<b>PRIVILEGE—SEATS OF THE HON. G. H. REID, AND MR. F. B. SUTTOR—EAST SYDNEY, AND BATHURST:—</b>		
Motion made ( <i>Mr. A. G. Taylor</i> ) that it be referred to the Committee of Elections and Qualifications to inquire and report whether the Honorable George Houston Reid, the Honorable Member for East Sydney, and Mr. Francis Bathurst Suttor, the Honorable Member for Bathurst, were not each incapable of being elected or of sitting or voting as a Member of the Legislative Assembly, no notice to that effect having been published in the <i>Government Gazette</i> on their respective acceptances of the office of Minister for Public Instruction, 172; Report brought up, 209; Letter from Mr. Suttor to Speaker, stating his intention to seek re-election, and read by Clerk, 231; Mr. Suttor's seat declared vacant, 237; Ministerial Statement respecting Mr. Reid, 239; Mr. Suttor re-elected and sworn, 269; Mr. Reid's seat declared vacant, 292; Mr. Burdekin elected and sworn, 311 .....		153
<b>SEAT OF MR. R. M. VAUGHN, GRENFELL:—</b>		
Motion made ( <i>Mr. McCulloch</i> ) that it be referred to the Committee of Elections and Qualifications to inquire and report whether Mr. Robert Matteson Vaughn, the Honorable Member for Grenfell, has not since the date of his election, in conjunction with another person, undertaken a contract for or on account of the Public Service, and whether he has not thereby become incapable of sitting as such Member, and whether the said Robert Matteson Vaughn did not, since the date of his election, in conjunction with another person, enter into such a contract, and whether his Seat as such Member has not thereby become void, 185; Report brought up, 226; Motion made ( <i>Mr. McCulloch</i> ) to declare Mr. Vaughn's seat void, and debate adjourned, 237; Debate resumed and motion negatived, 246 .....		169
<b>SEAT OF THE HON. H. E. COHEN, WEST MAITLAND:—</b>		
Motion made ( <i>Mr. A. G. Taylor</i> ) that it be referred to the Committee of Elections and Qualifications to inquire into and report whether the Honorable Henry Emanuel Cohen, the Honorable Member for West Maitland, was not, at the time of his election as Member for West Maitland, incapable of being so elected by reason of his then holding an office of profit under the Crown, which had not been gazetted by His Excellency the Governor as carrying with it the qualification of election to the Legislative Assembly, 185; Report brought up, 304 .....	2	183
<b>SEAT OF THE HON. J. P. ABBOTT:—</b>		
Motion made ( <i>Mr. A. G. Taylor</i> ) that it be referred to the Committee of Elections and Qualifications to inquire into and report whether the Honorable Joseph Palmer Abbott, Member for Gunnedah, was at the date of his election for Gunnedah capable of being so elected, on the ground that he then held an office of profit under the Crown, and that the Proclamation qualifying the Secretary for Mines for election to the Legislative Assembly was the sixth of such Proclamations made by His Excellency the Governor under the provisions of the 18th section of the Constitution Act, which legalizes only five such Proclamations, and negatived, 191.		
<b>SEAT OF THE HON. W. J. TRICKEET:—</b>

PRIVILEGE :—		
SEATS OF THE HON. G. H. REID, AND MR. F. B. SUTTON :—		
Motion made ( <i>Mr. A. G. Taylor</i> ), That it be referred to the Committee of Elections and Qualifications to inquire and report whether the Hon. George Houstoun Reid, a Member for East Sydney, and Mr. Francis Bathurst Suttor, Member for Bathurst, were not each incapable of being elected or of sitting or voting as a Member of the Legislative Assembly, no notice to that effect having been published in the Government Gazette on their respective acceptances of the office of Minister for Public Instruction, 172; Report brought up, 200; Letter from Mr. Suttor to Speaker, stating his intention to seek re-election, and read by Clerk, 231; Mr. Suttor's seat declared vacant, 237; Ministerial statement made respecting Mr. Reid, 239; Mr. Suttor re-elected and sworn, 269; Mr. Reid's seat declared vacant, 292; Mr. Burdekin elected and sworn, 311	2	153
SEAT OF MR. R. M. VAUGHN :—		
Motion made ( <i>Mr. McCulloch</i> ), That it be referred to the Committee of Elections and Qualifications to inquire and report whether Mr. Robert Matheson Vaughn, the Honorable Member for Grenfell, has not since the date of his election, in conjunction with another person, undertaken a contract for or on account of the Public Service, and whether he has not thereby become incapable of sitting as such Member: and whether the said Robert Matheson Vaughn did not, since the date of his election, in conjunction with another person, enter into such a contract, and whether his Seat as such Member has not thereby become void, 185; Report brought up, 226; Motion made ( <i>Mr. McCulloch</i> ) to declare Mr. Vaughn's seat void, and debate adjourned, 237; debate resumed and motion negatived, 246	2	169
SEAT OF THE HON. H. E. COHEN :—		
Motion made ( <i>Mr. A. G. Taylor</i> ), That it be referred to the Committee of Elections and Qualifications to inquire into and report whether the Hon. Henry Emanuel Cohen, the Honorable Member for West Maitland, was not at the time of his election as Member for West Maitland incapable of being so elected by reason of his then holding an office of profit under the Crown which had not been gazetted by his Excellency the Governor as carrying with it the qualification of election to the Legislative Assembly, 185; Report brought up, 304	2	183
SEAT OF THE HON. J. P. ABBOTT :—		
Motion made ( <i>Mr. A. G. Taylor</i> ), That it be referred to the Committee of Elections and Qualifications to inquire into and report whether the Hon. Joseph Palmer Abbott, Member for Gunnedah, was at the date of his election for Gunnedah capable of being so elected, on the ground that he then held an office of profit under the Crown, and that the Proclamation qualifying the Secretary for Mines for election to the Legislative Assembly was the sixth of such Proclamations made by His Excellency the Governor under the provisions of the 18th section of the Constitution Act, which legalizes only five such Proclamations, and negatived, 191.		
SEAT OF THE HON. W. J. TRICKETT :—		
Motion made ( <i>Mr. A. G. Taylor</i> ) respecting validity of, and to refer question to Committee of Elections and Qualifications, 678.

# ANNUAL REPORT.

TO THE HONORABLE JOSEPH PALMER ABBOTT, M.P., MINISTER FOR MINES.

Sir,

I do myself the honor to submit the following report upon the progress of Mining in this Colony during the year 1882, and upon the working of that branch of the Department specially charged with the administration of the Acts and Regulations relating to mining.

During the year 1,166 applications were made to lease parcels of Crown Lands for mining purposes, being less by 163 than the number of applications made in 1881.

Of the number of applications so made, 586 were for parcels of auriferous land, and 580 for lands containing minerals other than gold.

The number of applications dealt with in 1882 was 896, which, as compared with the number dealt with in 1881, shows an increase of 5. The number would have been larger but for delays in making and dealing with surveys of lands applied for to lease for mining purposes. The steps which have been and are being taken to secure greater expedition in the making, checking, and charting of such surveys will, it is hoped, not only lead to the speedy clearing off the arrears which have accrued but will enable the Department to deal with such applications in future within a reasonable time.

Of the applications dealt with in 1882, 415 were for gold-mining leases, comprising an area of 2,358 acres, and 481 were for mineral leases, comprising an area of 16,745 acres, together equal to 19,103 acres, and exceeding the area contained in the applications dealt with in 1881 by 3,030 acres.

The following table shows the quantity of land comprised in the applications to lease made during the year 1882, and the minerals proposed to be mined under such applications:—

Minerals.	Area.	Minerals.	Area.
	Acres.		Acres.
Gold .....	4,287	Marble .....	40
Antimony .....	400	Manganese .....	80
Asbestos .....	60	Minerals not specified.....	80
Coal .....	2,420	Opals .....	40
Coal and shale .....	85	Silver .....	240
Copper .....	3,044	Silver and lead .....	500
Copper and silver .....	40	Slate .....	380
Diamonds .....	100	Tin .....	11,689
Iron .....	180		
Limestone .....	180		23,845

The aggregate area applied for is greater than that of the previous year by 3,292 acres.) But there is a decrease in the acreage for gold, antimony, coal and shale, copper and silver, manganese, and slate. No applications were made for bismuth, chromate of iron, cobalt, and galena. There is, however, an increase in the acreage for asbestos, coal, copper, limestone, silver, and tin; and in the above list are areas for diamonds, opals, silver and lead, and iron, which do not occur in the table for 1881.

The following table shows the quantities of the several descriptions of mineral land held under applications to lease on the 31st of December last:—

Minerals.	Area.	Minerals.	Area.
	Acres.		Acres.
Gold .....	6,412	Limestone .....	200
Antimony .....	600	Manganese .....	145
Asbestos .....	20	Opals .....	80
Bismuth .....	320	Shale and copper .....	80
Chrome iron .....	260	Silver and lead .....	320
Coal .....	980	Silver .....	320
Cobalt .....	40	Slate .....	420
Copper .....	2,889	Tin .....	11,622
Copper and silver .....	40	Minerals not specified.....	80
Diamonds .....	100		
Iron .....	40	Total .....	24,968

## RETURN showing the area of Land held under lease and the Minerals to be mined.

Gold..... 3,784 yards river-bed.

In addition to the above a large area of land is known to be held under miners' rights and mineral licenses, but there are no means of ascertaining even approximately the extent of such area. There is also a considerable quantity of mineral land which has been sold conditionally or absolutely.

The applications under section 28 of the Mining Act for permission to mine under reserved lands, made in 1882, number 357. During the year 244 such applications were dealt with, the areas granted being for

Coal .....	a.	r.	p.

Shale.....	8	2	32
Coal and shale .....	10,400	0	0
Silver and gold.....	10	0	0
Copper .....	2	2	0

During the greater part of last year the Geological Surveyor in charge and his staff were engaged in arranging in that portion of the Garden Palace which had been set apart as a Mining Museum the very valuable collection of fossils and minerals belonging to the Department, and had nearly completed the arrangement and labelling of the collection when the fire occurred by which the Garden Palace and all its valuable contents were destroyed before the public had had an opportunity of inspecting the collection, the arrangement of which had cost so much labour and reflected so much credit upon Mr. C. S. Wilkinson and his staff. Some idea may be formed of the labours of these gentlemen, and of the loss sustained by the public from the following few facts relating to the museum and its contents: The floor space of the museum was about 15,000 square feet; the number of glass-cases was 160, and about twenty cabinets arranged in such a manner that ample space was provided for conveniently inspecting the contents of each case. Contained in such cases and cabinets were fossils and mineral specimens to the number of about 60,000.

Arranged around the walls on tables and elsewhere, in suitable places, were large blocks of coal shale, iron, copper, tin, lead, &c., and in racks provided for the purpose were the cores obtained from the bores at the Sutherland Estate, near Sydney, Temora, and Brisbane Water. There were also arranged in racks and along the walls more than 300 samples of the various timbers of the Colony, which had been dressed and polished so as to show the grain and character of each kind of wood. There were also hung upon the walls a fine collection of maps and sections. In a room adjoining the museum, intended as a library, was arranged and catalogued a large and valuable collection of works on geology and the allied sciences.

After

After the destruction of the mining and geological museum by the burning of the Garden Palace, circulars soliciting donations were issued by the late Secretary for Mines to foreign countries and the neighbouring Colonies, as well as to all parts of New South Wales, in response to which many collections have been promised; from New Caledonia, New Zealand, and Queensland, have already been forwarded typical collections of their rocks, minerals, and fossils, while in New South Wales the request has been most generously met, many gentlemen handing over their private collections; and on all sides universal regret has been expressed and active sympathy shown. Many of the country officers of the Department have also materially assisted in collecting and forwarding specimens.

From the 26th September to the 31st December, 140 donations were received, many of them comprising large collections; since the latter date to the 31st March the number has been increased to 203.

Between the first-mentioned dates the number of specimens registered was 2,712, which has been increased to 3,668 to the end of March, 1883 (exclusive of many duplicates which have been labelled for the purposes of exchanges, collections, &c.)

Two large collections from the Newcastle and Yass districts, as well as a considerable number of specimens of bones of extinct animals from the Wellington caves, now being dealt with, will increase this number to about 5,000 specimens.

Several thousand specimens of fossils which can be identified have been recovered intact from the ruins of the Garden Palace, which will also materially swell the number of specimens at present in the temporary Museum.

A representative collection of the minerals of the Colony has been prepared for exhibition at Amsterdam, and comprises large blocks of all the minerals of commercial value produced in New South Wales, besides smaller samples of numerous minerals and fossils.

In the month of November, 1882, Mr. H. Y. L. Brown, who had rendered most valuable service as first assistant to the Geological Surveyor in charge, resigned his position, having accepted the appointment of Geological Surveyor in the Colony of South Australia at a salary very much higher than that attached to the position he occupied in this Colony. The loss of Mr. Brown's services would have been severely felt but for the fortunate circumstance that at this juncture we were able to induce Mr. E. F. Pittman, Assoc. Royal School of Mines, &c., &c., to resume the position of first assistant, which he had resigned in November, 1881. The position of second assistant, which had been some time vacant, was filled by Mr. T. W. E. David, B.A., F.G.S., of Oxford University and the Royal School of Mines. Mr. David was selected in England for the appointment, and reached Sydney in November last.

A geological survey of the Forest Gold-field, in the Orange district, has been completed, and is now in course of publication. The map with its accompanying sections and explanatory notes, indicates the position of the auriferous reefs and leads, and the probable occurrence of other leads under the basaltic area between the Forest and Wentworth Gold-fields. Besides reporting upon the application for lands in gold-fields and mining reserves, and other departmental work, the Geological Surveyors have examined the Mittagong, Springwood, Tenterfield, and Yass districts, and their reports thereon will be found in connection with the Annual Report of the Geological Surveyor in charge.

A large number of mineral specimens submitted by miners and others for the opinion of the Geological Surveyor have been examined and reported upon, but the actual number cannot now be given in consequence of the destruction of the register in the Garden Palace.

During the year it was decided to make certain changes in connection with the survey of mining leases, &c., as it was found that the licensed surveyors could not make the measurements as expeditiously as in the interest of mining they should be made without neglecting the more profitable work often urgently required of them by the Surveyor-General. The changes involved the employment of a separate staff of surveyors, who are paid partly by salary and partly by fees, and who are solely employed upon mining work. By means of the staff surveyors much of the work that was in arrear in certain localities has been cleared off, and there is little doubt that during the present year the staff, though small, will be found capable of coping satisfactorily with the work and effecting the measurements within a very short time after the applications are lodged, so that the main cause of complaint against the leasing system, namely, delay in the issue of leases, will be removed. The Deputy Surveyor-General having resigned the position of Chief Mining Surveyor the Geological Surveyor has undertaken to perform the duties temporarily.

The chief draftsman and his staff during the year have, in addition to the ordinary work of the Branch, performed the following work :—

*Maps compiled and published.*

Mineral maps of the parishes of Wylie, Undercliff, Ruby, Corry, Maryland, Marsh, Cullendore, and Bookookoora, county of Buller and the parish of Annandale, county of Clive.

*Maps in course of compilation.*

Map of the staniferous country, comprised within the parishes of Severn, Boyd, Bloxsome, Scott, Bald Nob, and Mitchell, county of Gough, and map of part of the Coolongolook gold-field.

*Maps prepared for office use only.*

Map of Milburn Creek Gold-field, and map of part of Black Range Gold-field, parish maps of Kingsgate and Clive, county of Gough.

*Miscellaneous Work.*

Map of country in the vicinity of Forest Reefs, prepared for Geological Branch.

Plans of parishes of Swinton, Darby, Cope's Creek, Blake, Clive, Anderson, and Herbert, prepared for use of Wardens.

Alterations and additions made to large geological map of the Colony, prepared for exhibition (since destroyed in Garden Palace fire).

When in pursuance of the resolution of the Legislative Assembly it was decided that the Department should procure diamond drills, the services of Mr. W. B. Henderson, who had for some time occupied the position of manager of the boring operations of the Australian Diamond Drill Company, were secured to superintend the purchase and working of drills by the Government.

Tenders were invited for the supply of drills but no tender was received, except that of the Australian Diamond Drill Company, from whom six diamond drills were eventually purchased on the 30th June, 1882.

As these drills were to be handed over on completion of contracts then in hand they did not come into the possession of the Department until towards the end of the year.

Only three of the six drills were in readiness to undertake work up to end of December ; the other three were undergoing repairs.

The first drill delivered was set to work near Gosford to extend a bore in search of coal from a depth of 800 ft. At 892 ft. a seam of coal, containing bands 5 ft. 11 in. in thickness, was cut, and the work was then discontinued.

This drill was then removed to near Cooranbong, to put down a bore in search of coal, a very interesting undertaking as no test bores with diamond drill had previously been put down at or near that locality.

The second drill, available for work, undertook a bore at Long Swamp, near Marulan, and commenced erecting machinery on the 13th November, 1882, and on the 31st December had reached the depth of 99 ft.

The third drill was removed to the site of operations on the Holt-Sutherland Estate on the 27th November, and had bored 72 ft. up to the end of the year.

Under the able direction of the Superintendent very marked improvements have been made to these drills since they came into the possession of the Department.

The size of the diameter of the bores has in most instances been increased.

It was contemplated to add appliances to these diamond drills, which would fit them for use in alluvial soils with as much success as in rocks. This has hitherto been found a great defect in the construction of diamond drills.

A stock of steel tubing of special make has been ordered from Glasgow, for the purpose of having it converted into core-barrels. It is anticipated that fully 50 per cent. will be thus saved, as compared with the previous cost of these connections. 2,000 ft. of steel drill rods and some 3,000 ft. of artesian tubing have also been secured in order to provide the drills with a full supply of working connections.

Plans have been prepared, under the direction of the Superintendent, for more powerful drills, the mechanism of many of the parts being altered to specially suit the requirements of the inland districts of the Colony.

The engineers in charge of the various drills are each supplied with printed tabulated weekly report sheets, prepared by the Superintendent in such a manner as to afford the most minute information concerning the sections of strata passed through, and the wear and tear and the lasting nature of several classes of diamonds, without entailing upon the engineers unnecessary labour in furnishing the information required.

Diamonds used in boring are classified before being issued to the Engineers, and information is thus obtained so as to show the peculiar qualities of each particular class, which is one of, if not the most important points in the successful working of diamond drills.

Provision

Provision is made in the weekly report sheets for a complete section of each bore put down. The valuable information thus obtained might with advantage be made available to the public by exhibition in suitable places.

The collection of geological and other scientific information is also provided for, a register of water or minerals discovered being kept. In boring on private lands where possible the core obtained from the bore is retained by the Department.

Much care, time, and study has been devoted to this branch of the Department with the object of making the drills as nearly self-supporting as possible, in addition providing a means by which the mineral resources of the Colony may be developed with the least practicable expense to the explorers.

The number of drills possessed by the Department has not been sufficient to meet the demand up to the end of the year, but it was expected that when all the drills were at work the Department would be able to comply with all applications, which on public grounds merit attention. It is to be regretted that the miners generally have not, owing it is believed to want of combination or co-operation, availed themselves of the use of the drills in searching for and testing the deep leads and other auriferous and mineral deposits.

In consequence of the diamond drills not being suitable for searching for a subterranean water supply in the arid parts of the interior it was decided to purchase for this purpose water augers, such as were in use for a similar purpose in the adjoining Colony of Victoria.

Five water augers were obtained during the year and orders were given for the supply of three others.

Of the machines received three were forwarded to work on the line of road from Bourke to Mount Browne, and after great difficulty reached the site of their operations on the 13th December.

Another machine was forwarded to Girilambone, but owing to unforeseen difficulty in the selection of a suitable site work in this locality was considerably delayed.

The other machine was forwarded to Grafton on 14th November, and started boring on the 27th.

All of these machines have been employed in searching for water, but up to the end of the year no extensive or deep boring had taken place owing to the want of the proper description of tubing, which was not obtainable in the Colonies.

Upwards of 6,000 feet of suitable tubing, varying from 7 inches to 3 inches in diameter, has been ordered from the makers for the purpose of working these augers on the "Telescope" system, the only system known capable of coping with alluvial country containing drifts or swelling clays, such as our western plains.

There has been an unexpected delay in the delivery of this tubing owing to the inability of the makers to meet the great demand; but from advices received it appears that a good supply has been shipped from Glasgow.

There is every reason to believe that with the assistance of this tubing the machines will produce good results during the current year. Of course in all such operations it is necessary to recognize the fact that no amount of care or skill in the selection of sites or in the conducting of the work will do more than reduce the risk of failure. However, one successful bore frequently compensates for a large number of failures.

The foreman-in-charge of each water auger gives full information on printed weekly report sheets of the sections of strata passed through, the depth at which water is struck, and the quantity and quality of the water, samples of which are obtained and forwarded for analysis.

The information contained in these reports is made available to the Geological Surveyor, whose advice is frequently sought in the selection of sites for the working of both drills and augers. The Superintendent is untiring in his exertions and spares no effort to bring to a successful issue all the works undertaken. And I have no hesitation in saying that his great experience has enabled him to conduct the operations of the diamond drills in such a manner as to secure the best results at the smallest possible cost.

It affords me much pleasure to record my appreciation of the valuable assistance which Mr. Herring, the Chief Clerk, at all times renders me, and to testify to the satisfactory manner in which as a rule the gentlemen under him perform their duties. I gladly acknowledge the readiness with which the Registrar, Mr. Binny, and the wardens aid me in conducting the business of the Mining Branch of the Department.

The results of our mining operations in 1882 on the whole compare favourably with those of the year 1881, as will be seen by reference to the following table:—

The aggregate value of Minerals, the produce of New South Wales, for the years 1881 and 1882 respectively compared.

Minerals.	1881.			1882.			Increase		Decrease.	
	Quantity.	£	s. d.	Quantity.	£	s. d.	£	s. d.	£	s. d.

Aggregate increase for the year .....							409,154	7 10		

The only minerals which show an increase in value as compared with the preceding year are coal, shale, tin, and asbestos, while the value of the output of gold, silver, copper, antimony, lead, bismuth, and mixed minerals in 1882 is considerably less than that of 1881.

From the following table it will be seen that the aggregate value of our mineral products in 1882 is £2,782,344, exceeding the value of the output of any previous year, and exceeding the decimal average, by £401,742:—

The following Return shows the Quantity and Value of Gold, Coal, Shale, Copper, Tin, Silver, Iron, Antimony, Lead, Asbestos, and Bismuth produced in the Colony of New South Wales during the last ten years:—

Year.	Gold.		Coal.		Shale.		Copper and Regulus.		Tin and Tin ore.		Silver.		Iron.		Antimony and Ore.		Lead and Ore.		Asbestos.		Bismuth.		Mixed Minerals.		Total.

GOLD.

From the reports furnished by the Wardens and Mining Registrars it is evident that the drought which continued through the greater part of the year seriously retarded mining operations throughout the gold-fields. It is true that in some few localities the absence of rain enabled the miners to work portions of river-beds which in ordinary seasons are under water, and are consequently inaccessible. But the drought and scarcity of grass rendered prospecting most difficult, if not entirely impracticable, until the breaking up of the drought in the last quarter, hence few discoveries of importance were made during the year.

The yield of gold from Temora shows a large increase upon the previous year, but it is to be feared that yield will not be maintained unless the continuation of the deep lead be discovered. Mr. Warden De Boos says:—The continuation of the deep lead lost a little below the Frenchman's claim has not been sought for in a sustained systematic manner in the right direction—that is to say, to the left or west side of the lead. The Inspector of Mines thinks that there is a large area of auriferous country which has not yet been prospected, and that if prospected new discoveries are likely to be made.

The

The output of gold in the Albert district, so far as can be ascertained from the escort returns, shows a decrease as compared with that of the preceding year, but there is reason to suppose that some of the gold from this district passes by private hands into South Australia, consequently the actual yield may be much larger than that recorded. Mr. Warden King, in his report, says that until November all the gold won was obtained by dry-blowing, a process which is not only tedious but is attended with great loss of gold.

Owing to the great heat and dryness of the climate the district must under favourable circumstances be a most difficult one to prospect; it is therefore not surprising that little was done in the way of prospecting during the year. Although much has been done in the construction of dams and reservoirs for the storing of water, the present number being fifty-eight, the Warden is of opinion the quantity impounded during the last months of the year will not last more than two or three weeks. The quartz reefs at Warratta Creek are said to show good prospects, and if the three Companies who have machinery on the ground or on the road succeed in getting their batteries erected these reefs will probably be well tested. In several shafts water has been struck at a depth of about 80 feet; this will doubtless prove a great boon when appliances for raising it shall have been supplied, if the supply prove permanent and sufficiently copious. There appears to be a danger of the supply of fuel being inadequate to the requirements of the locality if the reefs should be extensively worked, so that the development of this field is beset with difficulties. Probably no gold-field has been discovered in the Colony which is calculated to tax the perseverance and ingenuity of the miner to a greater extent than the Albert Gold-field, and scarcely any event would lead to the settlement of a considerable population in that remote district except, perhaps, the discovery of rich and extensive deposits of gold.

In the Bathurst district the Warden states—very little rain fell between January and November, the creeks never flowed, and the rivers were chains of water-holes; dams were empty and springs exhausted. More than half the gold won during the year in the Trunkey division was obtained since November. It is to be regretted that the anticipations respecting the reefs at Mount M'Donald have not been realized, though there is still good reason to believe that they will yield payable though not such handsome returns as were expected. The Inspector of Mines entertains a very high opinion of the field. The extraordinary deposit at Browne's Creek, which is now 70 feet wide, is still being profitably worked, the output of gold being about 300 ounces per month. The Flat Reef, on the Belabula (from 2 to 10 feet wide), is so favourably situated that it is believed 1 dwt. per ton will pay when in full swing, every arrangement for labour-saving having been made. The crushing machinery is worked by water power. At Lucknow the Reform Company is working the pyritous lode, which averages 2 feet, has a footwall of diorite and a hanging wall of serpentine. The Company has been expending large sums of money in putting the mine into thorough working order with a view to turn out large quantities of ore. Two parcels have been shipped to England for treatment, and from 150 tons of refuse 319 ozs. 12 dwts. 2 grs. of free gold has been extracted.

From the very interesting report furnished (see Appendix to Geological Surveyor's report herewith) by Mr. Brown upon the Forest Reef Gold-field, of which he made a geological survey during the year, there appears to be one or more main deep leads and numerous tributaries under the basalt. Mr. Brown says:—"The ancient valley or deep ground, as indicated by the outcrops of slate and diorite through the basalt crosses, Browne's Creek, near the south-west corner of Graham's, and passes in the direction of Forest Reefs, being joined by branch valleys from the north and south, and afterwards by Lumpy and the Blacksmith's Leads." These two leads and Tigeroo have traced down and worked till they reached a depth of about 100 feet. Lumpy Lead has been traced for a mile and a half, at which point it reaches the main flow of basalt. Tigeroo shaft is about 98 feet deep, the surface at this point being 100 feet below the general level of the tableland, towards which the other leads run. In the Great Extended claim, they have sunk through 200 feet of basalt, proving ground 100 feet deeper than any before worked, except Tigeroo. The longest drive extends some 35 feet from the shaft, has crossed a gutter containing cemented wash, from which 141 loads washed in October last gave 140 ozs. 13 dwts. of gold. This, Mr. Brown regards as a branch of the main lead, the width of the basalt flow between the outcrops of bed rock being about 20 chains, leaves plenty of room for a main run of deep ground on either side of the shaft. On the other side, or southern watershed of the old dividing range, Mr. Brown says, "there is a large area of flat country, covered with alluvial soil which is a promising locality for alluvial leads. Up to the present only one gully, called Mullocky Gully, has been worked here."

The Warden at Orange says a reef now being worked at Belmore is 58 feet wide. 17 tons of quartz from a tributary yielded 21 dwts. per ton. The reef at Lucas's Gully, 15 to 18 inches wide, promises well; picked pieces of stone yield an ounce to the lb. weight. Another claim in the locality is producing stone containing 62 ozs. silver and 2 ozs. 15 dwts. of gold per ton. At Black Springs, near Ophir, a reef is being opened that promises well, and good looking stone is found between this locality and Golden Point. At Cadia a nugget weighing 70 ozs. was obtained from some surfacing. In

In the Tambaroora and Turon district the Wardens say many small claims taken west of Hill End are being worked with success, paying from £2 to £7 per week per man, and the Hawkins Hill Consolidated Company has done a great deal of prospecting work by means of rock-drills and otherwise. In the Ironbarks division powerful machinery has been brought on to the ground, with a view to sluice the extensive alluvial drifts which border the river Macquarie. Quartz-reefs showing stone of exceptional value have been discovered in the vicinity of the Bogan, and a township is now growing up at Tomingly. To the south and west of Tomingly other discoveries have lately been reported, and it is not improbable that an extensive gold-field will be opened in the line of country which stretches southward towards Parkes and northward to the Bogan. At Tomingly a large quantity of stone is at grass, awaiting suitable crushing plant. The machine first erected was found to be unsuitable, and had to be taken down and replaced by an ordinary battery. Gold shows freely in stone taken at random from the heaps. Remarkably rich veins have been discovered at Ten-mile Ridges, 17 miles south of Tomingly. Gold has been discovered near the Springs Railway Station, and fair prospects have been obtained. The locality is a basaltic hill, which forms a portion of the descent to the Bell River.

In the Lachlan district the Wardens report:—At Forbes, the Bald Hills, and Queen's Leads the prospects are improving. A battery has been erected, which will remove the obstacle to the development of the Pinnacle Reefs. At Cargo, Odgers and party are working a face of wash 70 feet wide and 18 inches thick, in the 40-foot level of their claim at Gum Flat. The prospects at Young are brighter than they have been for a long time. Some 300 acres of land in the vicinity of the town, and close to the Burrangong Creek, have been applied for to lease. The ground is known to be auriferous, and likely to pay well, but the miners have hitherto been prevented from working it by reason of the want of appliances to overcome the heavy influx of water. Now that there is a prospect of the necessary capital being available to procure machinery, and open up the ground systematically, there is found to be a difficulty in consequence of so much of the land in that locality having been surveyed and sold. Minter and party have erected machinery on their lease, and have sunk a shaft 70 feet. About 100 miners are making fair wages at Murrumburrah. There is at present no battery at Barmedman, the stone having to be sent to Temora to be crushed. There is a large quantity of stone at grass, awaiting the completion of the crushing plant which is being erected. Hitherto very little work has been done on the reefs below the water level—about 85 feet—but there is now a prospect of the reefs, both at Barmedman and Sebastopol, being thoroughly tested and systematically opened up, and it is believed they will prove to be highly remunerative. A new reef, containing a fair show of gold, was discovered in December, by Conway Bros., 21 miles N.W. of Temora.

In the Mudgee district the drought was severely felt and did not break till October. At Gulgong there are several claims that are paying moderately well. The result of Mr. Scully's prospecting operations on the Black Lead is looked forward to with some anxiety, as, in the event of his succeeding in opening up the continuation of that lead, a fresh start will be given to deep alluvial mining in that locality. There has been great delay in carrying out these works, but the difficulties have no doubt been exceptional. Although the field is at present dull there are grounds for believing that it will revive, as it is scarcely possible that the gold deposits have been exhausted.

In the Tumut and Adelong district a new reef has been discovered at Muttama, from which a trial crushing of 10 tons gave 4 ozs. of gold per ton. A dam has been constructed and a site for a battery has been selected. In the early part of the year an alluvial lead was found running at right angles from the Doctor's Reef at Muttama; there are ten payable claims on Crown lands and four on private lands; depth of lead from 30 to 110 feet; width of lead from 15 to 100 feet; gold coarse and water-worn. The deep ground at the lower end of the lead has not been tested in consequence of too much water. At Albury a new reef has been discovered in Portuguese Gully, and a fair amount of mining is being carried on. At Corowa a reef has been tested to a depth of 60 feet; the yield of gold obtained was equal to about  $\frac{1}{2}$  an ounce to the ton; other tests have been made in the locality, but it is thought the reefs have not had a fair trial in consequence of the want of facilities, the reefs being on private land. A large amount of money has been invested in the construction of extensive works for hydraulic sluicing at Kiandra, and there is the strongest probability that large quantities of gold will be obtained as soon as sluicing operations have been fairly started.

At Adelong, according to the report of the Inspector of Mines, the principal alluvial mines are making satisfactory progress, and great improvements have been made in the mode of working some of the quartz-mines which are now owned by capitalists, who possess the necessary capital and enterprise to work them systematically, with the aid of improved appliances. As the reefs in this locality have been worked to a greater depth than in any other part of the colony it is gratifying to know that they are likely to receive a satisfactory trial, and it is to be hoped they will prove remunerative at still greater depths than have yet been reached.

In the Southern District the drought has been favourable to the working of the claims in the Araluen River, and at Nerriga it enabled the miners to reach parts of the bed of the Shoalhaven River, which cannot in ordinary seasons be worked; the returns of gold from this river clearly indicate that it has not been worked out. In other parts of the district there has been a great decrease in the yield, partly due to the drought, which put a stop to ground sluicing, partly to the fact that much of the ground in the Braidwood division has been worked out.

Two batteries have been erected at Captain's Flat in the Queanbeyan division, where the reefs recently discovered are large, and from trials made are likely to prove payable. At Montreal the terraces containing auriferous deposits have been worked to the borders of Wallaga Lake; there the work has been abandoned for want of the capital necessary to carry on the work into or under the bed of the lake; but it is understood that an effort will be made by some capitalists to undertake the exploration of the terraces beyond the margin of the lake, and from the information furnished respecting the yield of the alluvium in the locality there is a strong probability the efforts, if properly conducted, will prove profitable to adventurers, and possibly open up a considerable extent of payable ground. On Mount Dromedary an 8-horse battery has been erected, which will doubtless help to develop the resources of that locality. At Whittaker's Creek, near Wagonga Heads, some reefs have been discovered, which promise to be both permanent and payable; they are from 2 to 4 feet wide, and arrangements have been made for the erection of a battery. The Donkey Reefs, near the Moruya Silver Mine, have been reopened, so have some of the old reefs at Mogo.

In the Peel and Uralla District, in the Barraba division, there are evidences of a revival; the Garryowen, Addison, Bonds, Kelly, and Woods' reefs, have been taken up, and extensive machinery is being obtained from England to work them on a large scale. The reefs at Crow Mountain are also being worked again, and machinery is on the ground. In the Bingera division the "All Nation's Reef" has been taken up again, and machinery will be erected; several claims have been taken up on the flat at foot of Cemetery Gully, and it is thought that if the water can be overcome a deep lead will probably be opened up. This flat has long been regarded with favour, as likely to contain a rich alluvial lead; but the difficulty of contending with the water has hitherto deterred miners from testing the deep ground. Some of the mines at New Ballarat continue to give good returns, the Ballarat Reef, which is patchy, containing some very rich stone.

In the Clarence and Richmond District there are reasonable grounds for anticipating an improvement during the coming year on some of the fields. The Tower Hill Co. at Dalmorton are putting in a tunnel which is expected shortly to strike the reef at a depth of 300 feet, and if it prove payable at that depth the battery will at once start to work again. At Narra Creek two mills have been actively employed upon the stone raised from the several reefs, and there is a probability of another battery being erected at the Hidden Treasure Reef, some 4 miles from Nana Creek. The prospectors at Mann River have a reef 3 feet wide with a fair show of gold at a depth of 42 feet.

The rough and mountainous character of the country has much retarded the development of this, the cost of carting the stone to the battery being twice or thrice the cost of crushing. Fifteen distinct gold-bearing reefs have been opened, but none have been worked to only a very moderate depth.

The remarks of the Inspector of Mines upon the Copeland and surrounding fields are well worthy of perusal as showing that the reefs are rich and permanent, requiring only skill and capital to develop them, the rugged character of the country being the chief obstacle to be overcome. From the size of the reefs and the yields obtained this should be one of the most important quartz districts in the Colony.

Though the rush to the Nowendoc diggings was a failure, there are strong grounds for believing that payable deposits, both alluvial and quartz, only wait a thorough search by experienced prospectors. The mountains between Nowendoc and Hanging Rock—a distance of 50 miles—are said to be auriferous, but have not yet been prospected to any extent.

The Inspector of Mines calls attention to some alluvial deposits in the Nundle Gold-field, which if an ample supply of water were brought to bear upon them would probably prove of immense value, as the wash, though not rich, is of unusual thickness. In one place from the surface to a depth of 25 feet has been tested and found to contain gold, and it is probable that the alluvium down to the granite—a depth of 100 feet—will pay.

A careful review of the prospects of our gold-fields, as gathered from the reports furnished by the Inspector of Mines, Wardens, and Mining Registrars, shows that the decrease in the output of gold for the year is mainly if not wholly due to the drought, and there are evidences of an improvement in the character of the works on many of the older fields which may be due to the recognition of the fact that some of our auriferous deposits cannot be developed or profitably worked without the aid of proper appliances and the adoption of system in the conduct of the necessary operations, which if persevered will doubtless

doubtless lead to an increased yield of gold and the working of large tracts of country now lying idle. The following information has been kindly furnished by R. Hunt, Esquire, F.G.S., the Deputy Master of the Royal Mint:—

QUANTITIES of gold, the produce of New South Wales, received into the Royal Mint, Sydney, during 1881 and 1882 compared.

The following table is compiled from information furnished by the Collector of Customs:—

## EXPORTS—GOLD—1882.

Gold.		Quartz Tailings and Pyrites.		Total.	
Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
ozs. dwts.	£149,123	pkgs. 849	£3,331	ozs. dwts. grs.	£153,519
36,162 7		604 cwt. pyrites.	£1,065	37,352 7 0	

I am indebted to the Deputy Master of the Royal Mint for the information that 36,071·85 ozs. of the gold (valued at £148,769) which was exported during the year 1882, passed through the Mint, and is included in the Mint Return, consequently only 1,381 ozs., valued at £4,750, remain of the above quantity to be added to the quantity which was sent to the Mint for coinage. Therefore, assuming that all the gold won during 1882 was received in the Mint for coinage, or was passed through the Custom-house, our gold yield for the year was 130,523·28 ozs., valued at £495,989 15s. 3d., being less by 19,104 ozs. in quantity and £70,523 in value, than the output of 1881. Though the output of gold for 1882 is less than that of 1881 it is larger than that of any previous year since 1876.

The returns of the yield of gold furnished by the Mining Registrars show a larger yield by 11,327 ozs. than that supplied by the Deputy Master of the Mint:—

RETURNS of Gold for 1882 from Mint and Mining Registrars compared.

	Mint.	Mining Registrars.	Excess.	Deficiency.

				3,667

The quantity returned by the Mining Registrars exceeds the quantity sent to the Mint by... 11,327

The returns of gold furnished by the Mining Registrars for the year 1882 as compared with such returns for 1881, show a decrease in the output of 13,537 ozs. :—

MINING Registrars Returns of Gold for 1881 and 1882 compared.

Less increase .....				3,984
Decrease in yield for 1882 .....				13,537

The following table shows the results obtained from some parcels of alluvium during the year. The quantity in respect of which particulars have been obtained is very small, but the average yield is high. It is much to be regretted that the want of system and other circumstances connected with the mode of working our alluvial deposits renders it very difficult to obtain from the mine-owners more ample details for the purposes of comparison on a large scale.

COMPARATIVE Statement of Average Yields from Alluvial Mines for 1881-82.

1881.				1882.

From our quartz-mines the returns this year have been more full, and show a very satisfactory average, namely, 19 dwts. 13·88 grs., or nearly 1 oz. per ton. There is, I think, reasonable grounds for expecting that in time less reluctance to furnish complete returns from all the mines will be evinced, and then I trust these tables will prove really beneficial.

COMPARATIVE Statements of average yields from Quartz Mines for 1881-2.

The number of miners engaged in gold-mining during the year, so far as can be gathered from the returns furnished (which, by the way, are not complete) is 9,215. Of these 7,843 are European, and 1,372 are Chinese. Taking the output of gold in 1882 to be 140,469 ozs., as returned by the Mining Registrars, valued at £526,521, the earnings of each miner would appear to be 15 ozs. 4 dwts. 20 88 grs., equal in value to £57 2s. 8 97d. per annum. It may, however, be taken for granted that the whole of the miners were not engaged in gold-mining during the whole year, because in many districts, as will be seen by reference to the reports of Wardens, &c., annexed, mining was suspended during several months for want of water.

During the year the following assays have been made by Mr. C. Watt, the Government Analyst :—  
GOLD.

Stone from 8 miles west of Dubbo—Neither gold nor silver.  
 Sand from Hanging Rock—Fine gold at the rate of 2 ozs. 3 dwts. per ton; silver, a trace.  
 Stone from bed of creek, West Kempsey—Gold, a trace; no silver.  
 Stone from shaft, West Kempsey—Gold, a trace; no silver.  
 Pyritous stone from Moreton Creek, Hastings River—Fine silver at the rate of 1 oz. 2 dwts. per ton; no gold.  
 Quartz from between Tuena and Oberon—Silver, a trace; no gold.  
 Pyritous stone from between Tuena and Oberon—Silver, a trace; gold, a trace.  
 Pyritous stone from Tamworth—Silver, a trace; no gold.  
 Pyritous stone from Gloucester District—Silver, a trace; no gold.  
 Stone from Blue Look-out Claim, Dogtrap—Gold, a strong trace (about 3 dwts. per ton); no silver.  
 Stone from Ironclad Claim, Dogtrap—Gold, a trace (under 2 dwts. per ton); silver, a trace.  
 Stone from Lady Sarah Reef, Dogtrap—Fine gold at the rate of 20 ozs. 13 dwts. per ton; fine silver at the rate of 3 ozs. 5 dwts. per ton.  
 Stone from Forlorn Hope Reef, Dogtrap—Fine gold at the rate of 1 oz. 4 dwts. per ton; silver at the rate of 10 dwts. per ton.  
 Pyritous stone from near Rydal—Gold, a trace; no silver.  
 Stone from Fish River Creek—Fine gold at the rate of 10 ozs. 4 dwts. per ton; silver at the rate of 2 ozs. 11 dwts. per ton.  
 Quartz from Glen Bower—Gold, a trace; no silver.  
 Stone from near Tamworth—Silver, a trace; no gold.  
 Stone from Crow Mountains—Gold at the rate of 3 dwts. per ton; no silver.  
 Quartz from MacLaughlan River, County Wellesley (1)—Neither gold nor silver.  
 Quartz from MacLaughlan River, County Wellesley (2)—Neither gold nor silver.  
 Quartz from MacLaughlan River, County Wellesley (3)—Neither gold nor silver.  
 Quartz from MacLaughlan River, County Wellesley (4)—Neither gold nor silver.  
 Stone from Braidwood District—Fine silver at the rate of 5 ozs. 19 dwts. per ton; no gold.  
 Stone from road from Port Macquarie to New England—Neither gold nor silver.  
 Stone from head of Nambucca River—Silver, a trace; no gold.  
 Ochreous ironstone from Temora—Neither gold nor silver.  
 Stone from Goonong Mountains, near Glen Innes—Silver at the rate of 14 dwts. per ton; no gold.  
 Sand from New Guinea—Neither gold nor silver.  
 Copper ore from Manaro District—Gold at the rate of 2 ozs. 19½ dwts. per ton; silver at the rate of 18 ozs. 15½ dwts. per ton; metallic copper 27·4 per cent.  
 Galena from Manaro District—Gold, none; silver at the rate of 9 ozs. 16 dwts. per ton; lead, 69 per cent.  
 Quartz from Louisa Creek—Neither gold nor silver.  
 Stone from Bundarra—Gold, a trace; silver at the rate of 1 oz. 2 dwts. per ton.  
 Stone from Glen Innes—Gold, a trace; silver, a trace.  
 Iron pyrites from near Glen Innes—Gold at the rate of 4 dwts. per ton; silver at the rate of 1 oz. per ton.  
 Stone from near Bendemere—Neither gold nor silver.  
 Iron ore from Dromedary—Gold, a trace; no silver.  
 Iron stone from Baily's Reef, Dromedary—Gold at the rate of 3 ozs. 10½ dwts. per ton; silver at the rate of 1 oz. 12 dwts. per ton.  
 Iron stone from Baily's Reef, Dromedary—Gold at the rate of 1 oz. 7 dwts. per ton; silver, a trace.  
 Stone from Gallah Creek, 8 miles west of Araluen—Gold, a trace; silver, a trace.  
 Quartz from near Kingsgate—Gold, a trace; no silver.  
 Quartz from Maloon—Silver, a trace; no gold.  
 Iron stone from Wagga Wagga—Gold, a trace; no silver.  
 Quartz from Wagga Wagga—Silver, a trace; no gold.  
 Stone from Bathurst (1)—Fine gold at the rate of 3 dwts. per ton; silver, a trace.  
 Stone from Bathurst (2)—Fine gold at the rate of 1 oz. 12 dwts. per ton; silver, 5 ozs. 1 dwt. per ton.  
 Antimony ore from Bendemeer—Fine silver at the rate of 12 ozs. 8 dwts. per ton; gold, a trace.  
 Quartz from 10 miles from Wellington—Fine gold at the rate of 5 ozs. 8 dwts. per ton; silver, 5 ozs. 1 dwt. per ton.  
 Quartz from Mitchell's Creek—Fine gold at the rate of 1 oz. 6 dwts. per ton; silver, 9½ dwts. per ton.  
 Stone from between Cobborah and Coolah—Silver at the rate of 2 ozs. 12 dwts. per ton; no gold; copper, 4·8 per cent.  
 Stone from Molonglo—Gold, a trace; no silver.  
 Bismuth ore from near Orange—Silver at the rate of 4 ozs. 2 dwts. per ton; gold, a trace; copper, a trace; bismuth, 5·4 per cent.  
 Quartz from near Gundagai (1)—Gold at the rate of 3 dwts. per ton.  
 Quartz from near Gundagai (2)—Gold, a trace.

- Quartz from new reef at Hargreaves—Gold, 5 ozs. 11½ dwts. per ton ; silver, 16 dwts. per ton.  
 Quartz from new discovery near Armidale—Gold at the rate of 47 ozs. 18 dwts. per ton ; silver at the rate of 10 ozs. 18 dwts. per ton.  
 Porous iron ore from Molonglo—Neither gold nor silver.  
 Quartz from Nana Creek—Gold at the rate of 13 ozs. 12 dwts. per ton ; silver at the rate of 2 ozs. 14½ dwts. per ton.  
 Stone from near Marulan—Neither gold nor silver.  
 Stone from near Uralla—Silver at the rate of 1 oz. 2 dwts. per ton.  
 Ore from near Blaney—Neither gold nor silver.  
 Gosson from near Wellington—Neither gold nor silver.  
 Quartz from Coolah and Talbragah Creeks—Silver at the rate of 28 ozs. 6 dwts. per ton ; gold, a trace.  
 Quartz from Talbragah Creeks—Neither gold nor silver.  
 Stone from Talbragar (1)—Neither gold nor silver.  
 Stone from Talbragar (2)—Neither gold nor silver.  
 Stone from Talbragar (3)—Silver, at the rate of 20 ozs. 16½ dwts. per ton ; gold, at the rate of 4 dwts. per ton.  
 Stone from Mann River—Silver, at the rate of 2 ozs. 5 dwts. per ton ; gold, a trace.  
 Quartz from Mudgee—Silver, a trace ; no gold ; copper, 1·5 per cent.  
 Quartz from new reef, Nana Creek—Silver, a trace ; no gold.  
 Pyrites from new discovered lode at Tenterfield—Silver, at the rate of 9 ozs. 11 dwts. per ton ; gold, a trace.  
 Stone from Pinnacle, county Wynyard—Silver, at the rate of 1 oz. 12½ dwts. per ton ; gold, a trace.  
 Stone from Braidwood District—Neither gold nor silver.  
 Stone from Jingellie—Silver, at the rate of 22 ozs. 9 dwts. per ton ; gold, a trace ; copper, 9·5 %  
 Stone from reef near Merimbula (1)—Silver at the rate of 20 ozs. 8 dwts. per ton ; gold, a trace.  
 Stone from reef near Merimbula (2)—Silver, at the rate of 4 ozs. 18 dwts. per ton ; no gold ; lead, 69·8%.  
 Stone from near Denison Town—Silver, at the rate of 19 ozs. 16 dwts. per ton ; gold, a trace.  
 Arsenical pyrites from Vegetable Creek—Gold, at the rate of 16 dwts. per ton ; silver, at the rate of 2 ozs. 1 dwt. per ton.  
 Concentrated tailings from Clarence River at Tooloon Creek—Gold, at the rate of 526 oz. 3 dwts. per ton ; silver, at the rate of 51 ozs. 17 dwts. per ton. (This sample, weighing 6½ lbs., was concentrated from one ton of tailings, therefore the above yield is equal to the rate of about 1½ oz. of gold per ton of tailings.)  
 Stone from Armidale District—Silver, at the rate of 2 ozs. 13 dwts. per ton ; gold, a trace.  
 Stone from New England District—Neither gold nor silver ; antimony, 70·6 %.  
 Arsenical pyrites and galena from New England District—Gold, a trace ; silver, a trace.  
 Ferruginous baryta, from reef near Bathurst—Silver, at the rate of 2 ozs. per ton ; gold, a trace.  
 Stone from Balmoral Company, Mount M'Donald—Traces of gold and silver ; lead, 6 % ; zinc, 5·4%.  
 Tailings from Balmoral Company, Mount M'Donald—Gold, at the rate of 2 ozs. 17 dwts. per ton.  
 Antimony ore from Armidale District—Metallic antimony, 30·1 % ; neither gold nor silver.  
 Stone from Dungowling Creek, near Tamworth—Neither gold nor silver.  
 Stone from Wagga Wagga District—Neither gold nor silver.  
 Pyrites from Little River—Neither gold nor silver.  
 Baryta from Dividing Range, between Queanbeyan and Braidwood—Neither gold nor silver.  
 Pyritous quartz from near Denison town—Gold, a trace ; silver, a trace.  
 Ferruginous quartz from Barraba—Gold, at the rate of 15 ozs. 6 dwts. per ton ; silver, at the rate of 2 ozs. 1 dwt. per ton.  
 Quartz from near Lionsville, Solferino District—Neither gold nor silver.  
 Decomposed granite from near Lionsville, Solferino District—Neither gold nor silver.  
 Diorite with quartz, from near Lionsville, Solferino District—Silver, a trace ; no gold.  
 Granite from Lionsville—Silver, a trace ; no gold.  
 Pyrites from Forest Reefs—Neither gold nor silver.  
 Pyritous stone from Forest Reefs—Gold, at the rate of 1 oz. 12½ dwts. per ton ; silver, a trace.  
 Pyrites from Forest Reefs—Gold a trace ; no silver.  
 Pyritous stone from Queensland Border (1)—Gold, at the rate of 16 dwts. per ton ; silver, at the rate of 7 ozs. 19 dwts. per ton.  
 Pyritous stone from Queensland Border (2)—Neither gold nor silver.  
 Brown hematite, near Dogtrap—Neither gold nor silver.  
 Pyritous stone from Dungowen's Creek, near Tamworth—Neither gold nor silver.  
 Hematite from Dungowen's Creek, near Tamworth—Neither gold nor silver.  
 Pyrites from Dungowen's Creek, near Tamworth—Neither gold nor silver.  
 Stone from new reef at Hargreaves—Gold, at the rate of 12 ozs. 13 dwts. per ton ; silver, 1 oz. 4½ dwts. per ton.  
 Stone from Walcha—Neither gold nor silver.  
 Stone from near Wagga Wagga—Silver, at the rate of 7 ozs. 15 dwts. per ton ; gold, 3 dwts. per ton.  
 Stone from near Molonglo—Neither gold nor silver.  
 Stone from Wagga Wagga District (1)—Neither gold nor silver.  
 Stone from Wagga Wagga District (2)—Neither gold nor silver.  
 Ironstone from 30 miles east of Cagillico.  
 Ore from Narrangarrie Silver Mine, near Denison town—Silver, at the rate of 142 ozs. 2 dwts. per ton ; gold, at the rate of 16 dwts. per ton.  
 Ore from Narrangarrie Silver Mine, near Denison town—Silver, at the rate of 10 ozs. 4 dwts. per ton ; gold, a trace.  
 Ore from Narrangarrie Silver Mine, near Denison town—Silver, at the rate of 16 dwts. per ton ; gold, a trace.  
 Stone from Worrell Creek, Macleay River—Silver, at the rate of 3 ozs. 16 dwts. per ton ; gold, a trace.  
 Stone from near Brown's Creek—Gold, a trace ; silver, a trace.  
 Stone from near Lionsville—Gold, at the rate of 10ozs. 10 dwts. per ton ; silver, at the rate of 3 ozs. per ton.  
 Stone from near Barraba—Neither gold nor silver.  
 Quartz from ranges between Binda and Dogtrap (1)—Neither gold nor silver.  
 Quartz from ranges between Binda and Dogtrap (2)—Gold, at the rate of 12 dwts. per ton.  
 Ore from Yugilbah Station, Clarence District—Neither gold nor silver ; metallic antimony, 49·5 %.  
 Mispickel from reef 15 miles from Moonbi Railway Station—Neither gold nor silver.  
 Pyrites from near Braidwood—Gold, at the rate of 8 dwts. per ton ; no silver.  
 Stone from Big Springs, near Wagga Wagga (1)—Neither gold nor silver.  
 Stone from Big Springs, near Wagga Wagga (2)—Silver at the rate of 3 ozs. 5 dwts. per ton ; gold, a trace.  
 Galena from range along the coast north of Macleay River—Silver, at the rate of 64 ozs. 10 dwts. per ton ; gold, at the rate of 5 dwts. per ton.  
 Quartz from Big Springs, Wagga Wagga—Silver at the rate of 4 ozs. 10 dwts. per ton ; gold, 4 dwts. per ton.  
 Quartz from Mount Grosvenor (1)—Silver at the rate of 6 ozs. 2½ dwts. per ton ; no gold.  
 Quartz from Mount Grosvenor (2)—Silver at the rate of 8 dwts. per ton ; no gold.  
 Quartz from Mount Grosvenor (3)—Neither gold nor silver.  
 Ore from Sunny Corner (1)—Gold at the rate of 12 dwts. per ton ; silver, 38 ozs. 19½ dwts. per ton.  
 Ore from Sunny Corner (2)—Gold at the rate of 4 dwts. per ton ; silver, 9 ozs. 16 dwts. per ton.  
 Ore from Sunny Corner (3)—Gold at the rate of 4 dwts. per ton ; silver, 32 ozs. 5 dwts. per ton.  
 Ore from Sunny Corner (4)—Gold at the rate of 4 dwts. per ton ; silver, 16 ozs. 2½ dwts. per ton.  
 Ore from Sunny Corner (5)—Gold at the rate of 4 dwts. per ton ; silver, 80 ozs. 9 dwts. per ton.  
 Ore from Sunny Corner (6)—Gold, a trace ; silver at the rate of 5 ozs. 19 dwts. per ton ; copper, 10·6 per cent. ; lead, 7·5 per cent.  
 Ore from Sunny Corner (7)—Gold at the rate of 8 dwts. per ton ; silver at the rate of 74 ozs. 2 dwts. per ton.  
 Ore from Sunny Corner (8)—Gold at the rate of 8 dwts. per ton ; silver at the rate of 11 ozs. 13 dwts. per ton.  
 Ore from Sunny Corner (9)—Gold at the rate of 2 dwts. per ton ; silver at the rate of 12 ozs. 5 dwts. per ton.  
 Ore from Sunny Corner (10)—Gold at the rate of 4 dwts. per ton ; silver at the rate of 20 ozs. 17 dwts. per ton.  
 Ore from Sunny Corner (11)—Gold, a trace ; silver at the rate of 5 ozs. 4 dwts. per ton ; copper, 2· per cent. ; lead, 33·5 per cent. ; zinc, 29·7 per cent.

- Ore from Sunny Corner (12)—Gold at the rate of 8 dwts. per ton ; silver at the rate of 25 ozs. 10 dwts. per ton.  
 Ore from Sunny Corner (13)—Gold at the rate of 2 dwts. per ton ; silver at the rate of 76 ozs. 11 dwts. per ton.  
 Ore from Sunny Corner (14)—Gold at the rate of 8 dwts. per ton ; silver at the rate of 22 ozs. 1 dwt. per ton.  
 Granite from Timbarra—Gold at the rate of 8 dwts. per ton ; no silver.  
 Stone from Mount Grosvenor—Gold at the rate of 8 dwts. per ton ; silver at the rate of 19 ozs. 3 dwts. per ton.  
 Quartz from Bald Nob Creek—No gold ; silver at the rate of 1 oz. 12½ dwts. per ton.  
 Stone from Big Springs, Wagga Wagga—Silver, a trace ; no gold.  
 Ore from Old Razor Back, near Ilford—Neither gold nor silver ; antimony, 30·42 per cent.  
 Ore from Glen Elgan River—Neither gold nor silver ; antimony, 35·16 per cent.  
 Quartz from near Wagga Wagga (1)—Gold at the rate of 13 ozs. 17½ dwts. per ton ; silver at the rate of 12 dwts. per ton.  
 Quartz from near Wagga Wagga (2)—Neither gold nor silver.  
 Quartz from near Wagga Wagga (3)—Gold at the rate of 8 ozs. 3 dwts. per ton ; silver, a trace.  
 Quartz from near Wagga Wagga (4)—Neither gold nor silver.  
 Mispickel from near Uralla—Gold, a trace ; silver a trace.  
 Galena from Inverell District—No gold ; silver at the rate of 12 ozs. 5 dwts. per ton.  
 Stone from Carangula—Gold, a trace ; silver at the rate of 8 ozs. 11 dwts. per ton.  
 Quartz from Thorndale near Nyngan—Neither gold nor silver.  
 Quartz from Grenfell Road, near Cowra—Neither gold nor silver.  
 Granite from Timbarra—Gold at the rate of 3 ozs. 13½ dwts. per ton ; silver, 1 oz. 12 dwts. per ton.  
 Mispickel from Uralla—Neither gold nor silver.  
 Pyrites from Mudgee District—Neither gold nor silver.  
 Stone from near Tenterfield—Neither gold nor silver.  
 Stone from Corang Creek, Braidwood District—Gold at the rate of 4 dwts. per ton ; silver, a trace.  
 Stone from Armidale.  
 Quartzite from Gulgong (1)—Gold, a trace ; silver at the rate of 1 oz. 7½ dwts. per ton.  
 Quartzite from Gulgong (2)—No gold ; silver at the rate of 1 oz. 4½ dwts. per ton.  
 Quartz from Bogan District (1)—No gold ; silver, a trace.  
 Quartz from Bogan District (2)—Neither gold nor silver.  
 Stone from Gregadoo near Wagga Wagga (1)—Gold, a trace ; silver at the rate of 3 ozs. 5 dwts. per ton.  
 Stone from Gregadoo near Wagga Wagga (2)—Gold, a trace ; silver at the rate of 16 dwts. per ton.  
 Quartz from Kempsey—Gold, a trace ; silver at the rate of 12 ozs. 13 dwts. per ton.  
 Quartz from Narrangarie—Gold at the rate of 8 dwts. per ton ; silver at the rate of 10 ozs. 12 dwts. per ton.  
 Ore from New England—Gold at the rate of 2 ozs. 9 dwts. per ton ; silver at the rate of 10 ozs. 12 dwts. per ton ; bismuth, 79·5 per cent.  
 Ore from Orange District (1)—Neither gold nor silver.  
 Ore from Orange District (2)—Gold at the rate of 4 dwts. per ton ; silver, a trace.  
 Ore from Orange District (3)—Gold at the rate of 4 ozs. 9½ dwts. per ton ; silver at the rate of 11 ozs. per ton.  
 Ore from Orange District (4)—Gold, a trace ; silver, a trace.  
 Ore from Orange District (5)—Gold, a trace ; silver, a trace.  
 Mispickel from between Tingha and Armidale—Gold, a trace ; silver, a trace.  
 Ore from Glen Innes—Gold, a trace ; silver at the rate of 34 ozs. 6 dwts. per ton ; bismuth, 4·3 per cent.  
 Ore from near Ophir—Gold at the rate of 1 oz. 4½ dwts. per ton ; silver at the rate of 3 ozs. 13 dwts. per ton.  
 Quartz from Wagga Wagga—Gold, a trace ; silver, a trace.  
 Ore from Fairfield, near Boorook—Neither gold nor silver ; zinc, 50·2 per cent.  
 Pyrites from between Emu Creek and Clarence River—Gold, a trace ; silver, a trace.  
 Ore from Carangula—Neither gold nor silver ; antimony, 50·6 per cent.  
 Ore from Cryers Arms Creek near Bungonia—No gold ; silver, a trace ; copper, 21·3 per cent.  
 Ore from near Canoblas—Neither gold nor silver.  
 Pyrites from near Canoblas—Gold at the rate of 8 dwts. per ton ; silver, 1 oz. 12 dwts. per ton.

#### COAL.

The output of coal for 1882 largely exceeds that of any previous year in quantity, and in value it exceeds that of any previous year except 1879, when the average price was higher by 3 0·33 per ton than last year. The average price last year exceeds that of 1881 by 2 2·42 per ton.

The export of coal to both intercolonial and foreign ports as also the home consumption exceed, in 1882, that of any previous year.

There is a very satisfactory increase in 1882 upon the average price of the whole output as compared with the two previous years, but the average prices obtained for export to intercolonial and foreign ports were not as high in 1882 as in 1880.

During the year there have been several new coal-mines opened up, and a considerable amount of work has been done in testing coal lands. The diamond drill has been employed to test the seams of coal at Wyong Creek near Gosford, at Cooranbong near Lake Macquarie, at Long Swamp near Marulan, and at the Holt-Sutherland Estate.

From the Erith Colliery, near Jordan's Crossing, on the South-western Railway, about 50 tons of coal per diem is being raised, most of which is consumed on the railways, mixed with Newcastle coal, and the Berrima Coal Company from their mine at Berrima are raising about 60 tons per diem, which is chiefly used on the railways mixed with Hartley coal. Some new seams of coal have been opened at Emu Creek, 6 or 8 miles west of Bundanoon railway station, and also at Mcryla, 8 or 10 miles east of Moss Vale. A small quantity of coal has also been raised, for the purpose of testing, from the coal-seam at Ballimore, near Dubbo. There is a strong probability that several new mines will be opened up during the current year, and that our output will continue to increase. There are several new ventures in course of development along the line of the Great Western Railway across the Blue Mountains, and also in the Newcastle district. In the event of all these ventures proving successful, and being brought into full work, we shall be in a position to meet any increased demand that is likely to rise for some years to come.

QUANTITY

## QUANTITY AND value of Coal raised from the opening of the Coal-seams to 1857 inclusive.

The following table shows the output of coal in the several districts in 1882 as compared with that of previous years, the increase, both in quantity and value, being most satisfactory. The average price per ton in the Northern District was 9.975 in 1882 as compared with 8.6 in 1881. The average price per ton in the Western district was 6.446 in 1882 as compared with 5.9 in 1881. The average price per ton in the Southern district was 9.1138 in 1882 as compared with 9.125 in 1881.

The report of the Geological Surveyor upon the Mittagong and Berrima districts (hereto appended) contains interesting information.

The accidents which have recently occurred in some of our collieries from the careless use of explosives point to the necessity for some means of regulating the use of the explosives now employed or the introduction of a substitute which may be handled without danger. I am therefore induced to invite attention to the method of breaking down or gutting coal by means of compressed quick-lime and water introduced by the patentees, Messrs. Smith and Moore, in the Shipley Collieries, Derbyshire, where the method has been in use since January, 1882.

The following information on the subject is extracted from a pamphlet by Mr. Sebastian Smith:—

The process has been tried with very satisfactory results in most of the coal districts of England, Wales, and Belgium.

The system has for its objects:—(1.) To take the place of blasting by gunpowder, dynamite, or other explosives, thereby giving absolute immunity from all risk of accidents from explosions. (2.) To avoid the numerous and frequently fatal accidents from falls of coal and roof while working at the face. (3.) To enable the coal-owner to get a greatly increased percentage of large coal from a given area. (4.) To diminish the laborious work of the collier.

The following are among the principal advantages claimed for this system:—

Absolute immunity from explosion of gas, there being no fire or flame.

The heat produced by the slacking of the compressed blocks of lime is not sufficient to ignite paper and it is not possible for unslaked cartridges if thrown away in the workings of a mine setting fire to the gob.

There is no smoke or noxious smell of any kind.

The roof is not shaken by this process, no vacuum is created, as is the case with a blown-out shot, and the coals in falling produce less dust.

Skilled labour is unnecessary; the apparatus is simple and inexpensive, is easily carried about and kept in order, and can be used in narrow cramped workings and thin seams.

After pumping the water into the charged holes the men need not discontinue working as is the case with gunpowder; all risk is avoided by simply moving away from the face of the coal while the sprags are being taken out.

Any number of holes can be loaded and by applying the water to them in quick succession a gradual pressure is brought to bear along the face which causes the coal to fall in large masses.

The mode of operating is to employ nearly pure carbonate of lime. The stone used contains 98-40 per cent. of carbonate and after being carefully calcined is ground into a fine powder. This is conducted to a hydraulic press specially designed and patented by Mr. Sebastian Smith, having a die 2½ inches in diameter and 7 inches deep. A pressure of 40 tons is applied simultaneously to both ends of the column of

of ground lime, which reduces it from 7 inches to  $4\frac{1}{2}$  inches in length, thus nearly doubling its density. A projection in the die forms a groove on the side of the cartridge about half an inch in diameter. These blocks or cartridges are immediately packed into specially constructed air-tight boxes and are then ready to be conveyed to the mines for use.

The shot-holes are first drilled by means of a light boring machine, and an iron tube about half an inch in diameter, having a small external channel or groove in the upper side and provided also with perforations, is then inserted along the whole length of the borehole; this tube is enclosed in a bag of calico covering the perforations and one end and has a tap fitted on the other end. The cartridges are then inserted and lightly rammed so as to insure their filling the bore-hole. After the cartridges have been enclosed by tamping in the same way as gunpowder, a small force pump is connected with the tap at the end of the tube by means of a short flexible pipe and a quantity of water equal in bulk to the quantity of lime used is forced in. The water being driven to the far end of the shot-hole through the tube escapes along the groove and through the perforations, and the calico flowing towards the tamping into the lime, saturating the whole charge and driving out the air before it, the tap is then closed so as to prevent the escape of the steam generated by the action of the water on the lime, and the flexible pipe attached to the pump is disconnected. Experience has shown that after introducing the water there is always an interval before the steam attains a high pressure, so that all danger can be avoided. The action of the steam first takes place cracking the coal away from the roof and this is followed by the expansive force of the lime.

The time occupied in drilling a hole 3 feet deep and  $2\frac{1}{2}$  inches in diameter (including setting up the drill) averages 12 minutes, charging a hole with cartridges and tamping up 4 minutes, and pumping in the water 1 minute.

The sprags are left in under the coal so as to allow the force to exert itself as far back as possible and in many instances the coal is forced off and falls for a distance of several inches behind the end of the drilled holes. In from 10 to 30 minutes, according to the hardness of the seam, on the removal of the sprags the coal falls clean from the roof in large masses practically making no small. If the sprags are removed at once the entire length of coal operated upon falls, but if more convenient two or three sprags can be removed at a time and let down as much coal as is required for loading, leaving the rest to remain spragged up till wanted.

The following is a list of prices of the apparatus:—

	£	s.	d.
Press complete ... ..	65	0	0
Drilling machine, with pair bits complete ... ..	4	0	0
Hand pump, with stirrup, flexible hose, and patent coupling ... ..	2	2	6
Hydraulic tubes, perforated, slotted, and annealed ... ..	each	0	1
Steam taps, with nozzle to receive coupling ... ..	„	0	1
Grooved rammers ... ..	„	0	3
Buckets, galvanized and painted to indicate charges ... ..	„	0	3
Hand cartridge-boxes ... ..	„	0	4
Each charge, consisting of 7 discs and calico bag ... ..	„	0	0
			$3\frac{1}{2}$

The cartridges are packed in air-tight boxes or barrels, the cost of which will be charged in the invoice, but the amount will be allowed when returned in good condition. A rent of 1d. per package per week from one week after despatched from the Factory will be charged.

#### COAL, 1882.

During the year the following analyses have been made by Mr. C. Watt, Government Analyst:—

Coal from $2\frac{1}{2}$ miles from Mittagong—		Per cent.
Moisture .....		2.40
Volatile hydrocarbons .....		17.30
Fixed carbon .....		65.20
Ash .....		15.10
		<hr/>
		100.00
Kerosene Shale from Berrima District—		
Hydroscopic moisture .....		1.50
Volatile hydrocarbons .....		41.50
Fixed carbons .....		21.20
Ash .....		35.80
		<hr/>
		100.00
Coal from Luthwitch Creek, Berrima District—		
Hydroscopic moisture .....		1.84
Volatile hydrocarbons .....		23.56
Fixed carbon .....		54.00
Ash .....		20.60
Coke .....		64.6
Sulphur in coal .....		0.598

## SHALE.

Though the number of mines from which petroleum oil and cannel coal is raised continues the same, the output of this mineral for 1882 greatly exceeds that of any previous year, while the price as compared with the previous year shows an increase equal to 5s. 9.41d. per ton.

The following table shows the quantity and value of Kerosene Shale produced during the years 1865 to 1882.

Year.	Quantity.	Average price per ton.	Total Value.		
			£	s.	d.
	Tons.	£ s. d.	£	s.	d.
1865	570	4 2 5.47	2,350	0	0

	289,340	2 5 11.71	665,160	5	0

## TIN.

The export of tin for 1882 exceeds that of any previous year in quantity by 470 tons, and in value by £109,458.

Though the operations on the tin-fields were in some localities retarded by the drought, and at times by the want of sufficient miners, the mines on the whole have been fairly productive, and the high price of tin has enabled some of the old ground which had been abandoned as unremunerative to be re-worked with profit. There has during the year been a reasonable amount of prospecting and the results have on the whole been satisfactory. In the Tingha district the Mining Registrar reports the output exceeds that of the previous year by 1,000 tons, and the population, both European and Chinese, has largely increased. Tin is said to have been discovered at Little River, in the Oberon district, while in the Tumut district Messrs. Fitzgerald Bros. obtained 1½ ton of stream tin from their gold claim on Sandy Creek. At Jingellic, in the Albury district, 25 miners are employed on the tin-mines, where, in addition to stream tin, they have a valuable lode. Numerous tin-lodes have been tested in the Vegetable Creek and Wilson's Downfall districts, but they have not yet been worked to any great extent, nor are they likely to receive the attention they merit while the deposits of stream tin continue so productive. Fortunately there is still a very large extent of country containing deposits of stream tin, which have not yet been opened up, owing to the difficulties and expense of prospecting, the ancient river-beds containing the tin being covered by layers of basalt of considerable thickness.

The report of the Mining Registrar at Emmaville, on the Vegetable Creek tin-field, is well worthy of perusal, and Mr. Geological Surveyor H. Y. L. Brown's report upon the country north of Tenterfield, Wilson's Downfall, &c., which forms an appendix to the Geological Surveyor's report, contains most interesting information.

The following table shows the growing importance of this branch of mining, the value of our exports since 1872 exceeding five millions sterling:—

TABLE showing the quantity and value of tin exported from, and the produce of, the colony of New South Wales, since the opening of the Tin-fields in 1872:—

Year.	Ingots.		Ore.		Total.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.

During the year the following assays have been made by Mr. C. Watt, the Government Analyst:—

Cement from Inverell district—Tin, 51·2 per cent. ; sesquioxide of cobalt, 0·5 per cent.  
 Stone from near Tenterfield—No tin.  
 Tin ore from Inverell—Tin, 29·2 per cent.  
 Ore from Gundagai—Tin, 3·3 per cent.  
 Ore from Wambook, near Cowra—Tin, 68·0 per cent.  
 Ore from Mount Goonong, Glen Innes—Tin, 26·0 per cent.  
 Do do do —Tin, 30·7 per cent.  
 Stream tin from New England—Tin, 73·1 per cent.  
 Ore from Jingellic—Tin, 76·5 per cent.  
 Stone from Grasse Creek, County of Clive—Tin, 9 per cent.  
 Do do do —Tin, 22·1 per cent.

## COPPER.

Though the export of copper for 1882 is less than that of the previous year, the prospects of this branch of mining is steadily improving, and copper-mining promises to be one of the most important of our industries. It is quite true that the lodes in some parts of the Colony though rich near the surface have not, so far as they have been tested, maintained their size to any great depth, and the ore has not only become poorer but more difficult to treat, hence many lodes, which at one time gave great promise, have been abandoned. It is open to question whether even these lodes would not have paid if tested to a greater depth, and they may possibly yet be so tested. But though some ventures have not been attended with success there can be no question concerning the richness and permanence of the lodes in the Cobar district. In the Great Cobar Mine the deepest level is 324 feet, and the width of the lode at various points

points is from 50 to 70 feet. The output of ore for the year is 13,787 tons, of which 11,702 tons smelted produced 1,805 tons fine copper, valued at £126,350. In the Nymagee Mine the deepest level is 270 feet, the width of lode varies from 2 to 30 feet, the output of ore for the year was 7,253 tons, 6,618 tons of which smelted produced equal to 1,144 tons fine copper, valued at £80,000. In the Girilambone Mine the deepest level is 198 feet, the width of lode 6 feet, and the output of ore for the year 2,000 tons. Only 10 tons of regulus produced during the year valued at £700. At the Hartwood Mine, Nymagee, the operations have been confined to prospecting; the main lode has not, it is thought, yet been found, but they have a lode from 3 to 4 feet wide. The shaft is 215 feet deep, and the deepest level is 136 feet. Several rich veins have been cut in the main shaft. 70 tons of ore, estimated to contain 40 per cent. of pure copper, have been raised.

The following mines in the Cobar district are being prospected:—The Scottish and Australian, 8 miles north-west of Cobar; the Barcoo, near Gilgunnia, on Cowl Creek; the Babinda, about 9 miles east of Nymagee; Thompson and Smith's, near Girilambone; and Brown's, near Mount Hope.

The Burruga Copper-mine, near Rockley, employs some 200 men; the output of copper amounted to 465 tons, valued at £32,550.

From the Frogmore Copper-mine, Burrowa, 1,050 tons of ore produced 118 tons of copper, 12 tons of which was obtained by the wet process, which, by the way, is not yet in complete working order although a large sum of money has been expended upon it. It is thought the process will prove a valuable mode of treating poor ores, of which large quantities have accumulated during past years. The company is about to erect one of Hancock's Patent Jiggers for concentrating these ores.

From the Peelwood Mine, at Tuena, 950 tons, of value £2,910, was obtained. 43½ tons of ore value £52 19s. 3d., were obtained at Cadia, in the Orange district.

There is a probability that the Tonga Copper-mine, in the Nowra district, will be worked again.

A copper-lode, which is thought to be likely to prove rich and permanent, has been found at Captain's Flat, on the Molonglo River. A copper-lode has also been discovered about 5 miles north-west of Parkes, and a few tons of very fine ore has been raised. A shaft has been sunk on the lode to a depth of 80 feet, the lode being from 6 to 15 feet wide.

There is a prospect of some of the copper lodes near Wellington being opened up.

The copper-lodes at Bingera are not being worked owing to the cost of transit of ore to the seaboard.

Copper-lodes have been discovered at Dungowan Creek, Tamworth district, which contain ore of high percentage.

TABLE showing the quantity and value of Copper, the produce of the Colony, exported from the Colony of New South Wales, from 1858 to 1882.

During the year the following assays have been made by Mr. C. Watt, the Government Analyst:—  
 Copper-ore from Manaro District—Copper, 27·4 per cent. ; gold, 2 ozs. 19½ dwts. ; silver, 18 ozs. 15 dwts. per ton.  
 Stone from Mudgee—Copper, 1·5 per cent.  
 Stone from Jingellic—Copper, 9·5 per cent. ; silver, 22 ozs. 9 dwts. per ton ; gold, a trace.  
 Ore from Sunny Corner—Copper, 10·6 per cent. ; lead, 7·5 per cent. ; silver, 5 ozs. 19 dwts. per ton ; gold, a trace.  
 Copper-ore from Cryers Arms Creek, near Bungonia—Copper, 21·3 per cent. ; silver, a trace.

SILVER.

## SILVER.

There is a marked decrease in the output of silver during the year 1882, due mainly to the difficulty experienced in treating the ore found at Boorook. The Warden reports that Messrs. Hall and Davy have two shafts, a main shaft 160 feet, and No. 1 shaft 155 feet, both stopped on account of the influx of water, which is too heavy to be kept down by means of a whip, and they are now erecting a whim. The lode in the main shaft is 4 feet wide, composed of argentiferous pyrites, which averages 50 to 60 ozs. silver, and 0.75 oz. of gold per ton. In the No. 1 shaft the lode is 3 feet wide, 10 inches of which is hard stone containing blend, galena, and argentiferous pyrites, and will average 120 ozs. of silver to the ton. Good silver ore is now being obtained between the 70 feet and 140 feet levels, and about 600 tons of the ore is now at the surface. On the Addison lode stoping is carried on at the 30 feet level, where the lode is 9 feet wide, yielding a fair quantity of rich ore, some of which assays 700 ozs. of silver and 5 ozs. of gold per ton. The reduction works at Boorook, constructed by or under the management of Mr. Davy, are nearly completed, and a first experiment has been made which Mr. Davy regards as a perfect success.

The Narrangarie Silver Mining Company's shaft near Denison town is now 95 feet deep. The width of the lode varies from 1 to 3 feet down to 80 feet where it pinched out, but it made again, and at 90 feet had widened out to 2 feet.

At Thackeringa and Umermerka, near Mount Gipps, in the Albert district, extensive deposits of silver and lead have been opened up. Large quantities of the ore are found at and near the surface. The greater part, if not all the ore is sent to Adelaide via Torowic. Disputes and litigation concerning titles to the land have had the effect of retarding the development of these deposits, and the drought has prevented prospecting; but there is no doubt that in spite of the drawbacks aforesaid, and the great scarcity of water, the lodes in this locality will be extensively worked in consequence of the richness of the ore, and we may look forward to the settlement of a large population in this hitherto sparsely populated portion of the colony.

## IRON.

The Esk Bank Company continue to be the only makers of iron in the Colony. The return furnished by the Company's Secretary shows that during 1882 they made 4,320 tons of pig-iron, valued at £15,120, against 2,737 tons 12 cwt., valued at £10,950 8s. in 1881. Finished iron 2,139 tons 9 cwt. 2 qrs. 20 lbs., valued at £20,330 19s. 6d., against 3,351 tons, valued at £31,056 12s. 6d. in 1881; and castings, 1,016 tons 16 cwt. 3 qrs. 22 lbs., valued at £1,773 3s. 3d., against 220 tons, valued at £4,011 11s. 8d. for 1881.

The Warden reports that tenders have been called for the carriage of 30 tons of chrome from Bowling Alley Point to the Tamworth railway station. The ore is to be sent to London for the purpose of testing, and if the result be satisfactory it will be shipped in large quantities.

During the year the following assays have been made by Mr. C. Watt, Government Analyst:—

Stone from near Bendemeer—Iron, silica, and alumina	... ..	13.8 per cent.
Magnetic iron, Brown's Creek—Metallic iron	... ..	61.3 „

## Analyses of Iron Ore.

## ANTIMONY.

During the year the following assays have been made by Mr. C. Watt, Government Analyst:—

Stone from New England—Metallic antimony; 70.6 per cent.; neither gold nor silver.
Ore from Armidale District—Metallic antimony, 31.1 per cent.; neither gold nor silver.
Ore from Yugalbah Station, Clarence District—Metallic antimony, 49.5 per cent.; neither gold nor silver.
Ore from near Ilford, known as old Razorback—Metallic antimony, 30.42 per cent.; neither gold nor silver.
Ore from Glen Elgar River—Metallic antimony, 35.16 per cent.; neither gold nor silver.
Ore from Carangula—Metallic antimony, 50.6 per cent.; neither gold nor silver.

During the past year the quantity of antimony ore exported greatly exceeds that of the previous year, but the quantity of metal exported is considerably less. The quantities being :—

	1881.	1882.
Ore .....	302 tons 13 cwt.	1,045 tons 14 cwt.
Metal .....	236 „ 11¼ „	23 „ 4 „

This is probably due to the fact that from various causes some of our smelting works have been closed.

The antimony lodes in the Kempsey district have been almost abandoned, but the warden reports that it is proposed to test them to a depth of 200 feet, when, if the result be satisfactory, proper appliances for working them systematically and on a large scale will be provided. He also states that 120 tons of first-class, and 80 tons second-class, ore have been sent to Sydney for smelting.

The lodes in the Armidale district have been the chief source of our output during the past year. C. S. Wilkinson, Esq., F.G.S., &c., the Geological Surveyor in charge, has furnished the following report upon these lodes :—

“ Within this reserve, and at a distance of about 16 miles east from Armidale, occur several antimony reefs, which have been more or less worked during the last three years. The discovery of antimony ore here is said to have been made about sixteen years ago.

“ The country generally consists of rocky hills of no considerable height; but Baker’s Creek, which flows through it in a southerly direction, suddenly descends into a large precipitous ravine, called “The Falls,” which is about 1,600 feet in depth. This abrupt valley, which, like that of the Gara Falls, opens into another of greater magnitude, is a splendid instance of the effects of the denuding agencies which have eroded the slopes of the Great Dividing Range.

“ The formations of the locality are granite and metamorphosed sedimentary rocks, probably of Devonian age, judging from their lithological character; but as yet I have not been able to discover any fossils by which their age could be determined.

“ The antimony reefs crop out in places not only on the hills but also at various levels on both sides of the deep valley. The principal ones which have been worked are Moore’s, Brereton’s, and the Eleanora reefs. The latter reef occurs on the highest part of the eastern side of The Falls valley, and has been traced in a north-westerly direction for a distance of nearly half a mile and into the valley.

“ It traverses altered slates and dips E. 40° N. at an angle of 80°. The reef consists of dark blue siliceous slate crossed by a network of quartz-veins which give it a brecciated appearance. A granitic dyke accompanies the reef and generally divides it into two. Both the dyke and the reefs vary in thickness; thus, in the Eleanora Company’s claim the hanging wall reef is from 6 to 18 inches thick, the dyke from 1 to 5 feet, and the foot-wall reef from 1 to 4 feet.

“ Oxide and sulphide of antimony (stibnite) occur in irregular bunches, and also finely disseminated through the reefs, but they are absent in places. Gold is sometimes plainly visible in the quartz.

“ The following assays of samples from the Eleanora mine, were made by Mr. C. Watt, Government Analyst :—

Sample from hanging-wall reef—	
Fine gold at the rate of 8 dwts. per ton.	
Silver—a trace.	
Sample from foot-wall reef—	
Fine gold at the rate of 1 oz. 4½ dwts. per ton.	
Silver                    “           16 dwts.    “	
Sample of stibnite—	
Sulphide of antimony, 79.4 %.	
Equal to metallic antimony, 57.0 %.	
Fine gold at the rate of 2 ozs. 12 dwts. per ton.	
Silver                    “           19½    “	
Sample of the dyke stone—	
Metallic antimony, 0.5 %.	
Gold—a trace (under 2 dwts. per ton).	
Silver—none.	

“ In the adjoining Garibaldi claim the hanging-wall vein increases to 4 feet 6 inches in thickness, and contains many small bunches of stibnite; the foot-wall vein is 1 foot thick in the same section, the dyke between them 15 inches, and in the centre of the latter is a vein of nearly pure stibnite 1 inch thick. A sample from this vein gave on assay—

Sulphide of antimony, 93.7 %.
Equal to metallic antimony, 67.26 %.
Gold—a trace.
Silver—none.

“ A sample taken from the hanging-wall reef consisting chiefly of stibnite, gave on assay the following result :—

Sulphide of antimony, 55.6 %.
Equal to metallic antimony, 39.9 %.
Gold—a trace (under 2 dwts. per ton).
Silver—a trace,

which

which would seem to indicate that the gold in the reefs is not always associated with the stibnite. The vein stuff has a brecciated appearance like that in the Eleanora mine. Near the northern end of the claim I saw in the slate formation several narrow quartz-veins about  $\frac{1}{4}$  of an inch thick, containing coarse specks of gold.

"I was informed that the Eleanora Company forwarded to Sydney 36 tons 14 dwts. of vein stuff, which realized £488 2s. 4d., or at the rate of over £13 per ton.

"The reef has only been proved to a depth of about 63 feet; but I am of opinion that it will continue to a considerable depth. The other antimony reefs, one of which occurs almost at the bottom of the valley at a level of about 1,500 feet below the Eleanora mine, are also stated to be auriferous, but they have only been worked for antimony.

"It is questionable whether the reefs will pay to work for antimony alone, on account of the cost of transit of the ore or metal to the shipping ports of Newcastle or Grafton, but there is little doubt that they deserve special attention on account of their auriferous character.

"Messrs. Newbery, Morley, and Cleveland, of Melbourne, have recently patented a process by which the antimony and gold can be separated and saved, and it is believed that it would be suitable for the treatment of the auriferous antimonial ores of these reefs. By this process the sulphide of antimony is converted into oxide, which is collected in flues specially constructed for the purpose; the gold remains with the gangue in the furnace, and can be extracted by crushing and amalgamation.

"In anticipation of the future development of the reefs of this locality I have recommended the reservation of the unalienated land on a creek where there are good machinery sites on account of water.

"On this creek are situated the Hillgrove Antimony Smelting Works, belonging to Messrs. Guigni, Friedmann, and Kessler, of Armidale. An exhibit of star and crude antimony from these works has been sent to the Amsterdam Exhibition.

"The country between Hillgrove and Armidale consists of slate and granite formations, which are covered in places with tertiary drifts and basalt. On the main road, about 11 miles east from Armidale, several ferruginous quartz-reefs occur near the junction of the slate and granite. I have recommended that the Hillgrove Gold-field, open to conditional purchase, be extended so as to include this part of the district."

#### ASBESTOS.

Little or nothing has been done during the past year to develop this branch of industry, though the samples obtained from time to time in various localities are very fine, and there is reason to believe that a market could be readily found for it if a steady supply were obtainable.

#### BISMUTH.

The quantity of this mineral exported during the past year is very small compared with that of the previous year. The only deposits at present being worked are those at Kingsgate, about 16 miles from Glen Innes. The Geological Surveyor in charge has furnished the following report upon these lodes:—

"The formations here are granite and altered slate, forming rough broken country, with valleys about 500 feet deep. The line of junction of the two formations is well defined, and the bismuth lodes occur in the granite in proximity to this line or within about 400 yards from it.

"The mode of occurrence of these so-called "lodes" is very remarkable; they are *pipe-veins* or oval masses of quartz of variable thickness, descending in a more or less vertical direction in the granite, as though well-like caverns of very irregular diameter had been formed in the granite and filled with quartz and metallic minerals. Thus in one lode in the Kingsgate Company's property two masses of quartz (which the Manager, Mr. W. Yates, informed me were 30 feet apart at the surface), on being followed down, united and formed one large pipe-vein about 27 feet in diameter and of irregular shape, from portions of it protruding here and there into the granite. Nests or bunches of bismuth ore (native bismuth, sulphide, carbonate, and oxide of bismuth) were obtained about these protruding portions as well as through the mass of quartz; and in order to take out the vein-stone a large excavation about 60 feet by 40 feet has been made. The vein has only been sunk upon to a depth of 50 feet. The quartz is of a coarsely crystalline nature, and contains, in patches, a considerable quantity of molybdenite. The metallic bismuth and sulphide occur in the solid quartz, but the carbonate and oxide lie chiefly in the joint fissures in the quartz. Sometimes masses of native bismuth are found between crystals of quartz in the vein, and when removed the impress of the quartz crystals is well shown. Some splendid specimens, from 4 to 6 lbs. weight, from this mine were presented by the Company to the Mining and Geological Museum; some of them have been forwarded to the Amsterdam Exhibition. The largest mass of native bismuth found here weighed nearly 30 lbs.

"Other similar veins, but smaller, have been proved, though only for a few feet in depth; one contains much arsenical pyrites and hexagonal plates of molybdenite. An average sample of these sulphides gave on assay—

Metallic bismuth, 2.6 per cent.  
Fine gold, at the rate of 8 dwts. per ton.  
Silver, at the rate of 3 ozs. 5 dwts. per ton.

"On

"On portion 25, about half-a-mile north-west from here, another large pipe-vein is being opened; near the surface it consists of a very ferruginous mass of quartz, about 13 feet by 9 feet, containing bismuth, arsenical pyrites, wolfram, and molybdenite. The screened vein-stuff is said to yield about 50 lbs. of bismuth ore per ton, which will probably be equal to about 1 per cent. of ore for the whole vein-stuff.

"A sample of the ore, consisting of mixed particles of native bismuth, carbonate, sulphide and oxide, yielded on assay—

Metallic bismuth, 69·3 per cent.  
 Fine gold, at the rate of 4 ozs. 1½ dwts. per ton.  
 Fine silver, at the rate of 57 ozs. 3 dwts. per ton.

"The result of assay of the ironstone from this vein was 0·6 per cent. of bismuth and no gold; and the arsenical pyrites gave only a trace of gold and bismuth, with silver at the rate of 12 ozs. 5 dwts. per ton. The gold, therefore, appears to be almost entirely contained in the bismuth ore, probably in the metallic portion of it.

"Several veins of a similar nature have been opened on the Glen Innes Company's property, which adjoins that of the Kingsgate Company. The Company is now sinking upon a vein which is said to have been 1 foot wide at the surface, but when I saw it at a depth of 40 feet, the lowest level then reached, it was 4 feet wide. This vein is in granite, and close to the boundary of the slate formation. The vein-stuff is thickly studded with large brilliant steel-grey plates of molybdenite, some of them being more than 3 inches in diameter. Nodules of native bismuth, larger than walnuts, with carbonate, sulphide and oxide of bismuth, occur through the vein, and in greater quantity in places where the molybdenite becomes abundant.

"Another vein situated about 100 yards from this contains besides bismuth ore and molybdenite, some arsenical pyrites, which latter yielded on assay 9·2 per cent. of metallic bismuth; fine silver at the rate of 92 ozs. 14 dwts. per ton, and no gold.

"About 3 miles east from the Yarrow Creek Head Station, and about the same distance in a south-easterly direction from Kingsgate, is the Comstock Bismuth Company's mine. No work was being done here at the time of our visit; but we saw three pipe veins of hard white crystalline quartz which had been opened for only a few feet from the surface. The shafts were partly filled with water, so that the exact size of the veins could not be measured, but the largest of them appeared to be about 6 feet by 15 feet near the surface. A sample of bismuth ore collected from the heaps gave on assay:—

Metallic bismuth, 35·6 per cent.  
 Fine gold, at the rate of 2 ozs. 9 dwts. per ton.  
 Fine silver, at the rate of 9 „ 16 „ „

Thus, again, we see that the bismuth ore contains gold. These veins are also in granite, and distant about 200 yards from the slate formation.

"It is a somewhat remarkable feature that all the bismuth veins (eighteen) as yet found occur in the granite within a short distance from the slate; and it is probable that on further examination of the country along the line of junction of the two formations other veins will be discovered. The bismuth lode in the Silent Grove Mine occurs under the same conditions, viz., in granite close to its junction with altered slates, and it is of similar character to those above described.

"I may here mention that about 12 miles north from Glen Innes, and about 1 mile east from the Tenterfield road, several bismuth and tin-bearing quartz-veins have been discovered. These occur in a different manner from those at Kingsgate. They form irregular veins and masses of quartz traversing a fine-grained micaceous felsitic rock, which is surrounded by altered sedimentary rocks. In one place this rock for a length of about 100 yards and a width of 15 yards, is traversed by a net-work of quartz-veins. A small hole has been sunk here, and the stone taken from it contains bismuth ores, tin ore (cassiterite), molybdenite, arsenical pyrites, and wolfram. In another place, about 100 yards from that last named, a mass of hard crystalline quartz, in size at the surface about 40 feet by 20 feet, has been opened for a few feet in depth. It contains bismuth and tin ores, together with a large quantity of wolfram. Besides this, two other small veins of quartz, yielding bismuth and tin ores, crop out close by.

"I do not consider that the vein-stuff here can be profitably worked for *tin* on account of the occurrence in it of so much wolfram; but for bismuth mining, the prospects are encouraging, and the reefs should be further tested. I understand that the property belongs to Messrs. Vincent Brothers, and others, of Glen Innes.

"Some of the lodes at Kingsgate were originally taken up in 1871 for *tin* mining, but it is said that J. Feeney, a stockman on the Yarrow Creek Station, was the first discoverer of the bismuth, in the year 1877. I am informed that the quantity of bismuth ore raised from these mines during the last four

years

Soil from top of Berry's Ridge, Lord Howe Island—

Phosphoric acid, equal to  $\text{Ca}_3 \text{P}_2 \text{O}_8$ ; tribasic phosphate of lime, 9.1 per cent.

Soil from south side of Berry's Ridge, Lord Howe Island—

Phosphoric acid, equal to  $\text{Ca}_3 \text{P}_2 \text{O}_8$ ; tribasic phosphate of lime, 20.1 per cent.

Soil from Thompson's Farm, Lord Howe Island—

Phosphoric acid, equal to  $\text{Ca}_3 \text{P}_2 \text{O}_8$  } 5.6 per cent.  
Tribasic phosphate of lime

Soil from Admiralty Islets—

Phosphoric acid, equal to  $\text{Ca}_3 \text{P}_2 \text{O}_8$ ; tribasic phosphate of lime, 8.9 per cent.

*Note*:—These five samples of earth are not sufficiently rich in phosphates to export. They would be useful to enrich poor lands in the locality where they are obtainable, if such could be done at a moderate rate, say 10s. per ton, including all expenses.

Water from Diamond Drill Borehole, Randwick Asylum—

Fixed matter	...	...	...	...	...	...	...	...	...	17.6
Chlorine	...	...	...	...	...	...	...	...	...	7.1
Saline ammonia	...	...	...	...	...	...	...	...	...	0.106
Organic ammonia	...	...	...	...	...	...	...	...	...	0.14

*Remarks*:—This sample of water was of a deep brown colour, and contained much suspended matter, chiefly oxide of iron. The fixed matter yielded 1.5 grains of iron per gallon, estimated as ferric oxide  $\text{Fe}_2 \text{O}_3$ ; it also contained sulphuric acid. The only objectionable character of the water is the excessive quantity of iron which it contains; however, much of this would deposit if the water be exposed to the air and allowed to settle.

Water from Diamond Drill bore, Randwick Asylum, taken from well in which standpipe is placed—

Total solids	...	...	...	...	...	...	...	...	...	0.106
Chlorine	...	...	...	...	...	...	...	...	...	6.8
Saline ammonia	...	...	...	...	...	...	...	...	...	0.006
Organic ammonia	...	...	...	...	...	...	...	...	...	0.014

*Remarks*:—This water was clear and colourless, and may be considered as a good water for domestic purposes.

Water from Diamond-drill Bore, Randwick Asylum, taken from the standpipe in well where diamond-drill is bored—

Total solids	...	...	...	...	...	...	...	...	...	18.72
Chlorine	...	...	...	...	...	...	...	...	...	5.00
Saline ammonia	...	...	...	...	...	...	...	...	...	0.006
Organic ammonia	...	...	...	...	...	...	...	...	...	0.014

*Remarks*.—This water was of a muddy-brown color. The observations made with reference to the first sample from the bore apply also to this water with regard to iron, &c.

Ore from the Southern District for qualitative examination.

Found to be a compound of the silicates of iron and zinc. It also contained small quantities of copper, &c. The mineral is magnetic.

Sand coated with carbonaceous matter, from Coast, Richmond River—

Moisture	...	...	...	...	...	...	...	...	...	3.95
Volatile matter	...	...	...	...	...	...	...	...	...	10.00
Sand, &c.	...	...	...	...	...	...	...	...	...	86.05

Carbon	...	...	...	...	...	...	...	...	...	14.04
Gangue	...	...	...	...	...	...	...	...	...	81.52
										100.00

Plumbago from near Undercliff, New England (2)—

Moisture	...	...	...	...	...	...	...	...	...	4.80
Carbon	...	...	...	...	...	...	...	...	...	11.80
Gangue	...	...	...	...	...	...	...	...	...	83.30
										99.90

Water from well at Dunlop Station, Albert District.

Contained 352 grains of saline matter per gallon. This water is quite unfit for household use and for watering cattle.

Water obtained in shaft at the Dry Lake, Hilstone Road—

The quantity received (8 ozs.) was not anything like sufficient for proper examination. The following are the particulars I was able to obtain:—

Total fixed matter, 83.4 grains per gallons, consisting of chloride of sodium, carbonate of lime, sulphate of zinc, &c. The water contains free sulphuretted hydrogen.

If this is the ordinary characteristic of the water as it comes fresh from the shaft, it should be exposed to the air some time before the cattle are allowed to drink it.

#### LEAD AND ZINC.

During the year the following assays have been made by Mr. C. Watt, Government Analyst:—

Stone from reef 25 miles from Merimbula.—Lead, 69.8 per cent.; no gold; silver at the rate of 4 ozs. 18 dwts. per ton.

Stone from Balmoral Company, Mt. Macdonald.—Lead, 6 per cent.; zinc, 5.4 per cent.; traces of gold and silver.

Tailings from Balmoral Company, Mt. Macdonald.—No lead nor zinc; gold at the rate of 2 ozs. 17 dwts. per ton.

Ore from Sunny Corner.—Lead, 7.5 per cent.; copper, 10.6 per cent.; silver at the rate of 5 ozs. 19 dwts. per ton; gold a trace.

Ore from Sunny Corner.—Lead, 33.5 per cent.; copper, 2 per cent.; zinc, 29.7 per cent.; silver at the rate of 5 ozs. 14 dwts. per ton.

Zinc ore from Fairfield, near Boorook.—Zinc, 50.2 per cent.

#### SUMMARY.

In conclusion, it affords me much pleasure to be able to submit the following statement of the aggregate value of the minerals raised or exported to end of 1882. The value for the past year, notwithstanding the serious drawbacks in regard to some of the minerals, being £2,782,345, being £409,155 in excess of the value for 1881. The aggregate value to the end of 1882 being £57,859,853 12s. 3d.

AGGREGATE

## WARDENS' AND MINING REGISTRARS' REPORTS.

BATHURST DISTRICT—BATHURST, OBERON, ROCKLEY, TRUNKEY, AND TUENA DIVISIONS.

(Mr. Warden T. A. Smith, P.M., Trunkey.)

In submitting my report for the past year, I am compelled to admit that mining during 1882 has been most unsatisfactory throughout the Bathurst Division (with the exception of Burraga Copper-mine, situated on Thompson's Creek in this district) not on account of their being no payable gold obtainable but without water it was impossible to get it extracted. From January to November we had but very little rain: the creeks never flowed, the rivers were chains of waterholes, dams were empty, and springs exhausted. Horse-feed was very expensive, consequently cartage was very high. These drawbacks told against mining to such an extent that the industry was almost suspended. About 1,000 miners are working on these gold-fields, particulars of which I give below:—

*Trunkey.*—120 men working the alluvial. Notwithstanding all difficulties 985 ozs. of gold have been sold locally, the probable value of which was £3,500. More than half the gold was obtained since the rains in November. A company is working No. 7 on "Cromus" line of reefs, having baled out the old shafts and continued sinking. The results, the manager informs me, have proved highly satisfactory.

*Rocky Bridge.*—Europeans and Chinese are fossicking this creek over again, and make a living. The "Opal" mines, formerly leased by Emanuel and others and forfeited, have been taken up again by Piesley & Co.

*Back Flat.*—A wide gold-bearing reef was found here last summer, and a trial crushing raised, but as there was no machinery nearer than Trunkey it was not considered payable, and has been abandoned.

*Grove Creek.*—Like Rocky Bridge is being fossicked over again, and as the men stick to it I believe the results must be payable.

*Pine Ridge.*—Wilson's Reef, or rather lode, one of the best things in the district, but fortune has been against Mr. Wilson, for when he had a steam-engine he could not get wood on account of the roughness of the country, and since he erected the water-wheel the supply has been most irregular. When however he does get a few weeks regular work the results are most encouraging.

*Sounding Rock.*—Situate near the junction of Copperhanna Creek with the Abercrombie River. The alluvial leases are held by Thomas Knowles, who, like Wilson, has had a most irregular water supply; when a regular supply of water is obtainable a large number of men are employed.

*Burraga.*—From a very small beginning this mine has expanded into one of the best paying concerns in the Colony. It was at first worked without much success, but when it came into the hands of the present proprietary a change began. About 200 men are employed on the works. The population supported by the mine is variously estimated from 600 to 700 persons. Five or six furnaces are kept constantly at work. The value of the copper sold last year was upwards of £32,000.

*Tuena.*—180 men have worked on the creek, and the gold sold locally was 834 ozs. of alluvial; of this quantity fully one-third was obtained since the recent fall of rain. Ten quartz-reefs, representing 44 acres, have been applied for. Carey & Co. state that they will shortly erect machinery to sluice Maiden's Point. This spot was formerly very rich. The Lucky Hit quartz claim is the only-quartz-vein being worked that is said to be payable.

*Peelwood.*—Only twenty men are employed on this mine, and £3,000 worth of copper won.

*Dog Trap.*—Between Tuena and Goulburn, 6 miles south of Junction Point, several reefs are being worked, but with poor results. The names are "The Forlorn Hope," "The Lady Sarah," and "The real Sir Roger."

*Junction Point.*—The Victoria Reef is 2 miles distant, and has been worked during the year with fair results. The Phantom is to be worked again shortly.

*Rockley.*—The discovery under the "Basalt" at Sewell's Creek did not result in much. After driving into the hill a considerable distance the rain came which enabled the men to wash up. This operation resulted in giving about half wages; consequently many of the men cleared out. If a working party with some means continues prospecting this mountain I believe a rich discovery will be the result.

*Back Creek.*—Like upon many old diggings something encouraging occasionally turns up. Heaton & Co. discovered a quartz leader exceedingly rich but in hard country. This may lead to further prospecting. An attempt has been made by one of the oldest miners on the place conditionally purchasing 80 acres, including several payable claims and a lease or two.

*Bathurst.*—135 miners' rights issued for the year. At Millamurrah a slate quarry has been worked, but I have not heard how the speculation has paid. At Mount Grosvenor, near Peel, I hear a deposit of silver has been worked. I have endeavoured to get information from Mr. Howard, who I was informed acted as manager but unsuccessfully. I therefore concluded that he thinks the less said about the venture the better.

*Mitchell's Creek.*—The Mining Registrar states that the old place is looking up. That fifty Europeans and a score of Chinese are making a good living. The Chinese are only working the creeks.

*Oberon.*—No mining worth mentioning, but between Oberon and Taralga I am convinced payable auriferous deposits exist, and between Oberon and Burraga many good copper specimens are frequently picked up.

*Mount McDonald.*—230 men are working on these reefs. The gold obtained during the year was about 4,500 ozs. Great results were expected from the early discoveries, but up to date everything has gone against the speculators who purchased leases so freely from the original applicants. I do not think the field will sink any lower. The batteries are erected, the dams are full, cartage greatly reduced in price, and no doubt managers will work with economy. The population of the field is about 500 persons.

BATHURST

## BATHURST DISTRICT—CARCOAR DIVISION.

(Mr. Warden North, P.M., Carcoar.)

I HAVE little to report in the shape of mining operations in my division during the past year.

Having been relieved in the early part of the year by Mr. Warden Smith of the charge of the Mount McDonald portion of the district, that gentleman will, no doubt, in his report, furnish you with full particulars respecting the mining prospects of that gold-field.

At Galley Swamp and the Old Junction Reefs, on the Belabula River, very little has been doing. At the former place several new leases have been taken up, and the few parties at work seem satisfied with the prospects obtained.

At the Junction Reefs the company have been engaged in completing their preparations for crushing by water power, and are very sanguine as to the results when crushing has fairly commenced.

The Brown's Creek Mine, on Church and School Lands, continues to yield an average of about 300 ozs. of gold monthly, and there are many portions of these lands which might be worked to great advantage if some arrangement could be come to by the Department of Education and the miners.

In copper-mining nothing has been doing since the closing of the Blayney copper-mine, which, however, I understand, will resume work shortly.

## BATHURST DISTRICT—ORANGE DIVISION.

(Mr. Warden J. T. Lane, P.M., Orange.)

In submitting my annual report for the Orange Division of the Bathurst District, I have the honor to state that the expectations indulged in a few months ago have not been realized at Ophir. On the whole things look favourably, but there have been no such results as were anticipated.

The Belmore is looking better. A reef now being worked adjacent to it is 58 feet wide, and 20 tons of the quartz are sent to be crushed. The 17 tons that have been crushed from the tributary yielded 1 oz. 1 dwt. per ton.

Lucas's Gully promises well; the stone being raised is considered very good. The reef is 15 or 18 inches wide, and the choice pieces yield an ounce to the pound weight. Another claim in this locality is producing stone bearing 62 ozs. silver, and 2 ozs. 15 dwts. of gold to the ton; the gold is said to be very superior, worth £4 3s. per oz. The tests, wherever made on this claim, are very satisfactory. 2 tons of the stone have been sent to England for trial.

At Golden Point there is a reef 8 inches wide, bearing gold. From what has been ascertained it will yield 6 or 7 ozs. per ton. This is a continuation of the reef at Lucas's Gully.

The Drift Company is putting a new tunnel into Slater's Hill; they are in over 100 feet, and expect to obtain "wash stuff" in about 200 feet further. This company (Drs. Bassott and Spencer, Slater, &c.) has sent to England for a large syphon to empty a large waterhole underneath the basalt, as the tunnel is too high. Much credit is due to these gentlemen for their energy and perseverance in the direction of gold-mining at Ophir.

At the Black Springs, a short distance from Ophir, a reef is being opened that promises well; and good-looking stone is found between it and Golden Point locality.

At Lewis' Ponds, some 5 miles from Ophir proper, gold-mining operations are being renewed with fresh vigour, and good prospects are procured. Some of the stone, it is believed, will yield 1½ to 2 ozs. per ton.

I am not aware as to whether the company is formed to work the "Bluff." If this were achieved, the *real wealth* of Ophir might be soon ascertained. I have always maintained that private enterprise is quite inadequate to develop these localities. Companies who can hold out for 2, 3, or 5 years, if need be, are necessary.

The Back Creek, of old notoriety, is being again tried. No information touching results.

*Forest Reefs.*—The Extended Claim looks well, but the undertaking is too heavy for the few present owners, and a company is being formed in Melbourne. In October last 141 loads were washed from this shaft, which yielded 140 ozs. 12 dwts.

There is a shaft (prospecting) being sunk 1 mile from Forest Reefs, on the Spring Grove Road. This proves the confidence diggers have in this gold-field. The fact that 320 acres adjoining the Extended has been bought by a Melbourne company for gold-mining purposes at the tune of £22,000 is another proof.

I have heard nothing from either of the other old workings or localities.

Lucknow continues to go ahead. The shareholders of the principal claims appear satisfied with the results.

Copper-mining is pretty well a thing of the past in this district. I am not aware of anything worth reporting.

## BATHURST DISTRICT—BATHURST DIVISION.

(H. Hely Hutchinson, Mining Registrar.)

I HAVE the honor to submit my annual report upon mining operations within the Bathurst division of the Bathurst mining district for the year 1882.

I regret that I am unable to state there is any improvement in the prospects of gold-mining here; in fact the country has suffered so severely from the recent drought that there has been very little, if any, gold-mining at all.

On Winburndale Creek there are now no alluvial claims, and only one man at work, who told me there was only the bare colour to be got. Several trials have been made for quartz-reefs within this vicinity, but without success. At Glanmire, Clear Creek, and King's Plains there is also very little doing. At Chambers' Creek, Tonkin's Golden Streak claim is down 70 feet; the reef, which is 2 feet wide, is fairly defined, and may go 3 ounces to the ton, but as yet there has been no crushing.

At the Mount Grosveuer silver-mine (Howard's) one shaft is down 80 feet, but they have not struck the lode yet. The assay went 120 ounces of silver to the ton. By the Napoleon Sluicing Company very little work was done, owing to a scarcity of water, and the total value of gold won did not exceed £40.

I have issued during the year 135 miners' rights and eight business licenses; also one mineral license. The amount of gold transmitted by the gold escort from Bathurst during the year ending 1882 amounted to 1,895 ozs. 5 dwts. 19 grs.

There has been very little copper-mining in my district for the last twelve months, owing to the great scarceness of water; and I find great difficulty in getting information from the miners themselves.

#### BATHURST DISTRICT—CARCOAR DIVISION.

(*W. B. Warner, Mining Registrar.*)

THE year just closed has witnessed a great lull in mining matters in this district. To a certain extent this may be shown in the total amount of gold sent by escort from Carcoar in the three years ending 31 December, 1882, which has been as follows:—

	ozs.	dwts.	grs.
1880 ... ..	5,116	19	1
1881 ... ..	8,324	18	2
1882 ... ..	6,599	4	2

Showing a falling-off in 1882 as compared with 1881 of about 1,725 ozs. This does not represent the entire yield of gold in my division, as a good many parcels of the precious metal are disposed of in Orange and Bathurst, or forwarded privately to Sydney.

Another attempt has been made to work the auriferous reefs situated on the banks of the Belubula, a few miles below the town of Carcoar, by water power. This time the scene of operations is the old junction formerly worked by steam power. Up to the present time the work has been mostly preliminary, but the manager reports that when at full work "one pennyweight of gold to the ton will pay." At this place the reefs are in horizontal veins, varying in thickness from 2 to 10 feet, all more or less auriferous. These are situated on the face of a very steep hill, and the crushing plant, worked by a turbine water-wheel, is on the bank of the river immediately at the foot of the hill. The expense, therefore, of raising and crushing has been reduced to a minimum, which is self-evident when it is borne in mind that one pennyweight to the ton will pay.

The Brown's Creek gold-mine, situated on the Church and School Estate, is still as it has been for many years, the most constantly worked mine in this division. During the year 15,499 tons of stuff were crushed, yielding 3,410 ozs. of gold. Seventy men were constantly employed, with a plant valued at £30,000. The stuff raised is obtained from a lode 70 feet in width.

The mining on the Church and School Estate is still in a very unsettled state. No leases have been issued for years, and miners and speculators are unable to invest either their time or money in developing the mineral resources of this valuable mining property. I am confident that when some definite mode of dealing with the Church and School Estate as regards its mineral capabilities, giving security of tenure both to the working miner and the capitalist, then there will be a large influx of both men and money to develop the mineral resources of this portion of the district. The alluvial workings in all parts of the district were at a standstill for several months owing to want of water.

Copper-mining is at a low ebb in my division. The Great Blayney Copper Company, which commenced the year with such brilliant prospects on their land near the Blayney railway station, have now for some months stopped working, with no immediate prospect of recommencing operations.

The miners' rights sold by me during the last three years have been as follows, viz.:—

1880 ... ..	188
1881 ... ..	464
1882 ... ..	198

The falling-off in the sale in 1882 is a good deal to be attributed to the opening of a mining office at Mount McDonald at the latter end of 1881.

Not much has been done in iron-mining lately, but there is a considerable quantity of rich ore at Newbridge, Blayney, and Brown's Creek; but the expense of carriage so far as Lithgow must enhance considerably the cost of smelting at that place.

#### BATHURST DISTRICT—TRUNKY DIVISION.

(*Alexander Matterson, Mining Registrar.*)

I HAVE the honor to forward herewith for your information the attached papers, and I beg to state that mining in the Trunkey division during the past year has, I think, improved on the previous year. There has been no new discovery made during the past year in either alluvial or quartz reefs worth making mention of. I beg further to state that the best lines of reefs in the Trunkey division are now leased by mining speculators. The old claims, such as the Bathurst Old Company and several others, which, if they were open to the *bonâ fide* miners, would be taken up and worked to advantage, and I am satisfied that some of these claims would yield good results.

I beg again to state, in reference to alluvial mining in the Trunkey division, water has been more plentiful, and on the whole a certain amount of success has been the result.

#### BATHURST DISTRICT—TUENA DIVISION.

(*M. Jones, Mining Registrar.*)

I HAVE the honor to submit the annual report from this division for 1882.

Alluvial mining has been extremely dull during the past year owing principally to the very dry season just past.

In quartz-mining things have been a little brisker; there are at present two payable quartz-reefs—the *Lucky Hit* near Tuena, from which some very rich patches of gold have been taken, and the *Victoria Reef*, near Junction Point, which has given a very good average all the year through. There is very little to note in copper-mining, the Peelwood copper mine having just closed.

During the past year 131 miners' rights were issued, five mineral licenses and three business licenses.

## BATHURST DISTRICT—COWRA DIVISION.

*(W. B. Simpson, Mining Registrar.)*

I HAVE the honor to forward a report on mining operations in the Cowra district. The number of miners' rights issued at this office for the year 1882 amount to 51, which have been principally issued to persons holding mining interests at Mount M'Donald.

The number of mineral leases applied for during the year 1882 is 13, comprising an area of 440 acres, all of which have been taken up for copper-mining. Many of these leases upon a short trial have turned out useless and have consequently been abandoned. There is not one of these leases being worked at the present time. There is no gold-mining being carried on in this district at present owing to the dryness of the past season and great difficulty to obtain water. We have no crushing plants erected in this district.

## BATHURST DISTRICT—ROCKLEY DIVISION.

*(Thomas O. Cromie, Mining Registrar.)*

I HAVE the honor to herewith enclose you my annual returns for 1882, giving you all the information I am able to supply respecting the Rockley division during the year 1882.

163 miners' rights, 45 business licenses, and 3 mineral licenses have been issued here during the year, being a considerable increase on the previous year, owing, no doubt, to the rush at Blossom Hill, some 5 miles from here, which, in December, 1881, caused a good deal of excitement in this district and others, many miners coming here from Temora. The hopes entertained of this place were never realized, and only about 12 miners are now employed there. The prospectors and owners of No. 1 North have done a good deal of work, sinking and driving a tunnel into the basaltic hill; they are still sanguine of being able to find payable wash-dirt yet, although wages have never been made there as yet.

The old alluvial workings on Stony Creek, Back Creek, Isabella River, and Brown's Creek, are almost deserted, the seasons of late having been so dry, and the ground will not pay except by ground-sluicing.

The Chinese have nearly all turned their attention to gardening and the culture of the tobacco plant, which seems to pay better than fossicking about the creeks.

The only copper-mine in this division that is working is the Burruga Mine, some 23 miles south from here, on the falls to the Abercrombie River. These mines are now in full swing, and with every prospect of lasting for years. Through the courtesy of Lewis Lloyd, Esq., the manager, I find that there are now about 200 men employed on the mines. During 1882 there was 4,450 tons of copper ore raised, of the value of £17,400, which when smelted turned out 465 tons of pure copper of the value of £32,550. Depth of shaft, 180 feet; depth of deepest level, 170 feet; width of lode, 7 feet; dip on underlay—east. 5 furnaces are now in full work smelting the ore down to about 50 per cent. of copper. The regulus is then sent by teams to Perth railway station, thence by train to Lithgow Smelting Works, where it is turned into pure ingots of copper.

At the mines there is now a population of fully 400 people. Two stores are doing a good trade. A public school has been opened in the Union Church with an attendance of over 80 children.

For the past twelve months there has been a bi-weekly mail from Rockley, and since the 1st January now instant, a police station has been formed there.

During 1882, £59 was collected to the Public Revenue at the mines for timber licenses.

## BATHURST DISTRICT—MITCHELL'S CREEK DIVISION.

*(Samuel Shumack, Mining Registrar.)*

I HAVE the honor to furnish you with my annual report for this division. I am happy to say mining matters have assumed a more hopeful appearance during the past twelve months, both at Mitchell's Creek, Dark Corner, and Sunny Corner. The quantity of gold may not be more, as two of the crushing plants have been idle for the greater part of the year. Messrs. Brown Brothers, were erecting a new plant, and the Sunny Corner plant had been idle for want of water, and also repairs, but there is every prospect of a good return from both Companies the present year. There is a large quantity of stone raised at Sunny Corner now, which will soon be treated; it is expected to pay well. Had there been plenty of water the past year there would be about twice the quantity of gold obtained, but the want of water here as well as other places is a great drawback to all mining operations. I have reason to believe Sunny Corner will turn out well, and that at the end of the present year I will have a good report to make of that place, unless another dry season should prevent operations. Messrs. Brown Brothers, also of Mitchell's Creek, with their new plant, will be in nearly constant work if sufficient water; also the plant at Dark Corner (Mr. R. Smith's) expects to have a large quantity of stone to crush. On the whole I think mining has decidedly improved in this division, according to present appearances.

## BATHURST DISTRICT—OBERON DIVISION.

*(C. W. Cunyngham, Mining Registrar.)*

THERE has been a number of men prospecting during the year; one party discovered a quartz-vein at Lambert's old reef. Two men prospecting found tin at the Little River. There have been several applications for leases during the year for gold, but none of the parties are at work on the leases applied for; the only claim doing any good is Williams and Party, at Hope's Creek. Native Dog Copper-mines are idle.

## BATHURST DISTRICT—MOUNT M'DONALD DIVISION.

*(O. G. Gibson, Mining Registrar.)*

IN submitting the annual report of my division, for the year ended 1882, I have the honor to state, for the information of the Honorable the Minister for Mines, that the progress and development of this gold-field has not been as satisfactory as was expected.

This

This may partly be attributed to the delay in surveying the leases so long applied for, which has been the means of locking up over 1,000 acres of auriferous land.

Had the leases been issued it would have been the means of employing a large number of miners, as the leaseholders would have been compelled to put the labour on the ground or abandon it, and if abandoned a large portion of this ground would in all probability have been pegged out as block claims, and a trial of the ground would have been made.

At present out of 1,229 acres under application for gold-mining leases not more than 150 acres of this large area has ever had a pick in the ground.

The great monopoly of land by speculators has been very much against the development of this gold-field.

During the past year the yield of gold per ton of quartz crushed has also been a cause of much disappointment.

The Balmoral Gold-mining Company's average yield to the ton in 1881 was 4 ozs., and the past year the average was only 1 oz. 10 dwts.

In the Australasian Mining Investment Association's property, the trial crushings in 1881 gave an average of 4 ozs. to the ton, and in 1882 it only averaged 11 dwts.

The disappointment experienced in the above two large companies has been the means of deterring other large companies from being formed, and capital which was lavishly poured into the field some eighteen months since has stopped from coming into the gold-field altogether.

The auriferous belt of country at Mount McDonald is bounded south, east, and west by granite ranges, with numerous quartz-reefs running north and south, parallel with the strike of the slate, and the rock in which these reefs are embedded is composed of soft decomposed light-coloured slate on the eastern margin of the gold-field; of dark compact fine-grained slate, occupying the central portion of the field, and how far this may extend to the west is as yet an open question, as very little prospecting has been done on this portion of the field. The reefs at the southern extremity of the field near the granite are formed of quartz similar to that discovered in the eastern margin, and is characterised by its slate-like cleavage and semi-translucent character, in which fine gold can be seen embedded some depth below the broken quartz. One or two of the reefs here are very large, from 3 feet to 8 feet in width. The belt of country in which gold-bearing reefs are found extends north and south about  $2\frac{1}{2}$  miles in length and about 1 mile in breadth. The formation of the reefs are very irregular, but as all workings have been so far confined to surface operations, and down to a depth of 100 feet (with one exception), there is good reason for expecting great improvement as depth is attained.

A large percentage of the gold obtained on this field is very fine, and probably a large quantity is lost in crushing for want of proper appliances at the batteries for saving the very fine gold, and great complaints are made by the various claim-holders on this account, and it is believed that had the batteries been furnished with proper gold-saving appliances, such as are used at the Adelong Gold-fields, the results from the crushings on this field would have been very different.

The yield of gold for the year ending 1882 has been 4,058 ozs. 15 dwts. 16 grs., from 4,302 tons of quartz crushed, averaging 18 dwts. 21 grs. per ton, as against 2,851 ozs. from 1,713 tons crushed, of the average of 1 oz. 11 dwts. per ton in 1881, showing an increase of gold won of 1,207 ozs., and of quartz crushed, 2,589 tons, and a falling off in the average per ton of 11 dwts. 3 grs., and sold for £3 10s. to £4 per ounce.

There has been issued 233 miners' rights, eighteen business licenses, and three mineral licenses, during the year. 75 acres have been applied for for gold-mining leases, and 710 acres for mineral leases; the greater portion of the latter has been taken up at Wargoola, some 12 miles distant from this field, and does not belong to this division.

#### *Gold-mining Companies.*

*The Queen of the Mount Gold-mining Company*, which is situated on the eastern side of the gold-field, and known as Patterson's claim, have worked their mine in a very systematic manner, and evidently with a view to permanency. The deepest shaft is sunk to the depth of 150 feet, and is, at this depth, in the second formation, which is hard blue slate. Here they have met with a large reef, 3 feet wide, containing payable gold; they have driven on its course, south, about 50 feet, and no signs of the reef getting poorer or wedging out. It is intended to continue sinking the main shaft to the depth of 300 feet. This reef is well defined, having a good hanging and foot wall, underlying east, and the shoots of gold dip south. During the past year this company has crushed 568 tons of quartz, for a yield of 631 oz. 12 dwts., and employ about thirty miners, which number will be considerably increased as the workings become extended.

*Grant's Amalgamated Gold-mining Company*, south, and adjoining the Queen of the Mount, and on the same reef, has been extensively worked by tunnels during the past year. No. 1 tunnel has been driven 256 feet on the line of reef, and at the deepest point is 110 feet from the crown of the hill. No. 2 tunnel crosses the strata, and strikes the reef at 139 feet from the entrance, where a level has been driven 84 feet south, and 43 feet north, on the reef, and also, a cross-cut west 20 feet. The reef in this tunnel averages 18 inches in thickness, and is estimated to yield 6 dwts. to the ton. No. 3 tunnel has been driven 130 feet on the east side of the reef; crossing the country before striking the reef, and from this point, a level, south, has been driven 277 feet, and 105 feet north, on the reef, which averages 2 feet in width, with an underlie of 2 feet 6 in. in the fathom, east, and is not payable. There are two shafts sunk in this tunnel, 155 feet apart, to a depth of 70 feet each. The stone crushed from this mine during the past year is 1,119 tons, for a yield of 602 ozs. 7 dwts. of retorted gold, and has averaged from 3 dwts. to 1 oz. 3 dwts. per ton.

*The Balmoral Gold-mining Company*, on the western side of the gold-field, is also worked by tunnels. No. 1 tunnel has been driven 84 feet, through very hard rock; at 75 feet from the entrance a new reef was cut carrying good gold, but nothing has yet been done on it to ascertain its true value. No. 2 tunnel has been driven 218 feet, and will have to drive 140 feet further before intersecting the north and south reef. An intermediate tunnel has also been driven 46 feet. From this, and the shafts, most of the gold has been obtained. The deepest point in this mine is 110 feet from surface. The amount of stone crushed during the year 1882 is 1,338 tons, for a yield of 2,017 oz. 15 dwts. 12 grs. of retorted gold which has realized an average of £3 10s. per ounce. The

The next mine of importance on the western side of the field is the West Balmoral Gold-mining Company, which is to the west of the Balmoral Company, and is also worked by tunnels. The main tunnel has been driven 126 feet, through hard metamorphosed slate, except the last 40 feet, which has been in clean black slate. This tunnel gives a depth from surface of 155 feet, but no reef has yet been met with. No. 1 tunnel has been driven 149 feet, and holed through to the main shaft at a depth of 65 feet; total depth from surface, 80 feet. There have also been two shallow shafts sunk about 28 feet deep. The reef, which is a north and south one, has been small and irregular, and sometimes showing very rich patches of gold. The quantity of stone crushed from this mine for the past year is 310 tons, for a yield of 196 oz. 6 dwts. of retorted gold, and has varied in yield from 6 dwts. to 1 oz. per ton.

The *Australasian Mining Investment Association* embraces a considerable area of the gold-field, having leases at different parts of the field, and includes 100 acres of conditional purchase land. A large amount of capital has been spent during the year in putting down trial shafts and prospecting trenches. The principal workings of the company have been carried on in the 100-acre paddock, where several trial shafts have been sunk to depths from 20 to 60 feet. From Nos. 1 and 3 shafts a quantity of payable gold has been extracted, some of it giving as much as 4 ozs. to the ton.

A very large reef has been worked on O'Brien's lease at the northern end of the field, which also belongs to the Association; the reef is several feet in width, running north and south, and about 3 feet of it carries payable gold. Fergusson's lease, south of the 100-acre paddock, also belonging to the Association, has also produced some rich stone a few feet from surface from a vein a few inches in thickness; about 30 tons from this has been raised yielding about 3 ozs. to the ton. Quantity crushed by this company, 746 tons for 497 ozs. 15 dwts., varying in yield from 2 dwts. to 2 ozs. 10 dwts. per ton. There is also a block claim at the northern end of the gold-field known as Patterson's Claim, from which a few payable crushings have been taken; but at present there is no work being done on it, on account of the law-suit between the Milburn Creek Copper-mining Company and Patterson and party, and I would here remark that pending the decision of the Privy Council in this suit a large portion of the northern end of the gold-field is locked up, including the large copper-mine and smelting works of the Milburn Creek Copper-mining Company.

At the southern end of the gold-field very little has been done, and the only claim at work on this end of the field is the "Zulu" mine, which is on a 3-acre lease, and has been until now constantly worked by a small party of men who have sunk a shaft about 50 feet in depth on a very good reef about 2 feet 6 inches in thickness, and from which they have raised during the past year 76 tons for a yield of 73 ozs. The general opinion is that if this claim was worked with energy it would become very remunerative.

Pascoc and party on the south-east of the Zulu have sunk three shafts on their leases to a depth of about 50 feet, and found gold in sufficient quantities to warrant the erection of a 12-head battery, but their trial crushing was not sufficiently encouraging to continue working. I think one cause of their stopping work was want of water for the battery.

*Alluvial.*—Up to the present no alluvial deposits of any importance have been met with in this division, and the only claim at work under this head is situated about 5 miles from the township, on the bed of the Lachlan River, near the junction of the Abercrombie and Fish Rivers, which I am informed yields about 1 dwt. to the load, and Messrs. Franklyn and party, the owners of the claim, gain a fair living from the gold. I am unable to give the quantity of gold obtained from this claim as they send it to the Carcoar Bank. I have applied to them for returns, but they have not sent them in. During the summer of 1882 a few miners were engaged prospecting the bed of the river Lachlan, where a little gold was found, but not in sufficient quantities to remunerate the diggers. In fossicking about the bed of the river two of the miners found two or three good diamonds and other gem stones; one of the diamonds was valued at £10, and weighed  $1\frac{1}{2}$  carat.

*Machinery.*—There are three batteries at work on the field, which have been erected at a considerable outlay of capital. The King of the West battery on the Lachlan River, and about  $2\frac{1}{2}$  miles from the town, has twenty-five stamp heads and a very powerful engine attached, and capable of crushing about 175 tons a week. It is provided with the ordinary gold-saving appliances, viz., copper plates, wells, blanket-tables, and amalgamating barrels. The water is pumped from the river to the battery, which enables them to have a constant supply of pure water. The only disadvantage is the distance from the mines and the badness of the roads, which make the carriage of the quartz to the battery very expensive, averaging from 6s. 6d. to 10s. per ton so that only rich stone is able to bear the cost of carriage. The company intend to construct a wire-rope tramway from the mount, which, if done, will enable this battery to crush at a much cheaper rate.

The Australasian Mining Investment Association have completed the erection of a 20-head battery capable of crushing 150 tons a week. There is at this battery, besides the ordinary gold-saving appliances, one of Halley's percussion tables for saving pyrites, and at one battery a Chinese table, consisting of canvas trays, but as neither have been in operation I am unable to speak as to their gold-saving properties. The water for supplying this battery is obtained from a large dam, which has been made, and is capable of holding 2,000,000 gallons, and with ordinary rainfall is sufficient to keep the battery always at work.

The other battery, which is a 10-head one, is the property of the Balmoral Mining Co., and is situated at Spring Vale, about 2 miles from the Company's mine. This battery is of the same description as the others with the ordinary appliances, and is not used for public crushing.

There are two batteries at the southern end of the gold-field which I have not mentioned because they have been several months idle, viz., Pascoc's battery of twelve heads and Colburt's battery of six heads. Both these batteries are very old-fashioned, and although they cost a great deal to erect they are neither of them in a fit condition to crush out the fine gold contained in the quartz of this field, and to put them in good working order would cost several hundred pounds, and the requirements of the field would not at present warrant the outlay.

The population, which was at one time over 600, has now fallen to 450 or 500, about 150 of whom are miners, all Europeans, and as a rule a very respectable body of men, and well behaved. Occasionally a few "roughs" turn up, but through the vigilance of our local police they soon find they have to conduct themselves becomingly or leave the town. The wages paid here are £2 10s. per week for skilled miners, and this scale of wages has been found to induce a better class of miners to come to the field.

The scarcity of water on the field has been a great drawback, and all the water consumed by the inhabitants is brought from the Green Gully, a distance of 3 miles, at a cost of 10s. a load of three casks containing about 150 gallons.

The

The amount of rainfall during the year has been 10 inches, which you will observe is very small compared with the average of the Colony, and the scarcity of this valuable element has kept the crushing batteries at Mount McDonald idle for some time.

In conclusion I would most respectfully recommend that the labour clauses of all leases should be strictly enforced, especially in the cases where nothing whatever in the shape of prospecting or mining has been done on the leases, and if this is carried out I have every reason to believe that the gold returns from this division will be considerably enhanced.

TAMBAROORA AND TURON DISTRICT—HILL END DIVISION.  
MUDGEE DISTRICT—HARGRAVES AND WINDEYER DIVISIONS.  
(*Mr. Warden Troughton, Hill End.*)

I HAVE the honor to forward the Annual Warden's Report on the Tambaroora and Turon Mining District with that on the Hargraves and Windeyer Divisions of the Mudgee Mining District, of which I am at present in charge.

At Hill End the total yield of gold for 1882 is in advance of that for 1881. The increase is due to alluvial gold, the splendid rain which fell during the latter part of the year giving a fresh impetus to this branch of mining.

On Hawkins' Hill great changes have taken place during the year, an English company (the Hawkins' Hill Consolidated Gold-mining Company) having taken over the leases and property of the old Star of Peace Gold-mining Company, to which have been added by purchase, Krohmann's, Beyers and Holtermann's, and Carroll and Beards'. It will be seen that the Company has a wide field of action and great opportunities for testing the resources of the Hill. I believe that last year a great deal of prospecting was done, rock drills worked by compressed air being used during the latter portion of the year. I understand, however, that the amount of gold won during 1882 is far short of that won in 1881 by the Star of Peace Company.

The Patriarch (Messrs. Newton and Renwick) has been worked with much greater success, and indeed has given better results than any property in this division.

At Tambaroora a company recently formed in Sydney under the title of the Red Hill Amalgamated Gold-mining Company is engaged, by means of Tangye and other pumps, in draining the hill, from which it takes its name.

I am glad to report that many small quartz-claims taken to the west of the town of Hill End have been worked with great success. Crushings from these claims have paid their holders from £2 to £7 a week per man, and there are good indications of more.

In alluvial mining there has been great improvement. Rain has fallen in abundance, and on the Turon River, Macquarie River, Tambaroora Creek, Pyramul Creek, and the storm water-sheds, sluicing has been carried on vigorously and successfully.

In the Sofala Division quartz-mining is in a very hopeful condition. During last year several good crushings have been made, of the details of which the Mining Registrar will inform you. At the Red Hill, Golden Bar, Wattle Flat, Big Oakey Creek, and Solitary Creek the indications are good, and I hope that, with the improved machinery now in use, the ensuing year will be marked by some really payable and lasting discoveries.

In alluvial mining several sluicing companies have been engaged, but there is a decided falling off in the number of alluvial miners, who seem thoroughly disheartened by the want of water. Many of them have devoted their attention to farming, and many have taken work on the railway line. However, when the sluicing companies get water alluvial mining should look up considerably.

In the Hargraves Division the yield of gold was in advance of that for the previous year. This is the result of alluvial mining.

There is at present only one quartz-claim at work, and no crushing has been taken for some time. As explained in the last report the drawback to quartz-mining in this division is the absence of crushing machinery, and until that is introduced the reefs in this division cannot get a satisfactory trial.

In the Windeyer Division alluvial mining has been more successfully carried on than during the previous year, and several large nuggets have been found.

Rock-boring apparatus is expected to arrive for the purpose of testing the reefs.

No new discoveries of gold of any importance have been made in this district during the year.

I regret to say that the mineholders in this district have been unable to respond to the request for specimens made last year with a view to replacing the collection lost in the Garden Palace fire. This is perhaps due to the facts that the district is devoted almost exclusively to gold-mining and that, returns at present being low, auriferous specimens cannot be spared.

TAMBAROORA AND TURON DISTRICT.—IRONBARKS AND WELLINGTON DIVISIONS.  
(*Mr. Warden T. A. Browne, P.M., Dubbo.*)

I HAVE the honor to forward my second annual report and to state that mining operations in the Dubbo division of the Turon and Tambaroora District have exhibited during the past year a progressive and improving tendency.

In the vicinity of Ironbarks, a long established auriferous centre, sluicing operations of considerable magnitude have been initiated by means of co-operative enterprise. Capital has been furnished, with the aid of which powerful machinery has been brought on to the gold-field, and every probability now exists that the extensive alluvial drifts which border the river Macquarie will be adequately tested.

Quartz-reefs, showing stone of exceptional richness, have been worked in the vicinity of the Bogan during the past year. But though no doubt can exist as to the value of a large proportion of the stone now at grass, obstacles have arisen to the placing of suitable machinery for crushing upon the field. A substantial township is now growing up at Tomingley and but little delay need now be anticipated in the fruition of the hopes raised high by tempting specimens. To the south and west of this locality other discoveries have lately been reported, and it is by no means improbable that an extensive gold-field may be at some future date discovered in the same line of country which stretches southward towards Parkes and northward to the Bogan.

At

At no great distance from the township of Dandaloo on the river referred to copper lodes have been discovered and worked for test purposes with encouraging results. The comparative proximity of the North-western line of railway affords ground for predicting that the item of carriage will be a less heavy charge than in some properties of the kind.

In other parts of the district, and notably within the boundaries of the Wellington division, a number of copper lodes, more or less rich, have been partially worked, but the prospectors are not at present sufficiently in funds to bear the expense of fuller development.

With reference to the special work done during the past year a falling off in the number of quartz-reefs in full work is observable. At Ironbarks only the Poor Man's Reef (Liddle and party) and the Trickett Reef are raising stone; from the former 106 tons of stone have been crushed by Scott's machine, averaging from 18 dwts. to an ounce per ton.

At Messrs. Boothie & Co.'s machine 164 tons have been crushed for an average of from 5 dwts. to 3 ozs. per ton. Of these crushings the best return would appear to have been that of 26 tons of stone which produced 72 ounces. Messrs. Liddle and party had also another lot of 27 tons which produced nearly 2 ozs. to the ton.

A new feature on this field has been the occupation of the largest area allowed by the Mining Act for the purpose of ground sluicing. Not less than 600 acres, chiefly on the banks of the Macquarie, have been taken up chiefly under lease. Upon one of the river claims the Cornish Point Gold-mining Company has erected pumping and winding gear. 87 ounces of gold were obtained from the first paddock.

The Mookerawa Gold-mining Company commenced operations about the month of May last by purchasing the river claim of Mr. Patrick Manning, a conditional purchaser, who has for some years past combined the profits of farmer, grazier, and gold-miner. Operating when the water served he had been in the habit of ground-sluicing by means of a race, formed at considerable expense by a well known store-keeper named White. An immense oval excavation in the drift of the river flat testifies to the industry and perseverance exhibited. It is generally believed in the neighbourhood that this expenditure of cash and labour was not wholly unrewarded.

Having secured an area proved to be auriferous, the Mookerawa Company has, without loss of time, placed a very complete and powerful machinery upon the ground, comprising a Blake steam pump, guaranteed to raise 30,000 gallons of water per hour, to a height of 80 feet. The necessary water is forced by this means into a reservoir at a proper elevation, whence it can be utilized for sluicing purposes as required.

In the event of a wet season occurring the company holds a perfect title to White's race, by means of which the sluicing of an immense area can be inexpensively effected.

It is thought by the manager, Mr. Geary, who has had great experience in such undertakings, that the true bottom has not been reached in the area occupied by the old sluice-works, and means will be taken to remove and pass through the boxes the accumulated debris.

At the Cornish Point Gold-mining Company's lease, a mile lower down, and on the opposite bank of the Macquarie, machinery has also been erected, and a considerable amount of work testifies to the confidence and *bona fides* of the lessee.

A wonderful compact and powerful Tangye-pump, working with astonishing ease and simplicity, sends the water of the Macquarie to a height of 80 feet, into a reservoir, as in the case of the Junction Point and Mookerawa Company. Between this and the river, a tail-race has been cut at considerable expense, 600 feet in length, and averaging nearly 40 feet in depth, in places having been driven through the solid rock. This company has been at work for some time, and is indeed at present upon gold, besides having procured £300 or £400 worth of the precious metal for the first paddock sluiced. If these spirited and well carried out enterprises should be rewarded by steady and increasing profits an immense impetus will be given to sluice-mining, and indeed to all leases and other properties on the field.

The total value of the gold won during the past year in the division of Ironbarks is—1,374 ozs. 4 dwts. 20 grs., of which quartz-claims have yielded 211 ozs. 0 dwt. 12 grs.; alluvial, 1,133 ozs. 4 dwts. 8 grs.

The European miners number	...	...	...	...	138
Chinese	"	...	...	...	37

175

The progress of the gold-field and township of Tomingley has been much impeded, among other causes by the want of crushing power. The want of water, and the difficulty of procuring forage, combined with a high rate of carriage, threw obstacles in the way of a settled population during the prevalence of the great drought. Since the improvement in the season substantial buildings have been erected, allotments have been surveyed, and a neat and thriving township has resulted.

The prospectors were unfortunate in their selection of the crushing-machine, known as Cook's Pulveriser, at the commencement of their enterprise. After the expense of transit and erection had been borne a week's trial showed the unsuitability of the invention. It has been taken down, and a battery, with the effective, if old-fashioned, stampers will be shortly in full work.

Large quantities of stone are at grass, both from the prospecting and other claims which are on the line of reef. The gold shows so freely in specimens taken at random from the heap that but little doubt apparently need be entertained as to the eventual prosperity of this field.

The water question has been an anxious and difficult one until quite recently, the original Ten-mile Hole Springs, from which the field at the commencement took its name, being the only available supply. But the large dam and reservoir excavated by Messrs. Davies and Uttley is now full, and from appearances will be replenished by thunder-showers from time to time.

Quartz-veins, showing specimens of remarkable richness, have been discovered at a point 17 miles south of Tomingley, known as the Ten-mile Ridge, and even much nearer the present workings. With a seasonable fall of rain, sufficient to supply the needs of the prospectors, funds of yet greater importance may be looked for in the coming year.

The number of miner's rights taken out chiefly in connection with this field is, at Dubbo, 190—business licences, 30.

The only coal-mine at present worked in the division is that known as the Ballimore, recently owned by Messrs. Burslem and party. The original shareholders have now organized a company, under whose auspices steady work in development of the mine is now being carried out.

Situated

Situated on the Talbragar River, the outcrop of coal occurs at the base of a tolerably steep hill. It is said that the locality was made known to the original occupiers through the report of a sable son of the soil, who beheld with amazement rocks that had become ignited in a bush fire, and a falling in of the "everlasting hills" in consequence.

The present shaft has been sunk to a depth of 75 feet. A seam of coal, 5 feet 5 inches in width, was first reached free from bands; lately increased to nearly 8 feet.

Twenty tons have been raised, of which 10 tons were supplied to the Railway Department for the purpose of being tested on the engines of the line. The result, it is stated, proved highly satisfactory.

A sample of the coal, analysed by Mr. W. A. Dixon, gave the following result:—

Moisture	...	...	...	...	...	...	6.35
Volatile hydro-carbon	...	...	...	...	...	...	47.48
Fixed carbon	...	...	...	...	...	...	38.42
Ash	...	...	...	...	...	...	7.34
Sulphur	...	...	...	...	...	...	0.41
							100.00

It is asserted that this coal is exceptionally suitable for the production of gas.

Looking to the probability of very large quantities of engine-coal being required for the North-western and affiliated lines of railway, as also for smelting purposes, when the copper furnaces of the district shall be in full blast, the development of this mine while as a matter of profit to the shareholders will be yet more intimately connected with the general prosperity of the district.

The nearest point of the line of railway is said to be distant about 10 miles; if that be so, a tramway or light railway might possibly be constructed or subsidised by the Government, as a matter involving a public benefit.

Rich mineral indications have been observed at so many points in so many localities in this division that I would respectfully suggest, if one of the Government diamond drills could be spared, that its services be brought into requisition here.

Experienced residents, whose opinions I share, think it highly probable that, with such aid, mineral discoveries of great importance might be made at a comparatively trifling cost.

In many instances shareholders at present indisposed to embark capital might be confirmed in an estimate of the value of a mineral property by a testing with a diamond drill, while capital would be attracted to similar undertakings.

In my own opinion the division has hitherto received a very imperfect measure of testing as to its mineral resources, and I can imagine no more satisfactory and at the same time inexpensive method than through the agency, if procurable, of the diamond drill.

In the neighbourhood of Wellington mineral selections have recently been made near The Springs Railway Station, where a copper lode, shewing indications of permanency, is now being worked. Backe's copper-mine, to the eastward of the township, is now in work, and will probably commence to make returns adequately remunerative to the perseverance of a most exemplary prospector. A copper-lode immediately beyond the boundary of the Wellington Common has been taken up with a view of immediate action.

In the same vicinity as the copper-lode first mentioned, and within a short distance of the same railway station, gold has been discovered, and a few parties are said to be in possession of fair prospects. The locality is that of a basaltic hill, which forms a portion of the descent towards the Bell River.

With the exception of a few river claims, worked in the usual single-miner fashion and without machinery, the alluvial mining interest in the division is apparently quiescent.

The apparent falling off, however, both as to yield and population, in the southern extremity of the mining district of which I have charge, has been far more than counter-balanced by an exceptional development towards the north-west, where the Tomingley Reefs and the newly-discovered auriferous area which surrounds them, point to a new and possibly important centre of mining industry.

#### TAMBAROORA AND TURON DISTRICT—HILL END DIVISION.

(D. E. Troughton, Mining Registrar.)

I HAVE the honor to submit my report as Mining Registrar of the Hill End Division of the Tambaroora and Turon Mining District for the year 1882.

The total amount of gold transmitted from this Division during 1882 exceeds that transmitted in 1881 by about 150 ozs., the increase being in alluvial gold.

During the early and middle parts of the year the dry beds of the Turon and Macquarie Rivers, inaccessible in ordinary seasons, were worked with good returns, and since the rains which fell so freely in the latter part of the year, alluvial mining has taken a turn for the better.

In the Macquarie River and its tributary creeks the best results have been obtained, while the Turon River, Green Valley Creek, Pyramul Creek, Tambaroora Creek, and Golden Gully, have been worked with, on the whole, satisfactory results.

The number of Chinese engaged in alluvial mining was about 200, most of whom, I believe, have been well repaid for their labours.

There has been a slight falling off in the returns from quartz-mining.

The following information about mines on Hawkins' Hill is from reports kindly furnished by the mining managers:—

1. The Patriarch Mine—Fifteen men have been employed in this mine during the year, and the stone raised has been very much better than any I have seen here in such large parcels. 251 tons of quartz have been crushed yielding 861 ozs. 10 dwts., of the value of £3,440. The vein varied from 1 to 14 inches.
2. Paxton's Lease has been worked by a tribute party of six men who have raised 146 tons of stone, yielding £341 ozs. 5 dwts. of gold of the value of £1,328. The vein averaged about 9 inches.
3. The mine known as the "Monte Christo" was worked at a loss through greater part of the year, and it seems very doubtful if the present owners will work it any more.

The

The Star of Peace Gold-mining Company's Mines, Hawkins' Hill, became the property of an English Company (the Hawkins' Hill Consolidated), who also bought Krohmann's, Carroll and Beard's, and Beyers and Holfermann's leases. This company holds many leases, and has been prospecting largely with rock-drills, worked by compressed air. As far as I can ascertain, the gold won last year is far short of the amount won by the Star of Peace Company in 1881. Possibly the results of the prospecting will be more plainly seen this year.

Prospecting last year in abandoned reefing ground in Specimen Gully revealed the existence of veins which had every appearance of being payable. Claims were immediately taken for some distance north of the prospectors claim, and for upwards of a quarter of a mile south. The line of reef is quite close to the town, to the west. The crushings up to the end of the year have paid from £2 to £7 a week per man, and all the claims are still being worked. The ground is easily worked, no blasting being necessary, and the prospects continue good and have every appearance of lasting. To the south of this line a vein has been cut averaging 1 foot in width and showing gold freely.

During the latter part of last year pumping operations were begun at the Red Hill, Tambaroora, by a Sydney Company (the Red Hill Amalgamated Gold-mining Company). I understand that the water, which has prevented the working of these mines for some time will soon be cleared, and that stone will then be raised at once.

The number of miners' rights issued from this office during the past year was 480; that is twenty-seven more than the number issued in 1881. Business licenses, twelve.

The amount of gold transmitted by escort during 1882 was:—

	ozs.	dwt.	grs.
Quarter to 31 March...	1,325	6	17
"   30 June ...	1,886	7	10
"   30 September ...	1,285	12	17
"   31 December ...	2,009	6	11
Total by Escort ...	6,506	13	7
By private hands ...	278	8	3
Total ...	6,785	1	10

#### TAMBAROORA AND TURON DISTRICT—SOFALA DIVISION.

(M. Fagan, Mining Registrar.)

I HAVE the honor to forward my report relative to the mining interests in this division for the year 1882, and in doing so I regret to say that a considerable decrease is noticeable in the returns of gold as compared with that of previous year.

*Red Hill, Sofala.*—This ground, about 1 mile east of Sofala, on a ridge between Big and Little Oakley Creeks, originally opened by Mannell and Davis, and which proved so very rich for some time—one crushing yielding over 24 ozs. to the ton, but afterwards abandoned through losing the vein—has lately been taken up by Swain and party, and by steady perseverance the reef has again been found, about 1 foot wide, showing good gold in places, and promising to prove a remunerative venture. Two men are continuously at work driving at a depth of 50 feet.

*Golden Bar.*—Prospectors' Claim: About the middle of the past year great excitement was caused in the district by the discovery of some exceedingly rich stone on the Round Ridge, about 1 mile from the famed Golden Point, on the north bank of the Turon River, and about 1½ mile from Sofala. After surfacing out some 10 or 12 ozs. of coarse gold and specimens, the discoverers for some reason or other gave it up. It was subsequently reoccupied by Davis and Lloyd, who succeeded in securing even richer shows than the former party—"ounces to the dish." One-third share soon changed hands at about £350. The shaft is now down 26 feet on a vein 15 inches in width, and the party have about 25 tons of good looking stone on top.

*No. 1 North.*—Tonkin & Co.: A 5-acre lease, purchased from the original holders for £700. In this ground there have also been obtained some splendid specimens and rich stone at a depth of 84 feet. The reef varies from 1 to 3 feet in thickness, and about 70 tons of stone have been raised. The plot for machinery plant has been marked out; but in the absence of the necessary appliances for testing the stone it is impossible to arrive at even an approximate estimate of the value of those claims. The holders are, however, sanguine as to the results. There are several other veins in the vicinity being prospected but not yet fully developed.

*Erskine Flat.*—Gold-mining Sluicing Company, Thompson, Palmer, & Co.: This is a 10-acre claim of a once remarkably rich flat, on the south bank of the Turon, 1½ mile above Sofala. On the ground is erected a portable 8-horse power engine, with pumping gear for sluicing purposes; but on account of the long drought and consequent scarcity of water supply the work has been greatly retarded. The ground is about 30 feet deep, with 10 or 12 feet of really good wash-dirt, besides intervening top veins in patches. As originally worked, the drainage water both from hill and river necessitated a large portion of the underground being left unworked, or, at best, imperfectly cut out, and this should prove a rich harvest for the enterprising claim-holders. The trial shafts have proved encouraging. There are now eight men with horse and trucks stripping off the top soil. They have at present a paddock 80 feet by 40 feet, which will be operated on in a short time should there be a sufficiency of water, and no doubt with beneficial results. A trial-washing gave 9 ozs. 5 dwts. to three loads of dirt.

*Golden Point.*—Sluicing Company, Thompson, Palmer, & Co.: The same party have also a neat but more powerful engine, also portable of 16-horse power, raising the water to a height of 52 feet, which is carried in boxes on scaffolding a distance of 400 feet to the point to be sluiced away. Eight men are now employed cutting up sluice and tail-race, and in the course of eight or ten days they will be in full work. Should these parties succeed it will induce others to occupy more of the once very rich points and flats along the Turon River.

As regards other alluvial workings in this neighbourhood they are chiefly confined to Chinamen reworking the old bed of the river in large parties, with the aid of races and water wheels, numps, box-slucing, &c. The miners not otherwise employed content themselves with sinking on old blocks, and fossicking in abandoned ground with varied success.

## WATTLE FLAT.

*Old Surface Hill.*—Gold-mining Company: The true value of this old favourite mine has never been as yet realised, as the work carried on has been mainly on the tribute system. There have recently been five parties of miners raising stone on this system, and from the crushings had before the holidays every inducement is held out to the proprietors to proceed on a more enlarged scale in developing the auriferous resources of their valuable holding. No doubt a main shaft or a tunnel, for the working of which latter there is every facility, and piercing a number of rich veins, would bring to light the as yet hidden treasures of the famed old hill. In support of this opinion it may be stated that M'Dowell and another, in close proximity to the company's ground, have only lately obtained 11 ozs. loose gold, and 11 ozs. more from 13 tons of stone; while Holmes's party secured 11 ozs. from 8 tons, still nearer to the company's works. The remaining portions of this hill are being prospected and fossicked by private individuals now and again, who occasionally drop on some rich patches.

*Otter's Hill.*—O. K. Line of Reefs, Big Oakey Creek: There are three claims on this line continuously at work, and with most remunerative results. First is Vasala and party's ground, four men, which from the start has proved one of the best paying on Wattle Flat, situated as it is in the face of a steep hill overhanging Big Oakey Creek; while having every advantage in the manner of tips it has the disadvantage of both difficulty and danger in getting the stone carted to the battery, some distance from the mine, which disadvantage is now further increased, as that plant has been sold to a party at Solitary, some 3 miles further, and has again been shifted from the district to Kings's Plains, near Bathurst. An immensity of work has been done in this as on the adjoining claims, and it can be truly stated that the returns in every case have been highly satisfactory, the latest yield being 48 ozs. gold to 15½ tons of stone.

*Frenchman's.*—Gus and party are at present engaged in timbering. They have lately crushed 21 tons of stone for a return of 65 ozs., and have about 20 tons at grass awaiting the stampers. The same general remarks apply to this claim as in the foregoing, with the exception that here the stone has to be carried from the shaft up hill to be accessible by the drays.

*Grice & Clark's.*—On the Oakey Creek: Also partakes in a great measure of the character of the last-mentioned claim, the vein varying from 2 inches to 14 inches in width, and jumping in and out, at times entirely disappearing, causing a deal of lost time in again picking it up and following it. The ground being soft and easily worked, has been the means of making up in some degree for other drawbacks. Here also, as in the former case, the stone has to be carried up a very steep and rough pinch to the drays. The last crushing yielded over 1 oz. to the ton, and the average about 14 dwts.

