I have the honor to enclose a letter signed by the Hon. Secretary of the Coolaman Progress Committee, and would respectfully request that the concession asked for will receive your favourable consideration.

I have, &c.,

JAMES GORMLY.

Submitted for inquiry it may be considered whether it is necessary to draw the differential limit outside Narrandera.—W.J.L., 17/9/86.

[Enclosure.]

James Gormly, Esq., M.P., Wagga,—

Dear Sir,

Coolaman, 4 September, 1886.

We, the residents of Coolaman, beg to call your attention to the great disadvantage we have to labour under the existing rules of the differential railway rates and the truck system. Previous to October last year we could procure goods by truck loads from Sydney at the same rate as Wagga or Narrandera, viz., £20 per 6-ton truck, and for which we have now to pay £44,—an increase of £24 on 6 tons; the only stations this new rate affected here, Coolaman and Grong Grong, and as comparatively little traffic goes to the latter (especially as they are so near Narrandera), it can affect them but little. The truck system was a boon to Coolaman residents and surrounding settlers, outside of the immediate advantage it was to the storekeepers and others, as goods going back to Temora, Broken Dam, Barmedman, and other stations were forwarded from here, which cannot now be done under the existing rates. This district does such a small trade that, under this new system, the advantage either way to Government is insignificant that it would seem some interested party was at the bottom of the altercation for their own aggrandizement.

The Victorian trade if available to Narrandera is also available here; the distance from Sydney to Coolaman is 310 miles and Wagga is the same distance, and the distance by road from Wagga is 23 miles, it must be quite evident to every disinterested individual that the present system must eventually crush the trade of this place.

We see our goods daily going past our own station *en route* for Narrandera, which not only causes delay but must be a useless expenditure of power and haulage, and now that the Government's great policy is retrenchment we think that this is a matter whereby more labour and more expenditure is caused by this useless haulage.

The

The district is quite new and purely agricultural, and all settlers are heavily handicapped with this new and excessive extortion. We may add that this part of the Murrumbidgee electorate polled the third highest number of votes, which shows that it is worthy of consideration.

We would also add to yourself that we have noted the way you have pressed various matters forward, and we may add that if the boon is conferred of having 6-ton trucks running here at a cost of £20, as heretofore, you will confer a boon on us all, and will at future elections win you every possible support.

We are, &c.,
W. MACNAMARRA,
Hon. Sec. Coolaman Progress Committee.

Petition of the residents of Coolaman for reduced rates for general merchandise forwarded from Sydney.—Prior to the issue of the last merchandise rate-book on 1st October, 1885, the £20 truck rate for general merchandise applied to all stations on the South-western line distant over 305 miles from Sydney, but in consequence of the traffic for Temora and Barmedman finding its way to Coolaman at the £20 truck rate (whereas the more direct route was *via* Cootamundra, where the truck rate did not apply, thus causing a loss to revenue to the Department, and complaints from the storekeepers, about the inequality of the rates), it became expedient to extend the distance on the South-western line to which the truck rate should apply, and, after consideration, it was fixed at 340 miles, thus excluding all stations east of Narrandera. Since the 1st October, 1885, therefore, actual mileage rates have been charged to Coolaman, and nothing has transpired to induce me to recommend a reversion to truck rates.—W.V.R., 6/10/86.

For the Minister's information.—C.A.G., 10/10/86. Inform.—W.J.L., 13/10/86.

Sir,

Department of Railways, 20 October, 1886.
Referring to your letter of the 16th ultimo, forwarding communication addressed to you by the Secretary of the Coolaman Progress Committee, urging that the £20 truck rate might be again extended to Coolaman, I have the honor, by direction of Mr. Secretary Lyne, to inform you that the matter has been considered, and that it is not deemed advisable to revert to the truck rate as stated.

I have, &c.,

C. A. GOODCHAP,
Commissioner for Railways.

James Gormly, Esq., M.P., Legislative Assembly.

No. 42.

Minute by The Secretary for Public Works.

Differential Rates.

A DEPUTATION from Goulburn, accompanied by Messrs. Teece, Ball, and Holborrow, M's.P., waited upon me to-day, and, amongst other matters, brought under attention the question of the differential rates.

They represented that these rates unduly prejudiced the trade of Goulburn; that it was impossible for Goulburn traders or storekeepers to compete with the Sydney merchants in the distant districts, and their trade was, therefore, limited practically to a local one.

Mr. Rogers submitted the statement enclosed, showing the nature of the differential charges, and how they affected Goulburn.

I informed them that I admitted the importance of the matter, but the question was one surrounded by difficulties. It was a question engaging attention on almost all railways. It was being fought in England and in America; they sometimes carried goods 1,000 miles for the same rate as they carried them 50, and the Company found it paid them to do it. Mr. Rogers had submitted a very full and clear statement, and it deserved consideration, and it seemed to me there should be in some way an alteration.

I could not promise them an answer off-hand, as the question was such a large one; but I stated I would give it full consideration, and consult with the officers of the Department who had a knowledge of the question.

J.S., 11/3/87.

Put with this extract from Report Committee of the House of Commons on "differential rates." The statement of the different charges between Hay, Wagga, and Albury direct, and those places *via* Goulburn are startling, of course the latter is the equal mileage rate, and the former the competitive rate to win the traffic. We are still competing for it, even at the reduced rates, and any attempt to charge equal mileage rates, would simply be tantamount to handing over the trade of Riverina to Victoria. We do not lose on the low rate charged; indeed, if we could secure twenty times as much, the profit made would be of an appreciable character. It would be better to surrender the trade of the country comprised within the competitive districts than to charge the same rate to intermediate stations not affected by the competition. It is the case the whole world over, that traders at intermediate places cannot successfully contend for the trade of a competitive district supplied from rival metropolitan centres.—C.A.G., 16/3/87.

EXTRACT referring to differential rates, from the report of the Select Committee on Railways appointed by the House of Commons.—Ordered to be printed, 1882.

The Committee consisted of:—Mr. Ashley, Mr. Barclay, Mr. Bolton, Mr. Callan, Lord Randolph Churchill, Mr. Craig, Mr. Cross, Mr. Dillwyn, Sir Daniel Gooch, Mr. Gregory, Mr. Lowther, Mr. Monk, Mr. Samuel Morley, Mr. Mullholland, Mr. W. N. Nicholson, Mr. O'Sullivan, Mr. R. Paget, Mr. Jos. Pease, Mr. Pell, Mr. Samuelson, Mr. Sclater Booth, Sir Henry Tyler, and Sir Edward Watkin.

FIXING RATES.

THE question of the rate which a railway company has the power to fix for any particular kind of goods, under their special Acts, and with due reference to the charge they make for other goods conveyed under similar circumstances, is one of considerable difficulty. Railway managers contend that they have the right to charge any sum not in excess of the maximum authorized by the special Act, and that they ought in no respect to be controlled in charging much more for one kind of goods than for another, although the cost

cost of performing the service is no greater in the one case than in the other. It is indeed contended, as in the case of beef carried from Glasgow to London, that railway companies may properly carry the same kind of goods under similar conditions, from different consignors, at very different rates.

According to the evidence of the railway managers who appeared before us, no general principle or system for fixing rates has been adopted on any railway in this country. The charge for conveyance, they informed us, was such a sum, within the power of the company, as they thought the traffic would bear, having regard to competition, both of other means of conveyance and of other districts or markets; or, in other words, as much as could be got, and without reference to the cost to the company of performing the service. Indeed, the managers examined informed us that they found it impracticable to determine with accuracy the cost of conveying any particular kind of goods between two stations.

The railway managers assert that they carry no goods at a loss, and that even the lowest rates yield a margin of profit over working expenses; but in making this statement they do not include any charge for interest on capital.

No witness has recommended the adoption of equal mileage rates for the conveyance of goods, but may have complained of the anomalous charges by railway companies, and urged the general advantage of fixing rates on some intelligible principle, instead of arbitrarily at what railway managers think the traffic will bear.

It appears in evidence that in the case of one, if not of more, railway companies, no maximum rate has been fixed over a large portion of their system. The Committee are of opinion that it is essential to the protection of the public that a maximum rate should be fixed in all cases.

In some cases particular kinds of goods, or goods over one portion of a railway system, are carried at very low rates, as compared with those charged for other goods, or the same goods over another portion of the same system.

There is no question as to the existence of these "preferential" or "exceptional" special rates, the latter epithet being the term used by representatives of the railway. The evidence given under this head comes almost entirely either from persons engaged in production, who are being charged proportionately higher rates than producers resident in other parts of the country, or from towns or places through which traffic passes, who, as engaged in the business of carrying or distribution, complain that it is diverted from them by the lower rates charged on other routes. But for the competition introduced by the low rates given by railway companies, trade would be much more local, and the trader who was nearest the market would probably make a large profit; but, on the other hand, this competition cannot but be advantageous to the public; that Greenock sugar refiners should be in the same market as the sugar refiners of London, while it may be a grievance to London refiners, must be an advantage to Greenock refiners, and cannot be a disadvantage to buyers of sugar. It may be worth while to follow this as a typical case:—Thirty-nine towns in England to which sugar is sent are at an average distance of 292 miles from Greenock, and the same towns are at an average distance from London of only 150 miles. The rates for these distances, from London and Greenock respectively, are about the same representing in the case of the Greenock rate, 1.09d.; but in the case of the London rate, 2.13d. per ton per mile. In other words, sugar from Greenock is for the same sum carried double the distance as sugar from London. This enables Greenock to compete at these thirty-nine towns, and this is what the refiners of London object to. The demand from London, therefore, is that either the rates for the longer distance should be raised, or those for the shorter distance reduced. The effect of compliance with this demand would be to close some of these markets against Greenock sugar, to deprive the Northern lines of a considerable portion of their trade, handing it over to the Southern lines, and to give a practical monopoly to the London refiners of sugar, who would be real gainers by the transaction. It does not appear to your Committee that such a result would be either just or reasonable.

Although "equal mileage" rates, that is to say, rates proportioned exactly to the number of miles run, have not been advocated on this occasion as before former Committees; still, ideas have been put forward so closely resembling such as would naturally support the mileage system, that it may be worth while to recall the words of the Committee of 1872:—

- "(a) It would prevent railway companies from lowering their fares and rates so as to compete with traffic by sea, by canal, or by a shorter or otherwise cheaper railway, and would thus deprive the public of the benefit of competition, and the company of a legitimate source of profit.
- "(b) It would prevent railway companies from making perfectly fair arrangements for carrying, at a lower rate than usual, goods brought in large and constant quantities, or for carrying for long distances at a lower rate than for short distances.
- "(c) It would compel a company to carry for the same rate over a line which has been very expensive in construction, or which, from gradients or otherwise, is very expensive in working, at the same rate at which it carries over less expensive lines.

"In short, to impose equal mileage on the companies would be to deprive the public of the benefit of much of the competition which now exists, or has existed, to raise the charges on the public in many cases where the companies now find it to their interest to lower them, and to perpetuate monopolies in carriage, trade, and manufacture in favour of those rates and places which are nearest or least expensive where the varying charges of the companies now create competition. And it will be found that the supporters of equal mileage, when pressed, often really mean, not that the rates they pay themselves are too high, but that the rates that others pay are too low.

"Pressed by the difficulties, the proposers of equal mileage have admitted that there must be numerous exceptions, *e.g.*, where there is sea competition (*i.e.*, at about three-fifths of the railway stations of the United Kingdom), where low rates for long distances will bring a profit; or where the article carried at low rates is necessary, such as coal. It is scarcely necessary to observe that such exceptions as these, whilst inadequate to meet all the various cases, destroy the value of 'equal mileage as a principle, or the possibility of applying it as a general rule.'"

But some kind of equality of charge is pressed in other forms and on other grounds. Farmers complain that imported agricultural produce is given a bounty over home produce, by being carried at a lower rate; that foreign corn and meat are carried from Liverpool to London for less than English corn and meat; that American cattle are conveyed from Glasgow to London for less than Scotch cattle; that cattle landed at Newcastle are carried inland for less than cattle reared in Northumberland and Durham; that

that foreign fruit and hops are carried from Boulogne or Flushing to London for less than fruit and hops from Ashford or Sittingbourne. Wire manufacturers complain that Belgian wire and other goods are brought from Belgium to Birmingham for less than similar goods are charged from Birmingham to London. Makers of chemicals complain that the coal which they use is made to pay higher rates than the coal sent past their works to Liverpool for exportation to their foreign rivals; and Limerick complains that foreign bacon and provisions are carried from Liverpool to Limerick at much less rates than is charged for Limerick bacon over the same route to the same port. Bradford complains that the export trade from both Manchester and Bradford enjoy rates which are preferential as compared with those for the home consumption trade. In short, the complaint is frequently heard that railway companies prejudice home producers by low import and export rates.

Your Committee think that many of these differential charges afford substantial grounds for complaint, but they do not consider it necessary to express an opinion as to how far these differential rates constitute undue preferences, because that is a point which the proper tribunal has full power to determine, and each case must be considered on its merits.

At the same time, it must be admitted that when a farmer sees American wheat carried at a lower rate than his own, or when a manufacturer near a market has his profits in that market reduced by a competitor at a distance, who is brought into the market by the lower rates given to him, it is not surprising that there should be complaints, and that attempts should be made, and from time to time repeated to fix some standard by which rates shall be determined. One form in which this proposal has been made is, that the rate ought to bear some fixed proportion to the cost of the service performed; or, in other words, that the companies ought not to be allowed to make a higher profit on one part of their traffic than on another. It would be an answer to this suggestion to say that any such standard of charge would be difficult, if not impossible, in practice. To ascertain what is the relative cost and profit of each description of traffic would be beyond the functions of any Government Department or Court of law, and the companies allege that it would be beyond even their power. It would entail the finding and consideration of such items as the original cost of the particular line; the cost of carriage of the particular goods on that part of the line as compared with the cost of carriage of other goods on the same line, and of the same and other goods on other portions of the line; and the proportion of all these to the whole charges and expenses of the company. But assuming it is to be practicable, it is open to question whether the public would gain by this or by any other fixed standard of rates.

Any fixed standard of rates would materially interfere with competition. Supposing such a standard fixed, the result would be that the traffic which is now carried at a low rate in competition with a sea route would be driven from the railway to the competing sea route, whilst the railway, if it is to make as much aggregate profit as before, must charge a higher rate than it now charges on the traffic which remains to it.

If Parliament were to say that the North-eastern and Great Northern Company shall make no greater profit on cattle or on fish brought from Newcastle, or from Hull, or Grimsby to London, than they do on cattle and fish brought from Scotland or from abroad over the same portions of their respective lines, the effect would be either to send the Scotch and Foreign goods by sea to London, or to prevent them going to London. In either case the traffic of cattle and fish to the London markets would be restricted; the prices would be raised; and though the price would be raised the English producer would not get the benefit of it, for the railway companies would be able to raise their rates on English cattle and fish, in order to recoup themselves for the loss of their Scotch and Foreign traffic; or again, if the Great Eastern were not allowed to have a cheap long distance rate to London, the trade of Norfolk and Suffolk in agricultural produce would almost disappear as regards cattle.

Therefore when it is said that low rates always increase traffic, and that the companies will adopt universally the lowest rates they are now charging to anyone, the answer is that they are likely to understand their interest better than the Legislature; that if you force them into equal rates they will no longer have any inducement, or indeed be able, to make the experiment of low rates, whereas under the present system competition and self-interest oblige them to make these experiments.

Again, taking the case of the inland towns which complain of the lower mileage rates granted between towns which have better access to the sea, it is obvious that the railway companies are really only preserving to the latter the advantages which nature has given them, and that to prevent them giving the lower rates, would really benefit no one except the owners of steamers. Places less accessible by natural avenues, like navigable waters or the sea, may be less fortunate, but it is scarcely just or profitable—it must be unprofitable to some interest—to undertake by arbitrary laws to supply the advantages denied by their situation. Or, taking the preference alleged to be given by the railway companies to Barrow and Fleetwood over Liverpool, or to Hartlepool and the Tyne over Hull, it seems most unlikely that the companies would have incurred the expense of the docks of their own at Holyhead or at Hartlepool, unless they were satisfied that the trade was such as to pay them for these docks, and for the longer railway journey, without destroying what the companies already possessed, viz., the traffic from Liverpool and Hull. If the rate to Barrow and Fleetwood were raised the traffic to those places would suffer, and the railway companies, in order to recoup themselves for the lost profit might charge higher rates to Liverpool; so that Barrow and Fleetwood would suffer, while Liverpool might not gain. The probability is that the trade of the country gains, as a whole, by bringing these routes into operation.

It may therefore be assumed that some of the inequalities of charges complained of are to the advantage, rather than to the disadvantage, of the public. Where there is an "undue preference" the law now gives a remedy. A preference, to be illegal, and to furnish a reasonable cause of complaint, must be unjust. It is not unjust so long as it is the natural result of fair competition, and so long as equal rates are given for like services under like circumstances, and for like quantities of merchandise. It has thus been repeatedly decided in the case of passenger fares that there is no ground of complaint, merely because the fares over one part of a railway system are higher than those over other parts. It has also been decided in the case of goods that circumstances which make the cost of carriage differ such as steep gradients or difference in quantities to be carried, will justify difference in charge; and this is but right; what is reasonable for a road of easy gradient and a large volume of business would be unreasonably low for a road of heavy gradients and a smaller traffic. This discrimination or preference as regards quantities is recognised by the natural laws of trade, and is common to all branches of business. A man who buys goods wholesale expects and will receive more favourable terms than the one who buys at retail. The
seller

seller by one wholesale transaction is saved the trouble and expense of many smaller ones as well as the cost of storage. This is so natural and founded on reason that no one thinks of calling it preference. The same thing must be recognised in the business of transportation; there must be all the difference in cost whether an unbrokered full train is hauled to the terminus of a line, or whether the trucks of which it is composed are distributed at numerous different points, with the delay and expense of stoppages and "shuntings."

Traffic Manager for report.—CH.A.G. Mr. Traffic-Manager Read's report.

THE Commissioner has so clearly and fully stated the case, as far as the Department is concerned, that I do not think there is anything I can add. I can, of course, quite understand the arguments of the deputationists, but I cannot propose any way of effecting a remedy. As the Commissioner fairly points out, it would pay the Department better to sacrifice the Riverina traffic altogether than to reduce the rates for short distances to the same basis as that traffic which is highly competitive; and if that were done, the Goulburn merchants would not only not be assisted, but they would have to help, by paying higher rates than at present, to make up for a lost revenue.

Commissioner.

W.V.R., 4/4/87.

I wish Mr. Pickering to prepare statement, showing what the rate is for 100, 200, 300, and 400 miles, under Miscellaneous, Class A, Class B, 1st, 2nd, and 3rd Class, and what it would be at equal mileage rates—take two prominent articles from each division—also live stock.—CH.A.G., 31/3/87.

Particulars required herewith.—D.C.M'L., 6/4/87. I have sent all the particulars, with extracts from authorities, to Mr. Kirkcaldie, to be worked up into a paper on subject.—CH.A.G., 20/4/87. Report herewith.—W.V.R., 3/5/87.

Present rates are shown in black type.

Italic figures show rate on equal mileage basis, starting with rate for 400 miles; thus—Miscellaneous, 400 miles (present rate for 400, 25s.), 75 x 300 = 18s. 9d., reduced rate for 300 miles.

Figures in ordinary type represent charges on equal mileage basis, starting with rate for 100 miles.

NOTE.—It will be seen that if the equal mileage rate be calculated upon the present rate for 100 miles the figures will be much greater for the intermediate stations than if the 400 mile rate be taken as the basis.

What is required is the present rate and the equal mileage rate. There is a basis for every rate; for the 15 miles it is so much, and for every mile thereafter (that is for the 16, 17, and 18 mile the rate is fixed on some scale) for first class it is 4d. a ton per mile; for second class, 5d.; for third class, 7d. What I want is our present rate for (say) 300 miles, and what it would be if equal mileage rates were charged. Take oilmen stores for 300 miles—3rd class, our rate is 7d. per ton per mile; the charge, owing to differential reductions for distance, £7 3s. 2d.; but at 7d. per ton per mile, with nothing for terminal charges, the charge would be £8 15s.; difference, £1 11s. 10d. Again, to secure the trade of the South-western line, the charge to Hay (454 miles) is £5 10s. per ton; or, by truck load, equal to £3 6s. 8d. The equal mileage rate will make it for 1st, 2nd, and 3rd class as under:—

1st, £7 11s. 4d.; 2nd, £9 9s. 2d.; 3rd, £13 4s. 10d.

Again, Bourke (505 miles):—

	1st class.	2nd class.	3rd class.
Present charge	£6 3 8	£7 14 1	£10 14 11
Proposed	8 8 4	10 0 5	14 14 7

but to catch the trade beyond Bourke we have to make a rate for £5 a ton for 1st, 2nd, and 3rd class. Please get out the information in this shape.—Ct.A.G., 8/4/87.

I wish it ascertained how far Victoria, with present rates, could supply Riverina, if we charged equal mileage rates. At a rough estimate, I think we could not well supply beyond Cootamundra. Please make the calculation.—Ct.A.G., 8/4/87.

I enclose a table of calculations, which show that, if an equal mileage rate were adopted on these lines, Victoria would secure nearly all the traffic south of Cootamundra, while we should lose all the traffic (salt, oil-cake, and woolpacks excepted) between Junee and Albury. Harden would really be our trading limit, for there can be no doubt that, if the equal mileage rates were brought into operation in this Colony, Victoria would secure the trade of Cootamundra, which would be left to us. I also subjoin a statement showing what the rates for certain distances would be on the basis referred to in Commissioner's minute of 8/4/87:—

	M.	A.	B.	1.	2.	3.
100 miles	10/5	9/4	16/8	33/4	41/8	58/4
200 "	20/10	18/8	33/4	66/8	83/4	116/8
300 "	31/3	28/-	50/-	100/-	125/-	175/-
400 "	41/8	37/4	66/8	133/4	166/8	233/4
500 "	52/1	46/8	83/4	166/8	208/4	291/8
Basis ...	1½d. per mile;	1½d. per mile;	2d. per mile;	4d. per mile;	5d. per mile;	7d. per mile.

J.P., 13/4/87.

Minute by The Commissioner for Railways.

Differential Rates.

WHILE our position is impregnable as regards the ordinary allowances for distance, I cannot help thinking that we are weak in the case of the special discounts we make for the traffic of the competitive districts—not that we are not right in making these rates, but in their application to one central market only. The traders of Bathurst, Orange, and Dubbo cannot supply Bourke for places west of the Paroo, because the truck

truck rate for £30 is confined to goods sent from Sydney; so as regards truck rate on goods for Wagga and for distances beyond 346 miles on the South-western line, traders at Goulburn and Cootamundra cannot avail themselves of this rate. I have not thought the suggestion right out, but it has occurred to me that, as regards the special rates, traders at intermediate stations might be allowed the truck rate at the Sydney charge for the competitive district. For instance, why, if a merchant at Goulburn wished to do business at Hay, should he not be allowed to send a 6-ton truck load from Goulburn at the same rate as is charged by the Sydney merchant? I do not suppose it would mean much loss of revenue if availed of, but it is not likely that it would be available of to any great extent, but it would take the sting out of the complaint of undue preference shown to the Sydney merchant.

Traffic Manager.

CH.A.G., 11/4/87.

This paper only reached me this morning after my minute of yesterday's date on the same subject had been sent forward to the Commissioner.—W.V.R., 14/4/87. Commissioner.

To the Honorable gentlemen constituting the Legislative Assembly of New South Wales, in Parliament assembled.

The petition of the undersigned residents of Adelong Crossing, Grahamstown, Mount Adrah, Snowball, Mundarloo, Edwardstown, and surrounding districts,—

HUMBLY SHOWETH:—

First—(a.) That your petitioners consider it an injustice that the trade of towns over three hundred and five miles (305 miles) from the metropolis, such, for instance, as Wagga Wagga, should be unduly stimulated at the expense of neighbouring towns, within that distance by means of the system of rates charged on our railway, known as differential, under which a truck load of fourth-class goods is delivered from Sydney to a distance of three hundred and nine miles (309 miles) for thirty-three pounds twelve shillings (£33 12s.) less than if sent a distance of two hundred and eighty-seven miles (287 miles).

(b.) Your petitioners are further of opinion that all 1st, 2nd, 3rd, and 4th class goods should be charged for by the ton only; as at present a truck load of 4th class goods is delivered in places distant over three hundred and five miles (305 miles) for thirteen pounds (£13) less than if paid for by the ton, which unduly promotes the interests of large storekeepers and carrying firms, to the detriment of small traders and at the expense of the taxpayer.

(c.) Your petitioners are still further of opinion that a mileage rate per ton should be charged on all 1st, 2nd, 3rd, and 4th class goods, instead of the differential rates up to two hundred and fifty miles (250 miles), with no increase in the charge to any place beyond that distance.

Second—(a.) That, in view of the policy by which successive Governments have been guided to open up the interior, and to settle the people on the lands, it is desirable in the best interests of the Colony to carry grain at rates considerably lower than are at present charged on our railways. And your petitioners express the opinion that the rates for the carriage of grain should be brought to something the same level (say, one half of the present rates) as those charged in the United States of America, to enable our farmers to compete with those of other countries, where the rates are not more than one sixth of those charged on our lines, and that the rates for hay, straw, and chaff be reduced twenty (20) per cent.

(b.) Your petitioners are further of opinion that such reductions will be a gain to the revenue derived from our railways, as it must result in promoting settlement, consequently increasing passenger and merchandise traffic.

And your petitioners, as in duty bound, will ever pray.

[Signed by 40 persons.]

In response to your request, made during an interview with Mr. Kirkcaldie this morning, that I should submit a report upon your proposal to make the reduced rates which now apply from Sydney only to the southern competitive districts (upwards of 305 miles south and 340 miles south-west) applicable from any station on the Southern line, from which the actual mileage rates to the districts named are not lower than those from Sydney, I beg to state that the proposal is a perfectly just and fair one; but I am afraid it does not go far enough to satisfy the gentlemen at whose instance the recent deputation from Goulburn was formed to wait upon the Minister. Their contention, as I happen to know, from conversations with Mr. Rogers, of Goulburn, long ago, is that merchandise sent from there to Goulburn stations, and particularly to the competitive districts, having already paid the ordinary rates of trainage from Sydney, should be conveyed from there (Goulburn) to the more southern at something like the through rate from Sydney, plus a small charge for the break of journey; and it is not necessary for me to inform the Commissioner that that opens a very wide question, which I am quite sure he will not be in favour of. I attach a draft advertisement, embodying the Commissioner's views and extending the principle to the Western line. I had hoped to be in a position to say what the probable effect would be by the alteration upon the revenue as far as the Southern line is concerned, but find this will not be possible till Friday. I have no hesitation in stating that the effect upon the Western line will be nil.—W.V.R., 13/4/87. Commissioner.

[Enclosure.]

[Draft advertisement.]

Department of Railways, Sydney, 188 .
ON and after the the maximum rates on the down journey from any station on the Southern line to any station distant upwards of 305 miles on the Southern and 340 miles on the South-western lines from Sydney will be the same as from Sydney, viz. :—

1st and 2nd class traffic—Actual mileage rates less 20 per cent. maximum.....	110s. per ton.
3rd and 4th	110s. "
General goods (except explosives) in truck loads not exceeding 6 tons	£20 per truck.
Corrugated iron and fencing wire	£18 "

Similarly

Similarly, the maximum rate for merchandise (other than explosives) consigned from any western station to Bourke for the district from Buckambe station, and all stations below having a frontage to the Darling River on the eastern side and on the western side, including Marra and the whole district south and south-west thereof and stations lying wholly west of the Paroo River will be £30 per truck load not exceeding 6 tons.

Sugar, galvanized iron, and fencing wire, £24 per truck.

Commissioner for Railways.

The Minister is of opinion that the rate for the districts which are known as the competitive districts (viz., beyond 309 south and 346 south-west and for the districts west of the Paroo) should be apportioned to distance, that is to say, it is 454 miles to Hay, the rate is £20 a truck; Goulburn is 320 miles from Hay, and the rate should be the proportion of £20, which 320 bears to 454, and so throughout their difficulty in arriving at a proper rate, because the first rate, Sydney to the competitive district is not fixed on a mileage basis, it is the same for 346 miles as it is for 454 miles.—CH.A.G., 22/4/87.

In continuation of my minute of the 13th instant, I beg to state that for the three months ending the 31st March last, assuming that the Sydney rates of 110s. were made to apply to traffic sent from Goulburn to the southern competitive districts, the decrease in revenue would only have been £5 19s. 10d. = £23 19s. 4d. per annum. In no case was there a truck load so that the truck rate would not have applied. I think Goulburn is the only station that would be affected.—W.V.R., 15/4/87. Commissioner.

The future traffic cannot well be estimated from what the present is, allowing Goulburn and other places to train their goods at Sydney rate may have the effect of bringing a large increase of traffic.—CH.A.G., 20/4/87.

No. 43.

Minute by The Commissioner for Railways.

On the proposal for equal Mileage Rates.

NOTICE of Motion by Mr. William Teece,—That, in the opinion of this House, the differential rates charged for the carriage of goods and merchandise on the Railway Lines of New South Wales should be abolished.

THE term "differential" used in connection with our rates will probably convey an incorrect impression; it will to many persons imply the existence of a practice of charging different rates to different persons for the carriage of the same class of goods conveyed under similar conditions, whereas on our lines all persons are charged alike where the conditions are similar. The meaning of the term "differential."

I assume that Mr. Teece's motion refers to the *competitive* rates which exist in respect of the carriage of general merchandise from Sydney to the southern and south-western districts of the Colony—rates that were forced upon the Department in this Colony by the aggressive policy of the Victorian Railway Department, which, while charging full mileage rates upon all traffic in Victorian territory, has granted, for many years past, exceedingly low rates for the conveyance of traffic going from or coming to this Colony. Scope of Mr. Teece's motion.

Long before our railways had penetrated to any great extent southwards, Victoria had completed her railways to the border, and so secured, with but little effort, a hold upon the trade of the more southern and the whole of the south-western districts of New South Wales. Measures taken to secure Riverina trade.

But about seven or eight years ago, when our railways were being rapidly extended southwards; the Sydney market was made as readily accessible, at our ordinary mileage rates, as the Melbourne market had been; the Victorian Railway Department began to foresee that if that Colony were to retain the trade which it had become accustomed to regard as its own, special inducements would have to be offered, and that was done in the shape of a considerable reduction of railway rates.

A competitive policy followed—our Railway authorities felt it to be their duty to secure as far as they possibly could, the traffic of the districts through which our lines passed, and as the reduced rates on the Victorian lines were turning the stream of traffic towards Melbourne, while its natural channel was towards Sydney, the only course available was to reduce the rates on our lines between the metropolis and those districts of the Colony affected by the concessions given on the Victorian lines, and to raise the carriage-rates on goods between Albury and Wagga.

The success of this arrangement became so apparent, that after a time (in 1882) the Victorian Railway Department, in order to regain the trade, which it had to a large extent lost, offered to convey it over their lines at even lower rates still, and these rates have been in existence ever since.

For a brief, but only a very brief, time, this concession had the effect desired; it was met, however by our Railway authorities introducing a truck-rate, which, while it offered a lower average rate per ton than formerly, had also the effect of securing full loads for the waggons, and so yielded about as much revenue per waggon as had been realized previously, thereby securing the traffic without loss.

Since the time in question, with the exception of a little modification, in regard to the rate for the carriage of wool, no further effort has been made by Victoria to regain the trade; indeed, it is difficult to imagine what further concession they could give, unless they carried the traffic for nothing.

To show, however, the extent of the endeavour made by the Victorian Railway Department to obtain the trade of this Colony, two illustrations are given (one as regards general goods from Melbourne, and the other as regards wool to Melbourne).

First illustration.—Fourth class traffic (comprising furniture, liquors, glassware, and numerous other articles), conveyed from Melbourne to Wodonga (187 miles) for use in Victoria is charged at the rate of 106s. per ton; if the same traffic crosses the border to Albury (190 miles) the charge is reduced to 63s. 6d., and if it is consigned to any part of this Colony north of Gerogery (20 miles from the border) the rate as far as Albury is only 32s. 6d. per ton.

It will be at once apparent that if, as Mr. Teece's resolution proposes, our competitive rates are abandoned, whilst those of Victoria are retained, that Colony will be enabled to regain not only all she has lost but the whole of the trade of this Colony for a distance of 50 to 60 miles further north—as far indeed as *Cootamundra*, which is 253 miles from Sydney, and 323 from Melbourne—as the respective rates for general traffic would then be 126s. per ton from Sydney, and 108s. from Melbourne. The whole of the Riverina traffic as well as that of the Tumut district would be lost to us. Effect of Mr. Teece's proposal.

Second.

Second illustration.—The Victorian rate for wool grown in its own territory, is 7s. 6d. per bale, not exceeding 4 cwt., from Wodonga to Melbourne, but if grown in any part of New South Wales, bounded by the Murrumbidgee on the south, and longitude 144° west, the charges are only 3s. per bale, not exceeding 300 lb., and 3s. 6d. per bale exceeding 300 lb.

It is therefore very certain that the abandonment of our competitive rates, even if it does not prejudicially affect the traffic as far north as Cootamundra, which I have shown to be not only a possible but a probable result, will have the effect of depriving Sydney of the whole of the trade from Juncce southwards and from the south-western district.

The policy we have adopted to secure this trade has had the effect of causing not only an enormous increase of business to the old-established mercantile firms and others of Sydney, but has also resulted in bringing over a number of the largest Melbourne firms to retain the connection which no other course would accomplish. Amongst the firms referred to may be named Goldsbrough & Co. (Limited), Bright Bros. & Co., Cunningham & Co. (Limited), &c., &c.

Although this has been the result, and that the public in the districts referred to have obtained the benefit of very low rates of carriage, it is, nevertheless, to be regretted that such keen competition as I have described should ever have existed. The position, however, was forced upon, not initiated by, the railway authorities of this Colony. And to abandon what we have secured would be uncommercial and suicidal. It may be, however, that Mr. Teece's motion is not intended to affect this competitive traffic, but is confined to asking Parliament to resolve that the rates throughout the lines shall be fixed upon uniform rates per ton per mile according to distance.

To anyone conversant with the principles which govern the conveyance of traffic, either by land or water, it must be apparent that there would be as little reason in such a system as there would be in charging the same rate for the carriage of coal as for silks.

Charges for carriage should, with other consideration, be proportioned to the cost of the service; it costs the Department more per mile for the carriage of goods 100 miles than it does for carrying them 200 miles, and the public who require the goods carried the longer distance should reap the benefit of this decreased cost by being charged a proportionately decreased price. Not only is such a system of charging fair in its incidence, but a contrary practice would most probably drive from Sydney the whole of the trade of the Colony from Murrumburrah southwards, because the conveyance of a ton of general merchandise between Sydney and Murrumburrah would cost £6 13s., while from Melbourne, *via* Wodonga, the charge would be £6 0s. 6d., notwithstanding the distance is 120 miles greater. Most certainly such a system would divert from Sydney all traffic from Cootamundra southwards since a ton of goods from Sydney to that station would cost £7 7s. 7d., while from Melbourne, a greater distance by 70 miles, the cost would be only £5 10s. 1d.

The introduction of uniform mileage-rates would, as regards the carriage of agricultural produce, have the contrary effect to that which the producers have been contending for, *viz.*, a *pro rata* reduction, for distance. This has been granted to them, but they want it to a larger degree. The adoption of Mr. Teece's proposal would increase the rates as follows:—

For a distance of 100 miles, from	9s. 9d.	to	10s. 5d.	per ton.
" " 200	" "	"	16s. 10d. to 20s. 10d.	"
" " 300	" "	"	21s. 10d. to 31s. 3d.	"
" " 400	" "	"	26s. 10d. to 41s. 8d.	"

and so on. Uniform mileage-rates would be the means of closing all the agricultural country beyond 200 miles from its market, whereas by the adoption of the sliding scale of rates proportioned to distance, agricultural country within 500 miles of its market can be made available for the profitable cultivation of produce.

An exhaustive inquiry, which extended over several months towards the end of 1881, was made into the question of rates on our railway lines by a Board of three gentlemen, entirely unconnected not only with the Railway Department but with the Civil Service; and these gentlemen, in submitting their report to the Minister of the day (and here it may be stated that at that time the competitive rates were in existence), the Board stated that they had commenced the inquiry "fully impressed with the importance of the subject, and the influence the policy of the Railway Department, in regard to the rates charged for the conveyance of goods, has upon the progress and development of the Colony."

The Board examined seventy-seven (77) witnesses, "who were fairly representative of the various interests in the Colony," and obtained the written evidence of four gentlemen, who were unable to attend personally; and perhaps I cannot do better than quote from the report of the Board the conclusions they arrived at. They said—

"The rates relating to the pastoral interests have not drawn forth much criticism, the principal matters complained of being the difference between the mileage rates for the carriage of stock and wool for long distances in comparison with the rates for short distances. The charges are, however, defended on commercial grounds and on the score of exigency. We do not see that any alteration can judiciously be made so as to equalize the rates, and we believe the effect of such an alteration would be, in the first place, to divert to other Colonies a considerable portion of the traffic that now comes to our metropolis; and, secondly, to cause much of the cattle now sent by railway to be travelled by road.

"The principal complaints tendered on behalf of the commercial interests are made by the country storekeepers, who state that their trade is practically limited to their own particular district by the differential rates, to remedy which an equal and uniform mileage rate is proposed. We have considered the feasibility of the adoption of a uniform rate, but cannot recommend it. It is against the practice, we believe of any railway company in the world; it is against the common practice of carriers, who will convey goods for a long distance at a cheaper proportionate rate than they will for a short distance; and in this Colony the concession would simply benefit the storekeepers, who must obtain their goods from the terminal station; and the uniform rate, while an advantage to them, would be a disadvantage to the people in the interior, who require the greatest consideration.

"Taken as a whole, the opinions of the various witnesses we have examined are very diverse, and evidently based upon mere local experience derived from the business in which each is most interested—in many cases diametrically opposed to each other—and in no instance offering any comprehensive or practical suggestions for the revision on the rate-sheet, but admitting generally that the present rates are fair and equitable.

"Taking

Result of measure to secure trade.

Wider scope of Mr. Teece's motion.

Considerations which govern the fixing of rates.

Effect of uniform mileage-rates on agricultural produce.

Inquiry made by Rates Board in 1881.

Conclusions arrived at by Board.

"Taking the evidence tendered to the Board, together with the Commissioner's able and exhaustive comments and explanations thereon, we are constrained to accept his assurance that the officers of the Railway Department have studied the question of the freight of charges from every point of view, with the object of affording to all interests concerned fair and equitable rates, and to agree with him that it is not desirable that any hard and fast rule from which departure is inadmissible should be laid down, because changes must be made from time to time to meet the variable conditions of trade, as well as the traffic, and the effect upon the traffic, brought about by the rates charged."

While these conclusions have been arrived at by our own authorities after careful investigation, it may be as well to know what authorities in other parts of the world have to say on the subject. Opinions of other authorities.

Mr. Farrar, Secretary to the Board of Trade in England, says, with reference to the rates question:—

"As to equal mileage rates, they would put an end to competition. The result would probably be 'levelling up' and not 'levelling down.' Parliament would never consent to take the lowest profit which a company now makes by its cheapest traffic as a standard, and fix maximum rates accordingly for all their traffic. The endeavour would be to fix a medium or average rate, and in the struggle over this, the companies must inevitably have the advantage of the public. But, supposing such a standard fixed, what would be the result? The traffic, which was now carried at a low rate, in competition with a sea route, would be driven from the railway to the competing route; while the railway, if it was to make as much aggregate profit as before, must charge a higher rate than is now charged on the traffic which remained to it. If, for instance, Parliament were to take from the South-Eastern Railway Company the power of charging on fruit and hops from Boulogne the low rate they now charged, the result would be that French fruit and hops would reach London by water, and that the Railway Company, to recoup themselves for the loss of the French traffic, would probably charge more on Kent fruit and hops. This charge the Kent fruit and hops would be able to bear, because the price would be raised in the London market. It was probable, therefore, that *most of the inequalities of charges complained of were to the advantage rather than the disadvantage of the public.*"

Applying to our circumstances the principle underlying these remarks, we should find as I have endeavoured to show, that the adoption of an uniform mileage rate for all distances would offer no advantage to the distant producer to send his produce to market; and that for those goods which must under any circumstances go into the interior for the requirements of the people there, water-carriage by rivers, wherever available, and the competing rates of the neighbouring colonies, would reduce our traffic to a minimum. To compensate for this it would be necessary to charge very much higher rates than are at the present time charged for the carriage of goods for short distances, or to places from whence the traffic could not be diverted by competitive routes. Effect of loss of traffic on distant parts of line.

Writing on the same subject, in reply to a communication which I addressed to him, Mr. Swarbrick, the General Manager of the Great Eastern Railway in England, says:— Mr. Swarbrick's opinion.

"You cannot, in my opinion, lay down any very hard and fast line for fixing rates. As a general rule, our home experience is that it is better to foster large quantities and longer distances by means of relatively lower rates, than to try by means of smaller quantities and shorter runs to secure a higher percentage of profit over a smaller area. We also, where there is an exceptionally large industry, or where necessary to foster any export or import trade, make special rates to meet the case, and thus our rate-books are full of anomalies and apparent contradictions to the benefit, as we think, both of ourselves and customers."

And as the result of an inquiry held in England some years ago, by a Select Committee appointed by the House of Commons, on the question, the Committee reported that:— Conclusions arrived at by Committee of House of Commons.

"There is no question as to the existence of these 'preferential' or 'exceptional' special rates, the latter epithet being the term used by representatives of the railway. The evidence given under this head comes almost entirely either from persons engaged in production, who are being charged proportionately higher rates than producers resident in other parts of the country, or from towns or places through which traffic passes, who, as engaged in the business of carrying or distribution, complain that it is diverted from them by the lower rates charged on other routes. But for the competition introduced by the low rates given by railway companies, trade would be much more local, and the trader who was nearest the market would probably make a large profit; but, on the other hand, this competition cannot but be advantageous to the public; that Greenock sugar refiners should be in the same market as the sugar refiners of London, while it may be a grievance to London refiners, must be an advantage to Greenock refiners, and cannot be a disadvantage to buyers of sugar. It may be worth while to follow this as a typical case:—Thirty-nine towns in England to which sugar is sent are at an average distance of 292 miles from Greenock, and the same towns are at an average distance from London of only 150 miles. The rates for these distances, from London and Greenock respectively, are about the same * * *. In other words, sugar from Greenock is for the same sum carried double the distance as sugar from London. This enables Greenock to compete at these thirty-nine towns, and this is what the refiners of London object to. The demand from London, therefore, is that either the rates for the longer distance should be raised, or those for the shorter distance reduced. The effect of compliance with this demand would be to close some of these markets against Greenock sugar, to deprive the northern lines of a considerable portion of their trade, handing it over to the southern lines, and to give a practical monopoly to the London refiners of sugar, who would be real gainers by the transaction. It does not appear to your Committee that such a result would be either just or reasonable."

"Although 'equal mileage' rates, that is to say, rates proportioned exactly to the number of miles run, have not been advocated on this occasion as before former Committees; still, ideas have been put forward so closely resembling such as would naturally support the mileage system, that it may be worth while to recall the words of the Committee of 1872:—

"(a) It would prevent railway companies from lowering their fares and rates so as to compete with traffic by sea, by canal, or by a shorter or otherwise cheaper railway, and would thus deprive the public of the benefit of competition, and the company of a legitimate source of profit."

"(b) It would prevent railway companies from making perfectly fair arrangements for carrying at a lower rate than usual, goods bought in large and constant quantities, or for carrying for long distances at a lower rate than for short distances."

"In short, to impose equal mileage on the companies would be to deprive the public of much of the competition which now exists, or has existed, to raise the charges on the public in many cases where the companies now find it to their interest to lower them, and to perpetuate monopolies in carriage, trade, and manufacture, in favour of those rates or places which are nearest or least expensive, where the varying charges of the companies now create competition. And it will be found that the supporters of equal mileage when pressed often really mean, not that the rates they pay themselves are too high, but that the rates that others pay are too low.

"Pressed by the difficulties, the proposers of equal mileage have admitted that there must be numerous exceptions, *e.g.*, where there is sea competition (*i.e.*, at about three-fifths of the Railway Stations of the United Kingdom), where low rates for long distances will bring a profit; or where the article now carried at low rates is a necessary, such as coal. It is scarcely necessary to observe that such exceptions as these, whilst inadequate to meet all the various cases, destroy the value of equal mileage as a principle, or the possibility of applying it as a general rule.

"Any fixed standard of rates would materially interfere with competition; supposing such a standard fixed, the result would be that the traffic which is now carried at a low rate in competition with a sea route would be driven from the Railway to the competing sea route, whilst the Railway, if it is to make as much aggregate profit as before, must charge a higher rate than it now charges on the traffic which remains to it.

"It may therefore be assumed that some of the inequalities of charges complained of are to the advantage, rather than to the disadvantage of the public. A preference to be illegal, and to furnish a reasonable cause for complaint, must be unjust. It is not unjust so long as it is the result of fair competition, and so long as equal rates are given for like services under like circumstances, and for like quantities of merchandise."

It is gratifying to find that the principle upon which the railway rate-sheets of this Colony have been compiled are supported by such unimpeachable authorities as I have quoted; but as railway management is a progressive science, it may be as well to know what the authorities say to the latest date.

The following extracts are taken from a book written in the end of last year (it is in fact, dated December, 1886), by Mr. Grierson, the eminent General Manager of the Great Western Railway in England, on "Railway Rates, English and Foreign." He says:—

Page 21. While shrinking from advocating equal mileage rates, many persons take up an intermediate position. They object to rates being much out of proportion to distance; they do so, although the traffic may not be carried over the same parts or sections of a railway. The rates to which objection is taken are of several kinds—transit or through rates, special rates generally, special rates for long distances as distinguished from short distances or intermediate traffic.

Such differential rates exist in all countries in which railways have been developed; and it will be found that here as elsewhere they have been adopted not solely or even chiefly with a view to benefit railway companies, but mainly to meet the not unreasonable demands of traders and consumers.

23. Special lower rates enable the manufacturers of exported goods, such as manufactured cottons from Manchester, and hardware from Birmingham, to send them to London, and to avail themselves of lines of steamers sailing from several ports. But for such facilities exporters would be confined to one, and that the nearest port, and they would lose the benefit of the competition in facilities and sea freights.

The railway company which happened to own the route to the nearest port would possess a monopoly of the traffic, and might charge their full rates instead of the present reduced rates.

31. Many apparent anomalies arise from competition of the railways with the sea; others are the results of comparison of the rates charged by railway companies, which must carry, if they are to carry the traffic at all, at the same rates as a company having a shorter route. Inasmuch as competition between railway companies is carried on extensively, many such disparities exist.

Tin plates are carried from South Wales *via* Stockport for Liverpool at lower rates than to Manchester, because the Midland Railway Company has to compete with two shorter routes between these places. This (apparent) anomaly would be entirely removed by the Midland Company ceasing to compete for the Liverpool traffic; but the consumers of tin plates in Manchester would not in any respect be benefited by the change.

32. One more illustration: Steamboats ply between Liverpool and Bristol. Goods carried by railway between these two places by one or other of the three available routes must pass through some one of the following places—Birmingham, Worcester, Hereford, Shrewsbury, Chester, or Warrington.

The local rates to all these intermediate towns may appear disproportionate to those charged between the extreme points, but is there any real injustice done?

What injustice is done to those whose goods are carried to and from intermediate inland places by the fact that their rates are higher, or higher in proportion, than the competitive rates, provided the rates to intermediate places are in themselves fair and within the Company's legal maximum?

33. A third source of complaint of disproportionate rates arises from the competition between ports. Assume, for instance, port A to be 51 miles, port B 72 miles, and port C a greater distance from D, one of the great seats of manufacture and commerce.

The merchants and shipowners at C and B desire to compete with A, and they induce the Railway Company to carry from all three at the same rates.

The result is that the rates are lower for the throughout distance than to and from some of the intermediate places. The grounds of grievance would be removed by the Railway Company ceasing to carry from C and B at the same rates as from A.

34. The chief explanations of differential rates have been mentioned; another cause less important is in operation. Of the various kinds of outlay on the part of a Railway Company, a large portion remains fixed, whether the distance run by a train is 10 miles or 100. Such, for example, are the cost of terminal accommodation, loading and unloading, clerical work, and, broadly speaking, such are the interest on construction cost; maintenance, &c. Another kind of expenditure increases directly with the mileage run; for example, the provision and wear and tear of locomotives, rolling-stock, and permanent way, and liability for loss of or damage to goods in transit.

Certain kinds of expenditure increase with the distance run, but not in the same ratio.

34, 35. Obviously, wages, cost of locomotive power, and cost of haulage generally, are not four times as much in the case of a train which has run a hundred miles as in one which has run twenty-five. With the progress of railways, with improved economy in the use of machinery, and in other ways, this tendency—recognized to some extent by the Legislature in the rates for short-distance traffic—in expenditure not to increase in the same ratio as mileage distance, becomes an important element. The result of all this is to make mileage less a criterion of cost, and tends to place large towns at a greater distance at an advantage as compared with intermediate towns, and to give rise to differential rates. It is also obvious that from many intermediate towns the quantities forwarded are not so large and regular as from terminal towns, and that from the former there is not a constant traffic to and fro.

Differential rates have arisen in no small degree out of the same causes as have necessitated a classification of goods. Goods of small intrinsic value will not be conveyed at all unless at low rates; only on special terms can such goods produced at a great distance be brought to market.

36. Sometimes it is urged as an objection to differential rates that by reason of them companies sustain, on long-distance traffic, a loss which is made up by charges on short-distance traffic; but though producing, no doubt, a lower percentage of profits than the latter, the former yields some profit, unless where undue competition exists. If a company be deprived of this long-distance traffic will it not be forced to raise rates on other traffic to maintain its revenue?

But,

Rate charges made in New South Wales upheld by authorities.

Mr. Grierson's opinions, latest published authority on subject of equal mileage rates.

But, it is also objected, differential rates deprive the inhabitants of certain towns of the natural advantages of their geographical position.

This argument would be more persuasive than it is if it were not generally expressed in the very language of protectionists—if it were not so often a claim of an exclusive right to supply certain markets, and a scarcely concealed dislike to the intrusion of competition.

Preserving the natural advantages of one town means preventing the removal of the natural disadvantages of others.

I could quote from other railway authorities to the same effect, but while it would lengthen it would not materially strengthen the case.

Summary showing effect of proposal.

