NEW SOUTH WALES.

RAILWAYS OF NEW SOUTH WALES.

(REPORT FOR 1882.)

The Commissioner for Railways to The Honorable the Secretary for Public Works.

Department of Public Works, Railway Branch, Sydney, 1 September, 1883.

Sir,

I have the honor to submit, for the information of the Government, a statement of the transactions of this Department for the year 1882.

No. 1.—RAILWAY CAPITAL AUTHORIZED.

At the close of 1881 the amount of Loans authorized was £26,702,661. Railway Debt. No additional loan was authorized in 1882. The total amount of Debentures Nos. 7 & 8, issued at the close of 1882 was £15,660,600, leaving a balance of £11,042,061 pp. 57-62. still to be raised.

The Railway capital bears interest as follows:—

£7,110,800—5	per	cent.					<i>:</i>	•••	annual inter	est	£355,540
8,549,800—4		,,	• • •								£341,992
11,042,061—4	•	,,		•	(stil	11to	be be	raised)	,,	:	£441,682

The average interest being 4.26 per cent., equal to £1,139,214.

The interest paid for 1882 on Railway Loans was £643,992. The net return from the Railway working of that year was £764,228, showing a net profit, after meeting all demands for working expenses and interest upon capital, of £120,136.

2.—RAILWAY CAPITAL EXPENDED.

At the close of 1882 there had been expended on lines open for traffic Capital expended. £15,848,494,* and on lines in course of construction £928,148; in all, Appendix £16,776,642, of which amount the sum of £1,896,178 was expended in the pp. 63-65. year 1882, as under:—

Construction	***	 	£1,666,381
Rolling Stock an	d Machinery, &c.	 •••	$\sim\!219{,}546$
Trial Surveys		 • • • •	10,251
			

£1,896,178

The

^{*} Includes cost of old Pitt-street Tramway, taken up in 1867.

The sources from which the money expended on lines open for traffic have been obtained are—

From Loans	•••	 		£15,210,615
,, Revenue		 •••		633,001
•				
			. '	£15,843,616*

The interest bearing capital expended on lines in operation was therefore only £15,210,615, and, as several of the lines were in operation for parts of the year only the net returns for 1882 will pay at the rate of 5.36 per cent. per annum for the period during which the lines were working; but in calculating the interest which the net receipts give the whole amount of capital has been, as in past years, included without regard to the source from which it has been obtained. The percentage to capital is consequently reduced from 5.36 to 5.14.

3.—LINES OPEN AND IN PROGRESS.

Railways Of the sum £1,666,381 expended in 1882 for construction, the sum Appendix No of £741,861 was expended on lines open for traffic, and the balance, £924,520, invested in unproductive lines in course of construction.

In the following statement is given the length of Railway lines open for traffic during the year 1882:—

Southern and South-western Lines.

•		Miles.
South:—In operation at close of 1881—Sydney to Albury South-west—Junee to Darlington	}	486
Opened 1 March, 1882—Darlington to Carathool	•••	34

Northern Line.

In operation at close of 1881—Newcastle to Tamworth (including	
Morpeth Branch) and Werris Creek to Gunnedah	
Opened 9 January, 1882—Tamworth to Moonbi	12
Opened 11 July, 1882—Gunnedah to Boggabri	24
Opened 2 August, 1882—Moonbi to Uralla	51
Opened 1 October, 1882—Boggabri to Narrabri	32
Total opened 31 December, 1882	147½
Average for the year	$281\frac{1}{2}$

It will be seen from the foregoing that during 1882 no less than 273 Southwestern miles of line were open for traffic, embracing extensions of great importance. In the south-west the line was extended from Darlington to the town of Hay, one of the most important centres in Riverina. The effect which the opening of this extension has had in diverting the Riverina trade to our own Capital is shown by the wool returns.

In the west the Department was able to arrange with the contractors Western Line. (A. & R. Amos) for the opening of the line from Dubbo to Warren Road, 63 miles, on the 16th October last, eight and a half months before the expiration of the contract time, a promise having been given by the Government that the contractors should be paid a bonus of £9,000 if the line were opened by the date mentioned. Of this sum, £5,000 was contributed by the Cobar Copper Company, in consideration of the benefit which the earlier opening of the line would confer upon the interests they represented.

The first section of the branch line to Mudgee, viz., from Wallerawang to Capertee, was opened on 15th May, 1882.

During the years 1880 and 1881 no additional mileage was opened Northern on the Northern Line; in 1882, however, 119 miles of line, an addition of over 50 per cent., were added to the Northern Railway system. The Main Northern Line was extended from Tamworth, first, to Moonbi, and subsequently to Uralla, on the borders of the rich and extensive district of New England. This extension resembles in some respects the Western Line over the Blue Mountains. The works are exceedingly heavy, owing to the mountainous character of the country. The line reaches a height above sea-level almost as great as the highest point reached by the Great Western Line. In the vicinity of the railway are many views of great beauty, which, added to the salubrity of the climate, should make this place the tourists' district for the residents of the lowland plains and towns in the Northern District. Since the close of the year the line has been extended to Armidale, the cathedral city and capital of New England.

The North-western Line was extended from Gunnedah to Narrabri, a distance of 36 miles. This extension will bring to the Northern system a considerable amount of traffic that was formerly carried by the Western line, and will open up a large area of country.

Since.

Since the close of 1882 the following extensions have been opened—

Uralla to Armidale, 1 February, 1882 ... 15 miles.

Nevertire to Nyngan, 9 June, 1882 ... 36 ,,

Albury to River Murray, 14 June... ... 1,

LINES IN PROGRESS.

Railways in progress.

At the present time there are 533 miles under construction. Particulars of the lines under construction are as follows.

Great Western Railway.

Wallerawang to Mudgee—85 miles.

Wallerawang to Mudgee. The first section of this line, viz., from Wallerawang to Capertee, a distance of 23 miles, was opened for traffic on the 15th May, 1882.

The contract time for the completion of the line to Mudgee is 30th June, 1884, and there is every reason to believe that it will be opened for traffic by that date.

Nyngan to Bourke—126 miles.

Nyngan to Bourke. Tenders for the extension Nyngan to Bourke were opened on the 22nd November, 1881, when the tender of George Mann & Co., for £412,977 18s. 4d. (the lowest of four received) was accepted. The contract time for completion of the line to Bourke is 31st March, 1885.

Great Northern Railway.

Uralla to Tenterfield—136 miles.

Uralla to Tenterfield The extension from Uralla to Glen Innes, $78\frac{1}{2}$ miles, was let to Mr. D. Proudfoot, on the 18th January, 1881, for the sum of £457,523. The time for the completion of this length is 31st December, 1883. The first section, Uralla to Armidale, 15 miles, was opened on the 1st February last.

Tenders for the extension from Glen Innes to Tenterfield, a distance of $57\frac{1}{2}$ miles, were opened in October last, when that of Messrs. Cobb & Co., for £618,737 14s. 2d., the lowest of six received, was accepted. The line is to be completed by the 30th June, 1885.

Sydney to Illawarra—1st Section.

Sydney to Illawarra. Tenders for the first section of this line, a distance of 23 miles from Macdonaldtown, were opened on the 12th September, 1882. Nine tenders in all were received, and the lowest—that of Messrs. C. & E. Miller, for £258,419—accepted.

The date for the completion of the whole length is 30th September, 1884, but it is probable that some portions of the line will be opened before this time. The contract includes the erection of the bridge over the George's River. The works beyond the 15th mile were, by arrangement with the contractors, stopped while surveys were made of a proposed deviation in the route. The survey has not yet been completed.

Homebush

Homebush to Waratah—1st Section, 29 miles.

Tenders for the first section of this line were opened on the 1st May Homebush to last. Ten tenders were received, and the lowest—that of Messrs. A. & R. Amos, for £445,472 16s. 8d.—accepted. The time for completion is 1st March, 1886. Included in this contract is the erection of the bridge over the Parramatta River. Amos & Co.'s tender for £380,969, the lowest of three received, was accepted on the 17th August last for a second section of this line, a distance of 49 miles.

Goulburn to Cooma—1st Section.

Tenders for the first section of the above line, extending from Goulburn Goulburn to Bungendore, a distance of $39\frac{1}{2}$ miles, were opened on the 3rd October last. Cooma. Eight tenders were received, and that of Topham, Angus, & Co.'s, for £232,508, accepted. The date for completion is—to Tarago, 1st October, 1883; to Bungendore, 31st December, 1884.

Murrumburrah to Blayney—1st Section.

Seven tenders were received for the construction of the first section of Murrumthis line to Young, and the lowest—that of Messrs. O'Rourke & M'Sharry, Blayney. for £184,270 6s. 8d.—accepted, on the 23rd September, 1882. The date for completion is 31st December, 1884.

Narrandera to Jerilderie.

'Tenders for the construction of this line were opened on the 28th Narrandera to November last, and Messrs. Halliday, Owen, & Co.'s, for £284,330 8s. 4d., the lowest of six received, was accepted.

This line, 65 miles in length, is to be completed by 30th November, 1884.

The following is a summary of the progress made with the construc-summary of tion of new lines:—

Summary of progress made in construction of new lines.

· Extension.	Distance.	Progress.
Wallerawang to Mudgee .	Miles. 85	From Wallerawang to Capertee, 23 miles, opened on 15 May. Line to be completed to Mudgee by 30 June, 1884.
Nyngan to Bourke	126	Line to be finished by 31 March, 1885.
Uralla to Tenterfield	136	The extension, Uralla to Glen Innes, is to be completed by 31 December, 1883. A section, Uralla to Armidale, was opened on 1 February, 1883. The line to Tenterfield is to be completed by 30 June, 1885.
Sydney to Illawarra	68	First section, 23 miles, under construction, to be completed by 30 September, 1884.
Homebush to Waratah	93	Two sections, 78 miles, under construction.
Goulburn to Cooma	130	Goulburn to Bungendore, 39½ miles, under construction, to be completed to Tarago 1 October, 1883; to Bungendore, 31 December, 1884.
Murrumburrah to Blayney .	108	Murrumburrah to Young, under construction, 18 miles, to be completed 31 December, 1884.
Narrandera to Jerilderie .	65	Under construction, to be completed by 30 November, 1884.

Railways opened and to

In the following table the lengths of Railway lines authorized, the be constructed total lengths opened, the extent of double line, and the lengths remaining to be constructed, are shown:—

Railways.	Length of Line sanctioned.	Length opened for traffic.	Portion laid with double rail.	Length remaining to be finished.

4.—LAND TAKEN FOR RAILWAY PURPOSES.

Appendix No.

The quantity of land taken for Railway purposes during the past year, was 5,140 acres $12\frac{2}{3}$ perches, of which 977 acres $14\frac{1}{6}$ perches were private, and 4,162 acres 3 roods $38\frac{1}{2}$ perches Crown Land.

On reference to Appendix No. 4 it will be seen that both the rate per mile and per acre on the total of all lines has increased. This is principally owing to the costliness of the land required for the construction of the line from Albury to the River Murray, and also to the number of buildings which had to be taken on the Illawarra Railway. The amount to be paid for land on the latter line is also very large, a value being stamped upon it by the prices realized at the sales of numerous subdivisions which were submitted to auction immediately before the issue of the proclamation and when the centre line of railway had already been marked out.

The claims outstanding on the 31st December, 1881, were 454, to which were added 164 during 1882; of these 618 claims 162 were settled in 1882, leaving, at the close of the year, 456 in various stages of adjustment.

For

For some time past consideration has been given to the question whether the community is not entitled, in a more direct way than has hitherto prevailed, to a portion of the wealth created by the construction of railways with public money. I brought this principle under the consideration of Mr. Secretary Lackey in connection with the extension of the Tram Lines, and it was so far adopted that the construction of the Tram Line to Cook's River was made conditional upon the owners of the land through which it would pass giving free the land required for the purpose. This proposal wasvery generally responded to, and no doubt the whole of the persons who held property would have given the portion required free had not other considerations determined the Government to abandon the construction of the line. I have called the attention of successive Ministers of Works for the last two years to the desirability of providing for the increased traffic on the Southern Line and creating and developing additional suburban traffic, by the construction of a line from about Liverpool to meet the Illawarra Line in the neighbourhood of Newtown.' Such a line would open up a large area of country capable of cultivation, and would give an additional outlet for the overcrowded population of the city. In order that the community might share in the benefits derivable from the expenditure of the money in the construction of this line, it was proposed to resume a large area of land, about one mile in width, throughout the whole route; and after providing for roads and the creation of suitable townships, to re-sell the land not required for railway purposes, the profits made upon the re-sale to go as a set-off against the cost You thought favourably of the proposal, and took some initiaof the railway. tory steps to give effect to it; but it soon appeared, from the fact that public petitions were being largely signed advocating this route, that either the intentions of the Government in this regard had become known, or the necessity for such a line had manifested itself to others. The object in view being thus in a measure frustrated, the alternative course was adopted of intimating to those interested, who waited by deputation upon you, that you would only consent to recommend the construction of the line to Parliament upon the understanding that the land required for its construction was given free. The policy proposed to be pursued in this respect is not, I find, without example. The question has recently been taken up in New Zealand, and the Minister for Public Works, the Hon. Walter Woods Johnston, in a statement delivered to Parliament on the 3rd July last, in speaking of the treatment of land specially benefited, said:

I now come to the consideration of the manner in which lands specially benefited by the construction of railways should be dealt with. With reference to the advantages which have accrued in the past, the Government does not intend now to make any proposals, for it is not practicable to suddenly seize for the State a share of these advantages without inflicting numberless wrongs. But with regard to the future the case is different, and we are free to consider, unembarrassed by any apprehension of committing injustice, what share the community may be entitled to of the wealth created by the construction of railways with public money. In seeking the simplest and fairest course to adopt; the first suggestion which will have probably occurred to the minds of honorable members is that the State should repurchase all the land for a certain distance on either side of the proposed line at a certain increase upon the property-tax valuation. Valuations for taxation are usually low; on the other hand, compensation for expulsionshould be liberal-perhaps compensation to the dispossessed landholders of twenty-five per cent. more than the valuation for property-tax would not be inequitable; and when railways are extended through country suitable for settlement there can be no doubt that the re-sale in moderate-sized farms of the land so taken would produce a profit sufficient to make a considerable contribution towards the cost of the railway, and moreover would bring into existence a traffic large enough to cause the railway to be a source of considerable revenue. Great collateral advantages would accrue to the Colony from the increase in our total production, and from the revenue contributed by an additional population.

5.—Importation of Railway Materials.

Appendix No. In the Appendix will be found a return of the Permanent-way materials, locomotives, and miscellaneous articles imported during the year under review.

The following is an abstract of the returns:—

						·			

Early in the year 1882 it became apparent that the store business of the Department could not much longer be transacted in the very restricted premises allotted to that branch at Redfern.

These premises had long been recognized as inadequate to the requirements of the Store Branch, but were clung to year after year in constant anticipation of the early removal of the workshops from the Redfern yard, and a consequent migration in which the Store Branch would participate.

For the double purpose of affording relief to the Redfern store premises, and of obviating delays in the transmission of supplies for the various works in the country districts, branch stores were opened at Goulburn and Bathurst. These have been found of great practical utility, and an actual pecuniary gain to the Department.

The relief thus afforded was, however, temporary only, being gradually negatived by the rapid increase of the business.

The following figures will convey some idea of the increase during the past ten years, and it may be pointed out that so far back as 1873, the year taken for comparison with 1882, the premises were considered inadequate for the efficient conduct of the business, which has since increased *elevenfold*.

		1873.	1882.
Value of purchases in the Colony	 . <i>:</i> .	£50,865	£433,798
Do Miscellaneous Imports	 •••	5,877	187,858
,		£56,742	£621,656

It was therefore determined to erect the present commodious premises at Eveleigh, in which, at the time of writing, the store staff is permanently established, and the business conducted in a systematic manner, which was almost impracticable in the cramped and inadequate premises previously occupied.

They occupy an area of about $5\frac{3}{4}$ chains north and south, by about $8\frac{3}{4}$ east and west; and upon this have been erected two galvanized-iron stores, each 200 feet long by 50 wide, and a small oil store, 40 feet long by 20 feet wide. The necessarily large clerical staff employed for the conduct of such a business has been accommodated in a handsome two-story brick building, containing eight large rooms, and surrounded by a balcony and verandah. A small garden has been laid out in front, and there is an air of comfort and neatness about the whole surroundings which is not often met with in connection with structures of this kind erected for Railway purposes, but which is none the less pleasing. A new store building, 75×50 , has also been erected at Randwick. This was in view of the increasing business of the Tramways, and the desirability of keeping the transactions quite distinct from the Railways.

The management of the store branch for all lines had been vested in the Storekeeper, Redfern, but on the opening of these three additional branch stores, making five in all, it was considered that that Officer could not efficiently conduct the general management of this service, and at the same time be responsible for the detail working of one particular branch. The difficulty was met by the appointment of a Superintendent of Stores, and of Storekeepers to take charge of the various branches, a change which came into operation at the commencement of the present year.

6.—Existing Lines.

Maintenance of Ways and Works.

All the lines were kept in good order during the year, and a large Appendix No. number of new works executed, details of which will be found in the Report of the Engineer for Existing Lines (Appendix I.) The following were the principal works carried out: - Excavation and levelling for workshops, foundation for running shed, and erection of store premises at Eveleigh; Goods sheds and heavy cranes provided at the principal suburban stations, and light cranes at several of the up country stations. At Summer Hill a Station-master's house was erected, and an over-bridge at Ashfield. A large number of new sidings were laid in during the year, amounting to 7 miles on the Southern Line, 5 miles on the Western Line, and over 1 mile on the Northern Line. The principal sidings were those in connection with the new and extensive cattle-yards erected by the City Corporation at Homebush. About $1\frac{1}{2}$ miles of new sidings were laid in at Granville, and also at Penrith. 1 mile of sidings were laid in at Blackheath, principally for loop lines, and 1 mile at Bathurst. In the south, principally on the Darling Harbour Branch and Suburban Line, 3 miles of line were relaid with steel rails. the west, in various parts, 10 miles of line were relaid. On the Richmond Line over 1 mile was relaid. $37\frac{1}{2}$ miles of railway fence were wired on the Southern Line and 11 miles on the Western Line. The work of improving the gradients and strengthening the Richmond Line has been continued during the year. Locomotive

Locomotive and Carriage Division.

Appendix No. 2, p. 26.

Complaints are still made of the great inconvenience suffered by this branch owing to the want of room at the workshops. The urgent necessity is pointed out for the early completion of the works at Eveleigh, so that operations may be carried on at that place. The works are being pushed forward as fast as possible, and arrangements have been made for obtaining the new and improved appliances that will be used. The visit of Mr. Scott, the Locomotive Engineer, to America and Great Britain, will, it is hoped, be productive of much good to the Department. - Mr. Scott visited the principal railway workshops of these countries, and will adopt in our establishments the most valuable appliances he saw in use in the leading workshops of England and America.

THE following is an Abstract of Rolling Stock on hand on 31st December, 1880, and the number and description of Vehicles supplied in 1882.

Appendix No.

It will be seen that thirty-five engines were supplied during the year. Twelve of these were made by colonial makers, viz., four by Mr. Henry Vale and eight by the Atlas Company. It is satisfactory to state that the Colonial-built engines have to the present time fulfilled the requirements of the Engineer, both as regards material and workmanship.

The stock of engines is still below estimated requirements, but a considerable number are under construction.

A question of some moment to the Department is that of obtaining permanent and good supplies of water at various convenient points on the lines. Before supplies are taken from any new source, samples of the water are sent to the Government Analyst, in order to ascertain whether the water contains any qualities that will affect injuriously the locomotive boilers. The whole question is receiving careful attention. Last year much inconvenience was caused by the failure in the dry season of many of the sources of supply, particularly on the Western Line, and water trains, at considerable expense, had to be run to meet the deficiency.

7.—REVENUE AND EXPENDITURE.

The varying necessities of the traffic, and the measures for its encouragement and development, have continued to receive close attention, and during the year numerous modifications in rates have been made from time to time in order to attract and secure traffic to the railways.

The gross earnings in 1882 were £1,698,863, being £254,637, or 18 per cent. in excess of those for 1881. The working expenses were £934,635, being £196,301 in excess of 1880, and the net earnings £761,228.

Gross and net earnings and working expenditure.

Of the gross earnings, the sum of £587,825 was derived from coaching traffic, and £1,111,038 from goods traffic. The proportion of the former to the latter was 34.60 to 65.40.

In the following tables are given the particulars of the Revenue and Expenditure for 1882 compared with 1881:—

COACHING TRAFFIC.

8.—DIVISION OF THE RAILWAY LINES INTO SECTIONAL AREAS.

The following statements of the capital, revenue, and expenditure on Division of the various sections of the Great Southern, Western, Richmond, and Northern sectional Railways for the year 1882 will show that generally the traffic on the new areas. lines has much improved, and that the old lines have been largely benefited thereby.

All sections. and Richmond.

It will be seen that the line from Junee to Hay has been worked at a Competing, as we do, with Victoria and South Australia for the Riverina traffic, it is necessary to give both low rates and good service; and while it is to be regretted that the revenue did not for 1882 cover the expenses on that line, it must not be forgotten that the South-Western traffic goes to swell the receipts between Sydney and Junee, and largely improves the returns on that section of the Railway. There are indications, moreover, that the traffic on the South-Western line is improving. obtained for the first three months of the present year, it is shewn that 900 tons of goods in excess of the quantity sent in the corresponding period of last year were forwarded from Sydney to Hay, and although it is not assumed that the whole of this increase will be maintained, as we shall lose, now that the Murrumbidgee is again navigable, some portion of the Melbourne traffic which has reached Hay via Sydney, there is every reason to believe that the bulk of it will remain with us.

Increase in	n 1882 £		8,214	5,319
Decrease i	n 1882	2,895	•••••	••••••

The return above shows the wool carried during the year. In Appendix No. 29 will be found the quantity carried from each station for the season 1881-2, in comparison with the season 1882-3.

Wool carried for season 1881-2 compared with 1882-3. Dividing the line into sections, it will be found that there is a decrease of 2,828 bales on the Main Southern Line between Sydney and Albury. There has been very little change on the last opened portions, from Wagga Wagga to Albury, the decrease being at stations that have been opened for some considerable time, and must be due mainly to the severity of the season which has checked the natural increase of sheep and reduced the clip of wool. The South-western Line, owing to the opening of the extension from Darlington to Hay for the season 1882–3, shows a very considerable increase, the quantity carried being 17,353 bales in the season 1881–2, against 30,502 bales for the season 1882–3, an increase of 13,149. This represents wool that had previously gone to Victoria, but which, owing to the extension of the line to Hay, has now been diverted to our lines. The quantity of New South Wales wool sent across the border to Victoria has for years, owing to the extension of our Railways into Riverina, been steadily declining. From

the statistics published this year by the Collector of Customs it will be found that four years back, viz., in 1879, the quantity of wool sent across the border into Victoria was 175,761 bales; in 1880 it had been reduced to 153,049; in 1881, to 126,349; and in 1882, to 115,584—a decrease of 10,765 bales in comparison with 1881, and a decrease of 60,177 in four years. It must be remembered also that during this period the total number of sheep in the Colony has been increased by 20 per cent.

Turning to the Western Line, the result is not so encouraging. In 1881-2, 91,969 bales of wool were carried, while in 1882-3 the number carried was only 74,150, a decrease of 17,546 bales, almost entirely due to the drought, which was very severe in the Western Districts.

The Northern Line shows a total increase of 23,683 bales. The principal increase, 17,420 bales, was due to the extension of the Northwestern Line. There was an increase of 4,597 bales on the line between Murrurundi and Uralla, but a small decrease (334 bales) on the portion of the line that has been long opened for traffic.

Altogether the wool traffic for the season shows an increase of 14,185 bales, a result due entirely to the newly opened extensions diverting that traffic to our lines that had long been enjoyed by the other Colonies. A double advantage is reaped by drawing the wool to our lines, for not only is the Railway benefited in getting the traffic, but the return loading is obtained, in the shape of station supplies, implements, &c.; and further, trade is kept in our own Colony and with our own people that would otherwise be obtained by the merchants of the neighbouring Colonies. Had the season been a favourable one the natural increase in the number of sheep would have materially augmented the total quantity of wool carried.

In the following statement is given the number of sheep in the Colony at the close of the years 1881 and 1882:—

Districts.	Number of Sheep, 1st January, 1882.	Number of Sheep, 1st January, 1883.	Increase, 1st January, 1883.	Decrease, 1st January, 1883.
Border	11,492,128	10,404,587		1,087,541
Northern	6,991,956	8,482,938	1,490,982	
Southern	9,167,548	9,179,537	. 11,989	
Western	8,940,314	8,047,752	•••••	892,562
	36,591,946	36,114,814	1,502,971	1,980,103

Number of sheep in the Colony.

11.—COAL TRAFFIC.

Coal traffic, Appendix, Nos. 33-39, pp. 100-103. The coal traffic during the year shows a satisfactory increase. This great interest was not disturbed, to any material extent, by strikes, and as an increased export trade was done a larger quantity of coal than usual was carried.

The total quantity carried over the Northern Line for the years 1881 and 1882 was as follows:—

			Tons.	Freight.
1882	•••	• • •	1,327,060	£63,305
1881	•••	• •••	1,029,256	47,510
Incres	ase		297 804	15 795

The following were the quantities shipped for foreign and intercolonial ports:—

1882				,	 1,080,446
1881		,	•••	•••	 899,369
Т	ກດນອາ	92			181.077

Appendix No. 38, p. 103.

There was a still larger proportionate increase in the quantity of coal and shale hauled over the South and West Lines. Increased activity was shown in the working of the Lithgow mines, which has resulted in a very much larger output for the year 1882. The quantity of shale forwarded from Hartley Vale and Joadja was nearly doubled; while a considerable quantity of coal was forwarded from the mines recently opened on the Southern Line, near Moss Vale. The development of the coal mines on the Southern Line is a matter of great importance to the Department; previously the coal used on that line had to be drawn from Lithgow and Sydney, but now a considerable proportion of this haulage can be saved. The total traffic on the Southern and Western Lines was as follows:—

	Tons.	Freight.
1882	152,705	£55,924
1881	105,524	38,121
Increase	47,181	17,803

In addition to the above there were 99,429 tons conveyed for the Department, the freight on which amounted to £43,322. As this coal was used for locomotive purposes the sum named has not been included in the revenue returns of traffic.

12.—RETURNS.

In addition to the Returns given and referred to in the Report, the following will be found in the Appendix:—

Appendix No. 24, p. 78. 1. The particulars of the various classes of merchandise carried, its tonnage, and freight value.

Appendices Nos. 25 & 26, pp. 83-91. Appendix No. 27, p. 92.

Appendix No. 30, p. 96.

- 2. The revenue traffic and expenditure at each of the Stations.
- 3. Live stock traffic.
- 4. Statement of the value of the live stock and wool, &c., exported over the Border.

5. Business transacted at Central Booking Office.

6. Detailed returns of the coal traffic.

10. Return of accidents.

- 7. Particulars of the suburban passenger traffic.
- 8. Merchandise traffic rates, 1881 and 1882.
- 9. Comparative statement of the rates of railway carriage in the Austra-Appendix No. 52, pp. 134-

No. 53, p. 145.

Appendix No.

Appendix No. 31, p. 97.

Appendices

- 11. Table of the progress and financial position of the Railways, from Appendix No. 55, p. 147. 1855 to the end of 1882.
- 12. Number and classification of employés, and the scales of, and total Appendices amount paid for, salaries and wages. pp. 148-155.
- 13. Return of free passes issued during 1882.

Appendix No. 58, p. 156.

Annexed to the Appendix are thirteen coloured diagrams, showing the following particulars of the Railway transactions for each of the twenty-seven years from 1855 to the end of 1882:-

- 1. Length of line opened on 31st December in each year.
- 2. Number of passengers.
- 3. Tonnage of goods.
- 4. Earnings from coaching traffic.
- 5. Earnings from goods traffic.
- 6. Gross and net earnings and working expenses.
- 7. Working expenses.
- 8. Earnings per train mile.
- 9. Working expenses per train mile.
- 10. Percentage of working expenses to gross earnings.
- 11. Net earnings.
- 12. Capital invested in lines open.
- 13. Interest on capital.

A Railway map showing in colours the Railway systems of the Colony, the lines constructed, under construction, and authorized, is appended.

13.—RECAPITULATION.

The transactions during the year are thus summarized:-

The total expenditure for construction was £16,776,642, of which the sum of £15,848,494 was expended for lines opened for traffic.

The net earnings were £764,228, yielding 4.55 per cent. to the total capital expenditure, and 5.14 per cent. to the capital invested on lines open for traffic.

At the close of the year, 1,268 miles of line were open for traffic, and 504 miles were in course of construction.

The rolling stock consisted of 268 locomotives, 564 coaching, and 5,445 goods vehicles.

64-E

The value of the railway materials, in the conveyance of which 155 vessels were employed, amounted to £447,431, and the freight and insurance to £42,684, making a total of £490,115.

During the year, 104,153 trains, of which 57,176 were passenger and 46,977 goods trains, were run a distance of 4,851,127 miles. The earnings amounted to £1,698,863, and the working expenditure to £934,635, or 55.02 per cent. of the earnings. 8,984,313 passengers travelled, of whom 2,836,909 were first class, and 6,147,404 were second class. Included in these figures are 15,785 season-ticket holders, representing 3,425,736 journeys. The proportion percentage of these classes is for first class passengers 16.03, second class 45.85, and for season-ticket holders 38.12.

The merchandise traffic consisted of 1,348,679 head of live stock, 235,918 bales of wool, 1,789,896 tons of minerals, and 725,281 tons of general goods.

The earnings per mile open were £1,518, the expenditure was £835, the net earnings were £683.

The earnings per train mile were 84.05d., the expenses 46.24d., and the net earnings 37.81d.

There was an increase of 411,270 in the number of first class passengers, of 751,117 second class, and 914,614 in the journeys made by season-ticket holders, also an increase in the receipts of £99,150 from coaching traffic, and of £155,487 from goods traffic—making a total increase of £254,637.

I may conclude this Report by congratulating the Government upon the results which have followed the extension of the railways into the border lands of the Colony. The additional extensions which have been authorized will still further promote the commercial relations between the distant parts of the country and the metropolis, open up fresh fields for settlement, and stimulate the development of our natural resources.

I have the honor to be,

Sir.

Your most obedient servant,

Commissioner for Railways.

The Honorable F. A. Wright,
Secretary for Public Works,

&c., &c.,

&c.

TRAMWAYS OF NEW SOUTH WALES.

Department of Public Works, Railway Branch, Sydney, 1 September, 1883.

Sir,

I have the honor to supplement my Report for 1882, upon the Railways of the Colony, with a report for the same period upon the construction and operation of the Tramways in the City and Suburbs of Sydney.

In the following table is given the capital expenditure on the lines Capital open and under construction to 31 December, 1882:—

Lines and Sections.	Total Exp to 31st D 188	endit ecemb	ire er,	Amount e	expo 82.	ended	Total exp 31st Dec	end	ed to 382.
	£	8.	d.	£	8.	d.	£	8.	d.

Trial surveys, as shown in 1881 £1,049 .15 8	-								
Transferred, as above									
	988	13	7	1,699	6	7	2,688	0	2
Total	220,317	16	8	237,827	7	Q.	458,145	3	8

In addition to the sum of £600,000, voted in 1880 for the construction of Tramways, the sum of £400,000 was voted on the Loan Estimates for 1883 for this service. The balance in hand on the 31st August last was £354,000.

Lines open.

At the close of 1881 there were $9\frac{1}{2}$ miles of Tramway open for traffic. During 1882 an additional $12\frac{1}{2}$ miles were opened, increasing the mileage in operation on 31 December, to 22, the capital expended upon which, inclusive of rolling stock, machinery, and workshops, was as under:—

	*	Capital i	nvested.	
Lines open for Traffic.	Actual length in miles.	Construction of Lines.	Proportion of cost, rolling stock, machinery, workshops, &c.	Total Capital invested.
	•	£	£	£
Redfern Railway Station to Bridge-street	$1\frac{3}{4}$	41,665	18,242	59,907

		<u> </u>		·
Total	22	284,951	127,610	412,561

The extensions opened during the year have caused a very large increase in the transactions of the Tramways. The Camden Line, which may be considered to be connected more with the Railway than with the Tramway system, was opened on the 10th March, 1882. This line, $7\frac{1}{2}$ miles in length, is an experimental one, constructed in order to see whether tram lines can profitably be used as subsidiary or feeding lines to the main trunk lines. The result, so far, has been unsatisfactory, the transactions for the nine months of 1882 the line was in operation showing a loss of over $1\frac{1}{2}$ per cent. upon the capital expended.

The Tramway to Botany via Redfern and Waterloo was opened on the 17th May, 1882. The line has been extensively patronised. The population in Redfern and Waterloo affords a large permanent traffic, while at holiday times the number of passengers from the City to Botany has been so great as to tax the rolling stock resources of the Department to the utmost.

On the 15th August, 1882, the Main Line was extended from Hunterstreet to the present Terminus at Bridge-street, where space was obtained to provide for the necessary shunting of the motors and cars. The area acquired, however (two acres in extent), is much too small for the purpose, and this can be readily understood when it is mentioned that there are upwards of 1,000 trams arriving at and leaving the Terminus daily.

On the same day that the Terminus at Bridge-street was opened, viz., the 15th August, the lines to Forest Lodge and Glebe Point were brought into operation. The road carrying both lines, from the Railway Station at Redfern to the junction of Parramatta-street with the Newtown Road, has been paved with wooden blocks, the Government paying $\frac{3}{5}$ and the Corporation of Sydney $\frac{2}{5}$ of the expense. It will be seen from the sectional Returns

that

that these extensions were worked at a loss last year; they were, however, open for a short period only, four and a half months, and as they have been better patronised since more satisfactory returns are looked for.

The line from George-street West to Newtown was opened for traffic on the 2nd October, 1882. This line connects with the Tramway from Newtown to Marrickville, opened 31st December, 1881, and a continuous service is now afforded between Marrickville and Sydney.

Since the close of 1882 the following new extensions have been brought into operation:—

Randwick to Coogee, 2 miles, opened on the 25th January.

George-street West, towards Leichhardt, $1\frac{1}{4}$ mile, opened on the 18th June. This line is to be continued through Annandale to Leichhardt.

There are at the present time no new Tram lines in course of con-surveyed struction, but surveys have been made of the following proposed extensions:—

Along Harris-street to John-street, Pyrmont, 1 mile 19 chains.

From the present Terminus at Bridge-street via the Circular Quay by George-street to Lower Fort-street, and thence by Kent-street, Sussex-street, and Quay-street to the Parramatta-street Bridge, 3 miles.

From the Tea Gardens, Waverley, to Bondi, 1 mile 60 chains.

From Milson's Point to the public Reserve at the North Shore; and thence by the Military Road to Middle Harbour; and from Middle Harbour to Brighton (Manly Beach), 9 miles.

From Newcastle to Platsburg, 8 miles 25 chains.

From the Leichhardt Line, at Balmain Road, to Five Dock, 4 miles 13 chains.

Other lines have been surveyed, notably a line from Leichhardt, through Balmain, and over the Bridges to Ryde; a line from Bowral, or Moss Vale, to Robertson; and a line from Goulburn to Crookwell; but the question whether these and other lines are to be tram-lines—making use as far as practicable of the ordinary roads—or light lines of railways having independent and fenced-in routes, has not yet been finally determined.

REVENUE EXPENDITURE.

The total earnings derived from the City and Suburban Tramways Appendix 15, during the year were £126,202, an increase of £63,653 over the earnings of 1881. The expenditure was £103,136, and the net earnings £23,066, which, upon the capital invested in lines open, gave a return of 6.80 per cent. As will be seen from the foot-note to the sectional returns, one-seventh only of the cost of relaying the line from Hunter-street to Redfern station with steel rails has been charged to the working expenses of 1882, it having been decided that as the steel rails were guaranteed by the manufacturers to last for seven

years,

years, it would not be right to burden one year with the whole cost of relaying; indeed it is open to question whether any portion of this outlay should be charged to working expenses, in view of the fact that the line which was replaced was constructed as a temporary one only to meet the special requirements of the traffic for the time the Exhibition of 1879 and 1880 was open. The charge, in this aspect of the case, is properly one for capital to bear, but as to so charge itjustifiable as that course could have been shown to be-would have been to introduce a departure from the invariable practice of the Department to charge revenue with all cost of renewals, exceptional or otherwise, it was determined to adhere to that principle in this instance also. In addition to the heavy expense incurred in the relaying of the line from Redfern to Hunterstreet, a large sum was spent in renewing with steel rails portions of the Randwick and Waverley Lines, the cost of which was wholly charged to the working expenses for the year. The larger portion of this expense was spent on the line from Liverpool-street to Botany-street, and as this is included in the Randwick section, the net earnings derived from that section are consequently low—a better return will be shown for the present year.

The section from the railway station to Hunter-street shows the highest return of interest to capital, viz., nearly 16 per cent., while the Waverley and Woollahra section comes next with the handsome return of 13 per cent.

The increase in the passenger traffic was, owing to the opening of fresh lines, very great. In 1881, 7,090,125 passenger fares were collected, but during 1882 the collection reached the large total of 15,269,100 fares, equal to 986,400 per average mile of line, while the earnings were equal to £8,142 per average mile of line, results which exceed any published Tramway transactions in any part of the world.

Appendix 21, The working expenses, compared with those of 1881, are shown in the following statement:—

`				,	1882.	1881.	Increase.
		•			£	£	£
Locomotive power					52,736	22,819	29,917
Carriage repairs	.:.				· 7,974	3,331	4,643
Maintenance and re	newal	of Way	<i>7</i>		17,481	13,552	3,929

Note.—The amount given above as permanent-way expenses is that properly chargeable to the working of the year 1882. The line Redfern to Hunter-street was during the year relaid with steel rails, for which the manufacturers when supplying gave a guarantee of seven (7) years wear. The whole of this expenditure, owing to the system of voting annual supplies, has to be charged in the books to the particular year in which the money was actually expended; the accounts for this year will therefore show a sum of £14,325, or $\frac{a}{7}$ of the cost of relaying the Redfern line during 1882, in excess of the permanent-way expenses as shown in this statement.

ACCIDENTS.

A return of accidents will be found in Appendix No. 54. The number Appendix 54, of persons killed during the year was 8, the same number, it may be p. 146. mentioned, as was recorded for 1881. Of these eight, four were run over, three lost their lives through their own want of caution in attempting to enter or leave the cars when in motion, and one (a tram conductor) was killed by being knocked off the footboard of a car by a passing dray.

The most serious accident occurred on the Camden Line a few days after it was opened for traffic. A tram from Camden, laden with passengers, when approaching the junction at Campbelltown, was, in error, turned into a siding, and collided with some ballast waggons. A number of passengers sustained a severe shock, but fortunately none were fatally or very seriously injured. Two collisions, but not of an important character, happened during the year on the City lines, causing slight injuries to six persons.

ROLLING STOCK.

The Locomotive Running Sheds, which were described in the last Rolling stock. Annual Report, have been completed, and are found of great advantage in enabling the necessary repairs to the motors and cars to be carried out with facility.

The stock at the end of the year consisted of forty motors, eighty-one cars, and five trucks, an increase of seventeen motors, thirty-four cars, and five trucks over the previous year's supply. The vehicles now possessed by the department are found fairly equal to the requirements of the traffic.

During the year under review a new type of engine was brought into use, viz., the combined motor and car, made by Kitson & Co., of Leeds. This vehicle has been engaged between the Railway Station and Bridge-street; it runs smoothily, but requires frequent repairs.

The Locomotive Engineer (Mr. William Scott), who was despatched to America and the United Kingdom primarily for the purpose of inspecting and reporting upon the railway workshops and appliances in those countries,

was also directed to report upon the Tramway system in operation, and the In his report of the observations he made, which motive power employed. has been prepared for publication, Mr. Scott says that he obtained as much information as possible about the construction and working of Tramways both in Great Britain and on the Continent, and concludes an interesting description of the Tramway systems of the Old World with the statement that he has no hesitation in asserting, judging by what came under his own observation, that both the motors and cars on our Tramway lines are better adapted for their work than any he had seen, and certainly compared most favourably in construction and accommodation with those used on English and Continental lines. Mr. Scott further says, "I am very certain that those who have experienced the conveniences of our Tramway system would never be satisfied with either the speed or accommodation afforded by horse tramways"; and adds, it is the opinion of all those to whom he had spoken who have a knowledge of tramway working that it is a foregone conclusion that horse power will ultimately be entirely superseded by mechanical power.

Mr. Scott's duties as Railway Locomotive Engineer do not bring him into contact, either directly or indirectly, with the administration of the business of the Tramways, and his conclusions therefore must be freed from the imputatations that they are other than disinterested—not arrived at from a spirit of esprit de corps—nor animated, unconsciously or otherwise, by an undue desire to commend and sustain the action of the Tramway authorities of the Colony.

It is gratifying to add that while Mr. Scott considers the Baldwin Motors, which we have adopted, to be the best yet designed, the Constructor of them has admitted that a motor designed by Mr. Downe, our Engineer for Tramway rolling-stock, is a great improvement upon the Baldwin. A specimen motor, which has been made in America to Mr. Downe's design, is now on its way to the Colony to be tested on our lines.

But although it appears from the foregoing that our construction and equipment compare favourably with the construction and equipment of other Tramway lines, I am far from believing that we have arrived at anything approaching perfection in either, and shall consider improvements are still necessary while a single just requirement remains unsatisfied, or one reasonable complaint is unredressed.

CONCLUSION.

In concluding this report upon the Tramways of the Colony for the year 1882, it affords me pleasure to bear my testimony to the zeal and competency displayed by the officers immediately charged with the conduct of them; they have assisted me most assiduously in endeavouring to perfect the administration of this important branch of the Public Service, and much of its success is due to their unremitting care and attention; indeed the whole staff of officers and men deserve, not alone my commendation, but the thanks of the public, with whom they necessarily come much in contact, for their acknowledged civility and for the faithful and intelligent manner in which they discharge their onerous and sometimes difficult duties.

I have the honor to be,

&c.

Sir,

Your most obedient servant,

The Honorable F. A. Wright,
Secretary for Public Works,
&c., &c.,

Commissioner for Railways.

APPENDIX TO REPORT ON RAILWAYS.-1882.

No. 1.

The Engineer for Existing Railways and Tramways to The Commissioner for Railways.

Sir, Railway Department, Office of Engineer for Existing Lines.

I have the honor to submit my Annual Report, from January 1st to December 31st, 1882, on the condition of the Existing Railways and Tramways under my charge.

SUBURBAN RAILWAYS.

Sydney to Granville Junction—Double Line—Length, 13 miles 16 chains.

GREAT SOUTHERN AND SOUTH-WESTERN RAILWAYS.

Granville Junction to Albury-Single Line-Length, 373 miles 4 chains.

Junee Junction to Darlington-Single Line-Length, 98 miles 66 chains.

Darlington to Currathool—Single Line—Length, 33 miles 66 chains—Opened for public traffic on the 1st March.

• Currathool to Hay—Single Line—Length, 34 miles 57 chains—Opened for public traffic on the 4th July.

The whole of the works on these lines, including the various branches, have been kept in good order during the year.

In addition to the various new works and improvements particularized further on, extensive repairs have been carried out on the several sections. On that section between Sydney and Granville a large portion of the fences have been renewed and paled. The sleepers are also being renewed for a distance of about $3\frac{1}{4}$ miles.

The timber bridges between Picton and Goulburn have been thoroughly overhauled, and are, where found necessary, being renewed. A large number of them have been renewed during the year. The iron bridges on this section have also been repainted.

The following works have been carried out during the year:-

At Sydney-

Verandah erected at office of Inspector of Permanent Way.

Additional water-closet accommodation provided.

Additional office erected for Inspector of Permanent Way.

Water laid on to premises occupied by Mr. Castner.

Chimney of spring-furnace taken down and re-erected.

3-ton crane erected.

Offices for District Engineer erected.

Additions built to Locomotive Engineer's office.

Offices at goods-shed extended.

Gas-main laid on to platform and signals.

New platform erected.

Arrival platform lengthened.

Store-room for Traffic Department erected.

Offices for Traffic Branch completed.

At Darling Harbour-

Water laid on to goods-shed and offices.

Hydrants fixed in yard.

New sewers nearly completed.

New goods-shed nearly completed.

64-G

At Eveleigh-

New carriage-shed erected.

Floor of carriage-shed asphalted.

Commissioner's land fenced in.

House erected over pumping-engine and well.

Water laid on to platform.

New signal erected:

Water laid on to carriage-shed.

New stores nearly completed.

Store offices nearly completed.

Excavations and levelling for workshops, &c., being carried out.

Foundations for running-shed in course of construction (by contract).

