAIR.

G. F. Danscy, Esq., City Health Officer, and Member of the Board, was examined in his place:—

1. *Chairman.*] Are your duties as City Health Officer continuous;—that is to say, are you employed daily by the Corporation, or do you only give your services when called upon to do so? I am on a salary at so much a year, but my services are not given wholly to the Corporation; I am allowed private practice; but I have to hold myself in readiness to attend whenever I am called upon by the Mayor or Corporation. G. F. Danscy, Esq., M.R.C.S. 23 April, 1875.
2. Then you have no daily or routine duties to discharge for them, but when they require your services they send for you? Yes; I am supposed to hold myself in readiness when they want me.
3. Do you receive your instructions from the Mayor? Yes.
4. And you only attend when called upon by the Mayor, in consequence of representations which have been made to him, or matters which have come under his notice, in reference to which your advice is required? Yes; or by the Inspector of Nuisances, who has also the privilege of asking me to inspect any place with him, if he thinks it necessary.
5. Then it is no part of your duty to hunt up nuisances yourself;—you have only to inspect them when you are called upon to do so? No, it is not part of my duty to look after them; I can do it if I like. The duties of the Health Officer are laid down in the Act.
6. The Inspector of Nuisances, in effect, calls you in to confirm him? Yes.
7. Are there often nuisances of that sort which you are called in to inspect? Continually.
8. Are they in the streets or other public places? Not so much in the streets; they are chiefly cases of bad fish, or unwholesome meat, and cases of that kind.
9. Those would hardly come under our present subject of inquiry. Have you often occasion to inspect nuisances arising from water-closets or cesspools? Yes; there are frequently accumulations of filth from those sources.
10. And are prompt measures taken in those cases to remedy the nuisance? Yes, very prompt.

* * * * *

21. But you think the legal powers of the authorities are sufficient? Yes, under the new by-laws, which enable us to carry out the summoning of the owner or occupant of the premises under a penalty of £10, which was formerly only 40s. Previously we could only summons the poor unhappy tenant, and the landlord might have been wholly to blame for not putting down pipes on the premises.

* 136—A

22.

- G. F. Danscy, Esq., M.R.C.S.
23 April, 1875.
22. Have you had any means of judging whether cases of this kind, which have been brought before Magistrates, have been fairly decided, or whether there has been any undue leniency shown—Have the decisions given been what you would call reasonable decisions? I could not say for a certainty. I have had once or twice a suspicion that certain persons appeared on the rostrum when those who belonged to them were in trouble, who were not seen on the Bench at other times.
23. That is not exactly what I mean—I was not alluding to improper or partial feeling on the part of the Magistrates; but Magistrates are sometimes what is called good-natured, and from a sort of love of popularity they do not care to enforce the law in respect to these nuisances;—Do you think that is the case, or have you been satisfied with the decisions as far as you have observed them? I have an opinion that I can always tell whether the parties are going to get off, if I can merely see the faces of the Magistrates sitting on the Bench.
24. Some are lenient and others less inclined to be so? Yes.
25. Are these cases decided by one Magistrate? Some of them by one and some by two. The Sewerage law requires two, and the by-law requires one or more. Mr. Seymour has a copy of the by-law and will show it to you.
26. Has your attention ever been called to nuisances existing in the City which are not removable—that is, nuisances which are not easily removed? Frequently.
27. In what parts of the city? I refer more especially to that part which is called Surry Hills, where it is all open drainage.
28. Do you mean to say that all the sewage—all the offensive matter from the houses—goes into the drains? The whole of the house-slops and filthy water goes into them.
29. But not the drains from the closets? No; that is immediately stopped by the Inspector of Nuisances if any connection is found between the closets and the surface drains.
30. Is there any means of remedying the nuisance arising from open drains of that sort? There is no underground drain in that part of Surry Hills.
31. I do not mean in connection with engineering difficulties; but as a matter of fact, is there any means of remedying those nuisances? No; but that is a matter upon which my friend Mr. Bell, as an engineer, could better express an opinion. As a matter of fact there is one drain in Bourke-street, east of Moore Park and south of Arthur-street. This is the place (*indicating the locality on a map of Sydney.*)
32. Where does that drain discharge its contents? By Alderson's, and then to Waterloo, and on to Shea's Creek.
33. Are there similar nuisances in other parts of the city which there are no means of remedying? Yes, in the low part of Cook Ward, towards Elizabeth-street, between what used to be Mrs. Terry Hughes's paddock and Campbell-street I think it is.
34. But there are many parts of the city not in connection with sewers, are there not? A great many.
35. In those parts how are the kitchen and laundry slops disposed of? The filth runs into the open gutters in the streets.
36. Does that create a serious nuisance? Yes, it is very deleterious to health, and especially if you pass by when the gutters are being swept. I have often experienced it myself.
37. Then, they depend simply upon the rain to cleanse them? Yes.
38. There is no sufficient supply of water to flush these gutters so as to scour them? I believe there is not.
39. What is the nature of the powers which regulate the removal of nuisances—Under what circumstances can you compel a person to remove a nuisance? The carts go round twice a week to remove the refuse of the houses in all parts of the city. They take the west side of George-street every Monday and Thursday, and the east side on Tuesdays and Fridays. The people are supposed to put out, or have ready for removal, all rubbish they want taken away.
40. Any kind of offensive matter, kitchen stuff, or any other matter? Any kind of matter, except fecal matter; they don't take emptyings from earth-closets. And if the people neglect to do this the Inspector of Nuisances can summon them. In that case the landlord is not summoned.
41. Then you think the powers which the authorities possess to remedy these nuisances are sufficiently exercised? Yes, as far as it is possible to exercise them.
42. With regard to cess-pits and the nuisances arising from them, under what circumstances can you advise interference? There is no doubt that the smell from these closets is very offensive indeed, especially where there are fifteen or sixteen houses with perhaps forty or fifty inhabitants using the same one.
43. I wish to know under what circumstances can you take steps in connection with them? We can only take steps when the smell from these closets becomes so offensive to the inhabitants of houses in the locality as to become a public nuisance.
44. Not because the closets have overflowed but because the fact is become a nuisance? Yes.
45. Because some one has observed it and taken notice of it? Yes, generally the stench mostly arises because the walls of the closets are not water-tight.
46. But you do interfere when the smell becomes offensive? Yes.
47. Do you think, as far as you are able to judge, that the powers which the authorities possess in respect to keeping these closets in order have been as far as possible efficiently carried out? I believe that, as far as the Inspector of Nuisances has been able, he has been desirous of carrying them out thoroughly and efficiently.
48. As a matter of fact have they been carried out as far as they could have been? I think he has done so to the utmost.

* * * * *

55. You merely act as Medical Adviser to the authorities, and to the Inspector of Nuisances? Yes.
56. Do you find any disease, such as typhus, or any other disease arising from these nuisances, coming under your notice? I have found typhoid fever during my practice for the last eight years, and in those localities where there are open closets, or which are exposed to bad smells—such as Darling Harbour at low water, the stench of which is unbearable even at a great distance.
57. In those localities where there is great stench from open closets have you found fever? Yes, generally a good deal of fever. Disease takes a low type in the neighbourhood.
58. In the places which you have noted, where there are open drains—such as Surry Hills—have you found a great amount of fever there? Yes, to a great extent, and other diseases have taken a low type; the tendency to typhoid type is increased in these localities.
59. Did you say that these open drains contain matter from closets? No, not matter from closets.
60. And in all those localities where the sewers discharge their matter into the harbour you have observed a great deal of disease? Yes. A great number of the clerks to steam navigation companies have complained of illness, and have even had to leave their duties from attacks of what is commonly called low fever.
61. And persons belonging to the working classes, who live about the borders of Darling Harbour;—have you observed that they suffer from the effects of these sewers? I believe they do.
62. From disorders of the same nature? Yes.
63. Do you know anything about the health of the crews of vessels in the harbour? I do not.
64. Is there anything you would wish to suggest—any measure of a temporary kind to cleanse the city, or to remedy the nuisances to which you have alluded; or do you think as much is being done by the authorities as is possible? I believe that under existing circumstances everything that is in their power at the present time has been attempted.
65. Can you suggest any increase of power? Whether any application could be made at low water to these bays, where the banks are exposed and covered with the black slime from the sewers, so as to destroy the smell which arises from them when they dry after being exposed to the sun,—would be successful? I cannot say. Chloride of lime, &c., was tried some time ago in the Thames, if you recollect.
66. Was that application effective? The effect, I believe, was very slight; it was all washed away with the returning tide.
67. And with regard to the cleansing of the city, can you suggest anything that could be done—anything, I mean, of a temporary kind, not involving a system of sewerage—anything that could be done at once? I do not see that we could do more than is being done at present.
68. Do you think anything could be done to remedy the evils you have mentioned arising from open drains at Surry Hills? No; unless it were possible to have sufficient water to wash away the filth.
69. What kind of sewage matter is it legal for persons to allow to flow into the gutters? No offensive matter is allowed to go into the gutters, except what we term house slops.
70. Bedroom slops for instance? Yes, from wash-hand basins; but I believe bedroom chambers are supposed to be emptied into the privy.
71. Is there any security that these two kinds of slops can be kept separate? No.
72. Do you think the whole of these bedroom slops in many cases find their way into the gutters? Yes; you can perceive it as you walk along the streets.
73. Still there is nothing illegal in allowing house slops only to go into the gutters? It is not legal in cases where there is a sewer in the street, but it is legal in those cases where there is no sewer to which they can connect.
74. *Mr. Moriarty.*] In what districts are the diseases which are supposed by medical men to take their origin from the fermentation of fecal or other matters most rife? I have found that it is in the neighbourhood of the bays, such as Darling Harbour or Blackwattle Swamp. When I was connected with the Odd-fellows I found more diseases of a typhoid character in those localities, and also in the Surry Hills, than in any other parts. In the Surry Hills, especially in that part which I have mentioned, east of Bourke-street and south of Arthur-street, before you come to Baptist's Gardens, on the opposite side.
75. Have you observed any marked difference in the state of public health in those districts which are sewerred and those which are not sewerred? I cannot say. We have found a great deal of disease in the low parts of the city close upon the harbors, near the outflow of the sewers, and every ward of the city is more or less sewerred, though the sewerage is not complete or fully carried out.
76. Have you observed any difference in the amount of disease in long continued dry weather, and other periods when the sewers are supposed to be sufficiently flushed with the ordinary rains? I have not had the means of judging, not having at present the power of obtaining any returns from medical men.
77. *Chairman.*] You have not noticed whether there has been more disease during long-continued dry weather than at other times? Generally speaking at the break up of dry weather there has been more sickness than at other times. The difficulty I have in answering that question is this: whether the flushing of the sewers after heavy rain causes any mischief, or whether the stench caused by the heavy rain upon accumulated vegetable and animal matter, giving forth fetid exhalations, especially when the sun shines upon it afterwards, does not more harm. It would be very difficult to decide what is the cause of it.
78. *Mr. Moriarty.*] Has the prevailing form of disease in Sydney been that which is supposed to take its origin from this cause, or from the poisoned atmosphere, caused by the fermentation of fecal matter? I have noticed, and I have heard several medical men say that the nature of the disease takes a low type from that cause—from the poisoned atmosphere caused by defective sewerage.
79. Is there a greater prevalence of disease of that character? I believe there is more than there would be if the drainage was good.
80. *Mr. Watt.*] Do you think twice a week is often enough for the removal of kitchen refuse in summer time? I do not, in summer time; I have always said so.
81. Have you any information to give as to the condition of the city urinals? You mean the public urinals?
82. Yes? Well, I continually visit those in the Haymarket, &c., and I always find them in particularly good order. The person in charge of them washes them out twice a day and sprinkles carbolic acid upon them.

G. F. Dansey,
Esq., M.R.C.S.

23 April, 1875.

- G. F. Dansey, Esq., M.R.C.S. 83. Are not those at the Railway Station in very bad order? Those are not under the supervision of the Corporation. I am only speaking of those of which the Corporation has charge.
- 23 April, 1875. 84. *Hon. J. B. Wilson.*] Have you any knowledge of the railway urinals? I have not; I have been to them twice with Mr. Seymour, and they seemed to be in a very bad state.
85. I think you have stated that water-closet drainage is not allowed, if known, to go into the gutters? Not if it is known.
86. Has Mr. Seymour ever brought facts of that kind under your notice? Yes, and it has been stopped promptly. Mr. Seymour will give you the cases, and shew you in his book the fines that have been paid.
87. Is it the case that even in George-street some of the houses are not connected with the sewers? Yes.
88. And how is the drainage from those houses carried off? Into the gutter, and thence into a gully-shaft connected under ground with the sewer.
89. Are those gully-shafts in different parts of the city in close proximity to each other? They are apparently; Mr. Bell will be able to tell you about them.
90. Are you aware whether from these gully-shafts connected with the underground sewers any offensive smell comes forth? At times I have found there is.
91. Consequently, in the higher parts of the city the smell from those shafts might be very offensive? I believe it depends upon whether they are fully attended to; for I have understood from my brother officers that if properly attended to there ought to be no smell from them.
92. Are there officers of the Corporation whose duty it is to attend to them? There are.
93. Has the Inspector of Nuisances any power to see that they are attended to? I believe he has the duty of emptying them.
94. Has he sufficient assistance—has he any assistants? Yes.
95. Are they sufficient? I do not consider they are. I think that for the duties he has to fulfil he should have more assistance.
96. You have alluded in the course of your evidence to the great stench that arises from Darling Harbour at low water. Does that stench arise, in your opinion, from the sewerage that goes into Darling Harbour, or from other natural causes, independent of the sewers? I believe it is from the sewers.
97. Do you think that nuisance would be as great if Darling Harbour were sufficiently dredged so as to prevent the sewage matter from ever being exposed at low water? I don't think it would be so bad, because matter covered by water does not throw off the same fumes as matter which is exposed to the sun.
98. Consequently, if the heads of our bays were cleared and deepened this nuisance would be very much abated? Yes; and if also what is called a tidal wall were built outside, so that none of the banks were exposed.
99. Then if that tidal wall were built it would be possible to ensure deep water close in to the banks always? Yes, because the dredge could work close up to them.
100. Have you had any experience in the offensive character of the present system of underground sewerage? Where?
101. What I allude to is the refuse at the mouth of the various sewers? I have often gone away from them sick.
102. Does that stench occur during a very dry period, or is it generally so? It is generally so, but it depends greatly upon the quarter the wind is from.
103. Then we are to gather that there is always a bad smell from the sewers? When the discharge is more under the surface the stench is not so great.
104. Have you ever formed an opinion as to whether that offensive smell arises from fecal matter or from decomposed organic matter of any kind? No, I have not, for this reason: The sewage matter is a mixture of all kinds, the same as experienced on board ship at the Circular Quay, lying off the tank-stream after a thunderstorm. I have experienced it myself, and the stench was unbearable; we had to close all the ports and skylights to keep it out.
105. Do you think the use of dry earth closets would be an improvement upon the present system? Do you think the sewerage would be as offensive and as deleterious to the health of the inhabitants if all fecal matter were excluded from the sewers? If you take away part of the poison that which is left will of course be less injurious; that is no doubt part of the matter which helps to make the sewage so offensive.
106. Can you give the Committee an opinion as to whether the filth from fecal matter is as detrimental and as productive of diseases of a typhoid type and death as other organic matter? Do you mean urine as well?
107. I mean urine as well? I asked that, because dry fecal matter does not give off much offensive smell after the first minute or two.
108. I wish to know which of the two descriptions of filth is more deleterious and productive of diseases of a typhoid type? Well, I should say that the stench from fecal matter would be more deleterious than from vegetable matter, but I should not like to assert it positively.
109. *Hon. J. Smith.*] Is it within your knowledge that Sydney has of late been unusually unhealthy? According to the statistical returns furnished by the Registrar General there have been a greater number of deaths.
110. For how long a period has it been unusually unhealthy? Not until this epidemic of measles took place have we ever had, since the Registrar General recorded them, a greater number of deaths than births—not until the month of January.
111. Have any other diseases besides measles been unusually prevalent? We have had scarlet-fever and measles together.
112. I mean within the last six months? There has been a great deal of scarlatina.
113. Can you connect the prevalence of measles and scarlet-fever with any distinct cause? No.
114. Not with the sewerage—with gases or sewage contamination of any kind? No.
115. Then have you any reason to believe that the prevalence of sickness has any connection with the sewerage of Sydney? I have. I believe the concomitant diseases following measles have been greatly enhanced by the bad atmosphere.
116. If I understand you, while you cannot attribute measles or scarlatina to the defective sewerage, the consequences from these diseases have been more serious? The after claps have been more.
117. You have spoken of the bad smells arising from the mouths of the sewers. Have you observed that disease has been more prevalent in those neighbourhoods? Yes, from the Registrar General's returns,
not

not from my own knowledge. The practice of a medical man is scattered over a large area—he has not a G. F. Dansoy, Esq., M.R.C.S. block of land to which he attends wholly. He may have one patient in one neighbourhood and the next half-a-mile away in another direction.

118. I think this question has been asked before, but I will put it again: Have you been able to trace any difference between the areas supplied with underground sewers, and the areas not so supplied? I believe every ward in the city has more or less underground sewerage, and I could only ascertain the mortality from the Registrar's returns, after finding out which streets are not well sewered and which are. 23 April, 1875.

119. I think you mentioned that some portion of Surry Hills was very bad, where there is no underground sewerage, and you single that out as being unusually unhealthy? According to the Registrar's returns the greatest number of deaths during the worst month were in Cook Ward, which is Surry Hills, Denison Ward, and Gipps Ward.

120. And that has no underground sewers? Only in one part of it, from Mr. Terry Hughes's paddock.

121. In the unhealthy parts which you have described have you been able to trace contamination of wells from privies or cesspools? In Sydney we have no wells; they have supply pipes in every case.

122. Then in those unhealthy places there are no houses which are not supplied with Sydney water? I believe they are all supplied with it.

123. I thought some of these places had no water from town pipes and had deep wells? Not to my knowledge; they have all to pay the water rates at all events.