To put the matter very briefly, the points to be considered are :—

- “1st. That the abolition of competitive rates would mean the diversion from Sydney to Melbourne of the trade of that part of the Colony from Junee southwards, and the whole of the trade of Riverina, which is now conveyed on the South-western line ; and
- “2nd. That the adoption of uniform rates per ton per mile will either involve the loss of an enormous amount of revenue on the short-journey traffic if the ‘levelling down’ process is adopted—that is to say, taking the longest-journey rates as a basis, and fixing all those for shorter distances in proportion, or otherwise divert to Melbourne the whole of the trade of the Colony from Cootamundra southwards.”

I may perhaps be pardoned for saying that, after the success that has attended the efforts of the Department to secure, against keen competition, the trade of our Colony, any action that may be taken to alienate it will be greatly to be deplored, not only in the interests of the Railway Department and its revenue, but of the Colony generally, the commerce of which will be, in a material degree, prejudicially affected.

Alternative Proposal by the Commissioner.

From inquiries I have made on the subject I am led to believe that the agitation for equal mileage rates derives its existence from the representations of country storekeepers that their trade under present system of charging is practically limited to their own particular districts.

Agitation for equal mileage rates promoted by country storekeepers.

They contend that they should be allowed to break journey with their goods, and be charged no more than the through rate, beyond a small terminal charge for unloading and loading at the intermediate stations. A trader at Goulburn, for instance, pays £3 16s. 5d. per ton for goods from Sydney for that place, but he wishes, subsequently, to send a portion of them to Cootamundra, and the charge from Goulburn to Cootamundra is £3 8s. 7d., in all £7 5s.

The storekeeper, however, at Cootamundra can obtain goods from Sydney direct, on the reduced sliding scale for distance, for £6 6s. 9d., and practically the Goulburn storekeeper is shut out from trading with Cootamundra and the district surrounding it.

The Traffic Manager, in a report on the proposal to grant this concession, has given some excellent reasons against it—a copy of his report is appended ; but on the whole I fail to see that the objections are insuperable. The Traffic Manager is in error as regards the statement that the Rates Board dealt with this aspect of the case. I think I am right in saying that this particular phase of it was not before them, the Board deprecated the introduction of equal mileage rates in the interests of local storekeepers to the disadvantage of settlers in the more distant part of the Colony, but the proposal to overcome the admitted disability of country storekeepers trading beyond their immediate district with goods brought from Sydney by the introduction of a “break-journey” rate was not discussed by the Board beyond its application to wheat stopped *in transitu* to be ground into flour, and this principle of charging they found to be in active operation, and approved of it.

Traffic Manager's report reviewed.

There are, it is admitted, difficulties and perils in the way of the application to goods generally of this principle of charging, especially in cases where there are manufactories at the intermediate towns ; but if there be no abuse of the concession I do not see how the Railway revenue can suffer. Country storekeepers are not now supplying such goods to districts beyond their immediate neighbourhood ; they are supplied direct by metropolitan tradesmen and merchandisers ; the adoption of the proposal will have the effect of disseminating trade, and as regards the more distant storekeepers, decentralizing it. The revenue (if there be no malpractices) would obtain a benefit, inasmuch as the terminal charges for break of journey can be made sufficiently high to show, not only a return for the service rendered, but a profit upon it.

Break-of-journey rate.

It is only the comparative absence of local manufactories which makes the introduction of this system of charging possible ; it has no parallel in any other country, and I would not willingly introduce it here, I only submit it for consideration because I fear that, unless this concession be made to country storekeepers, they will have sufficient influence to induce Parliament to sanction the scheme of equal mileage rates, which will result disastrously, not alone to the Railway revenue, but to the general commerce of the Colony.

Alternative proposal recommended and why.

CHAS. A. GOODCHAP.
Commissioner for Railways.

12 May, 1887.

Report of Traffic Manager to Commissioner for Railways on proposal to introduce a rate for goods which break journey at intermediate towns.

I HAVE carefully considered the proposal to give traders, at intermediate towns, the benefit of the reduced rates to the competitive districts proportionate to the distance they are situated from those districts, and would respectfully point out that a powerful argument against the introduction of the principle is that, if adopted in the case of traffic forwarded from Goulburn or other station on the Southern line to the competitive districts, it is all but a certainty that a similar demand will be made throughout

throughout the lines even where no competition exists; indeed the Commissioner will remember that this very matter was pressed upon the Board, which inquired into the rates some years ago, by some storekeepers in Orange who thought they should be able to reconsign goods (which had originally come from Sydney) to Dubbo at a through rate, plus a small charge for the break of the journey at Orange.

The effect of the adoption of such a principle would mean that the nearer a storekeeper lives to Sydney the better his position to compete for the trade of the districts lying near to a town many miles further into the interior.

For example, let it be assumed for the moment that competitive rates do not exist, but that ordinary mileage rates are charged throughout the lines. A storekeeper in a large business in Goulburn pays trainage from Sydney at the rate of £3 16s. 5d. per ton upon third-class goods, while the through rate to Bomen is £7 4s. 7d. His contention is that we should allow him to reconsign goods (originally received from Sydney) to a small store at Bomen at the latter rate, plus (we shall say) 7s. 6d. per ton, = £7 12s. 1d. altogether. But if the Wagga Wagga storekeeper, under precisely the same conditions, desires to supply the same small store at Bomen, he must pay:—

From Sydney to Wagga Wagga	£7 6 4 per ton, and
„ Wagga Wagga to Bomen	0 9 0 „
Total					£7 15 4 per ton.

So that, in the matter of railway carriage, he is beaten at his own door by a competitor living 170 miles away.

I would respectfully submit that the competitive rates do not affect the principle; moreover, these rates were forced upon us. We did not adopt them from choice, and it would seem judicious that they should not extend beyond the limits suggested by the Commissioner.*

There is another aspect of the case which has, perhaps, been overlooked, and that is that the adoption of the suggestion will necessitate a very largely increased staff at country stations, if adopted generally; and there is a further fear that it would open the door to frauds, the opportunity of which, in the light of past experience, should be avoided.

Take the case of a storekeeper at Orange, who, for every ton of leather he gets from Sydney, gets ten in the district. He sends a ton to Dubbo, and asserts that it came from Sydney and should be charged the through rate, plus the small charge alluded to. Who is to say that this particular ton of leather did not originally go from Sydney, and yet there may be strong presumptive evidence that it did not? The door would certainly be open to a dishonest clerk to defraud the Department by acting in collusion with the sender without much, if any, chance of ever being found out.

It is solicitude for the welfare of the Department which induces me to make these observations. I believe the introduction of this system of charging, while it might please storekeepers who live nearest to Sydney, it would give dissatisfaction to those living far in the interior, and, in my opinion, the latter deserve the most consideration.

W.V.R.,
4/5/87.

No. 44.

Minute by The Commissioner for Railways upon extract from the *Central Australian*.

Bourke, 16 July, 1887.

EXTRACT from the *Central Australian* of 16th July. Copy of paper forwarded by mail.

THE Editor satisfied himself as to the *bona-fides* of this statement before insertion. A confidential officer might pick up something here, but it would only be done to a very confidential officer.—EDITOR *C. A.* To Commissioner for Railways.

Confidential.

Even the paragraph does not necessarily show that any improper manipulation is going on, as a forwarding agent might give his customers the benefit of the truck rate, even for small quantities, but it is worth enquiring about.—*C.A.G.*, 18/7/87.

I visited Bourke and saw Mr. Parsons, the editor of the *Central Australian*. He apparently misunderstood the position of carrying agents in the matter of rebates. His impression was that the 6 tons must be the property of a single individual. There is no doubt, however, I think, but that the system has been, and is being, abused, and false declarations made, and Mr. Parsons' information to this extent is correct. It is not only the general impression of the Bourke people, but it is the cause of a great deal of irritation to them. From another unquestionable source I gathered that at least two steam-boat proprietors, and one firm at Wanaaring, are concerned, and I have arranged to be advised when their next consignments are to hand. I would suggest that one or two confidential officers should travel by the steamer and watch the disposal of the goods, many of which, I gather, are disposed of before reaching the boundary of the rebate system. I may state that the merchants of Bourke are very loud in their condemnation of this differential rate, and are no doubt placed at a very serious disadvantage by it. They have been very anxiously awaiting the result of Mr. Kirkcaldie's visit, and, in the meanwhile, have been dealing largely with Adelaide and Sydney by river, the rate from Sydney to Bourke being about £5 per ton with insurance.—*J. HARPER*, 28/7/87. Traffic Manager.

Commissioner

Commissioner to see. In Mr. Kirkcaldie's report on the Darling River trade, a proposal was made which would effectually stop the abuse alluded to.—W.V.R., 28/7/87. Commissioner.

This matter has been so far settled that no higher charge for wool than rates from Byrock are to be charged.—C.A.G., 30/8/87. Traffic Manager.

I note the reduction in the rates for wool from Bourke, and have taken steps to advise the stations and brokers.—W. V. READ, 1/9/87.

Wool Rates, Western Districts.—Referring to the conversation I had with the Commissioner, yesterday, respecting the wool traffic of the western districts, I now recommend that our present rates from Byrock to Sydney, viz., undumped scoured wool, £5 Os. 3d. per ton; greasy wool, £4 Os. 3d. per ton, be made the maximum wool rates from the western district. These figures are a reduction of 11s. 3d. and 9s. respectively on last year's quotations from Bourke. The reasons for making a reduction in the rates from Bourke have been fully explained in previous reports.—W.V.R., 24/8/87. Commissioner.

For Minister's approval.—C.A.G., 26/8/87. Approved.—J.S., 26/8/87. Traffic Manager.—A.R., 1/9/87. Instructions issued per G.O., No 69.—W.V.R., 22/9/87.

No. 45.

J. Haynes, Esq., M.P., to The Colonial Secretary.

[Extract from the *Evening News*, Saturday, October 15, 1887.]

RAILWAY RATES.

MEMORANDA on the existing merchandise rates of our railways, with proposals for an alteration of the same.

THE following has been addressed by Mr. J. Haynes, M.P. for Mudgee, to the Premier:—

“To the Hon. Sir Henry Parkes, K.C.M.G., Colonial Secretary,—

“Dear Sir,—I beg to submit to the Government, through you the following memoranda on the present system of merchandise charges on our railways. I am aware that, in some respects, the matter concerns the Works Department, and that my proposals might have been submitted to either the Commissioner for Railways or his chief, the Minister for Works; but as, according to my view, the whole thing is a question of public policy, affecting the government of the interior districts of this country, I have thought it the better course to submit the proposals to the Cabinet. In this work I stand representing the entire inland community, who are affected one way or another—for good or for harm—by the management of our great national highways. The question as to this management or control is one far beyond official or departmental concern, and is, in reality, a question of public policy. The representations in regard to the management of our railways which I now make, are from the country. It is fitting that these representations should be made to the Minister who represents the Government. Therefore I address you; and have only to hope that as the reforms proposed are really of an urgent character, no time will be lost by the Government in ascertaining whether they are sound or unsound. With these few introductory words I beg to proceed.

1. For a considerable period of time, principally during my last five or six years connection with the Press, I have watched the relative advance in trade development of our metropolitan and inland districts, and I have been struck with the comparatively small headway of the latter, notwithstanding their varied and great resources. Of late many bitter complaints have come up to us from the country of the continued unproductiveness of labour and enterprise of every kind. The tillers of the soil, spread over the railway-traversed centres of the country, have complained that they are almost wholly shut out from the great coast markets; while, on the other hand, those markets inland at all available are reached by cheaply-borne produce from outside Colonies. Very many of our farmers took up their lands years ahead of railway communication, and they have in the interval plodded on, expecting a complete change with the appearance of the locomotive. But to these the railways have come, and the farmers find their position changed if anything but little; in many cases they are the worse off. This disappointment has been felt inland, not by the farming interest alone. Almost every branch of trade, manufacturing as well as mercantile, has long been suffering from drawbacks which all could feel, but few describe. The recent three or four years of depression, felt here as in other parts of the world, has intensified the effect of this condition of things; and after all it is not perhaps surprising, in the uncertainty of the hour, many of our inland people, hitherto conspicuous as a body in their attachment to free trade, should lend for a time, at any rate, a partially willing ear to the delusive cry of protection.

2. I always felt that there must be something radically wrong with our governmental or administrative system (and as far as our inland communities are concerned they are one and the same under our centralising system), which would induce men to entertain even for a moment a proposition that to relieve trade of depression we must burden it with fresh handicaps rather than free it from those which it already bears. I was convinced that free trade meant deep and lasting prosperity, and I perceived that the existing handicaps to inland development could not come from our fiscal policy. I could see that our farming community were a laborious and steady people, and that our country business men were as energetic as any that could elsewhere be found. I turned my attention to our facilities for transport, and I must say I was not long examining our railway tariff system before I discovered what I believe to be the great—the one only—hindrance to inland development, and the ever-present cause of agricultural depression in this country.

3. I now propose to set forth in this paper the results of my investigation on this head, giving in detail particulars of existing handicaps, and appended hereto will be found my proposals for a complete remedy. Before proceeding further, I must here state my belief that the Commissioner for Railways (Mr. Goodchap) has at all times striven to shape our railway system to the wants of the general community; and I believe, further, that his occupancy of office has been an executive success. He has organised for the country a staff of officers second to none in any other part of the world—steady, reliable, and competent. We can realise this when we note that (with almost an entire absence of sacrifice of life or loss of property) we carry between 53 and 54 million passengers and about $1\frac{1}{2}$ million tons of merchandise on our railways and tramways in a single year. In this way, as an executive officer I believe Mr. Goodchap to have succeeded. But I must say that it is in this executive work his success begins and ends. I regret that I will in this paper have to show that not only has he failed to grasp the wants of the interior as regards our goods traffic, but that he has exercised ministerial rather than official powers, and has inaugurated a system of rates which is illegal as well as being diametrically opposed to the declared free trade policy of the country.

4. The profound blunder of our railway goods system is that it is shaped to meet a wholesale rather than a retail trade. It is impossible, on examination of the system, not to observe that it is to the few any favourable consideration is shown, and that the one object—benefit to the metropolis—is kept always in view. I will have to show that the wholesale principle is the body and soul of the system, as far as the metropolis and (in some respects with the view to benefiting Sydney) Newcastle are concerned, and that where the principle is extended inland at all it is to coal-mine owners and wool-growers.

5. Now it has been proposed to abolish the differential rate system, namely, that under which a specially low rate of carriage was devised to secure our trade in the terminal districts of the south and south-western trunk lines. Now, I propose—it is a paradox—to abolish the system by making it general. I believe it can be shown that the Commissioner is acting directly contrary to law in charging any such thing as a differential rate; and I believe a Maitland, Mudgee, Goulburn, or Bathurst trader could successfully resist in a court of law any further payment for carriage than the average for distance under the differential rate. (Mr. Teece, M.P., for Goulburn, informs me that the English Courts have decided the differential rates are illegal.)

6. As above stated, it is a paradox for me to say I propose obliterating these differential rates by maintaining them in general application over the entire stretch of our railways. My point is that the differential system, low as it is, pays the Department; and, extended all over the country, might be calculated to lead to a vastly increased traffic.

7. First of all, for general information, it may be as well that I describe what the differential rate system is and what it really means in pounds, shillings, and pence. It was inaugurated, as is well known, to enable Sydney to compete for the trade of our southern border with Victoria, who had devised a specially low railway rate to retain her hold of it. Our concession to the Sydney business people was this:—(1.) The maximum rate for any class of traffic (except explosives) from Sydney to stations distant over 305 miles on the Southern and 340 miles on the South-western lines will be £5 10s. per ton; or if in truck loads not exceeding 6 tons, the maximum charge will be,—corrugated iron and fencing wire, £18 per truck; other 1st, 2nd, 3rd, and 4th class goods, £20 per truck. (2.) A reduction of 20 per cent. will be allowed on 1st and 2nd class traffic from Sydney to stations on Southern and South-western lines, distant over 340 miles. With regard to the Western line, a differential rate of £35 per truck of 6 tons is made for a distance of 503 miles.

8. The working out of the system may here be briefly illustrated. A Sydney trader may send 6 tons of corrugated iron 454 miles for £18; but a Maitland trader sending his 6 tons to Tenterfield (120 miles less haulage) would pay £26 17s. Under the same system a Sydney firm dealing, say in Victorian-made agricultural machinery, could send 6 tons of it 450 miles for £20; but the Maitland man, sending exactly the same goods only 334 miles would pay £46 10s. 6d. Under the same arrangement, a Sydney merchant sending goods, known as fourth-class, would get his 6 tons for £20 for 450 miles, while the Maitland man, sending 120 miles less, would have to, and does, pay on 6 tons his £59 19s. Sending to Bourke, 503 miles, goods of this sort, the Sydney merchant would be charged £35, but if he had to pay the same rate per mile as the Maitland business man he would contribute not £35 but £82 15s. to the railway returns.

The rate sheet has not been the work of any one person, nor the outcome of the policy of any one Government; it has been shaped by the policy of the times, and the ever varying conditions of trade.—CH.A.G., 17/10/87.

Mr. Haynes is going to level down his proposal to give the short-journey traffic the benefit of the long-journey rates—he is going, in effect, to demolish the railway revenue.—CH.A.G., 17/10/87.

This has been replied to in anticipation by an official paper written on Mr. Teece's proposed motion for the abolition of the differential rates, supplied by an article in the *Herald* on 27th September, 1887.—CH.A.G.

But in practice we know that 6 tons of fourth-class goods never forms a consignment.—CH.A.G.

9. It might be contended that this instance of Maitland on the Northern line, where the differential system does not apply, is hardly a fair illustration of the workings; but it may be illustrated with equal effect as regards intervening districts on the very lines where the differential system is in operation. For instance, Orange. This town is 192 miles from Sydney. A trader there getting up 6 tons of ironmongery, agricultural machinery, &c., would pay for the distance £31 6s. 6d., while a Sydney merchant could send his 6 tons 454 miles for £20, or 262 miles further for £11 6s. 6d. less. If the trader at Orange were receiving 6 tons of fourth-class goods he would pay £40 8s. 6d., but the man at Sydney could send his 6 tons 311 miles further on the same line for £5 8s. 6d. less; and on the Southern Line 262 miles further for £20 8s. 6d. less.

10. How it has worked out may be judged from this fact: A storekeeper at Cootamundra, being 253 miles distant from Sydney, and consequently too near for the differential system, would pay for 6 tons of ironmongery, machinery, &c., £38 0s. 6d. But he knows the differential ropes. He books his goods to Wagga (56 miles further on) so as to get within the differential reach; gets the 6 tons up to Wagga for £20, retrucks them back from Wagga to Cootamundra for £9 17s. 6d., and saves £8 3s. on the consignment by giving the Department 112 miles of extra haulage.

11. This is the differential system briefly illustrated. It is not for me just here to bring the whole thing right out. That will be done further on. My object now is to justify by illustration my contention that our railway system is the embodiment of the wholesale rather than the retail principle; that consequently it is dead in favour of the metropolitan man, whether he be a big or a little trader, and that where it does extend any advantage to the country, it does it mostly to the big man, represented in the wool or the coal ring. And here I may just keep this idea clear and distinct on the surface, that I do not propose to deprive these men of the advantages they possess under the tariff, but claim rather for an extension of the advantages to every man of the inland community. I have said that the wholesale idea is the principle of our railway system, and then make the apparently illogical assertion (as above stated) that the little man (or the retail trader) of the metropolis is favoured. The point is very simply shown. First of all, it is seen that the wholesale Sydney merchant can send his 6 tons at the reduced rate of £20, and the 6 tons may be made up of any class of merchandise. The Sydney merchant usually deals in large consignments, and they are as often over as under 6 tons. But even if under the 6 tons the same advantage is gained; and herein is the way the retail or small man in Sydney gets the benefit of the wholesale principle. In Sydney, as we know, there are carrying or forwarding agencies—Wright, Heaton, & Co.; Lee, Macalister, & Co.; &c. Now, when a Sydney trader, large or small, has 4 cwt. of a consignment to send, he forwards it to the agents; twenty others do the same thing, and a £20 truck load of 6 tons is made up, the agents charging only commission; and so the £20 principle is extended to and enjoyed by the little and big man alike in Sydney. But the inland man, the farmer or the storekeeper, battling his way on any part of the vast stretch of our railways, knows nothing of such a grand arrangement. The farmer is a retail man, and as a retail man the system kills him. Illustration and proof of this will be amply given further on.

12. Now, with regard to the application of the wholesale principle inland. That it applies to the wealthy coal-mine owner and the wool king is indisputable. For instance, 6 tons of coal are carried (say) 96 miles for 46s., and at Newcastle or at Darling Harbour the use of the cranes or staiths, which have cost the country huge sums of money, is given in free. Now the colliery man is a wholesale customer. The farmer is not. But if he has to send his 6 tons of dairy produce the way in ninety-nine cases out of 100 it is sent, it will cost him the 96 miles, not £2 6s., but £12 4s. 6d.; while his ploughs, harrows, &c., would cost him £16 19s. 6d. As to the woolgrower, he is essentially a wholesale man, and gets his wool down 454 miles for £2 19s. per ton. Now the farmer has the wholesale principle offering to him with respect to grain that he seldom uses. If he sends 6 tons of wheat he can travel at a low rate (and I will show that it may be one at 100 per cent. cheaper); but he is oftenest a small dealer, and at that rate his grain costs him for the 6 tons £34 1s. 6d.

13. In hay, straw, and chaff, the farmer has got a consideration, but these are by no means the staple products of the interior, and the farmer prefers dealing in 1 ton to 4 or 5 ton consignments of hay, chaff, &c., especially if he has any transactions with inland markets.

The

No; the truck load does not average 6 tons; it may be made up of any class of merchandise, and this admission invalidates Mr. Haynes's calculations, which are always based on the supposition that the merchants send in some cases fourth-class goods, but never less than third-class goods.—CH. A.G.

To be accurate, Mr. Haynes must leave Newcastle out of the calculation; the northern coal is carried on very different terms to those he states.

Mr. Haynes's figures are wrong—but it appears that the principle he advocates here is that dairy produce should be carried as cheaply as coal; now, coal is worth 5s. a ton, while dairy produce is worth 6d. a lb., or £56 a ton.

The concession applies to consignments of 5 tons or so; but if a less amount is sent he is charged for the truck load; or his consignment of 1, 2, or 3 tons is charged first-class rates, actual weight. For instance, a wool-king can send his wool down by the ton at £2 19s. for 454 miles; but a farmer sending 1 ton of hay or chaff that distance would pay £5 13s. 6d.; or from my district, Mudgee, 192 miles, £3 0s. 7d.—a rather high percentage on its value. These are illustrations that our railways are conducted on the wholesale principle to the advantage of a few. The farmer gets concessions that he seldom uses, while on the other hand, the very wholesale principle of the tariff is used as a means to swamp him in his own adjacent inland markets. Proof of this latter statement is found in the following fact:—Millers and storekeepers (say) at Tamworth and Armidale, &c., on the approach of harvest time, get up cheaply by rail on the wholesale principle large lines of imported flour from Newcastle. Then, when the farmer comes to town to sell his wheat, the large cheaply-carried stocks of flour are pointed out to him, and he is forced to accept any price, &c., &c.

14. I proceed now to show the whole merchandise system in operation; but before doing so I must lay down this idea: We have no right to consider this or that trunk line separated from any other. All the lines form a system, and the line from Sydney to Albury is as much the property and concern of the Maitland trader and the Glen Innes farmer as is the line from Newcastle to the Queensland border. As portions of the general community, the Glen Innes and Maitland people have to bear the cost and the loss, if there be any, of the Southern and Western lines, and concessions granted to one portion of the people cannot be refused to another.

15. Now, let us take the case of a Maitland business man who does a trade extending along our Queensland border. I will illustrate my point with eight lines of ordinary merchandise, which may be taken as a sample of the articles in which business is every day done. The Maitland merchant sends his goods 330 miles to Tenterfield, and pays as follows:—

	£	s.	d.
Half ton of flour	2	4	4
„ bacon, cheese, &c....	2	15	2
„ salt	2	4	4
„ sugar	2	15	2
Two tons furniture	19	16	0
Half ton galvanized iron ...	2	4	4
„ fencing wire	2	4	4
One ton machinery	7	13	8
	<hr/>		
	£41	17	0

A Sydney merchant, however, could send his 6-ton consignment 454 miles—exactly 120 miles further—for only £20. Or a coal-shipper at Newcastle, who brings flour from Melbourne almost as ballast, could send from Newcastle, 354 miles, his 6 tons of flour for £6 4s., as against the Maitland man's £41 17s. 4d.

16. If the Maitland man wish to send 6 tons of galvanized iron and fencing wire, 6 tons of iron irrigation pipes, 6 tons of pastoral or agricultural machinery, and 6 tons of general merchandise, he pays for the 24 tons in their respective classes a total of £164 4s. 4d. for 330 miles; but the Newcastle flour-ballast importer can send his 24 tons of Victorian produce 354 miles for £24 16s. If we take the same goods and see what the Sydney man can do, I find that, while the Maitland man pays £164 4s. 4d. for 320 miles, the favoured man of the metropolis will send his goods 454 miles for only £78 18s. Those are instances of a monstrous 100 per cent tax fixed on the shoulders of the inland trade.

17. Let me illustrate it further. If we take a hundred business men in Maitland doing the above trade—and we know it merely represents their everyday transactions—and put them side by side with a hundred Melbourne business men doing business through their agent at Newcastle, we find the result as follows:—The men of Victoria would pay £2,480, while the Maitland men would contribute £16,421 13s. 4d.; and let it be understood the Maitland men would have 2,000 miles less haulage than the Victorians. Is it to be supposed that the Maitland merchant stands all this heavy tax? No; he passes on to his customer as much as he legitimately can; and so we find the farmer

This is not correct.

Figures are wrong.

But a Sydney merchant would pay as much if he sent the stuff 330 miles on the Western Line. It simply means that if he sends the stuff to a certain station which is the *entrepôt* of the competitive district he can do so at a cheap rate.—CH. A. G.

The comparison between flour and the miscellaneous articles enumerated is, as regards freight rate, absurd.—CH. A. G.

farmer bearing a ruinously heavy tax for all he requires, while, on the other hand, his very local market is flooded with produce carried for next to nothing, the trucks unproductively returning empty.

18. At Mudgee, the constituency I represent, there are extensive lime-burning works. At a large outlay of money two or three local men have put the industry in full swing, and 100 hands, with a prospect of many more, are employed. A few months ago the work had no existence. Let us see how our railway policy helps this inland industry. The Department will carry 6 tons of limestone 190 miles for £3 16s. 1d.; but for turning the limestone into lime on the spot the company have to pay for 3 tons, 190 miles, £9. Or the limestone, 6 tons of it, may be carried 500 miles for £6 18s. 8d., while 3 tons of lime would cost just £18 18s.—a tax on the Mudgee industry of only a few hundred per cent. The lime is mostly ordered by the ton or half-ton, and when any less quantity than 4 tons is carried (the wholesale principle in operation) the amount is charged as 4 tons, or raised to first-class rates and charged actual weight.

19. Again, Mudgee. There is a tannery in the town, not so large now as it used to be, which is not surprising when we know the why and wherefore. If the tanner wishes to send his leather to Sydney (for the benefit mainly of the Sydney manufacturer, or the produce auction mart people or exporters) he can forward 6 tons under class 1 for £18; but if he wished to reach another and better market inland he would find his goods raised to another class, and 190 miles, not to Sydney, would cost him £22 7s. If the Mudgee man sought to travel to Bourke direct with his 6 tons of leather he would pay £45 17s., while the Sydney man could send it the same distance to the same place for £10 less; and on the Southern Line could send it very nearly the same distance for the monstrous amount of £25 17s. less.

20. At Dubbo there is a soap-making industry, and, as we know, soap is not ordered by the 6-ton lot. Well, the Dubbo maker, sending his goods $\frac{1}{2}$ -ton at a time, would pay on a total of 6 tons for 250 miles; say to Bourke, the sum of £27 2s.; while at the other end of the line the favoured man of Sydney could send his 6 tons nearly double the distance for only £20.

21. At Lithgow there are pottery works, which have had a severe struggle to get to their present success. If the company attempt to do business westward, direct from the works, they are punished for ignoring Sydney. To send 6 tons of their goods 408 miles they would have to pay £31 5s. 6d., while the imported article could be sent from Sydney, 50 miles further, for £11 5s. 6d. less. Now, we know that the Lithgow Pottery does not execute 6-ton consignments— $\frac{1}{2}$ -ton orders are oftener the rule. Then up go the goods to class 2, and when 6 tons have been sent the cost for 408 miles is £38 19s., while the Sydney importer, sending his goods $\frac{1}{2}$ -ton at a time, can, through the carriers' agency arrangement previously mentioned, send his 6 tons for £20 for 454 miles. When I was at Lithgow recently the foreman said to me—"We must have 15 or 20 per cent. protection against the imported article." But here I have shown that this very industry is taxed, as compared with the imported article, by over 100 per cent. If I can get this 100 per cent. knocked off, I wonder whether the Lithgow pottery man will have need to cry out for 15 or 20 per cent. protection.

22. At Bowenfels, 97 miles from Sydney, there are tweed mills. Say the proprietors have transactions amounting in all to 60 tons, sending 6 tons at a time. They would pay £170 10s. for 970 miles of haulage. But a similar amount of Geelong or other imported tweeds could be sent on a haulage of nearly 5,000 miles from Sydney for only £30 more. If the Bowenfels firm wished to trade with Bourke they would pay £541, while the Victorian or other imported tweeds could go along the same line for £191 less, while using 970 miles more haulage. From Bowenfels to Bourke, 406 miles, the company would pay £503; while on another trunk line the Victorian manufacturer or importer at Sydney could use 454 miles for £303 less. But if the Bowenfels man was sharp and looked closely after the shillings, he would not send to Bourke direct. He would first send his goods to Sydney, and thence to Bourke, thus saving £23 by giving the Department 1,116 miles of useless extra haulage. In reality, with regard to our railways we give the outside or foreign manufacturer an advantage of from 150 to 200 per cent. against our local manufacturer. This, simply, is freetrade in a straight-jacket.

Whoever heard of limestone being carried 500 miles. Mr. Haynes should be practical; his *reductio ad absurdum* argument is misleading. If limestone or lime were carried such distances the rates would be very different.—CH.A.G.

See reasons given in rates, Board inquiry, for this apparent anomaly. It is a scientific rate, and can be well defended; it is called for by the circumstances of the case.

This is the only piece of argument approaching common sense which Mr. Haynes has yet used. Bourke market should be as much open to Mudgee tanners as it is to Sydney tanners, and I have urged this.—CH.A.G.

The low rate to Sydney is to allow the manufacturer to get to his central market; this is right and defensible.—CH.A.G.

This is the competitive export argument again dressed in another shape.

23. At Armidale, on the New England Plains, is a first-class man of business—currier, tanner, and boot manufacturer. If he wishes to reach Newcastle (the nearest practicable terminus to Sydney at the present time—the Hawkesbury connection being incomplete), he could send his leather down under class 1, and for 260 miles he would pay on 6 tons £22 4s. But if he attempted to reach Maitland, where a fine new market is developing, he would find his goods raised to class 2, and for travelling 20 miles less he would pay £4 3s. more. Now, does the Armidale man send his goods to Maitland direct? No. For the last ten years he has sent his leather to Newcastle, and retrucked it back to Maitland. Suppose he has done 100 tons transactions with one Maitland man in that time, then he has saved himself £130 by giving the railway 4,000 miles of needless extra haulage.

24. At Newcastle, as is well known, there is one of the largest and most successful biscuit factories in Australia. The proprietor, after a big battle for success, does a great trade in biscuits all over our northern country. Let us see how the Railway Department assists him. For his 6 tons of goods, 350 miles, he pays £48 4s., while the imported or other biscuits may be sent from Sydney 100 miles further in one direction for £28 4s. less, and in another direction 150 miles further for £13 4s. less. While, more astonishing still, if the Newcastle importer of ballast-borne Victorian flour wishes to send his 6 tons over the same stretch of our northern line as the Newcastle biscuit-maker does, he pays not £48 4s. but only £6 4s. In other words, we give the outside man an advantage over our own of about 800 per cent. Evidently the country does want protection—but it is protection from the administration of our railway system.

25. At Tamworth there is a musical warehouse, and when the proprietor comes to sum up his transactions he finds his 6 tons cost him £35 18s. 6d. for 167 miles. But our Victorian squatting friends resident down about Hay, and who do their business in Melbourne, can have their goods sent round to Sydney, and thence by rail to Hay, 454 miles, the 6 tons costing only £20. If the Melbourne transactions (or for the matter of that they may be Sydney transactions) were taxed the same as the Tamworth man's they would pay not £20 for 6 tons, but £76 3s. But the real position of the Tamworth business man is this (and I am giving the case as illustrative of the dreadful handicaps placed on inland development)—First, from Newcastle to Tamworth, his 6 tons to supply his warehouse would cost him £38 16s. for 183 miles, and his transactions in the same goods with the people of Tenterfield, 171 miles distant, would cost in carriage £36 12s. 6d.—a total of £75 8s. 6d. for a use of the railway on a haulage about half that given to the Sydney man for only £20. This is simply a tax of nearly 700 per cent. on the Tamworth business man. At Tamworth, a lot of people, ignorant of these imposts on their trade, are crying out for a miserable 15 or 20 per cent. duty at the Custom House. I propose to relieve them of a huge taxation, of which they appear to know nothing. But with these facts before us, will anyone deny that the time for decentralization has arrived, and that the first step towards its realization is a sweeping change in our wretched railway system.

26. At Newcastle there are several foundries, which, besides turning out first-class marine engines, are capable of the best foundry and engineering work. Now, at the present time there is a movement on the Namoi to store the water and irrigate the land. Well, while the farmer finds that the foreigner—(we may call the Victorian a foreigner from his very hostility to us with regard to his tariff)—can send his 6 tons of flour or fodder to Gunnedah (196 miles) for £4 5s. 11d., both he (the Gunnedah farmer) and the Newcastle foundry man find that 6 tons of their necessary iron material costs them £22 19s., while 6 tons of their machinery costs £31 18s.

27. At West Maitland is to be found one of the most extensive agricultural implement and machinery depôts in the interior of the country; and when I was recently in that town I found some of the members of the firm inclining to protection. Let us compare this firm with (say) a Melbourne branch house in Sydney, now pushing its Melbourne-made manufactures in our southern and western districts. Take for any period transactions in ironmongery up to 500 tons, and in agricultural machinery up to 500 tons. On the two kinds of merchandise, the Melbourne firm at Sydney, using a haulage of 149,850 miles, would pay, in 3-ton lots, £3,340. Now, supposing the Maitland firm used neither the Newcastle nor the Morpeth line to Maitland, but, loading them at Morpeth by steamer, brought their

This is a rate to a shipping port—"leather for exportation"—quite defensible, only Mr. Haynes is ignorant of the why and wherefore.

But not in the same direction. If the Newcastle biscuit-baker wishes to send to Bourke he can do so precisely on the same terms as the Sydney biscuit-baker or the importer. I have not space here to answer all the statements.—CH. A.G., 18/10/87.

goods.

goods on by dray to their depôt, then their transactions would commence with up-country. Their business, carried on in exactly the same way as the Melbourne firms, would result in their paying £7,600 for a haulage of only 109,890 miles. In other words, the Maitland firm, for using nearly 50 per cent. less haulage, would have to pay over 100 per cent. more money. If the Melbourne or Sydney man were served like the Maitland firm, he would pay for his 1,000 tons, not £3,340, but £9,814; while, if the Maitland man were treated as leniently as the other, he would pay, not £7,600, but under £2,650.

28. Let us take the case of a farmer at Cootamundra, 253 miles, who turns his attention to bacon-curing. He pays on 6 tons of salt, $\frac{1}{2}$ ton at a time, £22-11s.; and sending his bacon to market in the same way he pays £27 6s. 6d. On the other hand, New Zealand and Victoria bacon imported to Sydney can be sent 221 miles further for £7 6s. 6d. less.

29. When at Morpeth recently I found two leading residents—one an engineer, and another a cabinet-maker, both in a large way of business—very active in the cause of protection. They wanted a 15 to 25 per cent. duty at the Custom House. Here is how they stood with regard to the railways: If the cabinet-maker attempted business with the new centres about Tenterfield, 330 miles distant, he would pay on his 6 tons £46 2s.; while on another stretch of our railways an importer could send his 6 tons 454 miles in one direction for £20, and 500 miles in another for £35. In point of fact the Morpeth cabinet-maker who cries out for 25 per cent. lives under an impost of something like 130 or 150 per cent. that he knows nothing of. With regard to the Morpeth engineer and agricultural implement maker, I found that if he attempted to reach the grand new wheat areas of the New England tableland he would pay on 6 tons, 334 miles, £46 10s. 6d.; while a similar consignment of Melbourne-made (imported) machinery would be taken on another stretch of our lines 450 miles for £20. However, the New England farmer is not likely to do much business in furniture for his home or with improved agricultural machinery for his farm. He is robbed by railway freight on the one hand, and on the other ruined, even in his own local markets, by cheaply-borne Victorian produce. The farmer's machinery costs him £46 10s. 6d., but a similar load of Victorian flour can be run up on the same line the same distance for £6 4s. Is there any wonder in the Morpeth engineer and the cabinet-maker crying out for relief? In this gloom they cried out for a delusion.

30. We know that half-ton orders of galvanized iron are the rule. Well, if a Maitland firm, who does a large business in the line, sends 6 tons in that way to their constituents, the freight is £32 2s. for 330 miles, but a Victorian squatting firm down by Jerilderie or at Hay can get his 6 tons for £20 on a run of 454 miles.

31. At West Maitland there is just forming a great inland produce depôt or bazaar. That the development of this new centre of trade should be assisted is a matter that cannot be questioned. Buyers flock in increasing numbers from Sydney, Newcastle, the mining districts, and from all the towns above and about Maitland; and a business is doing which augurs an annual cash overturn of £500,000 in a few years hence. Let us see how the railway system helps the thing. A Guyra or Ben Lomond farmer, midway between Glen Innes and Armidale, whose pits and barns are filled with produce which is rotting, never to reach a market, would find, if he attempted to reach Maitland in lots to suit trade, that on his 6 tons of potatoes he would pay £21 13s. for 281 miles, while on his bacon sent in the same way he would pay £29 8s. 6d. On the other hand, he would find the wholesale flour importer at Newcastle sending 6 tons the same distance for £5 3s. 9d., while a $5\frac{1}{2}$ truck load of chaff would go for £2 17s. 1d. Is it to be wondered at that the New England and Liverpool Plains farmers should say they have no markets?

32. At East Maitland are the Shamrock Meat-works; and if their goods are sent to Newcastle (centralising system again) they are carried under special class A. If, however, they are sent in any other direction they are raised to first-class goods (and I am not sure that they are not raised to third-class). Well, taking it at first-class. Now, for 330 miles the Maitland merchant sending these goods northward to his customers would pay £26 12s.; whereas, if the same rate prevailed upward as downward, he would pay, not £26 12s., but only £7.

33. The hay, straw, and chaff rates look very liberal for the farmer, but they are not framed to facilitate the small man or the inland trade. If a farmer executes an order for 2 tons of chaff he finds a tremendous

tremendous jump in prices, and he pays from Mudgee to Sydney, 192 miles, £6 1s. 2d., and when a total of 6 tons is reached he has paid £18 3s. 6d. At Newcastle, however, where the coal exporter deals in return with wholesale lines of Victorian produce, the 5½ tons can be sent 350 miles for £3 10s. If the Mudgee farmer wants to execute a 2-ton order of chaff for Bourke, 500 miles, he would pay £12 6s. 6d., and his 6 tons would cost him £36 19s. 6d.; while the wholesale importer at Sydney could, as he sends it, send it the same distance for £4 11s. 7d.

34. Ale and porter, as well as spirits, are lines in which a great business is done. Here is how the question of freights affect them: The Maitland brewer sending his 6 tons of ale to Glen Innes, 300 miles, would pay £30 17s.; but imported ale on another stretch of our lines could go the 6 tons, 450 miles, for £20. The man at Tenterfield pays for his whisky or brandies £48 4s. for 350 miles; but on another branch of our lines only £20 is the cost for 450 miles. Why even the hotel-keeper at Mudgee, 192 miles, pays £31 6s. 6d. for goods which another man, distant 450 miles, gets for £20. Is this not monstrous?

35. I will now instance how a Glen Innes farmer is swamped in competition by reason of these one-sided railway rates (and I am putting it in the absurd way the Department expects a farmer will send his dairy produce—a ton at a time). He consigns to Newcastle 6 tons of bacon, 1 ton at a time, and in return for his sale gets up 3 tons of agricultural machinery and 3 tons of furniture. Now the freight would stand thus:—

6 tons dairy produce	£26 5 0
3 „ agricultural machinery ...	22 14 9
3 „ furniture	22 14 9
	<hr/>
	£71 14 6

Against him the Newcastle importer of Victorian flour or fodder could send the following goods on the very same stretch of railway:—

12 tons Victorian flour	£10 3 0
10 trucks Victorian chaff	27 15 0
24 tons Warrnambool potatoes ...	20 6 0
12 „ American timber	10 3 0
	<hr/>
	£68 7 0

Balance still against the Glen Innes farmer, £1 18s. The above case, bad even as it is, puts the farmer in a much better position than he usually occupies. He does not send down his bacon in tons, but quarters, and so his cost in the above transaction would be increased from £26 5s. to £32 9s.

36. A Goulburn boot manufacturer sends 6 tons of his boots to Wagga, 175 miles, and pays £28 19s.; but a Sydney importer or manufacturer can send his 6 tons 454 miles, to Hay, for £20. In other words, the Goulburn man pays £8 19s. more for travelling 269 miles less. Let me take a large transaction in which we may illustrate how the trade of an entire town is affected. The Goulburn tradespeople get up 500 tons of ironmongery, furniture, spirits, &c., and would pay on the amount, for 134 miles, the sum of £1,769 15s. 10d., the total, in 6-ton lots, representing a haulage of about 10,988 miles. Now, the Sydney merchant, for sending the same goods on the same line, would pay only £1,680 for a haulage, not of 10,988, but of 37,228 miles, or about £120 less for 26,240 miles more haulage.

37. It would be useless to proceed further with these illustrations. Every branch of industry or occupation inland is affected, and an incalculable amount of mischief is done. I believe I would be correct in saying that a general feeling of disappointment has followed on the opening of many of our railway extensions. The farming community, after waiting for years in expectancy of reaching near and distant markets, find themselves shut out from both, while those very immediate centres hitherto held by themselves are flooded with cheaply-borne produce from outside sources. It might, in fact, be urged that positive disadvantages have, in many cases, come to inland traders from the opening of our railway extensions. The ordinary road-carrying business has disappeared as the locomotive has advanced, and the people have now no alternative but to use the present costly system of the railways.

38. It appears to me that a radical alteration of the whole system is required, and I beg to submit proposals in that direction, and I do so with full confidence that my proposals will lend long-promised but long-denied aid to inland trade development; that they will assist our farmers to regain not only the intervening but also the coast markets of this country, and that they will bring increased returns to our railway revenue.

But so can the New South Wales grower send his own produce by specifying Victorian flour, chaff, and potatoes.

This is all nonsense.

Eureka.

39. From time to time quite a number of proposals have been put forth by way of a remedy; but they more or less have been of a patchwork character—special rather than common. Some reformers have proposed a variety of systems which really have no uniform applicable basis. In the present tariff we have this style of grasping the difficulty, and it is consequently not perhaps surprising to find the noxious principle of protection mischievously adopted to accomplish that which a sound, fair, and common-sense system alone would have won.

40. My proposal is to come to a common basis, allowing discounts or decrease in charges where the run of the train is lengthy—not as is done now, simply to bridge the distance out of sympathy for our people and enmity to our neighbours, but on account of the less handling or terminal work, and the consequent less cost in carriage. The differential system pays or it does not pay. If it pays, then it should be general; while if it be a loss, then a few should not benefit at the cost of the many. But we can safely go on the basis that differential system does pay, and that it may be expected to greatly increase the returns when general.

41. There must still be a classification of goods. Classification is affected by either the bulk of the goods, their perishable or other character, or the amount of handling required in the loading and unloading. Now, the classification at present adopted is notoriously defective and nonsensical. For instance, 6 tons of ironmongery is in most cases neither bulky nor fragile, and certainly does not require as much care, say, as flour. Yet we find that 6 tons of flour are carried 500 miles for £7 14s., while the carriage of the ironmongery for only half the distance would be £37 14s.

42. I have already pointed out that for every class of goods, 1st, 2nd, 3rd, or 4th, or for large or small consignments of anything, the differential system exists in Sydney from the fact that forwarding agents, acting for a number of people, can always secure a 6-ton truck load for conveyance, the maximum distance for the minimum cost.

43. Now, I propose that the present classification be altered to accommodate inland trade in the same way; but as there are no carrying agencies except here and there, I propose that the goods sheds or receiving stations act as such, that the goods be received in large or small parcels, and the loading or unloading be done under the direction and with the assistance of the porters in charge.

44. I propose that for general merchandise there be but one class—on the 6-ton per truck principle, applied retail as well as wholesale at every platform and station in the country, just as it has been so long and successfully applied solely in Sydney.

45. The differential rate appears to be about 1½d. per ton per mile, and so while we would get for a 13-truck goods train the sum of £260 (at £20 per truck of 6 tons) the cost would only be about £85 9s. for 350 miles.

46. Now, I suggest that all goods be received on any stretch of inland railway for 25 miles and over at 2d. or 2½d. per ton per mile—wool, mill and farm produce, coal, wood, hay, &c., being dealt with specially; the basis of this one general merchandise rate to be actual weight, with a reasonable addition in the case of unusual bulk. This would mean that as the Sydney man can take his 1 or 2 cwt. of goods of any description to the carriers' agent and have his consignment forwarded under the differential rate, as if he were sending a truck-load, so the inland man may take his goods to the station, and forward them in amounts as low as 2 cwt., or lower, on the differential estimate, a booking or entry commission being charged for receiving and handling, &c.

47. Let me illustrate this just and simple arrangement. If a farmer now sends 1 ton of bacon 350 miles, the cost is £4 12s. 8d., and 6 tons costs £27 16s.; while if he sends at half a ton at a time the 6 tons costs him about £34 12s. If he were in Sydney his 6 tons, whether sent in the one lot or by ½ cwt., would only cost him £20. Well, applying the differential system to the farmer, he would pay only actual weight at 2d. or 2½d. per mile, and instead of paying £5 15s. 4d. per ton in small lots, he would pay only £3 12s. 11d., and his 6 tons would stand him in £21 17s. 6d. (I have here reckoned at 2½d. per mile). With regard to ironmongery or machinery ordered by him, he would on 6 tons, in small or large lots, pay, not £48 4s., but only £21 17s. 6d. (it will be seen that I am working out these figures above the differential rate, for a purpose subsequently to be seen.) The arrangement would be actual weight down to 56 lb., with a small commission or handling charge added. As to bulk goods, there would be

This is done; see our paper where it is defended—Teece's motion.

And by their value, and the freight they will stand—the most important factors of all: apply them in this case.

If general merchandise is carried at 1½d. per ton per mile for any distance, there will be no net revenue to speak of.—
C.H.A.G.

This is some advance on the 1½d. per any distance.

I do not think this is correct.

be but little extra charge in regard thereto, as a truck will accommodate 6 tons of almost any goods. A truck which carries 6 tons of flour—concentrated produce—will also carry nearly 6 tons of wool, the bulkiest of all merchandise except hay or straw.

47½. Now, the question of grain seems to be one which might, on plain commercial principles, be considered with a view to increased return traffic. It might fairly be expected that if we assisted the farmer by concessions to reach our coast and export markets, a large up-country return trade would result. And, as I have shown that there is a substantial profit on the differential rate, the reduction on the downward or coastward rate would be largely or more than compensated for on the increased inland trade. This is the difference between the protectionist differential rate and that which I propose—a free-trade or soundly economic rate.

48. I find that wheat can be landed from Melbourne to the Sydney wharf-side miller at about 3d. per ton; but as now the railway freight to our farmers is about 6¾d. per bushel. The water-freight from Newcastle to Sydney is 2½d. to 3d. per bushel extra, while at the Darling Harbour terminus cartage is to be added. Now, what we want is not protection against the Victorian 3d. per bushel carried wheat, but extra facilities to our own farmers, and the conflict may be left to the future. Of course, in my estimate above of 6¾d. per bushel, I am conceding to the Department for the moment that the farmer is a wholesale man, and always sends in 6-ton lots. If the farmer sends anything less up go the freights, and a 4-ton consignment would cost him 10d. per bushel, and a 2-ton lot would cost him 1s. 8d. per bushel. Now, a downward or coastward run of thirteen trucks (our lines unfortunately are under the 50-foot grade), containing 78 tons of wheat, would cost the Department, roughly, £85. At the present rate the return would be £80 12s. In point of fact, they about balance. But on the return journey the profit to the Department would be, at 2½d., about £179. Now, against this profit might be charged a 100 per cent. special reduction in the coast-bound wheat rates. This would bring the carriage rate down to about 3d. per bushel, and I propose that the rate should apply to actual weight down to ½-ton lots. All kinds of grain to be similarly treated. Potatoes, included as well, would come down from £6 for 6 tons for 350 miles to £2 18s. or £3. It is rare that a farmer sends more than half a ton of potatoes to intervening markets, in which case he would now, on ½-ton consignments, pay £27 10s. for 6 tons. Under the new arrangement he would be charged actual weight, like the man who lives in Sydney. (Inward rates on mill produce, &c., I propose to charge actual cost and profit.)

49. The other propositions are that (1) with regard to hay, straw, chaff, &c., the present rate be made to apply to lots of not less than ½ ton; (2) goods under class A and B to be brought under above rates with charges on actual weight; (3) miscellaneous to remain with but slight alteration; (4) Class 1, 2, 3, and 4 of the present classification to come under a general merchandise rate, actual weight down to 56 lb.; (5) the minimum to be fixed at a low parcels rate.

50. Thus have I concluded my work. It will be seen that the whole of the proposals are to extend to the country that which the city at present enjoys, and to accommodate the system to catch in a retail way an enormous wholesale traffic which the railways up to the present have (much to inland loss and distress) never been able to secure. I suggest that special attention be at once given to our Newcastle terminus, as the outlet of a new, enormous trade certain to come from the north under the change I propose.

51. I finally urge on the Government to immediately obliterate from the system the principle of protection, with which it has through shortsighted official notions been impregnated; and I ask on behalf of the great army of toilers inland, those in our towns as well as those on the lands, to so have our railways controlled that they will assist inland development in every way, and bring to us at a near day a realisation of the grand and saving policy of decentralization.