*Whelan's Hill.*—From some cause, not easily understood, this ground principally leased by a Sydney company, seems to have been entirely abandoned. Some little tributing has been done during the past year, but at present there is only one party at work carting surface and clay to a puddling machine. It seems strange that this hill, so full of auriferous veins, yielding from 15 to 23 dwts. to the ton, and easily worked, should be so utterly neglected. I have no doubt that in time it will be again in active operation, tending to uphold the golden returns from this division.

*Solitary Creek.*—Solitary Creek Gold-mining Company have the most powerful and complete machinery and crushing plant that has ever been in this district. A great deal of capital has been expended on this mine, and although the returns have not been so satisfactory as might have been expected, still, with the body of stone in the mine, and the experience and determination of the manager, great results may yet be obtained. Some crushings on this line and in different claims have paid most handsomely, and the prospects of the present proprietors are by no means bad. The expenses for wages in preparatory works militated against the complete success of the venture from the outset, but from the yield of the different lots treated, a conviction of the payable nature of the mine has been arrived at. There is now a party of tributors at work in the deep ground, from whom good results are confidently looked forward to, and if the works are successfully carried on a proof will be forthcoming as to whether or not the Wattle Flat reefs, like those on Hawkins' Hill in the Hill End division, will carry rich deposits as they are followed down, and if so, give an impetus to the reefing industry of the neighbourhood. This company have just bought a share in Lawson's reef on the opposite side of the creek for £125.

*Lawson's.*—This claim, situated on the opposite side of the creek from the above, has on the whole been one of the richest on this line, with a well-defined vein, and a yield of from 1 to 3 ozs. The holders have been amply repaid for both outlay and labour. The engine and plant formerly belonging to Sanden, in the neighbourhood of Surface Hill, and which I have previously mentioned, was purchased by this party, for the convenience of those prospectors who had small lots of stone for trial, and who having no means of testing the stone raised were obliged to cease work, or go on as it were in the dark; but this boon did not last long, as the plant has again been removed to King's Plains, and they have now no resources but the battery of the Solitary Creek Company, to whom Lawson's party have just sold a share as mentioned, for £125.

*Scott and Clarke.*—This is an adjoining claim to the last, and of the same nature. The water is also here very troublesome, but with the newly-erected appliances a great saving of labour as well as of time will be effected. Their last returns were 24 ozs. of gold from 18 tons of stone.

*Bullock Flat and Allendale.*—In this part of Wattle Flat little or no reefing is being done. The attention of the miners having been principally directed to the rich alluvial deposits on the flats and in the gullies and blind creeks. The whole dependence for water supply being the occasional thunder-storms and heavy rains which, unfortunately, have been of rare occurrence during the past year. At present many of the large dams are well filled, and a few puddling machines are at work upon old worked ground, surface, and shallow clay. The same may be said generally of alluvial matters on Wattle Flat. In the absence of water a great number of the miners devote their time and labour to the cultivation of the little agricultural areas they have secured all over the flat, from which excellent crops of wheat, hay, maize, and potatoes are annually gained, tending greatly to the comfort and support of themselves and families. A great number of them have also during the past year found employment on the railway extension line from Wallerawang to Mudgee. When the permanent water supply works are carried out, the site for which has been surveyed, it will be the means of bringing under sluicing operations a large extent of ground which at present for want of water benefits none, and thereby a considerable increase in the returns of gold from this field will be the inevitable result.

*Box Ridge.*—Britannia Reef:—Mr. M. J. Hammond has had two men constantly prospecting on this reef during the last four years, and they have recently sunk a shaft to a depth of 120 feet, and driving south obtained some very good prospects. The work done this year, in addition to the shaft alluded to, has been 28 feet of driving, at a cost of £250. There has been no returns, except a small parcel of quartz, which is supposed to contain £50 worth of gold.

*Tobin's Oakley.*—During the year Tom Brothers have crushed at their mill 50 tons of quartz from the Golden Spur claim, which yielded only 8 ozs. 6 dwts. 5 grs.

From the Struggler's Reward claim, West Hill Top, 176 tons, for a total yield of 41 ozs. 17 dwts. 6 grs.

Work has been carried on steadily during the year by Tom Brothers, who are sanguine of getting a good return for their outlay from these claims.

The following results have been obtained from several small parcels of quartz raised in this division during the year:—

	Tons.	ozs. dwts. grs.
Lawson and Co., Solitary Reef.....	187	188 9 0
Solitary Reef Co., .....	294½	73 10 0
Scott & Clark, .....	38	59 18 0
Vassala, Williamson Co., O.K. Reef .....	26	74 11 0
Clark and Ellis, Bullock Flat .....	31	30 3 0
Geenens & Beath, Frenchman's Reef .....	47	125 2 0
Dein & Co., Blackfellow's Reef .....	31	26 5 0
Ellis & Clark, .....	20	15 10 0
Grice, Oakley Creek .....	9	14 15 0
Surface Hill Co. (tributors), Surface Hill .....	16	20 1 10
M'Dowall & Others, .....	23	30 13 0
Kelly & Co., Eldorado Reef .....	12	21 6 0
Moyle & Co., Surface Hill .....	5	7 10 12
Sundry lots, various reefs .....	58	41 8 6
Tom Bros., Hill-top Reef .....	50	8 6 5
„ West Hill Top.....	176	41 17 6
	987	779 5 15

The following amount of gold from all sources has been transmitted from this division by gold escort and other means during the year 1882, viz.:—

	ozs. dwts. grs.
For March quarter .....	473 8 10
For June quarter.....	715 2 4
For September quarter .....	989 0 2
For December quarter .....	795 10 13
Total by Gold Escort.....	2,973 1 5
By other means during the year .....	653 7 0
Total .....	3,626 8 5

being a decrease of 1,891 ozs. 2 dwts. 12 grs. from previous year.

539 miners' rights and sixty-one business licenses have been issued by me, and eighteen gold-mining leases have been applied for, during the year.

I enclose herewith a return of all machinery in the division; estimated value of same, £7,000.

#### TAMBAROORA AND TURON DISTRICT—IRONBARKS DIVISION.

(S. Y. Smedley, Mining Registrar.)

I HAVE the honor to make the following report for your information in respect of the mines and mining:—

I regret to say that during the past year quartz-mining in this district has not shown that increased activity so confidently anticipated during the early part of 1882.

Liddell and party, on the Poor Man's Reef and Marshall's Trickett Reef, are at the present time the only quartz-claims working. During the year 1882 there has been crushed at Scott's machine 70 tons from Marshall's Trickett Reef for a return of 18 dwts. per ton; Ginger Reef, 27 tons 6 dwts. per ton; Splitter's Gully, 6 tons 9 dwts. per ton; Golden Gully, 3 tons 2 ozs. per ton.

At Boehmes machine, Liddle and party crushed from Poor Man's Reef 26 tons, yielding 72 ozs.; Dreier and party, Madman's Reef, 37 tons, 18½ ozs.; Adolf Chump Reef, 5 tons, 8 ozs.; Liddle, 27 tons, 40 ozs.; Dreier, 19 tons, 8 ozs.

No fresh discoveries in quartz-mining have been made. The alluvial mining still continues to yield small wages to a number of miners, although no extraordinary finds have been made.

The Macquarie during the past year has been the great centre of attraction for the miners. The Cornish Point Company have erected pumping and winding gear with a view to ground sluice as far as possible, and haul up the bottom with the winding engine. They obtained 87 ozs. from one paddock, but have done but little work since.

Junction Point Company have erected a powerful Tangye pump, and have just commenced ground sluicing on a large scale, and are the first to introduce the hydraulic system in this district.

The Mookerawa Company are erecting their machinery for the same purpose, consisting of a 70 horse-power boiler and a Blake steam pump, capable of lifting 40,000 gallons per hour to a height of 60 feet. As these companies have only just started work no returns are to hand as yet. At the same time the proprietors are very confident as to the ultimate success of their undertakings.

All available ground is taken up on the river for a distance of 15 miles, and should success attend the present operations the Macquarie will form a vast field for surplus labour.

The aggregate value of these three machines and pumping gear is £5,000.

The total yield of gold for the year 1882 is 1,374 ozs. 4 dwts. 20 grs., of which 241 ozs. 0 dwts. 10 grs. is from quartz, and 1,133 ozs. 4 dwts. 8 grs. from the alluvial mines. The value of the crushing power in the Ironbarks Division is £1,600. There are 133 European and thirty-seven Chinese miners. In 1882 175 miners' rights were issued and nineteen business licenses; thirty-eight applications for gold leases have been received, representing an area of 602 acres; and one mineral lease of 20 acres has been applied for.

## MUDGEE DISTRICT—GULGONG DIVISION.

(Mr. Warden P. Snape, P.M., Gulgong.)

In pursuance of instructions I have the honor to submit, for the information of the Honorable the Secretary for Mines, an account of the mining operations in the divisions comprising the Mudgee Mining District during the year 1882.

The figures in regard to the yield of gold show a considerable falling off compared with the returns of previous years. This fact, in my opinion, may in a great measure be attributed to the severe drought that prevailed during the early part of the year, paralysing as it did, to an alarming degree, every industry—the pastoral, the agricultural, but more especially the mining industry—compelling those engaged in this pursuit to seek employment in other parts of the colony.

The rain fell in October last, but not in sufficient quantities to induce the absent miners to relinquish the remunerative labour in which probably they may have been engaged to return to a district where water for many miles in dry seasons is almost unattainable, and for the want of which mining operations have been arrested, prospecting being out of the question; the miners, therefore, were forced to seek other occupations. Another cause may also be assigned to the diminution in the yield, and which I omitted to mention in the last report, namely, that the gold from Hargraves, Windoyer, and Wellington, which was considerable, is now included in the returns furnished by the wardens of Hill End and the Turon, as in 1881, these places were separated from the Mudgee district. In the event of a cycle of wet seasons setting in I predict that large accessions to the ranks of the mining population will take place.

*Gulgong.*—The Gulgong Quartz-crushing Company, established in 1881, at a cost of £1,300, owing to the unparalleled dryness of the season, only commenced crushing operations in August last, with the following results:—

Tailings, 281 tons, yielded 15 ozs. 15 dwts.

From quartz-reefs, 267 tons produced as under—Cross and party, 125 tons, 12 ozs. 10 dwts.;

Zimler and party, 6½ tons, 8 ozs. 12 dwts.

Orlovich, 8½ tons, 1 oz.

Brennan, Red Hill, 101 tons, 10 ozs. 15 dwts.

Wilson and party, Old Gulgong Reef, 26 tons, 28 ozs. 18 dwts.

Small as these beginnings are, I desire to chronicle them, with the view of comparing them with results in the future. These crushings have been regarded by those interested as satisfactory on the whole, as the width of stone showing gold was very narrow, but it is anticipated that the veins will widen out as the reefing advances. The company have lately leased the mill and plant to Mr. Orlovich, an able and experienced mining manager. Crushing operations are now at a standstill for want of water, although heavy rains have fallen; the dam being comparatively a recent construction, fails to retain the necessary catchment of water for any length of time. This is much to be regretted as the manager informs me that he had two years work in crushing tailings alone on hand, irrespective of any, that might be brought to the mill to be operated upon from the reefs in the neighbourhood, to which precedence is invariably given when the mill happens to be at work. Limited as the crushing powers of the plant appear to be, it is of immense advantage to Gulgong, as it will tend to stimulate those engaged in quartz-reefing to persevere, feeling assured that the result of their labour can be readily and expeditiously ascertained by taking their quartz to the mill and crushed, and which was expressly erected by those interested in the advancement of the district with the view of encouraging the quartz-mining industry. Already several quartz-mining claims have been taken up and worked which were not in existence when I penned my last report.

*The Black Lead.*—There are only two claims at this place, Scully's prospecting claim and Myers and party, besides a few fossickers. Scully's claim is not yet completed, but is slowly and steadily progressing; the plant and surroundings appear to be all that can be desired. Preparations are in progress to carry the main shaft to the depth required; the engine is of 20-horse power; it has been tested and found sufficiently powerful to keep the water under. The operations on this claim are regarded with no ordinary degree of interest. If the undertaking should prove a success a great impetus no doubt will be given to mining interest by inducing capitalists to follow in Mr. Scully's wake. From a reliable source I gather that the gold from this lead alone purchased by the banks in Gulgong between the years 1871 and 1881 amounted to upwards of 76,908 ounces. In the opinion of many practical miners the deep ground only wants properly testing to prove equally rich and more permanent, and that it will eventually be the means of reviving mining interests in Gulgong. For the last two years Mr. Scully had been conducting his search under very trying circumstances, he richly merits success, and it is to be hoped that he will prove successful.

*Three Miles.*—This field a few months ago was all but deserted; there are now fifteen men working here with varied success. The depth of the sinking averages 15 feet. As the diggings are situated in a kind of basin, surrounded by gold-bearing reefs, it is more than probable that some rich finds may sooner or later be unearched. On the Canadian only four claims are at work, affording remunerative employment to some twenty persons. 150 feet is the average depth of the leads. Six puddling machines worked by horses are kept going. The White Horse claim still continues to reward the fortunate proprietors, who are receiving, it is reported, £12 per week each man. Owing, however, to an unexpected influx of water, the owners have been compelled to open up new ground, but in a different direction; the wash-dirt at present only yields 5 dwts. to the load; some of the drives extend to 50 and 60 feet. The shaft now being operated upon is down 132 feet. This well-known claim was opened up for the first time nine years ago. It is to be hoped that the present shareholders will be able to see their way to place some powerful steam machinery on the ground with requisite pumping gear. If this were done I predict that the result would prove most gratifying, not only to the owners themselves but to many others who indirectly participate in the success of those engaged in mining enterprises. Many years will elapse before the auriferous alluviums on the White Horse and adjacent claims will be finally exhausted.

*Home Rule.*—There are five claims here, the Union, the Good Hope, besides three on the Christmas Lead. There are also three whips and six puddling machines, four being worked by steam and two by horse-power. Fifty men are employed on the field. There are besides two steam engines with the customary appliances, costing £2,000, and £1,000 respectively. The Union claim is owned by the Messrs. Paul. The shaft is 185 feet in depth; this drive is 400 feet from the bottom of the shaft; the yield is only 3 dwts. to the load, but as they are driving towards the old Christmas lead they anticipate the yield will

*Cinnabar or Red Sulphuret of Mercury.*

This valuable ore has been found 6 miles south-east of Cudgegong in an auriferous alluvial drift. It has been asserted that as much as half a pound weight of ore can be obtained from a cubic yard of this drift, besides from half a pennyweight to a pennyweight of gold. The land on which the discovery has been made is but of limited extent. A cinnabar mine was worked in the direction of Rylstone many years ago; it is not improbable, therefore, that the recent discovery may turn out to be on the same lode. In view of the well known fact that quicksilver ore exists among the Cudgegong Mountains it appears somewhat strange that mining for this metal should have been so much neglected, or when undertaken, seldom if ever prosecuted with that amount of energy that generally animates those engaged in other mining ventures. Cinnabar is frequently associated with gold and gems.

*Stony Pinch.*—The Winefred Gold-mining Company are carrying on their operations with vigour, but at the present time it is impossible to speak with any degree of certainty as to the success of this extensive undertaking, as no information can be gleaned in regard to the gold won, but the prospects may be regarded as sufficiently satisfactory to induce the large outlay of capital that has been expended here; it is reported that £6,000 has already been invested in the undertaking. It is to be hoped the proprietors will be amply rewarded for their efforts in endeavouring to develop the auriferous deposits on their property.

*Silver-mines.*

Early in the month of July last I reported the result of the inspection of silver ore made by Mr Christian Knowblanch, mining manager, whilst prospecting for copper among the mountains in the direction of Denison Town. When I furnished my report I sent down at the same time several specimens. The discovery of silver ore was deemed of sufficient importance that Mr. Brown, the geological surveyor, was instructed to examine the locality. The report being regarded as highly encouraging, several enterprising residents of Mudgee established a company styled the Great Narangaree Silver-mining Company. On the occasion of Mr. Brown's visit the shaft was only from 15 to 18 feet deep; it is now about 95 feet. In the first 50 feet the walls showed quartz and granite, but principally quartz, the lode varying from 1 foot to 3 feet. At the 80-ft. level the lode pinched out; when the 90-ft. level was reached it widened out to 2 feet, and has continued at that for some time. The walls are composed of solid quartz, showing no granite; the quartz is now very damp as if the sinkers were approaching water. The lode trends in a north-east direction; no gold indications are as yet discernible. There is no work progressing on any of the other claims, fourteen in number. The Great Narangaree Silver-mining Company has already incurred a considerable outlay, and it is to be commended for the energy and enterprise it has displayed. In the event of the undertaking proving a success a material benefit will have been conferred on the mining community. The discovery of a silver-mine in the Mudgee Mining District cannot be over-estimated. It will give employment to hundreds of men and open up some of the surrounding country which is now scarcely known.

I append a statement, courteously handed to me by Mr. Clark, one of the shareholders, showing the result of the assays of some of the stone from this mine.

In conclusion I must observe that the extensive mining district of Mudgee possesses hidden stores of untold wealth, requiring only capital and enterprise with well directed labour to assist in their development.

It appears that since the establishment of the first escort in 1871 to December, 1880, upwards of 17 tons of gold were sent to Sydney, and it is the opinion of many competent judges that the Mudgee Mining District is far from being worked out; indeed it is confidently predicted that the future finds of gold will far exceed what has already been discovered, and that when we consider that silver-mining and copper-mining have until lately been almost ignored, it is probable that if these industries are properly developed it will lead to such a revival of mining in the district as will make it one of the most flourishing parts of the colony. I desire to add that the estimated value of machinery at present at work amounts to £13,800 (more or less).

Gold has been obtained as high as 2 ozs. 17 dwts. to the ton.

MUDGE DISTRICT—GULGONG DIVISION.

(H. De Boos, Mining Registrar.)

In consequence of the three years drought which had left its mark upon Gulgong and the surrounding country, the commencement of 1882 presented a very gloomy look-out for all concerned in mining operations in this district. The dams were all dry, the crops had mostly failed, vegetation seemed to be killed, and the cattle and horses were starving for want of grass and water. The summer was unusually hot, the thermometer ranging from 125° to as high as 140° in the sun. The dry weather continued all through the winter, and it was not until October that the rain made its appearance.

From the above causes little or nothing was done in mining during the first nine months of the year. Prospecting has been impossible, and many miners have been compelled to leave their claims for want of water; in fact things have been at a standstill, and hardly any work has been done worth recording for the last twelve months in this portion of the Mudgee district.

The

The Gulgong Quartz-crushing Company, which was established in 1881, has commenced work. The machinery was started in July last, but owing to the dam giving out the work has been of a very intermittent character. Since commencing operations they have crushed 281 tons of tailings and 267 tons of stone. The tailings yielded a little over a dwt. to the ton. A trial crushing of 6 tons from the "Morning Star," situated between the Old Gulgong and Louisiana reefs, yielded 22 dwts. to the ton, and 26 tons from the Old Gulgong Reef about the same quantity. One lucky digger on the Old Gulgong Reef dropped upon a patch consisting of decomposed quartz and clay, which gave him over a pound weight of gold for his week's work. There are some six or eight quartz-claims at work in the immediate vicinity of Gulgong, all showing good stone, and the proprietors seem to be very well satisfied with the prospect before them. Capital is, however, wanted for the proper opening out of the reefs, and until the work is carried on in a more systematic manner I am afraid that it will never prove very remunerative.

At Home Rule the Good Hope and Union Extended alluvial claims have both been idle during the greater part of the past year. They have lately started work again, and it is to be hoped that they may prove successful, as a large expenditure has already been incurred on both these claims. The extended claim of Tatton and party, adjoining the Union, and situated on the Old Christmas Lead, has lately been giving very handsome returns. It is always difficult to get the miners to give an exact account of their gains, but I have been informed that the owners of this claim have averaged from £10 to £12 per week per man for some time past. At the Canadian the White Horse claim is at the present time the only claim that is paying. The party are now working at the 130 feet level, with a face of dirt from 14 to 16 feet. The ground runs to 160 feet in depth without a bottom, showing plainly the immense depth of wash that there is in this claim. At the 160 feet level the water has hitherto stopped work, as machinery is required to keep the ground dry. The shareholders state that the wash yields from 5 dwts. to 12 dwts., and at the lower level the average is fully 12 dwts. to the load.

The Cooyal Gold-field is nearly deserted more, I think, on account of the unfavourable seasons than from being worked out.

Two-mile Flat seems to have been improving a little lately. There are more men now at work in the neighbourhood of this place than at the time of my last report. Some of the claims promise well, though none have yet paid more than wages.

At Tallawang there are some twenty-five men at work, and perhaps as many more in the immediate vicinity, but owing to the causes already stated most of them have only earned a bare subsistence during the last twelve months.

During the year 259 miners' rights and thirty seven business licenses have been issued from this office.

The amount of gold sent by escort from Gulgong for the year ending 31st December was 3,337 ozs. 14 dwts. 13 grs.

#### MUDGEES DISTRICT—MUDGEES DIVISION.

(F. S. Isaacs, Mining Registrar.)

IN forwarding my report for 1882 I regret to state that alluvial mining in my division has been during the past year completely at a standstill; with the exception of a few workings in old and abandoned ground there has been little or no mining on Crown Lands. A few miners still remain at the old gold-field at the Log Paddock, but they appear to be earning little. Cox's Paddock, which I mentioned in my report for last year, appears to be worked out. Very fair prospects were obtained at Cooyal at the beginning of the year, but were not followed by payable results. The alluvial mining at Mullamuddy, also reported upon last year, was exhausted some months back, and no fresh finds have been made. The applications for 1882 have been as follows:—Old, &c., ground, three; new ground, two; and water-races, three. The number of miners' rights for 1882 were 130, business licenses eleven, and mineral licenses twenty-two (these were obtained for mineral workings out of my district).

#### MUDGEES DISTRICT—HARGRAVES DIVISION.

(T. O'Brien, Mining Registrar.)

IN forwarding my report for the year 1882 I have the honor to report for your information that there has been but little progress in mining pursuits in this division during the year. Gold-mining operations have been principally confined to fossicking in old and abandoned ground years ago, both by Europeans and Chinese. There has been one quartz-claim at work during the year known as the old Eureka Prospecting claim, the yield of gold from which amounted to 250 ounces, representing in value £975. The average yield of gold won from this claim would reach about 27 ozs. to the ton. The claim has never had a fair trial, owing to the want of machinery, for which this field has been destitute for some time. There is no doubt a great deal more energy would be displayed in quartz-reefing if there was a crushing plant at Hargraves.

I have been informed, a day or two ago, that the claim known as the Old Eureka Quartz Prospecting is about to change hands; if so, I believe the purchasers will erect a crushing plant on the ground, which would be the means of giving quartz-mining an impetus in this locality.

The number of miners' rights issued at this office during the year 1882 and those issued the previous year are about the same as is the business licenses. I issued 181 miners' rights in 1882—ninety-three to Europeans and eighty-eight to Chinese; also eleven business licenses to Chinese.

An accurate return of gold won from the alluvial workings in this locality cannot be accurately ascertained, as some has been taken to the Banks at Mudgee, and more taken to the Mint, Sydney, privately.

I shall now give a rough calculation of gold won from the alluvial and quartz mining in this division during 1882:—

	ozs.	dwts.	grs.
Alluvial .....	1,292	18	6
Quartz .....	250	0	0

The above is not an accurate return of the alluvial gold won, but it is what passed through my office, as Gold Receiver, in transit to the Mint, from various persons in this district.

MUDGEES

## MUDGEE DISTRICT—WELLINGTON DIVISION.

*(F. Marsh, Mining Registrar.)*

In furnishing my report on the state of the gold-fields in the Wellington division of this mining district for the year 1882, I very much regret that I shall not be able to write in such favourable terms as I was led to expect when making my report for the preceding year of 1881.

There is an undoubted falling off in the quantity of gold won, but this may be attributed in some measure to the long succession of dry years which have prevailed. Certainly the present summer has been more favourable, but the depressing influences of the past are still felt, by the alluvial miners particularly. Another reason is the total cessation from work during the whole of 1882 of the only two quartz-crushing batteries in this division of the district. I have in former reports fully described these really first-class plants; and it is a pity that they should be idle, having good reefs in connection with them to operate on. Having also on former occasions mentioned the local names of the different surrounding alluvial diggings, I shall at once proceed to explain that the quantity of gold won in this division from all parts amounts to 755 ozs. 5 dwts. 19 grs., showing a decrease in the yield for 1881. This is to be deplored, but considering the dry nature of the past few years is not to be wondered at.

Within the last few days gold has been reported to have been discovered at a new place near Newrea, about 7 or 8 miles from Wellington, but until the ground (which is alluvial) has been tested no information can be offered.

While regretting that the quantity of gold won in 1882 is not equal to what was obtained in 1881, I am still sanguine that with a recurrence of the favourable seasons which have been enjoyed in the past the Wellington division, as a gold-producing district, will again take its proper position.

## MUDGEE DISTRICT—WINDEYER DIVISION.

*(T. H. Price, Mining Registrar.)*

I HAVE the honor to report that for the greater part of the past year alluvial mining in this division has suffered considerably from the scarcity of water, but the late welcome rains, coupled with the prospect that the drought of the past two or three years has ended, gives an assurance that alluvial mining in this locality will recover itself from its almost stagnant condition.

In March a nugget weighing 29 oz., with other smaller ones, was obtained by J. Ward in a blind gully leading into the Upper Meroo, also in April a nugget weighing 32 oz. was unearthed at the Pyramid.

In quartz-mining during the year four gold-mining leases were applied for, and two quartz-claims were taken up under the Mining Board regulations. The Catherine Company obtained suspension of work for six months to obtain efficient machinery; also Mr. Eisenstaedter obtained suspension of work on two 5-acre leases for four months, and it is intended by that gentleman to use air compressors and rock drills, and to that end a mining engineer of great experience, named Mitchell, the inventor of this labor-saving apparatus has been engaged, and who is now occupied in carrying out the preliminaries for a start in earnest in a short time. I therefore anticipate in 1883 a great development of the reefs in this division.

Miners' rights issued during the year:—Europeans, 89; Chinese, 71; total, 160. Business licenses, 33, with one exception issued to the Chinese.

Herewith I enclose return of men employed in gold-mining and an approximate estimate of gold won.

## LACHLAN DISTRICT—FORBES, PARKES, GLENFELL, AND CARGO DIVISIONS.

*(Mr. Warden Sharpe, P.M., Forbes.)*

I HAVE the honor to submit, for the information of the Honorable the Minister of Mines, my report for the past year on the mining district under my charge.

I regret to have to state that mining is in the same depressed state as it was when my report for the year 1881 was written. During the past year some discoveries, which appeared likely to turn out permanent and profitable, were made, but up to the present time the value of these mines remains to be proved. At the Belmore, which is situated some 2 miles from the township of Canowindra, some very rich quartz specimens were obtained, and as a consequence a small rush took place, and some claims and leases were pegged out. It appears that the discovery was made on some land claimed by a Mr. Collis, a storekeeper at Belmore, as an additional selection, a party of miners held a protection area, and part of this area encroached on the selection claimed by Collis. As regards the richness of the discovery, Mr. Collis states that he was visiting the selection in question one morning, and found two miners engaged in sinking a shaft on it; he enquired how they were getting on, and was informed that they were on pretty good stone; he was shown, or saw, some good specimens, and then told the miners that they were on his land; they did not believe him; he then tried to come to terms but could not. Finding that he could not get them off the land he claimed without taking legal measures, he applied for and got a Supreme Court injunction. The miners left, and Collis states that he is informed on good authority that some £2,000 worth of specimens were obtained from the small shaft about 10 feet deep, which they sunk on the land in dispute. Whether any further valuable discoveries will be made remains to be proved. Claims have been pegged off, and leases, and as these conflict, each party wanting the same ground, where the valuable specimens were obtained, disputes have arisen which, I am afraid, will take a long time and much money to settle. As a consequence, the mine remains unproved.

At the Pinnacle Reefs, which are situated some 24 miles west of Forbes, a number of miners are engaged in prospecting, and from what I can learn it is probable that they will be fairly successful. These reefs have been known for many years past, and although they are of a fair size, well defined, and yield good prospects, for some reason the country has never been properly prospected. The reefs, which are pretty numerous, and contained in an extensive belt of auriferous country, have been traced on the surface about 7 miles. Shafts have been sunk at intervals along the line (the deepest 190 feet) and a good deal of work done in some of them; but what the results were, owing to the lapse of time, I have been unable to ascertain, but it is reasonable to suppose that so much labour would not have been expended unless

some of the claims found payable stone. The miners at the Pinnacle say that the reefs there would have received more attention in time past but for the want of machinery; that the stone had to be carried a long distance; and that this and the expenses consequent swallowed up all the profits. This drawback does not exist now, as a large battery has been erected at a convenient distance from the reefs by Messrs. Nicholas and Raymond, who are largely interested in these reefs, and will doubtless soon ascertain whether they are payable or not. I am informed that no expense has been, or will be, spared to make this crushing plant and appliances for saving fine gold as complete as possible. The Pinnacle Reefs do not appear to be rich, so far as they have been tried, but their size, and the favourable nature of the country as regards obtaining stone, should make a small return payable. I have particulars of crushings from the claim known as Shanks and Partys. These men raised 89 tons of quartz from the surface to a depth of 25 feet from a reef between 3 and 4 feet wide, and obtained a result of 51 ozs. 12 dwts. and 6 grs. I may add that the first crushing from this reef—taken from another claim—of 80 tons of quartz, yielded 38½ ozs. The miners, some of whom have been prospecting in the neighbourhood for a long time, seem to think that they will eventually discover an extensive alluvial gold-field, and their efforts have been chiefly turned in this direction, but so far without success. A little gold has been found in the small creeks and gullies, but nothing of any consequence. I am inclined to think that if the attention which alluvial mining has received had been turned to the reefs in this locality very probably some valuable discoveries would have been made. The Pinnacle Reefs are situated in an out-of-the-way place, and it is difficult and expensive to obtain supplies, and these facts together with the attraction of the recent discoveries at Temora, Barmedman, and other places, have doubtless caused the Pinnacle auriferous country to be neglected, except by a few miners who still hope that they will discover in this locality either a rich alluvial field or payable quartz-reefs. At the present time nine men are employed at the Pinnacle Reef and two at the Ironbarks, a line of reef in the same neighbourhood. As I have already stated, a quartz-crushing plant, the property of Messrs. Raymond and Company, of sufficient power, viz., 10 stamps, has been erected in the immediate neighbourhood of the reefs. This battery, I am informed, is at present idle, owing to some improvements being required; consequently any stone raised must wait until these improvements are completed.

In the vicinity of Forbes what appears likely to turn out a valuable mine has been discovered. The locality is at a place called the Bald Hills, about 6 miles north of Forbes. Two gold-mining leases have been taken up, and on one of these a shaft has been sunk 165 feet deep. Some driving was done with results so favourable that the owners of the mine, Pennington and party, sunk another shaft and raised 90 loads of washdirt, which gave them the satisfactory return of 120 ozs. of gold. It appears that the only drawback to the rapid development of this mine is that the ground is wet and requires machinery to work it properly. I am informed that arrangements have been made to put the mine into the hands of a small company, who will provide the necessary machinery for pumping, &c. This discovery—of what appears to be a rich lead—has caused several leases to be taken up in this neighbourhood, which will no doubt be worked if the prospects of the leases held by Pennington and party continue as favourable as they are at present. At the Queen's Lead, which is situated about 6 miles from Forbes, on the Parkes' Road, various parties have been prospecting, and I am informed have been fairly successful. One party of miners, working an abandoned prospecting area, got over an ounce to the load for nine loads of dirt, but the gutter was very narrow, and it remains to be proved whether it will widen. On the Caledonian lead Matheson and party have sunk two shafts without success, and are now sinking a third, feeling confident that they will ultimately succeed. This party of miners have much to contend against, and deserve every credit for their determined efforts to prove what they believe to be a payable lead.

A prospecting party are out in the Barrow Mountains, 10 miles east of Forbes, but so far have not reported any discovery of importance. Near Marsden, at a place called "Billy's Lookout," some miners have marked out claims on an abandoned reef, which was worked some years since, and very favourable accounts have reached me concerning its value. A trial-crushing of a few tons of stone has been raised, and the result will determine whether the reef is worth working or not.

#### PARKES.

Parkes and its neighbourhood is the place in this district where most mining is being carried on, and I regret to have to report that very little is done even here. It appears that alluvial mining is almost exhausted, and there is little hope that fresh leads will be discovered, although every now and then some very valuable patches of alluvial gold, that have been overlooked or neglected, are found and give very satisfactory returns. For instance, on the "No Mistake," an old, and when first discovered, a very rich lead, a party of miners lately raised forty loads of dirt and got 5 dwts. to the load. This claim was abandoned after this and taken up again by another party; they raised twenty loads of dirt and washed up 6 dwts. to the load. At the present time on this lead two or three claims are raising payable wash-dirt. About Parkes and the neighbourhood there are still a good many men working—fossicking at one time, and following agricultural or pastoral pursuits at another—according to the season of the year, and thus obtaining a comfortable livelihood for themselves and their families. Most mining townships are supported by this class of men, who, when the alluvial or quartz gold is exhausted, in many instances become small sheep farmers or agriculturists, and gradually take the place of another class who can well be spared. Quartz-mining at Parkes is almost at a standstill. At the present time I am informed that there are not more than a dozen to sixteen quartz-claims at work. On what is known as the "Possum" line three claims are at work; one of them, Hales and party, crushed some time since over 100 tons for a yield of 13 dwts. per ton. The other two claims, before mentioned, are raising stone, but have had no crushing for a considerable time. On Medlyn's line only one claim is working, viz., Stewart and party. They crushed 160 tons for a yield of 3½ dwts. per ton, but they are now raising stone which appears to be payable. They have, I am informed, about 100 tons at grass. On the Bonnie Dundee line only two claims are working, viz., "the Germans'" and Medlyn and party. The former had a payable crushing lately which yielded 9 dwts. to the ton for 40 tons of quartz. They are now raising stone, and have upwards of 50 tons at grass. On the Buchanan line there are three claims working; one of them, called "the Germans'," and considered the best claim in the district, is raising stone estimated to yield an ounce per ton. The last crushing from this claim gave the handsome yield of 18 dwts. per ton for some 130 tons of quartz. The other two claims I have mentioned are prospecting, with a probability of success attending their efforts. At the Ten-mile Ridges, some 20 miles north of Parkes, there is a prospect that

some

some valuable quartz and alluvial discoveries will be made. I observe, in a late newspaper published at Parkes, that there are about fifty miners in the locality. 10 tons of stone have been raised as a trial crushing, and a quantity of quartz has been sent to the Mint for assay. The prospectors, Messrs. Dean, Kelly, and party, speak favourably of the place as regards alluvial and reef mining.

#### Copper.

On what is known as the Limestone Reserve, on the Coobang Run, 5 miles north-west of Parkes, copper has been discovered, and a few tons of very fine ore raised. The mine is the property of Messrs. Friend and party, who are sanguine that they have a valuable property. I visited this mine a short time since, and found that a shaft had been sunk on the lode 82 feet, and the lode was described to be from 6 to 15 feet wide. In the hands of a competent manager, prospecting would be carried on properly, and the value of the mine proved with the least possible delay. I am informed that another copper lode has been discovered about 14 miles from Parkes, but I have no particulars except that little work has been done towards developing the mine. I purpose visiting the place as soon as opportunity offers.

#### Grenfell.

At Grenfell mining is much in the same state as in other parts of this district. In alluvial mining the returns have been small, owing to want of water. A few claims are working, from which the average yield is about 5 dwts. to the load, which is payable, provided water is abundant and close at hand. A prospecting party is out about 6 miles east of Grenfell, searching for alluvial, but it is not known at this time what success they have met with. As regards reefs, that known as the Enterprise is considered the most valuable, the average yield being  $1\frac{1}{2}$  oz. to the ton. I may also mention the reefs known as the "Welcome" and "Lawson's," the former has crushed  $\frac{1}{2}$  oz. per ton, the latter 2 ozs. Other lines are at work, but have been so recently occupied that nothing can be said concerning their prospects.

#### Cargo.

At Cargo very little mining is going on, with the exception of one claim. The few miners in this division barely make a living; the claim excepted is that of Messrs. Odgers and party, at Gum Flat. This alluvial mine has been worked for the last ten years. The Mining Registrar reports concerning it as follows:—"In this claim a lode has been worked from a depth of 40 feet to a depth of 350 feet, at which depth it became poor and narrow; but further prospecting at the 40-foot level discovered what may be called a feeder to the main lode. On this alluvial deposit the owners have a face of 70 feet wide, with a depth of wash 18 inches, and the wash-dirt is estimated to yield about 8 dwts. to the load. Messrs. Odgers and party during last year washed 500 loads of dirt, from which they obtained 200 ozs. of gold."

In quartz-mining in this division only two claims have been working, viz., Messrs. Tom and party and Simmons and party. Tom and party's claim of three men's ground is at Boney's Rocks, 10 miles from Cargo. This party has raised about 50 tons of stone during the year, from which they expect 3 ozs. to the ton. The vein they are working is narrow, and the country very hard. Simmons and party, at Cargo, are working on the Homeward Bound Reef; they have raised 45 tons of quartz, and expect a fair return, as gold can be seen freely through the stone. Complaints are made of the want of machinery to crush the quartz when it is raised. There is a crushing plant at Cargo, the property of a public company, but I am informed that it is out of repair, and consequently useless.

At Forbes 689 miners' rights were issued last year, most of them, I believe, to enable the holders to occupy land as residence areas, as stated in my report for the year 1881. A very large quantity of land is occupied illegally in the neighbourhood of Forbes, and the quantity has been greatly increased during the last year in consequence of an opinion of the Attorney-General, which was published in the papers, and construed to mean that all that was necessary to entitle persons to occupy residence areas or 2-acre blocks in any number was to put on the improvements required by the Act, and that residence was not required. Numbers of persons combined together, each taking out a miner's right and fenced in large paddocks, which, in many instances, are studded with little huts, which are useless and valueless. There is plenty of valuable land about Forbes, and it is a great drawback to the prosperity of the place and district that it is not legally occupied. I am of opinion that legal occupation is not sufficiently encouraged on gold-fields, and that illegal occupation would be stopped to a great extent if an official notification of what constitutes legal occupation was posted up at every Lands Office on the gold-fields. Having this to direct them persons would have no excuse for lodging applications, which can never come to maturity, but which largely interfere with the settlement of the district. I annex a return of the gold won in this division of the Lachlan Mining District during the past year.

Return for the year, 1882, of gold won in the Forbes Division of the Lachlan Mining District:—

	ozs.	dwts.	grs.
Forbes ...	520	0	0
Grenfell ...	1,019	1	20
Parkes ...	2,020	8	15
Cargo ...	400	0	0
Total...	3,959	10	11

#### LACHLAN DISTRICT—YOUNG DIVISION.

(Mr. Warden Robinson, P.M., Young.)

I HAVE the honor to make my report for the year 1882. For several years past mining interests have languished very much in this division. This is accounted for by the general prosperity of the district. Interests other than gold-mining being more attractive greatly absorb both the capital and labour of the place. During the past year we issued 354 miner's rights, 44 business licenses, 1 mineral lease, 1 mineral license, and 18 gold-mining leases.

So far as I can gather, the gold won during the above period amounts to 1,153 ozs. 10 dwts. 4 grs., and of the money value (say) £4,494 11s. 2d. Some three years ago the rush to Scrub-yards, then to Temora, and latterly the attractiveness of Barmedmen, have enticed a number of practical miners from this

this neighbourhood. Notwithstanding these drawbacks mining prospects at Young are brighter than they have been for many a day. Eighteen applications have been recently made for gold-mining leases in the immediate neighbourhood of the township and in close proximity to Burrangong Creek. The ground is well known to be auriferous, but hitherto the miners have been driven out by a heavy under-ground flow of water. This difficulty will now be remedied by expensive machinery appliances, which will speedily be brought into requisition. Minter and party have already splendid machinery on the ground; the engine and working gear are of the newest and most approved principles. Water and wash-dirt will be brought to the surface simultaneously. The supply of water will be ample for all purposes connected with working the mine. The shaft, which is down to a depth of over 70 feet, is of large dimensions, and the engine is steadily at work pumping. The working of this area and that of the Burrangong Company will be taken as a test for the other sixteen leaseholds. These holdings form a chain running from east to west, adjoining each other, and comprise an aggregate area of 301 acres. The applicants are mostly men of means, and many of them thoroughly practical miners. Competent authorities freely predict that these ventures will turn out very successfully. The tunnel and shafts of the Burrangong Company have already cost over £4,000. During the year two expensive shafts were put down, and a third one is at present under operation. At Murrumburrah there are about 100 diggers, and a few on Demondril Creek. These men are making fair wages. At Wombat the ground pays well, but there are no adequate means for storing anything like a sufficient supply of water for sluicing purposes. About Young there are a few parties who have good sluicing claims which pay well when water is anything like plentiful.

LACHLAN DISTRICT—TEMORA DIVISION.

(*Mr. Warden De Boos, P.M., Temora.*)

I HAVE NOW the honor to make my report on the Temora Gold-field for the year 1882.

The history of the Temora Gold-field for the past year is but a repetition of that of every other alluvial gold-field that has ever been worked in this or any other country. At some time or other the alluvial deposits must be worked out, and the question of the time when this result is attained is the only one in which these histories differ.

At Temora the period of decadence has set in sooner than usual, owing, first to the arid nature of the country, and next to the limited area within which work has been prescribed.

Taking the first of these causes, the long period of drought completely—I had almost said disheartened—the miners; but such a word cannot fairly be used towards those who have displayed so much courage in working on in spite of every impediment, and hoping against hope, have persevered in the face of difficulties which in any other avocation would have driven men to despair. However, they were so far prejudiced against the field that whenever a sufficiency of water was available the owners of the richer claims, who could afford to pay the high price for puddling then demanded at the water shafts, 7s. and 7s. 6d. per load, got their dirt washed up, and having obtained the proceeds, cleared out from the field which offered them so few inducements to remain, instead of as in other places risking some of the gains in prospecting for further deposits. These having quitted the field, there would then only be left behind those who with poorer dirt could not afford to puddle it until better times came, when water was more plentiful and puddling cheaper. These men, who had to live hardly enough as it was during this period of expectancy, had not the means of undertaking anything like a systematic prospect of the country, still less to incur the expense of deep sinking, such as I shall hereafter refer to. Intermittent efforts were however made, but only limited in extent. Discouragement succeeded discouragement, and as no outside aid came in to assist them—for almost all outside capitalists who bought into claims were unfortunate, and burnt their fingers—no sustained efforts were made either to trace out the old lead or to discover a new one. This cause has been in operation during 1882, and the mining population has gradually thinned down in consequence.

But the first heavy blow and great discouragement that the field received and that has added materially to the ill effects of the course first mentioned was when the main lead was suddenly lost a little below the Frenchman's claim. Having run a distance of about 2 miles, along which the lead was tolerably well traceable—though intermittent in several places—it suddenly ran out nearly in a line with the "London Tavern." And yet near this very spot were some of the richest nuggetty claims on the field, Buckley's, Nugent and Adams, the Frenchman's, &c. Attempts were made to pick it up along a course of fully a mile and a half, and at one time it was thought that it had been struck at the Grecian Bend, but without success, the Grecian Bend proving to be nothing more than a patch, and a very poor one at the same time. There was thus no prospect of any extension of the field, and consequently every miner who was not interested in one of the claims then at work was left without a prospect of employment, and if he had the means was not slow in leaving the place.

It may, however, be mentioned here that though efforts were made to trace the lead in the direction I have indicated, that is, down the surface water-way, or north-east, no sustained or systematic attempts at prospecting for it were made crossways, to the left or west of the lead, where a low ridge forms the boundary of the existing water-way. But this ridge or rise is a mere surface indication, and there is every reason to believe that it consists of nothing more than alluvial deposit, and not of rock, or that at all events there is an exit through it by which the lost lead may have pushed its way into what appears now by surface indications as another water-course. Whether this be so or not, and the question is really worth trying, the mischief was done when the lead gave out, as the work was narrowed down to that portion of country that had been opened up to that time. It was lost on the northern end, whilst it could not be extended on the south-eastern end, as there the range was unmistakably rocky, having been so proved to be in every direction by quartz-claims.

The field thus limited, it can be easily understood that the end was almost in sight, depending as it must upon the time when the heaps should be washed up. Then came the copious supplies of water that filled the dams, tanks and reservoirs in every direction, in the latter part of the winter and the early spring of last year, enabling the miners to wash up their dirt at a reasonable figure, and to make available wash that under other circumstances must have been left on the ground. So much was this the case that as the heaps of wash-dirt disappeared one after the other, water became of no value since there was no longer dirt to wash, and the puddlers in many cases undertook the work for mere wages, that is, for the

cost

cost of carting and puddling, giving the water in. Even with this many of them could not get use for their water, and in several instances they set in to wash the mullock heaps around the shafts in immediate proximity to their machines, with the hope probably of coming across some patches of wash that may have been cut through in sinking and unnoticed at the time.

Such things have occurred here, and in one notable instance a rich layer of wash was left behind at (I forget the exact depth now), but at all events somewhere about half-way down to where the wash-dirt was expected to be found; and it was only by the accidental displacement of a nugget of more than usually interesting size that the run of auriferous drift was made manifest. It may be considered as very probable that more than one good nugget still lies buried in the heaps of mullock that bank up the staging of the shaft's mouth, for unlike other fields the run of wash at Temora has been exceedingly irregular in depth, even 30 and 40 feet of difference having been found in several instances. In the early days of the field when water was unobtainable, payable patches of drift may have been cut through unobserved, as prospects could not be tested; but whether the mullock heaps will pay for washing or not is another question. It may suit puddlers with full tanks and nothing else to do to set in on them, but I hardly expect that taking them all round wages will be made from them.

Of the many claims on the lead which have been opened and worked there remain only some ten or a dozen upon which work is still carried on. The chief one of these is the Golden Gate, which, to all appearance from the wonderful depth of wash-dirt found in it, will find work for its shareholders for the next twelve or eighteen months. The Chief Geological Surveyor, Mr. Wilkinson, has visited and reported on this claim, which, from the deep gulch in what is apparently the bed rock that has been found there, forms a geological problem, the solution of which would be of the greatest interest.

Apart, however, from the lead already worked, and which may be said to be virtually worked out, the indications of deep ground which have been given along the whole length, from Upper Temora right down to the worked end of the lead, are such as to suggest the possibility, if not the probability, of the existence of a deep lead at some considerable depth below that recently worked. Some of the water shafts have been put down to a depth of about 400 feet through a purely alluvial deposit, and without touching the bed rock. In Wearne's water-shaft at Lower Temora a gravelly or rather sandy grit, with some few water-worn stones, was gone through without coming to anything that in any way indicated a proximity to the bed rock. In the same way the indications given at other shafts, and more particularly at those on the Deep Lead, would almost lead to the inference that there must be a deep gutter somewhere. Whether it is auriferous or not is another matter; but, seeing that all the gold hitherto discovered is pure reef gold, lying almost *in situ*, for it is little, if at all water-worn, and seeing the immense amount of alluvial action that must have occurred to cause the deposit of these deep beds of alluvium, it is not by any means improbable that the older water-courses underlying those hitherto worked may contain deposits lodged there in ages antecedent to those which placed the Temora nuggets in the spots whence they have been so recently unearthed. Were such a field as Temora found to exist in Victoria any number of speculators would be found willing to risk a few thousands in endeavouring to find this deep gutter, quite content with the possibility of finding it, and next with the possibility that when found it would richly repay the enterprise of the investors.

Whilst alluding to the alluvial working it may be remarked as a singular thing that no alluvial deposits, either surface or deep sinking, have yet been found at Barmedman, although the reefs there are unquestionably rich, and although prospecting shafts have been sunk in every direction and in every position that would seem to indicate a probability of success. It would almost seem that even in the midst of the great pluvial force which must have been employed to deposit the immense mass of alluvium that has rendered this part of the country almost a level, filling up the gullies until they are barely to be distinguished from the hills, it would seem that with all this force there had been no abrasion of the reefs, but that these had been quietly silted up by the deposits brought down from a region, whose softer strata had yielded to the aqueous action. The reefs here are very numerous, and are nearly all buried under an alluvial deposit. In the majority of cases no surface indications of their existence are offered, and this would to some extent bear out the theory just indicated.

With regard to the reefs at Temora proper, I have no great expectation of their turning out anything wonderful. The appearance of the stone is not very promising, though it may possibly improve at a depth sufficiently to become payable; but only then by a proper system of working being adopted, and by means being secured for crushing at the claim, so as to save the ruinous cost of carting. The rich veins opened up by Lucas and party were nothing more than a few limited patches, for they ran out within a very short distance. Similar veins will in all probability be struck from time to time in some of the claims, but more especially in the vicinity of the diorite dyke which runs along the eastern range from Upper to Lower Temora. It is, however, really a question whether these veins thus placed do not in reality rob the main reef instead of feeding it, for as yet no good body of reef-stone has been found in proximity with the veins, and the evidence hitherto has gone to show that the reef-stone has been all the poorer for the riches of the vein. It would almost seem from the position *in situ*, and the unworn character of the alluvial gold at Temora, that there had been a net-work of these veins at some former period; that from their softer and disjointed character, owing to the large amount of gold they held, they had been broken down and formed the deposits now working; and that the harder, less yielding, and poorer quartz of the reefs had resisted abrasion and atmospheric action through the very qualities that now render it valueless.

Up to the present the yield from crushings has been anything but satisfactory; but as no systematic work has yet been done to test the stone at different levels these crushings hardly form a criterion for what may be done. It will not be until the reefs fall into good hands, that will give them a fair test at various depths, that anything like a correct estimate of their value can be formed. Under any circumstances a totally different system to that now followed will have to be pursued before the Temora stone can be made payable.

Barmedman is a very promising reefing country, so much so that it appears strange that it should have been allowed to remain neglected for so long a time. The reefs were originally taken up some ten or twelve years ago, but after going through various vicissitudes they ultimately dwindled down and languished until the only parties who were plucky enough to stand by them were the Brothers Quail. These gentlemen, with an amount of perseverance that does them infinite credit, through good report and evil report, through hard times, and times good only by comparison, hung on to the claims on the Ada reef for

for seven or eight years, and, I am happy to say, at last got their reward. Part of their ground was jumped, a law-suit ensued, public attention was drawn to the spot, the law-suit was arranged, the claims were floated for a good round sum, and they now form what is known as the Barmedman United Gold-mining Company. Some idea of the character of the stone may be gathered from the circumstance that during the time the Messrs. Quail held and worked the ground something like 1,500 tons of stone were crushed. The battery at which the crushing took place was only a very poor one, the tables were even worse than the battery, and water was so scarce that only a very moderate quantity indeed was allowed to the boxes. Yet, with all these drawbacks, the average yield of gold on the 1,500 tons was 13 dwts. to the ton. The main reef is from 5 to 7 feet thick, enclosed in well-defined lodes, and making as it goes down.

In close approximation to the Barmedman United are the Italians', Jackson's, Fanny Park, and another claim recently floated in Melbourne. All these, together with Wright's, and one or two others near by, are in active work; and by the time this report appears in print there will be the unmistakable test of crushing in a good and reliable battery applied to the reefs.

A very large body of underground water is found generally all over the Barmedman field, at an average level of about 60 feet below the surface. It is very strongly mineralised, but as there is reason to believe that it is nothing more than surface soakage it is expected that it will become purer as it is used, until it, at all events, becomes fit for generating steam. That pumped from the Barmedman United shaft is now being stored in the Company's reservoir, to be employed for the tables, and if necessity should compel in the boilers. If, as it is surmised, this water is merely a surface supply from soakage, it cannot be regarded as permanent; and should two or three of the companies start crushing plants at the same time the supply must necessarily become exhausted, and water from some other source will have to be introduced. Some of the old residents of the place say that this will not be difficult, but the question of water supply is certainly the most serious, and should be the first for any Barmedman Company to settle.

The reefs have been traced along a distance of some 4 miles in a S.E. direction, passing by the Hard to Mind to the Phoenix, in the direction of Tomora. Good payable stone has been raised at both the abovenamed localities, and if straightforward honest mining be carried on without the market rigging that too often accompanies the action of companies, there is a good future before Barmedman.

The people themselves seem to entertain the same idea. A nice little township has been established here, with streets of the regulation width. Mr. Surveyor Metcalf was sent up by his department, luckily in the very nick of time, and in conjunction with myself selected the site of the township, and aligned the main street. This having been done, I have to thank the energy and public spirit of Mr. James Fraser, for keeping the tents, &c., in line, and preventing miners and others from encroaching on the street during my absence. The main street presents a very respectable appearance, and there are two really first-class hotels erected, besides others of a secondary character.

Sebastopol, which some years back occupied a considerable amount of attention, but which, in common with other mining localities, fell into neglect at the time of the great mining collapse of ten years ago, and for no other reason than that every one had been so bitter as to be disgusted with the very name of reefing, has once more commenced to raise its head. It has been brought into notice under good and reliable auspices, and parties of character and position have taken up the reefs, which were so heedlessly deserted. Some very excellent returns were obtained from here when the reefs were formerly worked, and it seems hard to conceive however they could have been suffered to fall into neglect unless upon the supposition above given. Trial crushings have recently given sufficient returns to give confidence, and as there is a large body of stone in the several lines of reef it is not at all unlikely that Sebastopol will once again be established as a reefing district.

It is strange that here, as at Barmedman, no alluvial has been found, despite a large amount of prospecting that has been done in search of it. It is the more strange, as here the country is more undulating than is the level country to the north-west, whilst the very pronounced character of the hilly slopes would naturally, in conjunction with the numerous reefs, lead to the expectation that alluvial deposits would be found in the valleys. Nothing of the kind, however, has yet been found.

A large battery has been erected at Possum Power, but owing to mismanagement no good has been done with it.

Two or three prospecting parties were at work at the beginning of the year testing the country about Buddegower and Wyalong, but nothing favourable has been reported, though there seems to be an opinion amongst old residents that a lead of gold exists in that direction. The geological formation of the country favours that impression, consisting as it does of numerous slate ridges seamed with quartz-veins.

#### LACHLAN DISTRICT—FORBES DIVISION.

(F. S. Osborn, Mining Registrar.)

I HAVE the honor to submit my annual report for the year 1882, and to state that mining within the Forbes division of the Lachlan mining district was, in the early part of the year, in a very depressed condition, there being no water or a blade of grass for miles. During the last five months a revival has taken place both in quartz and alluvial mining, payable gold having been obtained at the Bald Hills Lead and Pinnacle Reefs, which reefs are situated on the Grenfell Road, near Forbes.

Several parties have started out prospecting, with every chance of success.

#### *Alluvial mining on the Bald Hills Lead.*

Pinnington and party are working two gold leases which have been approved of; a shaft has been sunk by them 165 feet deep on the western side of the gutter, and driven 75 feet to the east, when a dip of 14 feet bottomed on gold. A drive was then put in 36 feet, showing gold all the way. A load of wash-dirt was puddled at the Queen's Lead, and gave the handsome return of 1½ oz. to the load. The party, now knowing they had a payable claim, started to work with a will to sink a second shaft about 100 feet east and 30 feet south of their first shaft, and bottomed at 175 feet on the eastern side of the gutter; a drive was then put in 53 feet north, on gold all the way, crossing first drives about 11 feet from the end, where about 90 loads of wash-dirt was taken, which returned the splendid yield of 120 ozs. of gold.

The party are now engaged erecting a whim, as the water is too great for a whip, when it is intended to drive south 200 feet, and then block back.

These claims are now in process of being brought under the No Liability Act, with the idea of disposing of a small part of their interest to enable them to purchase machinery, as the ground is too wet and deep to work near the old workings without pumping gear.

Several other leases on this lead have been applied for, and I have no doubt that a large yield of gold will be returned next year from this lead, and will be the means of causing others to prospect the adjacent leads, which are now abandoned.

On the Queen's lead, 6 miles from Forbes, various parties have been working during the last six months, and small parcels of gold obtained. One party named Hlasenkam lately took possession of the old prospecting claim, and in driving to the east came across a more defined gutter than those previously worked, and from 9 loads of wash-dirt won 10 ounces of gold; the gutter is very narrow, but they have hopes that it will widen out. Should this be the case another rush will take place to this lead, as there is plenty of untried ground, and a first-class puddling machine.

On the Caledonia lead Matheson and party are still working, having sunk two shafts without success, but are so sanguine of ultimately obtaining gold that they are now sinking their third. This ground is wet and very difficult to work. The Madman's, Thompson's, and other old leads, have been fossicked during the year, a little gold obtained, and then abandoned.

A party of eight men, backed by eight others, have started out prospecting on the Eurow Mountains, where gold was found years ago; the sinking will be about 220 feet, and they seem determined to give the place a fair trial. Should they succeed there will again be a chance for Forbes, and a large gold-field in our midst.

#### Quartz-mining.

On the Pinnacle Reefs, near Forbes, a great deal of work has been done, but as yet only two claims have proved payable, but as the machine owners intend shortly to improve their machinery to enable them to save the fine gold, which is like flour, and for which these reefs are noted, should this be accomplished a number of claims which now crush 4 dwts. to the ton would return half an ounce.

The following is the number of tons of quartz crushed by Messrs. Nicolas and Raymond at their quartz-crushing machine on the Pinnacle Reefs, near Forbes:—

	tons.	ozs.	dwts.
Croakers ... ..	70	54	2
Pinnacle ... ..	171	33	9
Soldiers ... ..	62	19	4
Ironbark... ..	78	9	7
Prospecting claim ... ..	8	3	12
No. 2 South ... ..	80	40	0
Brown's claim ... ..	50	8	12
Roymond's lease ... ..	18	22	0
Shanks' claim ... ..	89	52	12
	626	242	18

These crushings were obtained from the surface, down to 80 feet, no drives.

*Strickland's Reef, near Forbes.*—No work of any consequence has been done on this reef during the year, as there seems to be some difficulty in floating the same into a company.

At Marsden, on the Bland, a party of miners have taken up an abandoned reef at a place known as "Billy's Lookout," showing good gold. They intend to send about 7 tons of quartz to Barmeldman to test the reef, and, if payable, will cause reefing to look up in that part of my division, as there are several known reefs there and at the Humbug Creek which only require machinery on the ground to make them payable. No minerals or metals, other than gold, have been found during the year.

Number of miners' rights issued during the year, 659. The greater part of these rights were taken out to secure Crown lands for residence purposes.

Number of business licenses issued during the year, 35.

Gold leases applied for ... ..	4
Mineral leases applied for ... ..	6

#### LACHLAN DISTRICT—PARKES DIVISION.

(W. C. Weston, Mining Registrar.)

I HAVE the honor to make my report for the year 1882, and transmit herewith details of the several heads as collected by myself and the Bailiff of the Warden's Court.

The number of claims registered by me during the past year was fifty-one, and six applications have been made for gold-mining leases.

2,220 ozs. 8 dwts. of gold have been purchased by the Banks at Parkes, but 3,125 ozs. 19 dwts. 10 grs. have been really won from the earth during 1882, which is valued at £9,504 11s. 3d., and a great quantity of stone raised in 1882 is waiting to be crushed, which ought really to appear in last year's yield.

The dry seasons have much impeded mining operations. No sluicing is done in Parkes District.

There is some talk of new reefs at the Ten-mile Ridges, about 30 miles north of Parkes, but as these are not in my district I cannot say anything about them.

373 miners' rights were issued by me in 1882 as against 365 in 1881, and 23 business licenses as against 25 in 1881.

#### LACHLAN DISTRICT—CARGO DIVISION.

(R. Hutton, Mining Registrar.)

GOLD-MINING in the Cargo Division has been during the year that has past almost at a standstill. Each year for some time past it has been my duty to report a falling off from the preceding one, but this year it may be truthfully said that mining has almost ceased.

In alluvial one claim (that of Odgers and party, Gum Flat) has paid good wages, and it is the only claim in the division that has done so. It is about ten years since this claim was first taken up, and it has paid well ever since. A load in it was worked from a depth of 40 to 350 feet, at which depth it was poor and

and narrower than before. The parties then came to the 40-ft. level, and found what may be termed a feeder to this lode, and on it they have been working during the last year. They have at the present time a face 70 feet wide, with 1½ feet wash, which they expect to yield about 8 dwts. to the load. They raised during 1882 about 500 tons, which when washed yielded 200 ozs. of gold.

About twelve other men have been working on this flat during the year, but to use their own expression they have only made tucker.

This is all the alluvial that has been done in the division during the year.

In quartz-mining only two claims have been at work.

The first of these is Tom and party, London Reef, Boney's Rocks (about 10 miles from the town of Cargo). This is a claim of three men's ground; the parties have been at work during the whole of the year, but have had no crushings. The ground is particularly hard and the vein narrow. They have however about 50 tons raised, which they expect will yield about 3 ozs. to the ton, and from what miners who have seen the stone say this result may be confidently expected.

The other claim at work is Simmeon and Martin on the Homeward Bound Reef, near Cargo. This claim was taken up about six months ago, and has been constantly at work since. They have about 45 tons raised which shows gold freely, and no doubt will give the parties good wages when it is submitted to the stampers.

The Cargo Gold-mining Company had a few men at work at the beginning of the year; work however was stopped about the 1st June and nothing done since. They sent some stuff to Sydney to be treated, but what the result was or what are the future intentions of the Company are a perfect mystery; all that is known is that the leaseholds are idle.

The Ironclad Gold-mining Company have done no mining during year; they had two men employed for a short time each day during the first eight months of the year keeping the water down. What their object was by this waste of labour would be hard to tell unless it was to prevent the cancellation of the lease. They lately sent a prospect from their extreme depth to Sydney for treatment, which is said to have turned out well. Their crushing plant has not been at work during the year: it has been allowed to fall out of repair, and it will require a considerable outlay to put it in order again. The idleness of this plant is the most serious drawback to reefing in this place as it is the only machinery for crushing in the division. There are numbers of small veins out of which small crushings, payable crushings, have been got, but the miners cannot afford to work them, nor will they prospect for others, as there is no likelihood of their being able to get their stuff crushed. In fact the owners of the two claims above reported upon as being at work are to be sympathized with as they are short of funds, but have the quartz to grass which, if they could get it crushed, would give them very good dividends instead of which it is very probable these men will be compelled to abandon all they have done.

#### *Canowindra Gold-field.*

The excitement caused in the latter end of 1881 by the rich find by Rea and party in Glazier's Reef, near Belmore, has completely subsided. This vein was very rich; the parties only crushed about 2 cwts. of stone by hand and got about 200 ozs. of gold, half of which was got in 1881 and the remainder in 1882. Why this ground should be idle is a mystery. The shaft, if shaft it may be called, is only 10 feet deep, and to abandon it after getting such returns at 10 feet speaks badly for the pluck of the miners. Sixteen applications to lease were made in the vicinity but the ground was never tried, the only breaking of the surface in many instances being the L trenches at each angle. During the last ten months there has not been one miner employed on this field. The want of machinery may have led to this result.

Nine applications for gold-mining leases were made in the division during the year; twenty-four miners employed; seventy-eight miners' rights and four business licenses were issued. 100 ozs. gold was obtained from quartz and 300 ozs. from alluvial, making 400 ozs. the gross yield for the division during the year.

#### LACHLAN DISTRICT—GRENFELL DIVISION.

*(W. M. Hazelton, Mining Registrar.)*

I REGRET to say that I cannot give a favourable report of the progress of this division for the year ending 1882, but I am of opinion that before the end of the present year I will have to report good returns from those parties now prospecting.

#### LACHLAN DISTRICT—YOUNG DIVISION.

*(T. E. Blomfield, Mining Registrar.)*

IN forwarding my report I have the honor to remark that my term of office since November last has given me such limited experience of mining operations at Young that an exhaustive report from me can scarcely be expected.

During the elapsed year (1882) from this office were issued 354 miners' rights, 44 business licenses, 1 mineral lease, 1 mineral license, and 18 gold-mining leases. The produce of gold for the period (1882) amounted to 1,153 ozs. 10 dwts. 4 grs., of the value of £4,494 11s. 2d.

From current reports I can gather that mining interests are looking up generally throughout the whole division.

#### LACHLAN DISTRICT—TEMORA DIVISION.

*(Thomas Love, Mining Registrar.)*

I HAVE the honor herewith to forward all the information I have been enabled to collect for Annual Report, together with returns for the year 1882. The quartz-mining is in a very depressed state, owing to the poorness of the trial crushings, the expense of crushing and want of machinery. There is only one 10-stamp battery on the field. There is good reason for the belief that this will be a good reefing district when the reefs are properly tested and good machinery erected. The alluvial is nearly worked out, and very little present prospect of anything new being opened.

Conway Brothers report discovery of new reef containing a fair show of fine gold 21 miles north-west of Temora on 24th December, 1882. Prospecting claim granted, four claims taken up.

During the year, 1,710 miners' rights and 197 business licenses were sold in this division.

LACHLAN

## LACHLAN DISTRICT—BURROWA DIVISION.

(W. J. E. Wotton, Mining Registrar.)

I HAVE the honor to submit my Annual Report on the Burrowa mining district for the past year of 1882. With regard to gold-mining, nothing had been done in my division during the last 12 months. In the early part of 1882 a large number of miners' rights were taken out on the strength of a supposed discovery of gold a short distance from the Frogmore copper-mine, but although the locality is known to be auriferous, more or less, the rush came to nothing, and as no miners' rights have been applied for this year, it is presumed there is no prospecting going on here at present.

*Copper.*

With regard to copper the Frogmore Copper Co. (Limited) are at full work, and have produced this year 118 tons of copper, 12 tons of which were produced by the "wet process" lately introduced, and scarcely in proper working order, and which was mentioned in my last report as the sulphuric acid process for utilizing poor ores; a great deal of trouble and expense was necessary to erect the chamber, but the producing powers of the system having been established, it is considered that it will prove an important adjunct to the furnaces, there being thousands of tons of poor ores at grass.

No. 1 shaft is down 373 feet, and No. 4 is down 360 feet, and the lode in both shafts holding out well at the bottom.

The Company are about to erect one of "Hancock's Patent Jiggers" to treat the poor sulphurets now on hand, and which have accumulated for years past, and when concentrated would yield at least 1,000 tons of 12 per cent. ore.

The prospects of the mine are good, and the operations could be very much extended if sufficient capital was supplied.

## LACHLAN DISTRICT—BARMEDMAN DIVISION.

(William Forbes, Mining Registrar.)

I HAVE the honor to forward the returns as to gold-mining in quartz-reefs at Barmedman. In doing so I may explain that I have purposely delayed sending my report till the success of the Pulveriser a newly-invented quartz crushing machine, was established or otherwise. I may mention that the probable wear of the machine was known to the purchasers shortly after its arrival, and it was only expected to work properly with certain improvements which were ordered from the machinists. The articles not arriving in time the manager commenced to work the pulveriser in order to test the actual capabilities of the cast-iron bearers and spindles. The result was rather in excess of the anticipation, for the wear by friction was excessively great. There was no attempt made to test the suggested improvements, but shareholders insisted that stampers should instantly be procured, and the progress of mining should not be delayed.

This machine is placed on the ground owned by the Ada Gold-mining Company, which comprises Nos. 3 and 4 of the north line of the Ada Reef, formerly owned by Quail Brothers. Jackson's Reef also intersects this reef, the ground being within a few yards of Jackson's main shaft, from where a great crushing has been recently obtained.

No paddock-stone has been yet crushed by the Ada Gold-mining Company, but the reef was cut yesterday in the main shaft at 120-ft. level, at a distance of 50 feet from the shaft.

Jackson's Reef Gold-mining Company occupy ground contiguous to No. 2 North Ada and to the previously named company.

Jackson's Reef was discovered some fifteen or sixteen months back, and was eventually sold to Messrs. Hunter and Solomons, and has since been formed into a company. Three cwt. from this reef, crushed in Sydney, gave at the rate of 130 ozs. per ton. A week ago a second trial of 25 cwt. crushed at an ordinary battery gave the return of 100 ozs. 9 dwts. of gold per ton.

The stone in the paddock promises at least 2 or 3 ozs. per ton, and this I consider the lowest possible estimate.

No. 2 North Ada has lately proved itself to be the best claim at Barmedman, so far as the width of reef is concerned. Although the P. Claim is equal in width it has not yet been worked in the same systematic style as the No. 2. The P. Claim I may mention is termed by miners as a pick and shovel claim, its undoubted prestige being announced by giving the following returns from about 1,500 tons of stone crushed at an inferior battery (condemned by the Barmedman United Gold-mining Company at Barmedman), the reef being crushed throughout at an average width of from 10 to 20 feet. The P. Claim and No. 2 have both been treated by the local machine, erected by Messrs. Minter and Maher, and such crushings have yielded an average of 13 dwts. per ton, there having been crushed about 1,500 tons.

Quail's Prospecting Claim, now known as the Barmedman United Gold-mining Company's, has been worked for the past nine years. About 750 tons of quartz have been crushed from this reef, giving a return of from 12 dwts. to 13 dwts.; in many cases the return has been greater, but  $12\frac{1}{2}$  dwts. may be considered the correct return, as verified by bank slips.

The Fanny Park has always been considered by me as one and the same reef as the Ada. Although apparently separate it still has the appearance of being a shot-over, or, as we term it in mining, the cap of a reef being turned over. The Fanny Park is considered very rich. When the Quail Brothers were working the Prospecting claim, the richest gold was obtained from the same quartz as now being raised by the Fanny Park.

The Fiery Cross is, beyond doubt, a continuation of the Fanny Park, the surface stone being of a soft, crumbly nature, and very easily crushed. This reef varies in width considerably, but at water level, where it seems to be better defined, it averages from 4 to 5 feet.

To the south of the Fiery Cross two claims are occupied, in which many shafts have been sunk; however there has not been any payable returns, the only gold discovered being some months back, by a party of foreigners, who procured some a few feet from the surface.

Wright and party's reef is in a southerly direction from the Barmedman United Gold-mining Company's ground, and, being an exception to most of our reefs, lies in an easterly and westerly direction. This reef carries exceptionally fine gold, and from various tests (owing to the want of machinery) to which it has undergone, it is fully supposed to yield at least  $1\frac{1}{2}$  oz. or 2 ozs. per ton. There are already 300 tons of stone at grass, awaiting treatment.

Lett and party's is a parallel reef to Wright's, and, presumably, a continuation of the Ada line. Mr. Sice's and my own opinion both coincide that the Ada, Fanny Park, and Fiery Cross is one and the same reef, and that Lett's and Wright's are merely diverging branches.

The Hard to Find, the principal claim being the lease owned by Roderick and party, which has been worked a considerable number of years, it is situated about 2 miles from Barmedman. Although this reef has been so long worked there has only been about 300 tons of stone crushed, which yielded from 20½ dwts. to 28½ dwts. This reef, although comparatively small, being in some places not over 8 inches, is extremely rich.

Wright and party occupy some ground situated between the lease and Morellis', No. 1 North Hard to Find, in which they have recently obtained a very promising reef; but, being like most other reefs obtained in close proximity to the water, prevents individual capital from fully developing same.

At Morellis and party's, the reef apparently narrows at the southern end, but continues its width, viz., 2 feet, in the northerly end of the workings. The best specimens were obtained at water level. A cwt. taken out before attaining that depth was forwarded to the Mint, and yielded at the rate of 160 ozs. 13 dwts. per ton.

The No. 2 North is owned by Barnett and party, and contains a very large reef, varying in width from 4 to 5 feet. This is an almost new discovery, and has, owing to the want of machinery, been very little worked. However, it is unanimously asserted that, with the exception of Jackson's, it will yield the most handsome returns on the field.

Attwell and party are sinking for Barnett's Reef, but owing to the great dip which most reefs in this district take considerable difficulty is experienced before cutting same. The Moonlight is a line of reef situated east of the Hard to Find, and has been opened some few months back. The vein has been traced through the prospectors', viz., eight men's ground, and shows very good gold. The width of the reef is from 6 to 12 inches, but it is supposed that other large bodies of stone intersect this ground. The walls are well defined and are of slate and sandstone formation. There are three claims under occupation at the Phoenix, a distance of 3 miles from Barmedman; the deepest shaft is the No. 1, owned by Fraser and party, their main shaft being 106 feet, at which depth they have cut a very well-defined reef, carrying very good gold. The prospecting claim on this line, the proprietors have most unfavourably been engaged in seemingly an interminable law dispute, which has considerably retarded the progress of their claim, also prevented capital being expended, as speculators are very dubious about investing in any claim which is likely to result in a law-suit, that luxury being considered rather expensive.

The total amount of quartz to grass is about 5,000 tons. There not being any crushing plant little energy is displayed in raising of same. There is an abundance of water, and although being of a brackish nature can be utilized by the machines; it is obtained at about the 70-foot level, and appears to be a general thing, as at the Hard to Find, as well as at the B.N.G.M. Co.'s claim, a subterranean channel appears to exist.

I may further add that on yesterday the Ada Gold-mining Company cut the reef after driving some 20 or 30 feet from main shaft, and have continued with the drive a distance of 8 feet without meeting with any walls, and as this reef is 20 feet wide in some places in the adjoining claim it may be a considerable time before its width can be accurately ascertained.

The value of the machinery may be estimated at about £10,000, the B.N.G.M. Company's plant consisting of half of this amount.

The number of miners' rights issued for the past year were ten, and business licenses eight; but the population coming from another mining centre, in which most were provided with miners' rights, accounts for the small demand.

There has not been any alluvial gold discovered yet, and but very little prospecting for same, the nature of the country being very flat, and any indications are quite discernible and surface water very scarce.

#### SOUTHERN DISTRICT—ARALUEN, BRAIDWOOD, LITTLE RIVER, MAJOR'S CREEK, AND NERRIGA DIVISIONS.

(*Mr. Warden Aldcorn, P.M., Araluen.*)

ANNUAL report of mining operations in the Araluen, Braidwood, Little River, Major's Creek, and Nerriga Divisions of the Southern Mining District.

Mining operations in some of the abovenamed Divisions, for the year 1882, have not been so successful as circumstances led me to anticipate they would be when I wrote my report for the previous year.

In the Araluen Division individual miners and small claim-holders have had very little opportunity of obtaining gold from ground sluicing, because of the scarcity of water, the rainfall having been much below the average of past years, except that of 1881, which was also a very dry one. This, on the other hand, has been favourable for the large stripping claims in the Araluen River, some of which have to be kept dry by pumping, and others by long and expensive tail races. Some new pieces of ground have been opened in this way, the result being a considerable increase of gold on the previous year. In consequence, however, of the great expense of working these claims and the patchy distribution of the gold, the holders are not very sanguine as to being able to continue operations with such returns as have been obtained lately.

As regards the Braidwood Division, Jembaicumbene, and the Shoalhaven River and tributaries being the gold-producing localities therein, a gradual falling off in the production of gold must be expected, as the ground at the former place (Jembaicumbene) has been pretty well worked out. However, had the season not been so dry there would probably have been a less deficiency than is shown in the subjoined statement. The return of gold from the claims on the Shoalhaven River, including the Nerriga portion, would indicate that the precious metal is not by any means worked out, and that by the aid of gold-saving appliances still larger returns may be obtained. A company who applied for permission to mine on the Oallen Reserve are importing some improved machinery from England, until the arrival of which they have applied for suspension of labour conditions.

In the Little River Division very confident anticipations of success in re-opening some previously worked quartz-reefs, as well as in the opening up of new veins, were indulged in by several parties, which have not to any extent been realized. As stated in my last report, one company had gone to considerable expense

expense in the erection of machinery, and during the past year they continued operations in connection with three claims, chiefly in the way of erecting buildings and adding to machinery for pumping, crushing, &c. Some trial crushings of a few hundred tons of stone have been made, as well as from the claims referred to as from several new veins applied for to lease by other parties, but so far the results have not shown that the reefs can be profitably worked. I understand, however, that it is the intention of Eisenstaedter and Company to test their claims more thoroughly by sinking to a greater depth. It is questionable whether it would not have been more prudent to have spent more of the funds of the company in effectually ascertaining what was underground rather than in buildings which may prove to be useless. There is a falling off to a considerable extent in the quantity of gold from Little River, but the scarcity of water for ground sluicing is, I have no doubt, the cause of this.

The anticipations of satisfactory results as regards the Major's Creek Division have been quite disappointed. Several parties have experimented at not a little expense on the reefs, but it would seem unsuccessfully, as nearly all working has been stopped, and most of the machinery is being removed. Ground sluicing and puddling, which at one time in this Division produced large quantities of gold, has been all but stopped during the past year from want of water, and consequently a large number of the miners have left the district to work on the railway lines and other roads. It is, therefore, not surprising that there is a large deficiency in the return of gold from this Division.

The reefs at Bell's Creek, to which I referred in my last report as being worked by a Mr. Brown, have not proved remunerative to that gentleman and those associated with him. The veins are so narrow and the ground so expensive to work that Mr. Brown has been forced to the conclusion that the gold obtained will not pay expenses, and he is about removing his machinery.

In conclusion, I would just remark that in view of the number of years during which gold has been obtained from the above divisions of the Southern District, and the exceptionally dry weather which has prevailed during the two past years, the quantity still produced must be regarded as satisfactory.

Place.	1881.	1882.	Increase.	Decrease.
	ozs.	ozs.	ozs.	ozs.

As I have for several months acted in the absence of Mr. Warden Russell for the Queanbeyan Division of the adjoining District (Tumut and Adelong), I may add to the foregoing report that at Captain's Flat, near the Molonglo River, an extensive quartz reef has been discovered, extending it is supposed for a distance of 2 or 3 miles, and of great width. About forty claims and leases have been taken up or applied for, and two powerful batteries have been erected by Messrs. Blatchford and party and Holtermann and Company. From the results of trial crushings already made there is every prospect that this will prove a payable line of reef.

A copper lode has also been discovered in the same locality which is supposed to be valuable, but nothing has as yet been done as to working it.

#### SOUTHERN DISTRICT—MORUYA DIVISION.

(Mr. Warden H. M. Keightley, P.M., Moruya.)

IN forwarding the annual report for 1882 there are not many fresh discoveries to chronicle.

At Montreal the terraces have been, and are still, continuously and successfully worked to the borders of Wallaga Lake; there the permanent traces have been abandoned from want of energy and capital.

On the summit of Mount Dromedary has been erected a smart eight-horse battery in connection with a company, but I have not yet received information as to their success, the leaders or veins in this locality are narrow, and occasionally rich.

On the east side of this mountain some fine veins of pyrites have been discovered, especially in the leases of Messrs. C. Brice and others, the assay exceeding 3 ozs. of gold to the ton. Without reference to the silver, this discovery, although at present in its infancy, will hereafter engage the attention of intelligent capitalists.

New reefs have been discovered at Whittaker's Creek, near Wagonga Heads, and as far as at present opened, indicate a soundness, and what is more necessary, a permanent future.

The sinking at present is from 30 to 40 feet, extending over several leases, and from 2 to 4 feet in width, with fair indications of gold which ought to prove payable, and in some cases rich.

Arrangements have been made for the erection of a stamping battery, which will soon operate on the various heaps at the surface.

The Donkey Reefs, near Moruya silver-mines, have been re-opened with varied success.

At Mogo some of the old reefs have been re-opened, and in one instance recently a leader has been discovered of unusual richness.

#### SOUTHERN DISTRICT—NOWRA DIVISION.

(Mr. Warden Lovegrove, P.M., Nowra.)

THE past year has been uneventful in the quiet gold-field under my charge. The mines generally have paid their expenses barely, with the exception of the Pioneer, which has worked steadily and returned a higher average per ton crushed than any other. The total yield for the year has been 828 ozs. from 2,029 tons.

The Pinnacle, which has crushed very poor stone, under 5 dwts., is registered for six months to enable the working bees to get rid of the drones who will not pay calls. The sale takes place immediately, and the purchasers will have a very handsome and complete plant, and a mine requiring the eye of a civil engineer and a practical gold-miner.

The

The Eclipse has crushed throughout the year for an average of about 8 dwts., but the last lot which was only completed in January, has averaged 14 dwts., and straightened matters considerably for them.

The Pioneer and Homeward Bound are both on good stone; the last parcels will average more than an ounce to the ton.

The Golden Crown, which was again started in new hands, crushed out of surface stuff, 12 ozs. from 47 tons, not very bright certainly, but a good deal better than dead work. The two working miners, who were also shareholders, differed as to further progress, and left the mine. A bystander gave me immediate notice that the conditions were not being fulfilled, so that law proceedings will probably delay the further development of this mine for the present.

#### *Copper.*

There has been a small revival of interest in this metal. The former manager of the Eclipse has been prospecting two lodes, with capital at his back, but nothing definite has yet been reported to me. The Tonga copper-mine, formerly in the Supreme Court, and before a Select Committee in Parliament, has been taken up as a mineral freehold by a well-known firm in Sydney, and will be developed if the tests are satisfactory.

Nothing has been done in any other metal or mineral held under lease, or under the 28th clause, and the sale of miners' rights has been much reduced.

#### SOUTHERN DISTRICT—BERRIMA DIVISION.

(Mr. Warden F. R. Wilshire, P.M., Berrima.)

I HAVE the honor to report for your information that the various mining operations carried on in the mining district recently assigned to me have not been very extensive; indeed, concerning that portion of the said district laying south of the police district of Berrima, I have nothing to report, having received but one application in connection with mining from that locality, and this was for tin-mining, whereon no mining operations have yet been commenced, and, never having seen the locality, I am unable to furnish any information, &c., concerning it.

Four miners' rights were issued to the members of a party in November last, who reported to have discovered gold in the neighbourhood of the junction of Bundanoon Creek with Kangaroo River, and spoke of taking up prospecting claims, but I have heard nothing of them since.

The recent discovery of gold reefs, &c., near Paddy's River, in the neighbourhood of Marulan, upon the prospects of which I reported unfavourably last year, has since proved a failure as a payable gold-field, and all the workings have, I believe, been abandoned as unprofitable.

With regard to coal-mining, Mr. Baker's mine (Erith Colliery) has continued at work, with more or less success, with an average output of about 50 tons per day, most of which is supplied to the Railway Department; and the coal, I hear, is giving tolerable satisfaction. It is generally used mixed with Newcastle, in which manner, I am informed, it gives better results as a locomotive fuel than if used alone.

The Berrima Coal-mining Company (Limited) have also continued at work during the past year, the output averaging about 60 tons per day, most of which also is supplied to the Railway Department for locomotive use, mixed, I believe, to some extent with Hartley coal, which is said to improve both coals for locomotive use. 1,000 tons were also supplied by this company (*via* Albury) under an order from the Victorian Government, for locomotive use; and it is confidently expected that large quantities of this company's coal will find a market over the Victorian border as soon as the Murray is bridged and railway connection established.

Some new seams of coal have been opened at Emu Creek, some 6 or 8 miles west of Bundanoon Station, as also at Meryla, some 8 or 10 miles east from Moss Vale. The coal of both places is said to resemble in character most of the other seams found in this district, and efforts are being made to further test and develop them.

A "boring" for coal was also started at a place on the Great Southern line, about 2 miles north from Bundanoon Station, with what results I have not heard, but I hear that the boring has now been discontinued.

Several other seams are reported to have been found in the vicinity of Mittagong, but I do not hear that any positive action has been taken to develop them. As a rule the coal-seams in that neighbourhood have not proved very good, and the same may be said, in a general sense, of many of the other known, though undeveloped, seams in this district.

The seams discovered near Marulan last year have since been proved and abandoned as unworkable, through narrowness of seam, &c., &c.

The Joadja Kerosene Shale and Coal Company still continue extending and improving their extensive works, and an important and valuable industry has now been fully established by this enterprising and persevering company, with every appearance of most successful results.

#### SOUTHERN DISTRICT—BOMBALA DIVISION.

(Mr. Warden Giles, Bombala.)

IN forwarding my annual report for this portion of the Southern Mining District, I have the honor to state there are not any fresh discoveries to chronicle.

The details of gold found in the division, so far as could be ascertained, will be found in the report of the mining registrar.

I anticipate that at Nelbothery there will be a considerable number of persons engaged in mining operations during the ensuing six months.

#### SOUTHERN DISTRICT—BRAIDWOOD DIVISION.

(W. F. Robertson, Mining Registrar.)

I do myself the honor to transmit herewith in tabular form the information asked for by the circular letter of 21st November, 1882, and with reference thereto I would point out that the yield of gold from the Braidwood Division of the Southern Mining District for the year 1882 has not only equalled but has considerably exceeded that of the year immediately preceding it, notwithstanding the many drawbacks that

that have existed to the successful working of these gold-fields, from the want of sufficient water and capital to develop them. The rainfall was so very small during the year that following as it did a succession of five or six dry seasons, there was not during the greater part of the year a drop of water available for sluicing purposes, except at a few claims on the Shoalhaven River and the Jembaicumbene Creek; and for that reason some of the claims had large quantities of washdirt stacked at the end of the year ready for the first good downpour, while others had to be abandoned as unworkable. Had that dirt all been washed, and those abandoned claims been worked, the results in the gold yield might have been at least 100 per centum larger, and I anticipate that for the ensuing year of 1883, with a large quantity of wash-dirt ready at the beginning of the year for the first available water supply, a far greater quantity of gold will be gained, and consequently the earnings of the miners will be considerably increased and be more satisfactory to them. I think there is but little difference in the numbers of men employed on those mines, but it is very difficult to arrive accurately at the numbers. The number 130, given in my returns, though less than my former estimates, does not prove that there is a reduction in the number of men employed. The reduced estimate is accounted for by a portion of the division being now included in another division, and although several of the miners have occasionally been induced by the high rates of wages offered on the railways, and other large works of a public and private nature, to leave for a time their old occupations, yet I think that has not made any appreciable difference as might be supposed, for they have invariably returned to their claims again within a few weeks, finding them no doubt more profitable. The large area of ground referred to in my last report as having been taken up at Jembaicumbene has remained unworked from the want of the capital requisite to cut a race sufficiently deep to drain the ground (which is in the bed of the creek), although the auriferous deposits are said to be very rich there. Several portions of Church and School lands were applied for and offered at auction to be leased for mining purposes, at Warri, on the Shoalhaven River, but from the absence of means to work the ground the applicants gave up for the time their intention to lease it, though from there for several miles up the river there is a very large area of ground which is said to be very rich in gold deposits, and more especially of very fine gold, which it is most difficult with present appliances to save, but which will eventually, when properly worked, be of immense value. I believe an attempt will be made in the ensuing year to work some of this ground by means of sluicing, the water to be raised by pumps or races to the required level.

Search has most perseveringly been made during the year by two enterprising miners in some of the ranges of hills in this division, for a silver lode, which it is alleged exists, and which one of them says he found whilst out cattle-hunting some years ago, but I have not been able to get any information of their operations, as they wish to proceed quietly and without molestation in the gaining of their prize, as they hope it may prove to be.

#### SOUTHERN DISTRICT—ARALUEN DIVISION.

(*E. F. Carlile, Mining Registrar.*)

MY returns for the year 1882 show an increase in the quantity of gold won in the division as compared with the previous year of about 700 ounces. The amount is 7,020 ounces, of the value of £27,027, being 6,867 ounces from alluvium and 153 ounces from quartz and pyrites. The increase is attributable to some of the large claims (as anticipated in my previous report) having been on better gold rather than to any actual extension of the works. Indeed, my numerical return of miners shows a diminution thereof, as several of the men have obtained suspension of work on their ground-sluicing claims in consequence of the continued dry weather, and with others sought work on the railway-line. Two of the larger claims were producing no gold for some months in consequence of one of them having changed ownership and the other removing to a new face; both are now, however, in full work.

It has long been the opinion of some that a good run of gold existed on the eastern side of Araluen, far away from the present workings. The proprietors of part of the private land determined to test the question, and undertook some extensive and expensive prospecting, but unfortunately so far without payable results.

I have to make the same remarks as before in reference to the difficulty of obtaining individual claim returns. Those accompanying this report are deficient in one of the principal items for determining an average yield, viz., the quantity of wash-dirt operated on. It is almost impossible in alluvial claims to get at this, as correct accounts (if any) are not kept of the number of cart or truck loads passed through the sluice-boxes; even if the superficial area of the ground washed during a given period were measured, the depth of vein varies so much (from a few inches to as many feet) that no satisfactory result could be arrived at. I know, however, that a day's washing last week yielded 10 ounces of gold from 180 tons (or truck loads) washed, which was considered very payable, but that cannot be taken as a general average.

A considerable quantity of ground has been taken up on lease at Fairfield and Wyanbene, on the Upper Shoalhaven, principally by a gentleman representing some English capitalists, but as the ground is waiting survey, little or no work has been done. I am credibly informed that arrangements are being made with some Melbourne brokers which will probably result in the formation of a company for working the ground on a large scale.

Quartz-mining has been principally confined to Bell's Creek, where 203 tons have been crushed with a yield of 9 dwts. 9 grs. to the ton; this was got from a depth of from 60 feet to 140 feet, chiefly below the water level. At the same place a reef of micaceous stone which was worked some time since, has again been started; 295 tons were crushed, with an out-turn of 3 dwts. 5 grs. to the ton. Some pyrites (8½ tons) have also been treated, which yielded 3 ozs. 6 dwts. 11 grs. to the ton. For this work a Wheeler's pan and two large vats (for chemical treatment) were erected. The works are at present stopped, the result, I am informed, not being satisfactory.

I have heard of some good washings within the last few days, so that the miners are starting out on the new year with renewed hope.

#### SOUTHERN DISTRICT—MAJOR'S CREEK DIVISION.

(*J. Heazlett, Mining Registrar.*)

IN compliance with the instructions contained in your circular letter of 21st November last, I do myself the honor to forward herewith to your address my statistical report for the year ending the 31st December, 1882, and in which I have endeavoured to give an accurate account of the progress made in mining generally, and also the number of miners distributed throughout my division.

In

In drawing up this my statistical report for the year ending the 31st December, 1882, I am reluctantly compelled to state that no progress has been made in either quartz or alluvial mining. There has been a decrease of seventeen in the number of miners' rights issued as compared with the number sold during 1881. There has been a considerable decrease in the quantity of gold purchased as against that of the preceding year, viz., 221 ozs. odd; but those acquainted with this place and the seasons for the past three years are not at all surprised, indeed the wonder is that so much gold has been bought at this place, and all of which has been obtained within a radius of  $2\frac{1}{2}$  miles. A few parties only have been doing well, having found some sound blocks, but most have done remarkably well, otherwise the quantity of gold would have been much less than it is.

To account for the reduction in the miners' rights, there is a large portion of private land within my division and a great many reside on their own allotments and need not pay 10s. a year, unless they can obtain a piece of ground worth working, and the fact of having had no floods for some years past, there was no encouragement to remain on the field, hence very many left in search of employment elsewhere, and only those who have water-races and water-rights, dams, &c., took out the miner's right. The long drought, and next to nothing being done at quartz-mining, is the cause for the falling off in the yield of gold.

It will be seen by a glance at the tabular form herewith that no less than three crushing machines have been removed from my division during the past year, leaving only two remaining, and if report speaks truly one of these has been purchased recently and will be removed very soon.

*Long Flat.*—One party excepted, the miners at this place have not done so well during the past, as what they have done during previous years. No doubt the ground is becoming poorer in gold every year, and probably not good enough to pay for working by puddling machines, though still good enough to pay by means of sluicing; and strange to say the more it is worked the better it pays during heavy rains. The secret of this is that the more the ground is pierced with shafts and tossed about the greater quantity of stuff can be sent away in flood time. With a good main tail-race into the Back Creek and a supply of top water the Long Flat would yield a large quantity of gold for many years to come.

*Major's Creek.*—This place is and has been at a stand-still for want of water, indeed with one or two exceptions all alluvial claims are worthless when dry seasons come, and one party only have been able to do a little, and this was owing to their having a race into Back Creek and three large reservoirs, and even this party have done very little compared with previous years. Quartz-mining is a thing of the past as regards this division. The Dargue's Reef Gold-mining Company, Spring Creek, crushed a few tons "mundic stone," which yielded about 2 dwts. 18 grs. free gold to the ton, *not payable*, hence work ceased many months ago. The Snob's Reef, at Big Hill, has not been worked since the Messrs. Field & Co. gave up, some two years since, and so it is with all other reefs, with one or two exceptions.

Having shown the dark side of the picture it is only fair that I turn it round and allow a glimpse at what may be termed its bright side, which, although sullied, may yet appear much brighter than at present; and as a beginning to this end I may mention that Mr. W. C. Newman, who a short time back made an application for a lease of 8 or 9 acres on Red Hill, known as the Rise and Shine line of reef, having raised a capital of some £3,000, has began work in earnest, and already has a shaft down about 80 feet, slabbed with sawn timber; it is 8 by 3 feet 6 inches. The same gentleman has, I am informed, secured a large block on the Old Commissioner's Hill (private land), and of which I have heard favourable accounts regarding the quality of the mundic, which in some places can be dug out without the aid of even a pick. These two blocks of ground, if as good as report says, then Mr. Newman has secured good property, and no doubt the reason they have not been worked to a greater depth is that the original holders were unable to treat the mundic (pyrites); should their two holdings prove to be as rich in gold as what they are expected to do, then there will be encouragement to the owners of other leaseholds. The fact is that our reefs have not had anything like a fair trial; even what is known as Dargue's Reef has not been worked as it should have been. It is true that opinions differ widely regarding this vast mine, some believing it is no good, whilst others believe the contrary, and say that had the money which has been expended in useless machinery, making a great show on the surface, been expended in sinking the mine to a greater depth, something good would have been met with, and at the worst there would have been the satisfaction of knowing it had got a fair trial and was found wanting; and this is not a solitary case of such bungling. Working miners will not act as companies are in the habit of doing, but will first prove ground and then, if payable, will get the appliances to carry out the work.

The future prosperity of the Major's Creek Gold-field depends on whether capital and common sense, *i.e.*, good management, be brought to bear on our quartz-reefs, and wet seasons for the alluvial ground; the latter so far as Major's Creek is concerned, will not make it yield large quantities of gold, but if the reefs be properly tested and found to pay, both together would keep up the prestige of the place for some years to come; but otherwise the people cannot, and will not, remain here, and even at the present time there are not over half-a-dozen young men to be found in the division, and a few married men with their families, finding they could do no good cleared out; and I may safely say that within the past twelve or fifteen months over six score have left, some temporarily and others altogether.

#### SOUTHERN DISTRICT—LITTLE RIVER DIVISION.

(P. J. Galway, Mining Registrar.)

THE drought which has prevailed here since 1879 has caused most of the race-holders to abandon their claims and seek employment elsewhere, and from the high wages to be obtained by trained pick and shovel men on the railway contracts I fear that, until favourable seasons for ground sluicing sets in, the alluvial population will not increase.

The constant dry weather has been ruinous to this gold-field. Water races of an aggregate length of 170 miles, and costing £40 per mile, are now lying idle or abandoned.

It was stated in my last report that a fresh start had been made in quartz-mining, several leases having been applied for, and some extended quartz-claims taken up. More leases have been marked out, together with extended claims, during the past year. None of the leases have yet been granted, and no work of any kind done.

The

The same remark with regard to work tending to test the reefs applies in many cases to the extended claims. Some expensive top work has been done on one or two, and poppet-head pumping and winding gear fixed, tanks erected, and others cut out of surface and other preparatory work finished, but no shaft, new or old, had been worked as deep as was done by the previous owners, who some twelve years back originally worked the reefs now held as extended claims, and then continued, with heavy water to contend against, to raise some 2,096 tons of stone, which yielded 2,772 ozs. gold, together with over 1,200 ozs. taken from specimens.

The following leases have been applied for, together with the extended claims mentioned below, and all information respecting them that could be procured will be found on the proper forms. I must also state that it is with the greatest difficulty that information can be had, the managers of the two principal companies refusing to give the yield of gold obtained from the stones raised and crushed at their own batteries:—

Shaw and party, Homeward Bound Hill, 4 acres.

James M'Donald and party, Swiper's Hill, 4 acres.

James M'Donald and party, North of Pride of Mongarlowe, Swiper's Hill, 5 acres.

Same parties, on Dibbs' old line of reef, Box's Creek, 10 acres.

Same parties, on Davis' old claim, Perseverance line of reef, 5 acres.

Same parties, on Burrell's line of reef, Settlers' Flat, 5 acres.

James M'Donald, William Clark, and Arthur Hogan, south of prospecting claim, Swiper's Hill (first taken up as an ordinary claim, and then applied for as a lease), 2 acres 32 perches.

This is the only lease on which any work has been done, and that mostly when held as an ordinary claim. This company is known as the Lady Mary Company, limited liability, and holds 31 acres 32 perches. No machinery has been erected with the exception of a 12-stamper battery.

Arthur Hogan, Nuggetty Hill, Fagan's Creek, 5 acres.

Pride of Mongarlowe Company, adjoining prospecting claim, 5 acres.

Arthur Hogan, Swiper's Hill, 10 acres.

John Jeffries and Company, Broad Gully, 4 acres.

Roderick M'Donald, Jeppett's Hill, 5 acres.

Homeward Bound extended quartz-claim, taken up September, 1880, by Denis Eisenstaedter and Co., was not in working order until the latter part of 1881. This is the only claim on which proper machinery was placed, and a Tangye pump, driven by a 25 horse-power boiler, was used to keep down the water. There is also winding gear and a 10-head battery on the ground. The old shaft, which was 120 feet deep, was cleaned out, and a level put in at 80 feet. A quantity of quartz, 250 tons, taken to grass and crushed; returns unknown. This quartz was left by the original proprietors, who obtained 600 ozs. of gold in specimens, and from a trial crushing of 46 tons 37 ozs. 5 dwts. They sunk the shaft an additional 30 feet, but were forced to abandon it from inability to cope with the water. The claim is at present at a standstill from the same cause, and the company are procuring more powerful pumping power.

*Alma Extended Claim, on the Alma line of reef.*

D. Eisenstaedter & Co.—Work has only lately been commenced on this claim, the old shaft cleaned out and newly timbered, a Tangye pump fixed in shaft, and winding gear erected. The shaft will be sunk a further 50 feet.

*Dog's Head, and Red, White, and Blue Claim Company.*

A shaft has been sunk on the Red, White, and Blue 70 feet and timbered. Water heavy in shaft, and a pump required. An old shaft on the Dog's Head end of claim cleaned out and timbered. Water found at 40 feet. There is a pump on the ground, and more machinery expected. No quartz has been raised. When first worked the Red, White, and Blue gave 2 ozs. per ton from 200 tons quartz, and the Dog's Head 17 dwts. per ton from 30 tons.

The Great Britain is another claim held by Eisenstaedter and Co., and also includes the Republican reef.

Payable stone was obtained on this line when first opened. No work has been performed on this claim by the present holder.

*Pride of Mongarlowe Prospecting Claim.*

A trial crushing from this claim gave 1 oz. per ton, but a further crushing of surface stone only gave 5 dwts. per ton. No proper shaft has been sunk, and the ground only fossicked; it is now held by a Sydney company, who intend to give the claim a proper trial.

There are several other claims from which quartz has been raised, particulars of which will be found annexed. There have been 523½ tons quartz crushed during the past year.

SOUTHERN DISTRICT—NERRIGA DIVISION.

(*Samuel Woollan, Mining Registrar.*)

I HAVE the honor to report with regard to mining generally in my division for the past year that it has been a most disastrous season for prospecting new ground or developing claims on the tableland, but it has been an exceptionally good one for working the bed of the Shoalhaven River, as the continued dryness of the season made it particularly favourable for workings of that description. I have no large finds to report, but a general satisfactory return from the claim-holders, who have been enabled to operate on ground they could not approach for many years previously, consequently I have a larger amount of gold to report from the alluvium, and a small increase in the number of miners employed. I have issued sixty-two miners' rights this year as against fifty-eight for 1881.

No mines for metals other than gold are being worked in this division at present, but report says some very rich discoveries have been made, and will shortly be developed by the aid of Melbourne capital.

SOUTHERN

## SOUTHERN DISTRICT—MONTREAL DIVISION.

*(John Berry, Mining Registrar.)*

I HAVE the honor to report that there has been very little alteration in mining matters on this field during the past year. Sinking on the eastern and western slopes of the Beach Terrace still continues, but the returns from the wash-dirt, I am sorry to say, are very small indeed. The beach is only now and again worked by a few fossickers, the general work being confined to the Terrace.

The average depth of sinking is from 30 to 45 feet, and the wash-dirt averages from 1 to 3 feet. Timber has to be used in all the drives.

There are two puddling-machines on the shores of Lake Wallaga.

Since the last report the lease of 25 acres, applied for and obtained by a company in Sydney, to work a portion of the bed of Wallaga Lake, has been cancelled.

There has been a great reduction in the population during the past year, there being only about twenty-four miners now on the field.

Several prospecting parties have been out to the south and north of Montreal during the year, but all have returned unsuccessful.

The returns of the yield of gold for the year is about 750 ozs. 9 dwts. 4 grs., including what has been taken by private hands.

## SOUTHERN DISTRICT—NERRIGUNDAH DIVISION.

*(H. O. S. Cowdroy, Mining Registrar.)*

THIS gold-field shows no progress during the year. The Europeans still continue to fossick in the old alluvial workings. The Chinese (being more co-operative) get the largest share of gold, several of whom have gone to the Flowery Land during the past year.

Prospecting for reefs has been carried on to some extent, and although rich specimens have been obtained no reef has been found payable. That *payable reefs exist* there seem to be no doubt, and there appears to be a very good field here for the energetic prospector, and also for the introduction of machinery to re-work the old alluvial ground.

## SOUTHERN DISTRICT—BOMBALA DIVISION.

*(C. G. Kyle, Mining Registrar.)*

I HAVE the honor to report that there were issued from this office for the year 1882, 29 miners' rights, 12 business licenses, and 1 mineral license. As mentioned in the last annual report furnished by my predecessor, the gold-miners are nearly all Chinese, and the greatest difficulty is still experienced in collecting from them the fees for miners' rights.

No mines for metals other than gold are being worked in the Bombala Division of the Southern Mining District.

The quantity of gold purchased by the banks in Bombala from gold-miners in the division for the year 1882 was 502 ozs. 9 dwts. 12 grs., value £1,984 10s. 7d.

## SOUTHERN DISTRICT—WAGONGA DIVISION.

*(Archd. M. Smith, Mining Registrar.)**Wagonga North Heads.*

SINCE my last report wherein I noted that good prospects of coarse quartz gold had been got in the creeks and blind gullies about 3 miles north from Wagonga North Heads and about 1 mile inland from the coast, inducing a search for gold-bearing quartz, I have the honor to report that a payable reef has been discovered averaging 2-2½ feet in width, the stone from numerous trials yielding 1½ to 2ozs. per ton. for the quantity tested. There are at present seven claims at work, representing an area of 28 acres applied for to lease. Arrangements have been made for placing a ten-stamper battery on the ground as soon as practicable. After machinery is at work, and the confidence expressed by the miners, every claim being upon gold, tends to the belief that this will be a permanent field, and as the ground is opened up give employment to many reefers whose wages here are £2 10s. per week, eight hours work. No alluvial diggings have as yet been discovered in this neighbourhood, and the ordinary digger could do little good in surfacing shallow ground without water. The only men likely to find employment must be thorough practical miners. There is room enough for investment of capital with the prospect of remunerative returns.

*Mount Dromedary.*

Cowdroy Brothers' claim has been continuously worked during the year to advantage.

Work in the Star of the South Gold-mining Co.'s claim has been much retarded in consequence of the delay in erecting their battery, which was expected to have been completed by the 1st of June last, but not in position till the end of December. The company have two tunnels, each about 400 feet in length, the upper tunnel, 70 feet above the lower tunnel, carrying gold in oxidized quartz; while the lode in the latter consists of pyrites, which from assays has yielded as high as 40 ozs. of gold per ton. I understand that it is the intention of the company to send the pyrites to England for treatment; about 250 tons of stone to grass, and it is expected that crushing will be commenced about the middle of January. The creek claims on the mountain have yielded fair wages to the holders.

## SOUTHERN DISTRICT—MORUYA DIVISION.

*(H. W. Barton, Mining Registrar.)*

I HAVE the honor to state the following in reference to the alluvial and quartz mining in the above division, which embraces Mogo Gold-field, Donkey Hill, and the locality where the old silver-mine was worked.

Mr. Francis Guy has still his machinery on the ground, consisting of a 20-horse-power engine and boiler with a battery of 10-stamps erected on the old silver-mine, and which machine Mr. Guy informs me has upon the average for the last twelve months crushed about 40 tons per week, realizing from the crushing 6 to 20 dwts. per ton all round. The reef is considered payable, and about twenty-five  
to

to thirty miners have been at work. The depth of the sinking in and about the locality has only reached some 40 feet. The reefers at present depending upon realizing from rich leaders—leaders which have given out in many instances 2 and 3 ozs. to the ton, but the granite casing is so hard that it is most expensive to get through, rendering the diggers unable to make more than wages sometimes, yet they stick at the work, and as far as I can learn are satisfied with the results.

The 194 ozs. 5 dwts. 6 grs. mentioned in printed form annexed does not come near what has been obtained. There have been 40 tons crushed per week during the year at Guy's machine, but the exact amount realized I cannot learn.

The manager of the Bank of N. S. Wales, Moruya, reports in writing to me that 601 ozs. 14 dwts. 8 grs. have passed through the bank principally from Nerrigundah, Donkey Hill, Moruya, and Mogo. The manager also states a private hand conveys a considerable amount of gold to Sydney from Mogo and the coast gold goes the same way. There is at present an impetus given at Mogo by an association of miners numbering about twenty, who have at present sunk about 50 feet and got on a reef about 2½ feet wide, and in their course have found good specimens. The shaft that has been sunk is a continuation of an old one that in 1873 was known as Corrigan's Reef, which at that period realized 12 to 13 dwts. to the ton, but was abandoned in consequence of the crushing machinery being removed. The above association have shown me specimens that are very rich and gold seems to be spread through the stone. There seems to be little question that notwithstanding all the difficulties and prejudices that once were to the fore that thousands of tons of payable quartz can be obtained in the Mogo district if proper machinery is put upon the ground. The gold is a flowery gold and requires very careful manipulation, and the old machinery, when I say the old machinery I mean the battery that was erected and removed some years ago and in which the amalgamating process was singularly defective, as large quantities of quicksilver were found afterwards in the creek.

I have perhaps been too general and discursive in my report, but I have written thus in the absence of filling in most of the printed forms which could be in most cases only nil in their respective columns.

#### SOUTHERN DISTRICT—NIMITYBELLE DIVISION.

(*G. W. Myers, Mining Registrar.*)

I HAVE the honor to submit my annual report of the Nimitybelle division of the Southern Gold-fields, Kydra. I regret to state that the mining interests of this division during the past year have not made very good progress. Nothing much has yet been done towards developing the field, the deepest shaft only being about 70 odd feet, and many of the claim-holders had to abandon their claims in consequence of not having sufficient capital to continue. The quartz is most expensive to raise. Thirty odd claims were taken up during last year, but only about a dozen is now working. Three or four parties are applying to have their claims converted into leases, and it is rumoured that other claimholders are likewise in treaty with sharebrokers in Sydney, with a view to the same object, and forming a company. This is considered the best course, as all miners would then work amicably. During last year there was a deal of litigation at Kydra, which I have no doubt retarded the progress of the field. Much credit is due to Mr. S. McDonald for the venturesome speculation in purchasing and erecting a crushing machine, at considerable expense on an untried reef, with but little proof of its turning out prosperous. Nearly 500 tons of quartz was put through this crushing machine between July and September, but owing to the shallowness of sinking the return was not very good. Through the courtesy of Mr. Mullens, manager to J. S. Bank Cooma, I am placed in a position to state that miners of Kydra, during last year, sold to him 172 ounces 3 penny weights of gold, at an average price of £3 11s. per ounce. The number of miners' rights issued here during 1882, are 155; business license, 1.

I hope to be able to report more favourably on this field in my next annual report.

#### SOUTHERN DISTRICT—GUNDAROO DIVISION.

(*A. Agassiz, Mining Registrar.*)

I HAVE the honor to report that mining in this locality may be termed a thing of the past. The reefs have been entirely abandoned. The machinery owned by the "Suburban Gold and Diamond Company," which was lying idle for about 18 months, has been removed to the Foxlow diggings. But two miners now reside on Brook's Creek, and the result of their joint labours in the alluvium for the past year has been about 10 ounces of gold. These men do not confine themselves to fossicking alone, but follow shearing, reaping, etc., in the season.

#### TUMUT AND ADELONG DISTRICT—TUMUT DIVISION.

(*Mr. Warden Vyner, P.M., Tumut.*)

I REGRET that the report I have to make of the state of mining in that portion of the Tumut and Adelong mining district under my charge is not much more favourable for the past year than it was for the previous one.

I think the population employed in mining has decreased, more or less, on every gold-field; the yield of gold, however, has not very materially diminished.

More rain has fallen in 1882 than in 1881, but still there was a marked deficiency during the latter year of that kind of rain which provides a permanent supply of water during the summer months; and a good many claims are now idle in consequence.

On the whole I am afraid that I must state that in the division under my charge mining prosperity is gradually declining, and I see no reason to hope for a revival of it at present.

There is no mining other than for gold being proceeded with.

The several mining registrars in my division have already furnished you with the usual statistical information.

#### TUMUT AND ADELONG DISTRICT—GUNDAGAI DIVISION.

(*Mr. Warden W. Love, P.M., Gundagai.*)

IN submitting my annual report I regret to state that gold digging has almost ceased in many places in this division, where numbers of men were formerly employed, the chief reason being that the returns were not sufficiently remunerative.

The

The only payable gold-field at present is at Muttamas, some 20 miles from Gundagai. From the report of the mining registrar at that place I send the following extracts:—

This field was opened more than twenty years ago as a quartz-mining district; from that time till the present there were opened and tested twelve lines of gold-bearing reefs, one of which was worked to a depth of 230 feet. This was a large and well-defined reef, and yielded from 8 dwts. to 15 ozs. per ton. It has been lying idle for nearly four years for want of sufficient capital to erect adequate pumping machinery. The Eureka, Stringy Bark, Excelsior, and Doctor's lines of reefs have all yielded from 18 dwts. to 8 ozs. per ton.

A new reef was opened last year by the Brothers Guy, from which they crushed 10 tons, yielding 4 ozs. of gold per ton; they have now disposed of it to a South Australian Company, with a nominal capital of £30,000. Since purchasing, this company has erected a dam, and cut out a site for a crushing plant; the company is also putting in a tunnel to cut the reef, and sinking a shaft. A great impetus will be given to quartz-mining when the crushing-machine is erected.

In alluvial mining I have to report that in the early part of 1882 a rush took place to a lead opened by Messrs. C. Wilson and party; this runs at right angles to and leads from the Doctor's reef. There are ten payable claims of six men each on Crown Lands, and four claims on private property. The deep ground at the lower end of the lead has not been tested in consequence of too much water. There are now about eighty men at work. The quantity of gold raised amounts to 2,100 ounces, valued at £8,137 10s. The gold is a coarse, waterworn sample, and brought from £3 17s. to £3 19s. 6d. per ounce at the Mint.

The depth of sinking is from 30 to 110 feet; width of lead, from 15 to 100 feet.

#### TUMUT AND ADELONG DISTRICT—COOMA DIVISION.

(*Mr. Warden R. Dawson, P.M., Cooma.*)

I HAVE the honor to furnish my report on the gold-fields within the Cooma division of the Tumut and Adelong mining district for the year 1882.

The only place where mining has been carried on during the year is at Kydra, where the miners numbered from twenty to fifty, very few of whom procured sufficient gold to pay expenses. The quantity of gold obtained was about 200 ozs.

I am of opinion that if a company were formed, with capital sufficient to thoroughly test the ground, and the present claims amalgamated in one lease, it would in all probability turn out a payable investment.

#### TUMUT AND ADELONG DISTRICT—ALBURY DIVISION.

(*Mr. Warden Maunsell, P.M., Albury.*)

THERE is a fair amount of mining carried on in my district considering the disadvantages miners have to labour under and the number of other gold-fields opened up during the past year.

Slattery and party's claim, Cherry-tree Reef, at Nail-can, being four men's ground, has been continuously worked for the last twelve months with good results. A new shaft was sunk to strike the lead, which has been found at a depth of 75 feet and at the bottom of the shaft. The claim is now 90 feet deep, and a crushing of 52 tons yielded 78 ozs., being  $1\frac{1}{2}$  oz. to the ton, which realized £3 17s. 10d. per ounce. There are still 25 tons on the grass. It is more a shoot than a well-defined reef, varying in width from 2 to 6 feet, and dipping south.

The new Nail-can Company (late the Albury Gold-mining Company) have not been at work for some considerable time until lately. The new company have put in a cross-cut at the 70 feet level, and at 20 feet a trial crushing of 18 tons yielded 8 ozs. Reef is 3 feet 6 inches wide.

Meredith and party's lease at One-tree Hill, Black Range, at a depth of 60 feet, has yielded 116 ozs. for 66 tons. The leader is still small (from 1 to 3 inches wide), but very rich.

Goldsworthy Brothers, at Black Range, are down about the same distance, and have crushed 21 tons for 35 ozs. Width of reef, about 12 inches.

Several claims are being worked at Portuguese Gully, near Black Range, and the prospectors' (A. T. Johnson and party) shaft looks well.

Portuguese Gully is an old alluvial ground, but the workings are now in quartz, and have been discovered during the last six months. The country here is much softer than at either Black Range or Nail-can.

The Hawksview Gold-mining Company (private property) are still tunnelling and are in 200 feet, but expect to have to drive another 100 feet through hard granite before touching the reef.

A crushing from Polkinghorne's claim at Hawksview returned 43 ozs. for 17 tons.

The machinery here consists of a battery, 8 head of stampers.

There is very little alluvial working in my district, not more than about 60 ozs. having been obtained at the Black Range for the past year, and nearly all by fossickers.

The Black Range Alluvial Company (25 acres lease) are idle at present, not having machinery to keep down the water. Should this ground turn out well—and there is every probability of its so doing—miners will again turn their attention to the alluvial.

#### TUMUT AND ADELONG DISTRICT.

(*Warden Hare, Corowa.*)

I HAVE the honor to forward you the annual report as to the prospect of the Corowa Gold-fields.

For several years the idea has been prevalent amongst the inhabitants that gold was procurable in the neighbourhood of Corowa; from time to time parties had fossicked with various success; gold was there, but whether in payable quantities or not was the problem to be solved. A company was started the beginning of this year with a capital of £3,000, a lease of the supposed auriferous land was signed, and the necessary arrangements made for working the ground. On the 12th of August the battery was started crushing, and the following results were obtained from the mine:—From 130 tons of quartz crushed the gold was 61 ozs. 3 dwts. The manager, when raising the stone, estimated the yield at 1 oz. per ton; but I am informed that this average would pay very well had the run of gold not been lost at 60 feet. Since then 90 tons of mullock taken from the same shaft have been put through the battery, yielding 14 ozs. 7 dwts. of smelted gold, which shows that there is a little gold along the sill of the reef.

Gold

Gold has also been found by trenching 600 feet south of this shaft, where the payable gold was first obtained, but at the depth of 25 feet the gold run out. In the western shaft, at a depth of 50 to 70 feet, very fair gold was obtained in a small leader for a few feet, but it did not extend any depth; also gold was found by driving west, but this lead also was very short; about 3 tons of this leader was crushed, which realized 4 ozs. of smelted gold. From what I am informed I fancy that a payable reef will be found in the locality, but the ground leased by the Company is too confined, and the owner of the land declines at present to sell or lease any more of his land on which the reef is situated. A meeting is to be held shortly to decide what further steps are to be taken.

#### TUMUT AND ADELONG DISTRICT—TUMUT DIVISION.

(George F. Scott, Mining Registrar.)

I HAVE the honor to state that there is very little doing in mining in this district, the principal work being done on Sandy Creek. Fitzgerald Bros. bring in about 20 ozs. a month, which does not appear in returns, being sent for collection; they also have won about 1½ ton of tin (stream) during the year. Evans Bros. have erected a small crushing-machine I hear, and have opened out a reef, but have not yet crushed, and others in the district seem to be making a bare living, with the exception of Otto Moehmig and party (3) on the Goobarangandra River, who have been getting about 10 ozs. a month lately.

#### TUMUT AND ADELONG DISTRICT—ADELONG DIVISION.

(John James, Mining Registrarr.)

THE gold-mining industry, particularly on the main reefs, in this division continues unabated as the returns of the annual output, viz., 8,800 tons will show. During the latter half of the year additional capital and energy have been called into action to further development and research. Notably the late Williams' Amalgamated Company, on the Victoria line, purchased by the Messrs. Amos Bros. forms with their holdings the Flag Staff, a large and valuable property. A powerful winding-engine has been erected, and all the latest appliances fitted to prosecute deep sinking. Ever since the late Williams' Amalgamated Company collapsed a prevailing opinion gained ground that payable veins existed in the walls. The Messrs. Amos Bros. procured a first-class diamond-drill, &c., of American manufacture at a large outlay, and for the first time in this division the work of boring commenced. The plans laid down were for penetrating the walls at sundry deep levels, and to prosecute a search at the same time by sinking the main shaft. The granite penetrated by the diamond-borer was pronounced as hard as adamant; and in consequence the process slow and expensive. Not deterred, the diamonds continue to do their work. The shaft is now approaching 900 feet, showing intervals for lode making, but nothing of a permanent character as yet discovered. The mining manager, Mr. Joseph Hosken, has superintended the works of the mines with untiring fidelity, and sanguine hopes are entertained of the payable future of these once valuable tenements frequently alluded to in past departmental reports.

The Perseverance Gold-mining Company's mines, of which a correct descriptive account is given in the published report of 1881, have not ceased in that continuous work of well-devised plans of mining with energy—with machinery to aid, expedition and economy are obtained. The company, through their mining manager, Mr. John McLennan, has been steadily carrying on the works and such projects of tests wherever made feasible.

The Challenger Gold-mining Company's tenements, comprising all that portion claiming the remarkable outcrop of old date, and known in mining circles as the Old Hill Reef, Mount Charcoal, has no lack of all the latest requisites for elaborate and extensive mining. The company is of local status, and employs about fifty hands. The monthly output is between 300 and 400 tons. A new and powerful winding engine was substituted for a portable one which had been in use. It is not discarded however, but made to do duty as an additional hauler from secondary shafts on the line of lode. A large new boiler gives an extra supply and the motive power found abundant. Mr. William Ellis is the mining manager, and well has he sustained a reputation for thorough business supervision.

The Great Victoria Gold-mining Company's tenements are gradually assuming larger proportions. It now includes the late Annetts & Co.'s tenement. By the way it is as well to notify that small holdings hitherto existing on the main reef have nearly all merged into companies. The last on the list is the Research, which is likely to share the same fate. But to resume—the Great Victoria Gold-mining Company's tenements rank among our best mines. Every department is worked with systematic energy compatible with a large undertaking. Here may be seen the motor drawing its laden freight daily to the Perseverance battery. Mr. John McLennan is the mining manager of this as well as the Perseverance, and the combined supervision is carried on with exceptional regularity and thoroughness.

The northerly extensions of the main lodes are alleged to be in the valley of the Caledonian, and on the adjacent heights of Donkey Hill and spurs. Here much remains for the speculator of the future. The numerous discovered veins have been worked a trifle below water level and abandoned. At present isolated tenements are held at the usual disadvantage minus larger resources.

The Currajong Co.'s leases, on a spur of Donkey Hill Range, terminating at the Adelong Falls, contained at one time the richest yielding vein in the division. During the year a rich shoot of stone was discovered, presumed to be a diverging link of the old, with a steady looking make northerly, in new ground, and a few lots crushed yielded 10 ozs. per ton. The divergence alluded to points to a new course. The lessees are troubled with too much water, and machinery is needed to cope with it, and to effectively work the mine.

The Gibraltar Range, a mile below the Adelong Falls, with its numerous auriferous veins of great extent running east and west, has had the experience of many fitful trials. The tenements of the Perkins Bros., on a spur, have been remarkable for steady monthly outputs for several years past, yielding from 1½ oz. to 2½ ozs. per ton. The range, rugged and steep, has a tempting aspect for the prospector.

I may now, in passing, allude to the new and large tracts of auriferous country in the vicinity of Mount Adrah and Tarcutta. The numerous veins discovered at the former place are of payable quality, and frequent tests at Adelong have verified the fact. Tarcutta has had a large share of notice on previous occasions, which I need not recapitulate. One thing is evident, that these outlying places require large crushing plants to encourage mining industry.

The

The Gap Range, near the township of Adelong, with its numerous tested gold-bearing veins, awaits the future for further research. Another new leader was discovered during the year, with a splendid show, but the gold was of light make, and the yields were not up to expectation. Small lots submitted yielded from 1 oz. to 2 ozs. After the surface was penetrated the yields deteriorated, to be only followed by abandonment.

The imperfect sketch given of the quartz-mining industry in the division is inadequate to convey a correct conception of the whole. Yet sufficient has been noted to form the idea that the division maintains its position, backed by representative capital, to rank among the best gold-producing divisions in the Colony.

#### *Alluvial.*

The extensive and expensive operations of mining carried on in the bed of the Adelong Creek, opposite Shepards town and Grahamstown, are such as to class them among the best systems in vogue. A new shaft, 8 x 4, bottomed on the upper portion of Mr. A. D. Shepard's tenements yielded 14 ozs. of gold, and the wash in the several opening drives promise an equally good yield. About 100 men are employed. Mr. Wm. Ryan is the mining manager, whose thorough knowledge has gained for him a reputation for making the ground pay handsome dividends with astonishing regularity. Thousands of pounds worth of machinery and appliances are on the ground.

Below Mr. A. D. Shepard's leases are the tenements of Mr. Travers Jones. Here is another costly undertaking growing daily into importance, and proving the extension of auriferous deposits lower down the creek. Ere long these tenements will vie with those of older date.

Noticing the alienation of large tracts of the flats of the creek, below the tenements of Mr. Travers Jones, now lying intact, resumption is needed. Another matter is the limitation, by present Regulations, of mining areas, where even a large preliminary expenditure is needed. To foster and encourage the industry larger measures are wanted to meet exceptional cases, and the immediate concessions sought are within the scope of liberal legislation. No sane man will embark a large capital, such as will be required to work the lower portions of the Adelong Creek, without first securing his holdings to an extent commensurate with the speculation in more regards than one.

There is no doubt that Mr. Travers Jones feels his limitations with some anxiety, and now that a first struggle is over he fosters the future status of his now remunerative tenements by additions which liberal measures may procure for him.

I cannot close this report without allusion to our quartz-crushing plants. During the year the Messrs. Wilson and Ritchie, proprietors of the Reefer batteries, have completed an addition to their already large motive water-power. By purchasing the late Williams' Gold-mining Co.'s water-rights, they extended the purchased race to their plant, and secured thereby an additional fall of 26 feet, making, in all, 58 feet of available fall, equal to 60-horse power. They are enabled to use the water twice over, so that, in the driest seasons, there will be sufficient power to drive the whole of the machinery. The batteries have two water-wheels, and to take advantage of this large power, provision was made for the erection of another five head of stampers. No pumps are needed, as water is obtained by gravitation to supply stamper boxes, while giving a constant flow to the tables and amalgamators. Thus the Reefer quartz-crushing and gold saving machinery is perfected as much as it is possible to do, and the proprietors have gained the confidence of the mining public that at their machine the saving of the minutest particle of gold is effected.

The Perseverance batteries, of twenty stamps, is as complete for the manipulating process as obtains in the Colony, and is constantly employed.

The above are the only machines in the Division, and from far and near test trials are brought to them, invariably giving entire satisfaction.

In conclusion, I may state that a forecast points to the assumption of next year being marked with a growing progress of enhanced value.

#### TUMUT AND ADELONG DISTRICT—KIANDRA DIVISION.

(*W. D. Bailey, Mining Registrar.*)

I FORWARD report for 1882. We have had an unusually severe winter; consequently there was not as much work performed as could be wished. From Messrs. Sharpe & Clifford, gold-buyers, I find the amount of gold bought is 951 ounces, but there are the Chinese storekeepers who also buy, and large quantities are forwarded to the banks and merchants, consequently no correct estimate can be formed of the amount actually won. The number of miners' rights issued is 188; this is an increase of 50 over that of 1881. My predecessor has so well described the old claims that he leaves me nothing to say, except that they are all being worked when water is available. On the Four-mile Messrs. Patrick, Mullens, Bogertitch, Patterson, Cox, Powell and Glennie are still at work and getting payable gold. On the Nine-mile, Colhoun Marshall and two Chinese parties are at work. On the Fifteen-mile Mr. Gipps has secured Mr. Stram's valuable property, and is having everything done that is necessary to work a large claim by hydraulic mining; he has several miles of race cut and is also erecting a crib dam. On the Twelve-mile Mr. S. Grant has taken up a prospecting claim to prospect for quartz; he has struck a leader varying from 1 to 18 inches in thickness, bearing very good gold; as there has been no crushing it is not known what the result will be. There are several claims taken up adjoining him, but the holders have not struck gold as yet. A few Chinese are still working on Pollock's Gully and also in the bed of the Eucumbene River, but they are very reticent as to what gold is won by them; the answer invariably is "Not much, welly poor." Heddy, Roberts, and Shinnick have applied for a 20-acre lease on the Six-mile, which they purpose working by hydraulic power. Mr. Roberts has been engaged for some time making surveys and other necessary work to bring on the water. Enclosed is his report at length. On the Three-mile the Kiandra Gold-mining Company have here erected a dam of 42,000 cubic yards, capable of impounding 436,000,000 gallons of water; the embankment is 45 feet high, 500 feet long, and 14 feet wide on top; when full it will cover about 60 acres. The water will be conveyed from this to the Company's workings on New Chum Hill by a head race 2—2 feet 6 inches by 4 feet, equal to conveying about 700 miners' inches of water. Owing to the broken nature of the country this race is over 4 miles long and empties into a reservoir of 153,000 gallons capacity; from this it will be conveyed to the hydraulic nozzle at the face of workings by 20-inch pipes reduced to 14-inch at nozzle. A tail-race has been tunnelled

in 596 feet 4 x 6 x 7; this shows an extra 15 feet of auriferous wash. In this race sluice-boxes with all the latest improvements are being laid to a distance of 700 feet, at which distance two under-current tables to save fine gold will be fitted, and then the tail-race will be continued for a distance of 1,000 feet, making a total of 1,700. The company expects to have a washing about the end of March. One of the shareholders recently visited all the Californian gold-fields, and his opinion is that they are not nearly so rich as those of Kiandra. Drummond & Nuttall are still tunnelling here, and Barclay is sluicing near the creek bed.

At the Eight-mile, the Eight-mile Company have cut about 5 miles of a head-race of two by 2 feet 6 inches by 4 feet, and about 2½ miles of the main head-race 5 x 2 x 7 feet. A tail-race 6 x 7 feet is being tunnelled at 300 feet; they will strike wash and then commence operations whilst continuing the race 400 feet further, making a total of 700 feet. This will all be laid with sluice-boxes with all the newest improvements. A reservoir is being constructed capable of impounding 1,150,000 gallons of water; about 1,200 feet of piping will also be required. Another dam is also being constructed by them about 4 miles from the mine of 250,000,000 gallons capacity.

On the Nine-mile the Empress Company have cut about 650 yards of main head-race 4 by 2 feet 6 inches by 7 feet. There is about 1½ mile more to cut when it will branch into two races two by 2 feet 6 inches by 4 feet for about 2½ miles each, the right hand branch or south-easterly branch eventually tapping the Doubtful River.

On Township Hill, Eastwood, O'Brien and party have been working with all available water. Altogether, the field is in a prosperous state, and when the companies commence operations will remind the old residents of Kiandra in its palmy days.

“Victoria Mines, Kiandra, January 10, 1883.

“Mining Registrar and Warden's Clerk, Kiandra,—

“Dear sir,

“In reply to your letter of inquiry as to work to be carried out on our Six and Twelve Mile Works this season, I have pleasure in informing you that as soon as my surveys are completed we shall commence to cut races, the united waters from which will be equal to at least 800 miners' inches for the Six-mile.

“The first to be cut will be the head waters of the Eucumbene River, together with a dam of about 10,000,000 gallons capacity. This portion of our works present no engineering difficulties, the ground being easily worked. The average waters to be derived from this source will be: Winter, 200 in.; summer, 100 in.; pressure, 120 ft. Our other waters source present heavy engineering difficulties; such, indeed, that the old residents deemed it an impossibility. We derive these waters from three sources, all having their origin in the Governor Hill, and from which at summer levels we expect to get fully 600 inches without any dams being required at all, whence we carry it in open races up to within a mile of the works, when we have to carry it over a valley some 200 feet below the pipe head dam. This we purpose doing by an inverted syphon about 3,500 feet in length, hence to the pipe head dam by 2,000 feet of fluming, the total length being about 9 miles. We have also to cut a tail race up a flat from the water falls, a distance of 2 miles, but in so doing we hope to be rewarded by getting a fair show of gold, as the flat is between two hills, both pliocenic in character. The gold has been traced some distance down, but was not workable on account of heavy under current and flood waters. In the bed of this race we shall adopt all the latest improvements in under currents, electro-plates, &c., that are now being successfully employed in some of the mines I have been engaged upon in California.

“The Twelve-mile waters present no difficulties whatsoever, and will give us in a ditch of 18 miles about 1,000 inches of water at summer levels.

“With regard to inquiry as to probable value of this field, all I can say is that were it in California, or Victoria even, we should have no trouble in placing from £100,000 to £1,000,000 sterling upon it. But as the operations of your mining laws are so complicated it is a matter next to impossible for a stranger to understand them, and the dilatory ways leases are surveyed and granted and withheld, together with high rental and compulsory working clauses (rent, 20s. *versus* 5s. California, 10s. Victoria; miners' rights, 10s. *versus* 5s. Victoria), that I find it next to impossible to induce foreign capital to invest at all, knowing even as they do that the drifts here as compared with those of California are as penny-weights to grains, without the heavy incubus of 500 to 600 feet of top material to remove, the heaviest here being only 200 to 250 feet, a serious consideration.

“I find that beds here are closely assimilated to those of the Yuba and Trinity Rivers, California, having here as well as there coniferous trees in the lignitus and wash, and the layers and foliations are so alike that one has no doubt as to their value. I firmly believe that we are on the brink of a great era in gold-mining in Australia, as the pliocene beds I have traversed personally extend some hundreds of square miles in this colony alone, and wherever they have been broached they have been done so by men who have had no experience in hydraulic mining either as to power of water or methods of gold-saving, fully one-half of the alluvium gold of this colony being lost, and more than that in heavy alluviums where clays predominate, such as Kiandra.

“Most of the miners of the colony would only laugh at the idea of an average of 4 cubic yards of material being removed per diem by each inch of water, or in our case by 800 in. on the Six-mile about 2,500 cubic yards per diem, and 4,000 cubic yards on the Twelve, the whole only requiring about thirty men; hence the small quantity of gold necessary to pay good dividends.

“Yours, &c.,

“W. CRAN ROBERTS, M.E.”

TUMUT AND ADELONG DISTRICT—YARRARA DIVISION.

(J. K. Armstrong, Mining Registrar.)

THE efforts of a few enterprising prospectors on this gold-field during the past year have had some very favourable results, not so far as actual returns are concerned but as to the promise of more prosperity in the future.

Several of the old reefs on Four-mile Creek and Yarrara have been again taken up, with the apparent intention of working them. In one instance (the Rangatira) the shareholders have been, as far as I can judge at present, remarkably successful. A new shaft to a depth of 80 feet was sunk, and then

a drive put in towards the reef, under the old working. In the face of much difficulty and danger from the heavy influx of water the reef was reached and a prospect obtained, which has yielded, it is stated on good authority, a little over the rate of 15 ozs. per ton, gold, standard value. On the strength of this a company has been formed to work the mine. Just now work is suspended for a time to procure suitable machinery, and when this is accomplished a rapid revival of mining may be expected.

In alluvial work there has been rather a falling off of late, but prospectors are still sanguine and keep trying again and again, especially in deep ground, when, unfortunately, the water is more than a match for them.

In April last a mineral lease was taken up in this vicinity for tin. The lode, however, proved on trial to contain more silver than tin-ore, but not enough of either to pay, and was consequently given up in a short time. Some stream tin was then obtained in another locality not far off, but this too has been abandoned, the ore though of good quality not being in sufficient quantities to be remunerative.

At Jingellic, tin-mining promises better. To the old workings under new management I am informed fresh impetus has been given, while a few miles higher up the river (the Murray), on the Jingellic Estate, some very fine looking lode-tin has been found, and now, I believe, a company has been formed under the auspices of the proprietors, Messrs. Hastings, Cunningham, & Co., of Melbourne, for the purpose of working what is considered a very valuable mine. The specimens I have seen cannot well be surpassed in richness and quality.

Several mineral leases and selections have been taken up in the Jingellic neighbourhood, and prospecting is being carried on with some vigour.

Thus it will be seen that those who expressed themselves hopefully in times past of mining prospects in this part of the country have not done so without some reasonable cause.

#### TUMUT AND ADELONG DISTRICT—ALBURY DIVISION.

(*Charles A. Conley, Mining Registrar.*)

I HAVE the honor to furnish my report for the year 1882. Mining in this district during the past year has not improved. No new finds of any consequence having been made very little prospecting is being done owing, no doubt, to more likely fields, such as Temora, being opened up. There are about forty miners at work in this district. The workings are principally quartz, the alluvial being almost confined to fossicking, with the exception of the Black Range Alluvial Company, who have applied for a lease of 25 acres. The company are not working at present, awaiting machinery to keep down the water. This is generally considered a good show. The total amount of quartz crushed was 193 tons, which yielded 266 ozs., average value of which is about £3 16s. 6d. per oz. In addition to the above there are about 105 tons of quartz uncrushed. There are only two parties at work on the Nail-can at present, viz., Slattery and party and the New Nail-can Company. Both these claims promise well, especially Slattery and party.

At Black Range there is very little doing at present, but directly the leases are tendered for execution the whole One Tree line of reef will be worked.

At Portuguese Gully, which is situated north-west of Black Range, there are two claims (quartz), Johnson and party and Usher and party, which look well, and from the formation of the country there is no doubt but that a rich reef will be found in this vicinity.

At the Eight-mile Reserve little or nothing is being done except fossicking.

There are two companies at work on Hawksview (private land). The stone here is fearfully hard. One claim, the Hawksview Company, are still tunnelling; the other, Polkinghorne's, have had a crushing of 17 tons for 43 ozs., and as they have machinery on the ground this is a payable yield.

The only other battery in the district is Goldsworthy's, at the Black Range, the Nail-can plant having been sold to a company at Ournie, Upper Murray.

In conclusion I am of opinion that the Albury Mining District will eventually turn out well, and be thoroughly tested directly one or two claims prove payable, as there is no doubt respecting the gold being about, both in the alluvial as well as quartz.

#### TUMUT AND ADELONG DISTRICT—REEDY FLAT DIVISION.

(*P. O. Gorman, Mining Registrar.*)

In furnishing my annual report for this year I regret to state that a considerable falling off in the quantity of gold won is perceptible, which I believe to be mainly due to the sources of water supply being greatly diminished through the summer months of the year, necessitating the majority of the miners to seek other employment. With regard to Reedy Flat, the most part of the ground for which water is available has been already worked out, if I except a few patches passed by the then large holders as not being worth their trouble to work, but which a few miners occasionally turn their attention to in the wet months of the year, and generally manage to make wages at the rate of £1 10s. to £2 per week. The only claim of note on Reedy Flat is Bates' extended of 3 acres, which has yielded the proprietor 125 ozs. for the year. The Mud Hole Creek, upon which are two claims, viz., Mowatt and party and Scanlon's (that in 1881 paid wages to the holders), have for the past year not paid expenses of working. On the Upper Adelong, Corbett and party have a return of 280 ozs., thus keeping up a fair yield, of which Mr. Bliss, the manager, says: "Our claim is sluicing ground worked by four men and hydraulic pipe. The amount of gold obtained for the year, working from 25th May to 30th December, is 280 ozs., from  $\frac{1}{4}$  of an acre of ground." All the claims on this creek pay good wages as long as water can be obtained. The remainder of the alluvial working in the division is principally fossicking in old workings, from which the miners employed manage to derive a living. In quartz-mining nothing has been done for the year, until the past two months, during which time Messrs. Lambe, Griffiths, and Channon, have taken possession of an extended quartz-claim on a dyke or reef formerly worked and abandoned by Patrick Walsh, who obtained good returns therefrom for a depth of 50 feet, when the water prevented its being worked to a greater depth without machinery or tunnelling from the creek, the latter of which Walsh tried, but his tunnel falling in, he abandoned it. The present holders have a tunnel at present to within about 28 or 30 feet of the reef, and are quite sanguine of success, as the tunnel will drain the reef to a depth of 120 or 125 feet. The Mining Registrar has experienced great difficulty in obtaining any accurate return of the gold won owing to a great portion of the gold being sold in small parcels in Tumut and Adelong, hence the unavoidable delay in forwarding his report.

## TUMUT AND ADELONG DISTRICT—COROWA DIVISION.

(O. A. C. Boot, Mining Registrar.)

In submitting my first annual report for the past year, I regret being unable to give a very encouraging statement of the increase of mining enterprise in this division.

But notwithstanding the gloomy aspect mining matters have here, I have not yet abandoned the idea that payable reefs will be discovered, and, as far as I can learn, no enterprising company has, as yet, fairly tested the ground, insufficient capital being, I think, the principal drawback.

The present line of reef it is surmised is a continuation of the Rutheglen and Chiltern Reef, Victoria, called Redlands, and is about 12 miles distant from here, and appears to bear north-westerly, being of basaltic formation. Two companies were floated here early in the year, but both have now suspended working operations, owing to the small return of gold.

## TUMUT AND ADELONG DISTRICT—TARCUTTA DIVISION.

(W. M. Johnston, Mining Registrar.)

MINING is very dull in the Tarcutta Division just at present. It is said by the miners that the want of capital is the only drawback to this place. The miners say the prospects of this field are quite equal to any in this mining district if capital was brought on the field; but there is, I am informed, a company from Melbourne going to commence working on this field very shortly, and the miners are in great spirits about the success of the field when there comes a good battery on the ground.

## TUMUT AND ADELONG DISTRICT—QUEANBEYAN DIVISION.

(O. Willans, Mining Registrar.)

THE only mine in my division now at work under the Mining Board Regulations is on the gold-field on the east bank of the Goodradigbee River in the county of Cowley, and there they are, and have been the past year, preparing for work only. The lead runs through a Mr. W. Reid's 380 acres conditional purchase, and there are two claims registered, an extended claim (alluvial) of 10 acres, and a sluicing claim of 6 acres. Mr. Reid informed me that the depth of the alluvial is from surface to 70 feet, and the prospect 2 dwts. to the load. Mr. Reid also states they have expended about £800 in forming head-race, dam, and tail-race, and that it will require nearly twice that amount yet to fully develop the mine. The whole is in the hands of Mr. W. Reid, Mr. G. Harcourt of Gininderra, and a company in Sydney. Micalago Quartz-reef is, I am informed, abandoned. On Captain's Flat, Molonglo River, three machinery areas are registered; on one of these (Holtermann's), the machine is now at work. As Mining Registrar I regret there is so little to report for the past year. The Warden will, I expect, have something to say about the gold and mineral leases taken up at Captain's Flat, Molonglo.

## TUMUT AND ADELONG DISTRICT—GUNDAGAI DIVISION.

(C. W. Weekes, Mining Registrar.)

Mr. Warden Love having already furnished a report upon this district I need add little except such statistics as were not included in that report:—

Number issued of miners' rights	...	...	...	...	...	115
"    mineral licenses	...	...	...	...	...	5
"    business licenses	...	...	...	...	...	2
"    applications for gold-mining leases	...	...	...	...	...	5
"    applications for leases for minerals other than gold	...	...	...	...	...	5

The latter including slate, copper, and asbestos.

There has been very little actual mining in this district during the past year, excepting at Muttama (reported on by Mr. Warden Love).

With regard to the district generally, I note that many of the old reefs, which were worked many years ago, with more or less success and then abandoned (generally after having exhausted the first shoot of gold only, and seldom reaching a depth of even 100 feet) are again attracting attention, and I believe the present year will witness a revival of quartz-reefing in this district. The whole country is so unmistakably auriferous, every hill and ridge carrying its quartz-reef, in most instances gold-bearing, that I am surprised more attention is not given to this gold-field by mining speculators. A large proportion of these reefs would, I am informed, pay well if properly worked. They are mostly reported as being of a solid and permanent character, carrying good walls and shewing every indication of continuing to a great depth. Pyrites also are found in most of these reefs, sometimes in large quantities. As this material was, in many instances, the cause of the reefs being abandoned, owing to the difficulty of extracting the gold, now that the successful treatment of pyrites is an established fact, these particular reefs should be objects of interest to capitalists; some of them will, I believe, yet be found sources of great wealth.

The Australian Slate Company at South Gundagai possess a magnificent property. The supply of material is practically inexhaustible, and easily quarried; the quality also being undeniable for all purposes for which this material is used. As the proprietors are pushing on their works with great energy and skill I anticipate that by the time the railway is completed to Gundagai a large and profitable industry will be in full swing opening up an important field for the employment of labour. I am informed that there are other deposits of slate in this neighbourhood of equal value, only requiring a similar amount of energy and capital to be expended upon them to insure similar success.

## TUMUT AND ADELONG DISTRICT—MUTTAMA DIVISION.

(A. Armstrong, Mining Registrar.)

I HAVE the honor to forward, for the information of the Honorable the Minister of Mines, the following report of this division of the Gundagai district. To do so it will be necessary to refer back some years, as I believe this will be the first official report sent to the Department from this locality.

This

This field was opened more than 20 years ago as a quartz-mining district; from that time until the present there were opened twelve lines of gold-bearing reefs, one of which was worked to a depth of 230 feet (or 170 feet below water level). This is a large well-defined reef, and yielded from 8 dwts. to 15 ozs. per ton. It has been lying idle for nearly 4 years for the want of sufficient capital to procure adequate pumping machinery. The Eureka, Excelsior, Doctors, and Stringy Bark lines of reefs have all yielded from 14 dwts. to 7 ozs. per ton. Six of the other reefs also gave satisfactory returns. A new reef was discovered last year by the Brothers Guy, from which they crushed 10 tons of stone, yielding 4 ozs. per ton. They have disposed of it to a company of South Australian capitalists, who have formed it into a limited liability Co. with a nominal capital of £30,000. They have commenced operations in a vigorous manner. They are sinking on the vein, also tunnelling to cut it at a greater depth to facilitate the working. The reef averages from 8 inches to 15 inches, with well defined walls of sedimentary granite. They have about 40 tons of stone at grass, equal in quality to the stone crushed by the original owners. The company are going to erect a 15-stamp battery, for which every preparation is made. A dam erected, which is now full of water. A road cut to bring the plant to the mine, &c. I look forward to see a great impetus given to quartz-mining after the erection of crushing machinery by this company.

In alluvial mining I have to report: a rush set in to this place in the early part of this year; there were then 700 or 800 men on the field, most of whom left, as the quantity of ground was limited; there are now eighty men employed. The lead runs at right angles to, and heads from the Doctor's Reef. There are fourteen claims at work, the depth of sinking, from 30 feet to 113 feet; the lower end of this lead has not yet been tested in consequence of water. The quantity of gold won amounts to 2,100 ozs., valued at £8,137 10s. from 5,000 loads of wash. The gold is a coarse water-worn sample (many nuggets from 1 oz. to 6 ozs.); the value of the gold at the Mint is from £3 17s. 3d. to £3 19s. 6d. per oz.

There are no other minerals being mined for in this division at present, although there are abundant indications of copper in the neighbourhood, also asbestos.

#### PEEL AND URALLA DISTRICT—ARMIDALE, URALLA, AND WALCHA DIVISIONS.

(*Mr. Warden Yates, P.M., Armidale.*)

In forwarding the Annual Reports of the Acting Mining Registrar, Armidale, and of the Mining Registrar at Uralla, which I have perused, I do myself the honor to observe that beyond what is already stated by these officers there appears to have been nothing of sufficient importance relating to mining operations for the past year to call for any special remarks from me.

I have not had the opportunity of seeing the report of the Mining Registrar at Walcha, he having, as I understand, forwarded the same direct to your Department.

#### PEEL AND URALLA DISTRICT—BINGERA DIVISION.

(*Mr. Warden Brougham, P.M., Bingera.*)

I HAVE the honor to submit, for the information of the Honorable the Minister for Mines, my report for the past year on the Bingera division of the Peel and Uralla Mining District.

The only description of mining which has been prosecuted has been for gold. Copper of good bearing qualities exists largely, but high rate of carriage militates against its development.

To a considerable extent my former reports have been verified by the increased find of gold, and this under adverse circumstances, as no new machinery has been introduced; yet, with what the miners could avail themselves of, the result as shown in schedule attached has been good. The large finds in New Ballarat, Upper Bingera, attracted speculators and miners from Sydney and Victoria, but finding so many claims taken up as gold-mining leases, and not being worked, they left, as they could not find any ground which had not been applied for; and here I would suggest that every applicant, when no objection has been lodged against his claim, should be obliged to put on the requisite amount of labour and continuously work the ground. Should this course be adopted, we would have a much larger body of men at work, more gold would be won, consequently the ground would be more fully developed. Proceeding from general considerations to facts, it is a matter of congratulation to know that notwithstanding the surrounding difficulties, viz., want of machinery, absence of practical miners, and locked-up claims, so large a quantity of gold has been won, tending to prove that Bingera will yet take a place in the first rank as a mining district.

*Bingera.*—The All Nations Reef has again been applied for—no work has been done. When the applicant erects his machinery I think the yield will be good. In former years, when the reef was worked with inferior mill, good gold was won, and considerable quantities lost, thereby causing a loss to the miners from the inefficiency of the appliances. Several claims have been taken up on the flat at the bottom of the Cemetery Gully, which some years since turned out large quantities of gold. As yet no one has appeared to work these claims; when they do come they must be prepared to have a large body of water to contend with, but energy, capital, and proper machinery will overcome this difficulty, and I think leave them a handsome profit.

*Spring Creek.*—There have been some twenty-three miners at work here, who have made good wages. As I stated in my report for 1881, if a good crusher were at All Nations a large quantity of stone would be carted to it from here, and the owners and miners would benefit thereby.

*Boro.*—This field has been only slightly worked, and that by the residents; it would pay practical miners to visit this locality on a prospecting tour; the whole of the country between this and Upper Bingera is gold-bearing. In former times Golden Gate and Wyndham's Creek yielded fairly, but I suppose, as it is considerably off the main road and very mountainous, visitors have not gone there.

*Upper Bingera—Wet Lead.*—Very little has been done here during last year. Hanton and Company abandoned their claim, as the gold had run out. Those who are still working in other claims are hardly making wages. I am inclined to think there may be a good find higher up the watercourse or on the range in the vicinity of Hardy's Springs.

*New Ballarat.*—Neill and Company, also Hanton, Brothers, have done first-class work in gaining gold, and still continue to do the same. The metal in both these claims has been patchy, but very rich; they are only down about 50 feet, and I think they will have to sink some 20 or 30 feet more before they reach the main body. Some ground higher up the range is being worked; good gold has been found, but they

they must sink deep before they can get any quantity. Some lower down the creek have sunk past the gold instead of trying to follow it when they first struck gold. There are some 140 miners at work on this field, and 1883 ought to have a good yield.

*Barraba—Tea-tree Creek.*—There are several old resident miners here, but as they do not prosecute their work with energy they barely make wages. As long as they make sufficient to keep them they appear to be content.

*Ironbark.*—The Garryowen, Addison, Bond's, and Kelly's, or Wood's Reefs have been taken up by Mr. G. B. Stewart, and are to be worked under the name of "The Old and New England Quartz-reef Gold-mining Company, Victoria Hills, Ironbark." As this company have extensive and first-class machinery coming out from home, these reefs will be efficiently worked, employment given to a large number of men, and large quantities of gold ought to be won.

*Cross Mountain* is again being worked, and as machinery is now on the ground there ought to be a fair quantity of gold won by the end of this year, as it is being worked by an energetic practical miner.

*Reading's Reef* has been worked, but as the reports about the yield have been so conflicting I am not in a position to say what has been the result, as it is next to impossible to arrive at the truth.

The following is a return of gold sent from Bingera and Barraba, as gained from books, but as several parcels have been sent by private hands from both Bingera and Barraba, it is impossible to give a correct return:—

	1881.		1882.		Increase.
	OZS.		OZS.		OZS.
Bingera .....	1,755	.....	4,416	.....	2,661
					Decrease.
					OZS.
Barraba .....	603	.....	298	.....	305

Thus, the total yield of gold gained as per books from my division for 1882, is 4,714 ounces.

#### PEEL AND URALLA DISTRICT—TAMWORTH DIVISION.

(*Mr. Warden Irving, P.M., Tamworth.*)

Since I relinquished the charge of that portion of the Tamworth Division, embracing the gold-fields at Nundle, Bowling Alley Point, and Hanging Rock, and the appointment of Mr. Warden Brown, of Nundle, to have charge of same, I have very circumscribed bounds within which to report upon.

#### Gold.

No mining for gold has been prosecuted for the year 1882 in my division.

Sixteen miners' rights were taken out, but not, so far as I am aware, for the purpose of mining near Tamworth.

#### Copper.

The mining for this mineral at Dungowan Creek seems at a standstill at present. I am not aware that any ore was raised during 1882, except a few cwt. for a test sample.

#### Tin.

There are some leased tracts in the neighbourhood of the Giant's Den, on the extreme north-eastern boundary of the Tamworth land district. The leases have only been granted in 1883. There has been no tin-mining during 1882 I believe.

#### Manganese.

The same remarks apply to this mineral, which is to be found nearly in the same locality.

#### PEEL AND URALLA DISTRICT—GLEN INNES DIVISION.

(*Mr. Warden Martin, P.M., Glen Innes.*)

The year 1882 was, on the whole, a favourable one for the miners in my division, and work was carried on with an energy and perseverance characteristic of their labours during the previous twelve months. The winter was very dry, and in consequence washing operations very much retarded until October, when rain set in and continued to fall in abundance to the end of December. Taught by the experience of former years, a more ample provision had been made for the storage of storm water by the erection of dams, and those who were thus provident were enabled to work profitably much ground that would otherwise have been valueless.

The output of tin ore for the year was 3,970 tons—being 364 tons 10 cwt. less than the amount raised in 1881. Of this amount 3,517 tons were obtained within the police district of Vegetable Creek—the balance, 354 tons, being won within the police district of Glen Innes.

The value of the ore on the ground was (at £55 per ton) £208,350. The number of working miners averaged—Europeans, 600, at £2 5s. per week; Chinese, 1,400, at £1 16s. per week, without rations.

The rate of tribute raised in accordance with the varying richness of the ground, from £25 to £45 per ton.

I am glad to be able to report that 20 tons of the ore raised during the year was direct from the lode. The amount is not large, but it is of interest as showing that a commencement has been made with mining in a form the most likely to be permanent.

The rude hand and horse-power appliances hitherto used for crushing the matrix are now being superseded by stampers driven by steam, and as the supply of tin-stone is abundant a largely increased return may be expected under this phase of mining in the coming year.

