Referring to you telegraphic communication informing me that Mr. Farrell is willing to give up possession of the water reserve at Wallis Creek, East Maitland, I have to request you will be good enough to take possession of the reserve on behalf of the Crown, and give Mr. Farrell notice to remove his fencing forthwith (say within three days); otherwise the Government will remove it.

I am, &c.,

A. O. PRETIUS,

Officer-in-charge.

No. 64.

Telegram from Officer-in-charge, Occupation of Lands, to Crown Bailiff, East Maitland.

29 June, 1877.

WHAT has been done with respect to taking possession of the Wallis Creek water reserve?

No. 65.

Telegram from Superintendent of Police, East Maitland, to Officer-in-charge, Occupation of Lands.

30 June, 1877.

SENIOR-CONSTABLE Hogan absent in Sydney. Wallis Creek water reserve has been thrown open for the use of the public.

No. 66.

The Officer-in-charge, Occupation of Lands, to The Crown Bailiff, East Maitland.

Sir,

Occupation of Lands, Sydney, 7 July, 1877.

See No. 57.

Referring to your letter of the 5th May last, reporting that the case in prosecution for trespass on the Wallis Creek water reserve at East Maitland had been dismissed, I have to request you will be good enough to furnish me with a copy of the depositions taken in the case as soon as possible.

I have, &c.,

E. DU FAUR,

Acting Officer-in-charge.

No. 67.

The Crown Bailiff, East Maitland, to The Officer-in-charge, Occupation of Lands.

Re Wallis Creek water reserve.

Police Station, East Maitland, 12 July, 1877.

Enclosed.
See No. 66.

SENIOR-CONSTABLE John Hogan herewith forwards a copy of the depositions in the above case to the officer-in-charge, Occupation of Lands, Sydney, as required by letter, dated 7th July instant.

The Senior-Constable further states that the reserve is open and the fence removed since the 28th June last.

JOHN HOGAN,

Senior-Constable.

Forwarded through the Inspector General of Police.—E. V. MORRISSET, Supdt., 14 July, 1877.
The Inspector General of Police. The Officer in Charge, Occupation of Lands, B.C., 17 July, 1877.—
E.F., I.G.P.

[Enclosure.]

Information (General Purposes.)

New South Wales, }
to wit. }

BE it remembered that on this 11th day of April, in the year of our Lord one thousand eight hundred and seventy-seven, at Maitland, in the Colony of New South Wales,—

John Hogan, a Senior-Constable of Police, stationed at East Maitland, being a person duly authorized to prefer information, under the "Crown Lands Occupation Act of 1861," and the "Crown Lands Amendment Act of 1875," appears before me, the undersigned, one of Her Majesty's Justices, duly assigned to keep the peace of our Lady the Queen, in and for the Colony of New South Wales, and on oath informs me that on the 9th day of April, in the year of our Lord one thousand eight hundred and seventy-seven, one Francis Abberton, late of East Maitland aforesaid, not being a person claiming under any subsisting lease or license or otherwise, under the "Crown Lands Occupation Act of 1861," or under the "Crown Lands Amendment Act of 1875," or under any other Act, was found unlawfully occupying certain land reserve for public purposes by enclosing the same, the said land being in the town of East Maitland, fronting Wallis Creek, and known as the East Maitland Water Reserve, contrary to the Act in such case made and provided; whereupon the said John Hogan prays that I, the said Justice, will proceed in the premises according to law.

Sworn at Maitland, in the said Colony, on the }
day first above written, before me,— }

JOHN HOGAN.

THOMAS W. PEARSE, Justice of the Peace.

Francis Abberton.

Senior-Constable John Hogan, on oath, states: I produce a duplicate of a summons, which has been returned to me from Muswellbrook, as having been served on defendant, Francis Abberton; there is affidavit, &c., of service on the back; defendant does not appear to-day although called three times.

Sworn at Maitland, this 19th April, 1877, before me,—

JOHN HOGAN.

T. H. BARTLETT, J.P.

Postponed till this day week, the 26th April instant.
17 April, 1877.

T. H. BARTLETT, J.P.

John O'Brien, on oath, states: I am a constable stationed at Muswellbrook; I served a duplicate of the summons which I now produce, on defendant, Francis Abberton, at his residence at Kayuga, near Muswellbrook; I served it personally; it is under the hand and seal of a Magistrate of this territory, and made returnable for the 17th of this month; I served it on the 12th instant; I have heard him called three times, and he fails to appear.

Cross-examined by Mr. Chambers: Abberton has a selection there, and he has resided on this selection since I have been in that district, two or three months.

Sworn at Maitland, this 24th April, 1877, before me,—

JOHN O'BRIEN.

G. F. W. ADDISON, P.M.

(Information read—Cause to show.)

John Hogan, on oath, states: I am the informant in this case; I produce my authority from the present Minister for Lands for laying this information; I do not know Abberton; I know the piece of land referred to in my information; I have seen it on the map, and have been there to see it; I found no one there but a person named Matthew Farrell came and pointed it out to me; I found this land enclosed; it was so on the 9th April last by a two-rail fence; the land inside the fence had been under cultivation with lucerne, it was then quite bare; the fence was so erected as to prevent the public from having free access to this land enclosed; this land fronts Wallis Creek on one side.

Cross-

Cross-examined by Mr. Chambers: The fence does not go right down to the creek; the fence is at the top of the bank; I could get down the bank in some parts to the water, but I don't think it would be safe to take cattle.

By the Bench: This fence that is erected does not prevent stock having access to the water if they chose to go there.

Re-examined by Mr. Thompson: The enclosure would be a hindrance to a large number of stock going there to water.

Sworn at Maitland, this 1st May, 1877, before me,—

G. W. F. ADDISON, P.M.

JOHN HOGAN.

Thomas Evans, on oath, states: I am the district surveyor appointed by the Government; I know the piece of land that is in question in this matter; I produce a plan or sketch of it; I know it is correct, as I have made the survey of it myself; there is a piece of this land fenced in, 1 acre and 7 perches, the remainder is unfenced, excepting another small piece that is fenced; the remainder of the reserve outside the 1 acre and 7 perches is 1 acre 2 roods 22 perches; this land unenclosed forms a lane leading down to the water; the piece of land enclosed is between the top of the bank and Mr. Bruncker's fence on the east side; if you take the bank away it would face Wallis Creek; it is fenced as near as it could be to the water and is in East Maitland; I produce a plan showing 3 acres 1 rood and 4 perches, offered for sale on 31st August, 1858, by the Government, and showing the adjoining portions as a water reserve put in as evidence of locality. [Ex. B.]

Cross-examined by Mr. Chambers: As regards this enclosure the whole access to the water is open; there is such access as would be sufficient for all the cattle of East Maitland to water.

Re-examined by Mr. Thompson: If 200 head were taken there at the same time there would not be sufficient access to water for the whole of them.

Sworn at Maitland, 1st May, 1877, before me,—

G. W. F. ADDISON, P.M.

THOMAS EVANS.

Patrick Bowes, on oath, states: I am Council Clerk of the Municipal Council of East Maitland; I produce a lease that I found in my office from the Municipal Council of East Maitland to Francis Abberton of a piece of land said to be the reserve for access to water; I know a man named Farrell has paid rent for this land; I don't think Abberton has.

By Mr. Chambers: I don't know that this is the lease by which he now holds possession, but I merely produce it as a document that I have found.

Sworn at Maitland, this 1st May, 1877,—

G. W. F. ADDISON, P.M.

PATRICK BOWES.

Robert Galloway, on oath, states: I was formerly Council Clerk for the Municipality of East Maitland; I took a document headed "Agreement"; I find it bears my signature as a witness as Council Clerk; it was signed by Francis Abberton; this document was in my custody immediately at the time of my giving up the duties of Council Clerk; I produce the lease—(admitted, marked exhibit S.); I drew up this document myself.

Sworn at Maitland, this 1st May, 1877, before me,—

G. W. F. ADDISON, P.M.

ROBERT GALLOWAY.

Matthew James Farrell, on oath, states: I know the piece of land on the bank of Wallis Creek which is in question in this matter; I have paid to the Municipality of East Maitland rent for this land on account of Mr. Abberton; I produce one receipt that I got; I have paid rent since then—£3 I believe. (Ex. D.)

Cross-examined by Mr. Chambers: I have taken this place off Abberton's hands for the remainder of the term he has now to run; I have paid rent for it since then myself, and I have got a receipt in my own name; I have the land since January or February last year, since Abberton left the district; he has gone to Muswellbrook.

By the Bench: He sub-let the land to me; I at first paid the rent due by Abberton—the rent I afterwards paid for myself.

By Mr. Thompson: The Council have given me no lease.

Sworn at Maitland, this 1st May, 1877, before me,—

G. W. F. ADDISON, P.M.

his
MATTHEW JAMES FARRELL.
mark.

Case dismissed.

1st May, 1877.

G. A. O. Moriarty, Esq., submitting report of the proceedings in connection with the actual opening of reserved lands Yanko and Colombo Creeks, with an address conveying the thanks of the inhabitants of the district to Mr. Moriarty and the members of his staff, for their courtesy in conducting the business in connection therewith, with enclosure. 21 October, 1876.	76

CROWN LANDS.

No. 1.

Memo. from The Deputy Surveyor General to Mr. District-Surveyor Wood.

3 July, 1867.

REPORT the position and areas, with sufficient information to draw descriptions of reserve from conditional purchase, required on the Yanko Creek, with a view to cancellation of the existing reserve extending its full length.—P. F. ADAMS.

No. 2.

(Form F.)

MEMORANDUM OF INSTRUCTIONS, 3 JULY, 1867.

Subject.

Reply.

Mr. D.-S. Wood is requested at his early convenience to report the position and areas with sufficient information to draw descriptions of the reserves from conditional purchase required on the Yanko Creek, with view to cancellation of the existing Reserve extending its full length.—P. F. ADAMS, 3 July, 1867.

Mr. Surveyor Bolton is requested to act, and with reference to my *letter of this date.—J. H. WOOD, D. S., Albury, 10 August, 1867.

*Missing.

No. 3.

Mr. Surveyor Bolton to The Surveyor General.

Sir,

Conargo, 12 October, 1867.

In compliance with instructions conveyed in your B.C. of 3 July, and Mr. District-Surveyor Woods' letter of the 10th August, directing me to suggest water reserves on the Yanko Creek, embracing one-fifth of the frontage in lieu of Reserve No. 157, extending the whole length of the creek, I do myself the honor to recommend that the Crown land within the boundaries described in the accompanying description marked A may be reserved from conditional purchase for access to water. See No. 1. Not with the Papers. See Appendix B to No. 38.

To have put this Reserve exactly opposite Reserve B would have occupied an undue amount of frontage, on account of a great bend in the Yanko Creek.

The water is not permanent anywhere along this part of the creek; but this reserve will give access to Tomgroggan Lagoon on Reserve B, which I believe has never been dry.

I have, &c.,
C. F. BOLTON,
Surveyor.

[Enclosure to No. 3.]

A.

DESCRIPTION of proposed reserve marked A for access to water, situate on the Yanko Creek, county of Mitchell: Commencing at a point on the right bank of the Yanko Creek bearing south 40 degrees west 11 chains from Tomgroggan Lagoon, and east 165 links from a gum-tree marked broad-arrow over w^r over A, and bounded thence on the south by a line bearing west to the west boundary-line of F. Jenkins' Yanko Run; on the west by that line bearing north 1 mile; on the north by a line bearing east to the Yanko Creek; on the east by that creek, downwards, to the point of commencement.

This reserve forms part of Jenkins' Yanko Run.

C. F. BOLTON,
Surveyor.

No. 4.

Mr. Surveyor Bolton to The Surveyor General.

Sir,

Conargo, 12 October, 1867.

In compliance with instructions conveyed in your B.C. of 3rd July, and Mr. District-Surveyor Woods' letter of 10th August, 1867, in reference to water reserves on Yanko Creek, I do myself the honor to recommend that the Crown lands in the accompanying description marked B may be withdrawn from conditional purchase. See No. 1. Missing.

The site of this reserve was chosen on account of the permanent water in Tomgroggan Lagoon, the water in the Yanko not being permanent.

I have, &c.,
C. F. BOLTON,
Surveyor.

[Enclosure to No. 4.]

B.

DESCRIPTION of proposed reserve for access to water, marked x on the Yanko Creek, county of Mitchell: Commencing on the left bank of the Yanko Creek, at a gum-tree marked broad-arrow over w^r over B, bearing about south 50 chains from Tomgroggan Lagoon, and bounded thence on the south by a line bearing east to the 4 miles; on the east by a line bearing north 1 mile; on the north by a line bearing west to the Yanko Creek; and on the west by that creek downwards to the point of commencement.

This reserve forms part of F. Jenkins' Yanko Run.

C. F. BOLTON,
Surveyor.

No. 5.

No. 5.

Mr. Surveyor Bolton to The Surveyor General.

Sir,

Conargo, 12 October, 1867.

See No. 1.

In compliance with instructions conveyed in your B.C. of 3rd July, I do myself the honor to suggest, that the Crown land described in the accompanying description be reserved from conditional purchase, for access to water.

See No. 31.

The Yarrabee Waterhole, which extends along this part of the creek, has never been known to be dry. I enclose a sketch in a separate letter, showing approximate position of this reserve; also, Howell's 320 acres, which is shown in the wrong place in a tracing supplied me from head quarters.

I have, &c.,

C. F. BOLTON,
Surveyor.

[Enclosure to No. 5.]

C.

DESCRIPTION of proposed reserve, marked c, on the Yanko Creek, county of Mitchell: Commencing at the north-east corner of Howell's 320 acres, at Yarrabee; and bounded thence on the north by a line bearing east to the east boundary of Yarrabee Run; on the east by that boundary bearing about south 22 degrees west 1 mile and 6'30 chains; on the south by a line bearing west to the Yanko Creek; on the west by that creek, upwards, to the point of commencement.

This reserve forms part of Peters' Yarrabee Run.

C. F. BOLTON,
Surveyor.

No. 6.

Mr. Surveyor Bolton to The Surveyor General.

Sir,

Conargo, 12 October, 1867.

See No. 1.

In compliance with instructions conveyed in your B.C. of the 3rd July, I do myself the honor to recommend that the Crown lands described in the accompanying description, marked d, may be reserved from conditional purchase for access to water.

The reserve fronts part of the Yarrabee Waterhole, which is permanent, and the land contained in it is of inferior quality.

I have, &c.,

C. F. BOLTON,
Surveyor.

[Enclosure to No. 6.]

D.

DESCRIPTION of proposed reserve for access to water, marked d, on the Yanko Creek, county of Boyd: Commencing at the south-east corner of Howell's 320 acres at Yarrabee homestead; and bounded on the north by lines bearing west to the west boundary of Peters' Yarrabee Run; on the west by that line bearing about south 22 degrees west 64'73 chains; on the south by a line bearing east to the Yanko Creek; and on the east by that creek, upwards, to the point of commencement.

This reserve forms part of J. Peters' Yarrabee Run.

C. F. BOLTON,
Surveyor.

No. 7.

Mr. Surveyor Bolton to The Surveyor General.

Sir,

Conargo, 12 October, 1867.

See No. 1.

In compliance with instructions conveyed in your B.C. of the 3rd July, I do myself the honor to recommend that the Crown lands described in the accompanying description may be reserved for access to water. If, however, the reserve numbered 121, shown on the plan supplied me, has been set apart for any special reason, it might be desirable to alter the reserve proposed by me so as to embrace it, in which case the same starting point would do by describing the reserve north of it instead of south. The reason why I suggested the proposed site was, that it might not be too close to reserve.

I have, &c.,

C. F. BOLTON,
Surveyor.

[Enclosure to No. 7.]

E.

DESCRIPTION of proposed reserve for access to water, marked e, counties of Mitchell and Boyd: Commencing at a gum-tree marked broad-arrow over w₂ over e on the Yanko Creek, where the New Washpen or Back Creek flows into it; and bounded thence on part of the south by a line bearing east to the eastern boundary-line of Yarrabee Run; on the east by that line bearing about north 22 degrees east 1 mile and 6'30 chains; on the north by a line bearing west to the west boundary-line of Yarrabee Run; on the west by that line bearing about south 22 degrees west 1 mile and 6'30 chains; and on the remainder of the south by a line bearing east, to the point of commencement.

This reserve forms part of J. Peters' Yarrabee Run.

C. F. BOLTON,
Surveyor.

No. 8.

Mr. Surveyor Bolton to The Surveyor General.

Sir,

Conargo, 12 October, 1867.

See No. 1.

In compliance with instructions conveyed in your B.C. of the 3rd July, I do myself the honor to recommend that the Crown land described in the accompanying description, marked F, be reserved from conditional purchase.

This reserve embraces the Bengegong Waterhole, which is permanent, and extends $\frac{1}{4}$ a mile along the Yanko Creek.

I have, &c.,

C. F. BOLTON,
Surveyor.

[Enclosure

7

[Enclosure to No. 8.]

F.

DESCRIPTION of proposed reserve for access to water, marked F, counties of Mitchell and Boyd: Commencing at point on the Yanko Creek 3 chains below the confluence of the ana branch of the Colombo Creek with the Yanko Creek, and bearing north 5 degrees west 38 links from a gum-tree marked broad-arrow over WR over F; and bounded thence on part of the south by a line bearing east to the north-east boundary-line of Bingegong Run; on the east by that line, bearing about north 40 degrees west 1 mile and 24.43 chains; on the north by a line west to the west boundary-line of Bingegong Run; on the west by that line, bearing about south 20 degrees west 1 mile and 51.36 chains; and on the remainder of the south by a line bearing east to the point of commencement.

This reserve forms part of J. Peters, Bingegong Run.

C. F. BOLTON,
Surveyor.

No. 9.

Mr. Surveyor Bolton to The Surveyor General.

Sir,

Conargo, 12 October, 1867.

In compliance with instructions contained in your B.C. of the 3rd July, I do myself the honor See No. 1. to recommend that the Crown land described in the accompanying description may be reserved from conditional purchase for access to water.

This reserve embraces a waterhole known as the Reedy Waterhole, and some good waterholes in the Yanko Creek.

I have, &c.,

C. F. BOLTON,
Surveyor.

[Enclosure to No. 9.]

G.

DESCRIPTION of proposed reserve for access to water, marked G, Yanko Creek, counties of Mitchell and Boyd: Commencing on the left bank of the Yanko Creek at a gum-tree marked broad-arrow over WR over G bearing 279 degrees 35 chains from the south end of Reedy Waterhole; and bounded thence on part of the south by a line bearing south 63 degrees east to the east boundary-line of the Bingegong Run; on the east by that line bearing about north 34 degrees east 1 mile and 60 links; on the north by a line bearing north 63 degrees west to the west boundary-line of Bingegong Run; on the west by part of that line bearing south 20 degrees west 1 mile 56 links; and on the remainder of the south by a line bearing south 63 degrees east to the point of commencement.

This reserve forms part of Peters' Bingegong Run.

C. F. BOLTON,
Surveyor.

No. 10.

Mr. Surveyor Bolton to The Surveyor General.

Sir,

Conargo, 12 October, 1867.

In compliance with instructions contained in your B.C. of the 3rd July, I do myself the honor See No. 1. to suggest that the Crown land described in the accompanying description, marked H, may be reserved from conditional purchase for access to water.

The water, though not very permanent, lasts longer than any other place within 3 or 4 miles. The greatest advantage, however, of this site is its being situate where the road from Warrandera to Jerilderie strikes water after keeping away from the creek for some miles.

I have, &c.,

C. F. BOLTON,
Surveyor.

[Enclosure to No. 10.]

H.

DESCRIPTION of proposed reserve for access to water, marked H, Yanko Creek, county of : Commencing on the left bank of Yanko Creek, about 2 miles above Goree Old Station, at a tree marked broad-arrow over WR over H; and bounded thence on the south by a line bearing south 63 degrees west to the eastern boundary-line of Goree Run; on the east by that line bearing north 34 degrees east, 70 chains 50 links; on the north by a line bearing north 63 degrees west to the Yanko Creek; and on the west by that creek downwards; and on the remainder of the south by a line bearing south 63 degrees east, to the point of commencement.

This reserve forms part of J. Peters' Goree Run.

C. F. BOLTON,
Surveyor.

No. 11.

Mr. Surveyor Bolton to The Surveyor General.

Sir,

Conargo, 12 October, 1867.

In compliance with instructions contained in your B.C. of 3rd July, I do myself the honor See No. 1 to recommend that the Crown lands described in the accompanying description, marked J, may be reserved from conditional purchase for access to water.

The water in the creek at this place is permanent for nearly $\frac{1}{2}$ a mile. The Yellow Creek, from which the description commences, is well known by people in the neighbourhood.

I have, &c.,

C. F. BOLTON,
Surveyor.

[Enclosure to No. 11.]

J.

DESCRIPTION of proposed reserve for access to water, Yanko Creek, county of : Commencing at a gum-tree, marked broad-arrow over WR over J, on the left bank of the Yanko Creek, opposite the outbreak of the Yellow Creek, about 20 chains below a subdivision fence; and bounded thence on the south by a line bearing south 63 degrees east to the south-east boundary-line of Goree Run; on the south-east by that line, bearing about north 60 degrees east, 83 chains 56 links; on the north by a line bearing north 63 degrees west to the Yanko Creek; and on the west by that creek, downwards, to the point of commencement.

No. 12.

No. 12.

Mr. Surveyor Bolton to The Surveyor General.

Sir,

Conargo, 12 October, 1867.

See No. 1.

In compliance with your instructions, conveyed in B.C. of 3rd July, I do myself the honor to recommend that the Crown land described in the accompanying description, marked *x*, be reserved from conditional purchase for access to water.

The water on this reserve has been made permanent by damming the Yanko Creek and an ana branch on the north side of it. There is a larger supply of water in the ana branch than in the creek itself; this is therefore a very suitable site for a water reserve.

I have, &c.,

C. F. BOLTON,
Surveyor.

[Enclosure to No. 12.]

K.

DESCRIPTION of proposed reserve for access to water, marked *x*, on the Yanko Creek, county : Commencing on the right bank of the Yanko Creek, at the south-east corner of a measured portion of 320 acres at Bundure Homestead; and bounded thence on part of the west by the east boundary of that land and its northern prolongation, being a line bearing north in all 5 miles; on the north by a line bearing east 1 mile; on the east by a line bearing south to the south boundary-line of Bundure Run; on the south by that line bearing about south 59 degrees west, 93 chains 33 links; and on the remainder of the west by a line bearing north, to the point of commencement.

This reserve forms part of Bundure Run.

C. F. BOLTON,
Surveyor.

No. 13.

Mr. Surveyor Bolton to The Surveyor General.

Sir,

Conargo, 12 October, 1867.

See No. 1.

In compliance with instructions conveyed to me in your B.C. of the 3rd July, 1867, I do myself the honor to recommend that the Crown lands described in the accompanying description marked *L* may be reserved from conditional purchase for access to water.

This reserve contains a large waterhole in the Yanko Creek, and part of a lagoon some distance from the creek; on the whole it is a very suitable site for a reserve.

I have, &c.,

C. F. BOLTON,
Surveyor.

[Enclosure to No. 13.]

L.

DESCRIPTION of proposed reserve for access to water, Yanko Creek, county of : Commencing on the right bank of the Yanko Creek, at the south-east corner of a measured portion of 320 acres, at Bundure Old Wash-pen, numbered 33; and bounded thence on the west by the east boundary of that land and its northern prolongation, being a line bearing north in all 5 miles; on the north by a line bearing east 1 mile; on the east by a line bearing south to the Yanko Creek; and on the south by that creek, downwards, to the point of commencement.

This forms part of Bundure Run.

C. F. BOLTON,
Surveyor.

No. 14.

Mr. Surveyor Bolton to The Surveyor General.

Sir,

Conargo, 12 October, 1867.

See No. 1.

In compliance with instructions contained in your B.C. of the 3rd July, 1867 (No. 67/58), I do myself the honor to recommend that the Crown land described in the accompanying description marked 97 *x* over *L* may be reserved from conditional purchase.

The frontage of Bundure Run appears to be more than 10 miles; I have therefore proposed a small reserve to give access to part of the Broomy Waterhole, which extends into this run. The Broomy Waterhole is well known on account of its being very permanent.

I have, &c.,

C. F. BOLTON,
Surveyor.

[Enclosure to No. 14.]

M.

DESCRIPTION of proposed reserves for access to water on the Yanko Creek, county of : Commencing on the right bank of the Yanko Creek, at the south-west corner of Bundure Run; and bounded on the west by part of the west boundary-line of that run bearing north 4 miles; on the north by a line bearing east 20 chains; on the east by a line bearing south to the Yanko Creek; and on the south by that creek, downwards, to the point of commencement.

This reserve forms part of Bundure Run.

C. F. BOLTON,
Surveyor.

No. 15.

Mr. Surveyor Bolton to The Surveyor General.

Sir,

Conargo, 12 October, 1867.

See No. 1.

In compliance with instructions contained in your B.C. of the 3rd July, I do myself the honor to recommend that the Crown lands described in the accompanying description marked *x* may be reserved from conditional purchase for access to water in the Yanko Creek.

The site is a suitable one, and it occupies the only piece of vacant frontage on the Thurrowa Run large enough for the purpose.

I have, &c.,

C. F. BOLTON,
Surveyor.

[Enclosure

[Enclosure to No. 15.]

N.

DESCRIPTION of proposed reserve for access to water on the Yanko Creek, county of Urana: Commencing on the Yanko Creek, at the north-west corner of portion $\frac{1}{4}$, containing 290 acres; and bounded thence on the east by the west boundary of that land and its southern prolongation 5 miles; on the south by a line bearing west 1 mile; on the west by a line bearing north to the Yanko Creek; and on the north by that creek upwards, to the point of commencement. This reserve forms part of S. Wilson's Thurrowa Run.

C. F. BOLTON,
Surveyor.

No. 16.

Mr. Surveyor Bolton to The Surveyor General.

Sir,

Conargo, 12 October, 1867.

In compliance with instructions contained in your B.C. of the 3rd July, I do myself the honor See No. 1. to recommend that the Crown land described in the accompanying description, marked o, may be reserved from conditional purchase for access to water. This reserve embraces a portion containing 640 acres, which was measured as a pre-emptive purchase for Wilson Brothers, but afterwards disallowed. The Broomey Waterhole, which is permanent, extends all along that part of the Yanko Creek fronting this reserve. In addition to this advantage the site proposed suits the fences subdividing the run.

I have, &c.,

C. F. BOLTON,
Surveyor.

[Enclosure to No. 16.]

O.

DESCRIPTION of proposed reserve for access to water on the Yanko Creek, county of : Commencing on the right bank of the Yanko Creek, at the south-east corner of portion $\frac{1}{2}$, containing 640 acres; and bounded thence on the east by the east boundary of that land and its northern prolongation to the north boundary-line of Wilson Brothers' Yanko Run; on the north by that line bearing about south 74 degrees west 84 chains 60 links; on the west by a line bearing south to the Yanko Creek; and on the south by that creek, upwards, to the point of commencement. This reserve is situate on S. Wilson's Yanko Run, and embraces the 640 acres mentioned in description.

C. F. BOLTON,
Surveyor.

No. 17.

Mr. Surveyor Bolton to The Surveyor General.

Sir,

Conargo, 12 October, 1867.

In compliance with instructions contained in your B.C. of the 3rd July (67/58), I do myself See No. 1. the honor to recommend that the Crown land described in the accompanying description, marked P, may be reserved from conditional purchase for access to water. I did not make this reserve opposite reserve O on account of the paddock fences, which unless removed at a considerable expense would prevent the stock from getting to the water. The water on the reserve proposed by me lasted well in the natural state of the creek, and has been rendered permanent by a dam.

I have, &c.,

C. F. BOLTON,
Surveyor.

[Enclosure to No. 17.]

P.

DESCRIPTION of proposed reserve for access to water on the Yanko Creek, county of : Commencing on the left bank of the Yanko Creek, at a point due south of the south-west corner of portion $\frac{1}{2}$, containing 640 acres; and bounded thence on the east by a line bearing south 5 miles; on the south by a line bearing west 1 mile; on the west by a line bearing north to the Yanko Creek; and on the north by that creek, upwards, to the point of commencement. This reserve forms part of S. Wilson's Yanko Run.

C. F. BOLTON,
Surveyor.

No. 18.

Mr. Surveyor Bolton to The Surveyor General.

Sir,

Conargo, 12 October, 1867.

In compliance with instructions contained in your B.C. of the 3rd July, 1867, I do myself the honor to recommend that the Crown land described in the accompanying description marked q, may be reserved from conditional purchase for access to water.

This is the only vacant piece of frontage along this part of the creek large enough for the purpose. However, it is a very suitable site for a reserve, the water having been made permanent by dams, and its See No. 1. position answers that of the subdivision fences.

I have, &c.,

C. F. BOLTON,
Surveyor.

[Enclosure to No. 18.]

Q.

DESCRIPTION of the proposed reserve for access to water on the Yanko Creek, county of : Commencing on the right bank of the Yanko Creek at the south-west corner of portion $\frac{1}{2}$, containing 640 acres; and bounded thence on part of the east by the west boundary-line of that land and its northerly prolongation; on the north by part of that line bearing about south 74 degrees, west 84 chains 60 links; on the west by a line south to the south boundary-line of the aforesaid run; on the south by part of that line bearing east 1 mile; and on the remainder of the east by a line bearing north to the point of commencement. This reserve forms part of Wilson Brothers, Yanko Run.

C. F. BOLTON,
Surveyor.

No. 19.

Mr. Surveyor Bolton to The Surveyor General.

Sir,

Conargo, 12 October, 1867.

In compliance with your instructions contained in your B.C. of the 3rd July, I do myself the See No. 1. honor to recommend that the Crown land described in the accompanying description marked R, may be reserved from conditional purchase for access to water. This

This reserve, in addition to affording access to water on Yanko Creek, embraces a lagoon which retains a large supply of water, and is a good drinking place for stock.

The land contained in the reserve is inferior to the land adjoining it.

I have, &c.,
C. F. BOLTON,
Surveyor.

[Enclosure to No. 19.]

R.

DESCRIPTION of proposed reserve for access to water in the Yanko Creek, county of Commencing on the right bank of the Yanko Creek, at the south-west corner of portion No. 26, containing 640 acres; and bounded thence on the east by the west boundary-line of that land and its northerly prolongation to the north boundary of Wilson Brothers Yanko Run; on the north by part of that line bearing about south 60 west 82 chains 40 links; on the west by a line bearing south to the Yanko Creek; and on the south by that creek, downwards, to the point of commencement.

This reserve forms part of S. Wilson's Yanko Run.

C. F. BOLTON,
Surveyor.

No. 20.

Mr. Surveyor Bolton to The Surveyor General.

Sir,

Conargo, 12 October, 1867.

See No. 1.

In compliance with instructions contained in your B.C. of the 3rd July, I do myself the honor to recommend that the Crown land described in the accompanying description marked s, may be reserved from conditional purchase for access to water.

This reserve gives access to the White Waterhole in the Yanko Creek, which was almost permanent in its natural state, and has been rendered quite so by dams.

I have, &c.,
C. F. BOLTON,
Surveyor.

[Enclosure to No. 20.]

S.

DESCRIPTION of proposed reserve for access to water in Yanko Creek, county of : Commencing on the right bank of the Yanko Creek, at a point bearing north from the north-east corner of portion No. 26-66, on Coree Run, containing 640 acres; and bounded thence on the east by a line bearing north 5 miles; on the north by a line bearing west 1 mile; on the west by a line bearing south to the Yanko Creek; and on the south by that creek, upwards, to the point of commencement.

This reserve forms part of S. Wilson's Yanko Run.

C. F. BOLTON,
Surveyor.

No. 21.

Mr. Surveyor Bolton to The Surveyor General.

Sir,

Conargo, 12 October, 1867.

See No. 1.

In compliance with instructions contained in your B.C. of 3rd July, I do myself the honor to recommend that the Crown land described in the accompanying description, marked t, may be reserved from conditional purchase for access to water in Yanko Creek.

This site contains some good waterholes in the Yanko Creek, and suits the fencing between Yanko and Coree Runs; which has been run along a "give and take" line, crossing the bend of the creek.

I have, &c.,
C. F. BOLTON,
Surveyor.

[Enclosure to No 21.]

T.

DESCRIPTION of proposed reserve for access to water, in Yanko Creek, county of Townsend: Commencing on the right bank of the Yanko Creek, at the south-east corner of portion 1, parish of Wononga, county of Townsend, containing 640 acres; and bounded thence by the east boundary of that land and its northern prolongation, being a line bearing north 5 miles; and on the north by part of that line bearing east; on the east by a line bearing south to the Yanko Creek; and on the south by that creek, downwards, to the point of commencement.

This reserve forms part of Wilson, Brothers Yanko Run.

C. F. BOLTON,
Surveyor.

No. 22.

Mr. Surveyor Bolton to The Surveyor General.

Sir,

Conargo, 12 October, 1867.

See No. 1.

In compliance with instructions contained in your B.C. of the 3rd July, I do myself the honor to recommend that the Crown land described in the enclosed description, marked u, may be reserved for access to water.

I was unable to get to the Yanko Creek to mark the starting point of this reserve, on account of the depth of water and strong current in the ana branches of the creek.

This site is a very suitable one, the water in the Yanko having been made permanent by the Nine-mile Dam.

I have, &c.,
C. F. BOLTON,
Surveyor.

[Enclosure to No. 22.]

U.

DESCRIPTION of proposed reserve of access to water on the Yanko Creek, county of : Commencing on the left bank of Yanko Creek, at a point 10 chains below the Nine-mile dam on Coree Run; and bounded thence by a line bearing east 2 miles; on the east by a line bearing north 1 mile; on the north by a line bearing west to the Yanko Creek; and on the west by that creek, downwards, to the point of commencement.

This reserve forms part of Samuel Wilson's Coree Run.

C. F. BOLTON,
Surveyor.

No. 23.

11

No. 23.

Mr. Surveyor Bolton to The Surveyor General.

Sir,

Conargo, 12 October, 1867.

In compliance with instructions contained in your B.C. of the 3rd July (No. 67-58); I do myself the honor to recommend that the Crown land described in the enclosed description marked v may be reserved for access to water in the Yanko Creek. See No. 1.

There were some good waterholes in this part of the creek when in its natural state. These have been rendered almost permanent by a dam erected below, called the Eighteen-mile Dam.

I have, &c.,

C. F. BOLTON,
Surveyor.

[Enclosure to No. 23.]

V.

DESCRIPTION of proposed reserve for access to water, in the Yanko Creek, county of : Commencing on the left bank of the Yanko Creek, at the north-east corner of portion No. 25-66, containing 640 acres; and bounded thence on the west by the east boundary-line of that land and its southerly prolongation, being a line bearing south in all 5 miles; on the south by a line bearing east 40 chains; on the east by a line bearing north to the Yanko Creek; and on the north by that creek, downwards, to the point of commencement. This reserve forms part of Samuel Wilson's Coree Run.

C. F. BOLTON,
Surveyor.

No. 24.

Mr. Surveyor Bolton to The Surveyor General.

Sir,

Conargo, 12 October, 1867.

In compliance with instructions contained in your B.C. of the 3rd July, I do myself the honor to recommend that the Crown land described in the accompanying description, marked w, may be reserved for access to water in the Yanko and Billabong Creeks. See No. 1.

Owing to the flooded state of the country I was unable to run a line across from the Billabong to the Yanko Creek, to mark the place where the proposed reserve strikes the latter creek.

The water on the Billabong at this reserve is very permanent, it being retained by a large dam on the portion from which it is described.

I have no tracing to enable me to show the exact position of this reserve, but it can be accurately fixed at head quarters.

I have, &c.,

C. F. BOLTON,
Surveyor.

[Enclosure to No. 24.]

W.

DESCRIPTION of proposed reserve for access to water, marked w, on the Yanko and Billabong Creeks, county of : Commencing on the Billabong Creek, at the north-west corner of portion No. , containing 320 acres (measured in virtue of improvements which consist of the Coree dam, &c.); and bounded thence on the west by a line bearing north 2 miles; on the north by a line bearing east 60 chains; on the east by a line bearing south to the Billabong Creek; and on the south by that creek, downwards, to the point of commencement. This reserve forms part of Samuel Wilson's Coree Run.

C. F. BOLTON,
Surveyor.

No. 25.

Mr. Surveyor Bolton to The Surveyor General.

Sir,

Conargo, 12 October, 1867.

In compliance with instructions contained in your B.C. of 3rd July, I do myself the honor to recommend that the Crown land described in the accompanying description, marked x, may be reserved for access to water in the Yanko and Billabong Creeks. See No. 1.

There is nothing special to recommend this site, except that it will protect the boundary-fence, which has been erected at a considerable cost, and there is no site in the immediate locality more suitable for the purpose than the one proposed.

I have, &c.,

C. F. BOLTON,
Surveyor.

[Enclosure to No. 25.]

X.

DESCRIPTION of proposed reserve x for access to water in the Yanko and Billabong Creek, county of : Commencing on the left bank of the Yanko Creek at the north-west corner of Coree Run; and bounded thence by part of the west boundary of that run bearing south 10 miles, crossing the Billabong Creek; on the south by a line bearing east 40 chains; on the east by a line crossing the Billabong Creek bearing north to the Yanko Creek; and on the north by that creek, downwards, to the point of commencement.

This reserve forms part of Samuel Wilson's Coree Run.

C. F. BOLTON,
Surveyor.

No. 26.

Mr. Surveyor Bolton to The Surveyor General.

Sir,

Conargo, 12 October, 1867.

In compliance with instructions contained in your B.C. of 3rd July, I do myself the honor to recommend that the Crown lands described in the accompanying description marked y may be reserved for access to water on the Yanko and Billabong Creeks. This reserve gives access to some good waterholes in the Billabong, and embraces water retained by dams on the Yanko Creek; in addition to this it will be a protection to the boundary-fence of the run. See No. 1.
Not with the
papers.

I have, &c.,

C. F. BOLTON.

No. 27.

No. 27.

Mr. Surveyor Bolton to The Surveyor General.

Sir,

Conargo, 12 October, 1867.

Description not
with the papers.

In compliance with instructions conveyed in your B.C. of the 3rd July, I do myself the honor to recommend that the Crown lands described, description marked z, may be reserved for access to water on the Yanko and Billabong Creeks.

This reserve fronts Mr. Blackwood's large dam on the Yanko Creek, and gives access to the water retained by it, which is permanent. It also extends along a portion of the Billabong, which in its natural state held water longer than the adjoining parts of the creek.

I have, &c.,
C. F. BOLTON.

No. 28.

Mr. Surveyor Bolton to The Surveyor General.

Sir,

Conargo, 12 October, 1867.

See No. 1.

In compliance with instructions contained in your B.C. of the 3rd July, I do myself the honor to recommend that the Crown land described in the accompanying description, marked AA, may be reserved for access to water.

This reserve does not embrace any permanent water, but will protect the by-washes and ana branches through which the surplus water from Mr. Blackwood's large dam escapes, and will afford passage from the back part of the run for stock watering at the dam which fronts the land, applied for to purchase by the lessee of the run.

I have, &c.,
C. F. BOLTON,
Surveyor.

[Enclosure to No. 28.]

AA.

DESCRIPTION of proposed reserve for access to water in the Yanko Creek, county of : Commencing on the right bank of the Yanko Creek at the south-west corner of portion No. broad-arrow over $\frac{3}{8}$, containing 320 acres (measured in virtue of improvements consisting of Mr. Blackwood's big dam, &c.); and bounded on the east by the west boundary-line of that land and its northerly prolongation, being a line bearing north in all 5 miles; on the north by a line bearing west 40 chains; on the west by a line bearing south to the Yanko Creek; and on the south by that creek, upwards, to the point of commencement.

This reserve forms part of Mr. Blackwood's Currabunganong Run.

C. F. BOLTON,
Surveyor.

No. 29.

Mr. Surveyor Bolton to The Surveyor General.

Sir,

Conargo, 12 October, 1867.

See No. 1.
Not with the
papers.

In compliance with instructions contained in your B.C. of the 3rd July, I do myself the honor to recommend that the Crown land described in the enclosed description may be reserved for access to water.

The situation of this reserve is very convenient for the purpose for which it is required, and the water is backed up to it by a dam below.

I have, &c.,
C. F. BOLTON.

No. 30.

Mr. Surveyor Bolton to The Surveyor General.

Sir,

Conargo, 12 October, 1867.

See No. 1.
Not with the
papers.

In compliance with instructions contained in your B.C. of 3rd July, I do myself the honor to recommend that the Crown land described in the accompanying description marked ca may be reserved from conditional purchase for access to water in the Yanko and Billabong Creeks.

There is a large permanent waterhole just at the junction of the Yanko and Billabong, besides others which last well some little distance below. Having proposed reserves similar to this all the way along the Yanko Creek, which I consider sufficient for the requirements of the adjacent runs, I see no reason why that part of the reserve 157, which extends along the Yanko Creek, should not be cancelled and the reserves proposed by me proclaimed in its stead.

I have, &c.,
C. F. BOLTON,
Surveyor.

No. 31.

Mr. Surveyor Bolton to The Surveyor General.

Sir,

Conargo, 12 October, 1867.

Appendix A.
See Nos. 8 to 30
inclusive.

I do myself the honor to forward a sketch showing the positions of the various reserves from conditional purchase proposed by me in my letters.

I have, &c.,
C. F. BOLTON.

No. 32.

Minute of The Deputy Surveyor General.

19 November, 1867.

See No. 31.

THE plan may be returned to Mr. District-Surveyor Wood, who will be good enough to point out which, if any, of these reserves are required for village sites or other public purposes, as for camping places for teams or travelling stock.

Appendix A.

The position of the existing reserves for villages, viz., Thurrowa, Cuddell, and an intended V.E. No. 121, notified 24th February, 1863, have been noted, and possibly it may be desirable to add to them before throwing open the whole frontage to conditional purchase. The

The circular of 15th May, 1866, having cancelled the instructions for the selection of reserves for the benefit of the runs, it appears that a great portion of the work done by Mr. Bolton will not be required in this department. There does not appear to be any special recommendation beyond the requirements of the runs, but on this point a further report is required.—P.F.A., B.C., 19/11/67. Appendix B.

[Appendix A to No. 32.]

GAZETTE NOTICE.

Department of Lands, Sydney, 24 February, 1863.

Reserve from Lease.

It is hereby notified, for general information, that His Excellency the Governor, with the advice of the Executive Council, has been pleased to withdraw for public use the portion of land hereinafter described, from the run of which it has hitherto formed part.

2. Any of the described land which may contain improvements and may not be specially reserved, may be purchased by the owner of such improvements within twelve months from the present date, on application to the Surveyor General, in accordance with the 6th section of the Regulations for the Alienation of Crown lands.

JOHN ROBERTSON.

Schedule.

Pastoral District of Murrumbidgee.

No. 121, 640 acres, at the affluence of the Colombo Creek from the Yanko Creek: Commencing at a point distant 40 chains north of a bridge carrying the main road from Narrandera to Deniliquin, over a cutting leading from a dam on an ana branch of the Yanko Creek to the Colombo Creek; and bounded thence on part of the north by a line bearing east 40 chains; on the east by a line bearing south 1 mile; on the south by a line bearing west 1 mile; on the west by a line bearing north 1 mile; and on the remainder of the north by a line bearing east 40 chains. This reserve forms portion of Mr. Peters' run called Bengangary.

[Appendix B to No. 32.]

(Circular.)

Surveyor General's Office, Sydney, 15 May, 1866.

Sir,

Referring to my circulars of the 9th December, 1864, and 9th August last, I have now the honor to forward the copy of a letter which, by the direction of the Honorable the Secretary for Lands, has been addressed to me, and from which you will observe that the selection of reserves for water supply has been entrusted to the Chief Commissioner of Crown Lands. See Enclosures Nos. 1 & 2.

2. This arrangement will not, however, render it unnecessary that you should report on the requirements of the public as regards reservations for water supply to towns, and to lands measured, or likely to be required for farms, for teams, and travelling stock, and in those cases where large areas would be rendered waterless by the alienation of portions containing the only water supply derived from natural sources. But you will be careful in every case not to exceed the area sufficient to attain the object of the reservation, and not to include land of a valuable character, if indifferent land equally suitable for the purpose can be obtained.

I have, &c.,

W. R. DAVIDSON, S.G.

[Enclosure No. 1 to Appendix B of No. 32.]

(Circular.)

Surveyor General's Office, Sydney, 9 December, 1864.

Sir,

As at the end of the ensuing year the leases in the squatting districts will expire, and the land will be open to conditional purchase, it is necessary that measures should be taken to prevent a monopoly of the supply of water, which in the Western Districts is particularly scarce.

2. I have therefore the honor to request that you will be good enough to prepare descriptions of reserves from conditional purchase for water supply and other public purposes, embracing the most valuable watering-places which may be known to you, and that you will mark them upon the ground at the points where they abut upon the water, and continue that marking for a short distance, perhaps $\frac{1}{4}$ a mile, sufficient to indicate the direction of the lines.

3. These reservations should in some instances extend for several miles into the back country, and in every case far enough to avoid the possibility of their being shut up by the selection of portions crossing them, which would defeat the object for which they are designed, viz., that of providing for the supply of water to the back country, not only to lands available for sale but also for lease. On the principal streams in the squatting districts as much as one-fifth of the frontage may be reserved, extending back so far as may be deemed necessary to prevent defeat.

4. The position and width of the reserve will depend upon their local merits, and to a certain extent upon the most judicious arrangements for maintaining cattle or sheep upon the back country; and in these cases much valuable information may be gathered from the lessees.

5. A sketch, illustrative of some of the various form of reservation, is enclosed for your guidance,

I have, &c.,

P. F. ADAMS.

Not necessary.

[Enclosure No. 2 to Appendix B of No. 32.]

(Circular.)

Surveyor General's Office, Sydney, 9 August, 1865.

Sir,

Referring to the 3rd paragraph of my circular of the 9th December last, on the subject of proposed reserves from sale, &c., for water supply for squatting runs, I have the honor to inform you that where the back country may be without permanent or comparatively permanent water, the frontage of the reserves may be increased to one-fourth of the frontage which the runs may have to any rivers, creeks, &c. See Enclosure No. 1 to Appendix B of No. 32.

2. To prevent misapprehension, I think it necessary to state that these reserves, which will be made under the 4th section of the Alienation Act, will not withdraw the lands from lease, or in any way interfere with the rights of the licensed occupants of the run on which they may be made. For public watering-places, either for travelling teams and stock, or for the benefit of settlers not immediately adjoining the water, reserves of a more permanent character will be made, and the lands withdrawn from lease under the 5th section of the Occupation Act. It is therefore necessary that you should state distinctly in your report the purpose for which the reserves you may propose are required, and whether they should be treated under the 4th section of the Alienation Act, or the 5th section of the Occupation Act.

3. For your guidance I enclose a sketch, illustrating the manner of dealing with certain cases frequently occurring in practice. Not necessary.

I have, &c.,

W. R. DAVIDSON.

No. 33.

Memo. of Mr. District-Surveyor Wood.

29 November, 1867.

WILL MR. Surveyor Bolton be so good as to inform me whether there is any good site for village reserve between Thurrawa and reserve No. 121, at junction of Colombo and Yanko? If so, please indicate on plan. The

See Appendix B
to No. 32.

The circular of 15th May, 1866, having cancelled the instructions for the selection of reserves for the benefit of the runs, it appears that some of Mr. Bolton's reserves are not necessary. I have marked off some as in my opinion not being required. Perhaps Mr. Bolton will be so good as to report on the matter.—J. H. WOOD, D.S.

No. 34.

Mr. Surveyor Bolton to The Surveyor General.

Sir,

Wagga Wagga, 8 January, 1868.

See No. 2,
Nos. 1 to 40.

In compliance with instructions conveyed in your B.C. of the 3rd July, 1867, I do myself the honor to recommend that the Crown lands described in the accompanying descriptions will be reserved for access to water and other public purposes, under the 4th section of the Crown Lands Alienation Act, but not under the 5th of the Occupation Act at present.

See Enclosure
to No. 31.

I return a sketch, which I sent in with my letter of 12th October, 1867, having since charted the positions of the reserves forming the subject of this letter.

Though from the absence of population these reserves are not at present required by the public, I think it advisable that they should be proclaimed to prevent all the best watering-places from being monopolized when the reserve extending the whole length of the Yanko is cancelled.

I have, &c.,
C. F. BOLTON,
Surveyor.

[Enclosure A.]

No. 1.

DESCRIPTION of proposed reserve for access to water :—640 acres, in the counties of Mitchell and Boyd : Commencing on the Yanko Creek, at a point bearing east 165 links from a gum-tree marked broad-arrow over A over WR, and bounded thence on part of the south by a line bearing west 1 mile ; on the west by a line bearing north 40 chains ; on the north by a line (crossing the Yanko Creek) bearing east 2 miles ; on the east by a line bearing south 40 chains ; and on the remainder of the south by a line bearing west to the point of commencement.

C. F. BOLTON,
Surveyor.

[Enclosure B.]

No. 2.

DESCRIPTION of proposed reserve for access to water, &c. :—65 acres, county of Mitchell : Commencing at a box-tree marked broad-arrow over WR, situate on the north bank of the Cuddell Creek at its intersection with the north-east side of Burt-street, and bounded thence on the south-west by a line bearing north-west 40 chains ; on the north-west by a line bearing north-east 15 chains ; on the north-east by a line bearing south-east to Cuddell Creek ; and on the south-east by that creek south-westerly, to the point of commencement.

C. F. BOLTON,
Surveyor.

[Enclosure C.]

No. 3.

DESCRIPTION of proposed reserve for access to water, &c. :—320 acres, county of Mitchell : Commencing at the north-east corner of William Stowell's 320 acres, and bounded thence on the north by a line bearing east 60 chains ; on the east by a line bearing south 40 chains ; on the south by a line bearing west to the Yanko Creek ; and on the west by that creek, upwards, to the point of commencement.

C. F. BOLTON,
Surveyor.

[Enclosure D.]

No. 4.

DESCRIPTION of proposed reserve for access to water, &c. :—320 acres, county of Boyd : Commencing at the south-east corner of William Stowell's 320 acres at Yarrabee, and bounded thence on the north by the south boundary of that land and its western prolongation, being a line bearing west in all 100 chains ; on the west by a line bearing south 40 chains ; on the south by a line bearing east to the Yanko Creek ; and on the east by that creek, upwards, to the point of commencement.

C. F. BOLTON,
Surveyor.

[Enclosure E.]

No. 5.

DESCRIPTION of proposed reserve for access to water, &c. :—320 acres, at Binegang Waterhole, county of Urana : Commencing on the Yanko Creek, at a point 20 chains north of the confluence of the Colombo ana branch, said confluence being 3 chains above a tree marked broad-arrow over WR over R, and bounded thence on part of the south by a line bearing east 1 mile ; on the east by a line bearing north 40 chains ; on the north by a line bearing west to the Yanko Creek ; and on the west by that creek, downwards, to the point of commencement.

C. F. BOLTON,
Surveyor.

[Enclosure F.]

No. 6.

DESCRIPTION of proposed reserve for access to water, &c. :—640 acres, at Reedy Waterhole, County of Urana : Commencing on the Yanko Creek, at a gum-tree marked broad-arrow over G over WR, situate 297 degrees 35 chains from the Reedy Waterhole, and bounded thence on part of the south-west by a line bearing 117 degrees 1 mile ; and on the south-east by a line bearing 27 degrees 40 chains ; on the north-east by a line (crossing the Yanko Creek) bearing 297 degrees 2 miles ; on the north-west by a line bearing 207 degrees 40 chains ; and on the remainder of the south-west by a line bearing 117 degrees, to the point of commencement.

C. F. BOLTON,
Surveyor.

[Enclosure

[Enclosure G.]

No. 7.

DESCRIPTION of proposed reserve for access to water, &c.:—640 acres, county of Urana: Commencing on the Yanko Creek, at a gum-tree marked broad-arrow over J over WR, situate near the outbreak of the Yellow Creek, and bounded thence on part of the south-west by a line bearing 117 degrees 100 chains; on the south-east by a line bearing 27 degrees 40 chains; on the north-east by a line (crossing the Yanko Creek) bearing 297 degrees 2 miles; on the north-west by a line bearing 297 degrees 40 chains; and on the remainder of the south-west by a line bearing 117 degrees, to the point of commencement.

C. F. BOLTON,
Surveyor.

[Enclosure H.]

No. 8.

DESCRIPTION of proposed reserve for access to water, &c.:—640 acres, at Bundure, county of Urana: Commencing at the south-east corner of 320 acres at Bundure homestead; and bounded thence on part of the west by the east boundary of that land and its northern prolongation, being a line bearing north in all 80 chains; on the north by a line bearing east 40 chains; on the east by a line (crossing the Yanko Creek) bearing south 160 acres; on the south by a line bearing west 40 chains; and on the remainder of the west by a line bearing north, to the point of commencement.

C. F. BOLTON,
Surveyor.

[Enclosure I.]

No. 9.

DESCRIPTION of proposed reserve for access to water, &c., 320 acres: Commencing on the right bank of the Yanko Creek, at a point 40 chains east of a measured portion of 320 acres at Bundure Old Washpen; and bounded thence on the west by a line bearing north 100 chains; on the north by a line bearing east 40 chains; on the east by a line bearing south to the Yanko Creek; and on the south by that creek, downwards, to the point of commencement.

C. F. BOLTON,
Surveyor.

[Enclosure J.]

No. 10.

DESCRIPTION of proposed reserve for access to water, &c.:—320 acres, at Broomy Waterhole, county of Urana: Commencing on the Yanko Creek at the south-east corner of a measured portion of 640 acres; and bounded thence on the east by the east boundary of that land bearing north 80 chains; on the north by part of the north boundary of the aforesaid 640 acres bearing west 40 chains; on the west by a line bearing south to the Yanko Creek; on the south by that creek, upwards, to the point of commencement.

C. F. BOLTON,
Surveyor.

[Enclosure K.]

No. 11.

DESCRIPTION of proposed reserve for access to water, &c.:—320 acres, near Broomy Waterhole, county of Urana: Commencing on the left bank of the Yanko Creek at a point bearing south from the south-west corner of 640 acres at Broomy Waterhole; and bounded thence on the east by a line bearing south 60 chains; on the south by a line bearing west 40 chains; on the west by a line bearing north to the Yanko Creek; and on the north by that creek, upwards, to the point of commencement.

C. F. BOLTON,
Surveyor.

[Enclosure L.]

No. 12.

DESCRIPTION of proposed reserve for access to water, &c.:—640 acres, county of Urana: Commencing on the Yanko Creek at the south-east corner of portion No. 34; and bounded thence on part of the west by the east boundary of that land and its northern prolongation, being a line bearing north in all 1 mile; on the north by a line bearing east 40 chains; on the east by a line (crossing the Yanko Creek) bearing south 2 miles; on the south by a line bearing west 40 chains; and on the remainder of the west by a line bearing north to the point of commencement.

C. F. BOLTON,
Surveyor.

[Enclosure M.]

No. 13.

DESCRIPTION of proposed reserve for access to water, &c.:—320 acres, at Uri, county of Urana: Commencing on the Yanko Creek, at the south-west corner of 640 acres at Uri; and bounded thence on the east by part of the west boundary of that land bearing north 1 mile; on the north by a line bearing west 40 chains; on the west by a line bearing south to the Yanko Creek; and on the south by that creek, downwards, to the point of commencement.

C. F. BOLTON,
Surveyor.

[Enclosure N.]

No. 14.

DESCRIPTION of proposed reserve for access to water, &c.:—320 acres, near Wilson Brothers, Nine-mile Dam, county of Urana: Commencing on the left bank of the Yanko Creek, 30 chains above Wilson Brothers' Nine-mile Dam; and bounded thence on the south by a line bearing east 1 mile; on the east by a line bearing north 40 chains; on the north by a line bearing west to the Yanko Creek; and on the west by that creek, downwards, to the point of commencement.

C. F. BOLTON,
Surveyor.

[Enclosure O.]

No. 15.

DESCRIPTION of proposed reserve for access to water, &c.:—320 acres, at the White Waterhole Bend, county of Urana: Commencing on the right bank of the Yanko Creek, at a point north of the north-east corner of S. Wilson's 640 acres at the White Waterhole Bend; and bounded thence on the east by a line bearing north 60 chains; on the north by a line bearing west 40 chains; on the west by a line bearing south to the Yanko Creek; and on the south by that creek, upwards, to the point of commencement.

C. F. BOLTON,
Surveyor.

[Enclosure

[Enclosure P.]

No. 16.

DESCRIPTION of proposed reserve for access to water, &c. :—320 acres, on Yanko Creek, county of Urana: Commencing on the left bank of the Yanko Creek, at a point north of the north-west corner of 320 acres, in which the large Corree Dam is situate; and bounded thence on the west by a line bearing south 70 chains; on the south by a line bearing east 40 chains; on the east by a line bearing north to the Yanko Creek; and on the north by that creek, downwards, to the point of commencement.

C. F. BOLTON,
Surveyor.

[Enclosure Q.]

No. 17.

DESCRIPTION of proposed reserve for access to water, &c. :—320 acres, on Yanko Creek, county of Townsend: Commencing on the right bank of the Yanko Creek, at the south-east corner of Wilson Brothers' 640 acres, situate about 3 miles from the western boundary of Yanko Run; and bounded thence on the west by the east boundary of that land and its northern prolongation, being a line bearing north in all 1 mile; on the north by a line bearing east 40 chains; on the east by a line bearing south to the Yanko Creek; and on the south by that creek, downwards, to the point of commencement.

C. F. BOLTON,
Surveyor.

[Enclosure R.]

No. 18.

DESCRIPTION of proposed reserve for access to water, &c. :—320 acres, on the Yanko Creek, county of Townsend: Commencing on the right bank of Yanko Creek, at the east boundary of North Currabungong Run; and bounded on the east by part of that boundary bearing north $1\frac{1}{2}$ mile; on the north by a line bearing west 40 chains; on the west by a line bearing south to the Yanko Creek; and on the south by that creek, upwards, to the point of commencement.

C. F. BOLTON,
Surveyor.

[Enclosure S.]

No. 19.

DESCRIPTION of proposed reserve for access to water, &c. :—320 acres, at Mr. Blackwood's large dam, County of Townsend: Commencing on the left bank of the Yanko Creek, at a point south of the south-west corner of 320 acres, measured in virtue of Mr. Blackwood's large dam; and bounded thence on the west by a line bearing south 1 mile; on the south by a line bearing east 40 chains; on the east by a line bearing north to the Yanko Creek; and on the north by that creek, downwards, to the point of commencement.

C. F. BOLTON,
Surveyor.

[Enclosure T.]

No. 20.

DESCRIPTION of proposed reserve for access to water, &c. :—320 acres, at the junction of the Yanko and Billabong Creeks, county of Townsend: Commencing on the right bank of the Yanko Creek, at a point 20 chains above its junction with the Billabong; and bounded thence on the east by a line bearing north 60 chains; on the north by a line bearing west 40 chains; on the west by a line bearing south to the Billabong Creek; and on the south by that creek, upwards, to the junction of the Yanko Creek, and the Yanko Creek, upwards, to the point of commencement.

C. F. BOLTON,
Surveyor.

[Enclosure U.]

No. 21.

DESCRIPTION of proposed reserve for access to water, &c. :—320 acres, Moranda Waterhole, County of Urana: Commencing at a point on the Colombo Creek, bearing north-east from the northern corner of Widgiawa Run, and 303 degrees 106 links from a gum-tree marked broad-arrow over BB over WR; and bounded thence on the west by a line bearing north 28 degrees east 40 chains; on the north by a line bearing south 71 degrees east 90 chains; on the east by a line bearing south 19 degrees west 40 chains; on the south by a line bearing north 71 degrees west to the Colombo Creek; and by that creek, upwards, to the point of commencement.

C. F. BOLTON,
Surveyor.

[Enclosure V.]

No. 22.

DESCRIPTION of proposed reserve for access to water, &c. :—320 acres Waouck, county of Urana: Commencing on the right bank of the Colombo Creek, at a point bearing north-east from the north corner of Widgiawa Run, and 303 degrees 106 links from a gum-tree marked broad-arrow over BB over WR; and bounded thence on the north-west by a line bearing south-west 60 chains; on the south-west by a line bearing south-east 40 chains; on the south-east by a line bearing north-east to the Colombo Creek; and on the north-east by that creek, upwards, to the point of commencement.

C. F. BOLTON,
Surveyor.

[Enclosure W.]

No. 23.

DESCRIPTION of proposed reserve for access to water, &c. :—320 acres, at old Widgiawa Waterhole, county of Urana: Commencing on the Colombo Creek, at a gum-tree marked broad-arrow over CO over WR, situate at the lower end of old Widgiawa Waterhole; and bounded thence on the south-west by a line bearing south 68 degrees east 50 chains; on the south-east by a line bearing north 22 degrees east 40 chains; on the north-east by a line bearing north 68 degrees west to the Colombo Creek; and on the north-west by that creek, downwards, to the point of commencement.

C. F. BOLTON,
Surveyor.

[Enclosure

[Enclosure X.]

No. 38.

DESCRIPTION of proposed reserve for access to water, &c. :—320 acres, on the Billabong Creek, at the east boundary of north Curabunganong Run, county of Townsend : Commencing on the right bank of the Billabong Creek, at the east boundary of Curabunganong Run ; and bounded thence on the east by part of the aforesaid boundary bearing north 60 chains ; on the north by a line bearing west 40 chains ; on the west by a line bearing south to the Billabong Creek ; and on the south by that creek, upwards, to the point of commencement.

C. F. BOLTON,
Surveyor.

[Enclosure MM.]

No. 39.

DESCRIPTION of proposed reserve for access to water, &c. :—320 acres, on the Billabong Creek, about 2 miles below Startwood, county of Townsend : Commencing on the left bank of the Billabong Creek, at the north-east corner of R. Blackwood's 89 acres ; and bounded thence on the west by the east boundary of that land bearing south about 1 mile ; on the south by a line bearing east 40 chains ; on the east by a line bearing north to the Billabong Creek ; and on the north by that creek, downwards, to the point of commencement.

C. F. BOLTON,
Surveyor.

[Enclosure NN.]

No. 40.

DESCRIPTION of proposed reserve for access to water, &c. :—320 acres, on the Billabong Creek, at the outbreak of Thulabin or Forest Creek : Commencing on the left bank of the Billabong Creek, at the north-west corner of R. Blackwood's 640 acres ; and bounded thence on the east by part of the west boundary of that land bearing south 60 chains ; on the south by a line bearing west 40 chains ; on the west by a line bearing north to the Billabong Creek ; and on the north by that creek, upwards, to the point of commencement.

C. F. BOLTON,
Surveyor.

Minutes on No. 34.

See P. S. in Mr. Bolton's letter of 27th January, 1868.—P.F.A., 11/1/68. Mr. Ellis,—Are any of these reserves proposed to be withdrawn from lease?—P.F.A. A village reserve is proposed in letter 68-2, which is the only reserve proposed to be withdrawn from lease at present.—C. F. BOLTON.

Not with the papers.

Not with the papers.

No. 35.

Mr. Surveyor Bolton to The Surveyor General.

Sir,

Wagga Wagga, 8 January, 1868.

I do myself the honor to recommend that the Crown land described in the accompanying description may be reserved as a site for a village.

There is no demand at present for allotments at this place, but it is recommended as being about midway between the village of Thurrowa and the village reserve at the outbreak of the Colombo Creek.

A better building site exists about 2 miles nearer to the Colombo, but the road is a long way off the creek at that place; in addition to which the creek soon goes dry opposite it.

I have, &c.,

C. F. BOLTON,
Surveyor.

[Enclosure to No. 35.]

DESCRIPTION of proposed village reserve near Goree, Yanko Creek, county of Urana: Commencing on the left bank of the Yanko Creek, at a gum-tree marked broad-arrow over π over WR, about 2 miles above Goree Station; and bounded thence on the north by a line bearing east 30 chains; on the east by a line bearing south 100 chains; on the south by a line bearing west to the Yanko Creek; and on the west by that creek, upwards, to the point of commencement.

Minutes on No. 35.

Mr. Ellis, 17th January.—P.F.A. In reply to my memo. of 19th November, 1867 (No. 32), as to reservation from lease, this appears to be the only one, and may be forwarded to the Chief Commissioner of Crown Lands for his information, and subsequently for *Gazette* notification.—P.F.A., 11 March. This land is at present protected from sale by the Yanko Creek Reserves, and the Proclamation of the village reserve might stand over until the Commissioner reports on the reserve from conditional purchase, recommended by Mr. Surveyor Bolton in lieu of the general reserve submitted herewith.—E.D., 2/5/68. Yes.—19/5/68. On the cancellation of the Billabong Reserve, now recommended, I presume this reserve may also be recommended?—E.D., 12/2/69. Yes.—15.

No. 36.

Memorandum from The Surveyor General to Chief Commissioner of Crown Lands.

2 April, 1868.

THE accompanying plans and descriptions will probably be of service to the Chief Commissioner of Crown Lands in dealing with the reserves on the Yanko, Colombo, and Billabong Creeks. The reserves were proposed under some misapprehension of instructions, as it is not the practice of this Department to deal with reserves other than these which it may be necessary to withdraw from lease for sites for villages, &c.

On being called on for explanation, and to state which, and if any were required for public purposes, the surveyor forwarded the same, with reductions, both in number and area, but not recommending any withdrawal or permanent deviation; he informed me personally that he considered that the original dimensions should be maintained, but in no case should any of the reduced areas be dispensed with or further reduced, as that would probably lead to the alienation of water actually required for the beneficial occupation of the vacant lands.

P. F. ADAMS.

Chief Commissioner of Crown Lands, B.C., 2 April.—M.F. I suppose these recommendations for water reserves had better be referred to the Commissioner for his report. They appear to have been examined and recommended by the surveyor under a misapprehension of his instructions, but with the accompanying plans will be of great service to the Commissioner, when recommending special reserves with a view to the cancellation of the large general reserves extending along the course, and comprising both sides of these creeks.—E.D., 2/5/68. The plans may be sent, though that of the Billabong is stated by Mr. Bolton to be very inaccurate—little more than a sketch. Should the reports and descriptions also go forward?—A.O.P., 18 May, 1868. Yes.—19. Forwarded to Mr. Commissioner Lockhart for his report, with reference to my circular of 14th February, 1866; and at the same time his attention is drawn to the large reserve on the Yanko and Billabong Creeks, notified 23rd December, 1865, with a view to its cancellation by the substitution of such reserves only as are necessary to protect the public interests.—A.O.M., Crown Lands Office, B.C., 22 May, 1868.

[Appendix A to No. 36.]

[Circular.]

Sir,

Crown Lands Office, Sydney, 15 February, 1866.

I have the honor, under the directions of the Honorable the Secretary for Lands, to inform you that it has been determined upon by Government, that all applications for temporary reserves for the preservation of water supply or other public purposes, should be examined into and reported upon with as little delay as possible, as well those already Gazetted as those at present undisposed of. I therefore forward herewith a file of *Gazettes* (Nos. 268, 270, 273) of the 23rd, 28th, and 30th December, 1865, respectively, showing the reserves already proclaimed in your district, together with the several applications, as per schedule enclosed, for reserves, which have been reserved but not yet dealt with. In making inquiry, and reporting upon the several cases, you will be guided by the following instructions:—

1. The Government will hold you responsible for the necessity and extent of the reservations which you may recommend in every case.

2. Reserves are not to be made for the purpose of securing to the lessees of Crown lands the possession of particular runs or portions of runs, but for the prevention of a monopoly of the water supply necessary for adjacent country, or for some other public purpose to be specified in your report; and in no case is the reserve to be more than what is *bona fide* necessary for the purpose in question.

3. In those localities where the runs are entirely dependent on the river frontage for a permanent supply of water, the reserve must not exceed 1 mile in 5 of frontage, with a depth of 5 miles.

4. In those localities where there is an abundance of permanent water distributed over the country reserves for the preservation of water supply may not be required, but reserves may be necessary for some other public purpose. In cases such as these a good deal must depend upon your judgment and discretion.

5. In many cases it may be of great importance to reserve isolated springs and waterholes.

6. Each reserve reported on must be personally examined and distinctly marked and described in that class of reserves alluded to in paragraph 3; marking the river boundary and indicating the direction of the side lines will suffice. In so far as it applies to the marking and preparation of descriptions, you will be guided by the requirements of the memorandum of directions, previously forwarded to you, and of which I again enclose a copy herewith. It is desirable, moreover, that the marking should be uniform, and with this view the initial letter *x* should be used in as conspicuous a position as possible, with a distinguishing number to correspond with the description.

7. You will devote your immediate attention to this matter, and forward your report to me as each is completed, as soon as possible, engaging in no other business unless specially ordered, until this work is brought to a satisfactory conclusion.

8. To prevent confusion and delay, you will report separately and fully on the reservations recommended upon each run in the completion of your examination of it. It will be convenient to use a form similar to the enclosed for this purpose.

9. In order that the public interest may be protected as far as possible, your attention must be directed in the first place to those reserves which have been applied for but not gazetted, the applications for which are enclosed. At present you will only deal with those already proclaimed, in so far as may be necessary to admit of the final disposal of any of those proposed reservations to which your attention is primarily directed.

I have, &c.,

A. O. MORIARTY.

[Appendix B to No. 36.]

Gazette Notice.

Department of Lands, Sydney, 22 December, 1865.

Reserves from Conditional Purchase.

His Excellency the Governor, with the advice of the Executive Council, directs it to be notified that in pursuance of the provisions of the "Crown Lands Alienation Act of 1861" the land specified in the schedule appended hereto shall be reserved from sale until surveyed for the preservation of water supply or other public purposes.

CHARLES COWPER.

Schedule.

No. 157. Counties Boyd, Mitchell, Urana, and Townsend, on the Yanko and Colombo Creeks, 271 square miles: The Crown lands within 1 mile of the Yanko Creek from the Murrumbidgee River to its junction with the Billabong Creek, and within 1 mile of the Colombo from its outflow from the Yanko Creek from its junction with the Billabong Creek.

(Plan herewith.)

No. 37.

Memo. by Mr. Du Faur.

18 January, 1869.

The reserves submitted within this cover are those against which "Billabong" is marked in general schedule. They are proposed chiefly in accordance with Mr. Surveyor Bolton's plan, as substitutes for the general reserves on both sides of the Billabong.

Mr. Crommelin has in the within reports dealt with every run through which that general reserve runs, but he has not yet recommended the cancellation of that reserve, which I think ought to take place at the same time as the notification of the substitutes. Perhaps he may be requested to state whether it is his intention to recommend, with reference to the Chief Commissioner's B.C. of 22nd May last on that subject, such cancellation; and at the same time he might report on the several queries on the written papers.—E.D. Yes.—19.

See No. 36.

No. 38.

The Chief Commissioner of Crown Lands to The Commissioner of Crown Lands,
Murrumbidgee.

Sir,

Crown Lands Office, Sydney, 22 January, 1869.

With reference to my blank cover communication of the 22nd May last, to your predecessor, drawing his attention to the necessity for the cancellation of the large water reserve on the Billabong, Yanko, and Colombo Creeks, by the substitution of such reserves only as are necessary for the public benefit, I have the honor to direct your attention to the fact that in your several reports in October and November last you have dealt with every run through which the reserve on the Billabong Creek (notified as No. 184, 23rd December, 1865, folio 2,904) passes, but you have not yet recommended its cancellation.

As such cancellation should take place at the same time as the notification of the reserves substituted, I have the honor to request your further report on the matter at your earliest convenience.

I have, &c.,

A. O. MORIARTY,

Chief Commissioner of Crown Lands.

See No. 36.

* Cannot be obtained.

See Appendix.

[Appendix to No. 38.]

Department of Lands, Sydney, 22 December, 1865.

Reserves from Conditional Purchase.

His Excellency the Governor, with the advice of the Executive Council, directs it to be notified that in pursuance of the provisions of the "Crown Lands Alienation Act of 1861" the land specified in the schedule appended hereto shall be reserved from sale until surveyed for the preservation of water supply or other public purposes.

CHARLES COWPER.

No. 184. Counties of Urana, Townsend, and Wakool, containing about 280 square miles. The Crown Lands within 1 mile of the Billabong Creek from the confluence of the Colombo downwards to its confluence with the Kyalito or Edward River, but exclusively of the village of Jerilderie and suburban and measured lands within the Jerilderie reserve from lease No. 49 extension, notified 10th March, 1865; the town of Conargo and suburban lands and measured lands within the Conargo reserve from lease, the village of Wangonilla and suburban lands, and the towns of Moulamein north and south and suburban lands.

No. 39.

The Commissioner of Crown Lands, Murrumbidgee, to The Chief Commissioner of Crown Lands.

Sir, Crown Lands Office, Albury, 3 February, 1869. No. 38.
 Referring to your letter of the 22nd ult., desiring a further report in regard to the large Billabong Reserve, I do myself the honor to recommend the cancellation of the Grand Billabong Reserve, notified as No. 184, 23 December, 1865, from the confluence of the Colombo downwards to its confluence with the Kyalito or Edward River, for the purpose of substituting those set forth in my several reports in October and November last. I was under the impression that my letter of the 17th October last was an all-sufficient recommendation for the cancellation of the Billabong Reserve, though perhaps I ought to have written more explicitly and not mixed up the question of Woorooma Reserves with that of the Billabong Reserve. See Appendix to No. 38. Not with the papers.

I have, &c.,
 THOMAS LAKE CROMMELIN,
 C.C.L.

Under this report the large Billabong Reserve may, I presume, be recommended for cancellation and those submitted herewith substituted (see various reserves to be gazetted same date).—E.D., 9/2/69. This reserve cancelled 22 August, 1871.—A.O.P.

No. 40.

Minute of The Chief Commissioner of Crown Lands.

17 February, 1869.
 SUBMITTED for the approval of the Honorable the Minister for Lands, with the suggestion that the same be laid before His Excellency the Governor and the Executive Council for confirmation.—A. O. MORIARTY, B.C., Crown Lands Office, Sydney, 17 February, 1869. Reserve from conditional purchase. (As future site for a village.)

No. 41.

Minute Paper for The Executive Council.

Department of Lands, Sydney, 24 February, 1869.
 It is recommended to His Excellency the Governor and the Executive Council, at the instance of the Chief Commissioner of Crown Lands, that the portion of Crown land particularized in the enclosed Schedule be reserved from sale until surveyed for a site for a future village, under the 4th section of the "Crown Lands Alienation Act of 1861." For description see No. 44.
 WILLIAM FORSTER.

Clerk of the Executive Council, B.C., 24 February, 1869.—M.F. The Executive Council advise that the portion of land herein described be reserved from sale until surveyed as the site for a future village, in terms of the 4th clause of the "Crown Lands Alienation Act of 1861."—ALFRED C. BUDGE, Clerk of the Council. Min. 69/9, 25 February, 1869. Confirmed, 3 March, 1869. Approved.—B., 11 March, 1869. The Chief Commissioner of Crown Lands, B.C., 16 March, 1869.—M.F. For description see No. 44.

No. 42.

Mr. R. P. Raymond to The Surveyor General.

Sir, No. 15, Bligh-street, Sydney, 7 September, 1869.
 I have the honor, by the instructions of Messrs. Holmes, White, and Co., of Melbourne, agents for the lessee, to make applications for sundry portions of land on the American Yards and Bundure Stations, to be measured and put up to auction, viz. :—
 320 acres on the right bank of the Umbango Creek, above Woolshed.
 250 acres to 300 acres on right bank of the Umbango Creek, above crossing-place, half-way between the Woolshed and Humula Homestead.
 300 acres on right bank of Umbango Creek, below the horse paddock at the Homestead.
 300 acres on left bank of Umbango Creek, below the horse paddock at the Homestead.

Bundure Station.

Two lots of 320 acres each on the Yanko Creek, opposite the Thurrowa Reserve, on the north side of the creek.

320 acres, Yanko Creek, between the Bundure Homestead and the new sheep wash, on the north side of the creek.

As these lands are unsurveyed it is not possible to give a clearer description of the lots required, but the manager at Bundure, Mr. Sutherland, will point out to the surveyor, on his arrival at the station, the exact locality of each.

I beg also to point out that as far as I can see from a rough sketch that has been sent me, some of these portions will be within and others partly within water reserves, but as the land the lessees are desirous of purchasing will not affect the general water supply of the station, I presume there will be no objection to the withdrawal of such portions from the reserve.

I have, &c.,
 R. PEEL RAYMOND,
 Agent.

Submitted, 21 Sept. Mr. D.-S. Wood,—For measurement of unobjectionable and probably at a rate below the scale price.—J.S.A. (for Surveyor General), Sept. 21.

No. 43.

Mr. J. Sutherland to The Surveyor General.

Sir,

Bundure Station, Jerilderie, 8 December, 1869.

Having become the proprietor of part, and erected others, of the improvements detailed below, and which I estimate to be worth £1,060, I have the honor to apply that I may be permitted to purchase, without competition, under the provisions of the "Crown Lands Alienation Act of 1861," the Crown lands on which they stand, and which are described hereunder.

The improvements referred to are now in my possession.

I have, &c.,

JOHN SUTHERLAND,
Manager for Lessees of Bundure.

Nature of Improvements.

Sheepwash and garden, with overseer's hut and men's hut, worth	£400
Cultivation paddock, drafting yards, and dam	240
Men's hut, travellers' hut, and large dam on ana branch of Yanko Creek ...	250
Middle Dam on do.	70
Shearers' hut	100
	<hr/>
	£1,060

Description of Land.

County of Urana, parish unnamed, 320 acres, on the right bank of the Yanko Creek, near the boundary with Goree and about 2 miles east from Bundure Homestead, 240, 250, 70, and 100 acres respectively on the ana branch of the Yanko Creek, near Bundure Homestead and the Woolshed.

The Chief Commissioner of Crown Lands.—G.J.A., B.C., 23 Dec., /69. Bundure Run, district of Murrumbidgee, is held under a promise of lease by the New Zealand and Australian Land Company (limited) of Glasgow.—A.O.M. Crown Lands Office, B.C., 30 Dec., 1869. Mr. Licensed-Surveyor M'Culloch for measurement, if unobjectionable.—P. F. ADAMS, 24 Jan., 1870. Transferred to Mr. Surveyor Betts in accordance with the Surveyor General's letter of instructions, 21 April, 1870.—J. M'C., L.S.

Missing.

No. 44.

Gazette Notice.

Department of Lands, Sydney, 7 March, 1870.

Reserve from Sale.

His Excellency the Governor, with the advice of the Executive Council, directs it to be notified that in pursuance of the provisions of the "Crown Lands Alienation Act of 1868," the land specified in the Schedule hereto shall be reserved from sale as a site for a future village.

WILLIAM FORSTER.

Description.

County of Urana, near Goree, Yanko Creek: Commencing on the left bank of the Yanko Creek, at a gum-tree marked broad-arrow over π over ω , about 2 miles above Goree Station; and bounded thence on the north by a line bearing east 20 chains; on the east by a line bearing south 100 chains; on the south by a line bearing west to the Yanko Creek; and on the west by that creek, upwards, to the point of commencement.

No. 45.

Mr. H. Gordon to The Surveyor General.

Sir,

Jerilderie, 24 August, 1870.

I have the honor to transmit a plan and report on John Sutherland's 320 acres improvement purchase situated on Bundure Run, parish unnamed, county Urana.

The improvements consist of a sheep-wash and huts, value £380.

I make no charge for the connection to this portion, as I have to complete the survey of an adjoining portion as soon as the water subsides, after which this connection will not be required.

I have, &c.,

HUGH GORDON.

Appendix C.

Query 13. Mr. Long.—The portion measured comes within the Yanko Creek Reserve, notified *22 December, 1865. Should not that part of the reserve be revoked previously to sending the portion in for appraisement? —T.H.L., 15 July, 1871. Yes.—G.L., 15 July, 1871.

Query 13. Surveyor General.—The land fronting the Yanko Creek is slowly but gradually being alienated, under the 8th clause. Have you any objections to such alienations taking place as they are all within the reserve notified *22 December, 1865?—T.H.L., 15 July, 1871.

The Yanko Creek Reserve was notified in December, 1865, on account of the creek having been improved by the run-holders. The Surveyor General told me he again intended to bring the matter forward with the view to cancellation, and retaining only the necessary portion for water supply. The Surveyor General had better be referred to.—J.E., 24 July.

As Mr. Surveyor Bolton is now in Sydney the advisability of bringing this matter under the notice of the Minister for Lands is suggested to Mr. Pretious.—P.F.A., 26 July.

No. 46.

Memos.

Charting Branch.

MEMO. of subjects requiring explanation or completion in connection with the survey and plan of 320 acres $\frac{3}{4}$, county of Urana, transmitted to Mr. L.-S. Gordon, letter of 24 August, 1870, and on which Mr. Gordon's report in explanation is requested. Appendix D.
See No. 45.

Subject.

The bearing of No. 44 on traverse line is required. Is the ana-branch excluded from the area?—E. TWYNAM (for the Surveyor General), 21 Sept., 1870.

The area of this portion is 335 acres. Mr. Gordon should explain.—J.S.A. (for the Surveyor General), 3 October, 1870.

Mr. Gordon has not given the length of the amended boundary, nor the distance from north-west corner to the connection.—P. F. ADAMS, 5 May, 1871.

The distance from the north-west corner to the connection is not given by Mr. Gordon on his plan.—P.F.A., 8 June.

Report.

The bearing of No. 44 is $5^{\circ} 30'$. The ana-branch is only a dry hollow in the summer time, and therefore not excluded.—HUGH GORDON, L.S., Survey Camp, Deniliquin, 28/9/70.

I have cut off 15 acres as suggested; my *calculations, which I transmit herewith, shew the original area to have been 321. 4 acres, exclusive of offsets.—H. GORDON, L.S., Deniliquin, 12 April, 1871. See Enclosure.

The length of amended boundary is 85.11 links, and there was no reference tree at either end of it. The distance from north-west corner to connection is the same as before.—H. GORDON, L.S., Survey Camp, 20 May, 1871.

It is 1,810.—H. GORDON, L.S., 17 June, 1871.

[Enclosure A to No. 46.]

No. 47.

The Surveyor General to Mr. Surveyor Gordon.

Sir,

Surveyor General's Office, Sydney, 5 April, 1871.

See No. 46

I have to refer you to my memorandum, dated 3rd of October, 1870, respecting your survey of 320 acres, county of Urana, on Yanko Creek, applied for by John Sutherland, and to request that the matter may receive your early attention.

2. Should there be any cause of delay you will explain it, and at the same time state when it is probable that the information required will be supplied.

I am, &c.,

P. F. ADAMS.

See No. 46.

I transmit the memorandam referred to herewith.—H. GORDON, L.S., Deniliquin, 12/4/71.

No. 48.

Mr. Surveyor Gordon to The Surveyor General.

Sir,

Deniliquin, 12 April, 1871.

Appendix E.

See No. 34.

I have the honor to transmit plan of 320 acres applied for by Messrs. Holmes, White, & Co., for auction sale, situated on Bundure Run, parish of Bundure, county Urana, portion No. 13. Instructions dated 21st September, 1869.

I am, &c.,

HUGH GORDON.

See Appendix B to No. 36.

D.-S. Office, Albury, 20 May, 1871. Submitted.—This portion comes within the Yanko Creek Reserve, No. 157, notified 22nd December, 1865. Should so much of the reserve as is contained in the portion be revoked, or should the measurement be cancelled? I have great hesitation in recommending the cancellation of any portion of the Yanko Creek Reserve. The land now surveyed will be immediately taken up.—T.H.L., 27 July, 1871. I have called the attention of Crown Lands Commissioner to the state of this reserve with a view to obtaining a decision from the Minister.—P.F.A., 27 July, 1871. Mr. Watt.—Will you be good enough to see Mr. Du Faur respecting the reserve in question? The matter has now been very long in hand.—T.H.L., 21 October, 1872. Mr. Lewis.—Upon inquiry at the C. C. Lands Office I find that no decision has yet been given in this matter. I also understand that there is no present prospect of its being definitely settled.—F.W.W., 2 January, 1873. The Surveyor General.—What action?—T.H.L., 2 January, 1873. Await decision.—J.S.A., 2 January. Mr. Pretious.—Has any decision yet been given?—J.S.A., 10 September, 1873. See papers herewith.—A.O.P.

Previous correspondence.

No. 49.

Mr. J. Mitchell to The Minister for Lands.

Sir,

Deniliquin, 7 June, 1871.

See below.

I have the honor to apply for the rescission of the reservation of the land particularized in the annexed description, in terms of the 12th section of the "Crown Lands Alienation Act of 1861," and I enclose a Post Office order for the sum of £5 as the deposit required by the 20th clause of the regulations under the said Act.

I have, &c.,

JOHN MITCHELL,

By his Attorney, Thomas Robertson.

Description.

320 acres, county of Urana, parish of Thurrowa, on the north side of the Yanko Creek, adjoining Sutherland's conditional purchase of 65 acres, and opposite land purchased by Mr. Wilson.

Post Office order received, £5.—12/2/71. Return the money order, and explain that the additional regulations quoted refer to rescissions of reservations of water frontage under the 12th clause of the Act. State that his application, which appears to be for the revocation of reserve set apart under the 4th clause of the Act, will be duly inquired into.—12/6/71. The advisableness of revoking the reserve referred to is under consideration, and will probably be shortly revoked.—J.E. Mr. Unwin.—Why was this money order detained?—19/7/71. Now placed with letter.—20/7/71. Memo. S. Gl.—This is an application to select within the Yanko Creek Reserve, notified for water supply in 1865, which includes the land within 1 mile of the Yanko from the Murrumbidgee to the Colombo Creek. Mr. Bolton reported in 1868 on this reserve, and submitted that certain portions of it only should be retained. Mr. Bolton's report was sent under B.C. to the Crown Lands Department, and nothing has been done in the carrying out Mr. Bolton's recommendations. Will the Surveyor General consider it now advisable to remind the Crown Lands Department on the subject?—J.E., 24 July. Chief Officer in charge of Crown lands accordingly.—P.F.A., 25 July.

Not obtainable

No. 50.

The Under Secretary for Lands to T. Robertson, Esq.

Sir,

Department of Lands, Sydney, 18 July, 1871.

No. 49.

With reference to your letter of the 7th ultimo, applying, on behalf of Mr. James Mitchell, under the 12th clause of the Crown Lands Alienation Act, for the rescission of the reservation of 320 acres of land on the north side of Yanko Creek, parish of Thurrowa, and enclosing a Post Office order for £5, in accordance with the Regulations published on the 12th April last, I am directed to point out to you that

Copy herewith

the clause of the Act in question refers to rescission of reservation of water frontage, whereas your application is apparently for the revocation of a reserve for the preservation of water supply under the 4th clause of that Act. I am, however, to inform you that the expediency of revoking the reserve is now under consideration, and should such revocation be found to be desirable the land will in due course be thrown open for sale, either by conditional purchase or auction.

2. I am to return to you herewith a Post Office order for the £5 forwarded by you, less six pence, ^{£4 19s. 6d.} the cost of remission.

I have, &c.,

W. W. STEPHEN.

[Enclosure to No. 50.]

Department of Lands, Sydney, 12 April, 1871.

It is hereby notified, for public information, that His Excellency the Governor, with the advice of the Executive Council, has been pleased to make the following additional regulation for carrying into effect the "Crown Lands Alienation Act of 1861."

J. BOWIE WILSON.

Every application for rescission of reservation of water frontage under the 12th section of the Crown Lands Alienation Act shall be accompanied by a deposit of £5, which, if the application be complied with, will form part of the purchase money, but will be returned if the application be refused. If the application be withdrawn, or the applicant fail to complete the purchase within the six months limited by the 20th clause of the Regulations, the deposit will be forfeited.

No. 51.

Memo. by The Chief Draftsman.

21 July, 1871.

Mr. Ellis,—Do you remember the object of the reserve, and by whom recommended? Should this go to Mr. Wood for report?—J.S.A.

The Yanko Creek Reserve was notified in December, 1865, on account of the creek having been improved by the run holders. The Surveyor General informed me that he intended again bringing the matter forward, with the view to cancelling it and retaining only such portion as may be necessary for water supply. Mr. Bolton reported on the matter in January, 1868, which report was sent to Crown Lands Branch by Surveyor General, and is numbered 68/749 of that Branch. Probably the Surveyor General should be referred to.—J.E., 24 July.

See Appendix B
to No. 36.

Submitted.—J.S.A., 25. Let me have papers referred to in this memorandum, and Proclamation of reserve.—A.O.P., 26 July.

No. 52.

Minute of the Officer in Charge of the Occupation Branch.

Reserves on the Yanko and Colombo Creeks.

22 August, 1871.

The general reserve on the Billabong Creek has been cancelled, and special reserves of portions of the frontage have been substituted.

These papers are now referred to Commissioner Crommelin, with a view to his reporting on the advisability of adopting the same course with reference to the general reserves on the Yanko and Colombo Creeks.

If it be deemed expedient to cancel the general reserves on these creeks, it will be requisite that great care should be taken in recommending suitable and sufficient special reserves on the frontage to admit of the beneficial occupation of the back country, and to prevent, so far as practicable, the depreciation of the Crown leaseholds.

▪ A.O.P.

Remind Commissioner Crommelin.—A.O.P., 15 June, 1872.

No. 53.

Memo. by Mr. T. H. Lewis.

I HAVE a couple of surveys of 320 acres each applied for under the 23rd clause, and are situated within the Yanko Creek Reserve. In your memo. of the 27th July last you stated "I have called the attention of Crown Lands Commissioner to the state of this reserve with a view to obtaining a decision from the Minister." What action shall now be taken?—T. H. LEWIS. Referred again to the officer in charge of the Crown Lands Office.—P.F.A., 11 Oct., 1871. I have thought it desirable to obtain the report of Commissioner Crommelin before dealing with this matter.—A.O.P., 13 Oct., /71. The Surveyor General. Any report?—P.F.A. Not at present. I am in expectation of receiving it shortly.—A.O.P., 27. Mr. Pretious,—Has any action been taken in this matter, or is any required?—G.E.H., 11 Nov., /72. Reserves submitted for approval on their notification. Inform Surveyor General with reference to this memo.—E.D., 3/12/72.

See No. 43.

No. 54.

Mr. A. O. Pretious to The Commissioner of Crown Lands, Murrumbidgee.

Sir,

Occupation of Lands, Sydney, 19 June, 1872.

Referring to my B.C. communication of the 22nd August last on the subject of the Yanko and Colombo Creek Reserves, I have the honor to request that you will advise me as to when you will be in a position to furnish me with a report on the matter.

I have, &c.,

A. O. PRETIOUS,

Chief Officer in Charge.

No. 55.

Mr. S. Wilson to The Surveyor General.

Sir,

Yanko Station, Jerilderie, 20 June, 1872.

Having become the proprietor of the improvements detailed below, and which I estimate to be worth £300, I have the honor to apply that I may be permitted to purchase without competition, under the provisions of the "Crown Lands Alienation Act of 1861," the Crown lands on which they stand, and which are described hereunder.

The improvements referred to are now in my possession.

I have, &c.,
SAML. WILSON.

Nature of Improvements.

Three-roomed cottage, detached kitchen, and hut, garden, stockyard, and horse-paddock.

Description of Land.

County of Urana, parish of Wood, 200 acres, on north bank of Yanko Creek, about $\frac{1}{2}$ a mile south by west of section 2, portions N and O, each 320 acres, on north bank Yanko Creek, Yanko Run, district of Murrumbidgee, is held under a promise of lease by Samuel Wilson.—A.O.P., Occupation of Lands, 11 July, 1872. Mr. Licensed-Surveyor Kinley, 2 August, 1872.—J.S.A., 31 July, 1872.

No. 56.

The Commissioner of Crown Lands, Albury, to Mr. A. O. Pretious.

Sir,

Crown Lands Office, Albury, 24 June, 1872.

In reply to your letter of the 19th instant, requesting to be advised when I shall be in a position to furnish a report on the subject of the Yanko and Colombo Creek Reserves, I have the honor to signify my intention to proceed as promptly as possible with the work in question. The subsidence of the present floods must be awaited; but I had previously to the receipt of your letter of the 19th instant determined on giving this work my next attention.

It is a matter of some importance, and as you very forcibly observe in your letter of instructions "it will be requisite that great care should be taken in recommending suitable and sufficient special reserves on the frontages to admit of the beneficial occupation of the Crown lands."

As a personal examination of a large extent of country will be necessary I trust every allowance will be made for any delay that may arise in the completion of my report.

Since the receipt of your B.O., dated 22nd August, 1871, I have been unceasingly employed in other work of a more urgent nature. The whole of the latter part of the year 1871 was taken up in the appraisalment of runs; and the early part of this, with the exception of the short period granted me as leave of absence, has been devoted to work which has been forwarded and can be estimated. I respectfully note these facts to prevent any supposition of *laches* on my part.

I have, &c.,
THOMAS LAKE CROMMELIN,
C.C.L.

No. 57.

Mr. J. Wilson to The Surveyor General.

A.

Application for the purchase of improved Crown lands.

Sir,

Coonong, Urana, *via* Deniliquin, 30 June, 1872.

Having erected the improvements detailed below, and which I estimate to be worth £2,560 sterling, I have the honor to apply that I may be permitted to purchase, without competition, under the provisions of the "Crown Lands Alienation Act of 1861," the Crown lands on which they stand, and which are described hereunder.

The improvements referred to are now in my possession.

I have, &c.,
JAMES WILSON,
Pro. SAMUEL M'CAUGHEY.

The following are the improvements, viz. :—

At the Home Station—		acres.
Dwelling-house and garden	...	320
Two-roomed kitchen, brick store, stable, men's hut, &c.	...	320
At the Colombo Creek—		
Wool-shed	...	320
Two bridges, stable, and hay-room	...	320
Dam at Colombo Creek, and bridge	...	320
Hot water wash and appliances	...	320
Shearers' dwelling, overseers' dwelling, and washers' dwelling	...	320
Dam on Colombo Creek	...	320
Total number of acres	...	2,560

Mr. Pretious, 22/7/72. "Coonong" Run, District Murrumbidgee, is held under a promise of lease by John Wilson, Charles Wilson, and Samuel Wilson.—A.O.P., Occupation of Lands, 25 July, 1872. Mr. Licensed-Surveyor Orr to measure if unobjectionable.—R. D. FITZGERALD (for Sur. Genl.), 3 Sep., /72. Instructions issued, 13 September, /72.

No. 58.

The Commissioner of Crown Lands, Murrumbidgee, to The Officer-in-charge,
Occupation Branch.

Sir,

Crown Lands Office, Jerelderie, 20 September, 1872.

Referring to your memo. (date of which I am unable to note) requesting to be informed when I should be able to report on the cancellation of the Yanko and Colombo Creek General Reserves,—

I do myself the honor to inform you that I am now engaged in the completion of this duty, which will receive careful attention.

I shall commence at the junction of the Yanko Creek with the Billabong Creek, proceed up the Yanko to its effluence from the Murrumbidgee, and afterwards down the Colombo Creek to its junction with the Billabong Creek. The time occupied will greatly depend on the weather, but every despatch will be used.

I have, &c.,

THOMAS LAKE CROMMELIN.

No. 59.

The Commissioner of Crown Lands, Murrumbidgee, to The Officer-in-charge,
Occupation Branch.

Sir,

Crown Lands Office, Murrumbidgee, 21 September, 1872.

Referring to your B.C. communication of the 22nd August, 1871, and your subsequent memo. of the 19th June last, requesting my report on the advisability of cancelling the great reserve on the Yanko and Colombo Creeks, notified 23rd December, 1865, and substituting such special reserves on the frontages as would sufficiently protect the public interests, I do myself the honor to transmit the following Report:—

See No. 52.
See No. 64.
See Appendix B
to No. 38.

In the first place, I must inform you that several of the leaseholders having runs on these creeks, hearing of the contemplated revocation of the general reserve, addressed, as well as expressed, strong remonstrances on the subject, in the hope that it might remain intact until the expiration of the present leases. These remonstrances, based as they are on equitably plausible grounds, are certainly entitled to consideration, and I note them accordingly.

The leaseholders state that the heavy outlay on what are known as the "Yanko Cuttings," and their maintenance and repair, has proved a constantly recurrent expense. That by these means and the erection of extensive dams the creeks have been made what they are, the Colombo Creek more especially, being in its normal state a dry channel, excepting in times of exceptionally heavy rains and high floods.

The original contract entered into was for the excavation of 40,000 cubic yards of earth at 2s. 4d. per yard, but the contractors failing to fulfil their agreements the "Yanko Association," composed of the leaseholders interested, was formed, and the work completed at an additional cost of £7,876, nearly £12,000 in all, which was defrayed by a ratable mileage frontage assessment. These cuttings, the one at the Yanko effluence from the Murrumbidgee, and the other at that of the Colombo from the Yanko, are kept in repair and efficiency by those interested and the expense similarly defrayed. It is nearly impossible to arrive at a true estimate of the whole outlay, but admitting it to be very great it is fairly presumable that compensatory advantages have been to some extent secured to the leaseholders during the past seven years of the existence of this general reserve. It is furthermore observable that partial cancellations of this reserve have been made in order to satisfy the demands of the leaseholders to purchase such portions of their frontages as contained improvements.

Again, on some of the runs, "Yanko" more particularly, several measured portions have been purchased by the lessee after cancellation and submission to auction sale. "Bundure" has also been permitted to purchase, and as this disposition to purchase is increasing, and to my own knowledge applications made to purchase fully 16,000 acres, I see no reason why a cancellation *in globo* should not be made, provided always that suitable and sufficient special reserves on the several frontages be made for the protection of the public interests and the beneficial occupation of the back country.

This cancellation ought to be modified in two very essential particulars, viz. :—At the effluence of the Yanko from the Murrumbidgee, and also at that of the Colombo from the Yanko, the reserve on each side of the creeks at these two points should remain intact, say for about 3 or 4 miles at the first-named point, and equally so or less at the last-named. But I will, after a personal examination of these parts, report more particularly as to the area necessary for reservation. If conditional purchases were permitted at these portions the injury to the whole frontages of the creeks might be incalculable, since by the erection of a small dam, especially at the Colombo effluence, a thorough stoppage of the creek waters might be effected.

I have, &c.,

THOMAS LAKE CROMMELIN,
C.C.L.

No. 60.

The Commissioner of Crown Lands, Murrumbidgee, to The Officer-in-charge,
Occupation Branch.

Sir,

Crown Lands Office, Murrumbidgee, 21 September, 1872.

I do myself the honor to remark that the accompanying recommendations for water reserves on the Yanko Creek are made on the presumption that the general reserve be cancelled in terms of my report of this date; the notification of these substitutes will doubtless take place at the same time as the cancellation. I purpose dealing in like manner with every run through which the Yanko and Colombo Creeks pass. These may be viewed as the first of a series.

Following separately.

I have, &c.,
THOMAS LAKE CROMMELIN,
C.C.L.

No. 61.

No. 61.

The Commissioner of Crown Lands, Murrumbidgee, to The Officer-in-charge,
Occupation Branch.

Sir,

Crown Lands Office, 21 September, 1872.

I have the honor to recommend that the water reserve herein described should be granted, and secured from sale for the preservation of the public estate.

I have, &c.,
THOMAS LAKE CROMMELIN,
C.C.L.

Description of Water Reserve.

District of Murrumbidgee.

General locality—Yanko Creek.

Name of run—Thurrowa.

Extent of proposed reserve in square miles—5 square miles. No. about 3,200 acres, county of Urana.

Description of boundaries of reserves:—The Crown lands within the following boundaries: Commencing on the Yanko Creek at the north-west corner of measured portion $\frac{1}{4}$ of 290 acres; and bounded thence on the east by the west boundary of that land and its prolongation, 5 miles south in all; thence on the south by a line bearing west 1 mile; thence on the west by a line bearing north to the Yanko Creek; and on the north by that creek, upwards, to the point of commencement. Forms portion of Thurrowa Run.

No. 62.

The Commissioner of Crown Lands, Murrumbidgee, to The Officer-in-charge,
Occupation Branch.

Sir,

Crown Lands Office, Murrumbidgee, 22 September, 1872.

I have the honor to recommend that the several reserves hereto appended and described, respectively numbered 1, 2, 3, 4, 5, 6, and 7, on the Yanko Run should be secured from sale. It is in my opinion necessary that the water therein comprised should be reserved for the beneficial occupation of the Crown lands.

No. 1 comprises the Broomey Waterholes. Permanent water.

No. 5 has been described so as to admit of the purchase by the lessee of 200 acres of land, applied for in virtue of improvements, consisting of a three-roomed cottage, with shingled roof, detached kitchen, hut, garden, and horse-paddock, fenced with six-wire fence; worth more than £250.

No. 6 comprises the White Waterhole, which is permanent water.

I have, &c.,

THOMAS LAKE CROMMELIN.

Description of Water Reserves.

District of Murrumbidgee.

General locality—Yanko Creek.

Name of run—Yanko.

Extent of proposed reserves in square miles— $32\frac{1}{2}$ square miles.

Description of boundaries of proposed reserves:—

No. . . . About 3,200 acres, county of Urana. The Crown lands within the following boundaries: Commencing on the right bank of the Yanko Creek at the point where it is intersected by the dividing-fence between Yanko and "Bundure" Runs; and bounded thence on the east by a line bearing north to the north boundary of the run; thence on the north by that line bearing about south 74 degrees west 84 chains 60 links; thence on the west by a line bearing south to the Yanko Creek; and on the south by that creek, upwards, to the point of commencement.

Forms portion of Yanko Run.

No. . . . About 3,200 acres, county of Urana. The Crown lands within the following boundaries: Commencing on the left bank of the Yanko Creek at a point due south of the south-west corner of reserve No. . . . above described; and bounded thence on the east by a line bearing south 5 miles; thence on the south by a line bearing west 1 mile; thence on the west by a line bearing north to the Yanko Creek; and on the north by that creek, upwards, to the point of commencement.

Forms portion of Yanko Run.

No. . . . About 3,200 acres, county of Urana. The Crown lands within the following boundaries: Commencing on the right bank of the Yanko Creek at the south-west corner of measured portion No. $\frac{1}{8}$ of 640 acres; and bounded thence on the east by the west boundary-line of that portion and its prolongation north, in all 5 miles; thence on the north by a line bearing west 1 mile; thence on the west by a line bearing south to the Yanko Creek; and on the south by that creek, upwards, to the point of commencement.

Forms portion of Yanko Run.

No. . . . About 3,200 acres, county of Urana. The Crown lands within the following boundaries: Commencing on the left bank of the Yanko Creek at a point bearing south from the south-west corner of measured portion No. $\frac{1}{8}$ of 640 acres; and bounded thence on the east by a line bearing south 5 miles; thence on the south by a line bearing west 1 mile; thence on the west by a line north to the Yanko Creek; and on the north by that creek, upwards, to the point of commencement.

Forms portion of Yanko Run.

No. . . . About 2,560 acres, county of Urana. The Crown lands within the following boundaries: Commencing on the right bank of the Yanko Creek, and bounded on the east by a line bearing north $3\frac{1}{2}$ miles, passing through a point bearing west 34 chains from the western boundary of measured portion No. $\frac{1}{8}$, of 640 acres; thence on the north by a line bearing west 1 mile; thence on the west by a line bearing south $4\frac{1}{2}$ miles; and on the south by a line bearing east to the Yanko Creek, and by that creek, upwards, to the point of commencement.

Forms portion of Yanko Run.

No.

No. . About 3,200 acres, county of Urana. The Crown lands within the following boundaries: Commencing on the right bank of the Yanko Creek at a point bearing north from the north-east corner of measured portion No. $\frac{2}{3}$ (on the Coree Run), of 640 acres; and bounded thence on the east by a line bearing north 5 miles; thence on the north by a line bearing west 1 mile; thence on the west by a line bearing south to the Yanko Creek; and on the south by that creek, upwards, to the point of commencement.

Forms portion of Yanko Run.

No. . About 1,600 acres, county of Townsend. The Crown lands within the following boundaries: Commencing on the right bank of the Yanko Creek at the south-east corner of measured portion No. 1, parish of Wononga, containing 640 acres; and bounded thence by the east boundary of that land and its prolongation north, in all 5 miles; thence on the north by a line bearing east 40 chains; thence on the east by a line bearing south to the Yanko Creek; and on the south by that creek, downwards, to the point of commencement.

Forms portion of Yanko Run.

No. 63.

The Commissioner of Crown Lands, Murrumbidgee, to The Officer-in-charge,
Occupation Branch.

Sir,

Crown Lands Office, Murrumbidgee, 24 September, 1872.

I do myself the honor to transmit descriptions of four reserves on the North Carrabunganung Run, which I am of opinion are necessary in substitution of the general reserve recommended for cancellation. For the protection of the public interests they should be excluded from purchase, as containing the best waterholes in the creek.

I have, &c.,

THOMAS LAKE CROMMELIN,
C.C.L.

Description.

District of Murrumbidgee.

General locality—Yanko Creek.

Name of run—North Carrabunganung.

Name (if any)—Nil.

Extent of proposed Reserves in square miles—8 square miles.

Description of boundaries of proposed reserves.

No. . About 1,440 acres, county of Townsend. The Crown lands within the following boundaries: Commencing on the left bank of the Yanko Creek at a point above the east boundary-fence of this run crosses that creek; and bounded thence on the east by a line bearing south 2 miles; thence on the south by a line bearing west 1 mile; thence on the west by a line bearing north to the Yanko Creek; and on the north by that creek, upwards, to the point of commencement.

Forms portion of North Carrabunganung Run.

No. . About 960 acres, county of Townsend. The Crown lands within the following boundaries: Commencing on the left bank of the Yanko Creek at a point opposite the south-west corner of measured portion No. $\frac{2}{3}$ of 320 acres (measured in virtue of improvements, consisting of Mr. Blackwood's dam); bounded thence on the west by a line bearing south $1\frac{1}{2}$ mile; thence on the south by a line bearing east 1 mile; thence on the east by a line bearing north to the Yanko Creek; and on the north by that creek, downwards, to the point of commencement.

Forms portion of North Carrabunganung Run.

Fine natural hole in this reserve.

No. . About 960 acres, county of Townsend. The Crown Lands within the following boundaries: Commencing on the right bank of the Yanko Creek at the south-west corner of measured portion broad-arrow over $\frac{2}{3}$ of 320 acres; and bounded thence on the east by the west boundary of that portion and its prolongation being a line bearing north in all 3 miles; thence on the north by a line bearing west 40 chains; thence on the west by a line bearing south to the Yanko Creek; and on the south by that creek, upwards, to the point of commencement.

Forms portion of North Carrabunganung Run.

No. . About 1,760 acres, county of Townsend. The Crown lands within the following boundaries: Commencing on the right bank of the Yanko Creek at a point where the eastern boundary of North Carrabunganung Run crosses that creek; and bounded thence on the east by a line bearing north 3 miles; thence on the north by a line bearing west 1 mile; thence on the west by a line bearing south to the Yanko Creek; and on the south by that creek, upwards, to the point of commencement.

Forms portion of North Carrabunganung Run.

No. 64.

The Commissioner of Crown Lands, Murrumbidgee, to The Officer-in-charge,
Occupation Branch.

Sir,

Crown Lands Office, Murrumbidgee, 24 September, 1872.

I have the honor to recommend the adoption of the water reserve herein described as necessary for the protection of the public interests in regard to the Puckawidgee Run when the cancellation of the Yanko Reserve is proclaimed.

I have, &c.,

THOMAS LAKE CROMMELIN,
C.C.L.

Description.

District of Murrumbidgee.

General locality—Yanko Creek.

Name of run—Puckawidgee.

Name (if any)—Nil.

Extent of proposed reserve in square miles—4 square miles.

Description

Description of boundaries within proposed reserve.

No. . . . About 2,560 acres, county of Townsend. The Crown lands within the following boundaries: Commencing at the right bank of the Yanko Creek at the south-east corner of the Puckawidgee Run; and bounded thence on the east by a line bearing north 4 miles; thence on the north by a line bearing west 1 mile; thence on the west by a line bearing south to the Yanko Creek; and on the south by that creek, upwards, to the point of commencement.

The Commissioner of Crown Lands, Murrumbidgee, to The Officer-in-charge,
Occupation Branch.

Sir,

Crown Lands Office, Murrumbidgee, 4 October, 1872.

I do myself the honor to report, that in my opinion the lands described in the accompanying descriptions should be reserved from sale. The several sites have been selected so as to secure access to the best water available on the frontages of the Goree Run, and for the protection of the public interests.

I have, &c.,

THOMAS LAKE CROMMELIN,
C.C.L.

Description.

District of Murrumbidgee.

General locality—Yanko Creek.

Name of run—Goree.

Name (if any)—Nil.

Extent of proposed reserves in square miles— $11\frac{1}{2}$ square miles.

Description of boundaries of proposed reserves.

No. . About 1,400 acres, county of Urana. The Crown lands within the following boundaries: Commencing on the left bank of the Yanko Creek, about 2 miles above Goree old station, at a tree marked broad-arrow over w over H , about 2 miles below a division fence and below a big waterhole; and bounded thence on the south by a line bearing south 63 degrees east to the eastern boundary-line of Goree Run; thence on the east by that line bearing north 31 degrees east 70 chains 50 links; thence on the north by a line bearing north 63 degrees west to the Yanko Creek; and on the west by that creek, downwards, to the point of commencement.

Forms portion of Goree Run.

No. . About 2,800 acres, county of Urana. Crown lands within the following boundaries: Commencing on the right bank of the Yanko Creek, at a point opposite a gum-tree marked broad-arrow over w over H , the said tree being on the left bank below a big waterhole and about 2 miles above Goree old station, and bounded thence on the south by a line bearing west 27 degrees north 5 miles; thence on the west by a line bearing north 27 degrees east 70 chains; thence on the north by a line bearing east 27 degrees south to the Yanko Creek; and on the east by that creek, downwards, to the point of commencement.

Forms portion of Goree Run.

No. . About 1,280 acres, county of Urana. The Crown lands within the following boundaries: Commencing at a gum-tree marked broad-arrow over w over J , on the left bank of the Yanko Creek, opposite the outbreak of the Yellow Creek, about 20 chains below a subdivision fence; and bounded thence on the south-west by a line bearing south-east 2 miles; thence on the south-east by a line bearing north-east 1 mile; thence on the north-east by a line bearing north-west to the Yanko Creek; and on the north-west by that creek, downwards, to the point of commencement.

Forms portion of Goree Run.

No. . About 1,920 acres, county of Urana. The Crown lands within the following boundaries: Commencing on the right bank of the Yanko Creek, at the effluence of the Yellow Creek from the Yanko Creek, opposite a gum-tree marked broad-arrow over w over J , about $\frac{1}{4}$ of a mile below a subdivision fence; and bounded thence on the south-west by a line bearing north-west 3 miles; thence on the north-west by a line bearing north-east 1 mile; thence on the north-east by a line bearing south-east to the Yanko Creek; and on the south-east by that creek, downwards, to the point of commencement.

Forms portion of Goree Run.

Minute on No. 67.

These reserves are opposite each other, reserving the same 2 mile frontage on each side of the creek. This is against the Regulations issued in 1865 or 6. Perhaps under the circumstances of these proposed reserves they might be allowed; either one can at any future time be revoked, if necessary.—E.D., 28/11/75.

No. 68.

The Commissioner of Crown Lands, Murrumbidgee, to The Officer-in-charge,
Occupation Branch.

Sir,

Crown Lands Office, Murrumbidgee, 4 October, 1872.

I do myself the honor to recommend that the five water reserves on the Bingeang Run herewith described be excluded from purchase for the protection of the public interests. Nos. 1 and 2 embrace the well known Bingeang Waterhole; the water is permanent. No. 3 is very good water, and Nos. 4 and 5 embrace the Reedy Waterhole.

They are within the limits laid down by the Department, both as regards the extent of frontage and their depth.

I have, &c.,

THOMAS LAKE CROMMELIN,
C.C.L.

District

District of Murrumbidgee.
 General locality—Yanko Creek.
 Name of run—Bingegang.
 Name (if any)—Nil.
 Extent of proposed reserves in square miles— $9\frac{1}{4}$ square miles.

Description of boundaries of proposed reserves.

No. . . About 3,200 acres, county of Urana. The Crown lands within the following boundaries: Commencing on the right bank of the Yanko Creek at a point 3 chains below the confluence of the ana branch of the Colombo Creek, and opposite a gum-tree marked broad-arrow over WR over F; and bounded thence on the south by a line bearing west 5 miles; thence on the west by a line bearing north 1 mile; thence on the north by a line bearing east to the Yanko Creek; and on the east by that creek, downwards, to the point of commencement.

Forms portion of Bingegang Run.

No. . . About 320 acres, county of Urana. The Crown lands within the following boundaries: Commencing on the Yanko Creek at a point 20 chains north of the confluence of the Colombo ana branch, the said confluence being 3 chains above a tree marked broad-arrow over WR over F; and bounded thence on part of the south by a line bearing east 1 mile; thence on the east by a line bearing north 40 chains; thence on the north by a line bearing west to the Yanko Creek; and on the west by that creek, downwards, to the point of commencement.

Forms portion of Bingegang Run.

No. . . About 1,440 acres, county of Urana. The Crown lands within the following boundaries: Commencing on the left bank of the Yanko Creek at the point where the subdivision fence strikes the creek immediately below the new Gorce Homestead, Bingegang Run; and bounded thence on the north by a line bearing east 3 miles; thence on the east by a line bearing south 40 chains; thence on the south by a line bearing west to the Yanko Creek; and on the west by that creek, upwards, to the point of commencement.

Forms portion of Bingegang Run.

No. . . About 1,920 acres, county of Urana. The Crown lands within the following boundaries: Commencing on the left bank of the Yanko Creek at a gum tree marked broad-arrow over WR over G, bearing west 9 degrees north 35 chains from the south end of Reedy Waterhole; and bounded thence on the south by a line bearing south 63 degrees east to the east boundary of the Bingegang Run; thence on the east by part of that line bearing about north 34 degrees east 1 mile and 60 links; thence on the north by a line bearing north 63 degrees west to the Yanko Creek; and on the west by that creek, downwards, to the point of commencement.

Forms portion of Bingegang Run.

No. . . About 2,560 acres, county of Urana. The Crown lands within the following boundaries: Commencing on the right bank of the Yanko Creek, at a point opposite a gum-tree marked G with broad-arrow and WR under, bearing west 9 degrees north from the south end of Reedy Waterhole; and bounded thence on the south by a line bearing north 63 degrees west to the western boundary of the Bingegang Run; thence on the west by part of that line bearing north 20 degrees west 1 mile 56 links; thence on the north by a line bearing south 63 degrees east to the Yanko Creek; and on the east by that creek, downwards, to the point of commencement.

Forms portion of Bingegang Run.

No. 69.

The Commissioner of Crown Lands, Murrumbidgee, to The Officer-in-charge,
 Occupation Branch.

Sir,

Crown Lands Office, Murrumbidgee, 4 October, 1872.

I do myself the honor to recommend that the three reserves herewith described on the Yarrabee Run should be excluded from purchase for the beneficial occupation of the Crown lands.

Nos. 1 and 3 embrace the Yarrabee Waterhole, which contains permanent water.

No. 3 is described so as to exclude very valuable improvements, consisting of large wool-sheds, mens' huts, drafting-yards, valued at upwards of £1,200, and to include the best water—the object to be secured.

I have, &c.,
 THOMAS LAKE CROMMELIN,
 C.C.L.

District of Murrumbidgee.

General locality—Yarrabee Creek.
 Name of run—Yarrabee.
 Name (if any)—Nil.
 Extent of proposed reserves in square miles—About 12 square miles.

Description of boundaries of proposed reserves.

No. . . About 2,880 acres, county of Urana. The Crown lands within the following boundaries: Commencing on the left bank of the Yanko Creek, at a point bearing east from the north-east corner of W. Howell's 320 acres at Yarrabee head station; and bounded thence on the north by a line bearing east to the east boundary of Yarrabee Run; thence on the east by that boundary bearing about south 22 degrees west 1 mile and 6'30 chains; thence on the south by a line bearing west to the Yanko Creek; and on the west by that creek, upwards, to the point of commencement.

Forms part of Yarrabee Run.

No. . . About 2,400 acres, county of Urana. The Crown lands within the following boundaries: Commencing at a gum-tree marked broad-arrow over WR over E, on the Yanko Creek, where the new wash-pen or Back Creek flows into it; and bounded thence on the north by a line bearing west to the west boundary-line of the Yarrabee Run; thence on the west by that line bearing about south 22 degrees west 1 mile and 6'30 chains; thence on the south by a line bearing east to the Yanko Creek; and on the east by that creek, upwards, to the point of commencement.

Forms portion of Yarrabee Run.

No. . . About 2,340 acres, county of Urana. The Crown lands within the following boundaries

Commencing at the south-east corner of W. Howell's 320 acres at Yarrabee homestead; and bounded thence on the north by lines bearing west 2 miles; thence south 20 chains; and thence west to the west boundary of Yarrabee Run; thence on the west by that line bearing about south 22 degrees west 64 chains 73 links; thence on the south by a line bearing east to the Yanko Creek; and on the east by that creek, upwards, to the point of commencement.

Forms portion of Yarrabee Run.

No. 70.

The Commissioner of Crown Lands, Murrumbidgee, to The Officer-in-charge,
Occupation Branch.

Sir,

Crown Lands Office, Murrumbidgee, 5 October, 1872.

I have the honor to recommend that the Crown lands within the boundaries described as n 1 and n 2 on the Yanko Run should be excluded from purchase in the interests of the public. n 2 embraces Tom Groggan Lagoon, which is good water, irrespective of that in the creek. This run has its name spelt with a "c," to contradistinguish it from Mr. S. Wilson's, spelt with a "k," situated near Jerilderie.

I have, &c.,

THOMAS LAKE CROMMELIN,
C.C.L.

District of Murrumbidgee.

General locality—Murrumbidgee River and Yanko Creek.

Name of run—Yanko.

Extent of proposed reserve in square miles—5½ square miles.

Description of boundaries of proposed reserves.

No. . . About 960 acres, county of Urana. The Crown lands within the following boundaries: Commencing on the right bank of the Yanko Creek, at a point bearing south 40 degrees west 11 chains from Tom Groggan Lagoon, and east 165 links, from a gum-tree marked broad-arrow over WR over A; and bounded thence on the south by a line bearing west to the west boundary of Yanko Run; thence on the west by that line bearing north 1 mile; thence on the north by a line bearing east to the Yanko Creek; and on the east by that creek, downwards, to the point of commencement.

Forms portion of Yanko Run.

No. . . About 2,560 acres, county of Urana. The Crown lands within the following boundaries: Commencing on the left bank of the Yanko Creek, at a gum-tree marked broad-arrow over WR over B bearing about south 50 chains from the Tom Groggan Lagoon; and bounded thence on the south by a line bearing east 4 miles; thence on the east by a line bearing north 1 mile; thence on the north by a line bearing west to the Yanko Creek; and on the west by that creek, downwards, to the point of commencement.

Forms portion of Yanko Run.

Minute on No. 70.

THESE reserves reserve in part the same frontage on opposite sides of the creek, which is against the Regulations of 1865-6. Perhaps under the circumstances of these reserves they may be allowed—either reserve may be revoked, if found to be objectionable.—E.D., 2/12/72.

No. 71.

The Commissioner of Crown Lands, Murrumbidgee, to The Officer-in-charge,
Occupation Branch.

Sir,

Crown Lands Office, Murrumbidgee, 9 October, 1872.

I do myself the honor to recommend that the two reserves herein described on the Colombo Run should be secured from conditional or other purchase. It is necessary that access to such water as the creek contains should be secured for the beneficial occupation of the Crown lands.

I have, &c.,

THOMAS LAKE CROMMELIN,
C.C.L.

District of Murrumbidgee.

General locality—Colombo Creek.

Name of run—Colombo.

Extent of proposed reserves in square miles—5¼ square miles.

Description of boundaries of proposed reserves.

No. . . About 1,920 acres, county of Urana. The Crown lands within the following boundaries: Commencing on the right bank of the Colombo Creek, at a point 1½ mile below the Colombo Head Station, and opposite a gum-tree marked broad-arrow over WB over WR; and bounded thence on the north by a line bearing west 3 miles; thence on the west by a line bearing south 60 chains; thence on the south by a line bearing east to the Colombo Creek; and on the east by that creek, upwards, to the point of commencement.

Forms portion of Colombo Run.

No. . . About 1,440 acres, county of Urana. The Crown lands within the following boundaries: Commencing on the right bank of the Colombo Creek, at a point 35 chains south of its intersection with the telegraph line; and bounded thence on the south by a line bearing west 3 miles; thence on the west by a line bearing north 60 chains; thence on the north by a line bearing east to the Colombo Creek; and on the east by that creek, downwards, to the point of commencement.

Forms portion of Colombo Run.

No. 72.

The Commissioner of Crown Lands, Murrumbidgee, to The Officer-in-charge,
Occupation Branch.

Sir,

Crown Lands Office, Murrumbidgee, 9 October, 1872.

I do myself the honor to recommend that the three water reserves herein described should be secured for the beneficial occupation of the Crown lands. They are on the Cocketgedong Run, the lessees of which have effected very valuable improvements on the frontage of the Colombo Creek by the erection of dams, wool-shed, and sheep-wash, in virtue of which they have applied to purchase the several portions of land containing them. As there are no permanent waterholes on this frontage, I have secured the public interests without prejudice to the lessees' rights under the 8th clause of the "Crown Lands Alienation Act of 1861."

I have, &c.,

THOMAS LAKE CROMMELIN,

C.C.L.

District of Murrumbidgee.

General locality—Colombo Creek.

Name of run—Cocketgedong.

Extent of proposed reserves in square miles—4½ square miles.

Description of boundaries of proposed reserves.

No. . . . About 1,920 acres, county of Urana. The Crown lands within the following boundaries: Commencing on the left bank of the Colombo Creek, at a point where the Give and Take fence crosses it, about 30 chains below the north-east corner of the Colombo Creek Run; and bounded thence on the west by a line bearing south 3 miles; thence on the south by a line bearing east 1 mile; thence on the east by a line bearing north to the Colombo Creek; and on the north by that creek, downwards, to the point of commencement.

Forms portion of Cocketgedong Run.

No. . . . About 430 acres, county of Urana. The Crown lands within the following boundaries: Commencing on the left bank of the Colombo Creek; and bounded thence on the south by a line bearing east 1½ mile, passing 20 chains south of a tree marked broad-arrow over WR over II, the said tree being on the left bank of the creek, where a subdivision fence crosses it, and about 60 chains north-east from the south-west corner of Colombo Creek Run; thence on the east by a line bearing north 40 chains; thence on the north by a line bearing west to the Colombo Creek; and on the west by that creek, downwards, to the point of commencement.

Forms portion of Cocketgedong Run.

No. . . . About 320 acres, county of Urana. The Crown lands within the following boundaries: Commencing on the right bank of the Colombo Creek at a tree marked broad-arrow over WR over III, about 20 chains below the Colombo Creek Bridge; and bounded thence on the west by a line bearing south 1 mile; thence on the south by a line bearing east 40 chains; thence on the east by a line bearing north to the Colombo Creek; and on the north by that creek, upwards, to the point of commencement.

Forms portion of Cocketgedong Run.

No. 73.

The Commissioner of Crown Lands, Murrumbidgee, to The Officer-in-charge,
Occupation Branch.

Sir,

Crown Lands Office, Murrumbidgee, 12 October, 1872.

I have the honor to recommend that the four reserves as herewith described in the Coonong Run be excluded from purchase as being necessary for the protection of the public interests. The water throughout the whole of the frontage of the run may be termed artificial; there are no deep waterholes such as are to be found on the Yanko Creek. The lessee had applied for purchases of several portions of this frontage in virtue of very valuable improvements erected thereon, and Mr. Licensed-Surveyor Orr was engaged on their survey. Reserves No. 1 and 2 embrace some of the water from a very fine dam, but my reserves will not interfere with the lessees' rights to purchase.

I have, &c.,

THOMAS LAKE CROMMELIN,

C.C.L.

District of Murrumbidgee.

General locality—Colombo Creek.

Name of run—Coonong.

Extent of proposed reserves in square miles—11½ square miles.

Description of boundaries of proposed reserves.

No. . . . About 960 acres, county of Urana. The Crown lands within the following boundaries: Commencing on the right bank of the Colombo Creek, at the north-east corner of a portion of 320 acres, measured in virtue of improvements, consisting of the Coonong large dam; and bounded thence on the north by a line bearing east 60 chains; thence on the east by a line bearing south to the Colombo Creek; and on the south by that creek, downwards, to the point of commencement.

Forms portion of Coonong Run.

No. . . . About 2,400 acres, county of Urana. The Crown lands within the following boundaries: Commencing on the left bank of the Colombo Creek, at the south-west boundary-fence of the Coonong Run; and bounded thence on the south-west by part of that boundary-fence, bearing about south 48 degrees east 5 miles; thence on the south-east by a line bearing north 42 degrees east 60 chains; thence on the north-east by a line north 48 degrees west to the Colombo Creek; and on the north-west by that creek, downwards, to the point of commencement.

Forms portion of Coonong Run.

No. . . . About 1,440 acres, county of Urana. The Crown lands within the following boundaries: Commencing on the right bank of the Colombo Creek, at the point where the boundary-fence between Widgiewa and Coonong Runs crosses that creek; and bounded thence on the north-east by the said boundary-

boundary-fence bearing west 23 degrees 35 minutes north to the north-west corner of Coonong Run ; thence on the north-west by part of the north-west boundary of Coonong Run ; thence on the south-west by a line 60 chains from and parallel to the north-east boundary to the Colombo Creek ; and on the south-east by that creek, upwards, to the point of commencement.

Forms portion of Coonong Run.

No. . . . About 2,400 acres, county of Urana. The Crown lands within the following boundaries : Commencing on the left bank of the Colombo Creek, where a tree stands marked broad-arrow over *WR* over *r*, the said tree bearing south 23 degrees 35 minutes west 58 chains 31 links from the boundary between Widgiewa and Coonong Runs ; and bounded thence on the north-east by a line bearing east 23 degrees 35 seconds south 5 miles ; thence on the south-east by a line bearing west 23 degrees 35 minutes north 60 chains ; thence on the south-west by a line bearing west 23 degrees 35 minutes north to the Colombo Creek ; and on the north-west by that creek, upwards, to the point of commencement.

Forms portion of Coonong Run.

No. 74.

The Commissioner of Crown Lands, Murrumbidgee, to The Officer-in-charge,
Occupation Branch.

Sir,

Crown Lands Office, Murrumbidgee, 14 October, 1872.

I do myself the honor to recommend that the six reserves hereinbefore described should be excluded from sale. They are in my opinion necessary for the protection of the public interests, and situate on the Widgiewa Run, *r1* and *r2*, embrace the Widgiewa Waterhole—the only permanent water throughout the frontage.

I have, &c.,

THOMAS LAKE CROMMELIN,
C.C.L.

District of Murrumbidgee.

General locality—Colombo Creek.

Name of run—Widgiewa.

Extent of proposed reserves in square miles—23½ square miles.

Description of boundaries of proposed reserves.

No. . . . About 3,200 acres, county of Urana. The Crown lands within the following boundaries : Commencing on the left bank of the Colombo Creek, at a gum-tree marked broad-arrow over *CC* over *WR*, situate at the lower end of Old Widgiewa Waterhole ; and bounded thence on the south-west by a line bearing east 22 degrees south 5 miles ; thence on the south-east by a line bearing north 22 degrees east 1 mile ; thence on the north-east by a line bearing west 22 degrees north to the Colombo Creek ; and on the north-west by that creek, downwards, to the point of commencement.

Forms portion of Widgiewa Run.

No. . . . About 2,240 acres, county of Urana. The Crown lands within the following boundaries : Commencing on the right bank of the Colombo Creek, at a point immediately opposite a gum-tree marked broad-arrow over *CC* over *WR*, at the lower end of the Old Widgiewa Waterhole ; and bounded thence on the south-west by a line bearing west 22 degrees north 3½ miles ; thence on the north-west by a line bearing north 22 degrees east 1 mile ; thence on the north-east by a line bearing east 22 degrees south to the Colombo Creek ; and on the south-east by that creek downwards, to the point of commencement.

Forms portion of Widgiewa Run.

No. . . . About 2,400 acres, county of Urana. The Crown lands within the following boundaries : Commencing on the left bank of the Colombo Creek at the north-west corner of James Cochrane's measured portion of 320 acres at Widgiewa Homestead ; and bounded thence on the south by the northern boundary of that portion, being a line bearing east to its north-east corner ; thence by a line bearing east 22 degrees south 4½ miles ; thence on the south-east by a line bearing north 22 degrees east 60 chains ; thence on the north-east by a line bearing west 22 degrees north to the Colombo Creek ; and on the north-west by that creek, downwards, to the point of commencement.

Forms portion of Widgiewa Run.

No. . . . About 1,960 acres, county of Urana. The Crown lands within the following boundaries : Commencing on the right bank of the Colombo Creek at a tree marked broad-arrow over *WR* over *4*, about 45 chains above the north-west corner of J. Cochrane's measured portion of 320 acres at Widgiewa Homestead ; and bounded thence on the south-west by a line bearing west 22 degrees north 3 miles ; thence on the north-west by a line bearing north 22 degrees east 70 chains ; thence on the north-east by a line bearing east 22 degrees south to the Colombo Creek ; and on the south-east by that creek, downwards, to the point of commencement.

Forms portion of Widgiewa Run.

No. . . . About 2,500 acres, county of Urana. The Crown lands within the following boundaries : Commencing on the right bank of the Colombo Creek at a tree marked broad-arrow over *WR* over *s* about 50 chains north-east of the 6-mile Dam ; and bounded thence on the south-west by a line bearing west 22 degrees north 4 miles ; thence on the north-west by a line bearing north 22 degrees east 1 mile ; thence on the north-east by a line bearing east 22 degrees south to the Colombo Creek ; and on the south-east by that creek, downwards, to the point of commencement.

Forms portion of Widgiewa Run.

No. . . . About 2,800 acres, county of Urana. The Crown lands within the following boundaries : Commencing on the left bank of the Colombo Creek at a small uri (a prickly honeysuckle) tree marked broad-arrow over *FF* over *WW*, situate about 1½ mile above the south-west boundary of Widgiewa Run ; and bounded thence on the south-west by a line bearing east 22 degrees south 5 miles ; thence on the south-east by a line bearing north 22 degrees east 70 chains ; thence on the north-east by a line bearing west 22 degrees north to the Colombo Creek ; and on the north-west by that creek, downwards, to the point of commencement.

Forms portion of Widgiewa Run.

Minute

Minute on No. 74.

RESERVES No. 1 and No. 2 reserve the same frontage on opposite sides of the creek, which is against Regulations of 1865-6, and Nos. 3 and 4 in part do the same. Under the circumstances of these reserves perhaps they may be allowed, as either reserve can be revoked at any subsequent time, if found to be objectionable.—E.D., 2/12/72.

No. 75.

The Commissioner of Crown Lands, Murrumbidgee, to The Officer-in-charge,
Occupation Branch.

Sir,

Crown Lands Office, Murrumbidgee, 14 October, 1872.

I have the honor to recommend that the reserve herewith described on the Waouck Run should be reserved from sale as necessary for the protection of the public interests.

I have, &c.,

THOMAS LAKE CROMMELIN,
C.C.L.

District of Murrumbidgee.

General locality—Colombo Creek.

Name of run—Waouck.

Extent of proposed reserves in square miles— $1\frac{1}{2}$ square mile.

Description of boundaries of proposed reserves:—No. . . . About 960 acres, county of Urana. The Crown lands within the following boundaries: Commencing on the right bank of the Colombo Creek at a point opposite a post marked E at the end of a line of 4-east fence, being the south-east corner of Waouck Run; and bounded thence on the south-west by a line bearing west 22 degrees north 2 miles; thence on the north-west by a line bearing north 22 degrees east 60 chains; thence on the north-east by a line bearing east 22 degrees south to the Colombo Creek; and on the south-east by that creek, downwards, to the point of commencement.

Forms portion of Waouck Run.

No. 76.

The Commissioner of Crown Lands, Murrumbidgee, to The Officer-in-charge,
Occupation Branch.

Sir,

Crown Lands Office, Murrumbidgee, 14 October, 1872.

I have the honor to recommend the water reserve herein described on the Morandah Run, which in my opinion should be excluded from sale, conditional or otherwise. It embraces a good water-hole, and is required for the public interest.

I have, &c.,

THOMAS LAKE CROMMELIN,
C.C.L.

District of Murrumbidgee.

General locality—Colombo Creek.

Name of Run—Morandah.

Extent of proposed reserves in square miles—About 2,400 acres.*

No. about 2,400 acres, county of Urana.

Description of boundaries of proposed reserves. The Crown lands within the following boundaries: Commencing at a point on the Colombo Creek, about $\frac{1}{4}$ mile below the north-west corner of Waouck Run, and 303 degrees 106 links from a gum-tree marked broad-arrow over BB over WR; and bounded thence on the west by a line bearing north 23 degrees east 40 chains; thence on the north by a line bearing east 19 degrees south 5 miles; thence on the east by a line bearing south 19 degrees west 60 chains; thence on the south by a line bearing west 19 degrees north to the Colombo Creek; and by that creek, upwards, to the point of commencement.

Forms portion of Morandah Run.

No. 77.

The Commissioner of Crown Lands, Murrumbidgee, to The Officer-in-charge,
Occupation Branch.

Sir,

Crown Lands Office, Murrumbidgee, 15 October, 1872.

Referring to my letter of the 21st ultimo, recommending the cancellation of the general reserves on the Yanko and Colombo Creeks, subject to certain modifications therein referred to, I do myself the honor to draw your attention to the description of the two reserves hereto appended, which in my opinion should be excluded from purchase to prevent monopoly of the water therein comprised; and for the prevention of the public estate from injury by depreciation of its value. The reserve recommended at the Yanko effluence is manifestly necessary, as the source of supply to both creeks, and has been limited to 4 miles as the crow flies, though the cuttings, owing to the sinuosities of the creek, was 8 miles in length. I will now draw your attention to the pen and ink tracing which, though roughly made will, I hope, prove all-sufficient in illustrating the salient points at the "effluence of the Yanko ana branch," and the "Colombo effluence" therefrom. At the first-named point the level of the stream-bed had to be deepened and a dam erected at the point shown on the tracing to prevent the reflow of the water into the Yanko along its ana branch. Below this again the stream is very sluggish, there being only a fall (as I am credibly informed) of 4 inches in a mile; the channel too is narrow, rendering the lower end of the reserve essentially necessary. In my opinion, therefore, any interference with these cuttings within the areas recommended by me for reservation from sale, whether on the part of the leaseholder or conditional purchaser, would prove highly injurious to the public interests; on the other hand by guarding against any obstructive interference the value of the frontage lands would be retained, if not considerably enhanced.

It

* This ought to be in square miles.

It must also be borne in mind that these improvements, effected at an enormous expense, must be maintained in repair; even so recently as last year an assessment of £2 per mile frontage was paid by the Colombo Creek leaseholders for repairs of damages, occasioned by floods at the dam, cuttings, and Bridge.

The effect of this cancellation, and the substitution of the special reserves, if adopted, will be to throw open at least 100 square miles of country, embracing 4-5ths of the entire frontage, on each side of the Yanko and Colombo Creeks.

I have, &c.,
THOMAS LAKE CROMMELIN,
C.C.L.

Descriptions.

District of Murrumbidgee.

General locality—Yanko Creek, ana Branch, and Colombo Creek.

Name of reserve—Colombo Cutting Reserve.

Extent of proposed reserve in square miles—7 square miles.

Description of boundaries of proposed reserve. Containing 4,480 acres. All Crown lands within a mile of the Yanko Creek, Yanko ana Branch, and Colombo Creek, within the following points: Commencing on the Yanko Creek where the dray road from Thurrowa to the Yarrabee station crosses that creek, about 3 miles below the Yarrabee station; thence by the Yanko Creek downwards to the effluence of the ana branch leading to the Colombo Creek; thence by that ana branch downwards to the dam erected across it at the effluence of the Colombo Creek therefrom; thence by the Colombo Creek downwards to a gum-tree marked broad-arrow over ox on the right bank of the Colombo Creek at the point below the old Waouck stockyard where the give and take fence between the Waouck and Morandah Runs crosses that creek.

District of Murrumbidgee.

General locality—Yanko Creek.

Name—Yanko Cutting Reserve.

Extent of proposed reserve in square miles—4 square miles.

No. about 2,560 acres, county of Urana.

Description of boundaries of proposed reserves. The Crown lands within the following boundaries. The Crown lands within $\frac{1}{2}$ a mile of each side of the Yanko Creek from the effluence of that creek from the Murrumbidgee River to a point thereon 4 miles as the crow flies, below the said effluence.

Forms portion of Yanko Run.

Under this report and general report on cancellation of Yanko and Colombo Creek Reserves, this reserve may, I presume, be notified.—E.D., 2/12/72.

No. 78.

Messrs. Watt and Thomson to The Surveyor General.

Application for the purchase of improved Crown lands.

Sir,

15 October, 1872.

Having erected the improvements detailed below, and which we estimate to be worth £320, we have the honor to apply that we may be permitted to purchase, without competition, under the provisions of the "Crown Lands Alienation Act of 1861," the Crown lands on which they stand, and which are described hereunder.

The improvements referred to are now in our possession.

We have, &c.,

WATT & THOMSON,

Claimants of lease of Cocketgedong Run, Urana.

Nature of improvements.

Wool room, stores and offices, shearers' hut for twenty-two men, overseer's and weekly men's huts, sheep drafting yards, post and wire fencing.

Description of land.

County of Urana, parish of Cocketgedong, 320 acres, on the left bank of Colombo Creek, say 2 $\frac{1}{2}$ miles north-easterly from north-east boundary of North Yathong Run.

Cocketgedong Run, district of Murrumbidgee, is held under a promise of lease by Alexander Brock and James Hardie.—A.O.P., Occupation of Lands, 25 October, 1872.

Mr. Licensed-Surveyor Orr to measure, if unobjectionable.—R.D.F., 13/11/72.

No. 79.

Messrs. Watt and Thomson to The Surveyor General.

Application for the purchase of improved Crown lands.

Sir,

15 October, 1872.

Having become the proprietors of the improvements detailed below, and which we estimate to be worth £300, we have the honor to apply that we may be permitted to purchase, without competition, under the provisions of the "Crown Lands Alienation Act of 1861," the Crown lands on which they stand, and which are described hereunder.

The improvements referred to are now in our possession.

We have, &c.,

WATT & THOMSON,

Claimants of lease, Cocketgedong Run, Urana.

Messrs. Watt and Thomson to The Surveyor General.

Sir,

Cocketgedong, 15 October, 1872.

We have occupied and possessed this run for three and a half years; lease will be legally transferred to us in January next, and have signed our applications, as claimants of lease, which we trust will be satisfactory. Of the present lessees (Brock & Hardie) one is dead, and the other not at present in the colony.

We have, &c.,

WATT & THOMSON.

No. 85.

Mr. W. G. Elwin to The Minister for Lands.

Sir,

Ganeo, Wagga Wagga, 26 October, 1872.

Would you have me informed if there is any way (in the event of my taking up a large free selection) of my securing the grass right, or does the law always give the squatter right to stop the grass-right against the free selector?

Also, are we to expect the Yanko Creek to be open for selection after the new year.

I have, &c.,

W. G. ELWIN.

Mr. Ellis,—Can you answer this question? 6th Nov.

Refer applicant to sections 12, 16, and 18 of Crown Lands Occupation Act.—J.E., 12 Nov.

The question of the last paragraph should be referred to Mr. Pretious.—J.E., 12 Nov.

No. 86.

The Commissioner of Crown Lands, Murrumbidgee, to The Officer-in-charge,
Occupation Branch.

Sir,

Crown Lands Office, Albury, 4 November, 1872.

Referring to the cancellation of the general reserve on the Yanko and Colombo Creeks, recommended in terms of my report, dated 21st September, 1872, I do myself the honor to transmit for your guidance the accompanying sketch showing the position of the reserves in substitution of the general reserves. This sketch has been very carefully drawn by Crown Lands Bailiff, Mr. Piper, under my direction, and I trust may be received as creditable, having been prepared after attentive reference to the descriptions of the run boundaries and charts extant in the office, and may be regarded as correct as the means at my disposal admit of.

It

No. 69.

Appendix G.

It may be observed that the respective positions of the Yanko and Colombo Creeks and the runs thereon, in the absence of any connecting survey are only approximately correct. Mr. Surveyor Bolton's tracing and a tracing in the Survey Office show considerable discrepancy in the bearings, course, and length of the two creeks.

I have, &c.,

THOMAS LAKE CROMMELIN.

No. 87.

The Commissioner of Crown Lands, Murrumbidgee, to The Officer-in-charge, Occupation Branch.

Sir,

Crown Lands Office, Albury, 4 November, 1872.

I have the honor to recommend that this amended description of the Colombo Cutting Reserve should be substituted for that described in my report of the 15th ult., in order to counteract the prejudicial effect of any selection or purchase which might be made of land on the north-west side of the reserve on the Yanko ana branch, between the dotted lines and Yanko Creek, as observable on the accompanying large sketch. The land, if selected or purchased, would embrace too much frontage, and the area, scarcely 1 square mile, would be too insignificant in view of the mischief its sale might create. It was only on completion of the sketch that this became apparent.

I have, &c.,

THOMAS LAKE CROMMELIN,

C.C.L.

AMENDED description of the "Colombo Cutting Reserve," proposed in substitution of that recommended in Report, 15 October, 1872:—

District of Murrumbidgee.

General locality—Yanko and Colombo Creeks.

Name (if any)—Colombo Cutting Reserve.

Extent of proposed reserve in square miles—8 square miles.

Description of boundaries of proposed reserve:—No. . . . About 5,120 acres, county of Urana. The Crown lands within the following boundaries: Commencing on the right bank of the Yanko Creek, at a point 5 chains above where the dray road from Thurrowa to Yarrabec crosses that creek; and bounded thence on part of the north by a line bearing west 40 chains; thence on the west and south-west by a line bearing south to the Yanko Creek; thence by that creek, downwards, until a point is reached bearing west from the north-west corner of reserve from sale No. 96, notified 25 February, 1863; thence by a line bearing east to the north-east corner of that reserve; thence by a line bearing south to a point $\frac{1}{2}$ mile south of the Colombo Creek; thence by lines bearing south-easterly and southerly, generally parallel with the Colombo Creek, and $\frac{1}{2}$ mile distant therefrom, until a point is reached bearing west from a gum-tree marked broad-arrow over GR, on the right bank of the Colombo Creek, at the point below the old Waouck stock-yard, where the boundary-fence between Waouck and Morundah crosses the creek; thence on the south by a line bearing east 1 mile; thence on the east and north-east by lines bearing northerly and north-westerly, generally parallel with the Colombo, Yanko ana branch, and Yanko Creeks, and $\frac{1}{2}$ mile distant therefrom to the intersection of a line bearing east from the point of commencement; and on the remainder of the north by a line bearing west to the point of commencement.

Forms portion of the Morundah, Waouck, and Yarrabec Runs.

[Appendix to No. 87.]

Department of Lands, Sydney, 24 February, 1863.

RESERVES FROM CONDITIONAL PURCHASE.

His Excellency the Governor, with the advice of the Executive Council directs it to be notified that in pursuance of the provisions of the "Crown Lands Alienation Act of 1861," the lands specified in the Schedule appended hereto shall be reserved from sale until surveyed for the preservation of water supply or other public purposes.

JOHN ROBERTSON.

Schedule.

Pastoral district of Murrumbidgee, No. 96, at the effluence of the Colombo Creek from the Yanko Creek, containing 1 square mile; reserve No. 121 of the Murrumbidgee Reserves, as proclaimed on the 24th February, 1863.

Minute on No. 87.

UNDER this special report and the general report on cancellation of general reserves on Yanko and Colombo Creeks, this reserve may, I presume, be notified.—E.D., 2/12/72. See report of 15 October, 1872, for Yanko Cutting Reserve.—E.D.

No. 88.

The Commissioner of Crown Lands, Murrumbidgee, to The Officer in Charge,
Occupation Branch.

Sir,

Crown Lands Office, Albury, 4 November, 1872.

Referring to my communication of the 4th ultimo, recommending reserves on the Bingegong Run, I have the honor to draw your attention to an error observable in my field-book, which may have been copied into my report.

Describing R1, containing 3,200 acres—

"Commencing on the right bank of the Yanko Creek, at a point 3 miles"—it ought to be 3 "chains" Right in first Report.
—"below the confluence of the Ana branch of the Colombo Creek," &c., &c.

I have, &c.,

THOMAS LAKE CROMMELIN,
C.C.L.

For notification:—Nos. 5 and 6 reserve, same portion of frontage on both sides of creek, and Nos. 1 and 2 partly so, which is against the Regulations laid down in 1865-6. Under the special circumstances of these reserves perhaps this may be allowed. Either reserve may be revoked hereafter if found objectionable.—E.D., 30/11/72.

No. 89.

Messrs. James and Henry Osborne to The Minister for Lands.

Sir,

Elsternwick, Victoria, Melbourne, 5 November, 1872.

As the licensees of the Colombo Creek Run, Murrumbidgee District, we have heard with extreme regret that the Government contemplate cancelling the existing reserve of 1 mile on either side of the Yanko and Colombo Creeks and opening same for selection; and as our most important improvements for working the station and securing a permanent supply of water for stock during the summer months are upon the creek or creek frontage, we have the honor to submit herewith five applications for the purchase of 240 acres to secure improvements at each of four dams and one sheep-yard on said run. We may add that to this date we are the owners in fee simple of only 160 acres pre-emptive purchase on the Colombo Creek Run, and have respectfully to request that you will cause the survey and valuation of the lands comprised in these five applications to be carried out with all convenient despatch.

See Nos. 90 to 94 inclusive.

We have, &c.,

JAMES & HENRY OSBORNE,
Licensees of Colombo Creek.

No. 90.

Messrs. James and Henry Osborne to The Minister for Lands.

Application for the purchase of improved Crown lands.

Sir,

Elsternwick, Melbourne, Victoria, 5 November, 1872.

Having constructed the improvements detailed below, and which we estimate to be worth £300, we have the honor to apply that we may be permitted to purchase, without competition, under the provisions of the "Crown Lands Alienation Act of 1861," the Crown lands on which they stand, and which are described hereunder.

The improvements referred to are now in our possession.

We have, &c.,

JAMES & HENRY OSBORNE,
Licensees of Colombo Creek Run, Murrumbidgee District.*Nature of improvements.*

Old dam on Colombo Creek, about $\frac{1}{4}$ of a mile from west boundary of Colombo Creek Run, at junction of Yathong Sand-hill, constructed with additions at different times, at a cost of £300.

Description of land.

240 acres at old dam, Colombo Creek, Run, parish of Colombo Creek, Murrumbidgee district. Bounded on the south by the Colombo Creek per 40 chains east, starting from a marked tree near dam; on the east by a line 60 chains north; on the north by a line 40 chains west; and on the west by a line 60 chains south, to marked tree at starting point.

Colombo Creek Run, district of Murrumbidgee, is held under a promise of lease by James Osborne, junr., and Henry Osborne.—A.O.P., Occupation of Lands, 27 November, 1872. Mr. Licensed-Surveyor Finley, 19 December, 1862.—J.S.A. (for Surveyor General).

Sir,

Elsternwick, Melbourne, Victoria, 5 November, 1872.

Having constructed the improvements detailed below, and which we estimate to be worth £250, we have the honor to apply that we may be permitted to purchase, without competition, under the provisions of the "Crown Lands Alienation Act of 1861," the Crown lands on which they stand, and which are described hereunder.

The improvements referred to are now in our possession.

We have, &c.,

JAMES & HENRY OSBORNE,

Licensees of Colombo Creek Run,
Murrumbidgee District.*Nature of improvements.*

Large sheep-yard at Nicholas's Point, capable of holding and drafting 8,000 sheep, constructed with additions at different times as required, at a cost of £250.

Description of land.

Colombo Creek Run, 240 acres at Sheep Yard, Murrumbidgee District, parish of Colombo Creek. Bounded on the south by the Colombo Creek for 40 chains west, starting from the south-west corner of pre-emptive purchase of 160 acres at homestead; on the west by a line 60 chains north; on the north by a line 40 chains east to west boundary of 160 acres pre-emptive aforesaid; and on the east by that boundary to starting point at south-west corner.

Colombo Creek Run, district of Murrumbidgee, is held under a promise of lease by James Osborne, junr., and Henry Osborne.—A.O.P., Occupation of Lands, 27 November, 1872. Mr. Licensed-Surveyor Finley to measure, if unobjectionable.—J.S.A., for Surveyor General, 17 Dec., 1872. Received, July 15, 1873.—H. H. MORE. Surveyed and plan transmitted with my letter of 16 September, 1873.—H. H. MORE, L.S.

No. 95.

Memo. by Mr. Du Faur.

3 December, 1872.

UNDER these general reports and the special reports herewith submitted, these reserves, fifty-five in number, comprising about 110,000 acres may, I presume, be notified in lieu of the general Yanko and Colombo Creek Reserves recommended to be simultaneously revoked. I have noted some of the proposed reserves as being at variance with the Regulations of 1865, as to the non-reservation of opposite sides of the same frontage, when comprised in the same run, but submit that under the special reports and circumstances of the cases it would not be advisable to depart from the Commissioner's recommendations, which appear to have been the result of very careful investigation; nor to delay the whole matter while seeking further reports. Any reserve hereafter found to be objectionable can be revoked at any time.—E.D., 3/12/72.

See Nos. 61 to
inclusive, also
Nos. 86, 87, & 88.

No. 96.

Memo. from The Surveyor General.

APPLICATION has been made by Messrs. Osborne for the subdivision and sale of some 8,000 acres of their Colombo Creek Run. The frontage of this land is within the reserve 157, notified 22 December, 1865, which, it is understood, is shortly to be revoked and other smaller reserves notified in lieu.

Perhaps Mr. Pretious will furnish me with descriptions of the proposed reserves, for the guidance of Mr. District-Surveyor Wood in preparing a design for the subdivision of the land applied for.

J.S.A. (for Surveyor General),
17 December, 1872.

No. 97.

Mr. S. Wilson to The Surveyor General.

Sir,

Yanko Station, Jerilderie, 31 January, 1873.

Having become the proprietor of the improvements detailed below, and which I estimate to be worth £300, I have the honor to apply that I may be permitted to purchase, without competition, under the provisions of the "Crown Lands Alienation Act of 1861," the Crown lands in which they stand, and which are described hereunder.

The improvements referred to are in my possession.

I have, &c.,

SAMUEL WILSON,

per J. MACLEAN.

Nature

Nature of improvements.

Three-roomed cottage, detached kitchen and hut, garden, stockyard, and horse paddock.

Description of land.

County of Urana, parish of Wood, 300 acres, on north bank of Yanko Creek, about $\frac{1}{2}$ a mile south by west of section No. 2, portions N and O, each 320 acres, on north bank of Yanko Creek.

Herewith.

Previous application for above land, dated 20th June, 1872. Reasons for second application annexed as memo. on other side.

[Enclosure to No. 97.]

Sir,

Yanko Station, Jerilderie, 31 January, 1873.
Mr. William Orr, Licensed Surveyor, now surveying on Yanko Run, finds that a portion of the land which I have applied for is on a "proposed reserve;" consequently I have the honor to apply that he may be instructed to survey the whole, and a reserve marked elsewhere, instead of that now proposed. Without trenching on the proposed reserve he has only been able to survey about 160 acres, on which stands a considerable portion of the horse paddock, but neither cottage, detached kitchen, hut, garden, or stockyard.

I have, &c.,

SAMUEL WILSON,

Per L. MACLEAN.

Yanko Run, district of Murrumbidgee, is held under a promise of lease by Samuel Wilson.—A.O.P., Occupation of Lands, 18 Feb., 1873. Mr. District-Surveyor Orr for report.—R.D.F., 18 March, 1873.

No. 98.

Minute of The Officer-in-charge, Occupation Branch.

SUBMITTED for the commands of the Honorable the Minister as to whether the cancellation of the general reserves on the Yanko and Colombo Creeks should now be allowed to take effect.

It appears to me that Commissioner Crommelin has taken considerable pains to carry out the instructions conveyed to him in this matter, and that suitable and sufficient special reserves have been recommended by that officer, with a view to prevent so far as practicable the depreciation of the Crown leaseholds and the revenue derived therefrom.

I have not pressed this matter earlier to an issue, as it was one requiring to be carefully considered and dealt with, in view of the large interests involved and the large expenditure incurred by the lessees, many of whom have urged on me personally their claims for consideration on this ground, and their hopes that the Government would see fit to allow them to remain in undisturbed possession of the frontage at least until the expiration of the present terms of lease, *i.e.*, to the end of 1875.

This is of course a matter for the decision of the Hon. the Minister. The claim appears to me one in every way worthy of favourable regard.—A.O.P., 13 March, 1873.

In my opinion the reserve should remain intact until at least the expiration of the present leases.—J.S.F., 14/3/73.

No. 99.

Mr. T. Brown to The Under Secretary for Lands.

Sir,

Urana, Murrumbidgee District, 19 May, 1873.

Having heard that the land on the Yanko and Colombo Creeks are now available for selection, and being doubtful as to its truth may I ask you, sir, if such is true?

I have, &c.,

THOS. BROWN.

Memo. of Surveyor General.—The reserves have not yet been cancelled. The Surveyor General obtained a report and recommendation from Mr. Surveyor Bolton about three years ago, and submitted that report should be dealt with at Crown Lands Occupation Branch, and the matter is still in abeyance at that branch. This reserve includes a frontage to the Colombo Creek of 40 miles on each side, and a frontage to the Yanko Creek from the Murrumbidgee River of 100 miles on each side. I have understood that recommendations have been made for cancelling the reserves also by the local Commissioner of Crown Land, and that such recommendations have been in type and type broken-up.—J.W.E., 29 May, 1873.

The attention of the officer in charge Crown Lands Branch may be called to the subject, and if he concurs with me that the matter should remain in abeyance for the present, applicant might perhaps be so informed. As soon as I have the services of some more surveyors I could go into the question of measurement, but at present I would rather not.—P.F.A., 30 May, 1873. B.C., 4 June, 1873.—W.B., for U.S.

The accompanying papers are submitted for the information of the Surveyor General. It will be seen that the Hon. the Minister has approved that these reserves should remain intact, until, at least, the expiration of the present leases.

There would, however, I apprehend be no objection to the cancellation of any portion of the reserve which the lessees might specially apply for to purchase at auction.

A.O.P., 26 June, 1873.—The Surveyor General.

This case should not be dealt with until the Hon. the Minister for Lands has reviewed the question of alienations in the salt bush country, referred to in my memo. of 25th instant.—P.F.A., 30 June. Submitted, 7 July, 1873. This question has now been dealt with.—J.S.F., 28/8/73.

See No. 98.

No. 100.

No. 100.

Mr. S. Holland to The Minister for Lands.

Sir,

Yanko Creek, near Jerilderie, 23 May, 1873.

I beg to request that you will be pleased to inform me whether the Yanko Creek frontage Reserve is thrown open for selection.

One mile on both sides of the creek was exempt from selection for five years on petition by squatters in this neighbourhood.

That period has expired by effluxion of time and still the land is not thrown open to selectors.

There are many who could wish to settle on the Yanko Creek, and, as a matter of course, it is a great injustice to persons wishing to select that it is not thrown open.

I may add that the reserve was originally made for the five years as above stated in consequence of squatters having made a cutting from the Murrumbidgee into the Yanko; now their full benefit has been gained by that project.

I therefore trust and beg that the frontage may be thrown open for the benefit of persons who are desirous of selecting upon this frontage.

I also pray that the Hon. the Minister for Lands will be pleased to grant an early reply.

I have, &c.,

SIMON HOLLAND.

P.S.—I beg to state I make this my application, as myself and others wish to take up some country on the Yanko Creek, and should we have to go a mile back from the creek it would cost a great deal to make water.—S. HOLLAND.

Memo., Department Surveyor General,—Under a letter from Thos. Brown, the matter of the See No. 99. Yanko and Colombo Creeks Reserve from sale was submitted 29 May for consideration. This application to cancel that reserve is now submitted.—J.E., 2 June, 1873.

No. 101.

Mr. Licensed-Surveyor Orr to The Surveyor General.

Sir,

Wagga Wagga, 24 May, 1873.

I have the honor to transmit herewith the plan of a portion of land containing 320 acres, and Appendix I. numbered 14, situated in the parish of Cocketgedong, county Urana, applied for under the 8th section of the "Crown Lands Alienation Act, 1861," by Messrs. Watt and Thomson as an improvement purchase, and measured by me on the 7th March, 1873, in accordance with your instructions of 13th November, 1872. See No. 78.

The improvements in virtue of which this application is made consists of wool-room, shearers' huts, &c., all of which I estimate to be worth fully (£320) three hundred and twenty pounds sterling, the property of applicants.

I have, &c.,

WILLIAM ORR,
L.S.

According to recent decision, the Yanko and Colombo Creek Reserves should remain intact until See No. 99. the expiration of the leases.—W.D.A., 9 Jan., 1874.

No. 102.

Mr. Licensed-Surveyor Orr to The Surveyor General.

Sir,

Wagga Wagga, 24 May, 1873.

I have the honor to transmit herewith the plan of a portion land containing 100 acres, Appendix J. numbered 10, situated in the parish of Cocketgedong, county Urana, applied for under the 8th clause of the "Crown Lands Alienation Act of 1861," as an improvement purchase, by Messrs. Watt and Thomson, and measured by me on the 7th of March, 1873, in accordance with your instructions of the 13th November, See No. 79. 1872.

The improvement in virtue of which this application is made consists of a dam shown on plan known as the Telegraph Dam, that part of which lying within this portion I estimated to be worth about (£100) one hundred pounds sterling, the property of Messrs. Watt and Thomson.

Mr. Crown Lands Commissioner Crommelin marked a tree broad-arrow over WR over II, bearing 167° 36' 278 links from the south-west corner of this portion, intending that the reserve should lie 20 chains on each side of it. If this was allowed it would interfere with the improvement mentioned above, which I think should be granted, especially as the site chosen by me would offer greater facility for the purpose, should you deem it advisable to make it a permanent watering place at some future time.

The Reserve I propose would commence at the south-west corner of portion 10, thence east to the road from Urana to Jerilderie; thence by that road on the east; thence by a line west; on the south to Colombo Creek parallel to and distant 40 chains from the northern boundary of reserve; thence on the west by the Colombo Reserve, upwards, to the starting point.

I have, &c.,

WILLIAM ORR,
L.S.

Noted,—Mr. Long, 18/6/73. Charted, 6 Nov., 1873.—W.D.A. According to a recent decision on memo. from Mr. Pretious the Yanko Creek Reserves should remain intact until the See No. 99. expiration of the leases.—W.D.A., 9 Jan., 1874.

No. 103.

Mr. Licensed-Surveyor Orr to The Surveyor General.

Appendix K.

Sir,

Wagga Wagga, 24 May, 1873.

See No. 80.

I have the honor to transmit herewith the plan of two portions of land numbered 11 and 12 situated in the parish of Cocketgedong, county Urana, No. 12; is applied for under the 8th clause of the "Crown Lands Alienation Act of 1861," as an improvement purchase by Messrs. Watt and Thomson, and was measured by me on the 7th March, 1873, in accordance with your instructions of 13th November, 1872.

The improvements in virtue of which the application for No. 12 is made consists of a dam which the applicants have made on a by-wash cut from the big dam in the vicinity, and which I value at (£80) eighty pounds sterling, the property of applicants.

Portion No. 11 was measured by me for sale on the personal application of Mr. Watt, a member of the abovementioned firm.

I have, &c.,

WILLIAM ORR,

L.S.

See No. 98.

According to a recent decision the Yanko and Colombo Creek Reserve should remain intact until the expiration of the leases.—W.D.A., 9 Jan., 1874.

No. 104.

Mr. Licensed-Surveyor Orr to The Surveyor General.

Appendix L.

Sir,

Wagga Wagga, 24 May, 1873.

See No. 81.

I have the honor to transmit herewith the plan of a portion of land containing 320 acres, numbered 13, situated in the parish of Cocketgedong, county of Urana, applied for by Messrs. Watt and Thomson under the 8th clause of the "Crown Lands Alienation Act of 1861," as an improvement purchase and measured by me on the 7th March, 1873, in accordance with your instructions of the 13th November, 1872,

The improvement in virtue of which this application is made consists of that part of a large dam situated within the portion as shown in plan, and which I estimate to be worth at least (£400) four hundred pounds sterling. This dam is known in the neighbourhood as the "Big Dam," and was erected at the joint expense of the lessees of Cocketgedong and Colombo Runs. There is a portion of the dam connected with the right bank of the creek which I have not included in my estimate above-mentioned.

I have, &c.,

WILLIAM ORR,

Licensed Surveyor.

[Memo attached to No. 104.]

Charting Branch.

MEMO. of subjects requiring explanation or completion in connection with the survey and plan of portion No. 13, parish of Cocketgedong, county of Urana, transmitted by Mr. Licensed-Surveyor Orr's letter of 24th May, and on which Mr. Orr's report in explanation is requested.

Subject.

Report.

Traverse line No. 22, plots 115° instead of $154^\circ 25'$.—J.S.A.

The correct bearing is $115^\circ 35'$, instead of $154^\circ 25'$.
The plot is correct in this instance.—WILLIAM ORR, L.S., 12 November, 1873.

No. 105.

Mr. Licensed-Surveyor Orr to The Surveyor General.

Sir,

Wagga Wagga, 24 May, 1873.

Appendix M.

I have the honor to transmit herewith the plan of a portion of land containing 320 acres, numbered 15, situated in the parish of Cocketgedong, county of Urana, applied for by Messrs. Watt and Thomson as an improvement purchase under the 8th clause of the "Crown Lands Alienation Act of 1861," and measured by me on the 7th March, 1873, in accordance with your instructions of 11 November, 1872.

See No. 82.

The improvements in virtue of which the application is made consist of sheep-shearing shed, outside yards, branding yards, sheep-wash paddock, fencing, all of which I estimate to be worth (£320) three hundred and twenty pounds sterling, the property of the applicants.

I regret to say it is not possible to mark any trees along the creek either on this or the adjoining portion, as when any were near any of the corners they were inaccessible owing to the depth of water in the creek. The corner-pegs have in all cases been carefully marked, the wood from which they are made being free from defects of any kind and of the most durable description to be obtained.

I have, &c.,

WILLIAM ORR,

L.S.

See No. 98.

According to a recent decision the Yanko and Colombo Creek Reserves should remain intact until the expiration of the leases.—W.D.A., 9 January, 1874.

No. 106.

Mr. Licensed-Surveyor Orr to The Surveyor General.

Sir,

Wagga Wagga, 24 May, 1873.

Appendix N.

I have the honor to transmit herewith the plan of a portion of land containing 320 acres, numbered 2, situated in the parish of Colombo, county of Urana, Coorong Run, applied for by Mr. S. M'Caughy as an improvement purchase under the 8th clause of the "Crown Lands Alienation Act of 1861," and measured by me on 5th of October, 1872, in accordance with your instructions of 13th September, 1872.

See No. 57.

The

The improvements in virtue of which this application is made consist of wool-shed, outside yards, &c., all of which I value as being worth fully £1,000 (one thousand pounds), and are the property of the applicant.

It will be observed that a long time has elapsed since the surveys were carried out; the reason is because the whole of the improvements were included in one application. I have not been able to carry out one part of the instructions, viz., the survey of a portion at the boundary between Coonong and Colombo Runs, in virtue of dam on the Colombo Creek. This dam is a very large erection, and at the time when I was surveying there in October the country for about 300 or 400 acres was submerged. I deferred measuring, therefore, until March, and found that even then anything like a correct traverse of the creek cannot be made. I determined therefore to forward plans of portions already surveyed by me, and beg to recommend that Mr. M'Caughey be requested to send in a fresh application, which might be attended to when a dry season permits.

The dam referred to is said to back the water up a distance of 21 miles.

I have, &c.,
WILLIAM ORR,
Licensed Surveyor.

Coonong Run, district of Murrumbidgee, is held under a promise of lease by Samuel M'Caughey.— See No. 98.
G.M., Occupation of Lands, 1 July, 1873. According to a recent decision the Yanko and Colombo Creek Reserves should remain intact until the expiration of the leases.—W.D.A., 9 January, 1874.

No. 107.

Mr. Licensed-Surveyor Orr to The Surveyor General.

Sir,

I have the honor to transmit herewith the plan of a portion of land containing 320 acres, numbered 1, situated in the parish of Colombo, county of Urana, Coonong Run, applied for by Samuel M'Caughey as an improvement purchase under the 8th clause of the "Crown Lands Alienation Act of 1861," and measured by me on the 7th October, 1872, in accordance with your instructions returned with my letter of 24th May, 1873, dated 13th September, 1872. Appendix O.
No. 166.
See No. 57.

The improvements in virtue of which this application is made are the property of the applicant, and consist of large wool store, stables, and part of the sheep-wash, all of which I value as being worth fully £400 (four hundred pounds) sterling.

For cause of delay in transmitting plan I beg to refer you to my letter of this date. See No. 106.

I have, &c.,
WILLIAM ORR,
Licensed Surveyor.

Coonong Run, district of Murrumbidgee, held under promise of lease by Samuel M'Caughey.— See No. 98.
G.M., Occupation of Lands, 1 Jan., 1873. According to a recent decision the Yanko and Colombo Creek Reserves should remain intact until the expiration of the leases.—W.D.A., 9 Jan., 1874.

No. 108.

Mr. Licensed-Surveyor Orr to The Surveyor General.

Sir,

I have the honor to transmit herewith the plan of a portion of land containing 320 acres, numbered 1, situated in the parish of Kendall, county of Urana, Coonong Run, applied for by Samuel M'Caughey as an improvement purchase under the 8th clause of the "Crown Lands Alienation Act of 1861," and measured by me on the 2nd October, 1872, in accordance with your instructions of 13th September, 1872, which I have this day forwarded to you with letter. Appendix P.
See No. 57.
See No. 106.

The improvements by virtue of which this application is made consists of shearers', overseers', labourers', and washers' dwellings, store-house, and tank, which I estimate to be worth £320 (three hundred and twenty pounds) sterling.

They were erected by and at the cost of Mr. M'Caughey.

For my explanation in regard to delay I request you to refer to my letter of this date. See No. 106.

I have, &c.,
WILLIAM ORR,
Licensed Surveyor.

Coonong Run, district of Murrumbidgee, held under promise of lease by Samuel M'Caughey.—
G.M., Occupation of Lands, 1 July, 1873.

No. 109.

Mr. Licensed-Surveyor Orr to The Surveyor General.

Sir,

I have the honor to transmit herewith the plan of a portion of land containing 320 acres, No. 1, situated in the parish of Coonong, county of Urana, Coonong Run, applied for by Mr. Samuel M'Caughey as an improvement purchase under the 8th clause of the "Crown Lands Alienation Act of 1861," and measured by me on the 26th September, 1872, in accordance with your instructions of 13 September, 1872, which I have this day returned with my letter. Appendix Q.
See No. 57.
See No. 106.

The improvements by virtue of which this application was made are in Mr. M'Caughey's possession and consist of those shown on plan, and all of which I estimate to be worth £550 sterling.

For explanation of cause of delay in forwarding the plan I must beg to refer you to my letter accompanying instructions. See No. 106.

I have, &c.,
WILLIAM ORR,
L.S.

Coonong Run, district of Murrumbidgee, is held under promise of lease by Samuel M'Caughey.—
G.M., Occupation of Lands, 1 July, 1873.

No. 110.

Mr. Licensed-Surveyor Orr to The Surveyor General.

Sir,

Wagga Wagga, 24 May, 1873.

Appendix R.

I have the honor to transmit herewith the plan of a portion of land containing 320 acres, No. 2, situated in the parish of Kendall, county of Urana, Coonong Run, applied for as an improvement purchase under the 8th clause of the "Crown Lands Alienation Act of 1861," by Samuel M'Caughy, and measured by me on the 2nd October, 1872, in accordance with your instructions of the 13th September, 1872, forwarded to you with my letter this day.

See No. 57.
See No. 106.

The improvements by virtue of which this application is made consist of a complete sheepwash, substantially constructed, with yards and other necessary improvements, all of which (and not including the steam engines) I estimate to be worth £500, the property of the applicant.

See No. 106.

For my explanation of cause of delay in forwarding this plan I must beg to refer you to my letter accompanying instructions.

I have, &c.,

WILLIAM ORR,

L.S.

Coonong Run, district of Murrumbidgee, is held under promise of lease by Samuel M'Caughy.—G.M., Occupation of Lands, 1 July, 1873.

According to a recent decision the Yanko and Colombo Creek Reserve should remain intact until the expiration of the leases.—W.D.A., 9 January, 1874.

No. 111.

Mr. Licensed-Surveyor Orr to The Surveyor General.

Sir,

Wagga Wagga, 24 May, 1873.

Appendix S.

I have the honor to transmit herewith the plan of a portion of land containing 320 acres, No. 2, situated in the parish of Coonong, county of Urana, Coonong Run, applied for by Samuel M'Caughy as an improvement purchase under the 8th clause of the "Crown Lands Alienation Act of 1861," and measured by me on the 27th September, 1872, in accordance with your instructions of the 13th September, 1872, which I have this day forwarded with my letter.

See No. 57.
See No. 106.

The improvements by virtue of which the application is made consist of a dwelling-house and garden in the applicant's possession, which I estimate to be worth £600 sterling.

I am not aware whether a measurement in the form of this portion is allowed. If I had measured in the usual way it would have given an extraordinary amount of water frontage.

See No. 78.

The cause of delay in forwarding this plan I have explained in my letter of this day, to which I beg to refer you.

I have,

WILLIAM ORR,

L.S.

Coonong Run, district of Murrumbidgee, is held under promise of lease by Samuel M'Caughy.—G.M., Occupation of Lands, 1 July, 1873.

No. 112.

Mr. Licensed-Surveyor Orr to The Surveyor General.

Sir,

Wagga Wagga, 24 May, 1873.

See Nos. 101 to
108 inclusive,
and No. 110.
See Appendix B
to No. 30.

I have the honor to draw your attention to my plans transmitted this day, viz., plans of Nos. 1 and 2, parish of Kendall—1 and 2, parish of Colombo—and 10, 11, 12, 13, 14, and 15, parish of Cockat-gedong, county of Urana. These portions are all situated within water reserve No. 157, notified in *Government Gazette* of 23rd December, 1865.

See No. 102.

I beg to state that before measuring I was informed by Mr. Crown Lands Commissioner Crommelin of your intention to recommend the revocation of certain portions of this reserve. I have taken care not to interfere with any intended permanent reserves, except in one case, the reasons for which are fully explained in my letter I trust.

I have, &c.,

WILLIAM ORR,

L.S.

Submitted. The measurements referred to in this letter are now submitted for approval. A large portion of the water reserves in 1865 were proclaimed on the application and in the interests of the Crown lessees for the protection of their respective runs, and as these measurements appear to have taken place with the approval of the Commission, and contain valuable improvements, they may probably be allowed, and so much of the reserve cancelled as will admit of alienation of the land to the lessees.—G.L., 2 July, 1873.

Refer tracing to Mr. D.-S. Wood, asking him if he see any objection to the alienation of the portions in right of the improvements; the reference is necessary before recommending the withdrawal of the land from the reserve.—P.F.A., 14 July.

See No. 117.

Submitted. On the report of Mr. D.-S. Wood, of the 22nd July, 1873, shall the measurements under the 8th clause go on for appraisalment? Being in Colombo and Yanko Creek Reserves there are several other measurements which await this decision as a precedent.—G.L., 9 Jan., 1874. Dep. Sur. Genl.

See No. 119.

May these improvement cases go on for appraisalment, or does the memo. of the 15th November, 1873, apply to such measurements that have been charted?—G.L., 16 Feb., 1874.

No. 113.

Mr. Licensed-Surveyor Orr to The Surveyor General.

Sir,

Wagga Wagga, 27 May, 1873.

Appendix T.

I have the honor to transmit herewith the plan of a portion of land, containing 144 acres, numbered 7, situated in the parish of Wood, county Urana, Yanko Run, surveyed by me on the 25th January, 1873.

In

In accordance with instructions herewith from Mr. D.-S. Wood, I proceeded to the ground and found the improvements applied for by Samuel Wilson under the 8th clause of the "Crown Lands Alienation Act of 1861," were situated not only within water reserve No. 157, notified in *Government Gazette* of 23rd December, 1865, but within a reserve proposed by Mr. Crown Lands Commissioner Crommelin, as shown on the above-mentioned plan. I surveyed portion No. 7 because there is a considerable amount of fencing upon it, and also because the land if alienated to anyone but the owner of the "Uri" improvements could make those improvements useless. I have provided the best way of access to "Uri" possible, viz.,—along the banks of the lagoon, the track at present used.

My instructions were too explicit to allow me (without Mr. Wood's permission) to interfere with Mr. Crommelin's proposed reserves. I beg to recommend, however, that 200 acres be allowed within the permanent lagoon and the Yanko Creek, as the lagoon is permanent for some distance.

I have, &c.,
WILLIAM ORR,
D.S.

No. 114.

Mr. Licensed-Surveyor Orr to The Surveyor General.

Sir,

I have the honor to return herewith your instructions of 18th March, 1873, to report on Samuel Wilson's application for the purchase of 300 acres of land under the 8th clause of the "Crown Lands Alienation Act of 1861" in virtue of a three-roomed cottage, detached kitchen, &c.

I beg to state the improvements are situated within a reserve proposed as one of the permanent runs in lieu of water reserve No. 157, Gazetted on 23rd December, 1865. I have returned the original application this day with plan and my letter No. 30, to which I beg to refer you as I then gave a better explanation by means of the plan.

I have, &c.,
WILLIAM ORR,
Licensed Surveyor.

As the reserve was recommended by the Crown Lands Commissioner, perhaps it may be advisable to refer the application to that officer as to any objection to the alienation.—J. H. Wood, D.S., B.C., 11 June, 1873. Submitted.—G.L., 14 August, 1873.

Reserve 157, Yanko Creek, was an application by the lessces of the runs on that creek on account of improving its channels, and recommended by the Surveyor General, and has not yet been cancelled. The proposed reserve by Mr. Commissioner Crommelin and referred is a proposal by that officer for adoption on cancellation of 157 above.—J.W.E., 26.

Dep. Surveyor General,—Submitted that the recommendation of Mr. D.-S. Wood be adopted and the case referred to the Commissioner.—29 August, 1873.

Await decision of Minister on Yanko Reserve.—P.F.A.

No. 115.

Mr. Licensed-Surveyor Orr to The Surveyor General.

Sir,

I have the honor to return herewith your instructions of the 13th Nov., 1873, to survey 200 acres of land, Cocketgedong Run, county of Urana, applied for by Messrs. Watt and Thomson under the 8th clause of the "Crown Lands Alienation Act of 1861" as an improvement purchase by virtue of dam and fencing of which they have become proprietors.

I beg to state the improvements are situated within portion No. 15, parish Cocketgedong, county of Urana, the plan of which was forwarded to you with my letter of the 24th May, 1873.

I beg also to state I could not value the dam referred to, as the water from a dam lower down the creek covered all of it but a small portion of the top. The fencing mentioned in the application is shown on the plan above alluded to.

I have, &c.,
WILLIAM ORR,
Licensed Surveyor.

No. 116.

Memo. of subjects requiring explanation.

Charting Branch.

MEMORANDUM of subjects requiring explanation or completion in connection with the survey and plan of portion No. 1, parish of Colombo, county of Urana, transmitted by Mr. Licensed-Surveyor Orr's letter of 24th May, 1873, and on which Mr. Orr's report in explanation is requested.

Subject.

Report.

Traverse line No. 21, plots 29° instead of 150° 41'.—J.S.A. (for Surveyor General), July, 1873. The correct bearing is 29° 19' The plotting is therefore right.—W. ORR, Licensed Surveyor, November 23, 1873.

No. 117.

Memorandum of Instructions.

Form F.

Surveyor General's Office, Sydney, 19 July, 1873.

Subject.

Reply.

Mr. District-Surveyor Wood is requested at his early convenience to state if he sees any objection to the alienation of the portions in right of improvements within the reserve on each side of the Colombo Creek, county of Urana, as shown on the accompanying tracing?*

I do not consider there is any objection on public grounds to the alienations of these portions under the 8th clause; but under the late decision of the Honorable the Minister for Lands only one portion can be granted for any single improvement. The improvements on portions 10 and 13 are applied for

*Tracing not with the papers

Subject—*continued.*

In the event of Colombo Creek Reserve being revoked will the measurements referred to above interfere with any recommendation for reserves on that creek?—P.F.A.

Reply—*continued.*

by the lessees of Colombo and Cockatgedong Runs; they cannot both purchase without measuring two portions for the same improvement, which would be contrary to late decision.

The measurement referred to will not interfere with the reserves recommended by the local Commissioner of Crown Lands.—J. H. WOOD, District Surveyor, 22 July, 1873.—The Surveyor General.

The measurements as made in each case is in accordance with recent Ministerial decision, viz., the improvements to the centre of the creek only are embraced in the report showing applicants' improvements to be of sufficient value.—G.L., 7 August, 1873.

No. 118.

M. Fitzpatrick, Esq., to The Under Secretary for Lands.

Sir,

100 Pitt-street, Sydney, 15 August, 1873.

Referring to the interview granted this morning to Mr. Angus Robertson and myself, I beg that you will confirm officially the answer verbally given to his personal inquiry, viz.:—"That the Government, whilst they are prepared to offer for sale parts of the Yanko Reserve where applied for will not during the currency of the present leases cancel those portions of the reserve which may front the runs of lessees who still desire the reserve to be maintained."

I have, &c.,

MICHL. FITZPATRICK.

Submitted. As Mr. Fitzpatrick asks for a written pledge, I take the liberty of urging the necessity for great caution in the wording of any communication, which may be quoted hereafter in bar of the exercise of the powers conferred upon the Governor and Executive Council by law, and of which circumstances may arise to demand the exercise in the interests of the public before the precise period mentioned, viz., some four years hence. In effect, Mr. Fitzpatrick asks for a new condition in these current leases, binding the Government not to cancel without the concurrence of the lessees, a temporary reservation made, not for their benefit, but that of the whole community.—A.O.M., 31 August.

See No. 93.

The leases of the runs referred to expire on the 31st December, 1875—that is, sixteen months from the present time. I decided, whether rightly or wrongly, on the 14th March, that the reserves should remain intact during the currency of the present leases, and I expressed an opinion in accordance with Mr. Pretious's memo. of the 26th June. This matter had better be referred to Mr. Pretious, who is fully acquainted with the whole matter.—J.S.F., 22/8/73.

Advise Mr. Fitzpatrick of the decision arrived at in this matter.—A.O.P., 27 August.

It appears to me questionable whether any alienation either to the Crown tenants or others is desirable, on the frontage of the water artificially conserved on the Yanko and Colombo Creeks—not by the effort of any one lessee but by the common consent and at the joint cost of several. There can be no question that the alienation of any portion of the frontage will materially depreciate the value of the Crown leaseholds. Early in the ensuing year a revaluation of the runs will be necessary owing to the expiration of the present leases on 31st December, 1875. Should it be determined that these reserves should for the present remain intact this would be a matter of some moment and consideration in adjusting the rentals for another term of lease.—A.O.P., 19 Oct., 1874.

I am of opinion that the reserves should be kept intact.—J.S.F., 5/2/75.

No. 119.

Minute by The Surveyor General.

26 August, /73.

I AM not aware of the grounds of the decision referred to by the Chief Officer in charge at the Occupation of Lands, but should it not be an insuperable objection I should recommend that when I can obtain the services of a competent surveyor that a comprehensive design should be made and the land brought forward for sale and selection after measurement.—P.F.A.

Officer in charge, Occupation Branch, for former papers, showing directions within referred to.—W.W.S., B.C., 26 August, 1873.

The papers referred to are re-submitted for the Surveyor General's information.—A.O.P.

See No. 93.

The minute of 14/3/73, direction that the reserve should not be rescinded during the currency of the leases, was not to exist. Some of the lessees are pressing for the sale of portions already measured, and a surveyor has instructions to make a comprehensive design for the subdivision of the reserve (which is only a mile from the creek), also for the adjacent country, for which there is great demand. Some of the lessees are pressing for the sale by auction of the lands measured at their application, and on their applications I have recommended that the practise of measuring within the reserve, even at the application of a lessee, should not be admitted, pending the adoption of a general scheme for the subdivision of this extensive and valuable country. Submitted for further instructions, as the surveyor may be required to stay further proceedings.—P.F.A., 15 Nov., /73.

No. 120.

The Officer-in-charge, Occupation Branch, to M. Fitzpatrick, Esq.

Sir,

Occupation of Lands, Sydney, 27 August, 1873.

No. 118.

In reply to your letter of the 15th instant, I have the honor to advise you that the Honorable the Minister for Lands has been pleased to approve that the Yanko Reserve should remain intact until at least the expiration of the present leases.

I have, &c.,

A. O. PRETIOUS,

Officer in Charge.

No. 121.

51

No. 121.

Mr. Licensed-Surveyor More to The Surveyor General.

Sir,

16 September, 1873.

I have the honor to transmit you herewith plan of a portion of land containing 75 acres, numbered 40, parish of Thurrova, county of Urana, applied for under the 8th section of the "Crown Lands Alienation Act of 1861," by James and Henry Osborne, and which I have surveyed in accordance with your B.C. memo. of instructions of the 17th December, 1872, to Mr. Licensed-Surveyor Finley, subsequently transferred to me. Appendix U.
See No. 91.

I have, &c.,

HUGH H. MORE,

Licensed Surveyor.

Addenda.—The improvements consist of sheep-yards fenced with sapling pine rails and double split posts, and the value of which I estimate at £75.—H.H.M.

Papers forwarded to Mr. Surveyor Smith in connection with instructions already issued respecting measurements in Colombo Creek Reserve. Tracing herewith.—P.F.A. B.C., 29 January, I do not know of any objection to the alienation of the portion referred to in this application.—THOS. H. SMITH, Jun., 30 April, 1875. The Surveyor General. Schedule herewith for appraisement.—G.L., 17 May, 1875. See enclosure.

No. 122.

Mr. Licensed-Surveyor More to The Surveyor General.

Sir,

16 September, 1873.

I have the honor to state herewith that portion No. 13 of 320 acres, on the eastern side of Colombo Creek, has already been measured, on the application of Messrs. Watt and Thomson, for the improvements referred to in this application, and this area I consider amply sufficient for their value.

The dam is situated between portions 13 and 48 (*vide* my plan of Colombo Creek, transmitted with my letter of 16th September, 1873). Not with the papers.

I have, &c.,

HUGH H. MORE,

Licensed Surveyor.

Applicants should be informed that 320 acres have already been measured on account of Messrs. Watt and Thomson, in virtue of the dam herein referred to, the value of which is reported to be fully represented by that area.—J.S.A., 21 January, 1875. Ascertain who are the present lessees of the run. Colombo Creek Run, District of Murrumbidgee, is held under a promise of lease by James Osborne, Junr., and Henry Osborne.—A.O.P., Occupation of Lands, 31 January, 1874. Inform in accordance with memo. of 21 January.

No. 123.

Mr. Licensed-Surveyor More to The Surveyor General.

Sir,

16 September, 1873.

I have the honor to state herewith, that Harvey's Dam, the improvement referred to in the enclosed application, is so much broken away and demolished by the action of the water that it is utterly useless for the purposes intended.

The dam is situated between portions 6 and 23 (*vide* my plan of Colombo Creek), transmitted with my letter of 16 September, 1873. Not with the papers.

I have, &c.,

HUGH H. MORE,

L. S.

Applicant should be informed the surveyor's report describes the improvement (in virtue of which alienation of the land herein referred to herein is sought) as valueless, and that the claim to purchase under the 8th clause cannot therefore be allowed.—J.S.A., 24 October, 73.

No. 124.

Mr. Licensed-Surveyor More to The Surveyor General.

Sir,

16 September, 1873.

I have the honor to state herewith, that Middle Dam, the improvement referred to in the enclosed application, is so completely broken away and impaired by the action of the water that it is utterly useless for the purposes intended. See No. 92.

The dam is situated near the north-east corner of portion No. 45 (*vide* plan of Colombo Creek, transmitted with my letter of 16th September, 73). The dam shown by dotted lines on the other arm of the creek has been constructed by Messrs. Watt and Thomson, and is in pretty good repair; but is of little use on account of the other dam being destroyed. Not with the papers.

I have, &c.,

HUGH H. MORE,

L. S.

Applicant should be informed that the report of the surveyor represents that no improvement at present exists on the land referred to, and consequently alienation as herein sought cannot be allowed.—J.S.A., 24 October, 1873.

No. 125.

Mr. Licensed-Surveyor More to The Surveyor General.

Sir,

16 September, 1873.

I have the honor to state herewith that portion No. 10, 100 acres, on the eastern side of Colombo Creek, has already been measured on the application of Messrs. Watt and Thomson, for the improvements referred to, and this area I consider amply sufficient for their value.

The

Not with the
papers.

The dam is situated between portion 10, parish of Yathong, and 10, parish unnamed (*vide* plan of Colombo Creek, transmitted with my letter of 16 September, 1873.) I have, &c.,

HUGH H. MORE,
L.S.

Applicant should be informed of surveyor's report.—G.L., 21 January, 1874.

No. 126.

Mr. R. P. Raymond to The Minister for Lands.

Sir,

Bell's Chambers, Sydney, 23 September, 1873.

At the instance of Mr. Samuel Wilson a large quantity of land to secure improvements, and for auction was measured within the Yanko Reserve at the time when there was a probability of the reserve being cancelled, and which Mr. Wilson is still desirous of competing for at auction sale, provided it is not in the first instance thrown open to selection.

It is to the advantage of the country that this land should go to auction sale, when 20s. or more per acre, if there is competition, will be realized for it, and the whole block will be sold, whereas if thrown open to selection first the choice portions only will be taken up at 5s. per acre and the residue left, because valueless alike to the lessee and the selector. It is unfair also to the lessee after paying for the survey of land that he should not have the opportunity of competing for it at auction. I have the honor, therefore, to inquire whether you will revoke so much of the reserve as will include the measured land, and, as it is provided that thirty days must elapse after the publication in the *Gazette* before either the land can be sold or a reserve is open to selection, whether both the notification of sale and revocation of the reserve will be made to appear in the same *Gazette* so as to ensure the land going to auction.

I have, &c.,

R. PEEL RAYMOND,

Agent.