124. So that you do not know a case where disease can be traced to the contamination of water by any sewage matter? Not in Sydney.

125. *Chairman.*] Has your attention been drawn to any nuisances connected with water-closets proper? Yes, to a great many.

126. What was the nature of the nuisances? They have occurred from the closets not being properly attended to—generally speaking, from the negligence of the persons using them.

127. What was the nature of the evil? Stoppage or breakage.

128. Have the nuisances from these closets been connected in any way with the watermains? Yes, my attention has been drawn to cases of that kind by the Inspector of Nuisances. Mr. Bell will be able to explain to you how by some mode of suction the water has become contaminated.

129. But it has come under your notice? It has come under my notice.

130. Is it the unusual amount of sickness which has caused the authorities to be so active now, or has there been an unusually dirty state of things which has called for that activity? With regard to the state of the city I believe the yards of the inhabitants of Sydney are cleaner than they have been for some years past; they are frightened to leave anything to collect.

131. You think then that the sickness, rather than any particular amount of dirt or neglect, has caused the Corporation to exert themselves? Yes.

132. Have they done as much as they are doing now during the past six months? The city was as well looked after six months ago as it is now; but during the temporary difficulties of the Corporation they could not look after it as well, inasmuch as they were not able to employ the same number of men as they do now, and as they did before.

133. How long did that deficiency of men last? About a month or six weeks. Mr. Bell will tell you.

Francis Bell, Esq., City Engineer, and Member of the Board, examined in his place:—

134. *Chairman.*] You are Engineer for the city? I am.

135. Do you receive your instructions from the Mayor and Corporation? I act under them.

136. Have you the charge of the city works? I have the charge of the sewerage and water.

137. The sewerage and water alone? Alone.

138. Have you any control over the Inspector of Nuisances—have you anything whatever to do with the removal of nuisances? I have nothing whatever to do with the surface; I have merely the charge of the sewers and the water.

139. Does the defective state of the sewers and the health of the inhabitants of Sydney come under your notice at all? The sewerage does.

140. You have to see that they are kept in proper order—anything beyond that? No.

141. Have they been kept in good order during the last six months? Yes; they are in very good order at present.

142. Have you the charge of these gully-shafts? No, that is in the City Surveyor's Department. I believe a great many in the city are not properly trapped, and that a very offensive smell arises from them.

143. Have you had any difficulty lately in connection with the sewers? No, none at all.

144. Nothing of which you are aware that should have occasioned sickness or death in the city? No; and I have been very particular since I came into office, in cases where landlords apply to connect their houses with the sewers, to make them use flap-traps.

145. Have you the power to compel them? Yes; I always make it compulsory. They grumble a good deal, but I always insist upon it.

146. Then this had been neglected before? Yes; formerly the flap-traps were so constructed that they opened into the sewers, and when a rush of water came down the sewer the door of the trap was wrenched off and became useless. I have altered that, and the new doors open in a recess in the pipe itself, and no injury to it can take place.

147. Have you any opportunity of judging whether there is an accumulation of fecal matter in the sewers? In Woolloomooloo they have very little fall; some of the sewers have only an inclination of 1 foot in 350 feet, but all through the city, except Woolloomooloo, there is a good fall.

148. So that there is no accumulation of filth even in dry weather? No.

149. No offensive matter at all? No, none at all.

150. Have you any reason to suppose that there is any escape of deleterious gas? Yes, in a great many parts of the city.

151. In which parts? In the higher parts of the city, where they are making alterations and opening the ground to extend the sewers the gas is very bad.

152. Is that the case in thickly populated parts of the city? There are several places in George-street.

153. Do you know, as a matter of fact, that gas has escaped there? Yes, I have drawn the attention of the City Surveyor to it several times.

154.

F. Bell, Esq.,
C.E.

23 April, 1875.

- F. Bell, Esq.,
C.E.
23 April, 1875.
154. Does not most of the gas rise and escape through the pillar in Hyde Park? Unfortunately very few of the sewers are connected with it. I will show you the position of the shaft (*indicating position on map.*)
155. Do you think it would be desirable to take steps to carry off these gases in a similar way in any system of sewerage? Yes; I think every drainage area should have a separate air-shaft.
156. Can you suggest anything to the Board—anything which could be carried out at once—to remedy the evils which are said to exist; or do you think this is only a panic, and that there is nothing necessary beyond what is usually done after a hot season? I think it is desirable that all these drainage areas should be connected with air-shafts.
157. The Government say they are pestered with communications in reference to the state of the city, and that complaints are made that people are dying in consequence of the filth which exists;—do you think there is any foundation for this kind of outcry, or is it merely a panic, which has arisen in consequence of the late epidemic, which has no connection with the sanitary state of the city? That is my opinion.
158. Then you consider there is nothing exceptional in the present state of the city which renders it necessary for the Government to take exceptional steps? I do not know of anything.
159. You know of no local cause which should have produced unhealthiness? No.
160. *Mr. Watt.*] Could the sea water be used temporarily to flush the sewers? I do not think it could; the difficulty would be very great. It would have to be raised by some means or other to a height. The sewers are pretty well flushed as they are.
161. *Chairman.*] Have you any artificial means of flushing them? No.
162. *Mr. Watt.*] With regard to these flap-traps, which you have insisted upon being placed in all the connections with the sewers, are there many places where these traps have not been inserted? A great many.
163. Then you think it would be desirable to pass some measure to compel householders to have these flap-traps? Yes.
164. I think you have stated that it is very necessary to keep these sewers free from foul air; do you think one air-shaft would be sufficient? I think so—one shaft for each drainage area.
165. I suppose you would suggest that it should be placed in the highest spot? Yes.
166. Is the present one in Hyde Park properly attended to by the authorities? Yes, I have been most particular about it. Twice or three times a year we put in fresh charcoal. Formerly we used to put large lumps of charcoal in with spaces for the air to come through; now we put large pieces at the bottom and small stuff at the top. When it is taken out it has apparently no smell, but if you put it in the fire the stench is abominable.
167. *Hon. J. Smith.*] Are these flap-traps effectual in preventing the gas from escaping through the house drains? I think they are.
168. But you say the law does not compel persons to have them? I am not quite sure; we were bringing in fresh by-laws lately, and that was one of them.
169. But, as a matter of fact, some house drains have no flap-traps? Many of them.
170. Can you point out any part of Sydney in that position? Well there is a great part of George-street without them; in short, all parts of the city. Some of the merchants' clerks complained of the smell in their offices, and I made inquiries and I found it was from the want of flap-traps, and I had them put in.
171. So that the evil arising from this cause is not confined to any particular locality, it is spread far and wide, wherever these drains happen to be laid down? Yes.
172. And you think it would be desirable to compel householders generally to have these flap-traps? Yes.
173. It was stated, perhaps in one of your own reports to the Municipal Council, that many houses have pipes direct from the watermains to their private closets? Yes.
174. Is there any law to prevent that? Well, that is another of the new by-laws, but it is not in operation. But I do now insist, when houses are connected with the mains, that they should have cisterns so as to cut off the direct connection.
175. Are there many houses that have direct connection with the main? Yes, about 5,000.
176. So that when the water is cut off from the main for any reason, there would be an indrain from the pipes that are left open, and if the water-closet pipe be left open it may suck in the gas or even liquid matter? Yes.
177. *Chairman.*] Have you known such cases? Yes; that is where the pan gets choked up.
178. And you are doubtful whether you have power to prevent that? Yes. I may mention a flagrant case which came under my notice in Castlereagh-street:—The pan was completely choked; the service-pipe which connected it with the watermain in the street was about 50 feet from the closet. We cut the pipe, and found it completely choked with matter from the closet. The whole neighbourhood round about was poisoned by the water.
179. *Hon. J. Smith.*] But you say there is some measure by which you can enforce the use of cisterns for the future? Yes, but it is not retrospective.
180. *Chairman.*] What would be the expense of making the alteration in each case? About £4 or £5.
181. Would that cover all the expense? Yes.
182. Do you know whether the water served to the people in the neighbourhood, in the case you have just instanced, was contaminated? It was. There was one woman who lived close by who became sick, and gradually got worse and worse, and was all but dying; and one night she went out and got a tumblerfull of water, which was nearly all offensive matter.
183. Do you mean to say that you cannot compel people to adopt proper means to prevent this? We can bring a man up and punish him for keeping his premises in bad order, as we have done.
184. But you have no power to compel him to adopt the cistern system? No, we have no power; hundreds of cases of that sort have taken place.
185. How long would it take do you suppose to effect this reform—would it be unreasonable, for instance, to give people notice to do this, in say six weeks? Yes, that would be too short a time.
186. *Hon. J. Smith.*] I think you stated that you are responsible for the underground drainage? Yes.
187. Does it come under your province to look after the gully-shafts? No, Mr. Seymour attends to them.
188. What kind of a trap have these city shafts? There are two kinds of traps to these shafts—chamber-gully trap and the other a flap-trap, such as I have described, and of which the Board can have a drawing if they require it.

189. And from your experience some of them are not trapped? Some of them are not.
190. *Chairman.*] Would it be difficult to find out where they are not trapped? Yes, it would in house connections, because there is no means of getting at them; the pipes are too small for a man to go up them. In the pipes now constructed there is a flap-trap every fifty feet in the main sewers, ready for connection.
191. Is there no other method that could be devised to prevent the escape of gas in these pipes? The difficulty and the expense is in finding out where the traps are. A flap-trap costs about 10s., and the opening up the ground costs about the same.
192. Then you don't think there would be any difficulty in insisting that flap-traps should be used in all cases? No; but it would spoil the thoroughfares greatly to put them in, which is, however, a minor consideration.
193. *Hon. J. Smith.*] Have any of the inhabitants in the neighbourhood of the Obelisk in Hyde Park complained of the smells? Yes, but I have immediately remedied it. Dr. Renwick did once.
194. And by putting in charcoal twice a year you prevent that? Yes.
195. Have there been any complaints from that neighbourhood lately? No, there have not.
196. *Hon. J. B. Wilson.*] Could a person enter the main sewer and discover whether there were traps in the branch drains or not? Yes, but not in the branch drains, for a man could not go up a 12-in. pipe.
197. Could not traps be put on these branch pipes entering the main sewer? Yes, that could be done.
198. Would not that mitigate the evil in a great measure? Yes, it would.
199. *Chairman.*] Would that be very expensive? Not very.
200. *Mr. Bennett.*] Would that injure the discharge power? No, not with the new pipes.
201. There would be pressure to open the door? Not much pressure; the door is quite loose, hanging on a hinge.

F. Bell, Esq.,
C.E.
23 April, 1875.

TUESDAY, 27 APRIL, 1875.

Present:—

M. B. PELL, Esq.,	P. F. ADAMS, Esq.,
C. WATT, Esq.,	E. O. MORIARTY, Esq.;
F. BELL, Esq.,	HON. J. B. WILSON,
G. F. DANSEY, Esq.,	HON. J. SMITH,
H. G. ALLEYNE, Esq., M.D.,	W. C. BENNETT, Esq.

M. B. PELL, Esq., B.A., IN THE CHAIR.

Mr. Richard Seymour, Inspector of Nuisances, called in and examined:—

202. *Chairman.*] You are Mr. Seymour, I believe? I am.
203. Inspector of Nuisances for the City of Sydney? Yes.
204. You obtain your instructions—from whom? From the Mayor of Sydney.
205. I will first ask you a few questions with respect to the public places in the city. Is it your duty to keep them clean? It is.
206. If you find any nuisance do you cause it to be removed—is it done under your direction? It is done under my direction.
207. It is done by officers in the service of the Corporation? Yes.
208. Are the public places in the City of Sydney at the present time in a cleanly state? The City of Sydney at the present moment is cleaner than I have known it for the last twenty years.
209. For the last few months has it been constantly kept clean? It has—very clean.
210. Is there a sufficient staff to do all that is necessary to keep the city clean? Yes.
211. Has there been a sufficient staff during the last few months? Yes. At the beginning of the year there was a reduction in the number of men employed, which lasted for about six weeks, when it was again increased to the original number, which is sufficient to carry out everything that is necessary for the winter months.
212. Then there is no difficulty in the matter on that score? None at all.
213. With regard to private premises which have to be looked after—do they come under your inspection as well? Yes.
214. Is it your duty to remove nuisances, or merely to report their existence? It is my duty to see them removed.
215. Do you remove them yourself—that is to say, by your own action? Yes, if it is necessary for the public health. If we go into a yard and find it is necessary for the public health, more especially during the summer months, to remove a nuisance, I send a cart and take it away at once, and then I summons the person who is responsible for it.
216. Who finally bears the expense of removal? Yes, by means of the fine.
217. You summons these persons before a Magistrate? I do.
218. Have you sufficient powers for that? I believe I have not the powers which I ought to have.
219. Have you experienced any inconvenience from want of sufficient powers to carry out what you considered necessary? I have.
220. Will you state the nature of the inconvenience? I have been refused by the parties entrance into their premises, and I have had to send back to the Town Hall for my appointment, and even then I have had difficulty in being allowed to enter the premises.
221. Then you have no distinct instructions in these cases—you do not in fact know what powers you have? I have instructions to enter any premises, public or private, to inspect any nuisance. I think there ought to be a distinct power given me to enter any premises without producing my appointment.
222. It is necessary, I suppose, to produce papers of some kind as credentials to persons who deny you entrance? If I were a stranger it would be necessary.
223. Have you found this to be a source of particular inconvenience? No, I have not, except in one or two instances, during the whole time of my appointment as Inspector of Nuisances.
224. Can you enter any house at a reasonable time in order to inspect a nuisance? I can.

Mr.
R. Seymour.
27 April, 1875.

SEWAGE AND HEALTH BOARD—MINUTES OF EVIDENCE.

- Mr. R. Seymour.
27 April, 1875.
225. If you find any nuisance existing, such as, for instance, a closet overflowing, or any other offensive matter, you summon the parties? I do.
226. Suppose the closet is not actually overflowing, but is still offensive, do you summon them? We usually give them notice, and if they do not pay attention to that notice we summon them; but if the nuisance is so bad as to affect the public health I call in the Health Officer, and we summon the party without further notice.
227. Have you had any difficulty which has embarrassed you in performing that part of your duty? In issuing summonses?
228. Yes? No, I have not.
229. Do you find that the result of summoning offending parties is satisfactory to you—that the action of the Magistrates is satisfactory? The result, as far as some of the Magistrates are concerned, is very satisfactory; in fact, the fines inflicted recently by Captain Scott and Mr. Smart have been the means in a great measure of putting down nuisances in the city. We don't find one dirty yard now out of every twenty that we inspect; the others send away all the refuse to be removed by the city carts.
230. Do you mean to say that, in some cases, when those particular Magistrates are not sitting, the fines are not sufficient? They are not sufficient to deter people from keeping their premises in an unclean state. There was an instance occurred lately in which the matter was deleterious to the public health. We brought up a butcher from the Haymarket, for having eighteen sheep, rotten and unfit for human food, on his premises for sale. They were in a fearful state, and we brought him before the Central Police Court. He was liable to a penalty of £10 for each sheep, and Mr. Driver had a long argument with the Bench to show that the penalty ought to be enforced; but the Magistrates said there did not seem to be any intention on the part of the man to do any harm, and they fined him 10s only.
231. Do you think that fine met the ends of justice? I do not, because it was a very bad case, and the City Health Officer inspected it with me.
232. Do you find the same inconvenience with respect to persons who have nuisances on their premises in connection with closets? Yes, they are merely fined as low as 5s. Even in cases where the sickness arising out of the nuisance has carried off four or five persons in a family, and proof has been given that this was from the effects of the closet, or the drainage on the premises, and we have explained this to the Bench, the parties have only been fined 5s.
233. You think that such small penalties interfere with the efficient discharge of your duties as Inspector of Nuisances? I do.
234. Are the summonses in these cases always carried out, or are they sometimes withdrawn? Some of them are withdrawn on representations being made that the nuisances have been abated, or else that the parties are making preparations to connect their premises with the sewer, or are otherwise taking speedy steps to remedy the evil.
235. Are the summonses in such cases withdrawn by you? No, sometimes they are withdrawn by the Bench.
236. But who requests the Bench to withdraw them? They suggest the withdrawal themselves. They say, "Mr. Driver, in this case the party appears to be taking steps to abate the nuisance; would it not be better to withdraw the case?" That has been done frequently by the Bench.
237. Do you think that this has been done frequently to the public detriment? I do, sir.
238. Are there cases where the summonses have been withdrawn before they come into Court? Yes, sometimes; but only when there is a clear understanding that steps are being taken to abate the nuisance, and then they are withdrawn, with payment of costs.
239. Is that done by you? Yes, when I am satisfied.
240. Are you ever directed to withdraw them? No, except in such cases as I have stated, where steps are being taken to abate the nuisance.
241. It has been stated to the Board that very unpleasant smells come up from the gully-shafts;—when that is the case is it any part of your duty to report the fact? Yes.
242. Do you often find that to be the case? Yes. We have two sorts of traps to the gully-shafts; one is an iron chamber; the other is an earthenware pipe, with a flap to it, which opens into the sewer.
243. What steps do you take to remove a nuisance occurring in one of these gully-shafts? I first send a man to clean it out, and if he cannot get at the shoulder or flap-trap I then acquaint Mr. Bradridge, the City Surveyor, and he sends a man to repair the damage whatever it may be. If we can manage to clear out the dirt with a long scraper, which we keep for the purpose, then there is no complaint made. We can always tell when the nuisance exists by the smell.
244. Are there traps in all places, or are there any wanting in some parts of the city? There is a deficiency in the square traps in the summer months. We have not sufficient water to pass along our gutters and keep our gully-shafts full. Some of the old-fashioned traps are iron and some are brick, and the water dries up in them. The only remedy we have is to send a water-cart and fill these gully-shafts up, which is always done.
245. Are there any places where there are no traps and where you think there ought to be? I do not think so, as far as my knowledge goes.
246. Do you find nuisances from water-closets arising frequently? Yes.
247. In what way? I find that the syphons of the water-closets are deficient, and that the most offensive smell is carried through the whole of the building—conveyed from one room to another.
248. Does this arise from the connection between the sewer or drain and the atmosphere of the house? When the syphon of the closet is defective the smell is carried from one room to another.
249. Whereabouts does the stoppage occur? In the syphon—generally at the bend. When that is defective the water leaks out and the smell must come up.
250. When you find this to be the case, what steps do you take? I give notice to the landlord and the occupant of the house.
251. Do you find that these water-closet pipes get choked? Yes, we have found the pans of the closets full in many instances up to the top.
252. There was a case, was there not, recently, where you found the water in the pipe had become contaminated? Yes, that has been frequently the case. There was one case in Castlereagh-street, and in the adjoining yard a lady was very sick. I investigated the case and I found the closet stopped up. I went back to the next yard and turned the water on for about two seconds, and I found night-soil, paper, and everything belonging to the adjoining closet, come down through the pipe.

