Coal from Lithgow Valley	48	35	83.7	500
			\mathbf{WM} .	WEBSTER.

Acting Locomotive Engineer. - J.C., 12/10/81. Mr. Baker offers to supply coal at the siding 1 mile on Goulburn side of Bundanoon Platform for 13s. a ton screened into trucks. If Locomotive Engineer concurs, orders for 100 tons per week might be given. Coal delivered at Mittagong costs us 18s. at present.—Ch. A. G., 15/10/81. I suggest 100 tons more for trial before a regular supply be obtained.—W.S, 18/10/81. Approved.—Chas. A. G., 19/10/81.

No. 13.

Mr. J. S. Martin to The Commissioner for Railways.

Marrickville, 30 August, 1881. I have the honor to request that you will permit a sample of coal now lying at the Railway Station, Mittagong, but which will be forwarded thence to Sydney Station, to be used on one of the Government locomotives, as a test of the quality of such coal, and that the driver or stoker may report thereon accordingly.

In support of my request I beg to state that the coal referred to is taken from a seam lately opened by myself and others, near the railway, Mittagong. I believe, from testing the coal myself, that the discovery is a valuable one, and will be of great benefit to the community; and I think that a report from the Government on the subject would be the surest means of enabling the proprietors to successfully develop I have, &c.

JOHN S. MARTIN. There is no objection to the coal being tried. The Traffic Manager will please arrange for its being kept in a suitable place for the purpose, and the Acting Locomotive Engineer will direct a trial of it in the -Сназ. А. G., 30/8/81.

Mr. Paull, Darling Harbour, to note and arrange for the truck of coal in question being handed over to Locomotive Department. Let me know when done.—W. V. Read, per D.K., 31/8/81.

Received the coal on 30/8/81, and delivered it to Mr. Scott, Loco. Department, on Mr. Martin's order. Will you please say in the Chas. Paull, 2/9/81. Traffic Manager.

Chas. Paull, 2/9/81. Traffic Manager.

W. V. Read, per D.K., 3/9/81. Will you please say if the freight, as shown on ticket attached, is to be collected from Mr. Martin.

Please see 81-5,582 herewith.

Driver

Driver Baker to Mr. Cobb.

Sir,

I beg to state that yesterday, September the 8th, I used Mittagong coal with engine No. 106 on No. 15 down goods train to Picton. I find the coal very inferior to the ordinary Bowenfels coal. I had to clean the fire three times between Sydney and Picton; the first time at Liverpool, the fire-box being full of dirt; the second time at Campbelltown, the fire-box being again full of dirt; and again at Picton. There is fully three times the amount of dirt in this coal to what there is in the ordinary Bowenfels coal. It would be impossible to work any train to time with this coal in its present dirty state. The amount used on the trip was 61 cwt. against 47 cwt. of ordinary coal. I lost twenty minutes on the down trip cleaning the fire and getting steam.

Mr. W. Webster to The Locomotive Overseer.

Sir,

I beg to report I travelled with the engine in which the coal sent from Mittagong was being tested. It is a very strong coal, and makes steam without any difficulty while the fire is clean, but the consumption is very large, and it leaves far too much ash to be of service in locomotives; the fire had to be partly cleaned at Liverpool, and thoroughly cleaned at Campbelltown (causing a delay of 20 minutes), and then the dirt was level with the fire-hole on arrival at Picton, which is what would have been with the Bowenfels coal for the whole journey.

WILLIAM WEBSTER.

This coal was tested in goods engine No. 106, running a "through" goods train between Sydney and Picton. From the reports it appears to be very dirty coal; and the consumption is also large, 61 against 47 cwt. Mr. Martin accompanied the engine, and I believe expressed himself quite satisfied with the trial.—J.C., 10/9/81. Acting Locomotive Engineer.

Inform and then return to Manager for collection of freight.—D.V., 19/9/81.

Mr. D. Vernon to Mr. John S. Martin.

Sir, Department of Public Works, Railway Branch, Sydney, 22 September, 1881.

With reference to your letter of the 30th ultimo, requesting that a sample of coal from a seam opened by yourself and others, near the railway station at Mittagong, might be tested for locomotive purposes, I have the honor to inform you that a trial of the coal has been made, and I enclose herein copies of the reports received, from which it will be seen that it is unsuitable for locomotive purposes.

I have, &c.,

D. VERNON,
Pro Commissioner for Railways.

Mr. Paull to collect freight.—W. V. Read, per D.K., 23/9/81. Freight into Revenue, 23/9/81.—Chas. Paull, 26/9/81. Traffic Manager. Secretary.—

Freight duly collected and paid Secretary.—W. V. READ, 26/9/81.

Mr. John S. Martin to The Commissioner for Railways.

Sir,

A short time ago we obtained permission to try 5 tons of coal from our mine at Mittagong on one of the Government locomotives. The result of that trial, although demonstrating that the coal supplied was unfit for locomotive purposes, showed that it was of such a character as to lead us to persevere in the further development of the mine. After further working we find the coal so improved as to appear to answer the required qualifications.

Under the circumstances, we beg to request that you will be good enough to direct that we may be permitted to try 5 tons of the coal now being worked (with a view to testing its fitness for locomotive purposes) on one of the Government locomotives.

We need hardly draw attention to the fact that the production of a superior coal close to the station on the Southern line would be of very great importance.

An early answer will oblige.

We have, &c.,
JOHN S. MARTIN,
For self and partners.

Another trial may be allowed.—Chas. A. G., 1/2/82.

The Commissioner for Railways to Messrs. J. S. Martin & Co.

Gentlemen, Department of Public Works, Railway Branch, Sydney, 3 February, 1882.

In acknowledging the receipt of your letter of the 24th ultimo, asking that a further trial may be made of coal obtained from your mine at Mittagong, I have the honor to inform you that another trial will be allowed, and have to refer you to the Acting Locomotive Engineer to make arrangements for the delivery of the coal, &c.

I have, &c., CHAS. A. GOODCHAP, Commissioner for Railways.

Mr. Cobb will please arrange for a thorough test of the coal and report the result.—W.S., per C.A.N., 6/2/82. Mr. Cobb. Arrange to test this coal in a goods engine between Picton and Goulburn; let me know when you are ready and I will send driver John Jones to Picton to carry out the test.—J.C. Mr. Webster. Mr. Martin, on his representation to accompany the engine.—J.C. This coal has been tested, driver John Jones will report the result.—W. Webster, 22/2/82. Commissioner.—W. Scott, 24/3/82. Seen. If result of test be applied for it can be supplied in general terms.—Chas. A. G., 6/4/82.

Driver Jones to Mr. Cobb.

Picton, 22 February, 1882. I beg to report on the quality of the coal supplied by Messrs. Martin & Co., tested on No. 188 Sir, engine, with ordinary goods train between Picton and Goulburn on 21st. This is a pretty fair steaming. coal, but makes a large percentage of ashes; it steams well as long as the fire is clean, but the ashes quickly accumulate, and the only difficulty is to get rid of them; we had to thoroughly clean the fire twice on the journey but managed to keep time. It has the look of coal that will soon improve in quality, as from its appearance it has evidently been taken from near the surface. There was also a large quantity of sakes in it, which retarded its steaming powers and added to the quantity consumed as well as to the weight of ashes made. The engine, too, was not in as good order as the one which tested the Berrima and Erith coal, having considerable blow on her slide valves, which would act slightly against it. This coal, although it would be useful for many purposes, is scarcely suitable at present for locomotive use, although I have tested worse than this from the Southern mines. If it improves in the manner that I think it will, it will soon bid fair to become equal to any coal produced from the Southern mines.

The following shows the consumption, &c.:-

Date.	No. of Engine.	Load.				Coal consumed.		Ashes made.		Miles run.	fbs. per mile.	
21 Feb	188	Picton to Mittagong Mittagong to Bowral Bowral to Austermere Austermere to Bundanoon Bundanoon to Baker's siding Baker's siding to Cable's siding Cable's siding to Morrice siding Morrice siding to Marulan Marulan to Towrang Towrang to Goulburn	18 17 18 19 21	aggons and	l bv.	t. 2	c. 9	q. 15s. 0 0		q.	81	67 ‡

Yours respectfully, J. JONES.

No. 14.

Mr. S. R. Baker to The Commissioner for Railways.

Sir,

Erith Coal-mine, Bundanoon, 14 October, 1881.

I understand that the trial of my coal which you were good enough to have made has shown that it can be used with advantage on the Government railways. I beg to say that I shall be prepared to supply the Department within five weeks from the present time with coal equal, if not better, than that which was tried, at 13s. per ton, screened into the railway trucks at the siding situated 1 mile on the Goulburn side of the Bundanoon platform.

The quantity I could supply at first would be 100 tons per week, which I could increase very shortly

if the Department desired it. I am, &c.,

The coal delivered at Mittagong costs us at least 18s. per ton. I think it will be desirable to give an order for the delivery of 100 tons of this coal weekly till end of year, when Mr. Baker and others interested in southern coal will be able to tender for the quantity required in 1882. In the meantime, by using 100 tons per week for six weeks or so, we shall be able better to judge of the quality of the coal. the Locomotive Engineer concurs, an order may be given.—C.A.G., 15/10/81.

I would suggest that (say) 100 tons be obtained for further trial before ordering a regular supply.

Approved. Inform the writers to-day.—C.A.G., 19/10/81. W. Scott, 18/10/81. Commissioner.

The Commissioner for Railways to Mr. S. R. Baker.

Department of Public Works, Railway Branch, Sydney, 19 October, 1881. Sir, With reference to your letter of the 14th instant, in which you state that you will shortly be in a position to supply coal equal to, if not better than, that which was tried by this Department, I have the honor to request that you will be good enough to supply 100 tons, with a view to a further trial being made of this coal. I have, &c.

D. VERNON,

pro Commissioner for Railways.

Mr. S. R. Baker to The Commissioner for Railways.

Erith Coal-mine, Jordan's Crossing, 20 October, 1881. Sir, I have the honor to acknowledge the receipt of your letter of the 19th instant.

I understood that the trial of my coal, which you were good enough to have made a short time since, was of such a satisfactory character that you would order 100 tons per week of it for so long a period as you might deem advisable. By your letter just received, it would seem you require another lot of coal for trial

Allow me to point out that you have about 5 tons of coal left which I sent for trial, and if that be not enough I could send you 10 tons more; but to supply 100 tons for trial would necessitate me constructing expensive works, which, before I do, I desire, if possible, to enter into some arrangement to supply you for regular use.

Perhaps

Perhaps you might see fit to give me an order to supply 100 tons per week for such a time as may be suitable to yourself, reserving to yourself the right to cease taking any more coal from me at any time you If you do so, I desire to say that should you at any time intimate to me that you do not require more coal to be sent by me, I shall not consider that by your so doing I am entitled to any compensation or any consideration from you. I am, &c.,

S. R. BAKER.

Mr. Scott, for report. I can quite understand that to get out 100 tons some considerable expense will have to be gone to—construction of a tramway, &c. It seems to me that the Department cannot incur much risk, under the condition stated in the last paragraph of this letter. Of course, if Mr. Scott has any reason for supposing that the coal will not turn out as well as the sample supplied, or that the test and report thereon made are unreliable, we should not give an order for even 100 tons. Should there be any ground for entertaining any suspicion of bona fides, we should either take advantage of the proposal to take 10 tons for a further test or abandon the proposal altogether.—C.A.G., 20/10/81.

I think it would be more satisfactory to take 10 tons, as proposed by Mr. Baker, for a further trial, before committing ourselves to taking any larger quantity.—W. Scott, Actg. Loco. Engineer, 25/10/81. I gather from this that Mr. Scott is uncertain about the accuracy of the test. An Commissioner.

additional 10 tons may therefore be tested.—C.A.G., 25/10/81.

The Commissioner for Railways to Mr. S. R. Baker.

Department of Public Works, Railway Branch, Sydney, 26 October, 1881. Sir, Referring to your letter of the 20th instant, stating that to supply 100 tons of the coal from your mine would necessitate the construction of expensive works, and asking that an additional 10 tons may be accepted for the purpose of making a further test of the coal, I have the honor to inform you that I cannot at present give you an order for the delivery of 100 tons per week as you request, but the quantity to be tested will be reduced from 100 to 10 tons.

I have, &c.,

CHAS. A. GOODCHAP Commissioner for Railways.

Memorandum to Mr. W. Webster.

22 October, 1881.

THERE will be delivered at the Bundanoon Siding 100 tons of coal from the Erith Coal-mine. Please send four trucks (24 tons), to Mr. Tipping, Penrith, and two trucks (12 tons) to Sydney, and have the other 64 tons used in the usual manner, and then report on same.

Pro J. COBB, W.D.M. Please say if any of this coal is to be sent to Goulburn and beyond.—W. Webster, 23/10/81. Cobb.

Mr. Baker cannot send the 100 tons and has been asked to send 10 tons, which I wish you to send to Mr. Tipping for trial. Please book to him, and inform him when it leaves Jordan's Crossing.

If you have any more of this left, send it to Mr. Proctor and ask him to test it and forward report to me.—J.C., 24/10/81. Mr. Webster.

Memorandum to Mr. Cobb.

Picton Station, 24 October, 1881. I have one truck of the coal sent for trial by Mr. Baker still on hand, which I will, in accordance with your instructions, send to Mr. Proctor in Goulburn to be tested.

WILLIAM WEBSTER.

Mr. J. Proctor to The Locomotive Overseer.

Sir, Goulburn, 31 October, 1881. rial in our engines. I tested One truck of coal received at Goulburn from Mr. Baker for trial in our engines. this coal on engine No. 104 with a goods train Goulburn to Harden on 28/10/81, sixteen loaded trucks and break-vans, total weight of train 154 tons; the quantity of coal consumed on trip 94 miles was 46 cwt.; the weight of ash from this coal was 17 cwt. 3 qrs. 24 lbs. This coal steams well for 50 miles; at Yass the fire-box was full up to the door and had to be cleaned out; there is no clinker in the ash, though it will not fall through the bars unless knocked out with the pricker. The quantity consumed is about the same as Bowenfels coal it makes a little more ash. I consider this sample of coal suitable for same as Bowenfels coal; it makes a little more ash. I consider this sample of coal suitable for locomotive engines working goods trains. J. PROCTOR.

Mr. S. R. Baker to The Commissioner for Railways.

Erith Coal-mine, 2 November, 1881. I am in receipt of your letter (No. 81-19,198), in which you state you require another 10 tons

of my coal for trial, which I shall be willing to supply. There have been already two trials from 5 tons out of the 10 tons I have supplied, and I hear that the 5 tons left have been sent to Goulburn for another two trials, so that perhaps if I now supplied 5 tons, which would give two trials more (in all a sufficient quantity for six trials), that might be enough to test the coal properly. I will therefore send 5 tons as quickly as possible, and if the officers of the Depart-

ment want more I will supply it. As I cannot now say the exact day when I can have the 5 tons ready, on account of the alteration I am making in the tramway to connect my line with the Southern Railway, perhaps I had better communicate when ready with the Locomotive Superintendent.

I may say, however, that I shall be able to put the 5 tons at my siding probably in about a week's

I shall be glad to be allowed, in company with my engineer, to be on the locomotive when the next trials are made. I am, &c.

S. R. BAKER.

I see no objection to a compliance with this request. At the same time, to prevent any dispute hereafter I wish some one from the Locomotive Branch to go to the mine, and see the coal taken from it, in order that there may be no doubt as to the place where the coal came from. As the coal will be required for use on the Southern Line, its trial may be confined to that line. Mr. Baker fears that the prejudice against Southern coal if used on the Western Line would militate against an impartial report. I do not believe that there is any foundation for any such belief, but as a trial on the South will answer all purposes it may be confined to the south.—C.A.G., 3/10/81.

Mr. Scott, B.C. Mr. Cobb to arrange and report.—W.S., 4/11/81.

Mr. W. Webster to The Locomotive Overseer.

Picton, 14 November, 1881. Sir, I beg to report that in accordance with instructions I visited Mr. Baker's coal-mine, about

2 miles from the Bundanoon platform, on the Southern line of railway; the mine is situated in the bottom of a gully, and has one main tunnel about 150 feet long, with six branch tunnels out of it; the seam is about 3 feet in thickness, having several bands running through it, which require to be carefully

picked out with present appliances; about 25 tons of coal per day could be put into the trucks at the railway.

I saw 4½ tons of coal taken from the mine, and had it brought to Picton and tested in goods engine No. 42, Driver Henry Matthews, with a special goods train from Picton to Goulburn; the trial was made as nearly as possible under the same circumstances as before, except that it was not the same engine; the train was composed, on leaving Picton, of eleven waggons loaded with coal, and brake-van; three waggons of coal, and five of material were attached at Mittagong, making a full load for this classof engine.

The consumption of coal was greater on this occasion than before, the quantity consumed being 55 cwt. 5 qrs. on the journey of 81 miles as compared with 54 cwt. before, making a difference of $2\frac{1}{2}$ lbs. per mile; the total quantity of ash made was 1,320 lbs., being 1,130 lbs. taken out of the ash-pan (which is a very large quantity), and 190 lbs. from the smoke-box (which is not large).

The fire on this occasion had to be cleaned at Colo and pricked up at Bundanoon. 10 minutes time was lost between Picton and Mittagong, although the train was run the whole distance from Picton to Goulburn in time, but I have still to report that this coal is not so well adapted for our work as the Bowenfels coal, both on account of the extra consumption and the extra trouble and delay in getting rid of the ash.

WILLIAM WEBSTER.

Acting Loco. Engineer.—J.C., 15/11/81. The results of the trials of this coal are not so favourable as could be desired, but I think we may commence to use it for some of the goods trains on south line, with the view of proving whether the trains can be worked with it or not. I would suggest that (say) 50 tons per week be ordered, but I think Mr. Baker should be informed that the Commissioner does not bind himself to take any particular

quantity of coal, unless it be found in practice to sufficiently answer our requirements as regards quality.

Commissioner.

W. SCOTT. Commissioner.

To be considered in connection with the tenders for the supply of coal for 1882.—Chas. A. G., 19/11/81.

Mr. W. Scott to S. R. Baker, Esq.

Department of Public Works, Railway Branch,

Locomotive Engineer's Office, Sydney, 7 December, 1881. I have the honor to request that, with the view of a further trial being made, you will be good enough to deliver at Austermere Siding not less than 5 tons of the coal you tender to supply this department with during next year.

I shall be glad to hear from you when the coal is delivered.

I have, &c., W. SCOTT, Acting Locomotive Engineer.

Will Mr. Scott be good enough to give directions to allow Mr. Baker and his engineer to be in attendance when trial is being made of their coal.—D.V., pro Commissioner, 13/12/81.

Mr. Webster to arrange.—J.C., 14/12/81.

Memorandum to Mr. Webster.

Redfern Station, 16 December, 1881.

Mr. Baker called this morning and stated that the sample of coal to be tested is now ready at his Siding. Please arrange with the Traffic Department to have it brought to Picton; also, if possible, arrange to have it tested by driver Jones (without mixing it with other coal) on Wednesday next, in goods engine between Picton and Goulburn. Mr. Baker, junr. and his engineer to be allowed to accompany the engine.

JOHN COBB.-

I saw Mr. Baker, junr. yesterday, and arranged with him to test his coal on Thursday; please send pass for that day to him.—William Webster, 17/12/81.

Papers herewith.—J.C., 17/12/81.

This coal was tested as desired, and will be reported on by driver J. Jones.—W. Webster, 28/12/81. These trials have been completed.—W. Webster, 29/12/81.

Picton, 23 December, 1881.

I beg to report on the quality of the Erith Colliery coal, tested on engine No. 183 with the ordinary goods train from Picton to Goulburn, on the 22nd instant.

This is a fair steaming coal, but makes rather a heavy percentage of ashes. It lights up and burns very freely, makes no clinker, and much resembles Bowenfels coal in its action. Of course there would be some little difficulty with it at present, and the fire would have to be cleaned once, or perhaps twice, on

the journey; but it is quite possible to use this coal alone on these goods trains if the fire be cleaned on the journey. We managed to keep time all the way running from Picton to Mittagong without cleaning the fire, and being the heaviest part of the road I consider this to be very fair, although the journey was performed under favourable circumstances, with a new engine and dry rails.

The following is the consumption:

Consumption of Coal. Date No. of Engine. ec. 22 183 lbs. per mile. 58 Tons cwt. qrs. lbs. 2 1 3 25 Dec. 22 Picton to Mittagong, 11 waggons and brake... Mittagong to Bowral, 22 Bowral to Austermere 20 Austermere to Moss Vale, 17 Moss Vale to Bundanoon, 19 Bundanoon to Marulan, Marulan to Goulburn, 17 Ashes made, 8 cwt. 0 qrs. 9 lbs. Miles run, 81.

This was a light train the latter part of the journey, which would reduce the consumption of coal and also the weight of ashes.

JOHN JONES.

Acting Locomotive Engineer.—J.C., 30/12/81.

Sir,

Picton, 28 December, 1881.

I beg to report on the trial of the Berrima coal and Bowenfels coal, mixed in equal parts, and tested on No. 183 engine, on ordinary goods train from Picton to Goulburn, on the 27th instant.

The mixture of Bowenfels greatly assisted the Berrima coal in burning and making steam, and both together they steam pretty fairly. By cleaning the fire twice on the journey we were enabled to keep time.

Mixing these coals is the only way I can suggest to make it go. As the Berrima coal gets better, which I think it will, the Bowenfels coal can be diminished by degrees until it can be dispensed with altogether. This, I think, could be left to the discretion of the drivers, who would discover from day to day how much the Berrima coal improved, and so increase the quantity to suit their requirements. I have no doubt there would be some difficulty with it at first with some of the engines, but still it can be used in this manner on these goods trains, and as the Berrima coal improves in quality this difficulty will disappear.

The following is the consumption, &c.:-

D . 37 479 .					Coa	l con	sum	ed.	
_Date No. of Engine		Load.			Tons	cwt.	grs.	lbs. lb	s. per mile.

Yours, &c., JOHN JONES.

Assistant Locomotive Engineer,—J.C., 30/12/81.

No. 15.

Mr. W. Scott to The Chairman of the Berrima Coal-mining and Railway Company, Goulburn.

Department of Public Works, Railway Branch,

Sir,

Locomotive Engineer's Office, Sydney, 4 November, 1881.

Referring to your tender for the supply of coal required at Picton, Goulburn, and Harden, I have the honor to request that you will be good enough to deliver at Austermere (for trial) a sample of the coal you propose to supply.

I shall be glad to hear from you when you have delivered the coal.

I have, &c., W. SCOTT,

Acting Locomotive Engineer.

Mr. J. J. Atkinson to The Acting Locomotive Engineer.

Sir

Moss Vale, 12 November, 1881.

Mr. Davies of Goulburn has forwarded me your letter of 4th instant in which you request a sample of our coal (for trial) to be delivered at Austermere platform.

I have the honor to inform you that I caused a load of this coal to be delivered at Moss Vale Station on Friday last (11th instant) and wired you to that effect. I find on inquiry that the coal has been sent on to Sydney. As we should wish our engineer, Mr. Swinney, to be present at the proposed trial, would you be kind enough to inform me on what day and from what place such trial will take place, and give directions for Mr. Swinney to be allowed a seat on the locomotive.

I have, &c., J. J. ATKINSON,

Managing Director for Berrima Coal-mining and Railway Company (Limited).

Copy of my letter (81 No. 6,711) to Mr. Davies herewith. Mr. Cobb will please make the necessary arrangements for having the coal tried as early as practicable. Please say upon what date and from what place the trial will take place, so that I may inform Mr. Atkinson.—W.S., 15/11/81. Mr. Cobb. Mr. Webster, 15/11/81.

Sir,

Picton, 15 November.

I beg to report on the quantity of the Berrima coal tested to-day between Picton and Mittagong, on No. 42 goods engine, with a full load of sixteen empty sheep-vans, cattle waggons and brake. This is a very poor steaming coal, and makes nearly 20 per cent. of ash but no clinker. Had to clean the fire and wait for steam four times on the journey, and exceeded the running time by an hour and fifteen minutes. At present it is perfectly useless by itself for locomotive purposes, but a certain portion of it may perhaps be used in conjunction with Bowenfels coal until it improves in quality, and so increase the quantity as it becomes more suitable.

Coal supplied.
Tons. cwt. grs.
1 15 1

Coal consumed. Tons. cwt. qrs.

Ash made.

Miles run. 24

Acting Locomotive Engineer—J.C., 17/11/81.

JOHN JONES.

Memorandum to Locomotive Overseer.

Picton Station, 15 November, 1881. I wrote to Mr. Atkinson last night that there was not sufficient coal for the trial required, the sample that was sent was tried to-day between Picton and Mittagong, in the presence of the Company's Engineer, with, I think, not very satisfactory results, as the train was delayed an hour on the journey. there was no more coal here and no word of any more coming, Jones returned this evening to Penrith, and I presume will have his report at your office in the morning. I think it is a mistake that a truck of coal has been sent to Sydney, as I wired to the Station-master, Moss Vale, yesterday, and his reply was that we had got all he had received. Telegram attached.

WILLIAM WEBSTER. No coal has been received at Sydney; see memo. attached.—J.C., 17/11/81. Acting Locomotive

Engineer.

Memorandum to Goods Department.

Redfern Station, 15 November, 1881.

PLEASE say if you have received one truck of sample coal from Moss Vale to Sydney, 11th instant, invoiced to Locomotive or Mr. W. Scott, from Mr. Atkinson, Director Berrima Coal Coy.

JOHN COBB.

I have not received a truck of coal from Moss Vale, either for Mr. Scott or for Locomotive Branch, as yet, but it may be in to-night or to-morrow. -W. P. Jones.

No. 16.

Mr. J. J. O. Atkinson to The Commissioner for Railways.

Oldbury, Moss Vale, 25 November, 1881. Sir. I have the honor to enclose herewith letter from our Chairman. I should feel obliged if you would kindly give instructions for Mr. Swinney (our engineer) and myself to be present on the locomotive when next trial of coal comes off, and that I should have timely notice of time of trial.

I have, &c., J. J. O. ATKINSON,

Managing Director.

Forward to Acting Locomotive Engineer.—C.A.G., B.C., 6/12/81.

Mr. W. Davies to The Commissioner for Railways.

Mr. W. Davies to The Commissioner for Railways.

Sir,

Berrima Coal-mining and Railway Company (Limited), Goulburn, 23 November, 1881.

As Chairman of the above Company it is my duty to place before you a statement which, it is hoped, may lead to a much more satisfactory trial of our coal than has yet been practicable.

When Mr. Scott informed me that coal was requested for trial he did not name any quantity. A dray-load of 35 cwt. was sent, and ere more could be supplied that was sent on to Picton. On Monday, the 15th instant, a note was sent to the Managing Director (Mr. Atkinson) to the effect that a trial of our coal from Picton to Goulburn would take place in the morning at 6 30. That this note reached Mr. Atkinson at all was accidental, for it did not go through the Post Office, and it came into his hands after dark on Monday evening, when there was no time for arrangements. Knowing that the coal supplied was insufficient, a cart-load was sent to Moss Vale Station to meet the train on Tuesday morning, but this was not used, as the engine did not go beyond Mittagong.

Coming now to the trial itself, I beg to mention some circumstances which were against us.

The engine, No. 42, was an old one, and too light for the state of the rails, owing to the rain which fell all the time.

The train load was estimated at 115 tons, which I understand is sufficient for a heavier engine.

I am informed that the chief cause of failure was the mode of firing. Our engineer says that he has frequently been on engines on the South-west and North of England lines, and has invariably seen used a pricker to loosen the fire.

The Berrima coal is bituminous, and needs different treatment from splint coal; but during the trial no pricker was used, and the consequence was that the ash accumulated over the bars and the fire went down.

I have been informed that much of the western coal makes a great deal of ash, but owing to its nature the same difficulty may not be experienced.

difficulty may not be experienced.

I would also direct attention to the reports of Mr. Wilkinson in report for 1880, Department of Mines, and to the place awarded to a section of the seam now being worked, and from which the coal for trial was obtained, at the International Exhibition, Sydney, 1879–1880. The coal has also been used in furnaces in Goulburn and at the hoisting machinery

at the Company's mine.

In conclusion, I cannot refrain from the expression of a fear that unless the trials are conducted under the supervision of an officer above suspicion and thoroughly competent no better result will be obtained. Only on the day before the last trial was made, a statement was overheard at a station on the railway that the Berrima coal was to be tried

to-morrow, and the worst engine in the shed would be used.

I can now leave the matter in your hands, and am confident you will take such steps as will secure a thorough, fair, and conclusive trial, seeing that the interests involved are of a serious character and of a public nature.

I have, &c., WM. DAVIES,

This letter is also forwarded to Mr. Scott; a similar one was sent to him a day or two since. An exhaustive trial must be given to this coal, not necessarily in the interests of the Company, but in those of the Department.—C.A.G., 8/12/81. Mr. Webster 13/12/81. Actg. Loco. Engineer.—J.C., 14/12/84. Mr. Webster to note.—J.C., 10/12/81. -W. WEBSTER, 13/12/81.

Memorandum

Memorandum to Mr. W. Webster.

9 December, 1881. Please let me have your report on letter from Mr. W. Davies, Goulburn, dated 23/11/81, attached. JOHN COBB. Report attached.—W. WEBSTER, 12/12/81.

Memorandum from Mr. W. Webster to The Locomotive Overseer.

Sir,

In reply to the attached statement from the Chairman of the Berrima Coal-mining and Railway Company, I beg to state that a communication from the above Company to the acting Locomotive Engineer to the effect that 5 tons of coal had been delivered for trial was sent to me with instructions to arrange for having the coal tested from Picton to Goulburn. I at once inquired from the Station-master at Moss Vale if any of this coal had been received, when he informed me that a quantity of coal, stated to be 3 tons, had been received and would be forwarded to Picton. I at once arranged to have this coal tried by the same engine (No. 42) and the same driver and fireman who had previously tested coal sent for that purpose from the Erith Coal-mine, my reason for so doing being to avoid the very appearance of partiality. I at the same time arranged with the Station-master, Moss Vale, that as soon as I knew if the trial would take place on the Tuesday, I would send through him a communication to the Managing Director Mr. Atkinson, to be by the Station-master delivered to Mr. Atkinson's own man, who would be at Moss Vale Station on Manday marning with milk which communication was duly delivered as be at Moss Vale Station on Monday morning with milk, which communication was duly delivered, as Mr. Swinney, the Company's Engineer, informed me that he received notice at 3 p.m. on Monday, so that it was not altogether by accident that the communication reached Mr. Atkinson in the manner it did, but was sent that way as being the safest and quickest, and if the Engineer received his instructions at 3 p.m. it must have been delivered before "dark," and that there was time to make arrangements is proved by the Engineer, Mr. Swinney, being present in Picton in time for the trial. As regards the trial itself I have nothing to say, as I had not the charge of it, but as regards the weight of train, I may say that the maximum load for this class of engine, as per return supplied January, 1878, is 122 tons.

In reply to the complaint that the pricker was not once used during the journey, I have only to say that it is evident that the gentleman does not understand the subject, for the pricker was there to be used if required, yet every experienced driver knows that the frequent use of the pricker is an evidence of bad firing, and the less frequently it is used the better, as every time it is put into the fire is a waste of

The reflection on the honesty and competency of those under whose supervision the trial was made is an unworthy one, and I trust needs no reply from me.

WILLIAM WEBSTER.

Mr. Webster's explanation I think fully meets the charge that timely notice of the trial was not given. Mr. Webster also sufficiently replies to the statement that the engine was too light. I may add that it was in first-rate condition. It received new boiler in October, 1879, and was recently thoroughly repaired. I regret that Mr. Davies should have thought it necessary to make remarks impugning the integrity and competency of officers of this Branch. I believe there are no more trustworthy men in the Service than inspector Webster and driver John Jones. The latter has many years experience as a first-class driver. For some years past he has always been selected (on account of his peculiar fitness) to make any special test of oil or coal, or for other work demanding particular care and conscientiousness.—John Cobb, Acting Locomotive Engineer, 18/12/81.

No. 17.

Mr. W. Scott to The Chairman of the Berrima Coal-mining and Railway Company, Goulburn.

Department of Public Works, Railway Branch,

Locomotive Engineer's Office, Sydney, 6 December, 1881. I have the honor to request that, with the view of a further trial being made, you will be good enough to deliver at Austermere siding not less than 5 tons of the coal you tender to supply this Department with during next year.

I shall be glad to hear from you when the coal is delivered.

I have, &c. W. SCOTT,

Acting Locomotive Engineer.

Mr. William Davies to The Acting Locomotive Engineer.

Goulburn, 7 December, 1881. I have the honor to acknowledge receipt of your letter dated 6th instant, and conveying a request for me to deliver at Austermere siding not less than 5 tons of coal, with the view of a further trial being made.

The managing director, Mr. Atkinson, has been advised by me of your request, and he will at once

forward the coal. I have, &c.

WILLIAM DAVIES,

Chairman B. Coal and R. Co. (Limited).

Mr. J. J. O. Atkinson to The Acting Locomotive Engineer. Sir, Oldbury, Moss Vale, 10 December, 1881. Referring to your letter marked 81/7,338 to Mr. W. Davies, of Goulburn, and which has been forwarded to me by that gentleman, requesting him to deliver not less than 5 tons coal at Austermere siding, with a view to a further trial, I have the honor to inform you that I have made arrangements for the delivery of that quantity at Moss Vale Station on Tuesday, 13th instant, there being no road to Austermere and our railway line not being completed. I made an application to your Department, in a letter to the Commissioner dated 25th ultimo, for instruction to be given for Mr. Swinney (our engineer) and myself to have permission to be present on the locomotive at the trial, and should feel obliged by your furnishing me with the necessary permits, and advising me of the date when trial will take place, and place and time of departure.

I have, &c.,

J. O. ATKINSON,

J. J. O. ATKINSON, Managing Director, B.C.M. & R. Co.

Mr. Cobb.—W.S. per C.A.N., 13/12/81. Please arrange for this coal to be tested in goods engine between Picton and Goulburn, and inform Mr. Atkinson in time for him and Mr. Swinney to be present. Give me a day's notice in order that I can arrange for driver J. Jones to come to Picton to conduct the trial.—J.C., 18/12/81. Mr. Webster. Trials completed.—W. Webster, 29/12/81.

Driver Jones to Mr. Cobb.

Picton, 21 December, 1881.

I beg to report on the trial of the Berrima Company's coal, tested on engine No. 183 with the

ordinary goods train from Picton to Goulburn, on the 20th instant.

This coal was tested about a month ago, and has improved a little in quality; it burns more lively, and makes more steam and rather less ashes, but it is still unsuitable for these trains through the large amount of ashes it makes, and could not be used alone until it very much improves in quality. It makes so much ashes that we had to knock them out four times during the journey, losing over an hour's actual running time. At the request of Mr. Atkinson (who accompanied us) we used the pricker very freely on one part of the journey, but only succeeded in producing a large amount of clinker and a momentary rise in the steam only.

7	The following	ng shows the consumption, &c. :		•

Yours, &c., JOHN JONES.

No. 18.

Mr. S. A. Stephen to The Minister for Public Works.

Sir,

I am interested in a coal mine near Marulan, the quality of which is, I am instructed, equal to any to be obtained from Newcastle, and well adapted for steam purposes, and that the same can be delivered to you at the railway at considerably less cost than the Government has been paying. I therefore have to ask whether the Government will be prepared to take (say) 20 tons on trial, and negotiate as to a contract for the supply of such coal as may be required. An early answer will oblige.

I have, &c.,

S. A. STEPHEN.

Mr. Stephen might be informed that a trial of the coal referred to will be made.—J.L., 4/7/81.

The Commissioner for Railways to S. A. Stephen, Esq.

Sir,

In acknowledging the receipt of your letter of the 1st instant, bringing under attention the coal from your Marulan mine, which you represent to be equal to Newcastle coal and well adapted for steam purposes, and that it can be delivered at the Redfern Station at a price considerably less than that hitherto paid by the Government, and asking whether the Department will take 20 tons of this coal to be tested for locomotive purposes, I have the honor, by direction of Mr. Secretary Lackey, to inform you that if you will deliver 20 tons of your coal, free of cost, a careful test will be made and the result communicated to you.

I have, &c., CHAS. A. GOODCHAP,

Commissioner for Railways.

Memorandum to the Storekeeper.

Locomotive Engineer's Office, Regent-st., Redfern, Sydney, 12 July, 1881.

I shall be glad if the Storekeeper will be good enough to order for trial from Mr. S. A. Stephen—20 tons of coal from his mine near Marulan, as per letter attached, 81–3,979.

The coal is to be delivered at Marulan Station.

R. H. B.

This coal has been ordered.—The Loco. Engineer, A.R., 14/7/81.

Memorandum to Mr. Scott.

Locomotive Engineer's Office, Regent-st., Redfern, Sydney, 12 July, 1881. Mr. S. A. Stephen will shortly deliver at Marulan 20 tons of coal for trial on locomotives. Please make the necessary arrangements for having it tested, and let me have your report.

R. H. B.

Mr. Proctor to have tested.—W. Scott, 14/7/81. Mr. Stephen has not sent this coal for trial on locomotives.—J. Proctor, 3/9/81. Loco. Overseer. Acting Loco. Engineer.—5/9/81, J.C. Did Mr. Stephen inform Inspector Proctor verbally or in writing that the coal was not sent for trial

on locomotives? If the former, I should like to know exactly what was said on the matter; if the latter, then the papers should be attached.—W.S., 12/9/81. Mr. Cobb.

The papers should be attached.—W.S., 12/9/81. Mr. Cobb. Mr. Proctor.—J.C., 12/9/81. I have not seen Mr. Stephen or received any letter from him.—J. Proctor. Acting Loger.—14/9/81. J.C. Mr. Proctor should be attached.—Wr. Proctor. Acting Locomotive Engineer.—14/9/81, J.C. Mr. Proctor should say how he knows that the coal was not sent for trial on locomotives.—W.S., 15/9/81. Station-master informed me that no coal had been received at Marulan for Locomotive Department.—J. Proctor, 16/9/81.

comotive Department.—J. Proctor, 16/9/81. Acting Locomotive Engineer.—J.C., 17/9/81.

The Commissioner to see, in connection with his 81-11,714, returned on 8th inst.—W.S., 19/9/81.

ssioner. Inform Mr. Stephen.—C.A.G., 26/9/81. Mr. Stephen, 29/8/81.

The Commissioner for Railways to S. A. Stephen, Esq.

Department of-Public Works, Railway Branch,

Sir. Sydney, 29 September, 1881.

In further reference to your letter of the 1st July last, relative to the coal from your Marulan mine which you pronounced to be equal to Newcastle, and well adapted for steam purposes, and asked whether the Department would take 20 tons to be tested, I have the honor to inform you that a reply was forwarded to you on the 7th of the same month, stating that if you would deliver 20 tons of your coal free of cost a careful test would be made and the result communicated to you, but from reports received it appears that up to the present time no coal from your mine has been sent for trial on locomotives.

CHAS. A. GOODCHAP. Commissioner for Railways.

Mr. S. A. Stephen to The Commissioner for Railways.

Sir, Sydney, 3 October, 1881. I have the honor to acknowledge the receipt of your letter of the 29th ult., respecting the coal from the Marulan mine.

As the proprietors are desirous that the sample of coal to be tested by the Government should be of fair average quality, they have delayed supplying you with the 20 tons until they have a larger quantity in stock. I hope that arrangements will be perfected in a short time to enable us to supply an unlimited quantity, and I will then address you respecting the sample.

I am informed by the Manager that the coal at bank at present time would be admirably suited for the working of your pumping stations, but that it would not be a fair quality to be tried in the locomotives. I have, &c.,

S. A. STEPHEN.

Locomotive-Engineer to see.—D.V., 8/10/81. Has Mr. Stephen yet supplied any coal for trial? Commissioner.—W.S., 1/2/82. Seen.—C.A.G., W.S., 27/1/82. No.—J. Proctor, 30/1/82. The Commissioner.—W.S., 1/2/82.

No. 19.

Memorandum from Mr. W. Webster to Locomotive Overseer.

Government Railways, Locomotive Engineer's Branch,

Sir, Picton Station, 23 February, 1882. When the Berrima coal was brought into use at the beginning of this month, the supply of coal from the Western mines very nearly stopped, six trucks only being received in ten days instead of two trucks per day, so that a larger proportion of Berrima coal than one-half had to be used, and that caused more delay than would have occurred otherwise; but so long as one-half of the coal used is from the Berrima mine, it will be necessary that time should be allowed at Mittagong for cleaning the fire, and then it is not certain but that there will be further delay from the same cause.

WILLIAM WEBSTER.

Acting Loco. Engineer.—J.C., 24/2/82. Traffic Manager to see, and please return.—W. Scott, 27/2/82. Seen. Should not the Commissioner's attention be called to the quality of the Berrima coal? Perhaps it may improve as the Company gets further into the seam.—W. V. Read, per D.K., 4/3/82. Mr. Scott. Commissioner.—W. Scott, 8/3/82. Write to Company to say that, in justice to the interest they are developing, they should see that only the best coal is supplied, as if it does not improve in quality it will have to be abandoned.—C.A.G., 15/3/82.

The Commissioner for Railways to Mr. W. Davies.

Sir, Department of Public Works, Railway Branch, Sydney, 15 March, 1882. I have the honor to inform you that complaints have been received from the Locomotive Branch that the quality of the coal supplied by your Company has on several occasions caused considerable delay to the trains on the Great Southern Railway line. I need hardly point out to you that it is of the utmost importance that the trains should be run with punctuality; and, in justice to the interest you are developing, it is desirable that you should see that only the best coal is supplied, for should it not improve in quality its use by this Department will have to be abandoned.

I may add that I should regret to have to take any such measure, but if complaints continue to be received of delays in the train service I shall be compelled, in the interests of the Department, to take the step indicated. I have, &c.

CHAS. A. GOODCHAP, Commissioner for Railways.

Mr.

Mr. W. Davies to The Commissioner for Railways.

Berrima Coal-mining and Railway Co. (Limited), Goulburn, 17 March, 1882. I have the honor to acknowledge receipt of your letter dated the 15th instant, informing me that complaints have been made of the quality of the coal supplied by my Company.

I can only account for this by supposing some carelessness at the colliery; and I proceed by mail train to-night to make inquiries, which will I trust have the effect of removing all cause of complaint. I have, &c.,
W. DAVIES,

Chairman.

Mr. W. Davies to The Commissioner for Railways.

Berrima Coal-mining and Railway Co. (Limited), Goulburn, 21 March, 1882. I have the honor to inform you that, in accordance with promise, I visited the colliery and inspected the coal being obtained. Generally the coal seemed very good; but in order that no further complaint might be made, I directed that a man should be placed in the truck while loading and carefully

exclude all doubtful pieces

I would respectfully direct your attention to the fact, that with the same quality of coal now being supplied the trials were made, and since then frequent trains have been run to time. Only to-day, while Mr. Cooper, Secretary to the Company, was conversing with your Mr. Watts, a goods train arrived at

Goulburn Station to time.

It may be that owing to one or two conditions necessary to the successful using of this coal not having been attended to the complaints have arisen. One of these is the width of the furnace-bars apart. I understand the width of the spaces is 1 inch, while some are only \(\frac{3}{4}\)-inch; and I am informed by a recent letter from England that in some locomotive engines there the bars are as much as 13 inch apart. There are, I believe, in some of the American engines shaking bars, and it might be found advantageous, in view of the saving in haulage and cost of coals, to have some engines running on the Southern line fitted with this modern appliance. The second condition is that the fire should be stirred with a pricker; and from our own experience in the little engine on our railway, and in the stationary engine at the mine, if these two conditions are complied with there will be small cause for complaint.

I cannot but fear that some of the men may find in their new coal a convenient cover for other Certain it is that trains failed to keep time before this coal was used, and will do so, I

apprehend, should its use be discontinued.

My co-Directors and I have so much confidence in your rectitude that we are sure you will not allow indiscriminate complaint to injure an enterprise of such moment; and while we will use every means within our power to secure the sending in of coal without any admixture of bands, we rely on your giving such instructions as will ensure the use of right methods in burning the coal.

I have, &c., W. DAVIES.

Forward to the Locomotive Engineer. I wish every reasonable effort made to make this coal a successful fuel for our locomotives. I have no doubt it will prove to be so, if the Company be careful to supply us with the best, and the drivers use it well.—C.A.G., 22/3/82.

Mr. W. Webster to Locomotive Overseer.

Picton, 4 April, 1882. Sir,

In reference to the attached letter from the Chairman of the Berrima Coal Company, I beg to state that, in accordance with instructions, I have been using this coal, mixed in equal proportions with coal from the Western Collieries, on engines working ordinary goods trains; but the result has not hitherto been such as to warrant its use in even small proportions on passenger engines, and the delay caused in having frequently to clean the fire was found to be such that I have had to use it in much smaller proportion on

engines running fast goods trains, such as No. 15 down and No. 6 up.

The average width of space between the fire-bars in engines running in this district is 1 inch, which has been found sufficient for the coal from the Western mines, and it is matter for consideration whether it is worth while incurring the expense and inconvenience of altering the fire-grates to such a width that ; they would be unsuited for use in any other district, for the sake of bringing into use an inferior coal, which at its present price does not compete successfully with the Western coal in Picton (as I have previously shown), for while the cost including carriage is some 5 per cent. less, the consumption is fully 10 per cent.

If this coal is to be brought into general use for goods engines, it will not only be necessary to provide "shaking" fire-bars, but it will also be necessary to provide ash-pits at all watering places, and dispense with fast goods trains, as not only is there delay in cleaning out the ashes, but the coal being a slower burning coal than that from the Western mines requires more time on the journey.

It is no doubt true that at times "trains failed to keep time ere this coal was used," but as the cause of delay is invariably shown on the guards' time and occurrence sheet, it can be seen what has been the cause of such delay, unless these are the men referred to in the unworthy insinuation as finding "a

convenient cover for other causes of delay."

*See page 33)

As regards the instructions given for burning this coal, it is difficult to understand why a "compact bituminous coal" necessarily requires such very wide bars, or should require so much "stirring," which is held by all competent locomotive engine-men to be an evidence of either bad fuel or bad firing.

WILLIAM WEBSTER.

Attach previous reports, and if any subsequent. Done.

The following is a copy of the instructions issued re burning Berrima coal:—This being compact bituminous coal, it is necessary that the furnace-bars be $1\frac{1}{2}$ to $1\frac{1}{2}$ inch apart, and that the fire be occasionally stirred with the pricker to prevent the coal from caking. In lighting up, the large pieces should be first put on, then the smaller ones. By attention to these simple instructions the coal will burn well and throw out a great heat.

Mr. William Allan to The Locomotive Overseer.

Sir. Goulburn, 26 April, 1882. Re Berrima coal, I beg to report for your information that I have been using this coal according to instructions, and the result has been very unsatisfactory. There is scarcely one train that is not detained through this coal, owing to have to clean the fire out at almost every staff station. On special live stock trains I have had to put on \(^3\) Bowenfels, or the mails and other trains would be detained for a considerable time. I have tried this coal on several engines with seven or eight fire-bars out, which leaves a space of about 2 inches. The only good that this did was that it was easier to knock down the fire, the engine did not steam any better, as the coal seems to run over the bars so much that all the stirring up will not been the bars along. They had a good deal of experience on the continue at home and They will not keep the bars clear. I have had a good deal of experience on the engines at home, and I have never seen any fire-bars any wider than 5 of an inch, and I think that will be found to be the very outside, as the majority of the engines in England are from \$\frac{3}{8}\$ to \$\frac{1}{2}\$-in. fire-bars.

If this coal is to be continued to be used as at present, the time-table now in use will have to be altered, as goods engines have to run so fast down the banks to make up the time lost by cleaning out fires, and besides there will have to be hose fitted up at every convenient place where water can be got, as engines are often caused to run hot through the dust getting into the bearings.

As regards the directions for using this coal, they have been strictly adhered to, and the result has been that the engines have come to a stand-still, and it has been found better to allow the driver and fireman to use their own judgment in the matter of using this coal.

WM. ALLAN.

No. 20.

Memorandum to Mr. Hackett, Harden.

Government Railways, Locomotive Engineer's Branch, Redfern Station, 2 May, 1882. Are you adhering to the instructions respecting the use of Bowenfels and Berrima coal in equal proportions; if not, why?

Memorandum to Locomotive Overseer.

Government Railways, Locomotive Engineer's Branch,

Sir, Harden Station, 3 May, 1882. I have not strictly adhered to the instructions of the Department in ordering equal quantities of Bowenfels and Berrima coal. My reason for the slight departure is, there are several mail engines that take Bowenfels coal here, besides what is consumed by the bogie No. 126, stationed at Harden, and if not replaced by ordering occasionally more of the latter than the former coal, I should be in time run out of Bowenfels coal altogether.

In all other respects I am adhering to instructions, that is, by compelling an equal quantity to be

taken on all goods engines.

Below is the quantity of coal ordered, and the quantity received during the month of April, 1882 :-

							Uraer	ea.
							Bowenfels.	Berrima.

*Memorandum to Locomotive Overseer.

Government Railways, Locomotive Engineer's Branch,

Sir, Picton Station, 23 February, 1882. I beg to submit for your consideration the question whether it is worth while attempting to use the Berrima coal at Picton. The price paid for the Berrima coal delivered at Austermere is 13s. per ton, the carriage from there is 3s. 6d., making the cost at Picton 16s. 6d. The consumption of this coal is found to be about 10 per cent. greater than that of the Bowenfels, the cost of which at the mine is 7s. per ton. The carriage from there to Picton is 10s. 3d. per ton, which makes the cost of that 17s. 3d., or 9d. per ton. The carriage from there to Picton is 10s. 3d. per ton, which makes the cost of that 17s. 3d., of 3d. per ton more than the Berrima; but taking into consideration the greater consumption of the latter, it makes the Bowenfels coal the cheaper by about 5 per cent., without taking into consideration the additional labour and delay of trains through being compelled to clean the fire so frequently on the journey.

WILLIAM WEBSTER.

Mr. Webster, I should like to confer with you on this matter when you are next in Sydney.—
Thos. Middleton, 25/4/82. Saw Mr. Webster herein on the 8/5/82, and I think every effort is used to make this coal a success.—J.M., 17/5/82. Loco. Engineer. 294-E

No. 20.

Railway Department, Office of Engineer for Existing Lines, Sydney, 28 February, 1882. Memorandum to Storekeeper.

A TRUCK of natural coke will be required at Campbelltown for Tramway use by Tuesday, 7th March; A TRUCK of natural coke will be required at Campbellown to Lamber to Camden when the engine goes up.

GEO. DOWNE.

P.S.—If you have any contracts for coal that can be delivered cheaper it may be used.

GEO. DOWNE.

I will in this case order two trucks of Bowenfels coal, as being by far the simplest expedient. natural coke would have to be carted to the station and then be loaded into trucks, which would make it far more troublesome and equally expensive. I notice that this memo. refers to two trucks, but it does not appear that any arrangement has been made for a continuous supply for working the line.—A.R., 1/3/82. Mr. Downe.—G.C., 2/3/82. Mr. Cowderv.

A definite quantity cannot yet be fixed; if the storekeeper will arrange for five trucks every fortnight—that is three trucks within the first week of opening, and two trucks the second, and so on alternately, I think it will meet the requirements.—Geo. Downe, 2/3/82. Mr. Richardson.—G.C., per G.L., 4/3/82. Will Mr. Scott oblige me by his opinion as to whether or not Berrima coal would be likely to answer for the tramway work, Campbelltown to Camden.—A.R., 6/3/82. Acting Loco. Engineer. I think this matter had better be referred to Mr. Cowdery.—W. Scott, 8/3/82. Storekeeper.

I am quite aware that this is a matter affecting Mr. Cowdery's department; but Mr. Cowdery has,

I imagine, had no opportunity whatever of testing the quality of the Berrima coal, and this is the reason why I asked Mr. Scott to favour me with his opinion after having made a trial of this coal for railway locomotive purposes. I feel sure Mr. Cowdery would also feel obliged for this information. to see if it will be cheaper to get Berrima than Bowenfels coal.—A.R., 9/3/82. Mr. Scott.

Please see my minute of this day's date.—W.S., 13/3/82. Storekeeper.

Memorandum to the Storekeeper.

Locomotive Engineer's Office, Regent-street, Redfern, Sydney, 13 March, 1882. Storekeeper, 82/1,401, Loco. Engrs., 82/1,266.

THE result of the trial of the Berrima coal proved that it could not be used for railway locomotives hauling heavy loads. It was therefore found necessary to mix Bowenfels coal with it. As however the circumstances under which the coal would be used on the trainway, as compared with the railway, are so different, I think it would be better, as I before stated, to refer the matter to Mr. Cowdery, with the view of having a trial made with special regard to the adaptability of Berrima coal for tramway purposes.

W. SCOTT.

Forwarded to Mr. Cowdery for his information, and for any action which he may like to take.-A.R., 14/3/82. The Engineer for Existing Lines. Mr. Downe.—G.C., 15/3/82. Better have two trucks sent, one for Campbelltown and one for Camden. I will have them tried, and report accordingly. GEO. DOWNE, 17/3/82.

Telegram from Moss Vale Station, addressed to Commissioner for Railways.

WE can supply Campbelltown and Camden branch line with coal at 7s. per ton at Austermere. Shall I send for trucks; if so, how many?

J. J. O. ATKINSON, Managing Director.

Mr. Cowdery for report.—From whence is it proposed to obtain the coal for this tramway; I think we should use southern coal if it is economical.—C.A.G., 11/3/82. Mr. Downe, for report.—G.C., 13/3/82. Better let me have two trucks for trial.—Geo. Downe, 16/3/82. Commissioner to see.—20/3/82. Write to Company to send down 10 tons for trial.—C.A.G., 23/3/82.

D. Vernon to J. J. O. Atkinson, Esq.

Department of Public Works, Railway Branch, Sydney, 24 March, 1882. Referring to your telegram of the 10th instant, offering to supply the tramway line from Campbelltown to Camden with coal from your Company's mine at 7s. per ton, I have the honor to request that you will be good enough to have 10 tons sent to Campbelltown in order that its suitability for use in I have, &c., D. VERNON, the tramway engines may be tested.

pro Commissioner for Railways.

Mr. Cowdery.—G.B., B.C., 25/3/82. Mr. Downe to see.—G.C., 27/3/82. I should like Seen. to be informed when they are going to deliver. Geo. Downe, 28/3/82. Commissioner.—G.C., 29/3/82.

Memorandum to the Storekeeper.

Railway Department, Office of Engineer for Existing Lines, Sydney, 18 March, 1882. I was at Campbelltown last night and found the engine without coal. It appears you sent a truck forward but it overran its destination; by wiring they managed to get it down just in time to prevent a doubt know by thom this work stoppage of traffic. Kindly have the number of trucks asked for sent regularly, to prevent a break. Coal stages are now erected at both places. Do you empty the contents of trucks into the stages, or is it a charge appertaining to the locomotive branch? if it belongs to me I will arrange on hearing from you. GEO. DOWNE.

Before making any arrangement with the Bowenfels mine for a permanent supply, I would like to f the Berrima coal is likely to suit. I referred this matter to Mr. Cowdery on the 16th instant. know if the Berrima coal is likely to suit. Mr. Downe, 24/3/82.

Mr. Downe to see. The coal will have to be unloaded by your men.—G.C., 23/3/82. -Geó. DOWNE, 24/3/82.

J. J. O. Atkinson to The Commissioner for Railways.

I have the honor to inform you that, in compliance with request contained in letter from your Department, Ms. 82–944, I have given instructions for two trucks coal to be forwarded to Campbelltown for the Campbelltown and Camden Tramway Line, and trust it will be found suitable for your purpose. I may inform you that we burn this coal in our own locomotive without any admixture of other coal and that it burns splendidly, but being bituminous requires a judicious use of the pricker, and the furnace-bars should be rather wider apart than for the splint coal.

I have, &c., J. J. O. ATKINSON, Managing Director, Berrima Coal Company.

Mr. Cowdery.—B.C., 31/3/82, G.B. Mr. Downe to see.—G.C., 3/4/82.

Seen, and instructions issued to ascertain if this coal can be used, and with what result. Details of trial shall be forwarded when completed.—Geo. Downe, 3/4/82. Commissioner.—G.C., 6/4/82.

Resubmit end of April. Resubmitted, 1/5/82. Mr. Cowdery. B.C., 2/5/82, G.B. Mr. Downe.

G.C., 4/5/82.

Minute of Commissioner.

From what source is the coal for Camden Tramway being obtained, at what price, &c.? If the Berrima Company will deliver at 7s. a ton, will it not be economical to take it—delivery at Austermere?—C.A.G., 31/5/82. Storekeeper, B.C.

Camden Tramway supplied with Lithgow coal, cost at Lithgow, 8s. 6d., at Campbelltown, 17s. 1d. Berrima coal received at Austermere at 7s. would cost at Campbelltown 12s. 3d. Before any arrangement is made with Berrima Co., it would be well to get Mr. Downe to report upon the relative value of the two coals, &c.—H.C., pro Storekeeper. Commissioner, 1/6/82.

I have not received any report upon the coal used on the Camden Tramway. There is an apparent saving of 4s. 8d. per ton in using Berrima coal. Mr. Scott, who has now charge of the Locomotive Branch of Camden line, will please report.—C.A.G., 5/6/82.

As the papers notifying that the charge of this line is to be handed over to this Department only reached me this morning, I presume Mr. Downe will be able to supply the information required.—W. Scott. 7/6/82, The Commissioner. Mr. Cowdery, B.C., 7/6/82.—G.B. Mr. Downe, for report.—G.C., 9/6/82. Report herewith.—G.C., 12/8/82. Commissioner.

Geo. Downe to The Engineer of Existing Lines and Tramways.

Sir,

Attached are papers showing the relative values of Berrima and Lithgow coals for steaming purposes on motors running on the Camden line.

It will be found the Berrina has been worked out at two different prices per ton, one at 12s. 3d. per ton, assuming it can be bought for 7s. at Austermere, as per Commissioner's minute of 31/5/82, and the other at 18s. 3d., the price actually charged for that used on the trial; the Lithgow has been taken at 17s. 1d., present price at Campbelltown.

It was found on trial that the Lithgow coal maintained steam easily; was fairly clean; its consumption was 28 lbs. per train mile, and cost 2.56d. per train mile.

The Berrima coal sent for trial was found to be very dirty, could only be worked by having a very light quick fire, and with frequent use of the blower; it produced a large proportion of ashes; the consumption was 40.25d. lbs per train mile, and cost 2.64d. per train mile at 12s. 3d. per ton and 3.93d. per train mile at 18s. 3d. per ton.

The quantity in each case included the amount required for lighting up.

It will be seen the cost per train mile of Berrima coal at 12s. 3d. per ton is 2.64d. against 2.56d. of Lithgow; and this, considering the extra stoppage of thirty minutes on the Berrima trial makes the cost about the same in each case.

If the seam of Berrima coal should improve in quality, and could be supplied at 12s. 3d. per ton, the cost to the Department would be about equal in each case.

TRIAL of Berrima Coal.—Results of trial run on the Camden line.

No. and maker of engine used during trial, Baldwin.

Do. car, Hudson.

No. of trips from Camden to Campbelltown and back, four.

Distance actually run with passengers, 32 miles.

Time actually running with passengers, including stoppages, 40 minutes. Time occupied in stoppages on journeys, 6 minutes.

Distance shunting at termini, I mile.

Time occupied in shunting at termini, 45 minutes.

Time standing still at termini, $3\frac{1}{2}$ hours.

Total time of trial, 7 hours.

Average boiler pressure during trial, 105 lbs.

Total number of passengers carried, 68.

Weight of passengers carried (15 pass. = 1 ton), 36 tons.

Total dead weight hauled (engine and car $18\frac{1}{2}$ tons), 604 tons.

Gross load hauled, 640 tons.

Kind of fuel used, Berrima coal.

Weight do. 1,288 lbs.

Consumption of fuel per train mile, 40.25 lbs.

Do. do. per mile, running and shunting, 39.03 lbs.

Do. do. per ton gross load, 2.01 lbs.

Do. do. per hour, 184 lbs.

GEO. DOWNE.