At Macdonald Town-

New drinking fountain erected.

Down line distance signal altered.

Waiting-shed enlarged.

Approach road to station fenced.

At Newtown—

New 5-ton crane erected.

New wicket-gate erected.

Fence erected round fire-engine.

New sub-way, Liberty-street, nearly completed. At

At Stanmore-

Flagging at approach to station extended.

New block signals erected.

New double-arm signal erected.

Water laid on to station.

Gas laid on to signal-box and signal.

At Petersham-

Gas laid on to signal-box.

New advance starting signal erected.

New 5-ton crane erected.

Water closet and urinals erected.

Verandahs fixed at sides of signal-box.

Goods-shed erected (by contract).

At Summerhill-

New house erected for station-master (by contract).

Underground tank constructed.

At Ashfield-

Gas laid on to station-master's house.

Ticket office enlarged.

New 5-ton crane erected.

New batten fence and gate crected.

Gas laid on to station.

Signal-box enclosed.

New iron over-bridge erected at Matilda-

Goods-shed erected (by contract).

At Croydon-

New batten fence erected.

At Burwood-

New 5-ton crane erected.

New picket fence and bye-posts crected.

Gas laid on to post-office.

New gas-stove fixed in signal-box.

Gas laid on to station and signals.

New verandahs fixed at sides of signal-box.

New lamps erected on station.

New lamps erected on over-bridge.

400-gallon tank provided and fixed at signalbox.

Goods-shed erected (by contract).

At Redmyre-

New tank and stand fixed.

New semaphore signal erected.

At Homebush —

New semaphore erected at cattle-yards.

Temporary block signal-box erected at cattleyards sidings.

New up and down line distance signals erected at cattle-yards.

New lamp erected on over-bridge.

New down line starting signal erected.

New up and down line starting signal erected at cattle-yards.

New dock wall at cattle-yards nearly completed.

At Rookwood-

New advance starting signal erected.

Four 400-gallon tanks provided and fixed.

New waiting-sheds and ladies' room on up and down platforms, completed.

New water-closets and urinals, nearly completed.

New picket fence erected in front of Stationmaster's house.

New goods-shed erected by contract.

At Granville-

New water-closet fixed for signalman.

New signal erected at Hudson Brothers' siding.

Well sunk at Duck River.

New 5-ton crane erected.

New lamp erected at south side of overbridge.

New lamp erected on overbridge.

Gas laid on to station-buildings.

New goods-shed and loading-stage erected.

Additional tank fixed at Sydney Road gate-house.

New house erected over pumping-engine.

Water laid on to urinals.

Box erected for signalman.

Gas laid on to signals.

New wicket-gate erected.

Five gates erected at Hudson Brothers' siding.

New signal-box erected.

New signal-box erected at Dog Trap Road.

Platform erected near Granville, and another nearly completed.

Fixing interlocking apparatus.

At Fairfield—

New picket fence erected at Station-master's

House for porter erected, and another nearly completed.

At Cabramatta-

New carriage-dock constructed.

New goods-shed erected.

Two tanks and stands fixed at goods-shed.

At Liverpool-

New tank and stand fixed at gate-house, near hospital.

Well sunk for locomotive department.

New ash-pit constructed.

New 5-ton crane erected.

Drain from station to river lengthened.

North end of platform enclosed with picket fence.

At Minto-

New verandah erected at porter's house.

New goods-platform erected.

New goods-shed being erected by contract.

At Campbelltown-

Alterations and additions made to goods-shed.

New 5-ton crane erected.

New wicket-gates erected.

New goods office erected.

At Menangle-

Goods-shed renewed.

Two tanks fixed at goods-shed.

At Douglas Park-

New semaphore erected.

At Picton-

New store-room erected.

New gate erected near stock-yards.

New house erected for engine-men.

New cart weigh-bridge, and office erected.

Partition erected in goods-shed.

Office removed from Bundanoon and re-erected for guards.

Ticket-office, removed from Bundanoon, erected.

At Picton Lakes-

New watch-box for gatekeeper erected.

At Bargo

Cottage for porter in charge crected.

At Coolaman-

Two culverts lengthened.

Porter's cottage, removed from Bowning, in

New platform in hand.

Stop and scotch blocks fixed.

Two distance signals erected.

At Fresh Food and Ice Company's Siding-

Buffer-stops and scotch-blocks erected.

At Mittagong-

Large parcels office erected.

5-ton crane erected.

Picket-fence erected.

Notice-boards and turnstiles fixed.

Water-closets and urinals erected.

New stop-blocks fixed.

Porch erected to gate-house.

Platform extended 50 feet.

New lamp erected.

Signals removed and erected on platform.

Electric repeaters fixed.

At Joadja-

Box-drain extended 11 feet.

New buffer-stops and scotch-blocks fixed.

At Bowral-

Approach to Mr. Ward's ground fenced in. New cess-pit constructed.

At Burradoo-

Stop and scotch-blocks fixed.

Level crossing constructed at 84 miles 78 chains.

At Austermere-

Stop and scotch blocks fixed to Berrima Coalmining Co's Siding.

Two distance-signals erected.

At Moss Vale-

Buffer-stops fixed.

Stockyards pitched and ballasted.

Approach-road ballasted.

New picket-fence erected to platform.

New cart weigh-bridge fixed.

Platform lengthened 60 feet.

New underground tank to goods-shed constructed.

Culverts lengthened.

At Meryla-

Tank to gate-house fixed.

At Bundanoon-

New station erected.

Porch erected to cottage for porter in charge.

Two new lamps and posts erected.

At Baker's Siding-

Two new distance-signals erected.

At Wingello-

Approach-road formed and ballasted.

Loading-dock, 200 feet, constructed.

New platform, 150 feet, erected.

Porter's cottage, removed from Bowning, erected.

Two new 16-feet gates fixed.

Lamp erected.

Two new distance-signals erected.

At Barber's Creek-

Pumping-house enlarged.

At Marulan-

Stop and scotch blocks fixed.

Stockyards divided and new sheep-race pro-

New house for Station-master in hand.

Cart weigh-bridge fixed and office erected.

Gate enlarged at Sutton Forest Saw-mill Co.'s

Signal-levers fixed on platform.

At Carrick-

New 15-feet gate erected.

At Townang-

Station-master's house erected.

Platform extended.

At North Goulburn-

Three name-boards fixed.

New waiting-shed and office erected.

Signal-levers fixed on platform.

At Goulburn-

6-feet paling fence erected around workshops

Additions to weigh-bridge office erected.

New picket-fence erected on both sides of approach to station.

Sand-house removed and re-erected.

Inspector's offices removed and re-erected.

New rooms with verandah for guards erected.

At Goulburn-continued.

Store and offices fitted up, water laid on, and tanks and chimney erected.

Platform lengthened.

Three new name-boards fixed.

New picket-fence erected to platform.

New blacksmith's shop erected.

Coal-bin for Traffic Department fixed.

Level crossing gates, Goldsmith-street, altered to close across line.

Gate-house removed and re-erected.

Buffer-stops fixed.

Offices for District Engineer erected.

Gentlemen's water-closet and urinals erected.

Two culverts lengthened.

Distance-signal removed and re-erected.

At Yarra-

Waiting-shed removed from Bundanoon erected.

At Breadalbane-

Verandah at back of Station-master's house erected.

Verandah erected to station.

Filter-frame made and fixed.

New tank fixed.

Signal erected.

At Fish River-

Well sunk for locomotive water supply.

At Gunning-

Fender to goods-shed fixed.

Electric repeater-boxes fixed.

At Jerrawa-

Lamp-room erected.

Notice-board fixed.

Signal erected.

Patent lever to distance signal fixed.

At Yass—

Fender to 5-ton crane fixed.

Water laid on to copper for heating water for foot-warmers.

At Yass Lime Company's Siding-

New buffer-stops put in.

Stop-block fixed.

New gate erected.

Two distance signals in hand.

At Bowning-

Chimney erected to goods office.

At Binalong-

Old station removed and re-erected temporarily.

New station in hand.

At Rocky Ponds-

Electric repeater-box fixed.

At Cunningar-

Gate-house fenced.

At Harden-

New tank stand erected.

Water laid on to urinals and water-closet.

At Harden—continued.

Pumping engine-house erected.

Pumper's and engine-cleaners' cottages fenced.

Stock reserve fenced.

Pumper's cottage, removed from Rocky Ponds, erected.

Chimney erected at goods office.

Wicket-gate fixed.

Reservoir impounded and silt-pit constructed.

New cess-pit constructed. . .

At Murrumburrah—

Gates fixed to close across line.

Turnstiles erected.

Buffer-stops and stop-blocks fixed.

Bank between main line and siding sheet piled.

15-feet gate fixed on approach to siding.

Station-master's residence removed and reerected.

3-ton crane erected.

Water-closet and urinals removed and re-

Electric box and contacts fixed to up-distance signal.

At Two-mile Creek-

Buffer-stops and stop-blocks fixed.

New entrance gates fixed.

Two new distance-signals erected.

At Wallendbeen-

Two additional rooms erected at station.

Stockyards erected.

Gates at Bland Road altered to close across line.

5-ton crane erected.

At Cootamundra—

Goods-shed lengthened and loading-stage widened and covered.

Wicket-gate fixed.

Chimney erected to goods office.

Front of waiting-shed covered.

Turnstile fixed.

Tank fixed to pumper's house.

5-ton crane erected.

Lamp erected.

At Mullaly's Siding-

Two distance signals in hand.

At Cungegong—

Two distance signals in hand.

At Bethungra-

Two name-boards fixed.

New engine-pit constructed.

Wicket-gate fixed.

Pumping engine-house removed from Bomen erected.

At Illabo-

Position of entrance gates altered.

At Junee Junction-

Temporary station buildings erected.

House for engine men erected.

Four wooden cottages erected.

At Junee Junction—continued.

Two porters' cottages removed from Bomen erected.

Engine-drivers' room removed from Bomen built.

Three tanks fixed.

Office for Traffic Inspector removed from Benerembah erected.

New cess-pit constructed.

Cellar built under refreshment-room.

Temporary water-closets for Locomotive Branch erected.

Lamp fixed at entrance to station.

Electric repeater-box and contact for triangle-signal fixed.

At Harefield-

Two notice-boards fixed. Staff and ticket-boxes fixed.

At Bomen-

New notice-boards fixed.

Gates at level crossing 308 miles 2 chains altered to close across line.

At South Wagga-

Large drain at back of porters' cottages covered in.

Two sets of buffer-stops fixed.

Temporary water-closet for Locomotive Branch erected.

Lockers and shelves in engine-shed fixed.

House for enginemen built.

Porters' cottages fenced in.

New stockyards constructed and pitched.

Approach road to goods-shed metalled.

Urinals drained into timber culvert.

Drainage to engine-pits altered and improved.

Cart weighbridge fixed.

Electric repeater-box and contact fixed.

Level crossing constructed at 324 miles 16 chains.

At Hanging Rock-

Approaches to station blinded.

5-ton crane erected.

At Yerong Creek-

Ladies waiting-room and water-closet erected. Two new turn-stiles fixed.

At Culcairn-

Buffer-stops fixed.

Capping to carriage-dock fixed.

5-ton crane erected.

New stockyards being erected.

At Gerogery-

New 5-ton crane crected.

Fence erected to Station-master's residence.

Two small gates erected at entrance to station.

Semaphore and up-distance signal erected.

At Bowna-

Notice-boards fixed.

Fire-places built in station buildings.

Name-boards and lamps fixed.

At Bowna—continued.

Lamp-room erected.

Goods-yard enlarged and metalled.

Letter-receiver fixed.

At Ettamogah-

Notice-boards fixed.

Two distance-signals erected.

At Albury-

Approaches to passenger-station and goods-shed made up.

Tanks fixed to porters' cottages.

10-ton frame erected.

Coupling-rack and flag-stand fixed.

New buffer-stops fixed.

Water laid on to enginemen's house.

New stop-blocks fixed.

Hay-gauge erected.

Temporary passenger-platform converted into loading-stage.

Small entrance-gate fixed.

New lamps erected on passenger-platform.

Land fenced for plantation.

Picket-gate fixed.

Cart weigh-bridge fixed.

Stone kerbing fixed in front of station.

Turn-table altered.

Tanks fixed to porters' cottages.

Station-signal erected.

Signal-lever removed from temporary platform and fixed on new platform.

Miscellaneous—

New distance-signal at 12 miles 10 chains.

Tool-boxes, trollies, &c., made for extension, Darlington to Currathool.

SOUTH-WESTERN RAILWAY.

At Old Junee-

Station-fittings provided.

Station-signal and two distance-signals erected.

At Marrar-

Platform, 40 feet long, erected.

At Coolaman-

Station-signal and two distance-signals erected.

At Grong Grong-

Fireplace in booking-office built.

Station-signal erected.

At Narrandera -

5-ton crane erected.

Pumper's cottage built.

New engine-pit constructed.

Stop-blocks fixed.

Turnstile fixed.

Chimney and water-closet erected to gatehouse.

Cart weigh-bridge fixed.

Approach to goods-shed widened.

At Narrandera—continued.

New well for locomotive water supply sunk. Semaphore and up distance-signal erected. Up distance repeating-signal erected.

At The Quarry-

New gate fixed at entrance to station.

New gate fixed at entrance to contractors'

Chimney erected to booking-office.

Semaphore erected.

At Yanco Siding-

Stop-blocks fixed.

Two distance-signals erected.

At Hulong-

New cottage erected for porter in charge.

Coupling-rack fixed.

Water supply for carriers provided.

Gates to sheep-yards altered and refixed.

Semaphore erected.

Approaches to sidings formed, &c., by contract.

At Darlington-

Cottage erected for porter in charge.

New stockyards erected.

New name-boards fixed.

New notice-boards fixed.

Stop-blocks fixed.

Lamp-posts erected.

Coupling-rack fixed.

Semaphore erected.

400-gallon tank fixed.

Approaches to sidings formed by contract.

At Benerembah—

New stop-blocks fixed.

Office removed to Junee Junction.

Chimney erected in booking-office.

At Bringagee-

Gate erected.

Semaphore erected.

At Koorongal-

New stop-blocks fixed.

At Currathool-

Water-closets removed from Darlington and re-erected.

Lamps erected at station.

New stop-blocks fixed.

Additions to sheep-yards carried out by contract.

Approaches to sidings formed, &c., by con-

New wicket-gate fixed.

Name-boards fixed.

Semaphore erected.

At Uardry—

New stop-blocks fixed.

At Beabula—

New stop-blocks fixed.

At Waradgery-

New stop-blocks fixed.

At Hay-

Two turnstiles erected.

Semaphore and down distance-signal erected.

5-ton crane erected.

Two new wicket-gates erected.

At Springwood-

Wicket-gate erected alongside crossing. Buffer-stops erected.

At Faulconbridge-

Additional room erected to waiting-shed. Wicket-gate erected.

At Linden—

Approach stage to platform erected. Office erected.

House for porter in charge erected.

Small house for night porter erected.

Staff-boxes provided.

At Lawson-

Staff-boxes provided.

At Wentworth Falls-

Two signals erected.

Staff-boxes supplied.

Dam for Locomotive Department constructed.

At Katoomba-

Approach to platform formed.

New wicket-gate and gate erected.

At Blackheath-

Staff-boxes provided.

At Mount Victoria—

Fence and gate from over-bridge to stockyards erected.

New weighbridge fixed.

Staff-boxes provided.

Turn-table lengthened.

At Hartley Vale—

New gate erected.

At Mount Wilson-

Staff-boxes provided.

At Clarence Siding-

Semaphore signal erected.

At Zig Zag, Bottom Points-

Platform lengthened.

Porter's office erected.

New lamp erected.

At Eskbank-

Gate erected in fence.

New goods-shed erected.

Loading-stage erected.

Paling-fence erected from overbridge to Lithgow.

At Eskbank-continued.

Turn-stile fixed in fence.

Closet to guard's house erected.

At Lithgow-

Fence erected across culvert.

At Bowenfells-

Wicket-gates erected.

. Staff-boxes provided.

At Wallerawang-

Alterations and additions to station completed.

Wash-house to Station-master's residence erected.

Horse and carriage dock constructed.

Box culvert and drain constructed.

Signal erected.

At Rydal—

Well for Locomotive Department deepened.

At Tarana-

New cattle-yards erected.

Loading-stage constructed.

Well sunk.

Staff-boxes supplied.

At Locksley-

Porter's in charge house fenced in.

At Brewongle-

Up-distant signal erected.

At Raglan-

Distant signals erected.

At Kelso-

Staff-boxes supplied.

At Bathurst-

Verandah extended.

New lamp and storeroom erected.

New locomotive office erected.

Counter fixed in telegraph office.

Carriage-shed erected by contract.

New office for District Engineer erected. Verandah to driver's house in progress.

Gas laid on to Station-master's house.

Additional locomotive workshops in progress.

Oil and waste store erected.

Two lamp-posts and lamp erected.

New blacksmith's shop erected.

Additional water-way provided for draining

Verandah to guards' barracks erected.

Inspectors' offices erected.

New home signals erected.

Pumping-engine house raised.

New permanent-way workshops erected.

Remodelling signals in progress.

Down platform erected.

Sub-way in progress.

Improving drainage in progress.

Improving roads and yard in progress.

Laying water-pipes, hydrants, &c., in progress.

New cesspits in progress.

New turn-table erected.

At Perth-

New lamp-room erected.

New crane erected.

At George's Plains-

Loading stage lengthened.

Wicket-gate erected.

Cart weighbridge fixed.

At Wimbledon-

Home—up and down distant signals in progress.

At Blayney—

Fence from level crossing to carriage dock erected.

Picket-fence along platform erected.

Hay gauge at Lime siding erected.

At Spring Grove-

Two distant-signals erected.

New gate for level crossing erected.

At Spring Hill-

New distant-signals erected.

Tank with appliances for fire fixed.

Loading stage crected.

Cart weighbridge fixed.

Gate widened.

Counter and cupboards fixed in lamp-room.

Buffer-stops erected.

At Orange-

Balcony to Station-master's house erected.

Picket-fence erected.

Shower-bath fixed under tank.

List

LIST OF MACHINERY IN WORKSHOPS ON 31ST DECEMBER, 1882:-

Carpenters' shop-

- 1 20-horse power semi-portable engine.
- 1 dimension planer.
- 1 wood-turning lathe.
- 2 circular-saw benches.
- 2 tennoning machines.
- 1 horizontal boring machine.
- 1 cross-cutting machine.
- 1 band saw.
- 1 fret saw.
- 1 variety wood working machine.
- 2 mortising machines.
- 1 surface-planing machine.
- 1 squaring and planing machine.

Fitting shop-

- 1 12-inch lathe.
- 2 $10\frac{1}{2}$ -inch lathes.
- 1 10-inch lathe.
- 1 6-inch lathe.
- 5 drilling machines.
- 1 slotting machine.

- 1 shaping machine.
- 5 planing machines.
- 2 screwing machines.
- 1 wood-turning lathe
- 1 10-horse-power semi-portable engine.

Smiths' shop-

- 1 10-horse-power portable engine.
- 1 fan to blow 16 fires.
- · 2 punching and shearing machines.
- 2 steam hammers.
- 1 fan to blow 20 fires.

Plumbers' shop-

- 1 pair rollers.
- 2 burring machines.
- 1 folding machine.
- 1 swedging machine.
- 1 lead-washer punching machine.
- 1 punching and cutting machine.
- 1 pipe-screwing machine.
- 1 guillotine machine.

GREAT NORTHERN RAILWAY.

Newcastle to West Maitland—Double Line—Length, 20 miles.

The permanent way has been kept in good condition.

With two exceptions the bridges are in very good order. One over Throsby's Creek, near the Waratah Junction, consisting of two 20 feet spans on stone abutments and pier, and another near the Waratah Crossing, of one 15 feet span, also on stone abutments, are becoming very shaky—the stonework showing unmistakeable signs of giving way, owing to bad material and workmanship. The abutments will probably require to be taken down and rebuilt; but, in order to keep them safe beyond doubt, temporary trestles are being erected.

The buildings and other works on this section are in very good order.

West Maitland to Tamworth—Single Line—Length, 161 miles 28 chains.

The permanent way, bridges, and other works on this section are in good condition.

Many of the cuttings on both sides of the Liverpool Range have been very troublesome during wet weather, in consequence of their tendency to slip; but the line has always been kept clear without interruption to the traffic.

Tamworth to Moonbi-Single Line-Length, 12 miles. Opened for public traffic 9th January, 1882.

Moonbi to Uralla—Single Line—Length, 51 miles, 57 chains. Opened for public traffic 2nd August, 1882.

The permanent way and works on these sections are in good condition.

These portions of the line have given very little trouble, except near Kentucky, where some difficulty has been experienced in keeping the side drains clear, owing to the soft greasy nature of the slopes.

Bullock Island Branch—Double Line—Length, 1 mile 43 chains.

Morpeth Branch—Single Line—Length, 4 miles.

All the works on these branches are in very good order.

North-western Branch.—Werris Creek to Gunnedah—Single Line—Length, 40 miles 40 chains. The works on this section are in first class condition.

Gunnedah to Boggabri-Single Line-Length, 24 miles 5 chains. Opened for public traffic 11th July, 1882.

Boggabri to Narrabri—Single Line—Length, 32 miles. Opened for public traffic 4th October, 1882.

These sections have been found difficult to maintain. The line was far from good when opened for traffic, and subsequent heavy rains caused a good deal of trouble. It is now however in fair running order, and is gradually being improved.

The bridges and other works are in first class condition.

64-I

The following works have been carried out during the year:-

At Newcastle-

Sand furnace erected.

Commissioner's land fenced. .

Fountain fixed at Station.

At Honeysuckle Point-

Brick office for Store Branch erected.

Down platform extended.

Two additional gas-lamps erected.

Galvanized corrugated iron store erected.

Crane erected in store.

At Wickham-

Gas-lamp erected at Railway street crossing. Gas-lamp erected at Hannell-street crossing.

At Bullock Island-

A loading platform erected.

Railway fence extended to wharf.

At Waratah-

Brick ticket-office erected on up platform.

At Hexham Township-

A porter's residence erected.

Booking office erected.

Closet and urinal erected.

Loading wharf constructed.

At Woodford-

Booking office erected.

At Victoria-street-

Closet and urinal erected.

Waiting-shed erected on up platform.

At East Maitland-

Retaining wall and fence erected at Melbourne-street.

Fountain fixed at station.

At Morpeth-

Sheep-yard constructed.

At High-street-

Two fountains fixed at station.

At West Maitland-

Loading wharf constructed.

Brick residence for Station-master erected.

Traverser erected.

Dray weigh-bridge fixed.

Fountain fixed at station.

Gas-lamp erected at Elgin-street approach to station.

At Ravensworth-

Ladies' waiting-room erected.

At Musclebrook-

Underground tank constructed:

Culvert extended.

Fence erected.

At Aberdeen-

Galvanized corrugated iron goods-shed erected. Level crossing constructed.

At Wingen -

Goods-shed erected.

At Doughboy Hollow-

Closet and urinal erected.

At Willow-tree -

Verandah erected to station.

At Tamworth-

Gas laid on to station grounds and buildings. Lamps and spikes fixed and gas laid on to footbridge.

At Walcha Road-

Level crossing constructed.

At Kentucky-

Loading stage erected.

Gate fixed.

At Boggabri-

Wool-stage erected.

At Narrabri—

Wool-stage erected.

The permanent-way on all these lines has been kept in good running order.

The work of relaying both up and down lines between Redfern and Hunter-street with steel rails and guards has been continued and completed during the year. The section from Liverpool-street to Botany-street, and the curve at entrance to Moore Park, have also been renewed with steel rails.

The rails in Botany-street and in a portion of the up line from Racecourse to Randwick are wearing fast, and will require renewing during 1883. The up line from Darlinghurst to entrance to Water Reserve, and the down line from Darlinghurst to near the Sacred Heart Church, and from cokehouse to Paddington Reservoir, have been relaid with steel rails and guards. The rails in the other portions of this section are wearing fast, and will require renewing. About 8 chains of the Woollahra line has been relaid, and the other portion will shortly require renewing. The whole of the Crown-street line will have to be relaid, as the iron T-rails are much worn.

The road in Devonshire-street, which is laid with 70-lb. steel T-rails, is standing well. The curves leading into and out of Redfern-street have been relaid with steel rails, and the other portions of the section to Waterloo will require renewing during the year. From this point to Botany the line is in good order.

The Glebe and Forest Lodge lines are in good order.

The very heavy traffic on the road from George-street West to Newtown Bridge necessitated considerable repairs to the line, which, however, is now in good order. From Newtown Bridge to Marrickville the line is in good order, but the iron T-rails on this section show signs of considerable wear.

Lines in course of construction:—

Randwick to Coogee, double line

University Gates to Johnson-street, Leichhardt, double line

Length.

1 mile 70 chains.

1, 24,

Total ... 3 miles 14 chains.

The following works have been carried out during the year:-

Culvert widened at Sydenham Road, Marrickville.

Water-meter fixed at Newtown.

Box erected for pointsman at corner of George and Devonshire Streets, Sydney.

Water-crane and stand-pipe erected at Treasury grounds.

Smiths' shop for permanent-way erected at Tramway yard, Pitt-street.

Fourteen lamps erected at stopping places, Waterloo to Botany.

Two 12-feet gates erected at Mr. Pemell's property, Randwick.

Fence erected at Queen-street, Woollahra.

Fence erected at Camden Tramway.

Ash-pit constructed at Botany.

Motor-shed erected at Botany.

Accommodation provided for Traffic Foreman at Treasury grounds.

Closets erected at Treasury grounds.

Closets and urinals erected in Tram-yard, Pitt-street.

Ten gates erected on Tram-line, Campbelltown to Camden.

Goods-shed and platform erected at Camden.

Goods-shed and platform erected at Narellan.

Buffer-stops erected at Narellan.

Buffer-stops erected at Camden.

Four pairs gates erected at Camden.

New signal-box erected at Tram Junction, Campbelltown.

Interlocking apparatus fixed at Tram Junction, Campbelltown.

Coal-stage erected at Campbelltown.

Tram-car shed erected at Randwick, by contract.

Brass furnace erected at Randwick, by contract.

Running-shed erected at Randwick, by contract.

Store and offices in course of erection at Randwick, by contract.

GENERAL REMARKS.

RAILWAYS.

An immense quantity of work of every description has been done on all the lines.

The tops of many of the bridges on the Southern and Western lines have been renewed; some more require to be renewed. One on the Western line has been taken down and a culvert substituted. A few others I purpose doing in the same way. The ravages of the white ants necessitate very careful watching. Many of the iron bridges have been carefully examined and repaired; loose rivets taken out and others put in, with other necessary repairs, cleaning, painting, &c. The Petersham viaduct is showing signs of weakness, and must shortly be taken down. I therefore propose to replace it with a brick and iron structure of three spans as soon as possible. It is being watched daily, and every care taken to keep it safe.

The permanent-way on all the lines is in first-class running order. A great number of sidings has been laid in, several new station buildings erected, and many of the platforms renewed, widened, and lengthened.

The excavations for the new work-shops at Eveleigh are rapidly approaching completion. The foundations for the large running shed, together with engine-pits to accommodate 126 locomotives, are completed. A portion of the iron roofing has been imported, and will soon be fixed. Tenders are being invited for several of the workshops, the erection of which will soon be in hand.

The running-sheds at Goulburn, Penrith, and Bathurst have been delayed for various reasons, and are therefore not as forward as I should like to see them, but I hope to make better progress with them shortly. Some progress has been made with the workshops at Newcastle, but there is a good deal more to be done there yet.

The interlocking of switches by Mackenzie and Holland's system has been carried out in several of the station-yards, and answers admirably. I trust before long that all the yards will be worked by this system.

Not much has yet been done towards improving the appearance of the Redfern station by a proper system of roofing, &c., but I hope to have something approved of shortly, as this must always be a station of considerable importance, whether the line is eventually extended to the Circular Quay or not.

Quadrupling the line from Eveleigh to the Redfern yard will, I think, be a great improvement, and is absolutely necessary before the increased traffic from the Illawarra and Northern lines is brought in.

The general Railway Stores, with ample office accommodation, &c., at Eveleigh, have been completed, and are now occupied.

TRAMWAYS.

THERE are now over 1,000 trains arriving at and leaving the terminus at Bridge-street daily—a great many more than I ever expected could be worked in this small yard; but before any more extensions of the present lines can be brought into the city it will be necessary either to get more room for shunting or continue the lines round the city.

The repairs and renewals have been very great, but the roads are now mostly in fair working order. There is great difficulty in keeping the joints good in consequence of the weakness of the fishing, which cannot be strengthened in consequence of the shallow depth of the rail, also the creeping of the rails running the joints past the sleepers. This will, I am afraid, always be a great source of annoyance and expense, unless a different rail with a continuous iron sleeper be adopted.

No. 1 carriage-shed, motor running-shed, store and offices, have been erected at Randwick, and tenders are about to be invited for the erection of No. 2 carriage-shed.

I have, &c.,

GEORGE COWDERY.

No. 2.

The Locomotive Engineer to The Commissioner for Railways.

Department of Public Works, Railway Branch,

Sir,

Locomotive Engineer's Office.

I have the honor of reporting as follows on the maintenance and general condition of the rolling stock, water supplies, &c., under my supervision during the year ending 31st December, 1882:—

SOUTHERN AND WESTERN LINES.

The whole of the locomotive engines and tenders have been kept in good working order during the year, except those either awaiting repair or under repair in the shops. There are also several old engines of a very light class (referred to in previous reports) standing idle, which are in moderate condition, but unfit for present traffic. But instead of breaking them up I intend fitting small jib cranes to them and thus convert them into locomotive steam cranes for coaling engines, shunting coal waggons, and washing out the boilers of running engines by means of a steam jet and hot water instead of using cold water for the purpose as at present, as I consider the action of cold water on hot boiler plates does them great injury and causes great strain from unnecessary expansion and contraction.

Thirty-one new engines were added to our stock during the year, viz., nineteen from English makers, and twelve from Colonial makers, making a present total of 231. The Colonial-built engines have, so far, fulfilled my expectations as regards material and workmanship.

Considering the increase of traffic and mileage our stock of engines is still below our requirements, especially as far as goods engines are concerned, and although we shall in a few months be in receipt of some sixty additional engines (thirty goods, twenty-four passenger, and six suburban tank engines for passenger traffic), I strongly recommend that immediate steps be taken to provide more, seeing that our lines will increase in length very much by the approaching completion of the Illawarra, the Cooma, the Newcastle Junction Lines, and the extension from Nyngan to Bourke.

This department is not only suffering greatly from want of engines, but excessively so from want of proper workshop and yard accommodation, and the necessary modern appliances for effecting repairs and renewals of the rolling stock. These repairs, &c., are increasing at a rapid rate, natural to the increase of stock and mileage; in addition to this our difficulties have been increased by giving up a portion of our yard at Redfern to the Traffic Department. I cannot use terms sufficiently strong to impress upon you the extreme importance of having the new shops at Eveleigh erected and finished as soon as it can possibly be done, as if this is not done I fear our difficulties will be insurmountable.

I trust that the erection of the new running-shed at Eveleigh (which seems to be progressing favourably) will soon be completed, as that instalment will be a great relief to the running department, as at present it is barely safe (especially at holiday times) to do what has to be done on the small space at Redfern; the work necessitates the utmost caution and forethought from all who work there.

The repairs carried out through the year have as usual consisted of the "daily running repairs" at Redfern, and at the principal locomotive depôts, and "thorough" repairs to engines and tenders, which in many cases necessitated their being kept in the shops a long time. The boiler repairs have been excessively heavy, as many of our earlier engines required a lot of repair and renewal, and others are getting into the same condition; and with our small shop accommodation it makes it extremely difficult to do work satisfactorily.

To meet the increased work additions have been made to the Locomotive Engineer's Office for the accommodation of the draughtsmen and clerks, and two new 4-feet wheel lathes have been put down in the workshops for turning carriage and waggon (wheel) tyres.

In the early part of the year the Camden Tramway was handed over to this department, and after several months' experience of working this line with motors and cars (as used in the streets of Sydney) it has been found desirable to put two small locomotives there to work the traffic, and I would support a suggestion already made that designs for new stock, including engines and cars, be got out at once for this and any similar lines which it may be the intention of the Government to construct.

The passengers carriages, vans, &c., and also the goods vehicles have been kept in an efficient state of repair, except a number of waggons, the wood work of which is decayed and requires renewing; these necessary works cannot be undertaken on account of want of shop-room. The erection of the new paint-shop at Eveleigh gives us very fair accommodation for painting, and the old paint-shop gives us a little extra room for repairing waggons, &c., but the space and appliances are still very much under our present necessary requirements, and what I have already said with regard to the erection of the locomotive shops at Eveleigh holds good also for the carriage and waggon department.

Notwithstanding

Notwithstanding the fact that considerable additions were made to our carriage and waggon stock during the year there is still a great want of stock of nearly all classes, and I would suggest that a liberal quantity be ordered as soon as possible to meet the ever increasing traffic and increase of mileage.

During the year one brake van, nineteen D waggons, and three ballast waggons were renewed.

The various water supplies have been a source of great anxiety and responsibility, especially on the mountain line, where during the latter part of the year, and for some time after, it was necessary to carry water from Penrith to Linden by means of a locomotive and two tenders and afterwards by substituting a large tank (on Bogie's) instead of the tenders, the supplies at Glenbrook, Lawson, and Wentworth Falls having practically given out. A permanent supply will shortly be established at Linden.

The supplies at Dubbo and Wellington from "wells" have, from the opening of the line, given constant trouble, and during the year at each place new works have been carried out whereby supplies have been taken direct from the River Macquarie, which I am happy to report have given great satisfaction. The work was done at a reasonable cost; and the change of water has had a very beneficial effect on the locomotive boilers.

The water supply at Goulburn has also been very much improved. A new line of 6-inch pipes has been laid for $2\frac{1}{3}$ miles, and we now have the advantage of an abundant supply; but before this the supply was very small and the risk great.

The water supplies all over the system require the greatest and most careful attention, if we are to be free from trouble as regards this matter in the future; and I have for some time been making proper provision for this, and trust that the works you have sanctioned will give entire satisfaction when carried out. It is evident from our present experience of having to run water-trains for the accommodation of the permanent-way men and their families, that consideration will have to be given to the extension of this system as we go further into the western districts: this, with our locomotive requirements, will cause a great demand on our resources.

The water supply at Granville, Liverpool, Barber's Creek, Goulburn, Fish River, Harden, Bethungra, Junee Junction, Narandara, Penrith, Kerr's Creek, Stoney Creek, Wellington, Dubbo, and Richmond, have also received considerable attention.

There has naturally been an increase in the working expenses of this department due to increased traffic, increase of wages, and shortening of drivers' hours.

The cost of repairing engines, other rolling stock and machinery, has in every case been charged against the vote for working expenses.

Appended is the list of locomotive engines, machinery in workshops and at pumping stations, &c.

GREAT NORTHERN LINE.

Locomotive Engines and Tenders.

These have all been maintained in good working order during the year 1882, and although four new goods engines have been added to the stock we are still inadequately supplied with power. There are now fifty-five engines on this line.

The completion of the new smiths' shop at Honeysuckle Point has afforded us great convenience in carrying on the repairing, &c. The new boiler-shop and new offices now being erected will assist us still more. It is necessary that a new and more modern style of running shed be erected at once at Newcastle, not only for the better accommodation of the engines now stationed there (the present running sheds being too small and otherwise unfit) but for the adequate stabling of additional engines when the line from Sydney to Newcastle is completed. I have already forwarded plans of what I propose for your consideration and approval. It is also necessary, in my opinion, to make similar provision for the running engines stationed at Singleton.

The usual repairs to locomotives and tenders have been carried on; but the older engines are in such a condition as to require heavier repair.

The passenger and goods stock has been maintained in good condition. Although a number of vehicles has been added during the year 1882 there is still a deficiency of passenger vehicles and brake-vans.

The water supplies, although not so short as on the Western line, have been a source of anxiety and require careful attention. To make ample provision for the future a line of 9-inch pipes has been laid from Bullock Island Junction to Honeysuckle yard, instead of the old 3-inch pipes.

The cost of repairs and renewals of rolling stock and machinery has been charged against the vote for working expenses.

3 October, 1881-Live Stock Rates and Conditions.

SMALL CONSIGNMENTS.

1 Truck, i.e., 4 Cows or Oxen, or 10 Calves, or 40 Sheep; or 30 Pigs.	1 Truck, i.e., 2 Cows or Oxen, or 5 Calves, or 20 Sheep, or 15 pigs.	Single Cow or Ox.	Sheep or Pigs, when less than 1 Truck.	Calves, when less than \ Truck.
 6d. per mile	4d. per mile:	3d. per mile	½d. each per mile	id. each per mile.
Miṇimum, 10s	Minimum, 7s. 6d	Min., 7s. 6d. each	Min., 1s. 6d. each	Minimum, 2s. each.

When the number of animals or the space occupied exceeds the limit for \(\frac{1}{4}\) or \(\frac{1}{2}\) truck, each one in excess will be charged at the mileage rates enumerated above for single animals until the \(\frac{1}{2}\) or full truck rate, as the case may be, is reached.

.. In ascertaining what portion of a truck is to be charged for, i.e., \(\frac{1}{4}\), \(\frac{1}{4}\), or full truck, regard will be had to the space actually occupied more than to the number of animals; but in no case must the number of animals stated above be exceeded.

Mixed stock will be carried together in the same truck, provided the whole consignment belongs to one person, and the Commissioner is relieved of all responsibility. When mixed stock cannot be loaded together, each kind will be charged for separately.

When the charge per head for Live Stock exceeds that for 1 truck, or when the charge for a part truck exceeds that for a full one, only the lesser amount will be collected.

Buils.

The charge for Bulls is 7d. each per mile; if more than one in a truck, 4½d. each per mile for ½ truck and upwards, Cattle rates. Minimum, 12s. 6d.

VALUABLE RAMS AND EWES.

If less than 1 a truck load, will be charged 2d. each per mile; for 1 a truck and upwards, Sheep rates. Minimum, 5s.

Horses.

See full truck rates. No less charge than for a full truck load will be made for any number.

When Live Stock is returned from Sydney or Homebush to Country Stations, in those neighbourhoods to which Cattle Trucks and Sheep Vans are being sent empty, half the above rates will be charged, provided the owners wait the requirements of the Department, but not otherwise.

Herds, Flocks, &c., when in consignments of not less than one full Truck load.

GREAT SOUTHERN, WESTERN, AND RICHMOND LINES.

CATTLE

Will be conveyed from the undermentioned Stations to Homebush, at the following rates per Truck:-

Darlington Hulong	£ s. d.		£s.d

Will be conveyed between the undermentioned Stations at the following rates per Truck:-

Stations from	Newcastle.	East Ņāitlāpd.	West Maitland. Wollombi Road.	Lochinvar.
Funnedah Breeza Famworth Werris Creek Quirindi. Willow-tree Scone Musclebrook	$\begin{array}{cccccccccccccccccccccccccccccccccccc$	£ s. d. 5 4 11 5 4 2 9 3 17 3 1 3 9 4 2 12 4 2	£ s. d. £ s. d. 4 10 1 4 10 1 4 15 5 5 3 16 6 3 15 9 3 12 4 3 11 7 3 8 7 3 7 10 2 11 4 2 10 4 2 3 4 2 2 4	£ s. d. 4 8 9 3 19 5 3 14 3 3 10 1 3 6 4 2 8 4 2 0 4

Other distances to be charged—For the first 40 miles, 10d per truck per mile; for every mile exceeding 40 and not exceeding 100, 6d. per truck per mile; for every mile exceeding 100 and not exceeding 150, 4½d, per truck per mile; for every mile exceeding 150 and not exceeding 200, 4d. per truck per mile; for every mile over 200, 3½d. per truck per mile. For single-decked truck only two-thirds of these rates will be charged. Minimum charge, 15s. per truck.

GREAT SOUTHERN, WESTERN, AND RICHMOND, AND NORTHERN LINES.

HORSES.

The Commissioner will carry Horses in Cattle Trucks if requested to do so, but only under special contract, relieving him of all responsibility. The charge for horses so carried will be the same as for cattle in full truck loads.

Pigs-Same as Cattle. Minimum, 15s.

Under the foregoing Herd and Flock Rates for Cattle, Sheep, Horses, and Pigs, no less charge than for one full truck will be made for each and every truck used.

4th October, 1882.

Mixed stock will be carried together in the same truck, provided the whole consignment belongs to one person, and the Commissioner is relieved of all responsibility. When mixed stock cannot be loaded together each kind will be charged for separately with the following exception:

On Thursdays single animals conveyed to Sydney in the same trucks, although belonging to different owners, will be charged at a proportion of \(\frac{1}{4}\), or full truck rate, plus 25 per cent.; for example, should there be two cows, each owner will be charged half of the \(\frac{1}{4}\) truck rate, plus 25 per cent. and should there be three animals, the owners will be charged the \(\frac{1}{2}\) truck rate equally between them, plus 25 per cent. It is absolutely necessary that each animal be legibly addressed.

When the charge per head for live stock exceeds that for a quarter truck, or when the charge for a part truck on market days exceeds that for a full one, only the lesser amount will be collected.

Herds, Flocks, &c., when in consignments of not less than one full truck load.

GREAT SOUTHERN, WESTERN, AND RICHMOND LINES.

No. 51-continued.

Parcels Rates-continued.

Sce general regulations relating to insured parcels.

Fresh meat, fish, poultry (dead), dairy produce, eggs, fruit, vegetables, ice, and game, under 1 cwt., 25 per cent. reduction on parcel rates; minimum charge, 3d.

Musical instruments, packed in cases, 25 per cent. added to above rates.

Pictures in frames, packed or unpacked, double rates. Mirrors, double rates.

Furniture and sewing-machines, packed in cases, ordinary rates, but when unpacked double rates will be charged.

Bath chairs, perambulators, velocipedes, and bicyles, requiring a carriage truck for their conveyance, will be charged as for a two-wheeled carriage—see page 39. Bath chairs and perambulators (adults) carried in Break Vans will be charged double the rate for children's perambulators.

Corpses. 1s. per mile: minimum charge, 5s.

Corpses, 1s. per mile; minimum charge, 5s.

Newspaper parcels, one-quarter parcels rates; minimum charge, 3d.

Passengers' excess luggage, parcel rates.

Commercial travellers' excess luggage, parcels rates on down journey and free on up journey, on production of Railway receipts certifying that full trainage has been paid on down journey.

Gunpowder and other explosives will not be conveyed by Passenger Trains.

Perambulators (children's) and velocipedes will be conveyed in Guard's Vans, at the following rates:

When conveyed as passengers' luggage—

Not exceeding 125 miles Not exceeding 15 miles ... 150 200 ,, 50 6 250 2 100 300 When conveyed as parcels 50 per cent. additional will be charged.

Rates for conveyance of Library Exchanges.

Books forwarded for exchange to and from subscribers to recognized Circulating Libraries only will be carried at one fourth parcels rates, under the following conditions, viz.:—

1. The sender's name must be legibly inscribed on each parcel.

2. Each parcel must be open at both ends.

3. Each parcel must be declared on the consignment-note to contain books only.

Gold Dust and Bullion, and Gold and Silver Coin.

The Commissioner for Railways will not be responsible for the safe conveyance of Gold Dust and Bullion, Bank-notes and Bills, Orders, Notes, and Sccuritics for the payment of Money, and Gold and Silver Coin, or any of the other articles mentioned above, as the following charges are made, and the Gold Dust and Bullion and Coin carried, on condition of its being in charge of owners and at their risk.

NEW SOUTH WALES.

RAILWAYS OF NEW SOUTH WALES.

(REPORT FOR 1883.)

The Commissioner for Railways to The Honorable the Secretary for Public Works.

Department of Public Works, Railway Branch,

SIR.

Sydney, 1 September, 1884.

I have the honor to submit, for the information of the Government, a statement of the transactions of this Department for the year 1883.

No. 1.—RAILWAY CAPITAL AUTHORIZED.

At the close of 1882 the amount of Loans authorized was £26,654,161. Railway Debt. The total Nos. 8 & 9, During 1883 an additional amount of £1,245,000 was authorized. amount of Debentures issued at the close of 1883 was £18,388,100, leaving a pp. 74-80. balance of £9,511,061 still to be raised.

The Railway capital bears interest as follows:

£7,062,300—5 per	cent.		` .	•••	•••	annual interest	£353,115
11,325,800—4	,,	•••	• • •	•••	•••	,,	£453,032
9,511,061—4	,,	•••	(still to	be rais	ed)	39	£380,442

The average interest being 4.25 per cent., equal to £1,186,589.

2.—RAILWAY CAPITAL EXPENDED.