Mr. Reid, of the Tent Hill Smelting Works, says—"On the Ottery lode belonging to this firm, about 1 mile northerly from the smelting works, eight men have been employed since the 1st July, 1882. These men have sunk two shafts to a depth of 100 feet each, besides doing other work, to prove the value

of

of the mine. No. 1 shaft at a depth of 100 feet was 5 feet wide, showing tin ore freely; but large quantities of pyrites coming in it was deemed advisable to discontinue operations at that point, and start a shaft on another part of the lode, where some very large specimens of oxide had been found. In opening out the lode at this place a seam of almost pure tin was found, which was followed down to a depth of 60 feet, when a change of formation took place, and the stone, although still payable, became not nearly so rich. In hopes of recovering the seam of oxide the shaft was continued another 40 feet, but without further success than proving the existence of good stone likely to yield on reduction 20 per cent. of metallic tin. The prospects on the whole of this property have been of so encouraging a character as to induce the firm to erect, for trial crushing, a small plant consisting of a five-stamper battery, a separating jigger, and a circular puddle, and if the results should be as satisfactory as anticipated no time will be lost in erecting a plant capable of crushing and dressing some hundreds of tons weekly."

At the Mole table-land the Torrington Company are erecting a five-stamper battery in connection with other work at their mine, and as the directors have intimated an intention to crush for the general public, other claim-holders in that neighbourhood are raising stone for treatment at the works. This concession will be of immense service in the development of the many lodes in this locality, and will give to mining in this direction a much needed impetus. On the lodes at the head of Deepwater River hands are employed sinking, but no crushing has yet taken place. A company has been floated to work the tin-bearing lodes at the Pheasant's Nest, and many trial shafts have been put down, but beyond proving the ground nothing has been done. Carriage has been plentiful at £5 per ton to Grafton or Lawrence, by which routes about five-sixths of the ore raised and refined tin was forwarded to Sydney. About one-sixth went via Stanthorpe to Brisbane at the same rate, but as the duties levied on the border enhance by so much the value of return freight it is not likely that any larger percentage of ore will be sent in that direction while the cost of transit to the different ports remains on the same footing as at present.

The manager of the smelting works at Tent Hill reports that sixty men with fifty horses were constantly employed during the year, and that the firewood used in the reduction of ore cost £5,013. The output of refined tin was 1,807 tons.

#### *Bismuth.*

Two local companies hold all the land in which this metal has been found in payable quantities at Kingsgate, but beyond sinking trial shafts and raising sufficient ore to pay current expenses nothing has been done to place the industry on a permanent footing. The Kingsgate Bismuth Company has I believe entered into an engagement with some Sydney capitalists to transfer their rights in the mines on an early date, and the bulk of the purchase money has been paid. On completion of the sale, and when in the hands of the new and wealthy proprietary it is reasonable to suppose that greater energy will be brought to bear in developing what appears to be a valuable property. The Glen Innes Company possesses an equally rich tract of mineral land, but as in the former case operations at this mine are hampered by the want of sufficient capital to carry the initiatory proceedings to a successful issue. The native bismuth forwarded by me to the Department for transmission to the Amsterdam Exhibition was obtained from pockets in the quartz matrix at this place, but usually the ore is more evenly disseminated through the lode. One parcel of ore from this mine showed under assay by the Government analyst 123 ounces of silver to the ton. Account sales of bismuth ore in London are of too conflicting a character to be quoted as determining the value of the metal in the home market.

#### *Gold.*

The production of gold was about equal to that of 1881, and about the same number of miners were employed in seeking it. Its value I estimate at £1,800. The gold obtained was all from the alluvial, none having been extracted from the many reefs prospected.

No work has been carried on in connection with the galena and copper known to exist in the district.

The mining community has as usual been most orderly and law-abiding. There has been but little litigation in connection with mining disputes, only fifty-two cases having been entered in the Warden's Court for the year.

#### PEEL AND URALLA DISTRICT—NUNDLE DIVISION.

(*Mr. Warden Brown, Nundle.*)

I HAVE the honor to forward my annual report for the past year of the Nundle Division, Peel and Uralla Mining District.

I have very little to add to the comprehensive report furnished you by Mr. Kermode, the resident Mining Registrar, who has given in detail the workings and results obtained from the different mines, the total of which gives an increase of the gold won on this field of 169½ ozs. :—

	1881.	1882.	Increase.
Gold won ... ..	4,466	4,635½	169½

This increase would have been considerably larger but for the drought which prevailed in 1881, continuing during the first half of the past year.

The mining industry in this division has been steadily prosecuted during the past year, the only finds requiring special mention being the continued richness of Ruzicka's quartz-vein at Hanging Rock, from which nearly 700 ozs. have been taken during the year, the labor employed being an average of three men; and the new alluvial ground opened by Howarth and party, at Mount Ephraim (about 1½ miles distant from the Mount Pleasant Cement G. M. Co.) I had the pleasure of visiting this place with Mr. Slee (Inspector of Mines), who lately visited this gold-field, and fully described in his official report the geological formation of this alluvial tract of country; but this large extent of auriferous land can never be worked to advantage without an additional supply of water than that now in use being obtained.

When framing my last report I thought it probable that mining for copper would have been fairly started in this division before now, but owing to a misunderstanding between the parties who hold possession of the land, prospecting operations have been stayed during the whole of the year. This is greatly to be regretted, as it is known on Dungowan Creek copper lodes do exist containing ore of a very high per centage. During

During the past year several small samples of chrome ore have been sent to England from Bowling Alley Point for assay, but the quantities have been too small to test the market value. The lessees of the land have now called for tenders for conveyance of 30 tons to the Tamworth Railway station, *en route* for London. If the result is satisfactory they intend shipping home on a large scale.

I am not aware if any mining is being done on Swamp Oak Creek, not having visited that place during the past year.

In conclusion, I may state that the leading mines appear to have attained their usual average results, and which, I think, they are likely to do for some years to come.

PEEL AND URALLA DISTRICT—ARMIDALE DIVISION.

(*Edward Marriott, acting Mining Registrar.*)

I HAVE the honor to submit my report on the Armidale Division of the Peel and Uralla Mining District, for the year 1882, and in so doing I would state that I am not in a position to report as fully as I should wish owing to my having very recently taken temporary charge of this office, on the removal of Mr. E. G. Markham, the late Mining Registrar, from the district.

2. From the books in the office and from some long acquaintance with many of the miners in the district I was enabled to select some of the principal ones to whom I sent the usual circulars soliciting information as to the mining operations and returns for the past year. Very few replies have, I regret to say, been received. I am indebted to Mr. John Moore, the Messrs. M<sup>c</sup>Kinlay, Moses, Bracken, and party, Henry Teege, and Messrs. Taylor and Lynch for information as to some of the principal gold and antimony mines in the district.

3. *Gold.*—Messrs. Moses, Bracken, and party, of the Eleanora Mine, Hillgrove Falls, near Armidale, report as follows:—"The claim in connection with which these returns are furnished is better known as the Eleanor Mine. It was first worked for antimony, but the yield of this ore is now so scanty and irregular that it does not pay to search for it. The quartz which was first found in small quantities has increased with the decrease of antimony, and is now the most valuable product of the mine. The quartz-reefs lie on either side of a trap dyke and vary in width sometimes, being over 3 feet in width, with an average of 2 feet. The yield of gold varies also, but may be taken to average 3 to 4 ozs. to the ton. The quartz having been proved auriferous from one end of the claim to the other (933 $\frac{2}{3}$  feet), and to a depth of 58 feet without change, except for the better, it is supposed that there is available stone for 3 years' crushings without taking into consideration the probability, indeed almost certainty, of a continuance of the reef to greater depth. It is the opinion of experienced miners that this is one of the most promising reefs in the Colony, and as the stone is said to be peculiar and the district rich in reefs, it would well repay a visit from the Government geologist. 64 tons 11 cwts. 2 qrs. of stone was sold or shipped to England, under advance for £661 18s. 4d. No pyrites saved; 300 tons of stone at surface, supposed to be equal to 2 ozs."

4. Messrs. P. and J. McKinlay, Hillgrove Falls, report:—"40 tons of quartz raised, not yet crushed; waiting erection of machinery."

5. Messrs. Taylor and Lynch, Puddledock, report having obtained from their claim, by ground sluicing, 30 ozs. of gold, of the value of £112 10s.

6. Messrs. Henry Teege and party, Puddledock:—"Two sluicing claims at Navigator's and Bow's Gully; 23 ozs. 12 dwts. 1 gr. of gold from their claims; value, £88 10s."

*Antimony.*

7. Messrs. John Moore and party, Gara Falls, near Armidale:—"Quantity of ore raised, 350 tons; value, about £10 per ton, or £3,500 in England."

8. James McKinlay and party, Hillgrove Falls, near Armidale:—"Quantity of ore raised, 150 tons; value, £900."

9. J. P. McKinlay and party, Hillgrove Falls:—"Quantity of ore raised, 80 tons; value, £480."

10. Moses, Bracken, and party, Hillgrove Falls:—"Quantity of ore raised, 1 ton; value, £5 10s."

11. Three gold leases and seven antimony leases were applied for at this office during the year.

12. The number of miners' rights issued is as follows, viz.:

Miners' rights	...	...	...	...	...	...	...	...	...	75
Mineral licenses	...	...	...	...	...	...	...	...	...	11

13. From inquiries made at the banks and principal business places in town I have ascertained that very little gold has been purchased during the year, the total, as far as can be obtained, being 82 ozs. 14 dwts. 22 grs.; value, £312 5s. 2d.

PEEL AND URALLA DISTRICT—NUNDLE DIVISION.

(*Samuel Kermode, Mining Registrar.*)

I HAVE the honor to forward my report on the Nundle Division of the Peel and Uralla District.

J. P. Robitson and party have put a shaft down on the old Foley's Reef, at Bowling Alley Point; did not crush any stone during the year.

Hans Wilkins and party crushed 150 tons of quartz from the Opossum Reef, which gave a return of 14 dwts. to the ton; this stone was taken from about 160 feet deep.

R. Webster and party obtained one patch of gold in the Old Maitland Reef; they have a shaft down about 55 feet; have about 8 tons of stone raised; did not crush any.

Wm. Pepperill, and a party of Tamworth gentlemen, have lately taken up a claim on the old Kanaka Reef; have put a shaft down about 50 feet, and a drive from bottom about 50 feet along the reef. They have a great deal of water to contend with in this claim, the river Peel being almost on a level with the surface and close by. They were obliged to have a steam-pump which I understand does not lift the water well, so they are now about erecting a larger one, so that they will be able to drive under the bed of the river at a depth of about 50 or 60 feet.

W. H. Stephens and party have been prospecting Hyman's old claim on the Golden Hole Reef. They have put a shaft down about 40 feet; obtained a few dwts. of gold. This claim, somewhat like the Kanaka claim, is full of water, being very close to the bed of the river; they have had a steam-pump constantly going when working is being carried on below. The rock in this claim is very hard as well as the reef being very narrow.

Messrs.

Messrs. J. P. Robitson, Lindsay, and Stratton's quartz-reef, the well known Marquis of Lorne, crushed from January to September in 1882, 300 tons of quartz, which gave a return of 700 ozs. of gold. This claim has lately changed hands, and is now being managed by the experienced mining manager (Mr. John Stanning) from Foley's Folly. This manager is now getting the lower tunnel driven in through some very hard rock so as to cut the reef about 100 feet deeper than the old workings, which will take away the water which has been of late a great obstacle in this claim; also he has sunk a shaft through the old workings; in the north and south reef, 250 feet, an incline plane with double line of road for bringing trucks to top tunnel level. These trucks are to be wound up and down by a horse-whim, thus enabling the sinking to be carried on to a much greater depth on the main reef north and south. Also the ten-head battery and 15-horse-power-steam engine, now the property of the holders of this claim, is to be erected close to the claim, which will do away with a great deal of labour as formerly required for carting quartz a great distance to the machine.

M. Logan and party crushed 60 tons of quartz from the old Gap claim, on the company's estate, which gave a return of 1 oz. 4 dwts. to the ton; this stone was taken from a depth of about 100 feet.

Mularvey and party sunk a shaft about 110 feet on Price's old reef, on the Peel River Company's Estate. Did not crush any.

The old Blackfellow's Nob Reef idle all the year.

Messrs. Bunch, Williams, and Hole erected a large steam-pump, and had it working on the Peel River Company's estate for several months, at a great expense, raising water for sluicing the surface on a hill about 150 feet above the level of the river. I am given to understand that it did not pay. This machinery is now being removed from this district.

The alluvial mining between Nundle and Bowling Alley Point is principally Chinese fossicking claims.

Ah Sam Lowing's alluvial gold-mining lease, in the town of Nundle, has been steadily worked during the year with ten men; I do not know the correct amount of gold obtained; reported as making wages.

Moon-light Reef and other reefs between Nundle and Bowling Alley Point idle all the year.

Mr. Richard Walker prospected a quartz-vein for several months, in Spring Creek, under the Hanging Rock Range; obtained very little gold. Some years back there was some heavy specimens found in this creek in the alluvial wash, which tends to show that there must be some good reef or reefs in the locality.

A. Wilson, Edwards, and party gold-mining lease, head of Spring Creek, have a tunnel in about 200 feet; did not crush any during the year. I have not heard that any gold was obtained.

J. Watts and party's claim on the Lady Mary quartz-reef did but little work during this year.

J. Paty's claim, on the old Brown Snake reef, has been idle all the year.

Messrs. R. Allbourn and party's claim, on a reef about  $\frac{1}{2}$  of a mile east from Brown Snake reef, obtained a patch of gold reported to be 75 ozs.; also crushed 36 tons which gave a return of 1 oz. to the ton.

Messrs. J. Clark and Cairn's claim, on the Black Snake reef, crushed 8 tons of quartz, which gave a return of 3 ozs. to the ton; they have been working steadily all the year putting in a low level, which is now in about 240 feet through some very hard rock.

Messrs. C. B. Anderson, Cairns, and party have been working their claims on the Black Snake reef all the year; they have one shaft 200 feet, another 170 feet, with a drive from deep shaft 80 feet. Crushed 25 tons, which gave a return of 10 dwts. to the ton; also crushed 63 tons, which was taken out on tribute, which produced 13 dwts. to the ton.

Messrs. W. H. Kennedy and J. McGregor crushed 5 tons of quartz, which was raised from a vein close to the Black Snake line of reef; this stone gave a handsome return of  $3\frac{1}{2}$  ozs. of gold to the ton.

Messrs. W. Stringer and party crushed 16 tons from their claim on the Black Snake line of reef; this turned out 15 dwts. to the ton.

Messrs. R. Morris and party's old claim on the Black Snake line of reef has been idle all the year.

Messrs. Thos. Bakewell, R. Northmore and party crushed 300 tons of quartz, which gave a return of about 11 dwts. to the ton; lower level driven in on the reef about 250 feet; a great deal of water to contend with; depth from the surface about 100 feet.

Messrs. R. Allbourn and Cairns' quartz-reef claim, south of the Christmas Claim, idle all the year. Also the Golden Streak and Spier's old reef has been idle.

Messrs. J. Henderson and W. Henderson and party's alluvial cement claim has been worked steadily all through the year; they have a tunnel in some 1,300 feet. They trucked out and crushed about 5,100 trucks, or 1,700 loads, of cement wash, which gave a return of 316 ozs. of gold, or 3 dwts. 10 grs. to the load. The average number of men employed is 12. The lead varies in width, sometimes 5 feet, other times 60 feet, with a height of about 10 feet. Not having any water for crushing during the first quarter of the year made the returns much smaller than they should have been. Of late the lead has been very difficult to follow, sometimes pinching very narrow, and other times spreading wide amongst heavy boulders.

Messrs. Wilson, Pepperill, and party's alluvial cement claim, south from Messrs. Henderson and party's, has been working steadily all through the year; trucked out about 1,200 loads of wash, which gave a return of about  $1\frac{1}{2}$  dwts. to the load; they have a tunnel in about 625 feet. This claim has not been worked to the rock; they have been working on a hard cement band bottom. They are now going to try and work on the bottom, which will, I believe, turn out better than the past.

C. Johnson and Sons' claim on cement have a tunnel in about 600 feet; trucked out about 1,500 trucks, or 500 loads of wash, which gave a return by washing in a sluice race about 1 dwt. to the load; the wash in this claim is very hard to get out—almost like rock.

J. Rackham and party's cement claim, working on a false bottom of cement, have a tunnel in about 400 feet; obtained an average of about 15s. per week a man for two men during the year.

S. Paull and Sons' cement claim have a tunnel in about 250 feet; obtained about 300 loads of wash, which gave a return of about 40 ozs. of gold. This claim is also working on a false bottom of cement very hard.

Mr. G. Borelli's claim on cement lead, about 1 mile south from Mr. Paull's claim, has been worked by one man, driving a tunnel, which is in now about 300 feet; has not found the proper lead as yet.

Mr. Kukulies and Poetschka's claim on cement lead, close by Borelli's claim, has been worked by two men for a few months driving a tunnel; they have not found any wash as yet.

Messrs.

E. Howarth, J. Powell and party's cement claim on Mount Ephraim, head of Nundle Creek have been busy sluicing for several months this year with very good returns, making wages. As they have not washed or cleaned up their tail race they do not know what amount over wages they may have made during this year. They are sluicing this claim in a face about 25 feet deep, with gold (fine) from top to as far as they have gone down. They do not know what depth this claim carries gold as they have sunk a shaft about 50 feet deep and the prospects are about the same from top to as far as they have sunk, still no bottom found; the ground seems to be a rotten cement, with layers of quartz stones amongst it, which they save for crushing; they find some very good stone, showing gold in the middle as well as on the face; 10 tons of this stone were crushed during this year, which yielded 12 dwts. to the ton.

A. C. Thompson, J. Fletcher, and party's alluvial cement claim, at the head of Danger's Gully, on the Hanging Rock, have a shaft down 195 feet, 122 feet of it being on an incline of 7 inches to the foot, so as to get under the basalt and surface water; then a monkey shaft 73 feet deeper; no sign of bottom as yet. They also have a tunnel in 600 feet, and another shaft sunk in hard basalt rock 60 feet, which they had to leave on account of too much surface water to contend with.

J. Ruzicka's quartz gold-mining lease, "The Lady of the Mountain Reef," obtained 677 ozs. 12 dwts. of gold in patches; Mint assay, 651 ozs. gold, 26 ounces silver. He has three shafts, one 66 feet, one 26 yd., one 30 feet, on the underlay; one drive 80 feet, one drive 16 feet. Work has been carried on steadily the whole year, sometimes four men, always two at work.

A. C. Thompson and party sunk a shaft south of Mr. Ruzicka's claim through 50 feet of granite rock, very hard; all blasting; cut several small veins; did not get anything payable; all veins dipping north-west. This party also sank three shafts on the main top, near Mr. Henry's claim—one shaft 35 feet, one 20 feet, and one 16 feet; did not get any gold to pay.

T. Bakewell and party sunk a shaft through hard rock (chiefly slate) on the western boundary of Mr. Ruzicka, thinking of cutting the Lady of the Mountain Reef at about 70 feet deep; this depth was reached but not the reef.

W. Henry's quartz gold-mining lease on the Hanging Rock has been worked by two men the greater part of the year; obtained 30 ozs. of gold in patches of a few ounces at a time. They have four shafts sunk, one 60, one 40, one 25, one 20, with drives 40 feet, 30 feet, and two drives 20 feet each.

G. Bond's quartz-claim on the Hanging Rock raised about 10 tons of quartz but did not crush any.

J. Wright's quartz-claim, Hanging Rock, about a quarter of a mile west from the Lady of the Mountain Reef, obtained 30 ozs. of loose gold near the surface; crushed 10 tons of quartz, which gave a return of 12 dwts. to the ton.

T. Bakewell and J. Gustafson sunk a shaft on the Old Swamp Creek Reef 70 feet deep; raised 5 tons of quartz, which crushed out 16 dwts. to the ton. This reef is very small and requires to be very much richer before it will pay for working.

J. Gibson obtained 18 tons of quartz from near the surface in an old reef near Quackannacca Creek, which paid 15 dwts. to the ton.

J. Braysbaw, W. Page and party, raised 30 tons of quartz from their quartz-reef on the Hanging Rock, which yielded 12 dwts. to the ton. This claim, being near to a creek carrying a lot of water, cannot be worked any deeper without the aid of strong pumps and steam power.

The Old Foley's Folly Reef has been idle all the year.

M. Nethersole and Son raised 25 tons of quartz from a reef near Foley's Folly old reef, which crushed 1 oz. to the ton; they afterwards raised 36 tons from same shaft which only gave a return of 4 dwts. to the ton. This small return is said to be caused through some mismanagement with the stone after being raised; depth of shaft now 60 feet; reef averages about 6 inches wide.

John Stanning's quartz-claim near Foley's Folly raised 47 tons of stone, which crushed 1 oz. 12 dwts. of gold to the ton; he also raised 40 tons, which has not been put through the crusher yet. The stone crushed was taken out from the back of the original tunnel about 150 feet deep.

George Jarman's quartz-reef claim, near Foley's Folly, has been prospected for several months; crushed 8 tons of stone, which gave a return of 17 ozs. 17 dwts. of gold for the lot; he has a shaft down 50 feet, and a drive about 100 feet.

There have been several other reefs prospected in this neighbourhood, but nothing found to entice miners, without capital to carry on, to test such reefs at a greater depth.

There are several large creek claims being worked by open-faced cuttings, by Chinese parties, in Happy Valley and Oakenville Creeks, which, I believe, have been doing very well during the last eight or nine months on account of having plenty of water.

The total number of miners in this division are,—

Alluvial miners (Europeans)	...	...	...	83
Quartz " "	...	...	...	74
Alluvial " (Chinese)	...	...	...	82
Total miners	...	...	...	239

As near as I can ascertain, after careful inquiry, the quantity of gold won in this division during the year 1882 is as follows, viz. :—

1,152 tons of quartz crushed for	...	...	...	...
Patches from quartz-reef	...	...	...	...
Total from reefs	...	2,204	14	0
From alluvial claims	...	2,430	16	6
Total gold for the year	...	4,635	10	6
Total value of gold, at £3 14s. 6d. per oz.	...	£17,267	5s.	8d.

The estimated value of all the machinery at work and idle on this field during the year 1882, as near as I ascertain from owners, together with my own experience of machinery, is about £5,850.

## PEEL AND URALLA DISTRICT—BARRABA DIVISION.

(H. W. King, Mining Registrar.)

THERE are eight miners prospecting for quartz-reefs in the division, and there are 17 miners prospecting for alluviums. There is no progress being made with the mines owing to the want of machinery, and several leases have been taken up with a view to floating them in Sydney, mostly abandoned leases.

## PEEL AND URALLA DISTRICT—BINGARA DIVISION.

(Thomas Connolly, Mining Registrar.)

I HAVE the honor to report that gold-mining in this division has been better than it has been for years. The gold return for the year has been 4,416 ounces. Thirteen gold-mining leases have been applied for during the year, also five mineral leases, and I have issued 189 miners' rights. The principal portion of the gold is from Upper Bingara, from a reef known as Ballarat, which has turned out the extraordinary yield of three and four pounds weight to a bucket of stone. The two principal claims on this reef are Neals and party and Hanton Brothers; both are still on payable gold. Fletcher and party, next to Hanton, are driving a tunnel into the hill, and expect to cut the lead next week. This claim also has turned out 200 ounces already. The great drawback is the want of machinery; if there was good machinery on the ground there is no doubt the yield for 1883 would far exceed that of 1882. The alluvial diggings on this division are very poor at present.

## PEEL AND URALLA DISTRICT—TINGHA DIVISION.

(Mr. Warden Fraser, P.M., Inverell.)

I HAVE the honor herewith to furnish my annual report on the Tingha division of this district.

The past year has proved very favourable to the miners as regards the amount of ore raised, the price obtained, and the abundant supply of water.

Experience, the mother of invention, has led to a more judicious working of claims, and enabled the miners to reap improved results from their labours. I am glad to observe that the Department has consented to forward a diamond drill for the northern district.

The bulk of the recently taken up claims are situated in the parishes of Clive and Herbert, lying west and north-west of Tingha. Applications for land in the parish of Mayo, west of Tingha, are now pending. A large area of land is available there.

Working conditions of leases are being fairly complied with, and litigation is rare.

The population has considerably increased, and now numbers some 2,300 souls—say 1,500 Chinese and 800 Europeans. Many of the former are as yet inexperienced miners.

The whole of the ore raised is either won or purchased by Messrs. Litchfield, Moore, M'Clean Bros., Union Tin-mining Company (per their manager, Mr. W. Kennedy), and Messrs. George Woods and Company. They have furnished me with the following returns, viz. :—

	Tons.	cwts.	qrs.	lbs.
Mr. Wm. Litchfield ... ..	1,640	0	0	0
Mr. S. W. Moore ... ..	583	1	2	24
M'Clean Bros. ... ..	82	4	3	6
Union Tin-mining Company... ..	305	6	0	0
George Woods and Company ... ..	500	0	0	0

Giving a total of ... .. 3,110 12 2 2

The average price of ore on the field for the past year has been £54 per ton, giving a grand total of £167,973 14s.

The above figures show that a large haulage is necessary to convey the ore to the seaboard. We are heavily handicapped by carriers from the want of good roads to the Great Northern railway. The suggested route from "Mother of Ducks" Station, *via* Tingha, to Inverell would be the best, and a first-class road could easily be constructed. I trust the Roads Department will take the matter in hand at once. What with tin ore, wool, wheat, wine, and fruits, no better investment could be found to feed the Great Northern railway traffic.

## PEEL AND URALLA DISTRICT—WALCHA DIVISION.

(Milton S. Love, Mining Registrar.)

In reporting upon the gold-fields in this district as regards mining operations of 1882, the information at hand is limited to a degree, and I am therefore confined in remarks accordingly.

*Glen Morrison.*—During 1882 several leases were applied for on this field. Messrs. Mitchell & Green expended a considerable sum in their 12-acre lease and had every prospect of success, but suddenly the operations ceased. Work at Glen Morrison is to all appearances at a standstill.

*Tia.*—Messrs. Matheson & M'Intyre crushed 554 tons, yielding 181 ozs. 8 dwts. 10 grs. No other works at present on this field.

*Nowendoc.*—The alleged "big find" by certain miners on a line of reef at Nowendoc was mythical from the commencement. Several leases were applied for but subsequently (judiciously) abandoned.

I issued during 1882 thirty-seven miners' rights, four mineral licenses, and one business license.

## PEEL AND URALLA DISTRICT—URALLA DIVISION.

(Edward Marriott, Mining Registrar.)

I HAVE the honor to submit herewith my report on the gold-fields in the Uralla division of the Peel and Uralla Mining District for 1882.

2. The usual circulars were sent by me to the principal claim-holders in the district, asking for particulars as to the quantity of gold won and work done during the year, but up to the present time very few replies have been received. From the majority of those which have been received I understand very little sluicing has been done in consequence of the continued dry seasons and scarcity of water,

3. *The Bullion Gold-mining Company, Rocky River.*—The Secretary to this Company reports:—  
"The Bullion Company has not been working for the year now past." 4.

4. *Long Tunnel Gold-mining Company, Rocky River.*—I have not as yet received any reply to my circular asking for information as regards this company's workings. I understand, however, the mine has been almost continuously worked during the past year, and work is still going on under the superintendence of the new manager, Mr. Betheras.

5. *Union Claim, Mount Walsh Gully, Rocky River.*—Mr. John Anderson reports having put through between 2,000 and 3,000 tons of wash-dirt by ground-slucing, but there has not been sufficient water to clean up. About 5,000 tons of wash-dirt remain to be dealt with.

6. Mr. James Clendinning, McIntyre's Rocks, Rocky River, reports:—"About 300 tons of alluvium raised, yielding 11 ozs. 18 dwts. of gold, value £3 17s. per oz. Ground slucing carried on for about three weeks only during the year, for the want of water."

7. Mr. James Young, Mount Walsh Gully, Rocky River, reports:—"About 3,000 tons of wash-dirt sluiced, but no gold won, as the race is not cleaned up."

8. Mr. J. W. Herbert, near Brown's Gully, Rocky River, reports:—"No gold won in consequence of no sluicing being done."

9. Early in May last a new rush took place at Cabbage Gully, Cabbage-tree Creek, within the Rocky River Gold-field, and about 5 miles from Uralla. Several shafts were bottomed at a depth ranging from 9 feet to 30 feet, the wash-dirt being from 6 to 10 inches, with an average yield of 1 oz. to the load.

10. Mr. James Clendinning, who held a claim at Cabbage Gully, during a portion of last year, reports:—"He raised about 55 loads, or tons, of wash-dirt, which yielded nearly 58 ozs. of gold, value £3 17s. per oz. Many of the claims in the locality yielded about the same amount of gold, the total yield being estimated at about 300 ozs. Very few, if any, of the claims are being worked at Cabbage Gully now."

11. Boro Creek, situated on Mihi Creek, or Rockwood Run, about 25 miles from Uralla. Mr. Joseph Willgoss reports:—"Very little gold, for the want of water. The same may be said of the other claims in the locality."

12. The number of miners' rights, &c., issued by me during the year was as follows:—Miners' rights (Europeans, 135; Chinese, 33), total 168; business licenses, 5; mineral licenses, 5.

13. The quantity of gold purchased in Uralla during the year amounted to (as far as can be ascertained) 1,164 ozs. 8 dwts. 9 grs., value £4,474 14s. 8d., or an average of from £3 16s. to £3 17s. per oz.

14. During the year specimens of antimony were discovered at Carlyle's Gully, Rimbanda Run, on the main Northern Road, and about 17 miles from Uralla. A few mineral licenses were taken out, and one mineral lease was applied for. The discovery was, I understand, made on purchased or private land, and I have not since heard of the result.

Since forwarding you my annual report on the Uralla Division of the Peel and Uralla Mining District for the year 1882, I have received the enclosed report from Mr. S. Betheras, Manager of the Long Tunnel Gold-mining Company, Rocky River, relative to the operations of that Company during the past year. I have now the honor to request you will append the report now forwarded to my report for this district.

"Mr. S. Betheras, of Long Tunnel Gold-mining Company (Limited), Uralla, reports:—"I have the honor to report, for your information, that the above company's tunnel has been driven 1,800 feet from the mouth. The company, for some time past, have tried by various means to get into the wash above, but through the great pressure of water in the drift, found it impossible to do so from the tunnel. They have, within the last two months, sunk a shaft from surface to the water level, then drove two 4-inch pipes through into a jump-up from the tunnel, enabling them to sink the shaft through to the jump-up, and so drain the ground. They are now driving into the wash, and hope to commence sluicing in a week or two. They have now every prospect of having a good payable mine."

#### PEEL AND URALLA DISTRICT—COPE'S CREEK DIVISION.

(Richard Bickley, Mining Registrar.)

I HAVE the honor to submit the following brief report on the Cope's Creek Division of the Peel and Uralla mining district.

As I have only recently been appointed to the office, I am unable to give any details of the different mines of the district.

I can confidently say that the mines are in a flourishing state; the amount of tin ore produced during the year of 1882 was about 3,000 tons, which, I think, will exceed the previous year by about 1,000 tons. The population (both Europeans and Chinese) has also increased considerably during the past year; there are now from 800 to 900 Europeans and about 2,000 Chinese.

In conclusion, I may add that if the lithograph parish maps which are now in use were charted up to the end of each year they would afford valuable information to the miners in general.

#### PEEL AND URALLA DISTRICT—GLEN INNES DIVISION.

(Paul le Jeune, Mining Registrar.)

##### GOLD.

I HAVE the honor to report that gold-mining (alluvial) in this division has been principally carried on at the Nine-mile Creek, near Glen Elgin. A few European miners, who have been engaged in sluicing operations in that locality, report that during the past year they were for a considerable period at a standstill, owing to the want of water. There are five water-races covering about 11 miles in length, and the gold obtained by them has during the year amounted to 79 ozs.

During the year 1882, five applications for gold-mining leases (gold in quartz) were made for a reef situate at Nuggetty Gully, near Mount Mitchell East. The prospector of this reef, Jules Roy, reports having obtained, from a trial crushing made by hand, a yield of 8 ozs. to the ton of stone, and is now endeavouring to make better arrangements with a view of developing the reef. None of the adjacent land applied for under lease has as yet been opened up. As yet no report has come to hand of the work (if any) done on the Pilgrim's Progress Reef, situate at Kookaboogra, Mount Mitchell West. Three gold-mining leases have been applied for in this locality with a view of testing this reef.

During

During the year 1882 fifty-five miners' rights were issued as against fifty-three miners' rights during the year 1881. Ninety-one mineral licenses were also issued. Considerable reticence is manifested by the miners generally relative to the gold obtained by them; but it is a certain fact that to want of capital, coupled with great difficulty of access, is in a great measure to be attributed the slow progress made in working the undoubtedly rich reefs situate at Mount Mitchell.

*Tin.*

Mr. John Pearson, on behalf of the Glen Smelting Company at Skeleton Creek, reports that the quantity of tin ore raised during the past year amounts to 122 tons 18 cwts. 1 qr. 11 lbs., which realized £8,146 13s. 6d. The average depth of deposit is 15 feet; the average height of wash is 18 inches; the width of wash varies from 50 to 300 feet.

Mr. John Legge reports that at Skeleton Creek, Big Flat, and Hogue's Creek, the quantity of tin ore raised, so far as he has been able to ascertain, was 230 tons, valued £12,500. The average price of ore per ton having been £56 10s., on the ground; the average cost of carriage via Grafton has been £4 10s. per ton; the average assay of ore gave 74½ per cent. of tin, yielding in metal 72½ per cent.

Seven applications for mineral leases were received at this office during the past year.

HUNTER AND MACLEAY DISTRICT—COPELAND DIVISION.

(*Mr. Warden Baker, P.M., late of Copeland, now of Temora.*)

In submitting this my annual report for 1882 for the Copeland Division it is necessary in justice to myself and to the division, to state that at the close of the year I was transferred to Temora, where the report has to be written; and I need hardly say that to write a report so far away from the scenes of operation, and in the absence of the official books and records, is very irksome, and must of necessity cause the report to be more incomplete than it might otherwise have been. I have, however, been furnished by my successor, Mr. Warden De Boos, with some returns, which, with my own personal knowledge, will enable me to give a tolerably fair, if not a very full, account of the Copeland Division.

*Population.*

There has been a small increase of population during the year, notwithstanding a fewer number of miners' rights were issued in 1882 than in 1881. The new arrivals here however were for the most part miners from other gold-fields and brought their miners' rights with them. Besides it is very probable that a considerable number of the miners who were working for wages did not hold miners' rights; indeed some of them think it is not necessary that they should hold miners' rights when working for wages. Finding that such an opinion was entertained I made a point of calling attention, whenever opportunity offered, to the penalties both workmen and employers incurred for an infraction of the law in this respect.

In 1882, 280 miners' rights were issued, being twenty-eight less than in 1881. Of business licenses there were issued in 1882 forty-three at 10s. and nineteen at £1, as against fifty-one at 10s. and seventeen at £1 in 1881.

On the electoral lists for this portion of the Gloucester electorate for 1883-84 there are 450 electors as against 366 for the previous year, or an increase of 84 electors. The lists in both years were collected in January, and therefore the numbers collected may be accepted as a very close approximation of the actual number of electors within the division at the close of the previous year respectively. I assume therefore that at the close of 1882 there were 450 adult males entitled to vote within the division. Add to these the number of aliens, of females of all ages, and of males under 21 years of age, and I think the total population may be set down at about 1,200 souls.

There are about 350 miners in the division, say 300 quartz-miners and fifty alluvial miners. The population consists of people from nearly every part of the world excepting China; but I am not aware of any Chinese, either male or female, residing or being employed within the division.

For habits of industry, sobriety, and orderly conduct the population of Copeland and its surroundings compare favourably with any part of the colony; and having lived some four years among them am proud to be able to bear this testimony now I am removed from the district.

*Yield of gold.*

The yield of gold for 1882 was larger than in the year 1881 by some 1,918 ozs.; nevertheless it has not been as large as at the close of 1881 as I had been led to expect by the prospects of the field at that time. For some nine months of the year there was, however, great scarcity of water. This want of water kept the Prince Charlie crushing machine idle nearly nine months out of the twelve. It also kept the Criterion machine idle some two months, and for reasons unknown to me the Upper machine was kept out of repair until about December, and the Rainbow machine proprietors did not crush for the public for a great part of the year. The consequence of all these drawbacks has been, as a matter of course, to cause the yield of gold to be correspondingly smaller than it otherwise would have been.

By the courtesy of Mr. M. S. Montegresti, manager of the A.J.S. Bank at Copeland—the only bank there—I have obtained the information contained in the following:—

STATEMENT showing the quantity of gold received by the Australian Joint Stock Bank at Copeland during the year 1882.

Mr.

Mr. Monteagresti informs me that for quartz gold the highest price paid by the bank during the year was £3 10s. the lowest price £3, and the average price £3 4s. 6d. per oz. And for alluvial gold the average price was £3 11s. per oz.

Statement showing quantity of gold forwarded by escort from Copeland during the year 1882.

Memo.—All of the above mines, except otherwise stated, are situate at Copeland proper.

The above table does not show the gold obtained from alluvium, the exact quantity of which I have no means of knowing. We know, however, that the A.J.S. Bank purchased 178 ozs. 5 dwts. 1 gr. of the average value of £3 11s. per ounce; add the yield from alluvium to the yield from quartz as shown by the Mining Manager's returns, and we have for the year 1882 a total of 7,718 ozs. 11 dwts. 22 grs., in money value £27,037 18s. 4d. In 1881 the yield was 5,799 ozs. 12 dwts. 7 grs., of the money value of £20,008 13s. 4d. The increase for 1882, as against 1881, was 1,918 ozs. 19 dwts. 15 grs. of gold, in money value £7,029 5s.

The following statement has been compiled from information supplied by the proprietors or managers of the respective machines named below:—

Quartz crushed and yield of gold therefrom during 1882 at the undermentioned machines.

Name of Machine.	Quantity of Quartz Crushed.	Yield of Gold.	Remarks.
	T. cwt. qr.	ozs. dwt. grs.	
Hidden Treasure.....	1,826 0 0	3,118 16 21	Not including any stone crushed for hire.
Rainbow.....	255 0 0	439 14 0	
Prince Charlie.....	643 0 0	482 16 0	Including stone crushed for Prince Llewellyn Co.
Upper Machine.....	57 0 0	39 14 0	
Vivian & Co.—Bowman's.....	101 0 0	359 8 8	
Kerriput Co.....	300 0 0	350 0 0	
Boranel.....	98 0 0	385 0 0	
	3,280 0 0	5,175 9 5	

It will be noticed that neither the quantity of stone crushed nor the yield of gold therefrom shewn in the next preceding table agrees with the table compiled from the returns supplied by the several mining companies. Nor, can I now, at this distance from Copeland, obtain information to fully explain the seeming discrepancy. The explanation will, I think, be found in the fact that the Hidden Treasure machine returns give the stone crushed from the Hidden Treasure mine only, and do not include any stone crushed for hire. The stone and yield thus omitted would be about equal to the difference between the two statements.

*Machinery.*

*Machinery.*

Under this heading my report for 1881 may be adopted for 1882, with a few small and unimportant exceptions that is unimportant in so far as the public are concerned. The Criterion quartz crushing machine and the Kerriput quartz-crushing machine have changed hands, the Hidden Treasure Company having purchased the former, and the Kerriput Company the latter. The machinery has been revalued as will be seen by comparing my report for 1881 with the following:—

STATEMENT of quartz-crushing machinery in the Copeland Division at the end of the year 1882.

Machine owners.	Where situated.	Motive power.	Nominal horse-power.	No. of Stampers	Estimated value.
Hidden Treasure Co. ....	Copeland S. ....	Steam .....	12	10	£ 1,700 0 0
Somerville & Co. ....	Rainbow, Copeland S. ....	" .....	10	10	800 0 0
Prince Charlie Co. ....	Prince Charlie Lane, Copeland. ....	" .....	12	15	2,000 0 0
Thomas & Company .....	Upper Machine, Copeland S. ....	" .....	15	10	1,000 0 0
Vivian & Co. ....	Bowman .....	" .....	10	10	1,500 0 0
Kerriput Co. ....	Kerriput .....	Water .....	15	5	800 0 0
Jackson & Co. ....	Boranel .....	" .....	2	Chilian Mill	100 0 0
			76	60	7,900 0 0

For winding purposes the windlass is chiefly used. It is, however, giving place to "whips" and "whims," and in one instance a small steam-engine is used for winding and pumping purposes.

Roughly estimated the value of mining machinery within this division may be set down at £10,000.

*Gold-mining Leases.*

STATEMENT showing the number of gold-mining lease applications and the area of land applied for thereby during the year 1882.

Month.	No. of Applications.	Area.	Month.	No. of Applications.	Area.
January .....	3	9 acres	August .....	4	13 acres
February .....	4	19 "	September .....	4	25 "
March .....	4	12 "	October .....	3	9 "
April .....	4	16 "	November .....	...	...
May .....	6	23 "	December .....	2	6 "
June .....	5	20 "			
July .....	8	33 "		47	185 acres.

In 1881 there were received 57 applications for 177 acres of land.

During 1882 there were received at the Warden's office, Copeland, 44 gold-mining leases for execution by the applicants; of these 17 only were executed, and 27 were returned to the departments to be declared void. Of those not executed 12 were for Crown Lands, and 15 for land on the Church and School Estate. Of those executed 11 were for Crown Lands, and 6 for land within the Church and School Estate. It will be seen that the vicious system of applying for gold-mining leases in order to "shepherd" the ground without any intention to take up the leases when granted, still holds its own at Copeland. Of course if the labour and enterprise of persons other than the applicants should, during the pendency of the application, prove the land to be valuable, then the leases are taken up; if not, in the majority of cases, they are not executed and are declared void.

In conclusion the general features of the field at the end of 1882 were about the same as at the end of 1881; very little change to note. I do not remember any new discoveries during the year. The field has suffered greatly for want of water, both for crushing and for domestic purposes, and I fear this will be the case very frequently until some better mode of supplying the field with water than at present obtains, for although the rainfall on the whole at Copeland is above the ordinary average of the colony it is very fitful generally. A large amount of rain falls in a very short time when it does rain, but there are often long intervals between, so that it is very important that when it does rain the water should be carefully stored; but that is just what is not done, and is difficult to do, owing to the loose, broken, and porous nature of the rocks. For instance, the Prince Charlie Company constructed a fairly large-sized dam and have a large catchment area, but the dam will not retain the water, which goes away by some under drainage which the company has not been able to prevent. Probably after a time the clayey debris from the crushing machine being allowed to run into the dam may fill up the crevices and make it water-tight, but in the meantime the want of water is a great drawback not only to that company but also to the mines adjacent to the machine.

I have much pleasure in making special mention of the splendid enterprise of the Centennial and Baal Gammon Amalgamated Company. The great improvement in this company's method of working, the magnitude of its undertaking, and the many probabilities of its great success not only warrant but demand special mention. These mines were worked from shafts nearly at the top of a very high mountain range. On one side of this range runs the Barrington River, many hundred feet below the company's shafts and original workings. On this side of the mountain are a number of spurs, ravines, terraces, &c., forming a very large water-shed whose waters, by the peculiar formation of the country, converge to a place known as the "two creeks." At this point there is a fairly large flat piece of land offering a splendid site for a quartz-crushing machine. Indeed a more convenient site could scarcely be found anywhere—plenty of water, ample space for all their buildings, and some hundreds of feet of natural fall for their tailings, &c. Here they have secured a water-right and machinery area. They have also secured a machine site and water-right on the bank of the river, and I understand that if sufficient fall can be got the company will put up a powerful crushing plant on the bank of the river and work it with a large water-wheel, but failing this the machine will be erected at the site first named, in which case steam would be the motive power. The company has commenced to put in a tunnel 7½ feet high and 7 feet wide, which is large enough to allow for a double line

line of rails, and to permit of horses being used to truck out the quartz, &c., if necessary. When completed, this tunnel will be from 900 to 1,000 feet in length, and will give on the underlay nearly 1,200 feet of "backs" of quartz to work below the present workings. It is intended to construct a self-acting inclined plane from the mouth of the tunnel to the crushing machine, so that the stone put into the truck in the mine will go direct to the crushing machine without any more handling, and at a mere nominal cost for carriage. If the scheme so happily conceived be efficiently carried out in detail, it would be difficult to conceive a more favourable combination of circumstances for cheap and efficient mining. The mine would drain itself. The cost for haulage would be at a minimum, and there should be no waste of labour. Besides, the works are in the midst of an all but boundless forest of excellent timber suitable for all the purposes of the mine and machine, including firewood. In constructing the tunnel, and in machinery, the company expect to expend about £10,000. Do the prospects justify such an outlay? Perhaps the following facts will give a satisfactory answer to the question, I think they should. The Centennial Company commenced operations in November, 1878, and up to the end of 1881 had raised and crushed 1,102 tons of stone from a lode averaging 16 inches wide. This stone yielded 1,722 ozs. of gold, being an average of 1 oz. 11 dwts. 6 grs. per ton; during 1882 the company raised and crushed 100 tons of stone, which yielded 200 ozs. of gold, or 2 ozs. per ton from a lode averaging 20 inches; altogether the company have crushed 1,202 tons of stone, which gave 1,922 ozs. of gold, that is an average of 1 oz. 11 dwts. 19 grs. per ton from a lode averaging from 16 to 20 inches in width. The lode has been tested to a depth of 265 feet. Of course much will depend upon the continuance of the lode, but I am not aware of any indication of its discontinuance, besides, even if the Centennial lode should unfortunately run out, the chances are that, in constructing the tunnel, other valuable lodes may be discovered. Moreover, the tunnel and machinery will be well situated to command several other mines now being profitably worked, and it is very probable that these mines will eventually use both the tunnel and machinery to the great mutual advantage of all concerned.

HUNTER AND MACLEAY DISTRICT—BULLADELAIH DIVISION.

(*Mr. Warden Rowling, P.M., Bulladelah.*)

In submitting my annual report I regret to record that no satisfactory progress has been made in developing the mines in this division during the year 1882.

Only one crushing has passed through the machine, the yield from which did not pay working expenses.

Five leases, containing in the aggregate 35 acres, have been applied for.

Forty-six miners' rights and one business license were taken out during the year.

HUNTER AND MACLEAY DISTRICT—KEMPSEY DIVISION.

(*Mr. Warden Ducat, Kempsey.*)

I HAVE the honor to submit my annual report on the state of the mines and the progress made in work throughout the division.

1st. *Gold*.—*County of Raleigh, parish of Warrel*.—There has been two shafts sunk on the reef. The prospectors' shaft is down about 40 feet, the reef carrying an average thickness for that distance of 2 feet 8 inches. 3 tons of stone brought to grass; two assays made from small parcel of same stone. The report of the first assay gave a return equal to 1 ounce to the ton; a second assay, made at the Mint, yielded only at the rate of 12 dwts. 12 grs. to the ton.

Baterson's shaft, which is down about 20 feet, shows no better prospects.

The prospectors and other parties who are applicants for lease areas, all being men of very limited means, may be said to have abandoned their claims, the prospects not being sufficiently encouraging for them to spend more time and labour in developing them.

No report of any new discoveries have been made during the year.

2nd. *Silver and copper*.—These mines are virtually abandoned, no work having been done on either for the last eighteen months.

3rd. *Antimony*.—*County of Dudley, parish of Burrangong and Willawarrin*.—The affairs of the Corrangula Mining Company not having been finally arranged until very recently, few hands were kept employed on the mines, and those there only for the purpose of mining, all ore won being sent to Sydney for sale. The machinery and smelting works have been idle for over twelve months.

The quantity of ore won and shipped during the past year was about 120 tons of first-class ore and 80 tons seconds.

Bolt and Thomas have only been doing quarter work. The company not being purchasers of ore considerably cramped their facilities for disposal; they have therefore been doing but little work, have not opened any new shafts, and have not employed any extra labour.

The mines having again changed owners, Mr. E. H. Becke now carrying on operations, he has engaged about twelve men, and is requiring additional hands. He first proposes to sink a shaft for 200 feet or more and try to strike the main reef. It is his opinion, and also that of experienced miners, that the main reef may be found at about that depth. He proposes to give the ground a thorough test, and if equal to his expectations will have a large staff of workmen, with fresh appliances, to work it on a large scale. He has purchased Messrs. Bolt and Thomas out, and will therefore have an extensive scope of land to operate upon.

I, as Mining Registrar, sold seventy-one miners' rights and five mineral licenses.

HUNTER AND MACLEAY DISTRICT—DUNGOG DIVISION

(*Charles Graham Smith, Mining Registrar.*)

I HAVE the honor to report upon the state of the gold-mining operations in this division of the Hunter and Macleay mining district.

To this date thirty-eight miners' rights have been issued for 1883, against eighty-four for the previous year. This falling off is attributable partly to a decrease in the number of *bona fide* miners and partly to the fact that persons who previously held miners' rights on speculation have lost confidence in the permanently remunerative character of the workings.

At Lower Wangat most of the shareholders in the claims known as the Golden Spur East and West and the Hidden Treasure have abandoned their interests, and the remaining few are tunnelling in hope of cutting the veins. As these claims and the prospectors' claim gave fair promise at one time of good results, it may be inferred that permanently payable gold will be obtained at a lower level, but more capital must be employed than is at present to be had.

The Upper Wangat gives better promise.

The Mountaineer Company, who are said to have sufficient capital, have a shaft down 90 feet, and at that level 86 tons gave 3 ozs. 6 dwts. per ton, with a lode 12 to 18 inches, southerly dip, bearing east and west. The ground is to be worked through a tunnel just finished.

Connolly and Company's shaft is 80 feet; 20 tons gave 2 ozs. 16 dwts per ton; about 80 tons at grass; lode, 12 to 14 inches, southerly dip, east and west strike; to be worked through a tunnel just commenced.

The Prospectors' claim: Ore from surface to 75 feet; 200 tons gave 14 dwts. per ton; lode 12 to 14 inches, easterly dip; north and south strike; worked through a tunnel.

At Cherry-tree Creek there is nothing doing. From time to time very rich prospects have been got there in pockets; but the only hope for that place is the advent of a party with sufficient capital and prepared to go down 200 or 300 feet.

#### NEW ENGLAND DISTRICT—TENTERFIELD DIVISION.

(Mr. Warden J. B. Graham, P.M., Tenterfield.)

I do myself the honor to submit my annual report on the portion of the New England Mining District under my charge. In my last report I anticipated being able to give the result of the first treatment of silver ore at Boorook (under the process of roasting in furnaces) at an early date. The difficulties that had to be contended with in the erection of the furnaces and necessary works has delayed the completion of the plant for the reduction of silver ores until late in the year; in fact I have only now received information respecting the first trial. The large extent of argentiferous country at Boorook, which has been abandoned or idle in consequence of the difficulty of treating the ores, makes the success or not of the reducing works now erected a matter of great importance, as, if it continue successful and the results are what may be fairly anticipated, it will I have no doubt open up a valuable and permanent mining industry.

Mr. Davy, who constructed and has the management of the reducing plant, has now kindly supplied me with the following valuable information:—

On the Golden Age mine, the property of Messrs. Hall and Davy, two shafts have been sunk; the main shaft is 160 feet. Sinking is at present suspended in consequence of the water being too much to lift with a whip; a whim which will be able to keep the mine clear is now being erected, on the completion of which sinking will be again carried on. In the bottom of the shaft the lode is 4 feet wide, composed of argentiferous pyrites, which will average from 50 to 60 ounces of silver and 0.75 ounces of gold to the ton. No. 1 shaft on the same line of reef is 155 feet deep, the lode at the bottom is 3 feet wide, 10 inches of which is hard stone containing blend galena and argentiferous pyrites and will average 120 ounces silver to the ton. The sinking of this shaft is also suspended in consequence of the water. Good silver ore is now being obtained from between the 70 and 140 feet levels and about 600 tons of ore are at surface.

Some time ago it was discovered that a cross course had cut this lode and had shifted the continuation of it for some considerable distance; a great deal of prospecting has been done to find the continuation of the lode. It has now been picked up and shows good specimens of silver ore; as yet, it being so close to the cross course, it is much broken and disordered. Further explorations will be made when the water has been overcome.

On lease No. 24 held by the same parties (Hall and Davy), and known by the name of the "Addison" a lode exists which promises to be a very valuable one. Stopping out is now carried on at the 30-ft. level, where the lode is 9 feet wide. It yields a fair quantity of rich silver ores, some of which assay 700 ozs. silver and 5 ozs. of gold to the ton. This rich ore occurs in patches throughout the lode; it is anticipated the lode will become more defined and richer at a greater depth.

The reduction works are now nearly completed. At the beginning of last month the treatment of a parcel of ore of 60 tons was commenced. The ore was from the Addison Mine. The furnaces did excellent work, reducing the ore from a sulphide to a chloride. Operations were continued until the 23rd, during which time 64 tons of ore were treated in the furnaces. Early this month the amalgamation pans were started, which treated 50 tons of roasted ore in three days. The yield was 700 lbs. of amalgam, which has not yet been retorted. The result is considered very satisfactory. In the assay of the tailings only a trace of silver was found. Mr. Davy states that this first experiment was "a perfect success."

The continuous wet weather has delayed operations; about 40 tons of ore is now crushed awaiting roasting.

The reduction plant is very perfect, and the work reflects great credit on the enterprise and scientific knowledge of Messrs. Hall and Davy. The erection of the works has been under the direction and superintendence of Mr. Davy, who has had very great experience in the reduction of silver ores. The furnaces are 52 feet long, 12 feet wide, and 6 feet high, with 100 feet of flue or dust chambers, and a chimney 50 feet high. The crushing plant consists of a 24-horse power engine, and ten head of stampers; the process is dry crushing.

There is little other work going on at Boorook, but I have no doubt if Messrs. Hall and Davy succeed in profitably treating the ores, a large number of miners will be employed.

#### Gold.

Gold-mining in my division has not materially altered since my last report. Little has yet been done at Poverty Point,—the hydraulic sluicing works are not yet completed. There are about seventy European miners and thirty Chinese on the Timbarra, Tableland, Poverty Point, and Malara employed in mining. As far as I can ascertain they are barely making wages. Martin and party are getting good gold at Perseverance and Lunatic, and their Victorian companies are working them. The work at present is chiefly sinking on the reefs prospecting. At Lionsville, Solferino, Dalmorton, and Tooloom a little mining is carried on, the particulars of which will be given by the Mining Registrar.

Tin.

*Tin.*

The yield of tin-ore on the Maryland Mines is better than last year, and the prospects generally are more cheerful. The value of the ore won during the year amounted to £34,440, which is an increase of £6,100 on the preceding year. The number of miners engaged was less than last year. There are 400 Chinamen and 120 Europeans engaged in tin-mining. The mining registrar at Wilson's Downfall, reports that he has issued 151 mineral licenses, and received twenty-five applications for leases during the year.

Some attention is now being directed to the prospecting for and development of lodes in the locality. Dennis and Company have secured land of both sides of the main range, on which various lodes exist, showing good surface indications. They have erected a plant consisting of a three-stamper battery, and intend to commence work on the lodes at once. The battery is on Ruby Creek, in this colony. The first lode likely to be worked is situated in Queensland, a few yards from our border. The run of the reefs or lodes is north-east and south-west, crossing the boundary between the colonies. It is anticipated, judging from the large deposits of stream tin in the creek heading from that part of the range, that rich lodes will be found; the present discoveries seem to warrant such a conclusion.

Plumbago and antimony are found in large quantities in the district, but in consequence of cost of carriage little mining has been done for these minerals. Some land has been applied for under lease to mine for plumbago, on the Undercliff Run, by Mr. Ambrose Johnston, who, I understand, intends to develop it. Some samples were sent to Brisbane, and pronounced good.

## NEW ENGLAND DISTRICT—VEGETABLE CREEK DIVISION.

(*W. E. Henry, Mining Registrar.*)

I HAVE the honor to report to you, for the information of the Honorable the Secretary for Mines on the state of the Vegetable Creek mining district during the past year, and what may reasonably be considered its future prospects, which I shall do by referring to the various interests in the order of locality in which they are situated, beginning with those nearest to and in this town, and working outwards. I may here state that we can boast of a population of 3,398 souls. Having spent many days in travelling over the whole of this field, and carefully inspected all the workings and examined the prospects both of the surface and underground enterprises, I am able to speak positively on all that is being done.

On the northern side of the township of Emmaville are three parties of Chinese, averaging twelve men each through the year, who are working as tributors to Messrs. Irby, Andrews, and O'Donnell with good results, on ground that has all been worked over by Europeans, being a portion of what was known as "The Little Wonder," which name it bore on account of its great richness. To the west of the parties above referred to is another lot of Chinese (twelve men) on new ground, situated on what is called Vegetable Creek, who are working with good results in connection with the same gentlemen. The Great Britain ground comes next, and lies to the north of what I have described. Under the good management of Chas. G. Westhoven, Esq., it is being worked on the tribute system, by Chinese, of whom there are several parties, comprising in all about 220 men, who are working both the shallow and deep ground; the latter is about 25 feet sinking, and is timbered and managed so well that it would not disgrace Europeans. The stripping at the shallow workings varies from 4 to 10 feet in depth, which is removed on barrows; when needed the pumping is done with the ordinary "Chinese" pumps. Showing how well the mode under which the land is being worked answers, the company have obtained 609 tons of tin ore during the year. The wash varies in thickness from 2 to 2½ feet, and is about 18 feet in width.

On the Tent Hill road there are one or two parties of Chinese working on tribute to various lessees with profitable results.

Tent Hill is about 3 miles in an easterly direction from Emmaville, and about a mile from the old Tent Hill township. It presents a very pretty sight from the adjacent hills, being on a nice healthy rise, and is composed chiefly of the Glen Smelting Works and residences connected with it, nearly all of which are built of sawn timber and iron roofs, with walls painted white. The works, as also the whole of the Company's interests in the district (which are large), are under the very able and excellent management of John Reid, Esq., who is also one of the company, through whose energy and enterprise we are in a position to boast of the works, which I will now proceed to describe. They have been established some 7 years, during which time they have gradually increased in extent, until now it has become what I have already stated, a "pretty town." There are three reverberatory furnaces (from which rise two large chimneys to a height of 50 and 60 feet respectively) under the cover of two large sheds, which are roofed with galvanized iron, and capable of reducing 3 tons of ore every twelve hours, with a consumption of from about two to three cords of wood as fuel, and 15 cwt. of charcoal as flux. The cutting of such quantities of wood, burning of coal, and carting the same to the works, besides sending to the owners of mines for the tin, necessitates the employment of a large number of men, horses, and carts. As the process of smelting is so well known I will just simply refer to the tapping of the charges into the "float" (a brick tank). After the slag is sufficiently set it is removed from the top of the metal by means of bars, and the molten metal is then conveyed in ladles to the refinery, where it is allowed to settle for about two hours, prior to boiling, which is accomplished by inserting green billets of wood into the metal, causing it to agitate freely, which oxidises any foreign matter that may be present, and after having boiled for about an hour the metal becomes pure, and is ladled into ingot moulds. The output of refined metal for the year has been 2,000 tons. Owing to the very great heat necessary for the reduction of the ore to pure tin a great amount of wear and tear is caused to the furnaces, which necessitates the use of a larger number of fire-bricks, which are made on the premises, and in order to do this properly the company have erected a Chilean mill, pug-mill, and hand-press, and with the clay (procurable near the works) they are able to make a very good fire-brick.

The buildings surrounding the works are the general office, which is nicely fitted up, store, manager's residence, men's huts, and stables, all of which are built of sawn timber, and roofed with galvanized iron. The company have recently added a portable engine to the works for charcoal crushing, &c., and they are now busily engaged in the erection of a five-stamper battery, for the purpose of making trial crushings of the lode-stone from the different mines in which they are interested; most prominent among them is the "Ottery," which has developed to a valuable property. The first shaft on

this

this block is down about 90 feet, in which tin is plainly visible. About 2 tons of stone were taken to Mr. Hall's battery at Kangaroo Flat for a trial, and although the saving appliances were not adapted for lode-tin dressing, the results were 80 per cent. ore assaying 74 per cent. metal. About 200 yards in a southerly direction from the shaft just noticed, another shaft has been put down, which discloses the richest vein of ore yet discovered in the neighbourhood and, although the shaft is down only about 60 feet it is estimated that there are 20 tons of ore on grass. As some surface specimens from this shaft have been sent to the Mines Department by the company you will have an opportunity of examining them. In addition to the two shafts mentioned there are numbers of open cuttings, in almost all of which very good tin ore is visible in such quantities that it would keep a crushing machine going for months. The extent of the company's ventures may be imagined when I state the fact that they pay away in wages about £1,000 per month.

Several parties of Chinese are working around and near Tent Hill, some on tribute, and others under mineral licenses, with very satisfactory results.

Messrs. Moore and Company's ground at Tent Hill is nearly all worked out; one party of Chinese are still working on it.

The "Nine-mile," where the "Folkstone" mine is being steadily worked, will next be the subject of notice. The work is being well and steadily pushed ahead under the good management of Mr. H. Marshall, with comparatively small costs. He is following the reef, which is 4 feet wide, and dips about 1 foot 10 inches in 6 feet, and bearing easterly. The shaft is down 112 feet. The deepest level is 30 feet. There is a great deal of water in the shaft, which is bailed out with a keg attached to a whip worked by a horse. The stone, which is of a granite nature, is raised in hide buckets by the same means. A blacksmith's shop has been put up near the shaft by the company, when all necessary repairs, &c., are done by their own men.

Messrs. Crane, Cassidy, and Harvey are sinking on a block which they have got on tribute from Mr. Robinson, a short distance from the Folkstone mine, although they have exceedingly hard rock to go through, most of which being blue stone. They have sunk three shafts, one of which is down 124 feet, but without as yet having found bottom in any of them.

F. Davy's 20-acre block is situated on Battery Creek, and has every prospect of turning out well; it is now being worked by Mr. Davy and his son (only a lad); yet under such disadvantages it yields him rations, although he has to contend against a great deal of water. The wash is very good, and about 12 feet from the surface. It contains good coarse tin, some pieces of which weigh as much as one pound.

There are one or two people working lower down the same creek, and succeeding in making rations.

Messrs. Reid and Crane, "Bark Hut Tin-lode," near Battery Creek: They have sunk a shaft 40 feet deep on a good lode, about 3 feet wide, running from the surface at the south-west side of the block, and with a rich vein, averaging 14 inches in thickness; a sample from it, weighing 16 lbs., went 40 per cent. ore. The reef bears north-east and south-west, and crops up on the surface, in about 20 chains of which tin is visible all the way along. At the north-eastern boundary they have put down a shaft to a depth of 4 feet, where the reef is 4 feet wide, and showing fair tin right through.

*Little Catarrah Creek, Lee's Gully.*—The Great Britain Company have put down four shafts, two to a depth of 20 feet and one each 10 and 12 feet into very hard rock; the stone raised from each of them is pretty good, and I think that when some capital has been expended in developing the reef it will prove a good venture.

Messrs. J. E. Elliott & Co. have a block of 60 acres at Lee's Gully, 20 acres of which has been prospected, and proved exceedingly good. On one part of it there is excellent surfacing, out of which a man could make more than wages; three distinct reefs run through the 60-acre block and show well on the surface; a seam of almost pure tin shows itself for several yards at one place, averaging about 6 inches in thickness. I consider that this property will be a capital investment for speculators.

*Catarrah Creek.*—This locality is now occupied by Chinese only, of whom there are seven or eight parties, who are working several blocks (alluvial) to advantage; but excess of water is a great difficulty with which they have to cope.

*Table-land.*—Messrs. Elliott, Hawkins, Thompson, and Slough are working a block on tribute to Mr. Speare, near the Torrington, with such good results that they have taken up a block of vacant land containing 12 acres, which is the only land available adjoining this block, being hemmed in on the other sides by leased land and a reserve.

"The Torrington" mine, which has of late created so much excitement owing to the richness of the lode, has not been getting out such good stone during the latter part of the year; but it is very likely the company will again strike the rich deposits, for which they are steadily prospecting. A lot of stone is on grass, and also being raised, which will pay well. In order to treat it properly the company are erecting a five-stamper battery, which is expected to be in full work during 1883. The stone is being raised by means of the old-fashioned windlass, and has to be carted to the washing plant, a distance of about a quarter of a mile, where a good dam has been made and a tin house, also a manager's residence has been built, and where the battery is being erected. They have two shafts down to a good depth, one being 75 feet deep; in it the lode is 15 inches wide at the 27-foot level.

The Keyser, which belongs to the same company, is down 32 feet, and they have driven 16 feet for the purpose of testing the reef. The whole of the company's workings are under the careful management of Mr. H. Marshall.

On the "Dutchman" line of reef the Great Britain Company are putting down a new shaft at the bottom of block 62 and 63, where they have sunk 23 feet on a very hard rock; the reef runs north-east and south-west. James Montgomery & Co. are working on this property as tributors, which they have been doing for the last six months, and are making good wages.

"Walaroo," Trehwella & Co., 80-acre block, contains a splendid reef, which from appearances only requires to be worked to prove a good property. The reef averages 3 feet 6 inches, and runs about north-east and south-west; little more than prospecting has as yet been done. There are two distinct reefs on this block, and very payable tin is obtainable out of the loose soil at the sides of the reef. A very liberal offer was made a short time since for this land, but it was declined, as the owners would not sell for less than £7,000, so the property remains in the hands of the lessees, who are about working it themselves.

Anderson & Co. hold a nice rich patch of 4 acres under mineral license about a mile from the above.

Mr.

*Mr. B. Hart's M.C.P.*—Wm. Howes & Co. are working on this block as tributors with very good results, although there must be many cwts. of tin lost owing to the want of proper means of saving it. The stone is dug out of the top of a hill, and from thence carted to the creek, a distance of about a quarter of a mile, where they burn the stone in order to soften it, after which it is passed through very primitive processes for crushing and saving the tin. A battery is very much needed in this locality.

On the Duchman proper, work has been suspended pending its being let on tribute.

"Curnow's Reef," owned by the Great Britain Company, Messrs. Long and Masters, are putting down their shafts on the contract system. No. 1 is down 45 feet but had to be abandoned on account of water when they were on the lode. No. 2 is down 170 feet, in which tin is visible all the way down. The lode is about 18 inches wide and good. They have driven about 25 feet into the rock, which has revealed tin-bearing stone 3 feet thick with only one wall. No. 3, the engine shaft or main working shaft, which is 8 feet 6 inches by 4 feet 6 inches, is down about 38 feet, is to be sunk about 100 feet, but is not being worked just now owing to excess of water, to cope with which another shaft is being put down at the side of the hill and is now about 30 feet deep.

James Smith's 4 acres mineral area is held under mineral license and cuts into the south-west side of the Britain block. It is an excellent piece of ground out of which the poor old man is able by himself to make a comfortable living, not however before he deserved it, for he had to search three years before finding anything payable, and during which time he had anything but a bed of roses, being very much harassed by the company who own the block of which the 4 acres are said to be a part; but those who know the particulars connected with the case must admit that at least the man is entitled to peaceful possession of the 4 acres.

Messrs. Smith and Shaw are about putting a party of Chinese to work on their block 281.

*Moleyard Creek.*—The Stacey Brothers are working alluvial ground under mineral license with results that cause them to be contented. The stripping varies from 2 to 10 feet and the wash 2 to 3 feet in depth. Chinese are also working in this neighbourhood with pretty well the same results as the above party.

To the west of Stacey Brothers' workings Messrs. Ford & Co. hold a block of land containing an excellent reef. In one shaft, 34 feet deep, two lodes averaging 6 inches in thickness are revealing good stone. A few yards further to the west a shaft 20 feet deep shows a reef 18 inches in thickness, and about 100 yards further in a north-western direction is another shaft which the same party have put down about 20 feet, which shows quite a different kind of stone (a rotten granite reef) from 10 to 12 inches in thickness, containing very fine tin, almost as fine as flour. The block I have just spoken of is situated on a hill dividing the Moleyard Creek from Black Swamp.

*Silent Grove.*—There is not much going on here at present though once the scene of considerable activity. Messrs. R. Towns & Co. own a valuable mining plant which became idle when tin fell in price a few years back and operations have not since been resumed to any extent. The reefing is not being touched, but there are three men employed ground sluicing with satisfactory results.

Messrs. Swanson & Co. are prospecting and have found rich wash at 20 feet level, averaging 9 inches in thickness. I fully believe that this block will prove a valuable property, but of course it requires capital to develop it.

Messrs. Lane & Co. are doing a little ground sluicing at the Bald Rock, where they have 3 feet of wash which yields fair rations. Eight Chinese are working in the same neighbourhood with poor results, for although they have only 6 feet stripping the ground is too poor and patchy to pay.

James Fox is working near the Chinese with the same results.

Having retraced my steps I reach Flagggy Creek.

A Hulkert has been working by himself since June and is making a comfortable living on the alluvial portion of his block, on which there is also a good reef, bearing north-east and south-west, showing rich stone, 18 inches in thickness.

John Gogin is making good wages on the alluvial portion of his lease by ground sluicing, his only trouble being that he is often without water for half the year. There is a fine reef on his land which he proposes working after Christmas. The lode averages 3 feet in thickness and runs about north-east and south-west.

MacIntyre Tin Reef Company under the excellent and careful management of A. P. Burt, Esq., are putting a drive into the side of the mountain which has attained the length of 20 feet besides the cutting leading to it of 60 feet. They are following a promising looking well-defined reef which runs right over the mountain in a straight line averaging two feet in width, but as yet (excepting at the crown of the mountain where a little tin is visible) without finding anything to reward the company for their trouble. I think that there is tin in the neighbourhood as there are plenty of indications, and no doubt if it is to be found Mr. Burt is the man in the right place. He has done all that forethought and good management can do to test the land with very little cost, for a glance at the locality will prove what I say. Only five men are employed and three out of the number have only been working a fortnight. Besides what I have mentioned they built their own huts (bark), a blacksmith's shop, and powder-magazine. One man is constantly at work opening up the reef along its line, which is about north-easterly, one point of which must be fully 200 feet above the drive. There is a little alluvial land at the foot of the hill which is held under mineral license and where the camp has been pitched.

*Bullock Swamp.*—Block No. 15, of 80 acres, being Messrs. C. Newton, Brothers' mineral conditional purchase, is let on tribute to Messrs. Chapman & Co. Owing to the want of water during the early part of the year they have not done very well, but in the wet seasons they can make from £4 to £5 per man per week at the present price of tin. The race conveying the water they use is 3 miles long, which they have had in some cases to cut through very hard rock.

Mineral lease, block 27, adjoins the above and is of the same nature of land, which the lessees Messrs. Anderson, Chapman, & Gale have proved by prospecting.

Messrs. Anderson & party hold a 20-acre block in the same vicinity which they are ground-sluicing, it yields 2 cwt. of tin per man per month, which they obtain by means of a plentiful supply of water obtained from Bullock Swamp, through a race about 1½ mile long. Bismuth and galena are also found on this block. In the portion of it which extends into the creek is a fine reef about 2½ feet thick, at a depth of 7 feet, but excess of water has prevented it from being worked; the same party have also a promising-looking reef, 3 feet wide, near the creek.

Taylor's block, situated further down the Glen Creek, is worked by Chinese, on royalty, with good results; although the water supply is often deficient they have opened up two very fine reefs, which, however, the Chinese do not like, and will not work.

*The Gulf.*

Messrs. Coghlan and Summers' 20-acre mineral lease contains an excellent lode, about 1 foot in thickness, showing itself on the surface; they have sunk down 10 feet and found it very easily worked. Nine weeks' labour, including time taken in building their huts, &c., has yielded them 80 cwt. of tin ore.

*Messrs. Grancy and Co.*—This company's ground is under the able management of Mr. James Hamilton, being worked to the best advantage. A shaft has been sunk 15 feet through hard rock, and shows a rich vein about 15 inches in thickness, which they are following in the expectation of getting into a better and more easily worked strata. Another shaft, 33 feet deep, is put down about 200 yards from the above, in which the vein is about 2 feet 6 inches in thickness, running from the surface, and showing tin all the way through, but the rock is not so hard as in the first one. Six men are working on the reefs and 8 men on the alluvial portion of the block, which yields so well that it more than pays all the expenses.

The Gulf Lode Company are represented by Mr. M. W. Carr, who is working very carefully, without much expense, in continuation of what was commenced some time since. One shaft is 150 feet deep; good tin was got at 130 feet level. Two men are at present engaged in putting in a drive at 45 feet level.

A few Chinese are working at Deepsinkers' Creek under mineral licenses.

Messrs. Cadell and Hall have done a great deal of work at Deepsinkers' Creek during the year on some of their blocks, but until the tail-race is carried up from the lower blocks it will be impossible to work it advantageously. The lessees would do well to have the blocks amalgamated so that the labour can be concentrated, in order to open up the whole of the land properly, or even prove it thoroughly, the ground being deep, and the wash and drift very wet. Improvements to the extent of £120 have been made on the blocks, exclusive of the Chinese working-plant.

*Six-mile*—Hall Brothers' 60-acre block is being worked by 20 Chinese, who are surfacing, as there are no regular deposits. The wash varies from 400 to 500 feet in width. The year's yield has been 32 tons 12 cwt. 1 qr. 25 lbs. of ore.

Hall Brothers' Grampians has been worked by from eight to forty men during the past year. A plentiful supply of water is secured by a fine dam, worth about £1,000. The wash is nearly all surfacing, and varies from 6 inches to 10 feet in depth.

*Hall Brothers' Ionian Tin Mine.*—This property has the most complete mining machinery on it of any in the district, and is managed by Mr. James Wardell. About 2,000 feet of driving has been done during the year on the main drive, and some 400 feet in the cross drives, which have been made for prospecting purposes. I enclose herewith a plan showing the workings, which will speak for itself. An average of forty-five men are always employed, besides eight horses. One 16-horse-power engine drives the machinery, which consists of two puddling-machines, nine heads of stampers, a jigger, &c. This company labour under great disadvantage through the wash having to pass through so many processes, for though it is rich it varies very much in thickness, averaging only 10 inches, and varying from 20 to 230 feet in width, besides being in exceedingly hard country. When obtained it has to go through the puddling-machine into a sluice-box; when all that has not been broken up properly by the puddling is forked out, and from thence put under the stampers, through which it passes on to the jigger and then the dressing boxes, after which the tin is ready to be put in the drying-pans. All the water needed is pumped by the engine from a splendid dam, which is capable of holding 3,000,000 gallons of water.

Gunston's blocks, 126/7, are let on tribute to Bourke Brothers, who have been working to within a few weeks of the end of the year. They put down three shafts, but were compelled to cease operations owing to want of water.

Foley & Co. have been prospecting for months with considerable energy, and have got down on good tin, in a shaft 70 feet deep, in which they are putting a new drive to their old face, where they expect to meet with very good wash.

Two men are working at the Springs but with poor results.

Messrs. Wheeler & Co. are working at the Springs, on Messrs. Hart & Co.'s ground, with fair results.

*Red Hill.*—Messrs. Partridge & Co. have done a great deal of prospecting; two shafts have been bottomed, one at 84 feet and the other at 90 odd feet, in which they struck tin bearing wash varying from 18 inches to 3 feet in thickness, but with unprofitable results. About twenty men have been at work through the year. A third shaft is being put down, but unfortunately the country is very hard to work.

Messrs. Salmon & Co. are working as tributors to Mr. Jno. Lennon, on his M.C.P. blocks 8 and 9, on which a large amount of prospecting has been done. The tributors have had a great deal of difficulty to contend against; they put down three shafts through very hard basalt, which was only done by a great deal of perseverance, but they were in each instance driven back by the water rushing in upon them in such quantities that it can only be beaten by steam power. The proprietors who have expended from seven to eight hundred pounds in testing this land feel convinced that it will pay, but are unable, without help, to continue working, so are intending to admit partners by disposing of some shares.

Messrs. Salmon & Co. are also holding another portion of Lennon's M.C.P., adjoining Messrs. B. Hart & Co.'s ground. They worked up to August last, and made very good wages, but gave up owing to foul air; they are, however, intending to work again early this year, and expect that as they go towards Mr. Hart's boundary that it will improve.

*Lennon's M.C.P.*—Messrs. D. Bailey & Co. are working a block of this land on tribute; they have put down one shaft 112 feet, but cannot proceed further at present owing to excess of water. They have, however, proved that there are 3 feet of good wash, which will yield 1 cwt. to the load, but cannot tell its real depth. It is supposed to be a continuation of Flannery's lead. In addition to having put down four shafts, the party have driven 300 feet to test the width of the lead, which four men are now prospecting. The party propose getting an engine so as to work the deep ground properly; hitherto they have been working only the shallow leads.

Flannery & Company have a 120-acre block on Mr. H. Gordon's, Strathbogie Run, which they hold on tribute; they have put down a shaft 80 feet, through very hard basalt. Should they bottom on good wash at about 230 feet, which they expect to do, it will be the making of the district, for there are about 18 miles of the same sort of country that have never been touched. Nine men are at work in eight hour shifts of three men each.

Messrs.

Messrs. Hanlon and Fox's 17 acres tribute to the Wesley Company, at Rose Valley, have sunk 115 feet without getting tin, having bottomed on a high saddling; the water shaft is down 180 feet, from whence a drive was put in in a south-westerly direction, about 65 feet. The working shaft is down about 140 feet, where they have struck good wash, averaging from 4 to 9 feet. The company have had to obtain a new twelve-horse-power engine from Sydney, which has been working about one month, in order to cope with the water, which they are now mastering fast; it is bailed by means of a cask fastened to a wire rope, which the engine hoists; the wash is raised in green hide bags by the same means. Only five men are at present employed, but when in full swing from 80 to 100 will be needed; all preparations are being made for working in a systematic manner.

Messrs. Moore & Company's Rothschild Mine, situated on Vegetable Creek, about 2 miles from Emmaville, was purchased by the present owners about five years since, and they at once placed an engine and pumping gear on the lower end of the block, where they have an excellent water supply, which is raised as needed, 32 feet into iron box fluming, supported by sound timber frames, which measures 2,000 feet, and conveys it to where it is divided into separate ground races, for the use of different parties of Chinese, after which it passes back to the dam from whence it was first raised. The receipts from the tributors for the use of the water, pays all the working expenses of machinery. The yield of tin from this mine has decreased during the past year, as there are at present only six parties of Chinese working.

Flannery's 60-acre tribute to the Wesley Company, situated at Rose Valley, is owned by the gentleman whose name it bears, and under his skilful and systematic management has assumed the premier position amongst the mines of this district, and I may say in the Colony. Herewith I have enclosed a tracing of the workings, which shows what was worked out during 1881, and also that which has been tested and partly worked during the year 1882; the position of the engines, shafts, washing plant, and tin house are also shown; the portion tinted pink is ground not yet worked, but proved to be very rich, and the plain space between the tinted portions shows from where this year's tin (520 tons) has been obtained. The value of the plant on this property is about £2,500, 120 men are employed, and three engines are in use, also one of Tiffin's patent American well-borers, which is used to ascertain the run of the lead. The wash varies in width from 30 to 80 feet, and averages 9 feet in depth, the main shaft is 200 feet deep, and although most of the sinking has been through hard rock it has been necessary to timber it most of the way down, which is securely done with sawn timber. About 30 yards to the south of the shaft is a splendid new eighteen horse-power engine, which does all the lifting, &c., by means of a rope. The wash is wheeled from the drives in barrows to the chambers at the bottom of the shaft; from thence it is raised to the surface in large hide bags and emptied into trucks on a tram-line, which leads in a northerly direction to the washing plant. All the underground workings are exceedingly well secured by fine strong timber, some of which are quite 1 foot in diameter, and have equally strong cup pieces securely fastened, which support the closely lathed roof. Some 1,700 feet of driving have been done this year, or rather I should say during eight months, as four months out of the year were lost in getting everything ready for work. The men work in three shifts of eight hours each, and those working on the night shift collect wash to be raised during the day, as the engine only works in the day-time. The men working at night get down and up by the ladder-shaft, which is about 12 yards from the working shaft, and is fitted with 30 feet ladders, and 26 feet floors, so that if a man fell he could not drop more than 26 feet. One blacksmith is always engaged in connection with the ironworks required.

The sluice-boxes are fed by means of a shoot, into which the wash is emptied from the trucks. A door at the bottom of it is lifted, and dropped, as the quantity of wash needed passes out on to the hopper plate (a sheet of perforated iron) at the top end of box, on which two sluicers are always engaged passing the wash through a constant stream of water, by means of which they soon separate the stones from the tin and sand, which passes through the plate, leaving the clean stones, which are thrown into a truck at the right of the men, and when filled is drawn by a horse up a tram line laid on the stones. Two sluicers are always employed in the box shovelling up the tin in a heap at the top end, and allowing the sand to pass away with the water to the tailhole, where two more men are engaged filling the trucks, which run on two sets of lines, laid on the tailings. As one is being filled the other is being emptied, so that one is always at the side of the men. To the left of the sluice box is a platform on which the tin is placed when the sluice box is cleaned up of an evening. The following morning it is passed through another stream of water, in a smaller box, where it is properly cleaned and placed on a floor, on which it is allowed to drain, and afterwards put on the drying pans, and, when dried, it is bagged ready for the smelter. There are two drying pans made of  $\frac{1}{4}$ -inch iron, measuring 8 feet by 4 feet each, with 6-inch angle iron round them. They are built in with bricks and heated by fires underneath, which are lighted from the outside. The water used in sluicing passes away from the tail-hole in the tail race (100 feet long) to a settling dam about 60 feet long by 4 feet deep and 12 feet wide, from whence it runs into the reservoir, about 36 feet long, and the same in width, by 10 feet deep, from the south-eastern corner of which is a head race leading to the pump-hole, from which the water is raised by a Californian pump (worked by a horse-power machine and two horses) into fluming, which takes it back again to the sluice box; thus it will be seen that no water is wasted. The reservoir is cleaned out occasionally, to accomplish which a tail race 400 long is cut from the north-eastern corner of the reservoir (which is closed up by means of a flood-gate, so that it can be easily opened when needed), through which the mud is allowed to flow away, and is swept out about once in three weeks by means of paddles yoked on to a horse, which drags it down by walking along the side of the race.

The second engine is worked for raising water, which is lifted in large buckets or bags made of canvas, each holding 105 gallons, from a shaft 230 feet deep. 62 bags are raised in one hour, which equals 6,510 gallons per hour, in order to keep the washing plant above described supplied with this very necessary commodity, to which it is conveyed by galvanized iron piping a distance of about 400 yards. A third engine (a twelve-horse-power) is working at another shaft, which is down about 180 feet, and situated 8 chains easterly from the working shaft, but without obtaining wash, having got on a saddle; but they are driving to where they know the run of tin to be, which they do not expect to go far to strike. Men are always employed at the mouths of the shafts, dressing timber (which is supplied by contract, and keeps three teams constantly at work) ready to be placed in position below.

Messrs. Griffiths & Co.'s tribute to the Wesley Co. is 6 chains square, and adjoins Flannery's at the eastern side. Their shaft is down 165 feet, where good wash was struck, averaging 4 feet in thickness and yielding 2 cwt. of ore to the load. They have driven about 70 feet in an easterly direction, which shows the same kind of wash, gradually deepening as they go. They are at present employed sinking an air shaft, and when completed they intend to start washing. The width of the lode is unknown.

Messrs.

Messrs. Probert & Co. also are tributors to the Wesley Co., and hold 6 chains square, on which they have sunk to a depth of 160 feet, and driven 50 feet, but without very good results.

Messrs. Hume & Co. have also an area of 60 chains square from the Wesley Co., on which a shaft has been sunk 156 feet to bottom. They have driven 40 feet in a northerly direction on wash averaging 7 feet in thickness, and yielding 50 lbs. of ore to the load. The Wesley Co. supply timber and provide washing plant, including water, of which there is a plentiful supply on their land.

Messrs. M'Donald & Co., tributors to the Wesley Co., put down a shaft to a depth of 150 feet, and bottomed, but without getting wash until they had driven 30 feet, where they struck it 2 feet thick. It was dipping and making fast, so they are sinking the shaft 20 feet deeper, and from thence it is intended to put in another drive to the wash.

The Wesley Tin-mining Company's property is being excellently well managed by W. O. Pomroy, Esq. During the first eight months of the past year a portion of this mine was worked on wages, and another part on tribute, but since that time the company have done away with all wages men, and let the whole mine on tribute, believing that mode to be the most remunerative. As a proof of the new system answering best, the company have been able to divide (clear of expenses) £42,000 during the past year, and they fully expect that it will yield better this year.

Messrs. Graney & Co. have a block 6 chains square on tribute from the Wesley Company in which they have been working about four months, and put down a shaft 155 feet, also driven 35 feet, on 2 feet of rich wash, which is deepening as they go. The manager intends washing after the New Year.

Messrs. Moore & Co. adjoin Messrs. Fox & Co.'s rich claim; has been worked with unsatisfactory results, although often within only from 20 feet to half a chain of their boundary.

Messrs. Salmon & Co. worked what they call the "Eureka" as tributors, on Mr. Kennedy's mineral conditional purchase, where they have put down a shaft from 65 to 70 feet in which the wash is 3 feet in thickness, and yields a quarter of a pound of ore to the dish.

Messrs. Mober, O'Keeff, Salmon, and Pickhurt, I omitted to mention in their proper order, have been prospecting for twelve months on a part of Mr. Lennon's land, which they hold on royalty. They have put down twelve or fifteen shafts, out of which three are good and repaying them for their perseverance. The wash varies from 6 inches to 3 feet in thickness at a depth of 28 feet in easily worked country, a prop here and there being all that is needed. Although the party have put in cross drives with a view of proving the extent of the wash, they have not as yet been able to find out its width.

Flannery's 320 acres, royalty to Reynolds. They are sinking near to where land once worked by a party of tributors (Jew & Co.) is situated, which was subsequently taken up by a party of 40 shareholders who worked down to a depth of 230 feet, but had to give up through excess of water in No. 1 shaft, 6 feet by 3 feet; he is down to a depth of 170 feet, which is worked in three shifts. They expect to bottom at a depth of 200 feet or 220 feet. No. 2 shaft is in the same block, and lies about half a mile in an easterly direction from No. 1, on which six men are working in two shifts. They have got down 90 feet and expect to bottom at from 200 to 220 feet. Both shafts are so far passing through hard basaltic dry country, but should water be met with, Mr. Flannery has an engine and pump ready to put to work.

Messrs. Hall Brothers (now being worked by from 10 to 20 Chinese) was one of the richest alluvial blocks on Vegetable Creek. The value of plant is about £150. The Chinese are working it on the tribute system and have washed 20 tons 9 cwt. 0 qrs. 7 lbs. during the year. The portion of the block not yet worked is all surfacing, and the wash varies from 3 inches to 3 feet in thickness, and 20 to 300 feet in width.

Alfred Cadell, Esq.'s, block on Vegetable Creek is worked by a party of Chinese (on tribute) numbering from ten to fourteen throughout the year. They have washed out 15½ tons of ore during the past twelve months, out of ground that has been considered worked out by Europeans, and was some nine or ten years ago one of the richest alluvial claims on Vegetable Creek.

Messrs. Moore & Co.'s Vegetable Creek mine has been worked ever since the first discovery of tin upon Vegetable Creek, and proved itself to be one of the richest mines in the district, having occupied a prominent position for the yield of ore. For a number of years it has been worked and re-worked. It is now worked on the tribute system by Chinese with good results, the past year's yield having exceeded that of the previous year by 17 tons.

The whole of Messrs. Moore & Co.'s interests in this district are under the good and careful management of Thos. Chandler, Esq., who deserves special consideration at the hands of those he represents.

Mr. T. Cubis' 20-acre block "Nelson" is situated to the south-east of the township, and being worked by a party of nine Chinese, as tributors, who have obtained about 10 tons of ore during the year.

Mr. T. Cubis' 40 acres at Rose Valley has been worked by Europeans, with a yield of 16 tons of ore during the year; the party having worked out the lead are now driving in hopes of striking a new one.

The Vegetable Creek Tin-mining Company's land, situated at Vegetable Creek and Graveyard Creek, is under the management of Alfred Cadell, Esq., who is the managing shareholder, and has everything done to the best advantage. They employ from 50 to 150 men as necessity requires. The pumping and winding engine, steam-pumps, &c., as described in a former report, are valued at £1,500. 22½ tons of ore were obtained during the year: the wash varies from 1 foot to 4 feet in depth at from 40 to 100 feet sinking. The principal works during the year have been on portion 724 at Strathbogie North, and known as the "Valley," Graveyard Creek. All the deep leads are worked on the tribute system. Two parties of tributors are sinking at the Valley, one in a deep gutter (130 feet sinking) and leading into the Wesley Co.'s ground, and the other in the shallow lead, ranging from 30 to 45 feet from the surface. A reservoir, measuring 500 cubic yards, has been recently excavated, and the usual washing appliances, horse gear, &c., have been provided by the tributors, who prefer that mode of working to the more expensive one of machinery, which the company generally adopt. I feel sure, from the nature of the country that there is a good deposit of wash yet undiscovered in portions 724 or 725. Prospecting has been carried on in several of the other blocks during the year, and in some cases with good results. A new lead has been found at the Graveyard Creek, about half a mile west of the old workings, which is being worked by three parties of tributors, who have provided new dams and washing appliances for working the new lead. Other parties of men are engaged near the old workings chiefly in working out the northerly termination of the lead. The surfacing is worked by Chinese.

Messrs.

Messrs. Cadell and Mitchell's 540 acres M.C.P. is being worked by from thirty to 170 men, as circumstances require, and has yielded 146 tons of ore, which has been obtained at from 30 to 55 feet sinking, out of wash varying from 1 to 14 feet, in height by 25 to 300 feet, but generally 20 to 80 feet. The plant is worth about £3,000. Work has been carried on during the past year on a larger scale than before, the owners having provided additional conveniences, the principal of which are three dams, particularly described in their order further on. They are well constructed throughout, and finished off at the ends with logs, so as to resist the rush of flood waters, such as were experienced last December, and which caused some damage. The improvements made when they were repaired have, I consider, made them flood-proof. Dam No. 1: The excavation measures 2,000 cubic yards, the embankment being 750 feet in length, 10 feet high in centre, and 3 feet at the ends; it contains about 8,640,000 gallons of water; two sets of washing-boxes, two-horse-power, drying pans, tin house, and men's houses belong to this portion, which are used by two parties of tributors. Dam No. 2: Excavations are about 1,100 cubic yards, the embankment 280 feet long, 10 feet high in the centre, and 5 feet at the ends, and capable of holding 2,880,000 gallons of water; two-horse-power, two sets of sluicing appliances, drying pans, tin house, &c., complete, are used by two parties of tributors. No. 3 dam: The excavations are about 800 cubic yards, the embankment is about 240 feet long, 9 feet high in centre, and 4 feet high at the ends; it is estimated to contain 2,160,000 gallons of water when full; one-horse-power, with pump, &c., can raise water enough for two boxes if required. Dams Nos. 4, 5, and 6 have been used by Chinese tributors, working "surfacing" on part of the land; the dams when full hold a good supply of water. Dams Nos. 7 and 8, the engine dams mentioned in previous reports, are good reservoirs, at one of which a centrifugal pump is worked by a 12 horse-power engine, and the other has a horse power and set of sluicing boxes, &c., connected with it. Dam No. 9 is a large reservoir, with apparently an unfailling supply of water, and has connected with it horse-gear, &c., necessary for sluicing, and tin house. All the appliances such as engines and steam pumps having previously been fully reported on, I am confining myself particularly to the improvements made during the past year. The result of the opening up of this land has proved it to be the most extensive deep lead at present tested in this district; the large belt of basaltic formation, bounded north and south by the porphyry ridges, widens out at the eastern end of this company's ground. Recent operations have disclosed a series of almost parallel leads of washdirt, which, from the direction they run I believe converge into one channel in about the centre of this land. The various portions being worked are paying well, and there is every prospect of a heavy deposit being found at their confluence, which the owners intend testing during the next few months. The owners have during the past year expended £1,000 in reorganizing the system of working, consequent upon the land being let on tribute in small parties; but they will no doubt be amply recompensed by a permanent supply of water. Washing appliances are so regulated as to admit of the works being carried on by many different parties during the driest seasons. The lack of a constant water supply has always impeded the mining industry in this district, which the necessary expenditure of capital, in making needed provision for storage of that commodity, would generally rectify. A new feature has been observed in this ground in one of the leads on the south side of the basaltic formation; the ore was found coarse, and in small nuggets, whereas the general run of the ore is fine.

Messrs. Moore & Co.'s property, at the Y. Water-holes, has yielded 147 tons 9 cwt. 3 qrs. 16 lbs. ore during the past year, notwithstanding the delay, through want of water, during the early part of the year. It is all worked on the tribute system, by both Europeans and Chinese, and steam engine, with necessary machinery, are provided by the company.

Mr. R. Donoghue, Y. Water, has land which is difficult to work during the wet season, and on which fifteen men have been employed, with ordinary washing plant, during the past year, and obtained 56 tons of tin ore.

Having thus referred to all the various workings which I have inspected, and having travelled over the whole district, I am led to the conclusion, from what I have seen, that there is a good future in store for this field, which I believe to be only in its infancy, as there are hundreds of acres of land not yet even tested—both alluvial and reefing. With regard to the latter there is not yet one mine properly working. Capital is the want that, if supplied, and properly expended, will prove what I have said to be true.

Messrs. Skinner and Kelly are working a 40-acre block at Rose Valley, which they hold as tributors to Messrs. Irby, Andrews, and O'Donnell. The sinkings vary from 30 to 60 feet, and the alluvial deposit averages 18 inches in thickness by 30 feet in width, and the workings have to be closely timbered. About thirty men are regularly working, and have raised 42 tons 17 cwt. 3 qrs. 23 lbs. of ore during the past year.

Messrs. Irby and Company have a 20-acre block at the Graveyard Creek, which is being worked by a party of ten Chinese, who are surfacing, and got about 20 tons during the year.

Messrs. Irby, Andrews, O'Donnell, Hall, and Chandler own a block at Kangaroo Flat, which is known as the "Surprise." Two men are at present employed in prospecting. A large amount of work has been done, including a 300-foot tunnel, which shows promising-looking wash about 6 feet in thickness.

#### NEW ENGLAND DISTRICT—BOOROOK DIVISION.

(*J. P. Curran, Mining Registrar.*)

I HAVE the honor to forward my annual report of the mining industry in this division for the year ending the 31st December, 1882.

With the exception of the "Golden Age" mine at Boorook very little progress has been made in mining. The present depth of this mine is 163 feet, with lode at bottom of shaft 4 feet wide, which will average 60 ounces of silver per ton. The sinking of the shaft has been suspended in consequence of the great influx of water. The proprietors, Messrs. Hall and Davy, are now preparing to erect suitable appliances to cope with the water, and when completed will resume sinking forthwith. The deepest level worked in this mine is 140 feet from the surface. A great deal of work of an exploratory nature has been performed during the past year in search of the lode in the south end of the mine, which had been displaced by a cross-course. The continuation of the lode has been found, and has yielded some fine samples of silver ore, and a good deal of native silver is often met with. The lode has a dip west and bearing 20° E. of N.—width from 1 to 4 feet. Six men are continuously employed on this mine, and one man carting on to reduction works. There are about 600 tons of ore on the surface, which will average from 65 to 75 ounces of silver per ton. A great number of men will soon be employed on this mine. The

The "Addison" Mine, the property of Messrs. Hall and Davey, is about 30 feet deep, with lode 9 feet wide, dip west, bearing north and south. Some very rich ore has been obtained from this mine. Driving and stopping is being carried on in the north end of the mine, and some very rich ore has been raised. Four tons of ore from this mine, which was forwarded to London last May, realized £214. During the month of December 60 tons of ore was treated at the Boorook Reduction Works, which gave excellent results. There is still about the same quantity at the works awaiting treatment and about an equal quantity at the mine, which I have been informed by the manager, Mr. Davey, is equally as rich as any that has been treated. The proprietors purpose continuing the sinking of the shaft, as the ore seems to improve in quality at the bottom of the shaft.

I informed you in my last report that Messrs. Hall and Davy were erecting extensive reduction works in connection with their mines. I am happy to say that they are now completed, and shall endeavour to give you a description of them, for which I am indebted to the courtesy of Mr. B. Davey, the manager of the Golden Age mine and Boorook Silver Reduction Works, under whose supervision the whole of the work has been carried out. The reduction works consist of one 24-horse power engine, one 10-stamp battery, two double bed furnaces 52 feet long and 12 feet wide and 6 feet high, 100 feet of flues or dust-chambers, all covered in by a well-ventilated shed 65 feet long by 60 feet wide; the engine and battery is also covered by a shed 55 feet by 48 feet; outside of the shed, and some distance away from the works is a brick chimney 50 feet high; there are four Wheeler's pans, two separators, one filtering apparatus, two catch-pits built of stout masonry, 25 feet long and 20 feet wide by 6 feet deep; one bolting mill, consisting of circular sieve  $2\frac{1}{2}$  feet in diameter with mechanical feeder, &c., retorting furnace, smelting-room with furnace, and complete laboratory. The ore is crushed dry, and as it passes through the gratings is taken to a floor above the furnaces, where the charges are weighed and mixed with salt and other ingredients preparatory to roasting. After the ore has been calcined and all base metals removed it is drawn out of the furnace and placed on floors to cool; it is then taken to the bolting-room where it is passed through a circular sieve, composed of a very fine wire screen; it is then subjected to the Wheeler's pan—amalgamation process. I estimate the value of the whole of Messrs. Hall and Davey's plant at £9,000.

In gold-mining very little has been done during the year. At Lunatic Reefs, which are situated about 12 miles east of Boorook, a Mr. Field, an enterprising Victorian gentleman, and the representative of some capitalists in that colony, has taken up some of the old claims, which have been worked at shallow levels and yielded fairly in the early days of the Lunatic gold-field. It is the intention of Mr. Field to sink deeper as it is not improbable that beneath the belt of hard black slate there may be something worth searching for. The hard nature of the ground, and the great amount of water to be contended with has hitherto proved very discouraging to parties with small capital. Mr. Field has succeeded in reaching a depth of 146 feet in the Golden Crown claim, and raised about 26 tons of quartz, which has yielded 66 ozs. of smelted gold, value £3 13s. per ounce. In the same locality a person named Martin has been working on what is called the Morning Star Reef, and has from time to time unearthed large patches of gold ranging from 40 ozs. to 70 ozs. of gold. Altogether he has obtained up to date about 250 ozs. of gold, chiefly by hand crushing.

There is nothing sensational to report in alluvial-mining. The Surface Hill Sluicing Company at Poverty Point have suspended operations for a time, the cause I can not ascertain. Since the wet season has set in a number of parties have applied for water privileges, and have set in to the old workings at McLeod's Creek. At Tooloom and Pretty Gully a few fossickers are still employed, and a large party of Chinese have taken up an extended claim of 25 acres on Tooloom Creek. From gold-buyers' returns I learn that the amount of gold bought does not exceed 1,000 ozs., which may be accounted for by the great scarcity of water at the commencement of the year. I have issued during the year 114 miners' rights and seven business licenses. The number of miners' rights represents about a third of the adult male population on this field; the absence of a proper officer to enforce the gold-fields regulations deprives the State of a considerable amount of revenue.

#### NEW ENGLAND DISTRICT—WILSON'S DOWNFALL DIVISION.

(*W. Hicks, Mining Registrar.*)

I do myself the honor to forward my annual report for the year ending December 31st, 1882, on the Wilson's Downfall Division of the New England Mining District.

Notwithstanding the opinion expressed in my last report, *i.e.*, that the mining industry on these mines were failing, I am happy to say this year has proved an exception; but I consider this can be accounted for by the high price of tin ore, causing the miners to work ground which would otherwise have been idle, and in some instances getting very rich patches, but none of any permanency. There has been 70 tons of tin ore raised on these mines during the year 1882 more than in 1881, with an average of ten miners less than the former year. The number of miners on these tin mines at present is 120 Europeans and 400 Chinese (which has also been about the average for the year), and the quantity of tin ore won during 1882 is 615 tons, of the value of £34,440 on the ground, being an increase on the value of that of last year of £6,100. I have sold 151 mineral licenses, 11 business licenses, and 2 miners' rights during the year, and received 25 applications for mineral leases, comprising 700 acres, for which I received £338, besides £33 for survey, making a total of collections in this office for licenses, rents, and surveys, of £371.

I regret not being able to give a detailed account of the different workings in this division, there being no material change in the alluvial workings since last year, and the very uneven prospects obtained causing the miners to shift about from one creek to another many times during the year. The deposits of ore being chiefly found in patches in the banks of the creeks and ridges, in some instances where least expected, and almost impossible to form any idea of from what source it came there. The principal workings on these mines are the property of Donald M'Alister, situated on Wylie Creek, being the Clifton Tin-mining Company's old ground, which they forfeited during the year, and M'Alister has taken it up again by lease and mineral licenses, and employed an average of 100 Chinese during the year on the tribute system who won 80 tons of tin ore.

The principal drawback on this mine is getting rid of their under-water, which they manage mostly by waterwheels and California pumps, and in some instances by a sort of treadmill, worked by six or eight Chinese, and a California pump, which seems to work very well.

The

The old Lady Lisgar claim on this creek, the property of R. W. Robertson (mineral conditional purchase), on which a large amount of capital has been expended for the past ten years without any dividend, is this year at work, and fair prospects are being found away from the main creek, in a sort of drift, amongst large granite boulders, at a depth of 20 feet, which seems to me to be an old water-course, and may lead to larger deposits; but in consequence of the deep stripping the present tributors (Chinese) are scarcely making wages.

On the head of Wilson's Downfall Creek Messrs. Funnell and Goldie erected elevating buckets, which they worked by an 8-horse power engine, and raised the water about 16 feet high to fluming-boxes, which carried it back to the workings repeatedly for ground sluicing purposes; but the ground was too poor to pay expenses and they partly abandoned it and turned their attention to search for tin lodes in the main dividing range, and succeeded in finding a very good prospect at the head of Herding Yard Creek, which they have secured by lease. They have found several veins or leaders of stone carrying splendid ore, some of which I am informed is 90 per cent. tin. They have sunk one shaft to a depth of 16 feet, apparently having a good hanging wall running north-east and south-west with an underlie to the west, which seems to be the direction all the tin-veins are running on this range. Messrs. Funnell and Goldie expect to get on the lode here at a depth of about 40 feet, but I believe want of capital will retard their progress. There are a good many other parties who have applied for leases on this range, adjoining the last-mentioned claim, and have also found veins of tin-stone on the surface; but there has been so little done to test these lodes that it is impossible to form any opinion of how they will yield. There has been a company formed recently under the management of Mr. Jeffry Denniss to work a tin-lode on the dividing range between this colony and the colony of Queensland, at the head of Lode Creek in the latter colony, where they have found excellent prospects of tin-lode on the surface. Mr. Denniss has also applied for land for tin-mining purposes recently amounting to 120 acres in this colony, adjoining the company's ground above-mentioned, which he intends prospecting. He has also erected a dam across Ruby Creek, 150 yards wide, and will hold 17 feet of water in depth, which he intends to raise 40 feet by centrifugal pumps and flume it back to the ridge to work some shallow alluvial ground there, and for use in developing the lodes. He has also an 8-horse-power engine and a three-stamper battery in course of erection on this ground, and I believe there is scarcely a doubt, if prospecting for lodes is pushed ahead in this locality with any energy, I will be able to send a more cheering report of this division next year. The only drawback seems to be the want of capital in the district. I would also wish to mention that Mr. Ambrose Johnson, of Poverty Point, has taken up a mineral conditional purchase of 40 acres on the Undercliff Run, about 4 miles from the head station in this division, for the purpose of working a plumbago mine there (a sample of which took first prize at the Brisbane Exhibition during the year), but has not commenced to work it yet.

#### NEW ENGLAND DISTRICT—DALMORTON DIVISION.

(*W. F. Poole, Mining Registrar.*)

I HAVE the honor to furnish my annual report for the year 1882.

Although there is a decrease in the yield of alluvial gold the prospect for the year 1883 is encouraging. It is probable that a reaction will take place in quartz-mining, as several of the old reefs have been taken up, notably the Perseverance Reef, by the Tower Hill Company, under the management of Mr. Jas. Chalmers, and the Union Reef by Braham and party.

The Tower Hill Company commenced operations in January last, and have continued driving the tunnel started by the Clarence Pioneer Company. In the early part of the year the rock was free, and good progress was made; but for the last few months they have made very little headway, owing to the hardness of the rock and the absence of skilled workmen. Mr. Chalmers considers he has only 20 feet more to drive to strike the reef, and it is to be hoped he will be rewarded for the pluck he has shown in working under difficulties.

The Union Reef (Braham and party) commenced operations in May last. In September they sent 2 tons of quartz to the Sydney Mint, which yielded 5 ozs. 7 dwts. 6 grs. to the ton.

They have since formed it into a company, and work has been commenced under the management of Captain Green.

It is contemplated to work the mine in conjunction with the Sir Hercules Reef,  $\frac{1}{2}$  mile distant.

A considerable amount of dead work has had to be done on this mine, but everything is now in working order, and tenders are called for driving their deep shaft.

As the country around the Union Reef, Quart-pot Creek, is much easier to work than in the immediate vicinity of Dalmorton, it is expected that a large population will be attracted if the Union mine proves payable.

Two tons of stone (from the Robin Hood Reef, Come and party) have been sent to the Mint, but I have not yet learned the result.

During the year I have sold fourteen miners' rights and five business licenses.

#### NEW ENGLAND DISTRICT—SOLFERINO DIVISION.

(*T. Coudran, Mining Registrar.*)

I HAVE the honor to submit my report on mining matters within the Solferino division of the New England District for the year 1882.

In quartz-mining very little progress has been made during the past year. There are four claims being worked in this division. Nos. 2, 3, and 4, North Garibaldi Company, have about 40 tons of stone raised. They got a rich patch of gold at a depth of 150 feet from the surface. They crushed 3 cwts. of specimens, which yielded 56 ozs. of gold. The company have also sent 176 lbs of specimens to Sydney for crushing, which they expect to yield about 50 ozs. Messrs. Winkley and Word, of the Garibaldi Reef, crushed 4 cwt. of stone from their claim, which yielded 31 ozs. Messrs. J. F. Adam and party are working the Band of Hope Claim at Solferino, but they have not yet had any crushing. No. 1 North Lion Claim has been worked for the last nine months by Messrs. Lund and Hayes. They have not been successful in getting any gold. I believe they are now about to suspend work for a time.

Alluvial

Alluvial mining in this division has suffered considerably from the scarcity of water during the past year, and but little sluicing has been carried on, consequently there has been a diminution in the quantity of gold won.

Fifty-seven miners' rights have been issued during the year—forty-nine to Europeans, and eight to Chinese; and three applications for gold-mining leases have been received.

NEW ENGLAND DISTRICT—BALLINA DIVISION.

(*H. Bassmann, Mining Registrar.*)

EIGHTEEN miners' rights have been issued at this office during the year to Europeans, no holder of which has been working within the police district of the Richmond River. Their workings have been to the south of Evans River, in the police district of the Clarence. I have had no means to ascertain whether they, or any of them, have been constantly at work, nor what they have obtained. There is no mining going on of any kind in my portion of the police district.

NEW ENGLAND DISTRICT—TENTERFIELD DIVISION.

(*Charles L. C. Badham, Mining Registrar.*)

I HAVE the honor to report there were no mining operations going on in this portion of the district during the past year. The number of miners' rights sold was twenty-five, the number of mineral licenses sold was thirteen, and the number of business licenses sold was five; but all these were purchased by people engaged in mining some distance from here.

NEW ENGLAND DISTRICT—LISMORE DIVISION.

(*W. Carson, Mining Registrar.*)

REFERRING to your letter of 21st November last, I have the honor to inform you that nothing has been done in mining matters in the Lismore Division of the New England and Clarence Mining District during the year 1882. I am therefore unable to forward a report.

CLARENCE AND RICHMOND DISTRICT—GRAFTON, NANA CREEK, AND DALMORTON DIVISIONS.

(*Mr. A. L. McDougall, P.M., Warden.*)

I HAVE the honor to send the report of mining matters in the Clarence and Richmond Mining District, in accordance with the instructions contained in your circular letter.

I have not as yet been able to visit the gold-reefs at Dalmorton, but from information that I have received have no doubt but that active operations will soon be resumed there. The Tower Hill Company are putting in a tunnel which is expected to strike the reef every day at a depth of about 300 feet, when, if it proves payable, their quartz-mill will soon be at work again. The Sir Hercules Robinson Reef is said to be very promising, and several others there also.

At Nana Creek both the mills have been actively employed on stone from various reefs in the vicinity, and there is every prospect of another mill being erected at the Hidden Treasure reef about 7 miles from Nana Creek by Everingham and Party. The work at Nana Creek has of course been interrupted by the Christmas holidays, and will now be further interfered with by the floods in the Orrara River and creeks.

At the Mann River there is only one claim at work, McRea and Party's, from whom I received today the following particulars, viz., "That their shaft is down 42 feet and drive along the reef 10 feet, reef 3 feet wide with fair show of gold." The last 7 miles of the road from Grafton to the Mann River is not even rideable, and I have consequently not attempted going there.

I have not yet been able to inspect the reefs at Tallewudjah Creek and Nymboi, near Nana Creek, but now that roads are being made to those places I will endeavour to do so on my next visit to Nana Creek.

Rose and party's copper selections at Gordon Brook are virtually abandoned as not being payable.

As you have recently received from Mr. Slee, Inspector of Mines, a full report of the reefs at Nana Creek, I do not think it necessary for me to trouble you with further particulars relative to them. There are from 100 to 120 men on the Nana Creek mines; and the mining registrars at Grafton, Nana Creek, and Dalmorton will furnish you by my instructions with a return of the number of miners' rights, &c., issued by them for last year in this mining district.

CLARENCE AND RICHMOND DISTRICT—GRAFTON DIVISION.

(*W. Clarke, Mining Registrar.*)

I HAVE the honor to forward my report for the past year, which is brief and devoid of interest, as the mining done in my division was absolutely next to nothing. Andrew Sneath and party registered a quartz prospecting claim—four men's ground—on the Lady Isabel Reef, Mann River, and the reef, I am told, shows good gold; but capital will be needed and machinery must be provided before any good results will be attained. Two alluvial fossicking claims for the same locality were also registered.

I issued 205 miners' rights and one mineral license. The rights were chiefly issued to persons having interests in the quartz-reefs situated within the Nana Creek division. The following applications for mining leases were received at Grafton:—

Gold-mining.—For quartz; locality, Mann River; six.

Mineral leases.—For copper; locality, Oakey Creek, Gordon Brook; one.

The return of gold forwarded embraces nearly all the gold won at Nana Creek, and a very small quantity, if any, was won in my division. This return is compiled from information received from the banks throughout the district.

## ALBERT DISTRICT—WILCANNIA DIVISION.

(Mr. Warden Steel, P.M., Wilcannia.)

I HAVE the honor to submit my annual report for the year 1882 for the Wilcannia division of the Albert Gold-fields.

Within the limits of my own division no fresh discoveries in gold have been made, and the extreme dryness of the past season has stopped all prospecting being carried on. Few miners' rights have been issued by me during the year.

*Copper.*—Nothing has been done since my last report, and the land held has been abandoned by the lessees.

*Silver and Lead.*—Under this head I have to report that some excitement has been occasioned by the opening up of a large quantity of land situated at Thackeringa and Umberumberka in the neighbourhood of Mount Gipps.

Since my last report several mineral conditional purchases have been made, and a large number of mineral leases applied for. Those of Mr. R. Green, of Bourke, Garot, of Wilcannia, and Messrs. Smith and Holman, of Adelaide, have their claims in full working order. Report speaks favourably of the richness of these claims. The ore is procured in large quantities near the surface at a small cost, and is at present forwarded to Torowie railway station (South Australia), about 200 miles distant from Thackeringa, and thence to Adelaide. Very considerable inconvenience has arisen among the lessees from the absence of a Mining Registrar at Mount Gipps, some 30 miles distant. Applications at present have to be made either at Wilcannia or Milparinka, some 200 miles from the mines. I have already drawn your attention to this matter, suggesting that the Police Magistrate at Menindie be appointed Warden, the distance from the latter place being only 90 miles.

## ALBERT DISTRICT—MILPARINKA DIVISION.

(Mr. Warden King, P.M., Milparinka.)

IN handing you my annual report for the year ending 31st December, 1882, I have the honor to inform you that I arrived at Milparinka on the 10th February, and finally took charge of this gold-field from the late warden, Mr. W. H. J. Slee, on the 13th of the same month.

I found everything in a very depressed state owing to the dryness of the season, the scarcity, and consequent dearness of provisions, and the prevalence of fever, dysentery, scurvy, and ophthalmia.

In consequence of the scarcity of water for mining and also domestic purposes, the only gold that was procured up to the month of November was by the tedious and unhealthy process of dry blowing and by this means several hundred ounces of gold were obtained. It has, however, since been ascertained that there is a great loss attending this process, and that it will pay to *wash* all the dirt that has been dry-blown. An attempt was made to introduce a machine for dry blowing and the trial given it in Sydney in the presence of experienced men encouraged the hope that it would prove a great success here, but it was found that it was not equal to the task of separating the gold from the clay or cement with which it is usually found encased. No new alluvial ground has been discovered, probably for want of water with which to prospect; the miners therefore who had good claims stacked and registered their washdirt and prepared dams and tanks to collect and store water whenever there should be rain enough to fill them, but up to the present time their hopes have with two or three exceptions been blighted, and the partial rains that have fallen have not afforded sufficient water to last for more than two or three weeks, while in most of the dams there has not been any water collected. These remarks apply principally to the Granite Fields. At Mount Browne a heavy thunderstorm in the end of November filled all the dams and tanks, and work proceeded merrily for a short time, but the heat during December was so intense that the water quickly evaporated and dried up. A small rush took place to Dépôt Glen in the latter part of February, but after giving the ground a good trial it was abandoned. This was where gold was first discovered in this field. Two parties tried deep sinking at Mount Browne, but abandoned the work at a depth of about 70 feet.

At the quartz reefs, situated at the head of the Warratta Creek, about twenty claims have been at work, but with the exception of the Mount Browne Company, the Wittabrina Company, and the Rosemount Prospecting Claim, they have all suspended work for want of machinery to test the stone they have already raised. The Mount Browne Company was the first to get machinery on the ground but no steps have hitherto been taken to erect it. The Wittabrina Company have also machinery on the ground, but it was found on arrival to be so worn out as to be useless until many of the parts were renewed, and I am informed that these parts are now on the road. The indications of payable stone in all the claims are very promising, and a good deal of work and capital has been expended in preliminary shafts and tunnels, and dams. I am of opinion that quartz-crushing on this field will meet with two very serious drawbacks, viz., scarcity of wood and water. A township has been laid out at the Reefs and called "Albert," and the principal streets "Sturt" and "Poole."

Unless new alluvial ground is discovered, I cannot look on the prospects of this field as a permanent gold-field being very encouraging; all the known auriferous ground is either taken up or worked out. Should, however, rain in any quantity fall, the country would be thoroughly prospected.

There have been four townships laid out here: "Mount Brown" is now nearly abandoned, there being only one allotment occupied. "Milparinka" with a population of about 100, contains three large and substantial stone hotels and one built of iron, three mercantile establishments, one bank (the Commercial Banking Company), police office and court-house, and warden's office. The buildings are all of a permanent and substantial character. Warden's Court and Courts of Petty Sessions are held here whenever required. "Tibooburra" has a population of about 100, and contains four hotels, one being partly built of stone, four mercantile establishments, a branch of the Commercial Bank (which is about to be closed), and other buildings. "Albert" is in its infancy, and only has one large store owned by Bignal and Young, of South Australia.

The supply of water for domestic and stock purposes has commanded the attention of the Government. The public well at Milparinka has been fitted with a substantial whim, and has been further deepened by 20 feet, making in all 162½ feet, and a supply of good water equal to about 350 gallons per hour has been obtained. The Milparinka water-hole has been partly scooped out, and an embankment  
thrown

thrown across the lower end of it, and it is now about half full of water. At Tibooburra a well was put down 50 feet, and a small supply of brackish water being struck was abandoned, and a shaft on a quartz-reef about 1 mile from the town, which had been put down 60 feet, was taken up by the Government at the strong desire of the residents of the Granite field, and continuous work has been carried on in it, and it is now down 138 feet; there is a small supply of water of the best quality, equal to about 100 gallons in twenty-four hours, and it is confidently expected that a plentiful supply will be reached at a lower level. The importance of water supply to this portion of the field is painfully apparent when the inhabitants have for many months been compelled to send to a water-hole 25 miles distant for water for domestic purposes.

In the early part of this year provisions were getting very scarce, but the timely arrival of a caravan of camels, and two teams of camels from South Australia, afforded relief. About this time it was also found necessary to convey the mails by camels, and the trip to Wilcannia was performed once a fortnight.

The autumn of this year was a very unhealthy period, and many deaths took place from fever of a typhoid character, and dysentery, and there were many cases of scurvy and ophthalmia. The sickness, and consequent destitution, increased to such an extent that it was found necessary to obtain the temporary services of a medical man, and Dr. Wilkie remained here for two weeks. It was also found necessary to open temporary hospitals at Milparinka and Tibooburra, and a camel waggon load of sick men were sent away to Wilcannia, who all recovered their health. As the cool weather advanced, the sickness disappeared, and with the exception of two slight cases of fever at Tibooburra, there has been no return of it, and the general health of the inhabitants is very good; this, in some degree, may be attributable to the good supply of vegetables raised by the Chinese gardeners, and sold by them at reasonably remunerative rates. About eight Chinamen are employed in two gardens; two are employed as domestic servants, and one is a carpenter, and this (11) numbers the whole of the Chinese population here.

During the past year 3,000 ounces of gold have been sent by escort, 850 ounces are ready for escort, and about 500 ounces have been sent away by private hands, making a total yield, for the year 1882, of 4,350 ounces, or adopting the late Warden's (Stee) figures, in his annual report for 1881, 16,430 ounces as the total yield from this field.

A nugget weighing 12 ounces was found on the surface at Mount Browne, by Thomas Wheelodon, who shortly afterwards found three more nuggets, weighing in all 5 ounces. Several smaller nuggets weighing up to an ounce have been found, principally at Mount Browne and Tibooburra.

The residents on this field may now be estimated at 400, distributed thus:—

Mount Browne Diggings...	...	...	...	50
Town of Milparinka	...	...	...	100
Warratta Creek...	...	...	...	20
Town of Tibooburra	...	...	...	100
Granite Diggings and neighbourhood	...	...	...	130
Total	...	...	...	400

I am glad to be able to report favourably of the general conduct of the inhabitants of this remote region. Sly-grog-sellers and shanty-keepers have been nearly exterminated, at a cost to themselves, in fines and forfeitures, of upwards of £530. There have been two convictions for sheep-stealing, one for horse-stealing, and other minor offences, chiefly attributable to alcoholic influences. 98 cases have been tried in Petty Sessions here, during the year.

The following tabular statement, taken from daily observations by myself, may be of meteorological interest:—

1882.	Aneroid. Mean.		Thermometer at 9 a.m.	Thermometer.		Thermometer. Mean.		Rain in inches.
	Temp.	Pressure.		Max.	Min.	Max.	Min.	
January	.....	.....	.....	.....	.....	.....	.....	.....
February	81	29.750	86.8	108.0	68.5	101.6	73.2	0.40
March	81.2	.810	82.7	108.5	52.5	97.1	65.5	.....
April	70.5	.790	69.0	96.0	49.0	79.0	55.5	0.99
May	61.4	.838	60.0	88.0	36.0	74.7	46.3	0.98
June	52.7	.759	49.3	68.5	28.5	60.9	39.0	0.57
July	52.4	.829	50.3	83.0	25.0	60.5	36.7	0.08
August	55.4	.799	53.9	85.0	26.0	69.6	40.6	0.71
September	64.2	.748	67.0	100.0	34.0	80.5	46.0	.....
October	72.4	.702	73.4	100.0	40.0	86.5	53.5	1.11
November	80	.819	79.7	106.75	50.0	91.7	59.7	0.90
December	81.8	.660	82.2	113.5	50.0	96.7	60.7	0.80
Mean for 11 months	68.4	29.864	68.5	.....	.....	81.7	52.4	6.52

It will thus be seen that only  $6\frac{1}{2}$  inches of rain fell during the year. The highest temperature was  $113\frac{1}{2}^{\circ}$ , and the lowest  $25^{\circ}$ .

#### ALBERT DISTRICT—MOUNT BROWNE DIVISION.

(E. C. King, Mining Registrar.)

I HAVE the honor to report that during the year ending 31st December, 1882, there have been issued in the Mount Browne Division of the Albert Mining District 162 business licenses and 880 miners' rights, which show an increase of 20 business licenses and a decrease of 428 miners' rights. Six leases for quartz-reef claims have been applied for, and the consideration thereof is still pending.

Suspension from work has been granted to eleven quartz-reef claims, chiefly on account of there being no machinery erected to enable the claim-owners to test the stone they have already at grass.

The works performed by the several quartz-reef claims are as follows:—

- 1st. The Warratta Claim, P. A. Horn owner, has a shaft down 60 feet and 80 to 100 tons of quartz at grass. On this claim £1,000 to £1,200 has been expended, and it is now suspended from work on account of there being no machine yet erected. There has also been an application for lease (No. 3) of this claim.

2nd.

- 2nd. No. 1 South Warratta, Richd. Eades and Party owners, has a shaft down 60 feet and 60 tons of stone raised, and £400 has been expended on this claim, and it is now suspended from work for want of machinery.
- 3rd. No. 1 North Warratta, Deane and Party owners: This claim has had but little work done on it; it is now suspended from work on account of sickness.
- 4th. Pioneer Prospecting Claim amalgamated with No. 1 South Pioneer: This claim is owned by the Whittabrenna Company (an Adelaide firm); has two shafts down and about 150 tons of quartz at grass. This claim has some machinery on the ground; the remainder of the plant is expected to arrive here shortly. There has also been made an application (No. 5) for lease of this claim.
- 5th. Nos. 2 and 3 South Pioneer (amalgamated), owned by the Whittabrenna South Company (of Adelaide), has a shaft down 132 feet and about 200 feet of driving, and 150 tons of quartz have been raised. In connection with this claim a large dam has been constructed at a cost of £700, and a good supply of water has been saved from the last rain in November; but is now receding at the rate of about 1 inch per day.
- 6th. No. 4 South Pioneer, owned by Nolan and Orther (a party of working miners), has a tunnel 165 feet driven towards the reef and a shaft down 50 feet. This claim is suspended from work on account of there being no machinery on the ground.
- 7th. No. 5 South Pioneer, owned by Brisco and Party, has a shaft down 70 feet and 15 tons of quartz raised. This is also suspended from work on the grounds of want of machinery.
- 8th. No. 6 South Pioneer, Crawley and Party, has a tunnel 40 feet, and a shaft 60 feet, and a drive 10 feet striking the reef, which shows 18 inches in breadth showing gold.
- 9th. No. 1 and 2 North Pioneer, owned by the Wizard Peak Company (of Adelaide), has a shaft down 80 feet, and has struck good water. The quartz at grass shows gold, and is of a very promising character. An application (No. 2) for a lease has been made for this claim.
- 10th. Nos. 3 and 4 North Pioneer, owned by the Mount Browne Gold-mining and Crushing Company, has a shaft down 85 feet and a drive to the east 13 feet, and another shaft 30 feet. £4,000 has been expended on the claim and in a plant of machinery now in the course of erection; also a great quantity of firewood has been collected and a dam constructed. An application (No. 6) for lease has also been made. Good water has also been struck in this claim at 85 feet.
- 11th. No. 5 North Pioneer, owned by Nolan Brothers, has a shaft down 50 feet, and another 30 feet, 10 or 15 tons of quartz raised, and about £300 expended on the claim. It is now suspended for want of machinery. The Warratta reef as well as the Pioneer reefs are expected to be struck on this claim.

*On the Phoenix Reef.*

- 12th. Phoenix Prospecting Claim, owned by Percival A. Horn (of Adelaide), has two shafts down, one 35 feet the other 55 feet, and 20 tons of quartz have been raised. £1,500 have been expended on the claim, and there is machinery expected to arrive shortly. Application (No. 4) for gold-mining lease has been made.
- 13th. No. 1 North Phoenix, owned by Josephs and Party, has a shaft down 50 feet, with a drive of 20 feet, and about 6 tons of quartz are now at grass. £300 have been expended on this claim, and suspension from work has been granted for six months.
- 14th. Nos. 1 and 2 South Phoenix, owned by Bonnar and Company, has a shaft down 100 feet, and drive to east 73 feet and west 45 feet; water was struck at 90 feet. £800 have been expended on this claim, and is now suspended for six months on grounds of no machinery to keep water down. An application for gold-mining lease (No. 1) has been made.
- 15th. Nos. 3 and 4 South Phoenix have been abandoned.

*On the Rosemount Reef.*

- 16th. Rosemount Prospecting Claim, M'Caw and Party owners, has a shaft down 60 feet, and another down 30 feet, and 50 tons of quartz at grass. This claim is being worked by the owners, who are all working miners.
- 17th. No. 1 North Rosemount Claim, owned by Bergman and Party, has a shaft 75 feet and a drive to the east 33 feet, and another shaft 32 feet with a drive 43 feet, and 30 tons of quartz raised. This claim is also suspended from work.

There are on this gold-field fifty-eight dams and reservoirs, some of which are of a very substantial character. There is only one which has now any water in it, saved from a partial thunder-shower.

The population of this gold-field has decreased by 620, owing to the scarcity of water to enable them to go out and prospect for new ground in the surrounding country. Should there come a good down-pour of rain there is little doubt that there would be a large population on this field, which at present shows a very desolate appearance.

COBAR DISTRICT—COBAR DIVISION.

(*Mr. Warden Tompson, P.M., Cobar.*)

I HAVE the honor to submit my annual report on the Cobar Mining District for the year 1882.

With regard to gold-mining there has been very little done during the past twelve months. Three gold leases were applied for at Tindayrey, 20 miles north from Cobar, but only one was granted to Messrs. Elworthy, Ramsay, Clark & Hill, who are now prospecting the mine. About 4 cwt. of stone from this lease averaged 8 ozs. 16½ dwts. gold, and 27 ozs. silver to the ton. Some stone (about 30 cwt.) is now at the Mint for assay.

The country in parts of this district is of an auriferous nature, being of a slate and granite formation, and no doubt when it is prospected payable gold will be found on the West Bogan and Mulga Blocks, as there are very good indications in those parts.

With regard to copper there are now in this district six copper-mines in full work, viz. :—

1st. The Great Cobar Mine, at Cobar, 80 miles from Nyngan Railway Station.

2nd. The Nymagee Mine, at Nymagee, 60 miles from Nyngan Railway Station.

3rd.

- 3rd. The Hartwood Mine at Nymagee.  
 4th. The Girilambone Mine at Girilambone, on the railway line, 25 miles from Nyngan Railway Station.  
 5th. The New Mount Hope Mine at Mount Hope, 120 miles from the railway line.  
 6th. The Great Central, about 2 miles south-west from Mount Hope.  
 In addition to the above the undermentioned five mines are being prospected, viz.:—  
 1st. The C. S. A. Mine, about 8 miles west of north from Cobar.  
 2nd. The Bareoo Mine, near Gilgunnia on Cowl Creek, south of Cobar.  
 3rd. The Babinda Mine, south-east from Cobar, and about 9 miles east of Nymagee.  
 4th. Thompson and Smith's mine, near Girilambone.  
 5th. Brown's Mine, near Mount Hope.

During the year only four mineral leases have been applied for, the other lands having been taken up as mineral conditional purchases under the 19th clause.

At the Great Cobar Mine there were 550 men and boys employed.

The quantity of ore raised from that mine during last year was 13,787 tons and 11,702 tons smelted, which yielded 1,805 tons of fine copper of the value of £126,350. The depth of the shaft is 470 feet, and the width of the lode 60 feet.

The total quantity of ore smelted at this Cobar mine since 1st July, 1866, to the end of 1882, was 81,162 tons, which yielded 11,018 tons fine copper of the value of £771,200.

At the Nymagee Mine during the past twelve months 500 men were employed on the mine. The quantity of ore raised from the Nymagee mine during last year was 7,253 tons and 6,618 tons smelted, which yielded 1,144 tons fine copper of the value of £80,000. The depth of the shaft is 286 feet, and the width of the lode 30 feet. The total quantity of ore raised since this company started in 1880 was 13,824 tons, and quantity of ore smelted was 12,771 tons, which yielded 2,003 tons of fine copper of the value of £140,100.

At the Girilambone Mine, which has recently started, 80 men are employed. The quantity of ore raised during the past twelve months was 2,000 tons. The depth of the shaft is 252 feet and the width of the lode is 6 feet. The total quantity of ore raised since the company started is 2,650 tons.

From the New Mount Hope Mine and the Great Central I have no particulars, and therefore unable to furnish you with any information.

The work at the mines has been to a great extent paralysed through the utter inadequacy of the means of transit to the metropolis. At the Cobar mine there were about 1,300 tons of refined copper, and at Nymagee about 1,500 tons, refined copper of the value of £196,000, laying for months in the sheds, which could not be got away for the want of teams.

At the present time the Great Cobar Company are constructing a tramway, which will extend 10 miles into a dense forest. When this work is completed it is computed by competent judges that the production of the mine will be doubled or perhaps trebled. This distance of tramway that is being constructed by the Cobar Company represents one-eighth the distance of the railway that is required to connect Cobar with the railway line at Nyngan. If one mine can enter on such an expensive undertaking to secure the means of transit of timber only, there can be no question as to the necessity and paying capabilities of a branch railway line. The development of the other mines already referred to when we have railway communication with the metropolis will make this the most valuable mining district in the colony.

#### COBAR DISTRICT—COBAR DIVISION.

(George Stevenson, Mining Registrar.)

Confined, as I am, in the office from day to day it will be readily understood that I am entirely indebted to the courtesy of the mining captains for the statistics in connection with the mines, quoted herein. The other items of information I obtained from various reliable sources, and from observations in the discharge of the duties of my office, in conjunction with that pertaining to my position as Warden's Clerk and Crown Lands Agent. There is absolutely no tin or coal-mining in any part of this district, so far as I am aware, consequently my report will deal only with gold and copper mining, the latter occupying by far and away the premier place, and of which I will treat first.

#### Copper.

In so far as Cobar is concerned, copper is the staple product, and the Great Cobar Company regularly employ 550 men and boys, and during the year 1882, which is now under review, that number at least have been regularly employed. There were 11,702 tons of ore smelted, yielding 1,805 tons of fine copper of the value of £126,350. It must not be supposed that this is a fair yearly estimate of the capabilities of the mine, inasmuch as, during the early part of the year we suffered a severe drought causing a great scarcity of grass and water, and consequently were enabled to obtain but a very limited supply of firewood. On 30th December there were 12,995 tons of ore at grass; Barton's shaft had been sunk to a depth of 468 feet from the surface, and appeared to be in the centre of the lode all the way as neither wall had been touched nor had the termination of the lode been reached. At the bottom of this shaft the lode is of a solid nature, and composed of high per cent. yellow ore, mixed with elvan and spar. The lode that is now being worked is from 50 feet to 70 feet wide. Since this mine started in July, 1876, there has been 80,820 tons of ore raised, equal to 10,987 tons of copper, being an average of 13.59 per cent., and of the total value of over £700,000. Seven dividends have already been paid of 2s. 6d. each per share, and two more of similar amounts will be paid on an early date. It is computed that there is sufficient ore in sight to keep the mine in full work during the next twenty-five years, and that it cannot be worked out in 100 years. The works are under the very able and energetic management of Captain James Dunstan, J.P., whose perseverance and ability has developed it, under peculiar difficulties, to a highly successful issue. The population of Cobar is computed at 2,500 souls.

The Nymagee mine is next in importance, and is situate about 50 miles in a south-easterly direction from Cobar, and is an equal distance from the Nyngan Railway Station. It will be seen that during the year

year the produce of fine copper has been 1,144 tons produced from 6,618 tons of ore, value £80,000, the total quantity of ore raised being 7,253 tons; 500 men were employed, and the total population must be nearly 2,000. The same causes that obtained to retard further development at the Great Cobar Mine, militated in the same ratio against Nymagee; but Captain Jolly, J.P., was equally persistent and successful with his colleague, Captain Dunstan. It is confidently asserted by those who ought to know that Nymagee is destined to be one of the best paying mines in the western district.

Girilambone Mine is only in its infancy, but when it gets out of the swaddling clothes of juvenility and is favoured by direct railway communication with the metropolis, it will doubtless occupy a higher place amongst the mines of the district.

Returns from the Hartwood Company situate at Nymagee, and the Mount Hope Company situate at Gilgunnia have not reached me although I applied to the mining captains in the usual way. From the returns to hand it will be observed that there are 1,335 miners engaged in this district, five only of whom are in search of gold, the remainder being engaged at the various copper-mines, and all being Europeans; 23,040 tons of ore were raised, and 2,959 tons of fine copper were produced of a total value of £207,050. The Cornish, Scottish, and Australian Mine, which is situate about 6 miles north-north-west of Cobar, is about being formed into a company, and, judging from assays and reports, ought to be a profitable concern. The situation of the different mines is as follows:—

Great Cobar, county of Robinson, parish of Cobar.

Nymagee, county of Mouramba, parish of Priory Plains.

Hartwood, county of Mouramba, parish of Priory Plains.

Girilambone, county of Canbelego, parish of Girilambone.

Mount Hope, county of Blaxland, parish of Gilgunnia.

Cornish, Scottish, and Australian, county of Robinson, parish of Kaloogleguy.

There are two other mines at Gilgunnia of which I have no knowledge except a flying report, and in addition to these there are a large number of prospectors engaged, many of whom are sanguine of success. The principal drawbacks are the want of a permanent water supply, the prohibitory rates of carriage, and the consequent high prices which obtain for even the necessaries of life.

Large populations are concentrating at the different mines, the vast extent of pastoral property which surround them on every hand materially contributing to the support and prosperity of the whole. There are numerous handsome and costly private residences, large and substantial hotels and warehouses, but no public buildings of any description. It is evident the Government have concluded that these mines would, like numerous gold-fields, soon get worked out and be abandoned. Such however cannot be the eventuation, for the stability of the lodes is unquestionable, and they will evidently last for ages to come.

There are at the present time in the Cobar land district, seventy-four mineral conditional purchases containing an aggregate of 5,463 acres exclusive of those void, lapsed, or forfeited. Of these the following table will show where situated, viz.:—

County.	No. of O.P.'s.	No. of Acres.
Robinson .....	31 .....	1,870
Canbelego .....	27 .....	2,213
Mouramba .....	9 .....	1,040
Flinders .....	7 .....	340
Booroondarra .....	.....	.....
Totals .....	74 .....	5,463

There were four mineral lease applications; No. 1, situate about 8 miles north-west from Cobar, containing 60 acres, by Cohn and party, granted; Nos. 2 and 3 at Mount Allen, on Coen Downs, each 20 acres, by W. J. Weston, awaiting survey; No. 4, of 20 acres, near the "Caroline Hotel," by G. B. Richardson, granted.

#### GOLD-MINING.

During the year I issued thirty-eight miners' rights, six mineral licenses, and four business licenses, three gold-mining leases were applied for each containing 25 acres, situate at Tindarey, 20 miles in a northerly direction from Cobar. No. 1, by Elworthy and party, was granted, but the latter two were refused through an informality on the part of the applicants, but they are again being applied for. These three leases are conterminous, and the principal reef which traverses them has given evidence of great richness, and a second reef at half-a-mile distant is supposed to be equally rich. Different assays have given the following results, viz.:—

8 ozs. 16½ dwts. standard gold and 27 ozs. silver to the ton.

8 ozs. 16 dwts. standard gold and 33 ozs. silver to the ton.

11 ozs. 11 dwts. 22 grs. standard gold and 8 ozs. 1 dwt. silver to the ton.

10 ozs. 6 dwts. standard gold and 71 ozs. 2 dwts. 6 grs. to the ton.

Mr. Elworthy left nearly ½ cwt. weight of similar stone at the Museum in Sydney in the name of Mr. James Ramsay; 30 cwt. has been sent to the Mint for assay, but the result is not yet known. The gold-bearing quartz was obtained at depths varying from 4 to 39 feet, and the main shaft has been sunk to a total depth of 98 feet, where small leaders have been found showing in drive. Gold was not discernible to the naked eye in any of this stone, but it was found well mixed and plainly visible with the aid of a powerful glass. Sufficient water has not been conserved to continue work on No. 1, but adequate provision is being made for a good supply. 30 tons of stone are now at grass, and the proprietors intend to erect necessary crushing power and the reefs will be fairly developed. Alluvial mining in this district is impracticable in consequence of the absence of a sufficient water supply, nevertheless, many assert that they are aware of numerous rich deposits. It may fairly be concluded that the gold and copper mines of the Bogan Gold-fields, having given conclusive evidence of their richness and stability, are amongst the richest in the colony. Prospecting and speculation has assumed and maintained a healthy and reliable state, and in the years to come, with improved means of transit, the further development of our great mineral resources will doubtless exceed the most sanguine expectations.

INSPECTOR

## INSPECTOR OF MINES' REPORT.

In submitting my Annual Report for the year 1882, I have the honor to inform you that during the year 1882 I inspected the Albert mining district in the north-east; the Adelong, Temora, Barmedman, Sebastopol, Murrumburrah, Young and Grenfell mining districts in the south; the Forbes, Parkes, Mount MacDonald, Carcoar, and Blayney districts in the west; and Copeland, Nowendoc, Hanging Rock, Nundle, Dungowan, Bingara, Inverell, Tingha, Vegetable Creek, Dalmorton, and Nana Creek (Clarence) mining districts in the north.

The abovenamed mining districts are in a fairly prosperous condition, more especially so our tin fields in the Inverell, Tingha, and Vegetable Creek districts.

*The Albert Gold-field, Mount Poole.*—This gold-field, which is situated in the remote north-east corner of the Colony of New South Wales, on a track of country formerly known as Sturt's stony deserts (Central Australia) has suffered severely from the drought by which it has been visited during the last two years. Several thousand ounces of gold of very high quality has been obtained on and near the surface, mostly by a system of dry blowing; it is therefore but reasonable to suppose that if once heavy rains fall and fill the numerous dams, reservoirs, and water-holes, that the Albert gold-field will support a large mining population.

The development of the quartz-veins, to which I alluded in my Annual Report for 1881, have also been greatly retarded through want of quartz-crushing machinery and water, but as the former is now on the ground, perhaps, during the year 1883 will be heard for the first time in Central Australia the welcome sound of the stampers, by which the problem as to the probable nature of these quartz-veins will be solved. The quartz-veins occur in a very favourable gold-bearing formation (silurian), but the cost of labour, fuel, and everything connected with the workings of said quartz-veins is very high; but by the aid of economy, practical mining management and perseverance, they may be brought to successful development.

*Adelong Gold-field.*—In alluvial mining Mr. A. D. Shepard's royalty lease on the Adelong Creek still holds first place in the alluvial mines of this district. About 100 persons have been constantly employed. The sinking averages about 40 feet in depth, 35 feet of which consist of a loose water-soaked drift, the remaining 5 feet being a heavy auriferous quartz-wash. This being the case the workings have to be closely timbered, which, however skilfully performed, is very expensive.

The lease is about  $2\frac{1}{2}$  miles in length and contains 154 acres, but up to the time of my last inspection the mine had only been worked on the eastern side of the Adelong Creek, leaving the western side intact. All along this side of the workings a face of apparently payable wash-dirt 1,150 feet in length by 4 feet in thickness is standing; but how much westerly this wash-dirt is likely to pay could be ascertained by borings.

Before actual workings could be commenced on the western side, the plant, &c., would have to be removed to the western side, and the creek itself turned to the eastern side, over the present workings.

In connection with this mine, which is under the able management of Mr. John Ryan, who has been able to pay his employer large dividends, are water-rights, races, water-pipes, machinery, and all other requisites for the systematic working of said mine.

Immediately below Shepard's is Mr. Travers Jones' alluvial mine, which consists of 56 acres, and embraces all the available Crown Lands on the Lower Adelong Creek. At the time of my inspection, in June last, the mine had been at work for about twelve months, but owing to the progressive works being very extensive, the mine had up to June not paid any dividends, although Mr. Jones had during the preceding eight months obtained about 800 ounces of gold, valued at £3 19s per ounce. About fifty persons were employed at the mine.

The formation and workings are similar to those of Mr. Shepard's mine, with the exception that steam instead of water is the motive power.

The prospects of this mine are good, and when once extensively opened out, the results are likely to equal those of Mr. Shepard's mine.

Below Jones' mine the embankment, or rather the whole Adelong Creek, has been free-selected and lies idle. If this land could be made available for mining purposes (it being a well-known fact that said land is highly auriferous) fully 1,000 persons would be profitably employed thereon.

There are several other alluvial mines in the Adelong district, but little progress has of late been made owing to drought.

*Quartz-reefs.*

On the old line of reef the Challenger Gold-mining Company obtained some payable quartz; they have three shafts in full work, 663 feet, 300 feet, and 250 feet respectively; these shafts are about 500 feet apart from each other, but are connected at the 250 feet level. There are several levels at different depths opened out, from which, at the time of my inspection, payable quartz was being brought to grass. The company has a 16-horse power and 8-horse-power winding engines. The three shafts are worked by cages; the machinery and everything in connection with the mine is substantial, with a view of working this mine for years to come. The company holds about 25 acres under lease.

On the Perseverance G.M.C. the sinking of the Prowse and Woodward shaft, which is 870 feet in depth has been discontinued; but from the 500 feet level downwards the country is very broken, with no well-defined channel; probably if cross-cutting were proceeded with, especially to the east, parallel and payable veins may be discovered.

The air-compressor, winding, crushing, and other machinery of the Perseverance Gold-mining Company has been fully described by me in my annual report of 1880.

On the Victoria line of reef the Great Victoria Gold-mining Company has a perpendicular shaft 770 feet in depth, from the lowest level of which they put in a cross-cut to the east 28 feet in length, where a new channel was discovered. In June last a winze 53 feet in depth had been sunk, making a total of 823 feet from surface, the vein averaging 1 foot in thickness, and 175 tons of quartz crushed during June yielded 146 ozs. 4 dwts of retorted gold.

Annett's Company still obtained payable quartz below the depth of 800 feet; but owing to the company having only horse, instead of steam, power, very little progress could be made.

The

The Flagstaff, Williams, and North Williams are now one mine, the property of Amos Bros., who were erecting a new 16-horse power winding engine, diamond-drill, and air-compressor. These costly improvements go far to prove the great faith capitalists have in the payable nature and permanency of the Adelong mines.

At the Curragong Reef (W. Williams' mine) a new discovery had been made easterly, but close to the old channel, which contained the pyritous lode. This new discovery consists of small veins of honey-combed quartz, coated with oxidised iron and intermixed with granite. During my stay in June last a crushing of 35 tons, taken from the width of 9 feet, yielded 27 ozs. 18 dwts. of retorted gold; and as each man employed could raise at least 2 tons per day the discovery was worth noting; but as I stated in my last report on the Adelong mine it was premature to form a correct estimate of the extent and value of Williams' discovery.

The well-known quartz-crushers, Messrs. Wilson and Ritchie, bought the late Williams Gold-mining Company's crushing plant and water-rights. This they have utilised by extending the water-race, by which they secure an additional fall of 26 feet, making a total of 58 feet available fall. They have hereby secured a motive power equal to 60-horse power, which enables them with their two water-wheels to use the water twice over, so that during the driest seasons there will be sufficient power to drive their whole machinery. The present number of stamps being only fifteen they made provision for an additional five stamps.

From their high level race, which is about 190 yards in length, exclusive of an additional 150 yards of fluming, constructed at a cost of £500, the water is obtained by gravitation, thus dispensing with the pumps and insuring a constant flow of water to all the different gold-saving appliances. This quartz-crushing and gold-saving machinery is a credit to New South Wales, and ranks foremost of any in Australia. The details of Wilson and Ritchie's machinery have been fully described by me in my annual report for the year 1876.

#### *The Temora Gold-field.*

No fresh discoveries have been made of late, and mining matters at Temora generally are dull; still there is a large area of auriferous country which has not been thoroughly prospected, both in alluvial and quartz, and therefore new discoveries may be made at any time. In July last, at the time of my inspection, there were about 20 alluvial claims at work, some of which had washdirt from 3 to 20 feet in depth, varying from 5 dwts. to several ounces per load. The gold is coarse and of high quality.

With regard to the Temora quartz-veins I beg to reiterate my opinion expressed in my annual report for 1880, namely, that the quartz-veins at the head of the Temora Valley only contain a narrow streak of gold, although the veins themselves are often several feet in thickness; this accounts for the poor crushings obtained out of veins, out of which rich specimens were exhibited. The only chance to prove whether these quartz-veins will really be payable is to sink and test them at a very greater depth than that at present obtained. I look forward with almost a certainty to the time when narrow, but rich, patchy veins, will be discovered in the conglomerates near the alluvial workings in different parts of the Temora Valley.

#### *Sebastopol Gold-field.*

Is situated about 14 miles south of Temora, and is essentially a reefing district. The reefs were worked some years ago with various success, but, whether through want of energy and perseverance of mine-owners or other causes, the two crushing plants which were formerly in full employment at Sebastopol have been removed to other gold-fields, in consequence of which the whole of the quartz-mines in the district were abandoned.

Lately the Maid of Judea, the Morning Star, Evening Star, Homeward Bound, Cambrian, Hibernia, and others have recommenced work. Whatever might have been the cause of the removal of the quartz-crushing machinery from Sebastopol, the fact remains that the Morning Star crushed several thousand tons of payable quartz, and the same might be said of some of the other mines. None of these mines, however, have been tested below the depth of 150 feet.

The geological formation of Sebastopol presents to the eye all the characteristic features of a rich gold-field, both for quartz and alluvial, and if systematically prospected may support a large mining population.

#### *Barmedman Gold-field.*

So far is only a quartz-reefing district. Very little prospecting for alluvial workings has been carried on. These quartz-reefs are situated in the Bland district, about 28 miles north of Temora. They occur in slates, conglomerates, and diorite formations, and vary from a few inches to several feet in thickness. The first gold-bearing reef was discovered about nine years ago, by Treasure and party, who took a trial crushing from the Ada Reef to Slee's crushing-machine, Grenfell, a distance of 70 miles, which yielded 16½ dwts. per ton. Either for want of sufficient funds or influence to obtain quartz-crushing machinery, Treasure and party abandoned their prospecting claim, which was afterwards known as Quail Brothers and party's mine. This party has been more successful than their predecessors. A small crushing plant was erected near the claim, which enabled the various claimholders to crush their auriferous stuff. The claims, however, dragged along a snail-like progress, owing to the want of water for quartz-crushing purposes, the primitive mode of working, their slow method of raising, and their poor appliances for crushing their quartz.

Lately companies have been formed who have taken over the Ada Prospecting Claim, the Fanny Park, and the Jackson's reefs, since which event a township has sprung up with a main street half a mile in length, on each side of which substantial buildings are being erected. The population on the whole field at the time of my inspection numbered between 300 and 400.

The United Barmedman G.M.C. (Ada Prospecting Claim and Fanny Park) is only 90 feet in its greatest depth, and has gold-bearing quartz-veins varying in thickness from a few inches to several feet, which even at a low yield ought to give payable returns. The company had about 500 tons of quartz at grass. They are erecting extensive and improved pumping, winding, crushing, and gold-saving appliances, the whole of which is under the able management of Mr. F. W. Clarke.

No. 1 and No. 2 North Ada Reef has from 900 to 1,000 tons of quartz at grass. In one part of the claim the lode has been sunk on to the water level, a depth of 70 feet from surface. Generally the mine has been worked in an unskilful manner. The Fanny Park, Fiery Cross, and Letts, south of the Barmedman Company's property, will be found to be part and parcel of the Ada Reef. Wright's

Wright's Reef is an east and west vein, about 200 yards south of the Barmedman Company's mine; average thickness of vein, 12 inches; greatest depth, 70 feet, which is near the water level. The quartz in this mine is very honeycombed, and of pink colour, partly coated with oxidised iron, and containing galena, arsenical, and iron pyrites. The quartz, of which there were 100 tons at grass, showed gold freely.

Several parties were prospecting on this line, but up to date of my inspection without favourable results.

Jackson's G.M.C. mine is situated on the north-east boundary of the Barmedman G.M.C.'s property. The vein is very irregular, varying in thickness from a few inches to 2 feet; greatest depth, 70 feet. There were about 100 tons of quartz at grass, showing gold.

The Hard to Find Reef is one mile and a half south of Barmedman. There are several claims on gold, of which the principal are Morrell's, Barnett's, and Hassett's; in the latter mine the vein is very flat, several feet in width, and showing gold through the stone.

The Phoenix Reef, about 2½ miles southerly of Barmedman, is a well-defined little vein of a bluish tint. Four claims on this reef are on gold-bearing stone.

The country about Barmedman has a highly auriferous appearance. A network of quartz-veins, nearly all of which were covered over by alluvium, have already been discovered, and when once quartz-crushing machinery is erected to allow private parties to crush, fresh discoveries might be made.

Hitherto, very little, if any, prospecting for auriferous alluvial deposits has been carried on, although indications point to the probability of the existence of deep leads. The difficulties in the way are the scrubby and level nature of the country, the probable great depth, and the water which is generally met with in sinking below the depth of 90 feet from surface.

#### *The Burrangong Gold-field.*

This once famous field, better known as Lambing Flat, which for years past has almost been deserted, or rather left in the hand of a few sluicing parties, who during wet seasons have always been able to make excellent wages, has during the year 1882 received an impetus by the taking up for the purpose of gold-mining large areas of land on the Burrangong Creek, about 3 miles from Young, below the junction of several tributaries, including Opossum Flat. As early as the years 1862 and 1863 a few shafts were bottomed with payable, or even rich prospects of gold; but owing to the heavy water, soaked drifts, the small shafts, and the poor appliances used by the individual miner of those days, the water could not be overcome, hence the shafts fell in and the claims were abandoned.

About five years ago Tonking Brothers adapted a plan by which they thought to overcome the water difficulty by bringing up a drainage race over 1 mile in length; but, unfortunately, the fall obtained was insufficient, being 20 feet shallower at its termination than the bed rock; their drainage race or tunnel became almost useless. Tonking Brothers then formed a stronger company, they sank a shaft and bottomed on 5 feet of wash, which yielded 15 dwts. per set of timber. A second shaft was sunk which, when bottomed, gave prospects of ½ dwts. of gold from a shovelful of wash, or 1½ ozs. of gold per set of timber with 6 feet of wash. Unfortunately, in lowering the pump into position, the rope by which it was suspended broke, and before the pump could be recovered the workings became flooded, and fell in from the surface. Tonking Brothers are confident of success, and have once more started to work to cope with their difficulties.

Minter's Gold-mining Company is about 1 mile lower down the flat; but before they started to sink they wisely made use of one of the Government boring machines, for the purpose of ascertaining not only the deepest part of the channel, but also whether payable auriferous deposits existed in their property. The company put down several bore-holes, the deepest being 80 feet, and obtaining payable prospects in nearly all; they also ascertained that the water-soaked drifts were not so heavy, and therefore not so difficult to overcome as the drifts in Tonking Brothers (Burrangong Gold-mining Company's) mine.