Surveyor General, A.O.M. (for U.S.), B.C., 30 Sep., 1875. This appears to be a purely administrative question, but as it has been referred to me I think the course recommended would be an evasion of the law, and as such not to be recommended.—P.F.A., 6 October. The application cannot be complied with.—J.S.F., 9/12/73.

No. 127.

Messrs. J. and H. Osborne to Mr. District-Surveyor Wood.

Sir,

Elsternwick, Melbourne, Victoria, 7 October, 1873.

Having had occasion recently to visit the Billabong Forest Run, better known as Gum Swamp, just as Mr. Surveyor More was about to finish the re-survey of five blocks applied for by us (under clause 8 of the "Crown Lands Alienation Act, 1861") on 6th March, 1873, and having by him been permitted to have a look at a copy-tracing of such re-survey, we discovered that a mistake had occurred somewhere in copying No. 1 application for 320 acres, including the homestead at Gum Swamp.

All five applications were made in the names of James and Henry Osborne, who are the licensees of the run, whereas the survey of No. 1 is marked Henry Houston Osborne, and upon pointing out the error to Mr. More he referred to his book of instructions and found the same error there, which apparently did not originate with him. Of course there is a conditional selection of 320 acres, of same date, made at Deniliquin in the name of Henry Houston Osborne, a miner, but the homestead application for 320 acres should be in the name of the undersigned as licensed occupants of the Billabong Forest Run, and we have respectfully to request that you will cause the matter to be rectified at your earliest convenience.

We have, &c.,

JAMES & HENRY OSBORNE.

The portion referred to is No. 10, parish of Hardie, county of Urana, transmitted by Mr. L.-S. More, with his letter, 16 September last. On the plan the applicant's name is H. H. Osborne. This should be altered to James and Henry Osborne.—J. H. Wood, D.S., B.C., 10 Oct., 1873. The Surveyor General.

No. 128.

The Surveyor General to Mr. Licensed-Surveyor More.

Appendix V.
See No. 121.

Charting Branch.

MEMORANDUM of subjects requiring explanation or completion in connection with the survey and plan of portion 40, parish of Thurrova, county of Urana, letter of 16th September, 1873, and on which Mr. More's report in explanation is requested:—

Subject.

Report.

The distance from the traverse line to the creek is required.—P.F.A., 10 Oct., 1873.

I do not quite comprehend what is required here, but I hope that the sketch from field notes, given below, will supply the necessary information.—H. H. MORE, L.S., 17 Oct., 1874.

No. 129.

The Under Secretary for Lands to Messrs. J. & H. Osborne.

See Nos. 92 & 93.

Gentlemen,

Department of Lands, Sydney, 22 November, 1873.

With reference to your application of the 5th November, 1872, to purchase in virtue of improvement two blocks of land, each containing 240 acres, on Colombo Creek Run, I am directed to inform you, that as the local Surveyor has reported the improvement upon the portion of land referred to as valueless they cannot be alienated to you as desired.

I have, &c.,

W. W. STEPHEN.

No. 130.

No. 130.

Messrs. J. & H. Osborne to The Under Secretary for Lands.

Sir,

Elsternwick, Melbourne, Victoria, 4 December, 1873.

See No. 129.

We have the honor to acknowledge the receipt of your letter of the 22nd ult., advising us that "with reference to your application of 5th November, 1872, to purchase in virtue of improvements, two blocks of land, each containing 240 acres, on Colombo Creek Run, I am directed to inform you, that as the local surveyor has reported the improvements upon the portion of land referred to as valueless, they cannot be alienated to you as desired." In reply, we beg to state that on the date alluded to we applied for *five* lots, four of these on account of dams, and one on account of sheep-yard, and as a portion of seventy-five (75) acres, comprising the latter, appears to be the only *one* of the *five* recommended by the local surveyor, we are not very clear as to which *two* of the remaining *four* are the lots referred to in your letter, but we assume them to be lots 10 (of Mr. More's survey) fronting the lowest dam, and lot 45 fronting the middle dam.

In regard to these two dams we are free to admit that the by-wash of each has deepened into a small creek, but the original pile of earth comprising each dam remains as perfect as when first completed, and it would be comparatively easy for us, whenever we might so require it, to fill up the by-washes deepened by the high floods of the two last winters, rather than go into the construction of new dams. We are desirous to speak with all possible respect of the District Surveyor, Mr. Wood, of Albury, and of Mr. More, the local surveyor, and believe that each understands his own profession thoroughly; but the construction of dams, and the value of dams when so constructed in a dry country like the Colombo, are matters with which they have had no personal experience, and it is no reflection upon their intelligence to say that neither is fit to form a correct opinion upon the subject, particularly as both gentlemen only saw the Colombo Creek fronting our Station during one of the finest seasons the country has been blessed with for a period of twenty-years, the creek being almost bank-high along our entire frontage, owing to the expenditure for dams previously incurred by ourselves and our neighbours of the Cockatgedong Run.

We obtained the Colombo Creek Run by public tender in May, 1850, and for some five subsequent years in succession had to remove our sheep up into the forest country, near Albury, during the months from November to June following, owing to the then entire absence of standing water. Since the construction of our dams, however, there has been no shifting of stock, the station having become permanently watered at our own cost, and by our own exertions.

We respectfully submit, therefore, that we are equitably entitled to be permitted to purchase the frontages to these dams under the improvement clause, after a fair valuation, and hope the Honorable Minister of Lands will not unadvisedly commit such a manifest injustice to us as to permit such frontages to be declared open to conditional selection.

We have,

JAMES & HENRY OSBORNE.

Applicants should be informed that if they are dissatisfied with the report of the surveyor the law provides for the submission to appraisalment in such cases.—G.L., 31 January, 1874. Inform, 9 Feby.

No. 131.

The Under Secretary for Lands to Mr. R. P. Raymond.

Sir,

Department of Lands, 24 December, 1873.

No. 128.

In reference to your letter of the 23rd September last (on behalf of Mr. Samuel Wilson), requesting to have so much of the Yanko Reserve revoked as will include the land applied for by him to be brought to auction, and asking that the notification of the revocation and the Proclamation of sale should appear in the same *Gazette*, so as to ensure the land going to auction,—I am directed to inform you, that as such a course would be an evasion of the law, your request cannot be complied with.

I have, &c.,

W. W. STEPHEN.

No. 132.

Memo. by Mr. Ellis.

I FIND that the Surveyor General's minute, 15th November, 1873, does not appear to have been seen by the Minister, probably some notice should be taken in the matter.—J. W. E., 3 January, 1874.

See No. 119.

Referred to the Under Secretary for Lands as do not like to incur the cost of a survey and design in the present unsatisfactory state of the question. The mile reserved from the creek is too little if the matter is to remain as it is till the expiration of the leases.—P.F.A. The Minister considers that no further action need be taken in this matter for the present.—W. W. S., 7 January, 1874. Approved.—J.S.F., 7/1/74. After the Surveyor General has seen this the papers may be put by for a time.—A.O.M. Surveyor General, B.C., 8/1/74. Seen.—P.F.A., 8 Jan.

No. 133.

Mr. Licensed-Surveyor Orr to The Surveyor General.

Sir,

Urana, 29 January, 1874.

In compliance with instructions from Mr. D.-S. Wood, I have lately altered portions numbered 1 and 2, situated in the parish of Coonong, county of Urana. I have, therefore, the honor to request that no further steps be taken towards the alienation of the lands until I have the opportunity of transmitting an amended plan.

I have, &c.,

WILLIAM ORR,
Licensed Surveyor.

No. 134.

No. 134.

The Under Secretary for Lands to Messrs. J. & H. Osborne.

Gentlemen,

Department of Lands, 14 February, 1874.

See Nos. 90 & 91.

Referring to your letter of the 5th November, 1872, applying to purchase under the 8th clause of the Crown Lands Alienation Act two portions of 240 acres each on the Colombo Creek Run, I am directed to inform you that it appears from a report which has been obtained from the Surveyor General, that two blocks, containing respectively 320 acres and 100 acres, have been already measured for Messrs. Watt and Thomson, in virtue of the improvement described in your application, such areas freely representing the improvement in question. Your request cannot therefore be complied with.

I have, &c.,

W. W. STEPHEN.

No. 135.

Memo. by Mr. G. Lewis.

18 February, 1874.

See No. 119.

In the Surveyor General's minute of the 15th November, 1873, respecting the Yanko and Colombo Creek Reserves, reference is made to measurements effected on account of the lessees as being at present objectionable. There are several cases of measurements *in virtue of the improvements* by the lessees (eleven such being now herewith) that have been charted and await appraisal, but are kept back for direction as to whether the minute above referred to, of the 15th November, 1873, applies to measurements under the 8th clause.

G.L.

Colombo and Yanko Creek Reserves.

With reference to the decision of the Hon. the Minister for Lands that no further steps should be taken at present for the measurement for sale of the land within these reserves, the question is now submitted whether these eleven applications in virtue of improvements are to be entertained?—J.S.A. (for Surveyor General.) Under Secretary for Lands, 19 Feb., 1874.

See No. 119.

The objection to the measurements within these reserves were made by the Surveyor General in his memo. of 15 November, 1873. A further expression of his opinion as to the question above asked seems desirable before the Minister is asked for a decision.—A.O.M., 21/2/74.

As soon as the services of a salaried surveyor are available I shall advise the preparation of a comprehensive design for the measurement of the valuable lands upon the Yanko and Colombo Creeks and the revision of the reserves thereon; and that measurement should follow from time to time as demand might appear. I believe that 200,000 acres would be alienated if now ready. At present, from want of salaried surveyors, I am unable to do the work. I could employ a reliable licensed surveyor at a salary of £3 3s. per diem, but it would not be an economical arrangement, although the necessities of the case might warrant it. Submitted.—P. F. ADAMS, 27 February. Approved.—J.S.F., 28/2/74.

Mr. L.-S. Smith having been appointed to carry out the design, should now be supplied with Mr. Bolton's report and descriptions, also with the description of the reserve proposed by Mr. Commissioner Crommelin, and be allowed to take extracts of any other papers he may require.—P.F.A. Supplied, 19th March, 1874.

No. 136.

Messrs. J. & H. Osborne to The Minister for Lands.

Sir,

Elsternwick, Melbourne, Victoria, 18 February, 1874.

See No. 134.

We have the honor to acknowledge the receipt of your letter of the 14th instant, referring to our application of 5th November, 1872, to purchase under the 8th clause of the Alienation Act two portions of 240 acres each, on the Colombo Creek Run, and that the Surveyor General has reported that two blocks of 320 acres and 100 acres have already been measured for Messrs. Watt and Thomson, in virtue of the improvements described in our application, and that therefore our request cannot be complied with. In reply, we beg to state that we have no desire to interfere with Messrs. Watt and Thomson obtaining the full benefit of improvements made upon their own run of Cocketgedong and at their own expense, but we most respectfully protest against the principle of giving them the entire benefit of improvements constructed jointly by them and us. We paid *half the entire cost* of the new dam fronting lot No. 48 of Mr. More's recent survey on the Colombo Creek Run, and *the whole* of the original expenditure of the middle dam fronting No. 45, and of the old dam fronting No. 10 of said survey; and submit, therefore, that we are equitably entitled to the benefit of our own expenditure quite as much as Messrs. Watt and Thomson are to theirs, and request a re-consideration of the case, so that equal justice may be meted out to both parties.

We have, &c.,

JAMES & HENRY OSBORNE.

I do not think the arguments of the writer can be gainsaid.

If the lots sold to the proprietors of the adjoining run represent the whole value of the dam, it may be that they have been allowed to purchase a larger area than they should have been. But the present claimants are not thereby deprived of the right to purchase land on *their* run improved by *them*.

I would respectfully suggest a further reference to the surveyor for report on the claims of Messrs. Osborne as founded on *their* own expenditure and improvements, irrespective of the claims or purchases of other parties.—A.O.M., 5/3/74. Approved.—J.S.F., 16/3/74.

No. 137.

The Under Secretary for Lands to Messrs. J. & H. Osborne.

Gentlemen,

Department of Lands, Sydney, 19 February, 1874.

Referring to your letter of the 4th December last, further on the subject of your application to purchase under the 8th clause of the Crown Lands Alienation Act, two portions of land, each containing 240 acres on the Colombo Creek Run, I am directed to inform you that should you feel dissatisfied with the surveyor's estimate of the value of the improvements (which he reports to be of insufficient value to enable you to purchase the land in question without competition), you can have the matter submitted to appraisement by paying into the Treasury the usual fee of £1 ls. in each case. See No. 130.

I have, &c.,

W. W. STEPHEN.

No. 138.

The Surveyor General to Mr. Licensed-Surveyor Smith.

Sir,

Surveyor General's Office, Sydney, 14 March, 1874.

I have to request that you will proceed to the Yanko and Colombo and examine the country with a view to its capabilities, and more especially the present reserves, which if not suited should be amended, and should in all cases extend back to the limit of probable selection for some years to come. As a rule one-fifth of the frontage should be reserved, and the position and width of the reserves will depend entirely on circumstances; and you are not to consider yourself fettered by the present reserves, which can be revoked at any time. You will also make a point of seeing the lessees or their representatives, or give them an opportunity of stating their views before you prepare your designs, but you will be influenced by their views when they are not inimical to the interests of the public estate. Your attention is drawn to the measurements which have already been made upon the reserve, and especially to the unsold portions thereof, with a view to any modification that may be necessary; and when you have decided that no objection exists upon your report the land may, if desired by the lessees, be brought to auction sale without further delay.

You will run a traverse of each creek with the greatest accuracy attainable, referring the same to the true meridian every five (5) miles; this traverse should be well marked on the ground, so that it may be picked up on future subdivision. The necessary traverse to show beds of the creek, &c., may be of the most temporary description, and made with circumferentor or any instrument you please.

I will advise you to send sketch designs of some portions as speedily as you can prepare them, in order that you may gain experience.

The remuneration for the service will be at the rate of 63s. per diem, Sundays excepted, commencing from the date on which you leave your present district. Out of this allowance you will pay the wages of four men at 20s. per week each, with an additional 10s. 6d. per week for rations, rendering monthly abstracts, properly signed, stamped, and attested for, the same as sub-vouchers of the amounts in triplicate at 63s. per diem, which will contain two items, one for wages and provisions of party, as per enclosed abstract, and the other for your own salary and allowances for the period, which must not exceed twelve pounds sixteen shillings (£12 16s.) per week, as this amount added to wages of party make up the full allowance of 63s. per day for each week of six working days. (*Vide* enclosed sample accounts for say March, 1874.) Not necessary. Unnecessary.

This arrangement will only last during the continuance of the work specified, and you will consider yourself under the directions of Mr. District-Surveyor Wood, to whom all designs should be forwarded.

I am, &c.,

P. F. ADAMS.

No. 139.

Memo. from The Minister for Lands.

30 March, 1874.

STATEMENT of the action taken on five improvement applications made on the 5th of November, 1872, by James and Henry Osborne, in the county of Urana, Colombo Creek Run.

The application for 240 acres at Old Dam, on the right bank of Colombo Creek: This was reported on by Mr. Licensed-Surveyor More, to the effect that the portion No. 10 of 100 acres, on the opposite side of Colombo Creek, viz., the left bank, had been measured for Messrs. Watt and Thomson for the improvements referred to in Osborne's application, and this area he considered amply sufficient for their value. Mr. Licensed-Surveyor Orr, in measuring portion No. 10, of 100 acres, for Messrs. Watt and Thomson, stated that he estimated that part of the dam lying within the portion to be worth about £100.

Messrs. Osborne were informed of Licensed-Surveyor Mores' report on the 14th February, 1874. See No. 134.

The application for 240 acres at the new dam, valued at £480, on the right bank of Colombo Creek: Mr. Licensed-Surveyor More reported that 320 acres had already been measured for Messrs. Watt and Thomson in virtue of this dam, the value of which he reported to be fully represented by 320 acres. Applicant was so informed. Messrs. Osborne in reply stated that they had paid half the entire cost of the new dam fronting portion 48, parish of Thurrowa, and that they were entitled to the same area as that allowed to Messrs. Watt and Thomson on the other side of the creek. See No. 134.

The Honorable the Minister for Lands has approved of a further reference to the surveyor as to the claim of Messrs. Osborne.

The application for 240 acres at Middle Dam, right bank of Colombo Creek, valued at £280: Mr. Licensed-Surveyor More reports that the dam is so completely broken away and impaired by the action of the water that it is utterly useless for the purposes intended. Applicants were informed that the surveyor reported that no improvements at present exist on the land. See No. 130.

The application for 240 acres at Nicholas Point in right of a large sheep yard valued at £250.

Mr. Licensed-Surveyor More values the improvements at £75, and has measured accordingly 75 acres, the plan of which is now ready for charting.

The

The application for 240 acres at Harvey's Dam, valued at £245, on the right bank of Colombo Creek: Mr. Licensed-Surveyor More reported that this dam was so much broken away and demolished by the action of the water that it is utterly useless for the purposes intended.

See No. 129.

Applicant was informed that the surveyor reported the improvements valueless, and the claim under the 8th clause could not be allowed.—(Not initialled.)

The Colombo Creek is a frontage creek, and forms the boundary between two runs. The lessees of the runs have jointly contributed a moiety of the cost for the construction of certain dams; therefore they are joint owners of them.

The lessees of the respective runs are not joint lessees, nor are they partners; they have not applied to purchase jointly but severally. In my opinion the lessee of one of the runs cannot purchase in right of the value of the whole improvement, but that each lessee of the respective runs might be allowed to purchase in right of a moiety of the value. Therefore, in each of the cases now under consideration, where the parties have joined and contributed a moiety of the cost of construction, they may be allowed to purchase on their respective runs an area equal to the moiety of the value, at the rate of 1 acre for every pound of such moiety of value, provided that such area shall not exceed 160 acres in any case, and that together the area shall not exceed 320 acres for each improvement. Although a dam may be worth £1,000, the improver would only be entitled to purchase 320 acres in right of it.

If A and B jointly construct a dam across their boundary creek dividing their respective runs, of the value of £500, this improvement confers a right to apply to purchase 320 acres. A, whose run is on the eastern side of the creek, applies to purchase the 320 acres, but this area cannot be measured so as to include the dam unless by trespassing upon the run of B, which is situated on the western side of the creek, and *vice versa*. It appears to me that if allowed at all, that A should be allowed to purchase 160 acres and B 160 acres upon their respective runs, and thus leave them to their common law right in respect to that portion of the dam between bank and bank, the ownership of the soil under the water and to the thread of the stream being in the owner of the land on either bank. I merely mean the above to illustrate the principle upon which these cases should be dealt with or considered. If 320 acres have been measured for Messrs. Watt and Thomson, in right of a dam constructed at the joint cost of the Messrs. Osborne and Watt and Thomson, it is certainly wrong, and cannot be allowed. At the most 160 acres could only be permitted, and if the other cases referred to by the Messrs. Osborne are similar to this, the whole of the cases will have to be reconsidered.—J.S.F., 30/3/74.

In reading over this decision I find that it is inconsistent with the previous decision on such cases, which recognizes the practice of accepting dams on frontage creeks as two improvements. My previous decision above-mentioned should in all cases of this kind be acted upon.—J.S.F., 26/6/74.

No. 140.

Memo. by The Surveyor General.

20 April, 1874.

Separated.
See No. 139.

THE applications of Messrs. Osborne, together with Messrs. Watt and Thomson, are enclosed for measurement according to a recent decision of the Hon. the Minister for Lands, a copy of which is attached:

"Where the parties have joined and contributed a moiety of the cost of construction they may be allowed to purchase on their respective runs an area equal to the moiety of the value, at the rate of 1 acre for every pound of such moiety of value, provided that such area shall not exceed 160 acres in any case, and that together the area shall not exceed 320 acres for each improvement. Although a dam may be worth £1,000 the improver would only be entitled to purchase 320 acres in right of it." * * *

"If 320 acres has been measured for Messrs. Watt and Thomson in right of a dam constructed at the joint cost of the Messrs. Osborne and Watt and Thomson, it is certainly wrong, and cannot be allowed; at most 160 acres could only be permitted."

P. F. ADAMS,

20 April, 1874.

Mr. Licensed-Surveyor Smith, for remeasurement. Returned to Surveyor General for transfer to Mr. Surveyor Bolton.—THOMAS H. SMITH, Surveyor, 30 April, 1875. Mr. District-Surveyor Bolton, for remeasurement or report.—G.L. (for Surveyor General), 7 July, /75.

No. 141.

Messrs. Wilson & Rankin to The Minister for Lands.

Sir,

227, George-street, Sydney, 6 May, 1874.

See No. 101 to
107 inclusive.

On the 24th May Mr. Licensed-Surveyor Orr sent in plans of portions Nos. 10 to 15, parish of Cocketgedong, county of Urana, being lot applied for, in virtue of improvements, by Messrs. Watt & Thomson, on Cocketgedong Run. We beg respectfully to request that steps may be taken without further delay to have these purchases completed.

We have, &c.,

WILSON & RANKIN.

Mr. Wilson personally advised of the state of the matter.—29/5/74.

See No. 135.

Surveyor General,—What is now to be done with the enclosed measurements to which the question asked in this letter and in memo. of the 18th Feb., /74, refers?—G.L., 2 June, 1874.

Ask Mr. Smith to state whether any objection is known to the alienation of the lands in the form measured; and if he is not aware of any the land may go as for alienation.—P.F.A., 4 Sept.

No. 142.

M. Fitzpatrick, Esq., to The Minister for Lands.

Sir,

251, George-street, 23 June, 1874.

On the 23rd of March last Mr. Henry Osborne and myself had a long interview with you touching—first, the sale of certain lands on Colombo Creek Run, measured by Mr. Licensed-Surveyor More as far back as September of last year; and, secondly, with regard to the application of Messrs.

James

James and Henry Osborne for improvement purchases in virtue of certain dams and other improvements, Your personal instructions upon that occasion dealt with the second point; but on calling at your office yesterday I found that nothing had been done to mature the matter.

I now earnestly invoke your interposition to have these applications brought to issue, and at the same time I invite your attention to the enclosed extract of a letter from Messrs. Osborne, from which you will see that Mr. More has been under some misapprehension as to one of the dams, mistaking for the middle dam a temporary structure in a mere by-wash.

I have, &c.,

MICHL. FITZPATRICK.

[Enclosure.]

We find also that a very serious misunderstanding exists at the Crown Lands Office regarding certain applications—five in number—made by us on the 5th of November, 1872, to secure improvements on the Colombo frontage. 1, 2, 3, were for dams, 4 for a sheeppard, and 5 for a dam. See Nos. 90, 91, 92.

Dams 3 and 5 have, we learn, been pronounced worthless by Mr. Surveyor More, and as yet no allowance has been made to us for either 1, 2, or 3. Messrs. Watt & Thomson alone having received any allowance under the improvement clause for these structures. No. 5 was put up solely at the cost of their predecessors, Messrs. Brock and Hardy, and we therefore waive our half claim to it; but we bore the entire cost of constructing the old dam No. 1, and the middle dam No. 3, and paid Messrs. Watt and Thomson half the cost of the new dam No. 2; and all these three dams are still standing perfect. The middle dam, More has shown in the map, having been only a small earthwork to try and stop up an old by-wash, the actual middle dam appearing as if on an *a* (but in reality on the main channel) on the Cocketgedong side, and for which dam Messrs. Watt & Thomson, by some strange process, have got the entire credit, whereas, in reality, their predecessors or themselves never paid a shilling towards its erection. When in Sydney Mr. H. Osborne was not aware of the error into which Mr. More had fallen in marking upon his map a small broken earthwork on a by-wash as the middle dam of our application, or he would have put the matter in its proper light. And we have to ask you now to do so, and urge our claim to at least a similar acreage on our side for each of these dams, Nos. 1, 2, and 3, as Messrs. Watt and Thomson are to be allowed on their side. If the Crown Lands authorities be disposed to question the truth of our statements as herein set forth, we are prepared to furnish affidavits verifying the same. See No. 94.
See No. 93.

JAMES & HENRY OSBORNE.

Surveyor General,—Submitted that the three cases referred to in Mr. Fitzpatrick's letter of the 23rd June, /74, be returned to the surveyor for reconsideration.—G.L., 26 June, 1874. The Honorable the Minister for Lands acquiesced in Mr. Fitzpatrick's request that the above course should be taken, authority in the usual way being now required.—G.L. Yes; but possibly Mr. Surveyor Smith might be able to deal with them. I have not the maps to identify the locality, but Mr. Smith's last letters will show where he is now employed.—P.F.A. Mr. Surveyor Smith for measurement, if unobjectionable, or report as to the reasons for non-measurement. Mr. Smith's attention is particularly directed to the decisions of the Honorable the Minister for Lands, dated 30th March and 26th June, 1874.—J.S.A. (for Sur. Gl.), 30 June, /74. Returned to the Surveyor General for transfer to Mr. Sur. Bolton.—THOS. H. SMITH, 30 April, 1875. Forwarded to Surveyor Bolton. See No. 130.

No. 143.

Messrs. J. & H. Osborne to The Minister for Lands.

Sir,

Elsternwick, Melbourne, Victoria, 29 August, 1874.

We have the honor to request that we may be permitted to withdraw Nos. 1, 2, and 3 of our applications of 5th of November, 1872, for improvement purchases on the Colombo Creek Run, Murrumbidgee District, and to substitute *Nos. 1, 2, and 3 of this date, which we transmit herewith. See Nos. 90, 91, and 92.
See separate numbers following.

In accordance with the recent practice of the Crown Lands Department we are willing that the survey of the subdivisions necessary to give us the area applied for in each allotment shall be made at our cost. We also annex declaration certifying to the correctness of the statements and valuations made in our present applications.

We have, &c.,

JAMES & HENRY OSBORNE.

[Enclosure A to No. 143.]

DECLARATION.

THE undersigned, James and Henry Osborne, declare that in May, 1850, they became by public tender the licensees of the Colombo Creek Run, Murrumbidgee District, and have continued so until present date.

That they constructed at their own sole cost (first) the middle dam (see application No. 3), which still remains intact and perfect, and is not the broken earthwork erroneously marked middle dam on Mr. Licensed-Surveyor Hugh H. More's map of his survey. See No. 92.

Secondly. They erected at their own sole cost the old dam (see application No. 1) which is still perfect,—the cost of excavation when those two dams were erected being 19d. per cubic yard. See No. 90.

Previously to the construction of these dams they had to remove their stock for some four or five months during every summer and autumn for want of water, but since their erection the run has become permanently watered, and stock can be kept upon it through the whole year.

Lastly. They paid half the cost of the new dam (see application No. 2) which is still standing perfect. In each of the three cases they have only applied for an area corresponding at £1 per acre, to half the original expenditure. See No. 91.

And they make this solemn declaration conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intituled "An Act for the effectual abolition of oaths and affirmations, taken and made in various departments of the Government of New South Wales, and to substitute declarations in lieu thereof, and for the suppression of voluntary and extra judicial oaths and affirmations."

JAMES OSBORNE.
HENRY OSBORNE.

Made and signed before me at Melbourne, this 2nd day of September, 1874.—THOS. DIBBS, J.P., New South Wales.

[Enclosure B to No. 143.]

Copy of application for improvements on Colombo Creek Run, made 29th August, 1874.

No. 1. Valuation, £300. Old dam on creek, about three quarters of a mile from western boundary at Yathong Sandhill, and constructed solely at our own cost. Description: 150 acres, county of Urana, parish of Yathong, allotment 10; bounded on one side by the Colombo Creek, fronting allotment 10 of Mr. Licensed-Surveyor Hugh More's survey, and on the other three sides by section lines to include the quantity.

No. 2. Valuation, £212. New dam on creek fronting allotment 48, and constructed at joint cost of Messrs. Watt and Thomson, of Cocketgedong, and ourselves. Description:—106 acres, county of Urana, parish of Thurrowa, allotment 48; bounded on one side by the creek fronting allotment 48 of Mr. Hugh More's survey, and on the other three sides by section lines to include the quantity.

No. 3. Valuation, £280. Middle dam, nearly opposite allotment 45 of Mr. Hugh More's survey, *but not the broken earthwork erroneously marked on his map as "middle dam."* The original dam, constructed solely at our cost, is still standing and unbroken. Description:—140 acres, county of Urana, parish of Thurrowa; bounded on one side by the Colombo Creek, at the original middle dam, and partly fronting allotment 45; and on the other three sides by section lines to include the quantity.

JAMES & HENRY OSBORNE,
Licensees of Colombo Creek Run.

Minute thereon.

The previous applications may be withdrawn and the substituted applications may be proceeded with.—J.S.F., 9/9/74.

No. 144.

Messrs. J. & H. Osborne to The Minister for Lands.

Application for the purchase of improved Crown lands. [Alienation Act, 1861.]

Sir,

Elsternwick, Melbourne, Victoria, 29 August, 1874.

Having made the improvements detailed below, and which we estimate to be worth £300, we have the honor to apply that we may be permitted to purchase, without competition, under the provisions of the "Crown Lands Alienation Act of 1861," the Crown lands on which they stand, and which are described hereunder.

The improvements referred to are now in our possession.

We have, &c.,

JAMES & HENRY OSBORNE,
Licensees of Colombo Creek Run,
Murrumbidgee District.

Nature of improvements.

No. 1. Old dam on creek, about $\frac{1}{2}$ of a mile from western boundary, at Yathong Sand-hill, and constructed solely at our own cost.

Description of land.

150 acres, county of Urana, parish of Yathong, allotment 10; bounded on one side by the Colombo Creek, fronting allotment 10 of Mr. Licensed-Surveyor Hugh H. More's survey, and on the other three sides by section lines to include the quantity.

See No. 142.

Mr. Johnson.—There are four applications of the 5th November, 1872, by Messrs. James and Henry Osborne for four portions of land, each containing 240 acres, on the Colombo Creek Run. The improvement in each case consists of a dam. The applications were forwarded to Licensed-Surveyor Smith for report and measurement, if unobjectionable, on the 2nd July last.—11 September. (Not initialled.)

No. 150.

Mr. Surveyor Smith to The Surveyor General.

Sir,

Queanbeyan, 20 January, 1875.

In accordance with part of your instructions, dated 14th March, I have the honor to transmit herewith my design of a proposed subdivision for sale of a portion of the Colombo Creek Reserves within Widgiewa Run.

The land to be subdivided consists of magnificent open plains, with belts or clumps of pine, oak, and gum timber.

Suitable water reserves are provided for the beneficial occupation of the back lands to the probable limit of selection.

The subdivision can be effected expeditiously, and the special conditions of survey are enclosed. I would recommend that the work be let by contract, at a reduction of not less than 15 per cent. upon the existing scale of fees paid to licensed surveyors.

Accompanying the design are tracings showing a traverse of the creek to a scale of 20 chains to an inch, mounted for the use and guidance of the licensed surveyors employed on the work.

I have, &c.,

THOMAS H. SMITH,
Government Surveyor.

This letter should have been forwarded with Mr. Surveyor Smith's plans on 24th February last.—
J. H. Wood, D.S., B.C., 1 April, /75.

[Enclosure B to No. 150.]

CONDITIONS of survey and subdivision of part of the Colombo Creek Reserves within Widgiewa Run.

1. This survey and subdivision shall be effected in accordance with the Surveyor General's published regulations for the guidance of licensed surveyors, subject to the following special conditions:—
2. The meridian used shall be the same as adopted in the main traverse of the creek survey, by Surveyor Smith; traverse shown in red on tracings accompanying the design.
3. The stations of the above-mentioned creek traverse are defined by stakes and circular trenches. In the subdivision of the land these stations are to be connected with at least once in every 80 chains, i.e., when the traverse runs through be portions.
4. Special care is to be taken to secure the highest available ground in laying out the main roads.
5. Posts not less than 6 inches square to be inserted at each corner; intermediate stakes at every 10 chains to 3 inches square; posts and stakes to be 2 feet 6 inches long and inserted 1 foot 9 inches in the ground.
6. All lockpits whether at corner or intermediate stakes shall be not less than 6 feet long and 1 foot deep.
7. When there are no corner trees the number or numbers of adjacent portions are to be cut conspicuously in the post in Arabic numerals.
8. The plan of this subdivision shall be drawn upon mounted drawing-paper to the scale of 20 chains to an inch.
9. This survey and subdivision shall be in all respects carried out subject to the approval of whomsoever the Surveyor General may appoint for that purpose.

No. 151.

Gazette Notice.

Department of Lands, Sydney, 16 February, 1875.

RESERVES FROM SALE FOR WATER SUPPLY.

His Excellency the Governor, with the advice of the Executive Council, directs it to be notified, that in pursuance of the provisions of the 4th section of the "Crown Lands Alienation Act of 1861," the land specified in the Schedule appended hereto shall be reserved from sale for the preservation of water supply.

THOMAS GARRETT.

MURRUMBIDGEE DISTRICT.

No. 1,314. County of Mitchell, parish of Uroby, Tom Groggan's Lagoon, 5,384 acres. The Crown lands within the following boundaries: Commencing on Yanko Creek, at a gum-tree marked broad-arrow over W.R. over A., and bounded on part of the south by a line bearing west 7 miles; on the west by a line bearing north 1 mile; on the north by a line bearing east 8 miles 33 chains to the west boundary of portion 22; on the east by a line forming part of the west boundary of portions 22, 23, and 5, bearing south 80 chains; on the remainder of the south by a line bearing west 1 mile 33 chains to the point of commencement.

papers.

No. 1,315. Counties of Boyd and Mitchell, about 1,000 acres. The Crown lands within the following boundaries: Commencing at a point bearing north 57 degrees east 12 chains from a gum-tree marked broad-arrow over *a* over 74, and bounded on the north-west by a line bearing north 32 degrees west 45 chains; on the north-west by a line bearing north 57 degrees east to the Murrumbidgee River; thence by that river upwards to the northern corner of portion 9; thence by the north-west boundary of that portion south-westerly to its north-west corner; thence by a line bearing south 57 degrees west 25 chains 50 links; thence by a line bearing north 32 degrees west about 58 chains to the point of commencement.

No. 1,316. County of Boyd, parish of Howell, Yarrabee Waterhole, about 10½ square miles. The Crown lands within the following boundaries: Commencing on Yanko Creek, at the south-east corner of William Howell's pre-emptive purchase of 320 acres; and bounded on the north by a line bearing west 70 chains; thence by a line bearing north 65 degrees west 9 miles and 8 chains; on the north-west by a line bearing south 25 degrees west 1 mile; on the south-west by a line bearing south 65 degrees east to Yanko Creek; and by that creek, downwards, to the point of commencement.

No. 1,317. County of Mitchell, Yarrabee Waterhole, about 12 square miles. The Crown lands within the following boundaries: Commencing at the north-east corner of William Howell's pre-emptive purchase of 320 acres; and bounded on the north-east by a line bearing south 65 degrees east 12 miles; on the south-east by a line bearing south 25 degrees east 1 mile; on the south-east by a line bearing north 65 degrees west to Yanko Creek, by that creek, downwards, to the point of commencement.

No. 1,318. County of Urana, Morunda Waterhole, about 6,900 acres. The Crown lands within the following boundaries: Commencing at the north-east corner of reserve 121, notified 24th of February, 1863, and bounded thence on the north-east by a line bearing south 63 degrees east 10 miles; on the south-east by a line bearing south 27 degrees west 90 chains; on the south-west by a line bearing north 63 degrees west to the southern boundary of reserve 121 aforesaid; on part of the north and the west by part of the south and the east boundaries of that reserve, bearing east and north to the point of commencement.

No. 1,319. County of Urana, parish of Howell, Bingegang Waterhole, about 10 square miles. The Crown lands within the following boundaries: Commencing on Yanko Creek, at a point bearing north 65 degrees, east 10 chains, south 65 degrees east 8 chains; and bounded on the south-west by a line bearing north 65 degrees west 10 miles; on the north-west by a line bearing north 25 degrees east 1 mile; on the north-east by a line bearing south 65 degrees east to Yanko Creek, by that creek, upwards, to the point of commencement.

No. 1,320. County of Urana, parish of Bingegang, 640 acres. The Crown lands within the following boundaries: Commencing on Colombo Creek, at the north-west corner of F. Jenkins' portion 1, containing 209 acres; and bounded on the south-west by a line bearing west 27 degrees, north to Yanko Creek; on the west by that creek downwards; on the north-east by a line parallel with the south-west boundary, and distant 20 chains therefrom to Colombo Creek, by that creek, upwards, to the point of commencement.

No. 1,321. County of Urana, parish of Howell, Reedy Waterhole, 9½ square miles. The Crown lands within the following boundaries: Commencing on Yanko Creek, at a point 20 chains above a gum-tree marked broad-arrow over *W* over *G*; and bounded on the south-west by a line bearing west 25 degrees north 10 miles; on the north-west by a line bearing north 25 degrees east 60 chains; on the north-east by a line bearing east 25 degrees south, crossing Yanko Creek, to the boundary-fence dividing Widgiwa and Bingegang Runs; on the south-east by that fence south-westerly to a point east 25 degrees south from the point of commencement; thence by a line to that point.

No. 1,322. County of Urana, parish of Crommelin, about 9½ square miles: The Crown lands within the following boundaries: Commencing on the Yanko Creek, at a point bearing north 27 degrees east 15 chains below a gum-tree marked broad-arrow over *H* over *W*; and bounded on the south-west by a line bearing west 27 degrees north 10 miles; on the north-west by a line bearing north 27 degrees east 60 chains; on the north-east by a line bearing east 27 degrees south to the boundary-fence between Widgiwa and Goree Runs; on the south-east by that fence south-westerly to a point east 27 degrees south from the north-east corner of the village reserve, notified 7th March, 1870; thence by a line to that point; on the south by the north boundary of that reserve bearing west to Yanko Creek; by that creek downwards to the point of commencement.

No. 1,323. County of Urana, parish of Douglas, 3½ square miles. The Crown lands within the following boundaries: Commencing on Yanko Creek, at a gum-tree marked broad-arrow over *W* over *J*; and bounded on part of the south-west by a line bearing north 36 degrees west 5 miles; on the north-west by a line bearing east 36 degrees north 40 chains; on the north-east by a line bearing south 36 degrees east 7½ miles to the boundary-fence of Coonong Run; on the south-east by that fence, south-westerly 40 chains; on the remainder of the south-west by a line bearing north 36 degrees west to Yanko Creek; thence by that creek, downwards, to the point of commencement.

No. 1,324. County of Urana, parish of Widgiwa, 1½ square mile. The Crown lands within the following boundaries: Commencing on Colombo Creek, at a point where the boundary-fence between Widgiwa and Coonong Runs crosses that creek; thence by a line bearing west 24 degrees north to the corner of Coonong and Widgiwa Runs cross that creek; thence by a line bearing west 24 degrees north to the corner of Coonong and Widgiwa Runs; thence by the fence dividing Widgiwa and Goree Runs north-easterly; on the north-east by a line parallel with the south-west boundary and distant 40 chains therefrom to Colombo Creek, by that creek, upwards, to the point of commencement.

No. 1,325. County of Urana, parish of Morundah South, about 500 acres. The Crown lands within the following boundaries: Commencing on the north-west boundary of portion 46 at a point 9 chains 30 links from the western corner of portion 46; and bounded on the north-west by a line bearing west 26 degrees north to Colombo Creek; by that creek, upwards; on the south-west by a line parallel with the north-east boundary and distant 20 chains therefrom, south-easterly, to the north-west boundary of portion 43; thence by part of that boundary and part of the north-west boundary of portion 46, north-easterly, to the point of commencement.

No. 1,326. County of Urana, parish of Morundah South, 4,000 acres. The Crown lands within the following boundaries: Commencing on Colombo Creek, at the north-west corner of portion 1, S. Wilson's 320 acres; and bounded on part of the south by the north boundary of that portion bearing east

east to its north-east corner; thence by a line partly forming the north-east boundary of portion 5, parish of Morundah South bearing east 27 degrees south about 8 miles 76 chains; on the south-east by a line bearing north 27 degrees east 60 chains; on the north-east by a line partly forming the south-west boundary of portion 6 and parallel with the south-western boundary to the south-eastern boundary of portion 34; thence on part of the north-west, north-east, and south-east by south-east, south-west, and part of the north-west boundary of portion 34, Morundah South, bearing south 27 degrees west; west 27 degrees north; north 27 degrees east 20 chains; on the remainder of the north-east by a line forming the south-west boundary of portion 40 to a peg marked broad-arrow over 39 over 40 on Colombo Creek; by that creek, upwards, to the point of commencement.

No. 1,327. County of Urana, parish of Bingagong, 1,740 acres. The Crown lands within the following boundaries: Commencing on Colombo Creek, at a point about 23 chains in a direct line below the western corner-peg of portion 40, marked broad-arrow over 39 over 40; and bounded on the south-west by a line bearing west 27 degrees north to the boundary-fence between Widgiewa and Bingagong Runs; thence by that boundary north-easterly; on the north-east by a line parallel with the south-west boundary, and distant 60 chains therefrom to Colombo Creek; by that creek, upwards, to the point of commencement.

No. 1,328. County of Urana, parish of Morundah South, 7½ square miles: The Crown lands within the following boundaries: Commencing on Colombo Creek, at a post marked broad-arrow over WR; and bounded on the south-west by a line partly forming the north-east boundaries of portions 42, 43, and 44, bearing east 27 degrees south 10 miles; on the south-east by a line bearing north 27 degrees east 60 chains; on the north-east by a line bearing west 27 degrees north to Colombo Creek; by that creek, upwards, to the point of commencement.

No. 1,329. County of Townsend, parish of Widgiewa, about 7 square miles: Commencing on Colombo Creek, above the junction of Boree Creek, at a post marked broad-arrow over WR; and bounded on the north-east by a line partly forming the south-western boundary of portions 40 and 39, bearing east 27 degrees south 1 mile; on the south-east by a line bearing south 27 degrees west 60 chains; on the south-west by a line bearing west 27 degrees north to Colombo Creek; by that creek, downwards, to the point of commencement.

No. 1,330. County of Urana, parish of Betts, below the junction with Boree Creek, 2¼ square miles. The Crown lands within the following boundaries: Commencing on the boundary-fence between Widgiewa and Goree, at a point bearing west 27 degrees north from the south-west corner of 320 acres applied for in virtue of improvements; and bounded on the north-west by that boundary-fence south-westerly 41 chains; on the south-west by a line bearing east 27 degrees south to the Colombo Creek; by that creek easterly and northerly to a point east 27 degrees south from the point of commencement; on the north-east by a line partly forming the south-west boundary of the 320 acres aforesaid, applied for in virtue of improvements, bearing west 27 degrees north, to the point of commencement.

No. 152.

Memo. from The Surveyor General.

17 February, 1875.

I HAVE several surveyors ready for employment in the Yanko subdivision, and some old applications by Wilson, of Mellon, not yet attended to. I wish Mr. Surveyor Smith to forward some portion of his design embracing the early application for measurement, in order that a beginning may be made. Post to-day.

P.F.A.

No. 153.

The Surveyor General to Mr. Surveyor Smith.

Sir,

Surveyor General's Office, Sydney, 17 February, 1875.

I beg to inform you that there are several surveyors now ready for employment in the Yanko subdivision, and that, having some old applications by Wilson, of Mellon, not yet attended to, I wish you to be good enough to forward to me, without delay, some portions of your design, embracing the early applications for measurements, in order that a beginning may be made.

I am, &c.,
P. F. ADAMS.

No. 154.

Mr. Surveyor Smith to The Surveyor General.

Sir,

Queanbeyan, 20 February, 1875.

I have the honor to acknowledge the receipt of your letter, dated 17th February, and would beg to inform you that I forwarded through Mr. District-Surveyor Wood (by my letter dated 20 January) a design for subdivision of about 16 miles of the Colombo Creek Reserve through Morandah, Wauck, and Widgiewa Runs.

I will prepare immediately a design for the subdivision of the rest of Yanko and Colombo Reserves, as far as I measured.

I would ask that the tracings sought for in my memorandum, dated 20th January, may be supplied to me at once.

I have, &c.,
THOMAS H. SMITH,
Government Surveyor.

No. 155.

Mr. Surveyor Smith to The Surveyor General.

Dear Sir,

Queanbeyan, 20 February, 1875.

I did not reach as far as Mr. Wilson of Mellon with the Yanko Survey. I measured the Yanko as far as Bundure Run boundary, and the Colombo as far as Coonong boundary.

A design of about 16 miles of the Colombo Creek I forwarded through Mr. D.-S. Wood on the 20th January. The whole of the remainder of the designs should have been completed had I not been waiting

See No. 153.

See No. 150 for letter.

Not with papers.

Referred to in your letter dated 17 Feb. See No.

waiting for some information from Mr. D.-S. Wood (a tracing of the approved of design of subdivision back lands on Goree and Bingegong Runs) and some tracings from the Sydney office, sought by my memo† dated 20 January. I am afraid Mr. Wood is away in the field, but I sent him a telegram and have written another *memo. to Sydney for the tracings. †Not with papers *See No. 156.

I have none of the applications (referred to in your official letter of Thursday) for the measurement of lands. I suppose they are with Mr. Wood. The creek frontage will all sell, and I will design the whole of it. It is a great loss to the Government selling at £1. per acre; 30 shillings per acre is a reasonable price, and the land would sell as readily as at £1. Would there be any harm in my reporting this officially? If it could be done, would be a gain of more than £50,000.

I hope no harm will come of the delay in Gazetting the Reserves. When I found it out I thought I had better send you a telegram.

Forwarded by this post is the tracing of the Yanko and Colombo Reserves, telegraphed for yesterday evening by the Deputy Surveyor General.

I must apologize for this hasty letter, being rather tired finishing a good day's work.

I am, &c.,

THOMAS H. SMITH.

Mr. Johnson,—The tracing referred to in the last paragraph is required.—G.L., 23 February, 1875.

No. 156.

Mr. Surveyor Smith to The Chief Draftsman.

Sir,

20 February, 1875.

Will you please have returned to me at once tracings (from the County Map of the Yanko and Colombo Creeks) forwarded with my memorandum dated 20th January, asking that any additional information may be shown them. Required for the immediate preparation of designs for subdivision. Missing.

Also tracing of Mr. Licensed-Surveyor Sutherland's subdivision adjacent to the Yanko Mile Reserve on Yarrabee, Bingegang, and Goree Runs.

THOMAS H. SMITH,
Govt. Surveyor.

No. 157.

Mr. Surveyor Smith to The Surveyor General.

Sir,

Queanbeyan, 20 February, 1875.

In compliance with your instructions conveyed by telegram dated 19 February, I have the honor to transmit herewith a tracing showing proposed reserves for access to water on part of the Yanko and Colombo Creeks, Murrumbidgee District. Cannot be obtained. Appendix X.

I would mention that the plan of these reserves was forwarded through Mr. District-Surveyor Wood on the 28th January last.

I have, &c.,

THOMAS H. SMITH,
Govt. Surveyor.

No. 158.

The Surveyor General to Mr. District-Surveyor Wood.

Sir,

Surveyor General's Office, Sydney, 23 February, 1875.

I beg to inform you that I have decided on placing the subdivision of lands on the Yanko under the charge of Mr. Surveyor Bolton, who will remain on the spot to supervise the measurements. And I have to request that you will be so good as to return all instructions for the upper part of those waters; and apprise me what has been done in certain long standing applications of Mr. Samuel Wilson, of Mellon, some of which, however, are in the name of Mr. M'Caughy.

I wish to be in possession of Mr. Surveyor Smith's designs and recommendations, in order that I may explain my views to Mr. Bolton; and any information you can give in this respect may be reported, especially of the limits within which you would propose to confine Mr. Bolton's services.

I am, &c.,

P. F. ADAMS.

No. 159.

M. Fitzpatrick, Esq., to The Minister for Lands.

Sir,

251, George-street, Sydney, 25 February, 1875.

I have been informed on inquiry at the Lands Office that the applications as per margin, made by Messrs. James and H. Osborne, to purchase improved lots on Colombo Creek Run, are still in the hands of Mr. Surveyor Smith, to whom they were referred in September, 1874; I do myself the honor to ask that the surveyor may be instructed to expedite the action expected of him in the matter. See Nos. 144, 14 and 146.

I have, &c.,

MICHAEL FITZPATRICK.

The Surveyor General, B.C., 27 February, 1875.—W.W.S. Mr. Surveyor Smith, for report.—G.L. (for Surveyor General), 1 April, 1875. Returned to the Surveyor General for transfer to Mr. Surveyor Bolton.—THOMAS H. SMITH, 30 April, 1875. Forwarded to Mr. Surveyor Bolton.

No. 160.

Mr. Surveyor Smith to The Surveyor General.

Sir,

Queanbeyan, 8 March, 1875.

See No. 138.

(Five roll plans).
Appendix Y1,
Y2, Y3, Y4, Y5.

In accordance with part of your instructions dated 14 March, 1874, I have the honor to transmit herewith my design of a proposed subdivision for sale of a portion of the Yanko and Colombo Reserves within Yanko, Yarrabee, Bingegang, Morandah, and Waouck Runs. The land to be subdivided consists of fine open plains, and pine, oak, and gum timbered country.

Suitable water reserves are provided for the beneficial occupation of the back lands to the probable limit of selection.

Cannot be
obtained.

The proposed subdivision includes a reserve n47, notified 16 March, 1853, which now is, I think, unnecessary, and may be cancelled.

See enclosure.

The subdivision can be effected expeditiously and the special conditions of the survey are enclosed. I would recommend the work to be let in two contracts, the Yanko and Colombo Creeks being the division line at reductions of not less than 15 per cent. upon the existing licensed surveyors' scale of fees.

Accompanying the design are mounted tracings shewing the creek and road traverses to a scale of 20 chains to an inch for the guidance of the licensed surveyors employed on the work.

That part of the Yanko Reserve between the Murrumbidgee and Reserve A on the western side of the Yanko Creek is inferior country, and I would suggest that the subdivision thereof be deferred until the more important lands of the reserve are measured, or until an application is made with the customary survey deposit for its measurement by the lessee of the run. I have shewn in brown the proposed direction of the frontage lines for the subdivision of this part of the reserve in the event of its being measured for sale.

I have, &c.,

THOS. H. SMITH,
Government Surveyor.

[Enclosure A to No. 160.]

Conditions of Survey.

1. The survey and subdivision shall be effected in accordance with the Surveyor General's published regulations for the guidance of licensed surveyors, together with the following special conditions:—

2. The meridian used shall be the same as adopted in the main traverse of the creek survey by Surveyor Smith; traverse shewn in red on tracings accompanying design.

3. The stations of the above-mentioned creek traverse are defined by stakes and circular trenches. In the subdivision of the land these stations are to be connected with at least once in every 80 chains, V.C., where the traverse runs through the portions.

4. Special care is to be taken to secure the highest available ground in laying out the main roads, as no roads have been reserved through Wm. Howell's 320 acres, Yarrabee; the various roads required are designed on the tracing by red dotted lines. This design if necessary is to be deviated from to secure good and practicable roads.

5. Posts not less than 6 inches square to be inserted at each corner. Intermediate stakes at every 10 chains to be 3 inches square. Posts and stakes to be 2 feet 6 inches long, and inserted 1 foot 9 inches in the ground.

6. All lockspits, whether at corner or intermediate stakes, shall be not less than 6 feet long and 1 foot deep.

7. Where there are no corner trees the number or numbers of adjacent portions are to be cut conspicuously in the post.

8. The plans of these subdivisions are to be drawn on mounted drawing paper to the scale of 20 chains to an inch.

9. These surveys are to be in all respects carried out, subject to the approval of the Surveyor General, or whomsoever he may appoint for that purpose.

No. 161.

The Surveyor General to Mr. District-Surveyor Wood.

Sir,

Surveyor General's Office, Sydney, 11 March, 1875.

I have the honor to request that you will be good enough to forward to this office, at your earliest convenience, the design for subdivision of about 16 miles of the Colombo Creek Reserve, through Morandah, Waouck, and Widgiewa, which Mr. Surveyor Smith states he forwarded through you by letter, 20th January.

I have, &c.,

P. F. ADAMS.

No. 162.

Mr. District-Surveyor Wood to The Surveyor General.

Sir,

District Survey Office, Albury, 12 March, 1876.

In accordance with your instructions of the 23rd ultimo, requesting me to return all instructions for measurements on the upper waters of the Yanko Creek, I have the honor to inform you that the papers referred to are now enclosed.

2. With regard to Mr. Samuel Wilson's application, I beg to report that Mr. Licensed-Surveyor M'Carthy is now engaged in carrying out a subdivision of about 20,000 acres on Mr. Wilson's North Jerilderie Run, and that a plan showing about 5,000 acres is now in this office nearly ready to send on.

3. Respecting land applied for on Coonong Run by Mr. M'Caughy's manager (Mr. James Wilson) I beg to inform you that nearly half the area applied for is now measured.

See No. 160.

4. Mr. Surveyor Smith's designs, received this day, are now returned. I have not had time to examine them very closely, but for the most part they appear good. Some modification might however be made in the proposed reserve along the banks of the upper part of the Colombo and Yanko Creeks; the irregular boundary appears to be objectionable.

5. Respecting the limits within which Mr. Bolton might be employed, I would suggest that he supervise all surveys within a distance of about 20 miles on either side of the Yanko Creek, but it would be only rarely that he would have to travel that distance; whilst in the neighbourhood of Jerilderie Mr. Bolton might perhaps examine on the ground some surveys lately made by Licensed-Surveyor Menzies for the Messrs. Osborne, of Mornolong.

I have, &c.,

JAMES H. WOOD,

D.S.

As

As it is not intended to sell the reserve at present, the quantities applied to be measured inside the reserve by Mr. S. Wilson and others may be measured outside the reserve where available.—T.G., 9/4/75.

Forwarded to Mr. District-Surveyor Bolton for his guidance, with reference to instructions of this date for measurements in this locality. The Minister's is not intended for his consideration.—J.S.A., B.C., 27 July, /75.

No. 163.

Messrs. J. & H. Osborne to The Minister for Lands.

Sir,

Sydney, 6 April, 1875.

Having ascertained at the Crown Lands Office that all the papers connected with our applica- See No. 143. tions of 5th November, 1872, and amended applications of 29 August, 1874, for improvement purchases on the creek frontage of our Colombo Creek Run, Murrumbidgee District, have been referred to Mr. Smith for his report.

We have the honor respectfully to request that upon receipt of such report no final decision may be come to without giving us an opportunity of making further explanations if necessary.

We have, &c.,

JAMES & HENRY OSBORNE,

Licencees of "Colombo Creek."

No. 164.

Mr. Surveyor Smith to Mr. District-Surveyor Wood.

12 April, /75.

An alteration in the proposed route of the Urana and Naranderra stock road I now find necessary, and Appendix Z attached is tracing showing.

I was not aware of the measurements of portions to the southward of the village of Cuddell when making the original design, and the work being urgent I did not delay for the return of my county map which had already been detained for some eight or ten weeks in Sydney, having this and other additional information charted thereon.

THOMAS H. SMITH,

Government Surveyor.

Forwarded to the Surveyor General to be placed with papers relating to Mr. Surveyor Smith's design for the subdivision of lands along the Colombo Creek.—J. H. Wood, D.S., B.C., 30/4/75.

No. 165.

Mr. Surveyor Smith to The Surveyor General.

Sir,

Queanbeyan, 22 April, 1875.

In accordance with part of your instructions, dated 14 March, I have the honor to transmit here- See No. 133. with my design of a proposed subdivision for sale of a portion of the Yanko Creek Reserve, within Goree Roll plan. and Bingebang Run, county of Urana, Murrumbidgee District. See Enclosure A. Appendix A1.

The land to be subdivided consists of fine open plains, and oak, pine, and gum timbered country.

All the necessary water reservcs are provided for the beneficial occupation of the back lands.

The subdivision can be effected expeditiously, and the special conditions of the survey are See Enclosure B. enclosed. I would recommend the work to be let in two contracts, the Yanko Creek being the division line, at reductions of not less than 15 per cent. upon the existing licensed surveyors' scale of fees.

Accompanying the design are mounted tracings showing the creek and road traverses, to a scale Missing. of 20 chains to an inch, for the guidance of the licensed surveyors employed on the work.

I have, &c.,

THOMAS H. SMITH,

Government Surveyor.

[Enclosure B to No. 165.]

Conditions of Survey.

1. The survey and subdivision shall be effected in accordance with the Surveyor General's published regulations for the guidance of licensed surveyors, together with the following special conditions:—

The meridian used to be at a variation of 80° 20' east of the true north.

Special care is to be taken to secure the highest available ground in laying out the main roads.

Posts not less than 6 inches square to be inserted at each corner. Intermediate stakes at every 10 chains to be 3 inches square. Posts and stakes to be 2 feet 6 inches long, and inserted 1 foot 9 inches in the ground.

All lockspits, whether at corner or intermediate stakes, shall not be less than 6 feet long and 1 foot deep.

Where there are no corner trees the numbers of adjacent portions are to be cut conspicuously in the post.

The plans of these subdivisions are to be drawn on mounted drawing paper to the scale of 20 chains to an inch.

These surveys are to be carried out in all respects to the approval of the Surveyor General, or whomsoever he may appoint.

No. 166.

Memo. by Mr. District-Surveyor Wood.

Albury, 29 April, 1875.

TRACINGS showing Mr. Surveyor Smith's design for the subdivision of land on the Colombo Creek now returned to the Surveyor General; it had escaped my notice that it was addressed to him. I was under the impression that it was sent to this office for my information, and as Mr. Licensed Surveyor Orr was measuring land in the locality it was sent to him in order that he shall not in his survey interfere with the design. Not with the papers.

Schedule of Land applied for by Messrs. J. & H. Osborne.

17 May, 1875.

SCHEDULE of land applied for under the "Crown Lands Alienation Act of 1861," in virtue of improvements, parish of Thurrowa, county of Urana.

Portion.	Applicant.	Area.	Remarks.
40	James and Henry Osborne	a. r. p. 74. 2 0	

No. 168.

Mr. A. A. M'Kersie to The Minister for Lands.

Sir,

Jerilderie, 31 May, 1875.

I, with many others left Victoria, and came to New South Wales, intending to take up land on the Yanko Creek when it would be open for selection, which was generally understood would be on the first of the present year. I have made inquiries at the Deniliquin Land Office as to when it will be available for selection, but can get no information, nor can they tell me if the reserve has been renewed. Now, sir, this mile reserve along each side of said creek, includes some of the best land for selection in Riverina—land which if thrown open for selection would induce hundreds of families to settle permanently on the soil; and I am confident this would ultimately form one of the most flourishing districts in the whole Colony, either for small graziers or agriculturists, either of which would be of infinitely more benefit to the country than the present absentee pastoral tenants. They made the cutting from the Murrumbidgee into the Yanko certainly, but they have been amply repaid for their outlay. The time has now arrived when the public should have a chance of securing a home. Men with a family and a small capital should have an opportunity as well as the large capitalists, who, as I said before, are mostly absentees—many of them living in Melbourne, reaping a rich harvest off their run here and spending the money elsewhere. I contend sir, that a labouring population would be preferable to the present holders, who by iron houses and useless tanks baulk true settlement.

But I am trespassing too far on your valuable time. So to the point: When is this reserve likely to be available for selection? An answer to the above query at your earliest convenience will greatly oblige,

Yours, &c.,

ALEX. A. M'KERSIE.

The reserve referred to includes the land within 1 mile of the Yanko Creek from the Murrumbidgee River downwards, to the Billabong Creek. The reserve has not yet been cancelled.—J.E., 16 June. Suggested that the writer might be asked what areas he would prefer the land measured in, as it has been determined on measurement before selection in this reserve.—P.F.A., 17 June. Approved.—T.G., 30/6/75.

No. 169.

Memo. by The Surveyor General.

7 June, 1875.

THE accompanying design for the proposed subdivision of country adjoining Yanko and Colombo Creeks into portions for sale is submitted for the consideration of the Honorable the Minister for Lands.

It is recommended that the measurement be proceeded with as requirements appear necessary; there are good reasons for the supposition that a large portion of the land will sell readily, and a great demand will arise for the same as soon as it is known that measurements are in progress, as it is particularly suitable for the class of persons now leaving Victoria in great numbers, and selecting in the other districts of this Colony.

In the proposed survey but few portions will be measured of a less area than 320 acres, which appears to meet the views of applicants; and in order to test the feeling, I would suggest that intending selectors, applicants other than lessees, who have asked when the reserve will be opened for sale—and there are many of them—be requested to state what areas they are desirous of selecting; also that the Land Agents at Urana (if appointed) and at Deniliquin be asked as to the areas that the public would desire. I will ascertain the views of District Surveyors Wood and Bolton and Mr. Surveyor Finley on this point, all of whom have had experience in the demand.

Surveyor General's Office.

P. F. ADAMS.

Approved.—T.G., 8/6/75.

No. 170.

The Under Secretary for Lands to Mr. W. Orr.

Sir,

Department of Lands, Sydney, 20 July, 1875.

Referring to former instructions sent to you for your guidance in the appraisal of lands, I now forward the documents necessary to enable you to appraise the value of the lands particularized in the annexed Schedule, and which have been applied for under the 8th clause of the "Crown Lands Alienation Act of 1861."

I have, &c.,

LINDSAY G. THOMPSON,

For the Under Secretary.

Note.—The 28th section, clause 6, of the "Crown Lands Alienation Act of 1861," provides that a single appraiser or arbitrator must make his award *within sixty days* after his appointment, or within such extended time, if any, not exceeding thirty days, as shall have been duly appointed by him. Failure on part of any appraiser or arbitrator to comply with the terms of this section will, in the absence of sufficient explanation, involve the forfeiture of half the amount of appraisement fee, *i.e.* ten shillings in each case.

.....	James and Henry Osborne.....	a. r. p. 74 2 0	40	Parish of Thurrowa, county of Urana, Colombo Creek Run.

[Enclosure to No. 170.]

Appointment of Appraiser by Government.

WHEREAS we, James and Henry Osborne, of Melbourne, in the Colony of Victoria, have applied to purchase in virtue of improvements, certain Crown lands in the parish of Thurrowa, a description whereof is set out in the Schedule hereinafter written: Now I, the Under Secretary for Lands, having been duly authorized by the Minister for Lands, in pursuance of the powers vested in him under and by virtue of the "Crown Lands Alienation Act of 1861," do hereby appoint William Orr, of Urana, in the Colony of New South Wales, to be Appraiser on behalf of the Crown, to appraise the value of the said land, and the price to be paid by the said James and Henry Osborne, for the purchase thereof.

In witness whereof I have hereto set my hand this twentieth day of July, 1875,—

W. W. STEPHEN.

Schedule referred to.

Portion 40, containing 74 acres 2 roods, in the parish of Thurrowa, county of Urana, on Colombo Creek Run.

I, THE within-named William Orr, do solemnly and sincerely declare, that I am not directly or indirectly interested in the matter referred to me, and that I will faithfully and honestly, and to the best of my skill and ability, hear and determine the matters referred to me, under the "Crown Lands Alienation Act of 1861."

WILLIAM ORR.

Subscribed and declared this thirty-first day of July, A.D. 1875, before me,—

H. HARVEY ARMSTRONG, J.P.

No. 171.

The Under Secretary for Lands to Messrs. J. & H. Osborne.

Gentlemen,

Department of Lands, Sydney, 20 July, 1875.

I beg to inform you, in reference to your application of the 5th November, 1872, that portion 40, containing 74 acres 2 roods in the parish of Thurrowa, on Colombo Creek Run, has been measured, and the Honorable the Secretary for Lands having authorized me in that respect, I have appointed Mr. William Orr, of Urana, appraiser on behalf of the Government. If you are satisfied that the land in question shall be valued by him alone, you will please sign the form sent herewith marked "A"; if, however, you wish to appoint an appraiser to act on your behalf, you will sign the form "B," annexed. In this case you will be required to pay the costs of such appraiser, and of the umpire who will then have to be appointed, and upon forwarding the same to William Orr he will proceed herein, to act on behalf of the Government. You will of course understand that unless an appointment in either form A or B be forwarded to him within sixty days from this date he will proceed with the appraisement in accordance with 3rd clause of the 28th section of the Alienation Act.

See No. 94.

Form A. See No. 175. Form B herewith.

2. In appointing an appraiser you will be so good as to sign your name in full.

I have, &c.,

LINDSAY G. THOMPSON,

For the Under Secretary.

[Enclosure to No. 171.]

B.

Applicant appointing Appraiser on his own behalf.

WHEREAS I, of in the Colony of New South Wales, have applied to purchase certain improved Crown land, situate at a description whereof is set out in the Schedule hereinafter written: And whereas the Minister for Lands has duly appointed to be the person to appraise the value of the said land on behalf of the Government, and to fix the value or price thereof to be paid by me. And whereas I am desirous of appointing an appraiser on my behalf in the matter aforesaid: Now I, the said do hereby, in pursuance of the provisions of the "Crown Lands Alienation Act of 1861," appoint of in the Colony of New South Wales, to appraise on my behalf the value of the said land, and the price to be paid by me for the purchase thereof: And further I do hereby undertake and promise to Minister for Lands, that I will pay to the person above appointed as appraiser on my behalf, and to any umpire who may be appointed in the matters aforesaid, all costs, charges, and expenses which shall or may become payable to the said appraiser, and to any umpire who may be appointed herein, and that I will hold the Government of the said Colony indemnified from being called upon to pay the said costs, charges, and expenses, or any part thereof.

In witness whereof I have hereunto set my hand, this day of 187 .

Schedule referred to:—

I, THE within-named do solemnly and sincerely declare, that I am not directly or indirectly interested in the matter referred to me, and that I will faithfully, honestly, and to the best of my skill and ability, hear and determine the matters referred to me under the "Crown Lands Alienation Act of 1861."

Subscribed and declared this day of A.D. 187 , before me,—
J.P.

No. 172.

No. 172.

Memo. for The Surveyor General.

21 July, 1875.

Not with this paper. See previous tracings.

See Nos. 150, 160, and 165, and their enclosures.

HEREWITH are tracings of Surveyor Smith's plans (12 in number.)

1. In forwarding them to District-Surveyor Bolton shall a letter be prepared explaining the action taken as to proposed modification of areas?

2. As Mr. Smith in letters transmitting, suggests action, &c., and encloses "conditions of survey," shall they also be forwarded with tracings for Mr. Boulton's information?

H. WICKHAM.

See Nos. 150, 160, and 165.

Approved.—P.F.A. The question of areas should be settled before action is taken.—P.F.A., 22 July. Telegram to Bolton sent on first paragraph.—H.W., 27 July/75. Three letters dated 8 March, 1875, 20 January, 1875, 22 April, 1875, and enclosures, sent to District-Surveyor Bolton, with twelve tracings of Smith's plans.—J.S.A. (for Surveyor General), B.C., 27 July, 1875.

No. 173.

Telegram from Mr. District-Surveyor Bolton to The Surveyor General.

Wagga Wagga, 26 July, 1875.

WHEN may I expect designs and traverses of Yanko Creek work; adjacent surveys required to conform to design delayed for them?

No. 174.

Telegram from The Surveyor General to Mr. District-Surveyor Bolton.

Wagga Wagga, 27 July, 1875.

TRACINGS of Yanko designs by post to-day. Minister has not yet decided as to minimum areas; will endeavour to obtain speedy decision.

No. 175.

Concurring in appointment of Appraiser.

See No. 94.

WHEREAS we, James and Henry Osborne, of Colombo Creek, in the Colony of New South Wales, have made application to purchase certain unoccupied Crown lands situate at Colombo Creek Run, county of Urana, and parish of Thurrowa, a description whereof is set out in our letter to the Minister for Lands bearing date 5th November, 1872; and the Minister for Lands has intimated that he is willing to appoint William Orr, Esq., of Urana, in the Colony of New South Wales, to appraise the value of the said land on behalf of the Government: And whereas we are desirous of concurring in the appointment of the said William Orr, Esq., as such appraiser as aforesaid: Now therefore we, the said James and Henry Osborne, do hereby nominate and appoint the said William Orr, Esq., to be appraiser on our behalf, to the intent that upon his being appointed by the Minister for Lands as appraiser on behalf of the Government, he may, as sole appraiser, determine the matters aforesaid.

In witness whereof we have hereunto set our hands this 28th day of July, A.D. 1875.

JAMES & HENRY OSBORNE,
Licensees of Colombo Creek Run.

Schedule referred to.

Portion 40, containing 74 acres 2 roods, in the parish of Thurrowa, county of Urana, on Colombo Creek Run.

No. 176.

The Under Secretary for Lands to Mr. A. M'Kersie.

Sir,

Department of Lands, 31 July, 1875.

No. 168.

Referring to your letter of 31st May last, inquiring when the Yanko Creek Reserve will be available for selection, I am directed to inform you that it has been determined to measure the land within this reserve before it is thrown open to conditional purchase, and to enquire in what areas it would be preferred that such measurements should be made.

I have, &c.,
W. W. STEPHEN.

No. 177.

M. Fitzpatrick, Esq., to The Minister for Lands.

Sir,

251, George-street, 16 August, 1875.

It may be convenient to have before you something in writing to remind you of the promise which you kindly made to Mr. Osborne and myself on Saturday morning, namely, that you would at an early date submit to your colleagues the question of the retention of the Yanko and Colombo Creek Reserves, or the sale of the land included therein.

I have, &c.,
MICHL. FITZPATRICK.

To the Surveyor General,—From time to time the question of this reserve has been submitted.—J.W.E.

Reserves have been Gazetted as proposed in design for subdivision of the Colombo and Yanko Creeks.—J.W.E., 19 August.

No. 178.

No. 178.

Appraisement by single Appraiser.

To all whom these presents shall come—I, William Orr, of Urana, in the Colony of New South Wales, send, greeting:—

WHEREAS on the 20th day of July, in the year of our Lord one thousand eight hundred and seventy-five, I was duly appointed by the Minister for Lands, on the twenty-eighth day of July, in the year of our Lord one thousand eight hundred and seventy-five, by James and Henry Osborne, of Melbourne, in the Colony of Victoria, as the sole appraiser to fix and determine the price or value to be paid by the said James and Henry Osborne for certain unoccupied Crown lands situate at Colombo Creek Run, county of Urana, a description whereof is set out in the Schedule in the paper writing hereto annexed: And whereas I have entered upon the consideration of the value of the said land, and have heard and considered the evidence produced before me, by or on behalf of the Minister for Lands and the said James and Henry Osborne: Now I, the said William Orr, do hereby declare the sum of seventy-four pounds ten shillings sterling to be the value of the said land, and do appraise and fix that sum as the amount to be paid by the said James and Henry Osborne for the purchase thereof from the Crown—and I assess and fix the costs of this appraisement payable to me at the sum of two pounds ten shillings, which said sum I direct shall be paid by the Minister for Lands.

In witness whereof I have hereunto set my hand this eighteenth day of August, A.D. 1875.

WILLIAM ORR,
Appraiser.

See Enclosure to
No. 170.

No. 179.

Mr. District-Surveyor Bolton to The Surveyor General.

Sir, District Surveyor's Office, Wagga Wagga, 25 September, 1875.

I beg to acknowledge the receipt of your B.C. of the 27th July, 1875, directing me to delay the subdivision of the frontages of the Yanko and Colombo Creeks until a decision is come to as to the size of the portions the land is to be measured in; also your B.C., of the same date, forwarding papers having reference to the reserves on those creeks, with a minute written thereon by the Hon. the Minister for Lands to the effect that it is not intended to sell the land embraced in such reserves at present; and in reply I do myself the honor to draw your attention to the fact that a great deal of the frontage of the Yanko Creek has already been alienated to the Messrs. Wilson and others in virtue of improvements, and as pre-emptive purchases, and the reserves in question have been flanked by measurements for auction, so as to cut them off from the back country, except where reservations for access to water have been provided in accordance with the system adopted on much more important frontages such as the Murray and Murrumbidgee; hence that no benefit to the adjacent country can accrue by locking up the frontages to the Yanko and Colombo Creeks any longer; and I may state that the lessees of the runs through which these creeks flow and the general public are anxious to be allowed an opportunity of acquiring land along them, and I consider it would be only just to the lessees of runs who have purchased large tracts of the back land, under the impression that the frontage would be soon alienated, to afford them an opportunity to purchase the land between their large tracts and the creek.

And with reference to the survey of the creek frontages and adjacent land a great saving of labour would result from the subdivision being carried on concurrently.

And as regards the size of the portions, owing to the fact of the country being suited only for pastoral purposes or agriculture in connection with grazing, no demand exists for small portions, so that the areas should be generally large. However, a few portions in favoured spots might be measured small, say from 80 to 160 acres, and so grouped that they could be amalgamated if required by anyone desirous of obtaining a large holding.

For these reasons, and in deference to the wishes of the lessees of the runs and general public, I would recommend that the subdivision of the Yanko and Colombo frontages with the adjacent country be proceeded with forthwith.

I have, &c.,
C. F. BOLTON,
D.S.

I see no reason for delaying the measurement of the reserve whenever either the public or the lessee desire it. The surveyors are ready, and will commence if a favourable decision is given.—P.F., 27 Sept. Submitted to Minister and returned.—27 Dec.

Portion No. 40

The Treasury, New South Wales,
29 December, 1875.

Sir,

I am directed to inform you that James and Henry Osborne paid into this office on the 28th inst. the sum of £74 10s., being the amount of purchase-money for land at Colombo Creek, county Urana, containing 74 acres 2 roods.

2. The fee on the deed (£1) has also been paid.

I have, &c.,
W. NEWCOMBE,
Pro Under Secretary.

Colombo Creek Run, District of Murrumbidgee, was at the date of the payment of the purchase-money held under a promise of lease by James Osborne, junior, and Henry Osborne.—A.O.P., Occupation of Lands, 8 February, 1876.

No. 181.

No. 181.

Mr. District-Surveyor Bolton to The Surveyor General.

Sir, Wagga Wagga, 20 January, 1876.
I do myself the honor to inform you that I hold a large number of applications for land in virtue of improvements, situated within the Yanko and Colombo Creek Reserves, most of which have been returned to this office by various surveyors unacted on because the land applied for is embraced in the above reserves, and I now request that I may be informed if the measurement of the land in question should be stopped on that account, while the land in the Yanko Reserve, on Sir S. Wilson's run, having frontage to the Yanko Creek, has been measured in large quantities, and so much of reserve as relates to those portions has been revoked and alienated. In fact the greater part of the Yanko frontage, from its junction with the Billabong up to Bundure, has been thus disposed of. If that course was unobjectionable in that part of the creek I do not see why the same course should not be pursued above Bundure on the Yanko and on the Colombo Creek.

I have, &c.,
C. F. BOLTON,
D.S.

Minute on No. 181.

Submitted for the consideration of the Honorable the Minister for Lands, that Mr. Bolton be instructed to cause the measurement of the Yanko and Colombo Reserves as speedily as circumstances will admit; and that where the lands are found to embrace improvements, the portions on which they fall will be exempt from auction sale and conditional purchase, and when the portions of the reserve is revoked within which they are situated, the owner of the improvements can purchase the land in virtue of them. It is understood that only the measurements for auction sale in these reserves are to be submitted specially to the Minister.—P.F.A., 6 Mar.,/76. The Under Secretary for Lands.

No. 182.

Mr. A. Armstrong to The Minister for Lands.

Sir, Central Land League Office, 18, Bridge-street, 8 March, 1876.

I have the honor to state that I have been requested by the Free Selectors' Association at Deniliquin, in the interest of a large number of intending conditional purchasers, to make application for the cancellation of reserve No. 157, in the counties of Townsend and Boyd, Mitchell, and Urana, last Gazetted in *Government Gazette* of date December 22nd, 1865.

2. With reference thereto, I have the honor to submit that the object of the reserve has been far more than fulfilled, and the Crown lessees through whose runs the reserve passes have been amply rewarded for the comparatively slight outlay at which such runs have been permanently watered,—to recoup whom the reserve was made.

3. The reserve in question is of sufficient area to make provision for some hundreds of families and without doubt will be at once conditionally purchased. And the revocation of the reserve would in effect materially add to the importance of the Riverine District generally. And as it is now, comparatively speaking, unproductive, it is a manifest injustice to have it longer locked up from the public—an injustice not only to the persons prepared at once to conditionally purchase, but also to Crown lessees holding blocks of country at back of those forfeited, who have at enormous cost watered their runs, and who have not had the benefit of immunity from selection over so valuable a tract of land.

I have, &c.,
A. ARMSTRONG.

No. 183.

Sir Samuel Wilson to The Minister for Lands.

Sir, Ereildoune, Burrumbeet, 15 March, 1876.

I have the honor to request that you will have the goodness to allow the two surveyors now at work on the Yanko Run both to remain until the survey of the Crown lands on that run is completed.

I would suggest that the surveyor should include all temporary reserves, but especially the reserve along the Yanko Creek, No. 157, as it is much easier done at the same time with the general survey. If you agree to this please to issue instructions accordingly. The survey asked for on the Yanko have been so long in being commenced that I consider that I am entitled to have this request granted.

I have, &c.,
SAML. WILSON.

The writer's request as to the two surveyors being allowed to remain on the Yanko Creek Reserve until the whole of the Crown lands thereon is completed, may be complied with. The survey of the Yanko Reserve contemporaneously with the land outside has already been approved of. Inform applicant.—T.G.

No. 184.

The Under Secretary for Lands to Sir Samuel Wilson.

Sir, Department of Lands, Sydney, 8 April, 1876.

Referring to your letter of the 25th ultimo, requesting that the two surveyors now at work on the Yanko Run may be allowed to remain until the survey of the Crown lands on that run is completed, I am directed to inform you that the Minister for Lands has been pleased to approve of your request, and that the surveyors will be at once instructed accordingly through the district surveyors.

2. I may add that the survey of the Yanko Reserve has already been approved of contemporaneously with the lands outside.

I have, &c.,
A. O. MORIARTY, (for U.S.)

No. 185.

Description of portion of land, parish of Thurrowa.

James Osborne, Jun., and H. Osborne.

I.P.

Description.

74 acres, 2 roods, county of Urana, parish of Thurrowa, portion 40: Commencing on the right bank of Colombo Creek, at a point where the northern side of a road 1 chain wide, dividing it from part of portion 35 of 261 acres, meets it; and bounded thence on the south by that road bearing west 10 chains and 68 links; on the west by the eastern boundary of portion 34 of 320 acres bearing north 45 chains and 71 links; on the north by the southern boundary of portion 32 of 91 acres 1 rood, bearing east 20 chains; and on the east by a line bearing south 28 chains 48 links to Colombo Creek; and thence by that creek, downwards, to the point of commencement, exclusively of a road 3 chains wide passing through this land in a north-easterly direction, the area of which has been deducted from the total area. Examined.—R.U. Diagram prepared, 9/5/76. Deed prepared, 26 May, /76.

No. 186.

Mr. District-Surveyor Bolton to The Surveyor General.

Sir,

District Surveyor's Office, Wagga Wagga, 13 June, 1876.

I do myself the honor to acknowledge the receipt of your B.C. of the * 17th July last, in * 7th July. reference to the Messrs. Osborne's applications to purchase land, in virtue of improvements on the Colombo Creek, and in reply I beg to inform you that I have visited the locality, and examined the dams which form the improvements, and find that the statements contained in the Messrs. Osborne's correspondence to be in accordance with facts, and after a careful investigation and due consideration I would recommend that they be allowed to purchase the portions particularized in this report. See No. 140.

The first being portion 10, parish of Yathong, county of Urana, containing 225 acres 3 roods and 37 perches, which I would suggest be alienated to the Messrs. Osborne in virtue of the dam on the Colombo Creek forming the frontage of that portion, which I estimate to be worth £240, and which was constructed at their sole expense, while Broughton and Walker occupied Cocketgedong Run.

The second parcel of land recommended to be alienated to Messrs. Osborne embraces portions 47 and 48, parish of Thurrowa, county Urana, containing together 483½ acres, in virtue of half the cost of a very large dam on the Colombo Creek, fronting portion No. 48, which I estimate worth £1,000.

The third parcel recommended to be alienated to Messrs. Osborne embraces portions 44 and 45, parish of Thurrowa, together containing 149 acres in virtue of dams and excavation on frontage of portion 45. The dam shown as a broken dam by Mr. More was only the dam to stop up the by-wash which had scoured to the depth of the main creek.

Though the dam at this place is in disrepair, and has not been attended to of late, because the big dam below backs the water past it, nevertheless the work done has added greatly to the holding capacity of the creek, and in event of an accident to big dam below it would retain a valuable supply of water, so that I consider the improvement fully worth £150.

The fourth parcel recommended to be alienated to the Messrs. Osborne in virtue of improvements is portion No. 6, parish of Thurrowa, the improvement being a dam, which, if in good repair, would be worth £500; however, there is a breach in it that would cost a considerable sum to repair, but in its present state I consider the improvement worth £440, and I do not think 218 acres 3 roods would be too much to allow in virtue of half the value of the improvement.

As this matter has been delayed for a very long time, I would recommend that it be dealt with as early as practicable, especially as it would be well to define the Osborne's rights before the Colombo Reserve is thrown open to conditional purchase.

I have, &c.,

C. F. BOLTON,
District Surveyor.

APPENDIX.

Memorial to the Honorable the Minister for Lands with reference to the Yanko Cutting.

To the Honorable the Minister for Lands,—

The memorial of the undersigned Lessees of Runs, situated upon the Yanko and Colombo Creeks, in the Murrumbidgee District,—

Humbly sheweth:—

That the Yanko and Colombo Creeks are supplied entirely by the flood waters of the Murrumbidgee River, out of which the Yanko runs, and out of it the Colombo.

That your memorialists expended £15,000 in engineering works, which they found it necessary to undertake in order to secure an annual supply of water.

That by a cutting, which cost £13,000, and by dams, which cost £2,000, they have to a great extent achieved that object.

That previous to the cuttings so effected by your memorialists the Yanko and Colombo Creeks had not run for eleven years, and the said creeks could never have run but for their operations, except there happened a re-occurrence of such a rare and exceptionally high flood as that by which Gundagai was destroyed.

Your

Your memorialists therefore beg respectfully to represent that it is entirely owing to the expenditure of their capital that there is the supply of water which now exists in the two creeks named; and they submit that a great hardship and an irreparable injury would be inflicted upon them if, by conditional purchases being allowed to be made upon the banks of the said creeks, they are deprived of the use of the water they have secured at so large an expense for their own use, and in order to render the Crown lands leased by them available for depasturing purposes.

Your memorialists received with great satisfaction the assurances which were repeatedly given by the late Minister for Lands, the Hon. John Robertson, Esq., that in such cases the legitimate interests of the Crown lessees would be protected by such reservation of lands from conditional purchase being made as would secure to the Crown tenants the uninterrupted use for their stock of the water so secured.

Inspired, therefore, by the hopes raised by these assurances, and by the knowledge that the promises so made have been faithfully redeemed in the case of the Willanthory, Billabong, in the Lachlan District, your memorialists humbly pray that you will, before the expiration of the present year, cause to be proclaimed as reserved from conditional purchase and for the use of the lessees of the adjacent runs, for the purpose of watering their stock, the land for 1 mile back along both banks of the Yanco and Billabong Creeks.

And your memorialists, as in duty bound, will ever pray, &c.

Robert Patterson, Puckarwidgee.

R. Blackwood, North Currabungam.

Pro Mr. Wilson, G. P. Barber, Coree.

R. H. Hamilton, Colombo Creek.

Cochran & Wilson, Widgiewa, Colombo Creek.

Samuel M'Caughy, Coonong, Colombo Creek.

Brock & Hardie, Cocketgedong and Colombo Creek.

Holmes, White, & Co., Bundure.

Wilson Bros., Yanco, Thurrowa, and Jerilderie North.

Memorial to The Minister for Lands with reference to the Yanco cutting.

To the Honorable the Minister for Lands,—

The memorial of the undersigned Lessees of runs on the Lower Billabong Creek, in the Murrumbidgee District,—

HUMBLY SHOWETH:—

That the waters of the Billabong so rarely reached the lower part of the creek that until the undertaking known as the Yanco cutting had been completed, the creek during the last hundred miles of its course was so generally without water that the adjacent runs were, during the greater portion of the year, quite unavailable for stock.

That by the cutting above alluded to the flood waters of the Murrumbidgee have been enabled to flow into the Yanco and Colombo Creeks, and from thence into the channel of the Lower Billabong, thus affording to your memorialists the opportunity of securing a supply of water, which they have availed themselves of, by the erection of numerous and expensive dams.

That the Yanco cutting was made at a cost of £13,000, and the money was contributed by settlers on the Yanco, Colombo, and Billabong Lower.

That in addition to the share of expense of the said cutting which your memorialists bore, their dams alluded to have not cost less than £10,000.

Your memorialists therefore venture to say that unless they are protected in the enjoyment of water so secured by them, not only will a great hardship and irreparable injury be inflicted upon them, but the value of the runs leased by them from the Crown will be most materially depreciated.

Your memorialists therefore humbly pray that you will, before the expiration of the present year, cause to be reserved from conditional purchase 1 mile on each side of the Billabong Creek, from the junction of the Colomba and Billabong at Yathong, to the junction of the Billabong and Edward River at Moulamcin.

And your memorialists, as in duty bound, will ever pray, &c.

Peppin & Sons, South Wanganella.

Myles Patterson, Conargo.

John Hunter Patterson, Boonoke.

Maryah Station.

R. Blackwood, South Currabungam.

Lachlan M'Bean, Woowoma and Wandoran,

Henry Darlot, Carroonboon.

Alfred Crack, Supt., Tara.

Thos. & Gideon Lang, North Wanganella.

Henry Ricketson, Karrabuai.

Robert Patterson, Kickaiwidgel.

Pro Samuel Wilson, G. P. Barber, Coree.

Pro Peterson & Sargrere, W. P. Harris, Jerilderie.

Rawlins & Murchison, Yathong.

Patrick Brennan, North Yathong

Brock & Hardie, James Hardie, Cocketgedong.

Pro Wilson Brothers, J. M'Gaw, North Jerilderie.

The Deputy Surveyor General reports thus:—

The supply of permanent water in the Billabong Creek, from the mouth of the Colombo Creek downwards to the River Edward, is dependent upon dams erected by private enterprise at great cost; and the reservation from sale until surveyed, of 1 mile on each side, is recommended; but, in so doing, petitioners should clearly understand that the reservation is only a temporary one, and liable to revocation whenever a desire to purchase land is manifested.

APPENDIX II.

[Urgent.]

A.

Memo. by Mr. A. O. Moriarty.

THERE being reason to believe that on the opening of the Yanko Reserve to sale (now in immediate contemplation), the competition for the land on the part of the present lessees of it, for pastoral purposes on the one hand, and conditional purchasers on the other, will be of an extreme character, and that every means will be resorted to by applicants of obtaining or securing possession of the land, it is thought desirable that due precautions should be taken in the public interest to confine the competition to legitimate channels.

It is apprehended that some of this land may be applied for under mineral lease; not that any of it is required or likely to be used for mining, but as a means of obtaining possession of areas in excess, or in anticipation of that obtainable by regular means, and with the intention of subsequently converting the tenure into conditional or other ordinary purchases. The whole area is represented to be alluvial: there has never been mining within it, and it is stated to be certain that there never will be. It is therefore fairly to be assumed that any mineral leases which may at the opening rush be applied for will be designed—not for the purposes of mining but for such objects as are above indicated.

It is therefore recommended that on the reserve being revoked the assistance of the Honorable the Minister for Mines be invoked, with a view to the land being for a time—say six months—reserved from mining, pursuant to the 26th clause of the “Mining Act of 1874.”

A.O.M., 8/9/76.

Submitted for approval.—W.W.S., 8 September, 1876. For Minister for Mines for Proclamation.—T.G., 11/9/76. The Under Secretary for Mines, B.C., 12 September, 1876.—W.W.S. To be returned. Prepare a minute, recommending that the land comprised in the Yanko Reserve be reserved from mining, in terms of section 26 of the “Mining Act of 1874.”—J.L., 14/9/76.

B.

Memo. by Mr. A. O. Moriarty.

YANKO RESERVE—RECEIPT OF SELECTIONS.

It is anticipated that on the first Land Office day after the Yanko Reserve becomes open to sale the competition will be very close for the greater part of the land, and that intending selectors will be in attendance on the opening of the Land Office in unprecedented numbers. In these circumstances it is necessary to provide for securing, on the one hand, the benefit of their fair priority to the first applicants, and on the other hand, the opportunity of competing to others who may be present at the same time with those who first obtain access to the Land Agent, but unable from the number to present their applications simultaneously.

It is the duty of the Land Agent to ascertain who is the first tenderer, and it has been determined that the priority of a few minutes is sufficient to confer the prior right.

Ordinarily, little difficulty is experienced in the performance of this duty, but it is obvious that when selections are being tendered by a crowd of applicants, time must be allowed to those whose accidental position in the crowd may be in the rear, or who may be anticipated by others, only by greater strength or rudeness.

It is therefore recommended that it should be left open to the Land Agent (under instructions) in such an emergency, to treat as made simultaneously all selections tendered to him between the hours of 10 and 12, 12 and 2, and 2 and 4, and that to remove any doubts which may exist as to the legality of such a course under the regulations now subsisting, a regulation be proposed for the approval of His Excellency the Governor and the Executive Council, to the effect of the draft herewith submitted.

A.O.M., 16/9/76.

See Enclosure to F.

C.

Minute for Executive Council.

Recommending that the parcels of land described in the Schedule annexed be reserved from occupation for Mining Purposes under the provisions of the “Mining Act, 1874.”

Department of Mines, Sydney, 21 September, 1876.

It is recommended to His Excellency the Governor and the Executive Council that the parcels of land described in the Schedule annexed be reserved from occupation for mining purposes, under the provisions of the “Mining Act, 1874.”

JOHN LUCAS.

Approved.—H.R., 25/9/76.

[Enclosure to C.]

Department of Mines, Sydney, 25 September, 1876.

His Excellency the Governor, with the advice of the Executive Council, has been pleased to approve of the parcels of land hereunder described being reserved from occupation for mining purposes under the provisions of the “Mining Act, 1874.”

JOHN LUCAS.

SCHEDULE.

MURRUMBIDGEE DISTRICT.

Counties of Boyd, Mitchell, Urana, and Townsend, on Yanko and Colombo Creeks. 271 square miles. The Crown lands within 1 mile of the Yanko Creek, from the Murrumbidgee River to its junction with the Billabung Creek, and within 1 mile of the Columbo, from its outflow from the Yanko Creek to its junction with the Billabung Creek.

County of Cadell, parish of Moama. About 8 square miles. That part of reserve No. 998, on account of travelling stock, included within the following boundaries: Extending from the town of Moama northerly to the north boundary of reserve No. 318 from sale, notified 27th December, 1865.

County of Cadell, at Moama. 47½ square miles. The Crown lands within the following boundaries: Commencing on the Murray River at a point bearing about north 35½ degrees east, and distant about 4 miles and 8 chains from the confluence of the Goulburn and Murray Rivers; and bounded thence on the east by a line north about 3 miles to the south boundary of the extension to reserve No. 90, from sale until surveyed, notified 22nd December, 1865; on the north by that boundary being a line passing ¼ a mile south of the south boundary of 1,361 acres reserved from sale until surveyed, &c., 8th December, 1865, parish of Bama, bearing west about 7 miles; thence by a line crossing the north-westerly extension of reserve No. 91, from sale until surveyed, notified 22nd December, 1865, southerly; thence by the south boundary of the westerly extension of that reserve bearing west 4½ miles to its junction with the northerly extension of reserve No. 95, from sale until surveyed, notified 22nd December, 1861; thence on the west by the east boundary of that reserve bearing south about 3½ miles to the north-west corner of J. Rousch's conditional purchase of 320 acres, being portion No. 46, parish of Tartaila; thence on the south by the north boundary of that 320 acres bearing east by the east boundary of that 320 acres bearing south; and by the north boundaries of R. Berryman's 185 acres conditional purchase, portion 26, parish of Tartaila, J. Halseher's 185 acres conditional purchase, portion 25 and portion 24, of 185 acres, parish of Tartaila, bearing east to the north-east corner of portion 24 aforesaid; thence by the north-eastern boundaries of portions 23, 21, parish of Tartaila, south-easterly to the north boundary of the reserve on account of the population of the town of Moama; thence by the north and the east boundaries of that population reserve, being lines bearing east and south to Backwater Creek; thence by that creek, downwards, to the Murray River; thence by that river upwards, to the point of commencement. [Ms. 76-6,288]

County of Cadell, parish of Moama. About 12 square miles. That part of the Murray River Forest Reserve included within the following boundaries: Commencing at the intersection of the western boundary of the forest reserve with the southern boundary of reserve No. 90, notified 23rd December, 1865; and bounded thence on the west by the west boundary aforesaid, bearing south-westerly to Backwater Creek; thence by Backwater Creek southerly to its junction with the Murray River; and thence by that river north-easterly to the south-east corner of reserve No. 318, notified 27th December, 1865, being a point on the Murray River bearing about north 35 degrees 30 minutes east, and distant about 4 miles and 40 chains from the confluence of the Goulburn and Murray Rivers; and thence on the east by the east boundary of reserve No. 318 aforesaid northerly to the south boundary of reserve 90 aforesaid; and thence on the north by that boundary westerly to the point of commencement. [Ms. 76-6,288]

County of Cadell, parish of Moama, about 1,500 acres. That part of reserves Nos. 90 and 91, extended 23rd December, 1865, within the following boundaries: Commencing at the north-west corner of reserve No. 318, notified 27th December, 1865; and bounded thence on the south by the northern boundary of that reserve easterly about 4 miles and 25 chains to its intersection with a line from the north-western prolongation of the south-western boundary of reserve No. 91; on the south-west by that prolongation south-easterly to the back boundary of the Murray River reserve from lease; on the south-east by part of that boundary, north-easterly, 1 mile; on the north-east by a line forming the north-westerly prolongation of the north-east boundary of reserve 91 aforesaid, north-westerly to a point ½ mile south from the north boundary of the reserve; thence on the north by a line west to the western boundary of the extension of reserves Nos. 90 and 91 aforesaid; thence on the west by a line south to the point of commencement.

About 100 acres. That portion of reserve No. 91, included within the following boundaries: County of Cadell, parish of Moama: Commencing at northern extremity of the south-west boundary of reserve No. 91 aforesaid; and bounded thence by part of that boundary south-easterly to the western boundary of reserve No. 1,622; thence by that boundary northerly to the north-western boundary of reserve No. 91; and thence by that boundary south-westerly, to the point of commencement.

County of Cadell, parishes of Bama Caloola, about 1,620 acres. That part of extension to reserve No. 91, notified 23rd December, 1865, included within the following boundaries: Commencing on the western boundary of the railway from Moama to Deniliquin at the south-east corner of portion No. 161, H. B. Joachim's 320 acres; and bounded on the north by the south boundaries of that portion and portions 162, 160, parish of Bama, and Nos. 3, 6, 7, and 50, parish of Caloola, to the eastern boundary of reserve No. 95; on the west by part of that boundary bearing south 40 chains; on the south by a line bearing east to the railway aforesaid; and on the east by that line north-easterly, to the point of commencement.

County of Cadell, parish of Moira. That part of reserve No. 89, notified 22nd December, 1865, included within the following boundaries: Commencing at the north-west corner of Louis Throsby's 439 acres; and bounded on the north by the south boundaries of portions Nos. 13, 124, 31, 151, 22, 20, 41, 48, 49, 94, 93, 108, 109, to the west boundary of reserve No. 95 extended, notified 2nd December, 1873; on the west by part of that boundary bearing south 80 chains; on the south by a line bearing east to the west boundary of stock reserve No. 998; on the east by part of that boundary northerly, to the point of commencement.

Tartaila and Moira Runs. County of Cadell, 11½ square miles. The Crown lands within the following boundaries: Commencing at the north-east corner of reserve 95 aforesaid, as notified in *Government Gazette* of the 23rd December, 1865, at a point about 7 miles north from the Murray River; and bounded thence on the east by a line north about 11½ miles to the north boundary of Moira Run; on the north by part of that boundary westerly 1 mile; and on the west by the north prolongation of the west boundary of reserve 95 aforesaid bearing south about 11 miles; and on the south by the north boundary of reserve 95 aforesaid, as proclaimed at the aforesaid date, easterly, to the point of commencement. [Ms. 73-5,374]

County of Cadell, parish of Moama, about 95 acres. The Crown lands within the following boundaries: Commencing at the north-west corner of reserve 64; and bounded on the north by a line bearing west about 65 chains to the road from Moama to Deniliquin; thence on the west by that road southerly 30 chains; on the south by a line bearing east to the south-west corner of reserve 64 aforesaid; on the east by the west boundary of the reserve bearing north, to the point of commencement.

Chief Clerk,—

Before this paper is put away should it not be referred to Mr. Campbell to certify that the reserves mentioned have been noted?—H.W.P., 15/12/76. Yes.—T.C.B.

D.

Memo. by The Under Secretary for Lands.

[Urgent.]

This draft circular will do, I think; but if the number of applicants is not sufficient to necessitate a departure from the ordinary mode of procedure I conclude that the Land Agent can at his discretion conduct the business as usual.

The instructions are only issued in anticipation of extraordinary competition. If that anticipation is not realised, and there is no real occasion to apply the new regulations, it would seem to be useless to do so, and the delay would lead to dissatisfaction. In the case of the Moama Reserves, it is doubtful whether the necessity will arise for acting on the instructions.

W.W.S., 29 September.

[Enclosure

[Enclosure D.]

[Circular, urgent.]

Department of Lands, Sydney, September, 1876.

Sir,

I am directed to enclose herewith, for your information and guidance, six copies of the Supplement to the *Government Gazette*, dated 27th instant, containing certain additional Regulations under the "Crown Lands Alienation Act of 1861."

2. With regard to clause 2 of those Regulations, headed conditional purchases, I am to apprise you that the provisions of that clause are to be carried out with regard to the applications which may be made on Thursday, the 12th October next, on which day the Moama Reserves (Gazetted as revoked on the 10th instant) will become open to conditional purchase. Any applications, therefore, coming within the category specified in that clause, and which you are unable to dispose of on the Thursday, are to be dealt with by you between the hours of 10 a.m. and 4 p.m. on Friday the 13th instant.

3. You should take care to give due notice of the above arrangement, and to have copies of the Regulations posted on the doors of the Land Office and inserted in the local papers as soon as practicable after the receipt of this communication.

E.

Memo. by The Under Secretary for Lands.

[Urgent.]

MR. B.,

Have letter (in accordance with the Minister's memo.) drafted at once, as Mr. Garrett wants ^{See B.} the Urana and Moama Land Agents to be apprised to-day.

The Chief Clerk's memo. enclosed, will be of assistance, no doubt, in framing the letter.—W.W.S., 29 September, 1876.

[Enclosure to E.]

Minute by The Minister for Lands.

THE circular should contain instructions to the effect that when the doors are opened at 10 o'clock so many persons desiring to make applications as the office will conveniently hold should be admitted; the doors then closed, and the applications received. All those applications tendered by the parties then present should be dealt with as simultaneous applications, if found upon examination to conflict. When the applications of all those then present have been received and dealt with, and the parties have left the office, at 11 o'clock the doors should again be opened, and another series of applicants allowed to enter, and their applications similarly dealt with, and so on from hour to hour. Such applicant, upon tendering his application and money, receiving a ticket with the number of his application thereon inserted. Upon Friday all those applicants who may have applied for land for which there was no other applicant at the same hour, will have formal receipts given them, and all conflicting applications, *i.e.*, those applications that may have been made within the same hour for the same portion or parcel of land, be disposed of by ballot in the usual way. T.G.

F.

The Under Secretary for Lands to The Land Agent, Urana.

(Circular.)

Sir,

Department of Lands, Sydney, 29 September, 1876.

I am directed to enclose herewith for your guidance, six slips of the Supplement to the *Government Gazette*, dated 27th instant, containing certain additional Regulations under the "Crown Lands Alienation Act of 1861." ^{See copy enclosed.}

2. With regard to clause 2 of the Regulations headed "Conditional Purchases," I am to apprise you that the provisions of that clause are to be carried out in the manner hereinafter specified with respect to the applications which may be made on Thursday, the 19th day of October next, on which day the Yanko Creek Reserves (Gazetted as revoked on the 16th instant) will become open to conditional purchase.

3. When the doors are open at 10 o'clock, as many persons desirous of making application as the office will hold should be admitted. The doors should then be closed, and their applications received and dealt with as simultaneously made if found upon examination to conflict with one another.

4. At 11 o'clock the doors should be again opened, and after the first batch of applicants have left the office another should be allowed to enter; the doors then closed, and their applications similarly dealt with, and so on from hour to hour.

5. Each applicant upon tendering his application should receive a ticket with the number of his application thereon inscribed, as also the hours between which it was made.

6. Upon Friday all those applicants who may have applied for land for which there was no other applicant at the same hour, and which you may be unable to dispose of on the Thursday, will have formal receipts given them between the hours of 10 a.m. and 4 p.m.

7. Conflicting applications, *i.e.*, all those that have been made within the same hour for the same portion or parcel of land or any portion thereof, will be disposed of by ballot in the way provided by the new Regulations.

8. You should take care to give due notice of the above arrangements, and have copies of the Regulations posted on the doors of the Land Office, and inserted in the local papers as soon as practicable after receipt of this communication.

I have, &c.,

W. W. STEPHEN.

Similar circular despatched to the Land Agent at Moama.

[Enclosure to F.]

Department of Lands, Sydney, 27 September, 1876.

His Excellency the Governor, with the advice of the Executive Council, has been pleased to make the following additional Regulations under the "Crown Lands Alienation Act of 1861," and the same are now published for general information.

THOMAS GARRETT.

CONDITIONAL

CONDITIONAL PURCHASES.

Priority of selections made on the same day.

1. Whenever the same land shall be applied for on the same day by two or more applicants, that applicant who shall first have tendered to the Land Agent an application in due form, accompanied by the prescribed deposit for the land, shall be declared the purchaser, but in the event of the applications being tendered simultaneously, or so nearly together that the Land Agent shall be in doubt as to which may have been first tendered, the right to the land shall be determined by lot in accordance with the Regulations heretofore subsisting, as soon as the same can conveniently be done.

2. Should there be reason to anticipate extraordinary competition for land on any land office day, it shall be within the discretion of the Minister for Lands to instruct the Land Agent to deal with all applications that may be found upon examination to be conflicting, and upon the clear priority of which he has doubt, tendered on that day between such hours or periods as he may prescribe, as applications having been made simultaneously: Provided that such instructions shall be limited to the day or days therein specifically mentioned.

3. In the event of its being found, at any time subsequently to the receipt of applications for conditional purchase, that the same land has been applied for, wholly or in part, by two or more persons, a day may be fixed, of which due notice shall be given by the Land Agent to the several applicants, and the right to the land shall then be determined by lot as already provided.

G.

Opening of Reserved Lands, Yanko and Colombo Creeks.

CONFORMABLY to the desire expressed to me by the Honorable the Minister for Lands, that a brief report of the proceedings in connection with the actual opening to selection of the land on the Yanko and Colombo Creeks should be made, to accompany the papers on the general subject that are about to be laid before Parliament, I do myself the honor to submit the following outline sketch, and trust that it may not be thought out of place if I venture to congratulate the Honorable the Minister that so little of the difficulty that might have been anticipated, considering the position, value, and extent of the reserved areas, and the extent to which popular attention in this and the neighbouring Colony had been interested in their opening to settlement, was found to operate when that measure was being carried into effect.

It is known that while the revocation of these reserves had been determined upon by the Government some time previously, and the necessary surveys and examination of the country had been for some time in progress, having for their object the preservation of the interests of the general public and a regard to the peculiar features and circumstances of the land itself,—the ultimate revocation of the reservation was hurried forward as much as possible consistently with such considerations, in pursuance of the resolutions passed by the Legislative Assembly; but the experience of other cases had shown but too clearly that,—if this measure were taken without proper precautions and arrangement,—confusion, litigation, and difficulty of every kind would have been entailed upon the selectors, as well as irreparable damage and loss upon the possessors of the valuable pastoral properties of which the reserved lands were composed, and to whose enterprise and expenditure much of the present value of the lands is owing. Accordingly much of the land had been measured into portions of such a size as the public interest and the convenience of applicants of all classes had seemed to dictate. The areas containing the improvements of the pastoral tenants were indicated and prescribed, and special reserves made of water frontage and of particular areas needed for purposes of ultimate settlement. Plans showing all this information in detail were prepared under the direction of the Surveyor General, lithographed, and widely circulated, and maps of the various parishes were specially prepared on a very large scale and exhibited at the various district offices for the use of all persons applying for information, some time previous to the actual opening of the land to selection.

It became necessary for the Minister to consider when the Proclamation of revocation was ready to be issued, what effect the actual date of it and the consequent date of the revocation itself (thirty days subsequently) would have upon the receipt of applications from the various classes of applicants. It was represented that if the thirty days should commence from Monday (by reason of the Proclamation issuing on that day) the period would obviously expire on Wednesday and the land become open to selection first on Thursday, the ordinary land office day for conditional selections; and that consequently the pastoral occupants, whose interests represented property of great value in a most critical position, would be deprived of the opportunity of purchasing any portions of their holdings until after they had been picked over by applicants, to whom the deterioration or destruction of such properties would be matter of small concern. If issued on any other day of the week, several days must have been left for the operations of the lessees before a Land Office day. In deciding to issue the Proclamation on a Saturday, therefore, the Minister limited the period before a Land Office day, to the least, consistent with affording any opportunity of purchase of portions of their holdings to the class of purchasers who alone possessed a vested interest demanding recognition if only in consideration of its worth to the whole community.

It was also necessary to provide against the probable occurrence of confusion and crowding at the first tender of applications, and for discriminating the priority of selection between them. On similar occasions in another colony difficulties and evils of an aggravated character had arisen from these causes, and some inconvenience had been known within the experience of this department. To obviate these, regulations were framed under which the Minister was empowered to direct the Land Agent on such occasions (when he would obviously be unable to ascertain the first applicants in a crowd assembled to rush the Land Office at the appointed moment of its being opened) to treat as simultaneous all applications deposited with him between prescribed hours—sufficient to admit of all applications then ready to be tendered—being duly received and noted. It was further decided that a sufficient official staff should be in readiness for the emergency.

The reserved areas comprised portions of the districts of Wagga Wagga, Urana, Deuiliquin, and Hay, but the bulk of the land being within the Urana district it was at that place that special arrangements were principally called for. The Land Office at Urana was a small building, constructed of pine, of about 20 feet in length by 12 in breadth, forming two small rooms, the whole of such a size as to be useful only as an accessory to the accommodation requisite for any considerable number of people. The erection of two temporary sheds, with necessary fittings and enclosed yards adjacent, the whole of the simplest construction and composed of rough pine boards was accordingly recommended and authorized, and they were completed in time for use at a comparatively trifling expense (about £167). From the vicinity

vicinity of the country to the neighbouring Colony of Victoria, from which large numbers of people have been for some time past settling in adjacent parts of this Colony, and from the prominence given to the subject in Victorian as well as our own newspapers, it was impossible to estimate with any certainty the probable numbers of applicants at the opening of the reserve, but the most reliable information obtainable warranted the anticipation that several hundreds of people would be waiting for admission at the opening of the Land Office on the first Land Office day. In the inevitable uncertainty it was thought better to risk error on the side of greater than of less convenience. Accordingly the sheds were made of sufficient capacity, and so arranged that from 800 to 1,000 selections might have been dealt with without very much difficulty. I append a small diagram illustrating the arrangement of the sheds and yards. It may be sufficient here to state that the former were erected in front and on either side of the Land Office, with a large yard between them, and two other yards, one at the opposite and outer side of each shed. Each yard was entered from the street, and closed by a gate. The sheds or offices were entered by four separate doors, each opening, through a barrier, from the yard adjacent, and provided with separate doors of egress; and opposite each entrance door, and extending to the door of egress, was a counter forming a passage, through which the applicants entered, deposited in succession their applications with the officer behind the counter, and passed out into the street. In the spaces behind and between the counters were tables for the plans, &c.

Appendix A 2

The official staff consisted of Mr. Houston, a qualified officer of the Surveyor General's Department, who with an assistant draughtsman (Mr. Tritton) had been despatched in charge of the plans; and Messrs. Oliver and Robertson, experienced clerks in this office, who were sent to assist Mr. Badham, the Land Agent. Mr. Bolton, the District Surveyor, was also present, and rendered most valuable aid, and being myself at that time in a neighbouring district on leave of absence (consequent upon an attack of illness) the Minister expressed a wish that I should be present to supervise the arrangements, and was pleased to authorize me to deal with any matters requiring prompt decision and falling within the range of executive or official action. I arrived at Urana in time to have every arrangement completed before the opening day.

On the first two days after the revocation took effect, fourteen selections were made under the 31st clause of the "Lands Acts Amendment Act 1875," comprising an area of 3,890 acres, and 122 Volunteer Land Orders were deposited for the selection of 6,100 acres. These applications being severally conformable to the law and regulations were, after examination, passed and noted accordingly.

Several applications were also tendered under the clause above quoted which, not being in conformity with the law, I felt it to be my duty to instruct Mr. Badham to decline accepting them. I should naturally have preferred referring the question of their acceptance or rejection to higher authority, but, having regard to the responsibility imposed upon me, and deeming the applications to be plainly illegal (being within areas *not* representing 5 miles square of leasehold, or portions of which had been broken in upon by previous alienation), I considered it the better and wiser course to refuse acceptance of the applications at once, rather than by taking any other course to leave myself under the necessity of refusing or questioning any selection of the same land that might be subsequently made in conformity with the law by other parties. It was of course inevitable that some disappointment and dissatisfaction should be felt by the applicants, who I do not doubt applied in every instance without any idea of exceeding their presumed legal right. In some cases indeed I was assured that competent legal advice had been obtained, and that the applications were based thereon. While refusing to receive the applications I thought it only proper to note the documents for identification, with the facts of their tender with the proper deposits, and the grounds of refusal in each case, so as to enable the applicants to have ready proof of such tender and refusal, in the event of its being ultimately determined by appeal to the Government or the legal tribunals that I was acting on erroneous views. It is satisfactory to me to have since found that about the same time the Government in Sydney, under the advice of the Crown law officers, was acting in other cases on the same view of the clause in question as that on which I proceeded. It seems unnecessary to pursue the question further here.

The selections under the 31st clause and those under Volunteer Land Orders were charted, as soon as made, upon the large maps prepared for public inspection; so that at the close of the ordinary office hours on the Wednesday intending selectors were enabled to see what lands had been thus taken up, and the offices were on that day kept open to the public to a late hour with this object.

On the morning of the first land office day the public were admitted to the yards, and at the hour for opening the office a constable was placed at each door of ingress to prevent crowding and preserve order. It was arranged that the business of certain parishes should be taken at each counter, and the names of those parishes were placed on a placard over the door leading to it. In one shed Mr. Bolton, the District Surveyor, and in the other Mr. Houston, took charge of the plans relating to the respective parishes. I was myself prepared to render assistance wherever required. Behind each counter was stationed an officer to receive the applications and deposits, to facilitate which each was provided with a certain number of tickets numbered and bearing the initials of the Land Agent, Mr. Badham, one of which was given to each applicant—a corresponding number being at the same time endorsed on the application—with an intimation that the ticket was to be presented on the following day, after the various applications should have been examined and compared in detail, when the lots applied for by more than one person would be balloted for and formal receipts issued to those whose selections were successful or unopposed. By these means four separate streams of applicants were passed through the offices simultaneously, and whenever the current past any counter ceased, the door leading to it was closed so as to separate the first applicants from any who might have come afterwards. About two hours sufficed for the reception of some 215 separate selections, without the slightest approach to disorder, crowding, or inconvenience to the applicants or the officials engaged.

After the applications had all been taken, the duty of comparing them with the plans and with one another commenced and was one of no slight trouble if not difficulty. Through the exertions mainly of Mr. Houston and his assistant, Mr. Tritton, however, the examination was completed by the following morning, when the drawing of lots commenced and occupied a great part of the day. Owing to the way in which the selections were found to interlace and overlap one another,—in many instances one lot being embraced by fifteen or sixteen separate applications, otherwise distinct and conflicting, again, with others it was necessary to have no less than sixty-five separate ballots before the right to the several lots could be determined. Ultimately it was found that 36,218 acres had been selected by 215 persons.

Of this area 4,064 acres were taken up by conditional purchase for alleged mining purposes, and there could be no reasonable doubt that these selections were made purely in the interest of the pastoral lessees, and without any intention of working *minerals*. The land having been legally open to selection in this form, there was of course no ground on which the selections could have been refused or questioned, or dealt with differently from others. The conditions if carried out will involve the payment of a high price for the land by the selectors; if not carried out will entail the forfeiture of the deposit of 10s. per acre, as well of the selections.

It may be satisfactory to the Honorable the Minister if I append to this an address, which was handed to me at the conclusion of the business, and which I was very far from anticipating. I was informed that it emanated at first from the selectors, and was headed by the signatures of the leading pastoral lessees of the district. The feeling therein exhibited towards myself and the other officers engaged was certainly most gratifying to us, and as certainly, so far as it applied to them, merited by their exertions. For myself I do not claim any particular credit for arrangements that I presume will be held to have been successful; though I may be permitted to hope that the determination of myself and colleagues to carry out the law and regulations, and deal with the business entrusted to us to the best of our united ability, and of course with courtesy and perfect impartiality, may have been speedily and fairly recognized by the parties concerned, and have contributed to the success of the carefully considered arrangements made in anticipation by the Government. It is with great pleasure that I take the opportunity of acknowledging the readiness and confidence with which our proceedings were accepted, and the admirable spirit that was general even amongst those applicants who were inevitably disappointed.

A. O. M.

Urana, October 21, 1876.

W. Moriarty, Esq.,—
Sir,

We, the undersigned, beg most respectfully to return you our sincere thanks for the courtesy and impartiality with which you and the members of your staff have conducted the business in connection with the Yanko and Colombo Reserves:—

BILLABONG AND COLOMBO CREEKS
MURRUMBIDGEE DISTRICT

(Sig. 7)

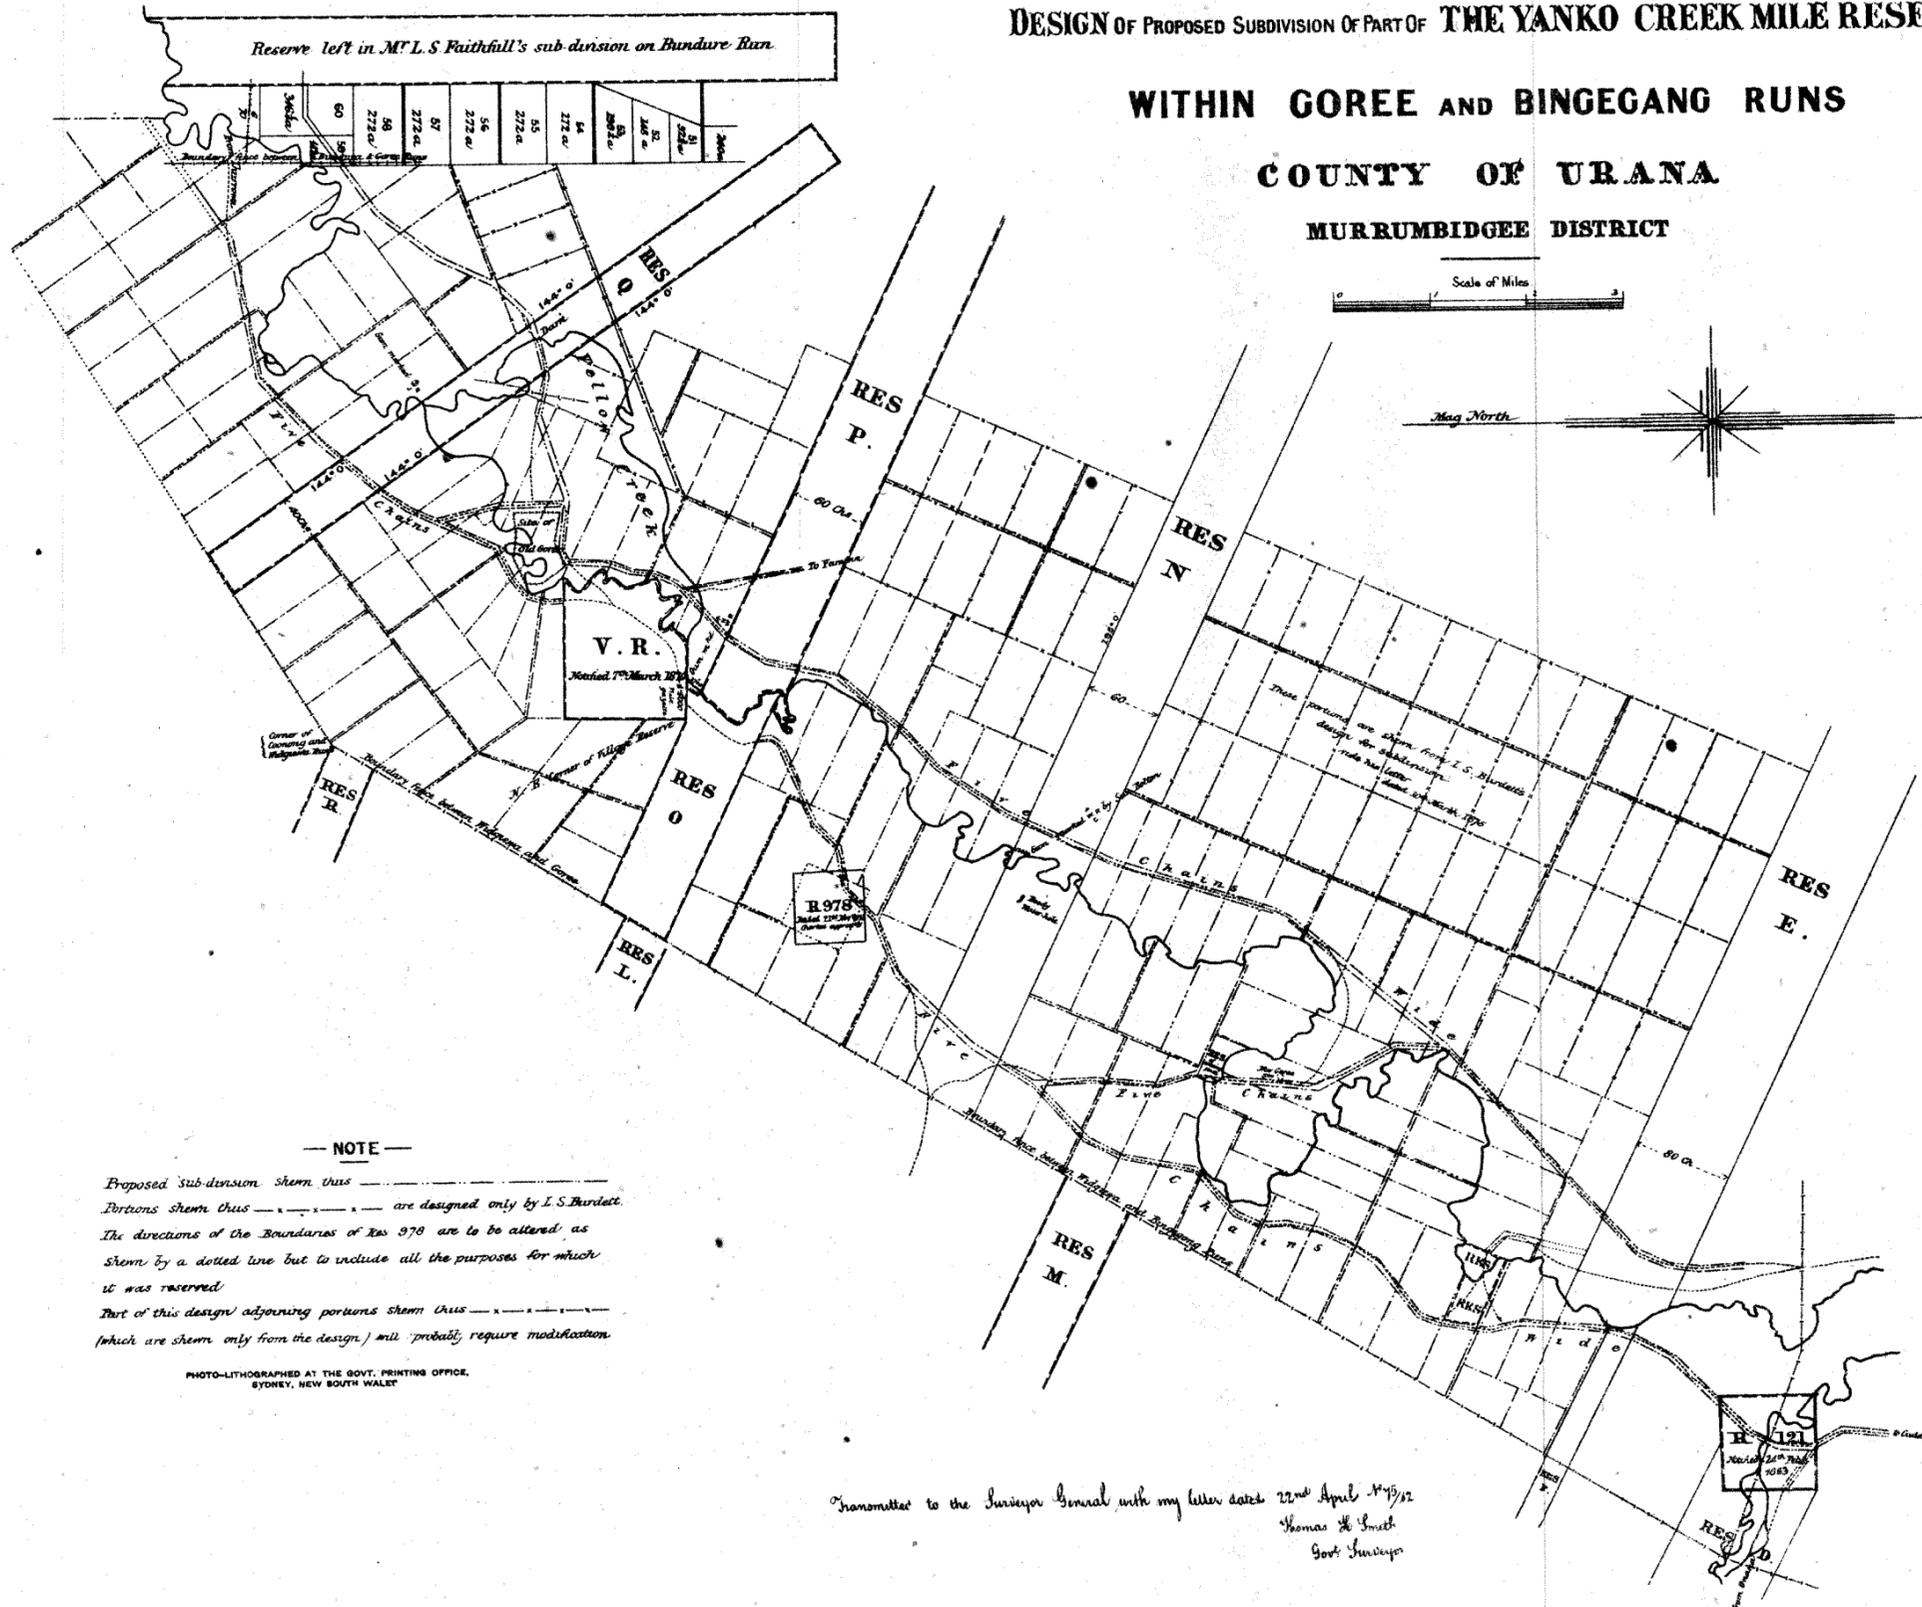

NOTE. Lines shown thus — are edged green on Original Plan

DESIGN OF PROPOSED SUBDIVISION OF PART OF THE YANKO CREEK MILE RESERVE

WITHIN GOREE AND BINGEGANG RUNS

COUNTY OF URANA

MURRUMBIDGEE DISTRICT

NOTE

Proposed sub-division shown thus ————
 Portions shown thus - - - - - are designed only by L. S. Burdett.
 The directions of the boundaries of Res 978 are to be altered as shown by a dotted line but to include all the purposes for which it was reserved.
 Part of this design adjoining portions shown thus - - - - - (which are shown only from the design) will probably require modification.

PHOTO-LITHOGRAPHED AT THE GOVT. PRINTING OFFICE, SYDNEY, NEW SOUTH WALES.

Transmitted to the Surveyor General with my letter dated 22nd April 1872
 Thomas H. Smith
 Govt. Surveyor

PLAN

of 320 ac. I.P. portion to.

Parish Bundure, County of Urana,

Applied for under the 3rd Clause of the Crown Lands Alienation Act of 1861 by

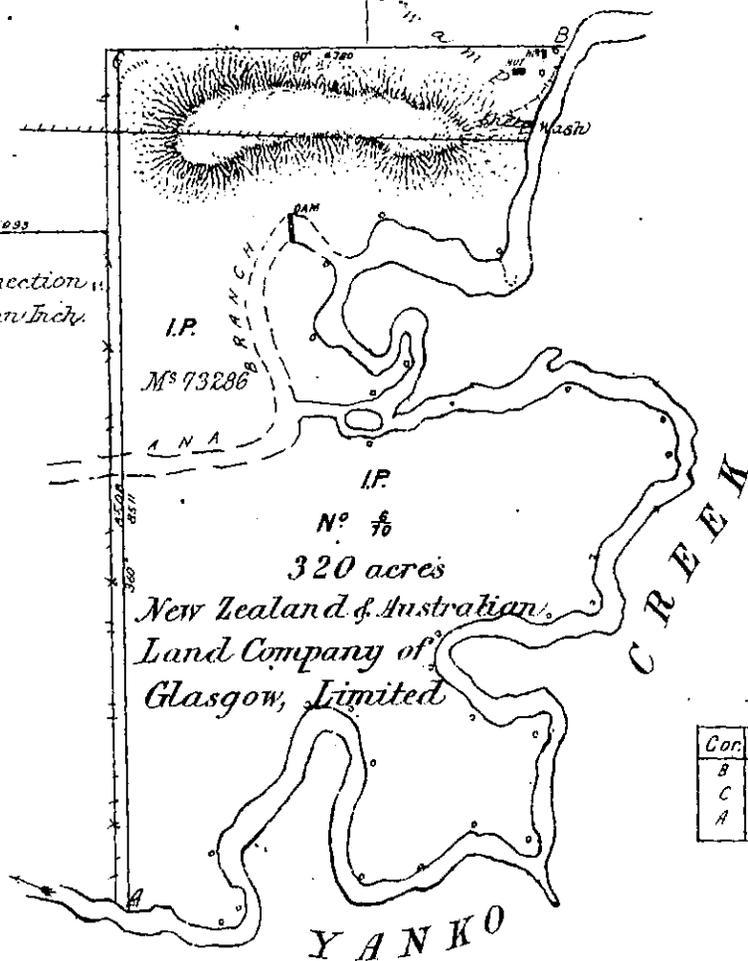

John Sutherland

Within Reserve N^o 157, Notified 22nd Dec^r, 1865.

That part of Res. 157 included within the above portion cancelled by notice
of the 19th April, 1872.

240 ac. I.P.

NEW SOUTH WALES.

MINING ACT OF 1874.

(REGULATIONS FOR MINERAL LEASES UNDER.)

Presented to Parliament by Command.

REGULATIONS UNDER THE MINING ACT OF 1874
RELATING TO MINERAL LICENSES.

NEW SOUTH WALES, } Proclamation by His Excellency Sir
to wit. } HERCULES GEORGE ROBERT ROBINSON,
Knight Grand Cross of the Most Dis-
(L.S.) tinguished Order of Saint Michael and
HERCULES ROBINSON, Saint George, Governor and Commander-
Governor. in-Chief of the Colony of New South
Wales and its Dependencies, and Vice-
Admiral of the same.

WHEREAS by the "Mining Act, 1874" it is enacted that it shall be lawful for the Governor to cause documents to be called Mineral Licenses to be issued to any person or persons applying for the same, and upon the payment of the sum of twenty shillings for each such license; and that every such Mineral License shall be in force for the period of twelve months from the date thereof. And, whereas by the said Act it is enacted that the Governor may make and proclaim Regulations for carrying the division of the said Act relating to Mineral Licenses into full effect, as therein provided: Now therefore, His Excellency the Governor, by and with the advice of the Executive Council, in exercise of the powers conferred by the said Act, doth make and proclaim the following Regulations respecting such Licenses, that is to say:—

Issue of Mineral Licenses.

1. A Mineral License or Mineral Licenses in the form in the Schedule hereto numbered 1 shall be issued to any person applying for the same, and paying the sum of twenty shillings for each such license.

Privileges conferred by Mineral License.

2. Every Mineral License shall (subject to the Regulations following) during its continuance in force entitle the holder thereof—

- (a.) For the purpose of searching for any minerals other than gold, to take possession of and occupy forty acres of Crown Land.
- (b.) For the purpose of working deposits of stream tin, to take possession of and occupy four acres of Crown Land.

Provided always that for the purpose of searching for coal, not more than six hundred and forty acres of land shall be occupied in one parcel; and for the purpose of searching for minerals

other than coal or gold, not more than eighty acres of land shall be occupied in one parcel; and for the purpose of working deposits of stream tin, not more than four acres of land shall be occupied in one parcel.

Form of parcel of Land.

3. Parcels of land as aforesaid having a frontage to any stream, water-course, or road, shall be measured with a mean depth having a proportion to the frontage of two to one. On courses of streams where the water-course is only partly defined, such parcels may embrace the channel or gutter in the proportion of not more than one in the direction of the flow to every three in depth. Parcels not so situated shall be measured in square blocks if the quantity of land allowed as aforesaid can be obtained in that form.

Mode of taking possession, and maintenance of boundary-marks.

4. To entitle any holder of a Mineral License or of Mineral Licenses to occupy any parcel of land for any of the purposes aforesaid, he shall take possession thereof by fixing firmly in the ground at each angle thereof a post not less than three inches thick, projecting above the surface not less than three feet, and set in an L trench six feet long and nine inches deep, indicating the general direction of the boundary-lines; or by a conspicuous mark upon a tree at each angle thereof, and trenches cut from each such tree six feet long and nine inches deep, indicating the general direction of the several boundary-lines. In standing water such parcels shall be marked by posts or marked trees without trenches; and in rocky country by mounds of stone or by a conspicuous L trench, the sides of which are to be three feet in length, in the direction of the boundary-lines, so that the boundaries shall be clearly and distinctly indicated. The holder for the time being of such parcel of land shall maintain the boundary-marks during his occupation.

Forfeiture for failing to search.

5. If any person who shall occupy land under Mineral Licenses for the purpose of searching therein for any mineral, shall (unless otherwise authorized thereto by the Secretary for Mines) fail to employ upon the land occupied for the purpose of searching for coal at least one man upon or in respect of every eighty acres or fractional part of eighty acres so occupied, or to employ upon the land occupied for the purpose of searching for minerals other than coal or gold at least one man upon or in respect of every forty acres or fractional part of forty acres so occupied, and shall fail to prosecute the search for minerals to the satisfaction of the Minister, he shall forfeit his title to occupy such land. And if it shall be made to appear to the

Secretary for Mines that any person who occupies land as aforesaid does not *bonâ fide* employ thereon the required number of men, or does not *bonâ fide* and efficiently prosecute the search for the mineral for the discovery of which he occupies the land, the said Secretary may declare the title to such land forfeited, and thereupon the title to occupy such land shall cease and determine absolutely.

Forfeiture for non-work.

6. If any person who shall occupy land under Mineral License for the purpose of working therein deposits of stream tin, shall (unless otherwise authorized thereto by the Secretary for Mines) fail for a period of seven days to work such land *bonâ fide* and efficiently, he shall forfeit his title to occupy such land.

Forfeiture for non-conversion of holding into leasehold.

7. If any person who shall occupy land as aforesaid for the purpose of searching therein for any minerals shall neglect or fail, for a period of thirty days after the discovery therein of the mineral for which he was searching, or after he shall have commenced to mine for, work, or win any other mineral discovered within such land, to make application in the prescribed manner and form for a lease of such land, he shall forthwith forfeit his right to occupy such land, and his interest in such land and in any minerals raised therefrom shall thereupon cease and determine absolutely.

Forfeiture for neglecting to maintain boundary marks.

8. If the holder of any parcel of land as aforesaid shall at any time fail to maintain the boundary marks of such parcel in such a manner as to be distinctly visible, he shall forfeit his title thereto.

Site for Residence.

9. Any holder of a Mineral License may in virtue thereof occupy for the purpose of residence one parcel of Crown Land not exceeding in extent one quarter of an acre.

Use of Water.

10. Any holder of a Mineral License may in virtue thereof take or divert water from any lake, pool, or stream, or may conserve water for mining and domestic purposes, and may enjoy an exclusive right to use for mining purposes any water by him taken, diverted, or conserved, provided such water is not required for domestic purposes, and that no other person has a prior right to such water.

Repeal of Regulations.

11. The Regulations relating to Mineral Licenses made and proclaimed on the sixteenth day of January, one thousand eight hundred and seventy-seven, are hereby repealed.

NEW SOUTH WALES.

INSPECTION AND REGULATION OF MINES.

(OTHER THAN COAL AND SHALE MINES.)

Presented to Parliament, in pursuance of the Act 37 Vic. No. 13, sec. 114.

Department of Mines,
Sydney, 10th August, 1876.

His Excellency the Governor, with the advice of the Executive Council, has been pleased to make the following Regulations for the Inspection and Regulation of Mines, other than Coal and Shale Mines, in pursuance of the powers conferred by the "Mining Act, 1874."

JOHN LUCAS,
Minister for Mines.

REGULATIONS FOR THE INSPECTION AND REGULATION OF MINES, OTHER THAN COAL AND SHALE MINES.

WHEREAS by the "Mining Act, 1874," section 64, the Governor with the advice of the Executive Council is amongst other things empowered to make Regulations for enforcing the proper ventilation and safe construction and timbering or supporting of all mining shafts, tunnels, drives, or other mining workings used in mining for gold or any other mineral or metal, and for prescribing the mode of inspection of all such shafts, tunnels, drives, or workings, and the powers and duties to be exercised by the persons authorized to act as inspectors in that behalf: Now therefore, His Excellency the Governor, with the advice aforesaid, doth hereby, in exercise of the powers conferred by the said Act, make the following Regulations, and doth hereby direct that such Regulations shall be in force in respect of and shall apply to all mines except Coal and Shale Mines within the Colony of New South Wales, that is to say:—

Interpretation of Terms.

1. In the construction of these Regulations, the following terms in inverted commas shall have the respective meanings hereby assigned to them, unless there is anything in the subject matter or context repugnant to such construction (that is to say):—

- (a.) "Inspector." The person appointed by the Governor with the advice of the Executive Council or the person authorized by the Secretary for Mines to inspect any mine or mins.
- (b.) "Mine." Any land or claim demised or occupied and used for mining purposes other than coal or shale mining, and shall include any place, pit, shaft, tunnel, drive, level, or other excavation, drift, gutter, lead, vein, lode, or reef wherein or whereby any operation for or in connection with mining is or shall be carried on.
- (c.) "Machinery." Steam or other engines, boilers, furnaces, stampers, or other crushing apparatus, winding or pumping gear, chains, trucks, tramways, tackle, blocks, ropes, or tools, and shall include all appliances of whatsoever kind used in or about or in connection with the mine.
- (d.) "Owner." In respect of claims occupied in virtue of miners' rights, the registered owner, or where the title to such claim is not registered, the person in actual possession and working the claim; in respect of land demised for mining purposes, the lessee; in respect of any mine worked on tribute, the tributor for the time being of such land; in respect of machinery used in connection with mining, the person claiming or in charge of such machinery; in the case of incorporated companies or of companies registered under the Act to limit the liability of mining partnerships, the managers of such company; and in every other case, the

person having the management of the mining operations carried on in any mine.

The singular shall unless inconsistent with the subject matter include the plural, and "person" shall include any incorporated company.

Inspector of Mines.

2. The Secretary for Mines may by writing under his hand, authorize any person to inspect any mine or mines or to act temporarily as an Inspector of Mines.

Powers of Inspector.

3. An inspector shall have power to do all or any of the following things, namely:—

- (1.) To make such inspection, examination, and inquiry as may be necessary to ascertain whether in the case of any mine the provisions of these Regulations relating to matters above or below ground are complied with.
- (2.) To enter into at all reasonable times by day and night, but so as not to impede or obstruct the workings, and inspect, examine, and inquire, respecting the state and condition of any mine to which these Regulations apply, or any part thereof, and the ventilation of such mine, and the sufficiency of the special rules (if any) for the time being in force therein, and all matters and things connected with or relating to the safety of the persons employed in or about the mine or any mine contiguous thereto.
- (3.) To exercise such other powers as may be necessary for carrying these Regulations into effect.

Penalty for obstructing Inspector.

Every person who wilfully obstructs any inspector in the execution of his duty under these Regulations, and every owner of a mine who refuses or neglects to furnish to the inspector the means necessary for making any entry, inspection, examination, or inquiry under these Regulations, in relation to such mine, shall be liable to a penalty not exceeding fifty pounds.

Notice to be given of cause of danger.—Penalty for neglecting to comply with notice.

4. If any inspector find any mine or any part thereof, or any matter, thing, or practice in or connected with such mine to be dangerous or defective, so as in his opinion to threaten or tend to the bodily injury of any person, such inspector may give notice thereof in writing to the owner of the mine, and shall state in such notice the particulars in which he considers such mine or any part thereof, or any matter, thing, or practice, to be dangerous or defective, and require the same to be remedied within a period of time named in such notice; and unless the cause of danger be removed or such defect be remedied within the time named, the owner shall be liable to a penalty not exceeding ten pounds, and to a further penalty of one for every

day thereafter during which the owner shall fail to comply with such notice.

5. A copy of every such notice as aforesaid shall forthwith be transmitted by the inspector to the Secretary for Mines.

Disqualification of Inspector.

6. No person shall be appointed or authorized, or be qualified to act as an inspector who practises or acts, or is a partner of any person who practises or acts, as a mining agent, or who is employed by the owners of or is interested in any mine.

Penalty on Inspector divulging information.

7. Any inspector who shall, without the consent of the owner, divulge or make known to any person otherwise than as a witness in a Court of justice, any information obtained by him in the discharge of his duties respecting any drift, gutter, lead, vein, lode, reef, or other metalliferous or mineral deposit in any mine, shall be liable to a penalty not exceeding twenty pounds, and shall be disqualified for the office of inspector.

Duties of mine-owners, &c.

8. It shall be the duty of every owner to enforce the proper ventilation and safe construction and timbering or supporting of all shafts, tunnels, drives, or other excavations in his mine, and to see that such mine and the machinery are in such a state as shall not injure or endanger the health or life of any person employed on such mine or any mine contiguous thereto, or employed in or about such machinery. And any accident occurring in any mine or in or about any machinery shall be *prima facie* evidence that such accident occurred through some neglect or default on the part of the owner thereof.

Liability of owner in case of accident.

9. If any person employed in or about any mine or machinery suffer any injury in person, or be killed, owing to the default or neglect of the owner thereof, his agents or servants, the person so injured or his personal representatives, or the personal representatives of the person so killed, may recover from the owner compensation by way of damages as for a tort committed by such owner; and the amount of such compensation with the costs of recovering the same shall be a charge on the mine or machinery or both in or about which such person was employed. If there be more than one owner, and the person so injured or killed be one of such owners, and the accident be not wholly due to the neglect or default of such person, the compensation and charges shall be borne and paid rateably by the owners.

General rules.—Penalty for contravention of.

10. The general rules in the Schedule hereto shall apply to such mines as the Secretary for Mines shall from time to time upon the report of an inspector direct; and any owner of any such mine who contravenes any such general rule shall be liable to a penalty not exceeding ten pounds; and any person (other than the owner) employed in any such mine who contravenes any such rule shall be liable to a penalty not exceeding two pounds.

Penalties, &c., how recovered.

11. Penalties, charges, and sums of money under these Regulations shall be recovered in the manner prescribed by the "Mining Act, 1874."

SCHEDULE.

General Rules.

1. An adequate amount of ventilation shall be constantly produced in every mine to dilute and render harmless noxious gases to such an extent that the working places of the shafts, levels, stables, and workings of such mine, and the travelling roads to and from such working places, shall be in a fit state for working and passing therein.

2. If at any time it is found by the person in charge of a mine, or any part thereof, that such mine or part is dangerous, every workman shall be withdrawn therefrom; and in every such case a true report of the condition of such mine, or part thereof, shall be forthwith made to the Secretary for Mines; and no workman shall (except in so far as is necessary for inquiry into the cause of danger, or for the removal thereof, or for exploration) be re-admitted into the mine, or such part thereof as was so found dangerous, until the same is stated by the manager, or by an inspector, to be safe. Every such report shall be recorded in a book which shall be kept at the mine for the purpose, and shall be signed by the person reporting.

3. Gunpowder or other explosive or inflammable substances, shall only be used underground in the mine as follows:—

- (a.) It shall not be stored in the mine in any quantity exceeding what would be required for use during six working days.
- (b.) It shall not be taken into or kept in the mine except in a case or canister.
- (c.) A workman shall not have in use at one time in any one place more than six pounds.
- (d.) In charging holes for blasting, an iron or steel pricker shall not be used; and no person shall have in his possession in the mine underground any iron or steel pricker, and an

iron or steel tamping rod or stemmer, unless mounted with at least four inches of copper, shall not be used for ramming either the wadding or the first of the tamping or stemming on the powder.

(e.) A charge of powder which has missed fire shall not be unrammed or drawn.

4. Every mine shall be provided with proper and sufficient machinery and appliances for keeping such mine free from water, the accumulation or flowing of which might injuriously affect any other mine.

5. Every shaft which is out of use or used only as an air-shaft, and the top and all entrances between the top and bottom of every working or pumping shaft, shall be securely fenced, but if proper precautions are used such fences may be removed for repairs or other operations.

6. Every working and pumping pit and shaft where the natural strata are not safe shall be securely cased or lined, or otherwise made secure.

7. Where one portion of the shaft is used for the ascent and descent of persons by ladders or by a man-engine, and another portion of the same shaft is used for raising material, the first-mentioned portion shall be cased, or otherwise securely fenced off from the last-mentioned portion.

8. Every working shaft shall be provided with means of communicating from the bottom of the shaft, and from every entrance for the time being in work between the surface and the bottom to the surface, and from the surface to the bottom of the shaft, by such distinct and definite signals as shall be prescribed by the Minister; and all shafts used for raising or lowering persons shall be provided with guides.

9. A proper footway or ladder, inclined at the most convenient angle which the space in which the ladder is fixed allows, shall be provided in every working shaft where no machinery is used for raising or lowering persons, and every such ladder shall have substantial platforms at intervals of not more than 40 feet, and no such ladder shall be fixed for permanent use in a vertical or over-hanging position unless in shafts used exclusively for pumping.

10. In every mine in which vertical or over-hanging ladders shall be in use in the shaft at the time when these rules shall be applied to it, they may be retained, provided securely fixed platforms be constructed at intervals of not more than 30 feet from each other, and such ladders have sufficient spaces for foot-holds of not less than 6 inches; but in no case shall new vertical or over-hanging ladders be constructed either in substitution for old ones or otherwise.

11. A sufficient cover over head shall be used when lowering or raising persons in every working shaft except where it is worked by a windlass, or where the person is employed about the pump, or about some work or repair in the shaft.

12. No single-linked chain (except the short coupling chain attached to the cage or load) shall be used for lowering or raising persons in any working shaft, and no material shall be lowered or raised in the same cage with or in the opposite cage against any person.

13. To the drum of every machine used for lowering or raising persons, such flanges or horns, or such other appliances as shall be sufficient to prevent the rope from slipping, shall be attached.

14. A proper indicator, in addition to any mark on the rope to show the position of the load in the pit or shaft, and also an adequate break, shall be attached to every machine worked by steam or water power used for lowering or raising persons.

15. If more than twelve persons are ordinarily employed in the mine below ground, sufficient accommodation shall be provided above ground, near the principal entrance of the mine, and not in the engine-house or boiler-house, for enabling the persons employed in the mine to conveniently change and dry their dresses.

16. Wherever any entrance to any mine, or any communication within any part of any mine to any other part thereof, shall be by means of a vertical shaft, or pit, or inclined plane, no person, other than a properly competent person of the full age of eighteen years, shall have charge of any engine, windlass, or gin (whether driven or worked by manual labour or any other power), or of any part of the machinery, ropes, chains, or other tackle, by or by means of which persons are brought up or passed down any such vertical shaft, or pit or inclined plane. And no person in charge of machinery in connection with the working of any mine shall under any pretext whatever unless relieved by a competent person, absent himself, or cease to have continual supervision of such machinery during the time it is used in working the mine. No person in charge of steam machinery shall be employed more than eight hours in any one day.

17. Every steam boiler shall be provided with a proper steam-gauge, water-gauge, and safety-valve; and at least once in every six months every boiler shall be subjected to a hydraulic test.

18. The fly-wheel of every engine, and all exposed and dangerous parts of the machinery used in or about the mine shall be securely fenced.

19. Sufficient borcholes shall be kept in advance and on both sides to prevent inundations in every working approaching a

place likely to contain a dangerous accumulation of water or noxious gases.

20. The roof and sides of every travelling road and working place shall be made secure, and no person unless appointed for the purpose of exploring or repairing shall travel or work in any such road or place until it is made secure.

21. On the occasion of any examination or inspection of a mine the owner shall, if required so to do, produce to the inspector or any other person duly authorized by the Secretary for Mines an accurate plan of the workings thereof, and if the inspector or such other authorized person finds that any part of any plan is withheld or any part of the workings of the mine is concealed from his inspection, or that any plan produced is imperfect or inaccurate, he may require an accurate plan of the actual workings of such mine to be made within a reasonable time by and at the expense of the owner, on a scale of not less than two chains to the inch or on such other scale as the plan

then in use in the mine is constructed on. And every such plan as aforesaid shall show the workings of the mine up to within six months of the time of the inspection, and the owner shall if required by such inspector or other authorized person, cause to be marked on such plan the progress of the workings of the mine up to the time of such inspection, and shall also permit the inspector to take a copy or tracing thereof. Every such copy or tracing shall be deposited in the principal office of the Department of Mines, and no copy or tracing thereof shall be furnished nor information given nor shall such plans or tracings be open to inspection without the sanction of the owner or of the Secretary for Mines.

22. A printed copy of these Rules shall be posted in the office, and on a building or board in some conspicuous part of the mine, and a copy shall be supplied to each person employed in any mine to which they shall apply.

1876-7.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

DEPARTMENT OF MINES.

(WORK PERFORMED BY CERTAIN OFFICERS—COST OF SURVEYS, &c.)

Ordered by the Legislative Assembly to be printed, 31 July, 1877.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated the 12th June, 1877, That there be laid upon the Table of this House,—

“(1.) A detailed statement of all work performed by the Examiners of Coal Fields, the Geological Surveyor, the Inspector of Coal Mines, and the Inspector of Metallic Mines, during the last five years; together with an account of the salaries, expenses, &c., paid to the said Officers, and the fees received by them or the Government from private persons or public Companies, for surveys, reports, &c., made by them or under their direction.

“(2.) A detailed statement of the surveys, inspections, plans, sections, &c., that have been made by the present Examiner of Coal Fields, and the cost thereof, from the date of his appointment till now.

“(3.) A detailed statement of surveys, inspections, plans, sections, &c., that have been made by the Government Geologist, and the cost thereof, from the date of Mr. Wilkinson’s appointment till now.”

(*Mr. McElhone.*)

DEPARTMENT OF MINES.

(1.) A detailed statement of all work performed by the Examiner of Coal Fields, the Geological Surveyor, the Inspector of Coal Mines, and the Inspector of Metallic Mines, during the last five years; together with an account of the salaries, expenses, &c., paid to the said Officers, and the fees received by them or the Government from private persons or public Companies, for surveys, reports, &c., made by them or under their direction.

(2.) A detailed statement of the surveys, inspections, plans, sections, &c., that have been made by the present Examiner of Coal Fields, and the cost thereof, from the date of his appointment till now.*

* This is embodied in Return under No. 1.

EXAMINER OF COAL FIELDS.

Questions 1 and 2.

THE work performed by the Examiner of Coal Fields during the last five years has been the general supervision, and seeing to the efficient and proper carrying out of the Coal Mines Regulation Act in the proclaimed coal districts under his charge (under Act 26 Victoria, 20th December, 1862), namely:—The counties of Northumberland, Durham, Gloucester, Camden, Cumberland, and Cook.

Preparing yearly Reports to the Minister; publishing, in April, 1873, a plan showing where he had traced the outcrop of the upper seams of coal and the probable extent of the New South Wales Coal Field, as far as he had traced it in the counties of Northumberland, Durham, Gloucester, Camden, Cumberland, Cook, Brisbane, Phillip, Roxburgh, Westmoreland, and St. Vincent, together with the vertical sections showing the strata and seams of coal at Newcastle, Wallsend (county Northumberland), Wolgan (county Cook), Kangaroo Creek (county Camden), Mount Keira (county Camden), A. T. Holroyd's land (county Camden), and in 1875 publishing the following diagrams:—

Upper Coal Measures—Northern District.

Sections showing the thickness, character, and portion mined out of the seam of coal now worked at the Australian Agricultural, Waratah, New Lambton, Co-operative, Newcastle, Wallsend, and Duckenfield Collieries in the neighbourhood of Newcastle.

Upper Coal Measures—Western District.

Sections showing the thickness, character, and portion mined out of the lower thick coal at the Vale of Clwydd, Eskbank, Lithgow, and Bowenfels Collieries, and where the seam of coal has been opened out near the Bowenfels Railway Station and other places near Lithgow, in the county of Cook.

Middle Coal Measures—Northern District.

Sections showing the 8 feet seam of coal worked at the Woodford Colliery near Newcastle, at Four-mile Creek, near East Maitland, and at the Tomago Colliery, in the county of Northumberland.

Upper Coal Measures—Southern District.

Sections showing the thickness of the No. 1 or uppermost seam of coal now worked at the Osborne, Wallsend, Mount Pleasant, and Bulli Collieries, and where it has been opened out at Coal Cliff in the Illawarra District, in the county of Camden.

Upper Coal Measures—Northern District.

Sections showing the thickness, character, and portion mined out of the No. 2 or uppermost seam of coal now worked or opened out and about to be worked in the Lake Macquarie and Newcastle Districts.

Middle Coal Measures—Northern District.

Sections showing the thickness, character, and portion mined out of the seams of coal worked at the Stony Creek, Anvil Creek, and Greta Collieries, in the neighbourhood of Stony Creek and Branxton.

Longitudinal sections across the lower coal measures at Ward River, Karuah River, Mammi Johnson, and Smith's Creek (11,000 feet in length of strata proved), showing the position of the lepidodendron, knorria, calamites, stigmara, otopteris, phyllothea, conularia, fenestella, and producta, &c., beds.

Sketch Section showing the position of the glossopteris, phyllothea, vertebraria, clasteria, sphenophyllum, cyclopteris, &c. (fossil flora), found in the upper coal measures, and the position of the producta, spirifers, pecteus, trochi, fenestella, orthoceras, conularia, inocerami, &c. (fossil fauna), found between the lower and middle coal measures; also the position of the knorria, lepidodendron, calamites, otopteris, conularia, fenestella, producta, &c. (fossil flora and fauna), found between the lower and middle coal measures.

Plans showing the position and extent of the different collieries at and near Newcastle, Wollongong, Bulli, and Lithgow Valley.

Reporting upon one hundred and eleven (111) applications to mine under reserves, and making survey and estimate of the Bulli Company's encroachment upon Dr. Cox's property—making reports for Messrs. Lamb and Burdekin, Victorian Government, Sir John Robertson, Messrs. Brown & Lamb, Honorable G. A. Lloyd, and James Neale, Esq., James Hannell, Esq., M'Donald, Smith, & others, Australian Agricultural Company, Thomas Bawden, Esq., J. D. Larsen, Esq., M'Vey Baird, Esq., James Manning Esq., Hardie & Gorman, Sir Henry Parkes, and the Honorable John Sutherland, C. K. Moore, Esq., H. W. Statham, Esq., the Honorable Thomas Garrett, and Edward Greville.

Sections showing the seam of coal and bands therein worked by the Australian Agricultural Company, Waratah, New Lambton, Lambton, Co-operative, Newcastle, Wallsend, Duckenfield, Catherine Hill Bay, Cardiff, Australasia, Redhead, Burwood, Murrurundi, Four-mile Creek, Stony Creek, Anvil Creek, Greta, Bulli, Mount Pleasant, Osborne, Wallsend, Vale of Clwydd, Eskbank, Lithgow Valley, Bowenfels, and Blackman Flat Collieries.

Question

<i>Query.</i>	<i>Question 1.</i>	<i>Answer.</i>
1. Salary.	1. £2,921.	
2. Travelling expenses.	2. £452.	
3. Fees from private persons, &c., for reports, &c.	3. I have not kept an account of these private transactions, but should say that I received for fees about £1,800.	

<i>Question 2.</i>	
1. Salary.	1. At rate of £600 per annum.
2. Travelling expenses.	2. I am unable to state amount, not having kept an account of private transactions, with expense of which the Government were not charged.
3. Cost of assistance while making surveys, plans, and reports.	3. The answer to this question is the same as that given to No. 2 above.

JOHN MACKENZIE,
Examiner of Coal Fields.

THE GEOLOGICAL SURVEYOR.

Question 1.

“A detailed statement of all work performed by the Geological Surveyor during the last five years; together with an account of the salaries, expenses, &c., paid to him, and the fees received by him or the Government from private persons or public Companies, for surveys, reports, &c., made by him or under his direction.”

The appointment of the Geological Surveyor dates from 16th July, 1874.

(I.)

STATEMENT OF WORK PERFORMED.

Inspected portions of Hunter River and the Illawarra Districts, and made a collection of the characteristic fossils and rocks therefrom illustrative of the geological formations.

Arranged and classified the geological Museum in the Surveyor General's Department.

Made a detailed geological survey of the Hartley, Bowenfels, Wallerawang, and Rydal districts. During this survey 13,882 chains, or 173½ miles, of traverse were measured, and over 1,250 specimens of fossils and rocks, illustrative of the geology and mineral resources of the district, were forwarded to the Museum of Mines in Sydney.

Prepared geological map of this survey, embracing an area of about 160 square miles. On this map are defined the boundaries of the various formations, and the positions of the *iron ore*, *limestone*, and *coal deposits* worked in the Western district, together with explanatory notes, and a section showing the relative position of the various formations.

Cleared the summits of Mount Lambie and Mount Walker, near Rydal, for trigonometrical survey stations.

On behalf of the Government assorted, and forwarded to the Consul for France, a collection of geological specimens of New South Wales, for the School of Mines, Paris.

Accompanied the Deputy Surveyor General and the Director of the Botanical Gardens to Mount Wilson, on their examination of that locality for a timber reserve.

Arranged and classified upwards of 1,000 specimens of minerals and fossils, characteristic of the geological formations of New South Wales, for exposition at the Agricultural Society's Exhibition, 1875.

Wrote descriptive report on the mineral exhibits, published in the “Mines and Mineral Statistics, 1875.”

Inspected and reported on the coal lands near Jamberoo, belonging to Mr. G. W. Lord, M.P., and others, furnishing plans and sections.

Prepared, on behalf of the Department of Mines, a collection of about 900 specimens of minerals and fossils, for the representation of the mineral resources and geology of New South Wales at the Philadelphia Exhibition, 1876.

Acted also on the Philadelphia Commission, in arranging for the representation of the various resources of New South Wales at the Philadelphia Exhibition.

Wrote Report of Progress of the Geological Survey Branch for 1875, published in the Annual Report of the Department of Mines, 1875.

Arranged the metalliferous ores, minerals, and fossils in the Museum of the Department of Mines.

Forwarded from the department, on the application of the President of the Upper Hunter Pastoral and Agricultural Society, a suite of minerals and fossils for that Society's Exhibition, 1876.

Arranged a large collection also, which was exhibited by the Department at the Metropolitan Exhibition (1876) of the Agricultural Society of New South Wales.

Inspected the water reserve at Penrith, and reported on an application for mining the extensive gravel deposits which have been left there by the Nepean River during flood-time.

Examined the silurian formation near Yass, and forwarded to the Museum of Mines a series of the characteristic fossils therefrom.

Inspected and reported on recommending the proclamation of the Mount Adra Gold Field.

Inspected and reported on recommending the proclamation of the Crookwell Gold Field.

Inspected and reported on Reserve No. 75, in the parish of Young, county of Montegle, and recommended a portion of it to be thrown open for alienation.

Inspected and reported on lands at Junction of Tipperary Gully and M'Henry's Creek, parish of Young, recommending same to be reserved from sale on account of gold-bearing lead.

Inspected and reported on lands near head of M'Henry's Creek, parish of Woodonga, county of Montegle, applied for by Mr. Spencer.

Inspected and reported on water reserve in the parish of Moppity, county of Harden.

Inspected

Inspected and reported on certain lands near Wombat, county of Harden, applied for by Messrs. Prest and Williams: recommended that the land be reserved for gold-mining purposes.

Inspected and reported on town and suburban lands at Young: recommended alienation of some portions, and reservation of others.

Prepared geological map of the town and environs of Young.

Reported generally on reservation of abandoned and occupied gold-mining lands.

Inspected and reported on the Cumbamurrah and Jugiong Creek Gold Field, recommending the cancellation of several selections on Spring Creek, and reservation from sale of certain lands (shown on map) for gold-mining purposes.

Inspected and reported on auriferous lands on Cunningham's Creek, 4 miles from Murrumburrah, recommending their reservation for gold-mining.

Inspected and reported on lands at Demondrille, applied for for school purposes.

Reported recommending that lands within proclaimed Gold Fields be not sold by auction, unless subject to the provisions of the 14th section of the Crown Lands Alienation Act, 1861, as to the right to search for gold, and to resume the land if payable gold be found thereon.

Inspected and reported on the Seven-mile Creek Diggings, Tyagong Gold Field, recommending the cancellation of certain selections, and the reservation from conditional purchase of certain lands shown on map.

Inspected and reported concerning the sale of town and suburban lands at Grenfell, indicating them on a map, together with other portions recommended to be reserved from sale, and an area to be reserved for water supply.

Made geological map of Grenfell, showing reefs and leads worked in the vicinity.

Examined part of the gold workings at Forbes, and collected geological specimens from the silurian formation there for the Museum of Mines; and observed, about a mile from Forbes, the existence of a deep deposit of tertiary drift, which will probably prove payably auriferous.

Examined geological formations at Parkes Gold Field, near the township: observed the auriferous reefs to be chiefly in dioritic greenstone.

Inspected Goodrich Gold and Copper Mine, and obtained characteristic mineral specimens therefrom for the Museum of Mines.

Reported respecting the probable depth of coal under Sydney, describing the geological considerations involved in the question.

Examined and reported on portion of the Macquarie River Gold Field, recommending certain areas near the confluence of the Cudgegong River and Macquarie River, and also the lands for 15 chains on each side of the Macquarie River for a distance of 10 miles along the river above certain portions marked on tracing, to be reserved for gold-mining purposes.

Inspected and reported on Mr. Byron's gold-mining lease, and Mr. F. B. Suttor's application for an improvement purchase, both on Tweedy's Flat, Macquarie River.

Inspected and reported on Mr. Suttor's mineral leases on the Macquarie River, near Burradong.

Examined the limestone and silurian formation at Currie's Creek and other localities near Wellington, and collected specimens therefrom for the Museum of Mines.

Inspected and reported on the Mitchell's Creek Gold Field, and recommended proclamation of reservation of certain lands (position shown on plan) in the parishes of Tenandra, Bodangara, and Micketymulga, county of Lincoln.

Examined gold diggings at head of Spicer's Creek, county of Lincoln, proposed to be reserved from sale.

Inspected and reported on portions 91, 92, 93, in the parish of Biragambil, county of Wellington, recommending sale of two portions, and reservation for mining purposes of No. 91.

Examined and reported on the Belubula Caves, near Carcoar, and collected therefrom numerous fossil remains and specimens of stalactites, &c.

Wrote Progress Report on examination of the Gold Fields. This report was published and inserted within the Annual Report of the Department of Mines for 1875.

Examined and reported on the mineral leases of Winters, Morgan, and others, at Sunny Corner, near Mitchell's Creek, Turon Gold Field.

Inspected and reported on portions 49, 50, 51, 52, 53, parish of Galambine, county of Phillip, recommending alienation of the same.

Inspected and reported on the land applied for by William Wright, on the Cudgegong Creek, Two-mile Flat Gold Field.

Inspected and reported on portions 52, 53, 54, on the Rats Castle Creek, county of Wellington, applied for by the Honorable G. H. Cox, M.P., to purchase by auction, but recommended the alienation of the land only under 14th clause of the C. L. A. Act, 1861, as these portions embrace auriferous formations.

Inspected and reported on land, portions 33, parish of Piambong, and 34, 35, parish of Wiadere, applied for by the Hon. G. H. Cox, M.P., to purchase by auction: recommended that these portions be not alienated, as the land embraces workable gold-bearing deposits.

Examined the Tallawang Gold Field, and reported the occurrence of gold in the carboniferous formation.

Inspected and reported on portions 25, 26, on the Tallawang Creek, and recommended the alienation of the same as unobjectionable in view of mining interests.

Inspected and reported on portions 130, 131, 132, 133, 134, in the parish of Puggoon, county of Bligh, applied for by Mr. George Rouse: reported alienation of same objectionable, unless under 14th clause C. L. A. Act of 1861.

Inspected and reported on land near Havilah, county of Phillip, applied for under V. L. Orders, recommending alienation of same.

Inspected and reported on land near Cooyal, county of Phillip, applied for under V. L. Order, recommending alienation of same.

Examined the watershed of Cooyal Creek, for the purpose of ascertaining if a supply of water could be obtained therefrom for the town of Gulgong.

Made a geological survey and map of the Gulgong District, showing the auriferous and other formations.

Examined

Examined and reported on the Gulgong and Tallawang Gold Fields, and furnished map showing the position of lands recommended to be thrown open to conditional purchase under the 14th clause of the C. L. A. Act of 1861.

Inspected and reported on Messrs. Rouse and Jamieson's mineral leases at Mitchell's Creek, in county of Lincoln.

Inspected the auriferous lands at the head of Spicer's Creek, county of Lincoln.

Reported on school lands at Mitchell's Creek diggings, county of Lincoln.

Reported on school lands near Stony Creek, in the county of Phillip.

Inspected and reported on certain coal lands (2,560 acres); in the parish of Teralba, county of Northumberland, leased by Mr. R. D. Adams.

Inspected and reported on certain coal lands (1,710 acres) in the parish of Teralba, county of Northumberland, leased by Mr. R. D. Adams.

Inspected and reported on the coal lands (2,948 acres) in the parish of Teralba, county of Northumberland, belonging to Messrs. Garrett, Greville, & Co.

Inspected and reported on the coal property (consisting of 1,071 acres) belonging to the Anvil Creek Coal Mining Company; it is situated in the parish of Branxton, county of Northumberland.

Inspected and reported on the coal property of the North Bulli Coal Company at Illawarra.

Inspected and reported on the Great Victoria Gold Mine at Adelong, and supervised the crushing of the quartz (3 tons) obtained therefrom, to prove the claim of the G. V. G. Mining Company to the Government reward of £1,000 for having been the first to prove a quartz reef payable at a depth of 800 feet from the cap of the reef.

Arranged a large collection of metalliferous ores and geological specimens from the Museum of Mines, for exposition at the Agricultural Society's Exhibition, Sydney, 1877.

Made surveys and report with map on Water Supply to the town of Grenfell, recommending that the sum of £2,000 be appropriated for carrying out the proposed scheme for Water Supply.

Inspected and reported on lands near Murrumburrah, applied for to purchase at auction: recommended alienation of certain portions, and furnished map showing position of same.

Examined and reported on school lands within a gold field at Demondrille, county of Harden.

Examined and surveyed portions of the Bulli Coal Mining Company's Estate at Bulli, Illawarra.

Examined coal lands at Mount Kembla, near Wollongong, the property of Mrs. Acheson.

During 1876, 1877, the Geological Surveyor travelled on duty 5,250 miles, inclusive of 1,624 miles by railway. The distance travelled during 1874, 1875, was not recorded.

An account of the salary, expenses, &c., paid to the Geological Surveyor since the date of his appointment.

Received during the years 1874, 1875, 1876, and 1877 :—	£	s.	d.
For salary, at £400 per annum	1,150	10	9
Equipment allowance, at £230 per annum	661	11	2
Travelling expenses and railway fares	151	1	0
Travelling expenses when inspecting lands for private persons, at 30s. per diem—			
For Mr. G. W. Lord, M.P.	17	5	0
Mr. R. D. Adams	4	10	0
Messrs. Garrett, Greville, & Co.	1	10	0
Anvil Creek Coal Mining Company	6	0	0
North Bulli Coal Mining Company	4	10	0
	£1,996	17	11

The Geological Surveyor has not received any fees or remuneration whatever from private persons or public Companies, for surveys, reports, &c., made by him, or under his direction.

THE INSPECTOR OF COLLIERIES.

RETURNS of work performed by the Inspector of Collieries during the five years from the beginning of the year 1872 to the end of 1876, and the amount of remuneration received, in salary, travelling allowance, and expenses and fees, during the same period :—

Number of inspection and air-measuring visits to the collieries in the various districts	650
Number of accidents, investigated into the causes thereof, &c.	140
Do. Coroners' Inquests attended	34
Do. days travelling on duty to and from the Southern and Western Districts	103
Number of attendances at Department of Mines, Sydney, and Coal Fields Office, Newcastle	50
Number of attendances at Select Committees of the Legislative Assembly and Council	8
Number of reports and letters written, &c.	498
Do. tracings of mine plans filed, &c.	147
Do. legal proceedings undertaken	2

Amount

Amount received for salary, travelling allowance, and expenses and fees, for above work, both from Government and other sources:—

	£	s.	d.
Salary for five years, at £300 per annum	1,500	0	0
Travelling allowance at £1 per day, while inspecting and investigating causes of accidents, &c., in the Southern and Western Districts Collieries. (This item includes £16 received through the Government from Sir H. Parkes and the Hon. J. Sutherland for reporting on their coal land at Jamberoo, also £7 for attending Select Committees of Assembly and Council)	207	10	6
Expenses of train and horse hire while inspecting, &c., the Hunter River District Collieries	15	16	6
For reporting on coal property for the Promoters of the Newcastle Coal-mining Company	21	0	0

THOMAS LEWIS,
Inspector of Collieries.

THE INSPECTOR OF (METALLIC) MINES.

ALL work performed by the Inspector of (Metallic) Mines during the last five years, together with an account of the salaries, expenses, &c., paid to him or the Government, from private persons or public Companies, for surveys, reports, &c., made by him or under his direction.

I have the honor to inform you that I was only appointed on probation for three months, dated from 7th August, 1876, and on permanent staff from 7th November, 1876, as Inspector of (Metallic) Mines, and I am therefore only able to give the information sought for during the last ten months.

	£	s.	d.
The total amount received by me from 7th August to 31st December, 1876, has been	99	9	3
And the total amount from 1st January to the 31st May, 1877, being from head quarters all this time, has been—Salary	104	3	4
Travelling expenses	150	0	0
Refund for stamps and telegrams	0	13	11
Do. carriage of specimens	1	5	0

Total amount for salary and expenses, from 7th August, 1876, to 31st May, 1877...£355 11 6

I received no fees as Inspector of Mines either directly or indirectly from private persons or public Companies. I made nor directed to be made no surveys or reports to any person or Companies other than the Government. The work performed by me from 7th August to 31st December, 1876, was at my head quarters, Hill End, and consisted of visiting and inspecting the underground workings of all the mines in the Hill End division of the Turon and Tambaroora Gold Fields.

Several alterations were made in these mines at my suggestion (for the safety of life) either verbally or by notices in writing, copies of which were sent by me to the Department of Mines.

The work performed by me as Inspector of Mines, from the 1st January to the 31st December, 1877, has been the visiting and inspecting of all the gold mines on Adelong, causing several alterations to be made in some of the mines, for the safety of life. The inspecting and reporting on the Great Victoria Gold Mining Co.'s mine, and the supervision during the raising of about 10 tons of quartz from said mine for the purpose of testing its commercial value.

The legal Manager of the above-named Company had laid claim to the £1,000 reward offered by the Government for the first person who, being the discoverer, should report to the Minister for Mines the existence of payable quartz at the depth of 800 feet perpendicular from the cap of the reef.

Visiting and inspecting the Tumberumba, Lac-ma-lac, Sandy Creek, Snow Ball, Copper, Lambing Flat, Grenfell, Forbes, Parkes, Mitchell's Creek, Gulgong, and Mudgee District Mines.

No surveys were made or ordered to be made by me, with the exception of the Great Victoria G. M. Co.'s Mine, Adelong, but of which no plan was kept by me.

W. H. J. SLEE,
Inspector of Mines.

“(3.) A detailed statement of Surveys, Inspections, Plans, Sections, &c., that have been made by the Government Geologist, and the cost thereof, from the date of Mr. Wilkinson's appointment till now.”

THE GEOLOGICAL SURVEYOR.

Question 3.

A detailed statement of the Surveys, Inspections, Plans, Sections, &c., that have been made by the Government Geologist, and the cost thereof, from the date of Mr. Wilkinson's appointment till now.

Made a detailed geological survey of the Hartley, Bowenfels, Wallerawang, and Rydal Districts. During this survey 13,882 chains, or 173½ miles of traverse were measured, and over 1,250 specimens of fossils and rocks, illustrative of the geology and mineral resources of the district, were forwarded to the Museum of Mines in Sydney.

Prepared geological map of this survey, embracing an area of about 160 square miles. On this map are defined the boundaries of the various formations, and the positions of the iron ores, limestone, and coal deposits worked in the Western District, together with explanatory notes, and a section showing the relative positions of the various formations.

Made a geological survey of the town and environs of Young, and prepared map thereof.

Made a geological survey of the town and environs of Grenfell, and prepared map thereof showing the reefs and leads worked.

Made

Made a geological survey and map of the Gulgong district, showing the auriferous and other formations.

Made surveys and report, with map, on the Water Supply to the town of Grenfell, recommending that the sum of £2,000 be appropriated for carrying out the proposed scheme for Water Supply.

Examined and surveyed portions of the Bulli Coal Mining Co.'s Estate, at Bulli, Illawarra.

Inspected portions of Hunter River and the Illawarra District, and made a collection of the characteristic fossils and rocks therefrom illustrative of the geological formations.

Accompanied the Deputy Surveyor General and the Director of the Botanic Gardens to Mount Wilson, on an examination of that locality for a timber reserve.

Inspected and reported on the coal lands near Jamberoo, belonging to Mr. G. W. Lord, M.P., and others, and furnished plan of the land, and sections of the coal strata with the report.

Inspected the water reserve at Penrith, and reported on an application for mining the extensive gravel deposits which have been left there by the Nepean River during flood-time.

Examined the silurian formation near Yass, and forwarded to the Museum of Mines a series of the characteristic fossils therefrom.

Inspected and reported on recommending the proclamation of the Mount Adra Gold Field.

Inspected and reported on recommending the proclamation of the Crookwell Gold Field.

Inspected and reported on reserve No. 75, in the parish of Young, county of Monteagle, and recommended a portion of it to be thrown open for alienation.

Inspected and reported on lands at the junction of Tipperary Gully and McHenry's Creek, parish of Young, recommending same to be reserved from sale, on account of a gold-bearing lead.

Inspected and reported on land near head of McHenry's Creek, parish of Wodonga, county of Monteagle, applied for by Mr. Spence.

Inspected and reported on water reserve in the parish of Moppitty, county of Harden.

Inspected and reported on certain lands near Wombat, county of Harden, applied for by Messrs. Prest and Williams, recommending that the land be reserved for gold-mining purposes.

Inspected and reported on town and suburban lands at Young, recommending alienation of some portions and reservation of others.

Inspected and reported on the Cumbamurrah and Jugiong Creek Gold Field, recommending the cancellation of several selections on Spring Creek, and reservation from sale of certain lands (shown on map) for gold-mining purposes.

Inspected and reported on auriferous leads on Cunningham's Creek, four miles from Murrumburrah, recommending their reservation for gold-mining purposes.

Inspected and reported on lands at Demondrille, applied for for school purposes.

Inspected and reported on the Seven-mile Creek diggings, Tyagong Gold Field, recommending the cancellation of certain selections, and the reservation from conditional purchase of certain lands shown on map.

Inspected and reported concerning the sale of town and suburban lands at Grenfell, indicating them on a map, together with other portions recommended to be reserved from sale, and an area to be reserved for water supply.

Examined part of the gold workings at Forbes, and collected geological specimens from the silurian formation there, for the Museum of Mines, and observed about a mile from Forbes the existence of a deep deposit of tertiary drift, which will probably prove payably auriferous.

Examined geological formations at Parkes Gold Field, near the township, observed the auriferous reefs to be chiefly in diorite greenstone.

Inspected Goodrich gold and copper mine, and obtained characteristic mineral specimens therefrom for the Museum of Mines.

Examined and reported on a portion of the Macquarie River Gold Field, recommending certain areas near the confluence of the Cudgegong and the Macquarie Rivers, and also the lands for 15 chains on each side of the Macquarie River, for a distance of 10 miles along the river, above certain portions marked on tracing, to be reserved for gold-mining purposes.

Inspected and reported on Mr. Byron's gold-mining lease, and Mr. F. B. Suttor's application for an improvement purchase, both on Tweedy's Flat, Macquarie River.

Inspected and reported on Mr. Suttor's mineral leases on the Macquarie River, near Burrandong.

Examined the limestone and silurian formations at Curney's Creek and other localities near Wellington, and collected specimens therefrom for the Museum of Mines.

Inspected and reported on the Mitchell's Creek Gold Field, and recommended proclamation of reservation of certain lands (position shown on plan) in the parishes of Tenandra, Bodangara, and Micketymulga, county of Lincoln.

Examined gold-diggings at the head of Spicer's Creek, county of Lincoln, proposed to be reserved from sale.

Inspected and reported on portions 91, 92, and 93, in the parish of Biragambil, county of Wellington, recommending sale of two portions and reservation for mining purposes of No. 91.

Examined and reported upon the Belubula Caves near Carcoar, and collected therefrom numerous fossil remains and specimens of stalactites, &c.

Examined and reported on the mineral leases of Winters, Morgan, and others, at Sunny Corner, near Mitchell's Creek, Turon Gold Field.

Inspected and reported on portions 49, 50, 51, 52, 53, parish of Galambine, county of Phillip, recommending alienation of same.

Inspected and reported on the land applied for by William Wright on the Cudgegong Creek, Two-mile Flat Gold Field.

Inspected and reported on portions 52, 53, and 54, on the Rats Castle Creek, county of Wellington, applied for by the Hon. G. H. Cox, M.P. to purchase by auction, but recommended the alienation of the land only under the 14th clause of C. L. A. Act, 1861, as the portions embrace auriferous formations.

Inspected and reported on land portions 33, parish of Piambong, and 34, 35, parish of Wiadere, applied for by the Hon. G. H. Cox, M.P., to purchase by auction: recommended that these portions be not alienated, as the land embraces workable gold-bearing deposits.

Examined the Tallawang Gold Field, and reported the occurrence of gold in the carboniferous formation.

Inspected

1876-7.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MINERAL SELECTION AT MITCHELL'S CREEK.

(CANCELLATION OF MR. THOMAS COX'S LEASES—ADDITIONAL PAPERS.)

Ordered by the Legislative Assembly to be printed, 20 February, 1877.

SCHEDULE.

NO.	PAGE.
1. Supplementary Opinion of the Honorable the Attorney General	1
2. Letter from Mr. Davies, M.P.	1
3. Mr. Under Secretary Wood's Minute	3
4. Minute of the Honorable the Minister for Mines	5

No. 1.

Supplementary Opinion of the Honorable the Attorney General.

OPINION of the Honorable the Attorney General supplementary to that given by him on the 22nd December, 1875, in connection with the matter of Mr. Thomas Cox's Mineral Selections at Mitchell's Creek, which was omitted from the Return to an Order of the Honorable the Legislative Assembly, dated the 15th of August, 1876.

As my honorable colleague appears to entertain some doubt as to the power of cancellation in the event of the lessee, after the lapse of a reasonable time, not being prepared to execute the lease, I am of opinion that such time having elapsed, and the lessee having received notice and not having executed the lease, the Secretary for Mines may cancel the same.

4/4/76.

W.B.D., A.G.

No. 2.

J. Davies, Esq., M.P., to The Colonial Secretary.

Dear Sir,

London Terrace, Bourke-street, Surry Hills, 15 September, 1876.

Last Session I moved for copies of all documents and papers having reference to Mineral Selections made at Mitchell's Creek by Mr. Thomas Cox; and as the papers disclose to my mind a great mistake committed by the Mining Department in dealing with Mr. Cox's selections, I feel it to be my duty to bring the facts under the notice of the Government, in order that justice may be done to Mr. Cox. It appears Mr. Cox took up a selection on the 21st June, 1872. Mr. Cox selected 20 acres of mineral land at Sunny Corner, Mitchell's Creek, the number of selection being 5907, on which the proper fees and rent were paid up to 31st December, 1875. During the latter part of 1874 and beginning of 1875 he called several times at Mining Department urging the issue of the lease for his selection, and was informed on the 4th December, 1874, that the lease had been prepared in his name and forwarded to His Excellency the Governor for execution. For several months after Mr. Cox called repeatedly at the Mining Office to accept the lease but could not obtain the same, nor was he allowed to notify his acceptance; and after calling at the office again without effect, he in April, 1875, left Sydney for the country, in consequence of ill health, and on his return, when he applied at the office for his lease, he was told that an advertisement had appeared in the *Government Gazette* stating that the lease had been cancelled, as he had failed to execute and take delivery of his lease. I am informed Mr. Cox never received any intimation from the Mining Department. I therefore think that the Hon. Minister for Mines did Cox a great injustice in not having issued his lease after Cox having called and wrote so often to obtain his lease. It looks very

strange, three days after Wiuter's letter to the Minister for Mines, that Cox's lease should be advertised in *Government Gazette* for cancellation, and was erroneously described "Castleton," whereas the proper designation should be "Coolamigal." This is an important discrepancy in describing the locality of the cancellation of Mr. Cox's lease. Mr. Cox was not asked if he held a miner's right for 1874—which he held for 1874, as did also the men working on his mineral selection. Mr. Cox holds receipts for the four blocks of land for 1874, and to the 31st December, 1875, as the printed papers show. The Mining Department submitted Mr. Cox's case to the Crown Law Officers, and obtained the opinion of the Hon. Attorney General, and have decided in direct opposition to the Attorney General's opinion. See page 18, No. 42, of the printed papers.

It will be seen that Mr. Cox took up his mineral selections under the Crown Lands Occupation Act of 1861, and duly observed the conditions under the Act, therefore his lease cannot be brought under the Mining Act of 1874. I submit the case as one of great hardship to Mr. Cox, and after a careful consideration, I am convinced the Government will see that a great wrong has been done Mr. Cox, and that he at present is entitled to his leases. I therefore trust that the present leases will be revoked, and that Mr. Cox will be restored to his former position as lessee. Trusting this matter will receive your early and serious consideration,—

I have, &c.,

JOHN DAVIES.

P.S.—I enclose copies of printed papers, and opinion of His Honor the Chief Justice, Sir James Martin.

[Enclosures.]

Sydney Morning Herald, 14th June, 1876.

SUPREME COURT.—TUESDAY, JUNE 13.

IN BANCO.

BEFORE their Honors the CHIEF JUSTICE, Mr. Justice HARGRAVE, and Mr. Justice FAUCETT.

EX PARTE THOMAS COX.

Mr. Salomons applied for a rule *nisi* to be directed to the Secretary of Mines, calling upon him to show cause why a writ of *mandamus* should not issue, directed to him, to compel him to hand over to the applicant a mineral lease, executed by the Governor, in pursuance of the Mining Act, to the applicant. 37 *Vic.*, No. 13, and regulations 32, 34; *ex parte Mackenzie*, 6 S. C. R., 306; *Reg. v. The Lords Commissioners of the Treasury*, 16 Q. B., 359; *Reg. v. The Lords Commissioners of the Treasury*, L. R., 7 Q. B., 401; *Rex v. The Lords Commissioners of the Treasury*, 4 Ad. and E.; *ex parte Smith*, 6 N. and M., 505; *Ellis v. Earl Gray*, 6 Simon, 214; *Feather v. The Queen*, 6 B and S., 697, were cited.

The Court unanimously dismissed the application.

The CHIEF JUSTICE said: This was an application for a rule *nisi* to issue a *mandamus* directed to the Minister or Secretary for Mines, to order him to hand over to the applicant a mineral lease which had been executed by the Governor. It appeared that in 1872 the applicant selected a block of land for mining purposes, went into possession of it, and paid the rent. In answer to letters written by him to the Mining Department, he was informed more than once that his lease was being prepared, and that it would issue to him when executed. After some years waiting, and after repeated applications for his lease without success, the applicant left his usual abode for some five months. He next heard that his lease had been cancelled by the Minister for Mines, although he had received no notice that it had been executed, or that it was ready for him, or that in default of his applying for it that it would be cancelled. All of the steps were taken without his knowledge, another lease of the same block of land issued, and the lessee was put into possession. On that state of facts, it is now submitted that the applicant is entitled, as he has no other legal remedy, to have the prerogative writ of *mandamus* to issue. The case certainly, from the *ex parte* statement in the affidavits, appeared to be a hard one, and, without doubt, there had been some great irregularity in the office to have this lease cancelled without notice after such a long delay in having it executed, after the frequent applications for it, and after receiving rent for so many years. The question still remained, did the facts warrant the Court in issuing the prerogative writ of *mandamus*? It was contended that on occasions a Court would grant a rule *nisi* where it was patent to them that it could not be made absolute so as to allow the points to be discussed and the Court's opinion given. His Honor did not think that was the proper course. Rules *nisi* were, at times, granted when the Court entertained some doubt, but never when it was clear that the rule must fail—as it must in this case. In His Honor's opinion no rule should be granted. The case cited, *Rex v. The Lords, &c., of the Treasury*, 4 Ad. and E., 286, was of very doubtful authority; it was so characterized in more than one case. *In re Baron de Bode*, 6 Dowl, 776, at page 792, Coleridge J., said—"But, as against the servants of the Crown, as such, and merely to enforce the satisfaction of claims upon the Crown, it is an established rule that *mandamus* will not lie. I call this an established rule, and I believe that it has never been broken in upon. There are circumstances, indeed, under which a *mandamus* will lie against the Lords of the Treasury, and a much misunderstood instance is the case of *Rex v. The Lords of the Treasury* (4 Ad. and El., 286); there it appeared *prima facie*, that a pension had been granted; that funds applicable to its payment had been placed by Parliament in the hands of the Lords of the Treasury as *public officers charged by statute with the payment of such pensions*; that the Lords had allotted the funds for the payment, and acknowledged to the claimant that they held it for his use; and that they only refused to pay because he declined to take it clogged with conditions they had no right to impose." In order to show the strict principle, some of the words were expressed in italics. The principle is very clearly laid down in the *Queen v. The Lords of the Treasury*, L. R., 7 Q. B., 387, at page 397. Blackburn, J., said—"Passing from that, the question remains whether there is any statutable obligation cast upon the Lords of the Treasury to do what we are asked to compel them to do by *mandamus*, namely, to issue a minute to pay that money, because it seems clear to me that we ought to grant a *mandamus* if there is such a statutory obligation, particularly when the application is made on behalf of persons who have a direct interest in the matter, viz., the Treasurer of the Country, on behalf of the Country, which ought, by the statute, to have been indemnified for the costs which they have been compelled to pay. But it is here, I think, that the case fails. The general principle, not merely applicable to *mandamus*, but running through all the law, is that where an obligation is cast upon the principal, and not upon the servant, we cannot enforce it against the servant, as long as he is merely acting as servant." The judgment went on—"The same principle applies to *mandamus* if the duty is by statute, though perhaps 'duty' is hardly the word to employ with regard to Her Majesty. When the intention of the Legislature shows that Her Majesty should be advised to do a thing, and when the obligation, if I may use the word, is cast upon the servants of Her Majesty so to advise, we cannot enforce that obligation against the servants by *mandamus* merely because the Sovereign happens to be the principal." And further on—"That being so, the question comes to this,—whether it can be shown (common law out of the question) that in any way a duty is cast upon the Lords of the Treasury towards third persons, and not merely a duty to the Queen to advise, but a duty to third persons to issue this minute, which it is the object of the *mandamus* to make them issue." No clause of the Act had been cited, nor did any exist, which imposed upon the Secretary for Mines, or upon any other person, the duty of handing a lease, after it had been executed by the Governor, to the lessee. If such a clause did exist it might be another matter. If the Court did grant the rule, they would on the *ex parte* statement of the applicant have to decide a case involving many troublesome points of law and fact in regard to the construction of the Mining Act and Regulations, which would uselessly occupy much valuable time, to the hurt of other suitors where cases had been set down for argument for many Terms. To His Honor it was clear no rule should be granted.

Mr. Justice HARGRAVE concurred. It was said the case was a bad one; that was no reason the Court should make bad law by granting the rule.

Mr. Justice FAUCETT concurred.

Evening News, 14th June, 1876.

IMPORTANT JUDGMENT ON CROWN LEASES.

AN important decision affecting the interests of all mineral leaseholders was given yesterday by the full Court, consisting of the Chief Justice Sir James Martin, Mr. Justice Hargrave, and Mr. Justice Fanelett. Mr. Salomons, on behalf of Mr. Thomas Cox, moved for a rule nisi to issue a writ of *mandamus* against the Minister for Mines (the Honorable John Lucas) to compel him to hand over to the applicant (Cox) a mineral lease which had been executed by the Governor, in pursuance of the Mining Act. The facts as revealed in the documentary evidence tendered are simply these:—In 1872 Cox selected a block of land for mining purposes. He went into possession thereof, and paid rent to the Crown for the same for some years. Cox wrote several letters to the Mining Department demanding his lease. The replies were to the effect that the lease was being prepared, and when executed, should be issued to him. Two or three years elapsed, during which time Cox had repeatedly forwarded applications for the lease, but he was always doomed to disappointment. Ultimately he learned that his mineral lease had been cancelled by the Minister for Mines, without receiving any notice of its execution, or that it was ready for him, or that in default of his applying for it that it would be cancelled. In fact, he was kept in ignorance of the action the Minister for Mines took in cancelling the lease, until he ascertained that a portion of the same block of land was leased to another party, and the lessee put into possession. It was now contended that Cox was entitled (as he had no other legal remedy) to have the prerogative writ of *mandamus* issued. The Court unanimously dismissed the application. Being *ex parte* there was no appearance of Counsel for the Minister for Mines. Their Honors were unanimously of opinion that the case appeared to be a very hard one. They thought there had been some great irregularity in the Mining Department to have cancelled the lease without notice after such a long delay in having it executed, and after the frequent application for it, besides paying the rent of the lease for so many years. Their Honors did think that the proper course was to grant a rule for a *mandamus*, to allow the points to be discussed, for rules were sometimes granted when the Court had a doubt, but never in any case when it was clear that the rule must fail, as it must in this case. In the matter of the case of Baron de Bode, Judge Coleridge said "But as against the servants of the Crown as such, and merely to enforce the satisfaction of claims upon the Crown, it is an established rule that *mandamus* will not lie. I call this an established rule, and I believe that it has never been broken in upon." This principle of law, their Honors held and stated, was clearly laid down in the case by *The Queen v. The Lords of the Treasury*. Their Honors also held that no clause of the Act had been cited, nor did any exist, which imposed upon the Minister for Mines, or upon any person, the duty of handing over a lease after its execution by the Governor to the lessee. It is therefore the duty of lessee, or his agent, to call for it, and thus prevent its cancellation. If such a clause existed, the Court probably would grant a rule. Their Honors also thought, if they did grant a rule, the arguments on it would involve many troublesome points of law as to the construction of the Mining Act and its Regulations, which would uselessly occupy much valuable time that should be devoted to other cases now long pending.