At the close of 1883 there had been expended on lines open for traffic, Capital £16,915,515,* and on lines in course of construction, £2,272,949; in all, expended. Appendix CO 411 299 was expended in the Nos. 10 & 11, £19,188,464, of which amount the sum of £2,411,822 was expended in the $\frac{N_{OS.}}{pp.}$ 81-92. year 1883, as under:-

Construction		•••	• • •	•••	£2,017,351
Rolling stock		ry, &c.	•••	•••	376,224
Trial surveys	•••	•••	•••	•••	18,247

£2,411,822

The

^{*}Includes cost of old Pitt-street Tramway, taken up in 1867, and £5,623, cost of rolling stock used on Camden Tramway.

The sources from which the money expended on Railway lines open for traffic have been obtained are—

From Loans £16,235,923 ,, Revenue 669,091

£16,905,014*

The interest bearing capital expended on lines in operation was therefore only £16,235,923, and, as some portions of the lines were in operation for parts of the year only, the net returns for 1883 will pay at the rate of 4.66 per cent. per annum for the period during which the lines were working; but in calculating the interest which the net receipts give, the whole amount of capital expended on lines open has been, as in past years, included without regard to the source from which it has been obtained. The percentage to capital is consequently reduced from 4.66 to 4.48.

3.—LINES OPEN AND IN PROGRESS.

Of the sum £2,017,351 expended in 1883 for construction, the sum of £680,684 was expended on lines open for traffic, and the balance £1,336,667 invested in unproductive lines in course of construction.

Additions to Capital Account—Lines open for Traffic.

Additions to Capital Account. In the year 1882 the capital invested in open lines was £15,843,616; during 1883 a further sum of £1,061,398 was added, making the total capital invested £16,905,014.

The amount of £1,061,398 was made up as follows:	s, viz.:	
Amount transferred from construction account, &c.		10,113
Expenditure during 1883 on construction		466,114
Additions and improvements to works and stations, &c.		£214,570
^{a.} Additional rolling stock, machinery, and workshops, &c		370,601
		07.007.000

£1,061,398

Nature of Capital Account.

See detail in Appendix 10a

As some misapprehension appears to exist as to the character of the charges which should be debited respectively to the construction and revenue accounts, and as the action of the Department in this respect has been challenged, a few remarks on the subject may not be out of place.

Exception so emphatic indeed has been made to the items debited in the accounts of the Department to construction that it would almost seem as if the view were entertained that when once a Railway is brought to the point of being opened and handed over for traffic purposes the construction or capital account should be closed, and that thenceforward all expenditure of every kind should be charged to revenue. Although this view is opposed to the established principle of Railway accounting and to general commercial practice, it has been advocated by some persons even in England, but it has been under unusual circumstances and in times of great excitement, when apprehension and prejudice have got the better of sound judgment. For instance, some years ago, after the discovery of certain Railway malpractices in transferring amounts wholesale from the working expenses account to the capital account, and thereby showing a handsome but fictitious profit—

large

^{*} Excluding the cost of the old Pitt-street Tramway, which was taken up in 1867, and value of rolling stock used on Camden Tramway Line.

7

large dividends being paid which really came out of capital, an outcry was raised on some of the Railways for the final closing of the capital account. Resolutions to this effect were proposed by anxious and indignant shareholders, and in some cases, I believe, carried, but the force of events, and the laws which govern these transactions, were stronger than the ill-directed and mistaken determination of individuals, and it was soon found that the plan was impracticable, and was of necessity abandoned. Shareholders came to see that if their capital accounts were closed two courses only were open to them-either to abstain from all expenditure required for the augmentation or improvement of their business, or else to make allpayments for such purposes from revenue to the sacrifice of legitimate It was found that the accommodation provided at the outset was insufficient for the purposes required, that necessary appliances had been overlooked, that as time went on new channels of trade were opened and population increased. A double line became necessary where a single one had sufficed, enlarged stations and goods-sheds, new sidings, additional engines, carriages, and waggons were required, and the commercial instinct was not slow to perceive that, as all these things represented capital value and tended directly to the earning of new revenue, the cost of them was not a legitimate debit against income. The capital account assumed its proper functions, and in course of time it came to be understood and admitted that, by reason of the influence which Railways exert in the development of traffic, the time could hardly ever arrive when the capital account of a Railway could be safely said to be finally closed.

As to the character of the charges which should properly be debited to the capital account, there is no diversity of opinion among the authorities.

An American writer—Kirkman, who is the recognized authority in his own country, and whose views are accepted in England—has been freely quoted lately, and I will therefore only refer to his opinion so far as to quote the broad rule which he lays down. He says—speaking, of course, of Railways—that the construction account represents "the original cost of the property, and should include the cost of all improvements which add value and increased stability to the property."

A great English railway authority (the late Seymour Clarke, who was for many years at the head successively of the Great Western and Great Northern Railways) held that the cost of everything not in the nature of a renewal or a repair or an ordinary working charge should be carried to construction; in short, that the cost of every new work and of every improvement and addition, whether provided for the purposes of new traffic or because the accommodation or appliances originally provided were found to be insufficient for the traffic should be paid by capital. Again, the writer of the article on capital in the last edition of the Encyclopædia Britannica thus defines capital:— "The common characteristic of capital is that of a fund yielding a return and reproducing itself whether the time to this end be long or short." definition, which is that of a man who is no mean authority in matters of finance, marks well the distinction between capital and income. Money invested in any way and yielding a return is capital, the return is the revenue The functions of the two are not, and cannot be made, interchangeable, and, adopting the views of this writer, it is by no means easy to

see how any confusion can have arisen as to the nature of the charges which should be debited to the two heads of account respectively.

It will seem that these three authorities, although their views are expressed in language so diverse, are in principle completely in accord. With regard to the application of this principle to the Railways of New South Wales it has been conclusively shown by the papers that have recently been laid before Parliament, that under no circumstances has the capital account been burdened with the cost of works properly chargeable to revenue.

In the following statement is given the length of Railway lines open Appendix No. 4, page 53. for traffic during the year 1883:—

will be opened before the close of the year, making a total for 1883 and 1884 of 388 miles, equal to an average of 194 miles for each year.

The contracts entered into and the progress made with new lines are as follow:—

Western Railway.

Nyngan to Bourke—126 miles.

The contractors, Mann, Carey, & Co., are making every effort to Nyngan to Complete this line, and the first section, viz., from Nyngan to Byrock, will be opened in September. Byrock is within 50 miles of Bourke, the time for the completion of the whole line being 31st March, 1885.

Great Northern Railway.

Glen Innes to Tenterfield.

The extension from Armidale to Glen Innes was opened for traffic on Glen Innes to the 19th August, and the only section now to be completed is that from Glen Innes to Tenterfield. The contractors, Messrs. Cobb & Co., are pushing on with the work, and the line will probably be opened by the end of 1885.

Sydney to Illawarra—1st Section.

The original contract provided for 23 miles, but under an arrangement Sydney to with the contractors the length was reduced to 13 miles, and the greater portion of this section, viz., to Hurstville, will probably be opened during September, 1884.

2nd Section.

On the 22nd July, 1884, tenders were opened for the 2nd section, viz., from 13 to 24 miles. Ten tenders in all were received, and the lowest—that of Rowe & Smith, for £410,319—was accepted. The contract is to be completed by July, 1885.

4th Section.

Tenders for the 4th section, viz., from $33\frac{1}{2}$ to $60\frac{1}{4}$, were opened on the 30th October, 1883, and that of Messrs. Proudfoot & Logan, for £318,526, the lowest of seven received, was accepted.

The work is to be finished by the 30th June, 1886.

The work between 24 and $33\frac{1}{2}$ miles (3rd section) has not yet been let.

Homebush to Waratah.

The tenders of Messrs. A. and R. Amos were accepted last year for Homebush to the two end sections of this line, viz., from Homebush to near the Hawkesbury, and from 50 miles 48 chains to Waratah. The works to be completed by the 1st March and 31st July, 1886, respectively.

Tenders for the intermediate section, viz., from 36 miles 60 chains to 50 miles 48 chains, were opened on the 28th August, 1883, and Mr. George Blunt's, for £293,022, the lowest of five received, was accepted. The work to be completed by 30th September, 1886.

There still remains the bridge over the Hawkesbury to be provided for, the contract for which has not yet been let.

1188 ·· B

Goulburn to Cooma.

Goulburn to

The first part of this line—Goulburn to Tarago—was opened for traffic on the 3rd January, 1884. The section extends to Bungendore, 39 miles from Goulburn, and is to be completed by 31st December next.

Tenders for the 2nd section, viz., from Bungendore to Michelago, $47\frac{1}{4}$ miles, were opened on the 27th May, 1884, and the lowest of five received—that of Messrs. A. Johnstone & Co., for £492,056—accepted. The work to be completed by 30th June, 1887.

Murrumburrah to Blayney. Murrumburrah to Blayney-1st Section, Murrumburrah to Young.

The work on this line is being well pushed forward, and is to be completed by the 31st December, 1884.

Orange to Molong.

Orange to Molong. Tenders for the construction of the above line, a distance of $22\frac{1}{4}$ miles, were opened on the 19th February, 1884, and the lowest of eight received—that of Messrs. Wm. Cain & Co., for £151,091—was accepted. The contract is to be completed by the 30th June, 1885.

Cootamundra to Gundagai.

Cootamundra to Gundagai.

Tenders for the above, a distance of $32\frac{1}{2}$ miles, were opened on the 2nd October, 1883. Eight tenders were received, and the lowest—that of Messrs. M'Sharry & Co., for £167,378—was accepted. The line is to be completed by the 30th June, 1885.

Summary of progress made in construction of new lines. The following is a summary of the progress made with the construction of new lines:—

Extension.	Distance.	Progress.
Nyngan to Bourke	Miles. 126	First section, Nyngan to Byrock, to be opened September, 1884, and whole line to be finished by 31 March, 1885.
	-	
Glen Innes to Tenterfield	57 1	Line to Tenterfield to be completed by 31 December, 1885.
Sydney to Illawarra	6 8	Part of first section, 9 miles, will be opened in September, 1884; second section, 11 miles, under construction, and to be completed by July, 1885; the fourth section, 26 miles, to be completed by 30 June, 1886.
Homebush to Waratah	93	First section, Homebush to Hawkesbury River, 29 miles, to be completed by 1 March, 1886; second section, bridge over Hawkesbury, not yet contracted for; third section, Hawkesbury to Gosford, 14 miles, to be completed by 30 September, 1886; fourth section, Gosford to Waratah, 49½ miles, to be completed by 31 July, 1886.
Goulburn to Cooma	130	Goulburn to Bungendore, 39½ miles, under construction, to be completed by 31 December, 1884 (Goulburn to Tarago, 23 miles, now open); Bungendore to Michelago, 48 miles, under construction, to be completed by 30 June, 1887.

Extension.	Distance.	Progress.
Murrumburrah to Blayney	108	Murrumburrah to Young, 18 miles, under construction, to be completed by 31 December, 1884.
Cootamundra to Gundagai .	32½	Under construction, to be completed by 30 June, 1885.
Orange to Molong	22	Under construction, to be completed by 30 June, 1885:

In the following table the lengths of Railway lines authorized, the Railways opened and total lengths opened, the extent of double line, and the lengths remaining to to be constructed (1st September), are shown:—

4.—LAND TAKEN FOR RAILWAY PURPOSES.

Appendix No 5, p. 55.

In Appendix No. 4 will be found particulars referring to the land resumed for Railway purposes to 31 December, 1883.

The claims outstanding on the 31st December, 1882, were 456, to which 490 were added during 1883; of these 946 claims, 191 were settled in 1883, leaving at the close of the year 755 in various stages of adjustment, a large number of which have been settled during the present year.

5.—Importation of Railway Materials.

Appendix No. 6, p. 58.

In the Appendix will be found a return of the Permanent-way materials, locomotives, and miscellaneous articles imported during the year under review.

The following is an abstract of the returns:—

Number of Ships employed.	Number of Tons of Goods shipped.	Value of Goods shipped.	Amounts paid for Freight and Insurance.	Average rate of Freight and Insurance per ton.

The establishment of the new and capacious stores at Eveleigh, to which allusion was made in the report of last year, has continued satisfactorily to facilitate the working of this important branch of the Department.

EXISTING

EXISTING LINES.

Maintenance of Ways and Works.

During the year a large number of works were carried out, details Maintenance of which will be found on reference to Appendix No. 1. Those charged to Works the Capital Account have been Scheduled, and the cost of each is shown in Appendix No. 10 a.

Appendix No. 10 a.

Appendix No. 10 a.

The principal works carried out have been :-

Southern Line.

Providing for electric lighting, Sydney station, &c.

Overbridge, Petersham.

Additional platforms, sub-way, &c., Summer Hill.

New bridge, Burwood:

New loading-yard, Homebush.

Station buildings, Colo.

Water supply, Barber's Creek.

Refreshment-room, Goulburn.

Refreshment-room, Yass.

Station buildings, Binalong.

Houses for employés, refreshment-rooms and water supply, Junee Junction.

Stock-yards, Culcairn.

Refreshment-rooms, Albury.

Alterations and additions to stock-yards, Hay.

Additional sidings laid in . . . 86,210 feet.

Permanent-way relaid with steel rails 7,928 do 981

Sidings

Western Line.

New platform and overbridge, Parramatta.

Additions to station building and running-shed, Penrith.

New platform, Mount Victoria.

Houses for employés, Capertee.

Sheep and cattle-yards, Kelso.

Workshop for smiths, Bathurst.

House for porter in charge, Kerr's Creek.

House for loco. foreman, Dubbo.

New station, Windsor.

Additional sidings laid in 21,285 feet.

Permanent-way relaid with steel rails 22,858

Sidings. do

Permanent-way relaid with re-rolled iron

11,616

Sidings relaid with re-rolled iron rails 2,625

Northern Line.

Mortuary station, Honeysuckle Point.

Workshops and offices,

Station accommodation, Woodford.

Goods-shed, Branxton.

Stock-yards, Whittingham.

Overbridge, Murrurundi.

Platform and shed, Wollon.

Station-master's house, Kentucky.

Platform and waiting-shed, Emerald Hill.

do Baan Baa.

Twelve cottages for employés, Narrabri.

Additional sidings laid in 11,687 feet.

Locomotive

Locomotive and Carriage Division.

Locomotive nd Carriage Division.

In view of the many difficulties under which the repairing of the rolling stock and other plant has been conducted the work done must be deemed satisfactory. It is now some years since the demand upon the space and appliances at the Redfern yard reached the limit of the convenience afforded, and the rapid growth of the general traffic has still further tended Notwithstanding these disadvantto increase the inconvenience already felt. ages, the rolling stock has been maintained in good running order, and the general business of the Branch has been performed in an efficient manner, while a good quantity of work has been conducted at a reasonable The demand upon the resources of the Department for repairs must ever be an increasing factor in the working expenditure, and the inadequacy of the existing space has been long foreseen and provided against, Provision for meeting the requirements of the Departas far as possible. ment in this respect has been necessarily one of time, but it is satisfactory to state that the erection of the new buildings at Eveleigh is being rapidly proceeded with, the large running shed capable of accommodating 147 locomotives is approaching completion, while good progress has been made with the foundations of the Locomotive Workshops, the work being delayed pending the arrival of certain portions of the structure which it has been found necessary to obtain from England. The working expenses have necessarily been heavier than they would have been if the accommodation available had been commensurate with the demands of a large and growing traffic, but it is reasonable to expect that when the new workshops are sufficiently advanced for occupation the cost of repairs and renewals to the rolling stock will be sensibly reduced.

The running sheds at Penrith, Bathurst, and Goulburn, to accommodate the engines employed in these districts, are approaching completion, and will be of very great benefit.

Appendix No. p. 73.

A large addition to the rolling stock has been made during the year, no less than 1,100 vehicles having been added, particulars of which are given below:-

ABSTRACT of Rolling Stock on hand on 31st December, 1882, and the number and description of Vehicles supplied in 1883.

The capital expenditure in new stock during the year was £283,723 and a sum of £114,727, charged against Revenue, was expended in repairing and renewing existing stock.

New contracts were let at the close of the year for the supply of rolling stock, other than engines, required for the ensuing five years, and it is satisfactory to note that the progress made by the manufacturers in

this

17

this branch of Colonial industry is such that the prices for the several descriptions of vehicles have been reduced with each successive contract. The prices now being paid are in marked contrast with those paid when this class of work was first let in the colony, and show that the hope then entertained that when industries of this character were fairly established the rates for the Colonial manufactured articles would bear favourable comparison with the same class of imported work, has been fully realized.

7.—REVENUE AND EXPENDITURE.

The gross earnings in 1883 were £1,931,464. The working expenses Gross and net £1,177,788, and the net earnings £753,676.

working expenditure.

Of the gross earnings, the sum of £661,751 was derived from coaching traffic, and £1,269,713 from goods traffic. The proportion of the former to the latter was 34.25 to 65.75.

The expenditure in the Locomotive Branch was £438,174. Of this sum there was expended for renewals and for repairs of rolling stock, workshops, &c., other than those caused by fair wear and tear, the amount of £120,576, and the balance, £317,598, was used for current repairs and running expenses.

In the Permanent-way Branch the expenditure was £343,322, of which the sum of £109,252 was expended in renewals of line, buildings, stations, and for exceptional repairs, and the balance, £234,070, in ordinary maintenance.

The Traffic Branch expended £356,702, of which the sum of £23,628 was used in renewals of sheets, furniture and fittings, £2,881 in compensation for personal injuries, £1,721 in compensation for loss or damage to goods, and £328,472 in the ordinary charges for conducting the traffic.

The general charges, common to all branches, absorbed £39,590, of which £951 was for renewals of offices and buildings, and the balance, £38,639, was expended in superintendence, store and audit expenses, &c.

Although the gross earnings for 1883 were in excess of those for 1882 by the sum of £232,601, the net earnings were £10,550 less. This result—the causes for which will be explained—reduced the rate of interest, which the net earnings give to capital invested, from 5.14 per cent. in 1882, to 4.48 per cent.

The causes of this reduction are very generally known. 1882, when the result of the Railway transactions for 1881 was ascertained, the Government, in view of the fact that the Railways for that year gave the handsome return of 5.31 per cent. to the capital invested, determined to reduce the rates of carriage and to increase the wages of the workmen, so that the public who use the Railways and the men who work them should benefit directly by this prosperous condition of affairs.

Reductions in the rates of carriage for passengers and goods were accordingly made to the extent of, at least, £100,000, and the wages of the workmen were increased by the sum of £37,000 per annum. admitted at the time that these concessions would reduce by nearly 1 per cent. the per centage which the net earnings return to capital invested, and the result shows that this estimate was approximately correct.

Particulars of coaching traffic.

In the following tables are given the particulars of the Revenue and Expenditure for 1883 compared with 1882:—

No. 8.—DIVISION OF THE RAILWAY LINES INTO SECTIONAL AREAS.

Sectional returns. In the following statements are given the capital expenditure, the gross earnings, the working expenditure, the net earnings, and the return which the net earnings give to the capital invested in each section.

It will be seen that out of the eleven sections, into which the whole of the Railways have been divided, two make no return to the capital invested in their construction—indeed have been conducted at a loss—viz., the line from Junee to Hay, upon which a loss of £10,767 has been incurred, and the Windsor and Richmond Branch, upon which the loss is £2,707.

The capital invested in these two sections is £1,188,396, and the interest which has to be paid on that sum amounts to £47,535, so that it may be said the loss which the country has directly sustained upon the working and interest accounts of these two lines amounts to £61,009. But while the direct loss is as stated, the indirect gain which the traffic passing over these lines brings to the other and main portions of the Railway system minimizes if it does not altogether recoup this loss. For instance, the wool and other produce from Hay, and the goods in exchange carried to Hay, have for the most part to be carried over the 287 miles of Railway intervening between Junee and Sydney, and the handsome return to capital which that portion of the line gives is sensibly contributed to by the profit made upon this traffic. To illustrate this more in detail I may instance a trader at Hay coming to Sydney to purchase goods. He pays for the journey £7 5s., but only £2 11s. 2d. of that amount is credited, on the mileage basis, to the earnings of the line from Hay to Junee; the balance goes to swell the earnings of the line from Junee to Sydney. back 20 tons of goods at a freight cost of £66 13s. 4d., but of this sum £42 3s. is credited to the line from Sydney to Junee, the balance only being appropriated to the extension to Hay. If the line from Junee to Hay had not been constructed the trader would not have visited Sydney, nor obtained his goods there; he would have journeyed to Melbourne, and purchased his goods in that centre of supply, forwarding them to Hay by the Victorian Railway to Echuca, and thence by the river. While it is true that under such circumstances the country would have been spared the loss incurred upon the working of the Branch Line from Junee to Hay, it would have lost the profit derivable from the transit of the traffic over the Railway from Sydney to Junee.

It is apparent, therefore, that, while for the advantage of having detailed information before us for a guide, it is useful to show the working of the lines by sections; the result of the working of the Railways as a whole can alone be accepted as an index of their position and progress. The main channel of traffic is swelled by feeders to the stream, the latter, for the time being, working at an apparent loss, but contributing to the prosperity of the whole, and promising at no distant time to become profitable streams of traffic from which other feeders will spring.

10.—WOOL RETURNS.

The following is a return of the Wool carried on the Railways for the years 1883 and 1882:—

	South and West.	North.	Total.
No. of bales in 1883	244,971	116,068	361,039
Do 1882 ,	162,584	73,334	235,918
Increase in 1883	82,387	42,734	125,121
Revenue in 1883	£105,044	£51,719	£156,763
Do 1882	67,790	30,712	98,502
Increase in 1883	£37,254 '	£21,007	£58,261

Returns for 1883 compared with 1882. Appendix No. 30, p. 121.

The return above shows the wool carried during the year. In Appendix No. 31 will be found the quantity carried from each station for the season 1882-3, in comparison with the season 1883-4.

So far as the traffic is concerned the wool business has been a satis-cause of factory one to the Railway Department, inasmuch as there was an increase increase increase wool traffic. on the year's transactions of 125,121 bales, and on the season 1883-84 against 1882-83 of 54,602 bales. The increase in the year's traffic is due, in a measure, to the fact that the clip for 1882 was late, causing the traffic in the early part 1188-E of

34

of 1883 to be heavy. The season, judged by the rainfall, has been a bad one for the wool-growers. The absence of rain, however, has prevented the rivers from filling, and the wool could not therefore to the same extent as formerly be carried by these waterways to the adjoining Colonies. The wool riverborne to South Australia and Victoria in 1882 amounted to 187,633 bales, and in 1883 to 154,530 bales, a reduction of 33,103 bales. This, coupled with the fact that our railway extensions have penetrated into the border districts, principally accounts for the large increase in the wool carried. Strong evidence of the recent bad seasons is given by the average rainfall for the Colony, which in

1879 was 30.75 inches. 1880 ,, 19.93 ,, 1881 ,, 20.73 ,, 1882 ,, 20.11 ,, 1883 ,, 17.96 ,,

From 1874 to 1879 the average rainfall was equal to 28 inches; from 1880 to 1883 it fell to 20 inches.

Wool returns, season 1882-3 and 1883-4. For the seasons 1882–83 and 1883–84 the wool returns from the various Lines were as follows:—

	•	1882-83.		1883-84.		Increase.		
South and South-	west	91,873 k	pales.	$113,227$ \downarrow	oales.	21,354	bales.	
West		74,150	,,	102,077	,,	27,927	,,	
North	• • •	86,836	,,	92,157	,,	5,321	,,	
Total		252,859	,,	307,461	,,	54,602	,,	

Number of Sheep-in the Colony.

In the following statement is given the number of Sheep in the Colony at the close of the years 1882 and 1883:—

Districts.	Number of Sheep, 1st January, 1883.	Number of Sheep, 1st January, 1894.	Increase, 1st January, 1884.	Decrease, 1st January, 1884.
Border	10,404,587	9,728,119		676,468
Northern	8,482,938	9,118,590	635,652	
Southern	9,179,537	10,469,777	1,290,240	
Western	8,047,752	8,599,024	551,272	•••••
	36,114,814	37,915,510	2,477,164	676,468

11.—Coal Traffic.

Coal traffic, Appendix, Nos. 34-41, pp. 126-132. The coal traffic during the year shows a satisfactory increase. This great interest was not disturbed, to any material extent, by strikes, and as an increased export trade was done a larger quantity of coal than usual was carried.

The total quantity carried over the Northern Line for the years 1882 and 1883 was as follows:—

			Tons.	· Freight.
1883	•••		1,428,756	£ $67,725$
1882	•••	• • • • •	1,327,060	63,305
Increase	.			5.858

The

The following were the quantities shipped for foreign and intercolonial ports:

1883				•••		1,359,505
1882	•••	•••		•••	•••	1,080,446
Increase			`•			279.059

The coal traffic on the South and West Lines shows a fair increase, but Appendix No. there is a marked decrease in the quantity of shale carried, the export trade in this article, which was very active in 1882, being very quiet during 1883. The total traffic on the South and West Lines was as follows:-

`			Coc	al.	Sh	Shale.			
1883	•		$^{ m Tons.}$ $127,\!576$	Freight. $\pounds 46,197$	Tons.	Freight.			
1882		•••	109,915	240,197 $41,628$	29,344 $42,790$	£9,883 14,296			
				<u></u>					
	ncrease		17,661	4,469	•••	•••			
T	ecrease	• • •		•••	12,646	4,413			

In addition to the above there were 165,308 tons conveyed for the Department, the freight on which amounted to £76,555. As this coal was used for locomotive purposes the sum named has not been included in the revenue returns of traffic.

12.—RETURNS.

In addition to the Returns given and referred to in the Report the following will be found in the Appendix:-

Annexed

Annexed to the Appendix are thirteen coloured diagrams, showing the following particulars of the Railway transactions for each of the twenty-seven years from 1855 to the end of 1883:—

- 1. Length of line opened on 31st December in each year.
- 2. Number of passengers.
- 3. Tonnage of goods.
- 4. Earnings from coaching traffic.
- 5. Earnings from goods traffic.
- 6. Gross and net earnings and working expenses.
- 7. Working expenses.
- 8. Earnings per train mile.
- 9. Working expenses per train mile.
- 10. Percentage of working expenses to gross earnings.
- 11. Net earnings.
- 12. Capital invested in lines open.
- 13. Interest on capital.

A Railway map showing in colours the Railway systems of the Colony, the lines constructed, under construction, and authorized, is appended.

13.—RECAPITULATION.

The transactions during the year are thus summarized:—

The total expenditure for construction was £19,188,464, of which the sum of 16,905,014 was expended for lines opened for traffic.

At the close of the year 1,320 miles of line were open for traffic, and 597 miles were in course of construction.

The rolling stock consisted of 296 locomotives, 695 coaching, and 6,386 goods, vehicles.

The value of the railway materials, in the conveyance of which 121 vessels were employed, amounted to £275,149, and the freight and insurance to £18,984, making a total of £294,133.

During the year 116,286 trains, of which 64,088 were passenger and 52,198 goods trains, were run a distance of 5,937,261 miles. The earnings amounted to £1,931,464, and the working expenditure to £1,177,788, or 60.98 per cent. of the earnings. 10,272,037 passengers travelled, of whom 3,398,169 were first class, and 6,873,868 were second class. Included in these figures are 14,972 season-ticket holders, representing 3,640,612 journeys. The proportion percentage of these classes is for first-class passengers 17.89, second class 46.67, and for season-ticket holders 35.44.

The merchandise traffic consisted of 1,753,024 head of live stock, 361,006 bales of wool, 1,915,502 tons of minerals, and 816,918 tons of general goods.

There

37

There was an increase of 397,746 in the number of first-class passengers, of 675,102 second class, and 214,876 in the journeys made by season-ticket holders.

The earnings per mile open were £1,484, the expenditure was £905, the net earnings were £579.

The earnings per train mile were 78.07, the expenses 47.61, and the net earnings 30.46.

The net earnings were £753,676, yielding 4.48 per cent. to the capital invested on lines open for traffic.

I have the honor to be, Sir,

Your most obedient servant,

Commissioner for Railways.

The Honorable F. A. Wright, Secretary for Public Works, &c., &c., &c.

TRAMWAYS OF NEW SOUTH WALES.

Department of Public Works, Railway Branch, Sydney, 10th October, 1884.

Sir,

I have the honor to supplement my Report for 1883, upon the Railways of the Colony, with a report for the same period upon the construction and operation of the Tramways in the City and Suburbs of Sydney.

Capital expenditure.

In the following table is given the capital expenditure on the lines open and under construction to 31 December, 1883:—

Return showing the Capital Expenditure on the Government Tramways of New South Wales to the 31st December, 1882, and subsequent expenditure to 31 December, 1883.

	THE

The extensions opened during 1883 were:—

Lines open in 1883 and 1884.

From Randwick to Coogee, 1 mile 50 chains, opened on the 25th January; and the line from Forest Lodge Junction to Leichhardt, $1\frac{1}{4}$ mile, opened on the 18th June.

Since the close of 1883 the following additional lengths have been added:-

> Continuation of Leichhardt Line to Norton-street, 1 mile, opened on the 1st May, 1884; and the line from Waverley to Bondi, 1 mile, opened on the 24th May, 1884.

The plans and sections of a line from Newcastle to Plattsburg, $8\frac{1}{4}$ miles, were laid before Parliament and approved on the 12th August. Tenders for the construction of this line will shortly be invited.

Some unavoidable delay has taken place in determining upon a line of Tramway for the North Shore, from Milson's Point to the Reserve. Inquiry has had to be made into the relative advantages and cost of a steam motor line and a cable line system for this route. The question has not been finally determined, but such information on the subject is before the Government as will admit of a decision being arrived at upon an early date.

REVENUE AND EXPENDITURE.

Revenue and Expenditure

The total earnings derived from the City and Suburban Tramways Appendix No. during the year were £190,699, an increase of £64,497 over the earnings of 16, p. 96. The expenditure was £178,877, and the net earnings £11,822, which upon the capital invested in lines open gave a return of 2.22 per cent.

> As 4 per cent. is the rate at which the Tramway capital has been raised, the transactions for 1883 show a loss of 1.78 per cent., equal to a sum of £9,478.

Result of transactions. 1884.

I regret to say that the transactions for the first six months of this The causes which have year do not promise a more favourable result. contributed to this state of affairs are several. It was intended when the Tramway system was initiated to popularize it by charging cheap fares, and 2d. per section of 2 miles and under was fixed upon as the rate which should The public have, however, from time to time demanded that the sections should be extended, and, with few exceptions, the first sections of the Tramway, for which a charge of 2d. is made, extend to nearly 3 miles, and in some instances over that distance. Again, when the Tramways were first opened, children were charged the ordinary fares. The demand was made and conceded that the same concession allowed to children travelling on the Railways should be extended to children travelling on the Tramways; and though it cannot be said that the concession was an unreasonable one to make, it must be pointed out that the granting of it resulted in an estimated loss of £10,000 to the net revenue.

While we have been charging exceptionally low rates, we have had very heavy expenses to contend with. In the first place the construction of the Tramways in Sydney, owing to the hilly formation of the City, has been very expensive, and the maintenance cost has been correspondingly heavy. The portions of the road or streets upon which the Tram-lines are laid are generally kept in better condition than the other portions of the street; and the consequence is, that the ordinary vehicular traffic is concentrated on the Tramway, causing, as already stated, a very heavy charge for the maintenance Another of the road.

Another and a peculiarly heavy item of expenditure is the large amounts which are claimed and obtained through the Law Courts for personal injuries.

Workmen's wages necessarily form a very considerable item in the expenditure upon any Tramway, but the rates paid to the employés of the Tramways in Sydney are considerably in excess of those paid elsewhere, in addition to which they have the benefit of the eight-hour system of labour, which necessitates the employment of two shifts of men per diem. I am not prepared to say that the men are paid too highly or that their work is light, but as the Tramways cost more to construct here than they do elsewhere, as the cost of maintenance is greater, the wages of the men higher, and the hours of labour shorter, it is not possible to work them at a profit if, as is the case in many instances—especially as regards the first sections of the lines—a lower fare is charged than is charged upon other Tramways where the conditions for profitable working are so much more favourable.

The public who use the Tramlines are continually asking for further accommodation. It is admitted that for their greater comfort the cars should be improved, additional waiting-sheds should be provided, and the crossings at the stopping-places paved; but these facilities cannot be given without a further expenditure of money and a consequent greater loss upon the working of the lines.

The people who are best served at the present time are those who travel on the first sections of the line; they are carried longer distances for the same fare. It is but reasonable, therefore, that any proposal to increase the present fares should be made to apply to the first sections. It will not be denied that the Tramways'should return a sufficient sum to maintain them in good working order, and to pay interest upon the capital invested; but while every effort has been made to work the Tramways ecenomically, with a due regard to the reasonable requirements of those who make use of them, this result has not been obtained. I have, therefore, deemed it my duty to submit to you a proposal to increase the fares charged on the first sections from 2d. to 3d., as under:—

Bridge-street to Glebe Point.

- ,, to Forest Lodge.
 - to Cleveland-street, Newtown Road.
- ,, to Glebe Junction (Leichhardt Line).
- to Waterloo.
- ,, to Crown-street.
- ,, to Queen-street, Paddington.
- to Cleveland-street (Moore Park).

The fares on the other section to remain as they are at present.

It is not proposed to disturb the present charge for children.

With the increased fares proposed it is estimated that the revenue obtained will make the Tramways self-supporting and ensure a fair return upon the capital invested. The public, I believe, are not unprepared for this change, and will be found willing to respond to a proposal which, while it is fair in its incidence, will afford the means of increasing the accommodation and enhancing the value of the service which the Tramways have been admitted to render them.

In the following statements are given the capital expenditure, the gross earnings, the working expenditure, the net earnings, and the return which the net earnings give to the capital invested on each section:—

Line in operation 12 months	ı .	£4	0,957	Loss per cent. per annum capital	on 	6.00				

The loss sustained upon this line has been largely contributed to by the heavy amount which was paid in 1883 for personal injuries sustained in the accident which occurred on the 13 March, 1882. The sum paid was no less than £2,161, which represents within £295 the whole excess cost in working the line. The prospects of a much more favourable return for the present year are very promising.

ACCIDENTS.

It is satisfactory to be able to say that notwithstanding the great Appendix No. 56, pp. increase in the number of passengers carried there has been no increase in 178-179. the number of accidents.

The following were the accidents for the years 1882 and 1883, together with the number of passengers:—

	•	Acc							
Ser	vants.	Pass	Passengers.		n Passengers ervants.	T	otal. •	Number of Passenge Fares.	
Killed.	Injured.	Killed.	Injured.	Killed.	Injured.	Killed.	Injured.

Of the persons who lost their lives in 1883, six died through leaving or entering moving trams, one threw himself in front of motor, and four were run over; in each instance the accident was due rather to carelessness on the part of the deceased than to any fault of the Tram Service.

As the passenger fares collected were 25,713,433, the accidents were in the proportion of one killed to every 2,337,585 fares, and one injured to every 642,835.

ROLLING

ROLLING STOCK.

Rolling Stock.

At the close of 1882 46 motors were in use, and during 1883 12 new engines were added (11 from the Baldwin Company and 1 from Merryweather), making the total 58 at the close of the year. The average mileage run by each motor was nearly 25,000 miles. The average mileage of each Railway locomotive was for the Southern and Western Lines 24,782, and for the Northern Line 23,963. The Tramway motors have therefore performed a greater service than the Railway engines.

17 cars were added to the stock during the year, making the number in use 98, which will accommodate 7,020 passengers.

For the more economical working of the service it is essential that additional rolling stock should be obtained. Owing to the paucity of motors the work of repairing those which have failed during the day has to be performed at night; and as the mechanics are paid 25 per cent. in excess of the rate of wages for day work, the working expenses are sensibly increased.

With a small reserve of motors, and the additional workshop accommodation which is now being provided at Randwick, the cost of repairs will be largely reduced.

I have the honor to be,

Sir,

Your most obedient servant,

Commissioner for Railways.

The Honorable F. A. Wright,
Secretary for Public Works,

&c., &c., &c.

· APPENDIX TO REPORT ON RAILWAYS-1883.

No. 1.

The Engineer for Existing Railways and Tramways to The Commissioner for Railways.

Railway Department, Office of Engineer for Existing Lines.

I have the honor to submit my Annual Report, from January 1st to December 31st, 1883, on the condition of the Existing Railways and Tramways under my charge.

SUBURBAN RAILWAYS.

Sydney to Granville Junction-Double Line-Length, 13 miles 16 chains.

GREAT SOUTHERN AND SOUTH-WESTERN RAILWAYS.

Granville Junction to Albury-Single Line-Length, 373 miles 4 chains.

Albury to the River Murray-Single Line-Length, 1 mile-Opened for public traffic on the 14th June.

Junee Junction to Hay-Single Line-Length, 167 miles 29 chains.

THE whole of the works on these lines, including branches, have been kept in good running order during the year.

In addition to the several new works and improvements, list of which is appended, various repairs of a minor nature have been carried out during the year.

The main up and down lines at Eveleigh have been lowered for a distance of 32 chains.

Extensive renewals of both rails and sleepers on the Suburban Line will require to be made at an early date, as also between Granville and Glenfield. The superstructure of many of the bridges between Picton and Goulburn have been renewed, this portion of the line being now in first-rate order. The condition of the sleepers on the section between Goulburn and Gerogery is anything but satisfactory, necessitating very extensive renewals. A large quantity of ballast will also be required, more especially between Goulburn and Yass, and Harden and Cungegong.

The rails, sleepers, and fences on the South-Western Line are in good condition.

The following works have been carried out during the year: -

At Sydney-

New lamp-posts erected near dock at station. New lamp erected in front.of luggage office. New tool-house erected for Inspector Waring. Additional office erected for Inspector Waring. Platform at eastern end of station extended 38 feet.

New luggage office erected.

Pit closets at Locomotive Engineer's Office connected with sewer.

New office erected for cashier and paymaster. Engine fixed and shed erected in Domain for lighting Parliament Houses by electricity.

Engine fixed and shed erected in yard for producing electric light.

Gas laid on to electric light engine-shed.

Brick culvert at one-half mile lengthened 37 feet.

Interlocking apparatus altered.

Buffer stops fixed to dead-end siding at tunnel.

Additional closet accommodation provided at Mortuary.

Brass furnace erected.

New double arm signal erected to protect sidings.

At Sydney-continued.

New down line starting signal erected.

42 feet retaining wall, and four gate piers erected, one 200 candle lamp, and one 100 candle lamp, fixed at Devonshire-street.

Temporary gates erected near sheeting-shed. Two 70-candle lamps erected at station.

New departure platform flagged.

Platform walls on up side lengthened 80 feet. Two 400-gallon tanks fixed at electric light engine-shed in Domain and gas laid on to ditto.

Six additional closets at goods-shed almost completed and connected with sewer.

Concrete floor laid in shed for electric light engine, and galvanized iron screen erected.

At Darling Harbour-

New sewers completed.

Crane on wharf removed and re-erected.

New store-room erected for receiving copper.

Two water-closets and five urinals erected.

Bridge widened.

Iron wheel-plates fixed on approach to cart weigh-bridge.

At Darling Harbour—continued.

New goods-shed completed.

Open timber drain constructed and connected with sewer.

Buffer stops fixed at new siding to cattle-yards.

Water and gas laid on to new goods-shed.

Water laid on to hulk "Ricca Genora."

Water-closets connected with sewer.

Shed erected for protection of hose reel.

New platform erected at west end of shed.

Goods delivery office enlarged.

Two boxes made and fixed to hold extincteurs. Footpath formed, kerbed, and guttered, from main entrance gates to weigh-bridges.

New box erected for shunters.

Office erected for Inspector of erection of meat store.

Office for goods foreman enlarged.

Room for receiving copper enlarged.

GREAT WESTERN RAILWAY.

Granville Junction to Parramatta—Double Line—Length, 1 mile 9 chains.

* Parramatta to Nevertire—Single Line—Length, 325 miles 32 chains.

Nevertire to Nyngan—Single Line—Length, 35 miles 64 chains. Opened for public traffic on 9th June, 1883.

Wallerawang to Capertee-Single Line-Length, 22 miles 74 chains.

The whole of the works on these sections have been kept in good repair during the year.

Both rails and sleepers have been renewed to a considerable extent on the section, Springwood to Bathurst, and a very large number more still remain to be so done. On the section, Bathurst to Orange, the rails are wearing very fast. 5 miles and 30 chains of the line have been relaid during the year; the sleepers are also decaying very rapidly, rendering very excessive renewals necessary. The road on the other sections is in very fair condition.

The following works have been carried out during the year:-

At Parramatta-

New doors fixed to waiting-shed, Parramatta Domain.

New platform erected at Oakes' Orchard.

Box erected for gate-keeper at Harris Park.

Water laid on to station and goods-shed.

New cart weigh-bridge fixed and office erected.

Retaining wall erected.

Drinking fountain fixed.

Gas lamps erected.

Pump fixed at good-shed.

Up and down home-signals erected.

Extension of platform at Parramatta Park—400 feet nearly completed.

Foot overbridge almost finished.

At Westmead-

Waiting-shed erected.

At Wentworthville-

Two 12-feet gates erected.

Up and down distance-signals erected.

RICHMOND LINE.

Single Line-Length, 16 miles 11 chains.

This line and the various works in connection with it have been kept in first-class order.

The timber bridge at $34\frac{1}{2}$ miles has been strengthened.

The following works have been carried out during the year:-

At Blacktown-

Distance signals erected.

At Schofield's Siding-

Retaining wall erected.

At Riverstone-

Water-closet and urinals erected.

At Mulgrave-

New water-closet and urinals erected.

At Windsor-

Temporary platform erected at Gosper's paddock.

Station removed from Richmond and re-erected.

Temporary parcels' room erected.

Office erected for Inspector of Erection of Station Buildings.

Retaining wall and fence erected.

New station erected by contract.

At Richmond-

Fittings provided in new station.

Hay gauge erected.

New goods-shed completed.

Cart weigh-bridge fixed and office erected to same.

5-ton crane erected.

Stock-yards erected.

Tank erected for Locomotive Branch.

Water-pipes laid from well to temporary tanks.

The following quantity of ballast has been used during the year:-

Ballasting permanent-way $262\frac{1}{2}$ cubic yards.

LIST OF MACHINERY IN WORKSHOPS ON 31ST DECEMBER, 1883:-

Carpenters' shop-

- 1 30-horse power semi-portable engine
- 1 dimension planer
- 1 wood-turning lathe
- 2 circular saw benches
- 2 tenoning machines
- 1 horizontal boring machine

- 1 cross-cutting machine
- 1 band saw machine
- 1 fret saw machine
- 1 variety wood-working machine
- 2 mortising machines
- 1 surface planing machine.

List

List of Machinery in Workshops-

Fitting shop —

2 12-inch lathes
1 10½-inch lathe

2 10-inch lathes

1 6-inch lathe

1 small hand or power drilling machine

5 vertical drilling machines
1 radial drilling machine
2 slotting machines

1 shaping machine 5 planing machines

2 screwing machines

1 wood-turning lathe.

Smiths' shop

1 12 horse power portable Engine

1 fan, to blow 16 fires

2 punching and shearing machines

2 steam hammers

1 10-horse power semi-portable engine.

Plumbers' shop-

2 burring machines 2 swedging machines 1 punching machine 1 guillotine machine 2 folding machines

1 set tinsmiths' rollers

1 washer punching machine

1 pipe-screwing machine 1 curving machine.

GREAT NORTHERN RAILWAY.

Newcastle to West Maitland-Double Line-Length, 20 miles.

The permanent way has been maintained in good condition.

With one or two exceptions the bridges are in good order, and all are safe beyond doubt.

The buildings and other works are in first class order.

West Maitland to Tamworth-Single Line-Length, 161 miles 28 chains.

The permanent way, bridges, and other works on this section, have been kept in a satisfactory state.

Tamworth to Uralla—Single Line—Length, 63 miles 57 chains.

With the exception of the occasional filling up of the side drains in deep cuttings, this portion of the line has not been troublesome to maintain.

Uralla to Armidale-Single Line-Length, 14 miles 72 chains. Opened for public traffic 1st February, 1883.

The permanent way and works on this section have been maintained in good order with little difficulty.

Bullock Island Branch-Double Line-Length, 1 mile 43 chains.

Morpeth Branch—Single Line—Length, 4 miles.

All the works on these branches have in every respect been kept in a satisfactory state.

North-western Branch, Werris Creek to Gunnedah—Single Line—Length, 40 miles 40 chains.

Gunnedah to Narrabri-Single Line-Length, 56 miles 5 chains.

The permanent way, bridges, &c., on these sections have been maintained in excellent order at a moderate outlay.

The following works have been carried out during the year :-

At Newcastle-

Two 100-candle lamps erected at steamer's wharf.

Gasaliers fixed in Traffic Manager's Office.

Loading stage for goods traffic erected.

Plank way laid from Great Northern Wool-dumping and Shipping Co.'s Stores to wharf.