253. You saw that yourself? Yes, and I went down and brought Alderman Chapman and the City Engineer to see it. We have found two or three cases similar to that in Woolloomooloo since.

254. When did that take place? It was about the latter end of '74.

255. Who was Mayor then? Mr. Goold.

256. Did you call the attention of the Mayor to the circumstance? I did, sir.

257. Did you know of it, or was the case pointed out to you? I knew of it myself; the closet was stopped up.

258. Was the pipe to the closet direct from the main? There was, I should say, about 4 feet difference between the level of the watermain and the closet.

259. Did you ascertain whether any water in the pipes adjoining that house was contaminated by that closet? Yes, the water which supplied the whole row of houses to the Castlereagh-street schools was contaminated.

260. Did you know then that the evil arose from the direct connection of the closets with the water-mains? Yes.

261. What steps were taken in that case? I knocked the pipe out myself so that no water could come or go from the closet. A plumber was then sent for, and I issued a summons next morning, and the parties were fined at the Police Court.

262. Did you take any more active steps than usual to determine whether other and similar nuisances existed? I did; I made it my business in every case when I found a water-closet stopped up to investigate the matter, and I found three similar cases in Woolloomooloo.

263. Where the water had been contaminated by connection with the closets? Yes.

264. Are you aware whether any steps were taken to prevent such nuisances in future? Yes. The Municipal Council passed a by-law, or a minute of Council, I forget which, that for the future all water-closets should have cisterns erected on the top, and that no closets should be connected direct with the main.

265. Are any steps being taken to carry out that decision? Yes; they are being altered every day.

266. Is that being done, do you think, as rapidly as can reasonably be expected? It is being done, but not as quickly, I think, as it ought to be done. I think there ought to be power to compel the alteration.

267. Do I understand you that this is being done by special action—by compulsory action towards the landlords? By compulsory action on the part of the Council. Whether they have the power I cannot say.

268. When was that minute passed? I think about the latter end of the year. Mr. Bell will be able to tell you more about it.

269. There have been great complaints of nuisances existing at the mouths of the sewers entering the harbour;—have you found that to be the case? I have.

270. Have you any means of judging of the amount of sickness existing in various localities? I have.

271. Do you think more sickness exists in those localities which are near the mouths of the sewers which empty themselves into the harbour than in places otherwise similarly situated? I do, sir.

272. Has there been more sickness, as far as you have noticed, this year than there has been in previous years? Yes, I think so, during the dry weather, among infants.

273. Do you know of any unusual local cause to produce this sickness? I do not.

274. In what parts of the city was the sickness most prevalent? Down about Darling Harbour and Blackwattle Swamp there has been a deal of sickness; and in the Surry Hills, where there is a large open drain, near Arthur-street, which goes through Burdekin's paddock—that is a great nuisance. There has been a great deal of sickness, in one family in particular, living close to Moore Park—Mr. Buzacott's. The whole of the drainage from a portion of Paddington, Botany, and other streets, goes into that large paddock in Moore Park, close to the Barrack wall, and that family is nearest to it.

275. Are there many such nuisances in the city which you are unable to remove? Yes. The whole, or the greater portion of the drainage of Redfern, Chippendale, Darlington, and those houses recently built on Shepherd's paddock, goes into a large open pond which is used by the sugar works for some purpose or other, and the smell there at night is something horrible.

276. I suppose it is not the contents of closets that goes there? I am positive that the contents of closets from Redfern, also the dirt from cow-yards, butchers' yards, and house drainage of all sorts, go into it; and the only way it is ever let off, I believe, is when they have a surplus of water in the dam.

277. Has that pond occasioned sickness to your knowledge? I cannot say.

278. What is this water used for? Something in connection with the Sugar-works, because it is brought in and, after going through the pipe, is emptied again into this large reservoir.

279. Have you ever made any representations to the authorities respecting this matter? Yes.

280. To whom? To the Mayor and Aldermen.

281. Have any steps been taken in consequence—any inquiries made? Yes; there was a summons issued in one case in connection with it, and in reference to the burning of bones on the premises; the Corporation proved their case, but the balance of the evidence turned against them. Three persons came forward, who stated that they had resided near the premises for twenty years, and had never enjoyed better health in their lives, and the case was dismissed.

282. What class of persons were these witnesses? They seemed to be working men; but one of them, I think, was a chemist.

283. Were the persons who gave that evidence servants of the Company? I could not say; but, to the best of my belief, some of them were.

284. Who went to inspect the premises on that occasion;—did the Mayor and Aldermen? Yes; or some of them. To the best of my belief, some of the Aldermen went, and I went with the City Health Officer, Dr. Dansey.

285. And the result was that nothing was done? The case was dismissed, and was at an end, and we were powerless.

286. Did you say they burn bones there as well? They say not; but the smell goes on as bad as ever. There is also another great nuisance in that neighbourhood: The drainage from Victoria Barracks is carried into a large waterhole on Moore Park, and, in summer time especially, it is a great nuisance.

287. *Mr. Moriarty.*] Do you perceive much difference in the smell arising from the gully-shafts in dry weather and those times when the sewers are flushed? In dry weather it is worse; it is so offensive at times that we have to send a water-cart to fill them up.

- Mr. R. Seymour. 288. Is that from the accumulation of matter in the sewers? It arises from the want of flushing the sewers.
- 27 April, 1875. 289. Do you perceive any difference in the effluvia from house sewers in dry and in wet weather? In dry weather we often find it offensive, and in wet weather it is oftentimes offensive because they are not properly trapped.
290. Do you attribute that to the drains not being properly trapped, and to the gas escaping? I do, sir.
291. *Mr. Bennett.*] Have you noticed at what time the smell from the harbour is the worst? At low-tide.
292. Is it worse in dry weather or after a flush? I have observed it mostly in dry weather, especially in Woolloomooloo Bay.
293. Is it more offensive at the end of the tank stream in dry weather? That I cannot say; I have never been there but it has been offensive.
294. Are most of the house-traps water-sealed? They are not.
295. That is because of the principle on which they are made, and if they are not water-sealed the difficulty arises from the traps not being filled with water? Many of the water-pipes convey the water from the top of the house down to the sewer, and there is no trap at all. For instance, in Bridge-street you can go to the top of a house and you will be knocked down by the stench from the pipes.
296. I refer to the water-closet pipes? They are all watertight.
297. Then it is not from the scarcity of water that the closets become choked up? No, it is not from the scarcity of water, but from the negligence of the inhabitants.
298. But that is not the case with the gully-shafts? No; that is from want of water to keep them constantly full.
299. Are all the cases you bring before the Corporation prosecuted to conviction? The greater part of them are.
300. And those that are not, are they dropped for want of sufficient evidence? No; when cases are not brought before the Court, it is because there is a desire shown by the persons summoned to abate the nuisance; in that case time is frequently allowed them to enable them to do so.
301. *Mr. Bell.*] Do the old gully-shafts ever get choked up? You mean the chambers?
302. Yes? They do.
303. Is it difficult to get them cleaned out—as difficult as the flap-traps? Not so difficult as the flap-traps.
304. Does the smell arise from sewage matter or from gas which escapes? I cannot say what it is from.
305. I should like you to give the Board some idea of the class of men who clean out these sewers? They are a labouring class of men.
306. How long do they last at it? I don't think they could last more than five or six years.
307. *Chairman.*] Do you mean that they do not live beyond that time? I mean that they cannot keep up that kind of work. There are three or four of them at present in the Liverpool Asylum; they become infirm, and cannot keep up that kind of work.
308. *Mr. Bell.*] They become quite crippled, do they not? Yes, I have seen several of them quite crippled.
309. Will you describe the appearance of the water in that large pond at the Sugar-works, to which you have referred, on the surface? There is a green fatty substance on the surface generally, in the north-west corner; that is nearest to where the pipe conveys the water into the Sugar-works.
310. And I suppose the smell is very bad? Yes, the smell from that corner is really very bad.
311. They use that water over and over again, do they not? Yes, it goes in and comes out, and goes in again.
312. And the overflow, when they let it off, goes down towards Blackwattle Swamp? Yes.
313. Is there a great deal of sickness in that neighbourhood? There is.
314. *Mr. Watt.*] I think you mentioned that the results of your summons at the Central Police Court were satisfactory? I said they were more satisfactory recently.
315. How are they with reference to the other Court—are they equally satisfactory? Within the last month or six weeks they have been, but only since certain articles appeared in the *Sydney Morning Herald*.
316. Do you know of many cases in Sydney where the closets are above the level of the water-pipes? Yes, there are many cases.
317. Can you form an opinion as to what proportion of them are above the level of the supply-pipes? All the water-closets up-stairs in every house are above the pipes.
318. What proportion of the houses do you think are connected directly with the water-mains? I could not say; I believe about 5,000.
319. *Hon. J. B. Wilson.*] You have mentioned certain localities in which you found a large amount of sickness, such as Darling Harbour, Blackwattle Swamp, and Surry Hills—None of these places are connected with the underground sewerage, are they? Blackwattle Swamp is connected, and so is Darling Harbour, and a portion of Surry Hills.
320. Does not much of the offensive smell at Darling Harbour and Blackwattle Swamp arise from the exposure of noxious matter? Yes, and I think if we had large receptacles, which we call silt-chambers, to receive all that matter, it would not be so offensive.
321. Do you think those portions of Sydney which are brought into the underground sewers are better situated than that part of Surry Hills and those other places you spoke of as being entirely dependent upon open surface drainage? The portions of the city where there is underground sewerage are far before those which have open drains, in which we have found urine and frequently human excrement. Our scavengers have found this lying in the gutters repeatedly.
322. There are several distinct systems of sewerage in Sydney, are there not? Yes, there are some sewers constructed of brick and some stoneware.
323. But there are several different systems of sewerage, commencing and ending at different points? There are.
324. And one of them has an obelisk to ventilate it? Yes.
325. Have you ever observed whether the drainage area which has that obelisk connected with it is as offensive as the others? I have not.
326. What is the quantity of refuse which is removed by the Corporation weekly in their carts—Do you know? Yes; for the present week, ending yesterday, 1,007 loads of street sweepings, 432 loads of house rubbish, 25 loads of refuse from the city markets, 36 loads of stuff from earth-closets, and 190 loads of street refuse from gully-shafts, making a total of 1,690 loads for the week. Dead animals for the same week,

week, 542; of all sorts—fowls, rats, cats, dogs, &c. I have a book (*producing it*) which shows everything—the street it is found in, and where it is taken to. I have another book which shows all the street sweepings.

Mr.
R. Seymour,
27 April, 1875.

327. What becomes of these 1,690 loads of rubbish? A great deal of it goes to the City Common; some of it goes to Harris-street to fill up large holes, some of it goes to Macquarie-street for the same purpose, and a great portion of it goes to the Domain for garden use. Some of it has lately gone to Wynyard-square, and some to the Flagstaff.

328. Do people make complaints of that rubbish? They do sometimes.

329. Is it offensive in your opinion? It is offensive for a day or two, but after that it is not. You can pass along Wynyard-square without being offended by it.

330. Has any attempt been made to utilize that refuse by taking it out of the city? There has not to my knowledge. I think there ought to be.

331. Do you think it could be made remunerative? Yes, I think it might be sold. I have had a proof of it during my time in the old city yards. The first year I started to sell it for the City Council we brought in £10, but the last year we brought in £700 or £800. Then Moore Park was commenced, and everything was carted there. I think there have been about 120,000 loads taken to Moore Park.

332. Did any great nuisance exist in Moore Park in consequence of this accumulation of city refuse? No, because it was spread out as soon as it went there.

333. And the noxious elements were got rid of in that way? Yes; when it is spread, after the second or third day there is no smell whatever from it, unless you go there for the purpose of finding it.

334. Where do you at present take the matter from the earth-closets? To Moore Park, and to the back of Steel's Battery, where it is mixed with street sweepings. The house refuse is taken to Moore Park and used for top dressing after being subject to fire and then screened.

335. Are any complaints made by persons residing in that neighbourhood? I have heard none.

336. *Hon. J. Smith.*] Do you make house to house visitations in these cases? I do, sir.

337. From house to house as you go along? I do, sir.

338. Whether the house looks of a respectable character or not? Yes—I go to every house.

339. And do you take all the streets as far as you can? I take every street as far as I can.

340. In this house to house visitation have you met with a great many very crowded localities? I have.

341. Where are they chiefly? In the west end of the city—that is west of York-street chiefly.

342. Do you mean towards Darling Harbour? Yes; I have found rooms with eight stretchers in each room; there was not room to walk between each bed. Those are what they call six-penny lodging-houses. We found in one room in the yard in one of these houses in Clarence-street, and within three feet of a common water-closet, five beds.

343. Is there any law to prevent this crowding in lodging-houses? No, there is not, sir.

344. Apart from these lodging-houses, have you met with cases where families have been over-crowded? Yes, I have. I found a house with four rooms and four families in it—one family in each room; seven persons sleeping in one room.

345. Can you give the Board any idea of the dimensions of that room in which seven persons were sleeping? Yes; it was a room at Miller's Point, 12 feet by 10 feet; the father, mother, and five children slept in it. They were cow keepers, and in a yard not a quarter the size of this room there were four or five cows.

346. Then these over-crowded localities are chiefly along Darling Harbour, are they? Yes, they are.

347. Have you distinctly observed that there has been an unusual amount of disease in these localities? I have seen more disease there.

348. Can you name any doctors whose practice lies in those localities? Dr. Dansey is one, Dr. Gilhooley is another; I cannot remember the names of the others.

349. Is there, in your opinion, a great deal of over-crowding in Sydney? I am sure there is.

350. And you think that is a fruitful cause of disease? It is.

351. And, as far as you know, there are no means of preventing this over-crowding? So far as I know there are not.

352. Which do you consider the filthiest part of Sydney? I always look upon the west end of the city, from York-street down to Darling Harbour, as the worst; it would require an inspector of nuisances for itself; it requires to be gone through every week. In that locality also there is a great deal of prostitution. There is one whole lane containing prostitutes—thirteen, fourteen, and fifteen of them lying in one room without beds, or table or furniture of any kind. That lane is called Exeter-lane, and is of very bad repute. It is inhabited almost entirely by prostitutes of the lowest class.

353. And can you say, from your own knowledge, that disease is much more prevalent in those localities? I am sure it is.

354. You have described some very sickening cases where the water has been contaminated by pipes connected with water-closets;—are you sure that the contaminating matter was fecal matter? Yes, I had a tumbler of it in my hand.

355. Are you quite sure that the water was not contaminated in any other way? I am quite sure, because we turned off the tap from the water-closet, and then turned on the tap of the next house and the water was then quite pure; then we turned on the tap from the closet pipe and the water was full of offensive matter.

356. And you think that in any case it must get back into the main? I am perfectly certain it must.

357. You are not regularly accompanied by a medical man during your visitations, are you? No, I am not.

358. Do you think it would be advisable in certain cases that you should be so accompanied? I do. The City Health Officer's duty does not compel him to accompany me, and the inspection of the city is carried out by me and my assistant. Dr. Dansey is only called in when I require his services in cases where the public health is endangered.

359. You call him in to inspect bad cases only? Yes, I do all the inspection myself.

360. And you think it would be desirable that a medical man should make a regular round of visits himself? I do. I think it ought to be the duty of the Health Officer.