No. 3.

Mr. Under Secretary Wood's Minute.

Cancellation of Mr. Thomas Cox's Mineral leases.

Mr. Davies states that "on the 21st June, 1872, Mr. Cox selected 20 acres of mineral land at Sunny Corner, Mitchell's Creek, the number of the selection being 5,907, on which the proper fees and rent were paid to 31st December, 1875." In addition to the parcel of land mentioned, Mr. Cox selected three other 20-acre parcels at the same place, on which he did not pay the rent.

Again, Mr. Davies says,—“For several months after (4th November, 1874) Mr. Cox called repeatedly at the Mining Office to accept the lease, but could not obtain the same.” There is nothing beyond Mr. Cox's statement to support the supposition that Mr. Cox called after the month of January or February, 1875, but it is quite clear that the leases were in the office ready for delivery by the middle of March (*vide* notice in the *Gazette* dated 16th of that month), and if he had called after he would certainly have been asked to execute them. Moreover, notices of the leases being ready to be issued to Mr. Cox were published in the *Gazette* and the Sydney newspapers, in March, 1875, and if Mr. Cox remained in Sydney, as he alleges, till April of that year, he had ample means of knowing that his lease was ready.

Again, Mr. Davies says,—“I am informed Mr. Cox never received any intimation from the Mining Department.” Mr. Cox, in his note (*No. 39 of Return*), in effect, says his agent at Mitchell's Creek saw the notices respecting the leases, and an officer of the department called at Mr. Cox's address, and not finding him there called also upon his Sydney agent and informed him that the leases were ready.

Again, Mr. Davies says,—“The Minister for Mines did Cox a great injustice in not having issued his lease after Cox having called and written so often.” From the middle of March till the commencement of June—a period of nearly three months—the department tried to get Mr. Cox to take the leases during that period; notices were published in the *Gazette* and newspapers inviting him to take them, and warning him of the consequences if he failed. If Mr. Cox had left Sydney, he did so without informing the department of his intention to do so, without asking that the issue of his leases might be delayed till his return, and without supplying any address to which notice could be sent. The department is in all cases most anxious that applicants for leases shall take them rather than allow them to be cancelled, and therefore finding that Mr. Cox did not apply for his leases, an officer of the department was requested to find Mr. Cox and give him personal notice; accordingly he called at the place of business formerly occupied by Mr. Cox (which is the address given by Mr. Cox in his applications), and was there informed that Mr. Cox had left Sydney and that his address was not known. He was also requested to call upon a gentleman who had acted for Mr. Cox in reference to these leases, with a view to ascertain where Mr. Cox could be found. The officer was informed that Mr. Cox had left Sydney without leaving with this gentleman any address or any intimation as to when he would return, or whether he still desired to obtain the leases; so that in fact, Mr. Cox took the most effectual means of preventing the issue of the leases, and that they were not issued is due entirely to the action of that gentleman.

Again, Mr. Davies says,—“It looks very strange three days after Winters' letter to the Minister for Mines that Cox's leases should be advertised in the *Government Gazette* for cancellation.” The inference is that Mr. Cox's leases were advertised “for cancellation” at the request and in the interest of Messrs. Winters and Morgan. The facts are:—1st. That cancellation of the leases was not advertised till several weeks after receipt of Mr. Winters' letter. 2nd. That instructions for publication of the notice of 29th April, copy annexed (which was not as Mr. Davies infers a notice for cancellation, but a notice calling upon Mr. Cox and other persons similarly placed to execute their leases within thirty days), were given several days before the receipt of Mr. Winters' letter, which though dated 26 April did not reach the department till the 28th. 3rd. That for a period of six weeks after the cancellation of Mr. Cox's leases had been notified in the *Gazette* the land was open to the world, and during that period neither Mr. Cox, Mr. Winters, nor any other person applied for it, clearly showing that the leases were not cancelled for the benefit of any person in particular.

Again,

Again, Mr. Davies says the locality of the land "was erroneously described Castleton, whereas the proper designation should be Coolamigal." The correct name of the parish is Castleton. When applying for the land Mr. Cox evidently did not know the correct name of either the county or parish, because in the notification of his selections he names the county "Wellington" instead of Roxburgh, and the name of the parish he leaves blank. Castleton was given as the name of the parish by the surveyor, when he measured the land for Mr. Cox in 1872 (*vide enclosures to paper No. 16 in printed Return*); and from that date until the survey was made for Messrs. Winters and Morgan in November, 1875, when the name of the parish was erroneously given as Coolamigal, it was unquestioned even by Mr. Cox, though he and his agent were in correspondence with the Lands Department respecting the survey of his land. In December, 1875, some six months after Mr. Cox's leases were cancelled, he discovered that the surveyor who measured the land for Messrs. Winters and Morgan described it as in the parish of Coolamigal, and thereupon he sought to show that he had been deceived by the notices published respecting his leases, because they described the land as in the parish of Castleton, whereas in fact Mr. Cox had never known the land to be otherwise described until the surveyor who measured the land for Messrs. Winters and Morgan, some six months after Mr. Cox's leases had been cancelled, and about four months after Messrs. Winters and Morgan had taken up the land, described the land erroneously as in the parish of Coolamigal.

Mr. Cox then attempted to take advantage of the surveyor's error, but he failed in his attempt, because the land is in the parish of Castleton and was correctly described in the notices.

Again, Mr. Davies says, "Mr. Cox was not asked if he held a miner's right for 1874, which he held for 1874." It was not known that Mr. Cox was mining for gold, but if it had been the question would not have been asked. 1st. Because the law casts upon the person mining, and not upon the Crown, the onus of seeing that such person is authorized to mine. 2nd. Because a miner's right is for such purpose useless, as it does not entitle the lessee or any other person to mine for gold upon land under mineral lease or promise of such lease. 3rd. Because the law provides that if a lessee of mineral land shall proceed to mine thereon for gold before he shall have obtained a gold-mining lease, his mineral lease shall be liable to be forfeited and cancelled.

Mr. Davies appears to think that Mr. Cox paid rent to the end of 1875 on the four blocks of land; such is not the case; he paid upon one block only, and he did not do that until gold had been found in that particular block, and he had made arrangements to participate in the profits of working such gold. Before he paid any rent Mr. Cox received £20 from the first party of gold-miners, and when he pressed for the issue of his leases he had made an arrangement under which he received a share of the gold won by a second party.

Mr. Davies says that the department has decided Mr. Cox's case "in direct opposition to the Attorney General's opinion." This apparent opposition is due to the fact that a supplementary opinion given by the Honorable the Attorney General was accidentally omitted from the return made to Parliament. This supplementary opinion is to the effect that after a reasonable time having elapsed, and the lessee having received notice and not having executed the lease, the Secretary for Mines may cancel the same.

The time that elapsed between the first publication of notice that the lease was ready to be issued and the publication of the notice of cancellation was three months. The notices were published in the newspapers as well as in the *Gazette*, and Mr. Cox admits (*No. 39 of Return*) that his agent at Mitchell's Creek saw the notice. Hundreds of persons have attempted, like Mr. Cox, to hold mineral land for speculative purposes, in the hope that something may turn up to render it valuable; and had the power to cancel in such cases not been exercised, thousands of acres that are now being worked with profit to the individual and the public would be still locked up under lease to persons who have no intention of working.

Mr. Davies says, "Mr. Cox took up his mineral selections under the Crown Lands Occupation Act of 1861, and duly observed the conditions under the Act, therefore his lease cannot be brought under the Mining Act of 1874." The conditions under the "Crown Lands Occupation Act of 1861" are: 1st.—Not to mine for gold. 2nd.—To pay rent in advance. 3rd.—To expend £5 per acre upon each lot within three years. Mr. Cox has failed to observe all those conditions. 1st.—Mr. Cox did mine for gold. 2nd.—He failed to pay the rent in advance (indeed it was considerably in arrears until he found the land contained gold), but this was waived by granting him permission to pay up arrears of rent, of which he availed himself, as to the block on which the gold was found. 3rd.—He did not expend £5 per acre (Mr. Warden Johnson in his report says "three years within a few days have elapsed * * *"). No expenditure whatever has been made upon them, as required by the Regulations of the "Crown Lands Occupation Act of 1861" upon each block within three years. All such leases are by operation of the "Mining Act of 1874" brought under it (*vide sections 61 and 62*), if the lessee attempt to mine for any mineral or metal other than that for which the lease has been granted; and it provides that any mineral lease *under it or any other Act* is liable to forfeiture and cancellation, as for a breach of condition, if the lessee shall proceed to mine for gold before he shall have obtained a gold-mining lease in addition to any mineral lease he may hold.

As to the opinion of his Honor the Chief Justice, enclosed—His Honor says "The case certainly, from the *ex parte* statement in the affidavits, appeared to be a hard one, &c." He also says "No clause of the Act had been cited, nor did any exist which imposed upon the Secretary for Mines or upon any other person the duty of handing a lease after it had been executed by the Governor to the lessee, &c." To summarize this case, Mr. Cox (like hundreds of other persons, especially on the Northern Tin Fields) appears to have taken up mineral land during the mania of 1872, for speculative purposes. The plan adopted by these gentlemen was as follows:—Trusting to the defects in the Act and the Regulations, they selected a piece of mineral land in a likely spot, knowing that in consideration of the 5s. per acre paid for permission to select they would be able to hold the land without paying any more rent or doing any work upon it for at least three or four years, and in the meantime the chances were in favour of some person ignorant of the fact that the land had been selected setting in to work upon it and making a discovery. As a rule, some person located near the land was employed to watch it, not with a view to warn persons from setting in to work upon it, but to inform the lessee if any such person made a valuable discovery. If no discovery was made to render the land valuable before the lease was ready to be issued, the lessee evaded executing it by every means in his power, in order to gain more time to use the land as

a trap to catch industrious but unwary miners, and when all the devices for keeping the lease alive without paying rent or working were exhausted it was allowed to be cancelled; but if, on the other hand, any discovery was made, the lessee at once paid up the arrears of rent, pressed for the issue of his lease, and proceeded to secure the fruits of the discovery, and to evict the discoverer, or to make profitable terms with him. In order to put a stop to this practice, and to prevent the resources of the Colony being locked up for the benefit of such persons, leases so applied for have been prepared as speedily as possible, and as soon as ready the fact has been notified, and every effort made to induce the lessees to execute their leases and work the land; failing therein, the lessees were warned that unless executed the leases would be cancelled, and if they still refused or neglected, the leases were cancelled accordingly, and by this means hundreds of instances, but in none more notably than in Mr. Cox's case, most valuable deposits have been opened for the benefit of the public, instead of being locked up for the benefit of persons who possessed neither the industry nor the enterprise to develop them.

A person who makes application to lease a piece of land contracts to accept the lease if granted; and if the Crown notify that the application is granted, and tender the lease by ample notice, it has performed its part of the contract, and the lessee has no just grounds of complaint if his lease be cancelled, because he evades the performance of his part. No person on behalf of the Crown is required either to hand the lease to the lessee or to serve notice upon him personally that it is ready, but had it been otherwise, Mr. Cox's journey for the benefit of his health would have prevented the requirements being complied with.—H.W., 23/10/76.

[Enclosure.]

Department of Mines, Sydney, 29th April, 1875.

NOTICE TO APPLICANTS FOR MINERAL LEASES.

NOTICE is hereby given, that unless the Lessees execute and take the delivery of the undermentioned Leases within thirty days from this date they will be finally cancelled.

JOHN LUCAS.

No. 4.

Minute of the Honorable the Minister for Mines.

On the 17th of June, 1872, Mr. Cox took up a 20-acre block of land to mine for copper.

On the 20th of June, 1872, he took up three 20-acre blocks for the same purpose.

Nothing further was heard of that gentleman until the 23rd of October, 1874, when he applied for and obtained permission to pay up the back rent (his selections having become forfeited for non-payment of rent), but instead of paying the rent due upon the 80 acres as he proposed and as it was expected he would have done, he paid the rent due on 20 acres only. It appears that he had then recently visited the district where the land is situated, and discovered a party mining for gold, from whom he obtained £20 and some future interest to allow them to continue. (This was contrary to law, as he had no right, nor had he a right to allow others, to mine on the land for gold.) It was after he had received this money he obtained permission to pay £20 rent, when in fact he paid £5 only. The party from whom he received the £20 above mentioned, not being able to make the ground pay, left it.

A short time afterwards his agent (whom it appears he keeps on the watch) informed him that a second party were at work on his land. He rushed up, and by threats of legal proceedings induced the second lot of gold-miners to enter into an agreement (*see printed paper No. 38, Enclosure No. 2*) to give him a share of the gold obtained from the land, after which he again made his appearance at the Department of Mines and was anxious to obtain his lease. Shortly afterwards the second party of miners discovered that they could not make the ground pay, and left it; they sent the gold obtained to the Mint. (*See printed paper No. 38, Enclosure No. 5.*) Cox's share being only a few shillings, he was dissatisfied, and instructed his solicitor (the late Mr. Henry Driver) to write to the miners (*see letter printed No. 38, Enclosure No. 4*) demanding his proper share—the second time forfeiting his right to the ground by allowing it to be mined for gold. (*See 62nd clause of Mining Act of 1874.*) The second party having abandoned the ground and Mr. Cox being a second time disappointed, ceased to visit the Department of Mines or to apply for his lease, as the following facts will show:—

Mr. Cox states he left Sydney in April, 1875; the notice that his lease was ready for execution was published on the 16th March—in fact it was ready lying at the department several days before that date. Had Mr. Cox been as anxious as he now pretends to have been, surely he would have called at the Department of Mines and inquired about it previous to his departure, seeing that he did not leave Sydney for a month after the lease was ready for issue; but the second party having pronounced it worthless, no doubt Mr. Cox intended to abandon it, and I believe had not Winters and party been successful we should not have heard anything more of Mr. Cox—indeed the facts speak for themselves. Cox says he left Sydney in April, 1875; on the 16th March previous it was notified in the newspapers that the lease was ready for execution; again on the 29th April it was notified that unless it was executed within thirty days it would be cancelled, but it was not cancelled until the 17th June, and from that until the 16th August (when Winters and party selected it) it remained Crown Lands open for any person to select. During this long period, and indeed for many weeks after, there was not anything heard of or from Mr. Cox. It appears that after taking it up, Winters and party went to work with spirit; they put machinery on the ground and set a large number of men to work, by which means they made the property a valuable one—of which fact it appears the local agent informed his principal, for shortly afterwards Mr. Cox again turned up, had an interview with me, and protested against a lease being granted to Winters and Morgan. This was the first that I knew of Mr. Cox, or knew that there was anything more special in his than thousands of other cases which I have dealt with.

I believe Mr. McIntosh came with him upon that occasion, and I promised to inquire into the case. A few days after I so promised Mr. Cox again called, and informed me that Winters and party were taking large quantities of gold from the claim, and requested me to prevent them working. I at once instructed Mr. Under Secretary Wood to write to Winters and party to stop all work on the ground, which was done. It appears Mr. Cox shortly afterwards called upon Mr. McIntosh, and told that gentleman that I had refused to request Winters and party to cease operations, and induced Mr. McIntosh to accompany him to the department, where I, in the presence of that gentleman, accused him (Cox) of falsehood, which he could not deny. I then made a searching inquiry into the case, which was not favourable to Mr. Cox; and as another interest had been created, I sought the advice of the Attorney General. His opinion, as I thought, not being quite clear, I had an interview with that gentleman, and he then supplemented his opinion (in consequence of the hurry in preparing the papers for Parliament the supplementary opinion was omitted); that opinion, together with the information I had received, clearly proving to my mind that Mr. Cox was evading the payment of what was due to the Crown, defrauding the Treasury, and trying to keep the land as a trap so that he might benefit himself by the labour and expenditure of others. I refused to revoke the cancellation of the leases, the right to which he had three times forfeited.

Shortly recapitulating the facts: In June, 1872, Cox selected four 20-acre blocks as copper land; he left the rent unpaid until October, 1874; he discovered persons mining for gold on the land; instead of stopping them he obtained £20 from them for the right to mine for gold; from the said £20 he paid £5 rent (£20 was due), and kept the balance, £15. This party failed, so Cox dropped off applying for his lease. A second party went to work on the land; Cox came down on them for a share of the gold, and let them the four blocks, or 80 acres, to mine for gold, having only paid the back rent upon one block of 20 acres, having paid £5 instead of £80. Upon the second party agreeing with him he became anxious to obtain his lease. The second party left the ground, and Mr. Cox ceased calling for his lease. On the 16th March a notice was published that the lease was ready for issue. On the 29th April it was notified in the press that if not executed within thirty days the lease would be cancelled. Nevertheless it was not cancelled for fifty days, and then it remained open for any person to take up until the 6th August, another fifty days, when the land was taken up by Winters and party; and it was not for fifty-five days after it was so taken up, and Winters and party had gone to work vigorously, and proved the property to be valuable, that Mr. Cox turned up again and claimed the land, after having disappeared for eight or nine months, stating as an excuse that he was not aware that the lease had been cancelled, although, according to his own statement, he left Sydney in the month of April; and the fact of the lease being ready for execution, and that it would be cancelled if not executed within thirty days, was published in the daily papers of March and April. Besides which, Mr. Binny, an officer of the department, personally informed his Sydney agent,

and

and also called at his place of business (the place of his address), and left word there that if the lease was not executed it would be cancelled, and Cox wrote a letter (which is amongst the published papers) to this department, which shows that his country agent at any rate knew of the publication.

He took the land up as mineral land to mine for copper only, at 5s. per acre, and to expend upon it £5 per acre within three years. He had it three years, and did not expend a shilling on it, and did not attempt to mine for copper, or indeed for any other mineral, with his own labour or capital, but allowed several others to mine for gold for his profit without informing the Minister for Mines, and without paying the gold rent of (£1) one pound per acre, thereby evading the payment of the proper sum to the revenue, and forfeiting his lease as provided by law.

Mr. Cox says one reason that the lease was not applied for was that it was published as situated in the parish of Castleton instead of Coolamigal. The fact is that the land is situated in the parish of Castleton, but when surveyed for Winters and party the surveyor by mistake reported it as in the parish of Coolamigal; this was several months after Cox's lease was cancelled, so that could not have deceived him.

Mr. Cox says he had a miner's right (*quære*). How many had he, when did he take them or it out? Did he take out a miner's right as an after-thought, as he thought to take advantage of the mistake in naming the parish? But if he had fifty miners' rights he would not be justified in mining for gold upon land which he took up to mine for copper at 5s. per acre per annum; persons who lease gold land at £1 per acre must have miners' rights, and no person knows better than Mr. Cox that it is nothing less than a fraud upon the revenue to mine for gold on land at 5s. per acre, whilst gold-miners holding miners' rights are by law compelled to pay 20s. per acre.

Mr. Cox says his rent was paid up to the end of 1875; yes, by paying £5 when he should have paid £30; but if he had paid all he owed it would not alter the case, for there are thousands of persons who would willingly pay £1 per acre on speculation to wait for what chance would throw up to make money by other people's labour and expenditure, as Mr. Cox has done in this case. There are tens of thousands of acres of auriferous lands so locked up on our gold fields, which is the chief cause of the mining depression. I have been cancelling leases as fast as possible, and I hope that in a short time the whole of those idle and locked up lands will be open to the miners. In this case Mr. Cox never had an claim to any other mineral but copper. I have dealt with some 20,000 cases, but this one of Cox's is the most gross attempt to defraud the revenue, and make profits at the expense of other persons' means, labour, and capital, that has come before me.

J.L.,
20/2/77.

CASE OF LEGGE AND BRICKWOOD AND WOODS.

No. 1.

Notifications of selection by Wright, Clifford, & Co.

(M.L. 4,877.)

Sir,

Sydney, 7 June.

I have the honor to report to you that, in pursuance of the authority conveyed to me in the letter of the Under Secretary for Lands, dated 7th June, I have selected the portion of Crown lands hereunder described, for the purpose of working tin, viz. :—20 acres, county of Hardinge, parish of situated west of Coggan and Eastment's 20 acres, on the north side of Lunney's 50 acres, about 2½ miles north from Cope's Creek, starting from tree marked C.

I have, &c.,

JOHN P. WRIGHT,

For J. P. WRIGHT.

J. W. CLIFFORD.

— COGGAN.

T. H. ALCOCK.

W. A. COOKE and Party.

The Honorable the Minister for Lands, Sydney.

Mr. Greaves, D.S.—W.H. (for J.S.), S. D.-S. Greaves, 12 July, /72, No. 1,146. Noted in Register. Cancelled, *Government Gazette*, 11/9/76.

(M.L. 4,878.)

Sir,

Sydney, 7 June, 1872.

I have the honor to report to you that, in pursuance of the authority conveyed to me in the letter of the Under Secretary for Lands, dated 7th June, I have selected the portion of Crown lands hereunder described, for the purpose of working tin, viz. :—20 acres, county of Hardinge, parish of situated west of Coggan and Eastment's 20 acres, on the north of Lunney's 50 acres, about 2½ miles from Cope's Creek, starting from tree marked C, bounded by block No. 19 of the undersigned's selections.

I have, &c.,

JOHN P. WRIGHT,

For J. P. WRIGHT.

J. W. CLIFFORD.

— COGGAN.

T. H. ALCOCK.

W. A. COOKE and Party.

The Honorable the Minister for Lands.

Mr. Greaves, D.S.—W.H. (for J.S.), S. D.-S. Greaves, 12 July, /72, No. 1,146. Noted in Register. Cancelled.—See Ex. Min., 76/1,217. *Government Gazette* 25/2/76/62.

(M.L. 4,879.)

No. 2.

Mr. Licensed-Surveyor Allport to The Surveyor General.

Sir,

Cope's Creek, 6 January, 1873.

In accordance with your instructions of 12th July (W. A. B. Greaves, Esq., D.S.), I have the honor to transmit herewith a plan of three 20-acre portions applied for by Wright, Clifford, Coggan, and party under the 22nd clause of the "Crown Lands Occupation Act of 1861."

I have, &c.,

H. C. ALLPORT, L.S.

The Surveyor General.—M. O'C. BLAKE (for D.S.), 26 Feb., /73. No Treasury receipt herewith. For description.—W.S.C., 3 April, /73. Dealt with in charting branch.—W.S.C., 29 May, /73.

[Enclosure

[Enclosure A to No. 2.]

Wright, Clifford, and party.

M.L. 4,877.

DESCRIPTION.

20 acres, county of Hardinge, parish of Swinton, M.L., portion 208: Commencing at the north-eastern corner of portion 4 of 50 acres; and bounded thence on the south by part of the northern boundary-line of that portion bearing west 14 chains and 15 links; on the west by the eastern boundary-line of M.L., portion 209, bearing north 14 chains and 15 links; on the north by the southern boundary-line of M.L., portion 231, bearing east 14 chains and 15 links; and on the east by a line bearing south 14 chains and 15 links, to the point of commencement. Examined—J.C.

[Enclosure B to No. 2.]

Wright, Clifford, and party.

M.L. 4,878.

DESCRIPTION.

20 acres, county of Hardinge, parish of Swinton, M.L., portion 209: Commencing at the south-western corner of M.L., portion 230; and bounded thence on the north by the southern boundary-line of that portion bearing east 14 chains and 15 links; on the east by the western boundary-line of M.L., portion 208, bearing south 14 chains and 15 links; on the south by part of the northern boundary of portion 4 of 50 acres and a line in all bearing west 14 chains and 15 links; and on the west by a road 1 chain wide dividing it from M.L., portion 210, bearing north 14 chains and 15 links, to the point of commencement. Examined—J.C.

[Enclosure C to No. 2.]

Wright, Clifford, and party.

M.L. 4,879.

DESCRIPTION.

20 acres, county of Hardinge, parish of Swinton, M.L., portion 210: Commencing at a point distant 1 chain west from the north-western corner of M.L., portion 209; and bounded thence on the east by a road 1 chain wide dividing it from that portion bearing south 14 chains and 15 links; on the south by a line bearing west 14 chains and 15 links; on the west by a line bearing north 14 chains and 15 links; and on the north by a line bearing east 14 chains and 15 links, to the point of commencement. Examined—J.C.

No. 3.

J. Carney and Party to The Under Secretary for Mines.

Sir,

Tingha, 2 February, 1875.

Will you please inform as to whether we can take up any one of the numerous blocks of land for the purpose of prospecting, the same land having been previously taken up for tin-mining, but is at present abandoned, but not yet forfeited by official declaration? Could you also inform me as to block No. 210, situated half way between Cope's and Middle Creeks, on the Cope's Creek side, if the same block was cancelled; if not, can we apply for the same, or can we occupy of the said block as much per man as our mineral license allows? By letting us know at your earliest convenience you will much oblige

JOHN CARNEY AND PARTY,
Post Office, Tingha.

Mr. Binney,—Can you identify block 210? If so, what is the number, and how does it stand?

Mr. Campbell,—Can you supply the information?

Portion 210, parish of Herbert, county of Gough, may be the portion intended. I cannot say for certain without more definite information. This stands in the name of T. Moore & Co., M.L. 5,436.—W.S.C., 10.

M.L. 5,436 measured, and has not been forfeited.—10.

The lease may be prepared and tendered at once. The writer may be informed the lease is not forfeited, that the lease will be tendered forthwith, and if the applicants do not take delivery it will be cancelled, and they can then take up the whole or any part of it, but they cannot take possession of any portion of the land before the forfeiture has been declared.—J.L. Informed, 15 Feb., 1875.

No. 4.

The Under Secretary for Mines to John Carney and Party.

(75-754.)

Gentlemen,

Department of Mines, Sydney 15 February, 1875.

In reply to the inquiries contained in your letter of the 2nd instant, I am directed by the Secretary for Mines to inform you that portion 210, in the parish of Herbert, county of Gough, selected for mineral purposes by Messrs. T. Moore & Company, is not forfeited, and that the lease thereof will be tendered forthwith, and if the applicants do not take delivery it will be cancelled; you may then take up the whole or any portion of the land, but you cannot take possession of it before the forfeiture has been declared.

I have, &c.,

HARRIE WOOD,
Under Secretary for Mines.

No. 5.

Duguid & Co. to The Under Secretary for Mines.

Sir,

Pitt and Bridge streets, Sydney, 1 March, 1875.

We have the honor to request that mineral leases Nos. 4,878 and 4,879, selected by Wright, Clifford, and party, and mineral lease 14,574, selected by Connolly and M'Donald, may be declared forfeited, as we are informed that the rent on same has not been paid.

We have, &c.,

DUGUID & Co.

The leases may be prepared at once and tendered for execution. If the applicants do not execute and pay the rent the leases may be cancelled. Messrs. Duguid & Co. may be informed of the action proposed to be taken.—J.L. Informed, 4 March, 1875.

No. 6.

5

No. 6.

The Under Secretary for Mines to Messrs. Duguid & Co.

Gentlemen,

Department of Mines, Sydney, 4 March, 1875.

In reference to the request contained in your letter of the 1st instant, I am directed by the Secretary for Mines to inform you that mineral leases Nos. 4878, 4879, and 14,574, will be prepared at once and tendered for. Execution by the applicants, if they fail to execute, and to pay the rent due on the leases, they will then be forfeited.

I have, &c.,

HARRIE WOOD,

Under Secretary for Mines.

No. 7.

Mr. W. Walker to The Under Secretary for Mines.

(M.Ls. 4878-4879.)

Offices, Bell's Chambers, No. 175, Pitt-street, Sydney, 20 March, 1875.

Sir,

I have the honor, on behalf of Messrs. Wright, Clifford, Coggan, Alcock, Cooke, and party, to apply for permission to pay the rent at the Treasury on the above selections for the years 1874 and 1875.

Requesting that the permission now sought may be granted by your Department,

I have, &c.,

WILLIAM WALKER.

Permission to pay the past due rent granted.—J.L. Treasury and Mr. Walker, 24 March, 1875.

No. 8.

The Under Secretary for Mines to The Under Secretary for Finance and Trade.

Sir,

Department of Mines, Sydney, 24 March, 1875.

I am directed to inform you that the Secretary for Mines has approved of Messrs. Wright, Clifford, Coggan, Alcock, Cooke, and party, paying into the Treasury the overdue rent of mineral leases Nos. 4878 and 4879, containing 20 acres each, county of Hardinge.

Date of Treasury receipt, 7 June, 1875.

I have, &c.,

HARRIE WOOD,

Under Secretary for Mines.

No. 9.

The Under Secretary for Mines to Mr. W. Walker.

Sir,

Department of Mines, Sydney, 24 March, 1875.

I am directed to inform you that in compliance with the request contained in your letter of the 20th instant, the Secretary for Mines has approved of Messrs. Wright, Clifford, Coggan, Alcock, Cooke, and party, paying into the Treasury forthwith the overdue rent on mineral leases Nos. 4878 and 4879.

I have, &c.,

HARRIE WOOD,

Under Secretary for Mines.

No. 10.

The Under Secretary for Finance and Trade to The Under Secretary for Mines.

Sir,

The Treasury, New South Wales, Sydney, 1 April, 1875.

With reference to your letter, dated — March, 1875, I have the honor to state that Messrs. Wright, Clifford, Coggan, Alcock, Cooke, and party, have paid into this office the overdue rent on mineral leases Nos. 4878 and 4879.

I have, &c.,

G. EAGAR.

No. 11.

Messrs. Duguid & Co. to The Under Secretary for Mines.

Sir,

Pitt and Bridge streets, Sydney, 25 January, 1876.

We have the honor to request that mineral leases Nos. 4877/9, in names of Wright, Clifford, and party may be cancelled, the rent not having been paid for present year.

We have, &c.,

DUGUID & Co.

M.L. 4877, rent not paid for 1875; M.L. 4878/9, rent paid for 1875; M.L. 4878/9, gazetted as being ready for delivery on 15th April last—30 days' notice, 17th June, 1875.—T.C.B., 27/1/76. The cancellation may be expedited as much as possible.—J.L., 28/1/76. M.L. 4878/9 cancelled; see Government Gazette, 25/2/76/62.

No. 12.

R. Forster, Esq., M.L.A., to The Under Secretary for Mines.

Sir,

203, York-street, Sydney, 4 April, 1876.

Having reference to my interview with you on the 20th ultimo, in relation to an alleged act of injustice done to one George Lock, of Tingha, tin miner, I am now in receipt of a further communication from George Lock, and will, as far as I can understand the case, give you a precis thereof.

About

About three years ago several blocks of land were taken up for mineral purposes, but never worked. About twelve months ago Lock and his mate (Carney) being the holders of mineral licenses, and believing that the land had been abandoned and forfeited, proceeded to prospect one of these blocks, and after expending nearly all their hard earnings had the good fortune to strike good tin wash-dirt. About this time a man appeared on the ground, said that he was an original shareholder in this claim, that by paying up the back rent he could insist on his right, and in this way he induced Lock and mate to give up the claim.

The Warden was written to, but stated that he was powerless. Your Department was written to as to their right to prospect this land, and you replied on 15 February, 1875, No. 75/754, that the lease would forthwith be tendered to the original applicants, Messrs. T. Moore and Company, and that if they did not take delivery it would be cancelled, and then Lock and Carney might take up the whole or any portion of this land.

There appears to be some error as to the exact block and the original selectors. You name "Moore & Co." and give the mineral lease No. 5,436, portion 210. My clients say the land was originally taken up by Messrs. Wright & Cook, of Sydney, block No. 210, co. Hardinge, p. of Swinton, and in proof of this I annex the notice as published in a newspaper, and giving the mineral lease No. 4,879; the notice bears date 24 February, 1876; the present holders are Messrs. Woods & Brickwood, the date of their application being, I believe, 25 February, 1876.

The worst feature in this case, if true, as stated to me, is this: that Brickwood, who is a storekeeper at Inverell, and was acquainted with Carney, came to the ground, congratulated them on their success, and stated that he had an agent in Sydney who would do all the business to secure the land for them, and thus save them trouble; and Lock and Carney, believing Brickwood was a man in whom they could place confidence, left it to him to secure the land for them; but shortly after Brickwood again made his appearance, said he was agent for a Sydney gentleman, that the land belonged to him, and immediately proceeded to post notices on the ground warning all persons not to trespass.

If this be true, then I submit Woods & Brickwood obtained the land by fraud, and ought not to be permitted to hold possession.

I earnestly invite attention to this case.

I am, &c.,

ROBT. FORSTER.

They were informed, 15/2/75, that 210, par. Herbert, was held under lease 5436 by Moore & Co. To this they did not reply. Their description being block 210, between Middle and Cope's Creeks; if they had said the block referred to was in the par. of Swinton, the correct information would have been given to them. Mr. Forster, M.P., may be so informed, and that the matter shall be considered in connection with Messrs. Woods & Brickwood's application. Attach to papers on receipt of the said application.—J.L., 10/4/76. Mr. Forster, M.P., informed, 13 Apl., /76.

Department of Mines,
Sydney, 24 February, 1876.

NOTICE TO APPLICANTS FOR MINERAL LEASES.

NOTICE is hereby given, that the undermentioned mineral leases of Crown lands have been finally cancelled, the lessees having failed to execute and take delivery thereof when called upon to do so.
[76-1,217]

JOHN LUCAS.

No. 13.

The Under Secretary for Mines to R. Forster, Esq., M.L.A.

Sir,

Department of Mines, Sydney, 13 April, 1876.

In reference to your letter of the 4th instant, inviting attention to certain information furnished by this department to Messrs. Lock and Carney on the 15th February, 1875, as to some mineral lands which they desired to obtain, I am directed by the Secretary for Mines to point out that my letter of that date, in accordance with the description of the land as given by them, viz.:—"Block 210, between Middle and Cope's Creeks," was to the effect that portion No. 210, parish of Herbert, was held under lease by Messrs. T. Moore & Company, and to this no reply was made, as it should have been, if such information did not rightly describe the land they were inquiring about. Had they said that the block referred to was in the parish of Swinton the correct information would have been given.

2. I am to state in conclusion that the matter shall be considered in connection with Messrs. Woods and Brickwood's application for the land.

I have, &c.,

HARRIE WOOD,

Under Secretary for Mines.

No. 14.

Mr. G. Woods to The Minister for Mines.

Sir,

Inverell, 15 June, 1876.

On February 29th, 1876, myself and R. Brickwood took up at the Inverell Land Office two forfeited mineral selections of 20 acres each, portions Nos. 210 and 209, parish of Swinton and county of Hardinge, which we have been working ever since; but as Mr. Lucas, of Tingha, appears to think that he only as Mining Registrar should be applied to, he has put us to great inconvenience by bringing other parties and trying to stop us from working this land. He also tried to get the Warden of Armidale on behalf

behalf of one Mr. Legge, to place an injunction on this land, and prevent us working the same, which the Warden refused to do. We have fulfilled all the conditions, have put up the required notices and in the prescribed time, and owing to this man Lucas, the Mining Registrar at Tingha, I personally applied for this land by a mineral conditional purchase in order to make the thing doubly sure, as we have expended a large amount of money on this land in constructing dams, &c., &c.—fully £400. This application I made on April 12th, 1876, but if the original application was correct, as I suppose it is, I would like this money refunded, as myself and R. Brickwood intend to make same a mineral conditional purchase at our next rent time. Trusting you will inquire into the conduct of this officer—if he had not some motive in view, perhaps he would not take this trouble about the land.

I remain, &c.,
G. WOODS.

Request the Mining Registrar at Inverell to explain the delay in forwarding the applications referred to. Request the Warden's Clerk at Tingha to explain his action in reference to Messrs. Woods and Brickwood's application.—J.L., 21/6/76. The Warden's Clerk, Tingha.—H.W., B.C., 26 June, 1876. The M.R., Inverell, by memo., 26 June, 1876.

No. 15.

The Mining Registrar, Inverell, to The Under Secretary for Mines.

Sir, I have the honor to enclose two mineral lease applications from Messrs. Woods and Markby, together with Mr. Surveyor Murray's report, which I received on the 24th instant, too late to be posted by that day's mail.

Land Office, Inverell, 30 June, 1876.

I have, &c.,
W. CARDEW,
Mining Registrar.

No notice of application (sch. 6) was forwarded to this Dept. in accordance with regulation 9.—P.A., 6/7/76.

Submitted.—The land herein referred to appears to have been taken up under the 19th clause of the "Crown Lands Occupation Act of 1861," in the name of G. Woods. See M.C.P. 76-37.—W.C., 12/7/76. The Under Secretary for Mines. Date of conditional purchase, 13 April, 1876.—Send copy of Mr. Forster's letter, and request that as the land was the subject of an application for a mineral lease which had not been dealt with at the date of the conditional purchase by Geo. Woods, such conditional purchase should be disallowed.—J.L., 19/7/76. The Under Secretary for Lands, 24 July, 1876.

[Enclosure A to No. 15.]

E 1.

The Mining Registrar, Inverell, to The Mining Registrar, Tingha.

Sir, I have the honor to inform you that portions Nos. 209 and 210, parish of Swinton, have been applied for at this office as mineral leases by Messrs. Woods and Brickwood, and to request that you do not receive applications for the same land.

Land Office, Inverell, 4 April, 1876.

I have, &c.,
W. CARDEW,
Mining Registrar.

[Enclosure B to No. 15.]

E 2.

Mr. J. Legge to The Mining Registrar, Tingha.

Sir, Having made application to you for mineral lease for portions Nos. 209 and 210, county of Hardinge, parish of Swinton, and find that the said land has been applied for previously at the Inverell Office, which is illegal by the Mining Act of 1874, I therefore, having complied with the Act by making application to you, request that my application be received, otherwise I must refer the matter to the Minister for Mines or the Warden for the district.

Tingha, 10 April, 1876.

I have, &c.,
JOHN M. LEGGE.

Description of Land.

No. of mineral lease:—Portion Nos. 209 and 210, county of Hardinge, parish of Swinton. Applied for at Inverell by Richard Brickwood and George Woods 26th February, 1876.

[Enclosure C to No. 15.]

E 3.

The Mining Registrar, Tingha, to The Warden, Armidale.

Sir, I have the honor to request instruction as to how I shall act between this time and that of the inquiry by you into this case.

Warden's Office, Tingha, 12 April, 1876.

JAMES LUCAS,
Mining Registrar.

[Enclosure D to No. 15.]

E 4.

Edward Marriott, Esq., to The Warden's Clerk, Cope's Creek.

Sir, In reply to your communication of the 12th instant, forwarding summonses in the case noted in the margin, and asking "How you are to act between this time and that of the hearing of the case," I have the honor to inform you that I have telegraphed to the Hon. the Minister for Mines informing him of disputes to be settled at Tingha and other parts of this district, who will no doubt appoint some other Warden to hear them in the absence of Mr. Warden Buchanan, of which you will be duly informed; in the meantime, I should recommend you to caution all parties to *cease work*, pending the hearing of the disputes.

Warden's Office, Armidale, 26 April, 1876.

I have, &c.,
EDWD. MARRIOTT,
Pro JAS. BUCHANAN,
Warden.

Brickwood v. Woods.

[Enclosure E to No. 15.]

E 5.

Mineral Lease Regulations.—Schedule 2.—Application for Mineral Leases.

To the Hon. the Secretary for Mines, Sydney,—

Sir, We hereby make application for a mineral lease of that piece or parcel of land situated in the county Hardinge, parish of Swinton, containing 20 acres, of which we took possession on the 26th day of February, at the hour of 11 o'clock in the forenoon, for the purpose of mining thereon and therein for twelve months by four stakes at each angle thereof, being portion No. 209, lease No. 4878, formerly owned by Wright, Clifford, and Parry, and cancelled.

Inverell, February 29, 1876.

Notice

Notice of our intention to make this application has been given in accordance with the Regulations in that behalf, and we also hand herewith £5, being the first year's rent in advance of the said land, and the sum of £1 to cover the cost of inspection.

We hereby acknowledge that this application is made upon the distinct understanding and condition that if we shall abandon or fail to proceed with it, or if it is refused, the Secretary of Mines for the time being may deduct from the sum of £6 deposited as aforesaid any cost to which in his opinion the Crown may have been put in or about or in respect of this application; and this application shall thereupon become and be void, and the possession aforesaid shall cease and determine. And if the lease shall be granted we shall and will commence mining operations upon or in connection with the demised land within one month from and after the granting thereof, and shall and will employ upon such land not less than four men during the first three months of the term thereby created, and not less than two men during the remainder of such term. And shall and will at any time when called upon in terms of the Regulations relating to mineral leases to do so, execute and take delivery of such lease, or failing therein for a period of fourteen days after being so called upon we shall and will forfeit the said sum of £6 and all right, title, or interest in and to the said land and the possession thereof, and the said lease shall be forthwith cancelled.

We have, &c.,

GEORGE WOODS, Inverell.

RICHARD BRICKWOOD, Inverell.

This application was received by me this 29th day of February, 1876, at the hour of 10 o'clock in the forenoon, and is numbered 32.

W. CLARE CARDEW,

Land Agent.

Application No. 32 at Inverell for a mineral lease.

1. By whom application was received? Land Agent.
2. At what place? Inverell.
3. Date and hour when received? February 29th, 1876.
4. Receipt for first year's rent No. 32. Date? February 29th, 1876.
5. To whom receipt was issued? Woods and Brickwood.
6. Date when notice to survey was sent to Surveyor? April 7th, 1876.
7. Date when report and plan were received from the Surveyor? June 24th, 1876.
8. Names of objectors, and dates on which they lodged their objections?
9. Dates of inquiry?
10. Are the applicants holders of miners' rights?
11. Is the land applied for exempted from leasing under the 34th section of the "Mining Act, 1874?"

[Enclosure F to No. 15.]

E 6.

Mineral Lease 148.

Mr. Mining Surveyor Murray to The Chief Mining Surveyor.

Sir,

Inverell, 25 April, 1876.

In accordance with notices of survey from Mining Registrar, Inverell, of 7th inst., on application of George Woods and Richard Brickwood for 20 acres as a mineral lease, I have the honor to report that I inspected the land referred to on the 14th inst. and find that it has already been measured as portion No. 209, parish of Swinton, county Hardinge. It was originally taken up by Wright, Clifford, and Party as mineral lease No. 4878, but having been forfeited by them (see Gazette, 25th February, 1876) was applied for by the present applicants. Woods and Brickwood were the only parties in possession of the ground when I inspected it; they had complied with the Regulations, and were engaged in deep sinking for tin, but they showed me a notice from a person named John M. Legge, a copy of which I enclose, and I subsequently ascertained that the same person had applied for a summons against Woods and Brickwood to appear before the Warden's Court.

It appears that Mr. Legge was not an applicant for the land himself, but having discovered that Woods and Brickwood had not applied for the land at the nearest office—which is Tingha—but at Inverell, where Mr. Woods resides, he wished to have their claim disallowed and an application received from himself. The Warden's Clerk at Tingha refused to accept his notice of application on 4th April, being aware by a notice on the post office, and by a notice from the Mining Registrar at Inverell, that the land had been already applied for by George Woods and R. Brickwood.

I have the honor to suggest that this report be forwarded to the Acting Warden for the District of Armidale, in order to help him in dealing with the case.

I have, &c.,

R. L. MURRAY,

Mining Surveyor.

[Sub-Enclosure.]

Mr. J. Legge to Messrs. Brickwood and Woods.

Gentlemen,

Tingha, 10 April, 1876.

I beg to inform you that I have instituted proceedings in the matter of portions Nos. 209 and 210, mineral selections, county of Hardinge, parish of Swinton, now illegally held by you.

I am, &c.,

JOHN M. LEGGE.

[Enclosure G to No. 15.]

E 7.

Mineral Lease Regulations.—Schedule 2.—Application for Mineral Leases.

To the Honorable the Secretary for Mines, Sydney,—

Sir,

Inverell, 29 February, 1876.

We hereby make application for a mineral lease of that piece or parcel of land situated in the county Hardinge, parish Swinton, containing 20 acres, of which we took possession on the 26th day of February, at the hour of 11 o'clock in the forenoon, for the purpose of mining thereon and therein for twelve months, by four stakes at each angle thereof,—being portion No. 210, lease No. 4,879, formerly owned by Wright, Clifford, and party, and duly cancelled.

Notice of our intention to make this application has been given in accordance with the Regulations in that behalf. We also hand herewith £5, being the first year's rent in advance of the said land, and the sum of £1 to cover the cost of inspection.

We hereby acknowledge that this application is made upon the distinct understanding and condition that if we shall abandon or fail to proceed with it, or if it is refused, the Secretary of Mines for the time being may deduct from the sum of £6 deposited as aforesaid any cost to which in his opinion the Crown may have been put in or about or in respect of this application; and this application shall thereupon become and be void, and the possession aforesaid shall cease and determine. And if the lease shall be granted we shall and will commence mining operations upon or in connection with the demised land within one month from and after the granting thereof, and shall and will employ upon such land not less than four men during the first three months of the term thereby created, and not less than two men during the remainder of such term. And shall and will at any time when called upon in terms of the Regulations relating to mineral leases to do so, execute and take delivery of such lease, or failing therein for a period of fourteen days after being so called upon we shall and will forfeit the said sum of £6 and all right, title, or interest in and to the said land and the possession thereof, and the said lease shall be forthwith cancelled.

We have, &c.,

GEORGE WOODS, Inverell.

RICHARD BRICKWOOD, Inverell.

This application was received by me this 29th day of February, 1876, at the hour of 10 o'clock in the forenoon, and is numbered 31.

W. CLARE CARDEW,

Land Agent.

Application

Application No. 31 at Inverell, for a mineral lease.

1. By whom application was received? Land Agent.
2. At what place? Inverell.
3. Date and hour when received? Feb. 29th, 1876, 10 a.m.
4. Receipt for 1st year's rent? No. 31. Date, Feb. 29th, 1876.
5. To whom receipt was issued? Woods and Brickwood.
6. Date when notice to survey was sent to surveyor? April 7th, 1876.
7. Date when report and plan were received from the surveyor? June 24th, 1876.
8. Names of objectors, and dates on which they lodged their objections?
9. Dates of inquiry?
10. Are the applicants holders of miners' rights?
11. Is the land applied for exempted from leasing under the 34th section of the "Mining Act, 1874"?

[Enclosure H to No. 15.]

Mr. Mining Surveyor Murray to The Chief Mining Surveyor.

E 8.

Mineral Lease, 147.

Sir,

Inverell, 25 April, 1876.

In accordance with notices to survey from Mining Registrar, Inverell, of 7th inst., on application of George Woods and Richard Brickwood for 20 acres as a mineral lease, I have the honor to report that I inspected the land referred to on the 14th inst., and find that it has already been measured as portion No. 210, parish of Swinton, county of Hardinge. It was originally taken by Wright, Clifford, and party as M.L. No. 4,878, but having been forfeited by them (see Gazette, 25 Feb., 1876), was applied for by the present applicants. Woods and Brickwood were the only parties in possession of the ground when I inspected it; they had complied with the Regulations, and were engaged in deep sinking for tin, but they showed me a notice from a person named John M. Legge, a copy of which I enclose, and I subsequently ascertained that the same person had applied for a summons against Woods and Brickwood to appear before the Warden's Court.

It appears that Mr. Legge was not an applicant for the land himself, but having discovered that Woods and Brickwood had not applied for the land at the nearest office, which is Tingha, but at Inverell, where Mr. Woods resides, he wished to have their claim disallowed, and an application received from himself.

The Warden's clerk at Tingha refused to accept his notice of application on 4th April, being aware, by a notice on the post office, and also by a notice from the Mining Registrar at Inverell, that the land had been already applied for by Geo. Woods and R. Brickwood.

I have the honor to suggest that this report be forwarded to the Acting Warden for the district of Armidale, in order to help him in dealing with the case.

I have, &c.,
R. L. MURRAY,
Mining Surveyor.

See letter No. 76/2.

(Copy of Notice.)

Mr. J. M. Legge to Messrs. Woods and Brickwood.

Gentlemen,

Tingha, 10 April, /76.

I beg to inform you that I have instituted proceedings in the matter of portions Nos. 209 and 210 mineral selections, county Hardinge, parish of Swinton, now illegally held by you.

I have, &c.,
JOHN M. LEGGE,
Tingha.

[Enclosure I to No. 15.]

Description:

Application No. 31, at Inverell, portion 210, parish of Swinton, county of Hardinge, 20 acres.

Commencing at a point bearing west, and distant 1 chain from the south-west corner of portion 230, and bounded on the east by a road 1 chain wide, bearing south 14 chains and 15 links; on the south by a line bearing west 14 chains and 15 links; on the west by a line bearing north 14 chains and 15 links; and on the north by a line bearing east 14 chains and 15 links, to the point of commencement.

Application No. 32, at Inverell, portion 209, parish of Swinton, county of Hardinge, 20 acres.

Commencing at the south-west corner of portion 230, and bounded thence on the west by a road 1 chain wide, bearing south 14 chains and 15 links; on the south by a line and part of the north boundary of portion 4, bearing east 14 chains and 15 links; on the east by the west boundary of portion 208, bearing north 14 chains and 15 links; and on the north by the south boundary-line of portion 230 aforesaid, bearing west 14 chains and 15 links, to the point of commencement.

No. 16.

The Under Secretary for Mines to The Under Secretary for Lands.

Sir,

Department of Mines, Sydney, 24 July, 1876.

I have the honor, by direction of the Secretary for Mines, to forward herewith a copy of a letter received by this Department from Mr. Robert Forster, M.P., respecting a certain application made by Messrs. Woods and Brickwood for a mineral lease.

2. It appears that the land applied for by the said application has been taken up under the 19th clause of the "Crown Lands Occupation Act, 1861," in the name of George Woods, as a conditional purchase.

3. As the above-mentioned application was not dealt with at the date of the conditional purchase, I am to request that such conditional purchase should be disallowed.

I have, &c.,

HARRIE WOOD,

Under Secretary for Mines.

No. 17.

Messrs. Hoskins and Blomfield to The Minister for Mines.

Sir,

Sydney, 24 July, 1876.

In conformity with the provisions of the 58th section of the "Mining Act of 1874," we have been instructed by Messrs. Woods and Brickwood, who have applied for a mineral lease of portions 209 and 210, in the parish of Swinton, county of Hardinge, and who have been working the said portions of land for tin, and have raised tin ore from the said portions to the surface, estimated to be worth about £300,

421—B

which

which is now ready for washing; and have also constructed dams, sunk shafts, formed water races, and have other property on these portions, to apply for an injunction to restrain John M. Legge, who has likewise applied for a lease of the aforesaid portions of land, from interfering with any of the tin ore raised to the surface by Messrs. Woods and Brickwood, or with the dams, shafts, or workings which have been undertaken by those parties on the aforesaid portions of land, or with any property belonging to Messrs. Woods and Brickwood which may be at the present time on the aforesaid portions, until you have decided after an investigation which of the aforesaid parties are entitled to hold and keep possession of the portions of land, numbers 209 and 210, parish of Swinton, county of Hardinge.

We have, &c.,
HOSKINS & BLOMFIELD.

Prepare an injunction and submit to the Crown Solicitor, and when approved of serve upon all the parties and post upon the land in dispute. Injunction prepared and forwarded to the Crown Solicitor.—24 July, 1876.

No. 18.

The Under Secretary for Mines to The Crown Solicitor.

Sir, Department of Mines, Sydney, 24 July, 1876.

I have the honor, by direction of the Secretary for Mines, to forward herewith a form of injunction under the 58th section of the "Mining Act 1874," for your approval.

I have, &c.,

HARRIE WOOD,

Under Secretary for Mines.

No. 19.

J. Macintosh, Esq., to The Minister for Mines.

My dear Sir,

Sydney, 25 July, 1876.

I beg to hand you a letter from a Mr. Brickwood, a tin miner, in the district of Inverell, complaining of a grievance that he considers he has been subjected to by the Warden at Tingha. I may state that I have known Mr. Brickwood for several years as a highly respectable man, in good circumstances, and not at all a person that would do a wrong action, or make a false statement. He was at one time a hay and corn dealer at Newtown, and may be known to you. If you would kindly look into his case and see that he obtains justice it would oblige

Yours truly,

J. MACINTOSH.

[Enclosure A to No. 19.]

Mr. R. Brickwood to J. Macintosh, Esq.

Sir,

17 July, 1876.

I take the liberty to address you, knowing you are a lover of fair play, and to ask you to lay this matter before your colleague in Parliament. My complaint is this:—On the 26th day of February, 1876, myself and partner, Mr. G. Woods, made application to Mr. Cardew, Land Agent and Mining Registrar at Inverell, to select two 20-acre blocks, county of Hardinge, parish of Swinton, as a mineral lease, duly posted all notices required by the Mining Act, Mr. Cardew assuring us that applications for mineral leases applied for at his office, Inverell, was just as legal as any application made to the Warden's Clerk, Tingha, in whose district the land in question is. Mr. Surveyor Murry reported on this land, and found all pegs and notices required by the Mining Act had been complied with, so we naturally thought that the title would be good, and have since spent some £600 on the land in building puddling mill, horse pumps, sluicing plant, sinking shafts, and raising wash-dirt,—when I was served with a summons at 4 o'clock p.m. to attend the Warden's Court at Tingha at 10 o'clock the following morning, the 15th July, 1876, to answer the complaint of John Legge, which was a breach of the sixth clause of the "Mining Act of 1874,"—that I had applied at Inverell instead of Tingha for the land, and through so doing the Warden gave the case against me, and put the complainant, J. Legge, in possession of the land, who has never had any application posted anywhere concerning it. He is now in possession, and dares me to remove anything, or work on the land. So we are thus ousted from the land with eighteen hours notice. At the conclusion of the case my partner made an appeal against the decision of the Warden, and we are now carrying the case on to the best of our ability, which will be an expensive one to us, and all through the mistake of Mr. Cardew, Mining Registrar, Inverell. Now, if a Mining Registrar does not understand this Mining Act it will be very hard for me to do so. When other people have made application for mineral land at the Inverell office in the same way as I have done, and their lease is now prepared for them. This party is named H. Turner, and this land is in the same mining district as the land just taken from us.

Six weeks after we made our application (in February) this man Legge made application at the Tingha office, and was refused, on the ground that the land was already applied for; yet the Warden, on July the 15th, when giving decision, requested the Warden's Clerk at Tingha to date his refused application back to April 4th, time alleged when this man made application, although he never complied with the Act in posting notices, marking the land, or serving notice on parties in occupation.

Should Parliament be prorogued would you kindly confer with the Minister for Mines on this matter, as no doubt he will have all the depositions and decision of the Warden for his final consideration.

Yours, &c.,

RICHARD BRICKWOOD.

No. 20.

The Land Agent, Inverell, to The Under Secretary for Mines.

Sir,

Land Office, Inverell, 18 July, 1876.

I have the honor to state that applications made by Woods and Brickwood for mineral leases in the parish of Swinton were received by me on the 29th February last. All the required notices were posted up both here and at Tingha, and no objections were lodged against the said applications. My notices to Mr. Surveyor Murray were forwarded in due course, and his report, together with applications, are now with you.

A

11

A short time ago John M. Legge lodged an objection with the Warden's Clerk at Tingha. The case Legge *versus* Woods and Brickwood was heard by Mr. Warden Buchanan on the 15th instant, at Tingha. The depositions in this case have, I believe, been forwarded to you for your consideration. You will see by Mr. Warden Buchanan's decision that he held that an application made to me at this office for mineral leases was illegal—the land being within a mining district. Should you confirm this decision I am afraid it will give rise to a great deal of confusion and injustice, for I have received several lease applications, believing that I was authorized to do so, and they have never been questioned till now.

Please instruct me for the future whether I am to receive mineral lease applications or not.

I have, &c.,
W. CARDEW.

Inform that as Land Agent he would be empowered to receive applications for mineral lease of land outside of a mining district if such land were within the district assigned to him as Land Agent, but applications to lease land for mining purposes within a mining district should be made either to a Warden or a Warden's Clerk.—J.L., 1 Aug., 1876.

No. 21.

The Under Secretary for Mines to The Land Agent, Inverell.

Sir,

Department of Mines, Sydney, 2 August, 1876.

In reference to the inquiry made in the concluding paragraph of your letter of the 18th ultimo, I am directed by the Secretary for Mines to inform you that as Land Agent you would be empowered to receive applications for mineral lease of land outside of a mining district, provided such land were within the district assigned to you as Land Agent.

2. Applications to lease land for mining purposes within a mining district should be made either to a Warden or a Warden's Clerk.

I have, &c.,
HARRIE WOOD,
Under Secretary for Mines.

No. 22.

The Mining Registrar, Tingha, to The Under Secretary for Mines.

Sir,

Warden's Office, Tingha, 19 July, 1876.

Referring to the enclosed letter of G. Woods, I have the honor to inform you that Mr. Warden Buchanan, on the 15th inst., at the Warden's Court holden here decided the case against both defendants, and in favor of John M. Legge, the complainant. With regard to assertions contained in the enclosed letter of G. Woods against myself, I beg leave to say that they are without truth, and that I am now taking the opinion of counsel preparatory to entering an action against the said G. Woods for libel.

With this view I would respectfully request that the enclosed letter of G. Woods may be placed in my hands as evidence when the case may come on for hearing in the Supreme Court, Sydney.

I have, &c.,
JAMES LUCAS,
Mining Registrar.

Inform the writer the letter will be available if required in Court, and request him to forward the application of J. M. Legge through the Warden as speedily as possible.—J.L., 25/7/76. Telegram, 26 July, 1876.

Request the Warden to forward the depositions and all papers connected with the complaint of Legge against Woods and Brickwood at Tingha.—H.W., 26/7/76. Telegram, 27 July, 1876.

No. 23.

Telegram from Under Secretary for Mines to Mining Registrar, Tingha.

26 July, 1876.

PLEASE forward the application of J. M. Legge to this office through the Warden as speedily as possible. Woods' letter will be available if required in Court.

No. 24.

Telegram from Under Secretary for Mines to Mr. Warden Buchanan, Armidale.

27 July, 1876.

PLEASE to forward at once to this office the depositions and all papers connected therewith in the complaint of Legge against Woods and Brickwood, heard by you at Tingha on the 15th instant.

No. 25.

The Crown Solicitor to The Under Secretary for Mines.

Sir,

Crown Solicitor's Office, Sydney, 26 July, 1876.

I have the honor to return the form of injunction forwarded to me with your letter of the 24th instant, with such alterations as appear to me necessary made in red ink [*italics*].

Nothing to the contrary being said in your letter, I assume that there was only one application lodged by the disputing parties in respect of the two allotments of land.

I have, &c.,
JOHN WILLIAMS,
Crown Solicitor.

Prepare

Prepare injunction in the form annexed to be served upon the parties forthwith.—J.L. 26/7/76. Forward the injunctions to the Warden's Clerk at Tingha, and request him to instruct the bailiff to serve them on the persons respectively whose names are endorsed. Before serving them he should read them over and compare them with the copies, and then endorse upon such copies respectively an affidavit of service.—H.W., 27/7/76. Forwarded, 27 July, 1876.

[Enclosure A to 25.]

In the matter of the application of George Woods and Richard Brickwood, of Inverell, and of the application of John M. Legge, of Tingha, respectively, for a lease of certain parcels of land, being portions numbered 209 and 210, in the parish of Swinton, in the county of Hardinge, for the purpose of mining therein and thereon, for minerals other than gold.

Whereas a dispute has arisen as to the respective rights of the said George Woods and Richard Brickwood, and of the said John M. Legge, to a lease for mining purposes of the lands mentioned in the above applications; and I, the Honorable John Lucas, the Secretary for Mines for the time being, in the said Colony, under the powers in that behalf given to me by the "Mining Act 1874," have authorized and directed a competent officer to make inquiry into such dispute, and to take such other proceedings in relation thereto as are authorized by the 57th section of the said Act: And whereas it has been made to appear to me the said John Lucas, as such Secretary for Mines as aforesaid, that the property in dispute as aforesaid is liable to be prejudiced by the working of the minerals therein and thereon, pending the said inquiry into the said several applications for lease of the said land: Now therefore, I, the said John Lucas, the Secretary for Mines of the Colony of New South Wales, in virtue of the powers conferred upon me by the said "Mining Act 1874," do hereby order, command, and enjoin you, the said George Woods and Richard Brickwood, and also you, the said John M. Legge, that you and each of you absolutely desist from all mining operations or workings in or upon the parcels of land aforesaid, and that all mining operations and workings upon the said land be suspended until the rights of the several parties applicants to a lease of the said lands shall have been duly inquired into, and determined in favor of either party, as provided by the said Act, or until this injunction shall have been withdrawn, or otherwise lawfully set aside.

In witness whereof, I, the said John Lucas, so being such Secretary for Mines as aforesaid, have hereunto set my hand at Sydney, this day of 187
To George Woods and Richard Brickwood; and to John M. Legge.

No. 26.

The Under Secretary for Mines to The Warden's Clerk, Tingha.

Sir,

Department of Mines, Sydney, 27 July, 1876.

I am directed to forward herewith six copies of injunction for service, together with two copies for the bailiff, and I am to request you to be good enough to instruct the bailiff to serve the persons respectively whose names are endorsed.

2. Before serving them the bailiff should read them over and compare them with his copies, and then fill in upon such copies respectively affidavit of service.

I have, &c.,

GERARD E. HERRING.

(For the Under Secretary for Mines.)

[Enclosure A to No. 26.]

E 1.

To George Woods, Richard Brickwood, and John M. Legge,—

In the matter of the application of George Woods and Richard Brickwood, of Inverell, and of the application of John M. Legge, of Tingha respectively, for a lease of a certain parcel of land, being portion numbered 210, in the parish of Swinton, in the county of Hardinge, in the Colony of New South Wales, for the purpose of mining therein and thereon for minerals other than gold.

WHEREAS a dispute has arisen as to the respective rights of the said George Woods and Richard Brickwood, and of the said John M. Legge, to a lease for mining purposes of the land mentioned in the above applications and, I, the Honorable John Lucas, the Secretary for Mines for the time being in the said Colony, under the powers in that behalf given to me by the "Mining Act of 1874," have authorized and directed a competent officer to make inquiry into such dispute and to take such other proceedings in relation thereto as are authorized by the 57th section of the said Act:

And whereas it has been made to appear to me the said John Lucas, as such Secretary for Mines as aforesaid, that the property in dispute as aforesaid is liable to be prejudiced by the working of the minerals therein and thereon, pending the said inquiry into the said several applications for lease of the said land: Now therefore, I, the said John Lucas, the Secretary for Mines in the Colony of New South Wales, in virtue of the powers conferred upon me by the said "Mining Act of 1874," do hereby order, command, and enjoin you the said George Woods and Richard Brickwood, and also you the said John M. Legge, that you and each of you absolutely desist from all mining operations or workings in or upon the parcel of land aforesaid, and that all mining operations and workings upon the said land be suspended until the rights of the several parties applicants to a lease of the said land shall have been duly inquired into and determined in favor of either party as provided by the said Act, or until this injunction shall have been withdrawn or otherwise lawfully set aside.

In witness whereof I, the said John Lucas, so being such Secretary for Mines as aforesaid, have hereunto set my hand at Sydney, this day of 187

Affidavit of personal service.

I, E. MARKHAM, of Tingha, make oath and say, that on the 1st day of August, 1876, I served the within-named George Woods, Richard Brickwood, and John M. Legge, with the injunction, a true copy of which is at the opposite side hereof, by delivering it to each of them personally at Tingha.

E. MARKHAM,

Bailiff of Warden's Court.

[Enclosure B to No. 26.]

E 3.

To George Woods, Richard Brickwood, and John M. Legge,—

In the matter of the application of George Woods and Richard Brickwood, of Inverell, and of the application of John M. Legge, of Tingha respectively, for a lease of a certain parcel of land, being portion numbered 209, in the parish of Swinton, in the county of Hardinge, in the Colony of New South Wales, for the purpose of mining therein and thereon for minerals other than gold.

WHEREAS a dispute has arisen as to the respective rights of the said George Woods and Richard Brickwood, and of the said John M. Legge, to a lease for mining purposes of the land mentioned in the above applications, and I the Honorable John Lucas, the Secretary for Mines for the time being in the said Colony, under the powers in that behalf given to me by the "Mining Act of 1874," have authorized and directed a competent officer to make inquiry into such dispute, and to take such other proceedings in relation thereto as are authorized by the 57th section of the said Act:

And

And whereas it has been made to appear to me the said John Lucas, as such Secretary for Mines as aforesaid, that the property in dispute as aforesaid is liable to be prejudiced by the working of the minerals therein and thereon, pending the said inquiry into the said several applications for lease of the said land: Now therefore I, the said John Lucas, the Secretary for Mines of the Colony of New South Wales, in virtue of the powers conferred upon me by the said "Mining Act of 1874," do hereby order, command, and enjoin you the said George Woods and Richard Brickwood, and also you the said John M. Legge, that you and each of you absolutely desist from all mining operations or workings in or upon the parcel of land aforesaid, and that all mining operations and workings upon the said land be suspended until the rights of the parties applicants to a lease of the said land shall have been duly inquired into and determined in favour of either party as provided by the said Act or until this injunction shall have been withdrawn or otherwise lawfully set aside.

In witness whereof, I, the said John Lucas, so being such Secretary for Mines as aforesaid, have herunto set my hand at Sydney, this day of 187

Affidavit of personal service.

I, JAMES LUCAS, of Tingha, make oath and say, that on the 1st day of August, 1876, I served the within-named John M. Legge with the injunction, a true copy of which is at the opposite side hereof, by delivering it to him personally at my office at Tingha.

JAMES LUCAS.

Telegrams from Warden's Clerk, Armidale, to Under Secretary for Mines.

27 July, 1876.

Mr. WARDEN BUCHANAN absent visiting Barrington Gold Field. Copies of minutes of evidence, papers, &c., in case Legge *versus* Woods and others will, however, be forwarded by next post.

July 27, 1876.

IN *re* dispute Legge *v.* Woods and others Woods has telegraphed to Mr. Warden Buchanan as follows: "Legge removing our wash-dirt raised. Could you prevent same by injunction until case appeal decided?" Please instruct me how I am to Act.

Instruct Warden's Clerk, Tingha, to notify Legge that injunction has been issued by the Minister, posted last night, and warn him not to remove any property from the land applied for by Woods and Brickwood.—H.W., 28/7/76. Telegram, 28 July, 1876.

Inform Warden, Armidale, of action taken.—H.W., 29/7/76. Telegram, 31 July, 1876.

No. 28.

Telegram from Under Secretary for Mines to Warden's Clerk, Tingha.

28 July, 1876.

NOTIFY to John M. Legge that an injunction has been issued by the Minister, and warn him not to remove any property from the land applied for by Woods and Brickwood.

The injunction was posted to you last night.

No. 29.

Telegram from Under Secretary for Mines to Mr. Warden Buchanan, Armidale.

31 July, 1876.

INJUNCTIONS to desist from work upon the land in dispute Legge *v.* Woods and another were forwarded to the Warden's Clerk, Tingha, on the 27th instant, for service on the parties concerned.

No. 30.

The Warden's Clerk, Armidale, to The Under Secretary for Mines.

(76-4,722.)

Memo.

Warden's Office, Armidale, 27 July, 1876.

No depositions were taken in the case Legge *v.* Brickwood and Woods. Minutes of evidence were, however, made by Mr. Warden Buchanan, copies of which are herewith forwarded, together with all papers which have been received at this office in connection with the case, in accordance with instructions conveyed in your telegram of this day's date.

The Warden's Clerk, Tingha, has, I believe, in his possession the "protest marked A" (lodged by Legge against Brickwood and Woods' application); also "letter marked B," and those marked "C," alluded to in minutes of evidence.

EDWD. MARRIOTT,

Warden's Clerk.

Refer to the Warden, with request that he inquire into the whole matter, both as to the rights of the parties alleged to have been in possession before Messrs. Woods and Brickwood, and into the applications made by the last-named persons and Mr. Legge. Report thereon fully for the information of the Department; also to obtain and transmit the exhibits in the case herein referred to.—J.L., 1 Aug., 1876. Mr. Warden Buchanan.—H.W., B.C., 3 Aug., 1876.

[Enclosure

[Enclosure A to No. 30.]

Mineral Lease Regulations.—Schedule 2.—Application for Mineral Leases.

To the Secretary for Mines, Sydney,—
Sir,

Tingha, 10 April, 1876.

I hereby make application for a mineral lease of that piece or parcel of land situated county of Hardinge, parish of Swinton, being measured portions Nos. 209 and 210, containing 40 acres, of which I took possession on the 3rd day of April, at the hour of about 11 o'clock in the forenoon, for the purpose of mining thereon and therein for tin ore, by taking the original blocks as surveyed at each angle thereof. The datum point is from tree 209 in a westerly direction from said tree.

Notice of my intention to make this application has been given in accordance with the regulations in that behalf, and I hand herewith a list of the persons who occupy or claim a right to the land aforesaid, or any part thereof, together with such consents as I have obtained. I also hand herewith the sum of £10, being the first year's rent in advance of the said land, and the sum of £2 to cover the cost of survey.

I hereby acknowledge that this application is made upon the distinct understanding and condition that if I shall abandon or fail to proceed with it, or if it is refused, the Secretary of Mines for the time being may deduct from the sum of £12, deposited as aforesaid, any costs to which in his opinion the Crown may have been put in or about or in respect of this application; and this application shall thereupon become and be void, and the possession aforesaid shall cease and determine. And if the lease shall be granted I shall and will commence mining operations upon or in connection with the demised land within one month from and after the granting thereof, and shall and will employ upon such land not less than three men during the first month of the term thereby created, and not less than four men during the remainder of such term. And shall and will at any time when called upon in terms of the regulations relating to mineral leases to do so, execute and take delivery of such lease, or failing therein for a period of fourteen days, after being so called upon, I shall and will forfeit the said sum of £12, and all right, title, or interest in and to the said land and the possession thereof, and the said lease shall be forthwith cancelled.

I have, &c.,
JOHN M. LEGGE,
Tingha.

The original of this has this day been forwarded to Mr. Warden Buchanan on this date, viz., July 28, 1876, as per directions per telegram from Under Secretary for Mines, Sydney, dated 26 July, 1876, and received by me yesterday.—J.L.

This application was received by me this 10th day of April, 1876, at the hour of o'clock in the noon, and is numbered 63.

JAMES LUCAS,
Mining Registrar.

NOTE.—This application was granted to John M. Legge by order of the Warden, as per his decision of the 15th July, 1876, in the case of Legge v. Brickwood and Woods, and order given by the Warden to date it as first applied for by John M. Legge.—J.L.

[Enclosure B to No. 30.]

E 2.

Mr. G. Woods to The Warden's Clerk, Tingha.

Sir,

Tingha, Cope's Creek, 27 July, 1876.

Take notice, that in accordance with provisions of "Mining Act, 1874," and clause 15 of the regulations of the same, division 3, I, George Woods, of Inverell, hereby object that a lease be issued to John M. Legge, of Tingha, portions 209 and 210, county Hardinge, parish Swinton, applied for on July 15th, but ordered to be dated back to April 10th, 1876, on the following grounds, viz.:—That I, the said George Woods, had applied for the said land on April 13th, 1876, as a mineral conditional purchase, at which date the said Legge had not taken the land up; and further, for breach of clauses 2, 3, 4, 5, 6, 7, 9, 10, 12, 15, 16, 17, and 18 of the Regulations of said "Mining Act of 1874," division 3; and further, for breach of clause 25 of the said Act, division 1, and beg that the same may be inquired into according to the provisions of said Act.

GEORGE WOODS,
Inverell.

"MINING ACT, 1874."—SIXTH SCHEDULE.

Warden's Court.—Summons.

To Richard Brickwood and George Woods, of Inverell,—

You are hereby summoned to appear before me, or some other Warden, at on the 15th day of July next, at 10 o'clock in the forenoon of the same day, precisely, to answer the complaint of John M. Legge, of Tingha, by which complaint he complains that the defendants have illegally, under the 6th clause of the "Mining Act of 1874," made application for two blocks of tin land at the Mining Registrar's Office, Inverell, instead of at the Mining Registrar's Office, Tingha, and hereby the complainant seeks to claim the land.

If you desire the said complaint to be heard before assessors you are entitled to have it so heard.

You may have a summons to compel the attendance of any witness, or for the production of any books or documents, on applying at my office.

Bring this summons with you when you come to my office.

Given under my hand this day of 18 .

J. BUCHANAN, Warden.

Affidavit of Service.

In the Warden's Court of the Mining District at

I, E. Markham, of Tingha, make oath, and say that on the 14th day of July, 1876, I served the defendant, Richard Brickwood, with the summons in this suit, a true copy of which is at the opposite side hereof, by delivering it to him personally. Sworn by the abovenamed deponent, at Tingha, }

JAMES LUCAS, Mining Registrar.

E. MARKHAM.

[Enclosure G to No. 30.]

Warden's Court, Tingha, 15 July, 1876.

Present:—The Warden only.

J. M. Legge, Tingha, *versus* Richd. Brickwood, Tingha, and George Wood, Inverell.

Application to be put in possession of mineral leases Nos. 209 and 210 (block numbers), declared forfeited in Gazette of 24th February, 1876.

John M. Legge, on oath:—I am complainant in this case, and the parties before the Court are those I complain of; I produce my mineral license, 3rd April last; I applied to Mining Registrar Tingha for forms "Schedule 1;" he advised me to wait for a day or two, as he believed the ground had been applied for before; on the 4th April I made direct application for these blocks to the Warden's Clerk, Mr. Lucas; he refused to receive the same on the ground he had been officially informed the land was taken up at Inverell; a few days afterwards I lodged a protest against the ground being taken up; I base my application for the land on the informality of the application for the defendants. Produced, marked A.

Cross-examined by defendant Woods: I never saw any notice of the taking up of this ground posted at this post-office.

By complainant Legge.—*James Lucas*, on oath: I am Warden's Clerk and Mining Registrar, Tingha; I remember 3rd April; you then applied for forms under Schedule 1—application for mineral leases; I refused you; you subsequently applied again, and I again refused you; I did so for reasons set forth in letter I now produce; a few days after that I received from you the protest marked A. Marked B.

Cross-examined by Woods: I heard you posted notices of application; I did not see them.

By Brickwood: I never told you I went to see notices on purpose, and did see them; I do not remember having told you I saw notices.

By Warden: I produce all the correspondence I have in connection with the case, marked C; no notice was ever posted by Brickwood or Woods at my office in Tingha; the blocks in dispute are situate within 2½ miles of Tingha, and within the district of which I am Mining Registrar and Warden's Clerk. Marked C; four papers.

Defences.

George Woods, on oath: I am one of the defendants in this case, and hold a mineral license; on the 26th February last, at Inverell, I put up notices, and also at Tingha, notifying I was an applicant for blocks 209 and 210, county Hardinge, parish Swinton, 29 February; I applied Mining Registrar, Inverell, for them, and produce his receipts for moneys paid, Nos. 31 and 32; the blocks are measured blocks, and have been forfeited; Mr. Cardew said it was perfectly legal to apply for the land at Inverell; I was prepared to apply at Tingha, but this for assurance.

Cross-examined by complainant: I posted up notice at post-office, Tingha, not at Warden's office; the two blocks are declared forfeited in the Government Gazette; they were so before I put up the notices; I am certain as to the dates. Produced, dated 24 Feb., 1876.

Richard Brickwood, on oath: On 26th February I received notices from Mr. Wood—one I posted on Tingha post-office; the other on the two blocks in question; I did so; I also re-pegged the ground; I did it that day in the presence of a witness.

Cross-examined by complainant: I only posted one notice in Tingha; it was on the 26th February, I am certain. This closed the case.

Decision.

I find that complainant Legge did make application for the two blocks in question to the proper officer, and at the proper place, before any other application had been made at said office; and, further, that defendants Brickwood & Woods did make a prior application to the Mining Registrar, Inverell, who was not the proper officer to receive the same. I therefore order that the said Brickwood and Woods do now leave the ground in question, and that possession be given to the complainant Legge. See 4, 5, 6, clauses, mineral lease reg., Div. III.

I further order the £5 deposited by the complainant to be refunded, less costs of process and service, together with costs of complainant's witnesses. See clauses 71, 87 Vic., 13.

Dated 15 July, 1876.

JOHN BUCHANAN,
Warden.

Defendants gave notice verbally of their intention to appeal.—J. BUCHANAN, Warden.

I hereby certify that the above is a true copy of the minutes of evidence made by Mr. Warden Buchanan in the recent case Legge v. Brickwood and Woods, Tingha. EDWD. MARRIOTT,
Warden's Clerk.

Armidale, 27 July, 1876.

[Enclosure

[Enclosure H to No. 30.]

In the Warden's Court of the Peel and Uralla Mining District, holden at Tingha.

Between John Murday Legge against George Woods and Richard Brickwood.

TAKE notice that the abovenamed George Woods and Richard Brickwood being dissatisfied with the decision of the Warden's Court, given herein, at Tingha, on the 15th day of July instant, whereby Mr. Warden Buchanan decided that the abovenamed John Murday Legge was entitled to a lease of certain mineral land, the subject of the inquiry at the said Warden's Court, as against the claim of the abovenamed George Woods and Richard Brickwood to a lease of the said land, intend to appeal to the District Court sitting as a Court of appeal in its mining jurisdiction, to be holden at Inverell on the twenty-eighth day of August next, against the said decision of the said Warden's Court, upon the following grounds:—

1. That the said decision is against evidence.
2. That the said decision is against law, and contrary to the provisions of the "Mining Act of 1874" in that behalf, and the Regulations thereunder.
3. That the said George Woods and Richard Brickwood, having duly taken possession of the said land, and complied with the provisions of the said Act in that behalf and the Regulations thereunder, in marking boundaries thereof, posting notices, making application to the Mining Registrar of the district for a lease of the said land, and paying deposit, &c.; and the said John Murday Legge having failed to lodge any objections to the issue of such lease to them, in pursuance of regulation No. 15 in that behalf, or otherwise to comply with the Act and Regulations in that behalf, the said inquiry before the Warden was erroneous and irregular, and unauthorized by the provisions of the said Act and the Regulations thereunder, and that therefore the decision of the said Warden's Court was illegal, and in excess of its jurisdiction.
4. That the said George Woods and Richard Brickwood having complied with the provisions of the said Act and the Regulations thereunder in applying for a lease of the said land as aforesaid, and the said John Murday Legge having failed to lodge any objection thereto, as provided for by the fifteenth regulation in that behalf, the right of the said George Woods and Richard Brickwood to a lease of the said land (subject to the Governor's decision only) is indisputable.
5. That the said John Murday Legge has no right whatever to a lease of the said land, inasmuch as he never was in possession of the said land in any way whatsoever, and there was no record of his having made any application for a lease of the said land, or otherwise of his having complied with the provisions of the said Act in that behalf, or the Regulations thereunder.
6. That the Warden in directing the Warden's clerk to date an alleged application for a lease of the said land by the said John Murday Legge, alleged to have been made on the 10th day of April, 1876, *nunc pro tunc*, was *ultra vires*.
7. That, inasmuch as the said alleged application for a lease of the said land by the said John Murday Legge was alleged to have been made on the said 10th of April, being more than one month after the said application by the said George Woods and Richard Brickwood, on the 29th day of February, 1876, was made as aforesaid, and was rejected by the Warden's Clerk, at Tingha aforesaid, because of the prior application of the said George Woods and Richard Brickwood for the same land, the said John Murday Legge can have no claim to a lease of the said land as against the said George Woods and Richard Brickwood.
8. That the map put in evidence at the said inquiry at the Warden's Court, and relied upon by the Warden in giving his decision as aforesaid, was not a map of the "Peel and Uralla Mining District," and therefore was wrongly admitted as evidence in that behalf.

And upon such other grounds as the said Judge of the said Mining Appeal Court, either before or at the hearing, shall allow to be added.

Dated this 17th day of July, A.D. 1876.

ROBERT PALMER ALLEN,
Attorney for the Appellants,
Inverell.

To the Warden of the Peel and Uralla Mining District.

No. 31.

The Mining Registrar, Tingha, to Mr. Warden Buchanan, Armidale.

Sir,

Warden's Office, Tingha, 28 July, 1876.

As directed by telegram from the Under Secretary for Mines, Sydney, received yesterday, I have the honor to enclose application of John M. Legge, which I am directed to forward through you to the Department of Mines, Sydney.

I also beg to enclose an objection made by George Woods which, together with objector's deposit, was handed by him to me yesterday, 27th inst.

I have, &c.,

JAMES LUCAS,
Mining Registrar.

Forwarded for the information of the Hon. the Minister.—EDWD. MARRIOTT, *per* JAS. BUCHANAN, Warden. The Under Secretary for Mines, B.C., 31/7/76. Place with papers *re* Brickwood and Woods' applications, and the complaint of Carney and another, and forward to Mr. Warden Buchanan with these papers for inquiry; the actual date of receipt of J. M. Legge's application should be noted on it.—H.W., 3/8/76. Mr. Warden Buchanan with other papers, 76-4,722, &c., B.C., 3 August, 1876.—G.E.H. (for U.S.)

[Enclosure A to No. 31.]

Mineral Lease Regulations.—Schedule 2.—Application for Mineral Leases.

To the Honorable the Secretary for Mines, Sydney,—

Sir,

Tingha, 10 April, 1876.

I hereby make application for a mineral lease of that piece or parcel of land situated county of Hardinge, parish of Swinton, being measured portions, Nos. 209 and 210, containing 40 acres, of which I took possession on the 3rd day of April, at the hour of about 11 o'clock in the forenoon, for the purpose of mining thereon and therein for tin ore by taking the original blocks as surveyed. The datum point is from tree 209 in a northerly direction from said tree.

Notice of my intention to make this application has been given, in accordance with the Regulations in that behalf, and I hand herewith a list of the persons who occupy or claim a right to the land aforesaid, or any part thereof, together with such consents as I have obtained. I also hand herewith the sum of £10 being the first year's rent in advance of the said land, and the sum of £2 to cover the cost of survey.

I hereby acknowledge that this application is made upon the distinct understanding and condition that if I shall abandon or fail to proceed with it, or if it is refused, the Secretary of Mines for the time being may deduct from the sum of £12 deposited as aforesaid any cost to which in his opinion the Crown may have been put in or about or in respect of this application; and this application shall thereupon become and be void, and the possession aforesaid shall cease and determine. And if the lease shall be granted I shall and will commence mining operations upon or in connection with the demised land within one month from and after the granting thereof, and shall and will employ upon such land not less than three men during the first month of the term thereby created, and not less than four men during the remainder of such term. And shall and will at any time when called upon in terms of the Regulations relating to mineral leases to do so, execute and take delivery of such lease, or failing therein for a period of fourteen days, after being so called upon, I shall and will forfeit the said sum of £12, and all right, title, or interest in and to the said land and the possession thereof, and the said lease shall be forthwith cancelled.

I have, &c.,

JOHN M. LEGGE,
Tingha.
This

17

This application was received by me this 10th day of April, 1876, at the hour of o'clock in the noon, and is numbered 63. JAMES LUCAS, Mining Registrar.

NOTE.—This application was granted to John M. Legge by order of the Warden as per his decision of 15th July, 1876, in the case of Legge *versus* Brickwood and Woods, and order given by the Warden to date it as first applied for by John M. Legge.—J.L.

No. 32.

Mr. Warden Buchanan to The Under Secretary for Mines.

Sir,

Warden's Office, Armidale, 7 August, 1876.

In returning these papers after a very careful perusal I do not think I have anything further to add; I exhausted the subject, both sides on oath, at my Court, Tingha.

I arrived at my decision on the grounds that the Mining Registrar, being Land Agent at Inverell, ought not to have received the application of Messrs. Brickwood and Wood, and that the Warden's clerk, Tingha, should, instead of refusing Legge's application, have received the same. I therefore directed the Warden's clerk to receive Legge's application, the same taking effect from the date of the clerk's first refusal, that is to say, on the 10th April last, and my decision was further as appears in the copy of my minutes.

2. Brickwood's letter to Mr. Macintosh appears to me to be a fair statement of the case, and I think he is taking the proper course laid down by the Act, in appealing to the District Court Judge; and this course, I submit, precludes any further action on my part.

I have, &c.,
J. BUCHANAN,
Warden.

P.S.—I have telegraphed to the Warden's clerk, Tingha, for the exhibits and all papers in connection with the case; on their receipt I will forward them.—J.B., W.

As notice of appeal has been lodged it is not deemed expedient to refer to the complaint Legge *v.* Brickwood and Woods, or to the Warden's decision therein. As between contending parties applicants to lease a certain piece of land for mining purposes, and as between such applicants and another person claiming a prior right to occupy such piece of land, the Governor and the Executive Council alone have the power to decide that either or neither of the applications shall be granted. In order that the Secretary for Mines may be in a position to submit his recommendation in terms of regulation 26, the Warden should hold a Court of Inquiry into the matter of the several applications, and also into the matter of the complaint of Messrs. Lock and Carney, and forward the evidence taken therein and his report thereon.—J.L., 14/8/76. Mr. Warden Buchanan, B.C., 14 August, 1876.—H.W.

No. 33.

Mr. Warden Buchanan to The Under Secretary for Mines.

Sir,

13 July, 1876.

Referring to my communication of the 7th instant herewith, I have the honor to forward exhibits and other papers in connection with the case Legge *v.* Brickwood and Wood, as these papers are likely to be wanted in other and fresh cases. Perhaps after perusal the Minister will have the goodness to return them.

I have, &c.,
J. BUCHANAN,
Warden.

Refer to Mr. Warden Buchanan to be placed with the papers referred to him on the 14th inst.—J.L., 16/8/76. Mr. Warden Buchanan, B.C., 16 August, 1876.—G.E.H. (for U.S.)

Memo.—Mr. Lucas will be very careful of these papers, not letting them out of his custody; at the conclusion of the appeal he will without delay return them to me.—J. BUCHANAN, Warden, B.C., 21/8/76.

No. 34.

Telegram from Mr. Warden Buchanan to The Under Secretary for Mines.

21 August, 1876.

In re Legge *v.* Brickwood and Woods, and your B.C. minute of 14th instant, my last Court exhausted the subject; no fresh inquiry would, I think, throw any further light on the matter. I will, however, reinvestigate if still desired. I now formally recommend that Legge's application be approved, all particulars will be returned immediately after the hearing at Appeal Court. Please reply if satisfactory.

It is understood that no Court of Inquiry under the leasing provisions of the Act has been held. Until such has been held and the result transmitted the Minister is not prepared to deal with the applications to lease and the objections thereto. Neither the Warden's Court nor the District Court can grant a lease or deal with applications to lease; it is therefore assumed that the proceedings in the Warden's Court at Tingha had reference to some matter within the jurisdiction of such Court. The complaint could not be heard under the 71st section of the Act, unless all the parties consented, which consent should appear on the face of the proceedings, and then there would have been no appeal from the decision of the Warden's Court.—J.L., 22/8/76.

No. 35.

Telegram from The Under Secretary for Mines to Mr. Warden Buchanan.

22 August, 1876.

In re Legge versus Brickwood and Woods it is understood that no Court of Inquiry under the leasing provisions of the Act has been held. Until such Court has been held and the result transmitted, the Minister is not prepared to deal with the applications to lease and the objections thereto. Neither the Warden's Court nor the District Court can grant a lease or deal with applications; therefore it is accordingly assumed that the proceedings in the Warden's Court at Tingha had reference to some matter within the jurisdiction of such Court. The complaint could not be heard under the 71st section of the Act, unless all the parties consented, and such consent should appear on the face of the proceedings; then there would have been no appeal from the decision of the Warden's Court.

No. 36.

Precis of the Case.

Application to lease portions 209 and 210, parish Swinton, county Hardinge.

It appears that these two blocks of land were held under mineral lease by Messrs. Wright, Clifford, and party. That these leases were cancelled and notice thereof published in the *Gazette* of the 25th February, 1876.

Mr. Brickwood in his evidence says he has been working the land since about March, 1875.

Mr. Forster, M.P., writing on behalf of one George Lock, says, Lock and Carney, believing the leases had been abandoned and forfeited, took up the land about April, 1875, in virtue of their mineral licenses, expended money in prospecting, found tin, and then some person who represented that he was a partner of Wright, Clifford & Co., induced them to give up the claim.

Further, that Mr. Brickwood (in whom Carney had confidence) came on the ground, congratulated them on their success, and promised to use his influence to secure the land for them; shortly afterwards, Brickwood appeared again, said he represented a Sydney gentleman, that the land belonged to him, and posted notices warning persons not to trespass.

Lock and Carney clearly had no legal right to the land, and there is no evidence in support of the allegations against Brickwood. It does not appear that Lock and Carney had notice to attend the inquiry.

The matter as between Brickwood and Woods *v. Legge* appears to be that Brickwood and Woods on the 26th February, 1876, took possession (it is not stated how—but the surveyor in his report says they complied with the Regulations) of these two blocks—posted notice in the proper form in the Mining Registrar's Office at Inverell, and on the post office at Tingha (evidence to the effect that the land is nearer Tingha than Inverell). On the 29th lodged an application with the Mining Registrar and Land Agent at Inverell (the land is within a mining district) and proceeded to work upon the land, built huts, &c., and worked continuously up to the 15th July last. Would not have lodged the application at Inverell but was assured by the Mining Registrar it was quite legal to lodge the application in his office.

On the 3rd and 4th April, 1876, Mr. J. M. Legge appears to have applied to the Warden's Clerk at Tingha for forms of "notice of intention to apply," stating that it was his intention to apply to lease blocks 209 and 210; the Warden's Clerk thereupon refused to supply the forms as the land had been already applied for at Inverell. Mr. Legge appears to have taken possession on the 3rd April, but no evidence is tendered as to how it was taken. On the 4th Mr. Legge says the Warden's Clerk, Tingha, again refused to receive my application and speaks of the 3rd or 4th as the date of his application; and the Warden's Clerk says, "on the 4th April Legge again came to me"; he again made application for these two blocks and I refused him. Now the application bears date the 10th April (possession taken on the 3rd), and upon it is the following note by the Warden's Clerk:—"Note.—This application was granted to John M. Legge by order of the Warden as per his decision of the 15th July, 1876, in the case of Legge *versus* Brickwood and Woods, and order given by the Warden to date it as first applied for by John M. Legge," and he certified that it was received on the 10th April.

On the 10th April Legge lodged a protest against Brickwood and Woods having the right to the land, and served a notice (not in form, schedule 1) upon Brickwood that he (Legge) was an applicant for the land.

Mr. Legge says when he took possession on the 3rd he saw people and buildings on the ground. Mr. Legge says he served no other notice except that addressed to Brickwood and Woods; he posted none on the Warden's office (the necessary forms were refused to him). There is no direct evidence that he posted any notices, but he says he cannot recollect the date when he posted notices.

Messrs. Brickwood and Woods appear to have erred in that they did not post the notice (schedule 1) on the nearest Warden's Court, Court of Petty Sessions, or Mining Registrar's Office, and they lodged their application to lease with the Mining Registrar at Inverell instead of the Warden's Clerk at Tingha. They appear however to have put buildings on the land, and to have occupied and worked it so that there was ample notice that they claimed the land.

Mr. Legge did not attempt to take possession of the land till more than one month after Brickwood and Woods took possession. He does not allege that he was either misled or injured by reason of the errors committed by Brickwood and Woods in respect to their notice or application. He does not make out any case to entitle him to possession of the property on the land claimed by Messrs. Brickwood and Woods. He does not even prove that he complied with the Act and Regulations in respect to his own possession, notices, &c. So that if Messrs. Brickwood and Woods' application were refused on the score of informality, Mr. Legge's would have to be refused on the same grounds.

The Mining Registrar at Inverell is greatly to blame for neglecting to read the Regulations carefully. The Warden's Clerk at Tingha is to blame for refusing to supply forms or to receive any application tendered to him.

No. 37.

Mr. Warden Buchanan to The Under Secretary for Mines.

Warden's Office, Armidale, 5 September, 1876.

Sir,

Herewith I have the honor to transmit the depositions on oath taken by me at an inquiry held at Tingha, as also other papers touching the merits of applications made by "Messrs. Brickwood and Woods" on the one hand, and "Mr. J. M. Legge" on the other, for the right of leases to the several applicants of blocks Nos. 209 and 210, Cope's Creek.

This case formed the subject of a Court held by me on the 15th July last. I then held, as I believe, in terms of the Act, a Court, and I decided that the possession of the blocks in question should be given to Legge. This in no way affected the question as to who should obtain the lease, that being a matter entirely beyond my jurisdiction. In thus giving possession to Legge I am of opinion I in no way exceeded my powers as a Warden, but on the contrary acted according to law. It is patent that every one applying for a lease takes possession of the ground applied for before the lease is granted; often the ground is worked out before that operation is effected. The authority I exercised was merely to give possession.

The proceedings in both hearings being now before the Hon. the Minister, I trust he will find no difficulty in arriving at a conclusion; from my point of view it seems that Legge complied with what was required by the Regulations, but that Brickwood and Woods did not. In thus putting it in a strictly legal point of view, I would add that the case is a hard one for Messrs. Brickwood and Woods, as from the evidence they were clearly led astray by the Mining Registrar, Inverell.

I have, &c.,
J. BUCHANAN,
Warden.

It is thought that notwithstanding the technical defects in Messrs. Brickwood and Woods' application (the most serious of which is due to a misconception of his duties by the Mining Registrar at Inverell) it should be granted, and that Mr. Legge's application, which has defects without merits, should be refused. Minutes may be prepared accordingly.—J.L., 20/9/76.

[Enclosure A to No. 37.]

Warden's Office, Cope's Creek, 30 August, 1876.

Present: The Warden only.

An inquiry as to applications for the granting of leases for two blocks of land each of 20 acres, gazetted as forfeited by Messrs. Wright, Clifford, and party on the 24th February last,—said blocks being numbered 209 and 210, parish Swinton, county Hardinge.

This deponent, *George Woods*, on oath saith:—I am a partner with Brickwood in the two blocks the subject of this inquiry; I produce the Gazette dated 24 February, 1876, declaring blocks 209 and 210—Wright, Clifford, and others—as forfeited; on the 26th of the same month I made application for two forms under Schedule 1 of the Mining Act to Mr. Cardew, the Mining Registrar, Inverell; I obtained the forms and filled them in, applying for the two blocks I have previously mentioned; I posted one notice on the Mining Registrar's Office, Inverell, and sent the other to Mr. Brickwood on the claim; I told Mr. Cardew the position of the land—its distance from Tingha; he told me it was quite legal to take the ground up in his office; but for this assurance I would have gone to Tingha and applied there; on the 29th February I again saw Mr. Cardew and paid him £12 for the rent and survey fees of these two blocks; I produce the receipts; they are numbered 31 and 32; I also filled in the necessary forms of application for myself and partner, and handed them to Mr. Cardew; I then employed a man named Savery to work the land on my behalf; he with other men and Mr. Brickwood did work on the land; they erected buildings and occupied the land; these men are still in possession on behalf of self and partner; when I went on the 29th to see Mr. Cardew, the Mining Registrar, it was within the three days laid down by the Mining Regulations; early in March I visited the ground; Brickwood and our men were then in possession.

By *Mr. Ferguson, on behalf of J. M. Legge*:—I received no notice of objection before the 15th April; I applied at Inverell because I had done so previously in a similar case for another party, and the application was approved of; the case I refer to was that of Henry George Turner, *cide* Gazette, 18th January, 1876; I solemnly swear I would have come to Tingha for the land if I thought it was not right to apply in Inverell; I put no notices on the ground.

Sworn before me, at Tingha, the 30th August, 1876,—

J. BUCHANAN, Warden.

G. WOODS.

And this deponent, *Richard Brickwood*, on oath saith: I took possession of blocks 209 and 210 on the 26th February last, on behalf of myself and partner, Mr. Woods; I built huts and erected machinery; on the 26th February I received from Mr. Woods' messenger in a letter notices which I posted, one on the Tingha post office; I wrote a second notice and posted it on the ground—the notice on the ground was posted a day or two afterwards; I re-pegged the ground on the 26th, as I thought it was necessary; no one was in possession at the time I posted the notice and took up the ground; I commenced working the ground; I continued to do so until the Warden gave the ground to Legge, about 11th or 12th April; I received the letter produced; it is dated 10th April, 1876; from the 26th February to the 15th July we held undisturbed possession; I am still in possession, but not working; I did not receive any other notice of objection, except the letter I have referred to, dated 10 April. Marked A.

By *Mr. Ferguson*: I have been working the mines since about March, 1875, on behalf of Wright, Clifford, & Co.; I did put up a notice on a board against the brace of the shaft; I won't swear the letter was not left at my place on the 10th; the bailiff of the Warden's Court and Legge told me that Legge was to have possession of the land on the 15th July last.

Sworn before me, at Tingha, this 30th day of August, 1876,—

J. BUCHANAN, Warden.

RICHARD BRICKWOOD.

And this deponent, *James Lucas*, on oath saith: I am Warden's Clerk and Mining Registrar, Tingha; I remember on the 3rd April last Mr. Legge asking me for forms under Schedule 1; I asked him to wait, as the land had been applied for at Inverell; I heard this as a rumour; Legge told me the blocks 209 and 210, county Hardinge, parish of Swinton, I can't say; I absolutely refused him the forms; I may have done so on the 4th April; Legge again came to me; he again made application for these two blocks, and I refused him, upon the ground of a letter from Mr. Cardew, of Inverell, stating he had taken an application for them at Inverell; I know these two blocks and where they are situated; they are within the Cope's Creek division of the Peel and Uralla Mining District; the Warden's Office, Tingha, is the nearest office to the land; I got a notice of objection from J. M. Legge on the 10th April last.

By

By Mr. Allen: I keep a record of all applications received, the number is sixty-three, dated 10th April last; I did not receive it on that date; it was ordered by the Warden to be received as from that date; I never saw any notice on my office or on the post office that I remember from Mr. Brickwood; it might have been at the post office, but not on my office, without my knowledge as a matter of fact; I did hear there was a notice from Brickwood up at the post office.
Sworn before me, at Tingha, this 30th August, 1876,—
JAMES LUCAS.

J. BUCHANAN, Warden.

And this deponent, *John M. Legge*, on oath saith: I am applicant for mineral blocks 209 and 210; I remember on the 3rd April going to the office of the Warden's Clerk at Tingha; I applied to the Warden's Clerk for forms under Schedule 1, stating that I wished to post notices up as an applicant for blocks 209 and 210; he stated that he believed the ground had been applied for, and refused to give me the necessary forms; I then looked at the register and found no application had been made for these blocks; on the 4th April I again made application to the Warden's Clerk; he again refused to receive my application, stating he had received a communication from the Mining Registrar, Inverell, directing him not to receive applications for these two blocks of land, having failed to get the necessary forms; on the 10th April I lodged a protest against Brickwood and Woods having a right to the land; on the same day (the 10th April) I left a notice on Mr. Brickwood, that is at his residence, saying I was an applicant for the land; Tingha is within a mining district, Inverell is not, that I am aware of; Tingha is the nearest Warden's Office to the land applied for; the two blocks of land applied for are within a mining district, and Cope's Creek Warden's Office is the nearest to the land; on the 15th July I got possession of these two blocks through the bailiff of the Warden's Court; I never saw any notice posted by Brickwood and Woods at the post office, Tingha.

By Mr. Allen, on behalf of Brickwood and Woods: I was not in possession of these blocks prior to the 3rd and 4th April last; that is the date of my application; I did not post any notices on the ground previous to or on the 3rd and 4th April; I can't recollect the date when I posted notices; I took possession of the ground on the 3rd April; I went on to the ground that day; I did no work on the ground previous to the 15th of July; I can't say how long I remained in possession; on the 3rd I took possession; I put no one in for me; I saw people on the ground; there were buildings on the ground; I served notices on the 10th April, but not on the 3rd—the notice is the one marked A; I served no other notice; on the 3rd April I don't know who was in possession; my application was received by the Warden's Clerk on the 15th July last, either that or the 16th or 17th, I am not quite sure; I never posted on the Warden's Office; the necessary forms were refused to me, I mean as regards Schedule 1.

Sworn before me, at Tingha, this 30th August, 1876,—

J. BUCHANAN, Warden.

JOHN M. LEGGE.

No. 38.

Minute for The Executive Council.

Department of Mines, Sydney, 25 September, 1876.

THE applications for mineral leases of Crown lands specified in the accompanying schedule are submitted for the approval of His Excellency the Governor and the Executive Council, in terms of the "Mining Act, 1874."

JOHN LUCAS.

THE Executive Council advise that the applications for the mineral leases specified in Schedule be approved.—Wm. GOODMAN, Acting Clerk of the Council. Min. 76/46, 26/9/76. Confirmed.—2/10/76. Approved.—H.R., 26/9/76.

No. 40.

The Under Secretary for Mines to J. Hoskins, Esq., M.L.A.

Sir,

Department of Mines, Sydney, 24 October, 1876.

I do myself the honor to inform you that the application made by Messrs. George Woods and Richard Brickwood for the mineral leases noted in the margin has been approved.

I have, &c.,

HARRIE WOOD,
Under Secretary for Mines.

Nos. 31 and 32 ;
area 20 acres
each, county of
Hardinge, parish
of Swinton.

No. 41.

The Under Secretary for Mines to Messrs. Woods and Brickwood.

Gentlemen,

Department of Mines, Sydney, 24 October, 1876.

I am directed by the Secretary for Mines to inform you that your applications for the mineral leases noted in the margin have been approved.

I have, &c.,

HARRIE WOOD,
Under Secretary for Mines.

Nos. 31 and 3
area 20 acres
each, county of
Hardinge, parish
of Swinton.

No. 42.

The Under Secretary for Mines to Mr. J. M. Legge.

Sir,

Department of Mines, Sydney, 24 October, 1876.

I am directed by the Secretary for Mines to inform you that your application for the mineral lease noted in the margin has been refused.

I have, &c.,

HARRIE WOOD,
Under Secretary for Mines.

No. 63, area 40
acres, portions
209 and 210,
county of Hard-
inge, parish of
Swinton.

No. 43.

Mr. W. Brennan to The Minister for Mines.

Legge, Woods, and Brickwood's injunction case *re* lands, parish Swinton, county Hardinge.

Sir,

84, King-street, Sydney, 26 September, 1876.

I do myself the honor to request that you will be kind enough to acquaint me with the Minister's decision in this case so soon as the same is officially made known to you.

Yours, &c.,

WM. H. BRENNAN.

The papers in this case were sent on to the Ex. Co. on 25th instant, with minutes recommending the approval of Wood and Brickwood's applications, and the refusal of J. M. Legge's application.—P.A., 23/9/76. Inform as soon as the action of the Executive Council shall be complete.—J.L., 28/9/76.

No. 44.

The Under Secretary for Mines to Mr. W. Brennan.

Sir,

Department of Mines, Sydney, 26 October, 1876.

In reference to the request contained in your letter of the 26th ultimo, I am directed to inform you that the applications (Nos. 31 and 32) made by Messrs. Woods and Brickwood for mineral leases of the portions of land noted in the margin, have been approved, and Mr. John M. Legge's application (No. 63) for a mineral lease of the same portions of land has been refused.

I have, &c.,

HARRIE WOOD,
Under Secretary for Mines.

20 acres each,
county of
Hardinge, parish
of Swinton.

No. 45.

The Under Secretary for Mines to Mr. Warden Buchanan.

Memo.

Department of Mines, Sydney, 28 October, 1876.

In *re* objection by Mr. John M. Legge to Messrs. Brickwood and Woods' applications (Nos. 31 and 32) for mineral leases of blocks 209 and 210, parish of Swinton, county of Hardinge.

Your report, dated 27 July, 1876, has an order attached for the £5 deposited by the objector, to be refunded less costs. Please state whether such refund has been made, or whether any of the money is in your hands, or at the Treasury, which is available for refund.

H.W., B.C., 28 Oct., 1876.

J. M. Legge's objection to Messrs. Brickwood and Woods' mineral lease applications, Nos. 31 and 32. Warden's clerk report as to disposal of £5, objector's deposit, forwarded herewith for the information of the Honorable the Minister.—J. BUCHANAN, Warden. The Under Secretary for Mines.—B.C., 14/11/76. Put by till further application for refund.—H.W., 17/11/76.

[Enclosure

[Enclosure A to No. 45.]

Sir,

Warden's Office, Tingha, 6 November, 1876.
 In reply to your telegram, received by me on Friday, and replied to by wire *via* Inverell, I have the honor to forward you more detailed particulars. The register of complaints affords no information respecting the refund, but I learn from personal inquiry that certain costs or Court fees were deducted by my predecessor to amount of £1 3s. Legge gave receipt for same, but such receipt is not filed; hence my inability to furnish you with additional particulars.

Under date August 30th there is a receipt filed for £5, signed by G. Woods, for objectors deposit. This may have no reference to your telegram; but I simply quote the circumstance of observing it. The numbers quoted by telegram are 81 and 2. Brickwood and Woods' application having been made in Inverell does not show in my "Register for lease applications" the number referred to.

Finally, I beg to report that Legge's application is No. 63, and that no money remains in my hands whatever respecting objector's deposit.

I have, &c.,
 THOMAS JONES,
 Mining Registrar.

[Enclosure B to No. 45.]

Telegram from Warden's Clerk, Inverell, to Mr. Warden Buchanan, Armidale.

November 4, 1876.

TELEGRAM Postmaster mislaid—requires give no record. Upon personal inquiry Legge received £3 17s.—Lucas retaining balance. Woods also received refund £5. Telegram numbers fail to correspond. Two objectors deposits.

No. 46.

Mr. J. M. Legge to The Under Secretary for Mines.

Sir,

Tingha, 15 November, 1876.
 In the matter of my application for a lease of portions 209 and 210, county of Hardinge, parish of Swinton, refused by the Honorable the Minister for Mines, I have the honor to request that the deposit paid by me, namely, £12, be refunded.

I have, &c.,
 JOHN M. LEGGE.

Forward voucher for refund.—H. W., 20/11/76.

The Voucher (J. M. Legge) has been returned to the Warden's Clerk, Tingha, for insertion of particulars as to payment into the Treasury under B.C. this day.—1/12/76.

No. 47.

The Under Secretary for Mines to Mr. J. M. Legge.

Sir,

Department of Mines, Sydney, 22 November, 1876.
 Referring to your letter of the 15th instant, I am directed to inform you that a voucher form for the refund of the deposit and survey fee lodged with your application, No. 63, for the lease of mineral portions 209 and 210, parish of Swinton, county of Hardinge, has been forwarded to the Warden's Clerk at Tingha, for the purpose of being duly filled up, and that upon the return of the same to this office it will be sent on to the Treasury for payment in the usual course.

I have, &c.,
 HARRIE WOOD,
 Under Secretary for Mines.

P.S.—Please call at the Warden's Office and sign the voucher.

No. 48.

The Under Secretary for Mines to The Warden's Clerk, Tingha.

Department of Mines, Sydney, 22 November, 1876.
 THE accompanying voucher form, in respect of the refund of the deposit and survey fees lodged with application No. 63, made by Mr. J. M. Legge, of Tingha, for mineral portions 209 and 210, is forwarded to the Warden's Clerk at Tingha, who will be good enough to see that it is properly filled up, and signed by Mr. J. M. Legge, and afterwards returned to this office.

HARRIE WOOD,
 Under Secretary.

No. 49.

Mr. J. M. Legge to D. Buchanan, Esq., M.L.A.

Sir,

Tingha, 20 January, 1877.
 I write to express to you my thanks for bringing under the notice of Parliament the case of mineral selections 209 and 210 in *re* Legge and Brickwood and Woods. Mr. Lucas's reply to you in the House on the 10th instant, as reported in the newspaper, is not correct as to actual facts. My application was the first legally made, and so decided by the Warden. Messrs. Brickwood and Woods were perfectly aware at the time they made their application at Inverell that they were acting wrong, as did also the officer of the Department who received it, and their motive was to deprive a couple of working miners who prospected the ground of any interest therein. In making the application at Inverell they knew that it was a chance if any of us diggers here would know of it until it was too late to lodge objections. The facts of the case are these:—The two blocks in question were selected for mineral purposes in the year 1872 by Wright, Clifford, & Co., who paid one year's rent, since which no rent has been paid nor labour done, so to all intents the ground was abandoned, Messrs. W., C., & Co. probably not thinking it worth risking money on in prospecting, nor did Brickwood and Woods, until a prospector (a friend of mine, named Carney) who spent some weeks sinking on block 210 found the tin. Both Mr. Brickwood (who since has said he was agent for W., C., & Co.) and Mr. Woods (who, by the way, is a storekeeper at Inverell) saw him prospecting the ground, and encouraged him to persevere, Mr. Woods offering to act

as

as his agent, as he (Mr. W.) had great influence in Sydney, to procure him a lease. Now, mark the nice little arrangement: As soon as the poor fellow finds the tin Mr. Brickwood comes forward and claims the ground for Wright, Clifford, & Co., and threatens the terrors of the law, so that the poor devil was glad to clear out after making an ineffectual appeal to be allowed something for his labour. Now, it might reasonably be inferred, seeing the ground was likely to prove valuable, that Wright, Clifford, & Co. would have paid up the back rent and resumed the land, but they were not allowed to know that tin had been found on it, and Mr. Woods sets to work to get the ground forfeited. Meantime Brickwood keeps possession ostensibly for W., C., & Co., and as soon as that is accomplished the two (B. and W.) apply for a lease; they knew if they applied at the proper office they ran the risk of having to contest simultaneous applications, for their treatment of Carney was considered very bad and many were on the look out to try to defeat their object. It was very well and no doubt very convenient for Messrs. B. and W. to plead ignorance of the Regulations when they are pretty sure of an officer of the Department to pull them through, and this officer certainly coerced the Warden's Clerk at Tingha into refusing me the necessary forms to enable me to comply with all the Regulations, for he wrote to him cautioning him not to receive any applications for the said ground, and the Warden told the Clerk in Court on the 15th July that he was wrong not to receive my application and afford me the necessary means (which any applicant is entitled to) of complying with the Regulations. The Warden also said that the officer at Inverell was wrong in receiving an application for mineral leases within a mining district and was equally wrong in cautioning the Warden's Clerk not to receive mine. We badly want the Mineral Leases Act amended. Under the present Regulations, which gives the Minister for Mines individual power from which there is no appeal, there is very little chance of obtaining justice by the *bona fide* miner who cannot command influence at head quarters. In this case the Warden is clearly of opinion that I have legally complied with the Regulations, and he heard the case twice. If the Minister for Mines' decision was based on the sworn evidence alone one would feel a little more confidence in submitting ones case to such a tribunal, but I know in my case that after the evidence was in Sydney the Minister was interviewed by agents for the other side, and in correspondence with the Minister many statements were made that ought to have been put in evidence.

The Minister says there is no evidence that any person has been prejudiced or misled by the error of Messrs. B. and W.—decidedly I have been both. I apply in the regular course at the proper office to know if certain land has been applied for. I pay my fee, and am told that it has not. I then give notice of my intention to apply for the same, and three days after tender my application, which is refused although perfectly legal. The Warden decides so, and places me in possession; he again hears the case, and again decides I am the legal applicant; and it is not until over two months after the Warden sends his report that the Minister decides that I am not. Consequently I am turned out after losing six months (from April to November) of my time, which of course is my capital.

I must apologize for troubling you with this rigmarole; but in thanking you for bringing the matter forward, I wished to show you that even if justice only has been given to Brickwood and Woods an injustice has been done to me and Carney.

I have, &c.,

JOHN M. LEGGE,
Miner, Tingha.

This letter was handed in by Mr. Buchanan, M.P., who wishes the answer to go to the writer.—

MINING LEASE, HAWKINS HILL.

No. 1.

Mr. Warden Sharpe to The Under Secretary for Mines.

Sir, I have the honor to return herewith lease No. 1,741; it has been duly executed by three of the lessees, and at their request I return it to the department in order that the others may execute and take delivery.

Warden's Office, Hill End, 14 October, 1875.
I have, &c.,
ERNEST SHARPE,
Warden.

[Enclosure A to No. 1.]

WILL Mr. Warden Johnson be good enough to inform me what rent is due on lease No. 1,741 in the names of T. Paten, J. Rossiter, W. Hezlett, T. Cadell, Moses Bell, and R. G. Reading.

B.C., 27/9/75. To be returned.

ERNEST SHARPE,
Warden.

Mr. Farr, can you afford this information?—W.J., 28/9/75. The rent for the current year is fully paid.—E. FARR, 28/9/75. Whittingdale Johnson, Warden.—B.C., 29/9/75.

No. 2.

Mr. J. Jackson to The Under Secretary for Mines.

Lease 1,741.

Sir, This lease has been in the Sydney office some five weeks and is not yet signed. Will you please have the thirty days notice of forfeiture inserted in Gazette. The lease is situate in the Bathurst and Turon Mining Districts.

267, George-street, 27 November, 1875.
I am, &c.,
JAMES JACKSON.

Mr. Binny, how does this stand? G.L. 1,741 awaits signature of T. Cadell, one of the lessees, all the others having executed.—T.C.B., 27/11/75. The thirty days notice may be published, and the writer so informed.—J.L., 29/11/75. Informed.—4 Dec., 1875. Thirty days notice published, 2/12/75.—P.A. Lease cancelled, 31/1/76.—P.A.

No. 3.

The Under Secretary for Mines to Mr. J. Jackson.

Sir, In reference to your letter of the 27th ultimo respecting gold-mining lease No. 1,741, I am directed by the Secretary for Mines to inform you that the thirty days notice of intention to cancel the said lease was published on the 2nd instant.

Department of Mines, Sydney, 4 December, 1875.
I have, &c.,
HARRIE WOOD,
Under Secretary for Mines.

No. 4.

Mr. G. A. Russell to The Minister for Mines.

Re gold lease No. 1,741—T. Paten and others.

Sir, I have the honor to bring under your notice the circumstances connected with the cancellation of gold lease No. 1,741—T. Paten and others, and to request that such cancellation may be revoked. The reason for cancellation was the non-execution of the lease by the applicants. Now the applicants for this lease were six in number, and five of the six had duly executed; the one whose signature was wanting, namely Mr. Thomas Cadell, was quite ready to execute but had been in Queensland for a couple of months; he was not aware that there was any urgency, and so it happened that he failed to add his signature to the document. No notice was ever given to him, and in the printed notice his name does not occur. Rent has been paid on the lease in advance to the 1st July, 1877. Miners' rights for the current year are duly held by the six applicants, who are in fact trustees for Johnson's Gold Mining Company (Limited). I may mention that the lease was taken up under the old Regulations, and appears therefore to be subject thereto as regards forfeiture and labour conditions, see section 133, third clause.

129, Pitt-street, Sydney, 11 February, 1876.
Now

Now the 138th section provides that a lease shall not be cancelled without notice being first served on the lessees, and the question arises whether even in law the cancellation is not altogether illegal.

Taking all the facts of the case into consideration, and having regard also to the equity of the case, the applicants having spent many thousand pounds on this property, and having proved their *bonâ fides* by the almost complete execution of the lease by the payment of rent, &c., &c., I trust that you will reconsider the matter, and see the propriety of revoking the cancellation.

I have, &c.,
GEO. A. RUSSELL,
Manager of Johnson's G. M. Coy. (L.)

Place with papers *re* application recently made for this land as soon as they shall reach this office.—H.W., 11/2/76.

No. 5.

Messrs. Ackermann and Helsby to The Secretary for Mines.

Gold-mining Lease Regulations.—Schedule 2.—Application for gold-mining lease.

Sir,

Hill End, 4 February, 1876.

We hereby make application for a gold-mining lease of that piece or parcel of land situated at Hawkins Hill, Hill End, being cancelled lease No. 1,741, in Gazette of 1st February instant, containing 1 acre 3 roods 3 perches, of which we took possession on the first day of February, 1876, at the hour of two hours and thirty minutes in the afternoon, for the purpose of mining thereon and therein for gold, for a period of fifteen years, by erecting posts and cutting trenches at each angle thereof. The datum post is at south-east corner, about ten feet west of Petersen's tramway.

Notice of our intention to make this application has been given in accordance with the Regulations in that behalf. We also hand herewith two pounds sterling, being the first year's rent in advance of the said land, and one pound ten shillings to cover the cost of survey. And we hereby request that survey may forthwith be made of the said piece or parcel of land.

We hereby acknowledge that this application is made upon the distinct understanding and condition that if we shall abandon or fail to proceed with it, or if it is refused, the Secretary of Mines for the time being may deduct from the sum of two pounds deposited as aforesaid any cost to which in his opinion the Crown may have been put in or about or in respect of this application; and this application shall thereupon become and be void, and the possession aforesaid shall cease and determine. And if the lease shall be granted, we shall and will commence mining operations upon or in connection with the demised land within seven days from and after the granting thereof, and shall and will employ upon such land not less than two men during the first six months of the term thereby created, and not less than four men during the remainder of such term; and shall and will at any time when called upon in terms of the Regulations relating to Gold-mining Leases to do so, execute and take delivery of such lease, or failing therein for a period of fourteen days after being so called upon, we shall and will forfeit the said sum of two pounds sterling, and all right, title, or interest in and to the said land and the possession thereof, and the said lease shall be forthwith cancelled.

We have, &c.,

JOHN ACKERMANN,
THOMAS HELSBY,
Hill End.

This application was received by me this fourth day of February, 1876, at the hour of ten o'clock in the forenoon, and is numbered 1,223.—F. CAMERON. MACARTHUR.

[Enclosure A to No. 5.]

Application No. 1,223 at Hill End, for a gold-mining lease.

1. By whom application was received? Warden's Clerk.
2. At what place? Hill End.
3. Date and hour when received? 4th February, 10 a.m.
4. Receipt for first year's rent, No. Date
5. To whom receipt was issued? Thomas Helsby.
6. Date when notice to survey was sent to surveyor? 5th February, 1876.
7. Date when report and plan were received from the surveyor? 6/3/76.
8. Names of objectors, and dates on which they lodged their objections? Thomas Paten, John Rossiter, Moses Bell, Richard Reading, William Hezlett, Thomas Cadell, and James Barrie, 16th February, 1876.
9. Dates of inquiry? March 27th, 1876. Adjourned to April 10th.
10. Are the applicants holders of miners' rights? Yes.
11. Is the land applied for exempted from leasing under the 34th section of the Mining Act, 1874? Not that I am aware of.

[Enclosure B to No. 5.]

NOTICE of objections to the granting of a lease to Thomas Helsby and John Ackermann, of Hill End, of the land known as lease No. 1,741, applied for by them on the 4th day of February, 1876, application 1,223.

- 1st. That the said lease has not been forfeited under the Regulations of 1872.
- 2nd. That the rent of the said lease has been paid up to the 1st day of July, 1877.
- 3rd. That the estimated value of the shafts, tunnels, and mining plant on the said lease has not been paid to the original holders by the said Thomas Helsby and John Ackermann, nor have they sought to have such improvements valued, as required by the Regulations of 1872.
- 4th. That the said land was not open for lease when the said Thomas Helsby and John Ackermann applied for it, through being exempted under the 34th section, clause 1, of the Gold Fields Act of 1874.
- 5th. That the cancellation of the said lease had not taken effect when the ground was marked out by the said Thomas Helsby and John Ackermann—twenty-four hours had not elapsed from the time the Gazette was published.
- 6th. That the marking out of the ground was not done in accordance with the requirements of the Regulations relating to Gold-mining Leases.

7th.

7th. That the application of the said Thomas Helsby and John Ackermann is void through their not having allowed three days to elapse between the time of marking out and making application for the said land.

The foregoing objections are on behalf of—

Moses Bell, Sydney,
Thomas Paten, Tambaroora,
John Rossiter, do.
Richard G. Reading, Sydney,
William Hezlett, do.
Thomas Cadell, do.
and
James Barrie, Hill End.
Signed by James Barrie, Hill End.

[Enclosure C to No. 5.]

Mr. W. M'Pherson to The Warden, Gold-mining District, Hill End.

Sir,

I, William M'Pherson, hereby object to granting of lease application 1,223, to Thomas Helsby and John Ackermann, for the following reasons:—

1. That I was in legal possession and occupation of the said land prior to the time of their marking out and making application for the same, and have been in possession and occupation ever since.
2. That their application was obviously and clearly illegal, and contrary to the express provisions of Regulation 6 referring to Gold-mining Leases, dated the 13th day of July, 1874, which said regulation provides that application shall be made after the expiration of not less than three days from taking possession of the said land, whereas said applicants applied within the three days so named.
3. That the said land was marked out by me on the 1st day of February last, at a time previous to the said marking out by them, and subsequently to the legal cancellation of the lease thereof; and that consequently my application is entitled to priority over their application.
4. That the said lease was marked out by me subsequent to the cancellation thereof by the Government, and when consequently the land was open to be taken up.

I herewith deposit the sum of (£5) five pounds, according to Gold-mining Lease Regulations—Mining Act, 1874.

I am, &c.,
WILLIAM M'PHERSON.

[Enclosure D to No. 5.]

Telegram from Mr. W. M'Pherson, Bathurst, to Mr. Warden Sharpe, Hill End.

BROKEN my leg; kindly adjourn case *versus* Helsby.

9h. 43m., 27 March, 1876.

No. 6.

Mr. W. M'Pherson to The Secretary for Mines.

Gold-mining Lease Regulations—Schedule 2.—Application for gold-mining lease.

Sir,

Hill End, 5 February, 1876.

I hereby make application for a gold-mining lease of that piece or parcel of land situated at Hawkins Hill, Hill End, being lease area No. 1,741, cancelled in Government Gazette of the first (1st) day of February, 1876, containing about 2 acres, of which I took possession on the first day of February, 1876, at the hour of 2h. 25m. o'clock in the afternoon, for the purpose of mining thereon and therein for gold, for a period of fifteen years, by erecting posts and cutting trenches at each angle thereof. The datum post is distant about 12 inches in a northerly direction from the north-east corner post of Rose of England Company's Lease No.

Notice of my intention to make this application has been given in accordance with the Regulations in that behalf. I also hand herewith the sum of £2 sterling, being the first year's rent in advance of the said land, and £1 10s. to cover the cost of survey; and I hereby request that survey may forthwith be made of the said piece or parcel of land.

I hereby acknowledge that this application is made upon the distinct understanding and condition that if I shall abandon or fail to proceed with it, or if it is refused, the Secretary for Mines for the time being may deduct from the sum of £2 deposited as aforesaid any cost to which in his opinion the Crown may have been put in or about or in respect of this application; and this application shall thereupon become and be void, and the possession aforesaid shall cease and determine. And if the lease shall be granted, I shall and will commence mining operations upon or in connection with the demised land within seven days from and after the granting thereof, and shall and will employ upon such land not less than three men during the first three months of the term thereby created, and not less than eight men during the remainder of such term; and shall and will at any time when called upon in terms of the Regulations relating to Gold-mining Leases to do so, execute and take delivery of such lease, or failing therein for a period of fourteen days after being so called upon, I shall and will forfeit the said sum of £2, and all right, title, or interest in and to the said land and the possession thereof, and the said lease shall be forthwith cancelled.

I have, &c.,
WILLIAM M'PHERSON,

This application was received by me this fifth day of February, 1876, at the hour of ten o'clock in the forenoon, and is numbered 1,224.—F. CAMERON MACARTHUR.

[Enclosure A to No. 6.]

Application No. 1,224 at Hill End for a gold-mining lease.

1. By whom application was received? Warden's Clerk.
2. At what place? Hill End.
3. Date and hour when received? 5th February, 10 a.m.
4. Receipt for first year's rent, No. Date
5. To whom receipt was issued? William M'Pherson.
6. Date when notice to survey was sent to surveyor? 5th February, 1876.

7. Date when report and plan were received from the surveyor? 6/3/76.
 8. Names of objectors, and dates on which they lodged their objections? Thomas Paten, John Rossiter, Moses Bell, Richard Reading, William Hezlett, Thomas Cadell, and James Barrie.
 9. Dates of inquiry? March 27th, 1876. Adjourned to April 10th.
 10. Is the applicant holder of miner's right? Yes.
 11. Is the land applied for exempted from leasing under the 34th section of the Mining Act, 1874? Not that I am aware of.

[Enclosure B to No. 6.]

NOTICE of objections to the granting of a lease to William M'Pherson of Hill End, of the land known as lease No. 1,741, as applied for by him on the 5th day of February, 1876.

- 1st. That the said lease has not been forfeited under the Regulations of 1872.
 2nd. That the rent of the said lease has been paid up to the first day of July, 1877.
 3rd. That the mode of cancelling leases has not been complied with by the said William M'Pherson.
 4th. That the estimated value of the shafts, tunnel and mining plant on the said lease has not been paid to the original holders by the said William M'Pherson, nor has he sought to have them valued as required by the Regulations of 1872.
 5th. That the said land was not open for lease when the said William M'Pherson applied for it through being exempted under the 34th section, clause 1st, of the Gold Fields Act of 1874.
 6th. That the cancellation of the said lease had not taken effect when the ground was marked out by the said William M'Pherson.
 7th. That the marking out of the ground was not in accordance with the requirements of the Regulations now in force for the marking out and taking possession of Crown Lands open for gold-mining purposes.

The foregoing objections are on behalf of—

Thomas Paten, Tambaroora,
 John Rossiter, do.
 Moses Bell, North Shore, Sydney,
 Richard Grant Reading, do.
 William Hezlett, do.
 Thomas Cadell, do.
 and
 James Barrie, Hill End.
 Signed by James Barrie, Hill End.

[Enclosure C to No. 6.]

Mr. M. Ackermann to The Warden, Western Gold Fields.

Sir, Hill End, 19 February, 1876.
 Take notice that I object to your application, No. 1,224, of the 5th February instant, on the ground that cancelled lease No. 1,741 was not legally cancelled on the day you took possession of it, namely, the first day of February, 1876.

I am, &c.,
 MICHAEL ACKERMANN,
 Hill End.

[Enclosure D to No. 6.]

A. Margoschis, Esq., to The Warden, Western Gold Fields.

Dear Sir, Hill End, 27 March, 1876.
 I herewith apply that all cases in which Mr. William M'Pherson is interested in your Court may be postponed, as he has broken his leg, therefore cannot attend the Court.

Yours respectfully,
 A. MARGOSCHIS,
 Agent for the said William M'Pherson.

[Enclosure E to No. 6.]

Mr. W. M'Pherson to The Under Secretary for Mines.

Gold-mining Lease Regulations.—Schedule 6.—Notice of application and deposit.

Sir, Hill End, 5 February, 1876.
 I have the honor to inform you that I have this day deposited with the Warden's Clerk, at Hill End, the sum of two pounds, being the first year's rent in advance, of about two acres of land at Hawkins Hill, Hill End, for the purpose of gold-mining, and the sum of one pound ten shillings, being the fees for survey of the said land. The number of my application is 1,224.

I have, &c.,
 WILLIAM M'PHERSON,
 Of Hill End.

No. 7.

Mr. M. Ackermann to The Secretary for Mines.

Gold-mining Lease Regulations.—Schedule 2.—Application for gold-mining lease.

Sir, Hill End, 5 February, 1876.

I hereby make application for a gold-mining lease of that piece or parcel of land situated at Hawkins Hill, Hill End, being cancelled lease No. 1,741 in Gazette of 1st February, containing 1 acre 3 roods 3 perches, of which I took possession on the second day of February, at the hour of five o'clock in the forenoon, for the purpose of mining thereon and therein for gold, for a period of fifteen years, by erecting posts and cutting trenches at each angle thereof. The datum post is at north-east corner, about fifteen feet east of Petersen's tramway.

Notice of my intention to make this application has been given in accordance with the Regulations in that behalf. I also hand herewith two pounds, being the first year's rent in advance of the said land, and one pound ten shillings to cover the cost of survey; and I hereby request that survey may forthwith be made of the said piece or parcel of land.

I hereby acknowledge that this application is made upon the distinct understanding and condition that if I shall abandon or fail to proceed with it, or if it is refused, the Secretary of Mines for the time being may deduct from the sum of two pounds deposited as aforesaid any cost to which in his opinion the Crown may have been put in or about or in respect of this application; and this application shall thereupon become and be void, and the possession aforesaid shall cease and determine. And if the lease shall be granted, I shall and will commence mining operations upon or in connection with the demised land within seven days from and after the granting thereof, and shall and will employ upon such land not less than two men during the first six months of the term thereby created, and not less than four men during the remainder of such term; and shall and will at any time when called upon in terms of the Regulations relating to Gold-mining Leases to do so, execute and take delivery of such lease, or failing therein for a period of fourteen days after being so called upon, I shall and will forfeit the said sum of two pounds sterling, and all right, title, or interest in and to the said land and the possession thereof, and the said lease shall be forthwith cancelled.

I have, &c.,

MICHAEL ACKERMANN,
Hill End.

This application was received by me this fifth day of February, 1876, at the hour of 10·7 o'clock in the forenoon, and is numbered 1,225.

F. CAMERON MACARTHUR.

Gold-mining Lease Regulations.—Schedule 2.—Application for gold-mining lease.

Sir,

Hill End, 18 February, 1876.

We hereby make application for a gold-mining lease of that piece or parcel of land situated on the western slope of Hawkins Hill, and known as lease 1,741, containing 1 acre 3 roods 3 perches, of which we took possession on the fourteenth day of February, at the hour of 6·30 o'clock in the forenoon, for the purpose of mining thereon and therein for gold, for a period of fifteen years, by erecting posts and cutting L trenches at each angle thereof. The datum post is distant about one foot in a northerly direction from the north-east corner-post.

Notice of our intention to make this application has been given in accordance with the Regulations in that behalf; and we hand herewith the sum of £2, being the first year's rent in advance of the said land, and £1 10s. to cover the cost of survey; and we hereby request that survey may forthwith be made of the said piece or parcel of land.

We hereby acknowledge that this application is made upon the distinct understanding and condition that if we shall abandon or fail to proceed with it, or if it is refused, the Secretary of Mines for the time being may deduct from the sum of £2 deposited as aforesaid any cost to which in his opinion the Crown may

may have been put in, or about, or in respect of this application; and this application shall thereupon become and be void, and the possession aforesaid shall cease and determine. And if the lease shall be granted, we shall and will commence mining operations upon or in connection with the demised land within one month from and after the granting thereof, and shall and will employ upon such land not less than four men during the first half of the term thereby created, and not less than eight men during the remainder of such term; and shall and will at any time when called upon in terms of the Regulations relating to Gold-mining Leases to do so, execute and take delivery of such lease, or failing therein for a period of fourteen days after being so called upon, we shall and will forfeit the said sum of £2, and all right, title, or interest in and to the said land and the possession thereof, and the said lease shall be forthwith cancelled.

We have, &c.,

Signed on behalf of the within applicants by their agent, James Barrie. { THOMAS PATEN, Tambaroora.

NOTICE TO MAKE SURVEY.

Sir,

Hill End, Warden's Office, 4 February, 1876.

No. of application, 1,223.

Locality, Hawkins Hill; cancelled lease, 1,741.

Area, 1 acre 3 roods 3 perches.

Names and addresses of applicants:—

Thomas Helsby, Hill End.
John Ackermann, Hill End.

An application for a gold-mining lease, particulars as per margin, having been lodged in this office, I request you will be good enough to survey, in accordance with the Regulations relating to Gold-mining Leases, the area so applied for, and to furnish me at your earliest convenience with a plan and report.

Your attention is particularly directed to the Regulations relating to Gold-mining Leases, numbered respectively, 1, 2, 3, 4, 5, 14, and 15.

I have, &c.,

F. CAMERON MACARTHUR,

For Warden.

The datum post is at the south-east corner, about 10 feet from Petersen's tramway.

[Enclosure B to No. 9.]

Mr. Warden Sharpe to Mr. Mining Surveyor Robertson.

No. 76-5.

NOTICE TO MAKE SURVEY.

Sir,

Hill End, Warden's Office, 5 February, 1876.

No. of application, 1,224.

Locality, Hawkins Hill being lease 1,741 (cancelled).

Area, 2 acres.

Name and address of applicant:—
William M'Pherson, Hill End.

An application for a gold-mining lease, particulars as per margin, having been lodged in this office, I request you will be good enough to survey, in accordance with the Regulations relating to Gold-mining Leases, the area so applied for, and to furnish me at your earliest convenience with a plan and report.

Your attention is particularly directed to the Regulations relating to Gold-mining Leases, numbered respectively, 1, 2, 3, 4, 5, 14, and 15.

I have, &c.,

ERNEST SHARPE,

Warden.

[Enclosure F to No. 9.]

Paten and others.—Application 1,227, at Hill End.

Portion 1,041, parish of Tambaroora, county of Wellington; containing 1 acre 3 roods and 4 perches. Commencing at
 the south-western corner of portion 1,043, parish Tambaroora; and bounded thence on the north by the southern boundary
 lines of that portion bearing N. 65° 45' E. 442 links, and N. 66° 33' E. 454 links; thence on the east by part of the western
 boundary line of portion 117 bearing south 12° 45' E., 240 links; on the south by the northern boundary lines of portion 355,
 parish Tambaroora, bearing south 67° 35' W., 440 links, and south 82° 15' W., 470 links; and on the west by a line bearing
 northerly 103 links to the point of commencement.

No. 10.

Telegram from Mr. Warden Sharpe to Under Secretary for Mines.

Hill End, 7 April, 1876.

REFERENCE to Regulation 20 relating to Gold Leases, I adjourned inquiry for fourteen days from 27th
 ultimo till 10th instant, because one of the applicants had broken his leg in Bathurst. I am informed by
 him that he cannot appear before 15th of June at the earliest. It does not appear that I have power
 to grant further adjournment. What course should I pursue? Please reply at once.

Ask the parties to consent to an adjournment, and if they will not consent, the Minister can, if he
 think fit, order another Court of Inquiry to be held. (*Vide* Regulation No. 24.) Telegram, 8 April,
 1876.

No. 11.

Telegram from Under Secretary for Mines to Mr. Warden Sharpe.

Sydney, 8 April, 1876.

In reply to your telegram of yesterday, ask the parties to consent to an adjournment, and if they will not
 consent, the Minister can, if he think fit, order another Court of Inquiry to be held. (*Vide* Regulation
 No. 24.)

No. 12.

Mr. Warden Sharpe to The Under Secretary for Mines.

Sir,

Warden's Office, Hill End, 11 April, 1876.

I have the honor to transmit herewith gold lease application, Nos. 1,223, 1,224, and 1,225,
 and the objections thereto, and lease application 1,227, the evidence taken by me, and the report and plan
 of the mining surveyor,—and to state, for the information of the Honorable the Secretary for Mines, that
 I am unable to complete the evidence because Mr. William M'Pherson, the applicant for No. 1,224, and
 an objector to No. 1,223, met with a serious accident which prevented him attending the Court of Inquiry
 held on the 27th of March last. The evidence available at that date was taken, and Mr. M'Pherson's applica-
 tion for an adjournment till April the 10th instant granted. On that date another application was made
 by him for a further adjournment. I then asked Messrs. Michael and John Ackermann and Thomas
 Heelsby if they would consent that the case should be adjourned till the 15th of June next, that being the
 earliest

earliest date at which Mr. M'Pherson is advised by his medical attendant that he can undertake to appear. They refused, saying that they did not think Mr. M'Pherson had any chance of getting the lease in dispute; the other objectors did not appear, but I am informed that they did not object to the adjournment. Under these circumstances I have deemed it advisable to forward the papers for the consideration of the Honorable the Secretary for Mines.

2. I may add that lease application No. 1,227 is for the same portion of land as the other applications, and that no objection was lodged against it.

I have, &c.,

ERNEST SHARPE.

Let Mr. Russell have a copy of this report and the depositions.—H.W., 1/5/76.

Bathurst, 28 March, 1876.

WILLIAM M'Pherson broke his leg on Sunday; unable to attend your Court.

[Enclosure

[Enclosure G to No. 12.]

Mr. W. M'Pherson to Mr. Warden Sharpe.

Sir,

Cashman's Hotel, Bathurst, 5 April, 1876.

In reply to your letter of 28th ultimo, requesting me to state the earliest time at which I may be sufficiently recovered to attend your Court at Hill End, I do myself the honor to state, after consulting with Dr. Cortis on the matter, that I am directed by that gentleman to inform you that the middle (say about 15th) of June proximo is the earliest period at which, under favourable circumstances, I could undertake the journey.

With reference to giving a week's notice, I shall not omit to comply with your request when the time arrives.

I remain, &c.,

W. M'PHERSON.

[Enclosure H to No. 12.]

Minutes of Evidence taken at inquiry.

Court House, Hill End, 27 March, 1876.

Lease application 1,223, and Messrs. Barrie and others' objections thereto.

Thomas Helsby, being duly sworn, saith:—I am a miner, and produce my miner's right, No. 141, for the current year, dated 7th January, 1876; on the 1st February last, gold-mining lease No. 1,741 was cancelled; I produce Gazette showing cancellation, and on that day I marked the land I have applied for, application No. 1,223; I cut the trenches the length and depth required by the Regulations and erected the requisite posts; I put a board on one of the posts, the datum post, with the words "Applied for gold-mining lease, John Ackermann and Thomas Helsby"; there was no person in occupation of the lease when I marked my lease out; the next morning before breakfast I put up notices, "Schedule 1," on the Court House; on the 4th February, at 10 o'clock in the morning, I paid the deposit on my application, and produce receipt; I also produce receipt for survey fees; I received Schedule 6 from the Warden's Clerk, and forwarded it to the mines.

Mr. Barrie: I marked out the lease in dispute on the 1st of February, at 2 o'clock, p.m.; I came to know that the land was cancelled because I knew it was returned for cancellation and I got a telegram to say it was cancelled; on the same day I marked it; the posts were each over 3 ft. 6 in. long and were out of the ground quite 3 ft.; I erected a post at the south-east corner—it is my datum post; I put it against the surveyor's peg; I did not put it in where the old survey peg stands, but about 2 ft. west of the broad-arrow; the south-west corner I marked with a log to show where the trench should be; a shaft prevented me cutting the trench; the north-west corner I marked with stones on account of the rocky nature of the ground.

Taken and sworn before me, the 27th day of March, 1876,—

ERNEST SHARPE, Warden.

THOMAS HELSBY.

John Ackermann, being duly sworn, saith:—I am a miner, and produce my miner's right for the current year, dated 7th January; on the 1st February last I went down to the lease we have applied for, about half-past 4 o'clock in the afternoon; I went round the pegs my partner had put in, and saw the ground was marked in accordance with Regulations.

By Mr. Barrie: As far as could be done, there was a peg put up on the south-east corner, and at the south-west; I was aware that Johnson's Company held the ground in dispute before we applied for the lease; I was a shareholder in Johnson's Company—I held scrip in it; I claim so many shares, 650, if the Company does exist.

Taken and sworn before me, this 27th day of March, 1876,—

ERNEST SHARPE, Warden.

JOHN ACKERMANN.

James Barrie, being duly sworn, saith:—I am a miner and commission agent, resident at Hill End; I produce my miner's right for the current year, and the miners' rights of all the objectors to application 1,223; I produce my objectors' receipt, marked A; I and my partners, whose names appear as the objectors to application No. 1,223 took up the ground in dispute under the Regulations of 1872, and have complied with all the conditions relating to leases taken up under that Act; the names of the applicants were Thomas Paton, John Rossiter, Moses Bell, Richard G. Reading, William Hezlett, and Thomas Cadell; the lease was executed by three of the applicants and then forwarded to Sydney for execution by Mr. Cadell, Mr. Hezlett, and Mr. Reading; the last two executed, the first was absent in Queensland and did not execute; I produce receipt marked B showing that rent is paid up to 1st July, 1877; the applicants for No. 1,223 lease application have not complied with Exhibit B, Regulation No. 189 of the Gold Fields Act of 1866; with regard to the marking out of cancelled lease No. 1,741, there was no peg erected at the south-east corner of what was the Company's ground, nor on the south-west, nor was there any trench at those corners the size on the south-west corner.

Taken and sworn before me, this 27th day of March, 1876,—

ERNEST SHARPE, Warden.

JAMES BARRIE.

Thomas Paton, being duly sworn, saith:—I am a storekeeper at Tambaroora, and resident there; I was one of the original applicants for the lease in question, cancelled lease 1,741; I executed the lease when it was sent up; the Company expended about £2,700 on the lease.

By Mr. Helsby: I heard by report that the lease No. 1,741 was cancelled; you asked me about the ground how it had been worked; you said you were going to leave the district; I told Mr. Michael Ackermann that if the lease No. 1,741 was cancelled and I could get an interest in it I would do so, but I said I did not believe the lease was cancelled.

Taken and sworn before me, this 27th day of March, 1876,—

ERNEST SHARPE, Warden.

THOMAS PATEN.

John Rossiter, being duly sworn, saith:—I am a mining manager, resident at Tambaroora; I was one of the applicants for gold-mining lease 1,741, and executed it, and was led to believe that it had been executed by the others; I was also a shareholder when it was a claim; the Company bought the claim and tunnel from the claimholders; I and Mr. John Ackermann were in the original claim, and sold the claim to the Company.

By Mr. Helsby: I am not one of the directors in the Company; the lease was standing idle about two years.

By Warden: The whole claim was sold.

By Mr. Ackermann: I never received any notice under the 138th section of the Regulations of 1872.

Taken and sworn before me, this 27th day of March, 1876,—

ERNEST SHARPE, Warden.

JOHN ROSSITER.

The applicants for lease application No. 1,223 claim 30s. expenses if their application is refused.

The hearing of Mr. M'Pherson's objections to this lease application, and the objections to his application No. 1,224, stand adjourned till the 10th proximo.

ERNEST SHARPE,

Warden.

On being asked if they would consent to a further adjournment till the 15th June, that being the earliest period at which Mr. M'Pherson's medical attendant considers it would be safe for him to travel to Hill End, Messrs. Ackermann and Helsby refused. Mr. Barrie was not present.

ERNEST SHARPE,

Warden.

Court House, Hill End, 10 April, 1876.

[Enclosure

[Enclosure I to No. 12.]

Lease application No. 1,225 and the objections thereto lodged by Thomas Paten and others.

Court House, Hill End.

Michael Ackermann, being duly sworn, saith:—I am a miner, and produce my miner's right for the current year, dated the 7th January; on the 2nd February I went to Hawkins Hill, at 5 o'clock in the morning, and marked out as a lease the ground known as cancelled lease 1,741; I put up posts at the four corners—they were 3 feet out of the ground and 3 inches in diameter; the trenches were 6 feet long, and as deep as I could cut them, considering the nature of the ground; I affixed on the datum post, at the north-east corner, a board with the words—"Notice of application for gold-mining lease, Michael Ackermann," and on the same day I put up notice of intention to apply, on the Court House and at the Post Office; on the 5th of the same month I made application for the lease; I produce receipt for rent and survey fees; I then sent Schedule No. 6 to the Secretary for Mines.

By Mr. Barrie: I did not see the original owners, nor did I get the improvements valued—I did not think it necessary; at the south-west corner I built up a wall of stone for one side of the angle and put a log to show the eastern direction.

By Warden: The application shown me is mine, and bears my signature.
Taken and sworn before me, this 27th day of March, 1876,—

MICHAEL ACKERMANN.

ERNEST SHARPE, Warden.

William George Collings, being duly sworn, saith:—I am a mining surveyor, and resident at Hill End; I saw the north-west corner of Johnson's lease marked out by Mr. Ackermann on the 2nd February last, about 5 o'clock in the morning, and saw Mr. Ackermann standing at the south-west corner of Johnson's lease about the same time.

Taken and sworn before me, this 27th day of March, 1876,—

WILLIAM GEO. COLLINGS.

ERNEST SHARPE, Warden.

Exhibit A.

James Barrie, being duly sworn, saith:—I am a mining manager, resident at Hill End; I produce receipt for objectors' deposit, marked A; the objectors to this application (No. 1,225) are the original applicants for gold-mining lease 1,741, and were the holders of the ground before applying to have it converted into a lease; we applied for gold-mining lease No. 1,741, and paid the rent up to the 1st July, 1877, and have had no notice of the lease being cancelled or any one requiring the ground; we, the original applicants for lease No. 1,741, have had no offer for our improvements from Mr. Ackermann, as we consider we ought to have had, seeing that the lease in question was taken up under the Regulations relating to Gold-mining Leases of 1872; another objection is that Mr. Ackermann paid his money too soon—he did not allow three days to elapse; and twenty-four hours had not elapsed from the time of the publication of the Gazette before he marked the ground out.

By Mr. Ackermann: I was not one of the original proprietors for 1,741—I had a beneficial interest in it; Moses Bell did not authorize me to take out a miner's right.

Taken and sworn before me, this 27th day of March, 1876,—

JAMES BARRIE.

ERNEST SHARPE, Warden.

[Enclosure J to No. 12.]

Exhibit B. Warden's Court, 27/3/76.

The Gold Commissioner, Western District, to Mr. J. Barrie.

1,741
Cash received—
Deposit 5
21 Mar., '73.... 2
22 Apl., '74.... 2
£9
being rent for four years,
and £1 balance repre-
sented by the receipt.

Sir,

Western Gold Fields Office, Bathurst, 22 April, 1874.

Referring to your communication of the 21st instant, I have to acquaint you that in consequence of the area of lease 1,741 having been reduced by survey to 2 acres, the rent is covered by the payment now made to 1st July, 1877, and a balance of £1 is still to the credit of the next year's rental. You will observe the receipt enclosed is for £1, being the amount actually required to complete a year's rental.

I have, &c.,

ED. FARE,

pro Commissioner-in-Charge.

No. 13.

Mr. J. Jackson to The Under Secretary for Mines.

Sir,

Sydney, 267, George-street, 19 April, 1876.

I enclose copies of letters from Mr. Warden Sharpe with reference to the inquiry into the application for the land on Hawkins Hill, lately occupied under the application for lease 1,741 under the "Mining Act of 1866."

The cause of Mr. M'Pherson's non-attendance at Hill End is that his leg was broken while on his journey to attend the Warden's Court, and his medical adviser (Mr. Cortis, of Bathurst) states he will not be able to attend until June next. Can you suggest a course for the inquiry, as the Mining Act does not provide for an accident of this kind?

Would you authorize the Court to be held in Bathurst, where Mr. M'Pherson is lying? Would the writer be permitted to attend such Court as his (M'Pherson's) agent, and so relieve him of the trouble and anxiety beyond giving his evidence?

I have, &c.,

JAMES JACKSON.

[Enclosure A to No. 13.]

Telegram from Mr. Warden Sharpe to Mr. W. M'Pherson,

Bathurst, 28 March, 1876.

In reply to your telegram of yesterday, inquiry is adjourned to the 10th proximo.

[Enclosure B to No. 13.]

Mr. Warden Sharpe to Mr. W. M'Pherson.

Sir,

Warden's Office, Hill End, 28 March, 1876.

Referring to your telegram of yesterday informing me that you had met with an accident that would prevent your attending the Warden's Court appointed for the 27th instant, I have the honor to inform you that the inquiry stands adjourned till the 10th proximo.

Will you be good enough to inform me what is the earliest period on which you can appear, and I would also request that you will give me at the least a week's notice before such date arrives.

I have, &c.,

ERNEST SHARPE,

Warden.

[Enclosure

[Enclosure C to No. 13.]

Mr. Warden Sharpe to Mr. W. M'Pherson.

Sir, Warden's Office, Hill End, 12 April, 1876.
 Referring to your letter of the 5th instant, I have the honor to inform you that your second application for an adjournment could not be granted because the other parties concerned would not agree.
 I may explain that the Regulations relating to Gold Leases only allow one adjournment of fourteen days, which expired on the 10th instant.
 Perhaps under these circumstances it would be advisable for you to communicate with the Secretary for Mines stating your case.

I have, &c.,
 ERNEST SHARPE,
 Warden.

No. 14.

Mr. W. M'Pherson to The Minister for Mines.

Sir, 267, George-street, Sydney, 4 May, 1876.
 Having reference to my application (No. 1,224) for cancelled lease No. 1,741, Bathurst and Tambaroora District, the papers relating to which were forwarded to you by Mr. Warden Sharpe on 11th April last, I have the honor to request that you will withhold your decision on the various applications until I have been given an opportunity of tendering evidence in support of my application, which I was debarred from doing at the inquiry held by Mr. Warden Sharpe by reason of my being confined to my bed with a broken leg, which accident occurred while *en route* to attend the Warden's Court in connection with the hearing of the objections.

I am prepared with conclusive evidence that I first took possession of the ground after the application 1,741 was cancelled, and fulfilled all the conditions of application required by the leasing regulations.

I am prepared to tender you the evidence in writing immediately, or if required to be given before a Warden, as soon as it is possible for me to leave my bed.

I have, &c.,
 W. M'PHERSON,
 By his agent—JAMES JACKSON.

Submitted.—H.W., 10/5/76. The facts may be set out in writing verified by affidavit or statutory declaration.—J.L., 11/5/76. Mr. M'Pherson.—15th May, 1876.

No. 15.

The Under Secretary for Mines to Mr. W. M'Pherson.

Sir, Department of Mines, Sydney, 15 May, 1876.
 In reference to your letter of the 4th instant, requesting that the Secretary for Mines would withhold his decision until you have had an opportunity of tendering evidence in support of your application for a lease of the land proposed to be demised by gold lease No. 1,741, which has been cancelled,—I am directed to invite you to furnish this department with any documents you may deem desirable, setting out in writing the facts of the case, verified by affidavit or statutory declaration.

I have, &c.,
 HARRIE WOOD,
 Under Secretary for Mines.

No. 16.

Mr. J. Jackson to The Under Secretary for Mines.

Sir, 267, George-street, Sydney, 18 May, 1876.
 I have the honor to request that you will supply me with a copy of the depositions taken by Mr. Warden Sharpe, of the inquiry held before him with reference to application 1,224, and others, being for the land on Hill End, formerly known as lease 1,741—originally applied for by Paten & Co.

I have, &c.,
 JAMES JACKSON.

Copy may be supplied on payment of the prescribed fee.—J.L., 20/5/76. Copies supplied.—T.C.B., 30/5/76.

No. 17.

Mr. G. A. Russell to The Minister for Mines.

Sir, Johnson's Gold-mining Company (Limited).
 Sydney, 19 May, 1876.
 I have the honor to lay before you the following statement with regard to cancelled gold lease 1,741, and lease application No. 1,227, being for the same piece of ground.
 First, with regard to the cancellation of lease No. 1,741, I beg leave to protest against such cancellation, on the following grounds, viz. :—

- a. The lease was executed by five out of six lessees; the sixth, Mr. Cadell, having failed to execute, by reason of his absence from the Colony and sickness. He was perfectly willing to execute.
- b. Rent had been paid on the lease to the 1st July, 1877.
- c. No special notice was given to Mr. Cadell or any other of the lessees that the lease was ready for execution, or that it would be cancelled if not executed. The general notification in the Government Gazette was not observed.

See note attached hereto as to verbal notice and notice in newspapers.

d. The Company, besides paying £6,000 in cash to acquire the ground, had expended nearly £3,000 upon it in improvements. It is true that work had been temporarily suspended, but it was never intended to abandon the ground. Application had been made for registration of the ground, and refused by the Warden, only because it was not needed, the lease not having been issued. But at the same time other mines similarly situated were freely registered; and had lease No. 1,741 been issued, registration could have been obtained without difficulty, consequently the lessees could have had no reason for delaying to execute.

2. With regard to lease application No. 1,227: This is an application made by James Barrie on behalf of this Company in event of the cancellation of lease No. 1,741 being held to be good. No objection has been lodged against this application, and none can now be made. But there are three prior applications for the same land; against which objections have been made in due course in the Warden's Court; and with regard to which I beg leave to draw your attention to some (as I think) insurmountable objections.

3. Application No. 1,223 by John Ackermann and Thomas Helsby.

The ground was marked out by these applicants on 1 February, at 2 o'clock p.m., and the lease application was made on the 4th February, at 10 o'clock a.m.

In the first place I submit that the ground was not open for selection on 1 February, that being the day on which the cancellation was notified in the Gazette; the cancellation could not take effect until the termination of that day, and the ground would not be open for selection until the 2nd instant.

Secondly, I submit that the applicants did not allow the necessary interval of at least three days, as per clause 6 of the Regulations, to elapse between the marking out of the ground and the making of application.

Thirdly, I submit that the applicants did not serve on the lessees, or any of the parties concerned, the notices required to be given by clause 5 of the Regulations. The said John Ackermann being a shareholder in the Company well knew the names of the lessees, and knew also how to find the officers of the Company. I further submit that this Company was fairly in possession of the ground, having then a quantity of quartz at grass, having a shaft, &c., with timber, a shed also, and sundry small articles. Notices should therefore have been served on the six lessees as occupants.

4. Lease application No. 1,224, by W. M'Pherson. This applicant has not made any deposition before the Warden. Should he be allowed to make any statement hereafter? I must ask for an opportunity of replying to same if necessary, meantime I submit that the objections just enumerated against No. 1,223 will apply equally against this case—except that Mr. M'Pherson is not a shareholder in the Company. Still he knew well enough who were the lessees of No. 1,741, and who were the owners of the quartz, timber, &c., on the ground. He could easily have served the notices required by clause 5 if he had thought proper to do so.

5. Lease application No. 1,225, by Michael Ackermann. In this case the ground was marked out at 5 a.m. on the 2nd February, and a lease applied for on the 5th idem.

In this case also the necessary interval "not less than three days" was not allowed to elapse between the marking out and the making of application, and there is the same non-compliance with clause 5 as to notices. The said M. Ackermann is not a registered shareholder in the Company, but he executed the deed of settlement for John Ackermann, and is well acquainted with the Company, and could readily have given the notices required if he had chosen to do so. As before stated, the Company was in possession, and was entitled to the notice referred to, apart from the notices due to the lessees, yet none of these notices were given.

6. I believe the foregoing objections are sufficient to invalidate the applications referred to, but I may further point out that, under clause 189 of the old Regulations (1872), the lessees of lease No. 1,741 would be entitled to have their improvements—such as shafts, tunnels, &c.—valued, and the assessed value paid to them before any new applicant could obtain possession; and although the Regulations of 1872 have been for the most part repealed, yet it will be seen, on reference to the third section of clause 133, that "as regards forfeiture" leases applied for under these Regulations remain subject thereto.

7. I have further to submit that, in the decision of this case, the equities of it ought not to be disregarded. The Company which I represent had paid a large sum of money to acquire lease No. 1,741; they have spent a large sum of money in mining since acquiring it; they were in all respects *bonâ fide* owners for value; they had paid rent in advance, and five out of six of the lessees had executed the lease; they have thus abundantly proved that they were acting in good faith. It is therefore trusted that in giving your decision you will have regard to the equities of the case as well as to the points of technical informality to which I have ventured to draw your attention.

I have, &c.,

GEO. A. RUSSELL,
Manager.

Seen. Acknowledge receipt, and state that it will be considered in connection with the case.—J.L., 23/5/76. Informed, 25 May, 1876. Mr. Binny will please state whether he communicated to the Manager that the lease 1,741 would be cancelled if not executed, how often he did so, and as nearly as possible in what terms. Yes, verbally some four or five times to the effect that unless executed by all the parties the lease would be cancelled.—T.C.B.

MEMORANDUM, 15th May, 1876.

Gold lease No. 1,741.

DATE of Gazette:—1st notice, 23/9/75. 30 days notice, 2/12/75. Cancellation, 31/1/76.—T.C.B.

Mr. Binny saw Mr. Russell some four times at least before the expiration of the thirty days.

Notice that lease was ready for delivery published in Sydney and Hill End papers; thirty days notice published in Sydney and Hill End papers. Notice of final cancellation published in Sydney and Bathurst papers.—P.A., 24/3/76.

15

No. 18.

The Under Secretary for Mines to Mr. G. A. Russell.

Sir, Department of Mines, Sydney, 25 May, 1876.

In reference to your letter of the 19th instant, submitting for consideration several points of objection to the cancellation of gold-mining lease No. 1,741, I have the honor, by direction of the Secretary for Mines, to inform you that your representations will be duly considered in connection with the case.

I have, &c.,
HARRIE WOOD,
Under Secretary for Mines.

No. 19.

Mr. W. M'Pherson to The Under Secretary for Mines.

Sir, 267, George-street, Sydney, 14 June, 1876.

Having reference to your letter of 15 May (76-2,785), concerning my evidence as to the marking out of my application, No. 1,224, being the land "proposed to be demised by gold lease 1,741," I beg to state that I have now sufficiently recovered from my accident to return to Hill End, and have the honor to request that you will order another hearing of this case and the objections thereto. I ask this as it will be more satisfactory for all parties than putting in my evidence in writing verified by affidavit. I await your reply, and remain, &c.,

WM. M'PHERSON,
(Per JAMES JACKSON).

In terms of Regulation No. 24, I direct the Warden to hold a Court for the purpose of taking further or other evidence respecting the several applications herein, and especially touching the applications in respect of which evidence has not yet been taken. The Warden will be careful to notify all the parties, and to report as speedily as possible.—J.L., 17/6/76. Mr. Warden Sharpe, B.C., 19 June, /76.

Evidence required herewith.—ERNEST A. L. SHARPE, Warden. The Under Secretary for Mines, Hill End, B.C., July 26, 1876.

No. 20.

Telegram from Mr. Warden Sharpe to Under Secretary for Mines.

Hill End, 1 July, 1876.

REFERRING to gold lease applications twelve hundred and twenty-three, twenty-four, and twenty-five, and instructions to hold Court for further evidence, I issued the necessary notices to applicants and objectors that I would hold such Court on the 3rd instant. I have just received application for an adjournment for fourteen days, from W. M'Pherson, with medical certificate that he is unable to travel. I see no power to adjourn; please inform what course I should pursue.

Urgent telegram.—The Warden may be informed the matter is in his hands; the Minister does not wish to interfere with the exercise of his functions.—J.L., 3/7/76. Telegram, 3rd July, /76.

No. 21.

Telegram from Under Secretary for Mines to Mr. Warden Sharpe.

3 July, 1876

IN reply to your telegram of the 1st inst., the matter therein referred to is left in your hands, as the Minister for Mines does not wish to interfere with the exercise of your functions.

No. 22.

Telegram from Under Secretary for Mines to Mr. Warden Sharpe.

20 July, 1876.

PLEASE state what steps have been taken in the matter of the application for the land recently held by the Johnson's Company, and how soon your report thereon may be expected.

No. 23.

Telegram from Mr. Warden Sharpe to Under Secretary for Mines.

21 July, 1876.

REFERRING to your telegram of the 20th instant in re Johnson's lease,—I have arranged to hold the inquiry on Monday next, and my report shall be furnished with the least possible delay.

Seen—J.L., 14/7/76.

No. 24.

Mr. Warden Sharpe to The Under Secretary for Mines.

Sir, Warden's Office, Hill End, 26 July, 1876.

In accordance with the instructions conveyed to me by blank cover minute of the 19th ultimo, I have the honor to transmit herewith, for the consideration and decision of the Honorable the Secretary for

for Mines, the gold-mining lease applications noted in the margin, the further evidence required concerning them, and the papers connected therewith, and to report as follows:—

1. The facts of this case are these:—The portion of land in question was and is known as Johnson's claim, and is situated on Hawkins Hill; it is also supposed to be one of the rich claims. Formerly a block claim, it was afterwards converted into a lease, and this lease was applied for and granted to Thomas Paten, John Rossiter, Moses Bell, Richard G. Reading, William Hezlett, and Thomas Cadell. The legal document was sent up to this office for execution and delivery to the lessees. Three of the lessees executed, and at their request the lease was then returned to the department in order that the other lessees might execute. Two of them did, but the third, Mr. Thomas Cadell, did not; the lessees were then I believe duly notified in the Government Gazette that their lease No. 1,741 would be cancelled on the 1st of February, 1876, unless they executed and took delivery in the meantime. They neglected to do so, and the lease was accordingly cancelled. Then the ground was immediately taken possession of and marked out by Messrs. John Ackermann and Thomas Helsby, application No. 1,223, W. M'Pherson, application No. 1,224, and on the 2nd February, by Michael Ackermann, application No. 1,225, and on the 14th of the same month by the lessees of cancelled lease No. 1,741, application No. 1,227.

2. Application No. 1,223 has been objected to by the applicants for No. 1,227, Messrs. Barrie and others, on the grounds principally that lease No. 1,741 has not been legally cancelled, that the land was exempted from leasing under the 34th section of the "Mining Act of 1874," that the cancellation of lease No. 1,741 was not completed when the applicants for No. 1,223 took possession, and that they did not comply with certain of the Regulations now in force concerning Gold-mining Leases. The only objections I need remark upon at present are numbered 5, 6 and 7, and in my opinion they are not sustained by the objectors except No. 5. This application is also objected to by Mr. William M'Pherson, on the grounds that he was in prior occupation and that the application in question was lodged too soon, in violation of the 6th Regulation relating to Gold-mining Leases. With regard to the question of prior occupation, I am inclined to think that Mr. M'Pherson and Mr. Helsby took possession of the land in dispute at the same time. The evidence on this point is conflicting, but I believe the view I have taken is correct. With regard to the question as to what is the earliest period at which, under the present Regulations, application for a lease can be lodged, I am of opinion that Messrs. Helsby and Ackermann have complied with the Regulations.

See papers.

3. Application No. 1,224 in the name of William M'Pherson is objected to by Messrs. Barrie & Co., and the objections are the same as in the former case, and in my opinion are not valid, with the exception of that numbered 5 before mentioned. Mr. Michael Ackermann also objects to this application, on the purely legal grounds that the cancellation of lease No. 1,741 was not complete when Mr. M'Pherson marked his lease.

4. Application No. 1,225 in the name of Michael Ackermann. This is objected to by Messrs. Barrie & Co., on the same grounds as in the previous cases, except as to the completion of the cancellation of No. 1,741. I do not think they have sustained their objections.

2. Application No. 1,227 in the names of James Barrie and others, who marked out the lease they have applied for thirteen days after the applicants for No. 1,223 and 1,224, and twelve days after the applicants for No. 1,225. No objection has been lodged against this application.

6. The evidence taken in these cases goes to show that the lessees of cancelled lease No. 1,741 have not used that diligence they should have used if they valued their lease and had not abandoned it. The lease, on their own admission, was lying idle for more than two years, and when the document of lease is sent up for execution it is only partially executed and then allowed to go for cancellation; for it seems to me from the evidence that there was nothing to prevent Mr. Cadell's signature from being obtained; although he was in Queensland and ill, a power of attorney could easily have been procured and sent to him. With reference to the rent having been paid up on the lease in question, this seems to have been an accident, as Mr. Barrie in his evidence concerning application No. 1,224 states "the rent was paid up to the first of July, 1877, we paid too much money in the first instance, and the surplus was appropriated to the rental." As evidence showing the slight value the Company placed on the lease in question Mr. Barrie states, "We did not work on the ground for the last two years, because the Company had expended their capital and were waiting for mining matters to take a more favourable turn so that they might raise more capital. I think from this that it is very evident the Company were in no hurry to develop the resources of their mine. Again, Messrs. Barrie & Co. complain that they did not know their lease was going to be cancelled. I would draw attention to Michael Ackermann's evidence concerning application No. 1,223, where he states that he gave verbal notice to the legal Manager of Johnson's Company on the 4th or 5th of August last, that he intended to apply for the ground now in dispute if they did not. This information should have warned them, and they should have been ready when the lease was cancelled to take up the land immediately the cancellation took place, and have kept some one in possession till it was cancelled. It appears to me that the only claim the applicants for 1,227 have is, that they have or the Company has expended some £2,700 on the land in question; and I do not think, taking the other circumstances of the case into consideration, this is sufficient to justify me in recommending that their application should be approved. With regard to Nos. 1,223 and 1,224, I am of opinion that the applicants have taken possession too soon—that is, they should have waited until the day on which the cancellation appeared in the Gazette had expired, before they took possession; but I think they have complied in all respects with the Regulations as far as was possible with regard to marking; and that they acted correctly as regards the time for lodging their respective applications; in fact it seems to me that these two applications are exactly equal in all respects, and that had there been no objections, the priority would have had to have been determined by lot under the 13th section of the Regulations.

See page 17 of evidence and Exhibit B., 27, 3/76.

See same page.

7. In conclusion, I would recommend that lease application No. 1,225 be approved, because the applicant therefor appears to have complied with the Regulations relating to Gold-mining Leases now in force, in all respects, and was the first to take possession of the land in question after the cancellation was completed. The applicants for Nos. 1,223 and 1,224 were too soon, and No. 1,227 too late; I would therefore recommend that the three last-mentioned applications be refused. In support of my recommendation, I have the honor to refer to a case heard in the Supreme Court on the 14th of December last, *ex parte* Gard and others before the Chief Justice, Mr. Justice Hargrave, and Mr. Justice Faucett. In delivering his judgment, the Chief Justice said, referring to the time when the cancellation of the lease took effect, "for several reasons it would appear more desirable to hold that the cancellation could not be taken advantage

advantage of till the next day, as some persons might acquire information before the general public, and might make the application (as in the case of Nos. 1,223 and 1,224), being aware from private sources that the cancellation was to be published on that day"; and this opinion is given in the face of the 48th Regulation relating to Gold-mining Leases under the "Mining Act of 1874." Mr. Justice Hargrave says, on the same point, "the lease could not expire till the last hour of the day of the publication."

I have, &c.,

ERNEST A. L. SHARPE,

Warden.

Submitted.—H.W., 29/7/76.

[Enclosure A to No. 24.]

Minutes of Evidence taken at inquiry.

Court House, Hill End, 24 July, 1876.

Lease application No. 1,223, and the objections thereto by W. M'Pherson.

Thomas Helsby, being duly sworn, saith:—I am a miner, and produce my miner's right, No. 141, for the current year—it is dated 7th January, 1876; on the 1st February last, gold-mining lease No. 1,741 was cancelled; I produce Gazette showing cancellation, and on that day I marked the land I have applied for, application No. 1,223; I cut the trenches the length and depth required by the Regulations, and erected the requisite posts; I put a board on one of the posts—the datum post—with the words "Applied for gold-mining lease.—John Ackermann and Thomas Helsby"; there was no person in occupation of the land in dispute when I marked the lease we applied for; the next morning, before breakfast, I put up notices—Schedule 1—on the Court House and on the Post Office at Hill End; on the 4th February, at 10 o'clock in the morning, I paid the deposit on my application, and produce receipt for deposit and survey fees; I received Schedule 6 from the Warden's Clerk, and forwarded it to the Mines.

By Mr. M'Pherson: I marked the lease on the 1st day of February; I commenced pegging at the north-east corner; I followed you round to the south-east corner; I then followed you to the south-west, and then to the north-west; I had then my four pegs in; I lodged my application on the 4th of February, at 10 o'clock a.m.; I marked the land in dispute on the 1st day of February, at the hour of half-past 2 in the afternoon; I am quite positive that the hour I have stated in my application was the time I took possession of the lease in dispute; in my former evidence I have stated 2 o'clock, but was in error—the hour was half-past 2; I had not got a telegram telling me the lease was cancelled when I marked out the ground; I marked out the land on spec, as I knew the lease was to be cancelled on that day; when I saw you coming over the hill I commenced marking the lease.

Taken and sworn before me, this }
24th day of July, 1876,— }

THOMAS HELSBY.

ERNEST A. L. SHARPE, Warden.

John Ackermann, being duly sworn, saith:—I am a miner, and produce my miner's right for the current year, dated 7th January, 1876; on the 1st February last I went down to the lease we have applied for—No. of application, 1,223; about half-past 4 o'clock in the afternoon I went round the pegs my partner Thomas Helsby had put in, and saw the land was marked in accordance with the Regulations now in force relating to Gold-mining Leases, as far as could be done; about 5 o'clock on this day I was coming home with my father and Mr. Helsby and Mr. M'Pherson, and he admitted to us that Mr. Helsby was marking out the ground at the time he (Mr. M'Pherson) came on it, and again on the same day, in Mr. M'Pherson's office.

By Mr. M'Pherson: I do swear that you admitted to me that Mr. Helsby was the first to mark out the ground.

By Warden: I cannot remember the exact words; we were disputing about going halves—you offered us one-fifth, and we wanted one-half; Mr. M'Pherson made a remark that we would have no chance in Court with him, because he had more influence; I said to Mr. M'Pherson—"Of course you know that we marked out the ground first," and Mr. M'Pherson said—"I admit, John, that you did mark out the ground first"; he pressed us afterwards to take the fifth and withdraw our application.

By Mr. M'Pherson: I don't know of my own knowledge when the ground was marked out.

By Mr. Helsby: Mr. M'Pherson stated that he would give us a fifth in what he was going to do after 12 o'clock that night; he then said he was going to mark out Hobson and King's, and that he would give us a fifth in that if we would take one-fifth in Johnson's, the lease in dispute.

Taken and sworn before me, this }
24th day of July, 1876,— }

JOHN ACKERMANN.

ERNEST A. L. SHARPE, Warden.

Michael Ackermann, being duly sworn, saith:—I am a miner, and produce my miner's right; I, with Mr. Helsby and my son, met at Bishop's public-house, on Hawkins Hill; we met Mr. M'Pherson there; he asked us to come to his office and make some arrangements; this was on the 1st of February, after the lease in dispute was marked out; we went to the office, and he admitted that Helsby was there first marking out—that that would be nothing—that pegging out to-night at 12 o'clock will be the time; he said he knew something worth £5,000 more than Johnson's lease, and if he would join him, and not dispute Johnson's lease, he would give us one-fifth in Johnson's, and something worth £5,000 more than Johnson's—that he had better take his offer, as we would have no chance of getting Johnson's, as he had two or three big bugs with him; he then wanted to draw up an agreement, but I refused altogether—I would have nothing to do with it.

By Mr. M'Pherson: I am interested in the application No. 1,223; I did not see the ground marked, but I saw it after it was marked out.

By Warden: I went round the posts after Mr. Helsby marked the ground, and the lease was marked in accordance with the Regulations now in force.

By Mr. Helsby: I knew you were shepherding the ground from 3rd December till 1st February; I gave notice to the legal Manager of lease 1,741 that I intended to apply for the ground if the Company did not; on the 4th or 5th of August I gave the notice verbally; I went to the office and saw Mr. Russell.

Taken and sworn before me, this }
24th day of July, 1876,— }

MICHAEL ACKERMANN.

ERNEST A. L. SHARPE, Warden.

William M'Pherson, being duly sworn, saith:—I am a miner, and produce my miner's right for the current year; I also produce the objectors' deposit (Exhibit D); I object to application No. 1,223; I know the lease in dispute, and on the 1st of February, at the hour of 25 minutes past 2 o'clock by my watch, I marked out cancelled lease 1,741; I knew the lease was cancelled from information I had received; I produce Gazette showing cancellation; I went on the ground and commenced to mark out at once; there were no fresh pegs or trenches, nor was there any one in occupation of the ground; when I went on the lease in dispute Mr. Helsby was on the adjoining lease; the first peg was placed in the south-east corner, with the notice-board and "Applied for gold-mining lease" affixed; when I was fixing the first peg I saw Mr. Helsby come on the ground; after this he commenced putting in his pegs at the north-east corner; he followed me round the boundaries, putting in the remaining pegs after I had mine in, and then placed his notice-board alongside mine, at the south-east corner; I marked out my lease in accordance with the Regulations now in force; Mr. Helsby told me that because he saw me marking the ground he marked it too; with regard to Mr. Helsby and Messrs. Ackermann's statement that I admitted to them that Mr. Helsby was the first to mark out the ground, it is entirely untrue.

By Mr. Helsby: When you arrived on Johnson's claim on the 1st February, was I not picking out the trenches on the north-east corner? No. Did you not say to me, "Helsby, you are too late"? Yes. Then did you not say, "Helsby, you will get shopped over this"? I did not. When I went to the south-east corner and you went to the north-east corner, did you not call out to me, "Helsby, you have taken my peg from this bush"? No. When I was coming up the hill I made that remark—I accused you of taking the peg, and you denied it. You carried up the peg for the north-east corner from the mouth of Johnson's tunnel for me.

By

By Mr. Ackermann: Was not Mr. Helsby in the act of marking our lease when you came down? No. Will you swear that our north-east corner peg was not in? Yes; it was not in. Will you swear that your watch was correct at the time you marked out the lease? No, I cannot swear, but I had telegraph time. When did you post your notices of intention to apply for a lease? On the same day I marked out the ground.

Taken and sworn before me, this }
24th day of July, 1876,— }
ERNEST SHARPE, Warden.

W. M'PHERSON.

By Warden: Mr. Helsby recalled: I did not post the notices (Schedule 1) on the day I marked the ground, because I had none; I got them as soon as I could, and posted them.

Taken and sworn before me, this }
24th day of July, 1876,— }
ERNEST SHARPE, Warden.

THOMAS HELSBY.

Court House, Hill End, 24 July, 1876.

Gold-mining lease application 1,224, and objections thereto by M. Ackermann.

William M'Pherson, being duly sworn, saith:—I am a miner, and produce my miner's right for the current year. The lease application shown to me is mine and bears my signature; on the 1st February last I went down to the ground on Hawkins Hill known as Johnson's lease No. 1,741, and marked out the ground which I have applied for; I marked it out at 25 minutes past 2 in the afternoon, by erecting posts 3 feet above the ground and 3 inches in diameter; I cut trenches at the angles 6 feet long and 6 inches deep; I took the south-east corner as the place for my datum post and put on it a board with the words "Applied for gold-mining lease," with the date of marking, and bearing my signature; I then posted Schedule 1 on the Post Office and Mining Registrar's Office; on the 5th of February I paid the sum of £3 10s., being the rent and survey fee; I produce the receipts (marked B and F), and lodged my application No. 1,224; there was no person in occupation of the land I have applied for when I marked it out.

By Mr. Barrie: I was not aware that Johnson's Company were in possession of the lease in dispute when I marked it out; I was aware that they held it before it was cancelled; I saw pegs in the ground when I marked—old pegs, but I did not see Johnson's Company on them; I saw a shaft and a tunnel, but no tools; I saw no bellows; I saw a windlass on the shaft, which had been there for two years to my knowledge; I served no notices on persons in occupation because there were none; I knew the lease was cancelled and I took it up; at the south-west corner I marked the trenches as far as practicable; at one leg of the trench was a shaft which prevented my marking the trench, but I extended the trench beyond the shaft across it; I applied for about 2 acres, and I put a peg at each corner; I cannot say whether I marked out 1,741 exactly or not; at the north-west corner I did not dig trenches 9 inches deep, because one was a hole some 7 or 8 feet deep; I marked the trench with loose rock built up; at the south-east peg was a trench showing the eastern boundary, but a portion of it is across a solid rock; I cut the trench as far as the rock, and placed an indication peg beyond showing the direction of it; the north-east corner was cut in accordance with the Regulations.

Taken and sworn before me, this }
24th day of July, 1876,— }
ERNEST A. L. SHARPE, Warden.

W. M'PHERSON.

James Barrie, being duly sworn, saith:—I am a miner, and have a miner's right for the current year, which I have produced on a former occasion. As my objections are purely legal, I have nothing to add to them.

By Warden: The reason I did not mark out the lease in dispute until the 14th February was that I believed the lessees had all executed; I did not hear the lease was cancelled until some days after it had been applied for by Mr. M'Pherson and others; the rent is paid up to 1st July, 1877; we paid up too much money in the first instance, and the surplus was devoted to the rental; we did not work on the ground for the last two years, because the Company had expended their capital, and were waiting for mining matters to take a favourable turn so that they might raise more capital.

Taken and sworn before me, this }
24th day of July, 1876,— }
ERNEST A. L. SHARPE, Warden.

JAMES BARRIE.

Michael Ackermann, being duly sworn, saith:—I am a miner, and hold a miner's right for the current year, No. 112, and dated 7th January, 1876; I also produce my receipt for objector's deposit (marked F) against gold lease application No. 1,224, in the name of William M'Pherson; I object to this application, for the reason stated in my written objection lodged with the Warden and with Mr. M'Pherson.

Taken and sworn before me, this }
24th day of July, 1876,— }
ERNEST A. L. SHARPE, Warden.

MICHAEL ACKERMANN.

[Enclosure B to No. 24.]

Mr. W. M'Pherson to Mr. Warden Sharpe.

Sir,

I do myself the honor to acknowledge your communication of 26th instant, notifying that you will "hold a Court at the Court House, Hill End, on Monday, the 3rd day of July next, for the purpose of taking further or other evidence concerning gold-mining lease application No. 1,224, and the objection thereto, and also concerning gold-mining lease application No. 1,223 and the objections thereto, and also concerning gold-mining lease application No. 1,223 and my objections thereto." In reply, I beg to enclose Dr. Cortis' certificate, and to state that I am quite unable yet to travel to Hill End, and on this ground respectfully ask that the inquiry be adjourned for a further period of fourteen days, when I hope to be sufficiently recovered to attend.

I may add that the Mines Department did not acquaint me that my application for a rehearing was granted, or I would have let you know when I could reach Hill End.

I remain, &c.,
W. M'PHERSON.

Certificate.

Bathurst, 28 June, 1876.

I CERTIFY that Mr. M'Pherson is unable to travel, he having broken his leg.

W. R. CORTIS, L.R.C.P.

[Enclosure C to No. 24.]

Mr. W. M'Pherson to Mr. Warden Sharpe.

Sir,

With reference to your communication of the 4th instant, requesting to be informed what is the earliest date on which I can be at Hill End for the purpose of giving my evidence with reference to lease application No. 1,223 and 1,224, and in reply thereto, I beg to inform you that Monday the 17th instant is the earliest date on which I can promise to attend your Court at Hill End for the purpose above specified.

I am, &c.,
W. M'PHERSON.

No. 25.

No. 25.

Mr. Warden Sharpe to The Under Secretary for Mines.

Sir,

Warden's Office, Hill End, 28 July, 1876.

I have the honor to transmit herewith receipt of objectors' deposit for the sum of £5 lodged by Messrs. Paten and others against gold-mining lease application No. 1,224, in the name of William M'Pherson. This receipt should have accompanied papers 76/3,610, forwarded by me to the department on the 26th instant.

I have, &c.,

ERNEST A. L. SHARPE,
Warden.

[Enclosure A to No. 25.]

Gold-mining leases—Receipt of objectors' deposit.

In the matter of the application of the undermentioned person for a lease under "the Mining Act 1874," and of objections thereto lodged by Thomas Paten, John Rossiter, Moses Bell, Richard Reading, William Hezlett, Thomas Cadell, and James Barrie.

Received from the above-named persons (objectors) the sum of £5, pursuant to the provisions of the said Act.

Dated 16 February, 1876.

F. CAMERON MACARTHUR,
Warden's Clerk,
Hill End.

Name and address of applicant,—

WILLIAM M'PHERSON, Hill End.

Application 1,224.

No. 26.

Mr. J. Jackson to The Under Secretary for Mines.

Sir,

267, George-street, Sydney, 29 July, 1876.

I have the honor to request that you will grant me a copy of the depositions taken before the Warden at the inquiry, held at Hill End on or about the 24th instant, in respect to the land formerly purposed to be demised by lease 1,741, Bathurst and Tambaroora District.

Application
1,224, and others
by Helsby,
Ackermann, and
Barrie.

I have, &c.,

JAMES JACKSON.

A copy may be furnished on the usual terms.—J.L., 1 Aug., 1876. Copy of Warden's report to Mr. Russell by permission. 12s.—T.C.B., 9/8/76. Copy of depositions to Mr. Jackson. Copy of Warden's report to Mr. Jackson.—T.C.B., 14/8/76.

No. 27.

Mr. G. A. Russell to The Secretary for Mines.

Sir,

Johnson's Gold-mining Company (Limited),
Sydney, 12 August, 1876.

Referring to my letter to you of 19th May, setting forth various objections to the cancellation of lease No. 1,741, also objections to the granting of lease applications Nos. 1,223, 1,224, and 1,225, I now beg leave to draw your attention to the following points:—

1. The inquiry at Hill End appears to have closed, and the Warden has sent in his report.
2. As to lease applications Nos. 1,223 and 1,224, the objection that the cancellation had not taken effect when the ground was marked out appears to be sufficient to invalidate them. I need not therefore waste your time by urging other objections.
3. As to lease application No. 1,225, there are two objections which remain with undiminished force against the application.

(1.) The ground was marked out on the 2nd February, and the application was lodged on the 5th. Thus the requisite interval of "not less than three days" (see clause 6 of the Regulations) was not allowed to elapse as it should have been.

(2.) The applicant (M. Ackermann) did not give the notices required by clause 5 of the Regulations to be given to "every person who shall be in occupation of any part of the land, or who has a claim to have any right to or interest in such land." The said Michael Ackermann has deposed that on the 4th or 5th August he gave me verbal notice that he intended to apply for the ground now in dispute. This statement I declare to be utterly false, and I am prepared to deny it on oath—there is not a word of truth in it. Mr. Ackermann probably saw me about that time in my office, for the purpose of discussing a proposal submitted by Thos. Helsby, on behalf of himself and friends, to work the lease on tribute. The subject of his applying for the ground could not in the nature of things turn up, for the Company had no intention of forfeiting their lease, and certainly did not contemplate that it would come to be cancelled in the way it did. The lease was not even advertised as ready for issue until the 1st October, and it is not reasonable, therefore, to suppose that Michael Ackermann gave me, on 4th August preceding, the notice that he says he gave. In any case I solemnly assert, and am prepared to swear, that he did not give any such notice. Even, however, if he had given the verbal intimation referred to, that could not be construed into a compliance with the Regulations, which require that notice in a certain form (Schedule 1) shall be "served upon" the person or persons, &c.

4. The Warden, in his report on the evidence in this case, advises that lease application No. 1,225 be granted, but I submit that the foregoing objections demonstrate its invalidity, and that it should be refused.

5. The Warden adds that lease application No. 1,227 "was too late," and should therefore be rejected; but how can an application be too late if no prior application has been made in proper form? To this application no objection has been taken by any parties; the time for raising objections has long since lapsed. I submit, therefore, that this application ought to be granted, as being the first application for the ground in question, made in proper form, after the cancellation of the lease No. 1,741 had taken effect. The granting of this application would at once be technically correct and equitably just.

I have, &c.,
GEO. A. RUSSELL,
Manager.

No. 28.

Mr. J. Jackson to The Minister for Mines.

Sir,

267, George-street, Sydney, 17 August, 1876.

Johnson's lease 1,741.—I have the honor to address you, as the representative of Mr. W. M'Pherson, of Hill End, who made Application, No. 1,224, for this land, when cancelled, as per Gazette notice.

I would respectfully draw your attention to the discrepancies in the evidence given at the two hearings at the Warden's Court, Hill End.

John Helsby, in April, states he marked out at 2 o'clock p.m. His application gives 2.30, as also his evidence on 24th July. M'Pherson marked out at 2.25, and Helsby admits on 24th July that he followed him round and marked off after him. Helsby, in April, stated he received a telegram advising cancellation of lease; in July, he says he did not receive the telegram, but marked out on spec when he saw M'Pherson set in to the work. The leases 1,604, 1,605, 1,608, 1,610, Guiding Star Company, were cancelled by same Gazette as cancelled 1,741, hence from position of the ground an onlooker would not know which lease was to be pegged off until he saw the work commenced. M'Pherson denies fully and flatly the assertion that he made the two Ackermans and Helsby an offer to amalgamate if they withdrew their application. The two Ackermans and Helsby own in evidence that they were partners in this attempt to gain the land.

Mr. Warden Sharpe recommends that the land be given to Michael Ackermann, as his marking was subsequent to the day of cancellation in Gazette, *re* the opinion of the Judges in Gard's case. This was, as you are aware, an extra-judicial opinion, as the question did not come before them in the pleadings, but was submitted for their opinion without agreement *pro* and *con*. Up to this time the Department had acknowledged priority of marking after publication of Gazette. *Now*, with that opinion before it, the marking out after the day of Gazette is deemed the correct time. This marking out was on 1st February—that is, *during the transition state*.

Michael Ackermann (application 1,225) does not appear to have given any evidence, nor, so far as my copy of the depositions show, was he at the inquiry held in April.

Why he puts in an appearance of 24th July I don't clearly understand.

I have, &c.,
JAMES JACKSON.

This may be registered and then attached to papers with me.—H.W., 18/8/76.

No. 29.

Memo. by Under Secretary for Mines.

Urgent.—Send notice to Mr. G. A. Russell that the Minister will see him and the directors of the Johnson's Company on Tuesday morning, at 11 a.m.—H.W., 25/8/76.

Mr. Russell informed accordingly, 25th August, 1876.

No. 30.

Mr. G. A. Russell to The Minister for Mines.

Sir,

129, Pitt-street, Sydney, 29 August, 1876.

Referring to my letter of 12th instant, I beg leave to request that you will allow me to put in an affidavit rebutting Mr. Michael Ackermann's evidence that he gave me intimation of his intention to apply for the ground now in dispute, if the Company did not.

I have, &c.,
GEO. A. RUSSELL,
Manager, Johnson's G. M. Co. (L.)

Permission granted; the affidavit when lodged may be placed with the papers.—J.L., 31/8/76.
Mr. Russell, 5 Sept., 1876.

No. 31.

The Under Secretary for Mines to Mr. G. A. Russell.

Sir,

Department of Mines, Sydney, 5 September, 1876.

In reference to your letter of the 29th ultimo, requesting permission to lodge an affidavit to rebut Mr. Michael Ackermann's evidence that he gave you intimation of his intention to apply for the ground which forms the subject of dispute between him and the Johnson's Gold mining Company (Limited), I am directed to inform you that the Secretary for Mines has approved of such permission being granted.

I have, &c.,
HARRIE WOOD,
Under Secretary for Mines.

No. 32.

21

No. 32.

Mr. G. A. Russell to The Minister for Mines.

Sir, Johnson's Gold-mining Company (Limited), Sydney, 7 September, 1876.
I now beg leave to enclose a declaration rebutting the evidence of Michael Ackermann, in respect of the notice alleged to have been given to me of his intention to apply for the ground covered by lease No. 1,741.