Yours obediently,
JOHN HAYNES."

I do not see how this is shown. Mr. Haynes would lose half the revenue derived from down traffic, and make up for it by losing half the revenue derived from up traffic; but while two negatives are said to make an affirmative under some conditions, under no conditions can two losses result in a gain.

Mr. Haynes may think so, but if he means to persist in this matter he will find that he has not commenced his work yet.

Minute by The Commissioner for Railways.

PUT also with this the departmental paper *re* the abolition of differential rates and the competitive rates, and also the article in the *Herald* of 27th September, which was based on the official paper. The two documents answered in anticipation of Mr. Haynes's contentions. As I have said on other papers, Mr. Haynes's contribution to the controversy "bristling" with errors. He has one example which he continually repeats, iterates, and reiterates; nine-tenths of his paper might have been omitted had he been content with one illustration. He tries to give it a new dress with every fresh instance of treatment, but it is the same argument, and the anomaly, in charges which he seeks to establish thereby, is accounted for by the policy of granting competitive rates on the South-Western Railway and at Bourke. He further (while admitting the necessity for classification) exposes what he considers to be a gross injustice, viz., that flour (especially Victorian-grown flour) is carried on the down journey at a cheaper rate than general merchandise. He wishes to cheapen the carriage of flour on the up journey, which at present is carried at the same rate as it is on the down journey. And this freetrader, with a perfect horror of the protectionist leaning which he thinks he has discovered in the present tariff, is unaware, apparently, of any inconsistency in the proposals he makes.

As regards the principles upon which the rate-sheet is compiled, Mr. Haynes is not probably aware that in attacking them he is "couching a lance" at the universal railway practice in this respect, and that in his remedial measure he has proposed to put something in place of the tariff which, if adopted, would have the effect of paralysing the railway revenue.

The Traffic Manager may be directed to answer in detail Mr. Haynes's paper, and I shall be pleased if he will see the Traffic Auditor, and let me know what the railway revenue would be for goods traffic, based upon the tariff which he proposes should be adopted in lieu of that in operation; it will not be possible, as the statistics have not in recent years been kept, to give the present quantities under each line and the loss that would accrue on each article; but this can be approximated to by taking the quantities returned when the statistics were kept, and adding a percentage increase for existing traffic.

As Mr. Haynes will no doubt follow up his paper by some Parliamentary action, it is desirable that the information I have asked for should be got out as early as possible.

In the penultimate paragraph of his paper, Mr. Haynes says triumphantly, "Thus have I concluded my work."

I can promise the honorable Member that so far from this being the case, he will find, if he persists, that he has not yet even commenced his work. It will be my duty to resist the establishment or adoption of his crudities, and to expose his fallacies; but I shall do so with the conviction that only in the interests of the country will any sharp criticisms be defensible, for I am prepared to acknowledge that Mr. Haynes is animated by a belief (often held by others, and as frequently demolished), that the method he advocates is a true one, and ought to be established.

CII. A. G., 18/10/87.

Minute by Mr. Traffic-Manager Read.

A GREAT deal of the subject upon which Mr. Haynes has written at such enormous length was so fully dealt with some months ago in minutes written in answer to motions which were then on the Parliamentary business paper in the names of Mr. Teece, on the differential rate question, and of Mr. O'Sullivan, as regards live stock and agricultural produce rates that, generally, there does not, at the first glance, appear to be much more to be said. I attach copies of the minutes.

The reasons for the existence of the low rates between Sydney and the competitive districts in the southern and south-western parts of the Colony are so well known, and were so exhaustively dealt with in the reply to Mr. Teece's motion, that, as far as that part of the subject is concerned, at all events, it will not be necessary to go over the ground again, particularly as Mr. Haynes will be found to have stated those reasons in the 7th paragraph of his letter.

In the fourth paragraph of his letter, Mr. Haynes states that "the profound blunder of our railway goods system is that it is shaped to meet a wholesale rather than a retail trade"; but if I am able to judge, I should say that it is framed to meet both—the retail even more, much more, than the wholesale.

In paragraph No. 5 it is stated that it has been proposed to abolish the differential (of course Mr. Haynes means *competitive*, for we have no *differential*) rate system. Except the motion of Mr. Teece's to which I have alluded, and which was never brought before the House, I am not aware of such a proposal ever having been made. Certainly it has never come from any of the railway officers, who are but too well aware that so long as the Victorian railway authorities, who initiated the competitive rates, adhere to them, we must in self-defence adhere to ours, or make up our minds to sacrifice the traffic to and from the competitive districts altogether, in which case it would, as a matter of course, be necessary to charge higher rates upon the traffic in the non-competitive districts to compensate for the revenue so sacrificed. And here let me say, in answer to the numerous examples quoted by Mr. Haynes of exceptionally low rates from Sydney to Hay—they are the same to Wagga Wagga, 309 miles—as compared with the higher rates from Maitland to Tenterfield—which, by the way, is 361, not 334 miles as stated—that for the traffic of the Hay district we have to compete with very low water-carriage as well as greatly reduced rates on the Victorian railways, while for the Tenterfield traffic, any more than that of all stations north of Wagga Wagga or east of Narrandera or Bourke, there is no such competition.

But let Mr. Haynes take any 361 miles, or any other distance, on the Southern and Western lines *outside of the competitive districts*, and he will find that they are *precisely the same as on the Northern line*.

If that gentleman would, as he says in paragraph 6, make the low rates of the competitive districts general all over the lines—that is, take the existing rate for the longest distance, and reduce it proportionately for shorter distances, which appears to be the only way he sees out of the difficulty—I have no hesitation in telling him that he would diminish the revenue by something like £150,000 to £200,000, and, *rather than do that, I am satisfied it would be in the interests of the Department to abandon the competitive rates altogether and make Victoria a present of the traffic*. It would take much time and labour to work out the sum with accuracy, and the Traffic Auditor tells me his hands are already full of returns which have been asked for, but Mr. Haynes's proposal is so inadmissible that perhaps the estimate I have named will suffice for the present purpose.

The

The idea that the competitive rates extended all over the country might be calculated to lead to a vastly increased traffic is purely imaginary. Low rates are advisable when they are likely to foster a production which would otherwise languish; but it is useless to say that reduced rates would add vastly to the conveyance of general goods, and it is only upon such goods that competitive rates exist. *All our other rates are very low for the express purpose of fostering production.*

Paragraph 7 contains a fair statement of the reason for initiating the competitive rates; but as Mr. Haynes seems to make a point of their having been introduced to enable *Sydney* to compete for the trade of our southern border with Victoria, it may be as well to mention that in the latter colony they only apply from *Melbourne* upon general goods, and even from there, *only when the traffic comes into New South Wales.*

Mr. Haynes's reference to the rate for corrugated iron in paragraph 8 is quite correct; but he is evidently not aware that it has been decided to carry lots of 5 tons or upwards of any kind of machinery in a truck at *first-class rates*, according to which *three* tons conveyed a distance of 200 miles would be charged as 5 tons at first instead of actual weight at third-class rate, the former being the lesser charge to a small extent; so that if 6 tons (the quantity named by Mr. Haynes) were put in a truck and sent from Maitland to Tenterfield, the charge would not be £46 10s. 6d. for 334 miles, but £28 9s. for 361 miles. The amended rate was approved of since the present rate-book was issued; but it is inserted in the proof now in the hands of the Government Printer.

I cannot make out what deduction Mr. Haynes means to be drawn from paragraph No. 9, in which he implies that, as regards trainage, the trader at Orange is in a less enviable position in connection with the conveyance of his goods from Sydney than the sender in Sydney is in sending the same class and weight of goods 311 miles further (Bourke). Mr. Haynes must know that, as the sender in Sydney does not pay carriage, it is immaterial to him whether it amounts to 20s. or £20 per ton, so why he should think that the competitive rates play particularly into the hands of the Sydney merchant is somewhat of a mystery, since the goods all go from Sydney in the first instance, whether to Orange, Bourke, or Hay.

In paragraph No. 10 Mr. Haynes shows how a storekeeper at Cootamundra can save money by consigning his goods from Sydney to Wagga Wagga at the £20 truck rate, and having them re-consigned from there to Cootamundra. That has been known to us for a very long time, but we have also known that it has only been done to a small extent, and experience tells us that it is to our advantage to adhere to the present practice rather than to carry the goods direct to Cootamundra at *Wagga Wagga rates, plus the additional charge from Wagga Wagga to Cootamundra.*

And in paragraph No. 11 it is contended that the truck rate is the embodiment of the wholesale rather than the retail principle, and that, consequently, it is dead in favour of the metropolitan man, whereas it is well enough known, and a moment's reflection would have convinced him, that it was introduced purely upon economic grounds; moreover, in the very same paragraph, Mr. Haynes admits that it is not the metropolitan man at all but the country constituent who reaps the benefit, since he who does not get a truck load on his own account can get them sent through forwarding agents at a proportion of the truck rate, plus a small commission for the cost of collection and forwarding, &c. It would not pay the Department to run a truck from Sydney to Hay with 2 tons of goods for £6 13s. 4d., but it does pay when that truck, by carrying 6 tons, earns £20—although, of course, it would be very acceptable if we could get more. Mr. Haynes goes on to say that the wholesale Sydney merchant can send his 6 tons, made up of any class of merchandise, at the reduced rate of £20, and that such merchant usually deals in large consignments which are as often over as under 6 tons. In this assertion Mr. Haynes is very greatly mistaken, but even if it were correct it does not seem to have occurred to him that *the consignments of the Sydney merchants are entirely dependent upon the orders they get from their country constituents*, who alone reap the benefit of the truck rates, while the Sydney merchants only reap the advantage of the orders for the goods which would otherwise go to Victoria, where every inducement is offered by the railway authorities to attract them.

The fact, already alluded to, that small consignments are collected by forwarding agents until a truck load is made up, and that those agents only charge a commission for their trouble, shows that the small storekeeper and farmer have their interests as well looked after as others doing a large business.

In the following paragraph, No. 12, Mr. Haynes mixes up coal, dairy produce, agricultural machinery, wool, and wheat, and seems to be astonished that we should carry coal so much cheaper than the other articles named, or why we should insist upon its being carried in wholesale quantities, *i.e.*, truck loads. As regards the coal, he has made a slight mistake in stating that we carry 6 tons of coal a distance of 96 miles for 46s.; the correct amount is 48s., and that is about 150 per cent. of its value. As we cannot put dairy produce or any other goods in a truck beside coal, it is not difficult to understand why we specify that it will only be carried at such a low rate when it is in truck loads, or that, when consigned in smaller quantities, a higher rate is charged.

Dairy produce, in lots of *one* ton and upwards, is charged 33s. per ton for the same distance, so that the trainage of 6 tons would only be £9 18s., not £12 4s. 6d., as stated by Mr. Haynes, and £9 18s. is only about 20 per cent. of its value, assuming that value to be £50 per ton, which, I think, is rather under than over the mark. For £12 4s. 6d.—the amount named by Mr. Haynes—the 6 tons can be forwarded in consignments of 1½ cwt. at a time, and it surely cannot be held to be unreasonable that we should charge more for 100 consignments distributed over a number of days and, consequently, a number of trucks, than for one consignment.

Ploughs, harrows, &c., would only cost £9 18s. if loaded in one truck, not £16 19s. 6d. as stated.

The assertion that the farmer has the wholesale principle offered to him, which he seldom uses, and that consequent upon his being oftenest a small dealer, his grain costs him for the 6 tons £34 1s. 6d. for 454 miles, is not in accordance with fact. The great bulk of agricultural produce is carried in truck loads, and the farmer gets it carried in that way a distance of 454 miles for £7 4s. 10d. for the 6 tons, while, even if he sends it in lots of 1 ton, he gets the 6 tons conveyed for £8 17s., and twelve consignments as low as 10 cwt. each would only cost him £17 14s.

It is not very long since a gentleman largely interested in the trade stated that we ought to carry live stock 100 per cent. cheaper than we do, and now we are told that the same thing might be done in respect of agricultural produce. It would be preposterous to suppose that these gentlemen are not aware that their proposals literally mean carrying the traffic *for nothing*; but so it is, and it would be interesting to know from what other source the revenue so sacrificed is to come, or why the general public should be taxed for the special benefit of the farmer or the grazier.

Mr.

Mr. Haynes admits in paragraph No. 13 that as regards hay, straw, and chaff, the farmer has got a consideration. That is, to say the least, a mild way of putting the case; for I can assure that gentleman that, owing to the weight of such traffic, which can be, and is, put upon trucks—weights which, a few years ago, were considered by farmers and others to be impossible—it is actually conveyed at considerably less than coal rates.

It is true that £2 19s. is the rate for a ton of greasy wool from Hay to Sydney, while the same weight of chaff or straw would be £4 5s., not £5 13s. 6d. as stated; but it is perfectly well known that no hay, straw, or chaff comes from Hay, or even from the district; and, even if it did, it is in the very highest degree improbable that it would come in small consignments when the truck could be loaded up to 6 tons for the same money. On the other hand, wool is the staple product of the district; and, so great are the inducements offered by low water-carriage, coupled with exceptionally low rates on the Victorian railways, that we have great difficulty in getting £2 19s. per ton for it. Still a full truck of wool would earn £17 14s., as against for a full truck load of straw or chaff. Indeed, as I have already pointed out on other papers, the inducements thus offered have attracted an unusually large quantity of Riverina wool to Melbourne this season. Mr. Haynes is mistaken again in stating that the rate for a ton of hay or chaff from Mudgee to Sydney is £3 0s. 7d., for it is only £2 12s. 9d. for hay, and £2 6s. 8d. for chaff, and in each case the farmer can put 6 tons of the same kinds of traffic on the truck for the same money.

The assertion that millers and storekeepers at Tamworth and Armidale get large lines of imported flour from Newcastle does not say much for New England farming if it be true, considering that it has to bear the cost of transit and insurance to Newcastle, whilst the lowest charge from thence to Tamworth is 13s. 9d. and to Armidale 17s. 3d. per ton.

In the 14th paragraph of his letter, Mr. Haynes says:—"We have no right to consider this or that trunk line separated from any other. . . . As portions of the general community, the Glen Innes and Maitland people have to bear the cost and the loss, if there be any, of the Southern and Western lines; and concessions granted to one portion of the public cannot be refused to another." At the first glance this seems a reasonable contention, but suppose, as I have already said, it were preferable to abandon the competitive rates altogether the certain effect would be to drive the competitive traffic to Victoria, and to compensate for the traffic so sacrificed we would have to charge increased rates in the non-competitive districts. Mr. Haynes could not call that good policy.

And he has made a slight mistake in the 15th paragraph as regards the conveyance of certain specified kinds of traffic from Maitland to Tenterfield; the half ton of flour and half ton of salt should be added together and charged as 1 ton at B rate, which would reduce the charge upon these two articles by £2 4s. 4d. It is quite true that a 6-ton consignment, such as that specified by Mr. Haynes, would be conveyed to Hay for £20 if it could be got into a truck, which I have no hesitation in saying it could not, but it would not be carried in any other direction the same distance for less than the charge from Maitland to Tenterfield. The distance on which Mr. Haynes has calculated is 330 miles. The correct distance from Newcastle to Tenterfield is 361 miles. Such a mixed consignment as Mr. Haynes mentions could not be got into one truck.

But this rather extraordinary paragraph goes on to say, "Or a coal-shipper at Newcastle, who brings flour from Melbourne almost as ballast, could send from Newcastle, 354 miles, his 6 tons of flour for £6 4s., as against the Maitland man's £41 17s. 4d." What analogy there is between a consignment of 6 tons of mixed goods from Maitland and a consignment of 6 tons of flour from Newcastle it is difficult to see, since, as regards the flour, there is no competitive rate—the charge being exactly the same on all parts of our lines.

And precisely the same argument applies to the 16th and 17th paragraphs of the letter. It is only necessary to mention that the 24 tons of goods specified in the 16th paragraph would only be charged £125 18s. from Maitland to a distance of 330 miles, not £164 4s. 4d. as stated. But the idea Mr. Haynes seems to have that we should charge as high a rate for flour as for furniture is little less than ridiculous.

In the following paragraph—the 18th—Mr. Haynes draws attention to an imaginary anomaly in the rates for limestone and lime. "The Department," he says, "will carry 6 tons of limestone 190 miles for £3 16s. 1d., but for turning the limestone into lime on the spot the company (a Mudgee company) have to pay for 3 tons, 190 miles; £9; or the limestone, 6 tons of it, may be carried 500 miles for £6 18s. 8d., while 3 tons of lime would cost just £18 18s.—a tax on the Mudgee industry of just a few hundred per cent.," and then he deprecates the fact that the minimum charge for lime is as for 4 tons at A, or actual weight at first-class rate. Now, in this, as in other instances, that gentleman has shown a want of knowledge of our rates, which I should not have expected from anyone who has undertaken to criticise them so exhaustively. The charges for 6 tons of limestone are, it is true, £3 16s. 1d. for 190 miles, and £6 18s. 8d. for 500 miles; but the charges for the lime (6 tons of it, if the company likes to put that quantity into the truck) are not £9 and £18 18s. as stated, but £4 4s. 6d. and £7 14s. respectively.

And the grievance pointed out in paragraph No. 19 is really purely imaginary. It is difficult to know why it should be regarded "as for the benefit mainly of the Sydney manufacturer, or the produce auction-mart people, or exporters," that the Mudgee tanner should be able to send his leather to Sydney for 2d. per ton per mile less than the same material can be sent from Sydney to Mudgee. One would have thought that the advantage was rather in favour of the Mudgee tanner, who is enabled to get his leather conveyed to what must undoubtedly be his best market, at a low rate of trainage. To the Department it is beneficial in every way to encourage inland manufactures, for in addition to getting the products to carry, we get the general supplies, and it is from the latter we derive our principal source of revenue.

It is simply a waste of time to talk about 6 tons of leather being sent into the competitive districts, for such a consignment never has been, nor is ever likely to be sent.

Mr. Haynes is again wrong when he states in paragraph No. 20 that the trainage of 6 tons of soap from Dubbo to Bourke, in half-ton lots, would amount to £27 2s. The correct amount is £25 5s., and if he sent it in lots of 1 ton it would only cost £20 6s. As many as 120 consignments of 1 cwt. each would not cost so much as £27 2s.

And in paragraph 21 Mr. Haynes is very much astray in his figures, although in this case the mistake is quite pardonable, as the new rates have been adopted since the existing rate-book was issued.

in 1885; still, as Mr. Haynes admits having visited the Lithgow Pottery Works, and conversed with the foreman (who appears to be a protectionist as far as his own business is concerned, at all events), a simple inquiry would have put him right on the rates question as well as upon others, and he would not have hazarded the assertion that the Company are punished for ignoring Sydney if they do business westwards. 6 tons of their pottery, carried a distance of 408 miles, would not be charged £31 5s. 6d., but £15 13s. It is admitted that if forwarded in half-ton lots the charges for the same distance are £31 5s. 6d. (not £38 19s., as stated); but it is useless to say that the Sydney importer can send his half-ton lots through a carrier's agency for £20 for a distance of 454 miles, because in the one case we know that the truck does earn the £20, while in the other, as there is really no loading at Eskbank beyond the half-ton of pottery for the same place, the truck would only earn £2 12s. 2d. for 408 miles.

Nearly the whole of the remainder of Mr. Haynes' letter might have been left unwritten if he had left the competitive rates alone instead of comparing them with the non-competitive rates, between which, as the terms imply, there cannot possibly be any analogy.

His reference in paragraph 23 to the Armidale tanner paying more for the conveyance of his leather to Maitland is, as I notice the Commissioner has observed, due to the fact that Newcastle is a place of export; besides, the lower rate to Newcastle only applies when the leather is forwarded in consignments of 1 ton and upwards—smaller consignments are charged the very same rate per ton per mile to both places. Still, instead of making the reduced rates apply to Sydney and Newcastle only, I think they might be made to apply to all leather carried on the up-journey.

The comparison between the rates for flour and biscuits is equally uncommercial (*vide* paragraph 24). Admitted that a 6-ton consignment of flour is carried 350 miles for £6 4s., what has that to do with the fact that 6 tons of biscuits would cost £48 4s. for the same distance?

To begin with, there is admittedly a great difference in their respective values, and while it is more the rule than the exception to carry 6-ton consignments of flour, where can Mr. Haynes or any one else point to a 6-ton consignment of biscuits? To get the advantage of the £6 4s. rate for the flour it must be sent in one consignment—for £48 4s. the biscuits may be sent in nearly 250 different consignments.

What does it matter whether for auction sale or for export. The probability is that lots of leather submitted to auction at Maitland would ultimately find their way to Newcastle for export.

Flour, about £10 per ton; biscuits, about £50 per ton.

The statement that we give the outside man an advantage over our own of about 800 per cent. is utterly at variance with facts—in each case the "outside man" pays precisely the same as our own.

In paragraph No. 26 an extraordinary comparison is made between the rates for flour, iron, and machinery, the rate for which latter is £18 9s. 6d. for 196 miles, and not £31 18s., as stated. But suppose we went so far as to reduce the rate for machinery to the same as that for flour, would it help the engineers at Newcastle in any way, or would it not mean a sacrifice of revenue which would result in putting probably a good deal more money into the pockets of the Victorian implement maker than into those of our own. It is an undoubted fact, whether Mr. Haynes knows it or not, that the bulk of the machinery used in the Colony comes from Victoria.

It is unnecessary to follow Mr. Haynes in the examples cited in the 27th, 28th, and 29th paragraphs, since the circumstances in each case are so different, and seeing that these circumstances have already been fully dealt with. If he will take the same conditions and distances outside the competitive districts all the anomalies which he has made so much of will disappear. In the 30th paragraph we find Mr. Haynes stating that half-ton orders of galvanized iron are the rule, and that if a Maitland merchant sends 6 tons in that way to Tenterfield, 361 miles, the trainage is £32 2s., while "a Victorian squatting firm down by Jerilderie or Hay can get his 6 tons for £20 on a run of 454 miles" (Hay). Now, if we take the same conditions in each case it will be found that twelve half-ton consignments from Sydney would be charged £33, while if the whole 6 tons are sent in one consignment the trainage is only £18, not £20, as stated; and if the squatter could not get the iron from Sydney for that money he would get it from Melbourne. Equally misleading is the example quoted in paragraph No. 31. It is a most extraordinary circumstance that Mr. Haynes should conceive the idea of a farmer near Armidale or Glen Innes sending his 6 tons of potatoes to Maitland in lots of 5 or 6 cwt. at a time, as he must do to cause the trainage to amount to £21 13s., and in the same breath bewail the possibility of the wholesale flour importer at Newcastle being able to send (in one consignment) 6 tons "the same distance" for £5 3s. 9d., and that, too, into a farming and comparatively thinly populated country. Put the 6 tons in one consignment in each case and the trainage is exactly the same.

From flour and potatoes we come, in the 32nd paragraph, to meat, and here we are challenged with carrying preserved meat from the country districts to the ports of shipment at Sydney and Newcastle at lower rates than to the country districts further northward, southward, and westward.

If Mr. Haynes cannot see a good reason for the concession to Sydney and Newcastle as outlets for country-killed and preserved meat, I am afraid it will be useless to point it out to him. I question whether any is sent from the country stations to places other than Sydney and Newcastle, and if there is it must be in very small quantities.

Fresh meat is charged the same rates everywhere throughout the lines.

In paragraph 33 we are told the hay, straw, and chaff rates look very liberal for the farmer, but that they are not framed to facilitate the small man or the inland trade, and then it is asserted that 2 tons of chaff from Mudgee to Sydney cost £6 1s. 2d., and that consequently three such consignments (or 6 tons in all) costs £18 3s. 6d. Mr. Haynes is very imperfectly conversant with the rate-book, otherwise he would not make such glaring mistakes. *As a matter of fact, 2 tons would only cost £2 6s. 8d., and if the chaff is well pressed and 6 tons put upon the truck it would not cost more.*

It is almost unnecessary to say that the assertions about the rates for 500 miles being £12 6s. 6d. for 2, and £36 19s. 6d. for 6 tons, are equally wrong. In each case they are really only £4 11s. 7d., and the rates are the same on all lines.

Paragraph 35 gives a very peculiar mixture. Here Mr. Haynes states that the Glen Innes farmer sending 6 tons of dairy produce, 3 tons of agricultural machinery, and 3 tons of furniture to Newcastle would have to pay £71 14s. 6d., which is quite correct; although why a farmer should send agricultural machinery and furniture to Newcastle (these can hardly be called the products of his farm), instead of flour, chaff, and potatoes, which he grows in the district, but is supposed by Mr. Haynes to get from Newcastle, it is difficult to know.

The figures named by Mr. Haynes as the cost of conveying the produce are wrong. I shall here enumerate them, and place the correct figures side by side with them.

Mr. Haynes' figures.				£	s.	d.	Correct figures.			
				£	s.	d.	£	s.	d.	
12 tons	Victorian flour	10	3	0	11	16	6	
10 trucks	Victorian chaff	27	15	0	33	3	4	
24 tons	Victorian potatoes	20	6	0	23	13	0	
12 tons	American timber	10	3	0	14	15	8	
				£68	7	0	£82	8	6	

And of course it is hardly necessary to say that these amounts do not refer to Victorian produce or American timber, but to the same traffic, no matter where it is produced or upon what line it is conveyed. It is somewhat strange that all the mistakes Mr. Haynes makes are in favour of himself or his argument, and against the Department.

The assertion "that a general feeling of disappointment has followed on the opening of many of our railway extensions" is as new as it is astounding. Evidently Mr. Haynes wishes we had back the "good old times" when farming was unknown where it is now largely carried on, and the farmers had to burn their straw upon the ground because it would not pay to cart it to the railway and send it to Sydney, whereas now it is carried 200 miles by rail for about 8s. or 9s. per ton, and is then sold at prices varying from £1 10s. to £3 10s. per ton. Is it likely that the farmer is desirous of reverting to the old order of things?

In the 40th paragraph Mr. Haynes, unlike some previous writers on the rates question, advocates the "allowing of discounts or decreases in charges where the run of the train is lengthy," and this, it is scarcely necessary to say, has always been our practice, as well as it has been the practice of all carriers both by land and sea; but in the same paragraph he again introduces the threadbare subject of what he is pleased to term "differential," but is in reality *competitive* rates, upon which it is not necessary to enlarge further.

And in the 41st paragraph, while the necessity for a classification is admitted, Mr. Haynes contrasts the cost of carrying 6 tons of flour, which, for a distance of 500 miles, is £7 14s. with an equal weight of ironmongery, which, for half the distance, is £37 14s. This contrast, I must say, is a peculiar one. Conceive the quantity of flour used throughout the country as compared with ironmongery, and then consider that the cost of the former is about £10 per ton, while the latter is worth from five to ten times that amount. And then let it be borne in mind that a much greater weight of flour could, as far as measurement is concerned, be put upon any of our trucks than they are authorised to carry; whereas of the general ironmongery we could not possibly put nearly 6 tons upon our ordinary trucks. Mr. Haynes must surely have been dreaming when he wrote that "6 tons of ironmongery is in most cases neither fragile nor brittle, and certainly does not require so much care as (say) flour."

In paragraph 44 Mr. Haynes proposes that there shall be but one rate for 1st, 2nd, 3rd, and 4th class traffic, which means that, under all circumstances, whether the traffic is competitive or non-competitive, he would charge as much for the farmer's dairy produce or his seed as he would for a like quantity of silks, which are worth probably fifty times the value of the other!!! Where would be the justice of such a course, or what becomes of the classification Mr. Haynes has admitted the necessity of?

Then how would the truck system work in cases, of which there are thousands, where there are only a few cwt. of goods to be sent from one station to another? Are they to be kept, probably for many weeks, until a truck-load is made up? How would that answer in respect of dairy produce, which Mr. Haynes has taken so much pains to show is only forwarded in lots of a few cwt. at a time? Why introduce, when there is no necessity for it, the wholesale system, which he condemned so strenuously in the beginning of his letter?

If we do introduce the wholesale system generally, it will have to be with the knowledge that, while the trucks containing goods are provided with full loads, many will have to be run to the country empty to bring back farm produce at rates which, although they may answer well enough for return loading under present circumstances, would be absolutely ruinous if we had to run the trucks empty to get the traffic.

Mr. Haynes is entirely mistaken when he says (*vide* paragraph 47) that a truck "will accommodate 6 tons of almost any goods," and his assertion that "a truck which carries 6 tons of flour (concentrated produce) will also carry nearly 6 tons of wool, the bulkiest of all merchandise, except hay and straw," is also wrong. As far as accommodation is concerned, much more flour could, as I have already said, be put on any of our trucks than their dead-weight carrying capacity would render safe; and the same may be said of greasy wool; but it is impossible to put on anything like that quantity of scoured wool, which is more bulky than either hay or straw.

In paragraph No. 48 Mr. Haynes starts away with the assertion that "the railway freight upon wheat to our farmers is about 6½d. per bushel," but he does not say whether that rate is for 30 or 300 miles. As a matter of fact, the trainage of 6½d. per bushel is for a distance of 380 miles, when the wheat is carried in 6-ton lots—and that is only about 17 per cent. of its value. The trainage of an equal weight of coal would be only about 10 per cent. less, while it is only about one-eighth the value of the wheat.

And it is absolutely incorrect to say that "a 4-ton consignment would cost him (the farmer) 10d. per bushel, and a 2-ton lot 1s. 8d. per bushel;" for, in either case, and even if the consignment did not weigh more than 1 ton, the charge would be only equal to 7½d. per bushel.

Still Mr. Haynes contends that "a 100 per cent. special reduction in the coast-bound wheat rates" should be made; and, he innocently observes, "this would bring the carriage-rate down to about 3d. per bushel; and I propose that the rate should apply to actual weights down to ½-ton lots." Reduced to practice, this means that, in the absence of other loading for a truck, it would run 380 miles for 5s., and that too in the face of our being compelled to send trucks to the country empty to return with produce if the wholesale system is made general as regards general goods; and Mr. Haynes wishes the same principle applied to all kinds of grain, potatoes, &c.

As regards hay, straw, and chaff, he proposes (*vide* paragraph 49) that "the present rate be made to apply to lots of not less than half a ton," the meaning of which is that while half a ton of wheat, valued at £3 10s., is to be conveyed a distance of 380 miles for 5s., an equal weight of straw, which is about half the value of the wheat, is to be charged 6s. 2d.!!

And Mr. Haynes says that "under the new arrangement he (the country farmer) would be charged actual weight, like the man is charged who lives in Sydney." I confess I can scarcely follow him in this, for the farmer would not be charged actual weight if he only sent 5 cwt. and was charged Mr. Haynes' proposed minimum of 10. Surely that gentleman cannot be unaware that as far as farm produce is concerned "the man who lives in Sydney" occupies the same position as the one who lives at Bourke, Albury, or Hay.

And this, we are told by Mr. Haynes, is the completion of his work! Well, as the Commissioner has observed, nine-tenths of his letter is taken up with contrasts between the competitive and the non-competitive rates, the former of which must, as I have said, either be adhered to or the traffic abandoned to Victoria; and if he had been conversant with his subject, as so avoided the mistakes and incongruities to which I have drawn attention, there certainly would have been no necessity for the remaining tenth of his letter.

Briefly summarised, Mr. Haynes contends at the beginning of his letter that "the profound blunder of our railway goods system is that it is shaped to meet a wholesale rather than a retail trade," but before proceeding far he advocates the general adoption of the wholesale system. This, again, he practically condemns towards the end of his letter by submitting that farm produce should be carried in lots of half a ton or upwards, and other traffic under classes A and B at actual weight under the existing rates.

I may point out, however, that if the small farmer wishes to take advantage, either of the truck or the ton rate, he can easily do so by arranging with some of his neighbours to make up the consignment.

Now let us see how Mr. Haynes' proposals will work in actual practice. Hitherto the down and up traffic have tolerably fairly balanced each other as far as trucks are concerned; but adopt the wholesale system for general goods throughout the lines and we shall at once be faced with the necessity of having to send large numbers of empty trucks to the country to return with small consignments of farm produce, assuming, of course, that small consignments are sent, as Mr. Haynes seems to think will be the case.

In this we should not only lose £150,000 to £200,000 on the general goods, and something like £50,000 in the farm produce, if the reductions proposed by Mr. Haynes were carried out—to say nothing of other kinds of special class traffic being carried at actual weight at existing rates—but our working expenses would be enormously increased by the number of additional trucks that would be used, and consequently, the extra trains that would have to be run.

If Mr. Haynes had recommended what he is pleased to call the wholesale system both on the down and the up journeys there would at least have been consistency in his argument, but as it is there is none.

The reductions he proposes on the farm produce would make the rates from 30 to 50 per cent. less than those for coal, although the latter commodity is twenty or thirty times less valuable.

I would commend to Mr. Haynes a book which was written on "Railway Rates, English and Foreign" by an eminent English railway manager, and published in the end of last year; the reports of the Select Committee appointed by the British House of Commons on the rates question; the report of the Board which was appointed by the Government of this Colony some years ago to inquire into the matter; and any railway rate which he can get hold of, and I do not hesitate to tell him before-hand that nowhere will he find carried into effect the extraordinary ideas he has promulgated.

On the contrary, he will find very much greater apparent anomalies than he will be able to discover in our rate book. Although, as far as produce is concerned, he is not likely to find a more liberal tariff than ours.

And it is somewhat extraordinary that farm produce is the only country product in which he takes any interest except, perhaps, the lime burnt at Mudgee, for he appears to deprecate the idea of a country tanner or meat-preserver getting their products sent cheaply to the central markets at Sydney or Newcastle.

W.V.R., 3/11/87.

Commissioner.

Report by The Traffic Manager, Northern Line.

THE purpose of Mr. Haynes' report is to expose the anomalies brought about under the system of differential rates, which, as everyone knows, are intended to conserve the interests of the Colony as a whole by keeping its trade within its borders. Indirectly every taxpayer in the Colony benefits by this policy, and would inevitably suffer to a greater or less extent if the measures adopted were not in force, and the money now generally diffused went to other Colonies with the trade.

The system is in accordance with the law of self-preservation, and to abolish it by levelling down would be as suicidal as levelling up, while another Colony maintains the practice.

Railway companies in all parts of the world, conducted, as no person will deny, on commercial principles, which are prescribed with much persistency as the thing necessary to bring the management of the N. S. Wales lines to a proper state, have tariffs to meet competitive circumstances, and consequently the anomalies that Mr. Haynes so much objects to. In business firms, where commercial principles may be supposed to have the fullest scope, it is no uncommon thing to sell goods at a distant market more cheaply than on their own ground, so as to cope with competition.

The numerous illustrations, multiplied to a wearisome extent, conveying to the minds of the public that the tariff is as a whole anomalous, absurd, and unjust, are—notwithstanding the variety of treatment, elaborations, inversions, and changes of all kinds, but the one thing, and one plain statement—if the public required any, would have been ample.

The public in general know that owing to the pressure upon our trade from other Colonies we carry to districts where this pressure is operative goods for longer distances for less money than for distances where we are free from it.

But

But many Northern people have been led by Mr. Haynes's mode of exposition to suppose (not having looked into the subject themselves) that as a general thing the rates on these lines are higher than on the Southern and Western, even where there is no competition, and they consequently feel aggrieved that their lines have to make up for losses on the other lines. Mr. Haynes has not told them that all within the 305 and 340 distances respectively on the other lines have also to make up for loss on differential rates—supposing there is any.

The way in which unlike cases have been paired, and in which he has compared conditions that do not exist, and never will, with natural conditions, is amazing, completely nullifying all the intended effect of his arguments.

If such irregular reasoning and arbitrary comparisons are allowable, it is competent for any person to bring euclid or the science of astronomy into ridicule.

In paragraph 40 an approach to reason is made in the admission that goods should be classified according to risk, bulk, amount of handling, fragile character (though he says nothing about values, which all over the world are an unavoidable factor in freights), but throughout the whole of his article Mr. Haynes ignores the principle. For instance, in No. 12 he speaks of the injustice of carrying Newcastle coal, run over a portion of the Coal Companies own lines, in their own waggons, millions of tons annually, at a less rate than dairy produce, carried in small quantities at a time, and in Government waggons, wholly on Government lines.

It is further stated that the use of the cranes is given free. I am afraid this imperfect knowledge pervades the whole of Mr. Haynes's article.

1. It is stated roundly that in many cases the extension of railways has affected inland farmers injuriously; "because they are almost wholly shut out from the coast markets, while on the other hand, the inland markets are reached by the cheaply-borne produce from the other Colonies." A farmer reading this would be indignant to learn that the produce from other Colonies is carried cheaper than his own. The farmer, however, is misinformed, because the implied difference in rate against him is not a fact. Paragraphs 1 and 2 are founded on this assumption, and are therefore baseless.

4. While it is accordant with "commercial principles" everywhere to charge higher, *pro rata*, for small quantities than for large ones, Mr. Haynes says it is a "profound blunder" for the New South Wales Railway Department to carry out this principle. He has admitted that cost of handling, &c., should have a part in classifying, but, although small quantities cost more, *pro rata*, than large ones for handling, and do not admit of economical loads as a rule, we must still charge the same rate as a large lot, fulfilling all conditions of economy for the Department.

8. Here Mr. Haynes gives an impossible case—one that never occurs—in speaking of 6-ton lots of fourth-class goods. Any reasoning founded on 6-ton lots of fourth-class goods is invalid, because unreal.

13. "Millers and storekeepers, say at Tamworth or Armidale, * * * get up cheaply by rail large quantities on the wholesale principle of imported flour; then when the farmer comes into the town to sell his wheat the large cheaply-carried stocks of flour are pointed out to him, and he is forced to accept any price." Tamworth is a great wheat-growing district. The farmers do not grow wheat retail. The millers, as everywhere else, sell flour wholesale as well as retail. Though it is implied that it is dearer to send a given quantity of Tamworth flour to Newcastle than to send the same quantity of Adelaide flour the other way, it is not a fact. There is here a distinct, though unintentional, impeachment of the business capacity about Tamworth. With the same chances, the Victorian or Adelaide flour is nevertheless, run in upon him, although it has to pay two railway freights and the sea freight—at least Mr. Haynes says it is. If it be true, it is a state of affairs for which the railway tariff is not answerable.

15. Victorian flour is again compared with (among other things) furniture, although, as the articles differ so widely, there is no common ground for comparison. The admission that there should be classification is forgotten.

16. Victorian flour, irrigation pipes, and agricultural machinery compared as regards freight needs no comment.

17. Speaking of the country farmer, Mr. Haynes repeats an inaccuracy, to which I have before alluded. He says "his local market is flooded with produce carried for next to nothing." If the inward produce is carried for next to nothing, so is the country farmer's. While the inequality of differential rates is loudly complained of, so are the rates that act equally everywhere. It is hard to say whether Mr. Haynes has most objection against equal rates or against the competitive. If neither is right, what system is? A higher rate on Victorian flour, I take it.

23. Leather to Sydney or Newcastle 1st class; to other stations 2nd class. Mr. Haynes does not appear to comprehend the reason for the lower rate to the ports. It is, of course, to allow easier access to the great markets, and consequently admits of tanneries being established in the country. If the rate were higher, access to market would be retarded, and the tanneries would have to be established on the coast. Mr. Haynes favours decentralization; this rate, in the way indicated, has that tendency. The Armidale tannery (Messrs. B. A. Moses & Co.) has shipped a considerable quantity of leather from Newcastle direct to London. To give a cheap rate the other way would allow the Sydney tanner a better opportunity of competing in Armidale with the local establishment. This rate is not in favour of the Sydney merchant, as it is implied that the rates in general are.

24. A complaint that Victorian flour is carried cheaper than the Newcastle biscuits. There is no need to defend it. Gives the rate at which Newcastle biscuits are sent a given distance on the north, and imported biscuits on the south and west—like is seldom compared with like. Newcastle biscuits can be sent at same rates on all lines as other biscuits. Arnott's biscuits, as a matter of fact, are sent to the competitive districts on south and west, and get the benefit of the rates.

25. A Tamworth musical warehouse gets 6 tons musical instruments for £35 18s. 6d., and this is compared with the competitive district's rate.

26. Complains that the "Victorian foreigner" can send his fodder more cheaply than the Newcastle foundries can send irrigation pipes and machinery to the country. This is a curious kind of attack on rates.

31. Speaks of produce rotting at Guyra and Ben Lomond that can never reach a market. If a Ben Lomond farmer sends 6 tons potatoes in lots to suit purchasers "it will cost £21 13s. for 281 miles." This is a misstatement, unless the farmer sent 120 lots of 1 cwt. each to different persons at different

times; he would then pay £24. If he sent a truck load of 6 tons he would pay £5 8s. 6d. for the load. The unfairness of Mr. Haynes' statement lies in the fact that it is stated it will cost the Ben Lomond man £21 13s. for the same tonnage that the Newcastle importer pays £5 3s. 9d. (should be £5 8s. 6d.) for.

32. The "centralising system" of charging A rates for preserved meats to ports—the only outlet to a suitable market that these meats have—is alluded to. Mr. Haynes quite misses the point, and complains of the high rates on preserved meats to the country, where they never go, and would not go if they were carried for nothing. He does not perceive that cheap rate from the meat preserving establishments to their natural markets through the ports aids decentralization by permitting such establishments to be set up in the country. If there was not this special rate either the factories could not start or they would have to be located on the coast.

It is not worth while pursuing the investigation of this report any further. I have dealt with Mr. Haynes' illustrations and facts, which are typical of the whole. Though all varied, and the changes rung with some skill, they all apply to the one thing.

The remedy Mr. Haynes proposes is extremely crude, and would deprive the railways of the greater part of their revenue. He fails to know that rates must be made to suit particular circumstances, and that his hard and fast recommendations would not work.

Railways are about to be established in China. If that nation's producing powers be developed in anything like the ratio that railways have developed those in England, America, and other countries, China's production will, before many years, become a menace to the industries of all nations on the globe.

If, however, the Chinese could be persuaded to adopt Mr. Haynes' system the railways would before long become extinct, and the danger to other nations from China's competition be averted.

J. HIGGS,
9/11/87.

1888.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

RAILWAY FROM BOWRAL OR MOSS VALE TO ROBERTSON.
(CORRESPONDENCE, &c., RESPECTING.)

Ordered by the Legislative Assembly to be printed, 22 November, 1888.

RETURN to an Order of the Honorable the Legislative Assembly of New South Wales, dated 14th June, 1888, That there be laid upon the Table of this House,—

“Copies of all papers, minutes, reports of officers, or other documents, having reference to the construction of a Railway from either Bowral or Moss Vale to Robertson.”

(Mr. McCourt.)

SCHEDULE.

NO	PAGE.
1. Petitions from residents of Moss Vale, presented by Mr. Garrett, M.P., to Minister for Works, re line of railway from Moss Vale to Robertson; minutes and letter in reply. February, 1881	2
2. Letter from Secretary, Burrawang Committee, to Commissioner, enclosing sketch of proposed route. 22 April, 1881	5
3. Letter from Secretary, Burrawang Committee, to Minister for Works, re proposed route; minutes, &c., and report. 26 April, 1881	5
4. Letter from Mr. D. T. Smith to Minister for Public Works, re line of tramway. 28 April, 1881	5
5. Letter from Mr. Garrett, M.P., to Commissioner, forwarding letter received from Mr. Blencowe. 3 May, 1881	7
6. Letter from Mr. Barrett to Mr. Garrett, M.P., re report on route. 2 May, 1881	7
7. Letter from Messrs. Barrett Bros. to Mr. Garrett, M.P., with endorsement. 16 May, 1881	7
8. Letter from Mr. McCourt, M.P., to Mr. Garrett, M.P., re deputation to wait upon Minister, with reply; minutes, &c. 5 December, 1881	8
9. Letter from Mr. Garrett, M.P., to Under Secretary for Works, enclosing letter from Secretary, Burrawang Society; minutes and reply. 10 June, 1882	8
10. Letters from Secretary, Burrawang Committee, to Under Secretary for Works, re deputation for trial survey of line; minutes and replies thereto. 30 June and 7 July, 1882	8
11. Telegram from Secretary, Burrawang Committee, to Mr. Garrett, M.P., re date of deputation, and reply. 17 July, 1882	9
12. Letter from Mr. Osborne to Minister for Works, urging construction of line from Bowral. 20 November, 1882	9
13. Letter from Mr. Osborne to Minister for Works, re petition presented. 23 January, 1883	10
14. Letter from Mr. Miller to Minister for Works, re survey of line; minutes, &c. 31 January, 1883	10
15. Questions asked in Legislative Assembly by Mr. Garrett, M.P., re proposed line. 20 March, 1883	10
16. Letters from Commissioner for Railways to Mr. Mulligan and Mr. Garrett, M.P., re construction of line; minutes, &c. 21 and 24 April, 1883	10
17. Petition from residents of Kangaloon Valley, re construction of line. 12 May, 1883	11
18. Letter from Mr. Blencowe to Minister for Works, urging construction of line from Bowral. 16 May, 1883	11
19. Minutes, &c., with District Engineer's Report. 1 June, 1883	12
20. Letter from Mr. Garrett, M.P., to Minister for Works, enclosing communication from Mr. Miller; minutes, &c. 16 July, 1883	13
21. Letter from Mr. M'Niven to Secretary, Burrawang Farmers' Club, re proposed line. 20 July, 1883	13
22. Letter from Mr. Garrett, M.P., to Minister for Works, re fixing day to receive deputation, with reply. 21 July, 1883	13
23. Minute of Commissioner, re route of proposed line. 24 July, 1883	14
24. Minute of Minister for Works to Engineer-in-Chief; extract re instructions for trial survey. August, 1883	14
25. Letter from Mr. Miller to Mr. Garrett, M.P.—Survey from Burradoo wanted. 24 August, 1883	14
26. Letter from Mr. Garrett, M.P., to Minister for Works, urging survey. 27 August, 1883	14
27. Letter from Assistant-Engineer for Trial Surveys to Mr. Wilkins; instructions re trial survey. 22 October, 1883	14
28. Letter from Mr. Wilkins to Engineer-in-Chief, re start for Bowral. 24 October, 1883	15
29. Letter from Assistant-Engineer for Trial Surveys to Mr. Wilkins; instructions re trial survey. 26 October, 1883	15

NO.	PAGE.
30. Letter from Assistant-Engineer for Trial Surveys to Mr Wilkins; instructions <i>re</i> trial survey. 3 November, 1883	15
31. Letter from Assistant-Engineer for Trial Surveys to Mr. Wilkins; instructions <i>re</i> trial survey. 6 November, 1883	15
32. Letter from Mr. Wilkins to Engineer-in-Chief; books required, &c. 10 November, 1883	15
33. Letter from Assistant-Engineer for Trial Surveys to Mr. Wilkins; instructions <i>re</i> trial surveys. 13 November, 1883	15
34. Letter from Mr. Wilkins to Engineer-in-Chief; monthly progress report. 1 December, 1883	15
35. Letter from Mr. Wilkins to Engineer-in-Chief; shifted to Burrawang. 7 December, 1883.....	16
36. Letter from Mr. Wilkins to Engineer-in-Chief; monthly progress report. 3 January, 1884	16
37. Letter from Mr. McCourt, M.P., to Minister for Works; inquiry <i>re</i> deputation. 10 January, 1884.....	16
38. Letter from Assistant-Engineer for Trial Surveys to Mr. Wilkins; instructions <i>re</i> trial survey. 14 January, 1884	16
39. Letter from Mr. Wilkins to Engineer-in-Chief; field-work completed. 14 January, 1884	16
40. Letter from Mr. Wilkins to Engineer-in-Chief; forwarding books. 19 January, 1884	16

No. 1.

Petition from certain residents of Moss Vale to The Honorable John Lackey, Minister for Works.

The Petition of the undersigned, residents of Moss Vale and surrounding districts,—

RESPECTFULLY SHOWETH:—

That Parliament having affirmed the principle of constructing tramways as feeders to the main lines of railways, your petitioners desire to point out, that a line from Moss Vale to Robertson would be a great benefit to the settlers, and remunerative to the Government.

That the country through which the line would pass is thickly populated, having been selected in small farms since 1861, and from which Government is now receiving considerable revenue by way of interest. The land is rich and very productive; but its productiveness would be greatly increased if better means of transit to market were offered to the settlers.

That if the tramway were constructed, nearly the whole of the present large expenditure upon the main roads would be saved.

That the residents of Kangaroo Valley, who are now almost isolated, would be greatly benefited if the abovenamed line were constructed, as it would save them a distance of some 20 miles along very inferior roads.

And your petitioners, as in duty bound, will ever pray, &c.

THOMAS TATE, Moss Vale,
and signed by 197 residents.
Petition

Petition for Tramway from Moss Vale *via* Burrawang, Wild's Meadows to Robertson.

To The Honorable The Minister for Works,—

The humble Petition of the undersigned inhabitants of the districts of Burrawang, Wild's Meadows, Robertson,—

SHOWETH :—

That your petitioners are for the most part *bonâ-fide* settlers, representing an area of 325 square miles of the richest agricultural land in the Colony, who for some years past have suffered great inconvenience and serious losses for the want of good roads and cheap and rapid communication with the markets of the metropolis.

2. That your petitioners, numbering over 1,200 adult males, are chiefly occupied as dairy farmers, with holdings free selected since 1861, of from 40 to 320 acres each, a large portion of which is now cleared and used for grazing, agriculture, and orchards, which, twenty years ago, was one vast impenetrable scrub; but, by many years of toil, and the expenditure of large amounts of capital, has been converted into prosperous homesteads, now valued at from £500 to £5,000 each, whilst land has risen in price from £1 to £20 per acre, very strong evidence of the great progress which these districts have made.

3. That the districts enumerated above are situated at a distance of from 10 to 15 miles from the Moss Vale railway station, the roads to which from various places named are very heavy and in condition bad, and in winter very difficult to travel over; that the cost of carriage is very high, being from 15s. to £1 per ton for the short distance of 10 miles, or double of that charged for the whole distance (86 miles) by train from Moss Vale to Sydney, which, taken in conjunction with the great loss of time, and the large amount of damage done to the goods during their carriage to the station, your petitioners would most respectfully submit, are very strong reasons for urging upon your Honorable House, that a cheaper and more expeditious means of transit is absolutely necessary than that now in vogue, in order that your petitioners may be placed on a more equitable footing, so as to enable them to compete fairly with those more favourably situated, and especially so with the farmers of the neighbouring Colony of Victoria.