361. You spoke of earth-closets;—are they in general use? No, there are only 109 in use.

362. Are they confined to any one locality? No, they are spread over various parts of the city.

363. Have you had any experience in judging of their value? The present earth-closets I believe to be a perfect

- Mr. R. Seymour. perfect nuisance. In the first place we have no proper earth for them; then the servants empty all the night refuse—everything in fact—into them. I speak from experience, having one in my own house, that they are a perfect nuisance.
- 27 April, 1875. 364. You spoke of Arthur-street as being an unhealthy locality;—where is that? It turns out of Bourke-street. There is a large gutter there which receives a great deal of refuse.
365. And you think that is the cause of a great deal of disease? I think so.
366. You think that places which have only surface drains, which carry away very frequently fecal matter, are more unhealthy than those which have underground sewerage? I do, sir.
367. Do you think you can fairly infer that this unhealthiness is due directly to the exposure of fecal matter? I believe so, from that and the refuse water from the kitchen and laundry lying in the gutters. It has been a general complaint. The parties have said to me, Mr. Inspector, we are all laid up from the dreadful stench from that place—pointing to the drain in the street.
368. The complaint of the inhabitants is that they are all affected by the stench from these open drains? Yes.
369. Are the contents of closets ever removed by the city servants? Only the earth-closets; they are removed by the Corporation servants; the contents of the other places are removed by the owners or occupiers through a night-man. Formerly the Corporation had a contract for removing it all. Then the night-men gave it up and we could get no one to do the work. It is now done by private persons, who make their own contract with the person who removes it.
370. *Chairman.*] Are these places cleaned out as often as they ought to be? I don't think so.
371. Have you power to compel the parties to empty them more frequently? We have the power, if the place creates an unpleasant smell, to compel the party to empty it, and if he does not we bring him up at the Police Court.
372. And if there were no unpleasant smell it would be useless to summon him? Yes.
373. Do you think it would be better for the Corporation to take the cleaning out of these cesspits into their own hands, and to empty them whenever they considered it desirable to do so, and in all cases to charge the occupier of the premises or the landlord, as the case might be? I think it would be a great improvement.
374. Have you any sub-inspectors under you? I have one. My house to house inspection last year comprised 8,000 houses.
375. Could you perform your duties more efficiently if you had more assistance? I could. I may mention a way in which the police might assist me materially:—We have a system of cleaning the city; the centre portion, from Hunter-street to the Railway Bridge, bounded by Elizabeth-street and York-street, is cleaned every morning, and the other portions of the city twice a week and sometimes three times. That has been done during the last two months. But after the streets have been cleaned, parties will shoot the whole of their filth into the gutters in order to avoid being summoned for not having sent it away in the Corporation carts. Now, if the police would give me notice of all such occurrences I should be able to summon the offenders, and that would be a great assistance to me in the discharge of my duties.
376. About how many houses remain unvisited by you? There are about 15,000 houses in the city altogether; but I don't count in my visitation those of which complaints have been made, that is to say, I have inspected other houses which I do not count.
377. Do we quite understand you to say that when you have issued a summons no influence is brought to bear upon you by persons having authority to withdraw that summons? No, only where there is shown a desire to abate the nuisance, and then the Mayor sends for me and asks my opinion, and whether the ends of justice will be served by what has already been done, and if I think so then it is done, and the summons is withdrawn on payment of costs.
378. Is that the way it is always done with you? Yes, as long as I have been in office.
379. *Mr. C. Watt.*] Have you inspected the Railway urinals? Yes, I have.
380. Is it part of your duty to inspect them? It is my duty to inspect every place in Sydney—public or private.
381. *Mr. Bennett.*] You have complained very much of the nuisance in Park Road, Moore Park. Do you think any of that nuisance could percolate into Busby's Bore? I do not think so. It might percolate through the ground; but I don't think it could get into the Bore.
382. Are there any other places where percolation could take place into Busby's Bore? Not to my knowledge.
383. But there might be;—there are a number of cesspits and closets there, are there not? No, not in the direction of the Bore.
384. There is a great deal of refuse matter spread on Moore Park, is there not? Yes.
385. Does the water from Moore Park flow into the water supply, or does it go into Shea's Creek? Only a portion of it; but no refuse has been put on that part of the Park since a complaint was lodged with the Mayor and Council.
386. That was about eighteen months ago? Yes, the portion over which refuse is spread has no connection with the watershed.
387. What proportion of the houses are connected with the sewers? I cannot tell you; that is in Mr. Bell's department.
388. Could any offensive matter percolate through the sand into the Bore without going through the shafts? I don't think so; it might percolate through the sand but not into the Bore.
389. *Chairman.*] We are very anxious to obtain evidence as to the cleanliness of the city. Can you tell us of any person not officially connected with it who is acquainted with the state of the city and is in the habit of going about it? I do not know any one more capable of giving evidence on these matters than the doctors, who are constantly going about the city.
390. Do you know any of the city missionaries. They are supposed to go about a good deal. Do you see them often? Sometimes.
391. Can you give us the name and address of one of these gentlemen whom you see frequently? There is Dean Cowper; I meet him in many portions of the city travelling about; and there is Mr. Shepherd—I meet him also in many parts of the city. We also frequently see Mr. Pidgeon and Mr. Robins.

WEDNESDAY, 28 APRIL, 1875.

Present:—

H. G. ALLEYNE, Esq., M.D.,
E. O. MORIARTY, Esq.,
P. F. ADAMS, Esq.,
HON. J. B. WILSON,

F. BELL, Esq.,
W. C. BENNETT, Esq.,
C. WATT, Esq.,
HON. J. SMITH,

G. F. DANSEY, Esq.

M. B. PELL, Esq., B.A., IN THE CHAIR.

Mr. David Clement Robertson, Inspector of Waste Water, called in and examined:—

392. *Chairman.*] You are Inspector of Waste Water to the Sydney Corporation, I believe? Yes.
393. You have in that capacity, I presume, some knowledge of the connections between private houses and the water-mains? I have.
394. There is one particular matter to which we wish for the present to confine your evidence—the connections between the mains and the water-closets. One case in particular has come under the notice of the Board, which I dare say you remember; it occurred about twelve months ago, in which the water was contaminated in consequence of direct connection with a closet? Yes, I remember it.
395. We are aware of the particulars of that case, and we are also aware that similar cases have occurred elsewhere; in fact we have been told that there are a great many cases of the same kind? There are, sir.
396. We wish to obtain from you some more exact information as to the number of cases in which that direct connection still continues? At present there are 5,400 patent closets in the city; and there are 4,700 which have direct connection with the mains.
397. What do you understand by patent closets? Those closets where the water is laid on for the purpose of flushing the pans.
398. They only go by the name of patent closets; they are not really patents—You mean the ordinary water-closets? Yes, they are called patent closets. This is a plan of such a closet-pan (*producing plan*) with the connecting pipe for flushing it, as was mentioned in Mr. Seymour's evidence yesterday.
399. This plan refers to the ordinary water-closet? Yes; all water-closets have pans like this; that is the pan commonly used.
400. And which was used in the case we are referring to? Yes.
401. You say that out of the 5,400 closets now in use, 4,700 are directly connected with the mains? Yes.
402. Then the difference between these two numbers comprises those which have cisterns? Yes. 700 of them have cisterns.
403. Is it any part of your duty to inspect these places? Yes.
404. Have you received any instructions in reference to alterations necessary in connection with these existing closets? No, not in respect to existing closets,—only for the future.
405. Then nothing has been done, to your knowledge, to enforce a better system in respect to existing closets? No; except that when repairs are needed, or new closets have to be made, then we make the plumbers adopt the cistern principle.
406. And the old closets are allowed to remain as they are? Yes.
407. Are there any closets existing similar to that from which this terrible contamination took place? Several. I may safely say one hundred have come under my notice within the last twelve months.
408. There are hundreds as badly circumstanced as that one was? Yes; whenever the taps or valves are left open, suction takes place, supposing the main to be temporarily empty, and draws offensive matter from the pan.
409. And then if the main is not full the offensive matter drains in? Yes.
410. Do you think that sort of thing is going on now? Yes.
411. That the gaseous matter from the closets is liable to be drawn into the main from which the citizens of Sydney obtain their supplies of water for drinking? Yes, in all cases where there are no cisterns.
412. And you say you have had no instructions whatever in respect to existing closets? None.
413. Are you aware whether it is a common practice, or whether it frequently happens, that taps are left running or open when there is no water in the mains? Yes; the citizens as a rule are in the habit of propping up the handles of the valves so as to leave the tap on, and then if any accident happens, or any repairs are being made, and the water is shut off from the main, this suction takes place, and when the main is charged again, the offensive gases are driven into the service pipes, and thence into the taps.
414. Does it frequently happen that when water is drawn off the mains this suction takes place? Yes; it is frequently necessary to turn off the mains while connections or repairs are being made.
415. Then that is a thing which frequently happens? Yes, it is often necessary.
416. Have you heard frequent complaints about the water being offensive from the citizens of Sydney? Yes, I have.
417. Is it your opinion—because your opinion, considering the nature of your office, ought to be of considerable value—that these complaints are occasioned by the cause we now have under consideration? Yes, I am confident of it.
418. In fact the sewage matter from the closets gets into the pipes? Yes, in one place in Woolloomooloo we tested it.
419. But where no special test has been made you think it frequently happens in cases which have not excited particular notice? I am sure that where these closets have no cisterns, a quantity of bad gas is sucked in when the water is off, and even matter as well.
420. Now with respect to new closets, there is a particular kind of small cistern adopted is there not? Yes.
421. Is that adopted in all cases where new closets are constructed? Yes.
422. Does it work satisfactorily? It does.
423. Are you entirely satisfied with that system? I am.
424. Practically you find it works well? Yes; it has no connection whatever with the sewer.
425. And it is not likely to get out of order? No, not at all likely, and if it does, it is of very simple construction, and can be very easily repaired.

Mr. D. C. Robertson.

28 April, 1875.

- Mr. D. C. Robertson. 426. What, in your opinion, would be the additional expense of using these cisterns? Between three and four pounds each.
- 28 April, 1875. 427. The cost would depend upon circumstances? Yes; some persons like to have them made of lead, and some of iron, and that makes a difference in the expense.
428. I presume from the nature of your office you have some acquaintance with the plumbers in this city, and with plumber's work? Yes.
429. Can you give us any idea of what would be a reasonable time to require that all connections with closets should be made in this way by means of these tanks? It should be fully four months.
430. Do you think if the landlords or householders were required within four months to make the connections with their closets in this way any serious inconvenience would arise with the plumbers in the shape of extortionate demands? Well, that would be the difficulty, because the plumbers are very busy just now, and they are likely to be so for some time.
431. Can you suggest any plan by which this difficulty might be mitigated or overcome. Would they contract to make these connections in a given time? I don't see how that could be done. Every man would like to do his own work, or see to its being done for him by some one else. The Corporation have nothing to do with the inside work of a house.
432. Was there not some plumber who undertook to furnish tanks on this plan at a fixed price? There was; it was Chandler, the plumber.
433. Was it a contract or merely a statement that the work would be done at a certain price? He said he would make cisterns at £2 15s. each; but they were common cisterns of galvanized iron, and most people would like to have them of lead.
434. Do you think the alteration could be enforced without any serious difficulty in four months? Well, I think, upon consideration, it would take between five and six months. If the plumbers saw it had to be done in a limited time they would be apt to ask too much, and the householders would not like to pay. I should say six months would be a fair time to state.
435. What do you think would be the effect of an order that all closets directly connected with the mains should have the water cut off at once, leaving it to the occupier of the house or the landlord to make the proper connection whenever he thought fit? Well, sir, that would answer very well with careful people, who would take the trouble to flush the closets, but I am afraid that in many cases they would be too careless to clean out the pans, and a quantity of the soil would remain festering and causing offensive smells.
436. You think that would create a nuisance in the city? I am sure of it, from experience.
437. Then you would not recommend that plan? I would not.
438. Is there anything you could suggest—any mode of remedying this evil in less than six months? No, I can see nothing else, except to adopt the cistern principle.
439. Are you acquainted with any other effectual mode of connection? No; the water must be discharged into a separate cistern.
440. Have you ever heard of the flexible tube by which water is directed into the pan? I have heard of it.
441. Have you any knowledge of that system? No, it has never come under my consideration.
442. Mr. Moriarty.] Are you aware whether there is any law to compel landlords to put cisterns in their houses? There is no law to compel them.
443. They need not do it unless they choose? No; there are numbers now adopting the system since they have found out that the water is being contaminated by closet matter.
444. Have you found them refuse in any instance to carry out that system? Yes.
445. And they cannot be compelled? There is no law to compel them.
446. Are there not certain parts of the city from which, as a rule, the water is shut off at night? There were sometime ago; I am not aware of it now.
447. Such as the neighbourhood of the Gaol, and the higher parts of Woolloomooloo? I am not aware of it now.
448. A gentleman who lives there told me that they never have any water there now at night? I am not aware of it.
449. Are you acquainted with the mode adopted in Liverpool now in certain parts of the town—the use of flexible tubes? No, I am not.
450. Mr. Bennett.] Is there any difference in these closets which you say are connected directly with the main; are they in any localities more likely to contaminate the water than in others? No.
451. The liability is the same—but a closet connected with a large main would contaminate more water than a closet connected with a small main—the injury would be extended? Yes.
452. And that would be the place where you would commence the alterations? Yes.
453. You stated to the Chairman that you knew absolutely of one hundred cases in which the water had been contaminated by the closets? Yes, where the pans were choked, and the closet soil had got into the pipes.
454. And you have been aware that the water was contaminated? Yes, and the Inspector of Nuisances had been prosecuting the persons.
455. And in all these cases you found the water contaminated? Yes.
456. Have you seen closets such as they have in England in which you can only put one panfull of water, and if you prop up the handle the water ceases running? Yes, I have seen them.
457. Hon. J. Smith.] In the performance of your duty do you make house to house visitation? I have visited the greater part of the city; not the whole city.
458. Do you visit from house to house regularly as a part of your duty? No; I went with the Inspector of Nuisances to the western part of the city about eighteen months ago; we are constantly carrying out this inspection; we travel together.
459. Then in what way did you make up that estimate of so many closets having direct connection with the mains? By taking the numbers as we travelled along.
460. Then you have seen as many as that? I have.
461. And it is likely that there are a great many more which you have not seen? Yes; but a good many have been fixed on the improved principle since then.
462. How many out of the 15,000 houses in Sydney do you suppose you have visited and inspected? Well I suppose I have been in about 14,000 altogether.

463. Then the probability is that you really know the most of the cases—nearly all of them where the closets are in direct connection with the main? I do, sir, but a great many have been connected since the date of my inspection. Mr. D. C. Robertson.
464. But you spoke from your own knowledge when you gave that number? Yes, the number is correct, but it is probably larger now. These are the cases which have come under my notice. 28 April, 1875.
465. And in your own knowledge there are upwards of one hundred cases in which the water in the mains is actually contaminated by the water-closets? Yes, about a hundred cases.
466. Have you heard many people complain of that? I have.
467. And have they attributed the badness of the water to that particular cause? No.
468. But you satisfied yourself that it arose from that cause? I am quite satisfied of it.
469. Do you think an efficient cistern can be put up for £2 15s.? No sir, it cannot, if the work be substantial—not under £3.
470. But you think it can for £3? Yes; a good strong cistern, to hold ten gallons, with a compartment to hold two gallons of water sufficient for one flush. When placed overhead it gives a greater pressure.
471. Are there many cases in which persons have voluntarily replaced the old connections by the improved system of tanks? Since the beginning of the year 200 new cisterns have been erected.
472. Voluntarily by the landlords and occupiers of the houses? Yes. In most cases it has been where closets required to be repaired, and the new system has then been adopted.
473. But still the majority appear to prefer drinking this dirty water to spending £3 or £4? Well, a great many persons won't believe the water is contaminated, and some of the landlords object to fix the cisterns.
474. Even in putting up a new closet? Yes.
475. Have you power to compel them? The only way we can do it is through the license we issue to the plumbers.
476. Supposing a plumber makes a connection without a cistern, how do you deal with him? The only way is summon him before the Committee.
477. What power have they? They can suspend his license for a certain period.
478. Have you any idea of the results of summonses in nuisances of this kind—have they been satisfactory? Yes, we have had the closets cleaned at once.
479. Have the Magistrates dealt satisfactorily with the cases you know of. Have you any knowledge on the subject? Yes, I am in Court every week. As a rule they treat the cases very leniently. But those are Mr. Seymour's cases; mine are only in respect to waste of water.
480. Mr. Seymour issues the summons? Yes, for nuisances.
481. Are you aware whether any complaints have been made that pressure has been brought to bear upon him to induce him to withdraw summons in certain cases? No, I have no knowledge of them. (*Witness put in certain papers. Vide Appendices A, B, C, D.*)

Francis Bell, Esq., City Engineer, further examined:—

482. *Chairman.*] With reference to the cisterns you have recommended for use in the water-closets;— have you had experience as to the working of that system of connection? Yes. F. Bell, Esq.,
O.E.
28 April, 1875.
483. Are you quite satisfied with that mode of connection? Quite so.
484. Then you persist in your recommendation? Yes.
485. Are you acquainted with any other effectual system of connection? I am not.
486. Have you any knowledge of the flexible tube system? Yes; but I have not seen it in operation, and therefore I cannot speak of it.
487. Have you any further information to give us as to the time which would be necessary to make these improved connections throughout the city? I think the evidence Mr. Robertson gave on that subject was very fair. I hardly think less time than six months would be sufficient.
488. Do you think it is possible to obtain any more reliable information on the subject? No, I do not think you could.
489. You do not think any serious difficulty would arise if the landlords were required to make these connections within six months. You think that would be allowing them a reasonable time? Yes; I think now that they know as a fact, which formerly they did not, that the water supply is liable to be contaminated from these closets, they will be anxious to make the alteration; and that if a proclamation to that effect were issued they would do it, if they possibly could, within the time.
490. Is the water turned off from the city frequently, or from any portions of it? Not since the commencement of the year—since we made the new connections, so as to give the Glebe a constant supply independent of the city.
491. Then it is laid on now both night and day? Yes, it is never shut off.
492. You heard what Mr. Robertson said about its being frequently necessary to turn it off, did you not? Yes; when house connections are being made it is necessary.
493. Then you confirm what he said? Yes; the water is shut off only for a short time, while the connections are being made.
494. Then it is never turned off at night? No. If we are afraid of any fires taking place it would not do to turn it off.
495. In dry seasons have you found it necessary to turn it off? No; but occasionally our mains are not full.
496. That would be only for the high level service? Yes, and only for a few hours.
497. You think, if there is a short supply of water it is from the defective pumping power more than anything else? Yes.
498. *Hon. J. Smith.*] Are there any public water-closets in Sydney? Yes, there are a good many—there is one in the market—but they are in the City Surveyor's department, and I really do not know much about them.
499. Have you any knowledge of the mode in which they are supplied with water? I know they have the water from tanks, at least the Police and Railway closets have, but those in the market have not.
500. Then there are a number of public urinals in Sydney, are there not? Yes, a good many.
501. And they are kept flushed by a constant stream of water? They are.
502. Then, in the case of repairs to pipes when the water has to be run off, there might be an indrain through those pipes? Yes, of foul air I am sure there is. 503.

- F. Bell, Esq.,
C.E.
28 April, 1875.
503. And therefore it is quite as necessary to supply the urinals with cisterns? Indeed it is.
504. But I suppose in any case there is a cistern attached to a public urinal? No, except in some instances, such as I have quoted.
505. I see from the papers you have handed in, the Corporation are empowered to make this alteration in the connections in some cases? Yes, in cases where new closets are being put up.
506. But not in existing closets? No.
507. And even in the case of new closets the Corporation have no authority to compel the use of cisterns under the Act? They do it in every case.
508. You have stated that the water is never cut off in any part of Sydney from a scarcity of supply? No, it is not.
509. But that when repairs are being done or new connections made it must be cut off for a time? Yes, between certain locks.
510. In such cases do you run the water off from the tap at the lower level? Yes. We close the nearest locks in the main, draw the plug, and run the water out.
511. Then if there should be any direct connections with water-closets in that area and the taps happen to be open, there will necessarily be an indrain into the main which is being emptied? Yes.
512. And have the mains to be frequently emptied in that way for repairs? Yes, portions of them—say about four or five a day throughout the city.