Minter's Gold-mining Company have their machinery on the ground; they are sinking a shaft which is down over 50 feet, and expect soon to be able to give payable returns. Leases have already been applied for fully a mile above and below this company's operations, and the time is probably not far distant when the Lambing Flat lead will be extended for several miles. Shallow tributaries or feeders to the main lead or channel have been worked years ago, such as the Three-mile and Hefferman's, but the main channel has never been thoroughly tested, due, as stated above, to the heavy water-soaked drifts and the primitive appliances used by the individual miner in the early days of our gold-fields.

#### *Grenfell (Emu Creek Gold-field).*

With the exception of the Enterprise Reef, which has yielded payable returns from its first discovery in 1867, Mitchell and party at the Homeward-bound, and a few parties fossicking, there is very little mining carried on in the whole district; but, nevertheless, there are several reefs such as the Lucknow, Homeward-bound, and O'Brien's, well worthy the consideration of capitalists.

#### *Forbes.*

Since the South-Lead Gold-mining Company suspended their operations, mining matters are almost nil.

#### *Parkes.*

Alluvial mining is at a very low ebb, but the Bonnie Dundee, Medlyn and party's mine, is still yielding large returns. I have on several occasions reported on the Parkes mines, and now beg to reiterate my former opinion that Parkes is destined to become a flourishing quartz-roefing district.

#### *Mount MacDonalld Gold-field.*

This gold-field is situated in the Abercrombie ranges, about 30 miles from Carcoar. So far the workings are confined to quartz-mining; the country being rugged and mountainous is unfavourable to extensive alluvial auriferous deposits; but quite a net-work of quartz-veins are met with in all directions. The principal veins, such as the Balmoral West, Queen of the Mount, Grant's Amalgamated, and others, strike almost due north and south, with an easterly underlay; but there are also east and west veins, several inches in thickness, some of which yielded over 2 ozs. of gold per ton by actual crushings.

The whole of these quartz-veins occur in altered upper silurian schists, the quartz being of a very close grain with a bluish tint, and in parts heavily charged with iron and arsenical pyrites. The gold, which is generally fine, is evenly distributed through the quartz, there being almost a total absence of what miners term cleavage or face gold. This accounts for the crushings yielding higher returns than outside appearances of the quartz would indicate.

The principal mines at work are the Balmoral, Balmoral West, the Selection, Queen of the Mount, and Grant's Amalgamated. Prospecting operations are carried on in different directions, but the country being generally very hard, only slow progress can be made.

The Australian Investment Association have secured 100 acres freehold (Oliver's selection) in the very centre of the gold-bearing veins. The company has erected a 20-head battery at a reservoir inside the selection, on an excellent site near their gold-bearing veins. Their gold-saving appliances (which had not been erected at the time of my visit) will be on the most improved and modern principles. Their manager, Mr. John Allen, has had many years of experience in quartz-crushing, and in the treatment by amalgamation of very fine gold; this, combined with the scientific knowledge of Mr. Nicholas, F.G.S., who is superintending the Association's property, must tend to enhance its value. The company has brought about £50,000 cash into New South Wales from Victoria, and as their actions are *bonâ fide* they deserve every justifiable encouragement.

The Queen of the Mount Company has crushed several hundred tons, averaging about 2 ozs. of gold per ton. At the time of my inspection the vein averaged about 20 inches, greatest depth 90 feet, and there were about 350 tons of quartz at grass.

The Grant Amalgamated had several gold-bearing veins which they intended to work by tunnelling. They had about 350 tons of quartz at grass at the time of my visit.

The Balmoral is a distinct line of reef from the Queen of the Mount. Several hundred tons of quartz were crushed from this reef, averaging fully 2 ozs. per ton.

There are several other mines working with fair prospects of success.

The following is the quartz-crushing power on the field:—The Balmoral Gold-mining Company, 10-head; Colbert's, 8-head; Pascoe's, 12-head; Creighton's, 25-head; and the Mining Investment Association's, 20-head, batteries; making a total of 75 head and 100-horse power.

This expenditure of capital in quartz-crushing machinery proves that capitalists have faith in the permanency of the Mount M'Donald Gold-field, and when taking into consideration the geological formation, the nature of the quartz, and the depth some of these mines have already obtained, no other conclusion can be arrived at than that the Mount M'Donald Gold-field will rank amongst the permanent reefing districts of New South Wales.

There is also a large tract of cupriferous country within a few miles of Mount M'Donald, which if once developed will add to the settlement of a permanent mining population.

#### *Blayney and Carcoar.*

In these districts several mines, both gold and copper, have very excellent prospects, and the alluvial mines at Browne's Creek, of which I have formerly reported, have for years past, and are now, paying large dividends.

#### NORTHERN DISTRICT.

##### *Copeland Gold-field.*

Very few of the mines were, at the time of my inspection, up to the standard required by the rules and regulations for the inspection and regulation of mines other than coal and shale mines.

I am, however, pleased to state that the Copeland mines are in a prosperous condition, and that they have greatly improved since my last visit. There are fully sixteen public companies, more than half of which were formed by local residents (under the No Liability Act), which is one of the best guarantees that those on the spot and best acquainted with the yield of the mines, have implicit faith as to their permanency.

The defective gold-saving appliances to which I drew attention in my last report on the Copeland mines, are also gradually improving. Berdan's have been added to the several quartz-crushing batteries, and I have no doubt but that in a very short time mine-owners and quartz-crushers will find that, to add still more effective grinding and gold-saving appliances will be beneficial to all concerned.

On the Prince Charlie line of reef the Prince Charlie Company had about 200 tons of quartz at grass; last 50 tons yielded 1½ ozs. per ton; thickness of reef from 3 to 4 feet; greatest depth 162 feet. A 10-stamp battery has been erected in connection with this mine.

The Prince Llewellyn mine, which adjoins the Prince Charlie, had about 300 tons of quartz at grass, which was estimated at 1 oz. per ton. Thickness of reef, 3 feet; greatest depth, 180 feet from surface.

The Mechanic G.M.C., at the Mechanic line of reef, had about 100 tons of quartz at grass. Last crushing, 116 tons, yielded 410 ozs. of gold. Thickness of vein, from 6 inches to 2 feet; greatest depth from surface, 300 feet.

The Mechanic G.M.C. and the Caledonian G.M.C. work their mines by a tunnel, conjointly held by both companies.

The Mountain Maid G.M.C. was down with their main shaft 420 feet. Within a few feet of this level a new make was struck showing gold. There is a probability that, under the able mining management of Mr. Parker, the Mountain Maid will once more become a dividend paying mine.

At the Hidden Treasure line of reef several mines are at work. The Hidden Treasure G.M.Co.'s mine had about 400 tons of quartz at grass. The last 818 tons of quartz crushed out of this mine yielded 1,610 ozs. of gold. The reef varies from 2 to 6 feet in thickness, showing gold throughout the stone; greatest depth from surface, 380 feet.

No. 1 North Hidden Treasure (Bensusan's) will most likely obtain gold in payable quantities when their levels are extended into the hill; at present their shaft and workings are in a gully where the country is broken and very unsettled. The Town and Country, Cameron's, and other mines are also at work on this line of reef.

On the Centennial line of reef several mines are on payable gold.

The Baal Gammon, the Belmore, and others are at work with various success. At the Bowman's the last crushing, from the Golden Spur G.M.Co., yielded from 61 tons of quartz, 5 ozs. 7 dwts. of gold per ton. The Golden Spur, Consols, the Bank, and others are at work. The

The Melbourne G.M. Co. was on payable gold, and the Rainbow G.M. Co., having secured a ten-stamp battery in connection with their mine, have once more started to work with fair prospects of success.

During my visit to the Kerriput Mountains, distant about 15 miles from Copeland, the Albion G.M. Co. struck a new make of stone, showing gold estimated at 10 ozs. per ton; the quartz is heavily charged with arsenical pyrites, but the ground was not sufficiently opened to form a fair opinion as to its intrinsic value.

At Cobark mining matters were dull, but the Burneal reef, situated between Kerriput and Cobark, are raising rich stone; all the quartz crushed out of this reef has averaged 4 ozs. per ton.

The Copeland Gold-field is still in its infancy; new discoveries are of frequent occurrence, and gold-bearing veins are found in an extensive area for many miles around Copeland.

The apparently slow development of the Copeland quartz-mines is principally due to want of capital, and the scrubby and mountainous nature of the district.

#### *Nowendoc Gold-field.*

This gold-field is situated on the head waters of the Macleay and Bernard Rivers, from 4 to 8 miles easterly of Nowendoc Station, the homestead of Thomas Laurie, Esq., J.P., about 40 miles west of Walcha, and nearly 60 miles south-easterly of Copeland.

The formation consists of conglomerates, sandstone, altered slates, and quartzites; the tops of the higher mountains are capped with basalt. The diggings are principally on the Cooplacurripa River and Nuggetty Gully, which a few years ago afforded profitable employment to about 500 persons.

At present there are only a few isolated parties at work, and there are no stores or business places of any kind at the diggings; miners can obtain provisions at reasonable prices at the Nowendoc Station. The gold is of a coarse nuggetty description—local price, £3 12s. per oz.

Very little prospecting for auriferous quartz-veins has been carried on, although, during the latter part of 1881 a party of Frenchmen reported having obtained gold in a quartz-reef near Nuggetty Gully, in consequence of which several gold-mining leases were applied for; but at the time of my inspection, in September last, the whole of the leases were idle, including the Frenchmen's. I crushed a few pieces of quartz, but I could detect no gold, not even with a magnifying glass. There are, however, quartz-veins visible on the surface in the Frenchmen's ground, which, if prospected, might give favourable results. I certainly believe that rich quartz-veins will be discovered near Nuggetty Gully, and it is highly probable that an extensive quartz and alluvial gold field will in some future time be discovered east of the Nowendoc diggings.

About  $\frac{1}{2}$  mile S.W. from Nuggetty Gully a search for copper has been made; the gossan can be traced for a long distance in a N.W. direction.

The mountains from Nowendoc to Hanging Rock *via* Callaghan Swamps, a distance of about 50 miles, are capped with basalt, varied by narrow belts of slates and quartzites, which appear to be highly auriferous; but, as is the case east of Nowendoc so it is here, very little if any prospecting in quartz or alluvial has been prosecuted.

#### *The Hanging Rock or Nundle Gold-field.*

This gold-field, although one of the earliest discovered in New South Wales, is as far as its mineral wealth is concerned but little known to the public.

Independently of heavy deposits of gold, such as were lately discovered in Ruzicka's mine, the district also abounds in minerals other than gold. I think a thorough geological survey of this district would prove very beneficial to the general public.

During the early part of 1882 Mr. J. Ruzicka discovered, in a narrow quartz-vein, a shoot of gold from 9 to 16 inches in length, and from  $\frac{1}{2}$  inch to  $1\frac{1}{4}$  inches in thickness, which, from the surface to 32 feet in depth, yielded about 30 ozs. of gold per foot by hand-crushing, or about 1,000 ozs. of gold, valued at £3 16s. 6d. per oz. The vein is very irregular and much disturbed. Formation granite, diorite, slates, conglomerates, and quartzites. The Marquis of Lorne is over 200 feet in depth, from which depth rich quartz is raised. This vein is of a more regular description than any of the numerous quartz-veins at work in the district.

Extensive gold-mining operations are carried on by the Messrs. Henderson (Mount Pleasant Cement Gold-mining Company). These alluvial works are very interesting, and are situated about 3 miles south-east of Hanging Rock. They consist of a long tunnel being driven into a mountain to intersect the lead formerly known as Mount Misery, and which lead takes its rise from a gully several miles north-west of Mount Misery, traversing through Harding's Hill party into Oakenville Creek, through Mount Misery, the virgin soil of Mount Pleasant, and for several miles in a southerly direction. At the time of my inspection the width of the lead was about 40 feet, thickness of wash 6 feet, which in this part of the mine averages about 4 dwts. of gold per ton. A 5-stamp battery is at work at the mouth of the tunnel, which is driven by water-power. The whole of the cemented wash is crushed, and, instead of fine screens or gratings, the crushed stuff escapes through  $\frac{1}{2}$  inch openings between iron bars into the sluice-boxes (no quicksilver being used), which are about 200 feet in length, with an additional 500 feet of tailrace. The gold is generally of a coarse description, but the company believe that there is some of their finer gold lost.

About  $1\frac{1}{2}$  mile south-east of Mount Pleasant is Mount Ephraim, Powell and party. This party were sluicing on a mountain, and I was informed that they were making excellent wages. The depth of wash has not as yet been ascertained; everything from the surface downwards contains gold. In one part the mount has been sluiced for 25 feet in depth, but by appearances the granite bottom would not be reached under 100 feet.

The drawback for the development of these extensive alluvial deposits, which by surface indications may be traced for miles in a south-easterly direction, is the scarcity of water for sluicing purposes. It this was once overcome by bringing in water from some distant river, nothing could prevent Nundle from becoming one of the foremost gold-producing gold-fields in New South Wales.

#### *The Bingara Gold-field.*

At the time of my inspection, in October last, several parties were obtaining gold on the Upper Bingara. The gold is associated with gossan lodes, which traverse a belt of serpentine in a north and south direction. In these gossan lodes very narrow quartz-veins occur; one of which, named the Ballarat Reef,

Reef, is extraordinarily rich, but patchy, and in places almost entirely formed of gold; rich patches were exposed to view during my inspection of the under-ground workings of said mines. I was shown, and had in my hands, about 130 ozs. of gold, said to have been picked out as the last week's work for four men. The value of this gold is £3 10s. per oz. One of the parties on the Ballarat Reef were crushing, and expected their stuff to yield 10 ozs. of gold per ton; this is independent of several hundred ounces of gold which have been picked out by hand.

There are great indications visible that at a greater depth these quartz-veins are likely to form copper lodes or lodes of copper pyrites.

There are several auriferous quartz-veins in this district, which, although abandoned at present, will, by the aid of improved gold and labour saving machinery, become profitable investments.

It is a well-known fact that heavy auriferous deposits exist in the flat south-west of Bingara, but it will require powerful pumping machinery to overcome the great flow of water. I quite agree with Mr. Warden Brougham, P.M., of Bingara, that the Bingara gold-field has only been scratched, and certainly very little prospected or developed.

#### *The Dalmorton Gold-field.*

Mining matters on this field are, for the present at least, at a low ebb, and, with the exception of the Tower Hill, the Union, and another company, very little mining, either in quartz or alluvial, is carried on.

The country for a distance of fully 12 miles presents the appearance of being highly auriferous, but the rock in which the quartz-veins occur (siluria Devonian) being generally very hard and refractory the quartz-veins strike east and west, with a north and south underlay, and they vary in thickness from a few inches to several feet. The quartz itself, in addition to gold, contain galena and arsenical and iron pyrites.

Although there are some 30 gold-bearing veins discovered in this district, some of which have proved payable, the deepest shaft on the whole gold-field on any of the quartz-veins is only 146 feet, which is in the Tower Hill property. Out of said property 2,036 tons 11 cwt. of quartz were crushed, yielding 2,192 ozs. 10 dwts. 19 grains of gold. The Tower Hill Company are driving a tunnel which is 500 feet in length. Their able mining manager, Mr. James Chalmers, expects to strike the vein in an additional 30 feet. A crushing of 2 tons of quartz has lately been tested by the Union Company, at the Mint, Sydney, which yielded 5 ozs. 7 dwts. of gold per ton. This company's property is about 5 miles from Tower Hill, across the Little River, the latter of which flows through the Dalmorton Gold-field. There are two quartz-crushing batteries now lying idle, a five-stamp and a ten-stamp. The latter is a splendid piece of machinery; but there are no gold-saving appliances outside the boxes other than the ordinary blanket tables and amalgamating barrel. By systematically working the quartz-veins, and employing improved grinding, amalgamating, and other gold-saving appliances, these neglected auriferous quartz-veins would probably prove highly remunerative, and cause Dalmorton to come to the front as a gold-producing field.

#### *The Nana Creek Gold-field,*

Which is situated about 42 miles south-easterly of South Grafton, and about 10 miles north-westerly from the sea-coast.

The geological formation from South Grafton to within 12 miles of Nana Creek Township is mesozoic (of the Clarence series of sandstone), after which the altered sandstone (Devonian) formation makes its appearance, and in the latter formation all the auriferous quartz-veins so far discovered on the Nana Creek Gold-field occur.

From 5 to 12 miles on the Grafton side of Nana Creek the creeks, gullies, and hills have the appearance of being auriferous, and should be prospected, not only for reefs, but also alluvial. In this neighbourhood I also found several pieces of wood converted into oxide of iron.

The auriferous quartz-veins so far discovered on the Nana Creek Gold-field are confined to a tract of country of Devonian formation about 10 miles in an east and west direction, and about 3 miles in a north and south direction, on steep, rugged ranges which attain the height of from 600 to 1,000 feet above the Nana Creek township.

The ranges are covered with a thick forest of magnificent timber—box, gum, cedar, ironbark—very useful for mining and building purposes; in addition to which the creeks and gullies are generally covered with an undergrowth of brush, vines, and supplejacks. The rugged nature of the country, however, causes extra expense and difficulty to the prospector in search of new discoveries, and to claim-holders in forming roads to the crushing machines.

The township is situated on the Nana Creek, and contains a well-managed, respectable hotel, a few other business places, a private school, and a few miners' huts. The whole population of the gold-field does not exceed 150 persons.

There are two crushing machines at the Nana Creek—Munroe and Company's 16 h.p. engine, with 10 stamps and the power and fixings for an additional 5 stamps, and Dargue and Company's 12 h.p. engine, with 10 stamps. The former is managed by Mr. J. F. Watson; the latter by Mr. Dargue.

These two quartz-crushing plants would be ample for the whole field were it not that the reefs being situated on high, rugged ranges causes the making of roads and carting quartz for several miles very expensive; hence some of the mine-owners are arranging for quartz-crushing machinery near their mine.

The cost of carting the quartz from some of the mines to the battery, independent of road-making, is from £1 10s. to £2 per ton, and the price of crushing is 15s. per ton. Fifteen distinct gold-bearing reefs have already been discovered, some of which are lying idle, and others are in full work.

The Illabæ reef, on the eastern side of Nana Creek, has been sunk on to the depth of 100 feet. The length of the reef has been opened for about 30 feet. 24 tons of quartz crushed yielded 12 dwts. per ton; 2 tons 8 cwt. were also treated at the Mint, Sydney, which yielded 1 oz. 11 dwts. per ton. This party also crushed 4 tons out of a large blow of quartz (containing a large percentage of oxide of iron), which yielded 7½ dwts. per ton. If this blow of quartz is sunk upon the oxide of iron is most likely, at a greater depth, to form into auriferous iron pyrites.

The Matilda reef, also on the eastern side of Nana Creek, has at present suspended work. A shaft 100 feet in depth has been sunk on the lode, but the vein has only been stoped to the depth of 30 feet from

from surface, by about 60 feet in length, with an average thickness of vein of 10 inches. 348½ tons of quartz crushed, out of this mine, at Munroe & Co.'s machine, yielded 147 ozs. 1 dwt. 12 grs. of smelted gold. Three parcels of quartz were also tested at the Mint, Sydney, which yielded 2 tons, 28 ozs. per ton; 2 tons, 8 ozs. per ton; and 6 tons, 10 ozs. per ton.

Dargue's reef is a large reef, out of which 240 tons were crushed at Dargue & Co.'s machine, yielding 66 ozs. 7 dwts. 16 grs. of gold.

Benson's reef is also on the eastern side of Nana Creek. Several crushings have been taken out of this reef. 1½ ton of quartz treated at the Mint, Sydney, yielded 7 ozs. 19 dwts. of gold.

The Fifteen Acres Lease reef, west of Nana Creek, greatest depth 65 feet, average thickness of reef 2 feet. 127 tons of quartz crushed out of this mine yielded 113 ozs. of smelted gold. At the time of my inspection there were about 100 tons of quartz at grass.

The Hidden Treasure, about 4 miles westerly of Nana Creek township, has a vein from 1 to 3 feet in thickness, and about 100 tons of quartz at grass. 2½ tons of quartz treated at the Mint, Sydney, yielded 9 ozs. 6 dwts. of gold.

One and a-half mile westerly from the Hidden Treasure reef is the Nimboyd reef. In the prospecting claim gold could be seen by the naked eye in large lumps of quartz, the vein averaging about 2 feet in thickness. A splendid view can be obtained from near the Nimboyd reef of the sea and the Solitary lighthouse, near Coff's Harbour, which appears to me not more than a very few miles distant.

The Eureka, about 1 mile from the Nimboyd, is a small irregular vein. The first 30 cwt. of quartz crushed yielded at the rate of 4 ozs. per ton, and 24 tons of quartz crushed latterly yielded 1 oz. 4 dwts. per ton.

The Bushman's or Wilkinson's, about 4 miles westerly of the Eureka reef, had about 50 tons of quartz at grass, 20 tons of which were carted to the battery, and expected to yield about 2 ozs. per ton.

The Advance Australia, about 1 mile from Wilkinson's, has several irregular veins, some of which show good patches of gold.

The Caledonian reef, 4 miles N.W. of Nana Creek, is an irregular vein, averaging about 1 foot in thickness, greatest depth 40 feet. About 40 tons of quartz were on transit from the mine to the battery, the owners expecting a yield of 2 ozs. per ton. Some of the specimens shown me at this mine were very rich.

The Homeward Bound reef had about 100 tons of quartz at grass, some of which seemed rich; gold could be seen with the naked eye. There are several veins in the Homeward Bound claim, such as the Rise and Shine, the Miner's Bride. 4 tons crushed from the Homeward Bound and Rise and Shine reefs yielded 5 ozs. 17 dwts. 12 grs. of gold.

Thus it will be seen that, although the crushings from the several mines have been in small quantities, some at least have proved payable, whereas quartz forwarded to the Sydney Mint has given high returns; but mine-owners should be careful not to estimate the average yield of their mines in accordance with the yield obtained from trial crushings at the Mint, or from assays.

During my almost life-long connection with mining in all its branches I have found that persons forwarding samples of quartz, ore, or minerals for especial treatment, generally pick the very best. The whole of the quartz-veins in the Nana Creek gold-field are very irregular, but this I have found always to be the case in the Devonian formation. The thickness and regularity in these quartz-veins can never be depended on, in either length or depth.

The gold in these quartz-veins lies in shoots of only a few feet in length, which is the reason that small but rich crushings have been obtained from some of these reefs; but as soon as levels have been opened the gold has apparently been lost.

I would advise mine-owners of Nana Creek, especially some of the public companies, to sink their shafts say to 150 or 200 feet, open out levels, so, if possible, to intersect different shoots of gold, and then work their stopes upwards; cross cutting should also be adhered to. At present very little has been done but mere scratching near the surface, or the sinking of a few shafts. If a mine does not pay for sinking, opening levels, and working upwards, it will never pay under the present system of working adopted at the Nana Creek quartz-mines.

#### *Iron.*

Chromic iron of very rich quality has lately been discovered by the Messrs. Williams and Hole, at a place about 1 mile from Bowling Alley Point (Nundle Gold-field) on a high mountain, where large blocks of chrome are lying in all directions; some of these blocks are several tons in weight. 5 tons of this mineral have been forwarded to England to test its market value. The formation in which this chromic iron is found is serpentine.

Chromic iron ore has also been discovered in the Grafton district. Of late the iron deposits in the Blayney and Orange district have been worked with favourable results.

#### THE NEW ENGLAND TIN-FIELDS.

##### *Cope's Creek.*

Tingha, the principal township on the Cope's Creek Tin-field, has of late made rapid strides in permanent improvements. Business and mining is in a flourishing state throughout the district, partly due to the high market value of tin, the average local price being about £56 per ton. There seems to be a total absence of poverty on this field, and while some persons obtain rich tin deposits and become wealthy, the remainder of the population seem to make at least a comfortable living; facts are daily cropping up which prove beyond doubt that the Cope's Creek or Tingha Tin-field is only in its infancy, and that its stanniferous deposits are not confined to shallow creeks, as was formerly supposed, but are now frequently discovered under the basalt which extends for several miles in an easterly, westerly, and northerly direction. These tracts of basaltic country have only been partially prospected, and so far have proven rather patchy. The sinking varies from 25 feet to 150 feet in depth.

Commencing in the basalt formation easterly of the Topper Mountain with Borthistle and party's mine, who obtained several patches of tin at the depth from 110 to 135 feet, this energetic and persevering party of miners have hitherto been unable to discover any well defined lead, although the ancient watercourses now capped by basalt seem to have flown in an easterly or westerly direction, easterly towards Kangaroo Camp, and westerly towards the Gilgais and Inverell.

From

From Topper Mountain the basalt can be traced westerly through Jones's 186 acres conditional purchase, on which large lumps of tin (indicating a tin-lode close at hand) are obtained, and through which land at least a tributary if not the main lead at present worked by the Brickwood Company may some day be traced. A few shafts have been commenced in this property, but owing to the hardness of the basalt, which requires blasting, none of the shafts have been bottomed.

Westerly of Jones's conditional purchase is the Brickwood Tin-mining Company which is at present the premier tin-mine in the Tingha district; the sinking is from 25 feet to 50 feet in depth, the stanniferous deposits resting on a decomposed basalt, forming a false bottom. Although a shaft or two has been sunk through the basalt without obtaining tin deposits there is nevertheless a probability that in some parts at least of the Brickwood Mine payable tin deposits will be discovered underneath the basalt. At the time of my inspection in October last the weekly output of tin ore was about 12 tons. The whole of these works are under the management of Captain Wills, well known as an able mining manager.

The Butchard Reef on the head of the Butchard Gully is no doubt one of the sources from which the Brickwood alluvial mine received its tin deposits. Westerly of Brickwood's is Irwin's paddock, now belonging to Moore & Co., in which formerly some rich tin has been obtained. North-westerly from here towards the Gilgais and Inverell the basalt forms the principal formation, and several mines, including the Lady Mary, the Lady Jane (General John O'Rourke), the Jealousy, Forsyth's, the Terry McMahon, R. B. Walsley (Victor Mine), and others, are on payable tin deposits.

The Messrs. Doherty, Gibson, & Co. were prospecting fully 2 miles westerly of the Victor Mine, also in basaltic country. They bottomed a shaft and obtained sufficient encouragement which led them to believe that payable tin deposits existed in their property; should such be the case it will be the means of opening up a large tract of country hitherto unprospected, and will more closely connect the stanniferous country or basaltic tract from the Topper Mountains to the Gilgais.

At Middle Creek several Europeans and Chinese are at work with various success.

At the Stannifer the Albion is the principal mine at present at work under the able management of Mr. W. H. Martin. The whole of the works are shallow and let on tribute.

A prospecting party, Doherty & Co., better known as the Donegaller's claim, obtained some tin on the falls of the MacIntyre River, near the Upper Stannifer. The sinking is over 100 feet in depth, through basalt, and water is met with on the bottom, but should this party succeed in obtaining payable tin a large area of country hitherto not prospected would be opened for tin-mining purposes.

At Stony Creek Messrs. Fairby & Party are working in a tunnel which has proved payable for more than six years; but too great an importance cannot be attached to the bottoming of a shaft at Stony Creek by Messrs. Moore & Co. in basaltic country, and at a depth of 60 feet, 55 feet of which required blasting. This persevering company are likely to be rewarded for past outlay and difficulties, as the whole of the country in a east north-east direction is virgin, and the basalt can be traced for several miles in the direction of Kangaroo Camp. I believe that this discovery will connect in a west south-westerly direction the Starlight Mine and Dick Jones's Lead.

Dick Jones's Lead, which has been proven to be the main lead of the Tingha district, will now probably be traced for miles, the only drawback for its speedy development is the hard basaltic rock, which requires blasting, and the heavy flow of underground water, which the prospectors will have to contend against.

Red Hill is a basaltic hill, situated about 4 miles easterly of Tingha; on the south-western slope of this hill is Carr and Parker's Mine. A tunnel 500 feet in length is driven under the basalt in a N.W. direction; but at the time of my inspection part of the tunnel had fallen in, but there was, nevertheless, sufficient works opened by which to form an idea of the richness of the said property, as patches of tin could be seen in the face of the workings, but before extensive works can be carried on, the tunnel will have to undergo considerable repairs. There is also a strong flow of water in the mine, which is a boon rather than an obstacle to the company, as by storing the water could be made available for sluicing or puddling purposes. On the north-west slope of the Red Hill is the Bismarck (Conrad Bowers) Mine; here two shafts have been bottomed on tin ore, but owing to the heavy flow of water Bowers and party are driving a tunnel for the purpose of draining the water soaked, but rich stanniferous drifts.

#### *Elsmore.*

Very rich deposits of tin have lately been struck in the Union Company's property (Mr. Walter Kennedy, manager). The property is divided in portions, and let on tribute, of which Horswell and Pemberty, Billings and party, and Rooney and party are the principal; the latter two parties had their works not sufficiently opened to form an opinion as to the extent and value of their tin deposits, although they had each several loads of tin-wash at grass.

Horswell and Pemberty hold 80 acres from the Union Company on tribute for two years, the company receiving 3 cwt. of tin-ore out of every ton of tin-ore raised by the tributors. The tributors employed a large number of wages-men at £2 10s. per week per man.

On the eastern boundary of the Union Company's property a shaft was down 113 feet, with good tin-bearing indications, and should Messrs. James Smith and party persevere they will most likely be the cause of opening up a large tract of tin-bearing country in the vicinity of Elsmore, and the latter place will very probably become the centre of a large mining population.

By the above particulars it will be seen that new discoveries are of very frequent occurrence in the Tingha district, and parties are either working on or prospecting for tin deposits in all direction.

#### *Vegetable Creek.*

Emmaville, the principal township in the Vegetable Creek district, has of late greatly improved in its appearance, and the erection of permanent buildings.

At the Gulf, Bladder Arm Swamp, Back Creek, Bald Rock, Black Swamp, Mole Tableland, Nine Mile, Glen Creek, Tent Hill, Grampions, Vegetable Creek, and other places, parties of miners, principally tributors, are at work. The works are generally shallow, nearly the whole of which is in the hands of Chinese; whereas, all the lode-mining prospecting in basaltic country, which requires blasting, and deep or wet workings, wherever skill and strength is required, is in the hands of European miners. The output of tin ore in the year 1882 is as high, if not higher, than any previous year since 1878. Stanniferous lands which, four years ago, were considered worked out, or almost valueless, are, through the high price of tin now ruling, worked with profitable results.

At

At the Graveyard, Rothschild, Wesley's and other mines, Chinese tributors are employed to re-work (re-sluiice) the waste and tailings of former payable and rich workings, seemingly with satisfactory results both to owners and tributors.

The Great Britain Tin-mining Company (Mr. J. C. Westhoven, Manager). This property has been described by me in a former report. At present the whole of their alluvial workings are in the hands of tributors (Chinese), who seem to make fair wages. Curnow's and the Dutchman's lode on the Mole Tableland are also the property of the Great Britain Tin-mining Company. Rothschild's (Moore & Co.), Mr. Thomas Chandler, Manager, have a large number of Chinese tributors at work on their mineral conditional purchases and mineral leases.

The Graveyard Mine (Vegetable Creek T.M.C.), Alfred Cadell, Esq., J.P., Managing Director, have several European also Chinese tributors at work. Prospecting for new discoveries is also carried on by Mr Cadell, and there appears to be a great probability that the discovery of new workings in addition to those already opened will be the consequence. I believe the time is not far distant when it will be discovered that the Graveyard and Wesley's (Rose Valley) will form one and the same lead, contracting and widening in places similar to our recent water-courses; and I here beg to reiterate the opinion expressed in my annual report of 1880, *i.e.*, that the ancient water-courses under the basalt take almost the same courses and bends as our recent water-courses.

*Wesley's Mine.*—This mine, which for the present at least is the premier tin-producing mine in the Vegetable Creek District, is situated at Rose Valley, and is under the able management of Mr. W. O. Pomeroy. At present the whole of the mining operations are carried on by tribute parties, of which there are several.

Bourke and party (Wesley tributors), who some time ago bottomed on payable tin, seem to be on the southern sidling (reef) of the lead. Their shaft is 155 feet in depth, 81 feet of which required blasting. At the time of my inspection Bourke and party had about 9 feet of wash in the face of their workings, which looked likely to average about 1 cwt. per cubic yard of wash. They had about 80 loads of wash at grass, and when this claim is once properly opened out it should greatly help to increase the output of tin in Wesley Company's mine. Bourke and party, however, make a great mistake in their shaft, which can be termed nothing but a hole of no particular shape, representing that of a corkscrew more than anything else, leaving sharp ledges extremely dangerous to persons who have to ascend or descend into said mine. Bourke and party promised to sink a new shaft, which, if put down in proper size and shape, would greatly facilitate the output of ore, and soon repay for the outlay of sinking the shaft.

Graney's tribute is easterly of Bourke's and party. This party bottomed on a high reef about 7 feet shallower than Bourke's workings. The shaft is 148 feet in depth on the shallowest part, but was dipping considerably, and showing a little tin in the deepest part; 90 feet of Graney's shaft, which is through hard basalt, required blasting. Graney's tribute is in the hands of shrewd persevering men, who, while trying to make the best of their bargain, will give due consideration to the owners as well as to the safety of persons employed in their mine. I certainly believe that Graney's will obtain rich tin deposits, and that the lead will be connected in an easterly direction with Wesley's old workings.

Northerly of Bourke's and Graney's tribute are M'Donnell's tributors, who seem to have bottomed on the northern sidling of the lead, so that apparently the lead between Bourke's and M'Donnell's will be of great width.

Griffith's tribute is westerly of Bourke's. The party are on rich tin-wash, but at present are sinking a new shaft, which probably will occupy them several months.

Westerly of Griffith's is Flannery's tribute. The depth of the lead here is 160 feet, average width 80 feet, thickness of wash 9 feet, weekly output of tin ore 18 tons, or 3 tons per day. 1,000 tons of tin ore have already been raised out of this tribute mine, and the mine looks as well as ever. About 120 wages men are employed by Mr. Flannery, nine of which are constantly prospecting or sinking ahead of the main workings. Mr. Flannery has also one of Tiffen's well-borers, by which he tests the deepest country ahead of the shafts sinking. An 18-horse power portable engine does the winding of the main shaft; a 12-horse power portable engine is now placed in position in connection with another shaft, and an 8-horse power engine does the winding at the water shaft, which is 230 feet in depth. The water is baled into a tank, and runs through 970 feet of iron fluming to the sluice-boxes; the latter are 4 feet 10 inches wide and 22 feet in length. Eight (8) men are constantly employed in sluicing, drying, and bagging the tin ore. Mr. Flannery, who is a thoroughly practical miner, deserves great credit for the systematical manner in which he carries on his important mining operations. The whole of the workings are well secured with substantial timber, none being less than 8 inches in diameter; in fact, everything possible is done to keep the mine free from accidents, and at the same time to facilitate the output of tin ore. Mr. Flannery, however, has only a few reasonable partners to please, whereas mining managers are often crippled in their best intentions for the Company they represent by the false economy of their superiors at head-quarters.

Fox and party are trying for Flannery's deep lead; they have a tribute on Mrs. Fitzgerald's, now Proctor's, 17 acres M.C.P. Their workings vary from 140 to 175 feet in depth from surface. All the surface works, including a 12-horse power portable engine, are in first-class order, so as to be able to start to work in a systematical manner. Fox and party's washdirt is several feet in thickness, which has yielded payable prospects.

At Reynolds', about 1½ mile south-westerly from Wesley's, the Messrs. Flannery and Company are prospecting for tin in basaltic country. They are sinking two shafts, about ½ mile apart from each other. Last year a party of miners, and afterwards a local company, tried to bottom; but after getting through the basalt and on the drift the flow of water became too heavy (the available appliances being an 8-horse power engine for baling and winding purposes), so that at a depth of 232 feet from surface they abandoned their shaft without bottoming, although particles of tin ore were obtainable in the drift. Mr. Flannery is bringing capital and practical knowledge to bear on his undertaking, and is very sanguine of success. Should he be successful, and there certainly are excellent indications, a large tract of stanniferous basaltic country would be worked.

A prospecting shaft is also being put down near Strathbogie, in deep and wet basaltic country, by the Messrs. Cadell, Hart, Flannery, and Company.

At the Y Waterholes, the property of Messrs. Cadell and Mitchell, several European tributors are at work, who all seem to make fair wages. Messrs. Cadell and Mitchell have of late made extensive improvements.

improvements by the erection of dams. Their property consists of 450 acres M.C.P. and is a highly valuable tin-producing property, which in the hands of Mr. Cadell is not likely to lie idle. Mr. Cadell, like most of the mine-owners here, compels his tributors or wages men to keep their mining operations in accordance with the provisions of the regulations for the inspection and regulation for mines other than coal and shale mines.

The Red Hill (Hart, Partridge, & Co.) have since my last visit here finished their drainage tunnel, by which they expected to drain all the tin-bearing but water-soaked drifts of the Red Hill, but unfortunately the bottom of their tunnel did not reach within 10 feet of their wash; still it had the effect that this enterprising and energetic party were able to bottom a shaft which before the commencement of the tunnel could not be bottomed through the great flow of water. At the time of my last inspection they had about 100 tons of wash at grass; their washdirt in their underground workings was about 18 inches in thickness, yielding about 1 cwt. of tin ore per cubic yard.

Hammond and party, who are near the boundary of Hart, Partridge, and party, are also on tin ore. The two mines, which formerly were hardly able to work on account of foul air, are now connected by a drive, which has given them ventilation for the mutual benefit of both parties.

Kangaroo Flat (Hall Brothers). These enterprising gentlemen have of late been rewarded for the great perseverance and pluck displayed by them under all the difficulties they have had to contend against. There are several tunnels in this mine. The one they are now working is 600 feet in length, out of which payable tin is obtained, in addition to four shafts in different parts of the mine. At the time of my inspection Messrs. Hall Brothers employed about forty wages men.

About 1 mile north of the above said property, Hall Brothers have a party prospecting in a basaltic hill. Their tunnel is 430 feet in length, but nothing payable has as yet been struck, although the hill has the appearance that in some parts at least payable stanniferous deposit would be discovered.

*The lodes and lode mining.*—Of late a great impetus has been given to tin-lode mining in the Vegetable Creek district, due partially to the high price of tin and the decrease in the yield of tin ore out of the former rich but shallow workings. Prospecting for tin lodes is now extensively carried on, and several rich lodes have of late been discovered, and are now being tested and developed. In my last report on the tin mines of the Vegetable Creek district, I drew attention to the necessity there existed of thoroughly prospecting the tin lodes of the Gulf, Mole Tableland, believing that on their richness and permanency (in addition to the deep alluvial leads under the basalt) would depend the future and permanent prosperity of these tin-fields. I beg to reiterate my opinion then expressed, and am glad to be able to report that some of the tin-lodes which have been recently discovered present favourable appearances of permanency, and that ere long batteries for tin ore crushing purposes will be erected in different parts of this district, the consequence of which will be the establishment of an extensive and lucrative lode tin mining industry. Quartz leaders with seams of tin ore have been discovered at (Cadell's) Vegetable Creek T. M. C.'s property, and tin-lodes have been opened at the Grampian, Hall and Company's property, also at Tent Hill, Mole Tableland, the Gulf, Silent Grove, Rocky Creek, Deep Water Creek, and other places.

One of the most important discoveries lately made is the Ottery lodes (Reid, Hall & Co.), situated about 5 miles north-easterly of Vegetable Creek, and about 2 miles from the Glen Smelting Works, Tent Hill. The Ottery lodes occur in porphyry on an oblong hill; they can be traced on the surface for several hundred yards, and by surface indications there are at least four distinct lodes running parallel with each other. On one of these lodes a shaft 90 feet in depth has been sunk, laying to view a lode 4 feet in width, with well-defined walls, the lode being rich in tin, but intermixed with iron and arsenical pyrites, wolfram blende (zinc), and galena.

Some weeks ago Messrs. Reid, Hall, & Co. discovered some large lumps of oxide of tin ore on the surface on the western part of their property. One of these specimens weighed over 2 cwt., and I believe it is the largest and richest oxide of tin specimen ever found in New South Wales. It is the intention of Mr. Reid to forward the largest of these specimens to the Amsterdam Exhibition, and on their return to New South Wales present them to our Museum of Mines. In the immediate vicinity where these specimens were found trenches have been cut, and a lode discovered containing very rich tin ore. A shaft is being sunk on this lode (known as the gossam lode) which, at the time of my inspection, was down 35 feet, showing the lode about 3 feet in width. There is a large quantity of tin ore obtainable near the surface, and the natural facilities for the economical and systematical working of said lodes are excellent.

The Ottery lodes have also been traced into O'Donnell's mine, south-westerly of Reid, Hall & Co. Butler's lode (Dan O'Connell's) is situated about 2 miles westerly of the Dutchman's lode, on a rugged granite range between Glen Creek and Mole Tableland, and about 12 miles northerly of Vegetable Creek, and is, next to the Ottery lodes, one of the most important recent discoveries in this district. The back of the lode is from 7 to 9 feet in width, and can be traced for a considerable distance in a south-west and north-east direction. A shaft is being sunk and is down 25 feet, but the width of the lode is not yet determined, as one of the walls has not been reached; but at the time of my inspection tin could be seen across the shaft, which is a little over 3 feet wide. The tin occurs in micaceous granite. There are good natural facilities for working this lode by tunnel. There is a good site for a crushing plant close to the mine, and water as well as firewood is plentiful.

A new lode was discovered by M'Guinness & Co. about 12 chains north-westerly of Butler's lode, out of which some extraordinarily rich specimens of almost solid tin were obtained near the surface.

The Dutchman's lode has been sunk on to the depth of 90 feet, but at the time of my inspection very little could be seen of the lode, as the shaft and nearly all the surface workings were full of water; but I was informed that the lode was a foot in width at the lowest depth. A tunnel driven from the eastern part of the mine, driven at the lowest possible level, would drain the water, and the mine could then be economically worked.

Curnow's lode is a parallel-running lode in near proximity of the Dutchman's lode; their main shaft is down 185 feet. Some rich shoots of tin ore were gone through in the sinking of said shaft, and tin was visible in the lode at the lowest level. The shaft, however, is small and very rough, which, in its present state, is not likely to facilitate the speedy raising of a large quantity of ore. The lode can be traced for a considerable distance on the surface. The Company are sinking a new shaft, near which it is intended to erect a battery. This mine, if once properly opened out, ought to become very valuable.

The

The Bark Hut Lode (Reid, Crane & Co.) is situated on a hill about 15 miles north-east of Vegetable Creek. The lode is about 3 feet wide, 1 foot of which is rich in tin; greatest depth, 40 feet. 4 tons out of this mine were crushed, and yielded nearly 2 tons of 70 per cent. ore. The lode can be traced for over 20 chains in length on the surface, where in parts it shows 4 feet in width. About  $1\frac{1}{2}$  chain from this lode, in an easterly direction, a parallel-running lode with coarse tin is visible on the surface, but nothing has been done in testing this lode as to its value and permanency.

The Fergusson Lode (Bark Hut Creek) is about  $2\frac{1}{4}$  miles distant from Reid, Crane & Co.'s lode. Very little work has been done to test the value of this lode. The property is, however, well worth prospecting, as will be seen by the large specimen I forwarded from Fergusson's lode to the Museum of Mines.

The Wallaroo lode, distant from Fergusson about 4 miles, is very rich in tin-bearing granite. The lode, although 3 feet wide, carries only rich tin for about 1 foot in width. The lode is opened in several parts on the surface, which system of working is likely to create a good deal of trouble during wet seasons through the accumulation of surface water.

The Folkstone, about 16 miles from Vegetable Creek (Mr. Hugh Marshall, Manager), has a well-defined lode, averaging at the lowest depth, or 100 feet level, about 3 feet in width, with well-defined walls, and like one of the Ottery lodes, contains iron and arsenical pyrites, blende, and probably silver. There were over 200 tons of ore at grass.

The Torrington lode has been sunk to the depth of 70 feet. Extraordinary rich tin deposits were obtained near the surface, and the lode is now being sunk on in two different parts of the mine. A five-stamp battery is on transit to the mine, and on arrival will be immediately erected near the mine for crushing purposes. There are about 150 tons of ore at grass.

Numerous other lodes are opened on or near the Mole Tableland, such as Flaggy Creek, McIntyre's, Gogging's, Lee's Gully, Lane, Leary's, Iser's, Disputed, Paradise, McDonnell's, Black Swamp, and others.

At the Gulf, Carr's, Nuggety's, the Yankee's, Blair's, Graney's, and others are opened.

The Yankee lode has been sunk on to the depth of 25 feet, but the country here is very hard, and the lode pinched in to about 1 inch in thickness.

At Carr's prospecting is still carried on; the shaft is over 150 feet in depth; near the surface, and down to the 100 feet level, rich ore was obtained, but lately the Company have not been successful.

Blair's lode has well-defined walls. The lode is 3 feet wide, carrying rich coarse tin for about 1 foot in width. The shaft is down about 50 feet. The lode occurs in micaceous granite, and being of a somewhat soft nature is worthy of receiving a thorough prospecting.

Graney's lode occurs in hard granite, and at the time of my inspection a shoot of rich tin ore, about 2 feet wide, was visible in the granite at the depth of 14 feet from surface. This shoot of rich tin ore is probably a spur to a main lode, and is worthy of being thoroughly prospected.

At Silent Grove a new lode has been opened, named Antonia's Lode, which is within a short distance of the Silent Grove Company's property. Tin lodes have also of late been opened near Deep Water.

The Glen Smelting Works (Messrs. Moffett, Reid & Co.) are situated at Tent Hill, about 3 miles easterly of Vegetable Creek. They consist of three reverberatory furnaces, an 8-horse power portable engine, which at present drives a charcoal-crusher, and to which a five-stamp battery is to be added for ore-crushing purposes, brickworks for the making of fire-bricks, a chilian mill for crushing fire-clay (the latter is found in abundance within 1 mile of the works), a drying kiln to dry the wood in wet seasons, cottages, offices, carpenters' and blacksmiths' shops, also twenty-stall stable and 3,000 tons of fire-wood; the weekly consumption being about 200 tons, in addition to 30 tons charcoal used as flux.

The whole of the buildings in the smelting works township are painted white, which gives it a very neat and clean appearance. There is also a Public School, with an average daily attendance of fifty children, but there are no hotels. Messrs. Moffett, Reid, & Co. object to any hotels near their smelting works. These works, which have proved a great boon to the district, are accordingly highly appreciated by the public.

#### Copper.

The Great Blayney Copper-lode, near the town of Blayney, and several copper lodes in the Carcoar district, were also inspected by me. Although the Great Blayney Copper-mine suspended work near the end of the year, I am nevertheless of opinion that, by the introduction of capital and systematical working, Blayney will yet become a large copper-producing district. The formation near the Blayney Copper lodes is greenstone, or felspar of hornblende porphyry, with epidote in the joints,—a very favourable rock for gold and other minerals.

The Dungowan Copper-lodes in the Northern District, between Nundle and Tamworth, were also inspected by me. They are only 10 miles from the railway line. A little work, or rather prospecting, has been carried on, but not sufficiently to prove the value of said discoveries.

The geological formation is slate and greenstone, felspar porphyry. Large blocks of hematite iron, strongly stained with copper, are lying in irregular masses about the surface, and the cupriferous nature of the country can be traced for many miles in a north-westerly and south-easterly direction.

The mountainous country presents natural facilities for tunnelling. There is a fair supply of fire-wood, and a low percentage of ore ought to give payable returns. I picked up some rich specimens of red oxides of copper ore on the surface, but there was not sufficient work done to form an opinion as to the size and quality of the lodes.

Before closing this report, I beg to thank mine-owners and others for their kindness in assisting in the collection of minerals, fossils, &c., for the Museum of Mines.

## COAL AND SHALE.

TABLE compiled from Reports furnished by the owners of Collieries, showing the quantity and value of Coal and Shale won during the year 1882, and the number of Miners employed in the Collieries.

Report of the Examiner of Coal-fields for the Colony of New South Wales, for the year 1882.

In accordance with the provisions contained in the 26th section of the Coal Mines Regulation Act, 39 Vic. No. 31, I have the honor to submit a report from the Inspector of Collieries, with this my general report for the year ending 31st December, 1882.

The information I have the honor to submit, in respect to the condition and progress, &c., of the various coal and Boghead mineral mines under my supervision during the year 1882, is as follows:—

Number of accidents in 1881 and 1882.

The number of fatal and non-fatal accidents exceeds those of the previous year (1881) by ten. In the year ending 31st December, 1881, there were two fatal and thirty-three non-fatal accidents. The two fatal ones happened through "falls of coal," and twenty-five of the non-fatal accidents from "falls of coal"; the 26th through the falling of a prop; the 27th, being run over by empty coal trucks; 28th, crushed by machinery; 29th, through being thrown between a skip and stopper; 30th and 31st, through being run over by waggons; 32nd, by an explosion of gas; and the 33rd through being jammed between a tub and skip.

In the year under notice (1882) forty-five notices of accidents were received, twelve of them being fatal and thirty-three non-fatal accidents, all of which have been inquired into, the scene of the accidents examined, inquests attended, and reports made thereon. The names and occupations of the persons who died from injuries, and those who were seriously injured, as well as the names of the collieries, are given in the following summary:—

SUMMARY showing the number of fatal accidents in 1882, the names and occupations of the persons who died or were injured, cause of death or serious injury, and the names of the Collieries where they occurred.

Number of Accidents.	Date.	Name of Colliery.	Where situate.	Persons killed.	Persons seriously injured.	Occupation.	Cause of death or serious injury.	Lives Lost.												
								Fall of coal.	Fall of earth and cap-pier.	Crushed by a horse.	Fall of coal.	Explosion of fire damp.	Firing a shot.	Loaded skip falling out of cage.	Explosion of loose powder.	Fall of stone.	Loaded skip disconnected and fell down shaft.	Falling off ladder.	Falling down shaft.	
1	Jan. 3	Ferndale	Near Newcastle	Wm. Hulm.		Miner	Killed by fall of coal	1

Increase in 1882 .....	14	10	33,796 17	15,256 2 8

From these returns we find that in the Northern District in the year under notice there has been an increase in the quantity of coal raised to the extent of 217,044 tons, and an increase in the value of £278,667 5s. 4d.; whilst in the previous year there was an increase of 278,463 tons, and a decrease in the value of £22,103 6s. 8d. In the Southern District there has been an increase of 83,216 tons and £51,795 in the value; whilst in the preceding year there was only an increase of 13,072 tons and in the value of £1,821; and in the Western District an increase of 33,796 tons, and £15,256 2s. 8d. in the value; whilst in the previous year there was only an increase of 16,882 tons, and in the value of £5,379 11s. 9d.

As stated in my report for 1881, the low price coal was then selling at Newcastle accounted for the decrease in the value of coal raised there; but as the price had been raised from 7s. to 10s. per ton in January, 1882, I anticipated a great increase in price in that year (the one under notice), which has taken place; and as the price was again raised in January, 1883, from 10s. to 12s., we may expect a large increase in the value of the coal raised in the Newcastle and other districts in that year.

The following table shows comparisons between the year under notice and two preceding years, as to total output and value, tons of round and small coal raised for each person employed in and about coal raised for each life lost.

Year.	Exports to Intercolonial Ports			Exports to Foreign Ports.			Total Exports.			Home Consumption.

From

From the table at foot, we find that in the year 1882 we exported 103,091 tons more coal to inter-colonial ports than in the preceding year, and 123,610 tons more to foreign ports. The intercolonial increase in the year appears to be principally owing to Victoria having taken 35,093 tons; South Australia, 30,138 tons; New Zealand, 14,342 tons; Queensland, 7,580 tons; and Tasmania, 5,473 tons more coal from the Newcastle district, and the whole of the Colonies 6,972 tons more from the Southern District than they did in 1881; and the increase in foreign exports to have been in consequence of San Francisco and other countries having taken 121,293 tons more of Newcastle and 7,317 tons more of Southern coal than they did in 1881.

In 1881, the total exports exceeded those of the previous year by 276,488 tons, and the total output by 303,417 tons; whilst during the year under notice the total exports exceeded those of the previous year by 231,701 tons, and the total output by 332,684 tons, and there is sure to be a very large increase next year. In the same year, 1881, the home consumption exceeded that of the previous year by 26,929 tons, and in the year under notice by 100,983 tons.

It will also be seen that the quantity of coal raised during the last three years for each person employed above and underground at the collieries has averaged 405 tons of round and small coal per year, and that each person so employed added £162 18s. per annum to the wealth of the Colony.

In the years 1880, 1881, and 1882, twenty-two lives were lost for 5,338,059 tons raised, *i.e.*, 242,639 tons raised for each life lost.

These figures may be sufficiently explanatory in themselves, so far as a comparison of our export trade and home consumption, &c., for the whole Colony is concerned; but it will no doubt be interesting for people in each district to know the proportion the accidents and deaths bear to the persons employed, and the quantity and value of coal raised for each person employed in and about the mines, &c., which is as follows:—

The following statistical return, furnished me by Mr. W. R. Logan, the Collector of Customs at Newcastle, shows that the greatest yearly increases in the export of coal from this port have been—to Victoria, 35,093 tons; South Australia, 30,138 tons; Java, 25,594 tons; San Francisco, 21,432 tons; India, 17,097 tons; New Zealand, 14,342 tons; Mauritius, 13,818 tons; Valparaiso, 11,453 tons; Queensland, 7,580 tons; Tasmania, 5,473 tons; China, 4,671 tons; Western Australia; 3,493 tons; and that the total yearly increase of coal from this port was 217,412 tons.

The following extracts from an excellent treatise on the comparative commercial values of gas coal and cannel, by David Allan Graham, engineer, London, will, I am sure, be read with great interest by gas-manufacturers, owners of Boghead mineral property, and Boghead mineral Companies:—

"Years ago, when challenged to prove that an inferior quality of coal here referred to was comparatively worthless for gas purposes, I had then no means of substantiating the statement, nor of refuting an opposite opinion," &c., &c. "I shall now conclude this first series of examples by estimating the comparative value of an Australian shale producing 16,500 cubic feet of 47-candle gas. The equational illuminating power would doubtless exceed this value, but we shall adhere to this statement. I cannot state its production of oil, but shall substitute the quantity produced from Chatterly shale (English)."

"Equal to 25.28 gallons, or say 160 lbs. of oil, &c., &c., 16,500 cubic feet, would be

	worth £8 0 11 per ton.
Difference, carbonizing, &c., between 16,500 and 10,333=6.5d.—4s.....	0 2 1
Shale oil as per estimate, 160 lbs., at 1s. ....	0 1 7

So that this shale would be worth £8 4 7

less the cost of removing its ash, or say £8 4s. The laboratory results exceed the best practical ones by 20 per cent., £8 4s. less 20 per cent., or £1 15s., leaving £6 9s. to represent its comparative value when the standard coal sold for 13s. 9d., and the standard cannel for 24s. 6d."

*Complaints reported to me of deficient ventilation, &c.*

Sundry complaints of deficient ventilation and non-compliance with the provisions of the Coal Mines Regulation Act have been reported, and the matters complained of have been immediately remedied, either without any intervention on my part, or after an examination made by me accompanied with Mr. Inspector Dixon, who since his appointment in June last has caused great improvements to be made in the ventilation of the mines, has displayed great zeal in it, and seeing that the provisions of the Coal Mines Regulation Act are strictly carried out at each colliery, and in immediately reporting to me any breach of the law, also in sending me fortnightly reports, with full particulars as to the state of each mine, number of men employed, quantity of air travelling through the different "districts" or "splits," &c., &c.

NEW MINES OPENED OUT OR IN COURSE OF DEVELOPMENT DURING THE YEAR 1882.

*Lake Macquarie.*

March 2nd.—Mr. Parbury gave notice that Messrs. Lamb, Saddington, and Parbury would in a few days open a coal mine upon their property at Lake Macquarie.

*Near New Lambton.*

March 8th.—Mr. J. Green gave notice, on behalf of the Waratah Coal-mining Company, of having opened out a new mine on the Company's property near New Lambton.

*Mount Kembla, Wollongong.*

March 8th.—Mr. W. Bural gave notice that he had commenced driving a tunnel or heading to cut the Kembla or 8 ft. seam of coal north of Kerosene Works.

*Tighe's Hill.*

May 9th.—Mr. James Pepper gave notice of having opened a new coal-mine corner of Henry and Union Streets.

*Ballimore, Dubbo.*

May 24th.—Mr. Nancarrow notified that he was sinking a trial shaft at the Ballimore coal-mine, for the Dubbo Coal-mining Company.

*Tighe's Hill, No. 2 Pit.*

May 31st.—Messrs. Walker and Wilde gave notice of working their new No. 2 pit, Elizabeth-street, Tighe's Hill.

*Middle River, Marrangaroo.*

June 9th.—Mr. Philip Winchester gave notice of opening out a new seam of coal at Middle River, near the Mudgee Road, on Messrs. W. F. Mackenzie and Henderson's property.

*Ferndale Coal-mining Co.*

June 12th.—Mr. Powell gave notice of having commenced to sink a water shaft for drainage and ventilating purposes.

*New Lambton Estate, near Waratah.*

July 10th.—Walter and James Sneddon gave notice of starting a coal-mine at Waratah, New Lambton Estate, adjoining Goose Colliery.

*Morrisett Point, Lake Macquarie.*

July 10th.—Messrs. D. and P. Murray gave notice that they were about to open their coal-mine known as No. 1 or 10 ft. seam at Morrisett Point.

*Morrisett Point, Lake Macquarie.*

July 17.—Messrs. J. Hughes, W. Baker, and John Doun gave notice that they had leased from Messrs. Murray's, at Morrisett Point, the No. 2 or 4 feet seam of coal, and had commenced to get coal in the said mine. Linwood

*Linwood Estate, near Wickham.*

July 20.—Messrs. Walker & Wilde gave notice of having commenced to sink a shaft for working the coal on the Linwood Estate, the property of Mr. P. Fleming, and the right to mine for coal under Throsby's Creek and Bullock Island will be worked and won through this pit.

The pit is in close proximity to the Bullock Island Railway and the Hannell-street crossing, Wickham.

*Middle River, Marrangaroo.*

July 31.—Mr. Philip Winchester notified, on behalf of Messrs. Dr. W. F. Mackenzie & Henderson, that he was about to bore for coal and kerosene, with the steam rock-drill borer, on their property at Middle River, Hartley district.

*Landsale Colliery, New Lambton Estate.*

August 7.—Messrs. H. Jackson, R. Morgan, J. Jackson, M. Yates, B. Yates, and M. Atchinson, gave notice of having commenced a small Landsale Colliery on the New Lambton Estate, to work some coal blocked in by trees, and, if possible, some old pillars. It is near the main road New Lambton.

*Lambton Commonage.*

August 11.—Isaac Burnley gave notice of having opened a new colliery on the boundary line of New Lambton and Lambton Commonage, worked by four shareholders, and styled Isaac Burnley & Co.'s Hidden Treasure Colliery.

*Dog and Rat, Waratah Commonage.*

August 11.—Messrs. D. Hughes, B. Tonks, and J. Ruttle, of Waratah, gave notice of having sunk a shaft to mine for coal on what is known as the Dog and Rat Estate, leased by Messrs. J. & A. Brown, Waratah Commonage.

*East side of Tighe's Hill.*

September 23.—Mr. Thomas Bevan gave notice that he had commenced to sink a shaft on the east side of Tighe's Hill; and on November 3rd reported having sunk through very hard conglomerate 66 feet, coal shale 2 feet, and coal 3 feet 8 inches with two small bands in it.

*A. A. Company's Estate, Tighe's Hill.*

October 9.—Mr. William Thornton gave notice of having commenced to sink a shaft for a new coal mine, known as Spennymoor colliery, on the western side of the Great Northern Road, Tighe's Hill and Peppertown.

*Clarence Siding, Great Western Railway.*

October 16.—Mr. Charles Bennett notified his intention of opening out and working a coal seam on his M. C. P. of 180 acres, situate in a gully near the Zigzag.

*Peppertown, near Tighe's Hill.*

November 17.—Mr. John Burgin informed that he had purchased the coal remaining under Mr. Alfred Pepper's allotments Nos. 23, 24, and 25.

P.S.—Since wrought out and abandoned.

*Rathluba Colliery.*

December 18.—Mr. Matthew Hall reported that he had commenced to work the Rathluba Colliery near East Maitland.

## COAL-MINES ABANDONED OR OPERATIONS SUSPENDED DURING THE YEAR 1882.

May 31st.—Messrs. Walker and Wilde reported that they had finished working their pit known as Walker and Wilde's Tighe's Hill Pit, on the 6th idem.

*New Lambton Estate, Waratah.*

July 14th.—Walter and James Sneddon notified that they had failed to open the mine which they had given notice of on the 10th, owing to the coal being soft and unmarketable.

*Bevan's Brickyard Colliery.*

September 23rd.—Mr. Thomas Bevan gave notice that he had finished and abandoned the Brickfield Colliery, at the junction of the Maitland Road and Ingall-street, Tighe's Hill.

*Morrisett Point, Lake Macquarie.*

November 6th.—John Hughes and Company gave notice that they would let the coal-mine stand for awhile, and known as No. 2 or 4-foot seam, Messrs. Murray's Estate, Lake Macquarie.

Account of the strata and seam of coal bored through with the diamond rock drill, by the "Stockton Coal Company (Limited)," at Stockton, on the north shore, and adjacent to the Newcastle Harbour. A shaft 50 feet in depth was sunk by Mr. Stevens many years ago, and the present Company (capital £60,000 in 60,000 £1 shares) have bored from the bottom of it to the 13 feet coal, which is equal to and identical with that worked at the A. A. Co.'s Wallsend and Lambton, &c., Collieries. Mr. Green, of the Waratah Colliery, has been appointed colliery manager, and is now engaged in the preliminary works necessary for sinking through and winning the coal from the 50 feet shaft.

Total thickness of coal ..... 13 6½  
 Total depth from the surface to bottom  
 of coal ..... 341 7

This is a section of the Borehole and Wallsend coal seam, forwarded me by Messrs. Walker and Wilde, which they have recently sunk through at a depth of 162 feet on land belonging to Mr. Fleming, situated at Wickham, near Bullock Island and Newcastle, in the County of Northumberland. The mine has very recently been formed into a company, called the "Wickham and Bullock Island Coal Company," with a capital of £65,000 in 65,000 shares of £1 each, Marshall Bailey, Esq., of 19 Bridge-street, being the Broker.

In a Report made, for Messrs. Cordon and Woods, by Mr. Neilson, Manager for the Wallsend Company, he states that the coal is of excellent quality, and quite equal to the best coal in the Newcastle district. It is suitable for steam, household, smelting, gas and coking purposes, and dips about 1 in 36 to the south-east.

This represents a section of the "Borehole Seam of Coal" forwarded me by Mr. Alexander Brown, which has recently been proved, by the Diamond Rock Drill, to exist at a depth of 272 feet below the surface, on property belonging to the New Lambton Colliery Company, to the south of their present workings at New Lambton, near Newcastle, in the County of Northumberland.

This represents the No. 1 Cardiff Coal Seam, worked for a short time by Messrs. Bennett and Jones, on land belonging to Mr. Bedford, situated near the old Cardiff Colliery, at Lake Macquarie. At a depth of 100 to 150 feet below this coal is the No. 2 Cardiff Coal Seam, about 19 feet in thickness, of which I gave a section in my 1874 report, and is published in the Mines and Mineral Statistics for that year.

This represents a section of the coal seam opened out at Spring View Colliery, on private property belonging to Messrs. Warner, at Lake Macquarie, and reported upon by me on 13th July, 1882, along with an alleged discovery of a seam of iron ore 2 feet 6 inches in thickness said to underlie it. A sample of the ore having been sent the department and handed to Professor Dixon, and an analysis made thereof (giving 41.93 per cent. of iron); I was requested to ascertain the nature of the discovery, and after examination reported that in my opinion it was of no commercial value, was a nodule of iron ore only, and that the discovery appeared to have been notified for the purpose of increasing the value of their property, which there is little doubt about, as the people who were at work at the mine have sometime since abandoned it.

This represents a section of the coal seam measured by myself, and opened out by Mr. John Anderson, at the Bellvue Mine, on his property at Lake Macquarie. Until recently he supplied Messrs. Amos Bros. Locomotive and the Steam Dredge with coal therefrom.

It is identical with the Cardiff Coal Seam, belonging to Sir John Robertson and others, at Lake Macquarie.

Account

Account of strata bored through with the Diamond rock-drill at No. 1 Borehole, on Messrs. Amos Brothers' 640 acres, adjoining their authority to mine under 28th section, in the Parish of Wallarah, County of Northumberland, as taken by Mr. Foreman Robertson and checked by me, as far as practicable, from the cores of strata he had in boxes:—

	Feet.	Inches.		Feet.	Inches.
Coarse conglomerate, very loosely cemented together (no core brought up) ... ..	52	0	Sandstone and conglomerate ... ..	2	0
Blue shale... ..	1	6	Coarse grey conglomerate ... ..	7	7
Sandstone ... ..	15	6	Fine conglomerate and sandstone ... ..	5	8
Chocolate, blue and grey shale ... ..	25	0	Conglomerate ... ..	1	0
Coarse grey conglomerate ... ..	21	6	Blue and grey shale ... ..	1	3
Blue shale... ..	3	6	Fine grey conglomerate ... ..	4	0
Coarse grey conglomerate ... ..	26	0	Conglomerate ... ..	6	9
Chocolate and blue shale... ..	14	0	Conglomerate and sandstone ... ..	0	9
Grey conglomerate ... ..	29	9	Shale ... ..	2	0
Sandstone with seams of conglomerate... ..	6	0	Grey sandstone ... ..	1	0
Conglomerate ... ..	1	6			
Alternate beds of conglomerate and sandstone... ..	10	0			
				238	3

The diameter of the core is 1½ inch, and out of the 286 ft. 10 in. of strata bored through the borer only got about 138 feet of core, which is very unsatisfactory, and in my opinion is principally owing to the smallness of the core barrel, which *I think should not be less than 2 inches in diameter.*

Only 6 feet 6 inches of a coal core was brought up out of the 10 feet 6 inch coal seam ; 4 feet of the best part of the coal appeared to have been ground to powder and carried away with the water. Mr. Cogan's duplex core barrel was not used when going through the coal, but I question whether much more would have been procured if the core had been reduced to 1½ inch in diameter, which it would have been if the duplex barrel had been used.

Section of the strata bored through in the No. 1 Borehole with the Diamond rock drill, on land belonging to William Alison, Esq., situated near the projected railway from Waratah to Sydney, at Wyong, in the parish of Munmorah, county of Northumberland. It is about 65 miles from Homebush, and 75 miles from Sydney by the projected railway. Measured by J. Mackenzie, September, 1882.

When this seam of coal was bored through, gas came therefrom to top of borehole.

Section of the strata bored through in the No. 2 Borehole with the Diamond Rock Drill, on land belonging to William Alison, Esq., situated near the projected railway from Waratah to Sydney, at Wyong, in the parish of Munmorah, county of Northumberland. It is about 65 miles from Homebush, and 75 miles from Sydney by projected railway. Measured by J. Mackenzie, 23rd September, 1882.

This represents a section of the coal seam opened out by Mr. Duke and others, on land adjacent to Meryla Reserve (No. 148), in the county of Camden, measured by myself.

The coal appears to be similar in quality to that now being worked by Messrs. Baker, at Erith Colliery, Bundanoon, county of Camden.

The above represent sections of the No. 1 coal taken in two headings, which have recently been driven into that seam by T. Garrett, Esq., M.L.A., and Dr. W. F. Mackenzie, on the 2,500 and 1,600 acres respectively, which they hold under authorities to mine for coal, near the head of the Grose Valley, and situated  $4\frac{1}{2}$  miles from the Mount Victoria railway station, in the county of Cook. Six adits have been driven into the seam along its outcrop, at distances of about  $\frac{1}{2}$  of a mile apart, and a survey is now being made, and a railway set out along a leading range to join the Great Western Railway, near to the Mount Victoria station.

It is a bituminous coal, suitable for steam, household, smelting, gas and cooking purposes, and dips 1 in 67 to the east and north-east, and has been reported upon by James Fletcher, Esq., M.L.A., Colliery Viewer, &c.

This represents a section of the coal seam recently opened out, and now worked, at the Irondale Colliery, Piper's Flat, situated about  $4\frac{1}{2}$  miles from the Wallerawang Railway Station, and within  $\frac{1}{2}$  a mile of the Wallerawang and Mudgee Railway. Mr. Lawson is the Colliery Manager and the Company is called the Wallerawang Coal Company.

The coal-seam is identical with, and of a somewhat similar nature to, that worked at the Lithgow Valley Collieries, and the Company are supplying some of the Government luggage train locomotives with coal therefrom.

This is a section of the coal-seam worked by the late Campbell Mitchell, Esq., on Mr. Holt's 400 acres at Pipers' Flat, near the Wallerawang Railway Station, in the County of Cook.

This represents a section of the coal-seam sunk through by Mr. Nancarrow, at a depth of 70 feet at the Ballimore Coal-mine, situated about 18 miles from the Great Western Railway, and about 22 miles from Dubbo, in the county of Lincoln. The coal is highly bituminous, would evidently yield a large percentage of volatile hydrocarbons, and most of it is very similar in character to that worked at the Greta Colliery, Branxton, county of Northumberland. The mine, which was formerly held by Mr. Nancarrow, has been formed into a company of £80,000, and after it has been further developed it is intended to construct a tramway from the mine to the railway.

The seam is very variable in its character where open out, but I am of opinion that the strata in which it is found is probably of the same age and identical with the lower coal measures at Loder's Creek, near Liverpool Plains, and Murrurundi, where similar shales are found in connection with the Murrurundi Boghead mineral, and a similar coarse conglomerate and pudding-stone caps it, and the ranges adjacent thereto. And that there is a large extent of country in which these lower coal measures exist, north, south, east, and west of the Ballimore mine; on the Talbragar ranges, between them and the Castlereagh, and between Ballimore and Dubbo, which, provings by adits, borings, or sinkings (commencing from near the bottom of the coarse pudding-stones, conglomerates, and sandstones, immediately overlying the number one or Spricer Creek, 4 feet 6-inch coal) only can show what their commercial value in other places is likely to be.

A few miles from Ballimore, a 4-feet 6-inch coal, somewhat similar to Lithgow coal, only coarser grained, has been sunk through by Mr. Nancarrow, and permission to work the coal under the 28th section has been applied for by G. E. Cass, Esq, M.L.A. I believe it is the number one or uppermost coal-seam, in the Ballimore coal measures, and that it may exist under the conglomerates, pudding-stones, and sandstones, which over-lie the Ballimore coal-seam.

In conclusion, I have only to add, that in the year under notice there were fifty-four collieries under inspection, and eleven new coal-seams being opened out, against thirty-eight collieries under inspection in the preceding year, and ten opening out; and that this year's returns show an increase in the Northern District of 217,044 tons 14 cwt. of round and small coal raised, and £278,667 5s. 4d. in value; in the Southern District of 83,216 tons, valued at £51,795; and in the Western District 33,796 tons 17 cwt., valued at £15,256 2s 8d.

I have, &c.,

JOHN MACKENZIE, F.G.S.,  
Government Examiner of Coal Fields.

THE HALF-YEARLY REPORT of the Inspector of Collieries, on the state of the various Collieries in the several Colliery districts in New South Wales and Accidents therein, investigated by the Inspector for the six months ending 31 December, 1882.

The Examiner of Coal Fields, Newcastle,—  
Sir,

Glebeland, 13 January, 1883.

Pursuant to the provision of clause 26 in the Coal-mines Regulation Act, 1876, I have the honor to transmit to you this my six-monthly report on the state of the various Collieries in the several colliery districts in the Colony, for the half-year ending 31 December, 1882.

The total number of collieries under inspection during the term embraced by this report is fifty-four, being sixteen more than the number given in the January report for 1882, showing an increase for the half-year of thirteen collieries in the Northern District, two in the South-western District, and one in the Western District.

Number of collieries under inspection in each district for this report, viz. :—

Northern District.....	40	coal-mines.		
Southern „ .....	4	„		
Western „ .....	6	„	and 1 shale-mine.	
South-western District .....	2	„	and 1 „	
	52	„	2 „	54 mines.

PRESENT STATE OF MINES.

I am pleased to be able to state that the following detailed report of each colliery shows a rather favourable state of things, for, as a rule, I have found the various colliery managers endeavouring to comply with the spirit of the Coal Mines Regulation Act :—

*A. A. Company.*—About 460 men and horses are employed underground during the day shift, for which about 80,000 cubic feet of air per minute is supplied in ten separate currents or splits, and the number of men, &c., served by each current averages from twenty to fifty. Notwithstanding the great quantity of air passing through this mine, it has been found a very difficult matter to properly ventilate the rise portion of No. 1 workings. A great deal of work has been performed during the last six months towards enlarging the airways, the return airway in particular. The result has been most beneficial to the district as a whole, yet some of the bords to the rise still remain very warm. The Act is carried out in other matters.

*N. C. M. Company.*—About 232 men and horses are employed in the mine on both shifts, and about 50,000 cubic feet of air per minute is supplied in six separate currents or splits, each serving from twenty-six to sixty-four men, &c. The requirements of the Act are complied with in other respects also.

*New Lambton.*—About 100 men and horses are employed in the mine on both shifts, and about 15,000 cubic feet of air per minute is supplied in three separate currents, each serving from fourteen to forty-four men, &c. The Act is also carried out in other matters.

*Lambton.*—About 310 men and horses are employed in the mine, and about 50,000 cubic feet of air per minute is supplied in six separate currents or splits, and the number of men, &c., served by each current averages from thirty-five to seventy, &c. In all other respects the provisions of the Act are also carried out.

*Wallsend.*—About 541 men and horses are employed in the mine on both shifts, and about 100,000 cubic feet of air per minute is conveyed into the workings in ten separate currents or splits, each serving from thirty to seventy men, &c. A new tunnel has been opened out in connection with this mine; it is situated alongside of the main road. Another tunnel is being opened out to the east of the main tunnel, and when completed will make a short and easy outlet for all the coal on that side of the Company's estate. The requirements of the Act are complied with in other matters also.

*Co-operative.*—About 45,000 cubic feet of air per minute is sent into the mine for about 254 men and horses employed therein on both shifts. There are five distinct currents or splits, each serving from forty to seventy men, &c. A very large furnace has been erected in this mine during the last half-year, and is now in full working order. Besides this, a great deal of work has been done in closing the ends of old bords and making new air-courses, so that the pure air would find its way into the working places by the shortest possible route. The provisions of the Act are complied with in other matters also.

*Brown's Colliery.*—About 125 men and horses are employed in the mine on both shifts, and about 25,000 cubic feet of air per minute is supplied in four separate currents or splits, each serving from eighteen to sixty-three men, &c. The ventilation in this mine, especially in No. 10 district, is really good, as the current of air is well sustained in the working headings, owing to the ends of the old bords being tightly closed by good stoppings. The requirements of the Act are complied with in other matters also.

*Duckenfield.*—About 108 men and horses are employed in the mine on both shifts, and about 26,000 cubic feet of air per minute is conveyed into the workings in two separate currents, each serving from fifty to sixty men, &c. The other provisions of the Act are also complied with.

*South Waratah.*—Only about twenty-five men and horses now employed in this mine. They are all engaged in one district, and supplied with about 10,000 cubic feet of air per minute. The provisions of the Act are complied with in every respect.

*East Waratah.*—About ninety-eight men and horses are now employed in this mine. The working places are principally ventilated from the main tunnel, about 11,000 cubic feet of air per minute being supplied in three separate currents, each serving from eight to fifty-four men, &c. In all other respects also the provisions of the Act are complied with.

*Old Waratah.*—Only the four lessees, and another man besides, at work in this mine. Ventilation good throughout. No cause of complaint.

*Hidden Treasure Colliery.*—Only six men and two boys at present employed in this mine. There are two shafts, and the workings are well ventilated by a current of air about 3,000 cubic feet per minute. No cause of complaint.

*Dog and Rat Colliery.*—Eight men are employed in this mine. There are three shafts for ventilating purposes, besides the main tunnel. The ventilation is good throughout the workings. No cause of complaint.

*Goose.*—Only four men employed in the mine. The ventilation is good, and the provisions of the Act are complied with in every respect.

*Ferndale.*—

*Ferndale*.—About fifty-eight men and horses employed in the mine, and about 10,000 cubic feet of air per minute is supplied in two separate currents, each serving from twenty-four to thirty-four men, &c. The Act is also carried out in other matters.

*Ferndale, No. 2*.—Only one man working in the mine. No cause of complaint.

*Ferndale, No. 3*.—Six miners and two wheelers at work in the mine. Ventilation good throughout. No cause of complaint.

*Little Ferndale*.—This is a new mine; only two miners at present employed driving a heading. No cause of complaint.

*New Duckenfield*.—In this mine there are eight miners and two wheelers employed. The ventilation is good in the whole of the workings. The Act is also carried out in other matters.

*Walker and Wilde*.—Until recently there were four men employed in this mine. Operations, however, have now been suspended for a short time. No cause of complaint.

*Sneddens*.—At this place there are two distinct pits; four miners in each. Working places well secured by good timber. Ventilation good throughout the workings in both pits. No cause of complaint.

*Bergins*.—Only two men employed in the mine. The Act is carried out in every respect.

*Brickfield*.—Until very recently there have been six men employed in this mine. Whilst working the ventilation was excellent. The mine is now abandoned.

*Bevans*.—There are fourteen men employed in the mine. Ventilation good throughout the workings. The provisions of the Act are complied with in other matters also.

*Speanymoor*.—Only two men at present employed in the mine. No cause of complaint.

*Hartley, late Alnwick*.—About forty men and boys employed in the mine, and about 5,000 cubic feet of air per minute is supplied in two separate currents, each serving about twenty men, &c. In other respects also the provisions of the Act are complied with.

*Tulip's Pit*.—Only two men employed in the mine. No cause of complaint.

*Bloomfield*.—Only four men employed in the mine. For this number there is a current of about 3,000 cubic feet of air per minute. No cause of complaint.

*Marshall's Pit*.—About ten men employed in the mine, and about 3,000 cubic feet of air per minute in one current going into the workings. No cause of complaint.

*Fonthill*.—This mine is now abandoned, but until recently there were four men employed below, and about 2,000 cubic feet of air per minute going into the workings.

*Greta Colliery*.—About eighty men and horses are employed underground during the day shift, for which about 23,000 cubic feet of air per minute is supplied in two separate currents, each serving about forty men, &c. The provisions of the Act are complied with in other matters also.

*Singleton Colliery*.—About thirteen men and boys employed in the mine, and about 3,000 cubic feet of air per minute going into the workings. No cause of complaint.

*Ellesmere*.—Only three men employed in the mine. No cause of complaint.

*Rix's Creek*.—Only the lessee himself getting a few tons of coal occasionally. No cause of complaint.

*Rathluba*.—This mine has been abandoned for some months. Work has now been resumed, a few men only being employed. No cause for complaint.

*Springview Colliery, Warner's Estate, Lake Macquarie*.—This colliery was opened out by J. Horsfield & Company. A tunnel has been driven a distance of about forty yards into the side of a hill; at the time of my visit there were six men employed in the mine. Ventilation good, and everything secure.

*Parbury & Co's Colliery, Lake Macquarie*.—At this place a splendid tunnel has been driven for a distance of over 100 yards. At the time of my visit there was no one at work in the mine, the men being employed sinking a shaft in order to ventilate the workings.

*No. 1 Colliery, Morrisett's Point, Lake Macquarie*.—This place is worked by Hughes & Company. At present there are only two men employed in the mine. Several headings have been driven, and bords turned away. The ventilation is good throughout the workings; the working places and main tunnel perfectly secure.

*No. 2 Colliery, Morrisett's Point, Lake Macquarie*.—This mine has been opened out by Messrs. Murrey & Murrey. A tunnel has been driven in a distance of about sixty yards. A splendid shaft has also been sunk for ventilating purposes. The main tunnel is well timbered, and secure.

*Linwood Colliery*.—Sinking operations are still being carried on at this place. The work has been very difficult, owing to the peculiar nature of the strata gone through. It is anticipated that in a very short time the seam of coal will be reached.

#### SOUTHERN DISTRICT.

*Osborne Wallsend*.—About 120 men and horses are employed in the mine, and about 9,000 cubic feet of air per minute was, at the time of my inspection, being supplied in two separate currents, each serving about sixty men, &c. A shaft for ventilating purposes was being put down at the time of my visit, and from its size, and position in the workings, would be calculated to bring the ventilation up to a first-class standard. In other respects the provisions of the Act are complied with.

*Bulli Colliery*.—About 167 men and horses are employed in the old tunnel. The air is conveyed into the workings in three separate currents or splits, each serving from forty-nine to sixty men, etc. The ventilation was rather deranged at the time of my visit, and although I measured about 32,000 cubic feet of air per minute in the main return at the furnace, there was barely one-third of that quantity going into where the miners were working. Only eleven men, &c., are working in the new tunnel, and about 6,000 cubic feet of air per minute is supplied them. In other respects the provisions of the Act are complied with.

*Mount Pleasant*.—About ninety-six men and horses, &c., are employed in the mine, and about 15,000 cubic feet of air per minute is supplied in two separate currents, each serving from forty to fifty-six men, &c. The other provisions of the Act are complied with also.

*Coal Cliff*.—About seventy-eight men and horses are employed in the mine, and about 12,000 feet of air per minute is supplied. This air is well circulated through both districts. The miners are now paid by weight for the coal they get. No cause of complaint.

#### SOUTH-WESTERN DISTRICT.

*Erith Colliery*.—About eighteen men are employed in the mine, and about 2,500 cubic feet of air per minute is supplied for them. No cause of complaint.

*Berrima*

*Berrima Colliery.*—About twenty-eight men and horses are employed in the mine, and about 3,000 cubic feet of air per minute is supplied in two separate currents, each serving about fourteen men, &c. The provisions of the Act are complied with in other matters also.

*Jondga Shale Mine.*—About eighty-three men and horses are employed in the mine, and about 13,000 cubic feet of air per minute is supplied in two separate currents, the men, &c., being about equally divided into two districts. No cause of complaint.

#### WESTERN DISTRICT.

*Vale of Clwydd.*—About forty-eight men and horses are employed in the mine. There are two districts in the mine, and although there is a supply of about 9,000 cubic feet of air per minute in two separate currents, a great quantity of this air does not reach the working places, consequently many of the bords in each district are extremely warm and uncomfortable. In other respects the provisions of the Act are complied with.

*Esk Bank.*—About thirty-nine men and horses are employed in the mine, and about 12,000 cubic feet of air per minute is supplied them. It is all pillar work in this mine now. The ventilation is good throughout the workings. About twenty-nine men and horses are employed in the tunnel, and about 4,000 cubic feet of air per minute supplied them in two separate currents. No cause of complaint.

*Lithgow Valley.*—About fifty-seven men and horses are employed in this mine, and about 10,000 cubic feet of air per minute is conveyed into the workings in two separate currents, one for each district, the men, &c., being about equally divided. In other respects also the provisions of the Act are complied with.

*Coerwull.*—Only one man employed in the mine, getting a little coal for the factory. No cause of complaint.

*Bowenfels.*—Only nine men and horses employed in the mine; the men are all in one district, and about 2,000 cubic feet of air per minute is supplied them. No cause of complaint.

*Hartley Shale.*—About eighty-five men and horses are employed in the mine, and about 19,000 cubic feet of air per minute is supplied in two separate currents, each serving from forty to forty-five men, &c. There are three men employed in the old tunnel, and four in the common coal tunnels. The requirements of the Act are complied with in other respects also.

*Katoomba.*—Only one man employed in the mine. Great preparations are being made to start full work early in the new year. No cause of complaint.

#### Accidents in Mines.

In my inspection of the various collieries I have noticed, as a rule, a plentiful supply of timber for the miner's use. Yet, notwithstanding this fact, it is with considerable regret I have to state that during the past six months I have investigated twenty-four accidents, happening in most instances by falls of either coal or stone, two of which accidents were fatal, and most of them causing serious bodily injury. The first of the fatal accidents happened to a man named Michael Hanley, engaged as a furnace-man in the Wallsend Colliery, and who was crushed to death by a horse in that colliery, on the 13th July last. The District Coroner, C. B. Ranclaud, Esq., held an inquest on the body of deceased at Wallsend, on 14th July idem, when the evidence forwarded with my report was given, and a verdict of accidental death returned, with which verdict I fully agree. The second fatal accident happened to a miner named William Peacock, by a fall of coal in the Wallsend Colliery on the 25th July. The District Coroner held an inquest on the body of deceased, at Wallsend, on the same day, when a verdict of accidental death was given, with which verdict also I fully agree. The first non-fatal accident happened to a miner named John Gibbon, by a fall of coal in the Wallsend Colliery on 17th July, resulting in fracture of ribs. The second was a fracture of ribs to an onsetter named William Attwood, by being jammed by a loaded skip in the A.A. Company's Hamilton pit, on 21st July. The third was serious bodily injury to a miner named Isaac Hutchinson, by an explosion of loose powder in the Lambton Colliery, on 27th July. The fourth was a leg fracture to a miner named Edwin Evans, by a fall of stone in the Newcastle Company's mine, on August 21st. The fifth was a fracture of both legs to a miner named James McGoldrick, by a fall of stone in the Mount Keira mine, on August 24th. The sixth was a severe injury to head to a miner named Robert Charlton, by a fall of coal in the Co-operative Colliery, on 29th August. The seventh was a leg fracture to a miner named James Mains, by a fall of coal in the Mount Keira mine, on 1st September. The eighth was an injury to head to a wheeler named Joseph Grainger, by a loaded skip in the Ferndale No. 2 mine, on 9th September. The ninth was a severe bruise on leg to a miner named John McEwan, by a fall of coal in the Hidden Treasure mine, on 14th September. The tenth was a concussion of spine to a miner named Charles McLean, by a fall of coal in the A.A. Company's Colliery, on 16th October. The eleventh was a fracture of thigh to a miner named John Jones, by a fall of coal in the Lambton Colliery, on 1st November. The twelfth was a fracture of collar-bone to a miner named Patrick Dwyer, by a fall of coal and dirt in the Newcastle Company's Colliery, on 6th November. The thirteenth was a leg fracture to a miner named John Maltman, by a fall of coal in the Wallsend Colliery, on 8th November. The fourteenth was a fracture of ribs and thigh to a miner named John Ford, by a fall of coal in the A.A. Company's Colliery, on 18th November. At the same time and place, Charles James, who was working mates with Ford, received an injury to foot by the same fall of coal. The sixteenth was severe bodily injuries to a miner named James Jeffreys, by a fall of coal in the Wallsend Colliery, on 7th December. The seventeenth was an arm fracture to a boy named Alfred Herbert Price, by a fall from a ladder at the A.A. Company's No. 2 pit, on 11th December. The eighteenth was a skull fracture to a miner named William Gill, by a fall of coal and dirt in the Newcastle Company's Colliery, on 11th December. The nineteenth was a severe cut on head to a miner named Samuel Marsh, by being struck by a prop against which coal had fallen in New Lambton Colliery, on 12th December. The twentieth was injury to head to a miner named Alfred Peterson, by a fall of coal in New Lambton Colliery, on 14th December. The twenty-first was severe injury to back and ribs to a miner named John Harris, by a fall of coal and dirt in the A.A. Company's No. 2 pit, on 16th December. The twenty-second, and last, was severe bodily injury to a miner named John Kain, by an explosion of loose powder in the Wallsend Colliery, on 24th December.

The usual tabulated list of accidents is hereto appended—

I have, &c.,  
JOHN DIXON,  
Inspector of Collieries.

## GEOLOGICAL SURVEY OF NEW SOUTH WALES.

Report of Progress for 1882 by the Geological Surveyor in Charge.

DURING the past year I have been chiefly engaged upon Departmental work connected with the alienation of land in gold-fields or mining reserves, the establishment of the Mining and Geological Museum, the office of Chief Mining Surveyor, examination of minerals, and the preparation of a representative mineral collection for the forthcoming Exhibition at Amsterdam.

Mr. H. Y. L. Brown has completed a detailed geological survey of the Forest gold-field near Orange; his maps, sections, and notes are now being prepared in the Lithographic Branch of the Surveyor-General's Office for publication, and will shortly be issued. The map, which embraces an area of 54 square miles, shows not only the topographical and geological features of the country, but also the position of the worked and unworked reefs; and the vertical sections, while showing the order of superposition of the different formations, indicate the probable existence of auriferous deep leads beneath the basaltic formation, which occupies a large portion of the district between the Wentworth and Forest gold-fields. Mr. Brown's report is herewith appended. (Appendix A.)

In this district, at Cadia, Mr. J. Holman, in September, obtained a large nugget of gold weighing 70 ozs. from some surfacing near the outcrop of a ferruginous reef.

I inspected some of the country near Springwood for the purpose of ascertaining the position of sites suitable for boring for coal. I found that in "Sassafras Gully," about  $1\frac{1}{2}$  mile from Springwood, some shales with plant impressions cropped out beneath the Hawkesbury sandstones, and that as these shales are the lowest strata exposed, and appear to be the uppermost beds of the Coal Measures, this would be the most suitable place for testing, with the least depth of boring, the position of the coal seams. The Tiffin drill, or the ordinary boring appliances, could be worked upon this site; but it would be difficult to place the diamond drill machinery upon it owing to the precipitous nature of the country. However, having ascertained the depth at which the coal seams lie here, the information gained would indicate approximately at what depth the coal could be struck, by piercing the Hawkesbury sandstones nearer to the Railway line where the diamond drill could be conveniently employed.

In the bottom of a gully called "The Valley," about 1 mile from Springwood, there outcrops a mass of altered conglomerate containing fragments of carbonized wood. I did not discover any fossils to enable me to determine the age of the beds; but in their lithological character they resemble the Lower Coal Measures of the Hunter River; should they prove, on further examination, to belong to that series, it will show that there has been a disturbance of the coal measures in this locality, and that the seams of coal now hidden by the overlying Hawkesbury rocks, may have been brought nearer to the surface than the surrounding formations would seem to indicate. This is an important question which might be settled by a little prospecting. With these conglomerate beds occur some trachytic rocks; and in one place there is a spring deposit, about 50 feet in diameter, of brown iron ore.

In April Mr. H. Wilkinson was instructed to accompany the Government Commissioner, Mr. J. Bowie Wilson, to Lord Howe Island. He examined the island and some of the neighbouring islets, and made a geological sketch map of them, and collected for the Mining Museum specimens of the rock formations, as well as samples of the indigenous timber trees. With the exception of some blown coral-sand deposits, which afford good soil for agriculture, the island consists of volcanic rocks forming precipitous mountains. No minerals of value were found. As Mr. Wilkinson's report has already been published by the Government it is not necessary to append it here.

In September I examined a portion of the Mittagong district near the Nattai River, where the Hawkesbury beds and the underlying Coal Measures have been considerably disturbed by intrusions of trachytic rocks. I have given a description of the geological features observed in Appendix B.

It is with great regret that I have to record the destruction, by the fire at the Garden Palace on the 22nd of September, of the collections in the Mining and Geological Museum. The classification and arrangement of these had occupied the attention of the Curator and myself for a considerable time, and the Museum was nearly ready for it to have been opened to the public. The collections of minerals, rocks, and fossils comprised upwards of 50,000 specimens, including those formerly belonging to the late Rev. W. B. Clarke, many of which were of special palæontological value, being the original specimens which have been figured and described. Some fossils only have been recovered from the debris of the fire; all the specimens of rocks and minerals have been destroyed, with the exception of the more valuable gold specimens and gem stones which were kept in an iron safe, but even these have been much injured. The valuable Library which contained the scientific works, maps, and Mss. papers purchased by the Government from the family of the late Rev. W. B. Clarke, has also been destroyed. Besides the above-mentioned the Department has lost the large collection of the timbers of New South Wales which was exhibited at the Sydney and Melbourne International Exhibitions.

It is gratifying to know that the invitation of the Hon. the Minister of Mines for donations of mineral and other geological specimens has been liberally responded to by private persons and mining companies throughout the colony, and the Trustees of the Brisbane Museum, the Trustees of the Melbourne Technological Museum, and Dr. Von Haast, F.R.S., Director of the Christchurch Museum, have sent collections of minerals.

The officers of the Department of Mines have also forwarded numerous specimens, so that we already have a valuable collection wherewith to commence the re-establishment of the Mining and Geological Museum. A list of donations is given in Appendix C.

The committee of the Rankwick Asylum had a diamond drill bore put down under the direction of Mr. Coghlan to a depth of 710 feet, when a fair supply of water was struck which rose in the bore-hole to within about 10 feet of the surface. The water was found to contain much iron, but Mr. C. Watt, Government Analyst, expressed his opinion that if the water were to be exposed to the air for a time it would become fit for domestic use. The water probably rises from one of the numerous joint fissures which intersect the Hawkesbury formation. In the same formation another diamond drill bore was put down to a depth of nearly 1,000 feet at Eweleigh railway works, but water was not obtained in it.

On the 18th October I received your instructions to act as Chief Mining Surveyor, and have continued since then to perform the duties of that office.

Mr.

Mr. H. Y. L. Brown having accepted the appointment of Government Geologist for South Australia resigned his position on our survey. I regretted losing the services of such an able officer, but I am glad to say that the vacancy caused by his resignation has been filled by the appointment on 1st December, of Mr. E. F. Pittman, Associate of the Royal School of Mines, who was formerly on our staff and so efficiently performed the duties of Geological Surveyor. Just before leaving, Mr. Brown inspected the tin-bearing country between Tenterfield and the Queensland border. His report thereon will be found in Appendix E.

I had only the assistance of one geological Surveyor during the year until the 27th of November when Mr. T. W. Edgeworth David, B.A., F.G.S., who had been appointed Geological Surveyor, arrived from England. Mr. David was highly recommended for the office by Professor Boyd Dawkins, F.R.S., he had previously received his scientific training under Professor Prestwich of Oxford, and also at the Royal School of Mines. Soon after his arrival Mr. David was instructed to proceed to Yass where he made an examination of the Silurian beds in that locality and collected a suite of Silurian fossils to replace those lost in the late Garden Palace fire, and also for the Amsterdam Exhibition. His report and sections are herewith appended. (Appendix D.)

Through the efforts of the officers of the Department of Mines in the country districts, as well as of those in Sydney, an important collection of minerals has been obtained for the representation of the mineral resources of the colony at the Amsterdam Exhibition. It includes blocks, about 1 foot or more in diameter, of all the minerals of commercial value produced in New South Wales,—coal, petroleum oil coals, or kerosene shale, auriferous quartz, ores of tin, copper, iron, silver, lead, antimony, bismuth and manganese, chromic iron, marble, also smaller samples of various minerals and fossils for display in glass cases. These have been carefully arranged and labelled under my supervision by Mr. J. E. Carne, Curator of the Museum. Besides the above there have also been sent for exhibition the geological and mining maps, sections of the Coal Measures and of the coal seams, and the Annual Reports of the Department, together with the recently issued work published by the Department on the Mineral Products, Geology and Mineralogy, &c., of New South Wales.

During the year I have examined and reported upon numerous mineral samples submitted for my opinion by miners and others in various parts of the colony, but the register book having been destroyed in the Garden Palace fire, I am unable to state the number of samples examined.

The improvements to the Fish River Caves, which have taken longer to execute than the contractor at first anticipated, have been completed, and will render the caves more accessible to visitors. The keeper, Jeremiah Wilson, informs me that he has discovered a new cave about 1 mile from the old ones, but it has not yet been explored.

I have, &c.,

C. S. WILKINSON,

Geological Surveyor in charge.

#### APPENDIX A.

#### Progress Report on Geological Survey of Forest Reef Gold Field, by Henry Y. L. Brown, Geological Surveyor.

A LARGE portion of the area is a table-land, having an elevation of nearly 3,000 feet above sea level, bounded on the east and west by the creeks running parallel to one another in a southerly direction at a distance of 6 or 7 miles; the remainder is rangy country, in places, deeply cut gullies and steep hills, the tops of which are roughly on a level with the table-land. The lowest or bed rocks consist of limestone, diorite, feldstone, felspar, and hornblende porphyry, metamorphosed sandstones, conglomerates and slates, clay slates, and sandstones. The limestone, which is the lowest formation, crops out in several places on Flyer's, Brown's and Limestone Creeks, but is not exposed on the surface to any great extent, being greatly covered up by soil and alluvium. Fossil remains are very abundant, and include encrinites, trilobites, and shells of many species belonging to the Upper Silurian period. This rock is almost pure limestone, it varies in colour from grey to black, and would make a very ornamental stone if polished. Decomposed diorite and feldstone form the bed rock over a large portion of the district; these contain hard belts of diorite, porphyry, and altered sandstones and claystones, which pass insensibly into one another without any well-marked boundary. The porphyritic rocks are of most frequent occurrence in the neighbourhood of Flyer's Creek, extending from near the Little Emma Mine, and Jarvis', to Brown's Creek mine; in many places they contain fragments of a black siliceous rock, and appear to be an altered breccia or conglomerate. The metamorphosed sandstones and claystones are of a jaspery nature and sometimes show traces of becoming porphyritic. Claystone, sandstone, and mudstone also occur, together with a coarse conglomerate. Along the course of Brown's Creek their strike is generally north and south with an easterly dip at a high inclination.

The portion of the parish of Waldegrave included in the survey is chiefly a sandstone formation, which dips away from and off the limestone, and is most probably of Devonian age.

About one-third of the area is occupied by basalt which has come from the north and north-west, and filled up the ancient valleys and creeks northward of what at that time was a local dividing range trending east-north-east from the north-west corner of Errol to the south-east corner of Waldegrave.

In the parishes of Waldegrave and Blake there are cappings of basalt at different levels, and long narrow flows of the same rock which follow the lines of watershed, descending into the gullies at some points; they mark the position of ancient river-beds which have been denuded, except where protected by the basalt.

There are several places where points of volcanic eruption appear to have existed; they are however ill-defined and uncertain. On the plains there are in some places low hillocks of basalt which resemble eruption points, although they may be due to the pressure or outburst of steam or gas from below.

The most southern extension of this rock to be seen on the surface is in the parish of Calvert, about a mile westward of Brown's Creek mine, where it abuts on the diorite. There is however a narrow plain or flat extending into Beaufort which has the appearance of being basaltic, although the rock is not seen, being covered by alluvial soil; the presence of basalt here would indicate the existence of an old valley trending in this direction.

Pliocene

Pliocene leads have been worked for gold beneath the basalt at Lumpy Lead, Blacksmith's Lead, and Tigeroo, at depths up to about 100 feet. Lumpy Lead has been traced from near the head of Antonio's Gully, in a northerly direction for  $1\frac{1}{2}$  mile to where the tongue of basalt overlying it joins the main flow. Tigeroo shaft is about 98 feet deep, the surface here being about 100 feet lower than the general level of the table-land towards which the other leads run. In the Great Extended Claim, they have sunk through 200 feet of basalt, proving ground 100 feet deeper than any before worked, Tigeroo excepted. Washdirt with fossil nuts and wood, was met with immediately beneath the basalt, and good prospects of gold obtained. The longest drive is in some 35 feet from the shaft, and has crossed a run or gutter of cemented wash, which is estimated to yield 3 or 4 ozs. of gold to the load. The width of the basalt flow is about 20 chains between the two outcrops of bed-rock, so that there is plenty of room for a main run of deep ground on either side of the shaft. It is probable that the gutter they are on at present is a branch of the main lead; this will of course be proved as the drives are extended towards the bed-rock outcrops to the north-west and south-east of the shaft. The washdirt and decomposed bed-rock are dry, but a considerable amount of water comes into the shaft through the basalt at about 50 feet from the bottom.

This fact, together with that of the general occurrence of springs along the basalt boundary, seems to indicate that there is an accumulation of water between the basalt and the bed-rock, in still deeper ground than any yet reached, which forces its way upwards whenever an outlet is made.

The ancient valley or deep ground, as indicated by the outcrops of slate and diorite through the basalt, crosses Brown's Creek near the south-west corner of Graham, and passes in the direction of the Forest Reefs, being joined by branch valleys from the north and south, and afterwards by Lumpy and Blacksmith's Leads, thence somewhere near the Great Extended shaft towards Wells' Gully, where it joins branches coming from Tigeroo and the Lagoon, thence towards Flyer's Creek, which it meets near the Cadia Road Crossing, and becomes lost in the limestone. Older pliocene gravel is met with at this point between the basalt and limestone at a shallow depth, while near it a shaft has been sunk 200 feet in the former rock without bottoming, proving the uneven surface of the limestone bed rock, and the probable existence of deep caves and underground channels.

On the southern watershed of the old dividing range before mentioned there is a large area of flat country covered with alluvial soil, which is a promising locality for alluvial leads. Up to the present only one gully, called Mullocky Gully, has been worked here.

Alluvial mining in shallow ground is carried on to a small extent at Lumpy Lead and near Yankoe Point, Flyer's Creek. Sluicing claims are also worked on Flyer's Creek and Slattery's Creek by the Messrs. Jarvis and others, the water being brought from the Long Swamp, 3 miles higher up Flyer's Creek, by two races.

Veins and reefs of different kinds are numerous in places where the bed rock outcrops; they are usually composed of a porous quartz, associated with iron ore and pyrites, except near the limestone, where the material is of a flinty character. At the Brown's Creek Mine, which is being systematically and extensively worked, gold occurs in a cherty or flinty rock, with opaline quartz, chalcedony, &c., in clay, and in other alluvial material containing fragments of all the rocks found in the mine. The bed rock is limestone, which has been penetrated by dykes of a grey diorite resembling granite in appearance. Large boulders of limestone, diorite, and the flint rock are found imbedded in the washdirt. The intrusion of the diorite into the limestone must have been accompanied by an ebullition of hot springs, which deposited the siliceous gold-bearing rock in caves and hollows of the limestone; at a subsequent period the hollows and caves which had not been filled up became part of a watercourse or underground river, which filled in the remaining spaces in course of time with mud and detritus broken from the rocks through which it passed. The mine is at present being worked at a depth of 150 feet, and the extent of the deposit is considerable. At this depth there is a limestone wall on the southern side, which has been followed down from the upper level, but to the northward no wall has yet been met with. The richness of the crushing stuff is stated to increase with the depth. Traces of green and blue carbonate and other ores of copper are found in this mine.

There are outcrops of similar chalcedonic reefs, with copper ore, at other places in the same neighbourhood.

The only other reef being worked is that at Newton's paddock, Forest Reefs, where rich specimens of gold have recently been discovered.

A good many reefs have been prospected for gold, but none worked to any extent as regards depth. The Forest Reef itself has, it is stated, not been worked below where the pyrites began to make, which would be somewhere about water level.

*Iron Ore.*—Magnetite and limonite, or brown iron ore, are worked both from surface gravel and from the solid mass in open cuttings in the parish of Errol, and sent to Lithgow to be smelted. These masses sometimes fill hollows in the limestone, but in other places, form the upper portions of lodes, which probably will be found to contain other metals at a lower depth.

Iron pyrites is common in the quartz-reefs.

In conclusion it may be stated that the evidence obtained from an examination of this district renders it certain that, under the wide-spread covering of basalt, there exists a system of ancient creeks and watercourses, containing auriferous Pliocene drifts, which will be in course of time traced under the volcanic rocks lying between Forest Reefs and Lucknow.

The employment of a diamond drill would greatly facilitate the development of this gold-field, by boring through the rock to ascertain the position of the deep ground.

#### APPENDIX B.

#### Report upon the Coal Measures near Mittagong.

Sir,

Department of Mines, Sydney, 18 October, 1882.

In accordance with your instructions, I have the honor to submit the accompanying report upon the Coal Measures near Mittagong.

The geology of the Mittagong and Berrima District is of special interest from an economic point of view on account of the extensive deposits of coal and iron which occur in it. These

These mineral deposits have been known for many years past, and have been examined and described by the late Rev. W. B. Clarke in 1859, Mr. J. Mackenzie, Examiner of Coal-fields, and others. Several attempts have been made to develop them but without success, until the enterprising Australian Kerosene Oil and Mineral Company, and more recently the Berrima Coal-mining Company established the value of their mines from which considerable quantities of kerosene shale and coal are now being raised. These mines are situated respectively to the west and south-west of Mittagong, the former being connected with the Great Southern Railway near Mittagong by a line of railway 18 miles long; and the latter by a line 7 miles long, which junctions with the Great Southern Railway about miles south from Mittagong.

But the principal other localities in the district where the seams of coal have been opened lie in a northerly direction from Mittagong, in the Nattai River Valley. The most extensive of these old workings are those of the Fitzroy Iron-mining Company, which are situated about 1 mile from Mittagong. Here adits have been driven into the side of the hill in four places and at different levels. In the two upper adits the coal is of a bright anthracitic character, while in the next, only 200 yards distant, it is bituminous, quick lighting, and cokes readily; and in the lowest adit the coal is of a firm splint description with layers of anthracite. Notwithstanding the difference in level of these adits it is probable that the coal belongs to one seam which has been very much faulted. A good instance of the faulting of the seam may be seen at the mouth of one of the upper adits where the seam has been not only severed by a fault, but also, owing to severe compression, portions of the underlying fireclay shale have been forced up into it. The following sketch illustrates this:—

The cause of this disturbance, and also of the anthracite character of the coal, is at once apparent; for both above and below the seam occur intrusive dykes of trachyte which in a molten state was injected in various directions through the Coal Measures; the dykes are evidently off-shoots from a great mass of trachyte which comes to the surface on the east side of the adits.

There appears to have been less disturbance near to and on the north-west side of the Fitzroy Smelting Works; but the depth to be pierced to reach the coal would probably be from 300 to 550 feet, as the Hawkesbury sandstone formation which here forms the surface rock is seen in other places to be of that thickness.

The following is an analysis of the anthracite coal by Mr. C. Watt, Government Analyst:—

No. 197—

Hygroscopic moisture	...	...	...	...	2.12
Volatile hydrocarbons	...	...	...	...	8.16
Fixed carbon	...	...	...	...	79.42
Ash	...	...	...	...	10.30
Sulphur in coal	...	...	...	...	0.71%
Specific gravity	...	...	...	...	1.40

About 3 miles north from Mittagong, a tunnel known as "Martins" has been driven into a seam of coal which crops out on the western side of the valley near to the Nattai River and about 50 feet above it. The seam, inclusive of bands, is 15 feet thick, and the coal is of a semi-bituminous character; only the lower portion of the seam contains the workable coal.

A short distance (about 20 chains) further down the valley, the same seam, here called "Levicks," crops out on Mr. E. Vickery's land. As a clear section of the coal strata between the overlying Hawkesbury formation and the underlying diorite is here exposed, I measured it as follows:—

	Feet.	Inches.
Hawkesbury sandstone	500	0
Yellow shales...	5	0
Sandstone	3	0
Coal	0	6
Shale	2	0
Sandstone	4	0
Coal	2	0

Thin-bedded sandstone and shales ... ..	40	0
Coaly shales ... ..	9	0
Indurated thin-bedded shales ... ..	25	0
On trachytic diorite to level of river ... ..	80	0

Seam of coal.

The upper part of the diorite is fine-grained with small cavities partly filled with agate; the lower part becomes coarsely crystalline.

The coal is partly splint and partly semi-bituminous, and ignites freely. The bottom of the seam is, by aneroid observation, 390 feet below the level of the Mittagong Railway Station, or 1,679 feet above sea-level.

About 1 $\frac{1}{2}$  mile north-west from "Levicks" is the old mine of the Natti Coal-mining Company, where a tunnel has been driven into the seam of coal from its outcrop. The seam dips west 10 degrees south at an angle of 16 degrees, this high inclination being due to upheaval of the strata by the underlying igneous rock, for the outcrop at this point is 375 feet above that of "Levicks." About 6 feet of the lower portion of the seam has been worked; the coal is semi-bituminous and burns readily; there are however some bright layers of anthracite in it. It would be a good coal for steam purposes, but on account of the numerous irregular bands which it contains it would require much care in cleaning it. The seam also occurs at about the same elevation on the opposite or south side of the Gap Creek Valley at Longmore's mine.

One mile further to the north the same seam has been opened again, both by a shaft and an adit, at Dixon's mine on Smith's Creek, at a level of 475 feet below the Nattai Company's mine, thus affording additional evidence of the disturbance which the Coal Measures and Hawkesbury beds have suffered. It dips to the west at an angle of 10 degrees, and in the adit shows the following section:—

	Feet.	Inches.
(Top of seam not seen.)		
Coaly shale ... ..	0	2
Coal ... ..	0	2
Parting ... ..	0	0 $\frac{1}{4}$
Coal ... ..	0	6
Parting ... ..	0	0 $\frac{1}{4}$
Bright coal ... ..	0	2
Clay band ... ..	0	3
Semi-bituminous coal ... ..	1	2
Coaly shale ... ..	0	6
Semi-bituminous coal ... ..	3	11
Shale ... ..	0	8
Shaly coal ... ..	1	0
(Bottom.)		
	8	6 $\frac{1}{2}$

An average sample of the coal taken from the whole seam, excluding the shale bands, gave the following analysis:—

No. 196—	Per cent.
Hygroscopic moisture ... ..	1.60
Volatile hydrocarbons ... ..	22.84
Fixed carbon ... ..	48.20
Ash ... ..	27.86
Sulphur in coal ... ..	0.78%
Specific gravity ... ..	1.40

The coal is free-burning and cokes; it will probably improve in quality when opened out under deeper cover. However, about 300 yards up the creek from the mine, there is a large dyke of igneous rock, near which the coal will be altered, but immediately beyond the dyke, on the west side of it, the strata appear to be nearly horizontal and not disturbed; it is therefore in this direction where the coal should be prospected.

In a fine cliff section, on the east bank of the Nattai River, at a point about 4 miles in a direct line from Mittagong, there is exposed to view a seam of coal 17 feet thick, including the numerous bands; it dips E.N.E at 4°. A few yards away the river runs over the seam, and blocks of coal are strewn along the bed of the river, which is here 1,450 feet above sea level. About the middle portion of the seam there is a layer of clean coal 2 feet 2 inches thick. The coal is semi-bituminous, burns readily and leaves a white ash. From the following analysis it will be seen that the percentage of ash is very high:—

No. 194—

Hygroscopic moisture ... ..	1.66
Volatile hydrocarbons ... ..	18.34
Fixed carbons ... ..	52.40
Ash ... ..	27.60
Sulphur in coal ... ..	0.57%
Specific gravity ... ..	1.52

The other layers of coal between the clay bands vary from 4 inches to 13 inches thick, and consist of splint and semi-bituminous coal.

Half-a-mile to the north, and 280 feet above the river, a tunnel has been driven into a seam of coal which crops out on the side of the range on the property of Messrs. Campbell Mitchell, Fraser Martin, M.P., and others. This may be the same seam as that just described which is exposed in the river, but owing to the irregular manner in which the coal-beds have been upheaved by the trachyte, its connection is somewhat uncertain. At the end of the tunnel I measured the following section of the seam:—

	Feet.	Inches.
Coaly shale ... ..	0	8
Coal ... ..	0	2
Stony coal ... ..	0	7
Shaly coal ... ..	0	11
Coaly shale ... ..	0	6
Inferior coal ... ..	1	11
Clay band ... ..	0	3
Coaly shale ... ..	0	9
Bituminous coal ... ..	0	7
Stony coal (with bright coal 1 inch) ... ..	0	10
Bituminous coal ... ..	0	5
Clay band ... ..	0	2
Semi-bituminous coal ... ..	0	9
Stony coal ... ..	0	3
Bright coal ... ..	0	3
Coaly shale ... ..	0	1
Semi-bituminous coal with bright coal partings ... ..	2	6
Shale parting ... ..	0	0½
Semi-bituminous coal ... ..	0	7
Coaly shale ... ..	2	0
	14	2½

From the lower portion of the seam I took an average sample of the coal, excluding the bands, for analysis, which gave as follows:—

No. 195—

Hygroscopic moisture ... ..	2.20
Volatile hydrocarbon ... ..	10.20
Fixed carbon ... ..	51.60
Ash ... ..	36.00
Sulphur in coal ... ..	0.68%
Specific gravity ... ..	1.60

Another seam, about 6 feet of which is seen, crops out 70 feet below the tunnel, but it contains numerous bands and has not been opened; it rests upon a bed of coarse pebble conglomerate.

Immediately to the north of this, and extending to Mount Flora, is a vast intrusive mass of trachyte, which may be well seen in Stockyard Creek, which flows over it near Waite's selection. Fragments of altered coal occur in the bed of the creek, and these have no doubt been washed out from the Coal Measures which form the hills higher up the creek.

From the foregoing it appears that the Nattai River Valley marks the general course of a line of great disturbance; for in frequent places along the river for a distance of 6 miles from Mittagong, we find diorite and trachytic rocks which have disrupted and altered the overlying Coal Measures and Hawkesbury beds. The more prominent hills also indicate to some extent the points of disturbance. The important conclusion to be derived from the examination of these geological features is in short this, that we may not expect marketable coal for ordinary household and steam purpose to be found in the vicinity of these intrusive igneous rocks; and therefore the most favourable localities to search for coal would be in those portions of the parishes of Berrima, Jellore, and Colo, where the Coal Measures show little or no signs of disturbance. Such localities occur to the south of Smith's Creek and the Gap Creek, and again on the eastern side of the river, to the south-east and east from the head of Stockyard Creek. Though even in these areas I noticed some narrow trachyte dykes. Close to the Colo gates on the Great Southern Railway and again about 1½ mile to the north-west, Messrs. Campbell Mitchell, Fraser Martin, and others, have already commenced to sink shafts in the Hawkesbury sandstone to prove the underlying Coal Measures.

These

These are favourable positions for testing the formations; but the coal is not likely to be pierced at a less depth than 350 or 400 feet.

There are extensive deposits of rich iron ore in the Mittagong district; one of the largest of these is that which occurs on the property of the Fitzroy Iron company, and which has been and is still being deposited from spring water issuing from near the junction of the trachyte with the Hawkesbury and Wianamatta beds; it consists of hydrous per-oxide of iron. The previous attempts to work it have failed, owing, as I am informed, to mismanagement of the works and the then high cost of smelting. These are difficulties which will sooner or later be overcome, and there is no reason why this district should not become an important iron-producing one.

The following remarks of the late Rev. W. B. Clarke, written in 1859, will almost apply at the present time: "The value of the coal, iron (and if ever discovered, limestone), near Mittagong will probably be considerable; in the present state of affairs iron can be produced cheaper in Europe, but property containing the former mineral will be called into play by the extension of railway communication, which will enable iron to be smelted more cheaply than at present."

No limestone has been found in the locality, but it occurs in quantity near Marulan.

I have, &c.,

C. S. WILKINSON,

Geological Surveyor in charge.

The Under Secretary for Mines.

#### APPENDIX C.

Sir,

I have the honor to furnish herewith an epitome of the losses sustained by the Department of Mines in the destruction of the Mining and Geological Museum, by the burning of the Garden Palace; together with a short statement of the success of the efforts of the Department, to the end of the year, to replace the collection so lost.

The Mining and Geological Museum, occupying an area of 15,000 square feet of floor space, was rapidly approaching completion at the time of its destruction.

The collection, containing about 50,000 specimens, including those of the late Rev. W. B. Clarke, were in part arranged in 160 glass cases, the remainder being placed in cabinets, &c. One of the most valuable portions of the series was the large collection of characteristic fossils illustrative of the Palæozoic formations of New South Wales, which had been figured and described by Professor L. G. De Koninck, of Liège: these were arranged according to their divisions, classes, and orders, and mounted on coloured blocks coinciding with the colours of the different formations on the large geological map of the Colony, which was displayed on the wall space adjoining. Many of these fossils are figured in Professor De Koninck's published work, "Recherches sur les Fossiles Paléozoïques de la Nouvelle Galles Du Sud," but as a means of facilitating identification the actual specimens were invaluable.

The mineral collection was of a very comprehensive character, and well illustrated the various metalliferous deposits of the Colony, and the seams of coal in the Northern, Western, and Southern Coal Fields.

It embraced also collections from other colonies and foreign countries, arranged in separate courts or spaces.

An interesting display was made of the cores obtained from the strata passed through by the diamond drill at Port Hacking, Brisbane Water, and Temora.

Over three hundred specimens of woods indigenous to the Colony, collected by Mr. Charles Moore, F.L.S., Director of the Botanic Gardens, were arranged on stands and along a portion of the wall.

On the wall-space also was a collection of mining and geological maps, sections, &c.

The valuable library of the late Rev. W. B. Clarke had just been classified and catalogued, and would have been a valuable acquisition to the Mining and Geological Museum.

After the destruction of the above Museum, circulars soliciting donations were issued by the Minister for Mines, to foreign countries and the neighbouring colonies, as well as to all parts of New South Wales, in response to which many collections have been promised. From New Caledonia, New Zealand, and Queensland, have already been forwarded typical collections of their rocks, minerals, and fossils; while in New South Wales the request has been most generously met, many gentlemen handing over their private collections; and on all sides universal regret has been expressed as well as active sympathy shown. Many of the country officers of the Department, especially the Inspector of Mines—Mr. W. H. J. Sloc—have materially assisted in soliciting, collecting, and forwarding specimens.

Between the 26th September and the 31st December, 140 donations were received, many of them comprising large collections. Between these dates the number of specimens registered was 2,712, exclusive of many duplicates which have been labelled for the purposes of exchanges, collections, &c.

Two large collections of fossils from the Yass and Newcastle districts, collected by Mr. T. W. E. David, geological surveyor, and Charles Cullen, collector, amounting to over 700 specimens, have yet to be registered. A valuable collection of the remains of the carnivorous marsupials thylacoleo, thylacinus, sarcophilus, &c., as well as many specimens of extinct and living specimens of macropus, phascolumys, &c., have been obtained for the Museum, from the Wellington Caves, by James Sibbald.

From the ruins of the Garden Palace a number of specimens of gold and gems were recovered in the iron safe, while from the debris several thousands of specimens of fossils that can be identified have been recovered intact.

Owing to want of space, and pending arrangements for their display, the specimens as received have been registered, labelled, and repacked in cases until required.

Appended is a list of the donations received since the fire, to the end of the year.

I have, &c.,

JOSEPH E. CARNE, Curator.

The Geological Surveyor in charge.

## DONATIONS to the Mining and Geological Museum from 26th September to the 31st December, 1882.

Donor.	Donation.	Locality.
Hon. Dr. Renwick, M.P. Minister for Mines.	Collection of minerals	New South Wales.
Gresley, Lukin, & Co.	Collection of rocks and minerals	Europe.
Do do	Auriferous quartz	Queensland.
Do do	Tin ores	Tasmania.
King's Tin-mining Co.	Lode tin	Pheasant Creek, New England.
T. J. Thompson & Son	Silver and tin ores	Queensland.
Do do	Asbestos	Gundagai and Rockley.
Do do	Copper ore	Girilambone.
Mr. Thomas Rose	Collection of minerals	Molonglo and Clarence Districts.
Mr. Brown	Native bismuth and molybdenite	New England.
Mr. J. K. Hume	Collection of minerals and fossils	New South Wales.
Miss E. Hume	Collection of Silurian and Tertiary fossils	Yass and Dalton Districts.
Mr. W. B. Henderson	Copper ore	Wellington Common.
Mr. W. Richardson	do	Girilambone.
Mr. A. H. Hume	Argentiferous galena	Everton, near Burrowa.
Prof. W. J. Stephens, M.A.	Collection of Devonian fossils and rocks	Wallerawang and Capertee.
Messrs. Hardis & Gorman	Argentiferous galena	Colorado silver-mine, Queensland.
Mr. R. D. Adams	Collection of minerals	New South Wales, Queensland, and New Caledonia.
Mrs. Waugh	Collection of Silurian and Tertiary fossils	Yass and Dalton Districts.
Mr. Uro	Argentiferous and auriferous galena	Herberton, Queensland.
Messrs. Robert & W. H. Mackenzie	Auriferous quartz	Homeward Bound Reef, Little River, Braidwood.
Do do	Auriferous pyritous quartz	Catherine Auriferous Pyrites Gold-mining Company's claim, Eaglehawk, Windeyer.
	Auriferous quartz	Lunatic.
	Antimony	Tindale Brother's property, Mudgee.
Mr. W. M. Harris	Auriferous quartz and associated rocks	Eleanora Gold Mining Co.'s Mine, near Armidale.
Mr. C. J. Buckland	Argentiferous galena	Grand Papau Mine, Northern Queensland.
Mr. A. Armstrong	do	Great Queensland Silver Mining Co., Raven's Wood.
Messrs. G. H. Brown & Sons	Auriferous quartz and pyrites	N. S. Wales Band and Albion Mine, Big Hill, Mitchell's Creek.
Mr. A. Rudder	Collection of minerals, rocks, and fossils	New South Wales and Europe.
Mr. A. W. Scott, M.A.	Collection of fossils	Europe.
	Carboniferous fossils	New South Wales.
Mr. W. A. Dixon, F.I.C., F.C.S.	Stibnite, kaolin, manganese, and meteoric iron	do
	Nickel ore	New Caledonia.
	Lignite with retinite	New Zealand.
Mr. J. G. Griffin, C.E.	Collection of minerals and fossils	Northern districts of New South Wales.
Warden's Office	Collection of tin ores and Miocene fossils	Vegetable Creek.
Mr. T. Moustaka	Collection of copper ores	Great Blayney Copper Mine.
Rev. J. Milne Curran	Collection of minerals and fossils	Western district, New South Wales.
Messrs. J. B. North & Son	Kerosene shale	Hartley and Katoomba.
	Iron ore	Wallerawang and Blackheath.
	Various minerals	New South Wales and Victoria.
Mr. Sydney Dodds	Collection of Carboniferous fossils	Singleton.
Mr. Phillip Selfe	Collection of antimony ores, artificial oxide, crude and star antimony.	Carangula Antimony Co.'s Lease, Carangula, near Kempsey.
Mr. W. S. Wearne	Sulphate of alumina	Wingello siding.
Miss Edwards	Carboniferous fossils	Nowra.
Mr. Kelso King	Asbestos	Mount Macquarie, near Carcoar.
Messrs. Ross & Robertson	Argentiferous galena	Mount Grosvenor, near Bathurst.
Mr. Wynne	Tourmaline	Queensland.
Mr. A. Armstrong	Iron ore	Girilambone.
Mr. F. G. Warden	Hornblende	Attunga Road, near Tamworth.
Mr. W. H. Nalder	Rock specimens	Fiji.
Mr. C. S. M'Glue	Manganese ore	Near Bendemeer.
Mr. G. H. King	Lode tin	Pheasant Creek, 50 miles N.E. from Glen Innes.
Mr. James Mitchell	Zcolites	From the basalt, near Melbourne.
Mr. Gipps	Agates, opal, and ironstone	Breelung Creek, Warumbungle Mountains.
Mr. Riddle	Nickel ore	New Caledonia.
Mr. S. Samper	Titaniferous iron sand	Western district.
Mr. A. Armstrong	Pyritous quartz	Lockyersleigh, near Mittagong.
Mr. W. H. Cavil	Nickel ore	New Caledonia.
Mr. C. J. Sheridan	Tin ores	Tasmania.
Mr. T. G. Warden	Hornblende	Attunga Road.
Mr. R. W. Wormsley	Stanniferous wash	Victor Tin Mine, Stannifer.
Mr. J. Smith	Stanniferous wash and Miocene fossils	Elsmore.
Messrs. Horswill and Pemberty.	Rich lode tin	do
Mr. W. Kennedy	Lode tin	Elsmore and Butchart's reef, near Tingha.
Messrs. M'Lean Bros. & Doherty.	Stanniferous wash	Lady Jane Tin Mine, Stannifer.
Mr. J. O'Rourke	do	Lady Mary Tin Mine, Stannifer.
Messrs. Quinn and party	do	Jealousy Mine, Stannifer.
Messrs. Carr and party	Lode tin, and stanniferous wash	Red Hill, Tingha.
Messrs. W. & J. Markham	Lode tin	Young Cornwall Mine, Tingha.
Mr. S. Moore, J.P.	Lode tin and tourmaline	Stannifer and Tingha districts.
Mr. T. Jones	Galena	Star River, Queensland.
Messrs. Blackall & Hunt	Chrome iron ore	Tamworth.
Mr. Duncan M'Crae	Portion of jaw of <i>Diprotodon Australis</i>	Ferruckabad, near Glen Innes.
Mr. H. Copeland M.P.	Antimony ore	Gara, near Armidale.
Mr. W. Williams	Auriferous quartz	Currajong Gold-mining Co., Adelong.
Mr. D. Wilson	do	Challenger Gold-mining Co., Adelong.
Mr. J. F. Williams	Copper ore, asbestos, and associated rocks	Carangera Copper Mine, near Orange.
Mr. W. Kennedy	Stanniferous cement	Union Tin Mine, Elsmore.
Mr. A. Cochrane	Marble	Near Kempsey.
Mr. E. W. Rudder	Silver, lead, and antimony ores, magnesite, ochres, &c.	Warrell Creek, Nambucca River.

DONATIONS to the Mining and Geological Museum, &c.—*continued.*

Donor.	Donation.	Locality.
Mr. Dall	Obsidian	Farewell Spit, Nelson, New Zealand.
Mr. G. B. G. King	Lepidodendron specimens	Goonoo Goonoo, Peel River.
Mr. F. Guy	Silver ore	Moruya.
Mr. T. Mackay	Limonite	Isabella River, near Oberon.
Mr. J. R. Edwards	Auriferous lodestone with copper ore, limestone, &c.	Brown's Creek Mine, near Blayney.
Mr. W. H. Newman	Auriferous and associated rocks, asbestos, &c.	New Reform Gold Mining Co.'s Mine, Lucknow.
Mr. W. Cleghorn	Kaolin	Uralla.
Mr. R. T. Jones	Sapphires, zircons, and corundum	Wollombi River, county Sandon.
Do	Auriferous zircon sand with native bismuth	Mount James, Rocky River, Armidale district.
Mr. E. Rudder	Argentiferous galena	Warrell Creek, Nambucca River.
Mr. E. G. Larkins	Iron ore	Fitzroy Iron Mines.
Mr. A. Cochrane	Needle antimony ore	Carangula Mines, near Kempsey.
Mr. W. H. J. Slee, Inspector of Mines.	Tin ores, and associated rocks	New England.

Mr. H. H. Bradley	Stalactitic iron ore	Sydney Harbour.

## APPENDIX D.

## Report on the Fossiliferous Beds, Yass.

Sir,

Department of Mines, 22 January, 1883.

In accordance with your instructions I have examined the rocks in the neighbourhood of Yass, for the purpose of making a sketch map illustrative of the geology of the district.

The accompanying plan and horizontal and vertical sections are intended to show the thickness and extent of the Silurian and crystalline rocks from Bald Hill Creek to Reedy Creek, and in particular the relative positions of the fossiliferous beds.

The nature of the crystalline rocks being obscure an extensive and detailed survey would be requisite to determining their character with any precision. The plan shows them to be divided into two patches by a strip of Silurian rocks, averaging one-third of a mile in breadth, and running nearly north and south. The patch to the east is intrusive in places; the wedge-shaped patch to the west, which shows traces of vertical bedding was heaved, and slightly altered the overlying Silurian rocks. The Upper Silurian rocks at Yass consist of dark greenish-brown and indigo-coloured shales, sandstones, grits, mudstones and limestones. They are divided almost into two parts by the wedge-shaped mass of crystalline rock already referred to and it is a remarkable fact that they have undergone but very little alteration at the point of contact. Assuming that the unfossiliferous grits and shales from A to C in the vertical section are Silurian, the aggregate thickness of these beds, as far as they were traced by me, is nearly 3,000 feet. The section however probably does not include the highest or lowest rocks belonging to the Upper Silurian series in this district. The general strike of the beds is about N. 17° W. and S. 17° E., the dip being westerly, and averaging 20° in the eastern division; in the western, the dip, which is 35° at the junction of the Silurian limestone with the crystalline rock, becomes gradually reduced to 8½° between Hatton's Corner and Reedy Creek.

The general conditions under which these Upper Silurian rocks were formed may be gathered from the details of the sections.

Taking the beds in ascending order, fine laminated shales constitute the base of the section from L to K. Above these lie false-bedded sandstones, containing clay-galls and small angular-twisted fragments of shale, very similar to those which occur on a grander scale in the Hawkesbury sandstone; they also show sun-crack and ripple-mark. Overlying these sandstones are micaceous greenish-brown shales, containing great numbers of the fossil shell *Pterinea laminosa*. Beds of mudstone and two beds of limestone succeed, their fossils being generally characteristic of the Upper Silurian rocks. One species however—a coral, *Rhizophyllum* sp.—nearly approaches in appearance the Devonian *Calceola sandalina*. Above these two lower limestone beds, and separated from them by a considerable thickness of shale and sandstone, is the wedge-shaped mass of crystalline rock from G. to F. As its eastern margin slightly overlaps the Silurian rocks the nature of its junction with them is partially hidden on this side. At its western margin a satisfactory junction is revealed by a natural section in a sharp bend of Yass River three-quarters of a mile above Hatton's Corner.

The crystalline rock is here more finely crystalline than at the centre of its mass, and shows distinct planes of bedding, dipping at a high angle in the same direction as the overlying Silurian shales and sandstones. Resting on these is a third bed of limestone rich in corals, which is divided by more shales and grits from a fourth bed of limestone, which in one place is 40 feet thick. Between this and the fifth and uppermost bed of limestone, greenish brown shales intervene containing great numbers of shells and trilobites. These shales, as the map shows, are on nearly the same geological horizon as the trilobite-bearing shales at Limestone Creek, and may therefore be a continuation of them. From these shales and from the overlying limestone bed marked *c* a great variety of characteristic Upper Silurian fossils were procured for the Museum by C. Cullen, Collector to the Department.

No fossils were found by me in the beds of shale and sandstone between this uppermost limestone bed at Hatton's Corner and Reedy Creek. As however there is no stratigraphical break in their succession, they may be included provisionally in the Upper Silurian series.

All the fossils found by me in the Upper Silurian rocks at Yass are enumerated in the accompanying sections.

I have, &amp;c.,

T. W. EDGEWORTH DAVID,  
Geological Surveyor.

## FOSSILS FROM LIMESTONE CREEK, YASS.

Taken from strata probably the equivalents of those shown from C to D on the horizontal and vertical sections.

## CORALS—

Order, *Rugosa*—

Petraia sp.

Amplexus sp.

## CRUSTACEA—

Order, *Trilobita*—

Phacops caudatus.

" longicaudatus.

" latifrons.

Calymene sp.

## MOLLUSCA—

*Brachiopoda*—

Spirifer sp. (large).

Orthis elegantula.

Strophomena sp.

Leptaena sp. (allicid to depressa).

## APPENDIX E.

General geological report on country in the neighbourhood of Tenterfield, Wilson's Downfall, and Maryland; and in the parishes of Moogen, Timbarra, Bajimba and Barney Downs; with remarks on the present condition of the Boorook silver-mines, and the Plumbago-mine near Undercliff station, from observations made while inspecting certain portions of land, and generally examining the tin country on the border, by Henry Y. L. Brown, Geological Surveyor.

At Tenterfield the formation is granite of the ordinary kind, covered however with rich soil derived from the denudation of igneous rocks which previously existed in the neighbourhood. Barney Downs, Timbarra, Bajimba, and Moogem, are also on granite, with occasionally syenite, porphyry, and diorite. Hills covered with red and yellow clay and showing no rock are met with in the granite country; they appear to be the outcrop of feldspathic dykes or beds of soft slate and sandstone. From Tenterfield to Wilson's Downfall the formation passed over is also granite. The tin-bearing country, or rather that portion of it which has hitherto proved payable, commences near the Bookookoorara Creek, and extends northwards to Maryland Creek, being bounded on the west by the range forming the Queensland and New South Wales boundary. Wilson's Downfall, Herding Yard, and Ruby Creeks with their numerous branches, appear to have been the chief centres of alluvial tin-mining. They drain a section of the main range about 6 miles long, in the vicinity of the Sugarloaf, one of its summits, and flow into the Maryland and Wylie Creeks, which are branches of the Clarence River.

The granite is generally of a coarsely porphyritic character all over the district. Near Flint's selection on Maryland Creek it is replaced by schists, quartzites, and slates, with diorite dykes which continue on to near the village of Maryland, where there are also dykes of basaltic trap and granite traversing the quartzites and schists.

Quartz-veins are met with in the vicinity of the main range and elsewhere. About  $\frac{1}{4}$  of a mile north-west of the Sugarloaf there is a shaft 14 or 15 feet deep in decomposed granite on a thin quartz-vein containing tin ore, the strike being north-east and south-west. Further northward a large quartz-reef outcrops with a similar strike; it contains molybdenite and pyrites. Tin-ore attached to quartz is common in the alluvial drift here, indicating the proximity of a lode. Dykes and veins containing tin ore have recently been discovered at the head of Herding Yard Creek. These deposits partake of the nature of lodes and dykes, the formation consisting of quartz, micaceous granite, micaceous quartz, etc., with crevices and cavities containing smoky quartz crystals; they occur in a belt of four or five, striking from north-east to south-west across the range, and are enclosed in granite with an Elvan porphyry dyke on the south-east running parallel to them. Shafts have been sunk to a depth of from 10 to 15 feet by the prospectors, Funnel and party, with the exception of which no work has been done to test them. The ore is disseminated through the micaceous quartz and micaceous granite, and on the faces of the crystallized quartz-veins. There is no doubt but that these belts of tin-bearing veinstone and dykes extend for long distances through the granite, and that the supplies of ore found on the alluvial flats of the creeks have been derived from them from time to time as they were denuded by the water. To account for the amount of alluvial tin which has been deposited in certain spots, wide dykes must have been denuded, and it is reasonable to expect that such will be met with in prospecting along the line of strike.

Alluvial tin ore has been worked from the saddles of the main range at the heads of the creeks, downwards, for several miles. The sinking is shallow and of the ordinary kind, viz., through clay, sand, granite drift, and wash-dirt, the latter being sometimes found in a cemented state. There is a considerable quantity of semi-rounded quartz drift in the wash together with crystallized quartz, chiefly of the smoky variety. The wash is payable all over the creek flats in places, in others only narrow runs. Shafts are reported to have been sunk on the lower parts of some of the creek flats, without bottoming owing to running drift being met with. Near Stormer's Gully, a branch of Ruby Creek, there is a cemented drift of older date than the alluvium, probably Pliocene, covering a flat rise, which has been worked for tin. In other parts of the district there are large areas of low sandy country which may be expected to be underlain in places by similar Tertiary deposits. The schist country in the vicinity of Maryland might also be prospected for gold.

With regard to prospecting the Wilson's Downfall District, I am of opinion that a diamond drill cannot be advantageously employed as the ground is comparatively shallow and composed of soft alluvial material, and there is no appearance of any volcanic rock overlaying tin-bearing drifts. In the case of lodes or dykes a drill might be useful if the bore were put in at an angle so as to intersect the various parallel veins at a depth, although the results might be uncertain and perhaps deceptive.

In the localities where there are running drifts and water to sink through the Tiffin's Boring Machine would doubtless be found of use in prospecting for alluvial tin.

The examination and development of the dykes and lodes by prospectors is very desirable, and will lead to the discovery of larger deposits, from which the future tin supply will be obtained in years to come, on the exhaustion of the alluvial drifts.

The Plumbago Mine is situated about 5 miles eastward of Undercliff Station and 12 miles from Wilson's Downfall.

There is no appearance of any vein or lode, the material being simply a plumbagenous shale interstratified with hard bands of schist, sandstone and shale, dipping S.S.E. at an angle of  $45^\circ$ , and lying close to the granite boundary. The workings consist of two shallow cuttings from which a small quantity of material has been raised. A sample, analyzed by Mr. Watt, gave 10% of carbon, which is very low percentage and not sufficient to give the material any commercial value.

*Boorook Silver Mines.*

The mines at present at work are, the Golden Age, No. 1 South, Addison and Silver King. The furnaces, battery, and other apparatus now being erected by Mr. Davey, on the Cataract Creek, to treat the ore are nearly complete, and are expected to start work at an early date.

HENRY Y. L. BROWN,  
Geological Surveyor.

November 18th, 1882.

# SECTION ACROSS SILURIAN AND IGNEOUS ROCKS. YASS.-REEDY CREEK TO BALD HILL CREEK.

*Vertical Scale exaggerated five times.*

*True Scale*

### Index.

Silurian shales, limestones, grits and sandstones.

Diorite Andesite and Metamorphic Rock.

Total thickness of sedimentary rocks shown in section is over 2,800 ft.

*Note I.*—The igneous rocks from F-G are not necessarily interstratified with the Silurian rocks, but may form part of a dyke, which has broken out here nearly along the planes of bedding of the latter.

- A—Reedy Creek joins Yass River.
  - A-B—Dark blue shales faulted and contorted axes of anticlinals run 22° W. of N.
  - B—Dark brown grit.
  - B-C—Compact laminated shales.
  - C—Thick bed of limestone rich in corals.
- |  |  |

## ANNUAL REPORT.

TO THE HONORABLE JOSEPH PALMER ABBOTT, M.P., MINISTER FOR MINES.

Sir,

I do myself the honor to submit to you the following Report upon the progress of Mining in this Colony during the year 1883, and also upon the working of that branch of the Department charged with the administration of the Acts and Regulations relating to Mining.

The number of applications to lease Crown Land for mining purposes made during 1883 was 794 as against 1,166 made during the preceding year.

Of the 794 applications 310 were for auriferous land and 484 for mineral land.

The number of applications dealt with during 1883 was 1,194 as against 896 dealt with during the preceding year, being an increase of 298. This increase is probably due to the changes introduced in regard to the survey staff, the work being chiefly done now by staff surveyors employed by the Mining Department, and to the use by them of a new field-book, which enables them to forward to the Department field notes of their surveys without delay. The plans are prepared in the Department immediately upon receipt of the notes, by which means the serious delays in furnishing plans of surveys which formerly proved such a fruitful source of annoyance have been avoided. Further efforts are being made to expedite the work of the charting branch, which when complete will probably enable the Department to deal with applications to lease with such reasonable expedition as will remove the complaints concerning the issue of mining leases.

Of the 1,194 applications dealt with in 1883, 620 were for gold-mining leases, comprising an area of 4,443 acres, exceeding the area of the applications dealt with in 1882 by 2,085 acres, and 574 were for mineral leases, comprising an area of 16,959 acres, exceeding the area of the applications dealt with in 1882 by 214 acres.

The following table shows the quantity of land comprised in the applications to lease, made during the year 1883, and the minerals proposed to be mined under such applications :—

Minerals.	Area.	Minerals.	Area.
	Acres.		Acres.
Gold .....	1852	Copper .....	945
Antimony .....	60	Copper and tin.....	20
Bismuth .....	105	Diamonds .....	880
Coal .....	567	Manganese .....	20
Coal and shale .....	3,492	Silver .....	320
Kerosene shale .....	640	Silver and lead.....	5,480
Do and iron.....	100	Silver and tin .....	200
Coal and iron .....	640	Slate .....	110
Cobalt .....	40	Tin .....	6,076
		Total.....	21,547

The aggregate area applied for in 1883 is less by 2,298 acres than that applied for in 1882. The decrease is chiefly in gold, coal, copper, and tin. The increase is chiefly in shale, diamonds, silver, and lead. Bismuth and cobalt, which did not appear in the list for 1882, are included in the list for 1883.

The following table shows the area of land held under application to lease on 31st December 1883 :—

Minerals.	Area.	Minerals.	Area.
	Acres.		Acres.
Gold .....	3,821	Iron .....	40
Antimony.....	140	Kerosene and shale.....	640
Bismuth.....	140	Do and coal.....	2,560
Coal .....	907	Do and iron .....	100
Coal and shale.....	680	Manganese.....	100
Coal and iron .....	640	Minerals not specified .....	60
Cobalt .....	40	Silver .....	460
Copper .....	2,165	Silver and lead.....	4,840
Copper and tin.....	20	Silver and tin .....	200
Copper and silver.....	40	Slate .....	450
Chrome iron .....	20	Tin .....	6,250
Diamonds .....	800	Total.....	25,112

The

The area under application for lease at the end of 1883 exceeds the area at the end of 1882 by 145 acres.

The following table shows the area of land held under lease and the minerals to be mined :—

Mineral.	Mining Act, 1874.		Gold Fields Act, 1866.		Crown Lands Occupation Act, 1801.		Total.

3,684 yards river-bank.

The aggregate area under lease at the end of 1883 exceeds that at the end of 1882 by 1,539 acres, the increase being in the areas held for mining gold, tin, and manganese while the areas leased for mining coal, antimony, bismuth, copper, slate, and silver have decreased.

In addition to the areas set out in the above table considerable areas are held for gold-mining under miner's rights, for the purpose of searching for minerals other than gold, under mineral license, and for mining for such minerals under conditional purchase. There are also large areas of private property occupied for mining purposes.

The number of applications under the 28th section of the Mining Act for permission to mine upon or under reserved lands received during the year 1883 is 395, and the number of such applications dealt with during the year is 518.

The following table shows the areas of Reserves comprised in the authorities granted under section 28 during 1883, and the minerals to be mined thereunder :—

Coal .....	34,690	2 0
Coal and shale .....	9,340	0 0
Gold .....	230	3 32½
Tin .....	997	3 8
Copper .....	382	3 12
Cobalt and nickel .....	45	2 0
Antimony .....	2	1 28½
Gravel .....	20	0 0
Iron .....	80	0 0
Limestone .....	10	0 0
Marble .....	5	0 0
	45,813	3 31

In the bulk of the cases the authorities in respect of the above areas had not actually issued prior to the 31st December last.

The aggregate area comprised in the authorities granted in 1883 exceeds that of the previous year by 42,616 acres.

The following table shows the areas comprised in authorities issued under section 28 prior to 1883, and still in force, and the minerals to be mined thereunder :—

Gold .....	202	3 7
Tin .....	172	0 21
Coal .....	59,456	0 0
Shale .....	8	2 32
Coal and shale .....	10,400	0 0

#### GEOLOGICAL SURVEY.

During the year the Geological Surveyor in charge, Mr. C. S. Wilkinson, F.G.S., F.L.S., has devoted much attention to the replacing of the valuable collection of minerals, fossils, and geological works destroyed in the Garden Palace; and I am happy to say his labors have been attended with considerable success, though, unfortunately, no suitable building has yet been secured in which the collection can be exhibited. The want of a suitable building for a Museum occasions much needless labor to the Geological staff, inasmuch as the specimens of minerals and fossils, on receipt, have to be packed and stowed away instead of being arranged in cases for display. The collections of the Mining and Geological Museum have considerably increased, 6,659 specimens having been registered during the year, making the total number received since the fire at the Garden Palace, 9,371. These include a very complete suite of tin ores and associated rocks, collected by Mr. Wilkinson and his assistant, Mr. David, during their examination of the New England Tin-fields. From the Inspector of Mines (Mr. Slec), and other officers of the Department, as well as from private contributors, many specimens have been received.

During the year a large collection, illustrating the mineral resources and the geological features of this Colony, was prepared in the Department by Mr. Carne, the Curator, under the direction of Mr. Wilkinson, and was forwarded to the Calcutta Exhibition.

A geological map, with sections of part of the Forest Gold-field, from the survey of and prepared by Mr. H. Y. L. Brown, has been recently issued by the Geological Surveyor in charge. The printing has been admirably executed in the lithographic branch of the Surveyor-General's Department. This map is of special value in showing the unprospected areas of basaltic country beneath which auriferous beds are likely to be found. Mr. Brown's report upon the Forest Gold-field was published in the Annual Report of this Department for 1882.

During the year the Geological Surveyor in charge, in company with Mr. Geological-Surveyor David, B.A., F.G.S., has made an examination of the New England tin-fields, of the antimony lodes at Hillgrove, near Armidale, and of the bismuth lodes at Kingsgate and Hogue's Creek, near Glen Innes.

Mr. Wilkinson, also in company with the Inspector of Mines, examined the reef in the Great Victoria Amalgamated Gold-mining Company's mine at Adelong, and supervised the breaking down and testing of 3 tons of quartz from a depth of 1,030 feet in connection with the claim of the Company to the reward of £500 for the discovery of payable gold in quartz below the depth of 1,000 feet. This duty was performed by Messrs. Wilkinson and Slec with the greatest care, and resulted in the claim to the reward being recognised by the Department.

At the instance of Messrs. Augustus Morris and George Rankin, who were deputed by the Government to report upon the state of the Public Lands, Mr. C. S. Wilkinson, Geological Surveyor in charge, furnished a report upon the prospects of obtaining fresh water below the surface in the districts between the Lachlan and Darling Rivers, and beyond the Darling. This has already been published. Five geological formations have been described in which underground water may be found, and it is pointed out that artesian water will probably be obtained within the cretaceous area which comprises about 32,000 square miles and which is naturally devoid of permanent surface water; but within the area occupied by the paleozoic formations, which with few exceptions are of an impermeable nature, the supply must chiefly depend upon the rainfall conserved in tanks and dams.

During the year Mr. Geological-Surveyor Pittman made inspections in the Muttama, Mount McDonald, Carcoar, Cowra, and Mount Victoria districts. He also examined and reported upon Broughton Island and the Yalwal Gold-field, but a part of his time during the year has been devoted to his duties as Chief Mining Surveyor.

Mr. Geological-Surveyor David, since his examination in company with the Geological Surveyor in charge, has been engaged upon a detailed survey of the alluvial leads and the lodes of the Vegetable Creek Tin-mining district. Report and maps annexed to this Report.

The caves which are under the supervision of the Geological Surveyor in charge, have during the year received considerable attention, and are, under his direction, gradually becoming more attractive to visitors, additional improvements having been made during the year with a view to the preservation of the

the beautiful natural objects in them, at the same time adding to the convenience of visitors. The number of visitors to the Fish River Caves during the year was 603. Towards the end of the year steps were taken with a view to the making of improvements at the Wombeian Caves, which it is hoped will soon prove attractive to visitors.

#### Mining Surveys.

During the year Mr. E. F. Pittman, one of the Geological Surveyors, was appointed Chief Mining Surveyor, and under his direction considerable progress has been made in clearing off the arrears of surveys, and he has made such arrangements as it is thought will, in future, secure the measurement of parcels of land applied for to lease within a reasonable time after the application has been lodged. Of course the vast extent of territory over which our mineral deposits are distributed, and the isolated position of some of the areas applied for, present difficulties not easily overcome with so small a staff of surveyors as that employed by this Department; but the Surveyor-General is always most ready to render us every assistance in the way of allowing the surveyors under him to measure parcels of land for mining purposes, if by that means the work can be more speedily performed than by the surveyors on the staff of this Department. The Chief Mining Surveyor has also devoted considerable attention to the work of the Charting Branch of this Department, with a view to clear off the arrears of work and to secure promptitude in dealing with applications to lease, as well as applications under the 28th section, and I feel confident that if supported in his efforts he will soon succeed in removing one of the chief objections to the leasing system, namely, the delay in dealing with applications to lease. Should my anticipations in this direction be realised, it will not only be a source of gratification to the Department but it will tend to encourage mining enterprise. Prior to 1883 I have not been in a position to publish the number of surveys made under the Mining Act in any one year, and the advantage of such publication would not have been of the same importance for purposes of comparison as now that the greater number of such surveys are made by staff surveyors connected with this Department, but the number made in 1883 is, as nearly as can be ascertained, 620. In future I hope, with the aid of the Chief Mining Surveyor, to be able to compare the labors of the surveyors, during the year to which my report refers, with the work of preceding years.

During the year 1883, in the Charting Branch, the following work was performed:—

- A set of maps was prepared for the Amsterdam Exhibition.
- Three maps of Milburn Creek Gold-field were prepared for office use.
- One plan to illustrate the working of a machine for ascertaining the deflections of diamond-drills.
- One plan showing construction of a double whip for raising water from tanks.
- Locality maps charted up to date for Wardens and Surveyors.
- About 1,168 applications for lease, charted and dealt with.
- Action taken in about 758 cases under sections 27 and 28 of the Mining Act.
- About 2,080 diagrams on leases prepared by contract.
- About 1,040 descriptions for leases prepared.
- About 700 tracings made for Wardens, Stock Branch, Lands Department, &c.
- The original plans in office, sorted and partly re-arranged.
- A considerable number of plans, county maps, parish maps, tracings, &c., mounted by the plan-mounter.

The thanks of the Department are due to Mr. C. S. Wilkinson, for having undertaken and ably performed the duties of Chief Mining Surveyor in addition to his own as head of the Geological Staff prior to the appointment of Mr. Pittman.

#### Locality Maps.

There are probably about 4,000 parishes in this Colony of which no maps have yet been published. Many of these parishes are within gold or mineral fields, consequently, even if parish maps could be used for locality maps, they would not in those cases be available. This Department had already, prior to 1883, compiled and published twenty-six locality maps in parishes, one locality map embracing seven parishes, six locality maps of principal gold-fields, and two sketch maps of gold-fields.

#### Roads, Streets, and Gates.

The work performed by the officers of the Roads branch during the past year, under the direction of Mr. Herring, the Chief Clerk of the Department (Mr. R. H. Ormiston being the head of the branch) has been highly satisfactory. Mr. Ormiston, and the staff under him not only deal with the proclamation of new roads, the alignment of new streets, and the granting of public gates, but also the preparation of Parliamentary returns and the supervision of the advertising. I have much pleasure in submitting the following statement of the work done by the branch during the years 1882 and 1883, which, in my opinion, reflects credit upon Mr. Herring and the officers of the branch.

COMPARATIVE Statement of Work, exclusive of Parliamentary Returns and advertising work:—

	1882.	1883.
No. of papers registered .....	4,161	5,260
„ Letters written .....	2,146	2,502
New roads and streets .....	194	321
„ Gates .....	83	70
Tracings and Books of Reference sent away .....	202	359
No. of Plans sent to Executive Council .....	160	354

This shows an increase for 1883 of—

Papers registered .....	1,099
Letters written .....	356
New roads .....	127
Books of references prepared, and tracings sent away...	157
Plans sent to Executive Council .....	194

With a decrease of 13 new gates.

The

The Accountant (Mr. Farr) whose work has been largely increased during the year, has performed his duties to my entire satisfaction.

To Mr. Herring, the Chief Clerk, Mr. Binny, the Registrar, and the Wardens, I am much indebted for the ability and readiness with which they assist me in conducting the mining business of the Department.

I am under obligations to the Geological Surveyor, the Chief Mining Surveyor, and other officers, for the assistance they have rendered in connection with this report.

#### DIAMOND DRILLS AND WATER AUGURS.

During the year the diamond drills have been fully employed chiefly in boring for coal and water. The work done has on the whole been satisfactory, notwithstanding that in consequence of the serious illness of the Superintendent during the latter part of the year the Department was deprived of his valuable services. The want of the vigilant supervision which the Superintendent exercises over the work has been felt in the extra cost of some of bores put down during his absence, and the extra cost of these bores has detracted somewhat from the year's results. Nevertheless, as will be seen by reference to the Superintendent's report, we have proved coal in five different bores, namely: At Dora Creek, near Coorabong, 6 feet 3½ inches; at L. T. Creek, Lake Macquarie, in the aggregate, 23 feet 0¼ inches; at Teralba, Lake Macquarie, in the aggregate 40 feet 11 inches; at Stanwell Park, near Bulli (two bores) in one the seams measured in the aggregate 31 feet 2½ inches, and in the other 8 feet 3½ inches; making a total of 109 feet 9¼ inches of coal bored through, and the core saved is equal to 78·71 per centum of the coal pierced. At Wyong Creek, about 12 miles south of Gosford, a coal seam of 3 feet 8½ inches in thickness was discovered at the end of the year 1882. The total depth bored during the year is 6,648 feet 7¾ inches, and the average cost per foot to the public was (13s. 7½d.), thirteen shillings and seven-pence-halfpenny' the size of the bores being 2½, 2½, 3½, 3½, and 4½ inches in diameter. Three bores in search of water were completed during the year, water being found in each; the fourth bore was in progress at the end of the year. While boring for coal on the west side of Lake Macquarie a supply of fresh water was tapped at a depth of 197 feet, which rises to a height of some 30 feet above the surface, which is 20 feet above the lake level. The point at which the water was tapped is therefore considerably below sea-level. The following is an analysis of the water by the Government Analyst:—

		No. 8.	
		Grams per gallon.....	
Total solids . . . . .			122·64
Soluble solids.....	,,		120·14
Insoluble solids . . . . .	,,		1·62
Volatile at red heat ...	,,		0·88
			122·64
Chlorine . . . . .	,,		51·50
Saline ammonia. ....	Parts per 100·000.....		·4
Organic ammonia . . . . .	,,		·06

Sample No. 8 water from L. T. Creek quite bright and free from odour.