4. That the districts interested in this Petition have a total population of 6,200; that there are eight public schools, with an aggregate average attendance of 400 scholars; two or more churches in each, with clergymen, post and telegraph offices, three mechanics' institutes and schools of art, three friendly societies, with public halls, two or more general stores in each, three large steam saw-mills, whilst at Burrawang, the central district of the group, there is a Farmers' Club of over 200 members, and a splendid public hall, a race club, and an agricultural society which ranks either fourth or fifth in the Colony for importance, whose annual show is attended by 3,000 persons, thus marking the great social and commercial progress of the district; but your petitioners believe that all this would be more than doubled in a short time if a tram-road was added to our present system of traffic in the district.

5. That the district through which the proposed tramway will pass is the richest and most populous in the Colony, and is capable in itself of supplying the whole of Sydney with field, garden, and dairy produce in abundance, whilst its mineral resources, slumbering in the soil unworked, are rich and varied, such as coal, iron, limestone, kerosene shale, and copper, and quarries of building stone abound everywhere. It possesses a great variety of trees useful for building purposes, and its natural scenery alone would command a very large passenger traffic in the event of the tram being constructed; but, despite all these natural advantages of our district, your petitioners would urge the attention of your Honorable House that we have not advanced as we should have done for the want of cheap, easy, and rapid communication with Sydney.

6. That, upon a mere rough calculation, about 10,000,000 quarts of skimmed milk is thrown on the soil yearly which could be utilised in fattening calves; that there are 6,000 cows in daily milk, and that 4,000 gallons of new milk could be sent daily to Sydney; that 5,000 calves are annually destroyed—not even the skins are preserved—both of which could be utilised; the calves would be fattened and the skins preserved and sent to market; that fully 5,000 more pigs would also be forwarded on, and that hundreds of tons of the best English fruits, which are abundantly grown here, but mostly thrown to pigs, and many thousands of tons of potatoes more, which are produced in unlimited quantities, and unsurpassed by any in Australia for quality, would be sent to the metropolis, instead of being allowed to rot in pits as at present to the extent of many hundreds of tons annually.

7. That, should your Honorable House view with favour the contemplated tramway from Moss Vale to Burrawang and Robertson, your petitioners would represent that a great extent of these rich districts would be almost immediately cleared and brought under cultivation; that many industries would spring up which are at present quite impracticable; several steam saw-mills would be set in operation by which many thousands of tons of excellent timber would be utilised and sent to the market, instead of the trees being ringbarked or destroyed by fire; that the great coal measures existing on the line of road would soon be actively worked, and a large amount of capital and labour brought into the district; that, dense as the population of these districts is, there is ample room for thousands more to settle in our midst, and by affording facilities for transmitting our produce to the markets, a great impetus will be given to further settlement all along the proposed line of tramway, which would drain the metropolis of a deal of its surplus labour, and add very considerably to the traffic and tonnage on the line; that considerable advantage will be gained in the punctual and safe delivery of the daily mails in each of these districts, and at considerably less cost to the Government; and that the annual grant of public money to construct and repair the roads and bridges would also be greatly diminished; so that, apart from the great boon that would be thus granted, your petitioners believe that the cost of construction of such a work will not only be met by ample returns, but that a considerable amount will be added to the revenue of the Colony, as well as paying full interest for the outlay, and also the working expenses of the proposed line.

8. Your petitioners would invite the attention of the Assembly to the following approximate returns of a tramway from Moss Vale *via* Burrawang to Robertson. The data thus afforded having been collected with much care by parties specially appointed for that purpose at Burrawang, the central district of the group; but no allowance has been made in the estimate below for the use of, and the receipts from, the tramway for the conveyance of goods and passengers, &c., on the return trip; but it is based on the fare charged for a single passage from Burrawang to Moss Vale only, estimating the return traffic to be about

about one-third. Your petitioners believe the total receipts would equal the cost of the working and construction of the line, and be considerably in excess of the figures here quoted, namely:—

Data of approximate returns.

		£	s.	d.
15,000 tons potatoes and turnips at 1s. per ton	3,000	0	0
5,000 " sawn timber at 4s. "	1,000	0	0
4,000 " stone and brick at 2s. 6d. "	500	0	0
3,000 " store goods at 5s. "	750	0	0
1,500 " grain and meal at 4s. "	300	0	0
1,000 " artificial manure at 4s. "	200	0	0
1,000 " sundries at 5s. "	250	0	0
1,500 " butter and cheese at 10s. "	750	0	0
2,000,000 gallons milk per annum at ½d. per gal.	4,166	13	4
6,000 cases of fruit at 3d. per case	75	0	0
2,000 " eggs at 3d. "	25	0	0
500 coops fowls at 1s. per coop	25	0	0
5,000 calves at 1s. each	250	0	0
5,000 pigs at 1s. "	250	0	0
1,000 stock sundries at 2s. "	100	0	0
36,000 passengers per annum, estimated at 100 per day at 1s. "	1,825	0	0
16 miles mail contract, at 3d. per mile per day	72	16	0
		£13,559 9 4		

9. That the approximate cost of the proposed tramway is estimated, according to the opinion of persons competent to judge, at about £25,000, including the stations and rolling stock for the total length of the line—16 miles; and your petitioners feel that they are in a favourable position to appeal to your Honorable House, since it has become an established principle adopted by the Government to construct tramways as feeders to the great trunk lines, in connection with the great railway system of the Colony, and that the tramway herein proposed your petitioners have every reason to believe will, both commercially and economically, prove a great success.

10. That, with a view to gather exact data as to the proper route, and cost, and construction of the line for information of your Honorable House, your petitioners would respectfully suggest that an engineer and surveyor be directed to visit these districts, and make the necessary survey, as soon as possible; that the cheapest, most suitable, and the most desirable route, is that indicated in this Petition, as it presents no engineering difficulties, is the shortest line; almost equally divides these districts, running, as it will, through the centre of about 300 farms, thus benefiting a very large majority of the inhabitants, whilst it would favour a further extensive settlement along the whole line of tramway, and satisfy the most sanguine expectations of your petitioners' future hope of success.

11. That your petitioners believe that the construction of a tramway from Moss Vale, through these districts, *via* Burrawang to Robertson, has become a necessity, as without this public work, being farmers, and depending solely upon the markets of the metropolis, we are placed at a great disadvantage, and suffer great inconvenience, loss of time, damage to goods, and serious pecuniary losses from bad and heavy roads, slow transit of goods, and high charges for carriage; your petitioners are exposed to undue peril, and may perhaps be overtaken by positive ruin.

12. Your petitioners, therefore, for the reasons stated, and for others which could be deduced, humbly pray that your Honorable House will take these premises into your favourable consideration, convinced as your petitioners are, that a tramway from Moss Vale to Burrawang and Robertson would amply pay cost of construction, with interest; and also, not only pay well for the repair and of the due working of the line, but actually yield a good profit, to be added over and above to the revenue of the Colony.

And your petitioners will ever pray.

Dated at Burrawang, this 24th day of January, A.D. 1881.

[Here follow 317 signatures to Petition.]

Residents of Burrawang, &c., urging construction of Tramway from Moss Vale to Robertson, *via* Burrawang, Wild's Meadows, &c.

Get map of district, and show thereon line of tramway sought for.

CH.A.G., 24/2/81.

The Minister considers it desirable that an exploration of the country should be made to ascertain if there is any prospect of a trial survey resulting in a suitable line being found.—CH.A.G., 1/4/81.

Mr. Secretary Lackey wishes the petitioners to be informed that an exploration of the country will be made. Will Mr. Cowdery direct an exploration.—CH.A.G., 6/4/81.

Sir,

Department of Railways, Sydney, 5 April, 1881.

Referring to the deputation introduced by you to the Minister for Public Works, on the 19th February last, for the purpose of presenting a Petition for the construction of a tramway from Moss Vale to Robertson *via* Burrawang, Wild's Meadows, &c., I have the honor, by direction of Mr. Secretary Lackey, to request that you will be good enough to inform the petitioners that an exploration of the country will shortly be made, in order to ascertain whether there is any prospect of a trial survey resulting in a suitable line being found.

I have, &c.,

CHAS. A. GOODCHAP,
Commissioner for Railways.

Thomas Garrett, Esq., M.P.

No. 2.

The Hon. Secretary, Burrawang Committee, to The Commissioner for Railways.

Sir,

Burrawang, 22 April, 1881.

I have the honor to inform you that your letter of the 5th instant, No. 81-903, referring to the proposed tramway from Moss Vale to Robertson *via* Burrawang and Wild's Meadows, was duly forwarded to me by Thomas Garrett, Esq., some few days ago, and after due consideration of same by the committee, it was determined to forward you the enclosed sketch of the proposed route, believing that it might be of some service to the engineers when making a trial survey of the said tramway line.

I have, &c.,

WILLIAM BARRETT,

Hon. Secretary, *pro. tem.*

No. 3.

The Hon. Secretary, Burrawang Committee, to The Secretary for Public Works.

Sir,

Wild's Meadows, Burrawang.

If the tramway route from Moss Vale *via* Burrawang and Wild's Meadows to Robertson, as asked for by the petitioners, be not approved of, I would suggest that the road from Moss Vale to Wild's Meadows, by the lower road be examined, as I believe this would save considerable in costs of construction; also a branch from Wild's Meadows to the Cambewarra Road, at top of mountain, Kangaroo Valley. This would intercept the mail passenger and goods traffic from the coast district, and will be found to be the best paying routes of any submitted, as the line would pass through the best land in the district.

Hoping the same may be examined in connection with the other routes specified:

I am, &c.,

THOS. BLENCOWE.

Mr. Cowdery, B.C., 27/4/81. Mr. Halligan's report forwarded herewith.—G.C., 6/5/81. Seen by Minister, to be considered at the proper time.—CH. A.G., 9/5/81.

Railway Department, 2 May, 1881.

George Cowdery, Esq., Acting Engineer for Existing Lines, Railways and Tramways,—

Sir,

Acting on your instructions, I proceeded to Moss Vale on Tuesday last, the 26th April, to report on the question of tramway communication between Moss Vale and Robertson *via* Joe Wild's Meadows and Burrawang, and have the honor to submit the following:—

From Moss Vale to Robertson there is one macadamised road. Starting from Moss Vale, the main Southern Road is followed to point marked M. (on the accompanying sketch), from thence to Robertson *via* H and K. The old road use to go from H to Burrawang, and from thence to K. This still exists, but heavy traffic all passes direct from H to K. This direct road from Moss Vale to Robertson is, with a few exceptions, very good indeed, the gradients being very easy for most of the way.

In three or four places only would it be necessary to make cuttings or deviate from the road. By deviating from the road at any of the hills a good gradient could be obtained. The road is 1 chain wide, and the length from Moss Vale to Robertson is 15 miles.

The next route proposed is from Moss Vale to Bunter's, the same as before. From Bunter's a side road is taken to a point E *via* D; from E across country to Robertson *via* point F. This route from Bunter's to point F is very good indeed, and will accommodate more people than the main road, as it passes through the traffic centres of the populous districts of Yarrunga, Burrawang, and Wild's Meadows. From point F to Robertson a line will have to be chosen, and by following up Meadows Creek I think a good line could be obtained. This route has a decided advantage over the first one, *viz.*, the main road, inasmuch as the main road is entirely north of all the districts which will feed a tramway, and this latter route passes right through them. The village of Burrawang is on top of a hill, and is out of the question; but from the village to point F is scarcely a mile.

Another route, and one which, I think, will answer the requirements of the locality better than either of the others, is from Moss Vale across country to B; from B along a road at present unused to point C; from thence across a paddock to D; and from D the same route as last to Robertson. The main road being north of all the districts requiring a tram, it is so much better to have this latter road, which is three-quarters of a mile further south, and also along a Government road, which is much less hilly, and where cuttings or banks could be made without interfering with traffic.

In conclusion, I beg leave to draw your especial attention to this latter route, which is easier in grade to any of the others, and more central. Certainly it passes through about 9½ miles of private land altogether, and is altogether about 1 mile longer than the main road, and the same length as the deviation from Bunter's; but it catches more traffic, and will leave the main road untouched.

I have, &c.,

EDWIN MOLLOY HALLIGAN.

Commissioner.—G.C., 6/5/81.

No. 4.

Mr. D. T. Smith to The Secretary for Public Works.

Dear Sir,

Burrawang, 28 April, 1881.

I would draw your attention to the fact that Bunadoo is a better tramway junction than Moss Vale. Mr. E. M. Halligan has been sent up to inspect and report upon our present roads as to their suitability for the proposed Wingecarribee tramway (so we understand from him). Now, it is well known by the public that when roads were surveyed through this district in the first instance the country was so thickly timbered that it was impossible to pick out the best routes. That dray tracks were followed by the surveyors, and that to save time they ran their lines over the steepest hills regardless of severe gradients

gradients or public convenience. In proof of this statement consider the fact the Road Inspector is every year making deviations round and over the hills, and that at the present time efforts are being made at Robertson to give up two impracticable (surveyed) roads, and to make a new one (avoiding three severe hills) which will shorten the distance between Robertson and East Kangaloon by one half. I have no hesitation in saying that our main road to Moss Vale is an expensive and improper route on which to lay down a tramway.

But observe that the principle on which Mr. Halligan is to base his observations is, that the main roads must be the line on which the tramway is to be laid, and if this principle is persisted in Moss Vale must be the junction, to the marring of the gradients of the line and loss of public money. It seems strange that our common roads can be deviated year after year through private property, but that a tramway which is to serve generations is to be marred at the outset by not being allowed the principle sanctioned by this privilege. The petitioners were so convinced of the main roads being impracticable that in their estimate of the cost of the line they set aside a sum of money to purchase the land for the tram through private property, and the action of the Government (if correctly reported) negatives this portion of their prayer.

Mr. Halligan's report is unknown to me, but I fear that it will be biased by the Moss Vale people. They shepherded Halligan closely in Moss Vale and Burrawang, and a leading Moss Vale man said in my hearing he should recommend the main road to Moss Vale as the route. Moss Vale people have no land or interest here, but now they can stop the progress of our line no longer, they take improper means to gain a deviation of our line to suit themselves.

The line recommended by the Moss Vale people with Halligan is to start from Moss Vale, follow the main road up to the back of Barrett's mill, Burrawang, and then go on to Robertson. I am not now concerned to discuss whether the proposed line should come any nearer to Burrawang. But I will take Barrett's mill as a point common to both lines. Is Moss Vale or Burradoo line a short distance from the mill? Is the Wingecarribee Swamp the source of the Bong Bong River? The country by the side of this swamp and along the course of this river is perfectly level, and the fall so slight as to be imperceptible. It runs in a straight line from the mill to Burradoo; the line, therefore, would traverse a level open valley crossing the properties of Shipley, Perkins, and Throsby, at foot of Sheepwash Hill, keeping to same level country it passes over Riley's run to Bunadob Station. There is not a hill to impede, or cutting to stay the road. The Moss Vale Road, on the contrary, is continuous hill and dale from end to end, and graded in many places from 1 in 5 to 1 in 20. But allow me to point out more advantages than a level and inexpensive track:—

1. This Bunadoo Line would be more central as regards Upper Mittagong, and would save at Canole platform 5 miles road carriage to Bowral.
2. The carriage of goods from West Kangaloon would come to the Sheepwash platform, and save a road carriage of $7\frac{1}{2}$ miles. The Moss Vale Road would be useless to both these places.
3. And worthy of notice is this last fact, that by the Bunadoo Line the distance to Sydney would be shorter (by 5 miles) than by the Moss Vale route. A premium on every ton of produce carried, I may remark that the length of the proposed rival lines is the same in both cases, and Bunadoo is nearer to Sydney by 5 miles than Moss Vale.

The Bunadoo Line will have to run through private property. It avoids the main road, and thus does away with the risk of frightening country horses and breaking the necks of country people. The cost of the land would be met by the money saved in construction of an inexpensive route. This Bunadoo route should be granted in justice to Upper Mittagong and West Kangaloon people; it would disarm their opposition to the tram. At present these people are shut out altogether, and the benefit is to be reaped by Burrawang and Robertson, and indirectly by Moss Vale. The Bunadoo route is a benefit to Robertson and Burrawang, as it saves 5 miles of carriage on the Southern Line.

What is required is—

1. Power to put the line through private property.
2. A complete survey, with estimate of cost, including bridges, earthwork, cuttings, and gradients of the lines. This survey to extend to all feasible routes.

There has been mention made of a third line from Moss Vale to Burrawang *via* Yarrunga. Mr. E. M. Halligan was to inspect this road; but as it runs on the boundary of the district and skirts poor barren country, it hardly deserves consideration compared with the Bunadoo central line, though no doubt, failing to get the Moss Vale main road line, the whole force, interest, and support of the Moss Vale people would be given to this one. Of course at the present juncture we hear little about it; but in equity it should be surveyed and cost ascertained.

I have no interest in one line more than another. I feel interested in all the districts, and seek the greatest good to the greatest number.

I claim also to have seen something of the difficulty and expense of working a line with steep gradients.

I take the liberty of addressing you on the subject from the following considerations. You take a great interest in the welfare of this district.

My own duties prevent me giving any time to writing up this subject in the press or advocating it upon the platform.

That even if I had time it would be prejudicial to the interests of my church and of myself to contend with judgments blinded by self interest and the cliques of different local parties.

That the interests of this district will naturally suffer if a costly and difficult line is made not only in freights but also in the extension of the said line.

That I cannot see public money uselessly spent and not do my duty in making a protest.

I am, &c.,

DAVID T. SMITH.

I would be glad to show the Bunadoo line to any one taking an interest in the matter.

Mr. Cowdery.—G.B., B.C., 10/5/81.

7.

No. 5.

T. Garrett, Esq., M.P., to The Commissioner for Railways.

Tramway to Robertson.

Land and General Agency, 283, George-street, Sydney, 3 May, 1881.

Sir, I beg to forward you herewith a letter from Mr. T. Blencowe on the subject of route of proposed tramway from Moss Vale to Robertson. The statements and suggestions of the writer may be of use to your Department.

I have, &c.,

THOMAS GARRETT.

Forwarded to Mr. Cowdery.—CH.A.G., B.C., 5/5/81.

Mr. T. Garrett,—

Dear Sir,

Wild's Meadows, 2 May, 1881.

An officer has been sent by the Government to look over the route for the tramway from Moss Vale to Robertson. The route over the range through Burrawang was condemned, and it now remains whether the route by the main road on the north side of the dividing range be approved of or the route by the south side of the range be *via* Wild's Meadows, be preferred. The petitioners wish you to use your influence in the matter in favour of the route by Wild's Meadows, for the following reasons:—

1st.—That the object of the petitioners in asking for the tramway was to facilitate transit of agricultural produce. To effect this the line was asked through the centre of the district by Wild's Meadows to Robertson, and a branch from Wild's Meadows to the Kangaroo Valley Road to the top of the mountain. The whole of the land is first-class through which these routes pass, and includes five-sixths of the district. There are ten public schools located on these routes, and the population would number 90 per cent. as against the line on the north side of the range, and the people benefited by the direct route to Robertson.

Now if the line is constructed on the north side there is but one-sixth of the population would derive any benefit from this route as the dividing-range forms an obstacle that debars the south from participating in any benefit conferred. Again, the Wingecarribee Swamp runs direct for 6 miles in line with this route, on which not one single person is living, being a water reserve; and there are only twenty-four farms on the north slope of the range that would receive any benefit from this line. I may also add there is but one public school on this line, namely, at Robertson. You will see from this that the tramway, if constructed on this line of route, will be of no use to the district whatever, and the result will be as far as paying goes, a total failure. Why, the produce from Wild's Meadows side is now at least 80 per cent. more than that taken from Robertson, and if a Petition from the people was sent, 1,000 signatures could be obtained against 100 from Robertson in favour of the south side of the range. Hoping you will do your utmost to prevent an everlasting injustice being done the district is my excuse for troubling you with this long letter.

I am, &c.,

THOS. BLENCOWE.

No. 6.

Mr. W. Barrett to T. Garrett, Esq., M.P.

Dear Sir,

Burrawang, 2 May, 1881.

I beg to inform you that Mr. Halligan was up in our district on last Wednesday and Thursday making an exploration of the various roads with a view of having a survey of the most suitable site for the tramway. Would you kindly furnish me with a copy of his report on same as early as you possibly can do so, and by so doing you will very much oblige,—

Yours, &c.,

WILLIAM BARRETT.

Would the Commissioner for Railways kindly accede to this request.—T.G., 3/5/81. Mr. Cowdery for report.—CH.A.G., B.C., 5/5/81.

No. 7.

Messrs. Barrett Bros. to T. Garrett, Esq., M.P.

Dear Sir,

Burrawang, 16 May, 1881.

Would you kindly inform us if you have yet heard anything respecting the report of tramway route. We think it is now quite time that some steps should be taken in the matter, and trust that you will stir up the Department with respect thereto, and advise us of result at your earliest convenience and oblige.

Yours, &c.,

BARRETT BROTHERS,

(per W. BARRETT.)

Memorandum by Mr. Garrett.

My dear Goodchap,—Can you give me any information as to the matter referred to in the enclosed. I wrote some days back on the same subject.

Yours, &c.,

THOMAS GARRETT, 17/5/81.

Memo. from Mr. W. McCourt to T. Garrett, Esq., M.P.

Deputation *re* Tramway from Robertson to Moss Vale.

Dear Garrett,

A DEPUTATION of five or six from here and Burrawang wish to wait upon the Minister on Friday next, with reference to the tramway from Moss Vale to Robertson. Would you arrange for their reception by the Minister. It has been decided to push this matter, or we will be left out in the cold.

W. McCOURT,
Moss Vale, 5/12/81.

Friday, at 11.—J.L., 6/12/81. Inform Mr. Garrett, M.P.—J.R., 6/12/81.

Sir,

Department of Public Works, Sydney, 6 December, 1881.

Referring to Mr. McCourt's letter of yesterday's date, I am directed to inform you that the Secretary for Public Works will receive the deputation on the subject of a proposed tramway from Robertson to Moss Vale, on Friday next, the 9th instant, at 11 o'clock a.m.

I have, &c.,

JOHN RAE.

Thomas Garrett, Esq., M.P.

Railways.—J.R., B.C., 6/12/81. Mr. Cowdery.—G.B., B.C., 8/12/81. Most urgent. The country between Robertson and Moss Vale has been explored by Mr. Halligan, an officer of this Department. See his report with attached papers.—G.C., 8/12/81. Commissioner. Put report of deputation with this.—G.B., 9/12/81.

No. 9.

T. Garrett, Esq., M.P., to The Under Secretary for Public Works.

Sir,

Sydney, 10 June, 1882.

I enclose your letter from Secretary to the Burrawang Farmers' Club, asking for a day to be fixed upon which the Minister would kindly consent to receive a deputation upon the subject of the projected tramway to Moss Vale.

I would ask you to inform me the day it would suit the Minister's convenience to receive the deputation.

I have, &c.,

THOMAS GARRETT.

[Enclosure.]

Burrawang Farmers' Club and West Camden Agricultural Society,
Burrawang, 9 June, 1882.

Dear Sir,

At a large meeting of the above club held at the "Club Hotel" on the 1st instant, it was unanimously resolved that a deputation from this society should again wait on the Honorable the Minister for Public Works, and urge his special attention to the matter of the tramway from Moss Vale to Burrawang and Robertson, which formed the subject of their Petition presented nearly two years ago, and furnishing data which, in the Minister's opinion, fully made their claim good.

In furtherance of this object, it is now proposed to ask the Minister to have a trial survey made of the proposed line, and I am instructed by the society to ask the aid of your kind services by accompanying the deputation, and assist in obtaining the object of their visit. If you will kindly state in reply what Friday you can make it convenient to see the Minister with the deputation you will much oblige,—

Yours, &c.,

S. K. MILLER,

Hon. Secretary.

Thomas Garrett, Esq., M.P., Sydney.

Inform nothing can be fixed till Minister returns.—J.R., 13/6/82.

Sir,

Department of Public Works, Sydney, 14 June, 1882.

Referring to your letter of the 10th instant, requesting an appointment for a deputation on the subject of a proposed tramway to Moss Vale, I am directed to inform you that the Secretary for Public Works is at the present time absent from Sydney, and that nothing can be done in the matter until his return.

I have, &c.,

JOHN RAE.

Thomas Garrett, Esq., M.P.

No. 10.

The Hon. Secretary, Burrawang Committee, to The Under Secretary for Public Works.

The Burrawang Farmers' Club and West Camden Agricultural Society,
30 June, 1882.

Sir,

Will you kindly inform me as early as possible when the Honorable the Minister for Public Works will be able to receive the deputation from the above society.

The object of the deputation is to obtain from the Minister a trial survey of the proposed line of tramway from Moss Vale to Burrawang and Robertson.

The deputation will consist of the following prominent gentlemen of the above club (the members of which number 350), viz. :—

D. Moffitt, Esq., J.P., President; W. Barrett, Esq.; Jno. Hanrahan, Esq., J.P.; and Thos. Blencowe, Esq.

The deputation will also be accompanied by the following influential Members, viz. :—

Thos. Garrett, M.P.; Jno. Kidd, M.P.; Hon. A. Campbell, M.L.C.; Hon. Jno. Marks, M.L.C.; Dr. Tarrant, M.P.; G. H. Reid, M.P.; Major Holborow, M.P.; and W. Hezlett, M.P.

As the above gentlemen desire to be informed of the date a day or two before the time fixed by the Honorable Minister to receive the deputation, I shall feel greatly obliged if you can, by return post, furnish the necessary information. I may state that Friday, the 7th instant, would suit all parties if convenient to the Minister himself.

I have, &c.,

S. K. MILLER,

Hon. Secretary.

Friday, 20th, 11.30.—J.L., 13/7/82.

Burrawang

Burrawang Farmers' Club and West Camden Agricultural Society.

The Hon. the Minister for Public Works,—

Sir,

Randwick, 7 July, 1882.

Will you kindly let me know, as early as possible, when it will be convenient for you to receive the deputation appointed by the Burrawang Farmers' Club and West Camden Agricultural Society on the matter of a trial survey of the proposed tramway from Moss Vale to Burrawang and Robertson, which is the subject of a Petition signed by 357 farmers, presented to you in January, 1881.

Your reply, stating the day and hour that the interview can take place, may either be sent per post or telegraphed to me to Burrawang *via* Moss Vale.

I have, &c.,

S. K. MILLER,

Hon. Secretary.

Sir,

Department of Public Works, Sydney, 15 July, 1882.

Referring to your letter of the 30th ultimo, I am directed to inform you that the Secretary for Public Works will receive the deputation from the Burrawang Farmers' Club and the Camden Agricultural Society on the subject of a trial survey of line of tramway from Moss Vale to Burrawang and Robertson on Friday next, the 21st instant, at 11:30 o'clock a.m.

I have, &c.,

JOHN RAE.

Mr. S. K. Miller, Secretary Burrawang Farmers' Club and West Camden Agricultural Society,
Burrawang.

Sir,

Department of Public Works, Sydney, 15 July, 1882.

Referring to your letter of the 10th ultimo, I am now directed to inform you that the Secretary for Public Works will receive the deputation from the Burrawang Farmers' Club and the Camden Agricultural Society on the subject of a trial survey of a line of tramway from Moss Vale to Burrawang and Robertson, on Friday next, the 21st instant, at 11:30 o'clock a.m.

I am, &c.,

JOHN RAE.

Thomas Garrett, Esq., M.P.

Railways for the necessary information,—J.R., B.C., 15/7/82. Mr. Cowdery, B.C., 18/7/82. An exploration has been made of this route, and particulars forwarded to Commissioner. I cannot at present spare a surveyor for the purpose of making a trial survey.—G.C., 18/7/82. Commissioner.

Telegram from The Hon. Secretary, West Camden Farmers' Club, to T. Garrett,
Esq., M.P.

17 July, 1882.

BURRAWANG deputation, *re* tramway, wait on Minister, Friday, 20th instant, 11 a.m.

Dear Rae,—

Let me know at once whether this is fixed for, or, if not, will it suit the Minister.

Yours, &c.,

THOMAS GARRETT.

Sir,

Department of Public Works, Sydney, 19 July, 1882.

Referring to Mr. Miller's telegram to you of the 17th instant, I am directed to inform you that I wrote you on the 17th instant intimating that the Secretary for Public Works would receive the deputation on the subject of a survey for a tramway from Moss Vale to Burrawang on Friday, the 20th instant, at 11 o'clock a.m.

I have, &c.,

JOHN RAE.

Thomas Garrett, Esq., M.P.

No. 12.

Mr. A. Osborne to The Secretary for Public Works.

Sir,

Barrengarry, Kangaroo Valley, 20 November, 1882.

I beg to call your attention to matters in connection with proposed tramway line from Moss Vale to Robertson.

In the first place the original Petition presented by the deputation was signed by a large number of residents at Kangaroo Valley and Kangaloon, on the grounds that the line would be constructed to suit the requirements of the whole of these districts, which will necessitate branches, if the present proposal from Moss Vale to Robertson is carried out, thereby causing a large expenditure in the working of the lines hereafter. I therefore request, in the interest of these districts and two-thirds of the people who signed the Petition, that a through line be surveyed and constructed from or near Bowral through Kangaloon, crossing the main range in a depression between Burrawang and Robertson's, thence by Wild's Meadows to the top of the Barrengarry Mountain, at which place it will be necessary to provide for a township. This line has an immense advantage over any other, and although a little more difficult to construct, the line will run through the centre of these rich farming lands, and will bring double the traffic to the railway than the route now proposed, thereby making the line a complete success financially and satisfying the whole of the districts concerned.

I would also call your attention to the fact that 80 per cent. of the traffic would be to Sydney, and as this will shorten the distance thereto by 6 or 8 miles than the detour through unproductive country to Moss Vale, is of itself sufficient evidence in favour of this route being approved of.

In conclusion, I have it from those most interested that a large majority of the people of Burrawang concur in this route as being more direct, bring double the traffic to the line, and satisfying the requirements of the original petitioners.

I therefore ask that a survey may be made of the route suggested as soon as practicable in the interests of the districts as a whole.

I am, &c.,

ALICK OSBORNE.

No. 13.

The Secretary, Bowral Vigilance Committee, to The Secretary for Public Works.

Honorable Sir,

Bowral, 23 January, 1883.

Some months ago your predecessor in office promised, in reply to a Petition sent in from a number of residents in this district, asking for a trial survey of a route for tramway—Bowral to Kangaloon and Robertson—that, as soon as an officer could be spared, one should be sent to make the survey; since that time nothing has been done in the matter. I would respectfully ask you in the name of the petitioners to see that the matter is attended to.

The Petition was sent down some time in the month of July.

Your attention will very much oblige.

Yours, &c.,

W. J. OSBORNE,
Secretary, Bowral Vigilance Committee.

I have the honor of forwarding the within request.—W. McCOURT, 24/1/83. Railways.—J.R. B.C., 27/1/83.

No. 14.

The Hon. Sec. Burrawang Farmers' Club, &c., to The Secretary for Public Works.

Railway from Moss Vale to Burrawang and Robertson.

Burrawang Farmers' Club and West Camden Agricultural Society,

Sir,

Burrawang, 31 January, 1883.

At a general meeting of the members of the above society, held on the 25th instant at the "Club Hotel," Burrawang, the subject of the light line of railway from Moss Vale to Burrawang and Robertson (which was promised by the Honorable John Lackey, late Minister of Public Works, in reply to a Petition signed by over 350 farmers), was considered, and it was unanimously resolved "that the honorary secretary of the society be instructed to write to the present Minister, and request that this important matter may receive his early and favourable consideration, that the promised survey of the proposed line of railway be at once proceeded with, and, as the necessary grant is on the Estimates of the late Ministry, it is confidently hoped that the work of construction will be commenced with as little delay as possible. The favour of an early and satisfactory reply in reference to the above matter is respectfully requested.

I have, &c.,

S. K. MILLER,

Hon. Secretary.

Recommended by Mr. Garrett, M.P., for the early and favourable consideration of the Minister.—T.G., 10/2/83. Railways.—J.R., B.C., 15/2/83. Put answer in Parliament to-day with this.—G.B., 20/3/83.

No. 15.

Questions and Answers.

LEGISLATIVE ASSEMBLY, 20TH MARCH, 1883.

LIGHT BRANCH RAILWAYS:—MR. BADGERY, for MR. GARRETT, asked the Secretary for Public Works,—

- (1.) Is it the intention of the Government to submit an estimate to cover the cost of a system of light line railways in connection with, and as feeders to, the existing main lines of railways?
- (2.) If so, will one of such lines be one from Moss Vale to the township of Robertson?

MR. STEWART answered,—Following up the intentions of our predecessors, this matter, with others, will be considered during the recess.

No. 16.

Minute by the Commissioner for Railways.

EXTENSION of Tramway, Moss Vale to head of Kangaloon Valley. Write to J. T. Mulligan. Send letter open care of Thos. Garrett, Esq., M.P.

CH.A.G., 21/4/83.

Sir,

Department of Railways, Sydney, 21 April, 1883.

With reference to your personal representations respecting the necessity for the construction of a tramway from Moss Vale to the head of the Kangaloon Valley, I have the honor to inform you that the question of the construction of this line will be considered with others, during the recess of Parliament.

I have, &c.,

CHAS. A. GOODCHAP,
Commissioner for Railways.

Mr. J. T. Mulligan.

In Mulligan's letter was a request for the Minister to see a deputation on the subject. Is this request to be complied with? Next Tuesday week will do.—THOS. GARRETT, 24/4/83. Approved.—A.S., 24/4/83. Appoint Friday week at 11, and inform Mr. Garrett.—J.R., 24/4/83. Railways.—J.R., B.C., 24/4/83.

Sir,

Department of Public Works, Sydney, 24 April, 1883.

In reply to your letter of this day, I am directed to inform you that the Secretary for Public Works will receive the deputation from those interested on the subject of construction of tramway from Moss Vale to head of Kangaroo Valley, on Friday, 4th proximo, at 11 o'clock.

I have, &c.,

JOHN RAE.

Thos. Garrett, Esq., M.P.

Mr.

Mr. Cowdery to say if he has any papers *re* the survey of lines by Kangaloon Valley. Mr. Surveyor Halligan, I think, surveyed route to Robertson. It seems to me that the route *via* Kangaloon Valley should have been surveyed. There is a large number of producers in this valley, and though the line would be a little longer to Robertson *via* the Valley, the increased traffic secured would pay for the extra cost.—CH.A.G., 27/4/83.

The line should start, if it goes to Kangaloon Valley, some 3 or 5 miles this side of Sutton Forest or Moss Vale.—CH.A.G., 27/4/83. An exploration only has been made between Moss Vale and Robertson *via* Joe Wild's Meadows and Burrawang. The route *via* Kangaloon Valley has not been explored.—G.C., 1/5/83. Commissioner.

As the tramway to Robertson is one of the lines in contemplation, the route *via* Kangaloon Valley should be explored and report made.—CH.A.G., 7/5/83. Mr. Cowdery. Mr. Hyndman to arrange early for Mr. Halligan to make an exploration of the route referred to by Commissioner.—G.L., 8/5/83. Mr. Hyndman.

Mr. Halligan instructed.—R.H.H., 10/5/83. Mr. Cowdery.

No. 17. Petition.

Kangaloon Valley, 22 March, 1883.

To the Honorable the Minister for Works,—

The Petition of the inhabitants of Kangaloon Valley and district, praying that a line of light railway be constructed to the top of the Barrengarry Mountains.

SHOWETH:—

From the undermentioned statements the absolute necessity for the construction of a line of light railway to the top of the Barrengarry Mountains,—

1. That the population of Kangaloon Valley is over 1,000 at present, and rapidly increasing.
 2. That the inhabitants are principally employed in dairy farming and other agricultural pursuits, and that a very large quantity of produce is sent out, viz., some 500 kegs of butter, 300 pigs and calves, besides other produce, weekly, and that, if a proper means of transit was available, a large supply of milk would be sent to the Sydney market.
 3. The district is an exceedingly fertile one, and produces fruit and grain in great quantity and abundance.
 4. The general merchandise imported and exported into and from Kangaloon Valley exceeds 30 tons per week.
 5. The passenger traffic from Moss Vale is very great, and hundreds of persons are continually visiting the Fitzroy Waterfalls.
 6. The immense quantity of valuable timber growing upon the Crown lands adjacent to the proposed line would cover a large proportion of the cost of construction, and the said Crown lands are also very rich in minerals.
 7. That the inhabitants of this and the surrounding district are suffering great loss and inconvenience on account of there not being no proper means of conveyance for their produce to Sydney.
- And your petitioners, as in duty bound, will ever pray.

ALICK OSBORNE, J.P.,

and 500 others.

Railways.—J.R., B.C., 12/5/83.

No. 18.

Mr. T. Blencowe to The Secretary for Public Works.

Sir,

Wild's Meadows, Burrawang, 16 May, 1883.

I wish to call your attention to the proposed tramway, or the now substituted light railway line from Moss Vale to Robertson. I have been sent as a delegate on three different occasions to wait on the Minister for Works in reference to this line, and was first to propose the line in question at a public meeting held at Burrawang. I have been a resident of this parish for the past twenty years, and claim to have a good knowledge of this part of the district; and as the present Government is now in recess, and preparing their railway policy for next Session, I feel a responsibility on this matter; and as I have the present and future welfare of the district at heart, I ask patiently to be heard on this subject.

I beg to call your attention in the first place to the route of line. You will remember that, originally, it was intended to construct the tramways on the main lines of road. This was the policy avowed by your predecessors in the first instance, but it was afterwards discovered that trams were unsuitable for goods and heavy traffic. Light railways were then substituted. Now, my resolution asking for this line was based on the tramways running on the lines of road, as your predecessors had stated; but as the policy has been changed to light railways, if a better route, more suitable to the requirements of the district, and that will pay at the least 400 per cent. more than the line first proposed, it will be infinitely better for the district and the country to adopt this line of route in preference to the originally proposed line.

My proposal, as amended, is to construct a branch line from or near Bowral to Kangaloon; thence through the range between Burrawang and Robertson to Wild's Meadows, with the terminus at Barrengarry Mountain.

I will now deal with the leading features of this line. Commencing at Bowral, the first 5 miles would skirt the foot of the Mittagong Range, and is good pastoral land. The farmers are chiefly engaged in dairying pursuits, and grow large quantities of potatoes, &c., for local and Sydney markets; but the special features are the immense quantities of iron ore found in the range and spurs, forming an item of prospective value beyond calculation. The next 4 miles is through thickly-populated country to Kangaloon, laid down in rye-grass and clover, from which the best dairy produce is sent to Sydney; thence

thence crossing the Wingecarribe Swamp. The embankment across the swamp would serve to make a large fresh-water lake above, while below the land is of the best description for dairying purposes. The next 7 miles is through splendid land and densely populated, the land all laid down in artificial grasses; and capable of growing anything grown in a cold climate. The last 2 miles is poor sandstone country to the Kangaroo Valley Road, on top of Barrengarry Mountain, and most of it is reserved from sale. The terminus would be suitable to lay out a township, as it is Government land. Kangaroo Valley immediately adjoins the terminus at a depth of 1,800 feet. In the valley and the sides of the mountains are large numbers of people engaged in farming and dairying pursuits, who, I safely estimate, would contribute one-third the traffic on the line in question. Immediately to the terminus the mountains are broken down in perpendicular cliffs, and have revealed splendid seams of coal, said to be of good quality.

I wish especially to call attention to the vast mineral wealth on this route. Abundant coal at the terminus, with unlimited quantities of iron ore at the Bowral end, with one of the thickest-peopled localities in the Colony on the central part of the route, will make this line, if constructed, one of the most attractive and payable in the Colony. The charming scenery in which this district is unrivalled, with the magnificent Fitzroy Falls and Belmore Falls within 2 miles of the line, the bracing atmosphere and healthy climate, will bring, ere long, large numbers from Sydney, who already recognize this district as the grandest summer climate in New South Wales.

With regard to the originally proposed route from Moss Vale to Robertson, the first 8 miles is through second-class pastoral country, not capable of contributing much produce or traffic on the line, as population is scant, and the soil is too poor for farming or dairying purposes. The next 8 miles is through splendid land, thickly populated, as already described in the Bowral route. The two lines would intersect each other about the centre of the 8 miles, or (say) 3 miles west of Robertson. This line, instead of intersecting the ranges, would run between them, thereby accommodating only about one-third of the district, and, if constructed, will not pay interest on cost alone. There are interested parties at Moss Vale, Burrawang, and Robertson, who favour this line. The reasons are simple enough. Moss Vale is jealous of Bowral becoming the leading place, Burrawang because the Bowral route would take it from their property, and Robertson because the terminus would not be there. But is the district to be sacrificed to these factions? Are the Kangaroo Valley people and Kangaloon to be sacrificed, and the immense mineral stores of wealth to lay undeveloped for ever, because these miserable selfish people want to especially benefit themselves at the sacrifice of the district and expense of the country?

In conclusion, sir, I am satisfied I have done my duty in calling your attention to this matter, and have not the slightest objection to any one seeing this paper; as my object is the good of the district at large, and not private individuals, for their especial benefit.

All I ask is that Ministers, if possible, and officers will thoroughly inspect this amended route and obtain all the information possible from all sources in this district before committing themselves to any scheme, and that the best route for the district as a whole may be approved and constructed.

I remain, &c.,

THOS. BLENCOWE.

Acknowledge receipt, and say that prior to the receipt of his communication directions had been given for a survey of a route from the neighbourhood of Bowral *via* Kangaroo Valley to Robertson, and that I am glad to see, by the valuable information afforded in his letter, that it is more than probable that the survey will result in the adoption of a really good route.—CH. A. G., 27/5/83.

No. 19.

Minute by Mr. Surveyor Halligan.

Mr. Armstrong,—

Railway Department, Sydney, 1 June, 1883.

WILL you please let me have papers relating to Bowral and Kangaloon tram-line, as I wish to affix my report, &c.

G. M. HALLIGAN.

Papers herewith, but return them at once, as they are wanted by Commissioner.—G.L., 6/6/83.
Mr. Hyndman. Mr. Halligan's report herewith with plan.—R.H.H., 8/6/83. Mr. Cowdery.
Forwarded to the Commissioner with plan.—G.L., 12/6/83.

District Engineer's Office, Sydney, 7 June, 1883.

R. D. Stephens, Esq., District Engineer, Goulburn,—

Sir,

I have the honor to report that, acting on instructions, I proceeded to Bowral to report on the practicability of constructing a tramway from Bowral to Robertson *via* Kangaloon, and beg to submit the following.

Before describing the various routes suggested to me by the different people interested in the district, and by the Vigilance Committee of Bowral, I beg to call your attention to the accompanying plan, which shows most of the roads, creeks, and places of importance in the district. Each route is lettered distinctly to catch the eye:—

1. The first route is the road from Bowral to Kangaloon and Robertson, shown A, B, C, L, D, N, H. This route is altogether too rough for a tramway, it being (after leaving C) a succession of hills and valleys.
2. This route starts from Bowral (A) and follows main Kangaloon Road to C, thence it follows dotted blue line to D, M, and H (Robertson). From C to D is very flat and construction easy, but the remainder is very rough and passes almost entirely through private farms—length, 15 miles.
3. This route starts from Bowral as before, and follows main road to Kangaloon to point L; from thence along road to P and to H, continuing on from H to F and E, and terminating at Moss Vale, making a complete horse-shoe, and connecting Bowral, Robertson, and Moss Vale. The total length is about 35 miles. The portion of this route from C to L, P, and H is very rough, and line could not be constructed on main road without spoiling road with cuttings and embankments.

4. This route is the same as others from Bowral to point C; from thence *via* dotted blue line to D; thence along Sheepwash Road (crossing Wingecarribee River) to point E; thence to F and along main road to H (Robertson)—length about 15 miles. This route is undoubtedly the easiest to construct, and I also think will meet the requirements of the greater portion of the inhabitants of the district. If a line be constructed from Moss Vale direct to Robertson then the inhabitants of Kangaloon will be left out entirely. In the same way, if a line be constructed from Bowral to Kangaloon the people of Burrawang and Yarrunga, Wild's Meadows, &c., will be left out. A line cannot be constructed from Bowral to Robertson *via* Kangaloon without great expense.

As there are other suggestions likely to be made every day about leaving out Robertson and carrying line on to Kangaloon Valley and Barrengarry Mountains, I beg to state that my instructions were to report on a line of route from Bowral or Burradoo to Robertson, and in recommending one for your favourable consideration I call your attention to route A, B, C, D, E, F, H, as being the cheapest to construct, and I believe the most central for all parties, and the most remunerative to the Crown.

All the routes mentioned can start from Bowral (A) or Burradoo (K). A to B being shorter than K to B by a quarter mile. I think if it be determined the line terminus be on the north of the Wingecarribee River, the Bowral should be the terminus in preference to Burradoo, as Bowral is 2 miles nearer Sydney and will save $2\frac{1}{2}$ miles haulage, and is an established town, whereas Burradoo is nearer a railway platform.

I have, &c.,
E. C. HALLIGAN.

No. 20.

T. Garrett, Esq., M.P., to The Secretary for Public Works.

Sir,

I have the honor to enclose for your consideration a communication from the hon. secretary of the Burrawang Farmers' Club, as to the position of the question in your Department regarding the proposed line of railway or tramway from Moss Vale to Burrawang and Robertson.

Petitions have been presented, deputations received, flying surveys and plans prepared and submitted, and what the society whom the writer represents wishes to know is what do the present Government intend to do in the matter. An early answer will oblige.

Yours, &c.,
THOMAS GARRETT, 16/7/83.

Mr. Whitton for report.—F.A.W., 16/7/83. Mr. Garrett states that a survey has been made; if so, nothing is known of it in this Department.—J.W., 20/7/83. Under Secretary for Public Works. Railways.—J.R., B.C., 17/7/83. There was a survey made for tramway. There are a large number of papers on the subject. Obtain.—CH.A.G., 24/7/83.

[Enclosure.]

Burrawang Farmers' Club and West Camden Agricultural Society.

Thos. Garrett, Esq., M.P.,—

Dear Sir,

Burrawang, 13 July, 1883.

At a large meeting of the members of the above society, it was unanimously resolved to ask the Members of the district to urge the following matters upon the Minister to whose Department they severally belong, viz. :—

1st. That the hon. secretary write to the Members to wait on the Minister of Works and ascertain what has been done, or what is intended to be done in the matter of the promised line of railway from Moss Vale to Burrawang and Robertson, and the survey of same line by the present Government, and if it is found that nothing further is done or intended to be done, to withdraw the Petition from the office of the Minister for Public Works, and carry same into Parliament as soon as it again assembles, and also then call for all papers, documents, correspondence, &c., to be laid on the Table of the House in reference to same, with a view to support our claims to this work, and obtain something definite in the matter. It was stated at the above meeting by one of the Members that he waited on Mr. Wright, the Minister, and he said he knew nothing whatever of the matter.

I am, &c.,
S. K. MILLER,
Hon. Secretary.

No. 21.

Mr. A. M'Niven to The Hon. Secretary, Farmers' Club, Burrawang.

Sir,

Barrengarry, Kangaloon Valley, 20 July, 1883.

I am instructed by the Kangaloon Valley Progress Committee to inform you, that some time ago a deputation from this district waited on the Minister for Works, with the view of having the tramway extended to the top of Barrengarry Mountain, in the event of its coming to Burrawang, and a promise to that effect was given by the Minister.

I am, therefore, requested by the committee to state that the inhabitants of Kangaloon Valley are desirous of co-operating with the residents, Burrawang, in urging the necessity of steps being taken for the immediate construction of this line, but that we advocate no particular route.

I have, &c.,
A. M'NIVEN,
Hon. Secretary.

No. 22.

T. Garrett, Esq., M.P., to The Secretary for Public Works.

Sir,

21 July, 1883.

I am desired by the members of the Burrawang Farmers' Club to ask you to be pleased to name a day when it will suit your convenience to receive a deputation of the members of the club, to urge the early extension of a light railway or tramway from Moss Vale to Robertson *via* Burrawang, which has formed the subject of correspondence and deputations for some time past.

I have, &c.,
THOMAS GARRETT.

Will Mr. Ford fix the hour for Friday next?—F.A.W., 21/7/83. Railways.—J.R., B.C., 24/7/83.

Sir,

Sir, Department of Public Works, Sydney, 23 July, 1883.
I am directed to inform you, in reply to your letter of the 21st instant, that the Secretary for Public Works will receive the deputation on the subject of a light railway from Moss Vale to Robertson *via* Burrawang, on Friday next, the 27th instant, at 12:30 o'clock p.m.

Thos. Garrett, Esq., M.P.

I have, &c.,
JOHN RAE.

No. 23.

Minute by The Commissioner for Railways.

THE railway or tramway to Robertson should go, in my opinion, by the Kangaloon Valley or near it. It is in that valley that the greater proportion of the traffic will be found.

If the line goes direct from Moss Vale to Robertson, the Kangaloon Valley will be left out altogether, and if it is taken by the Kangaloon Valley, Burrawang will be left out. A compromise might be effected by taking the line from Bowral by the line marked A, B, C, D, E, F, H, to Robertson, and this will benefit in some degree both Kangaloon Valley and Burrawang.

CH.A.G., 24/7/83.

No. 24.

Minute by The Secretary for Public Works to The Engineer-in-Chief.

Extract from M.P. 83/3,327.

THE Minister for Works' (Hon. F. A. Wright) instruction to make a trial survey for a light line of railway, Bowral to Robertson *via* Burrawang. August, 1883.

No. 25.

Mr. S. K. Miller to T. Garrett, Esq., M.P.

Burrawang Farmers' Club and West Camden Agricultural Society.

Dear Sir,

Burrawang, 24 August, 1883.

At an adjourned meeting of the members of the above society, when yours and Mr. McCourt's letters were warmly discussed, having reference to the trial survey authorized by the Minister for Public Works, for a light line of railway from Bowral to Robertson *via* Burrawang, I was instructed to ask the Members of the district to see the Minister and urge him to have a survey made of the line he promised to the late deputation, from Burradoo or Austermere to Burrawang (at the foot of the hill at Barrett's Steam Saw-mills), which branches from this point to Robertson and also from the same point to Wild's Meadows, and to the Barrengarry Mountain.

Yours, &c.,

SAMUEL K. MILLER,

Hon. Sec.

Inform Mr. Garrett that it is quite impossible to have the survey asked for made for many months to come. There are already three surveys made in this district, and I have now a fourth one in view of the fact.—F.A.W.

No. 26.

T. Garrett, Esq., M.P., to The Secretary for Public Works.

Sir,

7, Gresham-street, 27 August, 1883.