Inform Company that until their coal improves, i.e., gets freer from those impurities which make ash, it seems to be more economical to use Bowenfels coal for the Camden Tramway.—C.A.G., 15/8/82.
```

The Commissioner for Railways to The Secretary, Berrima Coal Company.

Department of Public Works, Railway Branch, Sydney, 21 August, 1882. Sir, Referring to the proposal made to use Berrima coal on the motors running on the Camden Tramway Line, I have the honor to inform you that until your coal improves, i.e., gets freer from those impurities which make ash, it seems to be more economical to use Bowenfels coal for the Camden Tramway. I have, &c.

CHAS. A. GOODCHAP,

Commissioner for Railways.

No. 21.

Extracts from Guard's Time and Occurrence Sheets.

No. 3 down goods train Picton to Goulburn, 4/2/82.

Twenty minutes lost by locomotive at Mittagong cleaning fire; ten minutes lost by loco. between Marulan and Goulburn. For Mr. Scott's information.

W. V. READ,

Actg. Loco. Engineer.

per D.K., 16/2/82.

Mr. Cobb, 17/2/82. Mr. Proctor.—J.C., 17/2/82. This was caused by using Berrima coal.—J. Proctor, 18/2/82. This coal was put on at Picton.—Mr. Webster, J.P., 22/2/82.

Extracts from Guard's Time and Occurrence Sheets.

No. 4 up goods Harden to Goulburn, 8 Feb., 1882.

Fifteen minutes lost by loco. at Gunning oiling and cleaning fire; five minutes lost at Breadalbane; loco. ten minutes lost between Breadalbane and Goulburn getting up steam before going over Cook's cutting bank.

JAMES PAULL,

Guard.

Loco. Inspector to see.—A. Crawford, 11/2/82. Caused by using Berrima coal.—J. Proctor, 20/2/82. The Manager to see.—A. Crawford. Write Loco. Engineer and ask if these delays are likely to be of frequent occurrence, as if so, the time-table would require to be re-arranged. The through goods should not be required to use this coal.—W.V.R., 22/2/82. Written, 23/2/82. In a week.—D.K., 23/2/82. There are several other reports of the same kind (trains delayed owing to bad coal); attach them.—D.K., 23/2/82.

Extract from Guard's Time and Occurrence Sheet.

Up goods Harden to Goulburn, 9 Feb., 1882.

Twenty-five minutes lost at Yass, detained by loco., ten minutes cleaning fire and fifteen minutes shunting; thirty minutes lost at Gunning, fifteen minutes by loco., cleaning fire, and fifteen minutes shunting.

J. DOYLE.

Guard.

Loco. Inspector to see.—A. Crawford, 11/2/82. Caused by using Berrima coal.—J. Proctor, 20/2/82.

Extract from Guard's Time and Occurrence Sheet.

No. 3 down goods, Picton to Goulburn, 4/2/82.

Twenty minutes lost by loco. at Mittagong cleaning fire; ten minutes lost by loco. between Marulan and Goulburn.

ARTHUR JACOBS,

Guard.

Mr. J. Proctor.—A. Crawford, 9/2/82. Mr. Webster.—J. Proctor, 10/2/82. I know nothing of this; it was run by a Goulburn engine.—W. Webster, 13/2/82. Time lost with Berrima coal.—J. Proctor, 13/2/82. The Manager to see.—A. Crawford, 14/2/82. Inform Actg. Loco. Engineer, 15/2/82. Informed, 16/2/82. In a fortnight.—D.K., 16/2/82.

Memorandum to Inspector Crawford.

Sir,

Government Railways, Picton Station, 22 February, 1882.

I beg to report for your information, that No. 65 special was one hour late leaving Goulburn,
35 minutes waiting at Bundanoon for No. 27 down mail, 45 minutes late arriving at Mittagong.

Your obedient servant,

DANIEL RAY.

Memorandum to Inspector Crawford.

Government Railways, Goulburn Station, 21 February, 1882.

Live stock special 48 minutes late into Goulburn, time lost by loco.

W. J. PETTY,

Guard.

Loco. Inspector.—A. Crawford, per A.A., 23/2/82. Mr. Close.—J.P., 25/2/82. Driver R. Stuart ran this train, engine 100. Please report—J.C. 26/2/82. Mr. Proctor. Should have been 21st engine. Tubes leaking, and Berrima Coal.—J. Proctor, 27/2/82. The Manager to see.—A. Crawford, 1/3/82.

No. 22.

Minute of Commissioner.

How are we receiving coal from Berrima Company ? I am informed that we are only ordering about half the contract quantity. Mr. Richardson will please explain.

C. A. G., 10/5/82.

This coal is ordered by the Locomotive Department each week. It is a fact that nothing like the contract quantity is now being or has at any time been ordered. At first the Company were glad that this should be the case and made a request that they should not be pressed to supply the full quantity.

should be the case, and made a request that they should not be pressed to supply the full quantity.

I am not aware that this request has been countermanded; at the same time I have no idea that this is the reason for the continued ordering of so small a quantity, for I had been informed, though unofficially, that the coal was not approved of, and that a larger quantity of Bowenfels coal was required to mix with it than was at first anticipated; and I was under the impression that this had been reported to the Commissioner.—A.R., 12/5/82. The Commissioner.

Locomotive Engineer for report.—B.C., 20/5/82., C.A.G.

254

As I was anxious to give the coal a fair trial, I deferred reporting upon it until the works became more developed, when I was in hopes it would improve, and I still think it will. I forward he extracts from reports received reflecting on its quality, for your information.—W. Scott, 1/6/82. I forward herewith Commissioner.

Recapitulation showing trains delayed through using Berrima coal.

No. 15 down goods, Picton to Goulburn, 35 minutes lost between Picton and Mittagong. Bad coal

7-2-82 No. 25, down goods, Picton to Goulburn; fifteen minutes lost at Mittagong. Raking out fire-box.

8-2-82. No. 4, up goods, Harden to Goulburn; thirty-five minutes lost. Cleaning out fire-box at Binalong, Yass, Gunning, and Breadalbane.

9-2-82 No. 3 down goods, Picton to Goulburn; twenty minutes lost at Mittagong. Raking out fire-box.

11-2-82. No. 25 down goods, Picton to Goulburn; fifteen minutes lost between Picton and Bargo through having insufficient steam. Ten minutes at Bargo, driver getting up steam. Thirty-five minutes at Mittagong, cleaning out fire-box. Inspector Webster states:—In future fifteen minutes will be required by all goods engines to clean fire at Mittagong.

3-3-82.

No. 36 up goods, Harden to Goulburn; fifteen minutes lost between Gunning and Breadalbane. Cleaning out fire-box at Fish River.

No. 25 down goods, Picton to Goulburn; forty minutes lost between Mittagong and Goulburn. Bad coal. 3-4-82.

5-4-82. No. 36 up goods, Harden to Goulburn; thirty-two minutes lost. The coal was so bad the driver had to clean fire six times between Harden and Goulburn.

No. 7 down goods; thirty-eight minutes lost between Picton Lakes and Mittagong. 8-4-82. Bad coal.

No. 26 up goods, Harden to Goulburn; fifty-eight minutes lost-twenty-eight at Yass, 29-4-82. and thirty between Gunning and Breadalbane. Bad coal.

No. 25 down goods; seventeen minutes lost at Barber's Creek. Raking out fire-box. Up Special, Live Stock train; thirty-five minutes late into Goulburn. Time lost between 4-5-82. 14-5-82.

Bowning and Goulburn cleaning out fire-box.

2nd Division of No. 27 Mail, Goulburn to Junee; ten minutes late into Junee; bad 23-4-82.

coal. The engine (No. 91) had been shunting in Goulburn yard and was using Berrima coal, and a small quantity of this coal was left in the bunker before being filled with Bowenfels coal. W. SCŎTT

If Mr. Scott will take his memory back to the time when the Lithgow coal was first introduced, he will find that the engine-drivers, who are always loath to make a change, reported in like manner of the Lithgow coal, and made the same excuses for the delay of their trains. The chemical analysis of the Berrima coal is so good as to prove beyond all doubt that it is really a good coal, and when prejudice is overcome, and perhaps the lower deposits are reached (though the former and not the latter is at the bottom of the complaints in a great degree) we shall hear no more of the unsuitability of the coal.

The coal may require different treatment. To make it most effective may require to have an alteration of the fire-bars, but, in view of the economy which will result in the use of this coal, every reasonable expense must be incurred to make it serviceable before I shall be able to consent to its being abandoned. C.A.G., 5/6/82.

Noted.—Everything possible will be done to attain the object sought.—W. Scott, 6/6/82. The Commissioner. Seen.—C.A.G., 9/6/82. Storekeeper to see.—G.B., B.C., 12/6/82. Seen.—A.R., 13/6/82.

No. 23.

Mr. A. Armstrong to The Commissioner for Railways.

Land Agency Office, 26, Bridge-street, Sydney, 25 July, 1882. I have the honor to make application for a test to be made of coal recently discovered near Sir, Meryla Platform, Great Southern Railway.

The seam has been opened by a Company formed for the purpose of securing the land and proving its mineral capabilities, and a tunnel has been driven 100 feet into a seam of 11 feet 4 inches thick, the quality of which appears, as far as open-air burning can prove, to be of superior quality.

Arrangements will be made to supply a quantity for testing wherever you may request at any station between Sydney and Moss Vale.

Experts in coal have reported the coal discovered to be fully equal to that taken from the best Newcastle seam. Consequently, I respectfully submit that a full and perfect test might with propriety be allowed, in the interests of both your Department and the general public.

I have, &c., A. ARMSTRONG. I have no objectian to the coal being tested as proposed.—C.A.G., 10/8/82. Inform Mr. Armstrong.—12/8/82. Acting Locometive Engineer, B.C., 14/8/82.—G.B. This shall receive most careful attention.—T.M., 17/8/82. The Commissioner. I beg to suggest that the sample be sent to Sydney, so that I may give it my personal attention.—T.M., 31/8/82.

The Commissioner for Railways to A. Armstrong, Esq.

Śir, 12 August, 1882. With reference to your letter of the 25th ultimo, asking that a test may be made by this department of coal recently discovered near Meryla Platform, Great Southern Railway, I have the honor to inform you that there will be no objection to the coal being tried as requested.

I have, &c.,
C. A. GOODCHAP, GOODULAL, Commissioner for Railways. The

The Commissioner for Railways to A. Armstrong, Esq.

29 August, 1882.

With further reference to your letter of the 23rd ultimo, asking that a test may be made by the Department of coal recently discovered near Meryla Platform, Great Southern Railway, I have the honor to request that you will forward any sample you may have to submit to the Railway Station, Redfern. I have, &c.,

CHAS. A. GOODCHAP,

Commissioner for Railways

. Locomotive Department, Redfern, 9 September, 1882.

Driver John Cook, engine No. 92, 7.55 a.m., pass., Sydney to Picton, reports.—2/9/82.

"The trial coal (Mr. Black's) 22 cwt., received at Sydney, proved to be of very inferior quality, and totally unfit for locomotive purposes, in consequence of which I had to leave my engine No. 92 at Picton, and take the pilot engine No. 89, causing a delay of forty minutes to my train."

Please see Driver John Jones' report.—J.C., 9/9/82.

This coal has not turned out well. What I saw looked a very fair specimen, and Mr. Cobb expressed himself as having no doubt of its success the day previous to its being tried in the Moss Vale tourists' train. Mr. Black, who rode on the engine, expressed himself satisfied with the trial. I think the fire-bars I am preparing will make this and also the Berrima coal a success.—Thos. Middleton, 14/9/82. The Commissioner.

Mr. J. Jones to Mr. Cobb.

Penrith, 7 September, 1882.

I beg to report on the trial of the Sydney Co. coal from Meryla, Southern line, tested on No. 92 engine with the 7.55 a.m. Southern tourist train, September 2. Before arriving at Campbelltown the steam dropped down to 80 lbs. pressure, and on arriving there found the fire-box full up to the door with ashes; had to stop the train there and knock them out, thereby delaying the train considerably; and seeing that the coal was an utter failure, and there was no prospect of getting through the journey without losing some two hours or more, I obtained permission to send another engine on from Campbelltown to Picton, losing nearly 40 minutes with a train of eight cars only. Had we gone on we should have required at least 30 minutes at Picton to clean the fire and raise the steam, and I have We struggled present contains too much earthy matter, and makes too many ashes to be of any service for locomotive I remain, &c., purposes.

J. JONES.

Acting Locomotive-Engineer.—J.C., 8/9/82.

Driver Jones to The Locomotive Engineer.

Sir, Penrith, 7 September, 1882. I beg to report on a trial of the Sydney Co. coal from Meryla, Southern line. I tested this coal to-day on No. 61 engine, on No. 19 down goods, Sydney to Penrith, forty-one loaded waggons on. On arriving at Parramatta, and after consuming not more than 14 cwt. of coal, the fire-box was completely blocked up with ashes, and I had to fall back on some Eskbank coal, which I had on the back of the tender, in order to avoid delaying the other trains. As it was, I lost thirty minutes getting to Penrith, and delayed the up passenger train six minutes at Blacktown. This coal at present is quite unsuitable for loco. purposes owing to the very large percentage of ashes it makes. I remain, &c.

J. JONES.

J.C., 8/9/82.

Government Railways.

Telegram from J. Jones, 9.50 to Mr. Cobb, Loco. Foreman.

This coal is a complete failure; we shall be hours on the road. Shall I send another on from Picton? Reply to Picton. Received, 10.20.

Minute of Commissioner.

RECENTLY a train in which the Minister was travelling was detained at or near Campbelltown for want of steam for a considerable time; the answer given to inquiries as to cause of delay was that Berrima coal was being used. Let me have particulars, for it is denied that the coal in use was the Berrima Coal Company's coal, and even if it were, inquiry is necessary to ascertain why the coal failed on this particular occasion. C. A.G.,

Mr. Middleton.

14/9/82.

The coal used on the occasion referred to was not Berrima, but from a mine further south named I think Meryla. It failed to generate steam on account of the accumulation of a great quantity of white ash on the fire-bars.—Thos. Middleton, 15/9/82. The Commissioner.

Inform Mr. Wilshire that it was not the Berrima Coal Company's coal, but some other coal which was being tested that failed on the occasion referred to.—C.A.G., 15/9/82.

The Commissioner for Railways to W. J. Wilshire, Esq.

10 September, 1882.

Referring to the train which was recently delayed at or near Campbelltown through want of steam, I have the honor to inform you that inquiry has shown that it was not the Berrima Company's coal but some other coal which was being tested that failed on the occasion referred to.

I have, &c., CHAS. A. GOODCHAP,

Commissioner for Railways.

1883-4.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAY EMPLOYÉS

(IN DARLING HARBOUR YARD AND AT EVELEIGH.)

Ordered by the Legislative Assembly to be printed, 29 April, 1884.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 15th January, 1884, That there be laid upon the Table of this House, a Return showing,—

- "(1.) The number of men employed in the Darling Harbour Yard, the "date of employment, wages received in each case, and by whom "recommended.
- "(2.) The like information in reference to the men at Eveleigh, in "Mr. Waring's gang."

(Mr. Abigail.)

RAILWAY EMPLOYÉS.

RETURN of men employed at Darling Harbour Yard, showing date of employment, wages received, and by whom recommended.

LEGISLATIVE ASSEMBLY.

SOUTH WALES.

CONVEYANCE OF RAILWAY MATERIALS.

(RATES, CORRESPONDENCE, &c.)

Ordered by the Legislative Assembly to be printed, 19 March, 1884.

RETURN to an Order of the Honorable the Legislative Assembly of New South Wales, dated 28th November, 1883, That there be laid upon the Table of this House, a Return showing :—

- "(1.) The rates charged for the conveyance of Permanent-way material for "railway extensions chargeable to capital account; also the rates charged "for similar material carried by railway for private persons.
- "(2.) Copies of all correspondence which has taken place between the "Engineer-in-Chief for Railways, the Minister, the Commissioner for "Railways, or traffic authorities, as to the rates charged for the conveyance "of such railway material.
- "(3.) Copies of all correspondence respecting delays in forwarding perma-"nent-way material to the contractors for the extensions now under " construction."

(Mr. Hutchinson.)

(No. 1.)

THE rates charged for the conveyance of Permanent-way material for railway extensions chargeable to capital account; also the rates charged for similar material carried by railway for private persons.

The following are the rates charged for the conveyance of Permanent-way material for railway extensions chargeable to capital account :-

4d. per ton per mile with the following discounts-

10 % on the rate per mile for every mile exceeding 100 and up to 150. 150

And on the Southern and South-western lines a further discount of 20 per cent. when conveyed a distance of more than 340 miles from Sydney ; maximum rate, £5 10s. per ton.

The same rates are charged to private persons.

(No. 2.)

Copies of all correspondence which has taken place between the Engineer-in-Chief for Railways, the Minister, the Commissioner for Railways, or traffic authorities, as to the rates charged for the conveyance of railway material for the extensions.

The correspondence respecting the above was laid upon the Table of the Legislative Council on the 18th October, 1883, and comprised in a return printed under No. 3 Report from Printing Committee.

See pages Nos. 1, 33, 34, 35, 36, 37, 38, 39, and 40 of the Return entitled "Correspondence on the subject of the use of Iron or Steel Rails for Railway extensions, the expenditure of the capital vote for railway extensions, and the rates charged for material for railway extensions."

(No. 3.)

No. 1.

The Engineer-in-Chief to The Secretary for Public Works.

Department of Public Works, Railway, Branch, Engineer-in Chief's Office, Sydney, 19 April, 1883.

Slow delivery of construction material for Southern and Western Railways

As serious inconvenience is being caused to this department and to railway contractors from the slow rate of delivery of Permanent-way material for construction purposes, owing, as alleged, by the traffic authorities to the madequate stock of bolster trucks, I shall be glad if something can be done to expedite the delivery to the contractors of the rails, fastenings &c, for the extensions, or claims will most probably be made against the department

JOHN WHITTON.

Minutes on No, 1

Railways, BC, 21/4/83—JR Traffic Manager for report—Chas AG, 24/4/83. Urgent Let me have a return of the rails forwarded within the last three months—Chas AG. The return asked for by the Commissioner is enclosed. Rails are going to so many different places and for such long distances that the wagons take a considerable time on the journey, so that for a time we were not able to forward them as fast as we should have liked, but this month the supply to all contracts has been well maintained. If the "G" trucks that I asked for on 31st January, 1882, had been supplied there would have been no hitch at all, but none of them have been supplied yet. I do not however apprehend any more complaints, as every possible effort is being made to keep up the supply—W. V. Read. (per. D.K.), 31/5/83. Commissioner.

No. 2.

The Engineer-in-Chief to The Secretary for Public Works.

Department of Public Works, Railway Branch, Engineer-in-Chief's Office, Sydney, 29 June, 1883.

Slow delivery of construction material.

Reference to my minute of 19th April last, drawing attention to the delay in delivery of material for extension, owing to the scarcity of bolster trucks, I have the honor again to bring this matter under your notice, the contractors for the Narrandera to Jerilderie railway being at a standstill for want of rails, which cannot be delivered as required for want of sufficient bolster trucks.

W. H. QUODLING,

(For the Engineer-in-Chief.)

Minutes on No. 2.

Railways.—J.R., B.C., 29/6/83. Mr. Read for cause of delay now?—W. V. READ (per D.K.), 29/6/83. Mr. Read for report.—Chas. A. G., 29/6/83. What is the Goods Superintendent. Please show how many rails have been sent to this extension.—J.D. (pro Superintendent Evans). Mr. Paull, 30/6/83. Total number sent 1,324, and there is a balance of 134 to go, which will be sent in preference to any others. Mr. Paull, 30/6/83. The only delay is for the want of bolster trucks. Four sets of rails were sent on Friday.—Chas. Paull, 2/7/83. Goods Superintendent. There are now only 109 rails to go forward. Delay in executing orders is caused by scarcity of bolster trucks. I am wiring and writing daily to expedite their return, but as a large number of sets is required in the Inspector's districts it is impossible to obtain the full supply. I trust a supply of new belster or G trucks will soon be forthcoming.—G. T. Evans, 3/7/83. Traffic

[Enclosures.]

Telegram from Superintendent G. T. Evans to Inspector Crawford, Goulburn.

Sydney, 2 July, 1883.

Harbour without delay.

Sydney, 2 July, 1883.

Harbour without delay.

I have given instructions for spare bolsters to be worked through. Ten sets are used by Topham, Angus, & Co. at Cables and Wingello, five each day.—A. Crawford, 2/7/83. Goods Superintendent.

Memorandum from Mr. J. Carmichel to Station-master Paull.

I have to report for your information that there are no bolster trucks on the station this day. Please inform Goods Superintendent as we require about ten sets a day to keep the extensions supplied.

J. CARMICHEL.

For information of Superintendent Evans. Grave complaints are being made by owners of timber, as well as the contractors on the extensions, who are hardly pushed for rails.—Chas. Paull, 2/7/83. Superintendent Evans.

Memorandum from Storekeeper to Traffic Manager.

Government Railways, Store Branch, 3 July, 1883.

Rails for Narrandera The order for rails for Halliday, Owen, & Co., Narrandera, is still unattended to. This is a very serious matter. There have been plenty of bolsters lately in Sydney and Eveleigh yards.

A.R.

Goods Superintendent for attention.—W. V. Read (per F.P.), 7/7/83. What is the meaning of above report?—G. T. Evans, 9/7/83. Mr. Paull. This cannot have reference to Darling Harbour, as you are aware that we have had a very short supply indeed of bolsters during the past four or five months. This order was completed on the 4th instant.—Chas. Paull, 10/7/83. Superintendent Evans. Station-master, Granville, for report. Is there any outstanding order for Narrandera at your station?—G. F. Evans, 11/7/83. No, there is no outstanding order here for Narrandera.—J. Higgs, 12/7/83. Goods Superintendent. Traffic Manager to see.—G. T. Evans, 12/7/83. Stores Superintendent to see.—W. V. Read (per D.K.), 13/7/83. Mr. Quodling.—A.R., 16/7/83.

No. 3.

Messrs. Topham, Angus, & Co. to The Storekeeper.

Sir, Goulburn, 4 July, 1883. We are very sorry to have again to complain to you of the non-delivery of rails for the plate-laying on this contract. We are laying down fully 20 chains per day, if anything more, and our rail straighteners are standing for want of rails. We have to ask your kind and immediate attention to this, as it is interfering very much with the progress of this contract.

We are, &c.,
TOPHAM, ANGUS, & CO. (Per Chas. Smith).

Minutes on No. 3.

Traffic Manager.—A.R., 6/7/83. Very urgent. What is the difficulty in getting a good supply of material sent away for Messrs. Topham, Angus, & Co.? I wish immediate reply please.—W. V. Read (per D.K.), 10/7/83. Goods Superintendent. Mr. Paull, for immediate report.—G. T. Evans, 11/7/83. It is not possible for me to do any more in sending rails forward than I am with the short supply of rail trucks that we are receiving. The contractors for Goulburn to Cooma are not the only people who complain, because they are all complaining, and unless a better supply of rail trucks is received no doubt it will become far more serious than it has been. I have only four sets to-day; those I will load for Goulburn.— Chas. Paull, 12/7/83. Goods Superintendent.

Traffic

Traffic Manager to see. I am continually writing and wiring for bolsters, but the supply is very limited. When may we expect to have an addition to our stock?—G. T. Evans, 12/7/83. Please see my report on Stores Superintendent's minute of 12/7/83.—W. V. Read (per D.K.), 14/7/83. Stores Mr. Quodling, to whom the other paper is also sent.—A.R., 14/7/83. Superintendent.

> No. 4. Messrs. Topham, Angus, & Co. to The Storekeeper.

Goulburn, 10 July, 1883.

We are very sorry to have to inform you that the ganger of our rail straighteners and his men left us yesterday on account of broken time caused through the non-delivery of the requisite permanent way material for this railway, and if a supply of both rails and fastenings should not come to hand to-morrow we shall be obliged to give up plate-laying altogether on Friday, the 13th. This is a very serious matter to us, and we have to ask your kind and immediate attention to this subject, for try as we may it will be impossible for us to complete this contract within the specified time unless you can kindly oblige us with the permanent way material in quantities of not less than 20 to 22 chains per day.

We are, &c., TOPHAM, ANGUS, & CO., (Per Chas. Smith.)

Minutes on No. 4.

This is a very serious matter indeed, and if material for the construction of the lines is not sent forward with greater despatch I feel sure the Commissioner will sustain pecuniary loss, as the contractors

will not suffer for ever.—A.R., 12/7/83. Traffic Manager.

Everything possible is being done to keep up the supplies. .I have just seen Mr. Scott, and we have agreed to try the experiment of loading A trucks with rails, as far as Goulburn. This has often been done as far as Eveleigh and Granville, but we have not hitherto loaded them for a long journey, and it is not at all certain that they will suit, in consequence of the bolster being immovable, still it is our only chance of avoiding complaints, because the ordinary bolster trucks are all in use. There have also been two or three G waggons built, and I have given direction for them to be loaded.—W. V. Read (per D.K.), 12/7/83. Mr. Quodling to see.—A.R., 14/7/83. Stores Superintendent.

No. 5. Minute of Engineer-in-Chief to Secretary for Public Works.

Department of Public Works, Railway Branch, Engineer-in-Chief's Office, Sydney, 7 July, 1883.

Subject:—Slow delivery of rails for Goulburn to Cooma Extension.—Further re bolster trucks deficient.

REFERRING to previous correspondence, I have again to draw attention to the serious inconvenience

occasioned to the contractors through the slow delivery of rails.

The most recent complaint is from Messrs. Topham, Angus, & Co., the contractors for the Goulburn to Cooma Extension, who represent that their work is very much interfered with by the slow delivery, as they are laying down 20 chains of road daily. I have again communicated with the Traffic Department on this subject, but the main cause of the slow delivery seems to be the scarcity of bolster trucks, about which I have already reported to you.

JOHN WHITTON (Per W.H.Q.)

Minutes on No. 5.

Submitted. Forward to Railways.—J.R., B.C., 10/7/83. Traffic Manager.—G.B., B.C., 12/7/83. Everything possible is being done to keep up the supplies. I have been in communication with the Stores' Superintendent in reference to this matter, and have just seen Mr. Scott, and we have agreed to try the experiment of loading "A" trucks with rails as far as Goulburn, but it is not at all certain that they will suit, in consequence of the bolsters being immovable. There have also been two or three "G" waggons built, which can be loaded. All the ordinary bolster trucks are in use.—W. V. Read (per D.K.), 12/7/83. Commissioner.

Let me have a weekly return of rails forwarded from Sydney to their various destinations from this time forward. How many bolster trucks are there? Perhaps Mr. Read will see me on the subject. Some plan must be devised for getting the rails forward. There should not be much difficulty

with the 18' rails.—Chas. A. G., 16/7/83.

I have seen the Commissioner, and, as I informed him, the experiment that was made of loading two pairs of "A" waggons with rails for the Cooma line was very successful, and I have arranged with Mr. Scott to have all the "A" waggons fitted with bolsters, which will be exclusively used on the Southern Line, so that the "E" waggons can be confined to the Western Line. By this means I hope, and have no doubt I shall be able to avoid all complaints. W V P 18/7/22 doubt I shall be able to avoid all complaints.—W.V.R., 18/7/83.

Seen.—Chas. A. G., 21/7/83.

No. 6. Minute of Secretary for Public Works.

COMPLAINTS are made by Mr. Quodling that several of the contractors are complaining that the Department are not supplying them with permanent way materials as fast as they should do so. Will Commissioner F.A.W., for Railways kindly attend to this? 16/7/83.

Minutes on No. 6.

I have directed the use of other than bolster trucks for forwarding these rails, and have asked for a weekly return of rails forwarded. There is not I believe much to complain of, but while this is so every effort must be made to remove all cause of complaint.—Chas. A. G., 17/7/83. Traffic Manager.—G.B., B.C., 20/7/83. This is having every attention.—W. V. Read (per D.K.), 21/7/83. Commissioner.

No. 7.

The Engineer-in-Chief to The Secretary for Public Works.

Department of Public Works, Railway Branch, Engineer-in-Chief's Office, Sydney, 21 July, 1883.

Correspondence re short supply of bolster trucks.

Referring to previous communications on the subject of the paucity of bolster trucks, and the consequent delays in the delivery of rails for certain extensions, I have now the honor to enclose, for your consideration, correspondence from the Traffic and Stores Departments, touching the matters referred to.

W. H. QUODLING, (For the Engineer-in-Chief.)

Minutes on No. 7.

By Secretary for Public Works:—Are there any complaints now from contractors short supply about of rails, &c.?—F.A.W., 28/7/83. Engineer-in-Chief.—J.R., B.C., 26/7/83. Yes. See Messrs. Topham, Angus, & Co's. letter of the 23rd instant herewith.—W.H.Q. (for the Engineer-in-Chief), 28/7/83. Under Secretary for Public Works.

[Enclosures.]

Messrs. Topham, Angus, & Co. to District-Engineer Glover.

Goulburn to Cooma Railway, Section No. 1, 23 July, 1883.

Dear Sir.

Our memo. of 16th instant returned herewith; since that date we have received a good supply of fastenings for

the permanent way.

At the same time we desire to draw your attention to the very hand to mouth way in which we are being supplied with rails. Up to the present time we have received 1,170 tons 18 cwts. 3 qrs. 26 lbs. of rails, which are sufficient for about 10 miles 51 chains. These have been disposed of as follows, viz.:—

Laid in permar For temporary			act	,	 	6 miles 72 chains.
Rails in stock	 	•••	•••		 • • •	59 ,,
	Total				 	10 miles 51 chains.

You will thus see that we have only two days supply of rails in hand and we are sorry to state that we shall have two gangs of rail-straighteners idle to-morrow, which keeps the work in a chronic state of change. Your early attention Yours, &c., TOPHAM, ANGUS, & CO. to this matter will greatly oblige

The Engineer-in-Chief.--W.G., 25/7/83.

Forwarded for the information of the Minister.—W.H.Q., 28/7/83.

Topham, Angus, & Co. to District-Engineer Glover.

Goulburn to Cooma Railway, Section No. 1, 10 July, 1883.

Dear Sir,

We beg to bring under your notice that we have not received any permanent way fastenings since March 10th.

We have now only a few days supply on hand, therefore would you be good enough to direct that a further supply be immediately forwarded to Joppa, so as to prevent the platelaying from being stopped.

Yours, &c.,

TOPHAM, ANGUS, & CO.

The Engineer-in-Chief for Railways.—W.G., 11/7/83. Superintendent of Railway Stores.—W.H.Q., 13/7/83.

The whole of the fastenings for the 8 miles of road, viz.:—7,290 fish-plates, 14,580 bolts, 24,515 spikes, 39,095 screws were loaded up on March 6th, and are no doubt those referred to by Topham, Angus, & Co. as received on the 10th. How can they want more when they have yet 610 rails to receive? The fastenings for the order of August 11th are now being loaded up, but these should not be required until rails are sent.—A.R., 14/7/83. Mr. Quodling.

Since writing I learn that a truck load of fastenings is in dispute and the matter has been referred by the store-keeper to the Traffic Branch. In any case the other fastenings will be received by them in a day or two.—A.R.

Mr. Glover.—W.H.Q., 16/7/83. Messrs. Topham, Angus, & Co., 23/7/83.—W.G. Seen.—T.A. & Co., 23/7/83.

Railways.—J.R., 30/7/83. The Traffic Manager and Superintendent of Stores will please give this matter their best and earliest attention.—D.V., 30/7/83.

Please see my report, dated 1st August.—W. V. Read, per D.K., 1/8/83.

Telegram from Topham, Angus, & Co. to Engineer-in-Chief.

WE have only one day's supply of rails on hand; if none arrive to-morrow we must stop work altogether on Wednesday

Minutes.

Under Secretary for Public Works.—W. H. Quodling, 31/7/83. By Secretary for Public Works:—Will Commissioner for Railways attend at once to this matter.—F.A.W., 31/7/83. Will Traffic Manager report on this matter? I had Mr. Read's assurance that no delays should take place.—Chas. A.G., 31/7/83. The difficulty has been in getting the "A" trucks fitted with bolsters with sufficient rapidity. This now being done however, and I anticipate no further complaints. Six sets of rails were forwarded to Goulburn yesterday; three more are going to-day, and more will follow quite as rapidly as the contractors will be able to use them.

Commissioner.—W.V.R., 1/8/83. Seen.—Chas. A. G., 2/8/83.

No. 8.

Minute from Engineer-in-Chief to Secretary for Public Works.

Department of Public Works, Railway Branch, Engineer-in-Chief's Office, Sydney, 13 August, 1883.

Subject:—Further re slow delivery of rails for construction.

I HAVE again to draw your attention to further complaints received from the following contractors, viz., Messrs. Mann, Carey, &c., Great Western Extension, Fishburn and Morton, Mudgee Branch, Topham, Angus, & Co., Goulburn to Cooma Branch, Halliday, Owen, & Co., Narrandera to Jerilderie Branch, relative to the slow delivery of rails for their respective contracts. As explained in my previous reports on this subject the inadequate number of bolster trucks for this traffic seems to be the primary cause of the delays. I need hardly remind you that if the delays complained of are persisted in serious claims on behalf of the contractors against the Government for compensation as well as for extension of time are likely to be W. H. QUODLING, made.

For the Engineer-in-Chief.

Submitted, 14/8/83.—J.R.

Minutes on No. 8.

By Secretary for Public Works: - Will Commissioner for Railways kindly see if some steps cannot be

taken to keep Contractors properly supplied with rails.—F.A.W., 14/8/83.

Traffic Manager, B.C., 15/8/83.—G.B. We are now sending plenty of rails to all the contracts since the 14th instant, and up to yesterday inclusive we despatched 38 sets to Goulburn, 9 to Narrandera, 14 to Capertee, and 22 to Nyngan, so that none of the contractors have any reason to complain. I am doing everything in my power to keep up the supply and have every hope that I shall be able to do it.—W. V. Read, per D.K., 23/8/83. Commissioner. Seen.—Chas. A. G., 31/8/83.

No. 9.

Minute of Engineer-in-Chief to Secretary for Public Works.

Department of Public Works, Railway Branch,

Engineer-in-Chief's Office, Sydney, 20 August, 1883.

Complaint of contractors re slow delivery of material. Subject:—Dubbo Bridge. THE contractors for the erection of the Railway Bridge at Dubbo (Messrs. Barnes & Co.) having made strong representations to this office on the subject of the non-receipt of certain ironwork urgently required for this bridge, I caused inquiries to be made of the Superintendent of Stores Department, and elicited the fact that the delay in forwarding the ironwork (which has been landed ex s.s. "Glenfinart") has been occasioned by the difficulty of obtaining bolster trucks.

The contractors reasonably urge that if they are unable to keep their staff of men together for want of material they will be involved in considerable loss; and it is needless to point out that claims will

accumulate against the Government by reason of such delays.

W. H. QUODLING,

(For the Engineer-in-Chief.)

Engineer-in-Chief's Office, Sydney, 28 August, 1883.

Short supply of bolster trucks for carriage of rails and bridge material for extensions.—Further correspondence.

I FORWARD for the Minister's information the enclosed correspondence between the Superintendent of Stores and the Traffic Manager, Southern and Western Railways, re the difficulty in forwarding rails to the extensions, in consequence of the insufficient number of bolster trucks available for this service, and again urge upon him the necessity for increasing the stock of these vehicles very considerably.

I do not attach any blame to the Departments concerned, as I believe the respective officers in charge have done all in their power to mitigate the difficulty.

Bolster trucks are also required for girders of iron bridges and for long lengths of timber.

W. H. QUODLING,

(For the Engineer-in-Chief.)

Minutes on No. 11.

By Secretary for Public Works:—Commissioner for Railways for report.—F.A.W., 30/8/83.

Please hurry rails forward.—H.C., 14/8/83. Station-master, Darling Harbour.
Only one set of rail-trucks on station Saturday, and three sets Monday, and two sets yesterday, to send rails with; but to-day I have a better supply, and I will do my best to send all I can forward; but the want of trucks is the sole cause of all the complaints re want of rails.—Chas. Paull, 15/8/83. Storekeeper. Superintendent of Stores.—H.C., 16/8/83. The extensions will inevitably be delayed during this year if something is not done about increasing the rail-truck supply. There does not appear to be a sufficient quantity on hand for one extension, while we shall soon have nearly half a dozen to keep going.—A.R., 16/8/83. Traffic Manager.

It will be seen that about three sets a day have been sent this week. Nyngan requires fifteen sets a week, and every effort is being made to supply that number.—W. V. Read (per V.T.), 17/8/83. Stores Superintendent.

Minute from Superintendent of Stores to Traffic Manager.

Short supply of Bolster Trucks for the forwarding of rails to the various extensions.

Surely the Traffic Manager will not contend that three sets per day is a satisfactory quantity to send out. We shall soon have five or six extensions hard at it, and the lowest number that will keep them going will be twelve to fifteen sets daily. I trust that this matter will receive Mr. Read's personal attention before it is too late to make some provision. There are quantities of wagon fittings in store, and Hudson Brothers would soon knock together fifty extra trucks for this purpose.

18/8/83.

A. RICHARDSON, Superintendent of Stores.

Mr. Richardson may rest assured that I am doing everything in my power to send forward good supplies of rails, so that the contractors may not be delayed. I fancy he must be under the impression that the rails referred to in my minute of the 17th instant were all that were forwarded from Darling Harbour during the period stated; but that is not the case, because these were all forwarded to Nyngan. Last week sixteen sets of rails were sent to the Contractors there in addition to those sent to Capertee, Goulburn, and Narrandera.—W. V. Read (per D. K.), 21/8/83. Stores Superintendent.

For the information of the Engineer-in-Chief.—A.R., 24/8/83. Forwarded for the Minister's consideration with my minute of this date.—J.W. (per W.H.Q.), 28/8/83. The Under Secretary, B.C.

No. 12.

Goulburn to Bungendore—Stoppage of road-laying for want of rails.

FORWARD for your consideration the enclosed copy of a letter, dated yesterday, from Messrs. Topham, Angus, & Co., the contractors for section 1, Goulburn to Cooma Railway, reporting that they are again at a standstill with their permanent way laying for want of rails.

W. H. QUODLING,

(For the Engineer-in-Chief.)

Minutes on No. 12.

Will Commissioner for Railways give this matter his prompt attention. F.A.W., 31/8/83.

[Enclosure.]

[Enclosure.]

Messrs. Topham, Angus, & Co. to The Engineer-in-Chief.

Goulburn to Cooma Railway, Section 1, 30 August, 1883, We are very sorry to have to inform you that we were standing again to-day for want of permanent way material.

Three times within this last month our plate-laying has had to stop for want of rails; and through these stoppages we have lost some of our very best men, which tends to entirely upset our arrangements. We shall take it as a kindness if you will please endeavour to keep us better supplied, for as it is now these delays are putting us to serious inconvenience.

Yours, &c.,

(Pro Topham, Angus, & Co.), CHAS. SMITH.

I again forward these papers to the Traffic Manager to impress upon him the necessity of his forwarding the rails as early as possible. His efforts to keep the contractors going, and prevent any cause of real complaint, must not be relaxed.—Chas. A.G., 3/9/83.

Chas. A.G., 3/9/83.

Notwithstanding that thirty-eight sets were sent to Goulburn between the 14th and 23rd August it will be seen that the supply was insufficient.—Chas. A.G.

We were so hardly pressed for bolster trucks in all directions that it was quite impossible for a time to send forward supplies to please the contractors; but sufficient were always sent forward to prevent any hitch arising; and since we had a good many "A" trucks fitted with bolsters several weeks ago there have been no complaints, and there will be no more if I can possibly help it.—W. V. Read (per D.K.), 18/10/83.

Commissioner.

For the Minister's information.—D.V. (pro Commissioner).

The Engineer-in-Chief to The Secretary for Public Works.

Engineer-in-Chief's Office, Sydney, 4 September, 1883.

Subject: Further re short delivery of rails for Mudgee Railway.

Referring to my minute of 24th ultimo, No. 83-1,352, the District Engineer, Mudgee railway, reports (by wire) that the contractors who are able to lay a mile and a half of road per week are again short of rails.

As these delays will prevent the proposed opening of the line to Rylstone by the end of next month, I submit this further complaint for your consideration, and in the meanwhile I have represented the matter strongly to the Traffic and Stores Department.

Submitted, 5/9/83.—J.R.

JOHN WHITTON (per W.H.Q.)

Minutes on No. 13.

By the Secretary for Public Works:—Will Commissioner for Railways obtain a report from Traffic Manager about this continued complaint.—F.A.W., 5/9/83. Railways, B.C., 6/9/83.—J.R. Very urgent. Traffic Manager for report. I had Mr. Read's assurance that no further complaints would arise.—Chas. A.G., 7/9/83. Please see my report of this date.—W. V. Read (per D.K.), 18/10/83. Commissioner.

[Enclosures.]

Memorandum to Inspector of Stores, Redfern.

Department of Public Works, Railway Branch, Engineer-in-Chief's Office, Sydney, 4 September, 1883.

Further re short supply of Rails, Mudgee Railway.

THE District Engineer having reported that the contractors, Mudgee railway, are again short of rails, I have to request that you will use every effort to cause them to be supplied with their weekly complement, viz., one mile and a half (1½) of

The Traffic Manager's attention has been directed to this fresh complaint and representations have again been made to the Minister on the subject. W. H. QUODLING.

This ever-recurring complaint of want of rail trucks should I think be obviated without further delay.

It has been going on for several years, constantly getting worse instead of better. I have repeatedly written about it, suggesting that a number of extra trucks should be put on hand and turned out at once. Nothing however seems to be done, and it is quite painful to deal with the contractors for the extensions under present circumstances.

The only plan seems to be to wait for a complaint and then supply a quantity of material in that direction. These complaints are constantly going the round of the contractors. It is quite impossible to keep one half of them going satisfactorily, and when new contracts are let, which will be the case shortly, serious delays, which must result in pecuniary loss to the Department, will inevitably occur if the matter be not promptly taken in hand.

Again, when we have to send a few rails south or west for renewals the same difficulty presents itself. Works are often seriously delayed before we can secure the few rail trucks necessary.

A.R., 5/9/83.

The Commissioner.

What has Traffic Manager to say to this representation?—Chas. A.G.—7/9/83.—W. V. Read (per D.K.), 18/10/83. The Commissioner.

Narrandera to Jerilderie Railway.—Further re slow delivery of Rails.

On the 17th July last an order was issued for the delivery of ten (10) miles of road for this contract, but the contractors (Messrs. Halliday, Owen, & Co.) complain that up to Saturday last, the 8th instant, very little of the material had been delivered, and that having started plate-laying they would require at least twenty-five

twenty-five (25) chains of material per day. As there is every prospect that unless the rails are delivered faster this work will be seriously delayed and claims made by the contractors, I think it to be my duty again to call the Minister's attention to this matter, with a request that the delivery of rails be expedited. See my previous memoranda of 29th June, 21st July, and 13th August, 1883.

Messrs. Halliday, Owen, & Co. to The Engineer-in-Chief.

Messrs. Halliday, Owen, & Co. to The Engineer-in-Chief.

Narrandera and Jerilderie Railway, Narrandera, 6 October, 1883.

The permanent way material has been delivered in such insufficient quantities that we have been compelled to discharge half of our plate-laying gang; the remaining portion have only been able to work half-time and are likely to leave the work at any moment, having become thoroughly dissatisfied at losing so much time.

We are unwilling to discharge these men although the work is now being carried on in a very expensive manner, owing to the insufficient supply of permanent way material crippling the whole of our work, and causing us to adopt expedients for which there should be no necessity. We have however kept on, unwilling to have standing idle our locomotives, wagons, and plant, besides, knowing how difficult it is to get men back after once letting them leave. Still there will be no help for it unless the permanent way material comes forward at the rate of 200 tons or more per week, and we would respectfully state that we shall require to be reimbursed our loss in this matter.

By Secretary of Public Works:-Mr. Vernon will give this complaint his prompt attention.-F.A.W., 24/10/83

Railways, B.C., 24/10/83.—J.R. Traffic Manager, B.C., 25/10/83.—G.B.

Messrs. Fishburn and Morton are, I may say, themselves entirely responsible for being short of rails in e. On the 25th ultimo I received the following communication from the Station-master at Capertee:— "Messrs. Fishburn and Morton, contractors, inform me, and wish me to inform you, that they can do without any more rails for at least two weeks, and would be glad if no more are sent forward for that time, so as to enable them to convey more ballast along the section to Rylstone, they being anxious to complete that

I issued orders accordingly, and on the 10th instant I received another communication from Capertee to the effect that Fishburn and Morton were prepared to take the rails as fast as they could be sent to the extent of 12 or 15 miles, and on the same day I had a telegram from Fishburn and Morton, informing me

that they were stopped for want of rails.

Now, as the first communication asked me not to send any rails for a fortnight at least, I think I was perfectly justified in believing that a day or two more would not matter, and, after all, from the 25th September till the 10th October is only 16 days. When I got the communications on the 10th there were no wagons available, but advantage was taken of the first that arrived, and two sets of rails were forwarded on the 13th, two on the 16th, and seven on the 17th instant.

If Messrs. Fishburn and Morton had not asked me I would not have discontinued sending the rails Every endeavour has been made since to keep up the supply. W.V.R., 29/10/83. Commissioner.

Minute from Engineer-in-Chief to Secretary for Public Works.

Department of Public Works, Railway Branch, Engineer-in-Chief's Office, Sydney, 8 November, 1883.

Subject:-Insufficient number of rail trucks, material for extensions delayed, &c.

REFERRING to my previous representations regarding the rolling-stock for carriage of rails being unequal to the demands of the several extensions, I have now the honor to submit an extract from a memo., dated 6th instant, received from the Superintendent of Railway Stores, in reply to an inquiry from this office about rails required for the Southern and Northern Junction Railway, part 3, viz. :-

"If something is not done to increase the stock of rail trucks the extensions are bound to be brought to a stand. It is quite impossible with the existing stock to carry one-half of the rails which are required, and the existing lines are in immediate need of a quantity of rails for renewals, both south and west. I have now brought this matter under notice so often that it seems useless to make any further application; but I must again point out that I am powerless to prevent the deadlock which will inevitably arise for want of permanent way material.

"Every additional extension, like the present, only adds to the difficulty of the situation. I have several times suggested to the Traffic Manager the desirability of running specials to meet the difficulty."

JOHN WHITTON.

Railways.—J.R., B.C., 2/11/83.

Traffic Manager.—L.P.I., pro Secretary, B.C., 5/11/83.

[Enclosure.]

Messrs. Halliday, Owen, and Co. to The Engineer-in-Chief.

Sir,

Referring to our letter of the 18th instant, and our telegrams of the 20th and 23rd, on the subject of the Department failing to supply the necessary permanent way material for the purposes of this contract, we regret to say that we are still in want of rails and fastenings. Although we have received a few screws and fishplates we are still unable to go on with the work for want of rails, bolts, and spikes.

We are aware that you have given orders for the material to come forward, and we would respectfully ask you if this delay is unavoidable, or could we, by representing the matter elsewhere, obtain the necessary material for carrying on our work. Failing this, we must discontinue the ballasting and other work effected by the stopping of the plate-laying, the loss thus occasioned to be made good to us by the Department.

We have &c

We have, &c., HALLIDAY, OWEN, & CO., (Per T.C.G.)

Traffic Manager's Report on Messrs. Halliday, Owen, and Co.'s letter of the 6 October, 1883.

This complaint is dated 6th ultimo, but in order to explain it fully it will be necessary to go further back

Messrs. Fishburn and Morton were not, at their own request, supplied with any rails for a fortnight early in October.

Immediately after that—and, in fact, before the time was up—they complained of a stoppage, and in order to give them a good start it was necessary to take away the wagons from the other extension. this way Messrs. Halliday, Owen, and Co. ran short, of which I was advised on the 2nd instant; I had five (5) sets forwarded that day, and (6) six on the 3rd. The second lot, however, did not reach Narrandera five (5) sets forwarded that day, and (6) six on the 3rd. The second lot, however, did not reach Narrandera until the night of the 6th, and on that day they were, I believe, entirely out of rails; hence the complaint. in

Since the 2nd November thirty-three sets of rails have been sent to Narrandera, which exceeds the

supply—I have been told by Halliday, Owen, and Co.—they require.

The principal cause of these recurring complaints from the contractors is the deficiency of the

rolling stock to meet all the demands.

When it is considered that the rails have now to be hauled much further than in former years, which necessarily takes a much longer period for each trip, and that there are now seven extensions, all going on at the same time, whereas we never had more than two before, also an unprecedented demand for timber wagons, it will be admitted that the delivery of new trucks has not kept pace with our requirements. The wagons available for rails have been added to within the last few months, but, as I have already pointed out in looking forward to this increased traffic, I have anticipated a much larger supply of "G" trucks than we have obtained. Until the supply of wagons can be increased I see nothing for it but to send men and unload the rails as they reach the point of delivery according to contract. Hitherto we have allowed the wagons to go on the extensions, and so long as we had plenty of them it was a saving to have the unloading performed by the consignee, but the saving is very little compared to the delay when the wagons are required. There is nothing, I presume, in the conditions of contract to compel us to continue doing so, and it was a saving to have the unloading performed by the consignee, but the saving is very little compared to the delay when the wagons are required. In the continue doing so, and it was a saving to have the unloading performed by the consignee, but the presented contracts an obligation on our part; with Commissional was a saving to have the unloading performed by the consignee, but the presented contracts an obligation on our part; with Commissional contracts and the contract to compel us to continue doing so, and it was a saving to have the unloading performed by the consignee, but the saving is very little compared to the delay when the wagons are sioner's approval, therefore, I propose to stop these rail wagons running on the extensions. I have also asked the Locomotive Engineer to have forty more (twenty pairs) "D" trucks made available for rails, and with these and the saving of time at the point of delivery, I am confident that all demands can be fully met, but it will still be necessary to push forward the "G" trucks.

Although it is not of much importance, there are other causes of delay. For instance, on 14th instant a large quantity of rails were loaded at Granville which I contemplated sending to the extension, and especially to Narrandera, as the supply there was all but out (and I have since heard the contractors were idle on 17th for want of rails), but at the last moment they were consigned by the Stores Department to Darling Harbour, where they have stood for some days, as consignees were not prepared to take delivery; but the principal cause, as I have said, is the want of rolling stock and the delay to wagons in the

contractors' hands. Commissioner.

W.V.R., 17/11/83.

For Commissioner's approval to stop trucks going forward on extensions the contractors are perpetually complaining, and it will much relieve the Department if we deliver according to contract, and save the delay of allowing trucks to go forward to head of road.—D.V., 21/11/83.

Minutes.

By Commissioner:—I do not wish to adopt a course which will, in its effect, prove to be worse than the existing arrangements; it would doubtless relieve the traffic Department of the charge that they are unable to forward the material, but by obliging the contractors to take delivery of the rails at the stipulated points for delivery instead of allowing the trucks to run on to the head of the road, as has been the practice, a greater evil may be created. No doubt the trucks are unduly delayed by the contractors, but the Traffic Manager should communicate with them, and point out the necessity for their returning the trucks at the earliest possible moment. A guard should be told off to go with the trucks when they leave our terminus, and to see that they are returned without delay.—Chas. A.G., 24/11/83.

Traffic Manager, B.C.—G.B., 25/11/83.

Report from Traffic Manager.

WITH reference to my minute of 17th instant as to stoppage of operations on Narrandera and Jerilderie extension, I had advice yesterday from Halliday, Owen, and Co. of their again being stopped for want of bolts and fastenings, and to-day they wire me as follows:—

"Kindly advise when fastenings will be here; we are waiting your reply before paying off our men

Superintendent of Stores advises me as follows:-

"We cannot supply what we have not got. We have run out of extension bolts and nuts, and have been keeping the contractors going as far as possible by borrowing a few from existing line stock. A shipment has now arrived in Sydney, however." I have informed the contractors accordingly, but it will be observed the want of rails has not always been the cause of stoppage, and I have had similar complaints before, and from other contractors than Halliday, Owen, and Co. The supply of rails may not have been always so good as I would have wished, but it has more than kept pace with the supply of fastenings, and at Narrandera the contractors had been compelled to lay several miles of rails fastened only by two bolts instead of

Commissioner.

W.V.R., 21/11/83.

Report of Traffic Manager.

In returning these papers respecting the short supply of rails at Narrandera I would simply remind the Commissioner that the sudden demand for bolster trucks to carry forward rails, bridgework, and timber connected with seven extensions and a heavy timber traffic in all directions was more than the rolling stock could provide for, and it was necessary to convert a large number of trucks intended for other traffic into the "bolster" class in order to keep pace with the demand. Even then, and notwithstanding constant vigilance, it was not possible to prevent occasional complaints, because the contractors had never much more than a hand to mouth supply, and the slightest hitch left them without any, or nearly so.

With regard to Messrs. Halliday, Owen, and Co., they wrote me on the 9th November as follows:—

"We beg to acknowledge the receipt of your letter of 7th instant, and are much obliged for the attention you have given to our request for the forwarding of permanent way material.

"With reference to your inquiry as to the lowest number of rails required to keep us going, we find we cannot do with less than 2 miles per week, or say, sixteen sets of bolsters, besides fastenings."

And during the nine weeks ending 12th instant, I find 155 sets were forwarded, or fully seventeen sets per week, so that the quantity they asked for has been already sent. The last of the rails available for the extensions were forwarded early last week, and for the last six or seven days the wagons have been employed conveying rails, for renewal purposes only, to Bathurst and Goulburn. The contractors must therefore come to a complete stand very soon, if they have not already done so. I have no knowledge of what may be on the way from England, but until a supply is obtained I can do nothing more for contractors. As stated in my report of 21st November, the contractors have frequently had to stop operations for want of bolts and fastenings, and although an attempt has been made to blame the Traffic Department for that too, it has been clearly proved that there were no bolts or fastenings in the country to supply to the contractors, and that for some time the works were only kept going by material borrowed from the Engineer of Existing Lines. I enclose copies of the telegrams, &c., received by me during November last, showing to what extremities the contractors were reduced in consequence.

In accordance with Commissioner's request I am now making inquiry as to the delay to our wagons

on the extensions.

W.V.R., 23/1/84.

Kindly send bolts and fastenings; most urgently wanted; stopped for want of them. When will they arrive?

Message from Station-master.

9 December, 1883. HALLIDAY, Owen, and Co. are short dogs and fish-plates. What they have received have been chiefly screws. Mr. Owe informed me that Engineer-in-Chief says the blame is with the Traffic Department.

No. 19a.

Messrs. Halliday, Owen, & Co. to The Engineer-in-Chief.

Narrandera, 21 November, 1883. We have the honor again to bring under your notice the slow delivery of the permanent way Immediately after we began platelaying we were put to inconvenience on this account, and we material. find as we proceed the inconvenience becomes greater. At the present time we are stopped for want of fastenings, nuts being particularly wanted; six cases, equal to two days work, were sent to us on the 8th instant, and we have had none since. What we desire is that 2 miles of permanent way material be sent to us every week, and that sufficient fastenings be sent for the rails, so that we will not be stopped for want of rails at one time, and for want of fastenings at another. We trust that this matter will receive attention, as we are now hindered in our work and are suffering loss thereby, the best of our men are leaving, and general dissatisfaction is felt, owing to the repeated waiting for material.

We have, &c.

HALLIDAY, OWEN, & CO.

Minutes on No. 19a.

This difficulty appears to me to increase. Almost daily reports are received from some of the lines, complaining of delay in forwarding permanent way materials. I shall not be surprised if large claims are made by the different contractors for losses sustained from this cause. Forwarded for the information of the Minister.—J.W., 27/11/83.

Submitted, 28/11/83.—J.R.

By Secretary for Public Works:—I trust the Commissioner will urge upon his officers the need

there is for more prompt despatch of material.—F.A.W., 28/11/83.

I have been advised to stop the practice of allowing contractors to take the trucks to the head of the road, as they are much delayed thereby. It would be of greater advantage to us to unload the trucks ourselves at the places stipulated in the contract and allow the contractors to find their own means of getting the material to the head of the road. In this way the Traffic Department would be relieved of these complaints as they would be able to supply the material faster than the contractors could receive it, but my object is not to shift the cause of delay but to expedite the completion of the works. I have instructed the Traffic Manager therefore to continue the present practice, but to warn the contractors that they are responsible for the delay by unduly detaining the trucks and to urge upon them the necessity of expediting the return of them.

If, however, the Engineer-in-Chief is serious in his anticipations of claims being made, I shall have

to reconsider my determination to continue present practice.

If the contractors will return the trucks promptly the Traffic Manager states he could meet all Сн.А.G., 1/12/83.

By Secretary for Public Works:—For Engineer-in-Chief.—F.A.W., 1/2/83. See memo. of 20/12/83.—W.H.Q. Under Secretary, B.C.

The Engineer-in-Chief to The Secretary for Public Works.

Department of Public Works, Railway Branch, Engineer-in-Chief's Office, Sydney, 20 December, 1883.

Delay in forwarding construction material and alleged detention of rail trucks by contractors.

REFERRING to previous correspondence and to the statement that the contractors "unduly detain" the rail trucks at the head of their roads, I have the honor to submit for your information three letters received

Messrs. Topham, Angus, & Co.—Goulburn to Cooma Railway., Fishburn & Morton—Wallerawang to Mudgee ,,

", Halliday, Owen, & Co.—Narrandera to Jerilderie Railway respectively, denying that the rail trucks have been delayed by them as alleged.

JOHN WHITTON.

Minutes.

Submitted.—J.R. By Secretary for Public Works:-For Commissioner's information.-F.A.W., 27/12/83.

$\lceil Enclosures. \rceil$

Fishburn & Morton to The Engineer-in-Chief.

Rylstone, 11 December, 1883. Sir,

In reply to yours of the 10th instant (83/2,008), we have the honor to state that we are not aware that rail trucks have ever been detained by us, having on all occasions sent back the empties by return train, and in the future we will also be as expeditious as possible in returning them.

Rystone, 11 December, 1000.

We have that we are not aware that rail trucks have ever been detained by us, having on all occasions sent back the empties by return train, and in the future we will also be as expeditious as possible in returning them.

FISHBURN & MORTON.

Messrs. Topham, Angus, & Co. to The Engineer-in-Chief.

Tarago, 12 December, 1883. We are in receipt of your memorandum 83-2,005, referring to our complaints of the slow delivery of permanent

way material.

In this memorandum you give, as the primary cause of delay in the dispatch of our material, the unwarranted detention of trucks by us at the head of our road.

In reply, we may state that we have never at any time detained bolster trucks an unreasonable time; we have on every occasion got the permanent way material unloaded with the least possible delay, and we do not think that the Department has any reasonable cause of complaint.

We are, &c.,

TOPHAM, ANGUS, & CO.

Messrs.

Messrs. Halliday, Owen, & Co. to The Engineer-in-Chief.

Narrandera, 12 December, 1883. In reply to your memo. of the 10th instant, referring to the detention of rail trucks at the head of the road by contractors, we desire to say that we have not in any instance detained the trucks and beg to enclose letter from the Narrandera Station-master to that effect.

We have, &c., HALLIDAY, OWEN, & CO.

Mr. D. Sheppard to Messrs. Halliday, Owen, & Co.

Narrandara Station, 13 December, 1883. In reply to your memo. of to-day's date re delay to Government waggons on extensions, I have never had occasion to complain of delay caused to any of our trucks by your firm.

Yours, &c., D. SHEPPARD

Minutes.

By the Commissioner:—The Traffic Manager will please report upon this representation at once. I must have a full answer, showing liow long the trucks were away after reaching their destination; please detach a good man to make the inquiry. A claim for compensation may be set up. There should be no difficulty in ascertaining when the trucks arrived at our terminal stations and when they were returned by This evidence will be more convincing than the statement of the traffic officers on the one the contractors. hand or the statement of the contractors on the other.

I suppose there is no question that if the trucks were unloaded by us on arrival at terminal station, they could be returned much more quickly to Sydney than they are under present arrangement

By Traffic Manager:—In connection with the recurring complaints of shortness of trucks, I found some time ago that the bolster trucks were frequently a much longer time away upon the extensions than they ought to have been, and that in fact the delay in getting the waggons emptied was alone sufficient to account for all the short supplies. The contractors, it so happens, have had on all the extensions to haul the waggons a long way from the end of the Department's rails, which of course must take longer time, but that is a matter this Department cannot recognize, and it is questionable whether we should not in future deliver the rails at this end of the extensions according to contract.

I wish you to visit Nyngan before leaving that district and to make up a return showing how long the wagons were in the possession of the contractors in each case for three months, say from 1st October. Give waggon number (waggons of rails only), date and hour of delivery to the contractors, and date and hour received from the contractors.

Inspector Simpson.

22/1/84.

The returns kept from October to 31st December, 1883, of the rail trucks for the various extensions show that as a rule these waggons were twenty-four hours on the extensions. At Narrandera in October and part of November the contractor unloaded the rails in the station yard, and when this was done I find the waggons dispatched loaded outwards on the day following their arrival, which would not have been the case if the waggons had proceeded on to the extension.—Robert Simpson, 11/2/84. Traffic Manager, Sydney.

By Traffic Manager:—I have had this matter very fully gone into with the result that on the Bourke and Cooma extensions our waggons have been greatly delayed. The statements prepared of the traffic for three months show that out of a total of 189 sent to the Bourke extension 86 have been delayed more than twenty-four hours; and on the Cooma extension 65 out of a total of 148 have been similarly treated. The delays have in some cases extended to ten days. On the other extensions—Mudgee and Jerilderie the delays have not exceeded twenty-four hours, but as a rule that is the time occupied by the contractor. Had we unloaded the wagons at the end of our rails, instead of giving the contractors the use of them, this delay would have been avoided, and there would have been no difficulty in keeping up the supply. Even as it is the supply of rails was exhausted long before the contractor's demands were satisfied, and for some time back the trucks we got specially made for this traffic have been idle so far as the carriage of rails was concerned.

W.V.R., 23/2/84.

No. 20.

The Superintendent of Stores to The Commissioner for Railways.

Tardy arrival of railways for extensions under indent, dated 9th October, 1882, for 647 miles of railway. I have the honor to report that only 390 rails (per "Potosi") have been received in satisfaction of the above indent, and only 1,153 more have been advised by the "Procida," now sixty-eight days out.

Two consignments ("Dallam Tower," 494 cases, "Star of India," 787 cases) of fastenings have been

We are now almost out of rails, and the extensions will I fear be stopped for want of them unless further consignments arrive very soon indeed.

A. RICHARDSON, Superintendent of Stores,

11/1/84.

Minutes on No. 20.

By Commissioner:—The contract stipulates that 2,800 tons shall be shipped per calendar month from 1st July to 31st December, 1883. At least 8,400 tons should have been in the Colony if this condition had been complied with, but not a hundred tons have yet been received.—CH. A.G., 15/1/84.

By Secretary for Public Works: - What does Commissioner advise in this case? I see by specification contractor is bound to deliver 16,854 tons of rails each year, but I cannot find any penalty for non-performance of contract. Bond is dated from 1883, but delivery is to commence in January of same -F.A.W., 16/1/84.

By Commissioner:—The Engineer-in-Chief should see these papers. It seems to me that if the rails are not sent out with more expedition some of the lines for which they are required will be delayed. cablegram should perhaps be sent to Agent-General, urging early shipment.—CH.A.G., 17/1/84.

13/2/84.

Should cablegram now be sent ?—J.R., B.C., 14/2/84. Railways.

By Commissioner:—What quantity of rails have been received to date, and what quantity should have been received? Include advices.—Ch. A.G., 14/2/84. Reply quickly. Superintendent of Stores. lude advices.—Ch. A.G., 14/2/84. Reply quickly. Superintender Herewith information required.—A.R., 16/2/84. Commissioner. G.B., B.C., 15/2/84.

By Commissioner :-

Quantity should have been received to date as per indent 150 miles of road per annum ... ` 9,828 tons. Rails received to date, 784 tons ... 1,990 " advised to arrive to date, 1,203 tons 7,838 Deficiency

I advise that the following cablegram be sent to Agent-General:—"By contract nearly 10,000 tons of rails should be here; not 2,000 either received or advised. Cannot supply contractors for extensions. Expect large claims for compensation."—CH. A.G., 18/2/84.

By Secretary for Public Works:—Approved.—F.A.W., 19/2/84. Cablegram sent, 19/2/84.

No. 21. Minute of Traffic Manager.

With reference to former correspondence relative to the conveyance of rails to the various extensions now in progress.

Our rail-carrying trucks have been comparatively idle for some time in consequence of there being no rails in the Colony to forward to the contractors; and it is reported to me that operations have now been stopped at Nyngan and Narrandera for want of rails.

W.V.R., 31/1/84.

Minutes on No. 21.

For the information of the Minister.—CH. A. G., 7/2/84. For Engineer-in-Chief's report.—F.A.W., 9/2/84. Mr. Whitton.—J.R., B.C., 9/2/84. The Superintendent of Stores has been requested to obtain rails from the stock at Newcastle, pending the arrival of rails from England. I hope there will be sufficient rail-trucks available to meet the requirements of the Construction Branch when the rails begin to arrive from England.—J.W. (per W.H.Q.), 13/2/84. Submitted.—J.R., 14/2/84.

rails begin to arrive from England.—J.W. (per W.H.Q.), 13/2/84. Submitted.—J.R., 14/2/84.

By Minister:—Who is to pay for the additional expense that will be incurred?—F.A.W., 14/2/84.

By Commissioner:—It will be charged of course to the capital vote, as it wouldseem that the AgentGeneral when making the contract with Cornwell & Co. for the supply of these rails did not stipulate for any penalty for non-fulfilment of terms of contract. Had he done so the additional expense would have been charged to the sum so recovered. I think, however, that the extra expense incurred should be ascertained, and the Agent-General requested to recover from contractors. In the mean time the capital vote is the only fund it can be charged to.—CH.A.G., 19/2/84.

By Secretary for Public Works:—Noted and approved.—F.A.W., 20/2/84.

No. 22.

Minute of Commissioner for Railways.

Delay in forwarding construction material.

I HAVE inquired into this matter very carefully, and find that though there have been occasional delays, they have not been of great importance, nor have they put the contractors to serious inconvenience. They were unavoidable in the absence of additional rolling stock, and it could scarcely have been foreseen that there would have been such a great demand from so many sources; it has been unprecedented, and is certainly not likely to occur again. There are seven contracts on south and west lines alone, and all at a stage requiring rails. It would seem from the Traffic Manager's report that in many cases it was not the want of problems that the work of feet wines for the want of the second of t of rails but the want of fastenings for the rails that the contractors complained of. This was owing recently to the non-arrival from England of these fastenings; but the urgency of the case was met in some degree by borrowing from the maintenance stock; but there is of course a limit to that.

The Construction Branch therefore has nothing to complain of in this regard. It is much to be regretted that there should be so much delay in obtaining supplies from England; had the English contractors observed the conditions of centract there would be plenty of rails and fastenings to forward; but if the works are greatly delayed it will be owing to there being no rails to forward. We are getting some from Newcastle (intended for the Northern District) at an extra expense, but there is great difficulty in obtaining vessels to carry them. Unless some improvement takes place in the quicker despatch of these rails from England the delay will be really serious, far exceeding the trifling delay that has occurred

through the great and sudden demand made upon the rolling stock.

Cr.A.G. 16/2/84. LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAY CHARGES.

(ON GREAT WESTERN, NORTHERN, AND SOUTHERN LINES.)

Ordered by the Legislative Assembly to be printed, 25 March, 1884.

RETURN to an Order of the Honorable the Legislative Assembly of New South Wales, dated 13th February, 1884, That there be laid upon the Table of this House,—

- " A Return showing the relative charges made for parcels and agricultural
- " or pastoral produce upon the Great Western, Northern, and Southern
- "Lines, for up and down transit for 100, 200, and 300 miles."

(Mr. Targett.)

RAILWAY CHARGES.

RETURN of the relative charges made for Parcels and Agricultural Produce upon the Great Southern Western, and Northern Lines, for up and down transit for 100, 200, and 300 miles.

PARCELS.

LEGISLATIVE ASSEMBLY. NEW SOUTH WALES.

RAILWAY TRAFFIC.

(AMOUNT OF DRAWBACK PAID TO WRIGHT, HEATON, & CO. DURING YEARS 1880-81-82.)

Ordered by the Legislative Assembly to be printed, 9 October, 1883.

Answers to Mr. Garvan's Question, No. 17, in the Legislative Assembly, on 31st May, 1883.

No. 1.—What is the amount paid during the years 1880-81-82, and in 1883, by the Government, on account of the Railway Department, to Wright, Heaton, & Co.?

Answer: The sum of £143 17s. was paid to Messrs. Wright, Heaton, & Co. in 1880, as a drawback upon clips of wool which that firm had diverted to Sydney. This firm had travelled the Riverina Districts, and found that the road and Railway charges on many clips of wool, as between its destination, being Melbourne or Sydney, was in favour of the route to Melbourne by a small sum only. The Department agreed with the firm that a rebate of 9d. per bale would be allowed on all wool which they could divert in the wool season of 1879 to our lines, previous clips of which had gone to Melbourne. This rebate of 9d. per bale represents the above sum of £143 17s.

No. 2.—Return of the amounts paid during 1880-81-82, and to 31st May, 1883, by Messrs. Wright, Heaton, & Co. to the Railway Department.

Lines.	1880.	1881.	1882.	To 31st May, 1883.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAY TRAFFIC.

(BETWEEN PICTON AND HARDEN.)

Ordered by the Legislative Assembly to be printed, 13 March, 1884.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 11th December, 1883, That there be laid upon the Table of this House the following Returns relative to the traffic upon the Great Southern Railway between Picton and Harden, from 1st September, 1883, to 17th November, 1883, viz.:—

- "(1.) The number of regular goods trains run on such section.
- "(2.) The number of special goods trains run on such section.
- "(3.) The number of drivers and firemen employed.
- "(4.) The number of goods engines employed.
- "(5.) The number of goods trains not running to time, and the cause thereof.
- "(6.) The number of engines recommended for repairs and still kept "running, and the reason why such repairs have not been effected.
- "(7.) The number of instances that engines have not been cleaned on "arrival at their destinations, and the reason for such neglect.
- "(8.) The number of times that drivers and firemen have worked more "than fifty-five hours per week.
- "(9.) The number of accidents that have occurred in working goods trains."

(Mr. Butcher.)

RAILWAY TRAFFIC.

RETURN respecting Railway Traffic between Picton and Harden.

- (1.) Question. The number of regular goods trains run on such section?

 Answer. 1,474.
- (2.) Question. The number of special goods trains run on such section?

 Answer. 391.
- (3.) Question. The number of drivers and firemen employed?

 Answer. 90.
- (4.) Question. The number of goods engines employed?

 Answer. 26.
- (5.) Question. The number of goods engines not running to time, and the cause thereof?
 Answer. 270 goods trains, or 14 per cent. of the total number run, did not keep time. The particulars of the delays are as follows:—

185, through unusual quantity of work at stations.

- 73, bad coal.
- 2, engines off road.
- 2, blocked by signals.
- 4, temporary failure of working gear of engine.
- 2, delayed by passenger trains.
- 2, through one division of a train overtaking another.
- (6.) Question. The number of engines recommended for repairs and still kept running, and the reason why such repairs have not been effected?
- (7.) Question. The number of instances that engines have not been cleaned on arrival at their destinations, and the reason for such neglect?

 Answer. Nil.
- (8.) Question. The number of times that drivers and firemen have worked more than 55 hours per week?

 Answer. 368, equal to four times for each man.
- (9.) Question. The number of accidents that have occurred in working goods trains?

 Answer. 3. Particulars of the accidents are as under:—
 - 1, derailment of engine at Colo Vale, through points being wrong.
 - 1, derailment of engine at Powrang, through the points being wrong.
 - 1, through second division of a goods train overtaking first division; resulting in slight damage to trucks. No person injured.

GOVERNMENT RAILWAYS, NEW SOUTH WALES.

(MR. SCOTT'S (LOCOMOTIVE ENGINEER) VISIT TO ENGLAND AND AMERICA.)

Presented to Parliament by Command.

Instructions of the Commissioner for Railways to Mr. Scott upon his departure from Sydney for England and America.

WITH the approval of the Secretary for Public Works, Mr. Scott is proceeding to England and America, for the purpose of inspecting generally the machinery used and the plans of the railway workshops in those countries.

There are various matters which he might take a note of while on his tour, not only in regard to railway working and machinery, but in reference to tramway subjects,—for instance, the formation of the road for tramways, the forms of rail adopted, the design of cars, the systems of checking passenger fares, and in what respect they differ from our own,—the description of motive power used, to ascertain whether the tendency is to use mechanical in preference to animal power, and whether the prejudice heretofore existing against the use of mechanical power in the streets is not in a great measure being removed by practical experience of its advantage.

In connection with this subject, it will be desirable to note the topography of the towns and cities in which the tramways run; as, while in cities which are generally level tramways worked by horse power may be most desirable, they would not be of so much advantage, or indeed be workable, in places where steep gradients and sharp curves have to be encountered.

I shall be glad if inquiry be made as to what progress has been made in the designs of motors for streets, whether De Faur's system of stored electricity can be adopted, whether the air motor constructed under Megarski's design or Colonel Beaumont's is the better, and whether any improvements are being made at the Baldwin Works in regard to pneumatic motors. In Staffordshire, England, Mr. Scott will see at work on the street tramways Manning and Wardle's steam motors, which are pronounced to be the most successful yet introduced. Mr. Scott will visit Liverpool and Manchester, both of which places have adopted a system of running steam motors in the streets; and will also report upon the wire tramways which have been introduced at Liverpool, and upon that system generally of providing for street traffic.

As it is found that the motors used on the Camden Tramway are not sufficiently powerful for conducting the goods traffic over the steep gradients of that line, it is desirable that engines light and, at the same time, sufficiently powerful to work the traffic should be obtained. I should be glad if inquiry were made in England or America for an engine of this type, the weight of which must not exceed from 16 to 17 tons. Further, I should be glad if Mr. Scott would inquire into the system of tramways for the country, as subsidiary or branch lines to the main railways. They are said to be largely adopted in Denmark upon Mr. Rowan's scheme.

The importance, in the economical working of railways, of the reduction of the tare of vehicles and the increase of their carrying capacity, cannot be over-estimated, and I wish Mr. Scott to direct his inquiries into this matter, especially in America, where the subject has received and is receiving so much attention. There has been recently patented there a design for carrying grain in cylinders which are made to run on the rails without any framing—the heads of the cylinders are flanged and used as wheels. In view of the prospective increase of grain cultivation in this Colony for home consumption, and even for exportation, it is essential that every means should be sought to give cheap carriage to the sea-port; and one of the greatest aids to this object will be to obtain rolling stock which embraces large carrying capacity with comparatively light tare.

With regard to the main object of Mr. Scott's visit—the machinery used in workshops—Mr. Scott will see how far hydraulic power has been substituted for steam, and whether in the adoption of machinery for our shops it will be desirable to adopt either or both these systems. Mr. Scott will have the right of communicating with the Agent-General; but if not convenient at all times to take this course, he can send direct by cablegram to this Department any communication on matters of importance affecting the design

of the workshops in connection with any new machinery he may deem suitable. We should thus be informed in time to admit of the plans being altered, so that we could adopt any special equipment which Mr. Scott's inquiries may show to be desirable to introduce. Mr. Scott should take the ground plan and elevation of the buildings with him, to enable him to see how far the machinery he meets with in other countries—lifting machinery for the most part and overhead travellers—will be suitable for our workshops as now designed.

I should like Mr. Scott to obtain the rates of wages ruling on the various railways; he will have no difficulty in acquiring this information from the locomotive engineers and traffic managers. I wish him also to get some idea of the rates of charges for carriage, and the conditions affecting the charges in regard to length of journey, density of traffic, return loading, &c.

I should be glad if Mr. Scott, when in England, will see what arrangements are made on the various railways in connection with sick and accident funds for the employés, and what provision is made for retiring allowances for old and disabled servants. I am aware that on the North-eastern Railway of France a very excellent system has been brought into operation. The capital of the fund is made up by annual reductions of 2 per cent. from the wages of the men, and an equivalent amount is added by the Company. This fund is made use of in many ways for the present accommodation and future provision of the men and their families. The chief merit of the system is that it can be made—in fact is made—a kind of Savings Bank; because if the men desire to change their employment, or to retire from the service, or are even dismissed, the sum contributed by them is considered to be their own money, and is in no way estreated, beyond a small amount for the expenses of management. The men, therefore, have no dread that their contributions to the fund will, from some accident over which they have no control, or indeed from any misfortune or misconduct, be lost to them.

I have initiated a scheme in this respect for the benefit of the employés on our railways, and to this end have had compiled a statement of their length of service, ages, and rates of pay, and have ascertained what the capital amount of such a fund would have been at this time had the scheme been brought into operation when our railways started. All the facts and figures connected with the matter are now in the hands of an actuary, with a view of seeing on what basis the scheme can be brought into operation on our lines; but I should like to know how far such a scheme coincides with those adopted in other countries.

I shall be glad if Mr. Scott will pay some little attention to the interlocking apparatus, the systems in use for securing safety in the running—especially the block system—and the method adopted in working single lines of railway; and further, what improvements in advance of our system have been made in the systems of lighting railway carriages with gas.

As it is found difficult to obtain the services of competent spring-makers in the Colony, Mr. Scott might take the opportunity, when visiting America or England, to obtain through the Agent-General and on the best terms, two or three competent men for this work. In connection with this matter, I wish Mr. Scott to inquire into the merits of the recently patented concave steel springs, samples of which, in miniature, I herewith hand to him. By the simple contrivance of concaving the plates the strength of the spring is increased threefold; and if there be no blemish on the plan, of which I cannot see any indication, this form of spring will revolutionize existing designs, by cheapening the cost, reducing the weight, and increasing the elastic resistance. They are a Canadian invention. Mr. Scott will see from the papers herewith the name and address of the manufacturers, and the railway lines for which they have already been ordered. As our stock of water-cranes is getting short, Mr. Scott might also arrange for sending out as samples the most improved forms of these appliances now in use in the Mother Country. The stock can be manufactured here.

I am anxious to bring into operation some plan for the mental and intellectual improvement of the men engaged in the Department, and shall be glad if Mr. Scott will inquire into the arrangements made in the different workshops he may visit, in respect of providing the means for the improvement of the men, by the institution of libraries, establishing classes, &c. Mr. Scott might get an inventory of the books kept in such libraries, copies of the rules and regulations for their management, and probably could arrange with the Agent-General for the collection and forwarding of a nucleus of a library for our men. I wish to see also some improvement effected in respect of the conveniences afforded to our artisans and labourers while engaged at their work, by the institution of refreshment-rooms and the establishment of baths, &c., &c.

I am aware that these advantages for the men are provided by many of the large Railway Companies of England and on the Continent. It will not be necessary, however, that Mr. Scott should visit the Continent of Europe to acquire information on the subject of improved railway working, as the English Board of Trade has published recently the report of the Commission they appointed to inquire into the same subject, from which it appears that the English system of working is in advance of, and superior in all respects to that adopted on the Continental Railways.

In conclusion, I wish Mr. Scott to take notes generally on everything of interest and importance that he sees, with a view to his drawing up a report of his tour of inspection when he returns to the Colony. 15/6/82.

CHAS. A. GOODCHAP.

Mr.

Mr. Scott's (Locomotive Engineer) Report on observations made by him during his visit to England and America.

Railway Department, Locomotive Engineer's Office, Sydney, July, 1883. To the Commissioner for Railways.

In accordance with your instructions, I have endeavoured, during my brief visit to England

and America, to obtain information on every subject which in my judgment would be of interest and importance, and have now the honor to report the result of my observations.

I arrived at San Francisco on the 10th July, 1882. The first subject that engaged my attention was the system of street railways and tramways in operation there. Having a letter of introduction to Mr. Hallidie, the Engineer and Patentee of the Cable Railways, I was enabled to thoroughly inspect both their construction and working. There are five completed cable roads in full operation in San Francisco, all of which are double tracks. Those in Clay and California Streets are laid to a 3 ft. 6 in. gauge for a all of which are double tracks. Those in Clay and California Streets are laid to a 3 ft. 6 in. gauge for a distance of 11,000 ft. and 12,000 ft. long respectively, while a 5 ft. gauge is adopted for the lines in Sutter, Geary, and Presidio Streets, the respective lengths of which are 17,000 ft., 13,200 ft., and 5,000 ft. Claystreet is a central street, and is for several blocks densely thronged during business hours. This street is only 49 ft. wide from house to house; and, besides a double track to a 3 ft. 6 in. gauge, it has between the side-walks two lines of gas-pipe, one line of water-pipe, and a street sewer. Streets running at right angles to Clay-street, about 400 ft. apart, are all crossed on the level. The steepest grade in this street is 1 in 6.

The general arrangement of the Clay-street cable road (which may be taken as applying to all the roads constructed on this system) is as follows:—An endless steel wire-rone 3 inches in circumference.

roads constructed on this system) is as follows :—An endless steel wire-rope 3 inches in circumference, roads constructed on this system) is as follows:—An endless steel wire-rope 3 inches in circumference, 11,000 ft. long, is stretched the entire distance, lying in iron tubes below the surface of the ground, supported every 39 ft. on 11-in. sheaves. The rope is supported at every change of angle at the lower crossings on sheaves 4 ft. in diameter, passing round a horizontal sheave 8 ft. in diameter at the lower end of the line, and at the engine-house it passes around two angle-sheaves 8 ft. in diameter, which lead the rope on the grip pulleys, also 8 ft. in diameter, which are driven by one pair of 14×28-in. cylinder engines. The steam is furnished by one boiler 16 ft. by 54 in., which consumes 3,700 lbs. of coal a day. A duplicate engine and a boiler are kept in reserve. The grip pulleys being furnished at their circumference with jaws that grip and release the rope automatically, by the pressure of the rope in the jaws, prevent the rope from slipping, and being set in motion by the engine actuate the endless rope while travelling up one tube and down the other. In addition to the sheaves that support the rope in the tubes. at the upper side of each slipping, and being set in motion by the engine actuate the endless rope while travelling up one tube and down the other. In addition to the sheaves that support the rope in the tubes, at the upper side of each street crossing where the incline makes an angle upwards, there are sheaves in the tubes that keep the rope down. There is an opening in the upper side of the tube which runs the entire length of it, forming a long slot three-quarters of an inch wide. This slot is not immediately over the centre of the tube, but on one side of it, to keep sand and drift from falling on the rope, and enables the foot of the gripping attachment to pass by and under the upper sheaves, and over the lower sheaves in the tube. The connection between the cars on the line and the travelling rope is made by means of a gripping attachment fixed to a grip car or dummy, and connected by a thin steel bar, which passes through the narrow slot in the tube. The rope runs 17½ hours per day, at a speed of 6 miles an hour, and the cars start every five minutes, and, in some parts of the day, as often as at three minutes intervals. The rail used is an ordinary 30-ft. steel T rail, which is set on longitudinal sleepers, and is flush with the street, which is paved the entire width, so that it presents a smooth appearance.

The machinery is so arranged that the rope passes for some distance in view of the engineer, so that it can be easily examined at any time. There is a stretching arrangement at the lower end, which keeps a constant strain on the rope under all circumstances.

This system presents little impediment to ordinary street traffic, as the rope is grasped or released

a constant strain on the rope under all circumstances.

This system presents little impediment to ordinary street traffic, as the rope is grasped or released at pleasure, and is more easily controlled than any other system I have seen in operation. I was surprised with the ease with which the cars run on the steep grades, always travelling at a uniform pace whether ascending or descending them. The cars on the Clay-street line seat fourteen passengers, and the dummy cars seat sixteen passengers; but as many as forty-four have ridden in the car and twenty-six on the dummy. The cars are of the ordinary omnibus shape, minus the driver's seat, with a covered platform for the conductor at one end, and weigh empty 2,800 lbs.; and the dummy car, which weighs 2,100 lbs. empty, is shaped like an Irish jaunting car, the well or centre portion of which is occupied by the conductor, the gripping arrangement, and the brakes. The passengers sit with their backs to the well, facing the sides of the street. There are front and back seats extending the width of the car.

The cars on the 5 feet tracks are the same as those on the 3 6 lines, but carry thirty-six passengers

The cars on the 5 feet tracks are the same as those on the 3.6 lines, but carry thirty-six passengers The average life of a rope is about twenty months; it has a tensile strength of 160,000 lbs. to the

The following is Mr. Hallidie's estimate for construction and equipment of 3 miles, double

track, of his cable railway:-

Excavating trenches for tubes, placing and fitting tube and track, refilling and paving street	6,600 12,150 528 400 3,885 9,504 2,491 3,194 7,800 239 243	c. 00 10 00 00 00 00 04 00 00 36 00 16	\$	c.	
Cost of 1 mile double track complete Add 2 miles 3" flexible steel wire rope, 16,500 lbs., at 23c	48 104				
Total cost of 1 mile double track	\$51.899	56 \$15	5,698	6 8	

	\$	ċ.	`\$	' c.
2 horizontal engines, 14" × 30" set up		00		
2 hoilers 52" x 16 ft. set up	4,500	00		
Tank, pump, and heater	1,500	00		
Compensating arrangement at end of line	1,800	00		
Driving machinery, pulley, &c	6,500	00	•	
15 cars @ \$900 each	13,500	UU		
15 dummies, with grips, &c., at \$700 each	10,500	00		
		-	44,100	00
Building site, say	10,000	00		
Buildings	10,000	00		
			20,000	00
Engineering and contingencies, 10%	•••••		21,979	87
Total cost of 3 miles of double track complete Equal to about £50,300.		\$	241,778	55 -

The annual running expenses of working a 3 miles double track, at a speed of 6 miles an hour, 24 cars and 24 dummies, leaving every $2\frac{1}{2}$ minutes:—

	Ð	c.
Coal screenings, 970 tons, @ \$6	5,820	00
Wages of 1 engineer, \$1,200; and 2 firemen, \$1,200	2,400	00
Wages of dummy tenders, at \$2.50 per diem, \$912.50 per annum	21,700	00
Maintaining 24 cars, @ \$180	4,320	00
Do 24 dummies and grips, @ \$200	4,800	00
Do wire rope		00
Do engine and running machinery	3,000	00
Interest on cost of road, @ 6%	14,506	71
Thoses on cost of four, & 5/0		
Total	\$88,246	71

Equal to about £18,400.

In addition to the cable roads, there are a great number of horse tramways in the comparatively level streets, which travel at a speed of about 5 miles an hour. Some of the cars which carry sixteen passengers, all inside, are drawn by only one horse, and are of the ordinary bus type, with a platform for the conductor. Others of the same kind are drawn by two horses, and carry twenty-four passengers. They start every five minutes. The whole of the cars are carried on four wheels. The horse tracks are the 5-feet gauge. The rails, which are of various forms, are laid on longitudinal sleepers tied together by iron rods. The pitching of the road is on a level with the rails, so that it in no way interferes with the ordinary traffic.

I noticed that the wheels of many of the street vehicles rode on the rails with ease. The average running expenses of a horse tramway 3 miles, double track, speed $4\frac{1}{2}$ miles per hour, starting every $2\frac{1}{2}$ minutes with a stock of thirty-two cars, each seating twenty-two passengers:—

	ð	c.
Stable expenses and feed for 288 horses, @ \$180 per annum	51,840	00
Shoeing 288 horses, @ \$24 do	6,912	00
Maintaining harness, @ \$7.50 per set	1,080	00
Maintaining 288 horses, @ \$125 each, life three years, 36,000÷3	12,000	00
Maintaining 32 cars. @ \$180 per annum	5,700	00
Wages of drivers (32) (a) \$2.25 per diem, \$821.25 per annum	26,280	00
Wages of conductors (32), @ \$2.50 per diem, \$912.50 per annum	29,200	
Interest on cost of cars (32), @ \$900 each, \$28,000 @ 6%	1,728	00
Interest on cost of horses (288), @ \$125 each, \$36,000 @ 6%	2,160	00
Interest on road bed, \$32,000, @ 6%	. 1,920	00
	#100.000	

Thus it will be seen that the running expenses of horse tramways are 57 per cent. more than the cable roads, whereas the latter carry 50 per cent. more passengers, consequently there is a general desire to use mechanical power, of which the cable roads have the preference at present.

There are various systems of checking fares on the tramways. In some cases the conductor gives change to passengers and collects the fares, making a punch opposite the number on a piece of cardboard with 150 numbers printed on it (see Appendix), which, when full, he replaces by another. Another system is for the conductors to sell tickets, which they afterwards collect and punch. On the one-horse trams, where there is no conductor, the driver gives change to the passengers, who place the fare in a box near the driver's seat, somewhat similar to that adopted by the Sydney Omnibus Company,

The following are the ruling rates of wages paid by the Cable Railway Company of San Francisco:—

						Φ	c.

During my limited stay in San Francisco I visited the following:—The Pacific Rolling Mills, which were in full operation, making iron bars, rails, nuts, bolts, &c., also Prescott & Scott's Engineering Works. The shops are extensive, and some very fine tools are in use. The class of work appeared to be very good.

I also went over the works of the San Francisco Tool Company, where I observed some combination planing machines to plane 20 inches wide and 50 inches long, which perform the functions of both a planing and shaping machine. The overhang of this tool is the means by which the wide range of adaptation is given. The cutting force is the same, no matter what the length of the stroke may be, and the movement, which is strong and smooth, is effected by means of double-thread screws. No gear-wheels are used, and there was no noise in its operation. The driving-bands are moved differentially by a simple gearing, so that the tapples could not catch. The nut-bearings are from 12 to 15 inches long, the nuts being made of gun-metal, composed of four parts of copper to one of tin. The feed motion is operated by friction, and runs out of contact at each stroke, so that there is no loss of power, and the shifting arms are firmly locked in both forward and back strokes, to prevent the belts fouling by accident. Two or more tables are used, so that several pieces can be mounted and planed independently at the same time, or one piece can be fastened while another is being planed. This machine, which weighs about 2 tons, appears very strong, and through the danger of catching being averted it does not require such skilled workmen as the ordinary planing-machines.

There is a suspended drilling-machine made in these works which attracted my attention. The spindle is suspended from the floor-joists, and the sole-plate, swing-table, and stand for boring is fixed to a stone foundation in the usual way. Work of any shape or size can be performed by this machine, the operator having no difficulty in getting round his work. There is also a special screw-cutting lathe, with an improved arrangement for feed-gear which is both simple and effective. I obtained from Mr. Richards, the patentee of these tools, catalogues with quotations, and it is my intention to recommend that one of each be ordered as a trial.

Through the kindness of Mr. Bishop, the Commissioner for Harbours and Water-works, I was enabled to inspect the system of communication between San Francisco and Oakland Pier, where the railway station of the Central Pacific line is situated, and from which the overland journey to New York is commenced. The distance is 2 miles. It consists of two large two-decked steamers, 400 ft. long and 86 ft. beam, the cylinders being 65 inches and 12 ft. stroke, with paddle-wheels 42 ft. diameter and 10 ft. wide. The passengers are accommodated on the top deck, where there is a long saloon fitted with every comfort. Vehicles and luggage are taken on the lower deck. One of these steamers starts from each side every half-hour. There are other large steamers of the same class which have lines of rails on lower deck to a 3-ft. gauge. These are run in connection with a 3-ft. gauge of railway, which has a separate wharf at Oakland, and they also run every half-hour. On the 18th July I started on the overland journey. On arrival at Port Costa, 32 miles from San Francisco, we had to cross about 2 miles of water. This was done by running the train on to a steam punt, somewhat similar to those used between San Francisco and Oakland. This punt has four lines of rails on the deck, upon one of which the engine runs with as many carriages as the length of the punt will allow. A pilot engine then shunts on to the next track as many carriages as it will take, and so with the third track, after which it runs with the remainder of the train on to the fourth track, so that it is ready when they arrive at the opposite side to shunt the train into its original order ready for the journey. The aprons connecting the boats to the slips at Port Costa are 100 feet long, with four tracks. They weigh 150 tons each, and are worked by a combination of pontoons and counterweights, by hydraulic power.

On arrival at Sacramento I gladly availed myself of an introduction to the Manager of the Central Pacific Railway Company's workshops situated here, to inspect them. They are very extensive, covering 40 acres of ground, and are very complete. The general arrangement is that known as the long shop, with roads running through the centre. The lifting is done by hydraulic jacks. The engines are taken in and out of the shops by ground travellers, worked by an endless chain with several turns round the barrel of a steam winch, which is stationed at one end of the traversing pit. There are a number of very fine machine tools in use, and every appliance for turning out a large quantity of work. The buildings are principally of brick, with slated roofs. They build a large number of engines here for their own use, also nearly all the passenger and goods stock. The passenger engines on this line are of the usual American type, similar in general construction to our No. 105, built by the Baldwin Locomotive Company. The goods engines are of the consolidation class, somewhat similar to those imported by us from

the same firm, but I remarked that one of them had a four-wheel instead of a two-wheeler swing bogie in front, which is considered an improvement, and several were being constructed of this type when I was there.

	The weight of these engines in runni	ng. orde	er is				123,000 lbs.

The passenger stock on the Central Pacific is of the ordinary American type, similar to those running on our lines, excepting the sleeper, a "Pullman car" which is fitted up in a much superior style to ours. The upper-deck sleeping-berths are shut up, with the bedding, into and form a portion of the roof during the day-time. The lower berths are formed from the seats in the same way as in our sleepers. The dining-car is of the same class as the one we have. The freight-cars are much longer than those in common use on English and Colonial railways. The covered goods waggons are about 30 feet long, carried on two bogic trucks each having four wheels. They weigh 19,860 lbs., and carry a load of 20,000 lbs. The ordinary flat freight car is also about 30 feet long, weighs 16,000 lbs., and carries a load of 20,000 lbs. The running sheds are circular, built of brick, with a central turn-table. Galena oil, manufactured at Franklin (Pennsylvania), is used for the engines. It costs 48 cents a gallon, and is favourably spoken of. Perfection valve oil, manufactured at the same place, which costs 70 cents per gallon, is used for the cylinders. Lard oil, at 90 cents per gallon, is also used for special purposes. The consumption of galena oil is one pint to 20 miles run. The coaling of engines is effected by running the coal waggons up to a high level platform, or coal stage, which is fitted with a number of box shoots capable of holding 10 and 20 cwt. each. These shoots are sufficiently high to allow the coal to slide into the tender, upon the trapdoor at the bottom being unfastened. An engine can be coaled from one shoot by refilling it as often as required, or it can be taken from one full shoot to another until the necessary quantity is obtained. I obtained copies of the mileage expense sheets, and other forms and tables, which will be valuable to the Department.

The following are the rates of wages paid in the shops of the Central Pacific Railway:-

The mechanics work fifty-seven hours, and the drivers sixty hours per week.

Amongst the many things that engaged my attention in my inspection of these workshops was a very fine hospital for the use of the employés of the Company. It occupies the best site, and is both a beautiful and commodious building.

The necessity for the establishment of such an institution was caused through most of the men employed in the Company's service being strangers; and as the line passed through a sparsely-inhabited country, where little or no accommodation could be provided for those who, by the vicissitudes of climate, exposure, or accident, became sick or helpless, the Company concluded the wisest and most humane course to adopt was to build a hospital at the head depôt in Sacramento, where all the employés might be taken care of and restored to health as soon as possible, which action has led to most satisfactory results.

The hospital building was erected in 1869, at a cost of \$64,000. It consists of a main building, 60 feet by 35 feet, four stories and a basement, with a wide balcony at each story. The two wings are each 52 feet by 35 feet, the same height as the main building, with a large kitchen and other offices detached. There is a library of 1,500 volumes, also well appointed executive and medical rooms.

The institution is supported by every officer and employé of the Company contributing 50 cents per month from their pay as hospital dues. Every employé so contributing, in case he is taken sick or becomes disabled from injuries received while in the Company's service, is entitled to medical treatment or admission into the hospital, as required, not exceeding the length of time he shall have been in the employ and paid the hospital dues. The average number of patients treated annually for the last ten years was 445, and the average for the same period of those treated at the dispensary, &c., was 1,164. The total number of those treated for accidents during the same ten years was 1,349, or an average of 135 annually.

The staff of the hospital consists of a superintendent, a physician, a surgeon, and an assistant, one resident steward, one clerk, one cook with an assistant, one watchman, and three or more nurses, as may be required. In addition to the foregoing, there are permanently engaged good physicians and surgeons at San Francisco, Oakland, Stockton, Tulane, Los Angeles, Haricopa, Truckee, Reno, Winnemucca, Elko and Ogden, who receive no compensation except an annual pass for themselves and families.

Occasionally

Occasionally a small allowance is made when a large amount of work has been done. These positions are eagerly sought for, as they give the doctors prominence by enabling them to subscribe themselves the Company's physicians and surgeons. Their duties are especially to attend professionally to the passengers and employes who may be injured by casualties on the road within the prescribed limits of their practice. They are expected to do in surgery the first dressing, and give such other attention as may be necessary until the patient can be removed to the Hospital.

Notwithstanding that the lines of this Company are of great extent, there is very little difficulty Notwithstanding that the lines of this Company are of great extent, there is very little difficulty experienced in providing for and comfortably moving those who may be injured or overtaken by sickness. To show how liberally the patients are treated, I will mention one or two cases that came under my notice when going over it. One case was that of a man who had only served in a ticket office two years when he was stricken down with paralysis and had been in the hospital ten years. There was another case of over five years treatment of an employé who, in the discharge of his duties, after a short service, was injured by falling from a building. I was informed by the Manager of the workshops—and I have no doubt it is the case—that the establishment of the hospital was a great inducement to the men settling down and remaining permanently in the Company's service, and also had a tendency to make the men more faithful and attentive to their duties than they would be if such an institution did not exist. more faithful and attentive to their duties than they would be if such an institution did not exist.

Resumed overland journey, the weather being very hot and dusty, and notwithstanding that the

Resumed overland journey, the weather being very hot and dusty, and notwithstanding that the Pullman car in which I travelled was fitted with double-glass window frames, the dust penetrated.

The scenery over the Sierra Nevada is very grand, but I did not notice any works of magnitude except the snow-sheds and some high and very light looking timber framings to carry the line across the valleys. The highest point of the line is 7,000 feet above sea-level, and the steepest grade is 1 in 50.

The line is laid with 60-lb. steel rails of the Vignoles pattern, which are fastened to soft wood sleepers with dog-spikes. The sleepers are of different sizes, averaging about 8 feet long. The line is very poorly ballasted, in some places none at all was to be seen, and I remarked that nearly all the hands engaged in maintaining it were Chinamen. The switches used on this line are merely straight rails which are pulled over to the line or siding that they require to run on, the consequence being that at places engaged in maintaining it were Chinamen. The switches used on this line are merely straight rails which are pulled over to the line or siding that they require to run on, the consequence being that at places such as important stations where they are frequently used the ends of them become worn down flat and thereby cause a very unpleasant bump as each wheel passes over them. The platforms, which are chiefly constructed of wood, are much lower than those on English and Colonial lines, and only the important stations have any platforms at all. On arrival at Ogden, which is the end of the main line of the Central Pacific Company and junction of it with the Union Pacific Line, I visited the extensive railway workshops belonging to the Union Pacific Railway Company. They are well arranged, and showed some good tools. I saw the welding of iron tubes performed here very satisfactorily, also the renewing of files by a sand-blast. Chilled wheels for the waggons and many of the carriages on this line are made in these works. Paper wheels are used in most of the sleeping carriages. They are made at the Pullman Car Factory and Paper wheels are used in most of the sleeping carriages. They are made at the Pullman Car Factory, and are considered very suitable.

I took a run on the street tramways in Ogden. They are all worked by horses, the streets being particularly level. The steepest grade is 1 in 30 for a short distance only. The cars are similar to those used on the horse tramways at San Francisco. The fares are taken by conductor, who brings round a box with a glass front, by which means the fare can be seen as put in by each passenger.

On arrival at Omaha, I observed that several one and two-horse tramways are run in the streets,

which are very level.

I visited the locomotive workshops, and was kindly shown over them by the Chief Draftsman. The lifting of engines was effected by hydraulic jacks, no overhead travellers being used. The engines are taken in and out of the repairing shop by a ground traverser. The engines are stabled in round sheds with central turn-tables.

Galena and lard oils are used for locomotives, and black oil for carriage and freight car bearings. The coaling arrangements are similar to that at Sacramento.

The engines are of the ordinary American type, and appeared to be kept in good condition.

The carriage and freight car depôt is an extensive place. The vehicles are taken in and out of the shops by ground traversers. I noticed some very elaborate painting on some of the cars, a large number of which were being renewed.

Bronze metal is much used for carriage bearings.

I arrived at Chicago, the terminus of the Main Union Pacific Line, on the 26th July. I was astonished at the network of railway lines running in all directions from this wonderfully busy city. Some of the stations are very large, covering in one case over 100 acres, and in another 80 acres. Branch lines are laid to all points on the 'banks of the river, to the canal, stockyards, &c. All the lines which enter Chicago are connected by a line called the Central Railroad. A cable road is laid in State-street, which is almost dead level and very busy. It is a double track, laid to a 5-feet gauge for a distance of

The tube in which the rope runs is deeper than in San Francisco, being 4 feet deep. The rope is placed 30 inches above the bottom, thus allowing for an accumulation of snow, which drifts through the slot. The road-bed being soft and yielding, it needed a broad base of concrete to sustain the superstructure, hence the expense of constructing this road was heavy. The rope used is made of Swedish iron. It is 4 inches in circumference, and has six strands of nineteen wires. All the driving and angle pulleys are 12 feet in diameter.

The engines are two "Wheelock" pattern, having 24-in. cylinders and 20-inch stroke. The rope is run at 8 miles an hour. This line is worked round a square at one end, making a return by way of Maddison-

street, Wabash Avenue, and Lake-street to State-street.

The dummies and cars are of similar construction to those used in San Francisco, but it is usual for one dummy to haul two or more cars as required. As many as 35,000 passengers are carried daily on this line.

In addition to the cable railways there are a number of horse tramways in this city which carry a large number of passengers daily. The drivers sell tickets to passengers, which they afterwards collect and punch; and the punched tickets and money must tally. I visited the locomotive workshops, Chicago, and Rock Island Railway, which are 20 miles from the city. They are very extensive, and I saw many things of interest there. I was not, however, particularly impressed with the facilities provided for carrying on such extensive works. The lifting of engines is done by means of hydraulic jacks. The repairing shops have cross ground travellers. A very old plan is adopted for taking the wheels out of the engines. The engine is placed over a pit, into which the wheels are lowered, and after the engine is moved the wheels have to be lifted out, which is a very tedious process, and is certainly no improvement on lifting by jacks.

There is a large round running shed built of brick, with thirty pits. The arrangements for coaling

engines are somewhat similar to those at Sacramento before described

The carriage and waggon shops are also very extensive, as they build all their own rolling stock. Chilled cast iron wheels are used in the waggons on this line. They are cast on the works. Paper wheels are used in many of the carriages. The springs chiefly used on this line are made by A. French & Co., of Pennsylvania. The passenger cars are coupled up by Miller's Patent Central Buffer and Platform Coupler. Some fitted in this manner run through from San Francisco to Chicago and New York. The best black oil, which costs $4\frac{1}{2}$ d. per b, is used for tender axle-boxes, and paraffin and lard oil for the engines. Some patent Babbits Metal is used, also a large quantity of bronze bearings, which were very highly recommended. I next paid a visit to the goods station, where I saw a grain car known as the "Prosser cylinder car." This car is run on two cylinders, 8 feet 5 inches long and 7 feet diameter, which Angle-irons are riveted on the cylinders to fasten the tires. The only car of are made of boiler-plates. this type that I saw was lying at the end of a siding empty. The frame-work was rather rough, and it had no springs under it. I was informed by Mr. Prosser that there were others working on the line, but I did not see them. In reply to inquiries I made of several railway officials as to their usefulness, I ascertained they were not held in much favour. I noticed that if there should be anything in the forefoot these cars could be easily rolled off the track. Each cylinder holds 250 bushels of grain.

I next visited the noted Pullman Car Factory, which is very properly designated the "City of Pullman," after the founder, George M. Pullman. It is about 20 miles from Chicago. The shops are very extensive, and are both substantial and elegant. The chief carriage erecting shop is 700 feet long and 86 feet wide. There is another erecting shop, 400 feet by 86 feet. The waggon shops are 500 feet by 86 feet. Paper car wheel shop is 370 feet by 150 feet; iron machine shop, 103 feet by 200 feet; blacksmiths' shop, 200 feet by 128 feet; steam-hammers shop, 250 feet by 160 feet; wood-working machine shop, 200 feet by 200 feet; drying kiln, 150 feet by 90 feet, besides dry timber, coal and stationary engine houses. They are built of different-coloured bricks, which have a pleasing appearance, and are furnished with the very best tools and appliances for carrying on the building of cars, in fact everything connected with these works is so complete that it is at once evident to a visitor that no expense has been spared to make them perfect. There are two ground travellers worked by steam for taking carriages in and out of the shops. The shop machinery was driven by a pair of Bedone stationary beam engines, with Corlais valves, which surpassed anything I had seen. I ascertained that these engines were used for driving the machinery in the Centennial Exhibition at Philadelphia. French & Co.'s springs are extensively used by this Company for their carriages.

I closely inspected the cars built at these works, and found both the workmanship and material to

I closely inspected the cars built at these works, and found both the workmanship and material to be excellent. They are 60 feet long, with a private compartment at one end for ladies, and a smoking saloon and lavatory at the other. The dining cars built here are also well fitted with every requisite for comfort and convenience, and the workmanship and material in them are most creditable to the Company.

This Company forge their own carriage and waggon axles, and also make paper wheels for their

Bronze bearings and some patent metal are used in them.

The Pullman sleeping cars, which are more extensively used than any other on the American lines, have sleeping accommodation for twenty-six persons, but the berths are sufficiently large to allow of two being accommodated in each on an emergency. These cars weigh about 35 tons. They have never less being accommodated in each on an emergency. These cars we than twelve and some have sixteen wheels, eight at each end.

Although I could have profitably spent more time in Chicago, where so much connected with railways was to be seen, I did not consider it desirable with the limited time at my disposal to stop longer,

more particularly as I had obtained the information I specially required.

On the journey from Chicago to Philadelphia I was much impressed with the solid and substantial construction of the Pennsylvania Railroad, as compared with any of the American lines I had yet travelled over. The sleepers are all oak, of large size, laid 3 feet apart from centre to centre. The ballast is limestone, laid to a depth of 18 inches. Steel rails weighing 67 bs. to the yard, of the Vignoles pattern, are bolted to the sleepers

A great part of this line has four roads, two for passenger and two for goods traffic. At several places along the line there are troughs constructed of strong boiler iron, about 14 inches wide, 15 inches places along the line there are troughs constructed of strong boiler iron, about 14 inches wide, 15 inches deep, and 1,000 feet long in the middle of the track, or fore-foot, which are kept full of water, from which the tender is filled in a few minutes by means of a shoot or spout (which is lowered by the fireman into the troughs on the journey). The fireman has to be watchful so as to run the spout clear of the water immediately the tank is filled, or it would overflow the foot-plate in a few seconds. With the express train on the journey between Chicago and Philadelphia we ran 117 miles without stopping, through the engine taking water from the trough as we went along. Having separate roads for the goods traffic is a very great advantage, as the goods trains are never in the way of the passenger traffic, consequently they are able to take very heavy loads through making their own time. I observed a large number of the consolidation class of engines similar to those imported by us, drawing goods and coal trains, and through consolidation class of engines similar to those imported by us, drawing goods and coal trains, and through the line being comparatively level they had great loads. The cars on this line are of the ordinary American type previously described, and are fitted with the "Janney coupler," which is said to be the strongest and closest fastener used on any of the American railways. The Wharton patent switch is in general use here. This is the only American line where I saw the interlocking system adopted, and even here it is only in operation at important stations, junctions, &c. The Westinghouse air break, automatic, is adopted in the passenger stock. The trains are worked on the block system, signal towers for which are along the line at intervals of every few miles. No sooner has a train passed one of them than a disc by day and a red light by night appear in a target over the track to show that a train is on the section ahead, and the driver of the following train must not pass this signal until the "red" slowly falls out of sight, leaving the clear white signal, showing that the preceding train has passed block station ahead.

Having reached Philadelphia, my first inquiry was about street railways and tramways. All those in operation were worked by horse traction. A cable road was, however, in course of construction. The streets are level and wide. The trams do not go up and down the same street, but all run (say) south in

one street and north in the next, and they run east and west in like manner.

The Baldwin Locomotive Works are situated in the city, occupying several large blocks. They are very extensive, and are laid out to the very best advantage. Over 3,000 hands are employed sixty hours per week, and even with this staff they are unable to keep pace with the orders received. This firm can turn out ten locomotive engines per week, and in the cooler weather when overtime can be worked they can exceed this. Everything is done here in a most systematic manner, and so far as arrangement of details, which is so essential in arriving at great results, they cannot be excelled. The lifting in the erecting shop is done by very powerful hydraulic jacks, and in the boiler shop by an overhead steam traveller. I observed some very fine hydraulic and steam riveting machines, of which those worked by hydraulic power are preferred. After the tube-holes are punched in the plates they are trued out with tube rosebits in the drilling machines. I also noticed many improvements in securing of the cotters, in the connecting and coupling rods, over those in the engines supplied to us, which makes them much more secure. Two of Davis's stack and spark-arresters were being put in engines in course of erection, by the express directions of the parties for whom they were being built, and who had an interest in its success, but in the opinion of the Baldwin people, "there was nothing in it." I ascertained from the Managers, who gave me considerable information on account that they considered would be of interest to make the considerable information on account that they considered would be of interest to make the considerable information on account that they considered would be of interest to make the considerable information on account the state of the content o who gave me considerable information on everything that they considered would be of interest to me, that no later improvements have been made in the motors now built by them over those supplied for our

tramways.

I next visited the extensive machine and tool-manufacturing works of Sellars & Co., which are quite close to the Baldwin Works. A large number of superior tools are made here for the principal railway workshops. There is a novelty here in the way of foundations for machinery, &c.: cast-iron plates are planed and laid down the entire length of the shops, in rows about 6 feet apart, which are considered are planed and laid down the entire length of the shops, in rows about 6 feet apart, which are considered an excellent substitute for stone, concrete or brick-work. I made inquiries about the class of tools

required for our new shops, and obtained full particulars, including prices, &c.

Accompanied by Mr. Sellars, sen., I went over the Edgemoor Ironworks, which are situate about This is a noted place for bridge and boiler-making work, a large quantity of A very large number of hydraulic cranes and riveting machines are in use 20 miles from Philadelphia. which was then in hand. They have rolling mills connected with the works, which are very extensive, and well furnished

with appliances suitable for their class of work.

I took a trip by rail to Atlantic City, distant about 90 miles from Philadelphia. It is a wateringplace much resorted to in the season. There are several lines in competition for the traffic, so that it is a question of which makes the journey in the shortest time. We travelled 50 miles an hour. On the return journey I rode on the engine, the motion of which was by no means comfortable, and I was rather pleased when the journey was over. Bement & Sons' tool-making shops were also visited by me. I

obtained a copy of their catalogue, &c.

The Pennsylvania Company have a large locomotive depôt at West Philadelphia, which is quite a model, both as regards arrangement and the order in which it is kept. There is a very fine round brick running-shed, capable of holding forty-two engines; there is also an extensive engine-repairing shop, in which the lifting is performed by hydraulic jacks. Large carriage and waggon-repairing shops are here also. The principal workshops for this Company are situated at Altoona, which is 237 miles from Philadelphia; they are the most extensive in America, covering between 90 and 100 acres of ground, about 5,000 men being employed in them. Having heard a great deal about the superior class of work turned out at these shops I was specially anxious to see them, and having done so I am pleased to say they are quite entitled to the flattering reports I heard of them. It is at once evident that no expense has been spared in providing suitable buildings for the work of both engine-building and repairing, as also for the building of carriage and waggon stock, all of which are carried on here extensively.

The new erecting shop is 351 feet long, with two spans of 66 feet each, and three roads through it. Overhead travelling cranes worked by ropes, which were made by Wren & Hopkins, of Liverpool, England, run the entire length of the shop, for lifting engines off their wheels. There is a new machine shop same size as the erecting shop, and alongside of it, in which walking cranes driven by ropes are

provided for lifting wheels, &c.

The machine tools in use are all of the very best make, whether English or American.

There are three large round brick sheds, with forty-four stalls in each; one of them is used as an engine-running shed, another as a smiths' shop, and the third as a paint shop. Upon inquiry I was informed that paraffin and lard oil in equal quantities, which cost 3s. a gallon, are used for engines. The ordinary gas which is taken from the town main is used for lighting the carriages on this line. It is pumped to the holder and compressed to 300 lbs. on the square inch. The carriage and reagan halding and repositing shops are distant shout 11 mile from the

waggon-building and repairing shops are distant about $1\frac{1}{2}$ mile from the engine shops, communication to which is effected by means of a horse tramway.

The waggon shop is a semi-circular brick building, with forty-four stalls in it. There is a wrought-iron turn-table 75 feet in diameter, worked by a small locomotive, with a vertical boiler on a circular track in the turn-table pit. The shunting of the waggons in and out of the shop is done by a small locomotive of the ordinary type. There are also very extensive long shops for car-building, of which a large number is turned out annually. herides which there is a very extensive shop for wood working mechanics of is turned out annually; besides which there is a very extensive shop for wood-working machines, of which there are a great many of the best description for this class of work. The wheels of the carriages and waggons were all cast-iron, but the Manager informed me he thought of introducing wrought-iron. Bronze metal is generally used for bearings, and also in many of the valves, and is very highly spoken of.

A very large stock of timber suitable for carriage and waggon building is always kept, so as to

have it properly seasoned before being used in the passenger and goods stock.

The Locomotive Superintendent of this Company has an able staff of Professors of Chemistry and Physics, who have large practical knowledge in addition to their scientific attainments, in his department, whose sole duty it is to put everything used in the works to the test, in what is termed the department of

" experiment.

All departments of the road refer to this branch for information respecting points falling under their special supervision: an opinion upon a new coal mine as a source of supply, difficulties with coal supplied, questions involving the draught of engines, difficulties with oil, either in burning or in lubrication, the quality of soap used in washing cars, questions from traffic department as to dangerous and explosive freight, questions about the chemistry of iron used in manufacture of wheels, as well as reports on all kinds of materials purchased by the Stores Department. Although all branches of the department obtain 37—B information

information here, the testing branch is under the direction of the Locomotive Superintendent. The expenses of the testing department, as compared with the ascertained advantages gained by it, are trifling. The following are some of the many results attained by the application of the chemical tests, which, to my

mind, are of such importance that I give them in extenso.

Tallow.—It has been discovered that any soap or saponified tallow is injurious to iron subject to high temperature and pressure. Under these conditions the iron does not saponify good tallow; it may, however, replace caustic soda, which has previously replaced glycerine. In other words, tallow, with a small portion of soap, is injurious to iron, when no injury would have resulted if neither free acid nor soap had been present. Tallow is saponified to "sweeten" it and destroy the odour of the rancid acids.

had been present. Tallow is saponified to "sweeten" it and destroy the odour of the rancia across.

Lard oil.—No oil tested is regarded as more important than this, because it is used in nearly all lamps. Cotton-seed oil injures the burning qualities, and is liable to burn the wicks. It is possible, for example, that a serious accident might occur at a switch through the failure of a pointsman's lamp, whose wick had become gummed by cotton-seed oil. As much as 25 per cent. of cotton-seed oil has been discovered in lard oil, furnished even by firms whose reputation would be considered a guarantee as to the purity of the article furnished.

-Even the quality of the soap supplied has become a matter of importance—a single washing with a certain soap having destroyed the varnish on cars. Investigation shows that free caustic alkalies are very destructive to varnish; and specifications for soaps now require that they shall not contain more than from ½ to 1 per cent. of free caustic alkalies, or more than 1 per cent. of alkali carbonates.

Steel rails.—The investigations made as to the composition of steel rails of greater or less

durability have been attended with most beneficial results to the Company.

Without going further into details, I may state that the following have been investigated: the best composition of varieties of iron for chilled work, the introduction of electricity for lighting of cars; pig and wrought iron for chemical composition as cause for physical peculiarities, steel bearings, &c., &c.

Physical tests.—The best commentary on these are the following extracts from the conditions of some of the specifications to which the materials for the Company have to be manufactured.

Steel axles.—For every 100 axles ordered 101 must be supplied, from which one will be taken at

random and tested as prescribed.

Two test-pieces will be cut from an axle, and the test sections, of $\frac{5}{3}$ inch diameter by 2 inches long, may fall at any part of the axle, provided that the centre-line of the test section is 1 inch from the centre line of the axle. Such test-pieces should have a tensile strength of 80,000 lbs. per square inch, and an elongation of 20 per cent. Axles will not be accepted if the tensile strength is less than 75,000 lbs. nor the elongation below 15 per cent., nor if the fractures are irregular.

The axles must stand, without fracture, five blows at 20 feet of a 1,640 lbs. weight striking mid-

between supports 3 feet apart, the axle to be turned after each blow.

Iron axles.—The iron must be double rolled from muck bar not exceeding \(\frac{3}{4} \) inch in thickness. It must be tough, fibrous, uniform and free from scrap. Such axles must stand without fracture three blows at 10 feet and two blows at 15 feet of a 1,640 lbs. weight striking midway between supports 3 feet

apart, the axle being turned over after each blow.

Boiler and fire-box steel.—After each sheet is carefully examined to see that it shows no mechanical defects, a test-strip taken lengthwise from the sheet without annealing should have a tensile strength of 55,000 lbs. per square inch and an elongation of 30 per cent. in section originally 2 inches long. Sheets will not be accepted if the test shows a tensile strength less than 50,000 lbs. or greater than 65,000 lbs. per square inch, nor if the elongation falls below 25 per cent. Manufacturers must send one test-strip for each sheet, &c.

Coupling-links and pins, crank pins, iron for bridge works, &c., &c., are all tested in a somewhat similar manner, which tests are the result of careful study of each material.

Lubrication.—Samples of oils which they are prepared to supply are obtained monthly from competing houses. These are tested as to comparative lubricating value for journals running under ordinary conditions of pressure and temperature. The pressure is assumed to be 250 lbs. per square inch, and the temperature 100° F. The test is made on a Thurston machine which has been counter-weighted and further improved by running through the journal a graduated stream of water sufficient to reduce its temperature to 100°, or that of the average car journal in motion. The conditions of the journal are further approximated to those of the car by working the bearing into that lateral motion characteristic of car bearings. Special attention is also given to the condition of all surfaces; the proper temperature of the journal is attained by running with standard oil (without the use of water to cool); the surfaces are cleaned with benzine, a measured quantity of the oil to be tested is placed on the waste, the journal is run at the rate of a car wheel making 15 miles per hour, and readings of the amount of accumulated friction, as shown by the reading of the scale, are recorded every five minutes for one hour. shows the friction by the deflection of the counterweighted beam attached to the bearing from its normal centre of gravity.

The results attained by this machine, although not claimed to be scientifically accurate, give practical results which are uniform when repeated trials of the same sample of oil is tested; it therefore furnishes a standard of comparison. The tests made by the chemical department include flashing point

and purity

A dynamometer car is one of the implements of the department. Tests are made by it of the draught of engines; the car occasionally indicating that the shortcoming of one engine of a class in failing to pull a standard load is within the bounds of cure by additional weight on its drivers. Its principal use, however, has been the test of proposed changes in road in comparison with present grades and curves.

I arrived at New York on the 10th August, and I immediately laid myself out to get all the

information I could about construction and working of street railways and tramways.

The elevated railways are the only mechanical means of locomotion which I saw in operation in the They are very extensive, 350 engines being engaged on them, which are all tank engines, built and makers carried on four coupled wheels, with a four-wheeled bogie in rear. The size of streets. They are very extensive, 350 engines being engaged on them, which are all tank engines, built by different makers, carried on four coupled wheels, with a four-wheeled bogie in rear. The size of cylinders is $11'' \times 16''$. Ordinary coal is used. Trains run every few minutes, the speed of which is about 15 miles an hour. Some twenty of the engines used when the lines were first opened are now laid up, through not being powerful enough for the traffic. The train generally consists of two cars similar to the ordinary cars used on American railways. Some of the cars have longitudinal seats on the sides only.

The

The roads are double track to a 4.8½ gauge (one on each side of street), carried on wrought-iron columns about 18 ft. high and 20 ft. apart, with brackets on each side extending about 3 ft., carrying longitudinal wrought-iron girders, upon which wooden sleepers about 6 ft. × 8 in. × 6 in. are laid about 3 ft. apart to carry the rails, which are of the T shape. A wooden fender is laid on end on sleepers outside rail, which stands about 8 in. high, thereby making it almost impossible for an engine or car to leave the track. The supporting columns are built in solid masonry, on a rock or stone foundation, about 12 ft. below the level of the street. When the streets dip suddenly the columns stand much higher out of the ground and have a proportionately deeper foundation, in addition to which iron cross girders are used for staying one road to the other. The line is, as may be supposed, very rigid, and as a consequence is very trying on axles, several of which have broken, but fortunately with no serious results.

The stations or waiting-rooms are about one-third of a mile apart, are neat structures about 10 ft.

square, carried on neat iron columns over the footway, the ascent to which is made by metal stairs.