I have, &c.,
GEO. A. RUSSELL,
Manager.

[Enclosure A to No. 32.]

In the matter of the inquiry respecting lease applications numbers 1,223, 1,224, 1,225, and 1,227 respectively. I, George Alfred Russell, of number 129, Pitt-street, in the city of Sydney, in the Colony of New South Wales, Esquire, do solemnly and sincerely declare,—

1. That I am the duly appointed legal Manager of "the Johnson's Gold-mining Company (Limited)," and have been such Manager since the formation of the said Company, in the year one thousand eight hundred and seventy-two.

2. I have been informed that, on the twenty-fourth day of July last, Michael Ackermann stated on oath, in the matter of the above inquiry, before the Warden's Court of the Tambaroora and Turon Mining District, at Hill End, as follows:— "I gave notice to the legal Manager of lease No. 1,741, that I intended to apply for the ground, if the Company did not, on the fourth or fifth August—I gave the notice verbally; I went to the office and saw Mr. Russell." The said statement is absolutely untrue. The said Michael Ackermann did not, either on the fourth or fifth of August last, or at any other time, give me the notice mentioned or any notice to the like effect, either verbally or in writing. And I make this solemn declaration conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intituled, "*An Act for the more effectual abolition of Oaths and Affirmations taken and made in various Departments of the Government of New South Wales and to substitute Declarations in lieu thereof and for the suppression of voluntary and extra-judicial Oaths and Affidavits.*"

Subscribed and declared at Sydney, this 7th (seventh) day of September, A.D. 1876, before me,—

HENRY PRINCE, J.P.

GEO. A. RUSSELL.

No. 33.

The Minister for Mines to The Crown Law Officers.

Department of Mines, Sydney, 11 September, 1876.

THE Secretary for Mines requests that the Law Officers of the Crown will be pleased to advise him on the following points in connection with the case submitted herewith, viz.:—

- (1.) Whether gold lease No. 1,741 was properly cancelled.
- (2.) If so, which of the four parties of applicants is entitled to the fresh lease.

JOHN LUCAS.

No. 34.

The Crown Solicitor to The Under Secretary for Mines.

Sir,

Crown Solicitor's Office, Sydney, 6 December, 1876.

I have the honor to return herewith the papers received by me from your department relative to gold leases under the Mining Act, and to state that I have laid them before Mr. Attorney General Dalley, who has been pleased to write an opinion in the matter,—a copy of which is annexed hereto.

I have, &c.,
JOHN WILLIAMS,
Crown Solicitor.

Submitted.—H.W., 8/12/76.

The Cabinet are of opinion that the Company should have the land.—JOHN R.

[Enclosure A to No. 34.]

The Opinion of the Honorable the Attorney General *in re* Gold Leases under Mining Act.

I SHALL confine myself in this case to the expression of my opinion on the various points concerning which the Department of Mines requires to be advised.

The facts of the case are so clearly and so fully set forth in Mr. Warden Sharpe's report of date July the 26th, 1876, that it is quite unnecessary for me to state them.

(1.) I am of opinion that the whole of the lessees not having executed the lease, and having been duly notified in the Government Gazette that unless they did so and took delivery the lease would be cancelled, their failure to execute justified the cancellation. The fact of Mr. Cadell's absence and illness in Queensland need not have prevented the lease being completed, as he could have signed by power of attorney. In addition to the notice of intention to cancel the lease published in the Gazette, there was also a publication in the Sydney and Hill End newspapers, and a verbal notice was given to the gentlemen representing the lessees on the spot.

(2.) I am of opinion that applications 1,223 and 1,224 were not made in accordance with law. The notice of final cancellation appeared in the Government Gazette of 1st February, 1876, and in these two applications the land was marked out at 2:30 p.m. and 2:25 p.m. respectively, on the day on which the notice of cancellation appeared. As the law takes no account of fractions of a day (unless indeed justice imperatively requires it, as when it is necessary to ascertain which of two events first happened), the cancellation did not operate until midnight of the day of publication of the Gazette. In the case of *ex parte* Gard and others, heard in the Supreme Court, December the 14th, 1875, an intimation of opinion was given that the cancellation ought not to take effect from the actual time of publication, but from the end of the day on which the Gazette was published. "For several reasons," observed the Chief Justice, "it would appear more desirable to hold that the cancellation could not be taken advantage of till the next day, as some persons might acquire information before the general public, and might make the application on the day of the publication, being aware from private sources that the cancellation was to be published on that day." And Mr. Justice Hargrave remarked, that "It was a common principle of law known to all conveyancers that the day on which a lease terminated was always within the lease, the cancellation or forfeiture never operated till the day afterwards; there could be no fractions of a day, and the lease could not expire till the last hour of the day of the publication. To hold otherwise would be to open the door to great inconvenience and mischief." And Mr. Justice Faucett was disposed to concur in the construction by the other members of the Court of the date of the operation of the cancellation.

(3.) I am asked to advise as to the meaning of the words "not less than three days" in section 6 of Regulations relating to Gold-mining Leases, of date 13th July, 1874. I am of opinion that these words mean three clear days irrespective of the day on which possession is taken; for, by Regulation 48, which has especial reference to computation of time, it is provided

vided that in all cases in which any particular number of days not expressed to be clear days is prescribed, the computation of time shall be exclusive of the first and inclusive of the last day.

(4.) I am of opinion that after cancellation of leases the notice required by sec. 3 to be served on persons in occupation was not necessary.

5th December, 1876.

WM. B. DALLEY,
A.G.

No. 35.

Mr. G. A. Russell to The Minister for Mines.

Sir,

129, Pitt-street, Sydney, 23 January, 1877.

Referring to the cancellation of gold lease No. 1,741 (Hawkins Hill), and to the subsequent applications made for the ground involved,—referring also specially to my letter of 12th August last, setting forth the facts connected with these applications, and showing cause why application No. 1,227, made by James Barrie in the interest of the proprietors of cancelled lease No. 1,741 (viz., Johnson's Company), should be accepted, it being the only one really in proper form,—I beg leave respectfully to inquire whether any advice has been received from the Crown Law Officers on this subject, and whether any decision has been arrived at.

I have, &c.,

GEO. A. RUSSELL,

Manager of Johnson's G. M. C. (L).

The matter has to be submitted to the Cabinet, but though it has been ready several weeks, owing to press of important business the Minister has been prevented from presenting it. Will do so the first opportunity.—J.L., 29/1/77. Mr. Russell, 30/1/77.

No. 36.

The Under Secretary for Mines to Mr. G. A. Russell.

Sir,

Department of Mines, Sydney, 30 January, 1877.

I am directed to acknowledge the receipt of your letter, dated the 23rd instant, and to inform you that the matter of the applications in connection with cancelled gold lease No. 1,741 (Hawkins Hill) has to be submitted to the Cabinet for consideration.

The case has been ready for several weeks, but owing to press of important business the Secretary for Mines has been prevented from presenting it to his colleagues. He will do so, however, upon the first opportunity.

I have, &c.,

HARRIE WOOD,

Under Secretary for Mines.

No. 37.

Minute by the Minister for Mines.

A CLAIM was originally taken up by Michael Ackermann, which he sold to some Sydney people for £1,000 and an interest in a Company to be formed.

A Company was formed, and its Manager states that they expended about £6,000 upon the ground. The capital was expended, and work was stopped. The persons to whom the ground was transferred, on behalf of the Company, were called upon to execute the lease; one of them failed to execute, and after repeated warnings that the lease would be cancelled if not executed, at last it was cancelled (dodging on the part of Russell). The cancellation was proclaimed in the Government Gazette of the 1st February, 1876. The same day the ground was re-marked by two different parties, one at 2.25, the other at 2.30, but as the lease was not void until 12 o'clock that night, these markings were too soon, consequently illegal.

Michael Ackermann, who sold the ground (originally) for £1,000 and shares to the Company, marked it out at 5 o'clock a.m., on the 2nd February, and according to the Regulations he should, within the period of not less than three days or not exceeding ten days (from the time of marking) have lodged with the Warden an application for a lease of the land. This regulation the A.G. says he has not complied with, not having allowed three days to elapse before he made his application.

Barrie, on behalf of the original Company, some thirteen days later marked out the ground, and four days after made application for a lease to which no objections were made within the prescribed time for lodging objections.

The question to whom shall the lease be granted to—Michael Ackermann, or to Barrie for the Company.

Ackermann sold the claim to the Company for £1,000 and some 1,000 shares, and it would appear unjust that he should retain this large sum of money and get the ground back, after about £6,000 had been expended upon it, without paying anything for it; but it must not be forgotten that he held 1,000 paid-up shares, and although, as stated by the Manager, that £6,000 had been expended upon it. (In evidence upon oath before the Warden it was stated that the amount expended was only £2,700.) The capital was exhausted, and the ground remained unworked for nearly two years. And Ackermann states that he warned the Company's Manager that if the ground remained unworked and the lease became forfeited he would take up the claim again. The Company's Manager denies that Ackermann ever so warned him. Whether or no, the Company, after repeated warnings, allowed the lease to be forfeited, and did not take it up for about fourteen days after Ackermann marked out the ground. The day after cancellation he marked it in proper time and manner, but he did not, as the Regulations prescribe he should have done, viz., allow three days to elapse between the time of marking out the land and the making application for a lease of it.

Prepare minutes recommending that the undermentioned applications be refused, namely:—1,223, John Ackermann and Thos. Helsby; 1,224, W. M'Pherson; and 1,225, Michael Ackermann; and that application No. 1,227, Barrie and others, be granted.—J.L., 14/2/77.

No. 38.

Minute for Executive Council.

Recommending the refusal of three applications for gold-mining leases.

Department of Mines, Sydney, 19 February, 1877.

It is recommended to His Excellency the Governor and the Executive Council that the applications for gold-mining leases of Crown lands specified in the annexed Schedule be refused.

JOHN LUCAS.

Approved.—H.R., 20/2/77.

The Executive Council advise that the three applications for gold-mining leases specified in Schedule be refused.

No. 44.

Mr. W. G. Collings to The Under Secretary for Mines.

Sir,

Hill End, 13 March, 1877.

I am instructed by the legal Manager of Johnson's Company to make application for a refund of the objectors' deposits made by Messrs. Paten, Rossiter, and others, as under:—4,910, made 16 February, 1876, against Michael Ackermann's application, No. 1,225; No. 4,911, made 16 February, 1876, against the application of Thomas Helsby and John Ackermann, No. 1,223, dated 4 February, 1876; No. 4,912, made 16 February, 1876, against the application of William M'Pherson, No. 1,224.

I have applied to the Warden here, who tells me I have to obtain the voucher from you, and that I must get it signed by all the parties whose names are attached.

I have, &c.,

WILLIAM GEO. COLLINGS, M.S.

The receipts for the objectors' deposits in this case (No. 4,910-11 and 12) are with the papers which are now being dealt with by the Chief Draftsman (77/1,621); the three applications objected to have been refused, and no recommendation as to costs appears to have been made by the Warden in his report.—P.A., 20/3/77.

No such order can be made affecting an objector's deposit when the application is refused. Prepare refund vouchers, and forward for information and signature.—H.W., 20/3/77.

Mr. Collings informed. Vouchers (3) sent to Warden's Clerk. 22 March, 1877.

I have, &c.,

HARRIE WOOD,
Under Secretary for Mines.

No. 49.

Messrs. Helsby and Ackermann to The Minister for Mines.

THE undersigned Thomas Helsby and John Ackermann beg respectfully to submit the following report on the conduct of Mr. Warden Sharpe, Hill End, for consideration of the Honorable the Minister for Mines:—

On the 4th February, 1876, Thomas Helsby and John Ackermann made application for a gold-mining lease of 2 acres, being cancelled lease No. 1,741 in Gazette of 1st February, 1876. James Barrie, who represented himself as agent for the original proprietors of 1,741, applied for same ground on 18th February last, and lodged objections against the said applications of T. Helsby and J. Ackermann. On 22nd February, Ackermann and Helsby went to work on the ground and removed some quartz for the purpose of having them crushed. Barrie protested verbally against the removal of said quartz, and threatened to have an injunction placed upon them. On the night of the said 22nd February, Mr. Warden Sharpe went to the residence of Thomas Helsby, and threatened that if he (T.H.) would persist in removing the quartz that he (Warden) would issue a warrant and have him put in gaol, and on no account would he allow Helsby to crush the quartz. The Warden after frightening Helsby in the above manner, desired him to meet Barrie at Warden's Office on next morning, which Helsby promised to do, but on reflection sent Warden the enclosed note, marked A. On 23rd February, Warden called John Ackermann off the public street and demanded that he (J.A.) should go on oath. Ackermann protested against so arbitrary a proceeding, and said he had not been summoned nor received any notice to attend Warden's Court, but the Warden again demanded him to give evidence on oath, which demand Ackermann was obliged to comply with. Barrie had just given evidence on oath without Helsby or Ackermann being informed of such proceeding. A short time after the above proceedings the Warden issued the annexed injunction, marked B, and placed the Bailiff in charge of the quartz. About two hours after the Bailiff took possession of the quartz Helsby and Ackermann met Warden in company of Barrie, when Warden advised Helsby and Ackermann, that the best thing for them to do was to get the quartz crushed and place the gold to Warden's credit in the Bank; this Helsby and Ackermann, agreed to, and Warden then cancelled the injunction.

On the 24th February, Helsby and Ackermann were each served with summons (annexed, C) at the instance of George Alfred Russell, who represents himself as legal Manager of Johnson's Gold-mining Company, said Company being the proprietors of lease No. 1,741 before its cancellation. The summonses commanded them to appear at Warden's Court on 3rd March, which they did, and on the case being called the plaintiff Russell did not appear, James Barrie appeared to represent Russell, and produced a power of attorney which Helsby and Ackermann at once objected to as not empowering Barrie to go on oath as the representative of the plaintiff. However, on examining the said power of attorney it was found to have no date on. Barrie then applied for postponement of case to enable him to have power of attorney dated, which the Warden at once granted till the 6th of March. The case again came before the Warden on the 6th of March, and Barrie appeared to represent Russell and produced the same power of attorney he had on 3rd of March, only in the interval it was dated back to 7th February last. Helsby and Ackermann strongly protested against Barrie being allowed to appear for the plaintiff Russell, particularly as the power of attorney, which had no date on on the 3rd March, had been dated in the interim 7th February, 1876, but the Warden said he was determined to allow Mr. Barrie to represent the plaintiff, and then placed Barrie on oath to prove Russell's plaint against Helsby and Ackermann. The result was that the Warden found verdict for plaintiff, awarding him the gold, less expenses of carting and crushing, and also awarding expenses against the defendants, amounting to four pounds five shillings and sixpence (£4 5s. 6d.) Amongst the items of expense awarded to plaintiff is one guinea for Barrie's power of attorney, and 12s. 6d. for the injunction which was cancelled.

The Warden justified his decision under Regulation 210 of the Gold Fields Act of 1866, although according to said Regulation the quartz had to be registered, which they were not.

It is hardly necessary to add that Mr. Barrie is neither a barrister nor attorney, but follows the occupation of dealer and commission agent.

We may also add that Mr. Warden Sharpe is very intimate with Mr. Barrie, and is mostly to be found in that gentleman's company or at Barrie's office.

We feel that our action in removing the quartz, or doing any other labour on the ground which we properly applied for, is in accordance with Regulations 28 and 46 of Gold Leasing Regulations of 1874.

In conclusion, we humbly and respectfully beg that the Hon. Minister for Mines will give this report his serious consideration, and for the sake of justice cause an inquiry into the above facts, which we are prepared to substantiate on our solemn oaths.

We have, &c.,

THOMAS HELSBY.
JOHN ACKERMANN.

Hill End, 13th March, 1876.

[Enclosure A to No. 49.]

Exhibit A.

Messrs. Helsby and Ackermann to The Warden of Hill End.

Sir,

I apologize for not attending your office at 10 o'clock to-day, as I promised. On thinking over the matter and being called out of my bed, I must have been half asleep to have given you the information I did; but I trust you will keep it in confidence; but every word of it is true. I will bring proof in due time by the parties who rose the quartz over six years ago; and as regards to your threats of issuing a warrant and placing me in gaol, I am determined to let the law take its course; I trust I shall be tried by an impartial Justice. You will find me at Mr. Byer's machine, but I am home every evening, so you will have no difficulty in finding me.

Hill End, 23 February, 1876.

I remain, &c.,

THOMAS HELSBY.
JOHN ACKERMANN.

[Enclosure B to No. 49.]

Exhibit B.

Mr. Warden Sharpe, to Mr. John Ackerman.

Warden's Court, Hill End.

UPON hearing James Barrie, Agent for Johnson's Gold-mining Company, and a shareholder in the said Company, I, Ernest A. L. Sharpe, a Warden of the Tambaroora and Turon Mining District, do hereby order and enjoin you, John Ackermann, Michael Ackermann, and Thomas Helsby, all gold-miners, and residents of Hill End, or any person or persons authorized by you on that behalf, from interfering with or removing from the spot where it now lies a certain heap of quartz or stone removed by you from the lease known as number 1,741, situate on Hawkins Hill, on the 22nd day of February instant, and which is claimed by the said James Barrie as the property of the said Johnson's Gold-mining Company. This injunction will remain in force for a period of seven days from this date, inclusive of this day on which it is made.

Given under my hand, this 23rd day of February, 1876,—

ERNEST A. L. SHARPE,
Warden.

[Enclosure C to No. 49.]

Exhibit C.

Mining Act, 1874—Sixth Schedule—Warden's Court—Summons.

To John Ackermann and Thomas Helsby, of Hill End.

You are hereby summoned to appear before me or some other Warden, at the Court House, Hill End, on the third day of March, next, at 10 o'clock in the forenoon of the same day precisely, to answer the complaint of George Alfred Russell, Manager of Johnson's Gold-mining Company (Limited), by which complaint he seeks to recover from you the sum of £100 sterling, the estimated value of 7 tons of quartz the property of the said Company.

If you desire the said complaint to be heard before assessors you are entitled to have it so heard.

You may have a summons to compel the attendance of any witness, or for the production of any books or documents, on applying at my office.

Bring this summons with you when you come to my office.

Given under my hand, this 24th day of February, 1876,—

ERNEST A. L. SHARPE,
Warden.

No. 50.

Mr. Warden Sharpe to The Under Secretary for Mines.

THE facts of this case are as follows:—Gold-mining lease No. 1,741 was the property of the Company known as "Johnson's Gold-mining Company," and was cancelled on the 1st day of February last. On the 4th of that month it was applied for by Messrs. Helsby and Ackermann (No. of application, 1,223); on the 5th by W. M'Pherson (No. 1,224), and by Michael Ackermann (No. 1,225); and on the 18th by Thomas Paten and others. On the 16th February objections were lodged against application No. 1,223 by Messrs. Barrie and others, also by William M'Pherson; objections were also lodged against the other applications. On the 22nd of the same month, about dusk, Mr. Barrie came to my house, and informed me that he wished to apply for an injunction to prevent Messrs. Ackermann and Helsby from removing a heap of quartz, supposed to be valuable, from cancelled lease No. 1,741, and claimed by him as agent for the Johnson's Gold-mining Company, as their property. Mr. Barrie applied as a shareholder in the said Company, under the 88th section of the "Mining Act of 1874," because Messrs. Ackermann and Helsby were removing the stone from the lease in question as fast as possible and taking it to the Battery, although they had been remonstrated with by Barrie. I told him to apply for the injunction next morning, and that I would see Mr. Helsby and hear what he had to say—what claim he made to the quartz. I saw Mr. Helsby at his house, in order to save him trouble and expense. I asked him what claim he had to the stone. He said the lease was cancelled, and as he and Ackermann had applied for it they had a right to the stone on it, and that they meant to keep it, and would resist me if an injunction was granted—this was said in an offensive defiant way. I then said, "If you resist the injunction (or the law), if it is granted, you will go into gaol," or something to that effect. I then said, "You had better come to the Court in the morning and see Mr. Barrie, and perhaps the matter may be arranged." He said he would come down, but did not (I never desired Mr. Helsby to come down, as he alleges). I received a letter from (the letter herewith marked A) Mr. Helsby in the morning. I did not understand what it meant, as it was couched in very mysterious terms, and I was quite unconscious of having frightened Mr. Helsby. I merely pointed out to him what would be the consequence if he and his partner set all law and order at defiance, as he avowed an intention of doing if he and his partner were not allowed to do as they pleased. On the 23rd February Mr. Barrie made application for an injunction. The Bailiff called my attention to the fact that Mr. John Ackermann was standing outside the Court House—I believe at the door. Under the circumstances I judged it expedient to call him in and allow him to give any reason he might have against the granting of the injunction. He was called, and I explained to him what the application was, and said he had better give any evidence he could against the application. He did so—there was no compulsion used. As the application for the injunction was made under the 88th section of the Mining Act, there was no necessity for giving Messrs. Ackermann and Helsby formal notice—this I explained to them. I granted the injunction, as I considered Mr. Barrie brought sufficient evidence to support it. The Bailiff was put in charge of the stone that was left. Messrs. Ackermann had removed a considerable portion of

of it to the machine. I then, for the purpose of securing the property, suggested that all the stone should be crushed and the gold placed to my public account in the Bank, to abide the result of the trial. It was then agreed between Messrs. Ackermann and Helsby and Mr. Barrie (amongst other things) that each party should pay half the expense of carrying the stone to the engine. I said I would draw up the agreement for them, and Messrs. Ackermann and Helsby said they would come and sign the agreement in the morning, at my office. I then relieved the Bailiff of his charge. Messrs. Ackermann and Helsby never made their appearance at the time appointed (10 o'clock) a.m., but Mr. Helsby came in about 12 o'clock, and said his partner had gone to Mudgee. In accordance with the Act 24 Vic., No. 21, section 3, Messrs. Helsby and Ackermann were sued in the name of the legal Manager of the Company, Mr. G. A. Russell, who appeared by his agent, Mr. Barrie. I should not have allowed the last-mentioned gentleman to appear, but there is no attorney here, and I could not see the use of forcing Mr. Russell to come here merely to appear in Court, and enlarge the expense, for he knew nothing about the case. Mr. Barrie produced a power of attorney, the usual document used where a party appears by agent, authorizing him to appear on Mr. Russell's behalf; it was not dated, but was duly executed. The case was adjourned to have the date, and the costs of the adjournment paid by the Company, and handed to Messrs. Ackermann and Helsby. The document was sent to Sydney, and the date supplied. On hearing the evidence I found a verdict for the plaintiffs, as the only claim the defendants had was that the lease was cancelled, and they had applied for it. By the 210th Regulation of 1872, under which lease No. 1,741 was taken up, the forfeiture of a lease (claim and lease are the same under these Regulations) did not include the produce raised, provided the quartz was stacked. I see nothing in the section to compel the holders to register the quartz. The Regulation says, "The Mining Registrar shall, upon application made to him, register the same." I can find nothing in the present Act to affect this privilege, or give Messrs. Ackermann and Helsby any right to quartz already raised by the previous owners of a cancelled lease or their property. It appeared from the evidence that Mr. John Ackermann was one of the original holders of the claim, which was sold to the Johnson Gold-mining Company, and then converted into a lease. This very stack of quartz (about which the action was) was specially mentioned in the transfer of the claim to the Johnson Gold-mining Company, and Mr. John Ackermann received a large sum for his share,—£1,000 was, I believe, the amount. I am not aware that the costs in this case were excessive, but Messrs. Ackermann and Helsby have given the items incorrectly, although I myself gave the former a correct schedule, which he said he wanted for his mate Helsby. After the verdict Messrs. Ackermann and Helsby gave notice of appeal, which, however, they withdrew the same day. I may add, that they have always been treated by me with the greatest courtesy and kindness, except when they were impertinent, and I did not choose to put up with that. I suppose this is the wrong they have suffered. With regard to the statement that I am very intimate with Mr. Barrie, and am mostly to be found in that gentleman's company, or at his office, it is simply an untruth, without the slightest foundation. I am no more intimate with Mr. Barrie than I am with Messrs. Ackermann and Helsby, and know no more about him, and I do not think I have been a dozen times in his office in my life, and the only communications I have ever had with him have been on business totally unconnected with Messrs. Ackermann and Helsby. I give below a schedule of the costs allowed, and will forward the evidence for the perusal of the Honorable the Secretary for Mines, if he should wish to see it.

ERNEST SHARPE,

Warden.

No. 51.

Messrs. Helsby and Ackermann to The Minister for Mines.

Sir,

Hill End, 3 June, 1876.

As we have had no official information as to what action (if any) has been taken by the Department of Mines on the charges against Mr. Warden Sharpe, of Hill End, in our report of the 13th of last March, but having heard through Mr. Michael Ackermann that Mr. Sharpe had written a reply to our charges against him, denying nearly all of said charges,—we therefore humbly pray the Hon. Minister for Mines to institute an inquiry into the said charges, which we are prepared to substantiate on our solemn oaths.

From what we have heard through Mr. Michael Ackermann of Mr. Sharpe's reply to our charges, we have no hesitation in characterizing such reply as a tissue of falsehoods, which we are prepared to prove by overwhelming evidence on proper inquiry being instituted.

We also beg an inquiry for the sake of the impartial administration of justice, which is dear to the hearts of all British subjects, and which has been outraged in our case by Mr. Warden Sharpe.

A reply to the above prayerful requests, informing us whether an inquiry will be instituted, would much oblige—

Your humble and obedient servants,
THOMAS HELSBY.
JOHN ACKERMANN.

Submitted: Send copy of the Warden's reply, and request them to state definitely in what particulars it is untrue.—J.L., 7/6/76.

Messrs. Helsby and Ackermann, with copy.—9 June, /76.

No. 52.

The Under Secretary for Mines to Messrs. Helsby and Ackermann.

Gentlemen,

Department of Mines, Sydney, 9 June, 1876.

In reference to your letter of the 3rd instant, inquiring what action has been taken in respect of the charge made by you against Mr. Warden Sharpe, I am directed by the Secretary for Mines to forward herewith a copy of the reply sent in by that officer in connection with the complaint made by you, and I am to request you to be good enough to state definitely in what particulars it is untrue.

I have, &c.,

HARRIE WOOD,

Under Secretary for Mines.

No. 53.

Messrs. Helsby and Ackermann to The Minister for Mines.

Sir,

Hill End, 12 June, 1876.

We have received your communication of 10th instant, together with copy of Mr. Warden Sharpe's reply to our charges against him. We have perused said reply carefully, and have not the slightest hesitation in pronouncing it untrue. The little of truth it contains is so mixed up with that which is false that it would be impossible for us to separate the one from the other. We therefore implore an inquiry, when we shall prove by sworn testimony the falseness of Mr. Sharpe's reply, and the truthfulness of our charges against him.

We have, &c.,

THOMAS HELSBY.

JOHN ACKERMANN.

Submitted.—H.W., 13/6/76. If they will make specific charges such as will justify punishment, if substantiated, an inquiry shall be made into them.—J.L.; 14/6/76. The writers informed accordingly.—16/6/76.

No. 54.

The Under Secretary for Mines to Messrs. Helsby and Ackermann.

Gentlemen,

Department of Mines, Sydney, 16 June, 1876.

In reference to your letter of the 12th instant, requesting that an inquiry may be made into the matter of your complaint against the Warden at Hill End, I am directed by the Secretary for Mines to inform you, that if you will make specific charges such as will justify punishment if they shall be substantiated, an inquiry shall be held into them.

I have, &c.,

HARRIE WOOD,

Under Secretary for Mines.

No. 55.

Messrs. Helsby and Ackermann to The Minister for Mines.

Sir,

Hill End, 19 June, 1876.

In reply to your communication of the 16th instant, we herein distinctly specify our charges against Mr. Warden Sharpe, Hill End:—

- 1st. That on the night of the 22nd of last February Mr. Sharpe overstepped his duty on going to the residence of Thomas Helsby and threatening him that if he persisted in removing the quartz, he, Warden Sharpe, would issue a warrant and have him put in gaol.
- 2nd. That on the 23rd of last February, Mr. Sharpe had John Ackermann called from the public street and commanded him to go upon oath. Ackermann protested, stating that he had not been summoned nor subpoenaed to attend Warden's Court, and objected to be compelled to give evidence in such an arbitrary way. Warden then demanded that Ackermann should be sworn, which demand he was obliged to comply with.
- 3rd. That on the last-named date the Warden issued an injunction and placed the Bailiff in charge of quartz, the property of Helsby and Ackermann, without any previous notice as required by the Regulations, and on the mere application of a Mr. Barrie, who represented himself as agent for Johnson's Gold-mining Company, which Company owned lease 1,741 previous to its cancellation. Barrie failed to show any authority of his appointment as agent, and was not registered as required by the Regulations, and had not at this date the power of attorney he subsequently produced.
- 4th. That on the 3rd of last March, T. Helsby and J. Ackermann appeared at Warden's Court, on the summonses of George Alfred Russell, of Sydney, who represented himself as legal Manager of Johnson's G. M. Co., but the plaintiff Russell did not appear. This Mr. Barrie appeared and produced a power of attorney from Russell, but on its being examined it was found to have no date on. The Warden then advised Barrie to ask for a postponement, which advice Barrie availed himself of, and obtained a postponement of the case till the 6th March. On the 6th March when the case was called Mr. Russell failed to appear, but Mr. Barrie appeared as his representative, and produced the same power of attorney he had on the 3rd March, without a date, and which was dated in the interim back to the 7th February. Helsby and Ackermann strongly protested against Barrie being allowed to go upon oath on this informal power of attorney, and applied for a dismissal of the case, on the grounds that there was no plaintiff and that it was illegal for Barrie to go upon oath on the mere power of attorney. The Warden overruled these objections, and had Barrie sworn as the representative of Russell, and gave a verdict to Barrie for the produce of the quartz, at the same time awarding expenses against Helsby and Ackermann to the amount of £4 5s. 6d. In every previous case before Mr. Warden Sharpe he refused to allow an agent or representative to go on oath on a power of attorney, distinctly stating that it was illegal to do so. Amongst the items of expenses is one guinea awarded to Barrie for the power of attorney.

As

As we have suffered greatly, both pecuniarily and mentally, through what we consider the illegal and partial adjudication of Mr. Warden Sharpe, and as we are prepared to substantiate the above charges on our solemn oaths, we hope an inquiry will be held in order to satisfy the mining community that an injustice shall not pass with impunity.

We have, &c.,

THOMAS HELSBY.
JOHN ACKERMANN.

The papers may be referred to Mr. Warden Browne, with a request that he will proceed to Hill End and inquire into the matter of complaint, and report thereon at his earliest convenience. He will be good enough to notify all the parties interested that he will hold the inquiry, and on what date.—J.L., 26/7/76. Mr. Warden Browne, B.C., 27 July, /76.—H.W.

No. 56.

Mr. Warden Browne to The Under Secretary for Mines.

Sir,

Warden's Office, Gulgong, 3 August, 1876.

I have the honor to acknowledge the receipt of B.C. of date 26th ultimo, with enclosures, referring to a complaint made by Messrs. Helsby and Ackermann, of Hill End, against Mr. Warden Sharpe, and to state that I have advised both parties, by telegraph, that I shall be prepared to hold an inquiry therein, at Hill End, upon 7th instant.

I have, &c.,

T. A. BROWNE.

Seen.—J.L., 8/8/76.

No. 57.

Mr. Warden Browne to The Minister for Mines.

Sir,

Warden's Office, Gulgong, 22 August, 1876.

I have the honor to state that, in accordance with instructions, of date 26th ultimo, I proceeded to Hill End upon 7th instant, and on that day held an inquiry into the matter of the complaint made by Mr. T. Helsby and Mr. John Ackermann against Mr. Warden Sharpe, as contained in their letter, of date 19th June, to the Minister for Mines.

I beg to forward herewith notes of the evidence taken during the inquiry, as also my report thereon.

With reference to the first charge in the joint letter of Messrs. Helsby and Ackermann, of date 19th June, viz., "that on the night of 22nd February Mr. Warden Sharpe over-stepped his duty in going to the residence of Thomas Helsby, and threatening him that if he persisted in removing the quartz, that he (Warden Sharpe) would issue a warrant and have him put in gaol," I see no reason to doubt Mr. Sharpe's distinct denial that he had any other intention in seeing Mr. Helsby at his own house but the friendly and rational one of giving him notice of the application for an injunction made that evening by Mr. Barrie, the hearing of which was fixed for the following morning. As Mr. Barrie had made application that evening at dusk, representing the case as one of extraordinary urgency, in the terms of the section quoted, and as the case was fixed for hearing before the Warden's Court on the following morning, there was no other means, obviously, of arranging that Mr. Helsby should receive notice but through the Bailiff, a chance messenger, or a verbal communication from the Warden. Being past office hours, Mr. Warden Sharpe appears to have chosen the latter course, probably solicitous of being assured that the parties concerned should be both present at Court on the following morning. With reference to the asserted threat and mention of imprisonment, if Mr. Helsby, as stated by Mr. Sharpe, declared his intention of retaining possession of the auriferous quartz in dispute, in defiance of an injunction, Mr. Warden Sharpe was justified, in my opinion, in referring to the section quoted, and warning him of the penalty he was liable to incur.

37 Vic. No. 18,
sec. 88.

See second page
of Mr. Sharpe's
letter of explana-
tion, March 23,
1876.
37 Vic. No. 18,
sec. 129.

From the wording of the second charge, it would appear that Mr. Ackermann and his partner felt aggrieved that Mr. John Ackermann should have been "called from the public street and commanded to go up on oath," by Mr. Sharpe. I fail to see why Mr. John Ackermann should have felt unwilling to give evidence in his own behalf, or why he should have sheltered himself behind the small technical objection that he had not received a summons or subpoena. Any evidence which he could give would naturally be in his own favour. He was not compelled by law to obey the person, though an officer of the Court, who requested his attendance; but once there, he was merely, if compelled to give evidence, in the same position as a person in a Police Court present at a trial—"wherein he might have been compellable to give evidence and to produce documents by virtue of a subpoena, &c."

27 Vic. No. 7,
sec. 5.

Mr. Warden Sharpe alleges that no sort of compulsion was used, in which he is supported by the evidence of Mr. Stokes, Bailiff, who states that he was in Court, and that he does not think that there was any compulsion used to cause Mr. Ackermann to give evidence.

The third charge sets forth that on the date last mentioned (23rd February) "the Warden issued an injunction, and placed the Bailiff in charge of quartz, the property of Helsby and Ackermann, without any previous notice, as required by the Regulations, on the mere application of a Mr. Barrie, who represented himself as agent for the Johnson's G. M. Co."

By the section quoted, no notice required—"The Warden's Court may, upon the application of any such person as last aforesaid (i.e., claiming to be legally or equitably interested in any land, claim, &c.), who shall satisfy the Court that the case is one of extraordinary urgency, without any such notice as aforesaid, grant such injunction as last aforesaid, but to be in force for a period of seven days only."

37 Vic. No. 13,
sec. 88.

Mr. Barrie claimed to be legally and equitably interested, both by a power of attorney duly signed, though not dated, and by the ownership of 200 scrip in the Johnson G. M. Co. A Warden's Court was held upon the 23rd February, before which Mr. Barrie and Mr. J. Ackermann gave evidence upon oath; after hearing which the Court did, "under the Warden's hand, grant an injunction, to be in force for a period of seven days only." Mr. Warden Sharpe does not appear to have in any way exceeded his powers under the "Mining Act of 1874," either in granting the injunction or in placing the Bailiff in charge of the auriferous quartz which complainants were at that time proceeding to crush.

See evidence of
Mr. Barrie, 23rd
February.

Mr.

Mr. John Ackermann, in his evidence taken before me (pages 3 and 4), asserts that he did not agree to lodge the gold extracted from the quartz to the Warden's credit at the Bank; but apparently he and his partner were not actively opposed to this as an interim proceeding, for in the second page of the letter of 13th March, occurs—"the Warden advised Helsby and Ackermann that the best thing for them to do was to get the quartz crushed, and place the gold to Warden's credit in the Bank. This Helsby and Ackermann agreed to, and the Warden then cancelled the injunction." I can state from experience that where the matter in dispute comprises stone or earth of an auriferous nature, in process of extraction, such a course as the one suggested by Mr. Warden Sharpe is generally adopted.

Charge No. 4 impugns the decision given by the Warden sitting in the Warden's Court; and having heard the case on summons (B No. 2), as provided by the Mining Act of 1874, after taking the evidence upon both sides (notes of which are subjoined), Mr. Warden Sharpe gave a decision in favour of the complainant, and by a written order directed the proceeds of the crushed quartz to be handed over to him. Costs to the amount of £4 5s. 6d. to be paid by the defendants, Helsby and Ackermann.

7 Vic. No. 13,
sec. 106.

If Messrs. Helsby and Ackermann were dissatisfied with the decision of the Warden's Court, power was granted to them in the Act to appeal to the next ensuing District Court sitting as a Court of Appeal. They did not choose to avail themselves of the alternative, for the reason given, or others, and it does not appear to me to come within the limits of the inquiry that I should review Mr. Warden Sharpe's decision. It seems to me to have been arrived at in accordance with the provisions of the Act of 1874, and only through the course provided by such Act could it have been set aside. Mr. Sharpe has (in page 5) given the reason and authority for his decision, see letter of March 23rd, 1876.

After a careful perusal of the evidence I am unable to perceive that one of the charges contained in the letter of 19 June, 1876, signed Thomas Helsby and John Ackermann, has been proved. The complainants appear to have been much dissatisfied with the ruling of Mr. Warden Sharpe, and to have attributed to partiality his acts, manner, and whole proceeding in the case.

Mr. Sharpe has distinctly denied any feeling or expression of hostility, and appears merely to have spoken with that decision necessary to maintain the dignity of his responsible office. The complainants were in error in considering that the law required that they should have notice in an application for an injunction under the 88th section; nor does Mr. Helsby appear to have appreciated Mr. Warden Sharpe's desire to afford him timely notice and the opportunity of objecting to the injunction.

Mr. Sharpe denies positively the use of the expressions attributed to him in Court by Mr. Michael Ackermann, which indeed are scarcely intelligible or credible. The Bailiff has no recollection of such words having been used by Mr. Sharpe, though he was in Court. He does not profess, however, to have distinct recollection of matters at the time referred to.

37 Vic. No. 13,
sec. 106.

In conclusion, I must beg to re-assert my opinion that the proper course of the complainants under the circumstances would have been to appeal, and that failing resource, a formal and grave charge, imputing misconduct to the Warden, as contained in the letter of 19th June, goes rather to prove vindictive feeling than a desire to procure justice.

I have, &c.,

T. A. BROWNE.

Inform Messrs. Helsby and Ackermann that the inquiry asked for has been held, and that Mr. Warden Browne reports that they failed to substantiate the charges made.—J.L., 25/8/76. Informed, 28 August, 1876.

[Enclosure A to No. 57.]

Notes of Evidence taken at Inquiry.

Court House, Hill End, 7 August, 1876.

INQUIRY held by Mr. Warden Browne into the matter of a complaint made to the Minister for Mines against Mr. Warden Sharpe, by Messrs. Helsby and Ackermann, of Hill End.

By request of both parties, the letters of complaint were read by Mr. Warden Browne.

John Ackermann states:—On the 4th February I made application for a gold-mining lease of 2 acres, formerly lease No. 1,741, which had been proclaimed as cancelled in Government Gazette of the 1st February, 1876; certain objections were lodged by Mr. Barrie and others to the application; on the 22nd February Mr. Helsby and I went to work on the ground, and we removed certain quartz that had been laying there for over six years; the quartz was removed for the purpose of crushing; this quartz had been raised by myself and others some two years before the lease in question, from which it had been obtained, was floated into a Company; no one protested against our moving the quartz until we had it all to the top of the hill, and some to the engine; the first thing I knew of the matter was when I was called into Court from the street, by, I believe, Mr. Warden Sharpe's authority, either by a constable or the Bailiff, but I could not say by which; when I came into Court I did not hear Mr. Barrie apply for an injunction; Mr. Barrie's evidence was read over to me by order of Mr. Warden Sharpe; I then knew he was applying for an injunction; this was on the 23rd, the day after we had removed the quartz; Mr. Warden Sharpe asked me to state what I knew about the quartz; I objected to do so, as I had not been summoned or subpoenaed to do so; Mr. Sharpe demanded that I should do so, and I did then state what I knew; when I left the Court Mr. Sharpe asked me if I would call at his office about 1 p.m. as he wished to see me; this was after the hearing of the application for the injunction, but before the injunction had been granted I came down and Mr. Sharpe told me the best thing I could do would be to leave the quartz where it was and to sue Mr. Barrie; I then said that "I should do no such thing, that I should crush the quartz"; Mr. Sharpe then told me that he would grant the injunction to Mr. Barrie; I then went down to where the quartz had been stacked, and Mr. Helsby and I started to remove the quartz about half-past 3 or quarter to 4; the Bailiff came down to where we were at work and handed us each an injunction; he read his orders to us, and of course we had to stop; Mr. Helsby and I then came up to the town; we met Mr. Barrie and Mr. Sharpe in the street; Mr. Sharpe then told us we had better arrange and get an agreement drawn out, and get the quartz crushed and the gold placed to his credit; we were not agreeable to this, and we wanted Mr. Barrie to pay half of the whole expenses of carting, crushing, &c., and this Mr. Barrie declined to do; he was willing to pay half of the crushing and carting, but not the packing to the top of the hill, but this offer we refused until the case should be settled; Mr. Helsby left, then Mr. Sharpe, Mr. Barrie, and I went round to Mr. Barrie's office; Mr. Sharpe advised us not to consider the expenses, as they would not be much, and that we would get it back if the case was decided against us; I then said I was agreeable if Mr. Helsby was; we did not agree to this, but eventually the Bailiff was removed and we had the quartz crushed, the gold being left with the Manager of the crushing engine; Mr. Beyers, the proprietor of the engine, had retained the gold, as we refused to pay for the crushing in consequence of Mr. Barrie objecting to pay part; I believe eventually the gold was placed in the Bank to Mr. Sharpe's credit, with a mortgage on it of £6, amount due for crushing; some days afterwards we received a summons to appear before the Warden on the 3rd March, to answer complaint of Mr. G. A. Russell; Mr. Helsby and I appeared on the 3rd March, and Mr. Barrie appeared to represent Mr. G. A. Russell, the complainant, by power of attorney; I then protested against Mr. Barrie appearing by power of attorney for the complainant, and on examining the power of attorney it was found to have no date on; Mr. Sharpe then advised him to ask for a postponement of the case until the 6th of March, so that the power of attorney might be dated; Mr. Helsby and I then appeared on the 6th of March, and Mr. Barrie then produced the same power of attorney, which was then dated back to the 7th February, 1876; I then again protested against Mr. Barrie appearing on such an informal power of attorney,

attorney, or appearing in any way for the complainant; Mr. Sharpe then said that he had discretionary power, and that he would allow Mr. Barrie to appear, and then had Mr. Barrie sworn to prove complainant's case; at the conclusion of the case a verdict was given for Mr. Barrie for complainant for the amount of the gold, awarding Mr. Barrie expenses, £4 5s. 6d., including £1 ls. for the power of attorney, on which he appeared as representative of complainant, G. A. Russell. Mr. Sharpe held the power of attorney up and asked Mr. Barrie what it was worth; Mr. Barrie said he thought about £5 5s.—eventually £1 ls. was allowed.

By Mr. Sharpe: These charges were brought only by myself and Mr. Helsby—no one instigated us; the ground was pegged by others about the same time as we had; we thought we had a claim on the quartz under Regulation 46 of the Gold Mining Act of 1874; I will not state if the stack of quartz in question was mentioned or not in the agreement when the claim of which it formed a part was sold to a Company by the shareholders, of which I was one.

By Mr. Browne: I cannot state positively whether the quartz was or was not mentioned in the agreement.

By Mr. Sharpe: When I was called into Court in the first instance you forced me to be sworn to give evidence, by saying "I demand you to give evidence"; I then thought I must do so; I objected to give evidence, as I had not been called there in the proper manner; I was not prepared, as I had not had due notification; you told me that the best thing I could do to save the injunction if I claimed the quartz was to sue Mr. Barrie; I do not recollect Mr. Sharpe saying that it would be more in accordance with law if I claimed the quartz to leave it there and to sue Mr. Barrie.

We make the charge of your being with Mr. Barrie, as several times when we wanted you we found you with Mr. Barrie; we make the charge of your allowing Mr. Barrie to appear on power of attorney, as on several instances on trivial cases you had refused to allow people to appear on a power of attorney; we did not appeal against your decision, as we were too late to do so at the next Appeal Court, and we could not wait until September, as we might by that time have left the district.

Taken before me, at the Court House, Hill End,—
this Monday, the 7th August, 1876.
T. A. BROWNE, Warden.

JOHN ACKERMANN.

*Thomas Helsby states:—*On the 1st February last I was on the lease known as Johnson's Gold-mining Company's lease; I pegged it out and applied for it; subsequently, on the 22nd February, I took possession of certain quartz on this lease, and on the same evening, between 8 and 9, Mr. Sharpe called at my house; I said "What has brought you up here, Mr. Sharpe?" he said "Mr. Barrie had sent him up to see me about certain quartz," and I said "Yes, we have been pucking up some quartz to-day"; he said "What are you going to do with the quartz?" "To get it crushed," I replied; he said "Take my advice and do not touch them—if you do I shall issue a warrant and place you in gaol"; I said "The lease was cancelled on the 1st of February, and I had taken it up under the 46th clause, which gives me power to take up the claim and take possession of it as it stands"; he said "The quartz belonged to Mr. Barrie—that he rose it for the Company; and I said "If he says so he is a liar"; Mr. Sharpe then said "Do you call Mr. Barrie a liar?" and I said "I do so, as that quartz was raised by my mate and some of the working men in the district, and that over six years ago, long before they ever thought of putting it in a Company"; Mr. Sharpe stated that "Mr. Barrie had told him that he rose the quartz for the Company, and that I had better meet Mr. Barrie at the Warden's office at 10 o'clock to-morrow"; this was said in presence of my wife; I reflected on the matter, and sent to Mr. Sharpe the letter marked A, and did not attend the Warden's office; the next morning Michael Ackermann, John Ackermann, and myself went to the quartz we had removed on Hawkins Hill, as we could not cart it until about 2 o'clock in the afternoon, and we came into town about 12; we were passing the Court House, Michael Ackermann was walking along on the opposite side of the street, when he was called by the Bailiff into Court; John Ackermann and I remained to see what was wanted, not at that time aware that Mr. Barrie had had a hearing in this matter; when we got to the window we heard Mr. Sharpe say to Mr. Michael Ackermann, "If you do not mind you will not go away from here; you are here, and you must remain here"; Michael Ackermann said, "That might please some persons"; the Warden then said, "Mr. Ackermann, if you will give evidence on this case, and bide my decision, I will do all I can to get you the ground, but if you do not, I shall report all I can against you or it"; this was said in open Court; John Ackermann, my mate, who was with me, stepped into the Court, and said, "Your Worship, my father has nothing to do with this case—it was myself and Helsby"; John Ackermann then came out of the Court; he was then directly called in again by Constable Gallagher, and I said, to him, "Go in"; the Warden commanded John Ackermann to give evidence on oath; this John Ackermann declined to do, and said he objected to give any evidence on such arbitrary proceedings; the Warden again commanded that he should give evidence, and John Ackermann then said, "Your Worship, I always thought that anything coming before a Warden's Court must come through summons, which I can swear I have had no notice to appear, which I must have two days"; Mr. Sharpe again commanded him to go on oath and give evidence; John Ackermann was then sworn, and I went home to dinner; between 3 and 4 in the afternoon the Bailiff came and took possession of the quartz on Hawkins Hill, and handed me a copy of an injunction granted by Mr. Warden Sharpe on application of Mr. Barrie, as agent for the "Johnson's Gold-mining Company"; John Ackermann and I then came into town to see the Warden; we saw the Warden with Mr. Barrie in Clarke-street; I said to John Ackermann, "You keep your eye on the Warden, while I look in the office"; I wanted to look in the office to see if Mr. Barrie was registered as the agent of "Johnson's Gold-mining Company," and as we wished to see the Warden, we did not want to lose sight of him; on inquiry at the office I ascertained that at that time Mr. Barrie had never been registered as agent of "Johnson's Gold-mining Company"; we then went up to Mr. Sharpe and Mr. Barrie; I said to the former, "What about this injunction, Mr. Sharpe?" he replied, "Well, Mr. Helsby, I think you had better crush the quartz, and place the gold to my public account in the Bank"; I said, "I'm quite agreeable, but what about the expenses?" Mr. Barrie then said, "You must pay them, of course"; I said, "I shall stick to the gold then"; the Warden then said, "Mr. Barrie, the expenses I think ought to be paid out of the gold, as if you crushed them yourself you would have to pay them, so that it does not make the slightest difference to you"; I said, "I was willing to that, that I would lose my time"; I finally agreed to crush the quartz, and place the gold to the Warden's public account in the Bank; when I agreed to this I said, "Mr. Barrie, will you produce your authority as agent?"; Mr. Sharpe said, "That is all right, Mr. Helsby, he has taken affidavit to that effect"; and I said, "If he has done so, he has taken a false affidavit"; Mr. Barrie said, "Will you go to my office, and I will show you"; I left Mr. Ackermann, and went with Mr. Barrie to his office; he showed me a paper, but not relating to his agency; he then produced a £200 scrip, he said "Will that satisfy you?" "Yes" I said, "as far as having 200 scrip in the Company"; I said afterwards, "Though it gives you 200 scrip in the Company, it does not make you an agent"; Mr. Sharpe came in at this time, and Mr. Barrie applied to Mr. Sharpe to know, "Did that £200 scrip entitle him to act as agent in applying for an injunction"; the Warden said, "It did"; I said, "Well then if it does I am satisfied"; I stated then that the cart was coming with the quartz to take to the Police Office; I then turned the cart and took the quartz to the mill; Mr. Sharpe then came down and relieved the Bailiff of his duty; John Ackermann told me they had altered the agreement; I said, "I was not willing to lose anything but my time, that the expenses were to be paid out of the proceeds"; Mr. Sharpe then volunteered to draw up the agreement between the two parties; the next morning at 10 a.m. we were to call at the Warden's office to sign this agreement; I came the next morning to the office; I saw Mr. Sharpe in Mr. Barrie's office apparently writing, as I passed; I left word at the Court House with the Warden's clerk to tell Mr. Sharpe that my mate had gone to Mudgee for legal advice, and that I could not sign the agreement until he returned; it was 10:20 a.m. on the 24th instant when I left this message for the Warden; about 12 o'clock I got a message from John Ackermann to deposit the gold to the Warden's public account; I then called to see the Warden at his office; Mr. Warden Sharpe said, "Mr. Helsby you are no gentleman," and that I was very mean not to come according to promise at 10 o'clock, "and that my word was not fit to be took"; I informed Mr. Sharpe that I had been there at 20 minutes past 10, and that I had left word for him with the Warden's clerk; just at this time Mr. Barrie came in, and I told Mr. Sharpe that I would deposit the gold to his public account, or in his hand on receipt; Mr. Barrie said, "Yes, and you will get some gold if you leave it in the hands of Mr. Helsby"; I said "Well, if you doubt it, we will finish about 11 o'clock to-night, and you can come and see for yourself"; no one did come; the gold was detained by the engineer on the authority of the proprietor; the gold from the quartz in question was washed up and retorted by others in our presence; it never passed through our hands at all; in coming home that night we saw Mr. Sharpe about 11, and I handed to him the receipt (*Exhibit A 2*); Mr. Sharpe read it and gave it to me back, saying, "That was not the gold as he had authorized me to bring," and that he should not take that paper; he also said, "I had taken the law into my own hands, and that I must put up with the consequence of it"; I said, "Did you not authorize Mr. Beyers to stop it?" he said, "No"; I called on Mr. Beyers in the morning and asked him if Mr. Sharpe had authorized him to detain that gold; he said, "Yes"; I left the gold in the hands of the engineer, and did not see it any more, and I do not know what ultimately became of the gold.

By

By Mr. Browne: I did not say I would resist the injunction; I subsequently received a summons to appear before the Warden on the 3rd March; we appeared on that date to answer complaint of G. A. Russell; there was no appearance of complainant; Mr. Barrie was there, he produced a power of attorney; we objected to Mr. Barrie being heard on the power of attorney; the Warden said, he had discretionary power, and that he should use it; we asked the Warden when that power of attorney was dated, and on looking it over he stated that it had no date on; he then handed it over to Mr. Barrie, who stated it was no fault of his, and passed it back to the Warden; I said to the Warden, "How long do you think that has been wrote?" "But a few days," the Warden replied; I said, "Do you think it was written before the summonses were issued?" he replied, "I could not say, but I can see that it has been recently written"; the Warden then said to Mr. Barrie, "You had better apply for postponement of the case so that the power of attorney may be dated, for without a date it is useless, without the opposite party is willing for the case to go on"; I and my partner both objected; Mr. Barrie availed himself of the Warden's advice, and the case was postponed until the 6th; on the 6th we appeared again; both John Ackermann and myself received 10s. each for our expenses incurred by the postponement; on the 6th, when we attended, Mr. Barrie produced the power of attorney dated the 7th February, 1876; we again objected to Mr. Barrie being heard on power of attorney; the Warden again said he should exercise his discretionary power, and that he should not think of bringing a gentleman from Sydney to appear in Court knowing nothing of the case; I then said, that when I was working for Mr. Henry Dwyer, a resident of Sydney, who had given a power of attorney to Mr. James Cosgrove, James Cosgrove appeared on this power of attorney to make an affidavit before the Warden, and I understand the Warden objected to allow him to appear on a power of attorney; the Warden then said that the case must go on, and the case was heard, but no decision was then given; on the 7th we appeared, and a decision in favour of complainant (Mr. Russell) was given, with costs £4 5s. 6d.; this Mr. Sharpe stated was under the 210th Regulation of the "Gold Fields Act of 1866," and Regulations of 1872; we then objected, stating that the quartz had not been registered in accordance with Regulation No. 209 of same date; the Warden then said it did not matter whether the quartz was registered or not, that it was the Registrar's duty to register them; Mr. Sharpe held out the power of attorney to Mr. Barrie and asked what it cost; Mr. Barrie said it might have cost £5 5s.; £1 1s. was eventually allowed for it.

By Mr. Sharpe: On the evening you first came to my house you said "Mr. Barrie had sent you"; I was annoyed when Mr. Sharpe came to me and I agreed to come to the Court House the next morning, but eventually I decided not to go; I was and still am under the impression that I could take up the quartz under Regulation 46 of 1874; I did not think that one shareholder could sue another in a Limited Liability Company; as my partner also held scrip in Johnson's Gold-mining Company to the extent of £650, the legal Manager being the only one to sue and be sued.

I mentioned in my first complaint to the Minister of your intimacy with Mr. Barrie, as I had personally seen you three times in his office about this time, though I cannot say I knew you were on this business each time, though it was just at the period the injunction was applied for, neither do I put it as a charge; I have every reason to suppose you had ill will towards me, from your behaviour towards me on this first night when you came to my house, and also because since then, when I have appeared before you, you would not take down my evidence, though I particularly requested you to do so; I never knew of any injunction until the Bailiff arrived on the ground with the injunction Mr. Sharpe had granted to Mr. Barrie; no one else had ever anything to do with instigating this charge except myself; I am positive as to hearing you say to Mr. Michael Ackermann, that if he would give evidence in this case and bide your decision, you would do all you could to get him the ground, but if he will not you should report all you could against him; I was at the open window when this was said by you; I could not understand your reason for saying this; the day I had to come to sign the agreement I could not arrive at 10, but I came as soon after as possible, and I arrived at the Court House at 10:20, as before stated; on one occasion you threatened to have me locked up for contempt of Court; on this occasion I came in, and you asked me why I did not bring the gold; I said, "I could not bring it when you authorized Beyers to stop it"; Mr. Sharpe said he never told Beyers to stop it; I said, "Yes you did, for he told me so"; Mr. Sharpe then said, "Do you know who you are speaking to?" and I answered "Yes, your Worship"; I brought the charges against you, as I believe you dealt partially against me, from your actions towards me from the commencement.

Taken at the Court House, Hill End, this }
Monday, the 7th August, 1876,— }

THOMAS HELSBY.

T. A. BROWNE, Warden.

Michael Ackermann states:—On the 23rd February when passing I was called into the Court House; I did not know what case was going on; Mr. Sharpe told me, "If I would not prove my right to the quartz satisfactorily he would issue an injunction"; I said, "The law must take its course"; then Mr. Sharpe told me if I did not mind where I was I might stop where I was; I was not then asked to swear anything; Mr. Sharpe then said, "If I would go by his orders he would report for me, and if not he would report against me"; my son then came into Court and said I had nothing to do with the quartz; Mr. Sharpe then said I might go; I left with my son, who was called back; I assisted to unload the quartz on the 22nd on the top of the hill.

By Mr. John Ackermann: When you objected to Mr. Barrie appearing on power of attorney, Mr. Sharpe said he had discretionary power, and he would allow Mr. Barrie to go on with the case; I heard Mr. Sharpe previously refuse to allow Cosgrove to appear on power of attorney; I do not know the nature of Cosgrove's power of attorney.

By Mr. Sharpe: I do not wish you any harm in consequence of the decision in the matter of the leases at Pulley's Hill, nor have I any ill feeling against you.

Taken at Hill End, this 7th day of }
August, 1876, before me,— }

MICHAEL ACKERMANN.

T. A. BROWNE, Warden.

Mr. Warden Sharpe states:—With reference to my motive for going to Mr. Helsby's house on the night of the 23rd, I wished to hear what he had to say about the quartz before granting the injunction applied for by Mr. Barrie; on that occasion Mr. Helsby's demeanour to me was anything but respectful; I am aware that he was excited, and I think he must have misunderstood me; when speaking to him I was referring to the 129th section of Act of 1874; I believe I did more than I need have done; my sole reason was to give Mr. Helsby notice that an injunction was being applied for, so that if he wished it he might have an opportunity of opposing it; I am perfectly positive I never made any such statement as Mr. Helsby and Ackermann mention, in saying that I told Michael Ackermann "That if he would go by my orders and bide my decision I would report for him, but if not I would report against him"; I consider that if Mr. Helsby and Ackermann had any cause for complaint they should have appealed in the proper way; I have had no notice of the inquiry, or the nature of the charges, until I received a telegram on Friday last from Mr. Warden Browne; some of the charges I have never heard of before; Mr. Barrie is not a personal friend of mine, and I do not think I have spoken a dozen times to him except on business; Mr. Barrie is not here just now, he is living in Bathurst; I produce my notes of evidence taken in the case of application by Mr. Barrie for injunction, also in the matter of Johnson's Gold-mining Company; I cannot say from memory whether you did or did not promise to come up the next morning and sign the agreement.

Taken at the Court House, Hill End, this Monday, }
7th day of August, 1876, before me,— }

ERNEST A. L. SHARPE.

T. A. BROWNE, Warden.

By Mr. Sharpe: *Joseph Law Stokes states:*—I am a Bailiff of the Warden's Court here, and was present in Court when the injunction was applied for by Mr. Barrie; I do not recollect hearing you make use of the expression to Michael Ackermann, "If you will give evidence in the case and bide my decision, I will do all I can to get you the ground, but if you do not I shall report all I can against you"; it was so long since that I cannot state certainly as to the expressions used; I do not think there was any compulsion used to make Mr. Ackermann give his evidence; I have always been in Court when Helsby and Ackermann were there; I have several times heard you tell them to sit down when two or three would be speaking together.

By

By John Ackermann :—I have no distinct recollection of what was said to you when you were called into Court.

Exhibit A 2.

Beyer's Quartz-crushing Machine, Hill End, 24 February, 1876.

DETAINED from Mr. Thomas Helsby 6 ozs. 1 dwt. of gold, by order of Mr. L. Beyers.

SAMUEL DELLOW.

[Enclosure C to No. 57.]

Exhibit B 2.

Mining Act, 1874—Sixth Schedule—Warden's Court—Summons.

To John Ackermann and Thomas Helsby, of Hill End.

You are hereby summoned to appear before me or some other Warden, at the Court House, Hill End, on the 3rd day of March next, at 10 o'clock in the forenoon of the same day precisely, to answer the complaint of George Alfred Russell, Manager of Johnson's Gold-mining Company (Limited), by which complaint he seeks to recover from you 6 ounces and 1 pennyweight of gold, being the gold derived from 7½ tons of quartz, the property of the Company known as the Johnson Gold-mining Company, and converted by you to your own use.

If you desire the said complaint to be heard before assessors, you are entitled to have it so heard.

You may have a summons to compel the attendance of any witness, or for the production of any books or documents, on applying at my office.

Bring this summons with you when you come to my office.

Given under my hand, this 24th day of February, 1876,—

ERNEST SHARPE,
Warden.

Affidavit of service.

I HEREBY certify that I served the within-named Thomas Helsby with a true copy of the within summons, by delivering the same to him personally at Beyer's machine, Hawkins Hill, on Thursday, the 24th day of February, 1876.

Hill End, 26 February, 1876.

J. L. STOKES,
Baillif, Warden's Court.

I HEREBY certify that I served the within-named John Ackermann with a true copy of the within summons, by delivering the same to his wife, a person above the age of 14 years, at defendant's residence, Germantown, Hill End, on the 25th day of February, 1876.

Hill End, 26 February, 1876.

J. L. STOKES,
Baillif, Warden's Court.

Mining Act, 1874—Subpœna to Witnesses.

Complaint No.

George A. Russell, legal Manager of the Company known as Johnson's Gold- } In the Warden's Court of the Tamboraora and
mining Company, against John Ackermann and Thomas Helsby. } Turon Mining District at Hill End.
To Thomas Kent and Enoch Goodwin.

You are required to appear personally at the Warden's Court at Hill End, on the 3rd day of March, 1876, at the hour of 10 o'clock in the forenoon, and afterwards until the said suit is heard, to give evidence in behalf of the plaintiff.

Given under my hand, this twenty-ninth day of February, 1876,—

ERNEST SHARPE,
Warden.

G. A. Russell v. John Ackermann and Thomas Helsby.

James Barrie, being duly sworn, saith :—I am the duly authorized agent of George A. Russell, the legal Manager of Johnson's Gold-mining Company, and resident at Hill End; I produce copy of memorial (marked A) of Johnson's Gold-mining Company (Limited), by which it appears that George Alfred Russell is the legal Manager of that Company, in whose name the defendants John Ackermann and Thomas Helsby are sued; I produce G. A. Russell's miner's right and my own for the current year. The Company held certain land on Hawkins Hill, as a claim, in 1872; afterwards it was applied for as a lease; on the 14th of February last, there was a heap of quartz stacked on the Company's lease on Hawkins Hill; I saw it there, and it has been there for the last three years; I had received instructions from Mr. Russell about this quartz, to see that it was not moved; it was regarded as valuable, and on one occasion I received instructions from Mr. Russell to crush the quartz, but the local directors prevented the crushing; on going down to the claim on the 21st or 22nd of last month, I found that the quartz had been moved, and on making inquiries I was told that Goodwin had removed it; I saw what I believed to be the quartz on Hawkins Hill; I asked Goodwin who authorized him to remove the quartz, he pointed to John Ackermann and Thomas Helsby the defendants, who were standing by the heap; I then told them I would claim the stone on behalf of the Company, of which I am a shareholder; I then applied for an injunction, which was granted, but afterwards an arrangement was made that the quartz should be crushed and the proceeds held over; this agreement was broken by the defendants, who refused to perform their part of the contract; I then summoned them for the value of the quartz, which I put at £100; I put in an affidavit (Exhibit B) showing that G. A. Russell never authorized any one to take the stone; I also put in a letter (marked C) from John Ackermann to G. A. Russell; the defendant John Ackermann told me that he had taken up the ground under a lease application, and considered the stone was his; they refused to give up the stone; I don't know where the stone went; I refer to the 210th Regulation of 1872, and to the 189th and to the 39th section of the Gold Fields Act of 1874.

By T. Helsby: What time did you call at Johnson's claim to see the quartz was removed? About 4 o'clock on the 22nd February; you had packed all the quartz at that time. In what respect did we fail to comply with our agreement? In every respect.

By John Ackermann: You say the ground where the quartz was was the Company's? Yes. How was it that you were prevented from crushing the quartz at the time you have mentioned in the first part of your evidence? In deference to the managing director's instructions. What legal authority had he to apply for an injunction? Instructions from Mr. Russell.

Enoch Goodwin, being duly sworn, saith :—I am a miner, and hold a miner's right; I reside at Hill End; on the 22nd February or thereabouts I was requested by Messrs. Helsby and Ackermann to pack a parcel of quartz from the claim known as Johnson's, on Hawkins Hill; I was to deliver the quartz at Beyer's machine; the quantity was 7½ tons; the defendants were

were on the ground, Johnson's claim, and showed me the quartz—it was in a small heap; I was to be paid for packing and carting £4 2s. 6d.; I was paid by Mr. Ackermann; Mr. Stokes the Bailiff, took possession of this stone under an injunction.

The defendant.

By Mr. Ackermann: John Rossiter, being duly sworn, saith:—I am a miner, and resident at Tambaroora; I conducted the sale of the claim known as Johnson's in 1872; the transferrors were myself, John Ackermann, Mr. Bell, Mr. Puten, and Mr. Willis; I know the claim known as Johnson's; at the time of the sale there was a small heap of quartz at the top tunnel; everything was sold to the Company; this heap of quartz was sold with the claim for £6,000; everything that was on the claim was sold.

By T. Helsby: I was not aware that the lease was cancelled on the 1st of February.

By John Ackermann: The quartz was mentioned when the transfer was made.

This is the plaintiff's case.

*John Ackermann, being duly sworn, saith:—*I am a miner, and produce my miner's right; I reside at Hill End; on the 1st day of February last I and Thomas Helsby marked out and took possession of the ground known as Johnson's, late Gold-mining Company lease No. 1,741; on that day that lease was cancelled; I produce the Government Gazette of 1st February, wherein the cancellation appears; by the 46th Regulation now in force, when a lease is cancelled it becomes Crown lands, and on this Regulation we took possession of the quartz; we authorized Mr. Goodwin to pack the quartz in dispute to Mr. Beyer's machine, where it was crushed; the returns were 6 ozs. and 1 dwt. of gold; I produce a document signed by the man who receives the gold at Mr. Beyer's machine; the gold is worth £3 15s. an ounce; the expenses of crushing were £6 15s.; the Manager still holds the gold, as far as I know, because he has not been paid for crushing; I have not received anything out of the crushing, and I took the quartz because I really regarded it as ours, because we had taken up the lease when it was cancelled.

By Mr. Barrie: We took possession of the ground the same day we heard the lease was cancelled.

The Warden's Court finds a verdict for the plaintiff with costs, and orders the gold obtained from the quartz taken from the ground known as Johnson's claim, formerly lease 1,741, to be delivered to the plaintiff's agent, Mr. James Barrie, on his paying the expenses of carting and crushing, viz., £4 2s. 6d. and £6 15s.

Mr. Warden Sharpe to Mr. Alfred Bullock.

Warden's Office, 7 March, 1876.

You are hereby authorized to hand over to the bearer the gold obtained from 7½ tons of quartz crushed by you for Messrs. John Ackermann and Thomas Helsby, on payment to you of the expenses of crushing, £6 15s.

ERNEST SHARPE,
Warden.

Warden's Court, 23 February, 1876.

In the matter of the application of James Barrie and Thomas Wythes for an injunction under the 88th section of the "Mining Act of 1874."

*James Barrie, being duly sworn, saith:—*I am a commission agent and gold-miner, resident at Hill End; I am the Manager of Johnson's Gold-mining Company, and a shareholder in that Company; yesterday afternoon I went down to the ground known as Johnson's claim and found that about 4 or 5 tons of quartz, the property of Johnson's Gold-mining Company, had been removed; it had been taken from the lease on Hawkins Hill by Goodwin a packer, and placed on the top of Hawkins Hill; I asked him by whose authority, and he informed me by pointing at and naming Michael Ackermann and Thomas Helsby; I told them I should take proceedings against them for removing the quartz; Ackermann the elder (the younger was present but said nothing) said I was to mind my own business or else that I was too sharp; I have heard that the lease in question was cancelled, the number is 1,741; the quartz in question is the property of the Company; I was informed by Mr. Anderson the Managing director that it would yield, if crushed, about 3 ozs. to the ton; I myself have received instructions from the legal Manager to have this identical quartz crushed for the benefit of the Company, but from a difficulty about the crushing machine we were delayed; I believe Messrs. Ackermann and Helsby are applicants for the cancelled lease in question; I ask that an injunction for seven days may be granted to prevent Ackermann and Helsby from removing the said quartz from the spot where it is now lying, or in any way interfering with or disposing of the said quartz; I am not aware whether John Ackermann is a shareholder in Johnson's Gold-mining Company, but I have heard him spoken of as one; he worked in the mine for a time, but as a wages man; I am informed that Messrs. Ackermann and Helsby are preparing to cart away the quartz from the spot where it was placed by the packer; I should have applied under the 87th section of the Act but for this.

Taken and sworn before me, this 23rd day of February, 1876,—

JAMES BARRIE.

ERNEST SHARPE.

*John Ackermann, being duly sworn, saith:—*I am a miner, and I have heard the evidence of Mr. Barrie; the reason we have taken the quartz is because the lease is cancelled, and we think the Company have no right to it; we marked out the cancelled lease first; I was one of the original shareholders, and took out, with others, the quartz in question; this was over six years ago; after this the Company was floated and the mine was transferred to the trustees of Johnson's Gold-mining Company; I signed the deed of settlement; we claim the quartz because the lease is cancelled.

Taken and sworn before me, this 23rd day of February, 1876,—

JOHN ACKERMANN.

ERNEST SHARPE, Warden.

Application granted, such injunction to be in force for a period of seven days.

Warden's Court, Hill End.

UPON hearing James Barrie, agent for Johnson's Gold-mining Company, and a shareholder in the said Company, I, Ernest A. L. Sharpe, a Warden of the Tambaroora and Turon Mining District, do hereby order and enjoin you, John Ackermann, Michael Ackermann, and Thomas Helsby, all gold-miners, and residents of Hill End, or any person or persons authorized by you on that behalf, from interfering with or removing from the spot where it now lies, a certain heap of quartz or stone removed by you from the lease known as No. 1,741, situated on Hawkins Hill, on the 22nd February instant, and which is claimed by the said James Barrie as the property of the said Johnson's Gold-mining Company.

This injunction will remain in force for a period of seven days from this date, inclusive of the day on which it is made.

Given under my hand, this 23rd day of February, 1876,—

ERNEST A. L. SHARPE,
Warden.

Gulgong, 3 August, 1876.
I SHALL be at Hill End on Saturday next to hold inquiry into the matter of Helsby and Ackermann—to commence on Monday 7th August. Please answer if convenient. Reply by telegram quickly.
WARDEN BROWNE.

Telegram from Mr. Warden Browne to Mr. Warden Sharpe.

Gulgong, 3 August, 1876.
HAVE received instructions from Minister for Mines to inquire into complaint of Helsby and Ackermann against you and report thereon.
WARDEN BROWNE.

No. 58.

The Under Secretary for Mines to Messrs. Helsby and Ackermann.

Gentlemen, Department of Mines, Sydney, 28 August, 1876.

In reference to the complaint made by you against the Warden at Hill End, in the matter of the dispute between you and Mr. James Barrie as to the right to a certain parcel of quartz at one time lying on a claim known as Johnson's at the above-named locality, I am directed by the Secretary for Mines to inform you that the inquiry asked for by you in your letter of the 19th June last has been held, and Mr. Warden Browne has furnished a report to the effect that the charges preferred by you have not been substantiated.

I have, &c.,

HARRIE WOOD,

Under Secretary for Mines.

No. 59.

Messrs. Helsby and Ackermann to The Minister for Mines.

Sir, Hill End, 1 September, 1876.

We are in receipt of your communication of 28th August, informing us "that an inquiry has been held into the charges preferred by us against Mr. Warden Sharpe, and that Mr. Warden Browne reported that we failed to substantiate such charges."

We were fully impressed with the belief that we proved every one of the charges against Mr. Sharpe, and at the inquiry Mr. Sharpe scarcely offered any defence.

We made application to Mr. Warden Browne for a copy of the depositions, and that gentleman promised to furnish us with said copy, but up to the present time he has not fulfilled his promise.

We now respectfully beg the Hon. Minister for Mines to cause us to be supplied with copy of said depositions, also with copy of Mr. Warden Browne's report. We are ready at any moment to pay the cost of making such copies; in fact, by you informing us of the amount, we shall at once remit it before even we receive the copies.

We are, &c.,

THOMAS HELSBY.

MICHAEL ACKERMANN,

(FOR JOHN ACKERMANN).

Supply copies on the usual terms.—J.L., 5/9/76.

Messrs. Helsby and Ackermann.—7 September, 1876.

No. 60.

The Under Secretary for Mines to Messrs. Helsby and Ackermann.

Gentlemen, Department of Mines, Sydney, 7 September, 1876.

In reference to your letter of the 1st instant, requesting to be supplied with a copy of the depositions and of Mr. Warden Browne's report in the matter of the inquiry into the charge made by you against the Warden at Hill End,—I am directed by the Secretary for Mines to inform you that copies of the papers in question are now being made, and will be forwarded to you on payment of £4 16s.

I have, &c.,

HARRIE WOOD,

Under Secretary for Mines.

No. 61.

Messrs. Helsby and Ackermann to The Minister for Mines.

Sir, Hill End, 9 September, 1876.

In reply to your favour of 7th instant, we herewith enclose cheque for £4 16s., in payment of copies of depositions and Warden's report mentioned in the above favour.

We have, &c.,

THOMAS HELSBY.

MICHAEL ACKERMANN,

(FOR JOHN ACKERMANN).

Copies of depositions and Warden's report herewith. The receipt of the sum of £4 16s. may be acknowledged? Yes, and forward copies.—J.L., 18/9/76.

Messrs. Helsby and Ackermann with copies.—20 Sept., 1876.

No. 62.

The Under Secretary for Mines to Messrs. Helsby and Ackermann.

Gentlemen, Department of Mines, Sydney, 20 September, 1876.

I am directed by the Secretary for Mines to forward herewith a copy of the depositions taken at the inquiry into the matter of your charges against the Warden at Hill End, and a copy of Mr. Warden Browne's report thereon, in payment for which the sum of £4 16s. was enclosed in your letter of the 9th instant.

I have, &c.,

HARRIE WOOD,

Under Secretary for Mines.

No. 63.

Messrs. Helsby and Ackermann to The Minister for Mines.

Sir.

25 September, 1876.

We are in receipt of your communication of 20th September instant, together with copies of depositions and Mr. Warden Browne's report on the inquiry held into the charges preferred by us against Mr. Warden Sharpe, Hill End, for which we are extremely thankful.

We have carefully perused the evidence in the depositions, and also Mr. Warden Browne's report thereon, and we are painfully surprised that a gentleman filling the responsible position of Warden at Gulgong should have shown such gross partiality, in fact, should have displayed so glaring an advocacy in behalf of Mr. Warden Sharpe as is evidenced in Mr. Warden Browne's report. Mr. Warden Browne states that we have failed to prove *one* of our charges (meaning any one of our charges) against Mr. Warden Sharpe. We would humbly ask the Hon. Minister for Mines to peruse the depositions and judge for himself; he will there find the whole of the charges substantiated by the evidence of Helsby and Ackermann, and not denied by the evidence of Mr. Sharpe. The only charge that Mr. Sharpe attempts to deny is the first one—that of going to Helsby's residence and threatening him with imprisonment if he persisted in removing the quartz (*vide* Mr. Sharpe's evidence).

The second charge, which is distinctly proved by Helsby and Ackermann, and not denied by Mr. Sharpe, viz., that John Ackermann was called off the public street and compelled to give evidence, is made very light of in Mr. Browne's report. He states:—"Mr. Sharpe denies there was any compulsion used, in which he is supported by the evidence of Mr. Stokes. Well, Ackermann and Helsby both admit there was no force used, as Ackermann went upon oath when commanded to do so, believing that if he further refused he would have been locked up for contempt of Court."

Mr. Warden Browne dwells at considerable length on the third charge, and makes many statements in his report directly contrary to the evidence. For instance, he states that Mr. Barrie had a proper power of attorney, though not dated, whereas the evidence shows that Mr. Barrie had no power of attorney at the time the injunction was issued, and was not a registered agent. He was the owner of 200 scrip in Johnson's Gold-mining Company, and John Ackermann was the owner of 650 scrip in the same Company.

Charge No. 4 contains our principal complaint against Mr. Sharpe, and has been as clearly proved by us as ever any case was proved, and not in any way denied by Mr. Sharpe; yet Mr. Warden Browne had the effrontery to state in his report that we failed to prove any one of our charges. Mr. Browne gets over the difficulty of this *principal* charge by stating that "It does not come within the limits of the inquiry that he should review Mr. Sharpe's decision." Well, what was the use of the inquiry at all? The action complained of in this fourth charge is that we have suffered most by, and is the most glaringly illegal of Mr. Sharpe's proceedings. It is that we were summoned by Mr. George A. Russell, legal Manager of Johnson's Gold-mining Company, and that on our appearing to answer the charge at Warden's Court there was no plaintiff present, but a Mr. Barrie appeared with an undated power of attorney, and actually was allowed by Mr. Sharpe to become the plaintiff, and the result was that we were mulcted in the proceeds of our quartz and illegally saddled with expenses amounting to £4 5s. 6d., through the illegal partiality of Mr. Warden Sharpe, and, worst of all, were compelled to pay one guinea for Barrie's informal power of attorney.

We humbly solicit the Hon. Minister for Mines to read through the depositions, and he will then plainly see that we have proved our charges clearly, notwithstanding the partial report of Mr. Warden Browne; and, as the civil law can afford us no redress through the shelter afforded by the Mining Act to Mr. Sharpe, we hope the Minister will not suffer an officer in his department to commit wilful injustice with impunity.

We are, &c.,

THOMAS HELSBY.

MICHAEL ACKERMANN,

(FOR JOHN ACKERMANN).

Inform Messrs. Helsby and Ackermann that, at their request, an inquiry has been held into the matter of their complaints against Mr. Warden Sharpe, that the inquiry was conducted by one of the ablest judicial officers of this department, and that the department would not now be justified in discrediting or disregarding the report made by that officer; and invite attention to the fact that the proper remedy, in respect of their 4th complaint, was to appeal; and since they did not avail themselves of that right, there is now no power to review the decision complained of.—J.L., 29/9/76.

Messrs. Helsby & Co., 3 October, 1876.

The Under Secretary for Mines to Messrs. Helsby and Ackermann.

Gentlemen,

Department of Mines, Sydney, 3 October, 1876.

In reference to your letter of the 25th ultimo, in which you express dissatisfaction at the result of the investigation held at Hill End, of certain charges made by you against Mr. Warden Sharpe, I am directed by the Secretary for Mines to point out that the inquiry was held at your request, and was conducted by one of the ablest judicial officers of this department, so that the department would not now be justified in discrediting or disregarding the report made by that officer.

3. I am further instructed to invite your attention to the fact that the proper remedy in respect of your fourth complaint was to appeal; but as you have not availed yourselves of that right, there is now no power to review the decision complained of.

I have, &c.,

HARRIE WOOD,

Under Secretary for Mines.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

DISPUTED MINING LEASE, HAWKINS HILL.
(PETITION OF THOMAS HELSBY.)

Ordered by the Legislative Assembly to be printed, 27 April, 1877.

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned,—

HUMBLY SHOWETH:—

That in reference to a mining lease No. 1741, situated at Hawkins' Hill, which we took possession of on the 1st and 2nd of February, 1876, and which Mr. Barry took possession of on the 14th of same month and served us with a written notice of objection to the granting of our lease, we appealed against it about the middle of April as we had not received legal notice by the Gold Fields Act. We objected to same and appealed for a dismissal of the case, which the Warden overruled, saying that he had discretionary power and would hear it. He declined to take our evidence, as he said he was the judge of what was evidence. We asked what objection he had to take our evidence and he said the Minister for Mines would be better pleased if he would not do so. We reported the matter to the Minister, and he said if the case was one wherein injustice had been done us by the Warden he would punish him for doing so. We have in our possession copies of the depositions in the case, for which we had to pay £4 16s. We waited on the Minister several times and explained to him that the case was not tried under the Mining Act, but merely by the Warden's discretionary power, and we have not received legal notice from Messrs. Barry and Macpherson up to the present. The only objection the Minister raises is that we paid our money too soon, that is, on the 5th of February. Under these circumstances we would most humbly pray your Honorable House to cause an inquiry into the case.

And your Petitioners, as in duty bound, will ever pray.

THOMAS HELSBY.

1876-7.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

DISPUTED GOLD MINING LEASES.

MESSRS. GRIMLEY AND READ, M'FADDEN AND PARTY (AFTERWARDS GORDON KORFF), AND DREIER AND SMITH.

Ordered by the Legislative Assembly to be printed, 31 July, 1877.

PAPERS in connection with the dispute between the Lessees of Gold Mining Leases 1,826 (Messrs. Grimley and Read), and 3,991 (M'Fadden and Party, afterwards Gordon Korff), and Messrs. Dreier and Smith.

DISPUTED GOLD-MINING LEASES.

No. 1.

Mr. G. Korff to The Under Secretary for Mines.

Sir, 44, New Pitt-street, Sydney 23 March, 1876. Having observed in the Gazette of March 17th, that gold lease 3,991 (T. M'Fadden & others) is advertised as ready for execution, I have the honor to request that such lease may be returned to Department in Sydney, as the lessees are prepared to execute here.

I have, &c., GORDON KORFF.

Mr. Anderson, 23-3-76. This lease was forwarded to Mr. Warden Sharpe on 17th instant.—P.A., 23. Send telegram to Mr. Warden Sharpe, asking him to return lease No. 3,991.—H.W., 23-3-76. Telegram, 23 March, 1876.

No. 2.

Telegram from The Under Secretary for Mines to The Warden, Hill End.

Sydney, 23 March, 1876. PLEASE return to this office gold-mining lease number three thousand nine hundred and ninety-one (3,991), sent to you on the seventeenth instant for execution by the lessees, Messieurs M'Fadden and others.

No. 3.

The Warden, Hill End, to The Under Secretary for Mines.

Sir, Warden's Office, Hill End, 24 March, 1876. Referring to your telegram of the 23rd instant, I have the honor to transmit herewith the gold lease noted in the margin, for execution by the lessees. No. 3,991, M'Fadden and others.

I have, &c., ERNEST SHARPE, Warden.

Inform Mr. Korff that the lease 3,991 is now in this office ready for execution, and request him to direct the lessees to execute it forthwith.—J.L., 27-3-76. Informed, 27 March, 1876.

No. 4.

The Under Secretary for Mines to Mr. G. Korff.

Sir, Department of Mines, Sydney, 27 March, 1876. Referring to your letter of the 23rd instant, I am directed by the Secretary for Mines to inform you that gold lease No. 3,991, in the names of T. M'Fadden, T. Hickey, and H. Hernfield, is now in this office; and I am to request you to be good enough to call upon the lessees to execute such lease forthwith.

I have, &c., HARRIE WOOD, Under Secretary for Mines.

No. 5.

Mr. G. Korff to The Under Secretary for Mines.

Sir, 44, New Pitt-street, Sydney, 3 April, 1876. Having had the honor of an interview with you on Friday, March 31st, respecting a gold lease, No. 3,991, of 8 acres, situated on the "Poor Man's Line of Reef," at Ironbarks, applied for by Thomas M'Fadden, Timothy Hickey, and Henry Hernfield, on the——, I beg to give a statement of my claiming the said lease:—One-third of said lease from Thomas M'Fadden to me by transfer dated March 16/74, and by power of attorney; one third of said lease from Timothy Hickey to me by transfer and power of attorney; one-third of said lease from Henry Hernfield to Thomas W. Webb transferred October 2nd, 1873, and then from Thomas W. Webb to George Crow by transfer January 5th, 1874, and then from George Crow to me by transfer March 16th, 1874.

All the papers relating to the above I enclose, and I beg to request that a lease may be issued direct to me as early as possible. I have, &c., GORDON KORFF.

Make search; and if no encumbrances, transfers may be accepted subject to payment of fees, and the leases may be issued to the transferees.—6/4/76.—J.L. Registrar General, 8 April, 1876.

End of month. Include in list for search in Mining Registrars' Offices.—H.W., 20/4/76.

In the Supreme Court of New South Wales.—In Insolvency.

Voluntary Sequestration.

To His Honor the Chief Commissioner of Insolvent Estates for New South Wales.

The Petition of Henry Hernfield, now of Ironbarks, lately residing at Ironbarks aforesaid, storekeeper,—
Sheweth :—

That your petitioner, by misfortune and without any fraud or dishonesty on his part, has become and is insolvent, wherefore he is desirous of surrendering his estate for the benefit of his creditors according to law; and he hereby does surrender the said estate, and prays that the same may be placed under sequestration accordingly.

Dated this first day of March, one thousand eight hundred and seventy-five.

HENRY H. HERNFIELD.

The

The petitioner having satisfied me by his above petition, and his affidavits annexed, that he is insolvent, I hereby accept the surrender of his estate, and order that it be placed under sequestration according to law, and I appoint Mr. Frederick Thomas Humphrey to be Official Assignee of and in the said estate, and let the statement required by the Rule 20 in Insolvency be filed on or before the 25th day of March instant.

Given under my hand, at Sydney,
this 15th day of March, A.D. 1875,— }
GEORGE HIBBERT DEFFELL,
Chief Commissioner of Insolvent Estates.

I, George Hibbert Deffell, Chief Commissioner of Insolvent Estates in and for the Colony of New South Wales, do hereby certify the contents of the above and preceding paper writing marked "A," and duly sealed, to be true extracts from the Proceedings of Record in the insolvent estate of Henry Hernfield, of Ironbarks, storekeeper.

Dated at Sydney, the 28th
day of January, A.D. 1876,— }
GEORGE HIBBERT DEFFELL,
Chief Commissioner of Insolvent Estates.

[Enclosure 12 to No. 5.]

Gold Mining Lease Regulations.—Schedule 13.

Transfer of Gold Mining Lease.

I, FREDERICK THOMAS HUMPHREY, of Pitt-street, Sydney, Official Assignee of Henry Hernfield, registered as the part lessee of all that piece or parcel of land demised by a certain gold-mining lease by Her Majesty the Queen to M'Fadden, Hickey, and Hernfield, and dated the 28th day of February, 1876, and numbered in the register , in consideration of the sum of £10 paid to by the transferee, the receipt of which sum I hereby acknowledge, do hereby transfer to the said Gordon Korff, of Pitt-street, Sydney, all my right, title, and interest in and to the piece or parcel of land demised as aforesaid. And I, Gordon Korff, do hereby accept transfer of the right, title, and interest of the said Frederick Thomas Humphrey in and to the demised land aforesaid, subject to the provisions of the "Mining Act, 1874," and the Regulations made thereunder; and I hereby agree to be bound by all and singular the terms, conditions, covenants, provisos, restrictions, and reservations contained in the said lease.

No. 6.

Mr. G. A. Waddell to The Under Secretary for Mines.

Sir,

Orange, 5 May, 1876.

I beg to request that you will favour me with the following information, viz.:—The date of application of Mining Lease at Ironbarks, 10 acres, on "Poor Man's Reef," taken up in names of Messrs. Grimley and Read, about 28 March, 1872, also the local number of same. Lease referred to appears in *Government Gazette* as No. 1,826.

Warden at Bathurst refers me to you for the above information.

I have, &c.,

GEO. A. WADDELL.

1,826.—Date of application, 29th March, 1872. The application was made to the Commissioner at Bathurst, there is therefore no local number.—P. A., 8/5/76. Inform as above, and state how it stands.—J. L., 9/5/76. Send telegram to Warden Sharpe asking whether Lease No. 1,826 has been executed by the lessees, and if so to return it.—H. W., 11/5/76. Telegram.—13/5/76. Any reply, if not remind.—H. W., 16/5/76. Telegram.—16/5/76. Informed.—16/5/76.

Memorandum, 17 May, 1876.—To the Under Secretary for Mines.

In his return of collections for the month of April; Mr. Warden Sharpe includes £25 as rent of G. L. 1,826, Grimley and Read, per A. McLerie, on execution; and the date given is 24 April, 1876, but by the telegram now to hand (of this day's date) it appears that the lease has not been executed.

The amount, £25 is at suspense account, at the Treasury, pending a decision as to whether I, as Registrar, shall give a receipt for the rent or any other course be adopted.

The Warden's Clerk at Hill End has already been instructed not to receive rents on gold leases. If I am not mistaken such notice has been sent him more than once; and I would respectfully suggest that Mr. Warden Sharpe's attention be also called to the matter, and that he may be asked to remit directly to this department in future. By so doing much confusion will be avoided.—T. C. B.

Mr. Warden Sharpe may be informed as above, and requested to explain the circumstances under which he received the rent in question.—H. W., 17/5/76. As the lease has been returned no further action is necessary.—H. W., 22/5/76.

No. 7.

Telegram from The Under Secretary for Mines to The Warden, Hill End.

Sydney, 13 May, 1876.

HAS gold lease number eighteen hundred and twenty-six (1,826) been executed by the lessees; if so, please return it to this office.

No. 8.

Telegram from The Under Secretary for Mines to The Warden, Hill End.

Sydney, 16 May, 1876.

PLEASE return Gold Lease number eighteen hundred and twenty-six (1,826), asked for by my Telegram of the thirteenth instant, if executed by the lessees.

Telegram from Mr. P. Grimley, to The Warden, Hill End.

Orange, 12 April, 1876.

TELEGRAPH the amount due on Lease 1,826, "Poor Man's Reef," Ironbarks.

Informed, £25.—12/4/76. Mr. Macarthur,—This may be filed.—E.S., Warden, 18/4/76.

Enclosure 2 to No. 11.

Gold Mining Lease Regulations.—Schedule 12.

Form of Power of Attorney.

Know all men by these presents, that we, Peter Grimley of Orange, storekeeper, and John Read of Orange, miner, do hereby make, nominate, constitute, and appoint, and in our place or stead put, Alexander McPherson McLerie, of Hill End, to be our true and lawful attorney, for us and in our names and as our act and deed, to sign, seal, and take delivery of the Gold Mining Lease, No. 1,826, for which we on the twenty-ninth day of March, 1872, made application (No. at), under the provisions of the "Mining Act, 1874," and the Regulations made thereunder, and which has been or shall be granted and issued by the Governor, and for us and in our name to enter into all such covenants and agreements as we shall be required to enter into in and by the said Lease, and generally for us and in our name to do, execute, and perform all such other acts, deeds, and things as may be necessary or may be required to be done, executed, or performed in and about the application for and execution of such lease; and we do hereby ratify and confirm all and whatsoever the said Alexander McPherson McLerie shall lawfully do or cause to be done in or about the premises, by virtue of this power.

In witness whereof, we have hereunto set our hands and seals, this fifth day of May, 1876.

PETER GRIMLEY. (L.S.)
JOHN READ. (L.S.)

Signed, sealed, and delivered

By the abovenamed Peter Grimley, in the presence of,—

GEO. U. WADDELL

By the abovenamed John Read, in the presence of,—

MICHAEL REGAN.

No. 12.

Mr. P. Grimley to The Secretary for Mines.

Sir,

Sydney House, Anson-street, Orange, 8 June, 1876.

I do myself the honor to lay before you the following statement, relative to the Gold-mining Lease No. 1,826, situated on "Poor Man's Reef," at Ironbarks, and granted to P. Grimley and J. Read.

1st. On 29th March, 1872, Read and Ferguson pegged out the lease, and in the usual time Grimley paid the money to Mr. Johnson, Commissioner at Bathurst, in the name of the above lessees, Ferguson's name having been omitted.

2nd. It appears that after some time a person named M'Fadden wrote to Mr. Johnson to know if Grimley, Ferguson, and Read had a lease at "Poor Man's Reef," Ironbarks, to which Mr. Johnson replies that no application had been received in these names—when M'Fadden, I am informed, removed our pegs, though we had posted notices on the lease, and applied for some of our ground, which appears to have been granted.

3rd. Prior to our lease being granted, Mr. Fleming and party had been working on the lease, but on my notice being posted on the ground they desisted. But another party who also works on the lease refused and tore down the notice.

4th. I understand that the ground in which Fleming and party have ceased to work is that portion of our ground which was pegged by M'Fadden; and Fleming has cautioned our party that they are working in his ground. I may here state that I have a party of men at work.

5th.

5th. I see by the *Government Gazette* of 25th March, 1876, that M'Fadden's name for 8 acres, No. 3,991, Local No. 151, appears; which, as far as I am informed, is the ground pegged out by us, the present lessees. I believe that I am in a position to prove that M'Fadden moved our pegs and applied for a portion of our ground.

6th. Fleming's party, that ceased to work when notified to that effect, are waiting until M'Fadden's lease is cancelled to peg it out again, and as I am applying for an injunction, and have the Surveyor and Warden on the ground with the least possible delay.

7th. May I have the honor to request that you will be pleased to direct Lease 3,991 be not cancelled until Mr. Surveyor Simpson has again surveyed the ground, and Mr. Warden Sharpe has given his decision.

I have, &c.,
PETER GRIMLEY,
 Lessee, 1,826.

1,826.—Grimley and Read's 10 acres. Lease executed and delivered. 3,991.—T. M'Fadden & Co., 8 acres, adjoins above. Search now being made with reference to transfer to Gordon Korff. Papers herewith.—7/6/2,166. Both surveys made by Mr. L.-S. Simpson.—13/6/77, P.A.

Inform that Lease No. 3,991 is not likely to be cancelled for some little time, as search has to be made respecting transfer before it can be tendered.—J.L., 14/6/76. Mr. Grimley informed, 19 June, 1876.

No. 13.

The Under Secretary for Mines to Mr. P. Grimley.

Sir,

Department of Mines, Sydney, 19 June, 1876.

In reference to your letter of the 8th instant, requesting that Gold Mining Lease No. 3,991 may not be cancelled at present, on the ground that the land embraced thereby includes a portion of that demised to you by Gold Lease No. 1,826, I am directed by the Secretary for Mines to inform you that the said lease is not likely to be cancelled for some little time, as the necessary search for records of any transfers or incumbrances thereon is now going on, and until it be completed the lease cannot be tendered for execution.

I have, &c.,
HARRIE WOOD,
 Under Secretary for Mines.

No. 14.

Memo. from Mr. P. Grimley to The Under Secretary for Mines:

ANNEXED Post Office Order for registration of the within transfer.

P. GRIMLEY,
 7th June, 1876.

Transfer of Gold Mining Lease.

P. O. Order, 10s.
 10/6/76.—G.E.H.
 10s., P.O.O.—
 T.C.B., 12, 6/76.

JOHN READ, of Root Hog, Macquarie River, Gold Miner, being registered as the lessee of one-third of that piece or parcel of land demised by a certain gold mining lease by Her Majesty the Queen, to Peter Grimley, John Read, and known as the "Poor Man's Reef," Ironbarks, containing 10 acres, and dated the 1st day of July, 1873, and numbered in the Register 1,826, in consideration of the sum of £10 paid to me by the transferees, the receipt of which sum I hereby acknowledge, do hereby transfer to the said Peter Grimley and John Ferguson all my one-third right, title, and interest in and to the piece or parcel of land demised as aforesaid. And we, Peter Grimley and John Ferguson, do hereby accept transfer of the right, title, and interest of the said John Read of one-third share in the abovenamed lease in and to the demised land aforesaid, subject to the provisions of the "Mining Act, 1874," and the Regulations made thereunder; and we hereby agree to be bound by all and singular the terms, conditions, covenants, provisos, restrictions, and reservations contained in the said lease.

In witness whereof, we have hereunto subscribed our respective names this 21st day of April, 1876.

Witnesses to signatures,—

JAMES HOOKER.

BERNARD M'CONVILL.

JOHN READ, Transferror.

PETER GRIMLEY, Transferee.

JOHN FERGUSON, Transferee.

I, John Lucas, hereby sanction and authorize the transfer of the interest of John Read in the above-named lease to Peter Grimley and John Ferguson.

Dated at Sydney this 14th day of June, 1876.

JOHN LUCAS.

I HAVE this 14th day of June, 1876, at the hour of 2 o'clock in the afternoon, registered the above-named transferees as the holders of the Gold Mining Lease No. 1,826.

T. C. BINNEY,
 Mining Registrar.

Messrs. Grimley & Ferguson informed, 14/6/76.

No. 15.

Memo. from The Under Secretary for Mines to The Registrar General.

Department of Mines, Sydney, 12 June, 1876.

WILL the Registrar General be good enough to state whether any transfer or incumbrance has been registered in his Office against or in respect of any of the undermentioned gold leases?—

No. of Lease.	Names in full of Lessees.	Area.	Locality.	Date.
1,826	P. Grimley and J. Read.....	a. r. p. 10 0 0	Co. Wellington, parish of Ironbarks.	1 July, 1873.

B.C., 12th June, 1876.—H.W.

THERE is no transfer or encumbrance registered against the within leases.—JAS. BOSCAWEN DUFF, Deputy Registrar, 13/6/76.

No. 16.

The Mining Registrar, Ironbarks, to The Under Secretary for Mines.

Sir,

Mining Registrar's Office, Ironbarks, 16 June, 1876.

In compliance with your circular letter of the 13th instant, I have the honor to return you herewith List of Leases, and a transfer from H. Hernfield, in No. 3,991, to T. W. Webb.

As regards a re-transfer from Webb to Hernfield, under which Mr. D. C. B. Fleming claims to have a portion of this lease, I have made careful search, and there is no such transfer on the books; moreover, Mr. Hernfield admitted to me that the transfer in question had never been registered.

I have, &c.,
S. LANDAUER,
Mining Registrar.

[Enclosure 1 to No. 16.]

Form of Transfer.—Schedule X.

I, HENRY HERNFIELD, of Ironbarks, in consideration of the sum of fifty pounds (£50), do hereby transfer to Thomas William Webb, of Ironbarks, my right, title, and interest in and to one-third ($\frac{1}{3}$) of the whole of eight (8) acres on the "Poor Man's Reef," situated at Ironbarks, subject to all and singular the terms and conditions under which the said share has been held by me; and I, Thomas William Webb, of Ironbarks, do hereby accept of the said one-third ($\frac{1}{3}$) share, subject to the terms and conditions aforesaid.

Dated at Ironbarks, this 2nd day of October, 1873,—

Witness to signature—
M. HANLY.

H. HERNFIELD, Transferor.

Witness to signature—
M. HANLY.

THOS. W. WEBB, Transferee.

No. 17.

Mr. P. Grimley to The Secretary for Mines.

Sir,

Sydney House, Anson-street, Orange, 11 August, 1876.

Referring to the Lease 1,826, situated at "Poor Man's Reef," Ironbarks, and in reference to which I have addressed you on a former occasion.—I do myself the honor to inform you that I have written to Mr. Surveyor Simpson, at Wellington, on 8th and 22nd ultimo, requesting him to proceed to the lease and re-survey it, for which I would pay him; but up to the present time I have received no reply, and as parties are working in our ground I can do nothing until re-surveyed. I am informed that Mr. Simpson is not absent from Wellington.

Would you be pleased to direct Mr. Simpson to re-survey, as I can do nothing without his report.

I have, &c.,
P. GRIMLEY,
Lessee.

The Chief Mining Surveyor might perhaps ask Mr. L.-S. Simpson whether he has any objection to make the survey, and to request that if not he will make it as speedily as possible, at the expense of the lessees.—J.L., 15/8/76. Mr. Licensed Surveyor W. B. Simpson, for action accordingly.—ROB. D. FITZGERALD, Chief Mining Surveyor, B.C., 28th Aug., 1876. 29th. Replied to in my letter, 21st October, 1876.—W. B. SIMPSON, L.S.

No. 18.

Mr. G. Korff to The Under Secretary for Mines.

Sir,

44, New Pitt-street, Sydney, 10 August, 1876.

I have the honor to inform you, that I addressed you a letter, dated the 3rd April last, referring to a gold lease, 3,991, at Ironbarks, to which I have not yet received any reply. As this delay in not giving me the above lease is causing me very serious loss, in consequence of Mr. Fleming still working the ground in defiance of and against my wishes, which he has been doing the last twenty months, I beg very respectfully to request that you will cause the aforesaid lease to be issued to me at once, to enable me to take other proceedings. Requesting your early reply and attention to this subject,

I have, &c.,
GORDON KORFF.

Inform that search is being made to ascertain whether there are any encumbrances to prevent the issue of the lease to the transferees, and that nothing can be done in the matter of the issue of the lease till the search is complete.—J.L., 14/8/76. Informed, 19 Aug., 1876.

No. 19.

The Under Secretary for Mines to Mr. G. Korff.

Sir,

Department of Mines, Sydney, 16 August, 1876.

In reply to your letter of the 10th instant, complaining of the delay in issuing Gold-mining Lease No. 3,991, I am directed by the Secretary for Mines to inform you that search is being made in the office of every Mining Registrar throughout the Colony, for the purpose of ascertaining whether there are any transfers or encumbrances to prevent the lease being issued to the transferees, and that no further action can be taken in the matter until the search is complete.

I have, &c.,
HARRIE WOOD,
Under Secretary for Mines.

No. 20.

Mr. P. Grimley to The Secretary for Mines.

Sir,

Sydney House, Anson-street, Orange, 4 September, 1876.

I beg again to refer to Grimley and Read's Gold-mining Lease 1,826, situated at "Poor Man's Reef," Ironbarks, and also to refer to my first and second letters relative to it. I cannot get an injunction, as I cannot get the ground re-surveyed. Mr. Simpson has not done so as yet.

I took up the ground in March, 1872, paid deposit, and have in April last executed lease, and I am powerless to do anything but stand by and look at men working my ground on the block and robbing me of my gold. These men have no property that I could have any satisfaction, or could I cause them to refund as they may be in Victoria before I could do anything.

May I request that you will be pleased to instruct that I be put in possession of the ground that I have originally marked out, and for which I paid. Some immediate step is necessary to stop this robbing.

I have, &c.,

PETER GRIMLEY.

As I understand this case, Mr. Grimley complains that the parcel of land of which he took possession, and for which he applied to lease, was not surveyed for him, but owing to his pegs having been removed was surveyed for some other persons; and that the parcel of land, a lease of which has been issued to him, is not that for which he applied; and he wishes the land re-surveyed in order to prove the truth of his statement. In the meantime, he says, persons are taking gold out of the land which he claims, and he cannot procure an injunction to restrain them. The papers have been sent to the surveyor respecting the re-survey; perhaps the Warden might be asked why he does not grant an injunction, and to inquire into and report upon the matter in complaint.—H.W., 6/9/76.

Approved.—J.L., 6/9/76. Mr. Warden Lane.—B.C., 7 Sept., /76. To be returned.

Ironbarks is in the Tambaroora and Turon District. Nothing in connection with the matter has passed through this office.—JOHN T. LANE, Warden, Orange, 12/9/76. The Under Secretary for Mines, Sydney.

This appears to have been sent to Orange in error. Mr. Warden Sharpe.—B.C., 13 September 1876.—H.W. I annex report.—ERNEST A. L. SHARPE, Warden. The Under Secretary for Mines, Sydney.—B.C., October 6th, 1876.

Can Mr. Landauer give me any information with reference to this case? Is not the land claimed by Mr. Grimley, Lease No. 1,692, name of applicant, Gordon Korff? *No.*

Has not the lease been issued to Gordon Korff or his transferees? *No.*

Is not he or are not they in possession and working the said lease? *No.*

18/9/76.

The Warden's Clerk, Ironbarks. To be returned.

ERNEST A. L. SHARPE,

Warden.

No. 21.

Report of the Warden, Hill End, to The Under Secretary for Mines.

In July last I went over to Ironbarks to hear Mr. Grimley's application for an injunction to prevent certain parties from working his lease, No. 1,826. I made all inquiries possible, and visited that lease. I found the parties complained of were not working on Mr. Grimley's lease, but on the adjoining one—which is, I think, No. 1,692, in the name of Gordon Korff. Under these circumstances, of course I could not grant the injunction applied for.

Mr. Grimley then stated to me that the 10 acres measured as No. 1,826 was not the land he applied for except 2 acres, and that the adjoining lease above-mentioned embraced the remaining 8 acres. Mr. Grimley also stated that he was not present when these leases were measured by the Mining Surveyor, and that certain parties had misled him for purposes of their own. On Monday last, the 2nd instant, I again visited Ironbarks to hear an application for an injunction by Mr. Grimley to prevent Messrs. Dreier and others from working Lease No. 1,826. From the evidence it appeared that the last-mentioned persons were working on that lease, and they stated that they knew that the land in dispute had been leased, but they were informed that the lease was cancelled; they then took up four men's ground under their Miners' Rights, and registered the claim. The necessary notices of their application were posted, and no objection lodged.

They admitted having received a notice from Mr. Grimley to stop work; but took no notice of it, as they did not believe he had any right to the ground, as he had said the *adjoining lease was his*.

At the close of the evidence, as there seemed some doubt as to the boundaries of the Lease No. 1,826, with the consent of the parties I made an order prohibiting both parties from working the ground in dispute, or removing any stone therefrom, until the surveyor had pointed out the boundaries, and Messrs. Dreier and party agreed to give quiet possession if they were within such boundary. I annex a rough sketch to show what Mr. Grimley claims as Lease No. 1,826.

ERNEST A. L. SHARPE,

The Under Secretary for Mines, Sydney.—B.C., 6th October, 1876.

Warden.

[Enclosure 1 to No. 21.]

Plan showing land claimed by Messrs. Grimley & Read.

No. 1,826.	No. 3,991.
10 acres.	8 acres.

Note.—The black lines show leases as at present measured. The dotted lines, the land claimed by Messrs. Grimley & Co.

Will the Chief Draftsman kindly have a tracing prepared for the U.S., showing the relative positions of Leases 1,826, 3,978, and 3,991, at "Poor Man's Reef," Ironbarks.—P.A., 6/10/76. Herewith.—W.S.C.

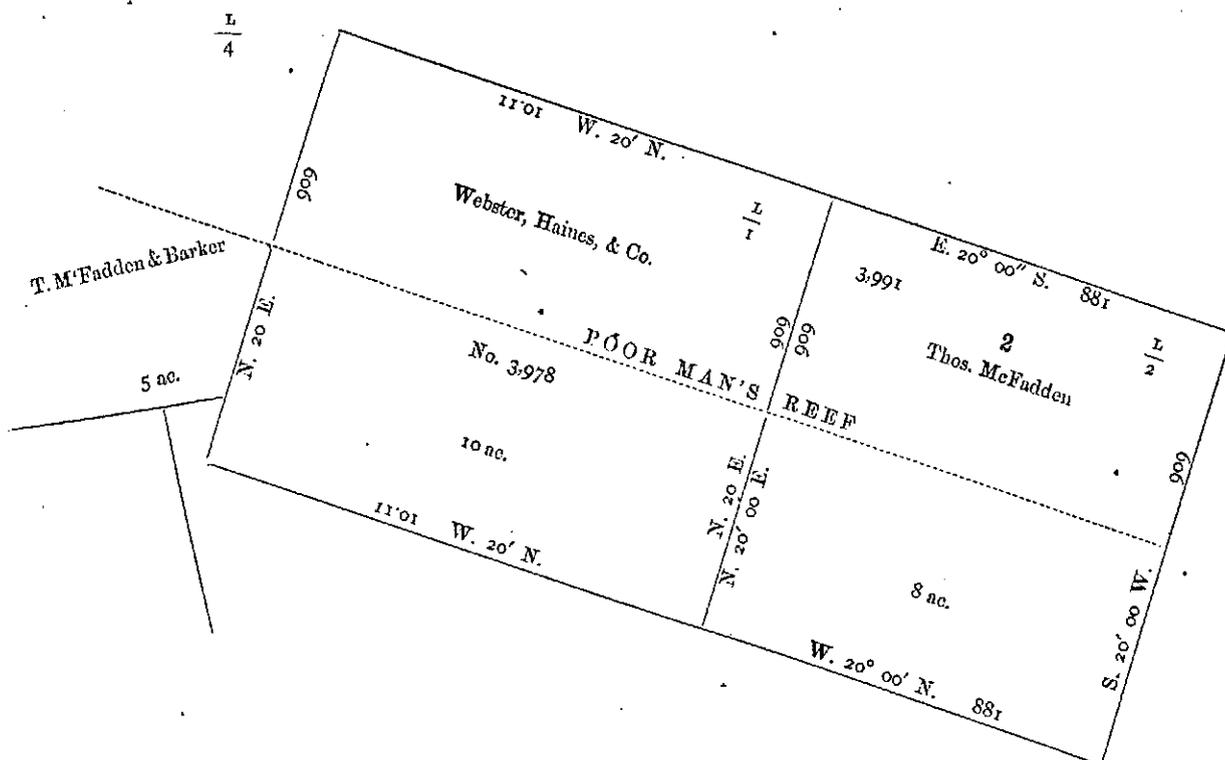

[Enclosure

[Enclosure 2 to No. 21.]

PORTIONS No. $\frac{L}{12}$ (AS SURVEYED.)

PARISH OF IRONBARKS, COUNTY OF WELLINGTON.

Applied for under the 7th clause of the Crown Lands Gold Fields Act of 1866, by—

Por. $\frac{L}{1}$ { Webster, Haynes, & Co.
Quartz Lease.Portion No. $\frac{L}{1}$

NOTE.—This is the same land as applied for by P. Grimley & Co., at Bathurst, 24 March; No. 1,826.

1,826.—Grimley & Read, executed and delivered, May, 1876. Applied for, 29th March, 1872.

3,978.—Webster, Haines, & Co., 30 days' notice published, 28/9/76. Applied for, 11th October, 1872.

3,991.—Transferred to Gordon Korff, search just completed, lease about to be prepared. Applied for 19th October, 1872.

Mr. L.-S. Simpson appears to have measured the same portion of land for 1,826 and 3,978, the plans furnished for each being identical. P.A., 9/10/76.

It will be seen by reference to the Warden's report and sketch, that Messrs. Grimley and Read complain that the wrong piece of land has been surveyed for them. Robert Smith, a miner (address, Post Office, Ironbarks), says an error has been made in the survey, and that James Harris (address, Post Office, Ironbarks) pegged out for Grimley and Co. and Robert McDougal, storekeeper, and William Scott, owner of crushing machine at Ironbarks, can testify as to the position of Grimley & Co.'s pegs, and that Henry Haudfield, "Post Office Hotel," knows McFadden's pegs. An application by Mr. Grimley for a re-survey of his land has been forwarded to Mr. L.-S. Simpson, with instructions to re-survey. Will the Chief Mining Surveyor be good enough to instruct Mr. Simpson to investigate the matter of the land taken possession of and surveyed for Messrs. Grimley and Read, Messrs. Webster, Haines, & Co., and Mr. McFadden, respectively, and report fully thereon with the least possible delay.—H.W., 10/10/76. Approved.—J.F.B., 10/10/76. Chief Draftsman, 11/10/76. Mr. W. B. Simpson instructed accordingly.—W.S.C., 12 Oct., /76, for Chief Mining Surveyor.

No. 22.

Mr. P. Grimley to The Secretary for Mines.

Sir,

Orange, 13 October, 1876.

I again beg to refer to Lease 1,826, Ironbarks. By appointment I met Mr. Warden Sharpe on the lease on 2nd instant, when he decided in Court that the Surveyor should come on the ground and point out the pegs, to which Dreier and Party consented that they would give up possession, meantime work to be suspended; I wrote at once to Mr. Mining Surveyor Simpson requesting his immediate attendance at Ironbarks and re-survey the lease, also to telegraph to me the day he would be there, also his fee so that if I could not go to meet him I would send cheque for the amount to my partner Ferguson, and up to the present time I have had no reply; this is my third letter without any reply. I can get no other

Surveyor,

Surveyor, and am at a loss to know what to do. I have had a great deal of trouble since the lease has been executed, and pray that it may be decided at once by survey, and that the land originally applied for by us may be granted.

I have, &c.,
P. GRIMLEY,

Lessee 1,826.

Inform the writer that Mr. L.-S. Simpson was instructed on the 12th instant to make the survey, on the understanding that he, the writer, will pay the costs. The Chief Mining Surveyor will please request Mr. L.-S. Simpson to inform Mr. Grimley on what date he will make the investigation and re-survey. H.W.—16/10/76. Informed Mr. Grimley.—20 Oct., '76.

The Chief Mining Surveyor.—B.C., 21 Oct., '76.—H.W.

No. 23.

The Under Secretary for Mines to Mr. P. Grimley.

Sir,

Department of Mines, Sydney, 20 October, 1876.

In reference to your letter of the 13th instant, complaining of the delay on the part of the Surveyor in the matter of your application for a re-survey of the land demised to you under Gold Mining Lease No. 1,826, I am directed to inform you that Mr. Licensed Surveyor Simpson was instructed on the 12th instant to make the survey of the said land, on the understanding that you will pay the cost of it.

I have, &c.,
HARRIE WOOD.

No. 24.

Mr. P. Grimley to The Surveyor General.

Sir,

Orange, 13 October, 1876.

I regret being compelled to report Mr. Mining Surveyor Simpson, Wellington, which I do under the following circumstances: Being lessee of a gold area at Ironbarks, and wishing to have the boundary defined, I wrote to Mr. Simpson on 8th and 21st of August, and also on 2nd instant, to proceed to Ironbarks and re-survey the ground, "as the Warden directed a re-survey"; and for him, Mr. Simpson, to telegraph to me the time he would be there and his fee, so that if I did not meet him I would send cheque to my partner, Mr. Ferguson, to pay him; and up to the present time he has not replied to any of my letters, which has caused a great pecuniary loss, as work is at present suspended. Will you be pleased to direct that he proceed at once and survey as directed.

I have, &c.,
P. GRIMLEY,
Lessee.

Inform that Surveyor has been so instructed.—H.W., 17/10/76.

No. 25.

Mr. L.-S. Simpson to The Under Secretary for Mines.

Sir,

Wellington, 21 October, 1876.

In compliance with instructions received in B.C., 29th August, 1876, from the Chief Mining Surveyor, and memo of instructions of the 12th October, 1876,—I have now the honor to transmit report on application by Messrs. Grimley and Read relative to their Gold Mining Lease, No. 1,826.

I visited the land in company with Ferguson, who was acting as representative for Messrs. Grimley and Read, and who stated that he now held Read's interest, and Henry Dreier, representative for Dreier and Smith, who applied for a quartz claim of 120 feet at the Mining Registrar's, Ironbarks, on the 24th August, 1876. I found that Dreier and Smith had been working on the leased land formerly surveyed by me for Grimley and Read, and there was a considerable quantity of stone on the ground raised by them. Messrs. Grimley and Read in the first instance claimed the adjoining lease of 8 acres applied for by Thomas McFadden; they a short time ago prevented a Mr. Fleming from taking stone from the lease, stating it was their 10 acre lease; subsequently they claimed the land worked by Dreier and Smith as their 10-acre lease, which is the case.

Relative to the remarks by Grimley and Co., that I had been misled in the original survey of their land is not correct, as I was guided by the notices on the pegs, in my surveys made on the "Poor Man's Reef" in 1863, and surveyed the lands accordingly, there not being anyone present to represent the leases or in any way to mislead me. The facts of the case are, that when Grimley and Ferguson ascertained that Mr. Fleming, owner of a crushing machine, was obtaining stone from the "Poor Man's Reef" under the impression that the leases were abandoned, they made a claim that the blow in which he was working was on their land; subsequently, when they ascertained that Dreier and Smith were obtaining stone from the "Poor Man's Reef," they claimed their workings as on their lease, thus claiming the whole of the reef as being some part of their 10 acre lease. Messrs. Grimley and party have not done any work on their own ground, with the exception of what has been done lately by Dreier and party. There has been no work done on their ground since the application for lease. They have not even put large square pegs on the land as required. The adjoining leaseholder McFadden had. With the exception of one, I found the whole of my pegs on the land and plainly marked as I had driven them four years ago, and at the present time, Ferguson said that he did not know where his 10-acre lease was until I came on the ground to show him the pegs.

I am of opinion that as the regulations have not in any way been complied with by Grimley and Party, their lease should be by their own action forfeited, and that Dreier and Smith who have actually procured the stone have the better right to it, although it was taken from the land originally applied for by Grimley and Read.

The

The application by Webster, Haines, & Co., No. 3,978, of 10 acres, was intended to embrace the same portion of land as formerly applied for by Grimley and Read; this application for lease appears to be abandoned by the applicants, as nobody claims on their behalf, and being subsequent to lease by Grimley and Party could not be entertained.

I have, &c.,

W. B. SIMPSON, L.-S.

Send copy of this report to the Warden; inform Messrs. Grimley and Read of the result of the surveyor's investigation, and that they will be required to observe the labour conditions of the lease.—H.W., 24/10/76.

Submitted. Approved.—J.F.B., 25/10/76. Mr. Simpson's charge is submitted; it appears to be reasonable.—W.S.C.-26. The Under Secretary for Mines.

The account may be submitted. Submitted. Vide Minute of 15/8/76.—E.F.

[Enclosure 1 to No. 25.]

No. 26.

Messrs. Dreier & Smith to The Secretary for Mines.

Sir,

Ironbarks, 28 October, 1876.

We, the undersigned, being holders of an ordinary claim of 120 feet on a quartz reef known as the "Poor Man's Line of Reef," Ironbarks, said claim being situate in a northerly direction 2 chains from McFadden's lease of 8 acres. The claim in question is in a lease held by Webster and party, whose permission we had to mine on the ground; we commenced work about the middle of March last, and registered our claim on the 13th April following, and carried on operations in the mine without interruption up to the 2nd October, upon which date Mr. Sharpe, Warden for the district, held a Court at the suit of Messrs. Grimley and Read, and decided that we cease to work on the claim, and put Messrs. Grimley and Read in possession thereof, upon the grounds that they were the original lessees whose claim dated prior to Webster and Party. On or about the 17th April last, Messrs. Grimley and Read gave notice to Bailey and Party, then in occupation, and mining in ground known as McFadden's lease of 8 acres, before mentioned, to cease work, which was complied with; and Messrs. Grimley and Read took possession of same, which they held up to 2nd October. We beg leave here to remark that Messrs. Grimley and Read in this instance put forward claims identical with those assumed at a subsequent date to dispossess us of our claim. When Mr. Warden Sharpe ordered us to cease work we complied, protesting at the same time against the proceedings, for reasons hereinunder mentioned. Firstly, we were not aware that Messrs. Grimley and Read held a lease on or had any claim to the ground, said ground being known as Webster and Party's lease of 10 acres. Secondly, having permission from Webster and Party to mine on said ground. Thirdly, we considered ourselves in lawful occupation of the ground by virtue of Miners' Rights; and having from the time of taking up the ground until ordered by Mr. Warden Sharpe to cease work continuously carried on operations in the mine, both by our own and hired labour, in evidence of which from 60 to 70 tons of stone may be now seen on the ground, raised at a cost to us of £50, we think it a great wrong and hardship to be deprived of this, the more so as the stone appears to be of a better quality than any we have raised before, having been brought from a greater depth. To-day Mr. Ferguson and Party, representatives of Messrs. Grimley and Read, gave us notice to remove our tools from the ground and took possession thereof. We now submit our case, praying that you give the matter timely attention and take early steps to prevent us suffering such a loss.

We remain, &c.,

HENRY DREIER.
ROBERT SMITH.

Inform that a copy of the Surveyor's Report has been forwarded to the Warden, who will probably hold a further inquiry into the matter of Messrs. Grimley and Read's claims. It is not clear that the inquiry can affect the rights of Messrs. Dreier and Smith, as by their own showing they were occupying under Miner's Rights land demised by lease to other persons.—H. W., 31/10/76.

Submitted. Approved.—J. F. B., 31/11/76. Messrs. Dreier and Smith.—7/11/76.

No. 27.

No. 27.

The Under Secretary for Mines to Messrs. Dreier and Smith.

Gentlemen,

Department of Mines, Sydney, 7 November, 1876.

I am directed to acknowledge the receipt of your letter dated the 28th ultimo, with reference to the decision of Mr. Warden Sharpe respecting your quartz claim on the "Poor Man's Line of Reef," Ironbanks, and to inform you that a copy of the Mining Surveyor's report has been forwarded to the Warden, who will probably hold a further inquiry into the matter of Messrs. Grimley and Read's claims to the ground in question.

I am to state, however, that it is not clear that the investigation can affect your rights, as by your own showing you were in occupation under Miners' Rights of land demised by lease to other persons.

I am, &c.,

HARRIE WOOD,

Under Secretary for Mines.

No. 28.

Mr. E. Clarke to The Under Secretary for Mines.

[Immediate.]

Sir,

Mudgee, 4 November, 1876.

Ironbanks, near Wellington, Lease No. 1,826, Grimley & Read, and 3,978, Webster & Party, for same ground.

I have the honor, with reference to the two leases mentioned in the margin, to bring under your notice the following, and to apply on behalf of Henry Dreier and Party that the Lease No. 1,826, held by Grimley and Read, may be cancelled for non-fulfilment of the labour conditions.

It appears Grimley and Read applied for ground in Lease 1,826, on 2 March, 1872. Some time afterwards, finding ground vacant, and no pegs, &c., Webster and party applied for the same ground; it was surveyed, and Lease No. 3,978 granted to them. Webster and party gave permission to Dreier and party to work a quartz claim (120 feet on the base line) within the leased ground, and they worked accordingly, and have raised some 60 or 70 tons of payable stone—having worked since the early part of the year. Messrs. Grimley and Read now claim the ground as theirs, under Lease 1,826, and upon the 2nd October Mr. Warden Sharpe ordered Dreier and party to discontinue trespass. Dreier and party have not yet left the claim.

They ask for the Lease 1,826 to Grimley and Read to be cancelled for non-fulfilment of labour conditions, upon the following facts:—Grimley and Read, in taking possession of their supposed ground, took possession of McFadden's Lease of 8 acres, which was being worked by a Mr. Fleming with fifteen miners, turning Fleming and his men out. Grimley and Read worked this ground for nine weeks and then knocked off, and four months afterwards finding my clients, Dreier and party, are obtaining gold, claim Webster and party's lease as theirs, and the Warden gives them possession or orders it to be given.

It is but fair to the Warden to state, that the surveyor stated Dreier's claim is upon what is included in Lease 1,826, and at the same time to mention that the ground in 1,826 is the same ground as granted to Webster in Lease 3,978. Upon 1,826 Grimley and Read have never done any work at any time, nor did they claim it until lately when they found Dreier and Co. obtaining payable stone.

Whether there has been any mistake in the last survey, or how it came to pass that the same piece of ground has been surveyed, paid for, and leased twice,—and whether leaseholders without claiming the ground or interfering in any way with it for over four years, to the detriment of four working miners who have worked seven months and discovered good stone, can now obtain it,—are matters to which I beg respectfully to draw your attention, with a view to justice being administered between the parties.

I have, &c.,

EDW. CLARKE.

Date of issue of lease to Grimley & Read? Date of Grimley's first letter objecting to survey, &c.? Date of execution of lease, 18th May, 1876.

On 8th June complained of error in survey; complaint not yet disposed of. Dreier & Smith can show no title, as they claim under Miners' Rights, in virtue of a permission given by Webster and party, whose title is of a later date than Grimley & Read's.

If it should turn out that the wrong piece of land has been surveyed for Grimley & Read, their lease could not be declared forfeited for not proceeding to work, seeing that under the lease they might have been working land which did not belong to them.

Acknowledge receipt, and inform that this statement shall be considered in connection with the matter in dispute respecting Messrs. Grimley & Read's lease.—H.W., 8/11/76. Mr. Clarke, 10/11/76.

These papers may be sent to Mr Warden Sharpe if he needs them. Ask the Warden by telegram.—H.W., 10/11/76. Telegram, 10/11/76.

No. 29.

The Under Secretary for Mines to Mr. E. Clarke.

Sir,

Department of Mines, Sydney, 10 November, 1876.

I am directed to acknowledge the receipt of your letter, dated the 4th instant, with reference to Gold Mining Leases Nos. 1,826 and 3,978, at Ironbanks, and to inform you that the statement therein made by you will be considered in connection with the matter in dispute respecting Messrs. Grimley & Read's lease.

I have, &c.,

HARRIE WOOD,

Under Secretary for Mines.

No. 30.

Telegram from The Under Secretary for Mines to The Warden, Hill End.

Sydney, 10th November, 1876.

PLEASE say if you require papers in matter of dispute respecting Messrs. Grimley & Read's lease, Ironbanks.

No. 31.

15

No. 31.

Mr. E. Clarke to The Under Secretary for Mines.

Sir,

Mudgee, 10 November, 1876.

May I urge upon you the case of Henry Dreier and Party as to Leases 1,826 and 3,978, in Ironbarks, Wellington, as contained in my letter of the 4th instant?

My clients inform me this morning that Grimley & Read are preparing to crush the stone raised by my clients, and worth some £300, and that the same will be crushed early next week.

I have, &c.,

EDWARD CLARKE.

As far as is known in the office, the stone has been raised from the land demised by lease No. 1,826 to Messrs. Grimley & Read, and therefore it does not appear how this department can aid Messrs. Dreier & Smith. The Warden will most likely hold further inquiry into the matter of the leases and lease applications on the "Poor Man's Line of Reef" as soon as he returns to Hill End. If, in the meantime, the writer desires to take any steps to protect his clients, there is an Acting Warden at Hill End.—H.W., 11/11/76. Mr. Clarke, 13/11/76.

No. 32.

The Under Secretary for Mines to Mr. E. Clarke.

Sir,

Department of Mines, Sydney, 13 November, 1876.

With reference to your letter, dated the 10th instant, further as to the conflicting applications of Messrs. Grimley and Read, and Messrs. Dreier and party, respectively, for certain land at "Poor Man's Reef," Ironbarks, I am directed to inform you that, as far as is known in this office, the quartz stone you allude to has been raised from the land demised by lease No. 1,826 to Messrs. Grimley and Read, and that therefore it does not appear how the Department can aid Messrs. Dreier and party in the matter.

2. The Warden will most likely hold a further inquiry into the question of the leases and lease applications on the "Poor Man's Line of Reef" as soon as he returns to Hill End; but if in the meantime you desire to take any steps to protect your clients, there is an Acting Warden at that place, who will, of course, take cognizance of any representations made on the subject.

I have, &c.,

HARRIE WOOD,

U. S. for Mines.

No. 33.

Messrs. Dreier & Smith to The Secretary for Mines.

Sir,

Ironbarks, 13 November, 1876.

Your letter of the 7th instant is to hand, in which you state, in conclusion, "that a further investigation may not affect our rights, we having shown that we were in occupation, under Miners' Rights, of land demised by lease to other persons."

It is true that we were aware of the ground being leased to Webster and Party, they having given us permission to mine on the ground, and we believe this to be a very material proof in favour of our claim; for if Messrs. Grimley and Read had a grant of lease, why were they not there to represent their interests therein? We understand the Mining Act to specify, that after execution of lease labour conditions should be observed, and this Messrs. Grimley and Read have neglected to carry out. We may also add, that Messrs. Grimley and Read were in utter ignorance of the locality of their lease, being unable to distinguish it by landmarks or posts, both of which should be conspicuous.

Hoping you will give this matter your best attention,

We remain, &c.,

HENRY DREIER.

ROBERT SMITH.

16 November.

PAPERS in matter of dispute, Grimley and Read lease, Ironbarks, required. Please forward.

Forward at once, and inform such will be done.—H.W., 16/11/76.

No. 35.

Telegram from The Under Secretary for Mines to The Warden, Hill End.

16 November.

PAPERS in matter of dispute between Grimley and Read, and Dreier and Smith, forwarded by to-night's post.

No. 36.

Mr. F. King to The Under Secretary for Mines.

Sir,

Ironbarks, 13 November, 1876.

I beg to submit the following statement of a case which came under my notice during a recent visit to the Ironbarks Gold Field, and which appears to me to demand your interference.

Two men named Henry Dreier and Robert Smith took up 240 feet of ground on the "Poor Man's Line of Reef," at Ironbarks, and worked it for some weeks. After getting out about 60 tons of stone which appeared to be rather better than the ordinary quartz, they were forcibly ejected by two men

men named Ferguson, who stated that they were owners with Grimley and Read, who had obtained a lease of the land. It appears from inquiries I have made that Grimley and Read applied for a lease of the land in 1872, and received the title approved by the Crown in May, 1876. They neglected to fulfil any of the labour conditions and virtually abandoned their right till October, when hearing that Dreier and Smith were getting out good stone, they took with the two Fergusons forcible possession, and drove Dreier and Smith off the land. The case is one of great hardship, and in the interest of these poor men I appeal to you to cause them to be reinstated in their claim, if on investigation my statement of the facts is correct; but in the first instance, I would suggest that an order be sent to the two Fergusons to prevent them from appropriating the stone which has been raised by Dreier and Smith until the matter is settled one way or the other.

This case has excited much attention on this gold field, and the general impression is that Dreier and Smith have been wrongfully put off their claim.

I have, &c.,

FREDERICK KING.

N.B.—Please to address your reply to my office, at the Hyde Park Asylum.

All the papers connected with this dispute, and with the several applications to lease the parcels of land affected by the dispute, may be forwarded to Mr. Warden Sharpe, with a request that he will be good enough to proceed without delay to investigate and report upon the matter. The several parties may be informed that such will be done, and that they will be duly notified of the date on which the inquiry will be held.

Request the Warden to notify accordingly.—J.L., 15/11/76. * Parties informed.—16/11/76. The Warden, Hill End.—B.C., 16th Nov., 1876.—H.W. Report herewith.—ERNEST A. L. SHARPE, Warden. B.C., 4 Dec., 1876. The Under Secretary for Mines.

No. 37.

The Under Secretary for Mines to Messrs. Dreier & Smith.

Gentlemen,

Department of Mines, Sydney, 16 November, 1876.

Adverting to your letter of the 13th instant, to former correspondence in respect of the conflicting applications of yourselves and Messrs. Grimley and Read, as to a gold claim on the "Poor Man's Line of Reef," Ironbarks,—I am directed to inform you that the whole of the papers in the case have now been sent to Mr. Warden Sharpe, with a request that he will be good enough to proceed without delay to investigate and report upon the matter.

I am to add, that you will be duly notified of the date on which the inquiry will be held.

I have, &c.,

HARRIE WOOD,

Under Secretary for Mines.

No. 40.

The Under Secretary for Mines to Mr. P. Grimley.

Sir,

Department of Mines, Sydney, 22 November, 1876.

I am directed to acknowledge the receipt of your letter dated the 17th instant, and in reference to the subject thereof to inform you that Mr. Warden Sharpe has been already requested to hold a Court at Ironbarks, for the purpose of inquiring into the dispute between yourself and Mr. Read on the one part and Messrs. Dreier and Party on the other.

I have, &c.,

HARRIE WOOD,

Under Secretary for Mines.

No. 41.

[76-7,509.]

No. 41.

The Warden, Hill End, to The Under Secretary for Mines.

THE facts of this case are as follows:—

On the 29th March, 1872, Messrs. Grimley and Read applied for 10 acres of land for gold mining purposes, on the "Poor Man's Reef," Ironbarks, application No. 1,826.

On the 11th October following, Messrs. Webster and Haines marked out and applied for the same land, application No. 3,978; and on the 19th of the same month, Messrs. McFadden and company applied for 8 acres in the same locality, application No. 3,991.

All these leases have been approved and measured, and No. 1,826 has been issued. Soon after this lease was executed and delivered, Messrs. Grimley & Co. complained that the land measured as Lease No. 1,826 was not the land they applied for, and the evidence which accompanies this report goes to show that their statement is correct. The plan accompanying Mr. Mining Surveyor Simpson's report shows Leases Nos. 1,826 and 3,978 as embracing the same portion of ground, and Lease No. 3,991, Messrs. McFadden's 8 acres, as adjoining on the south. I have visited the leases in question, and taken evidence concerning the position of the original pegs marking Lease No. 1,826. It appears from that evidence that the ground marked out and applied for by Messrs. Grimley and Read in 1872 comprehends about 7 acres of the land measured as Lease 3,991, and about 3 acres of that measured as Lease No. 1,826. John Ferguson and James Harris (see evidence) both agree as to the position of the pegs; and another witness was present to prove the same thing, but I did not consider it necessary to call him as he stated he could only give the same evidence as Ferguson and Harris. The confusion with regard to the position of these leases seems to have been caused by the applicants, Messrs. Webster and Haines, and then Messrs. McFadden & Co., not making proper inquiries as to whether the land they wished to lease was already applied for. The evidence of Mr. Hanley goes to show that Mr. McFadden had knowledge when he marked his lease that the ground was already applied for. I would therefore recommend that the land as originally marked be measured for and granted to Messrs. Grimley & Co., and that Lease No. 3,991 be measured south and adjoining it if the lessees are willing to accept it. Lease No. 3,978 has, I presume, been cancelled, as the preliminary notice was published in the *Government Gazette* of the 28th of September last.

With respect to Messrs. Smith and Dreier's complaint that Messrs. Grimley and Ferguson have failed to comply with the labour conditions of Lease No. 1,826, it seems to me that it must fail, because the land they applied for—except a small portion on which the complainants were working—had not been granted to them. In conclusion, I may add that there seems no doubt but that Messrs. Dreier and Smith have been trespassing on Lease No. 1,826, taking that lease as at present measured or as originally marked. It is true that they have raised a considerable quantity of valuable stone which has been crushed for the benefit of Messrs. Grimley and Ferguson, but I am informed that Messrs. Dreier and Smith had several more or less remunerative crushings before they were disturbed. Mr. Dreier admits too, in his evidence that he was told by Mr. Ferguson that he was trespassing; he should then have made the necessary inquiries before incurring further expense. I am also of opinion that Messrs. Grimley and Ferguson had no intention of taking up Lease No. 1,826 until they heard that Messrs. Dreier and Smith had discovered payable gold, and for that discovery they are indebted to them.

I annex a rough sketch showing the position of the various leases as measured at present, and No. 1,826 as originally marked.

B.C., 4th December, 1876.

ERNEST A. L. SHARPE,

Warden.

Inform Messrs. Grimley and Read that as they have claimed, and taken possession of, and applied to their own use the gold from a certain parcel of quartz in virtue of the lease issued to them, they cannot now refuse that lease and ask that a lease of different land be granted to them in lieu thereof. If they surrender the deed issued to them, they will then be in the position of applicants to lease the land which they now allege they originally marked out, and they may be called upon to lodge the gold with the Warden to abide the result of their application.—J.L., 11/12/76.

Messrs. Grimley and Read, 15th December, 1876.

Make a precis of this case, but don't complete it until Mr. Korff's statement has been received.—H.W., 2/2/77.

[Enclosure 1 to No. 41.]

Notes of evidence taken.

Court-house, Ironbarks, 29 November, 1876.

Peter Grimley, being duly sworn, saith: I am a storekeeper, resident at Orange, and one of the lessees of Gold Mining Lease 1,826, which lease I produce; I executed it on the 18th March, 1876; in the terms of the lease, the lessees are required to employ five men on the lease fourteen days after the document of lease had been delivered; we have had five men employed since the beginning of this present month; we were unable to put the labour on sooner, because we could not ascertain where our ground was until the surveyor came and pointed out the lease to my partner, Mr. John Ferguson; this was about the latter end of October, and we then put five men on to work our lease, and they have been continuously working from the latter end of October up to the present time.

By Mr. Dreier: I will swear that I have employed five men from about the commencement of this month.

Taken and sworn this 29th day of November, 1876,—

ERNEST A. L. SHARPE, J.P.,
Warden.

P. GRIMLEY.

Robert Smith, being duly sworn, saith: I am a miner, resident at Ironbarks; I hold a miner's right for the present year; I know Gold Mining Lease No. 1,826; there has been no labour employed on that lease until the 28th of October last.

By Mr. Ferguson: I recollect that you did tell me that I and my partner were working on the lease you had marked out originally, but I don't recollect the date.

Taken and sworn this 29th day of November, 1876,—

ERNEST A. L. SHARPE, J.P.,
Warden.

ROBERT SMITH.

Henry Dreier, being duly sworn, saith: I am a miner, and hold a miner's right for the current year; I complain that Messrs. Grimley and Read have not complied with the labour conditions under which they hold their lease. There has been no labour employed on Lease No. 1,826 since the execution of the lease in May last till the 2nd of October last. Since the 28th of October there has not been five men employed constantly; there have been sometimes five and sometimes only four.

By Mr. Ferguson: How many days was I away from my work? About a week—nearly a week; it was between the 28th of October and the present time. The surveyor was here on the 20th, and you commenced to work on the 28th of last month.

Taken and sworn this 29th day of November, 1876,—

ERNEST A. L. SHARPE.

HENRY DREIER.

John Charlton, being duly sworn, saith: I am a miner, resident at Ironbarks; I was working on Lease No. 1,826 in June last for about a fortnight, and no one interfered with me; I didn't find anything payable, and left it and went further north; John Ferguson then came to me, and proposed to sink a shaft in the lease measured for M'Fadden; I refused; there has been no labour employed on Grimley and Read's lease till very lately.

Taken and sworn before me, this 29th day of November, 1876,—

ERNEST A. L. SHARPE,
Warden.

JOHN CHARLTON.

Court House, Ironbarks, 29 November, 1876.

John Ferguson, being duly sworn, saith: I am a miner, and reside at Ironbarks; in March, 1872, about six or seven days before the 29th of that month, I came over to Ironbarks with a miner named John Read, and marked out a lease of 10 acres on the "Poor Man's Reef," near Ironbarks; I marked it by putting up two base pegs—one at the north end, and the other at the south; I think the ground I marked would comprehend about 10 acres or about 250 or 260 yards on the base line; I put up notice of intention to apply for the lease in question on the north and south pegs; we then went back to the "Root Hog" and told Mr. Peter Grimley, who was a mate of mine at that time, and I believe he made application to the Commissioner at Bathurst for the lease; I and Read were holders of Miners' Rights for the year 1872 at the time we marked the ground; I wish to qualify what I have said about a Miner's Right; I cannot positively swear I had a Miner's Right in 1872 when I marked Lease No. 1,826, but I believe I had; there was no other lease marked on the "Poor Man's Reef" at the time we marked No. 1,826 that I was aware of; we put no labour on Lease No. 1,826 until we got the document on the 18th of May this year; I know Lease No. 1,826 has been measured, but I don't know when the measurement took place; the lease as measured does not embrace the land we marked; the land we marked embraces 2 acres or about that quantity of the land measured for us by Mr. Simpson, and the adjoining 8 acres marked by M'Fadden; in March or April last Mr. Grimley told me that Lease No. 1,826 was advertised, and I saw it myself in the *Town and Country Journal*, that it would be cancelled if not executed; we then sent for the lease, and it was duly executed; when I marked Lease No. 1,826 I put in posts at either end of the ground about 3 or 4 inches in diameter and about 4 feet out of the ground.

Taken and sworn this 29th day of November, 1876,—

ERNEST A. L. SHARPE, J.P.,
Warden.

JOHN FERGUSON.

Peter Grimley, being duly sworn, saith: I am a storekeeper, resident at Orange; about the 1st of April, 1872, I was in Bathurst, and I went to the Gold Fields Office and paid for a 10-acre lease at Ironbarks, which my mate John Ferguson had marked out; I paid £7 10s. (seven pounds ten shillings), and got a receipt, which has been lost; the application No. 1,826 was in the names of Peter Grimley and John Read; I got printed forms—the usual forms for posting on making application to lease; I enclosed them in an envelope and sent them to James Harris, Ironbarks, for him to post them on the lease; I am not positive whether I had a Miner's Right when I applied for Lease No. 1,826, but I believe I had; I don't know how long time elapsed between the time Ferguson marked the Lease No. 1,826 and the time the notices were posted that we had applied for the lease; I believe we complied with the Regulations then in force.

Taken and sworn before me, the 29th day of November, 1876,—

ERNEST A. L. SHARPE,
Warden.

P. GRIMLEY.

James Harris, being duly sworn, saith: I am a miner, and reside at Ironbarks; in March, 1872, I was employed by John Ferguson to post some notices on certain lease pegs on the "Poor Man's Reef," and to re-peg the lease he had marked out; I knew the ground, and had no difficulty in discovering the pegs that Ferguson had put in; I fixed them in the ground and put up some printed notices; I recollect that the names of Ferguson and Read were on the forms; I don't know the date when I posted these notices; when I put up the forms there were no other pegs in the ground than Grimley and Ferguson's; five months after Ferguson marked out his lease, a man named M'Fadden came to me and asked me to go in with him for some land on the "Poor Man's Reef," that Ferguson had applied for, Ferguson and his party had not paid for it; I told him that they had, and I would not have anything to do with it; he told me afterwards that he had marked out an 8-acre lease on the "Poor Man's Reef"; I know where the survey pegs of M'Fadden's lease and Grimley's are; I know the ground originally marked by Ferguson; the survey pegs on the south end of M'Fadden's 8-acre lease are 20 or 30 yards outside the ground originally marked by Ferguson; the sketch shown me shows the position of the pegs as put in by me and Ferguson, and the ground as measured by the surveyor; M'Fadden's lease as at present measured takes in a considerable portion of the land applied for by Ferguson.

Taken and sworn this 29th day of November, 1876,—

ERNEST A. L. SHARPE, J.P.,
Warden.

JAMES HARRIS.

Michael Hanley, being duly sworn, saith: I am a Senior-constable of Police, stationed at Stony Creek; in March, 1872, I was Mining Registrar at Ironbarks; I knew a man named M'Fadden, a miner; he took up some ground on the "Poor Man's Reef" early in 1872; he came to me on several occasions for information about pegs that were in the ground he had marked out with the intention of leasing it on the "Poor Man's Reef," and also about papers that were on those pegs; he said that the papers purposed to be the preliminary notice to lease, and the names of Read and either Grimley and Ferguson attached to them; he brought one of the notices to me, and said he took it off the peg; the writing was faded, but it was a notice of intention to apply for a lease; I told him that I could give him no information about whether the land was taken up or not, and that he had better apply for information to the Gold Commissioner at Wellington; I also told him that lease applications were made at Wellington and not at Stony Creek, and for that reason I could not tell him whether the land he was inquiring about was leased or not.

Taken and sworn this 29th day of November, 1876,—

ERNEST A. L. SHARPE.

M. HANLEY.

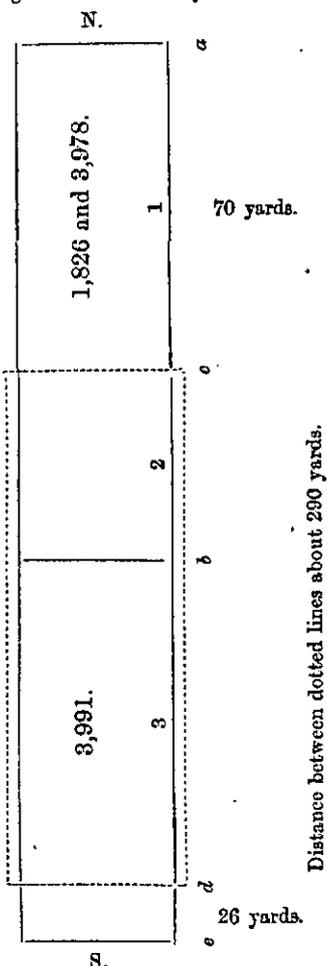

It may, perhaps, appear hard that Messrs. Dreier and Smith should lose the fruits of their labour, especially if, as stated, they have proved the value of Messrs. Grimley and Read's property, and thereby induced Messrs. Grimley and Read to take up the lease, which they would not have done had the proof depended upon their own labour; but as Messrs. Dreier and Smith were trespassers, and were informed that they were so, they have placed themselves in such a position that the Department cannot afford them any relief. If the statement respecting non-work be true, Messrs. Grimley and Read's title might be forfeitable; but the land is not open to be occupied by other persons until the title has been cancelled by the Governor and Executive, and notice thereof published in the *Gazette*. It appears from the report of the case that Messrs. Dreier and Smith have not laboured absolutely without reward, as they have crushed some parcels of stone and retained the gold therefrom.

J.L.

[Enclosure

[Enclosure 2 to No. 41.]

Sketch showing Ground claimed by Messrs. Grimley & Read.

Dotted lines show alleged marking by Grimley & Read; black, leases as at present measured.

- 1,826.—Grimley and Read. Their lease is granted and issued for 10 acres from *a* to *b*; they claim from *c* to *d*. The surveyor has surveyed it as from *a* to *b*. He was instructed to go over the ground again, which he did, and still persists in stating that he has surveyed the ground applied for.
- 3,978.—Applied for by Webster and Party. Lease not issued.
- 3,991.—*b* to *e*. Applied for by M'Fadden and Party, 1873; since transferred to Korff. Dreier and Smith were working between *c* and *b*, under Miner's Rights, with Webster's sanction. Grimley and Read took the proceeds of their labour by virtue of their lease.

No. 42.

The Under Secretary for Mines to Messrs. Grimley & Read.

Gentlemen,

Department of Mines, Sydney, 15 December, 1876.

Adverting to my letter of the 16th ultimo, to the effect that Mr. Warden Sharpe would investigate and report upon the matter in dispute between yourselves and Messrs. Dreier and Smith as to the right to certain land on the "Poor Man's Line of Reef," Ironbarks,—I am now directed to inform you that an inquiry has been held accordingly, and the Secretary for Mines desires me to state that, as you have claimed and taken possession of and applied to your own use the gold from a certain parcel of quartz in virtue of the lease issued to you, you cannot now refuse that lease and ask that one of different land be granted to you in lieu thereof.

2. I am to add that, if you choose to surrender the deed already issued to you, you will then be in the position of applicants to lease the land which you allege that you originally marked out, and you might then be called upon to lodge with the Warden the gold taken from the land to abide the result of your application.

I have, &c.,

HARRIE WOOD,

No. 44.

Mr. P. Grimley to The Secretary for Mines.

Sir,

Orange, 11 January, 1877.

Reverting again to the Lease 1,826, Grimley & Read's, Ironbarks, I do myself the honor to forward the following facts, viz. :—

1. That on March 29, 1872, we marked out the ground, as sworn to before the Warden, Mr. Sharpe, in Court, on 29th November, 1876; that it appears that we were notified by letter on 28th October, 1872, but such letter has not been received by us; that on 19th October, 1872, M'Fadden, Hickey, & Hernfield applied for 8 acres of our 10 acres, and it appears that it has been granted to them, though Harris in his evidence on 29th October, *vide* Warden's Court papers, that he was requested by M'Fadden to join him, and he said that he would not as the ground belonged to Grimley & Read; that it is clearly proven that the ground is ours. And I now request that it may be granted to us as originally marked by us.

I am, &c.,

P. GRIMLEY.

No. 45.

Mr. G. Korff to The Secretary for Mines.

17, Church Hill, Sydney, 3 February, 1877.

Re Peter Grimley & Co's Application, No. 1,826, for Lease at "Poor Man's Reef," Ironbarks.

REFERRING to the mining dispute which has recently taken place between Messrs. Grimley & Co. on the one side, and Messrs. Smith & Dreier on the other, respecting the boundaries of the above lease and those numbered 3,978 and 3,991 respectively, and to the evidence taken therein on the 29th day of November last before Mr. District Warden A. L. Sharpe, the latter by his report, dated the 4th day of December last *inter alia* recommending, "that the land as originally marked be measured for and granted to Messrs. Grimley & Co., and that lease No. 3,991 be measured south and adjoining it if the lessees are willing to accept it,"—I have the honor to inform you that I am entitled to the lease No. 3,991 and the land therein comprised, and I now respectfully object to any re-survey of the land therein comprised or to any interference with or alteration of the present boundaries. Without prejudice to my position, I submit that Messrs. Grimley & Co. are not entitled to the said lease, the lease they claim, inasmuch as none of them had a Miner's Right at the time of their application; therefor.

Yours obediently,

GORDON KORFF.

Seen. Make a precis.—J.L., 6/2/77.

Herewith.—C.O.H.

No. 46.

Mr. P. Grimley to The Secretary for Mines.

Sir,

Orange, 15 February, 1877.

I do myself the honor to again address you on the subject of the Gold Mining Lease 1,826, Grimley and Read's, Ironbarks. It is now nine months since the execution of the lease by us, and we have used every endeavour to have our boundary defined, which has been done; and at a Warden's Court held at Stony Creek on 29th November, it has been proven that we were the first applicants.

The case was to be brought before a Cabinet Council soon after the Christmas Recess, but up to the present time we have heard nothing. I now beg to know what decision, if any, has been arrived at; and also that the ground will be handed over to us, as we are the first parties to lease the ground.

I have, &c.,

PETER GRIMLEY.

Expedite the preparation of the precis, and inform that owing to pressure of business the Cabinet has not yet been able to deal with it, and time was allowed to Mr. Korff to state his case; but he shall be informed of the result as soon as a decision has been arrived at.—J.L., 20/2/77.

Mr. Grimley informed, 23rd February, 1877.

No. 47.

The Under Secretary for Mines to Mr. P. Grimley.

Sir,

Department of Mines, Sydney, 23 February, 1877.

In reply to your inquiry by letter of the 15th instant, further respecting your Gold Mining Lease No. 1,826,—I have the honor, by direction of the Secretary for Mines, to inform you, that owing to pressure of business the Cabinet has not yet been able to deal with the matter, and some little delay was occasioned in allowing Mr. Korff an opportunity to state his case; as soon however as a decision has been arrived at, the result shall be communicated to you.

I have, &c.,

HARRIE WOOD,

Under Secretary for Mines.

No. 48.

Precis of the Case, with Minutes.

Gold Lease Applications.—"Poor Man's Reef," Ironbarks.

No. 1,826. Messrs. Grimley and Read, made on 29th March, 1872, for 10 acres of land. Lease executed in May, 1876.

No. 3,978. Messrs. Webster, Haines, and Party, made on 11th of October, 1872, for the same parcel of land as was subsequently surveyed for Grimley and Read. This lease has not been issued, nor has it been asked for.

No. 3,991. Made by M'Fadden & Party on 19th October, 1872, area 8 acres, adjoining the portion above named. A promise to grant this lease was published in the *Gazette* on the 29th day of June, 1873.

Shortly

Shortly after the execution by Grimley and Read of their lease, Grimley objected that the 10 acres measured for them were not the 10 acres for which they had applied, but that only about 2 acres of it were so, the remaining 8 acres being embraced by lease 3,991 (applied for by M'Fadden and Party), transferred to Gordon Korff, and they (Grimley and Read) asked for a re-survey for the purpose of securing the land which they allege they marked out. After some delay the surveyor went to the ground, and then reported that the land had been correctly surveyed, as shown in the diagram, within the lines *a, b, c, d*.

Vide area bounded by lines a, b, c, d, on diagram annexed. Vide area enclosed by dotted lines on the diagram annexed.

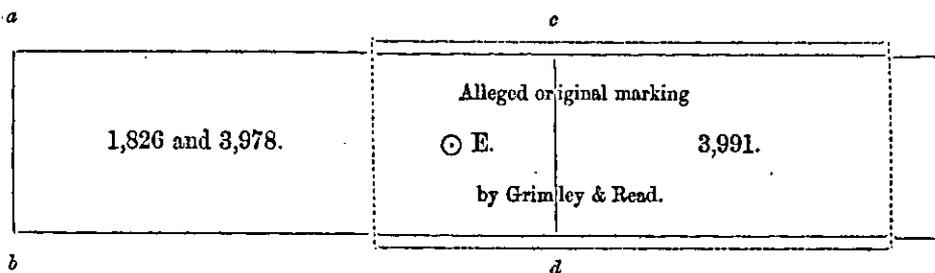

It is stated that Messrs. Webster and Hains had in the meantime given permission to certain parties, Dreier and Smith, to work upon the land taken up under application No. 3,978, and that several tons of stone were by them raised from the point *E* in the diagram.

Grimley and Read, who had done no work upon the land then applied for an injunction against Dreier and Smith, and an order was made by the Warden, who visited the ground, prohibiting both parties from working until the surveyor had pointed out the boundaries. Dreier and Smith, in the month of November, 1876, applied to have Grimley's lease cancelled for non-fulfilment of the labour conditions, but it was thought that Grimley and Read were not under obligation to work until the position of their boundaries had been definitely fixed.

Mr. Licensed Surveyor Simpson in his report states that on visiting the ground he found that Dreier and Smith had been working on the land originally surveyed by him for Grimley and Read.

The Warden also, who has held an inquiry into the matter, states that Dreier and Smith have been trespassing on land demised under Lease No. 1,826 to Grimley and Read.

Since then Grimley and Read have seized some 60 tons of stone raised by Dreier and Smith, and have appropriated the gold crushed therefrom; this, it is submitted, they could not have done except in virtue of the lease already issued to them, and therefore having adopted that lease for the purpose aforesaid they cannot now demand another lease in lieu of it, especially as the land which they desire is under promise of lease to Mr. Gordon Korff. On the 3rd February, 1877, Mr. Korff, in a letter to this Department, objects to any alteration in or interference with the boundaries of the land comprising the 8 acres applied for under application No. 3,991, and submits that Grimley and Read are not entitled to the lease they claim, as none of the party held a Miner's Right at the time of their application therefor. [The Act under which Grimley and Read applied did not require them to hold Miner's Rights, but the Regulations did.]

[77-1,028.]

Notes:—Grimley and Read, and Korff.

SEE diagram at foot of precis. The land surveyed for Messrs. Grimley and Read is shown by black lines, *a, b, c, d*, and a lease of that piece of land has been granted and issued to them. The land claimed by Messrs. Grimley and Read as having been pegged out by them is shown by dotted lines.

If a lease were granted to Messrs. Grimley and Read of the 10 acres embraced by the dotted lines, the 8-acre lease promised by notice in the *Government Gazette* to M'Fadden and Party could not be granted, and Mr. Korff who has purchased the interests of M'Fadden and Party on the strength, he alleges, of the notice in the *Gazette*, will probably claim compensation. Messrs. Grimley and Read were the first applicants.

At the point marked *E* in the diagram, some persons (trespassers) raised some 60 tons of quartz. Messrs. Grimley and Read, in virtue of the lease of the 10 acres bounded by the black lines *a, b, c, d*, seized the quartz and appropriated the gold. Thereupon, the late Minister decided, that as they (Grimley and Read) had used the lease in that way, they cannot now repudiate that lease and demand a lease of the land embraced by the dotted lines.

At the request of Messrs. Grimley and Read the late Minister promised to submit the matter to the Cabinet, but was prevented by pressure of business from doing so.

After careful consideration of this case, I am of opinion that the decision of the late Minister for Mines, on 76/7,509, should not be disturbed. The parties interested may be informed.—G.A.L., 31/5/77.

Grimley and Korff informed, 4 June, 1877.

Application 3,978 must be refused, as the land was not available at the date of the taking possession. Application 3,991 may be granted to Gordon Korff, as assignee of the applicants. Prepare a minute recommending that such be done.—G.A.L., 5/6/77.

3,978 was prepared and tendered before the survey of 1,826 was complained of, and was declared void on 21st December, 1876, for non-execution. 3,991 has already been granted, and lease prepared in the name of the transferee, G. Korff, after usual search has been made.—P.A., 6.

No. 49.

The Under Secretary for Mines to Mr. P. Grimley.

Sir,

Department of Mines, Sydney, 1 June, 1877.

Referring to my letter of 23rd February last and previous correspondence, touching your Gold Mining Lease No. 1,826, I have the honor to inform you, that after a careful consideration of the matter the Secretary for Mines is of opinion that the decision conveyed to you in my letter of the 15th of December last ought not to be disturbed.

I have &c.,

HARRIE WOOD,

Under Secretary for Mines.

Copy

Copy of decision above alluded to is annexed,—

“That as you have claimed and taken possession of and applied to your own use the gold from a certain parcel of quartz in virtue of the lease issued to you, you cannot now refuse that lease and ask that one of different land be granted to you in lieu thereof.”

No. 50.

The Under Secretary for Mines to Mr. G. Korff.

Sir,

Department of Mines, Sydney, 4 June, 1877.

Adverting to your letter of the 3rd February last, in support of your claim to Gold Lease No. 3,991, transferred to you by Messrs. M'Fadden and Party, I have the honor to inform you that the Secretary for Mines, after a careful consideration of the matter, is of opinion that the decision conveyed to Messrs. Grimley and Read, in a letter from this Department dated 15th December last, ought not to be disturbed.

I have, &c.,

HARRIE WOOD,

Under Secretary for Mines.

No. 51.

LEASE OF AURIFEROUS LANDS.

(Under 30 Victoria No. 8, section 7.)

Register No. 3,991.

VICTORIA, by the Grace of God, of the United Kingdom of Great Britain and Ireland, Queen, Defender of the Faith, and so forth.

To all to whom these presents shall come, greeting :

WHEREAS Gordon Korff, in our Colony of New South Wales, who is hereinafter styled the lessee, has made application for a lease of the portion of waste lands in our said Colony described in the “Schedule of Land” hereinafter written, for the purpose of mining for gold under the provisions of “The Gold Fields Act of 1866,” and the Governor for the time being of our said Colony, with the advice of the Executive Council thereof, hath consented to grant a lease of the said lands for the term of fifteen years, and at the yearly rent of one pound per acre, and under and subject to the terms, conditions, exceptions, reservations, and provisos hereinafter contained: Now know ye, that in consideration of the premises, and of the sum of eight pounds in hand, paid to the Colonial Treasurer for the time being of our said Colony before the issue hereof as and for the first year's rent of the said lands, and also in consideration of the yearly rent, covenants, provisos, and agreements hereinafter reserved and contained, on the part of the lessee, his executors, administrators, and assigns, to be paid, observed, and performed,—We do hereby, for us our heirs and successors, demise and lease unto the lessee, his executors, administrators, and assigns, all that parcel of land described in the said Schedule of land hereinafter written, with free liberty for the said lessee to dig, sink, drive, make, and use all such pits, shafts, levels, watercourses, and other works which may be necessary for obtaining gold, and to use the said land or any part thereof either under ground or on the surface in such manner as may be proper and requisite for working and obtaining gold: Reserving unto us, our heirs and successors, and unto the Secretary for Lands of our said Colony, and to any and every person or persons hereinafter appointed by him in that behalf, free liberty at all times during the continuance of this demise to enter into and upon the lands hereby demised and all mines and works therein or thereon in order to view and examine the condition thereof: And also saving and reserving unto us, our heirs and successors, and to the Minister for Lands for the time being of our said Colony, and any person or persons authorized by him, the right to enter upon the said land or any part thereof, without compensation to the lessee, and to cut, dig, and remove all timber, stone, gravel, and other material in or upon the said land which may be required for any public purpose: To have and to hold the said land, and all and singular other the premises hereinbefore mentioned and hereby demised, with the appurtenances, unto the lessee, his executors, administrators, and assigns, from the first day of July, one thousand eight hundred and seventy-three, for and during the full term of fifteen years from thence next ensuing and fully to be complete and ended; and upon the terms and under and subject to the laws in force for the time being respecting Crown Lands of our said Colony, and the provisions of the “Gold Fields Act of 1866,” and the Regulations which have been made thereunder and are now in force for the management of the gold fields of our said Colony, or which may at any time hereafter be made by the Governor of our said Colony with the advice of the Executive Council and also subject to the conditions, exceptions, reservations, and provisos hereinafter contained, yielding and paying therefor unto us, our heirs and successors, yearly, and every year during the continuance of this lease, the clear rent or sum of eight pounds, by yearly payments thereof, in advance, on the thirtieth day of June in each and every year, into the hands of our Colonial Treasurer for the time being of our said Colony, at the Treasury, in Sydney, in our said Colony, the first of such payments after the issuing of this lease to be made on the thirtieth day of June now next ensuing, being the period up to which payment of the first year's rent has been made as aforesaid: Provided always, and we do hereby declare that these presents are made upon the conditions following (that is to say): Upon condition that the lessee, his executors, administrators, or assigns, shall well and truly pay, or cause to be paid, unto us, our heirs and successors, the rent hereby reserved, upon the several days, and when and as the same shall become payable in the manner hereinbefore appointed for that purpose: And that if the lessee, his executors, administrators, or assigns, shall make default in payment of the rent hereby reserved for one month after the same shall have become payable, and shall not pay the same, together with a fine equal to twenty-five per cent. of the annual rent, within the period of three months after the same shall be payable, and shall make default in payment of the said rent for three months after the same shall have become payable, and shall not pay the same, together with a fine equal to fifty per cent. of the said annual rent, within the period of six months after the said rent shall have become payable, and if the same or any part thereof shall be in arrear and unpaid for the space of six months after any of the days and times upon which the same shall have become payable, the demise hereby made shall cease and determine, and that the lessee, his executors, administrators,

or

or assigns, shall and will at all times, after the expiration of fourteen days from the date of delivery of this our lease, as indorsed hereon, and during the continuance of this demise, keep employed continuously in gold-mining upon the said land not less than four men, or such amount of steam or water-power as shall by any regulation now in force, or which hereafter during the continuance of this demise may be in force, is or may be permitted to be employed by the lessees of lands leased for gold mining purposes in lieu of manual labour: And do and shall, at all times hereafter during the continuance of this demise, well and truly observe, perform, and keep all and every such Regulations now in force for the management of the gold fields of our said Colony, or which may at any time hereafter be made for the management of the said gold fields, by the Governor of our said Colony with the advice of the Executive Council, under the said Gold Fields Act, as shall be applicable to the leases of lands leased under the said Act for gold-mining purposes, or under any Act of the Parliament of our said Colony which may at any time hereafter be passed for the management of the gold fields of our said Colony; and do and shall in all things well and truly observe, perform, and keep all and every the requirements of all, every, and any Acts of Parliament of our said Colony, which shall or may at any time during the continuance of the lease hereby granted be in force in our said Colony, relating to leases of land for gold mining purposes: And shall not nor will work any of the mines commenced or worked in and upon any of the lands hereby demised out of or beyond the limits or boundaries of the said lands, nor work any mines upon the said land for any mineral or metal other than gold: And that if the lessee, his executors, administrators, or assigns, shall at any time or times permit or suffer a breach of any of the conditions hereinbefore contained (excepting in respect of the payment of rent which is hereinbefore provided for), it shall be lawful for us, our heirs and successors, or for the Governor or the Officer for the time being Administering the Government of our said Colony, to declare by notice to that effect in the *Government Gazette* this lease to be forfeited, whereupon the lease hereby granted shall cease; and that if the lease hereby granted shall cease and determine on account of the non-payment of rent, or shall be determined by notice in the *Government Gazette*, under the condition in that behalf hereinbefore contained, it shall be lawful for us, our heirs and successors, or for the Governor or Officer for the time being Administering the Government of our said Colony, or any person or persons authorized by him or them in writing under his or their hands, to re-enter upon the lands hereby demised or any part thereof, and therefrom to remove the lessee and all servants and occupiers thereof: Provided lastly, and we do hereby declare, that this our lease shall not take effect until the actual issue thereof by our Secretary for Lands or other officer authorized in that behalf by our Governor or other Officer for the time being Administering the Government of our said Colony, notwithstanding that the same shall previously and in anticipation of the payment of the said yearly rent have passed the Great Seal of our said Colony: And we declare that the following is the schedule of land hereinbefore referred to.

In testimony whereof, we have caused this our lease to be sealed with the Seal of our said Colony.

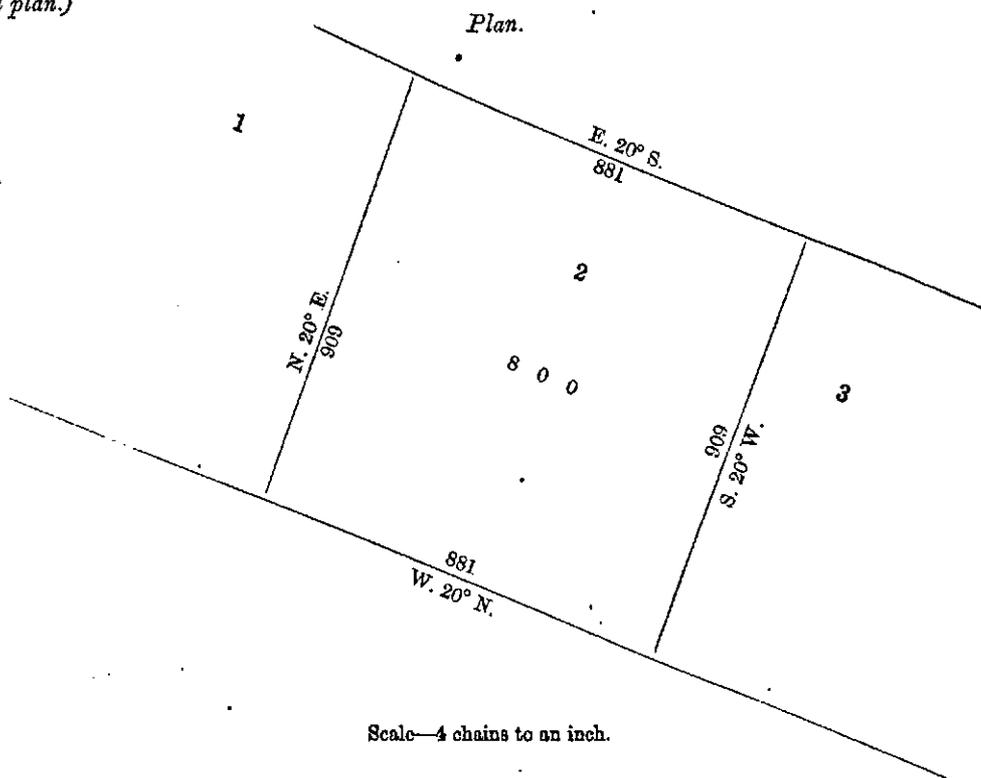

Witness His Excellency Sir Hercules George Robert Robinson, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, our Governor and Commander-in-Chief of our said Colony of New South Wales, at Government House, Sydney, in New South Wales aforesaid, this tenth day of February, in the year of our Lord one thousand eight hundred and seventy-seven.

HERCULES ROBINSON.

Entered at Gold Commissioner's Office, this _____ day of _____ Commissioner.

SCHEDULE OF LAND.

Situated at Ironbarks, "Poor Man's Reef," and described by survey as eight acres, county of Wellington, parish of Ironbarks, portion two: Commencing at the north-east corner of portion one, and bounded thence on the north by a line bearing east twenty degrees south eight chains and eighty-one links; on the east by a line bearing south twenty degrees west nine chains and nine links; on the south by a line bearing west twenty degrees north eight chains and eighty-one links; on the west by a line bearing north twenty degrees east nine chains and nine links, to the point of commencement. (*Vide annexed plan.*)

INDORSEMENT.

Lease for Gold Mining Purposes, dated

I CERTIFY, that on this
auriferous tract to

day of

, 187

, I handed the within lease for an

Commissioner.

I hereby accept the within lease subject to the terms, conditions, exceptions, reservations, and provisos therein contained, and also subject to the provisions of the regulations made or to be made by His Excellency the Governor, with the advice of the Executive Council, and which may now or shall hereafter during the term created by the within lease be in force relating to leases of auriferous lands. And I hereby covenant with Her Majesty, her heirs and successors, that I will during the term created as aforesaid, well and truly pay the rents reserved under the within lease at such times and places as are therein specified and appointed, will at all times during the said term observe and perform all and singular the covenants, conditions, stipulations, and provisos therein contained.

In witness whereof, I have hereunto set my hand and seal, this day of 18 .
Signed, sealed, and delivered by the within named
In the presence of

No. 52.

Mr. P. Grimley to The Under Secretary for Mines.

Sir,

Orange, 6 June, 1877.

I am in receipt of your letter of 1st instant, and have to request that you will inform me if that document is meant to be decisive. I now lodge protest against the execution of lease to M'Fadden or agents.

I have, &c.,
P. GRIMLEY.

Let the Lease 3,991 be kept back for a few days, to allow Mr. Grimley to take any action he thinks proper.—G.A.L., 8/6/77.

No. 53.

Mr. P. Grimley to The Secretary for Mines.

Sir,

Orange, 8 June, 1877.

I am in receipt of letter of 7th instant, and have to refer you to mine of the 6th, in which I beg to know if your letter of 1st instant is meant to be final, in the case of Gold Mining Lease 1,826, "Poor Man's Reef," Ironbarks. It's now twelve months since I lodged my complaint; and I now request your decision for or against me in this case, if the document already alluded to is not.

I have, &c.,
P. GRIMLEY.

Inform the action taken is intended to be final.—G.A.L., 11/6/77. Informed.—12 June, 1877.

No. 54.

The Under Secretary for Mines to Mr. P. Grimley.

Sir,

Department of Mines, Sydney, 12 June, 1877.

I have the honor, by direction of the Secretary for Mines, to acknowledge receipt of your letter of the 8th instant, further respecting your application, No. 1,826, for a gold mining lease, and in reply to the inquiry therein made to inform you that the action already taken in this case is intended as final.

I have, &c.,
HARRIE WOOD,
Under Secretary for Mines.

No. 55.

Mr. P. Grimley to The Secretary for Mines.

Sir,

15 June, 1877.

I am in receipt of your letter of 13th instant, and herewith beg to return Lease 1,826, as it does not represent the ground applied for by us. You will be pleased to send receipt for same, and direct that a proper survey be made, and that we be put in possession of ground applied for by us and granted. *Vide* letter of 26 October, 1872.

I have, &c.,
P. GRIMLEY.

Mr. Grimley now returns his lease after a transfer of an interest in it has been made and sanctioned, and after the lessees have in virtue of it seized and applied to their own use the gold obtained from a quantity of stone raised from the land demised by this lease; and Mr. Grimley now asks that a lease may be granted of a different parcel of land, alleging that the within lease does not demise the parcel of land for which he applied. *Vide* decision on 76/7,509 and 77/1,028.—H.W., 18/6/77.

[Enclosure 1 to No. 55.]

Lease of Auriferous Lands.

Register No. 1,826.

(Under 30 Victoria No. 8, section 7.)

Victoria, by the Grace of God, of the United Kingdom of Great Britain and Ireland, Queen, Defender of the Faith, and so forth.

To all to whom these presents shall come, greeting :

WHEREAS P. Grimley and J. Read, in our Colony of New South Wales, who are hereinafter styled the lessees, have made application for a lease of the portion of waste lands in our said Colony described in the "Schedule of Land" hereinafter written, for the purpose of mining for gold under the provisions of "The Gold Fields Act of 1866," and the Governor for the time being of our said Colony, with the advice of the Executive Council thereof, hath consented to grant a lease of the said lands for the term of fifteen years, and at the yearly rent of one pound per acre, and under and subject to the terms, conditions, exceptions, reservations, and provisos hereinafter contained: Now know ye, that in consideration of the premises, and of the sum of ten pounds in hand, paid to the Colonial Treasurer for the time being of our said Colony before the issue hereof as and for the first year's rent of the said lands; and also in consideration of the yearly rent, covenants, provisos, and agreements hereinafter reserved and contained, on the part of the lessees, their executors, administrators, and assigns, to be paid, observed, and performed,—We do hereby, for us our heirs and successors, demise and lease unto the lessees, their executors, administrators, and assigns, all that parcel of land described in the said schedule of land hereinafter written, with free liberty for the said lessees to dig, sink, drive, make, and use all such pits, shafts, levels, water-courses, and other works which may be necessary for obtaining gold, and to use the said land or any part thereof, either under ground or on the surface, in such manner as may be proper and requisite for working and obtaining gold: Reserving unto us, our heirs and successors, and unto the Secretary for Lands of our said Colony, and to any and every person or persons hereinafter appointed by him in that behalf, free liberty at all times during the continuance of this demise to enter into and upon the lands hereby demised and all mines and works therein or thereon, in order to view and examine the condition thereof: And also saving and reserving unto us, our heirs and successors, and to the Minister for Lands for the time being of our said Colony and any person or persons authorized by him, the right to enter upon the said land or any part thereof, without compensation to the lessees, and to cut, dig, and remove, all timber, stone, gravel, and other material in or upon the said land which may be required for any public purpose: To have and to hold the said land, and all and singular other the premises hereinbefore mentioned, and hereby demised, with the appurtenances, unto the lessees, their executors, administrators, and assigns, from the first day of July, one thousand eight hundred and seventy-three, for and during the full term of fifteen years from thence next ensuing and fully to be complete and ended: and upon the terms and under and subject to the laws in force for the time being respecting Crown Lands of our said Colony, and the provisions of the "Gold Fields Act of 1866," and the regulations which have been made thereunder, and are now in force for the management of the gold fields of our said Colony, or which may at any time hereafter be made by the Governor of our said Colony with the advice of the Executive Council, and also subject to the conditions, exceptions, reservations, and provisos hereinafter contained, yielding and paying therefor unto us, our heirs and successors, yearly, and every year during the continuance of this lease, the clear rent or sum of ten pounds, by yearly payments thereof, in advance, on the thirtieth day of June in each and every year, into the hands of our Colonial Treasurer for the time being of our said Colony, at the Treasury, in Sydney, in our said Colony, the first of such payments after the issuing of this lease to be made on the thirtieth day of June now next ensuing, being the period up to which payment of the first year's rent has been made as aforesaid: Provided always, and we do hereby declare that these presents are made upon the conditions following (that is to say)—upon condition that the lessees, their executors, administrators, or assigns, shall well and truly pay, or cause to be paid, unto us, our heirs and successors, the rent hereby reserved, upon the several days, and when and as the same shall become payable in the manner hereinbefore appointed for that purpose; and that if the lessees, their executors, administrators, or assigns, shall make default in payment of the rent hereby reserved, for one month after the same shall have become payable, and shall not pay the same, together with a fine equal to twenty-five per cent. of the annual rent, within the period of three months after the same shall be payable, and shall make default in payment of the said rent for three months after the same shall have become payable, and shall not pay the same, together with a fine equal to fifty per cent. of the said annual rent, within the period of six months after the said rent shall have become payable, and if the same or any part thereof shall be in arrear and unpaid for the space of six months after any of the days and times upon which the same shall have become payable, the demise hereby made shall cease and determine, and that the lessees, their executors, administrators, or assigns shall and will at all times, after the expiration of fourteen days from the date of delivery of this our lease, as indorsed hereon, and during the continuance of this demise, keep employed continuously in gold mining upon the said land not less than five men, or such amount of steam or water power as shall by any regulation now in force, or which hereafter during the continuance of this demise may be in force, is or may be permitted to be employed by the lessees of lands leased for gold mining purposes in lieu of manual labour; and do and shall, at all times hereafter during the continuance of this demise, well and truly observe, perform, and keep all and every such regulations now in force for the management of the gold fields of our said Colony, or which may at any time hereafter be made for the management of the said gold fields, by the Governor of our said Colony, with the advice of the Executive Council, under the said Gold Fields Act, as shall be applicable to the leases of lands leased under the said Act for gold mining purposes, or under any Act of Parliament of our said Colony which may at any time hereafter be passed for the management of the gold fields of our said Colony; and do and shall in all things well and truly observe, perform, and keep all and every the requirements of all, every, and any Acts of Parliament of our said Colony which shall or may at any time during the continuance of the lease hereby granted be in force in our said Colony, relating to leases of land for gold mining purposes; and shall not nor will work any of the mines commenced or worked in and upon any of the lands hereby demised out of or beyond the limits or boundaries of the said lands, nor work any mines upon the said land for any mineral or metal other than gold; and that if the lessees, their executors, administrators, or assigns, shall at any time or times permit or suffer a breach of any of the conditions hereinbefore contained (excepting in respect of the payment of rent which is hereinbefore provided for), it shall be lawful for us, our heirs and successors, or for the Governor or the officer for the time being administering the Government of our said Colony, to declare by notice to that effect in the *Government Gazette*, this lease to be forfeited, whereupon the lease hereby granted shall cease, and that if the lease hereby granted shall cease and determine on account of the non-payment of rent, or shall be determined by notice in the *Government Gazette*, under the condition in that behalf hereinbefore contained, it shall be lawful for us, our heirs and successors, or for the Governor or officer for the time being administering the Government of our said Colony, or any person or persons authorized by him or them in writing under his or their hands, to re-enter upon the lands hereby demised or any part thereof, and therefrom to remove the lessees and all servants and occupier, thereof: Provided lastly, and we do hereby declare, that this our lease shall not take effect until the actual issue thereof by our Secretary for Lands or other officer authorized in that behalf by our Governor or other officer for the time being administering the Government of our said Colony, notwithstanding that the same shall previously and in anticipation of the payment of the said yearly rent have passed the Great Seal of our said Colony: And we declare that the following is the Schedule of Land hereinbefore referred to.

In testimony whereof, we have caused this our lease to be sealed with the Seal of our said Colony.

Witness His Excellency Sir Hercules George Robert Robinson, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, our Governor and Commander-in-Chief of our said Colony of New South Wales, at Government House, Sydney, in New South Wales aforesaid, this nineteenth day of January, in the year of our Lord one thousand eight hundred and seventy-six.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

DISCOVERY OF GOLD.

(PETITION—MESSRS. WILLIAM TOM, JOHN H. A. LISTER, AND JAMES TOM.)

Ordered by the Legislative Assembly to be printed, 19 December, 1876.

To the Honorable the Legislative Assembly of the Colony of New South Wales.

The humble Petition of William Tom, the younger, of Rob Roy, Guyong, in the Colony of New South Wales, farmer,—John Hardman Australia Lister, of Guyong, aforesaid. farmer,—and James Tom, of Melbourne, in the Colony of Victoria, settler,—

SHOWETH:—

That early in the month of February, 1851, Mr. Edmund Hammond Hargreaves arrived at what is now known by the name of the "Guyong Inn," situate about 24 miles from Bathurst, on the Wellington Road. He arrived at the inn and informed Mrs. Lister (the mother of your Petitioner John Hardman Australia Lister), and your Petitioner John Hardman Australia Lister, that he was on his way to Wellington in search of gold, whereupon your Petitioner John Hardman Australia Lister showed him some stones, which your Petitioner John Hardman Australia Lister supposed to indicate the presence of auriferous matter, and which your Petitioner John Hardman Australia Lister had brought from the Turon and Macquarie Mountains and River, and which had been picked up by him in his peregrinations in search of gold in those localities. After some conversation with your Petitioner John Hardman Australia Lister, Mr. Hargreaves gave up the idea of going to Wellington; and it was agreed between him and your Petitioner John Hardman Australia Lister that they should become partners or colleagues in searching for gold; and accordingly, on the 12th February, 1851, your Petitioner John Hardman Australia Lister and Mr. Hargreaves commenced their search, and your Petitioner John Hardman Australia Lister took Mr. Hargreaves to a part of the country within three or four miles of what now bears the name of Ophir, on the Lewis Ponds Creek, where Mr. Hargreaves washed several panfuls of earth, from which he obtained four or five minute specks of gold, thus verifying an opinion long before entertained that this was a gold country. Having proceeded thus far, the next object which your Petitioner John Hardman Australia Lister and Mr. Hargreaves had in view was, the discovering a payable or working gold field. After this your Petitioner John Hardman Australia Lister and Mr. Hargreaves determined to further prosecute their inquiries for a payable gold field, and to proceed down the Macquarie River and thoroughly examine the creeks in the neighbourhood of Ophir; and not being acquainted with the bush or the country they were about to explore, they agreed with your Petitioner James Tom, who knew the whole of the country well, that he should join them in their search, with the full understanding that each person was to share alike in any benefits to be derived from their joint exertions, to which he consented; and after explaining to him the method of washing gold, your Petitioners John Hardman Australia Lister and James Tom started with the said Mr. Hargreaves on their journey, and after being engaged some days on their search, returned without having made the discovery of a working gold field. This journey being over, Mr. Hargreaves prospected no more in the Lewis Ponds and Ophir neighbourhood, but probably thinking a gold field might be found about Wellington, he made a journey thither, and after a lengthened exploration of that district he returned to Guyong without having met with any success. On his return to Guyong, Mr. Hargreaves informed your Petitioner he was obliged to return home, and your Petitioner James Tom having to go to Adelaide on business, it was arranged that your Petitioner William Tom should take his place and continue, in company with your Petitioner John Hardman Australia Lister, the inquiries in search of gold, your Petitioners having determined, if possible, to ascertain if Australian soil would pay for working. When Mr. Hargreaves was about to start from Guyong, he told your Petitioners that as soon as he arrived home he would make a tour to Moreton Bay, and give the whole of that part of the Colony a thorough search, and that if he did not succeed in finding gold in payable quantities he would go to California immediately on his return; but if he did succeed in finding gold he would let your Petitioners know as quickly as possible after the discovery. Your Petitioners made a similar promise to Mr. Hargreaves, as to informing him of the success of their search. Upon this understanding your Petitioners and Mr. Hargreaves parted.

This agreement having been made between your Petitioners and Mr. Hargreaves, your Petitioners John Hardman Australia Lister and William Tom started from Guyong on the morning of the 7th of April, 1851; and from the circumstance of a piece of gold having been picked up some time previously at a place now known by the name of the Fitz Roy Bar, your Petitioner William Tom suggested to your Petitioner John Hardman Australia Lister the importance of making a good search on that Bar; and the suggestion being approved of, your Petitioners William Tom and John Hardman Australia Lister repaired thither, and upon arriving at the place, your Petitioners turned out their horses, and after partaking of some refreshments, which they had with them, commenced searching for gold; and after looking for about ten minutes, your Petitioner William Tom succeeded in finding a piece of gold worth about £2 7s. This circumstance encouraged your Petitioners to prosecute their search further, and induced them to go into the mountains around the next morning for the cradle, which had been made by your Petitioner William Tom on a previous occasion, for the purpose of prospecting, and hid by him. About 2 o'clock the same day your Petitioners commenced working at the Bar, and by sun-down had accumulated about 30s. worth of gold dust, besides a nugget weighing about a quarter of an ounce. The next day your Petitioners collected about 300 grains weight of gold, and the day after about £2 worth. In prosecuting their labours your Petitioners carried the soil they dug up to the cradle in two 3-bushel bags.

As your Petitioners had now succeeded in ascertaining that the ground would pay for working, they determined upon proceeding down the creek to see if they could find any pieces or lumps of gold, in case any were exposed to view from the washing-away of the soil by the water. Accordingly they saddled their horses and proceeded to where a tributary creek emptied itself into the main creek, and your Petitioner John Hardman Australia Lister picked up a piece of gold immediately at the junction of the two creeks, which weighed eight sovereigns. John Hardman Australia Lister first saw this piece of gold while sitting on horseback: it was held above the ground, a portion of it being wrapped round the root of a tree. Your Petitioners' provisions being by this time exhausted, they were obliged to return home to Guyong the following day.

Your Petitioners communicated the result of their search to Mr. Hargreaves at the earliest opportunity they had, according to the agreement made between them, before alluded to; and considering themselves indebted to him for a knowledge of how to procure gold by the use of the tin dish, your Petitioners placed in his hands all the gold they had procured as before stated, in order that he might, on behalf of your Petitioners and himself, disclose the discovery made by your Petitioners to the Government, as his discretion and sense of honor might dictate. The money arising from the sale of gold your Petitioner had procured was received by Mr. Hargreaves, and by him divided equally between your Petitioners and himself. Your Petitioners respectfully submit to your Honorable House that this fact shows conclusively the fact of the agreement between your Petitioners and Mr. Hargreaves, and the understanding that any profit arising from the gold actually discovered was to be shared between Mr. Hargreaves and your Petitioners as partners in the business.

While your Petitioners admit that Mr. Hargreaves, as a partner with your Petitioners, was entitled to participate in the profits of the gold actually found in the course of their search, by virtue of the agreement between them before referred to, they respectfully submit to your Honorable House that they themselves were primarily entitled to be considered as such real and *bona fide* discoverers of such gold field, because they actually discovered such gold field in Mr. Hargreaves' absence from the spot where the discovery was first made.

In the year 1853 the then Government of the Colony made a grant to your Petitioners, upon the foregoing facts being brought to their knowledge, of £1,000, of which your Petitioners each received a third part; and this is the only sum ever received by your Petitioners from the Government for their discovery.

Your Petitioners entrusted the prosecution of their claim upon the then Government of the Colony to Mr. Hargreaves; and they have every reason to believe, from facts which subsequently came to their knowledge, that he did not fairly represent your Petitioners' share in the discovery, but that he gave an unfair prominence or importance to his own exertions to the prejudice of your Petitioners.

As a further reason in support of your Petitioners' claim as the discoverers of the first payable gold field in Australia, they beg to state, for the information of your Honorable House, that during the time Mr. Hargreaves and themselves were engaged in their searches for gold your Petitioners themselves paid Mr. Hargreaves' expenses consequent upon such search, and they did so in virtue of the agreement between themselves and Mr. Hargreaves before referred to. These expenses your Petitioners have never been repaid.

Your Petitioners have been informed a grant was made to Mr. Hargreaves, in or about the year 1853, of a large sum of money as a reward for his being the first or sole discoverer of a payable gold field, and that such sum was duly paid to him.

Your Petitioners have delayed bringing their claim before your Honorable House until the present time, solely that time might be given for the development of the resources of the gold fields of Australia, and in order that their value might be ascertained; and they submit that now the extent and value of such gold fields are fully known, they have a fair right to present their claims to your Honorable House as the first discoverers of the same as producing gold in payable quantities, and as being the persons by whose means the public attention was directed to the subject.

Your Petitioners therefore humbly pray that your Honorable House will be pleased to appoint a Committee to consider the prayer of this their Petition, and to report to your Honorable House whether or not your Petitioners are entitled to be considered the real and *bona fide* discoverers of the first payable gold field in Australia; and, if necessary, that your Petitioners may be at liberty to give evidence before such Committee in support of their claims, and may be heard by counsel in support thereof, either at the Bar of your Honorable House or before such Committee.

And your Petitioners, as in duty bound, will ever pray, &c.

WILLIAM TOM, JUNR.
J. H. A. LISTER.
JAMES TOM,

(By his Agent,—WILLIAM TOM, JUNR.)

1876-7.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

TYAGONG GOLD FIELD.

(PETITION OF JOHN O'BRIEN.)

Ordered by the Legislative Assembly to be printed, 11 May, 1877.

To the Honorable Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned resident of the Tyagong Gold Field, near Grenfell,—

RESPECTFULLY AND HUMBLY SHOWETH:—

That your Petitioner, on the 29th May, 1871, applied for a site upon which to sink a dam at Prince Alfred Gully, near Seven-mile, for mining purposes, 1,000 yards square.

That your Petitioner sunk a very large dam thereon, and at a cost of upwards of two hundred and fifty pounds (£250) erected ten puddling-machines, with all the necessary machinery.

That in consequence of the late Government throwing open the Tyagong Gold Field for selection, the ground upon which the aforesaid dam and machinery had been erected was selected.

That not less than fifty (50) miners were employed on this Gold Field at the time of its selection.

That owing to a decision in a case of a selector against a party of diggers, given in favour of the former by Mr. District Court Judge Forbes, at the Grenfell District Court held on the 24th January last, miners have relinquished further operations at the Tyagong.