On behalf of my colleague and myself, I have the honor to enclose a letter from the Secretary of the Burrawang Farmers' Club, urging that when the officer of your Department is sent or instructed to survey the light railway from Bowral to Robertson *via* Burrawang, that he should also be instructed to survey a line from about Burradoo or Austermere to Burrawang, with branches from the latter place to Robertson and *via* Wild's Meadows to the top of Barrengarry Mountain, so as to establish the Kangaroo Valley and south coast traffic.

Hoping that this very reasonable request may meet with your approval,—

I am, &c.,

THOMAS GARRETT,

(For self and Mr. McCourt, M.P.)

That trial survey now ordered will take time—twelve or eighteen months—to complete, and therefore I cannot grant the additional one asked for.—F.A.W., 28/8/83.

No. 27.

The Assistant Engineer for Trial Surveys to Mr. G. L. Wilkins.

22 October, 1883.

You may now proceed with your party to Bowral on the Southern Railway, and may make a trial survey from that place to Robertson *via* Burrawang.

Report when you will be there, and I will forward to you, addressed post office, Bowral, a county map of the district, on receipt of which you will please examine the country, and report before commencing the survey on the route you may propose to adopt for trial survey.

HERBERT PALMER.

Sir, Railway Survey Camp, near Bowral, 10 November, 1883.
 I have the honor to request that the following may be forwarded for use on Bowral to
 Robertson trial survey:—

Two level-books.
 Two field-books.

Plan of roads between Bowral and Robertson *via* Burrawang, would also be useful to show on the
 plan of above trial line shortly to be forwarded.

I have, &c.,
 G. L. WILKINS.

No. 33.

The Assistant Engineer for Trial Surveys to Mr. G. L. Wilkins.

13 November, 1883.
 I FIND there is no through plan of the Bowral and Robertson Road that would be of use to you, and
 this being so short a length it will occupy but little time to traverse and plot this road on your plan,
 where it is sufficiently near to the centre line of your trial survey to render it necessary that it should
 be shown.

HERBERT PALMER.

No. 34.

Mr. G. L. Wilkins to The Engineer-in-Chief.

Sir, Railway Survey Camp, near Bowral, 1 December, 1883.
 I have the honor to report progress made with trial survey, Bowral to Robertson *via* Burra-
 wang, November, 1883.

The reconnaissance survey was finished and reported on early in the month, and instructions
 received for trial survey to be made on route examined.

Leaving the Southern Railway near Bowral the trial line traverses undulating downs until reach-
 ing the Wingecarribee stream, at 2 miles 30 chains, marshy ground prevailing on the southern side of that
 river for half-a-mile; thence to the end of the present work (7 miles) a very easy line of country, only
 requiring light cuttings and embankments.

Before adopting the above line for survey the alternative plan of keeping on the north bank of the
 river was examined so as to defer crossing for 3 miles and avoid all marshy ground, but it was found that
 the line would thereby be lengthened 1 mile, besides having a worse section and many curves. There
 remains about one-half, or 7 miles, of this survey to be completed. Camp will be moved to Burrawang
 early in December.

I have, &c.,
 GEORGE L. WILKINS.

Sir, Railway Survey Camp, Burrawang, 7 December, 1883.
I have the honor to request that all letters for me may be forwarded to the above address in future. I have, &c.,
G. L. WILKINS.

No. 36.

Mr. G. L. Wilkins to The Engineer-in-Chief.

Sir, Survey Camp, Burrawang, 3 January, 1884.
I have the honor to report progress made with trial survey, Bowral to Robertson *via* Burrawang, for the month of December, 1883.
The survey has been completed as far as the town of Burrawang, with all necessary traverses. Plan and section have been plotted thus far.
The road between Robertson and Burrawang has been traversed and roughly levelled, and the trial line marked for about 1 mile.
Owing to the dense bush prevailing for the greater portion of the route progress has been slow.
There now remains about $3\frac{1}{2}$ miles of this survey, which may be expected to be finished about the 10th instant. I have, &c.,
G. L. WILKINS.

No. 37.

Mr. W. McCourt, M.P., to The Secretary for Public Works.

Sir, Moss Vale, 10 January, 1884.
I write to ask if you would kindly receive a deputation from this district on Friday, 25th January, concerning the survey, &c., of routes of railway between Robertson and Southern Railway. Yours, &c.,
W. McCOURT.

No. 38.

The Assistant Engineer for Trial Surveys to Mr. G. L. Wilkins.

14 January, 1884.
On completing your trial survey from Bowral to Robertson you may forward, without delay, the plan, section, book of reference, field and level books, &c., after which you may proceed with your party to Goulburn to take up one of the alternative trial surveys to Crookwell, viz., from the Sydney side of Goulburn to Crookwell, with branch to Taralga. HERBERT PALMER.

17

No. 42.

The Assistant Engineer for Trial Surveys to Mr. G. L. Wilkins.

24 January, 1884.

WHEN making the trial survey from Bowral to Robertson you must have been aware that a reference to the plan would be required.

Your statement that the difficulty in obtaining information on the ground as to ownership prevented your supplying this information can hardly be considered a satisfactory one when you suggest that by returning to the district for one day, viz., the 26th, you would be enabled to obtain the necessary information.

On the completion of your present survey you may, on your way to Sydney, collect the information required.

HERBERT PALMER.

No. 43.

The Secretary for Public Works to The Engineer-in-Chief.

Trial Survey, Moss Vale to Robertson.

A DEPUTATION, accompanied by Messrs. Garrett, McCourt, and Humphery, waited upon me to-day to ask for a trial survey from Robertson to Moss Vale. The advantages of such line are set forth in the Petition enclosed. I promised to send an officer up to examine the country and would place him in possession of previous papers on the subject in regard to proposed routes. I would obtain a report from the officer entrusted with the survey as to which was the most practicable route, and would be guided by his opinion in the matter.

F.A.W., 25/1/84.

Will Engineer-in-Chief send some person up to examine and report upon this country.—F.A.W. 25/1/84. Mr. Palmer.—W.H.Q., 6/2/84.

Mr. Bell proceeds to Moss Vale to-day to make the required examination of the country from Moss Vale to Robertson *via* Yarrunga, Wild's Meadows, and Burrawang. Mr. Bell takes with him the plan and section of survey already made between Bowral and Robertson, which will enable him to compare the two routes, and he will report on his return to Sydney.—H.P., 26/2/84. The Engineer-in-Chief.

No. 44.

Mr. G. L. Wilkins to The Engineer-in-Chief.

Sir,

Survey Camp, near Goulburn, 1 February, 1884.

I have the honor to report progress made with the trial surveys, Bowral to Robertson and Goulburn to Crookwell, for January, 1884.

The former survey was completed on the 15th, and plan and section forwarded to you.

In commencing trial survey Goulburn to Crookwell *via* Woodhouselee, the ground was thoroughly examined for the best route from the junction with the Great Southern Railway, at 130 miles 24'30 chains to the northern boundary of the Norwood Estate.

The centre line has been staked between these points, and the section will probably show an even ascent of about 350 feet for 6 miles.

Before leaving the locality a deviation of about 2 miles will be required to obtain, if possible, a better crossing of the Wollondilly River.

I have, &c.,

G. L. WILKINS.

No. 45.

The Assistant Engineer for Trial Surveys to The Engineer-in-Chief.

Sydney, 15 February, 1884.

ATTACHED is a tracing for the Lands Department, showing the centre-line of the trial survey lately made from Bowral to Robertson, for the purpose of dealing with reserves.

HERBERT PALMER.

No. 46.

The Assistant Engineer for Trial Surveys to The Engineer-in-Chief.

Sydney, 26 February, 1884.

I HAVE instructed Mr. Bell to proceed this evening to Moss Vale to make an examination of the country, as directed by the Minister for Works, between Moss Vale and Robertson. I have to recommend that, while on this work, he may be allowed £1 per diem for expenses in lieu of equipment allowance.

HERBERT PALMER.

Appd.—J.W., 27/2/84.

No. 47.

Mr. W. R. Bell to The Engineer-in-Chief.

Report on routes for proposed Railway, Bowral or Moss Vale to Robertson.

Sir,

Trial Survey Office, Railway Department, Sydney, 12 March, 1884.

On the 26th February I received instructions from the Engineer in Charge of Surveys to ^{Instructions.} proceed to Moss Vale, examine the district towards Robertson, and report upon the most suitable route for a railway connecting Robertson with the Great Southern Railway.

Having

226—C

Having made the examination and devoted considerable time to inspecting the districts to be served by the proposed railway, I have the honor to report as follows:—

Description of country.

The township of Robertson, about 14 miles east of Moss Vale, lies on an elevated plateau, and is approached from the Southern Railway at Moss Vale and Bowral by the Burrawang and Kangaloon Ranges, between which lie the Wingecarribee Swamp and the Bong Bong River. These two ranges are covered with extensive tracts of rich chocolate soil, eminently adapted for dairy farming, and this good land extends 3 or 4 miles past Robertson, gradually getting poorer however. Around Robertson settlement is not so advanced as in the more westerly parts of the district.

Opposite the west end of the Wingecarribee Swamp the ranges die out about 5 or 6 miles from the Southern Railway, and are succeeded by grazing country.

On the Burrawang Range, 10 miles from Moss Vale, lies the private township of Burrawang, through which the line already surveyed from Bowral to Robertson passes. Three-quarters of a mile southward, at the foot of the hill, is the head of Joe Wild's Meadows, formerly a swamp fed by the Meadows Creek from the southern slope of the Burrawang Range. This meadow is now occupied by dairy farms; it runs out towards the Fitzroy Waterfall, a favourite of pleasure-seekers, and is crossed at its lower end by the road from Moss Vale to Shoalhaven and Broughton Creek, and is bounded on east and west by fertile ranges. The Shoalhaven Road, 3 miles after passing Wild's Meadows, descends the Barrengarry Mountain by a road 4 miles in length and falling more than 1,500 feet into the Kangaroo Valley.

This is the most important district in the neighbourhood, and comprises Kangaroo, Barrengarry, Broger's, and Cambewarra Creeks, and the district round Bendiea. Up each of these creeks are large tracts of fertile land, a great portion of which has been cleared of brush and dense scrub, and is occupied by dairy farms of from 40 to 100 acres and upwards. The tenure is largely freehold, and the land is already selected on the hillsides up to the foot of the cliffs. The climate is very mild, and the settlers could thus keep up the supply of produce throughout the winter, when the upland pastures were unproductive.

Between Wild's Meadows and Moss Vale is the parish of Yarrunga, containing the settlement of Manchester Square. The land is in small farms, but the soil is not so fertile as in the districts already described.

Description of route existing survey.

There is already a railway-line surveyed direct from Bowral to Robertson. Starting from the Great Southern Railway near the former place it runs in a south-easterly direction for $2\frac{1}{2}$ miles, where it crosses the Bong Bong River in a flat half-a-mile across, and subject to floods upwards of 6 feet deep. Continuing in the same direction through pastoral land it crosses the Moss Vale and Robertson Road about $7\frac{1}{2}$ miles from Bowral, and begins to ascend the Burrawang Range, keeping on the north side of the ridge until at $11\frac{1}{2}$ miles it crosses a saddle, whence it continues on the south side of the road and ridge to near Robertson, which it enters on the south-west. It passes through Burrawang township at 10 miles, and the summit is reached at $12\frac{1}{2}$ miles from Bowral.

The districts it serves are the Burrawang Range, Robertson, and through it East Kangaloon, while the West Kangaloon people would meet it about 6 miles from Bowral. The Wild's Meadows settlers would have to either travel uphill to Burrawang (at 10 miles), or go out to meet the line on the level, at the crossing of the Moss Vale Road, 7 miles from Bowral. The Kangaroo Valley and Manchester Square traffic would be entirely cut off.

Accommodation of districts. Kangaloon.

The various districts would be accommodated as shown hereunder.

Kangaloon is completely cut off by Wingecarribee Swamp from communication with Burrawang direct; East Kangaloon has, therefore, an outlet by Robertson, the country falling in that direction, while West Kangaloon, sloping towards Bowral, would be accommodated only at the "Sheepwash" by the line as now surveyed; but considering the short distance saved and the extra mileage to Bowral, it is doubtful whether the western settlers would avail themselves of the branch line.

In deciding therefore upon the route for a railway to Robertson, Kangaloon interests must be set aside, as nothing less than a railway through Kangaloon would serve the country properly, and the district is too rough and too circumscribed to justify the construction of a line.

Burrawang Hill.

The Burrawang Range is best served by the surveyed line, but the district is too small of itself to make a railway pay, there being actually only half-a-mile to a mile of land between the surveyed line and Wingecarribee Swamp, the virtual boundary on the north, whereas all the other districts lie to the south of the line, and to reach it would have to come uphill.

A line by Wild's Meadows would give the settlers three-quarters of a mile more to carry their produce, but as this is downhill, and as no part of the Burrawang District would be 2 miles from such a line, they would have nothing whatever to complain of.

Wild's Meadows.

Their objections to such a line resolve themselves into a fear that the present township would be hurt, and that stores would have to be brought three-quarters of a mile uphill.

Of Wild's Meadows and the districts between Burrawang Hill and the Shoalhaven (Kangaroo Valley) Road, the centre is about $2\frac{1}{2}$ miles from the surveyed line, and the carriage is uphill, whereas the proposed line would not be more than 2 miles from the centre, and would meet the traffic on the flat.

Kangaroo Valley

At present there are two modes of exit from Kangaroo Valley by which produce is brought out. The one is *via* Barrengarry Mountain to Moss Vale, about 20 miles from the valley township, and the other is over the mountains to Broughton Creek, about 16 miles.

At Broughton Creek the exports, consisting of butter, eggs, fowls, pigs, and cedar are shipped on a small steamer for Shoalhaven, where they are again transhipped to the coasting steamers. By this route there is great loss and deterioration, as after the heavy journey up and down the mountain the produce is much knocked about and delayed in the several transshipments. One item of produce, *viz.*, calves, cannot be transported either *via* Broughton Creek or Moss Vale, and farmers have consequently to destroy large numbers which might otherwise be a source of profit.

In coming out of the valley *via* Moss Vale, there is only one hill to climb, but the distance is such that the double journey cannot be performed in one day. The settlers in the valley were unanimous in stating that their wants would be well satisfied by any line that came sufficiently near the top of the hill on the flat, so that each man could take out his produce by his own vehicle and return to the valley the same day.

This would be accomplished by a line at the upper end of Wild's Meadows, but the valley traffic could not be counted upon if, in addition to the long carriage up from Barrengarry, the carts had to climb another

another hill at the end. It is a matter for consideration how much of the traffic would be diverted from such a line by the completion of the Illawarra Line to Shoalhaven, but so important is the valley traffic that it might even be advisable to lengthen the proposed line by going so far down Wild's Meadows in order to bring it nearer to the Valley Road, and also to accommodate visitors to the Fitzroy Falls, which at holiday times are visited by great numbers of people.

One of the largest landowners in the valley has at present to devote a large part of his land to fattening cattle, whereas, were there better facilities for getting to market, he would lay it out in dairy farms. There is always a great amount of clearing going on, which will greatly increase the traffic in the district as the land is brought into use.

The Yarrunga and Manchester Square settlers would be accommodated only by a line from Moss Vale ^{Yarrunga.} *via* Wild's Meadows.

There are three practicable routes other than the line at present surveyed; they would unite before ^{Proposed new routes} reaching Wild's Meadows, which would be passed on the level ground, they would have easier gradients and a considerably lower summit level than the present line.

- 1st. Leaving Bowral by the line already surveyed, and following it for 7 miles, then bearing to the south so as to get on to the southern side of the Burrawang Range on E. Shipley's section of 378 acres, then keeping up to the head of Kelly's Creek through Stagg's 237 acres to water reserve where Meadows Creek crosses Wild's Meadows Road; keeping thence on the slope of Burrawang Range up the Meadows Creek to the saddle on William Hanrahan's land at head of the creek; thence in to Robertson nearly on the line of the existing survey.
- 2nd. Starting from Austermere, on the Great Southern Railway, keeping round the bend of the Bong Bong River, crossing the western boundary of Throsby's 4,000 acres, about 30 chains from the southern corner; thence straight to meet the first proposed line in Shipley's 378 acres; thence *via* top of Wild's Meadows to Robertson as before.
- 3rd. Starting from the Great Southern Railway, 20 or 30 chains to south of Moss Vale Station, and keeping up White's Creek; thence bearing eastwards through the 1,000 acres, originally Chas. Throsby's, along the southern side of the watershed separating the Bong Bong basin from that of the Meryla to a point about a mile to the north of Yarrunga School, where the selections of Messrs. T. Seery, Bath, and Hayter adjoin; thence keeping up by Kelly's Creek and joining the first proposed route between Shipley's and Stagg's land, whence it is continued *via* Wild's Meadows to Robertson as previously described.

The three proposed routes coinciding from near Shipley's 378 acres to Robertson the advantages of ^{Comparison of new routes} that portion over the surveyed route are:—It is more in the centre of the district, and from that part whence the line is diverted the traffic is downhill. The rise does not commence until after leaving Wild's Meadows, and the gradients up to Robertson are easier, the summit level being nearly 100 feet lower than on the present survey. There is a good permanent supply of water in the Meadows Creek.

- 1st. Of the portions of the proposed routes before they unite, the advantages of the first running on the surveyed line to Bowral are that it will save 6 miles of carriage on Sydney traffic over a line starting from Moss Vale, and it will partially serve West Kangaloon. The disadvantages are the scantiness of the population and the liability of the Bong Bong River to floods.
- 2nd. The second route starting from Austermere will avoid the Bong Bong River entirely, and will save 2 miles on the Sydney traffic over the Moss Vale route. On the other hand, the junction is away from a township, and the population for the first 8 miles from the Southern Railway is scattered.
- 3rd. The line to Moss Vale has the advantage of joining the main line near the township, which at present is the chief place in the district, and it also serves the Yarrunga residents. It is carried for some distance on the watershed, and thus avoids gullies and creeks. The only disadvantage is that the distance towards Sydney is 6 miles longer than *via* Bowral.

It therefore appears that the most payable line would be one from Robertson down the south side ^{Recommen-} of the Burrawang Range, past Wild's Meadows, and that the most suitable junction would be at Moss Vale, unless the saving in mileage on the other routes would override other considerations. It would be necessary to open a road along the side of Wild's Meadows to enable the Kangaloon Valley traffic to come from the head of the mountain to the railway on the level, as the present road runs on the top of a range.

The lengths of all the routes do not differ greatly, but on the new proposals the heavy work commences on leaving Wild's Meadows; and it is worthy of consideration whether the line should be constructed to that point in the first instance, leaving its extension to Robertson to a future time. The drawback to such a course would be that it would very greatly retard the progress of East Kangaloon.

I have, &c.,

WM. REID BELL.

I have attached to Mr. Bell's report portion of a county map on which I have shown the line already surveyed from Bowral to Robertson and the alternative routes that have been suggested and examined by Mr. Bell. It appears from this report that a line from Moss Vale to Robertson would pass through the most populated part of the district, and I think a trial survey of this route might be made, to compare with the route from Bowral. I do not see any necessity for surveying the intermediate routes, as I imagine the point to be eventually decided will be whether this line is to leave the Southern Railway at Bowral or at Moss Vale.—H.P., 14/3/84. The Engineer-in-Chief. Forwarded for the information of the Minister for Works.—J.W. (*per* W.H.Q.), 20/3/84. Under Secretary, B.C. Submitted, 21/3/84.—J.R. I approve of Mr. Palmer's suggestion that a trial survey be made from Moss Vale to Robertson.—F.A.W., 22/3/84. Mr. Palmer.—W.H.Q., 25/3/84. Instructions given to Mr. Bell to proceed with this survey without delay.—H.P., 26/3/84.

No. 48.

F. J. Humphery, Esq., M.P., to The Under Secretary for Public Works.

Deputation, Trial Survey from Wild's Meadows to top of Barrengarry Mountain.

Dear Sir,

Sydney, 10 May, 1884.

A deputation from Kangaroo Valley desire to wait upon the Honorable the Secretary for Works on Wednesday next, to ask for a trial survey from Wild's Meadows to the top of Barrengarry Mountain, and I shall be obliged if you will be good enough to inform me if Mr. Wright can conveniently receive the gentlemen who have been appointed to form the deputation.

Yours, &c.,

F. J. HUMPHERY.

Write Friday, at 11:30.—F. J. HUMPHERY, Esq., M.P., 13/5/84.
13/5/84. Seen.—J.W. (*per* W.H.Q.), 14/5/84. Under Secretary, B.C.

Mr. Whitton.—J.R., B.C.,

Trial Survey, Wild's Meadows to Barrengarry Mountain.

Department of Public Works, Sydney, 15 May, 1884.

A DEPUTATION, consisting of Messrs. Osborne, McIlwrath, Miller, and Alexander, waited upon me at the Assembly last night to ask that a trial survey might be made for a light railway from Wild's Meadows to Barrengarry Mountains. Wild's Meadows is on the line being surveyed from Moss Vale to Robertson, the distance between Wild's Meadows and the mount is about 6 miles, and the country is said to be level. The deputation stated that already there was a considerable population in the vicinity, and the traffic assumed fair proportions; but were a convenient means of transit afforded the traffic would be largely increased, and would pay a good return upon the railway if constructed.

I informed the deputation that I would be glad to grant their request for a trial survey; but I could hold out no promise that the railway would ultimately be constructed, as subsequent action would depend upon the character of the reports I received. At the same time I stated that our experience of light lines had not been a bright one, the experimental line, that to Camden, proving in working unsuccessful.

14/5/84.

Railway Trial Survey, Wild's Meadows to Barrengarry Mountain.—No. 2 deputation, Mr. T. J. Humphery, M.P. 11:30 o'clock.

Department of Public Works, Sydney, 16 May, 1884.

THE Engineer-in-Chief has not yet been instructed in the matter. Letter enclosed. What reply shall be sent to Mr. Humphery.

Proposed railway, Bowral, Robertson Park, Barrengarry, Robertson, &c.—Deputation, 12 o'clock.
Thos. Garrett, M.P. (See memo. of Commissioner for Railways.)

Department of Public Works, Sydney, 8 August, 1884.

MR. GARRETT, M.P., informed 15th instant at 12 o'clock noon, 9/8/84.

Submitted, 15/8/84.

No. 49.

W. McCourt, Esq., M.P., to The Secretary for Public Works.

Sir,

Moss Vale, 11 July, 1884.

As the Government are now preparing their railway policy I trust the line to connect the township of Robertson and the splendid agricultural district of Wingecarribee with the Southern Railway will be included in the proposals. The late Minister for Works (Mr. Lackey) promised a deputation that if he remained in office he would sanction the construction of this line, and as the present Government have sanctioned different trial surveys to be made, and are now in a position to fix upon the most suitable route, I do hope our railway will be placed amongst the new lines of railways to be constructed by the present Government.

Yours, &c.,

W. McCOURT.

Inform matter now being considered by Cabinet.—G.R.D., 13/3/84.

No. 50.

Mr. W. Barrett to T. Garrett, Esq., M.P.

Dear Sir,

Burrawang, 4 August, 1884.

Referring to your memo. on my letter of 25th ultimo, *re* railway route, I regret you were unable to furnish me with the necessary information on this point. Do you think it would be to our interests to get up a deputation to wait upon the Minister for Works and point out the necessity of constructing the Bowral line in order to suit the requirements of the whole district? As this route would suit Robertson Park, West Kangaloon, Yarrunga (where the line crosses at Shipley's Corner), Burrawang, then the branch line to top of Barrengarry Mountain would run through Wild's Meadows, and in addition to all this the line is easily constructed. No matter what any selfish person may say there is no other line that will serve so many people as this one.

Should you think it advisable to form a deputation for first Friday, if you send me a telegram to-morrow (Tuesday) I will be in Sydney for that day. My reason for asking you to wire is this: I have to be in Moss Vale early on Wednesday morning, so that if I knew to-morrow I could arrange to go on to Sydney from Moss Vale on Wednesday night instead of coming home again that evening. I shall pay for telegram at this office.

If

If you think that the following week would be time enough you could write and let me know. However, the people of Robertson, Burrawang, Kangaloon, and Bowral are anxious about this line; but the people of both Wild's Meadows and Moss Vale are striving to obtain the Moss Vale line if possible.

You will, therefore, now know how to act in this matter, and I shall await your early reply by either wire or letter as herein directed.

I have, &c.,

W. BARRETT.

No. 51.

The Acting Secretary for Public Works to The Engineer-in-Chief.

LET me have Wilkins' report, with others, by Thursday next when the Cabinet is considering.

G.R.D., 15/8/84.

Memo.—Will Mr. Palmer please say if Mr. Wilkins has furnished a report on trial survey from Bowral to Robertson, in compliance with circular sent to surveyors, dated 18th January last.—W.H.Q., 18/8/84.

I do not think so. This survey was finished by Mr. Wilkins before the circular was issued.—H.P., 18/8/84.

No. 52.

The Engineer-in-Chief to The Secretary for Public Works.

Sydney, 21 August, 1884.

Railway Trial Surveys, Moss Vale to Robertson *via* Wild's Meadows; branch line thence to top of Barrengarry Mountain, and Bowral to Robertson *via* Burrawang.

IN accordance with the Minister's instruction of 15th instant, I forward the accompanying reports from surveyors employed on the undermentioned railway trial surveys, viz.:—

Mr. W. R. Bell's report on trial survey, Moss Vale to Robertson *via* Wild's Meadows, dated 5th June, 1882.

Mr. W. R. Bell's report on trial survey for branch line from Wild's Meadows to top of Barrengarry Mountain, dated 8th August, 1884.

Mr. G. L. Wilkins' report on trial survey from Bowral to Robertson *via* Burrawang, dated 2nd November, 1883.

JOHN WHITTON,

(*per* W.H.Q.)

Seen.—F.A.W., 13/10/84.

No. 53.

Mr. G. L. Wilkins to The Engineer-in-Chief.

Sir,

Railway Survey Camp, Bowral, 2 November, 1883.

Under separate cover I have the honor to return the county map of Camden, on which I have shown by a red line the route which I recommend for a trial survey from Bowral to Robertson *via* Burrawang.

The proposed line will give an easy upward gradient of good section from the curve on the main line, about 20 chains south of the Railway Station at Bowral for a distance of about 8 miles; thence a gradient of about 1 in 40 will be necessary to approach the town of Burrawang, which is situated on very high ground about 10 miles from Bowral. From Burrawang to Robertson ($4\frac{1}{2}$ miles) either side of the leading range may be followed for the trial survey, and in this locality the works are likely to be heavy owing to the steepness of sidings, and depth and number of watercourses. The gradient for this portion is also ascending. The route for the greater part of the way is heavily timbered.

I have, &c.,

G. L. WILKINS.

Mr. Palmer.—W.H.Q., 3/11/83. County map received, and instructions sent to Mr. Wilkins to proceed with the trial survey.—H.P., 3/11/83.

No. 54.

Mr. W. R. Bell to The Engineer-in-Chief.

Report on Trial Survey—Moss Vale to Robertson *via* Wild's Meadows.

Sir,

Wild's Meadows, 5 June, 1884.

In handing you the plan, section, and reference book for this survey, I have the honor to report as follows:—

Leaving Moss Vale the line passes for the first 4 miles through open country, the flats being swampy, and the earthwork is light, except at the Moss Vale end; the next 4 miles (to 93 miles 40 chains) is through ridgy country, the earthworks being heavier. By keeping more to the south, between 91 miles and 92 miles, a more regular section would be obtained, but the length would be increased too much. There is a wide detour between 92 miles and 94 miles, necessitated by the high ridge along which the Yarrunga Road runs.

A line of the same length as the one surveyed could be obtained by keeping to the south, as shown by the dotted red line on plan. The line surveyed was adopted in the first instance, as the gradients on the southern alternative are very steep. Both lines would have been surveyed, but so much time was lost through bad weather that the survey of the alternative was abandoned for the present. In making the permanent survey it would be well to survey the alternative route, and to adopt it if satisfactory, as it brings the railway nearer to the Yarrunga residents and saves cutting off the frontage of the sections at 92 miles 40 chains.

The

The line from 94 miles presents no great difficulties, except at 98 miles 50 chains, where it is necessary to go through a very heavy rock cutting. The line should have gone round the hill at this point, but the alignment would be bad, and would have to cross a gully 60 or 80 feet deep. The summit level from this cause is only 66 feet below the summit of the previous survey *via* Burrawang, instead of 80 or 90 feet as anticipated.

From Moss Vale to 93½ miles the formation is sandstone and shale, the sandstone being of moderate hardness and suitable for ballast. From 93½ miles to Robertson the rock is an excellent basalt (hyphenic), except at the water reserve at Wild's Meadows and at 97 miles 40 chains, where sandstone and shale appear—the former of fair quality at the reserve. The distribution of the stone renders it unnecessary to specify any particular quarries on the plan.

Except at the summit level, and on the basalt spur at 97 miles 40 chains, cuttings from 94 miles onwards will come upon rock at a depth of 10 or 12 feet.

Bricks are obtainable at Moss Vale and at about 93 miles, though the clay is not of first-class quality. Timber is obtainable between 90 miles and 92 miles, but is all in private hands.

The most permanent water supply is at the water reserve at Wild's Meadows, but good water is obtainable from 90 miles onwards, and at Moss Vale.

Station accommodation would be required at 90 miles, 93 miles, 94½ miles, and at Robertson and platforms at 88 miles 50 chains and 97 miles 30 chains.

It may be necessary to repeat that I have studied thoroughly the country from Kangaloon, southwards, and the general route surveyed is the only one suitable for the requirements of the district, and the one from which a branch to the top of Barrengarry Mountain can be made.

I have, &c.,

WM. REID BELL.

The trial survey from Moss Vale to Robertson, with a survey of a branch to Barrengarry Mountain, was made after the completion of the Bowral and Robertson trial survey. The sections of both trial surveys have been graded and the earthwork quantities computed. The Moss Vale and Robertson route passes through the best district and gives the lightest average of cost per mile. There is but little difference in the lengths of the two lines, each one being between 14 and 15 miles, but the through distance to Robertson *via* Moss Vale will be about 5 miles greater than if the line was constructed from Bowral. The proposed branch to Barrengarry Mount is about 6 miles in length, and the section is an extremely easy one.—H.P., 19/8/84.

No. 55.

Mr. W. R. Bell to The Engineer-in-Chief.

N.S.W. Railway Department—Moss Vale to Robertson Trial Survey.

Report on Trial Survey of Branch Line from Wild's Meadows to top of Barrengarry Mountain.

Sir,

8 August, 1884.

I have the honor to report on the above survey as follows:—

This branch line leaves the main survey on the water reserve at Wild's Meadows, 95 miles 48·79 links from Sydney, and skirting the east side of Wild's Meadows, passes about 70 chains to the east of the Fitzroy Waterfalls; thence it goes through Crown land and crosses the Shoalhaven Road, where the road to Burrawang branches off; it terminates on a selection belonging to Fox, of Moss Vale, on the roadside, a few chains north of the tree marked 4 miles 27·76 links, at the head of the Barrengarry Mountain.

It could be shortened about 7 chains by going down the centre of the meadow, but the ground there is not so solid; the lower end is subject to floods, owing to rocky bars in the Meadows or Waterfall Creek in the neighbourhood of the falls, and the line as adopted runs close to spurs, whence good ballast would easily be obtainable. Where the line crosses the swamps the ground for a great part has been drained and is fairly firm, although it consists chiefly of peat. After leaving the swamps it passes through barren country, and the cuttings would reach the sandstone at a depth of from 1 to 3 feet.

Water can in all seasons be obtained from the Meadow Creek, but there is no permanent supply at the top of the mountain.

On the Crown land between the Meadow and the top of the mountain fencing and sleeper timber is found, and a plentiful supply of timber for all purposes can be obtained from Kangaroo Valley.

Blue metal is found on the spurs along the east side of the Meadow, and sandstone more or less suitable for building near the terminus of the line.

Bricks could be made near the upper end of the Meadow.

I have, &c.,

WM. REID BELL.

Mr. Palmer, for report.—W.H.Q., 12/8/84.

No. 56.

The Assistant Engineer for Trial Surveys to The Engineer-in-Chief.

Trial Survey—Bowral to Robertson.

MR. WILKINS went to this district at the end of last October to examine the country previous to making a trial survey. His report on what he considered the best route for survey was sent in to this office on the 2nd of November, and instructions were at once sent to him to proceed with a trial survey from Bowral to Robertson *via* Burrawang. The survey was completed and the plan and section were forwarded to this office about the middle of last January. Since that date other trial surveys have been made from Moss Vale to Robertson, with a branch to Barrengarry Mountain, and quantities have been computed in this office from all the sections of the surveys made, so that comparative estimates may be made when required. On the 1st of December, 1883, Mr. Wilkins reported as follows:—"Leaving the Southern Railway, near Bowral, the trial line traverses undulating downs until reaching the Wingecarribee Stream, at 2 miles 30 chains, marshy ground prevailing on the southern side of that river for half-a-mile; thence to

to the end of the present work (7 miles), a very easy line of country, only requiring light cuttings and embankments. Before adopting the above line for survey the alternative plan of keeping on the north bank of the river was examined, so as to defer crossing for 3 miles and avoid all marshy ground; but it was found that the line would thereby be lengthened 1 mile, besides having a worse section and many curves. There now remains about one-half, or 7 miles, of this survey to be completed."

The rest of Mr. Wilkins' monthly reports merely refer to the date he expected to complete the trial survey. H.P., 28/8/84.

No. 57.

Petition.

To the Honorable the Minister for Works,—

THE Petition of the undersigned freeholders, selectors, and electors, residents of the districts of Kangaloon, East Kangaloon, Burrawang, Robertson, and the Pheasant Ground, praying that you will cause to be placed on the Estimates a sum of money for the construction of a line of railway from Bowral to Robertson.

Your petitioners are of opinion that many Honorable Members voted against this item under the impression that the majority of the inhabitants of the districts were in favour of the Moss Vale route.

Your petitioners took no action in the matter before the vote was submitted to Parliament (although the subject had been discussed here), because they were quite content to leave the matter, as to route, to the decision of the Ministry, in whom they had the fullest confidence, and because, further, they considered that much valuable time of the Minister had been taken up and his patience sorely tried by the number of depositions upon railway and other multifarious subjects continually being submitted to him.

Your petitioners are in favour of the junction with Bowral, because it is the nearest route to the metropolis, the market that purchases our produce and supplies us with the various necessaries we require, but consider a better route can be found than that surveyed by Mr. Surveyor Wilkinson.

Your petitioners desire to bring under your notice the large and valuable tract of land adjoining the Kangaloon and Yarrawa Districts, known as the Wingecaribbee Swamp, which, if subdivided and sold, would go a long way, if not entirely pay the cost of the railway in question, and would be a weighty reason in favour of the Bowral route, because of the great addition of settlers it would give to Kangaloon, every one of whom would be best served by the Bowral route.

Your petitioners pray you to cause the item (*via* Bowral) £126,000 to be again placed before the Parliament; and we trust that Honorable Members, when they are made fully aware that we shall be best served by this route, will give us their favourable consideration; and your petitioners, as in duty bound, shall ever pray.

[Here follow 230 signatures.]

Place with other papers upon the same subject. Acknowledge receipt, and inform Mr. Garrett, M.P., that the matter shall have due consideration.—F.A.W., 28/11/84.

No. 58.

The Commissioner for Railways to T. Garrett, Esq., M.P.

Sir,

Department of Public Works, Railway Branch, Sydney, 2 December, 1884.

I have the honor to acknowledge the receipt of a Petition, bearing your endorsement, from residents of Kangaloon, Burrawang, &c., praying for the construction of a line of railway from Bowral to Robertson, and to inform you, by direction of Mr. Secretary Wright, that the matter shall receive due attention.

I have, &c.,

CHAS. A. GOODCHAP,
Commissioner for Railways,
(*per* D.V.)

No. 59.

F. T. Humphery, Esq., M.P., to The Secretary for Public Works.

Dear Sir,

Sydney, 9 August, 1886.

I have been desired to ascertain if it will be consistent, with the convenience of the Honorable the Minister for Works, to receive a deputation from Kangaroo Valley on Friday morning next upon the subject of the construction of a tramway or light railway from the Southern Railway system to the top of Barrengarry Mountain.

Kindly let me know and oblige,—

Yours, &c.,

F. T. HUMPHERY.

Deputation appointed for Friday, 13 August, at 11.30.—J.R., 10/8/86.

Deputation for construction of Tramway or Light Railway from the Southern Line to top of Barrengarry Mountain.

Department of Public Works, Sydney, 13 August, 1886.

THE deputation from Kangaroo Valley, &c., accompanied by Messrs. Kidd, Humphery, and Tarrant, Ms. P., waited upon me to-day with reference to the above matter, and asked that, in the first railway proposals, the Government submitted an extension from the Southern Railway to Wild's Meadows and Barrengarry Mountain might be included. It was pointed out that the late Stuart Government in their proposals had included such a line, but owing to some petty jealousy the proposal had been defeated. The desirability of the railway had, however, been affirmed by that Government, and they asked that it might again be submitted, when they believed it would be passed by the House. The line, it was represented, would be a remunerative one, as it tapped a fertile and well settled district; large quantities of produce would be carried from it, and also coal, while a large tourist traffic would pass to it.

With regard to the point of junction, they were quite satisfied to leave that to the officers of the Department.

I informed them that I had the papers by me in this matter, and remembered the discussion in the House, although I was not personally acquainted with the district.

I thought it extremely doubtful that any railway policy would be submitted to the House this Session, as the House would be fully engaged with the measures, of which notice had already been given, but I would be pleased at a convenient opportunity to submit the question of this extension to my colleagues for their consideration.

It was stated that Mr. Surveyor Kennedy had made a survey of this line, but had not been asked for a report. I promised in reply to their request to obtain a report from Mr. Kennedy relative to this survey.

W.J.L.

Engineer-in-Chief, B.C. Mr. Palmer.—W.H.Q., 20/8/86.

The surveyors employed in this district were Messrs. Ball and Wilkins (not Kennedy). Trial surveys have been made from Bowral, and from Moss Vale to Robertson; and a branch line (6 miles) has been surveyed from the Moss Vale and Robertson line to the top of Barrengarry Mountain. Various reports and answers to questions have been given; among others I find estimate of Bowral to Robertson (15 miles), £126,192, and from Moss Vale to Robertson (14½ miles), £106,770; also a report that the section from the Moss Vale and Robertson line to Barrengarry Mountain is an extremely easy one.—H.P., 24/8/86.

Under Secretary.—W.H.Q., 25/8/86. A line for a tramway was explored by Mr. Halligan, of the Existing Lines Branch. It is possible that Mr. Halligan's exploration (mistaken for Kennedy) is the survey referred to.—Ch.A.G., 5/9/86. Ask Dr. Tarrant if this can be the surveyor referred to.—W.J.L., 10/9/86.

No. 60.

The Commissioner for Railways to Dr. Tarrant, M.P.

Sir,

Department of Railways, Sydney, 24 September, 1886.

Referring to the deputation which waited upon the Secretary for Public Works on 13th ultimo, relative to the construction of a light line of railway from some point to be determined on the Southern Line to Wild's Meadows and Barrengarry Mountain, and to the statement made that Mr. Surveyor Kennedy had made a survey of this line, but had not been asked for a report on the subject, I have the honor to inform you, that, upon inquiry, I find Mr. Kennedy was not engaged in this district.

I may state, however, that a line was explored by Mr. Halligan, but not surveyed.

I shall be glad if you will inform me if Mr. Halligan is the surveyor referred to.

I have, &c.,

CHAS. A. GOODCHAP,
Commissioner for Railways,
(per D.V.)

Dear Sir,

207, Macquarie-street, Sydney, 24 September, 1886.

In reply to your letter, 86-14,902, I beg to inform you that, when I mentioned at the deputation the name of Mr. Surveyor Kennedy, I intended to have mentioned Mr. Surveyor Wilkins, as I think he was the gentleman who made the survey of the line from Bowral to Robertson, after having inspected all the different proposed routes. It appears that he was not called to report as to the best route to be adopted by the Department, although Mr. Bell, who subsequently surveyed the line from Moss Vale to Robertson, was requested to do so.

My object in asking for Mr. Wilkins' report is, that he being an experienced officer in the Department, and having examined all the different routes, would be able to satisfactorily report as to the best one.

I am, &c.,

Ch. A. Goodchap, Esq., Commissioner for Railways.

H. J. TARRANT.

Engineer-in-Chief.—Ch.A.G., 27/9/86. Mr. Palmer.—W.H.Q., 29/9/86.

Mr. Wilkins is now away in another part of the Colony, and I doubt whether any report he could furnish would have any great value. There are at present in this office plans and sections of all the routes of trial survey made in the district, giving all the information required to enable a decision to be arrived at as to which would be the best line to construct.—H.P., 29/9/86. Engineer-in-Chief.

Under Secretary.—J.W., 30/9/86. Railways.—J.R., 1/10/86. For Minister's information. Shall Dr. Tarrant be informed?—Ch.A.G., 5/10/86. Yes; and submit surveys of various routes.—W.J.L., 9/10/86.

No. 61.

The Commissioner for Railways to Dr. Tarrant, M.P.

Sir,

Department of Railways, Sydney, 13 October, 1886.

I have the honor to acknowledge your letter of the 24th ultimo, explaining with reference to the deputation which waited upon the Minister relative to the construction of a light railway from the Southern Line to the top of Barrengarry Mountain, that Mr. Wilkins was the officer who made the survey of the line from Bowral to Robertson, and suggesting that he, having inspected all the different proposed routes, would be able to report as to the best one.

In reply, I am directed by Mr. Secretary Lyne, to inform you that Mr. Wilkins is now away in a distant part of the Colony, and it is questionable whether any report he could furnish would have any great value; but there are in the Engineer-in-Chief's Branch plans and sections of all the routes of trial surveys made in the district referred to, giving all the information required to enable a decision to be arrived at as to which would be the best line to construct. These data will shortly be submitted for consideration.

I have, &c.,

CHAS. A. GOODCHAP,
Commissioner for Railways,
(per D.V.)

Sir,

Sir,

207, Macquarie-street, Sydney, 16 October, 1886.

In reply to your letter, 13th October, my object in asking that Mr. Wilkins should be called upon for a report is that he was first sent to examine the country between the Great Southern Line and Robertson and survey the line which he considered most suitable, when he decided upon the route Bowral to Robertson; subsequently another surveyor (Mr. Bell) was instructed to do the same, and he recommended and surveyed a line, Moss Vale to Robertson. Now, my grievance is that Mr. Wilkins was not called upon to make any report in writing but that Mr. Bell was asked for one, which he furnished, and with which many of the residents are dissatisfied. Although, as is stated in your letter, Mr. Wilkins is in a distant part of the Colony, I think he is sufficiently acquainted with the district that he could by reference to his book report upon the different routes without visiting the place, and therefore, I trust, Mr. Lyne will ask him to do so.

I think a light line of railway, at a cost of not more than £3,000 a mile, would be sufficient.

Yours, &c.,

Commissioner for Railways, Sydney.

HARMAN J. TARRANT.

Engineer-in-Chief.—CH. A. G., 20/10/86. Mr. Palmer.—W. H. Q., 22/10/86. On receipt of this letter I instructed Mr. Wilkins to furnish a report, which I now forward herewith.—H. P., 16/11/86. Engineer-in-Chief.

Proposed Railway, Bowral to Robertson.—Report.

Sir,

Railway Survey Camp, Brunswick, 5 November, 1886.

In reply to memorandum E6-254, I have the honor to report on the above line, surveyed November, 1883—January, 1884.

The route was recommended to you for trial survey on account of the easy nature of the country prevailing for two-thirds of the distance, the proximity of the line to the towns of Kangaloon and Burrawang, and the junction with the Southern Railway, being about 9 miles nearer to Sydney than the alternative proposal *via* Moss Vale.

The branch leaves the main line of railway about half-a-mile south of the Bowral Station, and traverses undulating downs until reaching the Wingecarribee Stream at 2 miles 30 chains. The swamp through which this creek runs is about 40 chains in width, but the position of the flood-level shows that an embankment may be formed across it to the site for the bridge without danger from unduly confining flood-waters. A favourable line of country follows to the crossing of the Kangaloon Road (7 miles), and the Moss Vale—Robertson Road (about 8 miles), light cuttings and embankments only being required. Easy gradients are obtained until approaching the town of Burrawang (10 miles), which is situated on elevated ground. In order to reach the only ground suitable for a station, a heavy cutting will be required near the township through the main road, where an overhead bridge must be provided for the ordinary traffic. From Burrawang to Robertson (10 miles to 14 miles) the trial line follows the general direction of the road connecting those places, and the earthworks on this length will be heavy owing to the mountainous nature of the country.

The works will comprise, in addition to the earthworks and the Wingecarribee Bridge already adverted to, a few small culverts at watercourses.

Timber, principally messmate, may be obtained with facility near Burrawang for railway and fencing purposes. The manufacture of bricks is largely carried on near Bowral, where clay suitable for that purpose may be obtained in any quantity required. Material for ballast can also be obtained within a short distance of the line.

A sufficient quantity of water for locomotive purposes would be supplied by the creek near Burrawang. At other places where stoppages are likely to be made sinking would have to be resorted to.

The country through which this line has been taken is of a fertile character, capable of a high state of cultivation. At the time of the survey, however, the parts occupied in small holdings at the Burrawang and Robertson end were used for dairy farms only, and the remainder, with the exception of a market garden near Bowral, for sheep and cattle runs.

The total length of this branch line a little exceeded 14 miles. The station site at the Robertson terminus would probably be on the Government reserves in that township. The permanent line could be staked parallel to the main street, which would afford the most favourable direction for the continuation of the line beyond the town for future requirements.

I have, &c.,

The Engineer-in-Chief for Railways.

G. L. WILKINS.

No. 62.

Dr. Tarrant, M.P., to The Commissioner for Railways.

Sir,

207, Macquarie-street, Sydney, 18 October, 1886.

In addition to what I stated in my letter of the 16th October, in reply to your statement, "there are in the Engineer-in-Chief's Branch plans and sections of all the routes of trial surveys, &c., giving all the information required to enable a decision being arrived at as to which would be the best line to construct," I desire to say that the plans do not give "all the information required," and that the papers are incomplete without Mr. Wilkins' report, if any consideration is to be given to Mr. Bell's.

Yours, &c.,

HARMAN J. TARRANT.

No. 63.

T. Garrett, Esq., M.P., to The Secretary for Public Works.

Sir,

19 May, 1887.

I have the honor to forward you enclosed a letter from Mr. Thomas Blencowe, a resident formerly of Wild's Meadows, in favour of the construction of a line of railway from the Southern Line, through Robertson to Barrengarry, or Kangaroo Valley more properly speaking, which I hope will not escape your consideration when the subject of the proposed line is brought before you.

Yours, &c.,

THOMAS GARRETT.

[Enclosure.]

[Enclosure.]

Hon. Thos. Garrett, Sydney,—
Dear Sir,

Wild's Meadows, 18 May, 1887.

I notice by the papers that your Government intend to bring before the House a comprehensive system of railways during the present Session. If so, I hope as our representative you will include the one from the Southern Railway to Barrengarry and Robertson. This line was one of the first branch lines proposed many years ago, and was favourably entertained by the past Ministers, including Hon. J. Lackey, Mr. Wright, Dibbs, and Mr. Lyne, who unhesitatingly pronounced it as one of the most promising remunerative lines of any proposed. Petitions have been presented at different times by the farmers and residents, and a number of deputations have waited on Ministers setting forth their claims to a railway. Indeed the money has been placed on the Estimates for the construction of a railway; but was not constructed, owing to different opinions as to route. Several lines have been surveyed, and the people are willing to leave the matter of choice to the Government.

If the present Ministry require any further information than already set forth the people here are ready to furnish the same. Also a good deal of information could be obtained from Moss Vale and Bowral Stations. I have no doubt five-sixths of the traffic is from these districts. As you are aware the produce is chiefly produce at present, and as I am engaged in that pursuit, I presume most of the farmers in the district are able to send to market about the same quantities of produce, more or less, as I can myself. In looking over my books I find that I have sent to Sydney market—450 cases of fruit, 40 cases of eggs, 5 coops of fowls, 60 pigs (in pork and bacon), 150 kegs of butter. Now, if there was a railway, I could in a short time send away 1,000 cases of fruit, and if instead of butter the milk would be 100 gallons per day, I estimate that I could place on a railway per annum—160 tons milk, 25 tons fruit and sundries—in all 185 tons. Now you will say why do you not send this amount now. The answer is—that milk and fruit are perishable goods and require quick transit. The roads are a quagmire after rain, and therefore impracticable. I had 1,000 cases of fruit this year left to rot on the ground from this cause.

I am, &c.,

THOMAS BLENCOWE.

The matter has previously had consideration, and Minister would like to see papers.—H.M.L.,
19/5/87.

No. 64.

T. Garrett, Esq., M.P., to The Secretary for Public Works.

Hon. T. Garrett, M.P.—Deputation. Branch line of railway from Southern Line to Wingecarribee District.

Dear Sutherland,

25 July, 1887.

Some of my people want to see you to-morrow week as a deputation about a branch railway from the Southern Line out to Wingecarribee Districts. Will you see them at half-past 2 o'clock on that day.

Yours, &c.,

THOS. GARRETT.

Railways.—J.R., B.C., 29/7/87.

No. 65.

Minute by The Secretary for Public Works.

Railway to Wingecarribee District.

Public Works, Sydney, 6 August, 1887.

A DEPUTATION introduced by the Honorable Mr. Garrett, M.P., waited upon me to-day with reference to the necessity for a railway from the Southern Railway to the Wingecarribee District. Messrs. McCourt, M.P., and F. Martin, M.P., accompanied the deputation. It was pointed out that the district referred to was a very fertile one, and was well settled; a considerable traffic would be given to any railway in the shape of farm and dairy produce as soon as it was built, and in addition, it would be used for the carriage of minerals. They believed the line could be constructed at comparatively as low cost, and that it could be made remunerative. The line had been proposed by a previous Government, viz., by that led by Sir A. Stuart in 1884, but owing to the opposition and owing to the disputes locally as to the point of direction the line had been thrown out. Those interested had now sunk all differences, and were quite prepared to accept any line the Government might propose, but they asked that the question of the junction might be carefully considered, an unbiased survey being made and a route chosen which would be best in the interests of the district and the Colony. I informed them that I was well acquainted with the district, and was aware that if the people interested had agreed upon one line coming to one station, Parliament would have passed the vote when it was before the House. When they were so strongly divided amongst themselves, they could not expect the Government to be wholehearted, and I was now glad to hear they had sunk their differences, and were prepared to accept any line the Government might suggest, if it were determined to submit one. I promised to obtain full information in the matter, and to get reports from the Traffic and Engineering Branches of the Department, and when I was in possession of the information, I would then consider whether I would be justified in submitting the line for the approval of the Cabinet.