Soluble solids were found to consist of carbonate of soda, chloride of sodium (chloride of sodium 85·3 grains, carbonate of soda 34·84 grains per gallon).

Insoluble of carbonates of lime and magnesia, iron and silica.

This is a very peculiar water. The quantity of carbonate of soda may perhaps be considered sufficient to render its continued use as a water for drinking objectionable.

With reference to the ammonia, &c., it is probable that these are accidental impurities and may have been in part derived from the vessel containing the water and the cork with which it was closed.

One bore in search of a deep alluvial deposit of tin was not successful. This is specially to be regretted, as in the district where the drill was employed there is a very large extent of country containing deep deposits of stream tin requiring to be prospected, in which a drill should be of great service. The want of success in this particular case was probably due to the absence from duty of the Superintendent.

During the year attempts were frequently made to induce the miners on some of our gold-fields to employ the drills in country suitable to them, but the want of co-operation prevented the drills being so employed. There is, however, reason to believe that one or more will be employed during 1884 in search of deep alluvial leads.

In the absence of a demand for the use of the drills elsewhere they have been well employed in proving our coal-seams.

With coal measures occupying 23,950 square miles, and with such deposits of coal as we possess in this Colony, and with an output exceeding 2½ million tons per annum and rapidly increasing, it is difficult to conceive how, under all the circumstances, the drills could have been much better employed than they were during the past. In addition to the good work done by the drills the sections of the bores and the cores obtained therefrom not only furnish useful information to the public but are of very great value to the Geological Branch of the Department. Indeed if the cores obtained had to be paid for at the same rate as the core obtained from the bore on the Sutherland Estate, near Port Hacking, which was purchased by the Department for the sum of £550 in 1880, the cores obtained by means of the Government drills would represent a considerable money value.

At

At the commencement of the year the Department had five water-augers. Three of these had been forwarded to Bourke for the purpose of boring for water on the line of road from Bourke to Tiboorra, one had been forwarded to Girilambone, and one to Grafton, but no work of any moment had up to that time been done. During the year four additional augers have been purchased, and the following work has been done:—On the Bourke line the first bore was sunk 18 miles from Bourke 194 feet 4 inches, in which salt water was found at various depths; the second bore was sunk near the first 198 feet 3 inches, and with similar results; the third bore, 34 feet 6 inches, in which a small supply of fresh water was found in a drift; the fourth bore was sunk 51 miles from Bourke 89 feet 2 inches, in which a small supply of fresh water was struck at depths of 30, 61, and 70 feet respectively; the fifth bore was sunk near the fourth 103 feet, wherein a supply of good fresh water was obtained at 80 feet, running at a height of 8 feet over the surface at the rate of 60 gallons per hour; the sixth bore was sunk near the fifth 198 feet 3 inches. At a depth of 122 feet 6 inches in this bore a supply of good fresh water equal to 600 gallons per hour. This bore was in progress at the end of the year, but early in 1884 boring was discontinued at a depth of 200 feet 8 inches. From this bore 600 gallons per hour of good fresh water is running from the pipes and spouting at a height of 10 feet above the surface. Total cost of these bores is £1,807, including £504 for carriage of plant from Sydney to the scene of operations. Very great difficulties have been experienced on this line owing to want of feed and water for the horses and the trouble occasioned by the wild horses, added to which much time is necessarily lost in sending to Bourke for supplies, repairs, &c., &c., in consequence of which it was found impossible to carry on more than one bore at a time, and the cost of boring was necessarily very much increased. At Girilambone much time was lost in searching for a suitable site for boring. The first bore was sunk 155 feet 6 inches, at which depth salt water fit for stock was found; the second bore, 120 feet, salt water struck at 116 feet; the third bore, 100 feet 3 inches; the fourth bore, 112 feet 6 inches. In the third and fourth bores no water was met with. The total cost, £426 9s. 4d., including carriage of plant from Sydney to site of operations, £105 14s. 7d.

After the auger first sent to Grafton had been some time at work it was found necessary to send a second. Great difficulties were experienced in boring at this place on account of the drifts, &c., met with, and the consequence was very slow progress. Two bores, sunk to depths of 46 feet 3 inches and 46 feet 6 inches respectively, had to be abandoned without any result; the third bore was carried down to a depth of 171 feet, and was still in progress at the end of the year. The work at this place was considerably delayed in consequence of there being no tubes in the Colonies sufficiently strong to support the bore, and artesian tubes had to be imported from Scotland. The total cost of the work at Grafton to the end of the year was £415 18s. 10d., including cost of carriage.\*

In the month of February boring was commenced at Gunnedah for the purpose of supplying the town with water. The following trial bores were sunk. The first 53 feet; the second, 25 feet; the third, 23 feet; the fourth, 40 feet 11 inches; the fifth, 59 feet 9 inches; the sixth, 40 feet 6 inches; the seventh, 30 feet; the eighth, 48 feet; the ninth, 33 feet 6 inches; in each of which fresh water was found but not in sufficient quantity; but from the results obtained, the Superintendent was enabled to select a site at which a bore was sunk to a depth of 132 feet, from which a supply of fresh water is obtained for the use of the town. Total cost £241, including carriage of plant £33.

In the month of November last an auger was sent to Dungere's Sandridge Reserve, on the road from Collarindibri to the Narran, known as the Sixty-mile Track, the object being to find a supply of water for travellers and stock on that line of road. At the end of the year the bore had reached a depth of 100 feet 3 inches, still in progress. Total cost, £372, including £300 cost of removing plant from Girilambone.

On the 14th November last an auger was sent to Gorian Station, near Narrabri, to bore for water under the published conditions. Up to the end of the year 83 feet had been bored, and the work was still proceeding.

In addition to the work done as aforesaid in boring for water, an auger was sent on the 8th October last to Araluen, to test the alluvial deposits in Messrs. Johnston and M'Gregor's mine. Bores were sunk to depths of 24 feet, 24 feet 6 inches, 30 feet 6 inches, 7 feet, 41 feet 3 inches, and 41 feet 5 inches respectively. The auger was employed under the published conditions.

Sections of the bores sunk in search of water are carefully prepared, and the sites are plotted upon a map of the Colony, with particulars of results obtained, and as this information accumulates it will be immensely valuable for both scientific and practical purposes, not only in guiding the Department in the further search for water but in aiding private enterprise in the same pursuit.

#### MINERAL PRODUCTS.

In Greville's Year Book for 1884 the value of the mineral products of the Australian Colonies to the end of 1882 is set down at three hundred and four and a half millions sterling. In

\* Note.—Since the end of last year the bore has been carried to a depth of 189½ feet, when boring was discontinued, the country being more suitable for a diamond drill than an auger. A seam of coal about 2 feet thick, containing 16 inches of good bright clean coal, was passed through at a depth of 183 feet.

In view of the fact that such an enormous sum has been won from our Australian mines in little more than thirty years, one cannot fail to recognise the vast mineral resources of these Colonies, or the influence which the mining industry must have exercised in bringing population to the shores, and in expediting and facilitating the settlement of the interior.

The further fact that New South Wales occupies the first place amongst those Colonies in the production of the most useful minerals, may be accepted as evidence of the influence which the mining industry is destined to exercise upon the future of this Colony.

Already the export of minerals from this Colony has reached the value of £2,438,828, that being the amount of our exports for 1883,—the largest item being coal.

The following table shows the aggregate value of Minerals, the produce of New South Wales, for the years 1882 and 1883, respectively compared:—

Minerals.	Quantity.			Value.			Quantity.			Value.			Increase in value.			Decrease in value.		
	1882.			£ s. d.			1883.			£ s. d.			£ s. d.			£ s. d.		
Gold .....	140,460	28	ozs.	526,521	12	5	123,805	58	ozs.	458,508	16	0	.....	.....	.....	68,012	16	5
Silver .....	38,618	25	„	9,024	0	0	77,065	00	„	16,488	0	0	7,464	0	0	.....	.....	.....
Coal .....	2,109,282		tons	948,965	12	8	2,521,457	05	tons	1,201,941	12	11	252,976	0	3	.....	.....	.....
Shale .....	48,065		„	84,114	0	0	49,250	0	„	90,861	10	0	6,747	10	0	.....	.....	.....
Tin .....	8,669	18	„	833,461	0	0	9,125	23	„	824,552	0	0	.....	.....	.....	8,909	0	0
Copper .....	4,953	2	„	324,727	0	0	8,957	35	„	577,201	0	0	252,474	0	0	.....	.....	.....
Iron .....	7,476		„	37,224	2	9	3,434	13	„	26,908	0	0	.....	.....	.....	10,316	2	9
Antimony .....	1,068	18	„	16,732	0	0	375	55	„	5,555	0	0	.....	.....	.....	11,177	0	0
Lead .....	11	19	„	360	0	0	30	35	„	450	0	0	90	0	0	.....	.....	.....
Asbestos .....	7	10	„	75	0	0	.....	.....	.....	.....	.....	.....	.....	.....	.....	75	0	0
Bismuth .....	2	14	„	162	0	0	3	7	„	650	0	0	488	0	0	.....	.....	.....
Mixed minerals .....	7		„	979	0	0	31		„	160	0	0	.....	.....	.....	819	0	0
Silver lead ore .....	.....	.....	.....	.....	.....	.....	105	85	„	1,625	0	0	1,625	0	0	.....	.....	.....

From the above table it will be seen that though there is a heavy decrease in our gold yield for 1883 there is a satisfactory increase in most of the other minerals, and a very considerable increase in some. The aggregate value of the mineral products of 1883 is £3,204,901, being an increase upon 1882 of £422,557 11s. 1d., and exceeds the decennial average by £773,951.

The following Return shows the quantity and value of Gold, Coal, Shale, Copper, Tin, Silver, Silver lead ore, Iron, Antimony, Lead, Asbestos, and Bismuth produced in the Colony of New South Wales during the last ten years:—

The value of the output of minerals in 1883 exceeds that of any previous year, and the aggregate value of our mineral products to the end of 1883 is £61,064,754 11s. 2d.

GOLD.

From the reports of the Wardens and Mining Registrars it is clear that the continued drought has had the effect of preventing the prosecution of prospecting operations during the year, and has seriously retarded the working of the older fields. Whether the falling off in the yield of gold can be accounted for by the absence of sufficient water to carry on the usual crushing and washing operations, or whether the decline is not in some degree due to the gradual exhaustion of such of the deposits in the older gold-fields

as are capable of being profitably worked without the aid of steam, hydraulic, or other power, it is difficult to determine with any degree of certainty. It is quite certain that in the absence of new discoveries it is only a question of time, and that comparatively limited, before those deposits which can be worked by the individual miner must be exhausted, but with the breaking up of the drought we may reasonably expect that prospecting operations will be resumed and new ground opened. Of course there is an unlimited extent of auriferous country within the older gold-fields of this Colony which worked with proper appliances on a large scale would yield satisfactory profits and give steady employment to a large body of miners for many years to come. But until the necessary capital and skill is brought to bear upon these deposits, or some new discoveries be made we cannot hope to see any large increase upon our output.

In the Bathurst district the Wardens and Mining Registrars report—At Scrubby Rush, near the Abercrombie River, between Trunkey and Tuena, a rich gold-bearing reef has been discovered, the crushings from which were highly satisfactory. At the Bull-dog Range, Mitchell's Creek, about 14 miles from Bydal, discoveries have recently been made, which the Warden thinks will cause quite a revival of mining in the Kirkconnel Gold-field,—about 900 miners employed there, but the quantity of gold obtained cannot be ascertained.

At Mount Macdonald the prospects are brighter and the mines are prosperous; about 100 *bona-fide* miners are at work, and most of the gold won is obtained by tributors. 12½ tons from Oliver's Pad-dock gave 93 ozs. 21 grs., and 13½ tons from Matheson's gave 78 ozs. 10 dwts.; from 4,355 tons crushed 4,000 ozs. of retorted gold was obtained. At Rockley there are about 100 miners, but the mines being exclusively alluvial work has been at a standstill for want of water, except at M'Leay's claim, at Sewell's Creek, where water was struck in the tunnel. The Warden is still of opinion that a good lead will be found in the range. A battery has been erected at Oberon, and it is thought some of the old reefs will be re-worked; a trial crushing of 19 tons from Molloy's Reef gave 20 ozs. 13 dwts., and a trial crushing of stone from Blackman's Reef is said to have yielded 1 oz. per ton. At Mitchell's Creek the prospects appear to be improving. At Daylight Creek a lode has been discovered containing silver, lead, and gold. In the Carcoar division the yield of gold has increased; a good deal has been obtained from the claims at Galley Swamp. In the Orange division little has been done in the alluvial mines, owing to the scarcity of water, although several parties have obtained payable gold at the confluence of the Ophir and Macquarie. At Lucas's Gully the reefs are still worked with encouraging results; a recently-discovered reef at Ophir (the Queen of the Ranges) looks well; the stone is expected to average 1 oz. per ton; on the road between Ophir and Orange, gold is being obtained under the basalt. At Dale's Reef, about 8 miles from Orange, and 2 miles from the Ophir Road, in the direction of the Mullion, there are large quantities of quartz and wash containing gold, which, with machinery would be payable, water being abundant. The Four-mile is beginning to attract attention; the Warden has great expectations from Lucknow, and the Inspector of Mines says the tract of basalt stretching from Lucknow to Forest Reefs will be found to cover deep alluvial leads.

In the Tambaroora and Turon district, the Warden and Mining Registrars report:—At Hill End, Carver and party, who struck gold-bearing quartz in July last, have sunk to a depth of 90 feet; the vein is 8 inches wide, from which 241 tons of stone gave 640 ozs. 18 dwts. 12 grains of gold, besides some rich specimens. Up to August last 549 tons were crushed from various levels for 233 ozs. 19 dwts. 8 grs. in the Consolidated Gold-Mining Company's Mine (late Star of Peace, Krohman and other leases). Since then a fresh start has been made under a new manager. It is believed that by deep sinking, and a different mode of working, the prosperity of this mine will be revived. Extensive and important prospecting works are to be carried on in this mine in 1884, at a depth of 800 feet, which, if successful, will have an important bearing upon mining in this locality. At the Red Hill Company's Mine great progress has been made in deepening the several shafts. 302 tons of stone crushed from this mine gave 426 ozs. 15 dwts., and a parcel of pyrites from this mine, recently tested, yielded 3 ozs. per ton. From the adjoining mine 20 tons of stone from a large reef in soft country gave 2 ozs. per ton. At Golden Gully Challen and party obtained 109 ozs. from 50 tons of stone. In the Sofala division Mongan and party are re-opening the Spring Creek Reef, which has been long abandoned, and they have placed machinery on the ground with a view to the development of the reef which is 1 foot wide. On the Solitary Reef, Wattle Flat, several claims are yielding about 1 oz. to the ton. Scott and party recently crushed 30 tons for 48 ozs. of gold from a reef 1 foot wide. Lewis and party from a reef 4 feet wide have crushed 57 tons for an average of 8 dwts. per ton. Otter and party from a reef 6 feet wide in an adjoining claim are obtaining 7 dwts. per ton. On O.K. Reef, about 3 feet wide, a trial crushing of 12 tons produced 17 ozs. of gold. Heagney and party from a reef 1 foot wide on Bullock Flat crushed 8 tons for an average of 10 ozs. 11 dwts. per ton. The total yield of the division exceeds that of the previous year by 437 ozs.

At

At Ironbarks there are 26 distinct quartz-reefs, some of which have yielded 3 ozs. of gold per ton, but owing to want of capital few of these have been operated upon during late years. Of the 26 reefs only nine have been worked. The Princess Alexandria yielded 28 dwts. per ton, the Ophir 24 dwts. per ton, Monk's 20 dwts.; the other from 6 dwts. to 17 dwts. per ton. The quantity of quartz crushed at Ironbarks last year is very small, viz.: At Scott's machine 403 tons gave 313 ozs., and at Boehme's machine 90 tons gave 80 ozs. At the junction of the Macquarie and the Mookerawa the deposit consists of a wash from 30 to 70 feet in thickness, which is worked by hydraulic sluicing, the average yield being equal to 1s. per load, but the bottom of the wash is rich in some places. The Mookerawa Co. during the last six months of the year obtained 306 ozs. of gold.

In the Mudgee district the Wardens and Mining Registrars report:—At Gulgong the White Horse claim still continues to pay £16 per man per week. It has given good returns for the past nine years. Talton and party on the Home Rule are said to have divided £600 per man clear of expenses from their last washing up. Some of the claims at Canadian and Stott's Paddock have been giving fair returns. Rouse's Paddock at Guntawang has been leased for mining purposes by a Company with a view to work the continuation of no less than six different leads. The Company are erecting costly and powerful machinery, and the Warden regards the enterprise and energy displayed by them as indicating the advent of a new era in mining at Gulgong, which was at its lowest ebb. They have, since September last, sunk a shaft over 100 feet; the same Company have also taken up land for mining purposes on the Black Lead and Home Rule, and it is expected they will develop these localities. The drought has been very severe and has seriously retarded operations. 30 tons of quartz, crushed from the Old Gulgong Reef, yielded 1 oz. 3 dwts. per ton. The quantity of gold sent from Gulgong for the year was 2,701 ozs., and from Mudgee 2,016 ozs. In the Wellington division mining is said to have been steadily declining during the past five years, due to the dry seasons, the absence of discoveries of new fields, and the gradual extinction of the *bona fide* digger. At Tomingley 2,693 tons of stone have yielded 2,081 ozs. 8 dwts. 5 grs. of gold. During the first eighteen months, after the discovery of this field neither water nor crushing machinery were available. Three lines of reef have been opened on this field (at Tomingley the deepest shaft is 112 feet, reef 4 feet wide), but no alluvial deposits have yet been discovered; from the flatness of the country and the absence of surface indications it is difficult to prospect for alluvial leads by means of sinking shafts, and the Mining Registrar thinks it should be prospected by boring from two of the claims. On the Myall Plain 210 and 70 tons respectively have been crushed from large quartz-reefs, one being 3 feet wide, and the other varying from 9 inches to 3 feet, the yield therefrom being equal to 3 ozs. per ton. At the Ten-mile Ridges, 18 miles from Tomingley, there are four distinct reefs opened; 20 tons from a large heap of stone raised by the Specimen Hill Company was crushed at Parkes (distant 25 miles), and gave 33 ozs. 13 dwts. of gold. Two lots of 20 tons each from two other reefs yielded 13 ozs. 5 dwts., and 13 ozs. respectively. The locality is nearly deserted on account of the scarcity of water and absence of crushing machinery.

In the Lachlan district the Wardens and Mining Registrars report:—At Forbes the British Standard Company, Bald Hills, the lead, which is about 180 feet deep, is 100 feet wide, wash 2 to 3 feet in height, yield from  $\frac{1}{2}$  to  $\frac{3}{4}$  oz. per load. During the year the Company obtained 844 ozs. Murphy and party,—trial washing of 8 loads gave 14 dwts. per load. The lead will probably be thoroughly tested as several claims and leases have been taken up. At the Pinnacle Reef two leases are at work; one party had a crushing of 300 tons, which yielded 6 dwts. to the ton, which did not pay expenses; they also during the year crushed 350 tons for 10 dwts. per ton. Other crushings from the Pinnacle Reefs have yielded from 6 dwts. to  $1\frac{1}{2}$  oz. per ton; the reefs are large and the stone easily raised, but the crushing plant is 3 miles from the reef, the carting costs 3s. and the crushing 12s. per ton. The yield of gold at Forbes for 1883 exceeds that of 1882 by about 700 ozs., due chiefly to the yields from the Bald Hills and the Pinnacle Reefs. At Grenfell only four mines at work; from the Enterprise Reef, which has been worked for eighteen years, one party raised 200 tons of stone, which yielded 21 dwts. per ton; 36 tons from Lawson's Reef gave 23 dwts. per ton, reef 1 foot wide. At Parkes the old alluvial leads are nearly exhausted, but there is shallow ground which would pay to sluice if water could be brought to bear upon it. The Bonnie Dundee Reef, which was abandoned two years and a half since, has been taken up by Medlyn and party, who have crushed from it 2,773 tons for 1,501 ozs. 11 dwts.; the vein averages about 18 inches; another party on the same line of reef have crushed 352 tons for 431 ozs. In April a new reef was discovered at M'Gregor's Paddock; 27 tons of the surface stone gave 106 ozs. 4 dwts.; the last crushing of 40 tons gave 1 oz. 12 dwts. per ton; 2,626 tons of quartz crushed during the year at Parkes gave 1,404 ozs. 18 dwts. of gold, and 3,089 tons of alluvium gave 661 ozs. 6 dwts. At Temora, Lucas and party came on a rich deposit in August last, from which 500 loads gave 240 ozs., besides rich specimens; 942 tons, raised by the South Australian Company, yielded 360 ozs. 15 dwts. 13 grs. Public crushing 313 tons for 455 ozs. 18 grs., and seven loads of pyrites gave 15 ozs. Conway and party, at about 6 miles west of the Halfway House, on the Barmedman road, crushed

crushed 20 tons of quartz from their prospecting claim for 18 ozs. of gold. The Warden says the Temora district, to use an old mining phrase, "has not even been well scratched." It would be absurd to say that it has been one quarter prospected either for gold in quartz or alluvium. There are those who indulge the hope that rich as have been the yields of gold at Temora in the past, the future will tell quite as pleasing a story, nor is such expectation by any means extravagant. Taking Temora as the centre for 30 miles in any direction (how much further I cannot say), the country gives strong indications of being auriferous, and I have seen within a few miles of Temora several places quite as "likly looking" for gold in alluvium as the celebrated Temora valley itself. The Warden estimates the output of gold at Temora for the year at 13,757 ozs. 8 dwts. 6 grs., of which 600 ozs. was from quartz, the balance from alluvium. At Barmedman the quantity of stone crushed was 7,851 tons, yielding 4,652 ozs. 8 dwts. 13 grs., the highest yield being 1 oz. 14 dwts., the lowest 6 dwts., per ton. The greatest depth from which stone has been raised is 120 feet. Some prospecting has been done for alluvial leads, but, owing to the flatness of the country and the absence of surface indications, without success. At Young the work done by Minter & Co. and the owners of the adjoining mines has proved the lead to be of considerable value and great promise; the depth of the lead is about 80 feet, the wash averages about 3 feet, with a yield of about 4 ozs. per cubic yard. At Murrumburrah there are about 100 miners employed at Blind Creek, most of them making good wages; depth of sinking, 30 feet; wash, from 3 to 12 inches. At Wombat operations retarded by scarcity of water; the quantity of gold purchased by the Banks at Young was 2,337 ozs. 5 dwts. 10 grs.; the yield of gold in the Young division for 1883 exceeds that of 1882.

In the Tumut and Adelong districts the Warden and Mining Registrars report:—In the Gundagai division little was done in alluvial mining during the year, but the quartz-reefs are more promising than those at Bongongolong, having yielded 1 oz. to the ton, but they have been abandoned owing to the influx of water, and the fact that there is no crushing plant within an easy distance. Harford's claim on the Kimo Reefs is paying nearly 1 oz. per ton; 152 tons crushed for 129 ozs. 5 dwts.; average width of reef, 18 inches. At Tarcutta the reefs are numerous, large and easily worked, and average 8 to 10 dwts. per ton, but that quantity of gold is barely sufficient to pay the cost of carriage to Adelong, and the crushing charges leaving no surplus to pay for breaking down and raising; these reefs should pay handsomely with a crushing plant on the ground. At Hillas Creek payable reefs have been discovered; 45 tons from one crushed at Adelong yielded 172 ozs. A shaft has been sunk 130 feet, on another the stone from which yields from 3 ozs. to 4 ozs. per ton, while from another reef about 1 mile distant, 33 tons crushed yielded 126 ozs. 7 dwts., the cost of carting to Adelong and crushing being 30s. per ton. At Muttama 3,000 tons of alluvium puddled yielded 1,300 ozs. There is a proposal to prospect by boring the large Flats extending for miles on each side of the Murrumbidgee for a lead which has been worked on both sides of the river to the edge of the flat where the water stopped further operations. At Adelong the Great Victoria Company are now raising payable quartz from upwards of 1,000 feet below the cap of the reef. The success which has attended the enterprise of this Company and other Companies at Adelong should encourage owners of other quartz-mines to test their reefs to greater depths than have yet been reached as there is no reason why reefs in other localities should not pay in depth as well as at Adelong. The Williams' Mine has been sunk to a depth of 930 feet, and a contract has been let to sink 100 feet deeper. The reefs in this Colony are too often abandoned before they have been thoroughly tested, and if mine-owners elsewhere profit by the experience gained at Adelong the rewards paid by Government to the Great Victoria Company will be money well spent. The falling off in the yield of gold at Adelong is probably due to the fact that in one of the principal alluvial mines washing operations have been suspended during the construction of important non-productive works. The alluvial mine of Mr. A. D. Shepard, as well as that belonging to Mr. Travers Jones, employ a large number of men, and the works are being pushed forward with vigour. In the former the lead appears at present to have diverged from its course necessitating some dead work. In the latter the lead is 48 feet deep, 300 feet wide, from which 230 trucks of wash-dirt are raised during each shift of eight hours. There is a large tract of auriferous alluvial country along the bed of the Adelong Creek, below Travers Jones' Mine, but unfortunately the land has been alienated. 6,829 tons 12 cwts. of quartz crushed yielded 5,993 ozs. 14 dwts. 12 grs. of gold. At Mt. Ardrah, Brown and Co. crushed 16½ tons for an average of 3 ozs. 13 dwts. per ton, Cole and party 30 tons for 4 ozs. 12 grs. per ton, Millar and party 6 tons for 4 ozs. per ton. Others have obtained good returns though not equal to the foregoing. There are several parties prospecting, and there is a probability of a valuable field being opened, but unfortunately the land upon which the discoveries have hitherto been made is private property. At Main Adelong a party working on reserved land under the 28th section of the Mining Act have sunk a shaft 86 feet, from which 80 tons of quartz crushed gave 21 dwts. per ton. There are indications of several abandoned mines in and around Adelong being reworked with profitable results. At the Black Range, Albury, there are three small crushing plants, the number of claims is 13. 233 tons of quartz crushed averaged 1 oz. 11 dwts. per ton. At Portuguese Gully the reefs from 3

to 18 inches wide, country soft, yield over  $1\frac{1}{2}$  oz. per ton. At the Hawksview Mine, near the Black Rango, 16 tons crushed averaged over 5 ozs. per ton. At Kiandra there are three Hydraulic Sluicing Companies; one at New Chum Hill made their first trial in April last and commenced work in May, working day and night; the water from the nozzle removes 60 tons of earth per hour, but the beds of shale and pipeclay slightly retard the washing. During the year the nozzle worked 3,101 hours, and is calculated to have removed 180,000 tons of earth to the 8th December when it was stopped for the purpose of cleaning up. Much dead work has had to be done in clearing the way for future operations. One at the Eight-mile commenced sluicing on the 26th July, from that date to the 24th November the nozzle worked 1,839 hours, and is estimated to have removed 90 tons of earth per hour, the bed of wash being very favourable for sluicing. The one at Fifteen-mile has worked during the year, but the results at this are said to have been less satisfactory than at the other two. There is a prospect of the resources of the Gundaroo Division being speedily developed by sluicing.

In the Southern District the Wardens and Mining Registrars report:—The drought has been very severely felt. In the Braidwood division the scarcity of water has never been so severely felt before, in consequence of which large numbers of miners have sought employment in other callings. The falling off at Araluen is mainly due to the great expense of stripping the earth overlying the wash. At Nerriga the drought entirely prevented the prosecution of prospecting operations that had been entered upon; it however enabled work to be carried on successfully in the bed of the Shoalhaven. Though no mining is now being carried on in the Yass division there are indications of quartz and alluvial gold, as well as of lead and copper. At Captain's Flat, in the Queanbeyan division, the reef averages 30 feet wide, and yields about 5 dwts. per ton in Emerson's claim, and in Montgomery's claim the reef averages 15 feet wide, and the yield averages 6 to 7 dwts. per ton. At Mac's Reef the average width of reef is 2 feet, and the average yield about 1 oz. per ton. At Brindabella a trial washing of the alluvial drift gave a satisfactory yield. At Kydra mining has not progressed owing to want of capital to develop its resources. The deposits here, as at Kiandra, can be worked successfully only by a Company prepared to risk the expenditure of money. To such a good return would be the result. Payable gold has been found on the Kybran River about 3 miles from Kydra. At Yalwal the work is limited to four claims. The quartz crushed from them is rather more than 3,000 tons, yielding 1,550 ozs. The proprietors of the old Pinnacle mine have begun to take down the hill on a face and to put through about 100 tons per week. There is a large area of rich alluvial ground at Nelbothing, in the Bombala division, which has hitherto been neglected owing to its elevation and the want of energy and capital to bring water on to the ground; but Messrs. Eisonstadter have secured 100 acres in claims and have machinery on the ground for raising 60,000 gallons of water per hour, to a height of 250 feet to work this deposit by hydraulic sluicing. The terraces at Montreal are still being worked by a few miners, 700 loads washed averaging  $3\frac{1}{2}$  dwts. per load; depth of sinking, 20 to 25 feet, and the quartz on the south side of Mount Dromedary yields 1 oz. per ton. The development of the Belle of Australia line of reef at Wagonga has been retarded in consequence of the reef being included in a forest reserve, but permissions will be granted under the 28th section of the Mining Act. The reef is 2 feet 6 inches wide, the last trial crushing of 2 tons yielding 3 ozs. 13 dwts. per ton; other trial crushings of quartz taken promiscuously from various depths have given satisfactory results. The alluvial workings on Mount Dromedary have been stopped from want of water.

The Warden of the Albert District reports:—Mining languished during the early part of the year from want of water, but the rains in February, May, and October, enabled the miners to wash up the greater part of the wash-dirt stacked, but there are several heaps still awaiting another fall of rain. The rainfall during the year amounts to 634 points. The Granite Diggings are nearly abandoned; there is some surface earth for puddling, which will last about twelve months longer. Of the new ground opened at Mount Brown that at Four-mile yielded gold from the surface to a depth of 4 feet. McCulloch obtained 35 ozs. in one month, Kerr and Russell 40 ozs., and others smaller quantities. At One-mile a party broke through the cement, which had been regarded as bottom, and at a depth of 10 feet struck a lead which yielded  $1\frac{1}{2}$  dwts. to the dish. Several shafts have been sunk to depth of 80 feet, three of them have struck gold, but it is not yet certain that this is a regular lead. On Mount Brown Creek a shaft has been sunk to a depth of 200 feet, and a drive has been constructed 61 feet, and the colour of gold found; there are signs of water in the mine. The machinery at the quartz-reefs on the Wittabrenah Creek was got to work in June, and trial crushings from several claims with the following results:—Pioneer Reef, 12 dwts. 2 grs. per ton; Phoenix Reef, 14 dwts. per ton; Rosemount Reef, 11 dwts. 3 grs. per ton; and Elizabeth Reef, nearly 1 oz. per ton. The scarcity of water is the great difficulty in connection with quartz-mining, and the charge for crushing is £2 per ton. Attached to Mr. Warden King's report is an interesting meteorological journal. The Inspector of Mines is of opinion that the Granite and Tipperary Gullies, which are in a tract of country 50 miles long by about 10 miles wide, will sooner or later be united by deep leads or other workings. There are favourable indications of a gold-field visible about midway between Mount Brown and Wilcannia.

In the Peel and Uralla district the Wardens and Mining Registrars report:—At Nundle the alteration of the Marquis of Lorne Co.'s mine works were not completed till June last, since which time 600 ozs. of gold have been won. A new reef, discovered by King and party at Bowling Alley Point, from which 48 tons yielded 2 ozs. 12 dwts. of gold per ton, but the work has been delayed by litigation. Nethersole and party have also reported a new discovery near Foley's Folly, from which they have crushed 21 tons of quartz for a yield of 189 ozs. The shaft is 50 ft. deep, the vein from 1 to 6 inches wide. Kennedy and Shorter, near Hanging Rock, crushed 11 tons for an average of 3 ozs. per ton, besides 500 ozs. in patches. Wilkins and party crushed 200 tons from the Old Opossum Reef for an average of 15 dwts. per ton. In the Scone division 770 tons of quartz have been crushed for 550 ozs. 13 dwts. 16 grs. From the Eleanor Mine at Hillgrove, Armidale, 60½ tons of ore, sent to England, realized in Sydney £593 9s. 8d. Since then a battery, &c., have been erected on the mine which occupied the greater part of the year, but since its completion 78 tons have been crushed for a yield of 71 ozs. 19 dwts. 18 grs. Sluicing operations at Uralla have been retarded by want of water. Matheson and McIntyre obtained 137 ozs. of gold from 280 tons of quartz. Neal and party at Upper Bingera obtained 1,066 ozs. of gold from 23 tons, and Hanton, Bros., from 156 tons (including 70 tons of headings), obtained 605 ozs. 17 dwts., the reef being 8½ feet wide. 390 ozs. of gold obtained by sluicing at Glen Elgin (Glen Innes Division) by 25 miners.

In the New England district the Warden and Mining Registrars report:—Discovery has been made of gold in cement beds at the heads of gullies, which have been rich in alluvial gold, the cement and gold-bearing drift underlie basalt; and at present it is impossible to develop these deposits from want of water, but it is thought they will prove very valuable. An alteration is proposed in the treatment of the material at Poverty Point, by which it is expected a great saving of gold will be effected. In addition to the hydraulic sluicing a battery is to be employed to crush the harder portions of the granite and the quartz-veins through which the gold is evenly distributed. Should this mine prove payable it will lead to the opening up of a large extent of similar country, provided water can be brought to bear upon it.

The Warden of the Clarence and Richmond District reports:—There are comparatively few miners working at Nana Creek, and only two shafts have been sunk to a greater depth than 100 feet. At Dargue's battery 410¼ tons of quartz crushed yielded 553 ozs. of gold. At the Lady Matilda battery 60 tons crushed for a yield of 31 ozs. 2 dwts. The prospecting works at the Tower Hill Co. at Dalmorton have been carried on, but without success so far. The Union Co., 5 miles from Dalmorton, have erected a battery and sunk five shafts varying from 25 to 130 feet, width 2 feet 2 inches. From the Hercules Reef, 1 mile from the Union Co., 11 tons crushed gave 1 oz. 18 dwts. per ton.

The Warden and the Mining Registrar of the Hunter and Macleay Division report:—There has been great depression at Copeland in consequence of the leaseholders, most of whom are miners employed in collieries, being unable to keep on the required number of men to work their leases. The reefs are not likely to be profitably worked until the small holdings are replaced by larger leaseholds, worked systematically according to the most improved methods, with the aid of the necessary labour-saving appliances; the falling off in the yield of gold is very considerable, exceeding 50 per cent. 3,984 tons of quartz having yielded 2,532 ozs. 16 dwts. 11 grs. of gold; this does not represent all the gold won as the bank purchased 2,960 ozs. 9 dwts. 5 grs. of reef gold, and 38 ozs. 16 dwts. 2 grs. of alluvial gold during the year. The greatest depth reached in the reefs in the Dungog division is 150 feet perpendicular, the average width of the veins is 1 foot with good walls, and the country not very hard. 873 tons of quartz crushed gave 1,028 ozs. of gold.

In the Cobar District the Warden reports:—The country in parts of this district is auriferous, with numerous quartz-reefs, and no doubt when prospected payable gold will be found on the West Bogan and Mulga Blocks, where there are very good indications. The labour conditions of the four gold leases in force in the district have been suspended in consequence of an insufficient supply of water to carry on the work. The Inspector of Mines states that the country between the "Restdown Hotel" and Nymagee, a distance of 25 miles, has the appearance of being auriferous. Prospecting in this region will probably result in the discovery of payable gold.

The following information has been kindly furnished by R. Hunt, Esq., F.G.S., the Deputy-Master of the Royal Mint.

QUANTITIES of gold, the produce of New South Wales, received into the Royal Mint, Sydney, during 1882 and 1883 compared.

The following table is compiled from information furnished by the Collector of Customs:—

## EXPORTS OF GOLD—1883.

Gold.			Quartz Tailings and Pyrites.		Total.		
Quantity.	Value.		Quantity.	Value.	Quantity.	Value.	
ozs. dwts. grs.	£		{ Tailings, 2,163 pkgs. Pyrites, 1,479 cwt.	£	ozs. dwts. grs.	£	
31,261 1 18	125,983			3,856 } 1,970 }	32,810 1 18	131,800	

Following the usual practice of adding the quantity of gold exported to that sent to the Mint for coinage as the nearest approach to the quantity of gold won during the year the result would be that the output of gold for the year would appear to be 154,587·48 ozs., valued at £582,575, but Mr. Hunt says that of the 31,261 ozs. 1 dwt. of bar gold exported in 1883—30,781 ozs. 17 dwts. had passed through the Mint, and is included in the return of gold received for coinage, so that after making the necessary deduction the output of gold for 1883 would appear to be 123,805·58 ozs., valued at £458,508 16s., being less by 6,717·7 ozs. in quantity, and £37,480 19s. 3d. in value than the output of 1882. It is however to be noted that it is more than probable that a large proportion of the gold won in the Albert district passes out of the colony without being included in either Mint or Custom House returns, and the same may be the case in a less degree in regard to some other gold-fields near the borders.

The output of gold according to the returns furnished by the Mining Registrars is less than the quantity sent to the Mint by 16,628 ozs., but this must be due to the fact that the Mining Registrars' returns are more incomplete than usual.

RETURN of gold for 1883 from Mint and Mining Registrars compared :—

The quantity sent to the Mint exceeds that returned by the Mining Registrars by .....

The output of gold for 1883, according to the returns furnished by the Mining Registrars, is less than that of 1882 by 35,317 ozs. This result is confirmatory of the statement made above as to the incompleteness of the returns collected by the Mining Registrars, the out-put of 1883, according to the ordinary test, being only 6,717·7 ozs. less than that of 1882.

Decrease in yield for 1883 .....				35,317

The following table shows the results obtained from some parcels of alluvium washed during the year 1883, and compared with a similar return for 1882. The result is not gratifying either as to the quantity treated or as to the average yield. It is, however, possible that had the returns been fuller (of course the quantity contained in the table is only a very small proportion of the material treated) the average yield would have been much higher.

The quantity included in the table for 1883 exceeds the quantity included in that for 1882, which I trust may be regarded as an evidence of increased zeal on the part of the officers charged with the collection of the returns, as also of the decrease of that prejudice on the part of some of our miners, which led them to refuse information concerning the result of their operations. The average yield is not so high as that for 1882, but it is still good, and if a return of all the stone crushed could be obtained the average would probably be still lower, but the return would be more valuable for statistical purposes as giving practical evidence of the value of our quartz-reefs.

The number of miners engaged in gold-mining during the year, according to the returns furnished by the Mining Registrars, is 6,750. Of these 5,742 are Europeans and 1,008 are Chinese. Comparing these numbers with those given in the report for 1882, we find a total decrease of 2,465 miners, being a decrease of 2,101 in the number of Europeans and a decrease of 364 in the number of Chinese. This decrease appears to be mainly due to the severe drought.

Taking as in former years the output of gold divided by the number of miners as indicating the average earnings of the miners, we find that each miner earned 18'34 ozs. of gold, valued at £67 18s. 6-53d., for the year. Taking into consideration that mining operations were retarded more or less by drought in all the districts during some part of the year, the foregoing figures compare very favourably with the results as to the earnings of miners in 1882.

It is gratifying to find that efforts of a more practical nature than hitherto are now being made to solve the problem how to extract the gold from pyritous matters by some process which combines expedition, efficiency, and moderate cost. Whether any of the processes at present before the public satisfy all these conditions it is impossible yet to say, but the tests made justify the hope that they will lead to the extraction of a larger proportion of the gold at a very much reduced cost. At the present time the Watson's Reef Company is treating pyrites at Murrumburrah, for which purpose they employ extensive machinery, and are said to obtain satisfactory results. Machinery has also been erected on the Sebastopol Reefs for the purpose of treating pyrites on a large scale. I have not been able to ascertain the process employed at either of those places, but I understand that at the latter place some kind of chlorination process will be used. Whether it is similar to that used at Sandhurst, a description of which I published some time since, I cannot say. Then it is proposed to introduce the necessary apparatus for working the Koch and Huntingdon process, which appears to be a recently devised improvement by Professor Huntingdon, of the London University, upon a process used in Victoria some years since, at some of our mines; and, I understand, a company has been, or is about being formed to work the process patented by Mrs. E. B. Parnell, which, judging from the description given, appears to be rather an improvement upon, or perfecting of, the old roasting and amalgamation process than a new process, the improvement, consisting in the bringing together of the gold (which has been freed by washing from all coatings of soluble sulphates, &c.) and the mercury (which has been floured) in the conditions most favorable to their perfect amalgamation. Mr. W. A. Dixon, F.I.C., F.C.S., has tested the process on several samples of pyrites, with a roughly devised apparatus, and obtained very satisfactory results. He says, "I believe that E. B. Parnell's process will actually separate gold from pyrites." Mr. J. Cosmo Newberry has also tested the process, with excellent results, and he says the process is simple and easily worked. Mrs. Parnell publishes a list of parcels of pyrites treated by her, varying from 2 lbs. to 6½ cwt., from which she extracted all the gold as shown by assay, except a small quantity, varying from 1 dwt. 4 grs. to 5 dwts. per ton. It is said that pyrites can be treated on a very large scale at a comparatively small cost by this process.

The

The number of *Iron* published on the 23rd November last contains a notice of the Sutherland Quartz Crusher which had then recently been tested in London. The machine is constructed on the pestle and mortar principle, and the quartz is apparently reduced by grinding. At the first trial quartz was reduced at the rate of 900 lbs. per hour to a very fine powder. Later trials are reported to have resulted in 15 cwt. of quartz, coprolite, cement, clinker, slag, and other refractory substances being reduced per hour to a sieving fineness of 120 meshes per lineal inch or 14,400 meshes per square inch. Neither the weight nor the cost of the machine are given in the notice.

During the year the following assays have been made by Mr. C. Watt, the Government Analyst:—

#### GOLD.

- Stone from Abercrombie Mountain—Silver, a trace; no gold.  
 Ferruginous Quartz from Marulan—Fine silver at the rate of 3 ozs. 5 dwts. per ton; gold, a trace (under 2 dwts).  
 Decomposed rock from Dividing Range between Lismore and Tweed River—Neither gold nor silver.  
 Quartz and Ironstone from Dividing Range between Lismore and Tweed River—Neither gold nor silver.  
 Quartzite from Dividing Range, between Lismore and Tweed River—Neither gold nor silver.  
 Pyritous quartz from Lismore District—Neither gold nor silver.  
 Ferruginous quartz from Lismore District—Neither gold nor silver.  
 Stone from Edinboro' Creek, near Ophir—Fine gold at the rate of 1 oz. 4½ dwts. per ton; silver at the rate of 16 dwts. per ton.  
 Stone from Edinboro' Creek, near Ophir—Fine gold at the rate of 4 dwts. per ton; silver, a trace.  
 Pyritous quartz from new reef near Shoalhaven—Gold, a trace (under 2 dwts. per ton).  
 Pyritous quartz from new reef near Shoalhaven—Gold, a trace (under 2 dwts. per ton).  
 Pyritous quartz from new reef near Shoalhaven—Fine gold at the rate of 4 dwts. per ton; no silver.  
 Pyrites from near O'Connell, Wiseman's Creek—Gold, a trace; silver, a trace.  
 Stone from 10 miles north-east of Orange—Fine gold at the rate of 1 oz. 4 dwts. per ton; silver at the rate of 2 ozs. 17 dwts. per ton.  
 Stone from Perico, near Eden—Silver, at the rate of 18 ozs. 15½ dwts. per ton; no gold.  
 Opaline quartz, containing pyrites, near Blayney—Neither gold nor silver.  
 Stone from a dyke 8 miles west of Gundagai—Fine gold at the rate of 1 oz. 12 dwts. per ton; silver at the rate of 16 dwts. per ton.  
 Stone from a dyke 8 miles west of Gundagai—Gold, at the rate of 8 ozs. 3 dwts. 8 grs. per ton; silver, 1 oz. per ton.  
 Pyritous quartz from Wiseman's Creek, O'Connell—Fine gold at the rate of 2 ozs. 14 dwts. per ton; silver at the rate of 16 dwts. per ton.  
 Lode stuff from Edinboro' Creek, Ophir—Fine gold at the rate of 16 dwts. per ton; silver, at the rate of 1 oz. 7 dwts. per ton.  
 Stone from Swallow's Nest, near Bathurst—Neither gold nor silver.  
 Iron ore, from near Dandaloo—Neither gold nor silver.  
 Galena from the Hume Estate, near Yass—No gold; fine silver at the rate of 11 ozs. 8½ dwts. per ton.  
 Galena from the Hume Estate, near Yass—Fine silver at the rate of 6 ozs. 16 dwts. per ton; no gold.  
 Galena from the Hume Estate, near Yass—Fine silver at the rate of 2 ozs. 9 dwts. per ton; no gold.  
 Galena from the Hume Estate, near Yass—Fine silver at the rate of 8 ozs. 19½ dwts. per ton; no gold.  
 Stone from Conoblas, near Orange—Fine gold at the rate of 16 dwts. per ton; silver, a trace.  
 Stone from New Reef at Molonglo—Neither gold nor silver.  
 Tailings from Beney's Rocks, Cargo—Fine gold at the rate of 35 ozs. 13 dwts. per ton; silver, 7 ozs. 12½ dwts. per ton.  
 Stone from Hanging Wall, Eleanora Mine, Hillgrove, near Armidale—Fine gold at the rate of 8 dwts. per ton; silver, a trace.  
 Dyke stone (horse) from Hanging Wall, Eleanora Mine, Hillgrove, near Armidale—Gold, a trace (under 2 dwts. per ton); no silver; antimony, equal to metallic 0·5 per cent.  
 Stone from Foot Wall, Eleanora Mine, Hillgrove, near Armidale—Fine gold at the rate of 1 oz. 4½ dwts. per ton; silver, 16 dwts. per ton.  
 Stibnite from Eleanora Mine, Hillgrove, near Armidale—Fine gold at the rate of 2 ozs. 12 dwts. per ton; silver, 19½ dwts. per ton; metallic antimony, 57·0 per cent.  
 Quartz from Mullion—Fine gold at the rate of 11 dwts. per ton; silver, 13 dwts. per ton.  
 Quartz from Mullion—Gold a trace; fine silver at the rate of 2 ozs. 1 dwt. per ton.  
 Quartz from Mullion—Fine gold at the rate of 8 dwts. per ton; silver, 7 dwts. per ton.  
 Pyrites from Mullion—Fine gold at the rate of 5 dwts. per ton; silver, a trace.  
 Stibnite from Hell's Hole, Mudgee Line—Fine gold at the rate of 2 ozs. 10 dwts. per ton; silver, a trace; metallic antimony, 40·26 per cent.  
 Dyke stone, Farrucabad Station, 4 miles west of Glen Innes—Neither gold nor silver.  
 Arsenical pyrites from Kingsgate, 18 miles from Glen Innes—Fine gold at the rate of 8 dwts. per ton; silver, 3 ozs. 5 dwts. per ton; metallic bismuth, 2·6 per cent.  
 Ferruginous cap of lode from Kingsgate, 18 miles from Glen Innes—No gold; silver, a trace; metallic bismuth, 0·6 per cent.  
 Arsenical pyrites from Kingsgate, 18 miles from Glen Innes—Fine silver at the rate of 12 ozs. 5 dwts. per ton; gold, a trace; bismuth, a trace.  
 Bismuth ore from Kingsgate, 18 miles from Glen Innes—Fine gold at the rate of 4 ozs. 1½ dwts. per ton; silver, 57 ozs. 3 dwts. per ton; metallic bismuth, 69·3 per cent.  
 Bismuth ore, Comstock Lode, near Yarrow—Fine gold at the rate of 2 ozs. 9 dwts. per ton; fine silver, 9 ozs. 16 dwts. per ton; metallic bismuth, 35·6 per cent.  
 Stone from Manilla—Neither gold nor silver.  
 Stone from near Bathurst—Fine gold at the rate of 2 ozs. 9 dwts. per ton; silver, 1 oz. 12½ dwts. per ton.  
 Stone from near Bathurst—Fine gold at the rate of 2 ozs. 1 dwt. per ton; silver, 1 oz. 12 dwts. per ton.  
 Stone from Peel and Uralla Gold-mining District—Fine gold at the rate of 2 dwts. per ton; fine silver, a trace.  
 Stone from Peel and Uralla Gold-mining District—Fine gold at the rate of 2 dwts. per ton; fine silver, a trace.  
 Stone from Peel and Uralla Gold-mining District—Fine gold at the rate of 6 ozs. 2½ dwts. per ton; silver, 1 oz. per ton.  
 Lode stuff from the Conoblas, near Orange—Fine gold at the rate of 8 dwts. per ton; fine silver, 2 ozs. 9 dwts. per ton.  
 Lode stuff from the Conoblas, near Orange—Fine gold at the rate of 4 dwts. per ton; silver, 1 oz. 4½ dwts. per ton.  
 Lode stuff from the Conoblas, near Orange—Fine gold at the rate of 12 dwts. per ton; silver, 1 oz. per ton.  
 Gossan from a new mine at Sunny Corner—Neither gold nor silver.  
 Stone from Gordon's Reef, 2 miles N. from Strathbogie—Fine silver at the rate of 13 ozs. 17½ dwts. per ton; no gold; metallic lead, 12·9 per cent.  
 Zinc blende and pyrites from the Folkstone Lode, New England—Fine silver at the rate of 3 ozs. 9 dwts. per ton; metallic zinc, 18·1 per cent.  
 Stone from Upper Lode, The Grampians, New England—Fine silver at the rate of 1 oz. 12½ dwts. per ton; no gold.  
 Stone from Ottery, No. 3 Lode, New England—Fine silver at the rate of 6 ozs. 19 dwts. per ton; metallic zinc, 2·0 per cent. (This mineral yielded a small quantity of lead and copper; no gold.)  
 Zinc blende and pyrites from Lower Lode, The Grampians, New England—Fine silver at the rate of 61 ozs. 13 dwts. per ton; metallic zinc, 20·0 per cent.; no gold; no tin. (This mineral yielded about 5 per cent. copper, and a small quantity of lead.)

Pyrites

- Pyrites from new lode at Four-Mile Creek, Conoblas, near Orange—No gold or silver detectable; sample too small for proper assay.
- Pyrites from new lode at Four-Mile Creek, Conoblas, near Orange—Fine gold at the rate of 10½ dwts. per ton; silver, 2 ozs. 3½ dwts. per ton.
- Quartz from Messrs. Storey & Co.'s Claim, Paddy's River—Neither gold nor silver.
- Sample from near Carcoar—Fine silver at the rate of 2 ozs. 17 dwts. per ton; gold, a trace.
- Manganese ore from near Tamworth—Silver, a trace; no gold.
- Sample of ore from Reid & Crane's Lode, Flagstone—Neither gold, silver, nor tin.
- Quartz from near Cooma—Neither gold nor silver.
- Pyrites from Rydal—Gold, a trace (under 2 dwts. per ton); no silver.
- Arsenical pyrites from Cooma District—Silver, a trace; no gold.
- Quartz from Long Flat, about 40 miles from Carangula—Neither gold nor silver.
- Arsenical pyrites from near Mt. McDonald—Fine gold at the rate of 9½ dwts. per ton; no silver. (Yielded a small percentage of copper.)
- Quartz from Bora Creek, about 20 miles east of Uralla—Neither gold nor silver.
- Mispickel from Ding Dong, Parish Parkes, County Gough—Neither gold nor silver.
- Mispickel from portion 56, Parish Parkes, County Gough—Fine silver at the rate of 3 ozs. 13½ dwts. per ton; no gold.
- Stone from reef between Stannifer and Tingha—Neither gold nor silver.
- Mispickel, from Pheasant Creek, New England—Fine silver, at the rate of 16 dwts. per ton; no gold.
- Stone from near Plant Gully, Emmaville—Fine silver, at the rate of 5 ozs. 8½ dwts. per ton; gold, a trace.
- Stone from near Plant Gully, Emmaville—Fine silver, at the rate of 15 ozs. 18½ dwts. per ton; gold, a trace.
- Stone from the New England District—Silver, a trace; no gold.
- Pyrites from Binda Mountains—Fine gold, at the rate of 3 ozs. 5 dwts. per ton; silver, at the rate of 8 dwts. per ton.
- Stone from about 5 miles from Goonoo Goonoo—Gold, a trace; no silver.
- Stone from New England—Gold, a trace; no silver.
- Stone from Sunny Corner—Gold, a trace (under 2 dwts. per ton); silver, a trace.
- Pyrites from Brown's Creek, near Blayney—Fine gold, at the rate of 3 dwts. per ton; silver, 16 dwts. per ton; copper, a trace.
- Quartz from Big Spring Station, Wagga—Fine silver, at the rate of 2 ozs. 1 dwt. per ton; gold, a trace.
- Iron pyrites from near Eden—Fine gold, at the rate of 4 dwts. per ton; silver, a trace.
- Pyritous quartz from near Eden—Fine gold, at the rate of 4 dwts. per ton; silver, a trace.
- Stone from near Glen Innes—Fine gold, at the rate of 15 ozs. 10 dwts. per ton; silver, 4 ozs. 10 dwts. per ton; bismuth, a trace; copper, a trace.
- Pyritous quartz from between Wattle Flat and Sofala—Neither silver nor gold.
- Stone from reef near Allen's Creek, 2 miles below the Grove Station, near Stanborough—Fine silver, at the rate of 2 ozs. 17 dwts. per ton; no gold.
- Quartz from Binbanang, Glanmire—Fine silver, at the rate of 18 ozs. 7½ dwts. per ton; gold, a trace.
- Stone from 970 feet level, Perseverance Mine, Adelong—Neither gold nor silver.
- Stone from 970 feet level, Perseverance Mine, Adelong—Neither gold nor silver.
- Quartz from Melrose, near Nymagee—Neither gold nor silver.
- Quartz from Melrose, near Nymagee—Neither gold nor silver.
- Quartz from Melrose, near Nymagee—Neither gold nor silver.
- Quartz from Melrose, near Nymagee—Neither gold nor silver; metallic copper, 1·7 %.
- Quartz from Melrose, near Nymagee—Neither gold nor silver.
- Quartz from a new reef at Ophir—Fine gold, at the rate of 4 dwts. per ton; silver, 2 ozs. 5 dwts. per ton.
- Quartz from a new reef at Ophir—Fine gold, at the rate of 14½ dwts. per ton; silver, 2 ozs. 5 dwts. per ton.
- Gold from a new reef at Ophir—Fine gold, at the rate of 2 ozs. 17 dwts. per ton; silver, 1 oz. 4 dwts. per ton.
- Arsenical pyrites from Upper Adelong—Neither gold nor silver.
- Mispickel from Emmaville—Fine silver, at the rate of 43 ozs. 14 dwts. per ton; gold, a trace.
- Stone from New England—No gold; silver, a trace; no bismuth.
- Pyritous quartz from Fernbank, North Bowenfels—Neither gold nor silver.
- Pyritous quartz from new reef at Tarana, near Goulburn—Neither gold nor silver.
- Blanketings from the Conoblas, near Orange—Fine gold at the rate of 1 oz. 12½ dwts. per ton; silver, 6 oz. 19 dwts. per ton.
- Mispickel from Furrucabad, near Innes—Fine gold at the rate of 4 dwts. per ton; silver, 1 oz.; no tin or bismuth.
- Quartz from Billygoa, 40 miles north of Cobar—Fine gold at the rate of 15 ozs. 18½ dwts. per ton; silver, 60 ozs. 8½ dwts.
- Serpentine, with quartz and calcite, from near Orange—Fine gold at the rate of 4 dwts. per ton; silver, 1 oz. 4 dwts. per ton.
- Quartz with mispickel from Hidden Treasure Reef, Tarrabandra, South Gundagai—Fine gold at the rate of 12 dwts. per ton; silver, a trace.
- Mispickel from Hidden Treasure Reef, Tarrabandra, South Gundagai—Fine gold at the rate of 8 dwts. per ton; silver, a trace.
- Stone from near Stony Range, Bathurst District—Fine gold at the rate of 8 dwts. per ton; silver, 2 ozs. 5 dwts. per ton.
- Stone from near Stony Range, Bathurst District—Fine gold at the rate of 5½ dwts. per ton; silver, 2 ozs. 19½ dwts. per ton.
- Stone from near Stony Range, Bathurst District—Fine gold at the rate of 8 dwts. per ton; silver, 2 ozs. 5 dwts. per ton.
- Stone from near Stony Range, Bathurst District—Fine gold at the rate of 3 ozs. 17½ dwts. per ton; silver, 4 ozs. 1½ dwts. per ton.
- Purple schist from Billygoa, 40 miles north of Cobar—Gold a trace (under 2 dwts. per ton); silver, a trace.
- Schist from Billygoa, 40 miles north of Cobar—Gold a trace (under 2 dwts. per ton); silver, a trace.
- Quartz conglomerate from Billygoa, 40 miles north of Cobar—Gold, a trace; silver, 2 ozs. 12 dwts. per ton.
- Iron ore from Wentworth, near Orange—Neither gold nor silver.
- Quartz with pyrites, from Barnedman—Neither gold nor silver.
- Quartz with slate from Nerriga District—Neither gold nor silver.
- Quartz with carbonate of copper from Nerriga District—Neither gold nor silver.
- Quartz with mispickel from Nerriga District—Gold, a trace (under 2 dwts. per ton); silver, a trace.
- Quartz with mispickel from Armidale—Neither gold nor silver.
- Quartz from new reef near Wagga—Neither gold nor silver.
- Quartz from new reef near Wagga—Neither gold nor silver.
- Mispickel and molybdenite from Glen Creek—Silver, a trace; no gold.
- Brown iron ore with iron pyrites from Dundee—Gold, a trace; silver, a trace. (Too small for proper assay.)
- Pyritous shale from Wagonga, North Head—Neither gold nor silver.
- Pyritous shale (crushed), from Wagonga, North Head—Neither gold nor silver.
- Quartz and baryta from near Glanmire—Fine gold at the rate of 7½ dwts. per ton; silver, 5 ozs. 17½ dwts. per ton.

## COAL.

From a valuable work, "The Coal and Iron Industries of the United Kingdom," published by Richard Meade, Esq., Assistant Keeper of Mining Records, I find that the areas of Coal-fields in the United Kingdom of Great Britain are:—

		Coal-fields.	Area in square miles.
England	...	Durham and Northumberland ... ..	796
		Yorkshire, Derbyshire, and Nottinghamshire ... ..	800
		Cumberland ... ..	25
		Lancashire and Cheshire ... ..	220
		Leicestershire ... ..	15
		Warwickshire ... ..	30
		Shropshire ... ..	28
		North Staffordshire... ..	75
		South Staffordshire . . . . .	93
North Wales	}	Anglesea	90
		Denbighshire	
		Flintshire	
South Wales	}	Monmouthshire ... ..	104
		Glanmorganshire ... ..	518
		Brecknockshire ... ..	74
		Caermarthenshire ... ..	228
		Pembrokeshire ... ..	76
		Gloucestershire (Forest of Dean) .. .	34
		Somersetshire (Bristol) ... ..	150
Scotland ... ..	1,720		
Ireland (estimated area) . . . . .	2,800		
Total area . . . . .			<u>7,876</u>

That the number of Collieries at work in 1880 was 3,904; the number of persons (male and female adults and children) employed above and below ground, was 484,933—the production of coal for that year being 146,969,409 tons, equal to 303 tons for each person employed. While in 1874 there were 538,829 persons employed, and the production for that year was only 126,590,108, equal to 235 tons for each person employed.

The following is also quoted from Mr. Meade's work under the head of "Resources and Probable Duration of the Coal-fields of the United Kingdom." The estimated total quantities of coal remaining and available for future use from 1880 amounted to 79,015,613,038 tons, divided as follows into the visible and concealed coal-fields of the United Kingdom at depths not exceeding 4,000 feet (40 per cent. being deducted for loss and other contingencies):—

	Tons.
England and Wales .....	69,192,056,317
Scotland.....	9,669,172,642
Ireland .....	154,384,079
<hr/>	
Total known Coal-fields .....	79,015,613,038
Total concealed Coal-fields (coal under Permian and other overlying formations at depths of less than 4,000 feet) ...	56,273,000,000
<hr/>	
	135,288,613,038

This quantity, with an annual output of 147 million tons, will last 920 years.

Mr. C. S. Wilkinson, F.L.S., F.G.S., (the Geological Surveyor in charge), in his address as President of the Linnean Society says:—"The coal measures of New South Wales are estimated to occupy an area of about 23,950 square miles. There is reason to believe that the coal-seams which are now worked in the Northern, Western, and Southern Coal-fields underlie within a workable depth an area of 3,328 square miles" (nearly half the area of the coal-fields of the United Kingdom of Great Britain). "It will be interesting to know that they contain, after deducting one-half of the total contents of the seams for waste, &c., about 14,370,000,000 tons of coal, which at the present annual rate of production of about 2½ million tons would last for over 5,000 years." From the foregoing it will be seen that the total quantities of coal remaining and available for future use in the "visible coal-fields" of the United Kingdom of Great Britain is not 5½ times as much as our Northern, Southern, and Western Coal-fields contain. As against the estimated quantity of coal in the "concealed Coal-fields of Great Britain," Mr. Wilkinson's further remarks may be quoted, viz.:—"This estimate (referring to the 14,370,000,000 tons) does not include the other good seams within the same area not at present worked." And he adds, "when we consider that in the remaining area of the coal measures (20,622 square miles) coal-seams are known to occur but have not yet been proved, we may rest assured of the stability of this great source of national wealth." Coal is already the most important of our mineral products, not only in regard to its money

money value, but also as regards the number of persons employed in and about our collieries and the aid it gives to nearly all of our most important industries. In view of the foregoing facts it can scarcely be doubted that coal-mining is destined to become the great industry of this Colony, and nothing that can be done to help forward the development of our coal deposits should be spared. Already, the diamond drills belonging to the Department have done good work in proving coal in various parts of our coal measures, as will be seen by the sections published herewith under the head of Diamond Drills; and this has been done without cost to the country.

In connection with the estimate given by Mr. Wilkinson, of the amount of coal available in the Northern, Southern, and Western Coal-fields of N.S.W., it will be interesting (with a view of showing the comparative values of the coals) to quote some remarks from the report of Mr. W. A. Dixon, F.C.S., F.I.C., upon the analysis of coals from the principal coal-fields of the world which come or may come into competition with the coals of this Colony.

It was one of the points of importance laid down by the Commission appointed by the Admiralty to investigate British coals for the purposes of the Navy, that coal "should not progressively decay, which renders it liable to spontaneous combustion." No better test of this property could be made than that to which these coals had been subjected (exposure to the summer sun for seven months during the Exhibition of 1879-80) before making the analysis, the results of which are given below.

Another condition laid down by the Commission was, that "it should possess considerable cohesion of its particles, so that it may not be broken into too small fragments by the constant attrition which it may experience in the vessel." This is fulfilled in our Northern coals, which are, with few exceptions, firm and not too easily crushed.

The following table shows the comparative specific gravity and percentages of sulphur, ash, and volatile hydrocarbons in N.S.W., and British coals:—

	Specific Gravity.	Sulphur.	Ash.	Vol. Hydrocarbons.
Average of 14 samples Newcastle, N.S.W. ....	1.311	0.91	4.97	37.55
„ 9 „ Western do .....	1.347	1.03	10.31	30.42
„ 7 „ Southern do .....	1.374	0.65	10.25	20.84
„ 17 „ Newcastle, England .....	1.246	1.24	3.82	36.44
„ 8 „ Derbyshire do .....	1.284	1.06	2.54	39.12
„ 28 „ Lancashire do .....	1.279	1.37	4.64	40.61
„ 31 „ Welsh do .....	1.318	1.34	4.15	21.15

This shows that our Newcastle coal is much denser than the English Newcastle, which it most resembles in properties. It is also higher than those of Derbyshire and Lancashire, whilst it is very little inferior in that respect to the coal of South Wales. The economic weight, or the space in cubic feet, occupied by 1 ton, would thus be in its favour, as against all these English coals, by about 3 cubic feet, or 6 per cent., so that a steamer's bunkers would hold about 6 per cent. more coal than if she were supplied by English Newcastle.

These numbers also give a gain in economic weight of about 5 per cent. in favour of our Southern coals over those of South Wales.

With regard to sulphur, "the results show that our coal contains on an average less than the coals of any of the celebrated coal-fields of Great Britain. This is a point of very considerable importance, not only as lessening the risk of spontaneous combustion, but also allowing large quantities of coal to be burned without rendering the atmosphere impure. For the purpose of gas-making, freedom from sulphur is a great advantage, as the sulphur compounds formed during the process are difficult to remove."

The quantity of ash in a coal is of some importance as it represents so much useless matter which entails expense in removing, and if in large quantities impedes free combustion. In respect of ash the coals of our Northern districts do not on an average stand so well as the English coal. The difference is, however, more than compensated for by the greater specific gravity, and consequently economic weight which enables a ship to carry more cargo.

The

The Southern coals appear on the average to be not very much below those of South Wales in value. Of the latter some are very much better, some very much worse than the average, whilst there is not so much difference in those of the former. So far as stowage is concerned the increase of ash is to some extent, or perhaps, entirely compensated for by the increased specific gravity—that is to say, that a steamer which would carry 100 tons of average coal of South Wales in her bunkers could carry 105 tons of our Southern coal, but the quantity of combustible matter would be the same, the additional 5 tons being ash. This does not afford an equivalent to the slightly increased stoking and the labour consequent on the removal of the ash, and the coal would necessarily be worth 5 per cent. less when delivered into the bunkers. Although the amount of volatile hydrocarbons in our Southern coal averages about the same as that of the Welsh coal it is greater than that of those which are regarded as *steam coals* par excellence, and hence our coals would evolve more smoke and suffer from its attendant disadvantages.

In conclusion, the results point out that the coal from our Northern coal-field is practically equal for all purposes to the best English coal, on an average of both, except that of South Wales, for the use of steamers, has the advantage of giving a more perfect combustion with freedom from smoke.

The remarks made with regard to resistance to weather-action on the Northern coals apply equally to those of the Southern Coast District. These coals differ from those of the Northern coal-field in having generally a duller appearance, higher specific gravity, more ash, and less volatile hydrocarbons—in which they approach more closely the Welsh steam coal. They are of the free burning, bituminous description.

The coals from the Western district differ considerably from the others and suffer much more from the action of the weather. They can be coked when fresh from the pit, but after exposure lose this property. These coals from their general character and properties are unlikely to be ever exported largely, but both these and numerous others not now worked, or worked in a small way only, are quite as well fitted for immediate local use as a great many coals worked in Great Britain, France, United States of America, and elsewhere, and specially suitable for smelting purposes.

In 1880 the quantity of coal raised in all the collieries of Great Britain was equal to 303 tons per year for each person employed, while in the collieries of this Colony 313 tons were raised in 1880 for each person employed. I am not in a position to compare the results since 1880, because I have not the figures for Great Britain; but in this Colony the average for each person employed in 1881 was 432 tons, in 1882 it was 468 tons, and in 1883 it was 460 tons. A comparison between our own coal-fields show the following results:—

QUANTITY of Coal raised for each Person employed:—

	Northern.	Southern.	Western.
	Tons.	Tons.	Tons.
1882 .....	452 .....	389 .....	344
1883 .....	454 .....	390 .....	777

In 1880 the largest output for each person employed was obtained in the South Staffordshire and Worcestershire Coal-fields, viz., 423 tons, and the lowest output in 1880 for each person employed was obtained in the Westmoreland Coal-field, viz., 122 tons.

The total output of our collieries for 1883 exceeded  $2\frac{1}{2}$  million tons, the exact figures 2,521,457 tons 1 cwt. being 412,175 tons in excess of the output for 1882. The average price per ton in 1883 being 0s. 6'40d. as against 8s. 11'07d. per ton in 1882.

There has been considerable activity in the search for coal during the year, and there is reason to believe that several new collieries will be shortly opened up. A new coal company has been formed, and has started working a seam of coal between 4 and 5 miles from the Mittagong Railway Station; and one has been formed to work a coal seam about 3 miles from the Erith Colliery; the seam is said to be 7 or 8 feet thick; and a seam of coal, 5 feet thick, has been struck by boring about 1 mile south of the Erith Colliery. The Berrima Coal Company, while working the upper seam, is boring for another seam of coal some 60 or 70 feet deeper. A seam of coal is reported to have been discovered at Bungawalbyn, about 25 miles from Lismore, but nothing has been done on it yet. A seam of coal, 2 feet thick, containing 15 inches of good, bright, clean coal, was passed through at Grafton at a depth of 183 feet, while boring for water. Coal of the best quality, and in very large quantities, is said to exist in the Coolah Valley.

## QUANTITY and value of Coal raised from the opening of the Coal-seams to 1857 inclusive.

Year.	Quantity.	Average per ton.	Value.	Year	Quantity	Average per ton.	Value.
Prior to		£ s. d.	£			£ s. d.	£
1829	50,000	0 10 0	25,000	1844	23,118	0 10 8·34	12,363
1829	780	0 10 1·23	394	1845	22,324	0 7 10·27	8,769
1830	4,000	0 9 0·00	1,800	1846	38,965	0 7 0·46	13,714
1831	5,000	0 8 0·00	2,000	1847	40,732	0 6 9·01	13,750

From the foregoing table it will be seen that the export of coal to intercolonial and foreign ports as well as the home consumption in 1883, show a very satisfactory increase upon previous years. It will also be seen that our output has doubled during the past ten years, and is nearly six times the output of 1863.

The following table shows the output of coal in the three coal-fields for 1883, as compared with previous years, and that in each district the increase both in quantity and value is satisfactory, the output of the Western District having nearly doubled within the last five years. In the Northern District the average price per ton was 9s. 9'24d. in 1883, being a slight decrease as compared with 9s. 9'75d. per ton in 1882. In the Southern District the price per ton was 10s. 0'87d. in 1883, being a slight increase as compared with 9s. 11'33d. per ton in 1882. In the Western District the price per ton was 6s. 8'31d. in 1883, as compared with 6s. 4'46d. per ton in 1882, being an increase of nearly 4d. per ton.

## SHALE.

The output of petroleum oil cannel coal, commonly called kerosene shale, for 1883, exceeds that of any previous year, and the price obtained for it was better than that realised since 1880.

The following table shows the quantity and value of Kerosene Shale produced during the years 1865 to 1883.

Year.	Quantity.	Average price per ton.		Total Value.	
		£	s. d.	£	s. d.
1865	Tons. 570	4	2 5.47	2,350	0 0
1866	2,770	2	18 10.48	8,154	0 0
1867	4,079	3	14 9.21	15,249	0 0
1868	16,952	2	17 7.11	48,816	0 0
1869	7,500	2	10 0.00	18,750	0 0

	338,599		2 4 7.87	756,021	15 0

During the year only two mines have been at work, namely, the New South Wales Shale & Oil Co.'s mine at Hartley, and the Australian Kerosene Oil & Mineral Co.'s mine at Joadja Creek; but an extensive deposit of shale was discovered during the year at Capertee, near the Mudgee line of railway.

The following is a report from Mr. Mining-Surveyor Seaver upon the deposit of shale, &c., recently discovered near Capertee :-

In accordance with your instructions I have the honor to submit the following report and accompanying rough sketch plan upon the petroleum oil cannel coal at present being worked and prospected for near Capertee.

The sketch plan shows Mineral leases 121 and 122, parish of Airly, applied for by Peter Wallace and Thomas Lonorgan and party, and surveyed by me in accordance with instructions dated August 20th, 1883, and also a rough section through the same, showing the mode of occurrence of the shale and coal seams (as determined by aneroid measurements), and a portion of the present track leading to the workings of the petroleum oil cannel coal.

The formation of the country is steep hills, consisting of coal measures capped by from 300 to 500 feet of Hawkesbury sandstone and conglomerates, which are again often surmounted by basalt, rising above the intervening valleys from 1,200 to 1,600 feet; the formation in the valleys and low rises being highly tilted slate and limestone beds (I believe of Silurian or Devonian age), conglomerates, and sandstone.

The Hawkesbury sandstones and conglomerates form bold escarpments to the summits of the high hill, consisting of cliffs and precipices from 100 to 500 feet high of the usual sandstones, conglomerates, and iron bands of the series, and in some places the tops of the hills are worn by meteoric forces into fantastic turrets and pinnacles from a few feet to 150 in height, with narrow gorges between, making the country most rough and rugged to travel over, or rather climb over, and rendering the running of survey lines most tedious and difficult, it sometimes taking hours for a few chains progress; and measuring by chaining in the ordinary way impossible, trigonometrical surveying being the only method applicable.

In other places the tableland tops of the hills rise into low hills, consisting of broken bluestone (basalt), a layer of which seems to have overspread the Hawkesbury sandstone to from 10 to 20 feet until worn away by the aforesaid meteoric forces, leaving the small patches of basalt as they now stand. Immediately below the base of the Hawkesbury, which I found by aneroid measurements to be about 2,940 feet above sea-level, but dipping about 2° to the north-easterly, commences the upper coal measures as shown in section on sketch plan, which section I obtained from a much worn watercourse where the various strata were well exposed to view, and from outcrops upon the sides of the hills. For 40 feet these measures consist of clay bands, sandstones, iron bands and light grey slates, and at 2,900 feet a coal-seam of about 5 feet 6 inches thick, with narrow clay bands running through it; then about 7 feet of a clay band much stained with iron oxide, and again another similar coal-seam of about 6 feet thick; another narrow clay band and a seam of coal 20 feet thick, with narrow clay bands running through it; then another clay band, and about 40 feet of sandstone, and again another coal-seam about 3 feet thick. The coal appears to be most suitable for household purposes.

At about 150 feet below this (2,670 feet aneroid measurement) is found the seam of cannel coal which varies from 2 feet to 3 feet 6 inches in thickness, and from a coarse hard slaty texture to that of the sample I have forwarded, and which was taken from No. 1 tunnel in M.L. 121, and is the best I have seen in the vicinity. No. 1 tunnel is about 100 feet long, entering the side of the hill at the level of the cannel coal on the north side of the mountain, and is where the best samples of cannel coal are obtained. The other tunnel No. 2 shows a much coarser coal, and is about 300 feet long, entering on the same side of the mountain, but the seam can be struck anywhere (by opening about the same level) on the slope of the mountain, and has been prospected in various places. This sample has been taken from about two-thirds from the top of a 3-foot seam, and from what is believed to be the best portion of the seam, and may be seen to contain a band of dense bituminous cannel of about 2½ inches thick, and nearer to the bottom of the seam. Immediately below the cannel coal-seam separated only by about 1½ inch of blue slate, occurs a seam of household coal, but of what thickness I could not determine (although it is seen to be over 12 inches) and then follows slates, sandstones, and shales, with a band of porcelain clay (kaolin) at about 100 feet below this, and then another band of household coal 50 feet lower, until we come to conglomerates, laying above a red sandstone, which sandstone has intervening narrow bands of pudding stone conglomerate and lies just above the upturned edges of the highly inclined (Silurian) slates and limestones, which same slates and limestones are found crowning many of the low rises of the Capertee Amphitheatre (at about 2,000 feet) with sharp anticlinal ridges, the strike of which I determined to be about N. 30° W., and which consist of dark and light blue, yellow, and brownish red schistose slates with intervening bands of sub-crystalline limestone (intersected with narrow veins of calcite) having the same strike and dip as the slates. The

The portions 121 and 122 are situated about 3 miles from the railway line, and the workings of the petroleum oil cannel coal are at present approached by a track of about 2 miles in length, leading from them over a gap of about 30 feet higher than the tunnel entering the side of the hill at the level of the cannel coal (and by which the seam is worked) and thence joining the road from Capertee to Glen Alice at about  $5\frac{1}{2}$  miles from the Capertee railway station along the said road.

A good road for a tram-line of a fair gradient could be made from the mine by keeping above this present track along the sidelings of the mountain, and continuing along the sidelings to the north of the Capertee and Glen Alice Road until the flat country near Galagher's section No. 5, parish of Bandamorn (which is over 150 feet below tunnel) is reached, and thence to the railway line. I estimate a line by this route could be constructed for under £2,000, but if good samples of cannel coal are discovered in the same seam to the south-west or west of the mountain upon which these leases are situated, workings in such a position could be approached by a much easier and shorter route from the railway line.

I forward with samples of shale some pieces of slate or fireclay containing fossil impressions which are obtained immediately above the cannel coal seams, and which appear to be those of the upper coal measures, also a piece of porcelain clay (kaolin) and a rhombohedral piece of calcite taken from a large vein of such laying between limestone. I have also come across beds of a very hard conglomerate containing numerous bivalve and other shells, and situated about 1,500 feet above sea-level, and between Capertee and Glen Alice, and when I am working in that direction, which I expect to be next week, I shall obtain some pieces of such, and forward them to the department, as well as a report on the shale found in that locality.

The specimens referred to by Mr. Seaver consist of kerosene shale of good quality, with a band of bituminous coal, calcite of no value, tourmaline in quartz, mica schist, diorite, silicified shale, petrified wood, glossopteris only of interest as mineral specimens, but the Geological Surveyor in charge is of opinion that gold is likely to occur where the diorite rock comes from.

The following analyses have been made, by Mr. C. Watt, of samples of the mineral sent to this Department:—

## TIN.

The export of fine tin in 1883 exceeds that of any previous year since the tin-fields opened; but the export of tin ore is less than that of any previous year, which is an important fact, as evidencing the progress made in smelting tin ore. Taking ingots and ore together the export as regards quantity exceeds that of any previous year, but owing to the fall in the price of tin the value of the export for 1883 is less by £8,909 than that of 1882.

The low price of tin, added to the scarcity of water and the great heat during the latter part of the year, has had a depressing effect upon the tin industry on all the fields, but the recent examination of the Vegetable Creek Tin-field by Mr. Geological-Surveyor David shows that the tin deposits there are so extensive that there is little probability of exhaustion for many years to come. And there can be little doubt that a similar examination of our other large tin-fields will prove equally satisfactory. Mr. T. W. Edgeworth David, B.A., F.G.S., has furnished a report and plans containing most interesting and instructive information concerning the Vegetable Creek Tin-field, the publication of which cannot fail to be of the highest value to those engaged or desiring to engage in tin-mining, as he has carefully mapped out the course of the deep leads which have already proved so rich in alluvial tin, in addition to which he shows the positions of the rocks wherein the tin lodes occur. The report and maps are published herewith in connection with the report of the Geological Surveyor in charge, who also visited and made an examination of the tin-fields during the past year, leaving Mr. David to make a detailed examination of the alluvial leads and the lodes in the Vegetable Creek district. Mr. Wilkinson in his report says the shallow stream tin deposits, which have hitherto yielded such large supplies of ore, are being rapidly exhausted as are also the dry portions of the deep leads. The main lead was very rich in places, especially in the Wesley mine and in that of the Vegetable Creek Tin-mining Company. In the latter 2,000 tons of ore are stated to have been obtained within an area of 5 acres. The lead trends westerly from the Wesley mine, the ground deepens and becomes wet, and therefore more difficult to work; but the prospecting shafts sunk into the wet drift show that it is rich in tin ore. The flow of basalt which covers the old river-bed, and the other geological formations, mark the continuation of the lead for several miles further. This fact shows that stream tin-mining will last for many years to come. Upwards of fifty tin-bearing veins or lodes have been opened in this district, and though the majority of them are too small to be profitably worked, yet the "Ottery," "Carr's," "Dutchman's," "Curnow's," "Butler's," "Pheasant Creek," and several other lodes are of a promising character. The occurrence of the ore in the lodes is very variable; sometimes it is found in quartz, at others in felspar, greisen, chlorite, &c., and irregularly distributed through these, as bunches, veins, or as disseminated grains. This uncertainty in its mode of occurrence will probably necessitate appliances specially adapted for the treatment of some of the kinds of ore.

A well-arranged crushing plant with concentrators has been erected at the Tent Hill smelting works, under the management of Mr. John Reid.

Mr. Wilkinson and Mr. David also examined the Cope's Creek tin-field in the Inverell district. Here, likewise, the shallow alluvial deposits are being fast worked out, chiefly by Chinese miners. Several of the leads, notably "Jones'," "Hammond's," "Stannifer," "Walmsley's," "Brickwood," "McMillan's," "Jealousy," "Elsmore," have been rich, and some of them are still being worked; but the tin ore has been found patchy in them, doubtless owing to the proximity of lodes from which the ore has been derived. Nearly all of the leads have a covering of basalt, and the geological examination of the country shows that the basalt tracts extend to the westward from the Stannifer and Elsmore districts towards Auburn Vale and Inverell. It is reasonable, therefore, to infer from the nature of the leads already worked that, where the bed rock formation consists of tin-bearing granites, the old river-beds or leads will in such places prove payable. Several attempts have been made to test these deep lead extensions; but, chiefly owing to the hard sinking through the basalt rock and the heavy influx of water they have not been successful. These, however, are difficulties not insuperable.

The tin lodes, of which fifteen have been prospected, occur much in the same manner as do those of the Vegetable Creek district. They are chiefly narrow quartz and felspar veins containing tin ore irregularly distributed through them; but at Elsmore, Long Gully, and Stannifer-Bischoff the lode-stuff is met with in some quantity. At Elsmore it occurs in quartz-veins and in irregular patches of mica-rock, somewhat similar to those of the Ding Dong and Pheasant Creek mines; at Long Gully it is contained in quartz and felspar veins; and at Stannifer-Bischoff it is disseminated in separate coarse grains or crystals through porphyritic granite. Crushing machinery is now in course of erection at this mine.

The

The Warden reports a falling-off in the output of the Maryland mines, due to want of and low price of tin towards the end of the year. No lodes are being worked in that district. In the Vegetable Creek district some few of the numerous lodes have been tested and the Warden states that 100 tons 18 cwt. 2 qrs. tin have been obtained from the crushing of lode stuff; of this, 56 tons is from the Torrington mine at the Mole Table-land. At the Ottery lode, near Tent Hill, there were 2,000 tons of stone at grass awaiting completion of the Battery. Only 6 tons of ore have been obtained from King's Tin Mine, Pheasant Creek, the men employed there having been chiefly engaged on surface works. There are indications that our lodes will speedily be worked if the price of tin would improve. The result of the new rush in the Tingha (parish of Aconite) is not yet known, as most of the land has been taken up under conditional purchase, and no work has been done beyond raising a few tons of ore which is equal in quality to any on the field. The Warden reports that the bad state of the roads in the Tingha district adds very much to the cost of carriage of ore, and thereby retards the progress of mining.

TABLE showing the quantity and value of tin exported from, and the produce of, the Colony of New South Wales, since the opening of the Tin-fields in 1872.

Year.	Ingots		Ore.			Total.		
	Quantity.	Value	Quantity.	Value.		Quantity.	Value.

The following assays of tin ore have been made during the year by Mr. C. Watt, the Government analyst:—

- Tin ore and pyrites from near Glen Innes—Metallic tin, 49·4 %.
- Tin ore from Bungonia—Metallic tin, 74·9 %.
- Tin ore from new discovery, table-land, New England—Metallic tin, 26·4 %.
- Tin ore from new ground in neighbourhood of Inverell—Metallic tin, 64·9 %.
- Tin ore from Wagga District.—Metallic tin, 24·1 %.
- Tin ore from new discovery, Glen Innes District—Metallic tin, 34·0 %.
- Tin ore from do.—Metallic tin, 63·1 %.
- Tin ore from do.—Metallic tin, 58·4 %.
- Black sand from Elsmore—No tin.
- Gem sand from Wiseman's Creek, O'Connell—No tin.
- Black sand from Bingera—No tin.

#### COPPER.

From the report of the Wardens and Mining Registrars it appears that the Great Cobar Company raised during 1883, 19,000 tons of ore, and smelted 18,096 tons, producing 2,401 tons fine copper, value, £158,464. As an evidence of the difficulty of getting the produce of the mine to market, it may be stated that at the end of the year the Company had 470 tons of fine copper, value £28,200, in the shed, waiting for teams to convey it to the railway station. The total quantity of ore raised by this Company, since it started in July, 1876, is 98,916 tons, which produced 13,388 tons of fine copper, valued at £358,464, and it is estimated that there is sufficient ore in sight to keep the mine in full work for the next twenty-five years. The deepest shaft in the mine is 552 feet, the deepest level is 324 feet, and the width of the lode is 60 feet.

From the Great Central Company's mine, 1,139 tons of ore, raised in 1883, made 187 tons of copper, value £8,700. Total ore raised since starting in April, 1882, was 1,551 tons; ore smelted, 1,148 tons. There are in this mine nine shafts, the deepest 120 feet. The deepest level is 120 feet, and the width of the lode is from 3 inches to 11 feet. The Inspector of Mines thinks this mine will yet play an important part in the copper-mining of this Colony.

At the Nymagee Company's mine, 10,236 tons of ore was smelted in 1883, producing 1,714 tons of fine copper, value £96,000. Depth of deepest shaft, 390 feet; deepest level, 310 feet; width of lode, 3 feet to 18 feet. Total quantity of ore smelted since the mine was started in 1880, 23,007 tons, making 3,717 tons fine copper, value, £236,100.

At

At the Hartwood Mine, adjoining the Nymagee Mine, no proper lode yet discovered.

At the Babinda Mine, 9 miles from Nymagee, prospecting work has been suspended in consequence of scarcity of water.

The Inspector of Mines states that the country between Cobar and Nymagee presents highly metalliferous indications, especially so from the "Restdown Hotel" to Nymagee, a distance of 25 miles, which has the appearance of being auriferous.

There are fine indications of copper at the Cornish, Scottish, and Australian Mine, 7 miles from Cobar, but the mine has not yet been properly prospected through want of water.

At the Melrose Mine,  $1\frac{1}{2}$  miles from the head station, Melrose Run, a shaft has been sunk, 30 feet from which ore containing  $27\frac{1}{2}$  per cent. has been obtained. From another shaft,  $7\frac{1}{2}$  miles from the above, 30 feet deep, ore from the surface,  $12\frac{1}{2}$  per cent., work suspended from want of water.

The Inspector of Mines says the lode in the New Mount Hope Company's mine has been opened along the surface about 200 feet, and it averages in parts 30 feet wide. A main shaft has been sunk to a depth of 150 feet. At the 100 feet level, the lode, which consists chiefly of high-class ores, had been driven into 50 feet without reaching the opposite wall. There is an ample supply of firewood within a radius of 10 miles.

The country between Cobar and Girilambone appears to be metalliferous, and deserves to be prospected. At Girilambone a strong lode is visible on the surface, about 100 yards east of the present workings. About three-quarters of a mile from the Girilambone mine, a strong lode is visible on the surface in the property of Messrs. Christensen & Co.

The Warden says a good many copper lodes have been found in the Forbes District during the past year, the indications of which are favourable. At the Limestone Reserve, 6 miles N.W. of Parkes, two men have been employed during the year; they have sunk a shaft 110 feet deep, and have raised 12 tons of good quality ore. Copper discovered at Euroow Mountain, 16 miles east of Forbes.

In the Burrowa mine, at a depth of 48 fathoms, a new lode was struck in August last, about 6 feet wide. It joins the old lode, making the width 17 feet. During the year 1,275 tons of 10% ore was raised and smelted, yielding  $127\frac{1}{2}$  tons fine copper.

On the Abercrombie River, about 40 miles above Scrubby Rush, good prospects of copper have been discovered.

The Peelwood Copper-mine has been worked on tribute with satisfactory results.

At the Burruga Copper-mine, near Rockley, work has been carried on for some time past under the management of Mr. Lewis Lloyd. In 1881, 2,600 tons of ore raised made 270 tons of fine copper; in 1882, 5,000 tons of ore made 480 tons of fine copper; in 1883, 6,150 tons of ore raised made 520 tons fine copper. The ore occurs in shoots with a north-east strike; the largest yet stoped is 110 feet in length, and from 4 to 9 feet in thickness, increasing in richness and size as a greater depth is reached.

At the Burrumagoo lodes, on the slope of a high hill, about 5 miles south of Rockley, a shaft has been sunk 50 feet; the lode has well defined walls, in which is a shoot of high quality ore about 1 foot thick. Higher up the hill is a large outcrop of gossan, which can be traced in a northerly and southerly direction, and appears to indicate the position of a main lode.

The Inspector of Mines says the copper lodes in the Wellington District have been very little prospected, though they present very good surface indications. The Warden at Wellington says Backe's Copper-mine, east of Spring's Railway Station, contains extensive blows of gossan. The ore from the first shaft averaged  $12\frac{1}{2}$ %. Shaft sunk to a depth of 100 feet when the country got too hard, and the haulage too heavy for their appliances. In

In the Harvey's Ranges, Tomingley, there are strong stains of copper visible on the surface.

At the Barrier Ranges several deposits of copper ore have been discovered; 5 tons sent to Adelaide yielded  $12\frac{1}{2}$ % of copper.

In Cheshire and Knoblanche's mine, 6 miles from Ilford in the Mudgee District, the lode is 6 feet wide at a depth of 120 feet. Furnaces are being erected, and will be completed early in 1884.

The growth of this branch of mining is a fact, the importance of which cannot be over-estimated, as it furnishes steady employment for such a large number of men. And as shown by the large settlements in the vicinity of some of our principal copper-mines, remote from the metropolis, tracts of country are settled, which but for these mines would have continued for many years to come mere sheep walks. The extension of our railways will almost certainly lead to the opening up of other mines, which, in their turn, will afford employment to the railways, thereby enabling them to be still further extended.

The following assays were made during the year by the Government Analyst:—

- Copper ore from Tomingley Quartz Reefs, Bogan River—Metallic copper, 26·0 per cent. ; fine silver, 2 ozs. 9 dwts. per ton ; no gold.
- Copper ore from Cudgegong—Metallic copper, 3·5 per cent. ; fine silver, 16 dwts. per ton ; gold, a trace.
- Copper ore from lode near Cudgegong—Metallic copper, 11·1 per cent. ; fine silver, 2 ozs. 9 dwts. per ton ; no gold.
- Copper ore from a new lode at Currawang, parish Granville, county of Wellesley—Metallic copper, 34·1 per cent. ; fine silver, 3 ozs. 5 dwts. per ton ; no gold.
- Copper ore from the Cheshire Copper-mine, Cudgegong—Metallic copper, 6·8 per cent.
- Copper ore from the Cheshire Copper-mine, Cudgegong—Metallic copper, 11·9 per cent.
- Copper ore from the Cheshire Copper-mine, Cudgegong—Metallic copper, 0·7 per cent.
- Copper ore from Plant Gully, Emmaville—Metallic copper, 19·3 per cent.
- Rock in copper lode from Plant Gully, Emmaville—Copper, a strong trace.
- Copper ore from Wellington—Metallic copper, 10 per cent. ; fine silver, 2 ozs. 9 dwts. per ton ; gold, 3 dwts. per ton.
- Copper ore from Melrose River, near Yellow Mountains—Metallic copper, 11·9 per cent. ; fine gold, 3 dwts. per ton ; silver, a trace.
- Copper ore from the Braidwood District—Metallic copper, 17·9 per cent. ; neither gold nor silver.
- Cupriferous gossan from W. T. Campbell's lode, Thackaringa—Metallic copper, 16·7 per cent. ; silver, a trace ; no gold.
- Copper ore from near Capertee—Metallic copper, 6·2 per cent. ; fine silver, 2 ozs. 1 dwt. per ton ; gold, a trace.
- Cupriferous iron ore from near Capertee—Metallic copper, 24 per cent. ; fine silver, 8 ozs. 3 dwts. per ton ; gold, a trace.
- Copper ore from near Capertee—Metallic copper, 11·8 per cent. ; fine silver, 2 ozs. 9 dwts. per ton.
- Copper ore from Eugowra—Metallic copper, 24·9 per cent. ; fine silver, 3 ozs. 5 dwts. per ton ; gold, a trace.
- Copper ore from Bingera—Metallic copper, 67·2 per cent.
- Copper ore from new lode, parish Inverary, near Bungonia—Metallic copper, 14·8 per cent.
- Copper ore from Goolagong—Metallic copper, 3·4 per cent. ; gold, a trace ; silver, a trace.

#### SILVER.

The export of silver for 1883, as compared with that of 1882, shows an increase of 39,447 ozs., value £7,464.

Unfortunately, operations in the vicinity of the Barrier Ranges have been retarded in consequence of the very severe drought, the water supply in the locality of the silver-mines being insufficient for domestic purposes, added to which there have been numerous disputes concerning titles. The ore that has been raised has been sent into South Australia or to England for treatment ; but it is probable that when the mines come to be properly opened up, a large proportion, if not the whole of the ore, will be treated locally, as there can be little doubt that this portion of the Albert Gold-field will become one of the most important mining localities in the Colony. Some of the ore raised is said to be very rich, but no reliable returns have yet been received. Mr. Warden Gower has furnished a report, but being unable, on account of the distance from his head-quarters, the state of the country, and the pressing nature of

his other duties, to visit the mines, he has had to rely upon information supplied by interested persons, which detracts from the value of the report; still, it contains matter indicating the extent and value of the lodes. Attached to the report is a statement of assays made at Silverton which show very satisfactory results. The samples of galena gave 16 $\frac{3}{4}$  per cent. of lead, and 1,739 ozs. silver per ton; 45 per cent. of lead and 15 ozs. of silver per ton; 82 $\frac{1}{2}$  per cent. of lead and 198 ozs. of silver per ton; 14 $\frac{1}{2}$  per cent. of lead and 9,175 ozs. silver per ton. The samples of silver ore gave results varying from 39 ozs. to 18,912 ozs. per ton. A few samples of the ore have been assayed by the Department, as will be seen below, the results varying from 40 ozs. to 1,504 ozs. per ton. The argentiferous deposits extend over a considerable area, the extent of which the Inspector of Mines estimates at 25 miles in length; but there is probably a very large extent of mineral country which has not yet been even visited, and which is not likely to be prospected until the drought breaks up. The Inspector of Mines reports that at the date of his visit the deepest shaft at Thackaringa was 70 feet, about 700 tons of ore had been despatched from the mines, and the ore at grass was about 350 tons. The cost of carriage and other expenses connected with sending the ore to England was estimated at £8 per ton, and the ore is said to realize from £16 to £25 per ton. At Silverton (Umberumberka) a lode 2 feet wide showing good ore had been sunk upon to a depth of 60 feet.

Mr. Warden Graham reports that he is of opinion that silver-mining will yet be one of the principal industries of the New England District, owing to the energy and enterprise of Messrs. Hall and Davey, who are still sinking on the various reefs at Boorook with very encouraging results. On the Golden Age Reef they have sunk on a good lode to a depth of 196 feet, the width varying from 10 inches to 3 feet, and the assays of samples from the bottom of the shaft varying from 70 ozs. to 350 ozs. of silver per ton. The ore at grass is estimated to contain 4,000 ozs. On the Addison Reef they have sunk to a depth of 85 feet, the width of the lode is 3 $\frac{1}{2}$  feet, and the whole of the ore will average 78 ozs. per ton, with indications of becoming richer at a greater depth. The ore at grass is estimated to contain 2,000 ozs. silver. During the year 100 tons of ore from the Addison and 500 tons from the Golden Age Reef have been treated, yielding 15,792 ozs. of silver and 70 ozs. gold. Some tons of the best ore was picked and sent to England for treatment. There is a large extent of argentiferous country around Boorook which will probably be taken up as soon as the works for the treatment of the ore are completed.

The Narangarie Silver-mine, in the Mudgee district, 9 miles N.E. from Denison Town, on the summit of the Dividing Range between Bong Bong and Coolah Creeks: At 40 feet deep the vein is 2 feet 4 inches wide, at 65 feet deep it is 3 feet wide; there are 300 tons of ore at grass. Work was suspended, but will be resumed shortly.

At Sunny Corner in the Bathurst District the erection of smelting works has been commenced. When completed the ore will be treated at the mine instead of being sent to Swansea, as it has hitherto been, for treatment, and the treatment of the ore locally will probably have the effect of leading to other mines in the Mitchell's Creek division being opened up.

The following assays have been made by the Government Analyst during the year:—

- Silver ore from Perico, near Eden—Fine silver at the rate of 18 ozs. 15 $\frac{1}{2}$  dwts. per ton; no gold.
- Oxide and sulphide of bismuth from Kingsgate, 18 miles from Glen Innes—Fine silver at the rate of 57 ozs. 3 dwts. per ton; gold, 4 ozs. 1 $\frac{1}{2}$  dwts. per ton; metallic bismuth, 69.3 per cent.
- Mispickel from Glen Innes Bismuth Co.'s Mine, Kingsgate—Fine silver at the rate of 92 ozs. 14 dwts. per ton; no gold; metallic bismuth, 9.2 per cent.
- Ore from Gordon's Reef, 2 miles north of Strathbogio—Fine silver at the rate of 13 ozs. 17 $\frac{1}{2}$  dwts. per ton; metallic lead, 12.9 per cent.; no gold; no tin.
- Zinc blende and pyrites from lower lode, The Grampians, New England—Fine silver at the rate of 61 ozs. 13 dwts. per ton; metallic zinc, 20.0 per cent.; copper, about 5 per cent.; no tin; no gold.
- Pyrites from new reef at Conoblas, near Orange—Fine silver, at the rate of 20 ozs. 3 $\frac{1}{2}$  dwts. per ton; gold, at the rate of 10 $\frac{1}{2}$  dwts. per ton.
- Ore from Plant Gully, Emmaville—Fine silver at the rate of 15 ozs. 18 $\frac{1}{2}$  dwts. per ton; gold, a trace.
- Quartz with galena from Binbanaug, Glaumire—Fine silver at the rate of 18 ozs. 7 $\frac{1}{2}$  dwts. per ton; gold, a trace.
- Mispickel from Emmaville—Fine silver at the rate of 43 ozs. 14 dwts. per ton; gold, a trace.
- Quartz from Billygoa, 40 miles north of Cobar—Fine silver at the rate of 60 ozs. 8 $\frac{1}{2}$  dwts. per ton; gold, 15 ozs. 18 $\frac{1}{2}$  dwts. per ton.
- Lead ore from the Barrier Range, North-west of Colony—Fine silver at the rate of 60 ozs. 9 dwts. per ton; no gold.
- Lead ore from Bull Dog Range, Mitchell's Creek, Bathurst District—Fine silver at the rate of 12 ozs. 5 dwts. per ton; gold, a trace; metallic lead, 55.1 per cent.
- Lead ore from Bull Dog Range, Mitchell's Creek, Bathurst District—Fine silver at the rate of 22 ozs. 17 dwts. per ton; gold, a trace; metallic lead, 57.3 per cent.
- Lead ore from Barrier Range—Fine silver at the rate of 1,504 ozs. 6 dwts. per ton; gold, a trace.
- Lead ore from Barrier Range—Fine silver at the rate of 60 ozs. 9 dwts. per ton; gold, a trace.
- Lead ore from Barrier Range—Fine silver at the rate of 40 ozs. per ton; gold, a trace.

#### IRON.

The Eskbank Iron Company (the only makers of iron in the Colony) made during the year iron to the value of £26,908, which is considerably less than the value of the make for 1882. But in 1882 the Company made pig-iron to the value of £15,120, whereas in 1883 the blast furnace was not in work. The number of men employed during the year was 175, but they were not fully employed.

In view of the fact that tenders have been invited by the Government for the supply of 150,000 tons of steel rails to be manufactured in the Colony from New South Wales ore, it may be useful to give a list of the best known deposits of iron ore, together with the various analyses which have as yet been made.

For

For the manufacture of steel from pig-iron, smelted from hematite and magnetic iron ores (which are in general practically free from sulphur, phosphorus, and copper), the process most commonly used is known as the Bessemer process. Molten pig-iron is run into an egg-shaped wrought-iron vessel (known as a converter) with an open inclined neck at the top, and lined with about 10 inches of fire-brick and ganister. A blast of air (at a pressure of about 20 lbs. per square inch) is turned on through a number of tuyers at the base of the converter and allowed to bubble through the molten iron. The duration of the blast varies from 13 to 20 minutes. The combustion of the carbon in the pig-iron with the oxygen raises the temperature to such an extent that the contents of the converter become as fluid as water. The carbon and silicon are almost entirely burnt out during the conversion. When the "blow" is at an end (shown by the diminishing of the flame which rises through the neck of the converter) the blast is turned off and from 7 to 10 per cent. of melted spiegeleisen is added to the contents of the converter. The fluid steel is then transferred from the converter into a casting ladle, and thence into vertical ingot moulds. The converters are constructed of a size sufficient to treat from 2 to 10 tons of metal.

The Bessemer process was, however, useless for the treatment of pig-iron containing phosphorus and sulphur, until Messrs. S. G. Thomas and P. C. Gilchrist patented their modification which is now known as the basic process, and by which pig-iron containing comparatively high per-centages of sulphur and phosphorus can be cheaply converted into steel of the best quality. The Thomas-Gilchrist invention consists in lining the Bessemer converter with a so-called basic substance such as limestone or dolomite (instead of fire-bricks), with the result that practically the whole of the objectionable impurities—sulphur and phosphorus—are removed in the form of slag. Late experiments have shown that bricks moulded from calcined limestone or dolomite (magnesian limestone) mixed with tar, form the best linings for the converters. The greatest difficulty in connection with the process is the rather rapid wear and tear of the lining which has consequently to be somewhat frequently renewed. However, the immense advantage of being able to manufacture the best steel by this process from ores containing such impurities will at once commend itself.

The principal deposits of iron ore in New South Wales which occur within or near to the coal-fields, are situated at Lithgow, Wallerawang, Mount Edgecome, Mount Clarence, Piper's Flat, Mount Lambie, and in the Blayney district, on the Great Western Railway; and in the Mittagong and Berrima districts, on the Great Southern Railway. It was in the latter district, at the Fitzroy Iron Works, that the first attempt was made in the Colony to smelt iron, but the result was not successful, chiefly, it is thought, on account of the unsuitable coal used. The iron ore of the Mittagong district consists of brown hematite, which has been deposited from ferruginous springs, and forms irregular but extensive deposits. The deposits occupy an area of 37.4 acres, and occur in five different localities situated within a radius of  $4\frac{1}{2}$  miles from the old Fitzroy Smelting Works near Mittagong. The deposit at Fitzroy occupies an area of 4.2 acres, and taking 25 feet as the thickness of the ore in sight (a bore is said to have been put down 40 feet without going through the ore), it contains 439,900 tons of ore, estimated to yield 179,949 tons of pig-iron.

The other deposits contain 2,446,320 tons of ore, estimated to yield 848,845 tons of pig-iron, giving a total of 2,886,220 tons of ore, equal to 1,028,794 tons of pig-iron. This quantity would keep three furnaces going, each producing 15,000 tons of pig-iron annually for nearly twenty-three years.

In 1882, the make of pig-iron in the United Kingdom was 8,493,287 tons, there being 565 furnaces in blast at the end of the year, or equal to an average production of 15,032 tons of pig-iron by each blast furnace. In 1865, each furnace averaged 7,391 tons of pig-iron.

There are also good iron ores in the Goulburn district which would be available for the smelting-works of the Mittagong and Berrima coal districts. Limestone is abundant at Marulan, and all are within easy distance of the Great Southern Railway.

I have not been able to ascertain the quantity of rails used annually in this and the adjoining Colonies; but I find the quantities imported into or purchased in this Colony from 1874 to 1882 amount to about 180,000 tons, and the consumption is always increasing, so that there will doubtless be a large demand if they can be made in this Colony at such a price as will enable them to compete successfully with imported rails.

The following analysis of the ore was made by Mr. C. Watt, Government Analyst:—

BROWN HEMATITE, MITTAGONG.	
Moisture, loss on ignition .....	10.43
Silica .....	9.07
Alumina .....	6.83
Oxide of iron ( $\text{Fe}_2\text{O}_3$ ) .....	73.67
Trace of phosphoric acid .....	.....
	100.00

At

At Lithgow, Wallerawang, and Piper's Flat, seams of clay-band iron ores (limonite) from 6 to 18 inches thick occur in the coal measures which crop out nearly horizontally in the sides of the hills.

Analyses by Professor Liversidge of specimens from Wallerawang yielded the following results:—

Water lost at 100° C. ....	1.35	
"    combined .....	10.29	
Silica .....	3.66	
"    soluble .....	.07	
Alumina .....	1.38	
Iron protoxide .....	.67	} Equal to 58.80 per cent. of metallic iron.
"    sesquioxide .....	78.96	
Manganese protoxide .....	2.43	
Lime .....	.65	
Magnesia .....	.14	
Phosphoric acid .....	traces	
Sulphur .....	traces	
	<hr/>	
	99.60	

The other specimens from these seams in the same locality yielded 56.0, 60.13, 54.46, 49.28, and 53.31 per cent. of metallic iron, respectively.

Near Piper's Flat and Mount Lambie dyke masses of brown hematite and magnetite of irregular thickness occur in the altered Devonian sandstones; their extent has not yet been proved. The magnetite is occasionally associated with a silicious ferruginous garnet rock.

Analyses by Professor Liversidge gave brown hematite 38.84 to 51.52 per cent. metallic iron, garnet ironstone 20 per cent. iron, magnetite 40.89 per cent. iron, with only traces of phosphorus and sulphur. An examination of the magnetic ore and garnet rock by Mr. W. A. Dixon, F.I.C., yielded the following results:—

Magnetite—Analysis.

Water.....	2.16	
Ferric oxide..	64.01	} metallic iron, 51.73.
Ferrous oxide ..	8.99	
Manganese .....	traces	
Alumina .....	2.75	
Lime .....	3.75	} total lime, 11.28.
Fluoride of calcium .....	10.68

Lime .....	7.75	
Silica.....	34.22	
	<hr/>	
	99.84	
Metallic iron.....	30.73	

Abundance of marble limestone occurs near Piper's Flat.

The Hawkesbury sandstone formation about Mount Edgecombe and Mount Clarence is traversed by numerous small veins of brown hematite, and consequently, where the sandstone has been denuded, fragments of these veins have collected in considerable quantities in places, and there is little doubt that this ironstone will be of future value for the smelting works at Lithgow. It is, however, variable in quality, for it sometimes contains a large per-centage of silicious sand, derived from the sandstone in which it occurs.

An analysis, made by Mr. C. Watt, Government Analyst, of brown hematite from Mount Clarence, yielded the following result:—

Hydroscopic moisture .....	0.43
Loss on ignition .....	10.80
*Peroxide of iron .....	79.20
Insoluble in acids .....	8.80
Alumina, traces of magnesia } .....	0.72
Phosphoric acid, &c. .... }	
	<hr/>
	100.00

\*Equivalent to 65 per cent. of metallic iron.

Another sample from the same locality yielded 56 per cent. of metallic iron.

In the vicinity of Lithgow there are extensive beds of clay-shale ironstone, interstratified with the lower beds of the Hawkesbury sandstone formation. Similar beds occur in the same geological position in the Illawarra district, and in other parts of the Colony. The ore may be useful to work in connection with the richer ores from other localities.

The following are analyses of samples from Lithgow:—

	I.	II.
Loss on ignition .....	8.47	5.10
Silica .....	37.80	66.80
Alumina .....	5.89	19.84
Oxide of iron ( $\text{Fe}_2\text{O}_3$ ).....	46.11	7.53
Traces of magnesia and phosphoric acid, alkalies, &c. ....	1.73	0.73
	100.00	100.00

A large proportion of the iron ore smelted at the Eskbank Iron Works, Lithgow, is obtained from the Blayney district, where it occurs in large quantities in isolated masses which are easily quarried. The ore consists of brown hematite and magnetite.

The following analyses of samples of these ores were made by Mr. C. Watt, Government Analyst:—

Brown Hematite from Newbridge, Blayney district—

Moisture, loss on ignition .....	12.35
Silica .....	6.95
Alumina .....	10.38
Oxide of iron ( $\text{Fe}_2\text{O}_3$ ).....	68.04
Phosphoric acid .....	2.28
	100.00

Magnetite from Brown's Creek, Blayney District—

Moisture, loss on ignition .....	0.13	
Silica, &c. (insoluble in acids).....	6.50	
Alumina .....	14.22	
Oxide of iron ( $\text{Fe}_2\text{O}_3$ ) .....	60.48	} Equal to metallic iron 52.5 per cent.
"    "    " ( $\text{FeO}$ ).....	18.67	
Trace of phosphoric acid .....	.....	
	100.00	

In the Goulburn District, through which the Great Southern Railway passes, and in the Bathurst and Blayney Districts on the Great Western Railway, extensive deposits of manganese and ferro-manganese ores and limestone occur.

In numerous other parts of the Colony rich deposits of iron and manganese ores are known, but with perhaps few exceptions they are not so favorably situated as are the abovementioned in proximity, or within ready access by rail, to coal and limestone deposits.

In the Coolah Valley (Mudgee District) the deposits of ironstone in close proximity to coal is said to be practically inexhaustible.

The following analyses have been made by the Government Analyst:—

Iron ore from Berrima—Analysis—

* Peroxide of Iron ( $\text{Fe}_2\text{O}_3$ ) .....	82.54
Alumina .....	0.84
Phosphoric acid ( $\text{P}_2\text{O}_5$ ) .....	0.63
Gangue.....	0.52
Moisture, loss, &c. ....	15.47
	100.00

\*Equal to 57.8 per cent. metallic iron.

## 39

Oxide and sulphide of bismuth from Kingsgate, 18 miles from Glen Innes—Metallic bismuth, 69·3 per cent. ; fine silver, 57 ozs. 3 dwts. per ton ; fine gold, 4 ozs. 1½ dwts. per ton.  
 Arsenical pyrites from Glen Innes Company's Mine, Kingsgate—Metallic bismuth, 9·2 per cent. ; fine silver at the rate of 92 ozs. 14 dwts. per ton ; no gold.  
 Bismuth ore, Comstock lode, near Yarrow—Metallic bismuth, 35·6 per cent. ; fine silver, 9 ozs. 16 dwts. per ton ; fine gold, 2 ozs. 9 dwts. per ton.

## LEAD.

The following samples have been assayed during the year by the Government Analyst, but no report has been received concerning the working of any of the lodes from which the samples were taken :—

Galena from Money Ranges, between Yass and Gundagai—Metallic lead, 80·9 per cent. ; fine silver, 8 ozs. 3 dwts. per ton ; fine gold, a trace.  
 Ore from lode in Yalwal Gold-fields, Shoalhaven District—Metallic lead, 20·83 per cent. ; metallic iron, 14·02 per cent. ; metallic copper, 3·10 per cent. ; fine silver, 5 ozs. 19½ dwts. per ton ; no gold.  
 Ore from Gordon's Reef, 2 miles north from Strathbogie—Metallic lead, 12·9 per cent. ; fine silver, 13 ozs. 17½ dwts. per ton ; no gold ; no tin.  
 Galena from (locality not known)—Metallic lead, 60·0 per cent. ; fine silver, 5 ozs. 6 dwts. per ton ; gold a trace.  
 Carbonate from Nerriga District—Metallic lead, 60·23 per cent. ; neither gold nor silver.  
 Carbonate of lead from prospecting shaft near Mitchell's Creek, Bathurst District—Metallic lead, 62·85 per cent. ; fine silver, 5 ozs. 6 dwts. per ton ; fine gold, 4 dwts. per ton.  
 Lead ore from Bull Dog Range, Mitchell's Creek, Bathurst District—Metallic lead, 30·8 per cent. ; fine silver, 2 ozs. 9 dwts. per ton ; gold a trace.  
 Lead ore from Bull Dog Range, Mitchell's Creek, Bathurst District—Metallic lead, 55·1 per cent. ; fine silver, 12 ozs. 5 dwts. per ton ; gold a trace.  
 Lead ore from Bull Dog Range, Mitchell's Creek, Bathurst District—Metallic lead, 57·3 per cent. ; fine silver, 22 ozs. 17 dwts. per ton ; gold a trace.

## MANGANESE AND COBALT.

No report has been received of any work done upon any of the deposits known to exist in various parts of the Colony, but it is probable that steps will shortly be taken to develop a very valuable deposit of manganese in the Tamworth district, a sample of which on assay gave peroxide of manganese, 86·2 per cent. The following samples have been assayed during the year :—

Oxide of Manganese from Mihi Creek, County Sandon—Peroxide of manganese, 75·36 per cent. ; cobalt a strong trace.  
 Manganese ore from Never Never—

Gangue	79·25
Peroxide of manganese	14·97
Moisture, oxide of iron } Alumina, &c. }	5·78
	100·00

Manganese ore from near Glanmire—Protoxide of manganese, 43·4 per cent.  
 Cobaltiferous manganese ore from near Bungonia—Sesquioxide of cobalt (Co<sup>2</sup> O<sup>3</sup>) 3·5 per cent.  
 Cobaltiferous manganese ore from near Bungonia—Protoxide of cobalt (Co O) 3·92 per cent.  
 Cobaltiferous manganese ore from near Bungonia—Protoxide of cobalt (Co O) 3·85 per cent.  
 Cobaltiferous manganese ore from near Windellama, on the Shoalhaven River—Protoxide of cobalt (Co O) 1·9 per cent.  
 Cobaltiferous manganese ore from near Windellama, on the Shoalhaven River—Protoxide of cobalt (Co O) 2·27 per cent.

## ZINC.

The following samples have been assayed during the year by the Government Analyst :—

Zinc blende and pyrites from Folkstone Lode, New England—Metallic zinc, 18·1 per cent. ; fine silver, 2 ozs. 9 dwts. per ton.  
 Zinc blende and pyrites from the Ottery No. 3 Lode, New England—Metallic zinc, 2·0 per cent. ; fine silver, 6 ozs. 19 dwts. per ton.  
 Zinc blende and pyrites from Lower Lode, The Grampians, New England—Metallic zinc, 20·0 per cent. ; fine silver, 61 ozs. 13 dwts. per ton.

## DIAMONDS.

There appears now to be a prospect of the diamond-fields around Bingera being developed, and I trust diamonds will figure in my next report as an important addition to our mineral products. The scarcity of water appears to have seriously retarded operations in 1883, but it is reported that Messrs. Falk and Co. have commenced sinking for water on their mine with a view to save the cost of carting the wash-dirt to the river, a distance of over 3 miles. It is stated that Messrs. Falk and Co. obtained 400 diamonds from about 100 loads of wash, 300 of them having been won in five days. The diamonds are small, but sixty or seventy sent to London were, it is stated, pronounced first-class. This mine is being worked in a face into the hill, the wash is 6 feet in height and increases as the works are extended. Messrs. Craddock and party have reached the wash by sinking at 40 and 80 feet respectively; they have found a quantity of very small diamonds of good quality, but have been unable to wash in consequence of the scarcity of water.

Small diamonds continue to be found also in the Cudgong River in the Mudgee District.

## SLATE.

A large amount of preliminary work has been done by the Australian Slate Company in opening their slate quarry at Gundagai, and preparing for the reception of extensive machinery which has been ordered from England. In addition to this the Company has turned out 30,000 slates and 10,000 feet of slabs. The operations will be conducted on a large scale as soon as the necessary machinery and appliances have arrived and been placed in position.

There

There is a probability of valuable quarries being opened and worked on a large scale in the Bathurst District.

WATER AND MISCELLANEOUS.

The following analyses have been made by the Government Analyst during the year:—

Pink mineral from Reid and Crane's lode, Flagstone, New England--	
Silica .....	60.24
Alumina .....	14.98
Lime.....	6.80
Iron.....	a trace
Loss on ignition.....	14.06
Hygroscopic moisture .....	3.22
Traces of magnesia }	
Alkalies, loss, &c. }	0.70
	100.00

Sample of subsoil from Port Stephens—	
Silica .....	90.75
Alumina .....	5.40
Iron (Fe <sub>2</sub> O <sub>3</sub> ).....	0.40
Lime (Ca O) .....	0.37
Magnesia (Mg O) .....	0.17
Potash (K <sub>2</sub> O) .....	0.29
Soda(Na <sub>2</sub> O) .....	0.60
Loss on ignition.....	2.00
Traces of ammonia }	
Carbon, loss, &c. }	0.02
	100.00

*Remarks.*—The feature of this subsoil is its large proportion of silica (sand). It also contains a moderate per-centage of clay.

Sand with a foot of fair soil overlying this subsoil would be suitable for agricultural purposes.

Clay from Capertec—	
Silica .....	62.05
Alumina .....	28.00
Oxide of iron (Fe O) .....	trace.
Lime.....	0.30
Magnesia.....	0.47
Loss on ignition.....	7.50
Alkalies, loss, &c. ....	1.68
	100.00

Indurated Shale from Ballimore, near Dubbo—	
Loss on ignition .....	1.50
Silica .....	65.52
Alumina and trace of oxide of iron .....	23.05
Lime .....	1.20
Magnesia.....	0.41
Alkalies, loss, &c. ....	3.32
	100.00

Sample from Bathurst district. (Test for lime and hydraulic properties.)

Carbonate of lime (Ca Co<sub>3</sub>), 95.97 per cent.

Does not act as a natural cement.

Saline deposit from Holy Box Well, Mount Hope—	
Moisture .....	0.25
Chloride of sodium .....	95.75
Sulphate of do. ....	3.04
*Alumina and oxide of iron .....	0.30
Sand.....	0.60
*Lime.....	trace.
*Magnesia.....	do.
	99.89

Water from Diamond Drill Bore at Girilambone—

No. 1.—Colour bright.

Total fixed matter ..... 812.48 grains per gallon.

Total chlorine ... 365.65 " " "

Fixed matter consisting of chlorides of magnesium and sodium, carbonate of lime, and sulphate of lime, &c.

Water from Diamond Drill bore at Girilambone—

No. 2.—Total fixed matter ..... 775.04 grains per gallon.

Total chlorine ... 343.28 " " "

Fixed matter consisting of chlorides of magnesium and sodium; carbonate of lime, sulphate of lime, oxide of iron, &c.

Water from Diamond Drill bore at Girilambone—

No. 3.—Total fixed matter ..... 777.92 grains per gallon.

Total chlorine ... 346.12 " " "

Fixed matter consisting of chlorides of magnesium and sodium, carbonate of lime, sulphate of lime, oxide of iron, &c.

Water from Holy Box Wall, Mount Hope—

Total fixed matter (about)..... 370.04 grains per gallon.

Total chlorine (about) ..... 173.95 " " "

Fixed matter consisting of chlorides of sodium and magnesium, carbonate and sulphate of lime. (Unsuitable for domestic use.)

The above samples all too small for proper analysis.

Water

\* These are all in the soluble form, and therefore present as salts; but being in such small quantity the sulphuric acid and chlorine have been calculated as combined entirely with the sodium.

Water from Spring Ridge, Liverpool Plains, from a well 22 feet deep, in centre of black soil plain, about 1,100 feet above sea-level—

		In 1,000 parts.
Chloride of sodium.....	864·83	12·146
"    magnesium.....	170·25	2·389
Sulphate of sodium.....	54·80	0·769
Carbonate of soda.....	60·57	0·850
"    lime.....	18·15	0·255
"    magnesia.....	33·25	0·467
Silica, iron, and alumina.....	2·10	0·029
Organic matter.....	12·90	0·182
	1216·85	17·087

Total chlorine ..... 669·65 grains per gallon.  
 " sulphuric acid ..... 30·88 " " "

Remarks :—Colour yellow, with a strong odour of sulphuretted hydrogen.

The proportion of organic constituents in this water is so excessive as to render it totally unfit for domestic uses, or for cattle.

Water from Gunnedah well ; depth 70 feet with 28 feet of water, which is soft and potable when fresh.

Total solids.....	58·56 grains per gallon.
Soluble solids.....	50·14 " " "
Insoluble solids.....	8·42 " " "
Chlorine.....	9·00 " " "

The soluble solids were found to consist of chloride of sodium, sulphate, and carbonate of soda, &c.  
 The insoluble of carbonates of lime and magnesia, silica, alumina, &c.

Remarks :—This water will yield a fair deposit ; but is a fairly good water for steam purposes.

Water from Curlewes ; depth 110 feet, with 50 feet of water—

Total solids.....	928·80
Insoluble solids.....	849·60
Soluble solids.....	79·20
Chlorine.....	530·72

The soluble solids were found to consist of chloride of sodium, sulphate, and carbonate of sodium.  
 The insoluble solids of carbonates of lime and magnesia, oxide of iron, alumina, silica, &c.

This water is unsuitable for any purpose.

Water from bore at Gladesville—

Total solids—grains per gallon.....	31·40
Insoluble.....	7·20
Soluble.....	22·75
Volatile at red heat.....	1·45
Chlorine.....	15·1
Saline ammonia—parts per 100,000.....	nil.
Organic.....	nil.
Protoxide of iron.....	1·45 grains per gallon.

Remarks :—This water was fairly bright when received, but contained a deposit at the bottom, consisting of sand, &c.

The soluble solids were found to consist of chloride of sodium, sulphate of lime and magnesia, traces of carbonate of soda, &c.

The insoluble solids of—oxide of iron, clay, carbonates of lime and magnesia.

When the bottle had been opened for a time the water became brown, and peroxide of iron began to deposit. The only objection to this water arises from the presence of much protoxide of iron, which can be removed by filtration after the water has been exposed to the air so as to convert the protoxide into peroxide of iron. In any other respects it may be considered a good water for domestic use.

SUMMARY.

In conclusion I have much pleasure in submitting the following statement of the aggregate value of our mineral products, which now exceeds sixty-one millions sterling.

AGGREGATE value of Minerals, the produce of New South Wales, to 31st December last is—

	Quantity.	Value.		Total Value.	
		£	s. d.	£	s. d.
Quantity and value of gold prior to the 1st January, 1883.....	9,365,648·51 ozs.	34,570,378	16 7		
Quantity and value of gold raised in 1883.....	123,805·58 "	458,508	16 0		
Totals.....	9,489,454·09 ozs.	35,028,887	12 7	35,028,887	12 7
Quantity and value of silver raised prior to the 1st January, 1883.....	765,397·14 ozs.	187,429	0 0		
Quantity and value of silver raised during 1883.....	77,065·18 "	16,488	0 0		
Totals.....	842,462·32 ozs.	203,917	0 0	203,917	0 0
Quantity and value of coal raised prior to the 1st January, 1883.....	25,990,761·6 tons	13,204,273	6 4		
Quantity and value of coal raised during 1883.....	2,521,457 "	1,201,941	12 11

## WARDENS' AND MINING REGISTRARS' REPORTS.

## BATHURST DISTRICT—BATHURST, OBERON, ROCKLEY, TRUNKY, AND TUENA DIVISIONS.

(Mr. Warden T. A. Smith, P.M., Trunkey.)

In forwarding to you my report for the past year I have the honor to state that several fresh discoveries of gold and other minerals have been made. A rich gold-bearing reef was found at Scrubby Rush, near the Abererombie River, between Trunkey and Tuena; about 40 miles higher up that river good prospects for copper have also been discovered, and at the Bull Dog Range, Mitchell's Creek, on the Kirkconnell Gold-field, about 14 miles from Rydalo, discoveries have recently been made that will, I believe, cause quite a revival in mining on that gold-field. About 900 men are employed in mining in this district, but it is impossible to ascertain the exact quantity of gold obtained. At Mount M'Donald everything seems bright and prosperous with the miners, about 100 of whom are *bonâ fide* workers. The population of the field is upwards of 400. Most of the quartz crushed has been obtained by tributors. 4,305 tons have been crushed, returning 4,000 ozs. of retorted gold, the estimated value being £15,500. A great many leases have been issued, but little or no labour employed. The Department has, however, called upon the defaulting lessees to show cause why their leases should not be cancelled; when this is done the field will be open for *bonâ fide* workers. The crushings above referred to have varied from 6 dwts. to 12½ ozs. to the ton.

*Tuena*.—120 men are at work; when the water is plentiful the number increases considerably. About 800 ozs. of alluvial gold have been disposed of locally. The quartz gold is invariably sent to Goulburn. The crushings from the Scrubby Rush reefs previously referred to were highly satisfactory to the proprietors. At Junction Point, the Dog-trap, and Lucky Hit, everything is quiet. The Peelwood Copper-mine has been worked on tribute by Mr. Fox, who informs me that the venture has been satisfactory. The Burruga Copper Mine, 20 miles from here, has been continuously worked the whole year. I have been unable to obtain returns, but as a population of upwards of 500 persons is supported by this mine, there can be no doubt but that it is paying handsomely.

*Rockley Gold-fields* support about 100 men, but being exclusively alluvial everything has been at a standstill for want of water, there being, however, one exception to the above. This is M'Leay & Co.'s claim at Sewell's Creek. This party has been driving into a basalt range, and when in about 240 feet water was struck, and was so strong that the claim had to be temporarily abandoned. This was the hill referred to by me last year, and I am still of opinion that a good lead will yet be found in this range.

*Oberon* only supports 25 miners, and is at the present time hardly worthy of notice.

The Kirkconnell Gold-field employs upwards of 150 miners, 337 acres of land having been applied for to lease, the excitement being caused by the discoveries made by Hensworth & Co. In the claim held by this party water is very heavy; three shafts have had to be abandoned. They are now employed in putting in a tunnel, hoping to drain the hill. Newton & Co., of Sunny Corner, have been working regularly during the year with apparently satisfactory results.

At Trunkey 111 men are employed. Rutherford & Co., at Holl's Hole, had a good washing up while there was water, but this only happened once during the year. Boyd & Co. have been working No. 7, but I have not been able to get any returns. The total quantity of gold sold locally was about 1,100 ozs.

The Carcoar District, which has been under my charge temporarily during Mr. North's illness, has not been much excited by gold or copper discoveries. Mining is extremely quiet. 9,317 ozs. of gold passed through the hands of the Carcoar Gold Receiver, 4,000 ozs. of which were obtained at Mount M'Donald.

In concluding my report I wish to state that the high rate of wages payable on the large Government works has caused a great many men to give up mining for the present and go to the railway works. Perhaps the dry weather also had a depressing effect; the total rainfall has not exceeded 24 inches for the year.

## BATHURST DISTRICT—ORANGE DIVISION.

(Mr. Warden J. T. Lane, P.M., Orange.)

I HAVE the honor to submit, for the information of the Hon. the Minister for Mines, my annual report for the Orange division of the Bathurst district, for the year 1883.

Nothing very striking has occurred during the past year, but a disposition to continue gold-mining operations seems to animate the mining fraternity.

*Ophir*.—There is little or nothing being done in the direction of alluvial workings owing to the scarcity of water, and so many of the miners being away harvesting.

The Belmore ceased working just before Christmas, but operations are to be resumed again shortly.

At Lucas's Gully the reefs are still being worked with encouraging results. Some good gold is occasionally found.

At the Queen of the Ranges (a recently-discovered reef at Ophir) things look well. It is thought the stone will average 1 oz. to the ton; and as it is easily raised, and the water very convenient, great things are anticipated when the intended machinery is erected.

The Drift Gold-mining Company continues to manifest its characteristic perseverance, having some ten men or more constantly employed. The tunnel is in some 310 feet, and the men are now pricking up towards the air tunnel. The latter is about 50 feet above the former—27 of which are got through—and ere it be reached the wash-dirt is expected to be cut. The air tunnel is 216 feet, and through which the workmen are supplied with materials, &c. The average of wash in the air tunnel is about 2 feet, and the prospects are deemed satisfactory. A large dam is being constructed in Murray's Gully about 100 yards from the mouth of the tunnel, with the view of conserving water for washing purposes; the dirt is to be conveyed by tram.

The

The above Company have sunk several test shafts on the Bluff with encouraging results, and are making arrangements to erect the required machinery forthwith.

At the confluence of Ophir and the Macquarie several parties are tunnelling at different heights of the mountain and have obtained payable gold; the tunnels are from 200 to 300 feet. Operations are retarded here for want of water, none being available at such a height.

On the road from Ophir to Orange there are four or five parties working. In one tunnel gold is being procured under the basalt; the others have not bottomed.

About 8 miles from Orange, and 2 from the Ophir road, in the direction of the Mullion, there are large quantities of quartz and wash at a place known as Dale's Reef. It is said gold is distributed through the drift in payable quantities if machinery were introduced; there is abundance of water.

*Forest Reefs.*—Operations are still carried on with vigour, hoping some day to realise their expectations and be abundantly rewarded for their perseverance.

*Four-mile.*—This old spot is beginning to attract a little attention again. The neighbourhood is auriferous, and I have no doubt payable gold will be found.

*Lucknow* maintains its reputation as a gold-field, and will one day disgorge something wonderful.

The other old workings in my district are as they were when I wrote my last report.

Copper-mining is, I might say, a thing of the past. I believe a few are working on tribute at Cadia and Carangara, but the returns are too trifling to demand any attention.

#### BATHURST DISTRICT—BATHURST DIVISION.

(*H. Hely Hutchinson, Mining Registrar.*)

IN submitting my annual report upon mining operations within my portion of the Bathurst Mining District, I have to state that very little if any work has been done during the past year 1883.

There are still a few miners prospecting near Napoleon Reef and the Black Spur, but so far as I have heard with little success.

I have issued during the year 125 miners' rights and three business licenses, also two mineral licenses. The miners' rights have been chiefly taken out by parties holding claims or leases in other districts. Water for washing purposes has been very scarce.

#### BATHURST DISTRICT—CARCOAR DIVISION.

(*W. B. Warner, Mining Registrar.*)

THE year just closed has been an uneventful one in this district. No new finds of gold of any importance have been reported; but a considerable quantity has been obtained from some of the mining localities, particularly Gally Swamp and Mount M'Donald, resulting in a total yield considerably in excess of that for 1882, as will be seen by the following return. Total amount of gold forwarded by escort from this and the Mount M'Donald division during

	ozs.	dwts.	grs.
1882	6,599	4	2
1883	9,817	16	12

thus showing an increase in 1883 of 3,218 ozs. 12 dwts. 10 grs., or about 50 per cent.

A good deal of gold has been obtained from the claims situated at Gally Swamp. About 30 men are employed on this field, together with two small crushing plants, which are ample for all requirements. The ground here is very patchy, the gold being found in the quartz mostly in small veins or leaders, generally very rich, in very hard ground, and difficult to find. The principal claims are those of Lane and party, Tucker and party, Rowe, Digby, and others.

The Brown's Creek mine is still the most important concern in this division. It is situated on the Church and School Estate, has a plant valued at £30,000, with from 70 to 100 men constantly at work, and yielding nearly 4,000 ozs. of gold per annum. It is now under the management of Mr. W. Roberts.

Another important locality in this division is the Burnt Yards, also situated on the Church and School Estate.

The old Prince of Wales claim, long celebrated for its rich deposits, is now being worked by a company who are investing large capital in machinery, &c., in order to work the ground on a much larger scale and also in a more scientific manner than heretofore. A tramway has been laid down to take the stone to the crushing plant on the banks of the Belubula River. A very small yield per ton will enable the company to pay good dividends.

Little or no copper or iron has been obtained in my division during the year.

I sold 115 miners' rights but no business or mineral licenses.

#### BATHURST DISTRICT—TRUNKY DIVISION.

(*W. T. Lee, Mining Registrar.*)

IN submitting this, my first annual return for the Trunkey division, I regret that it is not a more favourable one, although the past season has been much better than many previous, about 24 inches of rain having fallen. Mining matters are dull; hopes are however entertained that some discoveries may be made that will cause a reaction, as, undoubtedly, numerous and rich deposits remain to reward the persevering and industrious miner.

The rain, in nearly every fall, was so steady that it soaked in leaving little surface water for sluicing operations.

#### BATHURST DISTRICT—TUENA DIVISION.

(*M. Jones, Mining Registrar.*)

I HAVE the honor to report respecting this division that there has been a falling off in the yield of gold for the last twelve months—only one of the old reefs being now at work, and one new reef discovered giving anything like a fair prospect of paying; it is situated about 3 miles from Tuena, at a place called the Scrubby Rush. At present there are three claims in which gold has been found, but the best prospect is in a 4-acre lease held by James M'Carthy and party, who have had about 15 tons of stone crushed, giving a return of about 3 ozs. to the ton—the same party have about 90 tons more at grass, which they expect to pay well.

In

In alluvial there is not anything new to report. The principal yield of alluvial gold for the last year has been obtained by a few parties of Chinamen, the want of water preventing any sluicing, except about three weeks in the winter.

I have issued 108 miners' rights, 3 business licenses, and received 9 applications for gold leases for the year 1883.

BATHURST DISTRICT—COWRA DIVISION.

(*W. B. Simpson, Mining Registrar.*)

I HAVE the honor to forward a report on mining matters in the Cowra District during the year 1883. There has been a great falling off in all branches of mining in this district. There were three applications made for copper leases, the total area being 90 acres; these leases have not yet been worked. The Wangoola copper lease is the only lease from which ore has been taken, some 20 tons having been forwarded to Lithgow for smelting. In gold-mining there has been one lease applied for at Wood's Flat. There is one party at work at Wood's Flat obtaining payable gold. I was shown a 5-oz. nugget obtained at Wood's Flat. The number of miners' rights taken out at Cowra for the year 1883 is 13. There were 51 issued in 1882.

BATHURST DISTRICT—ROCKLEY DIVISION.

(*T. C. Cromie, Mining Registrar.*)

I HAVE the honor to herewith send you my annual returns for 1883, from which you will see that mining prospects in the Rockley division are very dull, and have been so during the whole year. During the year I have issued 65 miners' rights and 45 business licenses, being a large decrease on the previous year, owing to there being no new rushes or any excitement in mining matters. There were 185 ozs. of gold sold in Rockley during the year, chiefly from Blossom Hill and Isabella River; one nugget of 10½ ozs. of fine gold was found by Kennedy and party on the old Native Dog Creek diggings and there is no doubt there are plenty more in the same locality if there was only water to sluice. I may say that the Burruga mines are in full swing, five furnaces being kept in constant use and about 200 hands employed there.

BATHURST DISTRICT—MITCHELL'S CREEK DIVISION.

(*Samuel Shumack, Mining Registrar.*)

IN submitting the annual report of my division for the year 1883, I have the honor to report, for the information of the Honorable the Minister for Mines, that quartz-mining is decidedly improving. The Sunny Corner gold and silver mines are paying well, and have every prospect of continuing to do so. There have been several applications for leases all round this claim, and some few shafts sunk, but nothing found yet. A little further on towards Daylight Creek, Messrs. Hemsworth and Deacon have struck a lode of silver, lead, &c., besides a good show for gold. There has been great excitement about this. Several applications made, and several shafts are now going down, but as yet no other lode or reef has been found. What Hemsworth's will come to remains to be seen, but experienced miners tell me they have a good thing. There are several parties working at Dark Corner. One claim promises to pay well. Mitchell's Creek is almost deserted through this claim of Hemsworth's. Messrs. Brown Brothers are moving along steadily, not running at every report, but sticking manfully to their claim on the Big Hill, where I think they are doing more than anyone is aware of, or they would look for pastures new. I hope it is the case as they are very persevering young men. There is not much doing in alluvial.

BATHURST DISTRICT—OBERON DIVISION.

(*O. W. Cunynghame, Mining Registrar.*)

I HAVE the honor to report that there has been an 8-horse-power engine and four-stamp-battery erected at Lambert Old Reef this year, and the claim has been worked again to the end of the year. Molloy's old claim has been worked again, and a trial crushing of 19 tons yielded 20 ozs. 13 dwts. Blackman's old reef has been opened again, and a trial crushing is reported to have yielded 1 oz. to the ton.

BATHURST DISTRICT—MOUNT M'DONALD DIVISION.

(*G. A. Gunning, Mining Registrar.*)

IN submitting my report for the year 1883, I have much pleasure in stating that the prospect of this field is far more encouraging than at the close of 1882.

In the early part of this year several of the large companies ceased work through the poor yields, which accounts for the decrease in the total yield for the year.

Most of the leases that were being worked by large companies during 1882 have been taken on tribute by small parties, and although the companies became seriously involved the tributors have made good wages.

Within the last six months there have been several good yields, the principal ones being 12½ tons from Oliver's Selection, which yielded 93 ozs. 21 grs. Matheson and party have just crushed from their claim on Cancelled Lease No. 60, 13½ tons for 78 ozs. 10 dwts. This lease was abandoned by the original lessees, it not being deemed payable.

During the year there were only 101 miners' rights, eighteen business licenses, and one mineral license issued. The falling off may be accounted for by the depressed state of the field during the latter part of 1882, which caused a great number of miners to leave the place, and as those that returned did not do so for some months they had obtained their rights elsewhere.

During the year there have been 4,355 tons quartz crushed for 4,000 ozs. 9 dwts. 21 grs., the value of which is estimated at £15,500. The average value per oz. is £3 18s., some gold selling as high as £4 1s. per oz., while other as low as £3 12s.

I would respectfully suggest that all leases that are not being worked be cancelled. If this was done a great number of the leases would be retaken by *bona fide* miners, who would either have to work them or forfeit. The majority of the leases on this field were applied for in 1881, and as the lease has not been

been executed, there is nothing to compel the lessees working. There are several men who know of gold-bearing reefs, but as the lessces will not work them they can do nothing but wait until the lease is issued, and, if conditions not complied with, cancelled.

There are at present about 150 men employed on the field, 100 of them engaged in mining, while the remainder are wood-cutting, carting, or carrying on business.

The rainfall for the year has been about 20 inches, 16 inches 32 points having fallen between March and December. Out of the 200 and odd leases applied for there are only fifteen being worked, most of the ground having been taken up by speculators for the purpose of selling.

I anticipate a much larger yield from this field during 1884, as there are several claims with good stone in sight, and I am confident as soon as some of the old leases are cancelled they will be retaken and fully prospected.

TAMBAROORA AND TURON DISTRICT—HILL END DIVISION.

MUDGEE DISTRICT—HARGRAVES AND WINDEYER DIVISIONS.

(*Mr. Warden W. A. Steel, P.M., Hill End.*)

I HAVE the honor to transmit my annual report for the year 1883, on the Tambaroora and Turon Mining District; together with the Hargraves and Windeyer divisions of the Mudgee Mining District.

I took charge of this district early in February, 1883, and regret to state that in no time during the past history of this once rich gold-field have mining operations been so dull as during the year 1883. This applies to the whole of the district under my charge, with the exception of the Sofala division. Alluvial workings may be said to be suspended altogether, many of our miners have left to seek more profitable and certain employment on the Railway works, and Lithgow collieries; this would lead to the conclusion that many of the old alluvial claims have been worked out—the past season being remarkable for a large rainfall—and want of water cannot be urged as the cause of the falling off. The quantity of gold forwarded by escort from Hill End was 5,192 ozs. 11 dwts., being 1,235 ozs. 5 dwts. 7 grs. less than that transmitted during 1882.

Some excitement was caused in July last by Longton and party discovering gold within 2 feet of the surface in a claim formerly held by one Pascoe, on Prince Alfred Hill. This, however, was soon worked out, and work discontinued. No alluvial claims are payable.

*Quartz-mining.*—Carver and party (four) struck good gold in July last, since which they have had three crushings, comprising 241 tons, yielding a total of 640 ozs. 18 dwts. 12 grs., and are still getting gold, at a depth of 90 feet, the vein being 8 inches wide. The adjoining claims although at a greater depth have not yet struck payable gold. The old Star of Peace claim, Hawkins' Hill, amalgamated with Krohmann's and other leases, is now owned by the Consolidated Gold-mining Company; a new manager has recently arrived from England and taken charge of this mine, in which work has been suspended for some time, but was resumed on the 1st instant, it is believed by deep sinking, and a different mode of working from that hitherto adopted, the prosperity of this mine will be revived; it is devoutly to be hoped the shareholders' expectations will be realised, as the future of Hill End will in my opinion much depend on the success of this mine. The Patrick Gold-mining Company continue to work, the yield from which is not great. Paxton's and the Rose of England leases are worked on tribute, which I am informed are returning fair wages, after deducting all expenses.

The Red Hill Gold-mining Company's mine, at Tambaroora, commenced operations on the 4th October last (this mine was formerly worked by a private Company). Great progress has been made in deepening the various shafts, and 302 tons of quartz have been raised and crushed at the Company's battery, yielding 426 ozs. 15 dwts. of gold.

*Hargraves Division.*—Mining operations in this division may be said to be altogether suspended; with the exception of a few "fossickers," working old claims, nothing has been done during the year.

*Windeyer Division.*—I regret I cannot give a more cheering report of this part of my district than at Hargraves; the miners being for the most part Chinese, seem to be making a bare existence, from mining and tobacco-growing combined.

*Quartz.*—The Catherine Company's works have been idle since I took charge, and no crushing has taken place at any other machine.

*Sofala Division.*—This is the only part of my district wherein the yield of gold has exceeded that of previous years, though the number of miners are far less. Spring Creek Reef, situated about  $\frac{1}{2}$  mile south of Sofala, abandoned for some time, has again been opened by the Spring Creek Company, who have gone to great expense in placing a 25 horse-power engine, with batteries and pumping gear, the water having been pumped down about 150 feet, are now sinking on a vein about 12 inches wide; a few tons of stone have been raised, but no crushing has yet taken place.

*Wattle Flat.*—The Solitary Reef Company of Victoria: This mine is now worked at a depth of 350 feet; a recent crushing of 44 tons yielded 49 ozs. of gold. At present fifteen men are employed. It is believed by experienced Victorian miners that this reef will ultimately turn out very rich. There are several other reefs in the vicinity of Wattle Flat whose crushings have yielded from 8 dwts. to over 1 oz. per ton.

The Erskine Flat Sluicing Company and Golden Point Company have been dissolved and their engines disposed of; their claims, situated near Sofala, have been taken up by others, but as yet no work has been done. The yield from the reefs at Palmer's Oakey, and the neighbourhood of Sofala have not been encouraging. The alluvial workings in this division are confined to a few miners, chiefly Chinese, who "fossick" in the beds of the rivers and creeks, and in abandoned ground.

*Box Ridge.*—Some of the old reefs in this locality have changed hands; several crushing plants are at work; the owners seem very sanguine of success; stone is being raised; the result will shortly be made known.

The quantity of gold transmitted by escort from Sofala during the past year was 3,664 ozs. 3 dwts. and 13 grs.; and about 400 ozs. forwarded by other means, showing an increase of 437 ozs. on the previous year.

It is believed that much good will arise from the action recently taken by the Honorable the Minister for Mines, in enforcing labour conditions by lessees; it is well known that valuable mining properties are held by speculators for long periods to the great injury of *bona fide* miners.

## TAMBAROORA AND TURON DISTRICT—IRONBARKS AND WELLINGTON DIVISIONS.

(Mr. Warden Caswell, P.M., Wellington.)

I do myself the honor to submit the annual report of the present state and future prospects of the gold-fields in the sub-district of Wellington, formed from the Tambaroora and Turon District on the south, and the Mudgee District on the north, the southern portion being generally known as Ironbarks, and the northern as Wellington.

Until the 1st July last my district formed part of the Dubbo sub-district, but I did not enter upon my duties until the 19th September, and I am not as well acquainted with the mining operations as I could wish.

In a prosperous gold-field a Warden's whole time must be absorbed, for, in addition to his judicial and ministerial duties, the transmission of accurate information to the Department is of serious import to the mining population of the Colony.

It seems that Mining Registrars report direct to the Under Secretary in the same manner as the Wardens, and are allowed the same limit of time, so that although they are the depositories of all the statistical records of the mining districts on which the Warden's report should be based, the latter cannot wait for the information under risk of censure from the Minister. I mention this, as Registrars reports need not be very elaborate, should be easily compiled, and would afford some advantages if sent through the Wardens.

I regret to state that the mining interest in Wellington and Ironbarks is in a most depressed state. It has been steadily declining for the last five years. The decline may be ascribed to several causes, the long succession of dry seasons has doubtless had much influence on the decrease of alluvial workings. The absence of discoveries of new fields, and the gradual extinction of the class of *bonâ fide* "diggers," men who devoted their lives to the work, and to whom restraint became too irksome to submit to employment for wages, are additional causes to account for the falling off in the quantity of gold won. In this district the mining population consists of men ready to work anywhere and at any work for the highest wages. To such as these the temptation of high wages, either in the construction or working of the railways, is not resisted, and consequently since the advent of railways to the district there has been a constant steady drain of the miners.

There are twenty-six known quartz-reefs in the Ironbarks District, some of which have yielded 3 ozs. of gold per ton, but few of these have been operated upon during the past year. The crushings at the two mills did not amount to 500 tons. I can only account for this by the insufficiency of capital and the absence of large interests.

Some of the miners attribute the decline of the gold-fields here to the fact that a few persons have applied for a large number of leases, well knowing that owing to the length of time taken before the applicants are called upon to pay up, they are able to keep others off, and have time to speculate, and can in the end decline to take up the leases. So far as this district is concerned I do not endorse this, but no doubt the present system enables a few persons to shut up a large quantity of each gold-field, which would be prevented if surveys were expedited and deposits increased.

With the hope of stimulating the search for gold on the many payable reefs at Ironbarks, I suggested (long before I was appointed Warden) a combination of miners for the employment of the diamond drill. Meetings were held both before and since the promulgation of the new regulations, but I regret to state the determination arrived at was that the risk was too great as there was no certainty as to the costs which might be demanded by the Government in case of delay or accident to the machinery. I have no hesitation in asserting that Ironbarks would have been nearly deserted long since had it not been for the persevering exertions of a few sanguine and energetic men, who have induced the formation of small Companies, and have struggled on with insufficient capital year after year.

As a preface to a suggestion I would submit I have prepared a table from the Mining Registrars' Reports for the last five years, which clearly exposes the gradual decline of the mining interests of the district, and indicates the necessity for any assistance the Department can render; and as the win of gold has decreased throughout the Colony my remarks will have a general application.

TABLE showing the number of miners employed, the value of machinery, and the value of gold won on the gold-fields in the District of Wellington during the five years ending the 31st December, 1883.

Year.	Place.	Number of men employed.		Value of machinery.	Value of Gold won.		
		Ironbarks.	Wellington.		Ironbarks.	Wellington.	Total in District.
1879	Ironbarks.....	300	.....	3,000 0 0	£ s. d. 3,894 2 6	£ s. d. .....	£ s. d. .....
	Wellington.....	.....	137	10,000 0 0	.....	11,237 10 0	15,131 12 6
1880	Ironbarks.....	320	.....	3,000 0 0	5,194 0 0	.....	.....
	Wellington.....	.....	67	7,000 0 0	.....	8,310 0 0	13,504 0 0
1881	Ironbarks.....	120	.....	3,000 0 0	4,753 3 6	.....	.....
	Wellington.....	.....	78	10,200 0 0	.....	4,494 7 6	9,247 11 0
1882	Ironbarks.....	175	.....	6,600 0 0	5,325 3 9	.....	.....
	Wellington.....	.....	77	10,200 0 0	.....	2,832 2 9	8,157 6 6
1883	Ironbarks.....	151	.....	6,600 0 0	1,475 0 0	.....	.....
	Wellington.....	.....	45	10,200 0 0	.....	3,597 3 2	5,072 3 2
		1,066	404				
	Total of men in 5 years....	1,470				Total won in 5 years....	51,112 13 2

Thus £51,112 13s. 2d., divided amongst 1,470 men, gives their total earnings at £34 15s. 5d. per man per year without any deduction for wear and tear and interest on value of machinery.

By these returns it seems that all the gold won in five years, £51,112 13s. 2d., divided amongst the miners, would leave a share each of £34 15s. 5d., or less than 13s. 6d. per week, instead of £2 per week, the wages such a class of men would be entitled to; and these 1,470 diggers and the community lost more than £100,000 through misapplication of their labour.

The average earnings throughout the Colony are set down at £57 per man, without any allowance for mining managers and machinery, so that annually there is a terrible loss to the community of capital and labour.

If every gold-field had the benefit of a geological survey, and the theory of the survey proved by the diamond drill, most of this loss would be prevented, and the practical experience of both surveyors and miners would be greatly increased; and I therefore submit the Department should undertake the whole expense of doing this for economical reasons. Regulations could be so framed that the cost of using the drill would be more than recouped to the revenue, because increased rental might be obtained for ground successfully tested and offering good indications.

The experiment could be made on one gold-field, and that at Ironbarks has many advantages. The reefs have been proved highly auriferous, and a railway runs past in sight of many of them.

I will now proceed with details of the most important works in different portions of the district.

*Crushing Mills.*—There are only two mills at Ironbarks—Scott's and Boehme's. The former of ten-horse-power and 12 stampers, has only crushed during the year 403 tons for about 313 ounces of gold, a paying average if the quartz were plentiful and the machinery more powerful. Boehme's machine, which is rather more powerful than Scott's, being of 20 horse-power, driving 15 stampers, has only crushed about 90 tons for a yield of nearly 80 ounces, which is also a fair average. That there have been less than 500 tons crushed during twelve months indicates how little spirit there is in quartz-reefing at Ironbarks.

*Quartz-reefs.*—Of the 26 gold-bearing reefs at Ironbarks, or in that neighbourhood, only nine appear to have been worked; of those the Princess Alexandra yielded over 28 dwts. per ton, the Ophir 24 dwts., and Monk's reef 20 dwts. The others, Trickett's, Splitters' Gully, Martindale, Ginger, Perseverance, Great Britain, and Poor Man, from 6 dwts. to 17 dwts. per ton.

There is not much probability of any extensive workings in this description of mining being undertaken in the present state of the labour and money markets, unless some valuable discovery should be accidentally made.

The Alexandra reef is worked by Liddle and Nicholson as a quarry, and is only  $\frac{1}{2}$  of a mile from the railway station. It has a 30-foot face.

*Sluicing Claims.*—The only workings of this description I am aware of are those at the Macquarie River and Mookerawa Junction, and I am favored by Mr. Geary, an experienced mining manager connected with both, with the following information:—

"The Junction Point Gold-mining Company's property is situated on the west bank of the Macquarie River, below Mookerawa Junction about half-a-mile.

"It contains in all about 30 acres of leased land.

"The machinery consists of a 25 h.-p. boiler, with engine and a Tangye steam pump, capable of lifting water 240 feet in height. The Company bought up a tail race over 700 feet long to avoid the high bar, but it was found when the race was in the ground to be worked was so much deeper than was anticipated that only one paddock was opened, which returned 71 ounces of gold.

"The Company are now driving a tunnel through the rock, which will enable them to come with the wash in 300 feet, which command all the bottom without any lifting. A pressure of 70 will be obtained, and the dirt operated on by the hydraulic system. The value of the plant and machinery is £1,200. There are six men working in three shifts at the tunnel.

"The Mookerawa Company hold a lease of 35 acres at the junction of the Mookerawa Creek with the Macquarie River. The machinery consists of a 7-horse power boiler with engine, and a Blake steam-pump, capable of forcing water to a vertical height of 60 feet, and lifting 36,000 gallons per hour.