That your Petitioner, for the reasons above mentioned, is deprived of the power and opportunity of carrying on his business.

That your Petitioner estimates the loss he has sustained in the making of a dam, the purchase and erection of machinery, and the loss of time, at upwards of nine hundred pounds.

Your Petitioner humbly prays that your Honorable House will take the foregoing premises into your consideration, and grant such relief as it may think fit.

And your Petitioner, as in duty bound, will ever pray.

JOHN O'BRIEN,
Miner.

1876-7.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

COAL.

(EXISTENCE OF, UNDER SYDNEY.)

Ordered by the Legislative Assembly to be printed, 28 May, 1877.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 23 May, 1877, That there be laid upon the Table of this House,—

“ A copy of the Report of Mr. Wilkinson, Geological Surveyor, and Mr. Lewis, Inspector of Coal Mines, as to the probable depth at which workable coal would be obtained in the neighbourhood of Sydney.”

(*Mr. Cameron.*)

COPY of the Reports of the Geological Surveyor and Inspector of Coal Mines as to the probable depth at which workable coal would be obtained in the neighbourhood of Sydney, in return to an Order of the Honorable the Legislative Assembly of New South Wales, made Wednesday, the 23rd of May, 1877.

The Government Geological Surveyor to The Under Secretary for Mines.

Geological Survey of New South Wales.

Sir,

Wellington, 17 July, 1876.

I have the honor to acknowledge the receipt of your letter of the 14th instant, requesting me to state, for the information of the Secretary for Mines, my opinion as to what depth coal will be found under Sydney and its suburbs, and to furnish the data upon which my opinion is based.

As to the existence of seams of coal under Sydney there can be but little doubt, but the depth at which they occur can be ascertained only by a careful geological survey, which I have not yet had time to make, and by actual test by boring.

My own geological notes of those portions of the coal districts which I have as yet examined, together with the published observations of the Rev. W. B. Clarke, M.A., F.R.S., and of others who have written on the subject, I have not here with me for reference. I will however state generally the geological points to be considered.

The seams of coal in question occur in the upper coal measures. This formation is overlaid by the Hawkesbury rocks, which form those bold sandstone cliffs around Sydney harbour and along the southern coast for about 28 miles from Port Jackson, where, as seen in the hills a short distance inland these rocks cannot be less than 1,000 feet thick. At this point the coal measures appear at the sea-level and gradually rise, until near Jamberoo they attain an elevation of 1,800 feet, still overlaid by the Hawkesbury sandstones, which are here only about 200 feet thick.

In

In this splendid coast section we thus see that the Hawkesbury rocks have a thickness of from 200 to 1,000 feet. Now, if we take the northerly dip of 4° of the beds at Coal Cliff to be persistent for 28 miles, the upper coal seam of Illawarra would underlie Sydney at a depth of 7,700 feet, which, with 650 feet of coal measures between the coal seam and the base of the Hawkesbury sandstones, would give the latter a thickness of 7,050 feet below the sea level; this, with the 360 feet of rock above sea-level, as seen in the hills about Sydney, would make at least 7,410 feet as the thickness of the Hawkesbury formation, which is highly improbable. We must therefore arrive at the conclusion that either there must have been enormous denudation of these rocks, amounting to 7,210 feet in the Jamberoo district, and that at Sydney a thickness of 7,700 feet of strata will have to be pierced to reach the uppermost coal seam, or else that this formation is unconformable to the underlying coal measures, in which case the depth of the latter can be ascertained only by boring, for the position of the surface of the coal measures will of course depend upon the amount of upheaval or denudation, or of both, to which the beds were subjected before the deposition of the Hawkesbury sandstone.

But if we take 1,000 feet to be the total thickness of these sandstones, as shown in our Illawarra section, and suppose them to be conformable on the coal measures, then it is clear that instead of the dip at Coal Cliff continuing the same for any great distance, the coal beds must "roll" or undulate, and that the coal may occur within 1,250 feet of the surface at Sydney.

Again, at Catharine Hill Bay, near Lake Macquarie, 48 miles north of Sydney, the dip of the coal seams is stated by the Examiner of Coal Fields to be from 1 in 20 to 1 in 30 in a westerly direction. If this dip continue the same as far south as Sydney, the coal will be reached at a depth of about 2,600 feet. But this depth is improbable, for in most of the coal fields the strata frequently "roll," are sometimes faulted and intruded by igneous dykes, and occasionally even within a short distance the dip varies.

It has not yet been determined whether the Illawarra coal seams are the equivalent of those at Newcastle, or whether they are above or below them. I am inclined to regard them as below, judging from the identity of some of the fossil fauna from the marine beds at Wollongong with those from the Hunter River marine series. This is of considerable importance to ascertain, for if the Newcastle coal seams be the uppermost, their southern out-crop will probably be found immediately under the Hawkesbury sandstones in the neighbourhood of Port Jackson; if otherwise, the Illawarra seams will occupy that position.

This consideration at once suggests that the Hawkesbury formation rests unconformably on the upper coal measures, which, I believe will be confirmed by future observation.

From the scanty information now at our command, perhaps the most instructive is that to be derived from the study of the Hawkesbury sandstones, which a few miles north of Bulli have been observed 1,000 feet in thickness.

If this be their greatest development, then the upper coal measures will be found within 640 feet below the sea-level at Sydney; and if the two formations be conformable, the Bulli coal seam will lie at a depth, as before stated, of about 1,250 feet, but if unconformable the coal measures may lie even nearer the surface, but the position of the coal seams cannot be stated owing to the varying dip of the beds.

Assuming therefore the thickness of the Hawkesbury rocks to be 1,000 feet, whether they be conformable or not to the coal measures, I am of opinion that the coal seams may be met with at a depth of from 600 to 1,500 feet below sea-level in the vicinity of Sydney. To settle this question it would be most desirable that the Government should undertake this exploration both on account of the valuable scientific information which would be gained, and of the commercial interests attaching thereto.

I may be permitted to suggest that in contemplation of this exploration by boring being carried out, the Department of Mines should now communicate with the Rock Drill Diamond Boring Company (Limited), in England, and ascertain if they would undertake, and upon what terms, to make borings in this Colony.

I have, &c.,
C. S. WILKINSON, L.S., F.G.S.,
Government Geological Surveyor.

The Inspector of Collieries to The Under Secretary for Mines.

Sir,

Newcastle, 18 July, 1876.

I have the honor to acknowledge the receipt of your letter, dated the 15th instant, requesting me to be good enough to state for the information of the Honorable Minister for Mines my opinion as to the depth coal may be found under Sydney and its suburbs and to furnish the data upon which my opinion is based, and to state in reply,—

1st. I believe that coal may be found at a depth of about 1,500 feet under Sydney and its suburbs.

2nd. However, I must confess that the data upon which I form this opinion is necessarily vague, mainly because it is based on local observations in the districts of Jamberoo and Wollongong only, rather than close examination of the rock formation along the coast between Illawarra and Sydney.

3rd. If the prevailing opinion in which I share be correct, viz., that there is a nearly uniform dip of about 1 in 100 in the strata from the Illawarra district to Sydney, then the only conclusion must be clearly in favor of my expressed opinion.

4th. For example, supposing the distance from Jamberoo to Sydney to be about 60 miles, the coal in the Jamberoo Ranges is about 1,500 feet above sea-level. At Coal Cliff, about midway between Jamberoo and Sydney, the coal is down at sea-level; consequently, if the dip be the same thence to Sydney the coal must be about 1,500 feet below sea-level at the latter place.

I have, &c.,
THOMAS LEWIS,
Inspector of Collieries.

1876-7.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

SEWERAGE OF THE CITY.

(PETITION OF CITIZENS OF SYDNEY AND OTHERS.)

Ordered by the Legislative Assembly to be printed, 24 April, 1877.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned Citizens of the City of Sydney, and other persons interested in the health, commerce, and property of this Colony,—

RESPECTFULLY SHOWETH :—

1. That the situation of this city, upon the shores of the harbour of Port Jackson, is naturally one of the most salubrious in the world.

2. That the healthfulness of the inhabitants of this city during very many years preceding the committing of the nuisances aftermentioned was notorious and proverbial.

3. That in the year 1850, an Act of the Legislature empowered the Council of the City, and in the year 1853, another like Act empowered Commissioners to construct sewers for the draining and cleansing of the city.

4. The preamble of the first Act utters the policy of the measure, and declares that the health and comfort of the inhabitants might be greatly improved if proper and suitable common sewers were made.

5. Under such authority, the present system of sewerage has been established, which has resulted in depositing all the filth of the city in the harbour, rendering all business occupations upon its shores disgustingly offensive, largely increasing the sickness of the citizens, and silting up year by year navigable water to a large extent.

6. The experience of the cities and large towns of Great Britain has shown that a superior degree of health has been attained by all such communities as commit their sewage to the earth, and draws a contrast unfavourable to the condition of those which commit it to the water.

7. At the time when the Sydney sewerage system was resolved upon, it had become notorious that the stream of the river Thames was unable to scour away the deposit from the London sewers; and measures were adopted for carrying it upwards of twenty miles, and there deodorizing it for the purpose of manure.

8. The example of London, however, was not sufficient, and the Commissioners made the experiment of depositing the sewage in the harbour, which has been attended with the like result, with this addition, that there being no river here, the accumulation of deposit has been much more rapid.

9. The heat of the climate largely favouring the generation of noxious gases, the accumulation of a large mass of sewage all round the city, except the south side, is highly dangerous to life, and is utterly destructive of the comfort and enjoyment of life, and the condition of the city is driving every one out of it who is able to reside elsewhere.

10. This unsalubrious condition is becoming well known in various parts of the world, and threatens to damage the city and Colony generally, by discouraging immigration and hindering trade.

11. In addition to the general public mischiefs enumerated, some of your Petitioners, who are owners of waterside properties, are injured by having cast upon them, under a statutory allegation that the doing so "will greatly improve the health and comfort of the inhabitants," the excreta and offscouring of a hundred thousand people.

12. Your Petitioners have by very many hundreds of their number frequently sought redress of this terrible grievance, this unhappy mistake, by humble Petition to and interviews with Honorable Ministers, but without avail.

13. The sewer evil was brought upon your Petitioners by no act of their own, but was enforced upon them by the power of the Legislature of the Colony, and it is wholly beyond your Petitioners' power to remove it; and they submit that its palliation not less than its removal should be an act of the Government.

Your Petitioners, therefore, humbly pray that your Honorable House will take the premises into consideration, and that some immediate relief may be afforded to your Petitioners, whereby the insanitary condition of the city, arising from the discharge of sewage into the harbour of Port Jackson, may be improved, and that as soon as possible a comprehensive mode of dealing with the sewage, apart from the harbour, may be adopted.

And your Petitioners will ever pray.

[Here follow 3,800 signatures.]

1876-7.

NEW SOUTH WALES.

SYDNEY SEWERAGE AND WATER SUPPLY.

(TWENTIETH ANNUAL REPORT OF MUNICIPAL COUNCIL OF SYDNEY—1876.)

Presented to Parliament, pursuant to Act 20 Vic. No. 36, sec. 75.

The Town Clerk to The Principal Under Secretary.

Sir,

Town Clerk's Office, Sydney, 20 February, 1877.

I have the honor, by direction of the Right Worshipful the Mayor, to transmit herewith, for the information of the Parliament of New South Wales, the Twentieth Annual Report of the Municipal Council of Sydney, of their proceedings under the Water and Sewerage Acts, during the year 1876.

I have, &c.,

CHAS. H. WOOLCOTT,

Town Clerk.

TWENTIETH ANNUAL REPORT of the Municipal Council of the City of Sydney, of their proceedings under the Water and Sewerage Acts.

THE Municipal Council of the City of Sydney have the honor to furnish, for the information of the Parliament of New South Wales, the following Report of their proceedings in connection with the Water Works and Sewerage Works during the year 1876, together with Statements of their Receipts and Expenditure under each fund for the same period.

WATER WORKS.

The engines and pumping machinery at Botany have been working throughout the year 1876 in a most efficient manner. Two of the engines have been constantly at work, excepting occasionally for three or four hours at a time, when the reservoirs have been signalled full.

The total quantity of water pumped up from Botany into the service reservoirs during the year 1876 was ten hundred and seventy four million five hundred and eighty-three thousand four hundred and seventy-two (1,074,583,472) gallons, being a decrease on the year 1875 of four hundred and twenty-seven million two hundred and forty-two thousand one hundred and sixty-four (427,242,164) gallons. This decrease is attributable to the further enlargement of the dams in the Lachlan, the water from which is delivered in Sydney by gravitation, and also to the great saving effected in the consumption of water to closets by the enforcement of the "Water Pollution Prevention Act," which came into operation on 22nd July, 1875.

In consequence of the decrease in the quantity of water pumped up from Botany during 1876 a saving of £1,228 in the cost of coal was effected.

The several works throughout the Botany and Lachlan watersheds are in good order, and have been kept in thorough repair by ordinary attention.

The embankment comprising portion of the work ordered by the Council to be constructed in the Bunnerong watershed is nearly finished.

The contract entered into with Mort's Dock and Engineering Company for the supply and erection of a pumping engine and machinery at the Crown-street Reservoir, is progressing satisfactorily. The engines, &c., are nearly complete. The engine-bed and foundation of chimney are laid, and as soon as the engine-house is finished the engine will be fixed in position.

The extension of the High-level Reservoir, for which work Mr. W. Watkins is contractor, will be completed in a few weeks. The work throughout has been done in the most satisfactory manner.

A contract was entered into during 1876, with Messrs. Lorimer & Rome, for the supply of 150 tons of 12-inch and 100 tons of 4-inch pipes; the pipes have been shipped, and their arrival is expected in a few weeks.

The number of houses connected with the water-mains during the year was one thousand and ten (1,010); and the total number of houses now receiving and paying for water is twenty-one thousand eight hundred and forty-three (21,843).

The number of meters fixed at the end of the year was two hundred and ninety-seven, and the quantity of water registered as passing through them during 1876 was seventy-five million eight hundred and thirty-five thousand (75,835,000) gallons.

The total length of pipes laid during the year for the extension of the water supply to the City and Suburbs is seven miles fourteen hundred and fifty-nine yards (7 miles 1,459 yards). (See Appendix A.)

1876-7.

NEW SOUTH WALES.

CITY AND SUBURBAN WATER SUPPLY AND SEWERAGE.

(PROGRESS REPORTS FROM HYDRAULIC ENGINEER.)

Presented to Parliament by Command.

No. 1.

The Hydraulic Engineer to The Colonial Secretary.

Sir,

Sydney, 19 January, 1877.

I have the honor to report to you the progress which has been made with my mission to the Colony for the purpose of advising the Government upon the Water Supply and Drainage of this city.

Since reporting by telegram my arrival at Melbourne on the 22nd November, and at Sydney on the 30th same month, to yourself personally, I have been engaged in visiting the various localities from which it has been proposed to furnish the supply of water, as well as the different parts of the country through which the several supplies would have to be conducted, and have also examined the Botany and Lachlan reserves, whence the supply is at present obtained.

To the Botany and Lachlan my first attention was directed on arrival here, and in company with the Surveyor General and Mr. Bradridge, C.E., of the Municipality, the locality was carefully examined, and I have been furnished by the latter gentleman and Mr. F. Bell, C.E., City Engineer, with information on the subject of its capacity for storage, &c.

The project, for an improved supply, of the Water Commission (Report 1869), I have examined from its origin at Pheasant's Nest, on the Upper Nepean and the Cataract River, along the course of the proposed conduit as far as Duck's Creek, near where the pipe line is intended to commence.

In company with the Honorable T. Holt, M.L.C., I have examined the George's and Port Hacking Rivers.

With Mr. James Manning I have visited the watersheds near the head waters of the Cataract and Woronora, also George's River, at the Lodden and Madden Plains; our inquiry extended to the Wingarrabee Swamp and neighbouring country, also the upper waters of the Nepean River.

My last inspection has been of the Warragamba River, in company with Mr. Thos. Woore.

These inspections have occupied my time entirely until the 13th instant, and have been made in company with the Surveyor General, Mr. Adams, and my assistant, Mr. Wall, in addition to the other gentlemen as severally mentioned.

I have called for some further surveys and levels, and borings, in connection with the Warragamba, George's River, and Port Hacking schemes, and I am now devoting my time to consideration of the different projects in their several details.

I shall shortly be able to take up the subject of the drainage and sewerage of the city. On this question I have already had an interview with the Sewage and Health Board, and have been furnished with a plan showing the levels of the city.

I am, however, expecting more information, as I believe that the Engineers of the Government and of the City have each of them schemes upon which I shall be called to give an opinion.

I have, &c.,

W. CLARK.

No. 2.

The Hydraulic Engineer to The Colonial Secretary.

Sir,

Sydney, 15 March, 1877.

I have the honor to acknowledge the receipt of your No. 38, dated 14th March, calling for a further Progress Report of my proceedings in connection with the Water Supply of Sydney and Suburbs.

On this subject I had the honor to address you a letter, dated 19th January, since when I have been constantly occupied with the consideration of the various schemes which you have placed before me, and the several modifications thereof which you have been pleased to send me, the most recent of which, in reference to Mr. James Manning's scheme, I have now to acknowledge receipt, this morning, in your letter of 14th March, No. 39.

As mentioned in my previous letter, and in order to enable me to put in practical form for examination and comparison these schemes, I have applied to the Surveyor General, Mr. Adams, for further information in the shape of surveys, levels, &c., as follows:—

For Warragamba.

A survey and levels of the mountain at the junction of this river with the Nepean; these plans I received from Mr. Surveyor Binsted on the 8th instant.

For Lower Nepean (Pumping).

Levels and plan of a portion of the mountain on the right bank of the river, 4 miles from Penrith, which appeared suitable; these were received from Mr. Surveyor Binsted on 12th instant. I find therefrom that the area of land available at a suitable elevation is not of sufficient extent, and I have asked for further search for a more convenient site.

For George's River.

Borings and soundings in the river bed, also surveys and levels of the most suitable sites for the construction of a waste weir and dam; surveys and levels have been received from Mr. Surveyor Handcock, on the 14th instant.

Mr. J. Manning's scheme.

Mr. Manning having extended his scheme to the Wingacarrabee Swamp, has at his own cost taken the levels of the country between that locality and Lodden Plains, the better to enable me to judge of its merits. His section was furnished to me on the 17th ultimo.

Upper Nepean.

I have found it desirable to call on Mr. Moriarty to furnish me with a revised estimate for these works. I received this from him on the 10th February, and from Mr. Grundy for his portion on the 8th instant.

Botany and Lachlan.

For the purpose of determining the storage capabilities of the area at present giving the supply to the city, I have requested that several boreholes be made in places marked by me on the map, and that these boreholes should be kept open by tubes.

The level of the water actually present in the sand will thus be capable of periodical inspection, and its variation on level may be noted. The actual quantity stored above the level of the stream can then be approximately measured, the object being to demonstrate practically what has heretofore been a belief only of the capabilities of this area. I have also had under consideration an improved method of drawing the supply from this source.

Since the date of my last report of the 19th January, I have been occupied with the consideration of all these schemes, without being able to make a final comparison to which the information I have asked for is essential. I have not however exclusively directed my attention to them, but have looked for other means of obtaining a supply; one of which has appeared to commend itself for further investigation.

This comprised the connection of the Woronora River with Port Hacking by a tunnel and the damming of the latter, and the supply by pumping the united waters of these rivers. It appeared to me to obviate some objections to the George's River scheme, and promised as I had considered a possible source of supply which had several advantages.

The whole question, however, centered in the possible construction of an efficient dam, crossing the Port Hacking River. To solve this question I have asked for surveys, levels, and borings of one of the sites which appeared suitable for the purpose, and I have made a second inspection of the locality.

These plans, &c., I am now in daily expectation of receiving.

I have made another inspection of part of the line of conduit of the Upper Nepean scheme; I have also requested trial holes to be dug at several places; these are, I believe, now ready for inspection.

I have made a further inspection of the site of the proposed dam for the Prospect Reservoir, in order to satisfy myself more particularly of the presence of suitable materials, and the probability of its being constructed for the estimated cost.

These duties have fully occupied my time; but in the prosecution thereof, it has afforded me opportunities of visiting various portions of the city, during which I have made observations of its sanitary condition, with a view to its requirements; and I have also had opportunity of inspecting the proposed points of outfall of the suggested intercepting sewer.

With reference to my Final Report on the Water Supply question,—having now nearly all the information before me, I hope to be able to furnish it at an early date.

I have, &c.,
W. CLARK.

PLANS

Prepared by the Engineering Committee :—

1. General Plan of Sydney and Suburbs, to a scale of 20 chains to 1 inch.
- 2-3. Two large plans, to a scale 4 chains to 1 inch, of Sydney proper and the adjoining Municipalities.
4. Plan of proposed Sewage Farm for intermittent downward filtration of the sewage.
5. Longitudinal section of intercepting sewers on north side of Sydney discharging into the Ocean at Ben Buckler Point.
6. Longitudinal section of main intercepting and branch sewers for southern portion of Sydney and Suburbs.

THE SYDNEY CITY AND SUBURBAN SEWAGE AND HEALTH BOARD.

TWELFTH AND FINAL REPORT.

To the Honorable the Colonial Secretary,—

SIR,

1. We have the honor to present this our final Report upon the Sewerage of Sydney and its suburbs. In doing so we deem it desirable in the first place to review our proceedings since the appointment of the Board on the 12th April, 1875.

2. By direction of the Colonial Secretary, and in consequence of the excessive mortality then prevailing, we directed our inquiries in the first instance to immediate causes of ill-health with the purpose of suggesting temporary remedies or expedients capable of prompt application. An evil was soon brought to light of such magnitude as to engage our attention, in the first place, exclusively. We found that four-fifths of the water-closets were liable to be directly connected with the mains, and that the contents of the closet-pans were drawn into the pipes and mains supplying the inhabitants with water. Not only was this found to have been the case in some instances but there was evidence to show that it was probably of common occurrence. The horrible state of things thus disclosed was brought under the notice of the Government in our *First Progress Report*, which was adopted on the 4th May, 1875, recommending the passing of an Act requiring that every closet should be connected with a main through a cistern of such construction as to secure the water from contamination by any solid, liquid, or gaseous matter, and empowering the City Engineer to cut off all direct connections immediately after the passing of the Act. The result of this recommendation was the introduction of the "Water Pollution Prevention Act," which became law on the 22nd July, 1875.

3. The Board originally consisted of nine members, viz. :—Messrs. M. B. Pell, B.A., Professor of Mathematics and Natural Philosophy, University of Sydney, (Chairman), P. F. Adams, Surveyor General, H. G. Alleyne, M.D., Health Officer, Francis Bell, City Engineer, E. O. Moriarty, Engineer-in-Chief for Harbours and Rivers, Hon. John Smith, M.D., Professor of Chemistry and Experimental Physics, University of Sydney, John Whitton, Engineer-in-Chief for Railways, Chs. Watt, Government Analyst, and Hon. J. B. Wilson. On the 20th April, 1875, two additional appointments were made in the persons of W. C. Bennett, Commissioner for Roads and Bridges, and G. F. Dansey, M.R.C.S., City Health Officer. On the 27th of the same month Messrs. R. B. Read, M.R.C.S., and F. H. Grundy, C.E., were appointed, and the number was still further augmented on the 10th June, 1875, by the appointment of Messrs. Benjn. Palmer (then Mayor of Sydney), and Mr. Alderman M. Chapman, making in all 15 members.

4. In submitting the first Report of the Board to the Hon. Colonial Secretary, the Chairman took the opportunity of pointing out the disadvantage attending the deliberations of a Board so numerically large (the number of members being then 13), however excellent its constitution in other respects.

5. To remedy to some extent this disadvantage, and to provide for that calm and deliberate thought and discussion necessary in the consideration of questions of so much importance as those submitted to the Board, an arrangement, which received the sanction of the Colonial Secretary, was made on the 25th May, 1875, under which the Chairman, with five other members of the Board, Messrs. Moriarty, Bennett, Wilson, Alleyne, and Bell were constituted a Central Board to carry on the general inquiry, and the services of the other members were utilized by the formation of committees to investigate subsidiary matters, and to report to the Central Board from time to time. This subdivision of duty took effect from the 17th June, 1875, and was found to answer very well, as it enabled the Board to grapple with several questions at once, besides affording opportunity to members of visiting localities requiring personal inspection.

6. The next subject which engaged the attention of the Board was the construction and management of cesspits, the mode of cleansing them, and the disposal of their contents.

7. From the faulty construction of the receptacles for night-soil, the state of filth and neglect which was allowed in connection with them, and the absence of any control on the part of the City Corporation over the nightmen, an intolerable and flagrant nuisance existed on every side, sufficient in itself to breed fever and disease, even without the palpable contamination of wells in the immediate vicinity of the closets, which was constantly occurring. The evidence taken by us on this subject, and the careful inquiry we made into the systems adopted and the appliances made use of in other countries for the disposal of night-soil, convinced us that here also special legislation was necessary to reduce the evil.

8. Although disapproving of the cesspit system, and indeed of any system by which such refuse is removed by hand, we could not ignore the fact that to provide an adequate remedy would require some years, whereas the evil was immediate and palpable and should be brought within narrower limits by temporary measures. Accordingly, in our *Second Progress Report*, adopted on the 24th June, 1875, we submitted to the Government the heads of a measure under which owners and occupiers should be relieved from all responsibility in the matter, except that of paying the charges, and the Council of every Municipality should be required to undertake the duty of emptying cesspits and other similar receptacles by means of their own plant and appliances, and under the inspection of their own officers. The Bill contained provision empowering the Councils to make regulations as to the construction, situation, and size of cesspits to be thereafter made and to enforce such alterations in existing privies and water-closets as should be found necessary for the sake of health, decency, and facilities of emptying.

9. The result of this recommendation was the passing of the "Nuisances Prevention Act of 1875," 39 Vict., No. 14, which became law on the 11th August, 1875.

10. In accordance with the arrangement for subdividing the duties entrusted to the Board, referred to in paragraph 5, and in order to expedite the work, Committees were appointed at different times to inquire into minor matters affecting the public health. It may be as well to state them here in numerical order, with the dates of appointment for reference as we proceed.

No.	Date of Appointment.	Subject of Enquiry.	Members.
1875.			
1	May 25...	To inquire into the state of the Botany watershed and the appearance of the water.	Prof. Smith (Ch.), Messrs. R. B. Read, and F. H. Grundy.
2	" 25...	To inquire into the nuisance alleged to exist in connection with the waterhole on the Sugar Co.'s premises.	Messrs. C. Watt (Ch.), G. F. Dansey, and F. H. Grundy.
3	" 25...	To inquire into the disposal of blood from the Glebe Island Abattoirs.	Dr. Alleyne (Ch.), C. Watt, and F. Bell.
4	" 29...	To visit and examine the line of Busby's Bore	M. B. Pell (Ch.), E. O. Moriarty, and W. C. Bennett.
5	June 9...	To examine lands proposed as receptacles for night-soil.	M. B. Pell (Ch.), E. O. Moriarty, and P. F. Adams.
6	July 13...	To examine into the condition of Shea's Creek	W. C. Bennett (Ch.), M. Chapman, and F. H. Grundy.
7	" 16...	To examine and report upon the nuisance arising from the city sewers discharging into the harbor.	Dr. Alleyne (Ch.), E. O. Moriarty, and F. Bell.
8	Sept. 21...	To devise a scheme, and prepare plans and specifications for filtering the sewage at Blackwattle Swamp.	M. B. Pell (Ch.), E. O. Moriarty, and W. C. Bennett.
9	Oct. 8...	To audit the books and accounts of the Board	Hon. J. B. Wilson and B. Palmer.
10	" 21...	To cause plans and surveys to be prepared for the purpose of determining how far it is practicable to divert the every-day dry weather sewage either to the sea or to Webb's Grant, or on to some other suitable land in the same direction.	E. O. Moriarty (Ch.), M. B. Pell, W. C. Bennett, F. Bell, P. F. Adams, F. H. Grundy.
11	" 26...	To inquire into the crowded state of dwellings and areas in the City of Sydney and suburbs, so far as it affects public health.	Prof. Smith (Ch.), B. Palmer, G. F. Dansey, M. Chapman, and R. B. Read. N.B.—Mr. F. H. Grundy succeeded Mr. Read on Feb. 19, 1876.
12	Nov. 20...	To inspect the entrance to the Tunnel and to report upon Mr. Norton's letter, and the alleged contamination of the water by deposits of ashes and refuse by the Corporation.	Dr. Alleyne (Ch.) and P. F. Adams.
13	" 24...	To investigate special cases of scarlet fever reported to the Board, &c., and to report generally as to the causes which have occasioned the prevalence of that disorder.	Dr. Alleyne (Ch.), G. F. Dansey, and F. Bell.
14	Dec. 21... 1876.	To visit and report upon Messrs. York and Walsh's establishment at Glebe Island.	Dr. Alleyne (Ch.), F. H. Grundy, and F. Bell.
15	Oct. 27...	To receive and confer with Hydraulic Engineer	M. B. Pell (Ch.), E. O. Moriarty, and W. C. Bennett.

11. During the discussion of the questions dealt with in the last-mentioned Report, strong representations were made to the Board from different quarters as to the benefits of the dry-earth system.

12. The earth-closet was considered by a great many persons to be the real solution of the difficulty, and it seemed to be expected that we should recommend its general adoption. It was not considered necessary to take any local evidence on this subject, the repeated tests of this new method of treating night-soil made in other countries since its first introduction leaving little or nothing to be learned on the subject. We thought, however, that it was desirable, in view of the strong impression in favour of the use of earth-closets, to deal with the question in a separate Report, and in our *Third Progress Report*, adopted on the 14th July, 1875, we submitted to the Government a *resumé* of the reasons which render the dry-earth system efficient only in the case of private dwellings and public institutions where regularity and careful management can be enforced, and quite inapplicable to large towns. The authorities in Europe and India, where the system has been fairly and thoroughly tried, are so unanimous in this opinion that, so far as the City of Sydney is concerned, the Report of the Board may be said to have set the question entirely at rest.

13. On the 30th July, 1875, the Committee appointed to inspect and report upon the Glebe Island Abattoirs brought up their Report, and having adopted their recommendations, and taken some further evidence from the Colonial Architect in reference to certain proposed improvements, we brought the subject under the notice of the Government in our *Fourth Progress Report*, adopted on the 25th August, 1875. In this Report we advised that the city water be at once laid on to the island, and that arrangements be made to give the animals a sufficient quantity. We also recommended an improved and less porous description of flooring for the slaughter-houses, and the construction of filtering-tanks; while, in order to prevent the palpable nuisance created by allowing the blood to be discharged directly into the harbour, and the more indirect but equally undoubted nuisance caused by disposing of the offal to persons who used it for feeding pigs, we recommended that all the offal, blood, and other refuse should be the property of the Government and be dealt with by them.

14. To carry out these recommendations a new set of regulations for the management of the Abattoirs was framed; but they have not, we are sorry to learn, been carried out very strictly.

15. The blood has been treated so as to avoid all danger of nuisance from that source, but the offal is still openly carted from the slaughter-houses to various piggeries in the suburbs, from which we have received frequent complaints of nuisances.

16. We have been informed that it was not found possible at the time to carry out the intention of the Government in respect to the offal in consequence of the doubtful legal validity of the new regulations. A marked improvement has, however, taken place in the condition generally of the Abattoirs; and the keeping back of the blood from the harbour produced a very marked change for the better in the condition of the adjacent waters.

17. The Committee (No. 5) appointed to select a suitable piece of land to serve as a *dépôt* for night-soil, in connection with the Nuisances Prevention Act, having succeeded after much inquiry in finding a sandy tract of land known as Webb's Grant, at the mouth of Cook's River, on its southern side, consisting of about 300 acres, admirably adapted from its isolated position for the required purpose, reported the result of their labours to the Board. In the absence of the Colonial Secretary, and after a personal inspection of the ground, in company with other members of the Board, the Chairman finding the locality pointed out by the Committee to combine all possible requisites in a higher degree than could have been expected within so short a distance—about 6 miles—from the city, took upon himself the responsibility of purchasing 20 acres of this land, a purchase which was sanctioned by the Colonial Secretary on his return to Sydney. We hoped that the City Council and several of the suburban Municipal Councils would avail themselves of this place of deposit, and that the night-soil would be effectually, if not profitably, disposed of by trenching it into the ground at Webb's Grant, which might possibly form the site of a sewage farm hereafter should the researches of the Board lead them to the conviction that such an experiment would be desirable. With this object the Chairman invited the Mayor of Sydney and the Mayors of the suburban Municipalities to meet

meet in the board-room to discuss the question. On that occasion, there being a full attendance, it was resolved by a considerable majority that the most effectual way of disposing of the night-soil was to take it out to sea. This mode of disposal had also been agreed to by a resolution of the City Council, who had authorized the construction of punts for that purpose. More than twelve months have since elapsed, and up to the present moment we cannot learn that any practical effect has been given to the wish of the Council expressed in the above resolution.

18. Whether they are unable to find a wharf where the citizens will allow them to load the offensive matter, or whether they now admit the force of the objections urged by the Board against this project, is known to themselves only. The Act gives them power to choose their own place and mode of deposit, and it is probable that eventually they will adopt our recommendations.

19. In the meantime repeated complaints are made as to the disposal of night-soil in improper places just outside the city boundary. While however, we feel it right to point out that the Nuisances Prevention Act has not been strictly carried out still in some measure the nuisances arising from this source have been greatly mitigated. Until the Municipal authorities fully carry out the Act by themselves undertaking the duty of cleansing cesspits, the evils complained of will never be entirely removed. In November, 1875, the Board imported from Victoria an air-tight iron night-cart, similar to those used by the Corporation of Melbourne. This was at once placed at the service of the City Council, and has been found a great improvement upon the carts previously in use.

20. In the same Report we made certain recommendations to the Government on the subject of Blackwattle Swamp, which had been inspected and reported upon by Committee No. 8, the main recommendation being the construction, with as little delay as possible, of a sewer to carry the sewage to the water's edge and thence by pipes into deep water as a temporary expedient, pending the consideration of a general system of sewerage. We are glad to be able to state that this very necessary work has been effectively carried out, and that one of the most fruitful sources of sickness has thus been done away with.

21. Acting upon the advice of the Board, in accordance with a letter from the Chairman dated 11th August, 1875, the Colonial Secretary authorized the carrying out of an arrangement proposed some years ago by Mr. Moriarty for carrying into deeper water, by means of iron pipes, the sewage discharged from the main sewer at Fort Macquarie, and in our *Sixth Progress Report*, adopted on the 8th November, 1875, we advised the construction of similar works at the mouths of the Tank Stream and Queen's Wharf sewers in order to mitigate the evils complained of during the previous summer, arising from the foul gases generated by the sewage. We also recommended a change in the wharfage arrangements in Darling Harbour, in order to avoid the accumulation of offensive matter under and between the wharves where there is no room for a dredge to work.

22. Certain complaints from the Imperial naval authorities as to the alleged unhealthiness of the anchorage ground reserved for men-of-war in this port, having been referred to the Board for investigation, we made a careful inquiry into the circumstances of the case, inspected the locality, obtained samples of the mud at the bottom, which were analyzed; and proved, so far as such a matter is capable of proof, that the cases of enteric fever which gave rise to the complaints were not attributable to the sewer; but were probably due to the use of impure water by the seamen. Since that time the measures taken to prevent the contamination of the mains under the "Water Pollution Prevention Act of 1875" by the City Corporation have been carried out so completely and vigorously that no apprehension need be entertained of a similar outbreak. In our *Sixth Report* also, we made certain recommendations in respect to the construction and ventilation of sewers. In order to obtain fresh and accurate information as to the existing state of the City sewers, we employed Mr. W. Davies, an officer in the Harbours and Rivers Department, to make a close personal inspection of them as far as practicable, and to take notes as he proceeded. The evidence thus obtained, embodied in a Report to the Board, together with Mr. Davies's examination on the subject, were appended to the *Progress Report* of the Board.

23. With the sanction of the Colonial Secretary, we ordered and obtained from England several sample street ventilators in order to neutralize the effects of sewer-gas escaping in various parts of the city. The ventilators contain layers of charcoal

charcoal which act as purifiers and prevent any offence. They are much used in England, and so far as we have been able to test them are very efficacious.

24. In the same Progress Report were commended certain negotiations with the Australian Sugar Refining Company with a view to remedy a nuisance complained of in connection with the refuse water stored on their premises in Parramatta-street; we also made certain recommendations in respect to boiling-down establishments and to the state of the water supply (appending to the Report the Reports of Nos. 1, 2, 4, and 7 Committees, together with a Second Report from Professor Liversidge, containing analyses of samples of water taken from the Lachlan Swamp and from Busby's Bore), the probable contamination of the watershed from the Municipalities of Waverley and Woollahra, from the Sheep Quarantine Ground, and from other sources having engaged our serious attention for some time.

25. In our *Seventh Progress Report*, adopted on the 3rd January, 1876, we confined ourselves entirely to the state of the City watch-houses, upon which subject the Committee (No. 11) appointed to make personal inspections of the crowded parts of the City, had made some rather startling disclosures. The Report of that Committee, and the extracts from their notes, afforded ample proof of overcrowding and the want of proper sanitary arrangements, and we found it necessary to make some very strong recommendations in respect of better ventilation, lighting of the cells, the classification of prisoners, &c. We also recommended that a sum should be placed on the Estimates to build commodious watchhouses in the best available situations, to supersede those in George, Cumberland, and Parramatta streets, and to make additions and improvements at Darlinghurst.

26. In the month of January, the protracted drought presenting a very favourable opportunity for inspecting the various watersheds which have been suggested for supplying the city with water, we proceeded with the sanction of the Colonial Secretary, to make observations and to take evidence on this subject. We append all the information we obtained, together with a copy of resolutions unanimously agreed to by the Board on the 28th March, 1876. (*Vide Appendices A and B.*)

27. The Committees (Nos. 6 and 13) appointed respectively to inquire into the condition of Shea's Creek, and the prevalence of scarlet fever, having brought up their Reports, we embodied these in our *Eighth Progress Report*, which was adopted on the 8th February, 1876. In both these cases the evils existing were the results to be expected from the absence of any system of drainage or sewerage in a thickly populated locality. To quote from the Report of Mr. Bennett, Chairman of the Shea's Creek Committee—"The whole of the subsoil of the low ground appears to be saturated with the sewage, giving out the most offensive fumes. Many of the houses have been constructed in what are now green foetid pools, and complaints of illness and mortality during the hot weather of last summer were general; no language can adequately describe the foul and noisome filth of the drains in the immediate vicinity." The malignant cases of scarlet fever which the Committee (No. 13) were specially appointed to investigate were traced to similar causes,—want of proper drainage and ventilation. "Wherever," says Dr. Alleyne, Chairman of the Committee, "we found streets containing houses badly constructed, ill-ventilated, and without proper drainage, there were the dwellings where there had been fatal cases of scarlet fever, and we are forced to the conclusion that it is in such localities, among a population predisposed to disease, and with depressed vital powers less able to resist its attacks, an epidemic finds its ready victims." We pointed out the necessity of at once constructing the sewer recommended by the Committee for draining that neighbourhood, as the only means of remedying these evils. We also recommended the establishment of a suitable hospital for the reception of cases of scarlatina, erysipelas, or other forms of contagious disease, and suggested that a weatherboard building would answer the purpose, and be more suitable than one of stone or brick. The recommendations made by the Board in this Report were based upon the advice given at a conference of medical men convened by the Chairman to consider the subject.

28. Repeated complaints of the nuisance arising from the foul state of Shea's Creek, referred to in the last paragraph, and of the offensive fumes proceeding from the tannery of Messrs. Alderson & Sons, having been made to the Board, we instructed the Committee (No. 6) to make a further inspection of the place, and especially of the tannery and its surroundings; and upon receipt of their Second Report we brought the matter again under the notice of the Government in

our

our *Ninth Progress Report*, adopted on the 4th April, 1876, in which we recommended that the opinion of the law officers of the Crown should be taken as to whether an indictment might not be laid by the Attorney General against the proprietors. We also took the opportunity of repeating our former recommendations in respect to the practice of feeding pigs upon offal taken from the Glebe Island Abattoirs, the desirableness of giving authority to the City Council to make sewers through private property, and the nuisance existing on the Sugar Company's premises, and urged upon the Government the necessity of providing immediate relief to the inhabitants of Alexandria, Redfern, and Waterloo, who were suffering from a scarcity of water, many of the wells in those neighbourhoods having been found to be contaminated by percolation from cesspits.

29. Our *Tenth Progress Report*, adopted on the 2nd May, 1876, submitted to the Colonial Secretary the Second and Third Progress Reports of No. 11 Committee, appointed to inquire into the crowded state of dwellings and areas, adopting their recommendations—(1st) in respect to the regulation of common lodging-houses, so as to prevent injurious overcrowding and to secure a reasonable amount of cleanliness and fresh air; and (2nd) in respect to the supply of water to certain suburbs, which the Board had anticipated in their previous Report.

30. In our *Eleventh Progress Report*, adopted on the 10th August, 1876, we submitted the final Report of No. 11 Committee (Crowded Dwellings and Areas), together with the notes of inspection by members of the Committee and the evidence given by witnesses, making altogether upwards of one hundred pages of closely printed matter, and comprising a valuable and exhaustive description of the crowded and unwholesome localities in the different wards of the city. The chief points in regard to which legislation is required were in the opinion of the Committee—the appointment of a Central Board of Health, the passing of a Building Act, giving extended powers to Municipalities to construct drains or open up thoroughfares through private property, and the providing proper dwellings for the working classes. Adopting the views of the Committee, and repeating our previous advice, we recommended the appointment of a Board of Health and Works, to consist of a small number of members, who should not be directly subject to popular control, and who should have a secure tenure of office, and sufficient power, subject to the approval of the Government, to carry out necessary works and to compel the observance of sanitary laws. We also recommended, upon the strength of the evidence obtained by the Committee, a rigid and special supervision of Chinese quarters in Sydney.

SEWERAGE SCHEME.

31. The scheme which we have agreed to recommend for the sewerage of the City and Suburbs is described in detail in two Reports (appended) from the Engineering Committee, which were adopted without amendment, but not without much reflection and discussion. In our *Sixth Progress Report* we stated generally our unanimous determination that the sewage of Sydney should, as far as possible, be diverted altogether away from the harbour. Before entering into any of the details of the system now proposed, we will state briefly our reasons for rejecting all other methods known to us of dealing with sewage matter.

32. *Conservancy Systems*.—At one time the idea prevailed that the offensive and dangerous character of sewage was owing chiefly to the faecal matter mixed with it; and it was supposed that if such matter could be kept entirely out of the sewers, so great an improvement would be effected in the quality of the sewage that the difficulty in disposing of it would be greatly diminished. It was thought also that the excreta might be converted profitably into a portable and valuable manure. It has not been found, however, that the sewage of those towns where conservancy systems have been adopted is in any sensible degree purified; the fact being that the refuse from kitchens, laundries, and other sources common to large towns, after it has become putrescent, is quite as offensive and very much greater in quantity than that which is discharged from water-closets. We need not go far for a notable instance of this truth. In the latter part of the year 1875, when the excessive and intolerable nuisance occasioned by the accumulation of sewage in Blackwattle Swamp gave rise to such an outcry, the number of water-closets connected with sewers leading into that swamp was very small, although the area drained into the swamp is 533 acres, and the weather being continuously dry there could not have been an
overflow

overflow of cesspits, which sometimes occurs during heavy rain. At the same time it will be admitted that the quality of the sewage could hardly have been worse. We found also that a sample of Melbourne sewage, taken from one of the outfalls, was as offensive as could well be imagined, although measures had been taken there which render it almost impossible that any faecal matter should find its way into the drains. All conservancy systems may be abandoned as not effecting the object intended, however efficiently carried out, and leaving the sewage difficulty unsolved.

33. On the dry earth system we have already reported fully. The Liernur system having attracted some attention deserves a passing remark. We need do no more than quote from the Report of a Committee appointed by the President of the Local Government Board in London to inquire into the several modes of treating town sewage, dated 21 July, 1876, and in reference to evidence before them:—

“These statements show that the first cost of the pneumatic apparatus is very great, being at a rate of £4 per head of the population, and that the annual expenses are at a rate of 2s. per head. This is all in excess of ordinary sewers and drains, and ordinary scavenging. The income, it will be noted, is at present unsettled and uncertain.”

* * * * *
 “The pneumatic system is ingenious, but it is complicated in its construction and working arrangements; and consequently it is liable to derangements which are sometimes difficult to mend. We do not know one English town in which the apparatus, if adopted, would be other than a costly toy.”

34. *Filtration Processes.*—There is no doubt that sewage may be rendered inoffensive and perhaps innocuous by various methods of filtration, of which that in use at the workhouse at Stoke-upon-Trent is a good instance. This process is described in the evidence of Mr. G. R. Dibbs, M.P. (appended) and in a number of documents with which he kindly furnished us, and also in some reports on sewage questions which are before us. Such systems may be well adapted to large establishments, whether private or public, but are obviously inapplicable to the sewage of a populous city, and especially to Sydney, where the sewage has a number of outfalls, mostly in crowded localities, in which the necessary works could not possibly be established.

35. *Precipitation Processes.*—Important results were at one time expected from some of what are called precipitation processes, especially for inland towns in Great Britain. Several of these modes of treating sewage have been proposed and patented and tried. They vary in details, but have the following characteristics in common:—The sewage before being discharged into a watercourse is collected in large settling tanks and allowed to stand. The process of settlement is promoted and accelerated by the addition of various chemical and other ingredients. By these means it is admitted that the sewage is clarified and rendered inoffensive and apparently innocuous. It was supposed that two objects would be gained by these processes: The sewage would be sufficiently purified to allow its discharge into a running stream without offence; and the expense would be more than recouped by converting the sediment, or sludge as it is usually termed, into a valuable manure. Neither of those objects has been attained in any case which has come under our notice in the various reports of inquiries into sewage questions which have been made in Europe. Although the sewage is clarified, it is shown by analysis that the fluid still contains a great part of the organic matter in solution, and with it the greater portion of the ingredients which are at once the most valuable as manure and the most dangerous to health. The sludge is difficult to deal with, and although convertible into a portable manure of some value, it does not appear that it can be profitably treated. The general conclusion appears to be, even in Europe where labor is cheap and good manure finds a ready sale, that city refuse cannot in general be profitably disposed of on a large scale by any system of land carriage.

36. The Committee recently appointed by the President of the London Local Government Board to inquire into the several modes of treating town sewage, say:—

“That, as far as we have been able to ascertain, any mode of treating town sewage by deposition and by chemicals in tanks effects little change other than the separation of solids and clarification of the liquid. That this mode of treatment, however, effects a great improvement, and when carried to its greatest perfection may be accepted. That any rivers or streams receiving the water of sewage so clarified should not, however, be used as a source of water supply for domestic purposes.

“That none of the manufactured manures, made by manipulating town refuse, with or without chemicals, as examined by us, pay the contingent costs of such mode of treatment; neither has any mode of dealing separately with excreta, which paid the cost of collection and preparation by a sale of the manure, been brought under our notice.”

37. It would be easy to quote instances in support of the views above expressed, but it is unnecessary to do so. The reasons which have operated to induce the authorities of some English towns to adopt precipitation processes have been chiefly the following :—

- (1.) The remoteness of the sea.
- (2.) The difficulty, in some cases impossibility, of obtaining a sufficient area of suitable land for irrigation purposes.

Neither of these difficulties exist here, and if once the sewage is collected in an intercepting sewer, which it must be whatever system is adopted, it will be cheaper, casier, and in every way better either to discharge it into the ocean or to turn it on to suitable land, of which there is an ample extent close at hand, than to manipulate it in any more artificial way.

38. A Committee appointed to inquire into the best method of disposing of the sewage of Birmingham, in their report, dated October 2nd, 1871, make the following remarks on the question of sewage farming :—

“Chemists of the highest scientific attainments express absolutely contrary opinions, and engineers of the greatest eminence are equally at variance.

“In this state of uncertainty, it is, therefore, of special importance, in dealing with the immense volume of sewage at Birmingham, to proceed with the greatest caution,—at any rate until some agreement be come to between the various scientific authorities.

“In default of such agreement, the only resource is to turn to those places where the irrigation system has been adopted, and endeavour to ascertain the result of their experience; but in doing this it must be borne in mind that, with a few exceptions, all trials of irrigation are of very recent date.”

39. There is no doubt that, at the date of the Report above referred to, very great diversity of opinion did exist, even amongst those who are justly regarded as authorities; and that this variance extended not only to the irrigation system, but to every known method of disposing of town sewage. It cannot, however, be considered that much difference of opinion now exists amongst competent persons who have fully and impartially inquired into the various systems which have been tried in England.

40. The Birmingham Committee having carried out their enquiry in the spirit of the eminently sensible remarks above quoted, concluded to recommend for Birmingham a modified form of sewage irrigation which is known as the “intermittent downward filtration” system. In this system the main object is the purification of the sewage: the raising of crops is a secondary one, but tends in some degree to diminish the expenses. A very much smaller area is required than would be sufficient to thoroughly utilize the sewage, and to constitute a sewage farm in its proper sense.

41. Since the date of the Birmingham enquiry a great number of similar enquiries have been made among which we may mention particularly :—

- (1.) That of a Committee of the British Association appointed in September, 1873.
- (2.) That of the Executive Committee of the Conference on the Health and Sewage of Towns, whose report was published in May, 1876.
- (3.) That of a Committee appointed by the London Local Government Board to enquire into the treatment of sewage, whose report is dated July, 1876.

42. These Committees consisted of persons of the very highest attainments and standing and founded their reports upon the results of their own observations and experiments, and upon the recorded results of actual experience.

43. Their unanimous conclusions are that the only unexceptionable methods of dealing with sewage, are :—

- (1.) Sewage farming where a sufficient quantity of suitable land can be obtained.
- (2.) Intermittent downward filtration where a smaller area only is available.
- (3.) That for seaboard towns it may be allowable on the score of economy to turn the sewage at once into the Ocean.

And they conclude that precipitation processes should never be resorted to except when neither of the above-mentioned systems is practicable.

44. Some difference having existed amongst us as to the expediency of disposing of even a small proportion of the sewage of Sydney by sewage irrigation or downward filtration, the question was formally debated by us. A full report of the debate is appended, including lengthy extracts from recent reports on the subject.

It

It was finally determined, almost unanimously, to recommend that the sewage of the southern slopes, which now finds its way chiefly through Shea's Creek into Cook's River, should be treated by the "Intermittent downward filtration" system on a suitable tract of land on the lower part of Shea's Creek.

45. To turn the sewage referred to into the Ocean by any means which have been suggested would involve a large additional expense considering the quantity to be dealt with, and in the improbable event of the downward filtration system which we propose proving from any cause a failure, all the sewerage works which we recommend would still be subsidiary to any more expensive scheme for otherwise disposing of it.

46. It is satisfactory to us to find that we are fully confirmed in all the conclusions at which we had arrived by the valuable evidence of Dr. Wm. Morris, of this City, who has recently returned from England, and who visited many of the sewage farms and other sewage works in Great Britain, and had interviews with Mr. Rawlinson, Dr. Buchanan, and other leading authorities on the subject.

47. The graver objections which have been made to disposing of sewage upon land have been most conclusively dealt with by the recent reports from which copious extracts will be found in the report of the debate to which we have referred.

48. There is an acknowledged difficulty, however, in sewage farming in Great Britain—the disposal of the sewage during the cold winter months, when vegetation is torpid and additional moisture is an evil. We do not anticipate that any such difficulty will occur here. A luxuriant growth of a great variety of useful plants can be maintained here throughout the year, and it will not be often that an excess of water will be found pernicious on the light sands of Botany.

49. The scheme proposed for the treatment of the sewage of the northern slopes of the city may be briefly described as follows: The sewage which now finds its way into Port Jackson through the existing sewers, or which would otherwise be similarly disposed of through sewers to be hereafter constructed, is to be diverted by means of a system of intercepting sewers into a tunnel discharging at Ben Buckler Point, near Bondi. After much consideration, and we may say some fluctuations of opinion, we decided on recommending this plan in preference to diverting this immense body of sewage to Botany to be there treated upon the land. To utilize it thoroughly would require a very large area of land, and would form we believe a larger sewage farm than exists in the world. We believe that the land disposable in the direction of Botany is well adapted for sewage farming; indeed it has been proved at Dantzic (see Report of Debate, fol. 131) that mere drifting sea-sand answers the purpose. We believe also that our climate would produce results far more favourable than can be hoped in the north of Europe; but these are only opinions, and in the present infant and experimental state of the science of sewage farming we could not recommend an experiment on so large a scale.

50. We do not think, moreover, that anything would be gained by endeavouring to treat the sewage of the northern slopes by "downward intermittent filtration." Under that system the sewage is in a great measure wasted, and if the bulk of it is to be wasted, it is as well to turn the whole of it into the sea.

51. It will be observed that the proposed system of intercepting sewers will divert only the sewage of such parts of the city as are at a sufficient elevation to allow of its discharge by gravitation. The sewage of a narrow area along the shores will still find its way into the harbour. This area, however, is small and occupied mostly by warehouses, offices, and other buildings where little sewage is produced. We do not therefore anticipate any perceptible nuisance from this source, especially if works for conveying the sewage into deep water, similar to those which have been found so successful at Port Macquarie and Blackwattle Bay, be carried out at the mouths of all the sewers; and we strongly recommend that works of this nature be carried out without delay at the mouths of all the principal sewers.

52. The most difficult areas are those of the low-lying inhabited areas about Woolloomooloo Bay, the head of Darling Harbour, and Blackwattle Bay. If, however, these places are relieved by our proposed works from any sewage except what is locally produced, the nuisance will be reduced to a minimum.

53. The discharge of this sewage into the proposed tunnel would require a second set of intercepting sewers and a pumping station where it could be raised to the requisite level. All this would involve a greater immediate and current expenditure than the present circumstances of the case require.

54. It is proposed to intercept only the every-day dry weather sewage. Storm waters must still find their way into the harbour, the navigation of which must be kept open by dredging. A portion only of the storm waters find their way at present into the sewers, and to intercept even the whole of that portion and turn into the Ocean would present great engineering difficulties, and involve an expense altogether out of proportion to the value of the object gained.

55. We adopt also the recommendation of the Engineering Committee that the sewage of the southern slopes, including portions of Surry Hills, Redfern, Newtown, &c., should be similarly intercepted and disposed of as already stated by downward filtration towards the lower part of Shea's Creek. To construct a tunnel to carry this sewage into the main tunnel to the ocean would involve a great expense. The prospective quantity of sewage from the southern slopes is very large, as there are still extensive vacant spaces which will probably before many years be densely peopled. It would therefore be necessary to make the connecting tunnel of far greater capacity than is at present required. It would also be necessary to increase the main tunnel to much greater dimensions, for it would be obviously absurd to construct works of such a character to serve a temporary purpose only. All this would require a far greater expense than it is at all necessary to incur at present.

56. It has been proposed to discharge the sewage of the southern slopes into the system of intercepting sewers of the northern slopes, and thus to convey it a long distance through the most crowded parts of the city. There will be quite enough to do under the most efficient management to prevent nuisances arising from the sewers through the city without the additional burden of the sewage of several large and populous suburbs. It is well known also that sewage should be carried away from populated localities as quickly as possible, but according to this scheme, a large quantity of the sewage of some of the suburbs would be brought into the city, and by such a circuitous course that it would scarcely be got rid of before it had reached its maximum state of putrescence and offensiveness.

57. In the exercise of the discretion which was left to us we have not included Balmain, Camperdown, Marrickville, nor other more distant suburbs in the general scheme of sewerage which we recommend.

58. In conclusion, we trust that you will excuse us for still again urging upon your attention that the necessity which has been found to exist in England, of entrusting the enforcement of all sanitary laws to some independent authority, exists in full force here, and that without some such authority, not subject directly to popular influence, all sanitary legislation will be futile, and all attempts to raise the standard of health in the metropolis to what it naturally should be will end in disappointment.

M. B. PELL,
Chairman.

Board Room,
Sydney, 11th May, 1877.

FIRST REPORT

OF THE

COMMITTEE APPOINTED BY THE SYDNEY CITY AND SUBURBAN
SEWAGE AND HEALTH BOARD.*on the 21st October, 1875.*

“To cause plans to be prepared and where necessary surveys to be made, for the purpose of determining how far it is practicable to divert the everyday dry weather sewage either to the ocean or on to the land known as Webb’s Grant, beyond Cook’s River, or on to other suitable land in the same direction.”

ADOPTED BY THE COMMITTEE ON THE 15TH JANUARY, 1877.

To the Chairman and Members of the Sydney Sewage and Health Board.

1. We, the Committee appointed by the Board, on the 21st October, 1875, “to cause plans to be prepared, and where necessary surveys to be made, for the purpose of determining how far it is practicable to divert the everyday dry weather sewage either to the ocean or on to the land known as Webb’s Grant, beyond Cook’s River, or on to other suitable land in the same direction,” commenced our labours on the 10th November, 1875, and continued to meet from time to time to obtain information, inspect, and confer on the subject until the completion of the detailed plan enabled us to decide on conveying as much of the sewage as possible away from the harbour. This decision involved the consideration and maturing to a greater or less extent of several schemes for purposes of comparison, and the preparation of many plans and sections, which are all embodied in the large plan showing contours and sewer levels, in a more comprehensive way than has yet been done. When this decision was arrived at, the duty of preparing the complete design in detail sufficient for estimate was delegated to the Chairman, Mr. Moriarty, who was assisted by Messrs. Bennett and Grundy; Mr. Bell being unfortunately prevented from co-operating by illness.

2. We have now the honor to submit our Report, together with plans, sections, and estimate of the work which we recommend for Sydney proper.

3. The general plans for an intercepting system of sewers for the suburban portion of the city about Newtown, Redfern, and Waterloo are not in a sufficiently advanced state to allow of our now laying them before the Board, but we hope at an early date to be in a position to do so.

4. Before proceeding to state in detail the works which we propose for the interception of the sewage of Sydney, it will be well briefly to describe the general features of the district with which it is intended to deal.

5. Commencing on the coast, near Benbuckler Point, a little to the north of Bondi, a high ridge extends in a westerly and south-westerly direction, having a mean elevation of about 200 feet at its eastern end, and declining thence to about 100 feet near Newtown. The northern side of this ridge, from which branch off a number of spurs, forms the southern watershed of Sydney Harbour and the Parramatta River, the southern slopes forming the watershed of the north side of Botany Bay and Cook’s River.

6. The ridge is composed of what is commonly designated Sydney sandstone, and the stratification is either horizontal or dipping slightly to the westward. The crest of the ridge lying much closer to the waters of Sydney Harbour than to those of Botany, the slopes on this side are steep and comparatively bare of soil; while on the Botany side they are much more gentle, and the valleys are filled to a greater or less depth with deposits of sand, amongst which are extensive swamps, from which the water supply for Sydney has been derived.

7. The principal and older portion of Sydney is situated on the northern slopes of the main ridge, and the sewers and drains hitherto constructed have followed generally the valley lines, and discharge into the heads of the bays in which they terminate; hence it is that the harbour, to its great injury, has come to be the receptacle for the whole of the sewage, refuse, and offal of the town—Blackwattle Swamp receiving the sewage of about 696 acres, Darling Harbour of about 646, Sydney Cove 267, Woolloomooloo Bay 350, and Rushcutter’s Bay 743 acres, respectively.

8. On the southern side of the main ridge the features are different. Here the town has as yet established but a slight hold, and the large area of the Lachlan water reserve, Moore Park, and the Randwick Racecourse, will long if not ever prevent its being closely built over, except on the western parts near Shea’s Creek, Redfern, Waterloo, M’Donald Town, and Newtown, where occupation is rapidly extending, and where it is therefore necessary that immediate steps should be taken to provide for the drainage.

9. In the earlier times, and before the city had attained its present magnitude, it was inevitable that the drainage of each valley should flow down the natural watercourse and discharge into its own bay.

10. Previous to the year 1854 the drainage of the city was confined to a few square stone conduits, constructed by prison labour. In the years '54, '55, and '56, the conduct of such works being then under the City Commissioners, the principal streets—Pitt, Castlereagh, Elizabeth, Phillip, and Macquarie—had oviform sewers constructed in them, that in Pitt-street being 4 ft. 6 in., and the others 3 ft. 6 in. in depth; the main sewer, commencing at Macquarie-place and terminating at Fort Macquarie, being 6 ft. (A full description of the state of these sewers, when examined some time back, will be found in the report and evidence of Mr. W. Davies, appended to the sixth Progress Report of the Board.)

11. Recently, by the advice of the Board, outlet valves and a pipe, discharging 12 feet below low-water, have been placed at the Fort Macquarie outlet, at a cost of £950, with a view to reduce the offence caused by the discharge of the sewage; this they have been most successful in accomplishing. Such a course was recommended by the Engineer-in-Chief for Harbours and Rivers some years ago, but not carried out.

12. The Tank Stream, the purity and freshness of which induced the adoption of the site selected for the city in the first instance, has been gradually converted into a foul sewer, and has been walled up and roofed over. The construction of the brick sewers already described relieved it considerably, but it is still the outlet for most of the sewage of the low-lying places between Pitt and George Streets. At its outlet an arrangement similar to that at Fort Macquarie was proposed, but its immediate adoption has been postponed till the working of the latter shall have been tested.

13. The Essex-street sewer, which has its outlet close to that of the Tank Stream, will have much of its sewage intercepted; but the remainder should be dealt with in the same manner as the Tank Stream.

14. Since the restoration of the Corporation in 1857 two large and several small systems of sewers have been constructed by them. The most important is that of Hay-street, which receives, near Belmore Gardens, the drainage of that basin in oviform and pipe sewers, and discharges it through a stone main sewer of large dimensions into the head of Darling Harbour, silt pits being provided near its outlet. This system has not been very long in operation, but the contamination of the water at the head of Darling Harbour by the sewage is, if possible, worse than ever. Filters in the silt-pits and a submerged outlet, similar to that of Blackwattle Bay, should be immediately added.

15. The catchment of Woolloomooloo Bay has also been sewered, as shown on the accompanying plan, a flat-stone sewer carrying the united drainage from Woolloomooloo and other streets to the Bay. This system is most defective; the scour is totally inadequate to keep the sewers clear, and in consequence they are silted up in many places to the roof, as described in Mr. Davies's report. Considerable alterations in the sections of these sewers are necessary to render them self-cleansing.

16. That portion of the catchment of Blackwattle Swamp, within the city boundary, has been partially drained for some years, and the drainage works are being further extended by the Corporation at the recommendation of the Board. An outlet-sewer has been formed through the recently reclaimed land; it is 6 feet deep, of the Hawkesley section, and is provided with filtering-tank, silt-pits, trap-pipe, and outlet valves.

17. Numerous minor sewers have been provided, draining the northern slope of the city into Darling Harbour; and to mitigate the offence from them, and prevent in some degree the silting up of the harbour, silt-pits are provided near their outlets.

18. As mentioned in their report on Shea's Creek by the Committee of the Board, no sewerage exists on the southern slopes of the city, but in no part of the entire city is the necessity for such more apparent.

19. Of late years the quantity of sewage, street detritus, and other offensive matters discharged into the harbour, has been so great as to render it absolutely necessary, in order to save it from further injury, that measures be taken to intercept and lead them away to some other outfall, and to this end there are two courses open for adoption. One is, to form a sewer on the north side of the main dividing ridge, which should intercept and conduct to the sea the sewage, and as much of the rainfall as it is proposed to admit into the sewers; the other is to convey the sewage to Botany, and there to dispose of it as hereinafter mentioned.

20. If the former plan, namely, the northern line of interception and the discharge of the sewage at Benbuckler Point, be adopted, the general course of the sewers would be somewhat as follows:—Commencing at the junction of the Newtown and Parramatta Roads, and following Parramatta-street, it would intercept the Abercrombie-street sewer; thence continuing across Belmore Park and receiving

receiving the sewage of the Hay-street system in Elizabeth-street, it would continue along Forbes and Weymiss Streets to the junction of Liverpool and Oxford Streets, at the south-east corner of Hyde Park ; here it would meet a branch intercepting sewer from Kent-street and the eastern side of Darling Harbour, and another main intercepting sewer from the system draining into Sydney Cove. Continuing along Liverpool-street from the point of junction of these two sewers, and taking in the drainage of Woolloomooloo Bay by two branches at as low a level as can be reached, the main sewer would be continued across Rushcutter's and Double Bay valleys ; and thence onwards to the coast, discharging into the sea about 40 chains to the north of Benbuckler Point, which forms the northern headland of Bondi Bay. The point of outfall would be under a high precipitous cliff with deep water.

21. This northern line of sewer, as it seems to possess amongst others the great advantage of finally disposing of the sewage, we feel justified in recommending to the favourable consideration of the Board.

22. We have examined the set of the tides at the above-mentioned point, and find that during ebb the direction of the current is well off the land, although there is somewhat of an eddy setting in towards it to the southward of Benbuckler. On the flood the current sets also to the southward, but from the vast body of water with which the sewage would be mixed, and the constant wash of the waves, we do not apprehend that any nuisance would be caused in the neighbourhood.

23. Further to the south, at Bondi Head, the inward set of the currents is much more pronounced, and we therefore think there would be danger of nuisance if the sewage were discharged at that point, which is to a certain extent embayed by the projection of Benbuckler Head.

24. It is right that we should draw the attention of the Board to the other project, which is not without considerable merit, namely, that of conducting the whole of the sewage to Botany, and there disposing of it over the land at Webb's Grant, or on some other suitable place which might be selected for a sewage farm, in a manner similar to that generally adopted in England and on the Continent where circumstances are favourable.

25. Many and weighty reasons might be urged in favour of utilizing the great fertilizing power which the sewage of a large city possesses, and which under the warm sun and in the occasional dry seasons of this climate might be expected to produce most favourable results ; but it is not clear that the utilization of sewage in Europe has as yet been made a financial success, though in many instances it closely approaches it, as in Dantzic, Banbury, and Edinburgh. We do not feel justified in recommending its trial in the case of the northern outfall sewer.

26. At Edinburgh portion of the sewage is discharged by means of a cast-iron pipe into the Frith of Forth at the Blackrocks, and another portion is discharged over the Craigentiny Meadows, where the most astonishing results in the shape of crops have been obtained.

27. The sewage of London still continues to be discharged into the Thames at Barking and Crossness ; the sewage of Brighton is discharged into the Channel. At Newport, Dundee, and many other towns the sewage is similarly disposed of.

28. In regard to Glasgow, recently reported on by Sir John Hawkshaw, the final disposal of the sewage by discharging it into the Frith of Clyde has been recommended by that gentleman. Not to multiply instances, therefore, while it has come of necessity to be the practice for inland towns to adopt measures to deodorize and purify their sewage before allowing it to flow into the rivers and streams, which are frequently afterwards used for water supply,—in the case of coast towns the opposite practice, namely, that of finally disposing of it by discharging it into the sea, would seem to be generally adopted.

29. For these reasons we recommend an adherence to the principle which has guided many authorities at Home when dealing with the question of the disposal of sewage in the sea-coast towns, which has been to get rid of it at once and for ever in the most effectual manner.

30. We propose, therefore, that the sewage of those portions of Sydney which naturally drain into Port Jackson should be collected into an intercepting sewer such as we have already described, and have shown on the accompanying plans, and be led away by the most direct course, and at as low a level as is practicable, to be discharged finally into the sea.

31. We have given much careful consideration to the practicability of uniting the sewage of the southern slopes of the watershed, which at present flows towards Botany, with that on the north of the ridge, by means of a tunnel ; but after weighing the merits and demerits of each plan, we feel constrained to recommend that the two systems should be kept distinct, and that while that of Sydney proper is sent to sea, the sewage of Surry Hills, Redfern, and the southern portions of Newtown should be collected into a separate system and taken to Botany, and that sufficient land should be resumed at Shea's Creek or on Webb's grant for a sewage farm, where the sewage could be utilized or purified by filtering through the land before being allowed to escape into the Bay. All the circumstances are most favourable for the disposal

disposal of the sewage on the land at Botany, there being an ample area of light sandy soil, which is the most suitable for the purpose, and at a convenient level for irrigation by gravitation.

32. At Edinburgh and Dantzic, and many other places where the soils are composed of raw sea-sand, the most surprising fertility has resulted from irrigation by sewage.

33. As the extent of occupied land draining into Shea's Creek is yet inconsiderable, it would not perhaps for some years to come be necessary to carry the outfall sewer on to Botany, and it would probably be enough in the meantime to filter the sewage through the soil, as has been done with considerable success in many towns in England, allowing the effluent water, which would be sufficiently purified by the process, to run down Shea's Creek as at present; but when population extends in this direction it will undoubtedly be necessary to make provision for the disposal of the sewage on the land, of which the requisite area would require to be resumed in the manner we have suggested.

34. Reverting to the northern outfall sewer, a very difficult question presents itself for consideration, namely, the height at which the outlet should stand above high-water-mark. While on the one hand it is of course desirable to keep it as low as possible, so as to take the drainage of the greatest extent of the low-lying portions of the city; on the other hand, looking to the probable effect of the waves during gales of wind, it is desirable to keep the sewer so high as to be above the risk of having them driven with overwhelming force into it. It is well known that the oscillatory waves of the ocean become converted into waves of translation on meeting the resistance of the shore, and it is to be feared that if the outlet were fixed at so low a level as to be within reach of their full force, so large a body of water would be thrown into it during storms as to seriously interfere with the discharge of the sewer. During southerly, south-easterly, or easterly gales, the waves on the coast attain to enormous magnitude, and strike the coast-line and the cliffs with extraordinary force. In view of the risk of injury to the outfall works from this cause, we have felt that it would not be safe to fix the invert of the tunnel at a lower level than 10 feet above high-water-mark. We should have preferred to keep it higher, but to do so would throw the sewer at its upper end to an inconvenient height for intercepting the Hay-street and Abercrombie-street systems of sewers; we have therefore agreed to take 10 feet above high tide as the lowest safe level for the intercepting sewer at its outfall.

35. Even at a height of 10 feet, there can be no doubt that, in ordinary gales, the waves would break into the sewer with considerable violence, but their action might be greatly diminished by the formation within it, at a convenient distance, of an expanding basin, where the waves would be partially broken and dispersed, and by the construction of valves in suitable positions.

36. We are not acquainted with any instance of a sewer similarly circumstanced as regards its outfall: the probable effects of heavy gales, such as we have experience of on the coast, upon the action of the sewer, must be therefore to some extent a matter of conjecture; but with outlet works judiciously designed, at sufficient height, and with proper arrangement for the arrest and dispersion of the waves, and the strengthening of the exposed portions of the sewer by introducing an iron lining where the cover might be considered insufficient, we do not anticipate any serious objection to the plan we have sketched.

37. Our colleague, Mr. Bell, has suggested that 3 feet above high-water would be sufficient at the outfall, and he has accordingly sketched a line of sewer starting from Bondi Head at that level, taking a course from thence somewhat different from that which we have adopted. We regret exceedingly that, owing to his illness, we have not had an opportunity of discussing the matter with him in detail; but although fully alive to the great importance of keeping the outfall as low as practicable, so as to command the lower levels of the town, we are still of opinion that 3 feet would be too low; at such a level, even in fine weather, every wave would break into the sewer and greatly impede the discharge of the sewage. It would be most difficult, if not impracticable, to construct or maintain sluices or penstocks which could be guaranteed to resist the force of the waves in stormy weather; and no person who has not actually witnessed it can form an idea of the magnitude of the waves which roll on this coast, or of the overwhelming force with which they strike the cliffs in heavy storms.*

38. The difference between 3 feet and 10 feet at the outfall represents of course a proportionate area in the city the sewerage of which must be excluded from the proposed system, unless pumping be resorted to; but the general plan which we have had prepared, and which accompanies this Report, will show that the area of this zone is comparatively insignificant.

39. The lower portions of the city, that is to say those below the 25-foot contour, must remain beyond the reach of the proposed intercepting sewer, and be allowed to discharge their sewage into the harbour, unless it be collected by another system of intercepting sewers, and pumped into the proposed sewer. We do not think however that for the present, if indeed it should ever become so, this would be necessary,

28

* Since the above was written we find that Mr. Bell has altered his plan, and has taken high-water-mark as the level of his outlet. This alteration strengthens the objections made to this part of the scheme. Mr. Bell's complete scheme has only been placed before us to-day.

as with few exceptions the low-lying portions of the town are used for purposes of trade, stores, and wharfs; and it is only in one or two places, as at Woolloomooloo Bay and the southern part of Darling Harbour, where the inhabitants residing in those low-lying places are at all numerous; while there is an obvious tendency on the part of residents in those localities to abandon them to their more proper uses, namely, those of trade, and to select other and more suitable and healthy sites in the suburbs for their dwellings. But should it be determined to pump the sewage from the whole or any portion of this area it could be done, as provision has been made in the intercepting sewers for its discharge.

40. In determining the sizes of the sewer, we have preferred following the most modern English practice, with such modifications as the different circumstances of this country and of the case seem to call for.

41. In London, Brighton, and other recent cases, the sewers have been designed of capacity sufficient to discharge the whole of the daily water supply to the inhabitants in twelve hours, or half in six hours; as it has been found by careful examination that about half the daily water supply is delivered, and passes into the sewer within about six hours. To this has to be added the proportion of rainfall likely to be received into the sewers. In London this has been taken at about $\frac{1}{4}$ inch in twenty-four hours, that is to say, intercepting sewers are made large enough to carry off the whole of the water supply in twelve hours, and $\frac{1}{4}$ inch of rain over the whole of the watershed in twenty-four hours. But the water supply of London, which is furnished by Companies, has to be pumped, and it is not therefore likely, considering the vast population to be supplied, that this quantity will ever, or at all events for many years, exceed the present supply, which is about 6 cubic feet or 36 gallons per head. The sewage has also to be pumped into reservoirs before being discharged into the Thames. The rainfall of London is also considerably less than that of Sydney; the sizes adopted for the London sewers are therefore smaller than we have considered it safe to adopt.

42. But in our case we have taken a more liberal view of the question, as we believe the time is not far distant when an ample supply of water must be brought in by gravitation, and it is probable that at least double, say 12 cubic feet or 72 gallons per head, will be supplied. The consumption at New York has recently risen to 100 gallons per head per diem; at Melbourne 15,000,000 gallons per day is being provided for about 200,000 persons, being 75 gallons per head per diem; and in other cities supplied by gravitation, and where there has consequently been less reason to limit the supply, it has risen to that amount. We have therefore taken 72 gallons per head per diem as the quantity for which provision should be made in the sewers, half of which would probably be discharged in six hours.

43. As regards the number to be supplied we have adopted the same standard of population per acre as that of London, namely forty-seven and thirty-one respectively for the city and suburbs. The average density of the population of Sydney in many of the wards, excluding the Domain and Moore Park, approximates very closely to that of London. We have therefore adopted the above standard in regard to the number of persons per acre for whom sewerage should be provided.

44. Then as to the rainfall in Sydney it is nearly double that of London, so that we have made a corresponding provision in the increased size of the sewers, and have allowed for $\frac{1}{2}$ an inch per day. There are times when this amount would be largely exceeded, but the best authorities and writers on the subject have agreed in considering it unnecessary to make provision for taking off the whole of excessive rainfalls in the sewers; to do so would be to incur unnecessary cost, and it is considered more judicious to allow the excessive rainfalls to escape off the surface of the ground by the natural surface drains and channels, or by storm overflows (for which the existing systems of sewers, as well as the conformation of the surface of the ground in our case, afford peculiar facilities) rather than to construct large subterranean channels for the purpose. An examination of the returns of rainfall for the last nineteen years (attached hereto) will show that on an average it has not exceeded $\frac{1}{2}$ an inch per day for more than twenty-seven days in the year, and 1 inch per day for only thirteen days.

45. As even in the most densely built parts of London, with paved and flagged yards and courts, not more than about 60 per cent of the rainfall has been known, even in the heaviest storms, to find its way into the sewers, and at this rate only about $\frac{1}{2}$ an inch per day could flow into the sewers in thirteen days of the year,—we are of opinion that, in doubling the allowance made in London, and taking $\frac{1}{2}$ an inch per day as the amount for which provision should be made, we have adopted a sufficiently liberal scale; and that the sewers, while being sufficiently large, would not be unnecessarily costly. Thus, 12 cubic feet for water supply in twelve hours and $\frac{1}{2}$ inch of rainfall in twenty-four, are the proportions we have agreed to recommend, for the capacities of the sewers.

46. The gradient we recommend for the main intercepting sewer from the outlet up to the point of junction of Liverpool and Oxford Streets, where the three branch sewers unite, is 2 feet 6 inches per mile. In the branch sewers the gradients are proposed to be increased to 1 in 700 for the Circular Quay branch, 5 feet per mile for the Parramatta-street branch, and 1 in 700 for the Kent-street branch.

47. The main intercepting sewer should, we think, be circular in section, from the point of junction of the branch sewers at Oxford-street to the outfall at the coast, as this section gives the highest hydraulic mean depth and greatest velocity of discharge when running full or half-full. It should be 7 feet 6 inches diameter at the outlet, diminishing to 7 feet 3 inches above the inlet of Rose Bay future system of sewers, 6 feet 9 inches above that of Double Bay, 6 feet 3 inches above that of Rushcutter's Bay, and 5 feet 9 inches above the existing Woolloomooloo system.

48. The branch sewer to Parramatta-street should be oviform, the former 5 feet 6 inches \times 3 feet 8 inches to Elizabeth-street, 5 feet \times 3 feet 4 inches to Abercrombie-street, and a 4 feet syphon pipe southward thence to the junction of the Parramatta Road. The Circular Quay and Kent-street sewers would be 4 feet 6 inches \times 3 feet.

49. Storm-water escapes should be formed at the junctions of all the existing sewers, as well as at convenient points on the various valley lines; ventilators should be fixed at convenient intervals along the line of the tunnel and in the working shafts, as well as any penstocks and flushing gates which may be necessary at first or until an adequate supply of water be provided and the entire system brought fully into operation. We do not propose any detailed designs for these minor matters, as time does not admit of it, and we believe it would be premature to prepare them now, such details being better left to the judgment of the engineer who may have the carrying out of the works.

50. As the tunnel for the greater part of its length would pass through the lower and sounder beds of the sandstone, but very little brick lining would be required, except near the outlet, where it passes through a sandy tract for some 1,100 yards. We have, however, thought it safe to estimate for some brick lining in the rock as well as for lining the lower half of the tunnel with cement.

51. Where the sandstone is sound, the tunnel might be dressed, as nearly as possible to the exact circular form, and the lower portions or invert rendered with cement; or perhaps the cheaper plan would be to blast it out roughly to the approximate circular shape, and then fill in the interstices left by blasting to the exact cross section by a lining of concrete in the manner represented on the accompanying sketches. Of course some internal bricking would be required at the junctions, storm overflows, tumbling bays, and shafts, for which we have made due allowance in the estimate.

52. We estimate that the northern intercepting system of sewers will cost £256,000. The southern system we have not as yet had time to work out in detail, but the plans are well advanced, and we hope to be in a position to present the result in a supplementary report in a few days.

E. O. MORIARTY,
Chairman of Committee.

[No. 10 COMMITTEE.]

SECOND REPORT

OF THE

COMMITTEE APPOINTED BY THE SYDNEY CITY AND SUBURBAN
SEWAGE AND HEALTH BOARD,*On the 21st October, 1875,*

“To cause plans to be prepared, and, where necessary, surveys to be made, for the purpose of determining how far it is practicable to divert the every-day dry-weather sewage either into the Ocean or on to the land known as Webb’s Grant, beyond Cook’s River, or on to other suitable land in the same direction.”

To the Chairman and Members of the Sydney and Suburban Sewage and Health Board.

Gentlemen,

Sydney, 3 May, 1877.

1. In our former Report, under date 15 January, we submitted for your consideration and approval a system of intercepting sewers for that portion of the City of Sydney, lying on the north side of the dividing ridge which forms the watershed of Port Jackson and Botany Bay—and we recommended the final disposal of the sewage by discharging it into the sea at Ben Buckler Point. But we pointed out at the same time that the sewage of those parts of the town lying on the southern slopes would probably require a different mode of treatment. And the evidence which we had the honor to lay before you on the 29th January and 1st February last in favor of temporarily disposing of it on the land by the process termed intermittent downward filtration, having received your approval, we have now the honor to submit our proposal, which embodies that plan, in such detail as the circumstances seem to require.

2. In this latter case we have not confined ourselves to dealing only with the main intercepting sewers, as in the other, but have sketched out a system of branch or minor sewers, most of which are now urgently required; all will shortly be so, as the population is rapidly extending in this direction, and no attempts have as yet been made to relieve the inhabitants from those offensive accumulations of filth which have been described in former Reports as being so injurious to health.

3. The main intercepting sewer is so arranged as to insure its receiving the sewage of all the secondary or minor sewers of the district through which it passes, conducting it away by the most direct route to a suitable and convenient place, where it may be disposed of, after filtration through a sufficient area of land to ensure its deodorization and purification, by being allowed to flow into the watercourse of Shea’s Creek, which is the present, and the natural outlet for the drainage of the district.

4. The portion of the City and suburbs which we now propose to deal with embraces parts of Paddington, Sydney, Redfern, and Alexandria; the remainder of Alexandria, with Macdonald Town and part of Newtown, Marrickville, and St. Peters, may be hereafter connected with the extension of the system, but at present we think there is no absolute necessity to incur the expense of constructing sewers in these sparsely inhabited districts. When the time shall have arrived to deal with them, the sewage of the higher levels may be intercepted and brought into the continuation of the intercepting sewer now proposed, by gravitation, but the sewage of the very low portions will have to be lifted into it by pumping, or be otherwise locally disposed of.

5. The accompanying plan shows the course of the intercepting and branch sewers, which we would recommend should now be constructed.

6. The intercepting sewer would commence in Paddington, at the junction of the Park Road and Upper South Head Road, and continuing along Park Road to the depression below the Barracks, would receive in its course the drainage of the portion of land on the east side of the Victoria Barracks, as well as the sewage of Botany-street and its adjoining streets. The sewer would then take a south-westerly course across part of Moore Park to Dowling-street, where it would receive the sewage of that street and its branches, and crossing Dowling-street to Nobb-street it would pass along the latter to its junction with Bourke-street, where it would receive the sewage of that street and its branches. Thence continuing along Bourke-street, which is situated in nearly the centre of the valley, and receiving the drainage of Cleveland-street and its tributaries, and Elizabeth-street and its tributaries, it would continue to the crossing of the Botany Road, whence, after receiving the drainage of the valleys on either side of the Botany Road, it would follow the new road for a distance of about 60 chains to a point where it would discharge,

discharge, and the sewage be allowed to flow over a tract of land admirably suited to the purpose, which we propose should be resumed at this place, and which should be properly prepared by levelling and subsoil draining.

7. The other branch intercepting sewer would be formed down Botany Road, receiving the drainage of the houses and such of the streets on either side as would flow to it, as far as Buckland-street, and following that street to Garden-street it would continue along Garden-street to its junction with the other sewer before described.

8. These two valleys embrace nearly the whole of Redfern and Waterloo as yet built over. When population extends over the adjoining districts it will no doubt become necessary to construct additional sewers, but for the present, and probably indeed for some years to come, the two main systems which we have here described will be sufficient.

9. As it would not be judicious, and indeed would not be necessary as regards considerations of economy, to limit the size of small pipe-drains to the theoretical dimensions which have been considered proper in large sewers, we have allowed sufficient capacity in the pipe-drains to carry off a much larger amount of rainfall than was allowed for in the large intercepting sewer on the northern side, where, in consequence of the formation of the ground, allowing of frequent storm escapes by means of the existing system of sewers, there would be less danger of the main sewers becoming gorged during heavy rainfalls than would be the case on the southern slopes. On the latter, owing to the more gentle declivities, there will not be the same facilities for getting rid of heavy rainfalls. But at the same time the sandy nature of the soil will to some extent act as a moderator and prevent the rapid discharge of floods from the adjacent land into the drains, while the large amount of sub-drainage from the swampy tracts on either side will tend to prevent deposit taking place in the sewers in dry periods.

10. The areas for which drainage has to be provided at all the principal junctions are shown on the accompanying plan. The sizes of the sewers have been calculated as sufficient to carry off all the water supply to the inhabitants, taken at forty-seven persons to the acre and 72 gallons per head, in twelve hours; together with 1 inch of rainfall on the drainage area. This allowance, owing to the very absorbent nature of the soil, and considering that there are only thirteen days in the year, on an average, on which the rainfall exceeds 1 inch, cannot, we think, but be considered as ample.

11. The sewers up to 18 inches in diameter are proposed to be formed of drain-pipes; above that dimension they should be of brick, oviform in section down to the point of junction with the Botany Road system; thence onward we would propose a circular brick sewer as this form of section would be somewhat less costly, and would admit of the crown of the sewer, which in many cases rises above the surface of the ground, being kept lower, a matter of some moment when it is considered that the whole of this land will probably be built over and inhabited before many years.

12. We propose that for the present the outfall of the sewer should be at the point marked A on the accompanying plan, where the sewage would be turned over the land which at this place slopes gently down to Shea's Creek, to be treated on the intermittent downward filtration principle, and we would recommend a resumption for this purpose of say 100 acres of the swampy land lying between the sewer and the creek. The land, which would require to be fenced and sub-soil drained, would we believe be readily rented for market gardens, of which there are several in the immediate neighbourhood, showing that when properly manured the soil can produce good crops.

13. The outfall sewer is kept at such a height as will admit of the irrigation of about 120 acres of land at this place, while at the same time it also admits of being hereafter extended to Botany Bay, where the sewage may be discharged either over a sewage or filtration farm at Webb's grant, on the south side of Cook's River to be ultimately discharged into the bay.

14. The accompanying estimate gives the probable cost of the main intercepting sewer, as well as of the branch sewers, and in regard to the latter their cost in each Municipality has been taken out separately.

15. An estimate has also been made of the cost of connecting the system of sewers just described with that on the north side discharging at Ben Buckler Head—the latter arrangement would be much more costly than the former, while it would be of comparatively little value, because it would exclude the sewerage of the lower parts of Alexandria, Macdonald Town, Newtown, and Marrickville, which could only be connected by an expensive arrangement of iron pipe sewers and a large and costly pumping establishment, and the relief of these districts which now most urgently require sewerage, must be delayed until the large northern works are completed.

16. If the arrangement for filtration which we have proposed be carried out it will be necessary to improve the outfall at Shea's Creek by straightening and deepening its bed and placing tidal sluices at its junction with Cook's River, but these can be easily and cheaply done.

17. The probable cost of the works above described, including the purchase, levelling, and subsoil draining of (say) 100 acres of land, we estimate at £131,000.

18. Of the minor sewers the probable cost in each Municipality would be as follows :—Sydney, £12,872; Paddington, £2,847; Redfern, £9,248; Waterloo, £9,413; and Alexandria, £3,338.

19. The cost of further extending the sewer to Webb's grant, together with syphon pipes across Cook's River and 100 acres of land for filtration farm, would be £80,000, or £211,000 in all.

E. O. MORIARTY,
Chairman of Committee.

Board Room,
Sydney, 7 May, 1877.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SYDNEY CITY AND SUBURBAN SEWAGE AND
HEALTH BOARD.

MONDAY, 25 OCTOBER, 1875.

Present:—

HON. J. B. WILSON,
B. PALMER, Esq.,
F. BELL, Esq.,W. C. BENNETT, Esq.,
E. O. MORIARTY, Esq.,
Dr. ALLEYNE.

M. B. PELL, Esq., B.A., IN THE CHAIR.

George R. Dibbs, Esq., M.L.A., called in and examined:—

2080. *Chairman.*] I think you have some knowledge of a system called "Weare's Charcoal Filtration," for the filtration of sewage? Yes.

2081. I believe you have visited certain works at Stoke-upon-Trent, where this system is in operation? I have.

2082. Are you in a position to describe the nature of the works which you observed on that occasion? Yes. I visited the Workhouse at Stoke-upon-Trent, which is situate within an enclosure almost as large as the Barracks at Paddington. Outside the walls of this workhouse, where the sewage works are, the whole of the sewage matter, as well as the drainage from baths and elsewhere—all the drainage in fact—was conducted by pipes to certain sewage tanks—deodorizing tanks. I saw the process in full operation, and the best way I can explain what I saw is to refer to one of those little pamphlets I submitted to the Board, in which there is a plan or sketch of the works actually in operation there. I inspected the tanks, and I saw the effluent water as it escaped after passing through the final deodorizing tank, when it was as clear or perhaps a trifle clearer than the water in the sample bottle I sent to the Board. Then I saw the refuse—the dry solid matter which remained—and this, beyond a slight smell of ammonia, was perfectly or almost inodorous; there was no offensive smell whatever about it. There were about 70 or 80 tons of it; it was in a large room, about three times the size of this; it was a sort of pulpy substance, about as dry or a little dryer than mortar which is used for stone-work. There was no drainage from it, but it was hard, sufficiently so to be put in bags, and having only a very slight moisture, while the water which escaped was quite clear, as I have described it. (*Plan produced.*) Supposing this to be one of the tanks (*indicating tank marked on plan*), it is divided into two compartments in order to provide against any stoppage of the works from accident, so that when one tank is working the other is shut off. The first tank in the Stoke-upon-Trent Workhouse which I saw appeared to be about 14 feet square, and about 8 or 10 feet deep. This tank is a large underground chamber into which the sewage flows directly; it receives everything; in fact all the refuse of the establishment. You will find a description of it among the papers I sent you. I was assured by the manager of the workhouse, and by other persons who had seen it, that the entire refuse of the place was thrown into it—that they used to throw in old straw beds, as well as any animals which happened to die about the place; in fact one of the articles thrown in was an old sow and a litter of pigs. Everything goes into this tank, all the ashes of the institution are thrown into it daily, and any bulky matters are shot into it through a trap door. No other labor is required except to throw back from the other deodorizing tanks the charcoal used for filtering, which is done by hand labor.

2083. The accumulated matter in the lower tanks is thrown back into the first receptacle? Yes, as the charcoal becomes charged. The deposit in the first receptacle when it was emptied at the end of six months was dug out and found to be a brown earthy looking substance, showing no trace of dead pigs or other bulky matters. It seemed to have resolved into one mass of the consistency of mortar, having nothing offensive about it. Indeed, so free from any offensive smell was the tank in which this compost was, that after it had been dug out the men took their dinner in the middle of the tank.

2084. Did you observe or inquire how often this receptacle was opened in order to throw down rubbish into it? The ashes were thrown in daily so that there might be a continually fresh surface of absorbent matter; otherwise, from what I could gather, on account of the slimy nature of the contents of the tank the process of filtration would have been impeded.

G. R. Dibbs,
Esq., M.L.A.

25 Oct., 1875.

- G. R. Dibbs, Esq., M.L.A.
25 Oct., 1875.
2085. It was considered necessary then that this stuff should be thrown in daily? Yes, that was the case as far as my recollection serves me. I am speaking after a lapse of about six years, and of course my memory is not so clear as if I had visited the place yesterday. One of the objects of throwing in daily the ashes was to counteract the slimy matter and to allow drainage from it.
2086. Did you examine the effluent water? Yes, I saw it escaping, and it was perfectly clear; I did not taste it, but I might have done so from its appearance if it had been warm weather and I had been thirsty.
2087. How many inmates were there in the workhouse at that time? About 1,200.
2088. What was the distance from the first tank to the place where the water finally escaped? About 200 feet; there was plenty of ground; the land seemed to be of small value there.
2089. It appears from this plan that a considerable fall is required to carry out this process? There was a considerable fall there; but I put the question to some persons there—how would the system act in places where there was not so much fall and they said pumping would have to be resorted to.
2090. They do not pump the sewage at Stoke-upon-Trent? No, because there is a fall there to the river. The stuff which passes away from the second tank was described to me as running away like thick gravy soup, in a condition that might easily be pumped.
2091. Did the rain water which fell on the surface in the yards and about the premises pass through the filter? No. I think the filtering was confined entirely to the sewage; there seemed to be no provision for rain-water.
2092. There was a separate place I suppose for the surface rain water to escape? I did not notice that particularly, but I understood the persons I spoke to there to say that they did not allow the rain-water to go in at all.
2093. Do you think it would be possible to erect works similar to these, only of course on a much larger scale, at the mouth of the sewer which empties at Fort Macquarie? I think so. I have passed that sewer a great many times, for some years, and noticed the discharge from it; and I think in ordinary weather the sewage might be treated in this way.
2094. Do you think there is sufficient surface room to deal with the very large quantity of sewage which would require to be treated? By providing pumping gear I think it could be done.
2095. You think pumping would be required? Yes; unless some kind of mechanical power could be employed to make the water run up hill.
2096. You say that all the refuse matter goes into the first tank;—do you think it would be practicable to put all the refuse from such a large area as that drained by the Fort Macquarie sewer into a tank of this kind. It could not be done at one time? Do you mean the street sweepings as well?
2097. I mean the ashes and refuse—similar matter to that which goes in at Stoke-upon-Trent? I think it might be done. What I saw at Stoke-upon-Trent was the refuse from 1,200 persons, and of course there, where the people are on a shorter allowance of food, and under more discipline, there is not the same waste or the same amount of dirt, bones, and decayed vegetable matter. I think this process might be tried with advantage at, for instance, one of our Lunatic Asylums on the Parramatta River, or in connection with the Darlinghurst Gaol, or some other gaol in the Colony.
2098. Do you think it would be applicable to the Prince Alfred Hospital? Yes. When I was speaking in the House on this subject on one occasion, Mr. Stewart, who knew nothing of this patent, said he had adopted a similar plan at his place at Marrickville. He had arrested the sewage and made it inoffensive by a process of this kind in a very rude form, and had then pumped the sewage-water over his ground.
2099. Do you think it would be possible to apply this system to the mouth of the Tank-stream? Where is that—near Mitchell's?
2100. In the very centre of the Circular Quay? No, I think not; there would not be room enough to spare for it there without impeding ordinary traffic.
2101. Do you think it would be possible to apply it to the sewer at the Queen's Wharf? That is almost the same place.
2102. Do you think it would be possible to apply it to the mouths of the sewers which discharge into Darling Harbour? No, you must have some elbow room, and there it is only street and quay.
2103. What I want to get at is this: You say, and you are probably right, that this process can be advantageously applied to large institutions such as the workhouse you visited at Stoke-upon-Trent, and in this country to lunatic asylums, gaols, and hospitals; but do you think it affords any solution of the sewage question here generally? Well, not unless you have spare ground for the purpose. If you had a quarter of an acre near Mitchell's you might work it. I think you might treat all the sewage matter which is discharged at Fort Macquarie, because there is some room there.
2104. But you would require pumping power all the same? Yes, it would have to be pumped, in order to pass it through the other filters.
2105. And that would be required in every case? Yes, unless there is some mechanical process by which the water could be made to rise above its level. I do not suppose any syphon principle could be adopted.
2106. Have you gained any information relating to this filtration process since your visit to Stoke-upon-Trent? I hear it has been tried at Bradford upon a larger scale. I saw a very flourishing account of it in a local newspaper, and I believe it has been a success there.
2107. Are you aware that when a Committee was appointed to consider the best mode of disposing of the sewage at Birmingham a few years ago, this among other systems was inquired into, and that the Committee pronounced decidedly against it? Very likely.
2108. They stated on one occasion that the water after passing through the tanks came out worse than when it went in? I have heard it said of the A. B. C. process that the water which went away was worse than when it came in. But you have a sample of the water which was drawn five years ago, and there is less sediment in it than I have seen in the city water. (*Sample produced.*)
2109. *Dr. Alleyne.*] Was it carefully corked all that time? Yes.
2110. *Chairman.*] Are you aware that a Committee of the British Association, which has been sitting for some years inquiring into sewage matters, have also pronounced decidedly against this system, and that in their final report they state that the effluent water at Stoke-upon-Trent is weak sewage? I was not aware of it.
2111. You are aware, of course, that water may be perfectly clear, and yet possess poisonous qualities? Yes; I do not call that anything but impure water, strictly speaking, because I suppose you cannot get perfectly pure water except by distillation.

2112. Is it not your opinion that this process is more suitable to particular cases—to large institutions for instance—than for dealing with the sewage of a large city like Sydney? That I should not like to say; if it is applicable on a small scale I should be disposed to think it might be applied on a large scale; but of course certain mechanical appliances would be necessary. If you ask me whether it could be applied with advantage at the Circular Quay where the sewers are close to the street I should certainly say there is no room for it.

G. R. Dibbs,
Esq., M.L.A.

25 Oct., 1875.

2113. I have made myself acquainted with the opinions of most of the engineers of eminence who are inquiring into these matters, and they say that processes of this kind, which are suitable for small places where the number of inhabitants is limited, do not answer when applied to large populations. What is done on a small scale cannot always be done on a large scale? Yes, I believe that is true with regard to many things besides the treatment of sewage, and in this as well as other matters the people will find that nothing can be effectually done without a large expenditure, and they will have to look to the great advantage which will result from it, and take the security of life and health as a set-off against the pecuniary disadvantage.

2114. Do you think it would be advisable to divert as much as possible all the sewage away to the ocean or to some other place by gravitation, and to pump up the remainder to be treated in this way? I fancy some combined scheme would be better than any one scheme.

2115. Do you not think that would be better than attempting to deal with the whole of the sewage by some such scheme as this? Well, I have heard of a scheme to take the whole of the sewage out to Botany in one large tunnel.

2116. Supposing we can get rid of a certain portion of it by gravitation, would not it be better to do so than to attempt to treat the whole of it by some such method as this? I don't think the sewage of Sydney as a whole could be dealt with by this process; nor do I think that the whole of it could be dealt with by any one process; certain parts of it must be treated separately. But it must be deposited in some place, and knowing well what Sydney is and the limited amount of filtration which the soil affords there would be the same difficulty to meet wherever it was discharged.

2117. It has been found in England that the water after passing over land can be purified; and it appears that in this country the conditions are very favourable. Have you considered that view of the question? No, I have always thought that the soil about Sydney was too hard and rocky for the purpose.

2118. But if we can get it on to sand? I do not know where you are to get it.

2119. *Mr. Bennett.*] There was a great deal of labour attached to this system at Stoke-upon-Trent, was there not Mr. Dibbs? No, except the sweeping up and putting in the ashes every day; it was only occasionally they required to shift the charcoal from the filter-beds.

2120. But there was a good deal of labour required and it was gratuitous labour? Yes, workhouse labour.

2121. *Mr. Palmer.*] With respect to this bottle of water, how long have you had it? I believe about five years; I had six bottles sent out to me; this is the only one left; the remaining five were drunk by the City Council; they were precisely like this, and the water was quite clear of sediment when I had it first. I should like to add that I think an experiment of this system might be tried on a small scale at some public institution. £100 would cover the cost of it.

2122. *Chairman.*] I suggested it for the Prince Alfred Hospital, but Dr. Roberts, who has a good deal to do with that establishment, did not seem to favour its adoption. I thought if it were tried there and the effluent water after filtration allowed to run over the land it might answer; it is just the kind of place for it.

TUESDAY, 7 NOVEMBER, 1875.

Present:—

E. O. MORIARTY, Esq.,	H. G. ALLEYNE, Esq.,
W. C. BENNETT, Esq.,	F. BELL, Esq.,
HON. J. B. WILSON.	

M. B. PELL, Esq., B.A., IN THE CHAIR.

His Honor Mr. Justice Hargrave called in and examined:—

2123. *Chairman.*] We have been informed that you have had considerable experience, and can give us some information in reference to the disposal of sewage? Do you mean when it is in a condition to be manufactured for purposes of sale, or while it is in a liquid state?

His Honor
Mr. Justice
Hargrave.

2124. While it is in a liquid state? Yes. The result of all my knowledge on this matter is that the only way in which sewage can be disposed of to advantage is in a liquid state. I saw a good deal of the mode of disposing of sewage while I was in England, for the South London sewage works were erected on some land adjoining property of my own at Deptford Creek. I sent you the Government report of 1853, showing the nature and extent of the works for the whole London drainage system both north and south of the River Thames, and the large area drained; and the enormous lift and engine power at the pumping station at Deptford which were in course of erection when I left England in 1856. All the sewage of the south of London was being intercepted by sewers below low-water mark, and near the mouth of the Ravensbourne River the main low-level sewer passed under that river at my land, and was pumped to a much higher level, about 30 feet I think, from which level the South London sewage proceeds now by gravitation through Greenwich and Greenwich Park across the Greenwich marshes down through Woolwich to Erith, where it is discharged into the river at high tide. That is the way the liquid sewage of the South London districts is disposed of, and it has been found to be a complete success.

7 Nov., 1875.

2125. Is it not turned into the Thames? Not until it is twenty miles below Greenwich, at the Erith Marshes, as I have said, at ebb tide.

2126. It is not utilized in any way? No, not the metropolitan drainage that I ever heard of.

2127. Is it applied to the land on a large scale for purposes of irrigation? It was not when I left England; but it was being discussed to use it in that way by irrigation. I do not think, however, it is likely to be applied generally to that purpose, because there are such enormous quantities of it—millions of gallons to be continually disposed of—every day's sewage from two millions of people on each side of the Thames.

2128.

- His Hon. Mr. Justice Hargrave.
7 Nov., 1875.
2128. And large tracts of land would be required for the purpose? Yes, and the farmers will pay nothing for it, although it is brought to their doors; a few of them might, perhaps, take small quantities of it, but there can never be any regular demand for it—at least that was the case when I left England. But the system of applying sewage to the land in a liquid state has been adopted on a smaller scale at Croydon, and many other places, I believe, all through England. It is only by keeping it in its liquid state, and much diluted, that the ammonia can be retained or the sewage remain valuable as a fertilizer. When it is dried, or manufactured, the ammonia escapes and it becomes utterly useless; at least that is my opinion, notwithstanding the constant publication of deodorizing schemes and patents.
2129. Do you think the best mode of disposing of the sewage of a city like this is to apply it to the land? Yes, in connection with water,—that is to say, in a liquid state.
2130. By irrigation in fact? Yes; if you obtain a suitable sewage-farm near Sydney, capable of utilizing any given quantity of sewage, of course your farm must be proportionate to the sewage you bring to it; otherwise you will only bring the sewage to be discharged at one point instead of another point, and do no good by the transmission. On the other hand, where there is a small sewer discharging itself into the sea, and there are worthless sandy flats or swamps surrounding such outlet, the sewage may be utilized at such outlet, and the surplus if any allowed to escape without any nuisance. This may be done, I should think, at any of the little bays round Sydney.
2131. In England they have found a difficulty in treating the sewage in this way at different seasons of the year. During rainy weather they have too much water, and in cold and frosty weather they are unable to apply it to the soil with advantage. Is it your opinion that in this country, on account of the climate, it could be applied to the land under much more favourable conditions—that we should never have so much water as to destroy its effect, so that there would never be a scarcity of vegetation to absorb it? Yes, I think so, but a great deal of care will be necessary in applying the liquid sewage properly to the ground; if too much of it is applied it has the effect of scorching the plants; it must always be considerably diluted with water. Before I left England I received an invitation from Mr. Mechi, then and now a celebrated man in these matters, to visit his farm in Essex, Tiptree Hall, of which I availed myself. The farm consists of about 400 acres, and was a barren unproductive piece of land until Mr. Mechi took it in hand, and it is entirely by a judicious system of applying liquid sewage to its crops that he has rendered it highly productive. All the sewage of the place, from every animal on the farm, is collected into a large tank about the diameter of this room. Everything available for the purposes of manure goes into it—bones and refuse of all sorts. A dead horse, which died the morning I was there, was thrown into it. The contents of this tank are then pumped over each field of the farm by steam power, and especially whenever a shower comes on. The sewage is forced by steam power through iron pipes all over the farm into each field, and when the sewage is to be applied to the growing crop a man is employed who screws on to the hydrant in each field a leathern hose with which he irrigates the field. I was present and witnessed the whole operation. It is done with best effect when there is plenty of rain. The man in fact had a macintosh on while he was sluicing the lucerne field when I was there. The more rainwater there is the less labour is there for the engine; and the sewage being thus well diluted by natural rain finds its way easily to the roots of the plants. The same system is now, I believe, been adopted pretty generally and with perfect success in all agricultural operations in England. Mr. Mechi told me that a good deal of skill, as well as experience, was necessary in applying the sewage in this way. Your success will depend not upon your engine or pumping machinery but upon the manner in which you manage your sewage in all your farm operations. You must have the whole affair in your own hands. If you attempt to sell the sewage, whether liquid or sewage, people will be sure to find fault with it, just for the sake of finding fault with their purchase; but if you have one or more blocks of land suitable for garden operations near one of these little bays round Sydney, you can apply the liquid manure, say to 20 or 30 acres of garden land, and then the surplus sewage, if any there be, after nourishing your crops, can get away into the sea. If you have your farm or gardens under proper management you will soon acquire experience which will be of great general value to all the people of this Colony in all such farm and garden operations. You must also employ working men who will take an interest in the success of your operations. You have a certain amount of sewage to get rid of somehow or other; you cannot deodorize it so as to obtain any portable dry manure of the slightest value to customers. In 1853 I took a great deal of interest in Mr. Richard Dover's sewage works at Northumberland-street, Strand, in making experiments to convert the London sewage into a marketable commodity. The street sewer was tapped at that place, just before discharging into the Thames, and the contents turned into tanks similar to those described in Mr. Dover's reports in the third volume of the pamphlets I sent you, and the sewage was then subjected to a process of deodorizing, the deodorizing agent being, if I remember rightly, what is called milk of lime. The water came out from the deodorizing tanks perfectly clear; it was colourless and tasteless, and the residue left in the tanks was a black peaty-looking substance, which, when dried, you could crumble in your hands. Mr. Dover said it was worth a good deal of money, but I do not believe it was of any market value whatever, although people say that the ammonia is retained in matter of this kind. I believe it all goes away in the liquid portion or into the atmosphere imperceptibly to the senses; and that there is little or no fertilizing ingredient in the solid matter which remains; certainly none that produces the slightest fertilizing effect after a short time.
2132. Don't you think that in the case of town sewage in this Colony, where there is no danger of its being too strong for vegetation, or rendered useless by too much rain, that we should apply it to the land under much more favourable conditions here than in England, since not only the sewage is valuable but the water also is valuable? I quite agree with you, you could do it under much more favourable conditions in this City of Sydney, because you get the water necessarily combined with the sewage in all your house drains and main sewers also. In London the storm waters cannot be allowed to enter any low-level sewer.
2133. The quantity of water is sometimes a nuisance in England, but it is never so here? In this city you have the two necessary elements of success—sewage and water combined to start with—the water being both a chemical diluent and solvent, and also the cheapest and best vehicle for the ammonia.
2134. Don't you think we have also a great advantage over Europe in our warm winters, which allow the vegetation to become so much more luxuriant? Of course as we have no frost nor ice, all our sewage operations with liquid manure will be continuous, and more easily manageable than in England.
2135. But there is a difficulty in England from the fact that in cold weather the vegetation does not thrive as it does here? There would be no difficulty of that sort in this Colony, as vegetation flourishes all

all the year round, and there can be no difficulty about the continuous application of sewage. I have often observed gardeners and others making experiments with sewage water by growing plants, flowers, and garden produce. I have heard that the prize gooseberries and fruits reach an enormous size simply by the effect of liquid sewage. I believe also that many prize flowers are produced to a great extent by the application of liquid sewage, &c. The two great things to attend to are, first to apply the liquid manure in combination with any quantity of water, and secondly, to give the nourishment under ground, so that the ammonia shall not escape, but shall go direct to the roots of the plants.

2136. The sooner you get it into the ground the better? Yes; and it should be applied to the roots of the plants, and if possible, during a shower or at sundown, so that the dews may help its operation.

2137. Have you had any experience of sewage farms? No; I never saw one until I visited Mr. Mechi's, which was in perfect working order, and is so now; but I believe there are many such farms throughout England.

2138. But Mr. Mechi's was not treated with sewage from a town? No, it was from his own place only; but he was of opinion that the sewage of London should properly be applied to the same purposes. He showed me some fine bullocks he was about to send up to Smithfield market, and he said that the beasts the Kent and Essex farmers sent up to every Monday markets ought to come back again to their farms in the shape of sewage manure. Mr. Mechi, by strictly utilizing all the sewage of every kind on his farm, had converted a poor piece of land in Essex into a farm of great value; and in the face of disadvantages, which you would not like to meet with here, where the City of Sydney not only supplies the sewage, but also offers a daily market for all your produce. With regard to deodorizing;—various processes have been tried for the last twenty years, but not a single patent has been successful that I know of to any extent; they have all more or less proved failures. If a good article of manure is produced, it is always adulterated in the same way as guano has been until it is very difficult for any farmer to get it good. They crush gravel and other worthless matter, and put it in the bags, as well as other things; and even if you succeed in producing good manure by deodorizing you cannot get customers for it; there will always be a suspicion of its value; whereas, if you apply the sewage to the land in a liquid state, you know almost exactly what the effect will be. The whole of my gardens and grass paddocks at Rushcutters' Bay are kept in almost perpetual verdure and fertility by means of my house sewage of all kinds, which flows through earthenware pipes to covered tubs, sunk in various parts of my garden, whence it percolates to the roots of every tree, shrub, flower, and vegetable; and ultimately to the roots of the grass in the paddocks. The poplars, willows, coral trees, magnolias, bamboos, canes, bignonias, bunya-bunyas, and trumpet trees, are all well grown. I have fair supplies of peaches, nectarines, quinces, apples, grapes, guavas, bananas, and other fruits. I used to grow cauliflowers, melons, rhubarb, and other vegetables; and my geraniums, fuschias, camellias, dahlias, carnations, lilies, honeysuckles, roses, ferns, cacti, and other flowers, are ten times more than I ever want. The soil is mostly the poorest black sand, which I retain on the sandstone slopes by terrace-walks of couch and Buffalo grass, descending about 30 feet to my grass paddock at my sea-frontage at Rushcutters' Bay. I should mention that the public sewer is about 10 feet above the ground-level of my house, so that I cannot use the sewer, except by some sort of lift in place of my present system of percolation by gravitation.

2139. *Mr. Moriarty.*] Then you are of opinion that the proper way to treat the sewage of Sydney is to apply it to the land in a liquid state? Most undoubtedly, and if there is any surplus which ought not to be you can then let it overflow into the harbour or the ocean at any place you select. As for the idea of lifting it into a tunnel at a great height to take it all the way to Bondi, where would there be any means of disposing of it there, except to let it run into the sea, and be utterly useless for every purpose?

2140. You are of opinion that it would be a great pity to throw away such a valuable aid to vegetation? Yes, for there can be no doubt whatever of its value. Every Chinaman in this Colony who has a garden gives us a proof of this. The sewage of this city should be very valuable to the city, both directly to the City Treasury and indirectly to the health and advantage of the inhabitants if it could be profitably applied to its natural uses upon the soil of farms and gardens. It is one of nature's fixed laws that plants of every kind—cabbages and other vegetables—should require to absorb, and in fact live upon, the very ingredients which this town sewage contains. If you plant vegetable produce of every kind in mere sand it will refuse to grow to any size or value; but if town sewage diluted be allowed to percolate through the same sand to the roots of the plants they will all grow and flourish to their full size. Why then should we fight against, or rather blind ourselves to so simple a law of nature as the mutual relations of manure, water, and soil productions? One of the broadest principles of natural philosophy is that all divisions of our physical systems are naturally dependent systems, and the more closely we attend to this broad principle of mutuality in all our practical operations, the less will be our waste of nature's benefits, and the greater will be the ultimate results of our labour of every kind. Thus, for sanitary and productive purposes, the more completely we return into the soil the sewage in combination with the rains and dews of Heaven, or with artificial supplies of water, the greater will be the ultimate results of our labour upon the soil itself. Nor is it irrelevant or immaterial for me to refer, upon the sanitary point alone, to the Israelitish rule, xxiii Deut., verses 12-13: "Thou shalt have a place also *without the camp*, whither thou shalt go forth abroad, and thou shalt have a paddle upon thy weapon, &c., &c., and shall cover up that &c., &c." In all tropical cities and townships I apprehend every sewage scheme should adhere most strictly to this great rule, viz., remove all fecal matter and unhealthy odours *without the camp*, that is, beyond all human habitations; and water is the only "vehicle" for such "removal," or at least the best "vehicle" for such "covered removal" of all sewage matters from all our cities and townships, to be restored to the soil for agricultural, horticultural, or any other productive purposes. Instead of sewage water or sewage itself being a nuisance, the sewage should be considered a boon, and should be used to enrich the soil outside. All towns and cities produce sewage; all vegetable products grow vigorously with manure, and without it they will not grow. Water alone will scarcely make a few special sort of flowers grow; but when water is mixed with sewage manure, both water and manure produce maximum results. Another great advantage you would have in Sydney would be the large market which Sydney offers for all vegetable products. It is perfectly monstrous to be compelled to give a shilling, or even a sixpence, for a single cauliflower; they ought to be procurable at one-third the price, and in this hot country especially vegetables are, in my opinion, a necessity of health. I feel quite certain that under proper management your sewage farm would prove a complete success, both in a sanitary point of view and also as paying all expenses.

2141.

His Honor
Mr. Justice
Hargrave.

7 Nov., 1875.

His Honor
Mr. Justice
Hargrave.
7 Nov., 1875.

2141. *Mr. Bennett.*] You would not hesitate to apply sewage, with every hope of a successful result, to raw sand? I should not hesitate. All the soil in my garden is mere black sand, and I find that the sewage of my house, which soaks down to the roots of the plants and shrubs and trees is effective; in fact they all flourish just in proportion to the sewage applied to them, which their roots find out for themselves.

2142. Do you think if the sewage were allowed to run into the sea, say at Bondi, instead of being applied to some sewage farm, that the nuisance would be got rid of in that way? No, because the scum from the sewage of this large tunnel at Bondi would rise to the surface and be deposited on the shores, especially during easterly winds, which would create a great nuisance for at least a mile on each side of Bondi. In illustration of this point I may mention that ever since the sewer was opened into Ruscutters' Bay, at the end of my paddock, about four years ago, the deposit of this foul scum has increased every year, until all my baths and fish-ponds at the base of my gardens have now become utterly destroyed, and will remain so until the reclamation of the bay by Mr. Moriarty's design (as going on now at the Botanical Gardens), when I hope to be restored to my original comfort by the substitution of botanical gardens and recreation grounds upon the twenty-three acres of fatid sewage sand banks close adjoining my sea-frontage on Ruscutters' Bay. From my own personal experience at Ruscutters' Bay as to the results of the small sewer there discharging, I am sure that if the Sydney sewage be discharged into the Pacific Ocean at Bondi the whole coast will be, for a mile or two on each side of Bondi, quite uninhabitable, especially during easterly winds. I am satisfied you can only deal with the sewage by letting it percolate through the sandy soil to the roots of crops. You must have the courage to do as you think best in spite of any prejudices that may exist or arise. Complaints may be made, but you will of course be able to obtain Government land, and if your system be carried out with judgment, and the management of the farm placed in the hands of some trustworthy person as scientific curator I feel sure it will be a success.

2143. You think its application to sand would be successful? Yes; I do not mean sea sand on the sea-shore but a sort of black sand.

2144. Would you hesitate to apply it to white sand? I think sea sand would have to be mixed with something else, so as to render it more like soil than the sand on the sea-shore is.

2145. The sewage will do that by itself? Very likely.

2146. *Mr. Moriarty.*] Do you know Maplin Sands, on the north side of the River Thames? I do not know them exactly. I have never been there.

2147. It was proposed to reclaim a large piece of ground there, and to cultivate it? I was under the impression that vegetation would not grow in salt sand; but I have had no experience of sewage applied with success to sea sand.

2148. *Mr. Bennett.*] There is evidence to show that that description of sand is particularly fertile? I am very glad to hear it; all I know is that my trees—such as willows and other trees, except mangroves, &c.—all die when the salt gets to their roots.

ADDENDUM.

To M. B. Pell, Esq., Chairman of the Sydney Sewage and Health Board,—

Sir,

After revising the MS. notes of the evidence given by me before your Board on the 7th instant, I find that I have scarcely expressed myself so fully or so clearly as the importance of the subject under your consideration demands at my hands; and I have therefore availed myself of your permission to add the following letter to my oral evidence before you. This letter divides itself into the following topics, viz. :—

First.—The special circumstances and personal knowledge I had in England as to sewage matters, which may give some value to my opinions or advice as applied to Sydney sewage and health.

Secondly.—The more detailed recommendations which I beg to offer to your Board on the numerous detailed questions with which you honoured me at my oral interview last Monday.

As to the first topic, I have to state that in the years 1851-54 I had a great many interviews and negotiations with Mr. Bazalgette, the engineer of the London Commissioners, as to the whole South London drainage operations, the Commissioners being desirous to erect upon freehold land of mine at Deptford Creek their main lifting apparatus for the whole sewage of the South London District, on the Surrey and Kent side of the river Thames, the Commissioners proposing to lift this sewage from the low-level main sewer to the high-level main sewer, passing through Greenwich, Woolwich, and Erith, so as to discharge itself or be discharged by another lifting apparatus into the Thames beyond the possibility of reflux into the metropolitan portion of the Thames. My negotiation with the Commissioners resulted in the erection of all their proposed works, as recommended by Mr. Bazalgette and confirmed by Sir William Cubitt and Mr. Stephenson, on the land adjoining my land at Deptford Creek; and I have already given you the printed official report and description by those eminent engineers of all the London metropolitan works as began in 1853, and now recently completed in 1875, to the utmost efficiency for the perfect management of the sewage of the 4,000,000 population of London and its suburbs, to the great improvement of the health of London, and, so far as I have heard and read to the present date, without the slightest hint of any objection, either in principle or detail, to Mr. Bazalgette's works, which at the present date discharge the sewage of London through covered main sewers into the Thames at a point 20 miles east of London Bridge; the discharge takes place at every ebb tide, so as to be carried beyond reflux before the flood tide returns to the point of discharge.

During my negotiations with Mr. Bazalgette and the London Commissioners, a Mr. Richard Dover, patentee of some sewage deodorizing works at Northumberland-street, Strand, and strongly supported by influential gentlemen, applied to me to be allowed to erect deodorizing sewage works on my land at Deptford Creek, so as to produce there valuable manure—dry, portable, and unlimited in quantity, to be transmitted into the country districts by the Kent railway or water carriage by Deptford Creek and the Thames, available close to the Commissioners' works. The Commissioners decided, however, against Mr. Dover's or any other scheme for deodorizing the sewage into dry manure being erected within the metropolis, and adhered to their original design of only dealing with the London sewage by retaining it in combination with water sufficiently diluted to flow at an easy rate from Deptford Creek to Erith, through a covered main sewer about 9 feet oval, receiving of course all the local sewage along its whole length from Deptford to Erith.

I know that the Commissioners gave all possible examination and reflection to all the various patents and schemes for deodorizing sewage into dry manure, then before the London public, but declined any adoption of that principle. The Society of Arts also discussed the subject in their meetings of March 7th, 14th, and 23rd, 1855, already transmitted by me to you on November 6th last; and from that date to the present I have never heard or read of any deodorizing patent or scheme for dry sewage manure advancing beyond advertisements and puffing articles in newspapers, although of course there are the greatest possible inducements to success if any such discovery could be made of any practical value.

Besides my taking very great interest in Mr. Richard Dover's works at Northumberland-street, to my great pecuniary loss, in 1853, I also about the same time visited the celebrated farm of Mr. Mechi at Tiptree-Hall, Essex, where the liquid manure

manure system was applied with the most successful simplicity. Mr. Mechi personally explained to me how he had improved his 400-acre farm from its harsh, sterile, healthy condition, when purchased by him at a very low price, into a rich, fertile, valuable estate, producing green crops of lucerne, cabbages, and every other succulent product in endless succession either for his stall-fed bullocks, pigs, &c., or for transmission by rail to the London markets.

I observe frequently in the English newspapers to the present date continued reports as to the perfect success of Mr. Mechi's system, both in the numerous model farms established in almost every county of the South of England by wealthy noblemen and landowners, and also in the town sewage works established and now in successful operation at Croydon and Warwick, and I dare say many other municipalities, and I believe long since authorized and encouraged by special English legislation on this subject.

As to the second topic of this letter, viz.,—my opinions on the several detailed questions which your Board put to me on Monday last: as I had no idea previously of these particular questions or inquiries, I could only answer according to my impromptu ideas on each question; but I have since reflected more fully on your topics of inquiry, and request permission to add the following remarks to the notes of my evidence, as kindly taken down by your Secretary, Mr. Barlee.

In the first place, I see not the slightest difficulty in your applying the London system to the city of Sydney and its suburbs, and with scarcely any alteration of the present sewers; in fact only by supplementing the present sewers by the addition of the London system of lifts at one or more suitable points.

For example, why should not a simple lifting apparatus be erected at the corner of the Newtown Road, where it joins Parramatta-street, by the University Pond, immediately south of Bay-street, at the head of Blackwattle Swamp? Referring to Mr. Bazalgette's description of the present lifting apparatus at Deptford Creek, the engineering details of such an apparatus may be ascertained by your engineer, sufficient to deal with all the sewage that either now converge to this particular spot, or can be easily altered so as to converge to this spot. I imagine that about one-tenth of the horse power and one-tenth of the reservoir dimensions of the Deptford Lifting Apparatus and Reservoir will place the whole sewage of this district of our metropolis completely within the engineering powers of the lift I have suggested at this particular spot of our metropolitan sewers.

In the second place, I ask what difficulty or objection can exist to the transmission from this engine-lift, of all the liquid sewage there conducted through the largest earthenware pipes along the present Newtown Road, just below the road surface, across the Cook's River Dam, to some suitable area of 400 acres of worthless land abutting on Botany Bay, precisely as the whole low level sewage of the Surrey and Kent side of the Thames, between Westminster Bridge and Deptford Creek, is transmitted from the Deptford Creek engine lift along the main streets of Greenwich and Woolwich and past Greenwich Hospital, just below the road surface, for many miles in length, at a rate of a mile and a half per hour, till it reaches the outlet into the Thames for discharge into the ebbing tide at that point. The distance from the University Corner along the Newtown Road across the Cook's River Dam to Botany Bay cannot be more than about 6 miles, a mere bagatelle compared with any one section of London main sewers, to remove the London sewage from human habitations.

In the third place, supposing the sewage so far as collected into the lifting apparatus at University Corner, and so far as thus to be transmitted to the 400-acre farm beyond Cook's River Dam, why should not this sewage supply be received at the farm into a reservoir on the highest portion of such farm, and thence allowed to flow among the sandy soil in shallow channels as in the Croydon Farm, nourishing the roots of green crops of every kind—or as is done in a small way in numerous market gardens around Sydney, kept by the industrious Chinamen, who chiefly supply us with the few cabbages and cauliflowers and green peas we can obtain for daily nutriment and health, though at famine prices and quite beyond the general demand by our household population. In alluding to this point when giving my evidence, I forgot to mention that I considered the locality beyond Cook's River Dam (as selected already I believe by your Board) to be singularly suitable for a sewage farm; and for these two reasons, viz., first,—because the vicinity of Botany Bay or Shea's Creek facilitates the ultimate discharge of the sewage water, if any, remaining after depositing all its ammonia and other value at the roots of the farm crops, so that both eyes and nose can prove the success of the percolation system; and secondly, because the fresh water of Cook's River, above the Dam, will enable the curator of your sewage farm to liquefy the Sydney sewage when in the farm reservoir, to whatever degree of dilution may be desirable for the healthy nutrition of each particular crop under growth; a point which Mr. Mechi told me in 1853 was of the utmost importance in the application of all liquid manure to any crop whatever. Every one acquainted with either farming or garden operations knows very well that excessive manure will poison any garden crop, and will overforce the growth of your flowers or fruit trees.

With reference to this branch of your inquiries, viz.,—the disposal of the sewage of Sydney in a liquid state for farming or garden purposes, I entertain no doubt whatever that all the sewage on the south of the metropolis that can be collected into an engine-lift at the corner of the Newtown Road may be transmitted beyond Cook's River into practical utility there; and that all the sewage along the south declivities of Darlinghurst, Redfern, Woollahra, and Waterloo, may be similarly transmitted by gravitation through earthenware mains into similar utility in lesser portions of the sandy land of no present value, along the route bounded by Shea's Creek, so as not to interfere with the City Watershed at the Botany Works, but rather to keep the watershed perfectly pure.

I have sketched out on the accompanying map of Sydney, as coloured red, brown, and green, my ideas on this general question of the application of the liquid sewage of Sydney to agricultural purposes; but of course I submit my ideas to the consideration of your engineers and other professional advisers with great deference, as well as to your Board generally and individually.

With reference to the liquid sewage which would not be carried south from Sydney (on the portions of the map coloured brown), but would remain descending into the harbour down the various declivities at the Blackwattle Swamp, Darling Harbour, Circular Quay, Fort Macquarie, Woolloomooloo Bay, Rushcutters' Bay, and Double Bay, I cannot help thinking that a large portion of this sewage might be intercepted just before the outlets at each bay into silt pits, easily to be emptied without nuisance, and applied in reclaiming additional land at the Botanical Gardens, or in the other swampy lands of any part of Port Jackson. I also think that the ordinary sewage of these outlets, if any, not so intercepted, might flow into reservoirs at each bay, communicating with the low tide and percolating, if possible, through a surrounding area of garden ground or recreation ground; such reservoirs being built lofty enough to prevent any escape of effluvia sensible to the locality.

If these means of utilizing the present sewage of these outlets should yet leave any small residuum to flow noisily into the harbour at any one of these above mentioned bays, then we must resort to the lifting apparatus already described; and lift such residuum of the sewage into the nearest lifting reservoir communicating with the southern sewage farms and market gardens towards Botany and Cook's River.

The sewage of Darling Harbour may easily be lifted so as to flow southerly along the railway line towards the sewage farms.

I trust that this letter, with my evidence herewith returned, will be of some assistance to the Board in their arduous duties, and wishing them complete success in their labours,

Supreme Court,
Sydney, December 13, 1875.

I remain, &c.,
JOHN F. HARGRAVE.

MONDAY, 13 DECEMBER, 1875.

Present:—

HON. J. B. WILSON, | W. C. BENNETT, Esq.,
F. BELL, Esq., | E. O. MORIARTY, Esq.,

DR. ALLEYNE.

M. B. PELL, Esq., B.A., IN THE CHAIR.

Mr. Alderman Macintosh, M.L.A., called in and examined:—

2149. *Chairman.*] We have been informed that you have some scheme which you think would be advantageous to carry away the sewage from the metropolis, entirely away from the Sydney harbour, and we are desirous of hearing your views on the subject, if you will state what they are? Some years ago I was under the impression that if there was a main sewer laid down from the western end of Liverpool-street, and

J. Macintosh,
Esq., M.L.A.
13 Dec., 1875.

J. Macintosh, Esq., M.L.A.
13 Dec., 1875.

and carried from there in as direct a line as possible to Bondi, it might take away the storm waters and sewage matters from that portion of Sydney east of Darling Harbour.

2150. You propose to construct a large tunnel? Yes.

2151. The western part of Liverpool-street is a very high level, is it not? Yes, it would require to be as low as the gradient would permit for the flow of the sewage.

2152. And you would tunnel from that point direct to Bondi? Yes.

2153. Have you formed any opinion as to the most direct course for carrying that tunnel across to Bondi? I could not tell you exactly; it would of course have to be modified in accordance with the nature of the country.

2154. According to the nature of the country it went through? Yes.

2155. You have not paid any particular attention to the exact course which you think such a tunnel should take? The course would indicate itself. Supposing such a plan were adopted, and you started in the western part of Liverpool-street, you would go on to the lower part of that street, and then to Barcom Glen by the old brewery there; then through the ridge to another glen, so that in two or three places the tunnel would be almost on the surface of the ground. That is, however, a merely rough idea; it would be impossible to lay down the correct course without a survey of the land.

2156. Have you formed any definite idea as to the exact point where such a tunnel would discharge its contents into the ocean? Yes, in deep water.

2157. But at what particular point on the coast? It should be, I think, a little to the south of Bondi beach.

2158. And you propose that this tunnel should carry off, as far as possible, the sewage of the whole of the metropolis? That portion of it east of Darling Harbour as far as possible.

2159. Have you formed any opinion as to the mode in which the drainage from the other parts of the city—say from Woolloomooloo and from that part of Sydney which now drains into the Circular Quay, should be diverted into this tunnel? It could be done by means of intercepting sewers. A good portion of the present sewers would be available for the purpose.

2160. Was it your idea that this tunnel should carry away not only the ordinary sewage and average rains but the flood waters as well? Yes; I think it is more important to carry away the flood waters, because they have the effect of cleansing the city and bringing down a great deal of filth into the harbour which causes the harbour to silt up. They bring down more silt than the ordinary sewage does.

2161. You propose then that this sewer should be constructed of such capacity as to carry off all the flood water that falls in Sydney? Yes, down to the level, say 15 or 20 feet above tide level, and then the sewer would drain the whole of Waverley, Woollahra to Paddington, and the southern portions of the city and Redfern.

2162. Then you would connect the lower portions of the city, such as the portion we are in now, down to Woolloomooloo and that part of the city which now drains into Blackwattle Swamp with this tunnel by means of intercepting drains? Yes, as far as it would be practicable to do so. But this part of what is called Sydney, that is to say east of Darling Harbour, is beginning to be almost of less importance than other parts. Balmain is commencing to be almost as thickly populated as Sydney was thirty years ago, and the North Shore is also getting built upon a good deal. The gradients in both these places is steeper than the gradients in Sydney proper. Then there is a great deal of difficulty about the drainage of the Glebe.

2163. Would you propose to divert the drainage of the Glebe into this tunnel also? I do not know that it would be practicable.

2164. It goes into the Blackwattle Swamp at present? Yes; I could hardly give an opinion upon that point without ascertaining the levels; there is not much of the Glebe that would drain into the tunnel.

2165. Are you aware that the existing sewers in Sydney—in those portions of the city which are sewered—are quite insufficient to carry off the flood waters? I was not aware of it, because I have never observed that they were not of sufficient capacity, except in two or three instances. I believe it is impossible to provide sewers to meet emergencies which will sometimes occur.

2166. Do you think it would be practicable to provide a sewer to carry off the heavy downfalls of rain which we frequently have? I think it would be perfectly practicable.

2167. Have you ever thought of the extreme practical difficulty of intercepting flood waters? Perhaps some small difficulties would occur, but they could be got over. Looking at Sydney as being built on a ridge, with spurs running from it laterally, and to drains running through these spurs to a main sewer, I don't think the plan would be impracticable at all. The further end of the ridge is Waverley; then from the end of Liverpool-street there is a spur running down to Darling Point and Potts' Point, and if sub-drains were laid down it would be practicable enough; but, of course we should have the stream of sewage we have at present to contend with.

2168. The whole of the tunnel you propose would be an underground tunnel, for the most part of considerable depth? Yes, it is merely a suggestion which I made some years ago in the hope that a survey would be made to see if the scheme was practicable. I have thought of it frequently since, and I can think of no better plan.

2169. Have you any idea of the probable cost of such a scheme? No, further than by contrasting it with other works. The distance is about 7,000 yards, or about 4 miles, on the map. Mr. Moriarty, when on the Water Commission, proposed a tunnel $4\frac{1}{2}$ miles long, which I think he put down at the time at about £42,000. That, of course, would not be the same description of work, but it will give an indication of the cost; it is a question of very easy calculation, because it can be cubed.

2170. Would not the cost depend in a great measure on the nature of the country you went through—whether it was rock or sand? I think it would be quite as easy to take out rock as to take out sand.

2171. Would it not cost much less to take out rock than sand? No, I think not, because there are facilities for putting in adits from different points, and you would have nothing but the water to contend with in sandy ground.

2172. What would you propose to do with the drainage of that part of the city which is too low to be diverted into this tunnel? That is a matter which would have to be dealt with in some other way, probably by embanking the sides of our harbour in the same way as the Thames is embanked; but that would be a very expensive process, and I do not know whether the financial condition of the Colony would admit of it, or whether the citizens would approve of it. But if the other portions of the city were drained in the way I have shown the evil would be greatly lessened.

2173. Speaking generally then, it is your opinion that all the sewage of the metropolis and suburbs which cannot be carried away by gravitation without pumping should be got rid of in that way? Yes, without any deodorizing whatever. J. Macintosh,
Esq., M.L.A.

2174. Simply to get rid of it? Simply to get rid of it.

2175. *Mr. Moriarty.*] With regard to the tunnel you propose, Mr. Macintosh, would you provide for occasional discharges at intervals of the surplus storm waters, in the same way as has been done in London in the main drainage system, where they have made provision for the escape at certain places of the excessive storm waters? I should not like the sewer—supposing it to be constructed to allow any waters to escape to the north. I should bring all waters that could be intercepted to the tunnel. No water should go into Rushcutters' Bay or Rose Bay; it should all be intercepted, because the storm waters carry such a quantity of filth and sewage with them.

13 Dec., 1875.

2176. Have you any knowledge of the currents off the coast—the direction they take where you would discharge the sewage? I believe the tendency of the currents is from the north.

2177. Would not that have the effect of sweeping the sewage into the harbour? Well, the effect of sweeping it into the harbour would be so slight, and the consequences so small, that it would be scarcely worth while to take it into account. And even if it did come into the harbour it would not come up this distance.

2178. Have you ever heard that at Marseilles, where the sewage is also discharged into the sea, it becomes an intolerable offence, and that the smell of it can be perceived 20 miles off—the smell of sewage saturated with water? I was not aware of it; I always understood that to discharge it into the ocean was the lesser of the two evils.

2179. Have you ever thought of discharging the sewage at Botany? I have thought of it, but the prospective evils are so great that I believe the offence would be increased instead of being remedied. Botany Bay is silting up already since our settlement on this coast. We are allowing a great deal of offensive matter to lodge upon the white sands which were formerly cleaned out with every fresh. Botany Bay is silting up every year, and if we discharge our sewage there it would become a regular plague spot. In short, from that which goes down by Sheca's Creek the stench is already intolerable, but the nuisance is small now to what it would be if we discharge the whole of our sewage there. At present there is only the nuisance arising from the silt washed into the bay, and some small additional nuisance from Waterloo and Newtown.

2180. Supposing we were to discharge the sewage on to some land there, as is done in almost all instances in Europe, would you think Botany a suitable place at which to discharge it? No, because I think it would be a commercial failure; and judging from experience if it were a failure commercially it would be a total failure. The sandy soil there would not be suitable for the discharge of sewage. I believe that sandy soil is the most unsuitable for a person to put his house on, simply because it absorbs all the liquid matter, and leaves the offensive matter to create a nuisance. Most of the neighbourhood of Sydney is composed of sand, and as you could not keep the sewage deposited there continually moist, the poisonous matter would be continually offensive. There are many places about Sydney where people have gone to considerable expense in depositing street sweepings and other refuse upon sand, and I do not know that they have anywhere been a commercial success.

2181. Can you give us an instance in point? Yes; Moore Park, where about 6 inches of street sweepings have been put down.

2182. There is nothing offensive there now is there? There was nothing very offensive deposited there—only street sweepings; but nothing grows upon Moore Park that would be a success commercially; there is no consumption for what is grown there which would pay for the expense of manuring the ground in that way.

2183. Are you aware that in England sewage-grown crops have been particularly successful, and are considered particularly wholesome? I am aware that crops are raised in that way, but I am not aware that they are particularly successful. I have seen vegetables grown at Botany, and I am aware that they are grown very quickly; but they will not bear handling, and when exposed to the sun they putrefy in a short time, and when they are taken to the market and kept for a short period they give a peculiar and unwholesome smell.

2184. Is it not the common practice to use manure for growing vegetables? Yes, I believe so.

2185. Is there any essential difference between the sewage of a city like Sydney and the manure used for crops? Yes. The vegetables I have occasionally seen grown at Botany were grown from offensive matter, such as blood, offal, &c., and when they are exposed to the sun they putrefy sooner than vegetables grown with other manure.

2186. Then the poorer the manure the better the vegetable crop;—is that your opinion? I believe that the poorer the manure is the better the crop would be, and that it would stand the heat much longer without putrefying. If you take any vegetable growth from the mountains, where there cannot be any manure, it will stand the heat much longer than one of forced growth.

2187. But is it not a fact that vegetables grown on rich soil are better than those grown on poor land? There may be larger quantities produced, but it is doubtful whether they are of better quality. I have seen oat crops from 6 to 10 feet high, but they have been chiefly composed of rank straw with very little grain in the ear, and very coarse.

2188. You have no doubt heard of the experiments made by Mr. Meechi at Home? Yes.

2189. Do you believe in the accounts you have read of his success in applying sewage to his land? It is done in England under different circumstances altogether; we have no land here available for purposes of cultivation within a reasonable distance of Sydney.

2190. No doubt you are well acquainted with the meadows near Edinburgh irrigated with sewage? I have heard that from the scarcity of green food in the neighbourhood of Edinburgh prices have advanced, and the meadows you speak of are so situated that the sewage can be discharged upon them by gravitation, so that there is no expense for pumping. The soil and climate there are also better adapted for sewage irrigation. I believe too that it has always been a disputed question whether the cattle grazing in those meadows are not liable to certain diseases which do not affect cattle in other places.

2191. Have you read the last accounts of investigations made by the British Association with that subject; because they lay it down as a proved fact that such is not the case, and that cattle fed on land so irrigated are perfectly healthy? I have not read them.

2192. *Chairman.*] Are you aware that a Committee appointed a year or two ago to report upon the best means of disposing of the sewage of Birmingham, addressed letters to the authorities of the various towns

J. Macintosh, in Great Britain where the sewage was disposed of for the purpose of irrigation, asking certain questions, among others, whether any disease either among men or cattle had been created or had been supposed to have been created by this course, and that the answer in every case was invariably that it had not happened in a single instance? I have seen that, but I have always considered it a matter of dispute.

Esq., M.L.A.
13 Dec., 1875.

2193. Have you any evidence that you can give us on the subject, or can you refer us to any authentic report of such a thing having occurred anywhere? I believe I have read of it in standard works.

2194. Can you refer us to any work where cases of that kind are recorded? I do not know that I could at the moment.

2195. Can you do so at some future time? It is quite probable that I can. I look upon the question as applied to this Colony in the light of a commercial success or otherwise.

2196. But with regard to disease, if as you say it is a disputed question we should be glad to know who disputes it and who your authorities are? I have read accounts of it in the papers.

2197. We should not pay much attention to newspaper articles; we should like to have authentic information? I do not put much faith in reports of any kind; I would rather rely upon the opinions of practical men on the subject.

2198. *Mr. Moriarty.*] If the sewage were diverted to Botany for the purpose of discharging it upon a suitable tract of land there, you are aware I suppose that it could be taken there by gravitation quite as rapidly as it could be taken by gravitation to Bondi, so that it would cost no more? No, I think the main sewer could not be made to go towards Shea's Creek at the same expense, owing to the nature of the soil, which is decomposed vegetable matter to a great extent.

2199. Supposing that upon careful investigation it should turn out that it was really cheaper in the first instance to send the sewage by gravitation to Botany and discharge it upon suitable land there; and supposing it should be satisfactorily established that no evil results would arise from that mode of dealing with it, would you then have any insuperable objection to discharge it at Botany? Yes, I think it would be an evil that could never be remedied.

2200. What would be the evil in your opinion? I think the noxious qualities of the sewage would not be absorbed and would remain in the sand, and that in twenty or thirty or perhaps fifty years hence the place would be unhealthy, and it is all sand between this and Cook's River.

2201. *Chairman.*] That has not been the case in Edinburgh where the sewage has been discharged upon the land for a number of years—200 or 300 years? Well, I believe they have diseases there which we have not had here.

2202. *Dr. Alleyne.*] Can you mention one? They have had cholera there which we have not had here yet. We can hardly adopt the same policy in New South Wales which is adopted in England or Scotland, because there a great many of the towns drain into the rivers and it becomes a necessity to deodorize the sewage, which must find its way into the rivers again; the cases are very different. We have not to consider the same circumstances. In England they go to great expense for works of this kind for which they get no return whatever. There is one city, the name of which I forget, where the authorities incurred an enormous expense for deodorizing and sewage works, and then let the whole of the works to a nobleman for £30 a year, taking a bond from him to ensure his keeping them on.

2203. *Mr. Moriarty.*] Are you speaking of recent events? Yes; this occurred only a few years ago. Every town and every city has to be considered in reference to its own local circumstances and not to any general scheme, and I still think that in Sydney the best way to deal with the sewage is to get rid of it altogether. We could if necessary deodorize some or even the whole of the sewage in some of these little bays where it would not be offensive along the line of the tunnel I have suggested to Bondi.

2204. Then you would propose to make arrangements to do that at certain points of the main sewer? Yes, it could be done if it were considered necessary.

2205. And those portions of the city which are below the level of your tunnel you would not propose to deal with at present? There would be many ways of dealing with them; we must look at the money side of the question; it would cost as much to deal with the low levels as with all the rest put together, because there would have to be a sewer surrounding the harbour, through all its indentations.

2206. And do not you think it as important to get rid of the sewage in the low-lying portions of the city as it is in the upper portions? Not in my own opinion, because I think that seven-eighths or even three-fourths of the area of the city would be drained by the main sewer I propose; there would be very little from the lower levels; the silting-up of the harbour would not be benefited by dealing with the low levels first. It would be different if you took the sewage to Botany, because in that case you would have the same expense with the low levels as with the others. I should like to see it all dealt with, but we must look to possibilities.

2207. Then, as far as I can gather, you would not deal at all with these low levels for the present? Well, it might be done in some places where a very large area could be drained, because it could not be done all in one place. Woolloomooloo, for instance, would require separate treatment from Darling Harbour. One of those places might be treated at once if necessary.

2208. That would be a matter for consideration; it might happen that by going sufficiently low they might all be treated at once? Yes, it occurred to me once that the pneumatic principle might be adopted, and that by atmospheric suction at the mouth of the tunnel lower levels might be drained. Sydney is certainly peculiarly well situated for flushing the sewers.

2209. There is no arrangement at present, I believe, for flushing the sewers? No, except with fresh water, which we cannot spare; there are complete arrangements if we had the water.

2210. What are the arrangements;—is there any means of flushing the sewers by means of the ordinary water supply? Yes. I think Mr. Bell will tell you that every sewer is in some way connected with the water main.

2211. But there are no arrangements in the shape of flushing traps in the sewers themselves? No, we can only flush them by pumping the water from Botany or using tunnel water.

2212. *Mr. Bennett.*] Are you aware that the main sewer at Fort Macquarie has on several occasions been quite as full as it was possible to be? About twice, I think, or three times.

2213. And that a great quantity of water was running on the surface into the harbour from that watershed? Yes; I could not tell you the capacity of the main sewer; there is an improper opening in Hunter-street; there is an opening there through a cast-iron pipe, and there were other openings I believe.

2214. With all those aids to relieve it there was still a large quantity of water flowing through the streets and

and over the surface? Not to my knowledge, except on two or three occasions during the heaviest J. Macintosh, Esq., M.L.A. rains. I have been out and watched it frequently, and I have noticed that the sewer in Bridge-street had burst, which, of course, created an obstruction. But there is a sort of connection between the Tank-stream and the main sewer—I don't know whether you have found it out or not—in one or two places, and these obstructions may have caused some of the overflow. I have thought that the main sewer was not large enough opposite the Exchange, because it backed the water up to the *Herald* office. 13 Dec., 1875.

2215. You would propose in your new sewer to carry off even these extreme quantities of flood waters, so that on all occasions all the water should go into the harbour? Yes, nothing would satisfy the people of Sydney except perfect immunity from danger. There are a number of cellars in the city, and some of the proprietors are very influential people, and they would require to be perfectly safe, and to be considered specially in any scheme of this sort.

2216. Don't you think that if the sewage were discharged at Bondi the same offence would arise there which has arisen in Sydney—the faecal matter would float upon the water, and be driven by the prevailing winds in shore until all these nice white sands would become a depôt for filth and sewage matter? I grant you that fully, but if that were ten times the case I should consider it by far the lesser evil than to have it in the Sydney Harbour as at present. Of course we cannot expect to have a perfect state of things.

2217. Do you think that would be better than to deposit the sewage on to a piece of land, and to allow the water to go away pure, as it has done elsewhere, into the bay? It might answer if it could be made a commercial success, but I doubt that, and I doubt the utility of discharging our sewage upon sandy soil. I may be wrong, but that is my opinion. Anyone going to Botany at the present time can perceive, without being told of it, that he is in the vicinity of market gardens.

2218. But if the sewage were properly utilized the water coming from a sewage farm would be perfectly pure? I have repeatedly seen water extracted from sewage which was perfectly transparent, but I do not know whether it was perfectly free from poisonous matter. I don't think that to put poisonous or offensive water through any quantity of sand would purify the water. I know that, with regard to salt water the sand will not take the salt out of it and make it fresh.

2219. But we have statements from the highest authorities in England that it is the case there; and if you will, for purposes of argument, grant that it does take place, would you then see any objection to such a plan, because you admit that in the scheme you propose the sewage would, to a certain extent, be thrown upon the shores? I would prefer to get rid of it at once.

2220. But could you get rid of it at once? I think so, because it would be so diluted that it would create very little offence.

2221. Yes, if it were sufficiently diluted, but we know from experience that it is not, and that it returns, and is landed in our bays and on the beaches, and creates a nuisance there? Well, I am well acquainted with Farm Cove, and 25 years ago the water there was transparent; now it is beginning to get filled up with offensive slimy looking matter. That is a place where there is no current, and every facility for the matter to collect, and yet at that place, so near to the outlet of a sewer, it has not collected to such an extent as would be expected.

2222. Yes, but Farm Cove is hardly a case in point, because there the shore has been advanced three or four times to my knowledge? But I am speaking of the water. I admit that some offensive matter is there in the water, but only to a small extent; and looking to the thousands of tons of sewage which have been deposited, and that the place is in the vicinity of the outlet of a sewer, it is a great wonder, considering also the prevailing winds blowing in that direction, that so little harm has been done, and that it is quite bearable. Now it would be different if the sewage were discharged at sea into deep water; the currents and the storms would have full effect upon it, and the offensive matter would be so diluted that it would be almost impossible to take notice of it.

2223. But you will also admit that the quantity discharged at Bondi would be much greater than the quantity discharged at Farm Cove? The area to be drained would be larger, but the offensive matter would not be so large; taking into consideration the silt that has been deposited there, the vicinity of Darling Harbour, which was at one time a slaughter-yard, and all other circumstances, I don't think that for many years there would be more offensive matter there, though there might be a larger quantity of matter discharged.

2224. *Chairman.*] If I understand you, it would take a great many years for Bondi to become as offensive as Farm Cove? Yes.

2225. What Mr. Bennett says is, that the total quantity of sewage discharged from this tunnel would be much greater, and that it would drain a much larger area? There is the drainage of a large watershed discharged at Fort Macquarie, and there would be about 6,000 acres drained by the sewer to Bondi. Of course that would represent a large quantity of sewage, but the Fort Macquarie sewer drains a very thickly populated portion of the city. (*Map of Sydney produced, and witness made certain explanations.*)

2226. *Hon. J. B. Wilson.*] In a previous answer you stated that the current at Bondi runs from the north? Yes, I think so, but I am not positive about it; I had no idea of being examined on that point.

2227. Are you aware whether there is the same current a short way off the shore,—or does the current there run to the south? I believe the currents vary, and that they are modified a good deal by the headlands; but the natural currents, as I understand, are always from the north.

2228. Are you aware whether the sea at Bondi is deep in shore? In some parts it is; it is the usual depth as far as the beach is concerned; but there is a great depth of water off the rocks, a little way from the side.

2229. How deep do you suppose it is at the rocks? I do not know; you cannot see the bottom a little way off.

2230. Is there not often a very heavy sea running there? Yes.

2231. Do you think it would have the effect of dislodging and removing any deposits that might have taken place in calm weather? I think it would displace the heavier matter, and the lighter portion would be carried away and swept about with the currents.

2232. Then you think that on account of those heavy seas and currents there would be very little danger if any large quantity of sewage matter being deposited? I am convinced that there would be no offensive effects from the sewer.

2233. How far south from the Heads is the point at which you propose to discharge the sewage? I should think at least 4 miles; it is a long way round.

J. Macintosh, Esq., M.L.A. 2234. With regard to sewage farms—are you aware whether the success of a sewage farm is at all dependent upon the description of soil upon which the sewage is deposited? I have always considered that where you have nice fields to lay it on as in England, it may be an advantage. But the people who get it there get it for nothing, and very expensive works are erected for which there is no return.

13 Dec., 1875.

2235. What I wish to know is whether the nature of the soil has anything to do with the success of the farm, or whether a sewage farm would be equally successful in any soil? I think it would depend a great deal upon the nature of the soil, because some soils contain more decomposing properties than others. I do not think sand decomposes to any extent; consequently it would not be adaptable to a sewage farm. All these circumstances should be taken into consideration. You cannot apply the same principle to any two places alike.

2236. Have you any idea of the height above high-water mark of that part of Liverpool-street where you would propose to start your main tunnel? It would take a scientific man to answer that question. It is about 4 miles to Bondi, and it would be necessary to have a fall sufficient to carry away the sewage by flushing. Some sewers are constructed 1 foot to the mile, others 2 feet, and some 2½ feet to the mile, which I believe would be sufficient, but as it is through a sandy soil, I should like to have a little more than 2½ feet.

2237. Do you think 12 feet above high-water mark would give a sufficient fall? Well it depends very much upon whether any aid could be given at the other end. My own opinion is that it would be hardly safe to have it under about 16 feet.

2238. And from your knowledge of the locality do you think this 16 feet could be obtained? Of course you would require to take it; you would have to commence your sewer 16 feet above high water-mark. That is however a question for scientific men to consider. I would not like to give an opinion upon it.

2239. Now, supposing this main tunnel were constructed—with regard to the sewage from the lower portions of the city, from the Glebe and Blackwattle Swamp, and some parts of Darling Harbour—do you think there would be any great difficulty in constructing reservoirs of a considerable depth into which this sewage could be made to run, and from which it could be afterwards pumped into the main tunnel? It would be practicable; but considering that we have occasionally 12 inches of rain water falling in twelve hours, you would not be able to pump the flood waters.

2240. I am talking of the sewage matter? Yes, that could be easily pumped; but I think the storm waters do more injury to the harbour than the sewage.

2241. But there would be a great deposit from them even if they were allowed to run off through an escape pipe? The reservoirs would have to be of great capacity, as we can only allow from 3½ to 4 feet for the rise and fall of tide. In London and the whole of Westminster they are mostly below the level of the tide.

2242. *Chairman.*] We have it in evidence and it is obvious that the worst part of the water that comes down is the first part of a flood. This clears out all the refuse from the yards and drains and brings down a great deal of filth; the rest of the flood water is not so offensive. Is that according to your experience? Yes, it is the earlier part of the flood which is most offensive in character, as far as health is concerned, but as far as regards the silting up of the harbour there is very little difference in the flood water; the silt comes down continuously.

2243. I think you said that vegetables grown with rank manure were liable to putrefy when exposed to the sun, especially when the manure consisted of offal or blood? Yes, they have a very hasty growth.

2244. You think if they were manured with weak manure they would be more wholesome? Yes, that is my opinion.

2245. Are you aware that the sewage which is discharged from Cities is remarkably weak, and that if there is any objection to it it is not that it is too strong but that it is too weak? Yes.

2246. Then that objection would not apply to vegetables? Yes, but still there are objectionable properties in the sewage. We know that the solid matters in sewage are not more than 2½ per cent. of it.

2247. *Mr. Moriarty.*] (*Map produced again.*) Will you look at this map. I wish to ask you, looking at the lines starting from the west side of Bathurst-street, going to Bondi, and at the relative areas on the north side of that line, and the south side, what proportion do they bear to each other? There is a larger surface area on the south side than on the north, but taking into consideration the difference in the levels and the area which could be drained by sub-sewers, I think the position would be central.

2248. Does not the main dividing ridge, which separates the waters draining into the Sydney harbour from those draining into Botany lie very close to the Sydney Harbour—much nearer than to Botany? The natural Botany watershed commences at the Barracks, but we are considering the areas that can be artificially drained by a main sewer. Taking the present populated parts into consideration there is almost as much population on the north watershed as there is on the south watershed; and there is a large portion of the latter which it is not probable will be built upon.

TUESDAY, 21 DECEMBER, 1875.

Present:—

Hos. J. B. WILSON,
F. BELL, Esq.,
W. C. BENNETT, Esq.,

E. O. MORIARTY, Esq.,
F. H. GRUNDY, Esq.,
H. G. ALLEYNE, Esq., M.D.

M. B. PELL, Esq., B.A., IN THE CHAIR.

R. George Massie, Esq., called in and examined:—

R. G. Massie, Esq. 2249. *Chairman.*] I believe that during your recent visit to England you inspected a sewage farm at Croydon? Yes.

21 Dec., 1875. 2250. Will you be good enough to describe what you saw there—you saw the sewage as it first came from the sewer? Yes, I first went to the works at Beddington, where I saw the process of extracting the solid matter.

2251. The whole of the sewage, just as it comes from the town, is discharged into a large reservoir, is it not? Yes. 2252.

2252. What is the first process? There are two large wheels which revolve within this reservoir something on the principle of a dredging-machine, which bring up the solid matter and deposit it on a grating. The liquid matter is allowed to run off in the direction of the sewage farm. The solid matter is placed in a large open cesspit, merely as a temporary place of deposit, and then taken away.
2253. What is its ultimate destination? It is taken away by the market gardeners—I need hardly tell you what a number of market gardens there are there—at a price, as near as I can remember, of 3s. 6d. per ton. And it is taken away very fast, for while I remained there there was only as much remaining as had been raised in the course of three hours.
2254. And the liquid portion is allowed to flow away? Yes, it flows into an open drain or aqueduct.
2255. What time of the year was it when you inspected the works? It was in the winter—one of the most severe winters known in England for some years.
2256. Was the sewage before it entered this aqueduct subjected to any artificial treatment? None whatever.
2257. Was there much smell arising from it? Some, but a great deal less than I expected.
2258. Where did the liquid sewage flow to? I followed it to see where it went. It went first into a kind of open drain with sluice gates at different points, which are shut down at times to allow the land on either side to be irrigated. I followed the course of this drain to where the sewage was allowed to flow over a farm of 300 acres.
2259. There would be nothing growing there at that time; it would be the wrong time of the year for crops? Yes, there were enormous crops of rye-grass and large quantities of cabbages growing.
2260. Then the water is allowed to soak into the land? Yes.
2261. What is its ultimate destination? After it has gone over the land it runs into the river, and by that time it is perfectly clear and lympid; so much so that one of the men who accompanied me wanted me to drink some of it, which I declined, though the water was certainly excellent in appearance. I then went over the farm, which I think comprised 300 acres, from field to field, and saw how the sewage was disposed of from the time it left the engine works.
2262. What was the nature of the soil on that farm? It was hard, clayey soil; very poor land, and obtained chiefly on that account.
2263. Of course, during a severe winter in England people are much restricted by the weather in the crops they can grow? I believe so.
2264. Are you aware that one of the greatest objections to the sewage farm system has been the difficulty of raising crops in the winter? Yes; I was informed that the rye grass was not much liked by the cow-keepers, who used to buy it by the acre.
2265. That has been the objection to sewage farms on a large scale—that during the winter only certain crops could be grown, and if they were grown to a large extent the market would be overdone with them? I did not hear that; but it appeared to me that they grew more cabbages and onions than rye grass; if I had not seen the number of acres of cabbages myself I could hardly have believed that they were grown in such quantities.
2266. It has been objected that if the sewage farms were carried on on a large scale the supply of produce would be greater than the demand? Perhaps so.
2267. Don't you think then that our climate, which allows a variety of crops to be produced at all seasons of the year, would be far more favorable for the cultivation of sewage farms than that of England? I think so.
2268. Did you find any offensive smell on or about the farm you visited? Not the slightest, though it was very damp, muggy weather at the time, with fogs so thick that it was difficult to find one's way about.
2269. And you found nothing offensive to sight or smell about the farm? Nothing at all; it looked fresh and beautiful, just like a garden.
2270. I have heard that frequently visitors—strangers and pleasure seekers—wander about that farm without having any idea that it is a sewage farm? I think it is very probable; but when I saw it it was very dirty, wet weather, and I cannot imagine anyone going there for pleasure at that time of the year.
2271. Probably pleasure seekers would go there in finer weather, when there would be a greater probability of finding offensive odours? No; nothing of that kind is experienced; the farm is close to the village, and I inquired particularly whether there was anything offensive from the farm and found there was not the slightest complaint about it.
2272. You did not hear whether there was any difficulty in disposing of the produce? No I did not hear of any; as far as I can remember the cow-keepers took away the rye grass; they cut it eight or nine times in the year.
2273. Are you aware that this stiff clay is considered most undesirable for a sewage farm? Well as far as my own opinion goes, I should say it was the very worst, because the sewage cannot percolate through it so rapidly as through sandy soil.
2274. From what you saw of this farm, should you be disposed to recommend that the sewage of Sydney should be disposed of in a similar manner if practicable? I should strongly recommend it. I am sorry I have mislaid a letter to the *Herald*, which I wrote immediately upon my return, while the subject was fresh in my mind, as I gave more details in it than I can remember after this lapse of time.
2275. Perhaps you will give us the date of it that we may be able to get a copy of the paper? I will do so; I think it was in 1870 or 1871. I may mention that I visited two other sewage farms while I was in England in company with Major Scratchley, of the Engineers, who was appointed a kind of commissioner to inquire into the disposal of sewage. One was a farm at Cheltenham, which had just been commenced. The principle there was very much the same; not so completely carried out as at Croydon, where there is nothing offensive whatever, and the whole thing conducted in such a simple manner. There were only two men in the engine-room, and two men wheeling away the solid stuff as it came up.
2276. You mean besides the men employed on the farm? Yes. I am not talking of the farm laborers but of the works. The other sewage works I saw were at the Enfield Rifle Works; there they adopted a system of crushing the matter with large wheels, but they had to pump the sewage and the process was not so simple as that adopted at Croydon.
2277. Did you pay any particular attention to the kind of machinery they use for pumping the sewage at Enfield? No, I did not.
2278. Were the works in operation at Enfield? Yes, but I did not pay much attention to them. There had been a great deal of sickness among the labourers, which was supposed to have been caused by the sewage, and this system was adopted as a corrective.

R. G. Massie,
Esq.
21 Dec., 1875.

- R. G. Massie, Esq.,
21 Dec., 1875.
2279. What seemed to be the opinion generally among people in England with whom you conversed about sewage and farms? That they had paid as a commercial speculation; that land which was worth not more than £2 per acre could be made worth £10 or £15 by treating it in this way.
2280. It was generally considered then that this was the best mode of disposing of the sewage? Yes.
2281. You did not hear of any disease arising from it or among cattle fed on the produce from sewage farms? Quite the reverse. I learnt that the people living in and round about Beddington are quite as healthy as any inhabitants in any county in England. Croydon was rather notorious for low fever and typhoid fever in the winter until this process was adopted.
2282. Did you hear any complaints about Beddington? None whatever.
2283. *Mr. Moriarty.*] What was done with the solid matter remaining? It was carted away at once; they did not use the solid stuff on the farm; the market gardeners bought it.
2284. *Mr. Bennett.*] You say that the soil was very poor clay; did you notice that the soil itself of the sewage farm, besides yielding all these large crops, was really being improved? I should think so; because it became of a darker character, and altogether a different quality. It was originally poor, bad clay.
2285. Did you see any sewage applied to raw sand? No.
2286. From what you saw do you think it would be successful with raw sand? I think it would; and I recommended it in my letter to the *Herald* that it should be made use of on the sandy hills between the railway and Newtown. I think I pointed out that that was the situation best adapted for it.
2287. *Chairman.*] You do not think a sewage farm would be objectionable as close to the city as that? I don't think it would cause the slightest offence in any way.
2288. *Mr. Bell.*] Have you any idea of the character of the subsoil on the farm of Croydon, of which you have spoken? No. I merely walked over it; but I may tell you that having been engaged in farming operations for a number of years, I should be sorry to farm a piece of land so poor as that at a high rental.
2289. I understood that the subsoil was gravel, which would allow the sewage to run away? I could not tell you. I traced the sewage to its confluence of the river, and saw it run into the river. The soil did not appear to be all gravel, but it might have been.
2290. Was the soil artificially prepared, or did the sewage run into the river from the natural inclination of the ground? It appeared to be prepared as well as any garden.
2291. Then it must have had subsoil drains? I cannot say. My knowledge was only gained from walking over the farm and observing what was on the surface.
2292. *Hon. J. B. Wilson.*] Did you remark whether the liquid matter appeared to percolate through the soil or to lodge on the surface? It evidently percolated through the soil.
2293. Have you any idea of the depth of the land from the surface to the river level—does it stand very high? No, all the land about Beddington is very low, there is not much fall into the river.
2294. How many feet do you think? I can scarcely tell you; it is a level country and no apparent fall, perhaps 15 or 20 ft., or perhaps not quite so much.
2295. You stated that Croydon was very unhealthy before this sewage farm was commenced? Yes; that I believe is a matter of history.
2296. Do I understand you to say that you attribute the improvement in the health of the people to this sewage farm? Not to the farm itself, but to this mode of getting rid of the sewage.
2297. With regard to the Enfield Rifle Works, is there a large population there? No, there is only the Government establishment there.
2298. I suppose about 5,000 or 6,000 inhabitants? Not so many I should think.
2299. *Chairman.*] Did you reside for any length of time at Croydon? Yes.
3000. How long? I was living with my brother Captain Massie, for two or three months.
3001. And you heard no complaints of this farm being a nuisance? No, there was none. My brother made a point of getting all the information he could for me, and seemed rather surprised at the interest I took on the subject. While I was there, a prospectus was shown to me for taking up some very poor land at a low rental to be converted into a sewage farm as a matter of speculation. I may say that Croydon had been a very unhealthy place, but at the time I was in it it was considered quite as healthy as any place in the South of England.

MONDAY, 17 JANUARY, 1876.

Present:—

HON. J. B. WILSON,		F. BELL, Esq.,
W. C. BENNETT, Esq.,		DR. ALLEYNE.

E. O. MORIARTY, Esq., IN THE CHAIR.

Wm. Tunks, Esq., Mayor of St. Leonards, called in and examined:—

- Wm. Tunks, Esq.,
17 Jan., 1876.
3002. *Chairman.*] You are Mayor of the Borough of St. Leonards, Mr. Tunks, I believe? I am.
3003. And you have been Mayor for several years in succession, have you not? Yes, about nine years.
3004. The Board are anxious to have your evidence in reference to the disposal of night-soil; we have been told that this is a subject to which you have paid considerable attention, and that you have been treating the night-soil in the Borough of St. Leonards in some way which has been very successful; will you kindly inform us what you have been doing with it? Yes; about three or four years ago the disposal of the night-soil, not only of St. Leonards but also of the whole of the North Shore, became a question of some consideration. Having a reserve of 40 acres of land in the township of St. Leonards, and having also a Council, comprising Dr. Ward, M. W. S. Clarke, Esq., M.A., and other energetic members, who properly appreciate their duties, we collected a little money and trenched a border round this reserve. We, in conjunction with the Borough of Victoria, purchased a night-cart, then entered into a contract with two men to clean out the whole of the closets on the North Shore at the contract price of, I think, 10d. a cubic foot; the Council sinking the holes or trenches, and the contractor depositing the night-soil in them. This plan has answered very well, and, as far as I have been able to learn, no nuisance whatever has been created. The trees which we have planted there absorb the manure and grow remarkably well,

well, and we are now in a position to suppress any nuisance which may arise. In such cases we send the party notice by a policeman, who with the concurrence of the Inspector General of Police acts as our Inspector of Nuisances; he is appointed by the Council under seal, and receives as retaining fee £5 per annum. The notice requires the party only to remove the nuisance; if he does not he is summoned at once to the Police Court. We have had a great many tons deposited in the Reserve, and its presence cannot be detected even by passers-by. It is just thrown into the trench at night and covered over with about 6 inches of dirt, and the whole thing is done in a very short time, as we believe without damage or nuisance to any one.

Wm. Tunks,
Esq.
17 Jan., 1876.

3005. Will you be good enough to describe the process of trenching the ground and burying the night-soil? We trenched the ground to a depth of 18 to 20 inches in the first place with the object of setting out some ornamental trees, and we opened out a number of pits to receive the night-soil; there would only be about 1 foot of night-soil in the pits, and about 6 inches of dirt covered over it. We find that is quite sufficient to deodorize it. The first rain that falls washes the strong properties of the manure and diffuses it among the roots of the trees, which absorb it at once, and the trees grow quickly and well.

3006. And you have never experienced any disagreeable or offensive smells from it? Not the slightest.

3007. Then the result of your experience in the treatment of night-soil at the North Shore has been to convince you that that is the proper way to dispose of it? Yes, I have given a good deal of attention to the subject, and I think that is the most efficient way of treating it; I have seen no other way which has answered so well. I may mention that we have another reserve of 53 acres, which we may perhaps open up in the same way; but the 40 acres to which I have referred, if it were properly trenched, would, I believe, take the whole of the night-soil at the North Shore for a great number of years, supposing trees or green crops to be planted upon the portions operated upon. I feel convinced if a trench a yard wide or so were made across one end of the reserve and soil deposited on it and successive trenches made, that before we got to the further side of the reserve the first portion would be ready for trenching again; by that time all the manure first deposited would have been absorbed and converted into soil.

3008. Have you considered whether the expense would be any obstacle to the adoption of this plan generally? The expense would depend greatly upon the place of deposit and the distance the stuff would have to be carted; it would be expensive to send it several miles. Fortunately we have a place which is very handy and there is not much population near it.

3009. Still as you treat the night-soil there is no nuisance whatever attached to it? None whatever; and it appears to me to be a great saving, after the desultory way in which these matters were managed before. The amateur nightmen, undertook the work with very inefficient machinery to carry it out, and as the police were pretty sharp with them they charged pretty high rates, much higher, I believe, than obtain now that the work is done by the Corporation. We extended our operations so as not only to include our own borough but the whole of the North Shore, as we considered that if any contagious disease were to break out we should be affected by it wherever it might occur.

3010. What charge do you make to the owners of cesspits? We leave the contractor to make his charges, but if any dispute arises between the householder and the nightman, and the matter comes before the Council, we send one of our men to measure the quantity of stuff and fix the charge in accordance with the contract price—10d. per cubic foot. We have had no trouble in this particular.

3011. Per cubic foot of the stuff actually removed? Yes.

3012. Then if any of the residents in the Borough of St. Leonards send to the Corporation to have their cesspits cleaned out the Council take the matter in hand? Yes; the Council Clerk sends the application to the contractor.

3013. You are aware, I presume, that an Act dealing with this question has recently been passed? Yes, I believe so.

3014. It has not been proclaimed as applying to St. Leonards, I believe? No, I think not to our borough.

3015. Have you read, Mr. Tunks, of what has been done in England and elsewhere in reference to the treatment of sewage by disposing of it on land, as you are doing? I have read the ordinary publications on the subject.

3016. And as far as your experience goes you are disposed to think that is the best mode of treating it? Yes, it seems to me to be the best, where there are facilities for disposing of it in that way.

3017. You mean where suitable ground can be obtained within a reasonable distance? Yes. I may mention that all the refuse from Balmain, Pyrmont, and the Abattoirs, could be disposed of at the north side of the Parramatta River if we only had the bridge across near "Five Dock," for which money has been voted by Parliament.

3018. This rate which you charge of 10d. per foot I suppose covers the whole cost of the operation? Yes.

3019. The Municipal Council do not suffer any loss in carrying out this plan? Well, there is a small loss in the expense of opening out the holes. We think it better to do that ourselves than to risk injury being done to our trees by trusting the contractor to open the holes. We therefore send a careful man who prepares them in such a position that the night-soil cannot hurt the trees. We were under the impression that raw night-soil would kill them, but I am very doubtful whether any amount of such stuff as we get would kill a fig-tree. We prefer to keep the matter in our own hands, as we have charge of the park or reserve.

3020. *Dr. Alleyne.*] What is the depth of your pits? They are about 18 inches when they are first dug. Of course if we had a large quantity of stuff to dispose of we could make them deeper, but we should then have to go into harder earth, and we have no occasion to do so at present; "Sufficient for the day is the evil thereof."

3021. So that at present you are merely depositing it near the surface? Yes, it is covered with about 6 inches of earth, which is quite sufficient to render it inoffensive. Your chairman has been by the place several times, and he has never, that I am aware of, noticed it; so that there cannot be much of a nuisance there.

3022. But if you chose to do so you could dispose of a much larger quantity by digging your trenches deeper? Yes, if it were necessary; if we had the night-soil from a large city to deal with. I have no doubt by the time we had got across the reserve the ground first operated upon would be ready for trenching again. I have tried it in dry weather in several places, and it appeared just like dry ashes. There can be no doubt that the gases are disseminated and dispersed by every rain.

- Wm. Tunks, Esq.
17 Jan. 1876.
3023. Have you any idea of the depth of the soil in the reserve? It varies in different places; the rock crops up to the surface here and there; but there is about 3 or 4 feet of soil between the rocks. Where a well is now being sunk there is a depth of nearly 12 feet of ironstone gravel mixed with loam and earth of various kinds.
3024. I mean the depth of the soil before you come to what is called the Sydney sandstone? That crops up at the surface irregularly, but there is there 3 or 4 feet between the rocks.
3025. *Mr. Bennett.*] You live near the place, I believe, Mr. Tunks? Yes.
3026. And you have experienced no offence from it yourself? Not the slightest; in fact I have taken a number of persons, apparently without design, into the neighbourhood of these pits, and I have never known one of them to make any remark about unpleasant smells. The only occasion when I heard any complaint about it was when a woman allowed her children to run down to the place before the stuff had settled, and they ran into it; that was the only occurrence.
3027. You are not embarrassed by it when the weather is wet? Not in the least.
3028. Do you find, when the weather is wet, any nuisance arising from the leakage from cesspits, generally, on the North Shore? No, I have not noticed anything of the sort; but I may mention a fact which members of this Board can observe themselves: Mr. Davis, one of our aldermen, has a tank near Mount and Walker streets, which is cut down to the rock. It gives out large quantities of water, as many as 60 hogsheads, and one or two days 90 hogsheads of water have been taken from it during the dry weather—a charge of 6d. the hogshead is made for it. It is just in the most thickly populated part of the village. I have heard many different opinions expressed as to the quality of this water. That tank has been emptied once or twice, and it has now some thousands of gallons in it; where it comes from I cannot say.
3029. You are aware, I suppose, that water, which is clean and appears to be good, may still be dangerous to a great extent? Yes; I have not analyzed any of the water I am speaking of.
3030. Do you know that stream passing by Bligh's house—have you noticed that it has become very offensive? Yes, that is becoming the sewer of the neighbourhood. Some time ago, when public attention was called to the question, I wrote to the neighbouring Municipalities, asking them to co-operate with us in providing a proper supply of water, and in dealing with the sewage question; and I sent the inspector to examine that stream. We then found there were several closets in our Municipality openly discharging into it; he sent notices to the owners to remove them, and they were removed, but I am not aware that any action was taken by the other Municipality through which the creek passes to get to Carcening Cove.
3031. Then you think that however successful your present plan may be of dealing with the contents of closets, it will still be necessary to have sewers to receive the slops and drainage from houses? Yes; there is no way of getting rid of house slops except by letting them run through the streets, and then they get into the creeks, and eventually into the harbour.
3032. You are of opinion then that sewers are absolutely necessary? Yes.
3033. *Hon. J. B. Wilson.*] How much night-soil do you suppose is deposited in the reserve you mention, per night, or per week? I tried to ascertain that the other day, when I wanted to obtain the co-operation of the other Municipalities, and I could not. The Inspector told me that 90 loads had been taken there in a few weeks, but that could not be taken as a yearly rate, as that was done under pressure.
3034. Does the man who opens the holes cover them in also? No, that is all done during the night, and the stuff when emptied into the holes is covered over there and then. We do our part of the work during the day. The trenched ground has been dug occasionally. Any inequalities in the surface are then adjusted.
3035. Is much of the night-soil at the North Shore utilized by private persons? I am not aware that there is; I use it myself; all the refuse from my house goes into a tank and is applied to my garden and trees, and they seem to thrive with it. My house is on two acres of land. I cannot give you any idea how many persons utilize it in the same way.
3036. *Mr. Bell.*] What is the nature of the soil in the reserve where you deposit this stuff? It is mixed; it is on the border of some rocks; some of it is gravel, and some of it, about 20 or 30 acres, very tolerable soil; the rest seems to be a mixture of ironstone, gravel, and freestone. There is a vein of apparently pure pipeclay running through it; it would take a great quantity of sewage to poison it. The principal object I had in coming here to-day was to express my opinions about discharging offensive matter into the harbour—for instance in such places as Carcening Cove and Neutral Bay. I was very anxious to impress upon the Board that it is very necessary that the Government should take possession of the heads of these bays before interests are created which eventually it may be very hard to control. I recollect, some years ago, when I was a contractor in the Department of Harbours and Rivers, cutting away the Centipede Rock for the Dyke at Woolloomooloo Bay. Before it was filled in it was one of the most offensive places possible. I knew it a few years before that time and bathed there, when it was a sandy beach. Well, the same thing will happen sooner or later at the heads of all these bays, and the North Shore, if people settle there to any extent, which is almost certain, will be as bad as any place. The washings and other watercourses are fast filling up these bays, and we may in the future have to sacrifice a number of lives before we shall be able to effect what we could at the present time do without any difficulty. All that are born must die, but bad sanitary arrangements undoubtedly, in my opinion, occasion to many persons, especially to infants, a lingering and unenjoyable life and a premature death. It is the pressure of public opinion just now which has enabled you to pass several sanitary measures which you would not have been able to get passed at other times.
3037. *Chairman.*] You are of opinion that a great portion of the mortality in the City and Suburbs is caused by the want of attention to these matters? Yes, but I should like to guard myself against creating anything like a panic. The same thing is occurring up the Parramatta River. This is no new idea of mine. In the year 1866, when I was asked, as Mayor of St. Leonards, to answer certain questions put to me by the Harbour Commission, I expressed the same views, and I have not changed them since. It seems very clear to me that something must be done to secure the possession of these bays before selfishness steps in and hinders us. We may prevent the sacrifice of many lives by acting promptly.
3038. Then you would recommend that the Government should not alienate the heads of any of these bays, or give up its right to reserve 100 ft. back from high-water-mark. Would you go as far as that? Well, the Government have, I think, determined that the public interest shall be the first consideration in alienating these lands. It was considered otherwise at one time, and it was held that every landholder had

had a right to the water frontage to his land ; but Mr. Forster, when he was Secretary for Lands, issued instructions to some officers to report upon these applications. But a great deal depends upon the persons who agitate. If the Government took some action now it would not be a question of agitation hereafter. Any alienations in the interests of commerce or for effecting improvements which would be for the public good might easily be conceded by the Government if necessary. At present large frontages are selected and then there is no other course except to repurchase the land at fabulous prices.

Wm. Tunks,
Esq.
17 Jan., 1876.

3039. Then, unless it could be shown in these reservations that the immediate object of the purchaser was to use the land for purposes of commerce, you would recommend that the Government should refuse to part with them? I should like the Board to understand that I should not object to the sale of any land for *bonâ fide* purposes of improvement, but I think the requirements of the public should be considered before those of the applicants for the land. There are a number of places in Middle Harbour which if not already alienated should I think be set apart for public recreation grounds; there is also a large quantity of land up the Parramatta River to which the same remarks will apply.

3040. *Mr. Bennett.*] If I understand you aright, Mr. Tunks, you are of opinion that these slop lands at the heads of the bays should be reserved for reclamation? Yes; but I do not wish to pledge myself to immediate reclamation. I would begin nearest to the city and continue on where it is most required, as it is a very expensive affair.

3041. *Chairman.*] Are you acquainted with Rushcutters' Bay? I have a general knowledge of it, but it is not sufficiently minute to enable me to give you any information about it. I have seen it a number of times. Careening Cove is one of the places which ought to be reserved and dealt with at once.

3042. *Hon. J. B. Wilson.*] Is there much land to be reserved there? Yes; the silting has driven the water back a good deal.

3043. Your recommendation then amounts to this: That the Government should refrain from alienating any of that land unless it be required for some *bonâ fide* purpose? Yes. I may say that reserves for public health have not received sufficient attention in this Colony, and we ought to avail ourselves of every opportunity to provide them. In Neutral Bay there are a number of acres which could be reclaimed and set apart as a recreation ground. The water from the hill would be sufficient to supply an ornamental pond in the centre. The ground could be planted with ornamental trees, and it would be a great acquisition to the neighbourhood, in fact to Sydney as well.

3044. *Chairman.*] Is there anything else you would like to state in reference to the whole subject—any suggestion you would like to make? I must reiterate the opinion I expressed in reference to conveying the sewage of the city into the harbour; I think there are not half silt-catchers enough constructed. Years ago I recommended two large ones at Macquarie Battery Point; one to be shut off to be emptied while the other was being worked. I also recommended that the stuff should be utilized, and that trees should be planted. I believe that if a large quantity of water were used in the sewers the water system would be the best mode of carrying off the night-soil. I have made myself acquainted with what science may do with one or two; the cases may be stated by way of illustration: Formerly the refuse of gas-works was a great nuisance; it is now turned to account. Some of the beautiful magenta, mauve, and aniline colors, and a number of useful things, are extracted from it; and what was formerly a nuisance is now made into many useful articles. Then again, in and near Manchester, where they get rock-salt, and make all kinds of chemicals, the spirit of salts, the gases from which used to be discharged through high chimneys, and to destroy all the vegetation in the neighbourhood, and into canals, where barges and punts were plying, is now I think, in combination with lime, converted into a bleaching powder, which is very valuable, and has become an article of commerce. I think we shall be able, sooner or later, to utilize our sewage by some method in which the solid matter will be extracted from it, or be used in irrigating land. I think our sewers should have a trap-door in approved situations, to stop the stuff from going through them, until a sufficient quantity had accumulated to sweep them clear of offensive matter. During this dry weather, in many of the streets, the water evaporates from the traps or gully-shafts, and there is nothing to prevent the noxious gases from ascending. I have frequently experienced unpleasant smells, and I have concluded that they occurred because there was no water in the traps. I am not at all sure that the discharge of the sewers could not be dredged up from the harbour as cheaply as they could be carted away, considering the distance to be carted in the future. In the meantime the small quantity of solid faecal matter which could be extracted would not at present be worth while subjecting to any of the processes which they are trying in England.

3045. From what you have seen at the North Shore, and from what you have learned of the disposal of sewage generally, I gather that your opinion is, that it should be utilized on the land and not wasted? Yes, I think it ought not to be wasted; it is only a question of proper appliances to convey it to the place of deposit.

3046. Is there anything else you would like to add? I should like to say, now that I have the chance, that sufficient attention is not paid to the subject of public bathing-places. It seems to me to be a gross outrage upon the rising community not to afford them opportunities of learning to swim, and of keeping their skin in healthy action. That is a question which has troubled me for a long time, and I have not been able to make any progress with it. We have not nearly enough bathing-places in and about Sydney, and in this respect the suburbs are entirely neglected.

3047. I believe that in the old Roman days the subject of baths was one which occupied the Central Government. Do you think it is a question, which in the present day should be dealt with by the Central Government, or that it should with more propriety be left to the Municipal authorities? At present it is a work which is utterly impracticable for the Municipal Councils. There are twenty-five Councils and more than 200 Aldermen in the police district of Sydney alone. I was candidate for a Commissionership, and I had to find out the number of Councils and Aldermen to send the latter a circular. All these people would have to be dealt with and there would be no unanimity among them. Their means are not sufficient to enable them to carry out any plan of the sort, and unless there were a Metropolitan Board to grapple with the whole question there would be no chance of bathing-places being provided. In many of the Municipalities there is no bathing-place to begin with, although of course places might be provided and supplied with water by pumping.

3048. Then, in connection with this question, would you recommend that some central Board or authority should be created to deal with such matters? I think it will be impossible for any but a central Board to deal with works of such an expensive nature as baths or sewage. Why the whole income of some of these municipalities would not be sufficient to pay the cost of one good man to look after them.

Wm. Tunks, Esq.
17 Jan., 1876.

3049. You are aware of course that a sum of money was voted for the construction of baths at the North Shore? Yes, I have about 40 or 50 or £100 in hand for that purpose now, but we could not deal with the question because the place is not within our municipality; the other municipalities did not co-operate with us, and we did not care to spend money outside our own boundaries. The Parliament voted £100 last Session towards improving the township reserve, and the Government have supplemented subscriptions for the same purpose to the extent of the endowment authorized by the "Municipalities Act of 1867."

* Near Manchester, in England, where rock salt is cheap, 2,000 tons per week was said a few years ago to have been used in the manufacture of oil of vitriol and other chemicals in large demand. In making alkali large quantities hydrochloric acid was liberated and for some time discharged from high chimneys, but it destroyed all the vegetation in the neighbourhood. It was subsequently discharged into canals and mixed with the water; it then destroyed the ironwork of the barges and boats. Afterwards the acid was discharged into towers lined with coke, through which water flowed or percolated or the water took up the nuisance and when treated with lime is now called bleaching powder or chloride of lime, and realizes dry £17 per ton. Bleaching was formerly performed by exposure to sun and air.—*Professor Roscoe, Manchester Science Lectures, 1866.*

THURSDAY, 20 JANUARY, 1876.

Present:—

HON. J. B. WILSON,
F. BELL, Esq.,

W. C. BENNETT, Esq.,
DR. ALLEYNE.

E. O. MORIARTY, Esq., IN THE CHAIR.

Mr. Walter Beames, Council Clerk to the Leichhardt Municipality, called in and examined:—

Mr.
W. Beames.
20 Jan., 1876.

3050. *Chairman.*] We understand, Mr. Beames, through the Secretary, that you are in a position to give us some information in reference to the operations carried on at the Glebe Island Abattoirs? Not at the Abattoirs themselves, but in reference to the feeding of pigs upon offal.

3051. Offal obtained from the Glebe Island Abattoirs? Yes.

3052. To what place is this offal brought from the Abattoirs? Into the Municipality of Leichhardt.

3053. Will you kindly describe what takes place there? Pigs are fed upon it. I have only seen two people in the act of hauling it, but there are five or six of them engaged in it—as many as there were at first; there is no diminution whatever; in fact there are more pigs kept now than there were. (*Copy of Orders and Regulations, Glebe Island Abattoirs, produced.*)

3054. And that is done in contravention of the 15th clause of the orders and regulations published on the 16th November, 1875? Yes; I may state that a deputation from the Municipalities of Balmain, Glebe, and Leichhardt, waited upon the Honorable the Colonial Secretary in reference to this matter, and he promised them that it should not be done—that no offal should be taken to the municipality to feed pigs. That was why I was anxious to see the Chairman of this Board, because the thing is still being done in open daylight; in fact the nuisance is worse than it was before.

3055. And this is done in defiance of the deputation and in defiance of the Colonial Secretary? Yes.

3056. Is this offal of a character such as could be removed from the Abattoirs under the colour of being used for human food? No, it is not.

3057. It is of a totally distinct character? Yes; it is merely the entrails of sheep and cattle, and they are occasionally very gamey too.

3058. Is any blood ever taken there? No, I believe not.

3059. Merely the entrails and other offal? Yes, the entrails entirely; at least there may be some other offal taken there; but I have only seen the entrails myself, that is, the paunches, livers, lights, and so on.

3060. And this is being constantly done? Yes, constantly—daily and all day long.

3061. Are you aware whether the Inspector of the Glebe Island Abattoirs knows of this practice? I only know that I told him of it myself.

3062. And has it gone on since you represented it to him? Yes, he told me that these regulations were defective.

3063. Did he say in what respect they were defective? No, he did not; but he said he could not act upon them.

3064. That is to say in respect to this particular matter? In respect to this particular matter.

3065. Is there an Inspector of Nuisances for the Municipality of Leichhardt? There is.

3066. Can he not interfere and put a stop to this practice? He reported about a fortnight ago that all these places were clean; but the same day that his report came in I smelt them a quarter of a mile off. One of our Aldermen is a keeper of pigs.

3067. *Dr. Alleyne.*] When the inspector told you he could not act under these regulations—that is to say, under clause 15 of the orders and regulations—did he give you any explanation—did he say that he had made any attempt to do so, and had been prevented by any existing law, or by the action of any competent authority? I have heard, but not from him, that these regulations were submitted to Mr. Forster, the attorney who conducts their cases, and that he had advised Mr. Oatley not to bring a case into the Police Court.

3068. Did Mr. Oatley ever say to you that he had attempted to prevent the removal of the offal, which is contrary to the orders and regulations under which he holds his appointment, and that he had been prevented by any legal authority? I never heard him say so.

3069. He did not tell you that he had attempted to do so? No, but I have heard incidentally that Mr. Forster told him not to bring any case before the Court. I did hear also that Mr. Williams, the Crown Solicitor, had been applied to, and that he gave Mr. Oatley the same advice.

3070. You do not know whether Mr. Oatley applied to the Government in reference to the supposed illegality of the 15th clause of the orders and regulations? No, sir, I do not, but I understand that the Abattoirs at Glebe Island have been let under these or any other regulations which might be made—that these regulations were not final—and that the Government could make such other regulations as they chose.

3071. *Chairman.*] Are not these the regulations under which the Abattoirs have been let since the beginning of the year? Yes, but the Government have power at any time to alter them.

3072. *Mr. Bennett.*] Have you any objection to name the parties who are infringing these regulations? The two persons I have seen hauling offal are Malachi O'Neil and one of Mr. Hearn's sons.
3073. And on whose premises was the offal delivered? On Alderman Hearn's property—that which was taken away by his son; and O'Neil delivered his on his own property.
3074. *Mr. Bell.*] What appliances have the Government for removing the offal—have they horses and carts? Yes, they are taking it to Callan Park.
3075. *Mr. Bennett.*] Are you quite sure they are taking it there? Yes, they are taking the blood and a portion of the offal there.
3076. They took it down to the Botanical Gardens in the first instance, I believe? Yes. There is one thing I should be very glad if the Commission would do: I am told you have a house to house inspection going on. Could you spare time to come and visit these places? Nothing will be done in our Municipality until some stringent steps are taken by the Government. The Council has not made any by-laws yet or appointed an Inspector of Nuisances.
3077. *Chairman.*] Is it hopeless to expect that the Municipality will itself take the necessary steps? It appears so at the present time.
3078. Has the matter been brought under the notice of the Mayor and Aldermen? Yes.
3079. And the nuisance which you describe is now in your opinion detrimental to the public health? Very much so indeed. At the last meeting of the Council a motion was made by Alderman Burrows that a Committee be appointed to draw up by-laws for the Nuisances Prevention Act. Alderman Parsons was in the chair and could not second the motion, and the other Aldermen present did not take any action in the matter, and the motion lapsed.
3080. Is the smell from these places very offensive at present? Very much so indeed.
3081. Have you heard of any cases of sickness said to have arisen from it? I have heard of several cases of fever; but our municipality is very sparsely populated.
3082. But have those cases of sickness been attributed to this cause? I do not know; but it is a constant source of complaint; people are continually writing to the Council about it but they take no notice of it.
3083. *Dr. Alleyne.*] How are you supplied with water? Rain water from the tanks.
3084. Is there any chance of the water supplied for domestic purposes being polluted by any of these nuisances you have referred to? It is so polluted that you cannot use it. We had some very good streams there, but they are all polluted so that even the cattle won't drink at them. We had the Inspector of Nuisances out from Sydney. I got the Mayor to let him come up, and paid a guinea out of my own pocket towards it, and his report was most damaging. That is why I should like some members of the Board to see the place.
3085. Is there anything else you would like to mention? No, I think not.