THURSDAY, 29 APRIL, 1875.

Present:—

HON. J. B. WILSON,
E. O. MORIARTY, Esq.,
W. C. BENNETT, Esq.,
C. WATT, Esq.,

F. BELL, Esq.,
HON. J. SMITH,
G. F. DANSEY, Esq.,
H. G. ALLEYNE, Esq., M.D.

M. B. PELL, Esq., B.A., IN THE CHAIR.

Michael Chapman, Esq., Alderman of the City of Sydney, called in and examined,—Alderman S. Goold being also present by permission of the Board:—

- M. Chapman,
Esq.
29 April, 1875.
513. *Chairman.*] You are an Alderman of the City, are you not, Mr. Chapman? Yes.
514. The Board have taken evidence in reference to a particular case—a gross nuisance—which occurred some time in May last, in connection with a water-closet in Castlereagh-street? Yes, I remember it.
515. We have had full evidence as to the particulars of that case —? I remember the whole affair.
516. I think you were called upon to go and inspect it? During the absence of the Mayor (Mr. Goold) I acted for him; and at the request of Mr. Bell, and I think Mr. Bradridge, I went with them to a house in Castlereagh-street, occupied by a butcher. We went also to the house next door, occupied by McNeilly, a painter.
517. Were you satisfied that the water in the water-pipes supplying the houses in that neighbourhood was contaminated by this nuisance? The pan of the butcher's closet was some 8 or 10 feet above the tap which supplied the next house, and matter from the closet came out of the tap in the next yard. I saw it myself.
518. Then you were quite satisfied of it? We have also been supplied with copy of a report from the City Engineer to the City Council, respecting a number of closets connected in a similar way with the main. Do you remember that report? Yes.
519. What we wish to ascertain from you is what steps were taken by the City Corporation in consequence of communications made to them in consequence of that report? We sent officers to survey all places which were likely to be in that state. We also called for tenders for an improved water-closet cistern, and at my suggestion we offered a prize for the best plan of supplying the water to closets, and also hindering the great waste of water. We had a great number of plans sent in, and a gentleman of the name of Chandler got the prize of £10, and his system was adopted. Since that time numbers of cisterns of that sort have been erected in the City of Sydney—in every instance in fact where the Corporation could have them erected.
520. You mean in every house where a new connection was made? They are doing it in every new connection, but in hundreds of instances we have introduced them into old closets. For instance, I have ordered ten cisterns myself, and I know many other persons who are equally anxious to have them.
521. Are you aware of the number of closets in the City of Sydney which have improper direct connections, and the number of those which have the improved or some improved system of connection? I could not tell you the number.
522. Are you aware that the number of those which have a safe connection with the main by means of a tank is wholly insignificant in comparison with the total number—not more than 10 per cent.? I would not venture to give an opinion.
523. As far as you know, have the City Corporation any power to compel persons to adopt this improved method of connection, or any improved method of connection? They are doing it with all the new connections.
524. But in respect to the old ones? No, we are fully aware that we have not the power.
525. Can you pass a by-law to give the Corporation that power? No, we have no power to compel persons to pull down and erect, but we induce them to erect the cisterns whenever we can.
526. But it is not a question of erection or pulling down—it is simply to cut the pipe and put between the separate portions of the pipe a tank, so as to divide the connection? Whoever told you that—that the method was so simple—told you wrong, because, although the estimate for supplying the tank may be only £2, it costs about £4 if erected. In some instances you have to put down a fresh water-pipe.
527. What would be the extreme expense in each case, do you think? About £4 to £4 10s. For that you could get a very fair one.
528. I am speaking of old closets, now in direct connection with the main. What would be the expense of cutting the pipe and fixing a cistern? About £4 or £5.
529. You think that would be the extreme cost? Yes.

530. And you think that, as you stand, you have no power to insist upon this being done. I am speaking of existing closets entirely? No, I believe we have not the power. M. Chapman,
Esq.
531. And that the passing of a by-law would not enable you to do so? No, I am sure it would not.
532. This particular case which occurred in Castlereagh-street was of such a flagrant character that it was detected. We are informed that some other cases of a similar nature have occurred since. Have you heard of anything of the sort? I have not heard of any. That was a case which would not occur once in a hundred times. The water-closet was 8 or 10 feet above the level of the tap in the next yard. 20 April, 1875.
533. Are you not aware that a great number of the water-closets are upstairs? Yes; but I have never known any closets upstairs that were not supplied with cisterns.
534. Are you aware that out of 5,100 water-closets there are only 700 that have cisterns? I am not aware of it.
535. We have had the information from your own officers? I think they must be mistaken.
536. Were the City Council aware that with this large number of closets, having direct connection with the water-mains, there was constant danger of the water being contaminated? May I ask you whether this is an inquiry into the best method of disposing of the sewage of the City of Sydney, or an inquiry into the working of the Corporation? I understood it was an inquiry in reference to the disposal of the sewage.
537. It is an inquiry as to the best thing to be done to remedy the evils which are said to exist in connection with the health of the city, and we wish to ask you what information you had, and what steps were taken in consequence of that knowledge. Our instructions are very wide, and we are specially urged to inquire into all causes which affect the health of the inhabitants of Sydney. With that object I ask you whether the Corporation were aware of certain things, and what action was taken by them. If we do not know what steps the Corporation have taken how can we advise the Government as to what steps they should take. We wish to know what powers the Corporation possess, so as to be in a position to recommend, if we think those powers are deficient, that they should be enlarged, and we wish to know what has already been done, that we may advise the Government accordingly. I have therefore asked you what has come under your knowledge in respect to these matters. It is natural that the Board should wish to ascertain whether the persons authorized to act are in possession of the information which they have received, and what they have done. If the Corporation have already taken the proper steps then it will not be necessary for us to do more than advise the Government that they have done all that was required? Will all my remarks be printed as well as yours, or will only that portion which suits the Commission?
538. It will all be printed, and a copy of your evidence will be sent to you, in order that you may make any corrections you think necessary: We have been told, and I may I think say we believe, that there are a large number of closets in the City of Sydney so circumstanced that they are liable—not now and then, but frequently, daily—to contaminate the water in the pipes which supply the inhabitants of Sydney with water for domestic use, not perhaps to an excessive degree, as in the very flagrant case to which I have just referred, but to a degree which is both revolting and dangerous. We wish to know if the Corporation have been in possession of the same information? I presume the information has come from the same source that the Corporation have had it from. I don't believe it for all that.
539. What don't you believe? That there is so much danger, or that it is likely so much filth is thrown into the water used by the citizens—I do not believe that report.
540. It is not a report—we have evidence to that effect—we have a report by the City Engineer? Well, there is a difference of opinion on the subject. I believe it is bad, but nothing like so bad as it is represented to be. I believe some of these reports are written by officers when they have never seen the places themselves—it is done by their subordinates.
541. Has it ever been reported to you or to your colleagues that there are a large number of cases in which it has been ascertained, as a matter of fact, that the water has been contaminated by matter from the closets—as a matter of fact? No, I have not heard of it. I have heard of one very glaring case—that in Castlereagh-street; but I question whether there is another like it. That was a case where one house was built on a bank, and the adjoining house in a place that had been excavated, and the closet in one house being 8 or 10 feet above the level of the tap next door, the filth flowed from one to the other.
542. Has it ever been reported to the authorities that the nature of the connections is such as to render it certain—not a question of opinion—that under circumstances frequently occurring, foul gases at all events, and in some instances the contents of these closets, must get into the water-pipes? Has that ever been brought under the notice of the Corporation? I dare say it has.
543. Do you credit this? No, I do not believe it.
544. You think the engineers and men of science, whoever they may be, who assert that to be the case, are mistaken? I believe they do not know so much about these matters as a practical man. I believe a plumber is a better judge than an engineer in reference to matters of this sort.
545. I think I asked you what steps had been taken to remedy these evils, and you stated that the use of cisterns had been enforced in the new connections only? Yes; it is very doubtful whether we have power enough to do that, but we assume the power, and we find the citizens are very willing to act with us to remedy the evil.
546. You think this case in Castlereagh-street was an isolated case, and that there is no present necessity to alter the existing system with respect to these 5,000 closets? I did not say so. I do believe it is necessary to do it, because it is possible that some foul gases may get into the pipes, and I believe it is necessary to have the whole of the closets in the city altered and fitted with cisterns.
547. But you did not think it of such pressing importance as to make it necessary to take any immediate decisive action? We could not do it because we had not the power; in fact, it is doubtful whether we have the power now to do what we have done.
548. At all events you did not think there was anything so pressing as to make it desirable that the Corporation should seek to obtain further powers? We were so sick of seeking further powers from the Government that we thought it was a forlorn hope. Instead of giving us more powers they bereft us of everything they could.
549. This particular case of the water-closet in Castlereagh-street occurred in May, and Mr. Bell's report was written in July. A resolution was passed by the City Council some time in September, instructing the City Engineer to furnish particulars to the City Solicitor to enable him to draw up a by-law, enabling the

M. Chapman, the City Council to enforce the new system of connection in all new cases?— That is quite correct, and it has been carried out.

Esq.
29 April, 1876. 550. That resolution only applied to the new connections? Yes.

551. You did not think it was necessary to obtain powers to enforce the alterations in the existing closets? We thought it necessary, but we considered it a forlorn hope.

552. Then you would be very much obliged to the Board if they should succeed in obtaining these powers for you? The citizens would. But it appears to me that you are inquiring into the working of the Corporation, and it is hardly fair to put these questions without giving the Corporation an opportunity of defending themselves. It has been asserted out of doors by a gentleman on this Commission that the Mayor and Aldermen connive in stopping prosecutions under process of law. Now that is not the case. I have never known a single instance of it. In about every instance when applications have been made to stay proceedings, the Mayor has told the Inspector to do his duty, and that unless some very good reason was shown the case must go on.

553. Without reference to anything that may have been said out of doors, I can only inform you that the evidence given before the Board comprises no such charge whatever. On the contrary, it entirely confirms your statement.

554. *Mr. Moriarty.*] Have you ever heard that in Liverpool—I mean the City of Liverpool, in England—in many cases where the connections between the water-mains and the pans of the closets is direct, the same nuisance has occurred which is alleged to have taken place here? Yes, because the water supply in Liverpool is intermittent, and the water-pipes are occasionally empty; but here we have a continuous supply, and the force of the water in the pipe is greater than the force of the matter from the closet-pan, except in the instance I have mentioned, where the closet-pan was 10 feet above the level of the tap, consequently we are not liable to the same nuisance.

555. Might not the same thing occasionally occur when the water in the pipe was being drawn off? Yes, during the time of repair.

556. *Hon. J. B. Wilson.*] As a matter of fact is not the water in the City of Sydney frequently turned off while repairs are being made, and for other reasons? Only locally, in cases of repairs. It is turned off in the suburbs occasionally.

557. Before May or July last year, when this bad case occurred, was the attention of the Corporation ever turned to the necessity of preventing direct connection between the closets and the water-mains? I think not. We knew that there ought to be some alteration, but we got so little support from those who ought to have represented us in the House that we lost all hope, not only with regard to obtaining powers to carry out these alterations, but to make other improvements.

558. I am speaking of the powers which ought to be given to you by Act of Parliament? I quote from the Act 17 Vic. No. 34: "An Act for the better Sewerage and Cleansing the City of Sydney and portions of the suburbs thereof." Clause 9 provides that—"The said Commissioners shall cause the sewers which shall be from time to time vested in them and all private drains and sewers to be constructed covered and kept so as not to be a nuisance or injurious to health and to be properly cleared cleansed and emptied and for the purpose of clearing cleansing and emptying the same they may construct and place either above or under ground such reservoirs sluices engines and other works as may be necessary and may cause all or any of such sewers to communicate with or be emptied into such places as may be fit and necessary or may cause the sewerage and refuse therefrom to be collected for sale or for any purpose whatsoever but so as not to create a nuisance."

559. Was the attention of the Corporation ever drawn—before May, 1874, I mean—to the powers they possess under this Act, or were any steps taken to enforce the provisions of the clause from which I have quoted? Our attention was not particularly aroused to it until this case occurred at the butcher's in Castlereagh-street.

560. We have had in evidence that out of 5,400 water-closets supplied with water only 700 have cisterns—we have had that in evidence from officers of the Corporation, from actual observation? I quite believe that was the case early in 1874; it is very different now.

561. Consequently, I think you will admit that the fact of 4,600 closets being directly connected with the water-pipes is a matter that ought to be rectified as soon as possible? I have admitted it already—I quite agree with you.

562. How long do you think it would be necessary to give people to make the necessary alterations all through the City, supposing a Bill were passed by the Legislature, compelling all parties to connect their closets by means of cisterns? I would not give them longer than twelve months.

563. Could you not get it done in six months? You could not get the mechanics' work done in that time. I have ordered some to-day, and the man said he could not furnish the number I required at once.

564. Do you think the Board would be justified in recommending that the water should be cut off—do you think it would be judicious or prudent to cut off the water from such houses as are directly connected with the mains? Only in very bad cases.

565. Immediately;—do you think that would answer? I believe so, and make them supply the water necessary for their closets in buckets.

566. Would not danger arise from persons allowing their pans to get full? The pans would become quite useless, and soon would work itself out.

567. And you recommend, that in cases where persons delay making the improved connection, the water should be cut off? I believe in bad cases you are perfectly justified in making such a recommendation. If we go in for the purity of the city we must adopt rigid measures, and cut off the water at once in all such cases.

568. Would you suggest that a discretionary power should be vested in the Corporation, or would you make it absolute? I would make it absolute.

569. I mean to say that there might be some water-closets kept so thoroughly clean that there would be no danger of any nuisance? You could not draw a line between them.

570. *Chairman.*] You do not believe that there is much danger from the contamination of the water, or that it happens often; but supposing you did believe not only that it was likely to occur but that it frequently occurred, what steps would you recommend the Government to adopt? The step I have just recommended—cutting the water off immediately.

571. Without giving the parties any time? I would give them no time at all.

572. You would cut it off at once, and tell the parties it would be laid on again as soon as they had erected cisterns

cisterns on their premises? Yes, making it compulsory that within twelve months every house should be supplied with a cistern. In the meantime I would make them use water from a cask, as scores of them do now.

573. There is one question indirectly connected with this subject I have not asked yet. You were two years Mayor I believe? Yes.

574. Were you much troubled by persons who wanted you to exert your influence to get summonses withdrawn? That was tried once, at the commencement of my office, but it was never tried afterwards.

575. Not after the first time? Never after. Of course these influences are brought to bear, not by the Aldermen but by persons out of doors, but I have never known an instance of the Mayor giving way. The only difficulty we have had to fight against in Court, for breaches of Corporation by-laws generally, has been the miserable fines inflicted by the Magistrates.

576. That has been remedied, has it not? Yes; to-day one man was fined £15. We have had a great deal to contend with. Our officers have been quite disheartened; men have been fined as low as 5s. for very gross cases, where the filth from cow yards has created a great nuisance.

577. Could you name any Magistrates who in that way prevent the proper discharge of their duties by the officers of the Corporation? I could name Magistrates who come down to the Court when it is not their day on the roster, and who fine shillings when they ought to fine pounds.

M. Chapman,
Esq.

29 April, 1875.

Stephen Goold, Esq., M.L.A., called in and examined:—

578. *Chairman.*] You have heard the evidence given by Mr. Alderman Chapman;—do you concur in the answers he has given? My answers would be very similar to those given by Mr. Chapman, except in one particular. I do not think it would be desirable to recommend the Government to cut off the water at once. I think if you gave the people three months' notice you would have double the number of cisterns erected; I believe they would do all they possibly could during that time.

579. You would not object to cut them off after three months' notice? No.

580. Do you think that would be the opinion of the members of the City Council generally? Yes. I believe the answers given by Mr. Chapman are in perfect keeping with the opinions of the whole of the Aldermen in this city. I think that cisterns should be erected with as little delay as possible, and the very reason they have not been erected long ago is that we have been perfectly powerless in the matter; and I do not believe even now that we have power to enforce the erection of cisterns even in new buildings.

581. Is there any other evidence in connection with this particular point which you would like to give us? I must say that I never heard that the water was being rendered impure only in reference to this particular case in Castlereagh-street. No case was ever reported to me.

582. Were there no cases reported of the water being impure? No, only that one. When the dam was being enlarged there were many persons ready to state that they found dog's hair, cow's hair, and all sorts of things in the water, but there was no ground for such statements.

S. Goold, Esq.,
M.L.A.

29 April, 1875.

FRIDAY, 30 APRIL, 1875.

Present:—

H. G. ALLEYNE, Esq., M.D.,
F. H. GRUNDY, Esq.,
C. WATT, Esq.,
HON. J. SMITH,
G. F. DANSEY, Esq.,

HON. J. B. WILSON,
F. BELL, Esq.,
W. C. BENNETT, Esq.,
E. O. MORIARTY, Esq.,
P. F. ADAMS, Esq.

M. P. PELL, Esq., B.A., IN THE CHAIR.

Henry Norman M'Laurin, Esq., M.D., called in and examined:—

583. You are a doctor of medicine? Yes.

584. It has come to the knowledge of the Board that the water supplied to the inhabitants of Sydney has on several occasions been contaminated by fecal matter from the water-closets, and we are anxious to take this matter solely into consideration for the present, as it is one which the public are especially interested, and we wish to inspire them with a wholesome dread of the results which must follow. The Board are anxious to obtain further particulars from members of the medical profession in reference to the received opinion of the faculty as to the danger of using water so contaminated—the recognized opinion of the profession, arising from the introduction of matter of this nature into the water used for house purposes. To that point alone our inquiry is at present directed. Will you be kind enough to state what is the received professional opinion on this subject? There are several diseases which, it is believed, can be produced or propagated by fecal contamination of water. First of all, diarrhoea. It is admitted, I think, by everyone—in fact there is no doubt whatever about it—that diarrhoea can be produced in a great number of cases by this method of contamination. I have myself seen several cases of which I could, if necessary, furnish the details to the Board—

585. Do you mean to say that diarrhoea is produced or communicated by the introduction of fecal matter into the water? It is produced by the fecal contamination of water in certain cases and under certain circumstances.