"There are three drays employed carting out wash-dirt, which is tipped into sluice-boxes and washed at the rate of 250 loads per day, the average yield from which is 1s. per load. The bottom is very rich, and in some places returned 1 oz. per load. The wash-dirt varies from 30 to 70 feet deep, all of a good sluicing nature.

"The Company employ 22 men besides horse drivers, and 2 engine-drivers, and 3 horses and carts. The gold won during the first six months of operations amounted to 306 ozs. 8 dwts. 2 grs. During the period mentioned the ground was being opened, so that in future the returns should be largely increased. The plant is valued at £1,500."

#### *Copper-Mining.*

The great feature in this description of mining is Backe's Copper Mine, east of the Springs Railway Station, or rather Red Hill, near the Burrandong road, designated to me as the Great Burrell Mining Company's lease of 140 acres, taken up originally about ten years ago by John Backes, who alone, or with others, has worked the ground most industriously ever since. I am favoured with a short report by Mr. Charles Barton, one of the proprietors. He writes:—

"Three shafts of over 100 feet, and also a number of shallower shafts have been sunk. The first shaft was put down on an outcrop of copper, which resulted in a vein running out at intervals and again assuming a width (say) of 2 feet. About 25 tons of copper ore was taken out. Specimens averaged from 30 to 70 per cent., and the whole amount went an average of 12½ per cent. The country got too hard at 100 feet, and the haulage too heavy to render any further work at this shaft possible without the assistance of steam.

"A shaft of 100 feet was afterwards sunk at the north end of a very large blow of gossan, and resulted in discovering large deposits of pyrites (sample No. 1 herewith), intermingled at long intervals with copper stains and yellow ore in small quantities. These deposits underlying to the east, and were cut through; and as water was a difficulty this shaft was also abandoned and another shaft further down the blow of gossan was sunk 100 feet. A drive to the eastward at 60 feet level was put in, and resulted in finding a small quantity of decomposed ore containing a large percentage of malleable copper. Another drive was put in this shaft at 100 feet and cut the hanging wall of a lode, a sample of which (No. 2) is sent herewith. A number of assays were made of this stuff, a quantity of which is at grass, resulting in from

8 to 14 ozs. of silver per ton, and from  $4\frac{1}{2}$  to  $7\frac{1}{2}$  per cent. of copper. It has now become necessary to sink a fresh shaft to the east of this drive to prove the discovery, and arrangements are now being made to carry out this work.

"The principal feature of this property is the immense blow of gossan 40 feet wide by 80 feet deep, which runs north and south."

Although copper is very widely distributed throughout the Wellington district, and several leases taken out, I have nothing special to report of the operations. I may conclude on this head with the stereotyped phrase, "there are anticipations of great success."

*Mitchell's Creek.*—I am not aware of any alluvial mining in the neighbourhood of Mitchell's Creek. There may be some fossickers, but that is very unlikely during the continuance of this unprecedented drought.

Both Mitchell's Creek and Kaiser mines are still idle, though I have been informed recently that the latter will be put in working at an early date.

In concluding this report I desire to state that I have, in common with the most sanguine of the thousands who have worked or visited the district, the firmest belief in its boundless mineral wealth; and I understand Mr. Wilkinson, Geological Surveyor, in all his reports to confirm these opinions; but in writing the report in the manner I have, I desire to draw the attention of the Minister to consider the possibility of saving labour by scientific aids, and thus reviving our mining industry which is undoubtedly declining here.

#### TAMBAROORA AND TURON DISTRICT—HILL END DIVISION.

(*W. M. M. Farlane, Mining Registrar.*)

I do myself the honor to submit, for the information of the Honorable the Minister for Mines, the following report upon the mining interests in the Hill End division of the Tambaroora and Turon mining district for the year 1883:—

##### *General.*

I regret to state that this division has been in a more depressed state during the year than at any period since the field first became famous some twelve years back. The cause of the depression has been the small amount of gold obtained and the scarcity of anything like permanent employment, as many of the Companies that employed a considerable amount of labour have left off working through the small amount of gold won compared with the amount of capital expended.

In the month of May, just at a time when gold-mining here was at a low ebb, a vein was discovered on Prince Alfred Hill by Carver and party. Strange to say the ground in which this vein was discovered had been held by different lessees for years past, and only a short time before Carver and party took it up it was tried by an experienced miner who gave up after a short period of work as he did not meet with success. About the same time Longton and party discovered a vein running east and west lying north of Hawkins Hill from which they obtained some really good prospects, but beyond this they can have obtained very little gold as from the only crushing they had, of something over 23 tons, the yield was only about  $\frac{3}{4}$  of an ounce to the ton. As they believed they had cut out the gold-bearing shoot they did not take out another crushing. During the year Chellew and party struck a gold-bearing vein in their extended claim on the Golden Gully line of reef, about half-a-mile to the north-west of the town of Hill End.

Good results have been obtained during the year at the Red Hill Company's property at Tambaroora.

##### *Alluvial Mining.*

Alluvial mining in this division by Europeans is becoming almost an employment of the past; certainly some parties have been prospecting in different places, but they have not met with sufficient success to keep on working. The Chinese, of whom there are a good number, have been doing a considerable amount of alluvial mining, mostly with the aid of sluicing in all places where there is anything like a reliable supply of water; but I have no idea whether they have been obtaining good or poor results as they are particularly reticent upon all matters in connection with mining. Lately large numbers of Chinese have left the division as they find the alluvial ground is getting worked out.

##### *Quartz-mining.*

A great deal of prospecting has, during the year, been done upon the different veins in proximity to the ones from which gold has been obtained, but except in very few cases very poor results have been obtained.

##### *At Tambaroora.*

The Red Hill Amalgamated Gold-mining Company, No Liability, situated on the Red Hill, consists of the Perseverance, which was originally held by Kelly and party, and after them by Paten and party up to 1883; the Gigantic Struggle, formerly held by Mrs. Beard and Paten and party, and the Marshal Macmahon, originally held by Reneteau and party, afterwards by Renwick and party up to 1883. The Company have expended a considerable amount of capital upon the works, having purchased machinery of the value of £2,500. During the year they have been employing twenty-three men; they have sunk to a depth of 230 feet, the deepest level being at 220 feet; the vein is six inches wide, strikes north and south, and has an underlay east of 1 foot in 3; they have raised 304 tons of stone, from which they have won 426 ounces 15 dwts. of gold of the value of £1,609 16s. 2d. Iron pyrites are found in large quantities on this property; a small parcel was tested quite lately, and found to contain 3 ounces of gold to the ton. It is now the intention of the Company to treat all their pyrites by Parnell's Patent.

*Kissell's.*—This claim lies to the north of the last-mentioned property. A crushing of about 20 tons of stone from it was had just before Christmas, and it yielded 2 ounces to the ton, which paid exceedingly well, as the sinking is soft and the vein large. I have not received any return from this claim so cannot give any fuller particulars.

I know of no other properties about Tambaroora that are paying.

At

*At Hill End,*

Lying just to the west of the town, on Prince Alfred Hill, lies the vein that was discovered this year by Carver and party. Several leases have been applied for on the line of reef, commencing at the south or summit of the hill going northward.

Colling's freehold is on the summit of the hill. Upon this property a shaft has been sunk 100 feet on the underlay. Beyond a few colours no gold has been obtained. I believe this ground is to be further tested, but at present the contractors are awaiting instructions.

Bridges and party hold the adjoining lease on the north. They have done a considerable amount of sinking, and have obtained some good specimens; they have also crushed about 62 tons of stone, but it has not proved payable, as it only yielded about 5 dwts. to the ton.

Burns and party have not done very much work, and have not yet had a crushing. Quite lately they struck what they believe to be Carver's vein, from which they are now obtaining good-looking stone, which shows gold freely.

Carver and party hold the adjoining lease on the north, and without a doubt it is the best gold-mining property in this Division at present; they have been working continuously since last April, and during the last six months have obtained five crushings, which have paid them handsomely. The vein is about 8 inches wide, and has an underlay east of 1 foot in 3; the sinking is very soft indeed, the formation being a kind of pipe-clay rock. They have sunk to a depth of 100 feet, and have driven north 40 feet and south 90 feet. They have crushed altogether 244 tons of stone, yielding 648 ounces 15 dwts. of gold of the value of about £2,500, besides which they have some very fine specimens which they withheld from crushing. The property from the time of commencing work has paid £16 9s. 7d. per week per man, exclusive of working expenses.

Costen and party's lease adjoins; they have sunk about 80 feet, but have not yet found the shoot of gold. This is virtually the last lease on Carver's line; it runs almost down into Specimen Gully, but after crossing the gully and going along the hill on the west side still lies north.

Beattie's Claim.—He is working on the old Eureka lease, but has only had one fair crushing during the year.

Gustafson and party raised some quantity of stone from their claim on the north, but it does not appear to have been payable and they are not working at present.

Kuntze and party have been working their ordinary claim throughout the year, and are still persevering, but they have not obtained anything payable.

Dorin has worked his ordinary claim during the year to a depth 60 feet, and has taken out some crushings from one of which he obtained 2 ounces to the ton. The sinking being soft it has paid him about £3 per week, but it appears to have run out.

Goodwin and party have worked to a depth of about 50 feet. One of their crushings went 4 ounces to the ton.

R. Fortescue Lord holds the adjoining ground on the north as a 5-acre lease—it was originally the old Excelsior lease. Work has been carried on to a depth of 100 feet, but nothing payable has been found.

J. Ackermann and party have obtained some fair crushings from their claim during the year, and it has paid £2 10s. per week per man clear of expenses, and still looks well.

Meyer and Letcher have been working their claim throughout the year, and it has paid them £6 per week per man clear.

Marshall Brothers have worked to a depth of 120 feet, but have not up to the present obtained anything payable, but they are still sinking and expect shortly to strike the shoot that Meyer is on.

Longmore Brothers, on whose ground is situated the old St. George shaft, have been working east of the old workings, but have only obtained medium crushings; they now propose working the old St. George shaft.

Regan and party, who hold the northernmost claim on this line, have been working throughout the year. They have sunk to a depth of 100 feet, and have driven 300 feet along the line of vein. This claim gave good returns at first, but has not looked so well lately.

About half-a-mile north and slightly east of Regan and party Chellew and party hold an extended claim on the Golden Gully line of reefs. They have been working during the year. The vein is very small and they have some difficulty in tracing it, but the sinking is very soft. They have raised 50 tons of stone, which yielded 109 ounces of gold of the value of £418 15s., which has paid them very well indeed.

*Hawkins' Hill.*

As many of the old properties on Hawkins' Hill have been worked during the year, and as a good number of them are now held by the Hawkins' Hill Gold-mining Company I shall give a detailed account of them, commencing at the north of the hill and running south, but as I intend giving a full account of the H.H.G.M. Co. I will simply mention any properties held by that Company in their proper order.

The H.H.G.M. Co. hold the first property on the north as a lease, and their principal dam is situated upon it.

The Frenchman's is now worked on tribute by Longton and party, who have been working it for the last three months. Although they had a lot of dead work to do in getting the ground ready they obtained one crushing that gave good wages, after paying expenses, royalty, &c.

The Patriarch (late Trust and Try) has been worked continuously throughout the year. Mr. Charlton, the manager, has kindly supplied me with a report upon the work, from which I extract some interesting particulars as follows:—

At 130 feet from surface a cross-drive has been taken in east from the Frenchman's vein, for a distance of 100 feet, cutting eight veins, none of them bearing gold. At the same level a drive of 52 feet has been taken south on the Frenchman's vein, the vein being from 1 to 3 inches in width, showing fine gold. At 100 feet from surface a cross-drive of 78 feet has been taken to Paxton's vein, from which 60 tons have been crushed, yielding 51 ozs. gold. Width of vein, 3 to 7 inches. At 360 feet from surface, a drive has been taken south for a distance of 80 feet on Steven's vein. The vein averaged 4 inches wide and realized 14 dwts. to the ton. Work is now being carried on at 500 feet from surface on Paxton's vein, which is from 4 to 8 inches wide. 25 tons of stone from this level is now at grass, which is estimated to yield 30 dwts. of gold to the ton. The Company employ ten men, and have a steam winding engine valued at £500.

The Crown Prince Tribute (which includes the properties known as Crown Prince, Oxon's, Hermann's, Meyer's), Fischer & Beards, and Star of Peace are held by the H.H.G.M. Co.

Paxton's has been worked throughout the year on tribute by Clements and party. They have been getting a little of the rich old stuff by running the stulls, and occasionally getting a little of the stuff that has been missed in the good times. On the whole they have been making good wages. They have raised 120 tons of stone, which has yielded 141 ozs. of gold.

Hickson, Creighton & Beards', The Rampant Lion, Cock, Atwood, & Dwyer's, and Brown's have been idle during the year.

Porter & Rawsthorn's has been worked just towards the end of the year. As the work is being carried on under the supervision of Mr. Porter himself the ground will be thoroughly tried.

Monte Christo has been idle during the year, but it is now in the hands of Ackermann and party. Beyers & Holtermann's, Krohmann's, and Rapp's are held by the H.H.G.M. Co.

Rose of England is the only other property on the south of Hawkins Hill now being worked. It is held on tribute by Jeffree and party, who have obtained some crushings, the last one of which was very good. The stone is rich, but the vein is very small. They have many difficulties to contend with, not the least of which is that they have to take all their stone to the battery by packhorse, as the road is inaccessible for any other means of carriage. In the early days of Hawkins' Hill some of the richest stone was obtained from this property; and at the present time, if the holders are content to work for a fair return, there is every prospect of the gold continuing.

*The Hawkin's Hill Consolidated Gold-mining Company.*—This Company was formed in London, and commenced operations in January, 1882. Some time in 1881 Mr. Alfred Fairfax, who then held large interest in the Star of Peace Gold Mining Company, was deputed by that Company to proceed to London to negotiate the sale of their extensive properties on Hawkins' Hill, as they were unable, from want of funds, to prosecute mining operations advantageously. Mr. Fairfax succeeded in forming a strong Company, with a capital of £100,000, the directors being most prominent men in the financial world, and his Grace the Duke of Manchester Chairman of the board. The shares were mostly taken up in London, only about 15,000 being taken up in the Colony, which have since been forfeited for non-payment of calls. The forfeited shares in the Colony, I believe, have been taken up by the London shareholders, so the Company is now worked entirely by English capital. The properties held by the Company are known here as the Cornelian, Star of Peace, Fischer & Beard's, Golden Ville, Great Extended, Beyers & Holtermann's, Krohmann's, Carrol & Beard's, and Rapps. They also hold as tribute the Crown Prince, Hermann's, and Meyer's.

Including the money sent from London, sales of gold won from the mine and other items, the amount of money spent on the mine up to the end of 1883 is shown as £13,403 14s. 8d. Exclusive of this the Company sent out from London a first-class air compressor, complete with six rock drills, and a large shipment of explosives for the use of the mine.

During the year 1882 there were from thirty-five to sixty-two men employed on the works, principally in the Crown Prince. The work done was confined to shallow levels, and a good deal of prospecting was done. The quartz crushed was 1,243 tons, yielding 590 ozs. 8 dwts. 9 grs. of gold, of the value of £2,308 5s. 2d.

In 1883 the principal work done was stoping from the 625-660 feet level in Carrol & Beards, and in Hermann's tribute driving and sinking at the 120-160 and 220 feet levels with the rock drills. Up to August 549 tons of quartz were crushed, yielding 233 ozs. 19 dwts. 8 grs. of gold, value, £877 16s. 10d. The men employed up to this time averaged forty-seven. From August till the end of the year very few men were employed, and they were chiefly at work trucking mullock, from the tips of which 813 tons were crushed, yielding 87 ozs. 3 dwts. 12 grs. of gold, value £327 13s. 4d.

The programme of work to be carried out upon the mine for 1884, which will be under the immediate superintendence of Mr. James Murphy, M.E., from London, is as follows.—

1st.—To let the top ground down to the 300-foot level on tribute.

2nd.—Baling the water from Carrol & Beard's shaft for the purpose of timbering it down to the 800-foot level, and making the necessary repair to the timber at present in the shaft, three cross cuttings from the 800-foot level in Carrol & Beard's shaft, east 300 feet and west 100 feet, leaving 30 feet well-ho. I may state that work was commenced at the beginning of this year, thirteen men being employed at the commencement and no doubt more will be taken on as there is room for them. About three months ago the Company had all their leases registered for suspension of work through an influx of water, but they are not going to make use of the suspension any further.

I would more particularly draw your attention to the advantage to be gained from the work proposed to be carried out this year by this Company. By means of the cross cuts all the old rich veins will be tested at the 800-foot level, and when it is borne in mind that there has not been a cross cut cast or west below 500 feet, the test will be a most important one. The cross cut to the west will test the ground for any new veins coming in. Should the Company be successful it will give a fresh impetus to gold-mining pursuits in this locality and for that matter in the Colony generally, as it will show that payable gold-veins are not confined to surface shoots of gold, but lie buried deep in the hard rock, only waiting the judicious expenditure of capital and skilled labour to win the gold from the earth.

The Company have a most complete plant of machinery which is well suited for carrying out any of the heavier work entailed by working the deep levels.

Marshall's

*Marshall's Line.*—A little work has been done during the year on Marshall's line of reefs, but nothing payable has been obtained. Denman and party towards the end of the year applied for a 3-acre lease which they are now working. They have erected a whim, four men and two boys being employed one shift per diem. The vein is known to be very rich but very small, and they will require a good yield of gold to pay them.

*Bear Gully.*—Two claims have been worked at Bear Gully during the year. The vein though rich is very small. Although the stone when crushed yielded on an average 20 ounces to the ton it did not pay wages.

*East Root Hog.*—Tonkin and party during the year applied for three leases on the east bank of the Macquarie River, about 1 mile above the junction of the Turon River. The leases are situated near the Randwick, nearly opposite the Root Hog workings. The lessees have just erected a six-stamp crushing plant, and they expect to get good returns from the stone they are going to crush.

#### Machinery.

There is a great quantity of machinery in the Division most of which, I regret to say, is lying idle. There are only four crushing-machines working.

Beyer's Battery in the Town of Hill End has been crushing for the public during the year.

The H.H.G.M. Co. Battery mostly doing the Company's own work.

The Red Hill G.M. Co's Battery doing private work.

Tonkin's Battery just erected on their leases to do their own crushing.

#### Returns.

Twelve of the best returns from stone crushed for different parties during the year at Beyer's Battery.

Name of Party.	Locality	No. of tons stone.	Yield.
Carver and party.....	P. A. Hill .....	244	648½ ozs.
Letcher and party.....	Sargent's Hill .....	45	147½ "
Chellew and party.....	Golden Gully .....	50	109 "
Ackermann and party.....	Specimen Gully .....	91½	91½ "
Longton and party.....	Hawkins' Hill .....	46½	58½ "
Dorin .....	Sargent's Hill .....	25	50 "
Goodwin and party.....	Specimen Gully .....	31½	42½ "
Peterson and party.....	Golden Gully .....	40	36 "
Bromley and party.....	Bear Gully .....	35	31½ "
Jeffree and party.....	Hawkins' Hill .....	15	30 "
Evens and party.....	Washing Gully .....	20	30 "
Longmore and party.....	Golden Gully .....	15	15 "

#### Gold Exported.

Approximate total for 1883 .....	5,460 0 0

*Gold-mining leases.*—Thirty-three applied for, representing an area of 119 acres 3 roods 26¼ perches.

*Miners' rights.*—445 issued.

*Business licenses.*—Eleven issued.

#### Accidents.

I have much pleasure in reporting there has only been one mining accident since I have been here, unfortunately it proved fatal.

John Johnstone, a married man with seven children, met his death in the Marshal Macmahon shaft on the Red Hill Company's works and Tamboroora. At the inquest the jury brought in a verdict of manslaughter against the manager and underground manager of the mine, and as they are now awaiting their trial at Bathurst I will not make any comment upon the case.

#### Conclusion.

In drawing my report to a close, I desire to state that in framing it I have endeavoured to give nothing but thoroughly reliable information, and my thanks are due to all the miners at present working for the willing manner in which they have assisted me on all occasions to obtain necessary and correct information.

#### TAMBAROORA AND TURON DISTRICT—SOFALA DIVISION.

(M. Fagan, Mining Registrar.)

I HAVE the honor to forward my report relative to the mining interests in this division for the year 1883.

*Sofala.—Spring Creek Reef.*—(Mongan & Co.)—This line of reef, about 1½ mile south of Sofala, long abandoned, has again been opened by the present Company, who have gone to a great expense in placing on the ground 25 h-p. engine with batteries and pumping gear. It has been worked to a depth of 290 feet by former parties at various times. Mongan and party have now pumped the water down about 150 feet, and are sinking on the vein of about 12 inches wide. They have reached a depth of 90 feet and have a few tons only for crushing.

Golden

*Golden Bar Reefs.*—(Davies, Lloyd, & Co.)—The original prospecting claim, very rich on the surface, has been carried down to a depth of 80 feet and showed some rich stone in small patches in sinking. It was abandoned by the holders, and subsequently taken up by Tonkin and party.

Tonkin and Party No. 1 North.—This ground with the above, as also Nos. 1 and 2 south, have all been amalgamated, and are now held by a Sydney Company.

No. 1 North.—A good deal of labour has been done, the shaft having been sunk 160 feet. At 90 or 100 feet some rich stone was got up, but very soon the vein ran out, and no improvement has been shown to the present depth. The Company may probably resume operations in the commencement of next year. At present all is at a standstill.

Dighton and Party, No. 2 North.—Several shafts have been opened here for prospecting purposes, but with little or no success, the deepest being 40 feet, no gold having been met with after leaving surface, when some good specimens were found.

*Erskine Flat Sluicing Company.*—This Company, like Golden Point Company, is dissolved. The ground has, however, been taken up by a local party, and will probably be worked to more advantage. The original Company had two engines, one on each place, for pumping purposes. One has been gone some time, and the other is about to follow, and the present holders intend furnishing themselves with one suitable for the work to be done which will be commenced after the holidays.

*Red Hill.*—Swain & Co. crushed 5 tons of quartz which was raised from a vein on this hill. This stone gave a return of 3 ozs. of gold per ton.

*Wattle Flat.*—Solitary Reef Company of Victorian miners on 7 years' tribute, 15 per cent. royalty, present depth of shaft 350 feet, now sinking and under-hand stoping. Having two batteries or sets of stampers, while attending to their own immediate interests, are pretty closely employed on stone from the various claims at work on Wattle Flat and vicinity. The last crushing from this mine, at present depth of 350 feet, 4½ tons for 49 ozs. of gold. They have at present eight men employed below and seven on top, and although the water is pretty heavy it has not as yet caused them much trouble. They are now crushing good stone from Williamson and Co.'s claim, O.K. Line.

Bagnall and Allen have with a party of four reached a depth of 150 feet, having a vein of 10 inches average, which for the last twelve months has yielded at the rate of 1 oz. per ton. The water in this claim is rather heavy, as from the whim-shaft all the ground around it is being drained, rendering the output of stone considerably less than otherwise it would be. About 8 tons now on top.

Scott and Clarke, adjoining, two in party, being only 130 feet are benefited to a great extent by the baling of water from former-mentioned shaft, leaving them nearly dry. From a vein of 1 foot wide have just had a crushing of 30 tons for 48 ozs. of gold, being the result of three months' work.

*Caledonian, Surface Hill.*—Lewis and Company, of the Solitary Reef Tribute Company, with a party of twelve men, at about 300 feet on underlay, from a vein about 4 feet in width, in four months have crushed 57 tons for an average of 8 dwts. per ton with about 30 tons at grass and now being carted to the batteries at Solitary Creek.

Otter and Co., adjoining the above, now sinking, having reached a depth of about 60 feet, and raising stone from a reef nearly 6 feet in width. The last crushing showed a good yield of 7 dwts. to the ton.

*Old Surface Hill.*—On this ground the attention of isolated parties of miners is chiefly confined to the search after small veins, in several instances discovering small patches of very considerable richness. None of the larger veins are being worked at present.

*O.K. Line of Reef, Big Oakley.*—Frenchman's: This claim still holds the lead among the wide veins at a depth of 125 feet on the underlay, with a vein of about 3 feet thick. A trial crushing of 12 tons produced 17 ozs. 6 dwts., or an average of about 1 oz. 9 dwts. per ton. The party of four men have now about 40 tons on top awaiting crushing.

Williamson and party of three men, next to the Frenchman's, are still working on two small veins of about 3 inches average at a depth of 35 feet, and driving from another shaft. Their last crushing of 27 tons showed an average of 2 ozs. 17 dwts. of gold per ton. Now crushing about 15 tons, and showing like over 3-oz. stone. They also put through 4 tons from a portion of the 3-foot vein with a result of 4 ozs. 15 dwts. in all.

Davis and Butcher, south of the Frenchman's, are now sinking for the reef and occasionally raising stone; no very favourable result at present.

*Bullock Flat.*—Heagney and Cassidy work on this vein (opened by Heagney eighteen years back, left, and now resumed) has been carried on at a depth of 130 feet, vein averaging 1 foot, showing gold freely. A crushing of 8 tons gave an average of 10 ozs. 11 dwts. per ton; have now about 16 tons ready for the mill, which, from all appearance, they expect to go 2 ozs. per ton.

Cassidy and Co., adjoining claim to the above, now sinking two shafts, each at a depth of 18 feet, width of vein 5 inches, which, on trial, proved to be ½-oz. stone; no stone at present raised.

*Box Ridge, Britannia Reef.*—Hammond's lease of 4 acres. The vein in this ground runs very flat and has been worked on the underlay to a depth of 120 feet. Hammond's party of two men have followed along the vein at that level a distance of 80 feet. Since the crushing plant has been erected at the Box Ridge they have put through from different parts of the vein 2 tons 14 cwt. for a yield of 12 ozs. 17 dwts.; vein, 20 inches.

*Old Britannia.*—A Bathurst Company hold a 3-acre lease on this reef and are putting down a shaft to strike the reef at about 200 feet; present depth, 46 feet.

*Anthony Trollope Reef.*—Cole and party of six men, lately working on the Shakespeare, have been the means of bringing on the ground Price's engine from Crudine, at a rental of £1 per week. The vein in this ground runs from 3 to 6 feet in width. The shaft is down 30 feet, and they are now carting and crushing about 100 tons. Can form no idea of the probable yield at present.

*Tobin's Oakley Creek.*—Stragglers' Reward Reef. The Messrs. Tom, Brothers, have erected on this creek an engine of 15-horse power, with battery, &c. There are two shafts sunk on the reef 115 feet and 66 feet respectively, the average width of vein being 2 feet, from which the last crushing of 30 tons yielded at the rate of 5½ dwts. to the ton.

*Comet Reef.*—The same party hold this reef, on which one shaft has been sunk to a depth of 70 feet, the vein averaging 3 feet in width, the latest results of crushing being 7 dwts. per ton from 60 tons of stone.

*Palmer's Oakley Creek.*—British Lion Reef.—At present this is the only reef here being worked. It also is in the hands of the Messrs. Tom, who in the meantime are merely carrying on prospecting operations with the intention of taking more extensive measures after the Christmas holidays. There are many reefs here, but the mountainous nature of the whole district and the distance from any crushing plant greatly tend to retard the development of their value. The following amount of gold from all sources has been transmitted from this division by gold escort and other means during the year 1883, viz. :—

	ozs.	dwts.	grs.
For March quarter .....	600	7	7
For June quarter .....	686	18	9
For September quarter .....	1,059	17	8
For December quarter .....	1,317	0	13
<b>Total by gold escort .....</b>	<b>3,664</b>	<b>3</b>	<b>13</b>
By other means during the year .....	399	4	19
Being an increase of .....	437	0	3

in the amount of gold transmitted during the previous year. Market value of same, £15,237 16s. 3d. 424 miners' rights were issued in 1883 as against 539 in 1882, and 48 business licenses as against 61 in 1882. I have also issued 18 mineral licenses to people engaged in mining near Capertee. I enclose herewith a return of all machinery in the division; estimated value of same, £5,400.

#### TAMBAROORA AND TURON DISTRICT—IRONBARKS DIVISION.

(S. Y. Smedley, Mining Registrar.)

I HAVE the honor to forward my annual report on the Ironbarks Division of the Tambaroora and Turon Mining District.

During the past year the reefs in this district have been almost abandoned. Liddle and party, on the Princess Alexandria, and Marshall and Company being the only mines doing systematic work.

The Princess Alexandria gave an average return of 1½ oz. per ton, and Marshall's 16 dwts. per ton. The crushing machines have been for the most part idle.

No new discoveries have been made. The total amount of quartz crushed at Scott's machine is 43 tons, for a yield of 235 ozs. 4 dwts.; at Boehmes machine 89 tons were crushed for a yield of 79 ozs. 11 dwts.

Alluvial mining in the immediate vicinity of Ironbarks is at a very low ebb, being absolutely in the hands of fossickers. The present extremely dry season is a further drawback to this branch of mining, and has completely shut up the puddling machines for want of water.

At the Macquarie River, which is taken up in claims and leases for a distance of 17 miles, a large amount of work is being done in the way of sluicing operations. The Mookerawa Gold-mining Company, at the junction of the Mookerawa Creek and the Macquarie, have erected a powerful plant of pumping machinery, consisting of a 70 horse-power boiler and a Blake steam pump, which raises the water to a height of 70 feet. It is conveyed into a large reservoir by means of iron fluming, and from that led on to the ground to be washed. At the present time the Company employ from twenty to thirty men, and are opening their ground to extend the operations. During the six months they have been washing they have taken out 306 ozs. of gold.

It is confidently anticipated by the shareholders that this venture will be very successful.

The value of the machinery on this ground is £1,500. On the opposite side of the river is the Junction Point Company, who have erected a 25 horse-power boiler and Tangye pump, capable of lifting 20,000 gallons per hour to a height of 240 feet if required. One small paddock was washed from this ground, giving some 70 ozs. of gold. The tail-race not being deep enough it was found necessary to put in a tunnel through the rock from the river, by which means they will be enabled to bottom the ground and work on the hydraulic principle with a pressure of 70 feet. There is also a large reservoir made, hydraulic pipes, hose, nozzles, &c., &c. This Company's ground consists of 35 acres, and is looked upon as the best point on the Macquarie, as the whole hill can be washed away without any lifting, gold being distributed through the gravel from the grass down to a depth of 73 feet. I am informed a trial-shaft, put down by the Company, and the whole of the dirt being washed, averaged 1½ dwts. per load from surface to bottom. Schroder and party, leaseholders in the bed of the Macquarie River, have sunk a shaft on the bank of the river and have a drive under the river-bed 107 feet. They are still driving and shortly expect to meet the wash.

On Twedie's Flat, McDonald and party are erecting a very powerful water-wheel in order to raise water on the ground to be worked in a similar manner to the Company's I have described.

I may say, in conclusion, that the Macquarie at the present time absorbs all the labour in the district, and from all appearance I should say will turn out a very profitable concern to the lucky shareholders.

During the past year 151 miners' rights have been issued, and also nineteen business licenses. It is impossible for me to state the quantity of gold won on this field through the storekeepers not being willing to give that information.

#### MUDGEJEE DISTRICT—GULGONG DIVISION.

(Mr. Warden Snape, P.M., Gulgong.)

I HAVE the honor to submit the customary annual report for the year 1883, on mining matters in connection with the various gold-fields comprised within the Mudgee Mining District, and in doing so regret to say that the yield of gold for the past twelve months shows a decrease of upwards of 3,000 ozs. The falling off is due in a great measure to the long-continued dry weather and the absence of a large number of the mining population who, for the want of water, have been compelled to turn their attention and direct their energies to other pursuits. The water-courses are dry, and with few exceptions the dams are also in the same condition. The rains that fell in the spring, although materially benefitting the agricultural and pastoral interests, failed in benefitting the mining community to any appreciable extent; consequently mining operations have been at a standstill, and those engaged in the pursuit forced

to seek other sources of employment. It is a strange anomaly, but nevertheless a fact, that in consequence of so much dry weather the different gold-fields at the present time present an arid and parched appearance, yet below the surface at no very great depth tons of water are being daily pumped from the deep and wet leads. Unfortunately this water cannot be utilised in any way, and so is allowed to run to waste.

Depressed as the mining interests are just now, the record submitted of the doings of the past year is the most unfavourable one that has been furnished on any previous occasion. I am however impressed with the belief that although mining for gold is at its lowest possible ebb it will gradually improve, and it is more than probable that future finds will rival the golden harvest of the early days of Gulgong. This prediction I ventured to make in a former report, and am glad to say that it is in a fair way of being realised. I feel therefore justified in asserting that such is likely to be the case, as certain Victorian capitalists, full of energy, and possessing the spirit of enterprise, have commenced operations with the view of testing with adequate machinery the wet and deep leads, and which leads many years ago were traced and followed by the miners along the dry ground until lost in the wet on the Black Lead, when the water broke in upon them, and for want of the requisite money power to erect machinery, they had with great reluctance to submit to the inevitable and abandon the ground. A new era in gold-mining has commenced, and machinery of a costly and powerful description is at the present time being erected by Mr. W. R. F. Moore, M.E.C.E., an eminent mining engineer from India, and the representative of a wealthy Melbourne syndicate. The scene of operations is in Rouse's 4,000-acre paddock, a portion of which has been leased by the Company on satisfactory terms. Mr. Moore also contemplates erecting powerful machinery on Crown Lands on the Black Lead and at Home Rule directly he succeeds in obtaining sufficient areas that would justify him in incurring so large an outlay. It may not perhaps, at this stage, be uninteresting to record how it came about that Victorian enterprise should be directed to the almost deserted gold-fields in the Mudgee district. It happened in this way: The fame of the Gulgong mines, the miraculous yields have been known and talked about beyond the boundaries of the Australian Colonies. Mr. Moore, a scientist in the strictest acceptation of the term, heard from Australians, when residing in India of the marvellous finds of gold, which induced him to visit Melbourne; his services on arrival there were promptly sought after by a Melbourne syndicate and secured to the mutual satisfaction of all parties concerned. Through representatives relative to Gulgong, Mr. Moore was induced to visit the district and see and judge for himself. In October last, from what he had seen and heard, he determined upon commencing operations in Rouse's Paddock, with the owners of which satisfactory arrangements were entered into. Many years ago it appears gold was found in this paddock. At the foot of a prominent rise and at no very great distance from the Magazine Hill, near Gulgong, Mr. Olovich, the present able and efficient manager of the Melbourne Gold Mining Company, struck a lead of gold, called the Redgate Lead, better known in later years as the Perseverance and Caledonian Leads. These leads were traced to Rouse's Paddock. Satisfactory arrangements having been entered into with the fortunate proprietor, fabulous quantities of the precious metal are reported to have been unearthed by the diggers who followed them up until water and basaltic rocks were encountered, which proved, in the absence of machinery, too much for the working miner to contend against. Such was likewise the case on the Black Lead. The ground consequently had to be abandoned. Inside Rouse's Paddock a distinct lead running east and west, in which heavy course gold was found—indeed six or seven distinct leads or tributaries have been discovered in this golden paddock all apparently converging at a certain point, trending, it is surmised, towards the main channel or old watercourse. These leads will most likely all be thoroughly tested shortly with a diamond drill which is expected to arrive in the course of a few weeks, and there is every hope that under proper management it will be the means of opening up new ground and saving a good deal of useless expenditure. The Caledonian lead referred to has been described as having been wonderfully rich—nuggets weighing 36 ozs. and 320 loads of wash-dirt are said to have rewarded the finders with 1,150 ozs. of gold. I annex a rough sketch showing the various leads in that portion of the paddock now held under lease by the Melbourne Gold Mining Company, and which will shortly be operated upon. Mr. Slee, the Inspector of Mines, in his report referring to this particular locality says,—“At Rouse's paddock, on the western watershed of the main range, mining operations on a large scale are now in course of progress with the object of working no less than six different leads, which all converge into one channel or ancient watercourse, which is now covered by basalt, and which can be traced for miles following the course of the Cudgegong River, and towards the Two-mile Flat. The reason this auriferous tract of country has been allowed to lay dormant so long is not because the leads ran out, but this being private property the miners had to pay to the owner £10 per claim for the right to mine, and in addition  $\frac{1}{4}$  or 20 per cent. of the gross yield of gold, which was too heavy a burden to bear, in addition to sinking through hard basalt, and a heavy flow of water in the drift. The present Company however have far casier terms, and will most likely be able to employ profitably a large number of men before the end of the year.” Mr. Moore informs me that the Rouse's Paddock Gold-mining Company was formed in Melbourne in October last, with a capital of £10,000, for the purpose of working the deep ground on the property of Mr. R. Rouse. The work commenced at the end of October, and consisted in the erection of heavy pumping and winding gear, also the widening a shaft in the basaltic rock, from 3 feet up to 10 feet, by 4 feet, and a depth of 140 feet. The whole of the work has been pushed on in first-rate style, and is all but completed. It is the intention of Mr. Moore to make a main drive from the engine shaft to the face of the old workings, in order to tram the stuff to the cages; the drive will, he thinks, be finished in twelve weeks or so from this date, making the whole of the time occupied in the work under six months. The winding and pumping plant is of the very best construction and plan, and consists of one engine 35 h.-p., which is to drive the 12-inch pump and puddling machines. The winding engine is 14 h.-p., and is a most creditable piece of work. The engines will drive the winding gear, and nothing else, thus taking every advantage of time which would otherwise be lost, thus doing, as intended, the work of two; both engines will be supplied with steam from a large Cornish boiler, built in brickwork. The expenditure up to the present time has been £3,000, including cost of plant and labour expenses, a sum that has been wisely and economically spent. 23 men are employed on the works at present on wages at £2 10s. per week, and from £3 to £4 are paid to mechanics. Rouse's Paddock, I may remark, is surrounded by hills, all of which have proved to have been more or less auriferous.

*The Black Lead.*—Myers and party are down 80 feet, and are now driving. Rumour says that they are doing well. Gilbert and party are sinking at the head of the Black Lead near the town; they are down 160 feet, and are now on limestone. It was the intention of the party originally to sink for a  
second

second bottom, it being the prevailing opinion among skilful miners that a second bottom will be found, and some say that there is even a third bottom on the Black Lead. The want of means on the part of those who advocate this theory has prevented this most important matter being placed beyond a doubt. In a few weeks hence, however, this point will be set at rest, and that, as at Ballarat, the deep ground will probably be found as rich and more permanent than the shallow workings. Gilbert and party having struck limestone, have commenced driving in the hope of cutting the gutter near a claim that yielded the owners some few years ago £4,000 a man. Mr. C. S. Wilkinson, the Geological Surveyor, the diggers tell me, holds this particular locality in high estimation.

*Scully's Prospecting Area, No. 29, Reserve 3.*—Up to this date the sum of £3,000 has been expended on this claim in machinery and labour, and is now about being transferred to a Melbourne syndicate who purposes putting men to work as soon as satisfactory arrangements can be made. Should the anticipations regarding the deep leads be verified, Gulgong will become one of the most flourishing mining townships in New South Wales. Irrespective of the claims alluded to here there are a few fossickers earning a precarious subsistence.

*The Gulgong Quartz Crushing Company.*—In consequence of the want of water during the greater part of the year the lessee of the property has been compelled to suspend operations, and with the exception of one or two trial crushings the works have been idle since my last report.

*Finds of Gold.*—During the year 1883 three nuggets were found, I understand, in the direction of Pine Bowl and Two-mile Flat.

	ozs.	dwt.	grs.
The 1st nugget weighed .....	19	6	0
The 2nd „ „ .....	19	16	0
The 3rd „ „ .....	12	0	0

*The Canadian.*—The Canadian Gold Mining Company was established by several influential Mudgee residents with a few local men, for the purpose of mining for gold in the deep wet ground at the Canadian. The Company have leased 20 acres of land with the right to mine on adjoining areas belonging to Messrs. Stott and Smith. Operations were commenced in July last. The shaft is everything that can be desired, 10 by 4 in the clear. There are three compartments timbered with sawn planks, 2½ in., ladders from top to bottom, being well put together; it is substantial and strong. The shaft is now down to 150 feet, 100 feet of which was through limestone. At this depth the water, early in December last, burst in and rose to the height of 30 feet in the shaft; since then the pumps have continuously worked night and day. When the water has been subdued it is generally believed by those familiar with the locality that the undertaking will prove a most successful one and the enterprise of the shareholders be amply rewarded. The Company's affairs are under the supervision of Mr. Chappel, one of the most able mining managers in New South Wales. The Company contemplate putting another engine on the grounds, the 16 h.-p. at present doing duty although it expels the water at the rate of 160,000 gallons in the twenty-four hours more powerful pumping gear is required. Upwards of £2,000 have been expended in bringing the works to the present state of perfection. £6 a foot was paid for sinking.

*The White Horse Claim.*—This wonderfully rich claim still continues to reward the shareholders at the rate of £16 per man per week. It has for the last nine years yielded the shareholders substantial returns. The claim is likely to be materially benefited by the pumping arrangements on the works of the Mudgee Gold Mining Company, it being on the same water level.

*Stott's Paddock.*—There are three shafts at work; the parties are reported to be doing well; 50 feet is about the average depth.

*Home Rule.*—There is nothing particularly encouraging to chronicle. Hewitt and party, of the Christmas Lead, have been very successful; the last washing up yielded, I have been informed, 600 ounces of gold.

The Britannia claim, which was discovered about ten years ago by Driscoll and party, is about being tried again. The sinking of the prospecting shaft 180 feet is said to have been very easy, no impediment in the way of rock having been encountered. The party cut a vein of drift stuff; the result was a large influx of water, which prevented, in the absence of machinery, sinking operations from being continued. With the view of testing the claim, boring rods and augers were obtained and put down to a further depth of 220 feet, which disclosed that a vein of wash-dirt 6 feet thick had been passed through, containing gold averaging from 3 grains to ½-dwt. of gold to the dish. A person named Wright having a considerable interest in this claim thinking that these prospects were not altogether genuine determined upon putting down another bore for his own satisfaction; the result was a similar thickness of wash was found, containing 3 grains of gold in the 3-in. auger core; the second bore was from the opposite end of the shaft. The party then determined upon erecting a whim for the purpose of expelling the water, but without success. After trying night and day for many weeks these hardy and intrepid pioneers had to succumb and abandon the claim, their funds being exhausted. Until October last the Britannia claim has been allowed to remain dormant for many years, when a mining party of wealthy speculators applied for four leases of 25 acres each, which includes this as well as other deserted claims. I place these facts on record as they might prove of some interest to those who watch the gradual development of mining for gold in the Mudgee district, believing that this particular claim will some day contribute no insignificant quota to the escort returns. The Britannia lead is situated about a mile from Home Rule, and is supposed to be on or near the main channel into which the numerous leads enter, namely, the Canadian, Home Rule, Christmas Leads, besides other well-known leads.

#### *The Reefs*

In August last a Company was formed to systematically work the old Gulgong reef; a 10-acre lease was applied for by Davidson and party. Two shafts have been put down 50 feet and 110 feet respectively. Previous to the establishment of the Company 30 tons of stone were crushed, which yielded 1 oz. 3 dwts. to the ton. A capacious dam, sufficient to store a twelve months' supply of water, has been constructed. The Company are about placing in position on the margin of Stott's dam at the Canadian a 12 h.-p. engine, sufficient to drive eight head of stampers, to which the stone when raised will be carted a distance of 2 miles until their own dam can be utilised. The Company have made great improvement of

of a durable character on their property, £600 having, I have been informed, expended upon it. Next to the old Gulgong reef is a claim known as the Morning Star, the property of Messrs. Zimmler and party. Nothing of any consequence has been done during the last twelve months deserving of note. It is the intention of the party to have their property tested by the diamond drill. Appleyard and party, early in the year, while working their claim on the Louisiana reef, obtained from a small lode a pound weight of gold, besides several specimens of a most encouraging nature within a few hours; the lode pinches out and the party has had to give in owing to their funds being exhausted. There are other claims on this reef which have been abandoned from a similar cause; the diggers though have great faith in the Louisiana, which is not very far from the old Gulgong reef.

*Cudgegong*—The Rhobardah Gold-mining Company.—The property of this Company consists of four leases, namely, 6-acres, 10-acres, 9-acres, and 5-acres respectively. The Company are now driving into the mountain from the 6-acre lease with the view of cutting the reefs known to exist on the 9-acre lease. The drive at present is 90 feet in length, and it is the intention of the Company to continue driving until the reefs are tapped. On the 4-acre lease four shafts have been put down 80 feet, 70 feet, and 26 feet respectively. Several men are being employed in these operations at a weekly expenditure of £40. The Company anticipate cutting the first reef in February next. The work is going on night and day. These reefs, perhaps it might be as well to observe, were first struck on the surface and followed down. At the 80-foot level the stone improves. 126 bags of quartz are now waiting removal to Sydney to be tested at the Mint. If the assay be favourable powerful machinery will without delay be placed on the property. The Rhobardah mines are situated amongst a range of mountains distant about 3 miles from the village of Cudgegong, and 9 miles from the railway at Flatlands (some persons call this place Ilford). The Rhobardah Gold-mining Company's property is likely to prove at no distant day one of the most valuable in New South Wales. I may mention that the tunnel now being carried into the mountain is only half-a-mile distant from the Company's machinery area on the bank of the Cudgegong River, which the Company intends connecting by tram if the undertaking turns out to be a success. The tunnel is 6 feet in height by 4 feet 6 inches in width.

#### *Antimony.*

This ore abounds on land leased by Mr. A. Tindal to the Rockwell Antimony and Gold-mining Company for ten years. This very valuable property is only 3 miles from Rylstone. Several shafts have been sunk from 3 feet and up to over 100 feet. Within 3 feet of the surface the lode is from 8 inches to 12 inches in width. At one of the 50-foot shafts the ore runs from 8 inches to 12 inches, and widening. £600 have been expended in prospecting this property, which covers 40 acres. Assays show 60 per cent. of antimony, with a fair per-centage of gold and silver. The Company have 20 tons of ore at grass, 3 tons of which have been bagged (30 bags) ready for shipment to Swansea, where the Company intend having it treated. The ore when retorted, I hear is worth £10 a ton.

#### *Copper Mines.*

The shaft on Cheshire and Knoblanck's claim is down 120 feet. A large staff of men is being employed in driving levels at the 120-foot level, and performing other preliminaries. The work is being carried on most vigorously. It is the intention of the claim-holders to work the mine continuously both night and day. A blacksmith's shop and magazine have been completed, and a furnace for smelting purposes is being built. The improvements are substantial and good. The manager, Mr. Knoblanck, expects to have everything ready for smelting about the first week in February. The expenditure in connection with this mine from the commencement of operations on the 8th January, 1883, up to the end of the year, was £1,800. I enclose a sketch which Mr. Knoblanck has furnished, showing Cheshire and party's claim, which is the first one on the summit of a precipitous mountain. The sketch also shows other alienations. At the foot of the mountain is a well-watered grassy flat, extending to the railway station at Ilford, distant about 6 miles from the copper-mines. It is on a portion of this flat that those interested in copper-mining are desirous of having reservations made for a water supply and a site for a village, apprehensive that the land referred to might be free-selected, which would prejudicially affect the mining interests by cutting off the water supply. In the event of Cheshire and Knoblanck's mine proving a success a large number of men will find permanent employment. There is an ample supply of wood to keep a furnace going for two or three years, when the Company will have to fall back upon the coal which is found in abundance a few miles from the mines. At last-named level (120 feet) the lode is 6 feet wide, with every indication of widening. The ore at the present time, oxide, malleable copper, black ore, gray ore, purple and black coated with yellow. The underlay of the hanging wall is 2 feet 6 inches in depth; the foot-wall underlay is 18 inches. The lode runs north and south, and the underlay takes a westerly direction.

*Grattie*.—There are fourteen diggers on the ground, the sinking is on shallow ground, from 9 feet and upwards, gold shotty half a dwt. to the dish.

*Muroo*.—30 diggers find employment here; they are apparently contented with their earnings, and some of them are doing remarkably well. Depth of shafts from 6 feet and upwards. 50 Chinamen find employment on these diggings.

*Merindie*.—There are 30 Europeans and 12 Chinamen engaged in gold-mining. All are reported to be doing well and satisfied with the result of their labours. Murphy and party unearthed a nugget weighing 10 ozs. besides other specimens. The diggers do far better here in the winter than the summer time; in the summer months the miners have to convey the wash-dirt a considerable distance to be sluiced, whereas in the winter no inconvenience is experienced, as there is generally an ample supply of water on the ground where they are working. A short time ago there was a little rush to a free selector's paddock (Everingham's), but the excitement subsided principally through the want of water. Loban and party have sunk five shafts 20 feet and 34 feet in depth. Has a quantity of wash-dirt at grass but until rain sets in a doubt exists as to how it will turn out. The gold is embedded in a kind of cement. 23 loads have been washed at the creek which yielded only 2½ dwts. to the load.

*The Narangarie Silver Mining Company*.—In consequence of the report of the Geological Surveyor, Mr. Brown, upon the discovery of silver in the county of Napier, at Narangarie, some Mudjee mining speculators established the Great Narangarie Silver-mining Company. On the occasion of Mr. Brown's first

first and only visit the shaft was down to 18 feet; since then another shaft has been put down—the deepest is the 118 feet one. At the mouth of this shaft 300 tons of ore are lying at grass. The Company owns in all six blocks of land 40 acres each. Ten other 40-acre blocks have been taken up by parties, not with the view of adding to the wealth of the Colony but simply for speculative purposes. This is very apparent, for work only to the extent of sinking a shaft 6 feet deep has been carried on. The Narangarie Silver Mine is situated about 9 miles in a N.E. direction from Denison Town, on the summit of the Dividing Range, between Bong Bong and Coolah Creek. The elevation of the mine is 250 feet above Coolah Creek. The vein or lode runs north-east and south-west. The quartz-vein is 2 feet wide on the surface, and the underlay to the west. At the 40-foot level a drive was put in for about 8 feet; the vein there shows the width of 2 feet 4 inches; at the 65-foot level the vein is 3 feet wide, and another vein was followed to the depth of 118 feet. At the 100 feet level there is a soaking of water in the shaft. The formation of the country is very hard granite and conglomerate rock. Quartz-reefs abound. Several assays from various quartz-veins in the vicinity of the mine all contained gold, silver, and galena in small quantities. Coal of the best quality is obtainable 5 miles north of the silver-mines and also in the valley of the Coolah. Ironstone in close proximity to the coal abounds in large quantities and is practically inexhaustible. The mine has been standing idle since last May. The Company purpose resuming operations shortly with an increased capital. The Company no doubt are embarrassed as to whether the 300 tons of ore now lying at grass will pay. It appears that very few persons, if any, have ever seen silver ore in its raw state in their lives. I enclose a copy of a list of assays, courteously handed to me by Mr. Clarke, solicitor, of Mudgee, who takes a great interest in promoting the advancement of the district. In conclusion I would remark that the report of the doings of those engaged in the mining industry during the first nine months of last year is, when compared with the reports of previous years, far from satisfactory, but as has been before observed the cause of the depression may be traced to the bad seasons and a decrease in the mining population. On reviewing the position the fact is indisputable that tons of gold have been won on these gold-fields as will be seen by the published statistics. The depression that has been prevailing I regard as merely a temporary matter; I look forward very hopefully to the future, firmly believing that mining pursuits will ultimately prosper. It must be admitted on all sides that the days of the pick, the shovel, and cradle, those primitive appliances used in the early days for the extraction of gold, have passed away giving place to the erection of costly machinery directed and guided by able and scientific men, similar to those Victorian visitors who have lately been visiting the mines round about Gulgong. In one of my previous reports I ventured to assert that the Mudgee Mining District was teeming with mineral wealth, which with enterprise supported by capital is now in a fair way of being developed and thus raise the Mudgee Mining District to the position of being a permanent gold-field, and though the fabulous yields of the early days may never again be equalled, it may offer to the steady and practical miner constant work and good wages.

The quantity of gold sent by escort is as follows—

	ozs.	dwt.	grs.
Gulgong .....	2,701	0	1
Mudgee .....	2,016	13	6
	4,717	13	7

The gold receivers at Gulgong and Mudgee entertain the opinion that the above amount does not represent all the gold that has been sent to Sydney and they have grounds for believing that no considerable amount is sent down privately.

Miners' rights issued during the year 1883:—

Gulgong .....	211
Mudgee .....	138
	349
<i>Business Licenses.</i>	
Gulgong .....	30
Mudgee .....	7
	37
<i>Mineral Leases.</i>	
Gulgong .....	0
Mudgee .....	6
	6
<i>Gold-mining Leases.</i>	
Gulgong .....	18
Mudgee .....	2
	20

#### MUDGEE DISTRICT—GULGONG DIVISION.

(H. De Boos, Mining Registrar.)

MINING has never been so dull in this district as during the past year, for never since it was proclaimed a gold-field has there been such a stagnation in mining matters. The dry weather at one time seemed to have broken up and we had a very fair and promising spring, but no rain has fallen since October, and the country around Gulgong is in a worse state than it was twelve months ago. The dams are dry and vegetation has perished, and unless the rain comes before the end of January there will be nothing left either in field or orchard.

The continual decrease of our population even since last year is owing chiefly to the long-continued drought, which has driven miners and others to seek employment in more profitable occupations at a distance, in consequence of which labour has become comparatively scarce, and farmers have had some difficulty in obtaining the labour they required for gathering in their crops. It is, however, consoling to think that many of our best men will be glad to return here as soon as the works at present contemplated are commenced.

Rouse's

Rouse's paddock at Guntawang has been leased by a company of Melbourne capitalists. The ground was first broken in September last, and the shaft is down over 100 feet. There are two engines on the ground and the works are of a finished and permanent character, evidently showing that the management is in good and capable hands, and that neither trouble nor expense will be spared to make it successful. The same Company is about to test the deep ground on the Black Lead at No. 44 and at Scully's prospecting area. The same party have also taken up four gold-mining leases of 25 acres each at Home Rule on the Britannia Lead.

At Home Rule the only claim at present payable is Tatton and Party's Extended Claim, which has always been a good thing for the shareholders. Their last clean-up, it is said, gave them £600 per man, clear of expenses.

The Good Hope claim has been duffered out, and the engine and gear sold to the Company at work in Rouse's paddock.

The Union claim is idle, and it is the intention of the Messrs. Paul Bros., now the sole proprietors of the claim, to offer it to the Melbourne Company, who, there is no doubt, with the means at its disposal, might make the venture pay.

At the Canadian, the White Horse claim has not fallen off, but has been giving very good returns during the past year. It is at present the most productive claim in that locality, though one or two claims in Stott's paddock are being worked with satisfactory results.

The Canadian Gold-mining Company, started since my last report, has been pushing on the works with considerable energy. Early in December the water was tapped and at once rose to the height of 30 feet in the shaft. The pumps have been going constantly since, and gradually lessening the water at the rate of about 10 inches every 24 hours.

At the old Gulgong Reef the claims have been worked only intermittently during the last twelve months, and with the exception of one or two small trial crushings no stone has been raised during that period. The want of water is a very serious drawback to the proper working of this reef. Davidson and party are erecting crushing plant at the Canadian, as there is no water on the spot.

At Tallawang there are a number of men at work, who apparently are making a living, and who stick to the spot in spite of the dry weather.

Chappell's plant is idle; indeed he has not had a chance of doing anything all the time he has been there, and he is now managing the Canadian Gold-mining Company's works at the Canadian.

At Two-mile Flat little or nothing is doing. In the early part of the year a party took up a claim for the purpose of trying the cement said to exist in large quantities in the neighbourhood of the Flat. They had, however, to abandon the project on account of the want of proper machinery.

Eighteen gold-mining leases have been applied for during the past year. 211 miners' rights and 30 business licenses have been issued from this office during the same period.

The quantity of gold for the Gulgong Division for 1883, forwarded by escort, amounts to 2,700 ozs. 19 dwts. 13 grs. In conclusion, I would remark that in the course of the coming year we shall most likely see a revival of mining industry on this gold-field. Should the works now in progress prove successful, there is no doubt that the requisite capital will be forthcoming for the carrying on of any legitimate mining venture that may present a fair prospect of success, and I think that there is some foundation for the hope that mining at Gulgong has at last taken a favourable turn.

#### MUDGEES DISTRICT—MUDGEES DIVISION.

(F. S. Isaacs, Mining Registrar.)

DURING the past twelve months alluvial gold-mining (the only class of mining in my division) has been at a complete stand-still; this is mainly attributable to the want of water which has never been felt so much as at the present time. No new finds have been reported to me of any kind, and miners whom I have interrogated have all the same story, "no water." A Company has recently been formed here, called the Rhobadah Gold-mining Company, and their operations will be carried on near Cudgong. It will consist of a 10-acre and 5-acre lease; the promoters are very sanguine, and should this venture turn out well it will give a great spur to gold-mining in that locality.

The number of miner's rights issued by me during the past year was 138, mineral licenses 6, and business licenses 7.

There were also the following applications received by me:—

Gold-mining leases.....	1
Mineral leases.....	1
Water rights.....	2
Dams, &c.....	1
Protection areas.....	2
Total.....	7

#### MUDGEES DISTRICT—HARGRAVES DIVISION.

(T. O'Brien, Mining Registrar.)

I HAVE the honor to report anent mining matters in this division of the Mudgees Mining District for the year 1883, this year has not been as eventful as I anticipated it would be, when making my previous annual report. In fact I may say that mining has been at a stand-still during the year, with exception of a little puddling, sluicing, and fossicking in the old working in this division. The only quartz-claim at work is that of Bond and party's, and they have spent nearly the whole of the year in erecting a whim, and otherwise preparing the shaft for further sinking. They crushed no quartz from this claim during the twelve months, but they are sanguine that this claim will pay them handsomely for their time and outlay during the present year. If their hopes are realized in this instance, I have no doubt but it will give an impetus to quartz-mining in this division.

I sold 128 miners' rights and 8 business licenses during the year—56 miners' rights and 8 business licenses to Chinese, and 72 miners' rights to Europeans.

MUDGEES

## MUDGEE DISTRICT—WELLINGTON DIVISION.

(F. Marsh, Mining Registrar.)

I AM submitting my report on the state of the gold workings in my division for the year 1883. It affords me much pleasure in stating that notwithstanding the long continued and still existing very severe drought which prevails the quantity of gold won has been 928 ozs. 5 dwts. 19 grs., showing an increase of 173 ozs. on the quantity mentioned in my report for 1882. In expressing my satisfaction in this respect I cannot but record my regret that the only two quartz-crushing batteries in this Division, and which have been fully described on former occasions, have been idle during the whole of the year. Besides the places mentioned in former reports in my Division no new spots in connexion with any new discoveries have been reported to me, but in the Cudgegong River, some miles up from the Macquarie River (which I believe is not in my Division), I hear that there are a couple of very good sluicing claims obtaining gold, which I understand is all taken to Mudgee. Small diamonds also continue to be found occasionally in the Cudgegong workings.

I may add that the number of miners' rights issued by me for 1883 was 45, and 2 business licenses.

## MUDGEE DISTRICT—WINDEYER DIVISION.

(T. H. Price, Mining Registrar.)

I DO myself the honor, in submitting my Annual Report for the year 1883, to express my regret that mining matters in my Division have receded during the last year. In alluvial mining the continued absence of sufficient water for sluicing purposes has caused many miners to leave; that, coupled with the work obtainable on the railway and roads, has caused a great diminution in the number of miners usually following that occupation in this Division.

I have no record to give of any nuggets being unearthed during the last year, but I have reason to believe that one or two of small size were obtained on the Upper Meroo, but from the reticence of the miners I have no authentic account of them.

In quartz-mining I also regret that my anticipations contained in my last report have not been fulfilled. The Catherine Company appear (at least for the present) to have collapsed. Mr. Mitchell, who came up to manage the Company's works, has, I believe, rented the crushing plant of the Company; that gentleman has induced several miners to get out stone which has been crushed, but with what results I am unable to say, as Mr. Mitchell has not replied to the circular I forwarded him to elicit the returns of stone crushed at the Company's battery; however I believe the yield has been poor. Messrs. Adams, from their claim on the South Hill, Eagle Hawk, have had about 40 tons crushed, which yielded a little over 11 dwts. to the ton. This persevering party have great faith in their claim, and they tell me it is their intention to have a small engine and a 5-head battery to crush their own stone. The hill on which their claim is situated is a mass of freestone, requiring no blasting, and consequently although the vein is only 8 inches wide two men can raise a fair quantity of stone during the week.

It is a lamentable fact that during the last 12 years no less than 5 crushing plants (including the Catherine Company—one now on the ground) has been erected at Clarke's Creek, adjacent to the reefs, and at a rough calculation about £16,000 has been expended, yet there is only one shaft down a shade over 100 feet; in fact, as was observed to me lately by an experienced quartz-miner, "The work that has been done is little better than surface scratching." It is questionable whether it would not have been more prudent for the Catherine Company before they erected such splendid and expensive machinery, to have tested the ground to a greater depth. Notwithstanding that quartz-mining at Eagle Hawk is now depressed, I feel certain that with perseverance and proper management the Reefs at Clarke's Creek will eventually be found payable, and as far as surrounding circumstances indicate most probably rich.

Miners' rights issued during the year:—Europeans, 73; Chinese, 41; total, 114. Business licenses, 32, with one exception issued to Chinese.

## LACHLAN DISTRICT—FORBES, PARKES, GRENFELL, AND CARGO DIVISIONS.

(Mr. Warden Sharpe, P.M., Forbes.)

I HAVE the honor to submit, for the information of the Honorable the Minister for Mines, my report for the past year, on the mining district under my charge.

I regret to have to state that I am unable to report any new discoveries of importance, and mining is in even a more depressed state than it was when my last report was written. At the beginning of the past year on the 7th of March, Messrs. O'Brien and party reported a new discovery of gold at a depth of 30 feet, prospecting 4 grains to the dish, at a place called Billy's Look-out, which is situated about 15 miles north-north-west of Marsden, and forms part of the Lake Cowal Run, which is the property of Messrs. Wilson and Company. Reports were published in the newspapers as to the prospects found, calculated to bring miners and business people from a long distance, which were untrue or exaggerated; as a consequence, upwards of a thousand, or perhaps more, diggers and others were at one time in the locality where the prospectors were working. A very short time, and few inquiries sufficed to satisfy them as to the value of the field, and most of the miners left as quickly as they came disgusted, and probably in many instances considerably out of pocket. It is an easy matter to obtain, even on a new rush, reliable correspondents, and it is very commonly the worst characters who supply mining intelligence. It requires time to develop even a rich field, and untimely reports only tend to mislead the mining population and cause endless mischief and loss. The place where mining was chiefly carried on at Billy's Look-out is an open shallow gully about 1 mile wide and perhaps 5 miles long. This opens out towards Lake Cowal, which is distant only 6 miles from the diggings. About  $\frac{1}{2}$  a mile from where the rush took place gold was discovered ten years ago, and I am informed by miners, who were present on the occasion, that good prospects were obtained, but only a few claims were barely payable. When I visited Billy's Look-out in March last, I found about 900 diggers and business people assembled, a large number of whom were waiting to see prospects tried from the Protection Area, held by the prospectors. I caused two reliable and experienced miners to be selected from those present. They went down the prospectors shaft and took out about six dishes from the wash-dirt, this quantity being considered a sufficient trial under the circumstances,

stances, water being very very scarce, only one small dam being available for the whole population for mining and domestic purposes. The six dishes I have mentioned were taken from a face 16 feet wide, which was the distance opened across the lead, three dishes from each side. The dirt was carefully washed, and the result weighed in gold scales, viz., 5 grains from the six dishes. Another dish was washed, taken out afterwards, which gave 3 grains. The lead in the Prospecting Protection Area, as far as was known at the date of my visit, was 16 feet wide, with an average depth of wash of 18 inches. After trying the prospects from Messrs. O'Brien and party's claim, I had, at the request of the miners some prospects tried from the claim known as No. 1 North. The lead in this claim as far as was known was 25 feet wide and 12 inches deep. The first dish tried gave 2 grains, the second 5 grains, the third 2 grains, the fourth 1 pennyweight and 8 grains, of which a coarse piece weighed a pennyweight. Two dishes gave merely colours. The total yield from six dishes was 1 pennyweight and 17 grains. I was shown some gold which I was informed was the result of some prospects washed from the claim known as No. 4 North of the Prospectors. Three dishes merely showed a colour, one dish gave 6 grains, eight dishes gave 23 grains. Before I reached the scene of the rush I was informed that seven claims were on gold, but although I made careful inquiry I could only hear of three or four claims (a great number of shafts had been bottomed) from which anything like payable prospects had been obtained. There is a large tract of auriferous country at Billy's Lookout, and colour and even favourable prospects can be washed, but nothing up to the present time has been discovered indicating a payable field. Prospecting parties were out about Mount Wamboyno, which is near the Lake, at Manna and at Hiawatha, but so far I have no tidings of their success. The miners at Billy's Lookout, after satisfying themselves that the rush was a failure, left as rapidly as they arrived, except the few who had obtained fair prospects. At the present time I am informed there are eight men working at Billy's Lookout, who are making from 18 shillings to a pound per week, and it is probable that even this moderate yield will soon be exhausted. From what I can learn there is but little chance at present of any prospecting being done in this locality owing to the great scarcity of water. Some time during the past year a party of miners were prospecting on a station I have already mentioned called Hiawatha, which is about 22 miles west of Billy's Lookout, but not meeting with any success they have broken up the party. To give an idea of the value of the rush at Billy's Lookout, so far as I am able to ascertain, all the gold obtained was about 70 ounces. On the 21st of June last the Mining Registrar at Billy's Lookout reported to me the following results from various claims, viz.:—Messrs. Dark, Downey, and party, No. 1 north-west of the Prospecting claim, washed 70 loads for a yield of 11 ounces of gold; Atkins and party, No. 2 south-east of Prospectors' claim, 18 loads for 2½ ounces; Godfrey, Wilson, and party, No. 5 south-east of the Prospectors', 25 loads for 6 ounces of gold; O'Brien and party, the Prospectors', 20 loads for 10 ounces.

The next place of importance where mining is being carried on is at the Bald Hills, which are situated 3½ miles in a northerly direction from Forbes. The British Standard Gold-mining Company are working two 6-acre leases, for which the document of lease has been issued, and they hold besides under application 20 acres. This Company have been working since the beginning of June last, and have employed from 6 to 30 men besides horses. The lead is known as the Bald Hills, and the Company above mentioned have sunk 3 shafts on it to a depth of 180 feet; the lead varies in width; at present in the Company's shaft it is 100 feet wide with a depth of wash of from 2 to over 3 feet. In the British Standard mine, I am informed by a shareholder, the yield has been from a half to three quarters of an oz. to the load; and during the last twelve months the yield has been 844 ozs. or £3,038 worth of gold. The previous yields were also satisfactory. The first washing taken out twelve months since of ninety-one loads gave 127 ozs. At the Bald Hills, besides the British Standard mine, another party of miners, Messrs. Murphy and party, are at work on a 10-acre lease. A trial washing of eight loads from this mine gave 14 dwts. to the load. From inquiries I gather that the Bald Hills was first worked as a frontage lead nine years ago, and abandoned. As regards this lead, I have heard experienced miners remark that they were of opinion that it would be traced for a considerable distance. A good many leases and claims have lately been taken up at the Bald Hills, so that it is probable the value of the lead will soon be thoroughly tested.

#### *Cargo.*

The only workings at present going on in this division of my district are at Gum Flat and near the township of Cargo. At the former place the Mining Registrar informs me that one party made 10 ozs. in six week's work. This was obtained in old and abandoned ground. At Cargo township the Ironclad Company are working a lease on the Ironclad Reef. They have three men employed, and lately raised a trial crushing of 2 tons of stone which was sent to the Mint and yielded over 9 ozs. to the ton. This should encourage the proprietors to further development of the mine. No leases have been applied for in this division during the past year, and only sixty-three miners' rights were issued at Boney's Rocks; no mining is being carried on, nor at Canowindra, the other places where gold has principally been found in this division. In my last report I had occasion to mention that some very rich specimens of quartz had been discovered near Canowindra, at a place called Belmore. Leases were applied for and several disputes arose, but no work was done, and the reef or supposed reef has been lying idle ever since. Lately inquiries have been made whether the ground is available (part of it was on a selection) for mining and I presume from this that the place will soon have a further trial.

#### *Grenfell.*

At Grenfell only four quartz claims or leases are working, one on the Enterprise Reef, one on the Homeward Bound, and two on Lawson's Reef. On the Enterprise a 3-acre lease is working, three men employed. This has been a very remunerative and lasting reef, having been worked with payable results for the last eighteen years. The lease I have mentioned has been working seven years, and over 1,800 tons of quartz have been raised from it, which has yielded from an ounce to 2½ ozs. to the ton. The proprietors of this mine have raised about 200 tons during the past year, which gave 21 dwts. per ton and paid wages. On Lawson's Reef, as I have already stated, two claims are working. One of these, Hinchcliffe and party, are on gold. During the past year they have crushed 36 tons for a yield of 23 dwts. During the three years they have been working this mine the proprietors informed me that they had won 209 ozs. of gold. The reef in question averages a foot in width and has been worked in places to a depth of 140 feet. There is little or no alluvial mining at Grenfell at present.

*Parkes.—*

*Parkes.*—On this once flourishing gold-field more mining is being carried on than in any other part of this mining district. The alluvial, as regards the old workings at any rate, is almost exhausted. A few men are still working, scattered about on the old leads—at the Tichborne, Ben Nevis, London, Great Northern, and at Possum Gully, V.C. As regards the reefs, there are only two claims at work on the Bonnie Dundee line of reef, viz., that known as the Bonnie Dundee, six men's ground, and another, the name of which I have not been able to discover. In the Bonnie Dundee the claim has been at work for five years. The holders have sunk a straight shaft 210 feet and 40 feet on the underlay. This party have crushed about 3,000 tons for an average yield of a little over an ounce to the ton. The last crushing of 400 tons only gave 5 dwts. to the ton, but the stone had to be removed from the mine, as it interfered with the workings; and even this poor yield, I am informed, paid wages. There are about twelve claims at work near Parkes; when my last report was written the number was estimated at sixteen, so that it would appear the industry is not progressing. On the Buchanan line of reef there are two claims at work. Jansen and party have been working for over five months and have about 60 tons at grass, which they reckon should yield something over  $\frac{1}{2}$  oz. to the ton. The last party before Jansen and Company, working the same mine, got 2 ozs. to the ton, so perhaps the present holders under-estimate the stone they have at grass. The reef averages 12 inches in width. Messrs. Hale and party are working in Possum Gully and are reported to be on payable stone. The reef is about a foot wide and has been little prospected. At the Racecourse reef one party is working; their trial crushing gave 8 dwts. to the ton, which is considered payable. Besides those I have mentioned there are other claims scattered about the field, but none requiring special mention. As I have already stated, the alluvial workings must be considered as nearly exhausted, though if water could be obtained easily and cheaply there is shallow ground in different parts of the field that would pay to sluice, for instance, [at the Old Racecourse and at the Bushman's. On the 14th April, last year, payable gold was reported by Messrs. Coulson and party at a place called McGregor's Paddock. The prospectors found a surface reef and raised 27 tons of stone, which gave the handsome return of 160 ozs. 4 dwts. or nearly 6 ozs. to the ton, and their last crushing of 40 tons gave 1 oz. and 12 dwts. per ton. This discovery caused a good deal of excitement at the time and several claims were marked off and registered; but I fear the find is a partial one, as I am informed only the proprietors are working at the present time.

*The Pinnacle.*—At the Pinnacle two leases are at work, viz., that of Messrs. Raymond and party and Messrs. Walters and party. The latter are raising stone and have 60 tons at grass, which is estimated to yield about an ounce to the ton. It is stated that 8 dwts. per ton will pay wages. The country is soft and the reefs are large. Lately Messrs. Shanks and party had a crushing of 300 tons, which yielded 6 dwts. per ton, and left the mine a little in debt. I am informed that this crushing would have been payable, but a quantity of poor stone was put in with stone of better quality, thus bringing the average yield very low. During the last year Messrs. Shanks and party crushed, besides the stone I have just mentioned, 350 tons, which yielded 10 dwts. per ton and gave the party good wages. Other crushings besides those I have mentioned have taken place at the Pinnacle, which have been some of them payable and some not, yielding from 6 dwts. to  $1\frac{1}{2}$  oz. If the machinery for crushing was close to the reefs, these reefs would, I am informed, be payable and profitable. At present the crushing plant is 3 miles from the mines, and the cartage costs 3s. per ton. The Pinnacle reefs are large but "patchy," and the stone is easily raised. The cost of crushing per ton is 12s. It is probable, if water could be got near the reefs and sufficient encouragement was held out, that the crushing plant would be removed as close to the reefs as possible.

#### *Copper.*

It is probable that valuable discoveries will be made in this district of this mineral, and it appears strange that more prospecting is not done, seeing that within the last year a good many copper lodes have been found from which the indications are favourable. This is perhaps owing in some measure to the fact that employment is to be obtained on Government works, and miners naturally prefer regular wages to the uncertain employment of prospecting, at which money is always going out and returns, except in rare instances, very slow. In my last report I had occasion to mention a mine situated about 6 miles north-west of Parkes, on what is known as the Limestone Reserve. I am now informed that the lode apparently bears north-east and south-west. The shaft is 110 feet deep. Two men only have been employed during the last twelve months, and the quantity of ore raised is about 12 tons. The slow development of this mine is probably owing to want of capital, as the ore raised is of good quality and the mine is probably a valuable one.

A copper lode has been discovered about 9 miles north-east of Eugowra, about 16 miles from Forbes, and a lease of 40 acres applied for by Messrs. Sloan and Pateman. At the date of my visit, in November last, the lode was exposed about 5 feet, and a shaft or pit sunk on either side of it 5 feet. The lode appears on the surface in soft freestone, and if this formation continues can be easily worked. It has been traced about 136 yards along the surface. At this stage nothing can be said of the discovery, except that the indications are favourable and sufficient to warrant the expenditure of capital in proving the mine. I am informed by one of the prospectors that he intends to open up the mine without any unnecessary delay. Besides Messrs. Pateman & Company's lease, three other 40-acre leases have been applied for. At Melrose, or near that place, which is about 35 miles from Condobolin, I am informed some discoveries in copper have been made, also at a place between Grenfell and Cowra, but I have been unable to visit these localities, and can at present obtain no particulars. In conclusion, I may remark that the yields of gold in this district should decrease is not to be wondered at. It contains some of the oldest and most prolific gold-fields yet discovered, and these have afforded remunerative employment to a large number of people for many years. No new discoveries of any extent have been made in reefing, and the same must be admitted of alluvial gold; but these gold-fields have established a large population in a country that would otherwise have remained but sparsely populated, probably for years to come. This population occupies a large area for pastoral and agricultural purposes, and will occupy more land when the lands now reserved on account of gold or minerals are thrown open for selection. I may here remark that there is in this district a very large area of land at present not open to selection which will never be required for mining purposes, and which should be thrown open to selection without delay.

A large number of miners' rights and business licenses are issued each year at the various mining offices in this district, but only a small proportion of these are taken out for mining purposes; the rest are held in order that the holder may occupy Crown Lands. This right is much abused, and the abuse seriously affects the prosperity of this and other places throughout the Colony. It is very difficult for a *bona fide* occupant to get a block of land near a gold-fields township, as most of the land is enclosed in paddocks, always in the best situations. Most of the land I refer to has been applied for when residence was not considered necessary, and improvements only were required to give the right of purchase. If these old improved purchases could be dealt with the evil complained of would be much mitigated. About Forbes almost all access to the river is shut out, and land required for public recreation, where shade and water, the greatest luxuries in a climate like this, can be obtained, is enclosed in paddocks. Lanes and roads are fenced in, and a great public wrong exists. I do not think it would be difficult to find a remedy for these defects in the present law, and perhaps that remedy may be supplied in the new Land Bill now under the consideration of the House.

Before concluding this report I may be permitted to state that there is a large extent of mineral and auriferous country in remote parts of this district as yet quite untried, and rumours have reached me that alluvial gold has been discovered in the back country of the Bogan, but no official report, so far as I am aware of, has been lodged with any of the Mining Registrars in my district. I am afraid that not much prospecting will be done in the country I am now referring to unless heavy rains come, as it is almost if not quite devoid of water and feed, and supplies would probably have to be carried long distances.

I have not stated the quantity of gold won in this district during the past year, as this return has to be supplied by the various Mining Registrars.

#### LACHLAN DISTRICT—YOUNG DIVISION.

(*Mr. Warden Robinson, P.M., Young.*)

IN making my report for the year 1883, I may observe that at the close of the preceding year gold-mining prospects in this division looked hopeful and very encouraging indeed. Although anticipated successes have not been quite realized, mining interests hereabout at the end of 1883 look as prosperous as the most sanguine local miner could hope for. For several months past attention has been anxiously directed towards operations actively pursued on Minter and party's leasehold. Their machinery is splendid. Several months since their principal shaft had nearly reached bottom, when defects in the work were discovered. It was at once determined upon to commence a new main shaft, and about a month ago the new work was finished and the mine set in full working order. The first washing yielded an excellent return; shares went up rapidly, and it is now proved beyond all doubt that this and the adjoining gold-mining properties are of considerable value and great promise. In one word, the investors will realize splendid returns for their outlay. The mine is under first-rate management, and the proprietors are (most of them) men of means, and almost all of them are old veterans in mining pursuits. The adjacent grounds will now, I am quite sure, ere long be brought under the miners' handiwork. The old claim in the same neighbourhood, known as Tonkin's, which cost some thousands of pounds for tunnelling is still to the fore. The Company have put down expensive shaft after shaft, but from some cause or other failure has been the result. The present proprietors, however, nothing discouraged, are still pertinaciously prosecuting new operations in order to bring the mine into practical working. There is a large area of new ground in the same locality which no doubt will be immediately taken up by capitalists as safe investments. The scarcity of labour, which is proverbial in this district, will not in any appreciable degree affect proprietors in developing the wealth of these grounds, as machinery must be the active agency employed in working this class of property. The depth to bottom is about 80 feet. Wash-dirt runs from every angle of the bottom of Minter's shaft and averages about 3 feet in thickness, with a yield of gold about 4 ozs. to the cubic yard. The description of machinery and mode of working Minter's holding are fully described in my last report (for 1882.)

The diggings at Blind Creek, Murrumburrah, are still occupied by about 100 claim-holders; most of the men earn good wages; sinking depth at an average of about 30 feet, wash-dirt from 3 to 12 inches in thickness. This will likely be a permanent mining locality. At Wombat the old claim-holders are yet extant, but are miserably pinched for lack of water.

The quantity of gold won in the Young division for the year amounts to 2,337 ozs. 5 dwts. 10 grs., and of the approximate value of £9,015 3s. 8d., against the yield of the previous year, which amounted to only £4,494 11s. 2d., shows a very encouraging balance in favour of the immediate past year. The miners' rights issued here last year were 444; business licenses, 41, and 1 mineral license. We also received seven gold-mining lease applications representing an aggregate area of 83 acres; only one mineral lease application was received from the neighbourhood of Binalong to mine for silver and lead.

#### LACHLAN DISTRICT—TEMORA AND BARMEDMAN DIVISIONS.

(*Mr. Warden Baker, P.M., Temora.*)

IN submitting my report for the year 1883, I have to crave pardon for its many defects and omissions, as I am very unwell from the effects of an accident which I received on 1st December last while in the discharge of Warden's duties. Any omission, however, on my part will be partly, if not altogether, supplied by the reports of the Mining Registrars of the respective divisions.

*Temora.*—When I arrived at Temora about the end of January, 1883, the district was in a depressed state, and the forecastings as to its future were of a very gloomy nature. As a gold-field Temora was thought to be all but exhausted. Most of the rich claims had been worked out and abandoned, and the claims that were then being opened were, for the most part, not rich enough to pay their owners ordinary wages; indeed many of them had been pronounced to be "duffers," and were abandoned. In about eighteen months the population had decreased from some 8,000 to about 2,500 souls. The exodus was still going on, nor has it yet ceased altogether. A large number of business places had been closed; in many instances the buildings wholly removed, in others partially so, and in others they had been allowed to go to ruin and decay. Both Upper Temora and Lower Temora, especially the latter, looked like deserted villages. Middle Temora, while holding its own much better than the outskirts, nevertheless presented signs of decadence. The miners were on the look-out for new fields, and for the most part ready to move away from

from this district upon very slight inducement. Business people were one and all complaining about the dull times, and the small amount of trade they were doing; nor could this be wondered at, seeing there were more business people than miners. Even if all the miners had been earning fair wages—which they were not—they could not have supplied profitable business for half the number of people there were to do it. The hotel business was more overdone than any other, as may be supposed when it is remembered that there were at that time twenty-eight hotels, or rather twenty-eight drinking shops, for it would be quite a misapplication of terms to call some of them hotels. The rich yields of gold produced during the years 1880 and 1881 had produced an excitement amounting to fever, and naturally enough. When the yields of gold fell off the excitement began to decrease. When I had first the honor to see Temora the fever of expectancy had given place to the depressing feeling that the district, in a mining and a commercial sense, was just about on her "last legs." There were, however, a few persons both among the miners and among the business people who, while they admitted freely, and felt strongly the pressure of the altered state of things, nevertheless had faith in Temora's future; and this faith had a reasonable basis of fact to rest upon.

For some 30 miles round Temora—how much further I cannot, of my own knowledge, say, but I am told for at least a hundred miles—the land is rich agricultural land, well suited to produce cereals, fruits, &c. The climate is fairly genial, rather too warm during some part of the summer months, perhaps, to be pleasant; but at other times, even in summer, the climate is enjoyable, and in the winter and spring is beautiful—cool, clear, bright, and very bracing. This part of the Colony is very poorly supplied with water. There is no river within some 50 miles of Temora. Nor even a creek or streamlet—worthy of the name—within some 12 or 14 miles of Temora. The rainfall, too, is rather small and intermittent. In this respect however, I am informed, there has been a considerable improvement during the last few years, and the opinion is growing into a settled conviction, that as the country is opened up, the land cleared of scrub, cultivated and otherwise improved, the rainfall will increase; and that if this natural supply should be stored and conserved by means of dams, tanks, and other artificial reservoirs in suitable places, the district in a few years would be a fairly well watered one. Should these hopes be realized there is no doubt but that Temora would, as a matter of course, become a very important inland town, even if she had exhausted her mineral wealth.

But is Temora "used up," or nearly so, as a gold-producing district? Certainly I cannot find evidence to support such a theory. Taking the town of Temora as the centre—for 30 miles in any direction—how much further I cannot say—the country gives strong indications of being auriferous—and I have seen, within a few miles of Temora, several places quite as "likely looking" for gold in alluvium as the celebrated Temora valley itself, none of which appear to have been prospected in any way. The places referred to have a great drawback—they are too near Temora for distance to lend them enchantment; if they were at New Guinea, the Cape, Timbuctoo, or some other place a long way off and all but inaccessible, they would have been tested long ago. This district, to use an old but expressive mining phrase, has not even been well scratched. It would be absurd to say that she had been a quarter prospected either for gold in quartz or in alluvium. There are those who indulge the hope that, rich as have been the yields of gold at Temora in the past, the future will tell quite as pleasing a story. Nor is such expectation by any means extravagant.

Mr. Sub-Inspector Lynch has courteously supplied me with a statement showing the quantity of gold sent from Temora by escort during the three years 1881 to 1883, as follows:—

Years.	Weight of Gold.		
	ozs.	dwt.	grs.
1881 .....	29,652	14	14
1882 .....	33,348	0	7
1883 .....	17,347	8	6

I am aware of some 200 ozs. of gold having been sent to Sydney by private hands during the year 1883, in addition to that sent by escort. Of the gold sent by escort in 1883, 3,790 ozs. was Barmedman gold—(all from quartz); this would leave—including the 200 ozs. sent by private escort—13,757 ozs. 8 dwts. 6 grs. as the year's ascertained produce from Temora proper. Of this amount about 600 ozs. was from quartz, and the balance (say) 13,157 ozs., from alluvium.

The maximum price given for gold here during 1883 was 78s. 3d. per oz., the minimum price 76s. per oz., and the average price 77s. 6d. per oz. Taking the average price as the value of the gold produced in 1883—in round numbers

Temora produced gold of the value of .....	£53,300
and Barmedman .....	14,213
Total value of gold produced in 1883. ....	<u>£67,513</u>

I am indebted to the officers of the Bank of New South Wales and of the Australian Joint Stock Bank at Temora for some of the figures just given, and I have much pleasure in expressing my thanks to those gentlemen for their courtesy.

The Mining Registrar at Barmedman furnishes a return shewing that in 1883, at that place, 7,851 tons of quartz were crushed, yielding 4,652 ozs. 8 dwts. 6 grs. of gold, giving an average of 11 dwts. 12 grs. per ton; that is, spreading the average over all the stone crushed in the division—good, bad, and indifferent—during the year. Speaking of individual mines, the Jackson Company's mine gave the highest, and Bell, Hicks and party gave the lowest, average yield. The former Company crushed 538 tons of quartz, and obtained therefrom 793 ozs. of gold, being an average of 1 oz. 9 dwts. 6 grs. per ton. Bell, Hicks and party, No. 2 South Ada Reef, crushed 136 tons of quartz, which yielded 40 ozs. 18 dwts. of gold, or an average of 6 dwts. per ton. The whole of the quartz mentioned above was crushed at the United Barmedman Company's battery.

During the early part of the year, before the United Barmedman Company's plant was obtainable for public crushing, the progress of Barmedman was greatly retarded by reason of the miners being unable to get their quartz crushed. The small battery which had served the division for some years before had got out of repair somewhat, and was for that and other reasons not available and had fallen into disuse, and there was no means of crushing quartz until the United Barmedman Company's battery was available.

The

The Ada Company erected a plant to pulverize quartz. The process was said to be much superior to the old plan of crushing with stampers, or, indeed, any other process of reducing quartz. So much so indeed, that the new process of pulverizing by means of grinding would soon revolutionize quartz crushing and render stamper batteries all but valueless, as the pulverizer would do the work much better, much quicker, and much cheaper than any other kind of machine would do it. Expectation was very high, but the results were all but fatal to the Company. The machine was found to be a pretty toy but utterly useless for crushing quartz—that is commercially speaking. The machine certainly did crush some small quantities of quartz to an almost impalpable powder; but to do this the friction on the “bearers” of the machine was so great that it cost more to renew them than to have the stone crushed by the ordinary stamper process—in other words, the wear and tear on the pulverizer was ruinous—and for quartz-crushing purposes it was worse than useless. I do not wish to say one word against trying new appliances in connection with mining. On the contrary, every encouragement should be given to inventors to bring improved appliances and methods of every kind into notice and use. But it is folly, almost amounting to madness, for a mining Company—or, indeed, any other Company based upon commercial principles—to exhaust all its capital in the purchase of new fangled appliances before the practical value of those appliances has been ascertained. Better rely upon machinery and appliances which it is known will answer and have a small reserve fund for experimentalizing. In that case, if the experiments prove failures the Company is not seriously inconvenienced, it loses a little but knows the extent of its loss. But when it puts all its available capital into experiments, if they fail the Company is ruined, as was the case with the Ada Company. It is much to be regretted, both on account of the Ada Company itself and of the Barmedman miners, that the money spent upon the now discarded pulverizer was not spent in getting and erecting a nice little 10-head battery of stampers. The Company, in that case, might now have been paying dividends; or, if still desirous of testing the pulverizer, purchased the machine out of realized profits. Such a battery at that time would also have been a great benefit to the district by crushing for the public, which would at that time have given a great impetus to the quartz-mining of the district.

Barmedman is now, however, fairly well supplied with crushing power in the splendid battery of 25 heads of stampers erected by the United Barmedman Company. The Company's plant altogether is a very powerful one, and, with a few alterations and additions, would be perhaps the most complete gold-mining plant in the Colony. It has three powerful steam-engines—one for winding, one for pumping, and one to drive the crushing machine—with pumps, pumping gear, and other necessary appliances. The Company purposes employing 15 heads of stampers on its own quartz, and the other 10 heads in crushing for the public. This should be advantageous to all parties concerned. This battery is able to crush all the quartz now being raised in the district and for probably some time to come. It is very likely, however, that as miners find they can get their quartz crushed, the quantity of stone raised in the division will gradually increase until it will be found advisable for additional crushing power to be erected.

When I said a few sentences back that the erection of the pulverizer ruined the Ada Company I ought to have qualified the word “ruined.” The cost of that machine exhausted the balance of its first subscribed capital; but the Company still having faith in the mine, re-organized the Company, raised additional capital, and has conducted its works with a fair amount of vigour ever since, and it is to be hoped that the pluck and perseverance thus shown may be rewarded with success.

The Jackson Company have, during the year, erected a small steam engine with winding and pumping gear and the necessary appendages to make the little plant complete as far as it goes.

Barmedman is badly supplied with fresh water. Albeit there is an almost unlimited supply of underground water, but it is strongly impregnated with mineral salts, so much so indeed as to make it unfit to use for steaming purposes, because in a short time it would destroy the steam boilers. This water however is very suitable for all the other purposes for which water is required in connection with mining at Barmedman. While writing upon this subject—water—I trust I may be pardoned for pointing out what appears to me a great omission in the United Barmedman Company's plant in this respect. Now the Company has its machinery well housed, and the roofing is of galvanized iron, presenting a very large area for catching water during rainfalls, it is a matter for regret that none of this splendid water is utilized by the Company. If the roofing were spouted and the water which falls upon it from time to time were conducted to a good secure underground tank of proper dimensions to conserve it, to be used for steam purposes only, at such times as the Company's other supply of fresh water failed, the water thus stored would after the tanks were once filled, be sufficient, if carefully used, to prevent the Company ever being short of fresh water for its boilers. By the Company carefully collecting and condensing its waste steam and returning the water again to the tank, most of the water could be used over and over again. I do not think the expense of doing what I suggest would be more than (say) £200 to £250, and such an expense is very small for such a splendid plant, having regard to the immense advantage the water would be to the Company; because, it should be remembered, that without water for steam the Company cannot work at all, and that having sufficient for steaming purposes, it would have sufficient in its mine for all other purposes. The suggestion is offered respectfully just for what it is worth, not only to the United Barmedman Company, but to all others whom it may concern. Without intending to be irreverent I think the most effectual way of praying for water is to carefully catch, store, conserve, and use that which Providence sends.

My remarks about the rich agricultural lands surrounding Temora may be applied with equal force to Barmedman. I have no means of ascertaining the population of Barmedman, but should roughly estimate it at from 300 to 400 all told.

To return to Temora, the population is still decreasing; during the year several business places, including seven so-called hotels, were closed, and a considerable number of business people and miners have left the district. When the rush to Billy's Lookout took place there was a regular stampede from both Barmedman and Temora, but as that rush proved to be a failure, most of these returned to their old love. It is now roughly estimated that the population in and for say 2 miles round about Temora is about 2,000 all told, including a few Chinamen. As a general rule the population is an orderly law-abiding one. True we have a few roughs of both sexes, but their proportion to the general population is very small and would I am sure compare very favourably with the general average in this respect of the Colony.

Much

Much of the mining in this district is of a primitive character and a great deal of labour is wasted. What is known as "individual mining" is the general rule. In other words the work is conducted by small parties of co-operative miners, generally about four in a party. Sometimes men work singly—not often—and sometimes there are as many as eight in a party. A few joint stock companies for the purpose of mining on a fairly large scale were established here, but they have all with the exception of the South Australian Company collapsed without either benefiting the district or the shareholders.

The machinery in the Temora division, excepting the South Australian Company's battery, the only one in the division, is of a primitive character for raising the earth from the underground workings to the surface. The windlass is mostly used. There are however a few "whips," in which case horse-power is used. There is not a steam-engine for winding purposes in the whole division. In saying this I am not including Sebastopol or the Junee reefs, for though they are generally regarded as being in the Temora division they are not in point of fact even within the Lachlan District, but form part of the Clarendon division of the Tumut and Adelong Mining District. I am unable to report upon that part of my district, never having been at Sebastopol or Junee, but I am aware that some three or four plants have been erected there during the year, and I am informed these plants are of a very fair type.

In methods of mining and in mining appliances there is plenty room for improvement at Temora. Too many shafts are sunk for the area of ground worked; too much expense is incurred in carting the wash-dirt to the puddling machines; the wash-dirt too is handled too many times, and much of the work that is done by human hands could be better, quicker, and cheaper done by mechanical appliances. I am of opinion that at least one-third of the miners' labour in this division is wasted for want of system. But to introduce a system that would prevent this waste of labour would necessitate the operations being on a larger scale. To point out how this may be brought about would involve a number of details rather beyond the scope of this report, and would perhaps run counter to what some miners regard as their privileges—perhaps prejudices would be the more correct word. At any rate I cannot now spare time to thoroughly discuss the matter. It is mentioned here in the hope that the miners may give it their serious attention, and so devise means by which they may prevent a great waste of labour without in any way sacrificing the reasonable independence of individual miners.

#### LACHLAN DISTRICT—FORBES DIVISION.

(*D. E. Troughton, Mining Registrar.*)

I HAVE the honor to submit my Annual Report for the Forbes division of the Lachlan Mining District for the year 1883.

The amount of gold won in this division during last year shows an increase of about 700 ozs. over that won in 1882, the increase being in alluvial gold from the Bald Hills, and quartz gold from the Pinnacle reefs.

At the Bald Hills Pinnington and party's two leases have been worked by a Company, the British Standard Gold-mining Company, and the success which has attended their labours has induced many parties to take up ground both north and south of the Company's leases with the intention of tracing the lead.

The Company's workings are now at a depth of about 180 feet. Judging by present indications their success will be even more marked in the present year than in last year.

Very little has been done on the Queen's and Caledonia Leads during last year. In December small parties took up ground on both, but as yet I have no information of the result of their work.

At the Pinnacle Reefs much activity has been shown, the gold won (436 ozs.) being almost 200 ozs. in excess of that won in 1882.

#### *Copper.*

In September last Messrs. Sloane & Pateman, of Eugowra, applied for a lease of 40 acres—at the Eurow Mountain, about 16 miles east from Forbes—for the purpose of mining for copper. Their application was quickly followed by four others for the same amount of country. I am unable, as yet, to give any idea of the value of the discovery. The specimens which I have seen show an apparently fair percentage of copper with plentiful indications of iron. I am informed that the ground is easily worked, and hope, therefore, that its value will soon be tested.

Number of miners' rights issued during the year .....	470
Business licenses .....	30
Mineral licenses .....	4
Gold leases applied for .....	12
Mineral leases applied for .....	9

#### LACHLAN DISTRICT—PARKES DIVISION.

(*W. C. Weston, Mining Registrar.*)

IN forwarding my annual returns for 1883, I regret to have to state that gold-mining during the year past has been in a very languishing way. No new discoveries of any importance have been made; the only one that caused any excitement at all was Coulson and party, in M'Gregor's paddock, about 8 miles north of Parkes. Although this ground had been fairly prospected by many parties and abandoned several times, it was only in February last that Coulson and party got gold; the first crushing went over 5 ozs. to the ton, the second 3 ozs., and the third about 1½ oz.

There is no doubt this is a very valuable claim, and with more experienced miners and better appliances much more gold would be obtained.

On the Bonnie Dundee, Medlyn and party are still working, and, I believe, obtaining payable gold. They have just finished crushing 500 tons, which went over 6 dwts.; they took the cake to Sydney themselves to the Mint.

One or two parties are working on Buchanan's line of reef, and only a few days ago a man who has been fossicking there for months struck very good stone, so much so that one of the Germans who was so long working on the Buchanan's line gave £50 for a half share. They have crushed 13 tons which went nearly 3 ozs. to the ton.

At Sardine Gully, Miller and party are still getting payable quartz. Several claims were pegged out after their last crushing, but they are now abandoned.

At the Kurragong Meyer and Nelson are still working and getting payable gold.

Alluvial

Alluvial mining is at such a low ebb that I have really nothing to report. It was at one time thought that a new run of gold had been struck at M'Guigan's, but I am sorry to say it was soon diffused out. There is still a party of six, Stapleton and party, trying; they have applied for a 4-acre lease.

Many miners at this season of the year leave mining and take a turn at harvesting, as wages are high; others combine mining and farming, and this it is which makes Parkes hold its own.

With plenty of rain anything could be grown round Parkes; as it is provisions are cheap and plentiful.

Fifty-four claims have been registered by me during the year. Five gold-mining lease applications have been made and 13 mineral conditional purchases have been made to the Land Agent, all for copper, but they are situated about 100 miles from Parkes, principally on Melrose run.

355 miners' rights were issued and 17 business licenses, also 3 mineral licenses.

The quantity of gold bought by the two banks was 2,689 ozs. 14 dwts. 5 grs., which at £3 15s. 0d. per ounce, amounts to £10,086 8s. 3d.

Several parcels of gold were sent to Sydney by private hands, of which I have no account, but which I have every reason to believe would bring the amount up to 3,000 ozs.

#### LACHLAN DISTRICT—CARGO DIVISION.

(*R. Hutton, Mining Registrar.*)

MINING in the Cargo division may be now considered almost a thing of the past so little is there now being done.

In alluvial, Gum Flat is the only place where any work has been done during the year, and what work has been done can only be termed fossicking.

Odgers and party were on a pretty good patch at the beginning of the year, but it soon cut out, and searching for blocks among the old workings has given employment to about twelve men. About 1,000 loads have been washed, yielding 3 dwts. to the load, giving 150 ozs. as the gross yield in the division, during the year, from alluvium.

There has been scarcely any quartz-mining done during the year. In the beginning of the year Tom and party had about 60 tons crushed from Boney's Rocks which yielded about half an oz. to the ton; this ground is now idle, not being payable.

Simmeon and party had 40 tons from the Homeward Bound Reef, Cargo, crushed, which also gave half an oz. to the ton. This ground is also abandoned.

Thomas and party crushed 20 tons from the Dalcooth Hill for a yield of 15 dwts. per ton. The patch in this ground is worked out; it is therefore idle.

The Cargo Gold-mining Company have done no work during the year.

The Ironclad Gold-mining Company have had three men employed during the last four months putting the mine in order. It is said they intend to thoroughly work the lease again. They lately sent 2 tons to the Mint to be tested. It yielded upwards of 9 ozs. to the ton.

Quartz-mining has only given partial employment to about eight men during the year. About 83 ozs. of gold have been obtained.

There has been no mining done on the Canowindra Gold-field during the year.

Sixty-three miners' rights and six business licenses were issued in this office during the year.

#### LACHLAN DISTRICT—GRENFELL DIVISION.

(*W. H. Hazleton, Mining Registrar.*)

I HAVE the honor to furnish my report for the year 1883. Mining in my division during the year has, I may say, been nearly at a stand-still. In my report for 1882 I mentioned some parties that were prospecting about 6 miles due east from Grenfell. On payable gold being reported in March at Billy's Lookout they at once started for that place, and in my opinion left this portion of the country untried. Another great hindrance to the working of mines in this district is the want of capital. Many of the miners have gone to work on the railway lines and other public works of the Colony. It is my opinion that if assistance were given to prospecting parties that good results would ensue. It is the opinion of old miners and others who ought to be competent judges, that mining is only in its infancy in this district and if a little Government money was judiciously expended I believe a very satisfactory return would be the result.

#### LACHLAN DISTRICT—YOUNG DIVISION.

(*T. E. Blomfield, Mining Registrar.*)

OWING to the press of business in my office this month I regret to say I have been unable to furnish my report of the gold-fields of this district as early as I could have wished, and with these remarks in extenuation of the delay I will now proceed to frame my report in accordance with the information I have succeeded in gathering, giving precedence to the mining operations within the precincts of the immediate neighbourhood.

I have therefore the honor to acquaint you that for the greater portion of the elapsed year mining operations have been at the best but languid and fitful, and that enterprise with individuals as well as with companies has been despondent until very recently when a Company known as Minter and others, who sunk a shaft some 30 feet deep with the aid of excellent machinery and struck a vein or lode of a most encouraging nature yielding, as I understand it, a product of 13 ozs. to the load, and that further searches in the same mine justify the hope of most profitable results.

The announcement of this success completely galvanised the apathy of the occupiers of contiguous and adjacent holdings, and has stimulated them to test the value of their land which in all essentials is identical in character with that of the successful find, and if conducted on sound principles there is scarcely room to doubt of an equally successful issue.

Another

Another claim, and generally known as Tonkins, and which has been worked for some time has not proved so successful as was anticipated, and in fact has been worked at a serious loss, but the owners, encouraged by the recent success of Minter and Co, have renewed their efforts and are bent on pursuing their researches in full reliance that their enterprise will yet be rewarded with paying results.

From Wombat reports are discouraging, nothing of any importance having been done in that locality, the fearful dearth of water being held responsible as a reason for the failure in all mining operations thereabouts.

With regard to the outlying undertakings known as Marshal Macmahon's Reef, near Murrumburrah, very little has as yet been done, the works having been in abeyance awaiting suitable machinery, but this has reference to the holdings of substantial Companies. Still there are many who are working there with fair success in the ordinary method and are earning sufficient to satisfy their expectations, but the more wealthy proprietors express great confidence in their ultimate success when the machinery has had time to develop the works in hand.

I may here remark in proof of the richness of the land as regards its gold-bearing character that the Chinese with their usual perseverance and simple method of recovering the gold from the *debris* of the soil with which it is intermingled, find profitable employment by fossicking in the creeks, as I have on several occasions personally witnessed when they were selling the proceeds of their industry at the Bank, the value of which amounted from £5 to £10 at six different times.

I have had on several occasions the opportunity of examining specimens of the gold purchased by the Bank of New South Wales, and if I may, with my small experience, hazard an opinion of its quality, as judged by its weight and rich colour, I think I am warranted in pronouncing it exceedingly pure metal and inferior to none that has ever been discovered; its chief characteristic in shape is granular, with sharp edges, indicating slight abrasion or attrition, in its passage from the parent rock, from which I infer that the original will yet be discovered in larger quantities and of larger size.

By reference to the only two Banks in Young which deal in gold, viz., the Oriental and the Bank of New South Wales, the aggregate quantity purchased by these two Banks amounted in weight to 2,337 ozs. 5 dwts. 10 grs. representing a value of £9,015 3s. 8d sterling.

I have further to inform you that as Warden's Clerk for 1883, 436 miners' rights, 41 business licenses, and 1 mineral license have been sold. Seven applications for gold-mining leases for the elapsed year have been applied for on an aggregate of 83 acres, likewise two mineral leases, one only of which has been taken in hand, but with what results I have been unable to ascertain.

In conclusion, if not irrelevant to the matter contained in this report, I would beg to observe that the great deficiency of water supply in this district is a serious impediment to the recovery of the gold deposits which are known to exist in this section of the Gold-fields of Young, and as the Burrangong Creek would hold sufficient water to meet all such requirements, if improved either by dams or weirs at different levels, the facilities of winning the gold would be indefinitely increased to the advantage not only of the community here, but the country in general.

#### LACHLAN DISTRICT—TEMORA DIVISION.

(C. G. Gibson, Mining Registrar.)

In submitting the annual report of this gold-field, it will be seen that the falling off in the yield of gold for the year 1883 has been very considerable; and showing a decrease of 20,933 ozs. 2 dwts. The total yield for the year being 12,415 ozs. 2 dwts. 3 grs., as against 33,348 ozs. 4 dwts. 3 grs. in 1882. The number of miners is about 600, viz., 400 alluvial and 200 quartz-miners, all Europeans, showing a falling off in numbers of 400 men.

A large number of the alluvial claims have been worked out, and although several are still paying good wages, unless some new discoveries are made the returns of gold from Temora, as far as the alluvial is concerned, must very materially diminish.

Lucas and party's claim at Upper Temora has proved one of the best during the year, having come on a rich deposit of gold in the white decomposed reef or lode, which has produced since August last about 240 ozs. from about 500 loads of wash-dirt, and it contained a large amount of very rich specimens.

M'Dowell and party's alluvial claim adjoining the IXL claim, at Upper Temora, has produced a fair amount of payable gold, and about two months since they unearthed a nugget weighing 26 ozs.

In Deitcher's Paddock, conditional purchase, at Lower Temora, some prospecting has been going on, and which resulted a few weeks since in a man named Perman finding a 6½ ozs. nugget just under the surface; this caused some excitement on the field and a great deal of ground has been pegged out both in the private ground of Mr. Deitcher and outside in the Crown Land; but although a great many holes have been sunk nothing further has been met with, although many old diggers are very sanguine of finding some more gold in this part of the field.

At Sebastopol several quartz-claims are still at work, and the prospects are considered good; and recently some Melbourne capitalists have been buying up the principal claims there through Mr. W. Marshall, of Melbourne, and are preparing to work vigorously the ground they have acquired. The same party are also erecting some costly machinery for the treatment of some 30,000 loads of tailings, and from which they are sanguine of reaping good profits.

Conway and party, at about 6 miles west of the "Half-way-house," on the Barmedman Road, crushed 20 tons of quartz from their prospecting claim, which gave 18 ozs. or 18 dwts. to the ton, and they reported the claim payable. Some other claims are also at work adjoining the prospectors, but nothing of any importance has been reported.

Several quartz-claims are still at work at the Upper Town, but very little gold has been obtained. The South Australian Quartz-mining Company (No Liability), which have amalgamated with other claims have about 30 hands employed in prospecting and raising stone for the battery, but I am informed that the returns at present are not sufficient to make profits. The gold appears to be confined to a narrow portion of the reef and are obliged to take away a large portion that is valueless, and the bed rock is very hard diorite, which makes the mines very costly to work.

There has been issued 989 miners' rights and 159 business licenses during the year, which also shows a great falling off in numbers.

In

In conclusion I would say that although the falling off of gold has been very considerable and the population less than the previous years, there appears to be a degree of permanency about the town, and those miners left on the field appear to be sanguine as to the future, and this added to the fact of a very large area of land near Temora having been selected during the year for agricultural purposes, and from the productive nature of the soil, leads me to the conclusion that Temora will rise in importance as an agricultural town, although it may lose much of its character as a gold-field.

LACHLAN DISTRICT—BURROWA DIVISION.

(*W. J. Wotton, Mining Registrar.*)

I HAVE the honor to submit my annual report on the Burrowa Mining District for the year 1883. There is nothing to report with reference to gold. Although prospecting is carried on more or less through the district, and a few miners' rights are taken out, nothing payable has been found. The rush near Frogmore, as mentioned in my last report, has died out.

*Copper.*

The mining under this head has been confined to the workings of Frogmore Copper Company (Limited), and has been confined entirely to No. 4 shaft. About the middle of August last a new lode was struck in this shaft at a depth of 48 fathoms. At this depth it forms a junction with the old lode, and in one place is 17 feet wide. The general run of the new lode is about 6 feet wide, and in all probability runs up to the surface, and is a most important discovery, increasing the value of the mine it is thought fully 50 per cent.

During the year about 1,275 tons of 10 per cent. ore have been raised and smelted, yielding 127 tons 10 cwt. of ingot copper. 82 tons 10 cwt. of this have been made during the last half-year. The prospects of the mine have very much improved during the year. The result of the last half-year's working shows a fair profit. There is a valuable plant at the mine, consisting of winding and crushing machinery, two smelting furnaces, and refinery, chamber for the manufacture of sulphuric acid. The thousands of tons of the poor ores at grass, the accumulation of years, and for the purpose of treating which a "Hancock's Patent Jigger" was purchased, as mentioned in my last report, have not been touched, as the new lode above referred to was more than sufficient to keep everything at full work.

LACHLAN DISTRICT—BARMEDMAN DIVISION.

(*Wm. Forbes, Mining Registrar.*)

I HAVE the honor to submit for the information of the Honorable the Minister for Mines my report for the past year on the progress of the Mining Division under my charge, which, I am pleased to say, has made wonderful strides during the past year, notwithstanding the several rebuffs at first encountered. As mentioned in my last report, the introduction of one of Lecoup and Cook's pulverisers no doubt showed a spirit of enterprise on the part of Captain Matthews, the gentleman who introduced it on the field; but its absolute failure was keenly felt by the many claimholders, who not only held scrip in the Company for whom it was erected, but were anxiously looking forward to having small parcels of stone crushed. Next came the unfortunate death of Mr. Claussan, who, with other Melbourne gentlemen, came over to inspect some mining property at the Hard-to-Find reefs, with a view of forming it into a Company, and whilst in the act of descending the Ada Gold-mining Company's shaft (of which Company he was a Director), fell to the bottom, causing instantaneous death; and as he had every faith in the future of the field, and a considerable amount of capital at his disposal, would no doubt have invested largely, and thus helped to develop this new field.

The Barmedman United Gold-mining Company's battery, which was just bordering on completion at the end of last year, was completed early in the commencement of this year, and at once commenced crushing their own stone with fifteen head of stamps, that number being all they then had erected; but finding they could keep the fifteen head fully employed on their own stone, determined to erect an additional ten head, which would be devoted to the public. Under the management of Mr. F. W. Clarke the work was speedily commenced and rapidly approaching completion when his successor, Mr. R. Parker, undertook the management, and with his predecessor's energy, soon completed the erection of the additional ten head, which have since been actively employed in crushing stone for the public. So efficient and permanent has been the erection of the battery that the only appliances found necessary to be used in saving the gold are the ordinary quicksilver tables and blanketings, the blanketings being put through the machine a second time to ensure no loss. A concentrator is on the ground but has not yet been erected, the loss of gold being considered infinitely small. With one or two exceptions the quartz is almost free of other minerals, or, if any, in such small proportions as not to make any material difference.

This Company has very powerful machinery and pumping appliances, and having attained the major depth of any claim on the field, drain all the other claims, otherwise the water which is met with at from 70 to 80 feet would prove too strong for manual labor to contend with and stop all private enterprise. The water is used and acts admirably for the tables, but being so highly mineralized and quite salt (in fact it is said to be 3 per cent. saltier than the sea), cannot be used for the boilers. Although, when erecting the plant, that circumstance was taken into consideration, and three large Cornish boilers supplied, but the encrustment is so excessive that continual cleanings of the boilers are necessary, which adds greatly to the expense; also, the wear to boilers is very great. Up to the present they have managed to conserve, in large tanks, sufficient water for the boilers, but if not soon replenished it is a questionable matter whether the Company will be able to continue work, and if stopped almost all the other claims would have to suspend further operations as they are now working below the original water-level, and the stoppage of the pumps would at once allow the water to rise and flood their workings out. In point of fact the whole of the surrounding claims are dependent on the further development of this Company's ground, not any of the private claims having machinery of their own. The Ada Gold-mining Company and the Jackson's Gold-mining Company have both pumping machinery, but being fitted up with tubular boilers cannot utilize the water from the claims, and having exhausted the supply in their dams are consequently at a standstill, that is as far as further sinking is concerned.

At

At the Hard to Find line of reef, which is situate about  $1\frac{1}{2}$  mile in a southerly direction from the township, the same difficulty is experienced with regard to water, and as there is not any machinery on the ground very little profitable work can be done. Five claims on this line of reef have attained the water-level, and from that level the best gold has been obtained. The reef, which is generally of a very broken and undefined character, becomes more defined and regular at this depth. Several attempts have been made to induce capitalists to invest on this portion of the field, but that was prior to there being any machinery erected at Barmedman, and the parties in whose hands the properties were placed were generally supposed to have rather over-estimated the actual value of the claims, and the shareholders being unaware of the difficulties they would have to contend with regarding the water, asked prices which left but little margin for speculators; however, since the Barmedman United Company's battery has been erected, crushings from these various claims have fully reached the most sanguine expectations with but one exception, viz., from Barnott's Reef. A parcel of 280 tons of quartz being crushed from there, which was fully expected to give a return of 1 oz. per ton when cleaned up at the Company's battery, returned a cake of retorted gold weighing 116 ozs.; upon this being deposited at the bank, and subsequently forwarded to their head office, it was discovered that the cake, in addition to being very dirty, contained metal other than gold. It was then treated by the bank assayer with the result of a deduction of many ounces. This result being communicated to the shareholders caused quite a consternation, and one of them immediately proceeded to Sydney, and in company with one of the Company's directors (at whose battery the stone was treated) waited on the manager of the bank who handed over to them the ball of refuse which had been extracted from the cake of gold. It was then arranged between the Company's directors and the shareholders of the claim that this refuse be submitted to the Government Assayer in order to obtain an accurate account of what it contained; that being done, the result showed that the refuse still contained a large percentage of gold. The supposed refuse was then forwarded to the Mint, and from it was extracted a return of gold equal in money to the sum of £146 13s., so that with the gold already obtained and this further addition to it gave an average of 7 dwts. 13 grs. per ton, but the general opinion exists that the stone, had it been properly treated, would have given much better returns, and that extreme carelessness or gross mismanagement existed somewhere.

The Phoenix line of reef is about a mile in a south-easterly direction from the Hard to Find, and about  $2\frac{1}{4}$  miles from the township. Although discovered some two years ago very little work has been accomplished until within the last twelve months. The line comprises the prospecting claim and two ordinary quartz-claims on either side—north and south. In the Prospectors the reef was cropping on the surface and has been worked down to the 65-foot level. The reef is well defined and encased in walls of slate and sandstone formation; the stone is very hard and carries both coarse and fine gold well disseminated through the vein, which improves as the depth increases. Two small crushings from the top levels gave an average of 1 oz. 14 dwts. per ton, and as the reef is very easily and economically worked constitutes a very valuable property. The claims north and south cut the reef so close to the water-level that without the aid of machinery very little can be done to develop them.

The Moonlight Reef is parallel to the Hard to Find Reef, and situate about  $\frac{1}{4}$  of a mile to the westward; here the reef crops on the surface and looks very promising, but has not yet been subjected to the stampers.

Owing to the extreme flatness of the surrounding country and absolute want of any indications of a lead very little prospecting for alluvial has been done; one or two shafts were sunk by private enterprise but with very unsatisfactory results, not even a wash of any description being obtained. A Prospecting Association was formed and about £80 subscribed by the inhabitants; two parties of four each were elected who persevered very diligently but without any success; one place, fancied by a great many, looked very promising at first, the ground going deep; the water was reached before the bottom was attained, necessitating slabbing and additional labor, but only to result in another duffer being bottomed. The bulk of the money being subscribed by business men it naturally occurred to them that the nearer the township gold was discovered the more it would benefit them, and the radius for prospecting operations was confined to within 3 miles of the township, which completely shut out a large belt of very likely looking country. Had a boring machine been procured with the money thus expended much more efficient and beneficial prospecting might have been done, as the country is very soft, and boring operations would be easily accomplished. With these exceptions very little prospecting has been done; occasionally a party put down a shaft, but seldom try the second one.

The population numbers between three and four hundred people, which are decidedly of a very orderly class, our lock-up being very seldom patronised, and then generally by strangers to the town. About 150 miners are continuously employed, and it is quite an exceptional thing to see an idler in the streets. The greatest drawback to the further development of the township is the scarcity of water, but as the Government reservoir is fast drawing on completion, and the thunderstorms which should prevail at this time of year may yet give a supply; otherwise this want will be keenly felt, as we are now totally dependent on the liberality of the squatter for our domestic supplies.

The total number of miners' rights issued during the year was 212; business licenses, 35; and 1 mineral license. There were eight gold-mining leases applied for, comprising an area of 36 acres of land; of this number however one application was refused, thus reducing the area to 28 acres. In one or two cases advantage has been taken of locking ground up by way of converting abandoned claims into gold-mining leases, and thus taking advantage of the time between the application for and granting or refusal of lease; but on the whole very little desire for monopoly is now displayed, apparently having profited by the total failure of those who practised it in the early part of the fields opening.

Great dissatisfaction is expressed by many who have settled here and made considerable improvements to their holdings at the allotments not being appraised, although applied for some considerable time back, the present titles being considered so very precarious.

As shown by subjoined statistics there are thirteen claims, which have crushed with highly satisfactory results; the average cost of crushing as charged the public at the Barmedman United Gold-mining Company's battery, is about 10s. 3d. per ton. The total number of tons crushed for the year has been 7,851 tons; from which 4,652 ounces 8 dwts. and 12 grs. of gold was won, being equal to a money value of £18,029 10s., or an average throughout the whole field of 11 dwts. 20 grs. per ton, taking into consideration that by far the greater portion of this was raised above water level, should in itself be a sufficient guarantee of the future successes of the field.

My anticipations have been unpleasantly realized respecting operations at the Barmedman United Gold-mining Company's claim, as the whole of the machinery had to be stopped, including the pumping engine, for want of water, the water from the claim (of which there is an abundance) proving totally unfit, and in fact dangerous to be used any longer in the boilers, so that until rain comes mining will be considerably retarded, as already the hands who were employed in the lower levels have been dispensed with, and as no other occupation is obtainable in the district, a depression of business is likely to ensue.

SOUTHERN DISTRICT—ARALUEN, BRAIDWOOD, LITTLE RIVER, MAJOR'S CREEK, AND NERRIGA DIVISIONS.

(*Mr. Warden Aldcorn, P.M. Araluen.*)

THE year 1883, as will be seen by the annexed return, has been much less productive of gold, as compared with the previous year. The principal if not the only cause of the decrease is the want of water. Not only has the past year been a very dry one, but it was preceded by two years, almost, in this respect, as unfavourable for mining operations generally. At the present time sources of water supply which have rarely, if ever, been known to fail are quite dried up. In consequence of this short water supply a large proportion of the miners have gone away in search of other employment, and, under all the circumstances, I anticipated even a larger decrease in the quantity of gold obtained.

The large decrease at Araluen has been occasioned, not alone by the want of water, but also by the cessation from work during the year on all the large stripping claims in the bed of the river. It was found, as I anticipated in my last report, that the heavy expenses of stripping would not warrant the claim-holders in continuing operations. Against this I may state that a party of working men took up a claim where it was known that some good ground had been filled in and covered over by the floods of a few years ago. This party expended about £700 in opening up, and although they have only been washing for a short time the prospects are such as to warrant the expectation that they will be rewarded for their enterprise and labour. It is also in contemplation by the proprietors of one of the discontinued claims to rent it on favourable terms to one of the business men of Araluen, who is inclined to give it a further trial, and, as he hopes, successfully. There is still a considerable extent of ground in this and other claims which might be worked if the expenses could be lessened.

In the other divisions the decrease is, as I have stated, chiefly owing to the want of water. As regards Little River the small deficiency, in the face of a largely reduced population, is a proof of the richness of the gold deposits there, which continue to be turned out in such quantities, notwithstanding that the field has been worked on for so many years. With reference to the reefs at Little River not much has been done during the past year. The parties at work on these at date of my last report seemed to have expended all their capital, and work was stopped. For some months past attempts have been made to form a large company in Sydney to carry on operations, and I understand such a Company has been organised, and it is probable that what will possibly be a final attempt to develop these reefs will soon be made.

In conclusion I would just add that no new discoveries of gold have been made, nor is this to be looked for in this part of the Southern district.

A large extent of alluvial land at Wyambene, &c., on the Upper Shoalhaven, was taken possession of a year ago by Col. Halkett and party; but they seem as yet to have been unsuccessful in the formation of a Company to work the ground.

As regards minerals generally, nothing has been done in this district. Some land on the Shoalhaven River was taken up for copper, but it proved not worth retaining.

SOUTHERN DISTRICT—MORUYA DIVISION.

(*Mr. Warden G. Maunsell, P.M., Moruya.*)

THE continued dryness of this season has, I am led to believe, greatly retarded the mining operations of this portion of the Southern Gold Fields, and there are not more than 150 persons employed in mining here.

A portion of the Dromedary Gold Fields, in the vicinity of Wagonga North Head, on which is situated the Belle of Australia reef, has been proclaimed a timber reserve, and applications for gold-mining leases on it have been refused.

To this cause I attribute the decrease in the usual speculative mining work at this place.

The Dromedary Mountain has three Companies at work on it, viz., the Messrs. Cowdroy, Brice and Co., and Bailey and Co. They are sanguine as to the ultimate results of their labour.

An urgent necessity appears to exist for a geological examination of this mountain and its neighbourhood.

There are but six men working on the Montreal Gold-fields, and I am of opinion its extent and richness have been exaggerated.

The Company at work at the Moruya Silver-mines intend erecting more suitable machinery than it has there now.

I have heard of but one prospecting party on the Mogo Gold-fields.

## SOUTHERN DISTRICT—NOWRA DIVISION.

*(Mr. Warden Lovegrove, P.M., Nowra.)*

THE Gold-field at Yalwal, although limited to less than a mile lineal by less than a quarter of a mile width, is still the only portion of this district worked by miners, and with one exception the claims are still in the hands of men who do not wish to develop them beyond their own working capabilities. It will be seen that the whole of the work is limited to four claims, the Eclipse, Pinnacle, Pioneer, and Homeward Bound, taking them from north to south. The quartz crushed has been rather more than 3,000 tons, and the return 1,550 ounces, above half an ounce to the ton. But this does not represent the true value of the claims, as a good deal of dead-work has been done; during the first six months of the year the old Pinnacle Company was being wound up, and the new owner, Mr. Kelly, was overhauling the machinery, including a broken shaft. He has now begun to take down the hill on a face, and puts through about 100 tons a week; consequently, although the average is not high, the results are very payable. He has complained of the mercury getting sick and has applied the proper remedy. The Pinnacle claim is emphatically in good hands. The battery is now furnished with percussion tables, vertical and horizontal, amalgamating pans and a furnace for smelting the pyrites, which has assayed 11 ozs. 2 dwts. per ton. Mr. Kelly has also tried 60 tons from the Golden Crown, now his property, with a result of only 4 dwts., but I do not think the stone was at all picked. The miners recognise that it generally pays better to put through low stone rather than treat it as mullock.

Captain Reynolds has started his copper mine on a gully of the Bundudah Creek. He employs seven men, has sunk a shaft 94 feet; at 50 feet he drove 40 feet north and 30 feet south, and when he has reached 100 feet intends to drive again. I saw gossan, black oxide, and grey ore with mundie, and of the latter the captain has 8 to 10 tons laid aside, which he thinks will average 25 per cent. It is too early yet to decide whether the lode is payable. The strike is about north and south. This is 20 miles east of Tonga, where the first copper was tried, and is another proof of the wide diffusion of this metal.

No other mining of any sort has been done in the district.

## SOUTHERN DISTRICT—BERRIMA DIVISION.

*(Mr. Warden F. R. Wilshire, P.M., Berrima.)*

I HAVE the honor to report for your information, that during the past year of 1883 there has not been any very great alteration in the state of mining operations in this district, or any matter of sufficient importance to take special notice of.

The Joadja Shale Mining Company are still extending and improving their already very extensive oil works at Joadja, but much of their shale is being "stacked" at Mittagong, owing to the difficulty experienced in getting shipping accommodation to send it to foreign markets.

A new company for mining coal has been started near Mittagong, who are engaged with preliminary operations in opening their mine, distant from Mittagong station some 4 or 5 miles.

I have not had time to inspect the seam, and can say nothing of its extent or quality, though I am informed the owners are very sanguine of success.

A new Company has also been formed to work a coal seam about 3 miles north of Erith (Mr. Baker's) Colliery. They expect to be in a position to supply coal in February or March next.

The seam is said to be 7 or 8 feet thick and the coal of fair quality.

A "boring" party has also succeeded in striking a seam of coal 5 feet thick, about 1 mile south of the Erith Colliery, and the owners, having secured by M.C. purchase, some 2,500 acres of land there, are about opening up the seam with a view of bringing the mineral to market.

There are also some rumours of a Company being initiated to work some coal-seams in the neighbourhood of Meryla, some 8 or 10 miles easterly from Moss Vale, but I have no authentic information relative thereto.

The Berrima Coal Mining Company are still employed sending out coal, but I cannot ascertain the exact output for the past year. They have been working about 8 feet of what is known as the top seam, and are now, I am informed, engaged boring to a lower seam some 60 or 70 feet below the one now worked with a view of testing its quality; it is quite a different mineral from the overlying seam now worked, but whether better or otherwise remains to be proved. In boring the rod has passed through about 14 feet of superior fire-clay, and which, it is thought, may hereafter prove of marketable value and become an addition to the working operations of the mine.

I am informed this Company have (in order to secure a necessary addition to the working capital) made arrangements to sell the mine to some English capitalists. Should this succeed it will stimulate operations at the mine considerably, and it is expected that important extensions in connection with this Company's works will shortly be developed.

I have nothing at all to report regarding "gold mining," that industry being quite at a standstill at present in the division under my supervision, and beyond some rumour of a fresh copper deposit having been discovered near Goulburn there is nothing further of importance to bring under your notice.

I may state that, owing principally, I believe, to the prospective success attending the opening of the Berrima coal-mine a great deal of land has been selected in this district believed to contain coal-seams, and if a fraction only of it becomes developed into working mines there is every prospect of the district becoming in the future a very important coal-producing one, to say nothing of its future regarding the well-known undeveloped iron and shale deposits, &c., of the neighbourhood.

I have the honor to state, that, since writing my annual report of the 12th inst., I have learned some further particulars with reference to the results of the "boring" by the party (Denney and Co.), a little south of Erith Colliery, viz., the coal-seam was reached at a depth of 300 feet from surface, the drill having passed through sandstone the whole distance; the bore was started close to the G.S. Line, the seam is 5 feet thick, with one band, and considered identical with the seam worked at Erith Colliery.

With regard to this latter colliery I also learn that the proprietor (Mr. Baker) has recently considerably extended the mining appliances of the colliery, whereby the output can be largely increased, and that the work of the mine is going on in a satisfactory manner.

Perhaps you will, if deemed of sufficient importance, cause these additional particulars to be included in my Report of the 12th January.

SOUTHERN

## SOUTHERN DISTRICT—BOMBALA DIVISION.

(Mr. Warden Giles, Bombala.)

I HAVE the honor to submit my report for 1883 on mining matters within the portions of the Tumut and Adelong and Southern Mining Districts under my charge.

In accordance with instructions previously received, the Mining Registrars and Warden's Clerks stationed at Bombala, Nimitybelle, Cooma, and Kiandra have, I presume, furnished their reports for the past year, giving detailed accounts of the various workings, proceeds, &c., also the numbers of miners' rights and business licenses issued within their respective divisions to the 31st December last.

From reliable sources I find that the amount of gold won at Kiandra during 1883 shows a considerable increase over that obtained during the previous year, and I anticipate the most favourable results from the hydraulic sluicing at New Chum Hill and the other claims held by the Kiandra Gold-mining Company.

In order to develop the mineral wealth of the Kiandra Gold-field a large expenditure of capital must necessarily be incurred, thereby almost precluding the successful working of this gold-field by small capitalists. I have, as you are aware, deemed it advisable to recommend an extension of Kiandra Gold-field on its southern boundary, and it will be my duty to recommend a still further extension thereof on its western boundary.

I have not yet visited Collinton Gold-field, which, until within the past few months, was under the charge of Mr. Dawson, P.M., of Cooma, lately Warden for that division.

At Kydra, within Nimitybelle Gold-field, mining interests have not progressed favourably during the past year, mainly owing to a want of capital to properly develop the resources of this field, which, like Kiandra, can only be successfully worked by a Company prepared to risk the expenditure of money, in which case I am quite satisfied a good return would be the result.

I find that payable gold has been found on Kybean River, about 3 miles from Kydra.

With regard to Delegate Gold-field, mining matters have not progressed much during 1883. I regret to have to report that gold-mining interests have been seriously prejudiced by permitting indiscriminate free selection by conditional purchase of land along the banks of Delegate and Little Plains Rivers.

Messrs. Eisenstaedter have placed a considerable quantity of machinery on their alluvial claims at Nelbothorey, situated within Delegate Gold-field, but as yet they have not commenced work.

*Towomba Gold-field.*—With the exception of prospecting by some Europeans and Chinese, little has been done upon this gold-field during the past year.

## SOUTHERN DISTRICT—YASS DIVISION.

(Mr. Warden Fisher, P.M., Yass.)

I HAVE the honor to forward report for the year 1883 of that part of the Southern Mining District of which I am Warden.

My district embraces the county of King.

The information I have collected for the purpose of making this report is arranged under three heads—(a) the past mining history of the district; (b) the mining at present going on; and (c) the prospects for the future.

(a.) The past mining history of the district.—This reveals a series of unsuccessful attempts at mining for gold, lead, and copper, extending over a period of about 40 years. Alluvial gold-mining has been carried on at Blakeney's Creek especially, and at other places at different times by small parties, but never for any great length of time. About 1858 a prospecting party was employed on Blakeney's Creek by the townspeople of Yass, but this led to no profitable result.

Blakeney's Creek has however generally been regarded as the most likely place in the district to yield alluvial gold in payable quantities.

From near the source of this creek to its junction gold in small quantities can be obtained, both from the creek and its tributaries; the hills bordering the lower part of the creek are white with quartz fragments, and many quartz-reefs crop out on these ridges.

Very fine alluvial gold can be obtained from the bed of the Yass River, both where it runs through the township and higher up. The gravel deposits also which occur at heights of 30 to 50 or 60 feet above the bed of the river have yielded a little fine gold; once or twice a nugget has been obtained from the gravel over an ounce in weight, but unfortunately all attempts to obtain payable gold from this gravel have been hitherto unsuccessful.

Quartz-reef mining for gold was carried on for some time at a mine situated 3 miles N.E. from Dalton. The Company sunk four shafts and timbered them; one shaft was 40 feet deep. Gold was found in small quantities everywhere, but after crushing about 450 tons of quartz and obtaining only 16 ounces of gold the Company collapsed. The Company expended about £900 on this unprofitable venture.

A lead mine was opened over 30 years ago in Derrengullen Creek. This was called the Jews' mine, and was not successful. Another lead mine was opened on Limestone Creek, but with a like unprofitable result.

A lead mine was worked for some time at Everton, the property of A. H. Hume, Esq. The first assay made at the branch of the Royal Mint gave about 40 ounces of silver to the ton of lead. This was about 1870. There are now about 8 or 10 tons of ore near the shaft; some of it was assayed about 2 years ago and yielded both silver and gold, but I cannot say in what quantities. Some specimens were sent to the Amsterdam Exhibition.

Indications of copper are also found in the same neighbourhood, as well as lodes of magnetic iron ore and manganese. Unber has also been obtained a few miles from Everton.

Good indications of a copper lode were obtained at Lang's Creek, near Burrowa. This ground was opened, but without successful results.

Other indications of lead and copper are reported as occurring at different parts of the district, but I have not been able to obtain definite information.

(b.) The mining at present going on.—I regret that throughout the district I am not able to report any attempt at mining.

(c.) As to prospects for the future.—The very favourable prospects that have occasionally been obtained at Blakeney's Creek, lead many to believe that payable ground may some time be struck in that neighbourhood.

The

The numerous indications of the minerals lead and copper in this district and on the borders of the adjoining district lead me to believe that when more capital shall be directed to developing the mineral resources of the district, and when practical men with knowledge of the working details of mines are more easily obtainable, many of the mines now opened will be found to be remunerative.

The geological formation of the greater part of the district has been determined to be Upper Silurian.

#### SOUTHERN DISTRICT—BRAIDWOOD DIVISION.

(*C. Oslear, Mining Registrar.*)

I HAVE the honor to make the Annual Report for 1883, upon the mining operations in my portion of the Braidwood Division.

I regret to say that owing to want of water, through the very dry season and the exodus of a large number of the miners from here, a great many of whom seek employment on the Railway Extensions in this district in preference to mining, the returns in the yield of gold are far below the average of former years; about 739 ozs. have been obtained this year (1883), of the value of £2,861 6s. 6d.

There have been only two applications for gold-mining leases, and which are of such recent date that no results can be given. Sixty-one miner's rights and thirty-three mineral leases were issued during the year.

#### SOUTHERN DISTRICT—ARALUEN DIVISION.

(*E. F. Carlile, Mining Registrar.*)

THE yield of gold from the Araluen Division for the year 1883 shows a considerable falling off as compared with the previous year, the outturn being 3,763 ozs. 16 dwts., of the value of £14,490 12s. 6d. (viz.: 3,740 ozs. alluvial, and 23 ozs. 16 dwts. quartz); the quantity purchased in the Division has been more than that, about 500 ozs. having been brought here from Captain's Flat, Molonglo, the reefs at which place are worked to some extent by Araluen miners. The cause of the diminished yield is the cessation of work in most of the large claims, some of which have stopped temporarily, and others apparently permanently, for although the year opened with good prospects (some of the claims washing well) the returns fell off with part, and others were near their boundary, added to which the serious drought prevented the ground sluicers from washing.

One piece of ground which had lain idle for years, or with only spasmodic attempts to work it, has been opened, and so far yielded a fair return. A new party has just made a start with one of the discontinued claims, but no forecast can be made of the probable result.

But little has been done in quartz-mining (at Bell's Creek) and that with rather a poor return, the gold also being inferior in quality, worth only 62/6 per oz.

Though not within my Division, I have a knowledge of the returns of the Molonglo reefs, some of the claims on which are fairly payable, though the gold is of a very poor quality, being largely mixed with silver; the assay report of fineness of some parcels has been as low as 5,800, yielding from 44/- to 50/- per oz.

#### SOUTHERN DISTRICT—MAJOR'S CREEK DIVISION.

(*John Hexlett, Mining Registrar.*)

IN drawing up this my Statistical Report for the year ending the 31st December, 1883, I regret having but very little material to work upon. It is over four years since there has been sufficient rain to be of service to the claim-holders generally, and in consequence not a few have left in despair, and many others have found employment at the railway line and roadwork until the rainy season sets in, so that a few parties only are to be found at work, and for a long time past this field has the appearance of having been deserted. Old residents say they have no recollection of having seen such a dry season as what we are passing through, nor have they known of water being so scarce.

I have sold 48 miners' rights as against 65 in the year 1882, which is a great falling off, but when gold cannot be obtained diggers will not pay 10s. for nothing, and will leave their claims to take care of themselves. Those having water-races and water-rights will hold out as long as they can by registering under the 32nd section of the Mining Act and M. B. regulation 133.

In 1882 the quantity of gold purchased at this creek was as follows:—1,099 ozs. 0 dwts. 5 grs., value £4,076 14s.; the quantity purchased in 1883 was 712 ozs. 17 dwts. 6 grs., value £1,410 10s. 6d., and two or three parties have been doing very well, otherwise the decrease would appear greater than the above figures show. Since filling in the tabular forms herewith I learn that a few parcels have found their way to Braidwood, the exact amount I am unable to state, but am not far from correct in setting it down at 60 ozs.

In quartz-mining there is very little appearance of life or activity—the Rise and Shine excepted. The manager, Mr. W. C. Newman, crushed a few tons before Christmas, the result of which appears in tabular form herewith. This reef is narrow—say from 4 to 7 inches—has been very good from surface down to the mundic, and even to the depth already sunk, viz., 100 feet, and it is hoped that Mr. Newman will be able to get sufficient capital to sink another 100 feet deeper; trying stone from the top will be a long time in proving the value of the mine, and only a waste of money. It is time enough to expect dividends when stoping up is being done, and this is impossible until depth has been attained, and until companies and syndicates make up their minds to spend money in sinking to a greater depth they must not expect much gold. He (Mr. Newman) has made a good start at the United Miners' old claim at Commissioner's Hill, Pt. Land, by fetching a race from the main creek level, up into the hill, with the view of draining the hill to a greater depth in order to test the mundic, which is supposed to be very good, and in some places so soft that it could be dug out with a shovel and is a pretty fair width in places, viz., 5 feet; so much water to contend with and inability to treat the mundic prevented the original owners from working this (probably) very valuable mine.

These are the only quartz-reefs in which anything has been done worth recording here. Some two or three are registered for suspension of the labour conditions, pending the formation of a Company.

About 200 feet is the deepest shaft within this division, and judging by what has been done at Adelong and other reefing localities it is only reasonable to suppose that here too payable gold would be found at a greater depth, but without capital and good management these reefs are not likely to be developed in haste.

Long

*Long Flat.*—Water has not been so scarce at this place since it was first opened as a gold-field, and the few miners remaining thereon have worked at intervals only and have no idea as to the number of tons puddled and the yield of gold therefrom, in fact there has been no regular mining carried on, with one or two exceptions, and these have been on people's own allotments, and small chance of learning what they have been getting, and until wet weather sets in there is no prospect of a change for the better.

The Messrs. John O'Heir & Co., who have a long race from the Back Creek, together with three reservoirs, have done very little in the shape of flooding off, and worse still with the owners of dry races depending entirely on storm water.

Whilst I write, the whole neighbourhood for miles round is a dense mass of smoke and burnt leaves—bush fires raging in every direction. No potatoes or vegetables of any description; cattle searching for water, and if a change does not soon come there will be very hard times in this locality. It is the worst season I have seen during thirty-two years Colonial experience.

#### SOUTHERN DISTRICT—LITTLE RIVER DIVISION.

(*P. J. Galway, Mining Registrar.*)

I HAVE the honor to report for the past year that there has been but little progress made in mining, and the drought of 1883 has far exceeded any previously known, and creeks and springs are now dry that have never failed since the district was first settled. Ground sluicing, the chief mode of mining here, has been unknown during the past year; consequently there has been a regular stampede to the railway works Goulburn to Tarrago.

I had hoped that the quartz-reef would have made up for the temporary lull in alluvial mining, but this has also ceased during the past year, not caused by a failure of the reef but to some want of management amongst the owners in Sydney.

There were thirteen leases applied for during 1882, none of which have yet been granted, and on which, with this exception, little or no work has been done.

There was a battery of 12-head stampers erected in connection with the Lady Mary claim, the owners of which hold other leases, in all 31 acres 32 perches, with the battery site of 1 acre. 124 tons of surface stone was collected on the Lady Mary claim, chiefly left by previous prospectors, and this constituted the entire work down on any of the ground held by the Company. The work was suddenly stopped and the battery sold and removed. If only the ninety-ninth part of what was stated in the prospectus of the Lady Mary Company was true a grand property still remains for proper investment.

The Extended quartz-claims taken up by the well-known reefer, Denis Eisenstaedter, for self and others, have also been idle for the past year, caused by financial difficulties.

The different Companies having been reorganized under the name of the Homeward Bound Amalgamated Gold-mining Company, work has commenced again.

60 lbs. of pyrites taken from the Homeward Bound claim gave a return of 90 ozs. of gold per ton, and 10 lbs. taken from another part of mine, 36 ozs. per ton. Both samples tested by the New South Wales Pyrites Company. The highest returns but one of any pyrites tested by the Company.

Samples of quartz and pyrites from Lady Mary claim gave 287 ozs. per ton. Pyrites alone, from same reef, gave 201 ozs. per ton.

Tests assayed by Mr. Dixon, School of Arts, and published by the Lady Mary Company from the report of C. P. Richards.

The difficulty of procuring water by the general method of gravitation has induced Mr. William Taylor to erect a powerful Blake pump with a 25-horsepower boiler for supplying steam; the suction and discharge pipes are 10 inches in diameter, and the discharge of water 2-ground head at an elevation of from 150 to 200 feet as required. Everything works well, and no doubt but the venture will be a success.

A discovery of kerosene shale was made during the year on the coast range, some 12 or 15 miles from here, of which Mount Buddawang, situated in this division, forms a part; the mine is on the eastern fall and at the head of the Clyde River, and within the coal measures as laid down on the geological map. Though the mineral licenses were taken from this office the mine is not within this division, and I suppose that the officer in whose division it is will report to the department in full.

	ozs.	s.	d.	£	s.	d.
Gold purchased in Braidwood by Banks .....	1,251	@	77 6	4,847	12	6

Total .....	1,651			6,397	12	6

All from alluvial.

#### SOUTHERN DISTRICT—NERRIGA DIVISION.

(*Samuel Wollan, Mining Registrar.*)

MINING affairs in this division, I regret to report, show no improvement, owing to the disastrous season we have just passed through. Several protection areas were taken up for prospecting at the beginning of the year by men who not only had the means, but the energy, to thoroughly search for the precious metal, but they were driven away by the scarcity of water.

The season has been most favourable for working in the bed of the Shoalhaven River, and some very fine yields are reported—so much so that I have a very slight falling off in the return of gold to report. The number of miners has fallen off, but I feel certain that with a more genial season we shall soon see the number increased to the usual average.

#### SOUTHERN DISTRICT—MONTREAL DIVISION.

(*J. T. Hobbes, junior, Mining Registrar.*)

I DO myself the honor to forward you my report for this division for the year 1883, and to state that during the year no fresh discoveries have been made.

At Montreal proper the terraces are still being worked by a few miners, numbering nine, who are making little more than wages. The total number of loads of washdirt puddled for the year (as far as can be ascertained) is about 700, averaging  $3\frac{1}{2}$  dwts. per load, the sinking being from about 20 to 25 feet in depth.

On

On the south side of the summit of Mount Dromedary, being the portion within this division, the Star of the South Gold-mining Company have abandoned their lease, as the returns, I believe, were unsatisfactory; and they have also sold their machinery.

Messrs. Bailey and Milos, on the same line of reef, are still at work driving on the vein, and having bought the Star of the South Company's machinery, are crushing at it, the stone averaging 1 oz. per ton. They are now engaged in driving a tunnel which will strike the shaft at about the 70-feet level.

In the alluvial there is little or nothing doing. The miners number seven; and the total amount of gold won for the year is about 120 ozs., as far as can be ascertained.

Herewith I forward forms of particulars, as instructed by your letter of the 7th of November.

#### SOUTHERN DISTRICT—EUROBODALLA AND NERRIGUNDAH DIVISIONS.

(*John A. Berry, Mining Registrar.*)

I HAVE the honor to report that there has been little or no progress in this division during the past twelve months.

There are now a very few European miners left, who make but a scanty living by fossicking in the old ground.

The Chinese population number about thirty; but as they are scattered over a very large area of country it would be impossible to give their exact number.

I am of opinion that the greater portion of the gold won in the division during the past year has fallen into the hands of the Chinese.

Prospecting for reefs has been carried on by a few at different times, but without any success.

The proprietors of the Bumbo Reef have during the past year extended their main drive between 70 and 80 feet, and are about to extend it another 20 feet, when they expect to again pick up the vein which yielded such good returns some years ago.

The gold yield for the year ending 31st December, 1883, is about 950 ounces altogether.

There has been great comment in the division regarding the refusal to mine on the timber reserve at the north head of the Wagonga River, the leases having been refused on the 28th of August, 1883. Some of the miners in this division are interested in claims on the abovenamed reserve, who were consequently thrown out of employment, and compelled to seek work in other places at a very low rate of wages. It is to be hoped that the applications that have been made to mine upon or under the reserve will ere long be granted.

#### SOUTHERN DISTRICT—BOMBALA DIVISION.

(*C. G. Kyle, Mining Registrar.*)

IN submitting my annual report for the year 1883, I regret that I am not in a position to say that much progress has been made in mining matters during the year.

I think you are aware that a large area of rich alluvial ground exists at Nelbothery; but owing to its elevation it has, to a great extent, remained in abeyance for years, for want of energy and capital to bring a sufficient quantity of water on the ground to ensure anything like success in working the ground.

The Messrs. Eisenstaedter have secured 100 acres of this land by four extended alluvial claims of 25 acres each, and have now machinery on the ground to the value of about £500, consisting of a Tangye pump and 2,000 feet of iron pipes, capable of pumping 60,000 gallons of water an hour to a height of 250 feet. I am informed that Messrs. Eisenstaedter are on the eve of floating a Company to systematically work the mine by hydraulic sluicing, and if they succeed in getting sufficient capital I have no hesitation in saying the venture will pay handsomely, besides giving a considerable impetus to mining matters in this division.

As mentioned in my last annual report, the gold miners in this Division are principally Chinese, who will not, except under compulsion, take out their miners' rights.

The quantity of gold purchased by the local banks for the year amounts to 370½ ozs., of the value of £1,421 15s. 10d., as against 502 ozs. 9 dwts. 12 grs., of the value of £1,934 10s. 7d. for the year 1882.

There were only 16 miners' rights and 8 business licenses issued this year, as against 29 miners' rights and 12 business licenses issued for the year 1882.

#### SOUTHERN DISTRICT—WAGONGA DIVISION.

(*Archd. M. Smith, Mining Registrar.*)

##### *Wagonga North Head.*

THE refusal of applications to lease land at Wagonga North Head, on the Belle of Australia Reef, to mine for gold in quartz, for the reason that the land applied for was a timber reserve, has occasioned much disappointment, the applicants having no particular interest in holding the surface for any special purpose beyond the ordinary requirements of quartz-claims for timbering and residence accommodation, which could make but a very harmless inroad upon a timber reserve, being altogether apart from alluvial workings, of which there are none at or near the ground in question.

That the opening up of a payable reef 2 ft. 6 in. wide (the last trial crushing of 2 tons yielding 3 ozs. 13 dwts. per ton) should be condemned, throwing all hands out of employment, is unfortunate, especially at the moment arrangements were concluded by the joint action of claim-holders to place machinery on the ground, the conditions of the Regulations of the 4th April, 1882, having been complied with up to the date of refusal of applications on 28th August, 1883.

It is to be hoped that the applications now made to mine upon or under the reserve will be granted. The returns from every trial crushing made of stone taken promiscuously at all depths, offer ample inducement for capitalists to invest in reliable security. The importation of capital has for long been the cry of the mining interest in every district, security of tenure being of vital importance to the prosperity of mining, the hope is frequently expressed that the Regulations of 4th April, 1882, will be modified so as to remove the grievance of expending labour upon ground which after a considerable lapse of time may prove abortive through refusal of applications for reasons not immediately explained, thereby entailing expense upon applicants without guarantee of compensation for the loss sustained in submission to the edict issued.

*Mount*

*Mount Dromedary.*

Scarcity of water for a length of time compelled diggers in alluvial ground to leave the field and find employment at farm work, clearing, &c.; this sort of work is however only temporary with them; when favored by a sufficient supply of water they will certainly return to their more congenial occupation.

Cowdroy Brothers have kept their battery constantly at work during the year, and are satisfied with the returns.

The Star of the South Gold-mining Company, after expending a considerable sum, having been at work for nearly a year, but finding the vein not widening, and driving through a hard diorite country, gave up the undertaking, although as much as 40 ozs. of gold to the ton had been assayed from pyrites, proving however unprofitable to work for the reasons stated.

The plant of this Company has been purchased by Bailey & Miles, the adjoining lease-holders westward, who are energetically working on a different seam, with a soft dig, which promises well. This seam or vein is supposed to be the same as that in Brice and party's 10-acre lease, which lies  $\frac{1}{4}$  of a mile eastward, in which claim there is every indication of a rich pyrites lode of 12 or 15 inches wide. A quantity of the material is ready for shipment, which I am informed is to be forwarded to the Ballarat Pyrites Company for treatment.

No new discoveries have been reported during the year.

## SOUTHERN DISTRICT—MORUYA DIVISION.

(*W. Barton, Mining Registrar.*)

THERE is little or nothing to report in mining matters in the Moruya Division. There are a few quartz-miners who crush their quartz at Mr. Guy's crushing-machine erected at the silver-mine. These men have not discovered any reef, but are at work upon some small leaders; but the difficulty of obtaining the gold and the labour entailed (having to cut through a thick granite casing) renders the gold only payable in a small degree, although as much as half an ounce to the ton has been obtained in two or three instances.

The silver mine machine of 16-horse power and eight stamps, owned by Mr. Francis Guy, working for ore other than gold, has generally about six to eight men at work, and he raises a large quantity of ore from the old silver-mine shaft, whose managing man states to me is sent to England to be treated, but with what result I am not informed at present. The ore is largely impregnated with arsenic, pyrites, mundic, and gold and silver, which if extracted from the baser metals would be payable.

There is no movement made in the quartz-reefs at Mogo since 1876. But on Corrigan's Reef that gave out 12 dwts. to the ton, this reef has been re-worked, and is down about 60 feet. But for want of machinery suspension of labour has been applied for and granted, waiting machinery, which in all probability will be obtained on terms in a few months. Mogo seems to be a fair poor man's diggings, for all who work seem to get wages; but it is quite vain to expect any accurate report of their earnings; the only information to be obtained is through the storekeepers and the bank.

## SOUTHERN DISTRICT—GUNNING DIVISION.

(*J. F. Kenyon, Mining Registrar.*)

I HAVE the honor to report that so far as mining operations are concerned in this district for the year 1883 they have been nil, the quartz-reefs and alluvial being entirely abandoned. I have only issued eleven miners' rights for 1883, and they were for persons residing in the Goulburn district; but I am glad to say that within the last few weeks some Victorian speculators in mining matters have been examining the abandoned quartz-reefs with a view to having the stone, &c., further tested, and I firmly believe the result will be satisfactory, and trust during the present year to see them at work again. I am still of the opinion that payable alluvial ground will be discovered in this district, as also quartz-reefing, neither of which has been as yet properly tested.

## TUMUT AND ADELONG DISTRICT—TUMUT DIVISION.

(*Mr. Warden Vyner, P.M., Tumut.*)

THAT portion of the Tumut and Adelong Mining District at present under my charge comprise the following gold-fields, viz.:—Adelong, including Upper and Middle Adelong, Shephardstown and Grahamstown; Tarcutta, Mount Adrah, Sharp's Creek, Gilmore including Reedy Flat, Gobarragandra, including Sandy Creek and its tributaries, and Adgenbilly. At all these places, with one or two exceptions, mining is in a very depressed state, and the decrease of the issue of miners' rights shews that the miners have either left the locality or betaken themselves to other pursuits. There are two large alluvial mines at Adelong which continue to maintain their prosperity, and Tarcutta and Mount Adrah shew some signs of improvement.

At present I see no signs of a change for the better in the other localities, though no doubt the depression is somewhat aggravated by the continuance of dry seasons.

## TUMUT AND ADELONG DISTRICT—GUNDAGAI DIVISION.

(*Mr. Warden W. Love, P.M., Gundagai.*)

I HAVE the honor to submit the following report on this Division:—

Immediately around Gundagai alluvial digging for gold has almost ceased during the past year; many prospecting trials for gold have been made, unsuccessfully. Quartz-reefing, however, has become more promising.

From the Lord Shaftsbury claim at Bongongolong there has been a return of 1 oz. of gold to the ton; it has lately been abandoned owing to an overflow of water, and there being no crushing plant within an easy distance, but it is still a good and payable claim if sufficient capital to work it were employed.

An

An old reef, called the Bushman's Daughter, is now being opened up near the Lord Shaftesbury; formerly this reef was worked to a depth of 50 feet and paid the owners £8 to £10 per week; it was abandoned because the miners reported the reef had run out; a new Company have taken possession of it and are sinking about 30 yards away, hoping to strike the reef again.

Harford and Co.'s claim on the Kimo reef is also paying 1 oz. of gold to the ton; two men (owners) only are at work; the result is so satisfactory to them that they prefer keeping the claim to themselves, dispensing with partners, having bought the former partners out.

The Muttama gold-fields show a considerable falling off from the returns of last year. The Mining Registrar, Mr. A. Armstrong, has kindly furnished the following particulars.

The number of miners engaged here at present in alluvial workings is thirty-three. Yield of gold, 1,300 ozs.; total value at the rate of 8 dwts. 16 grs. per ton, £5,070.

In quartz-mining twenty-three men are employed, viz., fourteen to twenty at the Cootamundra Gold-mining Company's; Monk and party, three to five miners; Bovet and party, two to four; the last-named party have been working continuously during the past year, and have now 100 tons of stone at grass. Monk and party for eight months' working have also 100 tons raised. The Cootamundra Gold-mining Company decline to give any particulars of their operations for the year.

Number of leases applied for during the year at Muttama .....	10
Miners' rights applied for and issued .....	71
Business licenses .....	7

I have also received the following information from Mr. Travers Jones, a gentleman who employs a large number of men in mining operations, and who is well acquainted with the different gold-fields in the Gundagai portion of the district.