The platforms are carried on columns similar to those which support the road, and are about 100 ft. long and 6 ft. wide, with a neat iron railing at side and end. They are level with the car platforms.

Immediately a passenger reaches the top of staircase (which is level with platform) he pays his

fare to a man stationed there and gets a ticket, which he places in a box with glass sides fixed to a post in view of another official. After all the passengers enter the cars the conductor closes a light iron gate

across platform at end of cars, which is not opened until the next stopping-place is reached.

In addition to the elevated railways there are tram-lines in several of the streets which are drawn by horses, the speed of which is about 4 miles an hour. The cars are both single and double-decked. The single-deck cars can carry twenty-two passengers, and the double-deck cars carry forty-two passengers (twenty-two inside and twenty outside). They stop to take up and set down passengers as required, the same as our 'buses. The types of rail used in horse-tramways are various, weighing from 40 to 45 lbs. to the yard, and are laid on longitudinal sleepers, which are tied together with iron rods.

I went to New Jersey, where the locomotive building-shops of Rodgers & Co. are situated. They are very extensive, and are considered next to the Baldwin works in importance. The work done appears to be very good, and is highly spoken of. A large number of engines are built weekly, both for American Companies and foreign orders. One portion of the shops is quite new having been built to replace what

Companies and foreign orders. One portion of the shops is quite new, having been built to replace what had been destroyed by fire. The new buildings are three stories in height. The bottom flat is a turning and fitting shop; the second story is used as a pattern and engine cabin-making shop; and the top floor is a machine-shop, fitted with the most modern labour-saving tools. Through want of communication by rail, the work of delivering engines has to be done by horse-power, on large lorries specially made for the

purpose

On the journey from Montreal to Quebec I travelled in one of Davis's sleeping and parlour-cars, which differs in many particulars from the Pullman or the ordinary sleeping-cars in use on our lines. It is 65 ft. long, and is carried on two six-wheeled bogies of an improved type, upon which it rides remarkably smooth. There is a ladies' compartment at one end of the car and a smoking saloon at the other, both of which are fitted with lavatories, &c., &c. The fittings are all electro-plated, which has a very pleasing effect. The windows are large and give an excellent light; they have neat blinds on patent rollers. The mattresses and bed-clothes are kept in ornamental cupboards, which project from the sides between the windows, which tend to improve the appearance of the car very considerably. The chairs, which revolve on a centre pivot, have steel frames hinged so as to admit of them being folded up and placed under the sleeping berths when required. The mattress-frames are also made of steel, and make a very comfortable bed.

Then arrived at Montreel Legaled at the Depôt of the Canadian Pacific Reilway: and having most

Upon arrival at Montreal, I called at the Depôt of the Canadian Pacific Railway; and having most carefully inspected the design, workmanship, and material, of the Davis sleeping car, I approved of the building of two for the Department, in accordance with your directions. The locomotive, carriage, and

waggon shops of this Company are small, and I did not remark anything particularly interesting in them.

The locomotive and carriage and waggon workshops of the Grand Trunk Railway of Canada are about 2 miles out of Montreal, and cover a very large area. The locomotive repairing and erecting shops, which are built of brick, are long shops with a ground traveller in the centre of a number of roads which run at right angles on both sides of the traveller. There is an overhead crane at one end of the shops, where the engines are taken to be lifted off the wheels, which are then run out and the engine lowered on to trollies, when they are run down the shop to a pit where the repairs are done, upon completion of which the engine has to be taken back to the traveller and lifted to receive the wheels. boiler shop is also a very extensive place, in which there are some very fine hydraulic tools; one in particular, a punching and shearing machine by Richard Tweddell of London, was very highly spoken of. There are large shops for smith-work, pattern-making, turning, foundry, &c. A very large amount of work is done at these works, but in consequence of a comprehensive plan allowing of expansion not having been adopted in the setting out of the shops at the commencement, the additions which it was found necessary to make to them from time to time to meet their requirements are by no means the most suitable consequently considerable inconvenience and expansion are above to the most of the services. suitable, consequently considerable inconvenience and expense in working them is the result. The carriage and waggon shops are very large, and well equipped with machine tools, &c. A very large quantity of timber for carriage and waggon building is kept on hand, so as to have it well seasoned before being used. The running sheds are all circular brick buildings, with a large turn-table in the centre. A number of the engines on this line are of English build, but the great majority are of American build.

and goods stock are of the American type, carried on bogie trucks.

The ordinary cast-iron chilled wheels are used in the goods waggons, and the ordinary type of wheel with wrought centres, and steel tyres are used in the passenger stock. A quantity of patent metal is used here, as also bronze metal for slide valves and bearings. I was shown a very beautiful carriage which was specially built to convey the Directors and superior officers of the Company over the lines. It is about 60 ft long carried on two six wheel bogies and here a select private sleeping morner and a is about 60 ft. long, carried on two six-wheel bogies, and has a saloon, private sleeping-rooms, and a smoking compartment. The fittings and trimmings of this carriage clearly indicated that cost was not a

On my return to New York, I called on Mr. C. A. Smith, the Secretary of the Association of Master Car-builders of America, from whom I obtained very useful information in reference to the most suitable class of goods stock for railways. He furnished me with a copy of the report of the fifteenth Annual Convention of the Master Car-builders' Association, held in New York, in June, 1881. The report of a Committee appointed to investigate and report on the carrying capacity of freight cars is a very valuable document, and the information afforded is of such importance that I give it in extenso.

REPORT OF COMMITTEE ON THE CARRYING CAPACITY OF FREIGHT CARS.

To the Members of the Master Car-builders' Association.

At your last annual meeting the undersigned were appointed a Committee to report upon the 'Carrying Capacity of Freight Cars," and whether it can be safely increased above 20 tons.

In March last we mailed the following circular to 500 railway managers, superintendents, master

car-builders and master mechanics:-

New York, March 30th, 1882.

At the last annual meeting of the Master Car-builders' Association, the undersigned were appointed a Committee to obtain information with reference to the carrying capacity of freight cars, and to obtain the opinion of railway officers as to the advisability of increasing that of freight-cars above

It is only a few years since freight-cars were allowed to be loaded with more than 10 tons. At the present time but few eight-wheel cars are built with a carrying capacity of less than 20 tons. From this fact we infer that 20-ton cars can be run as safely as 10-ton cars, and that freight can be transported with

greater economy in cars that have the greatest carrying capacity.

The increase of freight traffic upon our leading railroads, during the last five years, has been very large, and if it had been necessary to transport it in 10-ton cars the expenses for motive power and train men, cost of maintenance of the greater number of cars, &c., would have been enormous. Road-beds and bridges are made more substantial than in former years. Locomotives have of late been made of enormous weight and power, and such locomotives are so successful and satisfactory that railway managers still continue to build them. If these heavy locomotives can be run without serious injury to road-beds and bridges, are there any objections to increasing the load of freight cars, when there are so many adventages to be exceeded with any bright of the relationship with an form and triding chiestings? many advantages to be gained thereby, with so few and triffing objections?

The following are considered a few of the most important advantages that may be derived in transporting any given amounts of tonnage in 30-ton cars:

Less cost of cars. Less cost of repairs.

Less dead weight.

Less number of waybills to make.

Shorter trains, shorter side tracks.

Less coupling and uncoupling of cars, and damage to drawbars and fixtures.

Less number of brakes to operate. Less number of journal boxes to oil. Less number of wheels to inspect.

Less train men, and many other smaller advantages.

The following table, showing the number of cars and parts of cars required to transport 1,000 tons of freight, with their cost, weight, length, &c., will show the great economy in the use of cars having the greatest carrying capacity. The cars taken are box-cars.

	With 10-ton cars.	With 20-ton cars.	With 30-ton cars.
Number of cars to carry 1,000 tons	100	50	34
Weight of cars to carry 1,000 tons	1.000 tons	550 tons	412 tons
Length of train to carry 1,000 tons	3,100 ft.	1,550 ft.	1,440 ft.
Cost of cars to carry 1,000 tons	\$57,000	\$30,000	\$21,450
Number of brake shafts, levers, and connection to carry 1,000 tons	500	250	170
of brake heads, shoes and wheels to carry 1,000 tons	900	450	306
of brake beams to carry 1,000 tons	200	100	68
,, of draw-bar stops to carry 1,000 tons	1 800	400	272
,, of draw timbers and fixtures to carry 1,000 tons	400	200	136
,, of draw-bars to carry 1,000 tons	200	100	68
of bolster and draw-springs to carry 1,000 tons	600 .	300	204
,, of journal-bearings to carry 1,000 tons	l 800	400	272
,, of journal-boxes to carry 1,000 tons	l 800	400	272
,, of axles to carry 1,000 tons	l 400	200	136
,, of wheels to carry 1,000 tons	l 800	400	272
Weight of trucks to carry 1,000 tons	450 tons	250 tons	175 tons

In order to make a report on this subject, the Committee are obliged to obtain information with reference thereto from practical railroad men. They will therefore be greatly obliged if you will give your opinion upon this matter and answer the following questions:—

1st. Have you found any difference in the wear or breakage of wheels under 10 or 20 ton cars ?

2nd. Are the wheels under your 20-ton cars of greater weight than under 10-ton cars. If not, do you think they should be?

3rd. Have you found any difference in the wear of journal-bearings upon 10 and 20 ton cars?

4th. Have you found that journals under 20-ton cars wear out faster than under 10-ton

5th. Have you had more hot boxes under 20-ton cars than under 10-ton cars?

6th. Have you found it necessary to use more expensive oil upon 20-ton than under 10-ton

7th. Have repairs to draw-bars and fixtures and other repairs under 20-ton cars been greater than for 10-ton cars?

8th. Do the bodies of 20-ton cars show greater deflection from their original lines than 10-ton cars?

9th. Have the 20-ton cars increased the repairs to road-bed, rails, or bridges?

10th. In your opinion, can freight-cars of 34 and 40 feet in length be run as safely as shorter

11th. In your opinion, can the carrying capacity of freight-cars be increased from 20 to 25 or more tons with greater economy than to carry freight in 20-ton cars?

12th. If the carrying capacity of freight-cars should be increased to 30 tons, would you recommend journals and axles to be made larger than the Master Car-builders' standard, and that wheels be increased in weight?

13th. Can a locomotive draw 1,000 tons of freight over your road, in 20-ton cars, with reater economy than in 10-ton cars?

About 100 replies have been returned to the above circular; about one-third of these were from General Managers and Superintendents.

In some cases the Master Car-builder or Superintendent of Motive Power filled out the blank, and

the General Manager or Superintendent approved of it.

Your Committee are of the opinion that a careful discussion of this matter by our members should be had, and would be pleased to have you recommend to Railway Managers that they build a few cars with a carrying capacity of 25 and 30 tons.

Below the Committee gives the replies to the thirteen questions:-

1st question.

36 have found no difference in wear or breakage.

2 have found a difference in both.

7 have found no difference, but expect wheels to wear out faster.

8 have found a slight difference in wear, but no more breakage. 2 say wheels under 20-ton cars make as much mileage as under 10-ton cars.

3 say more wheels break under 20-ton cars than under 10-ton cars.

2nd question.

27 say of no greater weight, and need not be.

3 say a first-class 500-lb. wheel is heavy enough for 20-ton cars.

10 say wheels for 20-ton cars should weigh from 525 to 575 lbs.

5 say they should be heavier, as cars are often loaded above their marked carrying capacity.

5 say they are heavier, and should be.

3rd question.

30 have found no difference in wear.

10 have found a slight difference in wear.

7 have found them to wear faster.

7 say the wear must be greater.

1 says the wear must be greater and the journals should be larger.

10 say the difference is in favour of 20-ton cars over 10-ton with small journals.

4th question.

28 have found no difference in the wear of journals.

9 say they do wear faster.

3 say a slight difference.

4 say the wear must be greater.

5th question.

42 answer no.

7 say they have no hot boxes with Master Car-builders' journals.

1 says hot boxes point that way.

6th question.

48 use the same quality of oil on all cars.

7 say they use a better quality of oil.

7th question.

2 say they have not, but expect less repair per ton per mile.

43 say they have not been greater. 5 say repairs have been slightly greater.

1 says repairs depend upon length of trains.

1 says they are greater on account of heavier engines.

8th question.

47 say they do not.

3 say a slight difference.

Many say no perceptible difference upon cars well built.

9th question.

2 say no, as less wheels pass over the track per ton per mile. 11 think the repairs must be greater.

14 answer no.

19 say they do not know. 4 say probably slightly. 4 say not perceptibly.

10th question.

29 say there is no doubt about it.

5 say they cannot.

5 prefer shorter cars.
2 cannot answer the question.

2 say 30-foot cars are long enough. 2 say 32 ,, ,, ,

5 say 34

2 say 35

1 says 40-foot cars would be easier and safer on the track.

11th question.

23 have no doubt that it would be economy to increase the carrying capacity to 25 or more tons.

11 say 20 tons is load enough for one car. 1 says it could be increased to 30 tons.

1 says the journals could not be kept cool.

2 say by increasing the load you make less cars and trains do the same work

2 are doubtful.

2 advised to stop at 20-ton cars at present.

12th question.

29 would recommend an increase in weight of wheels and size of journals.

6 would recommend for 30-ton cars a 4 × 8 journal. 9 say there is no necessity for an increase of either.

10 would increase the weight of wheel, but not size of journal.

3 would increase the size of axle.

13th question.

38 say there is no doubt about it.

3 say it can, saying nothing of less cost of cars, less repairs, &c.

1 says it can at a moderate speed. says 25 per cent. cheaper.

thinks 20 tons is load enough. 2 say it would make a difference of two trains per day over their road.

3 say it can, as the train would be shorter and lighter.

says it can, as it would take less motive power.

says it can, and the point is the number of tons of freight, drawn instead of the number of cars.

says he cannot tell.

1 says no.

Quite a number have not answered many of the questions. Too many have simply said no and yes.

In conclusion, your Committee would say that, in their opinion, FREIGHT can be carried in 30-ton cars, with as much safety and greater economy than in cars of less carrying capacity, and would recommend that any Company building 25 or 30-ton test cars increase the weight of wheels to 575 lbs., and use the Master Car-builders' standard axle or one of a larger size. (See Diagrams A, B, C.)

Committee $\begin{cases} C. & A. & SMITH. \\ J. & N. & MILEHAM. \\ C. & E. & GAREY. \end{cases}$

Having given a general outline of the places I have visited in America, I will now briefly summarize my views on the most important matters that came under my notice.

1st. The description of engines, and their suitability for the work they have to perform:

All the engines have bogie trucks in front, which carry from 30 to 40 per cent of their total weight. The ordinary passenger engines weigh with steam up and in running order from about seventy to seventy-five thousand pounds. They have 18-inch cylinders and 24-inch stroke, and have four driving-wheels coupled, of from 48 to 53 diameter. The wheels are of cast iron, with steel tires. The fire-box

wheels coupled, of from 4.8 to 5.3 diameter. The wheels are of cast iron, with steel tires. The fire-box is made of steel, and the boiler-tubes of iron; the quality of the steel and iron used in them is very superior. The cabs are more spacious and afford better protection for driver and fireman than those generally found on English-built engines. The lamps are very large, and give a brilliant light. The tenders, which are carried on two four-wheel bogies, are generally larger than those built in England. The Westinghouse air-breaks are in use in the passenger engines only. These engines both steam well and run smoothly, and are well adapted for the lines they run on and the work to be performed.

The goods engines are generally of two classes. The smaller class have six wheels coupled, the diameter of which is from 4 feet to 4 feet 6 inches, about same weight as passenger engines. The larger type, or consolidation class, have eight wheels coupled, of similar diameter, the weight of which, including tender, is about 75 tons in running order. All the engines have a very showy appearance, and appear to steam well and run easily. The goods engines have hand brakes only. All the engines are fitted with spark-arresters, somewhat similar to those in our engines. Patents are continually being taken out for so-called improvements, but from what I saw and heard they have not got anything likely to supersede what have been supplied to us by the Baldwin Company. Generally the engines are well adapted for the work they have to perform, and they run a good mileage considering the class of lines they run over.

Passenger cars.—The ordinary cars are 45 feet long, which are carried on two four-wheel bogie

Passenger cars.—The ordinary cars are 45 feet long, which are carried on two four-wheel bogie trucks, one at each end. They weigh about 40,000 lbs., of which 27,000 lbs. is in the car body, and 13,000 lbs. in the bogie trucks. The number of passengers which they can seat is fifty-two, so that the dead weight per passenger is 770 lbs. The wheels are nearly all cast iron, 33 inches in diameter, and weigh 540 lbs. each. Paper wheels are used in some sleeping and other special cars. The whole of the passenger stock that I saw had centre couplings and buffers. The trains generally gave evidence of the stock being well kept in every respect. The clean appearance of the cars is of course to be attributed to stock being well kept in every respect. The clean appearance of the cars is of course to be attributed to the fact that when not in use they are placed in sheds, and so kept free from the effects of the weather. The cars composing a train are very rarely uncoupled unless for the purpose of repairs, so that an entire train is run into a shed when the journey is finished until again required. The fittings and workmanship of the cars generally are very good. The timber used in the construction of the cars is all well seasoned, so that very little shrinkage is visible.

Goods stock.—The freight cars are generally much longer than on English and Colonial lines. The ordinary box freight car, corresponding with our covered goods waggon, is 28 feet long, and is carried on two bogies, each having four wheels. It weighs about 20,000 lbs., of which 11,500 is in the body and 8,500 in the trucks. The wheels are 33 inches in diameter, and weigh 540 lbs. This truck carries a load of 20,000 lbs. The ordinary uncovered freight car is 30 feet long, and is carried on bogie trucks similar to the box car. It weighs 16,000 lbs.—the body being 7,500, and the bogie trucks 8,500 lbs., and carries a load of 20,000 lbs., so that the dead weight moved for each ton (2,000 lbs.) is 1,600 lbs. The brakes are all worked by hand, with a small wheel from the tops of the trucks. Centre buffers and couplers are in general use on goods trains. The wheels are all cast iron. The timber used in the building of goods stock is principally

principally Oregon, so that the bodies of the cars are much lighter than our stock in proportion to their size. Although the gauge of the railways is similar to ours, the trucks are very much wider (8 feet 6 inches), which enables them to carry a bigger load. This could not be done to the same extent with our

stock, as the high platforms would not admit of it.

Stations and platforms.—The subject of station accommodation has engaged much attention, and the necessity for having sufficient ground has been so forced upon the notice of Railway Companies, by the rapid growth of some cities and towns, that all the modern stations have plenty of accommodation for a long term of years. The buildings at most of the terminal and other important stations are in many instances very handsome and well laid out. * The arrangement of booking-offices, waiting-rooms, &c., is generally well adapted for conducting a large traffic and for the convenience of passengers. refreshment-rooms are, as a rule, conveniently situated, commodious, and well furnished.

Baggage checks.—The system of checking passengers' baggage is most perfect, rendering it next to

an impossibility for anything to go astray. There is nothing so astonishing to an English traveller as the perfect manner in which it is carried out. Notwithstanding what he may have heard about its working, he

cannot but be agreeably impressed by the trouble and uneasiness spared him.

I have obtained full particulars as to the system by which the baggage department of the Central

Pacific Railway is governed, including rules, &c.

Signals.—On many of the American lines signal towers are used, which are round structures about 12 feet in diameter at the bottom, tapering to about 8 feet at the top. They are different heights, according to the requirements of the line.

There are two revolving signals on each side of the tower, one for the up and the other for the down line.

The colours used for the signals are the same as on our lines.

Tanks.—Many of those that came under my notice were constructed of wood, with an india-rubber

hose connected.

Corrugated Hutchinson spring.—I made particular inquiries as to the value of the concave spring which was brought under your notice, but I failed to learn anything of it until I reached Montreal, where the patentee resides, and from my observations of its manufacture I do not consider it is likely to come into general use.

Star metal bearings.—Although there is a large quantity of metal bearings used on American rail-ways this particular brand was not even heard of in the States, and it is not, so far as I could ascertain,

used anywhere but on the Canadian lines.

I left New York by the "Servia" on the 31st August, and arrived in Liverpool on the 7th Sept. To recapitulate particulars of the several workshops which I visited in England and Scotland would, I feel assured, be only troubling you with unnecessary details; I shall therefore confine myself to a brief statement of their leading features and objects of special interest which came under my notice in

LOCOMOTIVE WORKS OF THE GREAT NORTHERN RAILWAY.

These shops are of the old type, and adjoin the Doncaster Station-yard, from which, in addition to their own engines, a number belonging to other Companies arrive and depart daily. There are little of the modern appliances for carrying on extensive works to be seen here; in fact they reminded me of the Redfern Works (of course on a much larger scale), in so far as the traffic requirements having absorbed nearly all the ground intended for locomotive purposes, the consequence being that the want of space sufficient to admit of a much needed reconstruction and better arrangement of the shops is a matter of serious consideration with them.

The fitting and erecting shops are long buildings, with roads down the centre from end to end. Over-head travellers, worked by ropes, are used for lifting engines, &c.

The running-shed is a long building with a number of roads in it.

There is a superannuation fund established for the payment of superannuation and other retiring

allowances to the salaried officers and servants of the Company who contribute to the fund.

The following officers and servants of the Company are entitled to participate in the benefits of this fund, viz.—The principal officers, and their assistants, and clerks; the station-masters, booking-clerks, inspectors, ticket-collectors, guards, foremen shunters, draymen, policemen, signalmen, time-keepers, shop foremen, and engine-drivers.

Servants of any other grade may be admitted by the Managing Committee to the benefits.

The members are divided into two classes; those receiving £80 per annum and upwards being in the first class, who contribute $2\frac{1}{2}$ per cent. of their salaries to the fund, to which the Company add an equal amount. The contributions cease when a member retires.

The following are the benefits

If the health of a member fail before he shall have contributed for ten complete years to the fund and he be compelled to leave the service, he shall receive back the whole of his contributions with simple

interest on the amount, at the rate of 4 per cent.

If the health of a member fail after he has contributed ten years to the fund, and before he shall attain the age of sixty, and he be thereby compelled to leave the service, he will receive superannuation allowance in proportion to the period during which he shall have contributed at the rate of 25 per cent. of his average salary for the first ten years, and 1 per cent. additional, for each year, up to fifteen, when 2 per cent is added for two years (16 and 17), and 1 per cent on each year up to twenty-four years, when 2 per cent is allowed for one year, and so on up to forty-five years' service, when a member would be entitled to 67 per cent. of his average salary; but in no case shall a pension exceed

£500 per annum.

With the consent of the managers of the fund, any superannuation allowance to which a member is entitled may be commuted at any time for a gross sum, approved of by the actuary, or in accordance

with the scale fixed by him.

If a member were to die after having contributed ten years to the fund, and before being superannuated, his executors or administrators receive a sum equal to one half-year's average salary of such deceased member.

If a member voluntarily retires from the service of the Company before the time he would be entitled to superannuation allowance, he receives back one half of his contributions to the fund, without interest.

If a member be dismissed by the Company, through misconduct, he forfeits all claim on the fund;

but the managers have the power of returning all or any portion of his contributions, without interest.

The second class officers contribute 1 per cent. to the fund, to which the Company add a like amount, and the benefits are proportionately similar to those paid to the first class, provision being made for transfers from one class to the other, on a member's salary being increased to or beyond £80 per annum. All the members' contributions are deducted on the salary sheets.

There is a sick and funeral allowance fund for the benefit of the servants of the Company who

are not eligible to join the superannuation fund, who are classified into five classes, viz.:-

Class A.	to consist	of those in receipt	of 25s.	per week	and u	pwards.
do. B		do.	20s.	under	25s.	per week.
do. C	ďo.	do.	15s.		20s.	
do. D	do.	do.	12s.		15s.	
do. \mathbf{E}	do.	do.	7s.	do.	12s.	do.

The subscription being 2d., 4d., 7d., 9d., and 11d. per week respectively, no portion of which is returned in case a contributor leaves the Company's service.

The following are the benefits afforded: Medical attendance on contributor, his wife, and his children (under 14) not earning wages.

	Class A,	Class B,	Class C,	Class D,	Class E,
	per week.	per week.	per week.	per week.	per week.
Sick full paydo. half-paydo. quarter-pay	10s.	16s. 8s. 4s.	12s. 6s. 3s.	s. d. 7 0 3 6 1 9	s. d. 3 6 1 9 1 0

-On death of a contributor, £10, £7, £5, £4, £2,

On death of a wife in husband's lifetime, £7, £5, £4.

Full pay on the sick allowance scale does not in any case exceed twenty-six weeks, after which half-pay is allowed for a similar term, and quarter-pay for twenty-six weeks, after which, seventy-eight weeks, he has no further claim on the funds.

BEYER, PEACOCK, & Co.'s WORKS, MANCHESTER.

This is one of the most extensive and important locomotive engine building workshops in England,

several thousand hands being employed in them. They have a high reputation for the quality of the work.

The shops and offices cover 15 acres of land, and an additional 15 acres have recently been purchased to admit of their being largely extended. Very fine new offices are already in hand, and quite a number of additional above contemplated, which will much facilitate the carrying on of the works. The design, construction, and general arrangement of the present shops are admirably adapted for

turning out work both economically and expeditiously.

The machine tools are exceptionally good, a great number of them being their own make.

The erecting shop is a long building, with four roads running the entire length.

The lifting is done by overhead travellers made by Craven Bros., of Manchester, which are worked

The stationary engine and the shafting are very well arranged. The shafting is worked on the

mitre wheel principle, which by the particular construction of the wheels is not noisy.

Both steam and hydraulic riveting machines are used. I took particular notice of a tool (which was made on the premises) used for drilling, tapping, and screwing copper stays in fire-boxes, which is most ingeniously constructed, and saves a large amount of labour. The case-hardening furnaces are very complete. A very fine hydraulic plate flanging machine, made by Fielding & Platt, for the patentee Richard Tweddell, which was being used for flanging boiler-plates, also attracted my attention. The rims of the engine wheels are all welded up by hydraulic pressure in these works.

In addition to the thirty goods engines this firm are building for us, which are well advanced they

In addition to the thirty goods engines this firm are building for us, which are well advanced, they have a large order from Midland Railway Company in hand, besides several tramway engines of the Wilkinson type, which were being built for India and Java. These motors are geared and have vertical boilers. Mr. Peacock promised me he would send full particulars of them for your information. I may mention that the tender of this firm has been accepted for a portion of the machine tools required for our

new shops.

Cammel & Co.'s Works, Sheffield.

These are extensive steel-making works, and have a high reputation for the class of work turned out in them. There are nine furnaces, two of which take a 15-ton charge, three take 12-ton, and the remainder 5-ton charges.

When I visited the works they had just made a 40-ton steel casting for a gun carriage in one

piece. A large quantity of armour plates are made here for both the English and Foreign Governments. I was kindly supplied with some very interesting and valuable information in reference to the tests these plates are subjected to by the inspecting officers representing the Admiralty, as also photographs of targets, showing practical results of same.

VULCAN FOUNDRY, NEWTON-LE-WILLOWS.

These works have a good reputation for locomotive engine-building, a large number of which are

turned out annually.

The shops have lately been extended and remodelled, and are now very well laid out. They are of g class, with roads through the centre. The lifting is done by overhead travellers of Craven Bros. The snops have lately been extended and remodelled, and are now very wen laid out. They are of the long class, with roads through the centre. The lifting is done by overhead travellers of Craven Bros.' make, which give great satisfaction. As this firm had an order for six tank engines for us in hand, I was anxious to see what progress was being made with them. I arranged several matters of detail relating to the weight, &c., with the Manager, which will enable the alterations previously advised to be carried out to the best advantage. This firm is also very busy, having seventy-two large bogic engines for the Manchester, Sheffield, and Lincoln Company in hand, in addition to ours.

Locomotive LOCOMOTIVE WORKS OF THE LONDON AND NORTH-WESTERN RAILWAY COMPANY, CREWE.

These have the reputation of being the most extensive locomotive workshops in England—6,000 men being employed in the Crewe shops solely on locomotive and permanent way work. The carriage-building shops belonging to this Company are at Wolverton, and the waggon-building and repairing shops are at Erelsford, all of which I visited.

The total number of hands employed in all the shops and in the running sheds amount to 13,000. Although each locomotive, carriage, and waggon shop has a manager in charge, they are all responsible to

Mr. Webb, the Locomotive Superintendent.

The Crewe locomotive repairing and erecting shops are all long buildings, with two roads running through them, to bring the engines in and out and to stand wheels on, with a road on each side of them to stand the engines on while undergoing repairs. The lifting is done by overhead travellers of their own make. These shops are old, but their arrangement is very complete; the only fault I remarked was "they were too low." The most modern appliances and best class of labour-saving tools (a great number of the tools were made on the premises) are to be seen here. I went over the steel works connected with these shops, where boiler and frame plates, axles, rails, &c., are rolled. There are very heavy special tools in a separate shop for making switches and crossings—these machines carrying lumps of steel off the same as if it were wood. They were principally made by Craven Bros., of Manchester. The standard running sheds on this line are 240 feet long and 160 feet wide, with twelve roads, each accommodating six engines. The roads do not go through the sheds, so that the engines have to be taken in and out the same way. The roofs of these sheds are of the saw-tooth pattern, the ridges running across the lines of rails. The roof forms a series of 15-feet spans, while the beams from which the roof spans spring are supported by cast iron columns 25 feet apart. Extending the entire length over each line of rails there is a kind of inverted trough, for receiving the smoke from the engine chimneys. These sheds are well lighted and ventilated, and are specially constructed with a view to economy—everything being made strictly to gauge

inverted trough, for receiving the smoke from the engine chimneys. These sheds are well lighted and ventilated, and are specially constructed with a view to economy—everything being made strictly to gauge.

Mr. Webb took me through the new erecting shop and explained many improvements which he had introduced, and showed me his three-cylinder compound engine, which was laid up while the wheels were being turned up, and explained the principle of construction and some of the advantages gained by it.*

The following are the leading particulars of this engine:-

Seeing

of driving-wheels.

Seeing that I was particularly interested in ascertaining information about the working of this engine, Mr. Webb very kindly invited me to travel on it and judge for myself, which I thankfully accepted, and subsequently availed myself of by riding on it from Rugby to London with the mail from Holyhead. The engine both worked and steamed well. The working pressure was 140 lbs. in the boiler, and by indication showed from 50 to 60 lbs. back pressure on the small cylinders. When the pressure exceeds 60 lbs. there is a loaded valve to allow it to escape. The large cylinder is coupled to the driving-wheels and the two smaller ones to the trailing-wheels, 6 feet 6 inches diameter, and quite independent of each other, so that coupling-rods are dispensed with. This, as well as several other engines on this line, is fitted with Joy's patent valve gear, by the use of which all eccentrics are dispensed with, and consequently the cylinders if inside are placed closer together, the cranks are closer to the centre, leaving room for bearings on the driving-axles 10 inches long, if required, instead of $6\frac{1}{2}$ inches as at present. This is a very important improvement, as double the mileage will be got before they require to be repaired. The slide-valve is worked from a large stud or pin near the centre of the connecting-rod which connects the two levers. The pins in the joints are placed the correct distance to give the proper travel for the valve, which is connected to a quadrant, and can thereby be regulated to cut off at the different points of the stroke by the reversing lever handle as with the ordinary valve motion. This valve motion is very highly spoken of, and is coming into very general use in English locomotives.

I went through the carriage shops at Wolverton, in company with Mr. Boar, the Superintendent. There are many designs of four and six wheeled carriages in use. The four-wheeled stock is used on the branch lines, and the six-wheeled on the main lines. The leading and trailing wheels of the six-wheeled stock slide on frames, and have springs to keep them central when running; the centre wheels are rigid. Some of the first-class carriages are fitted with lavatories, and have sliding chairs which are used for beds at night. The top berth beds shut up into the roof, but these are not much used, as they are not liked. I obtained one of the pulleys used for connecting cords by means of which the guard can communicate with the driver. I observed a number of perforated, stamped out, zinc plate, which is used instead of network, for racks in the second-class carriages.

Many of the carriages on this Company's lines are lighted by gas made on Pope's patent, which is very highly spoken of. The gasworks are at Euston Square, in quite a small building, the plant being very simple. I obtained full particulars of how this gas is made, as also the cost.

The following are the results obtained from a series of trials on the London and North-western line:—

Thirteen carriages fitted with eighty-eight lamps have made the journeys between

Euston	ı to	Holyhead a	nd bac	ek			520	miles
Do.	to	Glasgow	do.	•••			800	do
		Edinburgh	do.		•••		800	$_{ m do}$
Do.	to	Aberdeen	do.	•••		1	.,070	do

with only one charge of gas for each double journey. A test carriage was run to ascertain exact cost of lighting, with the following result:—

Miles run				 41,184
Gas burnt		•••	•••	 2,926 feet
Hours burni	ng			 1,287

giving a consumption of 2.27 cub. feet for four lamps per hour, at a cost for gas (at 12s. per 1,000 feet), or about $\frac{1}{3}$ of a penny for four lamps per hour. It is claimed for this system that it is free from smell, and is not affected in any way by atmospheric influences.

There is a very fine library at Crewe, also at Wolverton, for the benefit of those employed in the Company's service. There is also a Mechanics' Institution, where scientific and practical lectures are delivered and classes formed for giving instruction in science, literature, and art.

There is a laboratory where students can take up the practical course in chemistry, and there is a mechanics' shop fitted with small screw-cutting lathes, shaping, planing, and drilling machines, worked by a gas engine, where students (chiefly apprentices) can acquire a knowledge of mechanical engineering and tools after working hours. Valuable prizes are offered by the Company for competition yearly amongst the youths in their employ; in addition to which there is a valuable scholarship founded in the Owen's College in Manchester, available for students of the Crewe Mechanics' Institute only. Everything that is conducive to the instruction and well-being of the employés generally is provided, and the results, so far as I could ascertain, were most satisfactory.

I was furnished with the rates of wages paid to the shop hands, as also to drivers, firemen, &c., which will be found in the Appendix. There is a Mutual Insurance Society established amongst the hands employed in the running department, viz., drivers, firemen, and cleaners, which is aided by annual grants from the Company, a copy of the rules and regulations of which I was also supplied with. (See Appendix A.)

GRESHAM & CRAVEN'S WORKS, MANCHESTER.

Hearing that this firm had an arrangement for working Smith's vacuum break continuous and automatic, I was anxious to see what it was like, and readily obtained what information I required, including description books, &c., which will be useful.

SHARP STEWART'S ENGINE-BUILDING WORKS, MANCHESTER.

These are old shops, and are rather inconveniently situated for working. The erecting and machine shops are separated from the blacksmiths' shop by a public street. With this exception however they are well laid out for engine-building and machine-tool making, which are carried on very extensively,

and the class of work performed is of a very superior character.

The erecting and fitting shops are long buildings, with roads through centre, and overhead travellers by Craven Bros., similar to those in use at Beyer & Peacock's. This firm has purchased the right to use Sellar's motion in the planing machines made by them, which is an improvement on the rack and pinion, and is quite equal to Whitworth's screw motion in every respect. This firm have been successfully tendering for several of the machine tools we require.

LOCOMOTIVE WORKS OF THE MANCHESTER, SHEFFIELD, AND LINCOLN RAILWAY, GORTON.

These are very extensive shops, covering a very large area. It took me six hours to go over them with Mr. Sacre, the Locomotive Superintendent, who informed me we walked 7 miles in our inspection of them. The arrangement of the locomotive erecting shops, which are quite new, is very good, and a large number of the best tools for locomotive work are provided. The shops are of the long class, with three roads through each span of 44 feet. The height from level of rail to traveller is 22 feet, and from traveller to roof 6 feet 9 inches. The travellers are overhead worked by ropes, and were made by Craven Bros. Two are 25-ton and two 15-ton. The carriage and waggon shops are also very extensive, and well found in wood-working tools, &c. There is a very good arrangement for washing carriages in use here. There are rolling mills connected with the works, where frames, plates, &c., are made.

In addition to a Superannuation Fund for salaried officers and clerks, which is established on the railway clearing system, and enables members, on a payment of $2\frac{1}{2}$ per cent. on their salaries, to which the Company contributes an equal amount, to retire on a superannuation allowance, there is also a Mutual Provident Society supported by contributions from the Company's fines and small weekly subscriptions of the employés, for the relief and maintenance of its members in cases of sickness arising either from accident or natural causes, for the provision of medical attendance upon members, their wives, and those of their children who are under fourteen years of age, and also for the assurance of small sums upon the death of a member or his wife. I was supplied with copies of the rules of all these Benefit Societies.

WHITWORTH'S WORKS, MANCHESTER.

These celebrated works are quite a treat to the visitor: their arrangement and equipment are most perfect. The new shops are very extensive, and fitted with the best modern appliances. The machine tools (principally their own make) are exceptionally good.

Both overhead and walking cranes, made by Craven Bros. and worked by ropes, are used for lifting heavy weights. This firm has successfully tendered for several of the machine tools required for our new

shops.

THE ASHBURY CARRIAGE AND WAGGON WORKS, MANCHESTER.

These are very extensive, and well laid out for carriage and waggon building. A large number of carriages of similar construction to those made by this firm for our lines were in hand, the materials and labour in them being very superior. This type of carriage is much used on English lines.

CRAVEN BROS.' WORKS, MANCHESTER.

These works have a great reputation for making travelling cranes, and from my own observation I have no hesitation in stating they deserve all the high encomiums that have been passed on them. I was shown several plans of locomotive and other shops where these cranes were in use, and after a most careful inspection of their work I left the plans of the Eveleigh Workshops with them, to enable plans of cranes most suitable for our requirements being prepared for my approval. They made many very important suggestions in reference to the arrangement of our shops, which if practicable, were, in my opinion, well worthy of consideration (*Vide my letter to you of the 31st October*, 1882), and in support of their views asked me to visit the new shops of the Midland Company at Derby, where I would see them in full operation. This firm's tender has been accepted for a number of machine tools required by us.

LOCOMOTIVE WORKS OF THE MIDLAND COMPANY, DERBY.

These are most modern workshops, and admittedly the best laid-out in England, and cover 89 acres. The buildings are brick with slated roof. The erecting shops are 450 feet long, with three spans of 50 feet each, carried on iron columns 17 feet apart. The height from level of floor to rail of travellers is 20 feet 33 inches. Peads are laid through these above for a rise to be appropriately acreal of the control of the c is 20 feet 3½ inches. Roads are laid through these shops for engines to be run and to stand wheels on. The overhead travellers, by Craven Bros., are very highly spoken of. The boilers of the stationary engines used for driving the shafting are placed outside the building in a most convenient position. The shafting is worked by mitre wheels, which I may state is the universal system adopted in English workshops. Attached worked by mitre wheels, which I may state is the universal system adopted in English workshops. Attached to the erecting shop there is a machine tool-shop of similar dimensions (450 feet by 150 feet), in which the lifting is done by walking cranes. The boiler and turning shops are 400 feet by 200 feet, in addition to which there is a large smiths' shop, carpenters' shop, saw-mills, stores, &c. There is a very large mess-room where the employés may have their meals, in which there are a large number of tables with marble tops, on iron frames. A caterer has a contract for supplying the eatables at a fixed scale of charges, which are posted up, and everything is as well arranged as in a first-class dining saloon. There are several round sheds with central turn-tables for stabling engines; in addition to which there is a large building enclosing two turn-tables, from each of which stalls for engines run as in the round sheds. Some of the stalls in this building accommodate three engines. The coaling of engines is done by cranes with boxes holding five and ten hundredweight each, from a stage. This Company make their own gas, the works for which are extensive. The wood-working machine shop, belonging to the carriage and waggon departments, is 320 feet by 200 feet, fitted with the best wood-working tools, made by Robinson & Sons of Rochdale. The paint shop is 400 feet by 300 feet, and the carriage and waggon building shops are each 400 feet by The paint shop is 400 feet by 300 feet, and the carriage and waggon building shops are each 400 feet by 200 feet, in addition to which there is a large building 600 feet by 200 feet for smithy, turning, drilling, stores and foundry. There are three large sheds for timber, each 400 feet by 200 feet: a large stock is always kept, so as to admit of it being properly seasoned before being used.

Amongst

Amongst the many interesting things that I noticed was an ingenious arrangement for brazing tubes. It consisted of a small circular furnace with a tube on end with three jets of gas and air, worked by a boy. There is also a special machine for boring them out and turning down the outside ends. The rough brazing of the tubes is taken off by an emery wheel. As compared with the hand file it is a great improvement, and it turns out four times as much work. There are special tools for spring-making, which perform very good work and save much labour; also, a machine for pulling the spring-buckles off by hydraulic pressure. I obtained a copy of the rules and regulations for drivers and firemen, which affords some useful information. (See Appendix B.)

TANGYE BROS'. WORKS, BIRMINGHAM.

These are very extensive works. The different description of pumping-engines, a very large number of which is in course of manufacture, as also differential blocks, the making of chains, &c., all of which this firm make a speciality, gave me much interest. Some very good tools, as also small overhead travellers, are made here. Large additions were being made to the shops, to meet the demands of their increasing business. There is a large dining and lecture room connected with the shops. The tender of this firm has been accepted for a few machine tools.

THE PATENT BOLT AND NUT MANUFACTORY, BIRMINGHAM.

These are extensive works, employing 400 males and 200 females. The females were engaged in screwing bolts, tapping nuts, and pointing and turning heads of bolts, &c.

This firm has a large order in hand for spikes and nut-headed screws for our railways.

LOCOMOTIVE AND CARRIAGE AND WAGGON SHOPS OF THE SOUTH-EASTERN RAILWAY, ASHFORD, KENT.

These shops being of the old type, there is nothing specially attractive in their arrangement. They are, like all the locomotive shops which I visited in England, well found in machinery, tools, and other necessary appliances for carrying on the repairs and renewals of the engines and rolling-stock. An overhead traveller, worked by hand, is used for lifting engines. Some of the locomotives and carriages used in the repair that the relative to the repair of the repair o in the earliest days of railways are kept here as a curiosity.

TAYLOR BROTHERS' IRON AND STEEL WORKS, LEEDS.

When inspecting these works I saw a number of steel tires in course of manufacture, also the work of rolling iron plates.

KITSON'S LOCOMOTIVE WORKS, LEEDS.

These are extensive shops, and they have the reputation of turning out very good work. A large number of steam motors were in hand. Some "Rowen's patent" combined motor and car were principally for the Continent, with a few for Victoria. The ordinary type of motors were for England, Scotland, and Ireland, &c. A large number of locomotive engines were being constructed for some French railways.

Manning Wardle & Co.'s Works, Leeds.

These are very old established locomotive works. They are the most convenient, best laid out, and cleanest shops I have seen. The machine-tools and other labour-saving appliances are of the very best kind, and the work turned out is excellent. This firm make a speciality of building small locomotives and tramway motors. I obtained particulars, including specifications, photographs, and prices of classes of engines built by them, which, with some slight alterations of details, would be admirably adapted for the Camden line. The piece-work system is not followed in these works. There were several boilers in hand, the heles in which, were purpled by an extraction and transparent was also at the sole of the control of th hand, the holes in which were punched by an automatic machine, and were as true when the joints were put together as if drilled through the two holes by one operation.

FAIRBAIRN, KENNEDY, & NAYLOR'S TOOL SHOP, LEEDS.

A large number of tools were being made here for English and American Railway Companies. I obtained photographs and quotations of tools made by them. The tenders of this firm have been accepted for some machine-tools, which have a good reputation.

THE LOW MOOR IRON-WORKS, NEAR LEEDS.

I had the satisfaction of seeing some very large plates being rolled, the men engaged upon the works being paid at piece-work rates. The Company have an Inspector, whose duty it is to watch the operation, and who is held responsible for the quality of the plates passed. As may be imagined, he is very particular; if he sees the slightest blister, or even an indication of one (when the water is thrown on the plate or in rolling) it is thrown on one side and either cut into a small plate or cut up altogether. There are a pair of fine new horizontal engines used for driving the large rolls. Gas is used for heating the furnaces. A pair of old atmospheric engines are used for working blowing cylinders, which are kept out of curiosity, being the only engine of this class at use in the present age.

TWAIT BROS'. STEAM-HAMMER-MAKERS, &C., BRADFORD.

This firm make a speciality of the manufacture of steam-hammers, and when I visited there was a large number in hand for English and foreign works. They also manufacture "Root's blowers," which are considered a great improvement on the ordinary fan, and are coming into general use in England. I was surprised at the force of the air emitted from these blowers. The tender of this firm was accepted for large steam hammers, one canally and one dupler Root's blower. was accepted for large steam-hammers, one cupola, and one duplex Root's blower.

VICKERS & SONS' STEEL-WORKS, SHEFFIELD.

These are very extensive shops, and have the reputation of turning out the best class of work. From 800 to 1,000 tons of steel are turned out weekly. I saw a large number of tires and axles in the different stages of manufacture, also a large number of propeller-blades and shafts for large steamers. A number of carriage and waggon axles were being tested, under the supervision of an officer representing the Western Railway Company of France, to whose order they were being made. The following is the result of his tests:—

Waggon axles.

Note.—Two blows of the tup are given before the axle is turned.

John Brown & Co.'s Works, Sheffield.

This is one of the largest and most important iron and steel works in England. When I visited them they were engaged rolling tires and armour-plates. The latter were 12 ft. by 10 ft. by 14 in. I was fortunate enough to see the process of steeling armour-plates carried on through all its different stages. Some of the machine-tools are exceptionally powerful. Two large planing and slotting machines, by Shanks, of Johnstone, near Glasgow, cost £2,600 each.

IBBOTSON BROTHERS' WORKS, SHEFFIELD.

These are extensive steel-works. I saw some Muchet's special steel undergoing the process of cleaning off and hardening; also, the drawing out of cast and shear; steel by the steam-hammer. I also saw the rolling of patent round steel in operation, which was made as true as if turned.

HADFIELD STEEL WORKS, SHEFFIELD.

When I visited these works there were several of the "Cowdery & Thomas" patent couplings being made, and twelve sets were being forwarded to Sydney. The steel castings were exceptionally good. A trolly wheel was bent in my presence, which appeared as tough as any wrought iron.

The process of annealing steel castings to give them the necessary toughness requires a large

amount of labour, and must necessarily be very expensive. This firm had an order in hand for car-wheels for our tramways.

OSBORNE & Co., SHEFFIELD.

There were many things in progress of manufacture which were of special interest, notably springs, files, shears, &c., &c., also the process of case-hardening Muchet's steel, which also requires much labour. Shear steel was being drawn out under the hammer, and some round steel passed through a spiral machine, which made it as true as if it were turned.

LOCOMOTIVE WORKS OF THE NORTH BRITISH RAILWAY COMPANY, COWLAIRS, GLASGOW.

These are very extensive and well laid out shops, and are equipped with the very best class of machine tools. The lifting of engines is done by hydraulic power, which in its operation appeared too slow for light lifts, and, through the shafting having to be taken the entire length of each shop for each crane for the purpose of working the pumps, it must be an expensive system. Saw an exploded boiler here, which was a complete wreck.

Dubs & Co.'s Locomotive Works, Glasgow.

These are extensive and well laid out works for locomotive-building. The machine tools are principally of Whitworth's manufacture. The erecting shops are long buildings, with roads through the centre. The engine-lifting is done by overhead travellers worked by ropes, and by walking cranes made by Craven Bros., Manchester. Inspected the work done for the engines in hand for us, and arranged to have the bogies made so that the inclined plane may be worked on a flat surface. I particularly impressed upon them the necessity of completing them as early as possible. A large number of locomotives were in course of construction for different Railway Companies. There are some extensive additions being made to these shops to meet their increasing business.

THE CALEDONIAN RAILWAY COMPANY'S WORKS, GLASGOW.

These are very old works, and very deficient both in arrangement and labour-saving appliances which are to be found in the northern shops. When visiting the works with the Locomotive Superintendent, Mr. Drummond, he fully explained the difficulties experienced in carrying on the works. He was having plans prepared for new shops, but he was crippled from want of sufficient space to build them on.

WORKS OF P. & W. MACLELLAN, GOVAN, GLASGOW.

A very large amount of bridge work is manufactured here. In addition to some large bridges and girders, they had 800 iron goods-waggons in hand for the Indian Railways. I observed some carriage locks, screw-jacks, &c., for which I inquired prices, &c.

GLEN & ROSSE'S WORKS, GLASGOW.

These are extensive tool works, of which I obtained catalogues and quotations. Steam-hammers are a specialty with this firm. The tender of this firm was accepted for the small steam-hammers we require.

RANSOME'S WORKS, LONDON.

These are extensive wood-working machine-tool works, and I saw some special mortising machinery, general joiner, panel-planer, &c., at work, which were admirably adapted for carriage and waggon shops. This firm was successful in securing orders for the greater portion of the wood-working tools we require.

LOCOMOTIVE WORKS, LONDON, CHATHAM, AND DOVER RAILWAY.

These shops are situated off Wandsworth Road, London. They cover a large and very valuable space of ground. The locomotive shops are well laid out. The engines are lifted off their wheels by overhead travelling cranes. There are a number of special wood-working tools in the carriage and waggon shops at Chelsea, some of which were made by Ransome, and two particularly useful tools were made by Fay & Co., of Cincinnati, America. Ground travellers are used in the carriage and waggon shops.

LOCOMOTIVE WORKS OF THE GREAT EASTERN RAILWAY, STRATFORD.

These are very extensive shops, new engines being built in addition to the ordinary repairs and

renewals. The erecting shop is a long building, with roads through it. Overhead cranes for lifting locomotives, which were originally worked by hand, have been rearranged by Craven Bros. to be worked by rope gear, which gives great satisfaction.

They were building some very fine express engines to run between London and Norwich, which were designed by Mr. Worsdell, the Locomotive Superintendent. They are four coupled 7-feet wheels; the leading wheels 4 feet in diameter have radial axle-boxes which give $\hat{\mathbf{I}}_{\frac{1}{2}}$ inch side motion each way, which leading wheels 4 feet in diameter have radial axle-boxes which give 1½ inch side motion each way, which is controlled by a horizontal elliptical spring fixed in a bearing beneath the axle with an adjusting arrangement. Joy's patent valve motion is adopted in them. The shell of the boiler and firebox is composed entirely of steel plates; the firebox is of copper, and the tubes of brass; the crown bars of the firebox are formed of steel plates. The boilers are fed by two injectors (Nos. 9 and 10), one of which (No. 9) is placed on the fireman's side. The working pressure is 140 lbs. per square inch. They are fitted with the Westinghouse automatic air break, the pump being carried within the splashers between the wheels, and the reservoir and valves, &c., underneath the foot-plate. The frames are made of a single steel plate, 1 inch thick; the frame cross-stays and buffer beams are also of steel, and the motion plate is of cast steel. On account of the distance between the coupled wheels, the rods are made of an H is of cast steel. On account of the distance between the coupled wheels, the rods are made of an H section. Sand-boxes are provided for the driving and trailing wheels, which are arranged to be worked from the foot-plate. An exhaust steam injector is being fixed on each engine. The weight of this engine in working order is-

		Total	•••	•••		38 1	0

The tender holds 5 tons of coal and 3,200 gallons of water.

J. STONE & Co., DEPTFORD, LONDON.

These are very extensive works, the manufacture of patent anti-friction white metals being very largely carried on. The metals are those known as "Kingston's," "Babbitt's," and "Fenton's" patents, which are highly spoken of, as also the manufacture of patent bronze, for which this firm has a great reputation. Pumps, water-cranes, valves, copper rivets, washers, brads, &c., are made here.

LOCOMOTIVE WORKS OF THE LONDON AND SOUTH-WESTERN RAILWAY, NINE ELMS.

These are old shops, and although well found in equipment, machinery, and tools, they are not by eans well adapted for performing work expeditiously. Mr. Adams, the Locomotive Superinany means well adapted for performing work expeditiously. Mr. Adams, the Locomotive Superintendent, accompanied me in my inspection of the works, and took great pains in pointing out everything

which he thought would interest me.

The principal repairing shop has overhead travelling cranes worked by ropes for lifting engines. The engines are taken in and out by ground travellers worked by an endless wire rope from the shafting, by a belt on fast and loose pulleys. It is a slow process, but appears to answer the purpose. I inspected one of Mr. Adam's bogies for engines, also his radial boxes, of both of which he kindly supplied me with tracings; I also obtained a photo of Mr. Adams' standard engine for suburban trains. There is a large tracings; I also obtained a photo of Mr. Adams' standard engine for suburban trains, round shed for stabling engines, with a central turn-table of the usual description.

The carriage and waggon shops are commodious buildings, very extensive works being carried on in them. All the carriages are carried on four wheels. There is a carriage-painting shop on the upper floor of the carriage-repairing shop (which is a two-story building). The carriages are taken up and down from the paint shop by means of a lift, with a winch worked by a pair of engines on the top floor. This system was adopted through want of room.

The coaling of engines is done from the trucks. There is a gang of four men to a truck, two to fill the baskets and two to weigh the coal and put it on the tender. At country stations the coalmen unload the trucks when not engaged upon coaling engines.

APPLEBY'S WORKS, GREENWICH.

This firm has a reputation for travelling cranes, so I was particularly anxious to see some of them.

There were several of their cranes, both hoisting and travelling, in use in their shops; and, although they showed good workmanship, they are not to be compared with those made by Craven Bros. as being suitable for locomotive workshops. This firm had a very large order in hand for work connected with the Sydney Water Supply.

They were building a motor for a short tramway line at Holloway, which it was intended to work by air on Megarskie's plan. It is a most complicated machine, which must be very expensive to keep in

The following are some of the leading features of this car:-

The body is $11\frac{1}{2}$ feet long, and accommodates twenty inside passengers, and on a platform in the rear fourteen more can be carried. Compressed air, of 25 atmospheres, is stored in eight cylindrical reservoirs of plate-iron from 12 to 16 inches diameter, placed transversely underneath the car, and connected together. They are in two separate series. The capacity of the principal series is 52 cubic feet, and that of the second or reserve series, 17 cubic feet. An upright reservoir, 14 inches in diameter and about 5 feet in height, placed at the front end of the car, is three-fourths filled with water heated to 340° F., corresponding to a pressure of 103 lbs. per square inch above the atmosphere. The compressed air, as drawn off for consumption, is passed through this reservoir, in which it becomes saturated with vapour. The mixture of air and water occupies the upper part of the reservoir. The frame of the car is of wrought iron, 5 feet 10 inches wide and 18 feet 8 inches long. The car runs on two pairs of wheels about 28 inches in diameter, and placed 6 feet 10 inches apart. One pair of wheels is driven by a pair of cylinders about 6 inches in diameter and 10-inch stroke. The car weighs $4\frac{3}{4}$ tons empty, and 7 tons loaded. The air is wire-drawn to a pressure of 5 atmospheres for working in the cylinders. It is calculated by the patentee that the fall of pressure, by wire-drawing from 25 to 5 atmospheres, followed by the complete expansion on a piston from 5 atmospheres down to atmospheric pressure, results in an efficiency of 62 per cent., that is to say, a loss of 38 per cent., and that this loss is compensated for by the reheating of the air during expansion by the intermixed steam. The expense of reheating the air is only a small proportion of the total fuel consumed, being only 2 lbs. against 33 lbs. used in charging the reservoirs. The cooling of the heated water, and the diminution of pressure of the air in the reservoir, takes place simultaneously on the journey, and thus the elements are maintained in sensibly constant proportions. It is stated that the quantity of air consumed does not exceed 11 cubic feet per mile run, and the rate of off for consumption, is passed through this reservoir, in which it becomes saturated with vapour. It is stated that the quantity of air consumed does not exceed 11 cubic feet per mile run, and the rate of speed at which they travel is stated to be from 5 to 9 miles per hour.

I ascertained that these motors were on a tram line in Nantes $3\frac{3}{4}$ miles long, on a 4 feet $8\frac{1}{2}$ inch gauge, which is generally level; the time occupied on the trip being forty minutes, which is done with one It takes twenty minutes to charge it. 4½ tons of coal are consumed per diem for eighty-six trips,

double, which gives 15 64 lbs. of coal per mile run.

LOCOMOTIVE WORKS OF THE LONDON, BRIGHTON, AND SOUTH COAST RAILWAY COMPANY.

These extensive works, which are situated at Brighton, are under the supervision of Mr. Stroudley, who kindly showed me over them. Over 1,200 hands are employed. The shops are long buildings, with roads through them. The overhead travellers are worked by hydraulic power, which requires two lines of roads through them. The overhead travellers are worked by hydraunc power, which requires two are shafting the entire length of the shops for driving the pumps, the consequence being that the operation of lifting light weights was very slow. A Roots' blower was in use for the cupola, which is far preferable Steel ferrules are made from parallel steel by an Oliver, at a cost of 4s. per 100. some steel tubes by Howel & Son, of Sheffield, 14 W.G., and also some with a coating of copper, by the same makers, are being tried, sample of which I obtained. The coaling at Batersea is done from a platform which is raised 10 feet from level of rails. Small trollies, holding 5 and 10 cwt. each, are carried on four wheels placed near the centre, which allows of their being readily turned in any direction, and easily wheels placed near the centre, which allows of their being readily turned in any direction, and easily tipped into the tender. At New Cross and Brighton the engines are coaled by a small steam crane, with iron boxes, holding 5 and 10 cwt. each, with drop bottoms, which are raised from the ground to the tender. A man stands on the tender, and, as the boxes are raised sufficiently high, he pulls a catch, which allows the bottoms to fall at an angle of 45°, there being a stop in the quadrant to prevent its opening too far. In lowering the boxes to the ground, they close by their own weight, and are ready for filling again. A number of boxes are always kept filled. The running sheds are all round, with turntable in centre.

There is no scarcity of engines on this line, there being 420, or one for every mile of line, and more are being built. Each driver has his own engine, which he runs from the day it is turned out of the shops until it comes in for repairs. Should a driver be absent from sickness or other unavoidable cause, his engine remains in the shed until he resumes work. By this system each driver is compelled to take an interest in keeping his engine in running order as long as possible.

The driver's name and the mileage run is painted on the weather-boards each time his engine comes in for repairs. Two boxes of Saxby and Farmer's interlocking arrangements, with 240 and 120 levers respectively, are in use here. The largest one is arranged so as to be worked by air pressure.

All the carriages on this Company's lines are lighted by Defries' patent oil-lamps, with the exception of the Pulman cars, which are lighted by electricity. The battery for storing the electricity has sixteen cells on each side, or thirty-two in all, which is found sufficient to last the journey from London to Brighton. All the passenger trains are fitted with Stroudley patent electrical apparatus, for communicating between passengers, guards, and driver. I procured a pull and one set of couplings.

Westinghouse Brake Company's Works, New Cross, London.

Upon visiting these works I observed many new arrangements connected with the working of this system, with which I was deeply interested. I was shown plans (of which I was supplied with copies) of an arrangement invented by this firm for a semaphore signal for guards' vans, to be used in connection with the Westinghouse automatic break.

LOCOMOTIVE WORKS OF THE NORTH LONDON RAILWAY COMPANY, BOW.

These shops are of the long class, with two roads in each span of 42 feet 4 inches; the height from rail level to traveller is 21 feet, and from traveller to tie-rod 7 feet. There was a new over-head traveller, just erected by Craven Bros., which was tested in my presence; it lifted an engine off its wheels and placed it on blocks in five minutes. This crane was worked by ropes. Some smaller cranes by Tangye Bros. were in use for lifting lighter weights, which were worked by endless chains from the floor, but they were not considered satisfactory. I noticed that a locomotive boiler was being used as a steam-hammer furnace, which struck me as particularly suitable for the purpose, so I obtained a tracing of it. There is a very useful machine for drilling and tapping fire-boxes, made by Craven Bros.; also a machine for grinding the lathe centres, which is easily fixed to any lathe, and saves time and labour in softening them. I obtained several of the forms in use on this Company's lines. These shops are of the long class, with two roads in each span of 42 feet 4 inches; the height from

LOCOMOTIVE WORKS OF THE GREAT WESTERN RAILWAY, SWINDON.

These are very extensive works; they are the only shops where I have seen ground-travellers at right-angles to the pits. They are worked by small engines, and, being well constructed, they give no There is a 50-feet traverser outside, used for taking carriages in and out of the shops, which is worked by a small locomotive engine with a vertical boiler, on rails in the traversing pit. The carriage and waggon shops are also very extensive, and well equipped with machine-tools, &c. There is an iron and brass foundry connected with the shops. Some of the rolling stock is constructed for the wide gauge and some on the 4 feet 8½ inches, a third rail being laid to accommodate both gauges. I did not observe any round sheds at Swindon, but those at the several places on the journey were of the round class, with central turn-table. I obtained very complete information in reference to the classification of the officers, &c., and the salaries and wages paid to all classes of employés, also classification of goods.

Appendix C.)

There is an institution in connection with the Loco and Car Works at Swindon which has been established for the purpose of disseminating useful knowledge and encouraging rational amusement amongst all classes of people employed by the Company. The scope of the institution is very extensive, for in addition to possessing a good library (over 11,000 volumes) and reading-room, it has connected with the ducational science and art classes, &c. Lectures on scientific and literary subjects are delivered by company to propose a science of the institution of the science and art classes, &c. petent persons, in addition to which vocal and instrumental concerts and theatrical performances are given. There are kindred institutions (on a smaller scale) at the Company's Loco. Works, Wolverhampton, Newton Abbot, Pontypool Road, and Saltney. I may mention that there is a similar institution at the Paddington Station for the salaried officers and clerks, where, in addition to a large library and reading-rooms, &c., &c., there is a dining club established, to which the Directors contribute by allowing the use of a suitable room charge a fixed tariff. In addition to a Superannuation Fund, under which every officer and clerk is entitled to a pension upon attaining the age of sixty, the retiring allowance is 1-50th of a member's entitled to a pension upon attaining the age of sixty, the retiring allowance is 1-50th of a member's maximum salary for every year's membership. The subscription to the fund is $2\frac{1}{2}$ per cent. on the member's salary, to which the Directors add a like amount. There is a Guarantee Fund for officers who have to find security, and a Provident Society, by means of which on a small payment (6d. a week) each member is entitled, on becoming incapacitated by accident or sickness, to a weekly allowance of 12s. for twenty-six weeks, and 6s. per week for such period thereafter as he shall be certified as unfit for work. Medical attendance and medicine are also given free of shares also functed the same also given free of shares also functed. Medical attendance and medicine are also given free of charge, also funeral allowances for members and their wives. A Pension Fund for workmen, which provides members with a weekly allowance in old age. Provided a member who has thirty years' service arrives at the age of fifty-five, he is entitled to a pension of 10s. per week, with an additional allowance of 1s. per week for every five years' service over that period. The subscription to the Pension Fund is 3d. per week, to which the Company add a like amount. There is also a Widow and Orphans' Fund, by means of which assistance is afforded to widows and orphan children of deceased members until the children are able to earn their own livelihood.

The subscription is 2d. per week, a like amount being contributed by Directors, shareholders, &c., and the allowances granted are, to a widow, 4s. per week; first two children, 1s. per week; every other

child, 6d. per week.

The subscriptions to the different Societies are deducted on the pay sheets.

THE BRUNSWICK STEEL-WORKS, WEDNESBURY, BIRMINGHAM.

There are three large shops. One of the shops was known as the "Patent Shaft and Axle-tree Company's Works," another was known as "Lloyd & Lloyd's," which are now connected with and form a portion of the Brunswick Steel Company's Works.

I saw a number of carriage-wheels in all stages of manufacture. Several wheels were being bossed and welded in the rim by hydraulic pressure. A large number of wheels had solid spokes, the outside rim being rolled to the section required and turned round in a ring, when the spokes are welded in by hydraulic pressure by one man while the washer is welded in the boss by another. They are then welded together in the outer rim, when they are ready for the lathe. together in the outer rim, when they are ready for the lathe.

There are a number of Bessemer steel converters, which turn out a large number of ingots or cast-

ings, which are worked into the different shapes required by hammering or rolling.

I also observed the process of making Brunswick steel. The scrap and pig is put in an open hearth furnace, which only took a 4-ton charge, and is the only one they have of this description. It is heated by gas and fused, which process takes from six to seven hours before it is ready to be run off; then it is tapped similar to a cupola and the molten metal is run into a large vessel, which is placed on a trolly and run out to the moulds. The top is then skimmed off, and a valve or tap is opened in the bottom of the vessel, which allowed the metal to run into cast-iron moulds. The casting (4 feet long by 15 inches at one end, and tapering to 12 inches at the other) weighing 18 cwt. is then taken to a reverberatory furnace while hot, where it is brought to a white heat, when it is hammered down to bars 7 inches square, which are cut into axle lengths, after which it is heated to a soft heat and rolled to the largest size required for axles; these are again heated and taken to a tilt hammer and drawn down to form the journals and centre of axle to required size.

A 5-inch axle was tested in my presence. The bearings were 5 feet apart with a ton tup, the axle being turned after each blow, the result being as follows:—

Fall of 20 feet .blow bent it 43 inches. -1st2nd straightened it. 3rdbent it $3\frac{7}{8}$ inches. 4th straightened it. Fall of 25 feet. -5 hbent it 45 inches. 6th straightened it. Fall of 28 feet.--7th bent it $4\frac{5}{16}$ inches. ,, 8th broke it (when turned).

It was a fair fracture, but a good axle should not break with such long bearings and so few blows.

DEURANCE'S WORKS, DOVER ROAD, LONDON.

I inspected several steam valves for steam brakes, some test gauges which were in hand for us, also some speed-indicators.

Howell & Sons' Steel-works, Sheffield.

Saw a number of locomotive tubes in course of manufacture, and obtained sample of their locomotive iron tubes, which are coated with a solution of copper.

Brown, Bailey, & Dixon's Steel-works, Sheffield.

These are very extensive works, a great number of tons of steel being made into springs annually. One of their leading spring-makers (Wm. Banner) was recommended to me strongly as being an excellent mechanic, and bearing a very good character. He was eight and a half years in their service. I offered him employment in the Sydney shops at 12s. per diem, in addition to a free passage for himself, wife, and two children by an emigrant ship, which, after much consideration, he accepted.

BUTHER AXLE-BOX COMPANY'S WORKS, SALTLY, BIRMINGHAM.

These shops are specially laid out for the making of axle-boxes, and constant endeavours are made

to improve them.

They informed me it was their intention to send a number of their patent axle collar protectors with the axle-boxes ordered by us, for which it was not intended to make any additional charge, as they were anxious for them to be tried on our lines.

DEFRIES' WORKS, HOUNDSDITCH.

Observed a number of improved railway carriage and hand lamps, samples of which they intended to send to this and other Colonies for trial. Some very good carriage fittings, such as locks, &c., are made by this firm.

PETER'S CARRIAGE TRIMMINGS SHOPS, MOORFIELDS.

A very large assortment of carriage trimmings, blinds, springs for seats, &c. I obtained samples of what I considered most suitable to our wants.

OWEN & DYSON'S WORKS, ROTHERHAM.

As this firm were making a number of wheels for us I called to see them tested. I saw several of the wheels cut through the centre boxes, which were perfectly sound and a very good job. Of the 500 sets ordered, 300 are to be made with patent stamped bosses.

THOS. ROBINSON & SONS' SHOPS, ROCHDALE.

This firm has a great reputation for the class of wood-working tools made by them. The shops are very extensive, employing about 400 hands. Connected with the works there is a large lecture-room and a dining-room for the employés, of which I obtained a tracing.

The whole of the wood-working machines for the new shops at Derby have been made at these works, and they are of a very superior class. I also obtained from Mr. Robinson a tracing showing the arrangement of the tools and shafting of the Derby carriage shops, including the saw-mills, which will be very useful, and serve as a guide to the arrangement of our new carriage and waggon shops at Eveleigh. The tender of this firm was accepted for a few of the wood-working machine-tools we required. several other factories and shops, where I obtained more or less useful information. Amongst them were the following :-

Collier's tool shop, Salford, Manchester.
Allday & Sons' Works, Birmingham.
Handyside's do., Derby.
Church, Hill, & Co., London.

Having visited most of the great shops in England, I was anxious to see some of the French works, so I took a run over to Paris for a few days and visited the following workshops:—37—D

LOCOMOTIVE

LOCOMOTIVE WORKS OF THE GREAT EASTERN OF FRANCE.

This being only a running depôt for locomotives the running repairs are effected in round sheds, I saw several locomotive engines on Crampton's patent, of which they there being two very large ones. have one hundred for running fast trains. The carriage and waggon shops are very extensive, as they build a large quantity of new stock here annually. Many of the carriages have iron panels. A considerable portion of the rolling stock in use appeared very old, and in every respect inferior to that on the English lines. The Westinghouse automatic air brakes are used in the engines and passenger stock.

Electric communications between guard and driver are adopted, the wire for which is taken over the roofs and down the ends of the carriages with a coupling for each wire arranged so that if a coupling were to break, or if uncoupling is neglected, it will part without breaking the electric coupling or wire. The wires are connected at the ends of the carriages. Although the gauge of French railways is 4 ft. 8½ in. the carriages are wider than English carriages, the first-class compartments accommodating four and the

second-class five passengers.

LOCOMOTIVE WORKS OF THE PARIS AND LYONS RAILWAY.

These shops are about 3 miles out of Paris, and classed amongst the largest and most important in France, upwards of 900 men being employed in them. Locomotive engine building is carried on exclusively. The shops are very fine roomy buildings, with roads through them, but as regards lifting appliances they do not compare favourably with English workshops, at which I was much surprised, as French scientists and mechanics have a very high reputation. This Company adopt very rigid tests for all running stores, also steel, iron, ropes, leathern belts, &c. &c. The Westinghouse automatic air brake is used in all the passenger stock on this line.

ELWELL'S WORKS, PARIS.

These are large engineering works in which tools and shop appliances for French railways are manufactured. Between 300 and 400 hands are employed, and the class of work appeared to be good.

With the knowledge I have acquired of what is regarded as the best design for workshops, as well as from my long experience of locomotive requirements, I am exceedingly pleased to be able to say that our new shops will compare very favourably both in design and general arrangements with the best I have seen in my travels, the only serious objection being the want of sufficient space for enlargement when the necessity arises, as it most assuredly will, and I feel I should be neglecting my duty were I not to call attention to the necessity for additional land being provided to meet it. I am convinced that if the whole of the land at Eveleigh was available for locomotive; purposes it would not be enough to meet our future of the land at Eveleigh was available for locomotive purposes it would not be enough to meet our future requirements, even if it were not, as it is, intersected by the main lines running through it.

As for the tools necessary to properly equip the new shops, I collected all the information possible both by inquiry and observation, with the view to obtaining those best adapted to our requirements. I drew up specifications for makers to tender by, and the result is that we shall have the very best machine-

tools at the lowest possible prices.

I was naturally anxious to see what changes had taken place in the design of engines and rollingstock on English lines since I left it twenty-seven years back; and speaking generally, I find that they are no nearer now than they were then to arriving at standard classes of either engines, carriages, or waggons.

On nearly every line you will find a distinct class of engine for performing work that is common to all lines, with little difference of grade on any of them. As a rule you will find an express class, a goods class, and a suburban class of engines on each of the lines, differing considerably from those used for a class, and a suburban class of engines on each of the lines, differing considerably from those used for a similar class of work on any other line; in fact each Locomotive Superintendent has his own opinion of what is best, hence the diversity of classes. Speaking generally, the construction of locomotives on English lines does not materially differ from those built thirty years ago, the most striking points of difference being a tendency to make them heavier, and instead of the large single driving-wheel for fast passenger trains, four-wheeled, coupled, from 5 feet 6 inches to 6 feet 6 inches and a few 7 feet are used. Bogies of different form are coming into use, such as Adams' four-wheeled and the Bissel bogie. Radial axle-boxes are much used, particularly for the leading or trailing wheels. There are two axle-boxes coupled together which form a segment of a circle when rounding curves with a long wheel have and are coupled together which form a segment of a circle when rounding curves with a long wheel base, and are considered very satisfactory. Joy's patent valve motion is being very generally adopted, and is said to give very excellent results.* The most startling novelty in engines is, however, Mr. Webb's compound engine, which I have before described. At several of the large locomotive works steel plates for boilers and frames are used. It has also been tried for inside fire-boxes, but it did not answer on account of the plates cracking and wasting away after being a short time in use, so that they had to be taken out

and copper substituted.

With the knowledge possessed of the suitability of American steel for fire-boxes, the English engineers have been endeavouring to account for the failure of the English steel. It was stated that the engineers have been endeavouring to account for the failure of the English steel. It was stated that the cause of failure was in the water, and it was suggested that a number of American steel plates should be obtained and used in English engines as a test, the result of which will be looked for with much interest. There is a difference of opinion as to the proper type and weight of tank-engines for suburban traffic. Many of those in use have 17-inch cylinders with a 24-inch stroke and four wheels of 5 feet 6 inches diameter, coupled. The weight of this engine, loaded, is 34 tons. This is the standard engine now approved of by Mr. Strindley, of the London and Brighton line, who a few years back was in favour of small engines, wheels of 4 and 5 feet diameter. The Westinghouse of small engines, about 27 tons, with six coupled wheels of 4 and 5 feet diameter. The Westinghouse air-brake, automatic, is used on the passenger stock of the Midland, the London, Brighton and South The Westinghouse Coast, the Caledonian, Great Eastern, London, Chatham, and Dover, North-eastern, West Lancashire, Glasgow, and South-western and the North British and South. Vacuum brakes are used on the Great Western, London, and South-western, Manchester, Sheffield, and Lincoln, and the Great Northern, &c.

On the London and North-western the chain brake is still in use throughout the trains.

I consider the rolling-stock has been improved much more than the locomotives. The carriages are more roomy in every way, and are consequently much more comfortable than they used to be, and the waggons are generally built to carry greater local.

The six-wheeled first-class carriages on the Great Western Railway are 29 feet long, 7 feet high to centre of roof, weigh 9 tons 16 cwt., and carry twenty-four passengers.

The six-wheeled second class carriages are 25 feet long 7 feet high, weigh 8 tons 19 cwts. 1 qr., and accommodate thirty-two passengers. The third class 6-wheel carriages are 28 feet long, 7 feet high, weigh 9 tons 12 cwt., and carry fifty passengers.

The carriages on the London and North-western Railway are six-wheeled, of much the same dimensions and weight as those on the Great Western.

The carriages on the North-eastern Railway are four-wheeled, the composite class being 28 feet long, 6 feet $9\frac{3}{8}$ inches high, weigh 8 tons 18 cwt. 2 qrs., and carry eighteen first-class and ten second-class passengers. The second and third class are about the same length, height, and weight, and carry forty

and sixty passengers respectively.

The South-eastern Railway has both six and four-wheeled carriages. The six-wheeled first-class carriages are 28 feet long, 7 feet high, weigh 9 tons 17 cwt., and carry twenty-four passengers. The four-wheel first-class carriages are 21 feet long, 7 feet high, weigh 7 tons 13 cwt. 2 qrs., and carry eighteen passengers. The second and third class four-wheeled passenger carriages are 24 and 27 feet long respectively, 7 feet high, weigh 7 tons 16 cwt. and 8 tons 7 cwt., and carry forty and fifty passengers

The Great Northern has six-wheeled first-class carriages, 28 feet long, 7 feet high, which weigh 11 tons 11 cwt., and carry twenty-four passengers. The second and third class carriages are four-wheeled, 23 and 26 feet long respectively, 7 feet high, and carry thirty-two second and fifty first-class passengers, and

weigh 8 tons and 8 tons 11 cwt.

The London, Brighton, and South Coast Railway has six-wheeled first-class carriages, 28 feet 4 inches long, 6 feet 10 inches high, which weigh 9 tons 9 cwt., and carry twenty-four passengers. There are four-wheeled first-class also, which are 26 feet long, 6 feet 10 inches high, and weigh 7 tons 1 cwt. 2 qrs., and carry thirty-two passengers. The second and third class carriages are 26 feet long, on four

wheels, 6 feet 10 inches high, which weigh 6 tons 18 cwt., and carry fifty passengers each.

The Midland Railway has no second-class carriages. The four-wheel first and third class are 29 feet long, 7 feet 1 inch high, which weigh 9 tons 6 cwt. and 8 tons 16 cwt., and carry twenty-four and fifty passengers respectively. In addition to the four-wheeled stock there are a number of composite carriages, carried on six-wheeled bogies at each end. These carriages weigh 24 tons, and seat twenty-four first and forty third-class passengers. These are somewhat similar to the Ashbury carriages on our lines, and were made by the same firm. The London and South-western Company has a number of carriages carried on

four-wheel bogie trucks. These carriages, like the Ashbury class, have side-doors.

The goods stock is all very strongly built, and it is at once evident the tendency is not in the way of reducing the dead weight of the vehicles, but rather to strengthen the stock so that greater loads may be carried. The waggons are all carried on four wheels.

The waggons on the Great Western are 15 feet 6 inches long and 7 feet 6 inches wide. The covered goods waggons are 6 feet 2 inches high, weigh 5 tons 6 cwt., and carry a 9-ton load. The medium-sided (similar to our D trucks) weigh 43 tons, and carry 9 tons, and the low-sided trucks weigh 41 tons and carry 9 tons

On the London and North-western the waggons are the same length as on the Great Western (15 feet 6 inches), but are 7 feet 8 inches wide. The covered waggons are 6 feet high, weigh 5 tons 11 cwt. and carry 7 tons. The medium waggons weigh 4 tons 13 cwt., and carry 7 tons, and the low-sided trucks weigh 41 tons, and carry 7 tons.

The waggons on the North-eastern lines are only 15 feet long, but are 7 feet 11 inches wide. The covered goods vans, 5 feet 6 inches high, weigh 5 tons 19 cwt., and carry 8 tons; and the medium and low-sided stock weigh 5 tons 9 cwt. and 4 tons 15 cwt., and carry 8 tons.

On the South-eastern Railway the waggons are 15 feet 5 inches long and 7 feet 7 inches wide. The covered goods vans are 6 feet 6 inches high and weigh 5 tons 11 cwt 2 grs for a load of 8 tons.

covered goods vans are 6 feet 6 inches high, and weigh 5 tons 11 cwt. 2 qrs. for a load of 8 tons. The medium and low-sided waggons weigh 5 tons 6 cwt. 2 qrs. and 4 tons 7 cwt. 1 qr., and carry a 10-ton load.

The Great Northern covered vans are 16 feet long, 7 feet 8 inches wide, and 6 feet 2 inches high. They weigh 5 tons 17 cwt., and carry 8 tons. The medium-sided (3 feet) waggons are 15 feet long, 7 feet 6 inches wide, weigh 5 tons 4 cwt., and carry 9 tons; and the low-sided waggons are 17 feet long, 7 feet 11 inches wide, weigh 5, and carry 9, tons.

The London, Brighton, and South Coast Railway goods stock are as follows:—High-sided, 2 feet 11 inches, open goods waggon, 15 feet 5 inches long, 7 feet 9 inches wide, weighs 5 tons 3 cwt., and carries 10 tons. The medium-sided (1 foot 9 inches) stock of the same length weighs 4 tons 2 cwt. 1 qr., and carries 7 tons; and the low-sided waggons are 12 feet long, 6 feet 81 inches wide, weigh 3 tons 3 cwt. 2 qrs.

On the Midland line the covered goods waggons are 15 feet long, 7 feet 6 inches wide, and (only) 5 feet $2\frac{1}{2}$ inches high, weigh $5\frac{1}{4}$ tons, and carry 6 tons. The medium-sided (1 ft.) of the same length and 1 inch less in width, weigh 4 tons 14 cwt., and carry 8 tons; and the low-sided waggons are 17 feet long, 8 feet 8 inches wide, weigh 5½ tons, and carry 10 tons. Some of the suburban trains have central buffers and couplings, which are never uncoupled excepting when brought in for repairs.

TRAMWAYS.

I ENDEAVOURED to obtain as much information as possible about the construction and working of

Tramways both in Great Britain and on the Continent.

They are generally in wide streets, which are There are a number of horse tramways in London. chiefly paved with either stone or wooden cubes, the latter being made from the ordinary Baltic pine. The cars, which carry twenty inside and twenty-two outside, are on four wheels. The speed is between 5 and 6 miles per hour.

The system adopted for checking fares is as follows:—The conductor sells tickets, which he punches (as he hands them to the passengers), when he enters on a paper form placed in a temporary frame near the entrance door, and in view of the passengers, the number of fares received both from inside and outside passengers as the cars are on the journey. Several inspectors are engaged, whose duty it is to check the conductors, by seeing that each passenger has a ticket, and that the total agrees with the number entered on the form, before referred to, by the conductor. These inspectors may jump on at any part of the trip, so that the conductors may not be aware of their movements.

A cable road, on Hallidie's patent, is about to be laid at Highgate, for which the sanction of the Board of Trade has been obtained. It is about a mile long, with steep grades. It is intended as an experiment, which, if successful, will no doubt be the means of a number of cable roads being made where

steep grades have to be encountered in street traffic.

A Corporation has already been formed in London, with a capital of a million, for leasing, working,

and constructing tramways on Hallidie's Patent Cable system.

The gross receipts for the twelve months ending June, 1882, of the following horse tramway lines in London, as shown by their reports, were-

The North Metropolitan Tramway ... 297,422 The London Tramway The London Street Tramways 69,393 £579,009 Total

The average cost of these three lines is 76 per cent. of the gross receipts.

On a tramway line at Holloway, Megarski's Air Motors are to have a trial, the one I saw in course of construction at Appleby's Works, Greenwich, being intended for this line. (For full particulars of Megarskie's motors, see remarks on Appleby's Works, page 23).

By invitation of Colonel Beaumont, R.E., I accompanied a party to Dover, for the purpose of seeing

his compressed air-motor in operation on some works connected with the Channel Tunnel.

The air-compressing arrangements and appliances were of a temporary character, it being built merely as an experiment. It drew twelve waggons of shale for a short distance, which, under the circumstances, was considered satisfactory. I obtained full particulars of trials made with it by Captain Galton, F.R.S., Mr. Richard Rice Williams, C.E., and Mr. William Kirtley, the Locomotive Superintendent of the London, Chatham, and Dover Railway, which afford valuable information as to their adaptability for tramway work

The following is a summary of the trials made:—

Summary of trials made with the Beaumont Compressed-Air Locomotive, at the North Metropolitan Company's Depôt, Stratford, January 24th, 25th, 26th, and 27th, 1882, based on detailed report of Messrs Greathead and Eykyn, C.E.'s, referred to in report of Captain Douglas Galton, F.R.S., Richard Rice Williams, C.E., and William Kirtley, Locomotive Superintendent, London, Chatham, and Dover Railway.

Air-Compressor.—The boiler of the air-compressing engine was a locomotive boiler of the ordinary

For compressing the air a compound high-pressure horizontal engine with variable cut-off was used, having two cylinders of 12 inches and 20 inches diameter and 2 feet stroke with cranks set opposite, and working directly for stage pumps of 12 inch, $6\frac{1}{2}$ inch, 4 inch, and $2\frac{1}{2}$ inch diameter respectively, placed in two tanks of water. Intermediate coils between the pumps served to cool the air, so that it was barely warm on leaving the compressor.

The air, cold, after passing through a considerable length of small iron pipes, was delivered direct

into the reservoir of the locomotive.

Locomotives.—Consisted of a pair of engines working on four cranks set in two opposite pairs, each pair of opposite cranks being at right angles to the other, each high and low pressure cylinder being connected to each pair of opposite cranks.

Diameter of the cylinders, high-pressure 2 inch, low-pressure 7 inch, stroke 18 inches. Variable cut-off from 0 to full.

Driving done by the cut-off.

The air was heated before entering the cylinders by being passed through steam-jacketed coils, the steam being supplied from a small boiler on the locomotive.

The air-cylinders were also steam-jacketed. The driving-wheels were 3 feet in diameter. The capacity of the reservoir was 96.2 cubic feet.

The feed-water to boiler was supplied quite cold by a small donkey-engine.

The firing was done by hand, and the state of the fire was carefully observed, so as to secure at the termination of each trial as nearly as possible the same fire as at the commencement.

The quantity of coal used for getting up steam was 6 cwt., the boiler full of water to begin with

being too hot for the hand, but with no pressure.

The height of water in the boiler was also noted; on January 24th (trial No. 1) it was the same at the finish as the start, but on January 25th (trial No. 2) the level was $\frac{7}{8}$ in. lower at the finish than at

The steam-pressure was also noted from time to time, and at the commencement and ending of each trial it varied between 95 lbs. and 100 lbs. per square inch.

The power given by the locomotive was measured by a friction dynamometer, the engine being lifted that its driving-wheel ran freely.

Counters were fixed both on the locomotive and compressing engine.

TRIALS

TRIALS made on January 24th and 25th.

To determine the quantity of fuel consumed, indicated horse-power of compressing engines, and corresponding power given by the locomotive, the pressure of air in the locomotive being maintained constant at 1,000 lbs. and 750 lbs. per square inch.

Duration of trial	1,000 lbs. H. M. 4 O	750 lbs. н. м. 4 О

at 2 lbs. per hour, to put 1 cubic foot of air up to 1,000 Amount of coal required to haul 1 ton 1 mile on a railway	0.87 lbs. 0.2928 lbs.	0.87 lbs.
Amount of coal required to haul 1 ton 1 mile on a tramway	0.73 lbs.	
		·

The rise of pressure, as shown by the gauge on the reservoir, corresponded very closely indeed to the volume swept through by the piston of the large air-compressing cylinder, showing that the loss of

air from leakage, clearance spaces, &c., &c., was insignificant.

I believe that with a somewhat modified arrangement of valves and air-ways in the compressor, the h.-p. required to compress the air, as evidenced in the above trials, may be reduced about 25 per cent.,

h.-p. required to compress the air, as evidenced in the above trials, may be reduced about 25 per cent, thus improving by that amount the efficiency of the system.

Briefly, the results of the trials of January the 24th and 25th may be stated as follows:—

The first day's experiments extended over a period of four hours, with a constant pressure in the reservoir of the locomotive of 750 lbs. on the square inch, and the weight applied to the brake was such as to require the locomotive to develop on an average throughout the period of four hours 14 h.-p., to overcome the frictional resistances of the brake while running at an average of 79 revolutions per minute, corresponding to a speed of about 85 miles an hour, while in order to keep the locomotive running at this speed the compressor engine indicated about 70 h.-p., showing that the effective power of the locothis speed the compressor engine indicated about 70 h.-p., showing that the effective power of the locomotive under these conditions was just 20 per cent. of the total indicated power of the compressing engine.

The results obtained during the second day's experiments, which were made under precisely the same conditions, with the exception that the pressure in the locomotive reservoir was maintained at 1,000 lbs. instead of 750 lbs., as on the former occasion, were exactly the same, the power developed by the locomotive to overcome the friction of the brake at a speed of seventy four revolutions per minute being 20 per cent of the indicated power of the compressing engine. The amount of fuel consumed by the compressing engine, it will be seen, was at the rate of 40 lbs. per 1 h.-p. in the first experiment, and 45 lbs. per 1 h.-p. per hour in the second. This consumption, together with the small amount of fuel (viz., 0.78 lbs. to 1.0 lb. per h.-p. per hour respectively) required on the locomotive for heating the expanding air, would be equivalent to 20.7 lbs. of coal per effective horse-power on the first day's trial, and 23.4 lbs. on the second day's trial. Taking the average of the two days' trials, therefore would give 23.0 lbs. of coal. In order to saying a ten a will can the milway when the amount therefore, would give 22.0 lbs. of coal. In order to carry a ton a mile on the railway, where the amount of the frictional resistance would be considerably less than on a tramway, and assuming the average resistance (constant and variable) to be 10 lbs. per ton, the power required to be exerted to haul a ton a mile at an average speed of (say) 15 miles an hour, would be 5,280 × 10 lbs. = 52,800 foot lbs., or 1.6 dyn. h.-p. It has already been shown that the average results of the two days' trials give 22.0 of coal per effective horse-power per hour, and $\frac{22.0}{10.0} = 0.366$ lbs. per dynamical horse-power, equivalent to 0.366 lbs. 1.6 dyn. h.-p. = 5856 lbs. of coal to haul 1 ton a mile on the level lbs. \times 1.6 dyn. h.-p. \equiv 5856 lbs. of coal to haul 1 ton a mile on the level.

It is obvious, we think, that with compressing machinery working on a larger scale, and with highpressure condensing engines, the consumption of fuel ought to be very much less than the 4.25 lbs. per
1 h.-p. per hour shown in these trials; and assuming that it can be reduced to half that amount, the quantity
of coal required to haul 1 ton a mile would then of course be correspondingly reduced, and amount to

no more than 0.2928 lbs.

The average consumption of coal for passenger trains on nine of the principal English railways, is 30.76 lbs. per passenger train mile; and taking the average gross weight of a London and North-western passenger train at (say) 245 tons, and the average consumption of coal at 30.30 lbs., which closely agrees with the average of the other lines, the coal required to haul 1 ton a mile would be just 124 lbs.

A reference to the diagrams already referred to shows, we think, very strikingly, that the locomotive was driven on each occasion at a fairly regular speed against the resistance of the brake (amounting to 9.88 h.-p. in one case and 9.53 h.-p. in the other), although the pressure in the reservoir varied from 1,000

lbs. to 275 lbs. per square inch.

DOUGLAS GALTON R. PRICE WILLIAMS. WILLIAM KIRTLEY.

These reports, which may be considered to an extent satisfactory, induced me to visit Stratford, with the view of seeing the "Beaumont" engine at work, in which I was disappointed, as it had been stopped from running, owing to it frequently getting out of order, necessitating horse-power to be substituted for it. I was informed that the trial of this motor was looked upon in the light of an experiment.

As regards the relative merits of the Megarski and Beaumont motors for tramway work, I cannot, from the information afforded to me, offer an opinion. To my mind, the practical knowledge which can alone be acquired from experience of their working is the only reliable basis upon which such an opinion can be formed. I may state that the principles upon which these air-motors are constructed are not held in much favour by scientific men. The whole affair is looked upon as merely experimental and quite in its infancy, and it is considered very doubtful if it will ever be a success as a motive power

When in Leeds I examined the system of the steam trams in operation, which are worked by Kitson's motors, similar to those in use on our lines. I travelled on it for some distance, the motor drawing only one car would seat about twenty passengers inside and twenty-two outside. It worked smoothly, and is evidently much appreciated by the public. The Chairman of the Tram Company, after an eighteen months' trial of the Kitson motors, expressed the opinion that they had performed their work satisfactorily. Notwithstanding that a portion of the line runs through crowded streets, and about a mile of pretty stiff grades,* no material complaints have been made as to the emission of steam or smoke. As to the comparative cost of steam and horse tramways, both of which are in operation, the advantage in

favour of the steam is found to be very considerable.

Both at Sheffield and Manchester there are a large number of horse tramways, the cars upon which carry forty-two passengers each. Several of the cars were constructed so that their bodies, which were worked on swivels, enabled them to be reversed from one end to the other by the horses, upon the driver pulling out a catch. By this system the necessity for taking out the horses or turning the cars is obviated. The cars have but one stair for passengers to ascend to the roof. The stairs are attached to the body, and are always at the end furthest from the horses. At Sheffield I observed large traction engines drawing heavy

loads of iron, steel, &c., which did not appear to travel over 4 miles an hour.

There are very extensive horse tramways at Liverpool, Birmingham, and Bradford, similar to those at Sheffield and Manchester. In addition to horse, Glasgow has steam tramways. I travelled on the Govan branch of the Vale of Clyde line, which is worked by Kitson's motors.

The car carries sixty passengers, but I was informed that at busy times an additional car, capable of carrying forty passengers, is taken. The cars are carried on two four-wheel bogies, similar to those used on our lines. The line I travelled over was practically level, and runs through a populous district. The Tramway Company express themselves as being well satisfied with the working of the Kitson motors; but I noticed that, through the exhaust steam being forced through a series of small pipes for condensation,

a jerky motion at the end of each stroke of the piston is caused, which is not at all agreeable.

Edinburgh also has a steam tram-line.* It runs from Waterloo Place to Portobello, a distance of a little over 3 miles, the steepest gradient being 1 in 28. The Kitson motors are used and the cars, which carry forty passengers, are somewhat similar to those used on the Glasgow line, two of which, See diagram E carrying eighty passengers, are generally used. I noticed the same jerky motion at the end of the stroke, in the motor I travelled with on this line, that I referred to in my description of the Glasgow line. This class of motor is also in use on lines at Blackburn and Burnley in England,* Dublin and Portrush in Ireland, Canterbury and Dunedin in New Zealand, and at Calcutta in India.

There are steam tramways in Staffordshire, upon which engines built by Manning, Wardle, & Co., weighing from 13 to 15 tons, were used. I ascertained they had ordered several of the Wilkinson type of motors, weighing about 8 tons, which could be worked at much less cost, as the line was not substantial enough for the heavier class, consequently the cost of maintenance was very large

In accordance with your instructions I called on Mr. Arthur Rowan in London, with the view of obtaining information about the "Rowan combined motors and cars" which were said to be working on a line in Denmark. After calling several times I succeeded in seeing Mr. William Rowan, who had just returned from the Continent. He informed me that unless I had other business in Denmark it was quite unnecessary to go there to see their motors at work, as some were forwarded to Victoria to be worked on some light railways which he considered would be a better test of their capabilities for tramway work than any information I could get in Denmark than any information I could get in Denmark.

See diagram I.

*See diagrams F, G, & H.

The Dewsbury, Batley, and Birstal tramway line, which is about 31 miles, is worked by steam, the

Merryweather motor being used.

This line is an easy grade of about 1 in 200. The rails are of wrought iron, and weigh 41 lbs. to d. The rails are $3\frac{1}{4}$ inches wide and 2 inches deep, and are carried on chairs 3 feet apart, to which they are secured by vertical spikes through the bottom of the groove. The chairs, which are cast iron, are laid in concrete, run in with pitch, and the rails are packed underneath with concrete. This line is paved with granite 4-inch cubes between the rails, and cubes of 6 inches deep for 18 inches outside of

The motors have 6½ inch cylinders, with a 10-inch stroke, and four coupled wheels 2 feet 2 inches diameter. The cylinders are placed inside the framing and are joined together at the middle, where they form the valve chest, whilst a saddle is placed on each half for the purpose of supporting the boiler at the smoke-box end. The feed tank, which holds 100 gallons, is placed in front of the smoke-box. A fender is fixed at each end of the engine, to remove obstructions. The working pressure of steam in the boiler is 140 lbs. per square inch. The weight of this motor is 7 tons in full working order. The cars (one of which is generally and two occasionally drawn) weigh loaded about 3 tons. The double journey, $6\frac{1}{2}$ miles, is done in sixty-five minutes, including stoppages, thus giving an average speed of 6 miles per hour.

The working expenses per diem of each motor, running 72 miles, is as follows:-

					s.	d.
					5	$2\frac{3}{4}$
t)		•••	•••		0	1호
					0	6
					Ō	11
				•••		- 4
			•			_
			•••		_	6
,	• • • •	•••	•••	•••	1	
•••	• • • •	• • •	•••	•••	Т	6
					_	
• •		•••	• • •	• • •	13	$11\frac{3}{4}$
		t) (do)	t)	t)	t)	$\begin{array}{cccccccccccccccccccccccccccccccccccc$

which is equivalent to 2.33 pence per mile run, which is exclusive of renewals.

It has been ascertained that the cost of working this line by horse traction is $4\frac{1}{2}d$. per mile run per car, or nearly double the cost of engine power.

Merryweather motors are used on a tramway at Stoke-on-Trent, which is 4-feet gauge. engines are larger than those on the Batley line, weighing in working order $10\frac{1}{2}$ tons. This line is about 3 miles long and has several steep grades, some of them being 1 in 16, 1 in 18, and 1 in 20. The cars weigh about 3 tons and carry forty-eight passengers.

The engines take a loaded car up these inclines at a speed of from 4 to 5 miles an hour.

I ascertained that Merryweather's motors had been ordered for tramway lines at Liverpool, Stockton

on Tees, Darlington, Cardiff, and Guernsey.

At Bristol some of the tram lines on the Horsfield system were worked for a time, as an experiment, by seven of Hughes' motors, which had been running on the Paris lines, but owing to prejudice against steam-power and other influences they were abandoned, although so far as I could learn they had persteam-power and other influences they were abandoned, although so far as I could learn they had performed their work satisfactorily as compared with horse traction. The prevailing grades on this line are from 1 in 24 to 1 in 68. The Hughes motors have 7 in. cylinders, with a stroke of 12 in., and four coupled wheels $2\frac{1}{3}$ ft. in diameter. The pressure in the boiler is from 80 to 100 fts. per square inch. This engine weighs in full running order $7\frac{1}{2}$ tons. It is rather singular that in both Paris and Bristol, when these engines were worked, the use of steam power was abandoned, so that the suitability of this class of engine for tramway work is very questionable. The Bastille-Charenton line at Paris, where twelve of these motors were in use, is over 4 miles in length, the steepest grades upon which are 1 in 20 for 100 yards and 1 in 29 for a similar distance. The duty they had to perform was to draw one car capable of carrying forty-six passengers, the gross weight to move being about $11\frac{1}{2}$ tons. The journey (4 miles) was run in thirty-five minutes, being a speed of 7 miles an hour. The engines ran about 67 miles per diem, and consumed 17 fts. coke per mile run. The expenses averaged as follows:—

d.

u.
2.218
1.840
$\cdot 148$
$\cdot 160$
2.357
6.723
2.702
9.425

It is stated that the immediate cause of the contract entered into for working this line by steam being abandoned was owing to the engines frequently breaking down through (it is alleged) a lodgment of a compound of grease and lime on the walls of the fire-boxes (the grease being derived from the condensed steam and the lime from the water), by which means the fire-boxes became overheated and bulged inwards, and the tubes leaked and broke.

It was found that the condensing apparatus employed in these engines was uncertain in action,

and very fickle, which caused, it is believed, a considerable back pressure on the pistons.

A more powerful class of motors was designed by Mr. Hughes for the Lille-Haubourdin line, which is level and about $5\frac{3}{8}$ miles in length; also for the Lille-Roubaix line, which is about $6\frac{3}{4}$ miles long, the steepest grade upon which is 1 in 22. These engines have 9-in. cylinders, with a 13-in. stroke, and four coupled wheels $3\frac{1}{2}$ ft. diameter. The tank holds 400 gallons of water, which is heated by exhaust steam up to boiling point on the trip. The weight of these engines is 10 tons in running order.

The

The Hughes Engine Company contracted to supply the steam power for these lines at the same rate paid to them for the line at Paris, viz., 6.9d. per mile run with one car, and 9.2d. per mile with This contract only lasted four months, after which the engines were hired for a year. It is stated that these engines were worked at a disadvantage owing to their having to take their turns between horse-cars, which limited the speeds, it taking fifty-five minutes to run 5 13 miles, and they were compelled

horse-cars, which limited the speeds, it taking fifty-live minutes to run o'13 miles, and they were compelled to stop from twenty to twenty-five minutes at one terminus and from eight to ten minutes at the other.

Tramways at Rouen in France are worked by steam. The motors chiefly used on them are the Merryweather. The ruling grade at one end is 1 in 20, and the average grade is 1 in 40. The speed is 5 miles per hour in town, and 8 miles per hour outside. The total working expenses per mile run on this line is 8 12 pence. The average run per diem by each engine on duty is 56 miles. The cars weigh 2 tons 18 cwt., and carry forty-six passengers. Two cars of a gross weight of $12\frac{1}{2}$ tons, which is as much as the

engines will draw, are taken.

There are several lines of tramways in Belgium, Germany, Spain, and Italy, worked by steam, upon

most of which the Merryweather motor is used.

There is a tram line at Berlin 8 miles long, upon a section of which a motor designed by Krauss & Co., of Munich, is used. The cylinders (outside) are 6.3 inches diameter and 11.8 inches stroke. The wheels, 4-coupled, are $24\frac{3}{4}$ inches diameter, placed 6 feet apart from centre to centre. The heating surface is 139 square feet, the working pressure is 170 lbs. per square inch, and the weight in working order $7\frac{1}{3}$ tons. This engine draws one car which carries forty-eight passengers below and fifty-two above, with standing room for forty additional, making a total of 140 places. The weight of this car, which has the top covered in, is 111 tons

On the Cassel and Wilhelmshohe tramway, which is $3\frac{1}{2}$ miles long, in addition to Merryweather motors, there is an engine built by Herschel & Son, of Cassel, which has inside cylinders 7.87 inches in diameter and 11.8 inches stroke. The wheels are 4-coupled, $24\frac{3}{4}$ inches diameter, on a wheel base of 4 feet 7 inches. The weight in working order, $9\frac{3}{4}$ tons. This engine can take two cars holding eighty pas-

sengers each up an incline of 1 in 17 and on curves of 52 feet radius.*

In the opinion of all those whom I have spoken to who have a knowledge of tramway working, it is a foregone conclusion that horse power will ultimately be entirely superseded by mechanical power, but

it is very questionable if the best form of engine for mechanical propulsion has yet been invented.

Judging by what came under my own notice, I have no hesitation in asserting that both the motors pared most favourably in construction and accommodation with those used on English and Continental lines. and cars on our tramway lines are better adapted for their work than any I have seen, and certainly com-

I am very certain that those who have experienced the conveniences of our tramway system would never be satisfied with either the speed or accommodation afforded by horse tramways.

I am decidedly of opinion that in localities where steep gradients prevail the cable tramways will

be found to be the most suitable.

In most of the cities, both in America, England, Scotland, and France, where I have seen tramways in operation, the streets are paved with stone or wooden cubes. In many cases the cubes are laid between

and for about 2 fect outside the rails. In a few places they are on ordinary macadamized roads.

With reference to the obtaining of some of the most improved type of water cranes, I made diligent inquiries of those who had experience of what is best and most economical. Two different designs were strongly recommended to me as being very superior, so I ordered three of each to be forwarded.

One type has a column with a stop-valve above ground, and a short arm with a leather hose.

One type has a column with a stop-valve above ground, and a short arm with a leather hose. The other type has a column and a long arm for swinging round, similar to those we have now in use on our lines; but they have the stop-valves above ground, so that they can be readily got at for repairs.

1 regret that with the limited time at my disposal I could not make a more lengthy stay in America and on the Continent, as I am sure I should have been enabled to obtain a large amount of additional information in reference to railway and tramway working which would be of service to the Department.

I have to express my thanks for the very many obligations I am under for the courtesy with which I was treated by the locomotive superintendents of the different railway companies' works, as also the proprietors and managers of the workshops which I visited, and for the assistance they afforded in forwarding the objects I had in view. I also desire particularly to express the obligations I am under to Sir Saul Samuel, the Agent-General for the Colony, Mr. John Fowler, C.E., our inspecting engineer, and his able assistant, Mr. J. D. Baldry, for the very valuable assistance and advice rendered by them.

I wish to say in conclusion that I am deeply sensible of the kindness and liberality of the Government in having afforded me such an excellent opportunity of seeing the advances that have been made in scientific and mechanical appliances connected with railway and tramway construction and working; and I am sanguine that the knowledge I have acquired will conduce to the more effective conduct of the business of the branch of the Railway Department which has been placed in my charge.

conduct of the business of the branch of the Railway Department which has been placed in my charge.

I have, &c., WILLIAM SCOTT.

^{*} I regret that I am unable to afford any information about De Faur's system, and it is certainly not owing to want of inquiry on my part.

APPENDIX A.

LONDON AND NORTH-WESTERN RAILWAY.

- -The men are to be paid at the rate of ten hours for a day regular time, overtime at the rate of two hours for a quarter; but before overtime is allowed, sixty hours must be made within the week. All time over and above sixty hours must be counted as overtime, and paid for at the rate of two hours for a quarter. Sunday time must be reckoned time-and-a-half, that is, ten hours to be a day and a half, and any portion of ten hours to be reckoned at the same rate. You must arrange for the extra men to work as near ten hours as possible. All the regular work will be done by diagram furnished through this office, and you must, for the present, fix the time that engines shall leave the shed to go to their trains, reporting to me the time you allow, which must be as short as possible compatible with the punctual starting of trains.
- 2.—When regular enginemen are engaged working mail and express trains, and are paid by miles and not by hours, 150 miles must be considered a day's work, and their rate of pay will be 7s. 6d. per day. Drivers working local passenger trains will be governed by diagram as heretofore, and will be paid at the rate of ten hours for a day, and overtime at eight, after they have completed sixty for the week. Drivers working on branch lines, who have hitherto been paid at the rate of 6s., must in future be paid 6s. 6d. per day. Through goods or mineral trains, upon the trip or mileage system, will be considered first-class work, and will be paid for at the rate of 7s. per day for 120 miles, overtime as before described. Local goods trains worked by diagram will be paid for as at present. Drivers engaged taking engines to and from the works must be paid at the rate of 5s. 6d. per day. Shunting enginemen must be paid 5s. per day of twelve hours, including meal hours where such are allowed. Where there is not the paid of the rate of two hours for a day and eventime at the rate of two hours for meals, they must be paid at the rate of ten hours for a day, and overtime at the rate of two hours for a quarter.
- 3.—In the case of enginemen working by the trip, or by mileage, time will not be taken into account, except in extreme cases of detention over which they have no control. In such cases, if the detention, including the time allowed for the trip, amounts to more than would be allowed by mileage, it must be paid for at overtime rate.
 - 4.—The following work will be done by the trip, and paid for as under :-

PASSENGER TRAINS.

Crewe to London and back Crewe to Carlisle and back	•••	•••	•••	•••	•••	2 days a 2	llowed.
,	Goods	TRAIN	18.				
Camden to Crewe and back	•••		•••	•••		$2\frac{1}{2}$ days a	llowed.
Crewe to Camden and back	• • •	•••	•••	•••	•••	$2\frac{1}{2}$,,
Manchester to Camden and back		•••	•••	•••	•••	3	,,
Camden to Manchester and back	• • •	• • •	•••	•••	• • •	ō	"

Any other work that can be satisfactorily arranged on the trip system will be done so from time to time.

- 5.—All extra enginemen in charge of regular or special trains must be paid 6s. 6d. per day; and extra enginemen assisting trains must be paid at the same rate.
- 6.—Men acting as relievers and turners must be paid at the rate of 5s. per day, working shop time; and their mates must be selected from the staff of cleaners most likely to become extra firemen. No alteration must be made in their wages whilst acting in that capacity.
- 7.—Enginemen will be promoted from 6s. to 6s. 6d., and from 6s. 6d. to 7s. per day, by merit and seniority.

 8.—Engine-turners acting in that capacity must be paid 5s. per day.
- 9.—It is agreed to continue fuel premiums, but it is intended to make some alteration in the standard allowed, and also to put each class of work on a more equal footing.
- 10.—Enginemen and firemen having made, by working on the link or long-strip system, or with special trains, their sixty hours, within (say) the first four days of the week, are not to be kept off duty two consecutive days to limit their time to sixty hours; but are, after having had a reasonable time for rest, to be allowed, if there is an opportunity during the same week, to resume duty at the overtime rate, viz., eight hours per day.
 - -Firemen will be paid as follows:-With shunting engines, and taking engines to and from the works 0 per day. When out on extra main line trains 3 When appointed to a regular train job-for 1st year ... 6 3 for 2nd year ... for 3rd year ...
- 12.—Firemen who may be fined to the amount of half-a-crown and upwards for misconduct will subject themselves to the postponement of their promotion for twelve months.
- -In future overcoats will be allowed annually, if the previous one supplied has been worn out by fair usage, or until the men are better protected on the engines, and at the next issue the men will be allowed to retain their old ones; but after that, on receiving a new coat they will have to give in the old
 - 14.—A free pass will be granted annually to each engineman and fireman and his wife or daughter.

APPENDIX B.

MIDLAND RAILWAY.

Regulations for Drivers and Firemen.

On and after Monday, November 10th, 1873, the following regulations respecting time, rates, &c., of drivers and firemen will come into force, viz.

Time.—All drivers and firemen to be paid at the rate of ten hours per day, time to be taken when the men come on duty (by order), and when they leave duty.

Shunters.—Time to be twelve hours for a day's duty, to include 11 hour allowed for meals. Over-

time to be paid for at the rate of eight hours per day.

Sunday duty.—All time made between 12.0 midnight on Saturday and 12.0 midnight on Sunday to be paid for at the rate of eight hours per day.

Overtime.—Overtime to be calculated at the rate of eight hours per day, and to commence after ten Time off duty.—So far as the necessities of the service will permit, nine hours at the least off duty to be arranged for.

Men off duty.—Men who are not called on duty in consequence of trains being unexpectedly stopped, to be paid as if on duty, if they have not made six days during the week.

Wages.—Enginemen will be paid at the following rates, viz.:

Second six months 6s. 6d.

Firemen to be paid-

First twelve months 3s. 6d. per day. Afterwards 4s. 0d. When passed 4s. 6d.

Firemen will be promoted to drivers by seniority and merit.

When men are required to lodge away from home they will be paid-Lodging allowance.-

2s. 6d. per night in the country.

1s. 0d. ditto, where lodging-houses are provided.

1s. 6d. ditto in London.

Leaving the service.—Fourteen days' notice to be given by either party.

Premiums.—For the year 1873 the usual premium of £500 will be distributed amongst those drivers who have kept the most correct time, and whose consumption of fuel and general stores is the lowest.—For 1874 and following years £1,000 will be distributed as premiums, and in addition the amounts deducted for fines will be added to the premium fund.

APPENDIX C.

GREAT WESTERN RAILWAY.

Staff.

The salaries and wages paid to the staff employed in the Traffic Department vary, of course, according to grade, length of service, and the importance of the duties performed.

The principal distinctions of grade in the Traffic Department (i.e., the station staff) may be

described under the following heads:

Station-masters, Goods Agents, Booking and other Clerks.

Inspectors.

Foremen.

Guards.

Signalmen.

Policemen.

Porters, and men of similar grades.

Station-masters, Goods Agents, Booking and other Clerks.

Station-masters on the Great Western Railway are of two classes. Those at larger and more important stations are salaried officers, the salaries varying from £80 to £325 per annum, while at the smaller stations they are called booking porters, and wear a uniform, the wages varying from 20s. to 35s.

The practice on this railway differs somewhat from that adopted by some other English Companies.

On the London and North-western Railway, for instance, very few of the station-masters, even at the largest stations, are salaried officers, their practice being to put the actual out-door work under the charge of a man in uniform, who is called a station-master, but whose general status approaches more nearly that of an inspector on the Great Western Railway.

These station-masters, beyond exercising a general supervision over the whole of the staff employed at the stations, have nothing to do with the accounts, whereas on the Great Western Railway, whether the person in charge of a station ranks as a station-master or as a booking porter, he is responsible for every part of the station work

every part of the station work

The station-masters and booking porters are responsible to the superintendents of the divisions in all matters relating to the working of the line and the conduct of the passenger and parcels traffic, and to the district goods managers for the proper reception, delivery, loading, unloading and invoicing of the goods traffic.

Of course at many stations no goods traffic is carried on, and the district goods managers, therefore, have nothing to do with such stations, while on the other hand, at some of the larger stations the passenger and goods departments are entirely separate, the station-master being responsible to the superintendent of the division, and the person in charge of the goods department—generally termed the "goods agent" to the district and the person in charge of the goods department—generally termed the goods agent"—to the district goods manager only.

In these cases the station-masters in charge of the passenger stations have nothing to do with the goods traffic until the trains come upon the main line, or the traffic is placed ready to be taken on.

The salaries of the goods agents vary from £90 to £350 per annum.

The divisional superintendents and goods managers are responsible to the heads of their respective departments, viz., the superintendent of the line and the chief goods manager, who act under the general instructions and supervision of the general manager.

Inspectors.

The inspectors are either "travelling" or "station inspectors," the duties of the former being to see that the signalmen, policemen, &c., understand and thoroughly carry out their duties, to inquire into irregularities in the running of the trains, and the working of the traffic in the division to which they are attached, reporting to and acting under the instructions of the divisional superintendent.

Station inspectors are attached to a particular station, and are required to see that the men at the station perform their duties in a proper manner, and generally to assist the station-master in the carrying

on of the out-door work of the station.

Inspectors, as a rule, are men who have worked their way up from lower grades, and are chosen for the positions they hold on account of the practical experience of the working of the line which they have gained.

The pay received by the inspectors varies from £80 to £150 a year in the case of district inspectors,

and from 25s. to 40s. per week in the case of station inspectors.

The term foreman porter is of itself almost a sufficient explanation of the duties required of a man

in that position.

At the smaller stations foremen are not required, but where several porters are employed it is customary to put them under the charge of a foreman, whose duty it is to see that the work is properly done

At the larger stations where a large number of men are employed, the staff is divided into "gangs,"

each having particular duties assigned to it, and there is generally a foreman over each gang.

The wages paid to foremen in the passenger department vary from 21s. to 35s. per week, according to the importance of the station; but in the goods department, where the work is generally heavier and largely carried on at night, the wages vary from 25s. to 35s. per week.

These are divided into two classes, passenger and goods. The wages of the passenger guards vary from 21s. to 40s. per week in the case of head guards, and from 21s. to 35s. per week in the case of

junior guards.

As a general rule guards commence service as porters, and, after having gained sufficient experience, are promoted as vacancies occur to the position of junior guard, on short journey trains. If their conduct continues to be satisfactory, they are, as they gain further experience, and as vacancies occur, promoted, those holding the position of head guard in express trains being, as a rule, the oldest and most experienced men of that grade in the service.

The goods guards are paid from 26s. to 30s. a week, according to length of service as guard; but in special cases, after a service of eight years as head guard, it is possible for a man to receive 31s. or 32s.

These men as a rule do not become passenger guards, though they are liable to be, and in times of

emergency are called upon to act as passenger guards.

The assistant goods guards, or "breaksmen," are paid at rates varying from 19s. to 24s. per week, and in course of time they are promoted to the position of head goods guard.

Signalmen.

On this railway the signalmen and switchmen are divided into four classes, their wages varying from 18s. to 32s. a week, according to the importance of the post and the amount of work to be done. These considerations also govern the hours of duty, which range from eight to twelve hours per day.

Men of this grade are entitled to receive an annual bonus of from £2 to £5, according to class,

provided the manner in which they have performed their duties during the previous twelve months has been thoroughly satisfactory. In the event of a man committing an offence involving the infliction of a fine, it is customary for the payment of the next bonus due to be deferred for a period of twelve months from the date of the fine.

- Policemen.

Under this head are included men acting as policemen upon the Company's premises, watchmen, and ticket-collectors, and their wages vary from 16s. to 20s. per week.

Porters.

These are of two classes—lad and adult.

The lad porters range from fourteen to eighteen years of age, and are paid from 8s. to 14s.

Adult porters commence at 15s., and, in the passenger department, rise to 19s. per week; but in goods department, where the work as a rule is more laborious, the wages rise to about 22s. per week.

In the goods department, however, the duties are of a multifarious character, and a man, though classed as a porter, may have to undertake the "checking" of goods in and out of the trucks, or the shunting of the trains, &c., &c., work which at the larger stations is performed by men styled "checkers," "shunters," &c., &c. These men are paid higher wages than ordinary porters, and at large stations act under the order of foremen, who, as explained above, are responsible for seeing the work properly done.

In the locomotive department the servants consist of

Engine-drivers, Firemen or stokers, Fitters or artisans.

With respect to drivers and firemen, these are of three classes—the men in the third, or commencing class, working branch passenger and goods, and local main line goods trains; those in the second class, local main line passenger and through main line goods trains; and the first-class men, through main line passenger trains.

The wages paid are as under:-

	•				Fi	remen.

It has been the practice of the Great Western Company for some years to appoint youths in the grades of clerks and porters, and to promote them year by year, until they are old enough to be placed on the adult staff, after which their promotion is strictly according to merit.

Experience being an essential qualification in a candidate for any post, and especially for those of superior grades, it necessarily follows that no person, except under circumstances of an exceptional nature, can profitably be appointed to a responsible post who has not had previous railway training. Besides, for many reasons, each Company prefers to appoint to such post an officer or servant trained on its own

Porters, police, and lad porters must comply with the Company's requirements as to height, &c., described in the paper C sent herewith, and they must also fill up the paper, and also pass a medical examination, which is required for two reasons: first, because it is necessary that every precaution should be taken against introducing into the service persons of delicate constitution, and next, because every person of the grade of a servant is required to become a member of a Provident Society, and persons not in good health could not be admitted. A form of the medical certificate, which is required to be filled up by the medical officer of the Company by whom the candidate is examined, is sent herewith (marked D).

All officers and servants of the Company are bound to subscribe to certain rules and regulations of

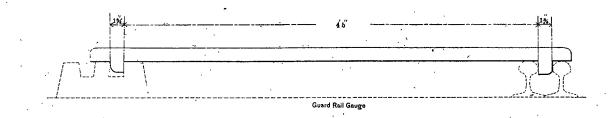

the service, a copy of which accompanies this memorandum (marked E).

The rules may be taken as containing the by-laws in force, and showing the relations between the Company and their servants, and will probably be found to be sufficiently clear on all points to which they relate without further explanation.

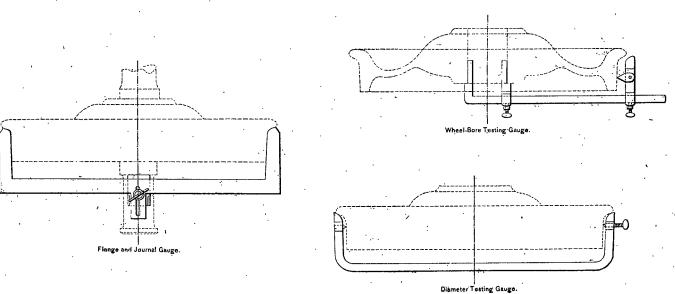

What are ordinarily termed "by-laws" are the regulations formed under the authority of Parliament for regulating the treffic upon the Company's premises

ment for regulating the traffic upon the Company's premises.

1883-4

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

LIVE STOCK TRAFFIC BY RAILWAY.

(COMPLAINTS AS TO DELAYS, &c.)

Ordered by the Legislative Assembly to be printed, 15 January, 1884.

LAID upon the Table of the Legislative Assembly, by the Honorable the Secretary for Public Works,—

Copies of Minutes and Reports respecting complaints made as to irregularities and delays in the transit of Live Stock by Railway.

LIVE STOCK TRAFFIC BY RAILWAY.

No. 1.

Messrs. Pitt, Son, & Badgery to The Commissioner for Railways.

Sydney, 17 October, 1883. Sir, We have a lot of cattle, the property of Mr. Christian, which arrived at Blacktown this day from Nyngan, and the men in charge report seven head dead, and the whole lot much knocked about; they also complain much of the delays on the way, and the amount of shunting which went on. that stock coming so far should have quicker transit, and unless some improvement is made in the live stock traffic when the line is open to Bourke we shall not be able to use the line then.

We have, &c. PITT, SON, & BADGERY.

Inspector Hornidge to look into this and report as early as possible. To save time, send paper to Mr. Higgs, who will add his report and forward to me complete.—W. V. Read, per F.T., 19/10/83.

Report of Inspector Hornidge, Bathurst District.

CHRISTIAN'S cattle left Nyngan on No. 40 (twenty trucks) and No. 46 (thirteen trucks) at 10 a.m. and 1.30 p.m.

respectively.

No. 40 could not take so many trucks through, part were put on to No. 58 up, at Narramine. No. 40 ran through to time, at least it left Bathurst to time. No. 58 reached Bathurst to time, but the special to run in connection with it did not leave Bathurst until 6·10 a.m., causing a delay of one hour forty-five minutes; the engine did not arrive from Eskbank until 5·15 a.m. No. 46 ran in two divisions from Dubbo—Christian's being on the second; both kept good time, and left Bathurst at 8 and 8·10 a.m.

Bathurst at 8 and 8·10 a.m.

As regards the cattle being down, two only were down in the last train so far as I know (see Guard Ogden's report attached). As to shunting, No. 40 left Nyngan with twenty of cattle, a carriage truck, and five tank trucks; attached one truck at Mullengudgérý and one at Nevertire—they went on in front, and would cause no shunting to the cattle. At Narramine eight of cattle, the tanks, and the two intermediates were shunted on to No. 58.