586. You were alluding to some particular cases which have come under your notice when I interrupted you? I could give the Board the details of a case which came under my own notice in the harbour of Wellington, New Zealand. I have a MSS. book with me, from which I can give them to you if you desire, but I can sufficiently describe the circumstances without them. Up to a certain day in the month of June, 1869, the crew of H.M.S. "Challenger" had been using distilled water. On that day the supply of distilled water ceased, and they commenced to use water supplied from the town. As soon as they began to use this water an outbreak of diarrhoea took place in the ship, which continued for about three weeks. During that time I was making inquiries, and I found out that the water with which they were supplied had been contaminated with fecal matter. In Wellington there are no drains at all, and during the heavy rains there had been a great deal of soakage from the cesspits into the water which was supplied to the ship. I advised the Commodore to cease using that water and to distil water again for the use of his crew; he did so, and as soon as ever they commenced the use of distilled water the diarrhoea ceased.

587. Were you assured of the presence of fecal matter in that water, or did you suspect it only? I was sure

H. N.
M'Laurin,
Esq., M.D.

sure of it, because I examined it. It had a disagreeable smell, and it was of a milky consistency; you could see the granules of matter in it; and I found that it had been contaminated, because during the dry weather the water came from a natural spring in the hills, but after a long period of wet weather there was such a constant soakage produced by the rain that matter passed from the neighbouring cesspits into the spring adjoining.

588. Are there any other diseases which are recognized by the profession as liable to be produced by the use of water so contaminated? With respect to typhoid fever there are two opinions: One is the opinion of Dr. Budd, which is, that typhoid fever can never be *produced* by the contamination of ordinary fecal matter; but the opinion of Dr. Murchison—which I believe is the recognized opinion of the majority of medical men—is, that under certain circumstances ordinary fecal contamination can produce typhoid fever; that water contaminated by healthy feces can produce typhoid fever. On the other hand, Dr. Budd says that to produce typhoid fever the feces which contaminate the water must come from a patient suffering from typhoid fever. Dr. Murchison is of opinion that this disease can be originated even from healthy fecal matter, and that, I think, is the safer opinion of the two. I have myself seen, when I was surgeon in the Parramatta Gaol, an instance of this. We had an outbreak of fever there. We had a number of cases there which I believe sprang from the contaminated condition of the water. The water was analyzed by the Government chemist, and it was found to contain a quantity of fecal matter. We then changed the source of the water supply, and the cases of fever ceased. There was no fever case after that while I was surgeon of the gaol.

589. Where do you suppose this fecal matter came from? I suppose from fecal contamination of the water in the upper part of the Parramatta River.

590. Are there any other diseases which are generally admitted by the profession to be produced by the contamination of water by fecal matter? Yes, cholera.

591. Is it the received opinion of medical men that cholera can be produced from that cause? The received opinion is that Asiatic cholera is communicated by the water which is drunk being contaminated by the feces of patients labouring under cholera.

592. Then it would be communicated, not produced? Yes; whether it is produced or not we have no proof; but that it is communicated, in scores of cases, there can be no doubt whatever.

593. Can you enumerate any other diseases which are believed to be produced in that way? Dysentery is often supposed to be produced in the same way, but I am not prepared to give any facts which have not come under my own notice.

594. We wish to ascertain what diseases are believed to be produced by the contamination of water by fecal matter, according to the recognized uncontroverted opinions of the profession? I think I have given you most of them,—diarrhoea and dysentery, typhoid fever and cholera.

595. Are there any other diseases which are supposed to be communicated by drinking water containing fecal matter? I think I have mentioned most of them.

596. You think then, and the members of your profession think, that these diseases are very likely to be communicated from one person to another, if water is contaminated in this way? They are so certain to be communicated that I will venture to inform the Board of a case which occurred in Over Darwen, in Lancashire, in England. There was no provision for drainage, and the water supply became so contaminated that the local medical officer told the people in spring, 1874, that unless they improved that state of matters there would be an outbreak of fever in the autumn. In the autumn an outbreak took place; on the 7th of November, 1874, there were 1,200 cases of fever, and between the 8th October and the 7th November, forty-five persons died from typhoid fever.

597. You say that in this case the water was contaminated by soakage—by fecal matter soaking into it? Yes, there was no provision for drainage—the population had increased very much within the last few years—that was the second epidemic in fact. In this instance it is interesting to notice that a prophesy was made that an outbreak of fever would take place from certain causes, and that the fever did break out, for, as I have already stated, there were 1,200 fever cases, and forty-five deaths in one month.

598. Do you think that water contaminated in this way, but not so offensive as to be noticed by ordinary persons, might still be dangerous? No doubt of it; there are many forms of contamination which you cannot discern by ordinary examination.

599. Is that an acknowledged fact, recognized by the medical profession? It is an acknowledged fact with regard to cholera; I did not mention this fact. When the epidemic of cholera took place in London in 1865 it was found to be almost entirely confined to one portion of the city which was supplied with water by one company—water drawn from a river called the Lee, near Blackwall.

600. Was the water in that river contaminated? Yes, it was known to be so; it was proved to be so. The water was not offensive to the inhabitants, and there was nothing in its appearance to lead them to suspect that it was contaminated, but when analysed it was found to be so. For you may pass water through a common filtering process and get rid of the smell and make it apparently pure, but unless you adopt some unusual means of filtration, you do not destroy the products of decomposition. I mean to say that the process of filtering, to remove the offensive taste or smell, is not sufficient to remove the products of decomposition.

601. Supposing the air, such as it is, which you find in the pan of a water-closet, is drawn into the water-main, should you think that the water might in that way be contaminated dangerously? Decidedly it might; and that is not my own opinion only, but that of every writer on the subject.

602. Without any solid matter being introduced into the main? Yes; direct communication between the water supply and the pan of a water-closet is exceedingly dangerous, because the gases are to a great extent soluble, and contaminate the water very seriously.

603. You think there would be danger of a disease being produced or aggravated in that way? A great deal of danger.

604. Is it considered that diseases produced by other causes can be aggravated by the use of water so contaminated? There can be no doubt of it. In the case I have mentioned, when the outbreak of diarrhoea took place on board H.M.S. "Challenger," I found that persons suffering from other complaints became much worse while this epidemic prevailed in the ship.

605. You think then that such diseases as measles and scarlatina might assume a more aggravated type in consequence of the use of water contaminated in this way? I believe so. I think I am safe in saying so. There can be no doubt that the use of contaminated water would produce, in a patient suffering from any other disease, similar effects to those which would be produced in a healthy person, only the symptoms would

would be more severe. A healthy person might, for instance, consume contaminated water without any very bad results, but if the same thing was done by a person exhausted with measles, that person would suffer from diarrhoea, which has been the cause of the greatest number of deaths in Sydney.

606. Then you think that where there were a number of persons living near each other, during an epidemic, and subject to these unhealthy influences, the danger to the neighbours of those who were suffering from the disease would be increased by the aggravated type which it would assume? I do not quite understand your question.

607. Would the use of contaminated water during an epidemic be dangerous, not only to the persons who consumed it, but to their neighbours, by aggravating the form of the infectious disease? I could hardly venture to give a definite opinion. I believe that where fecal contamination aggravates the character of such a disease as measles it does so by producing a specific effect upon the person so suffering—that is to say, it produces dysentery, diarrhoea, or some affection of that kind, but I am not prepared to say absolutely that the infection proceeding from that person to another would render the disease more severe. It is exceedingly probable.

608. In the course of your practice have you heard complaints of the water supply from the Sydney water-works being injurious in any way? Occasionally I have, but not frequently.

609. Have you ever had occasion to suspect that any illness was occasioned in that way? I have often suspected it in cases of typhoid.

610. You have suspected that it was caused by drinking bad water? By drinking bad water, because the cases of typhoid fever have chiefly occurred in portions of the city where there is but little provision for cleanliness—the closets, for instance, are connected directly with the main.

611. Do you know from your own knowledge that they are directly connected? Yes.

612. Is that the case in respect to closets up-stairs? It generally refers to small houses.

613. Suppose you were told that, at a rough calculation, there were 5,400 water-closets in the City of Sydney, including the suburbs, and that out of those 5,400 only 700 or 800 had cisterns, and the rest were connected directly with the main, would you consider that a serious cause of danger to the inhabitants? Yes, great danger; I think it is perfectly shocking.

614. Is it all usual, as far as you know, in Europe, for connections to be made in this way direct from the closet to the main? It is always recommended that there should be no direct connection at all; there should be a carefully guarded cistern between.

615. Is that the usual practice, as far as you know? It is the usual practice in well built houses, and it is strongly insisted upon by all writers on the subject.

616. Do you know what is the usual practice from your own knowledge? According to my experience it is very unusual to have anything but cisterns; according to my observations the new houses in London are invariably supplied with them.

617. Do you know anything of any compulsory regulations at Home in regard to this matter? The law in England has been so much changed of late that I am not prepared to state these regulations.

618. I have gathered from your evidence that it is your opinion that this state of things should be remedied without delay? Yes, I think it should be put a stop to as soon as possible.

619. *Dr. Alleyne.*] I wish to ask you one question,—whether in your opinion the reflux of gases with the water-main would not be almost as deleterious—at all events very deleterious—as the introduction of fecal matter? I think it would be.

620. *Chairman.*] Supposing the air from the closet itself were drawn into the main, would that be dangerous? It would not be so bad, but it would be very deleterious.

621. You would not like to drink a glass of water so contaminated? Indeed I should not. I think it is very dangerous that there should be any connection between the closet and the supply of water, in fact it is the first principle of safety to keep them separate.

622. *Mr. Mortley.*] Do you consider that the same danger to the public health would arise from the noxious gases given out from the outlets of sewers? I do not understand you.

623. The sewers here discharge their contents into the sea;—do you think the gas given out by the decomposed matter is likely to be injurious to the public health? If people are living near enough to the sewer mouths the public health will suffer. Gas of that kind is extremely dangerous. I am perfectly certain of it, and the nearer you are to it the worse it is.

624. *Hon. J. Smith.*] You stated, that while you were in charge of the gaol at Parramatta an outbreak of fever took place, and that you had reason to suppose it arose from the use of contaminated water;—what water was used before that outbreak? I had only been in charge of the gaol then for about three months. At the time the fever broke out they were using water from a pool in the Parramatta River, which was very convenient to the gaol.

625. And then they ceased to use that water? Yes, and used other water, and after they ceased using it there were no more cases of fever. I ought to have mentioned also in connection with that, that along with the cases of typhoid fever there was one case of malignant cholera, in which the man died in two hours.

626. Had you reason to suppose that that arose from the use of contaminated water? There was no other case after the use of contaminated water ceased.

627. In that case was the source of the contamination discovered? It was very difficult to say. The Parramatta River at that particular place runs not far from the houses. There are high banks, and houses are built near them, and there is no effective system of drainage at all, so that it is quite possible that some amount of fecal matter may get into the river.

628. In fact it was quite possible that the Government chemist did detect that matter? Yes.

629. There was no other reasonable cause for the outbreak? No; I examined all the drains in the gaol, and found no reason to suppose that there was any other cause.

630. And in that case was there anything in the water apparent—any offensive smell which would lead one to suppose that it was so contaminated? Nothing at all.

631. Had you many cases of typhoid on that occasion? I forget the number—seven or eight, I believe.

632. Is it not the recognized opinion now-a-days that typhoid is communicated chiefly, almost entirely, from water? Do you use the word “communicated” exactly as restricting the infection only from one person to another?

633. Yes, I mean communicated only, not originated, but passing from one person to another;—is it not believed that water is the principal medium of communication? It is; but we must not shut our eyes to the importance of sewage gas. When we remember such a case as that of the man who died at Cambridge from the effects of exposure to sewage gas while engaged in opening a drain.

H. N.
M. Laurin,
Esq., M.D.
30 April, 1875.

H. N.
McLaurin,
Esq., M.D.

30 April, 1875.

634. But that was a case where the fever originated? We cannot tell what matter from a typhoid patient may have been in the drain. I should not like to give an opinion on the disputed point between Dr. Budd and Dr. Murchison. It may be communicated by gas or by water; I believe it is more frequently communicated by water.

635. I think you stated that in the course of your practice you have had reason to suspect that it was communicated by water, but that you had no actual proof of it? In private practice it is very difficult to obtain such proof; it is only in public institutions or in small places that you can really trace the outbreak of fever.

636. Is it a fact that during the last few months there has been an unusual outbreak of typhoid in Sydney? Typhoid usually breaks out in the autumn—about this time. There has been a good deal of it.

637. *Chairman.*] You would recommend that a change be made in these direct connections between the closets and the water-mains, even if it should occasion considerable inconvenience; you think it is a matter of pressing necessity? I think so. I think it should be done at any inconvenience; it should be compulsory, and it ought to be done at once.

638. Have you any knowledge of the case in Golden-square, where people went to get water because it looked so clear, and yet it spread cholera all round? I have heard of it; that was in '54.

Benjamin Palmer, Esq., Mayor of Sydney, called in and examined:—

B. Palmer,
Esq.

30 April, 1875.

639. *Chairman.*] You are Mayor of Sydney? Yes.

640. We are confining our attention for the present to one particular point upon which we shall be glad to have your evidence—to the evils which are said to have arisen from the defective connections between the water-closets in the City of Sydney and its suburbs with the main. We have already obtained evidence on the subject from Alderman Chapman and Alderman Goold. They tell us, as we were already aware, that about twelve months ago—last May, I think—a portion of the contents of closets had been drawn into the water-pipes, and had contaminated the water which people were in the habit of using. The case was pointed out to the City Council, in a Report made to them by the City Engineer, a copy of which we have had before us. We find also that they were aware that other similar cases had occurred. We were told by this gentleman that the City authorities were fully aware of the exigency of the matter and the extreme necessity which existed that steps should be taken to prevent such occurrences, and they were advised that they had no power to do so? I can only say I have been in the Council for four years and it is all new to me. If anyone has told you that he has misinformed you.

641. I am merely giving you the evidence we have received. We have also been told that they considered they had no power to compel the landlords or occupiers of the houses to alter the system of connections between the closets and the mains, but they obtained power by means of a by-law to insist upon improved connections with cisterns in all cases where new buildings were erected. When asked if they had not considered it necessary to apply to the Government for Legislative powers to enable them to remedy the evil, they stated that they had been so much disgusted at the result of all such applications that they had not felt encouraged to do so. Consequently, the old state of things has continued to exist up to the present time. Is that in accordance with your own knowledge of the facts? No; it is all new to me. We have no power to compel any alterations of the kind; the by-law does not give us that power.

642. Does not it give you power in case of new connections? Yes, and during the last month or two—I forget the exact time—we have been compelling all persons making new connections, to adopt the plan suggested by Mr. Bell, and to have cisterns. With regard to those closets which were connected before, we have no power to insist upon any alteration. We tried it, but Mr. Driver said we had no power at all, as the owners had complied with the regulations existing at the time the closets were connected, and had conformed with the law then in force. But since then all new connections have to be made with cisterns. I have only known of one case where the water was contaminated, and that was in Castlereagh-street. There have been reports of other cases, but none of them have been confirmed.

643. Have you ever had reports on the subject from any of your officers, except Mr. Bell? No.

644. Have you ever heard of other cases where water has been contaminated—where it has not been so offensive as this but still bad? No, I believe it is all imagination.

645. You think the officers of the City Council imagine that the water is impure? Yes, for if that was the case and they did not report it they ought to be dismissed. I have only been in office for four months, but I have never heard a word about it. Of course I have come under the new system, the cistern system, which was adopted just before my time.

646. Do you recollect that any steps were taken by the City Council in respect to this matter? No, I have never heard anything about it; the only case I recollect was that one in Castlereagh-street, and that was due chiefly to the way in which the closets were built. Of course, all persons having closets in the upper portions of their houses are obliged to have cisterns; the water would not get to the closets without them.

647. Mr. Chapman is so impressed with the danger to the health of the inhabitants of Sydney, to say nothing of the disgusting nature of the contamination, that he has recommended the Board to advise the Government to empower the Corporation to give instant orders to cut off the water from all closets directly connected with the main. Alderman Goold concurred in the suggestion to cut off the water, but thought it would be only fair to give the parties three months, and then if after a further period of nine months any closets should be found improperly connected, the landlords of the premises should be heavily fined; and they told us that this step would be in accordance with the general opinion and wish of the City Council.—Do you concur with these gentlemen in the opinions they have expressed? Yes; it would be a great advantage I believe if every closet in Sydney had a cistern connected with it, and the inhabitants of the city would all be benefited by it, because as you are all well aware when repairs take place, our water, which is supplied by engine power, is often stopped for two or three hours at a time, and it is to our advantage to have a continuous supply. I know from my own observation that there are hundreds of houses which depend solely on the tap for their supply, and there is not so much as a tank or even a cask on the premises.

648. Then you assent to what these gentlemen say? Oh, yes, certainly.

649. And you think that was the opinion of the Council? Yes.

650. And that they simply delayed taking steps because they were not aware whether they had the power? We knew we had not the power.

651.

651. Do you think it would be advisable to cut off the water in all cases where the connections were direct, at once, as suggested by Alderman Chapman, or to give the landlords three months' notice? Well, considering the great number of houses in Sydney, and the small number of plumbers, it would be very hard to insist upon the alterations in such a short time. In justice to the citizens it would be only fair to give them three months' notice. There are somewhere about 15,000 houses in Sydney, and about fifty or sixty plumbers, and it would be rather hard on the citizens to say, "You must have this work done in three months."

B. Palmer,
Esq.
30 April, 1875.

652. *Hon. J. B. Wilson.*] We have it in evidence that there are 5,400 water-closets in the city, and that out of these there are only 700 which have cisterns—the remainder of them are connected directly with the water-main? I believe that is about the number.