*Tarcutta Reefs.*—This portion of the gold-field has been abandoned through the want of local crushing power, as, although the quartz-reefs are numerous, large and easily worked, they do not contain sufficient gold to pay the cost of carriage to the Adelong batteries. The only stone raised and crushed for the year was 30 tons crushed at the Reefer battery, Wilson and Company, for Rowen and party, which yielded 17 ozs. 15 dwts. retorted gold, just sufficient to pay expenses of carting and crushing, leaving no surplus to pay labour in raising the stone. Were a good battery placed on the ground a large quantity of quartz, averaging 8 to 10 dwts. per ton, could be raised and made to pay handsomely.

Hillas Creek lies about 20 miles south-west of Gundagai. For the past six months two small parties of six miners have been prospecting this portion of the gold-field, and have discovered two payable reefs, from which they have crushed at the Reefers and Perseverance batteries at Adelong, since May last to the end of the year, 45½ tons, yielding 172 ozs. of gold, worth over 80s. per oz. Miller and Company have traced a small rich vein or shoot of gold to a depth of 150 feet in fair sinking slate country, but they are now being troubled with water.

M'Mahon and Company are now sinking on a much larger shoot of gold on a parallel line of reef about ½ mile north of Miller and Company; they are now down 130 feet with no great difficulties to contend with; the stone yields between 3 and 4 ozs. per ton.

Cole and Company have discovered a payable reef about 1 mile north of M'Mahon's, running east and west, with a slate dyke on one side. A shaft has been sunk on it 66 feet deep, out of which they have raised and crushed since last August 33 tons, yielding 126 ozs. 7 dwts., value £4 2s. 5d. per oz. On the surface for 60 feet in length the shoot is proved payable, and is getting richer as depth is gained; their last crushing of 19½ tons gave 88 ozs. 11 dwts. of gold, and was raised in seven weeks by four men; the cost of crushing at Adelong, including carriage from Hillas Creek, is 30s. per ton; the total crushing from this place is 91½ tons for 324 ozs. of gold.

These rich finds have caused several parties of prospectors to leave Adelong and Graham's Town since the holidays for Hillas Creek, and promising prospects have already been found by them; there are thirty miners now upon this ground at work; the want of crushing plant upon this field is a great drawback; it is to be hoped this will be speedily remedied.

#### *Asbestos.*

No work is being done in this material at present; labour is very scarce and dear, owing to the urgent demand for men to work on the railway lines.

*Slate-mining.*—The manager, A. C. M'Innes, reports as follows:—

We have an average of twelve men at work during the year; we have paid over £1,000 in wages. The work as yet is only preliminary, clearing top debris, &c.; we have besides turned out 30,000 slates, and 10,000 feet of slabs.

Future prospects of the quarry very good. We are daily expecting arrival of machinery from England; when it arrives we shall be able to go ahead.

#### TUMUT AND ADELONG DISTRICT—ALBURY DIVISION.

(*Mr. Warden H. M. Keightley, P.M., Albury.*)

I HAVE the honor to forward my annual report of this portion of the gold-field under my charge.

The area is only nominal, and as my residence is of so short a duration the report must naturally be limited in its contents.

The only gold-field under my charge is at the Black Range, near Albury, where the operations are confined to three small crushing machines, where 233 tons of quartz have averaged to yield 1 oz. 11 dwts. to the ton. The number of claims working is thirteen, and of leases applied for nineteen.

There has been small crushing in private grounds, Hawke's View, near Black Range, where some 16 tons yielded over an average of 5 ozs. to the ton.

Beyond this I have no matter on which to report.

TUMUT

## TUMUT AND ADELONG DISTRICT—QUEANBEYAN DIVISION.

*(Mr. Warden J. C. Woore, Queanbeyan.)*

I HAVE the honor to submit, for the information of the Honorable the Minister of Mines, my report for the year 1883 upon the Queanbeyan Division of the Tumut and Adelong Mining District.

As I have been but a short time in this district I can scarcely be expected to have much personal knowledge of mining matters in the division assigned to me, and base this report upon information obtained from the most reliable sources available, and by personal inspection and investigation so far as my other duties would permit.

At Captain's Flat Blatchford's 2-acre lease and Emmerson and Co.'s 5-acre lease are on opposite sides of a ravine running at right angles with the reef, which is worked by tunnels, from which the stone is conveyed by about a hundred yards of tramway to Blatchford's twenty-head stamper machine, driven by a 16 horse-power engine.

On Blatchford's lease the tunnel is in about 200 feet, and the manager on the ground informed me that for about eight weeks the reef yielded from 20 to 30 ozs. of gold per week, but is now lost or run out, though work is continued in the hope of finding it.

On Emmerson and Co.'s lease the tunnel, now about 300 feet long, has been extended about 150 feet during the past year, and the value of the gold obtained within that time is estimated at between six hundred and seven hundred pounds; two shafts also have been sunk near the mouth of the tunnel each 20 feet deep. I was informed by one of the lessees on the ground that the mean width of the reef is about 30 feet, and the average yield of gold about 5 dwts. to the ton.

On Montgomery and party's 7-acre lease two shafts have been sunk on the reef, 64 feet and 30 feet respectively, with about 50 feet of cross-cutting, and a road about 20 chains in length has been cut on the side of the hill for conveying the stone to Holterman and Co.'s ten-stamper twenty-horse-power machine, which at the time of my visit was crushing for this party, the result being 6 to 7 dwts. of gold per ton, which is said to be the average yield of the stone on this lease.

I was informed by the manager that this machine has crushed about 300 tons of stone during the past year.

On Montgomery and party's 5-acre lease one shaft 60 feet and two shafts 30 feet each have been sunk with about 60 feet of cross-cutting; the reef on this lease is said to be about 15 feet wide, but no gold has been obtained from it yet, and the lessees have discontinued work for the last few weeks waiting for pumping machinery to keep the mine clear of water.

At Mac's Reef Hill and Ormond's 5-acre lease is not being worked regularly on account of a dispute between the partners, so I was informed by one of them on the ground. The shaft at work is about 80 feet deep, from which about 70 tons of stone have been taken during the last nine or ten months, estimated to yield about 1 oz. of gold to the ton, but there is not any machinery on the ground or within reach to crush it. Parties interested express a belief that this reef would pay very well indeed with proper machinery to save the gold, which is described as being exceedingly fine and light; the reef is said to average about 2 feet in width.

At Brooks' Creek seven men have been engaged in fossicking and sluicing during the past year, and have obtained about 60 ozs. of gold.

Evans and party early last year constructed a reservoir in the bed of the creek and a race from thence to the sluicing ground near the old workings at Golden Point, but operations have been suspended owing to scarcity of water.

The reefs at Brooks' Creek are abandoned.

At Brindabella, Goodradigbee River, Mr. William Reid has been engaged for the last twelve months in constructing a storage dam and tail race in order to get further trial washings, and has lately run through about 800 cubic yards of alluvial drift with a satisfactory result, 3 or 4 dwts. to the dish being obtainable in the sluice, which is considered very good for the quantity of drift run through, and from this and past washings it is believed that if sufficient head-water could be obtained gold-mining at Brindabella would be very successful.

At Micalago the reefs have not been worked during the past year, and I am informed that they are entirely abandoned.

I am not aware of any new discoveries of auriferous, metalliferous, or mineral deposits having been made within the division under my charge during the past year, and I regret to say that I have not been able to procure any samples of minerals or ores worth forwarding to you.

## TUMUT AND ADELONG DISTRICT—ADELONG DIVISION.

*(John James, Mining Registrar.)*

To this important Division the past year is made memorable by the visit for the first time of a Minister for Mines. The hearty reception accorded to him and his hon. colleague, the Colonial Treasurer, was calculated to leave a lasting impression that this old field continued with a measure of prosperity to foster its gold-mining industry. Every preparation was made in the principal mines for a ministerial descent, but unfortunately the weather becoming exceedingly unpropitious the underground inspection was not made. A visit to several locations of note was substituted. Subsequently deputants had their reasonable concessions to ask.

Another matter deserving of special notice was the claim of the Great Victoria Gold-mining Company to an additional reward of £500 for an alleged payable prospect at greatest depth of shaft in New South Wales, viz., 1,000 feet. The arrival of C. S. Wilkinson, Esq., Geological Surveyor, and W. H. J. Slee, Esq., Inspector of Mines, early in December last, was indicative of the prompt action taken by the department to make the investigation. Under strict personal supervisions the test quartz was obtained from a depth between 1,020 and 1,036 feet, and carefully forwarded to Sydney. The result is not publicly known as yet.

The returns of gold forwarded by local banks are shown as 12,100 ozs. 14 dwts., and a further annual decrease is to be noted. Hence the expectations assumed in last report of a probable increase have not been realized. The falling off can be traced to causes so often experienced intermittently in gold-mining. Of this class belong during the last quarter some of the best managed mines in the Division.

For

For instance, in the Challenger Mine the new discoveries in wall not coming up to a payable quality resulted in the knocking off wages hands, and resorting to the tribute system. Again the Great Victoria and Perseverance Mines partially reverted to a tribute system. The alterations have been effected but very lately, and strange to say the tributors have had the best of the bargain. To some parties the contracts have given from £6 to £15 per week per man.

Again, in the late Williams' amalgamated (now Messrs. Amos Bros. tenements) prospecting has been carried on unabatedly, but up to the present nothing of a permanent character discovered, and lastly Mr. A. D. Shepard's Royalty lease (alluvial) has had during the last quarter the fitful experience of a lost lead.

So far the causes of the decrease of yield noted above, is clearly accounted for, while any assertion of the waning productiveness of the gold-mining industry is questionable.

The total output of quartz is 6,829 tons 12 cwt., the chief contributor being the Great Victoria, closely followed by the Challenger. From all other sources 800 tons. These last rank in order as follow:—Perkins Bros., Gibraltar; Perseverance Company, Old Hill; Currajong, Currajong Range; Hodge Bros., Donkey Hill; also Mount Adrah Gold-field, which is largely selected.

Danby Brown and party, Elliott's Paddock, 16 tons 5 cwt.; average yield 3 ozs. 13 dwts.; assay-gold, 9,335; silver, 0.55; market value per ton, £14 12s.

Cole and party, Hardwick's Paddock, 30 tons; average yield 4 ozs. 12 grs. per ton; market value of ore, £16 10s.

Miller and party, Elliott's Paddock, 6 tons; average yield, 4 ozs. per ton; market value of the ore, £16 per ton.

Burns and party, Gold-field Reserve, 2 tons; average yield, 2 ozs. 1 dwt. per ton; market value, £8 16s. per ton.

Nicholas and party, Elliott's Paddock, 2 tons 12 cwt.; average yield, 1 oz. 2 dwts.; market value, £4 8s. per ton.

Touching the probable payable future of Mount Adrah to be distinguished as a gold-field of a permanent order, the late discoveries of several medium veins and their satisfactory yields, viz., from 2 to 4 ozs. per ton, are somewhat alluring to the belief. That the results have not made void the hope of still richer discoveries, it may be mentioned that four distinct parties of prospectors are searching the vicinity.

With one exception the veins are on selections, hence the alleged tenure of a questionable character, unless secured by special permits. However, when revocation is desirable, the fact of another permanent gold-field springing into existence will necessarily become apparent.

At the main Adelong, the Just in Time, Cottam and Cowie and party, privileged under the 28th section of the Mining Act of 1874, have their shaft down 86 feet on payable quartz. Already 80 tons have been crushed giving an average yield of 21 dwts. per ton. A small pumping engine is employed to combat the water. The party contemplate erecting a battery should extended inducements offer at greater depth. The dip of the shaft is easterly.

As a passing allusion on Tarcutta reefs, it may be remarked that mining appears to have been stagnated from the want of a powerful crushing plant. It was publicly known that strenuous efforts to effect this purpose at Wagga Wagga were made, and a purported combination of some 52 alleged shareholders brought about no immediate practical result. Messrs. Fosberry and Bryen forwarded to the Reefer battery here 1 ton of surface stone as a test. The yield was 13½ dwts. The vein from which the stone was obtained is said to be 12 inches in width. They have applied for a lease of 10 acres. The land is distant about 4 miles in a south-west direction from the old workings.

Other adventures have in consequence been forestalled, and Mr. Barry, an old experienced miner of Victoria secured helpers at £100, and a portable engine of 12-horse power, to drive 10 stampers, is now being erected on the Tarcutta Creek about 2½ miles from the reef.

At the Gap, Tumut road, a cancelled lease of 5 acres has been applied for by Nankervis and party. The surface water which was a great hindrance to their predecessors, working only the one shift, was the main cause of abandonment, although 14 dwts. per ton were obtained at last crushing.

The underground workings are now cleared of accumulated water, exposing a show below considered very satisfactory. In a drive 100 feet in length a continuous vein 1 foot in width and of fair quality exists. The party are working two shifts.

To instance prospecting works of a costly nature, that of the Messrs. Amos Bros., Victoria line of reef, takes precedence. The main shaft is now down 980 feet and still sinking. The lowest drives are at the 930 feet level. The north drive is now 100 feet, and still driving; and the south drive 62 feet. The indications in north drive are favourable as showing a small defined gold-bearing leader. Several small crushings, taken from the prospecting works, yielded half-an-ounce per ton.

Three cross bores with the diamond drill, varying in depth of bore from 72 feet to 145 feet at levels 540 feet and 600 feet in both walls, have been completed during the past year, and quartz-bearing channels were crossed at various distances from commencement of bores.

A. Wilson and party have taken up an extended area on the presumed south line of Old Reef lode, distant about 1 mile on the top of the crescent range fringing the township 800 feet above the level of the valley. In former days a shaft had been sunk on a gold-bearing leader. Wilson and party found after cleaning the appearances of channel, &c., similar to that of the Victoria, and a small gold-bearing vein well defined.

On Gibraltar Barbour and party have taken up an ordinary claim adjoining the Perkins Brothers' tenement. A trial crushing gave over 2 ounces per ton.

#### *Alluvial.*

Opposite Grahamstown are the new and extensive creek workings on tenements owned by Mr. Travers Jones in the full swing of work. Sixty hands are employed, and the hauling and pumping are done by a thirty-horse-power engine. Four shafts have been sunk, in three of which are pumps. A race has been cut and continued from that of Mr. A. D. Shepard's. The water thus conveyed is for washing purposes pumped to the required elevation by a Tangye. 8,000 feet of drives, besides cross drives, have been opened. In a shift of eight hours about 230 trucks of wash-dirt is landed from a depth of 48 feet. The lead, which is 300 feet in width, is in the centre of the creek, if anything inclining to the right bank.

The tenements are but tapped, and a great extent of land is in its primitive state.

Mr. Travers Jones' tenements have helped materially to increase the annual total returns.

Mr. A. D. Shepard's royalty leasehold has been at full work up to within the last quarter, when intermissions were experienced. The lead is surmised to bear away towards the right bank, and boring operations have commenced. If the bores give the direction the creek waters will have to be turned.

The following sluicing claims are contributors:—Corbett and party, Dickson and party, H. Cottam and party, Daniel Cahill and party, are opening out, and at Sharp's Creek several claims are registered, awaiting water.

On the whole the gold-mining industry of this division maintains energies to further developments, and gives much promise of renewed vigour.

From latest information furnished by Mr. W. Ryan, Mining Manager, there is sufficient to elucidate much of the perplexity arising from a conception of a lost lead mentioned in the annual report. There appears now to be no such thing. The expensive works were shifted and conducted on a large area of maiden ground during the last quarter of 1883, and centrally disposed of so as to work the whole area with the usual payable income. The main shaft and drives opened were unsatisfactory. A main drive across the creek easterly was continued for a distance of 170 feet, and three small veins of gold were met with. It was presumed that the deep ground lay still farther east and the borer was set to work. Three bores towards the right bank of the creek proved shallow with no wash. The appearance of a hard saddle bottom along the course of the main drive is conclusive that the works were commenced on an exceptional bar crossing the creek. The latest trials of sets driven at right angles begin to show that both above and below the bar old indications of wash exist.

#### TUMUT AND ADELONG DISTRICT.—KIANDRA DIVISION.

(*W. D. Bailey, Mining Registrar.*)

I HAVE the honor to forward my report for 1883. Mining matters generally are quiet, the chief interest being taken on the hydraulic sluicing Companies, three of which were working as long as water is available. The number of miners' rights issued was 223. I cannot ascertain the amount of gold won as the managers of the hydraulic claims do not consider themselves justified in making it known at present what they obtained on their washings up, which have been finished since new year. The gold got from other sources, as near as I can ascertain, amounts to between six and seven hundred ounces.

*Kiandra Gold-mining Co., New Chum Hill.*—The necessary works for hydraulic sluicing of this Company were complete about the end of March, and the piping, nozzle, &c., placed ready to commence operations. The first trial was made early in April when it was found that it would be necessary before commencing regular operations to strengthen the position of the pipes and make other alterations and improvements in the head race. This work was satisfactorily completed by the end of April, and hydraulic sluicing definitely commenced on the 14th May. Almost from this time sluicing was carried on uninterruptedly day and night, three shifts of men being employed. The winter being a mild one there was no lost time as work was carried on all the time. The hydraulic sluicing at this mine has been carried on very successfully although they had great difficulties to contend with in the commencement, as the face of the mine was blocked with debris from old workings, &c. This necessitated the removal of immense quantities of dirt, &c., before they could begin regular sluicing. The execution of the nozzle here is very great. It removes over 60 tons of earth per hour. The great drawbacks are a kind of shale commonly called lignite; this has to be broken by manual labour; also a stiff pipe-clay. This is very hard to wash. There is a good show of wash-dirt in the face. Sluicing was carried on to the 8th of December, during which time the nozzle was at work 3-100 hours, and it is calculated that 18,000 tons of stuff removed. From this date the cleaning up of the bottom was carried on; this was finished about the 26th December. The result I did not learn, but have heard that it was satisfactory. The Company are carrying on other improvements, such as lengthening tail race, &c. Their dam at Three-mile is now empty, and as sluicing cannot be recommenced at present the men are employed on the abovementioned improvements. This, their first year's sluicing, can only be looked upon as preliminary, the style of sluicing being quite new in the Colony, and the efforts used being principally to open out the mine for more extended operations in the future.

*Eight-mile Gold-mining Company.*—The hydraulic works of this Company are similar to those of the K.G.M. Co. They were completed about the middle of July when 1,060 feet of piping was in position, 810 feet of sluice boxes laid, and their dam overflowing. Hydraulic sluicing was commenced on the 26th July, and everything connected with the works working satisfactorily. From this date to the 24th of November the nozzle worked 1-839 hours. The amount of dirt removed per hour at this mine is estimated at about 90 tons, the ground being favourable for this style of work, being of a loose nature. There were many difficulties to contend with in opening this mine, as it was completely blocked with timber, dirt, &c., and a great deal of time was taken up in removal of this before anything could be done in the way of regular sluicing, the principal work done here being directed to opening the mine for future operations. Washing up was finished early in January but I did not learn the result.

*Golden Crown Mine, Fifteen-mile.*—The works on this mine are similar to those of the K.G.M. Co. and Eight-mile Co. They had a wash up some time ago; I did not learn the result but heard it was not so good as was anticipated. I have not yet received the manager's report. All the old claims about this field are being worked when water is available. There have been no new discoveries.

#### TUMUT AND ADELONG DISTRICT.—YARRARA DIVISION.

(*J. K. Armstrong, Mining Registrar.*)

THE hopes entertained during the earlier part of 1883, from the general prospects of mining in this division, have not been realized.

The Rangatira Quartz-mining Company at the outset obtained very good prospects, on the strength of which a steam-pumping apparatus with winding gear for raising stone, &c., was erected, and the claim put into good working order. About 50 tons of quartz were then taken out, and the Company, having purchased the old Perseverance crushing machine, a trial crushing was made of the 50 tons. The result proved far below expectations. It only yielded about 11 dwts. to the ton. This was disappointing and discouraging.

discouraging to the shareholders, after having had a 15-ozs. to the ton prospect. There had been for months about twenty men employed in and about the mine, but soon after the crushing all hands were dismissed and work stopped. After a while two men were engaged to prospect and sink on a quartz-vein shewing some gold, north of the principal shaft, and have continued at this, but without as yet finding payable gold. The Company intend, it is said, making another start before long, with the intention of sinking the main shaft from 50 to 100 feet, and then try the reef at a greater depth.

The Jingellic tin-mines have not answered expectations either. The Jingellic Estate Company suspended work after very considerable outlay. Another Company, whose ground is adjoining, put up machinery for crushing, and, with very commendable energy, kept trying for a payable tin lode, having found a few good patches near the surface, and indications of the reef going to a depth. On the old Jingellic mine, lower down the River Murray, I am told some alterations have been in progress, with the view of further developing its resources, and is said to be looking better. Nor has alluvial mining been more successful. Prospectors at Four-mile Creek, though still persevering, have not found payable gold. While on the old ground about Copabella and Yarrara Creeks, a few Europeans and Chinese keep working here and there without apparently getting more than enough to support a poor existence.

It will require some better discovery to give fresh vigour to mining hereabouts.

#### TUMUT AND ADELONG DISTRICT—ALBURY DIVISION.

(*Charles A. Conley, Mining Registrar.*)

MINING in this district has progressed fairly during the past year and several new claims have proved payable. Portuguese Gully, situated to the north-west of the Black Range, is an old alluvial working, but during the past 18 months gold has been discovered in the quartz. The prospecting claim (Johnson and party) is down 105 feet, the reef varying in width from 3 to 18 inches and the country remarkably soft. Last crushing from this claim yielded over 1½ oz. to the ton. This is generally considered a first-class show owing to the easy nature of the country. Deveno and party at the Black Range also have an excellent claim with a good width of reef and soft country. The crushings have always averaged 1½ oz., and strange to say, the only reef on the Black Range running north and south, the country always being considered east and west.

Pye and party, 8-acre lease, on the May Day Hill, have sunk their shaft some 50 feet and obtained one crushing of 37 tons for 61 ozs. This is also an undoubtedly good show.

The One-tree Hill Company (McCredith and party) have been engaged nearly all the year sinking a straight shaft, and are down 140 feet. Their intention is to go to 200 feet. The Company have worked this ground for many years, and still hope to find the permanent reef at a depth. Crushings have been taken out from time to time yielding nearly 3 ozs. to the ton.

Polkinghorne's Claim, at Hawkesview (private property), situated about 9 miles up the Murray from Albury, has yielded 86 ozs. for 16 tons. This speaks for itself. There has been no alluvial working during the year except fossicking, want of capital being the cause. The miners agree as to there being every prospect of a payable alluvial field as well as quartz, and past working warrants this supposition.

During the year a battery, 5 stamp-heads, and eight-horse-power engine, has been erected at Portuguese Gully, at a considerable outlay, by Mr. Louis Bauer, of Jindora.

Messrs. Goldsworthy's machine, at the foot of May Day Hill, is still at work, and continues to give complete satisfaction, the proprietors being very careful, upright, as well as competent men.

In conclusion, I am of opinion that the Albury Division will in time turn out a permanent field, and thus give employment to a large number of miners.

#### TUMUT AND ADELONG DISTRICT—TUMUT DIVISION.

(*Frederick Burne, Mining Registrar.*)

I HAVE the honor to transmit Mining Report for the year 1883. Judging from the decrease in the issue of miners' rights, being for the years 1882 and 1883, 62 and 42 respectively, mining in this district seems to be of no very great importance.

Confined as I am from day to day to my office, the difficulty of obtaining information outside the records of the office is very great, and information so obtained is not altogether to be depended upon, for the reason that miners may obtain their rights elsewhere, or, obtaining them in the district, remove to another; also much of the gold sent away by escort may have been obtained out of the district, and contrariwise.

I have used every endeavour to get information from other sources, *i.e.*, from those who are interested in mining, with no better result.

#### TUMUT AND ADELONG DISTRICT—TARCUITA DIVISION.

(*William Johnston, Mining Registrar.*)

IN furnishing my report for the year 1883 of that portion of the Tumut and Adelong Mining District for which I act as Mining Registrar, I am sorry to have to say that the whole of the mines in the Tarcutta Division were at a stand still for the past twelve months for the want of good machinery, but there is machinery in course of erection now, and the miners are in great hopes of the field turning out remunerative to all miners concerned. There are two Companies in course of formation but are not yet completed. If these two Companies succeed in their speculation there is not the least doubt but that Tarcutta will become a great gold-field as all the claims that have been worked have proved payable but for want of machinery had to be abandoned.

TUMUT

## TUMUT AND ADELONG DISTRICT—QUEANBEYAN DIVISION.

(O. Willans, Mining Registrar.)

THERE is very little doing in this division in any mining under the Mining Board Regulations; the only place where any work is going on is at Brindabella. Mr. Reid there reports:—"For the past twelve months I have been engaged in constructing storage dam and tail race in order to get further trial washings, and I have just finished running off about 800 cubic yards of the alluvial drift here, and the result is quite satisfactory. I have not yet cleaned up the gold but I can obtain from 3 to 4 dwts to the dish in the sluice which is very good for the quality of drift that has been run through the sluice. From this and past trial washings I am satisfied that if sufficient head water was obtained gold-mining would be a great success here, and I intend at once to try and form a Company for that purpose." I give Mr. Reid's remarks for what they are worth, merely stating that he had formed a Company during the past year as my report of last year will show. This Company appears to have got tired of laying out money, but if Mr. Reid's statement is correct I think he can easily form another Company. I make no report about Captain's Flat, Molonglo, the ground there being all under lease and the present Warden having gone over there to visit the mines, gold and copper, and make his report. I regret as Mining Registrar I have so little to report this year; up to the present time I have sold only nine miners' rights and one business license for the whole of this division.

## TUMUT AND ADELONG DISTRICT—GUNDAGAI DIVISION.

(C. W. Weekes, Mining Registrar.)

IN submitting my report for the past year I note with regret that mining has received but little attention in this portion of the Tumut and Adelong District.

*Alluvial mining.*—Nothing has been done in this branch with the exception of a little desultory prospecting for new ground or fossicking on abandoned fields. The idea has been long entertained that the large flats extending for miles on each side of the Murrumbidgee contain payable deposits of gold. The lead has been traced and worked on both sides of the river right down to the edge of the flat. The water has then put a stop to further operations. It is proposed by some of the more enterprising of the residents to procure a boring machine and have these flats properly tested with a view to their development. I look upon this scheme as a feasible one and worthy of support.

*Quartz-mining.*—With one exception (Harford's at Kimo) there has been no regular work on any of our local reefs during the past year. Numerous small parties have been at work at different places for a few months at a time but with no satisfactory result. The great want of this portion of the district is efficient crushing appliances.

Muttama on one side and Adelong on the other are the only places where public crushing can be had; there being 50 miles of country between these two places miners cannot afford to pay the heavy charges for cartage. In consequence of this want of crushing power numerous reefs are left unworked which would be highly remunerative if the machinery were anyway handy.

A little more spirit has been evinced during the last month or two in taking up old and abandoned leases, and I may have to chronicle some better results for the present year.

At the old Emu Reef on the Kimo Ranges good work is being done by Harford and Co., the Working Bees Company. They are working an abandoned lease with very fair results. I append their return of work for the year.

Eleven gold leases (aggregating 57 acres) have been applied for during the year. Most of these are at Muttama where there is a separate Registrar.

Two mineral leases (other than gold) have been applied for, both for slate.

The issue of miners' rights for the year numbered 47, and of mineral licenses 4.

## TUMUT AND ADELONG DISTRICT—MUTTAMA DIVISION.

(A. Armstrong, Mining Registrar.)

I HAVE the honor to report on the mining operations carried on in the Division under my charge for the year 1888. Mining has not improved since my last annual report. There is a considerable falling off in the yield of alluvial gold for the year. At the same time I am pleased to say the individual earnings were quite as good as last year, and gave very fair wages to the men employed. The number of miners employed in the alluvial workings for the first half of year was 45, and 25 for the last half year, or an average of 35 for the whole year. The quantity of alluvium puddled amounted to 4,000 loads, equal to 3,000 tons, yielding 1,300 ozs. of gold, or at the rate of 8 dwts. 16 grs. per ton; value of gold, £5,070; Mint value per ounce from £3 17s. 6d. to £3 19s. 2d.

In quartz-mining there is a considerable increase in the number of men employed. There are three claims at work, two on the New Years' Gift line of reef, and one on the Excelsior line. First in importance, as employing the greatest amount of labor, is the Cootamundra Gold-Mining Company, and Adelaide proprietary. I applied to the manager of this claim for the requisite information for my annual report to the Mines Department, which I am sorry to say he declined to give. Considering that this is the most important quartz-mine in this division, from which there has been a large quantity of stone crushed, I would respectfully suggest the desirability of inserting a clause in each mining lease compelling the lessee to afford the required information to the officers of the Department of Mines. It must be quite apparent that all reports of mining operations will be incorrect and misleading if there is not some means to compel owners of mines to afford such information. More particularly so in the case of public Companies who carry on their workings with money supplied by the public at large as shareholders.

C. Bovet and party have applied for a 4-acre lease south of and adjoining the above Company. They have a shaft down 80 feet, and have about 100 tons of stone at grass from which they have had some very rich specimens. They have not crushed any stone. They have employed from two to four men during the year.

Monk and Party, Excelsior line of reef, have had from three to five men employed sinking shafts in the two reefs running through their 6-acre lease. They have about 100 tons of stone on top showing fair gold. They have not crushed any stone.

There

There were ten leases applied for since my last report, viz., four leases on the Excelsior, one on the Antelope, and four on the New Year's Gift line of reefs, also one on the Stringy-bark line of reef. The latter is a large and easily worked mine, but has been idle for some years for the want of machinery to crush the stone. I understand this want will be supplied by the persons who have applied for a 10-acre lease, namely, Messrs. Jones and Monk, the moment they get their lease from the Department.

The number of miners' rights and business licenses issued for the year is as follows:—Miners' rights, 71; business licenses, 7.

TUMUT AND ADELONG DISTRICT—NIMITYBELLE DIVISION.

(*G. W. Myers, Mining Registrar.*)

IN accordance with instructions contained in your circular letter, dated 7th ultimo, I have the honor to submit my report for the year ended 31st December, 1883. In doing so I regret to state that very little has been done in mining matters in this division during the year. No fresh discoveries have been made, and only twenty-one miners' rights have been issued as against 155 for the preceding year. Most of the quartz-claims which were taken up last year have been abandoned in consequence of the miners not having sufficient capital to carry on the works. Five of the principal claims have been suspended. Mining operations have been very much retarded at Kydra in consequence of those engaged in this pursuit being poor and inexperienced men. With a little capital, good management, and more effective gold-saving appliances being brought to bear upon Kydra, it is confidently anticipated that some rich yields will be the result. In conclusion, I am pleased to state that Tindall and party have applied for a gold-mining lease, and the other claim-holders intend doing likewise with a view to floating Companies to thoroughly develop the field, and I hope to be able to report more favourably of the Kydra Gold-field in my next annual report.

TUMUT AND ADELONG DISTRICT—GUNDAROO DIVISION.

(*Augustus Agassiz, Mining Registrar.*)

I do myself the honor to report that operations in my division during the past year have been attended with considerable success. This result has been achieved by the introduction of practical experience combined with energy and determination. In consequence of this change the future prospects of mining in this locality are assuming a healthy aspect. Work has been carried on upon a small scale, but with the introduction of capital I anticipate that extensive operations will ensue.

During the year nine miners' rights were issued, but that represents more than the number of men regularly employed, as several follow other pursuits during a portion of the summer. My estimate of the total amount of gold won is 60 ozs.

At the commencement of the year Messrs. Evans and Graham, practical miners from California, constructed a reservoir and head race to work an extended alluvial claim for sluicing on Brook's Creek. The reservoir is 8 feet in height and 2 chains in length. The embankment is 9 feet wide, and constructed on the crate principle of dam-building in the beds of streams. This has withstood heavy freshes in the creek, and backs up the water for a distance of 30 chains. The head race was constructed through old ground at Golden Point, and thence across the bed of the stream by means of fluming about 25 feet in length on to the ground for sluicing purposes. About 15 ozs. of gold has been obtained by this means up to the present. Operations have been temporarily suspended owing to the desire of the principals to form a Company to carry on the affair. With this end in view they have applied for an extended area of ground.

*Lake George and Temora Water Supply Scheme.*—I am informed on reliable authority that F. B. Gipps, Esq., engineer, has been engaged during the past two months in laying down a practicable route by which water may be conveyed from the Snowy and Murrumbidgee Rivers to Lake George, which the promoters intend to utilize as a reservoir. A tunnel is projected to run through Geary's Gap on the western shore of the lake. A race will then be cut to convey the water through such portions of the country as may be practicable and of advantage to the community generally. Of course this scheme entails the sanction of the Legislature and the expenditure of a vast amount of money. I may add that the promoters are persons of position, and the scheme is as practicable as its object is desirable. I hope to report favourably of the affair next year.

PEEL AND URALLA DISTRICT—ARMIDALE, URALLA, AND WALCHA DIVISIONS.

(*Mr. Warden Yates, P.M., Armidale.*)

I HAVE the honor to forward herewith for the information of the Honorable the Minister for Mines my report for the past year on the portion of the Peel and Uralla Mining District under my charge:—

2.—GOLD.

*Armidale Division.*

(1.) Eleanora Gold-mining Company, Hillgrove Falls, near Armidale.—From a report kindly furnished to me by one of the proprietors of this claim it appears that during the year the following work has been done, viz.:—

“In January and February auriferous stone was raised weighing 60 tons 10 cwt. 3 qrs., which was sold in Sydney for shipment to England, realizing £573 9s. 8d.

“The persons interested in the mine being desirous of erecting machinery formed themselves into a Company under the No Liability Act, and proceeded without delay to carry out their purpose. A ten-stamper battery and a Berdan-basins complete were purchased from Wayman and Kay, of Stawell, Victoria, and have been erected under the supervision of Mr. J. D. Scouler (formerly engineer of the Moonlight Battery in that town). The cost of this battery with dams and other necessary works is about £2,500, and it was not until December that the erection was complete; only a small quantity of stone has therefore been treated, and as it was mixed with barren slate the manager (Mr. Scouler) expects to obtain better results from stone yet to be raised than from that now at grass, the quantity of which is estimated to be about 600 tons of calcined quartz and slate.

“The

“The results obtained

	“Ozs. dwts. grs.
“From 50 tons from S.E. end .....	47 4 18
“From 20 tons from N.W. end .....	9 17 6
“From 8 tons sent to Stawell and crushed there .....	14 17 18

Smelted gold about standard.

“Little progress has been made during 1883 in sinking shafts, the deepest of which is now about 68 feet. Work will be resumed with vigour after the holidays, and the Directors expect to show a good result in 1884.”

Appendix No. 1. (2.) From a report on mining operations generally in the same locality (Hillgrove Falls), kindly supplied to me by Mr. Max Kessler, who it will be observed on a perusal of his report attached hereto has taken considerable trouble in furnishing details of mining operations during the year in most of the claims in the locality referred to. He states:—

“Mining operations at Hillgrove Falls throughout the year have principally been directed to the development of the gold-bearing antimony reefs.

“*McKinlay's or the Isabella Mine*, which adjoins the Eleanora on its northern boundary.—From this mine, about 150 tons of quartz has been raised during the year not yet crushed. Two lots of quartz, about 1 and 1½ tons respectively, sent for trial to the Sydney Mint, gave a return of 5 ozs. 19 dwts. and 6 ozs. 6 dwts. of gold per ton. Several small shafts have been sunk, and a main shaft to cut the reef has been commenced, and is now down 40 feet.

“*The Garibaldi Mine*, also on the same line of reef, adjoining the Eleanora on the south.—This like the other two was originally worked for antimony only. Several shafts are sunk on the reef, some to a depth of about 60 feet, in which auriferous quartz is stated to be met with. Other leases of the ground on the same line of reef, and adjoining the Garibaldi Mine on the southern and the Isabella Mine on the northern boundary, have been applied for, which are (stated to be) found auriferous.”

See Appendix No. 2. (3.) The Mining Registrar of the Armidale Division of the Peel and Uralla District reports:—“About 175 ozs. of gold have been purchased by the local banks, &c., during the year 1883, of the value of about £659,” also that “about 13 people are employed at Puddledock in alluvial mining, who are reported to have earned fair wages.

The number of miners' rights, &c., applied for was, [viz.:—Miners' rights, 57; mineral leases, 4; business licenses, 2. Five applications for gold-mining Leases and one for manganese were lodged during the year.

See Appendix No. 3. (4.) *Rocky River Gold-field*.—The Mining Registrar at Uralla reports:—“Mining operations in this Division for the past year have been principally carried on at Rocky River, but owing to the dry weather the quantity of gold obtained has not come up to the usual average. The holders of several large sluicing claims have been unable to wash up during the past 12 months, owing to the scarcity of water.

“The Bullion Company's (Rocky River) operations during the past year having been boring three different shafts there was some gold found in one of the shafts, but not sufficient to warrant the heavy outlay required for sinking and working.

“The quantity of gold purchased at Uralla during the year amounted to 820 ozs. 19 dwts. and 16 grs. Value, £3,150 10s 5d. The number of miners' rights, &c., issued for the year was—Miners' rights, 97; business licenses, 2; mineral licenses, nil.”

See Appendix No. 4. (5.) *Walcha Division*.—The Mining Registrar of this Division reports:—“Mining operations in this district for the past year have been very limited, little or no work having been done.

“*Glen Morrison*.—Work on this once famous gold-field has been at a standstill.

“*Tia (Tia River)*.—Messrs. Matheson and McIntyre raised about 280 tons of quartz, which yielded about 137 ozs. of gold; average value per oz., £3 13s.

“*Novendoc, Cooplacurripa*.—Mr. Thomas Laurie reports:—‘Gold bought value about £200; number of men employed, about 12; average wages, £2 per week.’

“Only one lease for gold-mining and one for copper was applied for.

“Issue of miners' rights, &c., was miners' rights, 25; mineral licenses, 2; business license, 1.

“The quantity of gold purchased at Walcha was 157 ozs.; value about £570; average, £3 13s. per oz.”

### 3. Antimony.

See Appendix No. 1. 1. Mr. Max Kessler reports:—“Antimony mining has been very quiet during the year. The Hill Grove Antimony Smelting Company were compelled, owing to the great fall in price for antimony in the English market, to temporarily close their works. Only 16 tons of star (regulus), and 8 tons of crude antimony, pure sulphide of antimony, valued in England at about £800, have been reported by this Company during the year.”

“2. Mr. W. G. Brereton's mine, situate about a mile S. E. from the Eleanora Mine, Hill Grove Falls, and in a different line of reef. This mine is down one of the steep gorges formerly the tributaries to the Falls Valley and about 1,500 feet below the table-land, with which latter it is connected by wire tramway and telephone communication. About 250 tons of ore have been raised from the mine during the year, which in Armidale realized about £7 per ton. Several samples of ore from this mine, assayed in Sydney, returned at the rate of 3 ozs. of gold, per ton, and specimens of quartz and antimony, shewing gold freely, have frequently been met with.”

3. Messrs. John More and Co's Antimony Mine, Gara Falls, 15 miles from Armidale, easterly.

4. Mr. John More has kindly furnished the following particulars:—“In consequence of a law suit, the owners of this property suspended operations early in the year, and with the exception of a portion of the land which is let on royalty, no other work has been done except prospecting.

“About 100 tons of antimony have been despatched to Sydney, the value of which was (delivered on the trucks here) £750. There are several shafts on the land, varying a depth from 20 to 60 feet; three or four tunnels, the first 250 feet from the surface, and is driven over 100 feet; the second 100 feet lower down and is driven about 130 feet; one or two others varying from 10 to 50 feet. Several samples of quartz and antimony have been sent to the Mint for assay and realized as much as 2 ozs. 17 dwts. gold, and 7 dwts. 1 gr. silver.

“The

"The whole of this property is now under offer to Sydney capitalists to work on royalty. If operations are commenced it is intended to put fifty men on at once."

5. About 3 tons of antimony ore from the Eleanora claim (Hillgrove Falls) was sold locally for £20 14s.

4. *Copper.*

1. One application to lease 80 acres, situate at Walsh's Creek, near Nowendoc, Walcha division, was made by a Sydney firm, from which good samples have been obtained. Work not having yet been commenced no particulars as to this mine can be given.

See Appendix No. 4.

5. *Coal.*

1. A party are prospecting for coal at Orunbimbie, near Walcha. They report, "depth of shaft, 16 feet; deepest level, 16 feet; vein, 18 feet wide; bearing or strike, north and south."

See Appendix No. 4.

6. Very few applications for gold or mineral leases have been applied for in this district, and from the reports of the Mining Registrars at Armidale, Uralla and Walcha, forwarded herewith, the total number of miners' rights, &c., issued in the district during the past year was as follows, viz. :—

Appendices Nos. 2 & 4.

Miners' rights .....	179
Mineral licenses .....	6
Business licenses .....	5

7. The quantity of gold purchased throughout the district is as follows, viz. :—1,208 ozs. 2 grs. 7 dwts., value, £4,582 1s. 4d.

8. I had expected to be in receipt of further particulars relating to other parts of the district under my charge, not yet to hand. If, on the receipt of same, I find there is anything of sufficient importance, I will further communicate with you.

APPENDIX NO. 1.

L. Yates, Esq., P.M., Armidale,—  
Dear Sir,

Armidale, December 31, 1883.

I have much pleasure in furnishing herewith, as far as I am acquainted with them, the requested particulars concerning the mines and mining operations at Hillgrove Falls during the year 1883.

Operations throughout the year have principally been directed to the development of the gold-bearing antimony reefs, and great energy has been displayed in this pursuit.

McKinlay's, better known as the Isabella mine, which adjoins the Eleanora on its northern boundary, has lately been purchased by the Isabella Gold and Antimony Mining and Smelting Company. From this mine about 150 tons of quartz have been raised during the year, which are now awaiting crushing. Two lots of quartz, of about 1 and 1½ ton respectively have been sent for trial to the Sydney Mint, giving a return of 5 ozs. 19 dwts. and 6 ozs. 6 dwts. of gold per ton. Several small shafts have been sunk and the reef has been found payable throughout the property. A main shaft to cut the reef at a depth has been commenced, and is now down 40 feet. This Company have also purchased the Hillgrove Antimony Smelting Company's property, situate at Swamp Creek, and distant about 1½ mile in a north-westerly direction from the Isabella mine, where they intend erecting crushing machinery.

The Garibaldi mine, also on the same line of reef, and adjoining the Eleanora on its southern boundary, is owned by a party of twelve. This mine, like the other two, was originally worked for antimony only. There are several shafts sunk on the reef, some to a depth of about 60 feet, in which auriferous quartz is met with. A small quantity of antimony ore has been raised by this Company during the year, but the chief aim has been to test the auriferous qualities of the reef. It is expected that a larger Company will shortly be formed to work this mine.

Two more leases of ground on the same line of reef, one adjoining the Garibaldi mine on the southern and the other adjoining the Isabella mine on the northern boundary have lately been applied for, in both of which the reef has been found auriferous.

Another line of reef, believed to be equally as rich as the above described, has been discovered some 25 chains west of the Eleanora line of reef. On this line two 4-acre and one 2-acre leases of ground have been applied for, two of which, I am informed, have been named Alice and Mary respectively.

A machinery site, I believe in connection with the Garibaldi mine, has been applied for on Swamp Creek, and a little below the Hillgrove smelting works.

The various mine-owners are very sanguine about the future prosperity of Hillgrove, and the long felt want of a local crushing machine having been supplied the field will undoubtedly receive a fair trial.

Antimony mining has been very quiet during the year. The Hillgrove Antimony Smelting Company, which in the previous year expended about £200 per week in carrying on their works, were compelled, owing to the great fall in price for antimony in the English market, to temporarily close their works, a circumstance which to some extent caused the miners to suspend work also. Only 16 tons of star (regulus) and 8 tons of crude antimony (pure sulphide of antimony) valued in England at about £800, have been exported by this Company during the year. Their works are well constructed, and answer the purpose they were built for very well. The prize medal for best star and crude antimony, awarded at the Amsterdam Exhibition of 1883, has been awarded to this Company.

Mr. W. Breerton's mine, situate about a mile in a south-easterly direction from the Eleanora mine, and on an entirely different line of reef, is the only one at Hillgrove worked exclusively for antimony. This mine is down one of the steep gorges, formed by the tributaries to the Falls Valley, and about 1,500 feet below the table-land, with which latter it is connected by wire tramway and telephonic communication. About 250 tons of ore have been raised from this mine during the year, which were bought in Armidale at £7 per ton. Several samples of ore from this mine, assayed in Sydney, gave a return at the rate of 3 ozs. of gold per ton, and specimens of quartz and antimony, showing gold freely, have frequently been met with.

This line of reef has in the previous year also been opened and worked by Mr. R. Hargrave on his private land, but only about 50 tons of ore have been exported to England by Mr. Hargrave during this year. Here, too, specimens of quartz and antimony ore showing gold have been found, showing that this line of reef is auriferous also.

The above three items are, with the exception of some ore raised and disposed of by the Armidale Gold and Antimony Mining Company at Gara Falls (Messrs. John Moore and Company) of which I have no particulars to hand, the only returns for antimony from this field during the year.

A geological description of the reefs and their locality, by C. S. Wilkinson, Esq., F.G.S., &c., appears in the annual report of the Department of Mines for the year 1882, pages 26-27.

Trusting above statements will meet your requirements,

I remain, &c.,  
MAX. KESSLER.

PEEL AND URALLA DISTRICT—BINGERA DIVISION.

(Mr. Warden Brougham, P.M., Bingera.)

In pursuance of instructions I have the honor to submit for information of the Honorable the Minister for Mines my annual report for that portion of the Peel and Uralla Mining District under my charge for year 1883. During the year of 1883 the yield of gold has increased by 168 ozs., and would have been much greater, but Hanton Brothers were not working on their claim for four months, suspension of work having been granted them for the introduction and erection of a quartz-crusher.

*Copper.*—Parties have again turned their attention to copper. The Prince of Wales has again been taken up, with the view of working the ground by an English Company, and the applicant is now waiting for the receipt of a report made by some one appointed by the syndicate in London. Should they work the ground properly and smelt they ought to make it pay.

*Diamonds.*—The diamondiferous ground at Doctor's Creek, which was partially worked several years since has been largely taken up by several parties. Messrs. Falk and Company, of Melbourne, Victoria, now hold over 200 acres, and have prepared the ground properly. From the first lot of wash-dirt they gained 300 diamonds in five days; their ground promises well and shows a face of 6 feet of wash, which increases as it goes into the hill. As they had to cart the wash a distance over 3 miles to the river they determined upon sinking at the mine for water, and are now down 40 feet; should they obtain a good supply they will be in a position to wash at a comparatively trifling expense. Diamonds of a triangular form have been found by the Company, and as where these are found at the Kimberly mines larger ones are gained, I see no reason why the same rule should not hold good here. The original searchers for diamonds in this field found quantities of small stones, but never sank any depth, as they were under the impression that they did not exist at a lower level than 5 or 6 feet. That the diamonds are of good quality has been proved, as some 60 or 70 were sent to London, where they were pronounced to be of first water.

GOLD.

*Bingera.*—At Spring Creek and Boro, there has not been much work done, there are only a few men working, and they are making bare wages.

*Bobby Whitlow.*—There are some twenty men working here; the G.M. Lease originally held by M'Guire and others has again been taken up, the present holders have obtained fair stone which has gone to Sydney to be tested.

*Upper Bingera.*—Neal's and Hanton's claims on New Ballarat have kept up their character for gaining large quantities of gold. Hanton Brothers at a considerable outlay have placed a quartz-crusher on this field, which has proved to be a great boon to the leaseholders. Neal & Co. had stacked a quantity (23 tons) of earth, out of which they had taken over 1,000 ozs. of gold; this (the 23 tons) after crushing yielded 66 ozs., making a total of 1,066 ozs. of gold. Hanton Brothers, who were for some 5 months busy getting up and erecting machinery, out of 156 tons, in which quantity there were 70 tons of headings, got 3 ozs. to the ton; neither of these parties are yet on bottom. Some fortnight since Neal & Co. struck gold of a heavier character than they formerly did; the vein was still dipping at the 75-foot level; in my opinion they will have to sink 100 or 150 feet yet before they bottom, and even then they may have to go a greater depth. Porter and party are gaining gold, and have a good show to find something good; other parties are on this field, but they do not work their ground systematically, as I hold surveys of leases dated from Nov., 1831, to March, 1833. I would with all due deference to the Honorable the Minister for Mines, suggest the advisability of issuing all leases as soon as practicable after survey, as the non-issue keeps large areas locked up, thereby debarring the small capitalist from working, and preventing the development of the mining capabilities of the district.

*Barraba—Tea Tree Creek.*—This portion is as before inhabited by a class of men who work occasionally and make wages. From what I have seen of the ground at various times I am not inclined to think that any large quantity of gold will be got.

*Crow Mountain.*—This field has this year been tried by a Mr. O'Donnell who put machinery on the ground, but after working for some time abandoned it as it would not pay.

*Ironbark.*—The ground taken up by the old and new England Gold-mining Company is at last being worked. The machinery for crushing is in transit, and I fully expect work will commence about March next. The manager, Mr. Pendee, is a thorough practical miner, and will test the ground at Addison's and other reefs in the neighbourhood, in a proper and reliable manner.

The following is an account of the gold sent from Bingera and Barraba, the information is obtained from books, but as parcels have been sent by private hands, the return must fall short of the actual yield:—

	1882. ozs.	1883. ozs.	Increase. ozs.
Bingera .....	4,416	4,584	168
Barraba .....	298	320	22

Showing a total yield of 4,904 ozs.

PEEL

## PEEL AND URALLA DISTRICT.

(Mr. Warden Martin, P.M., Glen Innes.)

THE heavy rains falling at the close of 1882 continued well into January of 1883, and afforded an ample supply of water for tin-mining purposes during the earlier months of the year; but the winter was very dry, and the fierce heat and scorching westerly winds that prevailed in December completely denuded the country of surface water, and reduced to a chain of isolated waterholes the supply in creeks, where in ordinary seasons the flow had been ample and continuous.

At Emmaville, Vegetable Creek, during that month the thermometer occasionally stood at 112 in the shade, and frequent bush fires, adding to the heat, rendered the danger of exposure so great at times as to put a stop to any kind of mining labour in the open. Prospecting for new ground was in consequence very much checked in some places and in others entirely put a stop to. Poor deposits (only giving a profitable return in underground sluicing) could not be worked, and as labour was concentrated on the removing of the shallow deposits opened during the previous two years these were soon exhausted or found to be unremunerative when worked in such a season.

From the various causes referred to it is not surprising that the yield of tin for the past year should have fallen 944 tons below the returns for 1882, being 3,026 tons for 1883 from all sources as against 3,970 tons for the preceding twelve months.

The bulk of the ore was raised within the Police District of Vegetable Creek, 292 tons only having been won within the Police District of Glen Innes.

At £50 per ton on the ground the value of the ore won was £170,800.

The deep leads yielded well (1,149 tons) and as in most of them water was a hindrance, to be got rid of by pumping, there was of course little or no check to their development from atmospheric causes, and work was carried on continuously by night and day shifts in their sheltered shafts and galleries.

The returns of tin from the lode under operation of the crushing plant erected during the year gave 100 tons 18 cwt. 2 qrs. 56 tons of this comes from the Torrington works, at the Mole tableland, where a head of five stampers is driven by a 13-horse-power engine, and the manager reports seventy men at work at the close of the year.

At the Ottery lode, near Tent Hill, about 2,000 tons of stone are to grass awaiting the completion of a battery of ten head of stampers in course of erection by the proprietors, Messrs. Reid and Co., in lieu of the small battery which stood there and was used for testing purposes only.

At Pheasant Creek, Glen Elgin, the King's Tin-mining Company have a plant of ten head of stampers, driven by a 12-horse-power engine, and with the usual ore-saving apparatus in full working order. From sixteen to thirty men have been employed during the past eighteen months, principally in making roads, prospecting and erecting machinery, at a total expense of about £6,000.

As yet but 6 tons of ore have been forwarded to market.

This mine is 52 miles from Glen Innes, and 27 from the nearest point of the Newton Boyd Road. The last 16 miles of the track is over an almost impracticable wilderness of steep granite ridges, with occasionally an intervening sandy swamp, and it is surprising that the heavy crushing machinery could have been conveyed without injury through such a country. If the operations of the Company should be crowned with success it will become necessary to clear and form much of this road. On the south and just on the edge of the difficult country a magnificent forest of messmate, blue gum, sassafras, and woolly-butt shows clear barrels of from 40 to 80 feet in height and 18 inches to 4 feet in diameter. The sale of this timber (if reserved) would bring in a considerable revenue to the State, and some return for the expenditure on a road to make the locality accessible by teams.

The extent of the forest, I am informed, is about 8 miles by 15.

Further on, near the tin-mine, a noble beech forest covers the south-east side of a steep mountain, to the exclusion of all other timber. This wood is said to be very valuable, but it would be almost impossible to remove a log of it over the present road. With breaks this wood can be found over an extent of country 15 miles wide by 30 in length, but always confined on the south-east and east sides of precipitous ranges.

Considering only the amount of capital embarked and the appliances brought to bear in the development of lode-mining for tin during the past twelve months, a return of 100 tons appears very small and unpromising, but the broken and disrupted contour of the country where these lodes are found renders it extremely difficult to follow downwards the rich surface indications into the well-defined perpendicular vein which is usually looked upon by miners as a sign of permanency and of value.

Not deterred, however, by the erratic course of many leads the work of exploration is being steadily pushed on, and as greater depths are reached it is reasonable to suppose that this particular phase of mining will assume that settled and profitable character to which it has been brought, no doubt, through similar difficulties, by persevering and skilful management, in other countries.

The number of miners engaged in the tin-mining industry in this division varied considerably through the year, but as nearly as can be estimated about an average of 600 Europeans and 1,200 Chinese were at work at rates of wages unaltered from the previous year.

Carriage at £5 per ton to the Clarence, and £3 to Stanthorpe, was plentiful.

662 tons 14 cwt. smelted tin was sent by the latter route to Brisbane, and 2,108 tons smelted tin and ore by the former to Sydney.

The total cost of transit to Brisbane by team and rail was equal to the cost by team to Grafton.

Mr. Reid, of the smelting works at Tent Hill, reports that he has sent away during the year 1,406 tons 17 cwt. 2 qrs. of refined tin, and that the firewood used cost £3,500, and charcoal £1,800.

There were sixty men, with fifty horses constantly employed, and the wages paid per month amounted to £500. Operations at these works are being constantly extended by the enterprising proprietary, so that at present the place bears quite the aspect of a thriving village. A brick-making machine, capable of turning out 10,000 bricks per day, has been erected, and it is in contemplation to undertake the manufacture of drain-pipes at the same establishment.

The miners as a body have, as usual, been most orderly, and crimes of a grave character have been almost unknown amongst them.

*Bismuth.*

The work carried on at Kingsgate, on the properties of the Kingsgate and Glen Innes Bismuth Mining Companies has been mostly confined to prospecting, and but very little ore has been raised. No machinery has as yet been placed on the ground for crushing purposes. *Gold.*

*Gold.*

About 390 ozs. of gold have been won from the alluvial at Oban and Glen Elgin by about twenty-five miners. This would be in value, at £3 18s. per oz., £1,423 10s., giving £56 18s. 9d. as the earnings for each man during the year. Ground-sluicing on each of these fields is usually employed in obtaining the gold, but as the season has been so dry operations have been almost brought to a standstill for want of water. Some of the miners on these fields have been twenty years on the ground, and have erected neat houses and enclosed plots of garden ground, which give them employment in times which would otherwise be of enforced idleness.

Judging by the tasteful way in which some of the gardens are kept the owners value and are attached to the homes their industry has secured.

In copper and lead nothing is being done.

## PEEL AND URALLA DISTRICT—NUNDLE DIVISION.

(*Mr. Warden Brown, Nundle.*)

HAVING perused the report of this division, as compiled by the Mining Registrar, I have very little to add, except perhaps, to show the probable cause of the decrease in the production of gold on this field during the year 1883. This I am happy to say does not arise from any depreciation in value of our most important and productive mines, but from causes which admit of easy explanation.

The Marquis of Lorne quartz mine changed hands during the latter part of the year 1882, and the present proprietors, under the able management of Mr. John Stanning, determined to put the mine in thorough working order, also to remove their battery to a site adjacent the mine. These improvements were not completed until June of last year, since which time 600 ozs. have been won, therefore taking the same results for the first half of the year, our decrease in the year's production would nearly be made up from this one mine.

King and party made a new discovery during the past year at Bowling Alley Point. The quartz raised from this mine gave a return of 2 ozs. 15 dwts. per ton, paying each shareholder something like £8 per week. Unfortunately, in September last, their title to the land was disputed, since which time no work has been done pending settlement of the dispute. This was done last week by the Appeal Court sitting at Tamworth, and work has again been started.

Nethersole and Son have also during the past year reported a new discovery; they crushed 21 tons of quartz for a yield of 189 ozs., an average of 9 ozs. per ton; they have a considerable quantity of water to contend with, and have therefore been compelled during the last three months to drive a tunnel for drainage purposes.

*Henderson and Company (Mount Pleasant Cement Crushing Company).*—This I consider one of our most extensive and productive mines, but through some misunderstanding on the part of absent shareholders a considerable amount of litigation has taken place, and these leases have been held under suspension during the past six months; the disputes have now been settled, and the mine is again working.

From the foregoing exceptional causes it can at once be seen that the production of gold from this field has been considerably retarded during the year; the water supply, although better than in the years 1881 and 1882, has not been sufficient for all mining purposes, and at the present time the river and all creeks are nearly dry.

Nothing has been done during the past year with the copper lodes at Dungowan Creek, or the chrome ore at Bowling Alley Point.

In conclusion, I may say that notwithstanding the decrease in the amount of gold won on this field, as shown by Mr. Kermod's carefully-prepared report, I still think that with a reasonable supply of water the principal mines will still give their average returns for many years to come.

## PEEL AND URALLA DISTRICT—SCONE DIVISION.

(*Mr. Warden W. F. Parker, P.M., Scone.*)

I HAVE the honor to report, for the information of the Honorable the Minister for Mines, in connection with the gold-fields of this district during the year 1883.

I am sorry to state that gold-mining (the only description of mining carried on here) in this division has been almost at a stand-still during the past twelve months. As I have been only about six months in the district I have as yet had little opportunity of forming a correct estimate of the prospects of the division, but hope to be able to do so next year, and report more fully after visiting the different workings.

At Stewart's Brook there are about 15 miners at work on quartz and alluvial. On the Denison there are altogether about 20 miners working on quartz.

The number of miners' rights issued here during the year is 57, and the quantity of gold raised 622 ozs., which realized an average value of £3 9s. per oz., of the value of nearly £2,100.

## PEEL AND URALLA DISTRICT—TINGHA DIVISION.

(*Mr. Warden Fraser, P.M., Inverell.*)

THE past year has been unattended by any great excitement in mining pursuits, with the exception of a rush in the parish of Aconite, the result of which has yet to be proved, as, with the exception of a few tons of ore sent away, the land has not yet been sufficiently tested. The quality of the ore raised is quite equal to any on this field. A considerable area of the land taken up in this quarter has been through the Department of Lands as mineral conditional purchases, over which I have no supervision. Very little of the latter has as yet been worked.

During the early part of the year our old workings were carried on with vigour, but with the advent of hot weather a rapid decline in the output ensued. This I attribute (1) to the fall in the price of ore from (locally) £52 to £42 per ton, and (2) to the extreme heat causing in many instances a rapid and entire evaporation of water from the dams and creeks. The small quantity of wash-dirt now being raised is stacked for more favourable weather and markets. Raising of ore, unless immediately washed, is unprofitable to the miner, as if left long on the surface it cements and is hard to remove again. Already applications are being made for suspension of work from scarcity of water, and unless a change soon takes place a number of claims must close.

I am indebted to Messrs. Litchfield, Moore, Woods, and the Union Tin-mining Co., for reports on the results of their operations for the year. They are as follows, viz. :—

	Tons.	cwt.	qrs.	lbs.
Mr. Litchfield .....	1,601	2	3	15
Union Company .....	851	17	2	25
Mr. Moore .....	555	0	0	0
Mr. Woods .....	270	0	0	0
Sundry small lots .....	8	0	0	0
	3,286	0	2	12

The average price of ore locally has been £49 per ton, making the total value of ore raised £161,015 10s. 0d.

I had hopes of being able to furnish a return showing the various blocks from which the ore was raised, by which, with the aid of the Geological Surveyor, a map showing the course of the ore could be compiled. The locality maps are not well charted up, and I was unable to prepare a return. Mr. Litchfield is the only gentleman who has responded; I enclose his report. From the various returns received I find that the parish of Swinton takes the lead, followed closely by Anderson, in which parish the old Elsmore mine is situated.

Several fatal accidents have happened on this field through falling into abandoned shafts now very numerous. I think that the Department should fill in all old workings adjacent to roadways. This could be done at a small outlay, and for future applicants they should be required to make a small deposit to ensure their compliance with regulations on the matter, and to the satisfaction of the Warden.

The wretched condition of the roads to the railway station helps to maintain a high rate of carriage, and justifies the miners in their complaints of neglect by a paternal Government of their great industry. This grievance could be abated by the construction of a road of about 20 miles in extent to the Mother of Ducks Railway Station from Tingha, a considerable portion of the Armidale-Inverell line being available.

The Mining Registrar's Report will furnish the number of applications made and licenses issued for the year.

Dear Sir,

Tingha, 29 December, 1883.

The quantity of tin bought and despatched by me for the year 1883 is 1,601 tons, about 44 tons less than last year. The average price per ton, including cost of bags and cleaning, is about £50 10s.

If the Department of Mines should require it I could, with a little time and trouble, get at the quantity produced, showing the parish and block number from which it was taken.

W. W. Fraser, Esq.

Yours, &c.,

W. LITCHFIELD.

Dear Sir,

Tingha, 4 January, 1884.

The quantity of tin ore which passed through my hands last year was 555 tons. I should have had about 600 tons but for (1) the dry weather and (2) the present depressed state of the market, in consequence of which (1) a good deal of "dirt" remains unwashed, and (2) a good deal of ore that is washed out is being held back.

The average local price for the year was £49 per ton.

W. W. Fraser, Esq.

Yours, &c.,

S. W. MOORE.

Tin raised by Union Tin-mining Company, Tingha, during the year 1883 :—

Parish.	County.	Weight.				No. of men employed.
		T.	c.	q.	lb.	
Anderson .....	Gough .....	592	10	1	14	150 Europeans.
Herbert .....	Do .....	19	4	1	12	14 Chinese.
Clive .....	Do .....	13	6	0	8	20 do.
Swinton .....	Hardinge .....	132	6	0	14	91 do.
Darby .....	Do .....	91	10	3	11	103 do.
Cope's Creek .....	Do .....	2	19	3	22	6 do.
Total .....		851	17	2	25	384 men.

Dear Sir,

Tingha, 3 January, 1884.

Since sending you in the quantity of tin ore bought by me for the past year, I have made out the following list that will give the Department an idea of the quantity of ore raised from different parts of the district, so far as my purchases are concerned. My not having all the parish maps prevents me from giving fuller information in some of the parishes :—

	T.	c.	q.	lb.
Parish of Swinton .....	552	16	3	24
"    Darby .....	309	11	1	3
"    Clive .....	312	1	0	0
"    Herbert .....	128	3	0	8
"    Cope's Creek .....	41	6	0	10
From Boro Creek .....	16	17	2	0

W. W. Fraser, Esq.

W. LITCHFIELD.

## APPENDIX NO. 2.

## PEEL AND URALLA DISTRICT—ARMIDALE DIVISION.

*(C. Badham, Mining Registrar.)*

I HAVE the honor to inform you that I find on inquiry about 175 ounces of gold have been purchased by the local Banks, &c., during the year 1883, representing a total worth of about £659. I regret I am unable to furnish even a rough estimate of the quantity of gold produced in this portion of the district, for although I have made many inquiries the individuals asked could only state imperfectly the result of their own efforts, and could give no idea of the yield generally. I am informed there are about thirteen people employed at Puddledock in alluvial mining, who I understand have earned fair wages.

During the past twelve months the number of miners' rights applied for was fifty-seven; mineral licenses, four; business licenses, two.

Five applications for gold-mining leases and one for manganese (20 acres) were lodged during the like period.

Total area gold in  
leases, 10 acres.

## PEEL AND URALLA DISTRICT—NUNDLE DIVISION.

*(Samuel Kermode, Mining Registrar.)*

I HAVE the honor to forward my report on the Nundle Division of the Peel and Uralla Mining District, for the year 1883.

- 1st. Mr. J. P. Robitson and party's quartz claim on the old Foley's Reef at Bowling Alley Point raised 20 tons of quartz; did not crush any.
- 2nd. Mr. Hans, Wilkins and party raised about 200 tons of quartz, in the old Opossum quartz-reef, from a depth of about 80 feet below the old level; they crushed it for an average of 15 dwts. of gold to the ton.
- 3rd. Mr. R. Webster and party's quartz claim on the Maitland reef; idle all the year.
- 4th. Mr. Wm. Peppercill and party have prospected the Kanaka quartz-reef a great deal during the year, without finding anything to pay; the water in this claim is very plentiful and hard to contend with, causing a great deal extra expenses in prospecting.
- 5th. Mr. W. H. Stephens and party did a little work in Heyman's old reef; did not crush any.
- 6th. Mr. R. Walker and party's quartz claim (the Last Rose of Summer) have been prospecting a few months; they have not found anything to pay as yet. They are still prospecting, and expect to meet with something that will pay for their prospecting.
- 7th. Mr. M. Logan and party, at Bowling Alley Point, on the Co.'s side, raised and crushed 30 tons of quartz from Long Gully reef; average 5 dwts. of gold to the ton.
- 8th. The Marquis of Lorne quartz-claim, on the Peel River Land and Mineral Co.'s Estate, at Bowling Alley Point. I have been informed by the manager (Mr. J. Stanning) that over 600 ozs. of gold has been obtained since he has had the management of the claim. He cannot give me any particulars as to how many tons of stone were crushed to obtain the abovenamed 600 ozs. of gold. He has informed me that lately a leader struck off from the old reef into the hanging wall which led on to a main reef on the west side of original reef, dipping at an angle of about 60°, the former reef dipping only about 35°. This reef is now open for about 60 feet; it appears to be a permanent reef, the stone being of a blue colour, and jointy, bearing through a blue slate formation; such slate has never been met with about the Marquis locality before. This kind of slate is thought to be one of the very best indications for gold. I hope it will prove extra.
- 9th. The Gap Claim and Price's Reef Claims have not been worked during the year.
- 10th. The Blackfellow's Nob, the Moonlight Reef, the Golden Hole, and Starlight Reefs, have not been worked during the year.
- 11th. Messrs. Kings and party's quartz claim, on the reef known as the Hard-up Reef, raised and crushed about 48 tons of quartz from a depth of about 40 feet, the gold won being an average of 2 ozs. 12 dwts. of gold to the ton of stone.
- 12th. The alluvial workings between Bowling Alley Point and Nundle have not been of much importance during this year, principally a few Chinese fossicking along the river-beds.

13th

- 13th. Messrs. A. C. Thompson and party's quartz-claim at Swamp Creek obtained a little gold, I cannot ascertain how much.
- 14th. All other quartz-claims close about Nundle have been lying idle all the year.
- 15th. Messrs. W. H. Kennedy and J. Shorter's quartz gold-mining lease, near the Hanging Rock.—They crushed 11 tons of quartz, average 3 ozs. of gold to the ton. They also obtained in patches 500 ozs. of gold. Deepest shaft is about 100 feet on the underlay. The reef is bearing north and south, dipping to the east; average thickness from 1 inch to 8 inches.
- 16th. The Christmas Quartz Reef and nearly all the claims on the Black Snake Line of Reef have been idle all the year. The only claim being worked is the old Black Snake Claim, by Mr. J. Clarke. He has been driving in a tunnel to get into the reef below the old workings; he did not crush any during the year; he obtained a little gold by dishing.
- 17th. The Lady of the Mountain Reef, from which some 600 ozs. of gold were taken out last year, did not turn out much this year. This claim has lately changed hands, and is now under the management of Mr. Thomas Bakewell. I am given to understand that he is sinking and following a light shoot or trail of gold which may lead him on to a good patch.
- 18th. Many other reefs have been prospected a good deal about the Hanging Rock during the year without any success.
- 19th. Mr. M. Nethersole and party's quartz-reef near Foley's Folly, bearing north and south, dipping to the west.—This party has been working nearly all the year; they raised and crushed 21 tons of quartz; they obtained 189 ozs. of gold, or 9 ozs. to the ton; they have a shaft down about 50 feet; the average thickness of vein from 1 inch to 6 inches; they are putting in a tunnel to cut the reef at a depth of about 90 or 100 feet.
- 20th. Messrs. Paul Frisk and party have been prospecting on the same line of reef as Nethersole's and joining their claim; they have not struck anything good yet; they are still sinking on and expect to cut the same shoot of gold as Nethersole's party are working on.
- 21st. Messrs. John Stanning and Daw's claims on the same line of reef as Nethersole and party, raised 120 tons of quartz during the year; they did not crush any.
- 22nd. Mr. W. Stevens' quartz-claim on same line of reef as Nethersole and party, further north, have not done much work during the year.
- 23rd. Messrs. Ah Sam Lowing and party, alluvial gold-mining lease in Oakenville Creek, in the town of Nundle, has been worked steadily all the year. I am informed that the quantity of gold obtained during the year did not allow more than £1 per week per man.
- 24th. Messrs. Henderson, J. W. Rowe and party's alluvial cement gold-mining leases on Mount Pleasant were worked by ten men for the first four months of the year; they obtained 81 ozs. of gold. These leases were idle for the remaining part of the year, being under suspension; they have a tunnel in about 1,400 feet.
- 25th. Messrs. Wilson and party's claim, south of Henderson and party, worked steadily most of the year; they did not obtain wages.
- 26th. Messrs. C. Johnson and Sons' Alluvial Cement Claim, south of Wilson and party's Claim, did not earn wages during the year, the ground being very hard.
- 27th. Mr. John Rackham's cement claim, south of Johnson and party's, have a tunnel in about 400 feet. They did not earn wages during the year, about £1 per man per week being the average.
- 28th. Messrs. S. Paul and Sons' cement claim, south of Rackham's, has a tunnel in about 300 feet. They did not earn wages. These claims, south of Henderson and party's, are being worked on a false bottom. The gold seems to be very scattered on this bottom.
- 29th. Mr. G. Borelli's cement claim, about 1 mile south of Messrs. Paul and Sons' claim, have driven a tunnel into the cement about 400 feet. He did not meet with any payable wash.
- 30th. Messrs. Poetschka and Kukulies claim, joining Mr. Borelli's claim, has a tunnel into the cement about 200 feet. Not any gold found that would pay for working.
- 31st. Messrs. Howarth and party's cement claim, on Mount Ephraim, crushed 10 tons of quartz which was picked out of the cement while sluicing. The amount of gold obtained from quartz was 14 dwts. to the ton. They also made wages from the alluvial sluicing.
- 32nd. The cement claims at Dangar's Gully on the Hanging Rock has not been worked during the year.
- 33rd. Any other alluvial claims that are being worked are principally fossicking claims worked by a few Chinese and European miners.
- 34th. The total number of miners in this division, as near as I can possibly place them, viz. :—

Alluvial miners (Europeans) .....	71
Quartz " " .....	78
Alluvial " (Chinese).....	46
	195

- 35th. As near as I can ascertain after careful inquiry, the quantity of gold won in this division during the year 1883 is as follows :—

From 320 tons quartz crushed .....	ozs. 511
Margin's claim, quartz crushed .....	600
quartz reefs in patches .....	500
	1,611
„ Alluvial claims .....	1,952
	3,563
Total gold for the year .....	3,563
Value at £3 14s. 6d. ....	

- 36th. The estimated value of all the machinery at work and idle on this field during the year 1883, as near as I can ascertain from owners, together with my own experience of machinery, is about £5,400.

I may remark that the progress of some of the mines in this division has been obstructed to a great extent during the past year in different ways, the first way being the want of water during the beginning and the latter part of the year. Secondly, there has been a considerable amount of litigation between some of the miners that are connected with some of the best mines in the district; those particulars tend to make our gold total so far below the standard of last year. However, I believe, we will for the coming year have all claims in full swing and times may be somewhat better for the miners as well as the country. I feel confident that we are to have a change, and that it will be far and away better than the past year.

PEEL AND URALLA DISTRICT—BARRABA DIVISION.

(*R. T. Garland, Mining Registrar.*)

THE mining business in this district is very slack owing to the want of capital, and the miners are all clearing off to the Bingera Diamond Mines.

PEEL AND URALLA DISTRICT—BINGERA DIVISION.

(*T. Connolly, Mining Registrar.*)

I HAVE the honor herewith to furnish my annual report of the Bingera Division of the Peel and Uralla Mining District. Gold-mining in alluvial has been very dull in this division during the past year. The bulk of gold has been obtained at Upper Bingera in Neal and party and Hanton Bros' claims. The amount so far as I can ascertain is 4,584 ozs., which exceeds last year by 168 ozs., but now that Hanton Bros. have erected a crushing plant I have no doubt that the return for 1884 will be much larger than 1883. I have issued 156 miners' rights. 13 gold-mining and 29 mineral leases have been applied for during the year. The mineral leases applied for are principally for diamonds.

The principal holders of these leases are Falk & Co. of Melbourne, known as the Australian Diamond Mining Company, who purchased the mine they are working from the prospectors for a large sum and erected machinery on the river about 3 miles from the mine and put through about 100 loads of dirt for over 400 diamonds, which are small but of splendid quality. The expenses of carting was too great and they procured a water auger to bore for water on the mine, but the rock was too hard and they had to abandon it, and are now sinking a shaft by hand labour, and are down about 36 feet through blue rock, and blasting is resorted to which makes progress slow. Should they get water in sufficient quantities to put the wash-dirt through at the mines there will be a great future before this place.

Craddock and party are sinking on their ground and have obtained wash at 40 and 80 feet, which shows it runs in layers like gold. They have got a quantity of very small diamonds but have not been able to test the underwash for want of water. This is the principal work done so far. The want of water is the great drawback here, although in the course of time no doubt that will be overcome and this will then prove one of the richest districts in the Colony.

PEEL AND URALLA DISTRICT—WALCHA DIVISION.

(*E. Marriott, Mining Registrar.*)

IN obedience to the instructions contained in your circular letter of the 7th November last, I have the honor to furnish herewith my Annual Report on the Walcha Division of the Peel and Uralla District, for the year 1883.

1. From replies received to the usual circulars issued by me to the principal claimholders I learn that mining operations in this district for the past year have been very limited.

3. *Glen Morrison*.—Work on this once famous gold-field has been at a standstill, little or no gold having been won during the year.

4. *Tia (Tia River)*.—Messrs. Matheson and McIntyre raised about 280 tons of quartz, which yielded about 137 ozs. of gold; average value per oz., £3 13s.; this I understand is the only claim in the locality in which work has been done during the year.

5. *Orundumbie, near Walcha*.—Patrick Purcell and party are prospecting for coal in this locality; they report:—"Depth of shaft, 16 feet; deepest level, 16 feet; vein, 18 feet wide, bearing or strike north and south.

6. *Nowendoc, Cooplacurripa*.—Mr. Thomas Laurie reports:—"Gold bought, value about £200; number of men employed, about 12; average wages, £2 per week."

7. Only one gold-mining lease was applied for during the year, and one for copper, the latter by a Sydney company for 80 acres, situate at Walsh's Creek, near Nowendoc. I understand some good samples of copper ore have been obtained, and I hope to be in a position to report more fully on this mine in my next Annual Report.

From inquiries made I have ascertained the quantity of gold purchased in the town amounts to 157 ozs.; value about £570, or £3 13s. per oz.

N.B.—This amount does not include 5½ ozs. 4 dwts. purchased by Mr. Laurie at Nowendoc; value about £200, or £3 14s per oz.

Issue of miners' rights, &c., during the year, as under:—miners' rights, 25; mineral licenses, 2; business license, 1.

PEEL AND URALLA DISTRICT—URALLA DIVISION.

(*J. M. Sheahan, Mining Registrar.*)

I HAVE the honor to submit herewith my annual report on the gold-fields in the Uralla Division of the Peel and Uralla Mining District for the year ending 31st December, 1883. Mineral operations in this district have been principally carried on at Rocky River, but I regret to say that owing to the dry weather we have experienced for some time past the quantity of gold obtained has not come up to the usual average. The holders of several large sluicing claims have been unable to wash up during the past twelve months owing to the scarcity of water.

From inquiries at the local bank I find that the quantity of gold purchased during the year amounted to 820 ozs. 19 dwts. 16 grs., value £3,150 10s. 5d. The number of miners' rights, &c., issued by me for the year is as follows:—Miners' rights, 97; business licenses, 2; mineral licenses, nil.

I forwarded the usual circulars to the principal claim-holders in December last asking them to furnish me with particulars as to progress made in mining during the past year, but I have not received a reply from any of them with the exception of Mr. Leece, the Secretary of the Bullion Gold-mining Company, who reports as follows:—"The Bullion Company's operations during the past year have been boring three different shafts. There was some gold found in one of the shafts, but not sufficient to warrant the heavy outlay required for sinking and working."

PEEL AND URALLA DISTRICT—GLEN INNES DIVISION.

(*P. Le Jeune, Mining Registrar.*)

Gold.

THE year 1883 has been a particularly quiet one as regards gold-mining in this division, and especially so with reference to mining for gold in quartz. The gold-mining lease applications which were made during the year 1882 with a view of testing and afterwards developing the quartz-reefs situate at Nuggetty Gully (Mount Mitchell East) in the parish of Seeley, county of Clarke, and for which leases were granted, the areas having also been surveyed, have been abandoned by the applicants, there being apparently no prospect of these reefs being properly tested at present. This is owing to the want of machinery and appliances on the one hand, and to that part of the division in which these reefs are situated being remote and difficult of access, to which must be added the want of sufficient capital invested by applicants for leases to carry out such undertakings. It may be truly said that the applications for gold-mining leases made in those localities are of a purely speculative character, and that so long as this remains so no conclusion can be arrived at to the real value of these reefs. The same thing may be said with reference to the gold-mining leases applied for in the year 1881, for the Pilgrim's Progress Reef, situate at Kookaboogra, in the parish of Hall, near Mount Mitchell, which leases have been allowed to lapse by the lessees.

Alluvial gold-mining seems to have met with more attention and also with more success at the hands of a number of European miners, whose returns of the gold won by them during this year are not yet to hand. Sluicing operations have been constantly carried on by them, namely, at Paddy's Gully (on the left bank of the Oban Creek) at Ruin's Gully, at Humbug Gully and Night-cap Gully, all of which are situated at Oban, there having been no want of water for sluicing purposes during the year. It would appear, however, that the number of miners has decreased in this division, and this is chiefly owing to the high rate of wages ruling in consequence of the railway and other works that are being carried on in this district, which has caused many to seek for employment in that direction. This will no doubt account for the decrease in the issue of miners' rights which was as follows:—Miners' rights issued in 1883, 39, as against 55 issued in the year 1882. The number of mineral licenses issued during the year numbered 80, as against 95 issued in the previous year.

HUNTER AND MACLEAY DISTRICT—COPELAND DIVISION.

(*Mr. Warden De Boos, P.M., Copeland.*)

I HAVE the honor to forward for the information of the Honorable the Minister for Mines my report on the Copeland Gold-field for the year 1883.

At the beginning of the year a great impetus was received to the coal trade at Newcastle, and labor was very largely in demand at the several collieries. It was also reported by coal-bewers at Newcastle to their friends here that very high wages were obtainable. As the large majority of the miners here were coal and not quartz miners the information had the effect of at once taking away a great many men. Others followed at intervals as they could disengage themselves from their local liabilities, until now that the year has closed the population has been reduced quite one-half. It was stated broadly that wages could be earned at the collieries from £3 10s. to £4 a week, whilst here the regular wages are £2 10s. per week and work somewhat precarious and intermittent.

The cause of this may be found in the fact that the larger proportion of the ground here is held under lease by working men, who having only their wages to look to have not the means of efficiently working the ground by the continuous employment of labour. They themselves work for wages, and out of these wages manage to spare enough for an intermittent working of the ground, until they become so involved with the storekeeper, &c., that they are obliged to chance being reported for non-fulfilment of labour conditions. At the same time as they hold solely for the purpose of speculation they are unwilling to give up the ground whilst they are unable to afford to work it, and have always present with them the idea that they will at some time or other obtain a large price for it from some adjacent claim-holder, who honestly working his area may require additional ground in order to recoup himself for his original preliminary outlay. Under these circumstances the mode of procedure has been to apply to the Warden for a suspension of labour conditions, and when this source of relief has been exhausted and the Warden's leniency worn out the Mining Act and regulations are resorted to in the manner already described by me in a previous report to you on this particular subject, in order to evade the conditions of the lease.

Unfortunately there is no remedy for this state of things but an alteration in the mining law, and until this be effected Copeland, like other mining localities dependent upon reefing, must go through intermittent fits of depression.

The fact is that the quartz here is deposited in veins rather than in reefs, and though the stone is rich it is so heavily weighted down with expenses in the production that it is found difficult in the majority of cases to realise more than wages and expenses from it. To make the working pay every possible appliance for the saving of labour must be resorted to. A large working shaft will require to be sunk in which cages can travel with ten trucks. Tramways will have to be constructed underground on which to run these trucks loaded with stone; these loading from a shoot at the stope must be run on to the cage without further handling of the stone. Then a tramway at the surface for trucking the stone from the shaft to the machine will have to be laid down, and a battery working by water-power must be erected on the banks of the Barrington River.

Now all this means the expenditure of a large sum of money to start with. Some £5,000 or £6,000 will have to be expended before there is any possibility of a return; and then when remunerative work has been commenced, where are the returns to come from to repay the outlay, with the present very small areas taken up under lease? The ground would be worked out before the original outlay was recouped, so that

nothing but a large area under lease would justify a Company in going to such an expense; and yet, only by such an expenditure can the stone be made to pay. You will now see where the speculative lease system comes in. Such an area as is absolutely necessary to justify the above outlay cannot be obtained on any of the known paying lines, owing to the number of small leases that are dotted about here and there—held on speculation—with the knowledge that any large Company coming in to work the ground systematically must have these small areas, which would otherwise cut off one portion of their holding from another. And they are held too at such a price as to be prohibitive of purchase. This small lease system has acted as a blight upon this field from the first days of its opening down to the present time; whilst its continuance with the labour-saving manœuvres that have been employed has paralysed its efforts at resuscitation even when those efforts promised to be more successful. The steep mountainous character of the country renders the carting of stone impossible in wet seasons, and very expensive at the most favourable times; and the intermittent supply of water to the batteries, all of which are fed from dams, causes crushing to be precarious as well as dear. All this is against the small holder, and points to the necessity for the holding of large areas, to be worked by men of capital by improved means and a judicious outlay.

Looking at the average yield from the quartz crushed, the reefs ought to have paid handsomely, but the stone is so heavily handicapped with expenses, and so much labour is virtually thrown away that, as I said before, it has done little more in the majority of cases than to pay expenses.

The Mining Department has used every possible endeavour to counteract the evil I have pointed out at the commencement of the report, by cancelling every lease where it could be shown that the conditions had not been complied with. Still, favourite pieces have been taken up immediately after such cancellation, only to go through the same routine of manœuvre and contrivance until the happy time when the capitalist shall arrive and be prepared to bleed freely for its purchase. There have been cancelled in this division during the year 1883, seven leases for areas of 2 acres each; twelve leases for areas of 3 acres each; two leases for areas of 4 acres each; and three leases, for areas of 5 acres each.

During the year, twenty-seven leases for an aggregate acreage of 99 acres of land have been issued from the Department. Of these only 4, with an aggregate of 15 acres, have been executed and taken up; the remainder have been returned to the Department and been cancelled.

Fourteen applications for lease for an aggregate area of 54 acres have been lodged at this office during the year 1883, the application in each instance being for land previously held under gold-mining lease, and forfeited.

At the end of the year 1883, I think that at the outside there could not have been more than 150 miners in this district, or about one half of what there were in the district at the beginning of the year. These are all Europeans, no Chinamen having yet been able to obtain a footing in Copeland. The number of miners' rights issued during the year was 258 as against 280 during the preceding year; of business licenses there were issued fifty-two, of which eleven were for twelve, and forty-one for six, months.

The following is the return of the gold sent by escort from Copeland, during the year 1883:—

RETURN of gold purchased by the Australian Joint Stock Bank during the year 1883.

Nature of Gold.	Quantity. ozs. dwts. grs.
Reef gold .....	2,960 9 5
Alluvial do. ....	83 16 2
Total.....	3,044 5 7

The value of gold on this field ranges from 67/- to 74/- per oz., the mean price being 70/-.

It will be seen that none of the above returns correspond with each other as regards the quantity of stone crushed or the amount of gold won. I can only say that I have made them up from the particulars furnished to me, and am not of course responsible for the discrepancies. One thing is certain, and that is that there can be no mistake about the gold sent down by escort, or the quantity purchased by the bank. The falling off in the yield is very considerable, being from 7,718 ozs. 11 dwts. 22 grs. in 1882 to 3,044 ozs. 5 dwts. 7 grs. in 1883, being considerably less than one-half. The mere decrease of population would not account for so great a reduction in the yield. It is to be found first in a diminution of energy on the part of the several leaseholders, next in the hand to mouth system of crushing up refuse parcels of stone which have been barely payable, and lastly from the element already mentioned—the decrease of population.

HUNTER AND MACLEAY DISTRICT—BULLADELAH DIVISION.

(Mr. Warden Rawcett, P.M., Bulladelah.)

I do myself the honor, in making a report upon the Bulladelah Division of the Hunter and Macleay District, to state that since my arrival in the beginning of last August no progress has been made on this gold-field.

When I visited the reefs at Coolongolook in November I found no one at work; in fact no one resident on the field. A quartz-crushing machine of fifteen stampers lay idle on the ground with apparently no one to look after it; and, as I heard, when last worked there was only water sufficient to enable ten to be used. I presume at present the water supply must be still further reduced in consequence of the unusually dry season in this district.

The general opinion here is that more remunerative returns will be obtained by deeper sinking, the greatest depth hitherto obtained being but little over 100 feet; but if this should turn out to be the case it may be reasonable to suppose that the claims generally will have to fall into the possession of persons who have more abundant means at their disposal to carry out such ventures than the majority of the present lessees.

So far as is at present known, this certainly cannot be called a "poor man's diggings," as, although the country all round has been prospected for alluvial gold, I have been informed on reliable authority that not even the "colour" was obtained.

In the beginning of last year, before my arrival in the district, 33 miners' rights had been taken out. At the commencement of this year I issued only four, which were taken out by persons who had been in possession of claims.

I regret to be obliged to make such an unfavourable report.

HUNTER AND MACLEAY DISTRICT—KEMPSEY DIVISION.

(Mr. Warden Ducat, Kempsey.)

In submitting my annual report on the progress of the mining workings throughout the division under my charge, for the consideration of the Honorable the Minister for Mines, I have the honor to report that for the year past all workings in connection with mining for gold or silver have been at a complete standstill. The prospectors who made the discovery of gold at Werral Creek had to abandon their claim before fully testing the ground, owing to their not making working expenses. They were not in a position to enable them to remain at work unless it did so. No further prospecting has been attempted in the division.

2. The silver-mines on the south side of Werral Creek are for the present totally abandoned.

3. The Corrangula Antimony Company are now carrying on the works with vigour and activity, under the management of E. H. Becke, who reports that he is now confident this field will prove rich in ore and very extensive.

Their

Their main shaft is down 134 feet, and is well and faithfully timbered the whole of that depth. There are safe and secure ladder-ways to the bottom of the shaft, with landing stages at every 20 feet. Several small veins of antimony have been cut through as they went down, and at the 120-foot level cross drives have been put in, both east and west, to a distance of 40 feet. In the west drive they struck a fine lode, from which splendid ore was brought to grass, yielding 73 per cent. of metal. Mr. Becke purposes sinking this shaft to a depth of 200 feet, if necessary, being sanguine of cutting the main reef before reaching that depth. The indications are very satisfactory.

There are also six other shafts on the property, down respectively 80 feet, 70 feet, and three of 60 feet each; one, a newer shaft, not yet reached such a depth. From all of these ore is being brought to grass of a per-centage ranging from 50 to 70.

In addition to the above are three tunnels, which, with the open cuttings, are in a distance of 245 feet and 175 feet. One on Thomas's late property of 70 feet, from a shaft down 60 feet, are all leading so as to cut the lode on Bott's ground at the 120-foot level. Those tunnels show indications so encouraging that Mr. Becke confidently expects a great future for the Corrangula Antimony Mines.

The furnace buildings have been remodelled and the furnaces rebuilt, now in work, giving the works a more pleasing appearance, and will be much more economical in working.

Mr. Becke has commenced to turn out star antimony, 6 tons having been shipped for Sydney. This year he expects to ship a very large quantity of that metal. There are 2,000 tons of ore at grass ready for stopping.

There is a powerful steam-engine with pumps on the ground, but owing to the decrease in the water, the engine has been able to keep the water under with a cask for baling.

The actual expenditure by the Company to this date, including buildings, machinery, and working expenses, has amounted to £9,000.

#### HUNTER AND MACLEAY DISTRICT—DUNGOO DIVISION.

(C. G. Smith, Mining Registrar.)

I HAVE the honor to report that the workings in this division of the Hunter and Macleay Mining District do not appear to progress as satisfactorily as was anticipated. Nevertheless, the few miners still at work—about twenty—are sanguine of ultimate success.

The greatest depth yet reached is 150 feet perpendicularly and 180 feet underlay. With sufficient capital to sink to a deeper level there is every likelihood of better stone being got.

There is some difficulty in obtaining perfectly reliable information, but I think I am within the actual returns in stating that during last year 1,028 ozs. of gold were won from 873 tons of quartz, distributed as follows, viz. :—

<i>Upper Wangat.</i>		
	Tons.	Ozs.
Mountaineer Co. ....	183	350
Towns & Co. ....	280	168
Connolly & Co. ....	72	144
Smith & Klappe .....	20	20
<i>Lower Wangat.</i>		
Jones & Co. ....	178	196
Walker & Co. ....	140	150
Totals .....	873	1,028

Yielding at £3 10s. per oz., £3,598.

At Upper Wangat stone considered good is now being raised, and at Lower Wangat two fresh auriferous veins have lately been discovered and traced for some distance.

The Mountaineer Company at Upper Wangat, employing six men, work by tunnel and tramway. Plant valued at £100; shaft, 140 feet; deepest level, 100 feet; width of vein, 6 to 18 inches; dip to north, 1 in 5; strike, east and west.

*Towns & Co., Upper Wangat.*—Four men work by tunnel, &c. Plant worth £50; depth of shaft and level, 80 feet; vein, 15 inches; dip to south; strike, east and west.

The average width of the various veins is about 12 inches, with good walls, and the country not particularly hard. There are two crushing machines available, valued at £1,500—one of ten stampers, by water—the other of five stampers by steam.

No tailings or pyrites have been operated upon, but about 6 tons of pyrites have been sent to Swansea for treatment.

#### NEW ENGLAND DISTRICT—TENTERFIELD DIVISION.

(Mr. Warden J. B. Graham, P.M., Tenterfield.)

I do myself the honor to submit my annual report on the portion of the New England Mining District under my charge for the year 1883.

##### GOLD.

*Toooloom.*—In gold mining, very little has been done during the past year. On Toooloom, about 24 miners are engaged,—14 Europeans and 10 Chinamen. The quantity of gold won, as far as can be ascertained, is only about 150 ozs. The want of water for sluicing purposes during the year will, to a great extent, account for the small yield. I am informed that discoveries of gold have been made in cement beds situated at the heads of gullies which have been rich in alluvial gold. The cement and gold bearing drifts underlie basalt. There is some likelihood of these deposits becoming prospected and worked as soon as sufficient water induces the miners to return to the field; at present it is impossible to develop them. Judging from the accounts which have reached me, and the opinions of experienced miners, I have reason to believe that the discovery of these auriferous cement beds, underlying basalt, will turn out valuable.

*Pretty Gully.*—At Pretty Gully there is very little change. About thirty miners are employed in alluvial, and the amount of gold won, as far as can be ascertained, is 368 ozs. The want of sufficient water also applies to this field.

Povorty

*Poverty Point.*—At Poverty Point, during the past year, the property of the Surface Hill Sluicing Company has been examined and reported on by Mr. Phillip Davies, a gentleman of large experience in alluvial and hydraulic mining. His report is a very exhaustive and valuable one, and is generally very favourable, as far as the value of the mining property is concerned. The previous management is condemned by him, and the Company now are making arrangements to carry on the work in accordance with his suggestions and recommendations. Mr. Davies finishes his report by saying, "I thoroughly believe that your property at Poverty Point is a most valuable one, and capable, I believe, of paying large profits for a great many years." Mr. Davies is supported in this belief by the results of a number of assays made from prospects taken by him, some of which go as high as 11 dwts. to the ton. The gold is contained in decomposed porphyritic and felspathic granite, intersected with small quartz leaders, and harder belts of gold-bearing granite. The gold is evenly distributed through the granite, and not confined only to the quartz leaders. He says, "I was led to believe that nearly all the gold in this formation was confined to the leaders. On that account I was particularly careful while trying prospects that no undue preference was given to the leaders, and I am happy to state that, after forty trials in various parts of the Surface Hill, gold in payable quantities was found in almost every dish. The soft and hard stuff treated yielded about equal results, the latter being crushed in some cases." As I have before remarked, the previous working of the property has been condemned by Mr. Davies, and he now recommends the erection of a crushing plant. Previously the only means used for the extraction of the gold was sluicing the soft granite, and no fair trial was ever made of that process. He is of opinion that forty head of stampers could be kept going for many years without the slightest trouble." If Mr. Davies is correct in his estimate and opinions, and I have every reason to believe he is, a large extent of auriferous country will be opened up. Poverty Point is a high spur range, of granite formation, jutting out from the Timbarra table-land, and cut through and divided from the Malara Range by the gorge of the Malara or Rocky River. The descent from the top of the range to the river is very precipitous, with a fall of about 2,000 feet. On the other side of the river or gorge the range rises again abruptly, and it is of a similar formation to Poverty Point, and known in many parts to be auriferous. If the Surface Hill Company succeed it will no doubt open up a large extent of country. The auriferous rock is on the top of the spurs, and it being the highest land in the vicinity (nearly 3,500 feet above the sea level), it has been a great difficulty to obtain the necessary water supply, and considerable capital has been expended for that object; the present Company have expended between £12,000 and £15,000, principally in obtaining water. I hope to be able soon to report that work has been again commenced on this mine. At present a partial registration is granted for suspension of work, in order to allow the Company to make arrangements for the erection of plant, &c., under the recommendation made by Mr. Davies for the working of the mine.

*Dalmorton.*—At Dalmorton 24 men are at work in the division, all Europeans; 13 are engaged in alluvial and 11 in quartz. The Companies working are the Tower Hill and the Union Gold-mining Companies. Altogether there are about 80 or 100 tons of stone to grass awaiting crushing. The yield of gold for the year, as far as can be ascertained, has been 144 ozs.

*Lionsville and Solferino.*—Lionsville and Solferino are doing very little; a few men are engaged, but I have not been able to obtain particulars of the results of their working.

#### *Silver.*

*Boorook.*—I am still of opinion that silver-mining will eventually be one of the principal mining industries of this district. Messrs. Hall and Company are actively engaged developing the silver mines at Boorook, with every prospect of success. They are now sinking on the various reefs with most encouraging results. On the Golden Age there are two shafts; one is down now 196 feet, and the other 160 feet. A good lode has been carried down, and the stone now at the bottom ranges from 10 inches to 3 feet wide. Work in this mine has been carried on uninterruptedly during the year. At the 170 feet level the water was a great difficulty, but it is now diminishing considerably; it does not average more than 200 gallons per hour; it is lifted with a whip and bucket, and it is expected that it will soon entirely disappear. The sinking on the reef is for the purpose of prospecting the lode to a depth, and it is the intention of the proprietors to go down some 50 feet deeper before driving. The assays of the stone from the bottom of the shaft have been from 70 to 350 ozs. of silver to the ton. There are at present 20 men employed on this mine, and more men will be put on as soon as driving is commenced. There is now a quantity of ore at surface estimated to contain 4,000 ozs. of silver. On the Addison Mine, the property of the same Company, sinking has been resumed from the 40-foot level, with 3 shifts of men. There is no water to contend with as yet, and good progress has been made; the shaft is now about 85 feet. The lode is 3½ feet wide, carrying several rich veins of silver. The whole of the lode will average over 78 ozs. to the ton, and shews every indication of becoming richer. There are seven men employed. The ore at surface is estimated to contain 2,000 ozs. of silver.

During the year 400 tons of ore have been treated at the Reduction works, viz., 100 tons from the Addison and 300 tons from the Golden Age; the yield was 15,792 ozs. silver and 70 ozs. gold. The whole of the bullion has been shipped to England, as the proprietors found that more advantageous than sending it to our Mint. Out of the lot of stone some tons of the best ore was picked and sent to England for treatment; if that had been treated with the other ore it would have considerably increased the average yield.

The Reduction works consist of (4) four reverberatory furnaces, a 24 horse-power engine, and 10 head of stampers, the necessary separators, amalgamators, &c., which have been described in my previous reports. It is intended to add a patent pulverizer, which is now on the way from England. This will be used for the dry crushing process, and it is expected will enable the treatment of a much greater quantity of stone.

Mr. T. G. Davy has the management of the scientific part of the work, under the general supervision of Mr. J. W. Hall. Mr. Davy states that the result from the ores treated has been very satisfactory, surpassing his anticipations. Operations at the Reduction works are at present suspended, awaiting the sinking of the shafts and a sufficient supply of ore to keep the furnaces continually at work.

The Silver King is a mine owned by J. Dennis and party; it is situated to the north, and adjoining the Golden Age in the same line of reef. The shaft is down to a depth of 127 feet, and shows good ore at the bottom. It is probable that arrangements will be made with Messrs. Hall for the treatment of the stone.

There

There is a large area at Boorook known to be argentiferous, which will no doubt be taken up and worked as soon as the necessary works are completed for the treatment of the ores.

I forward a parcel containing samples of ore—No. 1 from the Addison, assayed by Mr. Davy, and containing 632.75 ozs. silver and 14.70 ozs. gold to the ton; No. 2 from the Golden Age, containing 398.50 silver and no gold; No. 3 from Golden Age, not assayed.

#### *Tin.*

*Maryland Tin-mines.*—The tin-mining at Maryland and Wilson's Downfall has undergone little change this year, except a gradual falling off in the yield, which may be accounted for partly in the working out of the alluvial, want of water, and fall in the price of the ore. Nothing has been done in lode-mining, although there are good indications of rich lodes existing on the main range. I forward you a specimen of lode tin from the head of Wilson's Downfall. Prospecting for the lodes will probably be carried on this year. The quantity of tin ore won during the past year was, as nearly as can be ascertained, about 450 tons; value on the ground, £22,500. 99 mineral licenses issued. The great portion of the land is held under mineral lease. There are 300 Chinamen and 80 Europeans engaged in mining.

I am glad to report that no accidents of any consequence have happened in this district during the past year.

#### NEW ENGLAND DISTRICT.—ENNAVILLE DIVISION.

(*W. E. Henry, Mining Registrar.*)

I HAVE the honor to furnish for the information of the Honorable the Secretary for Mines my report on the Vegetable Creek Mining District for the year 1883.

In reporting I will begin with the same mines as last year and from thence work to the Gulf and round the district.

I will first touch on Messrs. Irby & Co.'s block, known as the Little Wonder, where the Chinese are still working and making what gives them satisfaction. There is no new feature to report. The yield of tin has been 128 tons.

The Great Britain Company's mine or property is now managed very satisfactorily by Mr. Alexander M'Gillivray; it has not produced so much tin this year, which fact is chiefly owing to the many parts yet known on this property as payable having been nearly worked out. The tin raised during the past year was only 394 tons as compared with 609 tons for 1882. There are 180 Chinese working this year, whereas there were 220 for the previous year. I have very little doubt, however, but what when wet sots in again and the price of tin rises many of the men who have left will return again.

*Bullock Swamp, Glen Creek.*—Block No. 15, Messrs. Newton Bros.' M.C.P., which was worked during 1882 by Messrs. Chapman & Co., has been abandoned for a time as water has become scarce, and one of the party has left the district.

Block 27, Messrs. Anderson & Company, is not at present being worked, but I believe the land is under offer for sale.

Messrs. Anderson, Chapman, and Gale have also ceased working on their 20-acre block owing to scarcity of water.

Taylor's block has been worked on and off during the year by Chinese in the surfacing, and by Europeans in prospecting the reef; both parties have given up for the present, as the water supply the former had has run out, and the latter have opened up the ground enough to expose the reef to view, which the owner wished done in order to sell the property, as he has not got means to work it by himself, it being too large an undertaking. A mining expert has been up from Sydney with a view to purchasing it but the fall in price of tin is likely to affect its sale for a time.

Messrs. John Moore & Co.'s block, No. 4, is being worked by Messrs. Horning & Jew on royalty; the wash (surfacing) varies in depth of from a few inches to about 3 feet; they cart it to the creek where their washing plant is fixed, and from which the sludge runs away.

John Rossi's blocks 2 and 3 are now held by Messrs. Trewhella & Co. on tribute, at which they are making good wages; the wash varies from a few inches in depth to about 3 feet, and as in the case just mentioned it is carted down to the creek as they cannot get water to play on the high ground. There is a good reef on this block.

Mr. John Cumberston is still sluicing on his own block, which fact proves that he cannot do much better. He has got an excellent lode on his land, which will very likely be opened up during the year. Lode tin working has not yet commenced in this neighbourhood, because many of the holders of valuable land are too poor to introduce machinery, but I think reefing in this locality is worth the notice of speculators.

About 2 miles up the Glen Creek a man named Christian Stack is working by himself on 4 acres of a flat on the bank of the creek which he holds under a mineral license. He is making good wages surfacing, and the wash averages about 1 foot in thickness. The dirt will go 2 ounces to the dish. This piece has been included in several applications for lease, and the very land now occupied by him was sunk through to the rock when being prospected and then left as of no value, the parties never having thought of trying the surfacing.

*The Gulf.*—This neighbourhood is very badly off for water as rain has not fallen in any quantity for many months, consequently, most of the miners are stacking their wash and some have had to leave the neighbourhood for a time, notably the Chinese, several parties of whom have had to leave altogether.

Messrs. Coghlan & Summers have gone to work elsewhere until rain comes and relieves the want that has forced them to abandon their block for the present.

*Brown's Gully.*—Messrs. Graney & Co.'s block is not now being worked; want of water has caused the alluvial portion to be given up for a time, and the operations on the lode have been suspended pending the parties being able to make other arrangements.

*The Yankey, Block 99.*—Messrs. Graney & Company have two parties of Chinese tributors working for them. They have been making £100 per month clear in spite of scarcity of water. Some twelve or thirteen individuals are working in various parts of this neighbourhood under mineral licenses with varying results. They also are labouring under the same wants as those above referred to.

The Gulf Lode Company have ceased operations for a time on the lode, as they are desirous of having it worked either on tribute or royalty; two parties of Chinese are working the alluvial portion of this land but will not be able to wash until rain comes.

*The*

*The Red Cross.*—Mr. Carr's Mineral Conditional Purchase.—The lode on this block is only being prospected at present, but a party of Chinese are working the alluvial portion and raised 4 tons 11 cwt. of tin ore during the past year.

Some Chinese are still working shallow ground in Deepsinkers' Creek under mineral licenses.

Messrs. Cadell and Hall's blocks in Deepsinkers' Creek are being worked by two parties of Chinese tributors who are doing very well. The neighbourhood is remarkable for containing nuggets of tin ranging from several pounds in weight down to an ounce or two; one was given to me the other day as a specimen, and can be seen at my office, which weighs 3 lbs. 5 ozs. It bears the appearance of having travelled a great distance; the ordinary tin is of a nice coarse kind.

*Carpet Snake Creek.*—A large amount of land has been taken up in this locality during the year 1883, which so far as has been proved is alluvial, but though very rich the wash is generally confined to narrow gutters.

A party of Chinese are working on the creek for Messrs. Cassidy and Company as tributors, and raised 1 ton of ore during the month of November.

Near the creek at what is called Plump Gully three white men are working under their mineral licenses and making good wages.

*Parish of Highland Home.*—Messrs. Butler and Company's Reef of 60 acres is a promising looking property and changed hands recently for the sum of £1,200 and 350 paid-up shares for each of the original holders. It has been placed temporarily under the management of Mr. W. O. Pomoroy, pending other arrangements being made, which fact is enough to imply that it will be properly managed. When there a week or two since the men were busily engaged in building their huts and doing other necessary work, including making a roadway, which is very much needed, as the country is exceedingly rough; a dray could not get within a mile or more of the camp. In the main shaft the reef is about  $3\frac{1}{2}$  feet wide, and bears about east and west, and dipping to the north about 21 inches in 6 feet, from this point up the hill. The reef is about 10 feet wide and shows very well on the surface.

Near to the above and lying about west is the Mountain Maid, known as Messrs. M'Guinness, Bailey, and Butler's 40-acre block, which is a very promising looking property so far as can be judged by the surface indications.

Going up the hill from Butler's Reef is 50 acres applied for by Mr. Alfred Ottery; it adjoins block 175 in the parish of Highland Home. The applicant has done a considerable amount of prospecting with very satisfactory results, having opened up an excellent reef, and also proved that there is some good alluvial ground that will yield 2 lbs. of ore to the dish. There are two reefs on the land, one bearing north-east by south-west, and the other south-east by east by south-west by west, one of which shows very rich stone on the surface, and the other has not yet been properly proved, but which is under the alluvial, and shows a reef 4 feet wide and at about 4 feet from the surface. The great advantage that parties would have in working this block is the fact that there would be very little trouble in making a roadway to it, as its boundary extends on to the comparatively level table-land, so that there would be no obstacle in the way of getting tin from there to the smelting works or market.

*Flaggy Creek.*—The McIntire Reef Company have ceased working for some time, after having done a good deal more prospecting since my last report was written, but as they did not get on payable tin the owners of the lease considered it prudent to cease working. I should, however, have liked to have seen more work done as I think it very likely that they would see better stone as they went into the hill.

Mr. Halket is still working and making a living on his block although water is scarce with him.

Mr. Jno. Gogins' water supply having failed he has ceased working until more rain comes.

*Scrubby Gully.*—A few Chinese are working here on land, some of which they hold under mineral licenses, and the other portions under mineral leases, with results which satisfy them.

On the way to the Black Swamp I may remark that a saw-mill has been put up and is in full working, which will supply a want that has been much felt in this district, not directly in mining matters (although by supplying smooth battens and for timbering the works much time would be saved) but for building the miners' houses and necessary work-shops and sheds, &c., will prove of very great advantage to the miners generally.

*Black Swamp.*—A party of Chinese are working as tributors to Messrs. Henrickson and Co. with good results.

Messrs. Reid and Ford are sinking on a 20-acre block at a depth of 20 feet on a splendid lode of tin which averages a foot wide, shows remarkably well, running north-east and south-west.

Messrs. Burke, Ford, and Bolton's 40-acre block No. 1 shaft is down 50 feet, where the lode is 18 inches wide and very good, bearing north-east and south-west; the No. 2 shaft has not been touched during the past year.

Messrs. Swyny and Co.'s 40 acres. They are down 18 feet on a good lode 22 inches wide, bearing north-east and south-west.

Messrs. Prager and Co. are prospecting, and have proved the lode on their block to be good and 15 inches wide, bearing north-east and south-west.

*Silent Grove.*—Messrs. N. Swanson and Co. have ceased working on the land for which they made application about ten months since, pending the receipt of their lease.

The Silent Grove Company are again sinking on the reef and have got down about 30 feet; only two men are employed at present. The parties who I mentioned in my last report were ground sluicing have given up.

Messrs. Thomas Flannery and Co. are about starting to work on the Basaltic Hills, some 4 miles or so in a north-western direction from the last-mentioned locality, when it is to be hoped tin will be proved to exist, as that will lead to the opening up of a large extent of exceedingly promising-looking country. The operations are to be under the supervision of Mr. Flannery. There is no doubt but that if there is tin in the locality he is the man to find it. Prospects have been got on the surface, which may reasonably be expected to indicate that there is more lower down.

*Mole Yard Creek.*—Messrs. Stacey, Brothers, have abandoned their old workings and left the district.

Several parties of Chinese are working contentedly on the alluvial blocks.

*Catarrh Creek.*—This locality is still in the hands of Chinese only, who are doing very well on their various holdings, some of which are leased and others held under mineral licenses.

*Little Catarrh Creek, Lee's Gully.*—The Great Britain Company have ceased working on the blocks they held, which became forfeited, and have been since applied for by other parties.

Messrs. Murray and Company are now prospecting some land they took up recently, upon which they discovered an excellent reef.

Messrs. Elliott and Company have not done any work on their land during the year, but are awaiting the arrival of the leases.

Messrs. J. E. Elliott and Company are still working on Mr. Speare's block, but with poor results, and have abandoned the 12 acres they applied for last year, adjoining the above property, having found that it would not pay them to work it.

*Torrington.*—The five-head stamper battery which I mentioned in my last report as in course of erection, has been working splendidly and crushed all the stone they had on grass, 455 tons, which has produced 56 tons of ore. The manager, Mr. Hugh Marshall, is conducting the operations in a very careful manner, and using his best endeavours to again strike similar rich patches to those of which this mine has been so famous, and in order to save expense he is actually driving the engine himself.

The principal shaft is down 98 feet, but the prospects are not very encouraging. Two cross cuts have been put in, east 17 feet and west 18 feet, in order to test the ground; the manager intends to continue sinking after Christmas. At a depth of 50 feet the ground is worked south 60 feet, the backs are taken away to within 10 feet of the surface showing good tin-bearing stone, which averages 10 inches in thickness. A drive south is being continued in the hope of coming on the tin again. 40 yards north another shaft has been sunk on the same reef to a depth of 54 feet, following a shoot about 6 feet long and 10 inches wide, bearing good tin. The reef does not show well north and south, but a good trial has not yet been made in those directions. North from those I have described several shafts have been put down at depths varying from 12 to 20 feet showing good ore in different places, but nothing permanent.

*The Keyser.*—Three shafts have been sunk, two down to 50 feet, and one 60 feet deep, and a considerable amount of stoping has been done. A ladder shaft is down 28 feet, and shows the lode almost 2 feet wide, bearing a little tin, which the manager expects to improve as they go down. A great deal of surface prospecting has been done by sinking shallow holes and cutting trenches, with varying results.

Messrs. Howe and Murphy have ceased working on Mr. Hart's mineral conditional purchase as tributors, their term of agreement having expired. One of them is washing the old tailings over again and making a living.

Mr. James Smith is continuing to work his 4-acre block with the same results as last year.

*The Walaroo.*—This reef is still under offer, but I believe at a lower price than that mentioned in last year's report. The applicants for the land have done a considerable amount of work during the past year in way of opening up the mine, but left off their labours, pending a sale being effected.

*Dutchman.*—This property has changed hands during the past year and the Company now representing it have started working it in good earnest, under the management of Mr. William Knuckey, who has about 900 tons of stone on grass (which will be a good start for the stampers). He has shown, by what has been done since he arrived, that he knows how this sort of mining should be managed. Much work has been done in the way of opening up the mine. A 12-horse power engine has been introduced with a five-head stamper battery, and all the necessary machinery for saving the tin ore, which are being rapidly put in their places, under spacious and suitable sheds. The neighbourhood has assumed a very flourishing appearance; a large store has been erected for storing the Company's necessary supply of various materials required for working. Several neat cottages have also been built, one being the manager's residence, and the others those occupied by the men, all of which have been constructed chiefly of sawn timber, and covered with iron.

No. 1 shaft is down 200 feet, and well timbered; it is now being centred so as to provide an air shaft, in which a reef of good stone shows itself, averaging 3 feet in thickness.

No. 2 shaft is down 40 feet on the lode, which averages 18 inches in thickness all the way down; from this shaft drives have been put in, one 75 feet east, and the other 75 feet west. An air shaft is being sunk and is now down about 30 feet. In the back of the drive, and about 60 feet from No. 2 shaft, a tunnel is being put in at the side of the hill, which is intended to tap No. 1 shaft; they are 140 feet into the hill, so I do not consider that they will have very much further to drive. The lode dips towards the north.

*Messrs. Crane and Sons Bark Hut Lode.*—They have sunk about 20 feet deeper during the year, and carted some 40 tons of stone to the smelting works at Tent Hill to be crushed at the battery recently put up there, the results of which will, they think, enable them to float the property into a Company, so that it can be worked on a larger, and more profitable scale.

*Battery Creek.*—Mr. F. Davey is still working his block, and making a living, but the underground water he now finds very hard to contend against.

A few men are working lower down the creek under mineral licenses.

*The Folkstone.*—Nine-mile. No work has been done here since May last, when they ceased sinking at a depth of 118 feet, until they could get machinery, without which it is impossible to cope with the water. The lode which is  $2\frac{1}{2}$  feet wide shows tin in places.

Messrs. Harvey and Co. abandoned their workings last August, owing to excess of water, and although down 150 feet through hard sinking yet they do not feel disposed to go to further expense, as they are working on private land.

*Wellington Vale Run.*—About 14 miles from Vegetable Creek. Mr. Thos. Flannery has been prospecting during the past seven months, having nine men working; one shaft is worked, six men in two shifts of three in each, and the second shaft by three men in one shift, both of which have been bottomed, one at 184 feet, and the other at 175, but unfortunately without the slightest indication of tin, 65 feet of which was through hard basalt and the rest through rotten basalt and a few feet of clay near to the surface. He is now busily engaged in sinking two more about half-a-mile from the shafts just referred to, in which they are down 110 feet in one and 90 feet in the other.

Should the prospecting prove the existence of a deep lead in this locality it will be the means of opening up a very large area of country. The basaltic formation is very similar to that of Rose Valley, which past has proved to be very rich in tin.

The Ottery mine, near Tent Hill, belongs to Messrs. J. Reid and Co. A large amount of work has been done here during the year in opening up the lode.

No. 1 shaft is now down 120 feet, and at 60 feet level; they have driven about 30 feet and back stoping, where they are on a gossan ore lode measuring about 2 feet wide, which will average, I think, 30 per cent. pure ore. At the 120 feet level the reef is about 3 feet wide, which will average nearly the same proportion of ore as the one just mentioned. The reef here is composed of pyrites stone, which is considered a good indication. The shaft is worked by three men in one shift, the whole workings are well timbered throughout. There are about 40 tons of stone on grass. The lode runs about north and south, and underlays to the westward.

No. 2 shaft is down 110 feet, but not being worked just at present; the reef averages 3 feet in width from the surface, and underlays to the west, running north and south. They have driven 60 feet in a southerly direction at the 50 feet level, where the stone averages about 20 per cent. ore, and differs in formation, being intermixed with iron pyrites; the shaft is well timbered from the top to the bottom, and fitted with ladders. There are about 80 tons of stone on grass at this shaft.

No. 3 shaft is down 26 feet from the surface, where the reef averages 3 feet 6 inches in thickness; the underlay is about 30 degrees in a westerly direction; about 120 tons of stone have been raised to the surface, which will average about 18 per cent. ore; four men are working night and day shifts; for 60 feet along the surface of the reef and down to a depth of 20 feet, an open cutting has been made, revealing a reef identical with that got in No. 1 shaft which bears in a southerly direction; going north from this shaft the reef is visible for a distance of about 300 feet on the surface where it is 4 feet wide, and has been tested by shafts in various places.

No. 4 shaft is down about 15 feet and is being worked by two men; it shows a reef averaging 2 feet wide all the way from the surface, the stone yielding about 15 per cent. ore; the reef runs nearly north and south, and slightly underlaying to the west. A tunnel has been put into the side of a hill, a distance of 40 feet, where the reef is 2 feet thick, and good all the way from the mouth of the tunnel, and along the surface of the hill for 20 yards the reef bears about north-east and south-west; 25 tons of stone are at grass, which will go about 15 per cent. ore; a neat cottage has been built on the mine, of sawn timber with iron roof, as a residence for the boss. Men are very scarce just now, but when more can be got they will be employed.

A few parties of Chinese are working at and around Tent Hill, chiefly as tributors to various owners of land.

*Tent Hill.*—Much has been done here in getting the battery which I stated in my last report was being erected, in perfect working order; the machinery is of the best description and of the latest improvements, and to be driven by a 20 horse-power engine; it consists of jiggers, puddles, separators, rotating tables, and all the very best means of saving tin and separating it from any foreign matter with which it may be associated. The Company are determined to save every particle of tin that it is possible to do, thereby making moderate quality stone pay well.

The new brick-making machine which I said last year was being introduced has been erected, and is capable of making 10,000 bricks per day when working in full swing. A workshop has also been fitted up in connection with the works, with appliances for making repairs to machinery, which until now have had to be sent to Sydney, consequently entailing a great loss of time. Mr. Jno. Reid, who is the managing partner of the Company, Glen Smelting Company, deserves very great praise for the way in which the large interests he represents are being managed, and particularly in the putting together of the machinery to which reference has just been made, which being complicated requires so much care. All the works I have referred to, including the charcoal crusher, are covered with a large iron-roofed shed, and the whole of the machinery is driven by the engine I mentioned above. A large dam has been constructed conveniently situated to supply all the water needed in connection with the works which were fully described in my last report. 2,390 tons of tin ore have been smelted at the works during the year, and 1,632 tons 7 cwt. of metal were despatched for Sydney *via* Grafton and Stanthorpe.

There are a few parties of Chinese working on the road from Tent Hill to Emmaville with varying results.

*Y. Water-holes.*—At Messrs. Cadell and Mitchell's property work is being well carried on; but as the operations were fully described last year I need not say more now, as there have not been any improvements effected of any extent. They raised about 197 tons of ore during the year from a depth of 55 feet, the height of wash ranging from a few inches to 10 feet, and the width being from a few feet to 250 feet.

Messrs. John Moore and Co. have a very large quantity of land in this neighbourhood, much of which is let on the tribute system, as the Company are always willing to let it on reasonable terms. The area is composed of surfacing and deep leads, the former being from a few inches to 3 or 4 feet deep, and the deep leads ranging up to 40 feet. Over 245 tons of ore were obtained from the various tributors during last year; as a great deal of the tin at the Y. Water is associated with some foreign matter much resembling tin, it has to be very carefully dressed, which is done by a Willoughby machine, in order to make it marketable. On Messrs. Swyny and Co.'s portion of the tribute an engine is employed raising water from a dam by a centrifugal pump to a height of about 40 feet above the surface, to some fluming, which conveys it to the sluice-boxes. At other parts of the property the water, of which there is a good supply, is raised from the various dams, some of which have been made during the year by means of horse-power, hand, and treadle pumps. At flood times advantage is taken of the surface water for sluicing away some of the poor portions of the land, which pays well under such circumstances. If a good stream of water could be brought to bear on the hilly parts of the Y. Water-holes it would be of great advantage to the district generally, as the greater part of the poorer portions of the land could be worked profitably. Mr. Chandler is very successful in managing Messrs. John Moore and Co.'s property at a very little cost, as he works very hard himself, and sees that what will be the best is done for those he represents.

Mr. R. Donoghue has raised 75 tons of ore from his block during the year; the wash ranges from 6 feet to 25 feet from the surface, and from 6 inches to 4 feet high, varying from 20 to 100 feet in width. The greater part of this land is worked on tribute.

*Vegetable Creek and Graveyard Creek.*—The Vegetable Creek Tin-mining Company have not introduced anything new since my last report worth naming, but are continuing to work the land to the best advantage, as shown by their having obtained about 200 tons of tin ore during the year, some having been got from the surface and the rest from the deep ground, some parts of which are as much as 130 feet. The wash varies in height from a few inches to 4 or 5 feet.

*Nelson*.—Mr. T. Cubis.—This land is still being worked by a few Chinese, but the water has become very scarce through the continuance of dry weather.

Messrs. John Moore and Co. have seven parties of Chinese working on their Vegetable Creek land, much of it now being worked a third time, in spite of which it has yielded 109 tons 1 cwt. 1 qr. and 20 lbs. of ore during the past year.

Mr. C. Scherf is working on his land in the creek and making fair wages.

Messrs. Hall Bros.' ground is still being worked by Chinese with varying results.

*Rose Valley*.—Messrs. Skinner and Kelly, tributors to Messrs. Irby, Andrews, and O'Donnell, raised a little over 7½ tons of ore during the past year, from January to March, on which month they worked out their tribute.

Messrs. Griffiths and Kelly's Tribute, from the same owners as the above, worked out their piece last August, from which they got nearly 12 tons of ore.

Messrs. Griffiths, Burnell, and Co.'s tribute to Messrs. Irby and Co. is nearly worked out. They obtained over 15 tons of ore from this ground during the period from September to December last inclusive.

Mr. F. J. Kelly has started working on Foxe's old mine, block 47, out of which the owners did so remarkably well some two years or more since, where he expects to do very well, for there is a good deal of land not yet properly prospected and much wash is visible, which the former party considered too poor to pay them for raising. He has had a large amount of trouble in securing one of the old shafts, which is exceedingly uneven and small; but he is sinking a new one, about 80 yards westerly from the old shaft, in new ground, where he hopes to get on good wash.

Messrs. MacDonald and Company's tribute to the Wesley Company has been abandoned as they did not consider that the prospects were good enough to justify them in continuing to work, as it was too expensive for some of the party.

Messrs. Griffiths and Company's tribute to the same Company as I have just mentioned, has also been abandoned for the same reasons as the one referred to above.

Messrs. Hume and Company, gave up their tribute to the Wesley Company, owing to their wash having run out and being unable to find the run again.

Messrs. Probert and Company, tributors to the Wesley Company, have also given up, as they could not afford to do any more prospecting, they having bottomed with unsatisfactory results.

Messrs. Graney and Company, Wesley Company's tributors, have given up after washing what dirt they had raised, as they did not consider the prospects encouraging enough to justify further outlay.

Mr. Flannery's 60-acre tribute to the Wesley Company, which has been specially noticed on account of the excellent mode in which it has been worked, and its richness, and was fully described by me in last report was worked full-handed by day and night, until the end of July last (chiefly in blocking out unworked land which was shown in plan connected with 1882 report), when Mr. Flannery's agreement with the Company ceased.

Messrs. O'Rourke and Company are now working at a different level on the land just referred to above, and which they obtained from the Wesley Company on terms that suited them. They are working a level at 140 feet, and have the use of Messrs. Fox and Company's shaft. The wash averages 3 feet 6 inches high. They put down an air-shaft about the centre of Flannery's old tribute, from which they get a good supply of that commodity. They are also working about north and south from the old water-shaft, and about 14 feet below Mr. Flannery's old workings, where they have wash of a very good quality, averaging 4 feet in depth. All the underground workings are well timbered. Fifty men, two drays and horses, and one engine are kept constantly at work, besides timber getters.

One important fact this tribute has proved, is the existence of two separate or distinct levels, at which payable tin is obtainable. The present parties have the land in two separate tributes, one lower than the other. For some time past the party have been paying Messrs. Fox and Company for the use of water, as their own supply ran out.

Messrs. Fox and Company, tributors of 17½ acres to Mr. Procter, of Parramatta, are now engaged sinking another shaft some distance from those which I mentioned last year, on lower ground, and are down 180 feet, 40 of which is through hard blue rock, and the rest through drift and pipeclay, they having discovered that it was impossible to drain the workings from the higher ground, so as to get to the wash, which they were able to prove was rich, having succeeded in getting 36 tons of ore, the mistake being in sinking at the highest portion of the block. They have ten men working in three shifts to get the new shaft down, which no doubt they will not take very long in doing. The hauling and water-shaft and engine are let to Messrs. O'Rourke and Company for £12 per week to supply the water they need for washing and haul the dirt. They have also let a supply of water to some Chinese who are washing tailings which, as is always the case, they follow Europeans, and make a living where the latter would starve.

I omitted to name in proper order, which should have been between O'Rourke and Company and Fox and Company, that the Wesley Company are working a part of their mine themselves. The main shaft is bottomed at 150 feet, and on wash of a good quality, varying from 1 to 4 feet in depth. The lifting apparatus is a whim worked by a horse, or two if needed (but one does the work), round which the rope is so placed that, as one bag (made of hide) is being lifted, another is going down, a shoot being made to receive the wash from whence they will cart it to the washing plant about 200 yards off. The hands, &c., employed vary as necessity requires. At the time of my visit 67 men, 3 boys, 8 horses, and 3 drays were constantly working in three shifts. A tram is being constructed so that the wash-dirt can be carried from the shoot to the sluice-box by which means much time and labour will be saved. The washing plant is supplied with water by a 12-horse-power engine which is managed by one man, and kept going from 8 o'clock in the morning until 5 o'clock in the evening at the largest dam, and works a centrifugal pump, which raises the water 42 feet to a box, from whence it is conveyed to the sluice-box by 200 feet of galvanized piping; after it has been used it passes back again through races into three purifying holes in succession, which divide the distance between the engine dam and the wash plant. A shaft is down 156 feet about 70 yards from the main shaft, at which depth they are on wash, and have worked 70 yards from the main shaft. An underground inspection reveals 600 feet of wash in the various drives and average about 3 feet in depth on a very uneven bottom. Some wash is also visible in one of the drives overhead, of course to what extent it cannot be said. Mr. W. O. Pomroy is managing the whole of the Wesley Company's property in a very satisfactory manner.

It

It is worthy of notice that the wash is found to be quite as good on the rises and slopes of the uneven bottom as in the hollows or gutters. A blacksmith's shop is connected with the mine, in which one blacksmith and one striker are employed. 515 tons of ore have been obtained from the mine during 1883.

Mr. Reynolds' 320-acre block, which Mr. Flannery holds on royalty, has been vigorously prospected during the past twelve months, in which time they put down five shafts to the water level, their average depths being 176 feet, and most of the sinking through very hard basalt. In two of the shafts two different kinds of pumps have been used, viz., Douglas and a Tangye, neither of which were able to cope with the water, consequently work has been suspended for a time pending the arrival of more suitable pumps.

Messrs. W. T. Kerr and Co., tributors to Jno. Lennon, have got down 100 feet through hard sinking, and have driven 70 feet (to prospect) through cement, in which they hope to strike the lead. They consider that they are or should be on the Wesley vein. The shaft and drive are well timbered.

Messrs. Kerwin and Co., tributors to Jno. Lennon, have sunk two shafts through hard rock, one 80 feet and the other 112 feet to the water.

Messrs. Salmon and Co., Chance, started prospecting in the parish of Hamilton in July last, and up to the end of the year had got down 50 feet through very hard basalt, which cost them £2 10s. per foot. They are very sanguine of success, as they believe that Wesley Company's deep lead passes through their land.

Messrs. Jno. Salmon and Company's Eureka has been worked out.

Messrs. Jno. Salmon and Company's Mount Doubtful, in parish of Arvid, has been well prospected, and they have succeeded in finding payable wash at a depth of 25 feet, which however they cannot pass through the sluice boxes, as they have not got water. The party have, however, constructed a large dam, so that directly rain comes they will be enabled to start washing.

Messrs. Flannery and Co., on Mr. H. Gordon's Run, No. 1 shaft is on an 80-acre block, which they have on royalty. They are down to a depth of 145 feet, most of which is through hard basalt. The lifting and lowering is done by an engine. The rock they have passed through is the hardest yet found in the district, and has already cost the Company over £700; after passing through the rock they passed through sedimentary formation, after going through which they tapped the water, which was in such quantities that it rose 26 feet in the engine shaft although the engine was kept going baling night and day. If the bottom dips in a similar way to the surface, as is usually indicated in river-beds, they will have to go about 30 feet more before they bottom, that is if I may be guided by the old workings of the Wesley Company's Mine, which is about half-a-mile distant. Nine men are employed working night and day in three shifts. Another 80-acre block also belonging to Mr. Gordon is held on the same terms by the same parties, and on it No. 2 shaft is being worked by six men in three shifts. They have got one engine and fixed poppet-heads at the shaft, by which everything is hoisted and lowered. In this shaft they passed through rock, and tapped the water at 65 feet, to cope with which a new pump (Deane's force and lift pump) has just arrived, which when working will, no doubt, be able to best the water, as it is capable of throwing 10,000 gallons per hour and lifting it 200 feet. No. 3 shaft is on another 80-acre block held by the same parties, on the same conditions as the previously mentioned portions, and adjoins the block on which No. 2 shaft is situated; it has been worked by six men in three shifts, who got down to a depth of 65 feet, but having struck water were obliged to suspend operations, pending the result of the working of the pump at No. 2 shaft, which, if it answers well, will in all probability drain both places from where it is to be fixed, so that they can continue sinking. The above blocks are believed to be on the old Wesley Company's deep lead, and expected to be very valuable property, so it is the intention of the gentlemen I have named to have it thoroughly tested. If this locality is once proved to contain payable tin (which it is extremely probable it will) it will be a good proof that a very large area in the neighbourhood is likely to be valuable and worth prospecting.

Messrs. Turnbull and Quinn have been prospecting on block 130 in parish of Arvid, and got two shafts down a depth of 25 and 66 feet respectively, but had to suspend operations owing to the cancellation of their lease.

Messrs. Witherden and Company are prospecting on block 50, about half a mile from where Mr. Flannery is working. No. 1 shaft they got down 70 feet through hard rock, but had to give up owing to excess of water. No. 2 is a tunnel which has been put into the side of the hill 85 feet (above an old one which is 280 feet) so as to avoid sinking, but they have had to cease working in it for a time. No. 3 shaft is down 80 feet, 33 of which was through rock and the rest easy sinking, but had to be abandoned through excess of water; a little tin was got out of the bottom of the shaft. No. 4 shaft is down 60 feet, of which 53 feet are through very hard rock; having got to sand and water they had to cease working, pending the erection of baling apparatus.

*Two-mile.*—Berry and Company are working on block 52, and down 65 feet through fairly easy sinking; the wash is good, and averages about 2 feet; the lead runs east and west from the end of the main shaft; six men and one boy work one shift per day; a horse works at a whip, by which means the wash is hoisted and the timber lowered; they do not, however, require much timber, as the workings are in solid country.

*Three-mile.*—Block 137, Messrs. Wesley and Company's prospecting shaft is down 204 feet, of which 34 feet have been put down in about three months through very hard basalt, with the exception of about 40 feet of alluvial; they have seven men employed, working in three shifts.

Messrs. Wesley and Pomroy put down two shafts on Reserve No. 1,223 at the junction of the Three-mile with Vegetable Creek, one shaft being down 15 feet and the other 24 feet, most of the sinking being through hard basalt; they were prevented from continuing work until the permission under the 28th section, for which they made application, has been granted.

Messrs. Carney and Company are also on the same Reserve, and sank 60 feet through hard basalt, but have suspended operations pending the fate of their application for the land under the 28th section.

*Six-mile Creek.*—Messrs. Hall Brothers' land is still being worked by Chinese.

*Kangaroo Flat.*—Messrs. Hall Brothers' "Louisa" mine, under the management of Mr. James Warrell, have sunk eight shafts through hard basalt during the year at an average depth of 90 feet. 1,600 feet of main driving has been done during the year, and 7,200 superficial feet have been blocked out; the lead averages 70 feet in width and the wash runs about 11 inches in depth; they have employed on an average per day 42 men during the year, and raised 143½ tons of ore.

*Gunston's blocks, 126-7.*—Very little has been done during the past year different to what I reported for 1882; as is also the case with regard to Messrs. Foley and Company and Messrs. Wheeler and Company.

*Messrs. Hall Brothers' "Grampians."*—There is nothing new to report with regard to the workings in this neighbourhood, which are being carried on the same as last year.

*The Rothschild.*—Messrs. John Moore and Company's property, managed by Mr. Thomas Chandler. Six parties of Chinese are working on various parts of the block and making fair wages, although much of what they are now washing has already been put through the sluice-boxes. The yield of tin ore for the year has been a little over 87½ tons.

The total yield of tin for the district has been about 2,509 tons, being (say) 1,149 tons from deep leads and 1,265 tons from the shallow workings, and about 95 tons from lode workings. The mines that yielded over the tons were the Wesley Company, 515 tons; Messrs. Moore and Company, 449 tons; Great Britain Company, 394 tons; the Vegetable Creek Tin-mining Company, 199 tons; Messrs. Cadell and Mitchell, 197 tons; Messrs. Irby and Company, 162 tons; and Messrs. Hall Brothers, 144 tons.

The district generally is dull to account for which there are several good reasons such as the fall in price of tin. Some of the largest mines have either worked out their holdings or have lessened hands for various reasons, and that many men who were prospecting have gone to work on the railway line in order to raise means with which to continue prospecting on their blocks pending the arrival of the leases. I am in great hopes that next year I will be in a position to state that many of the prospectors now working have struck payable tin and opened up more of the rich deposits which no doubt do exist, but have never yet been tested. We require capital well directed accompanied with enterprise to work this district, for it is only with those that the real wealth of this reserve for mining purposes will become known. We would gain a great deal of information if some of our Victorian cousins would come and show us how they would work country like this.

The interests of this, and I maintain the whole of the mining districts of the Colony, would be very much enhanced if the applicants for land could at a given date, say 14 days after the expiration of the same period for lodging objections, have a sure title to the land, such as would justify them in making arrangements in starting work, which could easily be done at the local offices. Were they well posted up with all cancellations and refusals, the wardens given large discretionary powers, and the surveyors being instructed to plot all new surveys on the maps at the various mining registrars' offices, and the parties applying for leases be given a substitute lease or permit pending the issue of the Departmental document, for there are many miners who take up land and would work at once if their title was sure, but through the great delay in issuing leases they become scattered and in many instances cannot be found.

The delay that occurs under the present Act in granting or refusing applications under the 28th section also hampers the progress of mining on reserves.

#### NEW ENGLAND DISTRICT—BOOROOK DIVISION.

(*J. P. Curran, Mining Registrar.*)

I HAVE the honor to furnish you with my annual report on the present state and future prospects of the mining industry in this district. I am sorry to say that I cannot speak very cheerfully as regards gold-mining. The great scarcity of water throughout the district has retarded mining operations to a great extent, and consequently the output of metal is much less than in previous years.

In my last report I informed you that it was my opinion that the Lunatic Reefs were likely to again come to the front, but I regret to say that my predictions have not been verified. Mr. Anderson, the mining manager, informs me that during the last eight months he has raised and crushed 55 tons of quartz for the very small yield of 44 ozs. of gold, which result is so discouraging that the Company which he represents have decided upon relinquishing work.

At Tooloom a little gold is being obtained by the few miners employed there, but all work has been partially suspended during the greater part of the year through the insufficiency of the water supply. The prospects of this part of the field are not very bright at present, but new discoveries have been made of late of small deposits of gold in some of the cement hills at the heads of the gullies that have been worked in former years. The gold is of a coarse shotty character, very much water-worn; the scarcity of water, however, is a great preventive to prospecting. No doubt if water were available some more important discoveries might be made in the cement formation, and in the drift beds underlying the basalt.

At the works of the Surface Hill Company, at Poverty Point, operations have been suspended nearly the whole of the year, in consequence of the supply of water for sluicing running short. The manager informs me that whilst water was available he succeeded in sluicing about 5,776 cubic yards of auriferous granite which yielded 55 ozs. of smelted gold; he had also sluiced about 1,075 cubic yards in another portion of the property, but owing to the water supply running out was unable to clean up, so that results could not be ascertained. This is the driest season that has been felt in the district for a number of years.

At Boorook silver mining is the premier industry, the Golden Age and Addison being the principal mines, both being the property of Messrs. Hall and Co. Respecting these mines I cannot do better than forward you the report kindly furnished me by the mining manager, Mr. T. G. Davey, a gentleman who has had considerable experience in mining and treating of silver ores, and to whose opinion as regards silver mining may be attached considerable value, as in these Colonies the industry is quite new. I append Mr. Davey's report:—

"The Mining Registrar of the Boorook division of New England Mining District,—

"In compliance with your request I have much pleasure in submitting the following brief report on the silver mines of this district under my supervision.

"During the past year operations, although to a limited extent until November, have been carried on uninterruptedly at the Golden Age claim, the property of Messrs. Hall and Co. The greater part of the

the work done up to that date was of a preparatory nature, pending the erection of a strong horse-whim and other appliances to cope with the great influx of water, and thus enable the proprietors to continue the sinking of Nos. 1 and 2 shafts. All being in readiness during the first week of November, sinking was resumed on the No. 1 shaft from the 150-foot drive; three shifts were engaged, and the work has since been carried on expeditiously and uninterruptedly night and day. For the first week or two the influx of water was so great as to cause some anxiety as to the efficiency of the appliances at hand to extract it; but from this time the quantity of water began to decrease, and at present we have fortunately only about 200 gallons per hour to contend with, and there is every reason to suppose that in the course of a few feet deeper we shall have none at all, as the ground is now very hard, and from all appearances, is the "wall," or "basin" which has prevented the water from draining into the deep gullies by which we are so closely surrounded. This, however, is merely an opinion, the correctness of which remains to be proved. Despite this difficulty and the hardness of the ground, 42 feet have been sunk, and from this date far greater progress will doubtless be made. The lode—composed of quartz, iron pyrites, blende, a little galena, together with a little shale—has averaged throughout the sinking, about 4 feet wide, of which 2½ feet may be estimated as good ore, samples of which have varied, as per assay, from 70 ozs. to 350 ozs. of silver per ton. The silver is for the most part contained in the iron pyrites, although several cwt. of quartz extracted a few days ago was literally covered with spots of flexible sulphide and native silver. The average bearing of the lode is N. 29° E., and the dip 55° to the W. Sinking has also been resumed in No. 2 shaft, where the ground is far more favourable than in the former. The lode here is 4 feet wide and averages about 60 ozs. of silver per ton, and will no doubt become richer in depth. It has the same bearing and dip as in No. 1 shaft. This shaft (No. 2) is sunk 72 feet south of No. 1, and its present depth is 160 feet. There are at present 20 men employed at this claim, and more hands will be put on as soon as a proper depth for driving is reached. There are now about 4,000 ozs. of silver at surface.

"At the Addison work has also been carried on throughout the year without interruption, and in November sinking was resumed from the 40-foot level. As there is little or no water to contend with in this mine great progress has been made, although the ground is excessively hard, and the shaft is now 85 feet deep. The lode, which at the 40-foot level was 10 feet wide, suddenly diminished in size to about 1 foot, and continued so for some 12 feet when it just as suddenly became wider, carrying several veins of rich silver ore, giving an average value to the whole (3½ feet wide at present) lode of 78 ozs. of silver per ton as per assay. This lode shows every indication of becoming richer in depth. Its bearing is due north and south, and the dip almost imperceptibly to the west. There are 7 men employed in this claim, also the property of the Messrs. Hall. There are about 2,000 ozs. of silver at surface.

"At the Reduction Works (Messrs. Hall) 400 tons of ore have been treated during the year, viz., 300 tons from the Golden Age mine and 100 tons from the Addison, which have yielded 15,792 ozs. of silver and 70 ozs. of fine gold. In consequence of the very low price paid by the Sydney Mint for this metal (silver) the above was all shipped to England, where a more advantageous market is available. The returns have not yet arrived, so that we are not in a position to say what it has realized. From the above data the average yield per ton will appear very low, but the reason is easily explained as follows:—From the ore treated throughout the year all the rich ore was picked, which amounted to several tons, for shipment to England; thus it will be well understood that the remainder was to a very great extent impoverished. The ores to be treated hereafter will show a far better average yield of silver per ton.

"It is already known to you that the appliances used for the treatment of these ores consist of 1 engine, 24-horse power, a battery of 10 head of stamps, 2 double-bed chlorinising furnaces (in all 52 feet long by 12 feet wide and 6 feet high, with 100 feet of flues), 4 Wheeler's pans, 1 Bordan, 2 separators (one 6 feet high by 6 feet in diameter, and the other 3 feet high by 3 feet in diameter), 2 large slime pits, masonwork, 1 large circular sieve, with feeder, &c., 1 retort, smelting furnace, laboratory and assay office, &c., &c. The total value of plant is £9,000. A patent pulverizer has been ordered from England and is daily expected to arrive. This will be a great acquisition as it is better adapted to dry crushing than the battery and will get through a greater quantity in less time.

"The results obtained from the treatment of the aforesaid ore have given every satisfaction, being quite equal to, and even surpassing, what was anticipated. Operations are suspended for a time until there is sufficient ore at surface in the mines to enable the proprietors to keep continually at work.

"In conclusion, I may mention that the work done so far in the district leads me to suppose that there are rich deposits of silver ore still to be found, and that its prospects are certainly very promising. Now that the difficulty of treating the ore has been overcome, it is to be hoped that more capital and greater energy will be forthcoming in order to prove the district and develop the various mines which, though they offer every encouragement, are now lying idle."

On the Silver King, the property of Dennis and Co., which has been idle the greater part of the year, operations have just been resumed. The shaft is down about 130 feet, and it is the intention of the proprietors to sink to a further depth of 100 feet. This mine is adjoining the northern boundary of the Golden Age. The cause of suspension of work was the influx of water, but since Messrs. Hall and Co. have commenced sinking the water has diminished considerably, and the proprietors are now taking advantage of the opportunity to sink to a greater depth. The lode at the bottom of the shaft is of a promising character, and if it continues to improve in quality as they proceed with the sinking there is no doubt this will be a valuable mine.

From gold-buyers' returns and other sources I learn that the amount of gold won this year is only 682 ozs., and 15,792 ozs. of silver, representing a total money value of £6,241 16s.

I have issued during the year 94 miners' rights, 9 business licenses, and 1 mineral lease.

#### NEW ENGLAND DISTRICT—WILSON'S DOWNFALL DIVISION.

(*W. Hicks, Mining Registrar.*)

I HAVE the honor to submit my annual report for the year ending December 31st, 1883, for the Wilson's Downfall Division of the New England Mining District.

I regret to have to say that our tin-mining industry is still on the decrease, with no material change in mining operations since my report of last year. I find that the average earnings of miners on this field during the year is very little over £1 per week per man. Although there were some miners who made very good wages, there were others who did not earn sufficient to pay for their board.

As I have mentioned in my previous reports, the tin-ore on this field is found in patches in the banks of the creeks without having any apparent run or lead, which causes the miners to shift about many times during the year from one claim to another, thus preventing me from giving a detailed account of the workings, the only exception to this being the Lady Lisgar claim, the property of R. W. Robertson, on the Wylie Creek, under the management of Mr. D. G. Smith, and worked on tribute by eighteen Chinese during the year, who won 41 tons of tin ore of the value of £2,050 on the ground. The workings on this mine are from 18 to 20 feet deep, 100 feet wide, with depth of wash 1 to 6 inches, which is found in drift among granite boulders. I may also mention that the Noble Tin-mining Company have erected Tangye's pump on their ground at the head of Ruby Creek, near the Great Dividing Range which separates this Colony from Queensland. It is worked by a 10-horse-power engine, raising two sluice heads of water 60 feet, which they carry back in fluming boxes about 500 yards for repeated use.

*Ground sluicing.*—Twenty Chinese worked this ground on tribute for six months during the year, and won an average yield of 1 ton of tin ore per week. The workings on this mine are all surface from the grass to about 3 feet, with uneven prospects, some places being very good, while others have scarcely any.

Adjoining this claim in the Colony of Queensland this Company have been prospecting for lodes or reefs right on the border of this Colony (N.S.W.), and have put down a shaft to a depth of 60 feet on veins of tin stone, with occasional good bunches of tin ore. There has been scarcely anything done in this division during the year, prospecting or working lodes or reefs. Messrs. Funnell & Goldie, who I mentioned in my last report of having found veins of tin stone to a depth of 16 feet at the head of Herding-yard Creek on their mineral lease application No. 51, have not been at work during the year. On New Zealand Gully a man named Allison has erected a horizontal windmill, for the purpose of raising water 7 feet for ground sluicing, but I do not think it will answer the purpose. The wheel, which is erected on a mast 45 feet high, is 36 feet in diameter, having ten arms, each having a self-adjusting double-canvas sail 4 feet square. The wheel makes three revolutions per minute, and only throws 12 gallons of water in that time. The mode of raising the water is by a lever about 14 feet long, with a bucket on one end, which holds 4 gallons of water, with a fluming to its centre, where it discharges the water into boxes, which carry it to where required; the lever is worked by a connecting bar from its centre to a pendulum which is connected to a crank on the wheel. Allison states he is going to make a much larger mill of the same sort, which he expects will answer his purpose. About twenty Chinese and five Europeans have been at work during the year on Maryland Creek, near its junction with Wylie Creek, about 12 miles north-east of Amosfield, on ground which has not been prospected before, and have made fair wages. One man named Hamilton working at this place is now getting very good tin, going into the eastern bank of the creek, and getting deeper as he is going. His claim is now 14 feet deep, with about 10 inches of good wash-dirt. His present workings are 50 yards from the creek. The average number of miners on this tin-field for 1883 is 300 Chinese and eighty Europeans, being a decrease of that of last year of 100 of the former, and forty of the latter. This decrease, to a certain extent, may be accounted for by so much public works going on at Tenterfield, where men can obtain better wages than tin-mining. The quantity of tin ore raised during the year is 450 tons, of the value of £22,500 on the ground, being a decrease of the ore won on that of the previous year of 165 tons, and of its value £11,940.

During the year I sold one miner's right, seven business licenses, and ninety-nine mineral licenses, and received three applications for mineral leases.

In conclusion, I would beg to remark that it seems to me to be a very difficult matter to prosecute miners under the Mining Act for mining without a license on Crown Lands, as there seems to be no section under same directly bearing on the subject, except on proclaimed gold-fields.

#### NEW ENGLAND DISTRICT—DALMORTON DIVISION.

(*W. T. Poole, Mining Registrar.*)

In submitting my report for the past year, I have the honor to state that mining matters generally have been very dull. Several parties of prospectors have been out during the year, but have met with little or no success up to the present time.

At the Mann River two men are engaged prospecting a quartz-reef. The specimens I have seen are heavily charged with coarse gold, and I am informed the men are able to make a living by washing the casing, and crushing the best of the specimens.

At Cunglebung two men are fossicking in the old ground at Wellington Creek. About 30 ozs. of gold have been won in this portion of my division.

At Chambigne, O.B.X. Creek, two men are engaged prospecting an abandoned reef, and report that gold shows freely in the stone. I believe 2 tons of stone have been sent to Sydney for assay.

At Jackass and Chandler's Creek two or three diggers have been fossicking for years, and appear contented, although they say they can't get any gold.

At New Zealand Gully a few patches have been got, but nothing is reported of any extent. A party of three men are now prospecting the locality.

At Dalmorton the Tower Hill Company have been engaged driving their tunnel. They have driven about 100 feet during the year. The first 60 feet was through very hard country, and little progress was made. The last 40 feet has been along the course of a small vein, 2 or 3 inches wide; and although the rock has been very hard the work done has been more satisfactory.

The total length of the tunnel is 583 feet 6 inches; the depth from the surface is 165 feet.

The distance still required to be driven before cutting the Tower Hill Reef (the reef for which the tunnel was started) is nearly 200 feet, but I think it probable gold would be got at 150 feet, as the tunnel would intersect a reef in No. 1 prospecting area, from which gold as high as 4 ozs. to the ton was obtained.

I believe it is the intention of the present Company to abandon the mine, and as I think it has not had a fair trial I enclose herewith a plan of the Tower Hill property (25 acres), showing the course of the reefs where the principal gold was obtained, and the course of the tunnel in regard thereto.

A brief *resumé* of the work performed by the different owners of this mine may be of interest. As stated by the Inspector of Mines in his report for the year 1882, 2,036 tons 11 cwt. of quartz were crushed from this mine, yielding 2,192 ozs. 10 dwts. 10 grs. gold, or over 1 oz. per ton. This was obtained prior to September, 1876. Mr. Eddy, who was then manager for the Tower Hill Company, considered it advisable, on account of the great body of water he had to contend with, to drive a tunnel to cut the Tower Hill Reef at a depth of 250 feet.

To

To cut the reef at this depth required a tunnel to be driven 800 feet, and as this necessitated a large outlay, a local Company, under the name of the Clarence Pioneer Quartz-mining Company, was formed, and the tunnel was commenced in March, 1877.

Mr. Eddy decided to follow a small vein (known as Webb's Reef) as far as its course would allow, as he considered it would be much quicker and cheaper than going through cross country; and as it appeared probable at the time that he would be able to carry this vein with him 500 or 600 feet before diverging into cross country, I think he may be excused if he made any error in his choice of a site. This vein, valuable as it was in expediting the work, was the cause of the collapse of the Company.

After driving about 100 feet, gold was found in breaking down the vein, and the main work of the tunnel was stopped to stope out a lot of worthless rubbish. 100 tons yielded only  $\frac{1}{2}$  dwt. per ton. Whether the fault must be attributed to the directors or the manager is hard to say. One thing is certain the Company collapsed.

The lessee of the ground then drove the tunnel to 380 feet at his own expense (again under the management of Mr. Eddy). At this point a fault occurred, and a cross-cut was driven 24 feet to pick up the vein without success, and the work was again abandoned. Now I consider this cross-cut was another mistake, as the money expended on it would have continued the tunnel so many feet nearer the Tower Hill Reef, and sooner or later the cross country would have to be tackled.

In the early part of 1880 another Company made arrangements with the lessee, and under the management of Mr. James Chalmers work was again commenced. Mr. Chalmers decided on driving straight for the old workings from the end of the tunnel, and for this purpose spent two or three weeks cutting off angles in the tunnel to get a straight run. Subsequently, however, he decided to continue the cross-cut, and after driving this to 41 feet, gradually diverged to the right, in the hope of meeting a vein that would carry him to the reef. For the next 150 feet very little change occurred, the driving being all through cross country and very hard boring, but, as a rule, good shooting. At this point a vein 2 or 3 inches wide was met with, encased in well-defined walls, and heading straight for the Tower Hill mine. Following the course of this vein the rock was much easier to work, and of course much better progress was made. After driving along this vein 40 feet the work was stopped, and, as I stated before, I believe it is the intention of the Company to abandon the mine.

A box of stone was sent to Sydney and tested, the yield being at the rate of 6 dwts. per ton, but as the vein from which it was sent is only one of many spurs trending in the direction of the Tower Hill Reef, and to all appearance junctioning with it at the Tower Hill Company's mine, I fail to see why the absence of payable gold in this particular vein should cause the stoppage of the mine, as the reef for which the tunnel was started is still nearly 200 feet from the face of the tunnel. As a matter of fact nothing more is known of the Tower Hill Reef to-day than there was the day the tunnel was started.

At Quart-pot Creek the Union Gold-mining Company have driven their deep shaft about 16 feet to the east at the 120-foot level, and cut the Union Reef at its junction with another vein.

The reef was about 3 feet 6 inches wide at the junction, but I believe on following it east and west it pinched out. Very little gold could be seen in the stone, but occasionally good prospects could be obtained by burning and crushing the stone. I do not expect the stone from this level to exceed 5 dwts. per ton. About 30 tons are now at grass. From the surface to 20 feet 40 tons have been raised. This should yield at the least 1 oz. per ton.

At the Sir Hercules Reef, owned by the same Company, they have about 25 tons at grass, which is expected to yield 1 oz. per ton. They have a well-defined reef, from 9 inches to 15 inches in thickness. No work of any consequence has been done to develop the mine. The average number of men employed by the Company has been five.