J.S.

The Engineer-in-Chief first.—A.R. (for Commissioner), B.C., 9/8/87.

Two trial surveys have been made from the Great Southern Railway to Robertson, viz.:—From Bowral to Robertson, 15 miles—estimated cost, £126,192; and from Moss Vale to Robertson, 14½ miles—estimated cost, £106,770—exclusive of cost of land and compensation in each case.—J.W. (*pro* W.H.Q.); 17/8/87.

For the Ministers information.—J.W. (*pro* W.H.Q.), 17/8/87. Under Secretary, B.C. Railways.—J.R., B.C., 17/8/87. A.R., 19/8/87. I do not think the Traffic Manager has yet reported upon this proposal. Will he kindly do so now.—A.R., B.C., 19/8/87. Report enclosed.—W.V.R., 6/9/87.

No. 66.

Proposed Railway, Moss Vale to Robertson.

THE whole of the districts Yarranga, Burrawang, Wild's Meadows, and Robertson, comprise an area of about 325 square miles of very rich country pretty thickly populated, in holdings of from 40 to 320 acres selected since 1861, a large portion of which is now clear and used for grazing, agriculture, and fruit-growing; the said holdings have risen in value from £1 to £20 per acre,—a strong evidence of the progress these districts have made.

The

The districts enumerated are situated at a distance from 10 to 15 miles from Moss Vale Station, and during wet and wintry weather the roads are heavy and difficult to travel over; the freights in consequence are high.

The population of the districts immediately interested in the Moss Vale route are estimated at between six and seven thousand souls, having the usual complement of public schools, churches, post and telegraph offices, mechanics' institutes, and schools of art, and other evidences of progress and affluence.

The capabilities are in a manner unlimited, and could be extended to almost any length were it not for the want of a cheap and expeditious mode of transit. The districts have not made the progress they could have done if facilities had been given at an early stage.

The township of Robertson lies on an elevated plateau near the eastern edge of the southern tableland, about 14 or 15 miles from Moss Vale, and at an elevation of over 2,000 feet above the sea-level. The climate is healthy and bracing; the settlers around are engaged principally in dairy farming and the rearing of stock. Towards the sea-coast the country becomes rugged, and in many places steep and precipitous, so that the only available outlet for their produce is towards either Moss Vale or Bowral.

Robertson is approached from Moss Vale by the Burrawang and Kangaloon Ranges, between which lie the Wingecarribee Swamp and the Bong Bong River. The ranges are covered with extensive tracks of rich chocolate soil, eminently adapted for dairy farming, and this good land extends 3 or 4 miles past Robertson.

On the Burrawang Range and about 10 miles from Moss Vale lies the township of Burrawang; situated close by is the source of the Wingecarribee Creek, a tributary of the Wollondilly River. The adjoining country is undulating and fertile, and the land is settled upon and used for dairy farming and grazing. About three quarters of a mile to southwards is the head of Wild's Meadows, which is now occupied by dairy farmers, and about 3 miles further on is Barrengarry Mountain, a road from this leading into Kangaroo Valley, with a fall of about 1,500 feet.

There are two modes of exit from Kangaroo Valley by which produce is brought out, viz., one by Barrengarry Mountain to Moss Vale, about 20 miles; and the other over the mountains to Broughton's Creek, about 16 miles. By the latter route great loss and deterioration is sustained by shipping in small steamers to Shoalhaven, and then transshipping into coasting steamers for Sydney.

The two routes mentioned, viz., one *via* Bowral, Kangaloon, and Robertson, and the route *via* Moss Vale, Yarrunga, Burrawang, Wild's Meadows to Robertson, have each their advocates, who set forth their rival claims.

From the extent of the country opened up, population, and above all, cost of construction, I am of opinion that the Moss Vale route is the preferable one of the two, as trade will always seek the nearest, cheapest, and best route, and as by far the greater amount of traffic passes through Moss Vale it clearly demonstrates that this is the best point of connection.

The argument laid down by some of the Bowral advocates that the Bowral route should be preferred because it cuts off 6 miles of distance between Robertson and Sydney should not be entertained for a moment, because by this the Department is asked to construct 14 miles of railway, but would, virtually get only 8 miles additional freight.

I have compiled from information supplied by Moss Vale and Bowral a return showing the probable revenue to be derived by the construction of this line, and append the same hereto:—

Return of Traffic passing through Bowral and Moss Vale from the districts of Yarrunga, Burrawang, Wild's Meadows, Robertson, and East and West Kangaloon:—

<i>Via Bowral.</i>										
East Kangaloon	tons. 800
West Kangaloon	600
										— 1,400 tons.
Pigs	800
Cattle	110
Approximate number of passengers	300
<i>Via Moss Vale.</i>										
Yarrunga, Wild's Meadows, Burrawang, and Robertson	1,331 tons.
Pigs	500
Passengers	360

If this line was made *via* Moss Vale we would get all the East Kangaloon traffic in addition to the other places mentioned, and it would stand thus:—

East Kangaloon	tons. 800
Yarrunga, Wild's Meadows, Burrawang, and Robertson	1,331
										— 2,131 tons.
Pigs (say)	1,200
Cattle	200
Passengers	630

Take the whole distance at 14 miles, and that the bulk of the traffic consists of special A and 1st class goods, it may be summarised thus:—

	£	s.	d.
1st class goods, 1,000 tons, at 6s.	300	0	0
A class goods, 1,131 tons, at 2s.	113	0	0
Pigs, 1,200, <i>i.e.</i> , 40 trucks, at 6d. per mile	14	0	0
Cattle, 200, <i>i.e.</i> , 20 trucks, at 6d. per mile	7	0	0
Passengers, 210, 1st class, at 1s. 5d.	14	17	6
„ 420, 2nd class, at 11d.	19	15	0
	468	12	6
To allow for discrepancies, add 25 per cent.	117	3	2
	£585	15	8

Actual

Actual working expenses, wages only :—

	£	s.	d.
1 Station-master (say)	200	0	0
1 Porter	109	10	0
1 Guard	140	17	0
1 Engine-driver	219	0	0
1 Fireman	140	0	0
1 Cleaner	78	0	0
10 Permanent-way men	1,173	5	0
	<hr/>		
	£2,060	12	0
Thus leaving a loss of	1,474	16	4
Then 5 per cent. on £100,000 capital	5,000	0	0
	<hr/>		
Total loss of	£6,474	16	4

A. CRAWFORD, 6/9/87.

Traffic Manager.

No. 67.

The Engineer-in-Chief to The Secretary for Public Works.

Proposed Railway from Great Southern Line to Robertson.

Engineer-in-Chief's Office, Sydney, 18 August, 1887.

I FORWARD herewith, for the Minister's information, a copy of a report, dated 10th of October, 1884, on this line.

J.W. (*per* W.H.Q.), 18/8/87.

[Enclosure.]

"It was reported, with reference to the Bowral and Robertson survey, that starting from the Southern Railway, about 20 chains south of the Bowral Station, the section would be a fairly easy one for a distance of 8 miles; thence the approach to Burrawang would require a 1 in 40 grade, and that the works between Burrawang and Robertson, for a distance of $4\frac{1}{2}$ miles, would be heavy.

"The report on the Moss Vale and Robertson survey, or rather on that portion between Moss Vale and Burrawang (the portion thence to Robertson being common to both routes), deals chiefly with the nature of the soil, &c., which is said to be better than on the Bowral route, and it also points to the fact that a line by this route (Moss Vale) would benefit a greater number of settlers than would be the case on the other route.

"Referring generally to the two routes, it has been ascertained that a line from Moss Vale would pass through the best district, and would give the lightest average of cost per mile, that there would be but little difference in the lengths of the two routes, each being between 14 and 15 miles in length; but that the through distance from Sydney to Robertson *via* Moss Vale would be about 5 miles longer than *via* Bowral."

Railways.—J.R., B.C., 18/8/87. In a week.—A.R., 22/8/87. It will be well for the traffic officer, who is reporting on the proposal, to see this—perhaps Traffic Manager.—A.R., 22/8/87. Papers returned herewith.—W.V.R., 6/9/87. Secretary. For Minister's information. See report upon probable traffic.—CH.A.G., 10/9/87. Inform Hon. Mr. Garrett and Mr. McCourt of estimated traffic, &c.—J.S., 22/9/87.

I hardly like limiting the statement of traffic to these figures. Add that, even allowing that the prospect of a railway would, by the time the line is completed, induce production which would treble the present ascertained traffic, which is an anticipation very much probably in excess of the result which would be realised, the outlay would not seem to be justifiable on economic grounds.—CH.A.G., 24/9/87.
Hon. T. Garrett and Mr. McCourt, Ms.P., 27/9/87.

No. 68.

The Commissioner for Railways to W. McCourt, Esq., M.P.

Branch Railway to Robertson.

Sir,

Department of Railways, 26 September, 1887.

With reference to the representations made to the Honorable the Minister for Public Works in August last by a deputation, of which you formed a member, as to the desirableness of constructing a railway from the Great Southern Railway to Robertson, I have the honor, by direction of Mr. Secretary Sutherland, to inform you that the reports received show that while the probable revenue from such a railway would only amount to about £585 per annum on present traffic, the actual working expenses (wages only) would be £2,060 a year, and, adding to this 5 per cent. on the estimated capital cost (£100,000) £5,000, the total approximate annual loss upon the line would be £6,475. I am to add that even allowing the prospect of a railway would, by the time the line is completed, induce productions which would treble the present ascertained traffic, which is an anticipation very probable much in excess of the result which would be realized, the outlay would not seem to be justified on economic grounds.

I have, &c.,

CHAS. A. GOODCHAP.

On receiving the above communication a public meeting took place at Robertson, when a Committee was appointed to collect evidence, to ascertain the present and prospective traffic in support of our claims to a railway, and to appoint a deputation to wait on the Minister for Works and lay before him the result of our investigations. The following evidence has been supplied to the Committee from the storekeepers, farmers, carriers, publicans, and others from various parts of the district:—

Yarrunga Saw-mills.—Messrs. Serry, Hayter, & Co., timber merchants, furnish one year's supply from Moss Vale to other stations of timber, 103,648 feet; weight, 311 tons; cost from mills to Moss Vale by teams, £155 10s.; by rail from Moss Vale to other stations not ascertained.

C.

C. Tildsley, storekeeper, Robertson.—Statement from January, 1886, to January, 1887, from Moss Vale to Sydney, 3,200 kegs butter; cost by road out, £160; by rail out, £290; on hides, pigs, fowls, eggs, &c., by road, £48 6s. 8d.; by rail, £191. From Sydney to Moss Vale, goods, 300 tons; cost by rail, £288 1s. 6d.; by road, £225.

C. Alcorn, Kangaloon, storekeeper.—From 1st October, 1886, to 1st October, 1887, to Bowral, 2,150 kegs butter; goods from Bowral, 85 tons.

Messrs. Moule and Turwin, carriers, Wild's Meadows.—Estimated quantity taken out per week 96 kegs butter at present, or 3,200 per year; goods, 120 tons.

F. Wright, Kangaloon Valley, carrier.—Taken out per week about 100 kegs butter; or 4,000 per year from Moss Vale; goods, 220 tons.

George Schladdt, Robertson, hotel proprietor.—Goods received and despatched to and from Moss Vale in ten months, 77 tons.

James Graham, Robertson, hotel.—Goods to and from Moss Vale for the past twelve months is 90 tons.

John Graham, Robertson, carrier.—To Moss Vale, 30 kegs butter per week; and goods, 4½ tons average per week.

F. Faulkes, butcher, Yarrunga.—About 70 tons of pork and bacon to Moss Vale.

F. Baxter, Yarrunga.—60 tons of bacon and pork to Moss Vale.

T. Blencowe, Wild's Meadows, farmer.—To Moss Vale in twelve months, 150 kegs butter and 500 cases fruit. If railway was made could put on 150 tons of milk and 100 tons of fruit and vegetables.

Mr. Acres' "Commercial Hotel," Burrawang.—Goods received from Moss Vale Station in twelve months, 20 tons.

Barrett Bros., storekeepers, Burrawang.—Goods from Moss Vale per annum, 260 tons. If railway was made and mill going could send over 1,000 tons.

G. Bartlett, storekeeper, Yarrunga.—Goods in and out 10 and 40 tons respectively.

Mr. Mackie, storekeeper, Wild's Meadows.—Goods in and out 100 tons per annum.

Mr. Bridge, Burrawang, butcher.—Goods in and out 15 tons.

Statement.

Robertson—C. Tildsley	300 and 3,200 kegs butter.
Yarrunga—Seery, Hayter, and Co.	311
Kangaloon—Alcorn	85 2,150 "
Wild's Meadows—Moule & Turwin	120 3,200 "
Kangaloon Valley—F. Wright	220 4,000 "
Robertson—G. Schladdt	77
Do James Graham	90
Do Jno. Graham	225 1,500 "
Yarrunga—F. Faulkes	70
Burrawang—Barrett Bros.	1,260
Wild's Meadows—F. Mackie	100
Burrawang—W. Acres	20
Yarrunga—James Baxter	80
Wild's Meadows—Thos. Blencowe	150 fruit cases.
				2,958 14,200

If railway was constructed the following would be the estimate:—Miscellaneous, at present, 14,200 tons of milk; passenger traffic, 6,000 per annum; 4,958 goods; passenger, 18,000; number of dairy cows, 7,000; vegetables, 3,000 tons; calves sacrificed annually, 6,000; fruit, 1,000 cases; potatoes (formerly grown), 1,000 tons.

Mr. John Kidd, the late Member for Camden, stated at Burrawang that, had the tram-line now laid to Camden been laid from Moss Vale through your rich and fertile district, as it should have been, but for underhand influence, it would be a positive proof of the best-paying branch in the Colony.

The Honorable John Lackey stated he knew of no branch line in the Colony that would prove so remunerative as this. I speak from experience, as I have a thorough knowledge of your district.

Mr. O'Hara, an Inspector of conditional purchases, stated: "I have travelled over 200 miles in the Northern Districts, and I declare I have seen more grass at Wild's Meadows than in all the country I have recently travelled over. Your district is, without a doubt, the most fertile in New South Wales."

Mr. Harris, of Sydney, says: "I have recently gone over the garden of Victoria, the Gippsland District, and the other day on my return I was through your district, which is quite equal in fertility and richness to anything I saw here."

A gentleman two years ago made a journey through Victoria, South Australia, and Western Australia, and on his return made a trip to the Darling River, and on arrival here said: "Your district is a Paradise. There is nothing like it in Australia. The only green grass from the time I left till I returned again I saw in your district."

Dr. Maddern, of Moss Vale, on his return from Tasmania, states: "You do not know the value of your own district. From my experience of fruit-growing there, the climate and soil of the Moss Vale District is better adapted for producing the same varieties of fruit as are grown there, and this district alone could supply Sydney market with all the fruit required."

This district is, without doubt, from its elevation and abundant rainfall, its superior climate, fertile soil, and dense population, one of the best in Australia, and needs but a railway to make it attractive and develop its resources. As proof of the value of land for farm purposes, if any is offered for sale in the market, it realises from £20 to £40 per acre readily.

No. 69.

W. McCourt, Esq., M.P., to The Commissioner for Railways.

Sir,

5 October, 1887.

Having received an official letter, giving probable earnings and expenditure of proposed railway to Robertson, would you be so kind as to have sent to me a full statement of how the Estimates were arrived at.

I should feel obliged if this statement could be forwarded to me at Bowral by Saturday next.

Yours, &c.,

W. McCOURT.

Attend to this.—C.R.A.G., 6/10/87. Letter sent to Mr. McCourt, with copy of statement on two last papers of Mr. Crawford's report.—D.C.M.L., 6/10/87.

Sir,

Department of Railways, 6 October, 1887.

In reply to your letter of yesterday's date, asking for particulars of probable earnings and expenditure of proposed railway to Robertson, I have the honor to enclose herein a statement giving the information required.

I have, &c.,

CHAS. A. GOODCHAP.

W. McCourt, Esq., M.P.

No. 70.

W. McCourt, Esq., M.P., to The Secretary for Public Works.

Sir,

17 October, 1887.

I have been requested by the residents of Robertson to ask you if you would kindly receive a deputation with reference to railway to Robertson on Friday next, 21st. I should feel obliged if deputation could be received at 12 o'clock or after that hour.

Yours, &c.,

W. McCOURT.

Friday, 21st instant, at 12 o'clock. Inform.—J.R., 19/10/87. Railways.—J.R., B.C., 19/10/87.

Sir,

Department of Public Works, Sydney, 19 October, 1887.

In reply to your letter of the 17th instant, I am directed to inform you that the Secretary for Public Works will receive the deputation from residents of Robertson, on the subject of constructing a line of railway from Great Southern Line to Robertson, on Friday, the 21st instant, at 12 o'clock noon.

I have, &c.,

JOHN RAE.

W. McCourt, Esq., M.P.

No. 71.

Minute by the Secretary for Public Works.

Railway to Robertson.

21 October, 1887.

A DEPUTATION from Robertson, introduced by Mr. McCourt, waited upon me to day in connection with the request for a railway to Robertson.

They had previously waited upon me, when I promised the matter would have inquiry, and the question had been considered by the traffic authorities, who submitted statistics showing the probable traffic and revenue that would be derived from such a line.

The result showed that the probable earnings would be £585 per annum, and the working expenses and interest £7,060, leaving a net loss of £6,475. The object of the deputation was to prove these figures, as they said, altogether inaccurate and absurd, and they allege they must have been prepared by some one who was totally ignorant of the resources of the district and its productions and settlement. Taking the first item—passengers—the traffic officers calculated the traffic will be £630 for the year; they (the residents) estimate the traffic, including residents and visitors, at £18,000 per annum, and a large disproportion exists in every item of traffic. A committee of gentlemen interested in the matter has prepared returns of the traffic, which may be expected, and the probable revenue, which tends to show the line will be a paying one. Their statement is enclosed.

I informed them that I thought it my duty to give them an opportunity of seeing the figures prepared by the Railway Department, so that they might point out any error that might be made. The figures they submitted certainly differed greatly from those made up by the traffic officers, and I promised that reliable officers should be sent through the district to collect evidence, and they could then have an opportunity of verifying their statement, if they could do so they would do a great deal for their district. In this matter I wanted nothing but truth, and the more correct the figures obtained the better it would be for all parties.

JOHN SUTHERLAND.

Will the Traffic Manager be so good as to carry out the Commissioner's directions, and furnish early report.—A.R., B.C., 25/10/87. Please arrange to visit this district, and let me have a report showing as fully as possible the traffic that would be carried.—W.V.R., 27/10/87. Inspector Crawford.

As Mr. Crawford has already reported upon this matter it will be better that the great disparity between his figures and those of the petitioners should be examined by some other officer. It has been arranged for Mr. Harper to do it, and I shall be glad if he can visit the district on Thursday next, the 10th instant. Inform Mr. McCourt to-day that he will do so, as I understand he will put Mr. Harper in the way of collecting information.—D.K., 5/11/87.

Re

Re Railway to Robertson.

Inspector Crawford,—

LET me have your reply please, to my letter of the 25th ultimo hereon, as early as possible.

2 November, 1887.

W. V. READ,
(*per* J.D.W.)*Re* Railway to Robertson.

Inspector Crawford,—

PLEASE see paper attached and let me have a further report upon the matter.

25 October, 1887.

W. V. READ,
(*per* A.S.)

Railway to Robertson.

I CAN quite understand the charges of lamentable incapacity or wilful negligence heaped upon me. It is usually the case, when any pet theory is not accepted, the unfortunate individual who dares to place plain figures is at once charged with everything except honesty of purpose.

I based my report on the actual traffic received from the districts named. The returns were compiled by the station-masters at Moss Vale and Bowral from their books. I have no reason whatever to doubt their accuracy.

To show what reliance can be placed on Rauson and Tuston's attempt at figures.

The total quantity of butter shipped from Moss Vale Station averages 11 tons 18 cwt. per week, but all this butter does not come from the districts concerned in this railway.

Still, take the actual quantity of butter sent from Moss Vale, 572 tons 10 cwt., at 6s. for 14 miles, only gives £171 15s. per annum.

As for the passenger traffic, everyone knows that a farming population is not a travelling population.

The timber trade from this district cannot compete either in price or quality with timber nearer the larger centres of population.

The stone traffic is visionary and the milk traffic is ridiculously over-estimated. The supply at present is very much greater than the demand, and if we get milk, we shall not get butter, cheese, or bacon.

It is certainly a most extraordinary fact that hay and chaff are shipped from Tarago to Moss Vale for consumption. Yet hay and chaff is put forward as a probable source of revenue, grown in the district.

Goods Superintendent.

ALEX. CRAWFORD, 4/11/87.

Forwarded to Mr. Harper, who has other papers on this subject.—W. V. READ (*per* E.B.), 7/11/87.

ALL papers herewith. I have told Mr. McCourt that you will visit the district on Thursday next, the 10th instant, and have asked him to give you all the assistance he can in the way of collecting information.

Please let me have your early report upon the matter.

W. V. READ.

Goods Superintendent.

Railway,—Moss Vale to Robertson.

By appointment with Mr. McCourt, M.P., I visited Moss Vale on Wednesday last for the purpose of meeting the local committee who are interested in the construction of the above line of railway, in accordance with their wish, I accompanied them through the districts it is proposed to serve by this line, and was afforded every opportunity of judging of its extent and resources. The general impression left on my mind by this experience is, that for richness of soil, variety of scenery, and salubrity of climate, it stands unequalled in this Colony, if not in Australia, and one is forced to admit that it must have a great future before it when a denser population looks for new centres of production, and the tourist and health-seeker appreciate its advantages. At present it is given up exclusively to dairy farming, if some half-dozen orchards bearing the finest fruit be excepted. The soil of the whole district is capable of growing almost anything to perfection, with the exception notably of wheat, for the successful cultivation of which the climate is too humid.

The holdings are all comparatively small, and the result is that a large population is scattered throughout the district, and it is estimated that Robertson, East Kangaloon, and Pheasant Ground contain 3,000 persons, and Wild's Meadows, Burrawang, Yarrunga, and Kangaroo Valley is populated by a similar number.

Were the railway constructed, the residents of the former settlements would be served by a station at Robertson, distant 14½ miles from Moss Vale, and of the latter, by a station at Wild's Meadows, 11 miles from the main Southern Lines.

After seeing the district, I can readily understand the extravagant estimate formed by the settlers of the traffic it might develop, and the most biassed would concede, that it is capable of great improvement. The scenery of the district, including as it does the two waterfalls, Fitzroy and Belmore, also gives assurance that its passenger traffic, apart from its population, would be far greater than that estimated by Inspector Crawford. Whilst at the Fitzroy Falls, I casually asked the caretaker to what extent they were visited, and he informed me that he had counted as many as 540 people on a holiday, the great bulk of whom were visitors to the district.

However,

However, the chief object of my visit I considered to be to afford the committee an opportunity of proving the present traffic of their districts, and I suggested, with a view to this being done to their entire satisfaction, that we should go through twelve months invoices, way-bills, &c., at Moss Vale and Bowral Stations, and that they should pick out each consignment sent from or to the localities to be served by the railway. The suggestion was gladly accepted, and a gentleman from each of the places referred to selected to co-operate. They were afforded every latitude consistent with my duty to the Department, and the work was thoroughly done, occupying three days, and although the result was most decidedly against them, they readily admitted that they had been met by every consideration at the hands of the Department, and that the figures were unchallengeable. As already stated, there would be two principle stations, viz., Robertson (15 miles) and Wild's Meadows (11 miles) from Moss Vale, and for the purpose of accuracy, the traffic falling in at each was taken separately, and for a similar reason, it was taken out in classes. As most of the trade came from or went to Sydney, the mileage rate has been worked out as between 86 and 97 miles, and 86 and 101 miles. From November, 1886, to October, 1887, was selected by the committee as being the most favourable year, and the following is the statement during that period of the

GOODS TRAFFIC.

		<i>To Robertson.</i>				<i>From Robertson.</i>					
		£ s. d.				£ s. d.					
Special Class A.	321 tons, at 1s. 3d.	20	1	3	17 tons, at 1s. 3d.	1	1	3			
1.	26 "	5s.	6	10	0	4	"	5s.	1	0	0
2.	72 "	6s. 3d.	22	10	0	353	"	6s. 3d.	110	6	3
3.	127 "	8s. 5d.	55	8	11						
		<hr/>				<hr/>					
		546 tons.	£102	10	2	374 tons.	£112	7	6		

Timber.

		<i>To Wild's Meadows.</i>				<i>From Wild's Meadows.</i>					
		£ s. d.				£ s. d.					
Special A.	511 tons, at 11d.	23	8	5	*27 tons, at 11d.	1	4	9			
1.	22 "	3s. 8d.	4	0	8	85	"	3s. 8d.	15	11	8
2.	63 "	4s. 7d.	14	8	9	627	"	4s. 7d.	143	13	9
3.	149 "	6s. 5d.	47	16	1						
		<hr/>				<hr/>					
		845 tons.	£89	13	11	739 tons.	£160	10	2		

15 miles.

The traffic to and from Robertson includes the following tonnage sent *via* Bowral :—

<i>To Robertson.</i>		<i>From Robertson.</i>	
Special A.	74 tons	17 tons.	
Class 1st.	9 "		
" 2nd.	17 "	149 "	
" 3rd.	25 "		

The total goods traffic therefore carried to and from Bowral and Moss Vale for these districts amounted to 2,504 tons, and its value would be £465 1s. 9d.

LIVE STOCK TRAFFIC.

During the same period we carried to and from these stations stock traffic belonging to these districts as follows :—

* 15 miles.

		£ s. d.		
1,552 cattle and calves, 86 trucks, 8d. per mile*	...	43	0	0
6,281 sheep	62 "	31	0	0
2,273 pigs	79 "	29	12	6
186 horses	24 "	12	0	0

Total value carried by rail from Robertson ... £115 12 6

I have assumed for the above purposes that 18 cattle and calves, or 100 sheep, or 8 horses represented a truck, and 30 pigs half-truck, and with this the committee were perfectly satisfied. Coming now to

PARCELS TRAFFIC,

which may be estimated at £20, we have the whole of the at present known value of the traffic, which, summarized, is :—

		£ s. d.		
From goods	...	465	1	9
Live stock	...	115	12	6
Parcels	...	20	0	0
		<hr/>		
Total	...	£600	14	3

The committee claim, and with some degree of reason, that this could be largely increased were better facilities given to transport their trade to market. At present their roads are the reverse of good, and the high rate of carriage, and distance from the railway, is a great obstacle to those who feel disposed to cultivate fruit and vegetables, and there is no doubt the natural advantages of the soil and climate would constitute a strong inducement to carry on these industries were the railway at hand. They also claim that extensive deposits of coal and shale within 2 or 3 miles of the terminus; but, as I pointed out to them the fact of other extensive deposits of these minerals being worked nearer their markets, must render this a very problematical item of traffic. Similarly, with regard to the estimated quantity of milk, the difficulty would be not in producing, but in finding consumers, and I find from inquiries I have made

in Sydney, that the supply is fully equal to, if not in excess of, the demand, and that several dairy farmers who are half the distance from Sydney are turning their attention to converting their milk into butter. I do not think we should, for many years to come, have any very extensive traffic in this article, and it is not a factor worth reckoning.

I may mention that many of the people of these districts purchase their supplies in Moss Vale, and as this is the result of their business bringing them to that town, as the only means of reaching the railway, a certain proportion should be added to the goods the proposed line would carry. Even, however, assuming that all these causes doubled the traffic, we should still have but a revenue of £1,202 for goods traffic.

The passenger traffic is, of course, a matter of pure speculation; but I am satisfied that the original estimate is far too low. With a population of 6,000, the greater proportion in comparatively comfortable circumstances, it would be fair to assume that at least one half would pass over the line once per year, particularly as the Land Court and Police Courts are at Moss Vale, and one of the most successful agricultural shows in the Southern Districts is annually held in that town. This assumption is also fully justified by the passenger traffic on the Camden tramway, where the population and district is in many respects similar. Then again, it must certainly be admitted that the scenery, when once known, would attract many visitors, and I am strongly disposed to think that at least 4,000 or 5,000 people per annum would use the line. Taking the latter number, and dividing them in proportion of 3,500 2nd class fares, 1,500 1st class fares, and assuming that the whole are carried to Robertson, a distance of 15 miles, at ordinary return fares for that distance, the value of the traffic would be:—

	£	s.	d.
1,500 1st class fares, @ 4/6	337	10	0
3,500 2nd class " @ 3/2	554	3	4

	891	13	4
Add mail allowance, 15 miles, @ £12	180	0	0

	£1,071	13	4

I have, of course, in allowing a double goods traffic, and the above passenger traffic, left a most liberal margin in favour of the supporters of the railway, and it may be fairly taken as the maximum earnings of the line for some years after its construction, and its most ardent advocates cannot claim otherwise. Summarized, the traffic would stand:—

	£	s.	d.
Present goods, live stock, &c., doubled	1,201	8	6
Estimated passenger traffic	1,071	3	4

	£2,272	11	10

which, if other running expenses were added to Inspector Crawford's estimate, would barely cover working cost.

My impression is that, all things being considered, the time has not yet arrived when the construction of a railway to Robertson would be other than an addition to the list of non-paying lines.

JNO. HARPER, 26/11/87.

Traffic Manager.

It is quite evident that, taking a sanguine view of the traffic, the traffic upon the proposed line would not, for many years, yield more revenue than would cover working expenses, if as much, so that the interest upon the capital would have to be borne by the country.—W.V.R., 30/11/87. Commissioner.

Moss Vale and Robertson Railway.

THE further report of the probable traffic likely to be derived from this line is now to hand. Please make summary of the figures given in Mr. Crawford's report, and show in juxtaposition those in the latter one furnished by Mr. Harper.

D.C.M'L., 22/12/87.

Revenue.

Summary of prospective revenue to be derived from the proposed line as per the reports furnished by Messrs. Harper and Crawford respectively:—

Description of Traffic.	Mr. Harper's Figures.		Mr. Crawford's Figures.	
	£	s. d.	£	s. d.
Passenger traffic, &c.	1,071	3 4	34	12 6
Goods, live stock, &c.	1,201	8 6	434	0 0
To allow for discrepancies add 25 per cent.			117	3 2
Total	£ 2,272	11 10	585	15 8

Expenses.

The expense of operating the line is estimated (exclusive of running expenses) at £2,060 12s., add interest at 4 per cent. on estimated cost of construction, which is put down at £106,000; total, £6,300 12s.

G.A.S., 30/12/87.

No. 73.

Minute by The Commissioner for Railways.

THERE is not much difference between Mr. Crawford's and Mr. Harper's estimate of the goods traffic. Mr. Crawford estimated on the basis of the present traffic, that the goods traffic would be £551, and Mr. Harper, after going through the invoices of goods for the most favourable twelve months the committee could select, found it to be £601. He has doubled the estimate, on the ground that the railway would increase the traffic, and he has put down for passenger traffic a sum which is based not upon the present travelling, but on an anticipated amount of travelling which will be induced by the picturesque beauty of the district which the railway will pass.

If these somewhat fanciful sources of revenue are developed, the gross earnings will be £2,273, an amount which falls short by £4,000 of the sum required for making the line a self-supporting one.

For Minister.

Inform.—J.S., 4/1/88.

CH.A.G., 3/1/88.

No. 74.

The Commissioner for Railways to W. McCourt, Esq., M.P.

Sir,

Department of Railways, 10 January, 1888.

Referring to the deputation which you introduced to Mr. Secretary Sutherland, on the 21st October last, on the subject of the proposed railway from Moss Vale to Robertson and to the circumstance of the accuracy of the statistics previously collected having been challenged, also to the Minister's reply, that an officer of the Department would be detached to confer with those interested with a view of arriving at a true estimate of the prospective traffic, I have the honor, by direction of the Minister, to inform you that an officer has (as you are doubtless aware) visited the district to confer with the local committee, who are interested in the construction of the line, and that an examination of the invoices of the goods, live stock, &c., traffic for the most favourable twelve months, with a reasonable increase for new traffic that would be developed from the revenue derivable from the districts to be served by the line, would be £1,202, while the passenger traffic, which is based not on the present travelling, but on an anticipated amount of travelling the line will create, is estimated at £1,071, or together £2,272, an amount which falls short by £4,000 per annum of the sum required for making the line a self-supporting one.

I have, &c.,

CHAS. A. GOODCHAP.

No. 75.

W. McCourt, Esq., M.P., to The Secretary for Public Works.

Sir,

Bowral, 12 January, 1888.

Would you kindly oblige by forwarding to me at Bowral a copy of Mr. Harper's report on the probable income and expenditure of proposed railway to Robertson.

Yours, &c.,

W. McCOURT.

Please forward, 14/1/88.

Sir,

Department of Railways, Sydney, 24 January, 1888.

I have the honor, by direction of Mr. Secretary Sutherland, to forward herein for your information a copy of the Goods Superintendent's report upon the proposed railway, Moss Vale to Robertson, as requested in your letter of the 12th instant.

I have, &c.,

D. VERNON,

(*pro* Commissioner for Railways).

W. McCourt, Esq., Bowral.

No. 76.

J. Williams, Esq., to The Secretary for Public Works.

Sir,

Bob's Range, Oaks, 17 January, 1888.

I am writing to you concerning the proposed new line of railway to be constructed, as I hear that some of the farmers are agitating to have it run through the Oaks, but I think the new route will be the best, that is, to cross Monkey Creek and enter Burrawang at Bend Creek, as it will open up a lot of land that would never be populated otherwise; besides going through a lot of coal country, which, if worked, would give work to a great many who need it. The timber for the railway can be found close to the line, whereas, if it runs through the Oaks, it will only benefit a few farmers, and give very little work to any; besides it will take the traffic from the Camden tramway, which only runs 12 miles from the Oaks. I forgot to mention that there could be a good trade done with timber all along the line, if it runs through the forest into Bend Creek.

I have, &c.,

JOHN WILLIAMS.

No. 77.

W. McCourt, Esq., M.P., to The Secretary for Public Works.

Sir,

Bowral, 13 February, 1888.

I trust the proposed railway to Robertson will not be overlooked when you are considering railway policy to be submitted to Parliament. Am glad Government have decided to construct light and cheap branch lines, which is just the sort of line to suit the Robertson traffic. I feel sure if a line costing £40,000 or £50,000 is constructed to Robertson, it will produce a paying revenue.

Yours, &c.,

W. McCOURT.

No. 78.

No. 78.

W. McCourt, Esq., M.P., to The Secretary for Public Works.

Sir,

Sydney, 27 June, 1888.

I have been requested by the Wild's Meadows and Yarrunga Farmers' Union to ask you to kindly receive a deputation on Friday, 6th July, at 12:30, on the subject of construction of light line of railway from Moss Vale to Robertson. An early answer addressed to Bowral will oblige,—

Yours, &c.,

W. McCOURT.

Appoint Friday, 6th proximo, at 12:30 p.m. Mr. McCourt informed.

No. 79.

Memo. by The Secretary for Lands to The Secretary for Public Works.

In forwarding this to the Honorable the Minister for Works, Mr. G. desires its statements to be taken into careful consideration by Mr. Sutherland.

T.G., 7/7/88.

Sir,

Sydney, 6 July, 1888.

As representing the deputation which you introduced to-day, with reference to the construction of a light line of railway from the Southern Line to Robertson, we wish to draw your attention to the fact that when this line was occupying the notice of the Government some time ago, an officer, Mr. Surveyor Bell, was sent, not to survey any line, but to report as to the best route, such line should take in the interests of the people. His report was wholly in favour of a line from Moss Vale to Robertson *via* Wild's Meadows, as suiting the great bulk of the people, and which the great bulk of the people, as you know, entirely concur with. This line was afterwards surveyed by Mr. Bell. We are drawing your attention to this, as you in introducing our deputation to-day stated, as we think inadvertently, that we were asking for the line from Bowral to Robertson, and which statement might lead to further delay in this matter. The plans of one line are as complete as those of the other, and if our railway is to be considered by the Government this time, we trust that you will see that the line in the peoples' interests, and the Government officer's line (*vide* Mr. Bell's report) will receive that consideration which it so justly deserves.

We have, &c.,

THOMAS BLENCOWE.

WILLIAM MOSES.

J. T. HAYTER.

ROBERT M. GRAHAM.

The Hon. Thos. Garrett, Minister for Lands, Sydney.

No. 80.

Minute by The Secretary for Public Works.

Railway to Robertson.

Department of Public Works, Sydney, 6 July, 1888.

A LARGE and representative deputation waited upon me this morning, with reference to the construction of a railway from the Great Southern Line to Robertson. The deputation was accompanied by the Honorable Thomas Garrett, Messrs. Martin, McCourt, Colls, Waddell, and Stokes, M.S.P.

Mr. Garrett introduced the deputation, and stated that this matter had previously been considered.

The proposition they now wished to make was that the Government should propose a light branch line to Robertson. They would be perfectly satisfied with a light line, and it had been demonstrated by inquiry that such a line would pay, not only the working expenses, but also the interest upon the capital expended. He was aware of the opinion I entertained with reference to the construction of light lines of railway, and believed that this was a district to which a light line might fairly be extended. He trusted that this line would be referred to the Public Works Committee that had recently been appointed, and he had no doubt that they would be able to make out such a case as would lead the committee to approve of the proposal.

Mr. McCourt as one of the Members of the District, stated that he supported the proposal of this line of railway, and stated that he thought they were justly entitled to such a line in view of the population and the production of the district; he believed that the line would pay as well as any that had been submitted by the Government. The estimates that had previously been submitted had been made up on the basis of our main lines, but he thought a light and cheap line of railway, costing not more than £4,000 or £5,000 at the outside, should be adopted, making the total cost about £70,000; he was convinced that taking the traffic as revealed from the business done at Moss Vale, Bowral, and Mittagong which were three of the best paying stations on the Southern Line, that this line would pay handsomely. He, therefore, asked that this line might be submitted for the approval of Parliament, and he did not fear the result of any inquiry.

Mr. Blencowe pointed out that the products of the district were such as required quick transit to market. They did not require a heavy and costly line of railway, but he would be quite satisfied with a light line. He pointed out that the district was one of the most fertile in the Colony, and the soil was proved to be remarkably rich, capable of growing most luxuriantly all kinds of grass, fruits, and vegetables, although it was rather too humid for the successful cultivation of wheat. The population of the district was from 12,000 to 15,000 persons, and he found, according to the statistics for 1886, that the total traffic at Bowral was £13,552, at Moss Vale, £22,155, the largest portion of which would be affected by the proposed line of railway.

An officer of the Department had been in the district, and had borne testimony to the great fertility of the place, and its suitability of sustaining a large population, and admitted that if a railway were made it would give a great impetus to production and settlement.

Mr.

Mr. Harper had made an estimate of the probable traffic, but he (Mr. Blencowe) was satisfied that he had greatly underestimated the probable traffic. For instance, he had made no allowance for milk, which he was satisfied would form a considerable item. Mr. Harper had put down the traffic at 11d. and 1s. 3d. per ton. At present they paid 15s. to 20s., and if an average of 8s. per ton were taken, at least £1,000 more than Mr. Harper's estimate would be obtained, and he believed the line could be made to pay at least 3 per cent. on a capital of £70,000, which was equal to the rate paid by the Great Southern Railway, while the Northern Line paid less than 3 per cent. He believed if a light line were made it would be one of the best paying lines in the Colony.

In reply, I stated that they asked me to submit their proposals at once to the Parliamentary Public Works Committee, but I could submit nothing to that committee without the plans and books of reference and other necessary information.

Mr. Garrett: I think you will find that these have all been prepared some time ago on the ordinary scale.

I stated that I was not aware the Parliamentary plans were ready, if so it would materially expedite the matter. It was not of much moment as to the kind of plans proposed, that could be amended very easily to meet any altered conditions in the way of making the line a light one. I had to see Mr. Whitton in the afternoon with the schedule of the lines proposed, and I would consult him in the matter and have information ready to submit to Cabinet on Monday. Mr. Garrett was aware I was in favour of light railways, and in fact it seemed to me useless if we adopted a system of light railways for these branch lines we would have to do without these feeding lines altogether.

I thought as a light line this branch might be made to pay, but not as a heavy one.

If the plans were complete I would lay them before the Cabinet on Monday.

Will Mr. Whitton please say if plans and book of reference are ready.

JOHN SUTHERLAND, 7/7/88.

1888.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MUSWELLBROOK-CASSILIS RAILWAY LINE.

(CORRESPONDENCE, &c., RESPECTING.)

Ordered by the Legislative Assembly to be printed, 25 October, 1888.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 14th June, 1888, That there be laid upon the Table of this House,—

“ A copy of all plans, specifications, reports, documents, and other papers
“ connected with the Muswellbrook-Cassilis Railway line.”

No. 1.

Petition.

[Presented by Mr. Bell, M.L.C., Mr. M'Laughlin, M.P., and Messrs. Clive, M'Intyre, Parking, and others, 10/11/82.]

To the Honorable John Lackey, Minister for Works, &c., for the Colony of New South Wales.

The Petition of the undersigned residents of Scone, and of settlers on the route of the proposed railway from Scone to Merriwa and Cassilis, in public meeting assembled,—

RESPECTFULLY SHOWETH,—

That your petitioners unanimously assert that, in the construction of a branch line of railway from Merriwa and Cassilis, to join the Great Northern Line, the most direct and least expensive route would be that to Scone, from which place to Merriwa the distance is 16 miles shorter than that from Muswellbrook, *via* Denman.

That your petitioners are confident that the line they advocate would accommodate a larger present population than that *via* Denman, and that moreover there is every prospect—on account of the superior country through which the line now advocated would pass—of settlement increasing at a greater ratio on that route than on that of the line proposed from Muswellbrook.

That your petitioners would call attention to the fact that, in the opinion of professional surveyors and engineers, the difficulties of the intervening country on the respective routes are infinitely less by the route now proposed than on the proposed line *via* Denman, and would further notice that a saving of expense of at least £30,000 or £40,000 would be effected in erecting a bridge across the Hunter, necessitated if the latter route were adopted.

That your petitioners firmly believe that the population and industry—grazing and agricultural—distributed along the country between Scone and Merriwa would be a very important element in the traffic which, by the facilities of a line such as this advocated, would be constantly and greatly augmented.

That your petitioners would finally ask that the foregoing facts may be taken into serious consideration, and would pray that before any decision be come to in favour of any other route, a trial survey may be ordered of the route *via* Scone.

And your petitioners will ever pray, &c., &c., &c.

A. BELL,
Chairman.

Scone, 14th October, 1882.

Acknowledge receipt. Railways.—J.R., B.C., 14/11/82. Ackgd., 14/11/82. The Engineer-in-Chief.—D.V. (*pro* Commr.), 15/11/82. I agree with the petitioners, and think it would be advisable to start the line from Scone instead of Muswellbrook; but, before deciding, surveys should be made.—J.W., 17/11/82. End of year, 17/11/82. No funds available for trial surveys at present.—W.H.Q., 3/1/83. End of March.

No. 2.

Petition.

Messrs. Hungerford, McLaughlin, M's.P.—Petition from the district of Muswellbrook, Denman, and Merriwa, for the construction of a branch line of railway to connect Denman and Cassilis with the Great Northern Line at Muswellbrook.

Railways.—J.R., B.C., 13/11/82. J.W., 17/11/82.

[Presented by Mr. Hungerford, M.P., Mr. Bettington, Mr. White, and Mr. M'Laughlin, M.P.,
10th November, 1882.]

To the Honorable the Minister for Works.

The Petition of the undersigned, representing the towns and adjacent districts of Muswellbrook, Denman, and Merriwa, in public meetings assembled,—

RESPECTFULLY SHEWETH,—

That at monster meetings of the residents of the several localities named opposite the signatures hereunto appended, it was resolved unanimously that the construction of a branch line of railway to connect the towns of Denman, Merriwa, and Cassilis with the Great Northern line at Muswellbrook, is highly desirable, the route indicated being the natural course of traffic from the last-named town and the best available junction to the main trunk line for the towns and districts lying north-west of Muswellbrook.

That a railway line has already been surveyed from Muswellbrook to Mudgee, which, with very slight deviations, will answer all the purposes required.

That the country through which the line—as surveyed—would pass, presents no engineering difficulties, is of the richest description, yields under cultivation immense crops of cereals of the finest quality, and is admirably adapted to grazing, which under the present mode of traffic is the only remunerative pursuit.

That the population and statistics of the localities interested shew that the line hereby advocated would be at least self-supporting; the lands through which it would pass being so suitable for agriculture, an immense impetus would be given to that industry which at present is languishing because an extensive market for its produce is practically inaccessible.

That the method of conveying goods by dray to and from the railway at Muswellbrook is inadequate for the existing traffic.

That should this line be at once proceeded with, the necessity for making expensive mountainous roads over the range of various points to feed the Mudgee-Wallerawang line would be obviated, as that traffic, to be carried on these roads, would be secured by the proposed line from Muswellbrook to Cassilis and westward.

Your Petitioners, therefore, pray your earnest consideration of the foregoing facts, and ask that you will be pleased to cause a sufficient sum of money to be placed upon the Estimates to carry out the said railway.

And your Petitioners, as in duty bound, will ever humbly pray, &c.

S. J. DOWEL, Mayor and Chairman,
For and on behalf of meeting held at Muswellbrook, on Monday, 25th September, 1882.

JAS. B. BETTINGTON, Chairman,
For and on behalf of meeting held at Merriwa, on Saturday, 30th September, 1882.

EDWD. WHITE, Chairman,
For and on behalf of a meeting held at Denman, on Saturday, 16th September, 1882.

FREDK. WM. MORRIS, Chairman,
For and on behalf of a meeting held at Hall's Creek, on Friday, 22nd September, 1882.

No. 3.

H. Stokes, Esq., to The Hon. A. Stuart.

Newcastle, 13 April, 1883.

Re proposed Railway between Muswellbrook and Cassilis.

My dear Mr. Stuart,

The enclosed letter has been handed to me by Mr. Edward Parnell, a gentleman who has resided in this district for many years, and who is the owner of large properties in Newcastle and Jerry's Plains.

He wishes me to represent to you that a more profitable railway can be constructed between Singleton and Cassilis, via Jerry's Plains, than between Muswellbrook and Cassilis.

If you will kindly read his letter, and do what you think right in the matter, you will confer a favour upon me.

Yours, &c.,

HENRY STOKES.

Railways.—B.C. 17/4/83. Forward to Engineer-in-Chief.—B.C. 21/4/83. Mr. Palmer to sec.—
W.H.Q. 24/4/83. Seen, H.P. 24/4/83. E-in-C. 25/4/83.

[Enclosure.]

[Enclosure.]

Dear Stokes,

Newcastle, 12 April, 1883.

In the *S. M. Herald* I noticed that a question had been asked the Colonial Secretary, by Mr. Olliffe, for M'Elhone, respecting the Scone or Muswellbrook Railway to Cassilis, and the answer given was to the effect that these lines should be surveyed for the purpose of determining which of the two should be adopted.

Now I believe if the Government were made aware of all the circumstances they would accept neither line, and I will endeavour to show you why, in the hopes that you will use what influence you possess in endeavouring to prevent a waste of some public money. This I need hardly say, is I believe a duty incumbent upon every Australian, and one I believe you feel, and this must be my apology for troubling you on this subject.

Now some time back, Mr. Gould, the member for Singleton, asked Mr. Copeland if he intended constructing a line between Singleton to Cassilis, via Jerry's Plains. He said he did not because the Engineer-in-Chief had protested against it, for the reason that it would be 80 miles from Singleton to Cassilis by that route, (I am speaking from memory), whereas the line to connect Cassilis by Scone with the Great Northern Railway would be only 50 miles, or from Muswellbrook only 60 miles, therefore one of these two lines would be adopted. Now I presume Mr. Copeland, or the Engineer-in-Chief know little of the country round about Cassilis, Scone, Muswellbrook, Merriwa, Denman, Jerry's Plains, and Singleton, or they would not come to the conclusion that, because the line is longer between Singleton, via Jerry's Plains to Cassilis, than it is between Cassilis and Scone or Muswellbrook, that it must necessarily be more expensive.

These gentlemen are perhaps not aware that about 24 years ago, a line was marked somewhere about Singleton and continued to, or nearly to Cassilis by a person named Rowland, a surveyor of high character, he being one of the twelve, Sir William Denison was instrumental in bringing to the Colony for the special purpose of surveying and reporting upon the best lines for general railway purposes. And I heard Mr. Rowland say, the Jerry's Plains line was the best he ever surveyed; and one presenting few, if any engineering difficulties.

I contend therefore, that this last-mentioned line would be the best, because either of the other lines would be more costly, as there are high ranges to cross in both cases, and in one the Hunter to bridge. And if these were effected, the result would be a much longer line, as it is 50 miles from Cassilis to Scone, and 46 from Scone to Singleton, making that distance 96 miles, and from Cassilis to Muswellbrook 60 miles, and from thence to Singleton 31 miles making this line 91 miles. So that in coming from Cassilis to Singleton through Scone it would be 96 miles, or from Cassilis through Muswellbrook it would be 91 miles, now as it is only 80 miles from Singleton to Cassilis via Jerry's Plains, there would be a saving of haulage by this last named route of 16 miles in the one case and 11 in the other.

'Tis true there are in the Scone route 46 miles already available, and 30 in the Muswellbrook line, despite this advantage I contend, and hundreds agree with me, that the line from Singleton through Jerry's Plains, Denman, and Merriwa to Cassilis would be the cheapest, as there are no high mountains to cut through, or Rivers to cross, except the Wolombi Brook, and the Goulburn which is a mere tributary of the Hunter, and the best as a "Feeder" because it passes through five times as much valuable country as the other lines, and possessed by ten times as many proprietors, and last but not least passes through a great deal of Government land (between Singleton and Jerry's Plains) and would thereby enhance the value of the national estate, as the unalienated land alluded to is covered with a forest of very valuable ironbark and other trees,

Now to make this matter lucid I have been guilty of great repetition, which I trust you will excuse.

Believe me to be,

Yours, &c.,

EDW. PARNELL.

No. 4.

Memo. from Mr. O'Keefe to J. M'Laughlin, Esq., M.P.

Dear Sir,

July 23, 1883.

Your letter to hand last night. The Committee are in great anxiety about the survey of our line not being proceeded with *at once, as promised*. I am requested to enquire from you if it is necessary to send a deputation to the Minister for Works, or can you get this promise fulfilled. There have been two surveyors sent to a line which was promised since ours, viz., Mudgee to Coonamble, and a promise has been given to survey a line, Werris Creek to Dubbo, which would shut us out completely. Gather what information possible, and let us know at once to appease anxiety of the people. I want to call the Committee together but have no information to lay before them.