No. 40 did not shunt between Dubbo and Bathurst.

No. 58 did not shunt between Narramine and Bathurst.

No. 46 left Nyngan with fourteen of cattle, twenty-four empties, and van; at Nevertire, detached empties and attached nineteen of cattle; at Narramine, detached twelve of cattle, which left at once as a first division of No. 46. There was no shunting between Narramine and Bathurst, except that engines and vans are changed at Dubbo.

M. A. HORNIDGE.

22/10/83.

Traffic Inspector's Office, Traffic Manager's Department, Bathurst, 22/10/83. Extract from Guard's sheet of No. 2 division of No. 46 up train, Dubbo to Orange, date 15/10/1883. W. Ogden, guard.

One bullock down in C.W. 164 on arrival of train at Dubbo, and one bullock down in C.W. 115 on arrival of train at Wellington. I was unable to get them up. There was a man travelling with the cattle; he gave me no assistance, although I told him at Wellington.

Report of Inspector Higgs, Penrith District.

The cattle left Bathurst by Nos. 40, 46, and two special trains; all these trains had full loads on for through, and had to shunt trucks on at Mount Victoria and off at Katoomba; no other shunting was done except into sidings to cross trains, and at the Zigzags. Two bullocks were reported to me as being down at Bathurst, and guard Barking reported five head being down when he attached his train at Mount Victoria. The bullocks, some of them at least, laid down and would not attempt to rise; a portion of them did not leave Bathurst until 6 and 8 a.m., and then were a very long time on the road, owing to engine of No. 16 up leaving road at Numantia. The principal lot that were down (five) were in No. 44 up, and had to stand a good many hours at Mount Victoria, as the engines that had to bring them were so late on the down journey, consequently none of the trucks left Penrith until after dark on the 16th, when, I presume, they would not be unloaded until daylight on the 17th, so that fatigue alone would make them lie down. Had it not been for the accident at Numantia blocking the line for many hours, all this stock would have left Penrith by Nos. 40 and 44 up. Reports about the cattle being down in the trucks forwarded to Goods Superintendent at the time.

Report of Traffic Manager.

I REPORTED on these cattle in the minute I sent to the Commissioner this morning.

The animals were from Queensland, and they were driven hard all the Saturday and Sunday, and put into the trucks on the Monday morning without getting a rest after their journey.

That was not a wise thing to do, seeing that they had a railway journey of 369 miles before them; but it was the wish of the sender's agents, and of course our officials could not interfere.

That the animals were exhausted, however, there can be no doubt. Some of them were down in the trucks when they arrived at Orange, and the train was delayed there while they were taken out and re-loaded again; indeed, one or two of them were down by the time the train arrived at Dubbo; and although the guard drew the attention of the drover, who was accompanying them, and tried himself to get them up, the drover gave him no assistance.

There was really no shunting in transit; and as the waggons were fitted with screw couplings, there could be very, very little ierking.

very little jerking.

Of course there was the delay at Orange which I have mentioned, and there was another of several hours on the mountains, in consequence of an engine being off the road at Numantia, but that was unavoidable.

But for these occasional unavoidable delays, we cannot possibly give better despatch than we are giving.

W. V. READ,

Per D.K. 26/10/83.

No. 2.

Report of Traffic Manager.

As several comments have appeared in the public Press recently reflecting upon the railway management in respect of the conveyance of live stock traffic, I think it is only fair to the Department and to myself, as the head of the branch responsible for its safe conduct, that a similar publicity should be given to the real facts of the case.

According to the *Herald* of the 19th instant, Mr. Griffiths is reported to have said, from his seat in Parliament the previous evening, that on that day (Thursday) out of one consignment of sheep that had arrived at Homebush seventy-one were dead, and that out of a truck of cattle ten were dead; and, he added, that it had become the practice to attach to the cattle trucks three or four heavy wood or coal waggons, which knocked the stock trucks about in such a way that the sheep and cattle were bruised and killed in large numbers.

In a sub-leader in the *Herald* of the 20th instant, and in the letters which have appeared in the Press from time to time, it is quietly assumed that the Department is entirely responsible for these deaths, and that the safe conveyance of the stock is regarded by the railway officials as subordinate to economy in working.

I need hardly say that this is altogether an erroneous view to take, and I have no hesitation in stating that, if the owners of stock were in many cases more eager for its safe conveyance and good appearance in the market, and displayed less desire to keep down to the lowest ebb the expense of conveyance, the number of deaths at the end of the journey would be reduced to a minimum. All owners of stock know that our sheep vans will convey 100 ordinary-sized sheep without overcrowding (if the sheep are very large the number should be correspondingly reduced), and cattle trucks from eight to ten bullocks, according to size; but the animals vary so much in size that it has never been considered advisable to lay down an arbitrary rule as to what number shall constitute a full truck load; and our practice in this respect, I may add, is identical with that of the English railways. As the rates are very low, it has been believed that the interest of the owners to present their stock for sale in the best condition would be sufficient safeguard against their overcrowding the trucks and running the risk of losing a number of animals, and, happily, many owners do take this view, while others appear to be content to risk a number of deaths so long as they can save the cost of an additional truck.

Now, with respect to the consignment of sheep to which reference was made by Mr. Griffiths, I find that thirteen vans were supplied for their conveyance, but only eleven were used by the senders, and it was not until the loading was completed that the Department was informed the consignment consisted of 1,387, so that each van carried an average of 126 sheep!

The excessive mortality in transit, viz., 83 out of a total of 1,387, was, I have no hesitation in saying, entirely due to the overcrowded state of the trucks, which, it will be seen, would, to a very large extent, have been avoided had the senders used all the vans placed at their disposal by the Department. Knowing that the sheep had to travel a distance of 412 miles, I can only regard the overcrowding of the trucks as an act of positive cruelty on the part of the senders. In proof of this I may mention that, on the same day that these sheep arrived at Homebush, there was another consignment of 1,500 sheep, which had travelled 284 miles, but in that case the owners had consideration for the animals and only put ninety-four in each truck, so that when they arrived at Homebush there were only two dead. A third consignment travelled 270 miles, but in that case, too, the average number was only ninety-four per van, and, as a consequence, only one died.

Sheep and cattle, too, are not unfrequently put in trucks after having travelled a long distance, and, being footsore, it often happens that they (particularly sheep) lie down before the train is long under way, so that if the truck happens to be overcrowded they are unable to get up again; the remedy, however, for this is simple, and it rests with the owners.

The cattle to which Mr. Griffiths made reference were not overloaded, but they were trucked at Nyngan on Monday, 15th instant, and, I have ascertained that, in order to accomplish this, they were driven hard all the previous Saturday and Sunday, and were put into the trucks by the senders or their agents without first having the benefit of a rest. Whether it was wise to do so, in the face of a railway journey of 369 miles, is for the owners and not for me to say, but clearly it was not a case in which the railway officials could interfere; and there cannot be the slightest doubt that the deaths in transit were entirely due to the exhausted condition of the animals and their need of rest. Out of this consignment, which consisted of 289 head of cattle, seven (not ten as stated) were dead, but the train, I may add, was delayed a considerable time at Orange in order that those animals which had fallen down before it reached that point might be taken out and reloaded. At that time they had only completed half the journey, and this, I think, strengthens the statement put before me, that they were exhausted before being loaded.

To provide as much as possible for the safe conveyance of stock the Department has provided waggons equal to any in the world; and as it has frequently been asserted that animals are thrown off their legs by the jerking of trains in consequence of defective couplings, I may take the opportunity of mentioning that, out of 507 cattle waggons and sheep vans that are running on the southern and western lines, there are not more than twenty that have not yet been fitted with screw couplings—the same as passenger carriages—so that jerking is reduced to a minimum.

Goods trucks are never put on live stock trains, unless when the latter are not fully loaded, in which case it would simply be a waste of engine power to leave goods behind; but when the train is a mixed one live stock trucks are always placed at the rear, next the guard's van, and are consequently not subjected to any of the shunting that has to be performed at the intermediate stations.

For every consignment of three trucks of stock and upwards that is conveyed a greater distance than 60 miles a free pass is issued to a drover to accompany and take charge of it; and if the consignment should be so large as to be placed on more than one train, a pass is issued for a drover to accompany each train, so that he can attend to the stock in transit and raise any animals that may get down; but it too frequently happens that these drovers disregard all responsibility after the animals are in the trucks. As a proof of this I may mention that on one occasion, when passing a country station, I saw a sheep train standing there, and although it was not more than 20 miles away from its starting-point a number of the animals had got down, while the drover, instead of bestowing any attention to them, was ensconced in the guard's van, and it was only after I had instructed the guard to request the drover's immediate attention to these sheep, or to take the pass from him, that he did attend to them.

It has been asserted that guards in charge of trains should be held personally responsible for the safe conveyance of the stock. As a general rule it is the guard's duty to see to this, but he has many other duties

duties to perform requiring constant vigilance, and it was in order that the comfort of the stock might not lack that attention which it is not always in the power of the guard to give that the practice of issuing free passes to drovers was introduced.

The drover has nothing else to occupy his attention, and it is within his power to give attention to rge at every station at which the train stops.

W. V. READ, his charge at every station at which the train stops.

25/10/83.

No. 3.

Report of Traffic Manager.

With reference to my report of the 25th instant, respecting the large number of deaths (eighty-three) in a consignment of 1,387 sheep that arrived at Homebush on Thursday, the 18th instant, I have since ascertained that the live sheep realized from 7s. 8d. to 7s. 9d., and the dead ones 4s. each.

Taking the maximum price, it follows that the owners lost 3s. 9d. per head on eighty-three sheep-

The consignment was large enough, however, to have occupied fourteen trucks, and as the owners of the sheep only used eleven, they effected a saving of £24 1s. 9d. by their action. From that sum must be deducted the £15 11s. 3d. alluded to, and we find that by crowding the sheep as they did, and notwith-standing the excessive number of deaths, the owners actually saved £8 10s. 6d. upon their consignment.

It is not taking a complimentary view of the owners' conduct to assume that they knowingly overcrowded the sheep and risked the consequences, but I am afraid it is the only explainable one.

W. V. READ,

No. 4.

M.P., 83/24,162.

Minute of Commissioner.

In reference to the letter in to-day's paper respecting the supply of live stock trucks, I wish to have a return showing the dates upon which trucks have been ordered to be at the various trucking stations, and the dates upon which they have been there, that is, to show in how many instances delays have taken place. Make it up for two months. CHAS. A. G.

11/12/83.

[Enclosure.]

Extract from the Sydney Morning Herald, Tuesday, 11th December, 1883.

STOCK.TRUCKING ON THE SOUTHERN LINE.

To the Editor of the Herald.

Str.—Great dissatisfaction, disappointment, and annoyance exist amongst stockowners here against the Railway Department in the trucking of fat stock to Homebush. Either there is gross mismanagement or incompetency in the working of this branch of the traffic, for it is without doubt irregularly conducted, and assuredly to the detriment of the consignors.

The officials either cannot grasp the business or it is the want of rolling stock. If the latter, it ought to be at once remedied; for if they extend their Ilines as they are doing, they should exercise the forethought that any business firm would by seeing that their rolling stock is equal to any demand that may be made upon it. Trucks sent from here with fat stock just as often miss the market as catch it; the consequence is that stock are in many instances five days without food, thus entailing a loss to the sender of at least 1s. to 1s. 6d. per head on sheep and a like proportion on cattle, besides being a monstrous cruelty to the dumb animals. This is a serious charge against our humanity, for which there is no excuse.

We ordered, sixteen days ago, trucks to be sent here on 7th instant, and the sheep were sent to the trucking yards in anticipation of their arrival. Judge our surprise when we received from the Junee traffic inspector a peremptory intimation that he could not tell us when we could get them. There is neither, grass nor water available within several miles of the yards, and, as a consequence, the sheep had to remain there awaiting the mandate of this important functionary. This morning we were apprised by him that trucks would reach us to-day; the sheep will then have been thirty-six hours in the yard, with the thermometer at 96° in the shade, without food or water. This is not business—it is playing at it, and stockowners suffer seriously through such manifest blundering.

Last week we sent sheep by special train, with the full assurance that they would catch the market has

Letters have been written by the score on this question, pointing out the evils, but without avail. The Department simply folds its hands, and tells you, with a chilling politeness, that it cannot be helped.

Is there no one in the House who has the moral courage to beard those sleeping officials and make a searching inquiry into this branch of the Department, which is a blot on our railway system, so that consignors shall receive attention, their stock reach the market in due time, and have some security against blunders?

Pomingalarna, Wagga Wagga, December 8.

Number of sheep and cattle waggons.

WILL Traffic Manager please furnish a return of live stock waggons in use and under repair, where they

are, and on what lines running; give mileage run.

Representations are made to Commissioner that we have not a sufficient supply to carry on the traffic. Some time ago you furnished a return in answer to Commissioner's inquiry (please quote minute No. and date of this return). The Commissioner wishes you to keep him posted up in this matter, so that nothing can be wanting to enable us to successfully cope with senders' requirements.

G.B.

Urgent.

B.C., 15/12/83.

No. 6.

Report of Traffic Manager.

WITH reference to Commissioner's 83/24,586 and 83/24,162, both enclosed, I enclose the return showing the number of live stock waggons ordered and supplied at the various trucking stations during the last two months; also a monthly statement of live stock traffic received at Homebush for the years 1881, 1882, and 1883.

There are 250 sheep vans and 270 cattle waggons on hand, and on an average 10 per cent. of these They are kept continuously running on both lines, and although the mileage has not are non-effective. been made up to date, and I am not therefore in a position to say exactly what it is, I am certain the great mileage of last year, as compared with former years, will be fully maintained. The figures are:—

Year.	Average mileage.	Average mileage.						
rear.	Per Sheep Van.	Per Cattle Waggon						
1879	20.302	12,360 ,, 11,002 ,,						

I cannot at this moment lay hands on the previous report, or quote the number and date, but as far as I recollect it was about a year ago.

The delays in supplying cattle waggons have been very few; they have been quite exceptional, and

due entirely to irregularities in the train service. The supply of waggons has been abundant.

As regards sheep the delays have been more frequent, but they have rarely exceeded one day. With the exception of one week (ending 8th December), during which there was an unusual number of vans ordered to far-distant stations, we have been able to meet all demands within the week, although we have occasionally been a day late, and the reports in the Press will show that the markets have been kept fully supplied, and there has been no lack of live stock in Sydney to meet all demands. Owing to the drought and want of fodder in the interior a very large number of sheep have been sent to Sydney after shearing. The average number received at Homebush during this year has been 95,000 per month, but in one month only 53,000 were received, while in November last the number was 113,000. This does not include sheep forwarded to Riverstone, Orange, Wellington, Nyngan, &c.; and it is worthy of note that, taking all stations, the increase for the last three months only has been 106,000 sheep as compared with last year.

Were the traffic likely to keep up to the November standard, when the demand was fully double what it had been in some other months, it would be necessary to supplement our stock of sheep vans, and so be able to work forward the empties in good time by ordinary trains, instead of by specials, as I have been compelled to do for the last few weeks in order to keep abreast of the demand; but the November traffic is quite exceptional, and it is more than probable the number of sheep in transit will not be so great for the

next twelve months.

I should mention, too, as a cause of delay, that the owner is not unfrequently late in bringing his sheep up to the trucking station; sometimes a whole day is lost in this way, and waggons are thus occupied with stock in up transit at a time at which I had calculated they would have been empty, and on their way down for another consignment. Delays have occurred in this way which have disarranged our plans for a Then, again, when up-trains get a bad start, or are delayed attending to stock in transit, they block those with empty waggons on the down journey, which in turn throws a subsequent up-train late. There is a great deal to contend with, but if a comparison be made it will be found there is not another railway in the world having the stretch of single line that we have in New South Wales where the running is better, or even so good, as it is here.

As regards delays, deaths, and alleged injuries sustained in transit, these have been fully dealt with in previous reports; particularly I would refer to those of 25th and 26th October and 11th instant.

The delay, as I have already stated in previous reports, is distinctly traceable to causes outside the Traffic Department altogether. Time is lost at the trucking stations, and attending to exhausted animals in transit; also by failure of locomotives. Either of these is sufficient to put the train out of its running, and in some cases all three causes have operated on one consignment.

I have already stated that the mortality in transit is due to the exhausted state of the stock when trucked, the excessive number loaded into each waggon, and the cruelty practised by the drovers. In proof of this I sent you a letter from Mr. Gee, who makes a point of giving the animals plenty room, and I now

enclose extracts from various reports made to me on the subject.

No exertions will be spared in order to expedite the traffic and to keep pace with the demands; at the same time I feel bound to say that live stock traffic has, during all the time of these complaints, been worked with as great regularity as ever it was, and I am very much inclined to express an opinion that the recent attack made upon the Department is not so much in the interest of the animals as to draw public attention away from the true cause of the deaths in transit. W.V.R., 18/12/83.

[Enclosures to Traffic Manager's Report.]

The Manager, Sydney Meat-preserving Company (Limited) Works to The Traffic Manager.

Dear Sir, Sydney Meat-preserving Company (Limited) Works, Rookwood, 30 November, 1883.

I have to thank you for your letter of the 27th instant, re my complaint in delivering sheep in the early part of this month, and to express my thanks for the trouble you have taken in investigating the cause.

Since then I have had large consignments, and am glad to say they have come through both with expedition and safety; in fact, in the whole of my consignments I have only had three sheep killed in transit.

I attribute this favourable result to not crowding the trucks, 105 being my maximum.

The large number of deaths which have occurred on the railway is, in my opinion, entirely caused by overcrowding.

Yours truly,

ALLAN GEE,

Manager. The Manager, Sydney Meat-preserving Company (Limited) Works to The Traffic Manager.

Manager. 280

^{*} The number received at Homebush for last two weeks were—December 8th, 30,615; December 15th, 34,188; total, 64,803;—being the largest number ever carried to Sydney in so short a space of time.

280 Sheep, Narrandera to Homebush, for Wilkinson, Graves, and Lavender, 27 November.

Coaching Superintendent's Minute, 4th December, 1883.

I saw this consignment passing through, and in the small consignment, two trucks, in which there were 280 animals, fifteen were dead, and in the large consignment, which was properly loaded, none were dead.

I think the Department should get the Inspector of Cruelty to Animals to prosecute owners in such cases as this.

Station-master's (Orange) Minute, 2 October, 1883.

I have the honor to report on Saturday, the 29th ultimo, No. 10 up arrived with stock, no less than eight being down in three trucks. I accompanied the train to the yard, unloaded and reloaded the bullocks, less one which was dead. This was left behind, and I managed to sell it to Mr. M Clymont for £1 10s.

I attribute the large number down to the overcrowding in the trucks.

Station-master's (Orange) Minute, 3 October, 1883.

I have the honor to report this day up special arrived with several bullocks down, one being dead, was removed and remainder reloaded. I sold the dead one for £1 10s. to Mr. M'Clymont. They were consigned to Pitt, Son, & Badgery,

Station-master's (Orange) Minute, 10 October, 1883.

I have the honor to report up-special arrived here this morning with cattle down in three different trucks.

Cattle waggon 49. Two down, unloaded; got those that were down up and reloaded into same truck.

Cattle waggon 24. One down, very much trampled, got it out, and after short time managed to get it up, but unfit for travelling. The local agent (Mr. Leeds) took charge of it, and as soon as able to walk will remove to his paddock.

Cattle waggon 40. Two down, one of which was dead and terribly trampled. The man in charge informed me the beast was down at Nevertire. It was disposed of for 30s. Cheque for same will be forwarded upon receipt thereof. The cattle were from Douglas, Nyngan, to Griffiths and Weaver, of Homebush.

Extract from Station-master's (Nevertire) Minute, 11 December, 1883.

A mos of 317 cattle, belonging to Mr. Tyson, of Queensland, arrived here on Friday afternoon about 3 p.m. for the purpose of being trucked for Messrs. Sullivan and Son, Homebush. The cattle were driven very fast from Warren (situated about 12 miles from here), and when they arrived here they were thoroughly knocked up and heated, having no water on the road. Eight trucks were loaded and despatched by No. 48 up-goods, which left at 10 30 p.m.; seven cattle were still remaining in the yards, and which I am informed could not be got in the trucks, on account of the furious state they were in after being driven so fast. The cattle could not be sent away on Saturday, and consequently could not be trucked before Monday the 10th instant. Mr. New, however, left the cattle standing in the yard till that time without a mouthful of food to eat or water to drink.

1,387 sheep in eleven sheep vans were sent from Carrathool to Rudd Bros., in October last, and in this lot 83 were out dead. The load equalled 126 sheep per waggon, instead of 100.

Woods, Ferguson, & Co's. cattle, Nevertire to Homebush, 17 September.

Station-master's (Nevertire) report, 22 September.

This was a consignment of 110 cattle which were loaded in twelve trucks, Woods, Ferguson, & Co., to Pitt, Son, & Badgery, despatched from Nevertire to Homebush by up-special train at 11 a.m. on 17th September. One cow died in truck when calving as the train was leaving; the rest appeared to be in very good condition. Contract-book was signed for same by A. Spilsbury, the person in charge of stock.

Tyson's cattle, Nevertire to Homebush, 16 November, 1883.

Inspector Hornidge's Minute of 16 November, 1883.

THIRTY-FOUR trucks of Tyson's cattle for Sullivan were loaded at Nevertire to-day. Arrangements were made to run these through by the No. 78 special, but only sixteen trucks were ready by starting-time; the rest were despatched by Nos. 46 and 48 goods. The cattle will be longer on the road than they would otherwise have been, for which we are not to blame.

RETURN of Live Stock Waggons ordered and supplied for two months ending 15th December, 1883.

No. 7.

Minute of Secretary for Public Works.

I HAVE read this report with pleasure: it bears out a statement I made to the House the other evening that I was satisfied the Officers of the Department had made every effort to meet the requirements of this class

20/12/83.

No. 8.

Report of Traffic Manager.

Question to be asked in Legislative Assembly on 11th December, 1883.

MR. BADGERY to ask THE SECRETARY FOR PUBLIC WORKS,-

- (1.) Were nineteen trucks of cattle loaded at Narrandera on the 21st of last month and consigned to Homebush?
- (2.) When did they leave Narrandera; when did they arrive at Homebush; and if any delay occurred en route, where, and for how long?

Traffic Manager's reply :-

Yes.
 The nineteen waggons were forwarded from Narrandera in two detachments, one of eight and

the other of eleven waggons.

The eight waggons left Narrandera at 5.30 a.m., and arrived at Homebush at 9.45 a.m. next day, four hours late, twenty-eight and a quarter hours in all. The train was delayed sixty-five minutes at Bowning, in order to unload and reload animals observed to be down. This put it out of its proper course, and it lost time at various points waiting to cross other trains in consequence. The eleven waggons left Narrandera at 3.15 p.m., and arrived at Homebush at 1.50 a.m. on the second day following, eight and a half hours late, thirty-four and a half hours in all. The train was thrown out of its proper course by the late running of 31 down, which was in turn caused by up live stock trains. It met with a further delay of thirty minutes by failure of the locomotive, and seventy minutes were lost at Yass unloading and reloading animals observed to be down. Being now completely out of its course, it lost time all the way to Homebush, arriving there as already stated eight and a half hours late.

This inquiry has been suggested by the fact that six of the animals died in transit, and I have no doubt an attempt will be made to show that the excessive mortality was due to the length of time the waggons were in transit; but it can be proved conclusively, I think, that the injuries were not caused by any want of attention on the part of the Department, nor by delay in transit, which I may say in passing was

unavoidable.

The cattle were in a state of complete exhaustion when loaded into the trucks, caused it is said by the difficulty of getting them across the Murrumbidgee, and it is reported to me that five of them were altogether lost while crossing the river. In proof of this I may point out that the trains were delayed at Bowning and at Yass, in order to raise animals which had given way by that time, and that was before they had been twelve hours in transit. Not only were the animals in an unfit state to undertake a railway journey of 340 miles, but they appear to have been overcrowded in the waggons, no less than eleven in most of the trucks instead of eight (or nine if they were not too large). The Department supplied twenty-two

waggons for the conveyance of the herd, but only nineteen were used.

There have been delays unfortunately, but with a large traffic on single lines such as ours it is a matter of impossibility to avoid occasional irregularities in the time-table working. The delays are not unfrequently caused by time lost at the trucking stations on the part of the loaders, and when it is considered that on a single line the delay to one train throws a great many others out, it is not to be wondered at if they occasionally arrive late. The delays to goods trains caused by the failure of the locomotives and a greatly-increased traffic for some time past have been most troublesome; but it cannot be said, in the face of what I have pointed out regarding the condition of the animals and the way in which they are packed into the trucks by the owners and their servants, that the delay is the sole or even the chief cause of the deaths in transit. There is no want of screw couplings, and I may take this opportunity of again stating that on English railways live stock waggons are not fitted with screw couplings at all, nor are they better in any respect than those in use on New South Wales railways.

It cannot be said either that the animals suffer on account of goods trucks being put on the same trains, because that seldom occurs, except on the level lines on this side of the mountains and in the far interior. It is only done to avoid waste of locomotive power, and great care is always exercised in the

selection of waggons, and avoiding shunting in transit.

Were the stock well rested, fed, and watered at the trucking stations, then quietly loaded and not overcrowded, I am confident that deaths in transit would be seldom if ever heard of. In this I am borne

out by the written testimony of a gentleman of great experience, Mr. Gee, Manager of the Sydney Meatpreserving Company, whose letter I enclose.

Until last Saturday week all orders for live stock waggons had been completed, but during last
week, on account of the extraordinary demands made upon the Department to rush stock forward to the
Sydney markets, and partly owing to the irregularities of the trains, we fell behind to the extent of fortysize regarders of Schundary last. Special efforts are being made, and I trust that before the end of this week six waggons on Saturday last. Special efforts are being made, and I trust that before the end of this week W. V. READ, we shall again be working smoothly.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

CARRIAGE OF LIVE STOCK BY RAILWAYS.

REPORT OF THE BOARD

APPOINTED TO ENQUIRE INTO THE

CONDUCT OF THE LIVE STOCK TRAFFIC ON THE RAILWAYS OF NEW SOUTH WALES,

WITH

MINUTE OF COMMISSIONER FOR RAILWAYS THEREON,
DATED 15 MAY, 1884.

ORDERED BY THE LEGISLATIVE ASSEMBLY TO BE PRINTED, 10 June, 1884.

SYDNEY: THOMAS RICHARDS, GOVERNMENT PRINTER.

1884.

[1s. 3d.]

839—A

[827 copies-Approximate Cost of Printing (labour and material), £13 8s. 9d.]

CARRIAGE OF LIVE STOCK BY RAILWAYS.

Legislative Assembly, No. 35, Tuesday, 18 December, 1883.

Mr. Wilkinson moved,—That in the opinion of, this House, it is desirable that the Government should without delay appoint a Board to inquire into the Live Stock Traffic on the Railways, for the purpose of finding out and removing the causes of the existing irregularities and delays in the transit of live stock.

Question put and passed.

Mr. John Sanger, of Wangamong, near Corowa, called upon the Commissioner to make representations as to the urgent necessity of effecting certain alterations and improvements in the construction of our sheep vans.

One of the principal points which he laid stress upon was the necessity for dividing our compartments to prevent the sheep from being thrown down by the weight of their number.

Another point was the necessity of a board to prevent the sheep's legs slipping through at the floor along the sides of the van; of course it would require to be movable so as not to interfere with the cleaning of the trucks.

What is being done in the matter? Mr. Dawson some time ago saw Mr. Midelton on the same subject.

See if we have any report from Locomotive Engineer, and if not forward this for early report.

D.V., 6/12/83.

PLEASE report what has been done in this matter. See my memo. to you of 30/6/83.—W.S., per R.J.S., 13/12/83. Mr. Midelton.

Nothing has been done towards altering the vehicles, but I have given the matter consideration, especially since Mr. Dawson called on me. It seems by the papers that in 1880 six sheep-vans were subdivided for trial, but I see no reports as to result, but I notice that the Traffic Managers of the South and West and Northern Lines both say they think there will be very little to be gained by subdividing as suggested by Mr. Dawson and others, and I am somewhat doubtful about the benefits of such a scheme myself. From what Mr. Dawson told me of his scheme I consider he has well worked it out, but I think the real secret is not in subdivision but in being able to convey the sheep and cattle somewhat quicker or very much slower. I think it would be unnatural to expect a sheep or bullock to stand fourteen or sixteen hours (continuously) even in a turnip-field, much less in a railway waggon in motion up and down inclines of 1 in 40 and so on, and I certainly agree with the Traffic Manager that many of the waggons are over-crowded, and that is the principal cause of the animals dying, as I am sure the temperature of 100 sheep packed closely together must at all times be very high indeed. It would be well therefore as a first experiment (and as the cheapest too) to allow not more than a fair quantity of sheep to be put into a waggon, especially on long journeys; on short ones the same number as at present perhaps could be sent. Mr. Dawson has called on me several times, and he is now in possession of sufficient information to employ a draftsman, who I understand is designing a waggon to Mr. Dawson's ideas, and I dare say in a week or two we shall be favoured with a view of it.—Thomas Midelion, 14/12/83. Loco. Engineer.

According to the Traffic Managers'—south and west—reports, the subdivision of the trucks will necessitate additional races and loss of time which are matters of grave consideration.—W. Scott, 18/12/83. The Commissioner.

Something more should be done in my opinion than this. Great outcry is made for the subdivision of the trucks, and it is stated that the Victorian trucks are subdivided into four compartments. Traffic Manager might ascertain whether this be a fact through Station-master, Albury, or Inspector Roberts.—D.V., 21/12/83. Urgent.

In is a fact that Victorian sheep-vans are divided into four compartments, but they have also double races to suit, while ours are only single.

It would no doubt be a benefit to have the vans divided into compartments, but, as I said before, it will be necessary to go to very considerable expense in doubling our races too, unless, as I fear is impracticable, a portable sliding door were made in the partitions.

Please see my minutes of 18/6/83 and 14/9/83. While stating that the partition would be an improvement I am quite satisfied that the real remedy lies in abstaining from overcrowding.—W. V. Read, per D.K., 22/12/83. Commissioner.

None of our officers appear to me to look at this question aright. The result will be that the Department will presently be *compelled*, by force of public opinion, to make some advance towards meeting public requirements, and meantime the tendency will be to drive this traffic in the direction of Victoria. I am inclined to think we are behind that Colony in our means and facilities for conducting sheep traffic.—D.V., 27/12/83.

Minute

Minute of Commissioner.

MR. COWDERY to say what the cost will be of doubling the races at all the live stock stations South, West, and North, so as to admit of the sheep-vans being divided into four compartments.

I wish to have a reply to this not later than the 15th January. Please detach an officer to go into the whole question, not referring it to each District Engineer. I shall be glad if Mr. Avern can undertake this duty.

CH.A.G., 29/12/83.

Upon further consideration, the better plan will be to appoint a Board, consisting of Mr. Avern, Mr. Midelton, and Mr. Kirkcaldie, to report upon the whole question. In connection with this reference I think it desirable that both the design of truck which Mr. Dawson is said to be making, and also one which Mr. Evans has designed, should be taken into consideration by the Board. In the latter design I am informed provision has been made for subdividing the truck into four compartments during the process am informed provision has been made for subdividing the truck into four compartments during the process of loading, or after the sheep are loaded, by movable divisions, carried when not in use on the top of the van. If this contrivance be of any practical use it may save the cost of increasing the races at the live stock yards, and could readily be applied to our present vans at a trifling cost. As this Board may, in a measure, meet the requirements of the resolutions lately passed in the House on Mr. Wilkinson's motion, I submit the proposal for the consideration of the Minister.—CH.A.G., '29/12/83. Approved.—F.A.W., 31/12/83.

INFORM the members of the Board through their respective heads.—CH.A.G., 2/1/84.

Engineer for Existing Lines, Locomotive Engineer, and Traffic Manager informed as under.—

I HAVE to inform you that the Minister has approved of the appointment of a Board to enquire into the whole question of the carriage of live stock by rail, the Board to consist of Mr. Avern, Mr. Kirkcaldie, and Mr. Midelton. Will you please inform Mr. , and ask him to place himself in communication with the other members of the Board to arrange for meeting, &c.—G.B., 4/1/84.

Board appointed to inquire into the conduct of the Stock Traffic.

I THINK it would be as well, and give confidence to any recommendation which the Board may make, and to the conclusions which may be arrived at in regard to the causes of the alleged misconduct of the Stock Traffic, if the names of two gentlemen be added to the Board who are not railway officials. I have ascertained that Mr. Wilkinson, M.P., who moved the resolution in Parliament for the appointment of the Board, will be willing to give his services as a member of the Board; and Mr. Gee, of the Parramatta Meat Works, who is a large consignee of stock, might also be made a member with advantage to the

inquiry.

I therefore approve of the appointment of Mr. Wilkinson and Mr. Gee to the Board. Mr. Gee will be paid a fee of £3 3s. a sitting for his services.

F.A.W., 15/1/84.

The Secretary for Public Works to R. B. Wilkinson, Esq., M.P.

Department of Public Works, Railway Branch,

Sir,

Sydney, 15 January, 1884.

With reference to your personal interview of this morning on the subject of the Board appointed to inquire into the conduct of the Live Stock Traffic on the Government railway lines, and your consent, as mover of the resolution in the Legislative Assembly for the appointment of the Board, to act as a member of the same, I have the honor, while thanking you for your consent to act, to inform you that your appointment as a member of the Board is hereby approved.

I have, &c.,

F. A. WRIGHT,

Secretary for Public Works.

The Secretary for Public Works to The Manager Sydney Meat Preserving Company.

Department of Public Works, Railway Branch, Sydney, 15 January, 1884.

Referring to the representations that have from time to time been made as to the alleged misconduct of the Live Stock Traffic on the Government Railways, I have the honor to inform you that in accordance with a resolution passed by the Legislative Assembly it has been decided to appoint a Board to inquire into the matter, and it has been suggested to me that from your knowledge of the live stock traffic you would be eminently fitted to sit as a member of such Board.

I shall be glad, therefore, to learn, at your earliest convenience, whether you will consent to undertake the duties, and may add that a fee of £3 3s. will be paid you for each sitting. It is intended the Board shall consist of five members; those already appointed are R. B. Wilkinson, Esq., M.P.; F. M. Avern, District Engineer; D. Kirkcaldie, Assistant Traffic Manager; and Thomas Midelton, Locomotive Overseer; and the meetings will be held forthwith at the Central Railway Office, in George-street.

I have &c. F. A. WRIGHT,

Secretary for Public Works.

REPORT of Board appointed by the Honorable the Minister for Public Works to inquire into the Conveyance of Live Stock by Rail.

1. The members appointed to the Board were:

Members of Board.

MR. R. B. WILKINSON, M.P.,

Mr. A. Gee, General Manager Sydney Meat Preserving Company (Limited),

Mr. D. Kirkcaldie, Assistant Traffic Manager, New South Wales Railways,

Mr. T. Midelton, Locomotive Overseer, New South Wales Railways,

- Mr. F. M. Avern, M. Inst. C. E., and District Engineer, Western Railway, New South
- 2. The Board held its first meeting on 18th January, and elected Mr. Wilkinson, M.P., as Chairman of Board. Chairman.
- 3. The Board has held twenty-six meetings, extending over the period between 18th January and Board held twenty-six meetings.
- 4. At these meetings the Board examined thirty-four witnesses (as per list attached), and obtained witnesses examined by Board. suggestions in writing from others-comprising the leading stock and station agents and owners and trucking agents.

5. The Board visited Homebush Sale Yards and saw stock untrucked and yarded; also inspected inspection of yards by the Nyngan, Nevertire. and Dubbo stock yards, on the Western Line; saw a train of cattle loaded at Board, and journey Dubbo, and travelled by the stock train to Homebush.

6. The business which the Board considered itself called on to take in hand was:-

Business of the Board

- 1st. The consideration of such complaints as have been made against the traffic as at present
- 2nd. To obtain from witnesses a statement of any shortcomings in the service of which they might be cognizant.
- 3rd. To obtain suggestions for the remedy of such shortcomings and for the improvement generally of the Service.
- 7. The Board found the recorded complaints to consist of :-

Recorded complaints.

- 1st. Inability of Railway Department to supply sheep-vans when ordered.
- 2nd. Disappointment by sheep-vans not arriving to time at loading stations.
- 3rd. Inability of Station-masters at loading stations to give timely information as to exact time at which sheep-vans will arrive.
- 4th. Inability of Station-masters at Homebush, and Farley and other stations, where stock is unloaded, to give information as to the time when stock trains will arrive.
- 5th. Deaths of stock in trucks.
- 8. In regard to the first complaint, "Inability to supply trucks," the Board finds that the Depart- Inability of Department ment has been occasionally unable to supply the sheep-vans ordered, and this has been the case, frequently during the last two and a half months of 1883, when the orders were unusually heavy, consequent on the drought. [See Traffic Appendix.]

9. The witnesses all express themselves as believing these failures to arise from an insufficient stock witnesses consider rolling stock deficient in quantity.

10. The Board are of opinion that under a different system of dealing with orders the present Board thinks rolling number of vans, viz., 250 on the Southern and Western Lines and 139 on the Northern Line, might be found sufficient for the traffic, even when the demand is as abnormal as it was during the two and a half months referred to. At the same time the Board is of opinion that it would be a most expedient measure Board advisboth as an insurance to the Commissioner and as a safeguard against accidental disappointment, to increase the present number of vans by a reserve of about 10 per cent.

- 11. In regard to the second complaint of "Disappointment in supply of vans," some of the Disappointment in supply of sheep-vans. witnesses have admitted that they have been about as often in default by not getting their stock at the Consignors as much in fault as Department has been in not supplying the vans to time; and nearly witnesses taken and the properties and the constitute of the supplying the vans to time; and nearly witnesses and out the constitute and the constitute of the constitute and all the witnesses testify to uniform exertion and courtesy on the part of the railway officials of all grades, exertion and courtest on the part of the railway officials. in trying their utmost to push on business and to meet the reasonable wishes of customers.
- 12. The Board finds that the traffic has been heretofore regulated on a system of give and take, the system on which the Department has con-Department making no definite engagements, but promising to do its best to meet the orders of its cus- ducted the traffic. tomers, and the customers trying their best to get the stock in the yards at the times and on the days for which trucks are ordered.

Disappointment in the non-supply of vans by the Department arises frequently out of short-comings of owners.

13. The Board finds that many cases in which the Department has not succeeded in getting vans at the stockyards at the times appointed, arise out of disappointments which the Department itself experienced through owners failing to get their stock in the yards according to arrangement. Thus Mr. A. who was to have loaded sheep at X station on Wednesday, fails to do so until Thursday; the trucks are kept at the yards a day to suit Mr. A's convenience, and as a consequence these trucks, which are under promise to Mr. B. at Y station on the following Tuesday, do not reach him until Wednesday.

Board recommends system of deposits and fines.

14. The Board believes, and most of the witnesses are of the same opinion, that it would be most advantageous to all parties that this system of mutual accommodation should cease and give place to a system involving a guarantee of supply by the Department in return for a deposit on trucks ordered and fines and forfeits for trucks not used or availed of at the appointed times,—such a system as is now in force in Victoria.

Some hard cases must arise out of this system but the Board recom-mends consistent adherence to system.

15. The Board strongly recommends the change to such a system as being the root of all improvement in the punctual supply of vans. In doing so it has most carefully considered that in some quarters objections will be raised, especially when, as must occur, hard cases arise, particularly in connection with stock coming from Queensland and other distant places. The Board, however, thinks that a determined and consistent adherence to the rules of the proposed system will in a short time result in such increased vigilance and promptitude by all concerned, as to cause all ground for opposition or complaint in this respect to disappear.

Capabilties of rolling stock will be increased by this system and correspondence diminished.

Inability of Station-masters to give informa-tion as to arrival of

Inability of Station-masters at Homebush to advise as to arrival of stock trains.

Board advises better advices, and telegraphing of delays.

Cause of death of stock in trucks.

- 16. It is under this system that the Board considers the effective capabilities of the rolling stock will be largely increased and much of the present written and telegraphic correspondence be abolished.
- 17. The third complaint, that Station-masters are unable to give information as to when trucks ordered will arrive, would disappear on the introduction of the proposed new system.
- 18. In regard to the fourth complaint, "that the Station-master, Homebush, cannot advise as to the arrival of stock trains with sufficient certainty," the Board finds that the complaints on this head are many, and advises that the present system of advices between the despatching and arrival stations be more carefully and more rigidly carried out, and that certain of the intermediate large stations be ordered to telegraph to the stations to which stock are consigned the running of trains in case of delays.
- 19. To the fifth complaint, death of stock in trucks, the Board has given the most careful consideration and finds the causes to be those enumerated below in the order of their importance.

DEATH AMONGST SHEEP.

- 1. Overcrowding.
- 2. Jerking and shunting.
- 3. Want of attention on the part of the drovers in charge.
- 4. Want of arrangement in floor of upper deck for getting rid of droppings and urine and deficient ventilation.
 - 5. Length of time in trucks.
 - 6. Natural causes.

DEATH AMONGST CATTLE.

- 1. Overcrowding and use of old style of trucks.
- 2. Want of water and rest before trucking.
- 3. Jerking and shunting.
- 4. Want of attention on the part of drovers in charge.
- 5. Length of time in trucks.
- 6. Natural causes.

Difference of opinion as to best number of stock to load in truck.

Majority advocate a moderate number of stock to be loaded in each truck.

Owners who do not overcrowd have had very few losses.

Death rate in sheep has varied from 1 in 3,500 to 1 in 480.

have plenty of room and a chance of getting up should they fall. Others think it better to pack the animals as closely as possible with the idea that they are less likely to get down from the jerking of the train. The majority of the witnesses advocate a middle course. 21. The Board finds that owners who have paid careful attention to loading and refrained from

best method of loading. Some witnesses believe in loading a small number of animals, so that they may

20. In regard to the overcrowding of sheep and cattle much difference of opinion prevails as to the

overcrowding make very few complaints as to deaths.

22. One firm had consigned to it during the past year 37,000 sheep, and out of all these only lost 20 by death; and 10 of these deaths they admit to have been caused by unavoidable overcrowding in one consignment of about 1,600, so that out of the other 35,400 there were only 10 deaths, or about 1 in 3,500. In the cases of sheep landed at Homebush for other consignees the average mortality during the last eight months of 1883 was 1 in 480. The Board cannot too strongly invite the attention of owners to the desirability of avoiding overcrowding.

Board strongly advises owners to avoid overcrowding.

23.

23. The second cause of death in the case of sheep, and the third cause in cattle, "jerking and Jerking and shunting as a cause of death to stock. shunting," is testified to by a large number of witnesses, many of whom have travelled with stock trains. Jerking occurs occasionally on the road through bad management of the brakes and careless driving; but it more frequently happens at stations either at stopping and starting, or from shunting when the train is a mixed one of goods and cattle.

24. All witnesses agree that this serious cause of loss in stock has been much reduced by the intro- Death of stock much reduced by use of screwduction of screw couplings which are now suppled to nearly all the trucks on the Southern and Western couplings. lines, and to some on the Northern line. This improvement is one which it is believed exists on very few lines in any part of the world.

25. The Board recommends that the supply of screw couplings to all stock trucks be completed as quickly as possible; that none but experienced drivers be entrusted with stock trains; that drivers and guards be severely punished for neglect of care in starting trains and working brakes; and that such and equards for inching the severely punished to the severely puni experienced drivers. Punished for neglect of care in starting trains and working brakes; and that such negligence should be strictly reported as often as observed by Inspectors and all other railway officers; that stock trucks be mixed as little as possible with goods trucks, and that where this is unavoidable and obedience by men. That mixing stock and the rule of the Department, providing that stock trucks shall be put next the brake be much more rigidly enforced.

26. The third cause of death in sheep and the fourth in cattle is the want of attention by the want of attention to stock by drovers in drovers who accompany the stock trains, and in some cases the absence of any one in charge.

27. The Department issues free passes to drovers for the purpose of ensuring a caretaker for the stock by Department to during transit. The Board considers that by the constant attention of such caretaker and by raising such per animals as have fallen, the number of losses may be much reduced. At present, by the evidence of many drovers. witnesses, a great many of the drovers entering the brake vans tired from long stages, spend most of their Drovers sleep instead of caring for stock. time in sleep instead of in looking after their stock.

28. The Board considers that in all cases stock should be accompanied by a drover, and the efficiency and attentiveness of this man should be a matter for the special attention of owners and agents.

29. The Department should require guards of stock trains to note in their train report all cases Guards to report inattentive drovers. of drovers neglecting their duty.

30. In regard to fourth cause of death among sheep, viz., Want of arrangement in floor of upper want of foothold and ventilation in upper deck deck for getting rid of droppings and urine and deficient ventilation," all witnesses, with one exception, of sheep vans. agree that most deaths among sheep occur in the upper decks, and that the cause of the same lies in the want of arrangement for getting rid of the droppings and urine, and the want of ventilation through the top floor. To remedy this the Board recommends that in new trucks a second bottom, probably of sheet Board recommends double-bottom to upper iron, be fixed below the upper floors to receive the droppings and urine from the upper floor, which may dethen be arranged with holes or spaces between the battens, whereby both ventilation and cleanliness may

31. In regard to the fifth cause of deaths among stock in the trucks, the Board finds that the time Length of time in trucks. is occasionally considerably in excess of what it should be, according to time-table. The cause of this Caused by delays at lies in delays, sometimes occurring in consequence of the engines of stock trains losing time on the road, but more frequently from trains having to wait at stations through other trains running late. A frequent Unpunctuality of consignors a frequency cause of such delays at stations is that the stock trains are running out of their proper time, consequent cause of delay. on consignors having failed to load their stock in time to admit of the trains leaving the yards at the hour

32. The Board is of opinion that the time of live stock journeys should be shortened as much as possible, and that all possible precaution for preventing live stock trains being delayed or thrown out of Board recommends their running should be taken; and with this view recommends that additional crossing places be formed places. where such are found to be necessary.

33. Further, that the same class of coal and stores as are issued to passenger trains be served out Best class of stores recommended for stock to stock trains, so as to better enable them to run to time. Statements have been made that goods trains trains. have had preference of stock trains, but the Board has received no evidence to prove that the rule of the Department giving stock trains the preference has ever been infringed.

34. The last reason of death common to sheep or cattle is that of natural causes. This, though Deaths arise from natural obvious, the Board thinks has sometimes been overlooked, and such deaths have been ascribed to the treatment the animals received whilst in the trucks.

35. Finally a very important cause of death among cattle, but one applying only to a limited Bad condition of stock extent to sheep, is the bad condition of the stock as put into the trucks, arising from want of water and cause of death in cattle rest. Cattle driven into the yards and loaded at once after undergoing long marches, over a country often without grass or water, commence a long railway journey in a state of suffering, and many of them

fall down through weariness and thirst. This no doubt occurs chiefly in seasons of drought like the present, and is to a large extent practically unpreventible under existing arrangements, still the Board desires to commend the matter to the careful consideration of owners, as one from attention to which might result a great decrease in the number of deaths. In the third part of this report the Board deals with remedial arrangements, which it is hoped may materially assist in having the stock loaded in better condition.

PART Nó. 2.

Matters affecting the traffic.

- 36. In addition to the more general complaints which have been dealt with the following matters affecting the traffic in live stock were brought to the notice of the Board:—
 - 1. Unsuitability of stock-yards.
 - 2. Unsuitability of old cattle trucks.
 - 3. Want of cleanliness in trucks.
 - 4. Loss of sheep in transit.
 - 5. Splitting up of cattle trains, whereby consignments become divided and arrive irregularly.

Unsuitability of stock-

37. In regard to the first matter, that of "unsuitability of stock-yards," all the witnesses having experience of the stock-yards on the Western Railway say that the yards as now altered are suitable, particularly those at Dubbo, which would be complete and satisfactory in all respects except that the sheep and cattle races are not a sufficient distance apart to give the necessary truck space in the rare case when sheep and cattle are being loaded at the same time.

Nevertire and Nyngan

- 38. The yards at Nevertire and Nyngan were constructed in a particularly inconvenient design and wanting in strength. They have been altered by the Department, and made workable, but larger receiving yards at each place are still said to be a great necessity.
- 39. The yards on the Southern and Northern Lines are, some of them, incommodious, and the witnesses would like to see them altered and improved on the model of the Dubbo yards.

Recommendation of Board in regard to con struction of yards. 40. The Board is of opinion that in the construction of new lines more attention should be given to the design of stock-yards, and that such design should be based on observation of the practical working of existing yards, both Government and private.

Unsuitability of old style of cattle trucks.

41. In regard to the unsuitability of "old cattle trucks," all witnesses agree in condemning them and are as unanimous in praising the new trucks. The great defects complained of in the old trucks are their want of breadth and being open on both sides and having so many iron bars about them. One of the witnesses and the largest customer of the Department was most emphatic in denouncing the old trucks and declared they ought every one of them to be burnt.

Recommendation of Board in regard to old trucks and building of new ones.

- 42. The Board recommends that the old trucks be replaced as soon as possible by others on the new pattern and with the following improvements:—
 - 1. The removal of the iron rod at the bottom of the trucks and the filling up of the space, excepting a sufficient width to admit of ventilation and cleaning. All witnesses agree that this rod is dangerous to cattle from their getting their horns under it when thrown down. (This alteration should be made at once in the trucks now in use.)
 - 2. The omission of the rump-board, the utility of which seems more than doubtful
 - 3. The raising of boxing round trucks 6 inches higher than in those now in use. This alteration will increase the advantage that this style of truck possesses in screening the cattle and preventing their being frightened at the sight of people, lights, &c., at stations.
 - 4. Making the doors at end of sides of trucks instead of near the middle as at present.

 This alteration is recommended for preventing cattle knocking themselves about against the styles of doors when leaving the trucks.
 - 5. Rounding off of edges of all door and other posts.
- 43. The old style of trucks should be boarded up and as far as possible should, until replaced by others, be kept for traffic within short distances of the sale-yards, as between Homebush and Goulburn, and Bathurst, where the cattle are smaller.

Want of cleanliness in trucks.

44. The third matter, that of want of "cleanliness in trucks," has been spoken of by several witnesses, whose evidence is to the effect that on the Northern line trucks are seldom cleaned, and that in times of great pressure the matter has not been so regularly attended to on the Southern and Western lines as it should have been.

Recommendation of Board in regard to cleanliness in trucks 45. The Board considers it very important that trucks should be thoroughly cleaned before being sent out, and all necessary arrangements and appliances to this end should be considered, and supplied by the Department.

- 46. In regard to the fourth matter, "loss of sheep in transit," many witnesses complain of consign- Loss of sheep in transit. ments arriving with a less number of sheep than are invoiced to them, and some attribute these losses to sheep being taken out of the trucks during transit. The general experience is that these losses have become less frequent since the Department has adopted the plan of putting a wire and a seal on each
- 47. The Board has carefully considered this matter, and has come to the conclusion that it is Very doubtful if sheep have ever been stolen doubtful whether any sheep have ever been taken out of the trucks during transit (certainly since the from vans. introduction of seals), and think it much more probable that the invoiced numbers were never put in the trucks. But be this as it may, the Board considers that no better means of preventing sheep being taken seals the best kind of fastening. out of the trucks could be devised than those now in use by the Department. With proper sized wire and the lead seal carefully compressed, it seems impossible to remove a seal and replace it.
- 48. The only suggestion the Board can make is that a more careful and systematic examination suggestion by Board for systematic examination suggestion suggestion by Board for systematic examination suggestion sug of the seals should be made at receiving stations by an officer of the Department before the trucks are nation of seals handed over to the consignees, and that any cases of trucks found carelessly sealed should be reported.
- 49. The fifth matter, that of trains being split up, is one of which several witnesses have com-splitting up of trains. plained. A certain number of trucks of stock are started together in a train, and on arrival at certain places on the journey, one, two, or three or more, are cut off and left to be brought on by trains following. In this way it has happened that on sale days portions of consignments are not to hand, and it becomes a matter of favor to the agents selling the same that buyers will purchase the whole consignment. Also, trucks so cut off are very liable to get mixed with trucks of goods, notwithstanding regulations ordering them to be placed next the brake. .
- 50. The Board finds that owing to the varying character of the lines and the very heavy gradients splitting up of trains the splitting up of some consignments is unavoidable, and can only recommend the greatest promptitude and care in forwarding the trucks cut off.

PART No. 3.

51. The recommendations and suggestions elicited from witnesses for the general improvement of Recommendation the Service are as follows:-

- 1. The establishment and strict conservation of reserves at all the most important trucking Reserves.
- 2. The provision of a suitable water-hole or watercourse either at the yards, or, preferably, in water. the reserves, especially at such stations where natural water does not exist within a reasonable distance.
- 3. The watering of stock on the journey.
- 4. Supervision by the Department to prevent bad loading and overcrowding in trucks.
- 5. Division of sheep trucks with double races for loading.
- 6. Division of cattle trucks.
- 7. A combined sheep and cattle truck.
- 8. Special pick-up trains for small lots.
- 9. Increased speed of stock trains.

Supervision of loading. Division of sheep trucks. Division of cattle trucks.

Watering stock on the

Special pick-up trains. Increased speed.

- 52. In regard to reserves the Board finds that at many of the trucking stations these already Reserves. exist; but through want of fencing, or a ranger to have control over the same, these reserves chiefly supervision of reserves. benefit local proprietors and are of little or no use to stock travelling by rail.
- 53. The Board considers this matter one of very great importance, and especially will it be so Reserves of very great importance. should the system of deposits and fines recommended by the Board be adopted, inasmuch as under such a system owners of stock, in the desire to avoid being late, are more likely to have their stock at stock likely to be waiting the yards a longer time than at present, previous to loading them. In such case grazing and water for system of deposits and fines. stock will be of the very greatest possible benefit.

54. The subject is, however, surrounded by no few difficulties. In the first place there is the Difficulties in the way of making reserves effective. obtaining of reserves where not already secured and secondly, to make the reserves thoroughly effective they ought to be fenced in, and as such reserves would, according to the importance of the yards and the Reserves require to be fenced in. character of the country, vary in size from (say) 200 to 2,000 acres, such fencing would of necessity mean a very considerable outlay; and whether such outlay should be borne by the Railway or by some other Fencing very expensive and Department liable to Department is a matter for the consideration of the Minister. Thirdly, the reserves would require to be incur the same uncertain. carefully superintended to prevent stock-owners from grazing their stock on them an improper time, Ranger required. and also to prevent their misuse in other ways.

55. These points will require careful consideration and regulation; but the Board considers the matter well worthy of full attention and development in a practical and workable form.

Provision of water for stock. Board recommends provision when natural water is unobtainable within 3 miles of stock-yards. 56. In regard to the provision of water for stock the Board considers this of very great importance. When a natural supply is unobtainable within a reasonable distance of the stock-yards, say three (3) miles, the provision of water in connection with the yards is, in the opinion of the Board, an absolute necessity and in all cases a want that it is very desirable to meet.

Reserve the most suitable place for water in general. Dam recommended.

57. The Board considers that in most cases the reserve will be the most suitable place in which to establish a water supply, and probably a dam may generally be found to be the best arrangement.

Wide surface trough recommended for yard Description of trough. 58. In cases where it is found necessary or advisable to give the supply in the stock yards, the best form for inviting cattle to drink in small lots at a time, will probably be that of a trough from 4 to 6 feet wide, slightly raised above the general level of the yards, with the ground filled in to rise gradually to the lip of the trough. Such a trough should be 20 or 30 feet long and about 2 feet 6 inches deep and may be formed of brick in cement or timber. Water should be pumped into this through a pipe entering the trough near the bottom and overflowing near the top, so as to admit of a frequent change of the water. A pipe should also be fixed in the bottom of the trough, through which it could be emptied and cleaned out when necessary.

Condition of stock to be improved by watering and feed.

59. The Board considers this provision, together with that of reserves, should result in the stock being put into the trucks in very much better condition than at present, and that thereby one of the leading causes of death would be removed.

Watering stock in the trucks impracticable.

60. The question of watering stock during the journey has been very carefully gone into by the Board. A large majority of witnesses consider that it would be futile to attempt to water stock by means of troughs attached to the trucks. The animals are unaccustomed to troughs and are too wild to drink out of them, and this opinion is much strengthened by the evidence that even on arrival at Homebush after long journeys cattle will seldom drink out of the Corporation troughs.

Taking stock out of trucks for watering more injurious than beneficial. 61. A nearly equally large number of witnesses are of opinion that to unload cattle at some point on the journey, to water them and then to reload, would cause the animals so much knocking about as to be productive of more injury than benefit.

Sluicing cattle in trucks. Witnesses' opinion not favourable.

62. The question of sluicing cattle in the trucks by means of a hose has been carefully considered. The opinion of most witnesses was that after the first cooling effects of such a sluicing had passed off the animals would suffer from increased sweating, and be also much frightened.

Board not favourable.

63. The Board does not consider that animals so treated would be benefited; a trial of the plan can however be easily made.

Supervision of loading by Department.

64. In regard to the supervision of loading by the Department which has been advocated by several witnesses, the Board cannot see its way to endorse the advisability of such supervision. Theoretically it may be desirable, but in practice there are too many difficulties and objections, and the Board would therefore throw the responsibility of overcrowding on owners, and limits its recommendation to the following:—

Officer in charge at loading yards to record his opinion as to loading and condition of stock.

65. That the Department order the officer at the loading stations to take note of every consignment and to record in the contract book before it is signed by the owner or his representative, the condition of the stock so far as his judgment allows, and also his opinion as to whether a proper number of animals are loaded in each truck.

Division of sheep trucks. Centre division approved. 66. As regards the "advisability of dividing the sheep trucks" a large majority of witnesses have expressed the opinion that a centre division in both floors would be a great improvement.

Duplication of races required.

67. Some witnesses were of opinion that subdivision would involve extra labour or delays at time of loading but considered that such objection would cease to apply if the loading races were duplicated. This duplication, involving an expenditure of about £90 at each of the more important yards, is a necessity attendant on division, to obviate twice shifting the trucks and getting the sheep to run three separate times.

Cost of duplication.

68. The probable cost of dividing the vans by vertical bars would be £7 per van.

Cost of dividing trucks.

Board recommends
division of sheep trucks
and duplicating of races.

69. The Board recommends that this alteration in the vans and loading races be carried out.

Division of cattle trucks:

70. The Board has inquired of many witnesses their opinion as to the advisability of attempting to subdivide cattle trucks, so as to separate a truck into compartments, each containing two or more bullocks.

Witnesses not in favour of dividing cattle trucks

71. The general opinion is that any such subdivision would lead to trouble and delay in loading and lessen the number of animals which each truck could carry and should not therefore be attempted, especially as the new box truck seems to meet all practical requirements.

72.

72. Under these circumstances the Board has not deemed it advisable to recommend any system of Board does not recommend divi divisions in cattle trucks.

73. The Board viewed a long American bogie truck with divisions recently imported from America. American cattle truck recently imported. This truck is provided with water troughs and movable divisions which require to be lowered by a person entering the truck after an animal has been loaded. Manifestly such an arrangement could only be used in dealing with very tame animals and is altogether unsuited for the wild cattle of Australia.

- 74. Mr. Dawson submitted drawings of a cattle truck with movable divisions to be worked up Mr. Dawson's truck. from one end of the truck by means of a rack and pinion, each division to be worked up separately after two or more animals, according to the number desired to be placed together, had been loaded. There is some gear about this truck which, simple as it is, would be in danger of getting out of order and choked by dirt and droppings and thus might become difficult to work, or from other causes not work with that extreme simplicity which is absolutely necessary in a cattle truck. Still the Board have pleasure in recording their appreciation of much ingenuity in this plan and had any division of trucks seemed necessary would have recommended Mr. Dawson's design as the best under their notice.
- 75. Mr. Dawson also submitted a plan for movable divisions in sheep-vans, but the Board is of Mr Dawson's plan of opinion that a fixed division in the centre of the truck is the simplest and most satisfactory way of dividing sheep vans. the vans.
- 76. Mr. Dawson also proposed a movable platform for facilitating the loading of stock, and in Mr. Dawson's movable platform and decoy connection with the same suggested the use of a decoy mirror, but the Board does not find itself able to mirror favour this idea.
- 77. The Board had submitted to it a model with description of a combined cattle truck, sheep-van, Mr. Evans' combined and goods' truck, designed by Mr. Evans, the Goods Superintendent of the N.S.W. Railways. In this truck, truck the boxing in of the sides is made as flaps hinged half-way up the sides and capable of being raised into a horizontal position so as to form an upper deck for sheep. The flaps in this position are supported in the centre by a beam the length of the truck, which is lowered by means of a handle at the top of the truck, working a worm wheel and screw.

78. The Board believes that the invention of a good and simple convertible sheep-van and cattle A convertible sheep and truck is of the greatest importance and worthy of every encouragement by the Department as being likely great desideratum. to materially economize the quantity of rolling stock, and as offering greater facilities for the conduct of the stock traffic.

79. The Board considers Mr. Evans to be deserving of great credit for having gone far towards Board considers Mr. Evans deserving of great credit.

Board considers Mr. Evans deserving of great credit. realizing the idea, and for the display of considerable ingenuity in his proposed truck.

80. The Board recommends the construction by the Department of four (4) or five (5) of Mr. Board recommends trial of Mr. Evans' truck with trucks. but the following matters in which the truck is wanting should receive his attention:— Evans' trucks, but the following matters in which the truck is wanting should receive his attention:-

- 1. Some more effective arrangement for raising the flaps forming the upper deck.
- 2. Some means of giving efficient foot-hold to sheep on the upper deck, without such means rubbing or otherwise injuring cattle when the flaps are down and the truck in use as a cattle waggon.
- 3. Some means of ventilating and getting rid of droppings and urine from the upper deck.
- 4. Divisions in the upper and lower decks.
- 5. An alteration in the heavy bottom door in the centre—such a door having been found too heavy and inconvenient in the old cattle trucks.
- 6. That the truck complete have the full inside dimensions of the box cattle trucks, and shall not exceed 6 tons 14 cwt. in weight.
- 81. The matter of "Special Pick-up Trains" to run on certain fixed days of the week, for the Pick-up trains. purpose of picking up small consignments of stock at different stations, is one recommended by several
- 82. Such an arrangement would be undoubtedly advantageous in preventing the mixing of stock Advantageous to stock, with goods, and ensure the consignments a more speedy run into market; but there are difficulties in the Department way, and so nearly a practical certainty that such trains would not pay, as to place it out of the power mend pick-up trains. of the Board to recommend.

83. In the matter of speed of stock trains, all witnesses have advocated an increase in speed as the best and surest means of overcoming the difficulties connected with the stock traffic; but the majority outs witnesses are doubtful of the ability of the trade to pay a higher rate of freight for such advantage.

84. Increased speed of stock trains advocated by witnesses are doubtful of the ability of the trade to pay a higher rate of freight for such advantage.

Speed of stock trains in New South Wales.

84. The Board has carefully considered this subject, and finds that in the matter of speed of trains, excepting on the North-western line, where the speed requires to be accelerated, the Department is very little behind any railway of which it has any information, and if the very heavy gradients and sharp curves be considered the running is practically better than elsewhere.

Speed and weight of stock trains.

- Speed and weight of mail trains.
 Time of stock and mail trains from Nyngan to Homebush.
 Special circumstances
 only warrant a higher
 rate of speed.
- increase.
 Stock carried abnormally long distances through a semi-tropical climate. Wild nature of animals prevents feeding and watering in trucks. Board recommends pard recommends ghest practicable rate speed
- 85. At the present time, inclusive of stoppages, the time-table speed of stock trains, whose weight may be taken at 300 tons, is 22 miles an hour over the flat country, such as between Nyngan and Dubbo and Hay and Junee, and 14 miles an hour over the heavier portions of the line, where the load is about 150 tons. The speed of the mail trains, whose weight may be taken at 80 tons, is, over the same lines, 30 miles and 20 miles respectively. The time occupied by a stock train running from Nyngan to Homebush at the above rates of speed is 25 hours, and by a mail train $17\frac{1}{2}$ hours.
- 86. The Board thinks that only special circumstances would warrant the Department in attempting Special circumstances exist in N. S. Wales.
 Importance of meat trade a higher rate of speed than that now in force, but is of opinion that a fair claim to there being in this with Europe.

 Stock trade likely to Colony special circumstances which do not obtain elsewhere may be made out. Already in consequence of the trade with Europe in frozen and preserved meat, the stock trade is one of the most important in the Colony, and its importance promises to increase in the future. Stock has to be carried abnormally long distances, through a long stretch of almost tropical country, and the wild nature of the animals preventing the adoption of any means of feed or watering on the journey as is practised in other countries, seems to afford a special reason for the Department making a strenuous effort to run stock trains with the least possible delay at stations and at the highest speed practicable.

ROBT. B. WILKINSON, Chairman. ALLAN GEE. DAVID KIRKCALDIE. THOS. MIDELTON. FRED. M. AVERN.

APPENDIX. Stock received at Homebush for twelve months ending 31st December, 1833.

Average from 1st January till 20th October, 16,373; and from the latter date till 15th December, 29,826. From the 1st January till the 5th April, 1884, the average number has been 21,315.

Of course this is irrespective of stock conveyed to other stations than Homebush.

Minute of Secretary for Public Works.

WILL the Commissioner favour me with his views upon the suggestions made by the Board.

F.A.W., 5/5/84.

See my minute herewith.—Chas. A. G., 15/5/84.

The Commissioner for Railways to The Secretary for Public Works.

Minute of the Commissioner for Railways on the Report of the Live Stock Board.

In moving, on the 19th December last, for the appointment of a Board to inquire into the way in which the carriage of live stock by rail was conducted, with the view of finding out and removing "existing irregularities," Mr. Wilkinson confined his remarks entirely to the alleged insufficient supply of trucks for the conveyance of the stock, whereby vexatious delays and considerable loss were entailed upon stock-owners in getting their stock to market; but as, in the course of previous discussions, and in the discussion that ensued on that occasion, as well as by numerous representations which appeared in the public Press, strictures were made regarding what was called the "mismanagement of the traffic," to which cause the excessive number of deaths amongst the stock was attributed, it was determined that the Board should not be restricted in the scope of its inquiry, but that the fullest possible information should be elicited, so as to ascertain in what way an improvement could be effected.

As Mr. Wilkinson expressed his willingness to sit upon the Board, he was appointed thereto (and subsequently elected Chairman), together with Mr. Gee, the General Manager of the Sydney Meatpreserving Company, who from his extensive experience, was justly considered well qualified to aid materially in the thorough investigation of the subject.

The other three members of the Board were officers of the Department, representing the Traffic, Locomotive, and Permanent Way Branches.

The Board has dealt with the subject very exhaustively, and it is gratifying to find that, in effect, it exonerates the Department from the charges that have been so freely made against it.

With reference to Mr. Wilkinson's contention that the stock of trucks is insufficient for the traffic, it is admitted that for about $2\frac{1}{2}$ months at the end of last year the supply of sheep vans was not equal to the demand; but it is also admitted by the Board, and by all the witnesses who were examined, that, in consequence of the severe drought through which the Colony has passed, the sheep traffic during that period was very much greater than ever it had been before—the owners of the sheep having no other option than either to sacrifice them in an unfavourable market or lose them altogether through starvation.

I have no doubt that, but for the abnormal magnitude of the sheep traffic during the period named, there would have been no cause for complaint of the insufficiency of trucks. The supply of rolling stock of all kinds has been carefully seen to from time to time, and I submit that due regard has been paid to the requirements of the sheep traffic, and further, that even if the exceptional season we have passed through

through could have been foreseen, it is a question whether the stock of trucks should have been increased (particularly as sheep vans cannot be utilized for any other kind of traffic) to meet a traffic which is admitted on all hands to have been abnormal, and which in excess of our ability to cope with it only lasted for a few weeks.

Reference to the Appendix to the Report of the Board shows how the traffic fluctuated during the year.

From the beginning of January till the 20th October, 1883, the average weekly number of sheep received at Homebush was 16,373, while from the latter date till the 15th December the number was as high as 29,826 per week. It must of course be taken for granted that if the Department was able to convey the larger number for eight weeks in the year it could have done so for the whole fifty-two, so that for five-sixths of the year the stock of vans was considerably in excess of actual requirements, and I may add that since the beginning of the present year the supply of vans has exceeded the demand.

Although the Board has recommended that the present stock of vans be increased by ten per cent. I cannot admit that such an increase is necessary for the present traffic, but in view of the great increase that may be expected on the extension of the lines, orders were given before Mr. Wilkinson's motion was brought before Parliament for an additional number which will increase the present supply by twenty per cent., and some of these vans have already been supplied.

Before leaving this part of the question I should mention that, large as the sheep traffic was from the middle of October till the middle of December, the carrying capabilities of the Department were not even then legitimately tested, because it not unfrequently happened that vans supplied at stations in accordance with orders received were not made use of, presumably because of the fluctuating markets, and but for that cause other stock-owners would not have been subjected to disappointment. In this respect some of the witnesses admitted having, from causes which they say were beyond their control, transgressed to a greater extent (in not having been able to load the vans at the appointed time) than they were inconvenienced by the Department.

I may add that, as regards cattle, the supply of cattle trucks has been more than equal to the demand. The Board is silent on this point, and it may therefore be assumed that it is of that opinion also.

The Board recommends the introduction of the system of deposits (to be forfeited if the trucks are not used) when ordering trucks, and expresses the belief, in which I concur, that such a system will greatly increase the capabilities of the present rolling stock.

I may point out that this system is not new to us. It was in full operation some years ago, and was only discontinued at the repeated requests of the stock agents, who urged that the infliction of the fines pressed very severely upon the owners of stock, who were unable from unforeseen causes to keep their engagements with the Department, and expressed their willingness to abide by occasional disappointments at the hands of the Department if the system were abandoned.

Even now the witnesses are not unanimous on the point. Several of them, notably one who is said to have been one of, if not the largest importer of stock into Homebush market for the last few years, would rather have things remain as they are than revert to the system of deposits.

In view, however, of the opinions of the majority of the witnesses, and of the recommendation of the Board, I have no hesitation in advocating the re-adoption of the deposit system. I believe it to be a good system, and one that would not have been discontinued but for pressure from the very class which now recommends its introduction.

The officers of the Department have over and over again stated that the primary causes of death amongst live stock during transit were due to overcrowding and the exhaustion of the animals before being trucked. The Report of the Board very emphatically confirms such conclusions, and expresses the opinion, which has also been held by our officers, that however desirable it may be that the loading of trucks should be regulated by the Railway staff, there are too many difficulties in the way to justify them in recommending the adoption of such a course, and they therefore leave the responsibility, as it has always been left, on the shoulders of the owners or their representatives.

The recommendation of the Board that the condition of the stock, after being trucked, should be noted by the officer in charge at the loading station, and entered on the contract note, is open to some objections, which may be stated as follows:—

1st. It would bring the station-master or officer in charge into direct contest with the senders or their representatives, and probably, where a difference of opinion existed, as it may be assumed would not unfrequently be the case, engender a feeling of antagonism and hostility.

- 2nd. The probability of the owner or his representative refusing to sign the contract should it on the face of it bear remarks about the stock being, in the opinion of the railway officials, over-crowded, exhausted, or otherwise in bad order.
- 3rd. The probability that, should the station-master omit for any reason to note his opinions in the face of the contract, advantage would be taken of the omission to make the Department responsible, should any of the animals die from any cause in transit.

It is worthy of special remark, as testifying to the low rate of mortality amongst stock which is not overcrowded, that one firm received 37,000 sheep at Homebush during last year, only twenty of which were dead on arrival, and out of that number it is admitted that ten died from over-crowding in one consignment of 1,600, so that out of the remaining 35,400 the deaths only numbered 1 in 3,540, while in the case of other consignments where attention was not paid to the evils of overcrowding the mortality was 1 in 480. Considering the great length of the journeys most of the sheep are conveyed, even 1 in 480 does not seem an excessive mortality; but when it is compared with 1 in 3,540 the evil of overcrowding is at once apparent; it is equal to over 7 to 1 of all the other causes put together. I do not know how this bill of mortality compares with the deaths which occur in the transit of stock elsewhere, but we are told by an eminent authority that "there is no flock, however cared and tended, but one dead lamb is there," and I think it will be conceded that one dead in a flock of 3,540 leaves but little to complain of.

The attention of the Locomotive Engineer will be drawn to the representation of the Board respecting the effect of careless driving, and every means will be used to provide a remedy; but it is worthy of note that the witnesses admit that there has been a great improvement in this respect since the introduction of the screw couplings.

As the Board points out, the mortality amongst cattle is due, more than in the case of sheep, to long journeys and scarcity of food and water before they reach the trucks, and as they are in many cases trucked without obtaining rest or water it is not to be wondered at that some of the animals fall or lie down from sheer exhaustion before they have long started on their journey, and not only get trampled to death themselves, but are the cause of others falling and meeting a similar fate.

It may be, and very probably is the case, that there is no opportunity in dry seasons of getting water within a reasonable distance of the loading station, and that the best course is to get the stock to their destination as quickly as possible; but if that be so, I contend that it is more than ever necessary that the animals should not be overcrowded.

Although the Board has recommended the division of the sheep vans, I see from the evidence that the witnesses are not at all unanimous on the point. I will not, however, deny the advantages of divided spaces in the vans, but I think it is apparent that if sheep can be carried long distances with an average mortality not exceeding 1 in 3,540, the division of the vans is not a very urgent nor an indispensable measure of improvement.

The cost of dividing the vans is estimated at £7 each; there are at present 389 of them, and the immediate cost will be £2,723; in addition to this it will be necessary to duplicate the races at the more important trucking stations (say at those loading 20,000 and upwards per annum, of which there are at present twenty-five) the cost of this work is estimated at £90 for each yard, swelling the total expenditure for this service to £4,973.

While I do not regard the carrying out of the work as an absolute necessity, I am not disposed to oppose the recommendation of the Board, and the Government will no doubt give effect to it.

The only other recommendation that has been made as regards the construction of the new sheep vans is the introduction of a false floor to the upper deck, so that better ventilation and cleanliness will be obtained.

The recommendation will of course be adopted in the construction of new vans, but from inquiries I have made I am afraid it will not be possible to effect the improvement in the present vans.

I confess I am not surprised at the Board objecting to the old style of cattle wagons, because they are undoubtedly too narrow for large cattle, such as those that come from Queensland and the Western interior of this Colony, and they are also too open round the sides, although, it may be stated, the latter defect is being remedied. The recommendation of the Board, that the use of these trucks be confined to the districts between Sydney and Goulburn and Bathurst, will be complied with; indeed, I find that the Traffic Manager, twelve months ago, issued instructions to this effect.

Some years ago I devoted some time and attention to the consideration of the best style of wagon to adopt, and designed the cattle truck which, it is satisfactory to know, is so highly spoken of by all the witnesses. All new cattle trucks will, of course, be built upon this design, and due attention will be given to the alterations suggested by the Board, not only in the new but the existing stock, as far as practicable.

It will be observed that the division of cattle trucks is regarded by the Board as unnecessary. In deference to the wish of some persons who had travelled in America, a cattle truck was imported from that country a few months ago with a division for each animal, but all the stock-owners and agents who have seen it regard it as I regarded it, and so stated when the order was given, as only suitable for stall-fed animals and not for the wild cattle of Australia. It is therefore being altered.

A great deal has been said from time to time about the desirability of having all live stock trucks fitted with screw couplings, so as to save the jerking in transit to which trucks with the ordinary chains are so subject. As a matter of fact instructions were issued some years ago that this should be done, and with almost immaterial exception all the trucks have been so fitted; the remaining few trucks with chain couplers will have screw couplers substituted at once.

As the Board points out, this is an improvement which has not been introduced to the same extent on any other railway. I am aware that cattle trucks are so fitted in Victoria, but not sheep vans, and believe I am right in stating that on no British, Continental, or American railway are screw couplings provided for live stock trucks.

The Board has given due attention to the proposal that stock should be watered in transit, either by providing troughs in the trucks, or by unloading, watering and resting the stock at some suitable intermediate station, and has come to the conclusion that neither plan is practicable. The Board recommends, however, the fencing in and strict conservation of existing reserves at trucking stations, and the creation of others where they do not already exist, and also the supply of water at those stations where there is not a natural supply within a distance of 3 miles. No doubt such facilities would be of great advantage to stock-owners, but the expense would be so great that I cannot possibly recommend it, unless indeed, the rates are increased to such an extent as to yield a fair return upon the outlay. Attached will be found a comparative statement of rates in force here, and at other places, from which it will be seen that notwithstanding the smaller load we are able to haul, owing to the severe gradients of the lines, our charges for cheapness compare favourably with those charged elsewhere.

About eighteen months ago a proposal was made that the reserve at Wagga Wagga should be fenced in, and a couple of dams made, but upon inquiry it was found that the work would cost fully £1,200; and it was not considered at that time that the expenditure would be justified in view of the low rates charged. If reserves of something like 2,000 acres (and I presume little less would do at the principal trucking stations) were provided at each of the stations, at which more than 20,000 sheep are trucked in the year, the cost for fencing and providing water would be approximately £30,000.

As regards the speed of trains, I can only endorse the opinion expressed by the Board, that the time occupied in the transit of our live stock trains compares most favourably with the like running in any part of the world, although it might be reasonably expected that, considering the great lengths of our single lines, the number of trains running in each direction, and the very heavy gradients to be contended with, the loss of time would be greater here than where such obstructions to speedy running do not exist.

Even for the delays that do occur the Department is not always responsible, because, as stated by the Board, it frequently happens that stock is not trucked in time to permit of the trains leaving the loading stations at the appointed hour; and the result is that such trains must either be subjected to further delays at intermediate stations, or the whole of the traffic be upset to give them an uninterrupted passage; the adoption of the latter course would be necessarily out of the question.

I need hardly say that no opportunity will be lost for reducing the time occupied in transit, but to run to the *present* time-table the engine-load had to be diminished: The train earnings, I need hardly point out, were correspondingly reduced.

The proposal of the Board to increase the crossing-places is one which, if effect be given to it, will involve a very large expenditure, and would only be of benefit when trains are running late, because the time-tables are so compiled as to reduce to a minimum delays at crossing stations. Moreover the introduction of the deposit system, as recommended by the Board, will render, in my opinion, additional crossing-places unnecessary: It has been shown that the delays that have arisen have almost invariably been due to the senders failing to have their stock loaded at the appointed hour; and as one of the conditions of the deposit system will be that trains must start to time, whether the stock is loaded or not, there will be no delays in reaching the appointed crossing-places, except those due, which are few and far between, to the ordinary exigencies of traffic.

Each additional crossing-place would entail an outlay of about £1,000, irrespective of excavations or filling-up where such work is necessary; and the annual expenditure for wages, &c., with interest on the outlay, would amount to about £350. For thirty additional crossing-places the capital outlay would be at least £50,000, and expenses of maintenance and working £12,000 a year. I can see no necessity or even justification for such an outlay, and cannot support the proposal. Where, however, it is found that additional crossing-places are necessary for the general traffic they will be provided.

The proposal of the Board that the same quality of fuel should be supplied to the engines of live stock trains as to passenger engines will involve a sensible increase in the expenditure, as it means the substitution, in a great measure, of Newcastle for local coal; but I will give directions, in deference to the views of the Board, that coal only of the best quality is to be used for engines of stock trains.

The Department has been so often charged with the loss of sheep in transit, presumably from theft, that it is gratifying to find the Board express serious doubts as to whether any sheep were ever lost on the railway at all. All the efforts made by the Department to trace theft were unsuccessful. In any case, the Board has emphatically expressed the opinion that no sheep have been lost since the introduction some years ago of the system of sealing the vans, and that this system of securing the doors cannot be improved upon.

The cleansing of the trucks, to which attention has been called by the Board as having been to some extent disregarded, will be attended to.

The shunting of trucks containing live stock is avoided as much as possible, and orders were given long ago that, when conveyed on goods trains, they should always be kept next the guard's van, and the goods trucks next the engine so that they would not be subjected to any shunting that might be necessary at intermediate stations on the journey. It appears that this rule has in some instances been disregarded, and orders will be re-issued for its proper observance. I may here state that goods are never put on a train when a full load of live stock can be obtained.

The statement has often been made, and as often denied, that stock trains have been delayed, while precedence has been given to goods trains. It is satisfactory to find that none of the witnesses examined by the Board could point to a single infraction of the rule of the Department which requires that stock trains are in all cases to have priority of transit of goods trains. The Board also admits that the splitting up of trains on the journey is unavoidable, owing to the varying gradients.

The Board refers in disparaging terms to the original design of the stock-yards at Nevertire and Nyngan. The defects were painfully manifest to those officers of the Department who had the practical working of the yards, and I gave directions for alterations to be made. The Board admits that the yards as altered are satisfactory, with the exception that larger receiving yards are required. This recommendation, as well as those referring to the design of stock-yards generally, will receive due attention, but I must say that, in view of the extension of the Western line at an early date, I am not at present prepared to recommend the expense that would be involved in increasing the receiving-yards at Nyngan and Nevertire, but if further experience proves the additional accommodation to be necessary it will of course be provided.

I invite the attention of the Minister to the recommendation of the Board that more attention should be given than hitherto to the designing of stock-yards on new lines.

The recommendation of the Board that more attention be paid to the forwarding of telegraphic advices to the receiving stations, in order that consignees may be apprised, will be attended to. In giving this concession originally I was aware that such advices were not sent on any other railways, the consignees being left to be apprised by the consignors. With a desire, however, to afford the public the fullest facilities, I gave directions for the information to be furnished; and although the advice has been sometimes omitted, such omissions have been the exception and not the rule. I believe that there has been very little to complain of in regard to the way in which this concession has been carried out.

The Board has recommended the construction of four of Mr. Evans' combination trucks, with certain improvements which they point out, and I endorse the recommendation, with the addition that a sufficient number of these trucks be built to form a train load—say fourteen. In this way a more effectual trial can be given to them.

It seldom happens that there is a large cattle and sheep traffic at the same time, and a suitable combination truck would therefore effect an immense saving to the Department; indeed some years ago so satisfied was I on this point that I obtained the Minister's approval for the construction of a combination car, designed by an officer of the Engineer for Existing Lines Branch, but it failed owing to the imperfection of some of the working parts. Mr. Evans, in his design, seems to have overcome this difficulty.

I think I have now dealt with all the matters referred to by the Board.

CH. A. GOODCHAP.

15/5/84.

839-C

Minute

Minute of Secretary for Public Works.

I entirely concur with the Commissioner in this Report, with the exception that I do not think there is sufficient evidence to justify the Department in the expense of dividing the sheep trucks, the cost of which would be large, and I fail to see that any substantial benefit would accrue from it.—F.A.W., 30/5/84.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAY LOAN VOTES.

(PARTICULARS OF EXPENDITURE.)

Ordered by the Legislative Assembly to be printed, 16 July, 1884.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 28 November, 1883, That there be laid upon the Table of this House,—

- "(1.) A tabulated Return showing the amounts expended from Railway
- "Loan Votes after the Railways or Sections thereof have been opened for
- "traffic and delivered over to the Engineer for Existing Lines, the Return
- "to show the expenditure for each year separately from the 1st of January,
- "1873, to the 31st December, 1882, exclusive of expenditure sanctioned by the Engineer-in-Chief for Railways."
- "(2.) A like Return, and for the same period, showing the expenditure
- "sanctioned by the Engineer-in-Chief for Railways on Lines opened for "traffic."

(Mr. Poole.)

RAILWAY LOAN VOTES.

RETURN showing Expenditure sanctioned by Engineer-in-Chief from 1st January, 1873, to 31st December, 1882, out of Railway Votes, after lines or sections thereof were opened for traffic.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

EXPENDITURE ON RAILWAYS.

(SHOWING CAPITAL AND WORKING EXPENSES.)

Ordered by the Legislative Assembly to be printed, 8 April, 1884.

- LAID upon the Table of the House in accordance with promise made by the Honorable the Secretary for Public Works, in answer to Question asked by the Honorable Member for South Sydney, Mr. Poole, on Votes and Proceedings No. 65, of the 4th March, 1884,—
 - "(1.) The total capital expended on all lines opened for traffic at the end of 1883.
 - "(2.) The total expenditure for working the lines during the year 1883."

EXPENDITURE ON RAILWAYS.

- (1.)

 Question:—What was the total capital expended on all lines opened for traffic at the end of 1883?

 Answer:—£16,957,946.
- (2.)

 Question:—What was the total expenditure for working the lines during the year 1883?

 Answer:—£1,187,852.

Note.—The above figures are subject to final revision.

RAILWAY ACCOUNTS.

(MINUTES AND REPORTS.)

Ordered by the Legislative Assembly to be printed, 26 August, 1884.

Minute by Secretary for Public Works.

Mr. Garvan, M.P., made some statement in the House a few evenings ago, during my temporary absence from the Chamber, with respect to the Railway Accounts, the accuracy of which he challenged, stating that capital had been improperly charged with the cost of works which should have been charged to maintenance, and that thereby a fictitious net return had been shown. He also stated that a charge four times greater than the charge for ordinary goods was made for Railway material, and that wool was carried at a ruinous loss.

I am convinced that there is no foundation for these statements; but as it will be necessary authoritatively to contradict them, I desire to have the Commissioner's report on the subject at as early

I have already called upon the Accountant for a report, and will reply to Mr. Garvan's statement as requested. CH. A. G.,

Minute of Commissioner re Mr. Garvan's statement that Capital has been debited with expenses which should have been charged to Revenue.

I MAVE annotated the report of Mr. Garvan's speech, and the Accountant will see what is required to

refute the statements he has made.

I shall be glad if he will furnish, at the same time, a return of the various votes, whether from revenue or capital, for additions to the Railways to meet increasing traffic; include all votes for doubling lines, and the votes for improving the Windsor and Richmond line.

CH. A. GOODCHAP.

Report of Railway Accountant to the Commissioner for Railways.

Mr. Garvan's speech on the Railway Accounts.

Mr. Garvau, in his speech on the Railway Accounts, not only condemns the practice of charging certain items to capital, but deliberately denounces it in the following words, viz.:—

"It appears that were after year as our railways are constructed under the supervision." I procure

"It appears that, year after year, as our railways are constructed, under the supervision, I presume, of an able and competent man, they are handed over to another Department. The moment they get into new hands alterations are commenced, and are constantly made by an officer who charges their cost the revenue been bolstered up

In reviewing and controverting these extraordinary and unfounded assertions, it will be necessary for me in the first place to give a short account of the way in which these charges were commenced. I shall thus be able to show that the inauguration of the charges objected to was not coincident with the handing over of the lines, when constructed, to a separate Branch; and that the necessity for such a course was felt, and similar charges made, when the Construction and Existing Lines Branches were both under the supervision of Mr. Whitton, the Engineer-in-Chief.

The first reference that I can find to the matter is in Mr. Rae's report of 1872-1875, and reads as

under:—

"But, in addition to the ordinary repairs and renewals properly chargeable to this account, a large amount for additions to existing works and new buildings has been charged to revenue, though properly belonging to capital." This system of appropriation, which is manifestly wrong, is not of recent origin. In my first report, dated 30th September, 1865, referring to the rapid increase of working expenses as out of all proportion to the increased mileage, I stated that a considerable portion of that expenditure, which legitimately belonged to capital, had, from the want of special votes, been defrayed from revenue.

1026—A

On

On the 7th June, 1867, the Engineer-in-Chief drew attention to the same objectionable practice, in the following terms:—

"In the years 1863, 1864, and 1865, many important additions and renewals over and above the ordinary maintenance were made, and paid for out of revenue when the works were clearly chargeable to capital. For instance, the colliery junction on the Northern line, wharf, carriage docks and sidings at Newcastle and Maitland, new station at Hexham, stables at Newcastle, Rooty Hill station, and gatehouses on the Western line, and coal sidings at Newcastle. The total cost of the above works was £4,583 6s., and should have been paid from capital." "The renewals during these years," he continues, "were very heavy both to permanent way and station buildings, particularly on the Southern line, and many additions were made to stations."

Nothing further seems to have been done in the matter until the year 1870, when the Engineer-in-Chief, who was then still in charge of both the Locomotive and Permanent Way Branches on the existing lines of Railway, again drew attention to the fact that sums were being charged under maintenance which did not properly belong to the payments usually classed under that heading, as they had been incurred for works which were additions to the lines, in the following minute:—

" Engineer's Office, 27 May, 1870.

"Subject: Additional Schedule Revenue Account.

"With a view of distinguishing between improvements to the line and works and the ordinary maintenance of the same, I suggest that another Schedule be added to the Revenue Account, viz.:—

"SCHEDULE G .- Additions and Improvements to Works and Buildings.

JOHN WHITTON."

On the minute being submitted by the then Commissioner, Mr. Rae, Mr. Whitton's request was approved by the Minister, Mr. Sutherland, and the separate Schedule was commenced, and styled "Additions and Improvements to Works and Buildings."

The amounts at that time being voted by Parliament under the heading of working expenses, the expenditure was so treated in the accounts; and as the total yearly sum was not then very large, the inclusion of the expenditure did not at that time seriously affect the yearly results.

After 1874, however, it was found that the enormous growth and extension of the Suburbs of Sydney necessitated such large works being undertaken, in the way of improvements and additions to stations and siding accommodation to work the traffic, that in dealing with the expenditure of the year 1875, Mr. Rae, who was then Commissioner, called the attention of the Minister to the subject; and requested his authority to charge the items to capital account, as the expenditure was clearly not for maintenance but for additional accommodation to meet the necessities of a growing traffic.

In his concluding minute on the subject, Mr. Rae wrote as follows, viz.:-

"While Mr. Whitton agrees with me that the items charged in Schedule G, for alterations and additions to station buildings and siding accommodation properly belong to capital, he doubts whether they can be so charged, as he considers the amount was not voted under loans, but as a portion of working expenses. To remove Mr. Whitton's doubts, I requested the Under Secretary for Finance and Trade and the Consulting Accountant to the Treasury to favour us with their views on the question. They are clearly of opinion that Schedule G was not voted under working expenses, but specially under 'miscellaneous,' and that the mere fact of not having been voted under loans does not in any way prevent its being charged to capital."

"As I am clearly of the same opinion, I request the Minister's sanction for Schedule G to be transferred in our books from revenue to capital, and that the Accountant be instructed to treat it as capital for the future."

J.R. " 29/3/76."

On this the Minister wrote, "I am clearly of opinion that the items generally included in Schedule G should be a charge on capital and not on working expenses. I cannot imagine that it was ever contemplated that permanent improvements, such as station-houses, docks, and other buildings of a like character, which are in every sense permanent and lasting, should be regarded as a charge against the current expenses of working the different lines. I approve of the transfer being made."

' J.L. " 30/3/76."

The decision of the Minister was endorsed by Parliament voting the sum of £30,000 on the Estimates for the year 1877, under the following heading, viz.:—

"Alterations and additions to Stations and Buildings, and Siding Accommodation to meet increasing traffic." "Capital Account."

Since then the items of expenditure, properly classed under additions and improvements, have been treated in the capital entries.

In the year 1881 the vote was for the first time placed under loans. (See Loan Act, 44 Vict. No. 28, £300,000.)

The instructions given from time to time indicate very clearly the care exercised to prevent expenditure properly chargeable to maintenance being in the accounts charged to capital.

In 1876, on the transfer ordered taking place, Mr. Goodchap, who was then Secretary, drew attention to certain works being partly chargeable to revenue, and subsequently on various occasions until April, 1882, when the following minute was written by the Commissioner on a question then referred to him, viz.:—

"The rule to be observed is, that nothing which does not add to the capital value of the line is to be charged to the capital account.

Anything in the shape of a renewal or a replacement, or in the way of substitution, is to be charged to working expenses, and also small things, not exceeding £25 in value, should be charged to working expenses.

C. A. GOODCHAP,

11/4/82."

Having thus shown how the charges made originated, and the character of the works the cost of which is charged to the capital, I now come to the remarks made by Mr. Garvan on the subject. From an examination of the speech it will be at once evident that the argument on which this gentleman's remarks are based is this, viz.:—

That once a line is constructed and open for traffic, no charge of any kind shall be made to the capital account.

The logical result of which applied to the New South Wales Railways is as follows:-

That no matter how a country progresses, nor how traffic develops and increases, or the railways are extended, and thereby ten times the quantity of station accommodation and rolling stock are requisite for working the traffic, still the capital account must not be added to in any way. Working expenses must bear the cost of all new or additional stations, sidings, rolling stock, or plant of any kind whatever.

Such a rule if applied to the ordinary business of the mercantile world would at once put a stop to all progress of whatever kind. What Company would, as their business extended and necessitated new and enlarged works, think of charging the cost of such additions to the profits of the year in which such expenses were incurred?

It is a matter of daily occurrence within the cognizance of any one, that capital is increased and new shares issued to pay for facilities to work a growing trade.

Not only so, but Mr. Garvan, in advocating the course he does, goes against the approved practice on all railways. As confirming and determining, for his satisfaction, the true course to be followed inthe treatment of capital account, I quote the following authorities, viz.:—

1. From Kirkman's Work on Railway Accounts Disbursements (American).

America practice.

- Page 76, item 368. "The word construction in Railway Accounts is intended to describe the original or first cost of the property of the Company."
 - item 369. "Something original and new."
 - item 370. "The cost of all improvements that add value and increased stability to the property of the Company over the original value are properly chargeable to construction."
 - item 371. "Construction properly embraces the total cost of any extension of the Company's lines."
 - item 372. "The cost of right-of-way, increased facilities and grounds, and the expenses incidental thereto."
 - item 373. "The cost of new side tracks, less the cost of side tracks taken up."
 - item 374. "The cost of viaducts and road bridges (where none before existed)."
 - item 375. "The difference in value between temporary or cheap bridges and culverts, and bridges and culverts replacing such, constructed in a permanent manner of iron or stone."
 - item 376. "The cost of additional telegraph lines and facilities."
 - item 377. "The value of steel rails over iron rails, where the former are substituted for the latter."
- Page 77, item 378. "The difference in value between iron laid in track of a heavier grade than that which it replaces."
 - item 379. "The cost of additions or improvements in the fixtures appertaining to track."
 - item 380. "The cost of remedying any defects in track rendered necessary in consequence of its not having been constructed in a first-class manner originally."
 - item 381. "The cost of additional buildings, including the machinery and appurtenances belonging thereto."
 - item 384. "The cost of transportation of material and men for construction purposes is a proper charge in connection with this account."
- Page 78, item 378. "The furniture and fixtures or the tools and machinery necessary to equip a new building or structure, and fit it for the purpose it was erected to serve, should also be charged up, as a part of the cost of such building or structure to construction."
- Page 79, item 389. "All additions of a substantial and permanent character to things already in use, as explained above, come properly under the head of construction."
 - item 391. "The cost of enlarging stock-yards, extending platforms, improving depôt (station) grounds, and all items of a similar character, come under this head, and should be so charged up."
 - 2. From the Report to the Secretary of State for India, in Council, on Railways in India, 1879-1880.

Indian practice

Appendix.—Contract between Secretary of State and East Indian Railway Company, 22 December, 1879, page 60, paragraph 32—" The question whether any expenditure incurred for the purposes of this undertaking is to be treated in the whole or in part as a charge incurred on capital account, or how the same is to be dealt with, shall be determined on the general principle that capital is to bear the cost of new works, of additional rolling-stock, plant, and machinery, and of substantial improvements of and additions to old works, rolling-stock, plant, and machinery, including the cost of any temporary new work, the construction of which is requisite for the construction of a work properly chargeable to capital, and that the cost of repairs, restorations, renewals, replacements, or substitutions is to be borne by revenue."

English practice 3. Extracts from reports of Meetings of Railway Shareholders in Herepath's Railway Journal of 1884, London, Brighton, and South Coast Lines. Meeting held January 23rd, 1884.

In the course of his speech the Chairman said:—"What with working new lines, opening up districts that were unprovided with railway accommodation, what with improving the stations, platforms, signals, and sidings, and number of other things on our existing lines, what with completely renovating our rolling-stock, what with adopting all the latest improvements, such as the Westinghouse brake, the block system, and so on, we have spent in round numbers something like four and a half millions of capital in the last six or seven years."

Manchester, Sheffield, and Lincolnshire Lines. Meeting held January 23rd, 1884.

In his speech from the Chair Sir E. W. Watkin said:—" He must again call their attention to the requirements of the Board of Trade in regard to the block system and interlocking; upon these two things they had already speut in capital £187,386."

Great Eastern Railway Co. Meeting held January 29th, 1884.

Chairman's speech:—"It is in my opinion absolutely necessary for you to complete your works so as to give the line the greatest money-getting power. We are embarrassed at present in our Liverpool Station. We want two more docks. We must complete various stations and make some new stations practically, where great complaints are made, because some of your stations are totally inadequate for the traffic."

Great Northern Railway Co. Extraordinary Meeting to increase the capital, January 5th, 1884.

In the course of explanation as to what the capital was to be raised for, the Chairman said: "It is for the completion of works under construction, for additional rolling-stock, waggons, carriages, and so on, for the construction of some short lines in the Leicestershire ironstone field, and for the making of a new Copenhagen tunnel. The Copenhagen tunnel, gentlemen, is a second tunnel out of the King's Cross Station. At present we have only two lines of rails to bring the whole of the passenger traffic into King's Cross."

The foregoing quotations well show that the system of making charges to capital for additions to works and buildings is regarded as correct by the authorities, as quoted from America, India, and England.

Now take the suburban line from Sydney to Granville (13 miles) and compare it with what it was (say) ten years ago. Since that time seven new stations or platforms (the necessity for which did not exist, and was not provided for when the lines were first constructed) have been made, and the revenue returned from these seven stations during the year 1882 was £14,602; deducting working expenses, there remained a clear profit of £8,538, or a sum equivalent to a return of $47^{\circ}/_{\circ}$ per annum on the capital expended on these stations, namely, £18,000. It appears to me that no argument is, or should be needed, to show the folly of asserting that the cost of such works should be charged to the current working expenditure. It is as clearly a charge to capital, even though the works may not have been undertaken for twenty years after the line was open for traffic, as it would have been if they had been made before the line was open for traffic.

Not only however have new stations been constructed, but large additions to the original stations have been made in order to cope with the growing requirements. The necessity for these additions will be at once seen from a comparison of the returns of earnings in 1877 and 1882.

On the suburban line in 1877 the earnings were: Coaching, £90,296; goods, £138,126; and in 1882, coaching, £440,936; goods, £737,012; showing that the traffic in 1882 was nearly five times as great as in 1877.

From these figures it is evident that not only was increased accommodation necessary, but that it was provided, or the traffic could not have been carried, and it is the cost of these additional works that has been from year to year carried to the capital account, and very properly so.

What is true of the increased requirements on the suburban line is true also of the other lines, but only in a lesser degree, owing to the whole of the Southern and Western traffic having to run over the short length between Sydney and Granville.

As the lines are extended, and new sections and branches opened, it is requisite that increased accommodation be provided on the older lines; and as this large increase in the traffic does not appear to have been foreseen or provided for when these older lines were first made, the necessity has arisen for these charges to capital account on the other sections. In reference to the Richmond branch, which is specially mentioned by Mr. Garvan, it must be remembered that this branch when first constructed was intended only to be used as a horse tramway. Subsequently light locomotives were used, but it was found necessary in order that the traffic might be worked economically to remodel the line altogether by lowering the gradients and strengthening the bridges and replacing the light rails with 70-lb. rail, thus making it a line capable of carrying our ordinary locomotives. Special votes were passed by the Parliament for this work and the cost of the transformation, which is obviously not a maintenance charge, has been charged to the capital account.

But

But while the cost of these additions has been so dealt with, the proper amounts for maintenance have in all cases been carefully and regularly charged under working expenses. The amounts so charged in the year 1882 were as follows:-

Locomotive Branch.—Repairs and renewals of locomotives, carriages, waggons, and machinery, and workshops in connection therewith: £113,147.

Permanent Way Branch.—Repairs and renewals of permanent-way workshops, machinery, tunnels, viaducts, bridges, sidings, turn-tables, gates, fences, stations, platforms, signals, and main lines, &c. :—£261,989.

Traffic Branch.—Repairs and renewals of station furniture, fittings, and implements, making and repairing lamps, &c.:—£10,479.

A total sum charged for legitimate maintenance in the year 1882 of £385,615.

In order still further to show that working expenses is debited, not only with all that can fairly be charged to it, but also with items which could with reason be classed as improvements, I may mention that the whole cost of the plant for the electric light at Redfern, £2,500, was, by order of the Commissioner, charged to working expenses; that old locomotives have been replaced with vastly improved ones,—iron rails have been taken up, and steel put in their place; sleepers made of inferior timber replaced by ironbark sleepers; various improvements made in carriages and waggons; and at Parramatta, where four old timber bridges to carry a single line of rails are being replaced with iron girder bridges to carry a double line, the full single line cost of erection of the iron girder bridges, £12,583, is to be charged to working expenses, although the original cost of the wooden bridges did not exceed £6,000.

The minute of the Commissioner on this last item is as follows, viz.:—

"To be on the safe side, and to run no risk of being truthfully charged with paying from capital what ought to be borne by revenue, I recommend that these bridges be renewed as proposed, and that revenue be charged with the cost of £12,583.

"C. A. G. "20/1/83."

This was approved by the Minister on the 17th February, 1883.

I have taken the accounts of the year 1882 as an example of the items chargeable to capital. My remarks will, however, apply with equal force to the expenditure of previous years.

In conclusion, from my intimate knowledge of the railway accounts for the last nine years, I can safely affirm that Mr. Garvan's assertions are as groundless as the system of charging which he advocates is unsound and opposed to the general practice on all railways.

I append a detailed statement, showing the various classes of works which were made chargeable

to the capital account during 1882.

F. J. WICKHAM, Accountant, Railways.

27/3/84.

The Commissioner for Railways to The Secretary for Public Works.

In submitting the Railway Accountant's report upon the extraordinary statements made by Mr. Garvan, M.P., in his speech delivered in the Legislative Assembly upon the railway accounts, I desire to draw attention to that portion of it which refers to the initiation of the system of charging to capital the

expenditure incurred in improving the lines and adding to their actual value.

It will be seen that the Engineer-in-Chief (Mr. Whitton) was the first to object to the annual votes for maintaining the lines being weighted with the cost of "additions and renewals over and above the ordinary maintenance," which were—to quote his own words—"clearly chargeable to capital."

At the time Mr. Whitton made these representations he was in charge of and responsible for the

maintenance of the lines.

It seems to me to be unnecessary to enlarge upon the exhaustive report of the Railway Accountant, but there are other portions of Mr. Garvan's speech which are not less extraordinary and incorrect than are his representations with respect to the railway accounts. His statement that the revenue is exhalm at the expense of capital, by charging for the carriage of railway material for the extensions four times the amount charged for the carriage of ordinary goods, is simply incomprehensible. A reference to the published rate sheet (open to all) will show that the charge made for the conveyance of rails for a short distance is 4d. per ton per mile; for a long distance—as, for instance, from Sydney to Nyngan, for the extension to Bourke—the charge is equal only to 3d. per ton per mile for the whole distance.

Now, the charge for general merchandise included in third-class rate is, for short distances, 7d. per ton per mile and to Nyngan it is equal to 5½ per ton per mile.

ton per mile, and to Nyngan it is equal to $5\frac{1}{2}$ d. per ton per mile.

On comparing the rate for rails with the charge made for the carriage of other descriptions of iron, it will be observed that iron generally is charged 5d. per ton per mile, and to Nyngan 4d. per ton per

These are charges for materials conveyed from the metropolis to the interior, and the charge These are charges for materials conveyed from the metropolis to the interior, and the charge for rails should, equitably, be more, not less, than it is for other descriptions of iron, because the rails, in consequence of their length, have to be carried in what are termed "bolster trucks," which, having no sides, cannot be used for the conveyance of the produce of the country on the return journey, and for the most part they return empty. On the other hand, the "D" trucks which carry the ordinary iron can and do bring back wheat, coal, shale, iron-stone, firewood, and other similar goods.

There are of course charges considerably below the charges made for iron and for iron rails, but such charges are generally for the carriage of raw produce from the country to Sydney, and we are enabled to make very low charges for these goods because their carriage utilizes the trucks which would if a heavier

make very low charges for these goods because their carriage utilizes the trucks which would, if a heavier charge were made, have to return empty.

Taking all classes of traffic, however, from the lowest to the highest, it will be found that, so far from the charge for the carriage of rails being four times the charge made for the carriage of goods generally, it is absolutely below the average charge.

Mr. Garvan is not more fortunate in his statement about the charges for the carriage of wool. He says—"The chief article of produce in this Colony is wool, and I maintain, and am in a position to prove, that it is carried on our railways at a rate which is ruinously and unfairly low."

In reply to this, I have to state that in 1882 we carried 42,083 tons of wool, and that while the freight charge thereon amounted to £98,502, the net earnings were £47,792. If all classes of traffic paid the Department a like rate of profit, the return upon the capital expended upon our lines would be

sensibly larger than it is.

That wool returns a better profit than any other produce, either agricultural or mineral, is made clear by the fact that a truck of wheat or of mineral ore from (say) Orange to Sydney realizes for freight £4 18s., while a truck of wool from the same station realizes £12 12s. It will therefore be seen that the charges for the carriage of wool, instead of being "ruinously and unfairly low," produce a greater profit than almost any other description of traffic.

In concluding my observations, I desire to express a hope that nothing which has been said in these papers will be considered to be personally distasteful to Mr. Garvan; he has been animated, I am quite sure, by a conviction that he had good grounds for the representations he has made; and although he is altogether wrong, and it is my duty to refute his statements, I desire to do so dispassionately and with the respect due to the Honorable Member.

5/4/84.

RAILWAY CARS.

(COST, ACCOMMODATION, DURABILITY, &c.)

Ordered by the Legislative Assembly to be printed, 31 October, 1884, A.M.

- LAID upon the Table of the House in accordance with promise made by the Honorable the Secretary for Public Works, in answer to Question No. 2, in Votes and Proceedings No. 137, of the 24th July, 1884.
 - "(1.) What is the cost of the 1st class Railway Cars of the American "saloon pattern?
 - "(2.) What is the cost of 2nd class cars of same pattern?
 - "(3.) What is the number of passengers which such cars will carry?
 - "(4.) What is the average space accommodation in cubic feet afforded to each passenger in such cars?
 - "(5.) What is the weight of such cars?
 - "(6.) For what length of time will such cars last, and what is the average cost of keeping them in repair?
 - "(7.) What is the cost of the 1st class cars recently constructed of the older pattern on Ashbury under-carriages?
 - "(8.) What is the cost of 2nd class cars of that pattern?
 - "(9.) What is the number of passengers such cars will carry?
 - "(10.) What is the average space accommodation in cubic feet afforded to each passenger in such cars?
 - " (11.) What is the weight of such cars?
 - "(12.) For what length of time will such cars last, and what is the average cost of keeping them in repair?
 - "(13.) Is it intended to construct any more such cars; and if so, how many are now ordered?
 - "(14.) Is it intended to construct more cars of the American pattern; and
 - "if so, how many are now ordered?"

RAILWAY CARS.

Question: -What is the cost of the 1st class Railway Cars of the American saloon pattern? Answer: -£1,045 each. Question: - What is the cost of 2nd class cars of same pattern? Answer: -£805 each. Question: -- What is the number of passengers which such cars will carry? Answer:—1st class American car carries 60 passengers. 60 (4.)—Question: -What is the average space accommodation in cubic feet afforded to each rassenger in such cars? Answer: -Each 1st class passenger, 33 24 cubic feet. 33.24" 2nd " -Question: -- What is the weight of such cars? Answer:—1st class American weighs 16 10 3 2nd ,, ,, 16 2 0 (6.) -Question: -For what length of time will such cars last, and what is the average cost of keeping them in repair? Answer:—From 20 to 25 years. For repairs—1st class, about £25 per annum. £18 2nd ,, (7.) - Question: - What is the cost of the 1st class cars recently constructed of the older pattern on Ashbury under-carriages? Answer: £1,031 each. Question: - What is the cost of 2nd class cars of that pattern? Answer: -£857 each. Question: - What is the number of passengers such cars will carry? Answer:—1st class, 60 passengers.
2nd ,, 70 . ,, (10.)—Question: -What is the average space accommodation in cubic feet afforded to each passenger in such cars? Answer: -Each 1st class passenger, 36 4 cubic feet. 2nd ,, (11.)—Question:—What is the weight of such cars?

Answer:—1st class, 13 16 2 2nd , 13 5 0 (12.)—Question:—For what length of time will such cars last, and what is the average cost of keeping them in repair? -From 20 to 25 years. Answer: :-For repairs—1st class, per annum, £25. 2nd " -Is it intended to construct any more such cars; and if so, how many are now ordered? -Question:—Is it intended to construct any more such cars; and if so, how many are now ordered?

Answer:—The question as to further supply is under consideration. One 1st class and four 2nd class cars of this type are at present in course of construction. (14.) — Question :—Is it intended to construct more cars of the American pattern; and if so, how many are now ordered? Answer: - Fifteen 1st class of this type contracted for, two of which are now ordered and in course of construction. Fifteen 2nd class of this type contracted for, two of which are now ordered and in course of construction.

No. 1.

Mr. Surveyor Melrose to The Engineer-in-Chief for Railways.

Report upon examination of country between Wagga Wagga and Tumberumba, with a view to Railway Extension.

Sir, I have the honor to report, in accordance with your instructions, upon the country between

I have the honor to report, in accordance with your instructions, upon the country between Wagga Wagga and Tumberumba, with a view to railway communication.

The line I would recommend for trial survey commences at the South Wagga Wagga Railway Station, altitude about 604 feet, bearing south-easterly to the left of Villons Hill to Walsh's slaughter-yard; thence by Isaac Anneson's house to the south-east end of Gumly Gumly Common; thence through Graham's farm to Donnelly's gate, near Hoollahan's farm; thence through a low gap in dividing range on James Backer's selection, crossing the Tywong Creek to reserve on Molong Run, at junction of O'Brien's and Kyeamba Creeks, crossing the Kyeamba reserved road; thence to M'Cormack's selection on Yellow Creek; thence following the course of Yellow Creek easterly to the old road leading to Mate's, and following the said road to Archer's

NΩ

Archer's selection on the Main South Road; thence south-easterly by Saw-pit Gully to College Gully, crossing the Comatawa Range and Macnamara Creek to Umbango Creek Public School; thence following the general course of the said creek upwards to Cobden's, leaving what is known as the "Long Gully" to the west, still following the course of Kyeamba Creek, reaching Jonathan Gully, to Dowty's farm, on the Sydney and Tumberumba Road; thence to Mann's Creek, and so south-easterly to Glenroy; thence still south-easterly to Tumberumba Common, the altitude of which is 2,400 feet above sea-level.

About 4 or 5 miles of the latter portion of this line will be rather heavy and will no doubt take some time to work up, but I am of opinion a pretty fair line may be found in the direction indicated on the

county map.

I have travelled over other parts of this range to the south-west and on to Carabost, but found I have, &c. nothing so good as the route above described. GEORGE MELROSE

No. 2.

Mr. Surveyor Miller to The Engineer-in-Chief for Railways.

Germanton, 31 October, 1882. I have the honor to report that, in accordance with your instructions, I have thoroughly examined the country lying between Culcairn and Tumberumba, and I beg to submit for your consideration the annexed results.

I have been unable to find anything like a satisfactory line for a trial survey with a view to railway

The difference of level between Culcairn and Tumberumba Common is nearly 1,700 feet, and the country for the first 38 miles rises very gradually up to a gap on the Carabost boundary, which is about 1,800 feet above the sea-level.

The table-land is reached 12 miles For the next 6 miles the country falls rapidly about 400 feet. further on, so that the remaining elevation, amounting to nearly 1,000 feet, must be gained in this

distance

Should it be thought advisable to run a trial survey from Culcairn to Tumberumba, the following is

in my opinion the most likely route :-

Starting from the 355-mile post, about three-quarters of a mile north of the Culcairn Station, and running in a general easterly direction to the township reserve of Morven; thence following up the Billabong Creek to the bridge where the main road from Culcairn to Germanton crosses that creek; thence following up the Ten-mile Creek and the main road to a point on the Germanton temporary Common; thence following the Main Sydney Road through the township of Garryowen to Mr. Kirby's conditional purchase on the Four-mile Creek; and thence in an easterly direction to a gap in the Dividing Range, which separates counties Goulburn and Selwyn; thence following the main road to the Tumberumba Common.

This line is the best I could find; but it would, I believe, be very expensive and heavy.

I have examined several suggested lines and amongst them the more direct route by way of Varra

I have examined several suggested lines, and amongst them the more direct route by way of Yarra Yarra, Yarara and Copabella; but on account of the extreme roughness of the country I believe them to be

I may remark that between Culcairn and Germanton I have preferred the north side of the Billabons to the more direct and easier route to be obtained on the south side, because the main road has already severed the north frontages to the creek, and because ballast can be obtained close to the line.