In connection with this Company a 12-stamper battery has been erected, a dam made, and a race to connect the dam with Quart-pot Creek partly cut, say 200 yards—the total distance required to be cut about 500 yards.

As the watershed on which the dam is made is of very limited area it will require very heavy rains to give a supply of water for crushing, unless the race is completed.

Four tons from the Union Reef have been put through the battery for a yield of  $11\frac{1}{2}$  dwts. per ton, and 26 cwt. from the Sir Hercules Reef for a yield of 38 dwts., or 1 oz. 9 dwts. 6 grs. per ton.

As the manager of the Company has not responded to my circular I am unable to give the value of the machinery, or any account of the pyrites treated. I have taken the opinion of several as to the value of the machinery, and have returned it accordingly. Work has been stopped for the last three weeks, and as the services of the mining-manager have been dispensed with, it is not likely work will be resumed until a new manager has been appointed.

The Lone Star Company have made arrangements to take out a trial crushing of 30 or 40 tons.

I have issued during the year sixteen miners' rights and four business licenses.

#### NEW ENGLAND DISTRICT—SOLFERINO DIVISION.

(R. Wilkinson, Mining Registrar.)

I HAVE the honor to herewith furnish my report for past year 1883, which is brief and devoid of much interest. Mining in my division has not improved much this last twelve months, nothing of a substantial nature having been found. In quartz there were two mines at work in early part of year, but one of these ceased operations for a time at least; the other one, No. 4 North Garibaldi, has been a little more successful than previously, but even now has not paid itself for all working expenses; however, this party sent several parcels of stone to Mint for crushing; the reason for so doing is because the local battery has been idle so long that it takes too much labour to put it in working order; and then again, this reef is so patchy that they obtain almost all gold in small quantity of stone, which they find to advantage to send to Mint straight away, as it is generally very rich, what there is of it, as per returns below, and they then get all gold properly extracted. Their returns from two lots of specimens treated at Mint, viz.:—200 lbs. and 350 lbs. yielded respectively 33 ozs. and 87 ozs. 10 dwts., valued at some £425. They have now another parcel shipped to Sydney of some 200 lbs., which they hope to give them a return of 40 ozs. Those men also forwarded some 120 lbs. tailings, saved from a previous crushing at their own battery, which yielded 2 ozs. 3 dwts. of gold.

The alluvial miners have been more successful in early part of year than usual, having had a good supply of water, although latterly they mostly have suffered through dry weather.

At

At Cangi there are still several old diggers at work in creek, who are just making a bare living in dry season, but when anything like a fair supply of water is to hand they obtain from 10 to 12 dwts. per man per week.

As far as I have been able to ascertain, there has been won in my division during past year 181 ozs. 13 dwts. 18 grs. alluvial, and 133 ozs. 10 dwts. reef gold, valued respectively at £662 2s. 4d. and £460.

Thirty-seven miners' rights and one business license were issued during year, and one application for gold lease.

NEW ENGLAND DISTRICT—TENTERFIELD DIVISION.

(*J. H. Tompson, Mining Registrar.*)

I HAVE made enquiries throughout this division, and can find that no machinery is at present, or has been in use, during the past twelve months. There are a few Europeans employed in searching for alluvial gold, and what has been obtained is of an inferior quality, averaging about £2 18s. 6d. per ounce. Also, four persons prospecting for tin, but as yet have made no return of what, if any, has been obtained.

NEW ENGLAND DISTRICT—LISMORE DIVISION.

(*W. Carson, Mining Registrar.*)

REFERRING to your letter of 7th November last, I have the honor to inform you that no mining operations have been going on in the Lismore division of the New England and Clarence Mining District during the year 1883, but I may state that some months ago, under a mineral license, a prospector struck a seam of coal at Bungawalbyn Creek, about 25 miles from Lismore, but beyond the land being taken up as Mineral C. P.'s, under the 19th section of the Crown Lands Alienation Act, I am informed nothing further has been done.

I have only issued three miners' rights during the year, and those were to persons travelling through the district, who, I believe, intended to devote a portion of their time to prospecting, but as I have not heard from them I presume their efforts were not successful.

CLARENCE AND RICHMOND DISTRICT—GRAFTON, NANA CREEK, AND DALMORTON DIVISIONS.

(*Mr. A. L. McDougall, P.M., Warden.*)

IN forwarding my Annual Report for the Clarence and Richmond Mining District I have the honor to state that I visited the Nana Creek at the end of November last, and the Dalmorton and Chambenc Reefs during the middle of last month.

With reference to the stone crushed and gold obtained at Nana Creek during the year 1883, I find that 410 tons 5 cwt. of stone was crushed at the Dargue Battery there, yielding 553 ozs. of gold, and at the Lady Matilda Battery 35 tons yielding 22 ozs. 7 dwts. from the Matilda Reef, and 25 tons from the Lady Mary Reef at Tallewadjah Creek, which only gave 7 dwts. to the ton, I am informed.

I only found men working at the Matilda Prospecting Claim, and at the Hidden Treasure and Nymboy Prospecting Claims. The Homeward Bound resumed work on the 4th ult., and the Illaloe is to recommence work again early this month.

I find from the Mining Registrars' accounts that sixty-four miners' rights have been issued at Nana Creek from the 1st January last to 1st December, and at Grafton for last year eighty-two miners' rights, three mineral licenses, two business licenses, and that four claims were registered, and at Dalmorton fourteen miners' rights and four business licenses have been issued.

The Mining Registrar at Dalmorton informs me that 140 ozs. of alluvial gold has been obtained, principally from the Manna River during the year, and 4 ozs. 4 dwts. from quartz crushed at Dalmorton. A large sum of money has been spent by the Tower Hill Mining Company at Dalmorton, and a tunnel 780 feet in length, driven in without finding a payable reef, and the work has been stopped a month since.

At the Union Company's mine, 5 miles from Dalmorton, a twelve-stamp battery has been erected and a dam made, capable of holding a good supply of water. About 200 yards from the reef five shafts have been put down from 25 feet to 130 feet; width of reef, 2 feet 2½ inches.

Eleven tons of stone have been crushed from the Sir Hercules Reef, about a mile distant from the Union Reef, which yielded 1 oz. 18 dwts. to the ton.

At the Star of Hope reef, about 6 miles from Chambenc Station, and 24 miles from Grafton, I found two men at work; 2 tons of stone had been forwarded to the Mint to be crushed, but no return of it had been received on the 15th ult.

The Lady Matilda Battery has just been removed from Nana Creek to the Hidden Treasure Prospecting Claim, about 7 miles west of Nana Creek, and ought soon be at work on the stone raised.

No fresh discovery of any importance has been made during the year in this mining district.

The chromic of iron and copper mineral selections on the Gordon Brook Run are virtually abandoned, as also the gold lease applications at Woogoolga and many of those at Nana Creek and Dalmorton.

CLARENCE AND RICHMOND DISTRICT—NANA CREEK DIVISION.

(*George Geddes, Mining Registrar.*)

I HAVE the honor to own receipt of your advice of the 7th instant, covering papers for the Annual Report, &c., and in reply beg to state, that having only been recently appointed by the Warden to the office of Mining Registrar, I am far from being in a position to give the information required, nevertheless I will endeavour to supply some statistics.

There are two batteries on the field, both 15-stampers, only ten used—one 14-horse power and the other 15-horse power. Dargue and Co. own the battery with the engine 14-h.p., and the Nana Creek Quartz-crushing Company, recently formed, the 15-h.p. one. Should a sufficiency of stone be forthcoming then the other five would be erected.

From Mr. Joseph Dargue, the manager, I can obtain an account of what crushings have taken place at his battery, but he can furnish me with no particulars of assay, value, &c., and, as regards the crushings at

at the other battery during the former part of the year, I can gain no information whatever, all the records being removed by the former proprietors, the whole of the plant having passed into the hands of the Nana Creek Quartz-crushing Company, who have appointed a manager from Clunes, Victoria, who reached here on the 17th instant, and he has since put men on to work, the Company having decided to remove the battery to another and a more central site.

Prior to this movement I can safely assert there were not more than six *bona fide* working miners on the field, and the cause of this is, I believe, mainly traceable to the delay in the granting the leases long since applied for (nearly all the applicants having left the field), and further, the issue of orders for the suspension of work in a number of claims. The majority of the reasons assigned by the parties applying for such suspension, such as getting machinery, &c., I might, I think, say with truth, were simply frivolous pretexts, as the work promised to be done and machinery got, in most cases has never been carried out, in fact, from the outset, I firmly believe from what information I can gather it was never designed by any of them they should be.

There are only two shafts down of any great depth, say, over 100 feet, viz., the Illabo, about 107 feet, and the Lady Matilda about 105 feet. In the latter is a drive west 10 feet and east about 20 feet, with an average thickness of stone about 18 inches. There is another shaft on the claim sunk to the depth of about 100 feet, but I am unable to ascertain the thickness of the reef in that shaft, no levels having been taken. The stone at the depth stated showed gold, but not in a quantity to be deemed payable.

The following are the only claims being worked at the present time, and the number of men employed thereon, viz. :—The Waratah, one man ; Eureka, two men ; Nymboi, two men ; Lady Matilda, on tribute two men.

The lease for the No. 1 Hidden Treasure has been executed and registered, and the deed handed over by me (receipt taken) to the owners thereof.

I enclose you memo. of crushings up to the present time at Messrs. J. Dargue and Co.'s battery.

#### CLARENCE AND RICHMOND DISTRICT—GRAFTON DIVISIONS.

(*W. Clarke, Mining Registrar.*)

THE only mining in my division during the past year was at Chambigne Creek and the Mann River, and the Warden in charge at this district has lately visited these localities and reported thereon.

I issued 82 miners' rights, 3 mineral licenses, and 2 business licenses—most of which were purchased by miners in the Nana Creek Division—and registered the following claims :—One water-right at Mann River ; one river and creek claim at Mann River ; two extended quartz-claims at Chambigne Creek.

The return of gold forwarded, which was obtained from the various banks, comprises all the gold won in the Nana Creek Division.

#### ALBERT DISTRICT—SILVERTON AND THACKARINGA DIVISIONS.

(*Mr. Warden Gower, P.M., Wilcannia.*)

I HAVE the honor to send you a report on the Barrier Silver Mines of Silvertown and Thackaringa.

The information contained in my report is not from personal inspection but from notes kindly supplied me by gentlemen of mining experience, who hold interests in the mines and have resided on the field since it was first discovered in the latter end of 1882.

The Thackaringa Silver and Galena Mines are situated about 5 miles from the South Australian Border and 190 miles from Terowie, northerly.

No actual mining of any great extent has been done on these mines, as the large deposits of ore on the surface do not at present demand very skilled work.

The Gipsy Girl Mine has three shafts of 50 feet in depth, from which and surface explorations about 500 tons of ore have been despatched *via* Terowie, S.A., to the English market, and sold at from £16 to £18 per ton.

At present only nine men are working on this 40-acre block applied for under mineral lease.

700 tons of ore have been raised and sent to the same market from the Pioneer, an adjoining mine.

80 tons of first class ore have been raised from a nice rich lode disclosed in a shaft sunk 70 feet on the Gipsy Boy Mine.

An Adelaide Company own the Hercules Mine, upon which three shafts have been sunk, the deepest being 80 feet.

A perpendicular shaft is being sunk to cut the lode at 150 feet. Water was struck at 80 feet, but not in great quantities. A large quantity of ore has been raised and sent from the mine.

Adjoining this mine is the Goat Hill Claim, of Hillyers Bros., on which more legitimate mining operations have been performed than on any other mine at Thackaringa. Five shafts, varying in depth from 30 feet to 80 feet (water level), have been sunk, and the ore appears to be richer at the latter depth than on the surface. The width of the lode is about 2 feet at that level ; and 200 tons of ore have been sent to England by way of Terowie.

An underlay shaft of 140 feet has been sunk on the Homeward Bound Mine, showing good patches of ore and about 50 tons ore lying on the surface.

A fair lode has been discovered in two shafts of 50 feet deep on the Dan O'Connell.

The Comstock and Bonanza have each three shafts sunk, varying in depths of from 20 to 60 feet.

The Galena Lodes discovered in the above-mentioned mines average a width of 12 inches ; occasionally a bulge occurs when they widen out to 5 feet ; and the ore raised varies in value of from £8 to £20 per ton.

A few months ago (last December) about 130 men were employed, but what with the want of water and feed for cattle, drays have been unable to work between the mines and Terowie, that I do not believe more than forty men are at present working.

Prospecting is completely stopped through want of water. I may mention that drinking water is obtained from a S.A. Government tank, 22 miles from the mines, and sold at £2 for 200 gallons.

The recently surveyed mining township of Silverton, where a Court of Petty Sessions and Warden's Court are established, is situated 17 miles from the Thackaringa Mines in a northerly direction, and in the centre of all the mining properties and principal places of business.

A population of about 500 people are located here.

Within the past six months some very good finds of rich ore have been discovered about 9 miles in a north-easterly direction from Silverton, and is called Leadville, which from the reports given me, should the lodes discovered in this locality be as rich in silver as the inhabitants represent and as permanent, will be a large and thriving township; but I am inclined to believe the reports are slightly exaggerated and the miners a little too sanguine.

Messrs. Sinclair and Horne have sunk a shaft 12 feet deep on a lode of 2 feet wide containing horn silver assaying from 100 ounces to 10,000 ounces of silver.

Good galena ore has also been discovered on this property, containing from 40 to 70 per cent. of lead and 50 to 100 ounces of silver to the ton of ore.

A claim known as the Bobby Burns, on which Messrs. Kitto and Co. have sunk a shaft 30 feet on a lode assaying for both silver and lead of 2 feet wide, from 60 ounces to 14,000 ounces of silver to the ton. In a shaft 20 feet deep, adjoining this mine, a galena lode 2 feet wide has been found.

Chapple and Hartigan in a shaft 30 feet deep have a lode of 2 feet wide of fair quality with several small leaders of horn silver.

Meech's Big Blow, 3 miles south-east of above mines, shows a large quantity of ore on the surface.

No sinking has been done, but about 20 or 30 tons of payable ore has been obtained from a surface blow of the lode of a width of 3 feet.

No work is being done at present as an injunction has been granted pending a decision in the Supreme Court.

Assays from this lode have been made ranging from 60 ozs. to 600 ozs. of silver to the ton.

The galena ore here is also very good.

Adjoining southerly is Crisp Bros. Hen and Chickens claim, said to have ore in it assaying into thousands of ounces of silver to the ton. Some 20 tons have been despatched of a good quality.

A large number of mineral leases have been applied for in this neighbourhood.

About 6 miles north-east another property is owned by the same party and is known as the Lubra, and is considered a very valuable piece of land.

One and a half miles north-west Messrs. Nickyl and Anderson have sunk 10 feet on a lode showing rich in silver, from which they have raised about 6 tons of ore. About 2 miles south-west from here Messrs. Collins and Hawson have raised half a ton of ore, reported to be worth £2,500, from a leader, an assay from which has gone over 18,000 ozs., and energetic prospecting is being carried on for miles northerly and several rich small leaders have been discovered.

Prospecting here is very difficult on account of want of water for drinking purposes, hence the men cannot travel very far from a soakage on a small acacia creek.

Near the soakage is the Pluck-up Mine, discovered by Grubnau Bros. Here very rich ore was found upon which a vertical shaft is being sunk to cut the lode.

A quantity of payable ore has been found westerly on the Black Prince claim, which is considered one of the most important discoveries on the field.

White Brothers and Morphett are the lucky prospectors. In this locality are also situated the Western Grazier, Consolation, White Princess, and other equally rich mines.

About 20 miles north-east of Leadville some large and valuable deposits of ore have been found at the Round Hill and the Broken Hill, and but very little work has been done to test the discoveries as they are situated so far from any water.

An excellent assay from a piece of ore discovered on the lease held by Messrs. Ferrett and Dawes has been obtained, but the prospectors had to leave after sinking 8 feet, for the same cause.

Mr. W. Thomas, an assayer well known in Adelaide, and now residing at Silverton, has very kindly given me a list of the results of assays from some of the principal claims in the district, which I attach at the end of this report.

I would not like to state my opinion of the future of this portion of the Wilcannia District, where so many apparently rich lodes of silver are being daily found.

As no work of any nature to test the lodes has yet been done, but that the miners have a very high opinion of the lodes, is shown by the large area of land applied for under mineral lease regulations alone at the Silverton Warden's office, during the twelve months ending the 31st December, 1883, being 5,180 acres, and a revenue of £2,156 has been collected.

I regret very much that I have been unable to visit all the lodes mentioned in my report, so that I could state positively my opinion of them; but I am led to believe that after heavy rain has fallen, miners and Victorian and Adelaide speculators who hold the various leases will start to work and properly test the value of them.

Silverton is situated about 200 miles west of Wilcannia (my head quarters) and I could not possibly spare the time to inspect the lodes myself; and I would recommend that a resident Warden and P. M. be appointed to meet the requirements of such a large and increasing population, and from whom true and faithful reports could be obtained, by personal inspection, of the future of such a large and important and apparently rich mining field.

In conclusion I may state that all trade is done with only South Australia, and the quickest route from Sydney to Silverton is *via* Adelaide and Terowie.

List of Assays from some of the principal Claims situated at Leadville and Thackaringa :—

## ALBERT DISTRICT—MILPARINKA DIVISION.

(Mr. Warden King, P.M., Milparinka.)

I HAVE the honor to hand you herewith my annual report on the Mount Browne Division of the Albert gold-field for the year 1883.

During the early part of the year the field languished for want of water, but the welcome rains which fell in the months of February, May, and October, enabled the miners to wash up the greater portion of the dirt they had stacked and registered, and 2,450 ozs. of gold (alluvial) were sent away by escort. There still remains, however, several heaps of wash-dirt awaiting another fall of rain. On a reference to my meteorological report, appended hereto, it will be seen that the total rainfall for the year was only 6.34 points.

The granite diggings are now nearly abandoned, with the exception of a few puddling machines and fossickers, but it is considered there will be twelve months work for puddling machines, as a large portion of the surface of the granite flat will pay for puddling, the yield being about 1 dwt. to the ton, and the owners of the puddling machines have purchased most of the heaps of stacked wash-dirt. Unless therefore new ground is discovered there does not seem to be any probability of a return of the population to this portion of the field.

At Good Friday two parties have been at work, but with very small results. A shaft has been put down by Slavin to a depth of 20 feet through slate, in the hope of finding a deep lead or water, but with no results as yet. Could water be obtained here the surface would pay for puddling.

Mount Browne still supports a few miners. New ground was opened at the Four Mile, and four claims yielded gold from the surface to a depth of 4 feet. M'Cullagh obtained 35 ozs. in a month, Kerr and Russell got 40 ozs., and others smaller quantities. At the One Mile, Joseph Pars broke through the cement which had been considered the bottom and struck a lead which yielded 1½ dwt. to the dish at a depth of 10 feet; several shafts have been put down to a depth of 80 feet in some instances, and three have struck gold, but it is still questionable whether this will open out a deep lead. On the Mount Browne Creek a shaft has been put down to a depth of 200 feet, and a drive of 61 feet in a westerly direction, the colour of gold having been found, and also signs of water. It is intended to proceed further with this work. I think it is highly probable water will be found here.

At the quartz-reefs on Wittabrinna Creek, the Wittabrinna Company got their machinery to work in the month of June, and trial crushings were made for several claims, the charge for the same being at the rate of £2 per ton, and the following results show that could the crushing be done at a lower rate many of the claims could be profitably worked, but the scarcity of water is a difficulty that has to be overcome. The Mount Browne Company's machinery is on the ground, but no steps have been taken to erect it. The only claims now at work are the Wittabrinna and the Wittabrinna South, all the others being under suspension principally on account of the scarcity of water.

The following results have been obtained at the trial crushings :—

On the Pioneer Reef, 297 tons averaged	12 dwts. 2 grs. per ton.
„ Phoenix „ 41 „ „	14 „ 0 „ „
„ Rosemont „ 25 „ „	11 „ 3 „ „
„ Elizabeth „ 6½ „ „	1 oz. nearly „

and thus 230 ozs. of retorted gold have been obtained.

Escorts were despatched from here as follows :—

January.....	550 ozs. alluvial gold.
May .....	986 „ „ „
November.....	614 „ „ „
	230 „ quartz „
	2,680 „

The water supply at Milparinka has been ample for the requirements of the people during the last year; the water-hole having filled up in February and again in May and October has not been dry, and there is now sufficient for domestic purposes to the end of February, when we may hope for a further supply. The well has not been called into requisition during the year; a fine tank and troughs have now been completed in connection with the well. On the 20th October a land sale was held at Milparinka, and forty town allotments averaged £8 17s. 8d. The population of Milparinka has slightly increased, and a brisk business is done principally with the neighbouring stations, and this township may now be considered as permanently established as its vitality is due more to the surrounding stations than the gold-fields

At

At Tibooburra the population has considerably decreased, owing in a great measure to a want of a permanent water supply, the well that was being put down at the public expense having turned out a failure at a depth of 170 feet, and the miners have nearly all abandoned this portion of the field.

There have been but few cases of sickness or destitution. Fever until the last two months has been unknown, but there have been two fatal cases lately, and two cases which have happily been overcome by prompt measures; all these have originated on the stations.

The Chinese gardeners have been very successful in their operations, and have kept the residents supplied with vegetables at a reasonable rate, and to this may in a great measure be attributed the healthy state of the field. They have successfully proved that potatoes can be grown here, and next year they will have peaches, pears, and grapes in bearing.

EXTRACT from meteorological journal kept at Milparinka by C. M'A. King during the year 1883:--

#### ALBERT DISTRICT—MOUNT BROWNE DIVISION.

(E. C. King, Mining Registrar.)

I HAVE the honor to hand you my report on the Mount Browne division of the Albert Gold-mining District for the year 1883.

During the past year there have been 517 miners' rights and 97 business licenses issued which show a decrease of 363 miners' rights and 60 business licenses on the previous year, which is attributable to the number of miners who have left the field chiefly on account of there being no water to enable them to wash the dirt which is not suited for dry blowing.

There has been but little work done on this field and no fresh discovery of very great importance has been made.

At Mount Browne a party of business men and miners formed a company and prospected for a deep lead. They put down a shaft 200 feet and bottomed on slate with a good shew of wash-dirt which contained only a few fine colours to the tin-dish. They then drove 61 feet with but little better result and the shaft was abandoned, but the miners who held a share in it have gone on with the work, hoping to strike either gold or water; the latter would be almost as valuable as the former.

At the One-mile, Mount Browne, Joseph Pars and Joyce struck what is considered a lead at a depth of from 10 to 14 feet, the yield being  $1\frac{1}{2}$  dwt. to a tin-dish, and a number of claims have been taken up all round them, and some have bottomed with no results.

At Warratta Creek (reefs) there has been a twelve stamper-head battery erected with pumping gear on the Wittabrinna Company's ground and crushing has been done for the public, but the results were very much below the estimate, and many of the claims have been thrown up as the yield was not sufficient to pay for the crushing alone, for which £2 per ton is charged. But it is thought that below the water level the results will prove good, and the Wittabrinna Company are now sinking in order to test it. The Mount Browne Gold-mining and Quartz-crushing Company have a plant of quartz-crushing machinery on their claim but no work has been done and the machine has not been erected.

At Tibooburra (granite) and its surroundings there has been no work done with the exception of two washings, one in February and one in November. Some of the dirt yielded good results, but the water collected did not last sufficient time to allow the miners to wash all the dirt they have had stacked for the last three years.

There have been but few dams and puddling machines constructed since my last report.

The principal mode of obtaining the gold from the clay is by dry blowing, but this process is far from satisfactory as it has been proved that nearly one half the gold is lost on account of there being no means of pounding up all the clay, and lumps are thrown away often containing gold.

The want of water all over this field has retarded the progress of mining for the past year.

#### COBAR DISTRICT—COBAR DIVISION.

(Mr. Warden Tompson, P.M., Cobar.)

I HAVE the honor to submit my annual report on the Cobar Mining District for the year 1883.

With regard to gold-mining there has been no work done during the past twelve months.

The four gold-mining leases held by Messrs. Elworthy, Ramsay, Hill, and Clark at the Tindayrey Quartz-reef, 20 miles north from Cobar, in consequence of the insufficient supply of water the necessary mining operations could not be carried out, and therefore permission to suspend work for a period of six months was granted to the les-ees.

The country in parts of this district is of an auriferous nature, being of a slate and granite formation, with numerous quartz-reefs, and no doubt when it is prospected payable gold will, as I have previously stated, be found on the West Bogan and Mulga blocks, as there are very good indications in these parts.

During the year forty-seven miners' rights have been issued at Cobar and four business licenses.

Copper.

*Copper.*

With regard to copper there are now in the Cobar Mining District five copper-mines in full work, which last year raised 32,913 tons of ore, yielding 4,765 tons fine copper of the value of £286,819. There are also six prospecting mines. Particulars of all are hereunder given, viz:—

*Mines being worked.*

(1st.) The Great Cobar Mine, situated in the county of Robinson, parish of Cobar, and town of Cobar. The town has a population of about 3,000.

At the Cobar Mine there are 870 men and boys regularly employed, which the manager states are not sufficient, and the Company have been advertising in the newspapers in all the Australian Colonies for miners and other men, and are prepared to take on as many as they can obtain, and some have arrived from the other Colonies.

The machinery at the mine consists of steam and compressed air-machines, three 40-horse-power engines, 2 stone-breakers, 1 cracker, 1 jigger, 2 Tangye pumps, three 8-horse engines, Chilian mill, and 2 pug-mills, 2 air-compressors, air-winch, and 8 rock drills, turning-lathes, boring and shaping machines, a tramway of 11 miles (10½ miles already laid down), 6 locomotives and 84 trucks; four of the locomotives are imported and the other two manufactured in the Colony.

The value of the plant is £85,000. The quantity of ore raised from the Cobar Mine last year was 19,000 tons, being an increase of 5,213 tons on the previous year.

The quantity of ore smelted at the mine was 18,096 tons, which produced 2,401 tons fine copper of the value of £158,464. This also shows an increase of 6,394 tons ore smelted and a return of 596 tons fine copper above the previous year, which is very satisfactory considering the severe drought.

The depth of the shaft is 552 feet; depth of deepest level 324 feet, and the width of the lode 60 feet. The dip or underlay is vertical, and the bearing or strike is north 18 degrees west.

The total amount paid in wages during year was £90,000. The total quantity of ore smelted at the Cobar Mine since it started in July, 1876, up to the end of 1883 was 98,916 tons, which produced 13,388 tons fine copper of the value of £858,464. There are 15 furnaces completed, and 3 in course of erection. A great improvement in the Company's works when completed will be the large brick stack, which is now being built, 160 feet high, to which all the furnaces will be communicated by means of underground culverts. The advantage gained will be a great saving in output by condensing a considerable portion of the fumes, which now go to waste, besides carrying such fumes as do escape beyond the town boundary.

It is computed that there is sufficient ore in sight to keep the mine in full work during the next twenty-five years and upwards, and Cobar Mine has now been proved to be the most extensive copper-mine in the Australian Colonies.

The Cobar Mining Company's steam tramway, which is extended 7½ miles in one direction, and 3 miles of branch line, making a total distance of 10½ miles, has proved a very great success, and is working very satisfactorily, 4,000 tons of wood per month being brought in by the tramway.

The Company also engage as many wood-carters as they can get to cart wood to the mine. The distance of tramway that has been constructed by the Cobar Company represents more than one-eighth the distance of the railway that is required to connect Cobar with the railway line at Nyngan. If one mine can enter on such an expensive undertaking to secure the means of transit of timber only there can be no question as to the necessity and paying capabilities of a branch railway line from Nyngan to Cobar, which would be the means of the works on the mines being very materially extended. The price on cartage of copper and material to the mines would be considerably reduced, and influx of labour would follow, which would enable the Companies to start fresh works and larger operations.

Nymagee Mine, which is next in importance to Cobar, is situated in the County of Mouramba at the Town of Nymagee, and is about 42 miles in a south-easterly direction from Cobar.

The town of Nymagee has a population of about 2,000. At the Nymagee mine there are 500 men and boys constantly employed.

The description of machinery is two horizontal engines, 70-horse power, and two Tangye pumps. The value of the plant is £15,000. The quantity of ore smelted at the mine last year was 10,236 tons, which produced 1,714 tons fine copper, of the value of £96,000. This shows an increase of 3,618 tons ore smelted, and a return of 570 tons fine copper on previous year, which is very satisfactory, considering the bad state of the country last year, not a blade of grass in that district.

The depth of the shaft is 390 feet. The depth of the deepest level 310 feet. The width of the lode is 3 feet to 18 feet. The dip or underlay west about one in six. The bearing or strike is north 20 degrees west.

The total amount paid out in wages last year was £64,000.

The total quantity of ore smelted since the Nymagee Company started in 1880, up to the end of 1883, was 23,007 tons, which yielded 3,717 tons fine copper, of the value of £236,100.

New Mount Hope Mine is situated in the county of Blaxland and parish of Mount Hope.

The town of Mount Hope is situated at the mine, and contains a population of about 800.

On the Mount Hope Mine there are about 200 men and boys employed. The description of the machinery consists of an engine of 12-horse power. The value of the plant is £7,612 16s. 3d. The quantity of ore raised during the year was 2,088 tons, which yielded 431 tons fine copper, of the value of £22,000. The depth of the shaft is 268½ feet, and the depth of the deepest level is 150 feet. There are four furnaces continually at work.

The Great Central Mine is situated in the county Blaxland in the parish of Mount Hope.

The town at this mine has a population of about 350.

On the Great Central Mine there are 102 men and boys employed. The description of the machinery is one 8-horse-power engine, and the present value of the plant is £2,600. The ore raised during the year was 1,139 tons—187 tons copper made, of the value of £8,700. There are nine shafts on the mine, depths 120, 47, 65, 56, 60, 107, 107, 115, and 74 feet respectively. Depth of deepest level, 120 feet. Width of lode from 3 inches to 11 feet. Dip or underlay variable, east and west, not settled, assume that it will settle to westerly dip. Strike three degrees west of north. Two furnaces. Five months stock of wood for furnaces on hand. Price of wood delivered at mine 12s. 6d. per cord. Cost per month, present average, £1,300. Total sum paid out last year £9,268 19s. 2d. Total quantity of ore raised since the mine started, 1,551 tons. Total quantity of ore smelted, 1,148 tons. Number of years at work, 1 year 8 months, up to end of 1883.

The

The Girilambone Mine is situated in the county of Canbelego, parish of Girilambone, and at the town of Girilambone on the Great Western Railway Line. The town has a population of about 500.

On the mine up to the 30th April last, 130 men and boys were engaged; since that time the Company thought it advisable to put down a new shaft, and now only 22 men are employed. The description of the machinery is winding engine.

The value of the plant is £7,500. The quantity of ore raised last year was about 450 tons, which produced 32 tons 4 cwt. 1 qr. 2 lbs. fine copper of the value of £1,655. The depth of the shaft is 252 feet, and the depth of the deepest level 198 feet; the width of the lodes, from 2 to 19 feet; dip or underlay, east; bearing or strike, north and south. The total quantity of ore raised since the mine started is 3,100 tons.

The following are the prospecting mines, viz. :—

The Hartwood Mine is situated in the county of Mouramba, and adjoins the Nymagee Mine.

The Company have been putting down a shaft, and prospecting the mine, and I understand, obtained some very fair ore, but have not discovered any proper lode. The Nymagee Mine, which adjoins this, has become such a valuable mine that I feel sure that when more capital is expended in developing it, that it will prove quite as rich as Nymagee.

Babinda Mine comprises a 40-acre mineral selection in the county of Flinders, and parish of Babinda, and is distant about 9 miles from Nymagee, in the direction of the Bogan River, and is held by Messrs. W. J. Hogan and John Hutchens. The ground has been prospected to some slight extent, with every indication of turning out a good copper-field if properly developed. At present there is only one shaft down between 20 and 30 feet. Upon inquiry, I find that work is suspended there for the present, owing to the scarcity of water in the vicinity, but that the persons who hold it are fully bent upon a further development as soon as water is procurable, with anything like a moderate outlay. The stone at present obtainable is strongly impregnated with green carbonate, and with slight colours of blue, as also a good show of gossan, and a quantity of ironstone. I have also seen a return from an assayer in Sydney of some of the stone, with the following result:—

Metallic copper.....	7 per cent.
Gold per ton.....	1 oz. 2 dwts. 20 grs.
Silver.....	11 ,, 8 ,, 16 ,,

so that it will be seen with the above combination of minerals at the very shallow depth already reached strong inducements are thereby offered for a proper opening up of the blow upon which the present shaft is sunk. The mine, owing to such a small amount of capital being expended, is not at all widely known, but being in the vicinity of Nymagee, which is turning out so prosperously, and with the favourable assay, I have no doubt that at some future time it will attract considerable attention.

The Cornish, Scottish, and Australian Mine is situated in the county of Robinson, parish of Kaloogleguy, and is about 7 miles north-north-west from Cobar, and comprises a 60-acre mineral lease.

There are very fair indications of a copper lode; the gossan and back of lode can be traced some distance. If the ground were properly prospected it might prove to be a rich copper-producing mine. During last year no works whatever were done at the mine, as there was not sufficient water to carry on the necessary mining operations, and therefore the Company obtained permission to suspend work for six months, and then obtained a further period of six months to enable them to make the necessary provision for conserving water, but up to the present time no provision whatever has been made.

The Melrose mine, which belongs to Messrs. Glynn and party, is situated on Melrose Run, about 1½ mile from the head station. One shaft has been sunk 30 feet, out of which some stone was obtained which went 27½ per cent. Another shaft, 7½ miles from the above, was put down 30 feet. Stone from the surface at this place went 12½ per cent. Messrs. Glynn and party are very sanguine of success, and state that as soon as they can obtain a water supply and have sufficient means at their command they will properly test the mine. I saw some of the stone from the above shafts which certainly looked very good, and offered every inducement to the prospectors for a proper opening up of the Blow.

The Brown's Mine, which is situated in the county of Blaxland, parish of Mount Hope, is not at present being worked.

At the North Cobar mine, which is situated in the county of Robinson, parish of Cobar, no works have been carried on at that mine for some time owing to want of means. I understand that the Great Cobar Company made an offer of £20,000 for this mine, which was refused by the North Cobar Company, in the hopes that some day they would be able to find sufficient means to work it.

There are at the present time in the Cobar Land Office eighty-one mineral conditional purchases, containing an aggregate of 5,823 acres, exclusive of those void, lapsed, or forfeited. Of these the following table will show where situated:—

County.	Number of C.P.	Number of acres.
Robinson.....	31	1,870
Canbelego .....	30	2,373
Moramba.....	11	1,120
Flinders.....	8	420
Booroondara .....	1	40
Totals .....	81	5,823

The works at the mines have been to a great extent paralysed through the utter inadequacy of the means of transit to the metropolis, as it is impossible at times to get the copper away for months for the want of teams, and at the end of last year 470 tons of fine copper of the value of £28,200 were in the Cobar shed which could not be sent away for want of teams.

#### COBAR DISTRICT—NYMAGEE DIVISION.

(W. T. Moss, Mining Registrar.)

I HAVE the honor to forward the enclosed returns, properly compiled. They will show a complete absence of gold-mining in the Nymagee district.

The copper return shows the wealth and working of the Nymagee and Hartwood copper-mine, at Nymagee, which are the only ones in the district, and joining each other.

For

For the year 1883 only one business license, eight miners' rights, and five mineral licenses have been issued by the Mining Registrar.

The current year of the Nymagee Copper Mine did not expire before the 5th instant; hence the delay in forwarding the returns.

COBAR DISTRICT—COBAR DIVISION.

(*F. S. Osborne, Mining Registrar.*)

*Gold.*—No new discoveries have been made of gold won during the year, which is in a measure due to drought experienced in this district for the last two years, and the difficulty in procuring water for prospecting purposes. The country appears to be auriferous, but the great drawback will always be the want of water, which can only be obtained by excavating tanks, there being no creeks or watercourses in the district, and at the present time there is almost a water famine in the town of Cobar.

*Copper.*—As regards copper-mining, the miners at work are making steady progress, and no falling off in their returns; as to quantity and quality of ore raised and smelted, as to number of men employed and ore raised, and yield from same, must refer you to returns transmitted herewith.

Three gold-mining leases and one mineral lease have been applied for during the year.

Forty-six miners' rights, seven mineral licenses, and four business licenses have been issued.

NOT WITHIN A MINING DISTRICT.

(*Mr. Warden T. A. Browne, P.M., Dubbo.*)

I HAVE the honor to forward my third annual report upon the Dubbo Division for the year 1883.

I regret to state that owing to a season of almost unprecedented dryness, combined with other causes, the development of the gold-fields of this division has been considerably retarded. At the same time proof has been afforded that deposits of unquestionable richness exist in localities hitherto untested and unexplored, awaiting but the application of capital and the intelligent use of machinery to be exceptionally productive and permanently beneficial to the district.

The gold-field known as Tomingley is doubtless the most important and promising discovery which has been made of late years, with the exception, perhaps, of Mount Browne, that far distant Eldorado, heavily handicapped as it will always be by distance, sterility, and an ungenial climate. Within an easy distance of railway carriage, near a base of supplies, accessible from towns like Dubbo and Wellington, having already had crushings of undeniable richness, the reefing district of the Upper Bogan would seem to have been on the high road to notoriety and prosperity.

But an extraordinary combination of adverse circumstances has during the two years of its existence sufficed to retard the progress of Tomingley and to place still further in the future the period of its admitted success as a mining centre.

During the earlier months of the year 1883 an unusual scarcity of water interfered with crushing operations to such an extent that a firm of tributors with whom the United Star Gold-mining Company, with which were incorporated the Prospector's Claim and other ground, were compelled to give up working and abandon the agreement under which they were working the property. Rain set in shortly afterwards, however, and the dams both of the Star Gold-mining Company and the Tomingley Gold-mining Company were filled. A battery of fifteen stampers had been erected by the last-named Company and crushing operations were commenced towards the end of the past year.

As there were two batteries now in full work and a large quantity of stone at grass, much of which was patently rich in gold, it was thought that the long deferred hour of triumph was at hand. However further delay would seem fated to take place. It was discovered that the crushing machine first erected by the Star United Gold-mining Company was for economical purposes too far from the water supply, necessitating the constant use of a steam pump with some loss of power. In order to remedy this defect the machinery has been removed to a site nearer to the main body of the water.

With regard to the actual proceeds of the reefs gold to the amount of £6,093, the product of 1,702 ounces sold to the Australian Joint Stock Bank, Dubbo, has been won, with the addition of another parcel of 272 ozs., value £906, approximated a total of 2,000 ozs., worth £7,000. In this was included a parcel of 210 tons of stone which produced 679 ozs. of retorted gold. This exceptional yield being nearly 3 ozs. 5 dwts. to the ton was from No. 1 North, McPhail's Myall Reef. When such an exceptional crushing as the one last referred to is followed by others of nearly equal richness it must be seen that the successful development of the locality is merely a matter of time. Were a succession of rainy seasons to set in, such as the district has known in former years, the working of the reefs already known to be payable would be facilitated, while the prospecting and exploration of the adjoining auriferous district would be easily accomplished. While the present unfavourable seasons last, in my opinion, mining matters in this and other arid localities will be generally retarded.

It is a matter of hopeful consideration, however, that the reefs in the vicinity of Tomingley have always been comparatively easy to work, and that as yet the depth from the surface does not necessitate the expenditure with which other mines have to contend.

I relinquished charge of the Ironbarks and Wellington divisions in September last, in which month Mr. Warden Caswell was appointed.

I am not aware that I have any observations of importance to add to my last year's report of that locality. The Mookerawa Gold Mining Company is still at work, and during the past year has been fairly successful in its sluicing operations. Both the Company and the Cornish Point Gold-mining Company have gone on the sound principles of erecting powerful and complete machinery so as to ensure the treatment of a large area of auriferous earth. The River Macquarie will always supply whatever water may be needed, and if only a moderate percentage upon the immense areas of old alluvial ready for treatment be secured regularly, the shareholders must receive handsome dividends.

With regard to minerals other than gold, both coal and copper workings in the immediate vicinity of Dubbo have been quiescent during the past year. With regard to the Ballimore Coal-mine it is understood that a Company has been formed to work it, and that a tramway is in contemplation to connect with the nearest point of the railway line, at no great distance from Murrumbidgee. At present, however, operations are suspended.

Not

## NOT WITHIN A MINING DISTRICT—TOMINGLEY DIVISION.

(P. J. Gormley, Mining Registrar.)

I HAVE the honor to forward the enclosed forms filled in as requested by circular of the 7th November, and to submit my first annual report on the Tomingley Gold-field for the year ending 31st December, 1883.

My duties as Mining Registrar commenced only last April; all official business previous to my arrival was done in the Dubbo office. Though the report may appear incomplete in consequence it will not materially affect anything essential for its completeness, as the field only emerged from its rudimentary state by the first crushing being cleaned up the day of my arrival.

I soon got into harness and visited the three lines of reef being worked; the first discovered is in the township, the others are 2 miles further south at the Myall Plains; 30 chains were occupied on the three reefs, and in various stages of development, two most important factors, to aid which, that is, water and crushing machinery, were unknown quantities for 18 months after payable gold was reported at Dubbo, November, 1881.

Four of the prospectors sold out for £1,000 each; the buyers and the other two prospectors formed a Company, known as the Australian Star United, and made arrangements for the erection of Cook's dry pulverisers, the merits and suitableness of which for a dry district were so well advocated induced a trial of it; one week's work proved it a failure, causing its removal and replacement by a ten-stamper battery.

The copper-plates are electro-plated, the top plate being coated with liquid gold, making it much more susceptible to take the amalgam. Mr. Askam, the manager, who has had considerable experience with batteries, has a decided preference for such plates.

Tanks were excavated for the storage of storm waters; 600 feet of 3-inch pipes were laid with a Tangye pump attached, through which the water is pumped by the battery engines; considerable expense was incurred before the owners could make a start to get reconped for their outlay.

The Tomingley Company's battery commenced crushing early in November, and crushes solely for the public.

The reefs are of the block character, and vary from 2 to 15 feet in width; the gold is in shoots, and as most of the claimowners were novices at mining, the payable and duffer stones were mixed, resulting in a low average when crushed, causing great disappointment especially to those who bought in.

Claimholders who had worked twelve or eighteen months without any return for their labour, coupled with the fact that the facility for crushing being a remote contingency, compelled them to get suspension of work in eighteen claims out of a total of thirty, and which greatly retarded the progress of the field.

As a gold-miner myself for thirty years, I make no exception of this field regarding its slow progress, it being quite characteristic of fields in New South Wales, solely confined to quartz-mining, that unless there is something attractively good got in the beginning, or alluvial discovered in close proximity to cause a real live rush, the place wears the aspect of a one-horse concern until it manifests itself as was done here lately by exceptionally good returns from two claims at the Myall Plain, of 210 and 70 tons respectively yielding over 3 ozs. per ton from a large reef.

I am hopeful that such a grand result will induce a more earnest effort to be made, combined with a judicious expenditure of money under the supervision of practical intelligent skill for the effective development of the field.

There has been no alluvial got yet, and no persistent systematic prospecting for it; about twenty shafts were sunk in various places by different parties; one shaft which I measured was 220 feet, quite dry, no wash, and no gold; two men, Burke and McKellar, started it thinking to bottom at 50 feet, and though handicapped for such a depth they stuck to it manfully until it was bottomed, aided occasionally by the expectant shepherds.

It is the sort of country to be prospected by a boring machine, as it offers little or no guide to the prospectors, no gullies, ridges, or well defined flats, but level country for miles, covered with pine and yarran scrub, combined with a scarcity of water.

A party of four old campaigners of the right sort set in prospecting a month ago for alluvial, determined to give it a good trial.

This Division is free from the baneful influence of leasing for speculating purposes; there were a few applications lodged at Dubbo, two of which were for the conversion of claims into leases. I received two applications for the conversion of claims into leases, and one for a 12-acre lease at the Ten-mile Ridges.

Last July I visited the Ten-mile Ridges 18 miles south from here, and which the Registrar at Parkes says is not in his division (*vide* his report for 1882); there are four distinct reefs opened. The Specimen Hill Company applied for a lease of 12 acres, it has been continuously worked, a trial of 20 tons from a large heap was crushed at Parkes (25 miles distant), and realised 33 ozs. 13 dwts. Two lots of 20 tons each from two other reefs yielded 13 ozs. 5 dwts. and 13 ozs. respectively, but owing to the want of water and crushing machinery the place is nigh deserted.

I am pleased to remark there have been no deaths, accidents, or any serious sickness on the field since opened.

The only calamity to record is the destruction of the "Royal Hotel" by fire last September; it was the only hotel for some time after I arrived, and had a temporary office in it to within a month of the fire, when I removed into a hut which does us as a substitute for an office and Warden's Court, and narrowly escaped being embraced by the fire-fiend.

I issued fifty-nine miners' rights from April to the 31st December, for 1883, and thirteen business licenses for six and twelve months respectively. Population at present about 200, never exceeded 300; there is sure to be an increase now that the holidays and suspensions are expired.

I have not included the 59 ozs. 18 dwts., the result of 60 tons from three separate reefs at the Ten-mile Ridges, as the stone was crushed at Parkes, which I suppose will be included in the Parkes' returns.

## INSPECTOR OF MINES' REPORT.

In submitting my annual report for the year 1883, I do myself the honor to draw attention to a circular forwarded by the Department of Mines, during the latter part of the year 1883, to all Mining Registrars in New South Wales, requesting them to give to the Department of Mines, Sydney, the earliest information concerning accidents which occur in any of the metallic mines of their respective districts.

Hitherto it has been impossible for me to present in a tabular form the several accidents annually occurring in the metallic mines of New South Wales, but, with the assistance of the several Mining Registrars, I hope to be able to furnish in my future annual reports, at least approximately, the number of accidents, whether fatal or non-fatal, which annually occur in our metallic mines. But I believe that beneficial results other than merely statistical will be the consequence. Mine-owners, managers, and miners will become aware that, although the Inspector of Mines may not be able to pay frequent visits of inspection to their respective mines, all accidents occurring in their mines will be reported by the Mining Registrar in whose district an accident occurs to the Department of Mines.

The following is the number of accidents which have occurred during the latter part of the year 1883, notices of which were received from Mining Registrars:—

Number of Accidents.	Date.	Name of mine or Company	Locality.	Persons killed.	Persons seriously injured.	Occupation.	Cause of death or injury.	Fatal.		
								Falling of ladder.	Fall of earth.	Using iron pricker with powder.
1	5 Nov.	Red Hill G.M. Co.	Tambora, Hill End.	John Johnstone	.....	Miner	Killed by falling of a ladder.	1	...	.....
2	16 Nov.	Eight-mile G.M. Co.	Kiaandra...	.....	Chinaman, name unknown.	Miner	Leg fractured by fall of earth.	.....	1	.....
3	10 Dec.	Great Victoria G.M. Co.	Adelong...	.....	Charles Shintler.	Miner	Lost one eye and two fingers through carelessly using an iron pricker in charging a hole with powder.	.....	...	1
								1	1	1

During the year 1883 I have inspected the Mount Browne or Albert Gold-field, on the borders of Queensland and South Australia; the Barrier silver mines and copper deposits, near the borders of South Australia; the Girilambone, Cobar, Nymagee, Mount Hope, and Great Central copper-mining districts, in the north-west, and the gold and other mineral mines in the Mudgee, Gulgong, Wellington, Tomingley, Parkes, Orange, Lucknow, Hill End, Burrago, Burrumago, Rockley, Bathurst, and Adelong districts.

*Gold.*

Adelong is still one of the foremost gold-mining districts in New South Wales. The quartz-veins in said district have so far proved payable to a depth verging on if not over 1,000 feet from surface, and present indications point to the probability that payable gold will be obtained in the Adelong quartz-veins to a still greater depth.

The Great Victoria Mine is at its greatest depth 1,057 feet from surface; and at this depth the character of the country and the fissures or channels in which the quartz-veins intruded are in fac-simile to the character of the quartz-veins at the higher level from which such excellent payable results were obtained. It is also gratifying to know that the reward of £1,000 paid by Government to this Company about seven years ago for being the first who obtained and reported payable gold at the depth of 800 feet from the cap of the reef has had beneficial results.

The Great Victoria G.M. Co. have, during the latter part of 1883, made application for the Government reward of £500, claiming to have payable gold at the depth of over 1,000 feet. Mr. C. S. Wilkinson, chief geologist, and myself, visited the mine, and under our supervision obtained 3 tons of quartz from over 1,030 feet level, and forwarded the same to the Royal Mint. The quartz was crushed at the Mint under our personal supervision, but as the matter had not been finally settled by the end of the year I am unable in this report to give conclusions.

The machinery, tramways, &c., have already been reported on by me in former communications, and it only remains for me to state that everything in connection with this mine is in fair working order.

*Amos Bros.*—Williams' Mine has been sunk to a depth of 930 feet, where fragments of vein containing gold were met with both in sinking and driving, and it was therefore thought advisable to sink to a still greater depth; accordingly, a contract for an additional 100 feet sinking has been let, and it is confidently anticipated that payable quartz will be discovered before the additional 100 feet have been sunk. During the year Amos Bros. purchased a diamond drill for the purpose of horizontal or cross boring at the 500 and 600 feet levels. Three different bores were put in, making a total length of 321 feet 5 inches, but without any favorable results, in consequence of which boring has been discontinued at present.

Prowse and Woodward's shaft on the Perseverance Mine is over 900 feet in depth. Cross-cutting to the east was the only progressive work carried on in the mine at the time of my inspection.

The Challenger has a large number of tributors at work, obtaining payable quartz. In some of the levels of this mine, between the 250 to 600 feet level, some excellent stopes of quartz meet the eye, which ought to prove profitable to the shareholders in said mine.

At Monkey Hill Hodges Bros. are on excellent quartz. At their greatest depth, the 250 feet level, the quartz has even a better appearance than on the higher levels. With the aid of capital this mine ought to become one of the best paying mines in the Adelong district.

At Gibraltar Hill, Perkins Bros.' Mine has yielded payable returns for years past, and the mine is but very little developed.

At Mount Adrah there are also several parties on payable quartz.

In

In alluvial, on the Adelong Creek, Mr. A. D. Sheppard's mine is still at work; but extensive progressive works have been carried on during 1883, under the able management of Mr. W. Ryan. These works have somewhat reduced the yield of the mine for the year.

Mr. Travers Jones' mine, lower down the creek, on which I also reported last year, has, during the latter half of the year, given very satisfactory results. By present appearances, Mr. Jones will have years of payable prospects before him.

There is a large tract of this auriferous country below Mr. Travers Jones's mine; but, unfortunately, it is freehold, and is now only used for cattle or sheep walks.

#### TOMINGLEY GOLD-FIELD.

Tomingley is situated about 35 miles south of Dubbo, and about 50 miles north of Parkes, on the slopes of Harvey's Ranges, the latter of which seem to be highly metalliferous. Westerly of Tomingley a metalliferous country stretches towards Nymagee and Cobar, which has so far been but very little prospected.

Up to the present time, the gold has only been found in quartz reefs. The great drawback in prospecting for auriferous alluvial deposits has been the great scarcity of water, and the somewhat level country presenting very little, if any, surface indication of the existence of former water-channels now covered over by alluvium. If a good supply of water could be obtained, or a heavy rain season would set in, prospectors would be almost certain to sink on the alluvial flats surrounding the Tomingley quartz-reef, and the discovery of rich alluvial leads may be the consequence.

At the time of my inspection, a crushing of 312 tons were finished, yielding 612 ozs. 3 dwts. amalgam, or 222 ozs. 16 dwts. of retorted gold. This crushing was from the prospecting claim, and there were still several hundred tons at grass.

The deepest shaft sunk on the reef was No. 2 north, 112 feet in depth. Here the reef was 4 feet wide. There were about 400 tons of quartz at grass in which gold could be seen with the naked eye. I estimated the quartz at grass at a little less than 1 oz. per ton.

There were several claims north and south of the prospectors apparently payable.

About 2 miles south of Tomingley is a small plain on which two distinct gold-bearing veins have been discovered, viz., the Myall (McPhail's) reef and the Independent (Firth's) reef.

The Myall reef had been sunk on to the depth of 50 feet, with a reef averaging 3 feet in thickness. The gold was well diffused through the quartz, and apparently payable. There were several claims north and south of McPhail's sinking and driving on quartz, but I saw no quartz on these mines, which could be considered payable.

The Independent (Firth and party) is situated a few hundred yards south of McPhail's in a hard diorite formation. The reef was from 9 inches to 3 feet in thickness, and is very flat, underlying easterly. The quartz at grass seemed payable.

The Tomingley reefs are in blocks, perhaps not so rich and large, but somewhat similar to the Grenfell quartz reefs, and while I hold the opinion that nothing extraordinarily rich has, so far, or is likely to be discovered at the Tomingley Reefs, I am nevertheless convinced that if proper system and economy is brought to bear in the workings of the Tomingley Reefs, payable results would be obtained for years to come.

About 20 miles south are the Ten-mile Ridges where several parties have been at work for months past obtaining patches of payable gold in quartz, but there being no quartz-crushing machinery nearer than Parkes, a distance of 30 miles, the Ten-mile Ridges are likely to be again abandoned, unless the parties at present working there can join hand and erect a battery of their own. The country between Tomingley and Parkes appears highly auriferous.

#### PARKES.

Mining at Parkes is at present at a rather low ebb, still there have been several parties of miners during the past year who have been able to make excellent wages out of their respective mines. I might mention a few instances which came under my notice during my last visit of inspection.

Coulson and party made a new discovery near McGregor's Reef, about 7 miles north of Parkes, which for a time gave quite an impetus to quartz-mining in the Parkes district. Coulson and party crushed 31 tons, which yielded 160 ozs. 13 dwts., or over 5 ozs. of gold per ton. They were afterwards raising quartz to grass similar in quality to their first crushing. The geological formation is decomposed diorite. I have frequently drawn attention in my reports on the Parkes Gold-field to the fact that the auriferous quartz veins of the Billabong Gold-field have only been scratched over, certainly not developed. The Bonnie Dundee Reef, for instance, which was worked some years ago with payable results and afterwards abandoned, the then owners believing that the gold had run out. About 2½ years ago a party of miners (Medlyn and party) with the co-operation with a few Parkes business men, took up part of the Bonnie Dundee Reef, and have systematically worked said reefs with payable results. They have crushed 2,973 tons, yielding 1,501 ozs. 11 dwts. 6 grs. of gold. The vein or reef averages about 18 inches in thickness; the geological formation is decomposed diorite, which requires no blasting, and the reef has been sunk to a perpendicular depth of 240 feet from surface. At the time of my last inspection they had several hundred tons of quartz at grass estimated to yield up to the former average.

August Bottcher and Fritz, a party of Scandinavians, were also working on the Bonnie Dundee Reef. They had crushed 352 tons of quartz, yielding 431 ozs. of gold, which gave them £15 per man per week. Their reef is still payable.

#### HILL END.

Mining matters at Hawkins' Hill are very dull. There were at the time of my inspection very few miners at work on the line of the former rich veins of Hawkins' Hill.

B. Carver and Rowe were however obtaining very rich quartz from their mine near the old Scandinavian, and a few parties obtained payable gold on the Sergeant line of reef.

At Tambaroora in addition to the Red Hill G. M. Co., who are carrying out extensive mining operations, there are only a few parties on payable gold.

#### GULGONG.

Of the quartz-reefs the old Gulgong, the Louisiana, and a few others were still at work.

Although Gulgong is certain to come again to the front as a large gold-producing district, this will be most likely brought about, not so much by the development of the quartz-veins, although they are numerous and

and rich, but more so by the systematic working of the well-known deep, wet, alluvial leads. Had boring been followed up at the Buchanan, Britannia, Black, and numerous other leads, instead of sinking very expensive shafts, Gulgong would at the present time shine forth as the Ballarat of New South Wales. That these ancient valleys now covered by volcanic matters contain auriferous drifts beneath is admitted on all hands, even the most sceptical, but the difficulty in the way is how to overcome the heavy water-soaked drifts. This in my opinion can only successfully be overcome by boring, either with a diamond-drill or through piping with water-auger; by this means the deepest part of the channel of any particular valley intended to be prospected could be ascertained, and if found to contain payable gold (of which as I have stated before there is very little doubt) then a main shaft suited expressly for the country through which it had to pass could be sunk; the leads could be prospected with far less expense than hitherto, the gold could be wrested from the bowels of the earth, and the whole country would be substantially benefited thereby, and instead of Gulgong being a small township it would most likely outstrip Mudgee both in size and importance.

At the time of my inspection there were a few parties obtaining payable gold at the Canadian Lead. A new Company named the Canadian G. M. Co. had also started to work the deep auriferous deposits in the lime-stone formation, which had hitherto baffled small Companies on account of the heavy flow of water. The present Company have erected a 16-h.-p. engine under the superintendence of Mr. Thomas Chappel, and the Company expected to be raising and washing payable auriferous dirt at an early date, but probably they would be delayed longer with pumping their workings free from water than they anticipate.

At Home Rule, on the Christmas lead, Hewitt and party have worked their mine during the last four years. At the time of my visit in October last they had washed about 250 loads, and had still about 700 loads of wash at grass, the whole of it averaging from 16 dwts. to 17 dwts. per load; the wash in the mine averaging about 3 feet in thickness.

It is most probable that this lead will be traced for a considerable distance through the adjoining or Paul Bros' mine; although the latter party worked for many months with but scanty returns throughout the eastern portion of their mine, whereas present indications point to the probability that westerly of Paul Bros' engine shaft the Christmas or Hewitt's lead should be prospected for.

At the Black Lead, Scully's prospecting shaft is temporarily at a standstill, owing to fresh arrangements having been entered into by Mr. Scully and Melbourne capitalists. Mr. Scully has tried very hard for years past to bring his prospecting operations to a successful issue; he deserves credit for what he has done, as his energy and perseverance never left him, but capital did; had the latter not been the case the Black Lead at Gulgong would now profitably employ a large number of miners. At Rouse Paddock, on the western watershed of the main range, mining operations on a large scale are now in course of progress, with the object of working the continuation of no less than six different leads, which all converge into one channel or ancient watercourse. This ancient watercourse which is now covered by basalt can be traced for miles towards the Two-mile Flat. The reason this auriferous tract of country was allowed to lay dormant for such a length of time, is not because the leads have run out, but this being private property, the miner had to pay to the owner £10 per claim for the right to mine, and in addition  $\frac{1}{4}$  or 20 per cent. of the gross yield of gold, which was too heavy a burden to bear, considering they had to sink through hard basalt, and a heavy flow of water in the drifts. The present Company however have far easier terms, and are likely to obtain payable results.

#### LUCKNOW.

The Lucknow Mines are situated about 6 miles from Orange on the main road to Bathurst.

The auriferous deposits consist of alluvial and quartz, or lode; the occurrences of these deposits are not only peculiarly interesting and instructive, but they are also rich and extensive, apparently permanent, and likely to be worked to an unlimited depth.

The fissure which forms the so-called lode, dyke, or shoot, occurs between the diorite and serpentine formation, the former forming the foot the latter the overhanging wall. The lode in its course downwards is fed or intersected by quartz-veins coming in from the west through the diorite, and hornblende felsite formation, but these quartz-veins are barren until they strike the lode.

The crushing stuff consists of quartz, carbonate of lime, hornblende felsite, and iron and arsenical pyrites; the latter are richest in gold near the serpentine or overhanging wall; generally the more carbonate of lime and the less quartz the richer the crushing stuff. The stuff after being hauled to grass is handpicked, some of which is rich enough to be at once packed in barrels for transmission to Swansea, but the poorer stuff is crushed at the battery, the free gold retained, and the pyrites gathered in a bundle, after which the pyrites are dried, placed in casks and forwarded to Swansea for treatment. Some very rich patches of gold and pyrites are often met with in the lode. The peculiar characteristics of these rich patches is that they are nearly all of the one shape, that of an egg. These patches have been named by Mr. H. W. Newman, Manager of the New Reform Gold-mining Company, Bonanzas. The largest of these bonanzas so far found weighed 50 cwt., and realized £1,846 15s. sterling.

The New Reform Gold-mining Company is the only Company at work on this undoubtedly rich gold-field. This Company is carrying on extensive mining operations under the able management of Mr. H. W. Newman. During the year the Perseverance and Industry veins were being developed. At the time of my inspection in November last the Perseverance vein presented a face of about 25 feet in width, although generally its rise seemed to be from 3 to 4 feet in width; the lode seemed to be contracting, the yield of pyrites improving,—the lode becoming greatly intermixed with magnetite, which appears to be a sure sign of the improvement of the lode and yield of pyrites.

There are two working shafts on the mine. No. 1 is down 200 feet perpendicular, with a winze or monkey-shaft of 120 feet, making a total of 320 feet on the Industry vein. No. 2 shaft is also 320 feet in depth, and is the main shaft on the mine; the shaft is 9 feet by 3½ feet, in three compartments, two compartments for cages, and one for pump and ladder-way. The Perseverance vein is worked from this shaft.

*Machinery.*—Near No. 1 shaft is a 25 horse-power engine with Cornish boiler, a 12-stamp battery, with blanketing tables and buddle; and at No. 2 shaft is erected a 15 horse-power engine with 25 horse-power boiler which does the winding and pumping. Everything in connection with the machinery, appliances, material, or working in and about the mine is of a substantial character and very creditable to the management. A tramway 264 feet in length has been constructed from No. 2 shaft to the battery where the richest stuff is at once placed as stated above in casks for transmission to Swansea, and the inferior stuff is crushed through a 12-stamp battery, the discharged stuff running over mercury-charged tables which retain the free

free gold; the pyrites then pass into and are gathered into one of Monday's buddles, which have been improved by Mr. Newman to suit the peculiar nature in treating this crushing stuff. So well does the battery and buddle do their work that only 2 casks of inferior pyrites have been obtained from 30 tons of blanketings which were gathered from blanketings tables erected about 20 yards below the buddle. The machinery was only working 12 hours out of 24 hours owing to the temporary scarcity of water but as soon as work is started on the lower levels there will be sufficient water to keep the battery going night and day. All the water so far obtained in the mine is on the higher levels from surface soakage, but to prevent the water rushing on the workings too fast Mr. Newman has caused to be constructed a strong dam on the upper levels out of which the water is let by taps and pumped to the surface as required for crushing purposes.

During the last twelve months the Company have done a great deal of progressive work, such as constructing and securely timbering a main drive 254 feet in length by 6 feet in the clear, sinking shaft, erecting tramway and machinery. They have nevertheless been able to net an actual return of £4,648 8s. 9d., and an additional estimated value of £1,245 worth of gold and pyrites on the water on transit for treatment to Swansea. There were also 8 casks of pyrites, weighing from 6 to 8 cwt. each, ready at the mine for shipment, and about 250 tons of crushing stuff at grass.

*Prevention of accidents.*—A notice which I was pleased to see posted in the engine-house of the New Reform G.M.C., and which if copied by other mine-owners may become a preventive of many a serious accident in our metallic mines. It instructs the engine-driver to overhaul and fully examine the wire ropes, shackles, and cages every time before the shift of workmen descend the shaft and report to the manager immediately if the slightest fault is discovered; neglecting these instructions will be visited by instant dismissal. The manager also takes the precaution for the prevention of accidents of clipping out of newspapers all paragraphs relating to any mining accidents. These clippings are posted in the house where the workmen change their clothing so that they are daily before their eyes.

About 200 yards east of the Lucknow lodes or shoots is a large quartz-reef cropping up along the surface for a considerable distance; this reef runs north and south, and by surface indications apparently underlaying to the east and is likely, say at a depth of about 1,000 feet, to form a junction with all the known Lucknow lodes or shoots and so become the main gold-bearing vein of this district.

Some years ago rich alluvial deposits were profitably worked above the Golden Point, near the Catholic Church, and I think that sooner or later it will be discovered that a tract of alluvial auriferous basalt country, stretching from Lucknow towards the Forest Reef, will be worthy the attention of the capitalist. The appearance of the country is highly auriferous.

#### THE ALBERT (MOUNT BROWNE) GOLD-FIELD.

This gold-field was inspected by me in July and August last and since my former visit the population had greatly decreased owing principally to the very dry seasons prevailing and the consequent scarcity of water for mining or even domestic purposes. Up to the time of my inspection 351 miners' rights and 81 business licenses had been issued since the 1st January, 1883, and the population on the whole gold-field would probably not exceed 600. A large number of tanks, dams, and reservoirs had been constructed, also several puddling machines erected, the owners of which were waiting for rain to fall. Dry blowing was still the order of the day. Several miners informed me that if they could secure a water supply that they would make good wages whereas they were now only able to obtain the common necessaries of life.

The small yield of gold as shown by our Sydney Mint returns cannot be taken as a criterion as nearly all the gold obtained finds its way to South Australia and Victoria in exchange for merchandise.

Considering the great difficulties the inhabitants of this gold-field had to contend against, and the scanty rainfall it has been visited with since its opening, it has fairly prospered. Some of the heaps of wash raised in 1881 were still at grass at the time of my last visit for want of water to wash.

I still hold to my former opinion that Mount Browne, Mount Poole, the Reefs, Good Friday, the Nuggetty, Easter Monday, the Granite, and Tipperary Gully, which are situate in a tract of country 50 miles in length by about 10 miles in width, will sooner or later be closer united by deep leads or other gold workings, and that rich but narrow quartz-veins be discovered in the Devonian conglomerates and diorite formations.

The quartz-reefs at the Wamberriga Range and Warratta Creek were, at the time of my inspection, tested by samples crushed at the Wittabreena Gold-mining Company's quartz-crushing machine, the result of which seems to have disappointed shareholders, but during my term as warden of the Mount Browne gold-field I frequently drew attention to the fact that these quartz-reefs appeared not to be rich, and as the cost of working these reefs was exceptionally great, it would require great economy and practical knowledge to be brought to bear on them to make them payable ventures. The country (Silurian formation) in which these quartz-veins occur, is very broken, but probably, as greater depth is reached, the veins might become more regular and compact with a higher yield of gold. The greatest depth obtained on these reefs is 130 feet, and at 80 feet water has been struck in all the shafts which have reached that depth.

There are two quartz-crushing machines near the reefs. The Wittabreena Gold-mining Company's, which is a 16-horse-power boiler with a 12 stamp battery erected near their mine. They had no appliances for saving pyrites or flourey gold beyond the common blanketings tables. The Mount Browne Gold-mining Company have a fine 10-stamp battery on their mine, of which the boiler only is placed into position.

Four townships have been surveyed on the Albert Gold-field, namely, Milparinka, Tibooburra, Mount Browne, and the Albert.

Milparinka, the principal township from its situation on the Evelyn Creek and the main track to Cooper's Creek, must by force of circumstances (independent even of the gold diggings) become a very important place in Central Australia. A permanent supply of surface water could be secured by the erection of an overshot dam for which there is a splendid site on the Evelyn Creek, in close proximity to the township. In wet seasons the Evelyn Creek is subjected to heavy floods, old marks of which can be seen throughout the neighbourhood. These floods then would wash away any sandbank which could be thrown up to retain the water. The water so far discovered by sinking and boring has been unfit for domestic purposes, although perhaps good for stock. It will therefore be seen that some storm-water storage is required by the inhabitants of these hot and arid regions. The cost of an overshot dam may at first sight appear high, but the benefits accruing therefrom would be immense, not only to Milparinka but the whole of that part of Central Australia. As I have already stated there is a splendid site. There is good building stone on the very site, and labour, material, and appliances could be obtained as reasonable at Milparinka as at Wilcannia.

Milparinka

Milparinka has good building (sandstone) stone and lime. It has three large well stocked warehouses, three large hotels, which are respectable and well kept, butchers, bakers, blacksmiths, and other business places, nearly all built of stone; also a provisional school with a regular average attendance of 20 children.

Tibooburra, the township of the granite diggings, about 30 miles north-east of Milparinka, has four well stocked warehouses, three respectable hotels, bakers, butchers, blacksmiths, and other business places. It is situated on the main track to Cooper's Creek, and like Milparinka its permanent existence is independent of the gold diggings. It has building stone and all other requisites to make it a permanent town, but unfortunately it has no water supply, although a large sum of money has been spent on wells, both private and by Government. The water for domestic purposes has to be carted from a place known as Thompson Dam, a distance of fully 4 miles, and when this is dry, which is frequently the case, the water has to be carted from a greater distance from some of the station wells; but I believe that water could be obtained either by boring or sinking outside the granite formation within  $1\frac{1}{2}$  mile of Tibooburra.

About three years ago this remote part of New South Wales was but sparsely stocked, and could hardly be considered a sheep walk, but through the opening of this gold-field and the consequent settlement of population, civilization has made rapid strides; pastoral properties have risen considerably in value, and that which a few years ago was quoted as Sturt's waterless and stony waste has become a flourishing mining and pastoral district. At present the South Australian and Victorian merchants reap the greatest benefit, but when once the Albert Gold-field is connected by telegraph and our railway line open to Bourke, then our Sydney merchants will be able to compete and participate in the prosperity of this part of Central Australia.

There are favourable indications of a gold-field visible about mid-way between Mount Browne and Wilcannia, westerly of the Mount Browne road, near Morden's station, and easterly of the Mount Browne road, between Millard's and Patteson's.

#### Silver.

In August last I also inspected the newly-opened Barrier Silver Mines, known as the Thackaringa, Umberumberka, and Sinclair silver mines.

The Thackaringa silver-mines are situated on the Barrier Ranges, about 190 miles south-west of Wilcannia, and 5 miles from the South Australian Borders.

The geological formation of this part of the Barriers consist of felspar, quartzite, porphyry, and micaceous schist, and, with the exception of a few lodes which occur in porphyry, the silver lodes so far discovered in the Barrier Ranges occur in the micaceous schist formation. The latter formation can be traced for several miles in a north-east direction, being intersected or cut off by hard bars of felspar or quartzite. Most of the veins run very flat, dipping or underlaying not more than 1 foot in 6 feet, which is not a good sign for their permanency. The veins vary in thickness from a mere thread to 2 feet. Their strike is in all directions of the compass; in some of the mineral holdings quite a net-work of veins is observable on the surface; the tract of the metalliferous country has a north-east strike, and it is most probable that as depth is reached north-east will be the strike of the most permanent lodes on the Barrier. I think it will be found that when these silver deposits are more systematically worked that they are not continuous lodes, but shoots or blocks of ore going down a certain depth, and trending along the line of lode a certain length and then pinching out, or bulging and pinching as depth is reached. Miners ought not to be discouraged by these features, but sink and drive for fresh blocks or shoots of ore.

At the time of my inspection the principal mines at work at Thackaringa were the Hercules, Home-ward-bound, Dan O'Connell's, Garrott's, Hillier's, Green's, Kingston's, M'Grath's, and Collins'. The deepest shaft on the whole field was 70 feet from surface. With the exception of the few mines above mentioned a system of scratching, or to use a miner's phrase, "pig-rooting," has been carried on, which will in the future cost extra expenditure to secure and systematically work these mines. By the indications on the surface, and the greatest depth yet reached, it seems to me that these mines have been over-estimated as to their value. There is however sufficient ore in sight which with sound management may produce payable results for years to come. At present the whole of these mines are worked in a very primitive manner. The Thackaringa silver ores (samples of which I forwarded to the Department of Mines) consist of galena, antimonial galena, cerussite, anglinite, with a small percentage of chloride, sulphite of silver and antimonial and arsenical silver ores. The ore is not treated in Australia, but bagged and forwarded *via* Adelaide to England. About 700 tons had been despatched from the mines, and at the time of my inspection there were still about 350 tons at grass. The cost of carriage and other incidental expenses from the mines to England has been about £8 per ton. I was informed that returns to hand from England had proved the value of the ore from £16 to £25 per ton, but that the first ores shipped to England from which the returns were to hand had been of inferior quality. Some very extraordinarily rich assays have been obtained, but those in every instance have been picked pieces.

The metalliferous country at or near these mines has been taken up in 40-acre blocks, either by application for lease, or mineral conditional purchase, for more than 3 miles in a north and south direction, and fully  $2\frac{1}{2}$  miles in an east and west direction. The population roughly estimated was about 200.

The nearest water for domestic or stock purposes is in private tanks, about 7 miles from the mines. There is a good site for water supply with large catchment within 1 mile of the mines on Crown Lands, on which a large tank could be constructed.

The Umberumberka silver-mines are situated about 12 miles north-east of Thackaringa as the crow flies, but about 18 miles by mail-track. Umberumberka was the scene of a former gold rush, known as the Barrier rush in 1867, where several lives were lost. Here the geological features are similar to those at Thackaringa, micaceous schists being the silver-bearing rock; the lodes mainly consist of cerussite, anglinite, and chlorides, and contain less galena than the lodes at Thackaringa. The Umberumberka silver-mining Company's mine, which is the principal mine on this field, has a shaft down to the depth of 60 feet, and still sinking. At the depth of 45 feet the lode had pinched out, but at the time of my inspection the lode at the 60 feet level was fully 2 feet wide, showing good ore (samples of which I forwarded to the Department of Mines), 250 tons of ore had been despatched from the mine, of which 50 tons had reached England. The mine is worked in a practical and systematic manner. Some good ore has also been obtained in Stokie's and Garot's, in Crisp's, and other adjoining mines, from which I forwarded samples of ore.

Umberumberka is better supplied with water than Thackaringa, there being two private wells near at hand. A police station is in course of erection, and there is a good site and all requisites for a permanent township, which, by force of circumstances, it is likely to become, Umberumberka, being on the main road from

from Wilcannia to Adelaide. The Sinclair silver-mines were discovered by a man named Sinclair. They are situated about 9 miles north-east of Umberumberka, in the micaceous schist formation. Here, too, like all the silver or other mineral deposits in the Barrier Ranges, so far found, run in shoots or blocks. The ore appears to be of good quality, and has been found in a north-east and south-west direction for about 2 miles in length and about one-quarter of a mile in width. The Sinclair mines are as yet only surface workings. The population of Umberumberka and Sinclair is about 100. The tract of metalliferous country in which these silver deposits have been discovered commences within 5 miles of the South Australian border, trending north-east for about 25 miles as the crow flies, and is likely to continue in a north-east direction to Llangewira and Gualta; but should silver ores be discovered in the latter places it would have to be of high quality to pay, as the greater distance to market would cause a larger expenditure.

#### *Copper.*

During the year 1883 I also inspected several copper-mining districts. The copper lodes in the Wellington district have been very little prospected, although they present very good surface indications. In the Harvey Ranges at Tomingley, strong stains of copper, associated with iron, are in several parts visible on the surface.

At the Barrier Ranges several copper deposits have been discovered and were inspected by me. One of these newly-discovered deposits, that of M'Grath and party, in close proximity to the silver lodes, had been tested; 5 tons of the ore forwarded to Adelaide yielded  $12\frac{1}{2}$  per cent. The ore is visible on the surface in a short bunch about 20 feet in length, and consist of green carbonates, black oxides, and a small percentage of grey ores.

#### *Burruga Copper Mine.*

This mine is situated on a high range in the Abercrombie Mountains, and *via* Rockley; it is about 50 miles south of Bathurst. The country surrounding Burruga has a highly cupriferous appearance and presents indications favourable to the existence of other copper lodes than those at present at work. The Burruga copper lodes which occur in the Silurian formation, were discovered and first worked about 6 years ago, and although about 3,000 tons of ore was raised from these lodes during the years of 1877, 1878, 1879, and 1880, which produced 360 tons of fine copper, or  $12\frac{1}{2}$  per cent., the then Company were unable to command sufficient capital for the erection of furnaces and other necessary machinery, and as the expense of carriage to such a long distance as the Eskbank smelting works, Lithgow, was too great, the first Company, or owners, were compelled to sell out, and about  $2\frac{1}{2}$  years ago Mr. Lewis Lloyd, of Bathurst, formed a private Company with sufficient capital to erect the necessary furnaces and other machinery. The result has been that, under Mr. Lloyd's management, the Burruga mines have paid handsome returns for the capital invested. A new main shaft will have to be sunk to the north-east of the present working shafts, and if this is once accomplished the ore will be more speedily and more economically raised to grass. The ore in the Burruga lodes instead of being found in bunches, as has been generally the case in this district, it is found in shoots, with a north-east strike. Of these shoots there are several, but the largest so far opened and stoped on is 110 feet in length, the ore averaging from 4 to 9 feet in thickness. These lodes contain very little carbonates and oxides, but mainly consist of yellow sulphites partly intermixed with quartz. The lodes near the surface are very thin but have so far increased in size and quality as a greater depth has been reached. The ore is first calcined before it is made into rough copper, and the rough copper is afterwards forwarded to Lithgow for refining purposes. The copper is of fine quality, free from base metal, and bears the Lloyd instead of the Burruga brand. About 200 men are directly employed by the Company, of which 95 men were engaged in or about the mine, the remainder at the furnaces, woodcutting, carting, &c.

Ore raised in 1881, 2,600 tons, equal to 270 tons of fine copper; in 1882, 5,000 tons, equal to 480 tons fine copper; and from the beginning of 1883 up to the date of my inspection in May last, 2,700 tons, equal to 245 tons of copper. There were 4 furnaces at work and 1 in course of erection; also a 12-horse-power engine for winding purposes. A tramway from the mine to the furnaces had been partly laid and was partly in course of construction. Water and firewood is plentiful. Of the latter there are about 10,000 tons stacked near the furnaces, and large quantities were brought in daily. The population of Burruga is about 500, and in addition to the usual business places there is also a post-office and a Public school, the latter having 60 children as an average attendance.

The success of the Burruga mines has given quite an impetus to the search for copper lodes in the Bathurst district, and there is a great probability that new copper lodes will be discovered ere long.

#### *Burrumago Copper Lodes.*

These copper lodes, like those at Burruga, are also in the Silurian formation; they are situated on the slope of a high hill on the Burrumago Estate, about 5 miles south of Rockley and a half mile north of the Old Summer Hill Copper-mine. At the time of my inspection a shaft had been sunk on the lode to a depth of 50 feet. The lode, or rather channel, has well defined walls, in which there is a shoot of high quality ore about 1 foot in thickness, and appears increasing in the southern end of the shaft. About 50 yards east of this lode, higher up the hill, is a large outcrop of gossan, which can be traced in a northerly and southerly direction, and it appeared to me that by the surface indications the main lode of the hill should be found here.

The surface indications of these lodes are very similar to those at Burruga, and if the same system of management were adopted at Burrumago as at Burruga the results may prove equal to those of Burruga. At the time of my inspection in May last the owners were only prospecting, and the progress of development was very slow.

### THE NORTH-WESTERN COPPER MINES.

#### *Mount Hope Copper Mines.*

THESE mines are situated about 80 miles south of Nymagee, 40 miles of Euabalong, and 70 miles north of Hillston. There are three different mines at work, namely, the new Mount Hope, South Mount Hope, and the Great Central.

The outcrop of copper in the New Mount Hope Mine occurs on the summit of a small hill, a characteristic feature of all the outcrops or copper lodes so far discovered in the north-western districts of New South Wales. The geological formation is an altered sandstone (Devonian) with belts of iron sandstone.

sandstone. The lode has a strike of N. 7° 30' E., and has been opened along the surface for about 200 feet in length; it averages in parts 30 feet in width, and has been taken out in open cuttings to a depth of 50 feet.

A few feet westerly of the open cuttings a main shaft had been sunk, 150 feet in depth, and drives opened at the 100 feet and 150 feet levels. At the 100 feet level the lode had been driven across for 50 feet, and on the 3rd March last, the day of my departure, had not reached the eastern wall; the lode, although in parts dreggy, with small horses (blocks of rocks) consist of high per-centage ores, such as grey sulphites, red and black oxides, green and blue carbonates and silicates, and a small per-centage of yellow sulphites; in fact, interesting geological specimens could be obtained out of this mine, in blocks of 1 foot square and upwards, showing all the different oxides, carbonates, silicates, and sulphites of copper ores.

All the ore in this mine, whether found in small branches, veins, or large bunches, is of high quality, and when once machinery is introduced, such as crushers and jiggers, the sinking pushed ahead, and levels opened, then the output of ore will increase considerably.

During my stay at Mount Hope the securing of the open cuttings with substantial timbers was proceeded with.

Ore raised, smelted, and despatched:—

Ore raised in January, 1883 .....	223 tons
„ smelted .....	193 „
Fine copper produced .....	38 „
„ „ despatched .....	22 „
On hand .....	42 „
Undressed ore at grass .....	750 „

Number of men and boys employed at and in connection with the mine, 105. This, however, is above the average of the number of persons employed during the last twelve months.

*Machinery.*—A 12-horse-power engine, which drives an ore cracker and is used for winding purposes.

*Furnaces.*—The Company have three reducing and one refining furnace at work, and one reducing furnace in course of erection.

*Firewood.*—There is a good supply of firewood within a radius of 10 miles, which will be ample for years to come, even should the number of furnaces be increased.

*Water supply* is very scant, no time should be lost in the excavation of tanks for the storage of storm waters.

The population of Mount Hope is fully 500.

The South Mount Hope (Mrs. Browne) Mine is about 4 miles a little west of south from the New Mount Hope. The branches and veins in the South Mount Hope strike nearly north and south, and consist of quartz, carbonates, red oxides, and a little yellow and grey sulphites; however, very little work has been done in this mine to form opinions as to its value and permanency.

The Great Central Mine, like the South Mount Hope, is in porphyritic formation, and is situated on a hill on the southern boundary of the South Mount Hope. A network of branches, veins and stains of copper fully 8 chains in width are visible on the surface, varying from a mere film to several feet in thickness. Eight shafts have been sunk in different parts of the mine; two adits were also in course of construction, one at the northern boundary and the other on the western side of the hill, for the purpose of intersecting all the different veins and connecting the several shafts with the furnaces.

Commencing on the northern boundary the numerous veins as above mentioned can be traced along the surface for a considerable distance in a southerly direction, until a hard bar of porphyry breccia disturbs their course; this bar is several chains in length, after which the veins again become visible on the surface, but with a heave or bearing about 1½ chain westerly of the veins north of the hard bar.

Considering the short time this mine has been at work, and the small number of men employed, Captain Cause, the manager of the Great Central, deserves great credit for the progress made.

At the time of my inspection in March last there was ore raised and at grass about 600 tons. At the Great Central, like that at the New Mount Hope, all the ore, whether found in small or large veins or bunches, is of high quality, although in parts intermixed with silicate, and earthy or rocky substances; it can, by the aid of crusher and jigger, be dressed to high per-centage.

*Machinery.*—10-horse-power engine for winding purposes; two furnaces.

Water supply very scant; the Company requiring additional tanks for the storage of storm waters.

The Great Central and Mount Hope Mines, like Colbar and Nynagee, will yet play an important part in the history of copper-mining in New South Wales.

#### *Nynagee Copper-mine.*

Since my last inspection great improvements have taken place under the able management of Captain Jolly. At the time of my inspection in February last Barton's or main shaft had been sunk to the depth of 286 feet. Water having been struck the sinking has been discontinued for the present. Harcourt's shaft and Pope's shafts had also been sunk to the depth of 240 feet. The distance between Barton's and Pope's shaft is 535 feet.

In a cross-cut about 40 feet west of a prospecting shaft, which has been sunk between Harcourt's and Pope's shafts, an extensive bunch or lode of high quality grey ore has been discovered 76 feet from surface, and which at the depth of 158 feet from the surface is resting on a rich yellow sulphite lode.

A main level is now being driven through from the 45-fathom level of Barton's shaft to meet the level of Pope's shaft. Near Barton's shaft and for about 100 feet north the yellow sulphite ore is of poor quality; after which, on the back of the 40-fathom level, a rich yellow sulphite is stoped on. This lode dipping south would by appearances be cut in Barton's shaft after an additional 100 feet in depth had been reached. The yellow sulphite lode has been traced through the mine for a distance of about 500 feet, averaging in parts from 10 to 15 feet in width. If once the connection is made between the two shafts stoping operations on a larger scale can be carried on, and the ore will be more speedily brought to grass. In Pope's shaft, between the 50 and 70 feet levels, the lode consists of carbonates mixed with earthy matter about 40 feet in width, some of which is rich enough to go direct to the ore-breaker, and the remainder is treated through the crusher and jigger.

*Machinery.*—Two 40-h.-p. engines—one driving an ore-breaker, crusher and jigger, the other does the winding from Barton's and Harcourt's shaft. There are eight furnaces, seven of which were in full work.

*Water supply.*—The Company have a large reservoir on their property, which however is the receptacle of all the filth from the township. Total number of men employed at and in connection with the mine, 500.

The

The Hartwood Mine adjoining north of the Nymagee Mine can only be considered as a prospecting mine, but if indications are followed up it may become a payable copper-mine.

The town of Nymagee has also greatly improved, but one of the greatest drawbacks to its further advancement is the great want of water supply in the shape of wells or tanks.

The country between Nymagee and Cobar presents highly metalliferous indications, more especially so from the "Restdown Hotel" to Nymagee, a distance of 25 miles, which has the appearance of being auriferous, and if prospected may lead to the discovery of payable gold. The geological formation is granite, Silurian, porphyry, and Devonian; in some places round pebbles similar to those on the Mount Browne Gold-field are seen on the surface. The scarcity of water would be the greatest drawback for intending prospectors.

#### *Great Cobar Copper Mine.*

Since my last inspection of this extensive mine great improvements have been made under the able supervision of Captain Dunstan.

At the time of my inspection in February last stoping was carried on from the 26 to 39-fathom level; from the latter to the 54-fathom level is virgin ground, only connected by Barton's shaft, Miller's winze, Becker's shaft, and partly with Tressider's winze. The block of ore (yellow sulphite) thus proven between these levels is 487 feet in length, with an average of from 38 to 46 feet in width and 90 feet in depth. Levels have been driven on the 54-fathom level from Barton's shaft, both north and south, the north end being 253 feet in length, laying to view a yellow sulphite lode averaging from 38 feet to 46 feet in width, but in the face of this level the slate is met with right across the end, the lode having made a heave westerly. That this is only a heave or break in the lode is proven by the lode in Becker's shaft on the same or 54-fathom level, 300 feet north, where the lode is 36 feet in width, consisting of yellow sulphite. On the southern end of Barton's shaft the level is in 174 feet, and here too the slate is right across the face, the lode having apparently made an opposite or easterly heave to that on the northern end.

From the 54-fathom level Barton's shaft is being sunk 13 feet by 7 feet, which at the time of my inspection was 150 feet below the 54-fathom level, and was intended to be sunk 216 feet or to the 90-fathom level from surface. The whole of this shaft has passed through yellow sulphurcts similar to those above.

Everything is done by Captain Dunstan, as much as in his power lays, to comply with the regulations for the inspection and regulation for mines other than coal and shale mines.

The present system of securing this mine by filling in from the surface through shafts is the most economical and safe one which, considering all circumstances, could be adopted.

*Machinery.*—Two (2) 40-h.-p. engines—one driving two stone or ore-breakers, a crusher, a jigger and circular saw, the other does the winding—an air compressor, also three different kinds of rock drills, namely, Ford's, the National, and Trebeck's. Only seven out of fifteen furnaces were at work, owing to the scarcity of firewood and the accumulation of fine copper at the furnaces, which could not be got rid of through want of carriers. The Company had a tramway in course of construction about 10 miles in length into a large belt of timber, and it was thought that when once the construction of the tramway was completed there would be no further scarcity of firewood for some years to come, and the whole of the fifteen furnaces would be once more set to work.

*Water Supply.*—Since my last inspection the Company have excavated 15,000 yards for a tank near the mine; the earth taken from said tank was made use of to fill in the mine. The Company have also erected a large reservoir about half-a-mile from their furnaces, and on a sufficiently high elevation to supply water to any part of the Company's property by gravitation. The length of the embankment of said reservoir is 1,243 feet; height, 30 feet; breadth, 123 feet at bottom, and 43 feet at top. This, added to the 43,000 yards which has been excavated, makes it equal to 150,000 yards excavation, securing a watershed of 26,000,000 gallons. A 9-inch main has been laid through the embankment, after which a 6-inch main has been laid on, supply taps have been erected at the furnaces and different parts of the Company's property. Miners and others employed in connection with the Cobar Mine are permitted to take from these taps an unlimited supply of water for domestic purposes free of charge. This is a great boon to those employed in and about the Cobar Mine, more especially so as the water is free from filth and noxious fumes, such as the tanks near the furnaces and the township are subjected to. Total number of men employed, 516.

The Company compel all the boys in their employment who are under the age of 14 years to go to night-school at least 3 times each week, or they lose their employment; the Company however pay all school expenses. The country between Cobar and Girilambone appears metalliferous, and deserves to be prospected.

#### *Girilambone Copper Mine.*

This copper-mine is situated on the north-west corner of No. 5 West Bogan Block, on the crown of a small hill, and about 2 miles from the railway line Nyngan and Bourke. The formation is Devonian, with belts of micaceous slates and porphyry. At the time of my inspection in January last five shafts had been sunk, but only two were used for working shafts; the deepest being down 42 fathoms. The lode throughout seemed to me very bunchy and irregular.

A strong lode is visible on the surface about 100 yards easterly of the present workings, consisting of quartz with belts of slate and gossan intermixed, and as the underground working present strong indications in an easterly direction the probability is that the Company's future operations will have to be extended mainly to the eastward.

There are four reducing and one refining furnace, but at the time of my inspection there was only one furnace at work.

The township of Girilambone contained a population of about 500 persons, 90 of which were employed in or about the mine.

About  $\frac{3}{4}$  of a mile from the Girilambone Copper-mine is a strong lode visible on the surface in the property of Messrs. Christianson and Co., which deserves to be thoroughly prospected, as it appears to be the north and south lode in the Girilambone Copper-mining Company's property.

In conclusion, I beg to state that the country for the whole distance between Girilambone, Cobar, Nymagee, and Mount Hope is highly metalliferous, but perhaps rather too dry or arid for successful agricultural purposes, but when once more attention is paid to underground water-supply, either by boring or sinking of wells, and the storm waters are conserved by tanks and reservoirs, and when once railways pierce these sparsely populated districts, additional mineral deposits will be discovered, and townships will spring up, having for its inhabitants an industrious mining population. It is a well-known fact that valuable minerals of different kinds are met with in the north-western parts of New South Wales, the only drawback for their development being the severe dry climate and long distance from railway lines.

## COAL AND SHALE.

TABLE compiled from Reports furnished by the Owners of Collieries, showing the quantity and value of Coal and Shale won during the year 1883 and the number of Miners employed in the Collieries.

REPORT of the Examiner of Coal-fields for the Colony of New South Wales, for the year 1883.

In accordance with the provisions contained in the 26th section of the Coal Mines Regulation Act, 39 Vic. No. 31, I have the honor to submit reports from the Inspectors of Collieries, with this my general report for the year ending 31st December, 1883.

The information I have the honor to submit in respect to the condition and progress, &c., of the various coal and Boghead mineral mines under my supervision during the year 1883, is as follows:—

Number of accidents in 1882 and 1883.

The number of fatal and non-fatal accidents exceeds those of the previous year (1882) by four. In the year ending 31st December, 1882, there were twelve fatal and thirty-three non-fatal accidents. Two of the fatal accidents happened through "falls of coal," the eleventh by a fall of earth and cap-piece, and the twelfth through being crushed by a horse. Twenty-three of the non-fatal accidents from "falls of coal," the twenty-fourth and twenty-fifth from an explosion of fire-damp; twenty-sixth, from firing of a shot; twenty-seventh, through a loaded skip falling out of cage; twenty-eighth and twenty-ninth, by an explosion of loose powder; thirtieth, by a fall of stone; thirty-first, through a loaded skip getting disconnected and falling down shaft; thirty-second, through the falling of a ladder; and the thirty-third, by falling down a shaft.

In the year under notice (1883), forty-nine notices of accidents were received, fifteen of them being fatal and thirty-four non-fatal accidents, all of which have been inquired into, the scene of the accident examined, inquests attended, and reports made thereon. The names and occupations of the persons who died from injuries, and those who were seriously injured, as well as the names of the collieries, are given in the following summary:—

SUMMARY showing the number of non-fatal and fatal accidents in 1883, the names and occupation of the persons who died or were injured, cause of death or serious injury, and the names of the Collieries where they occurred.

Number of Accidents.	Date.	Name of Colliery.	Where situated.	Persons killed.	Persons seriously injured.	Occupation.	Cause of death or serious injury.	Lives lost.				Non-fatal Accidents.								
								Fall of coal.	Run over by loaded skip.	Fall of stone.	Explosion of loose powder.	Explosion of fire-damp.	Run over by empty waggon.	Explosion of loose powder.	Fall of timber.	Injured by cage.	Struck by horse limbers.	Injured by skips.	Blown from a shot.	Injured by loaded skips.

„ „ 1882 .....	645	2,830	1,569,516 14	715,937 3 6
Increase in 1883 .....	103	606	330,103 2	212,089 9 11

## SOUTHERN DISTRICT.

## Comparative statement of Return for 1882-83.

	Men above ground.	Men under ground.	Tons of round and small Coal raised.	Value.
Coal Cliff, Bull, Osborne Wallsend, Illawarra, Mount Kembla, Erith, Berrima, and Australian Oil & Mineral Company .....	262	736	389,419 2	£ 196,134 1 0
Total in 1883 .....	262	736	389,419 2	196,134 1 0
„ „ 1882 .....	245	633	342,126	170,113 8 0
Increase in 1883 .....	17	103	47,293 2	26,020 13 0

## WESTERN DISTRICT.

	Men above ground.	men under ground.	Tons of round and small Coal raised.	Value.
Vale of Clwydd, Lithgow Valley, Eskbank, Bowenfels, Eskbank Iron works, Coerwull, Irondale, Katoomba and Dubbo Coal Companies .....	64	235	232,418 3	£ 77,780 18 6
Total in 1883 .....	64	235	232,418 3	77,780 18 6
„ „ 1882 .....	48	186	197,639 1	62,915 1 2
Increase in 1883 .....	16	49	34,779 2	14,865 17 4

From these returns we find that in the Northern District in the year under notice there has been an increase of 330,103 tons in the quantity of coal raised, and an increase of £212,089 9s. 11d. in the value of the coal raised, whilst in the previous year there was only an increase of 217,044 tons and in the value of the coal raised £278,667 5s. 4d.

In the Southern District there has been an increase of 47,293 tons and £26,020 13s. in the value, whilst in the preceding year there was an increase of 83,216 tons and in the value of £51,795; in the Western District an increase of 34,779 tons and £14,865 17s. 4d. in the value, whilst in the previous year there was an increase of £33,796 tons and in the value of £15,256 2s. 8d.

## NEWCASTLE EXPORT TRADE.

In my 1879 report I drew attention to a very general opinion having been expressed that it was the high price of coal which had existed for 7½ years (14s. per ton) that had caused a decrease of 44,715 tons in the 1879 exports. Since then (in 1880) the price was reduced to 7s. and during that year there was still a decrease of 117,612 tons but in 1881, no doubt when the reduction in price had become more generally known in foreign countries, there was an increase of 273,463 tons. In January, 1882, the price was raised to 10s. per ton, and there was an increase of 217,044 tons; and in January, 1883, it was raised to 11s. when there was an increase of 330,103 tons.

It therefore appears as if the price of 14s. per ton was much too high, and at such a price did not tend to a yearly expansion or at any rate rapid increase in our export trade in coal.

## GREAT BRITAIN.

Export of coal published in the *Mining Journal*, January 12th, 1884, with their remarks thereon, during the last 21 years.

Year.	Tons.	Value.	Price per ton.	Year.	Tons.	Value.	Price per ton.

1871	12,747,989	6,246,133	0 9 11	1882	20,934,448	9,564,616	0 9 3
1872	13,198,494	10,442,321	0 15 10	1883	22,771,348	10,642,013	0 9 4
1873	12,617,566	13,188,511	1 0 11				

It will be seen that low prices have been most conducive to our export trade in coal and that the advance of wages made towards the close of 1882 and since continuing did not come from the increased prices of the coal sent out of the kingdom. It is, however, satisfactory to find that our exports of coal have nearly trebled in the course of twenty years, and this, of course, has caused employment to be found for many thousands of miners although they are now told by their leaders that the prices should be raised at all risks. There is no question that the low price at which our colliery owners have been able to sell their produce is the principal reason that can be assigned for the yearly expansion of our exports which, so far as coal is concerned, is now equal to one-seventh of all that is raised in the kingdom. France, Germany, and Russia have been our best customers.

How long the two latter will be included in that category is somewhat doubtful, for Germany is now increasing its productive power, and the Government gives every encouragement to the home producers, whilst Russia has just imposed a tax on all coal entering the Russian ports of the Black Sea, an exception being made in favour of the Baltic ports, to which large quantities of English steam coal are consigned during the summer months.

It is said that the duty is likely to be still further increased, so as to promote as far as possible the development of the vast deposits of coal that permeate such a large portion of the Russian territory in Europe.

From the table below we find that in the year under notice (1883), we exported 95,478 tons more coal to intercolonial ports than in the preceding year, and 155,422 more to foreign ports. The intercolonial increase in the year appears to be principally owing to Victoria having taken 77,408, New Zealand 8,554, and Queensland 25,472, tons more coal from Newcastle than they did in 1882. And the increase in the foreign exports have been in consequence of Hong Kong, India, Java, and Valparaiso, having taken more Newcastle coal, and other foreign countries more Newcastle and Southern coal than they did in the previous year. The Newcastle collieries exported 848,380 tons, and the Illawarra collieries 145,616 tons.

The following table shows comparison between the year under notice and two preceding years as regards and value, tons of round and small coal raised for each person employed in and about the Collieries, each life lost.

Year.	Exports to Intercolonial Ports.			Exports to Foreign Ports.			Total Exports.			Home Consumption.
	Quantity.	Average per ton.	Value.	Quantity.	Average per ton.	Value.	Quantity.	Average per ton.	Value.	
	Tons.	£ s. d.	£	Tons.	£ s. d.	£	Tons.	£ s. d.	£	Tons.

## 133

It will also be seen that the quantity of coal raised during the last three years for each person employed above and underground at the collieries, has averaged 445 tons of round and small coal per year, and that each person so employed added £190 18s. 7d. per annum to the wealth of the Colony. In the years 1881, 1882, and 1883, twenty-nine lives were lost for 6,405,963 tons raised, viz., 220,895 tons were raised per each life lost. These figures may perhaps be sufficiently explanatory in themselves so far as a comparison of our export trade and home consumption, &c., for the whole Colony is concerned; but it will no doubt interest each district to know the proportion the accidents and deaths bear to the persons employed, and the quantity and value of coal raised for each person employed in and about the mines, &c., which is as follows:—

## NORTHERN DISTRICT.

Number of persons employed in and about the mines .....	4,184
Number of persons employed underground .....	3,436
Quantity of coal raised in tons.....	1,899,699 16
Number of non-fatal accidents.....	29
Number of lives lost by accidents.....	12
Persons employed per each non-fatal accident.....	144
Persons employed per each life lost .....	348

The following statistical return, furnished me by Mr. W. R. Logan, the Collector of Customs at Newcastle, shows that the greatest yearly increases in the export of coal from this port have been—To Victoria, 77,408 tons; Hongkong, 42,514 tons; India, 37,156 tons; Java, 33,122 tons; Queensland, 25,472 tons; Valparaiso, 21,302 tons; San Francisco, 13,625 tons; Wilmington, 13,412 tons; and Manilla, 13,007 tons.

NEWCASTLE—New South Wales export of coal during the years 1882 and 1883.

To Foreign and Intercolonial Ports.	1882.	1883.	Increase during 1883.	Decrease during 1883.

*Complaints made of deficient ventilation, &c.*

I have inquired into several complaints made with respect to defective ventilation and non-compliance with the requirements of the Coal Mines Regulation Act, reports upon which have been duly forwarded to you, and proceedings taken where necessary.

## NEW MINES OPENED OUT OR IN COURSE OF DEVELOPMENT DURING THE YEAR 1883.

*Tighe's Hill.*

January 2nd.—Mr. C. Robinson gave notice that he had commenced to work the mine from under his property at Tighe's Hill, to be known as Little Ferndale. He has since leased the right to work the coal to Messrs. Walker & Wilde, and it is now known as No. 3 Little Ferndale.

*Megalow, county Cook.*

February 10th.—Mr. W. B. Pendleton gave notice, on behalf of the executors of the late T. S. Mort, that he had commenced to mine and search for shale on a mineral conditional purchase taken by Captain Charles Smith on the Megalow Mountain.

*Lochend, near East Maitland.*

February 26th.—Mr. Matthew Tulip gave notice that he was about to sink a shaft for coal on the Honorable John Bales' property, known as Lochend, near East Maitland.

*Stockton, county Northumberland.*

May 16.—Mr. J. S. Green gave notice that he had commenced doing some preliminary work in connection with a new colliery at Stockton on behalf of the Stockton Coal-mining Company. At the beginning of March, 1884, the Company had sunk their 15-foot diameter cylinders for a shaft 340 feet in depth a depth of 57 feet through the sand, Mr. Rossiter having then the sole control and management of the sinking of the shaft.

*Wallsend.*

June 20th.—Mr. Andrew Sneddon gave notice, on behalf of A. A. Sneddon, that they had opened a coal-mine at Wallsend.

*Font Hill, Stony Creek, county Northumberland.*

July 31st.—Mr. Wm. Williams gave notice, on behalf of a Company, that they had started a shaft on Mr. Green's Font Hill Estate for coal. Mr. Inspector Dixon reports that this is abandoned.

*New Lambton Colliery Coal-pit, near Adamstown, county Northumberland.*

August 9th.—Mr. James Thomas, on behalf of the New Lambton Coal-mining Company, gave notice that he had opened out a new pit on their estate, to be known as the New Lambton Colliery Coal-pit

*Hartley Vale, county Cook.*

September 1st.—Mr. Richard Fryer gave notice, on behalf of the New South Wales Shale Oil Company, of having commenced to open out a coal-seam, known as the Top-seam, on their property at Hartley Vale.

*Isolated Mountain, Katoomba, county Cook.*

September 17th.—Mr. R. Saddington, Acting-Secretary, gave notice, on behalf of the Australian Kerosene Oil and Mineral Company (Limited), having commenced opening a new shale mine at Katoomba

*Great Western Zigzag Colliery, county Cook.*

October 4th.—Mr. Wm. Wilson gave notice of having opened a new Colliery, about 1 mile from Vale of Clydd, to be known as the Great Western Zigzag Colliery.

*Home Villa Estate, West Maitland, county Northumberland.*

November 6th.—Mr. John Edgar notified, on behalf of the Font Hill Coal Company, of having started to prospect for coal and shale on the north side of Great Northern Railway, on the Home Villa Estate, belonging to Mr. Heydon, of West Maitland.

*Mittagong Coal-mining Company, county Camden.*

December 3rd.—Mr. R. Evans, Manager of the Mittagong Coal-mining Company (Limited), notified that he had commenced mining operations on the above Company's property.

When I was at the mine on December 31st, 1883, Mr. Evans promised to send me an accurate section of the coal-seam, to which the Company are constructing a railway, 4 miles in length, from the Great Southern Railway, but I have not heard from him since.

*Ruined Castle, near Katoomba, county Cook.*

December 20th.—Mr. J. B. North gave notice that he was working a prospecting shaft on his property opposite Katoomba Reserve, near the Ruined Castle and Megalow Mountain.

## COAL MINES ABANDONED OR OPERATIONS SUSPENDED DURING THE YEAR 1883.

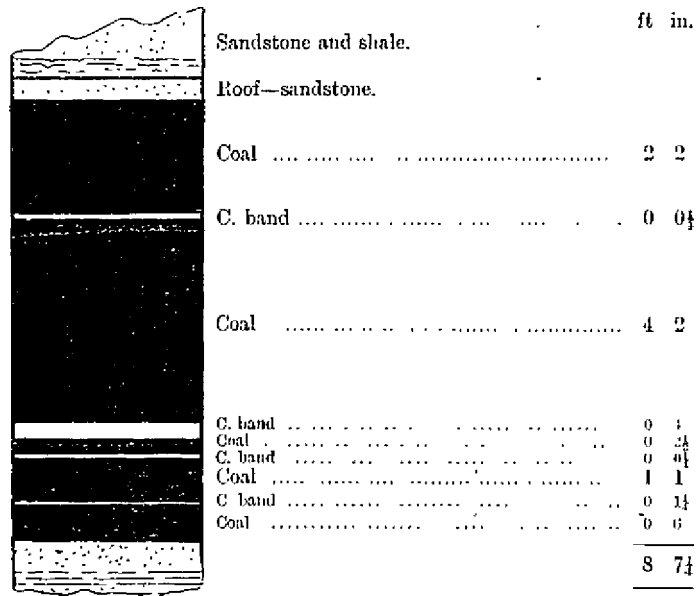

February 9th.—Mr. R. Nancarrow notified that the working of the Dubbo Coal Mine at Ballimore, on the Talbragar River, had been discontinued, pending the erection of suitable works, tramway, &c.

February 21st.—Mr. John Burgin gave notice that the Brickfield Colliery, worked by him, was finished.

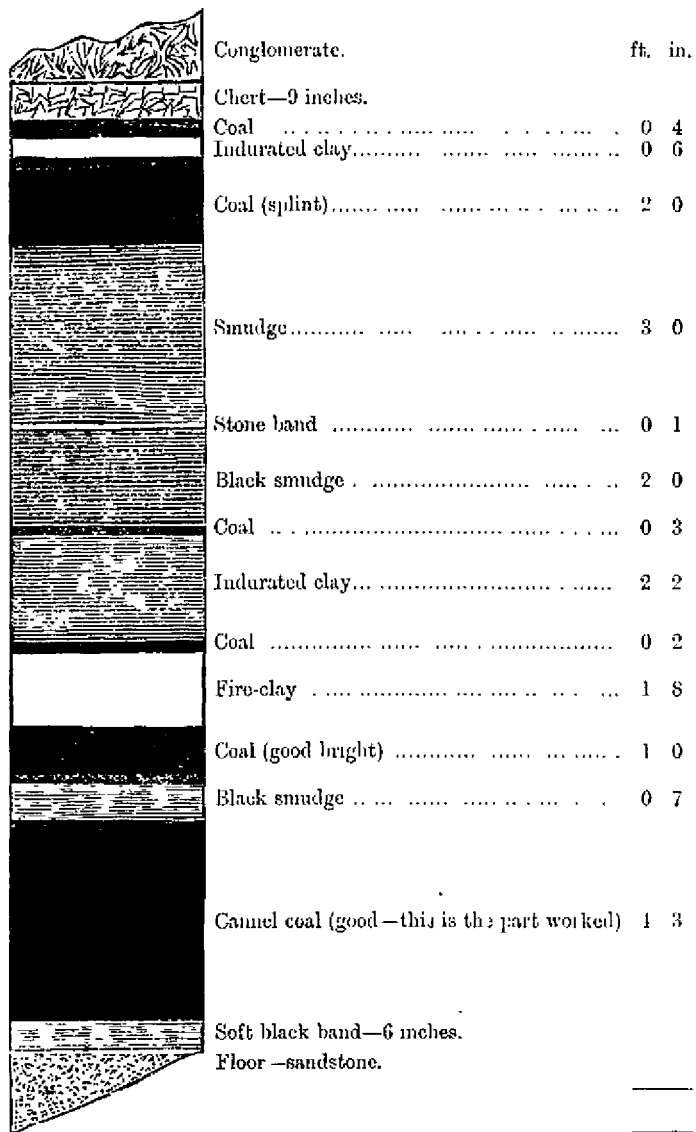

BORINGS FOR COAL.

James Fletcher, Esq., M.L.A., and colliery proprietor, has forwarded me the following account of the strata and seams of coal lately bored through with the Diamond Drill, on the West Wallsend Coal Company's 2,848 acres (No. 60 reserve), held under an authority to mine, and situated in the parish of Teralba, county of Northumberland.

The above represents a section of the No. 4 coal seam bored through with the Diamond Rock Drill, under the supervision of Mr. Fletcher, to which the West Wallsend Coal Company are about to sink a shaft 15 feet in diameter to a depth of 500 to 550 feet.

The above is a section of the coal and cannel coal seam sunk through by Mr. John Edgar, on behalf of the Font Hill Coal Company, on the Home Villa Estate at Stony Creek, near West Maitland, in the county of Northumberland.

The cannel coal is similar in quality to that worked by the late Honorable Bourne Russell.

Total depth to bottom of coal-seam 11 feet in thickness .....		204 0

The above represents a section of the Great Western Zig-Zag coal-seam opened out, and now worked by Messrs. Wilson and Saywell, about 1 mile from the Vale of Clwydd Colliery, at Lithgow Valley, county of Cook. The coal is similar in quality to that worked at Vale of Clwydd; powerful winding and pumping engines, and a substantial pit-top, have been erected under the supervision of Mr. Wilson, who is the Colliery Manager.

An account of strata passed through to the lower coal-seam in the No. 1 Borehole at Berrima Colliery, furnished me by Mr. J. S. Hamilton, Colliery Manager:—

Black bituminous shale (floor).	

The above represents a section of the Boghead mineral seam opened out by an adit, by Mr. J. B. North, on his land, situated near the Ruined Castle and Megallow Mountain, Katoomba, county of Cook.

The above sections (No. 1 and No. 2) represent the Boghead mineral seam opened out in two adits, on the Australian Kerosene Oil and Mineral Co.'s property, situated between the Isolated Mountain and the Ruined Castle, near Katoomba, in the county of Cook.

The above section denotes the coal-seam opened by an adit by the Ringwood Colliery Company at Bundanoon, in the county of Camden. The seam of coal is identical with that worked at the Erith Colliery, and the adit is situated only about ½ a mile from the Great Southern Railway. The tramway and all machinery, &c., necessary for raising the coal up a cliff 280 feet in depth, is being very substantially erected under the supervision of Mr. Bertram, a colliery viewer, who has recently come from England.

141

The above is an account of the strata and No. 1 coal-seam sunk through under the supervision of Mr. Fletcher, by the Illawarra Coal Company, between North Bulli and the Coal Cliff in the county of Cumberland, and adjacent to the Sydney and Illawarra Railway. The coal is similar in quality to that worked at Bulli and Coal Cliff.

The above section denotes the position of the No. 2 or 4-ft. coal-seam now being opened out, and about to be worked by the Bulli Coal Company, at Bulli.

In conclusion, I have only to add, that in the year under notice there were fifty-four collieries under inspection, and notices have been received of thirteen new coal and boghead mineral seams opened out, against fifty-four collieries under inspection in the preceding year, and eleven opening out; and that this year's returns show an increase in the Northern District of 330,103 tons of round and small coal raised, and £212,089 9s. 11d. in value; in the Southern District of 47,293 tons, valued at £26,020 13s.; and in the Western District 34,779 tons, valued at £14,865 17s. 4d.

I have, &c.,  
**JOHN MACKENZIE, F.G.S.,**  
 Government Examiner of Coal Fields.

THE

THE HALF-YEARLY REPORT of the Inspector of Collieries for the Northern District, on the state of the various Collieries in the Northern District in New South Wales, and Accidents therein investigated by said Inspector for the six months ending 31st December, 1883.

The Examiner of Coal Fields, Newcastle,—  
Sir,

Glebeland, 28 January, 1884.

Pursuant to the provisions of clause 26 in the "Coal Mines Regulation Act of 1876," I have the honor to transmit to you this my six monthly report on the state of the various Collieries in the Northern district for the half-year ending 31st December, 1883.

The total number of Collieries under inspection in the Northern district during the term embraced by this report is 34. Two of the small Collieries reported by me last time are now finished, viz., Walker & Wilde's and Bevan's, both at Tighe's Hill.

Another mine has been opened out at Fonthill, near Maitland, and has been under inspection during part of the time embraced by this report.

The mines at the Lake are not included in this report, as I have not visited them during the six months, owing to there being no work of any consequence doing at any of them.

*Present state of Mines.*

*A.A. Co.*—About 600 men, boys, and horses are employed in this mine during the day shift, for which about 80,000 cubic feet of air per minute is supplied in eleven separate currents. The number of men, &c., served by each current averages from twenty-five to sixty-five. The requirements of the Act are complied with in other respects also.

*Wallsend.*—About 700 men, boys, and horses are employed in this mine on both shifts, and about 100,000 cubic feet of air per minute is supplied in eleven separate currents. In three of the splits there are more men than the Act allows, but alterations are being made to relieve the overcrowded districts as speedily as possible. The Act in other respects is complied with.

*Lambton.*—There are about 370 men, boys, and horses employed in this mine on both shifts, and about 70,000 cubic feet of air per minute is supplied in eleven separate currents, each serving from ten to fifty men, &c. The requirements of the Act are complied with in other respects also.

*New Lambton.*—About ninety-five men, boys, and horses are employed in this mine on both shifts, and about 14,000 cubic feet of air per minute is supplied in four separate currents, each serving from twenty to forty men, &c. The Act is also complied with in other respects.

*Newcastle Co.*—There are about 340 men, boys, and horses employed in this mine on both shifts, and about 56,000 cubic feet of air per minute is supplied in six separate currents or splits, each serving from thirty to seventy men, &c. With the exception of sub-section 1, section 12 of the Coal-mines Regulation Act of 1876, which requires two separate openings to the surface, by means of either of which all persons employed may at all times pass in or out of the mine; the Act in other respects is complied with.

*Co-operative.*—About 370 men, boys, and horses are employed in this mine on both shifts, for which about 55,000 cubic feet of air per minute is supplied in six separate currents, or splits, each serving from fifty to seventy men, &c. The requirements of the Act are complied with in other matters also.

*South Waratah.*—About 17 men and horses are employed in this mine on one shift. The miners are all working in one district, on the long-wall system, and supplied with about 9,000 cubic feet of air per minute in one current. The Act is also complied with in other respects.

*East Waratah.*—About 150 men, boys, and horses are employed in this mine on both shifts, and about 18,000 cubic feet of air per minute is supplied in four separate currents or splits, each serving from eighteen to sixty men, &c. The requirements of the Act are complied with in other matters also.

*Old Waratah.*—About 18 men and boys are now employed in this mine, supplied with about 4,000 cubic feet of air per minute. The Act is also complied with in every other respect.

*Hidden Treasure.*—There are only about 11 men employed in this mine; the ventilation is good throughout, and the Act also complied with in every other respect.

*Dog and Kat Colliery.*—There are about 20 men and boys employed in this mine. There are several openings to the day. The ventilation is good, and the requirements of the Act complied with in every respect.

*Brown's Colliery.*—About 140 men, boys, and horses are at present employed in this mine during the day-shift, and about 39,000 cubic feet of air per minute is supplied in five separate currents or splits, each serving from twenty-four to forty men, &c. The requirements of the Act are complied with in other matters also.

*Duckenfield Colliery.*—There are now about 22½ men, boys, and horses employed in this mine during the day-shift, and about 38,000 cubic feet of air per minute is supplied in five separate currents or splits, each serving from thirty-six to sixty men, &c. During the last six months a splendid new furnace has been built in this mine. It is situated at the bottom of a very deep shaft, and if required could produce an adequate amount of ventilation for double the number of men and boys at present employed in the mine. The Act is also carried out in all other matters.

*Ferndale.*—About 100 men, boys, and horses are employed in this mine on one shift, and about 12,000 cubic feet of air per minute is supplied in two separate currents, each serving about fifty men, &c. The Act is also complied with in other matters.

*Ferndale No. 3.*—The old pit bearing this name is now worked out and abandoned, but another shaft has been sunk to the same seam, and is now being opened out by driving narrow work to make room for a number of hands being employed. The Act is complied with in every respect.

*Goose Colliery.*—Only five men, 1 boy, and 1 horse employed in this mine. The ventilation is good throughout, and the provisions of the Act complied with in every respect.

*New Duckenfield.*—About 21 men, boys, and horses at present employed in this mine. The ventilation is good, and the provisions of the Act carried out.

*Robinson's.*—About 9 men at present employed in this mine. The ventilation is good throughout, and the Act in other respects complied with.

*Bergin's Peppertown.*—Only the proprietor and one man getting coal here. They are removing the surface and taking the old pillars from the Brickfield old workings.

*Spenny Moor.*—

*Spennymoor.*—There are only seven men at present employed in this mine. There are several openings to the day, and the ventilation is good throughout. The Act is also complied with in other respects.

*Speedwell.*—There are nine men employed below at this mine. The ventilation is good, and the Act in other respects carried out.

*Wickham and Bullock Island Colliery.*—There are sixteen men employed below at this Colliery. Two shifts being worked, eight men in a shift. About 1,000 cubic feet of air per minute is supplied in one current. A fan is being erected on the surface for ventilating purposes, which will greatly increase the current of air in the mine. A second shaft will shortly be commenced and pushed on with all speed. The Act in other respects is also complied with.

*Hartley Colliery, Woodford.*—This Colliery has been under inspection during the half-year, but is now abandoned. There has been an average of about thirty men employed in this mine, supplied with a current of air of about 5,000 cubic feet per minute. The Act was also complied with in other respects.

*Brookstown Colliery.*—There are nineteen men and horses employed in this mine, supplied with about 5,000 cubic feet of air per minute in one current. The Act in other respects is also complied with.

*Marshall's Colliery.*—There are only nine men employed below in this mine. They are supplied with a current of about 3,000 cubic feet of air per minute. The provisions of the Act are also carried out in other respects.

*Tulip's Pit.*—Only one man employed below; ventilation good, and the Act carried out.

*Bloomfield.*—Only four men employed in this mine. Ventilation good, and the Act complied with.

*Font Hill.*—This is a new place being opened near Stony Creek above Maitland. There are only two men at work, but in all probability there will soon be more employed.

*Greta Colliery.*—There are about 120 men, boys, and horses employed in this mine on both shifts, and about 16,000 cubic feet of air per minute is supplied in two separate currents, each serving about sixty men, &c. The provisions of the Act are also complied with in other matters.

*New Park Colliery, Singleton.*—About twenty men are employed in this mine, and are supplied with about 41,000 cubic feet of air per minute. The Act in other respects is also complied with.

*Ellesmere.*—There are fourteen men at present employed in this mine; the ventilation is good throughout. The Messrs. Longworth are opening out another mine to the same seam on their original mineral selection; a tunnel is already driven to the seam, and preparations are being made for a large output of coal. The Act is complied with in every respect.

*Ria's Creek.*—Only the lessee himself getting a few tons of coal occasionally. No cause of complaint.

*Rathluba.*—This mine has been idle for the greater part of the half year but is now at work again on a small scale, only a few men being at present employed. There is no cause of complaint.

*Sneddon's, Tighe's Hill.*—This mine was under inspection during the early part of the time embraced by this report, but is now finally abandoned.

#### ACCIDENTS IN MINES.

THE accidents investigated by me in the Northern District during the six months ending 31st December, 1883, are twenty-one in number, happening in most instances by falls of coal, six of which accidents proved fatal—four by falls of coal, one by the upsetting of a dray, and one by the explosion of a shot. Some of the non-fatal accidents caused serious bodily injury; others were not so serious as was at first anticipated.

The first of the fatal accidents happened to a man named Joseph Wilson who was engaged carting material to a water-pit in connection with Brown's Colliery, Minmi, and who was killed on the spot by the upsetting of his dray on the 13th July last. The District Coroner held an inquest on the body of deceased at Minmi on the day following the accident, which inquest I attended. A verdict of accidental death was returned by the jury, with which verdict I fully agree. The second fatal accident happened to a miner named John Bunn, by a fall of coal in the Lambton Colliery on 30th July last. This was a leg fracture of such a severe nature that it was thought necessary to amputate the limb, after which operation death ensued on 3rd August. The District Coroner held an inquest on the body of deceased at Lambton on the following day, at which inquest I was present. The jury gave a verdict of accidental death, with which verdict I fully agree. The third fatal accident happened to a miner named William Johns by a fall of coal in the Newcastle Co.'s Colliery on 23rd August. This was a case of severe injury to the spine, and after suffering for about sixteen weeks the poor fellow died on 16th December. The fourth fatal accident happened to a miner named Edwin Buckingham Nugent, by the explosion of a shot in the Newcastle Co.'s Colliery, on the 25th August. The District Coroner held an inquest on the body of deceased at Glebeland on the 27th of the same month. I attended the inquest and fully agree with the verdict of accidental death. The fifth fatal accident happened to a miner named Thomas Fretwell, by a fall of coal in the Wallsend Colliery, on the 2nd of October. The District Coroner held an inquest at Wallsend on the following day. I attended the inquest and fully agree with the verdict of accidental death returned by the jury. The sixth accident with a fatal termination happened to a miner named Robert Wilson by a fall of coal in Brown's Colliery, Minmi, on the 19th November. This was a leg fracture of such a severe nature that the poor man never rallied from the shock, but died on the 28th of the same month in the Newcastle Hospital. There is something sad in connection with this case, as Wilson was the father of the young man who met his death by the upsetting of a dray, and whose name appears first in this record of fatal accidents.

The first of the non-fatal accidents happened to a wheeler named Robert Hume, by the falling of a set of timber in the East Waratah Colliery on the 11th July, and resulted in injury to foot. The second was a leg fracture to a miner named Robert Baulks, by a fall of coal in the East Waratah Colliery on the 12th July. The third was a fracture of thigh to a miner named George Burns, by a fall of coal in the Ellesmere Colliery, near Singleton, on the 26th July. The fourth was injury to head to a miner named Robert Young, by the explosion of a shot in the Lambton Colliery on the 24th August. The fifth was injury to legs and severe burns on arms to a miner named John Robinson, who was working with Robert Young, and who received his injuries by the explosion of the same shot. The sixth was severe injury to foot to a miner named Peter Riley, by being crushed with one of the cages at the bottom of the Newcastle Co.'s pit on the 24th August. The seventh was a leg fracture to a boy named Thomas Jones, by being struck with the limbers of a horse he was driving in the Lambton Colliery on the 8th September. The eighth was injury to back to a miner named James Spedding, by a fall of stone in the Ferndale Colliery on the

the 18th September. The ninth was severe injury to foot to a miner named Daniel Phillips, by a descending empty cage at the Newcastle Co.'s pit on 21st September. The tenth was fracture of left arm to a wheeler named John Mitchell, by being jammed between two full skips at the A. A. Company's Hamilton Pit on the 2nd October. The eleventh was a thigh fracture to a driver boy named James Bunn, by falling in front of loaded skips in the Lambton Colliery on the 11th October. The twelfth resulted in internal injuries to a miner named John Wall, by a fall of coal in the Lambton Commonage Tunnel on the 6th November. The thirteenth was severe injury to chest to a miner named William Patrick, by a fall of coal in the Co-operative Colliery on 16th November. The fourteenth was a leg fracture to a miner named James Butler, by a fall of coal in the A. A. Co.'s No. 2 Pit on the 26th November. The fifteenth and last was fracture of leg and compound fracture of arm to a miner named David Jones, in the A. A. Co.'s No. 2 Pit on the 19th December. This accident was caused by a fall of coal, and was of such a serious nature that it was deemed necessary to amputate the left leg above the knee and the left arm above the elbow. The operations were successfully performed, and the poor sufferer is progressing as well as can be expected under the painful circumstances.

The usual tabulated list of accidents is hereto appended.

I have, &c.,  
**JOHN DIXON,**  
 Inspector of Collieries.

THE HALF-YEARLY Report of the Inspector of Collieries on the state of the various Collieries in the Southern and Western Districts of the Colony of New South Wales, and accidents therein, for the half-year ending 31 December, 1883.

The Examiner of Coal-fields, Newcastle,—  
Sir,

Wollongong, 3 January, 1884.

In compliance with the requirements of clause 26 in Coal Mines Regulation Act, 1876, I have the honor to transmit to you this my six-monthly report on the state of the various Collieries for the half-year ending December 31st, 1883.

Three new Collieries have been added to the number during the last six months, viz., The Australian Kerosene Oil and Mineral Company (Katoomba), New South Wales Shale and Oil Company (Hartley Vale), Zigzag Colliery (Eskbank), making in all twenty Collieries.

Number of Collieries under inspection :—

Western District .....	10 coal-mines	and	2 shale-mines.
Berrima ,, .....	2 ,,	and	1 ,,
Southern ,, .....	5 ,,		
	17		3 = 20 Collieries.

I feel a satisfaction in being able to state that a great improvement has been effected in the ventilation in a number of the Collieries. During the last six months several new furnaces have been built, and air-shafts sunk, &c.

In the Southern district a difficulty exists to maintain a uniform condition of ventilation. The Collieries are situated along the line of mountains, the altitude varying from 800 to 1,000 feet above the furnace shafts. A westerly storm blowing over the mountains acts like a waterfall, thereby disarranging the ventilation on such occasions. By your instructions I examined every Colliery in the various districts regarding the non-compliance of section 12 sub-section 1 of Coal-mines Regulation Act, and have much pleasure in stating all those which were found deficient in this respect, have now complied with section 12 with the exception of one, that is meanwhile driving a communication towards compliance with the above-named section.

PRESENT STATE OF MINES.

I think it my duty to state in my circuit of inspections I found the Colliery managers as a rule endeavouring to comply with the spirit of the Coal-mines Regulation Act.

SOUTHERN DISTRICT.

*Mount Kembla.*—About fifty-six men and horses employed under ground, and supplied with 10,000 cubic feet of air per minute in one current. A new furnace has been built, which produces a plentiful supply of ventilation throughout the workings. No cause of complaint.

*Osborne, Wallsend.*—A large furnace has been built, an air-shaft sunk, and air-crossings put in, which has greatly improved the ventilation. About ninety men and horses employed under ground, and supplied with about 24,000 cubic feet of air per minute in two currents, each serving about forty and fifty men. The other provisions of the Act complied with.

*Bulli Old Tunnel.*—About 130 men employed under ground, and about 25,000 cubic feet of air per minute is conveyed into the workings in three separate currents, each serving from forty to fifty men. A new furnace has been built with all the latest improvements, but owing to the ventilating current having to pass an immense number of stoppings a heavy per-centage of ventilation is lost before reaching the working faces; but subsequently this loss will be partly overcome, as these stoppings are at present being overhauled. No complaint.

*Bulli New Tunnel.*—About twelve men and horses employed, and supplied with 6,000 cubic feet of air per minute in one current; ventilation good throughout the workings. No cause of complaint.

*Mount Pleasant.*—About seventy-five men employed, and are supplied with about 18,000 cubic feet of air per minute in two separate splits, each serving from forty-five to fifty men. No cause of complaint.

*Coal Cliff.*—About 102 men employed in the mine, and supplied with about 14,000 cubic feet of air per minute in two separate splits. No. 1 split, 2,500 cubic feet per minute for twenty-four men. No. 2 split, 11,500 cubic feet of air per minute for seventy-eight men and horses. No complaint.

BERRIMA DISTRICT.

*Erith.*—About twenty men employed, and supplied with about 3,000 cubic feet of air per minute in one current. The rise working are abandoned on account of low coal. Opening out the Colliery anew to the dip; ventilation good. No cause of complaint.

*Berrima.*—About 25 men employed in the mine, and are supplied with 4,000 cubic feet of air per minute in one current. Ventilation good throughout the workings. No cause of complaint.

*Australian Kerosene Oil Company (Joalja).*—About ninety men employed underground, and are supplied with 14,000 cubic feet of air per minute in two separate splits, each serving from forty-five to fifty men and horses. Ventilation good. No cause of complaint.

WESTERN DISTRICT.

*Vale of Olwydd.*—About sixty men employed, and supplied with about 12,000 cubic feet of air per minute in one current. Ventilation brought up to the working faces. The general condition of the Colliery much improved during the last six months. The provisions of the Act are complied with in other matters also.

*Lathgow Valley.*—About sixty men and horses employed underground, and are supplied with about 10,000 cubic feet of air per minute in two separate splits, each serving about equal number of men. No cause of complaint.

*Eskbank.*—About forty-seven men and horses employed in the mine, and supplied with 6,000 cubic feet of air per minute in one current. Ventilation good throughout the workings. No cause of complaint.

*Eskbank*

*Eskbank Old Tunnel*.—Only five men and horses employed, and supplied with 3,000 cubic feet of air per minute. No cause of complaint.

*Coerwull*.—Only one man working in the mine getting coal for the factory. No cause of complaint.

*Zig Zag Colliery*.—The sinking and surface arrangements are now completed. About twenty men employed starting away, levels, headings, &c.

*Irondale*.—An average of ten men employed in the mine, and supplied with 3,000 cubic feet of air per minute. Ventilation good. The Act in all other respects complied with.

*New South Wales Shale and Oil Company (Hartley)*.—About seventy men and horses employed in the mine, and are supplied with about 16,000 cubic feet of air per minute in two separate currents, each serving about equal number of men. No cause of complaint.

*Katoomba*.—About thirty men employed in the mine, and supplied with 3,000 cubic feet of air per minute in one current. Ventilation good throughout the workings. The Act in all other respects complied with.

*Australian Kerosene Oil Company (Katoomba)*.—This Colliery is about 6 miles south-west from Katoomba Railway Station; five men prospecting for shale; three tunnels are driven a distance from 40 to 50 yards into the mountain; also a fourth tunnel about 1 mile apart from the others, driven a distance of 30 yards. In the first three tunnels the shale is about 14 inches, with sandstone roof. The fourth tunnel, driven a distance of 30 yards; height of seam about 3 feet; shale of an inferior quality.

*Mr. North's Shale Mine (Katoomba)*.—This Colliery is about 5 miles south-west from Katoomba. Five men prospecting for shale. The tunnel driven into the mountain about 20 yards; height of seam, 3 feet; shale of a very inferior quality.

*Mount Victoria*.—This is a new Colliery about to be laid off, 4 miles from Mount Victoria Railway Station. Three men driving headings in various places along the line of mountain. Seven tunnels have been driven, three of which I inspected, these three varying in length from 20 to 50 yards. The seam of coal at each working face seemed to be of an excellent quality, and measured 6 feet high. I was informed by the manager a shaft is to be sunk about 300 yards from face of coal; this will reach the seam at a distance of 250 feet.

#### ACCIDENTS IN MINES.

DURING the last six months I have investigated five separate accidents, two of which were fatal and three non-fatal. The first of the fatal accidents happened to a miner named Michael Bowland on the 8th August at Bulli Colliery, who was killed instantaneously by a fall of stone from the roof. The District Coroner, F. C. Smith, Esq., held an inquest on the body of deceased at Woonona on the 14th August, when a verdict of accidental death was returned, with which verdict I fully agree. The second fatal accident happened to a miner named William Evans on December 12th at Katoomba Colliery; whilst riding on a loaded set of skips on the incline the rope broke; deceased was thrown violently against a post of timber, whereby he received fatal injuries, resulting in death. The first of the non-fatal accidents happened to a miner named Peter Rocks on July 8th, by a fall of coal in Mount Keira Colliery, resulting in a bruise across the haunches. The second non-fatal accident happened to a lad named Joseph Martin, September 24th, at Mount Pleasant Colliery, run over by a skip, bruised about the head. The third was a jaw-fracture to a miner named William Broadhead, on September 24th, by a fall of coal at Bulli Colliery.

The usual tabulated list of accidents is hereto appended.

I have, &c.,  
**JAMES ROWAN,**  
 Inspector of Collieries.

TABULATED LIST of Fatal and non-Fatal Accidents in the Southern and Western District of New South Wales Collieries investigated by the Inspector of Collieries during the half-year ending December 31, 1883:—

No.	Date.	Colliery.	Sufferer.	Occupation.	Remarks, &c., on the nature and extent of injuries.	Fall of Coals.	Fatal stone from the roof.	Crushed by an empty skip.	Killed on Keira incline.	Non-fatal.	Fatal.

## GEOLOGICAL SURVEY OF NEW SOUTH WALES.

Report of Progress for 1883 by the Geological Surveyor in Charge.

DURING the early part of the year, I prepared, in accordance with your instruction, a report with geological map, for Messrs. Augustus Morris and George Rankin upon the prospects of obtaining fresh water below the surface in the districts between the Lachlan and Darling Rivers, and beyond the Darling, which has been already published with the report of those gentlemen upon the state of the Public Lands. I was also occupied with other departmental work, especially that in connection with the office of Chief Mining Surveyor, until 19th March, when Mr. E. F. Pittman, Geological Surveyor, was deputed to act for me, and I proceeded in company with Mr. T. W. E. David, Geological Surveyor, to examine the principal mining reserves in New England. In my previous report, herewith appended (Appendix A.), is given the result of our examinations of the mining country, which includes the gold-bearing antimony lodes of Hillgrove, near Armidale, and the bismuth lodes of Kingsgate and Hoque's Creek, near Glen Innes. We then examined the large tin-mining district, of which Vegetable Creek has hitherto been the most productive part.

The principal formations of this district consist of altered Silurian or Devonian sedimentary rocks' metamorphic and intrusive granites, Tertiary clays, and pebble drifts, and volcanic rocks. The tin-bearing lodes occur in the old sedimentary rocks, and in the granites, but chiefly in the latter. These formations have suffered enormous denudation, for some of the valleys which have been eroded in them are more than 1,000 feet deep; consequently as the tin lodes which crop out in the sides of the valleys are but the remaining portions of those which have been broken up and carried away, we can readily account for the origin of the stream tin which has been concentrated, or as it were naturally ground-slued into the drainage channels. During the erosion of the valleys, volcanic outbursts took place, and the basaltic lava poured into and filled up some of the valleys, so that the rain-water still falling over the same area had to cut fresh drainage channels, which were formed generally along the edge of the basalt or across it, and therefore we sometimes find the old river-bed or deep lead immediately beneath a hill or watershed between the existing streams.

Thus the lead in the Wesley Company's ground has been traced beneath some of the highest basaltic ridges in that locality, but such an occurrence is not a prevailing feature, for further to the west the same lead passes under several of the largest creeks in that locality. In some places, as in the instance of the lead just mentioned, the newer channels have not been eroded down to the level of the old ones; while in others they have been cut considerably deeper, in which case the old river-bed or lead may be opened by tunnelling in from the sides of the present valleys. In this district therefore, where the denuding forces have operated so extensively, there are various tin-bearing drifts which have been deposited at different times, the Tertiary deposits, generally covered with basalt, being the oldest, and the existing creek-beds containing the youngest. The latter are usually not more than a few feet thick, and therefore being easily worked by ordinary manual labour large quantities of tin-ore have in a short period been raised from them. Such are the deposits at the Great Britain, Messrs. Moore, Spear, and Co.'s, Rothschild, and other mines situated upon Vegetable Creek, and upon the lower portions of the Y. Water-holes, Gulf Creek, and many other watercourses which drain from formations containing tin lodes. These shallow recent deposits are fast becoming worked out, but the older Tertiary deep leads will afford employment to miners for many years to come. There are two main leads, one of which consisting of rounded drift and sand, commences at the Y. Water-holes, and runs westerly for several miles on the south side of the Graveyard Creek; the other takes its rise in the Vegetable Creek Company's ground, near Emmaville, and extends with a winding but general westerly course to the Wesley Company's property, where it turns to the north for nearly half-a-mile, and then again westerly for about 5 miles, when it trends northerly for 5 miles towards Kangaroo Flat. There are several tributaries to it. From its source near Emmaville to Flannery's Lead in the Wesley ground, a distance of about a mile and three quarters, the sinking was dry and the lead very rich in places; thus in the Vegetable Creek Company's ground 2,000 tons of ore are stated to have been raised from 5 acres.

Several smaller leads or runs of tin-bearing wash have been found at higher levels, showing that on the top of the first basalt which covered up the main lead the drainage water of the country, still flowing down the same valley, deposited fresh drift from the adjacent hills where the tin lodes crop out. These newer leads, though not extensive, will be found in many places forming irregular deposits upon the uneven surface of the basalt, and therefore any shallow run, though it may not be rich enough to work, should yet be followed as it will probably be connected with thick and payable patches. From Flannery's, the continuation of the main lead containing rich wash has been proved through Foxe's claim into Bailey's, but here a heavy influx of water at present has to be contended with.

Beyond Bailey's Messrs. Cadell and Gordon have for some time been sinking through hard basalt, and further on Witherden and others have also been perseveringly putting down several prospecting shafts through similar rock, and have found a little tin-bearing drift, but owing to the great quantity of water met with they have not yet succeeded in striking the main lead; there can, however, be little doubt of their ultimate success, for just below Witherden's, Shaw and party have come upon good wash.

The diamond rock-drill could with great advantage be used for ascertaining the position of the deepest ground under the basalt in this district.

The geological boundaries of the basaltic country under which the lead will pass as far as Kangaroo Flat, comprising a distance of 11 miles of almost unprospected ground, are being carefully mapped out by Mr. T. W. E. David. The map accompanying Mr. David's progress report (Appendixes B and B1) defines the area occupied by the basalt, and in addition to the information now furnished Mr. David will give a detailed description and sections of the various leads when he has completed his survey. This survey, which will also embrace the country wherein the numerous tin lodes have been discovered, will be of value not only as a guide for prospectors but also as a scientific work descriptive of one of the most important tin-fields of the world.

During our preliminary examination of this country we saw upwards of fifty tin lodes or veins which have been opened. Many of these however are merely small veins which would not pay to work. Amongst the principal lodes may be mentioned the Ottery, Dutchman's, Curnow's, Butler's, Carr's, Torrington, &c.

The

The Ottery lode, near Tent Hill, consists of a dyke mass of micaceous curite from 40 to 100 feet wide with numerous quartz-veins running irregularly through it, but generally along it, containing tin ore; it seems to have several branch dykes also carrying tin ore. It strikes N. 18° E., and underlies westerly at from 70° to 80°. There is much gossan on the surface, probably resulting from the oxidation of pyrites in the lode. In the main shaft on the crown of the hill at 50 feet a vein from 2 inches to 1 foot thick of almost solid tin ore with brown spongy iron ore was struck, but at 60 feet it changed into quartz with less tin ore. At the surface a lump of nearly pure tin ore was found weighing 2 cwt. 1 qr. 2½ lbs. About 150 yards to the east is another curitic dyke more than 100 feet wide with quartz-veins containing tin. On the west side of the main lode a shaft has been sunk 90 feet deep upon a lode 6 feet wide, containing tin mixed with blende, galena, arsenical and iron pyrites; and a few yards further west a quartz-vein 9 to 13 inches thick has been opened with streaks of tin parallel with the walls of the vein, its strike is N. 40° E.

The country rock is porphyry with orthoclase, felspar, and hornblende. The tin ore is very irregularly distributed through the veins, but as there is such a large body of lode stuff to open out upon, with judicious sorting a considerable quantity of payable crushing stone can be raised, and therefore I think that this will become an important mine. Of course when the ore is raised from greater depths it will be less free from sulphides of other metals and more difficult of treatment. Nearer to the Tent Hill Smelting Works is the McMaster's lode, which when opened at the surface is 5 feet wide, strikes E. 30° N. to N.E., dips north-westerly at 59°, and traverses coarsely crystalline porphyritic granite. It consists of a porous ferruginous, siliceous, and micaceous rock, with quartz-veins of irregular thickness up to 9 inches containing tin. Near this there are other narrow tin-bearing veins, and about their outcrop much surfacing for tin has been done. A short distance to the west several dykes (striking N.E.) of vein-stuff are seen until the granite junctions with the black metamorphic slate formation. I may mention that excellent fire-bricks for use in the smelting works are here manufactured from decomposed granite.

The Dutchman's lode in the parish of Highland Home has been traced for nearly half-a-mile, strikes E. 30° N. to N.E. It is 3 to 4 feet wide, and consists of quartz with chlorite and tin ore. It has some remarkable cavities, the sides of which are lined with clear crystals of quartz from 3 to 5 inches long; crystals of tin ore occur at the base of the quartz crystals. It is evident that both the oxide of tin and the silica have crystallized from an aqueous solution which once filled these cavities. One of the cavities measured 2 feet in diameter. The reef has been opened by two tunnels put in from its outcrop on the western side of the hill, and higher up on the hill by a shaft 10½ feet deep. The reef at the tunnel entrance is split in two by a horse of granite 3 feet wide. A large quantity of tin-bearing quartz can be readily obtained, but it will require culling before sending to the machine as the ore is irregularly scattered through it. On the N.W. side of this reef and 60 feet from it is another reef parallel with it and 3 feet thick containing tin ore.

Curnow's lode crosses the summit of a high ridge on the west side of Lottery Creek. On the surface it is about 3 feet 8 inches wide, narrowing lower down (so the manager, Mr. Knuckey, informed me) to 1 foot when it widens again to 4 feet or more. It strikes E. 42° N., and underlays to the S.E. It consists of chlorite and quartz with tin disseminated through it. A shaft has been sunk upon it to a depth of 160 feet. Parallel with it, about 40 feet from it on the S.E. side, are four other similar lodes within a belt of 14 feet; these probably run into one another. On the N.W. side three other lodes are seen outcropping at the surface; and between Curnow's and the Dutchman's another lode has been opened, consisting of ferruginous crystalline quartz with chlorite and clay; it is from 2 to 3 feet wide and strikes N. 32° E. A crushing battery on Lottery Creek was about to be erected at the time of my visit for the treatment of the ore from these lodes.

Butler's, or the Dan O'Connell lode, is from 10 to 30 feet wide, striking E. 30° N., and traversing curitic and porphyritic granite. It consists of ferruginous chlorite rock, quartz-veins, felspar, and curite. The tin ore is regularly disseminated through the lode and occurs chiefly in quartz-veins and chlorite, while quartz-veins of more recent formation cut through all these. Some of the quartz crystals are coated in a remarkable manner with stellated scaly masses of chlorite. There is also a little wolfram. The lode has been traced for about 20 chains, and for half that distance along its outcrop tin ore may be seen at intervals in it. Stone taken from the whole width of the lode would not pay for crushing, for the ore is so scattered that suitable crushing stuff would have to be culled from the mass.

Carr's lodes are on one of the high spurs of the Gulf Ranges and near the Gulf Creek, the bed of which has been worked for stream tin. There are two principal lodes which are about 80 yards apart traversing coarse-grained porphyritic granite and striking E. 13° to 20° S. They are intersected by several small tin-bearing felspar-veins from 3 inches to 2 feet thick, striking about N.E. and S.W., and it is at the junction of one of these with No. 1 lode, which underlies to the north, that the main shaft 150 feet deep has been sunk. In a drive from the shaft the channel of the lode at one point was 7 feet wide, with soft slickenside joints. The tin ore occurs in irregular masses or floors; thus at this point was a mass of ore in chlorite from 1 to 8 inches thick and 18 by 2½ inches across, extending from the foot wall; these masses of ore seem to form a shoot in the lode dipping towards the east. In the lode in the upper levels tin in patches of red and white chalcidonic rock with small crystals of beryl were found. No. 2 lode is from 1 to 2 feet wide. A considerable amount of work has been done upon these lodes, and Mr. Carr, the Mining Manager, informed me that about 270 tons of ore had been raised.

Within a distance of 1½ mile westerly from Carr's and in the parish of Muir seven small tin lodes or veins have been opened. They strike about N.E., vary from 1 to 9 inches thick, and consist of felspar and quartz, with chlorite and tin ore. The alluvium in the gullies adjacent to these was being worked for stream tin by Chinese miners. It was in a small gully which runs through portions 9 and 10, parish of Muir, that those remarkable round nuggets of tin ore were obtained which were exhibited by Mr. J. H. Butchart at the Sydney International Exhibition. One of the nuggets weighed 32 lbs. The alluvial in which they occurred was only about 6 feet deep and 2 chains wide, with porphyritic granite cropping out at the surface on both sides, but no lode has been discovered; the granite is much jointed, the joints striking N.E. and S.W. About 20 chains from here to the south-east a shaft has been sunk on a pipe-vein of chlorite and micaceous rock; it contains anythystine quartz, pyrites, fluor-spar, and the rare mineral monazite.

About 1 mile to the south-east from Carr's is the Yankee lode which is a ferruginous quartz-vein 4 inches thick, with chlorite and tin ore; it has been traced for about 500 yards and strikes N.E. and S.W.,

S.W., traversing porphyritic granite. A prospecting shaft has been sunk upon it to a depth of 30 feet. On the south-east side of it, 12 yards from it, is a parallel vein which is 2 feet thick in places; it contains crystals of quartz, felspar, and tin oxide, and has been worked to a depth of 25 feet. Another similar parallel vein, 28 yards from it, has been worked to a depth of 30 feet, when it made into white quartz containing but little tin. Within 100 yards are four other narrow tin-bearing veins not worked. On the west side of the Yankee vein are several narrow quartz-veins running W. 25° N., and containing molybdenite and chlorite.

In the same parish (Land's End) and about 1 mile to the N.E., several lodes have been opened and partly worked. Some of them are veins similar to those just mentioned, while others are pipe-veins consisting of felspar with tin ore more or less disseminated through it. One of them in portion 55 was a quartz-vein 4 inches thick at the surface, striking E. 20° S. and traversing soft porphyritic granite; as it went down it changed into felspar, rich in tin ore, and increased to 2 feet thick, but at 25 feet deep it narrowed to 1 foot wide and became poor in tin. It was worked for a length of about 20 feet, and 5 tons of tin ore were said to have been crushed from it by dollying. But another of them called Grancy's lode in portion 53, parish of Land's End, is a very remarkable pipe-vein in hard granite. At the surface the vein or shoot consisted of an oval-shaped mass of ore with felspar 2 feet long and 18 inches wide; at 20 feet it is said to have been 5 feet by 2 feet; and at about 40 feet, the depth at which I saw it, it was 2 feet 6 inches long by 6 inches wide. Some fine blocks of almost pure ore from this lode were sent by Mr. Grancy, of Emmaville, to the Mining Museum. This pipe mass of ore went down with an irregular dip of about 66° towards N. 20° E. It seemed to be quite isolated, but I believe that it will be found to connect with a small vein in which a small patch of tin ore is seen at the surface at a distance of 83 feet, N. 18° E. from Grancy's shaft. In portion 90 a tin-bearing felspar-vein from 1 to 3 feet thick has been opened for about 50 feet along its strike of E. 15° S., and a little further to the west in portion 31 is Blair's reef, which consists of quartz and chlorite from 8 inches to 2 feet wide, containing tin ore in bunches; it strikes N. 38° E., and a shaft has been sunk upon it 38 feet deep. Near it are many other small parallel veins tin-bearing.

It is highly probable that if a good crushing plant were to be erected in some central part of this locality, which is known as "The Gulf," sufficient ore might be raised from the numerous lodes to keep it constantly employed.

It is worthy of notice that most of the tin lodes, like the bismuth lodes near Glen Innes before-mentioned, occur in the granite not far from its junction with the slate formation, which has been highly metamorphosed by the intrusion of the granite, and it is likely that the lodes are the filled-in shrinkage-fissures caused by the cooling influence of the slate formation.

We next proceeded to the table-land which lies to the N.E. of the Gulf, and observed that nearly the whole of the intervening country has a stanniferous appearance.

In portion 10, parish of Flagstone, on almost the highest point of this locality (by aneroid observation 3,660 feet above sea-level), two small ferruginous quartz-veins, containing tin ore and striking N. 35° E., have been opened by Mr. Alfred Cadell, C.E., of Emmaville, but they are too small to be of value. But in portion 3 Messrs. Cadell and Hall have partly opened a quartz-vein, in auriferous granite, containing coarse tin. It deserves further prospecting. The small gully which drains from this lode has been worked for stream-tin.

At the Black Swamp, near the junction of the granite and slate formations, an alluvial flat has been extensively worked for tin, and in the hills on the north side of the flat there are some lodes.

One mile before reaching the table-land township occur some very large and conspicuous granite tors, which are some of the finest of the kind that I have seen in the district.

The township is about 3,620 feet above sea-level, and is on the south side of a swampy flat forming the source of a creek which flows northerly to the Mole River. About a mile from the township several tin lodes have been worked. One of them, the "Torrington," has been prospected to a depth of 80 feet; it strikes E. 40° N. The lode stuff in one place was 2 feet wide, consisting of fine-grained felspar with tin ore in it, chiefly near the hanging wall, and in irregular patches. At its N.E. end the lode is cut off by a cross-course of fine-grained auriferous granite, which is part of a large mass running S.E. Here tin ore has been followed from the surface downwards as a shoot dipping W. 40° S.; it was 1 foot wide, and the hanging wall well defined with clay dig. The country is coarse micaceous granite, traversed by veins of fine-grained granite. On the S.W. side another parallel vein, from 3 inches to 2 feet wide, has been opened; and about 10 chains E. 30° N. from main shaft is a small vein, strike E. 30° N., containing tin. Also 20 chains to the S.W. is Gasser's lode, strike N.E., nearly vertical, and from 3 inches to 1 foot wide, opened for 200 feet along its course and 40 feet deep at the time of my visit. Almost on the same line of strike are Elliott's lode and Spear and Moore's lode of somewhat similar size and nature to the others.

A considerable amount of prospecting has been done on these lodes, and the results show that the tin ore occurs in shoots or bunches, sometimes as nearly solid ore, at others disseminated in crystalline grains through the vein stuff. The joint fissures which the lodes usually follow may extend to great depths, but the shoots of ore in them are of most irregular and uncertain occurrence, so that the proximity or otherwise of ore masses can only be ascertained by following the veins or joint fissures. Their depth or position has no relation to the present surface of the ground, for the lodes cropping out high up on the ranges present similar features to those at the base of the ranges, and it is also obvious from the fact that the lodes were formed in the granite before the present valleys had been eroded; therefore the occurrence of the ore in patches in the lode may be regarded as a constant feature. It is of course from the lodes that have been broken up during the erosion of the valleys that the deposits of stream-tin have been derived.

Near the eastern margin of the table-land, at the head of the Nine-mile Creek, where a considerable amount of alluvial mining has been done, are the Planet and the Folkestone lodes. The works on the former had been discontinued, but I was informed that some rich patches of ore had been found in it. The lode occurs in altered micaceous slate and strikes E. 15° S.; it also contains arsenical pyrites and wolfram. The Folkestone lode is in granite, and runs east and west. It is from 8 to 18 inches thick, consisting of quartz with zinc-blende, galena, arsenical and iron pyrites, and tin ore. A shaft has been sunk upon it to a depth of 100 feet. About 16 miles north of the Table-land, on the Silent Grove Creek, and 600 feet lower altitude, are the Silent Grove Tin and Bismuth Mines. The principal tin lode has been traced about 250 yards N.E. and S.W., traversing porphyritic granite. It consists of ferruginous quartz,

quartz, containing tin, chlorite, and white mica, and is from 4 inches to 6 feet thick. About 1 mile W. 15° N. from this a quartz and felspar vein from 4 to 9 inches thick, strike W. 15° N., contains, besides tin ore, metallic bismuth, sulphide and oxide of bismuth, chlorite, and white mica. Close by is a belt of quartzite, 40 feet wide, striking S. 30° W., having altered slate on the east side and euritic granite on the west; quartz and granitic veins with tin ore traverse this quartzite. Some surfacing has been done here for stream tin, which has been derived from these veins; and in the surfacing, a quarter of a mile to the west, lumps of tin ore 2-lbs. in weight are said to have been found. On portion 71, in the same parish—Silent Grove—there are two other quartz and felspar lodes containing tin ore. All the lodes of this locality occur near the junction of the granite with the slate.

The altered slate formation continues up the creek for about 3 miles from the Silent Grove Mines; then the road passes over porphyritic granite with masses of eurite in it. The granite in places is traversed by numerous vertical joints striking N.E. and S.W., which give it the appearance of stratification, huge slab-like masses standing out on the sides of the hills. Many dark chloritic quartz-veins strike N.E., also traverse the granite. These features continue to near the Black Swamp on the Table land, and some of the gullies have been worked for stream tin, so that tin lodes must evidently occur in the vicinity.