Level crossing constructed from Newcastle Wool-dumping and Shipping Co.'s Stores to wharf.

Crane removed from eastern and re-erected in western goods-shed.

At Honeysuckle Point-

Mortuary station erected.

Permanent way workshops, 200 feet by 40 feet erected.

Offices erected for Permanent Way and Locomotive Branches.

At Honeysuchle Point—continued—

Store-yard fenced in.

Oil store erected.

Gas laid on to Permanent Way and Locomotive Offices.

Urinals erected at Mortuary station.

At Bullock Island Dyke-

Signals erected.

Iron-shed erected for store department.

At Hamilton-

Platforms lengthened and a waiting-room and closet erected.

A 60-feet coal weighbridge fixed. Signal boxes erected.

At Waratah-

Loading platform erected.

At Wallsend Junction-

Junction of Wallsend Coal Co.'s line doubled.

At Sandgate-

Gate-house erected.

Platform erected at General Cemetery.

At Hexham-

Waiting-room erected.

Wharf constructed.

At Tarro—

5-ton crane erected.

At Woodford-

Ticket office, waiting-room, and porters' residence erected.

At East Maitland-

Level crossing constructed at King-street. Well sunk for supplying water to engines.

At Morpeth-

Additional office erected.

At West Maitland-

Additions and improvements made to stationmaster's residence.

Gas laid on to goods offices.

Church-street kerbed and guttered from Steam-street to station.

Dwarf-wall erected in front of station.

Three-rail fence erected in Church-street, between station and station-master's residence.

At Farley—

Stages provided for unloading sheep from upper tiers of trucks.

At Allandale-

Goods-shed erected.

Ticket office erected.

Closet and urinal accommodation provided.

At. Greta-

5-ton crane erected.

At Branxton-

New goods-shed erected and approaches formed,

At Whittingham-

Stockyards erected.

At Singleton-

Commissioner's ballast land fenced in.

Pumping engine-house erected and well sunk for Locomotive Department.

At Scone-

Stockyards enlarged and improved.

At Wingen-

Platform lengthened.

Level crossing removed to Livingstone-street.

At Murrurundi-

Carpenters' shop erected.

Over-bridge erected in lieu of level crossing near Murrurundi.

At Willow-tree-

Station-master's residence fenced.

At Quirindi-

Passenger platform lengthened.

At Werris Creek-

Engine turntable fixed.

At West Tamworth-

Signals altered and improved.

At Tamworth—

Loading platform erected.

Wicket gates fixed at Denison and Fitzroy Streets.

Signals altered and improved.

Gas lamp erected at Brisbane-street crossing.

Gas fittings provided in house rented by Mr. Hole.

Fence erected at house rented by Mrs. Mason.

At Moonbi-

Room altered for accommodation of Post Office Department.

At Walcha Road—

Stockyard erected.

Wool stage erected.

At Wollon-

Platform and waiting-shed erected.

At Kentucky-

Station-master's residence erected.

Small platform and loading stage erected.

At Uralla-

Crane erected.

Signals altered and improved.

At Kelly's Plains -. .

Waiting-shed and platform erected.

At Armidale-

Dray weigh-bridge fixed.

5-ton crane erected.

Between Uralla and Armidale the gates of main road crossings have been altered to close across the line.

At Curlewis-

Additions to porter's residence erected.

Small goods-shed erected.

Sidings

At Emerald Hill-

Platform and waiting-shed erected.

At Baan Baa-

Platform and waiting-shed erected.

At Narrabri-

Twelve cottages erected for employés.

5-ton crane fixed.

Wool stage constructed and approach thereto metalled.

The points and signals have been interlocked and gas has been laid on to signals at the undermentioned places, viz.:—

Newcastle Station yard.

Burwood Junction, near Newcastle Station.

Merewether-street Crossing, near Workshop-yard.

Bullock Island Crossing, near Honeysuckle Point Station.

GENERAL REMARKS.

RAILWAYS.

A very considerable amount of work of every description has been carried out during the year.

The repairs to the timber bridges on the Southern Line have been very heavy, and must continue to be so in consequence (to a very large extent) of the inferior class of timber put in them. I am sorry to have to make this statement, but do so in order that nothing but the very best qualities of timber might be allowed to be used on any of the extensions; or; what would be much better, that timber might be done away with entirely as iron bridges can be constructed for less money than some of the timber ones are now being built for. Several timber bridges have also been repaired on the Sydney end of the Western Line, but only to keep them in safe working order until the duplication of the Line.

The repairs to the iron bridges were stopped by order of the Minister for Public Works in July last. Several of them will require a good many new rivets put in, and the work closed and painted.

The permanent way on all the lines is in excellent running order, but a very considerable number of sleepers has been and will require to be renewed, and this, I consider, is largely due to the bad description of timber allowed to be put in.

The running sheds at Penrith and Bathurst are nearly completed, and the large iron running shed at Eveleigh is approaching completion, with pits, roads, &c., capable of accommodating 126 locomotives.

The foundations for the locomotive workshops are half finished, awaiting the roof and columns from England; the other half will be put in hand without delay.

The interlocking of points and signals by Mackenzie and Holland's system has been carried out at sixteen of our stations, and instructions have been given to introduce the system at seventy-one other places.

A large building for the frozen meat business is being erected at Darling Harbour, the first story of which is already in a forward state.

I think it quite time that something should be decided on with regard to further accommodation at the Redfern terminus in the way of covered platforms, roads, &c.

The accommodation at Darling Harbour should be extended without delay. At this dull season it scarcely affords facilities for the conduct of the business, and when the Illawarra and Northern Lines are brought in, I am confident that it will be found altogether insufficient.

I have, &c.,

GEORGE COWDERY.

Not very great progress has been made with Tramway extensions this year. The roads are in fair running order, or as well as they can be kept with the description of rail used, which are too light for the service and not of the best pattern, as it is impossible to keep the joint in first-rate order.

Before any more extensions can be brought on to the Elizabeth-street lines it will be absolutely necessary to extend the facilities at the terminus, and as this is not easy to accomplish the better plan will be to continue the system round the city as was originally intended.

No. 2 carriage-shed has been erected at Randwick by contract, and other improvements carried out by the Department. These are particularised further on.

The following works have been carried out during the year :-

Coke-shed enlarged at Tramway yard, Pitt-street.

New gates fixed at Tramway yard, Pitt-street.

New waiting-shed and ticket-office erected at Treasury grounds, Bridge-street.

Buffer-blocks fixed at end of each road in shunting-yard, Bridge-street.

Ten panels of 6-ft. paling-fence erected between Tramway and Police yards, Bridge-street. Coke-shed enlarged at Sydney.

Suggs' lamp erected at corner of King and Elizabeth-street.

New coke-shed erected at Treasury allotment.

Shed erected for ambulance at Bridge-street.

New waiting-shed erected at Elizabeth-street, Sydney.

New waiting-room erected at Liverpool-street, Sydney.

New water-closets and urinals erected at Bridge-street.

New lamp erected in front of waiting-shed, and two lamps fixed inside of shed at Elizabeth-street.

New lamp erected in front of waiting-shed, and two lamps fixed inside of shed, at Liverpool-street.

Gratings fixed to drain-pipes in ash-pits at Tramway yard, Pitt-street.

Foot-paths in front of waiting-sheds asphalted at Elizabeth and Liverpool Streets.

New coke-stage erected at Bridge-street.

Dwarf-wall and galvanized-fence erected at Tramway-yard, Bridge-street.

New outer ring fixed at turntable, Bridge-street.

Verandah erected at corner of Market and Elizabeth Streets, Sydney.

New office, with fittings, erected for Traffic Foreman at Tramway-yard, Bridge-street.

Coke-shed enlarged at Moore Park.

Engine-pit drained at Moore Park.

Six lamps erected at stopping-places between Randwick and Coogee.

New spring-furnace erected at Randwick.

Four new forges erected at Randwick.

Water and gas laid on to house for Superintendent of Rolling Stock, Randwick.

Fittings in new store, Randwick.

New platform erected at store, Randwick.

New water-closets erected at Randwick.

New urinals erected at Randwick.

New iron store erected at Randwick.

New office erected for Inspector of Car-sheds at Randwick.

House for Superintendent of Rolling Stock erected at Randwick by contract.

Approaches, &c., to house for Superintendent of Rolling Stock at Randwick, tar-paved.

No. 2 Car-shed, Randwick, almost completed by contract.

New platform erected at Randwick Racecourse.

Waiting-shed removed, and re-erected at Randwick.

New sand-furnace erected at Randwick.

Gas laid on to store and store-offices at Randwick.

House erected over sand-furnace at Randwick.

New tank-stand erected, and pipes laid to same, at Coogee.

Suggs' lamp erected at corner of Oxford and Crown Streets.

Alterations to water-supply, Crown-street.

Waiting-shed enclosed at Queen-street, Woollahra.

Pair of gates erected at waiting-shed, Queen-street, Woollahra.

New water-crane erected at Queen-street, Woollahra.

New gas-lamp erected at junction of Ocean-street and Old South Head Road.

Coke-shed enlarged at Waverley.

New gas-lamp erected opposite the staffman's box at the loop line, Old South Head Road, Waverley.

New coke-shed erected at Queen-street junction, Woollahra.

Suggs' lamp erected at corner of Devonshire and Castlereagh Streets.

Box erected for pointsman, Waterloo terminus.

New well sunk at Botany.

New tank-stand erected at Botany.

Tank-stand enclosed at Botany.

New water-closets and urinals erected at Botany terminus.

Box erected for pointsman at junction of Newtown and Glebe Roads.

New water-crane erected at Newtown.

New lamp erected at Newtown bridge.

Water-crane removed, and hydrant fixed, at Newtown.

Watch-box erected for pointsman, Enmore.

Watch-box erected for pointsman, Forest Lodge.

New water-crane erected at Forest Lodge.

New waiting-shed erected at Forest Lodge.

New water-crane erected at Glebe Point.

Water supply, Leichardt Tramway.

New up and down line distant signals erected at Narellan.

New water-closet erected at Narellan.

New down line distant signal erected at Camden.

New stock-yards erected at Camden.

New dock-wall built at Camden,

Two water-closets erected at Camden.

New waiting-shed erected at Camden.

New tank-stand erected at Camden.

New ash-pit constructed at Camden.

Iron-plated guard rails fixed at level crossing on and near Camden bridge.

Seven trenches, on American plan, constructed at level crossings on Camden line.

Thirty-six notice boards fixed between Campbelltown and Camden.

New gates (2) erected at Kirkham-lane, Camden Tramway.

Twenty panels 3-rail fence erected on Tram Line, Campbelltown to Camden.

No. 2.

The Locomotive Engineer to The Commissioner for Railways.

Department of Public Works, Railway Branch,

Sir,

Locomotive Engineer's Office.

In accordance with your instructions, I have the honor to submit the following report respecting the maintenance of the locomotive, carriage, and waggon stock on the Southern, Western, and Northern Lines during the year ending 31st December, 1883.

The whole of the locomotive stock available for traffic has been kept in good working condition, and more than the usual number have been repaired; but I am sorry to point out that the number of engines standing waiting for repair is increasing, and the boiler repairing has become very extensive. This indicates that it is now impossible to do all the repairing in our Redfern shops, and unless we soon get more accommodation the stock of engines, tenders, &c., wanting repair will increase very seriously. The repairs and renewals to engines have for a number of years been in arrear, consequent upon the inadequate workshop accommodation at our disposal, and when the new shops are handed over it will be a work of time to recover the ground that has been lost. The mileage and the number of vehicles are constantly being added to, which renders our difficulties in carrying on the traffic more serious. The speedy completion of the shops is a matter that cannot therefore be too earnestly urged to enable this Branch to be worked with efficiency and economy. The want of workshop and running-shed accommodation for the Northern Line is also productive of much inconvenience, and renders the carrying on of the work with despatch and efficiency a matter of difficulty.

I have placed additional machine tools in the shops at Redfern and Newcastle, and more mechanics have been employed. The result of this has been that more work has been turned out than in any previous year; but still it is very far short of what I consider is required to keep the lines equipped in that state of efficiency I desire to see them in. Means will have to be devised to make room for some additional machines in the Sydney workshops, in order to meet the increasing requirements, as, in addition to the general inconvenience arising from our inability to do all the work that I would like to see done through want of shop room, the cost of carrying out the work is considerably augmented. The erection of the shops and running-sheds is, however, I believe, being pushed on with all practicable despatch, and when we are given possession of them it is to be reasonably expected that we shall be able to show even more satisfactory results than we have been able to do this year.

No engines or vehicles have been allowed to run that were in anything approaching what was considered a dangerous state, as indeed special attention has been bestowed on the matter of examination of boilers, axles, tires, draw-gear, &c., so as to render impossible accidents that could be prevented by human foresight.

The six new suburban tank engines, ordered to replace six obsolete or worn-out engines, have arrived, and their cost will be charged against Revenue, less the present value of the old engines.

Twenty-eight new engines have been added to our stock during the year—four of these were made in the Colony, and our total number of locomotives now amounts to 296. Although there are more goods engines on order, and some arriving, I consider it highly necessary, in view of the increasing traffic, and the opening of new extensions, to order more, otherwise it will be exceedingly difficult to work the prospective traffic, more especially as our facilities for repairing are not increasing nearly so rapidly as I should wish.

The whole of the carriage and waggon stock available for traffic has been maintained in good working order; but it has been absolutely impossible to keep up the trimmings and decorations of the carriage stock in anything like the condition I desire to see them in, on account of the scarcity of shop room at disposal, and the pressure of the Traffic Department in asking for the use of carriages even when they are undergoing repair in the shops and yards.

The facilities for carrying on the repairs and renewals are not nearly commensurate with the magnitude of a railway system such as ours has become, and the vehicles brought in could not be turned out with that expedition which is so essential a part of economy in working. Damaged wagon stock had been accumulating for about three years, until their number reached nearly 100. With our appliances it was impossible to renew them, and a contract has therefore been entered into with a private firm for the renewal of 100 vehicles (mostly D wagons), the cost of which will, as usual, be made a charge against working expenses.

The recent removal of the work of repairing waggons from the Redfern yard to Eveleigh was not at first productive of any very beneficial result, either as regards economy of cost or general convenience, so far as this Branch was concerned. This, however, was only to be expected, as the transfer had to be

made

31

made before the necessary preparations at Eveleigh were complete, the removal being necessitated by the urgent demands of the Traffic Branch for more accommodation at Redfern. The latter branch of course at once benefited by the change; and as soon as the several temporary appliances for repairing waggons were completed the advantages of the work being carried on in a less confined space were reaped by this Branch, although the conveniences for carrying on the work is very far short of what is required.

On account of the severe drought during a portion of the year, and the dry nature of the country through which some of our lines extend, we suffered considerably at a great many places for want of water, and it has been necessary to adopt special appliances for supplying the locomotives. This has necessarily increased our working expenses; but I am happy to say that I have made provision at several stations to prevent scarcity of water in future. The following additions and improvements have been made:—

Additional water-tank at Penrith.

A complete (new) water supply at Linden.

A good 8" steam-pump placed at Blackheath.

A pulsometer pump put down at Tarana.

Pumping machinery removed and put higher up the River Bogan, at Nyngan.

Additional well sunk at Bethungra.

Two new water-cranes and an additional water tank erected at passenger station, Wagga.

An entire rearrangement of water supply, new tank, new engine, and pumps, at Richmond.

Extensive improvements at Yass.

Additional engine at Singleton.

The new offices for the Northern Division of this branch were completed and occupied early in the year.

The contracts entered into in 1879 for a five years' supply of rolling-stock, other than engines, expired at the close of the year, and were carried out in a very satisfactory manner by the contractors.

Fresh contracts were accepted for the ensuing five years' supply. The successful tenderers were as under:—

Contracts Nos. 6, 7, 8, and 9, Messrs. Hudson Bros., S.W. & R.

- Nos. 6, 7, 8, 9, & 10A, R. A. Ritchie, North, but subsequently transferred to Hudson Bros.
- ,, No. 10, Mr. Stephen Glasson, S.W. & R.

I am pleased to report that upon the whole this Branch has been successfully worked during the year, and, considering the disadvantage under which it is labouring, has been carried on with efficiency, and also with a minimum of accidents as compared with many other railways, which speaks well for the vigilance and competency of its employés.

Herewith I forward a complete list of returns in connection with your annual report, as shown below:—

- 1. Abstract of rolling stock on hand on 31st December, 1883, and the number and description of vehicles supplied in 1883.
- 2. Rolling stock on hand on 31st December, 1883.
- 3. Statement of the number and class of rolling stock manufactured by the different contractors during the year 1883.
- 4. Weights of locomotive engines and tenders, empty and loaded, on 31st December, 1883.
- 5. Weights of locomotive engines and tenders, and mileage run by each engine.
- 6. Abstract of total and average weights of rolling stock, empty.
- 7. Statement of the number and classification of persons employed in Locomotive Branch.
- 8. List and condition of locomotive engines and tenders on 31st December, 1883.
- 9. List of machinery on all lines, 31st December, 1883; and list of machinery added to stock during the year 1883.
- 10. List of machinery in workshops, 31st December, 1883.

I have, &c.,

W. SCOTT,

Locomotive Engineer.

No. 3.

The Superintendent of Tramway Rolling Stock to The Commissioner for Railways.

Department of Public Works, Railway Branch,

Tramway Locomotive Superintendent's Office,

Sir,

Randwick, 1st May, 1884.

I have the honor to report as follows on the maintenance and general condition of the rolling stock, machinery, &c., under my supervision during the year ending December 31st, 1883:—

At the commencement of the year forty-three independent engines and a combined engine and car were in stock available for traffic, also two independent engines for yard shunting; of this number thirty-four were in use daily working the traffic, and one in use shunting.

The cars in stock, January 1st, 1883, comprised thirty-four double-decked, seating ninety passengers; thirty-eight double-decked, seating sixty; five single-deck, seating fifty-six; five single-deck, seating seventy; one double-decked combined car, seating fifty; being a total of eighty-three cars, with a seating capacity for 6,020 passengers; of this number about seventy-three were in the hands of the traffic daily.

An addition has been made during the year to the engines in stock by the arrival of ten independent engines from the Baldwin Locomotive Works, one independent engine from Messrs. Merryweather & Sons, and a compound engine of the combined type, from a design furnished by the Department, and made by the Baldwin Locomotive Works.

The stock of cars has also been increased to the number of fifteen, viz., four double-decked, seating sixty, made by Messrs. Hudson Bros. (Limited); nine double-decked, seating sixty; one single-deck, seating eighty, made by Mr. T. Wearne; and one double-decked car, seating eighty, for the compound engine made by Messrs. J. G. Brill & Co.

During the year the Leichhardt line was opened, and two engines put on to work the traffic; and in June the Woollahra running was altered, which compelled the putting on of two extra engines on that line. The Merryweather engine has been employed in haulage of stores and watering the different lines.

The number of engines daily used for traffic now amount to thirty-nine.

The wear and tear of the engines still continues to be very great, and the repairing expenses consequently heavy. The limited accommodation for performing this work, and the fact that so much has to be done at night, in which the men have to be paid a full day for six hour work, increasing the cost of same 25 per cent., is a reason for part of this heavy expenditure. The state of the roads, and the conditions under which we have to run, also account in part for it.

I desire to urge upon the Commissioner the necessity for providing suitable workshop accommodation. Hitherto proper shops have not been erected, and the running and car sheds have had to be temporarily occupied for repairing purposes; this is not only inconvenient but adds to the cost of performing the work.

The mileage of thirty-seven engines during the year gives an average of nearly 25,000 miles per engine. Twenty of the number range from 20 to 25,000, thirteen from 25 to 30,000, and four from 30 to 34,000.

I would suggest the desirability of increasing, during the coming year, the amount of rolling stock to the extent of at least twenty engines and cars beyond those on order. Were these engines obtained a change can be made in the running that would tend to reduce the repairing expenses, and give a better opportunity of keeping them longer in an efficient condition.

During the year five engines were laid up requiring new boilers, and about seven will have to be taken off the road next year for the same purpose, one has been replaced, and the others are awaiting the arrival of boilers on order.

The whole of the machinery in the turning and temporary boiler-shops, together with the boilers and engines for driving same, have been kept and are now in efficient working order.

A number of machines suitable for car repairing is in stock, and I purpose utilizing No. 2 carriageshed as a car-repairing shop when completed by the contractors, and fixing and working these in it to facilitate and decrease cost of repairs.

Attached is a detailed report of engines and other rolling stock, also returns of machinery in workshops, &c.

I have, &c.,

GEO. DOWNE.

4

The total amount of the Debentures issued to 31st December, 1883, was £18,388,100 0 0

Add the Debentures authorized but not then issued, amounting to 9,783,500 0 0

Making a total of £273,766 I 4

Less amount authorized in excess of issue 1,327 0 0

272,439 I 4

The Treasury, New South Wales, 31st March, 1884.

JAMES PEARSON, Accountant.

^{*} In the report for 1882 a sum of £48,500 was included, since ascertained to be properly for public purposes other than Railways. The correct amount of Loans authorized for Railway purposes at end of 1882 was £26,654,161 in place o £26,702,661.

				1	

An average length of 46 miles opened per annum.

Note.—Between Sydney and Granville, including the Darling Harbour Branch, there are 34½ miles of sidings, the cost of which is included in the amounts shown. In 1882 the cost of the Locomotive, Permanent Way, and Traffic Shops and Sheds, &c., at Sydney, was included in Sydney to Granville. It is in this year shown separately below. (See note on No. 9.) On the Bullock Island Branch there are 5 miles of sidings, the cost of which is included.

3 October, 1881-Live Stock Rates and Conditions.

SMALL CONSIGNMENTS.

I Truck, i.e., 4 Cows or Oxen, or 10 Calves, or 40 Sheep, or 30 Pigs.	1 Truck, i.e.; 2 Cows or Oxen, or 5 Calves, or 20 Sheep, or 15 pigs.	Single Cow or Ox.	Sheep or Pigs, when less than ½ Truck.	Calves, when less than ‡ Truck.
6 d. per mile	4d. per mile	3d. p e mile	½d. each per mile	1d. each per mile.
Minimum, 10s	Minimum, 7s. 6d	Min., 7s. 6d. each	Min., 1s. 6d. each	Minimum, 2s. each.

When the number of animals or the space occupied exceeds the limit for \(\frac{1}{4} \) or \(\frac{1}{2} \) truck, each one in excess will be charged at the mileage rates enumerated above for single animals until the \(\frac{1}{2} \) or full truck rate, as the case may be, is reached.

In ascertaining what portion of a truck is to be charged for, i.e., \frac{1}{4}, \frac{1}{2}, or full truck, regard will be had to the space actually occupied more than to the number of animals; but in no case must the number of animals stated above be exceeded.

Mixed stock will be carried together in the same truck, provided the whole consignment belongs to one person, and the Commissioner is relieved of all responsibility. When mixed stock cannot be loaded together, each kind will be charged for separately.

When the charge per head for Live Stock exceeds that for \(\frac{1}{4}\) truck, or when the charge for a part truck exceeds that for a full one, only the lesser amount will be collected.

Bulls.

The charge for Bulls is 7d. each per mile; if more than one in a truck, $4\frac{1}{2}$ d. each per mile for $\frac{1}{2}$ truck and upwards, Cattle rates. Minimum, 12s. 6d.

VALUABLE RAMS AND EWES.

If less than \(\frac{1}{2} \) a truck load, will be charged 2d. each per mile; for \(\frac{1}{2} \) a truck and upwards, Sheep rates. Minimum, 5s.

Horses.

See full truck rates. No less charge than for a full truck load will be made for any number.

When Live Stock is returned from Sydney or Homebush to Country Stations, in those neighbourhoods to which Cattle Trucks and Sheep Vans are being sent empty, half the above rates will be charged, provided the owners wait the requirements of the Department, but not otherwise.

Herds, Flocks, &c., when in consignments of not less than one full Truck load.

GREAT SOUTHERN, WESTERN, AND RICHMOND LINES.

CATTLE

Will be conveyed from the undermentioned Stations to Homebush, at the following rates per Truck:—

GREAT SOUTHERN, WESTERN, AND RICHMOND, AND NORTHERN LINES.

Horses.

The Commissioner will carry Horses in Cattle Trucks if requested to do so, but only under special contract, relieving him of all responsibility. The charge for horses so carried will be the same as for cattle in full truck loads.

Pigs-Same as Cattle. Minimum, 15s.

Under the foregoing Herd and Flock Rates for Cattle, Sheep, Horses, and Pigs, no less charge than for one full truck will be made for each and every truck used.

No. 53--co'ntinued.

4th October, 1882.

Mixed stock will be carried together in the same truck, provided the whole consignment belongs to one person, and the issioner is relieved of all responsibility. When mixed stock cannot be loaded together each kind will be charged for

Mixed stock will be carried together in the same truck, provided the whole consignment belongs to one person, and the Commissioner is relieved of all responsibility. When mixed stock cannot be loaded together each kind will be charged for separately with the following exception:

On Thursdays single animals conveyed to Sydney in the same trucks, although belonging to different owners, will be charged at a proportion of \$\frac{4}{2}\$, \$\frac{1}{2}\$, or full truck rate, plus 25 per cent.; for example, should there be two cows, each owner will be charged half of the \$\frac{1}{4}\$ truck rate, plus 25 per cent., and should there be three animals, the owners will be charged the \$\frac{1}{2}\$ truck rate equally between them, plus 25 per cent. It is absolutely necessary that each animal be legibly addressed.

When the charge per head for live stock exceeds that for a quarter truck, or when the charge for a part truck on market days exceeds that for a full one, only the lesser amount will be collected.

Herds, Flocks, &c., when in consignments of not less than one full truck load.

		on charged providents between	awawa E milas

The charge per truck for distances not shown in this table will be one-fifth of the distance in rate between every 5 miles.

No. 53—continued.

Parcels Rates-continued.

Perambulators (children's) and velocipedes will be conveyed in Guard's Vans, at the following rutes:—
When conveyed as passengers' luggage—

	s.	d.		, s	3.	d.
Not exceeding 15 miles	0	9		Not exceeding 125 miles	3	0
30 "	· 1	0 -		150 " 8	3	6
, 50 ,,	1	6		200 ,,	4	0
75 ,,	2	0		250 ,,	4	6
.100 ",	2	6		300 ,,	5	0
When conveyed as parcels 50 per cent. add	itio	nal ·	will b	e charged.		

Rates for conveyance of Library Exchanges.

Books forwarded for exchange to and from subscribers to recognized Circulating Libraries only will be carried at one fourth parcels rates, under the following conditions, viz.:—

1. The sender's name must be legibly inscribed on each parcel.

Each parcel must be open at both ends.
 Each parcel must be declared on the consignment-note to contain books only.

Gold Dust and Bullion, and Gold and Silver Coin.

'The Commissioner for Railways will not be responsible for the safe conveyance of Gold Dust and Bullion, Bank-notes and Bills, Orders, Notes, and Securities for the payment of Money, and Gold and Silver Coin, or any of the other articles mentioned above, as the following charges are made, and the Gold Dust and Bullion and Coin carried, on condition of its being in charge of owners and at their risk.

	Distance	Distance	Distance	Distance	Distance	Distance	Distance
	not over	not over	not over	not over	not over	not over	over

	84				112	1	2

and 3d. for every additional 28lbs. or part thereof, and for the purposes of charging parcels, &c., from New South Wales Stations to Wodonga, the latter station is regarded as 388 miles from Sydney, and the charges calculated accordingly, plus the

Parcels between Albury and Wodonga are charged double the above rates.

Press parcels are charged one-fourth the above rates—minimum, New South Wales Line, 3d.

Packed parcels in hampers, crates, bags, cases, or other packages are charged quadruple the above rates, and the onus of proving that parcels are not packed rests with the consignors or consignees.

When two or more parcels are consigned to one person the above rates are charged on each parcel separately.

Bicycles, feathers, furniture, glass, hats, bonnet or hat boxes, cases of millinery, straw bonnets, mirrors (loose), musical instruments, perambulators, sulkies in pieces, pictures, sewing-machines, wicker-work, wire cages (loose), or other articles light or fragile, are considered admeasurement goods, and are charged 50 per cent. additional on the above rates. Parcels containing articles and property of a description not mentioned or specified in the following clause, such articles and property being over £10 in value, are, in addition to the amount chargeable by the foregoing scale of rates, charged a further sum equal to 1 per centum upon the declared value thereof.

Parcels containing any of the following articles are charged the following increased rates, viz.:—Over £10 and under

Parcels containing any of the following articles are charged the following increased rates, viz.:—Over £10 and under £50 in value, double, and over £50 in value, quadruple, parcel rates, viz.:—Gold or silver coin of this realm, or of any part of Her Majesty's dominions, or of any foreign state, or any gold or silver in a manufactured or unmanufactured state, or any precious stones, jewellery, watches, clocks, or time-pieces of any description, trinkets, bills, notes of any banks in Her Majesty's

dominions, or of any foreign bank, order, notes, or securities for payment of money, whether foreign or otherwise, stamps, maps, writings, title-deeds, paintings, engravings, pictures, gold or silver plate, or plated articles, glass, China, silk in a manufactured or unmanufactured state, and whether wrought up or not wrought up with other materials, furs or lace or any of them contained in any parel or peakers.

them contained in any parcel or package.

The trainage on all parcels conveyed under bond must be prepaid.

Horses, carriages, and dogs from New South Wales to Victorian stations are booked to Wodonga at Albury rates, and from Victorian Stations to Albury at Wodonga rates, plus the following charges:—

One horse	2	0
Two horses	3	0
Three horses belonging to same owner	4	0
Carriages, gigs, dog-carts, and vehicles of a similar description	4	0
Dogs	ñ	6

Corpses are booked in a similar manner, with 4s. added for conveyance between Albury and Wodonga.

Ice will be conveyed by Passenger Trains as under.

DUMP CARS.

No. 1.

Minute of Commissioner for Railways.

I have received from America some papers on the newly patented dump cars in use there, and which seem to be a great improvement in regard to the unloading of certain descriptions of goods. I shall be glad if the Traffic Manager will peruse these papers and furnish me with a report. It seems that the patented arrangement for "dumping" the cars can be attached to trucks in use at a cost of about £6 per truck.

Minutes.

By Traffic Manager:-The principal traffic for which the kind of trucks would be available is coal, but at present we have neither platforms nor staiths on to which to shoot the coal; now it is carted direct from the trucks. Should it be approved to build staiths at stations as is done in England (and I would strongly recommend it), then the adoption of the principle would be of great service in the saving of time and labour, and in enabling of greater mileage being run by waggons. There are other smaller kinds of traffic for which the principle could be made use of if there were places on to which to "shoot" it. The principle would appear to be well adapted for ballast waggons, and also for "loco." coal trucks; but of these the Engineer for Existing Lines and Loco. Engineer would be able to give an opinion.—W.V.R., 5/4/83. Commissioner.

Mr. Midelton, for early report.—G.B., B.C., 6/4/83.

THEORETICALLY this dump car looks very satisfactory and promises well, but when I fully consider the matter in its various manners of application I really cannot see much in it to recommend. It is like many other things not complete without some other appliance. I really cannot agree with Mr. Read that it is available for loco. coal traffic, for, as he says, it necessitates the erection of platforms, staiths, &c. If coal could be dumped direct in carts so that it could be hauled away to the coal yards and then dumped again, that would be an advantage, but this could not be done without either raising the dumping waggon or lowering the coal cart. A good deep bottom coal waggon, such as used by the Midland and Great Northern Railway Companies at home, cannot well be beaten for coal traffic, for domestic and manufactory purposes. I think the coal appliances at the various London depôts of the Midland Company the best I know of. If we could dump kerosene shale from these waggons direct into a ship's hold at Darling Harbour there would be an advantage, but at present this could be better done with stopper waggons as practised at Newcastle.

I could not recommend its adoption for ballasting purposes, and if I were a contractor I should prefer using drop-bottom waggons, as with them the ballast is deposited where required, but with the dump car it would be deposited in the side of the road, and unless there was plenty of room a great quantity would be deposited off the road entirely.

As for coaling engines, with the dump car I could not possibly agree to that, as I think it very little, if any, better than our present system with the D waggons. Should it be decided to order any of these cars I beg to suggest that dimensions of axles, buffers, &c., be sent by us to save alterations when they arrive in Sydney.

Commissioner.

THOS. MIDELTON.

No. 2.

Mr. J. C. Dibbs to The Commissioner for Railways.

George-street, opposite Bridge-street, Sydney, 2 April, 1883. Sir, As agent for the patentees I venture to submit for your information, plans, photographs, and particulars of the latest improvement in America for the economical working of railways in the "United States Car Company's Screw Lever Dump and Coal Car."

Car Company's Screw Lever Dump and Coal Car Enclosed herewith I beg to hand you,—

1. Printed description and circulars,
2. Letter dated Columbus, Ohio, 17/3/82,
3. do Allston, 6/4/82,
4. do Joliett, 8/7/82,
5. do Rock Island, 19/7/82,
6. do do 21/7/82,
7. do Nelsonville, Ohio, 4/8/82,
9 do New York, 4/8/82.

do New York, 4/8/82,

Nelsonville, Ohio, 24/8/82, do

Melrose, Mass., 21/10/82, do-

for your perusal, and to be returned after you have finished with them.

I am prepared to deal with you for the patent for this Colony.

A dump car is now on its way from Boston, which I shall be prepared to place under offer to you, practical proof being of greater service in the advantages of the system than any amount of photographs and plans.

I may state that these cars are in large use on the leading lines of America.

I am, &c.,
JOHN C. DIBBS,

Agent of patentee. Minutes.

Minutes.

The Traffic Manager for report.—D.V., 8/4/83.

I have already reported on these cars. Please see my minute on Commissioner's minute paper, 83-6,244. I could use a few of this style of car at once for traffic purposes, and would like to be supplied.—W.V.R., 23/4/83. Commissioner.

By acting Secretary for Public Works:—This car to be tried and taken if found suitable as an experiment.—A.S., 18/5/83. Inform. Mr. J. C. Dibbs informed, 22/6/84. Traffic Manager, B.C., 23/5/83.—G.B. Seen.—W.V.R., 29/5/83. Locomotive Engineer, B.C., 30/5/83.—G.B.

No. 3.

The Commissioner for Railways to Mr. J. C. Dibbs.

Sir, Department of Public Works, Railway Branch, Sydney, 22 May, 1883.

Referring to your letter of the 2nd ultimo, bringing under attention the United States Car Company's screw lever dump and coal car, I have the honor to inform you that the Department will be glad to test the car upon its receipt in the Colony, and if found suitable it will be purchased. I return description and circular as requested.

I have, &c.,

CH. A. GOODCHAP, Commissioner for Railways.

No. 4.

The Commissioner for Railways to Mr. J. C. Dibbs.

Sir,

George-street, opposite Bridge-street, Sydney, 8 May, 1883.

Referring to my letter dated 2nd April last, I have now to inform you that the dump car mentioned therein has arrived, per "Julia," from Boston, and will be landed in the course of a few days. Will you please give me instructions where you wish me to deliver it.

I have, &c., JOHN C. DIBBS, as Agent.

Minute.

By Commissioner:—As Mr. Read is desirous of having one of these cars at work it may be accepted on trial.—Ch.A.G.

No. 5.

Mr. J. C. Dibbs to The Commissioner for Railways.

Sir,

George-street, opposite Bridge-street, Sydney, 11 May, 1883.

Referring to my letters to you, dated 2nd April and 8th May, I have now to forward you the working plans of the dumping car which has been patented for this Colony.

I have, &c., JOHN C. DIBBS, as Agent.

Minutes.

By Commissioner:—On other papers I have requested that this car may be received. It will be delivered at Darling Harbour; please have it put together and let me know when it is ready to be used.—Chas. A.G., 11/5/83. Loco. Engineer, Traffic Manager, Storekeeper.

Seen. Traffic Manager to see and please send on at once to Locomotive Engineer with plans or drawings.—A.R., 14/5/83. Traffic Manager. Seen.—W. V. Read, 16/5/83. Acting Locomotive Engineer. Seen.—J.M., 17/5/83.

No. 6.

Mr. J. C. Dibbs to The Commissioner for Railways.

Sir,

I have the honor to enclose herewith memo. of my account for dump car which has been delivered to your Department, and I trust that it will be found so serviceable and effect so great a saving, both in cost and economical working, as compared with the trucks now in use on your lines, that you will be induced to purchase the patentees' rights for New South Wales.

I have, &c., JOHN C. DIBBS.

[Enclosure.]

The Commissioner for Railways of New South Wales Dr. to John C. Dibbs,-

To 1 dump car

The following extras—viz.: 1 cast-iron worm wheel; 1 cast-iron double cog; 1 cast-iron single cog; 1 cast-iron chain; 1 cast-iron top rocke plate; 1 cast-iron bottom rocke plate; 1 cast-iron work gear frame

Weighing 452lbs.

25. 0 0

£225 0 0

200

Minute

Minutes.

By Commissioner: Write separate memo to the Traffic Manager and Locomotive Engineer, stating that I wish an early trial to be made of this car. Ask Mr. Scott to say what progress has been made in the work of putting it together.—Ch.A.G., 6/6/83.

Memo.—Referring to the dump car (in pieces), supplied by Mr. J. C. Dibbs, I shall be glad if you will be good enough to report what progress has been made in the work of putting it together, as the Commissioner wishes an early trial of the car.—G.B., B.C., 8/6/83. Locomotive Engineer.

Mr. Midelton, for report.—R.J.S., 11/6/83. Report on separate paper sent to me by Traffic Manager: This car will be ready to-morrow (Tuesday), at 2 p.m.—J.M., 11/6/83. The Commissioner.— R.J.S., 11/6/83.

Memo.—Please note that a dump car (in pieces) was supplied to the Department by Mr. Dibbs in May, and the Locomotive Engineer has this day been asked to expedite the putting of it together in order that an early trial of the car may be made.—G.B., B.C., 8/6/83. Traffic Manager.

The car is now ready for inspection.—W. V. Read, 13/6/83. Commissioner.

By Commissioner: .- Mr. Midelton says that the cost is reasonable. I recommend the car be taken. Сн. А. G., 2/7/83.

By Secretary for Public Works:—Approved.—F.A.W., 5/7/83.

Locomotive Engineer. Make out voucher at once, please.—G.B. Mr. Midelton to note and forward certificate.—R.J.S., 7/7/83. Certificate herewith.—J.M., 9/7/83. Locomotive Engineer. The Examiner.—R.J.S., 11/7/83. Voucher for £225 has been forwarded for payment.—J.P.F., 31/7/83. Secretary.

No. 7.

Mr. C. Woods to The Secretary for Public Works.

253, George-street, Sydney, 19 June, 1883. With reference to the trial of the dump car imported by me from the United States, which was officially tested upon Saturday last, I am now desirous to submit to you important drawings and printed descriptions relative thereto, and for this purpose desire a personal interview with yourself at such time as will quite suit your convenience, and which I beg you will appoint.

Soliciting the favour of an early reply to this letter,

Believe me, &c. CARSON WOODS.

Minutes.

By Commissioner: -Will the Minister name a day for seeing Mr. Carson Woods. -CH.A.G.,

By Secretary for Public Works: -- Any day will suit me, but it had better be in the afternoon. 25/6/83.

No. 8.

Mr. C. Woods to The Traffic Manager.

253, George-street, Sydney, 19 June, 1883. Sir, The impromptu trial we had on Saturday last gave me no time to advise the Press of this City. Could I ask the favor of another show of this "dump car," in this instance to be filled with stones or gravel, giving me a day or two's notice, so that I could arrange with the reporters to be present.

You will, I need not say, oblige me very much if this can be arranged.

I have, &c., CARSON WOODS.

I think Mr. Woods should have an opportunity of fully testing the car; would Commissioner please approve of Mr. Woods' application.—W. V.R., 26/6/83. Commissioner. Approved.—Ch.A.G., 26/6/83.

No. 9.

Mr. C. Woods to The Commissioner for Railways.

Sir. 253, George-street, Sydney, 21 June, 1883. In deference to the wishes of a number of gentlemen in the City and representatives of the Press who are desirous to see the working capabilities of the "dump car," recently imported from America by me for the Government, will you do me the favor to order another trial to be publicly made of it, in this

instance directing the car to be loaded with stones or gravel.

If you will kindly do this and give me a few days' notice before the trial takes place, so that I may notify these gentlemen to attend it, you will confer a great favor upon all concerned.

I have, &c.,

ĆARŚON WOODS.

By Commissioner: —I have authorized this on Mr. Woods' application, made to Mr. Read.—CH.A.G., 26/6/83.

No. 10.

Messrs. Woods, Rich, & Co. to The Secretary for Public Works.

253, George-street, Sydney, 2 July, 1883. Sir. Our Mr. Carson Woods will do himself the honor of laying before you this afternoon the annexed list of papers relating to the American lever dump car.

Mr. Muir, of the works of the Ontario Car Company of London, Ontario, in a letter addressed to us

explains fully the value of this invention and we can add nothing to his letter.

Mr. Muir's name and the high standing he holds as a railway expert, being chief of the largest carbuilding establishment in Ontario, are safe guarantees for all the statements he makes.

The Gilbert Car Company of Troy, in the State of New York, endorse every word of Mr. Muir's

letter.

We would respectfully call your attention to the fact that these Companies are not interested parties, are car-builders only and have no control of any patent. As Mr. Gilbert, junior, said to our Mr. as they are car-builders only and have no control of any patent. Woods last January: "It does not matter to us what cars we build, but of course we are quick to appreciate a good thing." He referred, in saying so, to the American lever dump car.

We have, &c.

-CARSON WOODS, RICH, & CO.

Contents.

1. Letter-Thomas Muir to Carson Woods, 31st January, 1883.

2. Letter—F. Brownell to Carson Woods, 13th February, 1883.

[Enclosures.]

Mr. T. Muir to Mr. H. G. C. Woods.

Mr. T. Muir to Mr. H. G. C. Woods.

Dear Sir,

London, Ontario, 31 January, 1883.

I presume by this time you have got far beyond New York, or London, England, and I conclude it is best to address you "at home." We are really not prepared to undertake passenger car work for foreign shipment, but would like to call your attention specially to the "dump car" which we build. It is attracting very great attention from railway companies both here and in the States, and quickly superseding all other kinds of gandola and dump cars. It is quickly discharged, not easily put out of order, very strong, serviceable for general traffic and construction purposes, and so saves a great deal of empty mileage. The railway companies here have adopted it for the iron ore business, which has developed to such vast proportions within the last year. At Kingston and Trenton they are erecting elevated roadways with pockets at each side, overhanging the wharves, so that these cars can be run up and dumped on either side into the pockets, and from the pockets into vessels. You will readily notice, however, that the system for dumping cars can be applied to all descriptions of car-bodies, either the ordinary platform without sides, for carrying poles, ties, cordwood, stone, timber, pig iron, &c., or with box sides for coal, sand, ore, &c., and also with high slotted sides for coke, corn-cobs, and such-like freight. From one of our cars, exhibited at Kingston, a labourer from the wharf discharged over 21 tons ore in a few seconds. The cars do not require to be uncoupled, a whole train could be discharged at one time by so many men (one upon each car), but two or three men could dump fifteen or twenty cars within 30 minutes and have train ready to take away.

Our price to-day for 20-ton cars without sides, delivered on track at London, is \$600; same car with sides, \$615.

Car and Engine Wheels.

We are now prepared to supply the steel-tyfed wheels, cast steel tyres fused on double plate, cast iron centres. This wheel here will cost, for 33-inch size, \$20, as against \$35 which we have now to pay for English or German "Bessemer" steel tyred wheels with wrought iron spokes, and we can guarantee them to give better mileage. Our ordinary chilled cast iron wheels, 33 inch diameter, cost \$11 just now, but we are making a heavy "special passenger car wheel," with a thicker tyre and of extra quality charcoal irons (weighing 570 lbs. against 520 ordinary wheel) for \$12.75, which are really A1. The "Intercolonial" have taken them from us for their passenger cars.

I shall be glad to hear from you upon these matters. Any further particulars or other information desired I shall be happy to supply. A new sleeping car has been patented by a Halifax company, superior to "Pullman's" and very, very much better than another I know of. I have some idea of taking hold of it as a speciality. It is now before me upon favourable terms.

Yours, &c., THOS. MUIR.

Mr. F. Brownell to Messrs. Carson Woods, Rich, & Co.

Mr. F. Brownell to Messrs. Carson Woods, Rich, & Co.

Gentlemen,

The United States Car Co., 48, Congress-street, Boston, Mass., 13 February, 1883.