*Mr.
W. Beames.*
20 Jan., 1876.

Mr. John Hales, Inspector of Nuisances for Waterloo and Redfern, called in and examined:—

3086. *Chairman.*] You are Inspector of Nuisances for the Municipalities of Waterloo and Redfern, are you not? Yes.
3087. How are they off for water in those municipalities? In Waterloo they have hardly any; some of the wells are better than others.
3088. Are the people suffering at all in health from the absence of a sufficient supply of good water? I should consider so.
3089. Have you heard of any cases of sickness arising from the insufficiency of wholesome water? No, I cannot say I have.
3090. The houses in Waterloo, I believe, are chiefly supplied with privies—cesspits? Yes.
3091. And in Redfern? The water is laid on to the closets in Redfern in most cases.
3092. But in Waterloo there are only open cesspits? They are all open cesspits.
3093. You are aware, I suppose, that there is a new Act in operation having reference to the cleansing of cesspits? Yes.
3094. Has that Act come into operation in Redfern and Waterloo? At Redfern it has—they are making by-laws; the only thing they are deficient in is a place of deposit; they have applied for a place, and they are waiting for it.
3095. To whom have they applied? To the Colonial Secretary or the Minister for Lands; but they have entered into negotiations for a place at Botany.
3096. Can you tell us where the place is? It used to be called Rutledge's formerly, but is now owned by a man who brings in sea-weed.
3097. Is it near the dam, or how far down the dam is it? It is close to Shea's Creek.
3098. Is it above or below the junction of Shea's Creek with Cook's River? It is nearer to the water-works than Shea's Creek.
3099. Have you heard of any objections on the part of the inhabitants to the deposit of night-soil there? Yes, where it is deposited now.
3100. But at the place proposed—near Shea's Creek? No, I cannot say anything about that; no one knows anything about it, but the Mayor told me he was very anxious to obtain the land for this purpose.
3101. And what are they doing at Waterloo—are they taking any steps there to carry out the Act? They tried to open negotiations with Redfern, and they have framed a code of by-laws; but there has never been a meeting since until last night, and I cannot say what they did then, but from what I have heard from one of the Aldermen they have done nothing further; they are fighting between one another.
3102. The Aldermen are fighting among themselves? Yes.
3103. *Mr. Bennett.*] You say that complaints are made where the night-soil is deposited now—where is that? One of the places is Tunbridge's garden, and the other place is Hollinshed's, now belonging to Hardie and Mitchell.
3104. How many loads per night do they bring out? I should say close upon eighteen loads a night; they go close by my place on the Botany Road.
3105. *Hon. J. B. Wilson.*] Is not that from Sydney as well? I would not say it is not; I dare say it is from Sydney as well.
3106. *Mr. Bennett.*] Is night-soil from Sydney still deposited at that place? Yes, and the water-pipes run through Hollinshed's ground; in fact the night-soil is deposited on the pipes, and not only that but I may state that a dead creek runs away from that, and stops the water from going into the reservoir.

*Mr.
J. Hales.*
20 Jan., 1876.

- Mr. J. Hales.
20 Jan., 1876.
3107. *Hon. J. B. Wilson.*] With regard to these privies in Waterloo, I believe, as a general rule, they are very badly constructed? Yes, they are nothing more than sentry-boxes stuck on the sand; three-fourths of them have no holes in the ground.
3108. Are you aware that they are generally full? Yes, but I am doing the best I can; within the last month I have served 300 notices.
3109. It is a fact that wells are very numerous in Waterloo;—now don't you think that in wet weather a great deal of faecal matter, with which the soil is impregnated, must drain into these wells? You will find the wells, closets and all, running together in wet weather. There is very little water now, but when wet weather comes they won't be able to use the water.
3110. Then you think that in dry weather the water in the wells at Waterloo is better than at other times? Yes.
3111. Do you think that much danger to the health of the inhabitants is to be apprehended from a heavy fall of rain? The water will be one-third worse than it is now.
3112. Do you not think some stringent steps should be taken at once? I think the water should be laid on.
3113. Would not the construction of water-tight cesspits be an advantage? Yes, but a great many of the residents are very poor, paying 2s. a week ground rent, for it is all leasehold property, and they have not the means to pay for these cesspits.
3114. But the landlords should do it? They are all their own landlords, as they have got the land on a ninety-nine years' lease, and many of the allotments are sub-let.
3115. But, although this difficulty exists, there must be some way of getting over it—such a state of things must not be allowed to remain; if these people cannot do it themselves the Corporation should do it for them? The Corporation are very hard up themselves, and have not money enough to do the streets. I may mention that since I was here last I have been dismissed by the Alexandria Municipality because they could not afford to pay me £20 a year as Inspector of Nuisances.
3116. *Chairman.*] Is there anything else you would like to state to the Board in reference to the condition of these Municipalities—anything you would like to bring prominently under our notice? No more than this: I would like to see the water laid on to Waterloo and Alexandria.
3117. You think that is urgently necessary? Yes; Redfern is high ground, and a good deal of the drainage goes down into Waterloo, where there is not fall enough to carry it away.
3118. And you think that if good water were laid on from the city it would diminish the risk arising from the use of contaminated water? Yes; five or six persons came to me this morning and said that if the landlord would get the water laid on they would be willing to pay another shilling a week rent.
3119. Then in point of fact you represent the residents in the Waterloo and Alexandria Municipalities as being in great straits for want of water? I will say nothing about Alexandria as I do not belong to it now.
3120. Waterloo then? Yes, I may say that it is a very poor locality; the people have rented one or two acres from Sir Daniel Cooper, and put up small houses, and they cannot afford any expense; in fact most of the properties belong to the Building Societies.
3121. Have the Municipal Councils power to levy a water-rate if water were laid on? No.

TUESDAY, 7 MARCH, 1876.

Present:—

HON. J. B. WILSON,		F. BELL, Esq.,
C. WATT, Esq.,		W. C. BENNETT, Esq.,
E. O. MORIARTY, Esq.		

M. B. PELL, Esq., B.A., IN THE CHAIR.

Richard Seymour, Esq., Inspector of Nuisances, called in and further examined:—

- Mr. R. Seymour.
7 Mar., 1876.
3122. *Chairman.*] The Mayor has informed us, Mr. Seymour, that you can give us some information as to the state of the Abattoirs at Globe Island, and how far the recommendations made by this Board have been carried out—have you been there lately? I was there to-day.
3123. What is the condition of the Abattoirs—in point of cleanliness? There has been a great improvement made in the arrangements since the recommendations of the Board.
3124. How long is it since you were there before? I cannot say exactly; it was somewhere towards the end of last year; they were in a very filthy condition then.
3125. And you found a great improvement to-day? Yes.
3126. Could you form an opinion as to whether any of the blood is still allowed to go into the harbour? A small portion of it still goes into the harbour from the drainage; when the floors are washed clots of blood are carried away with the water.
3127. We have been given to understand that a nuisance is created by the accumulation of dung—the contents of paunches;—did you observe anything of the sort? Yes.
3128. Then the offence exists still? Yes; and there is a very filthy place still at the tramway where they shoot it down; it covers a large space of ground, and is very offensive. I suggested to Mr. Oatley that something should be done to confine it to a smaller compass, so as to let it on to the tramway directly from the shoots, instead of letting it spread on the ground.
3129. Then the market gardeners do not take it away readily? There does not seem to be any great quantity left there now, but I think the place might be kept clean enough by a good smart labourer, who might be employed in doing other work about the place.
3130. The intention of the Board was that the offal should not be carted away by the butchers? Well it is still.
3131. As much as before? Yes, there are twelve to fifteen cart-loads taken away daily.
3132. And that is taken mostly to Leichhardt to feed pigs? Yes, I believe so.
3133. Have you been to the Leichhardt municipality lately? No.
3134. Is there a supply of fresh water now on the Island? Yes, the tanks are always kept full.

3135.

3135. And are arrangements made now for watering the cattle there? Yes; they are waiting for some improved arrangements which have been ordered by Mr. Barnet, but still the cattle can get plenty of water to drink.

3136. Did you go to the boiling establishment of Messrs. York and Walsh? Yes.

3137. In what condition did you find it? It was very clean, but there was no boiling-down going on; they were merely drawing off the fat which had been previously melted.

3138. Was there anything offensive in that process? No, the place was perfectly sweet.

3139. Where did the water run to? There was no water running away; they were merely letting the tallow off.

3140. But before that the water had been poured off? No, the tallow floats on the top of the water which is raised to a sufficient height to let the tallow run off.

3141. As far as you could judge do you think such improvements have been made in that boiling-down establishment as would justify the Board in recommending that it be allowed to remain there? I do not know what improvements you mean, but the place is perfectly clean and sweet.

3142. *Dr. Alleyne.*] A large quantity of the refuse, when the digester was cleaned out, used to run down a wooden trough into the sea? There is none of that now; the place is as clean as any private establishment in Sydney.

3143. *Chairman.*] Your opinion then is that only a small portion of the blood from the Abattoirs is allowed to go into the harbour? Only a very small portion; in fact you can see the water looking nice and clear all round the place.

3144. And there is a less offensive odour about the establishment than there was? Yes, and I believe that when these asphalt floors which they are laying down are completed—two of them are finished—the place will be very clean.

3145. *Mr. Moriarty.*] Do you think they will make a good job of this flooring? I do.

3146. Did you see in these two slaughter-houses where the new floors were laid down any preparation made to catch the blood as it flows from the necks of the animals in vessels? Yes, there is a hole in the floor which runs into a small place outside with a curb round it to receive the blood. Then it is taken up and put into pans and carried to the iron tanks which are ready to receive it; there were two of them half full when I was there.

3147. Do you think the arrangements for catching the whole of the blood will be effective? Yes; but I would suggest that the pans used for collecting the blood should be thoroughly washed every day, first with water and then with hot lime. There is another improvement which I might suggest: There are a couple of half-casks where the guts are kept, in which the boy who cleans the guts throws the strippings, small remains of fat, and so on. These are in a very filthy condition, and covered with decomposed matter. I suggested that they should be thoroughly scraped and washed with hot lime.

3148. *Chairman.*] What is done with this refuse? It is sold. The guts are kept until they are thoroughly rotten and then cleaned, and the smell is dreadful.

3149. What are they used for finally? For making sausages. I think there ought to be more strictness observed in keeping these places clean.

3150. Do you think it would be better that the recommendation of the Committee who reported upon the Abattoirs should be carried out,—that the blood should be received in vessels directly from the necks of the animals? I don't think you could do it; it would be very inconvenient from the way the floors are laid; there is a direct fall to the hole into which the blood runs outside the slaughter-house, when it is taken up at once (so they tell me) into pans and then carried to the tanks.

3151. Does it run directly into the pans from the floor of the slaughter-house? No, it is scooped up and put into a large can which holds about 12 gallons and then put into the tanks.

3152. Don't you think it would be much better to make it run directly into the vessel which is emptied into the tank? Yes, I think it could be made to run directly into the pan; as it is, the walls 4 or 5 feet from the floor are bespattered with blood.

3153. Do you know whether any apparatus has been put up to filter the water that goes into the harbour? There is a filtering apparatus, which will be finished in about a fortnight; the men were at work at it when I was there to-day.

3154. I will ask you a few questions on another subject: Do you find that the "Nuisances Prevention Act of 1875" works well? It is working very well in the city.

3155. How is it worked—by contractors? No, we have no contractors.

3156. How is it worked then? We receive written applications at the office every morning from persons wanting to have privies cleaned out.

3157. From the occupants? From the occupiers or tenants, and the nightmen call at the office up to half-past 10 o'clock and get them.

3158. Is there any tariff of charges;—how do they charge? As they used to do—according to the size of the privy.

3159. Supposing you found an offensive privy what would you do? I should give orders to the nightmen to clean it out.

3160. And suppose the occupant would not pay for it;—has any such case occurred? There is a case going on in the Redfern Municipality, which will come before the Court to-morrow, where the landlord refuses to pay.

3161. Do you think any improvement has been effected by the passing of this Act? Yes, many of the old privies have been pulled down and new ones erected according to a plan which I have recommended. In place of having an open hole at the top, as in an ordinary privy, a pan is put in the same as in a patent closet, so that nothing can go down larger than $2\frac{1}{4}$ in., the bottom of the pan being only 3 in. wide.

3162. Are not those pans liable to become very filthy? No, they are easily kept clean, and are almost without smell. Many persons using these privies leave a certain portion of paper in the pan; this forms a sort of plug, and prevents any smell from escaping. I believe that in England now they have a trap under the pan.

3163. How is this pan washed—has it to be taken out? No, it is easily washed with a piece of rag and some water.

3164. These are improvements in the privies themselves, but as to the cleansing are they kept cleaner than they used to be? Yes, it is hard to find a dirty privy in the city now; the people know that an Act has been passed, and they know where to apply if they want their privies cleaned out. If they do not give

Mr.
R. Seymour.

7 Mar., 1876.

- Mr. R. Seymour. us notice when the privies are very dirty they are fined. During the present dry weather it is a very hard matter to find a privy running over; the soil in them is quite solid; but of course that will not be the case when the rain sets in.
- 7 Mar., 1876. 3165. Can you suggest any improvement in the Act from what you have seen of its working? No, except with regard to the recovery of money, and I believe when I was here last you were going to make some recommendation about that.
3166. There was an Act drafted, and why it was not passed I do not know—that was a question for the city authorities to consider, and not for this Board? I know myself, as a positive fact, that the Mayor has been to the Colonial Secretary repeatedly about the working of this Act, and about a place of deposit for the night-soil.
3167. You do not trouble yourself as to where it goes to now? No, I have no power over the nightmen when they go outside the city. I know that one application was made the other day by Mr. Thompson, of Little Coogee, for a thousand tons of it.
3168. There is no systematic disposal of the night-soil yet? No; there was a proposal in the Council the other day to have it taken out to sea in barges.
3169. Mr. Bennett.] Have you made use of the night-cart which was imported from Melbourne? Yes, we tried it; one of our contractors is using it now.
3170. Has your experience of it suggested to you any improvement or alteration in its construction? No; the only alteration I mentioned was an enlargement of the door at the back, but I find that when the pan is used, which I described, it is quite large enough, as that prevents large substances, such as bottles and tins, old boots, bones, and so on, getting in with the soil.
3171. Hon. J. B. Wilson.] Has any examination taken place with regard to the construction of these old cesspits by the men who are emptying them. Power was given by the Act to the Corporation to see that the cesspits at present in existence, if not properly constructed, should be altered? A great many of them have been pulled down and others erected in their place.
3172. But when the nightmen find a badly constructed cesspit do they report it? I inspect them myself, and if I find a badly constructed cesspit I give orders to have it removed.
3173. Mr. Bennett.] If the proprietor refuses to remove it, what steps do you take? We can either do it ourselves or take the party into Court; but they have never refused in a single instance. There were three ordinary privies going up on the Hughes' Estate in Elizabeth-street; the pits were already sunk, and I suggested that they should be removed; I told the parties that they could not have read the Act or they would not put these privies within 2 ft. of a public street, and that they must be removed; and I had them removed to a distance of 14 ft. from the street. If they had remained they would have been a public nuisance. They were removed at once and new ones put up.

Charles Moore, Esq., called in and further examined:—

- C. Moore, Esq. 3174. Chairman.] I asked you to come here to-day because I have been informed that the amended regulations at the Glebe Island Abattoirs have not been carried out, and that you have stated that the whole of the blood does not come to you. Is that the case? It did not.
- 7 Mar., 1876. 3175. But does it at present? Well, there were not sufficient carts to take it away, and I have had the greatest difficulty in getting those made. I went to Mr. Russell first, who undertook to make them and then declined. I tried then to get night-carts. At last I succeeded in getting Mr. Glasson to make two, and both are admirably constructed.
3176. You think then that the plan is working well now? Yes.
3177. Do you think the whole of the blood is taken away? That I cannot say; Mr. Oatley will be able to inform you.
3178. You receive somewhere about 1,000 gallons a day? We get about eight loads a day generally, but not always.
3179. At all events there is no palpable disproportion in the quantity of blood received and the quantity taken away? No, there ought not to be any excuse for not sending it all now since the last cart was made; the appliances should be sufficient to take away all the blood and the entrails as well.
3180. Have you succeeded in burying the blood without creating any nuisance? Yes, there is not the slightest nuisance about it.
3181. During the present weather of course you cannot say much about its success in respect to the growth of crops? No, but I have not the slightest doubt about it.
3182. Do you continue to go over new ground? Yes, we have about 2½ acres—ground enough to last us for perhaps two years.
3183. Without going back over the old ground? Yes.
3184. And you think you could dispose of the offal as well? We have to do so.
3185. Some of the offal does go to Callan Park then? Yes.
3186. Who sends it? It comes in carts from the Abattoirs.
3187. Some of the worst portions, I suppose, which are of no use to the butchers? Yes. I may say that nothing can be more crude than the mode adopted of collecting the blood at the slaughter-houses. Two men have to carry it by hand for 100 yards to the cart. If some reservoir were made to receive the blood from two of the slaughter-houses, and this reservoir raised to a sufficient height, the blood might be emptied directly into the carts.
3188. Where would you have this reservoir? There is a lane or roadway between each two slaughter-houses into which, in my opinion, there ought to be a reservoir of some kind to hold 30 or 40 gallons; that would probably receive the blood for about half a day, and if it were raised up so that a skeleton cart or barrel, like a water cask, could go under it, the blood could be wheeled away at once to the carts.
3189. The essential improvement would be the wheeling away the blood instead of carrying it away? Yes, it would be a good saving of labor, as a man could wheel away five times as much as he could carry; besides at present a good deal of the blood is spilt in removing it; it has to be scooped up into the pans and carried for 100 yards.
3190. Would it be impossible for the carts to go up these lanes to the slaughter-houses? Yes, the passage is not wide enough. That would save a good deal of labour, and a great deal more might be saved if the blood were collected in the reservoir and passed into the cart by a pneumatic tube, and taken away at once, or into a general reservoir.
- 3191.

3191. That is to say you would pump the blood from the various receptacles into a general receptacle outside at a sufficiently high level to let the carts go under it and get filled? Yes.

3192. Would it remain in a sufficiently liquid state? A pneumatic tube would take it even if it were in a coagulated state.

3193. The tube would have to be flushed occasionally? Yes.

3194. Have you been at the Abattoirs much lately? Not very often; I have been there several times.

3195. Do the present receptacles for the blood appear to be cleaned frequently? Well, that depends upon Mr. Oatley; it is his business entirely.

3196. We recommended that hydrants should be used for the purpose of washing the floors and carts, &c.;—has anything been done in that direction? No, I think not; I am not sure.

3197. There would be no difficulty in putting on a hydrant? Not the slightest.

3198. All these carts should be thoroughly sluiced with water? Undoubtedly; they should be as clean as a new pin. Mr. Oatley has only to give the order, and if it is not done he can dismiss the man.

3199. The hydrants would be a very trifling expense? Yes; it would only be a portion of the place which would require sluicing; there is only one place where the blood escapes. But the great difficulty with us is, that the butchers will not take the trouble to scrape the blood into the reservoir,—they wash it in; consequently the blood we get is two-thirds water.

3200. *Mr. Moriarty.*] Does that deteriorate the blood? I should not care how much water there was if it were not for the expense of carting it, which is very heavy. Supposing that this blood is taken away, as it is expected it will be, by the market gardeners, who see that it can be utilized, and supposing it has to be carted half-way to Botany, it would be a serious thing to cart all that quantity of water. I have no doubt now, after the experience I have had, that by putting the blood into a pit, and covering it over with soil, layer by layer, a most valuable manure would be obtained.

3201. *Chairman.*] You mean a layer of blood and a layer of earth alternately? Yes.

3202. You are satisfied then of its success as far as you have gone? Yes; we have been using from six to eight loads a day in the paddock, and I will defy any person to go there and detect the slightest smell.

3203. Have you heard of any complaints in the neighbourhood of its being a nuisance? No; Mr. Russell, who has been watching me as a cat watches a mouse, met me the other day, and never even mentioned the subject.

3204. And the blood does not become offensive before you receive it? Oh, it does sometimes, but the moment it is put down and covered the smell is gone. Dr. Manning and the editor of the *Mail* happened to be there when one very offensive load came, but as soon as it was laid down and a little earth thrown over it, away went the smell.

3205. How many men do you employ on the ground? I am now paying by contract. I give 3s. for every load that is covered in, and 7s. for preparing the ground for each load; then there are the carters to pay, at 14s. 8d. a day, and there are six men at the Abattoirs filling, and an overseer; but I do not know who pays the overseer; I do not pay him.

3206. Is not 3s. a high price for merely covering in a load of blood? But they have to work up the blood with the earth to the consistency of mortar; otherwise we should have a large quantity of blood in one place, and in another only water, and that would never do. No doubt it is expensive, but you cannot get it done for less; I have had as many as sixty persons, who have all given it up, because they could not make a living at it.

3207. *Mr. Bennett.*] Taking the expenses as you have enumerated them—3s. for covering in; 7s. for preparing the ground; six men filling, say 42s.; carting, 14s. 8d.; and the cost of forage for horses—they would make about £1 per load? £1 a load will not do it; it costs at least 25s. a load. If we had depôts for the blood and a general reservoir, as I have suggested, it would of course be much less.

3208. *Chairman.*] The expense of breaking up new ground will not have to be incurred when you have been over the ground once? No. I have tried day labour, and I found it a more expensive plan than the present, though I had my overseer watching the men; the ground is very hard, and has all to be picked and then pulverized.

3209. *Mr. Bell.*] To what depth is the ground trenched? 1 foot; 6 inches is worked up with the blood to the consistency of mortar, and the other 6 inches is put on the top of it. I had no idea of the power of earth until I came to use it in this way. I was greatly astonished when I came to see the expense, but after the experience I have had I can see no way of reducing it, except as I have said, by the use of pneumatic tubes and some improvement of that kind in the mode of filling. In putting it in the ground there can be no saving I am convinced.

3210. *Chairman.*] I see that the refuse offal which is not used for human food or trade purposes amounts to something like 200 tons a week? I cannot say. Mr. Oatley can give you better evidence on that subject than I can.

3211. Have you room enough to dispose of anything like 200 tons a week? Yes, we can dispose of any quantity as long as we have space.

3212. But have you space enough for this additional offal? I understood that we were getting all that is not sold.

3213. But it is sold for the purpose of feeding pigs;—could you find room for 200 tons of offal a week? Well, that is a large quantity; to do that we should be obliged to get fresh horses and carts.

3214. But as far as the ground is concerned? Well, you can easily calculate. As we are going on now I think the ground will last us for a couple of years; that quantity of offal in addition would probably reduce the time one-half. I had to make an alteration in the cart; the axle used to go through the body of the cart and it was difficult to get the entrails out. I had it made to go round the cart.

3215. *Hon. J. B. Wilson.*] You were talking about having pits to receive the blood and covering it over with earth layer by layer;—supposing there were several pits properly constructed and the blood were treated in that way, do you not think a manure might be made of such a valuable character that people would be induced to come and take it away? I am quite certain of it; there is some principle in the drying process which takes away some of the good properties of the blood, which would remain if it were treated in its raw state.

3216. It stands to reason that it is desirable to have as little water as possible with it? Most decidedly.

3217. Do you think pits could be made large enough to carry on that process so that some of them could be left alone until the blood was fit for disposal? I think so. It would be better to have several of them about 1 rood in width, and 2 to 3 roods long, and then to fill them up; but then the water would have to

be

C. Moore,
Esq.
7 Mar., 1876.

- C. Moore, Esq.
7 Mar., 1876.
- be kept out of them, and that would be expensive, and the blood would have to be kept covered over for about twelve months before it was thoroughly ready for use.
3218. *Chairman.*] Then to treat it in that way you would require a considerable number of these pits? Yes, that would be the difficulty; these market gardeners do not take it away regularly. It is proposed I believe, at least so I have heard, that this blood is to be taken away by Dr. Elliott, and made into manure; but what he takes away he must take away regularly, for there is no general reservoir that will hold more than one day's blood, and when once decomposition sets in it becomes terribly offensive.
3219. *Mr. Moriarty.*] Do you think it would be worth while to make a trial pit for testing the process you have mentioned to see if the manure could be sold? It might be worth while to try it; I think nothing can be done with it in its raw state as a fertilizer.
3220. You would have to keep the pits dry? Yes. I am going to meet some market gardeners this week, and I shall recommend them to sink pits in their own ground to receive the blood as I send it to them.
3221. *Hon. J. B. Wilson.*] If the market gardeners took it it would be worth while to have the pits bricked and cemented? If the market gardeners once get into the way of taking it, and it is properly worked, I believe it will be found equal to guano, but it will take twelve months to make it into good manure; the great difficulty is to get them to test it and prove its value, and there is the danger of their using the blood in its raw state.
3222. *Chairman.*] You are of opinion that it is of no use in its raw state—you did not think so at first? No; but I found it must be thoroughly rotted to be of value; it may perhaps be used in small quantities diluted with water.

WEDNESDAY, 15 MARCH, 1876.

Present:—

HON. J. B. WILSON,
F. BELL, Esq.,

C. WATT, Esq.,
DR. ALLEYNE.

M. B. PELL, Esq., B.A., IN THE CHAIR.

Colonial Sugar Company's Premises.

Charles Watt, Esq., who had been deputed by the Board, with Dr. Alleyne, to inspect and report upon the Colonial Sugar Company's premises in Parramatta-street, examined in his place:—

- C. Watt, Esq.
15 Mar., 1876.
3223. *Chairman.*] Will you be good enough to state the result of your inspection of the Sugar Company's Works, which I understand you visited the other day with Dr. Alleyne? Yes; according to instructions we visited the Sugar Company's Works, Parramatta-street, on the 8th instant, and have to report as follows:—We found the water coming down the creek, dammed back at the point at which it enters the Company's land—thus forming an oblong pond. It is well known that this water is very impure, and at the time of our inspection a large amount of filthy scum was visible upon its surface. This scum is allowed to pass into the by-wash, and during this very dry weather there is not sufficient water to carry it far down the waterway. The water to be used by the Company passes from the creek into two small waterholes, where the filtering arrangements were fixed. The water for some time past has not been efficiently filtered, as the filters are choked; but Mr. Pohlman promised to make some slight alteration which may remedy this to a trifling extent. The Company at this time have so little water that they cannot afford to clean out the holes and refix the filtering arrangements. The water in the dam was found to have a temperature of 93°, and appears to be about as impure as when first inspected by the Committee. The paddock was found to be fairly free from old bags and other refuse matters. The drain having its origin in a back lane joining one end of the Company's works, passing underground through their premises, and then as an open sewer until it meets the main watercourse, was in a very foul condition, and has evidently been neglected. We did not observe any evidence of the Corporation having commenced the construction of the main sewer. We are glad to be able to state that the Company hope to cease carrying on their operations in Parramatta-street within twelve months. It is clear that the only way to improve the sanitary condition of this locality is to construct the main sewer as soon as possible. When the Corporation are in a position to supply water to the Company every endeavour should be made to get them to do so until the operations of the Company are transferred to another locality.
3224. Did you observe any great improvements on the Company's works since you inspected them as Chairman of a Committee of this Board? Not as regards the water.
3225. Not in connection with filtering arrangements? No, they were not going on.
3226. What is the reason that the filters were choked and were not at work; did you ascertain? The Company are so short of water that they cannot afford to clean out the holes and refix the filters.
3227. You think then nothing can be done to remedy the evil unless the water is filtered, or water supplied by the city? I don't think the Company will go to any expense about it, having no water to fall back upon.
3228. Then you think from what you observed that the nuisance is as bad as ever? No, I don't say so.
3229. In what respect is it improved? The paddock and premises are much cleaner than they were.
3230. But the water is the same? Yes.
3231. And they still continue to discharge hot water into the drain which leads towards Blackwattle Swamp? There was no water going down when I was there; the hot water goes back into the dam.
3232. And keeps up the temperature;—93° is above the temperature of the atmosphere is it not? Yes.
3233. You think that in about twelve months the Company will terminate their operations at that place? Yes, they expect to be able to do so much within that time.
3234. Then we need not trouble ourselves any further about them? Except to urge the Corporation, if they can, to give the Company a supply of water in the interim. Considering that the Company have given them permission to construct a drain through the Company's property, I think, they might make some concession in reference to the water, when they can spare it.
3235. *Chairman to Mr. Bell.*] Taking into consideration the permission given by the Company, to take a sewer through their ground, don't you think the Corporation might give them water at a reasonable rate for the remainder of their term? They can have it at 1s. 6d. per 1,000 gallons. The drain will improve their land vastly; they are already laying out streets upon it.
3236. *Chairman to Mr. Watt.*] Have you anything further to add? No, I think not.

Disposal of Blood at Glebe Island.

Charles Moore, Esq., called in and further examined:—

3237. *Chairman.*] I understand that you have some further evidence to give us, Mr. Moore, in reference to the disposal of the blood at the Glebe Island Abattoirs? Yes. Since I was here last I have made it my business to make certain inquiries in reference to the quantity of blood, and the way it can be obtained, and I can now place the Board in possession of information upon which they can rely. There are twelve beef slaughter-houses, which are approachable by six roadways, sufficiently wide to admit of a cart being backed-up. Each slaughter-house, when in full work, yields about 16 tins or 96 gallons of blood per diem, as each tin holds a little over 6 gallons when full. In ordinary, or say three days at least a week, there is less than this quantity of blood obtained. To each cart-load, when full, there is about 32 tins or 192 gallons of blood. The blood can, and should be swept into the receiver, without the aid of water. The water used for washing down the carcass, from one to two buckets to each carcass, must go into the blood receiver, but no other water need be mixed with the blood. It is said, that by preventing the indiscriminate use of water, as at present, there would be less of so called blood to cart away—of between 200 and 300 gallons, or as my informant stated, a cart-load and a half. If each slaughter-house had (say) a 60-gallon cask attached to it to receive the blood from the tins, and if these casks were emptied into the cart, which could be backed up the lane for the purpose, a saving of the present labour could be made by nearly one-half. About 40 gallons of water would suffice for the day for each slaughter-house. On the mutton and pork side not more than one-third of the quantity of blood is obtained that is yielded on the beef side. The indiscriminate use of water might be avoided if stop-cocks were put on. I wish also to inform the Board that I have seen most of the market gardeners, and I believe they would take the whole of the blood, and would take it regularly if it could be sent to them, but they could not send for it themselves. They say they have no means of taking it; that they would have to get carts made for the purpose; in fact they could not afford to do it. Some of them half-way to Botany are quite aware of its value, as they used to get it from Carroll when he had the slaughter-house there. Of course if we were to dispose of it in that way we should require a double supply of horses and plant.

C. Moore,
Esq.
15 Mar., 1876.

3238. You would get rid of the expense of burying it? Yes, but look at the expense of burying it. I saw Mr. Robertson on the subject this morning, and he is very anxious that the market gardeners should have it, and wishes the matter to be initiated at once. I am going to draw up an estimate of the cost for him, and it will be for him to decide whether it is to be disposed of in that way or not.

3239. I suppose the cost will be less than the cost of burying? Well, not much.

3240. Do you think a competition would arise among the market gardeners, and that it would end in their paying for the blood? Yes, that might be the case.

3241. Would there not be fear that nuisances would arise if the blood were to pass into private hands in that way? Yes, there would be great fear, unless it were done under some strict regulations.

3242. And that would be impossible. Who would be the inspector to see that such regulations were carried out? No, there would be a difficulty about it.

3243. The Board were deterred from recommending the Government to dispose of the blood in that way by the conviction that whatever regulations were made it would be impossible to carry them out—that local nuisances would be created, and that complaints would be made. If the blood were taken to the market gardeners, for instance, how would it be known what they did with it?—they are not particular about stinks, and they might place it where it would drain into some watercourse or well. If it were distributed among a number of persons in that way it appears to me that any inspection would be impossible. That was the objection which determined the Board to recommend that the disposal of the blood should remain entirely in the hands of the Government. It would be different if one responsible person could be found who would take all the blood? Whoever takes it it must be taken away regularly.

3244. Yes, but suppose one of these market gardeners came and offered to take a certain quantity every week, and after three or four weeks, either on account of the dry weather or for some other reason, refused to take any more, there would be a difficulty in getting rid of it. Taking all these circumstances into consideration would you recommend the Government to dispose of the blood or offal in that way—to deliver it promiscuously to the market gardeners? Not unless they had proper reservoirs to receive it.

3245. On their own premises you mean? Yes.

3246. What do you call proper reservoirs? I mean pits sunk on their own ground.

3247. Would not that require proper inspection? Yes; those are points which I think should be submitted to the Colonial Secretary; he told me to-day he wished to have it carried out at once; in fact he told me to have it done.

3248. But do you not entertain some doubts about it? I have very grave doubts about it; but it might be tried. One man who lives near the "Halfway House," said to be a very respectable man, who farms 12 acres of land, said he would take some of it, and take care that it was properly disposed of and covered over.

3249. Did he say how much he would take? He would take a good deal of it; but there is no doubt that we shall have to fall back upon some place belonging to the Government.

3250. If we used that piece of land at Webb's grant for this purpose it would be almost inexhaustible? Yes; but it is a long way off; I don't think the same cart would take more than one load a day there.

3251. Would it not be less expensive to take the blood there than to bury it in the hard soil at Callan Park? You would still have to bury it.

3252. Yes, but in soft sand, which would make all the difference? It is impossible during the present dry weather to say what will be the result of the present mode of disposal, or what crops it is likely to produce. As a practical man, I know that I am putting a great deal more blood into the ground than I should under other circumstances, but we cannot tell you what the effect will be; it is thoroughly incorporated with the soil.

3253. What effect do you think heavy rain would have upon your operations? It would have little or no effect, because the ground is so hard.

3254. You think you would be able to carry them on right through the rainy weather? I think so—oh yes.

3255. Without any danger? So long as the present system is carried out—I am certain of it as I can be of anything.

3256. Have you anything further to add? No; except that I would suggest to the Board whether the butchers should not be compelled to empty the blood themselves into the reservoir.

Mr. Frederick Oatley, Inspector of Glebe Island Abattoirs, further examined :—

Mr. F. Oatley.
15 Mar., 1876.

3257. *Chairman.*] You heard what Mr. Moore stated, that the carts can back up into these narrow lanes? Yes.
3258. Is there any reason why it should not be done at once? No; I think it should be done. As for the butchers emptying the blood into the reservoirs that is not one of the conditions in their agreement, but it could be arranged in next year's lease readily.
3259. Would any further arrangements be necessary to allow of the carts going up these lanes? No, I don't know of any.
3260. Why was it not done before? Well, I do not know whose arrangement it was to take the blood to the carts in tins; it was not mine. I believe it was done by order of the Colonial Architect.
3261. I suppose you have authority to make the alteration, and can give the necessary instructions? Oh yes.
3262. Then will you have it done at once, as it appears that it will be a great saving of expense? Yes, I will do so.
3263. And you will also see that as little water is used in connection with the blood as possible? Yes.
3264. Whatever additional water is used in keeping the place clean goes through the filters, does it not? Yes, I take every care of that.
3265. Are the boiling-down establishments at Leichhardt still creating a nuisance? Yes, a very great nuisance.
3266. Is that one on the Island creating a nuisance? No, I have never experienced any nuisance from it since the proprietors made certain alterations in connection with it.
3267. Can you tell us whether Messrs. York and Walsh have gone to any great expense in making these alterations? Yes, they have been at a good deal of expense.
3268. Would it, in your opinion, be reasonable to require that all such establishments should make similar improvements? Yes, I think it should be done; if Messrs. York and Walsh could do it I don't see why the others could not.
3269. *Dr. Alleyne.*] You know that soap-making establishment a little way from the Abattoirs? Yes; you meant a place on what is called the Bullock Road; I do not know whether they make soap there, but they boil down mutton carcasses.
3270. *Chairman.*] Is that a very dirty place? Yes, I should think it could not be carried out without being a nuisance.
3271. Could they not make the same improvements which Messrs. York and Walsh have made? I do not see why they should not.
3272. Has there been any abatement of the nuisance caused by feeding pigs on offal in the Leichhardt Municipality? No.
3273. It still goes on there? Yes.
3274. Do the persons who use this offal come to the Abattoirs for it? Some of them do, and the butchers take some of it away, and if they cannot sell it they give it away.
3275. Some of it is sent to Mr. Moore? Yes, they send him that part of it which they have no use for.
3276. Are the Abattoirs cleaner than they used to be? Yes.
3277. Is there any improvement in the shore itself? Oh yes, there is a very perceptible improvement.
3278. And you think that only a small portion of the blood goes into the harbour now? Yes; and when all the water passes through the filter beds it will be quite clean.
3279. The filter beds are not in use at present? Not yet.
3280. You find a great advantage in having plenty of water now? Yes.
3281. You have plenty for washing the floors and keeping the place clean? Yes.
3282. You do not use salt water for any purpose? No, not now.
3283. *Mr. Watt.*] What becomes of the condensed steam at Messrs. York and Walsh's establishment? It passes off into the bay; it is like weak soup, but it is quite sweet.
3284. But it would soon putrefy. Don't you think there is a considerable quantity of animal matter in that water? Of course there is.
3285. *Chairman.*] At what hour of the day is that water discharged? It is not always discharged at the same hour, but it is generally let off early in the morning—at about 6 or 7 o'clock, I think.
3286. *Hon. J. B. Wilson.*] With regard to the boiling-down establishment to which you have just alluded in the Municipality of Leichhardt, do you think that any improvements effected in it could render it as free from nuisance as Messrs. York and Walsh's rendering establishment at Glebe Island? Not while they boil down the carcasses of animals; they don't do that at York and Walsh's.
3287. *Chairman.*] That is not generally done in these establishments? No, only when the market is low, to keep up the price.
3288. *Chairman to Mr. Watt.*] Don't you think, Mr. Watt, if the matter were taken in hand some plan might be devised by which these boiling-down places might be rendered innocuous? No doubt of it, by means of some precipitation or filtration process.
3289. Supposing the water discharged from Messrs. York and Walsh's works to be charged with animal matter, do you think it could be remedied by filtration? Yes, I think so, by some precipitation or filtration process.
3290. There is not a large quantity of it? No, but still it becomes putrescent.
3291. *Chairman to Mr. Oatley.*] What do the filters at Glebe Island consist of? There are two large tanks with sand, and stone and charcoal.
3292. The water goes through from one tank to the other? Yes.
3293. How soon will they be in operation? In the course of a week, I should say, at the farthest; they are only waiting for two pans.
3294. Has any alteration been made in the disposal of the refuse matter from the paunches? No, it is carted away by the market gardeners.
3295. It does not accumulate now as it used to do? No, they keep it pretty well down.
3296. Then it does not create a nuisance now? No.
3297. *Hon. J. B. Wilson.*] Have any steps been taken to prevent the butchers from taking away the offal for the purpose of pig feeding? I brought the matter under the notice of the Government; there seems to be some difficulty about carrying out the regulations.

3298. Have you received any instructions to prosecute any lessee for breach of the regulations? No, not since I was here last, and I do not like to act without instructions. Mr. F. Oatley.

3299. *Chairman.*] Do you think it is possible to carry on the practice of feeding pigs upon offal without creating a nuisance? I think it must create a nuisance, but it rests with the authorities of the municipality in which the nuisance arises to prosecute the parties offending. 15 Mar., 1876.

3300. But can they prevent it without putting a stop altogether to pig feeding upon offal? No, it must be put an end to altogether. In addition to feeding pigs upon offal they feed ducks and geese and poultry upon it, and they get very fat.

MONDAY, 20 MARCH, 1876.

Present:—

C. WATT, Esq.,	HON. J. B. WILSON,
W. C. BENNETT, Esq.,	E. O. MORIARTY, Esq.,
H. G. ALLEYNE, Esq.,	F. BELL, Esq.,

M. B. PELL, Esq., B.A., IN THE CHAIR.

Charles Watt, Esq., Government Analyst, further examined in his place:—

3301. *Chairman.*] Have you made the experiment you suggested with some of the blood from the Glebe Island Abattoir? Yes. I now produce a sample of the preparation (*parcel produced*); it contains 76 per cent. of a phosphatic earth, and 24 parts of dried blood; the phosphatic earth containing about 60 per cent. of tricalcic phosphate, the rest being earthy matter; this sample has been made about five days. Chas. Watt, Esq. 20 Mar., 1876.

3302. Is there any free ammonia in it? No, it is all fixed.

3303. Would it deteriorate in keeping? No.

3304. In what form is the ammonia? In the form of albumen, &c.; the phosphatic earth is not of the best quality or I could have produced a more valuable article; as it is I should say, judging from my experience, that it would be worth about £6 a ton. I reckon that the phosphatic earth used is not worth more than £5 a ton, so that a margin would be left.

3305. What do you do with the water? That is evaporated.

3306. Would this process require expensive appliances or machinery? Oh, no.

3307. And it would not create a nuisance? No, and the preparation in this state would allow of the addition of a good deal more blood. I would have mixed more of it, but I went to the Abattoirs to get the blood myself in order to obtain it free from water, and I could only bring about 10lbs. in the cab with me.

3308. Would the addition of more blood increase its value? Yes. I have spoken to several persons in the city about it and have been strongly advised to recommend that tenders be invited to take the blood from Glebe Island, and I have reason to believe that if that were done persons would take the matter into consideration.

3309. *Mr. Moriarty.*] Do you think they would be prepared to take it away at their own cost? I have no doubt they would if they had the certainty of having it for a long period; they will not go into the thing for a short time only. At present it is costing the Government, even at the reduced expenditure, about £30 a week.

SATURDAY, 25 MARCH, 1876.

Present:—

HON. J. SMITH,	HON. J. B. WILSON,
W. C. BENNETT, Esq.,	E. O. MORIARTY, Esq.,
F. BELL, Esq.,	DR. ALLEYNE,

M. B. PELL, Esq., B.A., IN THE CHAIR.

Messrs. Edwin Godfrey and Edward Drew called in and examined:—

3310. *Chairman to Mr. Godfrey.*] We received a letter from your firm offering to take a lease of the Government land at Webb's grant, Cook's River, for the purpose of receiving and dealing with night-soil? Yes. Mr. E. Godfrey. 25 Mar., 1876.

3311. I suppose you would not take this land unless you were sure that a certain quantity of it would be delivered to you? We should like to have the whole of the night-soil taken out of the city and suburbs.

3312. Of course you are aware that it will be impossible to deliver it on Webb's grant until some approaches are made to the river, so that it can be taken across by punt? Yes.

3313. I suppose about 30 tons a day, which is about the quantity taken away, would be sufficient for you to deal with? Yes, we should like to have it all.

3314. I suppose it is no secret—the way you propose to treat the night-soil? Oh, no.

3315. Will you tell us what the process would be? We should dry it by fire, in a kiln, and then screen it.

3316. You are aware that it contains a very large quantity of liquid? Yes.

3317. And that in drying it in this way a large quantity of vapour would be created, which would carry off some of its most valuable properties? We should prevent that by other means.

3318. You would not allow the vapour to escape? No.

3319. In order to distil 30 tons a day, for that is what it would come to, you would require very expensive appliances? Yes.

3320. Are you in a position to give security that you would do this without creating an excessive nuisance, and you would continue to do it; as it would not be worth while for the Government to go to the expense of making these approaches unless they had some guarantee that your undertaking would not fall through? There is not the slightest doubt that we can receive it and deal with it; there would be no difficulty about that. 3323.

- Mr. E. Godfrey.
25 Mar., 1876.
3321. You are prepared to incur the necessary expense? Yes.
3322. You would not propose to utilize any of the night-soil on the spot? No, the soil is not fit for it; we could do nothing at all with it; there is no water there of any kind, and in a dry season, or at any time during the summer, we could do nothing with that land.
3323. You could do nothing with it for want of water? For want of water. That swamp known as Muddy Creek is all dry now, and there is nothing but the tide goes into it; there is not a drop of fresh water from there to Sandringham.
3324. How long would it take you to make your preparations, supposing an arrangement were arrived at? About six months.
3325. You would be ready before next summer? Yes.
3326. Would the 20 acres of Government land on Webb's grant afford you sufficient room? That would be hardly sufficient.
3327. *Hon. J. B. Wilson.*] How much would you require? We should want at least 50 or 60 acres.
3328. *Mr. Moriarty.*] Do you intend to utilize the stuff or to sell it? To sell it.
3329. *Chairman.*] In a dry form? Yes.
3330. You could not undertake it unless you had 50 acres? No, not less than 50 acres.
3331. How would you propose to approach the place to get your own materials there? Well, if a punt and approaches were provided certainly we should use them, but under present circumstances we should go by the West Botany Road.
3332. You could get there as it is at present? I think so; there is a road across Muddy Creek I believe.
3333. *Mr. Bennett.*] What length of lease would you want? Twenty years.
3334. Have you been engaged in this sort of thing elsewhere? Yes, I have a large boiling-down establishment there now close by this place.
3335. But have you ever been engaged in this particular business? No, but I have a person with me who has.
3336. Engaged in this business in Europe? Yes.
3337. You state that the soil is unsuitable for utilizing the night-soil on the spot for want of water, but I presume that objection would not apply to sewage, which would convey its own water? No.
3338. You think you could utilize it then no matter how dry the sand might be? Yes.
3339. You think that sand, however hungry, is suitable for utilizing sewage for cultivation? I do not care what land it is; if you have sufficient moisture you can produce crops.
3340. Supposing this land were leased to you for twenty years and that the Government, instead of delivering night-soil, conveyed the sewage to you by ducts, would you manage to deal with it in the same way as the night-soil? Yes, we would.
3341. You would not consider it an infraction of your lease if sewage were sent to you instead of night-soil? Not instead of the night-soil, but with the night-soil.
3342. *Dr. Alleyne.*] In the event of its being brought to you by sewer instead of by cart, could you deal with it equally well by your drying process? We should use a different process for that.
3343. *Mr. Moriarty.*] Have you made any calculations of the expense of drying, say 4,000,000 or 5,000,000 gallons of sewage per day? No, not as far as sewage is concerned—only with regard to nightsoil.
3344. *Chairman.*] You would be prepared, I think you told me the other day, to receive the blood and other refuse from the Abattoirs, if the Government thought fit to send it to you? Yes.
3345. You are aware that blood contains much more valuable ingredients? Yes.
3346. Perhaps the Government might expect you to pay something for that if it were brought to you, as it is far more valuable than night-soil? We have not considered anything requiring payment.
3347. Would you know how to deal with it? Yes.
3348. Dried blood is said to be worth its weight in guano? So I believe, sir.
3349. *Hon. J. B. Wilson.*] With reference to your answers to some questions asked by Mr. Bennett about pure sand with moisture growing anything—are you aware whether pure sand by filtration will separate soluble organic matters from sewage? I do not exactly understand you?
3350. You stated just now that moisture and manure would cause pure sand to grow anything? So it will.
3351. Well, supposing you put sewage on to pure sand, in order to convert it into a sewage farm is there anything in the sand that would separate the soluble organic matter so as to utilize it? No, I don't think so.
3352. Are you not aware that pure sand, such as the sand on the shore, when used for the purpose of a sewage farm, is apt to become very offensive;—have you had any experience of it? No; I have had experience in gardens. I have a man now in my garden utilizing the offal from my boiling-down establishment, and as I said before if we have moisture we can make the ground productive; the pure sand will absorb all the liquid you can put on to it.
3353. Will that pure sand not become fetid and offensive? No.
3354. *Chairman.*] Have you tried it yourself? Yes, we have tried it with refuse from my boiling-down establishment.
3355. *Hon. J. B. Wilson.*] I am talking of the sewage with which the dry sand would be saturated;—have you had any experience of sewage farms? No, not as regards sewage.
- Mr. E. Drew.
25 Mar., 1876.
3356. *Hon. J. Smith to Mr. Drew.*] You propose to prepare a dry manure for sale? Yes.
3357. And you say that in drying it you can retain all the valuable volatile matter? Yes.
3358. Have you evidence that there will be a profitable demand for this dry manure? Perhaps not in this Colony, but we have evidence that it will be a profitable investment to ship it to New Zealand.
3359. The profit would depend largely upon the amount of water you would have to dry off? Yes.
3360. I imagine that the process you would adopt for dealing with manure delivered in carts would not answer for the liquid manure conveyed in ducts? Oh no, decidedly not.
3361. But you see your way to deal with them both? Yes.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SYDNEY CITY AND SUBURBAN SEWAGE AND HEALTH BOARD.

WEDNESDAY, 29 DECEMBER, 1875.

Present:—

HON. J. B. WILSON,
F. H. GRUNDY, Esq.,
R. B. READ, Esq.,

DR. ALLEYNE.

F. BELL, Esq.,
W. C. BENNETT, Esq.,
E. O. MORIARTY, Esq.,

M. B. PELL, Esq., B.A., IN THE CHAIR.

Messrs. York and Walsh's Establishment at Glebe Island.

Messrs. Alleyne, Grundy, and Bell examined in their places:—

1. *Chairman to Dr. Alleyne.*] I believe you have recently visited, in company with the other members of the Committee appointed for the purpose the boiling down or rendering establishment of Messrs. York & Walsh at Glebe Island? Yes.
2. Did you find it in a cleanly state? Very much so indeed.]
3. Did you find anything offensive in any way connected with it? Nothing at all; there was no smell upon approaching the place, and even when standing over the wooden gutter intended to carry off the refuse, which was the objectionable feature when I visited the place some months ago, we experienced no offensive smell. The place appeared to be particularly clean, and so far as the sense of smell is concerned there was nothing to complain of.
4. You noticed a marked improvement since your previous visit some months ago? Yes, very great.
5. On the former occasion there was a bad smell? Yes, and not only a bad smell but there was a lot of refuse—solid matter—in the wooden trough which carried the water from the machine into the harbour; that was all cleared away on this occasion.
6. It is then your impression that it is at any rate a matter of doubt whether they have not succeeded in abating the nuisance altogether? Yes.
7. When you made your first visit last week you were expected by the proprietors? Yes.
8. And you made a second visit yesterday, when they did not expect you? Yes.
9. And did you find it then in as clean and inoffensive a condition as on the first occasion? Yes.
10. And everything about the place equally clean? Yes.
11. I wish to know whether it is your impression that it is at all events worthy of consideration whether they have not succeeded in abating the nuisance altogether? I have no doubt they have succeeded in abating it to an enormous extent.
12. What I want to arrive at is whether you think they have abated the nuisance sufficiently to justify us to go on with the inquiry, with a view to ascertain whether or not we should recommend the Government to allow the establishment to remain there? I think you will be better able to judge when you have examined Mr. Walsh, who is more competent to explain to the engineers on the Board exactly how his machinery works. As far as I could see everything seemed to be perfectly clean and harmless.
13. *Chairman to Mr. Grundy.*] Do you concur with what Dr. Alleyne has stated? Quite so, so far as one visit would allow me to judge. I may mention, however, in reference to your remark that the visit was expected—that Mr. Bell and I followed the course of the trough down to the harbour, and that there was no sign of *débris*, which there must have been in any case if it were allowed to escape that way.
14. *Chairman to Mr. Bell.*] Do you concur with what has been stated? Yes, and I may state that on the previous Friday I had occasion to go over to Glebe Island in company with Mr. John Russell, and that we then examined the whole of the premises, and found them quite as clean as on the day when the members of the Committee visited by appointment. There was no smell whatever, and with the new machinery they have now in use the fumes from the boiling, instead of being allowed to escape as before, are carried down and consumed in the furnaces.
15. *Dr. Read to Mr. Bell.*] Is this wooden trough lined with anything? No, the water is pumped into a reservoir to a sufficient height above the tanks to allow it to run down.
16. *Chairman to Dr. Read.*] I believe you have some knowledge of the process adopted of rendering fat? I have.
17. Will you be good enough to explain the difference of rendering and boiling down? The term boiling down applies when whole quantities of sheep are put into the digester; that includes bones, meat, and everything. The sheep is simply slaughtered and skinned, cut into suitable pieces, and thrown into the digester.

Messrs.
Alleyne,
Grundy, and
Bell.

29 Dec., 1875.

Messrs.
Alleyne,
Grundy, and
Bell.

29 Dec., 1875.

18. Suppose you were to take the ordinary refuse from the Abattoirs, not the fat only but the refuse, would you call that boiling down or rendering? That would be rendering.
19. I am informed that at Messrs. York and Walsh's establishment they do not put the whole carcase in, nor the bones or waste, only the fat? No, only the fat.
20. That is a third term? Yes.
21. But I suppose there is a considerable quantity of matter which does not turn into fat? Yes, the membranous tissues which contain the fat—what are made into greases.
22. Do you know from your own knowledge what the process is which is carried out at Messrs. York and Walsh's establishment? No, I have not seen it myself.
23. Do you know whether after the fat has been put in, any water is put in with it into these cylinders or digesters? No. The steam passes into the cylinder.
24. But no water? No.
25. And of course the steam condenses to a certain extent? Yes.
26. Do you know how often it is necessary to draw off the water which accumulates below, and is required to float the tallow to a sufficient height? That depends in a great measure on the engine power.
27. In ordinary boiling-down arrangements does not what is called the soup liquor create an intolerable smell when it is let off? Not in all cases. When I visited the works on Miller's Point the smell was not offensive, but there was a smell as if cooking was going on.
28. But is it not a fact that in very many cases the smell is excessively offensive? There are certain parts of the process of rendering, especially where there are bones, which come in contact with the fire and get charred, when there is a very offensive odour.
29. Does it not depend in a great measure upon the time the material is kept, and also upon the state of the weather, whether the refuse is offensive? Yes; and if it is kept too long the tallow itself will be offensive.
30. From what you know of rendering or tallow melting establishments, do you think it possible that operations, such as have been carried on at Glebe Island, can be conducted so that at the time of drawing off the liquor no offence will be caused to the residents in the locality? With the greatest care I think it is possible.
31. Is not the time of drawing off the liquor the time of all others in the course of the operation when a nuisance would be most likely to arise? Yes.
32. And especially in hot weather? Yes.
33. *Dr. Alleyne.*] As far as I could understand the process from the description given to me, the steam is introduced into the cylinders, and the substance from which the tallow is extracted floats on the top of the water, which allows the tallow to run off. Then between 5 and 6 o'clock in the morning on each day they let the water off. There is a trap-door at the bottom of the cylinder, the water goes out through a sort of rose, and the residue from which the fat has been extracted—what doctors would call the sediment—subsides at the bottom of the cylinder. Then they open a trap door at the side, take it out, and sell it. I have never seen that part of the operation carried out, but that is the way it is done.
34. *Chairman to Dr. Alleyne.*] You visited an establishment near Glebe Island, I believe, where whole carcases of sheep are boiled down. Did you find anything offensive connected with the operations there? No, there was no offensive smell, but there was something to which I objected to there. The place was quite as inoffensive as this room as far as smell is concerned, but the vats had recently been emptied, and the contents were lying about the place. I was told that this stuff was regularly taken away each day by a man who bought it. It was quite as fresh as any meat in soup, but a certain amount of the solid refuse was going into the harbour, and that I think was very objectionable.
35. Solid and liquid matter together I suppose you mean? Yes.
36. If fresh carcases were taken there and boiled down immediately, it would take a certain number of hours before the refuse would become offensive? I dare say it would be inoffensive for forty-eight hours—certainly for twelve hours. Still I think there ought to be some regulation under which it should be immediately removed. It ought not to be left to the men, because they might leave it for twice or even three times forty-eight hours.
37. *Chairman to Dr. Read.*] Is there anything gained—any useful quality of tallow, useful for particular purposes, obtained by boiling down whole carcases of sheep? None at all, and it does not pay commercially to boil down whole sheep unless the proprietor can fellmonger as well.
38. I was under the impression that some particular tallow might be obtained? No. Perhaps the tallow might be somewhat brighter; there is a distinction between boiling down tallow and Island tallow, which is from the inside fat.
39. *Chairman to Dr. Alleyne.*] Did the other members accompany you when you visited Alston's establishment? Yes.
40. *Chairman to Mr. Grundy.*] Do you concur in what Dr. Alleyne has stated? Yes, entirely.
41. *Chairman to Dr. Bell.*] Do you also concur with Dr. Alleyne? Quite so.
42. *Hon. J. B. Wilson to Dr. Alleyne.*] Are any other works carried on there besides tallow rendering? Yes, the manufacture of soap.
43. *Chairman to Mr. Grundy.*] How far is this establishment from the Abattoirs? About a short half-mile I should say.
44. Do you think the residents at the Glebe Road could tell if they experienced an offensive smell, whether it came from Glebe Island or from Alston's establishment? No, because certain winds would carry the smell in certain directions.
45. There is no such great disparity in the distance? No certainly not.
46. *Hon. J. B. Wilson to Dr. Alleyne.*] Do you think the manufacture of soap at a boiling-down establishment tends to aggravate the evil? I do not know why it should.
47. Is not the soap refuse from a manufactory offensive? It may be more offensive, for the fat used is of an inferior quality.

Mr. J. Walsh.

Mr. John Walsh called in and examined:—

29 Dec., 1875.

48. *Chairman.*] I believe you are a partner of York and Walsh, carcase butchers? Yes.
49. And you have something to do with the rendering establishment at Glebe Island? Yes.

50. I understand that the last few months you have made certain improvements in the working of that establishment with a view of preventing the nuisance which has been complained of so much? Yes, we have.

Mr. J. Walsh.
29 Dec., 1875.

51. Will you be good enough to explain the nature of the improvements you have made? We have put in another digester, so that the fat can be put in immediately—it is brought from the Abattoirs. Then we have attached an extra pipe to the discharge pipe at the top which comes down under the fire, so that all the bad fumes go into the furnace and are consumed.

52. I understand you to say that you have now appliances which prevent any accumulation of fat on the premises? Yes. We never have any the second day; even the fat which comes in on Saturday morning is rendered on Saturday night.

53. You do not have any animals boiled down whole at your establishment? No; on one occasion there might have been fifty sheep boiled down, but that was the only occasion.

54. Do you put any water in with the fat? No, only steam, which makes a certain amount of water.

55. Do you frequently draw off the tallow which accumulates, or at intervals? We draw it off every day.

56. Only once a day? Only once unless there is more than one boiling in the day. The three large digesters will hold I suppose from six to seven tons of tallow. Occasionally, say twice a week, we have to run it off twice a day, but this does not occur more than twice a week.

57. Before drawing off the tallow do you introduce water into the cylinders? Yes. After the fat is rendered down and allowed to settle for a short time the water is let in and of course it raises the tallow up and then we run the tallow off.

58. And then you have to run the water off afterwards? Yes.

59. Where does it go to? Straight into the harbour.

60. I understood from Dr. Alleyne that it was received into a tank in the first place? Yes, it goes first into a tank.

61. And I suppose you get some additional tallow there? Very little.

62. What is the object of that tank? It has a small perforated rose through which the water escapes, so that nothing but water can go into the harbour.

63. Where is the refuse taken from—it does not go out with the water? No, we sell that to a person who comes and takes it away.

64. And what time do you run the tunnel off? In the evening.

65. And the water? Immediately after the tallow.

66. At what hour? That depends upon circumstances,—as soon as we have finished work.

67. I understood it was a practice to let this water run off between 5 and 6 o'clock in the morning? That depends upon the time the operation is completed; sometimes when the tallow is not quite settled or fit to run off it is allowed to stand till the morning.

68. I have been informed that in boiling-down establishments an excessive nuisance is created when this water is run off, and therefore it is the ordinary practice to run it off during the night? There is no comparison between boiling down and rendering.

69. Is that the practice in boiling down? Yes, there is a lot of offensive matter in boiling down.

70. But it is not the practice in your own establishment? Not at all.

71. And you can draw off the water immediately without causing any offence to persons passing by? Yes; you would experience no offensive smell even if you were standing close by while it was being drawn off.

72. There can be no doubt that a good many complaints have been made—I do not say within the last few months—of the offensive odours proceeding from your establishment at Glebe Island. Do you think that nuisance has been entirely removed by the steps you have taken? I think so; we do a very large business, and as two digesters were not sufficient to receive all the tallow we have had another and a very large one provided.

73. So that the tallow is not allowed to accumulate under any circumstances? No, and the exhausted steam which was formerly allowed to escape, and which was no doubt a great nuisance, is now consumed in the furnaces. We have also added about 50 feet to the chimney stack, which in itself would remedy the evil.

74. And the solid refuse which is taken from the digesters is immediately removed? Yes, immediately it is taken out.

75. How long would it take for the refuse to become offensive if it were allowed to remain on the premises? It would soon become offensive, but the refuse is only a trifle altogether; in fact a wheelbarrow would take away all the refuse from a day's work.

76. It would become offensive in twenty-four hours, I suppose? Oh yes it would; but it is not allowed to remain under any circumstances, even for an hour.

77. It is taken away immediately? Yes, because we have always a large number of horses and carts on the premises, and if the person who buys it of us does not take it away at once we send it away in one of our own carts.

78. You have no regular time for drawing off the water? No, it takes a certain time to render the fat, and the men are not always very regular in their hours. Sometimes we cannot get the fat from the Abattoirs until very late. It depends a great deal upon the rush of work; sometimes we do not get the fat until 6 or 7 o'clock at night.

79. Suppose you were told that the arrangements you have made were such as to justify the Board in recommending the Government to allow your establishment to remain, what guarantee would you give the Government or the public that no negligence would occur by which a nuisance would be created at some future time—I do not mean a money guarantee, but what safeguard would there be for the public? It would not suit us to create any nuisance, because our interest would suffer; we carry on a very large business; we rent four of the slaughter-houses at the Abattoirs, and we should injure our own interests by allowing any nuisance to exist on our premises.

80. You mean that you have a direct interest in preventing any nuisance of the kind? Yes, most decidedly we have.

81. You are aware I suppose that a large number of the residents in the neighbourhood are very much impressed with the fact that your establishment is a nuisance and are anxious to have it removed? I do not

J. Walsh. not think so; in fact I am positive it is not the case. I am sure that if the question were brought before the public a very large number of the residents would certify to the fact that it creates no nuisance whatever.

29 Dec., 1875.

82. Is there any other nuisance on the Island, independently of your establishment—anything which is a serious nuisance to persons passing along the road—anything in the way of offensive smells? Well, the Government have lately been making experiments with the flooring of the slaughter-houses—they have taken up the flooring of one of them which I occupy, and there has been a very offensive smell from the Abattoirs lately.

83. But that is an exceptional matter—Is there anything further than that at the Abattoirs which is offensive to persons passing by? There might have been some time ago, but the Abattoirs are much better managed now, and there is a great deal more care taken; and fresh water which is much better than the salt.

84. About four or five months ago there was an indisputable nuisance there; there was such an offensive smell that people going by in omnibuses had to take out their handkerchiefs and hold them to their noses;—from what cause do you think that arose? Perhaps some of the heads might have been left on the premises.

85. You do not think that nuisance occurs now? No, because things are much better managed there now; there are two extra men employed. Care is taken that none of the offal is left in the back yards.

86. What is done with the manure now? It is taken away regularly now by the Government in carts.

87. You are frequently at the Abattoirs yourself, I suppose? Yes, almost every day.

88. Are the arrangements for preventing the blood from going into the harbour carried out thoroughly? I would not say they are carried out thoroughly.

89. Is all the blood prevented from going into the harbour? Some of it, I believe, goes into the harbour, particularly the blood from sheep.

90. How is that? There are no arrangements for catching the blood in the mutton slaughter-houses the same as are provided in the beef-houses.

91. What sort of arrangements? Small tanks are provided in the beef-houses to catch the blood, and then it is taken away in carts.

92. It goes on to the floor in the first place does it not? Yes.

93. Do you think all the blood is taken away at the beef-houses? Yes, I think so, but not at the mutton-houses.

94. They have not the proper appliances there? No, they are not completed.

95. Have they carts enough to take away all the blood? That will depend upon the distance it has to be taken; it is carted away now to the Garryowen Estate.

96. *Dr. Alleyne.*] You stated that an offensive smell had arisen from the flooring of one of the houses occupied by you, which had been disturbed? Yes.

97. That was simply from the fact that the porous sandstone with which the house was originally floored had become so saturated with blood and offensive matter that as soon as a pickaxe was struck into it an offensive smell was emitted? Yes, and independent of that it never was properly laid down, and no cement was put between the joints. But that was not the worst place; the worst place was the pithing-pound, which was floored with wood, and underneath this floor the blood accumulated and was very offensive; that has all been taken up now. There has been a great deal more business done in the house I have been using where the flooring was broken, which is perhaps the reason; in the mutton-houses, where there has not been so much business done, there is no smell because the flooring is not worn out.

98. *Mr. Moriarty.*] You stated, I think, that some of the refuse was taken away in your own carts? Yes.

99. Where is it taken to? It is taken to a man who makes bone-dust.

100. *Hon. J. B. Wilson.*] Do you boil down any tallow except from your own sheep and bullocks? We buy all the fat from the retail butchers—at least nearly all, with one or two exceptions.

101. Do you think the arrangements which the Government are making to collect the blood will be effective? Yes, I think they will be very expensive but effective.

102. Do you think they will give satisfaction to the people who use the Abattoirs? Well, I don't know so much about that; there was far less trouble before when the blood was allowed to run away into the harbour.

103. *Chairman.*] Could you give us any advice or suggest any improved plan which could be adopted for the disposal of this blood—anything which would facilitate the arrangements? No, the arrangements for collecting the blood are very good, and it is a very valuable article if it can be collected.

104. It was recommended by the Committee who visited the Abattoirs that the blood should be caught at once from the necks of the animals which, we were told, is the practice in European towns? I do not see how it is to be done.

105. Have you ever seen it done? I have never seen it done, and I have had a great deal of experience in these matters.

106. Have you had any experience out of the Colony? Yes, in New York; I have always seen it go on to the floor.

107. What is the final destination of the blood in America? It is saved for manure, and that is done here in some private slaughter-houses. For instance, Mr. Davis had one at Petersham, and he saved the blood and by using it as manure on that hungry looking red hill at Petersham he has improved the ground so that it will grow anything.

108. That is what it is generally used for in America—they do not allow it to run into the harbors or watercourses there? No, I have never seen it.

109. Don't you think it a barbarous thing that we should have suffered it to run into our harbour so long? It certainly looked very bad to see all the shore red with blood from the Abattoirs.

110. I will just ask you a few questions on a different subject: It is advocated that slaughter-houses should be established for small goods. I think they call them—for the slaughter of lambs, sucking-pigs and calves. Will you state what is your opinion on the subject? My opinion is that it would be a great advantage. I have been almost all my life a butcher, and for twenty-three years a butcher in Sydney; and I know from experience that men who have a business in town will not take a lamb to Glebe Island to have it slaughtered.

111. As a matter of fact they are slaughtered in Sydney? As a matter of fact ninety-nine out of every hundred are slaughtered in the city.

112. A lamb slaughtered at the Abattoirs would not produce good meat if it were carted into town would it? I don't believe it would; you could hardly present it to your customers. Mr. J. Walsh.
113. Is it the same with veal? Yes, to a certain extent. The way they slaughter the calves now is a great farce; they bring them to Glebe Island and slaughter them, and take them home to dress them. 29 Dec., 1875.
114. It is not legal is it to carry the refuse away? Oh they take the inside out, but they leave the hide on; they simply bleed the calf and take the inside out, and take it home to dress.
115. I suppose the meat carries better with the hide on? No, if a calf is dressed at once it will keep a day longer than if it is left for a time with the hide on.
116. We know that the greater number—in fact almost all the calves and lambs are slaughtered in the city, and the authorities are unable to prevent it? They cannot do it.
117. And, therefore, if an authorized slaughter-house were established and placed under stringent regulations there would be less chance of any nuisance arising? I think so if there were slaughter-houses for lambs in the city; I don't believe there is one butcher who takes his lambs over to the Island to slaughter; for there is hardly a pint of blood in a lamb.
118. You think one establishment in a central situation would do? Yes.
119. For lambs, sucking pigs, and calves? Yes.
120. Do you think that would meet with public approval, or do you think there would be an outcry against it? That I do not know.
121. Do you think such an establishment could be carried on in the city without creating any nuisance? I think it could very easily.
122. Even in hot weather? Even in hot weather; the only difficulty would be that some persons might bring sheep to be slaughtered and say they were lambs.
123. Do you think there is anything objectionable in the way meat is frequently carried by the butchers in open carts and insufficiently covered over? Yes, it is sometimes very objectionable, but if the men get clean cloths they dirty them in the course of an hour.
124. That is done generally by the retail butchers I suppose? No, as a rule it is done by the carcass butchers,—by me and others like me.
125. What arrangement would you substitute for the proper transfer of meat;—would you suggest any different arrangement—any particular kind of cart? I think if we were to adopt the kind of cart the butchers have in Melbourne it would be a great improvement.
126. Are the carts used in Melbourne covered carts? Yes.
127. Do you think it is desirable to have close carts for the purpose? They are not close carts although they are covered; the fore-quarters lie in rows in front and the hind-quarters are hung up.
128. Do you think the use of such carts should be made compulsory? I think it would be a great improvement.
129. You think that meat carried in that way arrives at the butchers' shops in better condition? I don't know that it arrives in bad condition as it is, but that would certainly be an improvement. It might not be so acceptable to the men directly interested in the trade, but the meat carried in those carts would not be so unsightly as it is now.
130. You think then that the chief objection to the present mode of conveying meat is its unsightliness? Well, in hot weather it is not very good for the meat; for instance, a man may start with a lot of meat from Glebe Island and have to go round the town, stopping perhaps two or three times at public-houses on his way, when the meat is left in the sun.
131. Are there any regulations for carrying the meat under which any person using dirty cloths or a dirty cart can be summoned? Yes.
132. Have you had any experience of the effect produced upon carcases carried for any distance by rail by the vibration of the train? Yes, I was interested in a slaughter-house at Duck River for some years.
133. Did you find that the transit by train produced any effect upon the meat? Yes, it did not keep so well.
134. You are satisfied of that? Yes.
135. Coming from that short distance only? Yes; coming from that distance in many instances it would not take the salt. It is all right enough if you want it for immediate consumption, but not if you want to cure it. Sometimes the meat would be left for half-an-hour or more on the line. I have seen it kept there not once but often, and then it is jammed into the trucks and very roughly handled.
136. Do you think if it were put into vans properly constructed and ventilated and hung up in them and carried by rail for 50 or 60 miles that the vibration of the train would make any difference in the meat? The ventilation would make all the difference; the vans we used to have had no ventilation at all.
137. Do you think it would be objectionable to have Abattoirs 50 or 60 miles from Sydney? I think so. I know from experience what meat killed in these outside abattoirs is when brought down by train. It is rushed into the vans in order to catch the train and cut down before it has had time to cool in nine cases out of ten, and then it will never set, and it never has the same appearance.
138. But if all that were done systematically and under regular management and the meat allowed to set, would there be any objection then to have the Abattoirs at a distance? If you could manage to do that, but it is what we could never manage to do.
139. You do not think it would be practicable? No, I do not think it would answer.
140. Would it not be better to have the Abattoirs somewhere where there was better feed and water for the cattle, so as to prevent their being driven so far? The driving is the great objection.
141. In that respect then it would be an advantage to have the Abattoirs on the other side of the mountains? Yes, in that sense; sheep suffer more going over the mountains than all the rest of the journey put together.
142. *Mr. Grundy.*] Why was the steamer discontinued which used to bring your meat down from Newington? It did not pay; we found the Abattoirs on the Island better suited to our purpose; we are boiling down there.
143. *Mr. Bennett.*] Which road do the drovers take from Bowenfels chiefly? The Western Road above the mountains; the great objection to the other road is the number of gates.
144. What is the objection to the Mount Tooma Road? The scarcity of feed. Going that way in the winter time you would find a difficulty in getting your stock through.
145. *Mr. Moriarty.*] You are aware, I suppose, that a good deal of the meat supplied to London is killed out of town and brought in by train? I never was in London in my life.

- Mr. J. Walsh. 146. *Chairman.*] You have had some experience in New York? Yes, I was reared there.
 147. Do they bring their meat into New York by train? Yes, a good deal of it from Goshen and other places; but in the summer time they bring the cattle down by train.
 148. They do not bring the meat after it has been slaughtered down by train? Very rarely.
 149. *Hon. J. B. Wilson.*] And how far are the slaughter-houses from the city of New York? About 14 miles I think.
 150. In what direction? Up the Hudson River, northwards.
 151. *Chairman.*] Is any of the refuse allowed to discharge into the river? No; but it is very different there, the tides are so strong.
 152. How is the meat brought into the city? In covered pair-horse wagons; you never see any carts there.
 153. Are the butchers in New York under the inspection of the authorities? Yes, under regular inspection by the municipal authorities.
 154. Are the Abattoirs public property? Yes, they belong to the Municipal Council.
 155. Do they allow any private slaughtering establishments? Yes, several—not immediately in the city but close to it.
 156. Are they inspected? Yes, very carefully, all of them. In Birmingham, in the State of Connecticut, they are all private establishments.
 157. And all under inspection? Every one of them.

MONDAY, 14 AUGUST, 1876, A.M.

Present:—

Hon. J. B. WILSON, | H. G. ALLEYNE, Esq., M.D.,
 B. PALMER, Esq.

M. B. PELLE, Esq., B.A., IN THE CHAIR.

Benjamin Palmer, Esq., Mayor of Sydney, examined in his place:—

- B. Palmer, Esq. 3362. *Chairman.*] We are going to enter upon a short inquiry into a subject upon which we have already taken some valuable evidence—that of slaughtering in the city—and shall be glad to hear your views on the question. It appears under the existing law to be practically impossible to prevent the slaughtering of small animals in the city;—are you aware that this is the case? I am.
 14 Aug., 1876. 3363. I think I may say that it is the opinion of the Board, so far as members have expressed themselves on the subject, that this practice might and ought to be put a stop to by more stringent legislation; that additional powers should be conferred, so that whether the slaughtering of these animals is done in the city or elsewhere, it should not be done clandestinely as at present, but under proper supervision;—is that your opinion? It is.
 3364. What do you think is the opinion of the inhabitants of Sydney generally in respect to this matter,—that the slaughtering of the smaller animals should be allowed in the city or not—I mean small animals, such as calves, lambs, and sucking pigs? I think I can best answer that question by reading a report, made at my request by the Inspector of Nuisances, which I believe embodies the views of the City Council. [*Report read as follows*]:—

The Inspector of Nuisances to The Mayor of Sydney.

Office of Inspector of Nuisances,
 Town Hall, Sydney,
 29 July, 1875.

Sir,

Referring to the petition of Mr. Playfair, on behalf of the Butchers' Association of the City of Sydney, I have the honor to report that it is imperatively necessary that some steps should be taken to endeavour to stop the practice of killing lambs and calves on the premises of the butchers of this city. Even with the exercise of the utmost vigilance but few cases of private slaughtering can be detected out of the hundreds of constant occurrence. About 30,000 lambs and calves are annually sold in the city, of which about 1,000 only are slaughtered at the Abattoirs, the rest being killed privately on the butchers' premises.

To remedy this evil I beg to state that in my opinion the proposal to erect premises on the vacant land at the foot of Market-street west is very judicious, but the butchers should be compelled to slaughter there only and at no other place, and it would be advisable to pass a by-law prohibiting butchers under heavy penalty from keeping on their premises any living animal used as food for man; otherwise the evil now existing will never be eradicated.

Most suitable premises can be erected on the piece of land referred to, and the sole control of the same should rest with the City Council.

At the north-east corner of the vacant land is a piece of ground considerably elevated above the rest, on which a shed can be erected, the floor of which should slope towards the centre, where a cesspit can be so constructed as to receive all the offal and refuse. This cesspit should communicate with the outside by means of a covered drain with shoot and trap-door, and its contents discharged into carts brought up close under the building on opening the trap for that purpose. Thus all dirt will be avoided, and the place can at all times when necessary be well flushed and kept sweet and clean. The building should be sufficiently large to allow thirty men to kill at one time, and pens provided for fifty lambs and fifty calves.

I am informed that the cost of slaughtering a single lamb or calf at the Abattoirs is 1s. for the former, and 1s. 3d. for the latter.

By levying a charge of 4d. per head, being 1d. per head in excess of the proposal made in Mr. Playfair's letter, an annual sum of about £500 will be realized, which will be a handsome return for the outlay on such premises as will be required.

The adoption of such a measure as I have above proposed will, no doubt, tend to stop the evil now so prevalent, and of which so much disapproval is expressed.

I have, &c.,
 R. SEYMOUR,
 Inspector of Nuisances.

3365. Do you think it would be a popular or an unpopular measure to allow the slaughtering of these animals to take place in the city under proper supervision;—is it likely do you think that there would be any outcry against it? No; I think it would give general satisfaction.

3366. It has been stated by butchers and others that if these animals, which I believe are called "small goods," are slaughtered outside the city, they cannot be delivered to customers in good condition? I am sure they cannot.

3367.

3367. I understand that during your recent visit to Melbourne you learned something of the mode in which slaughtering is carried on there; the practice in Melbourne I believe is to do it all outside the city? Yes; not very far from the city.

3368. Still at some considerable distance? The Abattoirs are not so far from the city as ours are.

3369. Are these small goods brought into Melbourne in good condition? Yes.

3370. The meat is in good condition? Yes.

3371. Is it thrown into the carts or hung up? It is hung up.

3372. Could not the same thing be done here? Well, the distance the meat has to be carted would be against it. I have spoken to several of our carcass butchers about having the meat hung up instead of being thrown into the carts. Only last week I visited the Abattoirs, and suggested to several of the principal butchers the desirability of adopting the improved plan in use in Melbourne. Here the meat—perhaps some twenty or thirty sheep—is thrown into a cart, covered over with a cloth not at all too clean, and taken away with one and sometimes two men sitting on it. That can be seen any day in the week, and the only answer you can get when you suggest any improvement is: "It would be too expensive."

3373. That is the excuse for every abuse in this city—it costs too much to remedy it? Yes; some more improved system is imperatively necessary. The supply of small goods to Sydney from various quarters is something fabulous. I received a letter to-day from Mr. Tait, in which he informs me that from the Illawarra District alone in the year 1874 the number of calves and pigs—

3374. Full grown pigs? Yes; the total number of pigs, calves, and lambs (there were very few lambs) sent to Sydney was 19,800. In 1875 there were only 16,500. Mr. Tait expresses his opinion that the falling off of the supply in 1875 was due to the dry season, and to the fact that many persons come across the ranges and buy up the stock. That shows what one district supplies—the Southern District of Illawarra, including Wollongong, Shoalhaven, Kiama, down to Merimbula. A great deal of discomfort and inconvenience are at present experienced by persons attending the sales of stock at the different sale-yards and wharfs of the City, the places being at all times very filthy, and during wet weather exceedingly unpleasant from their exposed state. There is no doubt that a central sale-yard would be a great boon to the frequenters of these sales. I find, on inquiry, that the average weekly sales of stock in the City at the sale-yards and wharfs have been 1,600 sheep, 380 lambs, 895 pigs, 490 calves, and 50 cows. These have been received from the following sources:—

	Sheep.	Lambs.	Pigs.	Calves.	Cows.
By Railway	200	300	300
A. S. N. Company's Steamers ...	600	50	150	40
Illawarra Company's Steamers	120	120
Caledonian Wharf	30	200	30
C. & N. E. Company's Wharf	50
H. R. N. S. Company's Wharf ...	200	75
Other sources	800	100	50

This would amount yearly to the following numbers:—

Sheep.....	83,200
Lambs	19,760
Pigs	46,540
Calves	25,480
Cows	2,600

These figures do not include the number sent direct to the Abattoirs for slaughter, they merely represent the number sold within the city, at the wharfs and sale-yards. The number of all kinds of animals slaughtered at the Globe Island Abattoirs, per average week for the preceding six months, I find to be,—

Cattle	880
Calves	53
Sheep	6,000
Lambs	6
Pigs	360

which will show that there must be a good deal of clandestine slaughtering. We have no knowledge of what animals, or what numbers come coastwise or by rail, which may be slaughtered here. Persons attending the sales meet with a great deal of discomfort from the filthy state of the places at which they are held; and the establishment of a central sale-yard would not only be a very great convenience to them but might be made to pay a handsome sum in the shape of market dues. The centre portion of the Belmore Markets would answer admirably for this purpose. It would necessitate little if any expenditure, and could be readily kept clean and sweet. The closing of the present sale-yards would also do away with some abominable nuisances which now exist.

3375. Do you think it would be desirable at all events to compel the butchers to use the more improved meat carts adopted in Melbourne? Yes I do.

3376. Do you think that would obviate the necessity of having the small goods slaughtered in the city? I think they can be slaughtered in the city without the slightest inconvenience to the public, and as a matter of fact they are slaughtered now.

3377. We are all agreed that the present system must be put a stop to. The question is, what other plan shall be adopted—slaughtering within the city under proper supervision, or outside the city? I think it should be done in the city.

3378. And you think that would be a popular measure—that no outcry would be raised against it? I think not, if it were done under proper supervision.

3379. Of course we suppose that? I do not mean that the blood should be allowed to go into the harbour for instance.

3380. No, the blood and offal must all be taken away? Yes. I may mention that the present mode of slaughtering small goods clandestinely on the premises is an undoubted nuisance. Mr. Seymour has made a good many efforts to detect persons in the act. In one case, by breaking a hole in the plaster, he saw a man killing a lamb in his bedroom, and they will do this even at the risk of detection. For instance, a butcher having a small trade, who kills perhaps only three or four lambs in the course of the week cannot afford to employ a man and horse and cart, to pay the toll, and to incur the loss of time required to take them to the Abattoirs to be slaughtered; it does not pay him to do so, and he prefers to take his chance of being fined.

- B. Palmer, Esq.
14 Aug., 1876.
3381. *Dr. Alleyne.*] If a man cannot keep up a proper establishment he ought not to set up as a butcher? But we cannot prevent him, and there are so many small butchers.
3382. *Hon. J. B. Wilson.*] The large butchers do the same thing? Yes, and it is especially the case with the small butchers, whose requirements for Saturday's consumption do not exceed about four lambs; they cannot spare the time to go backwards and forwards to the Abattoirs.
3383. *Chairman.*] If a butcher is too far from the Abattoirs he should buy the carcasses already dressed? Yes, but they will not do that. I am sure these small goods can be killed in the city, under proper supervision, without any nuisance being created. Mr. Driver, who has to appear for the Council to prosecute these men, has told me over and over again that there are only about two clauses in the present Act which would require to be altered. You may see every day in different parts of the city one or two calves going into a butcher's shop, and whether they come out again calves or veal it is pretty easy to guess.
3384. *Dr. Alleyne.*] At all events in advocating that the slaughtering of small goods should be carried on in the city, you do not advocate letting anything in the shape of blood or offal go into the sewers? No. I may say that we have in view a magnificent site at the foot of Market-street West, near Sussex-street, now used as a metal depot. The entrance from Sussex-street is about 20 feet below the street level, and if the floor of the slaughter-house were constructed with a depression towards the centre, carts could be made to go under it, and all the offal and filth could be discharged direct into them, and the place could be cleaned out every day.
3385. *Chairman.*] So that nothing in the shape of offal or refuse would be allowed to accumulate? No, I feel sure we could get plenty of market gardeners to take it away at once. Then there is plenty of water laid on along the street, and the place could be flushed and kept thoroughly clean.
3386. *Dr. Alleyne.*] But no blood should be allowed to go into the sewer? No blood should be allowed to go into the sewer at all.
3387. *Chairman.*] If the place were flushed of course a certain quantity would have to go into the sewer? Yes, the washings of course would have to go.
3388. Then of course it would be necessary that the City Corporation should have power to license the places, and they would require strong powers to enable them to put a stop to private slaughtering? Yes, the fact of having one of these animals on the premises should be sufficient for a conviction; the fact of a lamb, or pig, or a calf being found should be evidence of private slaughtering.
3389. Or the presence of the blood and offal? Yes, we frequently see animals going into a butcher's shop, which are never seen to come out again.
3390. The butchers themselves do not deny the slaughtering? No. Of course I would not be so strict as to say that a man is not to kill a sucking pig on his own premises; that would be drawing it a little too fine.
3391. *Dr. Alleyne.*] I would not even allow that. A man has no right to keep sucking pigs on his premises in the city.
3392. *Chairman.*] Would you allow a butcher to have a number of sucking pigs on his premises? No—I am speaking of private persons. The place I have referred to, at the foot of Market-street West, is suitable in every way; it has good drainage; can be well supplied with water; there are no dwellings near it, and it is close to one of the wharfs—it is near the Illawarra wharf, where such a number of pigs and calves, and lambs, are landed for city consumption, and contiguous to other wharfs.
3393. What would be done with these animals while they were waiting to be slaughtered? Well, all these small goods, as a rule, are sent to be slaughtered at a certain time, generally on Fridays for Saturday's consumption.
3394. But they must sometimes accumulate so that there are several days supply on hand? No, very rarely. They arrive here usually on Thursday, and are killed on Friday night, so as to be hung up for sale on Saturday.
3395. Of course any one might come and bid for them and take them away? Yes, that would be a matter of speculation. I think the plan I have suggested would be the means of preventing slaughtering on private premises.
3396. Can you tell me the date of the Slaughtering Act now in force? I cannot remember.
3397. It is an old Act, I believe, which was passed about the time the Abattoirs were erected? I think so.
3398. Supposing you could get the meat delivered in town from the Abattoirs in good condition, would you still think it desirable to slaughter the smaller animals in the city? Well you see lamb and veal must be dressed to please the eye as much as anything, and it is found that if it is carted for such a distance along the road it is not in a saleable state.
3399. Even if carted in improved conveyances? No; from the information I have obtained I understand that the butchers would rather chance the penalty than go such a distance.
3400. What is the difference in the distance the meat has to be carried in Melbourne—how much further is it than from Glebe Island to Sydney? I really cannot tell you the exact distance; the place was pointed out to me, but I did not go near it.
3401. The Melbourne abattoirs are considerably nearer? Oh, yes. The abattoirs in Melbourne belong to the Corporation, and everything is done under the inspection of their officers, and the meat is sent direct from the abattoirs to the meat market. They have no carcass butchers as we have here. At the sale-yards the animals are put up to auction in lots, of (say) 50 or 100 sheep or more, and bought by the butchers, who perhaps join together in buying a lot. The sheep are then sent to the abattoirs, and slaughtered under the inspection of an Inspector of Food, who sees that the meat is fit and proper for use, and then they go to the meat market, where any person can go and buy a pig or a lamb, or a side of beef or a sheep, which you cannot do here.
3402. But do not the butchers take the meat to their own shops? They can if they choose. But here a very different practice is adopted. The carcass butchers buy the cattle on the road, and the retail butchers purchase from them, and what with the agent, the auctioneer, the carcass butcher, and the retail butcher, the meat goes through four persons hands before it gets to the customer. Now in Melbourne the producer and consumer are brought much closer together in consequence of the establishment of this market sale-yard. In Melbourne if you have 100 head of cattle to sell, instead of employing an agent you can send them to the market.
3403. Now, supposing a man had 1,000 head of cattle in Melbourne, how would he dispose of them? He would never think of putting them up for sale in one lot. He would put up (say) 100, and several small butchers would join and buy them, so that his cattle would be sold in small lots at different times.

3404. One of the principal butchers here confessed that when sheep were so plentiful that the market price was likely to go down, they preferred to boil them down;—don't you think something should be done to remedy such a state of things as that? Yes.

B. Palmer,
Esq.

14 Aug., 1876.

3405. Don't you think the present system unduly favors the carcase butchers? I do. Now that we have got the Belmore Market, the auctioneers and the Butchers' Association have induced us to erect some pens there for the sale of calves and lambs so as to prevent them being exposed to the weather. We have only had three or four sales there, and now I see the auctioneers for some cause or other have risen the price from 2 or 3 to 5 per cent.

3406. You mean the fees for slaughtering? No; the charges for selling.

3407. What is the general opinion with regard to slaughtering—not, only in respect to small goods but to the larger animals? I have really not heard any general opinion expressed about it.

3408. I mean in a general way as to the continuance of the Abattoirs in their present position, or as to their removal to some other spot; many people think they should be established somewhere up the line? I do not think that is necessary if they are properly managed. I think, however, they should be under the control of the City Council.

3409. *Hon. J. B. Wilson.*] I find that the Slaughtering Act was passed in 1850, 14 Vic. No. 30, and it appears to me that its provisions already meet the case. Clause 2 states:—"And be it enacted that it shall not be lawful for any person to slaughter, skin, scald, or dress, or cause to be slaughtered, skinned, scalded, or dressed, any animal in any house or place within the limits, or reputed limits, of any city or town to which the provisions of this Act shall be extended as hereinafter provided, other than in such slaughter-houses or places for slaughtering as are now licensed and shall continue to be licensed under the provisions of the said recited Act. And every person who shall so offend shall forfeit and pay on conviction for every such offence any sum not exceeding £10?" Then you would have to fine the butchers every day in the week, because it is a very common thing to see calves hanging up with their skins on.

3410. *Chairman.*] The question is what is to be considered *prima facie* evidence of slaughtering; if you find a dead calf or the skin of a calf on a man's premises, he should be compelled to prove how he came by it? I think the present Act would work very well with a slight alteration. Mr. Driver has told me that only about two clauses would require amendment.

TUESDAY, 29 AUGUST, 1876.

Present:—

HON. J. B. WILSON,

DR. ALLEYNE.

M. B. PELL, ESQ., B.A., IN THE CHAIR.

Thomas S. Mort, Esq., called in and examined:—

3411. *Chairman.*] We are making some inquiries, Mr. Mort, as to the expediency of removing the Abattoirs from their present situation at Glebe Island, and of course we could not recommend their removal without suggesting some other place, or some other arrangement altogether. It is advocated by some persons that a suitable place should be selected along the line of railway at a certain distance from town. That would involve a good many questions in which you might assist us with your advice. We should like to have your opinion, in the first place independently of any artificial process of meat preserving, whether there would be any practical objections to establish Abattoirs along the line of railway—say at a distance of 40 or 50 miles from Sydney? My opinion is that the Abattoirs should be taken as near to the pastures as possible; and that as the railway extends, the Abattoirs should be pushed on further.

T. S. Mort,
Esq.

29 Aug., 1876.

3412. Do you think the meat, without being subjected to any freezing or other process, could be brought into town in good condition from a distance of 50 miles? I will not say it could not be brought in from a distance of 50 miles, but to get over the mountains you would have to go 100 miles.

3413. Some persons are in favour of establishing the Abattoirs at Penrith;—do you think it would be practicable to bring meat from such a distance as that? I do not see that there would be any advantage in having the Abattoirs at Penrith; the hardship of getting the cattle over the mountains would still have to be endured.

3414. There would be the advantage of getting the Abattoirs removed from Sydney. Do you think the meat could be brought in in good condition from Penrith? Not during the summer certainly without artificial cold—say a temperature of about 50°.

3415. I have heard it stated that the tremulous motion caused by railway carriage causes the meat to decay more rapidly;—are you aware whether that is the case? Yes, if the meat be not thoroughly set before being conveyed along the line.

3416. In a natural way? Yes, that is to say, by allowing what the butchers term the breathing of the beast. If that be done to the extent of thorough stiffening not the slightest injury will be done to the meat during travelling, except what will be due to temperature.

3417. And it is not possible to do that in very hot weather? Certainly not, except by artificial means, unless the weather be cool.

3418. We are told that in London meat is brought in from a considerable distance—I suppose there they adopt some artificial process? I believe it is only carried for any long distances in cool weather. I may mention, if you will allow me, that an attempt was made in Sydney recently by Mr. Playfair, to bring meat from Brisbane. The vessel in which it was shipped made a quick passage and the weather was cool; but he told me that out of ten carcasses four were bad.

3419. They came by steamer? Yes, recently and during cool weather. There are a great many places in the country where meat goes bad in a few hours in the summer time.

3420. Then you would not recommend, independently of any artificial process for preserving the meat, that the Abattoirs should be removed to a distance of 50 miles from Sydney? I do not see that any good whatever would arise from it, except in regard of nuisance to Sydney, for I am quite confident that the meat could not be carried even any ordinary distance in warm weather unless some means of cooling it were

T. S. Mort,
Esq.
29 Aug., 1876.

were used. At Home the question of carrying meat has been the subject of many experiments and considerable expense. Ackland's Refrigerating Trucks were invented for the purpose of cooling the meat, but I believe that they have not found favour with the public. These trucks or carriages are made with perforated zinc on the inside and outside with felt between, and water is applied to the felt from the top. A reduction of the temperature by evaporation is thus obtained to the extent of about 10 degrees. That has been obtained in England under great climatic advantages, but in this country an equal reduction could not be relied upon, because here the atmosphere is often at the full point of saturation, especially in summer when the north-east winds prevail, and will not take up any more moisture; and as you are aware, unless you can present an atmosphere capable of carrying more moisture than it then holds you cannot reduce its temperature. In England a reduction of 10° may bring the temperature down to a point at which meat keeps pretty well, but a like reduction would be of little service in Australia, knowing as we do that fermentation is active at 60° to 65° below which we could seldom expect to see it in summer time, after allowing for a reduction of 10°, which for the reasons I have just given could not be relied upon.

3421. Do you think that for the health of the inhabitants it is desirable that the Abattoirs should be removed from their present situation—do you consider them a nuisance? I think the Abattoirs are unquestionably a nuisance, inasmuch as they produce unpleasant smells; but I do not think the smells from animal substances are injurious to health. There was a book published some time ago on the subject which does not bear a very pleasant name; it is entitled the "Philosophy of Stinks," in which I remember it is shown that in the neighbourhood of the knacker-yards and slaughter-houses the health of the inhabitants was generally good, and the children thriving and rosy-faced. The great disadvantage of having the Abattoirs in Sydney in my opinion is the cruelty to the cattle and the injury to the meat. I consider that most of the meat we eat is in a diseased condition.

3422. Then it would be an improvement to remove the Abattoirs to Parramatta—there is better pasture for the cattle there? I do not think you would get over the difficulty in that way, as you would not prevent the injury done to the cattle by crossing the mountains.

3423. Still it would be an improvement? I do not think the improvement would be appreciable. In my opinion nothing short of the other side of the mountains would be an improvement. It would be better to allow the Abattoirs to remain where they are than only to remove them so short a distance, because there is an advantage in having them in Sydney which would not exist if they were removed to Parramatta, as a large amount of stock is brought in coastwise, for which the present Abattoirs are convenient.

3424. Not cattle or sheep I think so much as small goods? A large number of sheep come in that way.

3425. *Dr. Alleyne.*] Yes, but that only occurs once in five or ten years; we have never had so many sheep brought in coastwise before? No; but I think you will find the number increase as fencing and other impediments to the travelling of stock present themselves.

3426. *Chairman.*] Will you be so kind as to explain what you think would be the best plan to adopt altogether? Well, my own opinion is pretty strongly evidenced by the work which I myself have undertaken.

3427. Yes, but we should like to have your opinion formally in evidence; perhaps you will be good enough to supply at your leisure a written answer to my question, giving your views in more detailed form? I am of opinion that the stock ought to be killed as near to the pasturage as possible, and for the following reasons:—

- 1st. That the dreadful cruelty may be done away with of allowing the animals as at present to die a lingering death prior to their being absolutely killed.
- 2nd. To avoid the deterioration in the quality of the meat, which must be a consequence of the way in which stock is at present treated.
- 3rd. To prevent the great waste in weight of meat during the long travel to market and whilst awaiting slaughter.
- 4th. To do away with the nuisance and inconvenience of slaughtering in the neighbourhood of a large population.
- 5th. In order that the blood and other refuse resulting from the slaughtering of large quantities of stock may be utilized on the lands near to where the stock is killed, in order to supply first quality pasture for any stock which may arrive at the Abattoirs in excess of the immediate demand.

In support of my first reason I am sure I need only give the evidence of Mr. Thomas Dawson, the well-known stock agent. That gentleman states in a letter recently made public—

"I am fully cognizant of the great suffering of the stock in being driven to this market, through ill-usage and over-driving through a mountainous barren country for the last 150 miles, arriving at the sale-yards footsore and starved, and then paddocked where there is not a mouthful for them to eat, perhaps for a day or more, after three weeks' previous starvation; and then on the morning of the sale drafted in yards up to their bellies in mud; and it is not an unusual thing to see them bogged in the middle of the sale-yards, and have to be dragged out with horses and men. They are, after the sale, driven in small mobs, with dozens of dogs at their heels, along a hard metalled road to the slaughter-houses, or to the paddocks thereabouts, where they are often kept for days before being slaughtered without food and often without water. It is well known by practical men that when cattle or sheep become footsore on the road and have to continue travelling, they lag behind in the mobs, as the case may be, on the road, the drivers' dogs continually heeling, viz., biting them, to keep them up with the others, till their hind legs become a mass of sores from the heel to the hock."

Mr. Dawson's statement can be corroborated by many, and has not been contradicted.

As regards my second objection to killing in Sydney, I need only call attention to the difference in the flavour of meat killed on or near its pasture and that supplied in Sydney. This difference arises largely through the loss of those salts which go to form flavour and which are drawn upon by the animals whilst in a state of semi-starvation, and only replaced with water, which renders the meat tasteless and makes it undesirable for salting or preserving, whilst for preservation by freezing I am of opinion it is to be avoided altogether. But outside this deterioration in the quality of the meat is the question of its fitness for consumption. On this point Mr. Dawson says that many of the cattle on arrival at the abattoirs "are in a high state of fever and unfit for human food."

I am aware that it may be urged that the evils of travelling may be overcome by availing of the railway for carrying the live stock to Sydney; but this mode will be found costly, whilst the injury done to the meat by fright and the loss in weight by fret will upon inquiry be found to be very serious. In support of this I may state that in evidence given before a Committee of the House of Commons some years ago it was shewn that a bullock suffered a loss in money value of £5 on the journey by rail from Scotland to London. In travelling in this Colony the waste is estimated at about 10 per cent. on the weight

weight of the animal in coming the last 100 miles, that is from the other side of the Blue Mountains. Mr. Dawson considers the loss to the Colony in this way on stock killed in Sydney is about £105,000 per annum, and our Chief Inspector of Stock even goes beyond those figures, and as they base their estimates upon a practical knowledge of the subject their data ought to be reliable. Still the evils which attach to killing in Sydney would be to some extent overcome if sale-yards were established on the Bathurst side of the mountains on the line of railway, such yards to have all appliances for getting the stock into the trucks with as little injury as may be. This would mainly put an end to the wretched cruelties which the stock now suffer between Lithgow and the slaughter yards in Sydney, and would moreover combine many advantages over the system of droving to Pymont; amongst others the grazier would have a market 100 miles nearer to his station, making him much more independent than if he had to travel his stock to Sydney over that wretched and expensive portion of the journey—the butcher, by himself or his agent, could be sure of a regular supply of good stock at first hand—the consumer would have the benefit if not of the very best at any rate of an improved quality of meat, and the Treasury would reap the advantage which would flow from an increased traffic upon the line. If abattoirs were erected in proximity to the yards the cattle could be slaughtered and the meat itself sent down for at least a third of the year without any artificial means being employed, and it would be easy for the Government to make arrangements for providing artificial cold for the other portion of the year, which the traffic on the line resulting therefrom would pay them to do, but even if it did not the country would be well repaid in other ways for any extra cost incurred therein.

T. S. Mort,
Esq.
29 Aug., 1876.

I attach very great importance to my fifth reason for killing away from Sydney, as it must be self-evident that nothing could tend to regularity of supply and excellence of quality, as well as saving of loss to the producer, and so collectively to the Colony at large, more than a good acreage of well cultivated grass lands in the neighbourhood of the Abattoirs. The blood and other refuse, at present the fruitful source of an offensive nuisance, might thus be utilized as produced, and being employed on the spot, under an inexpensive manipulation, and at a nominal cost for transport, the most profitable results might be ensured, as the producer could afford to pay well for the temporary use of feeding grounds, which would so effectually protect him against the heavy loss he might otherwise be subjected to.

3428. There is one point which I do not profess to understand very well, upon which a good many persons are not quite satisfied, and I should like to have your opinion upon it: It is said that meat which has been subjected to the process of freezing will not keep so long after thawing as ordinary fresh meat—that directly it thaws it commences to decay rapidly. Is that your experience? If it be frozen in a climate where cold is the existing condition, it can neither be what the butchers term properly breathed or properly bled. The consequence is that a very large amount of both water and blood is left in it; so much water in fact is left in it as, in the opinion of some, serves when that water is frozen to create a rupture of the cellular tissue. We all know that where water and blood, or water and albumen—and of course the albumen is one of the main constituents of the blood—come together, decay is very rapid. All meat killed and kept in a naturally cold climate is also more or less exposed to thaw during the winter, and whenever a thaw takes place a certain amount of progress towards decay goes on through what the chemists call molecular motion. All these occasional thawings added together amount to something really important at the end of the winter; and the elements of decay being in the animal in excess—that is to say, there being a large amount of water and albumen in excess of what there would be in meat killed in a temperate climate, decay is found to be the consequence very shortly after thawing, and thawing in water is resorted to in Canada and Russia in order to effect that object rapidly. After thawing in water the flavour is lost, and the meat is depreciated in quality. But if meat be properly killed in a temperate climate, properly breathed and bled, and allowed to stiffen thoroughly before it be put into the truck for carrying away, and if afterwards it be kept rigid by the action of cold, so that all movement be absolutely prevented—that is to say, movement of the particle—the meat will keep quite as long after thawing as it would if it had not been frozen, and no change whatever will have taken place in its structure.

3429. Does not the freezing process tend to rupture the tissues of the meat? Not if it be properly killed and breathed and allowed to stiffen. So far as I have been able to ascertain by the closest examination of the meat itself, no such change takes place, or if at all, only in over-driven half-starved meat. Any one can very easily satisfy himself of this practically by having some meat frozen in the rooms of the Fresh Food and Ice Company.

3430. I have been told that you attach great importance to the gradual freezing of the meat—that you avoid sudden freezing;—is that the case? We prefer to cool down to 32° in what we call our cooling room before we put the meat into the freezing room, so that the expansion of the juices may be as gradual as possible; of course water is at its normal condition at about 40° Fahrenheit, and it expands as it reaches 32°. It is possible that afterwards in the formation of the crystal there may be some further expansion, but not much.

3431. *Dr. Alleyne.*] I did not quite understand you when you spoke of the cattle being breathed. I should suppose that when the animal's throat was cut, he must bleed whether he were killed in a hot or a cold climate? No, the blood would not flow away in a cold climate so freely as in a warm one.

3432. It must go away so long as the action of the heart continues? Certainly, to some extent, but it coagulates with intense cold at the outlet, and thus prevents the free flow. The breathing to which I refer is after the beast is skinned and hung up; in a freezing atmosphere the pores would be frozen up immediately, and none of the moisture could afterwards escape.

3433. I suppose you mean a breathing from the carcase similar to that from a horse that has been hard ridden—in short, a natural evaporation? Yes, but in a cold climate when the animal is killed the evaporation is checked by the pores becoming frozen up. This effect is so well known in Canada that when they want to get good meat they kill in slaughter-houses heated artificially.

3434. *Hon. J. B. Wilson.*] Do your remarks about animals being slaughtered at a considerable distance from Sydney along the line of railway, that is to say, near their natural pasturage, apply to lambs and calves? We are considering the propriety of putting a stop altogether to the slaughtering of these animals in the city and suburbs. I should like therefore to ask you whether the same method can be made to apply to calves and lambs as well as to bullocks and sheep? Unquestionably.

3435. Would the butchers accept the meat of calves and lambs brought down from such a distance? If properly treated as I have described they could not perceive any difference in it.

3436. Could it be brought down from that distance in as good condition and to present as good an appearance in the shops? Unquestionably.

3437.

- T. S. Mort, Esq. 3437. *Chairman.*] The butchers tell us that the meat is not so good—does not look so well—if it is killed at the Abattoirs? If the meat is properly killed and stiffened in a cool temperature it can be brought in quite as well, always supposing that cleanliness in its transport be observed.
- 29 Aug., 1876. 3438. They say that there is a greater difficulty in transporting lamb or veal? I cannot see it; but I do not see any objection to the killing of lambs and calves in Sydney—that is, in the port of Sydney—as so many of them come coastwise.
3439. *Hon. J. B. Wilson.*] Do you see any objection to the establishment of a regular slaughter-house, to be carried on under proper supervision in Sydney—say somewhere at the head of Darling Harbour, where lambs and calves only should be killed? I do not see that there need be any difficulty about it.
3440. *Chairman.*] You think it might be done? I do. We know very well that in England there are pork-curing establishments, where they kill in the very centre of large populations great numbers of pigs, and I am told that no one even knows that the operation is going on, and that there is not the slightest nuisance created. But nuisance or no nuisance, I consider an abattoir for killing stock of every description which may come in coastwise, or from places in near proximity to Sydney, ought to be provided. It is not to the killing in Sydney that the great objection ought to be taken, but to the cruelty, loss, and deterioration by driving over our barren mountains. A compact building for killing within four walls, with good chimney and artificial draught, would not be very costly, and if placed in the centre of a small acreage of tolerable land the whole of the washings and manure might be profitably used in producing green food which, with the fresh offal, might be turned into excellent pork. A small steamer could carry all the meat to the city.
3441. How is the offal disposed of in England—is that sent away any distance? They utilize the offal at Home which we do not here.
3442. Do they send it any distance? No, I believe they utilize it chiefly in their immediate neighbourhoods.
3443. Did you ever take into consideration in connection with your Abattoirs the question of turning the offal to account? I have made careful inquiries on the subject. A Mr. Ihrmann, an eminent chemist, who came from the Mauritius on behalf of Messrs. Souchon and Co., who are chiefly engaged in preparing artificial manures for the sugar planters, came here to see if he could make arrangements for obtaining refuse of this kind, but he failed to show me any process by which I could make it pay for export, and there is no demand for it here because the farmers will not use it. If you were to put it on their land I believe they would scarcely take the trouble to make use of it.
3444. There appears to be a large demand here for bone-dust? Yes, I think that must be principally for the orchards and not for ordinary farming. It is also exported as super-phosphate of lime for the sugar plantations in the Mauritius, where it is mixed with other substances, according to what the soil may be deficient in.
3445. A great quantity is sent to New Zealand I believe? Yes, they use a good deal there. I commenced some time ago the manufacture of sulphate of ammonia, but I have not been able to find a demand for it, or to get my money back, although it ought to be an excellent article of export. The freight and charges kill it.
3446. It is a natural production in some countries is it not? I think not, in merchantable quantities.

THURSDAY, 21 SEPTEMBER, 1876.

Present:—

HON. J. B. WILSON, | G. F. DANSEY, Esq.,
 | DR. ALLEYNE.
 M. B. PELL, Esq., B.A., IN THE CHAIR.

William Lamb, Esq., M.B., called in and examined:—

- W. Lamb, Esq. 3447. *Chairman.*] You have had some experience, I am told, in the state of health at present existing at
 M.B. the Surry Hills? Yes.
- 21 Sept., 1876. 3448. Do you think the sickness which exists there is at all owing to the state of the drainage? I should form that conclusion from the fact that in a family I have attended, the father and three children are suffering from typhoid fever. The children have recovered, but the father has just had a relapse, and is very ill again. The state of the back premises is very bad; there are four privies over common cesspits within 10 feet of each other; the privy used by this family is the same as that used by the "Exchange Hotel" adjoining.
3449. Are those houses subject to the influence of the large open drain which runs through Surry Hills from the head of Shea's Creek? That I cannot say.
3450. You think the proximity of these cesspits makes them unhealthy? Yes.
3451. Are you aware whether the open drain to which I have referred affects the health of the inhabitants of that district? I cannot say. I had also a case at No. 103, Albion-street, Surry Hills, and I have one now in Little Bourke-street, which is also in Surry Hills, of a similar character.
3452. All typhoid fever? Yes.
3453. Is the state of health existing there now worse than it has been, or has it been constantly bad? I cannot say; I have only been here for a few months.
3454. Have you heard that Surry Hills is an unhealthy place since you came to practise here? Yes. I had occasion to see Dr. Spencer in regard to the family I have mentioned (Mr. Pawley's), and he said that Surry Hills was formerly considered to be one of the most healthy suburbs of Sydney, but that now he considered it the very opposite.
3455. Have you heard any other medical man express a similar opinion? No.
3456. *Hon. J. B. Wilson.*] Have you had any opportunity of paying attention to the appearance of the inhabitants of Surry Hills generally, I mean more especially with regard to the younger portion of the population? I cannot say that I have.
3457. You have not taken sufficient notice to be able to form any opinion as to the general state of vitality among them? No; I did not take notice of that. I merely mentioned to Dr. Dansey the fact of this family of four persons being down with typhoid fever, which is supposed to be due to bad drainage and contaminated water; I thought it my duty to mention the matter to him as the City Health Officer, and that is all I have to say about it.

G. F. Dansey, Esq., City Health Officer, examined in his place:—

3458. *Chairman.*] Can you give us any further information? From what I have heard from several G. F. Dansey, medical men, the state of health at Surry Hills at present is very low. Esq.
3459. As compared with other portions of the city? Yes.
3460. Do you think it is worse than it has been? Well, it has not lately been so bad as it was last 21 Sept., 1876. summer, but I fear that when the hot weather sets in it will be quite as bad, if not worse.
3461. It is increasing? Yes.
3462. Does the sickness follow the line of that open drain? Yes. This morning the Inspector of Nuisances visited that portion of the district which would have been drained by the proposed sewer, and he found that the filth which is derived from the houses along the line is something frightful. Scarlet fever has also broken out at Surry Hills again.
3463. In short there is every reason to believe that what happened there last year will happen again this year? Yes.
3464. *Dr. Alleyne.*] The state of things at Surry Hills then has not been improving since we visited it together some months ago—about four or five months? No, nothing has been done to improve it.
3465. *Chairman.*] The drainage is in the same state as it was when this Board first sat? Yes. I consider it a highly unhealthy place to live in, and I would not advise any one to live there.
3466. Are you aware that rents in that part of the city are considerably depressed? I was not aware of it; but I am not at all surprised. I tell every one not to go there.
3467. You are, of course, aware that the Parliament refused to vote the money for a sewer there in spite of the urgent representations made by this Board, and in other quarters? Yes.
3468. Do you think that sewer would have materially remedied the state of things now existing? That is my belief; it would have altogether altered it, as I mentioned in my last report to the City Council on the 9th instant.

MONDAY, 2 OCTOBER, 1876.

Present:—

HON. J. B. WILSON, | C. WATT, Esq.,
DR. ALLEYNE.
M. B. PELL, Esq., B.A., IN THE CHAIR.

Patrick Keelan, Esq., R.N., Staff Surgeon on board H.M.S. "Sappho," called in and examined:—

3469. *Chairman.*] I understand you have had a suspicion that there must have been some impurity in the city water which has led to the occurrence of typhoid fever on board the "Sapphire"? I cannot speak at all positively about it, as the men were not my patients, but I have seen them since in the hospital. It appears that they were taken ill some days before the "Sapphire" left Sydney, and the typhoid fever showed itself in the persons of these men the day before she left. They were sent to the St. Vincent's Hospital, where they are now convalescing. I inquired of these two men where they had been while on leave, and one of them stated that he had been at the Goodenough House, and also at an hotel in the lower part of the city.
3470. Some low public-house? Probably; he could not tell me the name of it. The other had been at a place called the "London Tavern."
3471. You think it quite possible that they may have caught the fever on shore independently of the water? It is quite possible.
3472. They were on shore on leave? They had been.
3473. How long had the ship been here? The "Sapphire" had been in Sydney about five weeks. The reason that letter was signed by Captain Digby is because he is the senior naval officer here, acting under instructions from the Commodore. I have analysed the water from Fort Macquarie myself lately, and I found nothing wrong with it. My own ship's company are all well at present.
3474. Are you aware that Dr. Messer sent me a letter some six months ago, asking me whether in my opinion the Sydney water was fit for use? No, I am not aware of it.
3475. My reply to that letter was that the circumstances likely to pollute the water were reduced to such narrow limits that I thought there could be very little danger in using it; but I was not prepared to state positively that it was safe to use it, and that if he had any doubts on the subject he had better use distilled water? As far as the "Sappho" is concerned, I considered from the analysis I made lately that it was quite safe to use it. But the contamination may be intermittent, because, fourteen months ago, I analysed the water with a different result, and recommended the captain not to allow the men to use it.
3476. That was fourteen months ago? Yes, about fourteen months, when we took two men here from Adelaide with typhoid fever contracted there.
3477. It was about eighteen months ago that typhoid fever broke out on board the ships of war in this port, and we then analysed the water and found it perfectly good, but as you say the pollution may have been intermittent? Yes, and the men while on shore may drink water from other sources.
3478. As a rule the men-of-war use the water entirely from Fort Macquarie? Yes, when not using distilled water.
3479. *Hon. J. B. Wilson.*] Can you tell us how often, and for what length of time, men-of-war's men get leave while in this port? Some get leave every night, some twice a week, and others once a month. The daily leave is about eighteen hours; the weekly, the same; the monthly leave is thirty-six hours.
3480. In fact the men spend a great deal of their time on shore, when the officers have no control over them? When a man is on leave, so long as he does not infringe any regulation he is of course perfectly independent.
3481. So long as he returns perfectly sober nothing is said about it? No.
3482. You say that all your men now on board are perfectly healthy? Yes, there is no zymotic disease on board.
3483. How long have you been here? Since the 21st August last.

P. Keelan,
Esq., R.N.
2 Oct., 1876.

MONDAY, 9 OCTOBER, 1876.

Present:—

HON. J. B. WILSON, | C. WATT, Esq.,
DR. ALLEYNE,

M. B. PELL, Esq., B.A., IN THE CHAIR.

Archibald Liversidge, Esq., Professor of Geology, University of Sydney, called in and examined:—

- A. Liversidge, Esq.
9 Oct., 1876.
3484. *Chairman.*] We have asked you to come here to-day, Professor Liversidge, to give us some evidence respecting an inquiry upon which we have some idea of entering—the adulteration of articles of food and drink. Can you tell us anything about your experience in England as to the difficulty found there in carrying out the Act? I am afraid I cannot give you any very definite information upon that point, and lately there have been various changes in the Act.
3485. Can you state how it worked at the time you were in England? I know there were difficulties in carrying it out.
3486. What was the nature of those difficulties? I cannot tell you exactly what they were; but I believe the Act was found to work with difficulty from various causes.
3487. Did they arise from differences among the chemists, or from a difficulty in finding out the adulteration? No, that was not the difficulty.
3488. Were the results of the chemical analyses suspected by the public? No, that was not the reason. I am afraid I cannot give you any definite information on the subject. I know that the Act was found unworkable, and it was necessary to make some alterations. I believe it was in a legal rather than a scientific point of view that it was deficient.
3489. Do you think there would be any difficulty in finding out whether articles of food were adulterated with improper ingredients? No; under ordinary circumstances there would be no difficulty on that score.
3490. Would there be sufficient unanimity on the part of the chemists in giving the results of their analyses to prevent any distrust on the part of the public? I think so, among chemists of standing. There was, I believe, some difficulty at first; some persons were appointed as Borough Analysts who did not possess the requisite experience, but I do not think that with chemists of repute there would be any difficulty on that score.
3491. Would an analytical chemist of ordinary education be competent to conduct these investigations, or would any special training be necessary? He must have experience.
3492. He would require special training in that department? Yes, either by holding office as assistant to a competent person, or by special education and study.
3493. Is the work of food analysis considered a difficult branch of chemistry? Not particularly.
3494. Competent chemists, then, would have no difficulty in gaining the necessary experience? Decidedly not. I think that if an Act were passed here, based upon the present English Act, with certain necessary alterations, there would be no difficulty in working it.
3495. *Hon. J. B. Wilson.*] Do you think the lactometers used for testing the quality of milk afford a satisfactory test? Up to a certain point they do.
3496. Could you base a prosecution upon such test? I do not think a prosecution could be made, except after a complete analysis of the milk so as to show the proportion in which its different constituents are present.
3497. *Chairman.*] You say that the common lactometer is only reliable up to a certain point? Yes.
3498. Do you mean that it only gives a general idea whether the milk is pure or not—Does it show the specific gravity of the milk? Yes, but the specific gravity of milk varies from different cows, and also from the same cow at different times. Milk might be largely adulterated, and yet conform to the common lactometer test.
3499. If the milk were adulterated with water to any considerable extent, it could be sworn to? Yes; provided the milk was not at the same time further adulterated in other ways.

WEDNESDAY, 11 OCTOBER, 1876.

Present:—

HON. J. B. WILSON, | C. WATT, Esq.,
DR. ALLEYNE.

M. B. PELL, Esq., B.A., IN THE CHAIR.

Archibald Liversidge, Esq., called in and further examined:—

- A. Liversidge, Esq.
11 Oct., 1876.
3500. *Chairman.*] I have asked you to come here again, because I thought as you have recently been in England you might give us information upon some further points. We have it in evidence that it is quite possible to conduct slaughtering operations, even in inhabited places, under proper supervision and management, without creating any nuisance. Can you afford us any information as to the state of things in England in this respect? No, I am afraid not.
3501. We also propose to inquire into the subject of trades which give offence in inhabited places, such as tanneries for instance. We have had complaints of excessive nuisances caused by tanning operations here. Are you aware whether trades of that nature are carried on in England, under good management, so as not to create a nuisance? I do not know at all. I have not heard that they are conducted in such a way as not to give some offence.
3502. I remember as a boy that tanneries were carried on in densely populated districts without creating the slightest nuisance; in fact there was one within a few hundred yards of a place I was living in, in England, from which there was no offence whatever beyond the smell of the tan. I imagine that some new process has been recently adopted which makes the operation offensive. We have it in evidence that at a tannery in the neighbourhood of Sydney, the nuisance is not by any means created by the hides, but by the excessively offensive materials used in the process of tanning. I want to know whether it has been

been the common practice for any length of time to use this offensive material. (*To Mr. Watt.*) A. Liversidge, Esq. Perhaps Mr. Watt will be able to answer that question. (*Mr. Watt.*) The nuisance arises from more than one cause. It arises from the stinking condition of the hides, and from one of the materials employed, called "pewer." That material, or some material of a similar kind, has always been used. 11 Oct., 1876.

3503. *Chairman.*] I understand that this offensive material is used for the purpose of tanning some superior kind of leather? I believe it is chiefly used for enamelled or embossed leather. The nuisance arising from a tannery, as I know from my observation of a tannery at Parramatta, is spasmodic: it occurs when the vats are stirred up.

3504. (*To Professor Liversidge.*) Then you cannot give us any information in reference to the way these offensive trades are conducted in England? No, I cannot say anything definite about them; it is a subject with which I am not at all conversant.

3505. You have never paid attention to the question of tanneries? No.

Charles Watt, Esq., Government Analyst, examined in his place:—

3506. *Chairman.*] I understand that you are in a position to give us some information respecting the deleterious adulteration of confectionery, especially that which goes by the name of "lollies," by means of colouring matter, in the city of Sydney. In what cases does this adulteration exist? Are you speaking now with reference to lollies made in the Colony, or only sold here? C. Watt, Esq. 11 Oct., 1876.

3507. Either made here or sold here; you can divide them into two classes if you like? I can only say, that all the poisonous ingredients used in other places are found in the lollies sold here.

3508. What are the poisons? Speaking of eatable lollies, I may say that chromate of lead and oxide of tin, with a vegetable coloring substance, are chiefly used.

3509. Are no compounds of copper used? No, I do not think so.

3510. How do they obtain the green colour—is not copper used for that? I think not; I have seen very little green in eatable confectionery.

3511. Do you think the colouring with oxide of tin is objectionable? That is a question which I leave entirely to the medical profession.

3512. Have you found any difference between the imported confectionery and that which is made here? Not much. I may mention that the chief manufacturer of confectionery in Sydney has expressed his willingness to discontinue the use of all these colours, which he has hitherto considered harmless, if the Legislature will prevent the sale of imported articles similarly coloured. I may state that the blue used is the common Prussian blue—a compound of cyanogen and iron, which may be injurious; the red is all cochineal.

3513. There would be no difficulty, you think, in preventing the sale of these pernicious colours? I do not think so. There are a great many colours used for other purposes besides edible confectionery—for ornamenting wedding cakes, for instance—but they are merely for show, though they may sometimes be eaten. I have examined a good many of these ornaments, and found them to be mostly made of raw flour, or plaster of Paris, or chalk.

3514. Are they harmless? I would not say that, but they are not generally considered poisonous except in regard to the coloring agent.

3515. *Dr. Alleyne.*] I should hardly consider plaster of Paris harmless. Anything that goes into a man's stomach, and does not do him good, is not likely to be harmless? Perhaps not. I have prohibited the use of all these things in my house.

3516. *Chairman.*] Is plaster of Paris used in the manufacture of lollies to any extent? No; I have found chalk and raw flour used to a considerable extent some time ago. I am not speaking of lollies manufactured here.

3517. Do not these extremely hard lollies—imported ones especially—contain plaster of Paris? No, I think not; I think flour is used frequently; I am not very sure. That is a point which Dr. Alleyne can speak to—whether raw flour is a wholesome thing to be given to children. At present I have no means of ascertaining whether articles of confectionery are imported or not. Unless I can get them from the Customs direct I cannot tell; but I shall shortly be able to know.

3518. Is there anything further you would like to say on the subject of adulteration generally? I may state that the English Act of 1872 failed for two reasons—it did not define what was meant by adulteration, and it did not define what was meant by food. The last Act passed in 1875 repealed that and all previous Acts, and I think any legislation for this country should be based upon it.

3519. All these Acts are embodied in one now? Yes. I believe the Act of 1875 does not mention a word of adulteration; it has been found impossible to define it, and therefore the word is omitted from the Act altogether. It will be very necessary in any legislation here to insert what is called the abstraction clause, which refers to any portion of an article of food being taken away—any essential ingredient. In the case of skim milk, for instance, under the old Act taking away the cream from milk was not considered adulteration. In the new English Act they have been very careful to define the word food. I think, if Mr. Driver intends to introduce his Act next Session, it is very important that this Board should give him some advice as to the sort of Act that is required. It will be necessary to give particular attention to those articles which are imported, and to consider whether a person is to be punished if he is not aware that the article he sells is adulterated.

3520. Is there any difficulty in ascertaining, as a matter of fact, whether there has been adulteration, in the usual sense, in ordinary articles of food? No, not with anything like a competent chemist who can use the microscope.

3521. In the question of milk, is it a difficult or expensive process to detect adulteration? No; I call it troublesome rather than difficult.

3522. Do you think there would be any practical difficulty in enforcing the sale of pure milk in Sydney? I cannot see that there would be any. Some fifteen years ago I analysed a great number of samples, and I found some of the worst to contain 45 per cent. of water. With regard to bread, the quantity of alum in the bread is so small that it cannot be considered adulteration in the proper sense of the word. I investigated this matter very carefully some time ago, and I found that scarcely any alum is used here; it is used for the purpose of whitening the bread, and I believe is only used with new flour.

C. Watt, Esq. 3523. Did you detect the addition of any ingredients for the purpose of increasing the quantity—potatoes for instance? No; to tell you the truth such ingredients in this country would cost as much as the flour; therefore there is no inducement to use them.

11 Oct., 1876.

3524. They are used, I believe, largely in England? They were when bread was 1s. the loaf. There is another article I may refer to—coffee. It is sold now in England as a mixture of coffee and chicory.

3525. The use of chicory with coffee is not prejudicial to health, is it? Well, some doctors consider it to be; in many cases there is a very large proportion of chicory.

3526. What is the practice in England with respect to the adulteration of imported articles—such as tea from China, for instance? The seller is liable to a penalty; but if he can show that he obtained the article from a wholesale dealer without knowing it to be adulterated, he can recover from him.

3527. But that does not stop the seizure of the goods? No; he can recover the penalty from the wholesale dealer. I do not think there is much adulteration of tea here; we have none of the exhaustive business carried on here; people do not collect the leaves. I have examined a great number of samples of tea and have found that very little green tea is used; I have mostly found it in private hands. I was requested some time ago to analyse a number of samples, and upon examination I found that they did not accord with the extracts which we have to guide us in analyses of this kind; the quantity of ash soluble and insoluble was considerably below the minimum—in fact the component parts did not agree with our tables of constituents, and it appeared that the tea must have been grown in some other country or under some unusual conditions. I was therefore unable to arrive at any satisfactory conclusions.

3528. Is it not quite possible that the tea-plant grown in a different climate would produce a different sort of tea? That is what I fancy; I have even moistened all the leaves in a packet of tea and spread them out, in order to detect any foreign additions, but I could not identify them. But I don't think there is much adulteration here.

3529. I believe that some time ago ale was adulterated by the brewers with *coccus indicus*—how does that matter stand at present? Well, I have had a suspicion, but I have not yet been able to make any discovery.

3530. Have you reason to suspect that it is used in this Colony? I believe it is, in some places.

3531. Have you any means of detecting its presence in ale? It is not very difficult—it can be detected. I have been watching for some time to try and find out an instance of this adulteration. But I may mention that the Sydney brewers are only anxious to produce the very best possible ale; they do not adulterate.

3532. Is there any legitimate purpose for which *coccus indicus* can be imported into this Colony? I do not know of any.

3533. It is imported into England? Yes, and it is imported here.

3534. I think I am right in stating, that it is found so objectionable in England that it is made penal for any brewer to have it on his premises. Is there any legitimate purpose for which it can be used here? I think not.

3535. Would it be right to prohibit its importation? I think so.

3536. It is not one of the common drugs? No.

3537. Then there would be no objection to prohibit its importation? No. I know that some time ago it was imported, and I suspected one person, but I have not been able to trace it to him or find out where it goes to. But I know it is sold in small quantities occasionally. I believe it is used for adulterating beer after it is made.

3538. For what purpose of advantage to the seller is it used? It is used to hocus persons who drink the ale.

3539. But I understand that the effect which the brewers require to produce is to preserve the beer? I do not think they use it for that purpose.

3540. So that a considerably smaller quantity of malt is required? I do not think so; I think it is only used to produce intoxication.

3541. *Dr. Alleyne.*] It is simply used as a narcotic? Yes.

3542. Is not it rather an unusual thing for brewers to put anything in their beer to hocus persons? I am sure the brewers do not use it; it is done by the sellers.

D. F. Robertson, Esq., Inspector of Water to the City Council, called in and examined:—

D. F.
Robertson,
Esq.

11 Oct., 1876.

3543. *Chairman.*] Some time ago—more than twelve months ago—in answer to a question put to you by this Board, you gave us the exact number of the water-closets in Sydney? Not the exact number, but as near as possible.

3544. You gave us some figures showing how many closets were connected, and how many were not? Yes, as near as I could give them, about 7,000 I think.

3545. In round numbers at all events. Are you in a position to give us similar information with respect to the state of things at present? Yes. From the time the Act was passed, until the 26th July last when the time expired, 6,186 closets which were directly connected when I last gave evidence before this Board had been disconnected.

3546. How many are there altogether? Those I have given have been disconnected, the total number of patent closets at present would be 9,014.

3547. Up to the present date? Yes, but of course I can hardly speak to a day, as scarcely a day passes but some connections are made.

3548. Of these how many are at present directly connected with the main? There are none of them directly connected.

3549. They have all been cut off? They have all been cut off.

3550. Every one in the city? Yes; and to make sure of it I am now making a close re-inspection of each ward; and I may state that I have only found one direct connection which was overlooked, and that was in Gipps Ward. There were 660 patent closets with direct connection, and 345 with cisterns; and out of the total number in Gipps Ward—1,005—there was only one with direct connection at the expiration of the twelve months given by the Act.

3551.

3551. Out of the total number—9,000 I think you said—the great bulk have cisterns in accordance with the Act? Yes.

3552. Not all of them? The greatest bulk of them.

3553. What have they then? They pour down water with buckets.

3554. Is the heavy fine which the Act empowers you to impose inflicted upon the owners for not having cisterns? Well, I don't think the Act is workable.

3555. How is it unworkable,—that is what we cannot get any one to tell us? If you read the Act carefully you will see that one clause clashes with another.

3556. Clause 5 states "5. Within twelve months from and after the passing of this Act the owner of every dwelling-houses or premises which shall have therein or thereon any closet with a pipe or branch-pipe directly connected with the main shall be required to fix and erect a cistern or cisterns for the reception of the water intended to be used for the closet, &c., &c.," where is the hitch? You observe that it says "any closet with a pipe or branch-pipe directly connected with the main." The question is whether we can compel those whose closets have not direct connection to erect cisterns. It is a pity that the Act was not submitted to some of the Corporation officers, as they could have pointed out the deficiencies in it.

3557. Then if a person has not his closet directly connected, and merely uses a bucket to flush it, so long as he keeps his premises clean, you cannot interfere? I think so.

3558. How many closets are there with cisterns? There are about 6,600.

3559. Do you think there is any practical difficulty at all which still requires to be set right? No, the want of labour has been the principal cause of delay. There is not a sufficient number of mechanics to do the work. The consequence is that they ask an exorbitant price, and the landlords content themselves with merely cutting off the connections and waiting until they can get the work done cheaper.

3560. You are prepared to say positively then, that there is no probability whatever of water being contaminated in Sydney by means of direct connections with the mains? Not the slightest.

3561. A suspicion has arisen as to whether the main which supplies the plug at Fort Macquarie, from which the men-of-war draw their water, has been contaminated,—do you think that is possible? No, I do not see how it can be. In Macquarie-street above all places there can be no nuisance of that sort, for the closets in the whole of that street, with one or two exceptions, have cisterns; there is no direct connection with the water main.

3562. Have you examined the arrangement at the Railway Station lately? Yes; there is no fear of contamination.

3563. Is there a cistern there? No; but the pipe is only turned on to flush the trough, and then turned off again. I intend, however, to enforce the Act, and to cut off the pipe if a cistern is not erected there.

3564. *Hon. J. B. Wilson.*] Have you been through the Government offices? Yes; and to show you how anxious the Mayor is to carry out the provisions of the Act, I am now engaged in going a second time through each ward. So far we have only found one direct connection.

3565. Do you think that had been tampered with? No, it had simply been overlooked: it is not easy for strangers to find out every single place in each ward, and this one had been omitted.

3566. Where does the main which supplies the men-of-war come from—from Hyde Park? No; it comes along College-street.

3567. *Chairman.*] Can you tell us how you obtained the data you furnished about twelve months ago as to the number of closets connected and disconnected? From inspection.

3568. Is any record kept in the City Council offices of connections of that kind? Only private memoranda from inspections. You can understand that when there is only one man to go over the whole of the city, a good deal of time is necessarily occupied, and a great many connections are made during that time.

3569. Don't you think it would be desirable that there should be a proper record kept in the Corporation offices of each connection of whatever kind with the water-mains? There is a record of them in the shape of an order to connect, which is issued on the occasion of every new connection.

3570. But do you not think there ought to be a record of all connections, so that all these questions might be answered at once upon reference to the books? There is a record of the number of patent closets.

3571. But is there a record of the nature of each? There should be. The connection orders show all the new connections made, and can be referred to in our books. I may mention, however, that by the time my present inspection is over—by the end of the year or the end of January,—I shall have a complete record of all the closets in each ward, and I shall be happy to furnish it if you desire.

FRIDAY, 20 OCTOBER, 1876.

Present:—

HON. J. B. WILSON,

B. PALMER, Esq.

DR. ALLEYNE.

M. B. PELL, Esq., B.A., IN THE CHAIR.

Benjamin Palmer, Esq., Mayor of Sydney, examined in his place:—

3572. *Chairman.*] I understand, Mr. Palmer, that you can give us some information on the subject of offensive manufacturing establishments in the city—as to tanneries for instance—Are there any other tanneries in the city besides that of Messrs. Alderson & Sons? I shall be able to give you some information on these points in a short time, but having only received notice of this inquiry a few days ago I have not had time, with other matters requiring my attention, to hunt up particulars. I may, however, mention that I have received a great many complaints of tobacco manufacturers. It appears that at these factories when they strip the leaves, they are in the habit of burning the stem and fibre in their furnaces, in order to get rid of it, and partly because they thus effect a saving in fuel. I have also had numerous complaints about Messrs. Dickson's new factory. The shaft they have built is not high enough to carry off the fumes, and a sort of white ash is deposited which is very objectionable. I have instructed Mr. Seymour to report upon this matter, but I have not yet received his report.

B. Palmer,
Esq.

20 Oct., 1876.

- B. Palmer, Esq.
20 Oct., 1876.
3573. In other respects the tobacco manufactories are not a nuisance? No, I believe not, but I shall be able to give you a more detailed account of them shortly.
3574. Are there any soap-boiling or candle-manufactories within the city? I think they are not allowed in the city.
3575. And you do not exercise any supervision over them in the suburbs? No.
3576. Have you, during your experience as Mayor of Sydney, had many complaints of offensive manufacturing establishments? Not lately, except those I have just mentioned.
3577. Are there many dairies within the city boundaries? Any number of them.
3578. Have you received many complaints of them? Innumerable complaints.
3579. Arising from the stench? Not only on account of the stench, but from the dung which accumulates. These cow-yards, being directly under our supervision, are kept as clean as they can possibly be; but there can be no question that where there are a number of cows they should be kept out of the city, or they must be more or less offensive.
3580. What does the nuisance arise from principally—the bad smell? From the bad smell, and the difficulty in keeping the yards as clean as they ought to be, especially where there are thirty or forty cows.
3581. Would not the same number of horses create an equal nuisance? No, I do not think it would be so bad.
3582. Is it not a fact that the refuse from a stable is more offensive than that from a cow-yard? That would depend upon the nature of the food supplied to the animals—the cows are usually fed on grains. In the course of our house to house inspection as a Committee of this Board we visited a cow-yard in Windmill-street, Gipps Ward, which was well flagged, well drained, and kept as clean as it could possibly be, but it was objected to. On the day that we visited it I think there were twenty-four to twenty-six cows there.
3583. You think it is an improper thing to keep cows in the city at all? Yes, I think they should be kept out of town.
3584. Do you think the quality of the milk is affected by the way in which the cows are kept? Yes, when they are fed on artificial food of course there must be a difference in the milk.
3585. *Dr. Alleyne.*] Would you call hay and corn unnatural food for a graminivorous animal? The cows are generally fed on brewers' grains.
3586. *Chairman.*] You think it would be desirable to make arrangements to keep all these establishments out of the city? Yes. I am collecting information on this subject, and shall be in a position in a few days' time to state the number of cow-yards in the city, and all particulars concerning them. I have noticed several places in Woolloomooloo where six or eight cows are packed together in very narrow places so that they can scarcely move. They can get no grass and have no room for exercise, and of course under such conditions it can hardly be expected that they can be in good health or condition.

FRIDAY, 27 OCTOBER, 1876.

Present:—

B. PALMER, Esq.,

DR. ALLEYNE.

HON. J. BOWIE WILSON, IN THE CHAIR.

Benjamin Palmer, Esq., Mayor of Sydney, further examined:—

- B. Palmer, Esq.
27 Oct., 1876.
3587. *Chairman.*] At a former meeting of the Board I think you stated, Mr. Palmer, that you could furnish us with some information relative to the cow-yards in the city of Sydney? Yes, and I now submit a statement which I have had prepared by one of my officers, and which I now hand in as my evidence. It is not however quite complete, as there has not been time to inspect all the cow-sheds in Sydney.
3588. How many cow-yards are enumerated in that list? Sixty.
3589. Can you inform us how many additional yards there are within the city? I believe it will be found that there are somewhere about 100 altogether.
3590. You hand in this statement then as a partial return? Yes; there are about 40 more cow-yards, the particulars of which have yet to be furnished.

REPORT of the Inspector of Nuisances on the Cow-yards in the City of Sydney:—

No.	Where situate.	Name of Cow-keeper.	No. of Cows kept.	Dimensions of Sheds.	General Remarks.
1	183, Liverpool-street	Sarah Horsey	4	23' x 11' 6"	Yard connected with sewer by very disgusting open drain; not flagged; very dirty.
2	15-17 Francis-street	John Conlon.....	5	41' x 11' 3"	Connected with sewer; not flagged; very clean.
3	Smedley-lane	Martin Cleary	8	24' x 9' 8" and 16' x 9'	Connected with sewer; remarkably clean; flagged.
4	47, Riley-street	John Bigrove	5	22' x 7'	Connected with sewer; clean; rubble stones.
5	104, Woolloomooloo-street	Susan O'Heir	6	30' x 12'	No drainage; dirty; not flagged. 24 cows in adjoining paddock.
6	Best-street.....	Margaret O'Brien ...	2	24' x 7' 9"	Connected with sewer; clean and pitched.
7	76, Judge-street	Patk. M'Mahon	12	40' x 10' 6" and 11' x 13'	Open drain to sewer; not flagged. Large paddock facing Dowling-street.
8	20, Judge-street	Mrs. Burns	2	13' x 9' 6"	Connected with sewer; clean; bricked.
9	94, Bourke-street.....	Patk. Clancy.....	3	13' 9" x 9'	Connected with sewer; clean; bricked.
10	9, Charles-street	Sarah Mahony	4	16' x 9'	Drains into back lane; clean.

o.	Where situate.	Name of Cow-keeper.	No. of Cows kept.	Dimensions of Sheds.	General Remarks.
11	120, Bourke-street	Mrs. Spooner	1	No drainage; clean.
12	99, Palmer-street	J. O'Grady	10	38' 6" x 11'	Connected with sewer; clean; flagged.
13	Chapel-lane	Mr. Land	18	36' x 17'	Connected with sewer; clean; flagged.
14	294, Liverpool-street	Wm. Bromley	9	46' x 9'	Connected with sewer; clean; flagged.
15	Liverpool-street	Alexr. Kennedy	5	14' 6" x 10'	No drainage; clean.
16	80, Burton-street	Denis Hegarty	2	8' x 8'	Connected with sewer; clean.
17	Forbes, Burton, and another street.	Cow paddock, with several people's cows.
18	Forbes, Liverpool, and Mr. Jonas Ray's fence.	Cow paddock, with several people's cows.
19	250, Victoria-street	James Fleming	8	{ 12' x 9', 14' x 8', 20' x 10', and 9' x 9' }	No drainage; clean.
20	Burton-street	Patk. Lindrigan	4	34' x 11'	Not connected; clean.
21	West-street	Martin M'Carthy	8	20' x 8', and 9' x 7'	On boundary of Paddington Municipality; in a very disgraceful state; has been fined several times; no sewer.
22	Barcom-street (east side)	Bartley Laverty	10	8' x 9', and 13' x 10'	Drainage into West Creek; not flagged; clean; no sewer.
23	435, Liverpool-street	Mrs. B. Gleeson	8	22' 3" x 9'	Filthy drain into back lane; premises clean; no sewer.
24	Selwyn-street	Sarah Evans	10	18' x 9'	Very dirty; no drainage; cows allowed to wander outside; no sewer.
25	144, Albion-street	John Davison	2	9' x 9'	No drainage; clean.
26	106, Little Gipps-street ...	T. Purcell	8	39' x 9' 6"	Drainage into street; dirty; no sewer.
27	109, Little Gipps-street ...	J. Coffey	3	12' x 11' 9"	Drains into receptacle for manure; thence into Ann-street; dirty.
28	113, Little Gipps-street ...	Norah M'Connell	7	21' 6" x 10'	Not connected; heap of manure at fence; clean.
29	Smith and Gipps Streets...	George M'Kay	3	15' x 9' 4"	Connected; vacant land opposite for cows; clean.
30	Mary-street	Mary Hayes	5	15' 6" x 9'	No drainage; clean; no sewer.
31	58, Albion-street	Wm. Doyle	4	15' x 9'	Connected; manure-pit close up to water-closet.
32	Bourke and Arthur Streets	Mary Toohy	1, and 2 calves.	No drainage; very filthy; no sewer.
33	Bourke-street	Corns. Connor	6	{ 20' 6" x 8' 7", and 8' x 4' 6" }	Drains on to vacant land; no sewer.
34	634, Bourke-street	Denis Schweiter	8	17' 8" x 9'	No drainage; clean; no sewer.
35	52, High Holborn	Mary M'Namara	4	16' x 9' 2"	Drains into street; no sewer.
36	Lansdown-street and High Holborn.	Reynolds and Pender	2	23' 9" x 10'	Drains into Lansdown and Crown Streets; no sewer.
37	189, Devonshire-street.....	Ann Quentin	8	{ 23' 10" x 12' 2", and 13' x 12' 10" }	Drains into Marshall and Devonshire Streets; no sewer.
38	Cooper and Elizabeth Streets.	Martin Haddon	5, and 1 bull.	28' 6" x 11'	Drains into Little Elizabeth-street; no sewer.
39	Little Elizabeth-street ...	Margaret Purcell	2	23' 3" x 11'	Drains into Little Elizabeth-street; no sewer.
40	118, Waterloo-street	S. Anderson	5	32' x 10' 10"	No sewer, very clean paddock for cows.
41	47, Holt-street	Jas. Farrelly	1	13' 3" x 9' 3"	No sewer; clean.
42	Off Elizabeth-street South.	Robt. M'Neil	3	14' 4" x 9' 7"	No sewer; drains into Elizabeth-street; clean flagged.
43	82, Buckingham-street ...	Mrs. Carrick	3	23' 5" x 10' 4"	No sewer; drains into street; clean.
44	Randle-street (off Devonshire-street.)	Henry Milroy	3	22' x 23"	No sewer; no drainage; dungpit in yard; flagged.
45	Kent and Windmill Streets	John Mulheren	7	45' x 9' 7"	Very filthy, and disgusting open drain to sewer.
46	32, Bettington-street	John Dwyer	1	19' x 12'	No drainage; clean.
47	135, Princes-street	William Steel	12	{ 16' 10" x 10' 4", 20' 10" x 10' 5", 39' 6" x 8' 3". }	Very dirty; open drain into sewer; large dung-heap in front of gate.
48	176, Cumberland-street ...	John White	2	9' x 7' 7"	Connected; clean.
49	143, Cumberland-street ...	Mary Cox	4	28' x 7' 8"	No drainage; dirty.
50	59, Cumberland-street.....	Thos. Kelly	4	16' 3" x 19' 8"	Connected open drain through rock; very dirty.
51	137, Gloucester-street	Mrs. Tiffin	1	7' 3" x 8'	No drainage; clean.
52	192, Clarence-street.....	James Oran	3	15' 5" x 9' 4"	Connected; very clean.
53	156, Clarence-street.....	Jno. M'Crawley	6	42' 2" x 8' 5"	Connected; bricked, and clean.
54	493, Kent-street	John Boyd	2	10' 6" x 11' 6"	Connected by open drain; clean.
55	323, Sussex-street	Jno. F. Hodges	16	{ 28' 7" x 11', and 28' x 9' 9". }	Drains into Dixon-street; badly constructed sheds, and very filthy.
56	Liverpool and Sussex Streets.	William Creely	Connected; very filthy.
57	Castlereagh-street	Owen Ryan	5	14' 9" x 9' 5"	Connected; clean.
58	78, Hunter-street.....	Henry Clegg	1	7' 10" x 10' 10"	Connected; clean.
59	80, Hunter-street.....	Fredk. Randall	3	12' 2" x 9'	Connected; clean.
60	499, Pitt-street.....	Robert Gauld	2	10' x 12'	Connected; clean; flagged.

B. Palmer,
Esq.
27 Oct., 1876.

B. Palmer, Esq. 3591. I observe that you mention in this return, under the head of "Remarks," that some of the cow-yards are "very dirty," and that some are "filthy and disgusting?" Yes, that is the case with several of them.

7 Oct., 1876. 3592. The existence of these places must be very injurious to the health of the inhabitants of a crowded city like Sydney? There can be no question of it.

3593. Do you think the citizens of Sydney would be put to any great inconvenience if these cow-yards were moved outside the town? I think it would be of great advantage to them.

3594. Would that entail any difficulty in the delivery of the milk? No, I think not, with the present facilities for locomotion and the railway extension.

3595. There are some dairies some five or six miles out of town along the railway line at present, I believe, which supply Sydney with milk? Plenty of them.

3596. As a rule the accommodation in these dairies in town is very limited, is it not? Yes. I was very particular in getting the dimensions of the sheds set down in the return I have handed in, because some of them where there are not so many cows kept are in very clean condition. In many cases however they pack the animals as closely as possible.

MONDAY, 29 JANUARY, 1877.

The Board met this day at 2 p.m., pursuant to adjournment.

PRESENT:—

HON. J. B. WILSON,
C. WATT, Esq.,
M. CHAPMAN, Esq.,
E. O. MORIARTY, Esq.,
H. G. ALLEYNE, Esq.,

HON. J. SMITH,
G. F. DANSEY, Esq.,
W. C. BENNETT, Esq.,
B. PALMER, Esq.,
F. H. GRUNDY, Esq.

M. B. PELL, Esq., in the Chair.

Sewage disposal.

THE minutes of the previous meeting having been read and confirmed, the Board proceeded to discuss that portion of the Report of the Engineering Committee which recommended the setting apart of a portion of land for a sewage farm, where the sewage of Sydney could be either utilized or purified before passing into the sea.

The Chairman having explained that the object of the meeting was to give members an opportunity of bringing forward precedents and authorities on the subject of sewage farming and downward filtration, about which there seemed to be some difference of opinion, and that it was desirable that each member of the Board should express his opinion on the subject,—

The Hon. J. B. Wilson, in order to commence the debate, moved the following resolution:—

“That the Board cannot recommend that any portion of the sewage of the city and suburbs be disposed of by the establishment of a sewage farm—first, because it cannot be profitably utilized; and secondly, because it would create a permanent nuisance, very offensive and dangerous to the health of the inhabitants.”

He said: Mr. Chairman,—We are called upon to give our opinions upon that portion of the Report of the Engineering Committee read at the last meeting which refers to sewage farms. Now there is one statement contained in that Report to which I must take objection, because I do not think it is borne out by facts. I refer to the 25th clause, which states that

Many and weighty reasons might be urged in favour of utilizing the great fertilizing power which the sewage of a large city possesses, and which under the warm sun and in the occasional dry seasons of this climate might be expected to produce most favourable results; but it is not clear that the utilization of sewage in Europe has as yet been made a financial success, though in many instances it closely approaches it, as in Dantzic, Banbury, and Edinburgh.

It is especially with regard to Edinburgh that I wish to speak. I think it was hardly right to introduce such a remark into the Report, seeing that there is no sewage farm in Edinburgh. The Craigentenny Meadows are not a sewage farm, and a great portion of the sewage runs into a ditch and goes into the Frith of Forth, and not into the meadows. There is no doubt that by flooding the Craigentenny Meadows with sewage when it was required, and only when it was required—and sometimes they are as long as nine months without being flooded—large crops have been obtained; that I do not deny. But in the first place the Craigentenny Meadows are not a sewage farm, and in the second place there can be no doubt that the process adopted there has created an intolerable nuisance. In proof of this, I will read the following extract from a work entitled “The Sewage Question”:—

These meadows have long been notorious as the most filthy and offensive plots of cultivated ground in Great Britain. They are also remarkable for their so-called extreme fertility in producing the largest produce of a coarse, rank, and washy grass, which like brewers' grains is only fit for the food of milk cows pent up in the close sheds of a town dairy where quantity and not quality of milk is the desideratum. They are situated about 2 miles to the east of Edinburgh upon the sandy shore of the Frith of Forth, and they have an area of about 250 acres. The sewage is poured upon them from an open sewer called the “foul burn,” which drains a district in Edinburgh with about 80,000 inhabitants, where water-closets are not in general use. The burn runs eastward and northward from the city and passes through a small sewage farm of about 30 acres (the Loehend Farm), twenty of which are in permanent grass and the rest in Italian rye grass. The tenant of this farm takes the sewage when he likes and he also takes as much of it as he likes, and the rest of it runs eastward in the open burn to the Craigentenny meadows, and thence, if not wanted, to the sea. As it passes through the meadows it is distributed upon them in the most profuse manner, rendering the ground a swampy sewage morass; in fact, the effluent water which runs off by many channels and trickles away to the sea-shore, is as foul as it can well be. The smell from the open burn and the swampy meadow is so powerful that it is offensive to the whole neighbourhood. The soldiers at the neighbouring cavalry barracks at Piershill complain of it as a serious nuisance, and say that at times it is quite sickening. Dr. Ligertwood, the surgeon of the 8th Hussars, attributes the absence of disease among the soldiers while stationed there in 1868, to the fact that the sea breeze which counteracts any evil influence from proximity to such fields, and thus, he says, they maintained their health “in spite of the nuisance.”

Now, sir, any person who is acquainted with Edinburgh will bear out that statement. It is many years since I saw them, but they were then in as foul a state as they could possibly be—in such condition as no one would expect to find in a civilized community. With regard to the other places mentioned in the Report as being noted for the successful treatment of sewage I cannot speak from personal observation, for I know nothing of Dantzic and must confine myself to Great Britain. The position I take up is this, that sewage cannot be profitably employed on a sewage farm.

Chairman.] What are we to understand by the word profitably;—do you include in such a calculation the cost of conveying it to the farm, as the cost of conveyance would have to be incurred in any case, whatever mode of disposal might be adopted? Do you think it would cost more to put it on to a sewage farm than to deliver it elsewhere?

Hon. J. B. Wilson.] I question whether it could be put there as economically as it could elsewhere, and there would be constant expenses attending it, so much so that no persons will take it unless it is actually put on their farms.

Chairman.]

Chairman.] I think we may assume that it will cost the same to take it to sea as to take it to a sewage farm—that is to say, to the edge of the farm. You think the cost of such delivery would not be repaid by utilizing the sewage?

Hon. J. B. Wilson.] I do not actually think it would; and I think it would create an intolerable nuisance, more especially at such a place as Webb's Grant. It is a well-known fact that when sewage is put on to raw sand no oxidation takes place; it is at once absorbed by the sand, but it is absorbed in its natural state—it is not acted upon by the atmosphere, and no oxidation takes place while an amount of decomposition goes on which makes it a perfect pest to the community. There was a paper on this subject read at Paris by a gentleman who obtained for it a prize from the Academy of Science—it was, I think, in 1834; and he lays down certain principles, first, that the soil must not be too light—and secondly, that the process of filtration must not be too rapid or hurried. He states, that to make the process at all safe or expedient oxidation is necessary. When sewage matter is not oxidized, it becomes a great nuisance and causes a frightful stench. Now, I have no doubt that the soil at Webb's Grant consists of sand, to a depth of 3 or 4 feet above high-water-mark, over clay; and that after the application of sewage in a short time it would become a putrid mass so offensive that no one would be able to stand it. Again, the area secured for the purpose is far too small. I believe that to meet the requirements of this city for a number of years we should require from 1,500 to 2,000 acres at least, in order to treat the sewage without injury to the health of the inhabitants. The estimate given in the paper to which I have referred is 1 acre to every twenty-five persons; and if we make provision, as we ought to do, for the next twenty-five years, and calculate the population of the southern slopes of Sydney at 85,000 to 100,000 inhabitants—and it would not be judicious or safe to propose any scheme which would not be effective for 100,000 inhabitants; and take only an acre for sixty or seventy persons—we should have to set apart an area of not less than 3,000 acres, in order to avoid creating a permanent nuisance and to injure the health of the inhabitants. I do not mean injury in the form of any actual malaria breaking out among the inhabitants in the immediate neighbourhood, but the danger so strongly insisted upon by many competent authorities arising from the food grown upon sewage farms. It is generally admitted that the only thing you can grow by means of sewage irrigation with any prospect of success, is Italian rye grass, and the scientific world have laid it down as a law that to feed cattle on this material is dangerous in the highest degree. In the work on the sewage question from which I have already quoted I find the following remarks on the "Parasitic Dangers of Sewage Irrigation":—

Entozoa diseases have always an external origin, and are generally caused by food or drink infected with the ova of parasites or with the parasites in a larval condition,—the food or drink being in its turn infected directly or indirectly by excremental pollutions. In some cases, as with the protozoa and the nematoid worms, the ova or the mature parasite may gain access to the body of man and at once cause disease of a more or less serious character through the water which we drink, or some raw vegetable which we eat, infected with sewage. Water-cresses, celery, lettuce, endive, and other such vegetables eaten in a raw condition, may after recent sewage irrigation, convey the agents of parasitic disease. At other times, as with the cestoid forms of entozoa, helminthic disease is caused by the use of meat infected with the larvæ of parasites that have had their origin in sewage or excremental matters present in the green fodder, or other food upon which the animals have fed. A single individual infected with tape-worm will discharge from his body millions of ova, every one of which is capable of producing a measles, as it is called, in the flesh of an animal, and this in its turn a tape-worm in man. As we have elsewhere remarked, sewage contains myriads of ova of intestinal entozoa,—every segment of tape-worm discharged from the human body being crowded with them, and if distributed with sewage upon the land, will become attached to the grass and other green fodder which is grown thereon. This is eaten by cattle, whose bodies quickly become infected with the parasite in its larval condition, and thus the measly meat becomes the agent of disease in our own bodies. At present the distribution of these ova, and their access to the bodies of herbivorous animals is entirely a matter of accident; but make it a matter of certainty, as most assuredly you will by distributing sewage upon the fodder producing land, and the consequences must be serious. Dr. Cobbold, who is our highest authority on this subject, has published an essay, warning the public of the danger of this method of distributing town sewage; and he has hinted at the probable introduction into this country of a terrible helminthic malady (*Bilharzia*) which is now common in Egypt, Africa, and the Mauritius, and which would assuredly be propagated throughout the land by this dangerous scheme of irrigation. "Have the kindness," he says, "to observe that every colonist returning from the Cape is liable to bring this parasitic treasure with him as a guest indeed, dwelling in his blood, and feeding on his life stream. In the advanced stages of the malady the afflicted individual must frequently evacuate the eggs and their contained embryonic larvæ, which are thus conveyed into the ordinary receptacles of such voidings. There let them remain, or convey them into a cesspool, and no harm follows. If deemed preferable, you may transport them along with myriads of other human parasite eggs and larvæ into a common sewer, and thence into the sea; still entozoologically speaking, no harm follows. Here, however, let me invite you to pause, for if, without due consideration, you adopt any one of the gigantic schemes now in vogue, you will scatter these eggs far and wide; you will spread them over thousands of acres of ground; you will place the larvæ in those conditions which are known to be eminently favourable for the development of their next stage of growth; you will bring the latter in contact with land and water snails, into whose bodies they will speedily penetrate; and in short you will place them in situations where their yet higher gradations of non-sexual growth and propagation will be arrived at. After all these changes, there is every reason to believe they will experience no greater difficulty in gaining access to our bodies here in England than obtains in the case of those same parasites attacking our fellow creatures, whose residence is found in Egypt, in Natal, in the Mauritius, or at the Caye. In a natural history point of view, it would not be an altogether singular result if, twenty years hence, this parasitic malady should be as prevalent in this country as it is now known to be in particular sections of the African Continent. Forseeing the possibility, not to say probability, of this contingency, am I not right," he says, "after years of long study, to raise my voice in the hope of preventing such a disaster."

Chairman.] That is only a theory. Can you quote any instances where these diseases have actually been produced by the use of food by men or cattle which has been grown by sewage irrigation?

Hon. J. B. Wilson.] I quote these opinions to show the danger of inviting diseases which it is in our power to prevent. I will continue the quotation a little further—

Nor is it unlikely that the trichina may be distributed in the same manner, for it swarms in the intestines of those who have just become infected with it, and may be discharged into sewage and scattered upon the land, and eaten by creatures whose flesh will give it back to us again. No one, in fact, but the helminthologist, can say what particular parasite may not be distributed and propagated by this dangerous agricultural process. "May we not indeed," as Dr. Cobbold observes, "but too reasonably conjecture that the wholesale distribution of tape-worm eggs by the utilization of sewage on a stupendous scale, will tend to spread abroad a class of diseases, some of which are severely formidable? So convinced am I," he says, "of the truth embodied in an affirmative reply to this latter query—so certain am I that parasites are propagated in this particular way—so surely do I see unpleasant results if no steps are taken to counteract the evil, that I feel myself bound to speak out boldly, and to produce no uncertain sound in the matter which most closely concerns humanity.

With regard to the success of sewage farms I will quote a short passage from the same book—

The farm at Rugby was laid out in the most approved fashion, and was managed by a very enthusiastic gentleman, Mr. Campbell, who had studied the operations at Edinburgh; but after eleven years of unsuccessful experience he abandoned it, and said in a letter to the *Times* of the 18th of November, 1864, that he had used the sewage of Rugby ever since the formation of the works, both upon his own land, and upon that of others, to the extent of 190 acres, but he was sorry to say that in a pecuniary point of view it had been altogether unremunerative. After this it was taken in hand by Mr. Congreve and Mr. Walker, two other enthusiastic gentlemen, but they also abandoned it, and now it is in the possession of the local authorities.

authorities, who work it for sanitary purposes. At Croydon, the pressure of legal proceedings for nuisance created by the discharge of sewage into the river Wandle, forced the local authorities, through the suggestive teachings of the Board of Health, to adopt the irrigation system, and until recently the farm has been rented by Mr. Marriage, but for some reason or another he has abandoned it; and although attempts are being made to form a joint-stock company to work it, the prospects are not hopeful. Almost everywhere, in fact, the system has failed, in both an agricultural and commercial point of view, and hence there are very subdued and modified opinions of the value of sewage farming by those who were once its most earnest advocates. Mr. Rawlinson, for example, the Board of Health champion of irrigation, has apparently come to the conclusion that it will not pay if sewage has to be paid for; for in his evidence before the Parliamentary Committee, in 1864, he said, in speaking of Worthing, where he was part proprietor of a sewage farm, that "they (the local authorities) had acted with wisdom, for they charge nothing for the sewage; if they had charged anything there would have been no experiments; they give the sewage, and they lift it upon the land." He also said, in speaking of the London sewage, that "if any company is induced to enter into the speculation of applying the sewage of London, and agrees to pay the sums I have heard named, they will be in bankruptcy very shortly." He therefore evidently looks on sewage as a thing to be got rid of, and ought to be given away by the local authorities, for farmers cannot afford to pay anything for it.

The persons who compiled this book have summarized at the end of it the conclusions at which they have arrived, and in page 200 I find the following remarks:—

In some cases, where large agricultural results have been achieved, as on the Craigentenny meadows at Edinburgh, all sanitary considerations are abandoned, and the sewage is allowed to flow upon the ground in such enormous quantities as to convert the locality into a stinking morass, which is a public nuisance; besides which the effluent water is so foul as not to be admissible into any decent watercourse, and therefore runs directly into the sea. On the other hand, when sanitary results are aimed at, as when the sewage is sprinkled upon the land by means of hose and jet, in the water-pot fashion, as was the case at Tiptree hall, at Rugby, at the Earl of Essex, and at the Voujours farm, near Paris, the agricultural results were so unprofitable that, notwithstanding the ardour and strong faith of its advocates, it was at last summarily abandoned.

Then a little further on they state, in enumerating the disadvantages attending sewage irrigation among other things:—

Sixthly: There is the serious disadvantage of the non-applicability of sewage to any other crop than grass, which can only be profitably used for dairy purpose. Seventhly: The noisome character of the operations, and the filthy sordid state of the soil are undoubtedly dangerous to the public health, for a damp atmosphere reeking with sewage effluvium is known to be a prolific source of typhoid and enteric maladies. Eighthly: The subsoil water, if not properly diverted, is apt to reach the neighbouring wells, and render them unwholesome. Ninthly: There is the great probability of producing entozoic infection of both man and animals by the distribution of excremental ova upon the land and its produce.

All these considerations, they say—

Lead to the conclusion that the present method of distributing sewage upon the land is eminently unsatisfactory, for it is wasteful, it is inefficient, it is expensive, and it is dangerous.

I will only add that I will defy any one to controvert the fact that no one in the world has had the hardihood to propose such a scheme for the disposal of sewage under any other circumstances than where it was utterly impossible to dispose of it in any other way.

Chairman.] The book from which you have quoted is an anonymous work, is it not?

Hon. J. B. Wilson.] Yes; it is a compilation of various articles on the subject, from the "Medical Press" and elsewhere. I have also a letter from a relative of my own who has one of the largest medical practices in Croydon, in which the writer expresses himself strongly adverse to sewage irrigation, as injurious to health.

Hon. John Smith being called upon to give his opinion on the subject under discussion, said:—I have not read up the question of sewage farming in connection with the report before us, for it did not occur to me that we were bound to give any immediate opinion upon it. It appears to me that the report only mentions a sewage farm as an experiment that might be tried if it should be considered desirable.

Chairman.] As you were not here during the latter part of the last meeting, I may mention that this discussion has arisen out of the fact that the Engineering Committee were unwilling to employ the time and to incur the expense required to make an estimate based on the supposition that downward filtration or a sewage farm would be adopted for the southern slopes of the city, if there was any chance that the Board would reject that mode of disposal in any shape or form. Therefore it seemed desirable to obtain a decided expression of opinion one way or the other from the Board, and to settle the question at once.

Hon. J. Smith.] I think we should recommend that provision be made for carrying the sewage to the sea, but I do not think that along with that recommendation we should utterly condemn sewage farms.

Chairman.] The question is whether under any circumstances it would be desirable to recommend sewage farming or downward filtration.

Hon. J. Smith.] I think we should recommend an arrangement to carry the sewage to the sea, but if this arrangement be of such a nature as to allow the experiment at some future time of a sewage farm, I do not see why at this stage of the proceedings we should condemn it.

Chairman.] The Board will have to consider whether they will recommend the treatment of a portion of the sewage in this way as a temporary expedient, with a view to save a large outlay not immediately required.

Hon. J. B. Wilson.] It cannot be done; there is no land for the purpose.

Hon. J. Smith.] Assuming that the requisite area of land can be obtained, we may consider the advantages and disadvantages of the process. Some very strong language is used in the opinions quoted by Mr. Wilson, enough to frighten one, but the cases of disease spoken of are merely hypothetical, and on the other hand there is a great deal of fertilizing matter in sewage. The Chinese, we know, use this kind of manure largely, but I have always understood that they do not bring it into direct contact with the green portion of the crops, but apply it in channels between the plants, and no harm results from it. But it does not therefore follow by any means that to flood the ground and cover the plants themselves with liquid manure, would not be productive of injury; the vegetables we eat have to be boiled, but cows eat cabbages and green crops in a raw state, and it is possible that they may thus become infected. I should be inclined at once to recommend arrangements for carrying all this matter to the sea, and to add that if convenient a sewage farm might be tried; that is what I should be disposed to recommend, unless it should be shewn that the expense of carrying it to the sea would be enormously greater.

Mr. Moriarty.] The idea the Engineering Committee had in their minds was this: that to make provision for carrying the sewage of the southern slopes to sea would involve an enormous outlay, and that for the present, in view of the small population existing at Newtown, Surry Hills, and the surrounding neighbourhood,

neighbourhood, the Board might recommend the establishment of a sewage farm where the sewage of these places might be purified by downward filtration, until the increased population should warrant the large cost of extending the sewer to Botany—that the cheaper method should be adopted for the present upon economical grounds.

Hon. J. B. Wilson.] What is the present population settled on the southern slopes of the city?

Mr. Moriarty.] We estimate it at about 20,000 at present.

Hon. J. Smith.] Then you propose to make use of the land simply as a medium for purification—as a filtering ground in fact so that the sewage may find its way into the sea in a harmless state, and not for the purpose of utilizing the sewage.

Chairman.] That is all.

Hon. J. Smith.] Then I would prefer to adopt that method as a matter of economy.

Mr. Moriarty.] If we extend the sewers to Botany an enormous cost will be involved. (*The speaker illustrated the relative positions of the different localities by means of a diagram.*) But if we strain the sewage first and then allow it to go on to a piece of land of moderate size so that it may be sufficiently purified we save the cost of the extension. Should this arrangement be found to create a nuisance we could then construct the sewer which we might have done in the first instance.

Hon. J. Smith.] If we are to consider the proposal of the Committee as a mode of getting rid of the sewage harmlessly—if that is the object of their recommendation—I am prepared to agree with it and I should prefer not to give any opinion on the subject of sewage farming. As far as I can gather the experience of sewage farms is not tempting.

Chairman.] You have no objection then to this inexpensive mode of dealing with the sewage?

Hon. J. Smith.] None.

Mr. Watt.] I should like first to put in an extract from a speech by Mr. Hawkesley, President of the National Association for the Promotion of Social Science. He is the highest authority, having for a great number of years been connected with water and sewerage works. He is now engaged at Windsor, where he has been obliged to adopt a scheme of sewage filtration. He is compelled to discharge it into the Thames in a certain state of purity, and he has no other alternative. He says,—

First, that sewage is as utterly worthless matter incapable of being utilized at a profit by any method already known or likely to become known; and therefore that it is better to get rid of it in the most convenient manner and at the least possible cost. Now, two methods are in use for the purification of sewage—irrigation and precipitation. The former necessitates an eventual expenditure of £5 or £6 per head of the community drained; the latter about 10s. or 12s. per head; and the absolute loss by the former is considerably greater than by the latter method. As a general rule then I prefer and recommend precipitation, nevertheless admitting that there are exceptional cases in which the irrigation method may be advisedly resorted to. When, however, this worthless and obnoxious matter can be disposed of in the sea we ought to avail ourselves of the opportunity the sea presents.

The two processes I have mentioned when properly carried out (which however is but rarely the case) are equally effective in the production of an effluent water clear to the eye, practically inodorous, and in chemical compositions reasonably pure. No rule of universal application can however be laid down for the purification, utilization, and disposal of the sewage of urban populations for such sewage is greatly affected by the manufacturing refuse with which it is mixed. It may moreover be observed that the manurial properties of water-borne excreta are always exceedingly feeble, and the more so the further they travel, because of the rapid decomposition and oxidation of the most valuable organic constituents; consequently urban sewage is of little service for farming purposes, unless it can be applied without delay and near its source. The natural operation of decomposition and oxidation by which our rivers and seas become in fact self-cleansed and self-purified is even yet but little understood by the public at large; and hence it is that so many well-meaning and influential persons are still found of firm faith in the benefits assumed to be derivable from the application of sewage to the production of food, and so assumed on the fallacious ground that, if matter of a high manurial value enters a sewer at its one end, that some matter must necessarily be found in it at its other end dissolved or diffused it may be, but not in any other respect changed. It will be an unpleasant surprise to such persons to be informed that this assumed fact is not a fact at all; for that, by way of instance, the River Trent, in its course before reaching Nottingham, receives the sewage of two million people, amounting to 40 or 50 million gallons per day; and yet at that town the water is clear, sweet and chemically free from all the noxious constituents brought into it by this enormous volume of sewage. In fact no form of matter suffers decomposition and reconstruction into compounds of a harmless nature with more facility than the description of matter to which I am now referring.

I will also put in a paragraph from the same journal—*The Journal of Gas Lighting, Water Supply, and Sanitary Improvement*—of 28 September, 1875:

We mentioned a few weeks ago that at the Romford Sewage Farm splendid crops had been grown and then ploughed in, for what reason we know not. The following explanation has been offered:—“The crops ploughed in was an effort to convert as much of the manure as possible into vegetation by first of all growing with the autumn and winter sewage a crop of rape, the better to store up in the soil the sewage passing through it, and then the decomposing rape forms a manure for the subsequent crop.” We shall begin to understand sewage farming presently. First we were told that sewage was an all-sufficient manure; next we were informed that it is advisable to dress the land with a considerable quantity of fold-yard manure; and now we read that it is necessary to plough in one crop to serve as manure for the next. We have the further information that the bulk of the phosphates and potash in sewage exists in the solid matter in suspension—that is in solid fecal matter. Hitherto we have been taught that six-sevenths of the manurial value of sewage was to be found in the liquid portion; but we must live and learn.”

I will read another extract from the same journal:—

Water and Sanitary Notes.

At this season of the year it is usual for the sewage question to turn up for discussion; and accordingly the daily papers have been flooded with correspondence on the unsavoury subject. Recently, additional interest has been given to the discussion by the suggestion of Mr. W. R. Greg, that a portion of the surplus—whenever a Chancellor of the Exchequer is so fortunate as to have one—should be applied in an endeavour to solve the problem of the profitable disposal of sewage, if it be possible, or in discovering the best means of getting rid of it altogether, if no utilization be possible.

Mr. Greg points out that the Rivers Pollution Bill, when it becomes law and is enforced, will impose a task on the country, involving an expenditure of £100,000,000, which, as he says, means rates by the million, or borrowing by the million. The prospect is certainly a dismal one for the, at present, overburdened ratepayer, and then the question arises whether, after all, the work is necessary or desirable. Mr. Greg appears to think that it is not. “The Rivers Pollution Bill,” he says, “provides in effect that, while our sewerage system shall be universalized and perfected, God Almighty’s sewers—our streams and rivers—for that end made and provided, shall no longer be used for the purpose; that our rubbish, manufacturing refuse, and household excrements shall no longer be turned into the natural watercourses, and so carried off to the sea, but shall be disposed of and find depositories elsewhere. In that last phrase lies the essence of the subject. Elsewhere! Where?” Mr. Greg then takes a glance at the valley of the Thames, and remarks that the effects of the Act referred to will be that “the excrementa of some 10 or 15 millions of people, which has hitherto floated away to the ocean, must be retained in this country and may become centres of pestilence.” We need not quote further, and will only express a confident opinion that Mr. Greg will never succeed in persuading a Chancellor of the Exchequer to expend any surplus revenue on sewage experiments.

Then comes Mr. Mechi, who, firmly believing in the success of sewage farming—a success, by the way, which he has never demonstrated—and seeing that the public cannot be persuaded to invest money in a scheme for utilizing the sewage of London, coolly suggests that the Metropolitan Board of Works shall guarantee the interest on the capital expended. They may

may, perhaps, do so—if the Board be in existence—when a surplus is devoted to sewage experiments; but, at the present time they are just as likely to guarantee interest on the money expended on the tunnel under the Channel.

Among the several communications made to the daily papers there are a few which tell us of the success attained at some sewage farms. The one at Ashby-de-la-Zouch certainly cannot be considered successful. The Local Board have, since 1870, expended £2,254 7s. 8d. on the farm, and they have received in cash £1,668 14s. 10d. Credit, however, being taken for stock, valued at £561 15s. 2d., the whole proceeds would appear to be £2,230, which leaves the Board with a loss of £23 on the five years working. But this is not quite all. The Board borrowed £600, which was to be repaid by annual instalments of £44 10s. We gather that no instalment has yet been paid, and thus £220 must be added to the loss.

Doncaster, too, has a sewage farm, but the Corporation never succeeded in making it pay. It is now leased to a company, who have been in possession two years, but have not yet paid a dividend. We always thought that sewage, if enough was applied—and it seems to be used unsparingly on the Doncaster farm—was all the manure required. The manager of this farm, however, considers it desirable to make a considerable quantity of fold-yard manure, and intends to dress the land all over with it. This is, no doubt, very advisable; but it is not sewage farming in the ordinarily received sense.

An able correspondent of *The Times* recently published a summary of the accounts of twenty-five sewage farms, which appeared to show that only two pay their agricultural working expenses. As regards one of these—Warwick—however, it seems that a great mistake was made. Mr. Clifford, who, we believe, laid out the farm, and managed it for some years, wrote to say that, instead of a profit, the loss to the ratepayers last year amounted to £423. This farm has now been leased to a company, who are to conduct it on commercial principles.

Whether the Romford farm, which is worked on commercial principles, is a success or not, we shall leave others to decide. We rather think we read recently that splendid crops were grown on it last year, and then were ploughed in, for reasons which we do not remember.

The sewage of Leamington is taken by the Earl of Warwick, who pays the local authority £450 per annum. It costs the Town Council, however, £1,046 to take the sewage to the earl's land, so that there is an actual loss of £596. Beyond this, there are the interest on borrowed money, and the annual instalment for repayment to provide; and, taken altogether, we may say that the present cost of getting rid of the sewage of Leamington is over £2,000 a year. What the Earl of Warwick makes by it is only known to his lordship and his steward.

We must wait for Lord Rosebery's returns for complete details as to the result of farming operations for the utilization of sewage; but we may say that, with the information now before the public, it seems to us highly impolitic for any local authority to engage in sewage farming. There is a great deal to be urged in favour of the plan known as intermittent filtration; but this must be regarded as still on its trial. It is impossible to believe that a small area of land can go on for an unlimited number of years purifying thousands of gallons of sewage, however deep the land may be drained, or however well the filter be constructed. The system has the recommendation of being the cheapest, and may be, for a time, the most effective means of purifying sewage; but we cannot help expressing a doubt whether the benefit will last.

Chairman.] Can you bring forward any instance where men or cattle have suffered—or where there has been a strong presumption that they have suffered—from the use of food grown on a sewage farm? I know there have been panics in different places arising from the belief that cattle have suffered from eating certain food, but I believe it was merely fancy.

Mr. Grundy expressed his approval of the report as it stood.

Mr. Chapman.] I feel inclined to recommend the system of filtration proposed in the report, and I may take the opportunity of stating what I have seen done by the Chinese, who rear cabbages and other garden produce for sale in Sydney. I have seen them carrying a bowl with a dipper in it, and pouring the sewage all over the plants—not only applying it to the roots, but pouring it over the leaves as well, and I can understand that in that way of using it some of the ill effects may occur which have just been mentioned. I have also seen Chinamen calling for a large cask of liquid refuse from a bone-boiling establishment further down the swamp—thick stuff like soup; Mr. Bennett I think was with me at the time, and when I asked them what they were going to do with it, they said to put it on the ground for manure. Therefore if the sewage is now commonly used in that way, I cannot see that any great harm is likely to arise from a sewage farm, and certainly not to the extent asserted by the authorities which have been quoted. I do not pretend to know much about sewage farms, but I have seen immense vegetables grown by sewage, and people eat them without any nuisance being created, and without any disease being produced. The Chinamen who grow vegetables with this horrid stuff can tell you too when they will be ready for market.

Mr. Grundy.] I can corroborate Mr. Chapman's statement from my own observations. I have spoken to these Chinamen, and have pointed out to them certain vegetables, and asked if they were not rather late in the season, when I have been told that they would be ready for eating, in what appeared to me an extraordinary short time.

Mr. Dansey.] For my part I think the most complete way of getting rid of the sewage is the best, but as I understand it, the proposal of the Committee is to pour the sewage on to a piece of sandy ground which would have the effect of filtering it, so that while the sand retained the fertilizing properties of the sewage, the effluent water would drain into the sea without creating any nuisance. I understand that it is not intended to purify the sewage by any artificial process, and to run the refuse water into the sea by pipes, but simply to let it filter through the sand, and to grow vegetables or green crops there. That appears to me very different from retaining it in the soil, and converting the ground into a swamp; whether vegetables grown in that way would be liable to the same effects as grass grown in the same way where the sewage is thrown over it, and the ova of worms attach themselves to the blades, there is a doubt in my mind.

Mr. Moriarty.] I may preface the remarks I have to make, by stating that when I wrote this report I had no idea of recommending that we should take up such a large extent of land as would be necessary thoroughly to utilize the sewage of Sydney. My idea and that of the other members of the Committee who carefully considered the question our main object, was to make some provision for purifying the sewage, so as to allow the effluent matter to flow harmlessly into Botany Bay or some other place, and to take up only so much land as would be required for that purpose. Well I find that a sewage farm is really required, and that large crops are grown on land by means of intermittent filtration. The plan adapted is this: One-third of the land is kept under filtration, one-third is under crop, and one-third is being prepared to receive crops, so that in reality only one-third of the area is used at one time for filtering purposes under this system.

Chairman.] Under that system then it is impossible that the sewage can be applied to the leaves of the plants? Yes, it is not considered desirable to do that. I shall now proceed to read one or two authorities which I have collected on the subject of intermittent downward filtration. I quote from the report of a Committee of the British Association for the advancement of Science, appointed to inquire into the treatment and utilization of sewage, published in September, 1873.

Chairman.]

Chairman.] Can you give us the names of the Committee? The Committee was composed of Richard B. Grantham, C.E., F.G.S. (Chairman); F. J. Bramwell, C.E., F.R.S.; Professor W. W. Corfield, M.A., M.D. (Oxon); J. Bailey Denton, C.E., F.G.S.; J. H. Gilbert, Ph. D., F.R.S., F.C.S.; W. Hope, V.C.; Professor A. W. Williamson, Ph. D., F.R.S., F.C.S.; and Professor J. T. Way. The following are some of the conclusions at which they arrived:—

Intermittent downward filtration through soil has been shown at Merthyr Tydfil to afford a means of purifying the sewage under favourable conditions; but it cannot be said to be a method of utilization except to a very partial extent, as the investigations made by the committee showed that the effluent water contained as much nitrogen as was originally in solution in the sewage, but mainly as nitric acid instead of as ammonia and organic nitrogen. There can be no doubt that the process would prove useful as an adjunct to irrigation, or where a sufficient amount of land for irrigation cannot conveniently be got. By properly conducted sewage irrigation a solution is afforded to the question of sewage utilization; it has already been stated that a precipitation process or some classifying process may be found useful.

If such process, however, removes the phosphates from the sewage, it will if employed for irrigation require to be supplemented either by the use of the precipitate produced in the settling tanks, or by that if some other manure supplying phosphoric acid.

* * * * *

An irrigation farm should therefore carry out intermittent downward filtration on a large scale so that the sewage may be always thoroughly purified, while at the same time the maximum of utilization is obtained.

It is certain that all kinds of crops can be grown with sewage, so that the farmer can grow that which he can best sell; nevertheless the staple crops must be cattle food, such as grass, roots, &c., with occasional crops of kitchen vegetables and of corn.

And it is also certain from the analysis of the soil that it becomes very much richer under sewage irrigation, and that some of the manurial constituents of the sewage accumulate in it.

Cattle should be fed on the farm. The result would be a vast increase in the production of meat and milk, the great desiderata of the populations producing the sewage.

* * * * *

The Committee has not been able to trace any ill effects to the health of the persons living along sewage farms, even when badly conducted; nor is there any proof whatever that vegetables grown thereon are in any way inferior to those grown with other manure. On the contrary, there is plenty of evidence that such vegetables are perfectly suited for the food of man and beast, and that the milk given by cows fed on sewage grass is perfectly wholesome.

To give a recent example, Mr. Dyke, Medical Officer of Health of Merthyr Tydfil, states that since the abundant supply of milk from the cows fed on irrigated grass the children's mortality has decreased from 48, 50, and 52 per cent. to only 39 per cent.; and that so far from diarrhoea having been made more prevalent by the use of sewage cabbages, "last year the Registrar General called attention to the fact that diarrhoea was less prevalent in Merthyr than in any place in England or Wales;" and he expressed his belief in "the perfect salubrity of the vegetables so grown."

With regard to the assumption which has been made, that entozoa diseases would be propagated by irrigation, all the evidence that the Committee has been able to collect, and more especially the positive facts obtained by experiments are against such an idea; and the Committee is of opinion that such diseases will certainly not be more readily propagated by sewage irrigation than by the use of human refuse as manure in any other way, and probably less if the precaution be taken of not allowing the animals to graze, but always having the grass cut and carried to them.

In the second Report of the Commissioners appointed to inquire into the best means of preventing the pollution of rivers, on the river Lee, they say—

In our report on the Thames (pages 12 to 15) we have described at some length the modes of sewage irrigation as practised at Croydon, Norwood, Worthing, Carlisle, and Edinburgh; we have little to add to this account, other than that experience confirms the practise of this mode of disposing of sewage. In the course of our inquiry we have received evidence as to its advantage. At this time (April 18th) there are crops of Italian rye grass at Worthing, grown under sewage irrigation, which are being cut at the rate of from 5 to 8 tons to the acre, whilst adjoining pasture lands are almost bare. A small dairy has been established, the cows being stall fed on the cut grass—the milk produced, from its richness and superior quality, commanding a preference in the town. A sewage farm requires special and peculiar management; the operations should be specially adapted to this mode of culture, and then it will be found that any land may be improved. The operations do not turn clay lands into swamps, although 60 inches in depth of sewage are added by irrigation to the rainfall. The dressings with sewage must be even and at regulated intervals. In all cases sewage should be used fresh, that is before putrescence has set in, so as to prevent any effluvia arising from the irrigated land. Where this is the case there cannot be any just grounds for complaint. Where clay lands are irrigated, and the contour of the land will admit of the operation, a second and even a third use of the water may be made with advantage."

Then follows a description of the appliances used, which I need not read, and they add—

A sewage farm not only requires a peculiar mode of cultivation, but also special management in dealing with the produce. Tolerably good land under sewage will produce from five to seven crops of Italian grass per annum, weighing in the aggregate when green from 50 to 60 tons per acre. A first cutting at Worthing in May, 1865, was from 20 to 25 tons per acre. The grass is used to the best advantage on the day it is cut, and is most profitably applied to stall-feeding dairy cows. With such rapid growth and weight of grass a special market for the produce of the land must be provided to prevent waste, failure, and disappointment; but as milk and butter are a necessity, and as good milk and butter will command a preference in the market, there need not be any difficulty with a sewage farm because of its great productiveness. This has however been a complaint made against sewage irrigation in some places—a market did not offer means for immediate sale, the grass spoiled in keeping, and therefore the experiment was pronounced a failure. In course of time sewage farming will become a special business; and when it is found that there is more profit in a sewage than in an ordinary farm, the system of sewage irrigation will have been solved. Where there is sewage there must be population. Milk, butter, and beef will therefore necessarily be in proportionate demand; so that when the true use of sewage is understood, that which is the cause of nuisance by being wasted will be turned to profit on the land.

In their recommendations at the close of their Report the Commissioners advise—

That after the lapse of a period to be allowed for alteration of existing arrangements it may be made unlawful for any sewage, unless the same has been passed over land so as to become purified, or for any injurious refuse from manufactories or agriculture, to be cast into the river or into any of its tributaries, and that persons offending in this respect be made liable to penalties to be recovered summarily.

In an address on health, by Robert Rawlinson, C.E., who is a Member of the Army Sanitary Committee, delivered at the Newcastle-upon-Tyne Congress of the Social Science Association, in September, 1870, he says,—

The sanitary engineer and manufacturer of the future will know nothing of waste products, because sewage will be used as the most valuable manure, and the ingredients which now pollute and destroy our rivers will be converted to profitable uses.

The Drainage and Sewage Utilization Works at Eton, which have been in operation over five years, appear to have been very successful. I extract the following from a report by the Rev. C. Wolley-Dod, Chairman of the Eton Urban Sanitary Authority. The report is dated September, 1876,—

In the case of Eton, the sewage is removed from the town, pumped up to the farm, distributed over the land, and the produce of the farm sold, and placed to the credit of the account.

The health of the town is exceptionally good, and there can be no doubt that the system is the best and cheapest that could be adopted.

The

The pollution of the river by the sewage of Eton is prevented, the health of the town improved, and the working expenses of pumping reduced to a minimum by having a fixed quantity to raise, instead of an uncertain and useless quantity of rain water.

Appended to this report is an extract from Colonel Cox's Report on the Thames Valley sewerage, dated January 11th, 1876, which refers to the Eton Farm.

As an example of what can be done nearer home may be cited the example of the Local Board of Eton, who by means of an irrigation farm and pumping works, though the rateable value of the district is only £15,000, solved the problem four years ago.

The same irrigation scheme is also referred to in a report of the *Lancet* in October, 1874.

The farm is about forty acres in extent, thirty of which only are at present laid out. The sewage is of course sent up to the highest point on the land, conveyed in the first place into several large tanks placed on various parts in order to equalise the supply, and then distributed over the surface of the farm by open channels. The soil of this farm, which may be called, we suppose, a sort of sandy humus, is so light that in summer no trace of liquid poured upon the land exists about an hour after the operation, and we were also assured by the Rev. Wolley-Hod, chairman of the Board, who politely escorted us over the farm, that since irrigation was commenced there has been absolutely no effluent water, everything put upon the land going at once to the subsoil.

The live stock and the crops on the farm all appear in remarkably good condition. The authority has adopted the very sensible course of keeping the farm in its own hands, so that the working can be regulated in accordance with sanitary as well as commercial principles, and it may be consoling to other public bodies to know that during the past year the sale of produce has cleared the cost of superintendence and irrigation.

Mr. James Gooch, and the other medical officers of the town and college, all concur as to the efficient working of the system, and as to the total absence of enteric fever since it has been in operation.

I will now read a few passages from a work entitled "Sewage Disposal," being the report of a Committee appointed by the London Local Government Board to inquire into the several modes of treating town sewage. The report is dated July, 1876.

The passages I am going to read occur under the head of "Conclusions."

5. That, as far as we have been able to ascertain, any mode of treating town-sewage by deposition and by chemicals in tanks effects little changes other than the separation of solids and clarification of the liquid. That this mode of treatment, however, effects a great improvement, and, when carried to its greatest perfection may, in some cases, be accepted. That any rivers or streams receiving the water of sewage so clarified should not, however, be used as a source of water-supply for domestic purposes.

6. That none of the manufactured manures made by manipulating town's refuse, with or without chemicals, as examined by us, pay the contingent costs of such mode of treatment; neither has any mode of dealing separately with excreta, which paid the cost of collection and preparation by a sale of the manure, been brought under our notice.

7. That town-sewage can best and most cheaply be disposed of and purified by the process of land irrigation for agricultural purposes, where local conditions are favourable to its application, but that the chemical value of sewage is greatly reduced to the farmer by the fact that it must be disposed of day-by-day throughout the entire year, and that its volume is generally greatest when it is of the least service to the land.

8. That land irrigation is not practicable in all cases; and, therefore, other modes of dealing with sewage must be allowed. That towns, situate on the sea-coast, or on tidal estuaries, after extracting the solids of sewage, may be allowed to turn it into the sea or estuary, below the line of low-water, provided no nuisance is caused; and, that such mode of getting rid of sewage may be allowed and justified on the score of economy.

9. That where rivers and streams are polluted by a discharge of crude sewage into them, the best practicable mode of dealing with such sewage so as fully to clarify and filter it should be strictly enforced by Act of Parliament.

S. J. SMITH, Assistant.
21st July, 1876.

ROBERT RAWLINSON,
CLARE SEWELL READ.