I have, &c., W. V. MILLER.

No. 3.

Mr. Surveyor Miller to The Engineer-in-Chief for Railways.

93, Cleveland-street, Redfern, 6 November, 1882. I have the honor to report that, in accordance with your instructions, I have examined the country between Gerogery Railway Station and the town of Corowa, with a view of finding a line suitable for railway communication, and I now beg to submit the results for your consideration.

The line would pass through a country composed principally of slight undulating hillocks, attaining

only at one spot any considerable elevation.

The following I would recommend for trial survey :--

Starting from the Gerogery Station and going due west until clear of the Gerogery Range; thence south-westerly, crossing the Waldundrie Road at a point about 2 miles south of Wedlock's corner; thence over a gap in the range to the head of Major's Creek; thence following that creek to a point about 3 miles north of the town of Howlong; thence south-westerly to a point on the main road from Corowa to Albury; thence following the general direction of that road to the town of Corowa.

I believe an easy and cheap line can thus be easily secured between Gerogery and Corowa.

I believe an easy and cheap line can thus be easily secured between Gerogery and Corowa:

I have also driven over great portion of the country between Culcairn and Corowa; it is almost all flat, with here and there small undulating hillocks. If it were proposed to run a trial survey between those places, I think a suitable line might be found passing through Waldundrie to a point south of the Oil-tree Lagoon, and thence south-westerly to Corowa.

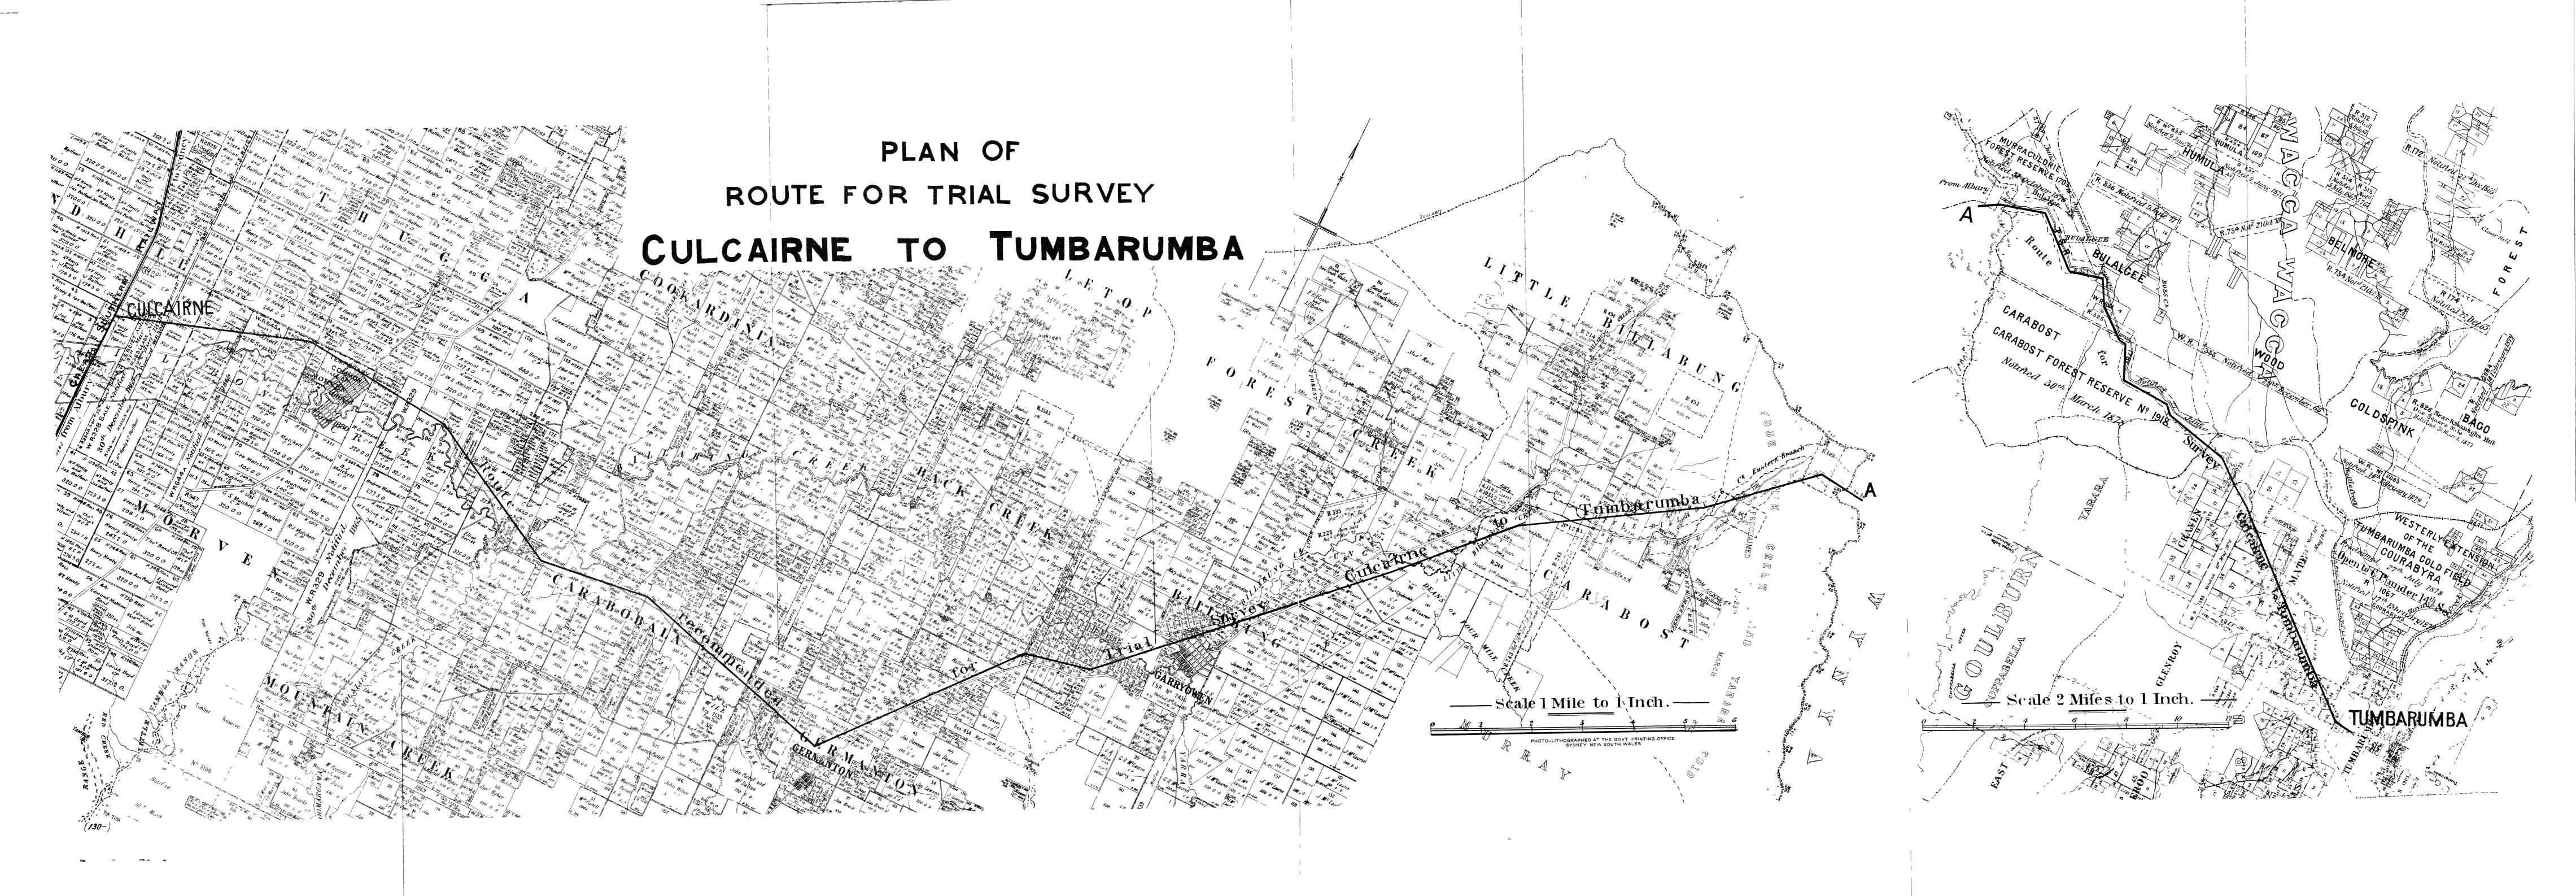

U. W. W. MILLER.

DARLING HARBOUR RAILWAY.

No. 1

Petition to Secretary for Public Works.

To the Honorable John Lackey, Esq., Minister for Public Works.

The memorial of the undersigned inhabitants, of holders of property, dealers, and persons engaged in business, at Darling Harbour, Ultimo, Pyrmont, Balmain, and surrounding districts, respectfully showeth :-

1. That the traffic upon the railway at Darling Harbour has increased, and is daily increasing, in a most unprecedented manner, and that the present arrangements for the traffic of vehicles and foot passengers are totally inadequate, and a continued source of danger to life and property.

2. That the detour now rendered necessary is a source of very great inconvenience, loss of time, and increase of expense to ourselves and all parties living on the western side of the railway line (in being thus practically cut off from the goods sheds), which your memorialists earnestly trust will be speedily removed.

3. That we have been informed and believe that a crossing place for vehicles has been already reserved by the Government, at the intersection of William Henry Street and the Railway Lines Reserve; we would therefore most respectfully press upon your consideration the absolute necessity of making the same available for vehicular traffic at once.

4. That we have learned (from statements in the public Press) that it is contemplated by the Government to resume land sufficient to enable Goulburn-street to be continued through to the reclaimed ground; we therefore beg respectfully to suggest, in that event, that the roadway may be continued across the lines to Harris-street, to the manifest public convenience and advantage.

5. From the same source we learn that you intimated to a deputation which waited upon you a few days ago that it was proposed to erect a steam crane on an elevated platform, and to run a passenger footway alongside; we however desire to point out to you that great as such proposed footway would be it is utterly inadequate to meet public requirements, as some provision for the crossing of vehicles is now absolutely necessary and daily and hourly more urgently required.

Your memorialists therefore beg that you will be pleased to take the foregoing into your earnest and favourable consideration and to give the necessary directions accordingly.

Sydney, February, 1879.

[Here follow 260 signatures.]

No. 2.

The Commissioner for Railways to The Crown Solicitor.

Level crossing over the Darling Harbour Branch Railway to admit of drays and other vehicles obtaining access to Pyrmont from Darling Harbour Wharf.

THE first question to be determined in connection with this matter is the liability of the Railway Department to afford a crossing over the line. It is alleged that when the land was taken to form the railway streets had been proclaimed and the right was reserved to open those streets across the line.

Will the Crown Solicitor be good enough to ascertain from the terms of the deeds of conveyance of the land in question whether such right was reserved, and advise me as to the particulars of such reservation (if any).—Ch.A.G., B.C. 13/3/79.

No. 3.

The Crown Solicitor to The Commissioner for Railways.

Crown Solicitor's Office, Sydney, 23 January, 1880. Sir, I have the honor to return herewith the papers relating to the application for a level crossing over the Darling Harbour Branch Railway to admit of drays and other vehicles obtaining access to Pyrmont from Darling Harbour Wharf, and, with reference to your inquiry as to the terms of the deed of conveyance of the land, to state the conveyance from the Messrs. Harris and others contains a reservation, as in the paper marked A, relating to Ultimo-street, Macarthur-street, and Ann-street, which refers to an agreement made between the Commissioner and the parties to that conveyance, bearing date 28th September, 1867. The paper marked B sent herewith is an extract of all material particulars from that agreement, and from it you will see the particulars of such reservation.

I have, &c.,

JOHN WILLIAMS, Crown Solicitor.

[Enclosure A to No. 3.]

Saving and reserving unto the said parties hereto of the first and second parts respectively and their respective heirs and assigns the rights of way and passage under the Railway Bridge at Ultimo-street and the right of making Bridges at Macarthur and Ann Streets and all other the rights with respect to the said Bridges as set out and mentioned in a certain Indenture bearing date the twenty-eighth day of September instant and made between the Commissioner for Railways of the first part the said John Harris George Harris John Harris Matthew Harris Margaret Harris William Henry Harris James Fullerton and Nancy Ann Harris of the second part the said James Fullerton of the third part and the said James Fullerton and John Harris of the fourth part.

[Enclosure

Enclosure B to No. 3.]

And the Commissioner for Railways for himself and successors doth hereby also covenant with the said James Fullerton and John Harris their heirs and assigns that in case at any time within the space of three years next following the day of the date of these presents the said parties hereto of the second part or any one or more of them their his or her heirs executors administrators or assigns shall be desirous of substituting and constructing in lieu of the present bridge or viaduct of a bridge or viaduct of the width of 66 feet to carry the said railway over the line of macarthur-street for the purpose of obtaining the like way or passage themselves as is hereby granted in the line of Ulmo-street or shall be desirous of building a bridge or viaduct in the line of Ann-street in lieu of the bridge or culvert existing at the present time immediately to the north of that street and of such desire shall give notice in writing to the Commissioner for Railways his successors or assigns within such time as will reasonably allow of the works required to be constructed in the terms of such notice being completed and finished in all things within the term of three years from the date hereof then and in such case after the expiration of such notice and subject to such provisions and precautions as the Engineer-in-Chief for the time being of the Commissioner for Railways his successors or assigns may direct or require the Commissioner for Railways aforesaid and his successors shall permit and suffer the person or persons giving such notice his her or their heirs executors administrators or assigns at his her or their own proper expense to build and erect such bridge or viaduct as aforesaid in respect of the matters aforesaid or any one or more of them so that in every case the works necessary for effecting the same shall be performed in a good substantial and workmanlike manner and with suitable material according to plans and specifications to be approved of before the commencement of the said work works of a more substantial or ornamental character than the average character of works for like purposes which shall at the time of giving such notice have been constructed by the Commissioner for Railways aforesaid upon the Great Southern and Great Western lines of railway in the said Colony.

Mr. Mason to see.—Chas. A.G., 28/1/80.

Seen.—W.M.

Commissioner, 3/2/80.

Minute of the Commissioner for Railways.

As no notice was given by the Messrs. Harris of their intention to make the bridges referred to within the prescribed time, viz., three years from 28th September, 1867, it would appear that the Department cannot now be called upon to give access over the line.

There is allusion made to a bridge or culvert existing at Ann-street—does this structure still exist? if not, it appears that there will be a claim to a right-of-way at this place.—Сн.А.G., 9/2/80. Mr. Mason.

The bridge near to Ann-street is still in existence, although not in a line with the street, but not far off.—W.M., 11/2/80. Commissioner.

No. 4.

Mr. Selfe to The Commissioner for Railways.

Sir.

183, Pitt-street, Sydney, 9 December, 1879.

I learn from the public papers that a deputation is about to wait on the Minister for Works with a view to obtain a crossing over the railway near to the Darling Harbour Depôt.

I have myself experienced the want of such a convenience, and having given the subject some attention do myself the honor to transmit for the consideration of your Department a plan which shows how the desired accommodation can be obtained without the disadvantages of a level crossing, and which will also save more than half-a-mile over the present means of communication.

I have, &c., NORMAN SELFE.

The accompanying drawing shows a bridge over the Darling Harbour Branch Railway and Pyrmont-The approach from Hay-street is by an incline of about 1 in 15, which gradient is continued right up to Harris-street. The railway is shown as crossed by a girder bridge, which reduces the gradient and does away with the many objections which would obviously attend a level crossing, where the traffic both by road and rail would be so continuous.—N.S., 9/12/79.

Minute of the Commissioner for Railways. I think a day is appointed for deputation. Let me have papers at once.—CH. A.G., 10/12/79.

No. 5. Report of Deputation.

Extract from Sydney Morning Herald, 13th December, 1879.

MESSRS. J. Harris, M.L.A., Alderman Meeks, W. M'Credie, and W. Cook, waited on Mr. Lackey yesterday with a view of inducing the Government to erect a bridge over Darling Harbour. Mr. Lackey said he would have the matter referred to the Railway Engineer for his report, but the Government could do nothing until such a report was before them.

Mr. Mason for report.—Ch.A.G., B.C., 26/2/80.

(Letter from Crown Solicitor, as to rights-of-way over the line at Darling Harbour herewith.)

A communication could be made between Sydney and Pyrmont, over the Darling Harbour branch, by continuing William-street on to Hay and Pier Streets, but the work would be costly, as it involves a great length of bridges on the approaches.—W.M., 19/3/80. Commissioner.

Minute of the Commissioner for Railways. To be considered at some future time; in the meantime a footbridge is being provided.—CH.A.G., 23/3/80.

No. 6.

No. 6.

Mr. W. Roylance to The Commissioner for Railways.

Trades and Labour Council of New South Wales,

Hyde Park Hotel, Bathurst-street, Sydney, 27 November, 1880. I have been directed by the above Council to call your attention to the dangers constantly incurred by the public at the railway crossing adjacent to the Goods Department, Darling Harbour. information laid before the Council it seems to be a constant practice for drivers to stop on the crossing, necessitating pedestrians using the road to travel round the trains, and in many cases before this is accomplished the train is in motion, to say nothing of the additional danger incurred from trains approaching on

the other line of rails. In the evening the risk referred to is increased, there being no lights or other means adopted to warn

the public of the danger incurred.

In wet weather, the elevation of the line being considerably above its immediate surroundings, the state of affairs is considerably aggravated by the slippery bank pedestrians are forced to climb to accomplish

the crossing.

From past experience and the uniform courtesy and attention paid to all matters the Council have thought fit to bring under your notice, we are of opinion the foregoing facts need only to be brought before you to ensure an amendment in the direction indicated, so far as is consistent with the interests of the public I have, &c., WM. ROYLANCE. at large.

General Secretary.

Minute of the Commissioner for Railways.

Will Traffic Manager see whether the cause of inconvenience complained of can be removed.—CH.A.G., 29/11/80.

Station-master, Darling Harbour, for report.—W. V. READ, 30/11/80.

This crossing place is between the goods shed points and the Atlas Works, where we have to make up all our trains; and as all the goods trains arrive here direct the crossing up to 12 noon is nearly always blocked; but I have a man placed there to warn people, and to prevent them crossing under the trucks when the trains are in motion. At night time we have several trains arrive which block the crossing until the trains are shunted; and I dont see how this can be altered, as we are so busy, and such heavy trains arriving; they all have to pull down to the goods shed points to clear the top points at the stone siding to enable shunting engine to get round the trains. It is very advisable to have an overhead bridge for foot passengers put up at once.—Chas. Paull, 1/12/80. Traffic Manager.

Minute of the Traffic Manager.

An overhead bridge or underground way for foot passengers should be provided at the place named as early as possible.—W.V.R., 2/12/80. Commissioner.

Minute of the Commissioner for Railways.

Inform Mr. Roylance of the report made, and add that the only remedy would seem to be the erection of a bridge for foot passengers.—Сн. A.G., 4/12/80.

No. 7.

The Commissioner for Railways to Mr. W. Roylance.

Sir,

Department of Public Works, Railway Branch, Sydney, 7 December, 1880.

In acknowledging receipt of your letter of the 27th ultimo, directing attention to the inconvenience and danger passengers using the railway crossing adjacent to the goods shed at Darling Harbour are subjected to through the line at this point being blocked by goods trains, I have the honor to inform you that the matter has been referred to the Traffic Manager, and from reports received I find that the inconvenience referred to is caused by the large goods traffic carried on at Darling Harbour, but every means is taken to prevent any accident happening to passengers through the running of the trains. The exigencies of the traffic however require that trains should stand on this crossing, and the only remedy appears therefore to be the erection of a footbridge for the use of passengers.

I have, &c.

CHAS. A. GOODCHAP,

Commissioner for Railways.

No. 8.

The Station-master, Darling Harbour, to The Traffic Manager.

Sir. Darling Harbour, 5 January, 1881. I would again draw your attention to the desirability of some immediate provision being made with respect to the level crossing, Ultimo. Thousands of people use this crossing in getting to the city, especially on Saturday nights, and although a man is on duty there night and day, at considerable expense,

his efforts, in many instances, to prevent people getting over and underneath the many trains are futile.

As a safety to the public who require this crossing, and to relieve myself or any of the staff of blame in case of accident, I trust some immediate steps will be taken in the matter. The level of the line at the crossing is about 10 feet on the one side and about 4 feet on the other side higher than the adjacent land, and I would suggest that an underhead bridge be constructed, which would save considerable expense, and be a greater benefit, as an overhead bridge would have to span 5 lines of rails.

I have, &c. CHAS. PAULL.

Minute

Minute of the Traffic Manager.

I would recommend a subway in preference to an overhead bridge.—W.V.R., 17/1/81. Commissioner.

Minute of the Commissioner for Railways.

Will Mr. Mason say what the cost of a subway would be, and whether it is practicable to make one. How far would the footbridge attached to overhead traveller meet the want.—CH.A.G., 20/1/81.

The footbridge alongside traveller would I believe suffice for the majority of foot passengers between Sydney and Pyrmont. As far as I remember, a subway would be impracticable, or at all events not advisable to make one.—W.M., 24/1/81. Commissioner.

Minute of the Commissioner for Railways.

The effect of the footbridge on overhead traveller must be tried first, before any additional outlay is ed.—CH.A.G., 28/1/81. Traffic Manager, B.C. incurred.—CH.A.G., 28/1/81.

Mr. Paull, Darling Harbour, to see.—W. V. READ, 31/1/81.

Seen; but some time since the Commissioner issued strict instructions to prevent the public using the Darling Harbour yard, &c., as a thoroughfare, and we were obliged to open the level crossing previously mentioned, the use of which is on sufferance only. As the footbridge attached to the overhead traveller, now in course of erection, will have several flights of steps leading into the yard, it is obvious that the traffic of foot passengers through the premises will be as great as previous to any check being put upon it, and now that all the inwards goods come to Darling Harbour (some of which are always outside the sheds in trucks) it would be miraculous if some three or four thousand persons of all classes would pass through day and night without committing some theft. The risk of fire would be increased, also the danger in shunting (especially at night time), if the public be allowed to use the yard as a thoroughfare. The entrance gates have been blocked with galvanized iron to prevent people getting through them; and taking the above facts into consideration, I feel sure the subway would be preferable.—Chas. Paull, 7/2/81. Traffic Manages.

Minute of the Traffic Manager.

The effect of letting the public into the Darling Harbour yard by using the footway in connection with travelling crane will be to increase the risk complained of in connection with the crossing now used, to say nothing of what has been pointed out of leaving the Darling Harbour yard open to the public day and night. I would like the Commissioner to inspect the locality.—W.V.R., 7/2/81.

Minute of the Commissioner for Railways.

Gates have been put up, or at all events authorized, which are to be closed, so that the bridge cannot be used after the yard is closed at night. I will inspect on an early day.—Ch.A.G., 10/2/81. Traffic Manager, B.C., 12/2/81.—G.B.

Minute of the Traffic Manager.

They are locked at night, and the public are kept out of yard; Yes, the gates have been put up. but if the footway spoken of is opened the yard will be accessible from it at all hours.—W.V.R., 15/2/81. Commissioner.

No. 9.

Mr. Selfe to The Commissioner for Railways.

Sir. 141, Pitt-street, 24 January, 1881. I had the honor, on the 9th of December, 1879, to forward you a plan showing how a bridge could be constructed over the railway at Darling Harbour, to accommodate the traffic in the neighbourhood and meet the wants which were expressed at a public meeting held just before. Subsequently a deputation

waited on the Minister for Works on the matter, on the 12th of the same month, and permission was given for a level crossing

As I have frequently witnessed the great danger which exists at such crossing, from the great number of people who use it and the frequency of the trains, and as, moreover, there is still no accommodation for vehicles, I have put my original proposals into more complete shape, and have the honor to enclose herewith a photograph and tracing showing the proposed improvements.

As a great portion of this much required bridge would be in the streets of the city, which are under the jurisdiction of the City Council, that body would probably be willing to bear a portion of the cost of its

The present Mayor, John Harris, Esq., was one of the deputation which waited on the Minister asking for this bridge, and at his request I am forwarding to the Council copies of my plans.

Should it be determined to construct the much needed work, I shall be glad to place my services at

the disposal of your Department and the City Council for carrying the same into effect.

My approximate estimate, including approaches, is £5,700. The proportion of this sum to be paid by the Government and the City Council would be a matter for mutual arrangement.

I have, &c.

NORMAN SELFE.

Resubmit in a week.—CH. A.G., 28/1/81. Corporation propose doing.—CH.A.G., 7/2/81.

Resubmitted.—5/2/81. Resubmitted, 1/3/81.

End of month to see what

No. 10.

Mr. Abigail, M.P., to The Secretary for Public Works.

589 and 591, George-street, Sydney, 18 February, 1881. At the request of a large and influential body of citizens residing and having extensive business premises at Ultimo and Darling Harbour, I beg to bring under your notice the pressing necessity of better means of road traffic. They respectfully suggest that Factory-street could, at a small cost, be taken through to Sussex-street; it is already partly carried through, and the only obstacles to its continuation are old dilapidated buildings, most of which have been condemned by the City Council. I

I have examined the locality, and it does appear to be reasonable.

I therefore venture respectfully to ask that you will be good enough to have the necessary inquiry made to see if the request may be complied with.

I may add that a petition is in course of signature setting this forth, and I would prefer if it could be done without. Asking your early attention,-I have, &c.

FRANCIS ABIGAIL.

Minute of the Secretary for Public Works.

Is it the case that the traffic here requires additional accommodation? I thought the grounds for complaint had been removed.—J.L., 22/2/81.

Minute of the Commissioner for Railways.

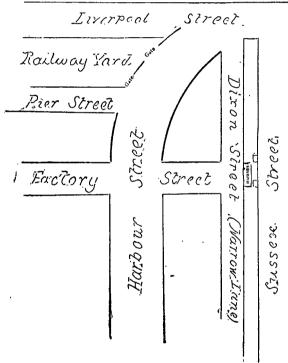

Put papers with this and ask Traffic Manager to report whether there is now much impediment to the vehicular traffic to and from Darling Harbour. We have widened Dixon or Harbour street, except in one Further outlets from the yard will ultimately be required.

Traffic Manager will please report early how the present traffic is being accommodated.—Ch.A.G.,

23/2/81

Goods Superintendent for immediate inquiry and report.—W. V. Read, 25/2/81.

The attached rough plan will serve to show at a glance the position of Factory-street and the proposed connection with Sussex-street, and there is no doubt if carried out will prove a great boon to many, as the opening of this street will avoid to a great extent the steep grade of Liverpool-street, and will therefore be much used, and will only mean, as stated, the removal of two old condemned houses and two or three old sheds at the back.—G. F. Evans, Traffic Manager, 1/3/81.

Minute of the Traffic Manager.

The proposed street would not facilitate the railway traffic. In the sketch enclosed, marked A, the portion of land it is now proposed to take in is marked blue; this would allow of drays getting through into Sussex-street, but it would be no more difficult to get round into Goulburn-street by way of Dixon than it would be by Sussex street; but the blue lines only show a portion of what it is intended to ask. I believe the portions of ground within the red lines are included in the scheme for improving Factory-street. Any work of the kind should I think be carried out by the Corporation, at least not by the Railway Department. An improvement that would assist the Railway Department would be the opening through of Goulburnstreet.—W.V.R., 7/3/81. Commissioner.

No. 11.

Mr. Jervis to Secretary for Public Works.

Sir, Ultimo Post Office, 17 February, 1881. At a public meeting held at the Congregational Church, Harris-street, on Wednesday, February 16th, for the purpose of urging upon the Government the absolute necessity of building a bridge across the

Harbour, the following resolution was passed:—

That a deputation should wait upon the Minister of Works to place before him the resolutions passed at this meeting, and that this deputation shall consist of the City Council, the Members for West Sydney, and the various Mayors of the Municipalities interested in this movement, and also such members of this meeting as shall now be nominated.

I shall feel honored if you will let me know when it will be convenient for you to receive this I have, &c., WALTER JERVIS, deputation.

Mr. Abigail informed that Minister would receive a deputation on this matter on Friday, the 11th, Railways, for requisite information. -J.R., 4/3/81.

No. 12.

Minnte of the Secretary for Public Works.

I pointed out to deputation that a portion of this belonged properly to the Corporation, and that if the Corporation were to place themselves in communication with the Department that we would be prepared to do that part of the work which belonged to the Railway Department. In the meantime instructions must be given for the traffic to impede this passenger thoroughfare as little as possible.—J.L., 11/3/81.

Traffic Manager, B.C.—G.B.

Minute of the Traffic Manager.

Seen. A footbridge would be a great convenience at the place named.—W.V.R., 22/3/81. Commissioner.

Minute of the Commissioner for Railways.

To await action of Corporation.—CH.A.G., 26/3/81.

No. 13.

Petition to Secretary for Public Works.

The Honorable the Minister for Works,-

We the undersigned wood, coal, and produce merchants, and others, residents of Darling Harbour and surrounding district, respectfully solicit that Factory-street may be continued through to Sussex-street, as great inconvenience is at present experienced by the public through the said street being, comparatively speaking, closed. We are, &c.,

No. 14.

F. Abigail, M.P., to The Secretary for Public Works.

Sir, George-street, Sydney, 9 June, 1881. On February 18th I wrote you about carrying Factory-street through to Sussex-street, from Darling Harbour. I afterwards presented a numerously signed petition from property holders and residents of the locality in favour of the same. Not having heard if it were favourably considered or otherwise, I take the liberty of asking if anything has been done, and is there any hope that either Factory or Goulburn Street will be carried through. As this is a portion of my electorate, and the petitioners are daily asking me what has been done with their petition, I request the favour of your early reply.

I have, &c., F. ABIGAIL.

Minute of the Commissioner for Railways.

The Minister wishes Mr. Abigail to be informed that the measures suggested by the petitioners referred to for increasing the outlets from the Darling Harbour Wharf have not been lost sight of, but the consideration of the scheme has been postponed for the present pending the determination of some arrangements which are being made for the increase of wharf accommodation at Darling Harbour and approaches thereto.—CH.A.G., 10/6/81.

No. 15.

The Commissioner for Railways to Mr. Abigail, M.P.

Department of Public Works, Railway Branch, Sydney, 12 June, 1881. Sir, In acknowledging the receipt of your letter of the 9th instant, with reference to the petition presented by you, signed by several residents and property holders living in the vicinity of Factory and Sussex Streets, relative to the carrying of Factory-street, Darling Harbour, through to Sussex-street, I have the honor to inform you, by direction of Mr. Secretary Lackey, that the measures suggested by the retitioners referred to facility the couldn't four property the couldn't four property that the measures suggested by the petitioners referred to for increasing the outlets from Darling Harbour have not been lost sight of, but the consideration of the scheme has been postponed for the present pending the determination of some arrangements which are being made for the increase of wharf accommodation at Darling Harbour and the I have, &c., CH. A. GOODCHAP, approaches thereto.

Commissioner for Railways.

No. 16.

Minute of Traffic Manager.

I WOULD again call the Commissioner's attention to the urgent necessity for having a subway or overhead bridge constructed at Darling Harbour, where the line crosses William Henry Street.

The station-master reports that, although there is a man constantly on duty there, it is impossible to prevent the public from crossing the line at this point, and that sooner or later an accident is sure to occur, some persons even persisting in crawling under the trucks, notwithstanding all his endeavours to prevent

Will the Commissioner please give this matter his early attention.

W. V. READ, 28/12/81.

Minute of the Commissioner for Railways. Write to Town Clerk stating case, and ask if the Council is prepared to pay cost of approaches to the bridge.—CH.A.G., 29/12/81.

No. 17.

The Commissioner for Railways to The Town Clerk, Sydney.

Department of Public Works, Railway Branch, Sydney, 11 January, 1882. Sir, I have the honor to inform you that numerous representations, by deputations and otherwise, have been made to this Department as to the urgent necessity for having an overhead bridge constructed at Darling Harbour, where the line crosses William Henry Street. It appears from reports received that although a man is on constant duty there it is impossible to prevent the public from crossing the line at this point, and as the traffic is large there is great danger of some accident occurring. I have to ask whether the Municipal Council will bear the cost of the approaches, should it be decided by the Department to erect I have, &c. the over-bridge

CHAS. A. GOODCHAP, Commissioner for Railways.

No. 18.

The Station-master, Darling Harbour, to The Traffic Manager.

Darling Harbour, 20 January, 1882. Sir, I would again call your attention to the great danger that exists at this station in people crossing over the lines to Ultimo and Pyrmont. Only on Wednesday we had a very narrow escape of a little girl getting killed; there were two trains standing on the line, and the man in charge of the crossing was doing his best at one side of the line to keep the people from passing under the trucks until the engine was cut off and away, and while he was doing so this little girl got under on the other side, and just as she did there were some trucks shunded on the train at the other end, which caused the train to go on, and only the man in charge called out for her to lay down flat on her face in all probability she would have been killed; as the trucks only went about four lengths she met with no hurt.

I would mention that thousands of people cross this place in a week, and although the new bridge has been opened across the yard, where the travelling crane is, the people will not cross there—only just odd I can assure the Traffic Manager that the greatest danger exists at this crossing, ones through the day. especially on Saturday nights, when such numbers of people cross to town, and on their return many of them the worse for drink.

CHAS. PAULL.

Minute of the Traffic Manager.

I would again draw the Commissioner's attention to necessity for a footbridge or subway at the place named; the danger is very great, and a temporary footbridge could soon be put up, and at a not very great expense. Something should be done at once. I would ask that the crossing be closed until something is done.—W. V. READ, 20/1/32. Commissioner.

Minute of the Commissioner for Railways.
No reply received to our letter to Town Clerk of 11/1/82. Remind.—Сн. А.С., 4/2/82.

Ask Town Clerk if the proposal of the Municipal Council to share in providing for the rest of this work has been abandoned.—CH.A.G., 5/6/82.

No. 21.

The Commissioner for Railways to The Town Clerk, Sydney.

Sir, Department of Public Works, Railway Branch, Sydney, 6 June, 1882. I have the honor to again draw your attention to my letter of the 11th January last, respecting the urgent necessity that exists for the construction of a subway or overhead bridge at William Henry Street, Darling Harbour, and have to ask whether the proposal of the Municipal Council to share in providing the cost of this work is abandoned.

Soliciting the favour of an early reply.

I have, &c., CH. A. GOODCHAP,

Commissioner for Railways.

No. 22.

The Town Clerk, Sydney, to The Commissioner for Railways.

Sir. Town Clerk's Office, Sydney, 15 June, 1882. Referring to your letter of the 6th instant, and to previous letters, on the subject of the construction of a subway or overhead bridge at Darling Harbour, I have the honor, by direction of the Right Worshipful the Mayor, to state that His Worship has had several interviews with the Honorable the Minister for Works on the matter, and is awaiting a further communication which the Minister promised should be forwarded after a reconsideration of the question as to whother the entire cost of the proposed work should not be defrayed by the Government.

I have, &c.,

CHAS. H. WOOLCOTT,

Town Clerk.

Minute of the Commissioner for Railways.

See if there be any papers on this subject in Public Works. I have not been made aware that a correspondence with the Corporation on this subject was being conducted in the ministerial branch. Ch.A.G., 17/6/82. Under Secretary for Public Works, B.C.

No correspondence has taken place in this office with the Town Clerk, but I understand that letter of 6th instant and other letters were sent from Railways.—J.R., B.C., 23/6/82.

Minute of the Commissioner for Railways.

Of course I was aware that we had sent a letter dated 6th June to the Town Clerk; it was to ask if the project had been abandoned. The reply says that they are awaiting a further communication, which the Minister promised should be sent. I was not aware, as I stated, that a communication had been sent from the ministerial branch, and it would seem none had been sent. The term "further communication" would therefore seem to be misleading.—CH.A.G., 30/6/82.

No. 23.

Minute of Traffic Manager.

With reference to my minutes of 28th December, 1881, and 12th April, 1882, relative to the necessity there. With reference to my minutes of 28th December, 1001, and 12th April, 1002, 10121. To the list for making either footbridge or subway leading into William Henry Street, Darling Harbour, will the Commissioner kindly let me know if anything is likely to be done towards erecting this footbridge or where we will be with the W. V. READ, 18/7/82.

Minute of the Commissioner.

I think the City Council should be informed that the Government will expect them to pay for the approaches to bridge, and will be unable to proceed with the work till they have consented to be at this cost.—Ch.A.G., 24/7/82.

Minute of the Secretary for Public Works.

Inform.—J.L., 4/8/82.

The Commissioner for Railways to The Town Clerk, Sydney.

Sir, Department of Public Works, Railway Branch, Sydney, 9 August, 1882.

Referring to your letter of the 15th June last, relative to the construction of a subway or overhead bridge leading into William Henry Street, Darling Harbour, I have the honor to inform you that your communication has been brought under the attention of the Secretary for Public Works, and he desires me to state, in reply thereto, that the Government will expect the Municipal Council to pay for the approaches to the bridge, and will be unable to proceed with the work until an intimation is received that I have, &c., C. A. GOODCHAP, the Council consent to be at this cost.

Commissioner for Railways.

Traffic Manager.—G.B. B.C., 9/8/82.

Seen.—W. V. READ, 14/8/82. Commissioner.

No. 25.

The Town Clerk, Sydney, to The Commissioner for Railways.

Town Clerk's Office, Sydney, 17 November, 1882. Sir. Referring to your several letters on the matter of the formation of the approaches to the proposed overhead railway bridge, Darling Harbour, I have the honor, by direction of the Right Worshipful the Mayor, to inform you that a recommendation will be submitted for the consideration of the City Council on the 5th proximo, for the payment of one-half the cost of carrying out the work in question. I have, &c.,
C. H. WOOLCOTT

Seen.—W. V. READ, 29/11/82. Traffic Manager to see. G.B., B.C., 23/11/82.

Town Clerk. Commissioner.

No. 26.

The Town Clerk, Sydney, to The Commissioner for Railways.

Town Clerk's Office, Sydney, 8 December, 1882. Sir, Referring to correspondence on the subject of the proposed construction of a subway or overhead bridge at the railway line at William Henry Street, Darling Harbour, I have the honor, by direction of the Right Worshipful the Mayor, to inform you that the City Council are of opinion that the entire cost of constructing a means of passage across the railway, as well as the approaches thereto, should be defrayed by the Government. I have, &c.,

CHAS. H. WOOLCOTT,

Town Clerk

Minute of the Commissioner.

Mr. Lackey has seen this paper and directed it to be put by for the present, in the expectation that the City Council will become more reasonable.—CH.A.G.

No. 27.

Minute of Traffic Manager.

I DESIRE to refer the Commissioner to my minutes of 8th December, 1881, 12th April, 1882, and 18th July, 1882, respecting the urgent necessity for the erection of an overhead bridge at Darling Harbour, where the line crosses William Henry Street. As my attention has been again drawn to the matter I shall be glad if the Commissioner will kindly let me know what prospect there is of the work being proceeded with. The population in the neighbourhood is increasing, and consequently there are now more people crossing the yard.

W. V. READ, 13/3/83.

Minute of the Secretary for Public Works.

I concur with Mr. Lackey that this expense should be jointly borne by City Council and Railway Department.—F.A.W., 19/6/83. Traffic Manager to see.—G.B., B.C., 20/6/83. Seen.-W. V. READ,

No. 28.

The Station-master, Darling Harbour, to The Traffic Manager.

You will remember that when the steam crane was first used and the overhead bridge finished at this station that instructions were given that the gates of the bridge should be opened daily (Sundays excepted) for the public to use when going to and fro from Ultimo and Pyrmont to Sydney. will remember that Mr. Goodchap was here with him at the time when the orders were given, and I pointed out that the crossing, which was about 100 yards from the bridge, would have to be used as well, when it was consented to. I would now respectfully ask that the use of this bridge for foot passengers be stopped, because there are not many who use it, but those who do have such a chance of seeing goods, &c., laying in the trucks and on the platforms as they pass to and fro through our yard, and no doubt this has had something to do with the pilfering that has taken place at times. If this bridge were closed we could then keep all persons out of the yard but those who had lawful business here. If it were closed I do not believe there would be a word of complaint from the public, because the greater majority by far cross over at the level crossing about 100 yards east of the bridge. At present numbers of larrikins get on the top of this bridge through the gates being open, and they give all kinds of annoyance to the watchmen, and not only that, they can take stock so well there of what is about the platform close by, and if closed it would stop all this. CHAS. PAULL, 25/5/83.

For the reasons given by Mr. Paull I think it advisable that the footbridge be closed. The Commissioner would perhaps approve.—W.V.R., 30/5/83. Commissioner.

Minute of the Commissioner.

The bridge must not be closed till the bridge over the line at present crossing is made. dent were to occur at the crossing any claim that might be made could be met by pleading that the Department has done its best to give a safe crossing by means of this overhead bridge. -Ch.A.G., 9/6/83.

-G.B., B.C., 11/6/83. Inf . Seen.—W.V.R., 15/6/83. Inform Mr. Paull.—W.H.C., 14/6/83. Commissioner.

No. 29.

Mr. Abigail, M.P., to The Secretary for Public Works.

Sydney, 7 August, 1883. I respectfully direct your attention to the extreme necessity of proceeding with the work of constructing the bridge over Ultimo at William Henry Street. Some dreadful accident will surely happen at this place if something is not done. People have to cross the railways, and men have to be stationed at this place to prevent loss of life. The people have no proper crossing, the bridge there being worse than useless. I may mention that plans, &c., have been taken out for the bridge, and there the matter stands. Asking your attention to this much-needed public work. I am, &c F. ABIGAIL

19/6/83. The Corporation ought to join in the expense of this very neces. See Minister's minute of 19/6/83. sary work.—CH.A.G., 14/8/83.

Minute of the Secretary for Public Works.. Inform Mr. Abigail.—F.A.W., 17/8/83. I concur.

No. 30.

The Commissioner for Railways to Mr. Abigail, M.P.

Department of Public Works, Railway Branch, Sydney, 20 August, 1883. With reference to your letter of the 7th instant, addressed to the Honorable the Minister for Public Works, urging that an overhead bridge should be erected at Darling Harbour over William Henry Street, I have the honor, by the direction of Mr. Secretary Wright, to inform you that while the necessity for this work is acknowledged by the Department, it is maintained that the City Corporation should join in the expense of carrying it out. This however they have so far refused to consent to.

I have, &c. CH. A. GOODCHAP, Commissioner for Railways.

No. 31.

Report of Deputation re High-level Bridge over Darling Harbour Railway.

A DEPUTATION comprising Messrs. Harris, Chapman, and Merriman, Ms.L.A., waited upon me to-day in reference to this matter. They stated that the work was very necessary, and considered the expense should be borne by the Government. I informed the deputation that while there was no objection on the part of the Government to bear the expense of providing the bridge, it was considered that the cost of making the approaches, &c., thereto, should be borne by the Corporation: they derived revenue from the streets, and ought, in fairness, to make the approaches. I promised to have a report made as to the probable cost of the bridge and the cost of the necessary approaches, and to communicate result to the Mayor, F.A.W., 21/12/83. Mr. Cowdery—Сн.А.G., В.С., 27/12/83.

Mr. Thomson, for cost of bridge and approaches.—G.C., 29/12/83.

Estimated cost of bridge and piers approaches 11,160

£21,180

No. 32.

The Town Clerk, Sydney, to The Under Secretary.

Town Clerk's Office, Sydney, 17 January, 1884. Referring to previous correspondence on the subject of the formation of the approaches to the proposed overhead bridge at the Darling Harbour Railway (William Henry Street), I have the honor, by direction of the Right Worshipful the Mayor, to inform you that the City Council have agreed to bear the cost of carrying out this work at an expenditure not exceeding £5,900.

It is suggested that the work can be more efficiently and economically performed in conjunction with that for the construction of the overbridge, and that if the Government will arrange to obtain one contractor for the completion of the whole of the work the Corporation will be prepared to contribute the sum named

upon the approaches to the bridge being made to the satisfaction of the City Surveyor.

I have, &c.

CHAS. H. WOOLCOTT, Town Clerk.

Railways.—J.R., B.C., 21/1/84.

I see no objection to the bridge and approaches being carried out in one contract under the supervision of this Department. Will Commissioner now please say if plans for bridge and approaches are to be made. G.C., 24/1/84. Commissioner.

Minute of the Commissioner. A plan was made by Mr. Norman Selfe, C.E., upon which I think the estimate was formed of cost of approaches, which is the amount named by Corporation as their contribution. Will Mr. Cowdery please report upon this plan.—CH.A.G., 24/1/84,

Mr. Thomson, for report on the plan.—G.C., 25/1/84 Report on Mr. Selfe's plan herewith.--G.C., 2/2/84.

High-level

High-level Crossing, Darling Harbour.

The plan of Mr. Selfe provides for an iron bridge over the railway lines and Pyrmont-street, in three spans of 85, 35, and 75 feet respectively, with stone viaduct approaches and retaining walls, 310 feet long on the Sydney side, and 190 feet long on the Pyrmont side, giving a total length of bridge and approaches of 695 feet. The width of the structure is 30 feet overall, which, deducting the parapets and kerbing, will-leave a roadway 18 feet wide and one footpath 8 feet wide. The gradients on the approaches are 1 in 10 on one side and 1 in 15 on the other; these might probably be improved when more accurate levels have been taken. By having the bridge in three spans two piers will be inside the railway fence and take up a large space of ground which otherwise could be used for additional siding accommodation, and I should therefore recommend to make the bridge in two spans of about 100 feet each, in order to preserve the full width of the railway land and have it available for other purposes. The cost of the bridge will also be reduced through there being one pier less to construct. Instead of having the main girders of the plate web type, as shown on the plan, I would suggest that it be constructed with open or lattice webs, as giving a lighter and better looking structure and more in agreement with the spans of the bridge.

The altered position of the piers and the effect of the same with regard to the railway property is shown in red on the plan. On the point of economy, I think it will be advisable to construct the approach viaducts of concrete and brickwork, instead of stone, as indicated on the plan, the difference in cost being some £5,000 in favour of the former. The total estimated cost of this structure, as per detailed estimate attached, is £21,180—the cost of the iron bridge and piers for the same being £10,020, and of the approaches on both sides, £11,160. In this estimate is included wooden cube paving on the bridge, and stone cube paving on the approaches. I do not think wooden paving will be suitable for the latter on

account of the rather steep gradients.—Max Thomson, 28/1/84.

Minute of the Commissioner.

It was understood that the work was to be carried out, if the Corporation would pay the cost of the approaches to the bridge; the whole cost is estimated as under-

£10,020 Bridge Approaches ... 11,160 £21,180

The Corporation however seem by their letter to limit their liability to £5,900. 1 do not know whether the Government will be prepared to proceed with work on these terms.—Ch.A.G., 4/2/84.

Minute of the Secretary for Public Works.

I should like Mr. Cowdery to report fully upon this matter, and whether in his opinion Mr. Selfe's plan is the best and cheapest that can be adopted; and if not, what plan he would suggest in place of it, and cost of bridge and approaches.—F.A.W., 6/2/84.

Memo.—I have again to ask that the papers respecting high-level bridge, Darling Harbour, and at William Henry and Mary Ann Streets, may be returned without further delay.—G.B., 24 with section.—G.C., 8/3/84. Section received; report herewith.—M.T., 10/3/84. Mr. Thomson -G.B., 25/2/84. An estimate of the bridge has been prepared, and I forward herewith a report in reply to Minister's minute of 6/2/84.—G.C.,

13/3/84

With the modifications mentioned in my report of 28/1/84 (viz., to construct the approaches of brick, instead of stone, and altering the spans of the bridge over the railway and Pyrmont-street, the plan for the crossing as proposed by Mr. Selfe appears to be the one best adapted for the purpose. As the crossing must of necessity be substantially constructed, on account of the heavy traffic it will have to carry, it will not be advisable to construct the approaches of timber. A portion of the Sydney approach (from B to C on the plan) might be constructed with iron girders and floor on brick piers, in place of arches, but as the cost will be the same in either case I should recommend the latter plan, as presenting a better and more uniform appearance.

Since writting my report of 28/1/84 I have had a section taken along the site of the crossing (shown in red on plan), and I find from the same that the approach on the Pyrmont side, as shown on Mr. Selfe's plan, can be considerably reduced, the whole required to be done on this side being merely retaining walls for a short distance, in consequence of which the estimated cost of the approaches will be reduced to £8,500; this includes the cost of concreting and paving with stone cubes. The concreting and paving might be left to be done at some future time, in which case the first cost of the approaches will be £6,500. The estimated cost of the bridge over the railway and Pyrmont-street (200 feet long) with piers is £10,020.—

M.T., 10/3/84.

No. 33.

Mr. N. Selfe to The Commissioner for Railways.

141, Pitt-street, Sydney, 16 February, 1884. I have the honor to submit an application for the payment of a professional commission under the following circumstances:

In the year 1879 the great danger and inconvenience to the citizens of the railway crossing was forcibly

brought under my notice at Darling Harbour.

After ascertaining from Mr. Mason, the then Engineer for Existing Lines, that he would not consider it an unprofessional act if I addressed you on the subject, I had the site surveyed, devised a scheme of crossing, and had plans made. I forwarded these to you on 9th December, 1879.

During 1880 some accidents occurred and the traffic increased, and a deputation waited on the

Minister about the matter getting serious, which induced me to further elaborate my proposals.

On January 24th, 1881, I wrote you, with further plans, and at the same time wrote to the Municipal Council of the city, in both cases offering to carry out the work on the joint account of the Government and the city.

In March, April, and May I was in communication with the city authorities, who had asked for more detailed information; this was forwarded by me, and also a plan by which the gradient was improved from 1 in 15 to 1 in 20.

I now learn the City Council have voted £5,900 towards their portion of the work, and that the Government are to carry it out, the Honorable the Secretary for Works having agreed to do so.

Under the circumstances, that I have done all the initiatory work, I trust you will consider me entitled to $2\frac{1}{2}$ per cent. or one-half the full commission on the Government portion of the work. I understand the Council will do the same on their portion.

I forward with this five drawings made by me in bringing the work out, also a photographic copy of general picture sent to the Town Hall. It is probable that the work will now be done on a more liberal basis than my first proposals, and at greater cost.

I would consider a commission on £5,000 a fair consideration for my services; this, at $2\frac{1}{2}$ per cent., amounts to £125. As I am leaving the Colony next month I could not undertake the work, unless it was deferred for twelve months, even if so desired, so trust my application will meet your approval.

I have, &c.,

NORMAN SELFE, M.I.C.E., M.I.M.E.

[Enclosure to No. 33.]

I hereby authorize the amount of the above certificate in my favour to be paid on my behalf to Commercial Bank.

NORMAN SELFE.

Minute of the Commissioner for Railways.

Mr. Cowdery for report. To what extent have Mr. Selfe's plans been availed of by the Department.—CH.A.G., 18/2/84.

Mr. Selfe's plans have not been availed of by the Department, and I am not aware that he has any claim. I forward herewith report of City Council on same question, which they decided should not be acceded to.—G.C., 7/3/84. Commissioner.

Extract from Report of Sydney Municipal Council.

"An application was received from Mr. N. Selfe for payment of the sum of £142 10s, being commission at the rate of $2\frac{1}{2}$ per cent. on an estimate of the cost of a proposed bridge at William Henry Street. The Town Clerk stated that applicant had not been engaged by the Council in this matter, and the meeting decided the application could not be acceded to."

In a week.—12/3/84.

Minute of the Commissioner.

It would seem that Mr. Selfe's plan has in no way been adopted (see Mr. Cowdery's report of 7/3/84 on 84/5,050 herewith), and that the estimate according to Mr. Cowdery's design is—

Bridge... $\pounds 10,020$ Approaches, 1st estimate £11,160, since reduced to ... 6,500 $\pounds 16,520$

In Mr. Selfe's letter of January 24th, 1881, he said that the approximate cost of bridge and approaches was £5,700—how is this difference accounted for? Mr. Cowdery (through Mr. Max Thomson's report of 28/1/84) seems to make some modification in Mr. Selfe's plan, which is said to have the effect of reducing the cost. This makes the matter somewhat complicated. It will be necessary to make a fuller explanation.—CH.A.G., 21/3/84. Mr. Cowdery, B.C.

Mr. Thomson for clear and full explanation.—G.C., 24/3/84. Full explanation herewith—G.C., 26/3/84.

The only way of accounting for the difference between the Department's estimate and that of Mr. Selfe is that the latter must either have miscalculated the quantities and cost of the work as proposed by himself or else made a clerical error, as it is evident that 200 feet of bridge and about 500 feet of approaches cannot be constructed for the sum of £5,700; in fact £25,700 would be nearer the mark for the class of work indicated on Mr. Selfe's plan, viz., stone approaches and piers. Probably a clerical error has been made in omitting the figure 2 before the 5. My first estimate (28/1/84) was based on the levels shown on Mr. Selfe's plan, consequently the length of approaches to be estimated for would be the same as shown by Mr. Selfe. The design of the bridge was however altered, as well as the construction of the approaches, brickwork being substituted for stonework in the latter. Since then accurate levels were taken along the site of the structure (shown in red on plan), from which it was seen that the levels as shown by Mr. Selfe were not correct, and that as a consequence the length of the approaches could be reduced, with a corresponding reduction,

reduction in cost; and a further reduction was made by eliminating the cost of concreting and paving the approaches, the estimated cost being then, as stated in my report of 10/3/84, as follows:-

> £10,020 Approaches ...

> > £16,520

The Engineer for Existing Lines.

Max Thomson, 26/3/84.

Minute of the Commissioner. See my minute of 28/3/84 and Minister's decision, that if Mr. Selfe will consent to carry out his design for £5,700 full commission will be paid him.—CH.A.G., 29/3/84.

No. 34.

Mr. N. Selfe to The Commissioner for Railways.

Sir, Sydney, 13 March, 1884. Adverting to my letter in which I ask for a commission on the bridge to be constructed over

the railway at William Henry Street, and dated the 16th ultimo, I find that a newspaper report entirely misrepresents the true state of affairs as to the part the Municipal Council of the city plays in the matter.

I have therefore the honor to inform you that when I wrote to you on January 24th, 1881, I also wrote to the City Council in similar terms. The only reply I received to that letter was one asking for more plans and information, as per copy enclosed and marked A, and dated the 28th March the same year. Acting on this, I had further drawings and surveys made, and from a conversation with the City Surveyor suggested an alteration of the roadway over the girders, instead of lengthening the approaches, to get a better gradient; these plans were furnished, and I then received the letter marked B, which, with the other, identifies the Council with my scheme. Had nothing been done with my proposals I should of course have no claim upon either you or the City Council, but as my proposals and plans have been adopted and the money has been voted (by the city) to carry the work into execution, I most respectfully submit that I have a valid and equitable claim for repayment of my services, and the newspaper report is wrong, or the Council are not properly informed in the matter. I have no doubt, now that similar particulars are laid before them, that they will pay the commission for their part of the work. I have, &c. NORMAN SELFE.

 $\lceil Enclosures.
brace$

The City Surveyor to Norman Selfe, Esq.

Sydney, 28 March, 1881.

HAVING been instructed to report on probable cost of erecting approaches to your proposed bridge over railway at William Henry Street, I shall be obliged if you will let me have tracings of your scheme, to enable me to estimate the quantities, and also any information you may possess on the subject.

A. C. MOUNTAIN.

The City Surveyor to Norman Selfe, Esq.

Sydney, 2 June, 1881. I HAVE duly received your letter covering tracings of improved gradient for your contemplated bridge over Darling Harbour Railway, and think it will be a material advantage over the former very steep slopes. I had unfortunately already reported on your scheme, before receipt of the tracing, and suggesting that the grade should be eased; as this is now done, however, the matter is settled.

Minute of the Commissioner.

The papers about this bridge are being dealt with separately. I have asked for a further report.

This will await result.

It will be seen from the report from the Engineer for Exising Lines that Mr. Norman Selfe's plan has not been adopted, and that his estimate of cost of bridge and approaches was altogether absurdin fact it can only be explained by the assumption that the figure 2 was omitted before the figures £5,700, and that they should have been £25,700.—Ch.A.G., 28/3/84.

Minute of the Secretary for Public Works.

If Mr. Selfe will undertake to carry out this work at his estimate, £7,500, he should be employed to do so and paid full commission. He had therefore better be seen.—F.A.W., 29/3/84.

Mr. Selfe left for England on 27th, last Thursday, and will be absent from the Colony twelve or eighteen months.—L. P. IREDALE, 31/3/84.

Minute of the Commissioner.

Minister to see.—CH.A.G., 1/4/84.

Minute of the Secretary for Public Works.

Inform City Council that cost of approaches will be £6,500.—F.A.W., 4/4/84.

No. 35.

The Commissioner for Railways to The Town Clerk, Sydney.

Department of Public Works, Railway Branch, Sydney, 7 April, 1884. In adverting to the correspondence that has passed on the subject of the formation of the approaches to the proposed overhead bridge at William Henry Street, Darling Harbour, I have the honor to inform you that it is estimated the cost of the approaches will amount to £6,500, and I have to ask whether your Council is prepared to contribute that sum for the work referred to.

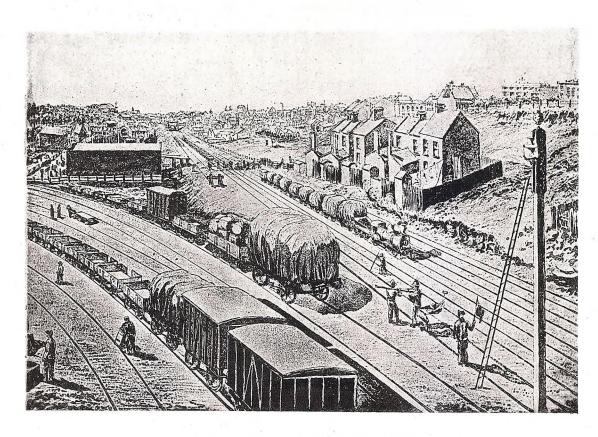

I have, &c.

CHAS. A. GOODCHAP

Trial Surveys—Sydney to Wollongong, 1873, 1874, and 1875.

Mr. R. D. Stephens to Engineer-in-Chief.

Sir,

Wollongong, 27 November, 1873.

I beg to inform you that I have partially examined the country between Sydney and Bulli. I am of opinion that a practicable route will be found by crossing George's River at Tom Ugly's Point, following up Gwaley Creek, then across the Goumea Range along Port Hacking Creek, crossing the Bulgo Range (by tunnel 25 chains in length and at an elevation of 350 feet above sea-level), and then descending the hill-side to Bulli; this will involve a tunnel about 50 chains in length at Coal Cliff, but the tunnel last mentioned is unavoidable no matter in what direction the line is brought.

The country for 3 miles south of Coal Cliff is awkward, owing to precipitous spurs following the coast-line so closely but I believe that a gradient of 1 in 80 for 3 miles will gurmanut the difficulty of

coast-line so closely, but I believe that a gradient of 1 in 80 for 3 miles will surmount the difficulty (I make it 1 in 100, but prefer to stake to 1 in 100, to be on the safe side). From this point into Wollon-

gong the country is comparatively easy.

I have examined two routes between Sydney and Tom Ugly's Point, but I prefer not particularizing or describing them until I have again considered their relative merits. I may, however, mention that either of them is practicable.

I do not wish to disguise the fact that the line along Port Hacking Creek will be expensive to construct, owing to sharp spurs and steep gullies, but the easy gradient (about 1 in 500 average) will enable us to surmount many difficulties by occasional short gradients of more severe character.

To-morrow we shall work back towards Sydney, examining the line as proposed by Mr. James Manning, and I shall call at your office on Tuesday next, when I shall give you full particulars.

I have, &c., R. D. STEPHENS.

Mr. R. D. Stephens to Engineer-in-Chief.

Illawarra Railway.

SIR.

Cook's River, 20 January, 1874.

I beg to acknowledge receipt of your letter of the 9th instant, instructing me to report on the trial surveys carried out under my direction during the year 1873.

In reply, I have the honor of informing you that, in the month of November, I made a rough preliminary aneroid survey of the country lying between Sydney and Wollongong, and that in the month of December I commenced the trial survey thereof.

Terminus.—The terminus, or rather the starting point, is situated about 7 chains south-west of the Chemical Works, Balmain, and is, I consider, admirably suited to the purpose intended; there being comparatively deep water close in to the shore, and the bottom being mud and sand, admits of being still further deepened, should it be found necessary. The general situation also is excellent; being close to the main part of the city, and yet in no wise interfering with the principal shipping.

I have made the plan of the terminus on a large scale, and this I will submit to you on my next

I have made the plan of the terminus on a large scale, and this I will submit to you on my next

visit to Sydney.

I have kept the formation level 20 feet above high-water-mark, so as to allow the coal to be shot into the ship's hold.

Line between Sydney and George's River.

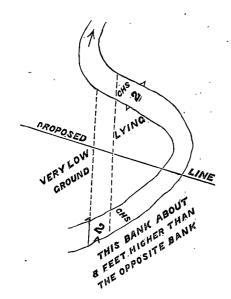

On examining the accompanying tracing you will find that I have sketched thereon several projected lines. The full red line denotes the route as now adopted by me. The dotted red lines represent rough trial lines, which I have examined, but which I have abandoned.

The line as now adopted by me, after leaving Balmain, passes underneath the Burke Town Férry Road (the level of which remains unaltered), crosses two narrow arms of the harbour, which are dry at low water, and then as a rule skirts the shores of Long Cove until it reaches Petersham. The Parramatta Road I cross by an under-road bridge, and do not alter the level thereof more than 2 feet. I then pass under the first each of the Patersham righted rolls and alter the level thereof more than 2 feet. under the first arch of the Petersham viaduct, which arch allows of ample room for a double line of railway. From this, with an average gradient of about 1 in 90, I reach the new Canterbury Road, which I cross at its lowest point with about 25 feet of cutting, so that the level thereof need not be affected.

About midway on this incline I purpose to branch off with a nearly level line to Petersham Station,

so as to connect this line with the existing line.

The descent from the crossing of the Canterbury Road to Cook's River is effected with an easy gradient and with comparatively little work. The crossing of Cook's River is not quite what I could desire, being on the skew to the existing channel; but then, on the other hand, the line is square to the flood-waters, which fact will be understood on the examination of the adjoining sketch.

A short river diversion 10 chains in length would meet all difficulties. Though the river is 2 chains wide, there is not the slightest current at ordinary seasons, and the highest flow known only reached 10 feet above its present level at this spot.

Woolli Creek crossing is more satisfactory, being bridged on the square. These two bridges and their approaches

are the only heavy works as far as we have gone.

The Illawarra Road, perhaps better known as the Sans Souci Road, is crossed by an over-road bridge, the level of the road remaining unaltered. The level of the Muddy Creek Road, also an important road, will also remain unaffected, but the course thereof will have to be diverted to admit of the bridge being somewhat on the square Here I have to pass through three (3) market gardens, but this I cannot possibly avoid; for, in the first place, this neighbourhood abounds with gardens of this description; and secondly, if I tried to avoid them by crossing the Muddy Creek Swamp I would incur far greater expense (with a worse line) than the purchase of these small gardens is likely to entail. I simply mention this because the people of this neighbourhood appear to lay undue importance on

the necessity for avoiding purchased or improved ground.

I may, however, incidentally mention that up to the present I have touched on extraordinarily little valuable property, which for a line so close to Sydney is rather remarkable. Muddy Creek is as far as I have reached at present, as Mr. Carver has for some time past been engaged on the other side of George's River, surveying the ground between this river and Port Hacking. Our progress has not been so rapid as I could have wished, but then the start is always necessarily slow. I had considerable difficulty in obtain-I could have wished, but then the start is always necessarily slow. I had considerable difficulty in obtaining suitable chainmen, and which was the chief cause of delay. We had, with the exception of $\frac{3}{4}$ of a mile at Petersham, to cut every inch of our way through this spreading over-hanging tea-tree scrub, which is

far more retarding than upright timber.

From Muddy Creek to Rocky Point I purpose keeping about midway between the beach and Pat Moore's Swamp. I do not think it would be desirable to hug the shore too closely; I think it best to leave a belt of timber to shelter the line from the drifting sand. The country about here is all level, so

that you can go anywhere so long as you avoid roads, swamps, and scrubs.

I have given the crossing of George's River my most careful consideration, and I have come to the conclusion that Rocky Point is after all the best crossing-place; for though it be a little wider than that at Tom Ugly's Point, yet the depth of water is considerably less, and as the crossing will, I presume, have to be partly bridged and partly embanked this will materially affect the cost. On the tracing I have sketched an alternative line by Tom Ugly's Point, but I do not see that it presents any special advantages.

The objections to abandoned line No. 1 are too sudden a fall from the Canterbury Road ridge to Canterbury, and when once past the heads of Cup and Saucer Creek you get into very rough and broken country. The course of the hill ranges also happens to be at right-angles to the course of the line, so that you cannot circumvent them—you are forced to pass through them. Crossing at Kangaroo Point I consider to be out of the question, for though it is considered to be the narrowest part of the river. still this

sider to be out of the question, for though it is considered to be the narrowest part of the river, still this distance is measured at right-angles to the course of the proposed line; in every other direction the width is considerable. Independently of this, the approaches on the north side are extremely high and precipitous; altogether I consider this point as totally unsuited for a railway crossing. There might be a possibility of bringing the line through the Woolli Ranges to Tom Ugly's Point, but this I did not examine. The only advantage of the Canterbury line is that it would bestow a station on Canterbury, but I hardly

think that this is worth taking into consideration.

Abandoned line No. 2 I consider to be impracticable, unless you resort to a very sharp curve, and to a tunnel underneath the Canterbury Road, and then, when once through, you have to interfere with numerous gardens and other valuable property. The only advantage that this line presents is, that it numerous gardens and other valuable property. The only advantage that this line presents is, that it crosses the Cook's River and Woolli Creeks with one bridge; but then again it would have to cross a fair-sized stream which comes from the direction of Newtown. On the south side of Cook's River the course of the line would be very awkward, and there would be some difficulty in dealing with the roads. The chief reason why I make reference to this line is, that numerous persons are of opinion that it should

come this way.

Line between George's River and Wollongong.

The Gomea Range rises very gradually and gently from Gwaley Bay, and I purpose ascending it with a gradient of 1 in 80. From this point I have not as yet fixed on the precise course for the line, but it will, to a great extent, have to follow the bends of Port Hacking Creek. The chief peculiarity of this creek, and the peculiarity which makes this creek specially available for railway purposes, is that it has but a very slight fall for nearly its entire length. The total fall from the Bulgo Range to the sea is only 335 feet, which, considering the distance and the nature of the country, is very slight. The Bulgo Range, which shuts it on the south is a very steep sharm but also very purpose spurp. Accompanying tracing which shuts it on the south, is a very steep, sharp, but also very narrow, spur. Accompanying tracing shows a section of this spur.

I propose a tunnel 25 chains in length through this range, and from this I propose to wind round the hills till I reach Coal Cliff. Here a tunnel about 60 chains in length is perfectly unavoidable. Cliff rises sheer out of the sea to a height of about 900 feet. There certainly is a ledge 60 feet wide about half-way up its sides, but it most assuredly cannot be made available for railway purposes. For about 3 miles south of Coal Cliff the country is rather awkward, but by adopting a 1-in-80 gradient we

are enabled to select better ground than we could do did we retain the average gradient of 1 in 120.

From Bulli to Wollongong the country presents no engineering difficulties of any moment.

On the whole, I may safely affirm that we shall be enabled to obtain a very fair line with easy gradients.

I fear that some of the curves along Port Hacking and on the descent of the coast range will necessarily be rather sharp, but I will make them as easy as I can.

I shall now touch lightly on the line as originally proposed by Mr. Manning. This line I have shown on the accompanying tracing by a dotted red line, and I also forward section of part thereof. You will perceive that it follows the Illawarra Road as far as Bulgo Range, which it crosses at about 900 feet elevation, and then gradually descends to Bulli. This last portion of the route is of course but very indifferent to the state of ferently represented on the plan, as I do not exactly know where it would go, but at all events we have the bare fact that he would have to ascend and to descend 900 feet. This would give a gradient of 1 in 53 for 9 miles, which is rather severe for a heavy coal traffic.

There is another very serious consideration in undertaking this incline, and it is this,—that when approaching Bulli you would get into the coal measures, and there the hill-sides are full of slips. It would not be safe to go much into cutting, or, for the matter of that, into bank either, and this of course is perfectly unavoidable in skirting a steep hill-side. We shall not be entirely free from this objection on the line that I propose, but we shall not feel it to nearly the same extent that we would do did we

I will not take up your time by going more fully into details, for it is of course self-evident which of the two lines is to be preferred. There was another line proposed, viz., from Liverpool. This is open to the same objection as Mr. Manning's line, but in a more marked degree, as they would have to cross the range at about 1,200 feet elevation instead of 900. I forward tracing of Bulli Pass, with the gradients marked thereon; it will give you some idea of the difficulties they encountered in attempting this long I have, &c., R. D. STEPHENS. incline.

Engineer-in-Chief to Commissioner.

Proposed reservation of land from Sydney to Wollongong:

11 February, 1874.

I RECOMMEND that the land between Sydney and Wollongong, coloured pink on the accompanying plan, be reserved from sale for railway purposes.

(Including glebe land.)

JOHN WHITTON.

Mr. R. D. Stephens to Engineer-in-Chief.

Illawarra Railway Trial Survey.

Sutherland, George's River, 23 February, 1874. I have the honor to report that I have reached George's River, and that Mr. Carver has Sir,

surveyed, but not laid out, the line for a distance of 7 miles beyond George's River.

When I asked Mr. Carver to survey the district beyond George's River I was under the impression that the country between Cook's River and George's River was so easy that I could first lay out the line and then fill in the survey, using the centre line as a base line, but on my attempting to do so I ran foul of a series of swamps, so I had to first make a careful and extensive survey and then afterwards lay out the centre line. By doing so I have succeeded in obtaining an excellent and direct line, clear of all By doing so I have succeeded in obtaining an excellent and direct line, clear of all swamps and obstructions, the main portion of the line being composed of two straight lines, each upwards

of 2 miles in length; the levels also are most satisfactory.

The survey of these swamps has been a very tedious matter, their edges being lined with thick and, in some places, almost impenetrable scrub. The cutting of the centre line has also taken far longer time than I had at first anticipated; every inch of the way had to be cut, the tea-tree scrub being very annoying. There is also a considerable quantity of standing timber, but these do not cause much delay. I have examined the first 7 miles of Mr. Carver's surveyed line on the south side of George's River; here the line will have to be slightly more circuitous than I would wish, owing to the absolute necessity for heading Ewey Bay, Gomea Bay, and the north-west arm of Port Hacking, but I shall endeavour to make the course as direct as I possibly can. Mr. Carver reports that there is some difficulty with Kangaroo Creek (a large tributary of Port Hacking Creek), and last Saturday I went over to examine this stream, but owing to a fearful storm of wind and rain I was forced to return, as during Saturday night Mr. Carver's camp was blown away.

We have had some fearful weather here, which has materially affected our progress, but I am glad

to be able to report that as far as we have gone we have succeeded in obtaining a very fair line.

I am camped on the south side of George's River, and I would feel obliged by your causing the letters to be addressed to the care of W. E. Rust, Sandringham, Kogarah.

I have, &c., R. D. STEPHENS.

Mr. R. D. Stephens to Engineer-in-Chief.

Illawarra Railway Trial Survey.

Port Hacking River, Kogarah Post Office, 20 April, 1874. I have the honor to inform you that Mr. Carver and I are now working on the Port Hacking Sir,

I regret to state that our progress has been slow; this is owing to the peculiar and in reality difficult character of the country lying between the Gomea Range and Port Hacking River. It consists of a sort of plateau or tableland about 200 feet above sea-level, and deeply indented with numerous deep chasms and narrow ravines, the bed of whose creek is to all intents and purposes on the same level as the level of the sea. The 200 feet rise is as a rule effected in about five or six chains horizontal distance, and the water in the various bays and inlets is mostly 60 and even 80 feet deep within 50 yards of the shore.

Mr. Carver, previous to my arrival, attempted to overcome the difficulty by heading all the creeks, and he ran a trial line upwards of 8 miles in length, but this brought him to the summit of the range,

from which there was no getting down.

I myself tried various routes, with but poor success. The jagged and precipitous nature of the cliffs and the extreme narrowness of the ravines prevented successful contouring without the introduction of almost impracticable curves, and running in anything like a straight line involved very heavy works—in fact tunnels. But I am glad to say that, after repeated trials, I have at last obtained a line which is fair and feasible, but I have been compelled to introduce 1-in-60 gradients for short distances. I have also been compelled to abandon 3 miles of line which I had fully completed, and which up to the very last promised very well. However,

However, once on Port Hacking Creek itself our progress will be considerably more rapid, for then our attention will be confined to the creek itself, which fortunately runs in the proper direction, and the general course of which is very fairly straight. I have, &c.,

R. D. STEPHENS.

Mr. R. D. Stephens to Engineer-in-Chief.

Illawarra Railway, Port Hacking, 16 June, 1874.

I have the honor to report that we are pushing on with the trial survey as fast as the extremely rough nature of the country traversed will permit.

It certainly is fearfully rough in the street of the country traversed will permit.

It certainly is fearfully rough in places—a confused jumble of huge boulders and rocks, covered with thick brushwood closely interwoven with vines and creepers, which renders expeditious setting out or

surveying almost an impossibility.

I have certainly worked as hard and as continuously as I could, but notwithstanding all my endeavours our progress is but slow—far slower than I had anticipated. The season of the year also does not admit of long working hours. In these deep narrow gorges the sun does not appear till 8, and you must be back in camp by 5, as it would never do to be benighted in these parts. The chaining of the different lines is most laborious, and in places very awkward—in fact sometimes positively dangerous. I have also been compelled to set up my instrument in some extraordinary spots. Generally speaking I am tolerably quick at setting out, but in this country I must confess that, with difficult clearing, &c., a quarter of a mile a day of setting out is about as much as I can manage these short working days. Of levelling I can do here about $1\frac{1}{4}$ mile, but then the line is of course already cleared. I simply mention these matters can do here about $1\frac{1}{4}$ mile, but then the line is of course already cleared. I simply mention these matters to account for my comparatively slow progress, for I had hoped to have been able this time to report satisfactorily. But, however, if the progress is not satisfactory in point of time, it is, I am glad to say, fairly satisfactory as far as the result of the work is concerned, at all events I believe as much so as the rough and precipitous nature of the country passed through admits of. A few of the curves and gradients are not quite so easy as I could wish, but I could not possibly avoid this. I was compelled to follow the contours of certain main spurs. I trust that the number of wet days we have had these last four months is exceptional in this country. I have been astonished at the continuous wet weather we have had lately. As a rule I do not like to excuse myself under the cloak of wet weather, but we certainly have had considerably more than what I thought was the average number of wet and stormy days.

I have, &c., R. D. STEPHENS. H.P., 23/6/74.

Mr. R. D. Stephens to Engineer-in-Chief.

Illawarra Railway Survey Report.

Sir, Stanwell Park, Bulli, 24 August, 1874. I have the honor to acknowledge receipt of your letter of the 18th instant (received yesterday),

directing me to send in report of the Illawarra Railway survey.

I had intended to have called at the office when in town, and with that view had brought in plan and section, as you could then have had a better conception of the country to be traversed; but on arrival in Sydney I found that the private business that I specially went into town for was so urgent, and the necessary arrangements to be made so tedious, that I really had no time to devote to anything else. Besides, the steamer that I was expecting only arrived on Friday night, and I had to be away again by coach next morning by 9 a.m., otherwise I would have missed the boat which was to bring me up Port Hacking Creek and had I done as it would have have a second to the second to the latest and the second to t Hacking Creek, and had I done so it would have been a matter of good two days at least getting back to camp. However, I purpose shifting camp to Stanwell Park itself in about a fortnight, and if you will permit me, I could, whilst the men are shifting camp, run up to town via Wollongong, and lay before you all necessary papers, &c. I would very much like to do so, as you could then more readily understand how matters really stood.

I am at present working near Hamilton's, position of which is shown on enclosed lithograph. On this plan I have also marked in pencil course of the line*; I find, however, that Port Hacking Creek is *I find it imposso incorrectly laid down (they evidently having confused Kangaroo Creek with Port Hacking Creek) the plan is too that I append thereto a rough tracing, done to the same scale, which more accurately indicates its true

The

As regards rate of progress, I am fully aware that it must be considered slow, in fact very slow, except by those who have actually been on the ground. Although I had previously been along the river banks, I was not prepared to find that the difficulty of getting about extended so high up the hill-side. The country is certainly fearfully rough—far rougher than the main range ascent in Queensland; but I do not so much object to this roughness (for the general formation levels are as a rule easy enough) if you could only get about and see where you are going to. The country is covered with an abominable weed or scrub, which here goes by a variety of names—a sort of raspberry bush or scrub, which grows about 4 feet 6 inches high, and is so dense and close in its intertwining that it is with the utmost difficulty that you can get through it at all, much less chain through it; the consequence is that it is nothing but cutting through it all day long, and this is most tedious. The standing timber also is as close and as thick as I have seen it anywhere; but this I would not so much mind if it were not for that detectable carries as I have seen it anywhere; but this I would not so much mind if it were not for that detestable scrub and underwood. This, in connection with the uniform steep sidelong ground (the average is about 1 in 4, and underwood. This, in connection with the uniform steep sidelong ground (the average is about 1 in 4; though we have long stretches of 1 in 2) renders expeditious surveying impossible. During the last week we have got into another description of weed or shrub, which I am glad to say is not nearly so bad, and the consequence is that I have been able to do more than double the work. We have of course to run rough preliminary trial lines to enable us to get at the general lay and features of the country; but these have to be cut just the same as the main centre line. Provisioning and shifting camp is here a really very serious matter. Pack horses are of course altogether out of the question, even if you could get them down—which you cannot—you could not keep them, for there is no grass. Even the settlers about Hamilton's, who sometimes bring a horse down their cut tracks, have to feed it on corn, and then send him back next day. Everything has to be carried on men's shoulders, and this, where the country is so him back next day. Everything has to be carried on men's shoulders, and this, where the country is so rough and the distance so great, becomes a really serious matter. The last time we shifted we shifted 6 miles, and it certainly was quite an undertaking. I had previously sent a boatload full back to Sutherland (Mr. Holt's place), and took nothing but what we absolutely required; but notwithstanding this we had a most laborious and tedious journey. We certainly had the boat to help us, and I really do not know what we would have done without her. There are also not show that the property of reaches of calm water, but there are also occasional obstacles in the shape of rapids, waterfalls, and fallen logs, and these had to be got over. I had the boat built specially roomy and light, otherwise we could

I am rather ashamed of going into all these minute details of obstacles, but I find that it is really necessary for me to do so in order to account for what otherwise must appear my unaccountable dilatoriness in completing the work. It is a line presenting no great engineering difficulties, but it is essentially a line requiring surveying, especially cross-sectioning, so as to avoid those difficulties. I have of course taken a series of rough cross-sections, so as to enable me to arrive at the best general course; my main object having been to get at the best general lay of the country. On the whole, taking the nature of the country into consideration, it is a fair line, though of course a subsequent contract survey would materially improve it improve it.

Finally, I am glad to be able to report that the main difficulties are over; all the heavy part of the work is now done. Once at Stanwell Park, which I hope to be in another fortnight, shifting camp and provisioning will cease to be our bugbears. The country also is considerably easier, and I feel perfectly satisfied that our progress will be fairly rapid. I do not say that the country between Stanwell Park and within 2 miles of Bulli is easy, because it is not; but still it bears no comparison to what where had here—at all events there is not the same difficulty which attends the clichtest movement that there is here. at all events there is not the same difficulty which attends the slightest movement that there is here.

From 2 miles on this side of Bulli into Wollongong the country may be classed as good. As regards the probable completion of the survey, I fear that it cannot be fairly finished before the end of this year. If you will give me permission to call upon you in Sydney, I wish to consult you on the best means of approaching Wollongong. By many it is desired that the line should go round by the Illawarra Lake, on the west side of the town, as it then would be of the greatest benefit to the farmers and to the collieries. On the other hand, looking at the subject simply in an engineering and political point of view, it would be best to keep on the cast side of the town. It would be best to keep on the cast side of the town. It would be best to keep on the cast side of the town. it would be best to keep on the east side of the town. It would be better situated for a future getaway to Shoalhaven; it is far more direct, and less expensive than the other route; however, I would feel obliged by your instructing me on this matter.

I have, &c.,

R. D. STEPHENS.

Mr. R. D. Stephens to Engineer-in-Chief.

Illawarra Railway Progress Report.

Bulli, 3 December, 1874. I have the honor to report that I am now camped some little distance on the Wollongong side

of Bulli, and I hope to complete by the end of the year, as stated in my report dated August 24th, 1874. In my last report I mentioned that a portion of the line on the south side of the Bulgo Range would give trouble, and I certainly did not over-estimate the difficulties. These consist in the crossing of two narrow but very steep gorges, which unfortunately retain their sea-level for a considerable distance up the creek, rendering successful turning round a matter of some difficulty.

There are several ways of meeting this difficulty:

1st. Retaining the comparatively easy curves and gradients used up to the present, and making up your mind to two bridges of some magnitude.

2ndly. Still retaining easy gradients and curves, but avoid these two heavy bridges by going

higher up the creek.

3rdly. Adopting very steep gradients (1 in 33) and very sharp curves (8 chs. radius), and crossing the creeks, with bridges of ordinary height, at very nearly the same places as at No. 1.

No. 1 is the course that I have adopted and have laid out. I retained 1 in 66 gradients and curves of 11 ch. rad.; but this, as previously stated, involves two very high bridges, the one about 500 and the other about 600 feet in length; this is measuring from the ends of the cuttings. I do not think that it would be desirable to have any embankment, the ground being so steep; but then it must be remembered that, owing to this very steepness of ground, it is only the two central stone piers which will assume gigantic proportions—I think about 100 feet high; the other piers will be but of ordinary dimensions. I am of course aware that these two bridges will appear rather stupendous, but after often and carefully weighing the matter in my mind. I feel estimate that this is the best and character my respectively. and carefully weighing the matter in my mind I feel satisfied that this is the best and cheapest way of dealing with the difficulty.

It is far more direct, and I consider cheaper, than No. 2; for in order to do any good you must, in the case of No. 2, go \(\frac{3}{4}\) of a mile out of your course, and besides that, go in for a short tunnel.

The only real advantage that No. 3 presents is the saving of the two high central piers. With the exception of the crossing of these two gorges (total length about 15 chs.), the \(\frac{4}{2}\) miles, as laid out on No. 1 principle, is really very fair, and I think that it would hardly be advisable to spoil the line for the sake of these high piers; however I can lay out No. 2 and No. 3 lines on the plan and I have for the sake of these high piers; however, I can lay out No. 2 and No. 3 lines on the plan, and I have sufficient data to enable me to give you an approximate section of each, so that you will be readily enabled to decide which course to adopt. I wish I could have forwarded these to you by this post, but the weather has been so exceptionally fine that I have had no time for office work, and could not finish the plan as it ought to be finished.

The setting out and levelling over Coal Cliff was rather bothersome. It rises 1,058 feet sheer out of the sea; and the levelling was troublesome owing to the sides being so disagreeably steep; but I am inclined to believe that the length of the tunnel will not be so great as I at first stated. The same remark applies to Bulgo tunnel

Since my arrival in Bulli I have started the feature survey, and have already done a considerable

portion of it.

I fear that should we not soon have wet weather I shall be very much behind-hand with my plotting, but I shall endeavour to push on with it as fast as I possibly can

I have, &c., R. D. STEPHENS.

Mr. R. D. Stephens to Engineer-in-Chief.

Illawarra Railway Survey—Progress Report.

Wollongong, 1 February, 1875. I am now camped within half a mile of Wollongong, having completed up to Para Creek, which is about three-quarters of a mile from the town. The proposed terminus is on the other side (i.e., the south side) of the town; this will give an additional 40 chains, leaving a total of 1½ mile remaining to be done, so that I expect to have finished in about ten days. I would of course finish sooner, but that the survey of the harbour, portion of the town, and two important creeks will take some little time.

Mr. Carver's section between Coal Cliff and Kennedy's Pass (some 2½ miles north of Bulli) took

considerably longer time than I had anticipated, and thus necessitated the extending my own length of

section to a rather inconvenient length (8 miles).

On the 23rd instant I instructed Mr. Carver to discharge his men and break up camp on the ensuing Friday (the 29th), as I would finish the rest of the work myself. This he has done, and is now

engaged plotting his work, &c.

Mr. Carver's section between Coal Cliff and Kennedy's Pass is, owing to its having been done on the contour principle, not nearly so rough as I had at first expected; in fact, I was quite agreeably surprised when I laid down the line on the plan for Mr. Carver to set out. The curves are comparatively

easy, and so are the gradients (about 1 in 80).

My own section is also pretty fair; in fact, the only real obstacle, which however is an obstacle, is the difficulty of dealing with the Bulli Com.'s tramway. In the whole course of its length it just bisects (i.e., keeps half-way up) the ridge which I have to cross, thus rendering it very difficult to get either under or over. I ran several rough trial lines, and also took a section of the tramway, and I at last adopted that which to me appears the only feasible plan, and that is to cross the tramway at a place where its gradients are level, or nearly so (generally speaking its gradients are very steep), and I propose to lower the tramway 10 feet at the point of crossing, which I effect by an under-bridge. The ground on either side is very well adapted for this alternation side is very well adapted for this alteration.

The rest of the line is fair, all the curves and gradients are easy, and I have one straight line upwards of $3\frac{1}{2}$ miles long. Some of the clearing was very bad; we got into that detestable tea-tree scrub again for very long stretches, and this unfortunately happened when we had those fearfully hot days and no water to be had; two of my men were knocked up, such was the intensity of the heat and the density of the scrub, which did not permit one breath of air to reach us.

On the completion of the survey I shall, as directed, at once proceed to Sydney, Mr. Carver I have, &c., R. D. STEPHENS. accompanying me.

No. 1A.

Minute by the Colonial Secretary.

Subject—Railway line to Illawarra by the Bottle Forest or by the Hacking River.

Colonial Secretary's Office, Sydney, 26 June, 1883.

The Railway line to Illawarra has been laid out by the Bottle Forest Road, from which it descends to the

lower level by the Wilson or the Stuart Ranges, and thence by Bulgo to Coal Cliff.

I have repeatedly drawn the attention of the former Minister for Works and of the Chief Engineer for Railways to the mistake which I believe has been made in adopting this route, and while administering the Works Department I had a conversation with Mr. Whitton on the subject, and arranged to inspect the route personally with him during the recess, and also the alternative route by the valley of the

Hacking.

Mr. Whitton's illness has prevented this from being as yet carried out, but, inasmuch as the contractors are now at work upon it, the matter can no longer be delayed, and therefore I invite the earnest attention of my honorable colleague the Minister for Works, in order that it may be thoroughly investigated before the country is saddled for ever with the enormous expense of tunnelling, as well as by a large annual cost, which will materially interfere with this line being, as it otherwise would be, one of

the most remunerative lines in the Colony

Sir John Robertson and I, having had occasion to travel by both routes many times during the past few years, have long been convinced, so far as unprofessional judgment goes, that the best route would be by the Hacking River Valley, and the objections which I raise to the present route are, at all events, worth consideration; and I am quite sure that if Mr. Whitton had had the same opportunity which we have had of pushing our way by many various tracks, both by the valley and by the precipitous route of the Strart Range he would have goons to the same conclusion as we have done upless other original. Stuart Range, he would have come to the same conclusion as we have done, unless other engineering difficulties occur unknown to us.

The Bottle Forest route reaches a higher summit level by 400 feet than the Hacking Valley route, and, inasmuch as that summit level is about 9 miles south of the summit level by the latter route, it stands to reason that the descent to the upper end of the valley-which must be reached whichever route is adopted—must be on a more unfavourable series of gradients than the other, and to any one who knows the break-neck character of the Wilson and Stuart Ranges it will be apparent that a more expensive series

of tunnelling through extremely hard sandstone indurated with iron can hardly be met with.

Mr. Whitton says that this route has been adopted on account of the numerous small creeks (but swollen in raiu) which would have to be crossed on the other route, the absence of which on the present

route is a conspicuous advantage.

I am confident that these have been overstated to him, and that by keeping the line on the western side of the river many of the most objectionable will be entirely avoided—in fact the only one of impor-

tance is Kangaroo Creek.

Even if it involved a larger outlay, which I do not think it would, for the culverts would not be so expensive as the gigantic tunnels on the Wilson Range, especially when it is borne in mind that the Bottle Forest route is nearly 3 miles longer, it might be better to incur a larger cost to begin with than to destruct the transfer of the state of the sta troy the traffic, for as this line will be to a large extent a coal-line it is essential to its development that no undue expense of haulage be incurred.

I know that some of its opponents have said that it will never carry coal against the steam colliers by séa.

This, however, is disproved in the case of the Coal Cliff Coal Company, which has repeatedly stated that it is prepared to contract to give 500 tons a day to this line if taken at the same rates as on the Newcastle lines, but if there be an unnecessary raising up steep gradients of an extra 400 feet, it seems to me that we would be destroying the traffic in a most suicidal way, or else rendering it so expensive as to be unremunerative, and thus, against our own interest, encourage steam-collier traffic.

Moreover, an enormous public estate has been secured to the inhabitants of Sydney in the future, in the shape of the National Park, and yet the railway, instead of running through the attractive portion of it, skirts the western side of the park, and the only access by the railway to its central portion will be by going about 10 miles beyond and running a branch line through the Coal Cliff Company's land backwards

to the park.

Surely this is a most absurd way of utilizing this great inheritance of the people, and the annual vote

which is given for gradually subduing its wilds.

Moreover, the valley of the Hacking abounds in magnificent timber, and though the valley is narrow, the land is of great richness, whereas the Bottle Forest Road consists of sandstone and ironstone, with low scrub, suitable no doubt for villa residences, but not generally useful.

The contractors, Millar Bros., have only recently commenced on that part of the line which lies beyond the deviation, and are willing to withdraw the men to the nearer part of the work, if asked at

once, so as to give sufficient time to have the country further examined.

Prompt action, however, is necessary, for if longer delayed their work will be too far gone to be

undone without incurring heavy expense.

I recommend the subject therefore to my honorable colleague.

Since writing the above I have had an opportunity of seeing Mr. Whitton. He states that although the summit is 400 feet higher by the Bottle Forest route, yet the point on the river reached by that route is considerably higher than where the other would intersect the valley, and that sum of extra haulage is thus neutralized, but that the expense of running by the river route would be greater on account of the unfavourable curves on several points 11 and 12 chains radius; but that as doubts have been expressed by those who have been in the habit of travelling, it would be well to satisfy these doubts by sending a surveyor down to go over the valley route again with careful observation, which may either dispel these doubts or admit that they have some foundation.

The Minister for Works.—A.S., 28/6/83. Submitted for decision—Urgent.—J.R., 29/6/83. The minute submitted by my hon. colleague is so important that I must ask the Engineer-in-Chief for Railways to at once send a party of surveyors and obtain a report upon this matter, and trust no time will be lost in doing so.

I have sent for Mr. Millar, the contractor, and will arrange with him to stop work upon the southern portion of his contract until report is submitted to me by Mr. Whitton.—F.A.W., 2/7/83.

Forward at once to Engineer-in-Chief for Railways.—F.A.W., 2/7/83. Mr. Whitton, for immediate attention.—J.R., 3/7/83. Report annexed, No. 83-1,554 of 6th Oct.—J.W., per W.H.Q.

No. 2.

The Commissioner for Railways to Messrs. C. & E. Millar.

Department of Public Works, Railway Branch, Sydney, 3 July, 1883. Gentlemen With reference to the interview which your Mr. C. G. Millar had with the Secretary for Public Works this morning respecting the terms upon which you are prepared to suspend work on your contract for the 1st section of the Illawarra Railway, until a survey of proposed deviation in the line is completed, I have the honor to inform you that Mr. Secretary Wright has approved of the stoppage of the work on the terms stated in your memorandum of the 2nd instant, and I have therefore to request that you will have the work stopped accordingly.

The agreement to be entered into will be prepared in the course of a few days.

I have, &c.

CHAS. A. GOODCHAP,

Commissioner for Railways.

No. 3.

Terms of Agreement for Suspension of Works, 1st section, Illawarra Railway.

Railway Camp, St. Peters, New South Wales, 2 July, 1883. 1sr. Work to be suspended from the 15th-mile peg to the southern end of contract until survey of proposed deviation is completed.

2nd. If survey of deviation is adopted, and the Government decides to deviate, the contractors are to be offered an equal length on new line at Schedule rates.

3rd. Should original line now under contract be adhered to, and contractors asked to again proceed with work, they are to be paid compensation for any loss incurred by delay, &c., the amount to be agreed upon between Engineer-in-Chief and contractors.

4th. In the event of any dispute arising between the Engineer-in-Chief and the contractors as to an extra value for work on deviated line, or amount of compensation asked for suspension of work, the Engineer-in-Chief and the contractors mutually agree that the portion of contract comprised within the 13th-mile peg from Redfern Station to the south end of contract be cancelled, without any compensation to the contractors whatever.

The contractors only being paid for work actually done, or materials on the ground or adjacent thereto

Extra time to be allowed for suspension.

C. & E. MILLAR.

Accept this offer, and let reply be sent.—F.A.W., 3/7/83. Will Crown Solicitor prepalegal deed to give effect to this agreement?—F.A.W. Letter to Messrs. C. & E. Millar, 3/7/83. Will Crown Solicitor prepare the Copy sent to Crown Solicitor, with instructions to prepare agreement, 4/7/83.

3 A.

3 A.

Mr. Quodling to The Engineer-in-Chief.

Memorandum to the Engineer-in-Chief.—Suspension of work, 1st section, Illawarra Railway.

Department of Public Works, Railway Branch, Engineer-in-Chief's Office,

Sydney, 3 July, 1883.

I FORWARD, for your information, a copy of the terms upon which Messras. C. & E. Millar are prepared to suspend work from the 15th-mile peg on the 1st section of the Illawarra line to the end of their contract.

These conditions have been accepted by Mr. Wright, who desired me to inform you that, as Mr. Stuart approved of them, and the matter was pressing, he did not consider it necessary to trouble you W. H. QUODLING. with the business.

J.W., 4/7/83. Mr. Firth,—To be returned.—W.H.Q., 5/7/83. All work beyond the 15th-mile peg is suspended.—T.R.F., 7/7/83. 3 B.

Minute from Commissioner for Railways to The Crown Solicitor.

Government Railways.—Minute Paper.

I have to inform you that it has been decided to suspend all works on Messrs. C. & E. Millar's contracts for the construction of the 1st section of the line from Sydney to the Illawarra District, from the 15th-mile peg onward, pending the completion of a survey for a deviation of the original route.

The conditions upon which the works are to be stopped are set forth in the memorandum here-

with, and I shall be glad if you will draw up an agreement upon the terms of this memorandum. Copy of letter to Messrs C. & E. Millar and bond in connection with contract herewith.

C. A:G., Recd.—W.H.Q., 5/7/83. B.C., 4/7/83. 3 C.

The Crown Solicitor to The Commissioner for Railways.

Crown Solicitor's Office, Sydney, 11 July, 1883. Sir,

I have the honor to return herewith the papers sent to me as instructions to prepare agreement as to the suspension of the works on a portion of the Illawarra Railway line, and to forward the agreement.

I believe I have correctly carried out your instructions; but as the matter dealt with is novel, it is desirable that, before adopting the agreement I now send to you, you should carefully peruse same, and ascertain that your instructions in the matter are therein correctly set out.

I have, &c.

JOHN WILLIAMS Crown Solicitor.

Have read the agreement, which seems to be in accordance with terms of agreement. I assume it is a clerical error when the figures "13" are inserted in 4th clause of the agreement; they should be 15, as the Crown Solicitor seems to have inferred, as he has adopted 15 in the deed. I do not quite understand the proviso for cancellation of contract, if the contractors and the Engineer-in-Chief are unable to agree as to the extra value of works on deviated line. By a preceding clause the works on the deviated line are to be carried out at Schedule prices. The agreement should be forwarded to the Engineer-in-Chief, for perusal, &c.—C.A.G., B.C., 12/7/83. Mr. Wade.—W.H.Q., B.C., 12/7/83.

Modifications suggested in proposed agreement with Messrs. C. & E. Millar, re stoppage of works on first section of the Illawarra Railway.

A. "And if there be any works on the new line of a class not provided for in the said Schedule, the value of such works shall be agreed upon by the Engineer-in-Chief and the said C. G. Millar and E. F. Millar," &c., &c.

B. "And after agreeing with the Engineer-in-Chief as to the amount to be paid for compensation on account of stoppage of works," the said, &c., &c.

Fifthly. Omit altogether.

C. The (13th) thirteenth-mile peg is meant by Mr. Millar, and is his ultimatum.

Mr. C. Millar has been with me and wishes the above to be inserted.—W.B.W., 13/7/83.

Memo. of suggested modifications herewith.—W.H.Q., 13/7/83. Mr. Berner. Commissioner. G.B., 13/7/83.

The Secretary will please to lay these papers before the Minister at once. There does not seem to be any objection to the modification of terms proposed. I draw attention to the seeming anomaly that while the works are suspended from the 15th-mile peg they are to be abandoned from the 13th-mile peg, if the Engineer-in-Chief and contractors cannot agree upon terms of resumption.—C.A.G., 13/7/83.

Seen. Return to Crown Solicitor.—F.A.W., 14/7/83.

3 D.

The Crown Solicitor to The Commissioner for Railways.

Crown Solicitor's Office, Sydney, 17 July, 1883. Sir, I have the honor to return herewith the agreement for the suspension of works on portion of line of railway from Sydney to Wollongong and Kiama, altered (in red ink) as requested by you.

Will you be good enough to peruse same as altered, and, if you approve it, return the agreement to me for re-engrossment. I have, &c.,

JÓHN WILLIAMS,

Crown Solicitor.

P.S.—Attention is drawn to queries in pencil on third side of agreement.

Will Chief Clerk kindly see Crown Solicitor and explain what the object in leaving out words in the fifth condition as follows:—"Or as to the rate of payment for works required to be done on the said deviation."-C.A.G., 17/7/83.

3 E.

The Crown Solicitor to The Commissioner for Railways:

Crown Solicitor's Office, Sydney, 18 July, 1883. I have the honor to return the whole of the papers relating to the suspension of works on portion of line of railway from Sydney to Wollongong and Kiama (contract No. 1).

I also send a copy of the agreement for suspension of said works for execution. You will observe that the agreement has been prepared and re-engrossed according to your instructions, and as finally approved by you. I have, &c.

JOHN WILLIAMS.

Crown Solicitor.

Signed by Mr. Millar. Submitted for Commissioner's signature before stamping.—G.B., 18/7/83, C.A.G., 18/7/83. Engineer-in-Chief.—G.B., pro Commr. B.C., 23/7/83.—G.B. Signed, C.A.G., 18/7/83.

No. 4.

Articles of Agreement.

Articles of Agreement made and entered into this third day of July in the year of our Lord one thousand eight hundred and eighty-three between the Commissioner for Railways a corporation sole created by the Act of Council passed in the twenty-second year of the reign of Her Majesty Queen Victoria number nineteen intituled "An Act to make more effectual provision for the construction by the Government of Railways in the Colony of New South Wales and for the regulation of the same" of the one part and Charles Gibson Millar and Edwin Franks Millar both of Melbourne in the Colony of Victoria carrying on business together as contractors under the style or firm of C. & E. Millar of the other part.

WHEREAS by Articles of Agreement bearing date the fifth day of October one thousand eight hundred and eighty-two and made between the said Charles Gibson Millar and Edwin Franks Millar of the one part and the Commissioner for Railways of the other part (hereinafter referred to as the said contract) the said Charles Gibson Millar and Edwin Franks Millar contracted and agreed with the said Commissioner for Railways as in the said contract is mentioned and provided for the construction and performance of works and the supply of materials in connection with the construction and completion of that portion of the line of railway from Sydney to Wollongong and Kiama comprised in contract number one including the bridges over Cook's River, and George's River on the said line of railway as more cook's River, and George's River on the said line of railway as more cook's River, and George's River on the said line of railway as more cook's River, and George's River on the said line of railway as more cook's River and George's River on the said line of railway as more cook of the construction and completion of the part of the construction and completion of the con the bridges over Cook's River and George's River on the said line of railway commencing at a point on the Great Southern Railway at Macdonaldtown one mile five chains distant from Sydney aforesaid and terminating at a point twenty-four miles eighteen chains and thirty links from Sydney aforesaid as shown on the plans in the said contract referred to being a length of twenty-three miles thirteen chains and thirty links and to do execute and complete all the works under the said contract in accordance in all things with the specification and general conditions and plans or drawings in the said contract referred to and to complete and finish the same in all things on or before the thirtieth day of September one thousand eight hundred and eighty-four or on or before such extended time or times (if any) as might be granted under section fourteen of the said general conditions and in default should be liable to pay or have deducted from payments to be made to them under the said contract the sums of money mentioned in section thirteen of the said general conditions and to such other proceedings on the part of the Commissioner for Railways or the Engineer-in-Chief as in the said conditions are provided and whereas the said Charles Gibrar Miller and Edwin Miller and India said Charles Gibson Millar and Edwin Franks Millar duly commenced and are now proceeding with the said works under the said contract and whereas since the said Articles of Agreement were entered into as aforesaid it has been thought desirable to consider whether a deviation of a part of the said line of railway cannot with advantage to the formation of the said line of railway be made and the Commissioner for Railways has therefore requested that pending the consideration of the said proposed deviation there shall be a suspension of the works in the said articles of agreement mentioned so far as the same will beaffected if the said deviation is made in such portion of the said line as hereinafter more particularly
mentioned and described but that such suspension shall not in any way affect the other portion of the
said works in the said Articles of Agreement mentioned and whereas the said Charles Gibson Millar and Edwin Franks Millar have agreed to suspend such works and if a deviation of the said line is determined upon that such deviation shall be made upon the terms and conditions hereinafter mentioned Now these presents witness that the said Charles Gibson Millar and Edwin Franks Millar for themselves their and each of their executors and administrators do hereby covenant declare promise and agree with and to the Commissioner for Railways aforesaid his successors and assigns And the Commissioner for Railways aforesaid on behalf of himself and his successors doth hereby covenant declare promise and agree with the said Charles Gibson Millar and Edwin Franks Millar their executors and administrators in manner following that is to say Firstly that they the said Charles Gibson Millar and Edwin Franks Millar their executors and administrators shall and will from the date hereof suspend all works on that portion of the said line of railway from the fifteenth-mile peg to the southern end of the said contract as shown on the plans of the said line of railway in the office of the Engineer-in-Chief for Railways in Sydney aforesaid until the Commissioner for Railways and his successors have determined whether a deviation on the portion of the said line of railway commencing at the said fifteenth-mile peg shall be made Secondly that if after survey the Commissioner for Railways shall determine to make the said deviation in the said that if after survey the Commissioner for Railways shall determine to make the said deviation in the said line of railway commencing at the fifteenth-mile peg and extending southerly to the end of the line contracted for as aforesaid then the said Charles Gibson Millar and Edwin Franks Millar shall be entitled to have made to them an offer of the construction on the new line of a length equal to the portion now temporarily withdrawn at the rates and prices mentioned and set out in the schedule of prices to the tender in the said contract referred to And if there be any works on the new line of a class not provided for in the said schedule the value of such works shall be agreed upon by the Engineer-in-Chief and the said Charles Gibson Millar and Edwin Franks Millar Thirdly that if after the said survey the Commissioner for Railways or his successors shall consider it to be desirable to adhere to the original line of railway

and the said Charles Gibson Millar and Edwin Franks Millar shall upon being requested by the Commissioner for Railways to resume work as to the portion of the work the execution of which is suspended under this agreement and after agreeing with the Engineer-in-Chief as to the amount to be paid for compensation on account of stoppage of works the said Charles Gibson Millar and Edwin Franks Millar shall and will forthwith proceed with the works thereon and finish the same in accordance in all things with the said Articles of Agreement Specifications and General Conditions excepting only in respect of the time within which the said works were therein mentioned to be completed Fourthly that in the event of its being determined to proceed with and complete the said works upon the line of railway as shown on the said plans and without any deviation being made therein then the said Charles Gibson Millar and Edwin Franks Millar shall be entitled to compensation for any loss incurred by delay under this agreement in proceeding with the said works the amount of such compensation to be agreed upon between the Engineer-in-Chief for Railways and the said Charles Gibson Millar and Edwin Franks Millar Fifthly if the Engineer-in-Chief and the said Charles Gibson, Millar and Edwin Franks Millar are unable to agree as to the amount of compensation to be paid on account of the suspension of the said works as aforesaid it shall be lawful for the Commissioner for Railways by notice under his hand and seal to declare that the further completion of the said portion of the said works in the said Articles of Agreement mentioned commencing at the thirteenth-mile peg and extending to the south end of said contract shall be cancelled and upon the service of such notice the said Charles Gibson Millar shall not be entitled to any compensation for or on account of any loss or any other matter or thing occasioned by the stoppage of the said works under this agreement or for the cancellation of the said contract or in the works then remaining to be done but shall be entitled only to be paid for work actually done or materials provided and intended to be used in the said works which are now on the ground or adjacent thereto. Sixthly any extension or extensions of time for the completion of the said works which will be rendered necessary by the said deviation being decided upon or if such deviation is not to be made and the works are to be carried out and completed as originally intended then an extension of time in respect of the delay occasioned in the completion thereof by this agreement shall be granted to the said Charles Gibson Millar and Edwin Franks Millar in such manner as is provided for extensions of time by section fourteen of the said General Conditions annexed to the said recited Articles of Agreement And lastly that nothing herein contained shall prejudice the rights or remedies of the Commissioner for Railways and his successors under the said Articles of Agreement Specifications and General Conditions thereto annexed or affect the powers and remedies vested in the Commissioner for Railways and his successors or the Engineer-in-Chief under the said recited Articles of Agreement and the said Specifications and General Conditions thereto annexed otherwise than is hereby stated but that the same shall remain in full force and virtue.

In witness whereof the said Charles Gibson Millar and Edwin Franks Millar have hereunto set their hands and seals and the Commissioner for Railways aforesaid hath caused his official seal to be affixed the day and year first before written.

The Official Seal of the Commissioner for Railways hath been hereunto affixed by the Commissioner for Railways in the presence of—

GEO. BERNER.

Signed sealed and delivered by the said Charles Gibson CHAS. G. MILLAR. Millar in the presence of—
GEO. BERNER.

Signed sealed and delivered by the said Edwin Franks Millar by his attorney Charles Gibson Millar in the presence of—

No. 5:

Messrs. C. & E. Millar to The Engineer-in-Chief.

Sir,

We have the honor to inform you that, at an interview which our Mr. C. G. Millar had yesterday with the Secretary for Works, at his request, we submitted a Memo of Agreement upon what terms we would suspend operations on a portion of the above contract, viz., from 15-mile peg to south end.

The Minister for Works having accepted the conditions named, and our having received official notice to that effect, and a request to stop works from the Commissioner of Railways, we beg to state that we have carried out his instructions this morning, and paid off all gangs and stopped all works connected with that part of contract.

We have, &c.,

C. & E. MILLAR.

No. 6.

Messrs. C. & E. Millar to Mr. T. R. Firth.

Sir,

Illawarra Railway, N.S.W., Contractor's Office, St. Peters, 4 July, 1883.

We have the honor to inform you that we have received a letter from Commissioner of Railways desiring us to suspend works from the 15-mile peg on this section to end of contract, that the Department may be enabled to make a deviation.

We have accordingly carried out these instructions, and paid off all gangs and stopped all work south of point named.

We have, &c.,

C. & E. MILLAR.

No. 7.

Memo. from Mr. Palmer to The Engineer-in-Chief.

Department of Public Works, Railway Branch, Engineer-in-Chief's Office, Sydney, 3 July, 1883.

In addition to the number of surveyors I named yesterday as under order to proceed to re-survey the original trial survey up the Port Hacking River, I have instructed Mr. Millner to go on the same work. The list will now be Messrs. Millner, Melrose, Bullard, Thornbury, Cumming, Vine.

HERBERT PALMER.

No. 8.

Memo. from Mr. Palmer to The Engineer-in-Chief.

Department of Public Works, Railway Branch, Engineer-in-Chief's Office, Sydney, 5 July, 1883.

In accordance with your verbal instructions, I leave Sydney to-morrow morning for the Port Hacking River, and shall carefully examine the whole of the route originally surveyed by Mr. Stephens up that river, and give the necessary directions to the surveyors employed on the re-survey of that route. to be back in the office on Tuesday morning.

HERBERT PALMER.

No. 9.

Memo. from Mr. Palmer to The Engineer-in-Chief.

Department of Public Works, Railway Branch, Engineer-in-Chief's Office,

Sydney, 17 July, 1883.

In accordance with instructions from the Honorable the Minister for Works, I leave Sydney to-morrow morning to accompany him to Wollongong via the Bottle Forest Road.

HERBERT PALMER.

Please inform Mr. Palmer that I think the Port Hacking survey should be plotted to 4 chains and 40 feet, and the slopes of banks kept out of reach of flood-waters of the creek.—J.W., 20/7/83. Mr Quodling.

Port Hacking Trial Survey.

THE Engineer-in-Chief desires me to state that he thinks the Port Hacking survey should be plotted to 4 chains and 40 feet, and the slopes of banks kept out of reach of flood-waters of the creek

W. H. QUODLING.

No. 11.

Report from Mr. Palmer to Engineer-in-Chief.

Railway Department, 29 August, 1883.

I have the honor to submit herewith plan, sections, together with tables showing gradients, straights, and curves of portion of the Illawarra Railway, from 14 miles 60 chains to 30 miles 30 chains, as permanently staked, via the Bottle Forest Road, and the proposed deviation between these points, via the National Park Camp and the valley of the Port Hacking River.

On the latter route, which is a re-survey of the original trial survey made by Mr. Stephens, the surface line on the section is shown by a black line, and when computing the earthwork quantities from the cross-sections taken throughout this route it was found that in many places retaining walls and viaducts would be required to keep the slopes of the embankments clear of the river. The bed surface line shows the extent to which the centre line must be altered to place the formation sufficiently into cutting to allow of the greater number of the retaining walls and viaducts being dispensed with, and the earthwork quantities as given in the estimate for this route have been computed from the surface line as shown in red on the section, the centre line on the plan being identical with such assumed alterations.

On reference to the comparative estimates it will be found that the chief difference between the true results is an average of paperly 500,000 enhick route of exercition on the proposed deviction with Port

two routes is an excess of nearly 500,000 cubic yards of excavation on the proposed deviation via the Port Hacking River, and that although the total length of tunnelling on this route is less than on the upper route (being in the proportion of about 2 to 3) the cost of bridges and culverts will be much greater than on the staked line.

The table of gradients shows almost equivalent lengths of the steepest inclines on the two routes, while the table of comparative straights and curves shows that on the Port Hacking route there would be 5 miles and 50 chains of railway to be constructed with curves of 10 to 12 chains radii, against 1 mile and $77\frac{1}{2}$ chains on the upper route having curves of similar radii.

I have, &c. HERBERT PALMER.

The length of proposed deviation would, with the necessary alterations, be just half-a-mile in excess of that via the staked line along the Bottle Forest Road.

No. 12.

Memo. from Mr. Palmer to The Engineer-in-Chief.

Department of Public Works, Railway Branch, Engineer-in-Chief's Office, Sydney, 5 September, 1883.

On the completion of the re-survey of Mr. Stephens's trial line up the Port Hacking River I instructed the surveyors to make a further trial survey on the eastern side of the river from the point where the original trial line crossed the river, near the Lower Peach Grove Creek; thence down the river, recrossing it below the junction of Kangaroo Creek, and joining the first trial line a short distance to the north of the National Park Camp. The field work in connection with this trial survey will be completed this week, and I shall be glad to have your instructions as to the necessity or otherwise of the surveyors being retained in that locality any longer.

HERBERT PALMER.

If all necessary information has been obtained to prepare careful estimates of this line, the surveyors may return. I shall be glad to see Mr. Palmer on Monday with reference to the surveys for the City Extension.—J.W., 8/9/83. Messrs. Melrose, Millner, Thornbury, and Bullard instructed to return.—H.P., 8/9/83.

No. 13.

Minute from The Engineer-in-Chief to The Minister for Works.

Minute Paper. Subject:—Re alternative routes for the Illawarra Railway, and the Honorable the Colonial Secretary's minute on the subject, of the 26th June, 1883.

Department of Public Works, Railway Branch, Engineer-in-Chief's Office, Sydney, 6 October, 1883.

As directed by the Minister for Works, by minute dated 2nd July, 1883, I have had a survey made of the deviation proposed by the Honorable the Colonial Secretary, commencing at 14 miles 60 chains (on the present staked line of the Illawarra Railway), passing through the National Park Camp up the Port Hacking Creek, and re-joining the staked line above referred to at 30 miles 30 chains.

This line had been advisedly abandoned in favour of the line along the Bottle Forest Road.

In the memo. of the Honorable the Colonial Secretary I find the following statements:-

- (1.) That the Bottle Forest line is nearly 3 miles longer than the Port Hacking line.
- (2.) That the summit level of the Bottle Forest line is 400 feet higher.
- (3.) That the gradients of the Bottle Forest line are not so favourable, and, in consequence of the higher summit level, the haulage would be unremunerative.
- (4.) That the outlay for culverts would not be so expensive as for the gigantic tunnels on the Bottle Forest line.

In reply to these statements, I submit the following:-

(1.)	Length of line by the Bottle Forest route is Do. by Port Hacking Creek	15 m. 16	$50 \text{ chs.} \ 2^{\frac{1}{2}} \ ,$
	Difference	0 m	32½ chs

The Bottle Forest line being therefore $32\frac{1}{2}$ chains shorter than the Port Hacking line, and not nearly 3 miles longer, as stated.

- (2.) The summit level by the Bottle Forest route is 426 feet above the points of divergence of the Port Hacking deviation at 14 miles 60 chains and 30 miles 30 chains (which are practically of the same height); but as the Port Hacking line descends to a level of 308 feet below these points of divergence, the fair comparison between the summit level of the two lines is the difference as represented by the rise made from the points of divergence to the summit of the Bottle Forest Road and the rise made from the lowest level on the Port Hacking route to the same points, viz., the difference between 426 feet and 308 feet, being in fact only 118 feet of extra ascent, instead of 400 feet as stated.
- (3.) I give below a list of the gradients and curves on both lines:-

Comparative Gradients.

	0				•				
	•	Total	15	50		16	$2\frac{1}{2}$		

It will be seen that the lengths of gradients of 1 in 40 on the Bottle Forest line are a little shorter than on the Port Hacking line, and as this gradients of 1 in 40 on the Bottle Forest line are a little shorter than on the Port Hacking line, and as this gradient of 1 in 40, which occurs on both lines, will limit the load which can be taken over either line, the cost of haulage will be nearly the same if one engine be used, but if an assistant engine be provided from Coal Cliff the cost of haulage will be in favour of the Bottle Forest line, as the assistant engine would only be required from the point of divergence (at A) of the Port Hacking line to the summit level of the Bottle Forest route where the assistant engine can be dispensed with, as the gradients are all descending from that point towards Sydney; but on the Port Hacking line although the gradients are generally falling towards the National Park Camp for a distance of about eleven (11) miles from the point of divergence at A descents of 1 in 40 again occur, and the assistant engine must either run the whole distance between the points of divergence or another assistant assistant engine must either run the whole distance between the points of divergence or another assistant engine must be provided.

4. The estimated cost of tunnelling on the Bottle Forest line is £41,131, and on the Port Hacking line £28,606.

The cost of culverts and viaducts on the former line would be £40,715, as against £117,200 on the latter line.

The following are comparative estimates of the two routes:-

Des	Description of Work.						Bottle Forest Line.			Port Hacking Line			
Excavation from cuttings Excavation from tunnels Brickwork in culverts and v Brickwork in tunnels Fencing	•••						£ 82,053 41,131 40,715 73,840 4,000	s. 0 0 0 0	d. 0 0 0 0	£ 155,620 28,606 117,220 52,780 4,104	0 0 0 0	d. 0 0 0	
Permanent way laid and ba Add 10 % contingencies	llasted, 1	nciuai 	ng rans	s and is	astening 	gs	$ \begin{array}{r} 40,715 \\ \hline 282,454 \\ 28,245 \end{array} $	0 0 0	$\frac{0}{0}$	42,465 400,795 40,079	0 0	0	
Totals							£310,699	0	0	440,874	0	0	
Difference, £130,175.	,					•							

I may now summarize the two lines as under:-The Bottle Forest line is shorter by $32\frac{1}{2}$ chains.

The cost of construction will be less by £130,175. The cost of haulage will be less, as the steep gradients are more favourably situated on the Bottle Forest line than on the Port Hacking deviation.

The curves are much better, as on this line there are about 2 miles of curves from 10 to 12 chains

radii, while on the Port Hacking line there are $5\frac{3}{4}$ miles of similar curves.

The Port Hacking Line.

I do not know any advantage to be obtained by constructing this line, which is inferior to the one adopted, unless it be of importance to carry a line through the National Park Upon this point I will offer no opinion.

Although I have made comparative estimates of the two lines, founded upon the same prices for similar work, I am satisfied that no contractor would undertake the construction of the Port Hacking line at such low prices as on the Bottle Forest line, nor would the works when completed be maintained as economically.

The mountains on each side of the Port Hacking Creek are so steep that the cost of constructing a double line eventually would be very much in excess of doubling the line on the Bottle Forest route.

Another matter which I think of considerable importance is that the Bottle Forest line is accessible for local traffic, from the point of divergence at 14 miles 60 chains up to 23 miles, while the Port Hacking deviation, after leaving the National Park Camp, cannot be approached on either side.

I enclose, for the information of the Minister, a plan and diagram sections showing both lines, with the curves and gradients upon each, and I advise that the Bottle Forest line, as now permanently staked, be constructed, and that Messrs. Millar be at once authorized to proceed with the works on their contract.

JOHN WHITTON.

I am satisfied from the report of the Engineer-in-Chief for Railways that the Government would not be justified in asking Parliament to consent to a deviation from the approved line. Mr. Whitton will therefore arrange with contractor to continue his work, and also arrange for letting the portions of the line between the end of Millar's section and the point near Coal Cliff, from whence the line for which tenders are now being called for commences.—F.A.W., 9/10/83.

Engineer-in-Chief for Railways, B.C.—J.R., 9/10/83.

No. 14.

Memorandum to Messrs. C. & E. Millar.

Department of Public Works, Railway Branch, Engineer-in-Chief's Office,

Sydney, 10 October, 1883. Re suspension of works beyond 15th-mile peg, Illawarra Railway.

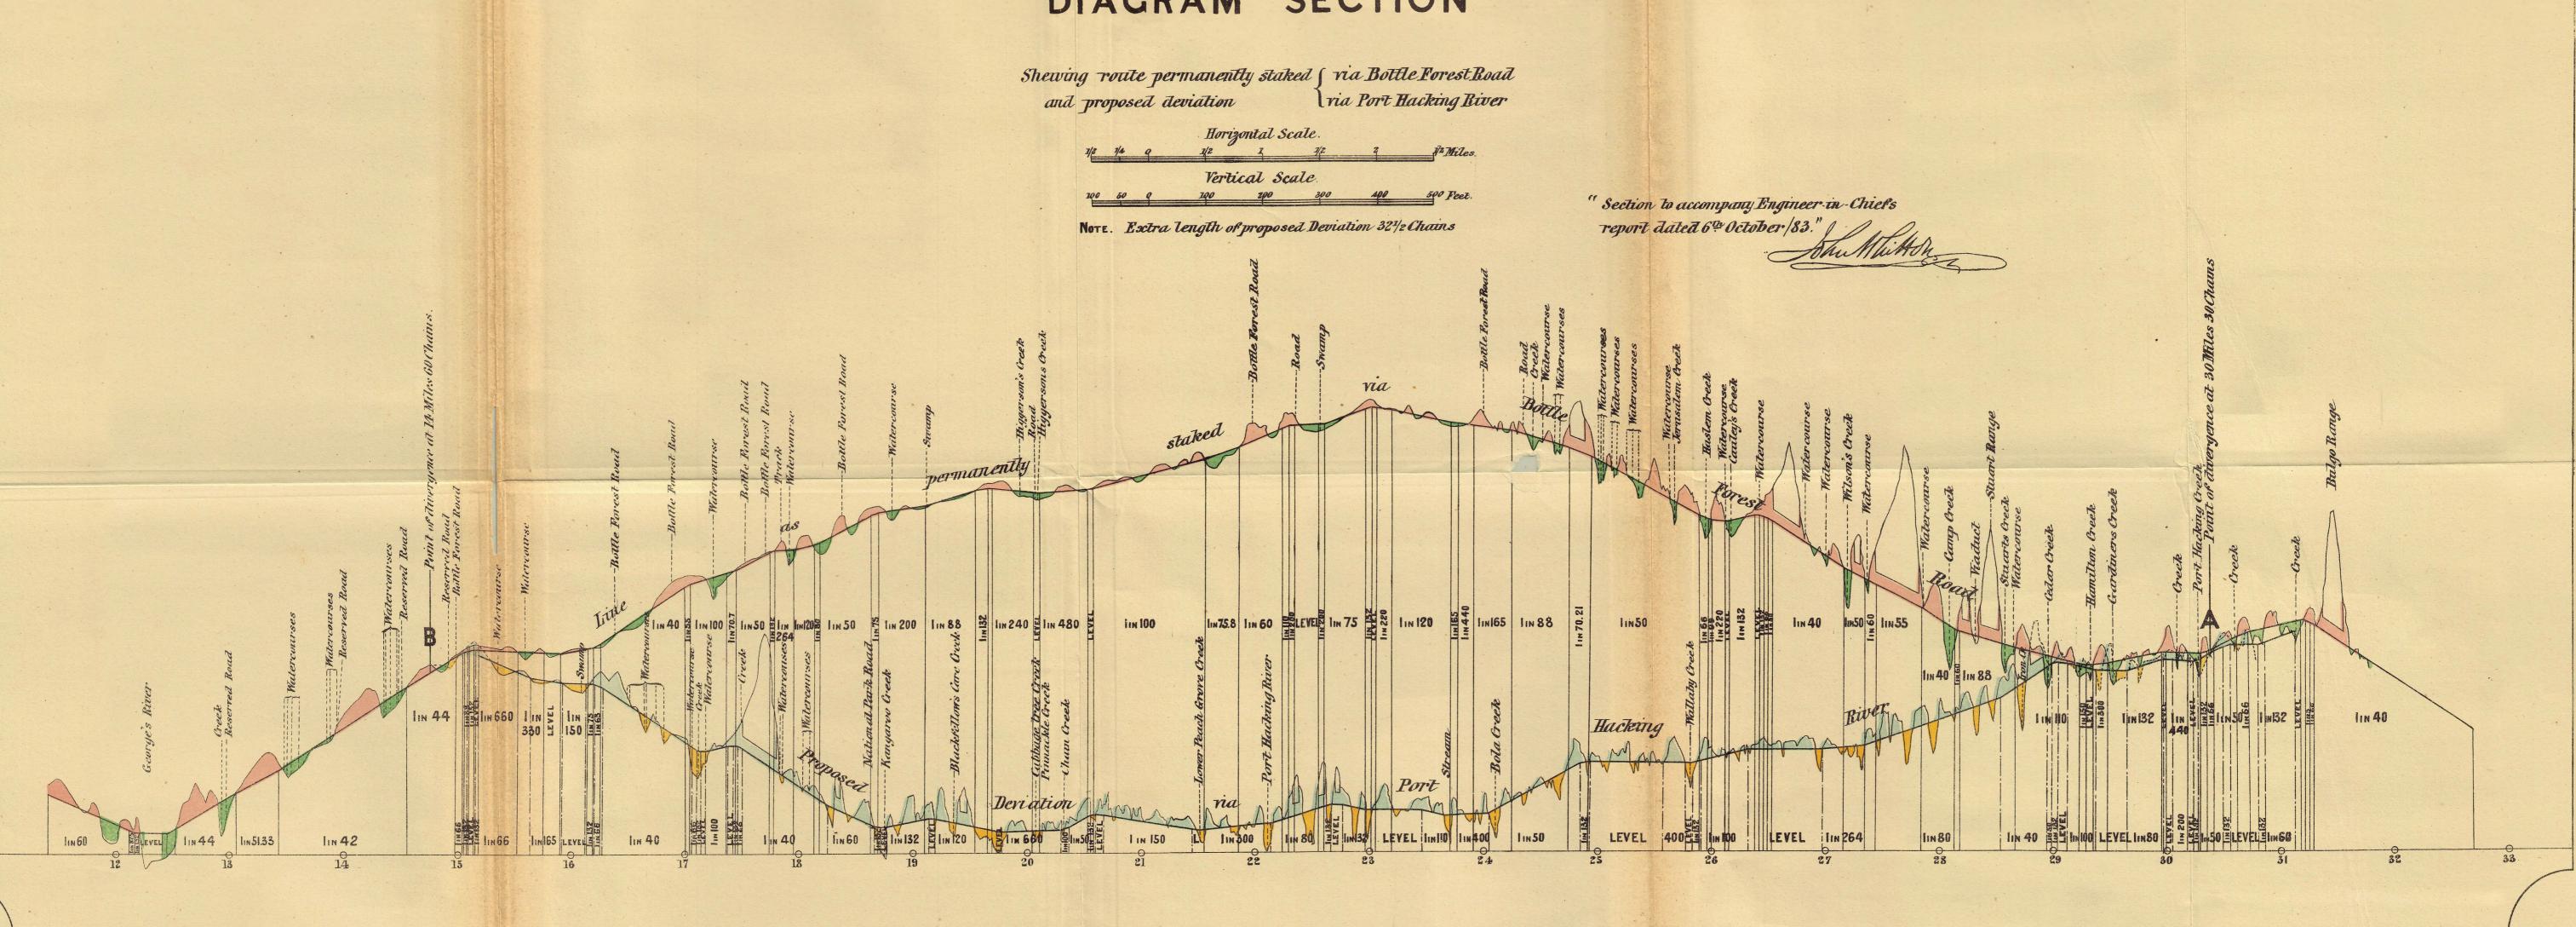

The Minister for Works having decided that the original line now under contract to you shall be adhered to, viz., from the 15th-mile peg to the southern end of your contract, the works on which were suspended on the 4th July last, I have the honor to request you to proceed with the said works in accordance with your contract, plans, and specification, the suspension referred to having been removed.

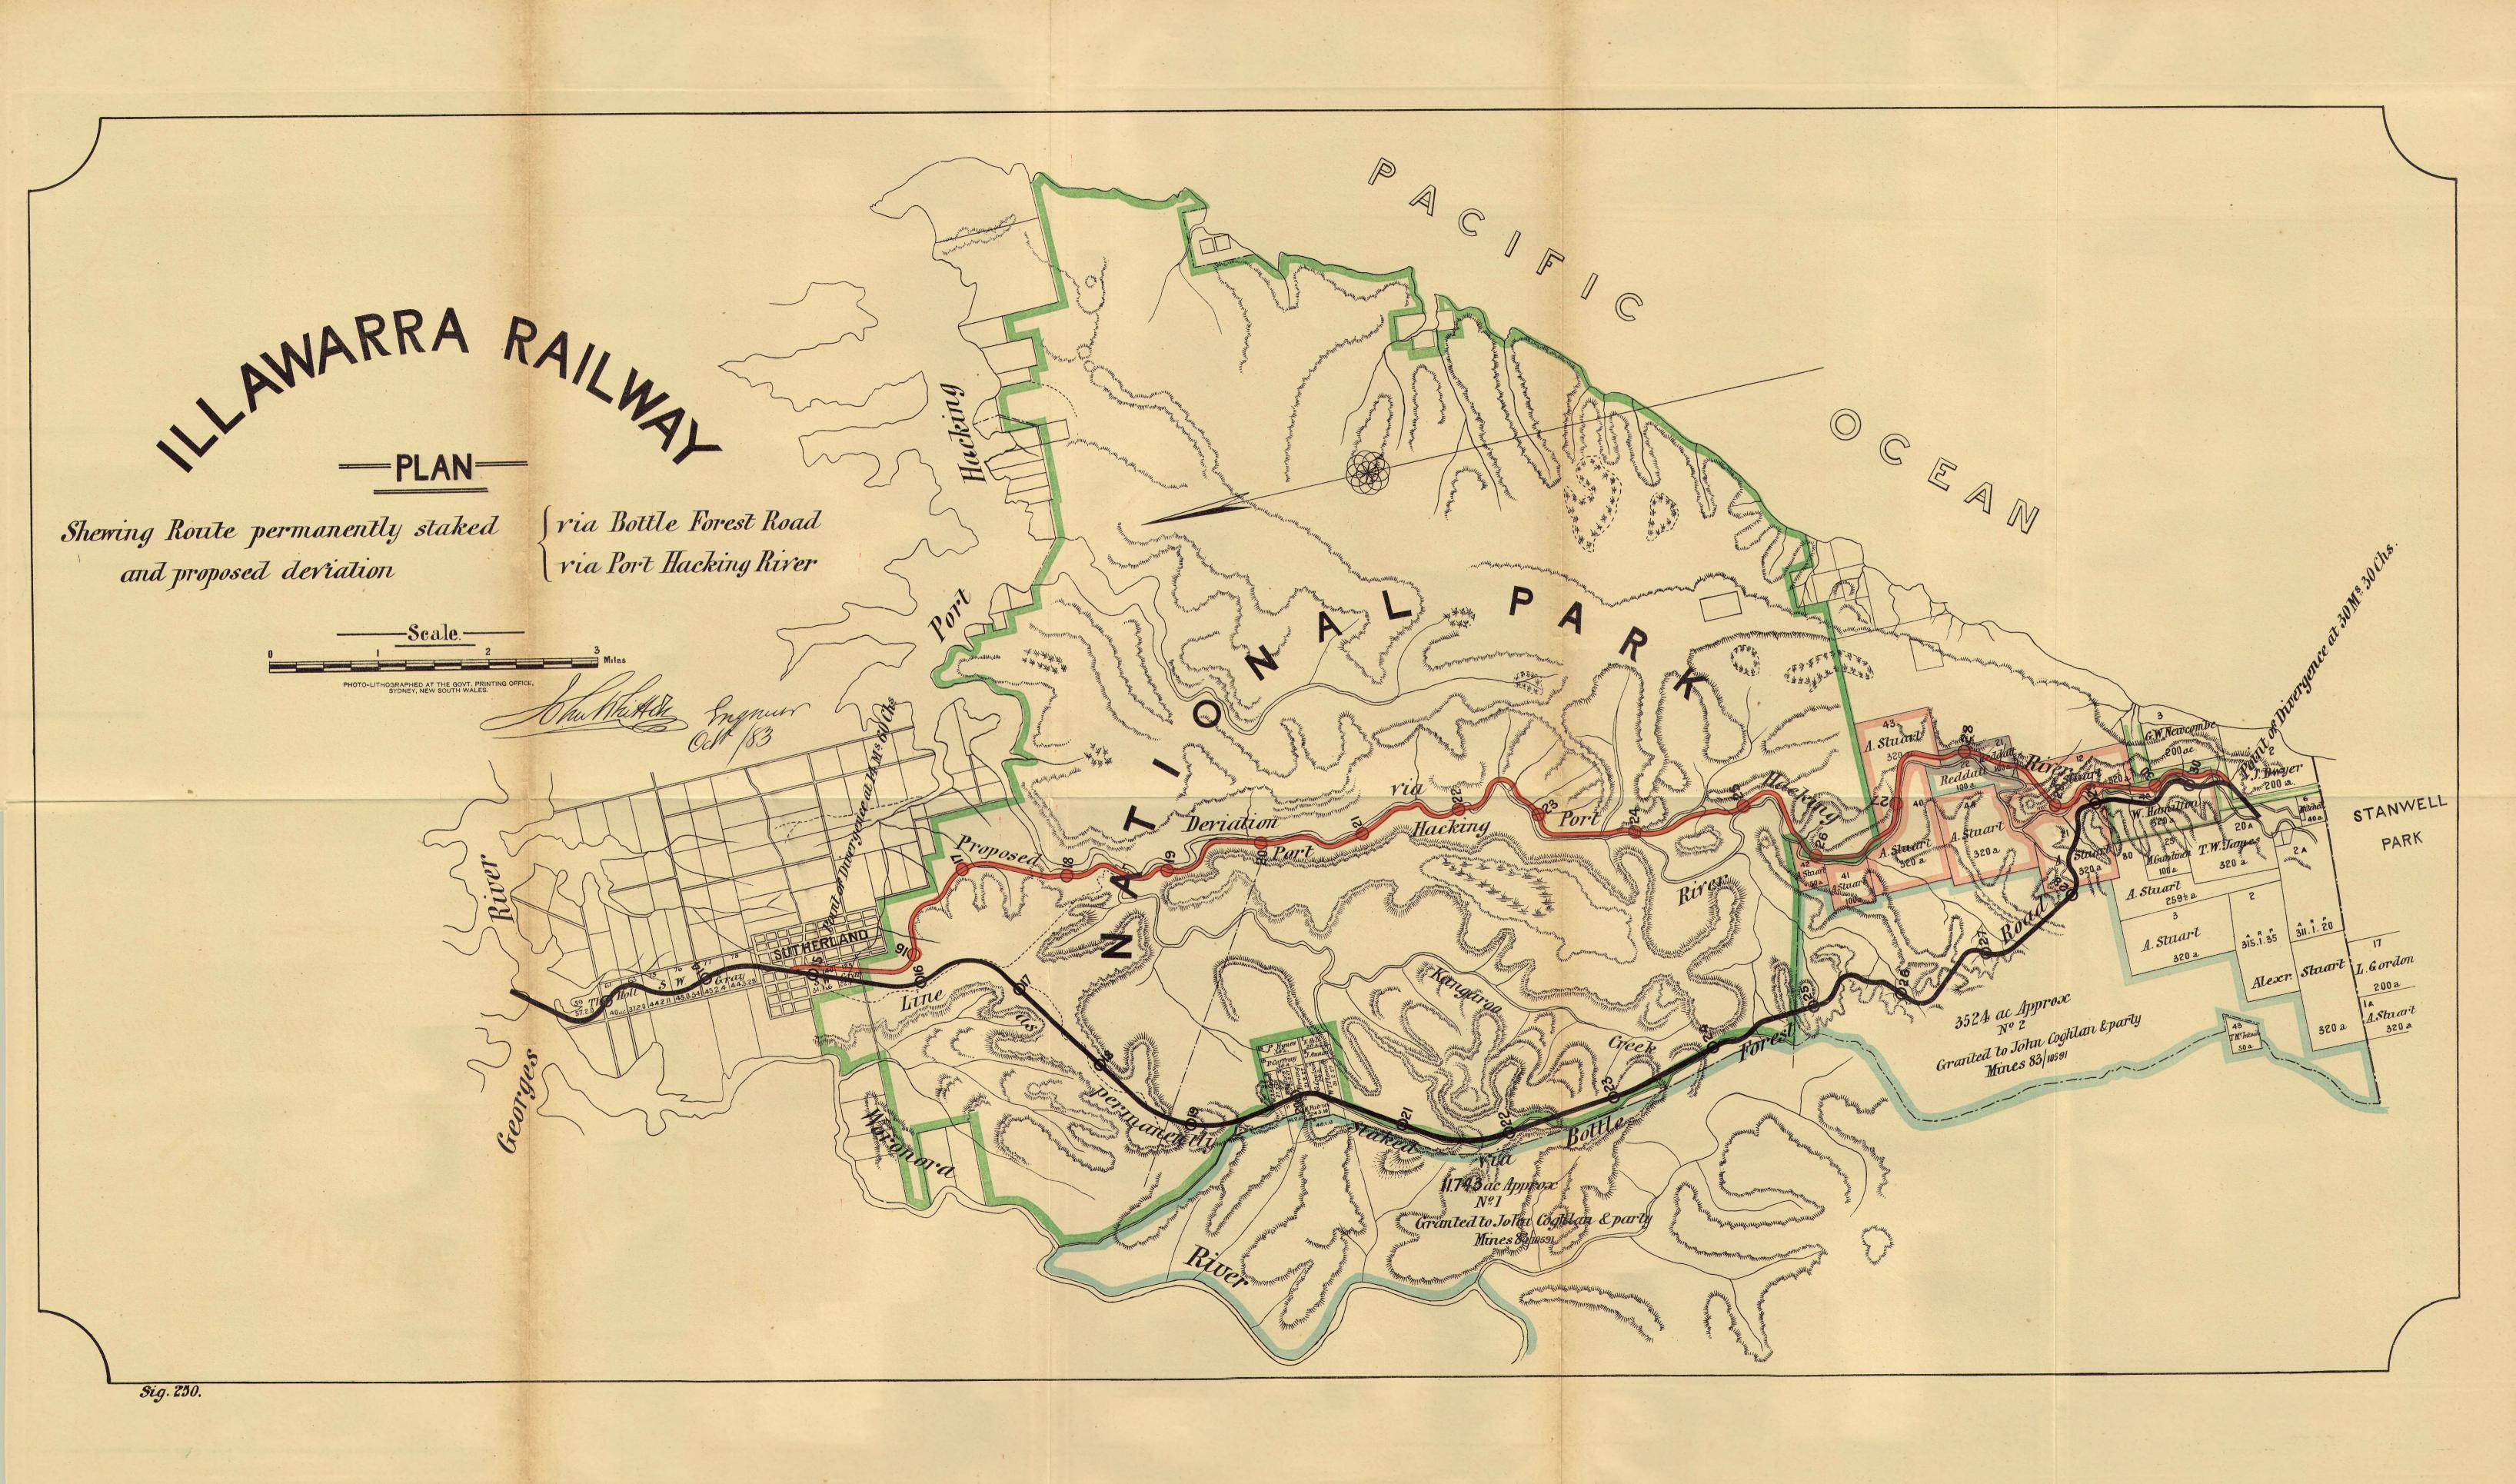

JOHN WHITTON.

[Two plans.]

SYDNEY TO WOLLONGONG & KIAMA RAILWAY

DIAGRAM SECTION

1883.

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

SOUTH COAST RAILWAY.

(PAPERS.)

Ordered by the Legislative Assembly to be printed, 20 December, 1883.

Petition to The Honorable Alexander Stuart, M.P.

The undersigned inhabitants of Illawarra desire most respectfully to express their approval of the proposal of the Government to take the South Coast Railway via the lower route or Port Hacking Creek Valley, instead of by the higher route round by Bottle Forest.

Hoping that you will use every legitimate effort toward causing the railway to be constructed along the said Hacking Valley, as that route is shorter and of easier gradient than the Bottle Forest one, they remain respectfully yours.

[Here follow 36 signatures.]

I forward this to my honorable colleague the Minister for Works. I suppose the survey is nearly completed. I feel sure that what is here asked will, if carried out, most materially benefit the future of the South Coast Railway, and turn it from an unprofitable to a profitable concern, besides the enormous benefit to the future of the Great National Park.

A.S., 7/9/83.

WOLLONGONG RAILWAY STATION.

No. 1.

W. McCourt, Esq., to The Hon. A. Campbell, M.L.C.

Dear Sir, You will see from enclosed extract that there is a dispute as to the best site for Wollongong Railway Station. I have 20 acres of level land just behind the Hospital on which the Station was first marked on, but abandoned because of too great a curve to get there. It is now fixed 300 yards west, and further away from the town, while the townspeople want it 300 yards nearer town than my place. Now as my land occupies the middle position there seems a good chance of its being ultimately adopted as a compromise between the Department and people who are agitating. To get it nearer town than my land great engineering difficulties would have to be overcome.

As you probably know Mr. Whitton well I thought you might put in a word for me which would

have weight with him. My land is really the nearest level to Wollongong.

A word to Mr. Lackey also would no doubt do good.

Yours, &c., W. McCOURT.

[Enclosures.]

From Illawarra Mercury.

The Railway.—As will be noticed by our advertising columns, tenders are being invited for the first section of the Illawarra Railway, the 12th September being the date for their closing. We deemed this item of information of sufficient importance to issue a supplement regarding it on Wednesday, as soon as we obtained the intelligence by telegram. The section being tendered for extends from the junction of the Illawarra railway with the main trunk line at Eveleigh to within a few chains of what will be the north end of the tunnel through Coal Cliff, just adjacent to Judge Hargraves' country seat, the distance being a little over 32½ miles. The permanent survey is now complete as far as the Mount Keira Road, a few chains to the rear of the residence of Mr. W. Robson, J.P., of Sunny Bank, or the Cross Roads, and probably within a few days the surveyors will be giving the finishing touches to the line through the Figtree and Berkeley settlements, on their way to Dapto and further southwards. Yesterday the man cutting the turrow or "lock-spit" from peg to peg, which are only a chain apart, had reached to opposite the Hospital, west of Wollongong. The line finally adopted in that quarter is the one surveyed after that through Mr. McCourt's land nearer the town had been abandoned. In a direct line from the town with the Hospital the route chosen is several chains further toward the mountain than was the line curving toward Wollongong through the lands of Messrs. Ahern and McCourt. Opposite the town the approved route runs in a straight line from a short distance north of Fairy Creek, above the main road, to within a few chains of the Mount Keira Railway, nearly half a mile west of the Hospital. It is not at all improbable that it is intended to have the Wollongong station near the centre of this straight piece of line, which is about three quarters of a mile in length. If so, the site of the station will be in Mr. Arthur Robinson's paddock, a little to the north of where the line crosses Gwynne's-lane; and so far as s

No. 2.

Memorial from Residents of Wollongong.

To the Honorable John Lackey, M.L.A. Minister for Works, &c. The Memorial of the inhabitants of the town of Wollongong,-

RESPECTFULLY SHOWETH

That at a public meeting of the inhabitants held at Wollongong on the 13th of June, 1882, presided over by his worship the Mayor, to consider the question of a site for the Railway Station at that place, it was resolved that the most suitable and convenient position for the same is the locality known as "The Green," situate at the eastern end of Crown-street, near the Roman Catholic Church, indicated on the tracing annexed to this memorial.

That by constructing the line of railway from the point marked in the said tracing, by red line from A to B, a little north of the Mount Pleasant Tramway, and continuing, in a southerly direction, the line

could be brought in nearly a straight course to "The Green."

That the only works of any importance along such line would be a small bridge over Para Creek,

and a cutting on the eastern slope of Smith's Hill.

That the bed of Para Creek, being of a good rocky formation, is well adapted for the foundation of such bridge, and the creek itself, being both narrow and still water, the cost of a bridge would not be considerable, and to ensure comparatively easy curves and gradients the cutting or earth-works would not be of much importance.

That the engineering works would be much less formidable on the proposed route to "The Green" than on that marked by the present survey to the west of the town, and a smaller quantity of private land would be required—obtainable at a much lower sum for compensation—by adopting the former route.

That it is doubtless the intention of the Government that facilities shall be afforded for bringing coals and other minerals from mines to be opened to the north and south of Wollongong, to the shipping port at that place, by connecting the latter with the Illawarra Railway line.

That

That when the length of a branch line is added to that already surveyed and marked out for the main line it is seen there would be very little difference in point of distance between such line and that proposed to "The Green," whilst the difference in point of cost of land required and works necessary would be much in favor of the latter route since, by adopting it, the line beyond Wollongong for a distance of about 4½ miles would pass through about 2 miles of Crown lands, and only one bridge would be required, whereas the present survey is through valuable private property and necessitates the building of four bridges.

Your memorialists therefore respectfully request you will be pleased to take the premises into your

favorable consideration and grant the request of your memorialists.

Signed by chairman on behalf of meeting,-

AQUILA PARSONS,

Mayor, Borough Council, Wollongong.

No. 3.

A. Stuart, Esq., M.P., to The Under Secretary for Public Works.

Kindly arrange for a deputation from Wollongong, introduced by self and Dr. Tarrant, to Monday. interview the Minister on Friday (and let me know the hour) to urge their opinion that Wollongong should have a railway station in the town in place of a mile outside of its principal centre.

Yours, &c.

ALEX. STUART. I have informed Mr. Stuart that no day can be fixed till Mr. Lackey's return.—J.R., 8/6/82.

A. Stuart, Esq., M.P., to The Under Secretary for Public Works.

My dear Rae Can this deputation see Lackey to-morrow, say about noon or any other hour?

Thursday.

The letter came while I was in Melbourne, but I wish to telegraph this morning for their guidance, so will be obliged if you can answer me by bearer.

I know Whitton is against their proposal, for he told me so, and I told the good folks of Wollongong, but they fancy, I suppose, that though my puny efforts may avail nothing, yet it is their duty to urge their own views on the Minister.

Believe me, &c.,

Inform—Not to-morrow, but Friday week, at 11.—J.R., 13/7/82.

The Under-Secretary for Public Works to A. Stuart, Esq., M.P.

Sir, Department of Public Works, Sydney, 13 July, 1832. Referring to your letter of to-day's date requesting an interview for a deputation from certain residents of Wollongong on the subject of site for Railway Station at that place to-morrow, I am directed to inform you that the Secretary for Public Works cannot receive the deputation at the time referred to, but has appointed Friday, the 21st instant, at 11 o'clock, a.m., to do so.

I have, &c., JOHN RAE.

ALEX. STUART.

The Hon. Secretary, Wollongong Progress Committee, to A. Stuart, Esq., M.P.

Sir,

I am desired by the committee to intimate to you the intention of a deputation from that body to wait upon the Hon. John Lackey, M.L.A., Minister for Works, and present a memorial from the inhabitants respecting a site for the railway station at Wollongong at the earliest available moment. The committee are further desirous that you should introduce the deputation in common with the Manhard Committee. respecting a site for the railway station at wollongong at the earliest available moment. The committee are further desirous that you should introduce the deputation in company with the Members for the Electorates of Kiama and Shoalhaven, and that the interview with the Minister for Works should take place on Friday next, 14th instant. Will you kindly undertake the duty of arranging the matter with the Minister, and giving me the earliest information as to whether the deputation will be received on the day named? I am, &c.,