We shipped the screw lever dump and coal car to you early in January, via barque "Julia," L. Jordan, master; we also sent several pieces castings, without charge, which were duplicates of what were with car, to replace any that may get broken in transit via vessel; we sent bill to Messrs. Richard Irwin and Co., New York City, as requested by you, and received a prompt remittance for balance due for car. We are meeting with grand success here with our car; the one we shipped to you was loaded and dumped and found to work perfectly; we trust you will see personally to it that the car is put together in a good workmanlike manner; then satisfactory results will follow, and one man be able to dump car, loaded with 20 tons, in 30 seconds with ease. The past week a Pennsylvania coal road placed an order with a reliable car-builder for 80 one patent screw lever cars. Since your Mr. Woods left here we have sold one patent, covering the entire Dominion of Canada, to some Montreal men, and they are forming a rolling stock company with \$650,000 capital, to build our style dump cars and lease them to Canada railroad companies. Let us hear from you and of your success with the car after its arrival.

Yours, &c.,

FRANK BROWNELL,

Treasurer.

Treasurer.

No. 11.

Mr. C. Woods to The Secretary for Public Works.

253, George-street, Sydney, 19 July, 1883. Sir Not wishing to call upon you without your appointment, I should esteem it a great favour if you would name a day on which I could have the honor of an interview with you, concerning the new I have, &c., CARSON WOODS. American lever dump car.

Minutes

By Secretary- for Public Works:—Inform Mr. Wood that owing to illness of Commissioner for Railways I have not been able to go into his matter about the dump car, but that if he will call, say on Monday week, I will be prepared.—F.A.W., 20/7/83. Railways, B.C., 21/7/83.—W.F.

No. 12.

The Under Secretary for Public Works to Mr. C. Woods.

Department of Public Works, Sydney, 21 July, 1883. Sir. Referring to your letter of the 19th instant, I am directed to inform you that the Secretary for Public Works will receive you on Monday week, the 31st instant, on the subject of the new American lever dump car. I have, &c.

W. FORDE,

pro Under Secretary.

No. 13.

Mr. C. Woods to The Under Secretary for Public Works.

Sir, 35, North Pitt-street, Sydney, 24 July, 1883. I am in receipt of your letter of the 21st instant, informing me that the Secretary for Public Works will receive me on Monday week, the 30th instant, on the subject of the new American lever dump

I will be glad if you will inform the Secretary that I will do myself the honor to call upon him at 11o'clock on that day. I have, &c.,

CARSON WOODS.

Minutes.

Railways, B.C., 27/7/83.—W.F., pro Under Secretary.
By Secretary for Public Works:—I have arranged to send Mr. Wood a note naming a time when I can see him, after I have talked his affair over with the Commissioner for Railways.—F.A.W., 30/7/83. Mr. Goodchap, B.C., 2/8/83.—J.R.

By Commissioner:—I am of opinion that the principle of the dump car can be made, with great advantage, to apply to the traffic of our lines, and if the right to use the patent in our shops can be acquired on reasonable terms I would advocate the purchase.—Ch. A.G., 6/8/83.

No. 14.

Mr. C. Woods to The Commissioner for Railways.

Sir, 35, North Pitt-street, Sydney, 6 August, 1883. I had the honor of an interview with the Honorable the Minister for Public Works a week ago concerning the United States screw-lever dump car.

The honorable Mr. Wright said that no final answer could be given to me until he had discussed the

matter with you.

I have letters from the Victorian and Queensland Railway Departments, and am in correspondence with the New Zealand people concerning this car. These Departments are most anxious that I should go over there and submit to them proposals for the purchase of my dump car, saying that if they will not purchase the patent I am certain of very heavy orders for it, from the reports which have come from America in its favour.

Their letters have given me a new idea.

Up till now I have been asking the Minister of Works to purchase the patent, but if the Department thinks it would suit them better to give an order for two hundred cars to be delivered in 9, 12, and 18 months, I will, on completion of that order, transfer the patent to the Railway Department, or, if preferable, as I first said, I will take a lump sum for the patent.

The Department, I understand, wants rolling stock, and no better or finer car for any freight purpose

can be had than the patent screw-lever dump car.

I ask the favour of your submitting this offer to the Honorable the Minister for Works, and will be glad of an interview with the Honorable Mr. Wright or yourself to discuss this matter, at your earliest convenience.

One reason why I wish this interview soon is that I want to interview the Governments of Queensland and Victoria, who have written to me desiring to see me on the subject, but of course I could make much better terms with them if I should settle with the Government of New South Wales first.

Another reason is that a party of gentlemen here are talking of purchasing the patent, and of course if it is sold to them the Government here could get no such terms from them as I now offer.

Trusting to hear from you at your earliest convenience,

CARSON WOODS.

No. 15.

Mr. H. Hudson to Mr. T. Midelton.

Sydney, August 7, 1883. In answer to your enquiry as to what we would build 200 dump cars, similar to that now in Darling Harbour, I beg to say we are prepared to build 200 cars similar in every respect for one hundred and eighty pounds each (£180).

Should you determine to use dump cars it will be necessary to use side buffers to work in with the other rolling stock; this will increase the cost to the extent of ten pounds (£10) per waggon.

Yours respectfully HENRY HUDSON.

Minute.

By Commissioner:—I sent for this on receiving Mr. Woods' letter of 6th August. Mr. Woods names £190 as the price for the dump car, and Hudson Brothers offer to construct at the same price. Mr. Woods, however, if we accept his offer, will grant us the use of the patent free, not only for the 200 trucks but for all trucks; otherwise he wants £6,000 for the patent for New South Wales.—CH.A.G.

No. 16.

Messrs. Woods, Rich, & Co. to The Secretary for Public Works.

Šir, 35, North Pitt-street, Sydney, 13 August, 1883.

Enclosed we take the liberty of sending you a copy of a letter with reference to the United States See No. 14. screw lever dump car, which we sent the week before last to the honorable the Commissioner for Railways.

This copy will explain our reason for again bringing this most valuable freight-carrying improvement and necessity under your notice. Two Colonial Governments have, by their authorized agents, requested us to lay before them our claims concerning this United States screw lever dump car.

We are also in correspondence with New Zealand people, and from the tenor of their letters we have no doubt that if we do not part in each Colony with our patent rights we shall get large Government orders for cars, which we would much rather receive than part with these patent rights.

We feel assured that if the Government of this Colony will order cars as suggested in the enclosed

letter, or purchase the patent, we will make a much better and higher settlement with the Governments with

whom we are now in correspondence.

Of the sale of this United States dump car we speak with confidence. The master car-builders of the United States speak of it as a necessity. It is the most important and best freight car in the world we assert without fear of disproval. Therefore we hope that the enterprise of our Mr. Čarson Woods, in going over to the United States and selecting it and purchasing the patent, bringing it out here and placing the car before the Government of this Colony first, at his own risk, will be recognised.

As our principal is most anxious to go to the other Colonies, where he is invited, as soon as possible, we would most respectfully ask for an interview to discuss the matter at your earliest convenience.

We have, &c.

CARSON WOODS, RICH, & CO.

Minute.

By Secretary for Public Works:—Let Mr. Woods be asked at what price he is prepared to sell his patent right:—1st, for New South Wales; 2nd, for Australia.—F.A.W., 15/8/83.

No. 17.

The Commissioner for Railways to Mr. C. Woods.

Department of Public Works, Railway Branch, Sydney, 16 August, 1883. With reference to your letter of the 6th instant, on the subject of the United States screw lever dump car, I have the honor to inform you that I have brought your proposals under the attention of the Honorable the Secretary for Public Works, and he desires me to inquire upon what terms you are prepared to sell the patent right of the above car-

1. For the Colony of New South Wales?

2. For the whole of Australasia?

CH. A. GOODCHAP,

Commissioner for Railways.

No. 18.

Mr. C. Woods to The Commissioner for Railways.

Pitt-street, Sydney, 17 August, 1883. In reply to your letter of 16th instant, asking for the information of the Honorable the Secretary Sir. for Public Works,

1. The price at which I am prepared to sell the rights of the dump car patent for New South

The price for the whole of Australasia, –

I have the honor to say that I am not in a position to dispose of the rights for the Australasian Colonies, as

I have entered into other arrangements.

I am willing to give the Government of New South Wales the use of the patent for the sum of £6,000, (six thousand pounds), but I am prepared to make a contract to build here 200 (two hundred) cars, at the rate of £190 (one hundred and ninety pounds) each, and include in such price the right to use the patent for the 200 (two hundred) cars, and for any other cars hereafter to be built or altered for the use of the Government of this Colony.

I have, &c. CARSON WOODS.

No. 19.

Minute of Secretary for Public Works.

I should much prefer having dump cars made in the Colony, and should be disposed to arrange for purchase of Mr. Woods' patent right at a fair price, but I could not think of any such sum as £6,000 for a patent of this kind, that may at any moment be improved upon. An offer may be made for the patent right for New South Wales.

F.A.W., 23/8/83.

No. 20.

The Commissioner for Railways to Mr. C. Woods.

Department of Public Works, Railway Office, Sydney, 24 August, 1883. In reference to your letter of the 17th instant, stating that you are willing to sell the rights of the dump car patent, for the Colony of New South Wales, for the sum of £6,000, I have the honor, by direction of Mr. Secretary Wright, to inform you that he would prefer having the dump cars made in the Colony, and is disposed to arrange for the purchase of the patent rights at a fair price, but cannot entertain any such sum as you name, viz., £6,000. I have, &c.,

CH. A. GOODCHAP, Commissioner for Railways.

No. 21.

Messrs. Woods, Rich, & Co. to The Secretary for Public Works.

35 North Pitt-street, Sydney, 24 August, 1883. We most respectfully ask the favour of your decision with reference to "The United States Sir. screw lever dump car," as our Mr. Carson Woods is waiting for your reply, previously to starting for Queensland and New Zealand.

We have had from South Australia another communication, and are holding back our reply until we

have the honor of hearing from you.

In this communication we will not again enter into the merits of the car; these are acknowledged

now by all railroad men in every part, down even to the improved bogies.

Our Mr. Carson Woods will have the honor to wait upon you for your reply at 11:30 this We have, &c. morning.

CARSON WOODS, RICH, & CO.

Minute.

By Secretary for Public Works:—I will see Mr. Woods on Monday.—F.A.W., 25/8/83.

No. 22.

Messrs. Woods, Rich, & Co. to The Commissioner for Railways.

Sir, 35 North Pitt-street, Sydney, 24 August, 1883. We have the honor to enclose you copy of a letter we have this morning forwarded to the Honorable the Minister for Public Works in reference to "The United States screw lever dump car," as our Mr. Carson Woods having received invitations from the Governments of adjacent Colonies to submit his speciality for their inspection and approval, is most anxious to take his departure as soon as possible, and

therefore desires to have the honor of your decision as speedily as possible.

We hâve, &c., CARSON WOODS, RICH, & CO.

No. 23.

Messrs. Woods, Rich, & Co. to The Secretary for Public Works.

35 North Pitt-street, Sydney, 24 August, 1883. Sir. We have the honor to inform you that, by our advices, received by this mail from America, it will be imperatively necessary that our Mr. Carson Woods should take his departure for that country so

soon as he has attended the appointments he has with the other Colonial Governments.

In order, however, that he may receive the decision of your Government in reference to "The United States screw lever dump car," he will wait upon you to-morrow, during the hours of 11 and 12, and if not then convenient for him to receive an audience, will attend at the same time on Monday next, the 27th

Should neither of the times stated suit your convenience, we should feel it a great honor, under the circumstances, if you would be pleased to name an hour when the proposed interview can take place.

We have, &c. CARSON WOODS, RICH, & CO.

Minute.

By Secretary for Public Works:—I will see Mr. Woods on Monday.—F.A.W., 25/8/83. Woods asked to call.—G.B., 25/8/83.

No. 24.

Mr. C. Woods to The Commissioner for Railways.

Sydney, 27 August, 1883. Sir. I have the honor to acknowledge receipt of your letter of 24th instant, in which you intimate that Mr. Secretary Wright would prefer to have the dump cars made in the colony and is disposed to arrange for the purchase of the patent rights at what he considers a fair price, but cannot entertain such a

In reply, I beg to state that I am prepared to build (200) two hundred cars in the Colony, inclusive of the patent rights, for the sum of (£190) one hundred and ninety pounds each, and thus meet the suggestion of Mr. Wright.

In submitting the offer of the patent for the use of the Colony I did so at a price of $(\pounds 6,000)$ six thousand pounds, instead of $(\pounds 10,000)$ ten thousand pounds, and I am not disposed to renew my offer at the price named. As I am leaving for Melbourne by the end of the week I should be glad to be favored with I have, &c., CARSON WOODS. an early reply.

No. 25.

Minute of The Secretary for Public Works.

Mr. Woods' offers to build 200 dump cars in the colony at a price, delivered complete, of £190 each may be accepted, subject to the following conditions:—That the cars are equal in all respects to the one now in the possession of the Department; that they do not exceed the weight of the same; and that after delivery is complete the Government are to have the patent right for New South Wales for all cars they may build or have built by private firms. F.A.W., 28/8/83.

No. 26.

See No. 21.

No. 26.

The Commissioner for Railways to Mr. C. Woods.

Sir, Department of Public Works, Railway Branch, Sydney, 28 August, 1883. In reply to your letter of the 27th instant, having further reference to the proposal made by you with regard to the rights of the dump car patent, and in which you state you are prepared to build 200 cars in the colony, inclusive of the patent rights, for the sum of £190 each, I have the honor to inform you that I have submitted the above proposal to the Honorable the Secretary for Public Works, and he approves of the acceptance of the same on condition that the cars are delivered complete on the railway line, Sydney, at the price named, and that they are in all respects equal to and of the same weight as the one now in possession of the Department. It is, as a further condition of the acceptance of your offer, that after delivery of the above cars is completed the Government are to have free and undisturbed use of the patent rights for New South Wales for all cars they may build or have built by private firms. I have, &c.,

CHÁS. A. GOODCHAP, Commissioner for Railways.

P.S.—You will have to enter into a bond for the due fulfilment of your contract, and to assure the Government in the undisturbed possession of the patent right as far as the Government Railways of New South Wales are concerned. The cars to be delivered, fifty in nine months and the remainder in lots of fifty at three, six, and nine months, within the succeeding nine months.—Chas.A.G., 28/8/83.

No. 27.

Mr. C. Woods to The Commissioner for Railways.

Sir, 35, North Pitt-street, Sydney, 29 August, 1883. I have the honor and pleasure to acknowledge receipt of official acceptance of my tender for the supply to your Department of 200 screw lever dump cars. I now await your instructions as to where and when the bond and other requirements you ask for in your letter can be signed and fulfilled by me.

CARSON WOODS.

Minute.

Locomotive Engineer for specification.—G.B., 30/8/83. Urgent.

No. 28.

Minute from Locomotive Engineer to Commissioner for Railways.

I would point out that the dump car which, as it appears, is to be the pattern for the 200 to be built by, has a central buffer and coupler, for which the frame has been specially constructed. This will prevent their being used in connection with our present stock. Before preparing specification I shall be glad if you will inform me if the 200 are to be precisely similar to the pattern.

5/9/83.

Minutes.

By Commissioner:—No; they are to have buffers and draw-gear similar to our rolling stock, and a sketch should be sent to Contractors showing what is required. See that the present dimensions are such that they will not interfere with our platforms, &c., and alter as required.—Chas. A. G., 7/9/83. Please have a specification prepared accordingly for approval of the Mr. Midelton. Please make sketch of principal dimensions of dump Locomotive Engineer, B.C. Locomotive Engineer.—R.J.S. Mr. Midelton. car. See if it will clear if made 9.0 wide; make tracing of continuous draw-gear, and place diagonals, in underframe to suit side buffers, &c., and let me see it.—J.M., 12/9/83. Mr. Chambers. Tracing No. 852, showing draw-gear, buffers, side chains, and maximum width of waggon body, herewith.—J.C., 2/10/83. I think if the builders of these dump cars keep to the tracing 852, the waggons will gear nicely with our present stock; the width of vehicle must not exceed 9 feet at any part. As the cars are to be built to the pattern one (with the exception of what is shown on tracing 852) I hardly think a specification necessary, as it may involve complication.—J.M., 2/10/83. Locomotive Engineer.

By Locomotive Engineer:—Tracing No. 852, showing deviations required from the dump car, is in the possession of the Department.—W. Scott, 2/10/83. Commissioner.

No. 29.

Mr. C. Woods to The Commissioner for Railways.

35, New Pitt-street, Sydney, 1 October, 1883. I have the honor to inform you that I purpose leaving for America on the 4th instant, to make the necessary arrangements for the completion of my contract with your Department for 200 dump cars. Should you still think a bond necessary I am quite willing and ready to sign but upon that date, I must sail. I need scarcely say that my services while in other countries are freely at your command, and any information you may require I will gladly ascertain and advise you by mail.

CARSON WOODS.

Minute.

Locomotive Engineer for specification.—G.B., B.C., 5/10/83.

No. 30.

No. 30.

The Commissioner for Railways to Mr. C. Woods.

Department of Public Works, Railway Branch, Sydney, 4 October, 1883. Referring to your contract for the supply of 200 dump cars to this Department, I have the honor to forward herein a tracing, showing the maximum width of body (overall) and standard dimensions, &c., of buffers and draw gear for the same.

I may add that the usual bond will be prepared in due course.

I have, &c.,

ĆH. A. GOODCHAP,

Commissioner for Railways.

Minutes.

I saw Mr. Berner to-day re specification, as I thought he had slightly misunderstood the matter. As these cars are to be made to the sample vehicle now in our possession (except as regards buffer and draw gear, a drawing of which we have sent to Mr. Carson Woods), we hardly want a specification. I think if we specify anything more than we have, it will amount to making writing drawings of the car, and a specification to suit, and as there will be a difficulty (with our double buffers, &c.), in introducing the dumping gear or mechanism, I think we should leave the matter to the manufacturers.—J.M., 16/10/83. Engineer.

I think the tracing sent, and the pattern wagon is all that is required.—W. Scott, 18/10/83. The Mr. M'Lachlan for bond instructions.—G.B., B.C., 23/10/83. Herewith. -H. M'L., Commissioner.

17/11/84.

No. 31.

The Commissioner for Railways to The Crown Solicitor.

I HAVE to inform you that a contract has been entered into with Mr. Carson Woods for the supply of 200 dump cars, to be manufactured in the Colony, at £190 each. Each vehicle is to be made the same in all respects, with the exception of buffers, draw-bar, and head-stock, as the screw lever dump-car now in the possession of the department. The buffers, draw-bar, and headstock to be completed according to drawing sent to the Contractor. The whole of the timber work to be of the same quality and description as that in the sample waggon.

The whole of the metal work to be forged or cast as the case may be, and manufactured in the Colony,

and to be as far as possible of the same design and dimensions to that of the sample wagon.

The vehicles must be finished in the most substantial and workmanlike manner, and in every respect to the entire satisfaction of the Locomotive Engineer.

The cars are to be delivered on the rails at Sydney Station as follows:-

50 within 9 months from date of order. 12 50 15 50 50 18 ,,

The Contractor shall forfeit and pay to the Commissioner by way of liquidated damages, to be deducted from the money's due to the Contractor, the sum of 1 % on the contract price of each article for each week that each vehicle shall remain undelivered after the respective dates named.

Payments to be made on the certificate of the Locomotive Engineer that the vehicles have been

supplied to his satisfaction.

After the contract is completed the Government is to have the patent rights for New South Wales of the American lever dump car.

Please give directions for the preparation of the necessary bond.

G.B., pro Commissioner, 17/11/83.

Minutes.

Will the Commissioner please forward the specification, general conditions, and tender in the usual J.W., 30/11/83. The Commissioner for Railways, Sydney.

This contract was not made in the usual way, i.e., by calling for public tenders; consequently no specification was prepared, or Gazette notice. The conditions under which the contract was accepted are given in this paper. A copy of Mr. Woods' letter, agreeing to make the cars, is herewith.—G.B., pro Commissioner, 26/11/83. Crown Solicitor.

No. 32.

Minute from Traffic Manager to Commissioner for Railways.

I should be glad to know whether any decision has been arrived at with regard to the United States Car Company's dump car? It is standing in one of the sidings in Redfern Yard. Will the Commissioner W. V. READ, 2/11/83. please say.

Minutes.

Locomotive Engineer, B.C., 7/11/83.—G.B. By Locomotive Engineer:—As Mr. Carson Woods has a contract to supply 200 more of the same pattern, I think it would be well not to use it until the others are supplied.—W. Scott, 14/11/83. Commissioner.

By Secretary for Railways:—Traffic Manager to see. If it belongs to us and can be used I see no reason for its being left out of work.—D.V., 16/11/83. H Lut $\mathbf{B}\mathbf{y}$

By Traffic Manager:—It appears from Commissioner's 83-10,412, attached, that this car has been purchased by the Department, and it would be as well to use it if there is no objection by Locomotive Branch. The load it can carry should be marked on it.—W.V.R., 21/11/83. Locomotive Engineer. Mr. Midelton.—R.J.S., 23/11/83.

I have twice tried to use dump car for coaling locomotive engines, but it will not clear Darling Harbour Wharf Platform, so I am told. It has no side buffers, and the centre draw-bar and buffers do not match our stock; considerable alteration will have to be made if we are to use it regularly in traffic, and enough scheming required to construct a new car. It is marked to carry 20,000 lbs. in two places.—

J.M., 29/11/83. Locomotive Engineer. Traffic Manager.—R.J.S., 29/11/83.

By Traffic Manager:—Seen. I shall be glad if the Locomotive Engineer will let me know when the car is ready for traffic.—W. V. Read, 12/12/83. Locomotive Engineer. Mr. Midelton to say.—R.J.S., 14/12/83. Mr. Bourn to see me hereon.—J.M., 17/12/83. Please see Mr. Bourn's report of 29/12/83 herewith.—J.M., 5/1/84. Locomotive Engineer.

I beg to report that previous to the dump car being allowed to be used by the Traffic Department, it is necessary that it should be taken to pieces and reconstructed, as at present it is too wide and will not pass the platforms; it also requires to be fitted with buffers and draw-gear to suit the present rolling stock now in use.—E. W. Bourn, 29/12/83. Locomotive Overseer.

By Locomotive Engineer:—Under these circumstances I cannot recommend that it be used, as the contractors who have tendered to build to this pattern might make it a cause of complaint.—W. Scott, 16/1/84. Traffic Manager.

By Traffic Manager:—The Commissioner should be informed.—W.V.R., 19/1/84. Locomotive Engineer. Forwarded for the Commissioner's information.—R.J.S., 23/1/84.

By Commissioner:—It had better be made to suit the requirements, in order that those to be supplied may be made suitable. I do not understand Mr. Scott's report, which seems to imply that the present car is unsuitable, and yet it must not be altered because the contractors are to build others from this pattern; that surely cannot be the case, but Mr. Scott's minute reads like it.—Ch.A.G., 25/1/84.

By Locomotive Engineer:—I can assure the Commissioner that he only does me justice in assuming that I did not intend that meaning to be conveyed by my minute. Looking at the fact that this particular truck is (excepting in the matter of side buffers and reduced width), the pattern to which Mr. Woods has contracted to supply 200 more, I did not consider it prudent to alter in any way the pattern truck until I saw some of the new ones, particularly when I find that the alteration of the under frame to enable side buffers to be used would make it an unsatisfactory pattern to work to. I also assumed that Mr. Woods would have the frames of those to be built specially designed for side buffers.—W. Scott, 31/1/84. The Commissioner. Seen.—Ch.A.G., 8/2/84.

No. 33.

Minute from Traffic Manager to Commissioner for Railways.

American Dump Car.

I BEG to refer the Commissioner to his minute paper 83-21,488, and to inform him that the lately imported dump car, referred to therein, cannot be made use of until the draw gear is altered and side-buffers provided.

In a conversation I had with Mr. Augustus Morris recently, he informed me that these waggons were not a success in America.

It is, however, very important that this car should be brought into use at once, in order that any defects may be noted and corrected in those now being imported, and I should be glad if the Commissioner would please give instructions to have the necessary alterations carried out without delay.

W. V. READ, 14/1/84.

Minutes.

By Commissioner:—The dump car should be made available at once.—Ch.A.G., 21/1/84. Report in one month if it be not ready. Traffic Manager, B.C.,—G.B. Kindly return the paper in a month. In the meantime the Locomotive Engineer should see it so that he can have the truck made available—W.V.R., 22/1/84. Commissioner. Loco. Engineer, B.C., 23/1/84.—G.B. See minute of 31/1/84, on other papers.—W.S., per R.J.S., 31/1/84.

No. 34.

Extract from Locomotive Engineer's minute re coaling arrangements for locomotive purposes.

I may also mention that the dump cars would be specially suitable for dumping the coal on to the platform. W. SCOTT, 10/3/84.

APPENDIX.

Specification of Carson Woods, of No. 253, George-street, Sydney, in the Colony of New South Wales, importer, the agent of Matthew Van Wormer, of Dayton, Ohio, one of the United States of America, the author or designer of an invention entitled "Improvements in railway cars or waggons."

My invention relates to improvements in that class of railway cars or waggons known as "dumping which are capable of being tilted sideways on their trucks to empty their loads in bulk.

The novelty of the invention consists in the construction and combination of the devices employed

as will be herewith set forth and specifically claimed.

In the accompanying drawings figure 1 is a side elevation of my improved dumping car; figure 2 is an end view of the same; figure 3 is a plan view of the body, taken off the trucks and inverted; figure 4 is a sectional end view through the line x x of figure 1; figure 5 is a sectional side elevation through the line y y of figure 2.

The trucks A may be of the usual or any suitable construction.

Upon the top of each upper truck-timber at its middle is secured the centre body bearing plate B (shown at figure 6 in perspective). This plate is concave, as represented, and has a central-frusto-conoidal boss or extension a, through which the king-bolt passes down into the truck-timber and serves to lock the plate B thereto. The head of the king-bolt b is shaped to complete the cone of which the bars upon the plate is a frustum, as seen in figure 6. These plates B and their king-bolts form centre bearings for the body of Upon each side of the plate B flat metal plates C are secured to the upper truck-timber, and through each is one or more apertures forming recesses c, whose office will be hereinafter explained.

Bolted to the end of each upper truck-timber in any suitable manner, is a segmental rack D with

the concave side uppermost as shown.

The platform, or bed, of my improved car-body is composed essentially of the side beams E, end beams, F; longitudinal central beams, G; and transverse central transoms or beams H, supported by the

Directly over each truck-timber is a rocker piece I flat on top, and convex on its under surface, the whole forming the segment of an ellipse, as represented. These rocker pieces may be of wood, with the beams G mortised through them, and they are further supported by metal straps or plates J and K, of which the former passes over and the latter under the rockers I, and have their outer ends, which are turned down, bolted to the side timbers E. While the under surfaces of the plate K are convex to conform to the rockers I, their outer ends are concave as represented, for a purpose to be hereinafter explained. To strengthen and stiffen this framework, I employ the girder rods f as represented, and to form a further support for the bed-planks I use metal straps L in pairs, which are bolted to the end timbers F as represented. sented, pass over the plates J and K, and over and under supporting-blocks, secured upon the transverse beams H.

Securely bolted, or otherwise fastened to the lower side of the rockers I, at their middle, are centrebearing plates M with convex laver surfaces, and having in each a central recess or aperture g, to receive and contain the heads of the king-bolts and the frusto-conoidal stem of the plate B. It is thus clearly seen that the body of the car by the intervention of the plates M rests upon the plates B as central bearings, and at the same time the king-bolts and the stems of the plates B form pivots for each of the trucks while

To dump the car to either side I employ a central longitudinal shaft N, which is journaled in hangers h, supported by the beams G, and is further supported by passing through openings in the rockers I and beams H. This shaft carries two pinions O, keyed to it, which engage respectively with each of the racks D. The teeth of the pinions are tapered at each side, so as to permit of the play between the parts requisite in turning curves. Keyed upon the end of the shaft N, just under the platform at one end of the car, is a worm wheel P, which engages with a worm R, secured upon a vertical shaft S, passing up through the platform, and provided with a crank or hand-wheel T. By turning said hand-wheel, the shaft N is caused to rotate, and the car is tilted to either side desired. By the employment of this dumping gear with a worm-shaft, a positive lock is always secured, no matter in what position the body of the car may be. It cannot move from that position without a breakage of some of the parts. To assist, however, in retaining the car in an upright position, and lessen the strain upon the dumping gear, I employ rests or side beams. U, which consist of cylindrical metal pieces, carrying pivoted friction rollers *i* in their lower ends as seen. These supports, figure 7, are recessed in metal sockets secured in the rockers I on each side of the centre bearings, and are provided with laterally-projecting pins *j*, which, travelling in slots in the sockets, prevent the supports from falling out of the said sockets, and further prevent them from turning therein. These supports are sufficiently long, also, that when dropped down to their lowest extent, their rollers *l* rest upon the plates C. To lock them in this position so as to enable them to support the healy of the carry cook side. the plates C. To lock them in this position so as to enable them to support the body of the car on each side, I employ rods k, having their forward ends connected to levers W, which, pivoted below the platform, pass up through openings in the same. Each of these rods k, which are supported in the sockets I, so as to slide therein, is provided with two slides l of the shape represented, and so fitted into transverse openings in the rockers I adjacent to the support sockets, that when said rods are shifted by their levers the slides l will pass

over the tops of the supports, and prevent them from ascending into their sockets.

When it is desired to dump the car, it is only necessary to unlock the supports on the dumping side of the car, when, by turning the hand wheel as aforesaid, the car will turn and empty itself. During this tilting of the car the supports, or side bearings which were unlocked, will be pressed up into their sockets out of the way, and will not interfere with the dumping. When the car, after being dumped, is turned back into a horizontal position, the supports will fall of their own gravity back to their former position, when they can be legled as aforesaid.

position, when they can be locked as aforesaid.

In order to prevent the car, while in the act of being dumped, from being disengaged from its centre bearings, I employ studs or dowels m, which are secured in any manner desired, to the underside of the rocker-plates K between the supports U and the centre bearings. These dowels, while the car is tilting, enter the apertures c in the plates B, and serve to prevent the car from slipping or being displaced. The apertures c, as seen are sufficiently wide to receive the dowels, even though the car, when being dumped, stood on a short curve.

Especial attention is called to the floor planks X, which are raised, as seen, just over the rockers, for the purpose of enabling the car to be tilted over further without raising the bed higher than other cars of this class, or of ordinary cars. This result is further contributed to by the curved portions p of the rocker plates K, and by the employment of the strap supports L which, lying upon each other, occupy very little space.

The sides of the car are movable gates A¹, which are held in slotted posts or supports B¹, and these posts form journals for shafts C¹, as seen. The gates A¹, of which I employ two or more on a side, which are free to slide up and down in the slots of the posts, are connected to the shaft C1 by chains, ropes, or wire cords D1 as shown.

By employing permanent or removable cranks at either end of the shafts C1, they may be rotated, thus winding up the chains D1, and causing the gates on either side to be raised simultaneously. A reverse

motion would permit them to fall by their own gravity.

Another valuable feature of my invention consists of a director board for causing the dumped material, as gravel for instance, to fall close to the rails of the track. This I accomplish by hinging a board E¹ to the side beams by means of pivoted bracket-arms F¹ arranged as shown. By means of these swinging arms the board when not wanted for use, can be swung around so as to lie close to the side of the car, in which position the contents of the car would pass over it while being dumped, or it can be swung out as shown in figure 4, when it could act as a director to throw the load of the car close to the rails.

It will be observed that the dowels upon the under side of the rocker could be transferred to the

plates C, and in that case the recesses c would be formed in the plate K of the rocker.

My invention further relates to the construction of the car-bed; to the transoms; to the construction of the rockers and means whereby the car, after dumping, shall right itself up again; to a device for preventing the separation of the car-bed from the trucks; to the mechanism for dumping at either side of the car; to the means for fastening pulleys to the end of the truck-timbers; to the mechanism for fastening and unfastening the doors of the car; to the construction of the doors; to the end posts, and means for fastening the car-bed; to the centre-posts, and the means for fastening them to the car-bed; to the sidebearings and their application, so as to keep the car-bed in position, and to prevent undue friction while the car is moving around curves of the track; in combining with the draw-bar a rocker whereby the dumping may take place with the ordinary draw-bar without need of uncoupling the car from the other cars of the train; in an improved brake mechanism; in a special construction of clutch-pulley with grooves and sockets adapted to receive and hold the links of the chain, and whereby the revolving of the pulley to gradually tilt the car will operate the chain, and prevent its slipping; in means for dumping, either slowly or suddenly as desired; in a special construction of guide-rollers for the chains; in combining the shaft of the clutchcoupling pulleys, and their chain and its guide-pulleys with a worm, gear, or screw-lever for operating the same, and in other particulars hereinafter set forth.

In the drawings, figure 9 is an elevation of another improved dump-car; figure 10, a bottom view with one truck removed; figure 11, a cross section through line x of figure 10; figure 12, a top view of one of the trucks; figure 13, a plan of the couplers, and figure 14, a section through y y; figures 15 and 16 details showing the side bearings; figures 19 and 20, brake mechanism; figure 21, partial top view, parts being broken away, showing the coupler pulleys and their connections; figure 22, fragment enlarged of convex stationary bed; figures 23, 24, 25, 26, and 27, details.

Of the timbers of the car-frame, 1 1 represent cross-sills or headers, extending from the longitudinal sills 2 and 5, and framed or secured into the same; 3 and 4 represent shorter sills framed into the cross sills, or header 1, and not as long as the outside sills 6, 7, or the sills 2, 5, the objects of making them shorter being for the purpose of giving room or space for the worm and gear of the screw-lever or other appropriate mechanism which operates the chain-shaft hereinafter described, and also to allow sufficient space without weakening the car-bed for such bed to dump over the wheels, oil-boxes, and truck timbers, without coming in contact with any of them.

An iron or wood transom 8 is applied to run above the top or upper portion of the sills of the car, and even with or above the top of the floor, and it may make a part of the said floor, and other iron bars or wood transoms a, passing underneath the inside sills of the car, and passing up in the shape of a brace between the respective outside sills 6, 7, and the sills 2, 5 are fastened to the transom 8, making a sufficient space between the lower sides of these transom-braces a, and the truck timbers or truck irons to give the car-bed more and ample dumping room, without coming in contact with such timbers or irons, or with the oil-boxes when discharging any material from the car. These transoms or braces α also make the construc-

tion strong and safe.

The rockers and their arched beds are such, that after dumping, the car-bed will right itself up again, and they are constructed as follows:—9 representing the rockers, their stationary convex bed being shown at 10; each may be all of iron, or of iron and wood. The rockers 9 have each a short central downwardly projecting stud or boss b, which may be of ball shape if desired, and also a series of sockets c^2 , c^2 , adapted to receive the cogs c c, the object of this being that when the car is turned or dumped they will prevent the car-bed from getting out of position and at the same time permit the tilting of the bed far enough over and to a degree of pitch sufficient to discharge coal or other material without the risk of coming in contact with either the trucks, truck-irons, oil-boxes, or wheels, and also to permit the car to right itself up after dumping. The car or car-bed will automatically right itself after dumping, because when it is tilted or turned over to dump and is left free to return by disengagement of the V-shaped couplings on the shaft or shafts, 12 hereinafter described, the fulcrum or bearing-point of the rocker is no longer at the boss b and its central socket, but has been shifted to one or more of the cogs and to their sockets, thus giving a long leverage for that side of the car or bed which is for the time being raised up, and this causes that side to fall by its own weight till the car is again level. It will be seen that any mechanical equivalent of these sockets, teeth or cogs, and boss, which will allow the same action and result, may be substituted for them. A bar of iron or wood, represented at 11, is designed to hold the car-bed from separating from the trucks while the car is in transit or motion. It is bolted or fastened to the truck-timber, or to the lower convex bed 10, and extended upwards to be attached to either the upper rocker 9, or to the car-bed, or to a cross sill, and is provided with a bolt for connecting it to such part, or to any iron or wood fastened thereto.

A shaft (or shafts if desired) marked 12, runs lengthwise of the car under its floor, either its full

length or a sufficient distance for receiving at its end or ends coupling pulleys $e e^t$ having V-shaped teeth on their adjacent sides for engaging with each other. On this shaft 12 (if but one be used) are affixed permanently one near each end and to revolve with it two clutches e having V-shaped teeth as shown designed, each to be engaged or disengaged at will from its fellow, which is provided with similar V-shaped teeth, and

placed loosely upon the shaft and adapted to be shifted in or out of engagement with the fixed clutch e (see enlarged views, figures 13 and 20). This coupling apparatus is to be located beneath the transom 8, so that the latter shall in no wise interfere with its free revolution. A chain f (figures 9 and 10) passing over and clinging to the loose pulley e1 (the particular construction of which pulley will be hereinafter fully described) and winding partly around said pulley passes thence under guide pulleys gg adjustable if desired, secured to the rocker or to the timbers of the car-bed. This car also passes under guide pulleys hh (see figures 9, 11, and 25) attached respectively to the opposite ends of the truck-timbers or frame; then ends of the chain respectively pass up to and are fastened upon the car-bed, or upon the outside sills 6 7, or to the car

For the purpose of applying the pulleys h h to the outer ends of the truck timbers so as not to interfere with the proper action of the car-springs, I fasten to the end of the under-truck timber a strap or bar i (see figure 25) of wood or iron and connect it to the upper-truck timber by bolts extending into or through such truck timber, and through a slot in said strap or bar i, such slot allowing the springs between the two trucktimbers to work the same as though said strap or bar were not there. The slot may be in either end of the bar i. Another strap or bar i of iron, or of wood, is bolted to the lower end of the bar i, or to the trucktimber to which it is firmly attached, and extends outward sufficiently to admit the pulley h between the bars i and i^1 , the axis or journal of said pulley h being supported by the two straps l, l^1 . I will now describe the manner and the means of fastening and unfastening the doors automatically. A bar or rod of iron 15 fastened or suspended to the outside sills respectively of the car have thereon one or more dogs or levers K (see figure 11), and to the outer ends of such levers are pivoted one or more upright slides or latches l, adapted to extend a little above the floor of the car, sufficient to catch latch and hold down the swinging doors 16, which latches run in appropriate guides or staples m. The levers K are so constructed that when the car is being dumped their long arms will come in contact with or strike the truck-timber or truck-irons at the appropriate time and unlatch the doors 16. Each latch l is provided with a hole in which a pin n may be inserted to lock them when desired. When these pins are removed the latches are ready for their automatic action upon tilting the car as above stated.

Each door, 16 (see figure 9), is a batten-door mortised in timbers or iron o at each end and swinging on pivots at their upper ends. These doors are also supplied with and strengthened by metal cross-bars or straps p secured thereto, the lower ends of which are so bevelled or turned under at an incline as to allow These doors are also supplied with and strengthened by metal cross-bars or them readily to pass the upper bevelled ends of the latches l in the act of closing the doors. The weight of the levers k tends to throw up the latches l and to automatically fasten the doors when they shall have passed the latches. One or more straps g of wood or iron fastened on the outside of the door and extending below its lower line serves to prevent the door from swinging too far in. The door is also provided with one or more truss-rods r r1 either inside or out, or both, for the purpose of strengthening it and holding it

properly to place.

The upright end posts, 17, of the car and their connections are as follows: They rest respectively upon the outside sills 6, 7, and extend down on the side thereof a sufficient distance to admit of being strongly secured thereto by bolts or otherwise and extend far enough above the doors to permit the same to be hinged or attached thereto. Said posts, 17, are grooved or recessed on their inner corner (see figure 23) to receive the end board of the car so as to leave the inner face of said board or plank flush or even with the inside of the post, thereby preventing any obstruction when unloading, and also to make the car more firm and strong. A rod s of metal or wood extends across the end of the car, and through both these posts to hold them and the end plank or board t firmly in their places. There is also an iron or wooden brace u extending from each post to the end sill or floor to aid in bracing and holding said post, 17, to its place. The upright centre posts, 18, also rest and are secured respectively upon the outside and top of a sill, and each is further secured by a metal plate u^t which extends down and is fastened to the inside of the outside sills of the car, as seen in figure 24. A vetal rod v passes through both these opposite centre posts 18, 18 under the floor and above the sills, and is tightened by appropriate nuts or equivalent means for firmly holding the posts in place.

The side-bearings for holding the car and keeping it in position are represented at 19 in figure 11 and in an enlarged view in figures 17 and 18, and are as follows:—They severally consist of a bar of iron or wood adapted to rest on the truck-timber and extending upward and movably secured to the rocker or to the sills or transoms or floor of the car. Through a hole x having a slot or keyway y in the upper end of each side bearing passes a shaft or bolt z with a key or pin a2 thereon. This shaft is secured to the car as abovenamed. It is represented in the drawings as attached to the end of the rocker. This slot y allows the side-bearing to play at its upper end and thus prevent the friction which it would otherwise have if com-

pelled to travel or move rigidly upon the truck-timber when the car is moving around curves.

The outer end of the shaft or bolt z receives an arm b³ secured to it by a pin or screw for the purpose of permitting the said shaft and bearing to be moved by appropriate connections extending upward, and connecting with a rod e³, which extends and is attached to both side bearings on one side of the car on the front and rear trucks, said rod extending to the end of the car, and being there attached to a lever f^3 for the purpose of operating both side bearings, which are upon one side of the car, at one act by the same lever to allow the dumping. Similar side-bearings and attachments are on the other side of the car.

On the under side of each draw-bar, 20, is an arched or curved rocker, 20*, the object of which is to permit the car to be tilted for dumping or otherwise without the need of uncoupling any car from the other cars of the train. (See figures 15 and 16.) This rocker may rest on a curved bed, as shown in figure 16.

I will now describe my improved brake mechanism, consisting of a combination of levers, chains, and

pulleys, as follows, referring more particularly to figures 12 and 25; a bar 21 of metal or wood is also attached to the truck-timber by an arm, 22, and bolts or screws, is also attached to the brake rod or bar f^2 by an arm, 23, and bolts or screws. The two brake bars of each truck coincidently upon the inner perimeter of all the wheels of each truck by means of the following connections: This bar or lever, 21, which is connected to and immediately operates one of the brake bars and which, as above stated, is fulcrumed upon the lower truck-beam, is also connected by means of a rod or bar i^2 with one end of a lever j^2 at the opposite side of said truck-beam, the other end of said lever connecting with the other brake bar g^2 which acts upon the other two wheels of the same truck, thus giving a movement in opposite directions at the same time to the two brake-bars. Provision is made for adjusting the throw of the levers which actuate the brakes. The brakes and their bars are suspended by links $k^2 k^2$ from springing or yielding straps b^2 secured upon the truck

truck beams. This affords a yielding and play to meet varying exigencies, and a self-adaptation to the curvature of the wheel. To the upper end of bar 21 (see figures 19 and 20) is attached a chain (or a rod), which connects with a lever m^2 , one end of said lever being fastened to the sill or floor of the car, as shown at n^2 , and the other end being connected to a chain (or rod) of running in a direction lengthwise of the car, such chain passing around a pulley p^2 on or near the end of the car, and fastened at its extremity to an upright hand-lever, which lever is pivoted to the sill or below the sill of the car. By operating this lever the brakes are brought into action, and the lever may be held to any desired position by means of a rack or ratchet r^2 , with the teeth of which it may engage and be held.

The loose coupling pulley e^1 has cavities on its periphery precisely adapted to receive and hold positively therein the successive links of the chain f. These cavities may be described as follows in general terms: A series of oval-shaped depressions or sockets s2 (see figures 13 and 14), to receive those links which lie flat, such oval sockets communicating only by deep narrow cuts or grooves s³ sufficient to receive edgewise those links which connect the alternate flat-lying ones. Each flat-lying link is sunk below the periphery of the pulley or wheel; a pull upon the chain would therefore revolve the wheel. Consequently the revolution of this coupling pulley e^i must positively, and without any chance of slipping, pull the chain in the direction of its revolution, and thereby tilt the car. The chain being properly applied in the first instance, with sufficient slack at its opposite ends to permit the greatest degree of tilting ever required, the proper relation is always under control. The chain is thus always self-holding to its pulley, and can never slip; although

the chain is, as it needs to be for this purpose, a loose one.

For connecting and disconnecting these couplers $e e^1$ there is an annular groove e^4 around the periphery of the loose pulley e^{i} , into which projects a pin upon a shifting lever 24 (see figure 21) pivoted to a rod u^{2} extending lengthwise of the car, for operating both couplings if desired, said rod being actuated by means of a hand-lever at the end of the car or other convenient place. When by means of this lever the couplings are disengaged or uncoupled, the pulley e^1 may revolve suddenly as a loose pulley, in order to allow the carbed to discharge its load itself, when it will come back or return of itself to its upright position. When the coupling pulleys are coupled or engaged, then the car may be tilted slowly. This capacity for sudden dumping is important when clay, dump coal, or other damp or adhesive material constitutes the load, so as to discharge it with a jar or "thud;" but with other materials, which might be damaged by such jars or shocks, or when it is desired to deliver gradually, the V couplings when in engagement afford full control to tilt the car as far or as slowly as may be advisable. The guide-pulleys g for the chain f are hexagonal on their peripheries, thus presenting six flat surfaces of a size adapted to the flat-lying links of the chain, and a peripheral groove x^2 adapts them for receiving the intermediate or edgewise-lying links. (See enlarged view, figure 27.) Thus these pulleys fit all the surface of the chain, and prevent its getting off. They may be flanged also if desired. Instead of being hexagonal, these pulleys may have eight or more peripheral faces. The pulleys h are circular, but with an annular groove to receive the edges of alternate links of the chain.