The following are extracts from the report itself—

GENERAL REMARKS ON SEWAGE.

The mode of utilising sewage with economy must depend upon local conditions, and a waste of sewage (which is manure) can only be justified when it would cost less to waste it *harmlessly* than to utilise it, as at Edinburgh, Liverpool, and Brighton, for instance. At Edinburgh, the Craighentiny meadows afford the strongest example of pecuniary success in the rough and ready use of crude sewage to produce rank crops of grass; and at Edinburgh also, in the Water of Leith intercepting-sewer we have an example, on a greater scale, of a waste of sewage into the sea at the Black Rocks outlet. The cases must, however, be considered with all their surroundings. At the Craighentiny meadows crude sewage flows down from the older part of Edinburgh without stint or charge towards land having little value in its natural state, as it is for the most part blown sand from the adjoining estuary. This sewage is received at a point sufficiently elevated to allow of its gravitating on to the land to be irrigated. It flows into rudely formed open carriers, to the highest points of the estate, from whence it gravitates by cheaply formed sub-carriers over the land below, the effluent escaping down to the boundary line of the sewage farm, which is the sea. The land is of low value as agricultural land; the sewage is abundant, far more than is required for the area irrigated; it costs nothing to the proprietor of the land; and its use, its abuse, or its waste is under no local control; it is applied in the cheapest way, and the crops are put up to auction in one acre plots each year, the purchaser cutting and removing the grass at his own cost. The mode of irrigation is uncleanly and rude, and there is undoubtedly at times an offensive smell from the carriers, from the rudely drenched irrigated surface, and from the effluent water. During winter the sewage is allowed to flow direct into the sea.

The next paragraph is headed "Sewage irrigation proved not to be injurious to health."

There is no record of any special outbreak of disease at or near the sewage farm. The men working on the land and amongst the sewage are reported to be healthy, the men cutting the grass are healthy, and the cows fed upon the grass are also as healthy as other cows, producing wholesome milk; and with respect to tapeworm, the medical men who attend the Edinburgh hospitals do not find any exceptional excess of the disease amongst their cases; but, on the contrary, less than in other hospitals. The Craighentiny meadows were made the subject of an exhaustive inquiry by the War Department during the time that Lord Macaulay was Member for Edinburgh and Parliamentary Secretary for that department. Complaints were made that the proximity of the irrigated meadows and the effluvia from them produced disease in excess amongst soldiers quartered in the neighbouring barracks. Official inquiry was made by army medical officers, who took the returns of health and mortality for twenty years back from barracks situate in different parts of Great Britain where troops similar in numbers and performing similar duties had been quartered, and these returns were tabulated, the results obtained proving that the barracks adjoining the Edinburgh sewage meadows had the lowest sick and death rate in the list, so that the allegations against the Craighentiny meadows fell to the ground. It must not, however, be supposed that rough and ready sewage irrigation is advocated, as the evidence should only be taken as proving that the application to land of putrid and crude sewage in the most gross form does not necessarily breed a local pestilence, though such mal-arrangements may produce an offensive nuisance which ought not to be continued. But we have no evidence that these Edinburgh meadows are a nuisance injurious to health; we are, however, satisfied that the work of irrigation may be carried on in a manner much more cleanly by a construction of settling-tanks to separate the solids and by the construction of permanent main-carriers, which could be regularly cleansed. The utilisation of sewage should, in all cases, be carried on in such manner as, in the vicinity of dwellings, to be the least offensive, although additional costs may, in some cases, be incurred to pay for more complete purification.

Further

Further on, under the heading, "Details of the modes of dealing with sewage"—

The application of town sewage to land is shown in this report to be the cheapest mode of disposing of it. The first cost of purchasing land for a sewage farm, of preparing this land to receive and filter sewage, and of constructing the necessary works and machinery, may require a rate in aid during the term allowed for repayment of the capital; but in most cases, where the sewage can be applied at a reasonable cost, by gravitation, so far as our investigations have been extended, there will be an available income from the farm at the termination of the temporary debt.

Sewage irrigation should in all cases be practised where there is land to be obtained, and the prospect of a balance of income in its favour, as sewage-grown grass is wholesome, and when used for dairy-cow feeding produces good milk, and affords employment to a large number of labourers.

The application of sewage to land need not in any case produce a swamp, nor generate malaria, as the volume of sewage applied at any period should be delivered in a thin film, such as the land can absorb at once; that is, within a few hours of its delivery.

Sewage should not in any case drench the land to which it is applied as is usual with water irrigations, where extensive areas are laid under water for several days at a time. The volume of sewage from any town being known, the sewage-farm should be from 10 to 15 per cent. greater than the area required for one week, and no more than one-tenth of the area of a sewage-farm should ever be under sewage at one time.

A wet season is not, as a rule, detrimental to a sewage-farm. In a wet season the value of sewage-grown grass is, however, reduced in value because there is more difficulty in removing crops from the ground.

The area of land required for a sewage farm, they say, must depend upon local conditions and the character of the subsoil, whether very porous or otherwise, as also by the volume of sewage and subsoil water in proportion to the population.

At Doncaster, with a sewage-farm of 264 acres and a population of 20,000, the average daily flow of sewage being about 600,000 gallons, 120 acres of land of a light sandy and open character have for three years absorbed the entire sewage, only about five acres at any one time being under sewage, and one acre has occasionally absorbed the entire volume of one day. At Croydon about one acre to each 100 of population has been provided. For a population of 60,000 there are about 15,000 water-closets in use; or one to four of the inhabitants. There are the contents of 25 water-closets in 20 tons of sewage each day; or about 7,000 tons of sewage per acre per annum.

The Committee recommend Italian rye grass as the best crop under sewage.

Italian rye-grass is probably in all respects the most advantageous crop to be grown under sewage, as it absorbs the largest volume of sewage, occupies the soil so as to choke down weeds, comes early into the market in spring, continues through the summer and autumn, bearing from five to as many as seven cuttings in the year, and producing from 30 to 50 tons of wholesome grass upon each acre. The area placed under this crop must, however, have reference to local means of consumption, as the young grass will not keep nor bear long carriage. It is most profitable for feeding milch cows. A dairy and a sewage farm should, therefore, wherever practicable, be associated. In a dry and warm summer good hay may be made, which will be sweet and wholesome.*

The following passages are from the same report:—

13. *Woking.* We refer, in conclusion, to an experiment in sewage irrigation on the slopes of poor sandy soil below the invalid prison at Woking. A population of more than 1,000 adults there receive a water-supply of upwards of 20 gallons a head, equal to about one ton daily to every ten persons. The whole drainage of the place passes through a tank capable of holding about 1,500 cubic feet, or 40 tons of water; and thence it has hitherto flowed almost entirely to waste, being used, however, in an unsystematic way, to fertilize the grass fields at the foot of the hill. Two acres upon the slope, in four consecutive plots apiece, were laid out in the spring of 1863, so that a tankful could at any time be poured upon the upper or any other plot of the series, the tail water being directed on any other plot of the series lower down. The four plots of one acre were sown with Indian rye-grass in March, and three crops averaging more than 12 tons each were cut during the following summer, the plant having been repeatedly sewaged during the intervals.

The Rivers Pollution Commissioners conclude their remarks on some chemical modes of treating town-sewage as under. Irrigation is the only power of cleansing sewage which has stood the test of experience, and, unless it be extensively adopted, there is but little hope of any substantial improvement in our sewage-polluted rivers.

It has often been asserted that sewage irrigation has a detrimental influence on the health of persons living near to or working upon sewage-farms; but nowhere have we found instances of ill-health that are properly attributable to malaria or other causes due to irrigation; and the evidence of Dr. Littlejohn, medical officer to the Board of Supervision in Scotland, Sir Robert Christison, Bart., M.D., Dr. Ligertwood, staff surgeon, Dr. Alfred Crosswell, and Dr. Alfred Carpenter, given before the Rivers Pollution Commission (see Report, Mersey and Ribble Basins, 1870, pp. 90-91), full confirms this.

The Craightinny Meadows.—After bearing testimony to the health of the village of Restalrig, which is surrounded by the sewage meadows of Lochend and Craightinny, Dr. Littlejohn says:—"I expected that the first part of Edinburgh (Regent Terrace and Carlton Terrace), against which the wind blowing over these meadows impinges, would have exhibited evidence of infection in the shape of cholera or typhoid fever; but I have totally failed to find it so. There are also at Marionville, which is in the very centre of the meadows, a collection of children of the poorest class, who have been kept under the auspices of Dr. Guthrie. Thus the soldiers in the barracks (on the one side, the old people at Restalrig midway, and the very young children with debilitated constitution on the other side) are healthy. With these three delicate tests, including Regent Terrace and Carlton Terrace, we have failed to show that the meadows are prejudicial to health; in fact, opposite evidence might be obtained of a very strong kind."

Dr. Littlejohn informed one of us in January, 1876, that he had not anything to add to or retract from the evidence he gave before the Rivers Pollution Commission.

Sir Robert Christison, Bart., M.D., President of the Royal Society of Edinburgh, in an address on public health in October, 1863, speaking of the influence of sewage irrigation on health, said:—"The irrigated meadows in the immediate neighbourhood of Edinburgh, with foul water, are agreeable. They might with reason be strongly suspected, for as managed they present that frequent alternation of considerable moisture and approach to dryness, that rankness of vegetation, and that abundance of decaying organic matter which are thought when combined eminently to foment intermittent and remittent fevers in countries liable to these diseases; but if there be any doubt as to the general salubrity of the now famous meadows of Craightinny, there is none at least as to the total absence of ague among the inhabitants. I have recently been making careful inquiry respecting this famous and somewhat unsavoury institution. Many years ago my own prejudices were all against the meadows. I have been compelled to surrender them. I am satisfied that neither typhus or enteric fever, nor dysentery nor cholera is to be encountered in or around them, whether in epidemic or non-epidemic seasons, more than in any other agricultural district of the neighbourhood. I think it right in reference to the late introduction of the Craightinny system of irrigation into the vicinity of other large towns, that these precise facts should be known."

Sir Robert Christison writes to the Secretary to the Commission on the 4th of February, 1870, "I have nothing to add to or subtract from the extract from my Social Science address in 1863, quoted above."

"Dr. Alfred Crosswell in his evidence says:—"I have resided in the neighbourhood of the South Norwood Sewage Farm since 1866, and have the largest practice there, especially attending the families of those who work on the farm, and who live in houses within 150 yards of the sewage fields. There is also a large school for girls near to the farm. In this school, in which there are more than thirty inmates, there has not been a case of illness from preventable diseases, and my last quarter's bill was 5s. 6d. I have not been able to trace a single case of illness to the sewage fields. An unpleasant effluvia does exist, but it is so seldom perceptible that a house built within 200 or 300 yards would command the same rent as if half-a-mile off. My investigations and independent observations during the last three years have made me an advocate for this method of utilising sewage matter; and as an instance of how perfectly the watery portion is purified, I can state that the water flowing over these fields and thence conducted into the brook is frequently drunk by persons who are ignorant of its source. It is clear, pellucid, and tasteless. Therefore, after watching the working of these fields, my opinion is that when the system of sewage irrigation is well managed the health of the inhabitants in the immediate vicinity is in no way influenced by it."

Croydon

* Note.—July 1876. On the Doncaster sewage farm 18 acres of Italian rye-grass have been cut (about 9 tons green) and made into hay (about 2½ tons per acre), or some 45 tons of hay from one cutting alone.

Croydon (Beddington) Sewage Farm.

Dr. Alfred Carpenter says:—"The visitor to Beddington will see a number of villas which have been occupied for some years, with irrigated fields both in front and rear, whilst not a trace of enteric disease has appeared in any of them, though I think the Beddington farm is capable of much improvement. It is a farm of nearly 300 acres, lying to the west of the town, and is within 500 yards of a populous portion of it, and also within 900 yards of the centre of the place; and yet I can safely say that the continuance of a west wind is always accompanied by a diminished amount of ordinary sickness in the place, and our ordinary mortality is generally below 20 per 1,040. At Norwood the population is much greater and much nearer to the fields than at Beddington, probably 400 persons living within 200 or 300 yards of the farm. Previously to its establishment in that district fever abounded; since then that disease has all but disappeared and the mortality of the district has steadily declined."

(Sewage-grown grass is wholesome.)

On the Liability to Disease which has been alleged to exist from the Consumption of the Milk and Flesh of Cattle fed on Sewage-grown Vegetables.

Dr. Henry D. Littlejohn in his evidence before the Rivers Pollution Commission at Edinburgh, on September 23rd, 1870, said:—"There are a considerable number of cows kept in Edinburgh and the immediate neighbourhood, and a large quantity of milk is consumed, chiefly obtained from these cows. They are fed with grass that is grown on the Craighentiny meadows. I was of opinion that such grass might be of inferior quality, but I have failed to detect any bad effects resulting from its use. Entozoic disease is remarkably rare in Edinburgh, and tapeworm is hardly ever heard of, except in the cases of persons coming from other places to reside here. Many of the cows which have been fed upon sewage-grown grass are used as food. They are not fattened, because they are always kept in such capital condition; but the cows which have been so fed find their way to our slaughter-houses, where they are examined by inspectors and myself, and so far as my observations have gone, the use of sewage-grass for the food of animals is unobjectionable. Trichiniasis is not known in Edinburgh. If there had been anything in the idea that sewage-grass would lead indirectly to entozoic disease, it has had plenty of time to develop itself, and Edinburgh is not only the seat of a great medical school but medical observation is carried to the highest point so that it could not fail of being detected."

Conclusions from the First and Second Reports of the Select Committee on the Sewage of Towns. Dated 10th April, 1862.

Analysis of Evidence.

1. The evidence proves that sewage contains the elements of every crop which is grown.
2. That as compared with solid manure there are advantages in the application of sewage manure to land.
3. The evidence proves that town sewage contains a large amount of heat, which in itself is beneficial in stimulating vegetation.
4. The evidence also proves that the water alone of sewage is of great benefit for agricultural purposes.
5. The evidence further proves that 1 ton (224 gallons) of average town sewage contains an amount of manure which, if extracted and dried, would be worth a little over 2d., taking Peruvian guano (at £11 per ton) as the standard.
6. A judicious use of town sewage permanently improves land.
7. Sewage may be applied to common grass, Italian rye-grass, and also to roots and grain-crops, with great advantage, dressings with sewage hastening vegetation.
8. Sewage-grown grass has a great effect in increasing the quantity and richness of the milk of cows, as well as improving the condition of the cattle which prefer sewage grass to all others.
9. The earth possesses the power of absorbing from sewage all the manure which it contains, if the dressings in volume are proportioned to the depth and quality of the soil.
10. Those who use sewage should have full control over it, that they may apply it when and in what quantities they may require it.
11. Heavy dressings of sewage (8,000 to 9,000 tons per acre) are wasteful; less dressings (500 to 2,000 tons per acre) when more carefully applied produce better results. The enormous dressings recommended by some witnesses would be agriculturally useless, as the sewage would flow over and off the surface unchanged.
12. When the sewage of our cities, towns, and villages is utilized to the best advantage over suitable areas, little or no imported or manufactured manures would be required in such districts.
13. Sewage may be applied with advantage to every description of soil which is naturally or artificially drained.
14. The most profitable returns, as in the case of all other manures, will be obtained when sewage is judiciously applied to the best class of soils.
15. Sewage may be advantageously applied to land throughout the entire year.
16. Some matters used in manufactures which enter town sewers such as waste acids, would be in themselves injurious if applied to vegetation; but bearing as they do so small a proportion to the entire volume of sewage into which they are turned, they are rendered harmless.
17. Fresh sewage at the outfall of the sewers, even in the hottest weather, is very slightly offensive; and if applied to the land in this state, in such dressings as can at once be absorbed by the earth, fear of nuisance need not be felt, as the soil possesses the power to deodorize and separate from liquids all the manure which they contain.
18. Large dressings and an over-taxed soil may pollute surface streams, subsoils, and shallow wells.
19. Solid manure cannot be manufactured from town sewage with commercially profitable results.

I will not detain the Board longer than to make a short extract from a report on the results of the Conference on the Health and Sewage of Towns, which I received by the last mail; it was published on the 10th May, 1876. It is a very valuable document, inasmuch as it comprises returns from a great number of towns, showing how the sewage is dealt with in each place, the cost and all particulars, besides a good deal of evidence of recent date. The Executive Committee, whose names I will read—Lord Alfred S. Churchill, Chairman of the Council; F. A. Abel, F.R.S., President of the Chemical Society; Sir Henry Cole, K.C.B.; Capt. Douglas Galton, R.E., C.B., F.R.S.; and Lieut.-Colonel E. F. Du Cane, R.E., C.B., Surveyor General of Prisons—with the Chairman of the Conference, the Right Hon. James Stansfield, M.P., commence their report thus:—

1. In certain localities where land at a reasonable price can be procured, with favourable natural gradients, with soil of a suitable quality, and in sufficient quantity, a sewage farm, if properly conducted, is apparently the best method of disposing of water-carried sewage. It is essential, however, to bear in mind that a profit should not be looked for by the locality establishing the sewage farm and only a moderate one by the farmer.

2. With regard to the various processes based upon subsidence, precipitation, or filtration, it is evident that by some of them a sufficiently purified effluent can be produced for discharge, without injurious result, into watercourses and rivers of sufficient magnitude for its considerable dilution; and that for many towns where land is not readily obtained at a moderate price, those particular processes afford the most suitable means of disposing of water-carried sewage. It appears, further, that the sludge in a material point of view is of low and uncertain commercial value; that the cost of its conversion into a valuable manure will preclude the attainment of any adequate return on the outlay and working expenses connected therewith, and that means must therefore be used for getting rid of it without reference to possible profit.

7. It was conclusively shown that no one system for disposing of sewage could be adopted for universal use; that different localities require different methods to suit their special peculiarities, and also that, as a rule, no profit can be derived at present from sewage utilisation.

Mr. Bennett.] Mr. Chairman, before the Board adjourn, perhaps you will allow me to read a portion of the introduction to "Burke's Sewage Utilization," as it seems to me very pertinent to the present discussion, as showing that opinions differ even among scientific men upon these points very considerably:—

While few questions are of greater interest and greater importance at the present day than that of the proper distribution of the sewage of our towns, few are more beset with difficulties of every kind. That any question which has for so many years defied alike the researches of science and the experiments of practical men, must be intrinsically and essentially difficult of solution, is almost self-evident; but the study of the subject under our consideration is further complicated and retarded by two artificial difficulties—the prevalence of party spirit, and the fallacy of statistics.

As regards the first of these two stumbling-blocks, a well known sanitary reformer once said to us that he only knew one topic besides polemics upon which men's party spirit got the better of their good sense, and even of their regard for truth and justice, and that was the treatment of sewage.

An out-and-out irrigationist would go to the stake in support of his views, and would hardly even use an A B C despatch-box, while the advocates of the various "systems" are equally bigoted in their own way and consider all those who differ from them as quite outside the pale of sanitary or scientific consideration. This excessive orthodoxy has the same effect in sewage matters as it has in religious, and naturally tends to make men narrow-minded and illiberal, and incapable of taking a broad and impartial view of distasteful and especially of novel themes.

As to the fallacy of statistics, using the expression generally, a good deal of the evil may be laid to the score of the moral aberration consequent upon this sewage "bigotry" to which we have just alluded, and as almost all books or pamphlets upon the subject of sewage utilization are written by partisans, with the avowed object of ventilating and lauding their own pet system, we find the most hopelessly confusing discrepancies in all values and quantities which should be but the data and not the deduction of the various authors. A manure will be spoken of by one writer as worth £3 17s. 9½d. per ton, while another values at 8s. 11½d., and when we have seen it carefully proved by the most accurate statistics that a certain deposit is not even worth its carriage for more than two or three miles from the place of its production we find in the next *brochure* we take up that the farmers all over England cannot get enough of it at £5 per ton; this is bad enough, but it is absolutely impossible for anyone who has not the most accurate knowledge of the prices of the commonest substance which can in any way be brought to bear upon sewage utilization, to carry away any but the most confused notions after a course of sanitary study.

Clay, charcoal, alum, coal, wood, ammonia, lime, and every conceivable substance—animal, vegetable, and mineral—are gravely valued at prices so ridiculously different that it can only be assumed that every one must estimate them at either four times or one-fourth of their actual value, according to his views or predilections. Again, one high authority, whose reputation entitles his opinion to the greatest respect, tells us that irrigation pollutes not only the land but the surrounding atmosphere, and that the neighbourhood of a sewage farm must necessarily be extremely unhealthy. This seems simple enough to understand until we come to read the statistics, which prove that not only has the death-rate *decreased* in a prodigious ratio since the year when the sewage farm was established, but that the immediate neighbourhood of the land under irrigation is the favourite resort of those who desire pure air!

But these discrepancies are as nothing compared with those to be found in the purely chemical statistics. One would think that when we had reached the region of pure science a calm voice would speak from the laboratory in the unprejudiced tones of perfect accuracy, yet it is precisely here that the earnest student becomes utterly and hopelessly bewildered.

Professor A analyses a gallon of water, finds it contains three grains of nitrogen, and pronounces it unfit for drinking; Professor B analyses a gallon of the same water, finds but one grain of nitrogen, and asserts that even if there were three grains of nitrogen in the gallon, which there are not, the water would be perfectly innocuous, and even possibly superior to water not so fortified.

The presence of *nitrates*, again, is by some considered to indicate a deadly amount of previous sewage contamination; others consider this opinion to be of a highly "sensational" character, and in no way warranted by science. Perfectly pure water, we are told on the highest authority, is unfit for human consumption, while on the other hand we learn that the smallest trace of impurity may involve a whole district in cholera or typhoid fever.

Adjournment.

The Board adjourned at 4:30 p.m., to resume the debate on Thursday next, February 1st, at 11 o'clock.

THURSDAY, 1 FEBRUARY, 1877.

The Board met at 11 a.m., pursuant to adjournment.

PRESENT:—

HON. J. B. WILSON,
C. WATT, Esq.,
M. CHAPMAN, Esq.,
B. PALMER, Esq.,

HON. J. SMITH,
W. C. BENNETT, Esq.,
E. O. MORIARTY, Esq.,
F. H. GRUNDY, Esq.,

DR. ALLEYNE.

M. B. PELL, Esq., IN THE CHAIR.

Minutes.

The minutes of the previous meeting were read and confirmed.

Sewage disposal—resumption of debate.

Mr. Moriarty.] At our last meeting I read some of the conclusions arrived at by the conference on the health and sewage of towns, which was recently held in London. As members are probably aware, the Society of Arts sent circulars to different towns, asking them to state their mode of dealing with their sewage and their sanitary arrangements generally. This information is contained in the form of reports sent to the Society, in evidence given before the Conference, and in tabular statements and statistics. I will now read a paper from it on downward filtration.

Hon. J. B. Wilson.] I must object to discuss that question at present. I think we should confine ourselves to the terms of the resolution before the Board. I was invited to consider the recommendation of the Engineering Committee contained in the 31st clause of their Report, which says nothing about downward filtration.

Hon. J. Smith.] It appears to me that the clause you mention refers to both modes of treatment, for it recommends that sufficient land be resumed at Shea's Creek or on Webb's Grant for a sewage farm, where the sewage could be utilized or purified by filtering through the sand before being allowed to escape into the bay.

Dr. Alleyne.] Many persons may think as I do that downward filtration is a mode of sewage farming.

Chairman.] It appears to me impossible that we can separate the two subjects. Downward filtration is only a process of sewage irrigation by which crops are produced.

Hon. J. Smith.] Perhaps it will simplify the matter if I take this occasion to move an amendment which I have prepared upon Dr. Wilson's resolution. I now therefore move,—

1. That while the experience of sewage farming in Great Britain is not so favourable as to warrant its adoption here on a large scale, yet the Board is of opinion that the Shea's Creek sewage, being relatively inconsiderable, may for some years to come be treated by straining and intermittent filtration through sand, so as to partially purify it before escaping into Botany Bay, as suggested by the Engineering Committee in paragraph 33 of their Report.
2. And that along with this filtration efforts should be made, by way of experiment, to utilize the sewage by growing useful crops on the filtering surface.

Mr. Palmer seconded the amendment.

Mr.

Mr. Bennett.] At Mr. Moriarty's request I will now read the passages to which he has referred. They are from a paper on Intermittent Downward Filtration, read at the Conference by Mr. J. Bailey Denton :—

The experience already gained in intermittent downward filtration not only proves that a comparatively small area of suitable soil will cleanse effectually the sewage discharged from towns and villages, and relieve our rivers and streams of pollution, but that by a combination of the process with other modes of treatment, the best chance may be secured of a profitable return from them. We have now had sufficient trial of actual works to assure us, first, that the suggestion which Dr. Frankland based upon his laboratory experiments, to the effect that an acre of suitable soil drained 6 feet deep, and used intermittently, would cleanse the sewage of 3,300 people, can be realized; and, second, that if modified by the arrangement which I have frequently advised of trebling that quantity of land, so that instead of one acre three acres of equal extent should be available, each capable of cleansing the whole of the sewage and of growing crops at the same time, the objections Dr. Frankland anticipated when suggesting the process may be entirely removed. Those objections, it will be remembered, were that—

- “1. The process would be entirely unremunerative, the amount of sewage applied to a given area of land being probably in such a case too great to permit of the growth of any ordinary agricultural crop; 2. The whole of the manure ingredients of the sewage would be absolutely wasted; and 3. The collection of solid faecal matters upon the surface of the soil, with no vegetation to make use of them, would probably give rise to a formidable nuisance, especially in hot weather.”

By trebling the quantity of land, it becomes an easy matter to grow crops, and remove all chance of overcharging the soil and causing a nuisance. Each area (one-third) should be used for the purification of the sewage for one year at a time only, whereby two areas (two-thirds) out of the three would be devoted for two years in succession to full plant growth, while the area in constant use would grow what it could.

Although experience at Merthyr, Kendal, Walton Convalescent Hospital, and other places, has most conclusively shown that one acre of suitable land will efficiently and for a constancy cleanse the liquid refuse of 1,000 people, a fact, the importance of which cannot be over-estimated in those cases where land is very difficult to get and very expensive when obtained, I may be pardoned for stating that I do not wish to be considered the advocate of dealing with the sewage in such a concentrated form under all circumstances. After devoting thirty-five years to the improvement of landed property with a view to the increase of food produce, I cannot look upon sewage as a substance to be entirely sacrificed, but consider in spite of the difficulties that seem to beset the question and stand in the way of profit, that it is clearly our duty so to treat the liquid refuse of our towns and villages that we may be able to turn to account its fertilising elements wherever and whenever it is possible to do so with advantage to those communities whose money is employed in its removal and disposal.

To effect this, intermittent downward filtration should be combined with surface irrigation in every case where land is resorted to. By this means sanitary authorities may “cut their coat according to their cloth,” and use effectively whatever extent of land they can obtain on fair terms. Even in dealing with the sewage of sea-board towns and towns on tidal rivers where it may be better to resort to chemical processes (to precipitate the solid matters and convert them into a portable manure) than to use land, the perfect cleansing of the effluent may in like manner be economically secured by supplementing the process adopted by intermittent downward filtration through a much reduced area of land.

In reply, the Chairman (Mr. Jones) stated on the 21st May last (1875) :—

“It will be as well, perhaps, if I here clear up one point with respect to the land taken and about to be taken, which I think is not well understood. The quantity scheduled is 400 acres, divided as follows, viz. :—

	a.	r.	p.
Land under filtration, areas.....	20	0	0
„ suitable for wide irrigation	305	3	13
„ rough and unsuitable	40	0	1
„ under roads and streams	34	0	36
	400	0	0

“I also desire to disabuse your mind that the Board contemplates the abandonment of the filtration areas. It contemplates nothing of the kind, but looks upon them as being that which cannot be described better by any other term than the one you use, namely, a ‘safety-valve.’ In fact, so satisfied is the Board with the principle of downward filtration as the purifier of a large quantity of sewage on a small area, that Mr. Harpur has just designed for the disposal of the sewage of a population outside our main drainage according to that principle, and we are seeking for powers under a Provisional Order to obtain land compulsorily for that object.

“I may also add that we have it view, if the land we shall have acquired be found to be of limited for wide irrigation, to lay out a set of filter beds on the Park Newydd Farm, which we have just bought.”

To which Mr. Jones added that they had now “adopted the system of wide surface irrigation, combined with intermittent downward filtration; and, having committed ourselves to a combination of those systems, we must direct our attention to carry them through to the most perfect state of completion that we possibly can.”

If anything more than this is needed to prove the thorough success of the intermittent downward filtration work at Merthyr, I cannot do better than point to the following passages of a letter from Mr. Dyke, the medical officer of the district, who wrote me as lately as July last in the following terms :—

“1. That the passage of the strained sewage in the carriers and on the prepared areas is effected without creating the slightest nuisance, without any appearance of unsightliness, and without any objectionable odour.

“2. That the effluent water discharged from the main exit is far purer than the water supplied for domestic use to London or Oxford.

“3. That the amount of nitrogenous matter in solution in the water does not exceed one part in two hundred thousand parts, and that this nitrogen is oxidated, and is in combination with lime or potash, &c.

“4. That the water may be safely drunk, and that in fact it is used by the men and boys employed on the farm. No ill result has been known to occur.

“5. That the vegetables produced on the areas are consumed by the public resident in Merthyr, and that no evil results have followed. Diarrhoea is a disease which would result from the use of bad vegetables. The Registrar-General drew especial attention to the fact that the mortality due to diarrhoea was less in Merthyr than in any town in the kingdom.

“6. The sewage areas have been at work since the spring of 1871, and there has never been any sign of clogging or over saturating.”

Now with regard to the alleged danger of entozoic diseases resulting from sewage irrigation, Dr. Corfield, in one of the lectures given by him at the School of Military Engineering at Chatham in 1873, says :—

Dr. Cobbold, the great authority upon entozoa, thinks that if sewage farms are spread much over the land, we shall have more of entozoic diseases, and that deaths from them will become much more frequent, and he even suggested that an entozon which is very fatal in some parts of Northern Africa (the *Bilharzia hæmatobia*) might become prevalent in this country. But that entozon is, in the first place, prevalent in those countries especially during the hot seasons. In the second place, we know next to nothing about the different stages it goes through, during which it no doubt inhabits different animals (snails, &c.); and lastly, Dr. Cobbold himself has shown that the larvæ of this parasite cannot live in impure water. So we may dismiss that at once. Then with regard to ordinary entozoa. In the first place, there is no sort of evidence whatever to show that they have been spread in cattle at farms where irrigation has been going on for 200 years. Professor Christison has distinctly stated that he has never been able to trace entozoic disease to trace entozoic disease to the Craigentinny meadows near Edinburgh, neither is there evidence that this has been done anywhere else. It is very easy to say that the eggs of the entozoa are in the sewage when it is carried on to the land, and that the larvæ will be developed as soon as the plants are eaten by animals. In the first place, you must know that it is necessary that these eggs should be living and fertilised too, and they have the smallest chance of living that anything can possibly have by the time they get with the sewage to the land, for they have a considerable distance to go before they get to the farm; they are tossed about in an alkaline liquid, their natural habitat being acid excretions; they are turned on to the ground and taken down into the soil with the water. However, to prevent any apprehension on this score the simplest thing is to have the grass cut and carried to the stalls, and not to graze animals upon it. Many of the best irrigationists insist upon this.

Some

Some investigations of this matter were made by the British Association Committee.

"An ox which had been fed for the previous twenty-two months entirely on sewage grown produce" was slaughtered, and the carcass examined by Dr. Cobbold, Professor Marshall, and myself; no trace of any entozoic disease was found in it, although most carefully looked for. Dr. Cobbold suggests several reasons for this result, and one of these is the freedom of the sewage farm from snails and insects, in the bodies of which many of these entozoa go through different stages of their existence; it seems, therefore, that the sewage kills those creatures which are necessary for the existence of these entozoa in their different stages. Dr. Cobbold also examined under the microscope portions of "flaky vegetable tufts" collected from the sides of the minor sewage carriers, and found that, although they contained animal as well as vegetable life, they contained "no ova of any true entozoon." So that you see that as far as we have got positive evidence it is entirely against the theory that entozoic diseases are spread in cattle, and from them down, by means of sewage irrigation.

I will read from the same lecture some further remarks about the crops:—

The most suitable crop for sewage is Italian rye grass. This plant will take up a very large amount of sewage. If you read the reports of the sewage of Towns Commissioners you will find the results of experiments upon the amounts of meadow grass grown with different quantities of sewage.

There was an average increase of about 4 tons of grass for each thousand tons of sewage applied per acre: the maximum amount of the latter being about 9,000 tons per acre per annum. The largest amount was about 33 tons of green grass per acre in one year, and 37 tons in another. Some of the land was not supplied with sewage at all; other parts with 3,000, 6,000, and 9,000 tons per acre per annum. The increase of produce was much greater with the first 3,000 tons of sewage than it was when the amount was increased from 3,000 to 6,000 tons, and more from 3,000 to 6,000 than from 6,000 to 9,000. So that the increased amount of sewage did not produce a proportionately increased amount of produce. The increase of produce per 1,000 tons of sewage was when 3,000 tons were applied about 5 tons of green grass, when 6,000 tons were applied 4 tons 2½ cwt., and when 9,000 tons were applied 3 tons 3¼ cwt. And the results given by Italian rye grass showed about the same increase of produce. It was also found that an earlier cut of green grass could be obtained by means of sewage irrigation.

Experiments were made about the quality as well as about the quantity, and it was found that the grass contained a smaller actual amount of dry solid matters when grown with sewage, but was richer in nitrogen, and was, in fact, more readily assimilable—more milk could be got from it.

The main result of irrigation farms must be the feeding of cattle and the production of milk. The sewage is turned into Italian rye grass, and is returned to the town from which the sewage has come as milk, butter, cheese, and beef.

Then, if Italian rye grass can be grown, every grass and almost anything else can as well. You will see that denied even to this day, in spite of the fact that almost everything else has been grown with it. These different plants can be grown upon land which is absolutely and perfectly valueless in an agricultural point of view without sewage, even upon blowing sea sand, and you can see in many parts of England excellent crops now growing by means of the use of this rich manure. Cereals can be grown perfectly well with considerable returns. In 1868 and 1869 (at Lodge Farm, Barking) wheat, winter oats, rye, and cabbages were grown. In 1868 wheat was grown on a slope of shingle. It had two dressings of sewage, equal to 450 or 500 tons in all. The results were 5 qr. 3 bush., as against 3 qr. 5 bush. without sewage, with 4½ loads of straw, as against 3 to the acre. The winter oats yielded 8 qr. of corn with 3 loads of straw to the acre. Among other vegetables must be especially mentioned beet-root. From experiments which have been made there seems very little doubt that beet-root can be grown for the production of sugar in almost any quantity. Prof. Voelcker has analysed some of the beet-roots grown on sewage, and they gave 13.19 per cent. of sugar, while the beet-roots from Holland, Suffolk, and Scotland only gave from 9 to 10 per cent. of it at the outside.

Well, now a word or two about the times when you don't want sewage on the land. There may be times when you don't want it at all—times when the sewage is too dilute, and the land is very wet, as during heavy floods; and this is a very strong argument for keeping the drainage water, properly so called, out of the sewage, the utilisation of sewage is thereby rendered very much easier. The best dilution for sewage is when it represents 25 to 30 gallons per head of the population. If you keep the drainage water as much as possible separate, you can always turn it into it as a diluent when more water is wanted.

Referring to Dantzic, which is mentioned in the 25th clause of our report as one of the places where sewage has been successfully utilized, I find in vol. 44 of the Minutes of Proceedings of the Institute of Civil Engineers, the following:—

* * * * *
On the Chemical Composition of Sewage at Dantzic Irrigation Works, by O. Helm.
* * * * *

The liquid is utilized in the irrigation of some land about 2 miles from Dantzic, part of which can be cultivated while the other part is useless sandy soil. The suspended matter delivered on the land forms a crust on the surface, and the dissolved matter is partly utilized in impregnating the soil, the remainder being exhaled into the air, while the organic matter undergoes a chemical change. The liquid after utilization is allowed to soak or filter through earthen banks, and is then collected in drains from which it is conducted in channels and conduits to Weichselmünde and Henbude.

The foregoing examination also points to the conclusion that after the irrigation has been carried on for a longer time the effluent water will continue to improve. That a more compact humus will gradually form on the irrigated land and more completely retain the organic matter of the sewage liquid.

The Results of Sewage Irrigation at Dantzic.

Sewage irrigation was commenced at Dantzic towards the end of 1871. The acreage then brought under irrigation being 2 acres, increasing to 31 in 1874. This latter amount being about half the acreage necessary to cover the costs which include pumping machinery for raising the sewage of the lower part of the town, and about one-quarter of the acreage that will probably be eventually irrigated. The experience already gained is sufficient to furnish satisfactory replies to the more important questions, such as the sufficient purification of the effluent water, the sanitary condition of the neighbourhood, the practicability of irrigation in the depth of winter, and the quality of the grass and vegetables grown on the sewage farm.

The daily supply of sewage liquid, three-quarters from the city refuse and the remainder from surface drainage, is 4½ million gallons, representing a supply of 41 gallons per head from a population of 80,000, and of 5,500 gallons per acre irrigated in 1874.

The sewage is conveyed in a cast-iron pipe 10,000 feet long to a cistern on the irrigated farm, from which its flow on to the land is regulated; the liquid is nearly clear of a grey colour.

The land on which the sewage is now utilized was originally so valueless that it let at about 4½d. per acre; it is now rented by the contractor at 31s. 6d. per acre, on a thirty years lease. The soil is principally dark sand, with an admixture of fox sand. The subsoil water rises to within 5 feet of the surface; while the sand on the surface is so light that it is blown about by the wind.

The sewage liquid, after a few hours, forces out any air from the land in bubbles, and then sinks rapidly into the subsoil, leaving on the surface and in the pores of the soil both the suspended and a portion of the dissolved matters, but washing out and carrying away some of the chlorine, iron, and humus substance contained in the soil. A portion of the matter with which the soil is impregnated is utilized in supporting vegetation, and a portion is rapidly oxidized by the air.

The result of continued irrigation has been to increase the depth of humus or vegetable soil, and this is clearly shown in the samples of soil irrigated; the irrigation of the first year merely introducing veins of humus matter into the soil while that of several years produces a clearly defined stratum.

The farm at Dantzic has been highly productive in 1871, no less than four to six cuttings of grass were obtained on a previously sterile soil, while the best land in the neighbourhood only yields two cuttings.

The crops mostly grown are Italian rye-grass and summer rye. In 1873 part of the land was converted into a vegetable garden, the yield of the various vegetables being thus—

Turnips, 224 to 248 bushels to the acre.
Rape and beet, 11 bushels to the acre.
Mustard, 3 cwt. per acre.

Cabbage, asparagus, and cumin were also grown, as well as barley, oats, maize, and rape seed. Both the grass and the vegetables were excellent in every respect, the latter being supplied to the patients of the Marienkrankenhaus without any detriment to their health. * * * * * The results of the English mode of applying sewage in irrigation are hence not only hygienically successful but also highly productive.

Sir

Sir John Hawkshaw, in his last Report on the purification of the river Clyde and its tributaries, makes these remarks.—

By the irrigation system is meant the distribution of the sewage over the land, whereby, if the soil be of a suitable character, and the area irrigated large enough in proportion to the sewage distributed over it, the liquid flowing from the land is rendered comparatively pure and inoffensive. This system has been tried more or less completely, and with varying success, at Edinburgh, Croydon, Rugby, Carlisle, and many other places.

Where there is soil of a suitable description, and land available to which the sewage can be conveyed at a moderate outlay, and so situated as to prevent the sewage farm from becoming a nuisance, it may be employed with advantage. But its application on a large scale is beset with many difficulties. The opposition of surrounding proprietors to the proposal to place vast sewage farms in their neighbourhood, would in many cases be great and proportionately costly, and in some cases fatal. The cost of distribution of sewage over the land would not increase in direct proportion to the area irrigated, but at a greater rate; nor have we any experience of how far the nuisance of a large area of many thousand acres irrigated with sewage would extend. On these grounds it is not safe to argue from small irrigation farms to large ones, either from an economical or a sanitary point of view. There may be cases where on a moderate scale irrigation may prove a good method, and in some such cases it may be the best."

Speaking of certain places south of Cootbridge and Airdrie, he says—

I do not recommend that the sewage of these towns and villages be dealt with as a whole. The quantity produced at each place will generally be small in proportion to the population, and will be best disposed of on the land in the neighbourhood, after the solid and more offensive parts of the sewage have been removed, or after the sewage has been deodorized, where the land available for irrigation is in proximity to human habitations.

The sewage of Wishaw has for many years been disposed of on the land, by irrigation, &c. And he says, with reference to the sewage of Dumbarton—

In order to remove this source of pollution from the Leven it would be necessary to construct one or more intercepting sewers along each bank, to points where plots of land can be obtained, if not of sufficient acreage to admit of irrigation at least large enough to permit of the sewage being chemically treated, and afterwards discharged into the Leven.

Hon. J. B. Wilson.] It may be necessary to adopt some such course in order to prevent the pollution of rivers, but I should like to know if you have heard of any place where facilities exist for conveying the sewage to the sea, and where a sewage farm has been recommended.

Mr. Bennett.] We do not advocate the disposal of the sewage in this way, in places where it can be taken to the sea economically; but that cannot be done in this instance.

Mr. Moriarty.] It appears to me that the object the Committee have in view is even yet not clearly understood. We state distinctly in our Report that if we could have seen our way to get rid of the whole of the sewage entirely, at a moderate cost, we should have recommended it. In that case we should have advised that the sewage of the southern slopes should be dealt with in the same way as that of the northern slopes of the city. But we saw that that would involve an enormous outlay, and we have recommended this method of dealing with it, as the cheapest mode of disposal, and one that will be efficient for some years to come at all events; when, if it should be thought necessary or desirable, the sewers can be extended to Botany or elsewhere. In the meantime we shall only encumber ourselves with a small piece of land, which can no doubt be disposed of to advantage at any time.

Mr. Bennett.] We also took into consideration the uncertain character of the population settled on the southern slopes; it may be trebled before long. There is a possibility at any rate that before many years the present watershed may be built upon, and it may become desirable to construct a separate sewer direct to the sea.

Hon. J. B. Wilson.] Could not the sewage be pumped into the proposed system of sewers for the northern slopes. Would not that be the cheapest plan?

Mr. Bennett.] No, it would be more expensive; if it were done at all it would have to be done by means of a tunnel, which would be very costly.

Mr. Palmer.] I have had very little experience of sewage irrigation, but I have been much struck with the statements quoted by Mr. Moriarty, and I think we shall be quite safe in adopting the recommendations of the Committee.

Dr. Alleyne.] I am also prepared to adopt the Report of the Committee as it stands.

Chairman.] I have a few quotations to make from the Report of the Birmingham Sewage Inquiry Committee of 1871, which appear to me very conclusive in favour of sewage irrigation. I have marked several passages which bear directly upon the subject we are discussing, and I will give them as they come:—

The plan which, after the fullest inquiry and consideration, the Committee recommend for adoption is that of *purification of the sewage by intermittent downward filtration*; in other words, the application of sewage to a moderate quantity of land, so as to make purification the first object, and cultivation only the second, with the view of passing the purified effluent water as quickly and cheaply as possible into the river.

Mr. Hope furnishes two Reports for the information of the Committee. In the second Report he strongly repeats his advice in favor of intermittent downward filtration:—

Referring to the proposal already before the Council for the purchase of a large area of land for sewage utilization, he says (Report, p. 91), "Having regard to all the circumstances of the case, I make a definite and precise recommendation, of which I accept the full responsibility. I say, do not waste your money in buying an area of land which, large as it is, would be quite insufficient to enable you to utilize all the manure of Birmingham; but buy only enough for a large filter, and supplement this by a small model farm, as a school for future customers, who will in a little time be very ready to buy all the manure you can sell them at a fair price."

Mr. Bailey Denton's proposal is also referred to:—

Mr. Bailey Denton advises the purchase of 900 acres of land for the purpose of intermittent downward filtration; the land to be divided into three areas, say of 300 acres each: any one of the three being sufficient to receive the sewage for six or twelve months, as may be decided upon, leaving the others at rest. Mr. Denton is of "opinion that this arrangement may be made a lasting one, and will render the effluent water admissible into the River Tame without any nuisance whatever. He further considers that a small part of the land should be used as a model farm, to show farmers what can be done with sewage in the way of ordinary irrigation; and he adds, "Experience at Merthyr justifies my stating that not only may crops be produced from the two series of areas which will be at rest, but that the series of areas at work may also be made equally productive."

The Committee remark on the subject of irrigation:—

Land is a natural filter, and, if the purification of sewage alone is contemplated, a comparatively small area, used simply as a filter bed, may suffice, if the filtration is intermittent, to purify sewage so as to allow of its admission into a running stream; but if it is also required to utilize the elements of fertility which the sewage may contain, a vastly larger area is necessary if the sewage is to be applied, so as to produce the greatest return in the shape of marketable crops without injuring the permanent fertility of the soil.

But

But with regard to utilization, they say :—

In the present state of knowledge upon this question it would be presumptuous in the Committee to express any decided opinion on these points.

Chemists of the highest scientific attainments express absolutely contrary opinions, and engineers of the greatest eminence are equally at variance.

In default of such agreement, the only resource is to turn to those places where the irrigation system has been adopted, and endeavour to ascertain the result of their experience ; but in doing this it must be borne in mind that, with a few exceptions, all trials of irrigation are of very recent date.

They then proceed to give the results of personal inspections of certain sewage farms :—

For the purpose of obtaining the necessary information the Committee have inspected the sewage farms of Warwick, Rugby, and Mr. Hope's model farm at Romford, and have also addressed a series of questions to the authorities of such towns as have already adopted the irrigation system.

The information obtained from their inspection of the sewage farms is as follows :—

Warwick.—The population of Warwick is 11,000. It is a complete water-closet town, the number of water-closets being 2,400.

The sewage, amounting to a dry weather flow of 528,000 gallons daily, is pumped to a height of 65 feet, and conveyed to a farm of 135 acres of clay soil, situated about 1½ mile from Warwick.

The sewage of 11,000 persons utilized on 135 acres is at the rate of 85 to the acre ; but the Borough Surveyor of Warwick is strongly of opinion that an acre of land of this description cannot properly utilize the sewage of more than 50 persons.

The cost of conveying sewage to the land, including pumping engines, has amounted to £10,085, and of laying out the surface for its reception, from £1 to £10 an acre, according to the nature of the ground.

The annual cost of pumping, exclusive of interest on capital, is £600.

The farm is managed for the Corporation by Mr. E. Pritchard, C.E., the Borough Surveyor, and is held on lease for 21 years from 1866, at a rent of £420 10s., or about 3 guineas an acre ; and the total annual outlay, including interest on capital, coals, and all expenses of pumping, rent, and all ordinary expenses in connection with the working of the farm, is estimated at £1,900.

The land is, for the most part, undrained, and in consequence of the stiffness of the soil the sewage runs over instead of through it.

Experience has shown that sewage can be more completely purified by passing through the soil, and it is now intended to drain the land thoroughly to an average depth of 3 feet.

Rye grass is grown on about 60 acres, and irrigated once a week, from 5 to 8 hours at a time. Five or six cuttings a year are thus obtained.

Cabbages, mangolds, potatoes, and other green crops are also grown, and a small proportion of cereals—oats and wheat ; but little or no sewage can be directly applied to growing cereal crops. Wheat is not irrigated at all, and oats two or three times only during the season.

The experience of the Borough Surveyor is to the effect that no regular rotation of crops is necessary, because the sewage manure, which can be applied at any time and in any quantity, is, in his opinion, sufficient for the requirements of any crop ; and further, that the land is generally improved by irrigation and the crops very satisfactory.

One of these is the Romford farm, purchased by the Board of Health, and leased to Colonel Hope :—

The area of the farm is 121 acres, so that the sewage applied is that of 58 persons per acre.

The rent paid by Mr. Hope is £2 10s. an acre for the land, and £600 a year, or £5 an acre, for the sewage, with the responsibility of purifying the whole, and holding the Board harmless from any actions for nuisance.

The farm, both in its character and position, is very favourable for sewage irrigation. The soil is very poor, light, and sandy, with a gravel subsoil, and requires a maximum amount of moisture, and its proximity to the London market enables Mr. Hope to farm it as a market garden, and thus, by a constant growth of rye grass and green vegetables, to obtain the most favourable pecuniary results from sewage irrigation.

Even under the favourable conditions described, Mr. Hope considers the quantity of land insufficient (although the amount of sewage applied is small compared with other sewage farms), and he is now negotiating for an additional 80 acres of adjoining land for the cultivation of cereals. With this addition the quantity of sewage applied would be that of 35 persons to the acre, which Mr. Hope considers a maximum amount.

His experience of the feelings of adjoining farmers, with reference to irrigation, is similar to that of the Borough Surveyor of Warwick. They were first prejudiced against it, but have been converted by seeing the quality and quantity of the crops produced. Mr. Hope irrigated a field sown with rye grass and mangolds, adjoining his own farm, with such beneficial result that the tenant would now be glad to negotiate for sewage for his whole farm of 500 acres, and has actually applied for some during the winter when it can be better spared.

It is scarcely necessary to add that all the operations on Mr. Hope's farm at Romford seem to be conducted in the most efficient and appropriate manner, and no care nor expense seems to have been spared to make this, what the Committee believe it to be, the "Model Sewage Farm."

The quantity per acre of the various vegetables grown is very large, and the quality undoubted, as is fully set forth in the Report of the British Association for 1870, which may be referred to for further particulars.

Then follows a description of the treatment of sewage in other towns, from which I make a few extracts, together with a tabular statement showing the population of each town, amount of sewage, particulars of distribution, crops cultivated, &c. :—

At Leamington, with a population of 23,500, and volume of sewage amounting to a daily dry weather flow of 800,000 gallons, an arrangement has been made by which the Earl of Warwick will receive the sewage of the town for 30 years, paying therefor the sum of £350 per annum, and indemnifying the Board from any actions for nuisance. The sewage is to be pumped 120 feet, and the town undertakes to erect the necessary works at an estimated cost of £17,000, and bear the annual expense of pumping. Here the storm water is carried direct into the river by a separate system of drains.

At Exeter a company has recently taken a lease of the sewage for 25 years, and contracts to construct an intercepting sewer, and all necessary works for applying the sewage to land by irrigation. The sewer and works are estimated to cost £30,000, and are to become the property of the Corporation at the determination of the lease.

At Cheltenham also, where the sewage is utilized over 330 acres of land, 130 acres only belong to the Corporation, and 200 to adjoining owners, who pay a small yearly rent for the sewage.

They appear to be unanimous on the following points :—

1. That the land improves greatly under irrigation.
2. That, as a rule, no complaints are made of nuisance arising therefrom. In the few instances in which nuisance has risen, it has been the result of carelessness in conducting the irrigation.
3. The health of the district where irrigation is carried on is not injuriously affected.
4. Cattle thrive on the irrigated land, and no case of their being affected with entozoa has ever been heard of.
5. No other manure has been found necessary for the crops, and the produce, both in quality and quantity, is very satisfactory.
6. The water, after passing through the land, is purified in a satisfactory manner, and in one case cattle drink the effluent water.

Town.	Population contributing to sewers.	Gallons of Sewage per head.	Daily dry weather flow. gallons.	Daily flow in tons, at 24 gallons a ton.	No. of acres irrigated.	No. of persons per acre.	No. of tons applied yearly per acre.	Quality of soil.	Crops cultivated.	No. of years' experience.
Birmingham	345,000	49	17,000,000	75,900
Edinburgh	96,000	250	Sand	Rye grass and meadow	123

As to the general financial result of sewage farming it is to be regretted that so little information has been obtained, the questions on this point having been generally unanswered.

The only two replies received are to the following effect:—

At *Warwick*, as before stated, the estimate for the present year (which has been the most satisfactory one) shows a profit of £171.

At *Cheltenham* the loss, after paying interest and yearly repayment of principal for purchase of land and permanent works, is almost nominal; but *Cheltenham*, as before remarked, is somewhat favourably circumstanced, for out of the 230 acres of land irrigated 130 acres only belong to the Corporation, and 200 to adjacent owners, who pay a small yearly rent for the sewage.

The Committee obtained the following information from their inspection of the filtration works at *Merthyr Tydvil*:—

The population of this town is 50,000, and the daily dry weather flow of sewage 600,000 gallons, or 12 gallons per head.

The Board of Health are restrained by the Court of Chancery from discharging their sewage into the river, and are making arrangements to purify and utilize it by irrigating 400 acres of land which they have secured for this purpose. It should, however, be stated, that this quantity of land had been taken before the efficiency of the method about to be described had been ascertained.

The method of purification at present employed is that of intermittent downward filtration on a limited area of land, arranged by and carried on under the superintendence of Mr. Bailey Denton, C.E., appointed by the Court to see the injunction complied with in the interval which must elapse before the completion of the irrigation works.

The area employed for the filtration is 20 acres, and although not yet fully prepared, the whole of the sewage has been passed through it for the last three months.

It is intended to be divided into four beds of 5 acres each, receiving in succession the whole sewage continuously for six hours each per day.

Ten acres only, or two beds, are as yet completed, and these now receive, and have been receiving for the last month, the whole sewage for twelve hours each per day, amounting to about 3 inches daily over the entire surface of 10 acres.

The soil is a fine, deep, friable loam, upon a gravelly subsoil, and is drained 7 feet deep at intervals of 40 yards, and the land is laid out in beds, divided by roads, with a gentle, regular inclination, and cropped with rye grass, various kinds of cabbages, mangolds, pease, and some other vegetables.

The rains run underneath the roads, so that the sewage cannot pass down directly into them with the risk of imperfect filtration.

When not under rye grass, the land is thrown into ridges and furrows, and on the crests of the ridges, 3 feet apart, the vegetables are planted, and are thus elevated above the sewage, which is run into the furrows between them.

The Committee observed that the crops were all in a fine healthy condition, the pease exceptionally so, as at this time of the year they generally fail under ordinary cultivation. All the vegetables had been planted since the 14th June, and, from the information received, the growing crop had been sold, and realized an average of £17 15s. per acre.

Five acres were in rye grass, sown in April; this had already yielded 2 cuts, realizing together £12 per acre. The growing plant appeared very healthy, and was expected to yield in the present season a third cut at £6 per acre.

Although, as above stated, the 10 acres on which these crops were growing had for the last month received the whole of the *Merthyr* sewage, yet not the slightest offensive odour was given out, either from the land or the carriers, which built of brick and cement, or of glazed earthenware, were most efficiently arranged for the even distribution of the sewage.

The sewage, which appears to be of the ordinary character, is mixed, before it enters the filtration works, with a small quantity of milk of lime, and then passed through a filtering tank, the filtering medium being crushed slag.

Some difficulty was experienced in disposing of the solid matter here separated, notwithstanding the fact that one farmer had grown luxuriant crops with its assistance.

The effluent water was in appearance most satisfactory, and when submitted to the test over white paper very favourably contrasted with that of the river, which was stated to be not appreciably contaminated with sewage, though slightly affected by the drainage from the ironworks in the neighbourhood.

The Committee, impressed with the present efficiency of the works, their freedom from nuisance, the completeness of the filtration resulting from them, and the obvious capacity of works of this description for purifying, for a period, large quantities of sewage, requested Mr. Bailey Denton to furnish them with a report upon the practicability of applying a similar system for the purification of the sewage of Birmingham.

Which they did recommend in their Report, one of their recommendations being the purchase of 800 acres of land for the purposes of filtration. Questions were addressed by the Committee to the Mayors or other authorities of towns where the system of sewage irrigation has been adopted, and the replies received have been very satisfactory—in scarcely a single instance has any complaint been made either with respect to a nuisance caused by it, or in respect to the health of persons living in the neighbourhood, or cattle fed on the produce.

Colonel

Colonel Hope, in a paper published by the Conference on the Health and Sewage of Towns remarks,—

I do not say that the results I have obtained are quite equal to those obtained in careful laboratory experiments, but they are very fair results, and specific disturbing causes fully account for the difference. Therefore I claim to have proved that the manure contained in sewage has precisely the same producing power as the same ingredients contained in any other description of manure; in other words, that the intrinsic value inherent in town sewage, which was accurately stated by Chadwick and Liebig, at, in round numbers, 10s. per head per annum, can be got out of it by its intelligent application to land, in conjunction with the ordinary operations for farming.

I have said that I have devoted fifteen years of my life to the elucidation of the sewage question, and I confess that it was with pain and humiliation that I read the proposals of Sir John Hawkshaw to expend a million and a half sterling in throwing the sewage of Glasgow into the sea. But of course Sir John Hawkshaw has no personal knowledge of the facts which I have been endeavouring to place before you.

Hon. J. B. Wilson.] I think we should look to the rapidly increasing population of Sydney before recommending any tentative measures of this sort. I believe that even at present the population settled on the southern slopes of the city cannot be far short of 50,000, and in view of the large addition which may be expected in the course of a few years, I think we should take advantage of the present prosperous condition of the country to urge the carrying out at once of a permanent work.

Mr. Moriarty.] The advantage of this scheme is that it does not bind the country to any large expenditure. It merely involves the purchase of some 20 to 50 acres of land.

Mr. Bennett.] And the works which will have to be constructed will fit in to any permanent system of sewerage which it may be necessary to carry out hereafter.

Hon. J. B. Wilson.] You have to deal with all the drainage of Waterloo, Redfern, and the southern portions of Newtown.

Mr. Bennett.] Yes, but it would be almost impossible to carry out a complete sewerage scheme for that part of the city and suburbs at present, because we could not deal with the watershed.

Chairman.] Is it not the case that the population and settlement upon the northern slopes of Sydney, which comprise the greater portion of the city, are approaching something like a maximum, so that the tunnel which it is proposed to make to the Heads will last for all time? On the other hand the settlement on the southern slopes is at present only comparatively speaking, commencing, and to make prospectively a large tunnel to carry off the amount of sewage which must ultimately be produced there would enormously increase the cost of the works without any immediate advantage?

Mr. Moriarty.] It would probably double the cost. The essence of our proposal is that we do not commit the country to any large expenditure, and that the sewers for which the outlay will chiefly be required will fit into any system adopted hereafter, it being necessary only to purchase a small piece of land which is not likely to involve any loss whatever in any case—even should the experiment, from some cause or other, prove a failure.

Chairman.] Except through some gross mishmanagement I do not see how there can be any nuisance, and I do not think there can be any doubt about the sewage being filtered through the sand so that it will find its way harmlessly into Botany Bay. My conviction, which may not be worth much, is that when once the sewage has been applied to the sand, landowners in the neighbourhood will not allow any of it to be taken to the sea, but will be anxious to get as much as they can of it.

Hon. J. B. Wilson.] What I am thinking of is this: the Colony of New South Wales was never in a more flourishing condition. We have an overflowing Treasury, and a grand opportunity presents itself of getting important city and suburban works carried out.

Mr. Moriarty.] Still the payment of £25,000 or £30,000 interest yearly for works which are not immediately necessary would not be calculated to increase the prosperity of the country. Even in London they have arrived at the end of their tether, and they do not extend their sewers into the suburbs that have been built over.

Hon. J. Smith.] What Dr. Wilson has said about the money view of the question is reasonable enough, but I feel sure the inhabitants of this city would be more satisfied to go to the expense of a second great sewer when they know that sewage farms will not answer. I do not think they will be satisfied until the experiment has been made. I think it is worth trying, and it has not yet been tried in this country. I think also, that the Engineering Committee have really been steering a safe middle course. They say, carry the great bulk of the sewage direct to the sea—and there we all agree with them; but temporize with the remainder on the ground of economy, and because for other reasons it cannot be dealt with finally at present. In my opinion their arguments are very good against the construction of permanent works on the southern side of the city at present.

Chairman.] All the works which have to be constructed there will be subsidiary to a future complete scheme.

Hon. J. Smith.] Then in that respect they will be permanent. I think it is a good middle course to pursue: to get rid of permanently the great bulk of the sewage by sending it to sea, and to temporise with the rest until we see how the population settles. In the meantime this proposal paves the way to a very useful experiment.

Chairman.] I feel certain of one thing—that if we were to recommend any very costly project for the southern slopes, the money to carry it out would not be forthcoming.

Hon. J. B. Wilson.] I think our Legislature are now in a position to do almost anything they are called upon to do, to provide for the health of the inhabitants.

Chairman.] I believe there is a strong desire that some attempt should be made to utilize the sewage.

Hon. J. Smith.] There is one observation I should like to make with regard to this report: I see that the Committee came to the conclusion that it was necessary to have the outfall of the sewage discharging into the sea 10 feet above high-water-mark with great reluctance, as it would necessarily prevent a great part of the city from being drained by gravitation. Now have the Committee sufficiently examined the coast to satisfy themselves whether there is not some small sandy inlet at which the sewage could be discharged at a lower level.

Mr. Moriarty.] Such a place could be found, but the action of the waves on a sandy beach being to wash the sand inshore, it is necessary to make the outfall above such a disturbing influence, or the mouth of the sewer would be in continual danger of being blocked up by masses of sand.

Mr.

Mr. Bennett.] And the sandy beach would be covered with faecal matter.
The Chairman then put the amendment, which was carried by show of hands,—Hon. J. B. Wilson being the only dissentient.
The Report of the Committee was received.

(Adjournment.)

[The Board adjourned at 12:45 p.m., *sine die*.]

TUESDAY, 27 MARCH, 1877.

Present:—

HON. J. B. WILSON,
H. G. ALLEYNE, Esq.,

E. O. MORIARTY, Esq.,
W. C. BENNETT, Esq.

M. B. PELL, Esq., B.A., IN THE CHAIR.

William Morris, Esq., Fellow of the Faculty of Physicians and Surgery of Glasgow, and Fellow of the Royal Microscopical Society of London, called in and examined:—

3597. *Chairman.*] We understand, Dr. Morris, that you have recently visited England, and made some inquiries there and also in Scotland, into sanitary matters, and more especially into the various modes of disposing of sewage? Yes; allow me to say before we commence that I only moved into my house last night, and as yet have nothing unpacked, so that I have not been able to refer to any data which I have collected on the subject. Any questions which you like to put to me however, which I can answer from memory, I will reply to with pleasure. Of course it is now some months since I visited these sewage farms—in August last.

W. Morris,
Esq.

27 Mar., 1877.

3598. Which of them did you visit first? The Craigtinny Farm.

3599. Did you find that any nuisance was created by the sewage there? None when I was there. I had an interview with Dr. Littlejohn, and he expressed his opinion strongly that no action for nuisance could be maintained connected with it.

3600. Do you know whether there has been any inquiry held there lately? There was an inquiry, I believe, held at the barracks.

3601. You did not observe any nuisance yourself in connection with the farming operations? Nothing beyond a strong smell, but not of a putrescent nature.

3602. There was a strong smell? Yes, the smell was strong in the main conduit; the solid excrement was floating past at the rate of about 3 miles per hour. The smell arising therefrom I should not call unhealthy, but what is known as the smell from fresh excreta. Several sections of the lower portion of the farm was under flood with sewage matter, and on those sections only was the ground boggy; the other section not under flood was solid and appeared to bear the weight of carts loaded with fresh cut grass. The uncut grass, and grass that was being cut, was of a very poor nature—mostly weeds. The portion of the ground now described was formerly known as the "Figgote Whins."

3603. Did you hear any complaints that any one was suffering in health in consequence of the sewage? None whatever. I made particular inquiries of the men who had rented the grass—that is the cow-feeders—and they told me the cattle were as healthy as any other cattle in the neighbourhood. One man especially called my attention to a beast that had not been out of the byre for eighteen months, and was as fat and sleek as could be wished. The men also told me that there were no complaints of any sickness, either amongst themselves or of people who used their milk.

3604. Did any suspicion seem to exist that ill effects were produced by the use of sewage-grown food? No, there are no cattle reared there for fattening purposes.

3605. Not for the market? No; they are all milkers.

3606. Has there been, from what you ascertained, any instance where disease was supposed to be propagated through the use of sewage produce? Do you allude to tape-worm?

3607. Yes? No, the eggs must become located in another animal before a tape-worm could be matured in man.

3608. Could not that be done through some of the lower animals—snails for instance? No, because it must become a vesicular worm in the pig before it can become a tapeworm (*Tania solium*) in man.

3609. Then it does not appear that any entozoic diseases are produced by this sewage farm? No; Dr. Littlejohn told me that Edinburgh and its vicinity was almost entirely free from entozoa. Professor Walley also told me that the animals were not troubled with anything except the thread-worm (*Filaria*) which are met with everywhere.

3610. With respect to the smell arising from the solid refuse you observed in the lower part of the ground, is there not a total absence there of the usual precautions taken on other sewage farms—all the refuse being turned on to the land in a crude state? Yes; no attention is paid to the conduits, and the men who rent the grass never think of cleaning out the gutters, because it is not their business to do it; all they do is to cut the grass during certain months. The long grass left in the gutters decomposes, causing some very objectionable smells. There was a very nice crop of turnips growing on the upper portion of the farm where the reservoir is situated, from which the sewage is pumped. There was also some very fine Italian rye grass, and the man who was cutting it complained that he was only getting three cuttings of it this year instead of five (each load costing him £3), on account of the dry weather. This ground was kept in good order, quite different from the lower portion, and on making inquiry I found that it was under the management of the owner of Craigmiller.

3611. Did they ever complain that they got too much of this sewage? I am not aware; it runs right off the lower ground into the Frith of Forth; on the higher ground a portion of the sewage is pumped up into a reservoir. There is a pumping apparatus for that purpose worked by a windmill near the Craigmiller House, which was pointed out to me. As a general rule the sewage is flooded over each section of land requiring it for a few hours once in nine days more or less, depending upon the weather.

3612. What is the natural character of the soil? On the lower portion it is quite a sandy soil.

3613. It is described in some of the reports as having been originally nothing more than sea sand? If I recollect right Mr. Rawlinson's report, which he gave me while I was in England, states that there is 92 per cent. of sand; but you must bear in mind that that is only the lower portion of the ground—that is almost pure sand.

- W. Morris,
Esq.
27 Mar., 1877.
3614. I gather from reports on the subject that this sea sand is not impregnated to any depth by the sewage in consequence of the accumulation of this refuse for a number of years upon it? No.
3615. And the report to which you refer states that even after that time the sewage matter has only penetrated the soil for a few inches? Yes, I pulled up some of the grass by the roots, and there was nothing but sand a few inches from the surface.
3616. You confirm that opinion? Yes.
3617. Did you visit any other sewage farms? Yes, I visited the Kendall farm, where there are only about 10 acres under cultivation and 5 under grass.
3618. Did you observe any nuisance there? Only a strong smell as usual; the intermittent system is adopted there on and off every eight hours. The sewage is allowed to remain on 5 acres, and then it is turned on to the other 5. I remarked that where the sewage was turned off, there were a large number of dead worms in the gutters between the ridges; and about thirty small white sea-gulls were feeding on the dead worms. There were some fine crops of mangold-wurzel, carrot, and cabbage, and Italian grass, but I was informed by the overseer that there was no consumption for the crops and vegetables when grown, and that the grass was sold at the rate of 14 lbs. for a penny. As for the root crops they could scarcely be got rid of at all. He told me that last year the farm had cost £90 for labour.
3619. You did not hear any complaints that the sewage created a nuisance—anything injurious to health? No, there was none that I could detect; the men appeared to be in good health, and they said they were not aware of any disease in the vicinity of the farm.
3620. Did you find that to be the case in the other farms you visited? Yes; I visited Heathgate farm, belonging to the Earl of Warwick, which receives the sewage from Leamington.
3621. Then you found no complaints in England of disease or ill health experienced by persons residing on or in the vicinity of sewage farms? No; and I made especial inquiries on the subject; they appeared to ignore it altogether.
3622. Did you hear of any persons being ill of disease occasioned by eating sewage produce? No; the only disease that may arise is where they allow the sewage to lie on the ground in a low wet country, causing the ground to become water-logged; then the malarial type of disease may make its appearance.
3623. But not from the unhealthy character of the food? No.
3624. You did not hear any complaints for which there was reasonable ground of belief that entozoic diseases were caused by sewage-grown produce? No; I made particular inquiries from the various officers of health and professors of veterinary colleges, and they seemed to be all of the same opinion, that as a general rule no patients appear to suffer from entozoa in the neighbourhood of sewage farms.
3625. Would you have any apprehension in recommending the establishment of a sewage farm near a thickly populated locality? Not if it were properly looked after; if it were neglected there might be a disease of a malarious type. As long as there are subsoil drains there is no danger. At the Craigentenny Meadows there are no such precautions taken, but at the Heathgate Farm and at Kendall there are proper drains, and the effluent water passes away quite clear.
3626. Has the prejudice against sewage-grown produce abated in England, do you know? Yes, it is beginning to do so.
3627. No scientific men now appear to consider it dangerous? Dr. Cobbold is the only one; but I think he is beginning to withdraw his statements now. A specialist like Cobbold always looks upon disease from a Helminthologist point of view when any unknown epidemic is in existence; these specialists generally attempt to explain that the cause of such disease may arise from parasites, as in the case of the horse epidemic in Egypt, when 50,000 horses died last summer. Cobbold, in various letters, insisted that the cause of death was from parasites, because a few had been found in the stomach and intestines of several.
3628. Did you visit any places in England where the system of intermittent downward filtration was in operation? Yes, the system of downward filtration is adopted at Kendall.
3629. Did you see the water passing away? Yes, it was as pure as could be. I should have had no hesitation in drinking it; there was no smell from it. The soil for about 3 feet in depth is loam upon a gravel bed.
3630. Have you any further information to give us on the subject of sewage farming? Any further questions you may ask I shall answer as far as I am able; these were the three principal farms I visited. If you wish me to state the process of Stanford's charcoal system I can do so, and also the system adopted at the Small-pox and Fever Hospitals at Glasgow, for disposal of the excreta from affected patients.
3631. That is for disposing of the night-soil entirely, is it not? Yes.
3632. Do you think it is possible to utilize the night-soil in this country by manipulating it in any way? No, we have not the labor available.
3633. I gather from what I have read that all the attempts to dispose of the night-soil in that way have been failures? Yes. No person has been able to manufacture a marketable manure from night-soil only, that is of any value to the farmer if cartage is required for any distance. Solid excreta, according to recent analyses, contains 1 per cent of ammonia; consequently, manure made from the above is of little value as a fertiliser; hence the recent attempts to fortify the manure by adding sulphate of ammonia made from distilling the liquid excreta with lime and passing the ammoniacal gas into sulphuric acid. I visited Oldham, where the charcoal process is supposed to be carried on its integrity. I found a little difficulty in getting inside the works, but when once inside the first look convinced me that the system would not answer; instead of using seaweed charcoal the debris from yellow prussiate of potash works is used; this is carted to their works in a state of soft mud; it is dried, pulverized, and mixed with the contents of the pails; it is then put into a drying apparatus, consisting of eight large flat pans, about 14 ft. in length, 3½ ft. in breadth, and about 8 in. in depth, having a forward and backward motion. About 2 in. depth of the mixed material is placed in each pan; when the pans move a series of scrapers continually keep the material stirred, causing it to pass on to the next scraper, and so on until it passes out at the other end in a state of powder into a trough, in which revolves an Archimedian screw; this carries it forward until it is elevated into its proper place, and stacked away for sale. In its present shape it contains about 1 per cent. of ammonia. On the same premises there is erected a still for distilling the liquid excreta by adding lime, and allowing the ammonia to pass into sulphuric acid, forming sulphate of ammonia. When an order is received from a farmer for a ton or tons of manure containing 5 or 6

per cent. of ammonia, the dry powder is mixed with the sulphate of ammonia to give the required standard. The whole process seemed to me to be in a state of muddle. Outside the building about 6,000 tons of crude night-soil was stacked in one heap, and covered over with asphalt, to keep away flies and smell. From what I saw I am of opinion that it is only a question of time for this company to collapse. In England this is considered one of the successful processes. I also visited Birmingham, where a precipitation process is employed, and lime is mixed with the sewage matter. It then travels over a space about $\frac{3}{4}$ mile, and is allowed to settle in large tanks, which are emptied every fourteenth day. The sewage is then pumped into a large shoot and conveyed for about $\frac{1}{2}$ mile on to the farm. There are other tanks to allow the finer sediment to subside, but the effluent water I saw passing out of them was the color of very strong tea and frothy, showing a large quantity of alkaline matter still passing into the river. The borough surveyor told me they are compelled to destroy large quantities of growing vegetables because there was no room for the sludge without digging it into the ground with the growing crops. Whilst examining the works the surveyor introduced me to Sir Henry Cole, K.C.B., who was perfecting a process for General Scott, the General's brickmaking cement process having been abandoned for some time. Sir Henry kindly allowed his chemist to explain to me the various stages of this chemical process. About 600 pails of stuff are supplied weekly for treatment (15,000 pails being the Birmingham weekly collection) upon fairly chemical principles. The greasy matters are coagulated so as to render the solid porous, which causes the liquid to be more easily separated. The chemicals employed facilitate the distillation of the ammonia which is collected in sulphuric acid and crystallised out as sulphate of ammonia. The heat which is used in distilling the ammonia is also applied to render the greasy matters more solid. The separation of the ammonia is carried on until the liquid is so reduced that the process would no longer be remunerative, and a phosphate of magnesia, which is itself an earlier product, the phosphoric acid being added at this stage, absorbs the remainder of the ammonia, and assists in rendering the solid more friable and inoffensive. After this treatment the solid portions, having lost their tenacity of the hold upon water, can be readily dried, and in this dry form constitutes a manure worth from £4 to £5 per ton. The sulphate of ammonia formed at an earlier stage can be added to the manure, increasing its value *pro rata*. During my visit the solids, after being chemically treated, and whilst in a drying state, had a very offensive smell.

W. Morris,
Esq.

27 Mar., 1877.

3634. Are you of opinion that any precipitation process would be of use in this country? None whatever.

3635. You think that nothing could be taken out of the sewers to any advantage? No, because it only contains about 1 per cent. of ammonia, and the farmers would not come and take it away unless beneficial to them.

3636. Would it not be better for us to carry it away, and to get rid of it at once? I think so.

3637. If it cost something less to convey it to a piece of sand, through which it could be filtered, do you think it would be desirable to treat it in that way? If it could be properly managed it might answer in the course of time, but I think it would be better to get rid of it at once. In Chicago they are going to turn their sewage into Lake Michigan, distant about $2\frac{1}{2}$ miles from where they draw their water supply. They have made a circular tunnel 300 ft. in length by 12 ft. in diameter under the bed of the lake; the depth of the shaft is 67 ft., giving 12 feet of water and 55 ft. of clay over the tunnel. The sewage is to be brought by means of a canal near to the mouth of the shaft; it will then be pumped up to give 4 ft. of a head above the surface of the lake; at the far end of the tunnel they will pierce through the 55 ft. of clay to allow the sewage to make its escape into the lake.

3638. *Mr. Moriarty.*] I heard that they were constructing another water tunnel to draw water from the lake, and that the way they disposed of their sewage was by cutting a canal to one of the heads of the Mississippi? No, the tunnel I saw is intended to carry the sewage under the bottom of the lake. Mr. Surveyor Chisborough explained it all to me; the tunnel is purely for sewage matter.

3639. Is the canal to take the sewage to one of the tributaries of the Mississippi not in operation? I am not aware. Mr. Chisborough gave me a map of the city, showing the position of the works, which I can show you at any time.

3640. *Mr. Bennett.*] Did you see anything of the working of the Liernur system? No it was not in existence in England, but Mr. Rawlinson expressed himself decidedly against it. It was a filthy process, he said; leaks were continually taking place, and it would never answer; besides being very expensive.

3641. Was that the result of his own observation? Yes.

3642. *Hon. J. B. Wilson.*] With regard to the Craigentenny Meadows, are you aware how many mouths in the year the sewage is used on the land? I believe from what I could learn—of course this is only hearsay evidence—that all the winter it is allowed to run to waste and that it is only utilized between the months of March and September.

3643. And during those six months it is allowed to run away, is it not? Yes, it can be used or not.

3644. So that they are in a peculiar position at the Craigentenny Meadows; they can make use of the sewage or let it run away, as they like? Yes.

3645. They just irrigate the land when it is thirsty or when it is convenient? Yes, they use their discretion.

3646. Now with regard to the question of health in connection with sewage farms, do you think our climate would make a difference in the healthiness of sewage farms. Do you think a semi-tropical climate like this is as suitable as the climate of England? With a sandy soil and the subsoil of the farm properly drained so as to allow the effluent water to continuously pass away and the sewage put in the ground in a fresh state, I am of opinion that no climate would be prejudicial to the proper working of a sewage farm.

3647. But if it were put into the soil before oxidation took place? It would then oxidise as it passes through to the soil just as the blood is oxidised as it passes through the lungs.

3648. In all your travels have you seen any place where persons had a sewage farm if they could safely deliver the sewage into the sea by water carriage? No.

3649. With regard to the 10-acre farm at Kendall, which you visited, is the whole of the sewage of Kendall used on it, or only a portion of it? Only a portion from the water-closets; the privies are cleaned out by scavengers who take away all the solid material and ashes.

3650. And you have already told us that the soil is loamy with a gravelly sub-soil? Yes, it was formerly the old bed of the river.

3651.

- W. Morris, Esq. 3651. As far as I can learn of the Leamington system, and the Earl of Warwick's farm, the whole of the sewage does not go on to the farm? No, I believe the contractor need not take the whole of it unless he requires it; he must take the whole of the liquid portion.
- 27 Mar., 1877. 3652. *Chairman.*] Where does it go to if he does not take it? The ashes and solids are taken away by scavengers; only the liquid portion goes to the farm.
3653. *Hon. J. B. Wilson.*] I believe he is only required to take it as he wants it, and therefore that farm cannot be considered a sewage farm in the true sense of the term; it is more like the Craigentenny Meadows, only irrigated when necessary? I am speaking only from memory; it is nine months since I was there, and I have had nothing to refresh my memory since. I believe the sewage is pumped up to a height of 132 feet to the highest point of the farm. There are eight wells to receive it, and four principal outlets, so that it can be used just as it is required. All sorts of vegetables are grown there, and I saw some fine cattle—one a very fine fat bullock, weighing over 1,000 lbs., fed entirely on sewage produce.
3654. Do you know how the butchers like that kind of meat? I do not; from the nature of the grass on which they feed it must be washy meat.
3655. I think you have already stated that in your opinion, so long as there were facilities for disposing of the sewage, thoroughly and completely, by sending it to sea, you would not be inclined to recommend a sewage farm? No; if pumping is required to raise the sewage to a moderate height sewage farming then becomes a very expensive affair, and we don't know where the expenses will stop when once commenced.
3656. *Mr. Moriarty.*] But if a considerable expense could be saved, and if you had a suitable tract of land for the sewage to percolate, while on the other hand, to take it to sea would involve enormous expense, would you not be inclined to try a sewage farm? I should, because from what I have seen it can be properly carried out.
3657. Supposing both methods of disposal involved the same cost, which would you prefer? To carry it out to sea.
3658. But you think if the expense were less there would be a reasonable prospect of success in a sewage farm? Yes.
3659. *Chairman.*] Do you think the white sand at Botany would answer for a sewage farm? I think it would be two or three years before you would get any returns off it; but after that I think it would answer very well.
3660. The market gardeners at Botany get very good crops off it? I suppose they mix a little soil with it. It is now thoroughly understood in England, that intermittent downward filtration is the only way to get pure effluent water from sewage.

APPENDIX A.

WATER SUPPLY.

RESOLUTIONS adopted by the Board on Tuesday, 28 March, 1876, on the motion of the Hon. J. B. Wilson:—Present: Messrs. Wilson, Watt, Chapman, Grundy, Bell, Dansey, Palmer, Moriarty, Bennett, Alleyne, and Adams,—M. B. Pell, Esq., in the Chair.

THE investigations of the Board have naturally forced on their attention the absolute necessity for a more copious supply of water to the city and suburbs, not only for domestic and manufacturing, but also for sanitary purposes. As no system of sewerage can be effectual unless the sewers are well flushed so as to prevent the accumulation of organic matter; and while the Board freely admits that the supply from Botany, considering the extent of the catchment area, is wonderful and satisfactory, yet they are fully convinced it will only meet the requirements of the City for a limited period—and that should there be a succession of dry seasons like the present there would be great danger of a serious scarcity.

Under these circumstances the Board considered it to be their duty to inquire into the various schemes proposed or suggested for the supply of the City and suburbs with water, with the view of forming an opinion as to which of them would yield the most ample supply of the best water obtainable at a reasonable cost, taking as the basis of the inquiry the fact that no supply would be considered adequate unless it would ensure a daily supply of at least 30,000,000 gallons.

The Board have confined their attention to the only three new schemes that could be considered worthy of any attention, namely, Loddon Plains or Mr. J. Manning's—the Lower Nepean—and the scheme recommended by the Water Commission from the Pheasant's Nest. Evidence has been taken respecting each of them, and they have also been inspected by several Members of the Board, and the following conclusions have been arrived at:—

I. *Mr. Manning's Scheme*—The Board are unanimous in the opinion that it is utterly inadequate, and cannot even be favourably compared with the present Botany supply. In fact, we are convinced that had Mr. Manning based his proposition on well ascertained facts instead of on crude ideas and statements, which cannot be verified, he never would have so persistently advocated it, or brought it so prominently before the public. To show how ill considered the whole subject has been by him, we have only to draw attention to the fact that in his evidence given on the 14th day of February he strongly urged on the Board as an important part of his scheme the Port Hacking or low level project, which on the 9th day of March he said he would not recommend. And also in his evidence given on the 9th day of February he asserted that he could intercept the waters of the Cordeaux River, but on the 9th day of March admitted that it would be impossible.

The catchment area is far too small to give any guarantee of a sufficient supply, and none of his supplementary proposals are worthy of further consideration. The expense of carrying out this scheme would we believe be much greater than that required for either of the others.

II. *The Lower Nepean Scheme*.—We have no doubt as to this magnificent natural reservoir being amply sufficient, but there are great drawbacks to its being carried out. In the first place it is a pumping scheme, and the annual expense necessary to be incurred to pump 30,000,000 gallons per diem would probably not be under £40,000; and secondly, all the water must, owing to the formation of the intervening country, be brought the whole distance in pipes; and it has also been proved, both by analysis and inspection, that the water though good, is not equal in quality to that from the Pheasant's Nest.

The original outlay would equal if not exceed that required to bring an abundant supply from the Pheasant's Nest.

III. *The Commissioners' Scheme*.—This is a well-considered scheme, and undoubtedly the best of the three—equal to the requirements of a city containing 1,000,000 inhabitants—and has the following advantages:—

1. A supply of the very best water, equal to a consumption of 50,000,000 gallons per diem.
2. The water can be brought to Petersham by tunnels and open cuttings necessitating only 9 miles of piping.
3. It will not only supply Sydney and the immediate suburbs, but also Parramatta, Homebush, Burwood, Ashfield, Petersham, and Newtown; but also, if necessary, Campbelltown and Liverpool.
4. The original outlay will not probably exceed £1,000,000.
5. The works being once completed, little expense will be afterwards incurred in keeping up the supply.
6. The catchment area is very large—350 square miles—and it is almost entirely uninhabited; never likely to be inhabited.

Believing as we do that the Commissioners' scheme is the best of the three schemes referred to, we would respectfully recommend that steps be taken to have a Bill prepared and passed, authorizing the Government to resume any land that may be required. And also, that suitable pipes be at once ordered, as whatever scheme is ultimately adopted a large number of them will be required; and pipes of the very best quality can be easily and expeditiously cast in the Colony.

REPORT to the Government of New South Wales, on the various projects suggested for supplying the City of Sydney with Water.

HAVING been honored with instructions from the Agent General in England, for New South Wales, to proceed to this Colony, for the purpose of advising the Government on the subject of the Water Supply and the Drainage of the City of Sydney, I arrived here on the 29th of November last.

The climate of Australia is well known to be subject to considerable vicissitudes of flood and drought; rain falling at times with tropical violence, is succeeded by periods of drought of greater or less severity. Due to these causes considerable inconvenience and distress are not unfrequent. Water, in all places a prime necessary of life, here possesses an especial value; its superfluity at one time, and scarcity at another, naturally suggests the necessity for equalizing, as far as possible, these extremes, and the means by which this can be accomplished.

It is probably due to this circumstance, that several gentlemen have come forward with proposals for supplying Sydney with water, and that including the present supply, I have no less than eight schemes to consider in the following Report.

Immediately on my arrival in the Colony I was placed in communication with the Surveyor General, Mr. Adams, and by him I was supplied with all the available plans and information on the various localities, whence it has been proposed to obtain supplies. With Mr. Adams, also, I have visited all the more important places in the company of the several gentlemen from whom the respective proposals have emanated.

The first six weeks of my time was thus entirely occupied, and with the occasional visits I have since found it necessary to make, fully two months have been spent in inspection of the country.

Sydney is now supplied from the area called the Botany and Lachlan Swamps, lying to the south of the city; the water is partly pumped by engines fixed at the margin of the area, and on the shore of Botany Bay, lifting the water into the Paddington Reservoir at an elevation of 214 feet, and into the Crown-street Reservoir at an elevation of 141 feet over sea level.

To these reservoirs there was supplied daily, during the year 1876—

To Paddington, about 1,000,000 gallons.

„ Crown-street, „ 2,000,000 „

The remainder of the supply is furnished from the Lachlan Swamps by gravitation, through the tunnel* called Busby's Bore, and estimated to be daily, about 1½ million gallons, giving a total daily supply of 4¼ million gallons.

The quantities pumped fluctuate from—

2¹³⁶ million gallons in the winter, to

4¹⁷⁶ „ „ in the summer.

During periods of drought, owing to the limited area of the watershed and the small quantity of water to be seen in the reservoirs, great apprehension of scarcity is felt, and this has continued through many years.

In 1867 a Commission was appointed to report upon the supply of water to Sydney and its suburbs. Various projects were considered, and in 1869 a Report was submitted, recommending a scheme which had been elaborated and investigated in considerable detail, and called hereafter "The Upper Nepean scheme."

In

* There are no means of accurate measurement of this quantity.

In the course of the proceedings of this Commission the following sources of supply had engaged attention :—

The Grose,
 „ Warragamba,
 „ George's River,
 „ Nepean, at Penrith,

besides several other tributary and minor streams, which appeared to offer a prospect of giving the required supply, at a height sufficient to command the city by gravitation.

Since the date of the Report of the Commission other projects have been brought forward, proposing as sources of supply the following :—

The Loddon River and Madden's Plains, with extension to the Wingecarribee Swamps ;

The Erskine Valley,—a tributary of the Nepean River ; and

A further scheme for supplying water from wells at Botany Reserve.

The engineering advisers of the Government, as members of the Commission, having recommended the Upper Nepean scheme, it appears to have been considered by the promoters of the others, which had not been adopted, that an impartial opinion was not to be expected from them on any scheme that might be considered as a rival to their own ; and an independent opinion was desirable. Under these circumstances I have had the honor to receive the instructions of the New South Wales Government.

In undertaking this service, the duty I have to perform is somewhat of a judicial character, to weigh the merits of the several schemes brought before me, and select the one that promises to be the best, the cost and other matters considered ; and at the same time to use my opportunities for observing any fresh source of supply during my investigations.

With the exception of the scheme of the Commission, the various proposals have emanated from unprofessional gentlemen, and are wanting in many of the data necessary for a just comparison of their respective merits. In several of these, great personal labour and some considerable expense have been entailed on the proposers. No greater proof of the strength of the convictions of these gentlemen as to the merits of their individual schemes could be given. It is scarcely to be expected that they could have elaborated their schemes to the full extent requisite ; nor, on the other hand, could the Government be expected to undertake the working out in detail of all the schemes brought forward. I have therefore been obliged to supply that which has been wanting to enable me to determine the probable cost, as well as the possible efficiency of the various suggestions. This was the only way of arriving at a just conclusion.

I have been anxious as far as possible that each project should be fairly considered ; and to enable me to accomplish this, I have found it necessary to call for further information, in the shape of surveys, levels, &c., the preparation of which under my instructions, has necessarily occupied some considerable time.

Upon the subject of quantity, the Report of the Commission says—“ We put it down at 12,000,000 gallons per day for a population of (say) a quarter of a million ; and further, “ that any scheme should be capable of expansion.” So far I fully concur in the views of the Commission. The growing population—the importance of the city—the wealth of mineral and other natural products—the prospects of its becoming in the future, owing to the cheapness and abundance of fuel, the seat of manufactures,—indicate the desirability of a supply in excess of what is usually considered ample.

The population of Sydney and its suburbs was in 1869 and 1876 as follows :—

	1869.	1876.
Sydney	64,000	93,269
Suburbs	56,000	73,872

being, in seven years, an increase per cent. of—

Sydney	44	per cent.
Suburbs	32 (nearly)	„

The Commission also defines what they consider should be the capacity for expansion that any scheme should have, viz., double the above amount, or to 24,000,000 gallons per day.

The

The Sewage and Health Board, at their meeting on the 28th March, 1876, resolve, "That no supply would be considered adequate unless it would ensure a daily supply of at least 30,000,000 of gallons."

Now, the figures 24 and 30 million gallons are very enormous quantities to provide daily, and when taken with the fact that storage for nearly twelve months' drought has to enter into the question, such a condition would exclude from consideration some of the schemes proposed, which in other respects would be entitled thereto.

There can be no doubt that any scheme which possesses capabilities of expansion, with economy in cost, must be held to possess greater advantages than one without it.

I have endeavoured in each case to ascertain the cost of supplying 12,000,000 gallons per day, with the subsequent cost of adding to the supply by increments of about six million gallons.

Past experience of droughts—some of them extending over more than one year, and the certainty of their recurrence—makes it necessary to adopt the *minimum rainfall as the safe unit for calculation* when considering the source of a future supply.

The records of observations taken at the Sydney Observatory give 50⁴⁷ inches per annum as the average fall of rain for the past thirty-six years. During 1849, however, 21⁴⁹ inches only fell, and this is the least annual rainfall for any one year during which authentic records have been kept. The nearest approximations are in 1862—23⁹⁸ inches, and in 1854—29²⁹ inches.

It would appear, however, that even smaller quantities of rain have fallen, as in 1824 it is stated that 19 inches only fell, but no authentic record of this seems to exist, and it cannot therefore be taken into consideration.

The determination of the minimum rainfall is a point of the greatest importance, as affecting the question of an unfailing supply of water to towns.

Of the quantity of water falling in the form of rain, over any specific area—part will be evaporated—part will be absorbed by vegetation—part will go to feed, by subterranean channels; springs at a distance—and the remainder will flow off by the natural drainage channels, the creeks and rivers of the watershed.

The last of these portions is that which we have now to deal with as available for our purpose; it is susceptible of actual measurement, and such records form the only safe guide for estimating the value of a source of supply.

To obtain such information, regular observations have been carefully made upon the rivers Nepean and Cataract during the past eight years, and afford most valuable data upon which to estimate the quantity of water that may be expected from any given area of watershed in this portion of the Colony. Observations of the amount of rainfall at Cordeaux, and Wilton, points in the catchment area, have also been recorded.

By these observations it is sought to establish a proportion of the available quantity of water due to a given area from an observed depth of rainfall.

It must be remarked that information so obtained is valuable, in proportion to the number of places of observation where the area is large, and to the length of the period over which such observations have extended—a period of not less than twenty years is requisite in order to form an accurate estimate; but as observations extending over such a time are not available, it is only necessary to observe greater caution in the use of the information which has been obtained.

The observations upon rainfall of the dry year 1848-9 were taken at Sydney—no observations had at that time been taken on the area from which the Commission could establish data for the supply. Rainfall at Sydney was therefore assumed as being applicable thereto.

During the intervening eight years since the issue of the Report of the Commission, a drought has occurred, viz., for eight months, extending from August, 1875, to March, 1876 (both months inclusive); during this period the amount of rain which fell at Sydney was 9⁹¹ inches.

Mr. Moriarty, in a memorandum dated 6th March, 1877, has drawn attention See Memo., page 50. to the fact that while in the dry year 1849, when only 21⁴⁹ inches of rain fell—during the driest consecutive eight months 13⁴⁹ inches fell—*i.e.* that in the driest years recorded there was no period so severe as the consecutive eight months of 1875-6 above referred to.

The table, page 43, in the Appendix, gives, amongst other information, on the Upper Nepean Scheme, the amount of rain falling at the several places of observation, Sydney, Wilton, and Cordeaux; also the quantity measured as passing down the rivers Cataract and Nepean, together with the percentage which this quantity represents, when compared with a rainfall over an area of 35·4 square miles, of the depth recorded.

From the commencement of June, 1871, the Cordeaux observations are taken as more nearly representing the average rainfall for such an area, and will be more nearly applicable to the various projects which have to come under consideration.

During the dry period above alluded to, from August, 1875, to March, 1876, when 9⁹⁴ inches fell at Sydney, 16⁹² inches were recorded at Cordeaux, and the Table as constructed, calculates the ratio of discharge to rainfall as observed at Cordeaux.

Plan No. 1 in the Appendix shows the rivers, creeks, &c., draining the several watersheds proposed as sources of supply, and a general outline of the schemes.

The following diagrams have been prepared by Mr. Moriarty to illustrate the subject, and are annexed to the Report:—

Diagram (No. 2) showing the monthly rainfall at Sydney, Wilton, and at Cordeaux, and the quantity passing down the rivers Nepean and Cataract.

Diagram (No. 3) showing the amount of water that would have been available monthly from the Nepean and Cataract Rivers for the supply of Sydney, during the years 1869 to 1876, through the conduits proposed in the Upper Nepean scheme.

Diagram (No. 4) showing the quantity of water that would have passed into the Prospect Reservoir* during the dry period from August, 1875, to March, 1876; also, the amount of water that would have been withdrawn from the Prospect Reservoir by evaporation, and by the supply of quantities equal to the daily supply to Melbourne, Dublin, Liverpool, Manchester, and Glasgow.

The observations of the quantities passing down the rivers, so far as they extend, are of the greatest value; and what may be learned from them is the fact that, unless a supply be drawn from some inexhaustible source, such as the Nepean at Penrith may be assumed to be, no scheme can be considered as permanent and sufficient, which does not provide a storage capacity on the occurrence of such a drought, equal to supplying the requirements of the city, and allow for the waste from evaporation of its exposed surface.

Taken annually the Table shows that the proportion of the water falling as rain which passed down the river was as follows:—

In 1869	'38	1873	'33
1870	'68	1874	'30
1871	'47	1875	'25
1872	'13	1876	'27

While, however, the average discharge of the years 1875–6 was about '26, the discharge for eight consecutive dry months of those years, taking the quantities registered at the several places of observation for calculation, was as follows:—

<i>Rainfall.</i>	<i>inches.</i>	<i>Discharge.</i>	
Sydney	9 ⁹⁴	proportion would be	'072
Wilton	10 ¹⁷	„	'070
Cordeaux	16 ⁹²	„	'042

These proportions, which represent the minimum quantities passing down the rivers Nepean and Cataract, will in the subsequent pages be adopted as generally applicable to the various schemes which will come under review, there being no other data available; or, in other words, the various schemes will be tested by the provision made for furnishing the required supply during a period of eight months, drought, and during which the water passing down the rivers bears this proportion to the total rainfall.

On the occurrence of dry periods the evaporation is necessarily very great; the showers of minor duration and amount, falling on a surface previously parched by the sun, are evaporated and absorbed, and little or nothing is added to the volume passing down the rivers. During

* Upper Nepean Scheme.

During the dry period of 1875-6 before alluded to, the evaporation at the Sydney Observatory amounted to 32[·]₃₀₀ inches; this would be from a surface of water freely exposed to sun and wind. It was more than double the amount of rainfall, and it is evident therefore that little effect upon the discharge in the rivers could be expected from the rain.

On the subject of evaporation the observations recorded at the Sydney Observatory give 48[·]₃₀₀ inches as the mean of seventeen years from a glass vessel, and 31[·]₉₂₄ inches per annum as the mean from a tank in the ground.

The latter of these conditions more nearly compares with that of a storage reservoir, but the Commission adopted 48 inches in their calculations, which as being probably in excess, is safer.

Another point I may here allude to: it appears to have been adopted as a somewhat foregone conclusion, that a supply by gravitation could be obtained, and that a pumping scheme would not be desirable; and, in some of the papers before me, I find that the liability to accident and interruption from the failure of machinery is put forward as a reason why a pumping scheme should not find favour.

This view of the case is scarcely tenable here. We are accustomed to go to sea for long voyages, trusting entirely to the proper and continued action of the steam-engine—we travel on railways without fear of such failures; and if there be one use of the steam-engine more than another where it can be made applicable with confidence and economy, it is in the pumping of water.

As a matter of economy, where engines of proper construction are adopted, the cost of raising 1,000 gallons 100 feet high is but little more than one-fourth of a penny where coals are procurable at £1 per ton.

If then the actual cost of the water, as represented by the interest on capital expenditure, working expenses, and maintenance be ascertained, and it be found to be less by a pumping than a gravitation scheme, I think there is no valid objection to the adoption of the former, provided it is not inferior in the quality of its water, nor in any collateral advantages.

Purity of Water.—The Commissioners, in the Appendix to their Report, page 101, give a general view of the analysis of waters of various localities which are available for supply. These with a few exceptions may be taken as good water for town purposes, and amongst the best are those furnished from the present supply from Botany.

As the list contains specimens from all the sources which have been suggested, I have not thought it necessary to have any further especial analysis made, except in the case of the Wingecarribee water, which will be found in the Appendix.

The principal feature in the list of waters above referred to is the absence of lime in the greater number of the specimens. It is the salts of this substance which give the property of hardness to water, and when absent preclude the use of lead pipes; when 3 grains per gallon are dissolved in the water it is good for all domestic purposes and more palatable as a drinking water, while the slight deposit which forms on the pipes protects them from its solvent action.

With these preliminary remarks, I proceed now to discuss the various projects which have come before me for consideration, after first noticing the subject of the present supply from the Botany and Lachlan Swamps.

Present Supply.

Sydney is at present supplied from an area lying immediately adjacent to the city on its south side.

It comprises—

The area of the Lachlan watershed, supplying the lower parts of the town by gravitation	1,125 acres.
And Botany watershed, supplying the city by engine-power	2,614 „

Total area	3,739 acres
	or 5 [·] ₈ square miles.

The

	Contents.
The area of the reservoir space on the Lachlan, in seven reservoirs, is $65\frac{3}{4}$ acres	$77\frac{3}{4}$ million gallons.
On the Botany	220 $\frac{3}{4}$ „ 473 „
Total	<u>$286\frac{1}{2}$ acres</u> <u>550 million gallons.</u>

In addition to the above, a further catchment area is in course of preparation of	1,461 acres.
Added to above	<u>3,739 „</u>
Gives a total of	<u>5,347 acres.</u>

From this total area however of catchment, 85 acres occupied by dwellings, will have to be deducted, leaving 5,262 acres area for furnishing future supply.

The capital expended on these works I have not been able to ascertain.

This area is composed entirely of loose sand, upon which a stunted and sparse vegetation is existing. By borings which have been made in fifteen places, the sand has been proved to extend to depths varying from 34 to 109 feet below the surface, with occasional thin layers of clay at irregular intervals.

The locality has been described as a natural depression, subsequently filled with drift sand from the sea, and this is probably correct; its natural outlet at Botany Bay has been stopped by a puddle embankment.

The area so described is undoubtedly one of very great utility for water purposes; few similar cases can be met with where so large a mass of sand is contained within a natural basin.

So constituted, it is at once a catchment area, a reservoir, and a filter bed; and under these various heads it may be considered.

As a catchment area, its extent, though not large, has the power of absorbing rapidly the water that falls upon it.

Experiments conducted in England (*vide* Minutes, Institution of Civil Engineers, vol. 45) for the last fourteen years go to show that out of an average depth of 25 $\frac{7}{12}$ inches of rain per annum,—

On ordinary soils—

The percolation is	7 $\frac{53}{100}$ inches.
Evaporation	<u>18$\frac{14}{100}$ „</u>
	25 $\frac{7}{12}$ „

On sand—

The percolation is	21 $\frac{40}{100}$ inches.
Evaporation	<u>4$\frac{32}{100}$ „</u>
	25 $\frac{7}{12}$ „

The percolation would of course vary with the difference of soil, and evaporation with the difference of climate; but it would appear that whereas the percolation in sand is nearly three times as great as in soil, the evaporation from a sandy surface is less than one-fourth; and that the percolation through sand, in an average year, is in England 83 per cent of the quantity of water that falls upon it as rain.

From inquiry and examination of the locality, I am led to believe that the water in the sand is not wasting into the sea in any considerable quantity.

As a storage reservoir the capacity of these sands is immense; not only are they saturated with water from their lowest depths to the surface of the creeks, but they also retain the water at a higher level in the hills. They afford a receptacle for the rain which falls in the wet seasons, and retain it for use in the dry, but up to the present time that portion only of the contents which exists above the levels of creeks has been drawn upon.

The observations of Mr. Prestwich, F.G.S., on the absorbing power of sand, go to prove that it will contain from two-sevenths, to one-half its bulk of water when saturated; and it will therefore be safe to assume one-third of the bulk of sand, as water.

The great value of the area as a storage reservoir will at once be apparent from the fact, that every inch of rain which falls on this area of 5³/₈ square miles, and which, without being dissipated by evaporation or otherwise, sinks to a depth of about 2 feet beneath the surface, will be stored, and give an available quantity amounting to 85 million gallons.

There is also evidence that the quantity in the dams alone does not furnish the supply to the city. Thus, during the recent drought of 1875-6, from papers before me, it is evident that a much larger quantity was delivered than could have been furnished by the contents of the dams, and must therefore have been supplied from the store in the sand.

Various endeavours have been made to increase the supply, owing to apprehensions that it would fall short of the demand; these have been,—

Firstly—By the temporary expedient of deepening the channels (that feed the main streams) during the dry period.

Secondly—By the construction of dams across the main streams to intercept the flow of water during periods of rain.

These dams are composed entirely of sand, and their stability as permanent structures has been called in question; several of them have failed on occasions of heavy storms, owing as has been explained, to the insufficiency of the overflow or waste weirs provided; these have since been extended, and by limiting the depth and velocity of the flowing water greater safety for the dams is obtained.

The purpose which these dams have served, has been to arrest the flow of water on the surface, and give it time to be absorbed by the surrounding sand. It then becomes stored in the sand, the whole body of which forms a reservoir, from which the supply is drawn as required.

The largest daily supply to the city of which I find any record was in January, 1875, viz. :—

By Botany engines	5,254,200	gallons.
Through the tunnel, assumed	1,250,000	„
	<hr/>	
Total	6,504,200	„

The average daily supply for last year (1876) was *4¹/₄ million, and the largest delivery since 1869, viz., in 1870, was 5³/₈, average per day throughout that year, when the population was 40 per cent. less than at present.

Now the area of the sandy reservoir is 5³/₈ square miles in extent, and assuming that only one-half of it is susceptible of saturation (probably a very low estimate), the quantity of water which it will contain, being as before stated one-third of its bulk, is 168 million gallons for each foot of depth.

So recently as last year considerable apprehension was entertained as to the quantity of water in the Botany and Lachlan Swamps; it may therefore be well to consider what was the condition of things during that time.

This dry period before alluded to extended from August, 1875, to April, 1876, say 240 days, and the daily supply was †5¹/₄ million gallons; the total quantity for this period amounted to 1,260 million gallons.

About half of this, or 551 million gallons, was supplied from the dams, the remainder being supplied by the rainfall—9³/₈ inches during that period—together with that drawn from the storage in the sand.

Assuming one-half the rainfall of the period (9³/₈ inches) to have been lost by evaporation, &c., and the remainder, say 5 inches, available for supply, *i.e.*, $5 \times 85 = 425$ million gallons.

Then,

$$\frac{551 + 425}{(\text{daily supply}) 5\frac{1}{4}} = 185 \text{ days' supply.}$$

The remaining 55 days' supply, to complete the 240 days of the dry period, was on this assumption drawn from the sand.

The quantities pumped weekly during the month of March were respectively, in million gallons :—28¹/₄, 25³/₈, 26¹/₄, and 25¹/₂.

From

* From Botany 3, Lachlan 1¹/₄. Total, 4¹/₄ million gallons.

† From Botany 4, Lachlan 1¹/₄. Total, 5¹/₄ million gallons.

From the time when the rain commenced to fall, these quantities gradually fell in amount until in the month of August they reached 151 million gallons.

It cannot therefore be said that the supply actually failed, nor how long it would have held out under a continuance of the drought; and the length of such possible holding out is rendered the more difficult to estimate, from the fact that no means existed for ascertaining the quantity supplied through the tunnel*; the falling off of the quantity would most probably first show itself at this, the upper portion of the swamp.

If however the sand had been drained to a certain depth below its ordinary saturation level, a definite quantity of water would doubtless have been obtained; and I estimate that for every $\frac{3}{8}$ of an inch so drained, a day's supply of $5\frac{3}{4}$ million gallons would have been procured, or a quantity approximating to 168 million gallons for every foot, as above stated.

In order that some reliable information may be obtainable as to the quantity of water stored in the sand-hills, I have requested that several boreholes should be made and kept permanently open by tubes; this will admit of occasional observations being made of the level of saturation in the sand, under the varying conditions of rainfall and consumption.

The boreholes are not yet all completed; but I have been furnished with the results in a few cases, by which I find that (at the end of March last) the water stood at an elevation, over that in the dam adjoining, or stream by which it finds outlet, and at a distance from it as follows:—

Distance of Borehole from the Dam or other outlet.	Elevation of water in the Borehole above that in the Dam or stream adjoining.
1,800 feet.	$12\frac{1}{2}$ feet.
850 "	$4\frac{1}{2}$ "
800 "	5 "
600 "	$2\frac{1}{2}$ "
400 "	5 "

It is scarcely possible to determine exactly the inclination of the surface which the level of saturation assumes; to do this it is necessary to know the exact point to which the imprisoned water is flowing; but the above results are quite sufficient to show that if a nearly level drain be cut into the hill-side it will liberate an additional quantity of water for supply, as the inclination of the natural slope will then be directed to the new and nearer point of escape.

Such records being taken, data for establishing the actual quantity available will be obtained, and go far towards removing the apprehensions that have from time to time agitated the public mind on the occurrence of unusually dry seasons.

Since making the request for sinking these boreholes, I have seen an account of some inquiry and experiments made at the suggestion of Sir W. Denison (*Sydney Magazine of Science and Art*, vol. 2, 1869), upon this subject. He stated that the slope assumed by the surface of saturation had been found to vary from 1 in 114 in the dry weather to 1 in 122 in the wet.

The large mass of sand also acts as a filter bed, and the purity of the water is ensured by the natural process of filtration it undergoes as it passes into and through the sand; as at present delivered at Sydney it is slightly coloured by peat, and not unfrequently contains a quantity of flocculent vegetable matter. Issuing from the sand-hills, the water flows into the shallow reservoirs at the back of the dams, and there meets with this impurity which passes on with it for distribution.

The impurity is not necessarily of a deleterious character, but it is such as to prejudice the supply in the opinion of consumers; if, however, the water could be removed from the sand and distributed without passing into the reservoirs, its purity would be preserved.

The question is, how best to draw off the water and leave the sand behind.‡ Mr. Bell has proposed to sink tube wells for this purpose, and his experiments from what I can understand promised to be successful; as however it involved the purchase and erection of machinery, the idea seems to have been abandoned.

In

* Since the above was written, I have ascertained that the supply from the Lacluan through the tunnel did fail, and was shut off on the 6th March;—the supply by the Botany engines however continued at the rate of 3.6 to 4 million gallons a day, to the end of the dry period.

‡ Mr. Wilshire's proposal (page 33) relates to this subject.

In place of the present mode of taking the water direct from the reservoir, which necessitates the excavating of the channels in the dry weather, in order to keep up the supply, it would be better that under drains be laid along and parallel to the principal creeks and channels, to collect the water from the sand, and conduct it direct to the pump-well and tunnel mouth.

These drains to be surrounded with broken stone, broken brick, or shingle, or any hard material which will, as in an ordinary filter, permit the flow of water into the central pipe and arrest the sand.

At intervals along the course of these drains, and at their junctions with the branches, wells to be built, where the flow of water could be obstructed when desired; by this means the quantity discharged would be regulated, and kept under control.

It is difficult to say what length would be required to furnish a given supply, but calculating from the experience of the passage of water in filter beds, I estimate it would not exceed 500 yards in length of drains, laid as I propose, for each million gallons per day, in sand saturated with water.

A further effect of these drains will be, to draw off the water from a greater depth beneath the surface than is possible by the mode now in use, and thereby increase the available supply. Every 6 feet in depth over an area of 5 $\frac{3}{4}$ square miles, half of which is saturated, will contain 1,018 millions of gallons, or 169 days supply at 6 million gallons.

There would be some difficulty in laying these pipes in sand saturated with water. I have, however, discussed the subject with Mr. Bell, the City Engineer, and he has furnished me with an estimate. I am of opinion that the present daily supply could be filtered out in the way I have indicated above, at a cost of £10,000, by drain pipes laid 6 feet below the present level of saturation.

A not unimportant point in this mode of taking the water, is, that in addition to the filtering immediately before use, it would be kept unexposed to light,—which is always desirable for water intended for town supplies

While, however, this source is sufficient for giving a supply at the present rate, and has stood the test of a severe drought of eight months, and has moreover a capacity for extension never yet tested to its full extent, it is necessary to examine further what were the conditions under which the supply was given during that critical period, and what would be the result of an increased demand, say of 6 million gallons per day, under conditions of extreme drought.

During 1870, when the largest daily supply was given averaging 5 $\frac{3}{4}$ million gallons throughout the year, the rainfall was 64 $\frac{22}{100}$ inches, or 14 inches above the average quantity.

During 1876 the average daily supply for the year was 4 $\frac{1}{4}$ million gallons, and the rainfall was 40 $\frac{385}{100}$ or 10 inches under the average fall. It appears from this that had the waste* which occurred during 1870 been allowed to continue to 1876, the resources of the present supply would have been severely taxed, and probably much inconvenience and distress would have been experienced. Still more so would it be on the recurrence of a dry year like 1849 when only 21 $\frac{40}{100}$ inches of rain fell, as the following calculation will show;—assuming that one-half of the 21 $\frac{40}{100}$ inches was dissipated, and that one-half or say 11 inches was stored;—considering moreover the reservoirs as full at the commencement of the dry year and omitting evaporation from their surface, they would supply as follows:—

	million gallons.	
Storage in dams	551	
	= — =	92 days supply.
Daily supply	6	
	million gallons.	
Due to rainfall (11 × 85)	935	
	= — =	156 days supply.
Daily supply	6	
		248 days supply.

Or, without drawing upon the storage in the sand, the present supply would fail before the end of the dry year.

Again.

* This waste has since been prevented by an improvement in the house fittings.

Again. Supposing that the daily consumption requires an increase to 12 million gallons, the annual quantity will amount to 4,380 million gallons. Now the average annual rainfall, as recorded at Sydney, is 50 inches, and the total quantity therefore falling on 5's square miles is 4,210 million gallons, or *the entire average rainfall is absolutely insufficient for such increase.*

It must be observed that this conclusion is arrived at principally by assumptions, but it is sufficiently near to indicate that a continuous supply of 6 million gallons per day during a dry year would severely test the resources, and that a supply of 12 million gallons a day, which is considered to be necessary in the future, could not be obtained; in fact, though the storage capacity of the swamp is ample, the catchment area is far too small to admit of any large extension to the present supply with safety.

There are several other considerations connected with this area—its position, the rapid extension of buildings in its immediate vicinity, the desirability of its appropriation for an extension of the city, and as a site for manufacturing industries. All these indicate that some other source should be looked to for furnishing the future supply.

Six million gallons per day would supply the present population of 167,000 with 36 gallons per head; this, if undue waste be prevented, would in most cases be considered sufficient for domestic purposes; in view however of the rapid increase in the population anticipated, and of manufacturing undertakings requiring this essential to their further development, no time should be lost in coming to a decision on this subject. Under any circumstances new works will occupy several years to complete; and I have therefore thought it desirable to consider some means for improving the existing arrangement, that may be adopted in the meantime.

In the future use of this reserved area for the purpose of habitation and manufacturing industries, the drains would require to be increased in number, in order to drain the area to a sufficiently low level to furnish dry sites, or they may be continued in their use as collectors of water for manufacturing purposes.

I would here also remark that though it has become necessary to seek a more extended source, yet the Botany and Lachlan area is of a very remarkable and valuable character; and I am of opinion that the measures which have been adopted to maintain and increase the supply have been judicious, and without them a great deficiency of water would ere this have been experienced by the citizens.

Upper Nepean Scheme.

THE result of the labours of the Water Commission in 1869 was the elaboration of a scheme for drawing a supply of water from Nepean, Cordeaux, and Cataract Rivers, at a level sufficiently high to supply Sydney by gravitation.

The Commissioners' Report so fully explains all the details of the project that it will be sufficient here briefly to recapitulate its general features.

The drainage area comprises 354 square miles, entirely in a sandstone country, and with a trifling exception is, on account of its sterility, wholly unoccupied, and not attractive for agricultural or pastoral occupation.

The quality of the water from such a source is unquestionable, and for the reason above stated likely to remain so.

The rivers have their rise in the mountain country running parallel to the coast between Bulli Pass and the Mittagong Range, and which attains an elevation of 1,000 feet and upwards.

The mountains present a very precipitous face towards the sea, with a more gentle slope landwards; they thus form a barrier to intercept the rain clouds and mists coming from the sea, which condensing discharge their water on the extended area of these landward slopes. A comparison of the records of rainfall near the coast with that more inland will show in figures that the larger rainfall is deposited soon after the clouds pass the summit of the range.

There are moreover numerous swamps in this upper portion of the catchment area, which retain the water falling upon it, preventing its rapid discharge by the rivers and rendering their flow more equable.

These

These rivers, like all those in this sandstone country, have cut their way into narrow gorges of a very rugged character till their waters reach in a comparatively short distance a level very little above that of the sea. The sides of these gorges are thickly covered with timber.

From Pheasant's Nest, which is a gorge of the character above described, just below the junction of the Cordeaux River with the Nepean, it is proposed to take the waters of the united streams, which together with the waters of the Cataract River, form the source of supply.

A dam, 10 feet high, built in the channel of the Nepean, will hold up the water, and enable it to be deflected through a tunnel $4\frac{1}{2}$ miles in length in the sandstone rock to Broughton's Pass, where the waters of the Cataract join those of the Nepean and Cordeaux Rivers.

At Broughton's Pass another small dam across the Cataract River will hold back its waters to a level of 421 feet over sea, and divert them into another tunnel $1\frac{1}{4}$ mile long, from which they will emerge on the western slopes of the main dividing ridge, separating the waters of the Nepean from those of the George's River.

The country continues to be of a somewhat rugged character, through which the waters on leaving the second tunnel are to be conducted in an open conduit following the direction of the range to a point near Mount Sugar-loaf, where the sandstone rock ceases, and is succeeded by the Wianamatta shale. From this point the open conduit is continued with occasional short tunnels to $34\frac{1}{2}$ miles from the Pheasant's Nest Dam; here the line crosses the dividing Range in a tunnel 3,300 yards in length, and at the 41st mile the water will be delivered into the Prospect Reservoir.

This reservoir will be formed by the construction of a dam, having a length of about 108 chains and maximum height of 80 feet. Its area when full will be 1,291 acres, and contents 10,635 million gallons, of which the upper 25 feet would be available for distribution in Sydney, and contain 7,110 million gallons. The level of the top water would be 195 feet over sea, and 170 feet when drawn down 25 feet.

From the storage reservoir the water will be conducted by an open conduit for a distance of 4 miles 58 chains, when it will be carried on by an iron-aqueduct for a distance of 7,986 feet to 48 miles 64 chains.

At the end of this aqueduct, at 48 miles 64 chains, and 14 miles from Sydney, a small reservoir is to be constructed, capable of holding 400,000 gallons. The next construction is a syphon pipe, 48 inches in diameter, crossing the valley through which Duck Creek flows; it is a depression of about 100 feet, and the length of this syphon pipe is 4,628 yards, capable of conveying $14\frac{3}{4}$ million gallons in twenty-four hours.

From this point the water is again conveyed for a distance of 1 mile 37 chains in an open conduit to 52 miles 73 chains, where a small storage reservoir is to be formed by an earthen embankment.

Here the water will be delivered at an elevation of 164 feet over sea level; and here also commences the pipe, 42 inches in diameter, which is to convey the water to Sydney, its length is 10 miles, and it will be capable of delivering daily 12 million gallons into the Crown-street Reservoir.

At Petersham it is proposed to construct a reservoir capable of containing 800,000 gallons for the supply of that suburb.

By this arrangement, instead of a continuous length of piping from Prospect, the larger carrying capacity of the open conduit enables a supply of nearly 29 million gallons daily to be brought to a point 14 miles distant from Sydney, and 84 million gallons to within $20\frac{3}{4}$ miles, at which place provision is made for a storage of 7,110 million gallons.

The total cost of these works as estimated in 1869 was—

Works...	£702,741
Land ...	12,288
Superintendence and Contingencies ...	30,000
Engines, &c., at Waverley ...	10,000
	<hr/>
Total ...	£755,029
	<hr/>

During

During the interval between 1869 and the present time, prices of materials and labour have risen in most cases, and at my request Mr. Moriarty has revised the above estimate to make it applicable to existing circumstances. As now before me it amounts to,—

Works... ..	£820,757
Land	12,768
Superintendence and Contingencies	30,000
	<hr/>
	£863,525
	<hr/>

Bearing in mind that the proposal of the Commissioners is that the scheme adopted shall be capable of immediately supplying 12 million gallons per day, and of extension to double that amount, it will be desirable here to examine the capacity of the scheme to satisfy these requirements.

In the present case, with so large a catchment area as 354 square miles, there can be little doubt as to the annual quantity available, and the whole question hinges upon the amount of storage, and I find that without any addition from rain, or from the rivers, and deducting loss by evaporation, the available capacity (7,110 million gallons) of the reservoir is sufficient to supply Sydney with 12 million gallons per day (equal to 72 gallons per head of its present population of 167,000) for a period exceeding twelve months.

The observations taken during the last eight years upon the flow of water down the Nepean and Cataract Rivers also fully prove this sufficiency.

*Appendix,
diagram Nos.
3 and 4.

The diagram* has been prepared for the purpose of exhibiting the quantity flowing down the river and the condition of the Prospect Reservoir,—and shows that during the period of eight months' drought which occurred in 1875–6, with a draught upon it of 12 million gallons per day for supply to Sydney, and the loss by evaporation from its surface, that 6.45 feet only out of the depth of 25 feet of storage would have been drawn from the reservoir.

Thus estimated, the entire quantity coming down the river, limited only by the capacity of the conduit, is shown as going to the reservoir. I observe, however, at page 37 of the Commissioners' Report, it is proposed that only quantities above 10 million gallons per day and under 84 are to be taken into the reservoir.

This 10 million gallons is, I believe, considered to be retained in the river channel, for purposes of proprietors of land along the course of the Nepean River.

On this subject I may here express an opinion that, if provision for the requirements of adjoining landowners can be made in some other and independent manner, it would be preferable.

Such independent mode would not be difficult or expensive I apprehend, and under this view I will not now diverge from the main subject before me to consider it.

†Appendix,
diagram Nos.
3 and 4.

The Prospect Reservoir, as shown by diagram,† is amply sufficient to meet the requirements of the city, and the diversion of the 10 million gallons would probably not affect that supply, even in so dry a period as that upon which the estimates of quantity are based; but on occasions of drought it would possibly lead to the difficulties and disputes which are usual under such circumstances.

Having ascertained that this scheme will answer the requirements as to quantity during periods of drought—having also inspected the line of conduit, and satisfied myself that the proposed works are practicable—I will now proceed to notice the one important subject which this scheme presents for consideration, viz., the character and cost of the works by which the water is to be brought to Sydney for the use of the citizens.

The character of the works is that usual in such cases; there are no especial or difficult features, in an engineering point of view, to be overcome—the distance is, however, considerable, being 63 miles from the source to the distributing reservoir. Its principal features are—

Tunnels	10 $\frac{3}{4}$ miles
Open conduit	34 $\frac{1}{4}$ „
Aqueduct	3 „
Pipes	13 $\frac{1}{2}$ „
Reservoir	1 $\frac{3}{4}$ „

The

The sandstone country in which the greater part of the tunnelling will be required is economical for such work—the rock is easily cut, and will not require lining; it is where these tunnels are constructed in the Wianamatta shale that any uncertainty as to the cost of the work occurs.

The shale in most of the sections I have seen is horizontal and evenly bedded, and is of an impermeable character. Where the conduits are constructed in strata of this character lining will probably not be required.

Where however, as in some places, the shale alternates in thin layers of hard and soft strata, as in the railway cutting near Campbelltown, lining would be required both for tunnels and conduits in excavation.

In laying out works of this character the greatest care and judgment are required to obtain the greatest economy, not only in selecting the easiest line—the amount of work considered—but also with reference to the class of work to be executed.

The most economical is generally found to be in light cutting, and therefore the line should be laid out with special reference to this fact.

The question as between a lined and unlined construction is of the greatest importance, as the one may roughly be estimated at three times the cost of the other; to avoid the necessity for lining the work, is therefore the endeavour of the careful engineer.

To bring these variable quantities into estimate with exactness is impossible, and even with requisite surveys and borings they can only be approximately ascertained.

These surveys and borings could not be completed during the period of my visit. I have however gone over the country, and after careful observation with the assistance of some trial holes, I have formed an opinion as to the nature of the ground to be gone through.

The Wianamatta shale, according to my observation, contains beds of hard sandstone: Specimens of rock from several trial holes sunk where the tunnels occur have been procured, and are generally of a favourable character.

I think if it be assumed, that the tunnel at the Sugar-loaf Hill, and all those below that place, will, for one-half their lengths, require masonry lining, it will be sufficient for a safe estimate. This would occasion an increase to the cost of about £28,000, on the item tunnels, above the amount given in the revised estimate.

What has just been stated with regard to the tunnels applies also to the open conduits. I have gone carefully over these, and in several cases put down an increased price, notwithstanding that the revised estimate provides for a lining of rubble masonry throughout its length in the Wianamatta shale.

There are several short aqueducts crossing creeks on the line. These consist of cast-iron troughs on rubble masonry embankments for the approaches, and wrought-iron troughs supported on masonry piers, in spans of 60 feet between them.

The principal aqueduct however is at 47 miles, crossing a depression where the Great Southern and Western Railway occurs. This aqueduct is 7,986 feet long, in 133 spans of 60 feet. The greatest height is 49 feet; its average height, 40 feet. As originally designed in the Report of the Commission it is entirely of wrought-iron. In the revised estimate, masonry piers are substituted for wrought-iron piles. Its use is in connection with the conduits, to bring the water to the nearest point to Sydney with the least diminution of head.

The cost of the pipes will depend upon the price of iron ruling at the time the works are to be executed. At present, cast-iron pipes can be delivered in Sydney at a price not exceeding £8 per ton. The quantity of this material required is 15,490 tons.

The Prospect Reservoir is one of the main features of the scheme. I have carefully examined the site, and find it well adapted for the purpose. The seat of the impounding dam, when the surface soil is removed, will be on an even bed of firm shale. Abundance of material of a retentive character for the construction of the embankment is obtainable; clay also is found in the bottom for puddle, while the adjacent Prospect Hill furnishes material for pitching.

The cubic content of this embankment is two million cubic yards.

The other reservoirs mentioned in the Schedule as below the Prospect Reservoir serve their respective uses for balance and storage purposes; they will moreover tend to prevent injury to the pipes, arising from sudden checks to the delivery of the water.

The

The revised estimate for the works, as per Schedule, page 46, Appendix, furnished to me by Mr. Moriarty, who has had great experience in the Colony, is doubtless a reliable one; but to assist me in forming an independent estimate of the cost of these and other works, I have obtained rates and prices current in the Colony from several sources; these as may be expected vary considerably. Many of Mr. Moriarty's prices are, I consider, sufficient; in some cases however, considering what I have before mentioned as to the character of the work in tunnel and conduit, &c., I have thought it necessary to increase them to be safe.

Under these circumstances my estimate is as follows:—

Works, as per Schedule, Appendix (Page 46)	£1,074,000
Land, as per revised estimate	12,768
	————— £1,086,768

It is only fair to notice that the estimate for this scheme includes several items for valuable subsidiary works, such as a covered reservoir at Petersham capable of containing 800,000 gallons, also two other small reservoirs. With the assistance of these, and others of similar character, several other places, as Ashfield, Redfern, &c., can be supplied from the conduit on its course to the Crown-street Reservoir.

Loddon and Wingecarribee.

JAMES MANNING, Esq., proposes to obtain a supply of water from the Loddon and Madden Plains, supplemented by a further supply from Kangaloon and Wingecarribee.

He has a still further proposal to obtain a supply from Port Hacking, but which is entirely separate and distinct from the others.

The Loddon scheme has its collecting reservoir near to, and north of the road leading from Appin to Bulli Pass; and on the river Loddon this is supplemented by some other small intercepting reservoirs.

The catchment area in this locality is stated to be between 9,000 and 10,000 acres, or about $15\frac{1}{2}$ square miles.

It is entirely on the sandstone formation, quite unsuited for cultivation; and from its general sterile character it may be assumed that except as a catchment area for purpose of water supply, it is unlikely to find any economical use. It is moreover, I believe, unalienated.

The area has been carefully inspected, and its characteristic feature is the large extent of swamps of which it is composed.

These swamps are not deep, but even during a somewhat dry period at the time of my visit in December last they were saturated with moisture.

Their existence is due probably to the elevated situation of the district, 1,100 to 1,300 feet above the level of the sea, and also to its proximity and influence.

It is proposed to form a reservoir by constructing a dam of concrete across the Loddon Creek about 60 chains from the point where it runs under the Appin Road.

This dam with a maximum height of 55 feet will form a reservoir estimated by the proposer at 408 acres in extent, with a storage capacity of 1,446 million gallons, or, as stated, 120 days supply, at the rate of 12 million gallons daily—this does not however allow for loss by evaporation.

A second and smaller dam half-a-mile nearer to the Appin Road, and lower down the stream, would intercept a portion of the water at a somewhat lower level and add 37 acres to the storage reservoir. The dam is proposed to be 20 feet in height. A third dam, on Madden's Plains, $26\frac{1}{4}$ acres in extent, will receive the drainage of 1,500 acres included in the above total area, lying to the east and west of the Bottle Forest Road; these are to be brought into connection with the main tunnel through which the water passes in its course to Sydney.

The heights of the waters in these reservoirs are stated to be 1,121,—1,111, and 1,203 feet above the sea respectively.

The

The sandstone rock is exposed at the surface at the proposed sites for the dams.

The total distance of the Loddon Lake from Sydney over the various lengths of work mentioned by Mr. Manning will be $40\frac{1}{4}$ miles.

The water is to be conducted from these storage reservoirs, partly by tunnel and partly by open conduit to a point on the Bottle Forest Road, $8\frac{1}{4}$ miles from the Loddon Reservoir, where a pipe line is to commence by which it descends to Sydney by gravitation.

This pipe line is to follow the Bottle Forest Road to George's River, to be crossed either by a timber bridge, or by a flexible pipe laid in the bed of the stream, and thence to a reservoir proposed to be constructed at Waverley; the total length of this pipe line is stated to be 32 miles.

The cost as estimated by the proposer is £600,000, and the amount of water to be delivered during four months of the year, or dry season, 9 million gallons a day; and for the remaining portion of the year 12 million gallons daily.

Mr. Manning considers that this portion of his scheme will be sufficient for many years to come, and that only when it is proved to be insufficient will it be necessary to extend this work to Wingecarribee.

He claims for it the great advantage of a delivery of the water to a distributing reservoir to be constructed at Waverley 300 feet above sea level, and at a pressure of 700 feet, which used as a motive power will go far towards paying the interest on the total cost of the work.

Under this view it will be convenient to inquire, how far this scheme will be likely to realize the expectations of the proposer, in delivering into Sydney 9 to 12 millions of gallons daily for domestic consumption, from a catchment area of $15\frac{1}{2}$ square miles, aided by the reservoir for storage.

It must however be noted that situated as the area is, very near the top of the range of hills and sources of the Cataract and George's Rivers, it is necessarily limited in extent, and Mr. Manning evidently depends upon arresting the water that would otherwise run off by the river during periods of storm. At ordinary times the discharge by the river Loddon is small, and on the occasion of my inspection of it was insignificant.

As before mentioned, I propose to apply to this and the other schemes the test of the dry period of eight months in 1875-6.

The tables of rainfall, &c., in the Appendix, and the proportion flowing down the rivers Nepean and Cataract, will also be used for this purpose.

It was found, page 6, that $\frac{1}{10}$ or about 1-20th of the rainfall by measurement was passing down the river at this period, and that proportion is therefore assumed as the quantity available.

It is however to be borne in mind that the atmosphere of this district is frequently loaded with moisture which, though not measurable by the rain-gauge, will probably assist in saturating this swampy area; while on the other hand it must be remembered that the evaporation from a swampy area, is most probably largely in excess of the average. Moreover, exposed as the region is to the south-east winds, and close upon the sea-coast, the rainfall is considerable. This however affects the measurement in the river lower down, where observations have been most carefully recorded during the past eight years, and it will therefore be safe, and not unjust to the merits of this scheme, to take these results as applicable to this case.

The amount of rainfall, as recorded at Cordcaux during eight months, September, 1875, to August, 1876, was $16\frac{1}{2}$ inches.

1-20 of $16\frac{1}{2}$ inches on $15\frac{1}{2}$ square miles	190 million gallons.
Storage capacity of Loddon Reservoir assumed as full—at commencement of the dry period	1,446 ..
Total available for supply	1,636 ..
Deduct evaporation from 408 acres for the same period at $32\frac{1}{2}$ inches	301 ..
	1,335 ..

or 112 days supply at the rate of 12 million gallons daily.

The depths and contents of the smaller reservoirs are not given by Mr. Manning—they would not however materially affect the result when evaporation is taken into account.

Assuming that <i>one-third</i> of the rain could have been stored, then		
$\frac{1}{3}$ of 16 ⁹² inches of rain from 15 $\frac{1}{2}$ square miles ...	1,269	million gallons.

Deduct evaporation as before	301	„
	<hr/>	
	2,414	„

Equivalent to 201 days' supply at 12 million gallons, whereas the dry period extended over 240 days.

However efficient in ordinary seasons, it is very evident that the Loddon scheme would be insufficient to give the requisite supply during a period such as that experienced last year, and the extended project to include the Kangaloon and Wingecaribee must now be considered.

This Wingecaribee Swamp is described as six miles in length, and of varying widths from 60 chains downwards; it measures 1,170 acres in area, and its average depth is stated to be about 20 feet; its surface is more or less covered by a quaking bog, bearing water-plants and mosses. It receives the drainage of about 18 $\frac{1}{2}$ square miles; its natural outlet is by the Wingecaribee River into the Wollondilly, and thence into the lower Nepean by the Warragamba. The surface level of the water has been found to be about 2,244 feet over the sea.

In addition to this, Mr. Manning proposes to intercept the drainage of 14 $\frac{1}{2}$ square miles, running into the Kangaloon Creek and Nepean, or Mittagong River.

From these sources it is stated that 20 million gallons, or more, daily could in all seasons be taken, and by means of wrought-iron pipes and conduit delivered into the tunnel reservoir at Loddon 1,100 feet below the Wingecaribee.

At very considerable personal labour Mr. Manning has recently taken the levels over the country between Wingecaribee and Loddon, and the section so made has been handed to me; it shows a very rough country, and one which for purpose of a pipe line and conduit is certainly not favourable. No doubt, however, it could be much improved by further examination and survey.

An inspection of the locality, with all the information I could obtain, appeared to indicate that a considerable supply could be derived from this source. Mr. Hanrahan, an old resident, informed me that I saw the water at its lowest, and there was then a stream of about three million gallons daily running into the swamp at its upper end, and, in addition, in every direction small rills of water were trickling down the hill sides, in quantity which would add considerably to the total volume. Scarcely any open water was to be seen. At the surface of the swamp, upon which cattle were grazing; a twenty-foot pole did not fathom the depth in several places when tried, but a plummet suspended to a string could not be got through the mass of vegetation.

The outlet from the swamp into the Wingecaribee at the time I saw it was running in large volume, owing to a heavy rain of eight or ten hours duration, which had fallen in the previous night, and could not be taken therefore as an indication of the ordinary flow.

In consequence of the analysis of the Wingecaribee water, as given in the Report of the Commission, being somewhat unfavourable in regard to the volatile matter, 3 grains per gallon indicating a somewhat large amount of organic impurity, a further analysis has been made by the Government Analyst, which will be found in the Appendix, page 47.

The fact has been brought to my notice that the river which drains the swamp is occasionally dry. This indicates that seasons do occur when the swamp would have to be drawn upon as a reservoir. It is a matter for consideration how far it is suited for this purpose. Pure as the water now is—without any demand on its volume beyond that of the overflow by the river and loss by evaporation—it might be

be otherwise when 10 or 12 million gallons daily were withdrawn from it and probably some of the vegetation now immersed became dry; the conditions would then be altered, and a process of decay and change would be continually going on, which might alter materially the present pure condition of the water.

The country round the swamp and Kangaloon Creek is very fertile, the soil consisting of decomposed trap; and every portion of the district is, I believe, alienated, with exception of the area of the swamp itself. It is being rapidly cleared of timber and converted into pasturage for cattle. To a small extent it is used for agriculture. Its value is said to be from £10 to £12 per acre to the agriculturist, and I should apprehend would become the seat of a large population.

The plans and data with which I have been furnished by Mr. Manning are necessarily very incomplete. He has, however, estimated the cost of the entire project at $1\frac{1}{2}$ million sterling, and, when completed, its daily delivery at 30 million gallons of water.

There are no data to enable me to estimate this latter quantity except those which have been already applied to Lake Loddon; nor have I any means of determining the storage capacity of the Wingecarribee Swamps, or amount of evaporation from a reservoir, nearly filled with growing vegetable matter, the presence of which diminishes the storage capacity and increases the rate of evaporation.

In the absence therefore of any observations of the rainfall of this district, or of the discharge of the rivers, I adopt those above referred to, for the dry period of eight months in 1875-6; and I may here add that while I hold an opinion that the Wingecarribee Swamp is unsuited to act as a storage reservoir, I am desirous to give the full advantage to the statement of the promoter of this scheme, by taking a part of its waters.

On the occasion of my visit Mr. Manning pointed out what appeared a suitable site for a reservoir at Kangaloon; he since informs me that "a simple crib and earth dam, 29 feet high, and $11\frac{1}{2}$ chains over all, would throw back a sea of water second only to the Loddon Lake." This however would require verification by actual survey; for the purpose of estimate, however, I will assume that one or more such sites could be found where by the construction of dams it would be possible to impound at reasonable cost as much water as has been calculated for Lake Loddon.

Under this supposition we shall then have the entire drainage area comprised in the several sites, as follows:—

Loddon	$15\frac{1}{2}$ square miles.
Kangaloon	$14\frac{1}{3}$ "
Wingecarribee	$18\frac{1}{2}$ "
					—
Total	$48\frac{1}{2}$ "
					—

Taking then 1-20th of the rainfall 16.92 inches as recorded at Cordeaux, during the dry period of eight months before referred to, as the quantity passing into the reservoirs, it will amount to 593 million gallons.

Then—

From rainfall	593 million gallons.
Quantity stored, assumed as twice the quantity in Loddon Reservoir	2,892 "
					—
Total	3,485 "
Deduct evaporation 2×301	602 "
					—
					2,883 "
					—

an amount equivalent to 240 days' supply, at the rate of 12 million gallons per day, which would empty the storage reservoirs at the end of such a period of eight dry months.

Mr. Manning states that the cost of these works will be " $1\frac{1}{2}$ million of money."

I have also endeavoured to form an estimate with the information before me. To do this, however, it has been necessary to assume many quantities which could alone be ascertained by detailed surveys, which, I have little doubt, from an inspection of the sections, would rather tend to increase than diminish the amount. Exclusive of land, compensation, &c., my estimate for the works executed, as proposed, with wrought-iron pipes, &c., amounts to £1,136,000. This sum includes the cost of two pipes, each 24 inches in diameter, for the lower or Loddon portion of the scheme, each theoretically capable of delivering $7\frac{1}{2}$ million gallons in twenty-four hours. The sum also includes the cost of one 26-inch pipe between Winge-carribee and Loddon, capable of delivering $6\frac{1}{2}$ million gallons per day theoretically.

In the event of an addition to the daily 12 million gallons becoming necessary at any future time, an additional $54\frac{1}{2}$ miles of pipes would be required, costing £556,000 for the increase to the supply of 6 million gallons, supposing that from the source under consideration water be available.

The wrought-iron pipes which are proposed for conveying the water to Sydney are used in America, but I am not aware that, up to the present time, they have been used in England, or by English engineers.

When the pressure exceeds 300 or 400 feet of head, wrought iron is undoubtedly better suited to bear such excessive pressure, and the concussions liable to be brought upon it, than cast iron. It is known, however, that when buried in the ground, wrought iron does not resist corrosion so well as cast iron. I have known wrought iron to be used for gas-pipes, and when the asphaltum, with which they are always coated, was perfect, the pipes were durable; but where, from any cause, such as making a connection, or otherwise, any part of the iron was exposed to the action of the soil, a hole speedily followed, and the pipes were ultimately removed, owing to the large escape of the gas from this cause.

It is proposed that the wrought-iron pipes, which are riveted longitudinally, and across to form the joints, should be coated with Angus Smith's solution inside and out, in the same way that is now the universal practice for the protection of cast-iron pipes; this is done by immersing the pipe in the molten liquid and boiling them in it for about twenty minutes; so applied it forms an efficient protection. Where however the seams would have to be riveted in the pipe-trench, to join together the different lengths, the solution can only be painted on, and it is precisely at these joints, as with a steam boiler which they resemble, where corrosion would take place. Everyday experience will render familiar examples of the corrosion of plate iron when used for water tanks.

Bessemer iron, which is rolled out from an ingot, and is therefore homogeneous and unlike ordinary rolled plate, which is lamellar in its structure, would be far better suited for such work than the best of ordinary plate. The corrosive action of the soil would affect this also, but in a less degree, as it would take place only at the surface.

A further consideration in the case is, how far it is desirable to undertake a work of this nature, with a material dependent in so great a degree upon a varnish for its permanence.

Regarding the motive power, which Mr. Manning expects might be obtained from pressure, due to the height from which the water is brought, it may be well to explain, that by the usual arrangements no effective power can be obtained save by an extra expense in cost of piping.

The size of a pipe is usually calculated to be that which will at the given inclination deliver the quantity of water required.

In this case the distance of the inlet of the pipe at Madden's Plains from Waverley is 32 miles; the difference of level is 1,062, less 320 or 742 feet.

A pipe to deliver 6 million gallons flowing continuously during twenty-four hours must be 22 inches diameter, and the water will issue with a velocity of 4.66 feet per second, or about 3 miles per hour only, to supply that quantity.

If then any form of machine be interposed, in order to obtain useful work, the flow will by the resistance it has to overcome be checked, and the discharge diminished in proportion to the resistance interposed.

To obtain motive power from water flowing through a pipe, it is therefore evident that a pipe of larger diameter than is actually necessary to supply the city must be adopted, involving an extra expense.

In the case of hydraulic gold-mining, jets of water are used of much smaller diameter than the pipe which supplies them, as in the case of fire hose attached to an ordinary street hydrant; if, however, these jets be increased in number till their collective areas approach to that of the pipe which supplies them, they will fail to act as jets.

It may be remarked that the pipes included in the estimate are calculated to discharge theoretically 3 million gallons daily in excess of the required quantity; this is necessary to ensure efficient working, and to meet occasional difficulties when repairs of pipes are required; but I am not of opinion that it would be desirable to apply any power which might be derivable from this increased size, to any purpose foreign to the delivery of water for the supply of the city.

Valuable as such a power would be, especially in extinguishing fires, such a pressure as is here contemplated could not with safety be put upon the ordinary street mains and house fittings, which are calculated to bear from two to three hundred feet, and special pipes of the necessary strength would require to be provided. There are many other inconveniences attending the introduction of such extreme pressures into the arrangements for town supplies.

The better plan in such a system is to control the flow of water by a sluice placed at or near its upper end, while the pipe is left entirely open at its lower end. By this arrangement all danger of bursting the pipe by a sudden stoppage of the flow of water would be avoided.

This being the only one of the various schemes which is capable of delivering water at a higher level than the Crown-street Reservoir, it is necessary to ascertain the amount with which this scheme should be credited, in order to make a just comparison with others not possessing this advantage.

It has been ascertained that of the present population of 167,116 of Sydney and its suburbs, that 146,000 reside on an area of the town which can be supplied by the Crown-street Reservoir, and that 21,000 are on the area above that level—the latter being the population of Cook and Fitzroy Wards, together with portions of Paddington, Randwick, and Waverley. The present proportion would, therefore, be about seven to one. This proportion must increase every year, as the high level area is of very limited extent, whilst the low level area may be taken as extending as far as Paramatta, and the settlement per acre is much more dense than is ever likely to be on the high land about Paddington; moreover, all water used for manufacturing purposes would, of course, be supplied from the low level.

Such being the case, one-eighth of the daily supply must be estimated as requiring to be pumped from Crown-street, and if it be assumed that the higher or Waverley levels be one-third of that area, the quantity, when 12 million gallons per day are supplied, will be as follows:—

12 million	
—————	= 1½ million per day
8	
To be lifted to the height of Paddington Reservoir...	214
From Crown-street	141
	————— 73 feet.
And one-third of 1½ million = 500,000, to be lifted—	
To Waverley say	320
From Paddington	214
	————— 106 feet.

The above quantities lifted these respective heights will be equivalent to lifting the entire quantity of 1½ million gallons to a height of 108 feet, and this would require an engine of 70 h.p., working twelve hours per day.

The cost of the above with necessary buildings, or of duplicating the engine of 84 h.p., now in course of erection, is about £9,000.

The cost of establishment and coals, at £1 per ton, stores, and upholding will amount to £1,750 per annum, which capitalized—

£1,750 per annum, at twenty years' purchase...	35,000
Cost of engines, buildings, &c.	9,000
	—————
	£44,000

Which sum of £44,000 must be taken in reduction of the estimate of this scheme for purpose of comparison, reducing it to £1,092,000. Mr.

Mr. Manning's Port Hacking Scheme.

The proposal is for supplying water by gravitation.

It is intended to erect a dam 70 feet high, for the purpose of intercepting the water from a watershed of 8,000 acres, or $12\frac{1}{2}$ square miles.

The level where it is proposed to erect the dam is 120 feet over sea.

A second dam is proposed two miles above the former to increase the storage, and the promoter believes that 12 million gallons per day will be obtained, when assisted by the "spare overflow" coming from his high level scheme.

From what has been stated with reference to the combined Loddon and Wingecarribee schemes, it will be apparent that this $12\frac{1}{2}$ square miles will be wholly insufficient to give an independent supply of 12 million gallons per day.

The storage capacity of the reservoirs formed by constructing the dams is not given, but it is stated that the 70-foot embankment will hold up the water for a distance of $1\frac{1}{2}$ mile.

The narrow gorge through which the Port Hacking River flows—at the part where I have seen it—is not favourable for forming a capacious reservoir.

Held up to a height of $120 + 70 = 190$ feet, the surface of the water in the reservoir would be 50 feet above the Crown-street Reservoir (which it is intended to supply) available for the depth of storage, and to give the necessary inclination to the pipe.

This pipe is to be 48 inches in diameter, and $26\frac{1}{4}$ miles long.

A pipe of this diameter and length would require a head of 44 feet to deliver the quantity running uniformly through the twenty-four hours.

This would leave 6 feet in depth available for storage in the reservoir behind the 70-foot dam.

Without knowing the actual area of the reservoir, but knowing the character of the country, I may confidently state that the reservoir would not contain a sufficient quantity for giving the required supply of water to Sydney during a period of eight months' drought.

I therefore gather from the allusion to the "spare overflow" coming from the level of the high-level scheme, that it is intended to supplement the high-level scheme by the addition of this Port Hacking portion.

The cost of $26\frac{1}{4}$ miles of 48-inch pipe, as proposed, would be about £450,000. Further observation and inquiry would however be necessary, before any conclusion could be arrived at, as to the drainage area, and storage available by the erection of dams, and also the size of pipe required, and approximate expense of the scheme.

As an independent supply for Sydney it would be wholly insufficient.

As an auxiliary it may be considered in connection with any other of the schemes proposed.

Lower Nepean Scheme.

THIS source of supply was investigated by the Commission, and the conclusion arrived at was, that "neither by gravitation nor by pumping can Sydney be economically supplied from the Lower Nepean."

The quality of the water, according to the Commission, is fairly good; it contains—

Total solid matter	10 ^o	grains per gallon.
Volatile	2 ²	"
Fixed	7 ⁸	"
Chlorine	2 ⁵	"
Hardness.....	3 ⁴	"

"Colour, dirty white, almost opaque, from diffused clay."

On my first visit to the district I was accompanied by Mr. Alderman Macintosh, M.L.A., who has interested himself on the subject, and I had the advantage of his views thereon.

The

The river Nepean above Penrith drains an area over 4,000 square miles; no other of the proposed sources of supply has so large a catchment, in fact it includes the others, the George's River and Port Hacking excepted; the Warragamba, with its 3,247 square miles of drainage, being one of its tributaries. When the Nepean ceases to flow, probably all the other sources would have failed.

From the Nepean Bridge at Penrith to the Warragamba, a distance of $10\frac{1}{2}$ miles, the river has a width during dry weather of from two to three hundred feet, which width is continued up the Warragamba for a distance of about 4 miles.

The combined area of the storage would be considerable, even omitting the constant flow into it from its large drainage area, a portion of which is given in the table* for the Upper Nepean scheme.

* Vide Appendix page 43.

No observations of its flow during dry periods have been taken, but there can be no doubt that it is ample to furnish 12 million gallons per day, and a large additional quantity when required.

During floods, and for several days afterwards, the water is very turbid. On the occasion of my visits it has not been sufficiently clear for distribution as a town supply without previous filtration.

It would not be necessary for a pumping scheme to construct any dam across the river. The pumping station would be placed near to the bank, at a sufficient elevation to be clear of the highest floods, and the water would be pumped direct from the river channel, and delivered at a height sufficient to flow by gravitation to Sydney.

Suitable sites for the pumping station, and for the storage tanks and filters at the requisite elevation have been found.

The former of these is about $2\frac{1}{2}$ miles up stream from Penrith. The latter is distant from the river about 4 miles, and in direction towards Sydney. Here about 100 acres would be required for works, and spare area.

Provision should be made for storing four days supply, where the water could settle before being let on to the filters; it would then be received into a clear-water tank at the head of the pipe, through which it would flow to Sydney.

The general arrangement of the works is shown on Diagram No. 10 in the Appendix.

It will be convenient to estimate for the works required for supplying 6 million gallons per day through a single pipe, and afterwards the additional cost of increments of 6 millions.

A 33-inch pipe with the fall that could be obtained from the clear-water tank, would deliver $6\frac{1}{2}$ million gallons per day into the Crown-street Reservoir.

The engines would be situated about 400 feet from the river bank, and a tunnel or suction-pipe, as would be found most suitable, would carry the water to the engines.

The engine-power required would be 340 horse power, arranged in two engines of 170 horse-power each, and one spare—total, 510 horse power. These would force the water from the lowest summer level in the Nepean, to an elevation of 280 feet above sea level, a total lift of 258 feet, through a 36-inch pipe, the length of which would be 4 miles.

Here it would be received into the reservoir arranged as for two settling tanks, having a capacity of 24 million gallons, with sufficient depth for the deposit of silt.

Three filters would be provided of sufficient area to pass through them 2 million gallons per day each, and a fourth filter as spare area.

From these the water would escape into a clear water tank, the capacity of which can only be determined from further detailed surveys.

The spot where the works would be situated is on the Wianamatta shale, and the reservoirs would be partly excavated in the shale, and partly embanked. They would be lined with puddle and stone pitching from the neighbouring hill. This lining is provided in the estimate. It is, however, not improbable that the character of the ground would admit of this expense being dispensed with, which would effect a considerable saving out of £30,000, which is its estimated cost.

The direction of the pipe line to Sydney could be either along the road or parallel to the railway. It would not be desirable to place it altogether on the latter. The lowest point of the ranges to be crossed would of course be selected.

The length of the pipe line from the filter works to Sydney would be 34 miles, its diameter, 33 inches. The total quantity of iron in the 38 miles of pipe is 29,128 tons, cost of which, laid at £11 per ton, will be £320,408.

There

There will be no difficulty in laying this line across the South, and Eastern Creeks, which will have to be passed. The distance from the railway is but trifling, and very little cost will be incurred for cartage; the price, £11 per ton, at the present price of iron would be ample.

The above are the principal items in the work. For supplies of 6 and 12 million gallons a day, my estimate is as follows:—

Works	533,800	
Land, for pumping and filter stations (say)					1,000	
						£534,800
Working expenses per annum, £6,000.						
For an additional 6 million gallons—						
Works	530,800	
Land	1,000	
						£531,800
Working expenses, £5,500.						
Or for 12 million gallons—						
Works	£1,066,600
Working expenses, £11,500.						
Coals are taken at 12s. per ton delivered at the pumping station.						

The Warragamba Scheme,

As proposed by Thos. Woore, Esq., R.N., is intended to obtain a supply of water by the construction of a dam crossing the Warragamba, near its junction with the Nepean River.

This dam would intercept the drainage of an area of 3,247 square miles. The dam, 170 feet high, is intended to hold up the water at an elevation sufficient to supply the Crown-street reservoir, 141 feet above sea level, by gravitation.

It is also intended as a means of irrigating a large portion of the county of Cumberland, and to have the further effect of relieving the Hawkesbury River of part of its waters during times of flood.

The effect of the construction of such dam would be to form a reservoir in the deep rocky gorge through which the river flows, 14 or 15 miles in length, with an average depth of 80 feet, and over 700 feet wide at its lower end.

With so large an area of drainage it is scarcely necessary to inquire into the sufficiency of the supply, and the water, though not the best examined by the Water Commission, is still of fair purity—its 4 degrees of hardness, which is higher than most of the other waters examined, is not excessive, in fact rather beneficial than otherwise, and would admit of the use of lead pipes.

The objections of the Commission to the scheme in 1869 were chiefly directed to the dam, which would be a work of unusual character, and, according to my view of the case, 214 feet in height.

I have been furnished with a section of the entire line of conduit between Sydney and the Warragamba. The first portion, between Sydney and Prospect, would necessarily be similar to that of the Upper Nepean scheme already described—chiefly of pipe line, with aqueduct and open conduit. At Prospect it crosses the site of the reservoir proposed by the Commission. Between Prospect and the Warragamba the direction of the conduit is generally parallel to the line of the Great Western Railway, averaging from 2 to 4 miles distant, and on its south side. It crosses the general direction of the drainage of the country and the following creeks, viz., Eastern Creek, Rope's Creek, South Creek, and Mulgoa Creek—some of them at a very considerable elevation. Between the Mulgoa Valley and the Nepean a tunnel would be required, and over the latter an aqueduct of great altitude, finishing by another tunnel of about $\frac{1}{2}$ a mile.

A recent inquiry, made for the purpose of this Report, shows the bed of the river Warragamba to be 29 feet over sea level at the site of the proposed dam, and the rise of the flood water over summer level to be 78 feet. The height of the dam will then be as follows :—

	feet
Height of Crown-street reservoir above sea level...	141
Gradient of conduit in 36 miles	72
Supply outlet below level of weir	10
Increase, for floods	10
Top of dam above surface of water in floods ...	10
<hr/>	
Total	243
Deduct height of river bed over sea-level	29
<hr/>	
Height of dam	214

As proposed, the dam would be constructed with a long slope of about 8 to 1 on its upper side, and about $2\frac{1}{2}$ to 1 on its lower side. The entire breadth of its base in the direction of the length of the river would be about 800 yards, and its cubic contents nearly 3 million of cubic yards.

It is intended by the proposer to be composed of the rough masses of rock quarried from the adjacent sides of the gorge—where the escape weir for the floods has to be formed—and thrown into the channel

To the dead weight of this mass of material Mr. Woore trusts for its safety, and by the construction of a vertical masonry wall in its centre he proposes to make it water-tight.

Thus erected, the dam would intercept the flood waters from an area of 3,247 square miles. The section of the stream during floods has been ascertained to be about 20,000 superficial feet, and its velocity is not less than 3 miles per hour.

The formidable nature of this stream, held up to a height of over 200 feet, I do not here stop to notice, further than that its disposal chiefly by the ordinary river channel must be provided for, as any quantity which could be taken off by an artificial channel for irrigation and other purposes would not exceed 1–20th part of its volume, and therefore would be quite insignificant.

The particulars of the important part of the work, the waste weir, are not given, but I observe on the plans furnished to me that the level of the outlet tunnel for the supply of Sydney is placed 6 feet below the top of the dam, and the waste weir would necessarily be at some intervening height between the two.

Under such circumstances the weir, to carry such a stream as that above indicated without flowing over the dam would be enormous. I have therefore in the above calculation for the height assumed 10 feet as the depth of the stream passing over the weir solely for the purpose of estimating its cost.

I must however here mention that I know no similar work where so vast a body of water is artificially impounded to so great a height, nor of such a waste weir as this would be, and I am here simply endeavouring to place the features of the scheme in a form that they may be easily understood.

Taking then 10 feet as the depth of the water passing over the weir, and with an approaching velocity of 3 miles per hour, I find that its width must be 813 feet.

For the purpose of this inquiry the point of the mountain between the Nepean and Warragamba Rivers has been accurately surveyed, and its levels ascertained.* These show that the maximum depth to be excavated between the two rivers is 220 feet, and the average 164 feet; and the shortest possible line for the weir involves an excavation of about $7\frac{1}{2}$ million cubic yards of rock.

* Plan No. 8, Appendix.

I must here observe that in a memorandum with which Mr. Woore has furnished me, he now contemplates that on the occurrence of exceptional floods a portion of the water will pass over the dam, and that constructed as above it will be safe for it to do so; and in addition to this, it is also proposed that if these means are insufficient, the opening of a tunnel or tunnels to the Nepean may be resorted to.

I gather also from the papers, that Mr. Woore was under the impression that a natural gully existed between the two rivers, which could be used as a waste weir, and some of the maps of the district show such a channel. An examination of the locality however proves that such does not exist; an artificial weir of at least the dimensions

dimensions above given is therefore necessary, for with such a stream it would be most unsafe to allow any water to escape over a mass of loose material piled to a height of upwards of 200 feet, nor am I prepared to advise the construction of a dam of such extreme height in any other way, unless the object sought could not otherwise be obtained.

Undoubtedly very great advantages are comprised in the scheme as proposed; but seeing the very considerable risk attending such a work, and the expense of the waste weir alone—upwards of $1\frac{1}{4}$ million sterling—compared with what is actually necessary to be done for supplying Sydney with water, I have not thought it necessary to pursue this subject further.

The Grose.

Having visited this river, I am enabled to confirm what is stated in the Report of the Commission of 1869 as to its impracticable character. The sides are exceedingly precipitous, and the huge boulders which strew its bed sufficiently indicate that no pipe could be laid without liability to destruction from falling fragments of rock, if near the bed of the river; and the formation of galleries or ledges on the sides of the precipices would entail enormous expense.

By the section of the valley which was taken for railway purposes, I find that to obtain the requisite level of 425 feet over sea, the water must be taken at a point nearly 15 miles from its junction with the Hawkesbury. This distance, taking the railway route to Sydney, would make the entire length of the conduit about 50 miles.

This distance might be shortened by tunnelling, but the great height of the mountain through which it would be driven for the greater part of the length, would forbid the selection of a direct line.

The further difficulty of crossing the Hawkesbury, added to the foregoing considerations, appear to place this project beyond the necessity for further inquiry.

George's River.

The Hon. Thomas Holt, M.L.C., and J. Lucas, Esq., M.L.A., have separately advocated the obtaining a supply of water for Sydney from this source.

The area drained by the George's River is stated to be 375 square miles, or 240,000 acres.

The proposal is to place a dam across the estuary, near its outlet into Botany Bay, at one of the three points—Rocky Point, Tom Ugly's, or Kangaroo—to the opposite shore. The distances across the river at these places vary from 1,492 feet to 1,896 feet, with a maximum depth of water of 48 feet. The bed of the river is sand and mud, resting on rock, which in places has not been reached by the boring-rod at 93 feet in depth.

The peculiar formation of the estuary, with jutting promontories and bays between them, offers an apparent facility for the construction of an impounding dam, together with the necessary waste-weir, by which the floodwater can be discharged.

The large drainage area is chiefly from the sandstone country, and the upper portion, near the sources of supply, is similar in character to the Cataract and Cordeaux Rivers.

The river, rising in hills upwards of 1,000 feet over the sea, rapidly cuts its way down to a comparatively low level, through similar gorges; at its lower reaches however it receives the waters of the Bunbury Curran Creek and some others which drain a Winamatta shale district, and are exceptions to the very pure character of the sources of the water discharged into the river.

The

The tidal waters flow up to Liverpool, a town 21 miles from the mouth of the river in Botany Bay. Here a dam has been placed across the river, and some industries have been established, the drainage from which—one being a wool-washing and the other a paper factory—at present, does seriously pollute the river-water below the dam at Liverpool.

I have had frequent opportunities of observing this during the past few months, and a line of black filth marked the banks of the river between high and low water levels, for several miles below the Railway Station, where an offensive stench is very perceptible.

There is a large charitable institution located near the dam, the drainage from which* is into the river. The surface drainage of the town of Liverpool also discharges into the river, and must always so remain as its natural outlet; but in the event of the town being drained at some future time by a system of sewers, it is an indispensable condition that some provision should be made for the disposal of its sewage, as it is also for the removal of the offensive matters above alluded to, before the works for supplying Sydney with water from this source should be undertaken.

Near Sans Souci and for several miles up, the river is of a very picturesque character, and its ample surface of 3,000 acres has suggested the idea of converting it from an estuary of salt water to a fresh water lake for the supply of Sydney, from which it is distant only 10 miles.

Mr. Holt's proposal is to make a canal from the lake so formed, and to connect its water with the present engine pond at Botany, where it can be pumped into the city.

It has been shown by Mr. Moriarty† that to effect this it would be requisite to raise the surface water in the river 14 feet 6 inches above its present level at high-water.

Mr. Lucas proposes to place his dam at Rocky Point, near Sans Souci, and to lay a pipe from the head of Townshend's Bay to deliver the water at the same place, a distance of $4\frac{1}{2}$ miles, "the water could then be drawn by pipes" presumably into the pump well of the Botany engines; he would use the Botany waters as far as they would go, and then supplement the supply by the George's River.

No estimate has been given by Mr. Holt of the cost of the works; those of Mr. Lucas are put down at £243,000, of which sum £90,000 is for the construction of a dam.

The above are the chief features of these proposals which must be treated as one scheme.

As no plans accompany Mr. Holt's papers, I have given a sketch of what I think is his view of the sort of construction possible for a dam. It consists of two embankments formed of stone quarried from the adjacent promontories, where a waste weir would be made, the space between the banks is to be filled with either clay or sand, both of which materials are procurable in abundance. Plan No. 5
Appendix.

The interior space between the stone banks so filled in, is on completion of the structure, to be again excavated, and a puddle-wall sunk through the bed of the river, and down to rock beneath, which would be reached at a depth below high-water of 43 feet in one place, and would not be reached in others at a depth varying from 62 feet to 93 feet.

Mr. Lucas gives a sketch of his proposed dam. This is shown to be a bank of rubble stone which, like Mr. Holt's, is to be quarried from adjacent promontories; it is his intention to form the puddle wall first by driving two rows of piles across the river; having cleated and nailed together sufficient planks to reach from the bottom of the river to the surface at low water for a length of 30 feet, and two such sheets of planking having been prepared, these are placed on the inner sides of the piles, and the clay for the puddle wall is tipped in between them. This is followed up by the stone, which is tipped on either side to give sufficient strength to the dam; which is shown to be about 20 feet wide at top, and sloping on either side about 2 to 1. By repeating this process the dam would gradually be completed.

By the prize essay on "The George's River as a source of Water Supply," copy of which has been furnished to me, and which I believe embodies Mr. Holt's views, it appeared to be the intention to hold up the water by means of a dam to a height of 6 feet above high water.

The

*The dry-earth closet system is said to be in successful use here. †Report of the Commission, page 168.

The surface area of the water so impounded will be about 4,000 acres; the surface of the estuary as at present being 3,000 acres; 1,000 acres of the adjoining lands will, by this calculation, become flooded by the construction of the proposed dams.

The storage capacity of the reservoir so formed will be, above level of high water 7,329 million gallons, and of the 6 feet between high and low water 5,701 million gallons, total 13,030 million gallons; presuming the dam to be water-tight.

The above quantity of 13,030 million gallons, would furnish a supply of 24 million gallons daily for twelve months, after allowing for waste by evaporation; without any accession from the river.

Again, taking the storage contained in the top 6 feet of the reservoir above high water mark at 7,329 million gallons, and the evaporation for the eight dry months, August, 1875, to September, 1876 (240 days), as 2,880 million gallons, the remainder, 4,449 million gallons, would be sufficient to give a daily supply of 18 million gallons during the dry period, assuming that no additional water from rain or other source was added during its continuance; or 12 million gallons a day for a year on like assumption.

The next point for consideration is the waste weir.

In all works of this character the insufficiency of the waste weir is the chief cause of failure, it must be ample, not only for ordinary but for the maximum discharge of the river, which has ever been known or may be likely to occur; if the water is not to be permitted to flow over the dams such as are proposed in this case.

The depth of the water passing over the weir at such times must be between the top of the dam and crest of the weir; if this be limited, as is usual in such calculations to 2 or 3 feet, it is evident that at the time of the maximum discharge, the broad deep river must be spread out into the far broader and shallower one, and the breadth will become enormous; where, as in this case, the area drained is very considerable.

It may be truly said that there are but few cases where the same facilities exist as are here found for such constructions, where long promontories or tongues of rock oppose each other with deep bays between them.

In India broad rivers are dammed back for a height of 10 or 12 feet by works there called "annicuts." These are solid walls of masonry, placed on well foundations sunk in the sandy bed of the river.

During the dry season of the year, lasting about eight months, these rivers are empty, or nearly so, and on their sandy beds the works are built during the dry season. The effect is to hold up the water to the level of the top of the annicut, and the water is used for irrigating a level country.

Dry as the river-bed may appear to be, there is however, a current of water passing through the sand in the course of the stream. The effect of constructing the annicut is to intercept a portion of the current, and the surface of the water rises to its level.

In the wet season the water passes over the annicut for a depth of many feet, and there is always more or less of danger to its stability under these circumstances.

An annicut so constructed is not, however, water-tight, and it is found, after its erection that, though no water in the dry time is seen immediately below it, further down the river it again appears at the surface, and at the distance of a few miles but little difference has been caused in the river by the construction of the annicut.

The George's River differs from this,—instead of a nearly dry bed of sand to work upon there is a depth of water varying from 20 to 50 feet; well foundations for such a purpose would here be entirely inapplicable, and the construction of a masonry wall would be impossible without the aid of a coffer dam.

Here also the great height of wall from the rock-bed to the necessary level above the surface, together with coffer dam, would make it so costly as entirely to preclude this form of construction.

Therefore with either form of dam suggested, it is evident that the waste weir must be of sufficient extent to prevent the water during the maximum flow from passing over them.

Mr. Lucas gives the particulars of the waste weir and dam, which he proposes; the level of the former, is to be 4 feet above high water-level, thus limiting the storage to that depth, over an area of between 3,000 to 4,000 acres; its length is

to

to be 2,000 feet. The water in the reservoir is to be permitted to pass over the weir at a depth of 6 feet—the dam itself being 4 feet higher or 10 feet above the level of the waste weir.

The question resolves itself into what will be the cost of such a weir.

It is found that the dam, constructed upon Mr. Holt's plan, would require for its formation to 12 feet above high-water level 633,000 cubic yards of rubble stone, in addition to the enclosed mass of sand or clay.

To enable me to determine the quantity of excavation for the waste weir, and the best position for its construction I requested that surveys, levels, and borings might be made in two of the positions proposed for the dams, and which, after inspection of the country, I considered most suitable. The result proves that the best position in every respect is between Tom Ugly's Point and Horserock Point, on the line of the present ferry.

My calculations indicate that it is desirable to confine the depth of water passing over the weir to the lowest possible limit; and this limit is of course due to the quantity passing over the weir in a given time, and the width of the weir to carry it.

The quantity of water passing down the river has never been ascertained, but the observations taken on the Nepean show that the heaviest recorded discharge down that river was on the 25th February, 1873—31,092 million gallons as measured.

This corresponds with about 6 inches of rainfall over the entire area of catchments; in that case 354 square miles.

Other observations have proved, that on occasions, the discharge is fully that due to the observed rainfall. These occur when several successive days of rain have fallen continuously or nearly so, when all the swamps are saturated, and hollows filled to overflowing; the entire quantity falling under these circumstances is immediately discharged.

In the case of the George's River, the more level features of the country towards the lower portion of the area, would prevent the rapidity of discharge, while, on the other hand, the limited amount absorbed by the shale country would earlier be satisfied, and the total rain would run towards the river.

Bearing in mind that safety is only to be found in the ample dimensions of the weir to meet the requirements in extreme cases, it may be assumed that the weir for the George's River should be capable of discharging a quantity equal to the depth of 6 inches in 24 hours over the entire catchment area.

On examining the plans which have been made at my request, I find that the greatest length which can be obtained on the line above selected wherewith to form a waste weir will be 33 chains, or say 2,180 feet, and in order to discharge 6 inches from the catchment area of 375 square miles in 24 hours over this length of weir, it must run at a depth of 3¹/₂ feet, or less than Mr. Lucas has proposed, but yet more than is usual in such cases.

The proper adjustment of the relative heights of weir and dam is of the most vital importance.

There are reasons why the level of the weir should be the lowest possible, as in this case, for if it be raised considerably, say 20 feet above low water, the leakage through a dam not tight will be considerably more than if it be limited to 4 feet, as proposed by Mr. Lucas; but if this height of 4 feet be adopted, it would considerably enhance the cost of the waste weir, as it would involve a larger amount of excavation in the rock; but again this height would not give the ample storage which a work of this character should have—6 feet more nearly represents that quantity as I have above shown.

Assuming then 6 feet over high water will give the required amount of storage, with the least possible pressure on the dam, I find that the quantity of excavation for the weir will be 927,000 cubic yards.

This is considerably in excess of the quantity required in the dam, and as the cost of the latter is dependent upon the quantity of material used in its construction, it may be assumed that the entire quantity, 927,000 cubic yards, moved in the formation of the waste weir, is the quantity available for the construction of the dam, which will then be of the dimensions shown by the dotted lines in the sketch plan No. 5.

Mr. Holt's proposal, as formerly stated, is to force the water through a canal, to be made to the present Botany engines. Mr. Lucas also takes the water to the same point by means of pipes, thus continuing the use of the present supply.

As

As before mentioned there are many reasons why the present water reserve should not be retained for its present purpose.

The George's River drainage area of 375 square miles is, with the proposed reservoir, sufficient to give the entire supply required, and to adopt it simply as an auxiliary to the present one, would appear to be unnecessary; the main features of this scheme and the cost of it would have to be encountered, and a better plan would be to lift the water direct from the George's River on to the adjoining high land, where a sufficient elevation can be got whereon to construct a tank capable of forcing the water into the Crown-street Reservoir, 141 feet over sea level.

It is on this view of the case I propose to estimate for comparison with other schemes, in order that the Botany and Lachlan Swamps may be dispensed with as a water reserve.

The project thus becomes a pumping scheme, with the advantage of a reservoir, which can be filled at convenient hours of working, keeping up the pressure in the mains by gravitation.

Plan No. 6,
Appendix.

A suitable place for the engines and filter beds has been found near to the bay, on the East of Bald-Face Point. The engines can be fixed within 100 feet of the bay; and land of sufficient elevation can be got within a $\frac{1}{4}$ of a mile of the same place whereon to build the requisite reservoir and filter-beds. From this point the water descends by gravitation through a 36-inch pipe laid along the Koggerah high road to Sydney, a distance of 10 miles; this pipe will deliver 6 million gallons per day; Ashfield, Petersham, and other suburban places being supplied by branches from the main on its course.

It will be necessary also to provide storage reservoirs (as in the case of the Lower Nepean Scheme) and filters to cleanse the water on the occasion of heavy storms, when the water is turbid. These will not be required to the same extent as in the above scheme, but cannot be entirely dispensed with; probably the case will be met by providing filter area, as in that case, with half the amount of storage.

So estimated, the cost of the works for the supply of 12 million gallons per day is £658,000, and working expenses £14,000 per annum.

The works, including the dam and weir, would first be constructed to deliver 6 million gallons per day, and additions of 6 millions a day could be made as required, the cost of each successive increment of 6 million gallons being £214,000, and working expenses £7,200 per annum.

This estimate does not include any sums for the following purposes—

Purchase of land already alienated.

Compensation for the land flooded by reason of the construction of the dam, or any other claim in the form of compensation for loss of water frontage, and of the convenience of the river for the purposes of communication, or for the removal of the objectionable features at present existing in the neighbourhood of Liverpool.

There are several other important points for consideration in connection with this as a source of supply besides those already noticed, viz., the manufacturing establishments and drainage at present received by the river at Liverpool, together with the prospective drainage of that town, all of which should be provided for before adopting the George's River as a source of supply of water to Sydney.

The objection to the conversion of a salt estuary to a fresh water lake has been well answered in the prize essay above alluded to. This shows the number of times the river water can be renewed in ordinary seasons, and the gradual diminution of its saline ingredients. This point, however, is one upon which every person will form his own judgment; it is one which can scarcely be reduced to actual certainty by such arithmetical computations.

No records of the discharge of the creeks in the shale have been taken, it is impossible therefore to say what their influence on the large body of undoubtedly good water is likely to be, and the extent to which the suspicions of the Commissioners on this point are justified.

The navigation on the George's River at present is said to be confined to a few wood and fishing boats, and is not worthy of consideration. Such may be the case at present, but the future should also be considered. Manufactures which have been commenced at Liverpool may extend, and the possibility of obtaining cheap freight

freight for goods by small vessels to the coast may be a desideratum in the future; and there appears to be no reason why the river should not be made navigable for barges as high as Liverpool.

Botany Bay is a shallow inlet of the ocean; it receives the drainage of the George's and Cook's Rivers—the latter a very inconsiderable stream. The principal cause of its remaining open is due to the fresh water coming down the rivers in floods, and the tidal ebb and flow which is now able to expand over the picturesque bays of George's River, the entire area which it is intended to impound. If, however, this tidal action be stopped in the future, it is not difficult to foresee that Botany Bay—the channels of which at present receive some scour due to this cause—will diminish in depth by the accumulation of drift sand from the shore of the ocean, and become useless for the purposes of navigation.

I must not omit to mention one of the advantages which Mr. Holt expects to obtain from the impounding of the waters, viz., the power which may be derived from the waste water for pumping purposes. Undoubtedly, when the water is running to waste it possesses power which could be made available; this power, viz., that of the water falling through a minimum of 6 and maximum of 12 feet, according to the condition of the tide, could be made to work machinery for pumping.

When, however, it is considered that the lift must be to a height of 180 feet, or twenty times the available fall, and that this can only be used at uncertain intervals on the occasions of rain, when the water will be flowing over the weir, it is questionable whether an amount of benefit would be derived from it sufficient to warrant the erection of a second set of pumping machinery to be worked in this manner.

On this view of the matter I have not taken it into consideration, but have estimated the cost of the works and pumping expenses as that due to a pumping scheme, worked by the best and most economical form of engine for that purpose.

The estimate includes the cost of two locks, by which small vessels could be passed through the dam, and which would be necessary in its construction. Should the desirability be established for utilizing the power of the water passing over the waste weir, after the construction of the works one of these could be converted into a mill race or otherwise utilized for this purpose; by the lock, coals could be delivered at the pumping station by barges, and the cost of cartage avoided. Except for such purposes, I consider there should be no regular traffic on a lake reserved for the water supply of a city.

The success of this scheme is wholly contingent on the dam. The construction should therefore be such as to preclude all risks of failure.

After the construction of the dam, as described at page 27, Mr. Holt's proposal is to sink a trench down through the soft material to the rocky bed of the river and make a puddle wall. This would be attended with considerable difficulty. The leakage into such a trench would be great, and the construction of an impervious wall of puddle therein would be a matter of great uncertainty.

I think I have now noticed the more important points which require consideration in connection with this project. Magnificent as the storage would be, if successful, and advantageous as is its position near to the city, there are several features connected with it which, both in the present and the future, are likely to affect its permanent success.

The river channels of a country are its drainage outlets; they are also the highways by which the produce and manufactures of the interior reach distant markets by the cheapest route. To interfere with the freedom of these natural outlets, by works which limit or destroy them, is not desirable, even though no immediate inconvenience would follow the construction.

Mr. W. S. Jevons, in his book "*Some data concerning the Climate of Australia and New Zealand*," page 59, gives extract from the *Sydney Government Gazette*. "1841, April 29.—Most violent storm of rain. Rain fallen on that day and night amounting to 20¹/₂ inches." Ample as are the dimensions of the weir provided in the George's River scheme for all ordinary times, it is on the occurrence of such exceptional storms, that destruction to such a work as is here contemplated is to be feared.

Port

NOTE.—Since the above calculations were made from the sections of Horse Rock and Bald-faced Points, I have received from Mr. Surveyor Hancock his plan of the locality (No. 6 Appendix). It appears from this that a considerable additional quantity of rock cutting, beyond what I had previously estimated, would be requisite at the high point marked A on the plan, to provide the necessary approach to the weir. This will make an addition to the cost of the work. I have not, however, delayed the report for further levels, &c., to enable the quantity to be calculated.

Port Hacking and Woronora.

I HAVE also visited in company with Mr. Holt the Port Hacking River, an estuary very similar to that at the George's River; it is distant 14 miles from Sydney, but is fed by a watershed having only 52 square miles of area—not sufficient in extent to be considered a safe source to depend upon for 12 million gallons of daily supply, during a protracted dry period.

I have thought that this watershed might be supplemented by the area drained by the Woronora, it having a watershed of about 48 square miles. The idea was to construct a low dam on the Woronora above the influence of the salt water, and thereby to force the water through a tunnel into the Port Hacking River, a distance of about $2\frac{1}{4}$ miles.

The estuary of Port Hacking would require to be obstructed by a dam in the same manner as George's River, whereby a large area of about 2,000 acres of water surface, would be impounded. Here at low-water is a large sandy pool with a very small depth of water over the bar at its entrance at high-water.

The drainage of both rivers is entirely from a sandstone country, very sterile and unlikely to be used for agricultural or pastoral occupation.

The first inspection of Port Hacking impressed me favourably with these advantages, and at my request surveys, levels, and borings have been made. The apparently shallow depth of water, the small area drained (52 miles), and consequently diminished rush of water in flood times, induced the opinion that the rock would be found near the surface, and in that case the construction of an efficient dam would be attended with little difficulty, and small expense comparatively.

On being furnished with the section and borings* of the estuary, at the point selected for the dam measured from low-water, it shows the depth to the rock as varying from 25 to 43 feet, and the length at high-water level to be 2,200 feet.

The height of the dam should be sufficient to store a quantity equal to 30 million gallons per day for one year—

	or say 10,950 million gallons.
Evaporation from 2,000 acres at 4 ft. per annum ...	2,177 ,,
Total ...	13,127 ,,

To contain this quantity, a reservoir of the superficial extent of Port Hacking would require to be 24½ ft. deep.

Assuming that the dam be made water-tight, and that the storage is obtained above low-water level,—

The height of the dam would be ...	24½
Average depth below low-water to rock ...	35½
Total height of dam ...	59 feet.

Such a dam would require to be built of masonry, which necessitates the use of an expensive coffer-dam, the total cost of which, and the masonry wall or dam, would I estimate be £649,000.

Under these circumstances I have not considered it desirable to proceed further in this inquiry.

Erskine Valley Scheme.

THE Erskine Valley, as a source of supply, has been advocated by Drs. Fortescue, and Spencer, and Mr. Grantly Fitzhardinge.

This valley, a tributary of the Nepean, is one of the gorges in the sandstone rock, similar in character to others in the district; the water is of undoubted purity, and the area—the drainage of which it is proposed to intercept—is not likely to be required for any other purposes.

The

The proposal is to erect a dam at a point about 4 miles from its junction with the Nepean, to divert the water into an aqueduct falling at the rate of 4 feet per mile to the Nepean. This river would require to be crossed at a height of 300 feet; the water would thence proceed to Sydney in piping.

The drainage area above the point where it is proposed to intercept the flow is about 100 square miles. A survey of the valley in 1876 by Mr. Mitchell, whose report has been handed to me, proved that a dam 50 feet high where the required elevation is obtained would throw back 60 millions of gallons only; and that, as measured by him, the stream was running at a little under 6 million gallons per day.

No other observations of the discharge of the river have been recorded, but it is evident that without a large storage reservoir the stream could not be depended on for a regular supply of 12 million gallons per day.

I have visited the gorge, in company with Dr. Spencer and Mr. Fitzhardinge. Like others of the same character, its fall is so rapid that no large storage capacity can be obtained by the construction of a dam of moderate height.

The proposers of the scheme are aware of this, and they suggest that an additional supply should be obtained, when the stream in the valley fails, by pumping from the Nepean. The scheme, therefore, becomes a combined one of gravitation and pumping.

To be efficient, the pumping arrangements must be precisely of the same character as if in constant use, and any saving that would be made would be in the consumption of fuel, the cost of the engines and establishment to work them remaining the same.

Under this view of the case, the most economical arrangement would be to place the engines at a suitable point on the river nearest to Sydney, and this would be in the position selected for the pumping arrangements, &c., in the 'Lower Nepean' scheme.

So few of the necessary data have been obtained, upon which to establish calculations for the project, that I am wholly unable to form any conclusive opinion on its capabilities; but in the absence of storage, which could only be provided by a succession of expensive dams, it is certain that the supply of 12 million gallons per day could not be obtained from this source.

The valley, for the portion of it travelled over by me, is of a very impracticable character, and probably the cheapest form of conduit would be a tunnel through the sandstone rock; an aqueduct crossing the Nepean at 300 feet of elevation would be a very costly construction. From this point to the pumping station of the 'Lower Nepean'—six miles—the water would be carried by a pipe.

It appears possible that with a drainage area of 100 miles, 6 million gallons a day may be obtained from this source, and as an auxiliary to the 'Lower Nepean' scheme it may possess some advantages, *i.e.*, if the diminished cost of pumping 6 million gallons a day, say £6,000 per annum, and representing a capital of £120,000, would suffice to pay the cost of the works for bringing 6 million gallons from the Erskine Valley.

I think this is unlikely, and that the entire cost of the works would be not less than £133,000.

I have therefore not pursued this subject further; but as an auxiliary to the 'Lower Nepean' it would be desirable to obtain further observations on the discharge of the stream, before the works for the second increment of 6 million gallons per day are undertaken in that work.

Tube Wells.

Mr. P. Wilshire has addressed several letters to the Government upon this subject. These with explanatory drawings have been placed before me. I have also had an interview with Mr. Wilshire, and received his further explanations.

The proposal appears to have originated from the paper by Mr. F. Bell, the City Engineer, dated October 24, 1872, wherein is described his experimental tube well, sunk to a depth of 80 feet in the sands of the Lachlan Swamp, and the difficulty met with on account of it resting on a bed of clay.

On the occurrence of such a difficulty, where from any cause the bottom of the well is obstructed and entrance of the water prevented, Mr. Wilshire's proposal is the providing of means for its admission at the sides. To accomplish this, the iron cylinder to be sunk has an arrangement of shifting panels at the sides, which are to be closed while in process of sinking, and opened when this operation is completed.

A principal feature in the arrangement is to fill the bottom of the well, where the panels are placed, with broken stone of various degrees of fineness, the finest next to the exterior sand, the coarser in the middle; and in this way, after removal of the panels, the water enters the well as through an ordinary filter, leaving the sand behind.

A well, 20 feet diameter, so constructed, the proposer calculates, will yield 5 million gallons of water per day. He is further of opinion that the Botany Swamp is fed by an area of 730 square miles, and by this means he suggests that a quantity of water sufficient "to supply 30 to 40 million gallons daily, which may be wholly drawn from the south shore of Botany Bay."

Water is undoubtedly present in the sands of the locality in large quantities, but there appears to be no sufficient reason for assuming that it is the one means of egress to the sea of the subterranean water from so large an area. I have endeavoured, when speaking of the present source of supply, to show that if the total rainfall of an average year on the area of 5³ square miles were conserved, it would still be insufficient for the future supply of the city.

There appears to be no great difficulty in sinking the wells through loose sand by aid of the sand-pump, and it is unnecessary to pump out the water during the operation.

How much water can be drawn from such a well in a given time is a question more of area than of pressure; for if the water in the well is pumped out in so large a quantity as to cause great difference of level between it and that outside, the loose sand will be scoured in from the exterior with the water, and choke the interstices of the filtering media, and the action of the well become disarranged. The water must in fact pass into the well slowly, as through an ordinary filter, to preserve its proper action.

To accomplish the object of the proposer, it would be sufficient if perforations were made in the sides of the lower portion of the cylinder, and that the bottom of the well, when sunk to the required depth, be filled with broken stone, so as to cover the apertures, previous to pumping out the water.

For the reasons before given, viz., the insufficiency of the area of the Botany and Lachlan sources, I have not thought it necessary to pursue this subject further.

Mr. Sadleir's proposal.

Richard Sadleir, Esq., R.N., proposed in 1852 to supply Sydney with water from the George's River, by connecting it with the Nepean by a tunnel 3 miles long, near Appin.

As the city expanded to the heights at Waverley, it was subsequently proposed that the united waters of the Cordeaux, Bargo, and Cataract Rivers should be impounded where suitable to obtain the higher service in Sydney.

No information is given as to the details of the project, and it was regarded by the author rather as a suggestive proposal. The scheme of the Commission subsequently adopted nearly the same source of supply.

In the foregoing pages of this Report, all the various proposals for supplying Sydney with water, have been noticed, and several have been shown to be wanting either in the sufficiency of supply, or in practicability, so as to render further inquiry unnecessary.

After eliminating these schemes four remain, viz. :—

- The Upper Nepean, gravitation scheme.
- Loddon and Wingecarribee, do. ,,
- Lower Nepean, pumping ,,
- George's River do. ,,

Estimates for each of these have been made, and the working expenses calculated. I am now, therefore, in position to make the further comparison of the actual cost of the water delivered by each into the Crown-street Reservoir at Sydney.

In addition, however, to the items of first cost and working expenses, there are still several points, wherein actual comparison can, and several where it cannot, be shewn in figures.

Of the former class is the cost of upholding the works—also the cost of cleansing and repairs incidental to conduits, pipes, &c.,—short of actual renewal. Where iron pipes are the chief item of cost, the expenditure in repair will be greater than where the works consist mainly of tunnels, masonry, and earthwork; where machinery is employed and in constant use, its repair will be *pro rata* more expensive than in the case of iron pipes.

In order, therefore, to assist in arriving at a comparative estimate of the cost per unit of quantity of the water in the several cases, I purpose, in addition to 5 per cent interest on the capital expenditure, to make the following rates of annual charge, viz. :—

On the first cost of tunnels, masonry, and earthworks ...	1/8 per cent.
On pipes and ironwork	1 do.
On machinery and buildings	2 1/2 do.

Among other items which cannot be readily estimated, is the interest on the works while unproductive or in course of execution; this, however, is common to all, and considered as for a work to deliver 12 million gallons per day the various cases will differ somewhat; it would be greatest in the Upper Nepean scheme, and least in the case of the George's River. The *risk*, however, to which the respective works are liable, both during construction and when complete, are still less easily brought into estimate,—they would be vastly greater in the last-mentioned scheme, where a heavy flood during construction, and before completion, might partially destroy it.

With this allusion to financial points, of importance in consideration of questions of this nature, I purpose in the comparison to omit these items of interest on unproductive works, and permanent charge to cover risks.

Charging each scheme then with 5 per cent. interest on its estimated cost, annual working expenses, and cost of upholding, at the rates above given, the following will be the cost of 1,000 gallons of water delivered into the Crown-street Reservoir, viz. :—

COST PER 1,000 GALLONS.

	6 million gallons per day.	12 million gallons.	18 million gallons.
	d.	d.	d.
Upper Nepean	3 ⁵²⁷	2 ⁴⁵
Loddon and Wingecarribee ...	5 ¹⁴	3 ⁵⁵	...
Lower Nepean	4 ³⁷	4 ²⁸	4 ²⁷
George's River (exclusive of land submerged, compensation, and Liverpool circumstances) ...	3 ⁶⁵	2 ⁹⁵	2 ⁷

The above table shows the inelasticity of the schemes in which the supply is mainly through pipes.

The highest of these estimated costs is furnished by the Lower Nepean scheme, viz., 4²⁸d. per 1,000 gallons; the lowest by the George's River, viz., 2⁹⁵d. From the latter, however, is omitted those serious items which I have been unable to bring into estimate. For the Upper Nepean scheme, when extended to 18 million gallons per day, the rate is 2⁶⁵d. per 1,000 gallons, somewhat cheaper than the water from the George's River, notwithstanding the great disparity in distance over which the water has to be conducted.

I have now arrived at a definite conclusion on the more important question of cost. The result is unfavourable to the Loddon and Wingecarribee; and without further reference to the inferiority of this scheme, in its limited catchment area, I am thereby enabled to remove that project from the list, and to proceed now to consider the others, on the more general grounds of their respective merits, and in connection with their relative cost.

The Lower Nepean, with all its advantages of an abundant and permanent source of supply, has nevertheless the great demerit of an extreme distance from Sydney, only to be covered by iron pipes—the most expensive of all forms of conduit; the estimated rate for these, at £11 per ton laid, would only hold good at the present low price of iron, and should any considerable rise in the price of this material take place, the work could not be executed for the estimated amount; nearly 30,000 tons are required for 6 million gallons per day, and double this quantity for 12 million gallons.

It is the great length of pipes that, together with the working expenses, makes this scheme the dearest in the list, viz., 4½d. per 1,000 gallons; it is 60 per cent. above the cost of that supplied by the Upper Nepean scheme, and under these circumstances it is necessary to remove it from the list also.

The remaining schemes are the Upper Nepean and George's River; the latter of these has the great recommendation of smaller first cost for the requisite works,—but it is attended with exceptional risks in its execution, and uncertainty in its results. After duly weighing all the concomitant circumstances in connection with it, it does not commend itself to me as an engineering work, nor do I think it would, when put to the test of actual experience, give that satisfaction to the public which is so essential in a matter of this nature.