FRAS. WOODWARD,

Hon. Secretary.

Will see Mr. Whitton in reference to this matter.—J.L., 21/7/82. Railways, B.C., 24/7/82.—J.R.

The Engineer-in-Chief to The Under Secretary for Public Works.

Memorial from Wollongong Residents forwarded to the Engineer-in-Chief.

I will have surveys made through the Town of Wollongong, and report to the Minister.

The Under Secretary for Works, B.C., 7 Augt., 1882.

J.W., 7/8/82.

A. Stuart, Esq., M.P., to The Under Secretary for Public Works.

My dear Rae The Wollongong deputation will meet the Minister as arranged at 11 on Friday. The subjects they wish to urge upon him are :-

1. The giving to Wollongong a railway station in the town, in place of a mile away from it.

Yours, &c., A. STUART.

No. 1.

No. 2

No. 3.

The Under Secretary for Public Works to A Stuart, Esq., M.P.

Sir,

Department of Public Works, Sydney, 10 August, 1882.

Referring to your letter of the 19th ultimo and previous correspondence on the subject of the site for a railway station in the town of Wollongong, I am directed to inform you that the requisite surveys of the town in question will be made by the Engineer-in-Chief for Railways, and upon the receipt of his report a further communication will be made to you I have, &c., JOHN RAE,

No. 4:

Mr. W. Wiley to The Secretary for Public Works.

91, Pitt-street, Sydney, 20 December, 1882. Hon. Sir, I have the honor, as one interested in the prosperity of Wollongong and the district, where I have extensive freeholds, respectfully to draw your attention to the present surveyed route of the Illawarra line and the currently reported "supposed" site for the Railway Station, marked on plan (number as per margin), as being by its distance from the township unsuitable to the requirements of a district now showing very rapid strides of progress, and would respectfully suggest for your attentive consideration what with me nearly every inhabitant of the district agrees is a more practicable, suitable, and convenient route.

At considerable cost I have had made a trial survey by one of the leading gentlemen in the profession, of a section commencing at a point of your present survey 47 miles 10 chains from Sydney, and particularly set forth in plan as per margin, continuing in a straight line through the Garden Hill Estate, in close proximity to the township, and I am prepared to hand to your department the original plans and data thereof; and, hon. sir, I request that you may be pleased to cause to be made a continuation of such trial survey to a junction with the present surveyed route on this side of Dapto (which will not materially increase the length of the line), when I feel assured your officers will at once recommend the deviation as proposed by me and shown on plans herewith.

In proof, hon. sir, that I am actuated in this by no mercenary motive, I am prepared, should you deem it fit after survey, report, and consideration, to cause the adoption of my proposed deviation, to grant to the Government as a site for station purposes an area of (5) five acres, close to the township, and at the junction of my proposed line with the deviation of the Dapto road, and adjoining the Mount Kiera Railway (shown on plan numbered as per margin) with which, from the gauge of both lines being alike, connection

could be effected and arrangements made so that your trains could run direct to the wharf.

I have been informed that the cause of the surveyed route being so far distant from the township is an idea that the land is too valuable to be resumed for railway purposes, but I opine that my offer as above, and the extra accommodation and convenience to the town and district generally, will so weigh in your considerations as to overcome any imaginary difficulties in this direction.

I may remark that on section plan No. 2, gradients shown as 1 in 34 and 27 can be easily altered inasmuch as there is only a cutting 20 feet deep, which made 40, would meet all requirements. Again, at the station site the grade is 1 in 165.72 which is not considered excessive and could be made easier.

the station site the grade is 1 in 165.73, which is not considered excessive and could be made easier.

I have, &c., WM. WILEY.

Forwarded to the Engineer-in-Chief.—C.A.G., B.C., 13/1/83. Railways, B.C., 6/1/83.

B.C. Instructions from Engineer-in-Chief to Mr. Palmer.

Surveys may be made of this deviation before the surveyors leave the district, but not necessarily Particulars will be given to the surveyors by Mr. Wiley.—J.W., 13/2/83. for adoption.

B.C. Mr. Palmer's reply.

The Engineer-in-Chief. Mr. Edwards instructed to make this trial survey.—H.P., 19/2/83.

[Enclosures.]

Memorandum from Mr. H. Palmer to Mr. Edwardes.

Department of Public Works, Railway Branch, Engineer-in-Chief's Office, Sydney, 19 February, 1883.

An application has been made for the trial-survey of a deviation on the line already permanently staked in the neighbourhood of Wollongong. I wish you on the completion of the survey upon which you have lately been engaged, between Jamberoo and Kiama, to undertake this survey. The route of the deviation is described as follows:—

"To leave the present survey at 47 miles 10 chains, continuing in a straight line through the Garden Hill Estate, in close proximity to the township to a junction with the permanently staked line on this side of Dapto" (I presume this to mean to the north of Dapto).

The application is made by Mr. Wiley, and if he is a resident of the district, you should apply to him for a further description of the route he recommends. Mr. Franklin has, I believe, made a trial-survey of a portion of this route for Mr. Wiley, and he may possibly be able to give you some useful information.

HERBERT PALMER.

Mr. C. A. Edwardes to The Engineer-in-Chief.

Sir,

Railway Survey Camp, Fig Tree, 20 March, 1883.

I have the honor to transmit herewith, under separate cover, plan and section of the trial survey I have made in accordance with your instructions (No. 83-75) of 19th February, of proposed deviation of the line now permanently staked between Wollongong and North Dapto.

Previous to my making this survey I called on Mr. F. A. Franklin, C.E., of Wollongong, who gave me information regarding the route, he having taken a section of part of the line, viz., through the "Garden Hill Estate," for Mr. W. Wiley, of 91 Pitt-street, Sydney, which portion of the line I have mainly followed.

This line, as surveyed by me, would cross the Mount Keira line on the level—the grade of the latter as will be seen from cross section being also nearly level; by shifting the line about 7 chains east, and raising the grade of the Mount Kera line a few feet, this level crossing could be avoided, but so doing would increase the distance, and make the grade and cutting at South Coast Road heavier.

I have shown the level of ordinary flood of American Creek, which occurs when the mouth of the Tom Thumb Lagoon, into which the creek empties, becomes choked, or through the waters being forced back by heavy high tides.

A level crossing would be necessary at the Mount Kembla Tramway and road adjacent thereto. The through mileage by this survey to junction with line permanently staked at peg 47 is 52 miles 75 95 chains, or 9 41 chains longer The cross-sections between 1 and 3 miles I have taken with a view of shortening the line, but which I am of opinion would increase the grade and amount of cutting.

Awaiting your further instructions,—

I have, &c.,

I have, &c., CHAS. A. EDWARDES.

B.C. Mr. Palmer to Engineer-in-Chief.

The route through the Garden Hill Estate, as suggested in the accompanying letter, has been surveyed, and is now adopted and plotted on the working plan and section.

The station site for Wollongong will however be on the southern side of the Wollongong and Kiama road, and not on the northern side as suggested by Mr. Wiley.—H.P., 5/7/83. The Engineer-in-Chief.

No. 5.

Mr. W. Wiley to The Secretary for Public Works.

91, Pitt-street, Sydney, 12 September, 1883. Being without reply to mine of the 20th December last, offering to the Government free a railway station site on my Garden Hill Estate, near Wollongong, and understanding that a site has been fixed upon, I have the honor to withdraw my offer as and from this date.

I am, &c., WM. WILEY,

Can Mr. Whitton give me any information about this letter?—F.A.W., 12/9/83. Mr. Palmer.—W.H.Q., 25/9/83. p. M.G. J.R. B.C., 14/9/83.—

Mr. H. Palmer to The Engineer-in-Chief.

I HAVE some recollection of seeing a letter from Mr. Wiley, in which a promise of a station site was made in the event of the Wollongong Station being fixed on the Garden Hill Estate, which lies to the north of the Wollongong and Kiama Main Road. The station site, as originally chosen, would have been on this estate, but since the centre line has been altered so as to pass nearer to the town of Wollongong it has been necessary to remove the station site to the southern side of the Kiama Road, and upon property which is not owned by Mr. Wiley.

H.P., 2/10/83.

Under Sec. for Works, B.C., 4 Oct., /83.—W.H.Q., for the Engineer-in-Chief. F.A.W., 8/10/83. Railways, B.C., 10/10/83.—J.R. Inform Mr. Wiley. -**F.A.W.**, 8/10/83. Submitted.

[Enclosure.]

The Under Secretary for Public Works to Mr. W. Wiley.

Sir,

Department of Public Works, Sydney, 10 October, 1883.

I am directed to acknowledge the receipt of your letter of the 12th ultimo, withdrawing your offer to the Government, free, a site for a railway station, Wollongong, i.e., portion of the Garden Hill Estate.

I have, &c., JOHN RAE.

Sydney: Thomas Richards, Government Printer.—1884.

[6d.]

1883. (THIRD SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

GREAT NORTHERN RAILWAY.

(ISSUE OF TICKETS, &c.)

Ordered by the Legislative Assembly to be printed, 29 November, 1883.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 18th October, 1883, That there be laid upon the Table of this House a Return showing,—

- " (1.) The number of Tickets issued at all Stations north of Singleton by the Up-mail Train, on the 14th of August last, for Singleton.
- "(2.) The number of Tickets issued at all Stations on the Great Northern
- " and North-western Railways to Singleton, on the 15th and 16th August
- "last, the amount of revenue derived therefrom, and the additional
- -" expenditure incurred in connection therewith.
- "(3.) The daily average number of Tickets issued at the various Stations,
- "between and inclusive of Newcastle and Murrurundi, to Singleton, from
- "the 1st January, 1883, to 12th August, 1883, and the amount of revenue
- "derived therefrom."

(Mr. Gould.)

- No. 1. The number of tickets issued at all stations north of Singleton by the up-mail train, on the 14th of August last, for Singleton.—Answer: 197 tickets.
- No. 2. The number of tickets issued at all stations on the Great Northern and North-western Railways to Singleton, on the 15th and 16th August last, the amount of revenue derived therefrom, and the additional expenditure incurred in connection therewith.—Answer: 3,282 tickets were issued on the days mentioned, from which a revenue of £967 6s. 8d. was derived. The additional expenditure incurred for the running of special trains and advertising in connection therewith amounted to £270 10s.
- No. 3. The daily average number of tickets issued at the various stations, between and inclusive of Newcastle and Murrurundi, to Singleton, from the 1st January, 1883, to 12th August, 1883, and the amount of revenue derived therefrom.—Answer: The daily average number of tickets issued between the dates named was 31, and the amount of revenue received for the period was £1,601 12s. 2d.

1883. (THIRD SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAY FROM WERRIS CREEK TO GUNNEDAH.

(COST OF LINE AND PARTICULARS OF TRAFFIC.)

Ordered by the Legislative Assembly to be printed, 7 November, 1883.

RETURN to an *Order* made by the Legislative Assembly of New South Wales, dated 6th September, 1881, That there be laid upon the Table of this House, a Return showing,—

"(1.) The cost of the construction of the Railway Line from Werris Creek to Gunnedah, including all Stations and other buildings purchased, rented, and erected thereon.

"(2.) The cost of the construction of the Railway Line from Werris "Creek to Tamworth north, including the viaduct, bridge, old and new "station houses, and other buildings purchased, rented, and erected "thereon.

"(3.) The amounts received at Gunnedah and Stations between Werris "Creek and that town for goods, live stock, and coaching traffic; the "amounts collected by all Stations on the Great Northern Line for goods and live stock forwarded from Gunnedah and Stations between "Werris Creek and that town; also the amounts collected by all Stations for coaching traffic to Gunnedah and Breeza during the year ending "30th June, 1881;—these Returns to be exclusive of goods carried for "Government works.

"(4.) The amounts received at Tamworth and other Stations between "Werris Creek and that town for goods, live stock, and coaching traffic; the amounts collected by all the Stations on the Great Northern Line for goods and live stock forwarded from Tamworth and other Stations between Werris Creek and that town; also the amounts collected by all "Stations for coaching traffic to Tamworth and Currabubula during the "year ending the 30th June, 1881;—these Returns to be exclusive of goods carried for Government works.

"goods carried for Government works.

(5.) The cost of maintaining and working the Line between Werris

Creek and Gunnedah, giving cost and number of locomotive engines

employed, cost and description of passenger carriages used, and expenditure of every description incurred by Locomotive, Permanent Way, and

Traffic Departments during the year ending 30th June, 1881.

"(6.) The cost of maintaining and working the Line between Werris "Creek and Tamworth, giving cost and number of locomotive engines "employed, and cost and description of passenger carriages used, and "expenditure of every description incurred by Locomotive, Permanent "Way, and Traffic Departments during the year ending 30th June, 1881."

(Mr. Joseph P. Abbott.)

RAILWAY FROM WERRIS CREEK TO GUNNEDAH.

RETURN to an Order of the Legislative Assembly for certain information respecting t from Werris Creek to Gunnedah and Werris Creek to Tamworth North:	he Railwa —	y Lines
	£	£
(1.) Cost of the construction of the Railway Line from Werris Creek to Gunnedah, including all Stations and other buildings purchased, rented, and erected thereon, to 30th June, 1881 Add proportion cost of Rolling Stock, Machinery, &c., estimated	245,811 20,000	-
Total cost construction and equipment		265,811
(2.) Cost of the construction of the Railway Line from Werris Creek to Tamworth, including the Viaduct Bridge and old and new Station-houses and other buildings purchased, rented, and erected thereon, to date as above	195,872 17,000	-
Total cost		*212,872
* This amount is only estimated, as the expenditure on the section was not kept separately.		•
* This amount is only estimated, as the expenditure on the section was not represented.		
(3.) Amounts received at Gunnedah and Stations between Werris Creek and that town for goods, live stock, and coaching traffic	10,862	
Ditto collected by all Stations on the Great Northern Line for goods and five stock for walded	. 9.009	
	3,803 1,572	
Amounts collected by all Stations for coaching traffic to Gunnedah and Breeza		
		16,237
The above amounts are for the year ending 30th June, 1881, and are exclusive of goods carried for Government works.		
(4.) Amount received at Tamworth and Stations between Werris Creek and that town for goods, live stock, and coaching traffic	16,289	
Ditto collected by all Stations on the Great Northern Line for goods and live stock forwarded from Tamworth and other Stations between Werris Creek and that town Amount collected by all Stations for coaching traffic to Tamworth and Currabubula	2,432 2,308	
·	~	21,029
Note.—See remarks on previous question.		
(5.) Cost of maintaining and working the Line between Werris Creek and Gunnedah, including all charges		14,127
Number of locomotives employed, 2; cost, £5,736. ,, passenger carriages, 5; ,, 2,308, consisting of 1 first-class, 1 composite, 1 second-class, and 2 brake-vans (light).		
The number of goods waggons could not be given, as they run over the whole line.		
(6.) Cost of maintaining and working the Line between Werris Creek and Tamworth, estimated only		18,007
The number and description of the rolling stock cannot well be given, as the trains run over the whole line from Newcastle unwards.		
Note.—In the above statements the receipts from the carriage of Government materials have been excluded; but in the expenses incurred for working and maintaining, the cost of conveying these goods is included.	•	
The total receipts for the year ending 30th June, 1881, including carriage of Government goods,		٠.
were— Werris Creek to Gunnedah Werris Creek to Tamworth		$19,381 \\ 21,478$

1883-4.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAY FROM GUNNEDAH TO NARRABRI.

(COST OF CONSTRUCTON, &c.)

Ordered by the Legislative Assembly to be printed, 20 February, 1884.

[Laid upon the Table of the House in accordance with promise made by the Honorable the Secretary for Public Works, in answer to Question No. 2, on Votes and Proceedings No. 49, of the 1st February, 1884.]

Question.

- (1.) The cost of the construction of the Railway Line from Gunnedah to Narrabri via Boggabri, including all Stations and Buildings purchased, rented, and erected thereon?
- (2.) The cost of maintaining and working the said Line, giving cost and number of Locomotive Engines employed, cost and description of Passenger Carriages used, and expenditure of every description incurred by Locomotive, Permanent Way, and Traffic Departments, from day of opening until 31st December last?

Answer.

The cost of construction, including Buildings, &c., amounted to £309,153 3s. 3d. Three Locomotives are employed—two Passenger and one Goods—and their cost amounted to £7,040 3s. 2d. Five Passenger Carriages are used on this Line and their cost amounted to £2,382.

The expenditure on the section of the Line from Gunnedah to Narrabri has not been kept separately, but has been included in the section from Werris Creek to Narrabri, consequently the cost of construction, &c., is given as closely as can be ascertained.

The Rolling Stock is used for the whole length of the Line and includes Trucks, Covered Vans, Brake Vans, Live Stock Waggons, &c., &c., the cost of which is not given in the above Statement.

The working expenses cannot be separated, but will be shown for the whole section from Werris Creek to Narrabri, when yearly returns are prepared.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAY FROM GRAFTON TO NEW ENGLAND.

(TRIAL SURVEYS, PETITIONS, &c.)

Ordered by the Legislative Assembly to be printed, 16 September, 1884.

RAILWAY FROM GRAFTON TO NEW ENGLAND.

No. 1.

Mr. Warren to Engineer-in-Chief.

Ry. Survey Camp, via Glen Innes, 31 May, 1882. I have the honor to forward herewith plan showing two proposed junctions of the trial line

from Grafton, via Mann R. with the S.N. Railway near Glen Innes.

The approximate distance from the crossing of Bald Nob Creek to the point marked B on the G.N. Railway is 22 miles, and to the point marked C, which is nearer Glen Innes, is 24 miles. The line A to B has 2 miles the advantage over the other in length of construction, has better gradients, and does not go through purchased land, besides bringing the town of Tenterfield nearer to the coast. Please return. me the plan with instructions as to which line I am to survey.

I have, &c.,

HENRY B. WARREN.

Plan returned to Mr. Warren with instructions.—H.P., 7/6/82.

No. 2.

Assistant Engineer for Trial Surveys to Mr. Warren.

HEREWITH I return your parish map showing the district to the north of Glen Innes, on which I have shown how the route of the amended survey from Grafton is to be connected with the Great-Northern Railway near the crossing of the Beardy River.

HERBERT PALMER.

The longitudinal section of your amended survey may be plotted to a scale of 4 chains horizontal and 40 feet vertical to 1 inch.

No. 3.

Mr. Bawden to Engineer-in-Chief.

Grafton, 1 June, 1882. Having, as you are aware, for some years past taken some interest in promoting the subject of railway extension between Grafton and central New England, I do myself the honor to invite your attention to the desirability of an examination being made of the country between South Grafton, by way of Chambeyne Creek, thence to Doughboy Hollow on the Nymboi River, and thence downwards along the little of the creek, the country between the Mitchell River et Tochedgenry. It have valley of that river to the crossing of the present survey over the Mitchell River at Jackadgery. I have not been over that part of the route indicated between the head of Chambigne Creek and Jackadgery, and therefore can say nothing of the practicability of it.

Mr. Surveyor Francis explored the route from South Grafton to the Nymboi River at Doughboy. From thence to Jackadgery the distance is not great, and the exploration of it might be done quickly

From thence to Jackadgery the distance is not great, and the exploration of it might be done quickly without delaying the general survey.

My chief reason for asking for this exploration is in order, should the route prove practicable, that the advantages of the extension of the line from Grafton towards the interior may be availed of as speedily as possible in taking up the trade which already exists, and so relieve the Newton-Boyd Road.

By the present surveyed route from South Grafton to Jackadgery and thence up the Mitchell River, the route will need to be extended some 60 miles before it will pick up any of that trade which exists between Grafton, Glen Innes, and the west by dray traffic at present. That consequently, this long length of extension and large expenditure of money will have to be made before there is any return in the shape of revenue from the line derivable from the existing trade; that until that length is completed there can be little done to promote the settlement of people upon New England, or to afford those facilities for the despatch of cereals and minerals from thence and supplies thereto which the extension of a railway is intended to confer.

next place at which this could be done would be at Newton-Boyd.

I need hardly point out to you what a great advantage this would be,—the intercepting the trade which already exists, and thereby turning it to account as revenue to the line, as well as giving those engaged in or interested in that traffic the benefit of the extension as speedily as possible as facilitating

these operations.

Apologizing for thus troubling you with these crude remarks, and requesting that you will

Thave &c... I ĥave, &c favourably consider the subject,-

Acknowledge, and say the matter referred to shall receive attention.—J.W., 6/6/82. Palmer, for information and examination on his visit to Grafton.—J.W., 6/6/82. Mr. Palmer. Mr. I have taken a copy of this letter, and will see Mr. Bawden when I visit Grafton.-H.P., 9/6/82.

No. 4.

Mr. Walker to Engineer-in-Chief.

Sir, Railway Survey Camp, via Glen Innes, 5 July, 1882. I have the honor to inform you that I have completed the survey of the deviation via Shannon Vale as far as requisite, and shall finish the plans this week or early in next, when I shall be ready to shift camp down the river to cross-section (the old survey) where required, in accordance with your instructions, for which purpose I shall require plans and sections of that part of the line. I have, &c

J. DOUGLAS WALKER.

No. 5.

Assistant Engineer for Trial Surveys to Mr. Walker.

ATTACHED I send you tracings of portions of plan and section of original trial survey South Grafton to Glen Innes, where cross-levels have to be taken, and for which I gave you instructions when in Glen Innes last month.

HERBERT PALMER.

No. 6.

Assistant Engineer for Trial Surveys to Mr. Millner.

7 July, 1882.

On the completion of the trial survey upon which you are now engaged, from Byron Bay to a junction with the original trial survey Laurence to Tenterfield, you may proceed without delay to Tabulam, and take up a length of trial survey from a point on the trial survey recommended by Mr. Marcolini at the village of Alice, on the Clarence River, about 10 miles below Tabulam; thence across the Clarence at

that point to a junction with the trial survey lately made by Mr. Hogg a few miles above Tabulam.

I will forward a tracing of plan and section of the trial line in the neighbourhood of Alice, and address it to you at Tabulam, next week, and will instruct Mr. Hogg to forward to you a tracing of his

plan and section at the point where I wish you to join his line.

Mr. Chauvel, at Tabulam, will I am sure be happy to point out to you the direction of the line to be surveyed.

HERBERT PALMER.

No. 7.

Assistant Engineer for Trial Surveys to Mr. Hogg.

7 July, 1882.

Under separate cover I have forwarded to you plan and section paper and tracing paper, also tracings of plan and section of original trial survey Laurence to Tenterfield, from 90 miles to Tenterfield, on which I have shown the end of the contract Glen Innes to Tenterfield at the south side of Molesworth-street, at which point I arranged your amended trial survey from Tabulam should be connected with the Great Northern Railway.

HERBERT PALMER.

No. 8.

Assistant Engineer for Trial Surveys to Mr. Millner.

7 July, 1882.

UNDER separate cover I have forwarded you a tracing of the plan and section of portion of the original trial survey Laurence to Tenterfield, from the junction of the trial survey to Casino (from Wyon) towards the Richmond Range.

As you have experienced some difficulty in connecting your survey from Byron Bay with the original trial survey on the Richmond Range, you may connect with that survey in the neighbourhood of Busby's Flat, at about 43 miles, and may forward your through plan and section from Byron Bay to that point of junction with the least possible delay.

HERBERT PALMER.

No. 9.

Assistant Engineer for Trial Surveys to Mr. Hogg.

7 July, 1882.

I wish you to forward to Mr. Millner without delay a tracing of your plan and section at that point, a few miles above Tabulam, where I arranged he was to connect his survey from the crossing of the Clarence River at Alice.

HERBERT PALMER.

No. 10.

Mr. H. Wyndham to Minister for Works.

Grafton and Glen Innes Ry., Bukulla, Inverell, 10 July, 1882. Sir I think that the enclosed letter against the above proposed railway will be found worth your Faithfully yours perusal.

HÜĞH WYNDHAM. [Enclosure.]

[Enclosure.]

To the Editor of the Inverell Times.

As I have been asked by the Committee of the Railway League to move an important resolution at the monster meeting to be held next Thursday, and have been obliged to decline, and as I shall be conspicuous at that meeting by my absence, I beg you will allow me to state publicly my reasons.

I have always considered that, however desirable it might be to these districts to have a railway constructed to Grafton,

we cannot now, with any fairness or reason, ask the country to incur such an expense when for a tithe of the money we might be connected with the Great Northern Railway at Uralla, and so be placed in the course of a very few years in direct com-

munication with Sydney and Melbourne.

Moreover, the country is bound to construct its railways with due regard to some return for the capital invested, and it has yet to be proved—though there can be no doubt of the matter—that the portion of the Great Northern line from Tamworth to Tenterfield will pay; but if another cross-cutting railway is made to its chief if not only feeding districts, one might pay, but both certainly would not. I fear that the only result of the present agitation will be that we shall have a railway to Glen Innes instead of Uralla, and the district will be saddled for the rest of our days with an unnecessary 50 miles of railway freight. We ought to look at this matter as it will appear to others not connected with the district, and apart from local prejudices. Depend upon it that if the Glen Innes-Grafton Railway ever does come before the House—which is very doubtful—some very hard things will be said about it.

Faithfully yours,
Bukkulla, July 3rd, 1882.

HUGH WYNDHAM.

No. 11.

Assistant Engineer for Trial Surveys to Mr. Millner.

UNDER separate cover and by same post I have forwarded to you, addressed to Tabulam, a tracing of plan and section of portion of original trial survey North Grafton to Tenterfield, also county map and instructions for a trial survey required from the neighbourhood of Alice to a junction with Mr. Hogg's amended survey near Tabulam.

HERBERT PALMER.

No. 12.

Assistant Engineer for Trial Surveys to Mr. Millner.

11 July, 1882.

Under separate cover I have forwarded to you to the above address a tracing of the plan and section of portion of the trial survey from North Grafton to Tenterfield, showing the crossing of the Clarence River

I wish you to make a trial survey and to forward a plan and section with the least possible delay, in accordance with the instructions I gave you at Grafton, from the point I have marked on the plan east of the Clarence River, about 10 miles below Tabulam, thence across the Clarence above the previous crossing at Alice, thence across the Timbarra River to a junction with Mr. Hogg's amended line between Plumbago and Emu Creeks.

HERBERT PALMER.

In the same roll with the tracings mentioned above I have sent you a lithograph of the county map, showing the district through which the survey has to be made.—H.P., 11/7/82.

No. 13.

Mr. Walker to Engineer-in-Chief.

[Telegram.]

12 June, 1882.

AM awaiting further instructions here.

J. DOUGLAS WALKER.

Telegraphed to Mr. Walker,—"Tracings and instructions sent to you by last night's post to Glen Innes."—H.P., 12/7/82.

No. 14.

Mr. G. S. Peel to Assistant Engineer for Trial Surveys.

Sir, Glen Innes, 15 July, 1882. The new railway line from here to Deepwater which you inspected and approved of, and which you said would be a great saving to the country, Mr. Hoyle told me that he reported to you that I was the person who took him over the line. Allow me to ask if you will use your interest that I may be compensated for the same. I have applied to the Department and received answers saying that I was not employed by them. When Mr. Hoyle was speaking to me about a new line, he said that he could not go out until he received instructions from the Government. Some months after our conversation I received a note from him asking me to show him the new line. The old condemned line which was years in hand the surveyors had received instructions to finish without delay, which has been a very large and unnecessary outlay to the country; the line which is a large saving, the Government try to excuse themselves, saying they did not directly engage me as tenders are called for the new line. Will you kindly report on it, that I may be paid.

The

The Grafton, Glen Innes, and Inverell lines I have been asked to show. You cannot blame me for declining to do so, as the Government does not want to pay without putting me to expense and trouble. In the event of any line that I might show, I want nothing unless approved of.

I have, &c., GEO. SAM. PEEL.

Perhaps this should be put with the previous papers on the subject. I think I have alread reported that I did not consider this applicant had any claim.—H.P., 18/7/82. The Engineer-in-Chief. I think I have already

No. 15.

Mr. Hogg to Engineer-in-Chiéf.

Tenterfield, 21 July, 1882. Sir, Under separate cover, I have the honor to forward a portion of the plan of the survey from North Grafton to Tenterfield, being a length from 66 miles 18 chains to 82 miles 22 chains between Tabulam and Tenterfield. When another length is completed it will be forwarded at once.

I have, &c

CHARLES E. HOGG.

No. 16.

Assistant Engineer for Trial Surveys to Mr. Warren.

25 July, 1882.

I HAVE written to inform Mr. Walker that it will not be necessary to send another surveyor to complete

the small amount of work upon which he was engaged at the time of his unfortunate accident.

I have also informed him that his party must be paid off, with the exception of one man, if he should be sending any portion of his equipment to Sydney which would require a personal attendant.

I wish you to see to the paying off of his party, and to forward the necessary vouchers, if, as I suppose, Mr. Walker is unable to transact such business.

HERBERT PALMER.

No. 17.

Assistant Engineer for Trial Surveys to Mr. Walker.

25 July, 1882.

IT is with much regret that I have heard of the accident you have met with.

The work on which you were at the time engaged is not of sufficient importance to warrant another surveyor being sent to the district to complete it. Your party may therefore be paid off, and if you contemplate forwarding any of your equipment to Sydney which would require a personal attendant, one man may be emplosed until the things reach Sydney.

I have written to Mr. Warren to see after the paying off of your men, if his doing so will relieve

you of any trouble in the matter.

I hope you will speedily recover, and as soon as you are able you may report yourself at this office.

HERBERT PALMER.

No. 18.

Mr. Millner to Engineer-in-Chief.

Camp, Tabulam, 10 August, 1882.

REQUIRED for the use of the Grafton and Tenterfield Trial Survey:

20 feet plan-paper. 20 feet section-paper with datum line. 1 field-book.

W. J. MILLNER.

No. 19.

Mr. Millner to Engineer-in-Chief.

. Camp, Tabulam, 10 August, 1882. Under separate cover I have this day forwarded to you plan, section, field-book, and three level-books of the Byron Bay to Tenterfield Trial Survey. J. MILLNER.

No. 20.

Mr. Warren to Engineer-in-Chief.

21 August, 1882. I have the honor to bring under your notice the early completion of the survey on which I am at present, viz., the deviation via Mann River, suggested by me some months ago, in connection with a direct line from South Grafton to a point on the Great Northern Railway about 6 miles north of Glen

I hope to have the plan and section completed by the end of this month. By this deviation I have reduced the distance on the original trial survey by about 15 miles, which makes the line about 100 miles from South Grafton to junction with Great Northern Railway; three heavy bridges have also been avoided, and about 40 chains of tunnelling. The works on the deviation are necessarily heavy, but when it is being worked up for permanently staking it can be improved considerably. I have only got 14 chains of tunnel on it; the cuttings as a rule are short, will stand at \frac{1}{4} to 1, and the greatest portion of them will be run out to spoil at the ends of the cuttings, which will reduce the price of the earthwork considerably. The slope of the ground is too steep to allow of embankments standing, so that retaining walls will have to be largely used; these should not cost very much, as the stone used for them will come out of the cuttings alongside where they are required. I have considered the cost of the work carefully, and from my former experience in the construction of a line similar to this, I think I am within the mark when I put down the total cost per mile, from Grafton to junction with Great Northern Railway, at £12,500. Three-quarters of the whole distance, viz., about 75 miles, consists of very favourable country, which will bring down the price to the above figures. I shall forward plans and sections about the end of the month, and await your instructions as to my future movements.

HENRY B. WARREN.

No. 21.

Assistant Engineer for Trial Surveys to Mr. Warren.

On the completion of the trial survey on which you have lately been engaged of the amended route of portion of the South Grafton and Glen Innes line to a junction with the Northern Railway, near the crossing of the Beardy River, you may break up your party and return to this office to assist in the preparation of the approximate estimate of the cost of the line.

HERBERT PALMER.

No. 22.

Mr. Hogg to Engineer-in-Chief.

Sir,

Under a separate cover I have the honor to forward to you the second portion of the plan and section between Tabulam and Tenterfield. This portion completed to Sandy Creek. The remainder to Tenterfield will, I imagine, be finished about the third week in next month.

I have the honor to request that you will forward me a tracing of the trial plan and section lying between 100 and 105 miles by the diagram plan, but it is that portion from Barney Downs Creek back 5 miles. I enclose tracing of diagram.

CHARLES E. HOGG.

Plan and section received; tracing will be forwarded when ready.—H.P., 31/8/84.

No. 23.

Mr. Hogg to Engineer-in-Chief.

Sir,

I have the honor to request that I may be supplied with two level-books, also reference in have, &c.,

CHAS. E. HOGG.

No. 24.

Mr. Hogg to Engineer-in-Chief.

Sir,

Camp, 5 September, 1882.

The portion of the tracing of the survey between Laurence and Tenterfield sent to me last week is not the portion I require, as I have already obtained that, but what I want is a portion of the plan and section of the Northern line run between Sandy Creek and Tenterfield, lying between, so far as I can tell by the diagram mileages, 102 and 109, which runs along the Cataract River and crosses Black Snake Creek and Barney Downs Creek. I would like the bench marks put on, particularly B M 22, which is near the crossing of Barney Downs Creek.

This creek at this place is also spoken of as "The Cataract," "Carroll's Creek," "Spring Creek," so any of these may be on the section.

I have, &c.,

CHAS. E. HOGG.

No. 25.

Assistant Engineer for Trial Surveys to Mr. Millner.

While making the trial survey to connect original survey near Alice with Mr. Hogg's amended survey near Tabulam, if will be necessary to survey two routes—one to cross the Clarence at the most suitable point near Alice, thence via Yates' Flat and across the Timbarra River to the point you may fix upon as the best to join Mr. Hogg's survey; and the other route from near Alice, thence via the Longmile Range to Tabulam, and across the Clarence above its junction with the Timbarra, and thence to a junction with Mr. Hogg's survey.

HERBERT PALMER.

No. 26.

Assistant Engineer for Trial Surveys to Mr. Warren.

11 September, 1882.

SINCE my last instructions to you to return to Sydney on the completion of your present survey from South Grafton to a junction with the Northern Railway near the Beardy River, it has been decided that a trial survey is to be made from Trial Bay to Armidale, on which your services will be required. You may therefore forward, when completed, the plan and section of your present survey, and then remove your party to Armidale.

Report when you expect to be at Armidale, and I will forward instructions as to the new survey. You are to survey from the Northern Railway at Armidale to meet surveyors who will work towards Armidale from Trial Bay; and before commencing your length it will be necessary to examine the country to the east of Armidale to ascertain the best point from which to commence the descent to the coast district.

Commence the descent to HERBERT PALMER. the coast district.

No. 27.

Mr. Millner to Engineer-in-Chief.

Camp, Tabulam, 30 September, 1882. Sir, I have the honor to report progress made with the trial survey Grafton to Tenterfield, as

The trial line on the western side of the Clarence River has been staked from 6 to 12 miles, and levelled from 0 to 12 miles. The line on the eastern side of the river has been staked and levelled for a distance of 3 miles, being a total distance of 9 miles staked and 15 miles levelled.

There now remains about 20 miles to connect both trial lines with Mr. Hogg's trial survey.

W. J. MILLNER.

No. 28.

Assistant Engineer for Trial Surveys to Mr. Millner.

30 September, 1882. On the completion of the surveys upon which you are at present engaged, viz., the one from Alice, thence via Yates' Flats and across the Timbarra River, to a junction with Mr. Hogg's amended survey, and the alternative line via Tabulam and across the Clarence above the junction with the Timbarra to the junction with the amended survey made by Mr. Hogg, I shall require you to survey and level the original traverse made by Messrs. Walker and Warren from the point where you have started your present work near Alice and then back to North Grafton, as the plan, section, and field-books of that portion were destroyed in the late fire at the Garden Palace.

Forward the plans, sections, and books of your present work as early as practicable to this office, and report without delay when you expect to be able to start the survey and levels back to Grafton.

HERBERT PALMER.

No. 29.

Assistant Engineer for Trial Surveys to Mr. Hogg.

30 September, 1882.

On the completion of the trial survey upon which you are at present engaged to its junction with the Northern Railway at Tenterfield, it will be necessary for you to break up your party and return to this office. The plans and sections of that portion of the amended survey from near Tabulam to the Tableland

which you forwarded to this office were destroyed by the burning of the Garden Palace, and must consequently be re-plotted. I wish you therefore to return as early as practicable, and plot the plan and section of the whole length to Tenterfield, as you fortunately retained the field and level books.

HERBERT PALMER.

No. 30.

Mr. Warren to Engineer-in-Chief.

Sydney, 2 October, 1882. I have the honor to report the completion of the trial survey to junction with Great Northern Railway north of Glen Innes near crossing of Beardy River, but unfortunately all my plans, field notes, &c., were destroyed in the Garden Palace fire. I have got Mr. Walker's field and level books along with my camp equipment up in New England, so that a re-plot of that portion of the survey will only be I have, &c. necessary. HENRY B. WARREN.

No. 31.

Mr. Hogg to Engineer-in-Chief.

Sir, I have the honor to inform you that during the past month I have completed the survey of the section into Tenterfield and the plan, all but certain fences and farm boundaries, which I will do this week.

The plotting of the plan and section will be completed about the 15th of this month. The last 15 miles of this section is admirable, while I cross the main range at a point 110 feet lower than on the

Should my plans which I have forwarded have been burned, I have all the field-books relating to that portion from Tabulam to Tenterfield, and also a tracing of the section as forwarded to you.

I have, &c. CHAS. E. HOGG.

No. 32.

Telegram from Mr. Hogg to Assistant Engineer for Trial Surveys.

HAVE not field books Grafton to Alice, but section complete Tabulam, Tenterfield; plan also, except 20 miles. Could replot in a few days. Will not resurvey if first part be wanted. Yours received. Kindly wire reply. CHAS. E. HOGG.

No. 33.

Assistant Engineer for Trial Surveys to Mr. Hogg.

5 October, 1882. Your telegram dated the 3rd instant is not intelligible. Do you mean that you have a complete section of the line from North Grafton to Alice? If so, forward it to this office without delay.

On receipt of your answer I will inform you whether you are to take up any portion of the trial surveys near Grafton or to return to Sydney.

HERBERT PALMER.

No. 34.

Mr. Hogg to Engineer-in-Chief.

Railway Survey Camp, Tenterfield, 10 October, 1882. In reply to Mr. Palmer's communication of the 5th instant, I have the honor to inform you that my telegram must have been wrongly transmitted.

I have no plan, section, or any field-notes of the survey from Grafton to Alice, or any papers

The plan and section of the first 25 miles only of the survey from Tabulam to Tenterfield have

been forwarded, and burned, I imagine.

The remainder of the plan and section will be complete in a few days, but I have a tracing of the section between Tabulam and Tenterfield of the portion destroyed, and a few days plotting will restore the plan that has been destroyed. The weather being extremely wet, I am replotting that portion of the plan. I have, &c., CHAS. E. HOGG.

No. 35.

Assistant Engineer for Trial Surveys to Mr. Warren.

10 October, 1882.

THE Engineer-in-Chief has drawn my attention to your journal for last month, which is not by any means

I attach a copy, and require you to send in without delay an amended journal, stating particularly your own movements from the 11th of the month; also when and where you received instructions with reference to the Armidale and Trial Bay survey, when you reached Sydney, the date on which you left your plans at my office, and also the daily record of the travelling performed by your party from the time they left for Grafton till they reached Armidale.

HERBERT PALMER.

No. 36.

Assistant Engineer for Trial Surveys to Mr. Hogg.

You may forward to this office when completed the plan of amended survey from Tabulam to Tenter-field, including the 25 miles you have had to replot, also the tracing of section of the first 25 miles from Tabulam and the plotted section of the remaining distance to Tenterfield, taking care to give all cross-sections as shown on the original section, which has been destroyed, so that the earthwork quantities may be calculated correctly on the side-lying ground. When you have forwarded this information, you may proceed with your party to North Grafton and resurvey the trial line, as staked by Messrs. Walker and Warren, towards Alice, until you meet Mr. Millner, who has been instructed to work towards Grafton on completing his trial survey between Alice and Tabulam to a junction with your amended survey. When commencing your survey at North Grafton, you may start the line on the bank of the Clarence, near the saw-mill on the boundary of the township, and you must be careful to connect this survey with a sufficient number of street corners to allow of the plan of the town of Grafton being transferred on the plan of trial survey. transferred on the plan of trial survey.

HERBERT PALMER.

Camp, near Copmanhurst, Clarence River, 25 November, 1882.

I have the honor to inform you that I shall most probably shift my camp on Monday week next, the 4th proximo, to the Mitchell River, the nearest post-office to which will be at Copmanhurst. I am, &c., HAMILTON HARWOOD.

No. 48.

Mr. Harwood to Engineer-in-Chief.

Sir, Copmanhurst, Clarence River, 30 November, 1882. I have the honor to report progress made with the re-survey of the trial line from South Grafton towards Glen Innes, as follows:

The line has been traversed and levelled from a point 15 miles 4 chains 88 links from Grafton to 24 miles 8 chains.

With the exception of about 60 chains, where the pegs had disappeared, there has been no deviation from the former survey. I am, &c HAMILTON HARWOOD.

No. 49.

Mr. Hogg to Engineer-in-Chief.

Sir. Camp, Grafton, 1 December, 1882. I have the honor to request that one field-book, four level-books, and 30 feet of plan and section paper, and also tracing paper, may be forwarded to me.

> I have, &c. CHAS. E. HOGG.

No. 50.

Mr. Millner to Engineer-in-Chief.

Camp, Yugilbar, via Grafton, 1 December, 1882. REQUIRED for the use of the Grafton and Tenterfield trial line (resurvey):—one field-book, 30 feet plan paper, 30 feet section paper with base line.

W. J. MILLNER.

No. 51.

Mr. Hogg to Engineer-in-Chief.

Sir, 1 December, 1882. I have the honor to inform you that during the past month I have completed the replot of the plan and sections forwarded to you on the 25th ultimo.

On the 20th of this month I began the re-survey of Mr. Walker's line.

I find that, with regard to a station site, there is a railway reserve next to Nipper & See's wharf, with deep water frontage, admirably adapted for the purpose.

It is on section 2 facing Victoria-street, and comprises blocks 6, 7, 8, while blocks 1, 2, 3, 4, 5, could be cheaply resumed, as the buildings on them would not be worth more than £200 in all.

I am aware that when I was here with Mr. Palmer he was not conscious that there was any such reserve, as the plan we had did not show it.

I have taken levels over this No. 2 section, and find that all parts of it are from 2 to 4 feet above the great flood of 1876. I have therefore thought it my duty to connect the survey with this block, in addition to that mentioned by Mr. Palmer, as I have no doubt he would have given me forders to do so had he been aware of the facts.

The approach to this section 2 is also satisfactory, as it comprises some of the highest land in Grafton, running through sections 12, 20, 34, 50, 65, 78, 93, 104, 119, and 126. I am taking careful levels along these blocks so that the flood of 1876 can be clearly marked on the plan. With the exception of the Public School playground, section 50, this line would pass through no ground of any importance or I have, &c. great value.

CHARLES E. HOGG.

No. 52.

Mr. Millner to Engineer-in-Chief.

Camp, via Grafton, 1 December, 1882.

I have the honor to report progress made with the trial survey Grafton to Tenterfield, as Sir follows

The trial line on the eastern side of the river Clarence has been staked and levelled from 9 to 161

miles, its junction with the trial line on the western side of the river.

The earthworks on the trial line on the eastern side of the river at Corabubla Range, near Tabulam, were of such a heavy nature that I abandoned that portion of the line, and crossed the river Clarence at Pagan's Flat, and thence the Timbarra Range, about a mile above its junction with the Clarence River.

The trial line on the eastern side of the Clarence River is 13 chains longer than the line on the western side, but the earthworks along the line on the eastern side of the river will be of a much lighter

I expect to complete plans in about ten days, and take up the resurvey of the line back to Grafton.

I have, &c., W. J. MILLNER.

No. 53.

Mr. Stuart to Engineer-in-Chief.

Camp, Purgatory Creek, Copmanhurst, 1 December, 1882. Sir, I have the honor to report progress made with the trial survey from South Grafton to Glen Innes, as follows:

The centre line has been surveyed and levelled from 9 miles 20 chains from South Grafton to

15 miles 10 chains, crossing the Orara River almost half a mile south of the Clarence River.

This part of the line presents no engineering difficulties, with the exception of about a mile where it runs along a rough, rocky siding of the Clarence River, about half a mile after crossing the Orara.

C. McD. STUART.

No. 54.

Mr. Warren to Engineer-in-Chief.

Camp, Glen Innes, 2 December, 1882.

I have the honor to report progress of trial survey from Glen Innes towards Grafton, as follows:-13 miles 14 chains has been completed, and I will forward the level-book in the course of a few days; there remains about 5 miles 40 chains to complete the survey to the foot of the range. I have just received the remainder of my camp effects from Armidale, and find that I have got the level and field-books belonging to Mr. Walker's length, which I will forward with my own level-book; 25 miles will be completed (including 6 miles done by Mr. Walker) at the end of the year.

The weather has been very much against the progress of the work during the month, which, together

with the rough country, accounts for the small amount of work done

HENRY B. WARREN.

No. 55.

Mr. Warren to Engineer-in-Chief.

Camp, via Glen Innes, 9 December, 1882.

I have the honor to forward by this post under separate cover Mr. Walker's level and field books of the portion of the amended survey via the Mann River on which he was engaged, also my levels from junction of Great Northern Railway to a point 13 miles 43 chains 57 therefrom. There is a gap between this point and the commencement of Mr. Walker's length of about 5 miles 40 chains, which I hope to complete by the end of the year, weather permitting. HÉNŔY B. WARREN.

No. 56.

Mr. Harwood to Engineer-in-Chief.

Camp, Mitchell River, 22 December, 1882. Sir. I have the honor to inform you that I shall be shifting camp about the 4th of January to a place about 8 miles further up the river. I believe there is an official tracing of the plan of this part of the old trial survey (South Grafton to

Glen Innes).

I am, &c. HAMILTON HARWOOD.

No. 57.

Assistant Engineer for Trial Surveys to Mr. Harwood.

10 January, 1883.

ATTACHED are tracings of the only portion of plan and section of original trial survey, South Grafton to Glen Innes, that were not destroyed in the Garden Palace fire.

Yout letters for the future must be more explicit.

Your last, dated the 22nd ultimo, merely gives as address "Survey Camp, Mitchell River," and you state that you are about to shift your camp about 8 miles further up the river, from which very scant information it is impossible to judge on what part of the river you were then camped, or to what point you were about to shift your camp.

HERBERT PALMER.

No. 58.

Mr. Warren to Engineer-in-Chief.

24 December, 1882.

Memo.—I have the honor to report, for the information of the Engineer-in-Chief, that the re-survey of my original length to the foot of the Big Hill, from Great Northern Railway, will be completed at the end of the month. As I am not aware of the movements of the two surveyors between Grafton and foot of Hill, I would beg to be informed if my services will be required on the lower length.

HENRY B. WARREN.

No. 59.

Assistant Engineer for Trial Surveys to Mr. Warren.

27 December, 1882.

You may continue the re-survey of the original Grafton and Glen Innes trial survey on completing your present length until you meet the surveyors who are working from South Grafton.

I will send to you in a few days tracing, showing a portion of the original trial survey which will

not require a re-survey.

HERBERT PALMER.

No. 60.

Mr. Harwood to Engineer-in-Chief.

Sir,

Camp, Mitchell River, 30 December, 1882.

I have the honor to inform you that since my last report, M. 5, C. 6-92 (from 33 m. 46 40c. to 38 m. 52 96 c.) of the old trial line, South Grafton to Glen Innes, has been re-surveyed and levelled.

I am, &c.,

H. T. HARWOOD

No. 61.

. Mr. Stuart to Engineer-in-Chief.

Sir, Camp, Copmanhurst, 1 January, 1883.

I have the honor to report progress made with trial survey from South Grafton to Glen Innes,

The traverse of old centre line has been checked and levelled from 24 miles 8 chains from South Grafton to 33 miles 15 chains, comprising the part of the line which runs from Main Creek, Ramornie, to the Mitchell River.

This part of the line runs through rough undulating country, parallel to the courses of the Purgatory and Jackadgery Creeks, and will necessitate the construction of a short tunnel through the range of hills which divides their watersheds, as well as a bridge 16 chains wide across the Mitchell River, to allow for flood-level.

I am, &c.,

C. McD. STUART.

No. 62.

Mr. Hogg to Engineer-in-Chief.

Sir,

I have the honor to report that during the past month I have completed the survey of that portion of Grafton through which the proposed line passes, and also re-traversed and levelled to a distance of 10 miles out of town.

I expect to complete the re-survey to the top of the Cole Dale Range about two months hence, when I expect to meet Mr. Millner, who is working towards me.

I have, &c., CHAS. E. HOGG.

No. 63.

Mr. Warren to Engineer-in-Chief.

Sir,

I have the honor to report progress of trial survey from Glen Innes towards Grafton as follows:—The re-survey of my original length is completed, which, together with Mr. Walker's length (the field notes of which I forwarded to you some time ago) makes a distance of 25 miles 25 35½ chains from Great Northern Railway. I am now shifting my camp to the foot of the Big Hill.

I have, &c.,

HENRY B. WARREN.

No. 64.

No. 64.

Mr. Millner to Engineer-in-Chief.

Sir, Camp, via Grafton, 2 January, 1883. I have the honor to report progress made with the re-survey of the trial line Grafton to Tenterfield, as follows:—The centre line has been traversed and levelled for a distance of 10 miles. expect to complete the field work and junction with Mr. Hogg by the end of the present month. I have, &c., W. J. MILLNER.

No. 65.

Assistant Engineer for Trial Surveys to Mr. Warren.

2 January, 1883 ATTACHED is a tracing showing a portion of plan and section of original trial survey, Grafton to Glen Innes, which it will not be necessary to re-survey, but through which you may take such cross levels as may be required to allow of the earth-work quantities being taken out with approximate correctness, noting in all cases to what height the flood-level extends up the sloping ground. There is a length of 19 miles to be re-surveyed from 68 miles (red) on plan forwarded to you to 49 miles on a tracing I have sent to Mr. Stuart, so you may continue the re-survey of this work until you meet him.

HERBERT PALMER.

No. 66.

Mr. Warren to Engineer-in-Chief.

Sir, Glen Innes, 2 January, 1883. I have the honor to report the completion of the survey on which I have been engaged from the junction with Great Northern Railway to commencement of tracing of original survey forwarded to me some time ago. The plan of the original survey made by me between Mr. Walker's length and Glen Innes is also completed, and only requires writing on cross-section levels, which can be done in the office from my level book. I had not sufficient paper to complete the plotting of the length between the end of Mr. Walker's survey and beginning of tracing, but the field books are in such a form that any one can plot this length of 4 miles—the river can be sketched in from notes made in my level book, showing the distance it is off the line at different points. I have, &c., HENRY B. WARREN.

No. 67.

Assistant Engineer for Trial Surveys to Mr. Stuart.

ATTACHED is a tracing of plan and section of that portion of the original trial survey of the Grafton and Glen Innes line which was I believe marked from C to D on the county map supplied to you.

You will observe that the centre line was omitted to be traced from the original plan between 47 and 48 miles (in red), and this part it.

and 48 miles (in red), and this portion will consequently have to be re-surveyed.

You must also take what cross-levels may be required on this length to enable the quantity to be taken out, with approximate correctness where the ground is sidelying, in all cases noting the height to which the flood-level extends.

HERBERT PALMER.

From the end of the plan forwarded to you, 49 ms. (red) there is a gap of 19 miles, viz., to 68 ms. (red), which must be re-surveyed. The only other portions of plan and section of which I have any tracing are from 68 ms. (red) to 73 miles, and these I have forwarded to Mr. Warren, who is working from the Northern Railway to meet you. H.P.

No. 68.

Mr. Stuart to Assistant Engineer for Trial Surveys.

Dear Sir,

I forward by this mail the ordnance plan showing the portion of the line from C to D between this and Newton-Boyd, as this part is between my camp and Mr. Harwood's. If you could let him have the tracing of it and return plan at same time I would be greatly obliged. His address will be, Railway Survey Camp. Mitchell River. Newton Boyd, whose we have made arrangements to have all letters. Survey Camp, Mitchell River, Newton-Boyd, where we have made arrangements to have all letters forwarded. Hoping you will excuse my delay in sending this plan, owing to floods in the river,—

C. McD. STUART.

Tracings were forwarded to Mr. Harwood on the 10th instant. County map returned to Mr. Stuart.—H.P., 24/1/83.

No. 69.

Assistant Engineer for Trial Surveys to Mr. Millner.

20 January, 1883. Notwithstanding you have received the strictest instructions that your journals are to give the fullest details, your entries in last month's journal are most unsatisfactory

Four days, 6th to 9th inclusive, entered as shifting camp, Tabulam to Tongilbar, no distances given for either day's travelling; and again 28th to 30th, three days entered as shifting camp, without the slightest reference as to distances travelled or the place to which your camp was removed.

No field or office work has been entered from the 22nd to 31st inclusive.

You will be good enough to forward a statement as to your daily occupation during this term (exclusive of the holidays), and if absent from your district, the time at which you left and returned.

HERBERT PALMER.

No. 70.

Mr. Stuart to Engineer-in-Chief.

Camp, Mitchell River, 31 January, 1883. Sir. I have the honor to report progress made with the trial survey from South Grafton to Glen Innes, as follows:

The centre line has been traversed and levelled from 38 miles 53 chains from South Grafton to 44 miles 20 chains, comprising the part of the line from half a mile on the Glen Innes side of the junction of the Mitchell and Nymboi Rivers to 44 miles 20 chains.

About 2 miles of this is through rocky side-lying country, which will have to be principally in

cutting, and require a large number of culverts and pipes.

I might mention that the progress of the work this month has been greatly retarded by the wetness I have, &c., C. McD. STUART. of the weather.

No. 71.

Mr. Hogg to Engineer-in-Chief.

Sir, Grafton, 31 January, 1883. I have the honor to report that during the past month I have completed the re-survey of the line (Grafton and Tenterfield) to Coaldale, at 22 miles 30 chains.

The weather during the past month has been of such a nature as to make work impossible for some

I could not even attempt to plot, as the rain beat in torrents through everywhere.

I will complete the re-survey in about a week, and the plans and sections in another week; but as I am going to improve the line crossing the Coaldale Range in a manner agreed upon by Mr. Palmer when here (the present section being altogether misleading), I will not have completed until the end of February.

I should strongly suggest that the section I have been taking should in parts be altered, as you can

form but a very slight opinion of the cost of the line by the section taken on the old survey, as the improvements to be made are of so substantial a nature as to quite alter (in parts) the nature of the section.

The suggested improvements would occupy three or four weeks, and are well worth considering.

I have, &c., CHAS. E. HOGG.

No. 72.

Mr. Harwood to Engineer-in-Chief.

Mitchell River, 1 February, 1883. Sir. I have the honor to report that, owing to the heavy rains at the beginning of January, I was not able to get my camp shifted and start work on the new length before the 15th, since which date 2 miles 42 chains (west of Wallamogo Creek) have been traversed and levelled, and 30 chains east of it traversed. I am, &c.,

HAMILTON HARWOOD.

No. 73.

Mr. Millner to Engineer-in-Chief.

Camp, via Grafton, 1 February, 1883. Sir, I have the honor to report progress made with the re-survey of trial line from Grafton to

The centre line has been traversed and levelled from 10 to 264 miles, where I junction with Mr.

Hogg's work from Grafton.

The plans are well in hand, and will be completed in about a week.

The line can be considerably improved at the Yellow Gap, Ogilvie's Gap, and the Coaldale Range. At present there is a tunnel in mile through the Coaldale Range, which can be quite got rid of by working up the sides of the ridge to the Gap, with a grade of 1 in 40, without affecting the length of I have, &c. the line.

J. MILLNER.

No. 74.

Mr. Millner to Engineer-in-Chief.

Telegram from Grafton, 9 February, 1883.

SURVEY completed. I proceed with the Richmond and Tabulam line.

W. J. MILLNER.

Replied,-"Break up your party and return to Sydney with plans."-H.P., 9/2/83,

No. 75.

Mr. Stuart to Engineer-in-Chief.

Camp, Mitchell River, Newton-Boyd, 1 March, 1883. I have the honor to forward pay-sheets, &c., for February, and to state that I was unavoidably delayed in the progress of my work owing to the state of the river, which prevented me shifting camp for a considerable time. I am now within 5 miles of Newton-Boyd, and Mr. Harwood and I expect to get the whole line completed up to where Mr. Warren left off about the middle of April.

C. McD. STUART.

I think Messrs. Harwood and Stuart should be instructed to return to Sydney on the completion of this survey, to work up the plan and section of the line throughout from South Grafton to the junction with the Northern line near Glen Innes.—H.P., 9/3/83.

No. 76.

Assistant Engineer for Trial Surveys to Mr. Harwood.

12 March, 1883. On the completion of the whole of the field work of the re-survey of original trial survey from South Grafton to the point at which Mr. Warren completed his survey from the Northern Railway, you may break up your party and return to this office, to work up the plan and section of the through route from South Outforte the Northern Railway. from South Grafton to the Northern Railway near Glen Innes.

HERBERT PALMER.

No. 77.

Assistant Engineer for Trial Surveys to Mr. Stuart.

On the completion of the whole of the field work of the re-survey of original trial survey from South Grafton to the point at which Mr. Warren completed his survey from the Northern Railway, you may break up your party and return to this office, to work up the plan and section of the through route from South Grafton to the Northern Railway near Glen Innes.

HERBERT-PALMER.

No. 78.

Mr. Stuart to Engineer-in-Chief.

Sir Camp, Newton-Boyd, 1 March, 1883. I have the honor to report progress made with the trial survey from South Grafton to Glen Innes, as follows

I have taken cross-levels from 38 miles 53 chains from South Grafton to 44 miles 20 chains, being the portion I traversed and levelled last month.

I have now shifted my camp to within 5 miles of Newton-Boyd, and marked out and blazed line from 55 miles from South Grafton to 59 miles 40 chains, and have commenced traversing and surveying This latter portion presents no serious engineering difficulties.

I have, &c., C. McD. STUART.

No. 79.

Mr. Harwood to Engineer-in-Chief.

Sir, Mitchell River, 1 March, 1883. I have the honor to report progress made with the re-survey of the trial line from South Grafton to Glen Innes, as follows:—The centre line has been traversed from 50 miles 21 chains to 55 miles 49 chains, and levelled from 50 miles 21 chains to 53 miles 51 chains, rough cross-sections being also taken along the latter length. HAMILTON J. HARWOOD.

No. 80.

Mr. Millner to Engineer-in-Chief.

Sir Railway Department, 1 March, 1883. I have the honor to report having completed the re-survey of the Grafton and Tenterfield trial survey, and that I have returned to Sydney, as instructed.

I have, &c., W. J. MILLNER.

No. 81.

Mr. Hogg to Engineer-in-Chief.

Sir. Tabulam, 1 March, 1883. I have the honor to inform you that I have completed the re-survey of the Grafton and Tenterfield line. I have almost completed the plan and section thereof.

I had previously reported that I was unable to do so in camp, as my camp was nothing but a bed of mud, and the insects prevented me doing anything. I therefore thought that I could save the

Department

Department much time by doing my plotting whilst my camp was being shifted to Tabulam, and so came on to Tenterfield to do so. I then fell ill and have forwarded a certificate to that effect.

I will in a few days forward to you a report on the proposed extension from Tabulam to Casino.

I am, &c.

CHAS. E. HOGG.

No. 82.

Mr. Harwood to Engineer-in-Chief.

Sir, Camp, Mitchell River, 1 March, 1883. I have the honor to inform you that I expect to be shifting my camp to near the junction of the Henry and Mitchell Rivers in about ten days time. As this will take me to within 7 miles of the beginning of Mr. Warren's line (which is, I believe, 68 miles from S. Grafton red mileage on official tracing), it will be my last camp on the length Mr. Stuart and I are surveying.

HAMILTON HARWOOD.

No. 83.

Mr. Hogg to Engineer-in-Chief.

Sir, Tabulam, 9 March, 1883. I have the honor to inform you I have examined as much of the country lying between

Tabulam and Casino as I think necessary.

I do not imagine there will be any difficulty in reaching the Richmond Range from the Clarence Valley, but such will not be the case from the Richmond River side, as the valley of the Richmond lies some 400 feet lower than Tabulam; but I saw a large number of spurs falling from the range to the Richmond, one of which I mean to make use of, but the scrub was so extremely dense that it was quite impossible to come to any definite conclusion without a protracted survey of the country, which will be carried out in due time, but could not be done by merely riding over the line.

Mr. Chauvel, I am aware, forwarded a sketch of the proposed route, and I see no reason why it

should be greatly departed from.

The survey will leave the Grafton and Tenterfield survey near Lilie's Creek, at a station numbered 40 on the ground, and proceed in the direction indicated by the sketch referred to. It will not go near Busby's Flat, keeping some 8 miles to the northward. The survey will be about 33 miles in length, though I cannot give this distance with any great confidence, on account of the scrub.

I would like to be supplied with the county maps from Tabulam to Casino or some tracing of the

country, as at present I have nothing to help me. Also a tracing of Mr. Millner's plan and section about St. 40, which lies some miles south of the Clarence River crossing. I consider, on the whole, that the survey will prove successful, as I do not think the Richmond Range a very formidable obstacle.

l have, &c., CHAS. E. HOGG.

Seen. County maps and tracing of Millner's plan and section forwarded to Mr. Hogg .- H.P., 20/3/83.

No. 84.

Mr. Stuart to Assistant Engineer for Trial Surveys.

Sir. Camp, Mitchell River, 10 March, 1883. I would be much obliged if you would send me 8 feet more of section paper, to complete the work here.

Mr. Harwood and I expect to be finished, if this weather lasts, about the 10th of April. We have the office copy of the plan and section of first 30 miles completed, and are getting on with the next 30. Shall I forward first part to Sydney now?

Your obedient servant,

CHAS. M'D. STUART.

No. 85.

Assistant Engineer for Trial Surveys to Mr. Stuart.

Mr. Stuart. 15 March, 1883. Under separate cover I have forwarded to you the section paper you will require for the remainder of the South Grafton and Glen Innes section.

You need not send in the first part of plan and section at present, but may bring everything down together on the completion of the survey.

HERBERT PALMER.

No. 86.

Mr. Harwood to Engineer-in-Chief.

Sir, Mitchell River, 31 March, 1883. I have the honor to report progress made with the re-survey of the South Grafton to Glen Innes line, as follows:

The remaining work on length ending 55 miles 60 chains 16 links has been completed, and a new length, from 63 miles 52 chains 71 links to 68 miles 16 chains 69 links, surveyed and levelled.

From this point (68 miles 16 chains 69 links) there is an official tracing of both plan and section to 73 miles, where Mr. Warren's survey from Glen Innes ends.

I am, &c. HAMILTON HARWOOD.

1095-C

No. 87.

No. 87.

Mr. Harwood to Engineer-in-Chief.

Sir,

I write to inform you that I shall be breaking up my survey party in a few days, when, with the exception of James Wilson, who was engaged in Sydney, all the men will be paid off by private cheques.

The men's wages voucher will not require to be returned to me.

I am, &c., HAMILTON HARWOOD.

No. 88.

Mr. Stuart to Engineer-in-Chief.

Sir,

Mitchell River, Newton-Boyd, 1 April, 1883.

I have the honor to report progress made with the trial survey from South Grafton to Glen

Innes as follows:—

The centre line has been traversed and levelled from 55 miles 50 chains from South Grafton to 63 miles 52 chains, comprising the part of the line from 4 miles beyond Cooraldooral old station, to 1 mile beyond the junction of the Mitchell and Henry Rivers, opposite Newton-Boyd.

The first 2 miles of this part runs over very rough rocky side-lying ground, in some places with an almost precipitous face. After this, for the next 6 miles, there are no engineering difficulties, a good deal of the line running through ring-barked country.

I have, &c.,

C. McD. STUART.

No. 89.

The Assistant Engineer for Trial Surveys to Mr. Hogg.

3 April, 1883.

PLEASE forward to this office without delay the plan, section, books, &c., connected with the re-survey made by you, North Grafton towards Tabulam.

HERBERT PALMER.

No. 90.

Mr. Hogg to Engineer-in-Chief.

Sir,

Railway Camp, near Tabulam, 8 April, 1883.

Under separate cover I have the honor to forward the plan and section of a portion of the resurvey of the line between Grafton and Tenterfield.

I have marked in pencil several places where the

line can be very greatly improved and shortened.

I regret that by some mischance I have lost about 3 miles of the angles taken on the traverse. This accounts for the delay in forwarding the plan, as I sent to Grafton to see if I had left the slip of paper on which they were written there. But the line is fairly straight for that portion, and as the angles would hardly take a day to take over again, I can very easily retake them as I go to Grafton on my way to Sydney, when this survey I am now on shall be completed, should this be deemed absolutely necessary.

I have not written in the mileage, as I do not know whether you would start from near Nipper &

See's Wharf or Salmon's Timber-yard.

I have not written in the inleage, as I do not know whether you would start the most representation.

I have, &c.,

CHAS. E. HOGG

No. 91,

Mr. Stuart to Engineer-in-Chief.

Sir,

Railway Survey Department, Pitt-street, 30 April, 1883.

I have the honor to report the trial survey from South Grafton to Glen Innes as completed.

I have, &c.,

No. 1.

Mr. Turner to The Engineer-in-Chief.

Railway Survey Camp, Commissioner's Water, near Armidale, 1 December, 1882. Sir, I have the honor to report progress made with trial survey from Armidale to Trial Bay as

After completing the necessary arrangements I left Sydney on the 20th ultimo, and proceeded to examine the country in the vicinity of Armidale, and have decided to connect the above-mentioned trial survey with the Uralla to Armidale line, now under construction, at peg 257/30; from thence running in an easterly direction towards Commissioner's Water.

The country through which I am now going does not present any engineering difficulties; very good

gradients are obtainable.

JAMES G. TURNER.

No. 2.

Mr. Waddington to The Engineer-in-Chief.

Railway Survey Camp, Spencer's Creek, Macleay River, I December, 1882. I have the honor to report progress made with trial survey from Armidale to Trial Bay as

Left Sydney on the 16th instant, pitched camp on the 20th, and during the remainder of the month have been chiefly occupied in examining the country from Trial Bay towards Kinchela Creek on the south side of the Macleay River. This side of the river is exceedingly rough and difficult, consisting of extensive hills thickly timbered, and dense undergrowth, with large communicative swamps between them, consequently some considerable time is necessary for carefully examining the country, as most of it can only be accomplished on foot.

L. J. WADDINGTON.

No. 3.

Mr. Turner to The Engineer-in-Chief.

Railway Survey Camp, Grafton Road, 1 January, 1883. I have the honor to report progress made with trial survey from Armidale to Trial Bay as

After making a careful examination of the country through Gyra, Hillgrove, Urotah, and Woolomombi, I have succeeded in finding a practicable route as far as Woolomombi River, and am proceeding to explore in the parishes of Chandler and Euringilly, with a view of avoiding the rough country about the Vaky River. I also purpose exploring in the parishes of Snowy, Styx, and Serpentine, before reporting fully upon the country passed through.

The weather during the last month was executionally had for this time of the year and has greatly

The weather during the last month was exceptionally had for this time of the year, and has greatly

impeded the progress of the work.

JAS. G. TURNER.

No. 4.

Mr. Waddington to The Engineer-in-Chief.

Railway Survey Camp, Spencer's Creek, Macleay River, 1 January, 1883. I have the honor to report progress made with trial survey from Armidale to Trial Bay as follows:

The fixed traverse lines have been staked out as far as the south-east, side of Smoky Cape,, and the centre line has been staked out from the proposed site for the breakwater, "Lagger's Point," my startingpoint being alongside the new convict prison to the foot of Mount Arakoon.

The country at this part being very broken and difficult, I have had some considerable trouble to get out of Trial Bay with 12-chain curves, but have succeeded in getting a good line with very easy grades, and without entailing heavy earthworks.

The inclement weather that prevailed this month has prevented me making the despatch I desire.

A TO THE REPORT OF THE PARTY OF

L. J. WADDINGTON.

Mr. Turner to The Engineer-in-Chief.

Report.—Armidale—Trial Bay (Trial Survey).

Railway Survey Camp, Styx River, 25 January, 1883. I have the honor to report progress made with the above-mentioned survey, and to forward herewith tracing and description of route, with aneroid readings of heights.

After some difficulty I have succeeded in finding a practicable route as far as the parish of Serpentine. As already stated in my progress report for November, I connected with peg No. $\frac{2.67}{300}$ of the Great Northern Line, the object being to avoid town, suburban, and improved agricultural lands in and about Armidale. I am unable to give a definite description of the land passed through, as the reference to the county map is incomplete.

In an agricultural point of view the country is, with a few exceptions, very inferior, and although

the season is favourable the pastoral aspects are not good.

Sir,

I furnish herewith a description of the class of timber, and the geographical formation as far as my judgment dictates.

The work has been somewhat interrupted by wet weather and other circumstances over which I had I have, &c., JAS. G. TURNER. no control.

Armidale—Trial Bay (Trial Survey).

Description of Route.

Description of Route.

The proposed route commences at peg \$\frac{3}{2}\) of the Great Northern Railway, passing through Michael Cannon's land, Nos. 752, 753, 754, and 755, on the east side of Walker Road, crossing a low spur; then in a north-easterly direction, passing through Bower's 50 acres to Commissioner's Water (the route so far is on the south side of the Grafton Road), crossing river about 15 chains above the present Road Bridge, through Gilmer's land on-the north side of the Grafton Road, up a gully to a saddle between last-mentioned river and Burial Ground Creek (from here the route was extended to the Gyra River in an easterly direction, but was afterwards abandoned, as the country appeared to be leading too near to the "Hillgrove Falls" shown on map); the route now crosses Burial Ground Creek at the present Road Bridge; thence in a north-easterly direction over very good country on the north side of the Grafton Road on to the Gyra River, crossing at reserve Ro. 37, and through the south-east corner of M'Intyre's No. 13 C.P., up Sawpit Gully to a saddle about 139 chains from last-mentioned river, descending for a distance of about 60 chains to Cooney Swamp, passing through Nos. 72, 74, 107, and 108 C.P.; over a saddle about 80 chains above said crossing; down siding country in same direction to Baker's Creek, crossing about 70 chains below Donald Finlayson's homestead; then rising for about 180 chains over a saddle are "Finlayson's Re Farm" on main range between Baker's Creek and Woolomombi River, down towards "Conningdale" (Kenneth Finlayson's) on to Woolomombi River, crossing at a bend about 120 chains from K. Finlayson's homestead (the country from the eastern side of Pint-pot Creek to the last-mentioned saddle is rather difficult, the route unavoidably being taken against the natural fall of the country); running along siding country on the west side of Woolomombi River through D. M'Donald's 40 and 160 acres C.P.s to a saddle, passing through an abandoned homestead; thence down siding to junctio

abandoned.

Returning to Ponds Creek the route takes a more easterly direction, rising for about 100 chains to a saddle on the Grafton Road about 100 chains west of Road Bridge at Rocky Creek; thence easterly, siding up said creek on the north side, crossing about 60 chains below said bridge, passing through a small swamp over a spur, rising in a north-easterly direction along the north side of a creek known as "Dago Creek," crossing at about 60 chains from last-mentioned spur; then in an easterly direction up a gully on to comparatively level country; then in a north-easterly direction down an easy slope, crossing the Grafton Road near the 39-mile peg to the river Styx about 20 chains above the present road crossing. The whole of the country passed through on the proposed route presents facilities for reducing the gradients.

The distances given should be considered as approximate.

JAS. G. TURNER.

JAS. G. TURNER.

No. 6.

Mr. Turner to The Engineer-in-Chief.

Railway Survey Camp, Styx River, 23 January, 1883. I have the honor to inform you that I have shifted camp to the above-mentioned river, but all communications should be addressed to "Woolomombi," to be forwarded.

Lhave, &c. JAS. G. TURNER.

No. 7.

No. 7.

Mr. Turner to The Engineer-in-Chief.

Sir,

Woolomombi, 1 February, 1883.

I have the honor to report progress made with trial survey from Armidale to Trial Bay. Since my first general report of the 24th ultimo I have nothing to add respecting the route.

The party has been engaged principally in cutting pack tracks through the ranges to enable horses to travel when shifting camp.

The country is very rough and thickly timbered.

I have been very unwell since the 27th ultimo, and have deemed it necessary to obtain medical advice in Armidale.

The weather continues to be very unsettled.

I have, &c., JAS. G. TURNER.

No. 8.

Mr. Waddington to The Engineer-in-Chief.

Sir, Railway Survey Camp, Spencer's Creek, Macleay River, 1 February, 1883. I have the honor to report progress made with trial survey from Armidale to Trial Bay, as follows

In consequence of the unprecedented severity and continuous unseasonable wet weather that prevailed on the Lower Macleay this month, and which created some alarm to many of the settlers, who removed their cattle and left their homesteads, to a place of safety, in full expectation of a great flood, leaves me but little progress to report. However, the centre line has been staked out and levelled for a distance of 3 miles 50 chains, being all curvilinear, with the exception of a few chains; and the surveys, which are numerous, are nearly completed for the above-named distance.

L. J. WADDINGTON.

No. 9.

Mr. Turner to The Engineer-in-Chief.

Railway Survey Camp, George's Creek, 15 February, 1883. I have the honor to inform you that I have shifted camp to the junction of Upper and Lower George's Creeks, and that I have made two camps since I left the Oakey; but my stay in each place was so short I thought it unnecessary to advise respecting them.

Letters addressed as usual will be forwarded.

I have, &c., JAS. G. TURNER.

No. 10.

Mr. Turner to The Engineer-in-Chief.

Oakey, mis-named in my last report Sty

Sir, Camp, George's Creek, 17 February, 1883.

In reply to your memorandum, No. 83-59, February 8th, which came to hand on the 16th instant, I have the honor to report that the route adopted, as far as the Oakey River, was selected after several attempts to find a better in other directions. The country south of the proposed line is lower, but leads into a series of falls, and the ascent east of Jeogla Run did not appear as practicable.

I intended, however, to further examine that part, had I not ascertained from observations that from

the Oakey River there is a descent mainly the whole of the remaining distance; but steep gradients are

unavoidable, and the construction would be very costly.

The greatest difficulty in descending occurs on the western side of Five-day Creek (vide red dotted I have, &c., JAS. G. TURNER. line on enclosed tracing).

No. 11.

Mr. Waddington to Engineer-in-Chief.

Railway Survey Camp, West Kempsey, 24 February, 1883. I have the honor to acknowledge the receipt of your Mr. Palmer's memo., dated the 8th instant, together with a tracing showing the district between Armidale and the coast, and the route Mr. Turner proposes for a line of railway to a point marked B as 3,653 feet above sea-level.

The cause of omission in my last report as regards gaining any ascent towards the tableland was the impracticability of making any ascent thereto within about 12 miles beyond Kempsey, being a distance of about 44 miles route from my starting-point at Trial Bay; consequently I thought it desirable to traverse, survey, peg out, and complete the line as I advanced for that distance, before I made any examination of the country beyond. However, immediately on receipt of your Mr. Palmer's instructions to report without delay in what direction I propose to make a practicable ascent of 3,653 feet to Mr. Turner's point B (which I fear will be a rather difficult task to accomplish within that limited distance), I at once shifted camp, and started to make the necessary examination of the country on the north side of the Macleay River, beyond Kempsey, and will continue on till I reach the aforesaid point B, if not otherwise instructed.

Please address "Kempsey Post Office."

I have, &c., L. J. WADDINGTON.

. No.∶12.

Mr. Waddington to Engineer-in-Chief.

Sir, Railway Survey Camp, Kempsey, 24 February, 1883. Please forward me a plan, 2 miles to inch, together with the reference sheets of the County of I have, &c., L. J. WADDINGTON. Macquarie.

Maps and reference sheets forwarded.—H.P., 7/3/83.

No. 13.

Mr. Turner to Engineer-in-Chief.

1 March, 1883. I have the honor to report progress made with trial survey from Armidale to Trial Bay, as follows:

During the month I have been engaged exploring between the Oakley River and Piedee Run, and have, I think, succeeded in finding a practicable route, but have not yet sufficiently examined the Botumburra Range to enable me to definitely determine, but hope to do so shortly, when I will furnish full detail in my next general report.

If I succeed in obtaining a satisfactory descent on the above-mentioned range, I apprehend that

comparatively few important difficulties will follow.

The country through which I am now passing is very rough and heavily timbered; necessitating cutting pack tracks when shifting camp, and causing the progress of the work to be slow and laborious.

JAS. G. TURNER.

No. 14.

Mr. Waddington to Engineer-in-Chief.

Railway Survey Camp, Kempsey, 1 March, 1883. I have the honor to report progress made with trial survey from Armidale to Trial Bay as

The centre line for a distance of 3 miles 50 chains from Trial Bay is pegged out complete, including levelling along centre line, cross sections, surveys of creeks, roads, lagoon, properties, &c., lockspitting, painting pegs, and the establishment of substantial bench-marks every half-mile. Beyond the above-named distance I have examined the country as far as a point marked A on the annexed tracing, and the route I propose the line to take is shown in red, which is the only practicable one to take so as to avoid swamps and the flood-waters from the Macleay River. The area (approximate) subject to inundations by a great flood (now seven years since the last occurred) is coloured light blue, and between it and the coast there are two sand ridges with jutting spurs on either side. These ridges run parallel with the coast, the outer one immediately on the coast, and the inner one is separated by a swamp averaging about $\frac{3}{4}$ mile wide, and then from this inner ridge to the river Macleay the land is swampy and low, and subject to flood-waters, except in a few isolated places, where there are sand-hills and spurs. The most suitable place to cross the Macleay River, away from flood-waters, is, I think, at Kempsey, where the banks are of a suitable height and the bottom rocky. For some considerable distance up the river beyond Kempsey, the land is low and subject to floods for many miles back from the river on either side. From my river crossing at Kempsey to the point A on tracing I follow on a low ridge of uniform level averaging 100 feet high, but very spurry on either side, that nearest the river very abrupt. The surveyed road goes along the summit, on which the country appears easy. The only ascent made towards the tableland up to the present time is about 120 feet above see level at point A on appeared tracing. I will continue my examination of the country towards the above sea-level at point A on annexed tracing. I will continue my examination of the country towards the tableland, in accordance with Mr. Palmer's instructions, dated the 8th ultimo.

L. J. WADDINGTON.

No. 15.

Mr. Turner to The Engineer-in-Chief.

Camp, Woolomombi, 1 April, 1883. I have the honor to report progress made with trial survey, from Armidale to Trial Bay, as

Since my last progress report, and during the past month, I have examined the country on each side of Five Day Creek, and, as anticipated, succeeded in finding a practicable descent from the Oakey River to a point the above-mentioned creek, where I met Mr. Waddington.

The closing of our reduced barometrical levels were very satisfactory.

Space in the monthly progress journal being limited, I will forward a more detailed report as soon

I have had great trouble with my party, and was compelled to change the men more than otherwise advisable, thereby causing inconvenience; they were troublesome when the work became rough and provisions difficult to obtain.

I am now on my way to Armidale, and purpose commencing the trial survey as soon as the camp is fixed at "Commissioner's Water," and the party made up. There is some difficulty in obtaining suitable men here.

JAS. G. TURNER.

No. 16.

Mr. Waddington to The Engineer-in-Chief.

Kempsey, 1 April, 1883. I have the honor to report progress made with trial survey from Armidale to Trial Bay as Sir; follows:

I have continued the examination of the country from point A, named in my last monthly report, to a point marked C, Selection 12, situated on the Five-day Creek, as indicated by the accompanying tracing, but my actual closing point with Mr. Turner's line is at a point marked B, Selection 1, on the same creek, and which I make 485 feet above sea-level. This now completes the examination of the

country

The country between Skillion Flat and Hickey's Creek is for the most part gum-tree forest, poor soil, but comparatively easy for construction; thence to Five-day Creek the country consists of apple-tree and mixed timber forest, with patches of excellent pasture on the flats and gullies, but a large portion is absolutely useless, owing to its steep mountainous sides and absence of soil. Through this latter portion the works of construction would be very heavy, on account of the spurry nature of the hills, and very broken country with its deep gullies to span, and would probably necessitate three tunnels (not of great length) at the points indicated on the tracing. From the crossing of Five-day Creek upwards to point B the works would be lighter, although costly. The country on this creek is principally apple-tree forest, excellent soil, and suitable for cultivation; in fact, the best land suitable for agricultural purposes is to be found on the creeks and river flats.

I beg to suggest that during the progress of traversing several deviations from my route should be made, to ascertain their respective merits, i.e., on the edge of the river, where the cliffs are not too perpendicular, thereby save one if not two tunnels, but at the same time would increase the length of the line I would suggest that an alternate line be tried up the Nulla Nulla Creek. I am shifting camp back to Trial Bay end of the line, where I will re-commence traversing, setting out, &c., from the point I departed

from; until further instructed.

LEONARD J. WADDINGTON.

No. 17.

Mr. Turner to The Engineer-in-Chief.

Armidale—Trial Bay (Trial Survey.)

Armidale, 12 April, 1883. I have the honor to report the completion of exploration for Railway line between Armidale and Trial Bay, and forward herewith tracing and description of the continuation of route from the Oakey River to Five-day Creek, where I met Mr. Waddington.

The country is very rough, and has therefore been difficult to examine. I have, however, succeeded in obtaining satisfactory results from approid measurements, and consider the route practicable.

in obtaining satisfactory results from aneroid measurements, and consider the route practicable.

As well as exploring the country described, I have made a careful examination of other parts, without the same satisfactory results.

I am now proceeding with the trial survey as directed.

I have, &c., JAŚ. G. TURNER.

Armidale—Trial Bay (Trial Survey.)

Description of Route-

Oakey, mis-named Styx in last report.

Description of Route—continued.

CROSSING the Oakey River about half a mile above the Grafton Road, the route continues along siding country in an east-north-easterly direction; on the south side of the Snowy Range, to a low saddle (No. 1); from thence in an easterly direction down the south side of a gully for some distance; then crossing on to the north side, to a point on the Styx River, about 40 chains above the junction of said gully with last-mentioned river, where it is proposed to cross; thence in a more southerly direction to Upper George's Creek; thence south-south-easterly along the side of Cunnawarra Range (average slope of siding 1 in 3), to a saddle (No. 3) on a spur between the two branches of Upper George's Creek; passing through reserve No. 2, on Diamond Flat; thence easterly to another saddle (No. 4); where the Old Kempsey Road crosses. (An alternate route is shown on the accompanying tracing by a red dotted line, which would save a rise of over 400 feet, and a greater distance could be gained to ease the gradient; the country, however, is very rough.) From the last-mentioned saddle the route continues down the eastern side of Botumburra range in an east-south-easterly direction: the upper part of the range is very steep, and the general roughness of the country has caused the examination of the route to be difficult.

This portion of the proposed route terminates on the northern side of Warne's C.P. No. 1, Peedee, the reduced baro-

This portion of the proposed route terminates on the northern side of Warne's C.P. No. 1, Peedee, the reduced barometrical level being 485 feet above sea-level.

JAS. G. TURNER.

12 April, /83.

No. 18.

Mr. Turner to The Engineer-in-Chief.

Camp, 1 May, 1883. Sir. I have the honor to report progress made with trial survey from Armidale to Trial Bay as

The line has been staked out from $\frac{2.6.7}{3.07}$ of the Great Northern Line, my starting-point, to 9 miles 20 chains near the Gyra River, 8 miles of which has been levelled, and the greater part check levelled.

There is nothing sufficiently remarkable to need comment so far; the country is broken, but not at all difficult for railway construction.

JAS. G. TURNER.

No. 19.

Mr. Waddington to The Engineer-in-Chief.

Sir, Kempsey, 1 May, 1883. I have the honor to report progress made with trial survey from Armidale to Trial Bay as follows :-

Since my return from the foot of the tableland I have continued setting out the centre line, also traversing through the sand-hills at the head of Long Swamp.

The country gone through consists of very dense tea-tree and honeysuckle scrub, consequently so many rough traverse lines are absolutely necessary to cut, so as to sweep round the sand-hills and to avoid the numerous small local swamps lying between.

LEONARD J. WADDINGTON.

No. 20.

Mr. Turner to The Engineer-in-Chief.

Armidale, 1 June, 1883. I have the honor to report progress made with the Armidale Trial Bay survey during the month of May as follows:

I have staked and levelled as far as Pint-pot Creek, but, as will be observed upon reference to level books, have not been able to complete the check levelling the whole of that distance.

The weather has been wet and stormy, and greatly impeded the progress of the work. I have also been very unwell.

I discharged the men in my party on the 31st ultimo, as ordered, and send all papers, plans, &c.,

also my account and check books relating to my public account, by the mail train.

The pay list for men's wages, enclosed herewith, is signed, but in case it is considered informal I have also enclosed one made out in the usual way. My object in doing so is to prevent any delay. men having been discharged are anxious to receive their wages, which they desire to be sent to their address, "Turner's Camp, Cooney, near Armidale," in separate envelopes, the amount (£10 5s. 7d.) to be paid in to my account Commercial Bank, Armidale. I have, &c.

JAS. C. TURNER.

No. 21.

Mr. Waddington to The Engineer-in-Chief.

Kempsey, 1 June, 1883. I have the honor to report progress made with trial survey from Armidale to Trial Bay as follows:

Many miles of rough trial traverse lines have been cut, and the fixed traverses for centre lines advanced to 9 miles.

The centre line has been staked out up to 8 miles.

The country gone through consists of broken sand-hills, covered with very dense scrub of tea-tree, honeysuckle, and occasional patches of bastard gum.

Numerous swamps intervene these sand-hills on all sides.

The line through this part is mostly curvilinear, but now having got fairly on to the inner or main sand ridge I expect to secure longer lengths of straight and much less earthworks than before

L. J. WADDINGTON.

Mr. Waddington to The Engineer-in-Chief.

Kempsey, 30 June, 1883. I beg to acknowledge the receipt of Mr. Palmer's memorandum dated the 20th instant, stating that he considers "the rate of progress made with the trial survey from Trial Bay towards Armidale most unsatisfactory." If Mr. Palmer was acquainted with the country the survey goes through, and the many

drawbacks to contend with, I think he would considerably alter his opinion.

I am cognizant of the fact that the rate of progress appears slow, but this is attributable to the inexperienced and inferior class of men I can only obtain that will work in this district for the low rate of 6s. per day, where rations and everything else is exceedingly expensive, and the demand for labour in this district at a much higher ruling rate, and then they only stop till they get their first pay or so. On inspection to my pay lists you will find that no less than ten changes of hands have occurred, and I expect more the next pay; this of course incurs loss of time in finding fresh hands—such frequent changes I never before experienced on any survey. Good survey hands refuse to come for 6s. a day when they can get 7s. and 8s. in other Government Departments.

Only slow progress can possibly be made with four field hands going through the dense scrub and forest, as every line for measurement, whether for cross sections or feature survey, have to be cleared; and so many of the traverse lines after they have been cleared prove useless, as they frequently run butt into some local swamp. It is impossible to see ahead through this impenetrable scrub.

Very often only three hands are available in the field, as the distance is so great to go for meat, rations, horsefeed, post, &c. As it is I lose so much valuable time waiting for the clearing to be done, and during which I turn to with the axe or bush hook myself. Last April I put an extra man on to facilitate the clearing, but the Department very unjustly, I consider, struck out his wages on the pay list, consequently I had to pay them out of my own pocket. Wet weather has been another severe drawback: it rained more or less on fifty-two consecutive days at the beginning of this year.

Perhaps I am making this a too accurate and detail survey,—that by curtailment it would be more expeditious. I am setting out all lines, angles, curves, and staking the centre line with the theodolite. Stakes 2 × 2 painted red are driven in the ground at intervals of 5 chains on the straight and 2 chains on

the'

the curves; 4 × 4 stakes painted white at the intersections, and indicators for same with ditches dug thus thus distributed and a dug round each intersection. Chainage painted on a peg

thus for every 10 chains. Good substantial B. M.s established every half-mile. Cross

sections taken from 1 to 4 chains apart on sidelong ground, and feature surveys made within a proximity of 5 chains, viz., coast lines, lagoons, creeks, swamps, roads, buildings, fences, &c. Centre line levelled at intervals of 1 chain, and less where there is non-uniformity of surface, and the centre line check levelled.

I am working from 8 a.m. till dark, Saturdays inclusive.

The probable time I expect will require to carry the survey to the point where I joined Mr. Turner on Five-day Creek when selecting the route, an approximate distance from Trial Bay about 85 miles, is—

1st.—With an assistant and seven field hands 8 months.
2nd.—Self and six field hands 12 ,,
3rd.—Self and four field hands 16 ,,

Your instructions will be faithfully obeyed.

I have, &c.,

LÉONARD J. WADDINGTON.

Bỹ this mail I forward a tracing as requested of as much of the survey that I have plotted. Tracing paper advised to me on the 20th instant not received.—L.J.W.

Mr. Palmer.—W.H.Q., 7 July, 1883. I think it is clear from this report that a change should be made in the conduct of this survey. Mr. Waddington commenced the examination of this country in November last, and by the 30th of last month 9½ miles of plan and section through almost level country was all that he had to show for over six months' work. I think Mr. Waddington might be usefully employed on easier country, where he would be under more supervision, and that he should be recalled.—H.P., 10/7/83. The Engineer-in-Chief.

Mr. Waddington appears to have made but little progress in an "almost level country." Would it be advisable to transfer him to any other survey, and if so, to which line?—W.H.Q., 12/7/83. Mr.

Palmer

Mr. Waddington was one of the surveyors named in my report, 83/2326, as not being satisfactory, but it has since been decided by the Engineer-in-Chief that the service of those surveyors should be utilized at present.—83/2545.—H.P., 13/7/83.

No. 23.

Mr. Stuart to The Engineer-in-Chief.

Sir,

I have the honor to report we expect to have the Inverell end of this trial survey completed before the 20th of next month (July).

Railway Survey Camp, Inverell, 30 June, 1883.

Your obedient servant,

CHAS. McD. STUART.

Mr. Palmer.—W.H.Q., 3 July. I think it will be advisable to send Messrs. Stuart and Harwood on the Armidale and Trial Bay survey, if no further surveys are required in the Inverell district.—H.P., 11/7/83. The Engineer-in-Chief. Approved.—J.W. (p. W.H.Q.), 12 July, 1883. Mr. Palmer.

No. 24.

The Assistant Engineer for Trial Surveys to Mr. Stuart.

Mr. Stuart,

On the completion of the trial survey from Glen Innes to Inverell you may forward all plans, books, &c., connected with that work to this office.

You may then proceed with your party to Armidale to make the trial survey from that town to

Trial Bay.

Report by what date you expect to reach Armidale, and I will then forward to that address plans, instructions, &c.

HERBERT PALMER.

No. 25.

The Assistant Engineer for Trial Surveys to Mr. Harwood.

Mr. Harwood,

On the completion of the Glen Innes and Inverell trial survey you may forward to this office all plans, books, &c., connected with the work, and may then proceed with your party to Armidale to make a trial survey from that neighbourhood to Trial Bay.

Report by what date you expect to reach Armidale, and I will then forward to that address plans, instructions, &c.

HERBERT PALMER.

No. 26.

Mr. Waddington to The Engineer-in-Chief.

Sir,

I have the honor to report progress made with trial survey from Armidale to Trial Bay as follows:—

The traverse line has been staked out up to 12 miles.

The country gone through continues of broken sand-hills covered with very dense scrub and forest trees.

L. J. WADDINGTON.

No. 27.

Mr. R. B. Smith, M.P. to The Engineer-in-Chief.

Sir,

Referring to my interview with Mr. Quodling on the 19th June, and his suggestion to write you officially, I have the honor to enclose telegram, and also a leading article which appeared in the Macleay Chronicle for your perusal, and to request that you will be pleased to cause to be furnished to me by Monday next all the information at your disposal respecting progress made in the trial survey of the line from Armidale to Trial Bay.

I venture to make this request as I leave Sydney in a few days via_5 Armidale to Kempsey, and will traverse the proposed line of railway. If you will kindly have my request complied with I shall feel much obliged.

Your obedient servant,

R. BURDETT SMITH.

Telegram from Mr. C. J. N. Dean to R. B. Smith, Esq., M.P.

What answer given by surveyors, Turner, Waddington, Trial Bay survey? See letter from Department, Macleay Herald.

Mr. Palmer.—W.H.Q., 6 July, 1883. I regret to have to report that the most unsatisfactory progress has been made on this survey. Two surveyors commenced the work last November, one at the Armidale end and the other at Trial Bay. The former has been dismissed for improper conduct, and the latter I have recommended for removal, as I do not consider him competent to carry out a trial survey through such difficult country. About 10 miles at each end has been surveyed.—H.P., 10/7/83. The Engineer-in-Chief.

No. 28.

The Chief Clerk to Mr. R. B. Smith, M.P.

Sir,

In reply to your letter of 5th instant, requesting information as to the progress made with the railway trial survey between Armidale and Trial Bay, I have the honor to inform you that about ten (10) miles at each end of the line have been surveyed, and every effort will be made to push forward the survey to completion, having regard to the difficult country to be traversed.

I regret that I was unable to obtain this information for you by the 9th inst. as requested, and hope

the slight delay will not have put you to any inconvenience.

I have, &c., W. H. QUODLING.

No. 29.

Mr. W. C. Proctor, M.P., to The Chief Clerk.

Dear Sir, Sydney, 188.

Would you kindly let me know what progress has been made with the Armidale to Trial Bay survey for a line of railway, and what is being done to complete the work, and oblige

W. C. PROCTOR.

P.S.—If you could let me have the information to-day or to-morrow I should be obliged.

W.C.P.

No. 31.

No. 30.

The Chief Clerk to Mr. W. C. Proctor, M.P.

Sir,

In reply to your letter of —— date, inquiring as to the progress of the railway survey between Armidale and Trial Bay, &c., I have the honor to inform you that about 10 miles at each end of the line have been surveyed, and every effort will be made to push forward the survey to completion as early as practicable, having regard to the difficult country to be traversed.

I have, &c., W. H. QUODLING, (For the Engineer-in-Chief).

853—B

No. 31.

The Assistant Engineer for Trial Surveys to Messrs. Harwood and Stuart.

Messrs. Harwood and Stuart, Armidale, Under separate cover I have sent you to the above address the plan and section and field and level books of that portion of the trial survey from Armidale towards Trial Bay completed by Mr. Turner.

I also forward a district plan of county maps of the country throughout from Armidale to Trial Bay,

showing the route recommended for trial survey between these points by Messrs. Turner and Waddington, together with a copy of Mr. Turner's reports on the portion of the route examined by him

You will observe from the section that it is not graded beyond the crossing of the Gyra River, and before continuing the survey to meet Mr. Waddington, who is working from Trial Bay towards the table-land, you must ascertain whether a better section may be obtained from the Gyra River to the summit at A No. 94. Cross sections may be sufficient to show whether the pencil grade of 1 in 40 may be used, or, if necessary, you may survey a deviation. I wish you to work together so that you may push forward a traverse and a section as rapidly as possible to the point where the actual descent towards the coast is to be commenced.

HERBERT PALMER.

No. 32.

Mr. Waddington to The Engineer-in-Chief.

Kempsey, 1 August, 1883. I have the honor to report progress made with trial survey from Armidale to Trial Bay as follows:

The traverse line has been staked out up to 16 miles.

The country gone through consists of low broken sand-hills, covered with very dense scrub and

forest trees combined, and abounds with numerous swamps throughout.

The survey could be very considerably expedited and a saving effected in its cost by allowing me two extra labourers to assist the perpetual cutting and clearing in the dense scrub, which is so prolific throughout this coast district.

L. J. WADDINGTON.

No. 33.

Messrs. Harwood and Stuart to The Engineer-in-Chief.

Trial survey, Armidale to Trial Bay.

Sir,

Railway Survey Camp, Armidale, 10 August, 1883.

We enclose plan and section with cross levels where the line crosses the dividing range, east side of the Gyra River. The black line shows Mr. Turner's section, and the blue line the correct one as levelled by us over his traverse between stations 83 and 95. You will see there is a considerable difference

between them which materially affects the gradient.

We might mention the line up to our starting-point, 15 miles from Armidale, is, as far as we have gone over it, neither blazed or pegged, and has only loose waddies at the various traverse stations, so that in a few months all traces of it will have disappeared.

We are, &c., H. T. HARWOOD & C. M'D. STUART.

No. 34.

The Assistant Engineer for Trial Surveys to Mr. Waddington.

Mr. Waddington, I wish you without delay to place yourself in communication with Messrs. F. G. Paton, A. Verge, T. Dangar, and A. Cochran, of the Macleay, and ascertain from them what in their opinion is the most practicable route for a line of railway from the coast level at the Macleay to the New England tableland, and to report in what particulars the route they may propose differs from that upon which you are at present engaged in making a trial survey.

HERBERT PALMER.

No. 35.

The Assistant Engineer for Trial Surveys to Mr. Stuart.

Mr. C. McD. Stuart, As I am informed that your services will be required as Assistant to the District Engineer on the Illawarra line, you may break up your survey-party and hand over to Mr. Harwood all plans, books, &c., connected with your work.

You may then return to Sydney with as little delay as possible, and report yourself on your arrival at the office of the Engineer-in-Chief.

HERBERT PALMER.

No. 36.

The Assistant Engineer for Trial Surveys to Mr. Harwood.

Mr. Harwood. Before proceeding further with the trial survey from Armidale towards Trial Bay, I wish you to see Mr. Aaron Crossman, of Armidale, and to ascertain from him what, in his opinion, is the best route for trial survey for the proposed line from the tableland to the coast, and to report without delay in what particulars the route he may propose differs from that recommended for survey by Mr. Turner.

HERBERT PALMER.

No. 37.

The Assistant Engineer for Trial Surveys to Mr. Harwood.

Mr. Harwood, 14 August, 1883. With reference to your report as to want of marks, &c., on Mr. Turner's survey between Armidale and your starting-point at 15 miles, it will not be necessary to go over this work again at present, as it is most necessary for you to push this survey forward as rapidly as possible to the part where the chief point of this survey is to be tested, viz., the practicability or otherwise of obtaining a feasible descent from the tableland to the coast level.

HERBERT PALMER.

No. 38.

The Minister for Works to The Engineer-in-Chief.

Trial Survey, Armidale to Trial Bay.

Department of Public Works, Sydney, 13 August, 1883.

Mr. R. B. Smith, M.P., called to request that he might be officially informed whether survevors have been sent on this work?

What is proposed to be done?

Where the surveyors now are?
What progress has been made, and if they can be instructed to communicate with residents of years standing as to the most practicable route, giving the names of Messrs. Aaron Crossman, J.P., Armidale; F. Goulburn Paton, A. Verge, O. Dangar, and A. Cockran, at the Macleay.

Mr. Whitton, for report.—J.R., B.C., 13/8/83. Mr. Palmer.—W.H.Q., 13/8/83.

This survey is still being continued, both from Armidale and from Trial Bay; 15 miles have been completed from Armidale, and 16 miles from Trial Bay. I have instructed the surveyors to communicate with the gentlemen named, and to ascertain from them what in their opinion is the most practicable route for a line of railway through this district.—H.P., 14/8/83. Under Secretary for Works, B.C., 15 August, 1883.—W.H.Q. (for the Engineer-in-Chief.) Inform Mr. Smith, M.P.—15/8/83, F.A.W.

No. 39.

The Under Secretary to Mr. R. B. Smith.

Sir;

Department of Public Works, Sydney, 16 August, 1883.

In reply to your personal inquiries as to the progress made with the preliminary survey for a line of railway from Armidale to Trial Bay, &c., I am directed to inform you that the survey is being continued at the present moment at both places, 15 miles having been completed from Armidale, and 16 miles from Trial Bay.

I am to add that into

I am to add that instructions have been issued to the respective surveyors engaged in the work to put themselves in communication with the gentlemen referred to in your letter with the view to ascertain from them what in their opinion would be the most practicable route for a line of railway through the district.

No. 40.

Mr. Harwood to The Engineer-in-Chief.

Sir,

Railway Survey Camp, near Armidale, 20 August, 1882.

With reference to memo. 83/296, instructing me to ascertain from Mr. Crossman, of Armidale, what, in his opinion, is the best route for trial survey from the table-land to the coast, I beg to inform you that I was speaking to that gentleman on the subject to-day. He told me that he knew very little of the country between Armidale and the Styx River, and was therefore unable to suggest a better route than the one recommended for survey by Mr. Turner, between those places. With regard to the descent from the tableland, the long spur, shown on county map, forking the George's Creek, near reserve 52, and the Nulla Nulla Creek, were mentioned by Mr. Crossman as places where the fall might be obtained by an easy gradient; but he could not say that they were better than the line recommended for survey.

I am, &c., I am, &c., HAMILTON HARWOOD. recommended for survey.

No. 41.

Mr. Waddington to The Engineer-in-Chief.

Kempsey, 1 September, 1883. I have the honor to report progress made with trial survey from Armidale to Trial Bay, as Sir, follows:

The traverse line has been staked out up to 19 miles 40 chains.

The country gone through continues of the same character as before, viz.:—Broken sand-hills, covered with very dense scrub and forest trees combined, and abounds with extensive swamps throughout.

Mr. Palmer's instructions to me, dated the 14th ultimo, are receiving prompt attention.

L. J. WADDINGTON.

No. 42.

Mr. Harwood to The Engineer-in-Chief.

Railway Survey Camp, near Armidale, 1 September, 1883. I have the honor to report progress made with the trial survey—Armidale to Trial Bay, as

Having explored and made trial traverses from the end of Mr. Turner's survey (10 chains west of Pint-pot Creek, 15 miles from Armidale) to the high tableland between Baker's Creek and the Woolomombi River, I found that it would be unadvisable to adopt the suggested route. The dividing range between Pint-pot and Baker's Creek is here very broken, making it almost impracticable for a line of railway; and unless a gradient of 1 in 30 were used, the ascent from Baker's Creek could not be made.

I have therefore started traversing from 13 miles 50 chains in a northerly direction, crossing Pintpot Creek about 3 miles and Baker's Creek 1 mile above the suggested line. 4 miles 56 chains to 18 miles 26 chains has been surveyed and levelled.

I am, &c.,
H. T. HARWOOD.

No. 43.

Mr. Waddington to The Engineer-in-Chief.

Armidale to Trial Bay-Trial survey.

Sir, Kempsey, 1 September, 1883. Please inform me what length sections you desire the field diagrams in, for this survey, to be forwarded to you. I have, &c., L. J. WADDINGTON.

No. 44.

The Assistant Engineer for Trial Surveys to Mr. Waddington.

Mr. Waddington, addington, 5 September, 1883. You may send in progress tracings of the plan and section of the trial survey from Trial Bay towards Armidale in 5 mile lengths as completed.

HERBERT PALMER.

No. 45.

Enclosure from Mr. R. B. Smith, M.P., to The Minister for Works.

ar Sir, Yanawall, Macleay River, 12 September, 1883. I have the honor to enclose two resolutions passed at a meeting of the Macleay River Railway My dear Sir, League, held on Tuesday last, and in doing so I have much pleasure in informing you that the statement I made to you in my letter of date July, 1881, that there were no difficulties of any moment on the proposed Trial Bay-Armidale Line line for a distance of from 70 to 80 miles, is fully confirmed by Mr. Surveyor Waddington; this being the case, it is but fair to assume that what I further stated in the same letter will be found correct, viz., that the difficulty of ascending from the valley of the Macleay to the tableland of New England will not in any way be found comparable with the difficulty of ascending the Blue Mountains on the Great Western line.

Blue Mountains on the Great Western line.

You will also be pleased to learn that Mr. Waddington states that the line from Trial Bay to Kempsey, a distance of 35 miles, can be constructed more cheaply than any other of an equal distance in the Colony. You will perceive by the first resolution that Mr. Waddington has examined the country for 85 miles, and that there are no difficulties of any consequence for that distance, and the line can be constructed very cheaply. After traversing this 85 miles it will then be necessary to ascend the range from the valley of the Macleay to the tableland of New England (not the one that you came down), have much more practicable one about 16 miles up Five-day Creek: once up this range the railway could range from the valley of the Macleay to the tableland of New England (not the one that you came down), but a much more practicable one, about 16 miles up Five-day Creek; once up this range the railway could either go direct to Armidale, or the line could be taken (for an equal distance as that to Armidale) to a point on the Great Northern Line to Queensland, 40 miles or more to the north of Armidale; and by doing this, the whole of the western country, inclusive of Inverell, also that of North and South New England, would be in communication with Trial Bay, where produce could be shipped were jetties provided. I need not reiterate what I have so often stated to you, "that there can be no question that Trial Bay will be a splendid harbour so soon as a portion of the breakwater is completed."

I would also draw your attention to the fact that a railway can be constructed from Armidale to Trial Bay within a distance of 135 miles, and for the same, and perhaps a shorter distance, were the line to join the northern line to the Queensland border—say 40 miles north of Armidale. No other line can be taken from the tableland to so good a harbour, and no line can be constructed so cheaply. You will please remember the proposed line from Glen Innes to Grafton terminates at the latter place—50 miles from the sea-board, and at which there is no harbour, and never can be; and further that the entrance to the Clarence is highly dangerous; and it is almost beyond a probability that it can ever be improved, at any rate

rate the fact stares us in the face that although vast sums of money have already been expended on this bar, instead of improving it, matters have been made rather worse. Further, I have to ask you to again urge upon the Minister the justice of waiting for the result of our survey before any proposition for the construction of any other line from the coast to the tableland of New England be submitted to Parlia-

I wish you to do this in the *interests of the country*, and not simply as the Member for The Macleay. As you are aware, my railway scheme embraces the construction of a coast line from Maitland to The Tweed, and one line from the tableland of New England, terminating on the coast at the grand harbour of Trial Bay, the finest on the coast, with the exception of Port Jackson. If the Government were to carry out this scheme, every interest and all the requirements of those great northern rivers would be met. Of course I can foresee there would be much local opposition at The Clarence and Glen Innes, and perhaps other places; but I would ask, are the interests of the rivers to the south of The Clarence to be ignored, and the general interest of the country to be sacrificed, to please any local cliques, be they ever so powerful. It would be a great day for the country if the Government—rising superior to the influence, the meanness, and the littleness of country cliques—were to adopt this grand scheme in its entirety; and the great advantage of which I challenge any one (so far as the interest of the Colony generally is concerned) to deny or gainsay.

The construction of the line from Grafton or from The Tweed to Trial Bay, and of that from Armidale to Trial Bay, and of that from

Armidale to Trial Bay, could be proceeded with simultaneously.

In conclusion, I have further to say that the line from Trial Bay to Armidale, or to a point 40 miles north from that place, would return good interest upon the money expended on its construction. Of course all the calculations laid before the Minister, in re Grafton-Glen Innes and Grafton-Tenterfield lines, by the various deputations from those places, will apply to the Armidale-Trial Bay line; and if justice is

done us, we ought to score a win when the spendid terminus our line possesses is taken into account.

If you think these few lines and my views are worth representing to the Honorable the Minister for Works I am quite willing you should do so, and I am quite sure that your constituents here will endorse my views in the matter.

F. GOULBURN PANTON,

Provident Smith For M. P. Smith

President, Macleay R. Railway League.

R. Burdett Smith, Esq., M.P., Sydney.

RESOLUTIONS passed at a meeting of the Macleay River Railway League, re Trial Bay-Armidale Junction Railway, held this day, Tuesday, 12th September, 1883, at Kempsey.

That this League, having heard Mr. Surveyor Waddington's explanation of the line to be followed by him in his survey for the Trial Bay-Armidale Railway line, desires to express its satisfaction with the same. This League being, however, desirous of affording information of the country beyond Five-day. Creek, and of pointing out an alternative route, it is hereby resolved that the President write to R. Burdett Smith, Esq., M.P., requesting him to interview the Honorable the Minister for Works, and to ask that instruction be given to the surveyor on the Armidale side of the proposed line to communicate with the President of this League, and also with Mr. Surveyor Waddington, in order that a conference of the surveyors, and some members of this League, and others interested, may meet at Long Flat Station, about 50 miles from Kempsey, and some 12 or 15 miles from Five-day Creek, to decide upon the most practicable route to ascend from the valley of the Macleay to the tableland of New England, and, if necessary, to point out the alternative route before alluded to; and further, that Mr. Smith be requested to draw the attention of the Minister to the fact that Mr. Waddington's opinion is, "that a practicable and cheap line can be constructed for 85 miles of the proposed route—85 miles being the distance Mr. Waddington has gone over this line." Waddington has gone over this line.

The above resolution was proposed by O. O. Dangar, Esq., J.P., and seconded by G. T. Bethel, Esq.

Proposed by Alexander Cochrane, Esq., seconded by O. O. Dangar, Esq., J.P.:-That the President write to R. B. Smith, Esq., M.P., requesting him to obtain and forward to the League copies of the reports received from the surveyors on each end of the line up to the 1st of September, 1883, in re Trial Bay-Armidale Junction Railway.

F. GOULBURN PANTON,

President, Macleay River Railway League. Memo.—The course proposed by the Macleay River Railway League will no doubt save delay in exploration. Will Mr. Wright kindly ask the Engineer-in-Chief if he can take the steps suggested in the resolutions.—R. Burdett Smith, Member for The Macleay, 20th Sept., 1883. The Honorable Minister for Works.

Ackge. Engineer-in-Chief for Railways, 20/9/83.—J.R.

The surveyors have already been instructed to communicate with residents both at the Armidale and Macleay ends of this trial survey, and they are now working from either end, in accordance with arrangements made after an exploration of the country, the route adopted agreeing, I believe, with the suggestions that have been made by residents professing to know the country well.—H.P., 2/10/83.

No. 46.

The Under Secretary to Mr. R. B. Smith, M.P.

Department of Public Works, Sydney, 2 October, 1883. In reference to the resolutions adopted at an influential meeting of residents of the Macleay River District, held at Kempsey on the 12th ultimo, and in compliance with the request contained in the letter of Mr. Panton on the subject, I am directed by the Secretary for Public Works to inform you that the surveyors at present employed upon the trial line at either end of the proposed railway from the coast to the teleboland at Armidology and the surveyors at present employed upon the trial line at either end of the proposed railway from the coast to the tableland at Armidale were instructed to place themselves in communication with the people in the district acquainted with the locality and interested in the work, and that in accordance with the arrangements made, and after an exploration of the country, the Engineer-in-Chief for Railways is given to understand that the route adopted agrees with the suggestions that have been made by the residents. I have, &c.

JOHN RAE.

No. 47.

Mr. Waddington to The Engineer-in-Chief.

Kempsey, 1 October, 1883. Sir, I have the honor to report progress made with trial survey from Armidale to Trial Bay as

The traverse line has been staked out up to 21 miles. The country gone through continues of broken sand-hills covered with dense scrub and forest trees, and abounds with extensive swamps. L. J. WADDINGTON.

No. 48. Mr. Harwood to The Engineer-in-Chief.

Railway Survey Camp, Ten o'clock Creek, 1 October, 1883. Sir, I have the honor to report progress made with trial survey Armidale to Trial Bay, as follows:— The traverse has been continued from 18 miles 27 chains to 26 miles, 6 miles 27 chains of which is levelled and cross-sectioned. After crossing Pint-pot Creek in reserve 244, the line runs through portions 58 and 9, crosses Baker's Creek near dotted track over a saddle in the dividing range between Baker's Creek and Woolomoobi River, at portions 7 and 6; then down side-lying country to the above river. There is a fall of 400 feet (by aneroid) between the saddle and the river, a distance of 4 miles, but no I am, &c., H. T. HARWOOD: easier descent could be found, the country being very rough and broken.

No. 49.

Mr. Waddington to The Engineer-in-Chief.

Kempsey, 1 November, 1883. Sir, I have the honor to report progress made with trial survey from Armidale to Trial Bay as

I very much regret that, owing to severe indisposition, caused probably by over-work and exposure to the weather, the progress in October has thereby been retarded. As a rule my party has been tolerably

healthy, with the exception of a case of blood-poisoning.

With a view to recoup for the lost time during my temporary indisposition, I am now working in the field from eleven to twelve hours a day, Saturdays inclusive.

The centre line has been staked out up to 22 miles 34 chains 25 links.

The country gone through is forest land with undergrowth up to 21 miles 27 chains 85 links, running along the foot of the north side of what is called Little Hill, which formation is conglomerated stone, thence to 22 miles 34 chains 25 links.

At the foot of Tulkenggay mountain is Darkwater Swamp, being 1 miles 6 chains 40 links across, and containing reeds and grass with standing water the entire distance. The bed is good, consisting of a

kind of pipeclay. The flood-waters from the Belmore River flow over this swamp, thence into Back Creek, Maria River, Wilson River, Hastings River, and out to sea at Port Macquarie, consequently these flood-waters must be spanned, and in finding the most practicable position with economy in construction, I have expended much time and labour in examining both sides, as they are very densely timbered and boggy, which made it very difficult to travel. However, I think I have selected a good crossing, and at the same time will save many miles of line from my original route laid down, as I find I can get a good and easy line round by the north side of Tulkenggay Mountain into Kempsey.

L. J. WADDINGTON.

No. 50.

Mr. Harwood to The Engineer-in-Chief.

Railway Survey Camp, Maiden Creek, 1 November, 1883. I have the honor to report progress made with the trial survey, Armidale to Trial Bay, as Sir, follows

From 26 miles to 36 miles 40 chains has been traversed, and from 24 miles 60 chains to 36 miles

40 chains has been levelled.

The traverse crosses the Woolomombi River about a mile above its junction with Ten o'clock Creek and the latter creek about 30 chains above said junction; then rising over a saddle near the Woolomombi track crosses a valley through the stockyards near D. M'Donald's old homestead (now owned by A. M'Rae), portion No. 11, and then rising for about 60 chains to a gate in the Dividing Range, Woolomombi and Chandler Rivers. Crossing the Chandler River near its junction with Maiden Creek, the traverse passes over a saddle near the old Armidale and Grafton Road and down to House Creek, which it crosses about a mile above said road crossing.

I have, &c., I have, &c.,
HAMILTON HARWOOD.

No. 51.

Mr. Harwood to The Engineer-in-Chief.

Railway Survey Camp, Oakey River, 30 November, 1883. I have the honor to report progress made with trial survey, Armidale to Trial Bay, as-Sir, follows:

6 miles 20 chains have been staked and levelled.

From House Creek the line passes over the divide between it and Pond's Creek through M'Allister's selections, crossing the latter creek near the S.W. corner of portion No. 22, then rising for about 100. chains to the Armidale and Grafton road over a saddle near junction of the old and new roads; then down to Rocky Creek, which is crossed about 40 chains below the road bridge. From this point to the end of the length (42 miles 60 chains) the line bears in an easterly direction through unselected country.

I am, &c., HAMILTON HARWOOD.

No. 52.

Mr. Waddington to The Engineer-in-Chief.

Sir, Kempsey, 1 December, 1883. I have the honor to report progress made with trial survey from Armidale to Trial Bay as follows:

The traverse line has been fixed and staked out up to 25 miles.

The country gone through is at the foot of the north side of Tulkenggay Mountains, through dense

forest trees and patches of undergrowth, very spurry, of conglomerate stone formation. The works on this portion of the line will be somewhat more unavoidably heavy than hitherto.

Acting immediately on the instructions received from Mr. Palmer, dated the 14th August last, to ascertain from Messrs. F. G. Panton, A. Verge, O. Dangar, and A. Cochrane, of the Macleay, what in their opinion is the most practicable route for a line of railway from the coast level at the Macleay to the New England tableland, and to report in what particular the route they may propose differs from that upon which I am at present engaged in making a trial survey, I now have the honor to report that, having put myself in communication with the abovenamed gentlemen, and by appointment met collectively at the School of Arts, in Kempsey, on the 11th September last, at a meeting of the Railway League, of which they are prominent members, after my explanation to them of the route I am following up to Fiveday Creek, a resolution was unanimously passed, "That the league, having heard Mr. Waddington's explanation of the line to be followed by him in his survey, desire to express their satisfaction with the same they are, however, desirous of affording information of the country beyond Five-day, and request that the surveyors at the other and he instructed to make the readless in a surveyors at the other and he instructed to make the readless in a surveyor at the other and he instructed to make the readless in a surveyor at the start of the surveyors at the other and he instructed to make the readless in a surveyor at the start of the surveyors at the start of the surveyor at the start of the surveyor at the start of the surveyor at the start of the surveyor at the start of the surveyor at the start of the surveyor at the start of the surveyor at the start of the surveyor at the start of the surveyor at the start of the surveyor at the start of the surveyor at the start of the surveyor at the start of the surveyor at the start of the surveyor at the start of the surveyor at the start of the surveyor at the start of the surveyor at the start of the start of the surveyor at the start of the surveyor at the start of the surveyor at the start of the surveyor at the start of that the surveyors at the other end be instructed to place themselves in communication with the league."

The aforementioned gentlemen promised to communicate with me again to appoint a meeting with the surveyors at the Armidale end of the line, for the purpose of pointing out the direction the line should take in their opinion beyond Five-day Creek to Armidale.

Not having heard anything further from them, I felt it my duty not to delay my report any longer.

L. J. WADDINGTON.

No. 53.

Mr. Waddington to The Engineer-in-Chief.

Sir, Kempsey, 1 January, 1884. I have the honor to report progress made with trial survey from Armidale to Trial Bay as

During the month 8 miles of traverse lines have been cut and fixed, 3 miles of which includes a deviation, which I thought most desirable to make, as thereby will avoid heavy earthworks, bridge openings, and expensive culverts, although a little higher altitude is attained and a slight increase in length of the centre line. This now brings the centre line staked out up to 30 miles.

The country gone through is very broken and difficult, through dense mixed forest trees with patches ergrowth. The surface soil is clayey, very poor and useless, producing naturally only the dwarf of undergrowth.

grass-tree generally.

L. J. WADDINGTON.

No. 54.

Mr. Harwood to The Engineer-in-Chief.

Railway Survey Camp, Styx River, 1 January, 1884. I have the honor to report progress made with the trial survey, Armidale to Trial Bay, as Sir.

The traverse and levelling has been continued from 42 miles 60 chains, and completed to 48 miles

From 42 miles 60 chains the traverse runs in E.N.E. direction, crossing the Armidale and Grafton Road near the 38-mile tree and the Oakey River; about 30 chains above the said road ford; from the latter point the traverse takes an E.S.E. course to a saddle in the divide between the Oakey and Styx Rivers.

On exploring a portion of the divide between the Styx River and George's Creek, I find it to be

very rough, densely timbered, with patches of very thick scrub along the sides. As yet I have not been able to find out how Mr. Turner purposed to cross this range (700 feet above the level of the Styx River); the only trace left of his flying survey being the track made for his pack horses.

I am, &c., HAMILTON HARWOOD.

No. 55.

Mr. Harwood to The Engineer-in-Chief.

Railway Survey Camp, Styx River, via Armidale, 10 January, 1884. With reference to the trial survey, Armidale to Trial Bay, I have the honor to report that, on examining that portion of Mr. Turner's suggested route between the summit of the Oakey and Styx Rivers divide and the latter river, I found that it could not be used for a line of railway. The ground falls too quickly towards the river; and as there is a high spur on the north and south side of the gully, mentioned in his description of route, the distance cannot be lengthened and the gradient reduced.

I then started a traverse from point A, shown in accompanying tracing, over an approximate 1 in 33 grade line, crossing the river as high as possible, and continuing it along the south side for 2 miles over very rough side-lying ground, the range on either side gradually closing in; high spurs and deep guilies had to be crossed every few chains. I saw that it was impossible to do any good in this direction,

so abandoned it.

From what I have seen of the country, I do not think that a practicable line can be found by way of the Styx River and the head of George's Creek. The latter is a very great obstacle. It runs through a valley whose side in many places is almost perpendicular for several hundred feet; this is near the head of it. What the valley is like lower down I am unable to inform you.

I purpose riding over to Mr. Mowle's selection, near Diamond Flat, in order to get all the information I can about this country; he has been living here for the last forty years, and was, I believe, employed with Mr. Turner's party.

I am, &c.,

HAMILTON HARWOOD.

No. 56.

The Assistant Engineer for Trial Surveys to Mr. Harwood.

Mr. Harwood. From your report, dated the 10th instant, it appears that the portion of the route proposed for a line of railway between Armidale and Trial Bay, which was to follow the direction of the Styx River and George's Creek, is impracticable for railway purposes.

Procure all the information you can from local residents as to any other line of country they may suggest as likely to be suitable for making the descent from the tableland, and examine and report on whatever proposals may be made, in order that a determination may be come to as to the utility or other-

wise of continuing this survey.

HERBERT PALMER.

No. 57.

The Assistant Engineer for Trial Surveys to Mr. Waddington.

Mr. Waddington, As your services are to be dispensed with at the end of the present month, it will be necessary for you to so arrange your field work that you may plot the plan and section of the entire length surveyed, and to hand over these documents at this office with the book of reference, and all field and level books, district plans, &c., on the 31st instant.

HERBERT PALMER.

No. 58.

Telegram from Mr. O. O. Dangar to Mr. R. B. Smith, M.P.

Behalf Railway League and inhabitants, respectfully urge strongest remonstrances to disbandment railway survey party from Trial Bay until sections have been taken from Dulkanguy Mountain to Gillstreet, East Kempsey, via Old Sheep-station, through Inches' and Onions' Grants route. Now surveying too far south. Is tableland party also disbanding?

O. O. DANGAR & OTHERS.

Will Engineer-in-Chief for Railways report to me upon this matter, and inform me what has been -F.A.W., 23/1/84. Mr. Palmer.—W.H.Q., 31/1/84.

The stoppage of the survey at the Trial Bay end is only a temporary one, the surveyor having been recalled on-account of the very unsatisfactory rate of progress made. After the plans of so much of the survey as has been completed by this surveyor have been examined, another surveyor will be sent to continue The survey party on the tableland has not been disbanded.— J.W., 4/2/84. Under Secretary, B.C., 4 February, 1884. the survey with the least possible delay. H.P., 1/2/84. The Engineer-in-Chief.

No. 59.

The Under Secretary to Mr. R. B. Smith, M.P.

Department of Public Works, Sydney, 11 February, 1884. Sir, Referring to the telegram forwarded by you from Mr. O. O. Dangar, respecting the abandonment of the railway trial survey from Trial Bay to Kempsey, I am directed to inform you that, from a report which has been received from the Engineer-in-Chief for Railways, it appears that the stoppage of the survey at the Trial Bay end is only of a temporary nature, the surveyor in charge having made unsatisfactory progress with the work; and after the examination of the plans of so much of the survey as has already been made, another surveyor will be sent to complete the work with the least possible delay.

I am to add that the survey party on the tableland has not been disbanded.

I have, &c., JOHN RAE.

No. 60.

Mr. H. Harwood to The Engineer-in-Chief.

Railway Survey Camp, Oakey River, 31 January, 1884. With reference to the trial survey, Armidale to Trial Bay, I have the honor to report, in accordance with the instructions contained in memo. 84-13, that a flying camp was taken to Jeogla, on the Kempsey and Armidale Road, and the country between there and George's Creek examined. Mr. Frizelle, a resident of over twenty years on the above station, showed me the best line of country he could suggest, and afterwards rode along the top of the divide between the Styx and George's Creeks waters, towards my old camp on the former river, thus connecting with my previous explorations. I also rode along the road towards Kempsey as far as the foot of the Big Hill at George's Creek, taking aneroid readings at known distances. These are given on the accompanying tracing, a glance at which will show the difficult nature of the country.

I have not been able to find a line of country that could be used for railway purposes, and as my explorations have extended from the tableland at the heads of the Styx and George's Creek to the Kempsey Road, a distance running north and south of about 20 miles, it would be useless to try to find a route elsewhere. My reason for coming to this conclusion is, that the tableland to the north of the Styx and George's Creek, has for its eastern boundary perpendicular cliffs, the head of the Bellinger River being directly underneath, and south of the Kempsey Road a distance could not be obtained sufficient to meet the fall of 2,400 feet. I have, &c.,

HAMILTON HARWOOD.

Mr. Palmer.—J.W., 4/2/84. It is evident, I think, from this report, and from the results of the trial surveys so far made from Armidale towards Trial Bay, that there is no practicable route for railway construction in this direction, and I would suggest that the trial survey be discontinued.—H.P., 5/2/84. The Engineer-in-Chief. Approved.—J.W., 11/2/84. Mr. Palmer.—W.H.Q., 12/2/84. Mr. Harwood has been instructed to remove with his party to Narrabri to commence a trial survey thence to Walgett. H.P., 13/2/84.

No. 61.

The Engineer-in-Chief to The Secretary for Public Works. Minute Paper:

Subject :- Discontinuance of trial survey for railway, Armidale to Trial Bay:

Department of Public Works, Railway Branch, Engineer-in-Chief's Office, Sydney, 11 February, 1884. REFERRING to my B.C. of 4th instant, in reply to your inquiry of 23rd ultimo, re telegram from Mr. R. B. Smith, M.P., on the subject of the alleged disbandment of the Armidale to Trial Bay railway trial survey party, I have the honor to submit that, since receiving the report of the surveyor in charge of this survey, I consider it desirable to abandon it altogether, there being no practicable route for a railway line between the two places.

After describing the route taken, in company with a Mr. Frizelle (a twenty years resident of the district), over the country between the Styx and George's Creek waters, to connect with his previous explorations, and along the road towards Kempsey as far as the foot of the Big Hill, at George's Creek, the surveyor reports that he has "not been able to find a line of country that could be used for railway purposes," and that, as his explorations "have extended from the tableland at the heads of the Styx and George's Creek to the Kempsey Road, a distance running north and south of about 20 miles; it would be useless to try to find a route elsewhere."

His reason for coming to this conclusion is, "that the tableland to the south of the Styx and George's Creek has for its eastern boundary perpendicular cliffs, the head of the Bellinger River being directly underneath, and south of the Kempsey Road a distance could not be obtained sufficient to meet the fall of 2,400 feet."

JOHN WHITTON.

Submitted.—J.R., 15/2/84. Let further action is taken.—F.A.W., 15/2/84. Let copy of this minute be sent to Mr. R. B. Smith before any

The Under Secretary to Mr. R. B. Smith, M.P.

Department of Public Works, Sydney, 18 February, 1884. Referring to my letter to you of the 11th instant, respecting railway trial survey from Armidale to Trial Bay, I am now directed to enclose for your information a copy of a minute of the Engineer-in-Chief for Railways recommending the abandonment of the survey in question.

I have, &c. JOHN RAE.

No. 63.

Mr. Waddington to The Engineer-in-Chief.

Sir, Kempsey, 1 February, 1884. I have the honor to report progress made with trial survey from Armidale to Trial Bay, as

In consequence of the continuous bush fires raging along and on both sides of the direction of the line it has been impossible to make fair progress.

The centre line is pegged out and completed up to 31 miles; all straights and curves have been set

out with the theodolite, and all pegs spotted.

Pegs 2" x 2" have been driven in the ground 5 chains apart on the straight, and 2 chains apart on the curves. Tangents are indicated by three pegs, and the intersections by a 4" x 4" peg, with a half-inch auger-hole on top at the true intersection point.

Pointed pegs are driven in the ground I chain beyond each intersection, indicating the direction of the traverse lines, with ditches dug close to and on the line of direction.

Triangular ditches are also cut at the intersection pegs. Levels on centre line are taken at every chain, and at shorter distances where sudden changes of the ground occur.

Cross section levels from 2 to 5 chains apart on centre line are taken where necessary.

Good substantial B. M.s, with cut letters and figures, have been established half a mile apart on trees through forest land, and on posts sunk in the ground through scrub land. 853-C

Pegs

Pegs on centre line painted red; intersection pegs painted white. Trees are well blazed on either side of the centre line. Surveys are made of all creeks, swamps, roads, fences, &c., within 5 chains on either side of the centre line.

Finished plans of the route, 10 chains to an inch, and longitudinal sections 10 chains to an inch. horizontal, and 100 feet to an inch vertical, showing proposed grades, bridges, flood openings, culverts, &c., have been made in the field.

Accompanying this report, I have the honor of delivering up in good order and condition as

follows:

Two sheets of finished plans of surveyed line of railway. longitudinal sections of do. Two county plans and references thereto. Four sundry tracings, tracing paper.
Two field-books of surveyed line of railway. Three longitudinal level books of Three cross-section level books of One check level book.

RAILWAY. TO INVERELL.

No. 1.

Minute from Secretary for Public Works.

Railway from Mother of Ducks to Inverell.

A DEPUTATION, consisting of Messrs. Proctor (M.P)., Doherty (Stannifer), and Moore (Armidale), waited upon me to-day to ask that a survey might be made for a line from Mother of Ducks, on the extension from Armidale to Glen Innes, to Inverell, via Tingha and Stannifer. The line if taken in this way would be 43 miles in length, but if it were taken from Glen Innes to Inverell the distance would be from Mother of Ducks to Inverell 76 miles, and would consequently cause a much longer rail journey from Inverell to Newcastle.

Inverell is an important district, and they asked that a survey of the line might be made before any definite promise was given to the deputation, which they understood was to wait upon the Minister

early to urge the construction of the line from Glen Innes.

I informed the deputation that owing to the destruction of plans in the late Garden Palace fire the services of the surveyors were so taken up in replacing the work destroyed that at the present time no surveyor could be spared to make a trial survey of the proposed route from Mother of Ducks to Inverell. I promised to give the matter every consideration before consenting to any request that the deputation from Glen Innes might make. I would give no hasty decision; I had to submit a comprehensive railway scheme to the ensuing Parliament, and, if possible, would get a trial survey made of the route they advocated to Inverell.

Railways.—J.R., B.C., 9/7/83.

F.A.W., 6/7/83.

Minute of Engineer-in-Chief to Secretary for Public Works.

Subject: - Railway trial survey from Armidale to Inverell, Great Northern Railway. - Petition, deputation, &c.

Department of Public Works, Railway Branch,

Engineer-in-Chief's Office, Sydney, 17 July, 1883.

In reference to the petition presented to the Legislative Assembly on the 18th January last, from residents of Inverell, &c., and to the request recently preferred to the Minister by a deputation from Armidale, on the subject of connecting the Inverell District by a branch line with the Great Northern Railway, &c., &c.,—I have the honor to enclose a tracing from the map of the Colony, from which it will be seen that the junction with the Great Northern Railway, as proposed in the petition, viz., at Guyra (or Mother of Ducks) is at an elevation of 4,330 feet alvel, giving an ascent from Inverell of 2,380 feet, while the ascent from Inverell to Uralla is 1,385 feet only.

It would therefore appear that the most practicable route would be found in the latter direction, inasmuch as all traffic per rail from Newcastle to Inverell, and vice versa, must be carried to an extra elevation of 1,000 feet (by passing through Armidale and the Mother of Ducks) instead of taking advantage of the fall of the water from Uralla.

For the Engineer-in-Chief, W. H. QUÓDLING.

Inform Mr. Proctor, M.P., and ask him to see me on the subject.— Submitted.—J.R., 18/7/83. F.A.W., 23/7/83.

[Enclosure to No. 1.]

The Under Secretary for Public Works to W. C. Proctor, Esq., M.P.

Sir,

Department of Public Works, Sydney, 24 July, 1883.

Referring to the deputation introduced by you on the 6th instant, requesting that a Railway trial survey be made from Armidale to Inverell, I am directed to inform you it appears from a report which has been received from the Engineer-in-Chief for Railways that the point of junction proposed on the Great Northern Railway, viz., Guyra or Mother of Ducks, is at an elevation of 4,330 feet above sea level, giving an ascent from Inverell of 2,380 feet, whereas from Inverell to Uralla the ascent is 1.385 feet only.

is at an elevation of 4,330 feet above sea level, giving an ascent from little 2,355 feet only.

It would therefore appear that the most practicable route would be found in the latter direction, inasmuch as all traffic by rail from Newcastle to Inverell and vice versá must be carried to an extra elevation of 1,000 feet (by passing through Armidale and the Mother of Ducks), instead of taking advantage of the fall of the land from Uralla.

I am to add however that the Secretary for Public Works will be glad to see you at your earliest convenience on the subject.

JOHN RAE.

Minutes on Railway from Armidale to Inverell.

I should like the country between Uralla and Inverell inspected and reported upon.—F.A.W., 10/8/83. Mr. Palmer. W.H.Q., 13/8/83. I have instructed Mr. Hogg to proceed to Uralla early next week to examine and report upon the country between Uralla and Glen Innes. While in the district, I think it would be well for him to examine the country between Inverell and the Mother of Ducks Lagoon, so that sketches may be prepared of all proposed routes for trial survey.—H.P., 17/8/83. The Engineer-in-Chief. Approved. Probably this exploration should be made by way of Bundarra. Mr. Palmer.—J.W., per W.H.Q. Mr. Hogg will leave for Uralla on Friday next, the 24th instant.—H.P., 22/8/83.

No. 2.

H. Wyndham, Esq., to The Secretary for Public Works.

"Petty's Family Hotel," Church Hill, Sydney, 20 July, 1883. As the question at which point—Glen Innes or Mother of Ducks—the proposed railway to Inverell shall leave the Great Northern Line is now being pressed upon your attention, I beg that you will allow me, as one long resident in the district of Inverell and well acquainted with both routes, to state a few reasons in favour of the line being from Mother of Ducks:

1st. The line from Mother of Ducks to Inverell can be constructed cheaper—that is, for less money, on the whole—than that from Glen Innes to Inverell, because the formation of the country west of the tableland is that of long spurs, with deep valleys between, running generally north-west. These run down from Mother of Ducks, close to Inverell, and can be followed pretty straight, so that an elevation once obtained need not be lost; and there are no creeks of any consequence to cross, and a great part of the line will be nearly a dead level. Whereas a line from Glen Innes to Inverell must of necessity cross the spurs (and notably one very high one, called Waterloo Range) and valleys, and several considerable creeks, particularly Swan Brook, which is crossed three times by the proposed line, and which in times of flood runs both wide and deep, with a very strong current.

2nd. The line to Mother of Ducks will junction with the Great Northern some 35 miles nearer

to Newcastle, so saving about that much haulage.

It is claimed for the Glen Innes line,-

1st. That it will be an instalment of the railway to Grafton.

2nd. That it will be a direct route to Queensland.

As I cannot believe that any Government will ever be insane enough to construct a railway from Glen Innes to Grafton, I dismiss the first, merely remarking that if it ever should be made no wool would be sent that way, and no passengers would go from New England to Sydney except such as might desire the agreeable change which a coasting steamer usually affords.

As to the second—that it would be a direct route to Queensland, where it is expected a market will be found for agricultural produce—it is certainly desirable that every possible market should be found for the latter; but Brisbane is already dangerously near the rich Inverell district, and a direct railway might have the effect of diverting all the produce, including wool, across the Border.

I have, &c.

HUGH WYNDHAM.

Please put with other papers re trial survey from Mother of Ducks to Inverell.—F.A.W., 25/7/83.

No. 3.

Extract from M.P., 83-3,426.

I wish also, when there is an officer to spare, that the country lying between the Mother of Ducks, Great Northern Railway, and the town of Inverell, and between Uralla and the town of Inverell, may be carefully examined and reported upon. F.A.W., 18/8/83.

Mr. Palmer.—W.H.Q., 21/8/83. Mr. Hogg is to leave for Uralla on Friday next, the 24th inst., to examine and report upon these proposed routes.—H.P., 22/8/83.

No. 4.

Report by Mr. Surveyor Hogg.

Exploration—Mother of Ducks to Inverell via Tingha.

STARTING from the Great Northern Railway at about mileage 287 miles 40 chains, at an elevation of 4,330 starting from feet, the line examined runs in a north-westerly direction, crossing the head of Sandy Creek and falling to G.N.R. Olera Creek, crossing it near the Olera head station; thence rising to the range, which is very flat, that divides the Olera Creek waters from Mordaunt Creek, the line falls gently, passing through extremely good agricultural country to Mordaunt Creek; thence, via New Valley, to Tingha township, through which Tingha. it would pass; thence crossing Cope's Creek to the Gilgai; and thence to a point opposite and about a mile from the town of Inverell, terminating on the west side of the Macintyre River.

Macinty

There would be no necessity to enter Inverell, and thus a saving of one if not two bridges over the Macintyre River would be avoided. The present road bridge over that river is about 400 feet long, with Bridges. five spans, and 260 feet of flood approaches. The river floods into the town.

It will be seen that on the extension of any line from Glen Innes this river would have to be

Very good timber can be obtained at several points on this line.

Timber.

Ballast is procurable at several points on the line.

About 50 per cent. of good agricultural land, and the remainder fair sheep country and good tin quality of the land. bearing country.

No. 5.

Seen.=-H.P., 1/10/83.

Mr. Palmer.—J.W., 13/9/83.

Report by Mr. Surveyor Hogg.

Exploration—Uralla to Inverell.

The line examined would start from a point at about 246 mileage, on the north side of Uralla, and rising to the Brisbane Range; would from thence fall by a fair grade to the Rocky or Bundarra River, where its width is about 330 feet. Thence over a spur to conditional purchase 112, and again falling to the Bundarra;

crosses that river at the foot of Yarrowick Mountain. The line would then rise to a saddle behind Woodstock homestead, but should the grade be found to be too severe a westerly course can be taken round Mount Brown. Thence crossing Sandy Creek and Smith's Swamp, rough ridgy country is entered, and so continues to 274 miles. Passing Abington Station the line crosses Laura and Clerk's Creeks, leaving Bundarra about 2½ miles to the left. Thence to the old survey, at about 47 miles from Uralla. I did not examine the country beyond this point, as it has been already surveyed; but I am aware the line crosses King's Gap Range, at about an altitude of 2,800 feet; and thence to Inverell. Timber.

The timber is mostly of a poor quality, some stringy-bark being found on the hills. Ballast is procurable in the Valley of the Bundarra and at several other points on the line. About 15 per cent. fair agricultural, the remainder poor grazing land.

Ballast. Quality of the land. Present cartage.

Fully 70 per cent. tair agricultural, the remainder poor grazing land.

Fully 70 per cent. of the present cartage from and to Inverell to the east passes through Bundarra, Present ca as well as the greater portion of tin from Tingha mines.

By starting from Kentucky instead of Uralla I imagine a good line could be got, and the Bundarra Kentucky. crossings avoided, while the saving in the through haulage would be about 3 miles, but the extra amount of construction about 2 miles.

Exploration—Uralla to Inverell, via Bundarra. Mileage calculated from Newcastle.

CHARLES E. HOGG, Railway Surveyor.

Mr. Palmer.—J.W., 13/9/83. Seen.-H.P., 1/10/83.

No. 6.

Dr. F. H. Woods to The Engineer-in-Chief.

Dear Sir,

Reverting to the conversation I had with Mr. Quodling on Thursday last, re the Inverell Branch line, I may state that having lived here between twelve and thirteen years, and having ridden over every foot of the country, I am sure that a line can be formed from this place to Bundarra, keeping the left or southwest bank of the river at a cost not so much in advance of a first-class macadamised road. I enclose rough tracing showing my proposed route in red. You will see that it crosses the Rocky River (the head of the Bundarra) marked in blue, quite high up, where it is merely a creek easily spanned, by an ordinary timber opening, and it is not crossed again until you reach Bundarra. The route from here would be—leave the Great Northern Railway near the racecourse lagoon, cross R. River to Walker's old selection, thence to Balala by Js. Barndon's selection, thence keeping Mount Lookout to your left and the big range to your right Uralla, 26 September, 1883.

right straight to Bundarra over a slightly undulating country; there would be no heavy cuttings and no creeks of any size on this route, as you will see by the tracing all the big creeks run from the table-land down to the north-east bank of the river. You would have to run a segment of a circle from here to Balala, as shown on plan. This route is far and away the cheapest that can be found, though there are others which might save a mile or two at the outside, but the cuttings would be heavier and the bridging more extensive. My private opinion is the line ought to go to Kentucky, it being in a straight line from Bundarra vid Balala, shown on plan in dotted lines—Balala to here, 10 miles; Balala to Kentucky, about the same—thus saving haulage from Uralla to Kentucky, 10 miles and further. I believe whenever there is a line to the coast it will go from Kentucky through a complete gap in the Salisbury mountains to Walcha, distant about 18 or 20 miles (thus doing away with the absurd idea of a branch line from Walcha road) and thence vid Yarrowitch. Whenever you arrange for the surveyors to come here if you will request them to keep their own counsel as to their visit (I mention this because I know that an immense amount of private self interest will be brought to bear both in taking them through certain lands and keeping them off others) and refer them to me I will see that they have a disinterested person who knows every foot of the country as guide, and I shall be most happy to give them every information that lies in my power.

I have, &c.,

F. H. WOODS.

I may state that it is as a country doctor that I have gained my knowledge of the country.—F.H.W.

Ack. and thank Mr. Woods for his letter.—J.W., 1/10/83. Accordingly, 1/10/83.

Mr. W. H. Quodling to Dr. F. H. Woods.

Department of Public Works, Railway Branch,

Sir,

Engineer-in-Chief's Office, Sydney, 1 October, 1883.

In acknowledging the receipt of your letter of 26th ultimo, I am desired to tender you the thanks of the Engineer-in-Chief for the information you have so kindly supplied in regard to the possible routes for the Inverell branch railway.

I have, &c.,

W. H. QUODLING.

Mr. Palmer.—W.H.Q., 2/10/83.

From inquiries I have myself made in this district I believe that a better section would be obtained from Kentucky towards Bundarra than from Uralla, but this would be a matter for comparative surveys, when trial surveys from the Northern line in this locality to Inverell are authorized.

H.P., 3/10/83.

The Engineer-in-Chief to The Assistant Engineer-in-Charge of Trial Surveys.

This line should be surveyed before any decision be arrived at for a line from Inverell.

J.W., 5/10/83.

Mr. Palmer. Noted.—H.P., 5/10/83.

Sydney: Thomas Richards, Government Printer.—1884

RAILWAY LINE, GLEN INNES TO INVERELL.

No. 1.

The Assistant Engineer for Trial Surveys to Mr. Francis.

Mr. Francis,

The Engineer-in-Chief wishes you to explore the country between Glen Innes and Inverell than the most feasible route for railway purposes. and thence to Warialda, and to report upon the most feasible route for railway purposes.

Before starting you are to communicate with Mr. Bawden, of Grafton, with reference to guides who are prepared to accompany you on this exploration.

HERBERT PALMER.

No. 2.

Mr. Francis to The Engineer-in-Chief for Railways.

Inverell, 28 September, 1878. I have the honor to report that in obedience to your instructions, dated August 29/78, I have examined the country between Glen Innes and Inverell for the purpose of discovering the best route for railway between these two places. The first route explored was suggested by Mr. M'Masters, of Wellingrove, and leaves Glen Innes in a direction about N.N.E. and follows the road to Clarevaulx by Dumaresque's for about 5 miles, then passing by or through the selections of Doolan, Clough, Ezzy, Delaney, Marshall, Sullivan, and Claffy, and intersects Mr. Stack's trial line from Inverell to Tenterfield, at an intersection numbered 162, about half-a-mile on the Glen Innes side of B. M. 24, and about 10 miles from Glen Innes from Glen Innes.

This route is even throughout its entire length (about 10 miles), there are no crossings on it, and it passes over first-class agricultural country.

If the remainder of the route to Inverell as surveyed by Mr. Stack is satisfactory, the only

objection to it is its great length.

With the view of shortening the distance, a second route, intersecting Mr. Stacks trial line from Inverell to Tenterfield, at an intersection No. 31 near B.M. 6, was examined. This route leaves Glen Innes in a direction about N.W. by W., and passes through Bugan's farm, about 7 miles from Glen Innes, then through the farms of O'Brien, M'Masters, and Bream, crossing Punch's Gully and the Waterloo Creek close by Kran's cultivated land, then by Cole's farm to the intersection with Mr. Stack's line.

The direct distance from Glen Innes to this intersection is about 13 miles, but the country would not admit of a direct route, and the distance would be increased by at least one-third, or say 4 miles by rounding spurs and heading gullies to obtain a practicable gradient. The route first examined is therefore

not only easier but shorter.

The third route examined was suggested by Mr. John Ross, of Balacklava, it leaves Glen Innes in a direction about west by the Inverell road, and crosses the Ferneabad Range at about 3 miles from Glen Innes, leaving the main road about half-a-mile on the right, passing through the selections of Offisty, O'Hara, Weir, Taylor, and M'Mullens, and crosses the Waterloo Range at M'Mullen's Gap, about 8 miles from Glen Innes; then down Boyd's Gully to the Waterloo Creek, passing through the selections of M'Intyre and Ross, then crossing the Waterloo Creek gets into the valley of the Swanbrook Creek, and follows the valley down to Inverell; or the survey may be made to close somewhere about B.M. 39, a few miles from Inverell on the survey from Inverell to Tenterfield. This route is nearly direct between Glen Innes and Inverell, and passes during its entire length over first-class agricultural land. The valley of the Swanbrook Creek consists of rich alluvial soil, and is capable of sustaining a large population. The the Swanbrook Creek consists of rich alluvial soil, and is capable of sustaining a large population. The only obstacle on the route is the Waterloo Range. A tunnel of from 12 to 15 chains in length would be necessary at M'Mullen's Gap, and by skirting the range on the left of Boyd's Gully, I think the descent to the Waterloo Creek may be made in about 4 miles, with a gradient of 1 in 40. The remainder of the route may be got over with easy gradients and flat curves. The distance from Glen Innes to Inverell by this route would be about 4 or 5 miles less than the distance by the main road. The advantages of this route over the other suggested routes are so manifest that I consider it the only route deserving of serious consideration. I have, &c. A. FRANCIS.

No. 3.

R. L. Murray, Esq., M.P., to The Minister for Works.

Construction of Railway to Inverell via Glen Innes.

Sir,

I have the honor to enclose herewith copy of certain resolutions passed at an influential meeting of the inhabitants of Inverell (the Mayor in the chair), and forwarded to me for presentation.

I trust that the Government will take these resolutions into their consideration, and see its way to do something in the matter part seesion.

I have, &c., R. L. MURRAY. do something in the matter next session.

B.C., 14/4/81.—J.R. Forward to Engineer-in-Chief. B.C., 15/4/81.—Under Secretary for Works. B.C., 29 April, 1881.—J.W., p. W.H.Q. B.C., 14/4/81.—J.R. Railways. J.W., 22/4/81. B.C., 3/5/81.—J.R.

Railway to Inverell.

AT a large and enthusiastic meeting held here (Inverell) on Saturday, the 2nd April, the following resolutions were carried

unanimously:—

1st. That it is desirable in the best interests of the Colony, that a railway should be constructed from the navigable waters of the Clarence District to the westward via Glen Innes, that route being the greatest benefit to the

greatest number.

2nd. That it would be a great national and profitable undertaking to commence forthwith the construction of a railway from Glen Innes to Inverell and westward, thus placing the important town of Inverell and others in the west within access of railway communication on completion of the Great Northern Railway to Glen Innes.

3rd. That this meeting express its strong condemnation of the conduct of the Government in leaving the line to Inverell out of the railway policy.

Telegram from W. J. Fergusson, Esq., M.P., to Minister for Works.

21 April, 1881.

Can one of the railway surveyors survey the line from Glen Innes to Inverell when finished with Grafton W. J. FERGUSSON,

Is there any objection to this being done?—J.L., 22/4/81. The objection. Shall I give instructions to have this done?—J.W., 22/4/81. The Engineer-in-Chief. Yes.—J.L., 22/4/81. Mr. Palmer.—W.H.Q., 28/4/81.

No. 5.

Telegram from R. L. Murray, Esq., M.P., to Minister for Works.

22 April, 1881. WILL you instruct surveyors to survey line from Glen Innes to Inverell before their return from Grafton? R. L. MURRAY,

May be forwarded to Engineer-in-Chief.—Ch. A. G., 24/4/81. See 81/1065. for Works.—W.H.Q., for E.-in-C., 28/4/81. Please return. Inform W. J. Fergu Under Secretary Inform W. J. Fergusson, Esq., M.P., and R. L. Murray, Esq., M.P.—30/4/81. Railways.—J.R., B.C., 30/4/81.

No. 6.

Under Secretary for Works to R. L. Murray, Esq., M.P.

Department of Public Works, Sydney, 30 April, 1881. I am directed to acknowledge the receipt of your telegram of the 22nd instant, and, in reply, to inform you that, in accordance with the request therein contained, the Secretary of Public Works has issued instructions for the carrying out of a trial survey for a railway line between Glen Innes and Inverell. JOHN RAE.

No. 7.

Under Secretary for Works to W. J. Fergusson, Esq., M.P.

Sir. Department of Public Works, Sydney, 30 April, 1881. In reply to your telegram of the 21st instant I am directed to inform you that, in compliance with the request therein contained, the Secretary of Public Works has issued instructions that a trial survey for a line of railway between Glen Innes and Inverell be carried out.

JOHN RAE.

No. 8.

The Engineer-in-Chief to Mr. Palmer.

Department of Public Works, Railway Branch, Engineer's Office, Sydney, 20 October, 1881. There is only one surveyor on the extension from Glen Innes to Inverell, and you say the survey will take five months to complete. Would it be advisable to put another surveyor on this length by appointing Mr. Hutchinson from Armidale, or do you think another surveyor can be spared to assist on this survey from some of the other lines, so that the survey can be completed earlier than stated.

I have instructed Carver and Hoyle to return to Sydney on completing at Tenterfield (about the end of this month). If you require another surveyor to be employed on the Glen Innes and Inverell survey, I think the best plan would be to counter-order Carver's return, and to send him to Inverell to work back to meet Vine, who is working from Glen Innes.—H.P., 20/10/81. The Engineer-in-Chief.

Yes, send Carver on the Inverell line, unless particularly wanted in Sydney, on working sections to Tenterfield. If this should be necessary some one else should be sent in his place.—J.W., 20/10/81. Mr. Palmer. Instructions sent to Mr. Carver.—H,P., 22/10/81.

No. 9.

The Assistant Engineer for Trial Surveys to Mr. Carver.

Mr. Carver

22 October, 1881.

As the trial survey between Glen Innes and Inverell must be completed with the utmost

despatch, I shall require you to take up a portion of the work.

On completing your field-work at Tenterfield, you can hand over all 'plans, books, &c., to Mr. Hoyle, who can bring them down to this office, and be careful that all the detail survey for the working plan, together with the necessary information for the Book of Reference to the end of the permanent staking at Tenterfield, is all shown perfectly clearly in your field books, so that Mr. Hoyle may have no difficulty in completing everything connected with the working plan on his return to this office.

You may then proceed to make a trial survey from a point about 8 miles from Inverell, where the Inverell and Tenterfield Trial Survey crosses the Swanbrook Creek, and, starting at this point, work to

meet Mr. Vine.

He has tracings of plan and section of original trial-line at Swanbrook, which you may procure from him; also copy the report I sent to him of the route of proposed trial survey.

The through plan and section from Glen Innes is urgently required, so you must use every endea-The through plan and section from Gien Times is discussive for the completing the field-work.' vour to join with Mr. Vine as early as possible, and return to this office on completing the field-work.' HERBERT PALMER.

Your plan and section from Swanbrook must, of course, be plotted from right to left, so that when joined to Mr. Vine's the through plan and section, Glen Innes to Inverell, may be from left to right, and you must procure sufficient information as to ownership of land to allow of a book of reference for Parliamentary plan being compiled. H.P., 22/10/81.

No. 10.

Mr. Carver to The Engineer-in-Chief.

Bly Camp, near Tenterfield, 26 October, 1881. I have the honor to acknowledge the receipt of memo. No. 81/1,179, and will carry out the instructions therein contained as soon as I possibly can.

Recent very bad weather here has delayed my present work.

I have, &c., N. P. CARVER.

Mr. Palmer.—W.H.Q., 31/10/81. H.P., 1/11/81.

No. 11.

Mr. A. Vine to The Engineer-in-Chief.

Sir, Railway Survey Camp, Glen Innes, 1 November, 1881. I have the honor to report progress made with trial survey from Glen Innes to Inverell as follows, also progress with permanent work Glen Innes to Tenterfield.

I have been employed making working plan on line Glen Innes to Tenterfield, and completed same up to 358 miles 52 chains $6\frac{1}{2}$ links, forwarded same to Mr. Carver. Travelling and removing camp, Deep-

water to Glen Innes, examining country between Glen Innes and Inverell for trial line.

I have run an experimental line of about $7\frac{1}{2}$ miles from Glen Innes nearing the crossing of the Waterloo Range (M'Millan's Gap), and about $3\frac{1}{2}$ miles of it levelled. This gap will necessitate a good deal of levelling to get the best line through it.

As soon as I have the experimental line run through and falling down into the Waterloo Range,

I will forward a tracing of same to Head Office.

I am, &c. ALFRED VINE.

No. 12.

Mr. Vine to The Engineer-in-Chief.

Sir, Camp, Balaclava, 2 December, 1881. I have the honor to report progress made with trial survey from Glen Innes to Inverell, as follows :

The centre line has been staked out from the junction of permanent trial line at Glen Innes to about 1 mile from the Waterloo Range, a distance of 5 miles 10 76 chains.

I expect to have the experimental line run and levelled over the Waterloo Range in the course of about ten days, down to Wellingrove Creek. This will be the heaviest work throughout the whole length.

As soon as I have the experimental line run over the Waterloo Range and down to Wellingrove

Creek I will forward a conv of same to Head Office.

Creek, I will forward a copy of same to Head Office.

ALFRED VINE.

No. 13.

Mr. Carver to The Engineer-in-Chief.

Camp, Swanbrook Creek, 31 December, 1881. I have the honor to report progress made this month in surveying the trial survey, Glen Innes

to Inverell, as follows:

After completing my survey from Tenterfield and fixing camp, I commenced work on the 5th by a thorough exploration of the country, and after completing 4 miles of necessary creek traverses, I commenced to stake the trial line, and have, with the exception of a little levelling, completed $6\frac{1}{2}$ miles of it, through a very thickly timbered country

After the 23rd of the month, work was a good deal retarded by the loss of chainmen, whose places I have, &c., N. P. CARVER. I have not yet been able to fill up.

No. 14.

No. 14.

Mr. Vine to The Engineer-in-Chief.

Sir, Balaclava, 3 January, 1882.

I have the honor to report progress made with trial survey, Glen Innes to Inverell, as follows: The line is staked, levelled, and surveyed to a distance of 5 miles 10 chains. Experimental line is

being run to a distance of 13 miles 52 chains from Glen Innes.

Here, in the latter part of 4½ miles, occurs a fall of 586 feet from the saddle in Waterloo Range to the crossing of Wellingrove Creek (tracing of plan and section forwarded on 24th instant). This part of the line runs over very rough, stony, and thickly-timbered country. I am now cross-levelling this portion of it, so that the best line may be ascertained at once, as in all probability the construction of this line will depend materially upon the descent from the Waterloo Range to Wellingrove Creek.

' The country from the Wellingrove Creek into the watershed of Swanbrook Creek is very good.

I have, &c.

ALFRED VINE.

No. 15.

Glen Innes Railway Conference to The Secretary for Public Works. To the Honorable the Minister for Public Works.

The Memorial of the undersigned, Members of the Railway Conference, held at Glen Innes, on Friday, 24th March, 1882,—

RESPECTFULLY SHOWETH,-

That your Memorialists were chosen as delegates to attend a Conference, to be held at Glen Innes, for the purpose of considering the question of connecting the Port of Grafton by means of a Railway with the Tableland of New England and the Western Districts of the Colony

Your Memorialists having carefully considered the whole question, and being individually acquainted with the districts interested and their requirements, amongst other things, arrived at the following

resolution:

"That, in the opinion of this Conference, the most suitable line of railway to meet the requirements of the Northern Districts of the Colony would be a line starting from Grafton, passing through Glen Innes and Inverell, and thence in a a westerly direction.

Your Memorialists, therefore, respectfully pray that you will take such steps as may be necessary to ensure the adoption of the line referred to, and the passing of a Vote during the ensuing Session of Parliament for the construction of the first section thereof.

And your Memorialists will, as in duty bound, every pray.

Edwd. Jones (Chairman of the Conference),

Glen Innes. T. Bawden, Grafton. Duncan M'Rae, Glen Innes. Frank Norrie, Grafton. Robert A. Lewis, Glen Innes. John H. Munro, Grafton. J. F. Utz, Glen Innes.

Robert Page. E. W. S. Hayley, Grafton. S. W. Burridge, Glen Innes. Samuel See, Grafton. T. M'Kittrick, Grafton. John Rea, Grafton. Edward Groves, Inverell. J. M'Master, Inverell.

No. 16.

Mr. Chinn to The Engineer-in-Chief.

Sir, Railway Camp, Glen Innes, 2 January, 1883.

I have the honor to report progress made with trial survey from Glen Innes to Inverell. The line has been surveyed and levelled from 323 miles 40 chains 10 links, on line Uralla to Glen Innes (my starting point), to 5 miles 10 chains, being a distance of 5 miles 10 chains, which is the top of the range known as Gallagher's Range.

The first two miles of the line is through flat country, scrubby, but not heavily timbered, the

remaining three miles being mountainous, but will not require very heavy earthworks.

The length between 5 and 12 miles is across the Waterloo Range, which is considered by far the I am, &c., worst country along the line. H. CHINN.

No. 17.

Mr. Chinn to The Engineer-in-Chief.

Camp, Balaclava, Glen Innes, 1 February, 1883. I have the honor to report progress made with trial survey from Glen Innes to Inverell, as Sir,

The line has been surveyed from 0 at Glen Innes to 17 miles 69 chains, being part of the line from

M'Millan's Range to about 1 mile west of the boundary of Newstead and Waterloo Runs.

The line between 7½ miles to 11½ miles, across the Waterloo Range, is through very rough and heavily timbered country, which will necessitate sharp curves and steep gradients, and consequently exceedingly heavy earthworks.

From inspection, I should say the line could be shortened some 3 or 4 miles, and easier grades found by tunnelling through M'Millan's Gap, and thence via Boyd's Gully, to plain, said tunnel not to exceed 20 chains in length.

As yet I have not traversed country between here and Inverell, but will do so on earliest opportunity, the distance being about 25 miles. I am, &c.

H. CHINN. No. 18.

No. 18.

Mr. Chinn to The Engineer-in-Chief.

Sir. Camp, 1 March, 1883. I have the honor to report progress made with trial survey from Glen Innes to Inverell, as follows

The line has been surveyed as far as Swan Vale, being a distance of 22 miles from Glen Innes, but

levelled only to $17\frac{3}{4}$ miles.

The country through which the line traverses between Waterloo and Newstead boundary is similar to the Waterloo Range, being very rough and heavily timbered, and will necessitate steep gradients and sharp curves, and heavy earthworks, and viaducts will be required.

H. CHINN.

No. 19.

Mr. Chinn to The Engineer-in-Chief.

Sir, Camp, Swanvale, 31 March, 1883. I have the honor to report progress made with trial survey from Glen Innes to Inverell, as follows:

The line has been surveyed and levelled from my starting point at Glen Innes to 28 miles 60 chains. The line from about 18½ miles to 28 miles 60 chains follows the valley of the Swanbrook Creek, and crosses same twice within a distance of two miles, and a third time some two miles below Swanbrook. There now remain about 14 miles to complete the survey.

Yours, &c. H. CHINN.

No. 20.

R. L. Murray, Esq., M.P., to The Colonial Secretary.

136 Pitt-street, Sydney, 23 May, 1883. Some time ago, in reply to a question of mine in the House, I was informed that the surveyor employed on the railway survey from Glen Innes to Inverell had been dismissed, that plans of his surveys were being prepared, and that another surveyor would be sent to take his place.

I have now the honor to request that I may be informed what steps are being taken in this matter,

and if a surveyor has yet been sent.

The want of this survey has been the excuse for not placing this line on the loan Estimates for not but T trust such will not be the case any longer. The survey of about 35 miles cannot be such a formidable undertaking.

R. L. MURRAY.

Mr. Murray was informed on 9th instant. See 83/2258.—W.H.Q., 20/6/83. Put by.

No. 21.

Assistant Engineer for Trial Surveys to Mr. Harwood.

It will not be necessary for you to plot the section of the remainder of the trial survey, Glen Innes to Inverell, but may forward your levels, when checked, to be plotted in this office in continuation

of what has already been plotted from Mr. Chinn's books. HERBERT PALMER.

Memorandum by The Secretary for Public Works.

Railway from Glen Innes to Inverell

A large deputation, accompanied by Messrs. Murray, See, Holtermann, Cameron, Fergusson, Levien, Withers, Poole, Purves, Fletcher, M'Kinnon, and H. Clarke, M's.P., waited upon me to-day and urged the construction of the line from Glen Innes to Inverell. They pointed out that the district through which the line would pass was a very fertile one, 90 per cent. of the land being fit for cultivation, and it would be put under crop at once if proper means of carriage for the wheat were given.

The railway would open up a district of one and a quarter million acres. 50,000 acres around Inverell were an untimbered plain, and as the average yield to the acre in the district was 20 bushels of wheat this area would give a total of 1,000,000 hushels per appropriate.

where in the district was 20 bushels of wheat, this area would give a total of 1,000,000 bushels per annum. The land in parts gave as high a return as $43\frac{1}{2}$ bushels per acre, and if the railway were constructed production and settlement would be largely stimulated, and the Colony could be supplied with the breadstuffs it required from this district, obviating the necessity that now existed of sending to Adelaide and other places for flour, &c.

The tin from Inverell last year was 3,000 tons, from Vegetable Creek 4,100 tons, this industry being more valuable than gold, and it was extending almost daily. The proposed line, again, would secure the wool from the clim of 1,200,000 sheep, astimated at 2,000 tons, not assume. The addition to the produce

wool from the clip of 1,200,000 sheep, estimated at 2,000 tons per annum. In addition to the produce sent away, it was estimated the carriage on goods sent up country would yield £20,000. They estimated the line could be made for £250,000, and they felt sure the traffic would pay a handsome interest upon this. It was mentioned the trade of the district was largely transacted with Toowoomba, Queenland.

I informed the deputation that I was pleased to receive them. Theirs was probably the largest and

most representative deputation that I was pleased to receive them. Theirs was probably the largest and most representative deputation that ever waited upon me or any other Minister. It seemed to me the speakers had been fair in the statements they made. The figures presented to me rather surprised me, for although I had known for a long time the district was a rich one, I was not aware it possessed such resources as were brought under my notice. I knew it had rich tin-fields, and the land was rich, and I knew it had rich tin-fields, and the land was rich, and I listened with pleasure to the practical farming experience of Mr. Gilhoney. I attached great importance to the statements made respecting the agricultural interest, and think the yield per acre should convince any one that the district was a very fertile one. I listened with pleasure also to the remarks made by Mr. Graney, respecting the tin industry principally, and thought them particularly fair, because he did not urge the construction of the line on local but on national grounds.

I could not give the deputation any definite promise at present in the matter beyond this, that I would recommend the construction of a railway to Inverell; but I was not prepared to say what particular route would be adopted. It seemed to me, from what I had already gathered that the route from Glan

route would be adopted. It seemed to me, from what I had already gathered that the route from Glen Innes was the correct one, but I was seeking information on the subject with a view of submitting the proposal to my colleagues and eventually to lay the matter before Parliament.

I would not bind myself to any particular route, but would pledge myself to recommend the construction of a line to Inverell.

F.A.W., 27/7/83.

Railways. B.C., 30/7/83.—J.R.

Glen Innes-Inverell Railway. - Facts for the Minister.

1. The construction of the line to Inverell, via Glen Innes, would bring Inverell within 425 miles of Sydney.

2. The line from Glen Innes to Inverell would intersect the richest agricultural portion of that district, and would tap an area extending from a point 10 miles east of Glen Innes to one 30 miles west of Inverell—say about one million acres.

3. 50,000 acres of this land consist of rich untimbered plains, ready for the plough.

4. The average yield of wheat for years past has been twenty bushels to the acre; as all this plain land will be placed under the plough within two years of the advent of the railway, there will be a production of 1,000,000 bushels.

5. The carriage in the above (27,000 tons), at present rates, would yield to the Government a revenue of £37,900.

6. In a very short time, on account of the unlimited quantity of good land, this could be increased three-fold.

7. The production of tin ore in the district is about 3,000 tons annually, the carriage on which would be £8,000.

8. This line would convey the clip of 1,200,000 sheep, say 2,000 tons, which would yield a revenue

9. That this line would connect two great centres 'of population, Glen Innes and Inverell, which

no other line could. 10. That in view of the promise made by former Governments, selectors, farmers, and others, have purchased the land from the Crown, and now eagerly and anxiously pray for the construction of this line to its further development.

Finally, that this line connects Inverell with the Great Northern Line at the nearest possible point.

Any other line would be at least 15 miles longer.

Extract from Report of Assistant-Engineer for Trial Surveys to Engineer-in-Chief.

Glen Innes to Inverell.—A line has been surveyed from the station site at Glen Innes, thence direct to Inverell. By adopting this route it is necessary to cross the Waterloo Range, which will add very considerably to the cost of the line. An estimate has been prepared of this extension, which gives a high average cost per mile. Should it be considered advisable to make the point of departure from the Northern Railway about 6 or 7 miles north of Glen Innes, I think a less expensive section might be obtained.

Sydney: Thomas Richards, Government Printer.-1884.

1883-4.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAY FROM GLEN INNES TO INVERELL.

(PETITION IN FAVOUR OF-INHABITANTS OF GLEN INNES.)

Received by the Legislative Assembly, 18 June, 1884.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the inhabitants of Glen Innes and surrounding district,-

HUMBLY SHOWETH:-

, That your Petitioners' respectfully urge your Honorable House to consider the necessity and advantage to the Colony of connecting the towns of Glen Innes and Inverell by a line of Railway.

That Glen Innes being the very centre of the celebrated New England District, and surrounded by some of the best agricultural land in the Colony, is the most suitable as well as the nearest—and will prove the most profitable—point to start a line to the rich extensive lands to the west.

That a line going direct west will go right through the heart of this magnificent soil (scarcely an acre of which but what can be used for growing cereals)—will bring the whole of the grand district of Inverell into communication with the Great Northern Line at its nearest point.

That the advantages arising from opening up land capable of supplying the Colony with breadstuffs, as also of being exporters of those commodities which for years we have been importing, must tend to the wealth of the Colony, as well as the particular districts named.

Your Petitioners therefore pray that your Honorable House will be pleased to make provision during the ensuing Session for the construction of a line of Railway from Glen Innes to Inverell.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 1,744 signatures.]

LEGISLATIVE ASSEMBLY.

SOUTH WALES.

RAILWAY FROM GLEN INNES TO INVERELL.

(PETITION IN FAVOUR OF-INHABITANTS OF INVERELL.)

Received by the Legislative Assembly, 19 June, 1884.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled. The humble Petition of the inhabitants of Inverell and surrounding district,

SHOWETH:

That your Petitioners, although residing and settled upon the richest agricultural lands in

That your Petitioners, although residing and settled upon the richest agricultural lands in Australia, studded and fringed as they are with tin-mines of great value, are yet shut out from the markets of the world in consequence of the want of railway communication.

Your Petitioners, relying upon the assurances of former Governments, have placed large areas under cultivation, but the market to this day being merely a local one, the tillers of the soil have been thwarted and disappointed, and this district, so richly endowed by nature, so designed, so capable of supplying the whole of the Australias with wheat, other cereals, wine, and fruit, is allowed to languish and account a position unprofitable to the State and ruinous to itself

and occupy a position unprofitable to the State and ruinous to itself.

That your Petitioners, studying the requirement of the district, and not being unmindful of the greater interests of the Colony, desire to point out that a line of railway from Glen Innes to Inverell would intersect and tap a tract of rich agricultural country extending east and west sixty miles, and north would intersect and tap a tract of rich agricultural country extending east and west sixty miles, and north and south twenty-four miles, or an aggregate of nearly a million acres, and by the further extension of this line westward large tracts of land of the same quality and description would be pierced, and finally the said line would pass into the Gwydir, a district renowned for its great pastoral wealth and resources.

Your Petitioners would further point out that no less than fifty thousand acres of this land consist of rich untimbered plains, ready for the plough, the owners of which are earnestly, eagerly, and impatiently waiting the advent of a railway, when the whole of the land would be immediately brought under cultivation.

under cultivation.

Your Petitioners desire further to state that the average yield of wheat per acre in the Inverell District for a series of years has been no less than twenty bushels (while that of the Colony generally has been fifteen bushels), and it is estimated that at the end of two years the district would export one and a half millions of bushels of wheat, worth three half will be a start of at least fifty thousand. succeeding year the producing capabilities would be increased to the extent of at least fifty thousand

Your Petitioners further state that the line proposed would bring nearly all the tin mines and mining centres of population to within four, seven, ten, or sixteen miles of one or other of the stations on the said line, to which points would be drawn from three thousand to four thousand tons of tin annually, worth from one hundred and eighty thousand pounds to two hundred and forty thousand pounds.

worth from one hundred and eighty thousand pounds to two hundred and forty thousand pounds.

Your Petitioners respectfully urge that the carriage of wheat and tin alone, as shown above, would contribute in a great degree towards making the line asked for highly remunerative, but when to this is added the carriage on wool, wine, maize, and other products of the district, it must be apparent that the said line would yield returns far exceeding those of any other branch line in the Colony.

Your Petitioners therefore pray that your Honorable House will be pleased to make provision during the present session for the construction of a line of railway from Glen Innes to Inverell.

And your Petitioners as in duty bound, will ever your from the construction of a line of railway from Glen Innes to Inverell.

And your Petitioners, as in duty bound, will ever pray, &c.

[Here follow 967 signatures.]

MURRUMBURRAH-BLAYNEY RAILWAY.

No. 1.

Mr. J. Gordon to The Secretary for Public Works.

Sir,

In pursuance of the provisions of the Act of Council, 22 Victoria No. 19, and in accordance with the terms of the notice under the hand and seal of the Commissioner for Railways, bearing date the 21st August ultimo, which said notice requires that all parties affected by the railway works "Extension—Murrumburrah to Blayney, Part 1," shall set forth in writing, to the said Commissioner, within one month from the publication of the said notice, any well-grounded objections that may appear to them to exist to the making of the said railway or to the erection of the said works, I have the honor, at the request and on behalf of the petitioners whose names are subscribed to the enclosed petition, to forward their said petition, setting forth the objections that appear to them to exist to the making of a portion of the said railway extension, and beg that the matters and objections therein mentioned may receive the consideration of His Excellency the Governor and of the Honorable the Executive Council.

JAMES GORDON.

No. 2.

To the Honorable John Lackey, Esq., Secretary for Public Works.

The petition of the undersigned inhabitants of the town and district of Young,—

RESPECTFULLY SHOWETH:-

That your petitioners, viewing with much concern the route by which it has been determined to bring the extension of the railway between Murrumburrah and Blayney, Part I, into the town of Young, desire to urge on you the following well-grounded objections that appear to exist to the making and

construction of a portion of the said railway.

By a perusal of the plan and book of reference it appears: That the line determined on, and coloured red in the said map or plan, will intersect the main road from Young to Burrowa—M'Leary-street, Zouch-street, the Market-square, Lynch-street, and Main-street (the latter two streets being the chief thoroughfares), Clarke-street, and Hornhill-street, and will occupy sections 28, 29, and the whole of the Market-square, and will have the injurious effect of dividing the town into a third part, it being already divided by the Burrangong Creek, and besides passing through large-areas of valuable private property, for which the owners will have to be compensated, it will destroy an important public building, and completely and permanently block up seven of the streets of the town.

That the resumption for railway purposes by the Government of the Market-square which in a

That the resumption for railway purposes by the Government of the Market-square, which, in a sanitary point of view, is advantageously situated in the centre of the town, will deprive your petitioners of the greatest boon they at present possess, and of a benefit which in a few years will be highly valued and appreciated by the townspeople; moreover, a large amount of public money has been expended in effecting improvements and in fencing in this square.

The closing of the streets abovementioned will materially affect and interrupt the traffic, and will cause great inconvenience to the townspeople, and will work a serious injury to the holders of property through which the said railway line passes, and to persons owning property to the north of and adjacent

Your petitioners regard the proposed resumption and consequent destruction of the Public School buildings and site as a very great and unnecessary sacrifice of public property and money, and respectfully urge that it is undesirable to resume the present site of the Public School for railway purposes, as it is the best available site for the Public School, being both in a central and elevated position.

Your petitioners understand that a trial survey, as shown on the sketch hereunto annexed, marked red, has already been made, which deviates from the line coloured red in the said map or plan (in the Police Office, Young), at a point about one hundred and seven chains on the south-east side of the town of Young, and joins the said line at a similar distance on the north-west side of the said town; and they desire respectfully to urge that the line of the said trial survey is the preferable one, and will be more easily constructed, more advantageously situated, and will not necessitate the expenditure of so large an amount of public money to compensate property owners as the line coloured red hereinbefore mentioned.

amount of public money to compensate property owners as the line coloured red hereinbefore mentioned.

The line suggested by your petitioners will pass through a portion of the town which is thinly populated, and will not in any way hinder or impede the traffic or interfere with the streets of the town, and will pass through land which is unalienated from the Crown; and by a reference to the said trial survey it will be at once seen that equally advantageous sites and positions can be obtained for the construction of the goods-shed, railway works, and station.

Your petitioners therefore earnestly pray that His Excellency the Governor, with the advice of the Executive Council, will deem it expedient to make such an alteration and amendment of the line of railway in question as will meet with the requirements of the public and with the views of your petitioners.

And your petitioners will ever pray, &c.

Railways, B.C., 20/9/82.—J.R.

Engineer-in-Chief, B.C., 25/9/82.—CHAS. A.G.

Report of Engineer-in-Chief.

The plans and sections of the trial line referred to in the petition attached were destroyed by the fire in the Garden Palace. The route now adopted was selected as the one that would do the least damage to the town of Young, and give a more favourable site for a station than could have been procured on the proposed deviation. I think, too, that the route adopted crosses the streets more favourably than would have been the case on the route proposed by the petitioners, and that a smaller number of streets will be closed than if the line had been taken obliquely through the town, as suggested.

Under-Secretary for Works.

(Sig. 128.-)

NEW SOUTH WALES.

GREAT SOUTHERN RAILWAY.

(ALLEGED MISMANAGEMENT ON-LETTERS AND MINUTES.)

Ordered by the Legislative Assembly to be printed, 26 February, 1884.

[Laid upon the Table of the House in accordance with promise made by the Honorable the Secretary for Public Works, in answer to question No. 7 on Votes and Proceedings of 8th February, 1884.]

"Copies of Reports, and Minute by the Commissioner for Railways, in reply to letter "appearing in the Melbourne Argus of the 7th December, 1883, signed "Veritas."

The Argus, Friday, December 7, 1883. AN OVERLAND RAILWAY DANGER.

To the Editor of the Argus. · Sir,

You will perhaps think it strange that a Victorian journal should be asked to expose a public danger in New South Wales, but the fact that the New South Wales newspapers are mostly, if not all, too timid to grapple with it, or too regardless of the public safety, and also that Victorians are deeply interested in the danger, should be sufficient warrant for your interference, particularly as a general feeling prevails that the officers of the Railway Department manage to suppress from public knowledge, if not from the Commissioner for Railways, as many as possible of the accidents and irregularities that occur. Inquiries are reported to take place, but the results of these are generally known only to the Department. It will scarcely be credited that so much irregularity and danger as I am about to detail could be permitted to exist unchecked for months together, on the great trunk line for mails and passengers which connects Sydney and Melbourne, over which one express and one regular mail train travel each of six days of the week, a great deal of which travelling has to be done in the dark, and on a great portion of which line the banks are so heavy and numerous, the gradients so steep, and the curves so sharp, that the utmost care is necessary to prevent accidents. For the last few months the most of the stock and goods Is there any trains running between Picton and Albury have been so irregular in their time, and the engine-drivers, truth in this guards, and firemen have been so exhaustingly worked, that it is almost a miracle no terrible and fatal B.C. 10/12/8 collision has happened ere this. These irregularities, which may be said to be equivalent to demoralization, chas. A. G. are widely known, and have been exposed to a limited extent through the Press; but the Commissioner for Railways, who has the reputation of being the right man in the right place, makes no sign; and it may be his apparent inactivity that induces the belief that he is not made aware of the extent of the danger. The dangers are that the stock and goods traffic is so great that the rolling stock is unequal to 1s this true? it; that trains cannot keep time to within "hours"; that some engines which have been for some time Chas. A. G., 10/12/88. past recommended to be sent in for repairs have not been repaired, and are still running; that one engine—No. 183, I think—has scarcely one true wheel to it, having been injured in the Gunning accident; Mr. Scott will please report engine—No. 183, I think—has scarcely one true wheel to it, having been injured in the Gunning accident; Mr. scott will that there is no time allowed to wash out the engine boilers and to clean the engines as they should be, upon this.—
to keep them in good order; that the men are harassed about and worked beyond endurance almost, to make up for the deficiency of rolling stock; that they have no regular nor nearly sufficient time for work, Mr. Scott.—
sleep, or refreshment, some being worked from 70 to nearly 100 hours per week, as against the standard Chas. A. G., maximum of 55 hours ordered by the Minister for Railways; that some of the fuel they are compelled to use—against which they have constantly protested—has been pronounced by judges to be unfit for its work and that heavy trains are often divided into two portions before heing sent on the worst part of the work, and that heavy trains are often divided into two portions before being sent on the worst part of the road, and that the second division is frequently sent on after the first within a quarter of an hour or so after the departure of the latter, to the imminent danger of both. Two accidents have recently occurred, rather too long one near Gunning, where the second division of a heavy train ran into the first; fortunately, it was not a "Vertias" does passenger train, and also fortunately, no one was seriously injured, the guards alone suffering from the shock; and as the accident occurred near a station, the line was cleared in time to prevent further damage about.—Chas by passing trains. Only a few nights ago a passenger train was divided at the Breadalbane Station, and A. G. the second portion started on the very worst part of the road within eight minutes of the first half. That this state of things should be allowed to exist on a main trunk "single line" of railway, over which so many passengers are constantly being carried, seems to be incomprehensible. Judging from all that is said and the little that is printed of the present Railway management, it looks as if the Department was thoroughly disorganized.

I am, &c., work, and that heavy trains are often divided into two portions before being sent on the worst part of the f tne ___ I am, &c., . VERITAS. thoroughly disorganized. New South Wales, December 3.

The Echo, Saturday, December 15, 1883.

THE TRAFFIC ON THE SOUTHERN RAILWAY LINE.

A FEW days ago (says the Argus) we published a letter from a correspondent in New South Wales, who asserted that the traffic on the Great Southern line between Sydney and Albury is being conducted in a dangerous manner. The substance of his statement is that the rolling stock is unequal to the goods traffic, and that trains consequently keep very irregular time; that engines which are out of repair are kept running; and that to make up for the deficiency of rolling stock the men are required to work nearly double time, and thus become unfit for the proper discharge of their duties. The effect of these influences, our correspondent declares, is to render the traffic unsafe and to produce virtual demoralization in the our correspondent dectares, is to render the trainc unsafe and to produce virtual demoralization in the Department. The statements of our correspondent, which are supported to a large extent by newspapers published at Goulburn and Wagga Wagga, are so circumstantial that we have felt justified in calling attention to them prominently, in the hope that official inquiry will be made. It may be objected that we should concern ourselves with our own affairs and not with those of our neighbours; but since the Albury to Sydney line is daily used by large numbers of Victorian passengers, who make it their regular means of communication with Sydney we are as much interested in the safety of the line as our follows: means of communication with Sydney, we are as much interested in the safety of the line as our fellowcolonists in New South Wales.

Get all the reports together at once, and submit to me not later than the 8/1/84; those officers who have not reported to report by that time.—Chas. A. G., 4/1/84. Urgent.

Report of Locomotive Engineer.

ENGINE 183 was not in the state described, but owing to skidding there were some flat places in the tyres, but nothing to justify any apprehensions as to the safety of running it. No. 183 has run 66,764 miles, and was due for an overhaul, but has been running since without any danger. The goods traffic having increased to an enormous extent, the engines have not on all occasions been able to keep time. As regards the number of hours worked by the drivers and firemen, they have not been excessive in any case. W. SCOTT The Commissioner. 27/12/83.

Have our men been working excessive hours; Traffic Manager, for early report.—D.V., 3/1/84. and have we at any time been short of engine-power on the Southern line lately?-D.K., 4/1/83. Inspector Crawford.

Report of Traffic Inspector.

THE traffic between Harden and Picton has been very heavy for the last three or four months. A large number of special trains and many of the up and down trains were run in two divisions, consequently many of the trains ran late; but as all trains are worked under the staff and ticket regulations, there could be no danger.

The guards were not worked exhaustively. Occasionally, through trains running late, they had longer hours, but nothing near to the extent as attempted to be shown by "Veritas."

On one or two occasions trucks were short of the demand.

Fifteen minutes interval is allowed between all trains on the more dangerous portion of the line,

and between Bargo and Mittagong all trains are worked on the block.

There is no foundation for the statement in reference to a passenger train being divided at A. CRAWFORD, Breadalbane-no such thing took place. 8/1/84. The Manager.

Report of Traffic Manager.

COMMISSIONER to see. The goods trains on the Southern line have not kept good time during the last few months, partly because the traffic has been heavy, but principally because of the bad coal used on the

The want of rolling stock on the Southern lines has been very rare indeed, and it is not true that trains are divided on the worst part of the road, or that a passenger train was divided at Breadalbane; nor is it true that the men have been worked beyond endurance, and I challenge "Veritas" to give a single case wherein a guard has worked 70 (much less 100) hours per week. W. V. READ, Commissioner. (Per D.K.), 8/1/84.

Minute by Commissioner.

There is no foundation for the sensational report made to the Argus, and the statements made should be contradicted in the Herald. No doubt the Victorian people, contrasting their frequent accidents with our immunity from accidents, would like to raise a belief that we are not so exempt from carelessness and neglect as the result seems to show we are, but that we have been more fortunate. The trite saying that "Providence helps those who help themselves" is more applicable, perhaps, to Railway management than it is to any other undertaking; and if the Argus, as the exponent of public opinion in Victoria, would devote their influence to perfecting the management of the Victorian Railways, they would have surer grounds for congratulation upon the result than they have for the strictures which they would have surer grounds for congratulation upon the result than they have for the strictures which they have been pleased to pass upon the management of the Railways of this Colony. CHAS. A. G.

14/1/84.

Minute of Secretary of Public Works:—I am pleased to have report, and concur with Commissioner's minute.—F.A.W., 14/1/84.

1883-4

1883-4.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

PENRITH RAILWAY YARDS.

(COST, ACCOMMODATION, &c.)

Ordered by the Legislative Assembly to be printed, 25 March, 1884.

- LAID upon the Table of the House in accordance with promise made by the Secretary for Public Works, in answer to Question No. 9 on Votes and Proceedings No. 2, of the 10th-20tober, 1883,—
 - "(1.) The cost of the Railway yards at Penrith, including earthwork, turn-"tables, and everything in connection with the erection of the yards in "question?
 - "(2.) How many trucks of cattle and sheep have been unloaded at Penrith "Station during the month of September and up to the 5th of the present "month?
 - "(3.) The time it took to unload each consignment of cattle?
 - "(4.) The number of Railway officials employed at each time unloading such cattle; also the number of men employed by the consignee?
 - "(5.) Is it a fact that the main line was blocked for a considerable time in consequence of the defective designs of the above yards?
 - "(6.) Is it also a fact that the only Railway approach for passengers and traffic to Railway Station was blocked up with wild cattle for some time when unloading such cattle?"
- (1.) Question. The cost of the Railway yards at Penrith, including earthwork, turntables, and everything in connection with the erection of the yards in question?

 Answer. The approximate cost of the erection of stock-yards, Penrith, including dockwalls, turntables, earthwork, sidings, &c., was £1,493 5s. 11d.
- (2.) Question. How many trucks of cattle and sheep have been unloaded at Penrith station during the month of September and up to the 5th of the present month?

 Answer. 37 trucks of cattle and 58 trucks of sheep.
- (3.) Question. The time it took to unload each consignment of cattle?

 Answer. It is impossible to say, as the time was not kept, and it would of course depend upon the size of the consignment.
- (4.) Question. The number of Railway officials employed at each time unloading such cattle; also the number of men employed by the consignee?

 Answer. Sometimes two and sometimes four Railway officials were employed. It depended entirely upon how many could be spared at the time. Consignees sometimes employed a similar number, according to the quantity of stock to be unloaded.
- (5.) Question. Is it a fact that the main line was blocked for a considerable time in consequence of the defective designs of the above yards?

 Answer. Yes.
- (6.) Question. Is it also a fact that the only Railway approach for passengers and traffic to Railway Station was blocked up with wild cattle for some time when unloading such cattle?

 Answer. Yes. The yards are being removed to a more eligible site.

NEW SOUTH WALES.

RAILWAY EXTENSION TO WALGETT.

(PETITION AGAINST GOVERNMENT PROPOSAL—CITIZENS OF MAITLAND AND MORPETH.)

Received by the Legislative Assembly, 9 October, 1884.

To the Honorable the Legislative Assembly of the Colony of New South Wales, in Parliament assembled. WE, the citizens of West and East Maitland, Morpeth, and surrounding districts, by the signatures of the Mayors of our respective Municipalities, added hereto by authority of a large and influential public meeting, humbly petition your Honorable House that, when taking into consideration the proposals of the Honorable the Minister of Works for the extension of our national railways, they will recognize the great and lasting injury that will be done the whole of the northern portion of the Colony if the proposal to extend the line from Mudgee to Walgett via Coonamble is sanctioned by Parliament.

Your Petitioners are of opinion that the only extension that will meet the trade and requirements of the Walgett district is by way of Narrabri, Wee Waa, and Pilliga, and that of Coonamble by connection with the Western line at Dubbo; and therefore pray, in the wisdom of your Honorable House, those lines

may be authorized in lieu thereof.

Your Petitioners humbly showeth:—1st. That the valley of Hunter River was almost the first portion of the Colony settled by an enterprising population of agriculturalists and graziers; that its early residents crossed the Liverpool Range, reaching the tablelands of New England, and, pushing westward, extended their explorations to the head waters of the Namoi, and thence to its junction with the Barwon, at Walgett, opening up one of the richest districts of the Colony, the trade to and from which has always been conducted with and through the towns on the Great Northern Railway and the Port of Newcastle. Should the proposed line be sanctioned this trade will be diverted from its usual and proper channel.

Your Petitioners would respectfully bring under the notice of your Honorable House that, whereas Walgett is only 110 miles from Narrabri, the connection with Mudgee would necessitate the construction of 213 miles of railway, the former line being through level country without any engineering difficulties, and therefore inexpensively constructed, whereas the latter line must pass over a mountainous district at great expense, the saving to the Colony in the cost of construction being nearly half a million, after making provision for the line from Dubbo to Coonamble. Should the proposed line be authorized it would come into direct competition with both the Great Northern and Western lines, thereby increasing the working expenditure and reducing the income derived from those lines. The traffic of the whole of the western portion of the Colony would also be concentrated upon the mountain line between Wallerawang

western portion of the Colony would also be concentrated upon the mountain line between waiterawang and Penrith, further entailing a large working expenditure and delay, whereas by the Northern line the traffic would reach the Metropolis by the railway now being constructed from Homebush to Waratah.

3rd. Your Petitioners would press upon the attention of your Honorable House the necessity of connecting, in as direct a manner as possible, the rich plains of the west (which unfortunately are subject to periods of disastrous drought) with the elevated tablelands of New England, which in such seasons are able to graze a large quantity of stock. Had such a railway been available during the past season the Colony would have been saved a heavy loss.

4th Your Petitioners prove that your Honorable House will not senction the proposal of the

4th. Your Petitioners pray that your Honorable House will not sanction the proposal of the Government in this particular, but will authorize the extension from Narrabri to Walgett, for the following reasons:—That it is the most direct and nearest route to the sea-board; that it will require less outlay than any other route, and can be completed in much shorter time; that it will pass through some of the richest land in the Colony; that it will add no burthen to the country, as it will unquestionably yield a return over and above the interest on the capital invested and working expenses; that it will prevent a great injustice being done to the Northern District by diverting its legitimate trade; that it will directly connect the rich lands of the Hunter River adopted from its greater minfull for agricultural numbers. the rich lands of the Hunter River, adapted from its greater rainfall for agricultural purposes, with the rich plains of the west, subject to periods of drought; also the connection of Coonamble with the Western line, at Dubbo, again retaining the trade of that district in its proper and legitimate channel by an expensive line of railway, in lieu of the expensive one proposed from Mudgee.

And your Petitioners will ever pray.

ROBERT HYNDES, Mayor, West Maitland. N. F. RICHARDSON, Mayor, East Maitland. W. BOWES Mayor, Morpeth.

1597 But 1885

WALES. S.O.U.T.H.

RAILWAY EXTENSION TO WALGETT.

(PETITION OF RESIDENTS OF DUBBO, TALBRAGAR, MARTHAGUY, &c.)

Received by the Legislative Assembly, 14 October, 1884.

To the Honorable Members of the Legislative Assembly of New South Wales, in Parliament assembled. The humble Petition of the undersigned residents of Dubbo, Talbragar, Marthaguy, Castlereagh, and other parts of the North-western District,-

HUMBLY AND RESPECTFULLY SHOWETH:

That your Petitioners have learned with surprise of the proposal of the Government to ask authority from your Honorable House to borrow the sum of £1,379,000 for the purpose of constructing a line of railway from Mudgee to Walgett via Coonamble.

That your Petitioners humbly suggest to your Honorable House the desirableness of negativing

1170---

the proposed loan, for the following reasons:—

That the line from Mudgee to Walgett would for the greater part of the first 100 miles go through sterile and rough country, neither fitted for agricultural nor pastoral pursuits, and where it went through good country, as near Gulgong and Cobbora, the land belongs to wealthy proprietors, who have formed in the neighbourhood large estates, which are and will be used, not to support a population, but to rear and

feed sheep and cattle.

That the cost of the line, £1,379,000, shows the unprofitable nature of the country through which the Railway would pass, for 43 miles of the country, from Mudgee to Coonamble, when the line strikes the Castlereagh Plains, and 68 miles to Walgett, the country is a dead level, and a railway could be built for £4,000 a mile, which for 111 miles is £444,000. This would leave the cost of the first 100 miles at the extraordinary sum of £935,000, or £9,350 a mile—nearly equal per mile to that expended on the construction of the unremunerative railway from Wallerawang to Mudgee.

That the extension of the railway from Mudgee to Walgett, instead of assisting to render profitably productive the Mudgee-Wallerawang Railway, will, on account of the wide area of heavy and bad country to be gone through, only intensify the loss to the country, and add another non-paying section to the already unsatisfactory and unremunerative branch from Wallerawang.

That your Petitioners would respectfully ask your Henorable House to reject the proposed Mudgee-Walgett Railway, and adopt instead extensions which, while costing nearly a half million of money less for construction, would not only do the greatest good to the greatest number of taxpayers, but prove an aid to, and not a charge upon, the general revenue. The extensions, the adoption of which your Petitioners respectfully ask, are: From the North-western Railway at Narrabri to Walgett; and from the Western Railway at Dubbo to Coonamble. From Narrabri to Walgett is 110 miles, through a splendid pastoral country, and from Dubbo to Coonamble. From Narrabri to Walgett is 110 miles, through a splendid pastoral country, and from Dubbo to Coonamble, is chiefly level plains, and a railway could be constructed for £4,000 a mile, or putting at the most £4,500 per mile, which would, for 202 miles, be £909,000, or £477,000 less than the sum proposed to be borrowed for the Mudgee-Walgett line.

Your Petitioners would impress upon your Honorable House that of lines from

**2477,000 less than the sum proposed to be porrowed for the Mudgee-waigett line.

Your Petitioners would impress upon your Honorable House that owing to heavy gradients, &c., the cost of working the proposed line from Mudgee will be double that of lines from Dubbo to Coonamble and Narrabri to Walgett. On the level country over which these lines would run locomotives will be able to haul double the freight they would over the first 100 miles of the line from Mudgee to Walgett.

Your Petitioners would particularly point out to your Honorable House that a railway from

Your Petitioners would particularly point out to your Honorable House that a railway from Narrabri to Walgett is the natural connection of the Namoi and Barwon country with the Hunter Valley and the Port of Newcastle. It would also materially assist the remunerativeness of the railway now in course of construction between Homebush and Waratah, and it would at the same time relieve the congested traffic of the Western line pointed out by Ministers but which they inconsistently prepage to congested traffic of the Western line, pointed out by Ministers, but which they inconsistently propose to aggravate by bringing on it the extra traffic of the north-western border country, by the line from Walgett via Mudgee.

Your

Your Petitioners would point out, as a further argument in favour of the lines from Narrabri to Walgett, and Dubbo to Coonamble, that the first named would connect the pastoral districts of the Barwon, Namoi, &c., with the rich agricultural producing Hunter Valley and the cereal growing Liverpool Plains; while the second named would connect the Castlereagh Plains with such producing districts as Dubbo, Wellington, Blayney, Orange, Molong, Caecoar, Bathurst, &c., and thus in time of drought enable the residents of these plains to be readily and cheaply supplied with produce, and their stock to be removed by rail from grassless country to the paddocks in the inside districts.

Your Petitioners, in conclusion, pray your Honorable House to reject the proposal of the Government for a railway from Mudgee to Walgett, and to authorize the construction of lines from Dubbo to Coonamble, and Narrabri to Walgett, because by so doing you will be saving, approximately, the country £500,000, and at the same time be sanctioning railways giving every promise of paying interest, and defeating a line which holds out no reasonable prospect of paying, during the next century, even working expenses, let alone interest on capital invested.

And your Petitioners, as in duty bound, will ever pray, &c.

[Here follow 962 signatures.]

Sydney: Thomas Richards, Government Printer.—1884

, Cha.

WALES. SOUTH

RAILWAY EXTENSION TO WALGETT.

(PETITION OF INHABITANTS OF NEWCASTLE.)

Received by the Legislative Assembly, 14 October, 1884.

To the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the Inhabitants of Newcastle, in Public Meeting assembled,—

RESPECTFULLY SHOWETH: 1. That your Petitioners observe with surprise and regret that the Government Railway scheme recently laid on the Table of your Honorable House proposes that the much required line of railway from Walgett shall run to Mudgee via Coonamble.

2. That the natural channel for the traffic from Walgett is via Narrabri to Newcastle.

3. That the proposed line to Mudgee runs for the greater part of its length through a barren and difficult country, and will be expensive to construct and maintain, and will have to depend to a considerable extent on the through traffic.

4. That a line from Walgett to Narrabri would be very much shorter and less expensive than that proposed, running as it does over level country where the timber necessary for its construction can be easily obtained, and a very large intermediate traffic may be expected.

5. That the line via Narrabri would involve only half the length of railway construction that would be necessary to connect Walgett with Mudgee, and would be the shortest route to the seaboard, and consequently afford a great saving to squatters and others desirous of shipping their wool and other produce.

6. That a large established trade exists between Walgett and different places on the Great Northern and North-western Railways, and the diversion of this traffic from its natural course by the construction of a railway in another direction would not only be injurious to the parties concerned, but would for all time compel the residents of Walgett and the surrounding districts to purchase their agricultural and other supplies at much higher rates than if the line were taken to Narrabri, besides agricultural and other supplies at much higher rates than if the line were taken to Narrabri, besides involving them in additional expense of haulage in carrying their own produce to the waterside, and creating greater difficulties and expense in moving their stock and obtaining fodder during time of drought.

7. That Coonamble is much nearer to Dubbo than it is to Mudgee, and would be more cheaply drought.

connected with it by railway.

8. That if the suggestions of your Petitioners were adopted, not only would there be a great saving to the country in capital, material, and working expenses, but the public would be better served, and a considerable loss to persons using the line would be avoided.

Your Petitioners therefore humbly pray that your Honorable House will be pleased to take the premises into consideration, and in lieu of authorizing the construction of a line of railway from Walgett to Mudgee, will sanction one from Walgett to Narrabri, and another from Coonamble to Dubbo.

And your Petitioners as in duty bound will ever pray &c.

And your Petitioners, as in duty bound, will ever pray, &c.

On behalf of the citizens of Newcastle, STEWART KEIGHTLEY, Mayor.

Newcastle, 13th October, 1884.

NEW SOUTH WALES.

RAILWAY FROM MUDGEE TO COONAMBLE.

(PETITION IN FAVOUR OF-MAYOR AND ALDERMEN AND OTHERS, OF COONAMBLE.)

Received by the Legislative Assembly, 29 August, 1884.

To the Honorable the Speaker and the Members of the Legislative Assembly of New South Wales.

The Petition of the Mayor and Aldermen of the Borough of Coonamble, and the Residents of the Town and District thereof,—

HUMBLY SHOWETH:-

- 1. That the railway route as now surveyed from Dubbo to Coonamble passes through a large portion of barren and sparsely populated country, and that great injustice would be done to a large number of settlers if that line is adopted in preference to the Mudgee line of communication with Coonamble.
- 2. That owing to Mudgee being one of the largest agricultural districts in the Colony, and the unfavourable seasons the Coonamble district suffers from, the facilities and benefits thousands would receive by being in direct communication with Mudgee would be incalculable.
- 3. That the Mudgee route to Coonamble offers benefits to the inhabitants of this district and the Colony generally, by passing through a large portion of first-class agricultural land not yet appropriated; the railway passing through the districts of Gulgong, Cobbora, Mundooran, Coonabarabran, Gilgandra, Gulargumbone, and other large centres, would benefit a far greater number than the proposed line to Dubbo.
- 4. That Goonamble district, situated as it is between Dubbo and Narrabri, and quantities of wool being often sent via the Northern line from this district, the adoption of the Mudgee line of communication would considerably ease the rolling-stock on the Western and Northern lines, and would not cause the same necessity for duplication of the lines as would most likely be the case if the Dubbo line was adopted.

5. That your Petitioners are in favour of the early extension of the North-western Railway from Mudgee to this district, with a view of its being carried on to the Queensland border; and that such a line running between the Northern and Western ones would open up a large tract of productive country, and must prove for the colonial benefit.

Your Petitioners therefore humbly pray that your Honorable House will be pleased to cause the railway line from Mudgee to Coonamble to be adopted in preference to that from Dubbo.

And your Petitioners, as in duty bound, will ever pray, &c., &c., &c.

[Here follow 386 signatures.]

NEW SOUTH WALES.

RAILWAY FROM ORANGE TO FORBES, VIA CUDAL.

Received by the Legislative Assembly, 5 June, 1884.

To the Honorable the Members of the Legislative Assembly, in Parliament assembled.

The Petition of the Inhabitants of Condobolin and surrounding district,-

HUMBLY SHOWETH :--

That your Petitioners would respectfully urge upon you the necessity of constructing a Railway from Orange direct to Forbes, via Cudal.

- 1st. That situated as at present we are, 150 miles from nearest point of Railway, viz., Orange, we are great sufferers in consequence of the high carriage we are compelled to pay to and from the nearest point of Railway.
 - 2nd. The nearest point of the Southern Railway, viz., Junee, is about 160 miles distant, and the nearest point available on the Western Line, Nyngan, is 185 miles from Condobolin.
- 3rd. Our district, which is a large and well settled one, is in consequence of this want of Railway communication completely isolated.

Your Petitioners, therefore, humbly pray that your Honorable House will give the premises your most favourable consideration, and grant such relief to your Petitioners as is equitable.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 117 signatures.]

The second of the Hill

1883-4.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAY FROM BORENORE VIA CUDAL AND EUGOWRA TO FORBES.

(PETITION IN FAVOUR OF—RESIDENTS OF FORBES.)

Received by the Legislative Assembly, 17 June, 1884.

To the Legislative Assembly of New South Wales, in Parliament assembled.

May it please your Honorable House.

The Petition of the residents in and around the Town and District of Forbes,-

RESPECTFULLY SHOWETH:

That your Petitioners, residing in one of the most important and wealth-producing districts of New South Wales, are still without the advantages of railway communication.

That while main trunk lines of railway and branch railways have already been constructed, or are in course of construction, in the northern, north-western, southern, and south-western portions of the Colony for the last six years, there has been no extension of the true Western line from the town of Orange.

That the delay in railway construction down the rich valley of the Lachlan and across the western plains to the Darling River, connecting those places with the Metropolis of the Colony, has resulted in much loss to your Petitioners, and has materially retarded the progress of several important towns along the route.

That a line from Orange, via Borenore, to Molong is already in course of construction.

That Borenore is much nearer to Forbes than Molong is, and that whereas a line from Molong to Forbes would be longer and pass through inferior and very sparsely-settled country, a line from Borenore by way of Cudal and Eugowra to Forbes would be shorter, the quality of the soil better suited for agriculture, while there is a population of 5 to 1 as compared with the Molong route.

That for these, as well as for other reasons of a national character, your Petitioners pray that, should any resolution at any time come before your Honorable House, in which a line from Borenore via Cudal and Eugowra to Forbes is proposed in lieu of the extension from Molong to Forbes, it may meet with your favourable consideration and support.

And your Petitioners, as in duty bound, will ever pray, &c.

Forwarded on behalf of public meeting.

J. T. DUNN, Chairman.

1883-4.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAY FROM BORENORE TO FORBES.

CPETITION IN FAVOUR OF, VIA EUGOWRA-CHAIRMAN OF PUBLIC MEETING IN EUGOWRA DISTRICT.)

Received by the Legislative Assembly, 19 June, 1884.

To the Legislative Assembly of New South Wales, in Parliament assembled.

May it please your Honorable House.

The Petition of the residents in and around Eugowra,-

RESPECTFULLY SHOWETH:

That, in the year one thousand eight hundred and eighty-one, a vote was passed by your Honorable House authorizing the expenditure of £705,500 for the construction of a railway from Orange to near Forbes.

That a portion of the work, viz., from Orange to Borenore, 9 miles on the Forbes side of Orange, is now in course of construction, and will shortly be completed.

That your Petitioners own and cultivate large areas of land in the immediate neighbourhood of the proposed line from Orange to Forbes, and that by its speedy construction they would have far greater facilities for disposing of their produce to advantage than they enjoy at present.

That it has come to their knowledge that the Honorable Member for Forbes has given notice of his intention to move in your Honorable House, on the 20th day of June, one thousand eight hundred and eighty-four, that it is desirable that the construction of the said line, from Borenore to Forbes, be proceeded with without delay.

That your Petitioners earnestly pray that the motion of Mr. Stokes may have your favourable consideration and support, and that such extension, from Borenore to Forbes, may be by way of Eugowra, as being in the direct route, and passing through an important district in which there is a large settled population of bona fide agriculturists.

And your Petitioners, as in duty bound, will ever pray, &c.

ARCHIBALD M'MILLAN,

Chairman of Public Meeting, and for the residents of Eugowra District.

NEW SOUTH WALES.

RAILWAY FROM MOLONG TO MANILDRA.

Received by the Legislative Assembly, 19 June, 1884.

To the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned, on behalf of the people of Manildra,—

Humbly Showeth:—

1st. That your Petitioner most respectfully desires to bring under the notice of your Honorable House the necessity of calling for tenders for the further construction of the railway from Molong to Manildra, as sanctioned by Parliament, with the least possible delay.

2nd. That the late Parliament having adopted the line from Orange to near Forbes, via Molong, Manildra, &c., and the first section, Orange to Manildra, sanctioned, a large number of your Petitioners have been induced to settle along this route, on the faith of its being constructed.

3rd. That your Petitioners desire to point out that the whole of the district from Molong to Parkes contains land suitable for agriculture equal to any in the far famed Molong district.

4th. That in regard to population a much larger per-centage of the district of Molong would be benefited by the line of railway as sanctioned being adopted than could be by any divergence of the line.

5th. That your Petitioners feel grieved at the unnecessary delay in the construction of the railway to Manildra, as sanctioned by both Houses of Parliament, through (as we believe) representations which can never be borne out, viz., that a better route can be obtained.

6th. We therefore respectfully desire to urge upon your Honorable House the truth of our Petition, and pray that you will in your wisdom order that tenders for the same be called without delay.

HUMBLY SHOWETH:-

That your Petitioners respectfully desire to bring under your notice the necessity of at once calling for tenders for the construction of the railway west from Molong to Manildra, the same having been approved of and sanctioned by both Houses of Parliament.

That your Petitioners desire to mention the fact that money was voted by the Parliament of 1881 for the construction of the westward extension to Manildra, whereas tenders have been called for a portion of the same only.

That your Petitioners earnestly desire to impress on your Honorable House the importance of at once extending the aforesaid line, thereby opening up railway communication with large and thickly-

once extending the aforesaid line, thereby opening up railway communication with large and thickly-populated districts.

That your Petitioners are desirous of informing you that in the Parkes land district alone there are upwards of 50,000 acres of land enclosed for cultivation, of which over 5,000 acres are under crop, yielding an average this year of 18 bushels of wheat to the acre. The reason that not more of the said enclosed land is under cultivation is that the growers have not had an outlet for their produce; but the whole of the land enclosed being of undoubted richness would be cultivated if the railway was extended to Manildra, as the boundaries of our land district would thus be tapped and an immediate market created, which can only be attained by railway communication.

which can only be attained by railway communication.

That your Petitioners desire to point out that the extension now asked for is distant not more than 14 miles from Molong, is without engineering difficulties, and forms a portion of the westward extension already sanctioned by Parliament.

That your Petitioners would earnestly impress upon you the fact that a large number of selectors have taken up land and built homesteads on the good faith of the railway line being constructed in accordance with the vote by Parliament in 1881.

That your Petitioners would further submit for your consideration the fact that the proposed line would be the means of developing a vast extent of country known to be rich in gold, copper, and other

That your Petitioners respectfully pray you to carefully weigh the premises herein set forth and give them your favourable consideration.

And your Petitioners, as in duty bound, will ever pray.

JOHN WARD, J.P., Chairman of Public Meeting held at Parkes on the 17th day of June, 1884.

1883 4.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAY FROM ORANGE TO MANILDRA.

(PETITION IN FAVOUR OF-CHAIRMAN AND SECRETARY OF THE GARRA RAILWAY LEAGUE.)

Received by the Legislative Assembly, 19 June, 1884.

To the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned, on behalf of the people of Garra,—

HUMBLY SHOWETH:-

That your Petitioners desire that tenders for No. 2 section of the further extension of the railway from Orange to Manildra, be invited for the construction of the work without delay, especially as the same has been affirmed by both Houses of Parliament.

2nd. Garra, we desire to impress upon you, is the centre of a large agricultural population, and was visited by your late colleague Mr. G. H. Reid, at the opening of the Public School in August last, and which numbered 70 to 80 pupils on its roll, which we think is ample proof of the settlement and progress of the district, also two well attended churches.

3rd. That the extension of this railway we feel sure will pay a high rate of interest on the capital invested.

4th. That your Petitioners have every confidence in the justice and reasonableness of their claim to have the further extension of this line pushed forward without delay, so as to enable farmers and other settlers a chance of getting their produce conveyed to a suitable market.

5th. That your Petitioners therefore most respectfully pray that no time be lost in inviting tenders for the construction of No. 2 section of railway from Orange to Manildra.

And your Petitioners, as in duty bound, will ever pray.

JOHN RUBIE, Chairman.

JAMES A. LISCOMBE, Hon. Secretary.

Garra Railway League, 17/6/84.

1883-4

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAY TO WILCANNIA.

(PETITION IN FAVOUR OF-RESIDENTS OF WILCANNIA.)

Received by the Legislative Assembly, 13 August, 1884.

To the Honorable the Speaker and Members of the Legislative Assembly of the Colony of New South Wales, in Parliament assembled.

The humble Petition of the undersigned residents of Wilcannia and the surrounding district,—
RESPECTFULLY SHOWETH:—

That the town of Wilcannia and the surrounding district are very much in need of a regular and speedy means of communication with the metropolis and other centres of population.

That the only means at present of obtaining supplies of provisions for the said town and district is by the river Darling, which is only navigable at distant and uncertain intervals.

That in times of severe drought, and when the Darling is low, the inhabitants of the said town and district are frequently without the common necessaries of life, and the prices of such articles as can be obtained are increased enormously.

That when the Darling River is unnavigable, graziers are unable to send away their wool, which occasions very great losses. As an instance, the clip of 1883 is still in the sheds, with every prospect of remaining for months, unless heavy rains fall at the head of the said river.

That a very large trade in the export of wool, at least 30,000 bales per annum, and import of all kinds of stores, is carried on between the said town and district and Melbourne and Adelaide.

That the said trade would be in a very great measure if not entirely diverted to Sydney if a Railway were constructed to Wilcannia.

That Wilcannia is the natural emporium for the supply of an immense area of pastoral and mineral country, extending to the north and north-west as far as the Queensland and South Australian boundaries.

That beyond doubt when the country immediately surrounding Wilcannia is thoroughly prospected minerals of great value will be discovered.

That were the said district connected by rail with Sydney, graziers could in times of drought remove their stock to places where feed and water are plentiful, and thus avert the losses which have been so heavy during the last few years.

That your Petitioners are of opinion that the best route for such Railway is from Nyngan to Wilcannia via Cobar, as it lies through an entirely level country, and presents no engineering difficulties of any importance.

Your Petitioners therefore humbly pray that you will be pleased to direct that steps be taken without delay for the construction of a Railway to Wilcannia by the route suggested.

And your Petitioners, as n duty bound, will ever pray.

[Here follow 815 signatures.]

SOUTH WALES.

RAILWAY FROM NYNGAN TO WILCANNIA VIA COBAR.

(PETITION IN FAVOUR OF-RESIDENTS OF COBAR.)

Received by the Legislative Assembly, 27 August, 1884.

To the Honorable the Speakers and Members of the Legislative Assembly, in the Colony of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Residents of Cobar and district,-

RESPECTFULLY SHOWETH:

That your Petitioners are desirous of having railway communication, and, in support of their request, urge the favourable consideration of this Honorable House to a few facts embodied in this Petition.

That it is suggested by your Petitioners the most urgent line for railway communication in the Colony deserving immediate consideration would be a branch line from Nyngan to Wilcannia via Cobar.

That the distance from Nyngan to Cobar is 81 miles, and from Cobar to Wilcannia 130 miles.

That as a line of railway is proposed from Hay, via Menindie, to Silverton, which, if constructed, would probably be preventative to the line from Nyngan via Cobar to Wilcannia, your Petitioners respectfully appeal to this Honorable House for a due consideration of their rights; and having that in view, beg to set out certain facts showing the advantages of constructing a line of railway as requested by your Petitioners; at the same time there is no intention of raising a voice against a railway from Hay to Silverton, via Menindie, except that your Petitioners consider, if only one line is intended, that the one via Cobar has much better claim for railway extension than the other.

That Hay to Menindie is about equal distance with Nyngan to Wilcannia, via Cobar; the latter line is entirely free from engineering difficulties, the country being slightly undulating and having a complete absence of anything approaching a hill, with no rivers nor creeks, and plenty of ballast for railway purposes. That from Hay to Silverton, via Menindie, would require to pass through a quantity of flooded country, and necessarily entail an enormous expense for the construction of such a line in comparison with the one suggested by your Petitioners, and that the last-mentioned line would pass large pastoral districts of good character, and would strike the river Darling at such a point as would command the greatest facility for competing with the river Darling trade. greatest facility for competing with the river Darling trade.

That Cobar is situated directly in a line with Wilcannia for railway communication, and it alone, your Petitioners consider, is entitled to a railway, inasmuch as its sources are of very great importance, which a glance at a few figures mentioned herein will show. The town itself has a population of about 3,000 inhabitants, and it is supported by a copper-mine known as the Great Cobar Mine, which perhaps might be justly called the richest in the world, yielding no less than 3,000 tons of copper smally called. might be justly called the richest in the world, yielding no less than 3,000 tons of copper annually, equal to £165,000 in value, and the carriage on which to Nyngan at the present time would be equal to £18,000, and a like amount is paid by the same Company for return loading, equalling a total of £36,000, for carriage per annum.

That over 70,000 tons of wood have been consumed during the last year for smelting purposes by the mine, and that in a short while from now the wood will be becoming scarce, and as a consequence coal will have to be adopted in lieu of same; and with the present number of furnaces used for smelting, it is estimated 30,000 tons of coal would be consumed annually, and that it would no doubt cause the development of a coal-mine, which is considered to be in existence near Dubbo, and only requires a market, which Cobar would afford, if railway communication were extended, and would also be the means of opening up the Mount Brown Gold-fields, lying north of Wilcannia.

That a railway being once at Wilcannia, the whole of the wool now despatched from that district to Melbourne and Adelaide would in a short time head its way to Sydney, owing to the river Darling being so often unnavigable, and would also secure a great portion of Queensland and South Australian trade. The wool clip for 1883 is lying in the sheds, the graziers being unable to despatch same, owing to the river being unnavigable.

That Cobar district depastures over 1,500,000 sheep, the product from which amounted to 14,450 bales of wool last year. The holdings are not half stocked, owing to the difficulty in obtaining goods, and wire, and other articles requisite, which is occasioned through there being no cheap means of transit.

That Nymagee Copper-mine is so situated that a railway via Cobar would confer a great benefit to the mining industry carried on there, which is now almost equal to Cobar.

That Silverton is at present held by large speculators of Victoria and South Australia, and there is nothing to prove its permanency.

That, finally, your Petitioners respectfully impress upon this Honorable House the fairness of their claim, and beg to say that the line for which they ask railway communication is the more direct, would prove the most remunerative, would cost less, would benefit a greater number of inhabitants, and open up better country than any line of railway to any other portion of the river Darling. And your Petitioners rest fully assured that incontrovertible facts as the above are all that is needed to guide this Honorable House to a compliance herewith.

And your Petitioners respectfully pray that the objects of the above Petition may meet with your approval, and the requests herein contained granted.

And, as in duty bound, will ever pray, &c., &c.

[Here follow 251 signatures.]

NEW SOUTH WALES.

RAILWAY TO SILVERTON.

(PETITION IN FAVOUR OF-RESIDENTS OF MENINDIE.)

Received by the Legislative Assembly, 17 September, 1884.

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned Residents of the town and neighbourhood of Menindie,—HUMBLY SHOWETH:—

That your Petitioners, being impressed with the importance to the Colony at large of the opening up of the district between Sydney and the Silver-mines in the Barrier Ranges by means of a railway, beg to approach your Honorable House, urging the necessity of such railway being undertaken with the least possible delay.

That your Petitioners, having in view the great outlay a railway would entail, are of opinion that the route from Hay, via Menindie to Silverton, being the shortest and presenting the fewest engineering difficulties, is the one that ought to be adopted.

That the advantages accruing to the Colony by the adoption of this route would be incalculable, inasmuch as it would run through one of the largest and best meat and wool producing districts in Australia, the produce of which in live stock and wool, besides untold quantities of silver and other ores, would find its way to Sydney instead of, as at present, to Melbourne and Adelaide.

That the adoption of other longer routes suggested to your Honorable House would give the sister Colony of South Australia an undue advantage, the terminus of her north-eastern line being distant from Silverton only about 200 miles, and that line extended to the border would naturally attract the traffic of this district, the difference of carriage occasioned by the longer route rendering trade with Sydney impossible.

That your Petitioners could urge many other reasons for the adoption of the route indicated, but think those stated sufficient for the consideration of your Honorable House.

Your Petitioners therefore pray that your Honorable House will take the premises into your most serious consideration, and grant the prayer of their Petition.

And your Petitioners, as in duty bound, will ever pray.

`^.`.

NEW SOUTH WALES.

RAILWAY TO FISH RIVER CAVES.

(PETITION IN FAVOUR OF—RESIDENTS OF OBERON AND OTHERS.)

Received by the Legislative Assembly, 16 January, 1884.

To the Honorable the Speaker and the Members of the Parliament of New South Wales, in Parliament assembled.

The Petition of the undersigned Residents of Oberon, Gingkin, Abercrombie, Bathurst, Little-River, Burraga, Swatchfield, Shooter's Hill, and Sydney and its Suburbs,—

RESPECTFULLY SHOWETH:

That there is in the district surrounding Oberon a large area of good agricultural land, several thousand acres of which have not yet been alienated. The land is well adapted for the cultivation of wheat, barley, oats, rye, tobacco, and potatoes. The district [also abounds in minerals. There are forests of as fine blackbutt and mountain ash timber in the district as there are in the Colony. There is also abundance of limestone. Many of your Petitioners suffer loss through having no good way of transit to market, as they cannot cultivate as much as they would, and every year hundreds of tons of straw are wasted. There is also every year large numbers of visitors to the Fish River Caves, and the numbers increase every year.

Your Petitioners therefore respectfully pray that a light line of Railway may be made from Tarana to the Fish River Caves, via Oberon.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 3,037 signatures.]

NEW SOUTH WALES.

SOUTHERN & SOUTH-WESTERN RAILWAYS.

(PETITION AGAINST INEFFICIENT WORKING OF-RESIDENTS OF WAGGA WAGGA.)

Received by the Legislative Assembly, 20 February, 1884.

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned residents and inhabitants of the District of Wagga Wagga,-

HUMBLY SHOWETH:

557

- 1. That it has day by day become more apparent that the present arrangements for the effective working of railways on the Southern and South-western Lines are inefficient and not conducive to the public convenience or welfare.
 - 2. That to show that this is so the following facts are quoted:—
 - 1st. That when the railway was opened as far as North Wagga Wagga, only about 2 miles from the Murrumbidgee, now known as Bomen, very great expense was incurred by the Department in erecting engine-sheds, goods-sheds, turn-tables, homes for railway employés, and particularly in procuring a water supply for the use of the engines.
 - 2nd. That when the extension across the Murrumbidgee River to South Wagga Wagga was opened, again very great expense was incurred in the erection of engine-sheds, goods-sheds, turn-tables, and cottages for employés. This latter expense is estimated by people who are well able to judge at a little over eight thousand pounds (£8,000).
 - 3rd. That this expense was gone to because it was found expedient to remove the engines from North Wagga Wagga, where, although but 2 miles from the river, it was found impossible to procure a full and proper supply of water for locomotive purposes.
 - 4th. That arrangements were made at South Wagga Wagga by the erection of pumping machinery and tanks, whereby a constant supply from the Murrumbidgee River was obtained, and that the cost of construction of such works was considerable.
 - 5th. That lately the whole of the locomotive plant has been removed from South Wagga Wagga to Junee Junction, and therefore the costly buildings and plant, at Bomen and South Wagga Wagga now lie empty, and by reason of disuse are falling into disrepair, buildings and plant, too, which cost the country, at the very lowest, approximately, twelve thousand pounds (£12,000).
 - 6th. That without any warning whatever, without any reason being given, the whole of the staff and engines were by one stroke of the departmental pen, removed to Junes Junction, a place which was never intended by the engineers who constructed the line as a head locomotive station, because they were aware, and Mr. Whitton still asserts, that on account of its natural disadvantages, and by reason of there being no permanent water there, Junes Junction is unfitted for such a station, and the costly appliances erected by the Government at Bomen and South Wagga Wagga, at the expense of the Colony, rendered
- 3. That to still further point to the necessity for an inquiry into the abuses said to have arisen from this removal of the locomotive staff to Junee Junction, the following facts are quoted:
 - 1st. That the most essential element for the proper working of locomotives, and therefore of the railway lines, is entirely wanting at Junee Junction—that element is water. Bore after bore has been put down by the Government, and yet no water has been reached sufficient in quantity to meet the demands of the Locomotive Department, and experts affirm that the formation of the country at and around Junee Junction precludes any probability that water will ever be obtained there by sinking. water will ever be obtained there by sinking.
 - 2nd. That owing to this entire absence of water at Junee Junction, the Colony is put to great expense, because all the water used at that place has to be drawn either from Wagga Wagga (a distance of 22 miles), Narrandera (a distance of 61 miles), or Yass (a distance of 100 miles).

3rd.

- 3rd. That from the places named in section 2, over thirty thousand gallons (30,000) of water are drawn to Junee Junction weekly at an approximate cost to the Colony of not less than four thousand pounds (£4,000) yearly.
- 4th. That owing to there being no water in sufficient quantity at Junee Junction to wash out the boilers, the nearest places being Narrandera (61 miles), Wagga Wagga (22 miles), and Harden (59 miles), the engines stationed at Junee Junction are becoming deteriorated in value, for the water which is used being mainly drawn from Hammond's dam, purchased at great cost by the Government, a mere surface drainage water, now rapidly drying up, is necessarily very muddy; and the fact that there is insufficient water to wash out the boilers at Junee Junction, combined with the fact that it is impossible to get a supply of water nearer than the places abovenamed for washing-out purposes, leads to a condition of the boilers which means absolute deterioration, loss of power, and liability to accident.
- 5th. Owing to the want of a full supply of water, which at all times it is now impossible to obtain, engines are unable to perform their work, and as a consequence trains run late, much to the inconvenience of travellers. This inefficiency of trainage power, too, must some day lead to a deplorable accident, the dread of which must militate against the use of the railways to the travelling public.
- 4. That again, to show that there is no necessity for bolstering up Junee Junction at so much loss to the Colony, it is affirmed that by making the stages shorter, that is, from Harden to Narrandera, from Narrandera to Hay, from Harden to Wagga Wagga, and from Wagga Wagga to Albury, the haulage of coals over the distance from Wagga Wagga to Albury, and from Narrandera to Hay, would be unnecessary, and thereby a great saving would be made to the State. That on these short stages Lithgow coal could be used, whereas to enable the engines to travel the long stages it is necessary to have coal carried all the way from Newcastle.
- 5. That your Petitioners deem that they have laid sufficient facts before your Honorable House to warrant it in granting the prayer of their petition.

Your Petitioners therefore humbly pray that your Honorable House may be pleased to appoint a Select Committee to inquire into the beforementioned matters, with power to call for persons and papers.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 489 Signatures.]

Sydney: Thomas Richards, Government Printer.—1884

LEGISLATIVE ASSEMBLY.

WALES. NEW SOUTH

RAILWAY BRIDGE OVER THE MURRUMBIDGEE RI

(PETITION AGAINST-RESIDENTS OF WAGGA WAGGA, HAY, AND NARRANDERA.)

Received by the Legislative Assembly, 19 February, 1884.

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales.

This, the Petition of residents in and around Wagga, Hay, and Narandera, in the Colony aforesaid:-

HUMBLY SHOWETH:

That, notwithstanding the repeated representations of your Petitioners to the Railway Department upon the subject, it is intended to erect the railway bridge over the Murrumbidgee River, upon the Narandera Jerilderie line, at a height of only 22 feet above summer level.

That if such course be persisted in, the navigation of the river will be stopped when the stream is moderately high, and available as a valuable water-highway; in addition to this the extremely low level proposed will endanger the safety of the structure.

That certified statements from residents have been forwarded to the Department to the effect that the river has, upon more than one occasion, within the memory of such residents, reached a height of 25 feet above summer level.

That the bridge could, at comparatively slight cost, be raised 10 feet above the proposed height, whereby the traffic would not only be uninterrupted but the security of the structure ensured.

That the suggestion by the Hon. the Minister for Works, that the funnels of the steamers plying the river be hinged, could not be effectively carried out. The shallowness of the watercourse in many places necessitates the use of boats of extremely light draught, the cargo being stacked high above the deck line—in many cases within a short distance of the top of the funnel. Again, the sharp turns in the river render it necessary to erect the wheel house at a considerable elevation. river render it necessary to erect the wheel-house at a considerable elevation.

Your Petitioners pray that your Honorable House will not permit a large and valuable river trade to be interfered with, but will cause an inquiry to be made into the circumstances of the case.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 231 signatures.]

1883.

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAY TO DENILIQUIN.

(PETITION IN FAVOUR OF-RESIDENTS OF DENILIQUIN.)

Received by the Legislative Assembly, 16 October, 1883.

To the Honorable the Speaker and Members of the Legislative Assembly of the Colony of New South Wales, in Parliament assembled.

The Petition of the undersigned Residents and Property-holders of the Town and District of Deniliquin, in the Colony of New South Wales,—

RESPECTFULLY SHOWETH:--

- 1. That the proposed line of Railway about to be constructed from Narrandera to Jerilderie will terminate at a point distant about 44 miles only in a direct line from the town of Deniliquin, and your Petitioners are desirous that the line may be carried to, and Deniliquin made the terminus of, that extension.
- 2. That Deniliquin is, and from its geographical position must always continue to be, the chief town in the rich and fertile district of Southern Riverina.
- 3. That the population of the district of which Deniliquin is the centre of trade numbers upwards of 7,000 souls.
 - 4. That the town of Deniliquin proper contains at present a population of upwards of 3,000 persons.
- 5. That the town has been incorporated as a municipality for the last fifteen years, and contains at present ratable property to the value of £250,000, with 8 miles of made streets.
- 6. That no less a number than 1,250,000 sheep (besides large numbers of horned cattle and horses) are depastured in the immediate district, returning an annual produce in wool of 30,000 bales, valued at upwards of £600,000.
- 7. That the revenue received during the last five years at the Customs-house in Deniliquin on goods imported from Victoria is shown by the returns to amount to £110,000, the entries showing a steady annual increase in number and value.
- 8. That during the last ten years upwards of £2,000,000 sterling have been received by the Government from the land revenue alone in this district, and all other sources of revenue have contributed proportionately large sums to the Treasury.
- 9. That the whole of the land in the district is admirably adapted for the growth of cereals and other crops, increasingly large areas being annually brought under cultivation, and the average yield proving about 20 bushels of wheat to the acre.
- 10. That your Petitioners would respectfully point out that there are no made Government roads (properly so-called) in the district, owing to the absence of suitable material, the work of the Roads Department being confined to clearing the track and forming the road with earth without metal or other road-making material, and as a consequence in wet weather traffic is almost suspended.
- 11. That roads properly constructed with burnt clay (the only substitute for stone, and of which the streets of the town are composed), on the Macadam principle, cost upwards of £3,000 per mile, or a little more than the cost of laying down a line of Railway.
 - 12. That the whole length of the line from Jerilderie to Deniliquin will not exceed 44 miles.
- 13. That the country to be traversed consists of plains and open box country perfectly level throughout. There are no creeks to be crossed, or bridges or viaducts to be made, and the whole work is totally devoid of engineering difficulty.
- 14. That your Petitioners are informed and verily believe that abundance of suitable material, both timber and ballast, can be obtained within easy distance of the proposed line, and that the Railway can be constructed between the two points at a cheaper rate per mile than any line yet constructed in the Colony, and at a cost below what would be required for the formation of an ordinary macadamised road.

15. That your Petitioners and the residents of the district generally have no sympathy with the protective policy of the neighbouring Colony of Victoria, with which they have been compelled to trade by reason only of the isolated position they are in with regard to the metropolitan city of their own

16. That your Petitioners and the residents of this district generally feel the burden of Victorian taxation, and especially the poorer classes, who, in buying their commodities out of bond in Victoria, pay as well the heavy taxes imposed by that Colony as the import dues of New South Wales; and, on the other hand, the Victorian border duties, especially the stock tax and the tax on wheat of £2 per ton, detract

greatly from the profits of their produce.

17. That your Petitioners, in order to reap the benefits of free trade, are anxious to open up trade intercourse with Sydney, even at present it being found more profitable to both storekeeper and consumer to purchase several important lines of merchandise in Sydney, bringing them by shipboard to Melbourne and through Victoria in bond to Deniliquin, than to buy in the Victorian market; and the only obstacle in the way of the whole of the large and important trade of this district being carried on with Sydney is the great delay and expense attending the delivery of goods at their destination, it being by no means an unknown circumstance for trade bills to have matured before the arrival of the goods for which they were given.

18. That the construction of a line from Jerilderie to Deniliquin will open up a large and fertile district on either side, besides attracting the Balranald, Moulamein, and Lower Edward River trade, and by placing this large district in direct communication with the metropolis, while developing its natural wealth, will not only benefit the residents of the district but also establish on a lasting basis trade with Sydney, and the freights earned will yield good returns on the small outlay required for the completion of the work.

Your Petitioners therefore humbly pray that your Honorable House, upon consideration of the matter above set forth, will recognize the justice of your Petitioners' claim to a direct Railway communication with Sydney, and that you will cause such steps to be taken for the speedy construction of the line from Jerilderie to Deniliquin as to vou in your wisdom may seem fit.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 340 signatures.]

1883-4:

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAY FROM JERILDERIE TO DENILIQUIN.

(PETITION-DENILIQUIN AND JERILDERIE RAILWAY EXTENSION LEAGUE.)

Received by the Legislative Assembly, 2 September, 1884.

To the Honorable the Speaker and Members of the Legislative Assembly of the Colony of New South. Wales, in Parliament assembled.

The Petition of the undersigned Members of the Executive Committee appointed by the Deniliquin and Jerilderie Railway Extension League,—

RESPECTFULLY SHOWETH:

- 1. That, as a consequence of the early completion of the railway from Narrandera to Jerilderie, the town of Deniliquin and intervening district will continue to be placed at as serious a disadvantage as hitherto unless the line be continued to the latter town and direct communication established with Sydney.
- 2. That residents and others, travelling overland to Sydney via Hay, have now to make a detour of 80 miles by coach at night to reach the main line of railway, and that if Jerilderie be made the terminus of the extension nearing completion there will still be a distance exceeding 60 miles to be traversed in this manner.
- 3. That the opening of the line to Jerilderie will result in an extensive trade in passengers and merchandise between Deniliquin and Sydney. This, in the absence of a railway, will necessitate the formation of a traffic road, the cost of which, where road metal has to be made from burned clay, will equal that of a light line of railway. Your Petitioners respectfully submit that the only way the progress and prosperity of the rich flat plains of this district can be developed is by introducing a type of railway that will afford safety and security at a minimum of cost.
- 4. That the importance of the district of Deniliquin, from population, prosperity in stock and land, returns from Customs, land, and other sources, entitle it to be linked on to a main line of railway. If excluded from this privilege, its inhabitants are placed at a serious disadvantage socially and commercially.
- 5. That your Petitioners would respectfully point out that the line in question presents no engineering difficulties to contend with. The intervening country between Jerilderie and Deniliquin is perfectly flat, a few inexpensive culverts sufficing to carry the line through. A trial survey, taken some years ago, made its length about forty-four (44) miles. The outlay required for an extension of the character indicated would be exceedingly limited, and the return in the way of interest would no doubt be ample.
- 6. That your Petitioners respectfully desire to call attention to a petition presented to your Honorable House in the month of October, 1883, from the residents and property-holders of the town and district of Deniliquin, praying for the concession now referred to, and setting forth in detail many reasons to induce your Honorable House to favour the views of your Petitioners. The statements therein made still hold good.

Your Petitioners therefore humbly pray that your Honorable House will give the making of this line its favourable consideration; and that in any system of national railway extension that may come to be discussed, a line from Jerilderie to Deniliquin shall be included.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 14 signatures.]

1883-

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MIDALE AND GLEN INNES RAILWAY CONTRACTOR.

(PETITION COMPLAINING OF-RESIDENTS OF ARMIDALE.)

Received by the Legislative Assembly, 22 July, 1884.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned residents of the City of Armidale,-

HUMBLY SHOWETH:

That the extension of the Great Northern Railway line between Armidale and Glen Innes is sufficiently constructed to permit the Contractor, David Proudfoot, Esquire, to run trains between the abovementioned places, although we are informed and believe the said extension will not be completed and handed over to the Government of this Colony and opened for traffic for some months to come.

The said David Proudfoot is, and has been for some time past, constantly and regularly running trains between Armidale and Glen Innes upon the said railway line, and carrying passengers and goods between the said places by means thereof for hire, to the great detriment and loss of your Petitioners and the inhabitants generally of Armidale aforesaid.

Your Petitioners are informed and believe that it has been represented to the Railway Department and the Government of the Colony that carriage by teams between Armidale and Glen Innes aforesaid could not be obtained, and that therefore it would greatly convenience the public to allow the said David Proudfoot to carry goods and passengers as aforesaid, but your Petitioners are well aware that such is not the case, and that such carriage by teams is plentiful and easily procurable.

Your Petitioners are further informed and believe that the moneys received by the said David

Proudfoot for such passenger and goods traffic as aforesaid are divided between the said David Proudfoot and a large number of forwarding agents, and a large firm of mail contractors, who are thereby deriving large profits at the expense of the general public of Armidale aforesaid and the surrounding districts.

Should the said David Proudfoot be allowed to continue the said traffic until the formal opening of

the said extension for public traffic, your Petitioners will sustain very great loss and hardship, and the

carrying trade of Armidale and the surrounding districts will be utterly ruined.

Your Petitioners therefore humbly pray that your Honorable Assembly will cause steps to be taken to prevent the said David Proudfoot from continuing and prosecuting the said traffic, and that your Petitioners may be afforded such further relief as to your Honorable Assembly may seem fit.

And your Petitioners will ever pray, &c. Dated this fourteenth day of June, A.D. 1884.

(Here follow 126 signatures.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

CATHERINE BUTTERLY.

(PETITION OF.)

Received by the Legislative Assembly, 2 October, 1884.

To the Honorable the Speaker and the Members of the Legislative Assembly of the Colony of New South Wales, in Parliament assembled.

The humble Petition of Catherine Butterly, of Sydney, in the Colony of New South Wales, widow,—

HUMBLY SHOWETH:-

- 1. That your Petitioner's late son, Stephen Butterly, deceased, was an employé in the New South Wales Government Railways in the year 1882, and was employed at Blayney, on the Great Western line, in the capacity of railway platform porter.
- 2. That your Petitioner's said deceased son, by his earnings as such employé, was the only support of your Petitioner and her daughter.
- 3. That in the exercise of his duties as such employé the said deceased had occasionally to assist at shunting and other railway work.
- 4. That on the morning of Monday, the twentieth November, 1882, upon the arrival at Blayney aforesaid of the daily morning train from Bathurst, the deceased, with several other men at the Blayney Station, was required to detach some waggons or trucks from the said train.
- 5. That during shunting, and whilst being engaged in coupling one of the waggons, the said deceased, in trying to get out of the way of some approaching trucks, got jammed between the buffers of the waggons he had been endeavouring to couple, and was so seriously injured that he died almost immediately.
- 6. That your Petitioner's said deceased son was a young man of steady habits and quiet disposition, and respected by all his fellow employés, zealous in his work, and anxious to acquire the knowledge requisite to enable him to rise in his vocation the better to enable him to support his mother, your Petitioner; and that the lamentable accident which caused his untimely death, and left your Petitioner in almost destitute circumstances, could not in the remotest way be attributed to any want of care, diligence, or forethought on his part.

Your Petitioner therefore humbly prays that your Honorable House will kindly take the foregoing statement into your favourable consideration, and be pleased to take such steps as will recompense in some measure the irreparable loss sustained by her through the death of her only son whilst in the execution of his duty, who was her only support.

And your Petitioner, as in duty bound, will ever pray.

 $\begin{array}{c} \text{her} \\ \text{CATHERINE} \times \text{BUTTERLY}. \end{array}$

GENERAL REGULATIONS.

THE following Code of Rules and Regulations made by the Commissioner for Railways, by virtue of the powers and authorities vested in him by the Government Railways Act, 1858, and Tramways Extension Act of 1880, having been approved by His Excellency the Governor and Executive Council, are hereby adopted for the guidance and instruction of the officers and men in the service of the Commissioner, and all former Rules and Regulations inconsistent with the same are hereby cancelled.

Every person in the service of the Commissioner shall be provided with a copy of these Regulations. He is strictly enjoined to read the whole, and make himself thoroughly acquainted with them, as no plea of ignorance of any Rule will be allowed as an extenuation of a fault, but will be considered rather as an aggrävation.

> Signed by the Commissioner, and sealed with his common Seal, at Sydney, the 22nd day of January, 1884.

CHAS. A. GOODCHAP, (L.S.)

Commissioner for Railways.

In the presence of—

D. VERNON,

Secretary.

RULES AND REGULATIONS.

SECTION 1.

Instructions and Rules of General Application.

Instructions and Rules of General Application.

1. Every employé shall devote himself exclusively to the service, whether his duties are specified or not, with zeal and fidelity; he shall attend at such hours as may be prescribed, and consider himself on duty when on the Tramway line or premises, although it may not be his regular time of attendance; keep the head of his department informed of his address, giving due notice of any change in the same; obey promptly all instructions he may receive from the officers under whose immediate control he is and persons placed in authority over him, and repair to any part of the Tramway whither he may be ordered; he shall conform to all the by-laws and regulations of the department, as well as use his best exertions to enforce obedience to the by-laws by passengers and others, and not suffer anything to be done whereby the department may suffer loss or damage; and he shall constantly bear in mind that his first and most important duty is to provide for the safety of the public.

2. He shall conduct himself with courtesy and respect, and be prompt, attentive, civil, and obliging while at the same time firm, to the passengers, poor as well as rich, under all circumstances; he shall never give an abrupt reply, but make respectful answers to every inquiry, and give his name without hesitation to persons requiring to know it, taking care that his manner is not such as to cause offence. Should this order be carefully attended to, the Commissioner will always support his employés and protect them from insult, whereas violent conduct or offensive language, no matter whether provoked or not, will be looked upon as a proof of incompetency.

will be looked upon as a proof of incompetency.

3. The slightest insobriety in any official or smoking when on duty on the Tramway line, premises, cars, or engines, will be followed by immediate suspension and subsequent fine or dismissal.

4. No employé is allowed to trade either directly or indirectly without the special permission in

writing of the Commissioner.

- 5. Any servant using improper language or entering into any altercation with the public or his fellow-servants, whatever provocation may be given; absenting himself without leave; being guilty of disobedience of orders, negligence, or other misconduct; or being incompetent; will be liable to immediate
- 6. Every servant is to come on duty clean and neat in his person and dress; if provided with uniform, he must appear in it in proper order.
 7. The acceptance of any fee, gift, or gratuity is strictly forbidden under any pretence whatever,

under pain of fine or dismissal.

8. No employé is allowed to convert to his own use any article the property of the Government, and the fact of the article appearing to be waste or useless will not form any excuse for its private appropriation. Every servant will be expected to inform his superior officer *immediately* of any property which he may observe exposed and liable to loss or waste, and to deliver up to him any property he may

9. All conductors, or others holding situations of trust, or who may have to render accounts of any kind or collect moneys, will be required to find security for their honesty and faithfulness, of such kind and in such manner as the Commissioner may require.

10. The pay of all officers and servants will be stopped from the moment of their being suspended, and the pay will not be allowed except in the event of entire acquittal of the charge for which the person was suspended.

was suspended.

The Commissioner reserves the right to deduct from the pay any fine imposed for neglect of duty, and no officer or servant must during suspension enter upon any part of the Tramway premises, or

perform any duties thereof.

11. No officer or servant (unless temporarily employed) will be allowed to leave the service without giving fourteen days' previous notice in writing of his intention to do so under the pain of forfeiting any salary or wages which may be due. He will also be held liable for any loss, damage, inconvenience, or expense which may be occasioned by his leaving without giving such notice. The Commissioner reserves the right of dismissing any employé without previous notice, but such a summary course will not be adopted in the case of any servant who has been faithful, honest, and zealous in the performance of his duties.

12. No servant on leaving the service will be paid any money due to him until he shall have delivered in his books, returns, tools, and other property of the Government; and if any such article shall have been improperly used or damaged a deduction from any pay due to the man will be made sufficient to cover the damage or supply a new article; or if the pay due be insufficient for that purpose,

he will be liable to make good the same.

13. At the head office of each branch a book shall be kept by the officer in charge in which all minor faults or irregularities of subordinate officers or servants shall be inserted at the time the offence is discovered, and the entry shall be notified to the offender; and general charges made against any subordinate officer or servant will not be entertained unless so recorded.

14. Certificates of good conduct may be issued only by the head of the department (and with the consent of the Commissioner) if he sees fit, but no such certificates will be granted under the following

conditions:

1st. If the man for whom the certificate is required shall have been frequently guilty of misconduct, although of a light nature, or has been found incompetent for his duty.

2nd. If he shall have been guilty of any misconduct of a serious nature, or have been dismissed

or discharged under strong suspicions of dishonesty.

3rd. If he shall have quitted the service without having given due notice of his intention to do so, or without giving up books, tools, &c., the property of the Government.

15. Any servant being unable through sickness or just cause to attend to his duties must send notice in writing to his immediate superior officer in time for him to provide for the performance of his duties; in case of sickness he must produce a certificate from a properly qualified medical man; but if the sickness be not of a sufficiently serious character to need the service of a doctor, and the absence only extends over one day, leave of absence for that period may be granted by applicant's immediate superior officer. Employés not observing this rule will be treated as absent without leave.

16. Officers or servants of the Department are not to take legal proceedings on behalf of the Commissioner, nor show any document or book to persons not connected with the Department; nor deal with any communication on a subject for which they have no precedent, or with doubtful questions, nor to communicate directly or indirectly with the public Press, or any person or persons, without first obtain-

ing the Commissioner's instructions.

17. On the change of duties between the day and night staff all circumstances which may have occurred out of the ordinary course must be communicated to the man coming on duty as relief, and

before he takes charge.

18. No person employed in any capacity shall give up charge to any other person whose duty it may be to relieve him, unless the person being relieved shall be satisfied of the perfect sobriety of the person whose duty it may be to relieve him. And if any person gives up his charge to anyone who may be in a state of intoxication, both the person relieved and relieving will be held responsible, and punished

accordingly.

19. Each servant is required to make himself thoroughly acquainted with all rules furnished him, and especially those which may in any way apply to himself; to obey them and use his best exertions to

carry them into effect. He is also to obey and carry out all general orders and instructions issued to him, and he must keep a copy of the rules, to be obtained by application to his immediate superior officer, constantly with him while on duty.

20. Each servant is required to report to his superior officer every instance of damage, derangement, or irregularity, or violation of these rules (or other instructions) of any kind whatsoever that may come under his notice, if possible on the same day, but on no account later than the morning following such occurrence. Messages and reports are at all times to be made in writing. Every notice or communication is to be acknowledged in writing.

21. Every officer is responsible for each person under his control, keeping the proper records, books, accounts, and returns, applicable to his duties. Any officer or servant failing to report an occurrence or matter that ought to be reported will incur the same responsibility as if he had been the

person in fault.

22. All men receiving daily wages will only be paid for the time they are actually at work.

23. Every person who may consider himself aggrieved has the right to appeal to the Commissioner for Railways, which he must do by letter, through his immediate superior, who will transmit it in the usual course.

SECTION II.

Instructions to Drivers and Firemen.

24. Every driver must be with his engine thirty minutes previous to his time of leaving the shed to start with the tram fixed for him; he will be responsible for having his engine in order, and a proper supply of tools, &c., and must be ready to start at least ten minutes before the time appointed for starting.

25. The fireman must be with his engine one hour previous to his time for starting from the shed;