Having thus fully described my invention, what I claim is: First—In a dumping car the combination of the following instrumentalities: Segment rocks attached to the trucks, pinions engaging with said rocks attached to the car-body by a common shaft, and an actuating worm-shaft connected to the pinion shaft by a worm-wheel, whereby the car can be dumped to either side, and whereby a positive lock is effected between the car-body and trucks, no matter in what position of inclination the car

body may stand. Second—In a dumping-car the combination with rockers upon which the car-body turns and rests of central bearing pivots, consisting of concave plates B, with frusto-conoidal stems and kingbolts, whose heads complete the cones of which the plate-stems are frustums as specified.

-In a dumping-car the combination with the trucks whose upper timbers are provided with central bearings and pivots and flat metal bearing-plates of convex rockers attached to the body of the car, and mounted upon said central pivots and bearing plates as specified.

Fourth—In a dumping-car the rockers I carrying upon their under surfaces the reversed curved metal plates K and the central recessed convex bearing-plates M, in combination with the

subjacent concave plates B and their conical pivots, substantially as specified.

Fifth—In a dumping-car the combination with rockers on which the body turns and rests, and by which it is pivoted to the trucks of telescopic gravitating side bearings, whereby when said side bearings are extended and locked the car-body is prevented from turning to either side as specified.

Sixth—In a dumping car the combination with the rockers I of the side bearings or supports U recessed in sockets in said rockers and carrying at their lower ends friction rollers as and for

the purpose specified.

Seventh-In a dumping car the combination with the telescopic gravitating side bearings or supports U of locking-slides connected to shifting rods actuated by levers upon the platform, whereby upon moving said levers in one direction said side bearings are locked to enable them to support the body of the car and prevent it from tilting, and whereby upon moving said levers in an opposite direction said side bearings are unlocked and will permit the car to be dumped by ascending into their sockets as specified.

Eighth—In a dumping car the combination with the rockers I and recessed plates C of dowels or studs connected to the lower side of said rockers and adapted to enter the recesses in the plates to prevent the body of the car from slipping or becoming displaced when dumped as

Ninth—The herein-described construction of the car bed or body, consisting of the side beams E, end beams F, longitudinal central beams G, transverse central transoms H, girder rods f, and strap braces L, the whole constructed and united in the manner and for the purpose

Tenth—The vertically rising and lowering gates Λ^1 in combination with actuating shafts C^1 , connected thereto by chains, ropes, or cords as specified, whereby upon rotating said shafts the

gates on either side are raised or lowered simultaneously.

Eleventh—In a dumping car the bed or platform raised transversely across and above the trucks whereby the car can be turned over further without raising the main body of the car higher Twelfththan ordinary cars substantially as described.

Twelfth—In a dumping car the directing or deflecting board hinged to the side of the car by

swinging brackets substantially as shown and described.

Thirteenth—The car-bed as made with the cross-sills and headers 1 1 extended from the longitudinal sills 2 5, and which reach from end to end of the car, and framed or fastened thereon, and with the shorter longitudinal sills 3 4 framed into the headers 1 1, and with the outside sills 67, the construction affording space at the ends of the car and between the sills 25, for the worm and gear or machinery which operates the dumping mechanism, and ample clear space at the sides for dumping, and all without weakening the car-bed.

Fourteenth—The rocker 9 constructed with a short central round boss b, and with a series of stout cogs cc on its under side, in combination with the convex-bed 10, constructed with the shallow central socket c^1 and the sockets c^2c^2 , on its upper side adapted for the cog teeth cc, all as shown and described and for the purpose of dumping the car and of permitting it to

right itself again.

Fifteenth—The dumping shaft or shafts 12 extending nearly the length of the car, in combination with the clutch-pulley thereon and with the linked chain and the described series of pulleys or devices for actuating the same and for connection with a hand lever or wheel and a connecting worm and gear, whereby such shaft may be operated to dump either slowly or suddenly at option.

Sixteenth—The combination with the ends of the truck timbers of the straps $i^i i^i$ and their interposed guide-pulley h, these straps being constructed and applied to each other and to the truck timbers substantially as set forth, so as not to interfere with the proper action of the

inteenth.—In combination with the swing-doors the bar or rod 15 one or more dogs or levers k beneath the car, one or more vertical slide-latches l and their guides, the combination and arrangement being such that the inner end of the dogs k may serve automatically to fasten or to unfasten the doors in the manner shown and described.

Eighteenth—The swing doors constructed as described—that is to say, morticed in timbers or iron supports O at each end, strengthened by truss-rods rr and by metal cross-bars or straps phaving bevelled lower ends for engagement with the fastening latches, and provided with one

or more straps or projections q as and for the purposes set forth. Nineteenth—In combination with the car-bed, the end posts 17 resting on the outside sills and extending down and secured to the outside of the same, and extending high enough to permit the swing-doors to be attached thereto, said posts being grooved or recessed at their inner corners to receive the end board t of the car flush with the inside of the posts, the posts and the board being held together by a connecting-rod and braced by braces u, all substantially as shown and described.

Twentieth—The centre posts 18 made and applied to the car-bed as described, and assisting to support the swing-doors, and strengthened by an inside metal plate u^1 and by a tightening

rod v beneath the floor connecting the two opposite ends.

Twenty-first-In combination with the car the movable side bearings 19, provided at their point of suspension with a slot or keyway as described, whereby, while holding the car in position during transit, and adapted to be swung up for dumping, they also prevent undue friction when the car is in motion around curves

Twenty-second—In combination with the drawbar the rocker or arched piece 20,* secured upon

its under side as and for the purpose described.

Twenty-third—In combination with a dumping car, brake mechanism, as described, consisting of the combination of bar 21, arm 22 on the truck timber, arm 23, brake bars f^2 g^2 , rod or bar i^2 , lever j^2 , links k^2 , and yielding straps l^2 , and appropriate means for actuating the same from the car platform.

Twenty-fourth—In combination with a dumping car the pulley e¹, made integral with its deep sockets s², and their narrow connecting grooves, and with the V teeth and the annular

groove, as and for the purposes set forth.

Twenty-fifth—In combination with a dumping car, the pulley shaft the loose pulley e¹, made integral with its deep sockets, and connecting grooves, V teeth, and annular groove as set forth, the pulley e and appropriate mechanism for disengaging these pulleys, and to allow the car bed to dump its load suddenly or slowly, as desired.

Twenty-sixth—In combination with a dumping car, and with the pulley shaft, its fixed pulley e and the loose pulley e', made integral with its sockets, grooves, V teeth, and annular groove, the shifting lever, 24 rod u^2 and hand lever v^2 , these devices operating as and for the purposes

Twenty-seventh—In combination with the linked chain f, attached to both sides of the car bed, the guide pulleys g, made with flat surfaces w, adapted for the links, and with the peripheral

groove x, as shown and described.

Twenty-eighth—In a dumping car the combination with the pulley shaft and with the described mechanism for operating the same of the pulley e, the pulley e', made integral with its sockets, connecting grooves, V teeth, and annular groove, the linked chain, guide, pulleys gg, grooved as described, and the guide pulleys hh, made as described, the ends of the chain being fastened to the outside on sills or floor, all substantially as shown and described. to the outside car sills or floor, all substantially as shown and described.

In witness whereof I, the said Carson Woods, have hereto set my hand and seal this twenty-seventh day of April, one thousand eight hundred and eighty-three.

CARSON WOODS.

Witness—Fred. Walsh, Manager, Edward Waters' Patent Office, Sydney.

LETTERS OF REGISTRATION.

By His Excellency the Right Honorable Sir Augustus William Frederick Spencer Loftus (commonly called Lord Augustus Loftus) Knight Grand Cross of the Most Honorable Order of the Bath, a Member of Her Majesty's Most Honorable Privy Council, Governor and Commander-in Chief of the Colony of New South Wales and its dependencies.

To all to whom these presents shall come, greeting: WHEREAS Carson Woods, of No. 253, George-street, Sydney, in the Colony of New South Wales, importer, hath by his petition humbly represented to me that he is the author or designer of a certain invention or improvement in manufactures, that is to say, of an invention entitled "Improvements in railway cars or waggons," which is more particularly described in the specification marked A, and the three sheets of drawings marked B, C, and D respectively, and which are hereunto annexed, and that he, the said petitioner, hath deposited with the Honorable the Treasurer of the said Colony of New South Wales the sum of twenty pounds sterling for defraying the expense of granting these Letters of Registration, as required by the Act of Council 16 Victoria, No. 24, and hath humbly prayed that I would be pleased to grant Letters of Registration whereby the exclusive enjoyment and advantage of the said invention or improvement might be secured to him for a period of fourteen years: And I being willing to give encouragement to all inventions and improvements in the arts or manufactures which may be for the public good, and having received a report favourable to the prayer of the said petition from competent persons appointed by me to examine and consider the matters stated therein, and to report thereon for my information, and am pleased, with the advice of the Executive Council, and in exercise of the power and authority given to me by the said Act of Council to grant and do by these Letters of Registration grant unto the said Carson Woods, his executors, administrators, and assigns, the exclusive enjoyment and advantage of the said invention or improvement for and during the term of fourteen years from the date hereof, to have hold and exercise unto the said Carson Woods, his executors, administrators, and assigns, the exclusive enjoyment and advantage thereof for and during and unto the full end and term of fourteen years from the date of these presents next and immediately ensuing and fully to be complete and ended: Provided always that if the said Carson Woods shall not within three days after the granting of these Letters of Registration register the same in the proper office in the Supreme Court at Sydney in the said Colony of New South Wales then these Letters of Registration and all advantages whatsoever hereby granted shall cease and become void. In witness whereof I have hereunto set my sign manual, and have caused the present Letters of Registration to be sealed with the seal of the said Colony of New South Wales, at Government House, Sydney, in New South Wales, this twenty-ninth day of June, in the year of our Lord one thousand eight hundred and eighty-three.

AUGUSTUS LOFTUS.

Sydney: Thomas Richards, Government Printer.—1884

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

REPORT FROM THE SELECT COMMITTEE

ON THE

PURCHASE OF RAILWAY ROLLING STOCK;

TOGETHER WITH THE

PROCEEDINGS OF THE COMMITTEE,

MINUTES OF EVIDENCE,

AND

APPENDIX.

ORDERED BY THE LEGISLATIVE ASSEMBLY TO BE PRINTED, 29 October, 1884.

SYDNEY: THOMAS RICHARDS, GOVERNMENT PRINTER.

1884.

1043-л

[7s.]

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE LEGISLATIVE ASSEMBLY.

Votes No. 144. Tuesday, 12 August, 1884.

8. Purchase of Railway Rolling Stock:—Mr. Sydney Smith moved, pursuant to amended Notice,—
(1.) That a Select Committee be appointed, with power to send for persons and papers, to inquire into and report upon the purchase of Rolling Stock, Material, &c., for the Government Railways and Tramway Works of the Colony.

(2.) That such Committee consist of Mr. Sutherland, Mr. Fletcher, Mr. Suttor, Mr. George Camp-

bell, Mr. Chapman, Mr. Poole, Mr. Teece, Mr. Wright, Mr. Garrard, and the Mover.

Debate ensued.

Question put and passed.

Votes No. 147. Friday, 15 August, 1884.

2. Purchase of Railway Rolling Stock:—Mr. Sydney Smith (by consent) moved, without Notice, That the Return to Order "Springs for Railway Engines and Carriages," laid upon the Table on 5th July, 1881, and the Return to Order "Dump Cars," laid upon the Table on 21st May, 1884, be referred to the Select Committee now sitting on "Purchase of Railway Rolling Stock."

Question put and passed.

Votes No. 148. Tuesday, 26 August, 1884.

5. Purchase of Railway Rolling Stock:—Mr. Sydney Smith (by consent) moved, without Notice, That the Return to Order "Railways, Springs for Engines and Carriages," laid upon the Table on the 25th November, 1879, be referred to the Select Committee now sitting on "Purchase of Railway Rolling Stock."

Question put and passed.

Votes No. 160. Tuesday, 23 September, 1884.

3. Purchase of Railway Rolling Stock:—Mr. Melville presented a Petition from Carson Woods, Esquire, praying for leave to appear by Counsel or Attorney before the Select Committee now sitting on "Purchase of Railway Rolling Stock," and to give evidence before the Committee. And the same having been read by the Clerk, by direction of Mr. Speaker,—Petition received, and referred to the said Committee.

Votes No. 176. Thursday, 23 October, 1884.

3. Purchase of Railway Rolling Stock:—Mr. Sydney Smith (by consent) moved, without Notice, That leave be granted to the Select Committee on "Purchase of Railway Rolling Stock" to sit to-morrow.

Question put and passed.

Votes No. 178. Wednesday, 29 October, 1884.

9. Purchase of Railway Rolling Stock:—Mr. Sydney Smith, as Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, and Evidence taken before the Select Committee for whose consideration and report this subject was referred on 12th August, 1881; together with Appendix.

Mr. Smith then moved, That the document be printed. Debate ensued.

Question put and passed.

1883-4.

PURCHASE OF RAILWAY ROLLING STOCK.

REPORT.

The Select Committee of the Legislative Assembly, appointed on the 12th August, 1884,—"with power to send for persons and papers, to inquire into and report upon the Purchase of Rolling Stock, Materials, &c., for the Government Railways and Tramway Works of the Colony;" and to whom the following papers were referred,—on the 15th August, "the Return to Order 'Springs for Railway Engines and Carriages'" and "the Return to Order 'Dump-cars'"; on the 26th August, "the Return to Order 'Railways—Springs for Engines and Carriages'"; and on the 23rd September, "the Petition of Carson Woods, Esquire,"—have agreed to the following Report:—

Your Committee find from the evidence on the subject of the ordering of 200 dump-cars, that on 2 April, 1883, Mr. J. C. Dibbs, agent for the patentee, submitted to the Commissioner for Railways plans, photographs, and particulars of the United States Car Co.'s screw-lever dump-car, which were forwarded by the Commissioner to the Traffic Manager for report. The Traffic Manager, in a minute dated 5 April, 1883, stated "that with certain alterations to the station arrangements, cars, according to the plans submitted, could be rendered useful for a certain class of traffic." On 6 April the papers, together with the Traffic Manager's minute, were submitted to the Acting Locomotive Engineer (Mr. Midelton), whose report, dated 17 April, 1883, was by no means favourable to the adoption of the car for traffic purposes.

Mr. J. C. Dibbs, in a letter dated 8 May, 1883, informed the Commissioner that a dump-car had arrived, and would be landed in a few days. Ten days subsequent to this, on 18 May, the Acting Secretary for Public Works, Mr. Stuart, approved of the car being tried and taken, "if found suitable as an experiment," which decision was communicated to Mr. Dibbs on the 22nd of the same month. This sample car was put together, and three tests of its capabilities were made during the month of June following. At these tests the car was filled with gravel, ashes, and billet-wood respectively, but in no case was the dumping, which had been

advanced as a special feature, successful.

Notwithstanding the unsatisfactory nature of these trials, and also that the car was otherwise deficient, and could not be used with safety on our lines, this

sample car was purchased at a cost of £225.

On 17 August of the same year Mr. Carson Woods, the patentee, proposed to sell to the Government the use of the patent for £6,000, or to build here 200 cars according to sample for the sum of £190 each, inclusive of the right of the Government to use the patent. Seven days later (24 August), Mr. Woods was informed that the Secretary for Works would prefer having the cars made in the Colony, and was disposed to arrange for the purchase of the patent right at a fair price, but could not give any such sum as £6,000 for a patent of this kind which might at any moment be improved upon. Mr. Woods, on 27 August, stated in reply that he was prepared to build 200 cars in the Colony, inclusive of the patent, for the sum of £190 each, and thus meet the suggestion of the Minister.

The next day (28 August) the Secretary for Public Works accepted the offer subject to the following additional conditions:—That the cars are equal in all respects to the one now in the possession of the Department; and that they do not exceed the

weight

In a foot-note the Commissioner added that the cars were to be weight of the same. delivered fifty in nine months, and the remainer in lots of fifty in three, six, and nine months, within the succeeding nine months, which decision was communicated to Mr.

Woods, and the agreement was confirmed by him on 29th August.

This contract for 200 cars, at a cost of £38,000, or £190 each, was accepted without the responsible officers of the Locomotive and Traffic Departments being consulted, (after the trials had taken place,) as to their opinion concerning its suitability for our Railway purposes, and the advisability of its general adoption. No report appears to have been asked for or received from the officers referred to from 17 April, which was prior to the arrival of the sample car, until after the confirmation of Mr. Woods's contract.

It appears, however, that on the occasion of the billet-wood test Mr. Midelton, who was not then in charge of the Locomotive Department (Mr. Scott having resumed duty) expressed a favourable opinion regarding the lightness of the bogie, but states emphatically that he never advised the Minister to purchase the cars, and his minute of 17 April, 1883, is unfavourable to their introduction. On 30 August Mr. Scott. the Locomotive Engineer, was asked by the Commissioner for a specification, and on 5 September he pointed out "that the dump-car, which as it appears, is the pattern for the 200 to be built by, has a central buffer and coupler, for which the frame has been specially constructed; this will prevent its being used with our present stock."

The Commissioner, in reply, directed "that they are to have side-buffers and draw-gear similar to our rolling stock, and a sketch should be sent to contractors showing what is required. See that the present dimensions are such as they will not interfere with our platforms, &c., and alter as required." A tracing was supplied (See Separate Appendix, No. 2), showing certain alterations, which Mr. Carson Woods states he considers were "Extras."

It seems that the Locomotive Officers, knowing that a contract had been entered into for cars as per sample, were very unwilling to advise any alterations; in short, Mr. Midelton on 16 October, 1883, stated that there would be some difficulty (with our double buffers) in introducing the dumping gear or mechanism, and said he thought the matter should be left to the manufacturer.

It appears also that the usual bond between the Government and the

Contractor has not been signed.

Recently a number of dump-cars arrived from America, and Mr. Scott, Locomotive Engineer, Mr. Midelton, Locomotive Foreman, Mr. Bourne, Inspector of Rolling Stock, and Mr. Bingham, Foreman of the Carriage and Waggon Department, were examined upon these and also upon the sample one. Their evidence (see also reports in Appendix G) was of such a condemnatory character that your Committee deemed it their duty, in the interest of the public, to offer a Special Report to Parliament; but it could not be presented in consequence of the opposition of the Government.

Your Committee find also that the cars contracted to be made in the Colony were imported and put together in the Government premises known as the old Atlas Works, which premises were let to Carson Woods & Co. at a rental of £2 per week,

including the use of the wharf thereat for the landing of materials.

From the facts adduced in the evidence, your Committee find that the sample dump-car, and also those recently imported after its pattern, are unsuitable

to the present conditions of our Railway requirements.

Your Committee also find that the officers immediately responsible for the safe and satisfactory character of rolling stock were not consulted before the contract for 200 additional cars was agreed upon. To make an agreement such as this in the injudicious manner apparent from the evidence, and where such a large expenditure of public funds as £38,000 is involved, is in the opinion of your Committee a most objectionable proceeding.

Your Committee find it was agreed that these cars were to be made in the

Colony, whereas the different parts are being imported from America and merely

put together here, which is an evasion of the spirit of the agreement.

That the cars have not been delivered within the contract time.

Your Committee find that the combined motor and car, concerning which Mr. Tramway-Locomotive-Superintendent Downe was sent to America, with a view to authorize a number being made for the Colony, the cost of which has been considerable

considerable both in manufacture and maintenance, owing to their faulty design, are not nearly so good as those in general use on our Tramway lines, and known as the Baldwin motors. Of this recent introduction two have been running for some time past (and, latterly, four), and have by no means given satisfaction in their working, the ordinary Baldwin motor proving itself by far the most economical and suitable for the necessary requirements of our street traffic. It appears, too, that an order for thirty additional combined motors, to cost about £31,500, has been approved by the Secretary for Public Works, but has been withheld till the conclusion of this inquiry, and we recommend that the order be not executed.

It transpires from the evidence given before your Committee, in reference to the tram-cars originally contracted to be made with six wheels, but afterwards constructed with four wheels only, and which had some time subsequently to be again altered and placed upon four-wheeled bogies, that they were, as regards their construction on four single wheels, in which way they were for sometime running, expensive regarding wear and tear, and also unsafe. On the 1st February, 1884, in reply to certain questions asked in Parliament as to the loss caused by the alterations to the bogies referred to, it was stated to be only £25 each, whereas we find that the actual cost far exceeded that amount, and it is to be regretted that such misleading state-

ments should have been made and Parliament deceived thereby.

Your Committee find that 250 trucks, fitted with a patent coupler, have been made and supplied to the Government for Railway use at considerable expense. The evidence upon this matter is not complete, owing to the necessity for a speedy conclusion of our inquiry, but sufficient has transpired, however, to warrant your Committee in recommending that before any further expense is incurred in that direction, or the trucks brought into general use, that a careful inquiry be made by the Government regarding the safety and serviceableness of the coupler in question.

the Government regarding the safety and serviceableness of the coupler in question.

Your Committee also find that an exceedingly objectionable and unfair practice exists of giving to agents and others large orders for expensive supplies, without first inviting tenders, thus permitting a monoply to the few. This is to be condemned, because in the competition of the many the same goods might be obtained for a much less cost, and a more general encouragement given to manufacturers to develop their several resources. Your Committee recommend therefore that public tenders be called for in all cases of rolling stock and materials required for the Government Railways and Tramways.

Although your Committee, owing to the limited time at their disposal consequent upon the early expected prorogation of Parliament, and being debarred from sitting during any adjournment of the House, have been unable to obtain evidence upon many other matters of importance regarding the purchase of rolling stock, materials, &c., they trust that what has been done with the restricted facilities at their command will result in a system being adopted whereby more care will be used to obtain proper information before entering upon contracts of the kind under consideration, the neglect of which, in too many cases, results in loss to the Department and danger to the public.

The whole matter is of such weighty importance to the country and community in general that, from the facts brought to light, your Committee fear there is much yet that should be revealed, and do not consider their labours satisfactorily ended, and would therefore recommend the reappointment of the Committee next

session.

In connection with the procuring of evidence for this Committee it has been necessary to call for statements from officials, who have testified according to their experience, but whose testimony might not be looked upon with approval from their immediate superiors. These witnesses your Committee desire to see protected in that manner which the importance of such an inquiry as this demands.

SYDNEY SMITH, Chairman.

No. 3 Committee Room, Sydney, 29th October, 1884.

PROCEEDINGS OF THE COMMITTEE.

FRIDAY, 15 AUGUST, 1884.

MEMBERS PRESENT:

Mr. Sydney Smith,

Mr. Chapman, Mr. Poole,

Mr. Teece, Mr. Garrard, Mr. Sutherland.

Mr. Smith called to the Chair.

Entry from Votes and Proceedings, appointing the Committee, read by the Clerk.

Committee deliberated.

Ordered,—That W. V. Read, Esq., and Mr. William Scott, be summoned to give evidence next meeting.

[Adjourned to Tuesday, 26 August, at Eleven o'clock.]

TUESDAY, 26 AUGUST, 1884.

MEMBERS PRESENT:-

Mr. Sydney Smith in the Chair.

Mr. Garrard, Mr. Sutherland, Mr. Teece, Mr. Poole, Mr. Suttor, Mr. Chapman.

Entry from Votes and Proceedings, referring Return to Order "Springs for Railway Engines and Carriages," and Return to Order "Dump Cars," read by the Clerk.
Printed copies before the Committee.

Chairman read a letter from Mr. Dibbs requesting that his name should be substituted for that of Mr. Wright on the Committee.

William Vero Read, Esq. (Traffic Manager of the Great Southern and Western Railways), called in, sworn, and examined.

Witness withdrew.

Motion made (Mr. Chapman) and Question,—That the Chairman take the usual steps to obtain the leave of the House for the Committee to sit during any adjournment,—put and passed. Committee deliberated.

Ordered,-That Mr. William Scott be summoned to give evidence next meeting.

[Adjourned to To-morrow, at Eleven o'clock.]

WEDNESDAY, 27 AUGUST, 1884.

MEMBERS PRESENT:-

Mr. Sydney Smith in the Chair.

Mr. Poole,

Mr. Chapman,

Mr. Teece.

Entry from Votes and Proceedings, referring Return to Order, "Railways, Springs for Engines and Carriages," read by the Clerk.
Printed copies before the Committee.

Mr. William Scott (Locomotive Engineer, Railway Department) called in, sworn, and examined. Witness withdrew

Mr. Edward John Bourn (Inspector of Rolling Stock) called in, sworn, and examined. Witness withdrew.

Committee deliberated.

Ordered,-That Mr. George Bingham and Mr. Thomas Midelton be summoned to give evidence next meeting.

[Adjourned to Friday next, at Eleven o'clock.]

FRIDAY, 29 AUGUST, 1884.

MEMBERS PRESENT:

Mr. Sydney Smith in the Chair.

Mr. Poole,

Mr. Teece. Mr. Chapman.

Mr. Sutherland,

Mr. Thomas Midelton (Locomotive Overseer, Railway Department) called in, sworn, and examined.

Mr. George Bingham (Foreman of the Carriage and Waggon Department, Railways) called in, sworn, and examined.

Witness withdrew.

Witness withdrew.

Committee deliberated.

Ordered,—That the Hon. F. A. Wright, M.P., be requested, and Charles A. Goodchap, Esq., be summoned, to give evidence next meeting.

[Adjourned to Wednesday next, at Eleven o'clock.]

WEDNESDAY, 3 SEPTEMBER, 1884.

MEMBERS PRESENT:-

Mr. Sydney Smith in the Chair.

Mr. Chapman,

Mr. Sutherland,

Mr. Poole,

Mr. Garrard,

Charles Augustus Goodchap, Esq. (Commissioner for Railways), called in, sworn, and examined. Witness handed in a tracing of the proposed Coal Stage at Eveleigh, showing the mode of discharging the coal from the higher to the lower level, and supplying the Engines by means of small trucks, which was ordered to be appended. (See Separate Appendix 1.)

Witness to supply a Report as to whether the Dump-cars ordered by the Government from Messrs. Carson Woods and Company, were being made in the Colony.

Witness withdrew.

Committee deliberated.

Ordered,—That the Honorable F. A. Wright, M.P., be requested, and John Rae, Esq., be summoned to give evidence next meeting.

[Adjourned to Friday next, at half-past Two o'clock.]

FRIDAY, 5 SEPTEMBER, 1884.

MEMBERS PRESENT:

Mr. Sydney Smith in the Chair.

Mr. Chapman, Mr. Garrard,

Mr. Sutherland,

Mr. Suttor,

Mr. Poole.

Henry Hudson, Esq., called in, sworn, and examined.

John Rae, Esq. (Under Secretary for Public Works), called in, sworn, and examined.
Witness handed in papers in reference to the contract of Messrs. Carson Woods & Co. with the Government to deliver 200 dump-cars.

Witness withdrew.

Mr. William Scott called in and further examined.

Witness withdrew.

Mr. Thomas Midelton called in and further examined.

Witness withdrew.

Mr. Edward John Bourn called in and further examined.

Witness withdrew.

Committee deliberated.

Re-assembling of the Committee to be arranged by the Chairman.

[Adjourned.]

TUESDAY, 16 SEPTEMBER, 1884.

MEMBERS PRESENT:-

Mr. Sydney Smith in the Chair.

Mr. Sutherland,

Mr. Chapman,

The Hon. Geoffrey Eagar (Under Secretary for Finance and Trade) called in, sworn, and examined. Witness handed in copy of the letter of instructions to Mr. Woolcott on his appointment as collector of the rents on the resumed property at Pyrmont, which was ordered to be appended. Appendix B.)

Witness withdrew.

William Prout Woolcott, Esq., called in, sworn, and examined.

Witness handed in copy of the Memorandum of Agreement with Mr. Carson Woods leasing the Atlas Works at Pyrmont, which was ordered to be appended. (See Appendix C.)

Mr. Edward John Bourn called in and further examined.

Witness withdrew.

Mr. George Bingham called in and further examined.

Witness withdrew

Mr. Thomas Midelton called in and further examined.

Witness withdrew.

Mr. William Scott called in and further examined.

Witness handed in tracing of the American Dump-car, showing alterations to be made, which was ordered to be appended. (See Separate Appendix 2.)

Witness withdrew.

Committee deliberated. Ordered,—That the Hon. F. A. Wright, M.P., be requested, and Mr. Thomas Midelton be summoned to give evidence next meeting.

[Adjourned to To-morrow, at *Eleven* o'clock.]

WEDNESDAY, 17 SEPTEMBER, 1884.

MEMBERS PRESENT:-

Mr. Sydney Smith in the Chair.

Mr. Chapman,

Mr. Teece,

Mr. Garrard,

Mr. Poole,

Mr. Sutherland.

Mr. Thomas Midelton called in and further examined.

Witness withdrew.

Motion made (Mr. Poole) and Question,-That the Chairman take the necessary steps to obtain the leave of the House for this Committee to make a Special Report, -put and passed.

Chairman submitted Draft Special Report, which was read, as follows:-

" DUMP-CARS—SPECIAL REPORT.

"The Select Committee of the Legislative Assembly appointed on the 12th August last, 'with

'power to send for persons and papers to inquire into and report upon the purchase of Railway 'Rolling Stock, Material, &c., for the Government Railways and Tramway Works of the Colony,' have agreed to the following Special Report:—
Your Committee deem it their duty to report to your Honorable House that the evidence already taken regarding the dump-cars, for which an order was given to Messrs. Carson Woods & Company for 200 at £190 each, discloses the fact that the cars now being supplied are unsafe in design, workmanship, and materials used, and, in the opinion of your Committee, should not be accepted or used on the Railways of the Colony."

Chairman to report to the House.

Committee deliberated.

Ordered,—That Charles A. Goodchap, Esq., and Mr. George Downe be summoned to give evidence next meeting, and that the Hon. F. A. Wright, M.P., be summoned under the Parliamentary Evidence Act of 1884 to give evidence next meeting.

[Adjourned to To-morrow, at *Eleven* o'clock.]

THURSDAY, 18 SEPTEMBER, 1884.

MEMBERS PRESENT:-

Mr. Sydney Smith in the Chair.

Mr. Poole,

Mr. Chapman,

Mr. Teece.

The Chairman read a letter from Mr. Wright, stating that he would attend the next meeting, and informed the Committee that in consequence of the receipt of that letter he had instructed the Clerk not to serve the summons as directed.

Charles A. Goodchap, Esq., called in and further examined.

Witness handed in papers in reference to coaling engines for the Department, also papers in reference to lighter rolling stock.

Witness withdrew.

Committee deliberated.

Ordered,—That the Hon. F. A. Wright, M.P., be summoned to give evidence next meeting.

[Adjourned to Tuesday next, at *Eleven* o'clock.]

TUESDAY, 23 SEPTEMBER, 1884.

MEMBERS PRESENT:-

Mr. Sydney Smith in the Chair.

Mr. Poole, Mr. Wright,

Mr. Teece, Mr. Sutherland,

Mr. Garrard.

Clerk submitted a letter from Mr. Wright forwarding names of witnesses for examination. The Honorable Francis Augustus Wright, M.P. (Secretary for Public Works), a member of the Committee, sworn and examined in his place.

George Cowdery, Esq. (Engineer for Existing Lines, Railway Department), called in, sworn, and examined

Witness handed in paragraphs from an American paper and a certificate from the National Exhibition of Railway Appliances in reference to the automatic couplers, which were ordered to be (See Appendices D 1 and D 2.)

Witness withdrew.

Chairman laid before the Committee a letter from Messrs. Stephen, Laurence, and Jaques, Solicitors for Messrs. Carson Woods and Co., stating their intention to apply to Parliament for leave to appear by Counsel.

Committee adjourned to 2 o'clock this day.

Committee resumed.

George Cowdery, Esq., called in and further examined.

Witness withdrew.

Mr. John Goff (Draftsman, Locomotive Engineer's Office) called in, sworn, and examined.

Witness withdrew.

Owen Blacket, Esq., called in, sworn, and examined.

Witness withdrew.

Committee deliberated.

Ordered that Mr. George Downe be summoned to give evidence next meeting.

[Adjourned to To-morrow, at *Eleven* o'clock.]

WEDNESDAY, 21 SEPTEMBER, 1881.

MEMBERS PRESENT :-

Mr. Sydney Smith in the Chair.

Mr. Poole, Mr. Suttor Mr. Chapman, Mr. Sutherland, Mr. Garrard.

Mr. Wright, Entry from Votes and Proceedings, referring Petition of Carson Woods, Esq., asking for leave to appear by Counsel or Attorney before the Committee, read by the Clerk. Petition of Carson Woods, Esq., before the Committee.

Resolved,—That leave be granted to Mr. Woods to appear by Attorney or Counsel before the Committee during the examination of witnesses relating to the purchase of the Dump-cars.

Mr. Woods called in and informed.

Present:—Arthur Bird, Esq. (Counsel for Mr. Carson Woods).

Mr. George Downe (Superintendent, Tramway Rolling Stock) called in, sworn, and examined. Witness withdrew.

Henry Gilbert Carson Woods, Esq, called in, sworn, and examined.

Witness handed in certain documents, which were ordered to be appended. (See Appendices E 1 to E 4.)

Room cleared.

Committee deliberated.

Ordered,-That Carson Woods, Esq, and Mr. George Batchelder be summoned to give evidence next meeting.

[Adjourned to To-morrow, at Eleven o'clock.]

THURSDAY, 25 SEPTEMBER, 1884.

Members Present:-

Mr. Sydney Smith in the Chair.

Mr. Chapman, Mr. Wright,

Mr. Sutherland,

Mr. Suttor,

Mr. Teece.

Present:—Arthur Bird, Esq. (Counsel for Mr. Carson Woods). Henry Gilbert Carson Woods called in and further examined.

Witness withdrew.

Mr. George Batchelder (Car-builder) called in, sworn, and examined.

Room cleared.

Committee deliberated.

Ordered,-That Mr. George Batchelder and Mr. William Cross be summoned to give evidence next mecting.

[Adjourned to To-morrow, at Two o'clock.]

FRIDAY, 26 SEPTEMBER, 1881.

MEMBERS PRESENT:

Mr. Sydney Smith in the Chair.

Mr. Sutherland, Mr. Wright,

Mr. Chapman.

Present:—Arthur Bird, Esq. (Counsel for Mr. Carson Woods). Mr. George Batchelder called in and further examined.

Witness produced links and bolts used in building the Dump-cars, and which had been tested with a 250lbs. hammer.

Witness withdrew.

Mr. Bird stated that if he wished to call further evidence on behalf of his client he would supply the names of the witnesses to the Committee.

Room cleared.

Committee deliberated.

Ordered,—That William Cross, Esq., be summoned to give evidence next meeting.

[Adjourned to Tuesday next, at Eleven o'clock.]

TUESDAY, 30 SEPTEMBER, 1884.

MEMBERS PRESENT:-

Mr. Sydney Smith in the Chair.

Mr. Poole,

Mr. Chapman,

Mr. Teece,

Mr. Wright,

Mr. Sutherland

Mr. Suttor.

William Cross, Esq. (Iron Merchant), called in, sworn, and examined.

Witness withdrew

Mr. Joseph Railt Davies (Car-builder) called in, sworn, and examined.

Witness withdrew. Mr. William Henry Burges (Truck-builder) called in, sworn, and examined.

Witness withdrew

The Chairman laid before the Committee a letter from Mr. Carson Woods inviting them to visit his works and inspect the Dump-cars. Committee deliberated

Ordered,—That Mr. Charles Paul, Mr. John Hough, Mr. James Fletcher, Mr. Alexander Clark, and Mr. S. Cook be summoned to give evidence next meeting.

[Adjourned to To-morrow, at Eleven o'clock.]

1043--- в

WEDNESDAY, 1 OCTOBER, 1884.

MEMBERS PRESENT:

Mr. Sydney Smith in the Chair.

Mr. Poole,

Mr. Chapman,

Mr. Sutherland.

Mr. Wright.

Mr. John Hough (Carriage-builder) called in, sworn, and examined.

Witness withdrew.

Mr. James Fletcher (Carriage-builder) called in, sworn, and examined.

Witness withdrew.

Mr. Charles Paul (Station-master, Darling Harbour) called in, sworn, and examined.

Witness withdrew. Committee deliberated.

[Adjourned to To-morrow, at Eleven o'clock.]

THURSDAY, 2 OCTOBER, 1884.

MEMBERS PRESENT: Mr. Sydney Smith in the Chair.

Mr. Poole,

Mr. Sutherland,

Mr. Chapman,

Mr. George Campbell,

Mr. Wright.

Mr. Alexander Clark (Car-builder) called in, sworn, and examined.

Witness withdrew.

Mr. John Nelson (Carriage-builder) called in, sworn, and examined.

Witness withdrew.

Mr. Sydney Cook (Coach-builder) called in, sworn, and examined.

Witness withdrew.

Committee adjourned to Two o'clock this day.

Committee resumed.

Mr. Jonathan A. Murray (Car-builder) called in, sworn, and examined.

Witness withdrew.

Mr. James Graham (Engine-fitter) called in, sworn, and examined.

Witness withdrew.

Mr. John William Brierley called in, sworn, and examined.

Witness withdrew.

Henry Gilbert Carson Woods, Esq., called in and further examined.

Witness withdrew.

Clerk informed the Committee that Mr. Goodchap, in returning his evidence, had forwarded certain documents which he requested to have printed with his evidence, which were ordered to be appended. (See Appendix F.)

Letter from Mr. Scott (with enclosures) and papers (handed in) by Mr. Goodchap on 18th September,

in reference to Lighter Rolling Stock, ordered to be appended. (See Appendices G & H.)

Committee deliberated.

Ordered,—That Mr. Thomas Midelton, Mr. Kendall, Mr. Thomas Jubb, and Mr. George Downe be summoned to give evidence next meeting.

[Adjourned to Tuesday next, at Eleven o'clock.]

TUESDAY, 7 OCTOBER, 1884.

MEMBERS PRESENT:-

Mr. Sydney Smith in the Chair.

Mr. Poole,

Mr. Sutherland,

Mr. Teece,

Mr. Suttor.

Mr. Thomas Jubb (Waggon-builder) called in, sworn, and examined.

Witness withdrew.

Mr. Thomas Midelton called in and further examined.

Witness handed in certain documents, which were ordered to be appended. (See Appendices J1 to J4.) Witness also handed in tracings of the Iron Platform Bogic Waggon, and of the Coal Waggon, which (See Separate Appendices 3 and 4.) were ordered to be appended.

Witness withdrew.

Augustus Morris, Esq., called in, sworn, and examined.

Witness withdrew.

Henry Gilbert Carson Woods, Esq., called in and further examined. Witness produced the Patent held by him for the Dump-cars.

Witness withdrew.

Mr. George Downe called in and further examined.

Witness produced drawings of the Downe's Combined Motor and Engine.

Witness withdrew.

Mr. Daniel William Campbell (Manager for Mr. Carson Woods) called in, sworn, and examined.

Witness withdrew.

Chairman laid before the Committee a letter from Mr. Carson Woods, pointing out the advantages of the Dump-cars, and offering to build the D-trucks 20 per cent. cheaper than the present contract price.

Committee deliberated Ordered,-That Mr. H. B. Howe, Mr. William Allen, Mr. Frederick Day, and Mr. George Hendy be summoned to give evidence next meeting.

[Adjourned to To-morrow, at *Eleven* o'clock.]

WEDNESDAY, 8 OCTOBER, 1884.

MEMBERS PRESENT:

Mr. Sydney Smith in the Chair.

Mr. Poole,

Mr. Chapman,

Mr. Teece,

Mr. Sutherland,

Mr. Wright.

Chairman laid before the Committee papers relating to Draw-bars of Waggons and Cars.

James Powell, Esq. (Collector of Customs), called in, sworn, and examined.

Witness produced the papers of the ship "Earl Granville," from Boston, showing Custom-house free entry for 9,555 packages for frames and buffers for car trucks, and two cases of car-couplers, entered by Messrs. Carson Woods & Co., by their agent, Mr. L. F. Ebsworth, and also an entry for thirty-two kegs of nails on which duty was paid.

Witness withdrew.

Mr. Henry Bryant Howe (General Foreman, Tramway Locomotive Department) called in, sworn, and examined.

Witness withdrew.

Committee deliberated,

Ordered,—That Mr. Frederick Davey, Mr. George Hendy, and Mr. J. M. Tiley be summoned to give evidence next meeting.

[Adjourned to To-morrow, at *Eleven* o'clock.]

THURSDAY, 9 OCTOBER, 1884.

MEMBERS PRESENT:-

Mr. Sydney Smith in the Chair.

Mr. Chapman, Mr. Garrard.

Mr. Teece,

Mr. Frederick Davey (Foreman, Tramways) called in, sworn, and examined.

Witness withdrew.

Mr. John Moxey Tiley (Collecting Officer, Darling Harbour Wharf) called in, sworn, and examined.

Witness withdrew.

Mr. George Hendy (General Foreman, Pitt-street Yard) called in, sworn, and examined.

Witness withdrew.

Committee adjourned to half-past Two o'clock this day.

There being no quorum present at the hour appointed for the re-assembling of the Committee the meeting lapsed.

FRIDAY, 10 OCTOBER, 1884.

MEMBERS PRESENT:

Mr. Sydney Smith in the Chair.

Mr. Poole,

Mr. Teece,

Mr. Sutherland.

Mr. William Allen called ip, sworn, and examined.

Witness withdrew.

Mr. Evan Davies called in, sworn, and examined.

Witness withdrew.

Chairman laid before the Committee a letter from Mr. Carson Woods requesting the Committee to

examine Mr. D. M'Leod, lately Resident Engineer Constructing Railways, New Zealand.

Committee deliberated and instructed the Clerk to inform Mr. Wood that the Committee had closed the inquiry in reference to the dump-cars, and to refer Mr. Woods to his evidence of 2 October instant (page 101).

Committee deliberated.

Ordered,—That J. C. Dibbs, Esq., Mr. J. H. Garforth, Mr. A. B. Brown, and Mr. J. W. Cayzer be summoned to give evidence next meeting.

[Adjourned to Tuesday next, at Eleven o'clock.]

TUESDAY, 14 OCTOBER, 1884.

MEMBERS PRESENT:-

Mr. Sydney Smith in the Chair.

Mr. Poole,

Mr. Chapman,

Mr. Sutherland, Mr. Wright,

Mr. Suttor, Mr. Garrard.

Chairman laid before the Committee papers in reference to Perry Car Couplers. John Campbell Dibbs, Esq. (Merchant), called in, sworn, and examined.

Witness withdrew.

Mr. James Henry Garforth (Engineer, Tramways) called in, sworn, and examined.

Model of a Compound Engine before the Committee.

Witness withdrew.

Mr. Albert Blair Brown (Running Foreman, Tramways) called in, sworn, and examined.

 \mathbf{W} itness

Witness withdrew.

Mr. James W. Cayzer (Chief Draftsman, Tranwoys), called in, sworn, and examined.

Witness withdrew.

Chairman laid before the Committee a letter from Mr. Carson Woods, requesting that his letters should be incorporated in the minutes of the Committee, and enclosing a Report from D. W. M'Leod on the Dump-cars, which letter was postponed for consideration.

Committee adjourned to half-past Two o'clock this day.

Committee resumed.

Mr. George Downe called in and further examined.

Witness to supply comparative statement of passenger accommodation capacity and dead weight in the various passenger rolling stock on the New South Wales Government Tramways.

Witness withdrew

Mr. Henry Bryant Howe called in and further examined.

Witness withdrew.

Mr. John Halliday (Traffic Foreman, Bridge-street Yard) called in, sworn, and examined.

Witness withdrew.

Mr. George Smith (Tramway Traffic Foreman, Railway Station) called in, sworn, and examined.

Witness withdrew.

Mr. Thomas Midelton called in and further examined.

Witness withdrew.

Committee deliberated.

Ordered,-That Mr. Thomas Midelton and Mr. William Scott be summoned to give further evidence next meeting.

[Adjourned to To-morrow, at Eleven o'clock.]

WEDNESDAY, 15 OCTOBER, 1884.

MEMBERS PRESENT:-

Mr. Sydney Smith in the Chair.

Mr. Poole,

Mr. Chapman, Mr. Sutherland.

Mr. Teece,

Mr. Suttor.

Papers (with plans) in reference to Coal Engines handed in by Mr. Goodchap on 18th September, 1884, ordered to be printed. (See Appendix K and Separate Appendices 5 and 6.)