Inform Mr. M'Laughlin that survey from Muswellbrook to Cassilis will be made.—F.A.W., 28/7/83. Mr. Whitton, B.C., 31/7/83.—J.R. Mr. Palmer.—W.H.Q., 1/10/83. The trial survey from Muswellbrook to Cassilis, *via* Merriwa, has already been commenced by Mr. Burrowes.—H.P., 1/10/83.

No. 5.

Memo. by The Secretary for Public Works.

Re Survey of line, Muswellbrook to Cassilis.

MR. JOHN McELHONE, M.P., has written to me asking that a survey might be made for a tramway or railway to Cassilis. I have written to Mr. McElhone promising that as soon as surveyors are available a survey would be made from Muswellbrook to Cassilis which I consider the best route to adopt.

F.A.W., 14/7/83.

Railways.—B.C., 14/7/83.

Mr. Palmer.—W.H.Q.,

No. 6.

N. F. Asser, Esq., to The Secretary for Public Works.

Sir,

Scone, 20 February, 1883.

Being one of the deputation that waited upon the late Minister for Works *re* the railway from Scone to Cassilis, I consider it would not be acting in justice to myself and inhabitants of this district not to apprise you of the fact that a petition is being got up by the people of Muswellbrook urging their route, and collectors are getting this petition signed by all and whom they can. The collectors of these names have a contract for such names as they get, and are paid for such at the rate of 7s. per dozen, or 7d. for every name this collector gets. I hope you will take this into consideration when the petition is presented, as I am informed numbers of signatures have been obtained to this petition who are neither interested in one spot or the other, but have signed it on account of the pressure brought to bear by these paid collectors of names.

I have, &c.,

N. F. ASSER.

Railways.—B.C., 22/2/83.

No. 7.

No. 7.

Mr. Surveyor Burrowes to The Engineer-in-Chief for Railways.

Sir,

Railway Survey Camp, Muswellbrook, September 7, 1883.

I have the honor herewith to inform you that after due and careful examination of the country west of Muswellbrook, as far as Pike's Gap (Wybong Creek) I find that it is thoroughly impregnable for a line of railway, the mountains and gorges being very steep and broken, and, the way that I now propose to run my line is down the Hunter River for about seven miles, on the south bank. By doing this I avoid all mountainous country, and am on good open country, and then cross the river and strike due west on a good open flat to Wybong Creek, the only gap in the range that a line can be taken through, but, by keeping about $2\frac{1}{2}$ miles to the south, I avoid the range altogether, where the range terminates on the Goulburn. I then have good level country the whole way.

I have, &c.,

CHARLES A. BURROWES,

Railway Survey, Muswellbrook.

Mr. Palmer.—W.H.Q., 7/9/83.

Seen.—H.P., 7/9/83.

No. 8.

J. P. Abbott, Esq., M.P., to The Secretary for Public Works.

Sir,

6 and 7, Wentworth Court, Sydney, October 13, 1883.

I have the honor to enclose to you a letter from Mr. N. F. Asser, of Scone, in reference to a trial survey of the line from Merriwa to the Great Northern. I would urge that before any decision is arrived at, that a survey should be made between Scone and Merriwa, and that the owners of land on that route, as also upon the one from Muswellbrook to Merriwa, should be asked to sign a document, agreeing to give the land required free. I am quite sure the bulk of the owners will do so.

I have, &c.,

J. P. ABBOTT.

Inform Mr. Abbott that as the trial survey now being made from Muswellbrook to Cassilis is being made *via* Merriwa, I cannot see any reason for an additional survey; but that if surveyor can be spared from other work the line may be surveyed in time.—F.A.W., 19/10/83.

Mr. Whitton.—J.R., B.C., 23/10/83.

Mr. Palmer.—W.H.Q., 26/10/83.

Noted.—H.P.,

26/10/83.

[Enclosure.]

Honorable J. P. Abbott, M.P.,—

Scone, 11 October, 1883.

Dear Sir,

I had intended seeing you when you went through yesterday, but could not get up to station in time. Last year I made one of a deputation that waited upon the late Minister for Works, the Honorable J. Lackey, *re* a survey for a Railway from Scone to Merriwa, &c., which Mr. Lackey promised, that a trial survey should be made from here as well as Muswellbrook. The survey is at present being made from Muswellbrook, and we in this district believe that the line taken from Scone would serve a greater number of people than via the Brook and Denman, and be cheaper, and Donald Macintyre, Esq., who was also one of the deputation, offered the land required going through his property on the Scone route. So far as I can learn a practicable route cannot be had direct from Muswellbrook, and it would have to be taken to Piercefield before crossing the river, which will take a very expensive bridge. If you will kindly lay this matter before the Minister for Works you will oblige yours respectfully,

N. F. ASSER.

Sir John Robertson and R. H. Levien promised to see Mr. Wright about this matter, but I thought more the better.

No. 9.

John McElhone, Esq., M.P., to The Secretary for Public Works.

Sir,

Sydney, 15 October, 1883.

I have the honor to enclose you petition from the inhabitants of Denman, praying that the railway survey from Muswellbrook to Cassilis may be taken or made by Denman, and have the honor to request that you will be pleased to give instructions to have the survey made via Denman. It is the centre of a large district, and a large quantity of wheat, wine, &c., is produced on the Goulburn River close by Denman, and its natural outlet is at Denman. Trusting that you will grant the request of the petitioners.

I have, &c.,

JOHN McELHONE.

Inform that I cannot consent to a line surveyed to Denman hence to Cassilis, as it would be too much of a round, Denman being very much out of the direct line.—F.A.W., 17/10/83. J. McElhone, Esq., M.P., 18/10/83. Railways.—J.R., B.C., 19/10/83.

[Enclosures.]

Dear Sir,

Denman, 10 October, 1883.

We had a meeting in reference to the subject of the enclosed Petition a few days [ago] at Denman. The following motions were unanimously carried:—

"That Mr. James Gillies be elected Hon. Secretary."

"That Messrs. J. Gillies and W. C. Brecht be authorized to draw up a draft Petition."

"That Messrs W. C. Brecht, M. Doyle, J. H. Saunders, W. Day, H. Stent, and G. Ross, be appointed a Committee to collect signatures and carry out the purposes of the meeting."

We now confidently put the matter into the hands of you and Mr. McLaughlin, knowing from past experience that you will do all in your power to forward our interests. We beg to request that you will use all possible despatch, as the Railway Surveyor has now reached the point where the line will turn towards or turn away from Denman, and he is waiting instructions as to which way he should run it.

Yours faithfully,

JAMES GILLIES

John McElhone, Esq., M.L.A., Sydney.

(Pro. Committee and other signers.)

To

To the Honorable the Minister for Works, Sydney

The Petition of the undersigned inhabitants of Denman and the surrounding district,—

Respectfully sheweth:—

That having anxiously watched several years for the construction of a line of railway to connect our township and district with the Great Northern Railway, it is with regret and surprise that we learn that it is contemplated to run the line which is now being surveyed from Muswellbrook to Cassilis at a distance of over 3 miles from Denman.

That Denman is the natural centre and outlet of about 200 square miles of rich agricultural and pastoral land and wheat growing and wine culture are extensively carried on in the district, and large quantities of these commodities and also great numbers of fat stock are annually sent away.

That the neighbourhood of Denman has a population of over 800, and the township contains three substantial Church buildings, School of Arts, Stores, Hotels, Flour and Saw Mills, a Court-house and Police Quarters, Post and Telegraph Office, and a Public School attended by 100 children, besides the usual private dwellings; and there is every reasonable prospect of a large increase in the settlement and population of the neighbourhood, as there is available a good deal of Crown Lands which is being rapidly appropriated and settled on (as can be ascertained by reference to the Lands Office), as well as a large area of town allotments, Government property, the value of which by bringing the railway near to them would be enhanced to an extent that would nearly if not quite compensate for any extra cost that might be incurred in slightly deviating the line to suit the conveniences of the people.

That all these interests would be most prejudicially affected, our properties depreciated in value, and we would be put to most serious loss and inconvenience if the line were to run at such a distance from the township.

We therefore regard the matter with utmost concern and anxiety, and beg humbly to submit that, as the ground is quite level and no engineering difficulties in the way, a fact which the engineer surveying the line, after having carefully inspected it fully admits, we have good grounds for requesting that the line be brought through the township.

We trust that you will take these premises into favourable consideration, and your petitioners, as in duty bound, will ever pray.

No. 10.

J. McElhone, Esq., M.P., to The Secretary for Public Works.

Sir,

Sydney, 22 October, 1883.

I have the honor to acknowledge receipt of letter of 18th instant, advising me that Denman is considerably out of the direct line—Mudgee to Cassilis—and the Secretary for Public Works is unable to comply with my request to survey a railway line to Denman.

I have the honor to inform you that I did not mention the Mudgee line to Cassilis, as there is no such line.

The petitioners requested that the trial survey of a line from Muswellbrook to Cassilis Line might be made *via* Denman.

As the surveyors are close to Denman, and it would cost very little to make the survey asked for, I have again the honor to request that you will be pleased to order that a survey may be made *via* Denman to Cassilis.

And I would point out to you that a trial survey which cost a lot of money was made *via* Port Hacking to Woollongong, and which I believe would not have been made if one of your colleagues had not owned a large area of land through which this survey went.

Such being the case, and as it is unusual to refuse to grant a survey of a few miles to Denman, which will cost very little to make, I hope you will reconsider your decision, and order a trial survey to be made to Denman of the line being surveyed from Muswellbrook to Cassilis.

I also requested that you would be pleased to give instructions to continue the trial survey from Cassilis to Coolah, as Coolah is the centre of a large wool-producing district. As the latter must have escaped your notice I trust the survey will be continued from Cassilis to Coolah.

Yours, &c.,
J. McELHONE.

The Hon. F. Wright, Minister for Works.

Inform of mistake and state that when survey now being made between Muswellbrook and Cassilis is complete I will, in deference to your repeated request, have a survey made of a route which will include Denman, but that I cannot promise a survey from Cassilis to Coolah.—F.A.W., 24/10/83.

John McElhone, Esq., M.P., 24/10/83.

Railways.—J.R., B.C., 26/10/83. Engineer-in-Chief (*pro* Commissioner).—G.B., B.C., 31/10/83.

Mr. Palmer.—W.H.Q., 2/11/83. H.P., 3/11/83.

No. 11.

J. McElhone, Esq., M.P., to The Secretary for Public Works.

Sir,

Sydney, 23 February, 1884.

I have the honor to forward you letter received by me from Mr. E. O'Keeffe, Secretary of the Merriwa Railway Committee, in reference to the trial survey from Muswellbrook to Merriwa being stopped at or near Giant's Creek.

I will feel obliged if you will cause me to be advised as to the cause of the stopping of the above trial survey if it is stopped, and if so, when it is likely that it will be again gone on with.

Yours, &c.,
J. McELHONE.

[Enclosure.]

Dear Sir,

Merriwa, 20 February, 1884.

In compliance with a resolution passed to-night at a meeting of the Merriwa Railway Committee.

I am directed to inform you that the survey of our railway line, Muswellbrook to Merriwa, has been suspended. The survey has reached Giant's Creek, about 30 miles from Muswellbrook (rumour says through scarcity of water), but such an excuse, if put forward, is not feasible; there being a sufficient supply of good water all along the route.

The Committee requests that you will be good enough to ascertain from the Minister the real cause of this stoppage, and urge the continuance of this survey without delay.

I am, &c.,
EDWARD O'KEEFFE,
Hon. Secretary, Merriwa Railway Committee.

P.S.—The people are in a ferment over this stoppage, which they fear is an attempt to shelve our railway.—E.O.K.

John McElhone, Esq., M.P.

Mr. Whitton for report.—F.A.W., 26/2/84. J.R., B.C., 27/2/84. Mr. Palmer.—W.H.Q., 1/3/84.

This survey was stopped through the surveyor who was engaged upon it having reported that there was a total absence of water along the whole route of survey between Giant's Creek and Merriwa, after having

having been specially instructed to examine the country throughout and to ascertain whether there was any portion of the survey that might be taken up. Another surveyor may be sent to continue the survey immediately after the district has been visited by a sufficient fall of rain.—H.P., 3/3/84.

Under Secretary, B.C., 5/3/84. P.W.O., 6/3/84. Inform.—F.A.W., 7/3/84. John McElhone, Esq., M.P., 10/3/84. Mr. Whitton, B.C., 10/3/84.—J.R.

No. 12.

J. M'Laughlin, Esq., M.P., to The Secretary for Public Works.

Dear Sir,

Temple Court, King-street, Sydney, 25 February, 1884.

Herewith I enclose you a letter received by me from the Hon. Secretary of the Merriwa Railway Committee; kindly peruse same and let me know the present position of the survey referred to.

I am, &c.,

JNO. M'LAUGHLIN.

[Enclosure.]

Dear Sir,

Merriwa, 20 February, 1884.

In compliance with a resolution passed to-night at a meeting of the Merriwa Railway Committee, I am directed to inform you that the survey of our railway-line from Muswellbrook to Merriwa, has been suspended (rumour says through scarcity of water), but such an excuse, if put forward, is not feasible, there being a sufficient supply of good water convenient all along the route. The survey work has reached Giant's Creek, about 30 miles from Muswellbrook, and now stopped.

The Committee request that you will be good enough to ascertain from the Minister the real cause of this stoppage of the survey, and to urge the continuance of the work without delay.

I am, &c.,

EDWARD O'KEEFE,

Hon. Secretary, Merriwa Railway Committee.

John M'Laughlin, Esq., M.P.

Place with letters from Mr. McElhone and send on to Mr. Whitton for report.—F.A.W., 26/2/84.

No. 13.

Mr. Surveyor Burrowes to The Engineer-in-Chief.

Sir,

Railway Survey Camp, Hall's Creek, *via* Denman, 15 January, 1884.

I have the honor to inform you that, owing to the severe drought in this district, the water is fast failing, and I am now reduced to one small hole on the township reserve at Hall's Creek, there being no other waters available. Giant's Creek is dry, as well as Hall's Creek, with the exception of this hole, and as travelling stock are coming along this road in great numbers and dying in hundreds along the road, and in the waterhole that we get our water from we have had to drag a couple of dead bullocks out of, the water cannot last but a few days longer without rain, and the nearest water is the Hunter and Goulburn, about 20 and 10 miles away. Please instruct me further. If we get rain it will be all right here, but if none I am at a loss as to know what to do. All the farmers have to leave their farms and go on to water, and the country here, in general, is in a deplorable state.

I have, &c.,

CHARLES A. BURROWES,

Railway Surveyor.

Mr. Palmer.—J.W., 17/1/84.

Mr. Burrowes instructed to report whether, in the event of a continuance of the drought, there are other points along the route of this trial survey (say) at Merriwa or Cassilis where there is a sufficiency of water to enable him to take up the survey and work back to meet the portion already surveyed.—H.P., 17/1/84. End of month.

No. 14.

The Assistant Engineer for Trial Surveys to Mr. Surveyor Burrowes.

17 January, 1884.

With reference to your report dated the 15th instant, as to the scarcity of water at Hall's Creek, where you are now engaged on the Muswellbrook and Cassilis trial survey, you should ascertain and report without delay whether there are other points along the route of this trial line (say) at Merriwa or Cassilis where you could obtain water in sufficient quantities to enable you to carry out your work, and from which you could survey to meet the portion already surveyed. This course should not be adopted unless you are compelled to do so, and as it has been raining here to-day, I trust your supply has been augmented.

HERBERT PALMER.

No. 15.

Mr. Surveyor Burrowes to The Engineer-in-Chief.

Sir,

Merriwa, 19 January, 1884.

Mr. Palmer's letter to hand, No. 84-17, on receipt of which I left for Merriwa and Cassilis to see if a point could be taken up where I could connect my work with my present working, and after carefully inspecting round Merriwa find that there is no water here or between here and my line. The country is simply in a deplorable condition, and my men are suffering from the very bad water, one man having to leave me and go to the hospital. The water is simply putrid, and from what I learn at present there is little or no water between here and Cassilis, but will report to you by Tuesday's mail.

Yesterday was a very cloudy day here, but to-day is as usual, dry, hot winds again. I had to sink a hole for water, but obtained none, and have had to drag dead cattle out of the hole we are now using.

In the event of not getting water between here and Cassilis, I might mention that it would be advisable to strike my camp and leave it at Hall's Creek until such time as we get rain, and discharge my men. They are sinking in the Hunter River for water at the present time at Muswellbrook and other places, and the Goulburn River is quite salt.

If we do not get water I fear that we will have serious illnesses in camp through such water. Will write further on inspection between here and Cassilis.

I have, &c.,

CHARLES A. BURROWES.

Mr. Palmer.—W.H.Q., 22/1/84. H.P., 23/1/84.

No. 16.

The Assistant Engineer for Trial Surveys to Mr. Surveyor Burrowes.

25 January, 1884.

As it appears from your reports that the trial survey from Muswellbrook to Cassilis cannot be continued at present in a satisfactory manner, through the scarcity of water in the district, you may break up your party and return to Sydney. As it is uncertain at what time this survey will be again taken up, you should either bring your equipment to Sydney or leave it stored, so that you might have it forwarded to Sydney without difficulty when required. You will be allowed to bring to Sydney those of your party only that you took up with you.

HERBERT PALMER.

No. 17.

Telegram from Mr. Surveyor Burrowes to The Engineer-in-Chief.

Merriwa.

Am leaving for Merriwa and Cassilis *re* water. No rain. Country deplorable. Will write Monday's mail. Have sunk for water, but none.

CHAS. A. BURROWES.

Railway Department.

Mr. Palmer.—W.H.Q., 21/1/84. Seen.—H.P., 21/1/84.

No. 18.

Mr. Surveyor Whitlock to The Assistant Engineer for Trial Surveys.

Sir,

Post Office, Giant's Creek, 16 May, 1884.

I have run a curve roughly at the Muswellbrook station, but to stake it out will take some time, owing to obstructions, &c.; therefore I went on to the above place, and am running the line as you directed; then I will proceed with the main work onward, back, and also forward, so as to try and raise the gradient and get clear away. I can at any time drive down to Muswellbrook and complete that part of the work, but perhaps the curve as it is now set out may be improved so as to keep off the banks of the river. Will you allow me to try to do so, or propose a way to deviate the creek. Address Giant's Creek for the present.

I have, &c.,

J. S. WHITLOCK.

Instructions sent to Mr. Whitlock.—H.P., 19/5/84. Put by.

No. 19.

The Assistant Engineer for Trial Surveys to Mr. Surveyor Whitlock.

19 May, 1884.

You must procure, without delay, the additional information at Muswellbrook, where the trial survey to Cassilis leaves the Northern Railway, as I instructed you before leaving the office, viz., to stake a traverse to suit approximately the curve I laid down on the plan, and level the same; also to take the few necessary cross levels to show whether the floods from the Hunter River will prevent any portion of the line, as surveyed by Mr. Burrowes, being adopted.

HERBERT PALMER.

No. 20.

The Assistant Engineer for Trial Surveys to Mr. Surveyor Whitlock.

19 May, 1884.

UNDER separate cover I have forwarded the parish maps and reference sheets as requested. There is no report of Mr. Burrowes that could be of any use to you. You must examine the country from the termination of that surveyor's plan and section to Merriwa, and after completing the survey to that point, can examine the remaining length to Cassilis, before continuing the survey beyond Merriwa.

HERBERT PALMER.

No. 21.

Mr. Surveyor Whitlock to The Engineer-in-Chief.

Sir,

Survey Camp, Gungull, Muswellbrook, 9 June, 1884.

In reply to instructions, 9th May, 1884, No. 84-105, which I will carry out, Mr. Burrowes' reports will be of no use to me, and I need not have asked for them, except under orders to do so. There will be no difficulty in defining the route into Merriwa, the starting point having been determined by Mr.

Mr. Burrowes, where he left off work, and traced out the line, the direction of which goes up the Giant's Creek Valley, which takes the line over a ghaat or gap from Giant's to Hall's Creek, similar to the one at the 19th mile or near Pyke's Gap. I have tried some deviations and cross sections. The line over this gap, as per section enclosed, can be much improved. I will report on the line to Merriwa as early as possible, as per instructions to examine the country. To save time and expense, perhaps (if you deem it advisable) it may be as well to employ some one for a day or two who knows the country well, to accompany me, to go over the ground, before I lay out the proposed line of railway, and probably by so doing, I might get the best line at once, as it is a rough country beyond Gungal.

The line having been fixed by Mr. Burrowes to go through the ghauts or gaps at the 19 and 27 miles, you may not have any objection, there being also another gap (via the Wappengai), which will necessarily (under any circumstances) have to be crossed, a distance of 7 miles, before reaching Merriwa.

On the contrary, should you wish to consider a line, via Denman, keeping level country, avoiding altogether the gaps at the 19 and 27 miles, as this is not in my work, and no time allowed for it, I shall, however, avoid reporting in any official diary on such matters, except in carrying out instructions received from time to time. As per instructions, No. 84-104, the 25-chain curve, as marked on my sketch tracing to suit approximately the ground, crosses the Sydney St. (Denman's Road), some distance from the present railway level crossing, and would destroy some good houses and one large hotel. The junction or points would also leave the rails at the south end of the Muswellbrook platform (which may be objectionable). The levels are nearly the same as over the original line. The highest flood levels of River Hunter reached about 3 feet below the present level of the railway, crossing the Public Road north of the railway station, and came over the road about 6 chains below the crossing (Denman's side of the same). There is no fear of floods preventing any portion of the line, as surveyed by Mr. Burrowes, being adopted, as the line where it crosses the Public Road bridge, is out of flood level. This flood level will apply along the line by the River Hunter. The floods have never gone over the Public Road bridge. Muswellbrook Creek might be much improved by diverting the stream to let out the back water. The present curve, a 15-chain radius, goes off north of the railway station.

By reducing the radius of curve leading from the Muswellbrook Railway Station, if you wish and deem it advisable, to 12-chain radius, a longer lead can be obtained for the points from the station, and perhaps you may approve of the line being nearer the present railway level crossing, or nearly into the same, and also to run the line about half a chain further off the river, and join the original line further on by a curve. It might probably be so arranged as not to interfere with the present Public Road bridge crossing the creek at the railway level crossing.

There may be curves of 12 chain radius on other portions of the line near stations. Perhaps it may be deemed advisable to adopt a smaller curve than 15 chains, looking at the advantages to be gained, and the line can be kept parallel to the river bank.

Absence from my camp for some days on the line towards the 20th mile, delayed me sending this information, and I was anxious to send levels of the gap at the 27th mile.

Under instructions, I have inspected and tried some deviations at the ghaat or gap, 19th mile, to try and improve the original line. These all give a grade of 1 in 40, and on the summit, 20 chains of tunnel with 100 feet above it, too deep for open cutting. Under no circumstances can the original line be improved at that point. It is confined to a small area in crossing the gap, and runs nearly on the square from valley to valley; by trying to creep up the sides of the hills could only be done by taking a long circuit and returning on the other side to the same point.

At Pyke's Gap, some distance off where the mail coach goes on the Public Road, the gap at the 19th mile is much easier and a better line, so that it cannot be improved at that point. The direction of the line onwards has been fixed by Mr. Burrowes (via Giant's Creek), which I am trying to improve at the gap, by going a considerable distance back, and creeping up the sides of the hills to reach the summit, or by diverging into another gap a little further down towards Gungal, and so try and get it nearer the township.

I have, &c.,

JOHN S. WHITLOCK.

Mr. Palmer.—W.H.Q., 12/6/84. Seen.—H.P., 13/6/84. I presume Mr. Whitlock has had all necessary instructions for the direction of this line.—J.W., 20/6/84. Mr. Palmer. I went carefully through plans of this district with Mr. Whitlock before he left, and gave him all necessary instructions.—H.P., 20/6/84.

No. 22.

The Assistant Engineer for Trial Surveys to Mr. Surveyor Whitlock.

13 June, 1884.

PLEASE forward at the end of the present month a tracing of reduction (to the county map scale of 2 miles to an inch) of the plan of your trial survey completed to that date, from the end of Mr. Burrowes' work towards Cassilis, and at the end of each succeeding month send in a similar tracing, shewing the monthly progress made with this survey until completion to Cassilis.

HERBERT PALMER.

No. 23.

Mr. Surveyor Whitlock to The Engineer-in-Chief.

Sir,

Wappengai, Gungal P.O., via Muswellbrook, 30 June, 1884.

I have the honor to state that, under instructions, I beg to forward a tracing of a reduction (to the county map scale—2 miles to an inch) of the survey plan complete to date. I commenced to run the centre line and take the permanent levels from the end of Mr. Burrowes' work, viz., the 21st mile, B.M. 22, datum, 542.64 ft., 1 chain east of line.

A similar tracing, showing the monthly progress made with the survey until completion to Cassilis will be furnished hereafter, as per your instructions, No. 84-124.

I shall proceed to inspect the route to Cassilis on the completion of work to Merriwa, about the end of next month, as per instructions, No. 84-105.

Two

Two Gaps or High Hills have been crossed, similar to the one at the 19th mile, viz., from Giants to Hall's Creek, at 28½ miles, and the other to get to the Worondi Creek, about 33 miles, marked on tracing.

Gradients, probably averaging 1 in 60-50; width of Hall's Creek average 1½ chain, with drainage area, say 20 miles by 4 miles.

I estimate that in the distance from the 21st to 33rd mile, four 6-foot and three 12-foot openings will be wanted for drainage to the creeks, and these may answer for cattle passes and occupation roads. 3 road crossings will, necessarily be required at the 26th, 28½, and 32nd miles.

Drainage area to small openings is only limited in all cases. Hills surrounding and ground undulating, &c., to the creeks.

Good building stone and lime is to be found, also an average supply of timber in the above locality. Supply of water, very limited.

I will furnish a report from the 33rd mile on to the Wappingai Gap in July report hence to Merriwa. This gap appears to be the most difficult one to cross. Gradients may be expected from 1 to 35 to 40.

It may be desirable to run more than one trial line over it to find the best crossing, also to take some cross sections to the Worondi Creek.

I believe after passing Merriwa the country is more favourable—less undulating; consequently not so tedious in selecting the route.

I estimate it may take at least four months to complete the length to Cassilis.

Supplies cannot be had nearer than Muswellbrook, and this only for daily cash payments.

The district from the 25th mile to the 35th mile is very rough and undulating, and beyond it to Merriwa. I have, &c.,

JOHN S. WHITLOCK.

Copy of sections of gaps will follow.—J.S.W.

No. 24.

Report of Line from Muswellbrook towards Cassilis, distance 25 miles 34 chains.

Railway Survey Department, 26 February, 1884.

The Engineer-in-Chief, Railway Department, Sydney,—

Sir,

I have the honor to report as follows, respecting my trial survey from Muswellbrook towards Cassilis:—

Bridges.—The first is over Muswellbrook Creek, on a 15-chain radius, at the approach to the Muswellbrook railway-station, and can be spanned without much difficulty, as the banks on both sides are very high. No. 2 is over the Hunter River, at Pearcefield, distance from Muswellbrook, 9 miles 50 chains. The foundation to this is really first-class, being a fine ledge of rocks extending over the river at an angle of 10 degrees. There is here, on the right bank, a very heavy seam of first-class coal, and showing itself in many places, and this has been tested and found equivalent to Newcastle coal. The banks on the river here are also very high, and the approaches good. No. 3 will be over the Wybong Creek, distance from Muswellbrook 16 miles 47 chains. This also is on a ledge of rocks, with good high banks; and this creek has never been known to overflow its banks. No. 4. The fourth is Giant's Creek, a small creek some 22 miles from Muswellbrook, and is not of any importance, being only a little over 1 chain wide, and as this creek has never flooded I think there will be no difficulty in having a very light structure here.

Culverts.—The culverts are not numerous, and only pertain to water ruts and very small gullies, a shown on general plan, many of which by training water courses can be avoided altogether.

Ballast.—This line is well supplied with first-class blue metal, and after the Wybong Creek is crossed metal of the very best description is attainable all along the line, and extra large quantities may be had anywhere, and especially at the foot of the range on the Stock Reserve, distance 22 miles from Muswellbrook.

Timber.—The timber is of a first-class description, being stout iron-bark, and different descriptions of gums, and also Cyprus pine of a large sort. The timber is in every way adapted for sleepers, piles, and railway construction in general, and the pine of a large enough description to be utilised in railway buildings, stations, &c.

Water.—Permanent water is only found in the Hunter River and the Wybong; but the Wybong has run dry this year, a thing which has never been known before.

Tunnels.—There are no tunnels of any description, and, with the exception of one or two places, is comparatively level.

Cuttings.—There are only two cuttings of any importance, which will be seen on my section—that on the main range, Pike's Gap; and one distant about four miles from the Hunter River.

Forming.—For the first 14 miles, with the exception of a small rise at Eden Glassie, distant from Muswellbrook about 4 miles, it will be all forming; and from the small cutting required at Eden Glassie there will not be found much bank to utilise in the formation. The rest of the line, excepting that shown, will be undulating country.

The Soils from Muswellbrook to a point 14 miles from Muswellbrook will be found to be a light loamy clay for a depth of about two feet; then will be found a sort of gravelly clay, with chalk stone suitable for forming.

Bricks.—At a distance of two miles and nine miles will be found, a short distance from the line, some splendid clay, suitable in every way for first-class bricks. Bricks of a very good description have been made at both these places.

CHARLES A. BURROWEES,

Railway Surveyor.

Mr. Palmer for report.—W.H.Q., 12/8/84.

The section of this portion of the proposed Muswellbrook and Cassilis Railway is a fairly easy one, with the exception of about 4 miles—viz., about 2 miles on each side of Pike's Gap. Here, according to the section of trial survey, there will be a tunnel, 23 chains in length, with very heavy cuttings on either side and grades of 1 in 40 for the greater part of the length. The bridges over the Muscle Creek and the River Hunter will also add considerably to the cost of the line.—H.P., 11/9/82.

No. 25.

This is not correct. There will be a tunnel required through Pike's Gap, 23 chains in length.—H.P., 11/9/84.

No. 25.

Mr. O'Keeffe to Mr. Surveyor Whitlock.

Dear Sir,

Merriwa, 4 August, 1884.

I am directed to inform you that at a public meeting, held at the School of Arts this evening, a resolution was carried by a majority of nearly three to one in favour of the junction of Venacher and M'Kenzie Streets being the best site for the Railway Station at Merriwa, this being most convenient for the townspeople, and clean in all seasons.

I may here remark that the Chairman (Mr. Bettington), in expressing concurrence with the meeting, stated that the site adopted was identical with that which you recommend.

I am, &c.,

EDWARD O'KEEFFE,

Hon. Secretary Merriwa Railway Committee.

Mr. Palmer.—W.H.Q., 4 Sept., 1884. Seen.—H.P., 4/9/84.

No. 26.

Mr. Surveyor Whitlock to The Engineer-in-Chief.

Merriwa, 6 August, 1884.

Report on the proposed trial line of railway, Muswellbrook to Merriwa, hence Cassilis, ending July, 1884.

HAVING previously remarked upon the line from the 21st mile (where Mr. Burrowes left off the work) as far as the Wappengai Gap, I now forward a general summary of the main features of the line from Muswellbrook to Merriwa, viz. :—

- No. 1. Gap at 19 miles.
2. Gap crossing from Giant's to Hall's Creek, at 28 miles.
3. Gap near the public road, at 33 miles.
4. Gap Wappengai, crossing the Worondi Creek, 37½ miles.

Owing to difficulty in crossing the last-named place, it was necessary to abandon about 2 miles of the line previously set out, before approaching the valley and summit, and take the line further on to meet a gully (which I afterwards found), and run it up, for an easier approach over the Wappengai Gap—hence a better gradient into Merriwa. Gradients in this length will be about 1 in 40. Building and limestone plentiful, also good and suitable timber for general work, but not for pile-driving and girder bridges; water is very scarce in these districts.

Bridges of importance—

- One crossing the Hunter River, about 9½ miles from Muswellbrook.
 - One crossing the Wybong Creek, at 16½ miles.
 - One viaduct, at 34½ miles, crossing a deep gully.
 - One viaduct, at 37 miles, crossing Worondi Creek, and valley approaching the Wappengai Gap.
- Length of each, about 4 to 5 chains. A similar one required over the Merriwa Creek.

Earthwork of an easy nature, as previously remarked. The deep cuttings composed of soft rock.

Railway Stations—

Permanent one required, about 29 miles, for passenger and goods traffic, to accommodate Giant and Halls valleys, and the public road, near Gungah, of some importance on the route. A station or platform may also be wanted at 21 and 35½ miles.

I have completed the survey as far as the 41st mile, and fixed the entrance into and leaving the town (crossing the river on the square), and for a few miles leading to Cassilis; as also I have settled upon the site for the station at the town of Merriwa. I shall at once proceed to inspect the country forward to Cassilis, as per instructions, 84/105. In the meantime the men will be engaged clearing the line and removing camp.

It was necessary to employ a guide for a few days to accompany me and point out the different gullies and valleys, crossing the Wappengai Gap, and hence into Merriwa, and in like manner it may be desirable to have some one for a few days over the ground to Cassilis. I understand that the country is very undulating, crossing from valley to valley, all the way more or less.

A tracing of a reduction to the county map—scale, 2 miles to an inch—of the trial survey plan forwarded of work completed as per instructions, 84/124.

Drainage area of the Worondi Creek is limited to a few miles; this I could not ascertain. There is no danger from floods in the creeks to bridges or railway embankments, as the fall in the creeks is rapid, and the water does not exceed the banks.

Mr. Palmer.—W.H.Q., 11 Aug., 1884. Mr. Whitlock instructed to send in without delay the plan and section of his portion of the survey as far as Merriwa.—H.P., 11/8/84.

No. 27.

The Assistant Engineer for Trial Surveys to Mr. Surveyor Whitlock.

11 August, 1884.

THE trial survey between Muswellbrook and Merriwa having been completed, you will be good enough to forward without delay the plan and section of the lengths surveyed by you, and if not ready to send in on receipt of this memo. please reply by what date it will be forwarded.

HERBERT PALMER.

No. 28.

No. 28.

Mr. Surveyor Whitlock to The Engineer-in-Chief.

Sir, P.O., Merriwa, Muswellbrook, 15 August, 1884.
 I have the honor to reply to your memo. No. 84-152, posted in Sydney on the 12th instant, reached me on the 15th. Telegram to hand. I will endeavor to dispatch plan and section of my work early part of next week. There is no mail from Merriwa on a Tuesday; will, if possible, send it on Wednesday, so as to reach Sydney on Thursday.
 I have, &c.,
 JOHN S. WHITLOCK.

Mr. Palmer.—W.H.Q., 18/8/84.

Tracings received.—H.P., 23/8/84.

No. 29.

Mr. Surveyor Whitlock to The Engineer-in-Chief.

Railway Survey Camp, Merriwa, 20 August, 1884.
 Trial survey, Muswellbrook to Cassilis.
 Sir,
 I have the honor to forward tracing of plan and section and list, showing length of lines; bearings, &c., as per memo. 84-152.

I required a little more information to make the survey complete as far as Merriwa. Perhaps you will fix the ruling gradient on the Wappengai I in 24 into Merriwa. The gradients at gaps 28 and 33 miles will not now have to be considered as per my previous reports. Probably as good, if not better, gradients may be had crossing the Wappengai and much shorter route into Merriwa by keeping a little further south-west of the present line, leaving it at about 32 miles. If cost of line is guided by gradients it may be desirable to run a trial line. This would terminate at the same point at Merriwa, leaving it again onwards to Cassilis. Unless I get instructions, I do not wish to spend the time at present to try it.

The station ground at Merriwa could be as per pencil on section, in case a better line cannot be had on the north side of the town. Probably advisable to try it, in case of your decision as to cost of line, gradients, and gauge, &c.

Building and lime stone, and a good supply of timber for general purposes in the district may be had; water very scarce. See previous reports.
 I have, &c.,
 JOHN S. WHITLOCK.

Mr. Palmer.—J.W., 23/8/84. The section forwarded by Mr. Whitlock is useless for railway purposes, taking into consideration that 1 in 40 is the steepest grade allowed—a fact that Mr. Whitlock must be aware of. I think, under the circumstances, it will be useless to allow Mr. Whitlock to continue this work, and have to recommend his being recalled.—H.P., 25/8/84. The Engineer-in-Chief. Approved.—J.W., 26/8/84. Mr. Palmer. Another surveyor must be sent to this district. Perhaps Mr. Edwards had better go there instead of returning to Sydney.—J.W., 26/8/84. Mr. Palmer. Mr. Whitlock recalled, and Mr. Edwards instructed to complete the trial survey to Cassilis.—H.P., 27/8/84.

No. 30.

The Assistant Engineer for Trial Surveys to Mr. Surveyor Whitlock.

27 August, 1884.

THE tracings of the plan and section lately forwarded by you of the trial survey you have made into Merriwa being useless, as regards any proposals that may be made for making a line of railway into the town of Merriwa, the Engineer-in-Chief has decided that you may break up your party and return to Sydney without delay.

HERBERT PALMER.

No. 31.

The Assistant Engineer for Trial Surveys to Mr. Surveyor Edwardes.

27 August, 1884.

ON the completion of the field-work of your present trial survey to Coonabarabran, you may proceed with your party to Merriwa, to complete the unfinished portion of the Muswellbrook and Cassilis trial survey. Report by what date you will be at Merriwa, and I will forward to you then all necessary field plans, instructions, &c.

HERBERT PALMER.

No. 32.

The Assistant Engineer for Trial Surveys to Mr. Surveyor Edwardes.

27 August, 1884.

WITH reference to the plan and section, field-books, reference and report of your present trial survey to Coonabarabran, you should forward them to this office with as little delay as possible, but you are not to allow the completion of this work to interfere with the earliest possible commencement of your next field-work on the Muswellbrook and Cassilis trial survey.

HERBERT PALMER.

No. 33.

Mr. Surveyor Whitlock to The Engineer-in-Chief.

Railway Survey Camp, Boggabri, Bow, Merriwa, 1 September, 1884.

Sir,

I have the honor to acknowledge receipt of your memo. 84-174, on my return from inspecting the country beyond Boggabri towards Colloroy and Cassilis. I beg to forward the working plan and section, and to state there is only 16 miles more to complete the work as far as Cassilis. This I am fully able to finish (out-of-door work), but not the plotting early in October. As I have traced out the line roughly, and settled upon the direction, so there would be no delay to complete, if you think desirable, and the men are now in proper training. I have also my full camp equipment, four horses and carts, and a good supply of horse-feed and stores for the men, in hand. On the contrary, and I get no further instructions, shall dispose of several things, and the stores, &c., to the best advantage (not worth transit), and, as per your orders, proceed to Sydney, after settling the monthly account ending August. I deemed it desirable to mention the short distance yet to complete to Cassilis, which may have not been taken into consideration. In the meantime, I shall be making every preparation to move camp, and the men to prepare, &c., for the march. I will leave all my out-door work complete, in case at any future time it is desirable to continue it or add to it in any form. Should a tracing of the county map be required, showing the proposed line as far as I have inspected and settled for it, I can forward it without delay.

I have been pushing on the work as fast as I could possibly do during the three months from the 21st mile to the 47th, or 26 miles. The line was very rough, and somewhat difficult to locate, with long journeys to my camp, and the short days; besides, I was for some time unable to get out of camp from a scalded foot, but which is now quite better, and the wound healed and sound for active duty again.

I have, &c.,

JOHN S. WHITLOCK.

N.B.—Reference to plan forwarded.

Mr. Palmer.—W.H.Q.—4/9/84. Plans and section received, and Mr. Whitlock instructed to carry out the instructions that were sent to him on the 27th ultimo.—H.P., 4/9/84.

No. 34.

Mr. Surveyor Whitlock to The Engineer-in-Chief.

Railway Survey Camp, Boggabri, Merriwa, September 1, 1884.

Sir,

I have the honor to forward the usual monthly tracing of trial survey, as per Memo. 84/124.

The centre line set out (and marked every 2-chain pegs by a ring) is over the best ground I could select in the direction of the course of the line selected. Plan shows fences and boundary lines pegs that could be found. On leaving Sydney I understood that Mr. Burrowes' plan would be a sufficient guide for me as to work required, although it showed no curves or radius: these I have put on my plan; his section had no heights or flood levels on it, which I have carefully defined at all important points, and fixed radius of curves with sufficient lengths of tangents to suit the ground in every case, and the levels on the same ground will be similar as those shown on the section at the same position; the length of tangents and curves, as also angles at intersection, can be had from bearings shown on plan and list forwarded previously, and a correct length of line ascertained round curves; these I have not fully staked out until something more definite was agreed as to route; as if an alteration was made the work would be wasted and time lost; radius of curves are given on plan; the detail survey can also be extended if route is decided from pegs and marks well defined on the ground; pegs have been left at these places, painted, and trees marked.

I

I have checked all levels, fixed BM at every mile and mile posts, painted the $\frac{1}{4}$ ' and $\frac{1}{2}$ -mile pegs and trees near the line, and in the usual way marked all intersection pegs by a ring and pegs round the same, and also every 2-chain pegs, as described to me on a former occasion; large mile posts have been fixed, and the distances noted.

The tracing of plan and section previously sent was merely to show the location of *the line and surface* of the ground, as I expected from the telegram and memo. to forward these urgently, it would suffice for general information as to gradients and route. The working plan and section were in an unfinished state in pencil, and I did not wish to cut the roll of paper at the time, expecting the work to go as far as Cassilis, only a short distance; the remaining paper being insufficient, I had not plotted up the work, as I could only do this when not at out-door work or in the evenings, and it is generally left until return to the Sydney office; more detail can be put on plans if desirable at a future time, on return to Sydney. The line I have selected is the best one the country will give in the general direction of the course I made for, but there are other parts that might be tried if desirable, but probably with no better result as to gradients and cost of line.

I have, &c.,

JOHN S. WHITLOCK.

Mr. Palmer.—W.H.Q., 4/9/84. Tracing received.—H.P., 4/9/84.

No. 35.

The Assistant Engineer for Trial Surveys to Mr. Surveyor Edwardes.

September 9, 1884.

UNDER separate cover I have forwarded to you a tracing from county map of the district between Muswellbrook and Cassilis, showing the route of the trial survey made between Muswellbrook and Merriwa, also tracing of the plan and section of the trial survey made by Mr. Whitlock into Merriwa. A portion of the section near 31-miles requires cross-levelling, and the latter portion of the section into Merriwa must be abandoned as useless. I have made notes on the section for your guidance, and I wish you to proceed with the least possible delay with a new trial survey from the point where you may select to leave this trial line, thence to Merriwa and Cassilis.

HERBERT PALMER.

Telegram from Mr. Surveyor Edwardes to The Engineer-in-Chief.

Merriwa.

AWAITING your further instructions, Merriwa-Cassilis trial survey.

CHAS. A. EDWARDES,
Railway Surveyor.

Mr. Palmer.—W.H.Q., 10/9/84. Instructions were sent yesterday.—H.P., 10/9/84.

No. 37.

The Assistant Engineer for Trial Surveys to Mr. Surveyor Whitlock.

25 September, 1884.

ON the 27th of last month I wrote to you instructing you to break up your party and return without delay to this office. As you only reported yourself to-day, you will be good enough to report why you failed to carry out these instructions, and how you have been occupied from the date on which you received these instructions.

HERBERT PALMER.

No. 38.

Mr. Surveyor Whitlock to The Engineer-in-Chief.

Sir,

Sydney, 27 September, 1884.

In forwarding the chainman's pay-sheet and my diary of work for September, I have the honor to state that I finished up my work as soon as I possibly could do without delay. Although I was desirous of going to Armidale, as per my request, I could not do so when I found the time would not allow it; therefore I shall have to ask your permission to go, if necessary. I concluded that the work I had done was not sufficiently complete to enable you to decide as to the line to be adopted; and as I had to begin the work where Mr. Burrowes left off, and to continue it from that surveyor's work to Merriwa hence Cassilis, the course being fixed, I could not deviate from that point where he left off. I got the best line that the country would afford, and knowing that no better gradients may be had into Merriwa, I considered it my duty to the work to finish it properly in case any further reference should be made to it. I might have been called to account for neglect, hence I considered a little time spent in this way would not be looked upon as a delay. If, however, I have not acted properly and with judgment in this respect (as is usual in such cases to complete one's work properly), I beg you will overlook it on this occasion, and in any case I must abide your decision on the matter. I have not been absent from the work, nor yet neglected my duties, which you can at any time ascertain, and as per my diary enclosed.

I had also a scalded foot, and much indisposed for over a month, besides having other troubles. I left some of the work incomplete on the outside survey and cross sections, which I could at any time complete, and merely at first run the centre line and levels to ascertain the route and section; and at the time of receiving instructions to stop the work, I had temporary camps for the purpose of finishing the work, as I could not walk long distances; and this was the reason I did not complete the outside work when the plans were sent in, as requested.

I was obliged to continue on the work, so as to show a monthly return, as per tracing asked for, otherwise I could not have carried out the instructions had I merely tried portions to find out the rate of gradient, and I was not aware that a gradient of 1 in 40 was required, or whether for a light line or tramway, but I merely continued the work on from the end of Mr. Burrowes' line.

Now that I have returned to Sydney, it is my firm decision to return to England as soon as I can get away; but at present, having some urgent business to settle, I shall have to remain until such is settled; but I cannot remain away any longer from my family. This also may explain to you my wish, after having had instructions to finish the work, of my anxiety to return; and with this object I am disposing of my things. I had to sell my horses and carts and tents, and what I could dispose of, at Merriwa and Muswellbrook. This also delayed me a day or two; besides, when I received the instructions to leave, being so sudden, I could not at once have proceeded. The men had a lot of stores on hand, and I had to get money to settle their accounts; but the chief thing was that I did not wish to leave the work incomplete on no account. In any case I shall be much out of pocket from the great expense of horse-feed and other expenses for so short a period. When I received the instructions I had about 1 ton stock of horse-feed. Besides it rained in succession for about five days shortly after I received the orders to break up camp.

I might have finished up the work better as I went along; but I could not have shown so much work at the end of each month, nor had the centre line and levels through the country, and see what section and grades it gave; besides I had a scalded foot for over a month, and had to leave the outside work where there was much walking required—this can be proved by my foot at the present time—and in other respects I was not in good health from other causes, and a desire to get to England, and shall therefore have to leave Sydney as soon as I can arrange my business.

I finished up my work as soon as I could do. I was never absent from my duties at any time, except going into Merriwa on two occasions to settle some accounts and my own affairs. As soon as I received funds I settled all the accounts for the men and my own.

I continued the work where Mr. Burrowes left off, and took that direction, but the route proved to give a gradient of less than 1 in 40. I had no orders to go back on his work, or I might have branched off before coming to the Hunter River (*via* nearer Denman); but I thought that I carried out the instructions fully, and it was not my duty to suggest or in any way alter the route Mr. Burrowes had commenced, as it might have received your previous sanction, and besides I was informed that his reports were not required by me; so, under all these circumstances, I acted in the best way I could to get a line run through to Merriwa.

I might have left my work incomplete, but I had not been used to do so on any former occasion, and I thought it would not be in accordance with proper business rules. I had also some of my things, as stated, to dispose of, and to get up money to settle the men's accounts before I left the district, as the people wanted everything settled before I left the district. The settlers would not render me any assistance when I first went to the district, owing to Mr. Burrowes having deceived them in his payments—he received considerable sums and goods without payment.

I have, &c.,

JOHN S. WHITLOCK.

No. 39.

Mr. W. H. Quodling to The Assistant Engineer for Trial Surveys.

T. S. Muswellbrook to Cassilis.

PLEASE say if Mr. Whitlock's further report on this trial survey has yet been furnished in accordance with previous instructions—

W.H.Q.

I have not pressed Mr. Whitlock for any further report on the survey made by him in this District. The plan and section of the trial survey made by him, showed that he had selected an impracticable route in the neighbourhood of Merriwa, which was the cause of his being recalled. The survey is now in the hands of Mr. Edwardes who will I believe find a satisfactory route—H.P., 10/10/84.

No. 40.

The Hon. J. P. Abbott, Esq., M.P., to The Secretary for Public Works.

Sir,

1 November, 1884.

I have the honor to inform you that it has been stated to me upon a very good authority, that the survey of the line for the Railway from Muswellbrook to Cassilis has not been made so as to bring it much nearer to Denman than it is now proposed to be, that by a slight deviation it can be brought within one mile of the town, and if this is the case I hope everything that can be will be done before it is definitely determined that Denman shall be left as far away from the line as is now proposed. I understand that a Mr. Burrowes made the survey, and that in consequence of his blunders part of the line near Hall's Creek is now being re-surveyed, and, in connection with his survey I am informed that he has taken the line over a high gap on the right bank of the Wybong Creek, which could have been altogether avoided, without any deviation, by a survey nearer to Denman.

I have &c.,

J. P. ABBOTT.

I should like Mr. Whitton to give this matter his best attention.—F.A.W., 4/11/84. Mr. Palmer.—W.H.Q., 7/11/84.

A deviation is to be surveyed which will bring the line near to Denman, in accordance with instructions already received before the through route for this extension is decided upon. The high gap mentioned in Mr. Abbott's letter will certainly be avoided as there is no necessity to take the line in that direction. It is only within the last month or two that it has been possible to make a proper start on this trial survey. It was originally commenced at a time when a large number of surveys were ordered and when many new surveyors had to be employed, and since the commencement of the survey it has had to be discontinued on two separate occasions on account of the withdrawal of the surveyors for incompetency.—H.P., 8/11/84.

Under Secretary.—J.W., *per* W.H.Q., B.C., 12/11/84. Forward to Mines.—F.A.W., 14/11/84. The Under Secretary for Mines.—J.R., B.C., 14/11/84. I shall be glad if the information here contained is sent to me in the usual way as a reply to my letter for I want to send it on to those who are interested.—J. P. ABBOTT, 15/11/84. The Under Secretary, Public Works.—G.H., for U.S., B.C., 17/11/84. The Hon. J. P. Abbott, M.P.—18/11/84. Engineer-in-Chief for Railways.—J.R., B.C., 18/11/84.

Dear Sir,

Rosemount, Denman, 24 November, 1884.

I notice by the *Upper Hunter Standard* that through your influence, part of our request, viz., a survey of the railway line nearer to Denman is already granted.

A numerously attended public meeting was held at Denman on last Saturday, the 22nd instant, when it was unanimously decided to petition Government to have the railway constructed to within a convenient distance of Denman, for it appears that to where the proposed Denman Station was to be erected could not be reached in less than 5 or 6 miles from Denman.