653. It is only proposed to cut the water off from the closets, not the water for house purposes, and it is suggested that people could sluice their closets with buckets of water until the improved connections were made? Well, the question would arise, "Might not these people have complied with the regulations which were in force when their closets were connected?" If so, it would be very hard upon them to cut the water off suddenly without any notice. But if they were allowed three months to do it in, I think it would be an equitable arrangement.

654. I think you have stated that the only case of contaminated water which has been reported to the city authorities that has come under your knowledge was the case in Castlereagh-street? That was the only case I have heard of.

655. We had it from one of the officers of the City Council that he had been connected with the prosecution of about 100 cases of filth in closets which were connected directly with the main—I wish to know whether it has been the custom to report these cases to the Council? I cannot say what has been done before my time. If such cases had occurred they would have been reported. Our excellent officer, Mr. Seymour, would, I am sure, have taken notice of them.

656. *Chairman.*] Would that matter of contamination of water in the main be a matter coming under, or likely to come under, the official notice of Mr. Seymour. Is it his business to report if he finds that the water is contaminated—has he anything to do with the water? I can hardly answer that question, because I don't think any report of the kind has ever taken place. It is Mr. Robertson's business, and he has never reported any cases of the kind to me, though he is constantly reporting to me cases of waste of water.

657. Do you know whose duty it would be to report such cases? It would be in the department of Mr. Bell, our City Engineer—Mr. Robertson being under him. There was a great outcry at one time about the embankment at Randwick; a number of letters appeared in the newspapers, and a great stir was made about it; but after all it turned out to be nothing. The danger only existed in the imagination of certain persons.

658. *Hon. J. B. Wilson.*] It has certainly been stated in evidence that a great many cases of nuisances, arising from foul water-closets—where the closets were in a filthy state and nearly full—have been brought under the notice of the Inspector of Nuisances, and that those closets were in direct connection with the main; and it has also been stated that when the water was turned off, either for repairs or for any other purpose, the foul gas was liable to be sucked into the water-pipes;—have you ever heard of any such cases? No, never; and I am quite certain, from Mr. Seymour's desire to carry out his duties efficiently, that I should have known if any such cases had occurred. Of course I can only speak of my term of office, which has been four months. There is one matter to which I should like to direct your attention, and perhaps this gentleman (the shorthand-writer) will take it down. When any nuisances are reported to Mr. Seymour—for, of course, he cannot travel through the city and find them all out himself; he gets his information in various ways, sometimes by letters from residents in the locality, or by anonymous letters, and he always attends—such as filthy closets—I mean common closets, privies, places where nightsoil has been allowed to accumulate,—he summons the owner of the premises. But it very often happens in cases of this kind that the nuisance has arisen from the neglect of the agent employed by him, who has promised to have it removed the next day or the next week, and has never had it done. The proprietor, of course, comes to the Council Chambers when he gets his summons—calls upon me and makes a statement, which puts his case in a most favourable light. But I make it a rule never to interfere with Mr. Seymour in the discharge of his duty. I hear his statement, and what the parties who are summoned have to say, and I tell them they had better appeal to the Magistrates in Court when their case comes on. I never interfere with Mr. Seymour; and if you will take notice of the fines which have been inflicted lately, you will see that these cases have all been decided in Court. I have never interfered, except once, and that occurred in this way: The man summoned happened to be the wrong man, and we withdrew the summons in his case, and summoned the right man for the next week. That was the only instance. Mr. Seymour never asks my opinion when he takes out a summons, and does not even come to me to sign it. Excepting in one case I have never interfered with him, and I think I can answer for my predecessor, and also for Mr. Chapman. I know there is an impression on the public mind to the contrary, but it is all imagination. I may also mention here that to-day we had a deputation in connection with the cattle sale yards, and I took the trouble to get a return from the manager of the cattle yards as to the number of animals slaughtered last year, which corroborates information I have received from Mr. Clarke and other persons. I find that there were not less than 12,000 lambs sold in 1874, and that out of these there were only twelve slaughtered at the Abattoirs, or one per month.

659. *Hon. J. Smith.*] Since that case occurred in Castlereagh-street, the Municipal Council passed a by-law to prevent any direct connections in future between the water-closets and the main;—did they not? Yes; but as the old connections were made under the old laws, we had no power to interfere with them.

Chas. H. Woolcott, Esq., Town Clerk, called in and examined:—

660. You are Town Clerk, Mr. Woolcott, I believe? Yes.

661. We have asked you to produce certain minutes of the City Council: Will you tell us whether there were any minutes respecting the connections between the water-closets and the mains during the last twelve months? The first intimation which the Council had of the pollution of water in the mains by imperfect closet connections was by a letter from the City Engineer of the 2nd July, 1874. This letter

C. H.
Woolcott,
Esq.
30 April, 1875.

was

C. H.
Woolcott,
Esq.
30 April, 1875.

was referred by the Council, on the 14th July, to the Water Committee, and, together with a further letter from the Engineer of the 30th July, was duly considered, and designs were called for a cistern to be attached to water-closets, which would prevent the possibility of any such occurrence as that reported. A premium was subsequently awarded for an approved design, and the Council, on the 9th September, adopted the principle of compelling the use of self-acting cisterns, and instructed their solicitor to prepare a by-law to meet the case. I put in as evidence the report of the Water Committee, the minute of Council authorizing the by-law. (*Vide Appendices E and F.*)

662. We have the report from the City Engineer: Will you read the report from the Water Committee? (*Report read.*)

663. What action was taken upon that report? The City Solicitor was at once instructed by me to prepare the necessary by-law.

664. Has that by-law been submitted to the Council? It has not.

665. That minute was passed in September last: Has any other action been taken? No, nothing further: we are waiting for the production of the by-law.

666. I see you have some other documents with you: Have they any relation to this matter? On the 1st of January last instructions were issued to persons connecting their closets with the mains —

667. We have seen that —? That seems to have been the principal action taken?

668. Have you any other documents in connection with the subject? I have brought with me a copy of the license issued to plumbers, containing conditions as to the mode in which these connections should be made. (*Vide Appendix G.*)

669. Have you full control over these plumbers? Yes; they are licensed under certain conditions, and unless those conditions are complied with the licenses are cancelled.

670. Have you anything further to lay before the Board in reference to this matter? No, sir, I have nothing further.

671. Your duties are chiefly of a clerical nature, I suppose? Yes; but on all these matters you would obtain better information from the heads of the different departments.

672. *Hon. J. Smith.*] The City Solicitor was instructed in September last year? Yes.

673. To regulate future connections between the water-closets and the mains? Yes.

674. Has Mr. Driver advised the Council officially that they have no power to pass that by-law? Mr. Driver has done nothing officially as yet.

THE SYDNEY CITY AND SUBURBAN SEWAGE AND HEALTH BOARD.

APPENDIX.

A.

The City Engineer to The Right Worshipful the Mayor.

Sydney Sewerage Works,
Engineer's Office, Sydney,
2 July, 1874.

Sir,

In accordance with instructions from the Committee to report upon the advisability of compelling all persons requiring to connect with the water-mains, or the branch water-mains, for closet purposes, to erect supply tanks over such closets before any connection is allowed to be made with the mains,—I have the honor to state, that the Council are empowered, by section IX of the "Sydney Water Act," to authorize such operations as they shall think necessary for the conducting of water into dwelling-houses and premises of whatever description, by pipes, which are to be laid and regulated as to ball-cocks, stop-cocks, cisterns, waste-pipes, and other requisites, under the direction and to the satisfaction of the said Council, or such persons as they shall appoint.

This rule of compelling the erection of tanks over closets has not been enforced up to the present, and I might say there is nothing in connection with the water regulations that requires enforcing more strictly than this rule. A most flagrant example came under my notice last month. In this instance a patent closet was found completely choked up, it being supplied with water by a service pipe (after passing and supplying two other houses) directly into the pan of the closet. On cutting the service pipe at the second house, it was ascertained that the contents of the closet had been sucked back and completely filled the pipe. A large portion must have at the same time found its way into the water-main of the city, as there were great complaints of the impurity of the water all around the neighbourhood.

Since the above was found, Messrs. Seymour and Robertson have discovered four more closets similarly choked and connected; and from returns in the office, I find there are about 5,000 closets, in and around the city, connected by service pipes directly into the pan of the closet without the intervention of a tank.

Urinals also should be supplied from tanks, or a break should be made in the service pipe, so that the foul air from the sewers could not ascend through the discharge pipe, and find its way into the vacuum in the mains, and thereby impregnate the water therein.

Apart from the great benefit to the public in preventing the contamination of the water, if this rule be enforced the saving to the Corporation from the wanton waste of water will be great, for at the present time it is the common custom for the greater number of the inhabitants to allow the water to run in these closets continuously, with the idea that it cleanses them; whereas if the water was stored up in tanks, it could be applied with much greater effect to flush the pipes when required.

The complaints that have been made so frequently of the impurity of the water delivered in Sydney were well founded, I have no doubt, and must have arisen from this cause.

There is no comparison whatever between this source of pollution and that arising from drainage into the water reserve, about which so much talk has been made. I would, therefore, strongly advise that some strenuous steps be taken to enforce the powers vested in the Council to prevent the contamination of the water for the future.

I have, &c.,
FRANCIS BELL,
City Engineer.

B.

SYDNEY SEWERAGE WORKS.

The City Engineer to The Right Worshipful the Mayor.

Engineer's Office,
Sydney, 30 July, 1874.

Sir,

In accordance with instructions from the Sewerage and Water Committee to report upon the advisability and cost of compelling all persons requiring to connect with the water-mains or branch water-mains for closet purposes, to erect supply tanks over such closets before any connection is allowed to be made with the mains,—

I have the honor to state that I have seen and examined several kinds of cisterns or tanks, and have made inquiry as to the cost of furnishing one to each closet.

The simplest and cheapest are those made of galvanized iron, and the cost of one with ball, cock, overflow-pipe, &c., complete, will be from 35s. to 40s. The labour and materials in erecting and connecting will be from 15s. to 20s. So that the total cost for the alteration of each closet will be say from £2 10s. to £3.

There is no other method I can think of that will ensure the water in the mains from being occasionally fouled but by the adoption of cisterns to closets.

I may here mention that the English Government have adopted the proposals of the Royal Commission on Water Supply, as given in the Report of 1869, and the "Board of Trade now require that the Water Companies shall give a constant supply, and that the owners and occupiers of property shall be required to provide the proper appliances to prevent undue waste and the fouling of the water." No system of air-valves or other appliances could prevent occasionally the fouling of the water in the mains where the use of cisterns are not enforced.

I have, &c.,
FRANCIS BELL,
Engineer.

C.

Instructions from the City Council to the City Engineer.

20 November, 1874.

"To furnish City Solicitor with necessary particulars to enable him to prepare a by-law to compel the use of cisterns for water-closets, in accordance with resolution of Council, 9th September last."

Particulars were furnished.

D.

INSTRUCTIONS TO BE OBSERVED BY PARTIES CONNECTING DRAINS WITH THE MAIN SEWERS.

1. Before commencing any drainage application in writing must be made to the City Engineer for instructions.
2. Connections with the sewers are to be made only at such places as may be pointed out by the City Engineer.
3. Drains must be laid to a gradient of not less than one in sixty where practicable.
4. Where several drains converge, a brick cess-pit must be built, and the drains connected therewith by stoneware lap junctions.

5. Stoneware pipes are recommended, but existing drains may be made use of, subject to the approval of the City Engineer, and where the cutting is through rock, the drain may be formed by chasing and rendering the rock to either of the forms shewn by drawings, to be seen at the Engineer's Office, Town Hall.
6. Privies are not to be connected. Existing cesspits must be emptied and refilled with earth, and water-closets applied.
7. All yard gullies, or other openings, are to be stench-trapped.
8. All water-closets must have cisterns attached with two compartments and ball-cock, &c. (similar to the prize cistern), so that no more than a certain quantity of water can be used for flushing at one time.
9. No connection direct to the pan of the closet will be allowed.

Town Hall, Sydney,

187

City Engineer.

E.

Resolution of the City Council of 9th September, 1874.

That the recommendation of the City Engineer, now submitted by the Water Committee, for making it imperative on persons using self-acting water-closets to attach cisterns thereto, for preventing the pollution of the water in the contiguous mains, be adopted, and that the City Solicitor be instructed to prepare the necessary by-law.

F.

REPORT of the Water Committee recommending that cisterns or tanks be affixed to water-closets connected with the water-mains.

Your Committee have the honor to report to the Council, that the City Engineer has represented that he has met with several instances of water in the mains being polluted by that which has been used in the closets and afterwards sucked back into the service pipes, thereby contaminating the water in the mains, rendering it unfit for use, as well as being most disgusting and unwholesome.

Your Committee consider that prompt measures should be taken to prevent this pollution of the water, and are of opinion that the Council should avail themselves of the power given under section 9 of the Water Act, and they would recommend that a by-law be prepared to compel all persons having closets connected with the water-mains to have placed over their closets, for the purpose of flushing, a cistern which shall have been approved by the City Engineer, or in accordance with a model cistern which shall have been adopted by the Council.

STEPHEN S. GOOLD,
Chairman.

Town Hall,
Sydney, 25 August, 1874.

City Solicitor instructed to prepare necessary By-law.—C.H.W., 9 September, 1874.

G.

WHEREAS, of street, in the City of Sydney, has applied for a license as a plumber for fixing and laying pipes from the several mains in the said city, for the purpose of conveying and distributing water therefrom, to such houses, factories, hospitals, prisons, warehouses, workshops, offices, and other buildings and premises within the said city, and in such manner as shall from time to time be directed: And whereas a license to act as a plumber has been granted to him for the purposes aforesaid, under the restrictions and conditions following: These presents, therefore, are to certify that the Municipal Council of the City of Sydney do hereby grant such license to the said for the purposes for which he has so applied: Provided always that he shall not at any time attach to, or lay on to, any main in the said city any service pipe for the purpose of conveying water to any house or premises in the said city without an authority in writing under the hand of the Inspector of Water Service of the said city being previously delivered to him for that purpose: And further, that whenever he shall lay on any such service pipe as aforesaid, he shall in each case bore the main to which such service pipe shall be laid on with a screw tap, and shall screw into such main a brass screw ferrule, to be connected with such service pipe; and further, that whenever he shall commence to lay on to any main in the said city any service pipe for the purpose aforesaid, he shall complete the same, and clear away all rubbish, and fill up and level all trenches which he may make for that purpose, before sundown of the day on which such work shall be commenced; and shall at all times, in executing such works, conform to such orders as shall from time to time be given to him by the City Engineer or said Inspector in that behalf, and shall make good at his sole expense all injury which he may cause to any man in the said city, in executing the work aforesaid, and shall perform all such work in a tradesmanlike manner, and for moderate and reasonable charges, and shall at all times conform to, and obey such orders and instructions as shall be given from time to time by writing, under the hand of the City Engineer with reference to the powers hereby vested. And the said Municipal Council do reserve to themselves full power, in the event of the said failing to comply with the foregoing conditions, or for any other cause which they may think fit, at any time to revoke this appointment, and such appointment shall be revoked when and as soon as the said Municipal Council shall by writing under the hand of the Town Clerk intimate the same to the said

Given under the common seal of the Municipal Council of the city of Sydney, at Sydney, this day of
in the year of our Lord one thousand eight hundred and

Town Clerk.

A printed copy of regulations is appended hereto.

MUNICIPAL COUNCIL OF THE CITY OF SYDNEY.

Regulations for the Guidance of Licensed Plumbers in Supplying Water to Houses, &c., in the City of Sydney.

(Adopted by the Water Committee of the Municipal Council, on the 19th day of April, 1863.)

1. Notice of intention to connect service pipes or water meters to the mains or to any other service pipe in each case to be lodged at the City Engineer's Office, and for the correct information in such notice the plumber will be strictly held responsible. The premises will then be inspected, and when the agreement is signed and rate paid, the plumber will receive a printed authority to proceed with the work. The ground is not to be opened or pipe connected until he has such authority. Printed forms of the Notice to be obtained at the office of the City Engineer.

2. In all cases where it is intended to connect a service pipe to the service pipe of any other premises, a written permission from the owner or occupier of such premises must be sent to the City Engineer's Office before the authority to connect will be granted.

3. In every case of repairs to service pipes, or where it may be wished to transfer service pipes from one main to another, or to connect with other service pipes, or where any change or alteration to them may be required, in any way, notice of such repair, alteration, &c., must be given in writing, at the office of the City Engineer, at least twenty-four hours before any such work shall be commenced—except in cases of great waste of water, when immediate steps must be taken to stop the leak, and notice given at the City Engineer's Office of the same forthwith.

4. All service pipes must be laid eighteen inches below the surface of the roadway and gutters, and meters fixed in accordance with the direction of the City Engineer or other authorized Officer of the Municipal Council; and on each service connected with the mains must be fixed two stop-cocks, one at the junction with the main, and the other on the footpath, two feet from the building line.

5. All water meters to be enclosed in a wooden box—all keys of both meters and boxes to be lodged at the City Engineer's Office, immediately after the meters are fixed. The Municipal Council reserve the right of affixing their own locks to the meters and boxes—twenty-four hours notice to be given of the day on which it is intended to connect meters, in order that the proper officer may attend and see them fixed correctly.

Adopted by Council 9 September, 1874.—C.H.W. Enclosures, City Engineer's letters 2nd and 30th July, 1874. 17 Vic. 35.

6. The plumber must take care that the portion of the streets and footpath opened by him shall be left in the same state of repair as he found them, the metal or iron stone covering being carefully taken off and put on one side, and the street properly made up by the trench being well rammed, as filled in, and the covering spread evenly over it; and where kerbing, guttering, or flagging may be disturbed, the same is to be carefully and substantially re-laid.

7. The officers connected with the water service are strictly enjoined to report every case of infringement of these Regulations, and the plumber offending against any of them will have his license suspended or cancelled, as may be thought proper in the circumstance of the case, besides being held responsible for any damages occasioned by his so transgressing any of the regulations.