Mr. Thomas Midelton called in and further examined.

Witness withdrew.

Mr. William Scott called in and further examined.

Witness withdrew.

Mr. Henry Walker (*Driver*, *Redfern Tram*) called in, sworn, and examined. Witness withdrew.

Mr. Thomas Rawlings Osborne (Motor Driver) called in, sworn, and examined.

Witness withdrew.

Mr. Daniel Manning called in, sworn, and examined.

Witness withdrew.

Chairman laid before the Committee a letter from Mr. Downe, requesting to be allowed to make a statement, and to be supplied with a copy of the evidence.

Postponed for further consideration.

Committee deliberated.

[Adjourned to Thursday next, at Three o'clock.]

THURSDAY, 16 OCTOBER, 1884.

MEMBERS PRESENT :-

Mr. Sydney Smith,

Mr. Wright.

In the absence of a quorum the meeting called for this day lapsed.

FRIDAY, 17 OCTOBER, 1884.

The House having adjourned over to Tuesday next the meeting called for this day lapsed.

TUESDAY, 21 OCTOBER, 1884.

MEMBERS PRESENT :-

Mr. Sydney Smith in the Chair.

Mr. Poole,

Mr. Garrard,

Mr. Teece,

Mr. Sutherland,

Mr. Suttor.

Chairman laid before the Committee a Return showing particulars of indents for Railway Rolling Stock, Materials, &c.; also a letter from Mr. Goodchap in reference to accidents traceable to the use of chilled wheels on the American Railways; also the papers relating to Downe's Combined Motor and Car, and the order for same.

Mr. George Downe called in and further examined.

Witness

Witness produced Locomotive Engine Running Shed Repairs Book, Drivers' Reports Book, and Fuel Tickets Book, in connection with the tramways; and handed in a comparative statement of passenger accommodation, capacity, and dead weight in the various passenger Rolling Stock on the New South Wales Government Tramways, which was ordered to be appended. (See Appendix L.)

Witness requested to be allowed to make a statement.

Chairman informed the witness that he had laid his letter before the Committee, and that they would now consider it.

Witness withdrew. Committee deliberated.

Witness called in and informed that they could not supply him with the evidence as requested, nor could they hear a general statement, but that if he wished to tender any further evidence in reference to the combined motor and cars they would hear it.

Mr. Frederick Davey called in and further examined.

Witness withdrew. Committee deliberated.

[Adjourned to To-morrow, at *Eleven* o'clock.]

WEDNESDAY, 22 OCTOBER, 1884.

Members Present:—

Mr. Sydney Smith in the Chair.

Mr. Chapman,

Mr. Poole,

Mr. Teece, Mr. Wright,

Mr. Sutherland, Mr. Suttor.

Mr. Frederick Davey called in and further examined.

 ${f Witness}$ withdrew.

Chairman laid before the Committee correspondence between Mr. Augustus Morris and the Commissioner for Railways in reference to Downe's Combined Motor and Car.

Committee deliberated as to the heads of the Draft Report to be drawn up by the Chairman and submitted next meeting.

[Adjourned to To-morrow, at half-past Two o'clock.]

THURSDAY, 23 OCTOBER, 1884.

MEMBERS PRESENT:-

Mr. Sydney Smith in the Chair.

Mr. Garrard,

Committee deliberated.

[Adjourned to To-morrow, at Eleven o'clock.]

Mr. Sutherland.

FRIDAY, 24 OCTOBER, 1884.

MEMBERS PRESENT:

Mr. Sydney Smith,

Mr. Sutherland.

- In the absence of a quorum the meeting called for this day lapsed.

TUESDAY, 28 OCTOBER, 1884.

MEMBERS PRESENT:

Mr. Sydney Smith in the Chair.

Mr. Poole.

Mr. Sutherland, Mr. Teece,

Mr. Chapman,

Mr. Garrard.

Entry from Votes and Proceedings, granting leave for the Committee to sit on Friday last, read by the Clerk.

Chairman read rough Draft of a Report which he proposed to have printed and distributed to the Members of the Committee before the meeting for its final adoption.

Committee deliberated.

[Adjourned to To-morrow, at Eleven o'clock.]

WEDNESDAY, 29 OCTOBER, 1884.

MEMBERS PRESENT:

Mr. Sydney Smith in the Chair.

Mr. Poole,

Mr. Sutherland,

Mr. Chapman,

Mr. Teece,

Mr. Wright.

Committee deliberated on letters written to the Committee by Mr. Carson Woods. Chairman to inform Mr. Woods that only the substance of his letters would appear in the minutes and that the Committee had no power to make visits of inspection. The

The following documents were ordered to be appended to the evidence, viz.: 1. The Return to Order "Dump-cars—ordered from Carson Woods & Co.," referred to the Select

Committee on 15 August, 1884. (See Appendix M.)

2. Papers relating to Allison's Manufacturing Company's cars for Railway freight, handed in by Mr. Goodchap, 18 September, 1884. (See Appendix N.)

3. Letter from the Hon. F. A. Wright to the Clerk of the Committee, submitting names or

witnesses for examination. (See Appendix O.)
Letter from Mr. Carson Woods to the Hon. F. A. Wright, pointing out the advantages of the dump-cars and offering to build the D truck 20% cheaper than the present contract price,—laid before the Committee, 7 October, 1884. (See Appendix P.)
Memorandum in reference to draw-bars of goods waggons, laid before the Committee on 8

October, 1884. (See Appendix Q.)

6. Papers showing prices of coal and freight cars made by the Allison Manufacturing Company, of Philadelphia, U.S.A., forwarded to the Committee by Mr. Augustus Morris. Appendix \hat{R} .)

7. Letter, with Enclosures, from the Commissioner for Railways in reference to accidents on the American railways traceable to chilled wheels, laid before the Committee, 21 October, 1884. (See Appendix S.)

(See Appendix S.)
8. Papers relating to Downe's combined motor and car, laid before the Committee on 21 October, 1884. (See Appendix T.)
9. Papers relating to proposed order for 30 Downe's combined motor and car, laid before the Committee on 21 October, 1884. (See Appendix U.)
10. Papers in reference to offer of the Baldwin Locomotive Company, made through Mr. Augustus Morris, to supply 30 Downe's combined motors and cars for £1,075 each, laid before the Committee on 22 October, 1884. (See Appendix V.)
hairman submitted Draft Report, which was read.

Chairman submitted Draft Report, which was read. Motion made (Mr. Poole) and Question,—That the Draft Report as read be now adopted,—put. Committee divided.

TIST OF WITNESSES

Ayes, 3. Mr. Sutherland, Mr. Teece, Mr. Poole.

Mr. Wright.

So it was resolved in the affirmative. Chairman to report to the House.

Tracing of Coal Boxes.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MINUTES $0 \, \mathrm{F}$ EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

PURCHASE OF RAILWAY ROLLING STOCK.

TUESDAY, 26 AUGUST, 1884.

Present:—

Mr. CHAPMAN, Mr. GARRARD, Mr. POOLE,

Mr. S. SMITH. Mr. SUTHERLAND, MR. SUTTOR,

Mr. TEECE.

SYDNEY SMITH, Esq., IN THE CHAIR.

William Vero Read, Esq., called in and examined :-

Chairman.] You are Traffic Manager of the Great Southern and Western Railways? Yes.
 Do you remember receiving a minute from Mr. Goodchap on 2nd April, 1883, in reference to dump-cars? I received one about that time.

W. V. Read,

26 Aug., 1884.

3. Do you remember writing a minute on the 5th April, 1883, that "the principal traffic for which the kind of trucks would be available is coal, but at present we have neither platforms nor staiths on which to shoot the coal; now it is carted direct from the trucks. Should it be approved to build staiths at stations as is done in England (and I would strongly recommend it), then the adoption of the principle would be of great service in the saving of time and labour, and in enabling of greater mileage being run by waggons. There are other smaller kinds of traffic for which the principle could be made use of if there were places on which to shoot it. The principle would appear to be well adapted for ballast waggons, and also for 'loco.' coal trucks; but of these the Engineer for Existing Lines and the Locomotive Engineer would be able to give an opinion'? Yes, that is a copy of my minute, I believe.

4. Have you seen Mr. Midelton's report in reference to these cars? I saw it this morning for the first

4. Have you seen Mr. Midelton's report in reference to these cars? I saw it this morning for the first time I think; I may have seen it before, but I do not remember it.

5. Was Mr. Midelton's minute referred to you after your minute of the 5th April? I think it must have come to me with other papers, but I do not think it was referred to me to report upon.

6. Were you not asked to report upon Mr. Midelton's objections? I think not. I believe I saw his minute, but I did not report upon it.

7. What is your opinion about the objections raised by Mr. Midelton? (Mr. Midelton's minute, page 2 of the printed papers, read.) I do not think Mr. Midelton's objections met what I think would be the I do not think Mr. Midelton's objections met what I think would be the benefit of these dump-cars.

8. In what particular? Mr. Midelton only states what is required to make them of use, which I have

9. Do you remember any tests that were made with regard to these dump-cars? Yes, I remember three. 10. What were they? The first was with ashes, the next with gravel, and the third with billet-wood. 11. Were they a success? The ashes did not shift on being canted—the gravel did. I think the ashes were damp

12. Did all the gravel go out of the cars? No.
13. Did it take any time to remove the balance? I do not think they did remove it. About two thirds of the gravel went out when the truck was canted over.

1043-A

2

26 Aug, 1884.

W.V. Read, 14. Did you consider that a success? I consider anything that will throw two-thirds of the load out in the manner that the car did would be a success for particular kinds of traffic or material. the manner that the car did would be a success for particular kinds of traffic or material.

15. Did they try this truck with billet-wood? Yes; there was a trial with billet-wood.

16. Do you know with what result? Yes; it was not very successful; it was long billet-wood, and not likely to be a success without some one assisting the wood to fall—shifting it.

17. Is it true that on one occasion they had to use one of the jacks to tilt the car over? I do not know; I did not see it.

18. Was the car disabled in any way after the test? Not to my knowledge.

19. In your minute of 23 April you say:—"I have already reported on these cars. * * * *

I could use a few of this style of car at once for traffic purposes, and would like to be supplied." Will you inform the Committee what class of traffic you purposed using these cars for? Billet-wood. 20. Is it not a fact that they had proved a failure with regard to billet-wood? Certainly not.

unsuccessful without assistance to shift the load, but it was a load of very long billet-wood.

21. Was there any test, after that test that was unsuccessful, to guide you in forming an opinion that this car would be suitable for the billet-wood traffic? No. My own sense of what would assist the unloading of the truck told me that a truck canted in this way would permit of unloading much easier than an

ordinary truck. 22. You have admitted that the test made was not successful with regard to billet-wood? Yes; but it was not ordinary billet-wood; it was very long billet-wood, and a very little assistance to this wood would

have caused it to fall out.

23. Is it not a fact that it took a number of men to unload the billet-wood after the test was made—to unload the balance? I do not think it was all unloaded—not when I left.

24. I mean after you left? It may have.

25. Mr. Midelton, in his report on page 11 of the printed papers, when asked whether this car could be made available, states:—"I have twice tried to use dump-car for coaling locomotive engines, but it will not clear Darling Harbour Wharf platform, so I am told. It has no side-buffers, and the centre draw-bar and buffers do not match our stock; considerable alteration will have to be made if we are to use it regularly in traffic, and enough scheming required to construct a new car." Was your attention directed to that report of Mr. Midelton's? No.

26. Was Mr. Midelton the officer at that time supposed to give reports upon any alteration of the rolling stock?. He was Acting Locomotive Engineer at that time, and as such he would report to the Commis-

sioner as to alterations in rolling stock.

27. Before the order for 200 cars was given to Carson Woods & Co., were you asked to report whether it would be advisable to give the order? No.

28. Is it usual to give such large orders for a new kind of rolling stock before the article is properly tested? I cannot say; I have never been asked to report upon such an order.

29. Is it not usual for all the officers to be asked to report, and to a great extent are not the heads of the Department guided by the report of the officers as to whether it will be advisable to order a large number of cars? I cannot say.

30. Have you heard of any other case? Not that I know of.

31. None of the officers have been called upon to report on any new idea with regard to rolling stock? I can only say that I have not.

32. You were not asked to report before this large order for 200 cars was sent? No. All the reports

I have made are in these papers.

33. In a minute later on, number 33, you state:—"I beg to refer the Commissioner to his minute paper 33. In a minute later on, number 33, you state:—"I beg to refer the Commissioner to his minute paper 83-21,488, and to inform him that the lately imported dump car referred to therein cannot be made use of until the draw-gear is altered and side-buffers provided. In a conversation I had with Mr. Augustus Morris recently, he informed me that these waggons were not a success in America." At the time you wrote that minute were you doubtful whether they would be a success here, after your conversation with Mr. Augustus Morris? That was the first doubt I had on the matter. I had no doubt as to the suitability of these waggons until Mr. Morris told me that he did not think they would be as great a success as we expected; and on hearing that I wished to have the car which we had in our possession put into work, so that we could see whether any improvements could be made in it. That was the reason of my minute of the 14th January, number 38.

34. Further on you say, "It is, however, very important that this car should be brought into use at once in order that any defects may be noted and corrected in those now being imported." Of course it is evident you had a doubt, and thought it wise, before ordering such a large number, that this one should be properly tried, so that you should see in what way it need be altered? Yes, from what Mr. Morris said.

said

35. That shows clearly that the success, so far, was not so satisfactory as it should have been; was anything done in regard to your minute of 14/1/84? No, nothing further was done that I am aware of.

36. No action was taken on your suggestion that the car should be tried again, to see what alterations should be made in it? It has never been brought into use.

37. Where is the car now? I think it is on a locomotive siding.

38. Has anything been done with it since the last test with billet-wood? Not that I know of. 39. Could it be used at all on our lines? Yes.

40. Is it true it is too wide? I believe it is too wide.
41. I would like to call your attention to page 11. You know Mr. Bourn. Mr. Bourn states in his report:—"I beg to report that previous to the dump-car being allowed to be used by the Traffic report:—"I beg to report that previous to the dump-car being allowed to be used by the Traffic Department it is necessary that it should be taken to pieces and reconstructed, as at present it is too wide and will not pass the platforms; it also requires to be fitted with buffers and draw-gear to suit the present rolling stock now in use." You were not aware that it is too wide? No, I was not at first.

42. You state that the use you wanted to make of these cars was for billet-wood? Chiefly for billet-wood; for other kinds of traffic also; but chiefly for billet-wood.

43. Do you think you could make use of 200 of these cars for billet-wood? Hardly for billet-wood alone.

44. What do they carry? 18 to 20 tons. I think about 20 tons of 2,000 lbs. a ton; about 19 tons.

45. Are your consignments large in regard to billet-wood; is it likely that one person would order 20 tons of billet-wood? Some people would.

46.

46. How many would? That is a difficult question to answer; I suppose perhaps half of the people who W. V. Read, get billet-wood. Esq. get billet-wood.

47. Is it not a fact that a great number of purchasers at Darling Harbour find a difficulty in disposing of 26Aug.; 1884.

4 or 5 or 6 tons? I do not know that they do; not the large dealers.

48. It has not been proved yet whether these cars would be a success with regard to billet-wood? think they would be a success in the unloading of any rough traffic which can be thrown out at once on to the ground.

49. Could you unload billet-wood anywhere on the line, on any portion on the side of the line—say at Darling Harbour? We have had to do so.

50. With these dump-cars? Part of it would have to be hand-thrown out.

51. How long do you think it would take to throw out the balance? I think the balance would not take any longer to throw out than if the half of it had been unloaded in the usual way before-hand. 52. How do you propose to weigh the wood that would be loaded in these dump-cars? On the weigh-

bridge.
53. With the small weighbridges? Yes. 54. Do you think you could weigh properly with those long trucks? Yes. 55. In what way? By weighing one end at a time.

56. Have any complaints been made by the general public in reference to the weights? I have received none

57. What length are the present small weighbridges? 13 feet.

- 58. And you think you could weigh these cars on these weighbridges? Yes; we do weigh long trucks on them now.
- 59. One end at a time? Yes; if the line is perfectly level it weighs as correctly as if it were a long

weighbridge.
60. Was it understood that these cars were to be made in the Colony? I do not know anything about the contract or the agreement made for the building of them. I had no knowledge of it.

61. I see by a minute of yours, on page 11, which I have read, that you were under the impression they were to be imported? I do not know how I came by the knowledge that they were being imported; it may have been hearsay, but as far as I can remember it was not through any official communication.
62. Do you think these cars would be suitable to run over the mountain line? If they are suitable at all

for any of the lines they ought to be suitable for the mountain line. 63. Would you have any hesitation in sending a train of them over the mountains? It would be for the locomotive engineer to say whether they were safe; if he said they were safe I would certainly send them

64. He is the proper person to say whether they are safe? Yes, it is his duty.
65. Mr. Poole.] In giving your opinion as to the suitability of these cars for particular kinds of traffic, I take it you presume, first of all, that the car is the proper width? Of course.
66. And secondly, that the couplings and buffers could be modified to suit our present system? Of

67. Assuming that the railway on which the car is to deliver its load is raised a couple or 3 feet above the cart-way, would the car then deliver its load, on being tipped, having this additional fall of a couple or 3 feet? In many cases it would deliver the whole of its load, but in some cases, with particular kinds of material which would bind, the remainder would have to be assisted.

68. I will take two or three kinds of material—say coal, gravel, and fire-wood. Under the circumstances I have pointed out, would this car, assuming it to be of the proper width and fitted with buffers and couplings on our own system, have an advantage over any others that we have now in dealing with these three kinds of traffic, coal, gravel, and fire-wood? Yes, I should think it would decidedly.

69. What is the charge for unloading traffic of this kind? We charge a shilling a ton.

70. In your opinion does that cover the cost to the Department, on the average? Yes.

71. Assuming that you had a raised railway, as I have suggested, what would be the saving to the Department, provided you charged a shilling per ton for discharging, if you had this kind of dump-cars; that is, upon the three articles of traffic I have enumerated—coal, firewood, and gravel. What would be the saving to the Department in the year as far as you can judge? I must tell you that the consignees are supposed to unload all this kind of traffic.

72. The Department does not unload? No, excepting when pressed for trucks, and then we unload in

order to get them for use.

73. So that from that stand-point there would be no saving to the Department? No, except by getting

- quickly the use of the trucks.

 74. Perhaps you will be able to give the Committee some idea, taking the transport of 1,000 tons of dead weight by the ordinary trucks carrying 5 or 6 tons, what would be the saving to your Department in all, owing to the difference in the dead weight of the two descriptions of trucks;—as near as you can state would there be any? Yes, there would be a saving. I suppose there would be a saving of about 25 per cent. in the dead weight of the cars. The tare of these dump-cars is about 25 per cent. less per carrying weight than that of the ordinary
- 75. Mr. Garrard.] Did you make any report to the head of your Department after the trial of this car? I did not; the Minister for Works and the Commissioner were there when it was tested with billet-wood.

76. You were not called upon? No.

77. Who was the Minister for Works then? Mr. Wright.

78. Was the trial of these two different classes of goods, gravel and firewood, at the same time, or two separate trials at different times? The gravel was a special trial. The Minister or the Commissioner were not present when the gravel or the ashes were tried; I think it was only at the trial of the billetwood that the Minister was present.

79. In your opinion the cause of the want of complete success in the firewood trial was owing to the extreme length of the wood? Yes; it bound a little, and there was not sufficient fall for it to get

80. What was the difference of level between the railway and the roadway where the trial took place? 3 inches only.

W. V. Read, 81. Mr. Chapman.] Under whose superintendence did the trials take place? Under the locomotive engineer.

82. What is his name? Mr. Midelton was acting at the time.

26 Aug., 1884. 83. Mr. Midelton, then, will be able to give us the information we require as to these trials. You seem to be doubtful about it? I think it was under the locomotive engineer. I had nothing to do with the

84. You spoke of weighing these long trucks one end at a time—weighing one end and then the other? We have to weigh them that way, and I see no reason why the weight should not be correct to a pound if the line is level.

85. Have you any idea when the dump-cars were ordered in the first instance. You admitted you were consulted about them? I have already said that all my reports on the dump-cars are in the printed papers, and my opinions were formed after reading the reports of different railway men in America which were highly favourable; and I stated that it would be advisable to try a few of them. That was all I had to say

86. And the few were not tried before a large number were ordered? Only one was tried.

87. Was it approved of generally? In what way do you mean? 88. You had a sample one, and it was tried and approved of so much that two hundred others were

ordered? I know nothing about the ordering of the others.

89. Were they ordered before the sample one was fairly tested and approved of? No other test was made than those I have spoken of. This sample one had been in the Colony some months when Mr. Morris told me they were not such a success in America as we had supposed; and then I asked the Commissioner to have the one we had in stock put into work, in order that we might see if there were any defects in it.

90. Was that done? It has not yet been done.
91. And the others were ordered? The others had been ordered, and were then on the way. Some of them had arrived when Mr. Morris spoke to me. 92. Had they all arrived? I do not know.

93. Where are they? I believe they are at Darling Harbour.
94. What is being done to them? I believe they are being fitted.

95. You do not know that of your own knowledge? No, I have nothing to do with them. 96. Who would be able to tell us about that? Mr. Scott.

97. Mr. Suttor.] Are we to understand that this sample car has never been fitted? It has not been fitted yet.

98. And beyond making two or three tests the Department had very little knowledge how to work it?

They had also the reports of railway men in America.

99. You said that, comparing this dump-car with the cars now in use, there is a saving of 25 per cent. in

the weight of the car? Yes, this car carries a very heavy load in proportion to its weight.

100. Would it last as long as the ordinary cars? I am not in a position to say.

101. The saving of weight might be at the expense of the length of service of the car? It might.

102. Under the present system the trucks discharge direct into the dray? Yes.

103. The dump-car would discharge on to the ground, and the load would have to be lifted into the dray? Yes.

104. That would involve great labour to the consignee? Yes, unless the discharging place were made a little higher than the roadway.

105. That would involve considerable alteration in all the platforms? Yes.

106. You would have to raise the railway 4 or 5 feet or lower the roadway? Yes; that is the way it is done in England.

107. Do you think the advantage to be derived from the use of this dump-car would justify the alteration?

Only in places where there was heavy traffic, 108. Could these alterations be made without interference with existing arrangements? Yes, in many

places.

109. In what way would you make the alteration—by raising the siding? By raising the siding or taking advantage of the land being lower at the side of the line.

110. Mr. Sutherland.] Is it not on your recommendation that all rolling stock required for the traffic is ordered? Not entirely.

111. On whose recommendation is the rolling stock used by the Traffic Department ordered? I furnish estimates of the probable requirements of the year to the Commissioner, and they are either acted on wholly by him, or augmented, or decreased.

112. But the only recommendation the Commissioner gets is yours, upon ordering this class of rolling

stock? I fancy the locomotive engineer also reports.

113. Do I understand that the locomotive engineer reports upon the number of the various classes of vehicles required for your traffic as well as you? I believe my reports are submitted to him. I have only reported once in my present position in respect of a large contract, but there have been other reports when vehicles were specially required. The present contract is for five years. In my report I state the probable number of the different kinds of vehicles I shall require.

114. And they are ordered for a five years contract? Yes.

115. Was the five years contract ordered before these dump-cars were ordered? I believe it was, but I

do not know the date on which these dump-cars were ordered.

116. Had you made any allowances then for the use of these dump-cars to prevent you requiring so many of the other classes of cars or trucks; 200 of these dump-cars is a very large number. What I wish to know is, have you made any calculation of the number of the other classes of trucks that would not be required if these were ordered and used? I do not think any alteration has been made in my estimate.

117. Then from what I understand you to say the order has been given for the five years' contract upon your estimate? I believe it has.

118. And no deduction has been made from that order on account of these 200 new class cars; being

ordered? I am not aware that any alteration has been made.

119. You have stated that you have already recommended that at many suburban stations the sidings should

should be raised to suit this class of car;—did I understand you to say that? No; I should recommend W. V. Read,

120. Then you have recommended the use of staiths for coal purposes? Yes.

121. And what other purposes besides? Coal chiefly.

122. At what stations have you recommended that staiths should be erected for the coal traffic? I have 26 Aug., 1884.

recommended them generally, but Newtown is the station I have chiefly in view.

123. That is for what we term mountain coal, I presume? Any coal.

124. Is it not the mountain coal that is at present coming to Newtown?

125. Are you aware that the Illawarra line will alter the whole of the coal traffic, as soon as that line once gets to the coal properties that are on the line? I have no doubt the suburbs will be nearly altogether supplied with Illawarra coal as soon as the railway is open to the mines.

126. Do you think that one truck of coal will come to that station from the Illawarra line? Yes, certainly

127. In what way will the trucks be brought to the Newtown station from the Illawarra line? They will be brought round by Macdonald Town from the junction.

128. Then they will come into the Sydney yard and go back to Newtown? No.
129. Where will you get them to cross the line—in the Eveleigh yard; the Illawarra line comes right into the Eveleigh yard, and at a lower level, I believe, than the Newtown yard? No; the Illawarra line

is on a level with the Eveleigh yard.

130. They would come through the Eveleigh yard and be shunted across the line to be delivered at Newtown or any other station further on? They would be shunted on to the sidings at Eveleigh, and then

taken out to the suburban stations.

131. Has there been any other report that you know of with reference to erecting staiths for the delivery of coal or other produce of that kind? None that I know of but my own report.

132. Do I understand that you had in view, when you made this report, that staiths were to be erected at all these places for the delivery of goods that were to be carried by this class of trucks? I had it in view that it would be better for the Department to get possession of their trucks quickly, to have staiths at all places where quantities of coal were unloaded, and that if we had these staiths these trucks could then be well and profitably used.

133. Then I see from your report, and from your evidence now, that all this depends upon certain things being done? Of course, as I have shown in my report, it is only under certain circumstances that these

trucks can be fully utilized.

134. And so far as you know now this truck has never been attempted to be used anywhere except these two or three trials, where the parties that sold and the parties that were the buyers were present? It has never to my knowledge been used for traffic purposes; it has only had these trials.

135. Have you not lying in the Eveleigh yard now some hundreds of trucks ordered for coal purposes, and for the permanent way people in repairing, that have never been used? I think not.

136. Have you any personal knowledge that there are some hundreds—I counted 150 myself when I was coming down in the train a fortnight ago—I do not know that they are in the yard now, but I made inquiries, and I was informed that they were there and never had been used? If such is the case I am not aware of it: I do not think it is so. not aware of it; I do not think it is so

not aware of it; I do not think it is so.

137. Is it within your power, as Traffic Manager, to know what rolling stock you have for your use, or is it not your duty to know and see what rolling stock you have in use, and that which is not in use? Of course I do see that all the trucks that I have are kept fully employed, and that they run as much as possible. I fancy the trucks you speak of must be trucks marked off for repairs.

138. These trucks I refer to have never been used; they are new trucks that have never been used? I have made for the patent coupler trucks which were made for the

do not know whether the trucks you refer to are the patent coupler trucks which were made for the permanent way department. Some of these may be idle for a few days, when the permanent way men are not at work, but I have no knowledge of them.

are not at work, but I have no knowledge of them.

139. What do you refer to as the patent coupler trucks? There is a number of trucks with patent couplings, or a new kind of coupling that will not connect with the ordinary trucks, and they are being used by the permanent way branch; it may be these that you have seen standing at Eveleigh.

140. Do you say the patent couplings will not work with the other rolling stock that you have? Not where they will not couple on to the other trucks; they must have a special coupling.

141. Have you not some hundreds of them, so that you could send dozens of trains into Sydney with them alone? You cannot keep all of a particular kind of truck together; in different consignments they must get mixed up with the other trucks generally in use. We tried to work these with our other trucks, but we found we could not well do it. but we found we could not well do it.

142. Have you not tried to work them alone and were unable to do it—that is, unable to do it with safety to the public;—have you not worked these trucks without mixing them with other trucks, and found it was unsafe? No, we have never had any accident, or anything, with any of these trucks.

143. I do not ask whether you have had any accident; I ask whether you felt it unsafe to work them for traffic purposes? No, I have not found it unsafe.

trainc purposes? No, I have not found it unsate.

144. Do you recollect having them working in train loads by themselves without mixing them—keeping them going to certain stations? Yes, I had a train load of them working; when we were short of trucks I got them from the engineering branch, and we worked them between Emu Plains and Sydney.

145. Have you had any report from the men who were working them that they were unsafe? They reported that at Emu Plains, on the curve going into the siding, the couplings came off.

146. And did you work them for traffic purposes after that? I worked them on straight lines—on the level lines

level lines.

147. Have you ever sent any of them over the mountains for traffic purposes, or for any purposes? The

permanent way branch have used them over the mountains.

148. Have you ever had them going regularly to South Creek, a train load of them, loading with firewood and hay from that station? I had a few of them running between Sydney and the wood stations, but found, on account of the difficulty in getting people to load them for Sydney only, that we had to

discontinue using them in this way.

149. You think you only worked them to Sydney—a train load of them by themselves? We worked them in with other trucks, but the truck with which they were coupled to the ordinary trucks had to have a special coupling.

26 Aug., 1884.

6

W. V. Read, 150. What was the special coupling you refer to, that you had to use to unite these two different kinds of trucks? The special coupling had to have a link on it, the same as the others, so as to couple it to the ordinary truck.

151. Did you at any time recommend the construction of 200 of these trucks with the special coupling?

No, I think not.

152. Is it usual, or ever done, to order any number of trucks without your recommendation? Yes; trucks for permanent way purposes are ordered by the Engineer for Existing Lines, and those for locomotive purposes by the Locomotive Engineer.

153. They were not intended for traffic purposes at all? I believe not. 154. We are speaking of the patent coupler trucks? Yes.

155. Do you know how many of these trucks are now in use and ordered, with the patent couplings? I think 250 were ordered for locomotive and permanent way purposes, and about 200 of these have been

supplied.

156. And you believe they were ordered by the Engineer for Existing Lines for use on the lines? I do not mean to say that the Locomotive or Permanent Way Engineers ordered trucks with the special All I do know is that the Locomotive Engineer and the Engineer for Existing Lines asked for couplers. trucks for their special use.

157. Who constructed these trucks? Hudson Brothers.
158. Ohairman.] You stated just now that you did not think it advisable to run different classes of trucks together—that you thought it better to keep the new class of trucks together? Yes, on account of the couplings.

159. Is it not a fact that auction sales of wood are held daily at Darling Harbour? Yes.

160. Do you not think it would greatly interfere with the competition if the auctioneers were unable to submit less than 20 tons for competition? It is a matter of opinion. In Victoria they will not allow any sales on the railway premises.

161. You have always allowed the system here? Yes.

162. Do you not think it would greatly interfere with small buyers if they were compelled to come down to the harbour and purchase 20 tons. Would it not put the monopoly into the hands of the large dealers? to the harbour and purchase 20 tons. I think a great many buy 20 tons now.

163. Is it not a fact that many private people come and buy? Yes.
164. Do you think they would be able to buy if they had to buy 20 tons? There might be a difficulty

165. You admit that as far as the Department is concerned it gains nothing by throwing out the billetwood, except the speedy use of the trucks? Yes.

166. All the unloading is supposed to be done by the consignees? It is supposed to be, but when we are pushed for trucks we have to unload ourselves.

167. The regulation is that if they do not unload within a certain time they are liable for demurrage?

168. You stated in reply to a question that it would be only in certain places that you could erect staiths for using these dump-cars? Yes.

169. Could you erect them at Darling Harbour? Not where the sales are at present held.

170. Is it not a fact that all the wood now comes to Darling Harbour? Yes, the wood for Sydney is all

consigned to Darling Harbour at present.

171. Auction sales are held at Newtown? Yes.
172. So I presume the same objection would apply there with regard to small buyers as would apply to

Darling Harbour? Whatever applied to Darling Harbour would apply to Newtown.

173. Mr. Suttor.] What is the greatest weight carried in any of the trucks now in use? 15 tons. have long trucks which we put 15 tons on.

174. Chairman.] What is the weight carried in the usual trucks? About $6\frac{1}{2}$ or 7 tons.

175. Mr. Suttor.] On how many wheels? Two pairs.

176. How many are there to these special dump-cars? Four pairs.

177. Do you think you would be able to run trucks like that on any of our lines? Yes; they are no

longer than the American cars, and the wheels are on the same principle..

178. Mr. Poole.] What is the weight of the ordinary 15-ton trucks? About 11 tons.

179. Mr. Suttor.] You say some of these trucks with special couplings have been ordered by the permanent way department? No, I do not say that. The permanent way department ordered trucks, but not, so far as I am aware, with patent couplers.

180. The couplings are a patent? Yes.

181. Who are the patentees? Hudson Brothers, I understand.

182. I understood you to say that on the Emu Plains siding you found these couplings became detached? Yes.

183. Who were the inventors of these couplings? Mr. Cowdery and Mr. Thomas I believe.

184. Hudson Brothers are now in possession of the patent? Yes, I think so.

185. Did Mr. Cowdery order these trucks? The locomotive engineer and the permanent way engineer ordered trucks, but not, so far as I am aware, with the special couplings.

186. In what Department is Mr. Thomas? Mr. Thomas, I believe, is in the Engineer-in-Chief's branch.

187. He would have nothing to do with ordering the trucks? No.

188. The recommendation would reside with the permanent way department? As I before observed, the locomotive and permanent way departments required and ordered trucks for their special use, but I am not aware that they ordered them with the patent couplers.

189. I understand you to say that in running on to the siding at Emu Plains the couplings became detached? Yes, round a very sharp curve.

190. What is the radius? I believe it is sharper than any other on the line.

191. What is the radius? And this couplings became a company of the mountains? 8 chains.

192. And this curve is somewhat sharper? Yes, I believe it is.
193. Are they still running these trucks on the mountains? No, I do not say they are running them on the mountains.

194. For your traffic you did not run them on the lines where the sharp curves are? No.

Mr. W. Scott

27 Aug., 1884.

ON THE PURCHASE OF RAILWAY ROLLING STOCK.

195. Is the permanent way department running them on the mountains where there are sharp curves? W. Y. Read, I do not know whether they have any working on the mountains.

1 do not know whether they have any working on the mountains.

196. Mr. Sutherland.] Is it not a fact that they have uncoupled in the Sydney yard in shunting, and that your men have refused any responsibility in putting them out with any goods? No report of that kind has been made to me, and I have not heard of it; I ought to know of it if it were so.

197. Mr. Poole.] With reference to the sharpness of the curve, the trucks will go round safely;—does not that depend upon the wheel base? Yes, the closer the wheels are together the sharper the curve may be.

198. That is the reason why bogic carriages are used for long trucks? Yes.

WEDNESDAY, 27 AUGUST, 1884.

Aresent :--

Mr. CHAPMAN,

Mr. POOLE,

Mr. TEECE.

SYDNEY SMITH, Esq., IN THE CHAIR.

Mr. William Scott called in and examined:

199. Chairman What position do you occupy in the Railway Department? Locomotive Engineer. 200. What are your duties principally? The supervision of the whole of the rolling stock and the whole of the men connected with the Locomotive Department.

201. Have you seen the dump-cars? Yes; on Monday I went down to Darling Harbour and saw the

cars being put together.

202. On what date did you first see the first dump-car imported? Shortly after my return to the Colony after leave of absence-somewhere about June, 1883.

203. Were you called upon to report regarding the suitability or otherwise of cars of this description? No.

204. Had you anything to do with the ordering of these dump-cars? No; it is no part of my duty to give the orders for vehicles—the Commissioner always does this.

205. Were you in charge at the time the trials were made? I saw some of the trials.

206. What was the car loaded with when tried? With ashes when I saw it.

207. Were you called upon to report after the trial? I think I was asked some questions; I was asked for a specification.

208. Do you consider the result of the trial satisfactory? For certain purposes it would be satisfactory; not for general traffic.
209. Did you consider the trial with ashes satisfactory? Yes, for dumping over a bank.

210. At the particular spot where it was tried did you consider it satisfactory at the time? Partly. It had every chance; it was on the edge of the embankment, and there was nothing in the way; it was at Darling Harbour, just on the edge of the bank. 211. Did the car empty itself? Not quite.

212. Do you know of any other trials being made? There may have been other trials, but I was not

present.

213. What do you think of the workmanship of the cars? The workmanship is fair, but not to be compared with our Colonial work—not so good as our Colonial work.

214. Do you think these cars would be perfectly safe to work over the mountains? No, not as the first

215. Has any alteration been made in those imported which would make them suitable for the mountains?

Yes, the alterations to be made make them much safer.

216. Do you think they will be perfectly safe to run over the mountains? I do not see any objection to them now, when the bogies are coupled with links.

217. Do you think the workmanship is perfectly safe—that there is no fear of them turning over in transit? I do not think there is.

218. Do they interfere with any of the platforms? No; they will clear all our platforms; I made out a sketch to confine them to width.

219. Mr. Poole.] Not to exceed 9 feet?

 ${
m Yes}.$

220. Do you think the workmanship of these cars as imported is equal to our Colonial work? No.

221. If cars were made with the same workmanship in this Colony, do you think you would accept them? We are to accept them subject to inspection when erected.

222. Would you accept them if made here? Yes, if the work was sound.
223. You say the work is not so good as Colonial work. What I want to know is, whether, supposing cars were made similar to this pattern, which these were made by—that is, the one in Sydney—supposing there was an order given to any Colonial firm to make 200 cars for our lines, would you accept the workmanship;—do you think the workmanship would be accepted if it were no better than this? No, I should not; but in the specification I have the power of rejecting any work I do not consider safe in the 200 dump cars.

224. If the cars imported are of the same workmanship as the pattern car, will you be bound to accept them under the agreement? No; there is a clause in the specification which deals with that.

225. Do you think these cars can be used unless the line is raised above the platform? They will suit our coal-shoots at Eveleigh, and there is another very suitable place at Eskbank.

226. Are there any other places? Those are the only places that I recollect now.

227. What quantity do you estimate you are using at Eveleigh? I could hardly answer that question.

228. How many tons a day? I really could not answer that question just now.

229. That is with regard to the coaling of the engines? Yes.

230. Do you think that for general purposes—for general traffic, such as wood and coal—that these cars could be used (say) at Darling Harbour, on the ordinary lines? Really I could not say; that is a matter more for the Traffic Department.

231. You cannot give an opinion as regards the other traffic? No; the Traffic Manager would answer that.

Mr. W. Scott. 232. On the 16th of January you state in a minute :—" Under these circumstances I cannot recommend 27 Aug., 1884. that it be used, as the contractors who have tendered to build this pattern might make it cause of complaint." That refers to the one now in use? That had a central draw-bar, and of course the frames would have to be re-arranged for side-buffers.

233. I should conclude from that minute that you did not wish to have any alterations made in the pattern, except side buffers and chains? That one remains there as the pattern waggon to be worked to-

the first one, with the alterations to be made to enable them to work with our other stock.

234. They are to be made according to that pattern? Yes, with the exception of the tracing that was sent, to have side buffers and draw chains.

235. What kind of wheels are there on this car? Chilled cast-iron.

236. Would you recommend that sort of wheels for the mountain traffic? No, it is not advisable in my opinion.

237. Are the wheels for the 200 dump-cars that are being imported made of chilled cast-iron, the same as

Yes, they are.

238. What kind of wheels is used on the rolling-stock generally? Wrought-iron centres with steel tires. 239. Do you not consider that they are far safer? Yes, they are safer and more durable; but I do not want to convey that these cast-iron wheels are unsafe; they are merely shorter-lived than those with steel

tires;—sure to live for a certain time.
240. Would you recommend these wheels for our purposes? No; I would recommend the wrought-iron

centres and steel tires in preference.

241. Had you been called upon to report prior to the order for 200 dump-cars being sent, would you have recommended that the order should be given for cars with these wheels? No, I would not. But wrought-iron wheels are much more expensive than chilled cast-iron wheels.

242. Have you ever recommended chilled wheels for any of our stock recently? No. We have had the

same wheels imported with our American carriages.

243. Mr. Poole. Chilled cast-iron wheels? Yes; and they have run considerable mileage. 244. Chairman. You think the others are more durable? Yes.

245. Do you think the increased cost for English wheels—the wheels under our ordinary rolling stock—is repaid by increased durability? Yes, 246. Is it not more than repaid? Yes, it is an everlasting wheel. 247. You can renew the tires at any time? Yes.

248. Can you renew these chilled cast-iron wheels in any way? No; we pull them off when they are

worn out, and have done with them.

249. If there is anything wrong with them what do you do with them? Put them on one side and break them up. The others will stand turning up five or six times; then the tire can be removed and a new tire put on; the wheel is practically everlasting.

250. For general traffic, do you think the Government will be able to weigh these trucks on their small weighbridges? Not on the small weighbridges. They could weigh one end at a time, which would suit

all practical purposes.

251. Do you think that is an accurate way of weighing? No, not quite, but nearly so. 252. To weigh correctly you think it will be necessary to have larger weighbridges put up? Yes; I believe there is a large weighbridge in store now that will take a long car.

253. Have any been put up on the line? No, none that I know of; but if the necessity arose no doubt

they would.

254. You think that before they can weigh accurately they will have to have these large weighbridges put up at different places? Yes, to weigh accurately and with dispatch, because it takes much longer to weigh one end at a time. However I do not think that is material as regards those dump-cars, for we are making long waggons of another pattern now.

255. We have some of these large trucks in use now? Yes, G trucks—a number of them; 28 ft. 6 in.

long in the body I think.

256. What are they used for principally? General traffic. They are very handy trucks for many purposes.

257. Could you use these dump-cars for general purposes? I do not see what is to prevent it.

258. With the dumping principle I mean general traffic for dumping? I do not think they will be found

259. Have you seen Mr. Carson Woods' letter of the 6th August, page 6, number 14, of the printed papers. The particular part of it I refer to is the sixth paragraph:—"The Department, I understand, papers. The particular part of it I refer to is the sixth paragraph:—"The Department, I understand, wants rolling stock, and no better or finer car for any freight purpose can be had than the patent screw lever dump-car." What is your opinion about that;—do you think the representations made by Mr. Woods are correct? No, I do not. Of course the Traffic Manager is in the best position to answer that question; but I do not think, myself, that they are answerable for general purposes—that is, for dumping purposes; but they would, no doubt, make a useful traffic car, as they carry a large load with a very small tare.

260. I forget whether I asked you whether you were called upon to report before this order was given for 200 dump-cars? No; I think the papers show that.

261. Is it not usual, when ordering rolling stock, for you to be referred to? It is in some cases: in most

cases in fact, but not all.

262. Have you ever known it to be departed from; that is, for a large order to be given without referring to you beforehand—an order amounting to something like £38,000 for a new idea? No; but others would be quite as capable of judging of the merits of the car for traffic purposes as I would.

263. Mr. Poole. In reference to the workmanship of the cars, will you be good enough to explain to the Committee wherein the inferiority consists, as compared with ordinary Colonial or English work? The iron work is your light, and your poughly get up.

ron work is very light, and very roughly got up.

264. Do the Committee understand from you, as locomotive engineer, that work of a similar quality to that in the pattern car, by which these other 200 are to be made, if made by a Colonial firm, would be rejected? I do not know how to answer that question.

265. I will put it a little plainer. Is the workmanship in this pattern car—not only the workmanship but the size and strength of material generally—up to the standard of what you require from Colonial

ż

266. The wheels of these cars are block wheels? Yes, cast-iron chilled wheels.
267. What is about the length of this dump-car? Somewhere about 28 feet; I could not say to a few

268. And the length of our new G cars is about the same? They are 28 feet 6 inches.
269. Irrespective of the dumping business, looking at these cars as a whole, do you consider them as well suited for ordinary traffic as our new G waggons? They are made of lighter timber and lighter struts than ours, but they will carry the same weight.

270. I was speaking more particularly with respect to the safety of travelling. Suppose they are loaded with any kind of merchandise that would have to be unloaded by hand under any circumstances, are they as well fitted for that kind of traffic as our new G waggons? No.

271. Do you think, taking our mountain line as a test, that they are as safe for running purposes, loaded in the ordinary manner with ordinary mcrchandise? I do not say they are unsafe.

272. Do you think they are as safe—have they the same maximum amount of safety as our own stock?

No.

273. How many of the long weighbridges that you have alluded to are in stock? There is one, I know. 274. Is it of English make? No, American make.

275. Was it imported with these cars? No.

Was it imported as necessary with a view to using these cars? No.

276. Was it imported as necessary with a view to using these cars? No.
277. The Chairman has asked you whether, owing to your position, you are as a rule called upon to report upon all supplies required for your department? Yes, rolling stock in particular.

278. And in this particular case, where the Government or the Commissioner thought it right to make a departure from the standard stock used, you were not asked to report? No, not until the matter was arranged; but precaution was taken that I should have the power of accepting or rejecting the cars if not up to standard.

279. Can you give the Committee any idea what it will cost to remodel this pattern car, and make it suitable for our traffic purposes? Perhaps £25.