he must have steam up, the water-tank filled, and a proper supply of fuel, oil, &c., with all necessary tools, destination flags, lamps, &c.; he must be ready to start ten minutes before the appointed time, and will be at all times under the control of the driver.

26. Every driver while on duty must have a copy of the time-bill for the current period and a

copy of this book of rules on his person.

- 27. Before starting with any tram the driver must see that it is properly coupled; after that time and until the end of the journey he will receive his orders from the conductor in all matters affecting the starting, stopping, or movements of the tram.
- 28. Great caution must be used in placing the engine against the tram, which must be done without moving the carriages, in order to guard against injury to any passenger who may be stepping into or getting out of a carriage at the time. Flying shunts are strictly forbidden.

The driver must be careful always to start and stop steadily, and without jerking the tram.

- 29. At sunset, when it is getting dark, and before it is dark, the driver must see that his lamps are lighted and kept burning brightly.
- 30. In all cases when approaching streets, intersections, going over points and crossings, round curves, and through crowded thoroughares, driver must observe the utmost caution; going at slow speed, at all times keeping a sharp look-out, and exercising the greatest watchfulness, in order to prevent accidents or injury to the public.
- 31. The fireman must, when the tram is on its journey, stand in the front of the engine, and manifest the same caution as the driver to prevent accidents; also give timely notice to him and the public in all cases of danger.
- 32. The driver must be careful to draw up at once on overtaking or meeting a restive horse, and pass the same slowly; if the horse attempts to shy he must come to a dead stop.
- 33. He must not run round curves, or through points, or over crossings at a greater speed than 3 miles per hour, and must not under any circumstances exceed 10 miles per hour. Where pointsmen are not stationed drivers must satisfy themselves that facing-points are in proper position before passing
- .34. At the intersections of streets where the trams are timed to stop the drivers must not attempt to cross each other until all passengers requiring to leave or enter have done so; and at no period of the journey must they pass each other at a greater speed than 4 miles per hour.
- 35. The driver and fireman only are to be upon the engine, and no other person whatever is to be allowed to travel upon it, unless by a special pass, which shall be issued by the Commissioner, Engineer, or Traffic Superintendent.

36. Drivers and firemen are strictly forbidden to smoke while on duty.

37. All drivers and firemen will be liable to instant dismissal for the slightest instance of insobriety, and to fine or dismissal for disobedience of orders, negligence, or other misconduct, as well as to punishment as the law directs.

38. Every driver and fireman must produce a certificate from the Medical Board of his physical

fitness to perform the duties required of him.

39. Drivers on arrival at the shed are to enter in a book kept for that purpose the state of their engines, so that any defect may be at once remedied.

40. Each driver will be held responsible for the safe condition and running of his engine, and

must in any case of repairs being required report the same immediately to his foreman.

41. Drivers must use engine whistle in cases of danger, and at authorized times and places only.
42. No driver of a tram or engine must approach nearer than 50 (fifty) yards to any other tram or

engine in front of him.

- 43. Any driver noticing any person or persons in charge of any vehicle across the track must, if time permits, warn them by a shrill whistle, and if he perceives no notice taken of his warning, apply his brake, and if necessary reverse his engine, so as to stop his tram in the shortest possible time; if such person or vehicle should come on the track too near to admit of the whistle being sounded, the fireman, whose duty it is to be always in the front of the engine when running, will give instant warning to the driver and such persons, and the driver will apply the brake, &c., as before, and do his utmost to avert an accident.
- 44. If any person or persons should come on the track, take no notice of any warnings given, and cause the tram to be stopped in the opinion of driver, fireman, or conductor, "wilfully," the name and address of such person or persons must be taken; should they refuse to give it, and no one is present that can do so, they must be given in charge or taken to the nearest police station to obtain same, and the circumstances reported in writing as soon as possible to be placed before the Commissioner, with a view to their prosecution if he so decides.

45. Trams travelling in opposite directions must not overlap each other at stopping-places, but

drivers must see that a space of at least 50 (fifty) feet is preserved between their motors.

46. Drivers and firemen of Railway Trams must be especially cautious passing George-street and Belmore, as pedestrians, seeing them approaching, may take it for granted that they will pull up at such

usual stopping-places.

47. In Elizabeth-street, when drivers are compelled to slow on account of a tram in front they must do so as far as possible from the stopping-place, and must avoid creeping up dead slow to the tram already on the stopping-place, as it leads passengers to suppose they can get out in safety. Once the cars are at a stand, drivers must not move without the conductor's signal, especially when only a few yards

from a stopping-place.
48. When drivers have sounded a danger signal, under Rule 43, they must not trust too much to vehicles getting immediately out of their way, but had better slow at once and make certain of the road

being clear, even at the risk of being behind time.

49. Drivers will be held strictly responsible for their firemen being in their proper places while en route.

SECTION III.

Signals.

50. The greatest possible care must be exercised by the driver, fireman, and conductor of each tram in keeping a careful and particular look-out for signals. Every signal must be immediately acted upon by the driver, whether seen by himself or notified to him by the fireman, conductor, or by any person observing a signal being given. Day

DAY SIGNALS.

51. The danger signal to stop.—A red flag, or, in its absence, both arms of the person signalling

52. Caution to slacken speed.—A green flag, or, in its absence, one arm of the person signalling being held up.

NIGHT SIGNALS.

53. The danger signal to stop.—A red light, or any light moved up and down.
54. Caution to slacken speed.—A green light, or any light moved slowly from right to left.
55. Any unusual signal, or the arm waved violently, denotes danger, and the necessity of stopping immediately.

.56. Signals by driver's whistle day or night-

One sharp beat of whistle to be given in acknowledgment of caution or danger signal; in reply to conductor's signal to stop when running; before starting after standing at terminus or loop; and for conductor to release hand-brakes, if applied, when running.

Three sharp beats of whistle, for conductor to put hand-brakes on, or assistant engine to stop.

Four sharp beats of whistle, for an advance or rear tram to stop.

One prolonged and one sharp beat of whistle, assistant engine to stop and reverse.

57. One long whistle from the conductor will be signal for driver to stop, and two short whistles a signal to start.

SECTION IV.

Instructions to Conductors.

58. Every conductor must be able to read and write, and produce a medical certificate as to his physical fitness, knowledge of colours, &c.

59. Every conductor must be at his appointed place of starting fifteen minutes before his tram leaves, that he may see that the carriages are clean and free from dust, and in every respect in good order.

60. No tram is to be started before the time stated in the Tables, and before giving the signal to

start the conductor must ascertain that all cars are properly and securely coupled, and that no one is getting on or off the car.

Every exertion must be used for the expeditious dispatch of cars at their appointed time, and for

insuring the punctuality of the traffic.

61. Conductors must call the name of each stopping-place plainly at least 40 feet before reaching it, and see also that all parties entering or leaving have done so before signalling the driver to proceed.

62. Conductors are not allowed to converse with their passengers, or with employes, except to

give information, and that in as few words as possible, and in a respectful manner.

They must in all cases discharge their passengers with as much dispatch as possible, and allow no passenger to enter or leave the cars while in motion.

Dogs must not be allowed in the cars.

63. In the event of any passenger being drunk or disorderly to the annoyance of others, the conductor must use all gentle means to stop the nuisance; these failing, he must for the safety and convenience of all, exercise his authority and remove such person from the car. No person in a state of intoxication must be admitted into the cars.

64. The conductor is responsible for the due placing of the various lamps on the cars, and for seeing that they are lighted at sunset and kept burning brightly.

65. Conductors must report daily to their superior officer, upon forms provided for the purpose, any instance of a driver travelling too quickly through points or over crossings, or faster than permitted by these rules; any indication of defect in road; any instance of engine or car getting off the road, or receiving any strain or injury; any defectiveness in brakes; any instance of cars shunted violently or observed to run unsteadily; any delays, neglect, or other irregularity or deviation from the requirements of these rules.

66. The conductor will see that the By-laws are complied with, and whenever they are violated report

the fact to his superior officer.

- 67. Immediately a passenger enters a car the conductor will politely request his or her fare or ticket, the receipt of which he will acknowledge by ringing his cash- or ticket-register bell, as the case may require. Public notices will be placed in every car requesting passengers to see that when they pay their fares they are so acknowledged, and any conductor neglecting to comply with this rule will render himself liable to dismissal.
- 68. A conductor on the first collection of fares should pay particular attention to his passengers so that in his subsequent collection he may be able to identify those who have previously paid him, and in all cases of doubt he must politely inquire if the fares have been paid.

 69. The conductor must not allow smoking, except in the compartments provided for that purpose.

70. Conductors must in all cases take in and discharge their passengers on the outside of the track next the pavement.

71. In case of accident, detention, or other necessity, the conductor may demand assistance from

any Tramway servant either by day or night.

72. During a journey, and when not engaged collecting fares, the conductor in charge must stand at the rear of his tram so as to command at a glance a view of the whole of it. When pulling up at, or starting from, stopping-places he must especially be on the alert to warn pedestrians passing behind his

tram, should a motor be approaching on the opposite line.

73. The conductor must not sound his whistle inside the cars. If compelled to give a signal while on the footboard, he must turn his back to the side of the car before doing so.

74. Whenever a driver gives a signal of danger ahead, the conductor must pay immediate attention, with a view of doing all he can to avert the possibility of an accident, and being able to give as full particulars afterwards as possible should an accident take place.

75. While it is desirable that the conductors and drivers should work in complete harmony, the conductor must distinctly understand that he is in charge and will be held strictly responsible for the

conductor must distinctly understand that he is in charge, and will be held strictly responsible for the

proper working of his tram.

76. Conductors must bear in mind that it is the passengers' right to ask questions concerning the routes, fares, &c., and all such inquiries must be answered in a cheerful, accommodating spirit. The exercise of a little intelligent tact and forbearance with passengers will tend to save complaints and consequent trouble of writing reports in explanation thereof, and render the conductors' duties generally easy and pleásant.

77. Conductors shall, in all cases, at once examine, in the presence of a witness, any bag, purse, &c., found in the cars. If such lost property be found by a passenger, the conductor should open the same and request the finder to witness the contents, as well as give his name and address for further reference if necessary. In the event of the conductors themselves finding any unlocked bag or purse, they should draw the attention of a passenger, or the nearest official, to the contents, to be called upon as a witness

in case of dispute,

78. General.—As cases will constantly occur on the streets that cannot be foreseen or provided for by any special rules, both conductors and drivers are expected to use their best skill and judgment in such emergencies, always bearing in mind that too much importance cannot be attached to the safety of the public.

SECTION V.

Instructions to Pointsmen and Signalmen.

- 79. Every pointsman or signalman must be in attendance at his post during the required hours of duty, and he must never leave the points or signals of which he has charge during those hours or until he is relieved.
- 80. He must not allow any person to frequent his box or cabin, which, as well as the ground adjacent, must be kept clean and neat.

81. Facing-points are always to be steadied, should they be hand-lever points, by the hand of the

pointsman when trams are passing over them.

82. Great care must be taken not to allow the points to fall back until every vehicle in the tram

has cleared them.

83. Before a pointsman goes off duty he must take care to inform the person relieving him what tram is due, so that the relieving pointsman may know if the trams are running out of their regular order. The relieving pointsman is to satisfy himself of the points, &c., being in good working order before the other pointsman goes off duty.

84. Men in charge of points and crossings must examine them carefully, and clean and oil them every morning, and must frequently from time to time ascertain that they are in perfect order, and not injured by the passage of trams; and must especially examine the rod connecting the points, and all screw nuts, cotters, &c., trying the points occasionally by moving them to and fro.

85. Each person whose duty it is to give signals must see that he is provided with the necessary flags and lamp by his superior officer, and must keep them ready for immediate use.

SECTION VI.

PERMANENT WAY.

Instructions to Gangers.

86. Every ganger must inspect his portion of the Tramway every morning before the first tram starts, whether the weather be wet or dry, also before leaving his duty in the evening.

87. Every ganger shall examine at those times all the points and crossings, and see that they are kept clean, well oiled, in good working order, and safe in every respect; that the rails are in gauge, in perfect line and level, all fastenings tightened, and the joints in proper order.

88. Any ganger who neglects so to examine the roads, points, or crossings, &c., or fails to inform his immediate superior officer of any defects in his length, will be immediately dismissed.

89. All tools, implements, &c., required for the repairs of the line must be kept in good order, and the ganger will be held responsible for their safety.

Regulations for working Single Lines by Train Staff and Ticket.

90. Train staff or ticket to be carried.—A train staff or train staff ticket must be carried with each

tram or engine, and without this staff or ticket no tram or engine must be allowed to travel on the line.

91. No tram to leave unless staff is at the station.—No tram or engine must be permitted to leave any staff station, unless the staff for that portion of the line over which it is to travel is then at the station.

92. Staff.—The person in charge of the staff for the time being is the sole person authorized to start a tram or engine.

93. When staff is to be given to engine-driver.—When a tram or engine is ready to start from a staff station, and no second tram or engine is intended to follow before the staff will be required for a tram in the opposite direction, it is the duty of the person in charge of the staff to give it to the engine-

tram in the opposite direction, it is the duty of the person in charge of the staff to give it to the engine-driver, who will then hang it on the hook provided for that purpose on the engine.

94 When tickets are to be given to engine-driver.—If other trams or engines are intended to follow in succession before the staff can be returned, a ticket must be given by the person in charge of the staff to the engine-driver of the first tram or engine, the staff for the section being shown to him, and so on with any other tram or engine, except the last, the staff itself being given to the engine-driver of the last tram or engine; as directed in Regulation 93. After the staff has been sent away, no other tram or engine must, under any circumstances, leave the staff station to follow in the same direction until the staff for that section has been returned.

95. Engine-driver not to start until he has received the staff or ticket.—No engine-driver with a tram or light engine must leave a staff station until he has received the proper staff or ticket for that

a tram or light engine must leave a staff station until he has received the proper staff or ticket for that section of the line over which he is about to travel, and he must not take the staff or ticket from any

other than the person in charge of the staff for the time being.

Signal.—After receiving the staff or ticket he must not start until the proper signal has been given by the conductor.

Staff

Staff or ticket to be given up.—On arriving at the station to which the staff or ticket extends, such staff or ticket must immediately be given up to the person appointed to receive it, to be dealt with

as the latter may be instructed by the Superintendent of the line.

96. Conductor to see staff before starting.—No conductor must signal his driver to start from any staff station without having first seen that the staff for that portion of the line over which he is to

travel is then at the station.

97. Penalty for engine-driver leaving without staff or ticket.—An engine-driver will render himself liable to dismissal if, under any circumstances, he leaves a staff station without the staff or ticket for the section over which he is about to run; or, if he leaves without a ticket, without having also seen the proper staff.

98. Staff.—Each staff has engraved or marked on it the name of the staff station at each end of

the section to which only it applies.

99. Person in charge to be careful in issue and receipt of tickets.—The person in charge of the station for the time being will be held strictly responsible for due care being taken in the issue and receipt of tickets, and he must see that no one but himself can obtain access to his ticket-book.

100. Not to take staff or ticket beyond proper station.—Engine-drivers must be extremely

careful not to take the staff or ticket beyond the station at which it ought to be left.

101. Engine carrying staff, disabled.—In the event of an engine which carries the staff breaking down between two stations, the fireman must take the staff to the staff station in the direction whence assistance can be obtained or is expected, in order that the staff may be at the station on arrival of the

Engine carrying ticket, disabled.—Should the engine that fails be in possession of a ticket instead of the staff, assistance must only come from the station at which the staff has been left. But if assistance can be more readily obtained at a station other than that where the staff is, immediate steps must be

taken to have the staff transferred to the other end of the section.

102. When line is blocked.—Should the accident be of such a nature as to block the road, and the traffic is likely to be stopped for any considerable time, special arrangements must be made for working the trams to and from the point of obstruction on each side. The Train Staff Regulations must be carried out on that side where the staff is at the moment of the accident, and, on the other side, the traffic must be conducted by a pilotman, to be appointed by an order in writing, and the person in charge

of each end of the section worked by the pilotman must have a copy of such order.

103. When line is clear after being blocked.—When the line is again clear no tram or engine must be allowed to pass the point of obstruction without the staff and the pilotman. The pilotman must accompany the tram or engine carrying the staff to the staff terminal, when the traffic will be again conducted according to the Train Staff Regulations.

104. Staff stations shown in Working Time-tables or Appendices.—The Working Time-tables or Appendices, issued for the guidance of the servants, will contain the necessary information from time to time as to the places which are appointed staff stations.

NOTICE.

Drivers will receive instructions from the conductors as to passing and stopping places when the cars are so loaded as not to admit of other passengers entering. Should they receive such instructions, they must in every case slow down and give signal by whistle prior to any crossing to be so passed, and use every possible precaution to prevent accidents of any kind.

Posted in Running Sheds, in April, 1883.

GEO. J. HENDY, Running Foreman.

GOVERNMENT TRAMWAYS.

Locomotive Superintendent's Office, Randwick, 22 February, 1884. Memorandum.—When passing over crossings, &c., all drivers must slow down and conform with the like speed which an omnibus would be expected to travel at.

Please note and instruct all drivers, in the form of a General Order, that the Commissioner has decided, "if he can get to learn of an authenticated and identified case where a driver has transgressed the rule re slowing down of speed and sounding the whistle while in the act of passing over crossings, whether with free motors or with motors attached to cars; he will consider it a duty due to the claims of the public for protection to dismiss the offender.'

Drivers must understand that this will be strictly enforced.

GEORGE DOWNE.

1883-4.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

CAMPBELLTOWN AND CAMDEN TRAMWAY.

(COST AND OTHER PARTICULARS.)

Ordered by the Legislative Assembly to be printed, 16 September, 1884.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 1st May, 1884, That there be laid upon the Table of this House a Return showing, in reference to the Campbelltown and Camden Tramway,—

- "(1.) The length of the line and total expenditure on same, distinguishing
- "between land resumptions, construction, and rolling stock; also the present
- "approximate amount of depreciation in capital value through wear and "tear.
- "(2.) The gross receipts for each year, or part of year, since opening for
- "traffic, separating 'passenger' from 'goods'; the total working expenses ${}^{\prime\prime}$
- "for the same periods, distinguishing between interest payable on capital
- "expended, cost of maintenance, and wages.
- "(3.) The net receipts and actual rates of interest returned on the capital "expenditure for the same periods.
- "(4.) The carrying capacity for passengers and goods per train, and the "approximate average number, and amount actually carried each way.
- "(5.) The proportionate rates for carriage, as compared with Railway rates "for similar distances."

(Mr. Copeland.)

CAMPBELLTOWN AND CAMDEN TRAMWAY.

(1.) Question. The (a) length of the line and (b) total expenditure on same, distinguishing between land resumptions, construction, and rolling stock; also the (c) present approximate amount of depreciation in capital value, through wear and tear?

Answer. (a) The length of line-7 miles 33 chains.

(b) The total expenditure—

Land resumption £2,089

Construction 33,245

Rolling stock 5,623

£40,957

(c) Nil.—The line, rolling stock, &c., are kept in effective order—the amount expended for this service out of Working Expenses Votes has been, for 1882, £245; for 1883, £395.

(2.) Question. The gross receipts for each year, or part of year, since opening for traffic, separating "passenger" from "goods"; the total working expenses for the same periods, distinguishing between interest payable on capital expended, cost of maintenance, and wages?

Answer. Gross earnings, 1882—passenger, £1,288; goods, £865; total, £2,153.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

COMBINED MOTOR AND

(BALDWIN COMPANY'S CERTIFICATE OF MR. DOWNE'S PATENT.)

Ordered by the Legislative Assembly to be printed, 16 May, 1884.

RETURN to an Order of the Honorable the Legislative Assembly of New South Wales, dated 1st May, 1884, That there be laid upon the Table of this House,-"A copy of the Baldwin Company's certificate of the performance under "steam of Mr. Downe's new Patent Combined Motor and Car."

Messrs. Burnham, Parry, Williams, & Co., to The Commissioner for Railways. Dear Sir; Philadelphia, 15 September, 1883.

We are pleased to advise you of the shipment of the Compound Motor and Car on the 30th ultimo, with a view to its shipment from San Francisco by the Pacific Mail Steam-ship "City of New

York," which carries this letter. On August 22 we sent you a telegram, as per enclosed copy, announcing the satisfactory performance of the car and its shipment by this vessel.

During its trial the motor worked efficiently and satisfactorily, and we believe fulfilled all our expectations concerning it. It is the best plan of eight-wheeled steam-car which has ever come within our notice, and contains many important features of construction which have never before been used in such a machine. As it is, however, the working out of an entirely new design, there must necessarily be found a machine. As it is, however, the working out of an entirely new design, there must necessarily be found many points susceptible of improvement, and these points will be demonstrated by its service on your lines. Its comparative economy of fuel will also be shown. While during its trial here it indicated that its consumption of fuel would be small, the conditions are so removed from those under which it will work on your lines that we must consider this one of the points which must be left for time and further experience to decide. Much credit is due to Mr. Downe for the diligence and attention which he has shown to every detail during its construction. He has devoted his time to it exclusively, and much praise is due to his skill and intelligence as a designer. No new idea in the construction of locomotive and kindred machinery has remained uninvestigated, and any credit which may be due for the merits of the design we take pleasure in rendering to him. We hope soon to hear good accounts of the performance of the car on your lines. of the car on your lines. .

We remain, &c.,

BURNHAM, PARRY, WILLIAMS, & CO.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

COMBINED TRAMWAY MOTOR AND CAR.

(COST AND OTHER PARTICULARS.)

Ordered by the Legislative Assembly to be printed, 16 September, 1884.

LAID upon the Table of the House in accordance with promise made by the Honorable the Secretary for Public Works, in answer to Question No. 1, in Votes and Proceedings No. 154, of the 4th September, 1884.

- "(2.) What has been the cost of each, including repairs, improvements, "&c., to 1st August, 1884?
- "(3.) How many and how often have each broken down in traffic?"

Note.—There is nothing exceptional in the above mishaps attributable to the Engines, interruptions through slight mishaps being inseparable from the conditions of street traffic, and common to all steam Motors; the Baldwin Motors having had to come in no less than 343 times during the first six months of the current year, in consequence of slight failures.

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

ADVERTISING ON TRAM-CARS.

(COPY OF AGREEMENT.)

Ordered by the Legislative Assembly to be printed, 12 October, 1883.

[Laid upon the Table of the House in accordance with promise made by the Secretary for Public Works, in answer to Question No. 3 on Votes and Proceedings, No. 3, of the 11th October, 1883.]

* Copy of Agreement made with the Tramways Advertising Company for the right of advertising on Tram-cars:—

in the year of our Lord one thousand eight Memorandum of Agreement made the day of in the year of our Lord one thousand eight hundred and eighty-three, between the Commissioner for Railways, a corporate sole created by the Act of Council passed in the twenty-second year of the reign of Her Majesty Queen Victoria, number nineteen, intituled, "An Act to make more effectual provision for the construction by the Government of Railways in the Colony of New South Wales, and for the regulation of the same," of the one part, and the Tramways Advertising Company (Limited), of Sydney aforesaid, registered under the provisions of "The Companies Act," of the other part: Whereas the Commissioner for Railways has agreed to grant to the said Tramways Advertising Company the right of posting advertisements in all tram-cars on the lines of tramway in Sydney and suburbs, from the first day of August, one thousand eight hundred and eighty-three, until the thirty-first day of July, which will be in the year of our Lord one thousand eight hundred and eighty-four. day of MEMORANDUM of Agreement made the first day of July, which will be in the year of our Lord one thousand eight hundred and eighty-four, upon and subject to the terms and conditions hereinafter mentioned, in consideration of the said Tramways Advertising Company paying to the Commissioner for Railways and his successors a rental or payment for the right so granted at and after the rate of five hundred pounds per annum, by equal quarterly payments of one hundred and twenty-five pounds each, in advance, on the first days of the months of August, November, February, and May in each and every year during the continuance of this agreement, the first of such payments to be made on or before the first day of August, one thousand eight hundred and eightythree: And whereas the said agreement was to a certain extent based upon a letter from one George Atkinson, of date twentieth April, one thousand eight hundred and eighty-three, in which he made an offer to pay for the right to advertise in all the tram-cars and tram-stations in Sydney and suburbs, but the Commissioner for Railways aforesaid declined to entertain any offer in which the right to place advertisements in tram-stations should be included, and the agreement between the said parties hereto therefore was and is limited to placing advertisements in tram-cars only, as herein is mentioned: And whereas the said Tramways Advertising Company have also agreed to execute a Warrant of Attorney to the said Commissioner for Railways to secure payment of the sum of three hundred pounds, and to enter into a bond in the penal sum of three hundred pounds, with two sureties, for the due performance and observance of this agreement on the part of the said Tramways Advertising Company: Now these present witness that, in consideration of the premises, and of the payment to be made as hereinafter mentioned, and of the said Tramways Advertising Company observing all and every the stipulations herein contained, the Commissioner for Railways aforesaid, for himself and his successors, doth hereby give and grant to the said Tramways Advertising Company, and its successors and assigns, full right and authority to cause advertisements to be affixed and posted in all the tram-cars upon all the Government lines of tramway in Sydney and suburbs, in the said Colony, from the first day of August, in the year of our Lord one thousand eight hundred and eighty-three, until the thirty-first day of July, in the year of our Lord one thousand eight hundred and eighty-four, according to the terms, conditions, and stipulations herein contained. And that, in consideration of the premises and of the grant by the Commissioner for Railways to the said Tramways in consideration of the premises, and of the grant by the Commissioner for Railways to the said Tramways Advertising Company of the said right and authority to advertise as aforesaid, the said Tramways Advertising Company, hereinafter styled "The said Company," for itself, its successors, and assigns, doth hereby covenant, promise, and agree with and to the Commissioner for Railways and his successors: That

That the said Company shall and will, during the continuance of this agreement, well and truly pay to the Commissioner for Railways aforesaid, and his successors, a rent or payment for the said right to advertise, after the rate of five hundred pounds per annum, by equal quarterly payments in advance of one hundred and twenty-five pounds each, on the first days of each and every the months of August, November, February, and May in each and every year during the continuance of this agreement, the first of such payments to be made on or before the first day of August, in the year of our Lord one thousand eight hundred and eighty-three:

That the said Company shall and will conduct and manage the right of advertising as aforesaid under and subject to, and in all things in accordance with, the stipulations hereinafter mentioned—that is

to say:

That the said Company and their servants shall be subject to the Tramway By-laws and regulations made or to be made for the good government of the officers and servants of the Commissioner for Railways:

That the said Company shall not nor will accept advertisements for any longer period than for one

year, nor for any time exceeding the day fixed for the termination of this contract:

That the said Company shall at all times give a printed receipt for the moneys received by them or their agents or servants for advertisements intended to be affixed in and upon the said tram-cars, which said printed receipts shall be taken to be the proper vouchers entitling the person named therein to the right of publishing the advertisement therein mentioned for the period therein named for such advertising, such period not to exceed one year, or to extend the day fixed for the termination of the contract hereinbefore mentioned:

That the said Company shall and will supply and provide proper frames for all advertisements required to be posted in the tram-cars under this agreement, and in such positions as may be indicated by the Superintendent of Rolling Stock; and that the said Company shall and will provide for the approval of the Commissioner for Railways aforesaid, and furnish similar boards and frames, and affix the same to the tram-cars, under the superintendence and subject to the approval of the Superintendent of Rolling Stock aforesaid, such advertising frames to be of such size and design and painted such colour or colours as the Commissioner for Railways shall direct, and be well made and finished with a neat moulding round the edges; that no advertisements shall be required to be posted otherwise than in such frames; that the said Company shall, on the termination of this agreement, remove all advertisements at its own expense; and that any damage which may be done to the Commissioner's property in posting or removing advertisements, or in carrying on the advertising business under this agreement, shall, upon the request of the Commissioner, be forthwith made good by the said Company by and at its own cost and expense. And further, the Commissioner for Railways, or his authorized agent, may seize and sell so much of the advertising plant as he may deem necessary to realize the amount of damage done; the value of such damage shall in all cases be fixed by the Engineer for Tramways for the time being. That such-advertisements may be removed from place to place within the tram-cars by the Commissioner for Railways or such Superintendent of Rolling Stock as aforesaid, in such way as may then to the Commissioner for Railways or such Superintendent of Rolling Stock as aforesaid appear necessary to meet the requirements or convenience of the Tramway Department:

That the Commissioner for Railways and the Superintendent of Rolling Stock shall have the right of rejecting any advertisement which the Commissioner for Railways or such Superintendent of Rolling Stock as aforesaid shall consider ought not to be posted or exhibited in the said tram-cars or any of them; and no advertisement will be posted, or, if already posted, will be allowed to remain posted, if disapproved of

by the Commissioner for Railways or such Superintendent of Rolling Stock as aforesaid:

That the Commissioner for Railways reserves to himself, and shall at all times during the continuance of this agreement have, the right of affixing in all or any of the said tram-cars all or any notices or other publications by himself or any of his officers affecting the said tramways or any or all tramway or tramways in the said Colony, or the use, working, or management thereof, or affecting persons using the said tramway or tramways, and also all, every, and any notices on the part of the Government of the said Colony, or of any public department of the Government of the said Colony, without payment to the said

Company for so doing:

That the said Company shall not, without the sanction of the Commissioner for Railways being previously had and obtained in writing, assign or sublet their interest in the right of posting advertisements hereby granted, and if the said Company shall assign, sublet, or otherwise part with its interest in the said right of posting advertisements hereunder, this present contract shall be deemed to be broken on the part of the said Company and shall henceforth and thereupon cease, and the amount of the penal sum mentioned in the said bond shall be forfeited to the Commissioner for Railways, and shall be recovered and retained by him as for liquidated damages: Provided always and these presents are upon the express condition that if default shall be made in any one or more of the said quarterly payments of rent when and as the same shall become payable, and if the same shall remain unpaid for the period of seven days after the same shall become due (in advance) as aforesaid, or if the said Company shall fail to observe, perform, and keep all and every of the covenants, conditions, and agreements which on its part are to be observed and performed and kept, it shall be lawful for the Commissioner for Railways, without notice, to take possession of the whole of the advertisements in all or any of the said tram-cars, and to manage and carry on the business of advertising therein as herein provided for in such manner as may appear to him advisable; and all costs and expenses incurred in the management, together with all sums due under the contract, shall be paid on demand by the said Company, and in default of the same being so paid on demand by the said Company, shall be chargeable against and upon the amount secured by and under the said bond as ascertained and liquidated damages. And it is hereby further declared and agreed between the said parties hereto that whenever the term "Commissioner" is used in this agreement it shall be understood to mean the Commissioner for Railways for the time being or any one or more of

In witness whereof, &c., &c.

1883-4

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

TRAMWAY CONDUCTORS.

(DISMISSAL OF.)

Ordered by the Legislative Assembly to be printed, 16 July, 1884.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 11th June, 1884, That there be laid upon the Table of this House,—

- "Copies of all letters, minutes, and other documents connected with the
- "case of the Tramway Conductors who were dismissed without any reason
- "being assigned, together with all notes of proceedings taken at the
- "inquiry held by the Secretary for Public Works into the matter referred
- "to; also copies of any reports made by Mr. Detective O'Brien upon which
- "the action of the Department was taken."

(Mr. Cameron.)

TRAMWAY CONDUCTORS.

No. 1.

D. A. O'Brien's Case.

Minute of Superintendent of Tramways.

From information received I personally called upon Assistant Conductor O'Brien to produce the watch supplied to him by this Department, but this he was not able to do.

In answer to questions he first said it was gone to be repaired, then that it was at home, and eventually that he had tried to catch a Waverley tram one night and it was stolen from him, and that he

had given information to the police.

On making inquiries I find that he went to the Central Police Office on 24th February at 8.25 p.m., and made a statement to the effect that he had lost or had stolen from his person on the 22nd February. between the hours of 10 and 12 p.m., in King-street, a silver open-face lever watch, marked tram No. 132 on case, with brass guard attached; value in all, £6 10s.; can be indentified; no person suspected.

I have suspended him and recommend that his services be dispensed with. I have detained his

pay-order; the amount due to him up to date is £6 15s.

Will the Commissioner please approve of his dismissal, and that the value of watch may be deducted from pay due to him (O'Brien); or would the Commissioner wish other action to be taken in the matter. Commissioner. J.R., 17/5/83.

Minutes of Commissioner for Railways.

WHAT has been O'Brien's reputation in the Department?

Without any dishonest intention the man may have simply been afraid to report the loss, and

perhaps expected to recover it before it was missed.

The Superintendent, however, probably knows something of the case. He should see me personally. If there be no suspicious circumstances beyond the man's prevarication I should be disposed to ask him for further information or explanation. Сн. A.G., 19/5/83.

Mr. Tyrer explained to me that O'Brien has borne a good character, that he attributed his not reporting the loss of watch to indisposition to face the consequences, &c.

Let the value of the watch be deducted from the man's wages, and he may be reinstated. Сн. А. G., 28/5/83.

Mr. Roberts.

Mr. J. Willmott to The Superintendent of Tramways.

Sir. Tramway Office, 18 June, 1883. I regret having made an error as staffman on the Waverley line on yesterday, the 17th instant. I was staffman at the Ocean-street loop, when the 1.43 p.m. down tram arrived, I gave him a ticket instead of staff, and when the 2.18 p.m. arrived I gave him the staff. The 2.5 p.m. left Waverley without (See Rules 84 and 85.)

Hoping you will give my case your favourable consideration,

I am, &c. JAMES WILLMOTT.

- 84. Conductor to see staff before starting.—No conductor must signal his driver to start from any staff station without having first seen that the staff for that portion of the line over which he is to travel is then at the station.
- 85. Penalty for engine-driver leaving without staff or ticket.—An engine-driver will render himself liable to dismissal if, under any circumstances, he leaves a staff station without the staff or ticket for the section over which he is about to run; or, if he leaves with a ticket, without having also seen the proper

Conductor O'Brien to The Superintendent of Tramways.

Tramway Office, 18 June, 1883. I beg to report being in charge of the 1.15 p.m. down tram, Bridge-street to Waverley, on Sunday, the 17th instant, the staffman, James Willmott, being in charge.

In leaving Waverley I was in error in not seeing staff or my authority for the right of the road. (See Rules 84 and 85.)

In coming round the corner at Vernon-street we saw the 2.18 p.m. tram approaching with the staff, and when within 50 yards of each other, pulled up; the 2.18 p.m. reversed and went back on the loop. We then received the staff for Ocean-street loop, causing a delay of about 4 minutes.

Hoping you will give my case your favourable consideration, I am, &c., D. A. O'BRIEN.

Forwarded for Commissioner to see. This might have been a serious accident, but as it was nothing did occur beyond the two trams coming within 40 yards of each other. The man, Willmott, gave a ticket to the tram leaving Ocean-street at 1 43 p.m., instead of the two staffs. This tram left Waverley without first seeing staff, the next tram going to Waverley at 2.18 from Ocean-street took staff, men leaving Waverley are to blame, they knowing the rules well re staff and ticket. Staffman Staffman Willmott is also to blame; but had the men leaving Waverley without first seeing the staff paid even a little attention to their rules this would not have occurred. The conductor has had a book of rules, also been working staff and ticket stations for ten months; he was instructed by myself over and over again re never leaving without seeing staff. The driver is also one of the oldest hands, and been working these stations for many months. I have suspended both men in my Branch. (See Rules 84, 85.)—J.R., 18/6/83. Commissioner.

I find that on previous occasions of a similar character we have disrated the conductor who has left a staff station without first seeing the staff to that of car-cleaner or flagman. I must therefore recommend that O'Brien be reduced to car-cleaner for three months, and 6d. a day taken off his pay. In the case of James Willmott I recommend that he be reinstated, with a fine of three days' pay. The

driver will be dealt with by Secretary.—J.R., 24/6/83.

O'Brien, after the expiration of this term of three months car-cleaning must work up again as assistant guard. Recommendation in his case approved. Fine Willmott one day's pay.—D.V., pro Com-

missioner, 25/6/83.

D. A. O'Brien.—Extract from M.P., 84-1,434 (Commissioner's Minute):—"Services to be dispensed see No. 8. with by a week's notice."

EVIDENCE.

Frank O'Brien, traffic inspector, states:—I have known this man for some years; he was a 'bus driver, but left through drink; he was summoned and fined for using obscene language to a transit officer; out of pity for him as a married man I got him re-employed, but he could not resist drink; I have seen him on duty in that nervous state he could not ring off his fares properly.

Mr. Felton, Government Watchmaker, states: -That O'Brien went to his shop and told him he had been robbed of his Government watch while sitting drunk in a gutter.

James Willmott, point-cleaner, states: -That he has seen O'Brien under the influence of drink while on duty at Bridge-street; he has also repeatedly seen him, when on duty at Waverley, leave his tram and go into a hotel.

T. Jones, revenue inspector, states:—I was in Melbourne on my holidays; O'Brien had also been there, absent without leave; he was known as an employee of the New South Wales Government Tramways, and left without paying his hotel bill.

J. Roberts, Superintendent, states: -O'Brien-is addicted to drink and not fit to be trusted to collect revenue; he has been suspended and recommended for discharge, through losing his Government watch when drunk and making fase statements to Mr. Tyrer as to the watch; he has been repeatedly absent without leave, on one occasion fourteen days, another nine days (see time-keeper's report); he was reduced from conductor to car-cleaner for three months, and 6d. a day taken off his pay for a serious breach of the Staff regulations.

Registered Reports.

17th May, 1883.—False statement made to Mr. Tyrer, and other papers re lost Government watch. 15th June, 1883.—Serious breach of Staff regulations, reports, &c., connected therewith.

F.O'B.

Mr. J. Willmott to The Superintendent of Tramways.

Bridge-street Yard, 18 May, 1884. I beg to report that while I was in the yard shunting I have noticed O'Brien the worse of drink, also when conducting on the cars at Waverley. I have noticed him leave his tram at Waverley terminus and go to the public-house. On one occasion I said, "Well Dan, it's very dry." He replied "I had no small change," and laughed.

D. A. O'BRIEN.

Suspended on 18th June for leaving staff station without staff.

Disrated on 25th June for three months as car-cleaner.

Absent 9 days. Pay-sheet ending 19th July, 1883.

1 day. , 30th August, 1883. " 1 day.

", 1½", ", 13th September, 1883.

Reinstated as conductor, 25th September, 1883.

Holidays commenced 2nd November, ending on the 9th instant (viz., 8 days). Resumed work, 24th November.

Absent 14 days over holidays granted.

Pay-sheet ending 28th February, 1884.

13th March, 1884. 4th April, 1884.

Dismissed, 5th April, 1884.

J. S. MUIR,

Time-keeper, 16/5/84.

JAMES WILLMOTT.

O'Brien:-Frequently drunk; on one occasion lost his watch; absent from duty on a plea of being sick; anything but attentive to passengers; misses ringing fares; passing passengers free; altogether unfit for the position.—J.R.

Minute of Secretary for Public Works.

D. A. O'BRIEN.

I READ the statement of offences recorded against O'Brien and drew his attention to them, pointing out that although his offences were all attributable to his giving way to drink, and nothing dishonest was charged against him, still his history proved him to be units for the duties he had to perform.

O'Brien did not attempt to deny his faults, but wished to lighten them in regard to his nervousness

by stating that he was constitutionally nervous and that, as regards entering a hotel at Waverley there was no accommodation provided, and he had of necessity to go into the hotel.

F.A.W.

No. 2.

Charles Gilberthorpe.

Memorandum from Mrs. Keogh.

46, Gipps-street.

THE last tram from Randwick. Got in at Moore Park; tram did not stop at Liverpool-street. Told the guard I wished to alight there. Signalman made the remark tram did not stop. A gentleman got out and I followed; fell and hurt my knee.

The conductor for report.—J.W.T. (pro Superintendent).—Mr. Muir.

Report to Office:—Last tram from Randwick on 13th December. Lady got in at Moore Park; asked her where she wished to get out, and I understood her to say Bathurst-street. There being no one about I gave the signal to go on just after the driver had slackened speed, whereupon the woman jumped out. She seemed not to have hurt herself, so I allowed the tram to go on. The gentleman that got out was a driver from the sheds. Lady seemed under the influence of drink.—C. GILBERTHORPE, 2/1/83.

I recommend that this conductor be fined a week's pay. These are the complaints that cause all

the trouble,—not stopping at streets, and rushing past appointed places on time-table.—J.R., 4/1/83. Commissioner. Fine him a day's pay.—D.V., 9/1/83.

Mr. J. McGann to The Superintendent of Tramworks, Randwick.

49 Bathurst-street, Sydney, 29 January, 1883. Sir,

I write to inform you that during the last two months, while travelling by tram from Sydney to Randwick while on duty, I have been subjected to threats and insults such as I can no longer endure

without complaining.

The person whose conduct I now complain of is a ticket collector, who, on the first occasion asked me for my ticket, when I told him that I was in the Government service and I travelled to and from work free of expense; he then, in a loud tone, expressed his disbelief in my statement, and insinuated that I was travelling as a rogue and an imposter; this charge brought all eyes on me, and I felt it very

On the second occasion he again asked me for my ticket. I then told him that I had already explained to him who and what I am. He then said, "You must get out of this and ride up stairs; that is your place." This order was given in a loud tone in the presence of the passengers, and when there was plenty of room in the car I was riding in.

On the third occasion he again asked me for my ticket. I then showed him a pass that I had just received, and expressed a hope that that would in future satisfy him; but it did not, for on Saturday evening last, the 27th January, when I entered the 5 50 p.m. tram from Randwick, he again demanded my ticket, when I again showed him my pass, but that would not satisfy him, for he loudly declared in the presence of all the passengers that if I did not leave the car and go up stairs that he would stop the tram and drag me out. And now, fearing violence and a breach of the peace at his hands, I claim the presence of the Department. the protection of the Department.

I may add that I am always well clothed, sober, and in all ways respectable, and that I never

ride in the cars when there is room upstairs and the weather will permit; and that on Saturday last when he threatened to drag me out there were only two persons riding in the car with me, and that it was a

In conclusion I will venture to remark that the power given to such men as the one I now complain of, to stop a tram and drag a respectable man out without just cause, is a dangerous one and

should at once be withdrawn, as the same end could be obtained by milder and better means.

If ticket collectors are empowered to act in this manner it would be well that they had something to show it, for I would rather pay my fare and give up my pass than be subjected to such violence which has so often brought me under the gaze of the public, and which has given me such pain.

On the Saturday here mentioned I handed the said ticket collector a pencil and paper and requested him to write his name thereon, but instead of his doing so he jeeringly commenced to write my own name on the paper, and after being requested several times to write his name he positively refused to do I am unable at present to furnish his name.

Hoping that you see cause to forward this to the head of his Department,

I remain, &c., JAMES McGANN, Night Watchman,

Randwick.

Since writing this letter I have learned that his name is Gilberthorpe.—J.M.

I inquired of Conductor Gilberthorpe what it was before perusing all the contents of this complaint. If it is as stated by Night Watchman McGann, the conductor, when the pass was shown, acted indiscreetly. McGann is a particularly quiet inoffensive man, and always clean, respectable, and respectful at all times, and I will add, from what I have seen of the conductor, it is unlike his general conduct. Perhaps his explanation will show some reason for his conduct.—Geo. Downe, 1/2/83.

Mr. Roberts. Conductor Gilberthorpe to report at once should he be the conductor in question.--J.R., 8/2/83.

Mr. C. Gilberthorpe to The Superintendent of Tramways.

9 February, 1883 The report laid against me by James McGann, most of it is untrue. The first time I saw the The report laid against me by James McGann, most of it is untrue. The first time I saw the man he told me that he was the night watchman at Randwick, which I found out to be true. Since, this man always attained a seat inside the car, whether full or empty. On one or two occasions he has kept his seat below when others who had paid their fare had to stand. About two weeks ago I spoke to him about it, telling him that all workmen who had passes travelled outside. When I told him that he said, "How dare you speak like that to me?—ride outside I will not." I asked him for his name (to inform Mr. Downe of his conduct), which he refused me. I afterwards told the night foreman about him; he told me never to mind him this time, for he was very crotchety when his dignity was touched. I therefore took no further notice of it. took no further notice of it.

I may state that I did not say I would stop tram or pull him out.

I have asked him several times to show his pass, for, as he was sitting alongside Randwick passengers, and they not knowing who he was, I went up and demanded his pass, which he did not like at any time.

C. GILBERTHORPE.

Send on for Mr. Downe to see. I wish Mr. Downe would instruct all his men to show their passes, asked for or not by the conductor.—J.R., 11/2/83. Mr. Downe.

Seen.—The men shall be instructed to show their passes. McGann states positively there was plenty of room in the car, and that the conductor's statement is only made to screen his action.—GEo. Downe, 13/2/83. Mr. Roberts.

There appears to be fault on both sides. I shall have conductor cautioned. You have done same to your man re showing ticket.—J.R., 16/2/83. Mr. Downe. Seen.—G.D., 24/2/83.

Mr. J. Daley to The Superintendent of Tramways.

382, Crown-street, Surry Hills, 20 February, 1883. I desire to bring under your notice what might have been a very serious, if not fatal, accident, Sir,

which occurred to my wife and children yesterday.

My wife and two children proceeded in the morning to Coogee, and on returning in the evening by the car which reached Oxford and Crown Streets at about 5 10 p.m., my wife got out immediately the car stopped, with the youngest child in her arms, then turned to assist my boy (about 5 years old) out, when the car started without any warning. My wife pulled the boy out, but in so doing got her arm bruised against the car. My wife can only guess as to the time car stopped at Oxford street. She says the conductor, so far as she can say with any certainty, was on the other side of car; she does not think she heard his whistle sound. The consequences may be more serious than I can at present say, as my wife heing just now in a delicate state of health may yet suffer from the fright. I may mention that my wife, being just now in a delicate state of health, may yet suffer from the fright. I may mention that I have noticed similar carelessness when travelling myself,—you are scarcely allowed time to get off the I take this means, rather than rushing into print, of endeavouring to put a stop to a practice which I am, &c., JOSEPH DALEY. must, sooner or later, end fatally.

My wife emphatically declares that nothing will induce her to ride in one of the cars again.

Let me know who the conductor was. I have issued orders about giving time to enter and alight **–J**.R., **21**/2/83.

Find out who had the 4.43 p.m., February 19th, 1883, from Randwick.—J.W.T., 21/2/83.

Conductor C. Gilberthorpe had charge of 4.43 p.m.—J. H. Jones. Mr. Tyrer.

A complaint is made that when the 4.43 p.m. up tram stopped at Crown-street junction you did not allow a sufficient time for a lady and two children to alight; that when she went to assist her son (about 5 years of age) to alight the cars were started without any warning. Report at once.—J.W.T. (pro Superintendent), 22/2/83. Conductor Gilberthorpe.

The complaint made against me I am quite ignorant of a pathing has becaused decimal.

The complaint made against me I am quite ignorant of; nothing has happened during the week to my knowledge.—C. Gilberthorpe, 25/2/83. Superintendent.

Report herewith. Conductor Gilberthorpe denies all knowledge of this accident.—J.R., 27/2/83. Commissioner.

The Traffic Foreman to The Superintendent of Tramways.

Bridge-street Yards, 1 March, 1883. I have to report to you about Conductor Gilberthorpe's conduct when I informed him that he was to go on the Waterloo line. He said he would not go. I said there was one of two things for him to do, either to go to Waterloo or go home. He said that he would go for a week. for a we. Yours, &c., G. GAMGEE, Traffic

Traffic Foreman.

I have seen Gilberthorpe, and he wished to make the foreman a liar direct. and I recommend that Gilberthorpe be fined a day's pay.—J.R., 2/3/83. Secretary. I believe Gamgee,

On the 6:30 Waterloo tram a man by name R. Hargrave was making a noise on top of car; I spoke to him asking him to keep quiet, which he refused by still keeping up the noise. I then told him he must get off the car, which he refused also. I caught hold of him to put him off. He said "I'm b—if you will," and caught hold of my throat, tearing my shirt-collar and coat. With the assistance of two conductors we got him down stairs on the ground; he then tried to bite and kick us, and we put him in a car to take him to the watch-house. In the car he used some very bad language. He said, "You b——, if I get six months for this I shall mark you," and many other words. While we were taking him over to the station he called one of the conductors who were helping me "a b—— fat bastard."—18/3/83.

I got up to Redfern Court-house this morning, the 19th, at about 7 or 8 minutes past 10 o'clock. The case had been called just before I got there and man discharged.—C. Gilberthorpe, 19/3/83.

This

This is the first I have heard of this case. Does Mr. Harper know anything of it?—J.R., 19/3/83. The only information I had of the matter was from Conductor Moxam, who told me last night that a man had been given into custody at the Redfern Station for refusing to pay his fare. I attended at the Redfern Court this morning, and as there was no Tramway official present, and no such charge on the sheet, I was in the act of leaving when Conductor Gilberthorpe came up, the charge against Hargrave for obscene language and assault having been dismissed for want of a prosecutor.—G. G. HARPER, 19/3/83.

Forwarded for the Commissioner's information. Gilberthorpe gave the man in charge and then pleased himself as to the result. When I informed him this morning as to what action he should have taken he simply told me that he had overslept himself. The man was discharged, there being no appearance of plaintiff. Gilberthorpe appears to be above his duty, and I must make this young man know his place. What would Secretary advise under the circumstances?—J.R., 19/3/83. Secretary.

When did he leave work on the previous night?—D.V., 21/3/83. Mr. Roberts, B.C.

Gilberthorpe left work on the Sunday evening at 7.30. Yesterday he came to the office and stated the man could be found if we chose to prosecute. The style Gilberthorpe gave this message to Mr. Collagoration.

Gilberthorpe left work on the Sunday evening at 7.30. Yesterday he came to the office and stated in could be found if we chose to prosecute. The style Gilberthorpe gave this message to Mr. Colls the man could be found if we chose to prosecute. was something above his position.—J.R., 23/3/83. Secretary.

When was he due on the day he missed attending Court?—D.V., 27/3/83. Mr. I At 2 p.m. Left work at 7 30 the evening he gave man in charge.—J.R., 28/3/83. Mr. Roberts, B.C.

Note this gross piece of indifference against this man, and let him understand that it will militate against him.—D.V., 30/3/83. Mr. Roberts, B.C. Have done so.—J.R., 31/3/83.

On the 7.35 p.m. down arriving at M'Evoy-street last night you uncoupled your cars from motor, and after motor had shunted you allowed them to run down to loop (a distance of about 200 yards). Report at once why this was done, and how many passengers you had on board.—J.W.T. (pro Superintendent), 23/8/83. Conductor Gilberthorpe.

In answer to the report, sent to me on the 25th instant, asking why I shunted at M'Evoy-street, I beg leave to state that the shunt was done to save time and allow the driver all time possible to attend to his motor, as it was not in a fit condition to run without being well looked after. Had no passengers on tram on arriving at M'Evoy-street.—C. GILBERTHORPE. Superintendent.

Murray and Lambert to state what length of time tram had at Waterloo.—J.W.T., 29/8/83. Gilberthorpe had 19 minutes, being 5 minutes before time after shunting.—W.C.M.,

Gilberthorpe should not do the like of this. He cut off his cars some 200 yards and then ran them down the road. He had plenty of time, and might have caused some serious accident. He should be fined two days' pay.—J.R., 30/8/83. Commissioner.

When the nature of the case is made clear, and one can understand what the man is to be fined for, I will say if approved or not.—D.V. Mr. Roberts, B.C., 4/9/83.—G.B.

The case is this: Gilberthorpe allowed the motor to be cut off some 250 yards from the Waterloo stopping place, and ran the cars down without the engine. Had there been an accident, see the conse-There was no necessity for this, and had the brake given way there would have been a nice mess. 9/83. Secretary. Fine approved.—D.V. -J.R., 6/9/83. Secretary.

Mr. C. Gilberthorpe to The Superintendent of Tramways.

Sir, I beg leave to appeal against the fine imposed on me for shunting at M'Evoy-street on the 22nd August last.

I may state in reference to the shunting that it has been practised since Botany line opened, to shunt at bottom points, cutting off between M'Evoy-street and the Toll-house. This shunt is necessary at times to prevent the Waterloo from delaying the Botany tram as they arrive at Waterloo almost

together on some trips. The shunt on the 22nd was done to give the Botany a clear road and also for a greater purpose in that of allowing my driver to work at his motor, to prevent running to the sheds, as it was in a bad condition, thus preventing a delay of traffic which otherwise could not have been avoided

C. GILBERTHORPE.

Let Mr. Hobart have all papers. I do not see the necessity of what this man states.—J.R., 3. Mr. Hobart, for immediate report.—J.W.T., 24/9/83. 20/9/83.

I do not see any reason for Conductor Gilberthorpe resorting to this dangerous mode of shunting. According to Murray and Lambert's report he had ample time to shunt the usual way before the arrival of the Botany tram. On inquiry, I find that it has not been the practice to shunt in this manner, and that of the Botany tram. On inquiry, I find that it has not been the practice to shunt in this manner, and that Gilberthorpe is the only conductor that has done so. His excuse of endeavouring to gain time for his driver is very trivial, as 19 minutes would be sufficient time to make any repairs to a motor that a driver could possibly make while on the road. - A. C. Hobart, 24/9/83.

I do not see any extenuating circumstances in this case, and cannot recommend that his appeal be granted, re fine imposed.—J.W.T. (pro Superintendent.) Commissioner.

Please state at once from whom you received instructions re ringing for fares paid for carriage of newspapers to Botany and the nature of instructions given.—J.W.T. (pro Superintendent), 12/9/83. Conductor Gilberthorpe.

I am called upon to state from whom I received instructions re ringing for newspapers to Botany, and the nature of instructions given. I beg leave to state that I heard the instructions read to the Superintendent (by the time-keeper in Bridge-street yards) from the minute-book. The instructions, so far as I can remember, were that the charge of three pence (3d.) a parcel should be paid for carriage of such (magning newspapers) on the transverse and the conductor should registry the said three same such (meaning newspapers) on the tramways, and the conductor should register the said three pence (3d:) on receiving the same.—C. Gilberthorpe, 14/9/83. Superintendent.

Mr. A. T. Colls to The Superintendent of Tramways.

Sir, Sydney, 12 September, 1883. In reply to your inquiries regarding Conductor Gilberthorpe, I beg to state that on coming to the office one morning about three months ago he called my attention to some money he had collected for newspapers, and wanted me to take it to the office. I said, "No; if you have not signed any order regarding it, you see Mr. Primrose at once, and he will inform you what is to be done with the cash." He came and saw Mr. Primrose, and rang it off before him.

I have, &c., ALFRED T. COLLS.

What instructions did Mr. Primrose give Gilberthorpe? Please say.—J.R., 13/9/83. Mr. Primrose. I remember Gilberthorpe asking me about this money. I told him instructions were issued to conductors to ring all money received for papers on the cash-bell. He had a small sum in his hand, which he said he had received that morning. He then rang the amount off before me.—A.P., 14/9/80. Superintendent.

Mr. J. M. Melly to The Superintendent of Tramways.

Waterloo, 26 September, 1883. I beg to bring under your notice the gross negligence of the tram-guard on the 7.20 a.m. tram to Botany on Wednesday, 26th September. I was waiting at Hayes' Road for this tram, but it dashed past me and did not stop as usual. The guard was on the motor talking to the driver. This guard makes it his business to inquire of the people where they intend getting off the tram, and then he only stops for them, never waiting to pick up passengers. I would not write, only this sort of negligence is of frequent occurrence, and when a man waits for a tram and it goes along and leaves him, it is very provoking. I have, &c. JOHN M. MELLY.

Mrs. C. Melly to Tram Inspector, or to those it may concern.

Botany Bay, 14 November, 1883.

I CERTIFY that I saw the tram-guard in the motor with his back to my son, John M. Melly, who was standing in the middle of the street at Hayes' Road. He did not notice him, or did not stop the tram to take him and Provent the later with the Potential Research to the later with the Potential Research to the later with the Potential Research to the later with the Potential Research to the later with the later with the Potential Research to the later with the later wi take him up. By not stopping he had to walk to Botany on the day mentioned in my son's letter. It was about 8 o'clock when he passed by in the morning.

Yours, &c., CHARLOTTE MELLY.

Name of conductor of 7.20 a.m. Botany down on the 26th September?-J.W.T., 1/10/83. Gilberthorpe, 4/10/83.

Memo. to Conductor Gilberthorpe:—You are reported as having been on the motor talking to driver while same was running the 7.20 a.m. trip to Botany on the 26th September, and that you did not stop to pick up on that trip at Hayes' Road. Report as to why this took place?—J.W.T. (pro Superintendent), 4/10/83.

In answer to memo, sent to me requesting report stating reasons why I was on motor while running the 7.20 a.m. trip to Botany on the 26th September last, and why I did not pick up passengers at Hayes' Road,—in reference to my being on motor it is false, for as we have very few passengers on that trip I always avail the opportunity to have my breakfast (en route to Botany), standing on end of first car, and placing breakfast on seat or stairs. As to not stopping, the tram was pulled up to a very slow pace, and my not seeing any one about but a workman, who was leaning with his arms on the railings on the other side of road, and who did not move even after my stopping, I started ahead again.—C. GILBERTHORFE.

The 7:39 p.m. from Botany did not stop at Macintosh-street on 3rd instant. Name of conductor? J.W.T., 5/10/83. Mr. Scholey. Charles Gilberthorpe. Conductor Gilberthorpe for immediate report. -J.W.T., 7/10/83.

Conductor Gilberthorpe to The Superintendent of Tramways.

Sir. Sydney, October, 1883. In reference to memo. sent to me, requesting a report why I did not stop at Macintoshstreet on the 3rd instant, 7.39 p.m. trip from Botany, I beg leave to state that on the night mentioned I had a strange driver, who did not know the stopping-places. We passed Macintosh-street some 30 yards, when I blew my whistle for him to stop, which he did, one passenger leaving the tram, and in no other I have, &c., C. GILBERTHORPE. way causing any inconvenience to passengers.

Assistant Conductor Clement to The Superintendent of Tramways.

I most respectfully beg to report on the 3.39 tram from Botany, on the 20th instant, Conductor Charles Gilberthorpe left the Botany Terminus without the staff. As soon as I discovered the mistake I followed with No. 54 motor-W. Whitelaw, driver-and brought the other train through to Botany

> W. CLEMENT Assistant Conductor

This is another instance of Gilberthorpe's carelessness. staff being left behind, it caused delay and work to the traffic. Place with papers, and make out with list of other complaints.—J.R., 22/10/83.

Although there was no actual danger, the

Conductor Gilberthorpe to The Superintendent of Tramways.

Sir,

I have to report an occurrence on the 3.39 p.m. trip from Botany on the 20th October. A special was sent out behind us on the 2.20 p.m. trip from Bridge-street to lay out at Botany until 5.39 p.m. Special arrived about 10 minutes before we started. I started to time, thinking we carried the staff, as I always placed strict confidence in my driver (Bruno Bronsch), but on nearing Gardener's-lane loop I found out it was behind. At the same time we noticed a light engine coming up with it, arriving in time to deliver it up to down tram, therefore causing no delay to traffic. I report this matter at once, thinking it my duty to do so.

C. GILBERTHORPE.

Minute of Commissioner for Railways.

MOTOR 52 leaving Bridge-street about 1.25 to-day. Some boys were observed jumping on to the cars when they were in rapid motion; observed by the unreproved by the conductor. Superintendent for report.

CH.A.G.,
28/12/83.

Who was conductor? Ask for report.—J.R., 29/12/83. Gilberthorpe, for report.—J.W.T., 31/12/83

Conductor Gilberthorpe to The Superintendent of Tramways.

In answer to report re boys jumping on cars, I beg leave to state to the best of my knowledge neither boy nor boys, or any passenger, got on or off the 1.20 p.m. Botany trip from Bridge-street, while same was in motion. As I had the working of both cars to myself on that trip such a thing might happen on one side of tram while I was on the other. Had I noticed anyone entering tram while in motion I should have taken name or names, and forwarded same to office.

C. GILBERTHORPE,

3/1/84.

Conductor's report herewith. He states he did not see anything of the kind occur.—J.R., 5/1/84. Commissioner.

Minute of Commissioner for Railways.

Ir was the Minister who brought this case under my attention, and it came under his own personal observation; he is under the impression that the conductor must have seen the boys jump on the car. Please make further inquiry.

Сн.А.G., 10/1/84.

Mr. Roberts, B.C.

Send for Conductor Gilberthorpe to see me.—J.R., 12/1/84. I have seen this man, and he asserts he never saw anything of the kind occur. I questioned him closely.—J.R., 15/1/84. Commissioner. I have a very poor opinion of this conductor.—D.V., 17/1/84.

Minute of Commissioner for Railways.

From the Minister's observation it seems almost impossible that the conductor did not see the lads getting on to the car.

CH.A.G.,

19/1/84.

Minute of Secretary for Public Works.

SEEN. I am not sure where the tram was going, but I am certain as to its number, and conductor must be very short-sighted if he did not see the boys.

F.A. W.,

Mr. Roberts, B.C.

21/1/84.

Gilberthorpe still states he did not see the lads. There is a good deal he should see but will not. I have cautioned him.—J.R., 23/1/84. Commissioner.

The Superintendent of Tramways to The Commissioner for Railways.

Tramway Traffic Branch, 4 February, 1884.

Recommendation for increase of wages or salaries.

I RECOMMEND that the wages of Charles Gilberthorpe, conductor, be increased from 8s. 6d. per diem to 9s. per diem from 26th January, 1884, in accordance with the cassification.

Before recommending this man's application for a rise I would like the Secretary to see the list of complaints against him, and state if I will be justified in keeping his increase back for some time; of course the man has had some fines inflicted upon him.

J. ROBERTS.

Must stand over for a time. Re-submit end of April.—D. VERNON.

TRAMWAY

Fined one day's pay for not stopping at Liverpool street. Cautioned for his rude behaviour to James M'Gann. Cautioned for not allowing Mrs. Daly time to alight from car. Cautioned for neglecting to attend Court after having given a man in charge. Secretary says this is to militate against his future advancement. 		
83-4784	83-4183 83-4519	22 August, 1883 14 September, 1883	Fined two days' pay for shunting cars at M'Evoy-street. Cautioned for neglecting to ring for carriage of newspapers.		

EXTRACT from Commissioner's Minute Paper, 84-1,434:—"Charles Gilberthorpe, tramway conductor. See No. 8. Services dispensed with on a week's notice.—Ch.A.G., 29/3/84."

Mr. C. Gilberthorpe to The Commissioner for Railways.

Darlinghurst, 22 April, 1884. I am advised by Messrs. Fletcher and Fremlin, M.'sL.A., through the Superintendent, to apply for an interview in reference to my recent dismissal from the Service (Tramway). I have received no cause as to the said dismissal; therefore I beg for an interview. Trusting you will grant this my earnest approach for invition appeal for justice, I remain, &c. CHARLES GILBERTHORPE.

Mr. C. Gilberthorpe to The Commissioner for Railways.

Sir, Darlinghurst, 28 April, 1884. I am unable to get a letter from C. Newton Bros. & Co., ten years having passed since my being employed there. I send a letter enclosed from Farmer & Co. in its place. Have sent letters from all other masters. Hoping my statement with my letters will meet with your approval, I am, &c., C. GILBERTHORPE.

P.S.—Can also obtain letters from some influential men of the City.

Minute of Commissioner for Railways.

Seen. No vacancy, and services not required.—Chas. A.G., 29/4/84.

GILBERTHORPE.

Frank O'Brien, traffic inspector, states :- I have noticed Gilberthorpe not ringing off his fares properly on several occasions, and seen him miss collecting fares through gossiping with passengers, especially females, and generally careless on duty; since his discharge he applied to the Commissioner for employment, stating that, among others, he could get a reference from C. Newton & Co., but which he failed do do (see Commissioner's memo. attached, A); about a fortnight ago Mr. Superintendent Roberts and I met Mr. C. Newton, who told us he would not give him a reference.

Lambert and Murray, revenue inspectors, state:—On the 24th August, Gilberthorpe, contrary to orders, cut off his cars at M'Evoy-street, risking accident, and was fined two days' pay. On 24th August, 1883, left his tram while at Waterloo, and was absent 20 minutes with a woman. On 10th September, 1883, took his bag on suspicion (see Cavanagh's evidence) of keeping newspaper fare; it afterwards turned out he had noticed us.

W. M. Cavanagh, conductor, on three occasions saw Gilberthorpe take money for newspapers and not ring his indicator, and reported to Mr. Roberts. (See attached report herewith, B.)

J. Roberts, Superintendent, corroborates Inspector O'Brien as to Mr. Newton's statement, that no man in the Department had been more often reported than Gilberthorpe for breaches of the Rules, and that he has good reasons to doubt his honesty with regard to newspapers and other fares.

Registered Reports.

17th January, 1882.—Fined a day's pay through not going on duty in time. Tram missed a trip waiting a conductor.

28th December, 1882.—Fined a day's pay. Not stopping for passengers at Liverpool-street.
29th January, 1883.—Cautioned. Rude to passengers. Mr. M'Gann.
20th February, 1883.—Cautioned. Not giving Mrs. Daly and children time to alight.

20th February, 1883.—Cautioned. Not giving Mrs. Daly and children time to alight.

1 March, 1883.—Cautioned. Refusing to obey lawful orders from Foreman Gamgee.

18 , , Cautioned. Not attending Court after giving a man in charge. Secretary ordered

this to militate against future advancement.

22nd August, 1883.—Fined two days' pay for shunting cars in the wrong place, thus risking accident. 24th September, 1883.—Cautioned for not ringing for newspaper fares under very suspicious circumstances.

948-B

3rd November.—Cautioned. Riding on motor gossiping with driver, and not stopping to pick up passengers waiting at Hayes' Road. (Mrs. Melly's complaint.)

A number of other complaints were made, but found doubtful, and the benefit given to the accused.

F.O'B.

Re Charles Gilberthorpe.

20/5/84.

CONDUCTOR C. Gilberthorpe cut off cars at M'Evoy-street, 22nd August, 1883.

Left his train, and was away with a woman for 20 minutes at Waterloo terminus, 24th August, 883

Took his bag on suspicion of appropriating paper money. He saw us leave the office previously, 10th September, 1883.

To Superintendent Roberts.

Returned.

W. C. MURRAY, WILLIAM LAMBERT, Revenue Inspectors.

(A.)

Minute of Commissioner for Railways.

GILBERTHORPE has sent me in the enclosed testimonials, but the one I specially asked for, viz., from Chris topher Newton & Co., he has not furnished.—CH.A.G., 25/4/84.

(B.)

Memo. from Conductor Cavanagh to Inspector O'Brien.

In reference to what I know concerning Conductor Gilberthorpe, I was early-morning man at Bridge-street, and on three occasions I saw Gilberthorpe and Redman take money for papers given to them to be delivered by them at Botany and Waverley, between three and four shillings each, and not ring for it. I told Mr. Roberts, and he told the detectives, and on the following morning Redman was caught and dismissed for it. When the detectives took Gilberthorpe's bag he had rung off the money.

A. M. CAVANAGH,

Conductor.

GILBERTHORPE.

2 days' absent. Pay-sheet ending 3rd January, 1884.

1 ,, 5th April, 1884.

Dismissed 6th April, 1884.

J. S. MUIR, 16/5/84.

Minute of Secretary for Public Works.

I READ the list of offences recorded against Gilberthorpe to him, and asked what he had to say. He denied that he was in any way dishonest or lax in the performance of his duties, and explained that the reported incorrect record of fares was due in cases to defects in the instrument. Mr. Superintendent Roberts acknowledged that often the contents of the conductors' bags did not agree with the register recorded by the instrument. In regard to the cutting off of cars at M Evoy-street, Gilberthorpe states he did this to meet the convenience of the Department. His train was running late and the motor was out of order; he cut off the cars in order to give the driver an opportunity of remedying matters, and his action enabled the train to keep time on the return journey. He complains that his endeavours in this particular were met by a two days' fine. He states the reason he did not ring for newspaper fares was on account of the peculiar circumstances. In one case (referred to) 1s. 6d. was given to him with a bundle of papers for Botany, but before he had time to ask about it the person went away. He had, when opportunity offered, brought the matter under attention, and, in the presence of Mr. Primrose, rung off the amount on his register. In regard to the removal of Mr. Hawke, he denied being rough in his treatment. Hawke was drunk and he removed him from the car as quietly as he could. After the man was removed he walked away direct to the Police Court and did not complain till some minutes afterwards of the injury to his arm. I informed Gilberthorpe that there could be no doubt the charge was well founded; I knew Mr. Hawke personally, and had a vivid recollection of the rough treatment to which he was subjected at the time.

Gilberthorpe stated that his chief reason for asking for the inquiry was to know definitely why he had been dismissed, as at present he had no knowledge and was without a recommendation so that he could not obtain employment elsewhere. I informed him that the offences bore against him and the other conductors dismissed were more for breaches of the rules, carelessness, &c., than for dishonesty, and I would see if I could notify it through the press so that their characters might in some measure be restored.

F.A.W.

No. 3.

Charles W. Willson.

On August 24th, 1883, at about 11:10 a.m., at the Show Ground, Moore Park, I picked up a £5-note in a tram-car. I called the guard (his name is Charles Willson), and suggested to him to call the passengers back before they got through the gate and try and find the owner of the note. The guard said no, it would not do; it would be better to leave the note at the Lost Property Office, and said he would leave it there.

F. W. SUTTOR, Varnville, Minto.

Conductor C. W. Willson, for immediate report.—J.R., 5/9/83.

Conductor

Conductor Willson to The Superintendent of Tramways.

I was in charge of a tram running to and from the Show Ground, on the 24th August, the 10·50 from Bridge-street. A gentleman gave me a £5-note at the Show Ground. I saw him pick it up in the car; I was standing a few yards from the car. He held the note out to me, saying, "Here, Guard, some one has dropped a £5-note; I think it was that elderly gentleman gone on in front; call out and ask who dropped it." I said, "No, sir, that would not do, as any one could claim it; I will wait until the owner asks for it, and if not I will leave it at the office." The gentleman said, "All right," and went into the Show Ground. A few minutes afterwards a gentleman came to me and said, "You have a £5-note which belongs to me." I said, "How is that?" He said, "I lost it, and a gentleman picked it up and gave it to you." I said, "Well, give me a proper description of the note and you shall have it." He did so accurately, and I handed him the note. Had he come a minute later we should have started from the Show Ground, and then I would have left it at the Lost Property Office. As he demanded the note, and said he was the owner, and gave a right description of it, I felt I was duty bound to give up possession of the note, as I have done in many other cases where people have left valuables in the car and came to me before I reached the office, giving a description of the goods lost. But in this case there is a third person. Mr. Suttor handed the note to me to give to the owner and I did so. Mr. Suttor now asks the question: "How does he know the right owner got it?" I can satisfy him no further than that on my own convictions the man who lost the £5-note was the man who received it from me. In the first place he gave a full description of it; secondly, his appearance was enough to convince me he was the right owner; in the third place he was a bit excited, as a person would be who lost anything of value, and I regret to state in my hurry I forgot to ask the gentleman his name and address, which, I confess, was very foolish on my pa

$\lceil Enclosure. \rceil$

PERSONAL.

FIVE POUNDS.—The gentleman who lost a £5-note in tram-car, and received same back at Show Ground, please send address to 70 Arthur-street, Surry Hills.

WILL the gentleman who received a £5-note at Show Ground on 24th August oblige by sending his address to 70 Arthur-street, Surry Hills, as the person who gave it up to him must satisfy the gentleman that found it the right owner received the note.

Send paper to Mr. Suttor, and ask him to return the same with any remarks he may have to make. —J.R., 12/9/83.

Reply from Mr. Suttor and Mr. Hayter attached. - J.W.T., 1/10/83. The Superintendent.

F. W. Suttor, Esq., to The Superintendent of Tramways.

Dear Sir,

I am in receipt of your letter of the 14th instant, also Conductor Willson's statement in reference to the £5-note which I gave him on the 24th ultimo.

The statement, so far as it relates to what the

The statement, so far as it relates to what took place between the conductor and myself, is substantially correct, except that I do not think he said anything about giving it to the owner if he asked for it, but he would leave it at the Property Office. As to the rest of the statement I cannot say anything, but this I may say, that a person I know, who lives near Camden, saw and heard what took place between Wilson and myself, and possibly he may have mentioned the matter inside the Show Ground, and perhaps sent the gentleman back to get the money. I will communicate with him and let you know result.

I am, &c.,

F. W. SUTTOR.

F. W. Suttor, Esq., to The Superintendent of Tramways.

Dear Sir,

The accompanying note is from the person referred to in my letter of the 19th instant as having heard what took place between the conductor and myself concerning the £5-note.

I am, &c., F. W. SUTTOR.

[Enclosure.]

Mr. J. Hayter to Mr. F. W. Suttor.

Dear Sir,

I remembered you giving the guard the £5-note on the opening day of the Show. I never heard any one inquiring about it, nor did I mention it to any one down there.

Camden, 21 September, 1883.

I am, &c.,

Willson asks me to keep these papers until he sees Mr. Suttor, and states that he will do so in a few days. —J.R., -2/10/83.

F. W. Suttor, Esq., to The Superintendent of Tramways.

Varnnville, 19 October, 1883. Dear Sir, Some little time ago I received a note from Conductor Willson, wishing to see me when in

Sydney, to explain the matter of the £5-note.

I saw him last Tuesday afternoon, and from the explanation he then gave me of the affair I am inclined to think he is innocent of anything beyond the indiscretion of neglecting to get some acknowledgment from the person to whom he says he gave the money; and I am induced to take this view of the case from the description he gave me of the man he says he gave the note to, which agrees very well with my own recollection of the person who sat near me, and whom I considered most likely to have lost it. For my own part I do not wish you to take any extreme measures with regard to Willson, as I now very Yours, &c., F. W. SUTTOR. much doubt his having appropriated the money.

Chas. W. Willson, Tramway Conductor.

EXTRACT from M.P., 84-1,434 (27/3/84):—"Services dispensed with by a week's notice.—Approved. CHAS. A.G."

W. Hezlet, Esq., to The Commissioner for Railways.

ar Sir, Melrose, Woollahra, 24 April, 1884. I write this at the solicitations of some of the ladies of Woollahra, on behalf of Tram Guard My dear Sir, Willson, under suspension. I have noticed his conduct and politeness to ladies with children, and I always

observed him strictly sober. I knew nothing of him before seeing him on the tram, and think you should be put in possession of any good qualities the guards may have. My lady friends are moved on his behalf Yours, &c., W. HEZLET. in consequence of his being a married man. And beg to remain

Mr. Roberts, B.C., 25/4/84.—G.B. The Department is better without this man's services, and I could not hear of his re-instatement.—J.R., 25/4/84. Commissioner. Inform.—G.B.

The Commissioner for Railways to W. Hezlet, Esq.

Sir,

Department of Public Works, Railway Branch, Sydney, 1 May, 1884.

I have the honor to acknowledge the receipt of your letter of the 24th ultimo, stating that you have been desired by a number of ladies of Woollahra to intercede on behalf of Tram Guard Willson, whose services were recently dispensed with, and in reply have to inform you that I am unable, under the report received, to approve of Willson's re-employment.

I have, &c. CHÁS. A. GOODCHAP, Commissioner for Railways.

EVIDENCE—(No. 5)—WILLSON.

Lambert and Murray, revenue inspectors, state that on 7th July, 1883, they saw Willson take a cash fare at Regent-street, give change, but not register it till he got to the other end of the car and saw them noticing him. They have known him to carry females in his car who paid no fare.

Wigg and Jones, revenue inspectors, have often seen Willson carry women who paid no fares; a often did so on the different lines he was working; they have repeatedly seen him talking with these women and neglect to go round for fares, and passengers leave the cars without paying; they were instructed to hand over a gold watch to Mr. Murdoch, solicitor, which it was alleged Willson had -, but which she could not get back.

Mr. Felton states Willson gave him a gold watch to repair, stating it was his wife's. (This watch is said to have been given by Willson's order to Miss --'s solicitor, to save a prosecution for its recovery.)

J. Wilmott, points-cleaner, has often travelled up and down with Willson; has had fares handed to him by passengers alighting from the cars which Willson had, while gossiping with women, neglected to collect; on the 22nd March, 1884, saw him take a cash fare which he did not register, and afterwards put

J. T. Campbell, foreman car-cleaner, corroborates Willmott, Lambert, and Murray, both as to seeing him keep cash fares, that passengers had handed him fares Willson neglected to collect.

J. Roberts, Superintendent, states that on 24th August, 1883, Mr. F. W. Suttor picked up a £5-note in a Moore Park car and handed it to Willson, who did not report the matter till seventeen days after when called upon to do so. He then told Mr. Suttor it was the property of the Government, and that he would hand it over, but failed to do so; neither did he tell Mr. Suttor that at the time it was found he had handed it over to the supposed owner, as he afterwards to Mr. Roberts. Willson has been many times reported for neglecting his duty re collecting fares, and I have fair grounds for doubting his honesty.

Registered Papers.

A NUMBER of papers relating to a £5-note found in his car by Mr. Suttor, which Willson stated that he had handed to a strange man without asking a name or address, which circumstance he failed to report till called upon seventeen days after.—F.O.B.

CONDUCTOR Willson was suspected of not registering his fares, and on the 7th July, 1883, was seen by us to take a cash fare at Regent-street, give change, and not register it till he saw us after he had nearly reached the other end of the car.

WILLIAM LAMBERT. reached the other end of the car. M. C. MURRAY,

Revenue Inspectors.

Mr. J. Wilmott to The Superintendent of Tramways.

Sir,

I think it is my duty to bring under your notice, through what I saw in the paper this morning, that on March 22nd, 1884, I was going to Woollahra to attend to my work, and I saw Willson take a cash fare for which he did not ring. I have travelled different times on Willson's tram, and had tickets frequently handed to me by passengers alighting from his cars. I have noticed Willson talking to passengers, mostly ladies, and I have more than once spoken to him about missing his fares; he made no replies, but sometimes laughed, and I have spoken to Mr. Roberts about it. The fare that Willson took and did not ring for he put in his pocket.

JAMES WILLMOTT.

J. T. Campbell to The Traffic Inspector.

Sir,

I beg to furnish you with the following information, through seeing so much scandalizing in the papers, caused through the dismissal of certain conductors, who are trying to bring all the disgrace on the Department they can, and to do certain members of the Department, who have fought for these men over and over again, all the injury they can. I consider it is my duty, as a member of the Department, to come forward and state what I know. I have on different occasions seen Willson take cash fares and tickets from passengers without ringing for them and put them into his pocket. I have seen a cash fare handed to Willson at Bridge-street Terminus, the week previous to his dismissal, by a gentleman getting out of his car, for which Willson did not ring. I was standing alongside of him waiting to brake the cars down.

Yours, &c.,

J. T. CAMPBELL.

Charles W. Willson appointed Assistant-conductor on 8/5/82 at 6s. per day.

On 24th August, 1883, Mr. F. W. Suttor, of Minto, near Campbelltown, gave Willson a £5-note that he picked up going to Moore Park Show-ground. This Willson never reported, and was called upon for immediate report on the 6/9/83, seventeen days after having received the same. Willson stated to Mr. Suttor on the 24th August it was the property of the Government, and he would hand it in. Willson did not do so, and did not mention the matter until called upon by the Department, when he stated that he gave the £5-note to some elderly gentleman, without either getting his name or address. Willson afterwards advertised for the gentleman he gave the money to, but no one turned up. Mr. Suttor states in his letter of the 19th September that Willson said nothing about giving it to the proper owner; he distinctly stated in the presence of a witness that he would leave it at the Lost Property Office. He did not do so. Willson has often been seen ringing his fares on the wrong bells. When on Waverley line he would take through fares against orders, and in that way it was easy to defraud the Department.—J.R.

REPORT.

Willson, C.-2 days' absent, pay-sheet ending 13 September, 1883.

,, 1 day ,, ,, 25 October, ,, ,, 6 days ,, ,, 3 January, 1884. ,, 1 day ,, ,, 5 April, ,,

Dismissed, 6th April.

J. S. MUIR, Timekeeper, 16/5/84.

CHARLES WILLSON.

I READ the complaints against Willson to him, and asked what he had to say. He asked that as his character was affected he might be represented by counsel, but I informed him the request could not be entertained for one moment; the question was simply one of credibility. I had reports that he neglected to ring for fares, &c. The question was a difficult one to prove or disprove; he could simply deny it; and it was therefore a question upon what side the balance of evidence lay. There was no necessity for witnesses or counsel.

In regard to the charge in connection with the £5-note, he remembered it being handed to him when running a tram to the Association Show-ground, but he states that a few minutes after he received it a man came to him in an excited state and asked for the return of the note. As the description he gave of the note was correct, and the circumstances seemed to point to applicant as the owner, Willson handed him the note. He did not report the matter till it was brought to his attention by the Superintendent, seventeen days after, as it seemed to him there could be no doubt about the ownership. He had advertised for the person who received the note, but could not find him, and Mr. Suttor, who picked

up the note in the first instance, was, Willson stated, satisfied the note had been returned to the right person. Mr. Suttor's letters are enclosed. I informed Willson that, no matter under what circumstances the note was taken or given, he should either have brought the note to the Lost Property Office, or, if he gave it to any person, taken a particular description of him and obtained his name and address.

neglected to do, and he was certainly guilty of great thoughtlessness and disregard of the rules.

In regard to the collection of fares, he denied that he was guilty of dishonesty or carelessness. alleging that the indicator was not a true register of what was collected, as it sometimes failed to act. was impossible to avoid speaking to passengers; continual inquiries were made of the conductor, and he had in common civility to answer them, but he did not allow his conversation with the public to interfere

with the collection of tickets.

Willson denies carrying passengers free; and the matter of the watch was not brought up. F.A.W., 21/5/84.

No. 4.

Joseph Cantor.

Mr. G. Hale to The Superintendent of Tramways.

Sydney, 4 July, 1883. was travelling by the Waverley tram (which arrives at Queen-street, Woollahra, at 6.10 p.m.) By giving this your kind Yours, &c., GEO. HALE. last night, when I was insulted by the guard—Cantor, I am told, is his name. consideration I shall feel greatly indebted.

Cantor, for report.—J.R., 5/7/83. I beg leave to state it was about 6.5 p.m. when I left the yard.—J. Cantor. Memo to Cantor to deliver to Mr. Hale, asking if he is the conductor.—9/7/83. Mr. Hale now wishes to withdraw his charge against Cantor.—J.W.T., 13/7/83.

Mr. G. Hale to The Superintendent of Tramways.

Dear Sir, Sir, Sydney, 12 July, 1883. In reply to yours of the 10th instant, I beg to inform you that as I do not like any one to lose their situation I will withdraw on these grounds. Yours, &c., GEO. HALE.

Mr. J. Cantor to The Superintendent of Tramways.

I beg to state that on the 7.5 p.m. trip from Enmore, on arriving at the yard I dropped the cars from Phillip-street on to No. 3 road, with my assistant Orgreen, just above the points. After laying there a short time Pointsman Webber called out to the driver to come back. He told me to take off my brake. At this time the motor was standing near the cars and fireman was talking to Pointsman Webber about trying to get home. This was near the back of the hind car. When the pointsman told him to come back I also blew my whistle for him to come back, as I thought by him being there so long he was coupled up. I took off my brake and waved him back. The cars came back by themselves and no motor. When the cars got half-way between the bottom points and the block I saw there was no motor, and I at once put on my brake and blew my whistle for the assistant to put his brake on, but he was off the car. He did not say he was going away. When I put my brake on so quick the cars skidded and the back bogies went over the block. If the assistant had been at his brake we could have stopped the cars from going over the block. I remain, &c.,

Cantor put back as assistant by Mr. Roberts.

1. Who put him in charge of a tram without sanction of Superintendent? 2. Who was his mate at the time the tram of which he had charge on 16th instant, when he let it over the roadway in Macquarie-street? 3. What was his mate doing at the time of the accident? 4. Instruct Webber to report what he saw of the accident.—J.W.T. (pro Superintendent), 17/8/83. Traffic Professor Bridge-street.

Cantor was not in charge of tram permanently, but had exchanged work with Conductor Ronald, on account of Ronald being lame. I told Mr. Roberts of the change at the time it occurred.—A. C. Hobart,

Foreman, 17/8/83.

Pointsman Webber to The Superintendent of Tramways.

Bridge-street Yard, 17 August, 1883. I beg to report that last night, the 16th August, Cantor's tram was standing on No. 3 line, and when the road was clear I gave him the signal to come back. He took off his brake and let his cars come back, and when he was back over the points he blew his whistle to stop, and then I heard the cars strike the block, and when I went down to see I found front bogie over the block and the car off the road.

Yours, &c.,
WILLIAM WEBBER. There was evidently carelessness on the part of Cantor, who should have seen his cars coupled up or otherwise. He did not put his brake on soon enough. The damage done to car is at least something heavy. I recommend that he (Cantor) be fined a week's pay.—J.R., 21/8/83. Commissioner.

What will cost of repairs be?—D.V., 23/8/83. Mr. Midelton. Will Mr. Roberts please say what is the number of the damaged car?—R.J.S. Car No. 96.—J.W.T. (pro Superintendent). Mr.

Howe, for reply to Secretary's minute. __J.M.

See letter.

I think there is some mistake about the number given of car. No. 96 car was not damaged, but on the same date, at Bridge-street yard car No. 75 was damaged in the manner herein described. To make the latter car in as good condition as before the occurrence would cost £30; but the estimated cost for repairing it so as to enable it to be continued running, is £3.—H.B.H. Fine approved.—D.V.

Mr. G. T. Dickinson to The Commissioner for Railways.

Bulli Coal Mining Company's Office, 19 November, 1883. I have the honor to write to complain of Guard No. 46, Waterloo tram, on Saturday, 17th Sir, instant—tram leaving at about 12 55 p.m.—in reference to the following circumstances:—I met the tram at Market-street, as it was proceeding from the Terminus towards Waterloo. Upon seeing that all the seats in the lower compartments and upper parts of both cars were not only full but people were standing along the upper gangway in front of the seats and on the platform on top of stairs, I stepped on the lower platform with some five or six others, and remained standing, the guard making no objection to our getting on. In the course of a few minutes or two a young guard (No. 46) came along, and in a peremptory manner ordered us to go upstairs. I pointed out to him that there was not even standing room, except on the stairs, and he told me to stand there, on the steps. This I refused to do on account of the danger which is apparent, on considering the lowness of the rail; the guard then told me I must go upstairs or get off. I said it was impossible to go upstairs as every gangway was choked with people, and as I was only-going a short distance I refused to get off, upon which he tried first to drag me off, and then to push me off, both of which efforts were ineffectual; several men standing on the stairs called out to him to be careful, and he then left and went collecting fares. Another guard came along and took my fare, among others, who were all standing on the platform. (No. 46 had made no attempt to prevent others getting on the tram and standing on the lower platform, subsequent to my going there.) A gentleman standing by told the guard he was exceeding his duty, and was immediately ordered to "hold his tongue and mind his own business." When I left the car, at the George-street Police Station, I gave the guard my name. I may mention here that he had not asked for it before attempting to push me off the car. The man all through was most excited and vehement, although not abusive.

In closing, I beg to refer you to Mr. Macdonald, E.S. and A.C. Bank, Pitt-street, who witnessed the whole circumstance. Applogising for troubling you at such length, and trusting that the guard may be cautioned against future assaults on passengers, I have, &c., G. T. DICKINSON.

ERTS, B.C., 19/11/83.—G.B. Who was the conductor in charge? Let him read this What has the assistant conductor to say? Obtain both reports.—J.R., 20/11/83. No. Mr. Roberts, B.C., 19/11/83.—G.B. note and reply. According to conductor's report the gentleman should have gone upstairs, and from the sistant it appears the conductor only did his duty.—J.R., 3/12/83. Commissioner. 46, Cantor. report of the assistant it appears the conductor only did his duty.—J.R., 3/12/83.

Mr. O'Brien to refer to some of the witnesses.—D.V., 4/12/83.

Conductor Cantor to The Superintendent of Tramways.

Sydney, 22 November, 1883. I beg leave to report that on the 17th of November I left Bridge-street for Waterloo about 1 beg leave to report that on the 17th of November 1 left Bridge-street for wateriou about 12.57 p.m. with a special. On arriving at Market-street there were about four passengers standing on the platform of the back car. I asked them to go upstairs, as nobody was allowed to ride on the platform. They all went up except one gentleman. I asked him to go upstairs, that no one was allowed to ride there. At this time there was room upstairs; he said there was no room. I then told him to get off and wait for the next; he said he would do neither. I then went round collecting the fares. After I collected the fares I asked his name, which at first he would not give. He wanted to go away. I told him that I must have his name. He then gave his name, and then some gentleman who was with him said I was exceeding my date. J. CANTOR.

The gentleman's name was Mr. Dickinson. Witnesses-Mr. James, Mr. Pike, and Mr. Zucker.

Assistant-Conductor Scully to The Superintendent of Tramways.

I beg to report that on the 17th of November I was on the 12.56 special to Waterloo, assistant to Conductor Cantor. When at Market-street I heard the conductor in charge ask a passenger to go upstairs, as he was standing on the footboard, and he refused to go up or get off the car when asked (there was room upstairs). Saw the passenger write his name for conductor when he was getting off at George-street.

I have, &c.,

M. SCULLY.

Traffic Inspector O'Brien to The Commissioner for Railways.

Tramway Department, Sydney, 6 December, 1883.

Re attached complaint against Conductor Cantor.

THE altercation took place on the front of the back car, on which Mr. Dickinson, Mr. M'Donald, and Cantor were standing, while the witnesses James, Pike, and Andrews were standing on the back of the

Mr. M'Donald says Cantor was very rough and appeared to have lost his temper, and that he did not ask an address before he tried to force Mr. Dickinson off the tram. He further states there was no room on the upper deck, that the stairs were crowded, and that he told Cantor he was exceeding his duty.

Santor's own witnesses, James and Pike, state there was standing room only on the upper deck of the hind car, and they saw several passengers, who stood beside Dickinson, go up when asked to do so by Cantor. They heard Dickinson refuse to go up or get off the car, when Cantor seized him by the collar with both hands and tried to force him off; some passenger spoke, and Cantor let Dickinson go. They heard nothing about name or address till Dickinson was leaving the car at George-street.

W. Andrews, a clerk in the Tram Office, corroborates James and Pike.

The

The trouble in this case seems to have been brought about by allowing passengers to get on a tram already overloaded, but it is very difficult to prevent it at certain times of the day,

Cantor is a young man, and appears to have acted without realizing the position. FRANK O'BRIEN,

Traffic Inspector.

Minute of the Commissioner for Railways: -It is evident that the guard acted indiscreetly in laying hands upon Mr. Dickinson, and he should be warned not to act in that way again, but to take the name and address of persons who refuse to move off the platform. Express regret to Mr. Dickinson that the conductor should have had to remove him from the car by force, but point out that if the conductor had taken his name and address in the first instance and reported his refusal to leave the platform it would have been my duty to have taken legal proceedings against him under the by-laws. Add that the conductor has been cautioned.—CH.A.G., 13/12/83.

The Commissioner for Railways to Mr. G. T. Dickinson.

Department of Public Works, Railway Branch, Sydney, 15 December, 1883. Referring to your letter of the 19th ultimo, complaining of the conduct of guard No. 46 in attempting to forcibly eject you from the Waterloo tram-car on Saturday, the 17th idem, I have the honor to inform you that I have caused inquiry to be made in the matter, and the reports are now to hand.

I must express my regret that the conductor should have tried to remove you from the car by force, but have at the same time to point out that if he had taken your name and address in the first instance, and reported your refusal to leave the car platform, it would have been my duty to have taken proceedings against you under the by-laws. I may add that the guard has been cautioned to be more careful in future.

I have, &c., A. GOODCHAP,

Commissioner for Railways.

 $Mr. \ Roberts. --G.B., \ B.C., \ 15/12/83.$ Cantor cautioned and informed according to Commissioner's minute paper. A difficulty exists when address is refused.—J.R., 15/12/83.

Inspector Wigg to The Superintendent of Tramways.

Tramway Office, 3 March. 1884. I beg to report for your information that by the Enmore tram, 3.20 p.m. from Bridge-street, of which Conductor Cantor was in charge, two young men came on the top of the car at Hordern-street, As Cantor passed them by without charging when collecting his fares, I asked him, on arriving terminus, how it was that he had done so. He replied that they had paid him right through at Enmore terminus, how it was that he had done so. He replied that they had paid him right through when getting on at the corner of the Newtown Road. These two men waited near the cars and went back again in Cantor's tram towards Sydney, and from their manner and movements whilst waiting I am of opinion that they were acquaintances of his, and that his statement to me of their having previously paid

their fares right through was not correct.

I have, &c., WALTER S. WIGG.

Conductor Cantor, for immediate report.—J.R.

Conductor Cantor to The Superintendent of Tramways.

Sydney, 4 March, 1884. I beg leave to state, in answer to the report charged against me by Mr. Wigg, that on the 3.20 p.m. trip from Bridge-street to Enmore on March 2nd, of which I was in charge, on arriving at Newtown Road two young men got on the car. When I started the tram I asked them for their fares, and one of the young men, who are strangers to me, gave me a shilling and told me to take through for two I registered 10d. and gave 2d. change. At this time they were standing on the stairs, and I asked them to go inside. I think they went in at Forbes-street or Missenden Road. After arriving at Enmore they asked me if the tram was going to Marrickville. I told them no, and said it would be about half an hour before one went there, so they said they would not wait, and they came back with me.

J. CANTOR. Who instructed Cantor to take the fares through? I don't quite believe the statement of Cantor.

J.R., 7/3/84.
I had no orders to take fares through; but on Marrickville nearly all the conductors take the fares through, and with passengers who don't understand the sections it is always best to do so, as it saves any difficulty.—J. CANTOR, 11/3/84. Superintendent.

I recommend that this man's services be dispensed with. He will not obey orders re the collection s. This is how these men defraud the Department.—J.R., 13/3/84.

Inspector Wigg to The Superintendent of Tramways.

Tramway Office, Phillip-street, 15 March, 1884. After having read Conductor Cantor's answer to my report of March 3, I am still of opinion that the two young men referred to were friends of his, and that they did not pay any fare. As to his statement of their standing on the stairs of the car, there was no occasion for doing so, as there was plenty of room on the top of the car, where he ought to have sent them at once if they were doing so. that they got on the car at the corner of the Newtown Road, but they were first seen by me at Hordernstreet, Newtown, when they came off the top of car. Also, his and their manner, whilst conversing together at Enmore, was not that of strangers to each other. I have, &c., WALTER S. WIGG.

Forwarded for the Secretary to see. This man Cantor should be punished.—J.R. Mr. O'Brien and Mr. Roberts,-Please see me to-morrow.-D.V.

Extract from Commissioner's minute of 27/3/84:—"Joseph Cantor: Services to be dispensed with by a week's notice."

EVIDENCE.

Frank O'Brien, traffic inspector, states:—On the 6th December last I was ordered by Mr. Vernon to inquire into a charge of assault, made by Mr. Dickinson, of the Bulli Company, against Cantor. From the witnesses Cantor named I found that he had not asked the passenger's name before roughly seizing him by the throat and trying to force him from the tram. Cantor was cautioned on the 7th December last; Cantor with Gilberthorpe was charged with breaking a drunken man's arm while removing him from the tram. The case was dismissed as plaintiff was drunk, but Mr. Dillon said he had no doubt the man's arm was broken in his struggle with the two conductors. Cantor was very careless in his duties; I have seen him miscollecting fares, through talking with passengers, and make mistakes with his indicator.

Walter Wigg, revenue inspector, states:—On March 2nd, 1884, two young men got on Cantor's car at Hordern-street; paid no fare to Enmore; stood there talking with Cantor, and left again for Sydney

in the car with him.

J. S. Muir, timekeeper, states:—On April 18th, 1883, I was speaking to Mr. Roberts at the Bridge-street platform; a lady and gentleman tried to catch the Glebe Point tram which had just started. Cantor laughed at them and called to them to come on, and put his thumb to his nose with the fingers extended, making a lunar as it is called; Mr. Roberts saw it.

James Wilmott, points-cleaner, states:—On the 9th of March, 1884, Cantor started a tram from Bridge-street before passengers had time to get in; one of them called to him to wait when he put his

thumb to his nose and laughed at them.

J. T. Campbell, car-cleaner (foreman), corroborates Wilmott, and states he has repeatedly seen Cantor do the same, and on one occasion saved him from being reported, by telling the gentleman he would let Mr. Roberts know; Mr. Roberts saw what took place.

Lambert and Murray, revenue inspectors, have seen Cantor rude to passengers and generally

neglecting his duties; carrying dead-heads, &c.

J. Roberts, Superintendent, corroborates Muir, Wilmott, and Campbell as to making lunars at passengers, &c., and states Cantor has been many times reported, fined, suspended, &c., for breaches of the rules, and that he is unfit for the position of conductor.

Registered Reports.

4th July, 1883.—Insulting behaviour to a passenger (Mr. Hale.) 6th December, 1883.—Assaulting a passenger (Mr. Dickinson.)

16th August, 1883.—Fined a week's pay for letting cars run into Bridge-street yard and damaging

car to the value of £30.

15th March, 1884.—Carrying passengers (friends) to and from Enmore and not collecting their fares.

Re Joseph Cantor.

CONDUCTOR CANTOR was in our opinion in no way suited for the position he held, being careless, inattentive and impudent to passengers.

Minute of Secretary for Public Works.

I READ this history over to Cantor and asked him what he had to say. He asked for a postponement of inquiry, but I informed him I could not listen to request as he was aware of the charges and in every case an inquiry had been made when he had either admitted or denied the charges. He stated he could produce witnesses to prove that he was not rude or rough to Mr. Dickinson, that he merely asked him to go up stairs as he had orders to allow no one to stand on the stairs or boards. As regards Mr. Hawke, he had simply acted under Conductor Gilberthorpe's instructions in assisting to remove Hawke from the car and had used no undue violence. I informed him that I knew Hawke to be a quiet, well-conducted man, and was of opinion he had used undue violence in removing him, and this result was shown in the careful examination at the Police Court. In regard to the miscollection of fares, he explained that it was the custom to collect through fares from passengers for Marrickville on the first section; consequently on the other sections no fares were collected, but he had to acknowledge that he acted against definite instructions in this matter. He denied the charge that he was in the habit of carrying passengers free.

No. 5.

J. B. Cullen.

Traffic Foreman Gamgee to The Superintendent of Tramways.

Sir. Bridge-street Yard, 8 July, 1883. I beg respectfully to report that on the arrival of the 2.33 p.m. tram from Waverley, before the passengers had time to alight at Bridge-street the conductor in charge, George Searles, let the cars in the yard before the passengers had time to alight from them; both he and his assistant (Cullen) commencing laughing at them. When I spoke to them about it they said they had plenty of time to get off. I replied they had not, and it was their duty to see that they were off at Bridge-street, as the passengers were half. way down the stairs at the time. The passengers said that they would report the matter. I told them (Searles and Cullen) that they would be reported, when they replied, "Let them, and be b--d to them : they will want us to take them off the cars. I have, &c.,

G. GAMGEE,

Traffic Foreman. Ask these two men to come to the office, and let foreman be here also. Let me know appointed time.—J.R., 9/7/83.

I have seen these two men. I have given Cullen another chance.—J.R., 11/7/83.

I am informed that one afternoon last week you obtained drink while on duty, having the same in a flask; also that you offered drink to another conductor when on duty. In consequence of your conduct in this matter you are required to show cause why you should not be dismissed the Service. J.W.T. (pro Superintendent), 18/8/83.

Assistant Conductor Cullen to The Superintendent of Tramways.

Sir,

In reply to your report, I beg to state that I did get a person to get me a glass of spirits whilst on duty, as I had the cramps in my stomach, which I am subject to at times, but only once; I also did ask Skinner, the conductor, to have a drop of it, not thinking it any harm.

This is the only time I have drank a drop of spirits whilst on duty since I have been in the Service:

J. B. CULLEN.

Seen. I am satisfied with this explanation.—J.R., 20/8/83.

Extract from Minute-paper, 84/1,434:—"J. B. Cullen, tramway conductor; services dispensed with on a week's notice.'

EVIDENCE.

Frank O'Brien, traffic inspector, states :- In July last my attention was drawn to Cullen at Glenmore Road; a lame passenger narrowly escaped a serious accident through the tram moving on too quickly; Cullen was gossiping with a passenger standing beside him on the platform, and said, "The b—— old crippled sod had no business on the trams"; I learned Cullen's name the next day, and reported the matter to Mr. Vernon, who advised to wait and see if the passenger thrown from the step would make a claim, and waiting action, no further steps were taken; I have seen a man, who I believe was a checktaker at the "Royal," ride in Cullen's car and pay no fare—Cullen talking with him; I noticed him ring only one or two cash fares on his indicator; one night in the latter part of last January I saw him, apparently booking bets, opposite the "Royal," when Foreman Hobart told me he was on sick leave; after his discharge he had two interviews with Mr. Vernon, and solemnly assured him that he had never been inside nor belonged to a certain gambling club, nor made a book at one suppressed by the police and the owner fined; on the strength of that statement Mr. Vernon ordered an inquiry, of which Cullen was advised, but failed to attend, although he was hanging about King-street at the time; before leaving, Mr. Vernon mentioned this to the Commissioner.

T. Jones, revenue inspector, states :- Acting under instructions from Mr. Roberts, I paid 5s. and became a member of the Totalisator Turf Investment Club, held in a room rented for the purpose at Little's, "Bass' Hotel," Market-street; only members were admitted; Cullen was a member; I have seen him there booking bets; the club was broken up by the police, and the owner fined.

J. T. Campbell, foreman car-cleaner, states:—I have known Cullen make a book on races in the

yard at the Bridge-street Terminus; he is a rough uncouth man in his manner, and commonly uses bad

language

G. Gamgee, traffic foreman, states:—On the 8th February, 1883, Cullen and another conductor ran a tram into the Bridge-street yard before the passengers had time to alight; the passengers complained, and I spoke to both conductors, and both made use of bad language and insulting behaviour; I reported the matter to Mr. Roberts, who severely consured Cullen and discharged the other conductor; about the end of February last complaints reached me and Foreman Hobart from passengers of rough and uncouth treatment from Cullen; on reporting the matter to Mr. Roberts he ordered Cullen to be taken off the cars and put to work on the street water to the conductor of the cars and put to the street water to the conductor of the cars and put to the street water to the conductor of the cars and put to the street water to the conductor of the cars and put to the street water to the conductor of the cars and put to the street water the conductor of the cars and put to work on the street water than the cars and put to work on the street water to the conductor of the cars and put to work on the street water to the cars and put to work on the street water to the cars and put to work on the street water to the cars and put to work on the street water to the cars and put to work on the street water to the cars and put to work on the street water to the cars and put to work on the street water to the cars and put to work on the street water to the cars and put to work on the street water to the cars and put to work on the street water to the cars and put to work on the street water to the cars and put to work on the street water to the cars and put to work on the street water to the cars and put to work on the street water to the cars are the cars and put to work on the street water to the cars are the work on the street watering tank; Cullen did not appear when first ordered to the tank, but afterwards did so, and remained on the tank till his discharge.

Clarkson, conductor, states:—Cullen was working with me as assistant conductor; some lady

passengers complained to me of his rough treatment, and I reported it to the traffic foreman.

J. Roberts, Superintendent, states:—In February, 1883, Cullen was reported by Foreman Gamgee, for insulting behaviour and using bad language to passengers; after hearing his statement I severely reprimanded him and gave him another chance; a few months ago he was again reported to me as being rough and uncouth with passengers, when I gave orders for him to be taken off the cars as conductor, and put to work on the street-watering tank.

Registered

Registered Reports.

8th February, 1883.—Foul language and insulting behaviour to passengers. Foreman Gamgee heard and reported to Superintendent.

19th August, 1883.—Having a bottle of spirits in his car while on duty, and offering part of it to another conductor. F. O'B.

Re Cullen.

In the evidence against this man, for Conductor Clarkson (clerical error) read Conductor Cavanagh, who was present at the inquiry in order to have given personal evidence if required. See his written statement, attached, which was made prior to the late inquiry; and for Mrs. Fulford, read Mrs. Ferguson.

The clerical errors occurred through Foreman Gamgee misunderstanding what the conductor said.

J. O'B., 4/6/84.

Memo. to Traffic Inspector F. O'Brien.

Sir,

I have been several times informed by passengers travelling on the Waverley line, of Conductor Cullen's conduct towards passengers as being very rough in his manner to them.

A. M. CAVANAGH.

Re J. B. Cullen.

Thomas Jones states:—By instructions received I became a member of the Totalisator and Turf Investment Club to see if a certain man, employed in the Tram Department, was in the habit of going there. I then saw Cullen there as a member of the club; both he and I remained members of this club until it was broken up. The meetings were held at Little's, "Bass Hotel," corner of Pitt and Market streets.

Mr. J. T. Campbell to Traffic Inspector O'Brien.

Sir,

Bridge-street Yard, 20 May, 1884. I beg to report for your information that I have known Cullen to make a book on horse-racing

Yours, &c., J. T. CAMPBELL.

Report.—Cullen, J. B.

Absent 5 days. Pay-sheet ending August 31st, 1883.

1 day. September 13th, 1883. 1 October 11th, 1883. December 6th, 1883. January 31st, 1884.

Dismissed, April 6th, 1884.

in the yard, and he has been considered a vulgar-spoken man.

J. S. MUIR,

Timekeeper, 16/5/84.

Minute of Secretary for Public Works.

I BEAD Cullen's history to him as recorded. He states in reply to Traffic Inspector O'Brien's complaint that he has no recollection of such an occurrence and is entirely innocent of making use of the words attributed to him. I allowed Cullen to examine O'Brien, but nothing definite was elicited, and O'Brien is confident that the words were made use of by Cullen. In regard to several reports of uncouth and bad language, Cullen admits that on occasions he may have made use of bad words, but denies being uncivil or rough with passengers, and states that he is innocent of the charge for which he was shifted to the street-watering tank, and that the charge was made through spite on Foreman Gamgee's part. In regard to the charge of having spirits on his car, Cullen explains that he was unwell; he asked to be relieved, but could not get away, and had to take a little spirits to keep him up. He denies that he was in the habit of making a racing-book, although he acknowledged making a few wagers and putting them in his pocket-book. He was not a member of a gambling club, although he had been a member of a totalisator, which was retarded by the relief of the pocket book. which was stopped by the police. He denies that he ever carried passengers without collecting their fares.

No. 6.

Reports of Superintendent of Tramways and Traffic Inspector.

Re character and habits of some Conductors.

Confidential. Tramway Department, 24 March, 1884. WE submit, for the Commissioner's information, the character and habits of certain conductors.

inquiries from which the information is compiled extends over the past nine months, from two distinct sources, and has been thoroughly and impartially tested, and we vouch for its being substantially correct.

Cullen.—Was until lately a friend of Challoner's, when they fell out; makes a small book on races and pays if it suits; a leading member of a gambling club, lately suppressed by the police; frequents the "Theatre Royal" on the same terms as Challoner; has met new conductor there, to show him the ropes and taught him how to keep tickets and told him to carry the check-taker free on his tram; is very foul-mouthed and rough with passengers, and is quite as dangerous, but more curping, then Chelloner; often mouthed and rough with passengers, and is quite as dangerous, but more cunning, than Challoner; often known to miss ringing for cash fares. Cantor.-

Cantor.—Very flash, and frequents theatres, &c.; pointed out by general detectives as often seen at night with prostitutes; very careless on duty, missing some and not ringing for other fares; several charges of assaulting passengers against him, carrying dead-heads, &c., &c.; lives above his salary.

Gilberthorpe.—This man is something after the Cantor style of living; is quite a model of suavity to speak to; dresses expensively and is often seen with loudly-dressed females at places of amusement; repeatedly known to miss fares, especially cash; was in the employ of Newton & Co., who dismissed him, and refused to give a reference. and refused to give a reference.

O'Brien.—Confirmed drunkard and gambler; beery appearance; will do anything for money to gamble with; was once a 'bus-driver, but had to be got rid of; drunk on one occasion and lost his Government watch (suspected of gambling it away to a 'bus-driver); often in low public-houses at night with

C. Willson; known to miss fares.

Willson.—Gambles and drinks; friend of above, and knows the methods of robbing the Department by all the black sheep; often noticed not ringing for cash and other fares. Carries a well-known Bourke-street prostitute about in his car. This woman (——) was allowed by Willson to pass herself off as his wife for the purposes of her peculiar business, passing nights at her house with other men, and telling his own wife he was detained on duty. Appealed to Mr. Roberts to get a gold watch from Willson, and she then stated she kept Willson from the proceeds of her business. Willson admits his relations with the

There are others under surveillance, but if the above men were removed it would for a time direct the revenue to its proper channel.

No. 10.

Report from Traffic Inspector O'Brien re Inquiry.

Re Discharged Conductors' Inquiry.

Tram Department, 26 May, 1884. The brief of evidence submitted for the Minister's information showed in every case sufficient breaches of the rules (which were quoted) to justify the steps taken. Written statements in full were in each case attached and the writers present to give direct personal evidence, if called upon. The discharged men now boast that they were promised employment in another Department. If these men are re-employed in the Government service it will encourage pilfering and negligence in others, who will argue that the worst that can happen to them will be change of employment. It will also render further efforts to protect the Revenue all but hopeless.

I have no hesitation in stating that at the time these men were discharged the Department was losing a large sum of money, either through direct pilfering or from the careless negligence of conductors not properly looking after and collecting their fares. I make this assertion not alone from my own observations but also from a comparison (made by Mr. Vernon's orders) with Mr. Roberts, whose sources of information were distinct from mine.

Challoner's case (with the Crown Solicitor's opinion attached) shows how all but impossible it is to get an open conviction.

Willson's

Willson's case also illustrates the difficulty of obtaining all fares that pass through the conductor's Two persons saw him take a cash fare, which he would have kept only for seeing them notice One has seen him repeatedly put cash fares in his pocket and not ring for them. Four have seen him miss fares and the passengers leave without paying at all, and two state passengers have often handed them fares Willson failed to collect.

Mr. Vernon realized the difficulty and advised the only course open to the Department, viz., to get

rid of men against whom it could be fairly shown that they were not, through strong suspicion on the one hand or continued negligence on the other, profitable servants, both involving a loss of revenue to the

Department.

FRANK O'BRIEN, Traffic Inspector.

No. 11.

Minutes of Secretary for Public Works.

Dismissal of Tramway Conductors.—Inquiry into the matter.

General Remarks.

Department of Public Works, Sydney, 21 May, 1884.

In accordance with my promise to make inquiry, the five tramway conductors, viz., Cullen, Cantor, Gilberthorpe, O'Brien, and Wilson, who were dismissed from the Service in April last, waited upon me to-day. I had each man before me in turn, and stated generally the reasons which induced the Department to dispense

with his services. The replies to the charges are given on the papers respecting each case.

I stated at the outset that I did not intend to act as a magistrate in this matter. They had asked to be represented by counsel in this inquiry, but I could not consent to sit and conduct any formal inquiry, such as the admittance of counsel and witnesses would involve, nor did I think it was necessary. In the first place I was doing more than any Minister had ever done before in holding such an inquiry, and if every man dismissed demanded an inquiry and was listened to as some wished to make out he should be, it would require a dozen Minsters to conduct the business of the office.

That they must understand that the Commissioner ruling over such a vast department as he did must have power to deal with the men as he thought best in the interests of the Department; that they joined the Service under no agreement to give a lengthy notice to leave, and no agreement was made that a long notice would be given to them, if at any time it was decided to dispense with their services. In a private business if a man did not suit his employer he was simply told his services were no longer required, and he would have to leave. In the exercise of his power the Commissioner deemed it desirable in the interests of the Department to dispense with their services and they accordingly received notice. No particular cause was assigned for their removal, nor had anything been said which would lead any one to suppose they were dismissed for peculation or fraud. A man might be as honest as the day but be so slow or careless in the performance of his duties that it would be to the interest of the Department to dispense with his services.

I informed them I thought they acted very injudiciously in bringing the matter under the notice of Parliament and having it discussed, for by doing so undue publicity had been given to their dismissal, and vague and discreditable imputations had been assigned as the reasons, in consequence of which no doubt their characters had been affected; but the Department was in no way responsible for these reports or for those which appeared in the newspapers. When the question was first submitted to me by the Commissioner he laid the facts before me and I concurred with him that it would be to the interest of the Department that the services of these men should be dispensed with. It was the Commissioner's intention not to intimate to the men the causes for which they were dismissed, but I thought this would be unwise, and directed Mr. Roberts to inform the men that upon inquiry Mr. Vernon, the Secretary, would intimate to them the reasons for their removal. As a matter of fact they did not wait upon Mr. Vernon, nor appeal to me, as it was competent for them to do, and as they should have done.

For the inquiry I had asked Mr. O'Brien to collect all the information bearing upon each case, and at the same time had instructed him to eliminate all matters that were outside the Department, as it was my intention to deal simply with the men in connection with their services as tramway employés, and to take no notice of any matters that were purely of a personal nature and had no bearing upon their official

positions.

In each instance there was probably no single charge which was sufficient in itself to require the dismissal of a man, but against each there were a number of charges of neglect of duty, disregard of instructions, carelessness, &c., and it was the aggregation of these charges that influenced the Commissioner in his

decision to dispense with their services.

I see no reason to say that in any case the interests of the Department were not best served by the removal of the men, and it is the interest of the Department alone which has to be considered, and whilst I think this I would not for a moment suffer an injustice to be done to any man nor could the Department or its reputation be served by such a course.

Each man's case was then taken separately and is given on papers enclosed.

F.A.W., 21/5/84.

Re dismissal of Tramway Conductors.—Conclusion of Inquiry.

AFTER the conclusion of inquiry I had the five men together before me, and informed them that I would give the matter, as they desired, a full and impartial consideration.

I saw no necessity, and they as sensible men would see there was no necessity, for their request to be represented by counsel; but it was my earnest wish to see justice done, and for that purpose I had taken the action of instituting the inquiry, and if I found that any wrong had been done them I would have it publicly rectified. I had the complaints against them, I had seen themselves personally and heard their statements, and all would be judged carefully and fairly. Whatever my opinion might be, however, I did not think it would be desirable to approve of their reappointment in the Tramway Service after what had transpired, as they would go back to work under

some who would be determined to do their best to get rid of them.

The men stated it was not so much the desire for re-employment as the desire to have their characters

cleared that led them to court à full inquiry into their dismissal from the Tramway Service.

F.A.W., 21/5/84.

Re dismissal of Tramway Conductors.

30 May, 1884.

I HAVE fully considered the charges advanced against these men, and have had the advantage of personally

seeing each man and questioning him in respect to the charges preferred.

I can arrive at no other conclusion than that the Commissioner for Railways acted perfectly right in recommending that the services of these men should be dispensed with. Though there might be a legal difficulty in establishing any charge of actual dishonesty against the men, there is in my mind no moral doubt that they are a class of men whose services should not be retained.

Serious charges are preferred against each man, and all, with the exception of O'Brien, are accused of not accounting properly for the fares of the passengers carried. No doubt the non-ringing of the bell-indicator might arise from negligence only, but in any case the omission to ring, to which the evidence so strongly points, would justify their removal from the Service.

The men in general terms deny the charges, and this might naturally be expected, since an admission of the month of the passengers carried and this might naturally be expected, since an admission

of them would establish their guilt; but I fail to see what motive other than the public interest the officers

who so charged them could have in preferring the charges against them.

I should be very sorry to injure the reputation of any man, but a sense of public duty compels me to say that the evidence placed before me justifies the conclusion I have arrived at—that their continuance in their positions in the Tramway Service would not be to the advantage of the Department nor to the public interest.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

ELIZABETH M'GREGOR.

(PETITION OF.)

Received by the Legislative Assembly, 21 May, 1884:

To the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of Elizabeth M'Gregor,—

HUMBLY AND RESPECTFULLY SHOWETH:-

That your Petitioner is the widow of John M'Gregor, who was a conductor and special constable for the Government Tramways, who entered the Service on or about the thirty-first day of August, one thousand eight hundred and eighty.

That between the hours of two and three o'clock on the afternoon of the twenty-third day of October, one thousand eight hundred and eighty-three, the said John M'Gregor, after having conducted the tram of which he had charge to the tramway terminus at Bridge-street and completed his day's work as appointed, and whilst returning to his residence at Waverley, in a tram under the charge of another conductor, was either thrown or fell from one of the cars when the tram was in motion, near Church-street, Waverley, and received serious injury, from which he died, on the twenty-eighth day of October, one thousand eight hundred and eighty-three. Owing to the injury he received the said John M'Gregor was incapable of explaining how the occurrence happened, and your Petitioner has not been able to obtain any reliable information with respect thereto.

That the said John M'Gregor was supplied with the Rules and Regulations for the guidance of officers and servants and the conduct of traffic on the tramways, and was well acquainted with his duties, and that the first of such Rules comprises words to the following effect:—"Every employe shall devote himself exclusively to the Service, whether his duties are specified or not, with zeal and fidelity; he shall attend at such hours as may be prescribed, and consider himself on duty when on the tramway line or premises, although it may not be his regular time of attendance."

That the said John M'Gregor had also been duly appointed a special constable for tramway purposes, and was sworn in on the fourteenth day of March, one thousand eight hundred and eighty-three, and, by virtue of the said Rules and Regulations and such appointment as a special constable, was on duty on the tramway line at the time of receiving the said injury which occasioned his death as aforesaid.

That your Petitioner applied to the Honorable the Minister for Works, on the fourteenth day of December, one thousand eight hundred and eighty three setting forth your Petitioner's claim for some

That your Petitioner applied to the Honorable the Minister for Works, on the fourteenth day of December, one thousand eight hundred and eighty-three, setting forth your Petitioner's claim for compensation, and received a reply from the Commissioner for Railways, dated the twenty-first day of December, one thousand eight hundred and eighty-three, to the effect that Mr. Secretary Wright regretted that he was unable to approve of any gratuity being allowed me by the Department, as gratuities were only allowed to the widows of employes when their husbands met their death in the execution of their duty, thereby implying that my late husband the said John M'Gregor was not on duty at the time he received the injury which occasioned his death as aforesaid.

That your Petitioner was left with eight children, and another child has been born subsequently to the death of the said John M'Gregor, and the family is totally unprovided for, and your Petitioner is now in poor and distressed circumstances.

Your Petitioner therefore most humbly prays that your Honorable House will be pleased to cause inquiries to be made, and take this case into their favourable consideration, with a view to securing to your Petitioner such relief as on examination may appear to be in accordance with the circumstances, and for the reasons set forth in the above Petition.

And your Petitioner, as in duty bound, will ever pray, &c.

Dated this nineteenth day of April, in the year of our Lord one thousand eight hundred and eighty-four.

ELIZABETH M'GREGOR.