This last mentioned then, the Upper Nepean scheme, I consider to be much superior as a source of supply, and as a permanently secure work, and also to possess collateral capabilities of extended usefulness beyond that of supplying Sydney. Moreover, though equally cheap in supplying 12 million—when extended to 18 million gallons per day, the water will be furnished at a cheaper rate than by any of the other schemes.

After much consideration, therefore, I with great confidence recommend that the Government adopt the Upper Nepean scheme for the future supply of the city.

I have mentioned (page 7) the collateral advantages which attach to the various schemes reviewed. I may now more particularly refer to this subject: it is one which, as connected with the Upper Nepean scheme, is of great importance.

The works as proposed comprise the tunnels, conduits, &c., capable of delivering into the Prospect Reservoir, at 40 miles from the source, 84,000,000 gallons per day; the table (page 43) shows that a large quantity of water is allowed to run to waste after the Prospect Reservoir is full.

This waste water, supposing means of storing it along the line of the conduit to be available, would undoubtedly be found of great value to the country through which it passes.

An examination of the tables of daily flow down the rivers Nepean and Cataract show that this quantity varies from 22,000,000 gallons daily in 1872, when 37.2 inches of rain fell, to 64,000,000 daily in 1870, when 64.2 inches of rain fell, and during the eight years over which the records extend, an average of 40,000,000 gallons daily would have run to waste.

Situated as the conduit will be, on or near the top of a ridge, it will command a wide extent of country on either side, and which for a distance of many miles is chiefly of an agricultural and pastoral character. All that would be necessary in order to bring this quantity of water into use, for irrigation, pastoral, or manufacturing purposes, would be, the provision of reservoirs to contain it.

For this purpose the country is especially favourable; a cursory examination of it, with a view to the utilizing the water otherwise to be wasted, shows that there are sites more or less suitable for ten storage reservoirs in the length of 21 miles of the conduit south of Prospect; and no doubt numerous other such sites exist.

Time will not permit me here to pursue this subject, but it is perfectly evident that this portion of the county of Cumberland may derive large advantages from the use of the water.

Very many eligible sites for residences and homesteads exist in the district passed through, and in all probability would be made available could this great advantage

advantage be secured to them, and for which they would no doubt willingly pay; the only additional expense will be the construction of the dam necessary to impound the water.

Two of the above sites have, at my request, been more particularly examined: The first at 30 miles 30 chains from Pheasant's Nest, is situated on the Cabramatta Creek, an embankment 35 feet in height, comprising 40,589 cubic yards of earthwork and puddle, would enclose $34\frac{1}{2}$ acres of water of an average depth of 14 feet, with a capacity for impounding 131 million gallons, and would command a considerable area of agricultural land: The other is situated on the Orphan School Creek, at 36 miles 60 chains; an embankment, 30 feet high will enclose $36\frac{1}{2}$ acres of water 12 feet deep, with a capacity of $119\frac{1}{4}$ million gallons. The dam in this case will contain 46,274 cubic yards of earthwork and puddle, and it will also command a considerable area a portion of which is under cultivation.

Plans and sections of these reservoirs are given in the Appendix. Nos. 11 and 12.

The plan would probably be for private owners to provide the reservoir on their own land, of the capacity to suit their requirements, and that these be supplied with water at such times as the reservoir at Prospect is full; the priority to supply at such times into the private reservoirs being an element in the price to be paid for the water.

I am unable to go fully into the estimate of the value of the water in an agricultural or pastoral district; it is possible, however, to estimate what a surplus quantity of 20 million gallons per day would do. It would be capable of supplementing the rainfall to an extent of 12 inches per annum on 20,000 acres, at a time when most required, or it would, if sold for wool-washing, or manufacturing purposes, at the price of a half-penny per 1,000 gallons, yield a revenue of £15,000 per annum, or a quarter of the total annual charge on the scheme for delivering 12 million gallons per day into Sydney.

Further examination shows that even this quantity of water may be considerably increased, and that by enlarging the capacity of the conduit from 84 to 120 million gallons per day, a quantity varying from 6 million gallons per day, in 1872, to 27 million gallons, in 1870, could be further secured.

Similarly, by increasing the conduit to carry 160 million gallons daily, an increased quantity of from 12 to 50 million gallons per day in the above-named years respectively could be effected.

It is therefore worth further inquiry into the value of this surplus water, before a commencement of the works between Prospect and Pheasant's Nest is made, with a view to ascertain whether it be sufficient to warrant an increase in the sizes of the conduits and tunnels to receive the larger quantity of water; for it must be borne in mind that the increase in the cost, will not be in so large a proportion as the carrying capacity of these works.

I have further to notice some of the points that have been alleged in depreciation of this scheme. In addition to the great length of the conduit, its construction partly in tunnel, partly in open channel, partly aqueduct, and partly pipe, have caused it to be regarded as of a complicated character; while after going so far for a source of supply, it reaches the city at an elevation insufficient to supply the whole of its area without pumping.

As an engineering work it is much in the nature of a line of railway, but more simple in its character; it can be carried round quicker curves, and the gradients, though all necessarily falling in one direction, can be changed and altered according to the circumstances of the situation, and if need be by a sudden drop. In this case the surface inclination of the country is in the required direction, but the ridge which the conduit follows, falls too rapidly, and the longitudinal section shows 16 drops, aggregating a fall of 90 feet between Pheasant's Nest and Prospect Reservoir, with a further fall of 60 feet into the Reservoir; this latter fall could be utilized as a source of power. The stream, when running steadily at the rate of 12 million gallons per twenty-four hours, would be equivalent to 151 H.P., and about one-half of that amount could be made effective for the pumping of water or any other purpose for which it may be required.

In the further investigation of the subject—should it be deemed desirable to increase the capacity of the conduits—any extra expense for the aqueducts can be entirely avoided by giving a greater inclination to the stream at those points.

There

There is also some advantage in adopting a nearly level gradient on portions of the length, with stop-gates and drops. These would afford facilities for laying portions of the conduit dry, for the purpose of cleansing and repair, bye-washes for emptying consecutive portions being provided for this purpose.

The masonry works shown in the Report of the Commissioners for these drops appear to me of a somewhat expensive character. All that is necessary is, to provide a well or water-cushion, lined with substantial masonry, to prevent injury by scour.

One feature in the works is indispensable, viz., that the conduits shall be watertight. The country through which they will pass is of a favourable character for this purpose; in the solid sandstone rock, it is only where fissures occur that any work beyond the excavation will be required; these cases, it is apprehended, will be of limited character, and easily made good with masonry in cement.

The Wianamatta shale, from all I can learn, is of an impermeable character, while the clay, which is generally present in its vicinity, provides the necessary material for lining, when it is otherwise.

In the Appendix, plan No. 9 shows the section of conduit, as proposed in the scheme of the Commission. It is not, however, necessary that this particular form of channel (Nos. 1 to 8) should be used in all cases; it may be varied to suit the locality and conditions of soil, &c., and it will, I think, be found that a channel with sides sloped, as in figure 9, will be more suitable where a lining of puddle and rubble walling is required.

The following are the lengths of some of the principal conduits for the supply of cities:—

New York Croton Aqueduct	40 miles.
Glasgow (Loch Katrine)	26 „
Aberdeen	20 „
Vienna	57 „
Paris	104 „

The greater portion of the New River, which supplies a large portion of London, is an unlined channel; as originally constructed it was 39 miles long, though the spring at its source is from London 20 miles only by direct line; the proposed conduit from Pheasant's Nest would therefore compare favourably with one of the most useful and profitable works ever constructed.

The line selected for the conduit undoubtedly admits of some considerable modification and improvement, and must be regarded as a preliminary line only. Surveys, borings and trial holes, the most careful and extended, will be necessary before the exact position of the line can be determined, and it will probably be found that where any considerable length can be saved, the cheapest form of conduit will be tunnel, when in hard rock.

It is quite impossible to do more than direct attention to these important investigations, but it may be confidently asserted that great economy in construction may be obtained if these inquiries be carefully conducted.

When the work comes to be executed, doubtless some other modifications may be made; among them of the pipes proposed under Duck Creek, and that delivering the water into Sydney, 48 inches and 42 inches diameter respectively. I would recommend that 36-inch pipes, capable of delivering 8 million gallons per day, be first laid, and that as the consumption increases these be duplicated, and thus avoid the risk attendant upon the use of one pipe for the entire supply.

It has also been pointed out in the Commissioners' Report, that the supply to Sydney need not be delayed till the Prospect Dam, and the long tunnel from the Nepean to the Cataract are completed. Temporary arrangements may be provided for carrying the Cataract water by flumes, &c., past the site of the Prospect Reservoir. These are the works that will occupy the longest time in their execution.

Regarding the insufficiency of head afforded by the Prospect Reservoir to supply the highest part of the city, at page 21, it will be seen that £44,000 represents the capital sum required to overcome this difficulty by pumping.

At page 140, *Report of the Commission*, Mr. Grundy has pointed out another and very desirable position for an impounding reservoir, at Bull's Hill, close to Prospect, which would afford sufficient elevation; and it was a question with the Commission of 1867 which of the two should be adopted. I quite concur in the decision that selected the Prospect in preference to the other—the larger area and cubical contents, its embankment 16 feet less in height, containing $\frac{1}{4}$ million yards

yards less earthwork—less cost, and possibility of conveying a larger daily supply to a point 6 miles nearer to Sydney—these advantages more than outweigh the higher delivery from a reservoir at Bull's Hill.

The prominent feature of the Upper Nepean scheme is the Prospect Reservoir; it resembles the Yan Yean in Victoria, and affords like it, the very abundant artificial storage so essential in a climate liable to extended periods of drought.

The Yan Yean Reservoir has an area of 1,303 acres, and cubic capacity of 6,400 million gallons; the Prospect will be twelve acres less, but its capacity greater, viz., 7,110 million; the Yan Yean is distant from Melbourne 20 miles, the Prospect 21 miles from Sydney. Both reservoirs have the advantage of being removed from the direct channel of the rivers that supply them; they are thus able to reject the water when turbid, and to prevent the entrance of drift timber and rubbish which collects behind a dam formed in the course of a stream. This matter is always difficult of removal, and liable to affect the purity of the water. Moreover, reservoirs formed in the channel of a river have to pass through their area the entire quantity of flood water, which when due to a large area necessitates a waste weir of formidable dimensions, and by reason of the uncertain quantity always involves some risks.

The Prospect Reservoir has very little catchment area beyond its own surface, as it is situated in the bend of a dividing range of hills, a waste weir of very small extent only is therefore requisite.

The area is at present, for the greater part, sparsely covered with the usual scrub of the country, a portion only being cultivated. The work of clearing it will not be heavy. As noticed by the Commissioners, it will undoubtedly take some time for the water, after its first admission, to attain its proper condition and brightness. The loose rubbish, vegetable and mineral, which the water will take up in the new channel and reservoir, will be held in suspension for a time.

I have not thought it necessary to provide for filtering the water; with so large an area for settlement, and from so unexceptional a source, it will not require it after the first difficulties are overcome. Filters, however, could easily be provided for clearing all the water drawn from the reservoir down to a level of 20 feet from the surface when full.

It remains for me to notice the subject of the distribution of the water on its arrival in Sydney. It is not necessary for me to go into the details, but I may give a general idea of the principles which should guide the authorities in this branch of the subject.

Reservoir space within the city is of great importance; it should be fully equal to two days' consumption, to permit of occasional necessary repairs to the supply conduit.

This space in a city like Sydney, covering an area with levels varying from that of the sea to a height of 360 feet above it, would be best disposed in several reservoirs for the supply of separate districts, and situated at suitable levels for commanding those districts; separate and distinct supply mains being laid from the central supply to the district reservoir. From this latter the distributing mains to be carried as nearly as possible to the streets occupying a limited range of elevation, each forming a distinct system in itself.

If this principle be adopted, the pressure will be more equable, much confusion will be avoided, while the pipes will be reduced to the minimum size necessary for a small district.

The present reservoirs are :

	Contents.	Top water line above sea level.
Crown-street	3 $\frac{1}{4}$ million gallons.	141 feet
Paddington (as now enlarged)	2 " "	214 "
In addition to the above, I would propose the following reservoirs :—		
At Petersham (by the Commissioners' scheme, capacity 800,000) should be enlarged to hold		
2	" "	141 "
Newtown	3 "	141 "
Woollahra	1 "	276 "
Waverley	1 "	360 "

Four of the above reservoirs will be new; and I have ascertained that there is vacant land in each place at the required elevation. The

The sites for the Petersham and Newtown Reservoirs are near the line of the main supply pipe from Prospect, that at Petersham being near the highest point of the hill to the south of the Railway Station, and capable of supplying that district and Balmain; that at Newtown, near the end of Missenden-street on the Newtown Road, for supplying the Glebe, Camperdown, and adjacent district, including St. Peter's on the south.

Crown-street supply will then be given to the district between Camperdown and Fitzroy Ward; and the Paddington supply to the whole of the district which it at present commands below the level of 214 feet.

The reservoir for Woollahra will be situate near the windmill, on the Laehlan Water Reserve; it will supply levels above the command of the Paddington Reservoir and below 276 feet.

The Waverley Reservoir is proposed to be on the Flagstaff Hill, and will command the highest levels from that point towards Randwick.

These reservoirs are recommended for adoption as the necessity for them arises with the growth of the city.

It is also highly desirable, in very wide streets and principal lines of traffic, to have separate pipes for each side of a street. Some extra expense in the cost of the mains will thereby be entailed, but great economy in the house service will be ensured, with less disturbance and expense in the restoration of the street surface for the purpose of making connections, doing repairs, &c. The Cock boxes, which often form such objectionable obstructions, will thus be removed from the centre of the street.

The present supply to Sydney is conducted chiefly on the constant service principle—undoubtedly the best where proper house fittings are used and kept in good order. The subject of fittings is intimately connected with that of waste, and in all places more or less one of difficulty.

The responsibility of the Corporation, or Public Company, to keep up the supply, and practical irresponsibility of the consumer to limit the consumption to its legitimate use, lead to continued dissatisfaction.

The cause lies chiefly in the cost of fittings, and of their subsequent repair; the former is expensive—the latter both expensive and annoying; the tendency is to limit the former to the necessary articles of the cheapest kind; the latter, as it is generally within private premises, is neglected.

Where cisterns are used, the leakage through a ball cock uncared for, and running off through the waste pipe will frequently more than double the consumption of the house. This has led to the abolition of the waste pipe, and the substitution of 'warning pipes,' which discharge the water from the cistern in some conspicuous place that will compel attention.

The above is only one source of waste—there are however many others; the constant dripping from a leaky tap will add largely to the consumption, while the deliberate opening of the taps for the benefit of the drains, as a general system is calculated to embarrass the most liberal arrangement for supply.

The right of admission to premises—after due notice, being recognised by legislative enactment—my experience dictates that it is better to send the Water Inspector as a friend rather than as an informer; and if he be provided with the means of effecting trifling repairs, consumers will gladly pay a small sum for a trifling repair who would, in the dread of a visitation by a plumber, allow waste to continue.

A water company supplying a large town in England within my experience acting on this principle, when water was becoming scarce undertook the making of trifling repairs without charge. The cost to the Company was trifling, but the result within a few weeks was that the difficulty was entirely removed, and their shortened available means were fully equal to the demand upon them.

It is not however necessary to go to Europe for the experience I have already drawn attention to, in the fact that, had the waste of water supplied to Sydney in 1870 been continued to 1875-6, it is quite probable that it would have resulted in serious inconvenience.

The nearly unanimous opinion of those who have the charge of the distribution of water for town supply, is in favour of the use of the meter, for water as for gas: by its adoption, the consumer at once becomes responsible for the condition of his fittings, and he has the opportunity of reducing his consumption at pleasure.

I recommend this mode of regulating the charge for supply wherever it is practicable; there has however been a difficulty in obtaining meters of a satisfactory construction, but this is gradually being overcome, and there are several meters which, with official testing at regular intervals, may be used with confidence, and at the cost of a few shillings per annum.

In the Appendix I have given copy of Regulations in use in one of the large towns in England, viz., Bury, Lancashire. These are drawn up by Mr. Hawkesley, Past President of the Institution of Civil Engineers, and are among the best for this purpose.

The provision of a stop-cock between the service pipe in the street and the outer wall of the house to be supplied,—by means of which, on occasion, the water can be turned off—comprises, with the meter, all that is required to prevent waste when payment for the water is made on this principle.

When the works are complete, an abundant supply to the city will be available for manufacturing as well as for domestic purposes. It may be assumed that the consumption will at least amount to six million gallons per day. This quantity distributed through the existing pipes, and sold to consumers at the rate of 1s. per 1,000 gallons, will yield a revenue sufficient to pay interest and working expenses, and leave some profit. As the consumption increases, the rate of charge can be reduced to large consumers.

The supply to the higher levels above Crown-street should be charged 1½d. per 1,000 gallons over and above that for the portions of the city below that level, to cover the additional expense of pumping, &c.

The value of property, for assessment in Sydney, including Government buildings, I learn is estimated at, per annum	£947,065
The value of that in the suburbs I have not been able to ascertain, but assuming it to be one-half of that in the city, say	473,532
Total	<u>£1,420,597</u>

Six per cent. on the above is £85,236 per annum, which, after paying working expenses and interest on capital, will leave a sum of £20,000 to pay establishment, and interest on the cost of extended reticulation.

As the consumption extends, of course these charges will diminish, but 5 per cent. is a usual charge on property for an abundant supply of water; and any profit which accrues may, as in Manchester (England) be applied to municipal improvements.

In that city, where the daily supply is 25 million gallons, the charge for 20 gallons per day is 12s. 9d. per annum, or 1s. 9d. per 1,000 gallons. In Glasgow, where the daily supply is 30 million gallons per day, the charge is 16s. per annum. Both of the above cities are supplied by gravitation works.

In eighty cases of gravitation works, as given by Humber in his recent work, "Water Supply of Cities and Towns," while seventy-three cases are in excess of the Manchester rate, seven only are below it.

It will therefore be seen that the above estimate of 1s. per 1,000 gallons,—on a supply of 6 millions, will furnish a revenue to pay working expenses, and interest at 5 per cent upon the capital expenditure of this scheme,—and at the same time not bring more than an ordinary rate of annual charge on the property supplied. Moreover, as the demand increases the rateable charge will diminish; or in other words, the more its capabilities of extension are availed of, the cheaper will be the commodity supplied.

At page 14 the subject of the appropriation of a daily quantity from the Nepean water, between the limits of 10 and 80 million gallons daily, as proposed by the Commission, is alluded to. The reservation of the 10 million gallons per day is I consider inadvisable, for many reasons. Of these, participation in the right to the water when most valuable is not the least, as it is generally found to lead to difficulties.

The portion of the river more immediately affected will be for a few miles below the dam. The Nepean below its junction with the Cataract and as far as Menangle has but little fall, and is navigable for a small boat. About 4 miles

below the dam the Bargo falls into the Nepean; this stream has a drainage area of some 60 square miles, the water from which, together with the surplus from the Nepean, if impounded, would probably supply the quantity required. A dam 10 feet in height constructed across the stream* below the Menangle Bridge would hold up the water for a distance of 10 miles, and would probably be a sufficient substitution for the water taken for the supply of Sydney; or some one of the reservoirs to which I have before referred, to be fed by the conduit, would be even more valuable. I think if £10,000 be added to the estimate for this purpose it will cover any expense chargeable to the scheme on this account.

There will also be an amount to add to the estimate for the cost of engineering and surveying, dependent somewhat upon the agency employed for carrying out the work; this would probably be covered by a sum of £30,000.

No item of severance of land is included, as it is considered that collateral advantages as above referred to will more than compensate for charges of this nature.

With the above last additions, the total cost of the undertaking may be considered to be as follow:—

Land and Works	£1,086,768
Capitalized value of raising $1\frac{1}{2}$ million gallons a day to high levels	44,000
Compensation Dam	10,000
Engineering and Surveying	30,000
	————— £1,170,768

In conclusion, I may remark that the scheme which I recommend for adoption, though it goes a long distance for its supply, promises to be not only a source of health and convenience to the inhabitants, but its financial results also promise to be equally satisfactory.

As an Engineering Work, in its conception, it will be a credit to the Colony; and when successfully carried into execution, will occupy a position with the most important works of this character of modern times; it has moreover the merit of being practicable mainly with the materials and resources of the Colony.

W. CLARK,

Member Institution of Civil Engineers.

15 May, 1877.

* On the 18th April the stream was 71 feet wide, with a depth of 2 feet in the deepest part; it has a rock bottom.

NEPEAN AND CATARACT RIVERS.

STATEMENT showing the Number of Days on which the Water would have run to waste in consequence of the Prospect Reservoir being full; and also the amount of Water that would have been saved if additional reservoirs were provided.

Year.	No. of days on which water would have run to waste.	Probable quantity would have been saved by additional reservoir.	Equal to million gallons per day.
1869 (Reservoir full 27 June.)	307	Million gallons. 5,613	30
1870	365	23,604	64.7
1871	351	17,602	48
1872	327	8,050	22
1873	365	17,105	46
1874	344	15,290	41
1875	256	10,802	30
1876	267	9,225	25
	Average, 323 days per year.	Total... 107,291; or an average of nearly 40 million gallons per day for 7½ years.	

Evaporation allowed at the same rate as at Sydney.

(Signed) F. H. GRUNDY.

31 January, 1877.

SOURCE of Sample—Wingecarribbee. Taken 24th January, 1877.

(Parts per 100,000.)

Total solid matter.	Volatile matter.	Fluid matter.	Chlorine.	Saline ammonia.	Ammonia from organic matter.
8.76	1.90	* 6.86	1.57	.0007	.02

* Any carbonic acid driven off during treating was restored before weighing.

Remarks.

The sample was almost colourless, bright, and free from taste or odour. It contained a few floating particles.

Microscopical examination—There was scarcely any deposit to submit to examination.

Under the microscope nothing was observed but what would be found in any good unfiltered surface water—such as minute pieces of vegetable structures and small particles of earthy matter.

CHAS. WATT,
Government Analyst.

Chas. Watt, Esq., to The Principal Under Secretary.

Sir,

31 January, 1877.

Herewith I have the honor to forward my analysis of a sample of a water received from Mr. Clark, the Hydraulic Engineer.

I have, &c.,

CHAS. WATT.

BURY IMPROVEMENT ACT, 1872.

WATER REGULATIONS.

For preventing waste misuse undue consumption or contamination of the Water of the Commissioners the provisions contained in Schedule (G.) to this Act shall have effect but the person or persons supplied or requiring or entitled to be supplied with Water by the Commissioners or liable to the payment of any rate or rent for such Water (herein and in such regulations called consumers) shall not be required to alter or remove in compliance with such regulations any pipes or apparatus by means of which at the commencement of this Act Water is supplied to them by the Bury Company or by the Haslingden Company until such pipes or apparatus shall in the opinion of the Commissioners have been found to be defective or shall conduce to the waste misuse undue consumption or contamination of Water and the Commissioners shall have given notice thereof in writing to the consumer and the Commissioners (except on emergency) shall allow the consumer not less than Fourteen days after such notice to comply with any requirement thereunder.

Regulations for preventing waste of water

The Commissioners may if requested by any person supplied or about to be supplied by them with Water furnish to him at his costs and charges and from time to time repair or alter any such pipes valves meters cocks cisterns baths soil-pans water-closet apparatus and receptacles as are required or permitted by their regulations and may provide all materials and do all work necessary or proper in that behalf.

Power to the Commissioners to supply fittings &c.

REGULATIONS

REGULATIONS TO BE OBSERVED FOR PREVENTING WASTE MISUSE UNDUE CONSUMPTION OR CONTAMINATION OF THE WATER SUPPLIED BY THE COMMISSIONERS.

1. *As to laying Street Services by the Commissioners.*

The Commissioners shall at their own cost lay down and maintain all the lead or other branches extending from the main or other pipe of the Commissioners to the side of the public highway or street in which such main or other pipe is situate and carry the pipe to within a distance of one foot from the fence or frontage wall (if there be one) forming the boundary of such highway or street to which branch the consumer's plumber shall connect his work.

2. *As to Consumers' Pipes.*

(a) Where the internal diameter of any consumer's pipe exceeds one inch the Commissioners may require the same to be of cast iron.*

3. *Prohibition from carrying Consumers' Pipes through Ashpits &c.*

A consumer's pipe shall not be laid kept or fixed through in or into any sough drain ashpit or manure hole or through in or into any place where in the event of the pipe being or becoming unsound the water conveyed through such pipe would be liable to become fouled or to escape without observation except in case such sough drain ashpit manure hole or place is in the unavoidable course of the pipe in which case the pipe shall be passed through an exterior cast-iron tube or box of sufficient length and strength to afford due protection to the pipe and to bring any leakage or waste therefrom within the means of easy observation.

4. *As to Construction of Drawing-cocks &c.*

(a) A drawing-cock stop-cock or ball-cock shall not be used or fixed unless it is strong well made and a hard brass and of the kind from time to time sanctioned and approved by the Commissioners.

(b) Every drawing-cock and stop-cock except where used for hot water shall be strong and be made of hard metal and shall have a loose screw-down valve with leather face not liable to be turned round on the seat and shall be in every respect of the quality known as "best" and be so marked thereon.

(c) Every drawing-cock and stop-cock used for hot water shall be similar to those lastly hereinbefore mentioned except that a face made of a material adapted for use in hot water shall be substituted for the leather face therein described. Provided that the drawing-cocks attached to boilers fixed in kitchens and other similar places and also stop-cocks where used for hot water may either be of the kind lastly described or may be strong and well made ground plug cocks.

(d) Every cock used or fixed as aforesaid and placed in a public thoroughfare or in a court or other exposed situation shall be protected by a sufficient iron casing and shall be made to open by means of a removable key.

5. *As to Consumers' Cisterns.*

(a) A Cistern shall not be made or used underground unless the use thereof is allowed by a memorandum in writing of the duly authorized officer of the Commissioners.

(b) The water supplied by the Commissioners shall not be allowed to communicate with any cistern intended or used for the reception of rain water.

(c) Every cistern shall be made and be at all times maintained absolutely water-tight and shall be provided with a sufficient ball-cock for the inlet pipe thereof.

(d) Every cistern and the pipes cocks and other apparatus in connection therewith shall be so made as to be open to inspection and shall be provided with means of access thereto.

6. *As to Consumers' Baths.*

In every consumer's bath the inlets must be distinct from and unconnected with the outlet and the inlet pipes must be visible and accessible and be attached to the bath above the bottom thereof and such bath shall be provided with a proper well fitted and perfectly water-tight ground outlet plug or cock.

7. *As to Overflow Pipes.*

An overflow or waste pipe shall not be made or attached to any cistern or service box or bath and every overflow or waste pipe attached to a cistern or service box or bath shall be removed or permanently closed.

Provided that as a precaution against overflowing there shall be attached to the cistern or service box and there may be attached to a bath a proper detective or warning pipe laid and fixed in a suitable manner so as to discharge in some conspicuous place on the outside of the house or building containing such cistern or service box or bath the same to be laid and fixed under the inspection of the Commissioners and after such detective or warning pipe has been laid and fixed as aforesaid it shall not be removed or altered without the consent in writing of the duly authorized officer of the Commissioners.

8. *As to Consumers' Water-closets.*

(a) Every pan water-closet shall be provided with a ball-cock and a service cistern comprising a boot or division as high as the top of the cistern and capable of containing not more than two gallons of water when filled to within three inches of the top thereof.

(b) Every such service cistern shall have two proper alternating valves so arranged at the opposite ends of a lever as to let down at each pull or lift of the valves only the water contained in such boot or division and such boot or division and valves shall be so arranged and contrived that water cannot flow both into and out of the boot or division at the same time.

(c) Every pan water-closet shall have a proper lead pipe leading from such boot or division to the basin of the water-closet of not less than one and a quarter inches internal diameter and weighing not less than nine pounds to every lineal yard thereof and provided with a proper air pipe thereto of not less than half an inch internal diameter.

(d)

* NOTE.—The regulations for the weight of lead pipes are here omitted.

The Report of the Commissioners, page 101, gives the following as the hardness of the water in the Upper Nepean schéme:—

Nepean, above Penrith	1°4
Cordaux	0°7
Cataract	0°7

Lead pipes (unless lined with tin) and cisterns cannot be used with safety for the conveyance and storage of the water. Galvanized iron with good workmanship is the best substitute.

- (d) Every pan water-closet shall be properly provided with a basin a scatterer a weighted lever a pan and a trap and all other necessary and proper appliances.
- (e) Every pull down water-closet or soil-pan shall have either a proper service cistern similar in kind to that prescribed in case of pan water-closets or a proper iron service box fitted with a proper cover screwed thereon and every such service cistern or service box as the case may be shall consist of or be fitted with a boot or division containing two alternating valves and with a lead or cast-iron pipe similar in all respects to the boot or division alternating valves and pipe prescribed in case of pan water-closets.
- (f) Every pull down water-closet shall have a proper wide rim flushing basin and trap.
- (g) Every service box connected with a pull down water-closet shall be provided with a ball-cock not exceeding three-eighths of an inch in diameter.
- (h) The valves of every pan water-closet or pull-down water-closet shall be worked by inflexible brass rods not less than a quarter of an inch in diameter, and not by wires or chains.
- (i) No consumer's pipe used for the purposes of any pan or pull down water-closet or soil-pan shall communicate directly or indirectly with any part of such water-closet or soil-pan or any apparatus connected therewith other than the service cistern or service box thereof.
9. *As to Consumers' Meters.*
- (a) A meter shall not be used unless the same is of a kind and is placed in a situation approved in each instance by a memorandum in writing made by the duly authorized officer of the Commissioners.
- (b) Every meter shall be so placed as to be open to inspection and as far as practicable in a situation where it cannot be affected by frost or injured by any other means and shall be provided with means of access thereto.
- (c) A meter shall not be used or be continued to be used if it is found on being tested by the Commissioners to be inaccurate to the extent of more than five per centum.
- (d) A meter shall not be connected to more than one separate and distinct inlet pipe leading from the service pipe or other pipe of the Commissioners unless permitted by a memorandum in writing under the hand of the duly authorized officer of the Commissioners.
- (e) No stop-cock drawing cock pipe branch outlet or apparatus other than the stop-cock immediately affixed to the meter shall be attached to the inlet pipe of a meter unless permitted by a memorandum in writing under the hand of the duly authorized officer of the Commissioners.
10. *As to Removal of Meters for Examination.*
The Commissioners may from time to time remove any meter for the purpose of testing the accuracy thereof or for examination or repair or for the purpose of substituting another meter and in case of the discontinuance of the supply.
11. *As to Hose and Movable Pipes.*
Water supplied by the Commissioners otherwise than by measure shall not be drawn or used through any hose or movable pipe except by previous agreement with the Commissioners as to the use of such pipe and as to the sum to be paid to the Commissioners for the water to be conveyed through the same.
12. *As to Discontinuance of improper Pipes or Apparatus.*
Any consumer's pipe or apparatus laid fixed or used otherwise than in accordance with these regulations or the materials or workmanship of which shall in the opinion of the officer of the Commissioners be of bad or defective quality shall if and when the Commissioners shall so require be discontinued and disused by the consumer.
13. *As to Connection Extension or Alteration of Pipes or Apparatus.*
No pipe or cock shall be attached to the works of the Commissioners or to any pipe or apparatus connected therewith nor shall any addition or alteration be made to or in any existing pipe or apparatus without due notice having been previously given at the office of the Commissioners nor until such pipe cock or apparatus shall have been inspected by the duly authorized officer of the Commissioners and found to be in accordance with these regulations and the charge or additional charge (if any) payable in respect of any such connection extension or alteration shall have been determined and agreed upon by the Commissioners.
14. *As to Employment of Plumbers.*
No Plumber or other workman shall be allowed to do or perform any work connected with the supply of water unless he shall have been admitted and enrolled by the Commissioners as an authorised Waterworks Plumber and has engaged to conform to and comply with these regulations.
Provided that the Commissioners shall not refuse to enrol any Plumber carrying on business within the water limits who shall have satisfied them in all respects as to his competency on his applying and engaging as aforesaid, unless his name shall have been already erased from the list of authorised Plumbers.
If at any time afterwards any such Plumber wilfully infringes the said regulations either by himself or his workmen or refuses to communicate any needful and proper information required of him in regard to any work connected with the works of the Commissioners done by him or his workmen or under his superintendence or upon his responsibility his name shall be erased by the Commissioners from the list of "authorised Plumbers" and may be forthwith advertised as so erased in some one or more local newspaper or newspapers.
No consumer of water shall employ in or about the supply of water to his premises or in relation to any pipe or apparatus connected therewith any person who is not an "authorised Plumber."
15. *As to Standard set of Pipes and Apparatus for Inspection of Consumers.*
The Commissioners shall maintain for the inspection of the consumers in a convenient place a standard set of the pipes and apparatus from time to time required by them to be used in accordance with the foregoing regulations.
16. *Interpretation.*
- (a) In these regulations the term consumers' pipe means any pipe not being the property of the Commissioners used or intended to be used for the conveyance or distribution of water for the time being supplied by the Commissioners.

- (b) The consumers' apparatus means a consumers' pipe cock cistern bath water-closet or any other apparatus instrument or thing used by a consumer for the conveyance distribution reception storage or use of water for the time being supplied by the Commissioners.
- (c) Where any act is required or authorised to be done by the Commissioners the same may be done on behalf of the Commissioners by an authorised officer or servant of the Commissioners and where any notice is required to be given by the Commissioners the same shall be sufficiently authenticated if signed by an authorised officer or servant of the Commissioners.

MEMORANDUM.

E. O. Moriarty, Esq., to W. Clark, Esq.

* No. 4.

Sir,

6 March, 1877.

I beg to transmit herewith for your information a diagram* showing what would have been the daily state of the Prospect Reservoir during the late drought of eight months, commencing in August, 1875, and ending April, 1876, during which only 9·94 inches of rain fell.

On looking at the returns of rainfall published under the authority of the Astronomer, it will be observed that although in the years 1849-50, 1854-55, and 1862 less rain fell within the whole year than in 1875-1876, yet in none of them was there so protracted a period of drought.

In the year 1849 only 21·49 inches of rain fell, but during the driest consecutive eight months 13·49 inches of rain fell. In 1854 29·29 inches fell, but during the driest consecutive eight months 15·54 inches fell. In 1862 10·33 inches fell during the eight months; while in 1875-76 as I have stated, only 9·94 inches fell in the eight months referred to, being 69 inches less than the driest period in the last 37 years or since 1840.

Thus we are fortunate in having one of the most trying periods on record in which to gauge the resources of the Prospect Reservoir, supposing it to have been completed, and the city to have been supplied from it during the period of drought mentioned.

The diagram exhibits at a glance what would have been the daily condition of the reservoir supposing it to have been called upon to supply the quantities delivered to such cities as Melbourne, Dublin, Liverpool, Manchester, and Glasgow, varying from about 12 million gallons in the first, to 30 millions in the last.

In Melbourne, with its 200,000 inhabitants, the summer supply is stated by Mr. Gordon to vary from 10 to 15 millions; I have taken it at an average of 12 million gallons per day, which was the amount proposed by the Water Commission for Sydney with present population of about 180,000.

I am here referring only to the quantity of water impounded between the 170 ft. and 195 ft. contours, which is 7,100 million gallons, and am not at all taking into account the body of water below the first named level, which amounts to 3,000 million gallons more, and which it is proposed to leave as a settling pond for sediment. The curves of the diagram indicate the daily loss by evaporation, as well as the quantities supposed to be withdrawn for town supply, the evaporation being taken as equal to that recorded at the Observatory.

I have preferred taking this quantity, as erring on the safe side, although there is no doubt whatever that the measurements of evaporation given for small vessels such as those used at observatories are altogether in excess of what would take place from large reservoirs or lakes; indeed it is now an established fact that in large deep reservoirs the temperature of which in summer keeps below that of the atmosphere, what has been designated negative evaporation takes place, or in other words the reservoir under certain conditions ceases to be an evaporating pan and becomes on the contrary a condenser, condensing the moisture in the warmer air and causing its deposition in the form of dew. I have, however, preferred disregarding this view of the case, and have taken the evaporation at its maximum:

I think it has been the practice of engineers in determining on the size of reservoirs necessary to supply a given demand, to allow for a period of about four months comparative drought, or say 120 to 140 days.

But in the Prospect reservoir we are dealing with a period of about 240 days of drought, and it will be seen that under even these trying circumstances the water stored in the reservoir never would have been reduced below 5,000 million gallons with a daily consumption of 12 million gallons plus evaporation, and in two months after the break up of the drought in April it would have been filled to the brim again.

Had 14 millions been withdrawn daily (which is the present supply to Dublin with its 330,000 inhabitants) plus the evaporation, the reservoir would only have been lowered to 4,600 million gallons.

If it had been called upon to supply Liverpool with its 620,000 inhabitants the reservoir would not have been reduced below 4,100 million gallons, and would have been filled again in three months after the breaking up of the drought.

The Manchester supply of 25 million gallons would have left about 2,400 million gallons, and Glasgow with its consumption of 30 millions to a population of 540,000, would still have left about 1,200 million gallons in the reservoir when the drought broke up, and it must be borne in mind that owing to the peculiar circumstances of the case in regard to Prospect, all the water remaining in the reservoir above the 170 feet contour at this date would have been available, whereas in most other reservoirs the water becomes unfit for use when drained too low.

It is evident that the reservoir would have stood nearly ten months drought under the Glasgow rate of consumption, twelve months drought under that of Manchester, a drought of sixteen months under the rate of consumption at Liverpool, and nearly two years drought for the consumption of Dublin or Melbourne, which is over three times the present supply of Sydney.

When the time arrives that the population of Sydney equals that of Glasgow (540,000), a city acknowledged to be the best watered in Great Britain, it may become necessary to consider the expediency of constructing additional reservoirs, and the Report of the Water Commission has shown that one or both of the sites at Bull's Hill would be suitable for this purpose. The tunnels, canals, and aqueduct works would be sufficient to fill them and keep them filled in ordinary seasons.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

SYDNEY WATER SUPPLY.

(LETTER FROM W. CLARK, ESQ., HYDRAULIC ENGINEER.)

Ordered by the Legislative Assembly to be printed, 21 May, 1877.

W. Clark, Esq., to The Colonial Secretary.

Sir,

Sydney, 15 May, 1877.

Herewith I have the honor to present my Report on the Water Supply to Sydney.

The inquiry with which I have been intrusted is, as I have stated therein, upon a subject that for some time past has been the occasion of much anxiety with the public.

In devoting my best energies to the question, I have done so under the impression that the opinion of a stranger was desired to decide between many conflicting views, and give decision to public opinion.

I have therefore had before me during my inquiry the full responsibility attaching to such duty, and I look forward with some anxiety to the result of my labours, in early action being taken in the matter, and to the successful completion of works for an efficient supply of water to a rapidly increasing population, and in a city where such necessary of life is of more than ordinary importance.

The subject has now been very many years under consideration, and has, I apprehend, reached the full limit of discussion that should precede action.

During this period the valuable records of observations taken have enabled me to proceed with a degree of confidence which the Commission at the date of their Report could not have done, and at the same time I may notice that the efforts made to continue the supply from the Botany area have proved so far successful.

The general impression upon my mind, after a long consideration of the subject, leads me fully to sympathize with those who have expressed anxiety as to the sufficiency of the present supply; and although, as I have stated, there is no very immediate cause for serious apprehension as to the failure of the Botany supply, I cannot but have become deeply impressed with the extreme vicissitudes of the Australian climate, and can conceive it quite possible that a drought even more trying than those on actual record may occur in the future, to place the city under circumstances of extreme difficulty.

I would therefore lose no opportunity to second those expressions of opinion that have come before me,—intimating that no further delay should occur in proceeding to carry out some new work for a more abundant supply of water to this city; and I trust the grounds I have given in my Report for selecting the scheme of the Commissioners will prove such as to enable it to be accepted by the public as the one amongst those proposed that ought to be carried out.

In a comparatively new country like Australia, I have felt that great deference is requisite to suggestions of any kind; I have therefore endeavoured to give the fullest consideration to all those which under your instructions have come before me, necessarily with some considerable expenditure of time.

It will doubtless be apparent that in a climate like this—peculiarly its own—it would be unsafe for a stranger to base estimates for practical purposes upon written records of observation only; I have endeavoured therefore to avail myself of every opportunity of personal communication with residents, and by my own observations, as compared with my experience elsewhere, to compare and check conclusions arrived at by recorded data.

It is a subject for remark, that the great number of persons who seem to have interested themselves in this question;—no doubt in a country subject to such serious inconvenience from periodical drought, the extreme value of water under such occasional conditions is fully appreciated. My own long residence in India enables me fully to sympathize with such impressions, and especially with schemes of the character of that proposed by Mr. Woore, where the collateral advantage of supplying a large district with water for irrigation purposes is contemplated, in addition to furnishing the city supply.

While fully admitting the great importance of such collateral object, I have been obliged to bear in mind, that the primary object of my inquiry should be subordinate to no collateral interest whatever; at the same time I would not desire to ignore such advantage, provided that it is in no way liable to come into conflict with the primary object.

In recommending the Commissioners' scheme therefore, I do so with the more confidence, inasmuch as that while it has the capacity of furnishing such collateral advantage, it can do this in its subordinate capacity.

Virtually I may say that the scheme will convey a small river of water (80 million gallons in twenty-four hours) on high ground commanding a large extent of country in the valleys on either side of such elevated position, for a distance of 40 miles;—such volume of water being greatly in excess of any possible requirements of the city,—admits of a portion being made available for the object so strongly urged by Mr. Woore.

It will also, I think, be readily conceded, that in a climate such as this, two essential conditions are requisite in the establishment of an unfailing supply of water to a city; these are—

1st. A large area of watershed from which to collect the rain water.

2nd. A large storage capacity.

The Commissioners' scheme fully satisfies these conditions, and in addition it has the merit of bringing a quantity of 80 million gallons daily, within a comparatively short distance (14 miles) of the city, from which point a relatively small expenditure in the costly form of channel of cast-iron pipes can increase the quantity furnished to the city, successively, up to the limit of the quantity above stated.

I trust I have in the Report made these and my other views intelligible, and that it may have the effect of furthering early and decisive action on this important subject.

I have, &c.,

W. CLARK.

The Principal Under Secretary to W. Clark, Esq., Advising Engineer.

Colonial Secretary's Office,
Sydney, 7 February, 1877.

SIR,

In reply to your letter of the 1st instant, asking for further instructions to guide you in your investigations as to the drainage and sewerage of the City of Sydney, I am directed by the Colonial Secretary to inform you that it is the desire of the Government that your inquiries extend over the subject in general and be not confined to the interception and disposal of the sewage only.

2. I am desired to subjoin the following observations for your particular information :—

1st. Your inquiry should extend to such of the Suburbs as may advantageously be comprehended in any scheme for the interception and disposal of the sewage of the City of Sydney.

2nd. Your opinion should be given as to the separation or keeping together of the surface water and the sewage, and as to the disposing of these either together or separately.

3rd. In making any suggestion that may occur to you, it will be desirable to consider how the existing work may be best turned to account, if it can be so turned to account with advantage.

4th. Where no works are in existence, you should of course advise that course of proceeding which may appear the best for the locality, always bearing in mind the probable increase of population on such areas.

5th. Due regard should be had in all cases to the efficiency of the works, as well for the surface improvement of the city as for the improvement of its sanitary condition in general; and all this should be combined with a due regard to economy.

3. For the carrying out of these instructions I am to request that you will place yourself in communication with the Sewage and Health Board, of which the Government engineers, Messieurs Moriarty and Bennett, are members, and also with the Mayor of Sydney, who has jurisdiction over the existing works.

4. These authorities will be requested to furnish you with every information in their power, and otherwise to facilitate your inquiries.

5. The authorities of the suburban Municipalitiés will, in case you should in the prosecution of your inquiries find it necessary to communicate with any of them, be asked to give you such information as you may require on your applying for it.

6. In conclusion, I am to say that the Government places full reliance in you that you will from time to time make communication to it, or inquiry of it, in connection with the important matters committed to your charge; and that the Colonial Secretary hopes that no failure may find place through any want of clearness or of completeness in your instructions, the object in view being to obtain the best possible results from your services, whether in connection with water supply or with sewage.

I have, &c.,

HENRY HALLORAN.

REPORT to the Government of New South Wales, on the Drainage of the City of Sydney and Suburbs.

IN conformity with the instructions contained in the foregoing office letter, 77/1,070, dated 7th February, 1877, I have the honor to report the result of my inquiries on the subject of the drainage of the City of Sydney and its suburbs.

To enable me to do this I have received the various Progress Reports of the Sewage and Health Board, and on the 17th May I received the Twelfth and Final Report.

I have been in frequent communication with Mr. Moriarty and Mr. Bennett, members of the Engineering Committee, also with Mr. F. Bell, City Engineer, and Mr. Bradridge, City Surveyor; with these gentlemen I have inspected a large portion of the city, and have derived a great amount of valuable information. I have also had full access to their plans and proposed arrangements.

I have communicated with all the suburban Municipalities and had personal interviews with the Mayor and Aldermen of the following, viz., Marrickville, Redfern, Darlington, Waterloo, Woollahra, and Paddington, in accordance with their expressed wish.

The result of these inquiries has elicited the fact that all the suburbs are more or less wanting drainage, and are subject to inconvenience greater or less according as the population is dense or scattered. In Marrickville, where the houses are at present scattered, no especial difficulty has been experienced. Present
sanitary
condition.

Speaking generally, there is no drainage whatever in the suburbs beyond the surface gutters in the streets, and the natural creeks, by which the storm water finds its way to an outlet, either into the harbour, or by Cook's River into Botany Bay.

Three only of the Municipalities possess plans and levels of their districts; these are Paddington, Redfern, and Woollahra; these plans are some fifteen or more years old and have not been kept up to date.

The Reports of the Sewage and Health Board show that a very exhaustive inquiry has been conducted, and valuable information elicited on a variety of subjects, amongst other the contamination of the water supply, and the construction and management of cesspits. This inquiry has brought to light facts, so important to the public health, as to have procured Legislative interference, and remedies have been applied in the form of the Water Pollution and Nuisance Prevention Acts.

Of thirteen subjects of inquiry, three have had reference to the water supply of the city and suburbs, four have direct reference to drainage, and the remainder to cases of especial nuisance arising out of noxious trades—the causes of certain forms of disease, cases of which have occurred—the crowded state of areas and dwellings—the nuisance arising from the discharge of the sewers into the harbour, &c., &c.

The perusal of these documents has occupied a considerable amount of time, but the sanitary defects which are clearly brought to light by them impress a reader with the value of the information obtained, and of the inquiry, which the Commission has now concluded.

My

Plans.

My first requisition has been for plans and levels of the City and its suburbs. I find that by section 5 of 17 Vic. No. 34, of 1853,* the Commissioners, constituted under that Act, were directed to cause a plan of the city, &c., to be made—the levels, &c., to be taken, and from time to time revised, and additions made thereto. This section of an existing law is so entirely to the purpose that I attach copy below.

This survey appears to have been made in 1854–5, and the Corporation is in possession of a map drawn to a scale of 40 feet to an inch for the City area. It was revised in 1865, but has not been kept up to date. During the past twelve years the streets and buildings have increased very considerably, and the map is now deficient; moreover, there are no levels shown, and it is therefore wanting in a most important particular for drainage purposes.

I have received from the Sewage and Health Board the plans and sections prepared by the Engineering Committee, and which accompany their Final Report. One of these plans is at 4 chains to the inch, and contains contour levels of the northern area of the City and a portion of the suburbs, at differences of elevation of 10 feet over high-water sea level. The second plan is of the southern portion of the City and suburbs, on a similar scale of 4 chains, containing contour levels of a portion of the area. A third plan at 20 chains to the inch, showing Port Jackson and the entire area of the City and suburbs, with contours at 20, 30, and 50 feet elevation above high-water. All of these are what may be called skeleton plans—*i.e.*, they show only the outlines of the streets and open spaces, and, with exception of a few public edifices, none of the buildings are shown, the scale being too small.

These plans, I am informed, are compilations of other detached plans which I have not seen, but I am assured that they are the best available for the purpose of my inquiry. They have been made for the Sewage and Health Board, and their possession has enabled the Board to advise the Government upon the disposal of the Sewage. The position of the proposed intercepting sewers are thereon given.

These plans therefore are the principal sources of information before me as to the topographical features of the City and Suburbs. I have also generally informed myself of these features of the area by a careful inspection of its more prominent points; and by aid of the Reports, before alluded to, I am enabled to form a general opinion of its immediate requirements for sanitary improvement.

Present drainage.

I find that the City is at present partially drained by brick sewers, discharging into the harbour. These sewers also receive a considerable amount of drainage from pipe sewers, which have extended over a great part of its area, and as I am informed, are calculated to remove 2 inches in depth of rainfall per hour. The City contains 16,924 houses, and at the end of 1876—8,126 of these were connected with the sewers; by these connections the house drainage, *i.e.*, cooking-water, slops, &c., together with the excrementitious matter from 7,000 water-closets, is removed and conveyed into the harbour at Blackwattle Cove, Fort Macquarie, Darling Harbour, Sydney Cove, Farm Cove, Woolloomooloo Bay,—these with Rushcutters' Bay, and Double Bay are what may be termed the northern outlets.

Drainage areas.

The ridge, which commencing at the sea near Ben Buckler, extends nearly in the direction of the Old South Head Road and Park Road to the city boundary at Botany-street; it then crosses the city to the south of the Railway Station, and is continued to the Newtown Road. This ridge thus divides the City and Suburbs into two areas: The one draining to the northern outlets as above described, the other, which may be termed 'the southern water-shed,' is drained by Shea's Creek, emptying itself into Cook's River.

The

Survey of area of City to be made for purposes of sewerage and drainage; and maps thereof indicative of levels &c.;

to be kept in the office of the Commissioners.

* 5. The said Commissioners shall, as soon as conveniently may be, cause to be made or completed, a survey of the area within the limits of the said City, and of such portions of the Suburbs thereof as they may think necessary to include in such survey, for the purposes of sewerage and drainage under this Act, and a map or maps thereof, on such scale or respective scales, and with such indications of levels, and particulars of sewers and underground works, and of the surface, as the said Commissioners shall think necessary or expedient for the purposes of this Act; and the said Commissioners may cause such map, or maps, or any part thereof, to be from time to time copied, engraven, and published, as they may think proper; and the said Commissioners shall from time to time cause such map or maps to be revised, and such additions made thereto as may show the new sewers and drains, and the new streets, roads, houses, or other alterations; and the date of revision shall be expressed therein; and every such map shall be kept in the office of the said Commissioners, and the same or a copy thereof shall be open at all reasonable times to the inspection of the owners or occupiers of any lands or houses within the limits of the said City or of such Suburbs thereof.

The state of the harbour at the outlets of the various sewers admits of no second opinion as to the necessity for some immediate remedy for a daily growing evil; an evil which will become more and more aggravated as the water supply is increased, and as the area drained is extended; while Shea's Creek, which receives the slops, &c., from surface drains, and the fluid filth from some manufactories, is the source of general complaint.

The Registrar General's return of mortality gives unmistakable evidence of the effect of the existing state of things upon human life:

"Estimated Population of Sydney and Suburbs, middle of year 1876.

Sydney	93,269
Suburbs	73,872

Memo. showing increase of Population of Sydney and Suburbs for last five Years.

Sydney.				Suburbs.			
1872	79,745	1872	63,160
1873	83,000	1873	65,738
1874	86,213	1874	68,281
1875	89,796	1875	71,119
1876	93,269	1876	73,872

Mortality in Sydney and Suburbs, for last five Years.

Sydney.				Suburbs.			
(Ratio per 1,000 living.)				(Ratio per 1,000 living.)			
1872	22.69	1872	14.48
1873	21.68	1873	15.16
1874	24.09	1874	17.56
1875	29.76	1875	23.15
1876	26.77	1876	22.62

Registrar General's Department,
3 February, 1877."

This would seem to indicate, that fourteen to eighteen per thousand is the inevitable mortality, and that the dangers attendant on city life are fatal to an extent equal to 6.4 per thousand above that in the purer air of the suburbs, while the rate for both the city and suburbs is steadily increasing.

It may also be stated generally that while preventable disease is a loss to the community by the actual loss of life entailed on its working members, the fatal cases indicate but a small portion of the misery and suffering which flow from the causes producing them. In England it is usually estimated that for every death there are twenty-eight cases of preventable sickness, which incapacitate the sufferer for active employment for many weeks, entailing a pecuniary loss, which when estimated in money is an amount calculated to startle the strongest and should induce a willingness to contribute to the cost of remedial measures. (*Vide Appendix*, page 35.)

With these passing remarks I now proceed to consider the measures that have been suggested for drainage improvements.

The city authorities are gradually extending the drainage, having added thereto—

Year.	Lineal yards of brick and stone sewer.	Lineal yards of pipe sewer.	Additional house drains and connections.
In 1873	236	1,091	435

The

Proposals
for sanitary
improvement.

The recommendations of the Sewage and Health Board are confined to the interception and disposal of the sewage which at present falls into the harbour and into Shea's Creek. To do this they propose to construct a sewer falling into the ocean near Ben Buckler Point, with a level of 10 feet over high-water. The upper end of the sewer is at Parramatta Road, near the University Reserve, at a level of 32.4 feet over high-water; it follows this street to a point near the Benevolent Asylum; thence by a tunnel to Belmore Gardens, along Forbes-street and Wemys-street, to the junction of College-street and Liverpool-street; it then proceeds along the latter street to West-street; from this point it skirts the low ground in Lacrozia Valley to near the tannery at its head in the Municipality of Paddington, crossing in this length the Glenmore Road, Cascade-street, and Point Piper Road.

The tunnel is then continued through the hill to the low land at a point on the Edgecliff Road, near Trelawney-street; thence it proceeds in a straight line under the ridge occupied by the Belle View Road, and crossing the low sandy area at the head of Rose Bay enters the rocky hill which forms the coast line and eventually falls into the ocean $\frac{1}{2}$ a mile north of Ben Buckler.

The length of the sewer is 5 miles; its inclination from the upper end to the corner of Hyde Park, at Oxford-street, is shown on the section to be 1 in 1,056; thence to the sea the inclination is 1 in 2,112.

It is of oviform section at the top end, and as far as Oxford-street increases in size from 5 feet by 3 feet 4 inches to 5 feet 6 inches by 3 feet 8 inches; it there assumes a circular form 5 feet 9 inches in diameter, and gradually increases by increments of 6 inches to 7 feet 6 inches in diameter.

In addition to two branch tunnels from Oxford-street to William-street for intercepting the drainage of Woolloomooloo, it has three principal branches—one crossing Hyde Park, and proceeding under Castlereagh-street and Bridge-street to intercept the system of sewers discharging at Fort Macquarie, where its level is 31.32 feet over high-water; a minor branch leaves this at Castlereagh-street, and proceeds along Foxlow-place, St. Martin's-lane, and George-street to Jamieson-street; thence under private property, and along Harrington-street to Argyle-street, where its level is 34 feet over high-water.

The third branch intercepting sewer leaves the main at Oxford-street, and crossing Hyde Park proceeds along Kent-street to Margaret-street, which it reaches at a level of 32.76 feet over high-water. All these branch sewers are 4 feet 6 inches high by 3 feet wide, and have a fall of 1 in 700.

So arranged, these sewers will intercept all the existing sewers which fall into the harbour, at levels varying between 24 feet at Woolloomooloo, and 34 feet at Margaret-street over high-water. There will be portions of the area drained by the existing sewers, below the above levels, which the intercepting sewers will not carry off, viz., part of Woolloomooloo, part of the area at the head of Darling Harbour, Blackwattle Swamp, and a marginal area along the entire harbour frontage. The General Plan of Sydney and the Suburbs which accompanies this report shows by a dotted red line the 30-foot contour level above high water from Darling Point to the Glebe, and the 40-foot contour through the Glebe and Balmain. The area here referred to may be taken generally as that portion which lies between those levels and the harbour.

The total area is estimated at 5,379 acres; that portion of the above from which the sewage and rainfall would be intercepted being 3,084 acres. From 1,183 acres, comprising portions of Woollahra and Waverley, it is proposed to intercept the sewage only.

The capacity of the intercepting sewers is intended to provide for the discharge of $\frac{1}{2}$ an inch of rainfall for twenty-four hours, together with the sewage at the rate of 1 cubic foot per head of the population per hour.

The population is estimated at forty-seven persons to the acre for the City, and thirty-one for the district of Double Bay, portions of Waverley, and Woollahra, giving at this rate a total of 148,097, and the discharge per minute 7,499 cubic feet.

The estimated cost of this scheme is £256,000.

In

In the southern area there is at present no covered drainage whatever. For this district it is proposed by the Sewage and Health Board to purchase an area of 100 acres of land on the Waterloo Estate, at $\frac{3}{4}$ mile from the Botany Road, over which the sewage is to be disposed of by filtration, having been previously passed through a strainer constructed on the line of Bourke-street. From this point and along this street to Hobbs'-street, in Redfern, a distance of $2\frac{1}{8}$ miles, a brick sewer is to be constructed; its inclination varies from 1 in 1,760 to 1 in 65, and its size from 5 feet circular to 3 feet \times 2 feet, oviform.

The area to be drained is estimated at 1,076 acres, and lies between the ridge before described, page 6, and the hill bounding the present Botany watershed, including portions of the Municipality of Redfern and Waterloo.

The capacity of the sewer is calculated with the intention of accommodating forty-seven persons to the acre, *i.e.*, 50,500 persons at 72 gallons per head, running off in 12 hours or 1 cubic foot per hour, being a total discharge of 50,500 cubic feet per hour, together with 1 inch of rainfall in the twenty-four hours, equal to a total discharge over the area of 1,076 acres of 213,000 cubic feet per hour.

Section drawings of the brick sewer in this portion of the scheme, and also the intercepting sewer for the northern discharge at Ben Buckler are given. The rainfall, here provided for, is double that for the northern scheme in consequence of the absence of the facilities which there exists for disposing of storms.

The ultimate intention is to continue the sewer to Webb's grant. Its present termination, and the spot selected for filtration of the sewage, is occupied by market gardens; the soil is sand, mixed with peat, and is very suitable for the purpose; it is also of sufficient elevation to admit effluent water from the filtration area (which will also be available for market gardens) passing off by Shea's Creek into Cook's River.

The cost of the above work, including the resumption of 100 acres of land, is estimated at £131,000, which includes works provided for the drainage of a portion of—

Sydney at a cost of	£12,872
Paddington	2,847
Redfern	9,248
Waterloo	9,413
Alexandria	3,338

These latter are stated to consist entirely of pipe sewers not exceeding 18 inches in diameter.

Mr. Bell the City Engineer's scheme, some particulars of which I received on the 23rd of January last, is similar in its general features to the project of the Sewage and Health Board, already described; its level is 10 feet lower, and the rocky point which forms the southern promontory of Bondi Bay is the place where it falls into the Ocean.

The chief point of its departure from the line adopted by the Sewage and Health Board is, that it is taken along William-street, Woolloomooloo, instead of Liverpool-street, which in the former scheme is drained by two branches in tunnel; the inclination of the sewer is 3 feet per mile; the total length to the point where the present sewers are intercepted do not materially differ from that of the Board's line; but the interception of the existing sewers is at about 10 feet lower elevation, owing to the greater depth at which Mr. Bell proposes to fix the discharging outlet.

This difference of level would enable a larger area of the several districts to be connected with the main sewer, as also admit of its extension along Newtown Road through Newtown, and a more extended accommodation of the adjoining municipalities.

Thomas Woore, Esq., R.N., has also suggested a scheme for the interception of the sewage.

By this scheme also it is intended to discharge the sewage into the sea at a point somewhat south of Ben Buckler, by an iron and masonry sewer.

It commences at the lower end at the sea level, with a tunnel 12 feet wide and 6 feet high; at its top end at Petersham it is 5 feet wide and 6 feet high. The arrangement and other particulars are as follows:—

“From Blackwattle Swamp to the sea is 5 miles in a straight line, which line cuts the heads of Darling Harbour, Rushcutters' Bay, Double Bay, and Rose Bay. Along this line I propose to construct a capacious sewer, by tunnelling through the sandstone ridges, and erecting a masonry or iron channel on the open ground to carry off the filth of the city and its suburbs. This sewer must necessarily be upon a level, or nearly so; and as the fluid will not spontaneously flow along a level, I propose to force it by the following means:—

“In constructing the channel it should be made smooth, and so formed as to widen sufficiently as it approaches the ocean, that there may be no obstruction to the passage of the fluid from confined area. This may be readily effected in cutting out the tunnels (being in sandstone), by stopping all crevices and irregularities in the strata with cement, and in the open spaces across the head of bays, by placing iron sewers upon masonry foundations.

“In order to force the sewerage to flow along this level, and cause it to discharge freely into the ocean, I would take advantage of the high ground at Ashfield, and on each side, in its vicinity, to construct main drains emptying into it, having considerable fall, that would discharge with force, and, by their action on the sewerage in the level, drive it on towards the sea; and where that power was insufficient, as would probably be the case between Double Bay and the ocean, I would assist the flow by placing twin propeller screws within the iron sewer, worked by small steam engines where required.

“The action of these screws would be threefold:—

“1st. By their rotation they would force the fluid on.

“2nd. By creating a vacancy behind them in the fluid, forward motion would be acquired by the action of gravitation.

“3rd. By their preventing deposit of the slimy matter through their agitating the fluid as it passed them.

“The principal of these main drains would be a continuation of the 5-mile level of $8\frac{1}{2}$ miles in a direct line, descending from the high land at Ashfield, constructed in tunnel which would make the main sewer $8\frac{1}{2}$ miles long in a straight line, discharging into the ocean from the cliff, where the water is 9 fathoms deep—the upper $3\frac{1}{2}$ miles being in fact a column of fluid, 86 feet in height, which may be made to act with considerable pressure upon that in the level below, forcing it to the sea. Into this sewer main drains would also discharge from the heights of Petersham, Norwood, Stanmore, Newtown, Balmain, and Glebe, which may also be made to act as columns of fluid; and, again, by similar main drains discharging from the heights of Redfern, Paddington, Woollahra, and Waverley, on the south, and from Pymont and Sydney proper (from York-street to Rushcutters' Bay), on the north. Nevertheless, propelling screws would most likely be required to accelerate the flow and agitate the fluid near to the outlet to the ocean, say at Rushcutters', Double, and Rose Bays, to obtain a sufficiently rapid discharge, and these may be multiplied to any extent that may be found necessary after trial. The section of this iron sewer may be conveniently formed on this figure,  for two reasons:—1. Being oval-shaped, the longest axis

laid horizontally. Twin screws worked within would have the greatest effect upon the fluid, and require less power to drive them, as there would be the least depth to act upon. 2. This form of iron sewer would be the most readily encased within the masonry wharfage of the bays, from not rising to an inconvenient height, and would readily permit storm water to pass over it where designed to do so. It would also afford ready means of placing trap hatches in the upper surface to get at the screws for repair, or to admit of the sediment being saved and taken away by boats or carts for manure, should that be found advantageous. For these reasons I conceive iron sewers in the open spaces would be preferable to masonry. They may be faced with masonry, and metalled on the top to form wharfs.

Should there at any time be a partial scarcity of water, this 5-mile sewer may be effectually flushed by pumping sea water into it at any of the bays. Critics may question whether such twin screws would have the desired effect. It may be observed that nothing of the kind is required in the new Thames Sewer at London, although the fall can be but little. No doubt it has the advantage of the reflux of the tide to clear it; but if a single screw will drive the “Whampoa” or “St. Osyth” round the globe, against the most violent winds and seas, surely several pair will move this painful of dirty water. Therefore, I think there can be no doubt of a favourable result in this respect. The work would be costly, but it may be spread over many years, and there can be no doubt as to its utility.

I propose also that a main sewer should be tunnelled from the neighbourhood of Dawes' Battery, round the head of the Cove and Woolloomooloo Bay, intercepting the present mains that lead down Pitt, Castlereagh, Phillip, and Macquarie Streets, discharging into the 5-mile level sewer at Rushcutters' Bay. Other main drains would be required on the east and west sides of Blackwattle Swamp, Darling Harbour, and Woolloomooloo Bay, also Rushcutters', Double, and Rose Bays, to complete the scheme, but not for many years, so that no sewerage would be allowed to enter the harbour at any point, although flood water would escape where necessary.”

Mr. T. Byrne's
scheme.

Mr. Byrne has also submitted a scheme, the main features of which are thus described by the proposer:—

“First: I would have a tunnel from a point near the head of Darling Harbour (say foot of Liverpool-street) in a straight line to one of the deep holes between the Light-house and Bondi, the floor of which would be 2 feet below low-water-mark at Darling Harbour, and 30 feet below low-water-mark at the Heads. This tunnel we will call A; well, A should be fitted with a strong sluice at Darling Harbour, to be kept shut down during flood-tide to prevent any of the sewage from entering Darling Harbour from A, and kept shut during ebb-tide (until a time which I will state), for the purpose of keeping the water back

back above a dam to be constructed across Darling Harbour from a convenient point north of A. This dam should be fitted with several sluices to admit the tide during its flood, and shut down at high-water to prevent its escape, and keep the reservoir above the dam full until we are ready to use it.

Second: A tunnel B to start from a point at A (say the south-eastern corner of Hyde Park) and bear away round the University to Petersham, or as far west as may be desired. The floor of B would be low-water-mark, thus giving a drop into A of about 3 feet for the reception of silt and heavy matter.

Third: From A and B there would be branch tunnels north and south, or (obliquely) the northern ones to start from A and B, and run to the lowest point in each of the bays to the waters of Port Jackson (but not connected except by sluices as at Darling Harbour); the southern ones from A and B to the lowest points as indicated by the lie of the surface for the upper drainage.

The floors of all the tunnels except A should be level (that they may be extended as required) and 3 feet below high-water-mark; the roof or crown of all the tunnels should be sufficiently above high-water-mark to receive the storm waters at all stages of the tide.

All the branch tunnels to be fitted with sluices at A and B; to be shut down at high-water (except in very wet weather); to keep the 3 feet of water that is in them back until the water in A and B has receded below their level, when they would be raised and the water would seek its level with a rush, carrying all thesewage in them into A and B; then B could be flushed into A by having dams on Johnston's Bay, Blackwattle Swamp, White Bay, and others, as extended.

The time for B to be flushed into A would be about when the tide had been ebbing four hours and a half, and let run for three-quarters of an hour; at that time the sluices on all the branch tunnels would be shut down preparatory to the opening of the sluice at the Darling Harbour end of A.

Now we have all the sewage of the City in A, and there is three-quarters of an hour's ebb-tide;—I then raise the sluice at the Darling Harbour end of A with a head of 5 feet of water above sea-level, and let it run for one hour, when A will be thoroughly cleansed, the sluice at A shut down, and those in the dam and the branches opened to commence the same operation again. It is not for the purpose of giving a fall to A that I would have it 30 feet below low-water-mark at the Heads, but that it may be out of the influence of easterly storms, and to discharge the sewage at such a depth that it would be carried far away from shore before any light matter could rise to the top to be cast on shore.

I believe that being so constructed would cause all light matter to remain in the tunnel until the sluice was opened, when it would be so thoroughly mixed up and diluted in its passage through the tunnel, and then sent to sea with such a force at such a depth there could not be a trace of it found."

A suggestion has been received from Dr. Belgrave, who recommends Liernur's system for adoption in Sydney. His reasons are thus stated:— Dr. Belgrave's project.

"Sydney having but a small depth of soil the sewers of the city require to be excavated out of the solid rock, an operation involving much time, labour, and expense, so much so that though the City and suburbs contain a population of only about 170,000, but a small area has been drained—the cost has reached nearly a million sterling.

"The extreme labour and cost of the sewerage in the neighbourhood of Port Jackson precludes its construction in streets and localities only partly inhabited."

The notes* which accompany the proposal refer to the advantages which the system in the opinion of the writer offers for the removal of fœcal matter, and proceed to say,— *Vide page 28.

"The adoption of the Liernur system for the removal of the house sewage renders necessary some system for the removal of storm-waters and surface drainage."

Some misapprehension appears here as to the objects and capabilities of the scheme recommended. House-drainage has for its object the removal, not only fœcal matter but also the daily water supply after use; this the Liernur system does not pretend to do, it supposes the pre-existence of a system of drainage for the removal of these fluids; moreover, if the Liernur system were first constructed it would not lessen either the expense or the absolute necessity of covered drainage.

Whatever be the difficulty and expense to be encountered in the construction of a system of sewage for Sydney it must be borne, and it is therefore unnecessary in this place to discuss the merits, or the additional expense which the adoption of the Liernur system would necessitate.

These are the various suggestions which have been forwarded to me, and it may simplify the matter if I now give some further remarks upon those proposed by Mr. Woore and Mr. Byrne, and in doing so I bear in mind that these are to be received as suggestions as to the direction for further inquiry, rather than as schemes actually to be carried into practice. Remarks upon foregoing projects.

Mr. Woore relies to a great extent on the pressure of the fluid in the upper portions to force forward that which is in the 5 miles of flat sewer, and to assist this screw propellers also are proposed near the outfall.

Sewers when properly designed should not run full; the materials of which they are usually constructed do not admit of any great internal pressure.

Their

Their action is in the nature of a flowing river with a free surface, and not of the character of water-pipes under pressure; the necessity for this is obvious, for if the sewer be full and under pressure the sewage would flow into any house or other place connected with it, as water would flow from a water-tap left open.

To prevent occurrences of this nature, and also to prevent injury to the sewers themselves, it is necessary that they be of sufficient capacity to prevent their running quite full, and this being so the 86 feet of pressure at Petersham, or any elevated portion of the city, can only act by its volume and velocity when flowing down an inclined channel with a free surface, and the velocity with which it would run down to the flat portion can be calculated.

Having arrived at the flat portion the velocity will diminish, owing to the additional friction, and the water will be heaped up within the sewer; it will then establish a regular inclination of the surface to the outfall, and its velocity and discharge will be that due to this inclination, and the same operation will occur in any case of flowing sewage if it be unobstructed.

A flat sewer 5 miles in length could not, I think, under the circumstances be trusted to remove completely all the matters which will find access to it; it would silt up, and to meet this difficulty the screw propellers are suggested.

Regarding this form of screw propulsion, by screws fixed in the sewer, as shown on the drawing accompanying this scheme, I am not quite able to follow the proposer. The screw propeller of a ship is submerged—here the conditions are different—the depth of immersion will of course vary with the quantity flowing down the stream. When the least quantity is coming down, as during the hours of night, it will be that the propulsion is most required, and in this sewer it will then be but a few inches in depth, and the screw propeller would then be unsuitable; there are other practical difficulties in the plan proposed.

Regarding the shape of the sewer, it is desirable to secure the greatest possible velocity when the flow is at its minimum; this is usually accomplished by concentrating the flow in a narrow channel, but in this proposal the sewer is spread out flat, or nearly so, and is the reverse of the recognized practice.

Mr. Byrne's proposal is virtually to make a tunnel about 5 miles in length which will be constantly full of water. Into this tunnel so filled the sewage is to fall, and will then be pent up until near the end of the ebb tide, when by releasing a quantity of water from a reservoir formed by an embankment crossing Darling Harbour it is intended to flush out the submerged sewer. The sudden release of a head of water through a sewer 5 miles long will undoubtedly cause a current in the hitherto stagnant sewer, but the velocity with which the water will reach the distant outlet with a surface fall of about 15 inches per mile may be roughly taken at about 2 feet per second, which velocity, acting only through a limited period, three-quarters of an hour as proposed or even a longer period, would be wholly insufficient under such circumstances to give satisfactory results.

Great as the expense of any project for the interception of the city sewage must be, that of accomplishing Mr. Byrne's object would be the greatest. I think, moreover, the admixture within the sewer of sewage with salt water, and the retention of it in a state of stagnation for some 18 hours of the day is most undesirable, and would be productive of great nuisance.

The prime object of all the schemes is to prevent the further pollution of the harbour by intercepting the sewage at the head of the various bays where it is at present chiefly discharged; the proposal of the Sewage and Health Board alone contemplates the discharge of a portion of it in the direction of Cook's River.

General considerations.

In the consideration of the subject generally the first point which presents itself is the fact that so far as the lowest portions of the area to be drained are concerned, they lie at or near to the uniform level of the sea; the area to be dealt with in fact begins and ends at the sea level, and the natural course of its drainage is into the harbour.

If taken in any other possible direction whatever than to the harbour, in order to give the requisite inclination it is necessary that the upper ends of the sewer shall be at or near to the harbour; thus, in the scheme of the Sewage and Health Board, as in that of Mr. Bell, the branch sewers are extended with an ascending gradient to the various points where they intercept the existing sewers before they fall into the harbour.

The

The only other practicable direction is that which would convey the entire sewage by tunnelling through the ridge (described at page 6), and constructing an outfall sewer leading towards Botany Bay,

This could be done as suggested in the Report of the Engineering Committee—paragraph 23, page 15, Report Sewage and Health Board—either by a tunnel about $1\frac{1}{4}$ mile long, from Belmore Gardens (as shown on the plan furnished to me) to the crossing of Bourke-street, in the Botany Road, or by a shorter tunnel about $\frac{1}{2}$ mile long, from the west end of Raglan-street, Redfern, to a point near the junction of Wells-street with Abercrombie-street, on the south side of Cleveland-street, between the points N-O, shown in dotted red lines on the general plan No. 1, which accompanies this Report.

Such an arrangement would be in fact, to drain the same area of the city and portions of the suburbs, by an intercepting sewer falling in an opposite direction from that proposed by the Sewage and Health Board. The length of tunnel would be shorter, but the total length of the arrangement when extended to Webb's grant, where the sewage must eventually be dealt with, would be somewhat increased; there would be no reduction in distance between the outfall and any one of the chief points to which the intercepting system is required to extend. Botany Bay is too shallow a basin to receive the sewage without causing great nuisance, and the necessity for some process of dealing with the sewage either by irrigation or otherwise would be imperative.

I have inspected the districts of Alexandria and Botany where a considerable extent of land is occupied by market gardeners; it is of a sandy and peaty character, well adapted to sewage irrigation. The inquiries I have made, and the estimate I have formed of the value of land by the rental of that now under cultivation, lead to the conclusion that the sewage will ultimately require to be taken beyond the area now proposed for utilizing it to the more distant locality of Webb's grant, and West Botany, where the character of the soil is also suitable; and I believe from casual inspection that a sufficient area of land at an elevation below 10 feet over sea level is available, but I have no levels of the locality whereby this can be determined.

These are the chief subjects for consideration in deciding on the point of outfall. It has to be determined whether the sewage shall be wasted in the sea, or shall be purified on land before being allowed to run off into Botany Bay.

It is unnecessary for me here to repeat the evidence which is given in the Report of the Sewage and Health Board on this important point. No process that I am aware of for converting the sewage into manure has been a financial success; and in Sydney where labour is expensive it is less likely to be so than in most other places. I thoroughly believe in the possibility of dealing with sewage by irrigation, and I am of opinion that in most cases, if properly managed, it can be so disposed of with an increased production of wholesome food for men and cattle. I am, however, unable to point to any instance where this is accomplished without some loss to the community interested, and where, an alternative of discharging the sewage at once, into deep water, without nuisance, presents itself, I should have no hesitation in adopting it. I therefore agree with the decision of the Sewage and Health Board to discharge the sewage into the ocean.

Regarding the southern portion of the city and suburbs, the sewage of which the Board propose shall be utilized, I also agree in principle. The experience which may thus be obtained will be valuable to the Colony. There are not many cases where the ultimate disposal of this matter in the sea can be effected, and in the case of all inland towns the pollution of the rivers should be prevented. The experience here gained of utilization will to them be most valuable.

Having now determined that the general direction of the intercepting sewer shall be to the sea, its point of discharge, level, inclination, and capacity have to be considered.

The place which has been selected by the Committee of the Sewage and Health Board for the point of discharge of the intercepting sewer into the ocean is about half a mile north of the Ben Buckler Point, a bluff rock with a precipitous face to the sea and rising out of deep water. That recommended by Mr. Bell is the rocky point south of Bondi Bay. He proposes to terminate the sewer by two branches—

branches—one to each side of the point. This suggestion is made to overcome the difficulty which will be experienced during the prevalence of storms, one aperture being open while the other may be supposed closed by the volume of the waves beating against it. I have inspected the locality, and after watching the action of the waves on this point, I am of opinion that there would be some danger of the sewage being driven into the bays on either side, and that the Ben Buckler position is to be preferred. This latter point I have also inspected from the sea on a quiet day, when a float thrown overboard drifted a little seaward and to the north. It is $3\frac{1}{2}$ miles from the mouth of the harbour, a distance too great to permit of apprehension of any nuisance arising thereto.

Level of outlet.

In order that the existing system of sewers should be intercepted at the lowest possible levels, and that the low marginal area excluded near the harbour may be reduced to the smallest possible dimensions, it is evidently desirable that the intercepting sewer be kept at the lowest elevation possible.

Similarly with the inclination given, whatever the rate it is evident that in the length of 5 miles of sewer a very considerable raising of the upper end will occur; the actual inclination absolutely necessary to give the requisite discharge without any excess of fall is the one sought. Thus both level of outlet and inclination of the sewer have an important bearing on the area to be drained.

Regarding the level of the outfall the opinion of Mr. Moriarty is of the greatest value. His duties render him familiar with the action of the sea on the coast range. That it is most violent, even with a moderate breeze, I have personally noticed.

In the Final Report of the Sewage and Health Board, page 16, the Committee state:—

Twelfth and Final Report, 16 May, 1877, page 16.

"34. Réverting to the northern outfall sewer, a very difficult question presents itself for consideration, namely, the height at which the outlet should stand above high-water-mark. While on the one hand it is of course desirable to keep it as low as possible, so as to take the drainage of the greatest extent of the low-lying portions of the city; on the other hand, looking to the probable effect of the waves during gales of wind, it is desirable to keep the sewer so high as to be above the risk of having them driven with overwhelming force into it. It is well-known that the oscillatory waves of the ocean become converted into waves of translation on meeting the resistance of the shore, and it is to be feared that if the outlet were fixed at so low a level as to be within reach of their full force, so large a body of water would be thrown into it during storms as to seriously interfere with the discharge of the sewer. During southerly, south-easterly, or easterly gales the waves on the coast attain to enormous magnitude, and strike the coast-line and the cliffs with extraordinary force. In view of the risk of injury to the outfall works from this cause, we have felt that it would not be safe to fix the invert of the tunnel at a lower level than 10 feet above high-water-mark. We should have preferred to keep it higher, but to do so would throw the sewer at its upper end to an inconvenient height for intercepting the Hay-street and Abercrombie-street systems of sewers; we have therefore agreed to take 10 feet above high tide as the lowest safe level for the intercepting sewer at its outfall.

35. Even at a height of 10 feet there can be no doubt that in ordinary gales the waves would break into the sewer with considerable violence, but their action might be greatly diminished by the formation within it, at a convenient distance, of an expanding basin, where the waves would be partially broken and dispersed, and by the construction of valves in suitable positions."

I so far concur in the recommendation of the Board that the outlet should be somewhat above sea-level, for I am of opinion that it is better to arrange for the largest area which can be safely included in the intercepting scheme than, by a small addition thereto, to endanger the action of the entire system.

A difference of 1 or 2 feet, *i.e.*, whether the sewer is 8 or 10 feet over high water, makes, I think, very little difference.

Inclination of intercepting sewer.

One of the first impressions on a visit to Sydney is the facility with which it can be drained, and so far as the surface water of storms is concerned this is true; the inclinations of the streets are so steep, the undulations of the surface so considerable, and the harbour so near to all parts of the area, that the rapid discharge of all surface waters is secured; in fact it is too rapid, and the scouring of the metalled roads and sandy surfaces in open places gives rise to a considerable difficulty where they are received into a system of covered sewers, by the amount of silt which is thus conveyed into them. Thus the outlet for Woolloomooloo drainage and some others are choked with sand and debris when they reach the lower levels.

So steep are the inclinations of the sewers generally that what in most cities would be considered excellent gradients, are here, by comparison, considered inefficient.

Mr.

Mr. Davis's evidence on the condition of the existing sewers, p. 22 of the 6th Progress Report of the S. and H. Board, is valuable. He thus describes the Macquarie-street sewer, from Bent-street to King-street; after ascending a part of the sewer with an inclination of 1 in 40, he says of the above portion which is 3 feet 6 inches high :—

"The gradient changes here and becomes very flat; between Bent and Hunter Streets there is a sediment of coarse gravel and sand from 6 to 8 inches deep, and backs up the sewage from the Legislative Chamber to the Mint, from 10 to 12 inches deep. Most of this sewage matter comes from the Infirmary. This part of the sewer requires to be flushed often as there is no inflow of water at its head to carry away the large flow of sewage that enters at this part."

The inclination of this sewer at the part referred to is 1 in 164, and if the sewage were received into a 9-inch pipe without the admission of the road surface water it would be carried away perfectly.

Again, he thus speaks of the main sewer discharging into the harbour at Fort Macquarie, which has an inclination of 1 in 352, an excellent fall in such a situation, for it is there above the level of high water :—

"In front of the junctions of Macquarie, Phillip, and Elizabeth streets the invert is damaged by the great force of water which rushes down these steep gradients, and at the outlet of each a bank of street metal, gravel, and sand, varying from 6 to 9 inches in depth, has been formed, but no sewage matter."

In the same sewer, Elizabeth-street to Bridge-street, where the inclination is the same, he says :—

"In this part there is a deposit of fine sand 6 inches in thickness. On the whole the tunnel is in good condition, but the invert is damaged and the centre brickwork worn away."

Again, speaking of the same sewer, where the fall is 1 in 100, he says :—

"In front of the Exchange there is a flat piece of bottom, along which there is a deposit of street metal, sand, and sewage matter, 9 inches deep; this deposit is formed principally by the material washed down Pitt and Bridge streets during wet weather."

There are many similar cases, indicating that notwithstanding the rapid velocity of the water during the period of storms, which is sufficient to damage the brickwork by the rapid removal of the stones and hard substances which find their way into the sewer, yet deposit occurs.

The cause of this is, I believe, the want of uniformity in the flow at different parts of the sewer, and the immense quantity of hard and heavy matter, such as road metal, which is received into them at different times. Four of the street sewers joining the main alluded to enter it with inclinations respectively of 1 in 17, 1 in 4, 1 in 12, and 1 in 20½—the receiving sewer being 1 in 352. The usual precaution to construct the entering sewer with a curve, I am assured by the City Engineer, is here adopted. Notwithstanding this, the velocity of the entering current is so great that it retards the current in the latter, and deposit immediately takes place of the heavy matter which may be passing down the main to the outlet, which matter would pass on were it not thus obstructed. Vide fig. A.
plan No. 6.

I have referred thus at length to this subject, as it is of great importance when deciding upon the inclination to be given, for it will at once be seen that if deposit occurs in existing sewers with a fall of 1 in 352, it is still more likely to occur with a fall of 1 in 2,112, as proposed to be given to the intercepting sewer by the Sewage and Health Board.

At the changes of size in this sewer the increased vertical dimensions is to be given by dropping the invert, and practically the inclination is thus brought up to 1 in 1,941, or 2.72 feet per mile,—the length of the sewer with this inclination being 4 miles 24 chains.

Where one stream A falls into another B in a uniform channel the additional quantity raises the surface at the point of junction in B retarding its flow, and deposit is there liable to occur. To prevent this theoretically, the channel B should be enlarged, and where it can be done, the surest means is by lowering the invert; however small the drop may be it tends to this effect, and it may generally be accomplished to the extent of a few inches, by reducing the inclination for a sufficient length below the junction.

The substances which are difficult not only to exclude, but also to keep moving in the sewers, consist almost exclusively of road detritus, which come in during storms; during the dry times the ordinary flow of house drainage brings very little solid matter into the sewers.

Owing to the great scour of the road surfaces in Sydney, this matter is considerably in excess of the usual quantity, and it is very important to the action of the proposed intercepting sewer that every precaution should be taken to reduce it as much as possible.

Present sewers to be utilized.

The large extent of drainage work already in existence renders it absolutely necessary that it should be utilized in any new arrangement, and some greater care should be taken to prevent the entrance of this solid matter by protecting all the inlets by gullies or catch-pits and traps; it can be removed therefrom at the cost of a few shillings per cube yard, but to extract it from the sewers by manual labour would cost about four times as much.

In the proposed intercepting sewer, and for the reasons I have above-mentioned, I think the fall should be somewhat greater than is usual, and that the velocity of $2\frac{1}{2}$ feet per second should be obtained when the sewage is running with its maximum daily flow during the dry weather period.

At page 8 it is stated that for the northern area the sewer proposed is calculated to convey 7,499 cubic feet per minute.

The population per acre there taken is the average of London; Sydney having already, according to the Report of the Registrar General, an average of 35.8 persons to the acre, while the Suburbs are taken at 31 per acre, this is sufficient, and even a considerable increase in the daily water supply, makes but a comparatively small addition to the sewage as compared with the rainfall.

It is not however the entire rainfall which has to be provided for in the intercepting sewer, but a portion only, the surplus being discharged at the present outlets of the existing sewers.

Proposal to intercept the entire rainfall.

It has been proposed that the entire rainfall over the city area should be intercepted and not be permitted to go into the harbour, but take the course that is provided for the sewage, thereby preventing not only the nuisance due to its mixture with salt water, but the silting up of the harbour also; it is necessary, therefore, to inquire what would be the character of the works necessary to accomplish this.

In order to assist in the determination of the quantity to be dealt with under this assumption, I have abstracted the following particulars of heavy and continuous rains as given by H. C. Russell, Esq., Government Astronomer, in his recently published work on the "Climate of New South Wales."

1869—on 10th February,	2.355 inches fell in	2 hours.
11th	" .7	" 30 minutes.
"	" .7	" 8 "
12th	" 3.0	" 12 hours.

1873—The heaviest fall recorded in Sydney, was on 25th February, 8.9 inches in $8\frac{1}{2}$ hours.
" 2.2 " 1 hour.

Heaviest fall of rain in Australia was at Newcastle, on the 18th March, 1871, when 10.61 inches fell in $2\frac{1}{2}$ hours.

In Sydney, the following heavy rains have also been recorded—

1841—29th April...	20 inches in 1 day.
1843—13th August	5.5 "
1844—15th October	20 "
1845—April	9.3 in last week.
1860—28th and 29th April	12.6.
1861—3rd and 4th April	12.4.
1867—12th April	5.6 in 1 day.

Continuous heavy falls of rain—

	inches.	inches.	inches.
1868—February, in three days ...	2.94	6.18	1.2.
1873— " " ...	2.175	8.9	4.93.
1867— " " ...	4.026	3.38	0.96.
1870—March, " " ...	0.860	3.38	0.96.
1860—April, " " ...	1.385	0.16	0.423.
1861— " " ...	2.63	0.023	1.109.
1867— " " ...	5.645	0.583	0.016.

An

An abstract of the quantity of rain falling in Sydney during the past eighteen years, 1858 to 1875, gives the following, in twenty-four hours—

Rain has fallen to a depth of 2 inches and not exceeding 3 inches,	36	times.
" 3 " 4 " 24 "		
" 4 " 5 " 5 "		
" 5 " 6 " 4 "		
" 6 " 7 " 2 "		
" 7 " 8 " 1 "		
" 8 inches " " 1 "		
Rain has therefore exceeded 2 inches in twenty-four hours	73	"
Or, on an average of	per annum	4
It has exceeded 3 inches	49	"
Or on an average of	per annum	2

It is not however the rainfall in periods of twenty-four hours that is to be considered so much as heavy storms of short duration; thus between 3 h. and 6 m. and 3 h. 51 m. p.m. on the 12th of May last, or in 45 minutes, .70 of an inch of rain fell. From 5 h. 50 m. to 7 h. 52 m. on the same day—a period of two hours, the rainfall was 1.32 inches, making with the previous storm, 2.02 inches, while the rain measured for the twenty-four hours, was 2.638 inches; on this occasion a sewer was burst in the Blackwattle Swamp.

A very heavy storm also occurred on the 5th May last, and measurements were taken in seven different sewers between Pitt-street and Macquarie-street, which showed flood-marks indicating that quantities of water had passed through them, which theoretically calculated, proved to be at velocities varying from 305 to 984 feet per minute, and quantities equivalent to the discharge of from 0.45 to 1.59 inch per hour over the area drained. It is quite possible that this quantity ran for a very short period—probably a few minutes only, but it is precisely at these times that injury to the sewers would take place, and in the proposed intercepting sewer some means of protection should be provided.

Taking a portion of the whole area, district No. 5, page 37, which including the Glebe extends to Woolloomooloo and its vicinity, contains an area of 1,787 acres, which this sewer will intercept; and calculating the rainfall at $\frac{1}{2}$ an inch per hour, and the sewage at 47 cube feet per acre, I find that the diameter of the tunnel when running full bore to take this quantity must be 15 feet 9 inches; but as it has been seen above that even this quantity is occasionally exceeded, and some portion must, on the occurrence of excessive storms, find its way into the harbour.

Even excluding the surface water entirely from the lower portion of the district to be drained, Rushcutters' Bay, Paddington, &c., which are unsewered at present, it is evident that a sewer somewhat larger than 16 feet diameter would be necessary where a sewer 7' 3" x 6' 3" is proposed. Similarly an increase would require to be made to all the other main and branch sewers in districts Nos. 1 to 5 in the table, page 34.

If sewers of these large dimensions be adopted to receive, as they must, also the minimum flow of the dry weather, a different form must be given to the channel to concentrate its flow and secure the proper action. (Plan No. 6, Fig. B.) This would introduce some further difficulty by increasing the height to be given to the larger sewer, and would also very considerably add to the cost. Moreover, it would necessitate the dealing with a larger quantity of heavy deposit in the intercepting sewer, which would be more easily done if allowed to escape into the harbour and afterwards dredged; for I am of opinion that the deposit is more easily and cheaply dealt with by dredging—proper apparatus being provided for the purpose—than in any other way; the sewage at all other times being diverted from the harbour, the deposit would then not be offensive or injurious.

This deposit might be removed at a cost of about 1s. per yard from silt-pits, such as constructed at Blackwattle Swamp, when no cartage of the material has to be done; by dredging it would cost less than one-half that amount. All these points considered, I am of opinion that it will not be desirable to encounter the cost of the excessively large works above described.

As a portion only of the storm waters can be received into the intercepting sewer, it becomes a matter of judgment how much this shall be, and what proportion must be discharged by the present channels. The Sewage and Health Board have decided upon $\frac{1}{2}$ an inch in 24 hours from the area to be included.

Quantity of drainage provided for by the intercepting sewer.

Under these circumstances, when the sewage commences to flow into the harbour it will be mixed as a minimum with about an equal quantity of storm water (but in most cases largely in excess of this quantity); I think the $\frac{1}{2}$ inch of rain is sufficient to receive into the intercepting sewer. The one point to observe, however, is the danger there will be of getting the maximum quantity of the heavy matter, with the small quantity of rain water; this will be further noticed when I come to speak of details.

Separation of
road surface
water from
house drain-
age.

The area to be drained, as shown in the table, page 37, is 6.66 square miles. That portion within the city boundary already drained has sewers, which for the most part are capable of receiving 2 inches of rain per hour; to these, considerations of expense necessitate that no change can be made, they must continue to carry the entire storm waters and the sewage; but in the further extension of the subsidiary sewers I am quite of opinion that the water from road surfaces and open spaces should be excluded, and made to flow down the street gutters to the natural outlets; if this be done a very considerable difficulty will be avoided, as well as the cost of constructing and cleansing the street gullies.

To give the required discharge for the area shown in the table, Nos. 1 to 9, the sewer as arranged by the Sewage and Health Board will run nearly full, no margin is allowed for extending the use of the intercepting sewer for the removal of the sewage beyond the districts there mentioned.

If however the sewage only be received from districts beyond the area given in the table, and the entire surface water excluded, as is proposed for 1,183 acres comprised in portions of Woollahra and Waverley (District No. 9), a very large additional area of Petersham, Leichhardt, and Balmain, may derive benefit from the intercepting sewer, into which the sewage from the higher levels could be discharged direct, and that from the lower levels pumped, if it be found desirable to do so; but this will necessitate additional size to the intercepting sewer.

In addition to the house drainage and surface water, there will also be a considerable quantity of sub-soil water to be carried off, as is found in the case of the Lachlan Tunnel, where at several places along its length water is found to enter and add to the town supply; the same will occur with the proposed intercepting sewer, and by adding to the quantity will in the dry time assist the flow in it, this quantity is of course very uncertain in amount.

Under all these considerations, I propose to increase the size of the sewer, to receive an additional quantity of 1,248 cubic feet per minute at its upper end in Parramatta-street, which will be equal to the dry weather drainage from an additional population of 75,000 persons in the above locality, at 72 gallons per head in twelve hours.

The flow of sewage is subject to so many varying conditions both as to quality and quantity passing through the same channel, that the ordinary mode of calculations does not at all times present a sure guide; there is a point, however, in all cases where the average velocity maintained will keep the sewer clear of deposit; beyond the inclination which will give that velocity there is on the one hand loss of area to be drained, and on the other there is the permanent difficulty, expense, and trouble attendant upon the keeping of such sewer in clean and proper order.

In most cases the outfall sewers of large cities may be kept clear of deposit when the inclination is about 3 feet per mile. Two instances are in my experience, one where 2 feet 3 inches fall per mile has given much trouble, and occasioned considerable expense; the other with 3 feet fall per mile just keeps itself clean. In both cases the heavier matters, such as pieces of road metal, &c., are kept out of the outfall channel.

Inclination of
intercepting
sewer.

In Sydney, however, considering what I have before said, I should advise that a slightly increased fall (say 3 feet 6 inches per mile) be given to the sewer for that portion, which, as recommended by the Drainage Committee, is to have an inclination of 1 in 1,941, or 2 feet 9 inches per mile.

The difference in the total fall of this portion, 4 miles 24 chains in length, will be about 3 feet, which I would divide between the upper and lower end of the work as suggested by the Sewage and Health Board.

As

As shown on the table, page 37, out of the entire area, the drainage of which the proposed sewer will intercept, viz. :—

	Acres. 5,379
It is proposed to intercept the surface water from	3,084
The remaining acreage in portions of Woollahra and Waverley	1,183
	4,267
	1,112

leaving 1,112 acres of area, the drainage of which will be excluded from the intercepting sewer in consequence of its lowness of level. Of this 1,112 acres, 730 represents the portions of Woolloomooloo, Darling Harbour, Blackwattle Bay, and the marginal area of harbour frontage; the sewage from this area must continue as at present to pass into the harbour; those portions of the areas of Blackwattle, Rushcutter and Double Bays, not already built upon, I would advise the Government to resume and devote as open spaces to purposes of recreation.

Regarding the surface drainage from the 1,183 acres of Woollahra and Waverley which the Sewage and Health Board propose to exclude from the intercepting sewer, the question arises whether this may in the future become of sufficient importance to warrant the present execution of a larger work for its reception; I am of opinion that there is no necessity to provide for any of the surface water from a district so entirely of a rural character. Entire exclusion of surface water from a portion of the area.

In the case of Woolloomooloo and Darling Harbour (where the area is already well covered with buildings), should the inconvenience be found of sufficient importance, a small pumping system must be adopted for the dry weather drainage, while the surface water will pass off by the existing channels.

In the foregoing remarks, on the northern area, a large system of sewers already in operation and their probable extension has been considered in connection with a new and important work of improvement; here we have an area which will be entirely independent of the above, and where there are at present no drainage works whatever. The principles upon which the works for this area should be constructed must now be considered. Southern area.

The Sewage and Health Board propose that a capacity for 1 inch of rain per 24 hours shall be added to the sewage quantity. It is not stated whether any portion of the road surface water is to be received.

As before mentioned, if the surface water be entirely excluded from the sewers and made to travel over the surface to the natural outlets, all difficulty as to deposit in the sewers is removed, so very little comparatively is the quantity of heavy matter which is contained in house drainage; there would then, however, be the difficulty and inconvenience of flooded back yards, which, in many cases, could not be easily drained into street gullies, or other channels, and which would require especial channels for its removal, involving an extra expense. This portion of the surface water might be admitted to and removed by the house drains without any material increase of expense beyond the cost of a trapped inlet, and with benefit to the inhabitants.

One advantage of the entire separation of the rainfall from the house drainage (including faecal matter) is that the sewage is then so much more valuable, and is consequently so much more easily disposed of.

Great as this advantage undoubtedly is, the comfort and health of the inhabitants within the city is of even greater importance, and I am of opinion that the modified system of admitting the surface water from the back yards of premises which has the effect of scouring out the house-drains, and from which comparatively little loose matter is taken, is the better practice,—it being a regulation, which must be enforced by inspection, that all inlets to the house drains shall be trapped, and have a sufficient cesspit to intercept solid matter, and shall be limited to the admission of rain water from roofed and paved surfaces only.

The surface water of roads and streets must then be made to run down the gutters. Works for crossing the streets and otherwise where necessary must be constructed, as well as at the lower levels where it collects in large quantities culverts must be built for the especial conveyance of these storm waters to the harbour, creeks, or whatever is the natural outlet for them. Regarding

Proportion of
roofed and
paved
surfaces.

Regarding the quantity to be admitted, I find by examination of plans of portions of the City and of Redfern, where the blocks may be said to be fairly occupied by buildings, that the portions which may be considered as *roofed and paved surfaces*, including back yards, &c., from which the surface water should be rapidly removed; that the proportion of such area to the whole is 35 to 48 per cent.; the roads, streets, and unpaved parts forming the remainder.

Some particulars of rainfall during the past eighteen years are given at page 16.

After careful consideration of these data I would propose that in the extension of the drainage works to the southern area, the capacity of the sewers should be equal to 40 per cent. of 3 inches per day, or one-twentieth of an inch per hour. This is a little in excess of the quantity which has been proposed by the Sewage and Health Board.

Plan and
levels of the
district
insufficient.

The contour levels at differences of 10 feet in elevation of a portion of the southern district, and also a section of Bourke-street as far as the proposed sewage farm, accompanies the Report of the Sewage and Health Board; but the levels do not extend to Webb's grant and West Botany, where it is probable in the future the sewage must be taken for utilization. In the absence of further levels and a plan at a larger scale, it is impossible to lay out the subsidiary drainage in any part of this area. Neither would it be safe to undertake the outfall works until the subsidiary works are designed, and especially as there is at present no information as to the levels and extent of the land for utilizing the sewage at Botany.

The levels not only of all the streets, but of the yards and back premises within every block bounded by streets is necessary to select the best possible position for the sewer works; it will then frequently be found that the street is not the best place for the sewer, but that when put in at the back of the houses it is at once the best and most economical position. This I shall have occasion to allude to hereafter, and also to the deficiency of the plans and levels of the city and its suburbs for the purposes of drainage.

While therefore I agree generally with the views of the Sewage and Health Board as to the drainage of the southern area, I would defer the designing and construction of these works until a better and more complete survey than is at present in existence, be available for the purpose; and I am of opinion that no time should be lost in commencing this survey, as the public health is considerably endangered by the inefficiency of the present system of storing fœcal matter in cesspits.

Conclusions.

I have now arrived at the following conclusions:—

The following are the only practical plans for preventing the pollution of the harbour by the sewage of Sydney:—

First,—By an intercepting sewer commencing on the southern margin of the city, and discharging into the ocean near Ben Buckler.

Another, by commencing at the northern suburbs of the city, and conducting the sewage through a tunnel falling in an opposite direction to the above, and piercing the ridge at Redfern, between Cleveland-street and Raglan-street, and conducting it towards Botany Bay.

A third plan, as recommended by the Sewage and Health Board, is a modification of the above; by adopting the first plan for the northern area, including the city proper and a portion of the suburbs; and draining the southern area separately towards Botany Bay; and generally I agree with the Board.

Level and
inclination of
intercepting
sewer.

On the general plan No. 1, I have shown the position which I would recommend for the intercepting sewer, and the table, page 37, gives the sizes and inclination, together with the area drained and discharges therefrom. These differ but little from the proposal of the Sewage and Health Board; the work in some places is slightly increased, and provision is made for overflows and flushing.

I have also gone into the question of cost, and in doing so I have provided for the flow of the additional quantity (1,248 cubic feet per minute) as alluded to at page 18. I have also thought it desirable in those parts of the sand-stone rock which are of doubtful hardness, to provide a somewhat thicker lining than is shown on

on the plan of the Sewage and Health Board; this is increased to 9 inches of brick-work, or cement concrete for about one-third the height of the channel. This necessitates additional excavation. The cross sections of the sewers I propose are shown on plan No. 6.

With these additions, and including storm overflows, flushing outlets, &c., and the connection of the intercepting sewer, with the existing works in the city, the cost of the work will amount to £287,000. There are, however, many items, such as the cost of land, compensation for passing through private properties, together with some works for surface drainage that I am unable to bring into estimate.

In the foregoing portion of this Report I have dwelt at length upon some of the points connected with the work, viz., as to the area, the drainage of which is to be intercepted; and the working of the sewer under the conditions in which it will be placed. These are the most important. The former is dependent on the level of the outlet above the sea, and the inclination to be given; the latter is chiefly dependent on the means which can be devised for keeping out the solid matter brought down by the existing sewers at the time of storms.

The further extending of the sewers in the city and suburbs has also been noticed, and that it should be capable of receiving the house drainage and one-twentieth of an inch of rain per hour only over the area drained, while all the remaining quantity of surface-water, including that from the streets, shall be made to flow away over the surface.

That existing sewers should be connected with the intercepting sewer in such a manner as to limit the quantity admitted at each inlet to that which is due to the area it drains.

I have moreover stated that the existing plans of the city and suburbs are insufficient to enable an engineer to proceed with confidence in the devising of a general scheme of drainage, and until such plans are made I do not advise either the city or suburbs to proceed with any expensive work beyond the intercepting sewer; for without such plans and levels I am certain that the money spent on the works will not be spent to best advantage.

Insufficiency
of existing
plans.

I may also add here that in carrying out of both the works for water supply and drainage, the existing Acts are deficient in some important provisions, which would be necessary when such works come to be carried out.

The various subjects, of which this is a brief summary, must now be further noticed. Some of them are matters of detail, others of a more general character. Of the former I propose first to notice the outlet of the intercepting sewer at the ocean.

To overcome the difficulty of the sea breaking into the tunnel Mr. Bell proposes to have two outlets, one of which in the differing directions of the wind would probably be open when the other was obstructed. Mr. Woore proposes a "porteullis," the effect of which would no doubt be to prevent the in-rush at times of storms of a large volume of water, but it would impede the outlet also.

Outlet of
intercepting
sewer.

I have already at page 13 given the views of the Drainage Committee. I have discussed this point with Mr. Moriarty, whose opinion is of great value; and it is to the effect that work of the simplest nature possible at this point is most suitable. (*Vide* plan 6, fig. C.)

It is a fact that waves of enormous size and power break upon the face of the rock at the place where the outlet must be made; the sea water would then be projected forward into any exposed aperture, and upwards when no such aperture exists. To overcome this difficulty of entering seas into a horizontal tunnel, it is proposed to form an expanding basin 30 feet or more in diameter, as at B, plan No. 8, and a self-acting valve, fig. V, No. 8; both of these are very desirable.

In order further to meet this difficulty Mr. Moriarty suggests an iron trunk in front of the outlet, as shown in the diagram above referred to. When the waves mount upward this would become, for a brief interval, a force in the nature of hydrostatic pressure, tending to force the water upward in the trunk. This is unavoidable unless some mechanical arrangement be devised to prevent it, but the rough

rough buffeting to which any valve or other contrivance would be exposed would render its adoption undesirable, and Mr. Moriarty's suggestion would in principle be more effectual.

I think, however, that the smaller the aperture exposed to this buffeting of the waves, the less would be their prejudicial effect; and that several small apertures is better than one large one. Moreover, it is desirable, if possible, that any arrangement upon this principle should be within the sandstone rock, rather than on its exposed face.

Regarding the elevation (10 feet over sea) at which it is proposed to fix the outlet, though in very moderate weather it may be sufficient to keep out the sea, on the occurrence of storms when the main difficulty arises, 1 or 2 feet higher or lower will make very little difference in the effect produced, and I propose, in consequence of the increased inclination I have suggested at page 18, to commence the tunnel at a level of 8 feet.

The arrangement which I would propose is shown on plan 8. The valve V is shown at a distance of about 200 feet from the face of the rock: by a drop of 1 foot it will fall into the expanding basin B, about 100 feet from C, which is a gallery 160 feet long and 15 feet wide, at right angles to the direction of the sewer. A canal, 8 feet wide, would be formed in this with a fall of 1 in 40 feet, to either end, of 1 foot; from this canal four tunnels, one at either end, and two others, each 40 feet distant from them, would be driven to within 30 feet of the sea-face, and from thence in a sloping direction to low-water spring tides. This would admit of the sewer at the valve V being 8 feet over high-water. Each of the tunnels to the sea would be protected by a penstock to be closed in calm weather for any cleansing or examination that might be necessary, and the galleries or outlets could, at a future time, be increased, as might be found desirable.

A further effect might be obtained by driving blind tunnels into the rock opposite the outlets by which the entering water could be received, and its exit facilitated; these are shown by dotted lines on the plan.

Overflow and
flushing out-
lets.

As a necessary precaution, which has to be observed in constructing the intercepting sewer, considering that a portion only of the total drainage is to be received by it, it is desirable that some provision be made by which, when filled, and an upward pressure begins to be exerted, the portions which are not in rock tunnel should be protected. This may be done at several places where low land is crossed, as at the point 32 chains distant from the outlet; again, at 'Double Bay, and Rusheutters' Bay, and Lacrozia Valley. And provision should be made by which, when occasion requires it, the sewer could be flushed out at these places where a natural creek occurs, and land at a low elevation; an arrangement for this is shown on plan No. 4.

In all these places where the land is but a few feet above sea level, and too low to afford healthy sites for houses without pumping the drainage and sub-soil water, I would recommend that the further erection of buildings should cease, that the land be resumed by the Government, and laid out for public use as places of recreation; moreover, that in each of these cases an open channel be formed through them for carrying off the surface waters of the district, which has here its natural outlet.

The channel which would carry off the surface water might assume the form of a paved roadway with slightly raised margin, where the wash would be considerable; in other places they might be shallow turfed channels, which would not be unsightly, even when containing running surface water on the occurrence of storms.

The sand and street debris, which would probably require to be removed, could then be dealt with in the cheapest way.

A sketch of the channels, &c., here intended, is given on plan No. 6; their precise dimensions can only be determined when the works for the various districts to be drained are laid out.

Points of
interception
of existing
sewers.

I have mentioned at page 18 the difficulties which may be expected to arise from the large quantity of heavy matter which comes down the sewer, and the necessity for some arrangement to prevent, as far as possible, this heavy matter from entering the intercepting sewer.

In the case of the sewer leading to Blackwattle Bay, which burst on the 12th May last, it was found just below the place where the disruption took place, that a
bank

bank had been formed in the sewer consisting of several heavy stones 15 in. x 6 in., whole bricks, &c., washed in from the open end, which had not been protected by a grating, the work being only recently completed. This material had been washed down a sewer having an inclination of 1 in 249.

It is necessary to consider occurrences of this sort with reference to the intercepting sewer, and the arrangements to guard against them; the existing sewers having, for the most part, considerable inclinations, while that of the intercepting sewer more nearly approaches the horizontal. It is also necessary that the communication between the proposed intercepting sewer and the existing sewers shall at all times be perfectly free and unobstructed, when the rainfall over the area drained does not exceed half an inch per day.

To do this an obstruction must be made to the discharge of the dry weather drainage through the existing sewer (*vide* plan No. 9); where P is the present sewer with the intercepting sewer passing under it, C the connecting branch sewer, O the obstruction to cause the sewage to enter at C.

If O be an immovable obstruction the heavy matter which enters during the times of rain will be arrested and fill up the space in front of it, and will force the greater part of the deposit into the intercepting sewer.

It is therefore necessary that some means should be devised for removing the obstruction, when the quantity flowing down the sewer is in excess of that which the intercepting sewer is designed to carry.

There are no doubt several ways of arranging this, but any mechanical means will require frequent examination, and side entrances should be provided for this purpose.

Fig. A, No. 9, shows one method: It represents a stop board fixed on a centre E, placed at about one-third of the depth of the sewage in the dry time; when in excess of that quantity the board will turn over into a horizontal position, and permit the passage of the sewage along the course of the existing sewer; having then a free flow to the harbour it will take with it the greater part of the solid matter brought down by the storm water. The stop board must be made a little heavier at its lower portion, and will thereby have a tendency to close as the level of the water falls in the sewer, resuming its vertical position again ultimately.

A further arrangement would be necessary to partially close the aperture C, a simple shutter just dipping into the surface of the maximum flow in the dry period will accomplish this; its effect will be to restrict the flow in the wet periods, and force the greater part of the stream towards the present outlet for those waters.

These are minor matters in themselves, but of great importance in regard to the proper action of the intercepting sewer, for it is evident that if this channel receives more than its due proportion at its higher levels, there will not be room for what is due from the area lower down.

It is intended to ensure so far as possible a regulation of the proper inflow by the adjustment of the sewer inlets to the work which the intercepting sewer is required to perform, and the exclusion of heavy substances.

The size of the connecting sewer will also be a subject of calculation in each case, but the above suggests itself to me as the most simple way of accomplishing the end desired. *Vide* plan No. 9, interception of Castlereagh-street sewer.

The channels for the discharge of surface waters are intimately connected with the arrangement and form of the street surfaces, and these in Sydney appear to be susceptible of considerable improvement. The street gutters, where the inclination is considerable, are the best means for the removal of surface water, and when its volume becomes so large that inconvenience may arise from its presence in the streets, then some especial channel should be provided for its discharge. The adoption of this plan will obviate many difficulties in connection with the removal of sewage, and will economise the cost of the works necessary thereto.

Surface water channels.

In cities where there is but little fall in the length of the streets by which the water can travel to an outlet, some additional provision is necessary; but when, as in Sydney, the declivities are so considerable, this to a very great extent is unnecessary.

Some

Form of road surface.

Some curvature is necessary of the road surface in order to discharge the water in wet weather; except for this reason, the road surface would be better nearly flat; then the entire width would be available for vehicular traffic, the wear more even over the surface, and its durability greater.

In Sydney the curvature given to the road surface is generally excessive, and a considerable width at the margin, where the gutters are formed, is entirely useless for wheeled traffic, thus in effect limiting the width of the streets already somewhat narrow.

The extra rise in the crown of the road has moreover the effect of causing the foot-paths and houses to appear as in a hole, very considerably detracting from the appearance of the buildings and streets, whatever the architectural features may be.

All that is necessary is that the centre of the street should be so raised that when worn down so as to require repair the middle shall be not actually a hollow.

In many of the Sydney streets I observe that the principal rise is near the margin, while the centre is flat, and on the occurrence of rain a channel of water is seen running down the centre; in such cases the extra height is of no value whatever, and the road surface is exposed to unnecessary scour.

Form of gutter.

To form the gutter, the kerbstone should be a margin, and a paved portion varying from 2 to 4 feet in width, with a slope of about 1 in 10, will form the gutter and carry off the water from a large area with such inclinations as are here obtainable.

In the Appendix, page 36, a table is given, in which is calculated the quantities which gutters of varying width and inclination will discharge, the areas they will drain at the rate of $\frac{1}{4}$ inch rainfall per hour.

Advantage of excluding storm water from the sewers.

The adoption of some regulation of this nature, and the laying of the kerb of the footpath to about the level of the crown of the road, would greatly improve the appearance of the streets, and avoid some of the excessive scour to which they are subject; it would also diminish to some extent the quantity of road detritus, which is so difficult to deal with in the sewers, and I think result in some economy in maintaining the street surface in proper order.

The usual proportion of each footpath to the width of the street is one-fifth of the total width. In Sydney they are generally much narrower. The actual cost of the footpath area is in all cases less than that of the road, and it is therefore a matter of economy, as well as an improvement, to adopt a somewhat wider footpath, where the wheeled traffic is not great. Plan No. 3, shows the alteration in the form of road surface I recommend.

The expense entailed in making or altering roads is always a serious one, and not to be undertaken without due consideration, and it is only just to state that Mr. Bradridge, the City Surveyor, is fully alive to the points I have here mentioned. I have done so, however, with the hope that it may support his views when desiring to make improvements.

Special arrangements, covered way, &c.

In some of the business streets, where any considerable quantity of water in the gutter would be specially objectionable, it may be desirable to provide a covered subway on each side of the street; and where this is the case, the arrangement shown on Plan 5, Fig. A, is an excellent one, as providing separately for the sewage and the storm water, and also for the gas and water pipes; there are probably several of the more important streets in Sydney where this arrangement would be desirable, as it would prevent the necessity for the opening of the streets, and the obstruction caused thereby to traffic, serving the same purpose as the covered ways now constructed under the modern streets of London.

In other places where the storm water to be carried away is in such great quantity as to necessitate a large channel, it may be desirable to provide an open one in the shape of a broad shallow ditch lined with masonry to conduct it, giving up the necessary strip of land to this especial purpose; but it is only when the drainage of the district is fully laid out that particulars of these channels can be determined.

Next in importance to the perfect removal of all fluid or solid matter which may find access into the sewers, is the regular change of its gaseous contents. In Sydney this has not received sufficient attention.

It

It is a regulation with the municipality, that not only the street gully-pits but the house drains shall be trapped near their inlet to the sewer.* According to these regulations, therefore, there are no means of changing the atmosphere within the sewers, and every house drain connected with it, which by any chance has a defective trap, is at once the channel by which the sewer gas can escape. Ventilation of
the sewers.

In practice it is well known that traps cannot be depended on as an efficient means of preventing this, and the only safety is in free ventilation of the sewers with the outer atmosphere.

To accomplish this the obelisk in Hyde Park was erected; but the effect of this is confined to the nearest point where by any chance there happens to be an untrapped inlet to the sewer. The obelisk moreover is connected with one of the systems only; the others have not even this protection.

Flap-traps at the ends of the house drains are very seldom absolutely air-tight, they also check the flow of the sewage into the sewer. Water-traps are considered better than the flap-traps for this reason, especially at the lower part of the house drain where the water is more likely to be frequently changed, for if it remains stagnant for any length of time the water becomes saturated with the sewage gas and it then readily passes through.

In the smaller houses the kitchen sink is the only point of connection with the drain, which is within the house.

The principal sufferers from sewer gas are those who dwell in the best houses, many of which have several baths, lavatories, and water-closets, these being connected directly with the house drain. Few people who use the bath or lavatory stay to put the waste-plug in place, and when the water has ceased to run the waste-pipe forms a direct channel to conduct the sewer gas into the house. The stack pipes also, which carry the rain water from the roof to the house drain, if terminating anywhere near a bedroom window are not unfrequently a source of nuisance, and from these combined causes, undoubtedly many cases of the most serious forms of sickness occur. Sewer gases.

The remedy for all this is ventilation. On plan No. 7 is a section of a ventilating-pit in connection with a man-hole shaft, intended to be fixed in the centre of a street; one of these at the corner of a street, where two or three sewers can be ventilated; and others at distances of about 500 feet apart for brick sewers, and 700 feet for pipe sewers, would efficiently ventilate the public sewers. The basket for charcoal can also be adopted if desired; but unless changed after a few months it is likely to lose its efficiency, and then is only an obstruction to the air, without producing the intended purifying effect.

The house drains should not only be trapped, but they should also be ventilated by a small pipe extending to the highest level of the house, with an open aperture not near a window.

All drain pipes from baths and lavatories, sinks and stack pipes, should be cut off a few inches above the surface of the ground; there the water should be received into a small pit-trap covered with a grating so as to exclude heavy matter from entering the drain pipe.

The soil pipe from the closet is the only one which should have a direct communication with the house drain. This pipe should be placed outside the house and continued up to the highest point of roof or chimney, and if the closet be of good construction, and well ventilated, there will be little danger of sewer gas entering the houses as it now frequently does. While the arrangements for public and private drainage should undoubtedly be as complete as possible, it is not to be expected that perfect action will continue uninterruptedly, without some attention, not only on the part of the authorities to the public portion of the works, but also by the owners and occupiers of houses to their private drainage. It is a perfectly simple matter, and if owners and occupiers would see that these few points are attended to, there would be no danger whatever from sewer gases.

Another

* In some cases the outlets into the harbour are closed also.

Exclusion of heavy matter from existing sewers.

Another subject in connection with the existing sewers appears to require attention: It is evident from the report of Mr. Davis on the condition of existing sewers, that large quantities of heavy matter, such as road-metal, &c., finds access to the sewers, and in many places to the injury of the invert of the sewer—the inner ring of brickwork in some cases being worn through.

The great inclination of the sewer, and facility with which rubbish of all kinds is washed away, rather leads to the practice of thus disposing of substances which should be carried away in the scavenger's cart. This practice is most objectionable, and in connection with the proposed intercepting sewer it will be absolutely necessary to adopt some means for preventing such matter obtaining access.

Much of the difficulty occurs at the street gully gratings, and other places where storm water is admitted. On the occurrence of a storm the water in the gutters carries with it all the floating, and much of the loose heavy matter from the street surface to the nearest inlet. The grating speedily becomes choked, and the rain-water prevented from entering flows over the street. To overcome this it is a practice to remove the grating, letting the rubbish with the water enter the gully-pit; in other places where the iron foot bridges cross the gutter they are made to protect an open aperture; the gully-pit then receives the solid matter, and owing to the violent agitation caused by the water entering the pit, much of the solid matter finds its way into the sewers.

It is difficult to remedy this effectually; the only means is to increase the depth of the pits so as to be not less than 8 or 9 feet below the grating; I would recommend this in future constructions. In plan 5, fig. B, I have shown one view of a gully-pit in which an inner cast-iron grating is placed; through this all fluid must pass upwards to enter the connecting pipe; this affords some protection to the sewer by stopping the larger and heavier matter from being carried forward with the entering fluid.

All open ends of sewers should be protected by catchpits and gratings from the admission of solid rubbish.

Plans.

I have alluded to the necessity for further plans of the city at page 20, and I would advise that the Government undertake the survey of the entire area of the city and suburbs; that the scale to which it is drawn be that of the city plan, viz., 40 feet to 1 inch. On such a scale can be shown, not only the levels of the streets, but also levels of the interior of the blocks bounded by them; also of the backyards and cellar floors. This is especially necessary in an area where the undulation of the surface is so great. It will then be found that in many cases (where no road surface drainage is admitted) that in some streets a sewer will not be required, while the position given to it, viz., through the back premises, will increase the efficiency and greatly economise the cost of house drains.

On this plan the position of all the house drains can be shown, and if kept up, as it should be, by an officer whose especial duty it is to put on all extensions of streets, building, and drainage, an inspection of this plan by any owner or occupier will enable him to see what drainage, &c., is provided for his premises.

The operation of the present Act requires the position of all new drains to be approved by the City Surveyor, who keeps a plan of the same. What is above recommended is therefore only an extension of the present system, only requiring the necessary Staff to be provided to do the work.

The value of such a plan in the sale and transfer of property will be readily understood by owners and others interested.

In addition to the 40-foot scale plan (which should be divided into sheets of convenient size) a general skeleton plan of the whole, showing the position of public and back streets, open spaces, sites of public buildings, should be prepared; a scale of 8 inches to the mile is well adapted for the purpose.

The possession of such plans will enable the Engineer to design a complete scheme of sanitary works suitable for the present city of Sydney, and its future extensions, not necessarily for entire and immediate execution, but a scheme to be carried into effect from time to time as required, and which, for want of such necessary information it is impossible for me now to do.

As

As an illustration of the value of the plans and levels which I recommend, I ^{Back} have selected a portion of the Borough of Redfern, plan No. 2. This is on a scale of ^{drainage.} 100 feet to 1 inch, and too small to show distinctly all the drains, inlets, &c. I have had the necessary levels taken through the back premises, and assuming that the point A is the proper outlet, it will be seen that the entire block may be drained by means of a sewer in one only of the principal streets.

The position of the privies* is shown in every case. The red lines show the house drains and street sewers. The drains to sinks, yard gullies, &c., are not shown, but on a 40-ft. scale plan they could be distinctly indicated.

It will be at once seen that in no case, in these blocks of houses, is it necessary to carry a drain under a dwelling-house, which is always objectionable; and that by this arrangement of *back drainage* not only is this advantage attained, but the house drains are reduced to about one-half the length that would be necessary with main sewers in the front; the cost is also reduced, but in a greater proportion, as the expense of removing and renewing house floors, where houses are in a continuous row, is avoided. A diagram illustrating this is given in plan No. 2.

In carrying out pipe-drainage work, not only for public sewers but for house drains also, I consider it necessary to lay the pipes in a bed of concrete, in order that they may be preserved at an uninterruptedly uniform slope, and not suffer derangement from either soft material below or filling above them. All pipe sewers and drains should have their lower half of the joint made with cement; they should be laid in straight lines, and when a change of direction or junction becomes necessary a small pit—'lamp-hole'—should be built, and if this be carried up to near the surface, the action of the sewer can be from time to time readily inspected. When a long length as of several hundred feet are so laid, it is convenient to construct a 'man-hole' at intervals of about 200 feet; the position of any obstruction which may have occurred in the sewer can then be ascertained and removed, without the expense and trouble of opening the ground, and breaking into the sewer. (*Vide* plan No. 7.)

On reading through the Acts of the Legislature at present in force, it appears ^{Legislation.} to me that some further powers are required to be given to the authority under whom works for water supply and drainage to the city, &c., are to be executed.

No power is given by any of these Acts, so far as I have been able to ascertain, to the City Corporation to enter upon private lands for the purpose of construction or repair of sanitary works. The Municipalities Act, 31 Vic. No. 12, of 1867, section 119, gives power to make sewers through private lands, but not under buildings. As it is quite impossible to carry out works for drainage and water supply in the exact line of the public thoroughfares, I would recommend that in any revision of the present Acts a clause be inserted similar to the 45th and four following sections of Act 11 and 12 Vic., cap. 63, for Promoting the Public Health; which refer to the construction and management of sewers and drains, and the interpretation clauses of the terms "lands" "street" "sewer" and "drain" should also be included.

In the case of back drainage, as shown on plan No. 2, when several premises are drained by one pipe, power to drain any such groups of houses, and to recover the cost thereof under the provisions of the 90th and 91st sections of the same Act, is also necessary.

I have visited several of the Suburban Municipalities, and have been informed ^{New streets.} upon some particulars of their operation. One of the anomalies appears to be, that though the Acts under which the suburbs are administered evidently intend that persons making new streets should "*form and make*" them, yet, practically, the making of the street, *i.e.*, the ballasting and metalling of the surface, and provision of kerb and channelling, is done by the Municipality. The income of the Municipalities in some cases does not exceed £700 per annum, and in only one case does it exceed £3,000 per annum, from which sum the cost of maintaining existing roads, scavenging, &c., has to be defrayed. The cost of ballasting and metalling to a

* It is presumed that when the drainage is completed these will become water closets.

a road is from 25s. to 30s. per lineal yard. The cost of 500 yards of new road would in some cases absorb the whole of funds of the year, leaving no means whatever for road repairs and current sanitary duties.

The usual course of proceeding is indicated in the sections Nos. 69 and 70.

Copy of all the sections of the Public Health Act of England, above alluded to, are given in the Appendix pages 33 and 34.

The Proposal of T. B. Belgrave, Esq., M.D. to introduce the Liernur System of Sewerage, and also a system for street watering.

I have yet to notice a communication from T. B. Belgrave, Esq., M.D., forwarded to me for consideration, to which, as not affecting the question of the drainage of the city, at page 11, I only made a passing allusion. The proposal is to adopt a plan of removing fœcal matter—known as the Liernur system.

Notes on the Sewerage and Street Watering of Sydney, by T. B. Belgrave, M.D. (Edin.)

Sewers in solid rock.

SYDNEY having but a small depth of soil, the sewers of the city require to be excavated out of the *solid rock*, an operation involving much time, labour, and expense; so much so, that though the city and suburbs contain a population of only about 170,000, and but a small area has been drained, the cost has already reached nearly a million sterling.

The extreme labour and cost of the sewerage in the neighbourhood of Port Jackson precludes its construction in streets and localities only partly inhabited.

Repairs to Sewers.

Except where (?) subways have been constructed, repairs to sewers are tedious, inconvenient, and costly, the superficial earth consisting of the hardened rocky debris of the original excavations.

Radical defect in all *vis à tergo* water-carrying sewage systems.

All systems of drainage whose carrying force is water, have one fundamental defect, viz.—that arising from the displacement of the gaseous contents of the drains and pipes by its equivalent in bulk of the water poured down the water-closet pipes, which gaseous contents ascending in spite of syphons and traps into the houses, may produce their specific effects in germinating zymotic disease among the inmates of the dwellings. Captain Liernur's *vis à frouté* or "Pneumatic system," obviously precludes this potent source of zymotic disease.

Singular suitability of Captain Liernur's system to Sydney; and to growing cities.

It is probable that the pneumatic system of sewerage devised by Captain Liernur is particularly indicated in a rocky locality, and an irregularly constructed city like Sydney—on the grounds of less cost in original construction—as compared with the present system; greater facility in laying down the pipes, in discovering damages, in making repairs, and in keeping all clean.

From the peculiarity of its parts or blocks being susceptible of independent action, the pneumatic system is singularly suitable to *growing cities*; and is in fact capable of indefinite extension.

Modern systems of water drainage presuppose compliance with two essential conditions, viz.: 1st. The complete removal of the sewage matter. 2nd. That it should not contaminate the neighbouring atmosphere or waters.

To accomplish these conditions a main drain is practically essential—to bring the sewage to a controllable focus, and to prevent its escape through accident or design. The practical effect of the preceding condition is to limit drainage areas and greatly enhance the cost of the water system.

An illustration of this is furnished at the present moment in London, where a system of main drainage running in the lower part of the Thames Valley having been completed at an expense of *twenty millions* sterling is found on its completion to be inadequate to drain the entire city, though it was equal to the task when it was designed, and also during a few years later.

To meet, therefore, the necessities of the north and north-western parts of London, which are not at present systematically drained, the Government propose to form a new drainage area and construct an independent system of Main Sewage along the "Valley of the Brent"—a contingency that does not appear to have been foreseen, and which will entail a further enormous outlay.

The adoption of the Liernur system for the removal of the *house* sewage renders necessary some system for the removal of *storm waters* and *surface drainage*, which, as regards Sydney, should be studied in connection with the form or construction of the streets and means for laying the dust; bearing in mind that the city being on a rock, and the roads consequently inelastic (as is not the case on a clayey soil), the reverberation from traffic is a sensible inconvenience even in the less frequented thoroughfares.

Watering the Streets of Sydney.

The conditions obtaining in Sydney render this subject one of much greater difficulty than in cities in England.

They are—the almost constant existence of gusty wind; the much greater heat of the climate; and the construction of many of the roads from friable sandstone. The two first conditions render very frequent, even hourly, watering necessary during a greater part of the year. The want of an adequate system for watering the streets gives rise to an enormous destruction of shop and household property, entailing great pecuniary loss on the inhabitants, and practically renders a considerable part of the City uninhabitable except at a great cost in material and well-being.

To meet these conditions, the writer suggests that the streets should be made of the opposite shape to that at present obtaining, that is to say, instead of being *convex*, with a gutter on either side, they should be *slightly concave*, or have a little inclination towards the *middle* of the road, which would thus act as a gutter or open drain.

If

If perforated pipes were placed on the road aspect of the curb stones, parallel with the pavement, the streets could be watered as frequently as might be necessary with a minimum of labour, the water trickling down the slightly inclined roads to the central gutter.

This plan would be inexpensive, easily kept in order; its adoption would cleanse the streets without cutting them up, as obtains under the present inadequate system.

The automatic system of watering the streets would be found extremely well adapted to thoroughfares fitted with the new compound wood pavement.

Conclusions formed from the preceding considerations.

1. That in consequence of the rocky character of the ground on which Sydney is built, the consequent unusual cost of sewerage works in it, the necessity for separating the sewage from storm waters, and other circumstances of an economical and hygienic character, the "Pneumatic System" of Captain Liernur, or a modification of it, offers evident advantages, and ought certainly to be tried in parts of the City and Suburbs at present quite destitute of drainage.

2. That the automatic system of watering the streets deserves a trial on a limited scale in Sydney.

3. That the composite wood pavement should be tried in some popular thoroughfare in Sydney, *with* and *without* connection with the automatic system of watering the streets.

That it would be in the highest degree unwise to continue to construct the sewerage and the roadways, and to water the streets of Sydney, on the old plans, without even limited practical trials of the new, or receiving reliable official reports of their success in those cities in Europe where they have been tried

4. That the slightly inclined form of the roads suggested would obviate the difficulty increasingly felt in Sydney by the high *crest* given to so many of the roads under the present system.

About two and a half years ago I had an interview with Captain Liernur, and had the benefit of his explanation of the system for the removal of fœcal matter by his Pneumatic System.

Regarding the process, it may at once be granted, that it is possible to remove fœcal matter in the way proposed, but as it appears to me at an unnecessary expense, however perfect the system may be.

The water supply to a City which now usually varies in amount from thirty to eighty gallons per day per head of the population, according as it is more or less used wastefully, has to be removed in the form of house drainage, as constantly as it is supplied; this is one of the purposes of a system of sewers.

Captain Liernur's system assumes that the city is already provided with a system of covered sewers to remove the water supply, amounting, as I have mentioned above, to thirty gallons and upwards per head from the city.

The introduction of the Liernur system cannot lessen either the necessity for nor the expense of a system of sewers for this purpose. What he proposes, is to remove by independent means a portion of the sewage, which can be conveyed away in and with the house drainage. As I understand him, his contention is, that the value of the fœcal matter, when collected separately, is so great that it will, after passing through a process of manufacture, sell at a rate which, if not profitable, will at least pay some interest on the capital expended, in addition to defraying working expenses.

Two years ago this process had not been determined upon, and I am not aware whether up to this time it has been, or whether any of the economical results thus anticipated have been realized. I was at that time able to point out to Captain Liernur where a quantity of night-soil amounting to sixty tons and upwards daily and ready collected could be had gratis, if he could convert it into a marketable commodity without nuisance, at Bombay and Calcutta, and Madras, besides many other places where fœcal matter is thus collected, and at considerable expense and nuisance discharged into the sea or streams, or buried.

The question of economical application of this matter, though occupying much scientific attention, is not yet determined. Under all these circumstances it appears to me most unwise to enter upon such a system for removal of fœcal matter until this financial result is attained, if its removal can otherwise be accomplished.

But further than this, I am of opinion, that having sewers properly constructed, that is to say, a system which conveys away at once and perfectly all fluid matter discharged into them, it makes but little difference whether fœcal matter be added thereto or not. The quantity of this matter for Sydney and suburbs is about 116 tons per day, of which one-fifth, or 23 tons is solid, while the present water supply of four million gallons daily amounts to nearly 1,800 tons; it is for the removal of this additional 116 tons—not more than one half of which could be collected—

collected—that the supplementary system of Capt. Leimur is here recommended. In the construction of the system of sewers not the slightest difference to their capacity could be made, consequently the expense would be the same with as without its adoption.

It is wholly impossible to exclude *all faecal* matter from a system of house sewers, the bedroom slops will, if not entirely, yet chiefly be removed by them. In Paris the system of separate removal of this matter is in operation; and, having passed through about four miles of the sewers in that city, I am able to say, by comparison with other cities where it does pass away with the fluid sewage, that very little if any difference could be detected between the sewage of Paris and that of the other places.

It is not intended by this to convey the idea that the Paris sewers are not efficient; they are large, and intended to afford means of access to the gas and water pipes which are suspended in them, without necessitating disturbance of the street surface, and they perform their office efficiently.

What is wanted in a system of sewers to prevent the evils which are supposed by some to be inherent to the water carriage system, is that the fluid matter shall be in constant motion, '*never stagnant*'; that it shall be discharged into the sewers while it is fresh, and shall not stagnate on its way to the outfall, which in ordinary cases it must reach in two or three hours, and before decomposition has commenced.

If the sewers be ventilated, as they should be, with the rapidly defusive properties of the gases, no evil will result.

Regarding the illustration which Dr. Belgrave has adduced, the main drainage of London, costing £4,100,000, and which he states is now insufficient; it is quite certain that the Liernur system would not have rendered the main drainage unnecessary; the river could not have been the receptacle for all the filth—minus the faecal matter; the Liernur system would not have removed the 120 million gallons of water supply, omitting entirely the surface drainage.

Even if adopted, the Liernur system would not have prevented the necessity for extending the main drainage, and itself would have required extension also as the metropolitan area has grown.

Seeing then that the system of drainage is indispensable, is it necessary or desirable to expend an additional sum of probably £300,000 to take away the faecal matter only? I am decidedly of opinion that it is not necessary, quite apart from other objectionable features that may be urged against the system.

Street
watering.

I have seen streets in cities on the Continent of Europe of the form here suggested where the centre is hollow with a shallow gutter in the middle. The object there appears the allowing of a filthy stream to run at a distance from the footpath. As a channel in exceptional cases for the removal of large quantities of rain water it might be adopted. It is here, however, recommended as affording facilities for surface watering in dry weather.

The appearance of streets so formed is certainly very inferior to that of the slightly rounded surface usually given, and on that account appears to be undesirable.

In the application of the water to run from the sides of the street and cover the surface to the centre it will be seen that the sides of the street must receive much more than the centre portion;—moreover to water the street perfectly by this means the surface must be even, without the little hills and hollows which, even in a well-made road, are more or less inevitable; the water would fill the hollow places, and unless used in larger quantity than is desirable would not cover the hills.

Where, as in Sydney, the streets are steep declivities in their length, it would be next to impossible to cover them this way, with a sprinkling of water such as is sufficient to lay the dust.

A light shower does this more effectually and perfectly than any artificial means can do, and the best arrangements for the purpose are those which most nearly resemble a light shower, either the *hose and jet* or the *water-cart*.

When the water is under pressure, as in Sydney, the hose and jet properly managed is undoubtedly the best means, and in manual labour the most economical.

Watering

Watering from the sides, as here recommended, would necessitate the turning on of the water from the pipes, by which it would be effected. This would engage a man's time, and he must wait while it is being done, as it could only be applicable to a certain portion of the street at a time; it would therefore not be economical in manual labour. Moreover, the laying down of the pipes to carry out this idea would be a heavy expense, and one which I think should not be incurred for the reasons given.

I have now referred to all the various points in the letter of instructions, placed at the head of this Report.

The means for relieving the harbour from pollution—the principles upon which the extension of new works of drainage to further portions of the city and suburbs—together with some necessary precautions to be taken in connection with the use of existing sewers and house drains—have been considered.

In doing this I have of necessity gone into matters of detail, and I have done so because the success of all drainage works depends upon attention to details; it matters little how perfect the public portions of the work may be if the private drainage is imperfect, and *vice versa*.

Drainage works, unlike those for the supply of water, do not make their imperfections at once apparent; when a burst pipe or leaky tap occurs with water under pressure, it is at once seen and remedied; a house drain, on the contrary, may leak for years, it may be partially choked or work inefficiently, and sickness may be the direct result, but the true cause unperceived.

Unfortunately, too, it is often the case that inferior workmen are set to do work of this nature, and its importance generally is not understood. I have therefore thought it desirable to point out the very simple rules which experience has proved to be necessary, with a hope that attention may thereby be drawn to this important matter.

I have also considered it desirable to direct especial attention to the means which should be adopted, in connection with the new intercepting sewer, whereby the danger of silting up may be avoided; this depends entirely upon the success of the means which may be adopted, by direct and unobstructed channels, to dispose of the solid matter with the surface water in time of storms, and to prevent as far as possible its admission into the sewer.

The new sewers which I have seen in Sydney are well constructed; the officers of the Municipality are intelligent, and worthy of the confidence of the public; excellent material is procurable, though somewhat high in price, and labour is expensive; there is every reason why drainage work of a superior character should be constructed.

The necessity for these works will be understood when it is considered that a large mass—many thousand tons of fœcal matter—is constantly stored, while the greater part of the fluid filth is as constantly evaporated in the midst of a dense population, where no drainage exists; and that the result where it does exist, is to pollute the magnificent harbour.

Few cities possess so beautiful a site and so many natural advantages, which should conduce not only to the prosperity but also to the health of its population; but it is evident from the Reports of the Registrar General that its mortality is far too high, and that a large proportion is due to preventible diseases.

I learn from the Registrar General that the percentage of zymotic disease for the past five months in Sydney and Suburbs is as follows:—

	Sydney.	Suburbs.
January	27·09	31·40
February	23·49	26·32
March	23·12	24·14
April	25·64	37·80
May	14·13	23·86

Whatever the origin of this class of disease, it is admitted by all that their localization and continued existence are mainly due to impurities of air and water, and result from defective drainage; and to carry out the proposed works of improvement requires, as I have pointed out, some further legislation.

It

It also requires money. These works are usually constructed by means of loans, obtained on security of the rates paid by the districts benefited, and redeemable in periods varying from thirty to fifty years.

There is, doubtless, here as elsewhere, an objection to rates; but it is certain that without some means of raising the required capital the necessary works of drainage must remain in abeyance.

People willingly pay for temporary benefits, such as *water supply by the bucket*, but when it is "laid on" to the house, and paid for in the form of a rate, however pure and abundant the supply may be, the form of payment is a tax, and therefore objectionable.

Similarly with drainage works, people pay willingly for the cleansing of their cesspits, to remove a palpable nuisance; and it may be desirable in concluding this Report to estimate what this amounts to, in the City of Sydney.

The number of houses in Sydney is	16,924
There are of water-closets	7,000
Difference...	9,924

It is evident, therefore, that there are about 9,924 houses, with cess-pits, necessitating storage of filth and its occasional removal.

From inquiries I have made, the cost of cleansing these receptacles twice in the year is from £2 to £2 10s.; taking it at the lower figure, a sum of about £20,000 is expended annually on an operation which would be unnecessary if proper sanitary works existed. The above sum represents the interest at 5 per cent. on a capital amount of £400,000, and for which I believe the entire drainage works of the city could be completed, *i.e.*, exclusive of the proposed intercepting sewer for the northern outfall; while the cost of the cess-pits is from £6 to £10,—a sum sufficient in most cases to pay the cost of the House Drainage Works.

The same observation applies to the suburbs, but I am not in possession of full information in regard to number of houses, &c. The cost, however, is equally great to each occupant, and the capitalized expenditure for this purpose, if paid in the form of a rate, would probably be sufficient to cover the cost of the drainage of the more thickly populated portions, when a general scheme for the drainage of the whole area is provided.

W. CLARK,

Member Institution of Civil Engineers.

19th June, 1877.

APPENDIX.

Extracts from an Act for promoting the Public Health 11 & 12 Vict. c. 63.

* * * * *

The word "Lands" and the word "Premises" shall include messuages, buildings, lands, and hereditaments of any tenure. "Lands"
"Premises."

The word "Street" shall apply to and include any highway (not being a turnpike road), and any road, public bridge (not being a county bridge), lane, footway, square, court, alley, passage, whether a thoroughfare or not, and the parts of any such highway, road, bridge, lane, footway, square, court, alley, or passage within the limits of any district. "Street."

The word "House" shall include schools, factories, and other buildings in which more than twenty persons are employed at one time : "House."

The word "Drain" shall mean and include any drain of and used for the drainage of one building only, or premises within the same curtilage, and made merely for the purpose of communicating therefrom, with a cesspool or other like receptacle for drainage, or with a sewer into which the drainage of two or more buildings or premises occupied by different persons is conveyed : "Drain."

The word "Sewer" shall mean and include sewers and drains of every description, except drains to which the word "drain" interpreted as aforesaid applies : "Sewer."

* * * * *

45. And be it enacted, That the Local Board of Health shall from time to time repair the sewers vested in them by this Act, and shall cause to be made such sewers as may be necessary for effectually draining their district for the purposes of this Act; and the said Local Board may carry any such sewers through, across, or under any turnpike road, or any street or place laid out as or intended for a street, or under any cellar or vault which may be, under the pavement or carriageway of any street; and after reasonable notice in writing in that behalf (if upon the report of the Surveyor it should appear to be necessary), into, through, or under any lands whatsoever; and the said Local Board may from time to time enlarge, lessen, alter, arch over, or otherwise improve all or any of the sewers vested in them by this Act, and discontinue, close up, or destroy such of them as they may deem to have become unnecessary: Provided always, that the discontinuance, closing up, or destruction of any sewer shall be so done as not to create a nuisance; and if by reason thereof any person is deprived of the lawful use of any sewer the said Local Board shall provide some other sewer as effectual for his use as the one of which he is so deprived. Making alteration, and discontinuance of sewers vested in Local Board.

46. And be it enacted, That the Local Board of Health shall cause the sewers vested in them by this Act to be constructed, covered, and kept so as not to be a nuisance or injurious to health, and to be properly cleared, cleansed, and emptied; and for the purpose of clearing, cleansing, and emptying the same they may construct and place, either above or under ground, such reservoirs, sluices, engines, and other works as may be necessary, and may cause all or any of such sewers to communicate with and be emptied into such places as may be fit and necessary, or to cause the sewage and refuse therefrom to be collected for sale for any purpose whatsoever, but so as not to create a nuisance. As to cleansing and emptying sewers, &c., by Local Board.

47. And be it enacted, That it shall not be lawful to cause any sewer or drain to communicate with or to be emptied into any sewer of the Local Board of Health, nor to cause any building to be newly erected over any such last-mentioned sewer, nor to cause any vault, arch, or cellar to be newly built or constructed under the carriageway of any street, without the written consent of the said Local Board first had and obtained; and whosoever offends against this enactment shall forfeit to the said Local Board the sum of five pounds, and a further penalty of forty shillings for every day during which the offence is continued after notice in writing from them in this behalf; and if any sewer, drain, building, vault, arch, or cellar be made, erected, or constructed contrary to this enactment, the said Local Board may cause the same to be altered, pulled down, or otherwise dealt with as they may think fit, and the expenses incurred by them in so doing shall be repaid to them by the offender, and be recoverable from him in the summary manner hereinafter provided. Penalty for making unauthorized sewers, and building over sewers and under streets.

48. And be it enacted, That any owner or occupier of premises adjoining or near to but beyond the limits of any district may cause any sewer or drain of or from such premises to communicate with any sewer of the Local Board of Health upon such terms and conditions as shall be agreed upon between such owner and occupier and such Local Board, or, in case of dispute, as shall be settled by arbitration in the manner provided by this Act. Use of sewers by persons beyond district.

49. And be it enacted, That it shall not be lawful newly to erect any house, or to rebuild any house which may have been pulled down to or below the floor commonly called the ground floor, or to occupy any house so newly erected or rebuilt, unless and until a covered drain or drains be constructed, No new house to be built without drains, &c.

of such size and materials, and at such level, and with such fall as upon the report of the surveyor shall appear to be necessary and sufficient for the proper and effectual drainage of the same and its appurtenances; and if the sea, or a sewer of the Local Board of Health, or a sewer which they are entitled to use, be within one hundred feet of any part of the site of the house to be built or rebuilt, the drain or drains so to be constructed shall lead from and communicate with such one of those means of drainage as the said Local Board shall direct, or if no such means of drainage be within that distance, then the last-mentioned drain or drains shall communicate with and be emptied into such covered cesspool or other place, not being under any house, and not being within such distance from any house, as the said Local Board shall direct; and whosoever erects or rebuilds any house or constructs any drain contrary to this enactment shall be liable for every such offence to a penalty not exceeding fifty pounds, which may be recovered by any person, with full costs of suit, by action of debt; and if at any time, upon the report of the surveyor, it appear to the said Local Board that any house, whether built before or after the time when this Act is applied to the district in which it is situate, is without any drain, or without such a drain or drains communicating with the sea or a sewer as is or are sufficient for the proper and effectual drainage of the same and its appurtenances, and if the sea, or a sewer of the said Local Board, or a sewer which they are entitled to use, be within one hundred feet of any part of such house, they shall cause notice in writing to be given to the owner or occupier of such house, requiring him forthwith, or within such reasonable time as shall be specified therein, to construct and lay down, in connection with such house and one of those means of drainage, one or more covered drain or drains, of such materials and size, at such level, and with such fall as upon the last-mentioned report shall appear to be necessary; and if such notice be not complied with the said Local Board may, if they shall think fit, do the works mentioned or referred to therein, and the expenses incurred by them in so doing shall be recoverable by them from the owner in a summary manner, or, by order of the said Local Board, shall be declared to be private improvement expenses, and be recoverable as such in manner hereinafter provided.

Local Board may, upon report of surveyor that any house is without a drain, cause one to be constructed, &c.

* * * * *

Power to compel paving, &c., of private streets.

69. And be it enacted that in case any present or future street, or any part thereof (not being a highway), be not sewered, levelled, paved, flagged, and channelled to the satisfaction of the Local Board of Health, such Board may, by notice in writing to the respective owners or occupiers of the premises fronting, adjoining, or abutting upon such parts thereof as may require to be sewered, levelled, paved, flagged, or channelled, require them to sever, level, pave, flag, or channel the same within a time to be specified in such notice; and if such notice be not complied with, the said Local Board may, if they shall think fit, execute the works mentioned or referred to therein; and the expenses incurred by them in so doing shall be paid by the owners in default, according to the frontage of their respective premises, and in such proportion as shall be settled by the surveyor, or in case of dispute as shall be settled by arbitration (having regard to all the circumstances of the case) in the manner provided by this Act; and such expenses may be recovered from the last-mentioned owners in a summary manner, or the same may be declared by order of the said Local Board to be private improvement expenses, and be recoverable as such in the manner hereinafter provided.

Certain streets not highways to be deemed such, and repaired by Local Board.

70. And be it enacted, That if any present or future street, not being a highway, at the time when this Act is applied to the district in which it is situate, be sewered, levelled, paved, flagged and channelled to the satisfaction of the Local Board of Health, the said Local Board may, if they shall think fit, by notice in writing put up in any part of the street, declare the same to be a highway, and thereupon the same shall become a highway, and be from time to time repaired by them out of the rates levied in that behalf under the authority of this Act; and every such notice shall be entered amongst the proceedings of the said Local Board: Provided always, that no street shall become a highway as last aforesaid if within one month after notice in writing shall have been put up as last aforesaid the proprietor of such street, or the person representing or entitled to represent such proprietor, shall by notice in writing to the said Local Board object thereto.

* * * * *

Private improvement rates.

90. And be it enacted, That whenever the Local Board of Health have incurred or become liable to any expenses which by this Act or by the said Local Board shall be declared to be private improvement expenses, the said Local Board may, if they shall think fit, make and levy upon the occupier of the premises in respect of which the expenses shall have been incurred, except in the cases hereinafter provided, in addition to all other rates, a rate or rates, to be called private improvement rates, of such amount as will be sufficient to discharge such expenses, together with interest thereon at a rate not exceeding five pounds in the hundred, in such period not exceeding thirty years as the said Local Board shall in each case determine: Provided always, that whenever any premises in respect of which any private improvement rate is made become unoccupied before the expiration of the period for which the rate was made, or before the same is fully paid off, such rate shall become a charge upon and be paid by the owner of the premises so long as the same continue to be unoccupied.

Proportion of private improvement rate may be deducted from rent.

91. And be it enacted, That if the occupier by whom any private improvement rate is paid holds the premises in respect of which the rate is made at a rent not less than the rack rent he shall be entitled to deduct three-fourths of the amount paid by him on account of such rate from the rent payable by him to his landlord, and if he holds at a rent less than the rack rent he shall be entitled to deduct from the rent so payable by him such proportion of three-fourths of the rate as his rent bears to the rack rent: and if the landlord from whose rent any deduction is made under the provisions last aforesaid is himself liable to the payment of rent for the premises in respect of which the deduction is made, and holds the same for a term of which less than twenty years is unexpired, but not otherwise, he may deduct from the rent so payable by him such proportion of the sum deducted from the rent payable to him as the rent payable by him bears to the rent payable to him, and so in succession with respect to every landlord (holding for a term of which less than twenty years is unexpired) of the same premises both receiving and liable to pay rent in respect thereof: Provided always, that nothing herein contained shall be construed to entitle any person to deduct from the rent payable by him more than the whole sum deducted from the rent payable to him.

Extract from a Report to Government on the Drainage of Madras by W. Clark, dated Fort St. George, 7th April, 1875.

* * * * *

Medical statisticians know that for every life saved there is a large number of cases (28 may be taken as under the mark) of serious sickness prevented, with all their concomitants of privation and misery; and the heavier portion of this burden falls on the poor.

In a community like Madras, with its 397,552 inhabitants, if the mortality can be reduced from 33 to 23 per 1,000, as there is no doubt whatever it may be, this would amount to no less a number than 3,970 lives, and in the proportion I have mentioned no less than 114,160 cases of sickness per annum would be avoided.

It would be a great mistake to suppose that the community does not pay for this, not only in the physical suffering but in loss of money.

If we take 10 years as the period which is lost by a life cut off prematurely by preventable sickness and its value at rupees two per month only, and the cases of serious and unnecessary sickness as incapacitating the suffering for a period of two months from employment, we shall then have as

	Rs.
Value of life lost	$3970 \times 10 \times 12 \times 2 = 9,52,800$
and by sickness	$111,160 \times 2 \times 2 = 4,44,640$
	<hr style="width: 50%; margin: 0 auto;"/>
Loss per annum—total rupees.....	13,97,440

It is not pretended that these figures are strictly accurate as applied to Madras; they are believed to be rather under than over the actual amount.

SYDNEY DRAINAGE.

(LETTER FROM MR. CLARK, COVERING REPORT.)

Presented to Parliament by Command.

Mr. W. Clark to The Colonial Secretary.

Sir,

Sydney, 17 July, 1877.

In conformity with the instructions contained in your office letter (No. 77/1,070), I have the honor herewith to forward my report on the interception of the sewage of Sydney for preventing the pollution of the harbour, together with the principles which should guide the authorities in the further extension of the drainage works in the city and suburbs.

I have dwelt at length on some of the conditions which will require careful attention to secure the successful action of the work for intercepting the sewage, and I have directed attention to the difficulty in dealing with the large quantity of surface detritus, which should as far as practicable be kept out of the proposed intercepting sewer though admitted to the existing sewers.

That there is urgent necessity for the execution of this intercepting work is evident in the condition of the harbour near the present sewer outlets, and I would commend the subject for the immediate consideration of the Government.

For the want of sufficient plans and levels of the city and suburbs, I have been unable to deal with the extension of the drainage works, further than to point out the general principles on which they should be arranged.

The separation of the surface drainage of streets and open spaces from the house drainage will not only avoid the difficulty of dealing with large quantities of solid matter in the sewers, but will also, with the inclination available, so far reduce the sizes of the sewers as to bring them within the dimensions of the stoneware pipes now successfully made in the Colony.

The necessity for the expensive brick sewers being avoided, except to a trifling extent, will bring the cost of the drainage works within the means of the municipalities if the cost of emptying cesspools under the present system be handed over to them; thus the system of storing filth in large quantities in the midst of a dense population, and the nuisance attending its removal by carts, will be avoided.

I have explained and illustrated the system of back drainage, which is especially suited to Sydney, insuring not only the greatest economy in construction of sewers and drains, but also their greatest efficiency.

The necessity for improvements in the ventilation of existing sewers has also been explained; also, the desirability of devoting certain areas of low elevation, as at Rushcutters' Bay, Blackwattle Swamp, &c., &c., and not yet built upon, to purposes of public recreation.

Having some considerable experience in the working of Municipal Acts, and the construction of works for water supply and drainage under these authorities, I would here endorse the recommendations of the Sewage and Health Board, that the execution and management of these for Sydney and suburbs should be entrusted to a separate and independent Central Board of Works or Commission, — such Board to consist of a paid chairman and officers qualified to direct and superintend the works.

The chairman should be assisted by an equal number of nominees of the Government and representatives of the Municipalities, and that these members should be paid for their attendances.

The total number of Commissioners not to exceed seven (7).

The nominees of the Government to be permanent, the representatives of the Municipalities to be elected for three (3) years and retire by rotation. That immediate steps be taken by the Government to make the necessary surveys and levels of the city and suburbs, and when obtained that the Board be empowered to carry out the works and assess each Municipality in the cost of the general plans and works, according to the benefit derived.

The direction and formation of all new streets, the levels of lowest floors of houses, &c., &c., to be subject to the approval of the Central Board.

I regret that owing to the general insufficiency of the plans of the various districts with which I have had to deal, my inquiry has been extended over a longer period than it need otherwise have been.

Having now completed the work for which I have visited the Colony, I am desirous of conveying to all the gentlemen with whom I have come in contact, Government officers and others, my best thanks for the courtesy, attention, and assistance I have received.

To the Surveyor General, under whose guidance I inspected the localities connected with the various water supply schemes, my thanks are especially due, also to Messrs. Moriarty and Bennett, Chief Engineers in Government Departments, and Messrs. Bell and Bradridge of the City Corporation, I am greatly indebted for their readiness and kindly desire at all times to furnish me with such information as I have required.

Also, to those gentlemen whose suggestions and schemes for water supply and drainage have come before me for examination; it has been impossible that all should be adopted, but it has been my desire to weigh fairly the merits of the various suggestions in the interest of the Government and the public, without reference to the sources from which the suggestions have emanated, and with confidence I now leave these important subjects and my Report thereon in the hands of the Government.

I have, &c.,
W. CLARK.

1876-7.

NEW SOUTH WALES.

WATER SUPPLY, &c., OF NEWCASTLE, MAITLAND, AND
BATHURST.

(REPORT FROM HYDRAULIC ENGINEER RESPECTING.)

Presented to Parliament by Command.

To the Honorable Sir Henry Parkes,
Colonial Secretary.

Sir,

Sydney, 14 July, 1877.

In conformity with your instructions, conveyed in Mr. Halloran's letters of the 25th June and 4th July, that I should visit the towns of Newcastle, Maitland, and Bathurst, with a view to advising the Government on the subject of Water Supply, and with reference to Maitland that I should have an "eye to the best means of protecting the place from floods," I now have the honor to report that I have visited all the towns in question.

I arrived at Newcastle on the 26th June, and on the 27th accompanied the Mayor and other authorities to inspect a source of supply near Red Head; and on the 28th I inspected the town, after which I went on to Maitland, and had an interview with the authorities on my arrival.

On the following day I accompanied the same gentlemen to the point on the Hunter River whence it is proposed to obtain the water supply by pumping, and we also went to other places in the district which they desired to point out to me with reference to the question of floods.

On Monday, 2nd July, at their request I accompanied them by river from Maitland to Morpeth, and went on to Newcastle. On arrival I had an interview with the Mayor, and with him visited several of the important mining townships where water is required. On returning to Newcastle I instructed Mr. Surveyor Fuller as to the plans and levels which will be required to enable me to advise further on the subject.

I returned to Sydney on the 3rd instant, and had the honor of an interview with yourself.

On the 4th instant I left for Bathurst; on arrival had an interview with the Mayor and Aldermen of that city. The following day the Winburndale Creek, as a source of supply, was examined. On the 6th instant the Vale Creek was inspected with the same object. On the 7th instant the city of Bathurst was inspected and the Macquarie River, with a view to obtain a supply by pumping from that source. On the 9th instant the Fish River and Campbell's River were visited, and barometric levels taken. On the 10th instant a further examination of the Winburndale Creek was made, which, as a gravitation scheme, promises to be the best. On 11th instant returned to Sydney, and reported my arrival to Mr. Halloran.

I have thus finished the cursory examination of the localities named, according to your instructions, and am now enabled to report to you.

There

There can be no doubt as to the absolute necessity of a water supply for domestic purposes to all the places I have visited. The present source of supply, wells chiefly, are not only scant, but there is evidence that they are impure, by the prevalence of diseases so engendered.

Regarding Newcastle, from information already obtained from Mr. Surveyor Fuller under my instructions, it appears there is considerable doubt if that city can be supplied from the Red Head locality; and in that case, owing to the extensive mining operations in the district, the only available source of supply will be the river Hunter above Maitland. If this should prove to be so, the plan will be to combine Newcastle and the mining townships with Morpeth, Maitland, and any other townships on the route in one comprehensive scheme, and I purpose leaving Sydney on Monday next to make further examination. Levels &c. are now being taken by Mr. Fuller to enable me to do this.

At Bathurst levels and surveys are now in progress, and will, I hope, be finished and ready for me on my next visit.

The subject of the floods in the Hunter Valley has been exhaustively treated by a Commission. It is one that cannot be dealt with satisfactorily without a very extended inquiry. Judging by the data already obtained, the conclusion of the Commission appears to be correct. To meet the views of the authorities however, other data are required, the obtaining of which would occupy much time, more in fact than under the circumstances I should feel justified in devoting to it. Without therefore abandoning the subject, which shall have my best attention while engaged on the scheme for Water Supply, I would here state that I do not propose to go especially into the subject, but if at the end of my visit to the district I can advise the Government further, from any additional information I may obtain, I shall do so.

On the subject of Water Supply to the various towns I have now under consideration, an important point is, how the capital for the necessary works and interest thereon is to be obtained, and the amount which it will be possible to obtain. The general impression is that the Government will assist the towns by lending the requisite capital at a low rate of interest, and in the form of an endowment for a certain number of years enable them to pay a portion of the interest, the town paying the remainder.

It is of considerable importance to know how far these expectations are well founded, because the water supply may be *great* or *small* according to the available means, the expense bearing a very close proportion to the quantity of water distributed. Twenty (20) gallons per head is a sufficient supply for washing, drinking, and culinary requirements, but insufficient for extensive manufacturing purposes, the irrigation of gardens, &c., &c., when fifty (50) and even eighty (80) gallons per head is occasionally distributed. A consideration of this subject, in connection with the present and probable increase of the population in each town, is necessary to fix the quantity for which the works shall be arranged in each place. Any views which the Government may have on this matter I shall be glad to be favoured with. In the meantime I shall proceed with the inquiry, and if not otherwise instructed I will include this point of daily supply also in my final Report to the Government.

On the subject of my visit to Orange, I have already addressed you on the 10th instant.

I have, &c.,
W. CLARK.

1876-7.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

WATER SUPPLY TO PARRAMATTA.

(REPORT FROM HYDRAULIC ENGINEER.)

Ordered by the Legislative Assembly to be printed, 10 October, 1877.

W. Clark, Esq., to The Colonial Secretary.

Sir,

Sydney, 5 October, 1877.

I have the honor to acknowledge the receipt of Mr. Halloran's letter of the 11th August, forwarding copy of a letter from C. J. Byrnes, Esquire, Mayor of Parramatta, and other papers, herewith returned, on the subject of the Water Supply to that town; and I am requested to give an opinion whether it would be the interest of that Borough to utilize the water now conserved by the masonry dam at the North Rocks.

I have ascertained that the distance of the dam from the town is $2\frac{1}{2}$ miles, and that the lowest available level of the water in the dam is 12 feet above the rails at the station.

The distance of the conduit in the Nepean scheme from the same point in the town is $3\frac{3}{4}$ miles, and the available fall is 120 feet.

In this case I should compare the cost of a 14-inch pipe $2\frac{1}{2}$ miles long with that of a 9-inch pipe $3\frac{1}{4}$ miles long, and I find it to be in favour of the longer and smaller pipe by about £900.

The cost of distributing the water through the town would also be somewhat greater, owing to the deficiency of pressure in the case of the North Rocks low level scheme, and I believe it is insufficient to supply a considerable portion of the town area.

The comparison, however, does not end here, for the water in the conduit from the Nepean would probably be charged to the Municipality of Parramatta at not less than 6d. per 1,000 gallons.

Assuming, then, that the water behind the dam at North Rocks would be obtainable free of cost, it remains to be ascertained at what cost the water can be taken from the dam, filtered, forced to a higher level, and distributed in the town of Parramatta, under a pressure equal to that which will be available from the Nepean scheme.

The cost of the works for this purpose will probably be about £8,000.

The interest on this sum at 5 per cent. is, per day ...	£1	1	10
Fuel and wages, say	1	5 0

£2 6 10

which considered as the cost of 150,000 gallons of water per day will give 4d. per 1,000 gallons, or 2d. cheaper than the Municipality should be called on to pay for the water from the Nepean.

The probable further cost of the pipes for distributing the water will not exceed 3d. per 1,000 gallons, which should, according to my view, be sold to consumers at one shilling, and would leave a surplus to pay off loans for constructing the work, for extending the supply, or for any other municipal purpose which may be deemed desirable.

I am of opinion, therefore, that the water from the North Rocks, which appears to be of excellent quality, should be made available for the supply of Parramatta.

I have, &c.,
W. CLARK.

1876-7.

NEW SOUTH WALES.

SUPPLY OF WATER FOR THE TOWN OF ORANGE.

REPORT

TO THE

GOVERNMENT OF NEW SOUTH WALES

ON A

SUPPLY OF WATER FOR THE TOWN OF ORANGE:

BY

W. CLARK,

MEMBER INSTITUTE OF CIVIL ENGINEERS.

Presented to Parliament by Command.

SYDNEY: CHARLES POTTER, ACTING GOVERNMENT PRINTER.

1877.

REPORT to the Government of New South Wales on a supply of Water for the Town of Orange.

To the Honorable the Colonial Secretary
of New South Wales.

Sir,

Having been honored with instructions to advise the Government on the subject of a Water Supply to the town of Orange and its vicinity, I proceeded there on the 20th of August last.

The population of Orange extends beyond the square mile of area which comprises the actual township, and at the present time is estimated at from 3,000 to 3,500 persons, and is daily increasing. The houses number about 550, but these are insufficient: many people reside in tents.

The water supply is derived from private wells; the town has no drainage, and there can be little doubt as to the result: it is simply a question of time when the wells will become contaminated, and the authorities are very anxious to anticipate the evils resulting from this state of things by the provision of a pure and permanent supply of water, to be distributed through the town by pipes, and to retain the work under their own control for the benefit of the people.

The most pressing want is water for domestic purposes; but I am assured that the establishment of various industries is contingent on the provision of water. It is necessary, however, to consider that the payment of interest on the capital and working expenses by a community who are entirely unaccustomed to pay for water would be attended with some difficulty if the works are unnecessarily large and expensive. It would seem, therefore, desirable that the scheme should be limited to a present liberal supply for domestic purposes, and be capable of expansion as the demand increases, and the people learn by experience that the water is not only abundant and pure, but that it is cheaper than the water derived from wells by the absence of the manual labour necessary to draw it therefrom.

Twenty gallons per day is an abundant supply for purely domestic purposes. $3,500 \times 20 = 70,000$ gallons per day, would therefore be a sufficient supply where there is no waste, for the present population; but, from the consideration above alluded to, I propose that the work should be capable of providing a population of 6,000 persons with 30 gallons per head, or a total quantity of 180,000 gallons per day, and the means of increasing upon this in the future.

The first source of supply to which my attention was directed was Meadow or Molong Creek, which has its rise in the Canoblas Mountains; these are of great altitude—4,000 feet and upwards above sea level,—and from this cause attract an unusual amount of rain.

The Government Astronomer, in his "Climate of New South Wales," shows that the district of Orange is an exception to the usual decrease of rainfall, as the distance from the coast increases; thus the average rainfall of Orange in the five years during which observations have been taken is 41.052 inches, the distance from the coast being 124 miles, while Bathurst, at a distance of 95 miles, has a rainfall of 25.03 inches only, which is the average of 14 years.

In

In the county of Wellington and parish of Towac, at a place called Devil's Hole, the Meadow Creek passes through a narrow gorge of considerable depth and well suited to the construction of a dam. Mr. Fisher, the District Surveyor, several years since called attention to this place as suitable for the purpose now under consideration, and recommended that it should be reserved. Since then Mr. George Plowman has acquired the right by selection of 210 acres of land, and has recently erected a saw-mill thereon; with this exception, the entire area drained by the creek, comprising 1,600 acres, is vacant Crown land.

At my suggestion various trial sections have been taken at this place, and others lower down the creek; the most advantageous site, however, appears to be that shown on the plan No. 1, where a dam 325 feet long at the top, 55 feet at the bottom, and 62.5 feet high, will impound an area of 21 acres of water at a level of 6 feet below its top. The upper 40 feet of this will give a cubic capacity of 97 to 100 millions of gallons, considerably more than one year's supply, after allowing for evaporation.

The one noticeable feature is the smallness of the catchment area, two and a half square miles; it is however to be remarked that the lofty mountain side and its precipitous character, entirely uncultivated, doubtless insures an unusual amount of rainfall and its rapid discharge. At the time of my visit the creek was a strong running stream, probably five or six times the amount necessary to supply Orange with 180,000 gallons per day, and this was after an unusually dry period with no recent rain to assist the flow.

On the 26th July last, after a long period of dry weather, Mr. Fisher estimated the flow at 300,000 gallons per day. More recent observations enable him to estimate the flow at $1\frac{1}{2}$ million gallons per day. The stream usually runs 3 feet 6 inches wide, $2\frac{1}{2}$ inches deep, and with a velocity of 4 feet per second at the point where the observations have been taken. On the 20th September half an inch of rain fell between 5 and 9 o'clock in the morning; in the evening the stream was running 3 feet 6 inches wide and 1 foot deep, with a greatly increased velocity. These observations are, of course, rough, but they go to show that the flow is immediately affected by the rain, and if sufficient storage be provided a very large proportion of the rain will be available for supply.

It is, however, very desirable that a proper rain gauge and weir should be established, where daily observations of the flow can be taken near the site of the proposed dam.

The level of the ground at the point where the dam will be constructed is 315 feet above the highest point in the town of Orange.

The means of carrying the water to the town would be by a race having a fall of 10 feet per mile for a distance of $5\frac{3}{4}$ miles, when it reaches a point $2\frac{1}{2}$ miles distant from the town boundary, and at an elevation of 250 feet above the town. From this point an 8-inch pipe would discharge the daily quantity of 180,000 gallons in a little over 4 hours.

At this point, near the farm occupied by Mr. Hicks, a suitable place for a reservoir and filter is found. The construction of a dam 15 feet high to top water level, and about 7 chains long, will impound an area of 2 acres of water with a cubic capacity equal to 3 million gallons (Plan No. 10.)

The basin is composed of rock to the surface, and as far as a superficial examination enabled me to judge, appeared to be well suited to the purpose.

With so large an area, and about 14 days supply, it is probable that no filtering or other cleansing process would be required if suitable catch drains be provided for intercepting the rain-water from the race and tank, so as to preserve the water at all times in the same condition as when it escapes from the storage reservoir. The expense of filters and a service reservoir would thus be avoided; the tank above described would receive the water from the race, and the head of the pipe for conveying it would be always fully supplied during any short period when repairs to the race may be required. This level will be 270 feet above the highest point in the town of Orange.

Below

Below the position where this dam will be constructed the country falls rapidly to Orange, affording ample facility for scouring out the dam from deposited mud, and also for the construction of filters, should experience prove them to be necessary.

My attention was also drawn by Mr. W. B. Wade, engineer in the Railway Department, to another source of supply in the Gosling Creek, at a point distant $2\frac{3}{4}$ miles from the town boundary.

This creek also has its rise in the Canoblas Mountains, at a point distant from the railway of about a mile up stream; it carries the drainage of an area, estimated by Mr. Fisher, the District Surveyor, at 6 square miles, which is capable of being extended to 8 miles, by diverting Brandy's Creek into it. The area drained is for the greater part cultivated, and nearly all of it is alienated.

At the point above mentioned, near the house of Mr. Munro, Mr. Wade estimates that a dam 20 feet high would impound an area of 30 acres of water, with a capacity of 65 million gallons in the upper 8 feet of depth. The stream, on the occasion of my visit, was nearly as large as that I had observed on the previous day in Meadow Creek.

Mr. Wade pointed out that a second dam can be constructed higher up the stream to increase the storage; both creeks are, in fact, susceptible of an increased storage by such means.

The settling tanks and filters, with the service reservoirs, could be fixed at a point distant from the dam of 62 chains, and at an elevation of 54 feet above the highest levels in the town.

The distance from the dam to the town boundary ($2\frac{3}{4}$ miles) would require to be covered by a 12" iron pipe.

The most important consideration in connection with these suggestions is that of the permanence of the supply.

From inquiries made on the spot I ascertained that the Gosling Creek usually ceases to run during several months in the summer season. There are no records of the flow of either creek or of their condition during periods of drought.

In order to obtain the best information on this important matter, I addressed a letter to the Mayor of Orange, Thomas Dalton, Esq., which, with the reply received thereto, is given in the Appendix, page 9.

It appears from the opinions there given that though the Meadow Creek drains an area but one-half that of the Gosling Creek, yet it is considered to be the more permanent source.

I think, however, that without a storage reservoir of ample capacity, neither the one nor the other could be considered quite safe in long periods of drought.

The available contents of the Meadow Creek Reservoir is	97 million gallons.
The annual evaporation from 21 acres	17 ..
Leaving available for supply	80 ..
The Gosling Creek Reservoir, from a storage of	65 ..
By a similar calculation will lose	24 ..
Leaving as available... ..	41 ..

There would, however, doubtless be some considerable loss of water in the open race in the first case; and the nearer proximity of the Gosling Creek would, if adopted, be attended with some economy, probably to the extent of £2,000 to £3,000; but in consideration of the character of the catchment area, wholly uncultivated, the greater promise of permanence, the larger storage capacity of the Meadow Creek scheme, and the higher pressure obtainable, I am of opinion that it is the source which should be adopted for supplying Orange with water.

I have, therefore, gone carefully into the consideration of the cost of the necessary works, which may be briefly described as follows:—

A dam of the dimensions described on page 4, containing 60,000 cubic yards of earthwork; a waste-weir, capable of discharging 1" per hour of rainfall over the entire catchment area. Plan and section of these are given, drawings Nos. 3, 4, 5, 6, and 7. Inlet and outlet pipe and culvert through the dam, 3 feet 6 inches in diameter, capable of carrying off the water of the creek on the occurrence of heavy showers during the construction of the dam, with arrangement for adjusting the flow to the requirement of the supply.

A race $5\frac{3}{4}$ miles long, consisting of a simple earthen channel, which, with an inclination of 10 feet per mile when running 6 inches of depth, will convey, theoretically, 800,000 gallons per day. Section of the race is given in plan No. 7. Land averaging half a chain in width, and fenced in on either side, is included in the estimate.

Plan No. 10 shows the arrangement of the settling tank acting also as a service reservoir, having a pipe with a movable end, supported by a float to draw the water from a few inches below the surface. The object of this arrangement is to obtain water in the clearest possible condition.

From the service reservoir the water is taken in an iron pipe 8 inches in diameter for the supply of the town; the distance is 2 miles 63 chains to Summer-street, where the pipes for distribution may be said to commence.

The very considerable pressure which will be available, and the abundant storage provided, will be of great value on the occasion of fires, when jets of water to command the highest buildings will be obtainable if pipes of suitable dimensions be adopted; and motive power for small machines could also be obtained.

In carrying out these works some care and ingenuity will be required to secure efficiency, safety, and economy.

The dam is the most important feature in the scheme, the soil in the district is decomposed basaltic rock, with a surface layer of red clayey soil, well suited to the execution of such a work and to ensure the bottom of the reservoir being watertight.

The precipitous side of the gorge where the bank will join upon it must be cleared of all loose soil and material and the puddle bank throughout carried into the solid rock, which will probably be found near to the surface.

The waste weir will be large and the material excavated therefrom will go into the dam below it; and it is probable that it will be to a considerable extent cut in the solid rock, which is desirable, but until trial holes are made this cannot be determined.

The rock failing to appear it will be necessary to provide a solid masonry wall from the end of the dam to the hill, with a puddle and pitched surface for the approach and tail of the waste weir. The basaltic stone of the district is suitable for this purpose and for pitching the slope of the dam.

Clay for puddle is procurable at a distance of one-third of a mile from the site of the dam.

The plan shows inlet and outlet pipes and culvert 3 feet 6 inches in diameter with a valve tower and pen-stock for regulating the flow. This size is considered necessary for passing the flow of the creek through the dam during its construction; it would if required also admit of drawing off the water rapidly at any time afterwards to 40 feet below top level.

These pipes and culvert will be laid in the solid ground forming the side of the valley, and are shown as in a trench 10 feet deep; but the exact position cannot be decided until the nature of the ground—rock or otherwise—is ascertained.

The iron pipes and tower (plan No. 8), &c., can be replaced by masonry should the price of iron render it desirable to do so before the works are constructed.

The site of the reservoir will require to be cleared of timber, *i.e.*, the trees cut down and burnt, the stumps left standing.

It will be necessary also to compensate Mr. Plowman for the removal of his saw-mill to another site and for the resumption of his land.

The

The race is intended to be a simple earthen channel, with side slopes 1 to 1, about 2 feet deep, and 1 foot 6 inches wide at the bottom, slightly rounded, as shown in diagram.

The nature of the soil is suited to this purpose, being somewhat clayey; doubtless there will be considerable leakage at first, but these channels where clayey matter is present speedily puddle themselves. In places where this does not occur it will be necessary to put about 6 inches of puddle in the bottom and cover it with stones 2 or 3 inches in depth, to preserve the puddle on occasions when the race is empty. It will also be necessary to prevent the scour of the sides by rain water when the race is formed on a hill-side; by providing a catch drain to convey the water into some other channel.

For some time after its formation the race will require attention to stop leakages and repair defects of the ground; it must also be fenced in to prevent the intrusion of cattle, &c.

The water will then be conducted to the reservoir described at page 4, which will be embanked with the earth obtained as nearly as possible to its site. The slopes will be formed at about 2 to 1 on the outside, and 3 to 1 on the inside, properly puddled and pitched; the floor of the settling tank being of rock will admit of being scoured out into the sludge outlet provided for the purpose.

The seat of the dam being on rock especial care will be required to prevent the water creeping between it and the earth. This will be done by excavating a trench in the rock to receive the puddle wall and other trenches in the front of it, as shown in the drawing No. 9, puddle also being used under the pitching on the face of the dam. This is also provided for in the estimate which amounts to £1,560.

A concrete dam 4 feet 6 inches wide at top and 10 feet at bottom where 15 feet high would be preferable in this situation, but it would cost about one-half more.

The estimate for the above works is as follows:—

Dam at Meadow Creek with waste-weir, outlet channels, valves, &c., &c.	8,925
5 $\frac{3}{4}$ miles of race, including land and fencing, at £500 ...	2,885
Dam at Hicks's Farm, with inlet and outlet valves, &c. ...	1,821
223 chains of 8" pipe, with valves, &c., to end of Summer-street, Orange	4,236
Land, fencing, and compensation, clearing ground, &c. ...	1,554
Engineering and contingencies	1,119
	£20,540 *

There are about 15 miles of streets in Orange, and the plan shows that the buildings occupy frontages to these to the extent of about 9 miles.

The streets are all 1 $\frac{1}{2}$ chains or 99 feet wide, and it will be desirable to arrange eventually for a pipe on both sides of the street, in order to prevent unnecessary expense to the owners of houses of 40 feet length of service pipe, which will be necessary if the pipe be laid in the middle of the street; and also to avoid the expense of opening the roads, and inconvenience to traffic.

The

* Since the foregoing was printed, I have received from Mr. Fisher a further section of the country between the dam at Meadow Creek and the town of Orange, made at my suggestion, to ascertain what would be the cost of bringing the water into Orange for the entire distance by iron pipes. The direction of this pipe is shown on the plan No. 1, and a diagram section is given on plan No. 9. I have ascertained that with the fall available from 430 feet over datum, at the foot of the dam to a point 100 chains from Summer-street, where the level is 200 feet over datum, a distance of 450 chains, that a 6-inch pipe will deliver the entire daily quantity (180,000 gallons) in 16 hours.

If this plan be adopted it will be necessary to provide a covered reservoir to receive the water capable of containing a day's supply. A plan of this reservoir is given, No. 11.

The remaining distance (100 chains) to the end of Summer-street would be covered by a 9-inch pipe.

The total cost of this arrangement would be £8,928, at the present price of iron pipes, or about the same as the Combined Race, Reservoir at Hicks's Farm, and 8-inch pipe to Orange. The pressure in the town would be less—80 as against 250 feet over the highest point. For purely domestic purposes the 80 feet is sufficient, while the 250 feet, except on the occurrence of a fire, or for actuating machinery, would probably be somewhat inconvenient. This arrangement would also admit of an additional 50 per cent. of water, or a total of 270,000 gallons per day, being given without additional expense; and I recommend it for adoption, as it will avoid all severance of land and possibility of pollution to the water in the open race. Should it be found necessary, filters also could be constructed at the foot of the dam at Meadow Creek.

The cost of the water supplied may, at present rates for iron, be considered as identical in the two cases, and the authorities at Orange may, if so disposed, select between the two plans for bringing the water into town.

The position of the water pipe should therefore be either outside the gutter or just within the line of the kerb-stone. It will not be possible on account of expense, to put down the second line of pipe at the first, and the side of the street selected to be first piped should be where the consumption is likely to be the largest.

The blocks of buildings are 10 chains each; a stand post for the public supply should be provided at $11\frac{1}{2}$ chains apart in each street, where persons who desire to do so can draw the water, while fire hydrants, which can be used for watering the streets and for fires, should be fixed at about 100 feet apart on every pipe: as, however, this would be too expensive at first, it is proposed to fix them at 300 feet apart; so arranged, the total number of stand posts required would be 63, and fire hydrants 155.

The pipes for distribution will vary from 8 to 3 inches in diameter, and the total weight of the pipes first to be laid will be 626 tons. The cost at the present rates, including fire hydrants, stand posts, &c., &c., will be £9,460.

The total cost of the works as herein described, will therefore be £30,000.

The interest on which, at 5 per cent., will be £1,500 per annum.

An overseer and occasional workmen	...	300	..
Repairs, &c.	200	..

Total interest and working expenses	...£2,000
-------------------------------------	-----------

The total daily supply being 180,000 gallons, and the daily expenditure at £2,000 per annum will be £5 10s.

The cost of the water will therefore be about $7\frac{1}{2}$ d. per 1,000 gallons.

The race and works, with the addition of another communicating pipe with the town, at a cost of £4,236 will be capable of supplying double the quantity, without reduction of the pressure, at a consequent large reduction in the cost of the water.

The present annual value of premises in Orange for rating is £18,676, which is rapidly increasing. A rate of 9d. in the £ may be expected to realize £700. This, I consider, should be levied for water, distributed to the public at the stand posts, for use on the occasion of fires, for watering certain of the streets, and other public purposes.

The remaining £1,300 per annum should be made up by the sale of water, which, at 1s. per 1,000 gallons supplied through meters, would require a sale of 72,000 gallons per day, after which the sales would show a profit and constitute a fund for the purpose of enlarging the works, or for any purpose of public improvement which may be deemed desirable.

For the construction of the works and their after management it will be necessary to enlarge the powers of the municipality. An Act of the Legislature for this purpose should contain power to take land and buildings and to carry pipes, &c., through and under lands and buildings, making compensation for damage; also to make contracts for the construction of the works, the appointment of officers, for the sale of water within and beyond the present jurisdiction of the Corporation, and for the recovery of debts, &c., &c., in the same manner as provided for the recovery of other rates; also to provide penalties for injury to the works and for the pollution of the water, &c., &c.

In conclusion, I may remark that this estimate is made for iron at the present rate, which is low, and that any rise in the price would add to the cost.

It is not intended by this Report and accompanying plans to give exact details; this would be beyond the limits of my instructions, and would take too much time; the drawings, &c., can however be furnished if desired hereafter.

An analysis of the water taken from the Meadow Creek, near the proposed dam, has been made by Professor Liversidge, and is given in the Appendix, page 10. It proves the water to be of excellent quality.

W. CLARK,
Member Institute of Civil Engineers.

APPENDIX.

W. Clark, Esq., to The Mayor, Orange.

Dear Sir,

Orange, 23 August, 1877.

I am engaged, as you are aware, on an inquiry as to the best means of supplying your town with water.

Two sources have been pointed out to me whence a supply may be drawn,—One from Meadow Creek, at or near "Devil's Hole," which I had the pleasure of inspecting with you. The other from Gosling Creek, pointed out to me by W. B. Wade, Esq., C.E., at a point about one mile from where the creek crosses the G.W. Railway, and near the house of Mr. Muuro, where it is proposed to construct a dam; and, about 10 chains higher up the creek, a second dam to increase the storage.

As it is a matter of the greatest importance that the source of supply adopted should be the most permanent available, and as there are no records of the condition of these creeks in periods of drought, I shall feel obliged if you will inform me, on the best information you can procure,—1st, for what period of the year the creeks above referred to *usually* cease to run; secondly, the longest period during season of drought, and any other particulars which should be considered when deciding on the respective merits of the creeks for the purpose required.

This application is made to you, as without such assistance I am unable at once to find the persons most likely to give the information.

The best form in which the information can be obtained will be in letters which can be attached to my Report; and in forwarding them to me I shall be glad to receive any remarks of the Town Council on the subject with which they may favour me.

Yours faithfully,
W. CLARK, C.E.

The Mayor, Orange, to W. Clark, Esq.

Sir,

Orange, 27 August, 1877.

The Municipal Council of the Borough desire me to report that they have read over the correspondence between yourself and the Mayor, and letters written by Mr. John Wright and Mr. John Tom Lane, hereunto annexed, upon the subject of the proposed site for intended waterworks; and, after consideration, from the information they have been able to obtain, and their own experience, they are of opinion that the head of Molong Creek is the most permanent and reliable source from which water can be obtained.

The supply of water for the town is urgently required for domestic, sewerage, and manufacturing purposes.

The present supply, derived from wells, is inadequate to the wants of the inhabitants, and there are large areas of the town where water cannot be obtained by sinking wells.

The dry season of the year is between the months of November and April; during this period Gosling Creek is frequently dry, but, as before stated, Molong Creek has never been known to cease to run.

I have, &c.,
THOMAS DALTON,
Mayor.

J. T. Lane, Esq., to The Mayor of Orange.

My dear Mr. Dalton,

Orange, 25 August, 1877.

Agreeably to your request, I have great pleasure in furnishing, as well as I am able, the required particulars touching the proposed sites for securing water for the future supply of the town of Orange.

The "Shed" at Gosling Creek is more extensive than at the "Devil's Hole," but in either case I believe it would be sufficiently large in moist seasons.

I have known Gosling Creek to be nearly dry on several occasions, and to have ceased running for years. The soil is favourable for holding water, and an excavation at the spot indicated might be made to retain sufficient water for ordinary seasons, but not for one of *our* protracted droughts.

At the "Devil's Hole," dams might be so constructed as to hold water equal to the demand for years. The water at the mouth of the gorge is supplied by a spring I never know to be dry; the stream loses itself but re-appears in different places, and hence the Meadow Creek always had the character of being "well watered."

I am sorry official duties and family affliction precluded the possibility of my seeing Mr. Clark whilst he was here, but I am sure the matter was perfectly safe in your hands. We could do no more than point out certain spots and give such information as we possess.

I have known these localities for about forty years, and seen them in all seasons. "Jack Wright" could perhaps give you some additional information, as he has known them even longer than I have done.

I am, &c.,
JOHN T. LANE.

Mr. J. Wright to The Mayor of Orange.

Sir,

Orange, 24 August, 1877.

I have been resident in this district for the past forty-four years. I know the Molong Creek, and have observed it frequently during the above period of time. I have never known the water to stop running at the head of this creek, at the place known as the "Devil's Hole," although in dry summers I have noticed that the water ceased running lower down the creek. During the great drought of 1838 and 1839 the water continued running at the spot named above, viz., the "Devil's Hole."

I know Gosling Creek, in which the water ceases to run during the dry summer months; rarely has the water in this creek entirely disappeared, although perhaps not running for any distance, but excepting on very rare occasions water is to be found in the holes near its source. I noticed that in the great drought of 1868 the water nearly disappeared out of these holes.

Yours, &c.,

JOHN WRIGHT.

The University, Sydney, 27 August, 1877.

REPORT upon a sample of water obtained from the source proposed for the supply of the town of Orange.

Colour, &c.—No trace of brown colour; fairly clear and bright, but with however a faint opalescence or milkiness. Only a small amount of sediment thrown down on standing.

Smell.—None.

Taste.—None.

Without previous filtration it yielded the following results:—

Free ammonia	04 parts per million.
Albumenoid	09 " "
Chlorine	1.60 " "
Nitrites present.						
Total solid matter	51.00	parts per million.	=	3.57 grains per gallon.
Loss on ignition	10.44	" "	=	.73 "
Fixed solid matter	40.56	" "	=	2.84 "

The residue left on evaporation to dryness was nearly white, with faint brown patches.

On ignition this residue blackened slightly; but the carbon burnt quickly away, and the fixed solid matter was almost pure white in colour.

The percentage composition of the above residue was found to be as follows:—

Analysis of Residue.

Silica	73.62
Iron sesquioxide and	}	7.97
Alumina		7.36
Lime	3.49
Magnesia	undetermined
Potash	}	undetermined
Soda	
Chlorine43
Sulphuric acid	traces
Carbonic "	traces
Undetermined and loss	7.13
						<u>100.00</u>

Microscopical examination.—Very few organisms were found to be present. The forms met with were those commonly existing in spring and river waters, such as rotifera, diatoms, paramoecia, and other closely allied organisms.

Remarks.—On the whole this water may be regarded as a very pure one, and one well-adapted for household and manufacturing purposes. The amount of inorganic matter in solution is below the average.

ARCHD. LIVERSIDGE.

ORANGE WATER SUPPLY—LIST OF PLANS.

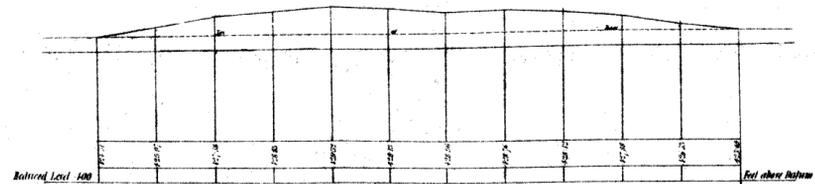

- No. 1.—Showing proposed reservoirs and line of pipes to the town.
- No. 2.—Section of No. 1.
- No. 3.—Reservoir at head of Meadow or Molong Creek.
- No. 4.—Section of dam at Meadow or Molong Creek.
- No. 5.—Section at Meadow or Molong Creek, from point G to D on plan No. 3.
- No. 6.—Section at Meadow or Molong Creek, from point D to E on plan No. 3.
- No. 7.—Sections of dam at Meadow or Molong Creek, race, and tank
- No. 8.—Section of water tower, &c.
- No. 9.—Sections of dam of proposed service reservoir, and section of alternative pipe-line, from Meadow Creek dam to Orange.
- No. 10.—Contours for service reservoir.
- No. 11.—Circular service reservoir.