280. You have noticed the bogie frames on the wheels? Ycs.
281. Do you consider them strong enough—the iron bogie frames? They are not so strong as we should make them, but for a load of 9 tons I think they should be able to carry it.

282. That is a total weight of 18 tons upon the two sets of bogie frames?

283. What is about the difference in percentage of strength between the bogic frames of the pattern car and our own bogic frames? I have not measured them, but I should say they are 50 per cent. lighter than our new bogie waggon frames; but at the same time I think ours are stronger than what is really necessary; but it is better to err on the side of safety.

284. Then you are simply carrying dead weight that is of no use? We think of reducing the weight.

285. With respect to their dumping properties, I think you stated, in answer to the Chairman, that the trial you saw was made when the car was required to discharge a load of ashes at the head of Darling

Harbour bank? Yes. 286. And in that case it did not discharge the whole of the load? No; it had to be shovelled out, part

287. And there are two positions—at Eveleigh and Eskbank—where you think these cars could be used?

 \mathbf{Y} es. 288. Taking the position at Eveleigh where you think the dump-car could be used to advantage, what would be the difference between the lower coaling road and the main line siding in level vertically, in order to work and allow your coal-staith to come in and make the dump-car fairly useful? I think it is

11 feet we require for our tenders to load coal from small trucks into our tenders. 289. 11 feet between the lower road level and the top of the coal-staith, and then from the top of the coal-staith to the main line siding level, how much do you require? I think 3 feet ought to do, but more

if we could get it.

290. As far as you have seen of the dump-cars now landing, out of which these 200 cars are to be made up, it is of no better class in point of workmanship than the sample car? No; in fact there is some of

it there I will have to reject—some of the iron work.

291. Altogether, in summing the whole matter up, to your mind it will not be so satisfactory to the Department, taking these cars in the way they are now imported, as if they had been made in the country?

No. Of course we could supervise the work better here.

292. Mr. Chapman.] Whose duty was it to superintend the unloading of this car and to report upon the adaptability of it? I was not there.
293. Have you any idea whose duty it ought to be? That was a question which Mr. Carson Woods himself answered. The waggon did not exactly belong to us then.

294. Prior to the ordering of these 200 cars, was this dump-car tested by any of our Government employés? I really could not say whether there was an official test. Mr. Carson Woods invited a few persons to be present.

295. And without a test of its adaptability for our use on the railways 200 cars were ordered? I think the Minister for Works and the Colonial Treasurer were present themselves. I was not present.

296. Under ordinary circumstances would it not be your duty to report upon the adaptability of a dump-car or any other vehicle to be used on our railways? Yes, if I was asked to do so. The car did not belong to us; it was the property of Carson Woods & Co. at the time.

297. But you were about ordering 200 of them? I was not aware of it.

298. You are not aware that anybody was ever called upon to report as to the adaptability of this car for our railway purposes? I am not, but they may have been.
299. If a report were required, are you not the party that would be called upon? It may have been done during my absence. This trial was made before I resumed my duties after returning from leave of absènce

300. Who was acting for you? Mr. Midelton.
301. These dump-cars are being put together in the Government sheds? On Government land at Darling Harbour.

302.

MINUTES OF EVIDENCE TAKEN BEFORE THE SELECT COMMITTEE

Mr. W. Scott. 302. Was that arrangement a portion of the specification, that the Government should supply the contractors with workshops? I know nothing about the arrangements-nothing more than what is in the 27 Aug., 1884.

papers.
303. If a gentleman, a manufacturer in Queensland or New Zealand, were to attempt to supply cars according to our specification, would he be allowed to put them together in the Government sheds? By making an arrangement with the Commissioner he might; the Commissioner would have the power to grant that; but I presume rent would be charged, and it would be better than having the shed idle.

304. It is no portion of the specification that they should be allowed that advantage? Not to my knowledge.

305. Does it come under your province to arrange couplings and so forth? Yes, to a certain extent 306. Do you know anything about a new coupling that has been patented, and a large number of them supplied to the Government? Do you mean what is called the Cowdery-Thomas coupling?

307. Yes. Was that approved of by you? No, I never did concur in that coupling.
308. Are those couplings being used now? Yes, we have a number of them in use in coal trains from Darling Harbour to Redfern yard, and a number on a ballast train.

309. Are there any complaints with reference to them? There have been several complaints of the difficulty of coupling them up with the ordinary stock.

310. Has it ever occurred that they have uncoupled themselves when not required to do so? It has been

reported that they have done so, but I have not seen it myself.
311. Chairman.] These dump-cars are being put together at a place called the Atlas Company's Works? Yes.

312. Does that belong to the Atlas Company now? No; I understand it belongs to the Government; it has been resumed for railway purposes.

313. Did you not understand that these dump-cars were to be manufactured in the Colony? That was my impression.

314. Was that not part of the agreement? I understood so. My impression at the time they were ordered was that they were to be built in the Colony.

315. Do you know why that agreement has been departed from? I do not.

316. You say all the cars are now being imported? Yes.
317. What use can you apply the sample car to? We will have to alter it; we cannot use it in its present

state; it wants side buffers.

318. It is too wide, is it not? Yes; we will have to make it narrower, and put side buffers and centre

319. Mr. Poole.] I suppose you got your impression that the cars were to be made here from Mr. Carson Woods' letter to the Commissioner, of the 17th August, 1883, No. 18 of the printed papers? Yes.

320. But the whole of the work is being done out of the Colony? Yes, except the fitting together.
321. Do you know who are the patentees for the patent couplings we have been speaking of? The

Cowdery-Thomas Coupling is the name it goes by. 322. Is Mr. Cowdery in the Government service? Yes.
323. In what position? Engineer for Existing Lines.
324. These couplings are used on some ballast waggons? Yes.
325. Who built those waggons? Hudson Brothers.

326. Fitted with these patent couplings? Yes.

327. Have Hudson Brothers any interest in the patent? I could not say.

328. And these ballast waggons are used solely under the direction of Mr. Cowdery himself? Yes. 329. Is Mr. Thomas a Government officer? Yes, I believe he is.

330. Do you know in what capacity? I do not.

330. Do you know in what capacity? I do not.

331. The couplings, irrespective of who makes them, or who is the patentee, are, in your opinion, not suitable to our purposes? There is a difficulty in coupling them with the ordinary stock.

332. Supposing the whole of our stock was fitted with these couplings, would you consider that an advantage? I do not think it would be any advantage.

333. Is the cost of the patent coupling greater or less than the ordinary coupling? I should say it is more.

334. And in your opinion not so effective? No.

335. Chairman.] Mr. Midelton was in charge of your duties during your absence from the Colony? Yes. 336. Mr. Midelton says:—"As for coaling engines with the dump-car, I could not possibly agree to that, as I think it very little, if any, better than our present system with the D waggons. Should it be decided to order any of these cars, I beg to suggest that dimensions of axles, buffers, &c., be sent, to save alterations when they arrive in Sydney." He alludes to our present coal stages.

337. What would it cost to make these alterations all over the lines in the coal stages? That is a question I could not answer. Unless the ground is suitable to it it would be almost impossible to do it. If the ground is suitable, as at Eveleigh, it could be done.

338. At any other place the expense would be very great? Yes; in fact I do not know that it would be practicable.

Mr. Edward John Bourn called in and examined:-

Mr. 339. What position do you occupy? I am Inspector of Rolling Stock.

E. J. Bourn. 340. What are your duties? To superintend the manufacturing of carriages and waggons; to superintend all new work outside, and all general repairs inside.

341. How long have you been in the Government service? Nearly twenty-nine years. 342. You have seen the dump-car—the sample one? Yes.

342. You have seen the dump-car—the sample one: 1es.
343. Were you called upon to report as regards the workmanship? No.
344. On the 29th December, 1883, you wrote:—"I beg to report that previous to the dump-car being allowed to be used by the Traffic Department, it is necessary that it should be taken to pieces and reconstructed, as at present it is too wide and will not pass the platforms; it also requires to be fitted with buffers and draw-gear to suit the present rolling stock now in use." Did you write that minute? Yes. When they talked about taking it upon the line, in my position I found it was too wide. That was not reporting upon the workmanship.

was put together in the yard under my supervision.

346. What do you think about the workmanship? It is rough.

Only when having it put together; it

E. J. Bourn. 27Aug., 1884.

345. Have you examined this dump-car—the one at Redfern?

347. Is it equal to the rolling stock manufactured in the Colony? No, I do not consider it is.

348. Would you pass similar work to that, if you were called upon, for work made in the Colony?

349. Do you think it is a safe truck to use? I have my doubts about the safety of it in many points. I do not think it is safe with the provision that is made for preventing it from dumping over in transit; it is likely to drop over if anything gets out of order.

350. Do you consider it dangerous? No; I do not consider it safe.

351. Do you think there is any fear of its dumping over in transit? Yes, if any of the leverage gets out of order a little.

352. What do you think would be the result if that car were to tip over in transit? It would cause an

obstruction on the line, and if a train was passing at the time it would cause a serious accident.

353. Are the cars now being imported made on the same principle? I think there is some alteration, but I not in a position to say, not having examined them. I only got notice yesterday to superintend the putting of them together.

354. You have not seen those imported then? I have seen part of them; I was there the day before yesterday.

355. What do you think of the workmanship of those that have been imported;—do you think they are any better than the sample? Not a bit; they are very rough.
356. What do you think of the wood work? The wood work is rough.
357. Is it equal in any respect to our Colonial-made work? The timber is better in some cases than our

hardwood, where strength is not required and lightness is desirable.

358. I am speaking of the workmanship? I do not think it is equal to what we make here.
359. What weights are these dump-cars supposed to carry? To the best of my memory it is 20 tons.
360. Do you not think that, considering the extra weight this car is supposed to carry, it should be stronger than it is? No, I think it is strong enough; only that the dumping arrangement is not sufficiently safe to travel on account of its liability to jump over.

361. You do not think it is safe to travel? No.
362. It is your duty, I understand, to report upon all rolling stock, is it not? When I get orders to do so.
363. I mean before being used? Yes.

364. Were you called upon for a report previous to the order for 200 dump-cars being given to Carson Woods and Company? I have no recollection of doing any more than writing this minute.

365. Is it usual, when a new class of stock is tried for you to be asked for an opinion? Yes.
366. Has any new class of stock ever been adopted here, and a large order sent home, say for £38,000 worth, without your being asked for an opinion? I am not aware of it.

367. Do you remember any case similar to this, where a new description of car has been tried, and a large order given on the test, where you have not been called upon to report—any case excepting this? No, I do not recollect any. Nothing has been imported but these cars since I have been down in Sydney. I knew nothing about this, only that I heard verbally that 200 of these cars were ordered; I never saw any papers nor had anything in writing to inform me they were going to do it.
368. Before adopting a new class of rolling stock is it not usual to ask the opinion of the officers? Yes.

369. You say it has not been done, as far as you are concerned, in this case? No, it has not. 370. Did you understand that these cars were to be made in the Colony? I understood verbally that Carson Woods & Co. were going to deliver 200 of these cars, but that they were to be made in the

371. Mr. Poole. From whom did you understand that? I could not say who it was, but I heard it up in the Engineer's office.

372. That was simply your impression? That is all.

373. Chairman.] Do you know whether they are being made in the Colony? No, they are being imported.

374. Have any arrived? About fifty of them, I fancy, from the amount of materials lying there.
375. Where are they being made up? At Darling Harbour,
376. In what place? The old works of the Atlas Company.
377. Who do the Atlas Company's Works belong to now? I fancy that ground belongs to the Govern-

ment; I could not say.

378. Were you present at any of the trials of this dump-car? I was at one when it was tried with ashes.

379. What was the result? They tried to dump it down at Darling Harbour at one siding, and I suppose one-third of the ashes fell out; then they brought it up to another siding, and tried it down a bank, and they got about one-third out again; then the ashes ran under the wheels and had to be dug out before the car could be removed.

380. How long did it take to unload it? We did not take the time particularly.

Were there many men employed? One man and a guard. 381.

382. Was the car disabled in any way after this test?
383. There was another test? Yes, with billet-wood.

383. There was another test? Yes, with billet-wood.
384. What was the result? I think six pieces fell out when the car was dumped over.
385. How many pieces were loaded on it? It was loaded full. None went out of the It was loaded full. None went out of the doors.

Yes, off the top. 386. About six pieces fell off?

387. How did you get the remaining portion out? We got it up and left the Traffic Department to unload it afterwards

388. How many billets do you think there would be in that truck? I daresay there was about 18 tons of wood in it.

389. And it threw out about 3 cwt.? Yes.

390. Which way was the billef-wood stacked in the car—crosswise or lengthwise? Some one way and some the other.

391. Was it a fair load, as it would be loaded at a station? Yes.
392. Was the truck disabled in any way on that occasion? The doors or gates as they call them were slightly strained—not to a very great extent.

393.

·E. J. Bourn.

12

393. You considered that the tests, as far as you could gather, were not satisfactory? I reckon the test was a total failure.

394. You were not called upon to report? No.
395. Do you know whose duty it was to report? I think that was done through the Traffic Department.
396. Mr. Poole.] Are you sure about it? No, it did not come with us.
397. Who was present at the test? The Commissioner, Mr. Wright (the Minister for Works), and

Mr. Dibbs

398. Were they present at both tests? They were present at the test with billet-wood-the Traffic Manager (Mr. Read), Mr. Midelton, and several others

399. There were no further tests made of that car? Not that I am aware of I did not see any others. I believe it was once loaded with gravel, but I am not aware that it was ever tested for dumping with that.

400. You know the machinery, the canting levers, to cause the car to cant over? Yes. 401. If these levers were locked when the cars were in a horizontal position, could the car cant over? No. 402. Then, in order to obviate the danger of the car canting over while in transit, all that it would be necessary to do would be to lock the levers? Yes, lock the levers down to keep them tight. 403. Is that your principal objection to them—the liability to cant in transit? Yes, that is the principal

one.

404. Irrespective of the dumping, do you think they would be safe while travelling? Yes, if you make them so that there is no liability to go over while in transit.

405. Of course you have examined the mode in which the car is canted over? Yes.

406. To your mind the danger in using these cars, as at present constructed, is that the oscillation in transit might cause blocks that hold the car in position to shift and allow it to cant over? Yes.

407. Do you object to these cars on any other ground for use in general traffic? They would be difficult to unload because of the way the doors are hung.

408. You object to them for ordinary purposes because the side doors are top hung instead of bottom hung; and therefore heavy packages could not be slid out or in, but would have to be handled with a crane? Yes.

409. Chairman.] And the workmanship is not equal to that made in the Colony? I do not think it is.
410. Have you examined the quality of the iron-work? No, I have not examined the quality of the iron. 411. Is there any danger of the body of the car jumping off the bogie frames? It is very likely to do so in a little rough shunting. There is no king-bolt to connect them together; you cannot put a bolt in. 412. Suppose the car were going up one of our steep inclines, and there is a sudden jerk, is there a likelihood of the fastening coming out? Yes.

413. What would be the result? It would be very serious.

414. Is any of our rolling-stock constructed in the same way? No.

415. Have you examined the wheels? They are cast-iron chilled wheels.

416. What do you think about these cast-iron chilled wheels? I do not think much of them. We have the same wheels on our American cars; the wheel must be thrown away when it is worn out. It cannot be fitted with new tires like the ordinary wheels.

417. With the ordinary wheels you can renew the tires time after time? Yes; and they last for years.
418. Would you recommend the use of chilled cast-iron wheels for our own stock? No, I do not believe in them; I believe in the wrought-iron wheels.

419. Then you think the whole construction of this car is faulty? Yes.

420. It is not what you would recommend? No.

FRIDAY, 29 AUGUST, 1884.

Bresent: —

MR. CHAPMAN, Mr. POOLE,

MR. SUTHERLAND, MR. TEECE.

SYDNEY SMITH, Esq., IN THE CHAIR.

Mr. Thomas Midelton called in and examined :-

Mr. T. Mideltor. :29 Aug., 1884.

421. Chairman.] What position do you occupy? Locomotive Overseer.
422. What are your duties? The general supervision of rolling-stock—engines, tenders, waggons, and so on-all rolling-stock.

423. Have you seen the printed papers in reference to the dump-cars? Yes, I have a copy here. 424. Do you remember receiving a minute from the Commissioner on the 6th April, 1883, asking you to report regarding the dump-cars? Yes, I see the minute here.

report regarding the dump-cars? Yes, I see the minute here.

425. You were called upon to report regarding the sample car? Yes.

426. Did you recommend it? No. My minute is here, and I still hold the same opinion as is here expressed. I have said here:—"Theoretically this dump-car looks very satisfactory and promises well, but when I fully consider the matter in its various manners of application, I really cannot see much in it to recommend." That is virtually opposed to the recommendation of the use of the thing.

427. What was your position when you made that report? I was Acting Locomotive Engineer then.

428. And as such it was your duty to report upon all rolling stock ordered by the Government?

at that time I was responsible for everything.
429. You condemned this car then? Virtually I did condemn it; I do not see how it can be profitably 429. You condemned this car then? Virtually I did condemn it; I do not see now it can be prolitably used on our railways. I do not see much in the thing myself, or how it can be used to advantage. For instance, take wool: if a car is loaded with wool up the country, and you bring it to Sydney, I do not see any particular virtue in being able to dump it all on to the ground; and I do not see how it could be dumped on to a staith unless you had an elevated road to dump it off the car on to the platform. If it could be dumped from the car into a lighter or a ship's hold, of course there would be an advantage; but with our present appliances I do not see how it can be done. The same with coal. It was suggested that

Mr. T.

they would be very useful for coal and for ballast. I do profess to know something about coaling engines, but I do not see how the car can be used economically for that purpose even. If the waggon was loaded at the colliery and brought to the locomotive depôt it could not be unloaded except on the ground; and I do not see any particular advantage in dumping it on the ground. It would be better to shovel it on to a tender direct. In fact it is a disadvantage. But if you had an elevated road there might be a little advantage in that case. But that is not the most economical mode of coaling an engine.

430. If it were dumped on to the ground it would have to be thrown up on to the coal stage? Yes, it

would certainly; but it would be too high to be thrown on to the tender—9 feet high.

431. Is there any place where you could utilise it at the present time? Supposing we loaded ashes or refuse from the locomotives the ashes would have to be shovelled into the car, taken then on to the line, and dumped on to the side of the road for the ballest men to use; that means on the 6 foot; you ould not dump it on the side of the road; that means really that the car would have to be hauled at the same time as it is tipped, it would have to be kept moving so as to distribute the ashes on the 6 foot; otherwise the ashes would get under the wheels and clog the passing trains. Unless distributed nicely it would be rather an awkward thing for passing vehicles. Then again, on a single road it means dumping the ashes on the side of the road, and in that case we should have to move the wagoon along the road to make it distribute the ashes for use; otherwise it would go down the bank, and if it were in a cutting it would block the cutting up.

432. Mr. Poole.] The stuff would be thrown back under the wheels? Yes. As I have said in my minute here, I should prefer a ballast waggon or a coal waggon. The usual tip waggon used by contractors is a small narrow thing that will throw the dirt and other things close to where it is wanted, on account of

being so much narrower, but this is about 9 feet 6 inches wide over all.

433. Chairman.] Have you had long experience in connection with rolling stock? I have done nothing

else all my life since I left school.

434. What is your opinion about the workmanship of these cars? It is fair. I do not see anything to specially mention as being extraordinarily good, and I do not see that there is anything to complain of in the specimen car. I have not seen any of the others.
435. What description of wheels have they? They are cast-iron chilled wheels on the specimen car, and

the same on those that are now being unloaded at Darling Harbour.

436. What is your opinion of these wheels? I prefer wrought iron wheels with steel tires. But on a car like that, running as a ballast-car or coal-car, there is a risk, as all statistics from America show, of great accidents from the use of cast-iron wheels. I should not like to be the man to recommend their introduction here.

437. You would not recommend them on our mountain line? No, not in any country.
438. Have you examined the way in which the body of the car is fixed on to the bogie? Yes.

439. What is your opinion about that? I think that on sharp curves of 8 or 10 chains radius the car would be apt to dump itself at a fair speed when it is not required. It might do that, but I do not say it would. It is subject to that danger I think.

440. What would be the result if that happened? It might throw the train off the road, or it might not; but it would be more likely to throw it off than not.

441. Supposing that occurred on a double line? It would interfere with another train passing then, of

442. Is there any danger of the body of the car separating from the bogie wheels? Yes; the dumping arrangement might get out of gear. There is a vertical plug of iron, about 9 inches long, which stands on either side of the centre of the bogie, and if that should happen to be pushed out of gear there is nothing to prevent the car going over. That is the weak point in the dumping gear. I pointed that out in the first car, and I see evidence in the bogies now being imported of that being remedied—they have put a link and breaket on it. link and bracket on it.

443. What is your opinion about the workmanship in regard to the iron used in the construction of these cars? It is what I should call rough workmanship; it is not neat; it may be strong enough; it is fairly well proportioned, and the general gear is good. The draw-gear is not what I should like; it is a central buffer and draw-bar combined, which will not couple with any of our rolling-stock.

444. Mr. Poole.] That applies simply to the specimen car? Yes; the others have been made to a drawing, showing the width of the car, the height the buffers and the width apart, and the draw-gear to range with

showing the width of the car, the height, the buffers and the width apart, and the draw-gear to range with our other stock.

445. That drawing was supplied by you? Yes.

445. That drawing was supplied by you? Ies.

446. Chairman.] Was any reference made to the danger of dumping? No; it was a diagram to show the contractor what was required to make the cars gear with our present cars.

447. Was any specification made? No; my opinion was that it was best to adhere to the pattern car. If I had made a specification I should have taken all the responsibility of the design, and I preferred pointing out what was necessary, supplying a diagram to make them match our stock, and leaving all the rest to the inventor. Otherwise, if anything went wrong I should be expected to explain.

448. Were you asked for a report before these 200 cars were ordered? No: this is the only report I

448. Were you asked for a report before these 200 cars were ordered? No; this is the only report I

supplied.

449. Which is against them? Yes. I say here:—"As for coaling engines with the dump-car, I could not possibly agree to that, as I think it very little, if any, better than our present system with the D waggons." It was suggested to me that they should be used for that purpose, and that is my reply.

waggons." It was suggested to me that they should be used for that purpose, and that is my reply.

450. How did you first become aware of this order having been sent for 200 cars? If I remember correctly, Mr. Woods, the contractor for the cars, called and told me he had the order. I am only

speaking from memory; I may have had official notification of it.
451. Did anybody else call upon you in reference to it? No, I think not. I have not seen the papers since that minute was written. I think my last minute was 7/7/83—about that date—within a day or two

452. Do you remember any trials being made? Yes, I remember a trial being made on the Botany road

453. What was the car loaded with? It was ballast from Penrith River gravel. I forget whether it was loaded or not on that occasion; if I remember right it was empty; the trial just showed the tilting motion; but I know it was loaded down at Darling Harbour. 454

Mr. T. Midelton.

14

29 Aug., 1884.

454. Were you present at the test with gravel? I was present when the test was made at the Botany road; but whether it was filled and dumped I do not remember; I saw it filled, but whether it was dumped in my presence I do not remember; but I do remember its being dumped with ashes at Darling

455. What was the result of that? I do not think it was satisfactory; I think there was about 25 per

cent. of the load left in the car when dumped, and that portion had to be shovelled out.

456. Who was present at that trial? I think Mr. Woods only; Mr. Heaton was at the Botany Road trial; I really forget now who was present, but I know Mr. Heaton was at one trial; Mr. Dibbs, the present Colonial Treasurer, was also at a trial, and Mr. Wright (the Minister for Works), and the Commissioner; but I really cannot positively remember which gentlemen were present at the respective trials; I know I saw these gentlemen at one of the three trials.

457. Were you present at the third test at Darling Harbour with wood? Yes.

458. Was that the last test? Yes, I think it was.
459. Was it an official test? I think it was at the request of Mr. Woods. I had instructions to be

present.

460. What was the result of that? I think the same as with the ashes—not quite satisfactory; it did not all come out, but that might be accounted for by the doors swinging from the top, and the tip choking. Of course there is not the same opportunity with wood as with coal or ashes; the upper portion of the load, on an average 5 feet 6 inches high on the top of the car, slid off the top over the doors, but what was left inside jammed against the door.

461. Were you asked to report regarding these tests? No, I do not remember being asked for any

reports.

462. Was it after that the cars were ordered? Yes, I think so.
463. Were you made aware of the order being given? Yes. I do not know whether I saw the papers or not, but I heard of the cars being ordered, I think, through Mr. Woods.

464. Were you asked officially to report whether you thought it advisable to order these 200 cars? 465. Is it not usual to ask an officer in your position to give reports on any new idea in regard to rolling stock before ordering such a large number? Yes, it is usual to ask either Mr. Scott or me our opinion about the design of rolling stock before anything is done in the department over which we have control.

466. Do you remember any other orders for any rolling stock having been given without consulting you in your position while you were Acting Locomotive Engineer? There was nothing ordered without

reference to me when I was Acting Locomotive Engineer.

467. Did you understand that these cars were to be made in the Colony? Yes, certainly, that was a clear understanding, that they should be made in the country, as far as I understand the language of the

468. Are you aware whether this is being done? I saw some bogies imported, and that is I think contrary to the common-sense view of the meaning of the contract or understanding; it does not seem to

me like building them in the country if they are imported.

469. Have you read Mr. Wood's letter, page 6, No. 14, in which he says:—"The Department, I understand, wants rolling-stock, and no better or finer car for any freight purpose can be had than the patent scand, wants forming-scook, and no better of inner car for any freight purpose can be had than the patent screw-lever dump-car"—Did you ever see that before? No, I never saw that till I saw it in print.

470. What is your opinion with regard to his contention? I certainly disagree with it.

471. Did the Department require freight cars at that time? We always want more stock; that is the

usual expression.

472. How long previous to that were you called upon to report regarding the quantity of rolling stock the Department was likely to require? I cannot tell you from memory. I was asked or expected to report what was required in view of the making of a five years' contract, I think.

473. Is it not customary to obtain an estimate, from an officer in your position, of the requirements of the Department for the next year or three years? That principally refers to engines and not to other stock. Here the Traffic Manager, I think, is generally looked to as the officer who intimates to the Chief what stock is required.

474. Do you think the workmanship in these cars is anything like equal to Colonial work? pattern car it seems to me equal, as far as I could see from the casual look I had of it; I think the work

in the pattern car is as good as the Colonial work.

475. You said just now it was rough? Some of the iron-work is rough; it has not a nice finish, but there

may be strength enough in it.

476. Have you tested the strength? No. I thought of using the car once or twice for a purpose I had in view, but it was too wide for the Darling Harbour wharf, and therefore I could not use it. It looked weak as regards strength; when it was loaded it sagged in the middle—when loaded with about 18 or 20 tons of ballast from Penrith. I have never gone into any calculations of the strength of it.

477. Were you asked to go into any calculations as to its strength? No.

478. Has the new car been altered to provide for additional strength? No, it has not been altered in

ر المارية المارية

479. Do I understand that, as far as you could gather from the test with the gravel, it did not appear to be strong enough? I would not quite go that far, to say it was not strong enough; the fact of its having given down when the weight was in shows it is not trussed properly; the truss-rods might want screwing up; it depends upon the size of the truss-rods whether it is strong enough or not; but looking at it, I should say it was strong enough.

480. Does any of your rolling stock act in a similar manner? We have not much of that class of stock except the G waggons. This car (the dump) sags; the other (the G) hogs. It may be trussed too tight;

the sagging is not an evidence of weakness altogether.

481. Do you think it is a safe car to run over our mountains? It is risky to run a car fitted with that

481. Do you think it is a safe car to run over our mountains? It is risky to run a car fitted with that gear over the mountain line—over the curves especially. I should not mind on the straight line.

482. In your minute, dated 16/10/83, page 10, you seem to have some doubt:—"I saw Mr. Berner to-day re specification, as I thought he had slightly misunderstood the matter. As these cars are to be made to the sample vehicle now in our possession (except as regards buffer and draw-gear, a drawing of which we have sent to Mr. Carson Woods), we hardly want a specification. I think if we specify anything more than we have, it will amount to making working drawings of the car, and a specification to suit

suit, and as there will be a difficulty (with our double buffers, &c.) in introducing the dumping gear or mechanism, I think we should leave the matter to the manufacturers." What difficulties did you refer to with regard to the double buffers? With the continuous draw-gear it is necessary to take the daw-bar up the centre of the truck, and the dumping could not occupy the same place. In the specimen 29 Aug., 1884. car the dumping-gear is in the centre of the truck, and if we introduced the continuous draw-bar that gear would have to go somewhere else. That was the reason I preferred adhering to the pattern car rather than make a drawing; I thought it better for the inventor to do that, instead of me having all the trouble and scheming to do it.

483. You did not care to have anything to do with it? No; that was what I thought at the time. If I make a drawing of this with the continuous draw-gear it means a rearrangement of the dumping gear. It was their duty to introduce the draw-gear and buffers that we required into their car with their dumping

484. You did not care about taking the responsibility? Certainly not. If I had been ordered to do it,

of course I should have done it. As I have said, it means a great deal of scheming.

485. Had the order been given when you were called upon to make that statement? No; apparently it was about to be given. That was the matter on which I saw Mr. Berner; I explained to him what I am

486. I would like you to read No. 25, page 8, minute of the Secretary for Public Works:—"Mr. Woods' offer to build 200 dump-cars in the Colony at a price, delivered complete, of £190 each, may be accepted, subject to the following conditions:—That the cars are equal in all respects to the one now in the possession of the department; that they do not exceed the weight of the same; and that after delivery is complete the Government are to have the patent right for New South Wales for all cars they may build or have built by private firms." That is dated 28/8/38. Your minute to which I have just referred is dated 16/10/83, over two months subsequent to that. So that when you were asked for these drawings the order had been given, that is very evident? I think not. Mr. Wright says, "Mr. Woods' offer," it is only an offer. That minute, I take it, means that they may be ordered subject to a certain condition which has been ultimately settled.

487. Is it not usual, when asking an officer to report, to send all the papers referring to the matter? Yes; but you see between the commencement of this and the order being given Mr. Scott came into office

I commenced the business and Mr. Scott finished it.

488. What was your position at the time you wrote that minute of 16/10/83? I was then "Acting Locomotive Engineer." Afterwards Mr. Scott resumed duty.

Locomotive Engineer." Afterwards Mr. Scott resumed duty.
489. At what date did Mr. Scott resume duty? It was in July, 1883, I think—the latter end of June or the commencement of July.

490. What has been done with the sample car? Nothing. It has simply stood there as a sample car from

the beginning.

491. Why has it not been put in use? We could not couple it to anything else, because the draw-gear

is different. It is lower, and of a different kind. 492. Is it too wide? Yes, it is also too wide; but we might have used it for coaling engines if the draw-

gear had been suitable.
493. With what coaling engines? With my own scheme for coaling engines.

494. Mr. Poole. You have noticed the manner in which the body of the car is attached to the bogie-frame? Yes.

495. Will you be good enough to describe to the Committee the mode in which the body of the car is attached to the bogie-frame? There are two castings—an upper and a lower casting. The upper casting has what may be called a dowel in the centre, and, I think, a couple of teeth—one on each side. The lower casting has corresponding recesses in it to allow the dowel and the teeth to enter; the centre dowel, of course, is round, and the other teeth are rectangular in the usual manner. The chain which operates the dumping gear passes over pulleys, and these castings, which are segments of a circle, roll on one another, and the dowel and teeth keep it from sliding laterally. But I should say it is not a safe plan by any means, because a good sharp shunt would knock the bogic right out from under the car.

496. That is the weak point—that is your deliberate opinion—that with any rough shunting—? Any

rough usage

497. With rough usage there might be danger of the body of the car being dislocated from the bogie-frame? Yes, I think such a thing could happen with the specimen car.

498. So far as regards the liability of the car to dump over in transit, could that be got over by locking the dumping levers? Yes. In my opinion the lugs I referred to just now are too close together; I think they should not be less than 5 feet apart.

499. What is the distance from the centre of the dowel to the point where these lugs or studs are placed-

about 3 feet; that practically will be the base the car has to rest upon? Yes. 500. What distance are these studs from the centre of the dowel? I think the first tooth is about $2\frac{1}{2}$ inches, and then there is a second tooth about $4\frac{1}{2}$ inches from that. (The witness here explained by

501. Do you consider the side-rods of the bogie-frames sufficiently strong for the work to be done by the car—the outside coupling of the bogie-frame itself? Yes, I think that is strong enough, but the bar

might be a little thicker with advantage.

502. Speaking generally of the ironwork, you think it is fairly good, only rough, and fairly proportioned to the work to be done? Yes, taken generally. The truss-rods in the side doors look rather tender, and one or two little things about the corners are tender also, but I dare say you might prick the same holes in almost anything.

503. Then, taking a general view of the workmanship of the dump car as a whole, is it equal to the style of workmanship you require from our contractors? Yes, I think it is as good, taken as a whole, as what I have seen done in the Colony. I have not looked into the thing very critically, to find fault with it; it

seemed a fair reasonable job, as regards workmanship. The finish is not good.

504. If the Committee have been informed that the workmanship, as a whole, is considerably below the standard of that hitherto attained by the Department in Colonial work, that would not coincide with your opinion as to this work? No, I would not say that, except that the general finish of the ironwork is rough and cheap, but it is good fair work. The bogies do not seem to be kept altogether square. There

16

Mr. T. Midelton. are only two transverse beams to hold the bogie square; but as regards the weight of the car I think it

Midelton: is quite strong enough to carry it.

505. With respect to the use of these cars for general ballasting purposes, from your knowledge of what is required you could not recommend a car of this description? No, certainly not. If I were a con-

tractor I should not buy any, and therefore I should not recommend them to anybody else. 506. Mr. Poole.] Is it not the practice with contractors' ballast waggons, that they are fitted in the bottom with a series of small traps, some to deliver in the four-foot and some to deliver outside of the wheel-bose? Yes.

507. Is not an arrangement of that kind much more economical in the delivery of the stuff than it is possible to get by dumping a load, whether great or small, in one place? Certainly; because it is put where it is wanted without having to shovel it.

508. Mr. Chopman.] At the time of the trial you spoke of were you acting Locomotive Engineer? There were three trials, and I cannot speak now exactly as to the dates. On 2nd April, 1883, I was acting

Locomotive Engineer.
509. I am speaking of the trial at the time Mr. Woods introduced this car here? If I remember rightly,

Mr. Scott had returned when the first trial on the Botany Road was made. 510. Then you would not have been called upon to report? No, I was not.

511. The Locomotive Engineer, I presume, is the person who would be supposed to report upon the adaptability of the sample car? Yes, certainly; nobody would have such weight in such a matter as the Locomotive Engineer.

512. At a subsequent trial you were Locomotive Engineer? No; I was not Locomotive Engineer at

any trial.

513. Consequently you would not be called upon to report? No. When the first trial, and the other two that followed it, took place, Mr. Scott was in office; therefore if any report had been asked for he would have been applied to; that would have been the usual course.

514. The trials you speak of were prior to the ordering of £38,000 worth of these cars?

515. When Mr. Woods told you afterwards he had got an order, it was after these trials?

516. When you wrote your first minute you were acting Locomotive Engineer? Yes.
517. After that you ascertained that 200 cars had been ordered? Yes. It was after I had ceased

to be acting Locomotive Engineer that I learnt through Mr. Woods that the order had been given for more.

518. In opposition to your report? Certainly; I do not agree with the car; I have a better car of my own. 519. You do not know very much about the cars now being put up at the Government sheds? have only seen about twenty of the bogies.

520. You have given suggestions as to improvements that were to be made in them? Yes, I think the improvement which has been made was my suggestion; that the vertical support should be done away with, and something better should be substituted; I did not say what.

521. Are you aware that that has been carried out? I am aware an improvement has been made, one-half of which I have seen on the bogies; I do not know what the other half or upper part is like; as far nair of which I have seen on the bogies; I do not know what the other half or upper part is like; as far as I can judge from the appearance of the bogies it appears to be an improvement, but I cannot judge until I have seen the whole of it; it may be worse than the original.

522. Mr. Teece.] You will observe at page 6, number 15, a letter from Mr. Henry Hudson to you. Did you make an inquiry of Mr. Hudson? Apparently I wrote him a letter which is not here. As near as I remember I wrote him a letter asking him the question.

523. How came you to write him that letter? It was after hearing that some had been ordered.

524. You were of opinion that an order had been given nearly three weeks before the offer was accepted? I think it was put this way to me, that it was proposed to order more cars, and I think I was asked what

I think it was put this way to me, that it was proposed to order more cars, and I think I was asked what my valuation of the specimen car was, and also whether the cars could be made in the country for the same price. I think it was a suggestion of my own to ask Mr. Hudson what the firm would build a car for, and this is the reply.

525. Mr. Hudson's reply looks very much like the tender that was accepted three weeks after-£190?

Yes, £180 for the car, as per sample, and £10 for extra buffers.
526. Chairman.] What position does Mr. Bourn occupy? He is foreman of the carriage department and

inspector of new rolling stock constructed in the Colony.

527. Has he been long long in the Service? Yes, a great many years; over 25 years I think.

528. Is he considered a good judge of workmanship in rolling stock? Yes, I believe that is the general opinion; I think him a fair judge.

529. Will you examine the workmanship of the specimen dump-car, and be prepared at some future day to give the Committee an opinion on it? Yes.

530. Have you seen the new patent couplings that have been placed on some of our rolling stock, the Cowdery-Thomas' Patent, I believe it is called? Yes, I have seen that. Cowdery-Thomas' Patent, I believe it is called? Yes, I have seen that.

531. How many trucks are these couplings on? I think 200 were ordered, and I should suppose 90 per

cent. of them have been delivered.

532. Are these trucks being used? No, not generally; we are using a few. I am using a few from Darling Harbour to Sydney for coaling purposes. Newcastle coal is delivered into these waggons, and we use them to and fro between Sydney and Darling Harbour.

533. What has been done with the remainder? They are standing about in places.

534. How many do you think are standing about not in use? Roughly speaking I should think there

were over 130 at Eveleigh now.

were over 150 at Eveleigh now.
535. How long is it since they were delivered? It is over three months.
536. Why are they not used? I can hardly tell why. Mr. Richardson, the Traffic Inspector, who is in England now, once asked me my opinion about them, and I said, "Well, you can use them if you like, but you have not my authority"; and I presume on that conversation they have not been used.
537. What do you think of this patent coupling? I do not like it; I do not think it safe.
538. In what way do you not consider it safe? I think it is likely to uncouple with a heavy pull, and it does not seem to me a good mechanical ich as regards the design; it is not a coupling I should recommend

does not seem to me a good mechanical job as regards the design; it is not a coupling I should recommend or support; on the contrary, I have from the first opposed it; I do not think it is safe.

539. Were you asked for an opinion on it? No, I have never been asked for an official opinion on it

540.

540. You say you opposed it? I mean in my own mind; if I had been discussing the matter with anybody I should have opposed it; if anybody had supported it I should have taken the opposite view.

Midelton.

541. Has any accident occurred with this coupling? There was an accident to a train, and these waggons were in the train; that was not the cause of it I do not suppose; but it is a question for consideration what influence the according had in the accident and in the suppose. what influence the coupling had in the accident, and in what took place after the accident. There was an accident at Rookwood some time ago, and there were several of these waggons in the train, and it looked a remarkable thing to me that so many left the road; I do not think that with the ordinary chain coupling so many would have gone off the road. It stands to reason that that which will couple automatically will disconnect easily.

542. Have you ever reported about these trucks not being used? Yes, I have called attention to it in minutes about waggons, when we have been short of waggons; I have referred to our not having sufficient waggons: I have not specially referred to these waggons, because that would look as if I was trying to point to them directly. Some are used in some of the ballast trains, and I use a few in coaling; but

the others are standing still.

543. Mr. Poole.] Are the waggons you refer to at Eveleigh the ordinary waggons? They are the ordinary D waggons, with the Cowdery-Thomas coupling.

544. Mr. Chapman.] They cannot be used with any other coupling? No, not with ordinary couplings. 545. Is it a fact that the trucks were greatly damaged by this accident at Rookwood? Yes; they were

badly damaged, all the waggons. Some of them were out in the paddock close by.

546. How many waggons were there? I think sixteen, if I remember correctly.

547. What do you think the loss was in that accident? I suppose the repairs would cost £50 a waggon. I do not see that you could estimate them at much less. The axles have to be straightened and the

springs repaired, and all that sort of thing.

548. Mr. Poole.] You would almost have to make a new waggon? I would rather make a new waggon.

549. Was any damage done to the road? Not a heavy damage; that was done principally by the engine,

which ran off at the points, not by the D waggons.

550. Was anybody injured? No; they were empty waggons, fortunately.

551. Mr. Chapman.] Would the accident have occurred if the waggons had been loaded? So many of them would not have gone so far away from the road; if they had been loaded the chances are they would not have scattered about so much, but the accident would have taken place because the engine was crossing over at the points and ran into a train that was passing.

552. If they had been ordinary waggons would they have been damaged in the same way? Perhaps not

so many of them.
553. Mr. Poole.] The others would not have uncoupled so easily? No, they uncoupled and went in

Mr. George Bingham called in and examined:-

554. Chairman.] What position do you occupy? Foreman of the carriage and waggon department.
555. Have you seen the specimen dump-car? Yes.
556. What is your opinion about the workmanship? As far as the workmanship goes the timber is very rough, and likewise the iron work is inferior; the iron work is very rough too, so is the wood work.

557. Is it equal to the workmanship in the rolling-stock made in the Colony? No, I consider it is not.

558. Were you present at any of the trials? Yes, I believe at two trials.
559. What was the car loaded with at the first? I could not be positive on the first occasion whether it was askes or billet-wood. I was at two trials. We tried one with askes in June, 1883.
560. What was the result? It was taken down to the far end of Darling Harbour and dumped into the rubbish hole. About one-third came out and blocked the wheels—fell underneath the wheels instead of falling away clear—consequently we had to dig the ashes away from the wheels before we could move the car. After that it was brought up to the cattle siding near Parramatta and dumped again there. That was on the other side of the line. We dumped it again there, and before we could get it square we had to put a jack underneath it, and put it straight again. Then we brought it to the Sydney yard and left it there.

561. Was any damage done to it? No.

562. Did these trials take place over a bank? On the second time of dumping it it was on a bank. They, were filling up alongside the Parramatta bridge—what we call the cattle siding. There is a bit of a bank there. It was late in the evening when we went down there-about half-past 4-Mr. Midelton, Mr.

Bourn, myself, and a driver, and a guard.

563. Was there any other trial? Yes, there was another trial with billet-wood at Darling Harbour.

564. What was the result of that? It was dumped over, and I suppose there may have been from ten

to twelve pieces of wood fell from the top.

565. What weight was in the truck? I suppose from 18 to 20 tons.

566. What weight was thrown out? I do not suppose more than about 3 cwt. was thrown out; some fell out of the doors at the last of it and jammed the doors; but that was through the eye-bolt that holds the chain breaking; it went all at once—the eye-bolt that holds the chain that you dump it with,—it went over suddenly and thereby caused the door to jam; the wood got in between the doors and jammed it, and one of the doors was strained at the time.

567. Has the car been used since? I believe it has been loaded since then with gravel.
568. Were you present at that? Yes.
569. What was the result? We only got about one-third of it out with the dumping; that was on level

ground near Botany Road; on that occasion we had to get the jack to it o jack it back again.

570. Did you have to go through the same process as before to move the truck? No. Mr. Carson Woods and the reporters of the Evening News and Town and Country Journal were there on that occasion; it was done for them to see, and we left it there for that time, and I believe the permanent way men had to dig the gravel from underneath before they could move it.

571. Do you consider it a safe car to use? No, I do not consider it safe to run on the road.
572. In what way do you consider it unsafe? In the first place the block that keeps it from dumping, which you have to pull out of gear before you can dump it, if one of these happened to get away it would 1043—C

Mr. T. Midelton.

Mr. G. Bingham.

29 Aug., 1884.

Mr. G. Bingham. 20 Aug., 1884.

get out of gear; in the next place it has no king-bolt, but only two cambs—a camb on each side and a boss in the centre. If the bogic should happen to get off the road there would be nothing to prevent the body leaving the bogic, or the bogic leaving the body; it is only 3 inches deep where the socket enters the cap.

573. Do you think there is any danger of the car becoming detached from the bogie through any sharp shunt, or through going round a curve? In sharp shunting I believe it would.
574. Is there any other defect in the system that you have noticed? No, only in the way it is constructed. If it was put on our ordinary outside buffers I do not believe it would stand the shunting or knocking.

575. Even when it has the buffers? No.

576. Are you aware that the new ones are being made with side buffers? Yes.

577. Do you think that with the alterations that have been made there will be any more success than with the pattern car? No.