8. All licensed plumbers to attend at the City Engineer's Office on or before the 10th of January in each year to have their names and licenses registered and the latter endorsed. Only such plumbers as comply with this Regulation will be deemed "Licensed Plumbers," and allowed to work as such.

A printed copy of the above Regulations will be given to each licensed plumber.
An annual fee of 10s. 6d. will be charged for each license.

[*Extract from Practical Hygiene by Parkes.*]

H.

Typhoid Fever.

The belief that typhoid fever can spread by means of water as well as air appears to be quite of modern origin, though some epidemics, such as the "Schleim-fieber" of Gottingen in 1760, were attributed in part to the use of impure water. In 1822, Wulz affirmed that an outbreak of "typhus" (typhoid) at Saarlouis, in Rhenish Prussia, was caused by impure water; and in 1843, Müller discovered that 129 cases of typhus abdominalis (typhoid), and 21 deaths, which occurred in the garrison at Mayence, were produced by fecal matter passing into the drinking water, which had a disagreeable putrid smell. In 1848, E. A. W. Richter published an account of an outbreak of the same kind which occurred in a school at Vienna, from the contents of a sewer passing into the drinking water.* In 1852, Dr. Austin Flint † published the particulars of a similar outbreak of typhoid fever at the hamlet of North Boston (Erie, U.S.) in 1843.

In 1852-53 a severe outbreak of typhoid fever took place at Croydon, and was thoroughly investigated by many competent observers; and it was shown by Dr. Carpenter, of Croydon, that it was partly, at any rate, spread by the pollution of the drinking water from the contents of cesspools.

In 1856 Dr. Routh ‡ published a case in which the evacuations of a typhoid patient were thrown into a closet, the pipe of which passed directly into the cistern of the drinking water, in a well-ventilated house at Hastings. No less than eight persons were affected with more or less typhoidal symptoms; many of these had not been brought into any personal contact with the sick person.

In 1859 Dr. W. Budd § published two very conclusive cases, in which well water was contaminated by sewage.

There is no satisfactory evidence that typhoid stools had been in the sewage matter, but their presence is not excluded. I learn, from personal communication with Dr. Budd, that he has long been convinced of the occasional propagation of typhoid fever in this way.

In 1860 an outbreak of typhoid fever occurred at the Convent of Sisters of Charity at Munich. 31 persons out of 120 were attacked between the 15th September and the 4th of October, with severe illness, and 14 of these cases were true typhoid; 4 died. The cause was traced to wells impregnated with much organic matter (and among other things typhoid dejections), and containing nitrates and lime. On the cessation of the use of this water the fever ceased.||

The propagation of typhoid fever in Bedford would certainly appear, from Mr. Simon's report,¶ to have been partly through the medium of the water.

Dr. Schmitt** has for several years paid particular attention to this point, and in 1861 published several very striking cases.

A case bearing on the same point was brought before the Metropolitan Officers of Health in 1862,†† by Mr. Wilkinson, of Sydenham. In this case the water was contaminated by absorption of sewer gases.

In 1862 a very sudden and severe outbreak of typhoid in a barrack at Munich was traced to water impregnated with fecal matter; on ceasing to use the water, the disease disappeared.‡‡ In 1865 a very remarkable outbreak of typhoid occurred at Ratho, in Scotland, and was traced to drinking water contaminated with sewage.§§ In 1866 typhoid fever broke out in a girls' school at Bishopstoke, near Southampton, and was traced unequivocally to the bursting of a sewer pipe into the well. The water was disagreeable both to smell and taste. 17 or 18 persons were affected out of 26 or 28. Several very striking instances are recorded in Mr. Simon's Reports by Drs. Seaton, Buchanan, and Thorne,||| and in some of these cases analyses of the water were made, which showed it to be impure, and to contain organic sewage, or its derivatives. A very good case, at the Garnkirk works in Glasgow, is recorded by Dr. Perry,¶¶ Dr. De Renzy, the Sanitary Commissioner of the Punjab, has also published a remarkable paper on the extinction of typhoid fever in Millbank prison, and shows, from the statistics of many years, that the fever has entirely disappeared since the use of Thames water was given up; the disappearance was coincident with the change in the water supply. Two excellent cases are recorded by Dr. Latham ††† Typhoid was introduced into a village and spread by the agency of contaminated drinking water.

That water may be the medium of propagating typhoid thus seems to be proved by sufficient evidence; and it has been admitted by men who have paid special attention to this subject, as Jenner, W. Budd, and Simon. It does not seem unlikely, indeed, that this mode of spreading will be found to be far more common than is supposed.

* All these cases are related by Riecke in his excellent work "Der Kriegs und Friedens-Typhus." Nordhausen, 1850, pp. 44-48.

† Clinical Reports on Continued Fever. By Austin Flint, M.D. Buffalo, 1852, p. 330.

††† Lancet, July 16, 1871.

[*Extract from Corfield's Treatment and Utilization of Sewage.*]

WHENEVER a closet was supplied by a tap direct from the main, the waste was invariably enormous from people leaving the tap open and the water running from sheer carelessness. And also under this plan, when the water in the service main has to be drawn off for repairs the result has been, in Liverpool, that a vacuum has been created and the soil has been sucked back through the supply-pipes and into the service main and so carried on, and has contaminated the water of a whole district. This happened in cases where the service-pipe from the main was connected directly with the soil-pipe of the water-closet.

1875.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

SYDNEY CITY AND SUBURBAN SEWAGE
AND HEALTH BOARD.

SECOND PROGRESS REPORT

OF THE

BOARD APPOINTED ON THE 12TH APRIL, 1875,

TO INQUIRE INTO AND REPORT AS TO THE BEST MEANS OF DISPOSING OF THE
SEWAGE OF THE CITY OF SYDNEY AND ITS SUBURBS,
AS WELL AS OF PROTECTING THE HEALTH OF THE INHABITANTS THEREOF ;

ADOPTED BY THE BOARD ON THE 24TH JUNE, 1875 ;

TOGETHER WITH THE

MINUTES OF EVIDENCE.

ORDERED BY THE LEGISLATIVE ASSEMBLY TO BE PRINTED,
25 June, 1875.

SYDNEY: THOMAS RICHARDS, GOVERNMENT PRINTER.

THE SYDNEY CITY AND SUBURBAN SEWAGE AND HEALTH BOARD.

SECOND PROGRESS REPORT.

To the Honorable the Colonial Secretary,—

SIR,

1. We have the honor to report that, since the date of our first Progress Report we have been engaged in inquiring into several matters affecting the health of the inhabitants of Sydney and the Suburbs, and requiring immediate attention.

2. There are many nuisances more offensive to the senses, and apparently therefore more dangerous, than a contamination of the water supplied to the inhabitants for drinking purposes, although perhaps in some cases such contamination may be scarcely if at all perceptible; but it is admitted on all hands, that there is none which is so certain and deadly in its effects. We have, therefore, primarily devoted our attention to this matter, and under special instructions, Professor Liversidge is engaged in a systematic examination of the water supplied to the metropolis, with a view to ascertain its quality, and to detect any sources of contamination beyond those which we have already pointed out. We are not yet able to report upon this matter, as the analyses are not completed, but we are in a position to say that the results of Professor Liversidge's investigations so far fully bear us out in urging the necessity of carrying out with the least possible delay the recommendations of our former Report.

3. So long as the inhabitants are daily drinking, as they undoubtedly are, water in many cases dangerously contaminated with what should be confined to water closets and sewers, it would be the merest affectation to adopt any other measures for improving their sanitary condition.

4. Committees have been appointed to inquire into the following subjects—

- (1.) The state of the Botany watershed.
- (2.) The disposal of blood and other refuse at the Abattoirs.
- (3.) Certain nuisances said to exist on the Sugar Company's premises, Parramatta-street.
- (4.) The state of Busby's Bore with reference to possible contamination by percolation.
- (5.) The fitness of certain localities which have been suggested for depositing night-soil from the metropolis.

5. The principal object of this Report is to draw your attention to an immediate and pressing evil, which seems to require for its removal or mitigation immediate Legislative action. We refer to the present system, if it can be called such, of managing and emptying cesspits in the City and Suburbs. Before proceeding further we beg to remark that in the recommendations made in this Report we are endeavouring to carry out the instructions conveyed to us by the Government to advise them as to any immediate steps that should be taken to remove or mitigate the evils alleged to affect the health of the inhabitants of the Metropolis. We are quite aware that it would be easy to suggest many grave objections to the cesspit system, but we are equally well aware that there is no doubt that for many years to come, in some localities for a great many years to come, that system must continue to prevail. Pending the consideration and preparation of a better system, it is expedient to make the best of things as they are, and to adopt measures to bring existing evils within the smallest possible compass.

6. We would gladly refer you merely to the evidence, and refrain from describing the disgusting, dangerous, and obscene state of things which it discloses, but we feel bound to present it to you in a condensed form. The Municipal authorities of the Metropolis appear to have scarcely any power whatever in regulating privies and cesspits. Any one, so far as they are concerned, may make a cesspit where and how he likes, and unless it comes to their knowledge that it overflows,

or

or from some cause has become a flagrant and intolerable nuisance, they cannot interfere; and then only by the cumbrous process of summoning the owner before the magistrates, who fine the offender more or less, according to their individual proclivities. It is universally admitted that under this system the authorities are entirely powerless to prevent these cesspits from being, especially in crowded localities, an excessive and abiding nuisance, dangerous to public health, and offensive to every sense of decency. In some cases, on account of imperfect construction, surface water flows into them—in others, in porous soil, water percolates into them; in both cases with every shower they fill up and overflow, contaminating the adjacent premises and gutters, and producing the most intolerable nuisance. In the Municipality of Waterloo these evils seem to prevail in the most aggravated form. The soil is moist and sandy. The cesspits are generally mere holes in the sand which absorbs the greater part of the faecal matter. When these holes become full they are often filled in and the closet shifted a few yards. The soil is thus becoming gradually contaminated; and if the present state of things be allowed to continue, the whole district will become unfit for human habitation. It is said that little if any night-soil is ever removed from this district. It is all absorbed or buried in the sand about the houses. In the yards in which these abominations exist are generally wells, which supply the inhabitants with water for household purposes. Between these wells and the faecal deposits a pretty free communication must and as a matter of fact does often exist. Many complaints have been made of the palpable contamination of these wells, which are the principal source from which the inhabitants can obtain a supply of water. It cannot be a matter of surprise that where these evils exist much sickness prevails, that the children are said to be sickly, and that the Registrar General's returns show an excessive rate of mortality.

7. In many cases it appears that, unknown to the municipal authorities, pipes are laid for the purpose of carrying the overflow from the cesspits into the street gutters, and that there is no effectual remedy. From the nature of the case under the existing system the cesspits must at every heavy shower overflow somewhere.

8. As far as we have been able to learn, there is no municipal control over the persons who empty cesspits, except that at Balmain there are contractors bound to a certain price. They generally charge what they like. There is no recognized place of deposit for the night-soil. The nightmen say that they sell it to market gardeners, who receive it in a crude state. If not placed within a certain distance of a highway it appears that no one can interfere. In the morning the carts recking with filth, return to the city where they remain all day. Sometimes, we are told, they bring back garden produce intended, it is presumed, for human food. We are afraid that the statement that the market gardeners receive the greater part of this matter is not a true one, for we have evidence that nightmen have been fined for depositing it in improper places, and that similar deposits have been made without the offenders being detected. At Newtown we are informed there are cesspits which are now full but remain uncleansed, because the nightmen say that they have no means of disposing of the contents. A member of this Board a few days ago observed that a load of this matter had been deposited on the Botany watershed, close to a public road. As he visited the place casually, and without any intention of inspecting its condition, it may be fairly concluded, taking into consideration the acknowledged difficulty of getting rid of night-soil, that similar deposits are frequently made. On these points we refer especially to the valuable evidence of Mr. Seymour, Inspector of Nuisances for the city, and that of Mr. Hales, Inspector of Nuisances for Redfern, Waterloo, and Alexandria.

9. On these subjects we have examined a large number of witnesses connected with the City and Suburban Municipalities, and are glad to say that they almost unanimously concur with us in the opinion that a radical reform should be made as soon as possible in the construction, management, and system of cleansing cesspits. All the municipal authorities whom we have consulted seem willing and anxious to act decisively, but they all complain of want of sufficient powers.

10. We will now go on to consider what in our opinion should be done, without delay, to remedy the evils we have described. The subject is naturally divided into three parts—

- (1.) The construction and management of cesspits.
- (2.) The mode of cleansing them.
- (3.) The disposal of their contents.

THE CONSTRUCTION OF CESSPITS.

11. On this subject there is but one opinion. Cesspits should be constructed of moderate size, they should be made as nearly as possible watertight, so as to prevent the overflow of surface water into them, the percolation of water into them, and to prevent any contamination of the adjoining soil by leakage out of them. The evils resulting from imperfect construction vary greatly with the nature of the soil, the situation, and a variety of other circumstances. It appears to us that full powers should be given to Municipal authorities to regulate cesspits, as to their size, situation, and construction; and in cases of existing cesspits, to enforce such changes in any respects as in the opinion of their authorized officers, may be necessary to health, cleanliness, and decency. So much depends upon local circumstances that we cannot see that any absolute rule could be laid down to be followed in all cases. Much must be left to the discretion of the Municipal authorities in enforcing changes in the construction of existing cesspits. If these authorities, as it has been insinuated, cannot be trusted to exercise their powers in a discreet and impartial manner, they should not be entrusted with any powers whatever in the matter. We believe that in England it has been found expedient in many cases to withdraw the control of sanitary arrangements from the Municipal Corporations; but from the cordial spirit with which all our suggestions for sanitary improvements have been received by the Aldermen and Officers of the Metropolitan Municipalities, and the anxiety which they evince to act decisively, we are induced to recommend that all the necessary powers should be given to them.

12. In the Municipality of Waterloo, and other similarly situated places, it is obvious that watertight cesspits should be at once insisted upon. On this subject we append a memorandum, prepared by a member of this Board, which contains, we think, some valuable practical suggestions. (*Appendix No. 1.*)

THE CLEANSING OF CESSPITS.

13. It seems agreed on all hands that the duty of cleansing cesspits should be transferred to the Municipal authorities, and that the owners of houses should be relieved from all responsibility in the matter, except that of paying the charges according to some scale to be determined. The Municipal authorities should provide all the necessary plant, and all the operations should be conducted under the supervision of their Inspectors. The cesspits should be cleaned at least once in three months. The more frequent cleansing would no doubt tend to increase the expense, but with an improved construction of cesspits, and with improved appliances and systematic management, we doubt whether the expense would be on the whole increased. We have no doubt that most landlords would be glad to be relieved of the trouble and responsibility of attending to these matters, even if it involved some additional expense. In any case, the health of the inhabitants, and common decency require that the change should be made.

14. No suggestions have been made of any serious practical difficulty in carrying out this proposal, nor does it seem that more than three or four months would be required to provide the requisite appliances. It might be necessary perhaps in some cases that some of the smaller Municipalities should combine for this purpose, as they do now for certain purposes; and we have no doubt that the City Council would be willing to undertake the duty for adjoining Municipalities under approved arrangements. It must occur to anyone that it would be desirable that these, and a number of other matters relating to the whole Metropolis, should be under one united management, but we are not prepared at present to recommend any such comprehensive change. We are recommending that certain necessary changes should be made, which ought, and we believe can be made in time to provide against the coming summer, and be the means of preventing much sickness, and saving many hundreds of lives.

15. Mr. Bell, the City Engineer, and some other City Officers, under instructions given to them, on 29th of October, 1874, have presented a Report to the City Council, dated May 31, 1875 (*Appendix No. 2.*) In this Report the use of pneumatic carts for the removal of night-soil is recommended. Mr. Bell tells us (*Evidence p. 28*) that he has not yet had time to make plans and specifications for these carts, nor is he yet prepared to make any definite recommendation as to their construction. On the Continent of Europe they are much used, and they are said to save much labour, and to diminish greatly the well known horrors attending the emptying of cesspits. There are many minor difficulties which seem likely to occur in applying them generally, but none we think that may not be overcome. There are

are several kinds in use in Europe, and it is only by experiment that we can determine the construction best adapted to our requirements. They have one feature in common. The night-soil is placed in air-tight cylinders, which are capable of being transported to any distance without danger of leakage or overflow, and without polluting the atmosphere as they are drawn through the streets. This change is necessary if there is to be any systematic method of disposing of night-soil.

16. As this is a matter affecting the health, comfort, and convenience of the inhabitants of all the larger towns in the Colony, we propose to give much attention to it, and, with the sanction of the Government, to make some experiments and trials, with the object of determining the best mode of constructing these carts, and of ascertaining how far they may be made generally applicable. That, under some form, they will be a great improvement upon the existing appliances, there is no doubt whatever.

DISPOSAL OF THE CONTENTS OF CESSPITS.

17. The authorities of the Metropolitan Municipalities, when called upon to undertake the duty of cleansing cesspits, naturally require that some unobjectionable place of deposit should be pointed out, having none within their own boundaries. In the report of the City Officers, to which we have already alluded (*Appendix No. 2*), it is recommended that this matter should be put into barges at Blackwattle Swamp, and conveyed to sea. We cannot at once endorse this recommendation. It is surrounded with many difficulties, which have not been sufficiently considered, and upon which we do not feel it necessary at present to enter particularly. It would require for its general application the construction of air-tight receptacles for the conveyance of the night-soil,—three large air-tight iron punts, properly constructed for the purpose, and wharfage accommodation, with the requisite appliances. The plans and specifications for carrying out these operations are not yet even commenced, nor have the difficulties connected with them been yet sufficiently considered, so that it seems to us certain that even if this plan were now finally determined upon it could not possibly be brought into use in less than twelve months.

18. It has also been suggested that the night-soil might, under certain regulations, be removed by railway. We think it very probable that this may be its final destination, but time is required, in the first place, to consider the question fully, and in the second, to make the necessary arrangements for carrying out such an operation without creating intolerable local nuisances.

19. It is obvious that for some time to come, certainly during the ensuing summer, the night-soil must be removed by horses, and in carts of some kind. To throw it into the sea we regard as the last resource, when every other plan has been found to be impracticable.