Messrs. J. H. Saunders and myself were elected to form a deputation to wait on the Honorable the Minister for Works, to present the petition, and to urge upon him the justice of our request.

I have now to ask if you will further favour us by attending with the deputation, and also to ask you if on or about the 12th proximo would be a suitable time.

In the meantime we will have the petition signed by all the residents of the district.

I remain, &c.,

W. L. C. BRECHT.

Hon. J. P. Abbott, Esq., Minister for Mines, Sydney.

Will you kindly inform Mr. Brecht that you will receive him as requested.—J. P. ABBOTT, 2/12/84. Will Mr. Rae inform this gentleman that the deputation can be received on Friday the 12th, at 11 o'clock.—F.A.W., 2/12/84. Mr. W. L. C. Brecht, 3/12/84.

Mr. Whitton for the information necessary to enable the Minister to reply.—J.R., B.C., 4/12/84. Please to forward all necessary information for the Minister.—J.W., 9/12/84. Mr. Palmer.

P.W.O., 11/12/84. The trial survey from Muswellbrook to Cassilis has been completed as far as Merriwa. This survey passes about 4 miles to the north of Denman, and a survey of a deviation to pass as nearly as possible to Denman was ordered some time ago. I instructed the surveyor on completing the survey at Merriwa to return to Denman to survey this deviation before continuing the survey to Cassilis, and from his last report I believe he is at the present time engaged on this survey or travelling to the neighbourhood.—H.P., 10/12/84.

The Engineer-in-Chief. Under Secretary.—J.W., 10/12/84.

No. 41.

Deputation *re* bringing line nearer to Denman.

That survey of railway route, Cassilis to Muswellbrook be brought nearer to Denman.—11 o'clock. Mr. L. C. Brecht.

Department of Public Works, Sydney, 11th December, 1884.

The deputation, Messrs. McLaughlin and Honorable J. P. Abbott, M.S.P., with Messrs. Campbell, Brecht, Hungerford, and Saunders waited upon me to day to ask that the proposed railway, Muswellbrook to Cassilis, might be brought nearer to Denman than was shown in the original survey. The petition enclosed was submitted in favour of the wish expressed by deputation. Mr. Hungerford pointed out also that generally a better route could be obtained than was now fixed by surveyors. I informed the deputation that I had already given instructions for the survey to be made, so as to bring the line as near as practicable to the town of Denman, and read Mr. Palmer's minute to show what had been done. With regard to Mr. Hungerford's remarks, I asked him to submit in writing the route he proposed, and I would have the matter referred to the Engineer-in-Chief, with the view to the surveyor meeting Mr. Hungerford on the ground.

F.A.W.,
12/12/84.

Mr. Palmer.—W.H.Q., 18/12/84. I have instructed Mr. Edwardes, who is now making the trial survey of a deviation to bring the line nearer to Denman, to communicate with Messrs. Hungerford and O'Brecht, and request them to point out to him the route they wish to be surveyed.—H.P., 23/12/84.

Mr. Whitton.—J.R., B.C., 12/12/84.

Denman, 22 November, 1884.

To the Honorable the Minister for Works, Sydney,—

The Petition of the inhabitants of Denman and surrounding districts—

HUMBLY SHOWETH,—

1. That we view with deep concern and anxiety the prospect of the projected railway line from Muswellbrook to Cassilis being constructed at a distance of several miles from Denman.
2. That, if the railway were constructed along the line as at present surveyed, great inconvenience would be occasioned from the station being so far distant from the town.
3. That this would necessitate the opening and construction at heavy expense of a road from the town to the station through private property.
4. That were the station at such a distance as is at present proposed, a great portion of the traffic to and from the district would consequently be diverted from the railway.
5. That the fact of the site of Denman being chosen as the most central and suitable for the traffic and convenience of the district, the hotel and ample paddock accommodation there available, the passing of one of the principal stock roads of the Colony through the town, the large amount of public and private capital expended in laying out the town and erecting buildings, the large area of Government land in the township and vicinity, the considerable population settled in the neighbourhood of Denman and surrounding districts are, we respectfully submit, facts and circumstances which justify our petitioners in requesting to have the line constructed within a convenient distance of this town.
6. That the disadvantage of a deviation from a direct course (if any be required) would be more than counterbalanced by the following advantages, viz., there would be fewer difficulties in the way; it would.

would save the expense of opening and making a road through private property from Denman to the station, it would render the railway more serviceable, and bring it nearer to a very large area of country containing some of the richest and most fertile land on the Upper Hunter, there is available an excellent site for a station on Crown lands adjoining the main road about a mile north from the town, this would be sufficiently near to meet our wants, thence the line would pass almost entirely through Crown lands to Sandy Hollow, distant 9 miles in a direct line towards Merriwa, and would run through large reserve at the junction of the Goulburn and Wybong Rivers, whereas the line, as at present marked out, runs through private land and over more difficult country for that distance.

7. That the road from Muswellbrook to Merriwa *via* Merton and Denman, has been the main traffic and mail route for the last forty years, ever since the district was first settled.

Therefore we, your petitioners, humbly request that you may be pleased to take the foregoing premises into your favourable consideration, and to take steps to have the railway carried along the line, which will suit the convenience of the public and meet the traffic requirements of our district.

And your petitioners, as in duty bound, will ever pray.

No. 42.

Messrs. Thos. Hungerford and W. T. O'Brecht to The Secretary for Public Works.

Sir,

Sydney, 12 December, 1884.

We have the honor to call your attention to the proposed amendment of the survey of the railway line from Muswellbrook to Merriwa, in that portion of it which extends from the Hunter River to near the confluence of the Wibong Creek with the Goulburn River; and to state that, in our opinion, the route chosen through Pike's Gap is not only not much the shortest but necessitates much more severe gradients than would be experienced by a line passing a point much nearer Denman, and so meet the desires of a large number of inhabitants of the Denman district.

We, the undersigned, would be happy to assist any exploration in connection with this line; and have the honor to remain your obedient servants,

THOS. HUNGERFORD.
 W. T. O'BRECHT.

P.S.—We shall be happy to meet the surveyor in charge of the line, or any other officer at Denman, at anytime.

W. T. O'B.
 Acknowledge,

21

Acknowledge, and ask Mr. Whitton to instruct his surveyor.—F.A.W., 16/12/84. Engineer-in-Chief for Railways.—B.C., 18/12/84. Mr. Palmer.—W.H.Q., 19/12/84.

The route suggested is, I believe, the one now being surveyed, but I have instructed Mr. Edwardes to request these gentleman to show him where they wish the survey to be made, and to report as to its practicability or otherwise.—H.P., 23/12/84.

No. 43.

The Assistant Engineer for Trial Surveys to Mr. Surveyor Edwardes.

23 December, 1884.

A COMMUNICATION has been received from Messrs. Thomas Hungerford and W. T. O'Brecht, in which they state their willingness to accompany any surveyor of this Department over what they consider a better route for a portion of the Musclebrook and Cassilis survey, in the neighbourhood of Denman, than has been chosen so far. I have not the address of these gentlemen, but I have no doubt you can ascertain in Denman how they may be communicated with; and I wish you to do so, and request them to show you over the route suggested, after which you are to report as to its practicability or otherwise.

HERBERT PALMER.

No. 44.

Mr. Licensed-Surveyor Worth to The Engineer-in-Chief.

Sir,

Merriwa, 4 February, 1885.

About fifteen months ago I lent to Mr. Burrowes, who was making a trial survey of a line of railway from Musclebrook to Cassilis, several parish maps, and a rough plan of a road in parish Yarraman, joining the main road from Denman to Merriwa to Sandy Hollow, close to the Goulburn River.

The parish maps are Brogheda, Wybong, Yarraman, and Worondi; the road survey was forwarded to Mr. Burrowes shortly after survey, and before a tracing could be procurable from the Survey Department. If any notations are made upon the parish maps, new ones can be sent, but I would prefer my own copy of road map, as I am under the impression I planned it upon the back of a map of another road survey; however, in this case a correct tracing of both roads would serve my purpose sufficiently.

I have, &c.,

CHARLES WORTH, L.S.

Mr. Palmer.—W.H.Q., 6/2/85.

Returned to Mr. Worth.—H.P., 7/2/85.

No. 45.

Mr. Surveyor Edwardes to The Engineer-in-Chief.

Sir,

Railway Survey Camp, Cassilis, 23 April, 1885.

Having now the survey from Musclebrook to Cassilis, within a few miles of the latter town, I hope to be able to complete the fieldwork in connection with same in about ten days from date.

I have, therefore, the honor to request that I may be furnished with your fresh instructions.

I have, &c.,

CHAS. A. EDWARDES.

Mr. Deane.—W.H.Q., 25/4/85.

Instruction sent, 85/106.—H.D., 28/4/85.

No. 46.

The Acting Assistant Engineer for Trial Surveys to Mr. Surveyor Edwardes.

April 27, 1885.

WHEN you have finished the fieldwork of the line you are now engaged upon you will please return to this office, without delay, bringing all books and plans, but leaving your equipment so that you can send for it should it not be necessary for you to return to the district.

H. DEANE.

No. 47.

Memo. from The Acting Assistant Engineer for Trial Surveys to The Engineer-in-Chief.

Department of Public Works, Railway Branch, Engineer-in-Chief's Office, Sydney, 22 July, 1885.

Musclebrook to Cassilis.

I FORWARD herewith tracing showing the position of the trial line between the above places, for transmission to the Surveyor-General, with a view to having the usual railway reserves proclaimed.

Of the two routes shown opposite the town of Merriwa, that passing through Merriwa would probably be adopted for permanent staking; but as there is some uncertainty about it, I presume that the reserves could be made to include both lines.

H. DEANE.

No. 48.

Mr. Surveyor Edwardes to The Engineer-in-Chief.

Sir,

Railway Survey Camp, Merriwa, 25 July, 1885.

I have the honor to herewith forward you under separate cover, plan and section of proposed deviation of the Muswellbrook to Cassilis trial line—for lower crossing of the Koui River.

This deviation commencing at 58 miles 33.00 chains, terminates at 62 miles 72.13 chains, being 10.31 chains longer than the original line.

A

A 14 chain curve I have used in order to get a level grade at crossing, the latter being 25 feet above flood level, is the lowest I could obtain.

The approximate grades I have shown in pencil on section. The cross levels I have taken in view of a further improvement of the line. I have, &c.,

Mr. Deane.—W.H.Q., 28/7. Noted.—H.D.

CHAS. A. EDWARDES.

No. 49.

Mr. Surveyor Edwardes to The Engineer-in-Chief.

Sir,

Railway Survey Camp, Muswellbrook, 25 August, 1885.

Upon examining the country for proposed alteration of trial line Muswellbrook to Cassilis, viz., crossing the Hunter River at Muswellbrook, and thence along west bank to junction with former line at about 11 miles, I find that such a line would, at river crossing, pass through about 2 miles of flooded country, as shown on section herewith. From point B, as shown on parish map, a line (dotted blue) can be obtained by skirting the ridges to a junction with former line, at point C, such line being about $1\frac{1}{4}$ mile longer.

In view of such increased distance, and flood at river crossing being about as great as that on original line, together with severance of private property from river frontage that would occur by such a route, I am of opinion that a line, as shown in pencil on plan, with 10 chain curve at crossing of Muscle Creek, would be the most practicable.

In order to show detail of survey more clearly, I have drawn plan to a large scale.

I would request that I may be forthwith furnished with your instructions as to the desirability of a further survey of this portion of the line.

I have, &c.,

CHAS. A. EDWARDES.

Plan, section, and parish map herewith under separate cover.

Mr. Deane.—W.H.Q., 28/8/85. Instructions sent, 85-198.—H.D., 31/8/85.

No. 50.

The Acting Assistant Engineer for Trial Surveys to Mr. Surveyor Edwardes.

28 August, 1885.

Muswellbrook to Cassilis.

In reply to your letter of the 26th instant, the line crossing the river at Muswellbrook is not a favourable one, the position shown by you in pencil is no doubt better, and may therefore be staked out.

H. DEANE.

No. 51.

Telegram from Mr. Surveyor Edwardes to The Engineer-in-Chief.

Muswellbrook.

HAVE completed deviation on trial line. Await your further instructions.

CHAS. A. EDWARDES.

Mr. Palmer. Surveyors should always report beforehand, so that instructions can be sent and prevent any loss of time.—J.W.; 9/9/85. Mr. Edwardes instructed to return to Sydney. I will caution him on his return with reference to the above.—H.P., 11/9/85.

No. 52.

Telegram from Mr. Surveyor Edwardes to The Engineer-in-Chief.

Muswellbrook.

AM still awaiting your fresh instructions. Further work already wired for and requested in journal.

CHAS. A. EDWARDES.

Mr. Palmer.—W.H.Q., 11/9/85. Mr. Edwardes instructed to break up his party and return to Sydney.—H.P., 11/9/85.

No. 53.

Mr. Surveyor Edwardes to The Engineer-in-Chief.

Sir,

Railway Survey Camp, Muswellbrook, 10 September, 1885.

I beg to forward you, under separate cover, plan and section showing alteration of part of trial survey, Musclebrook to Cassilis, viz., between 67 miles and 72 miles.

Deviation, No. 1, A B, made in order to obtain better crossings of Borambil and Two-mile Hollow Creeks, commences at 67 miles 7.60 chains and terminates at 72 miles 24.75 chains, being 21.86 chains longer than original trial lines.

It will be found that this deviation throughout gives a better section than original, although the length of tunnel has been increased.

Deviation.

Deviation No. 2, C.D., run in order to avoid tunnel above referred to, commences on deviation A.B. (point C.), at 68 miles 43.41 chains, terminates at 73 miles 14.95 chains, being 1 mile 34.29 chains longer than deviation No. 1, or 1 mile 56.15 chains longer than original line.

The approximate gradients I have shown on section of deviation No. 1, which I believe to be the most practicable line to be had.

The cross levels shown in blue I have taken for a further improvement in locating position of line:
I have, &c..

CHAS. A. EDWARDES.

Mr. Palmer.—W.H.Q., 11/9/85. Plan and section received and instructions sent to Mr. Edwardes to return to Sydney.—H.P., 11/9/85.

No. 54.

Minute from The Secretary for Public Works to The Engineer-in-Chief.

9 April, 1886.

THE Minister has verbally instructed me to request you to proceed with the permanent surveys of the undermentioned lines as early as practicable, viz. :—

* * * * *

Muswellbrook to Cassilis.

W.H.Q.

Surveyors into the field immediately to carry out the Minister's instructions with reference to the lines above named.—J.W., 9/4/86. Mr. Palmer. With the exception of Mr. Hogg, there is no one at present in the office that I can recommend to be sent on the Muswellbrook and Cassilis survey.—H.P., 21/4/86.

No. 55.

The Assistant Engineer for Trial Surveys to Mr. Surveyor Edwardes.

5 May, 1886.

ON completing the field work of the Culcairn and Corowa Permanent Survey, I shall be able to recommend your being employed on the permanent staking of the Muswellbrook and Cassilis Extension, provided you are able to return to Sydney before it is necessary to make other arrangements for that survey.

HERBERT PALMER.

No. 56.

The Assistant Engineer for Trial Surveys to Mr. Surveyor Edwardes.

25 June, 1886.

ON completing the field work in connection with the permanent survey of the Culcairn and Corowa Extension, including the measurement of the lockspitting of the centre line to the end of the staking, and of the trial holes as far as particulars of sinking have been sent to you, you may return with your party to Sydney. When you have handed over in this office all plans, books, and other documents connected with this work, to my satisfaction, your services will next be required on the permanent staking of the Muswellbrook and Cassilis Extension.

HERBERT PALMER.

No. 57.

R. G. D. Fitzgerald, Esq., M.P., to The Secretary for Public Works.

Sir,

Muswellbrook, 22 June, 1886.

I shall be obliged by your letting me know when it is expected that the work in connection with the survey of the railway line from Muswellbrook to Cassilis will be resumed. Your early reply will oblige.

Yours &c.,

ROBT. GEO. D. FITZGERALD.

What is being done?—W.J.L. Engineer-in-Chief, B.C., 23/6/86. Mr. Palmer, W.H.Q., 28/6/86. Mr. Edwardes, who was engaged on the trial survey of this line, has reported having completed the permanent survey of the Culcairn and Corowa Extension, and he is now under instructions to return to Sydney, and proceed to Muswellbrook to commence the permanent survey, thence towards Cassilis.—H.P., 28/6/86. The Engineer-in-Chief. Under Secretary, B.C., 29/6/86. J.W. (per W.H.Q.) Railways—J.R., B.C., 30/6/86. Inform Mr. Fitzgerald, M.P.—W.J.L., 8/7/86.

No. 58.

W. Bowman, Esq., to The Secretary for Public Works.

Sir,

Muswellbrook, 27 July, 1886.

As the final survey of the railway line from Muswellbrook to Cassilis is now being carried out, I wish to draw your attention to the line passing through my property (Balmoral), situated about 2 miles from Muswellbrook.

The line, as marked at the last survey, passes close to my residence, and between my stables and barn, through my yards connected with the stables, separating my homestead and stables from all water, which will, if carried out, give me any amount of trouble, annoyance, and danger, in crossing stock to water.

If

If the line could be removed 1 or 2 chains to the west when passing my barn it would not separate it from the stables, nor destroy my yards, and lessen the damage to my property considerably. Likewise, as there is a water-course the line has to cross, and a slight fall in the ground, I believe it would give me an under-crossing sufficiently high for stock to pass under to the creek. If only an over-crossing is left it will give me a great deal of extra trouble and expense in getting stock to water, especially stabled stock, such as stallions and bulls, which will have to be done twice a day, and an extra person would be required to open and shut the gates. Trusting instructions will be given to Mr. Surveyor Edwardes, who is now at work on the line, to see if what I propose cannot be carried out, so as to lessen the damage done to my property as much as possible.

I remain, &c.,

WM. BOWMAN.

Acknowledge. Done, 30/7/86. Engineer-in-Chief.—D.C.McL. (*pro* Commissioner.), B.C., 29/7/86. Mr. Palmer for report.—W.H.Q., 3 Aug., 1886. Mr. Edwards instructed to show all these details on the cross-levelled plan, so that the best arrangements admissible may be made when the permanent centre line has to be selected.—H.P., 4/8/86.

No. 59.

The Assistant Engineer for Trial Surveys to Mr. Surveyor Edwardes.

4 August, 1886.

MR. WM. BOWMAN writes that the line of trial survey (Muswellbrook to Cassilis) passes through his property known as Balmoral, doing much damage by passing close to his residence, and between stable and barn, through yards, &c. He also suggests that the line might be removed 1 or 2 chains to the west, and considerably lessen the damage to his property.

You must be careful to show these details on the cross-levelled plan, so that the best possible arrangement may be made when the permanent centre line has to be selected.

HERBERT PALMER.

You should try a deviation to pass between Balmoral and the road, or extend all cross-levels towards the road.

No. 60.

Mr. Surveyor Edwardes to The Engineer-in-Chief.

Sir,

Railway Survey Camp, Muswellbrook, 7 August, 1886.

I have the honor to herewith forward you plan and section showing proposed deviation of the Muswellbrook-Cassilis line at Muswellbrook, and cross-levels on the trial line from Muswellbrook to 8 miles.

This deviation, branching from the Northern Railway between passenger station and goods shed, at Muswellbrook, would pass for 5 chains through the Recreation Reserve, being part of 32 acres dedicated for Show Ground and Recreation Reserve, and would cross the Maitland Road and Mitchell-street on the level.

A reference to properties near to line fronting Maitland Road I have inserted on plan, Nos. 3, 4A; those that it would be necessary to resume being wooden buildings of small value.

Between 2 miles and 3 miles, in order to avoid "Balmoral" (W. Bowman), I have extended the cross-sections.

The land here to west of line is low-lying, and greater part liable to heavy flood.

On plan, I have shown in pencil a modification of the trial line, in order to run parallel to the Denman Road, and thus lessen the severance of property fronting it, and also "Balmoral."

This alteration would increase the length of line 9 chains.

An approximative section of the pencil line is shown in pencil on section. Owing to the Hunter River being at present uncrossable, I have been unable to complete the cross levels to the 12-mile peg, and trace flood line on west bank of river from this camp.

I have, &c.,

CHAS. A. EDWARDES.

Mr. Palmer.—W.H.Q., 9/8/86. Plan received and returned to Mr. Edwardes, with instructions for the permanent staking of the first 8 miles of this line.—H.P., 10/8/86.

No. 61.

Mr. Surveyor Edwardes to The Engineer-in-Chief.

Sir,

Railway Survey Camp, Muscleebrook, 11 August, 1886.

I beg herewith to forward you under separate cover, lithographs of the town of Muscleebrook, and parish maps, Brougham, Vaux, in the country of Durham, on which I have shown (in red) the first 8 miles of the centre line of the permanent survey from Muscleebrook to Cassilis, to be permanently staked.

I would request that the lengths and bearings of the allotments and surveyed portions, with widths of roads, through which the centre line passes, may be inserted on the above maps, and the latter then returned to me.

I have, &c.,

CHAS. A. EDWARDES.

Mr. Palmer. W.H.Q., 13/8/86. Maps returned with all information obtainable marked on them.—H.P., 17/8/86.

No. 62.

The Assistant Engineer for Trial Surveys to Mr. Surveyor Edwardes.

10 August, 1886.

UNDER separate cover, I have returned your cross levelled plan of the first portion of the Muscleebrook and Cassilis trial survey, on which I have shown by blue lines how the first 8 miles may be permanently staked.

HERBERT PALMER.

No. 63.

Memo. from The Assistant Engineer for Trial Surveys to Mr. Surveyor Edwardes.
 Department of Public Works, Railway Branch, Engineer-in-Chief's Office,
 Sydney, 3 September, 1886.

PLEASE forward a tracing from the first part of the working plan of the Muswellbrook and Cassilis extension, showing the junction with the Northern Railway, the Park, and the crossings of Maitland and Mitchell streets, and the main road to Denman.

HERBERT PALMER.

Tracing as required herewith forwarded under separate cover.—CHS. A. EDWARDS, 7th Sept., 1886. The Engineer-in-Chief. Mr. Palmer.—W.H.Q., 7/9/86. Received.—H.P., 8/9/86.

No. 64.

Memo. from The Assistant Engineer for Trial Surveys to The Engineer-in-Chief.
 Department of Public Works, Railway Branch, Engineer-in-Chief's Office,
 Sydney, 27 September, 1886.

As Mr. Jamieson will shortly complete the plotting of plans, &c., connected with his portion of the permanent survey lately made between Glen Innes and South Grafton, I can recommend his being allowed to take part in the Muswellbrook and Cassilis permanent survey.

HERBERT PALMER.

Approved by E.-in.-C.—W.H.Q., 29 Sept., 1886. Mr. Palmer. Noted.—H.P., 29/9/86.
 E.-in.-C., 30/9/86.

No. 65.

The Assistant Engineer for Trial Surveys to Mr. Surveyor Edwardes.

6 October, 1886.

I HAVE instructed Mr. Jamieson to join you on the permanent staking of the Muswellbrook and Cassilis line, and I shall expect you to work together so that the survey may be pushed forward as rapidly as possible. I shall leave you to arrange to work together until I have an opportunity of visiting the district, when, it is possible, I may make arrangements for placing more surveyors on the survey. I have explained to Mr. Jamieson how I consider the work should be divided when two parties are placed on the same length.

HERBERT PALMER.

No. 66.

The Council Clerk, Muswellbrook, to T. Hungerford, Esq., M.P.

Sir,

Municipal Council Chambers, Muswellbrook, 16 August, 1886.

I have the honor, by direction of the Council, to forward you the two following resolutions, carried unanimously at a meeting held the 11th instant:—

- 1st. That this Council having become aware that it is intended to alter the route of the proposed railway line to Cassilis, through the Municipality, by taking the same through the park, crossing Maitland and Mitchell Streets and the main road to Denman, protests against such deviation from original survey for the following reasons:—
 1. That the original survey will do the least injury to town property.
 2. That the existence of seven railway gates, already in the town, over principal thoroughfares, cause great inconvenience to the inhabitants, and the proposed route will cross other two important streets and the Great Northern Road.
 3. That the original survey will necessitate one, or at most two gates only over unimportant back streets.
 4. That a double crossing in Bridge-street would be far preferable and much less expensive than the number which will be required by the proposed deviation from the original survey.
 5. That a large sum of money has been expended in the maintenance and ornamental planting of the park, and should the deviation be decided upon the people will lose the entire benefit of the same.

This resolution, with the reasons for the protest, I have forwarded to the Minister for Works.

The second resolution as follows:—

That the foregoing resolution be forwarded to the proper officer of the Government through the Members for the district.

A copy sent to R. G. D. Fitzgerald, Esq., M.L.A.

I have, &c.,

J. STAFFORD,

Council Clerk.

Presented by Mr. Hungerford, M.L.A.—J.W., 16/9/86. Mr. Palmer for report.—J.W., 16/9/86.
 This is, I think, a copy of a paper on which I lately forwarded a report, with a tracing, showing how the first part of the Muswellbrook and Cassilis extension has been permanently staked.—H.P., 17/9/86.
 The Engineer-in-Chief.

No. 67.

Mr. Surveyor Edwardes to The Engineer-in-Chief.

Sir,

Railway Survey Camp, Muswellbrook, 4 October, 1886.

I have the honor to herewith forward you two level books containing the through levels of the permanent survey from Muswellbrook to Cassilis, from O.M. to 8 miles 40 chains, and the cross levels taken between O.M. and 5 miles 12 chains. The check level book containing levels, O.M. to 8 miles 40 chains, I have for the present retained for the insertion of more levels.

I have, &c.,

CHAS. A. EDWARDES.

Mr. Palmer.—W.H.Q., 5/10/86. Received.—H.P., 5/10/86.

No. 68.

Mr. Surveyor Edwardes to The Engineer-in-Chief.

Sir,

Railway Survey Camp, Denman, 22 October, 1886.

I have the honor to herewith forward to you, under separate cover, a field plan, with tracing of sections, showing the cross levels taken on the trial line of the Muswellbrook-Cassilis survey, from 8 miles to 21 miles, for the further determination of the straights and curves to be permanently staked.

In order to obtain an easier section through the dividing ridge, at 14 miles, I surveyed the deviations A. B., as shown on plan.

This deviation gives a section with smaller amount of earthworks and slightly easier gradients, the through distance being increased 4.11 chains thereby.

Field plans with section tracing under separate cover.

I have, &c.,

CHAS. A. EDWARDES.

Mr. Palmer.—W.H.Q., 23/10/86. Received.—H.P., 24/10/86.

No. 69.

Mr. Surveyor Edwardes to The Engineer-in-Chief.

Sir,

Railway Survey Camp, Denman, 28 October, 1886.

I beg to herewith forward you, under separate cover, the following parish maps:—Parish of Clauricard, county of Brisbane; parish of Wybong, county of Brisbane; parish of Denman, county of Brisbane; parish of Yarraman, county of Brisbane, on which I have shown, in approximate position, the centre line of the Muswellbrook-Cassilis Permanent Survey.

I have the honor to request that I may be supplied with the lengths and bearings of the boundaries of the measured portions through which the line passes, together with widths of roads crossed; also a tracing of road plans, Merriwa to Denman, catalogued No. R. 5-972, Merriwa to Muswellbrook, catalogued No. R. 900-1,603.

I have, &c.,

CHAS. A. EDWARDES.

Mr. Palmer.—W.H.Q., 30/10/86. Forwarded.—H.P., 11/11/86.

No. 70.

Mr. Surveyor Edwardes to The Engineer-in-Chief.

Sir,

Railway Survey Camp, Denman, 1 December, 1886.

I have the honor to herewith forward you, under separate cover, two level books, containing levels of the Permanent Survey from Muswellbrook to Cassilis, viz., the through levels from 8 miles 40 chains to 19 miles 5 chains, and the check levels from 20 chains to 12 miles 40 chains.

I have, &c.,

CHAS. A. EDWARDES.

Mr. Palmer.—W.H.Q., 3/12/86. Received.—H.P., 9/12/86.

No. 71.

Mr. Surveyor Edwardes to The Engineer-in-Chief.

Sir,

Railway Survey Camp, Denman, 7 December, 1883.

I have the honor to herewith forward you, under separate cover, one level book, containing the cross levels on the Permanent Survey from Muswellbrook to Cassilis, from 12 miles 11 chains to 16 miles 36 chains, and from 16 miles 40 chains to 20 miles 10 chains,

I have, &c.,

CHAS. A. EDWARDES.

Mr. Palmer.—W.H.Q., 8/12/86. Received.—H.P., 9/12/86.

No. 72.

Mr. Surveyor Jamieson to the Engineer-in-Chief.

Sir,

Railway Survey Camp, Denman, 20 December, 1886.

I have the honor to forward, in conjunction with Mr. Edwardes, trial plan, showing cross-levels taken on trial survey (from 26 miles to 31.40 miles), Muswellbrook to Cassilis, for a further determination of straights and curves.

I have, &c.,

JOHN J. JAMIESON.

Mr. Palmer.—W.H.Q., 22/12/86. Plan and section returned to Mr. Edwardes, with instructions.—H.P., 23/12/86.

No. 73.

27

No. 73.

Mr. Surveyor Edwardes to The Engineer-in-Chief.

Sir, Railway Survey Camp, Denman, 20 December, 1886.

I have the honor to herewith forward you, under separate cover, a field plan, with section, showing the cross-levels taken on the trial line from Muswellbrook to Cassilis (from 22 miles to 31½ miles), for the further determination of the straights and curves to be permanently staked.

The mileage now shown on plan is the new through mileage from Muswellbrook.

I have, &c.,

CHAS. A. EDWARDES.

Mr. Palmer.—W. H. Q., 22/12/86. Plan and section returned to Mr. Edwardes, with instructions.—H.P., 23/12/86.

No. 74.

The Assistant Engineer for Trial Surveys to Mr. Surveyor Edwardes.

23 December, 1886.

UNDER separate cover I have returned your cross-levelled plan of portion of the Muswellbrook and Cassilis trial survey, on which I have shown how the centre line is to be permanently staked from 22 miles to 31½ miles, excepting between 23 to 24½ miles, where, as you will see by a line I have marked in pencil, with a note also in pencil, that a trial survey should be made to ascertain whether it may be advisable to go round the bend of Hall's Creek in place of crossing it twice. Please return the plan and section as early as practicable, with the required information, so that no time may be lost in carrying forward the chainage through this length.

The first part of the working plan should also be sent in as soon as possible, so that the Parliamentary plan may be proceeded with in this office.

HERBERT PALMER.

No. 75.

Mr. Surveyor Edwardes to The Engineer-in-Chief.

Sir, Railway Survey Camp, Denman, 3 January, 1887.

I have the honor to herewith return you the cross-levelled field plan of portion of the Muswellbrook-Cassilis trial survey, on which I have shown the deviation of the trial line between 23 miles and 24½ miles, made in accordance with your memo. No. 86-399 of 23 December, to avoid the double crossing of Hall's Creek.

The mileage by this new traverse has been increased, as shown on section 28-37 chains.

I also forward a lithograph of the parish of Wickham, on which I have shown, by red line, the position of the line to be permanently staked.

I would request that I may be supplied with the lengths and bearings of the measured portions through which this part of the survey passes.

Plan, section, and litho. herewith, under separate cover.

I have, &c.,

CHAS. A. EDWARDES.

Mr. Palmer.—W. H. Q., 4/1/87. Plan and section returned with instructions. The remaining information required will be forwarded when ready.—H.P., 4/1/87.

No. 76.

The Assistant Engineer for Trial Surveys to Mr. Surveyor Edwardes.

4 January, 1887.

UNDER separate cover I have returned your cross-levelled plan and your section of portion of the Muswellbrook and Cassilis trial survey, on which I have shown how the centre line may be permanently staked round the bend of Hall's Creek, between 23 and 24 miles.

The information as to lengths and bearings of measured portions shall be forwarded as soon as ready.

HERBERT PALMER.

No. 77.

Mr. Surveyor Edwardes to The Engineer-in-Chief.

Sir, Railway Survey Camp, Denman, 28 January, 1887.

I beg to forward you, under separate cover, one level book, containing the through levels of the permanent survey from Muswellbrook to Cassilis, from 19 miles 5 chains to 29 miles 73 chains, the check level book being retained for the insertion of further levels.

I have, &c.,

CHAS. A. EDWARDES.

Mr. Palmer.—W.H.Q., 31/1/87. Received.—H.P., 8/2/87.

No. 78.

Mr. Surveyor Jamieson to The Engineer-in-Chief.

Sir, Post Office, Denman, 6 February, 1887.

I have the honor to forward, under separate cover per same post, three books, one containing check levels from 12 miles 40 chains to 24 miles 75 chains, and the others containing cross levels from 21 miles 4 chains to 26 miles 15 chains (by Mr. Edwardes), and from 26 miles 17 chains to 30 miles 75 chains on the centre line of the proposed railway, Muswellbrook to Cassilis.

I have, &c.,

JOHN J. JAMIESON.

Mr. Palmer.—W.H.Q., 8/2/87. Received.—H.P., 8/2/87.

No. 79.

No. 79.

Mr. Surveyor Edwardes to The Engineer-in-Chief.

Sir,

Railway Survey Camp, Denman, 17 February, 1887.

I have the honor to herewith forward you, under separate cover, the working plan part No. 1, of the Muswellbrook-Cassilis extension, embracing the permanent survey from 0 miles 0 chains at Muswellbrook to 24 miles 50 chains, and book of reference to same.

Together with the above I also forward the following plans:—

Cross-levelled field plans, Nos. 1, 2, 3.

Lithographs, town of Muswellbrook.

„ parish of Brougham, county of Durham.

„ „ Vaux, county of Durham.

„ „ Clanricarde, county of Brisbane.

„ „ Wybong, county of Brisbane.

„ „ Denman, county of Brisbane.

„ „ Yarraman, county of Brisbane.

I have, &c.,

CHAS. A. EDWARDES.

Mr. Palmer.—W.H.Q., 19/2/87. Received.—H.P., 21/2/87.

No. 80.

Mr. Surveyor Edwardes to The Engineer-in-Chief.

Sir,

Railway Survey Camp, Denman, 17 February, 1887.

In conjunction with Mr. Jamieson, I have the honor to forward you, under separate cover, a field plan, with tracing of section, showing the cross levels taken on the trial line from Muswellbrook to Cassilis, from 31 miles 50 chains to 38 miles 40 chains, for the further determination of the straights and curves to be permanently staked.

I have, &c.,

CHAS. A. EDWARDES.

Mr. Palmer.—W.H.Q., 19/2/87. Received and returned to Mr. Edwardes, with instructions for permanent staking of this portion of the Muswellbrook and Cassilis line.—H.P., 21/2/87.

No. 81.

The Assistant Engineer for Trial Surveys to Mr. Surveyor Edwardes.

21 February, 1887.

In future, when forwarding to the Engineer-in-Chief the remaining lengths of cross-levelled plans of the Muswellbrook and Cassilis trial survey for his determination as to the centre line to be permanently staked, you may mark out in pencil through these cross levels the centre line you may propose to permanently stake for his approval.

HERBERT PALMER.

No. 82.

The Assistant Engineer for Trial Surveys to Mr. Surveyor Edwardes.

21 February, 1887.

UNDER separate cover I have returned you 4-chain plan showing cross levels taken on a portion of the Muswellbrook and Cassilis trial survey, on which I have shown how the centre line is to be permanently staked. Enclosed in this plan is your tracing of the section of trial survey.

HERBERT PALMER.

The section I find has been also forwarded to you under separate cover.—H.P.

No. 83.

The Assistant Engineer for Trial Surveys to Mr. Surveyor Jamieson.

21 February, 1887.

For the future, when forwarding to the Engineer-in-Chief the remaining lengths of cross levelled plans of the Muswellbrook and Cassilis trial survey for his determination as to the centre line to be permanently staked, you may mark out in pencil for his approval the centre line you may propose to permanently stake.

HERBERT PALMER.

No. 84.

Mr. Surveyor Jamieson to The Engineer-in-Chief.

Sir,

Post Office, Denman, 23 February, 1887.

I have the honor to enclose tracing showing alienated portions in the parish of Worondi, county of Brisbane, through which the centre line of proposed railway, Muswellbrook to Cassilis, will pass.

Please cause the bearings, distances, &c., to be written on tracing, and returned to me with the least possible delay, so that I may connect same with centre line.

Mr. Palmer.—W.H.Q., 26/2/87.

I have, &c.,

JOHN J. JAMIESON.

Tracing received and the information required forwarded.—E.R.T., 3/3/87.

No. 85.

29

No. 85.

Mr. Surveyor Edwardes to The Engineer-in-Chief.

Sir,

Railway Survey Camp, Denman, 26 February, 1887.

I beg to forward you, under separate cover, lithographs of the parishes of Worondi, Mackenzie, and Merriwa, county of Brisbane, on which I have shown by red line the Muswellbrook-Cassilis extension.

I would request that I may be supplied with the lengths and bearings and reference to corners of the portions in the above parishes through which the line passes.

I have, &c.,

CHAS. A. EDWARDES.

Mr. Palmer.—W.H.Q., 1/3/87. Lithographs received and the information required forwarded.—E.R.T., 4/3/87.

No. 86.

The Assistant-Engineer for Trial Surveys to The Engineer-in-Chief.

Muswellbrook to Cassilis—Permanent survey.

Messrs. Edwardes and Jamieson have all necessary instructions for the permanent staking of the centre line to within 1 or 2 miles of Merriwa. For the remaining length to Cassilis they have been instructed to forward cross-levelled plan of trial survey with the line they may propose to permanently stake laid down in pencil through the cross-levels for approval of the Engineer-in-Chief prior to actually staking the centre line.

HERBERT PALMER, 5/3/87.

No. 87.

Mr. Surveyor Edwardes to The Engineer-in-Chief.

Sir,

Railway Survey Camp, Denman, 16 March, 1887.

I beg to herewith forward you, under separate cover, one level-book containing the through levels of the Muswellbrook to Cassilis extension from 29 mls. 73 chs. to 38 mls. 35 chs.

I have, &c.,

CHAS. A. EDWARDES.

Mr. Thomas.—W.H.Q., 17/3/87. Level-book to hand.—E.R.T., 18/3/87.

No. 88.

Mr. Surveyor Edwardes to The Engineer-in-Chief.

Sir,

Railway Survey Camp, Denman, 16 March, 1887.

I have the honor to request that I may be furnished with field-book, No. 3, containing the field-notes of the deviation of the trial survey from Muswellbrook to Cassilis at Merriwa, as when plotting the next cross-level field plan the above notes will be of great service to me. I would also request that I may be supplied with the following:—Tracing or lithograph of village of Merriwa; 4 level-books.

I have, &c.,

CHAS. A. EDWARDES.

Mr. Thomas.—W.H.Q., 17/3/87. Field-book No. 3, tracing of village, and four level-books forwarded.—E.R.T., 18/3/87.

No. 89.

Mr. Surveyor Jamieson to The Engineer-in-Chief.

Sir,

Post Office, Merriwa, 17 March, 1887.

I have the honor to forward under separate cover by to-day's post two (2) books, one containing check levels from 24 mls. 75 chs. to 37 mls., and the other cross levels from 30 mls. to 34 mls. 29 chs. taken on the permanent staking of the line Muswellbrook to Cassilis.

I have, &c.,

JOHN J. JAMIESON.

Mr. Thomas.—W.H.Q., 19/3/87. The two (2) level-books received.—E.R.T., 21/3/87.

No. 90.

Mr. Surveyor Jamieson to The Engineer-in-Chief.

Sir,

Camp, Merriwa, 1 April, 1887.

I have the honor to enclose, in trial plan, a parish map of Watt, county of Brisbane, upon which is shown, in red, the proposed line, passing through the alienated portions. Please cause the bearings and distances, also reference to corners, to be noted upon same, and returned to me as early as possible.

I have, &c.,

JOHN J. JAMIESON.

Mr. Thomas.—W.H.Q., 4/4/87. The Engineer-in-Chief. Plan and section to hand this day, and forwarded for approval.—E.R.T., 4/4/87. Map returned to Mr. Jamieson, with information thereon.—E.R.T., 21/4/87.

No. 91.

No. 91.

Mr. Surveyor Jamieson to The Engineer-in-Chief.

Sir,

Camp, Merriwa, 1 April, 1887.

I have the honor to forward, under separate cover by to-day's post, plan and section of portion of the trial survey, Muswellbrook to Cassilis, from about 43 miles to 49 miles 40 chains, showing cross levels, &c., to enable you to determine the straights and curves for permanent staking. I have, in accordance with your instructions, shown, in pencil, the straights and curves which I propose to be permanently staked; also, on portion of the section, have shown, in pencil, the probable section which the line I propose will give.

I have, &c.,

JOHN J. JAMIESON.

Plan and section herewith.—W.H.Q., 15/4/87. Mr. Drewett.—Received above, 16/4/87. Plan returned to Mr. Thomas for fresh levels to be taken near Cassilis, see No. 1,442-87.—J.W.D., 20/4/87. Mr. Thomas.—W.H.Q., 20/4/87. Plan and section received, without any instructions as to the further permanent staking of the line.—E.R.T., 21/4/87. The Engineer-in-Chief wishes the permanent staking to be proceeded with, including the deviation near Cassilis, and Messrs. Jamieson and Edwardes can now go on with the work.—J.W.D., 23/4/87. Mr. Thomas. Instructions forwarded to Mr. Jamieson.—E.R.T., 23/4/87.

No. 92.

The Acting Assistant Engineer for Trial Surveys to Mr. Surveyor Jamieson.

23 April, 1887.

THE Engineer-in-Chief wishes the permanent staking of the Muswellbrook to Cassilis Railway to be proceeded with, over the line shown in pencil on plan.

Owing to a deviation near Merriwa, and extending to the western side of Merriwa River, you will have to arrange your junction with Mr. Edwardes' staking.

Field plan and section forwarded under separate cover, even date.

EDWIN R. THOMAS.

No. 93.

Mr. Surveyor Edwardes to The Engineer-in-Chief.

Sir,

Railway Survey Camp, Denman, 2 April, 1887.

I have the honor to forward you, under separate cover, a field plan and section, showing the cross levels taken on the trial survey line, from Muswellbrook to Cassilis, between 38 miles and 43 miles 30 chains.

Upon the above plan I have marked, in pencil, a line passing through these cross levels, which I now submit for your approval of the permanent staking of same.

The section, as reduced by the cross levels, I have shown in pencil, also approximate gradients.

At 42½ miles I have marked a proposed site for station at Merriwa, which I believe to be the most practicable one obtainable.

I have, &c.,

CHAS. A. EDWARDES.

Mr. Thomas.—J.W., 4/4/87. The Engineer-in-Chief. Plan and section to hand this day, and forwarded for approval.—E.R.T., 4/4/87.

Will you please to instruct Mr. Edwardes not again to send in a plan and section with different horizontal scales. The plan is 4 chains to an inch, and the section 10 chains, of the Muswellbrook and Cassilis survey, now forwarded.—J.W., 15/4/87.

Plan and section herewith.—W.H.Q., 15/4/87. Mr. Drewett. Received the above.—J.W.D., 16/4/87. Plan returned to Mr. Thomas to have levels taken over the ground shown by a pencil line on plan near Cassilis.—J.W.D., 20/4/87. Mr. Thomas.—W.H.Q., 20/4/87. Mr. Edwardes instructed to take section near Merriwa, and plot sections to same scale as plans.—E.R.T., 21/4/87. For instructions see No. 1,444-87 this day.—J.W.D., 23/4/87. Mr. Thomas. Instructions forwarded to Mr. Edwardes.—E.R.T., 23/4/87.

Telegram from Mr. Surveyor Edwardes to The Engineer-in-Chief for Railways.

Survey Camp, Merriwa.

FIELD plan forwarded on 1st instant. Am awaiting your instructions for further staking line.

CHAS. A. EDWARDES.

No. 94.

The Acting Assistant Engineer for Trial Surveys to Mr. Surveyor Jamieson.

21 April, 1887.

THE Engineer-in-Chief wishes that all sections in the future to be plotted to the same horizontal scale as the plans.

EDWIN R. THOMAS.

No. 95.

The Acting Assistant Engineer for Trial Surveys to Mr. Surveyor Edwardes.

23 April, 1887.

THE Engineer-in-Chief wishes the permanent staking of the Muswellbrook to Cassilis railway to be proceeded with from 38 miles 35 chains on pencil line on plan, including the deviation near Merriwa.

You will have to arrange junction with Mr. Jamieson, owing to deviation. Field plan and section forwarded under separate cover, even date.

No. 96.

Memo. from The Acting Assistant Engineer for Trial Surveys to Mr. Surveyor Edwardes.

Department of Public Works, Railway Branch,

Engineer-in-Chief's Office, Sydney, 21 April, 1887.

THE Engineer-in-Chief has given instructions that you are to level over the blue line shown on the tracing forwarded under separate cover, and forward a section of the same plotted to scales of 4 chains to 1 inch horizontal, and 40 feet to 1 inch vertical.

In future, the Engineer-in-Chief wishes all sections plotted to the same horizontal scale as the plans.

EDWIN R. THOMAS.

Section of deviation as shown by blue line on tracing plotted to scales as required herewith (together with tracing) forwarded under separate cover.—CHAS. A. EDWARDES, 26/4/87. The Engineer-in-Chief. Mr. Thomas.—W.H.Q., 28/4/87. The section of deviation and tracing of plan received and forwarded herewith, that the height of the formation for the bridge over Merriwa Rivulet may be decided.—E.R.T., 2/5/87. The Engineer-in-Chief. Mr. Edwardes to return original section, 2/5/87.—W.H.Q. Mr. Thomas.

The original section of trial line and Mr. Edwardes' proposed alteration of same herewith, plotted to a 4-chain scale horizontal, and 40 feet vertical to 1 inch, also section of proposed deviation. Mr. Edwardes has by this date nearly reached the point of junction of proposed deviation, and will need instructions as to the further staking from this point. Is the "lock-spitting" and "trial-hole-sinking" to be proceeded with on this line? No instructions have been given for this work.—E.R.T., 9/5/87. What has been done in this matter? Mr. Drewett.—J.W., 13/5/87. Will Mr. Thomas please reply? Mr. Thomas.—J.W.D., 16/5/87. Mr. Edwardes was instructed on the 9th instant to proceed with permanent staking of deviation at Merriwa. See note on Mr. Edwardes' communication of the 5th instant.—E.R.T., 16/5/87.

The Engineer-in-Chief.—W.H.Q., 9/5/87. Mr. Thomas. Section returned.—E.R.T., 9/5/87.

No. 98.

Mr. Surveyor Edwardes to The Engineer-in-Chief.

Sir,

Railway Survey Camp, Merriwa, 5 May, 1887.

In accordance with your telegram of 2nd instant, received by me by last night's mail, I beg to herewith forward you under separate cover a section of part of the trial line from Muswellbrook to Cassilis, from 41 miles to 43 miles 40 chains. Section of trial line is shown in black, that of proposed alteration of line as marked in pencil on plan being shown by dotted blue line, plotted from cross levels shown on plan.

I would request that I may be at once informed by telegram should any alteration be now made in the deviation of line shown in blue on tracing forwarded, I having partly completed the staking of the same.

I have, &c.,

CHAS. A. EDWARDES.

Mr. Thomas.—W.H.Q., 7 May, 1887. Section received, and instructions wired.—E.R.T., 9/5/87.

No. 99.

Telegram from the Acting Assistant Engineer to Mr. Surveyor Edwardes.

9 May, 1887.

STAKE line of deviation as per memo., 23 April ultimo.

No. 100.

Mr. Surveyor Edwardes to The Engineer-in-Chief.

Sir,

Railway Survey Branch, Sydney, 18 May, 1887.

I have the honor to herewith forward you plans (2), sections (2), with book of reference, of trial survey, made in accordance with your instructions, from Muswellbrook to Cassilis.

This survey embraces—(1.) an amendment of Mr. Furrowes' trial line between 7 miles 47.44 chains and 22 miles, with deviation from his line at 10 miles, passing near Denman. (2.) Continuation of trial line from 22 miles to Cassilis *via* Merriwa, with deviation (rough staked) passing south of that town.

From Muswellbrook to main dividing range at 34 miles the country traversed by line is of a sandstone nature, valuable for agriculture and vine growing, that part of the Hunter Valley crossed being of an highly fertile nature. From 34 miles to Cassilis the country is chiefly basaltic being good agricultural land. With the exception of Crown reserves, as shown by green tint on plans, the line passes through private property, all more or less improved by cultivation, ringbarking, and clearing. From

From 17 miles to 34 miles, and in the vicinity of the Goulburn River, ironbark timber can be obtained; from 34 miles to Cassilis the timber, chiefly box and gum, is of a worthless description. Ironbark forests exist on Crown land near Ironbark Creek and Green Hills, distant about 7 miles south-west from Cassilis. Ballast is available the whole length of line; freestone for quarrying can also be obtained. From Muswellbrook to Worondi Creek, the soil is suitable for brickmaking. Beyond to Cassilis, owing to limestones and sand, the soil is of an unfavourable nature. Water for locomotive purposes can be had at the Hunter Rivers, Merriwa, Krui, and Munmurra Rivers.

The amendment of Mr. Burrowes' line from 7 miles 47.44 chains (A.) to 23 miles 78.57 chains (D.) is 65.89 chains shorter, and gives throughout a line with much easier grades and earthworks. The flood level of Hunter River (see diagram) is highest visible. I have also shown on plan a known flood mark of flood of 1872. The flats on each side of river being more or less flooded for a distance of about 70 chains on each side of river at and adjacent to crossing will necessitate piling the approaches to bridge.

I examined the country with a view of carrying the line as near as possible to the town of Denman. As will be seen from section (B.C.) the deviation near Denman, commencing at 10 miles on Mr. Burrowes' line, involves very heavy grade and earthworks, being 79.94 chains longer than line from 7 miles 47.44 chains (A.C.), any line taken nearer Denman being blocked by mountain range between Hunter River and Goulburn River. All traffic westerly for Muswellbrook is taken *via* Bell's Lane instead of Denman, it being about 3 miles shorter. Platforms erected at about 7 miles and 15½ miles would I believe fully meet the requirements of the locality, should the direct line be adopted. From 22 miles to 34 miles the country traversed is mountainous, the summit at 29 miles is the lowest gap available, occurring in range between Hall's and Worondi Creeks.

At 34 miles a tunnel 13 chains in length will be necessary. From (F.) summit of main range, at 36½ miles to Cassilis the country is hilly with swelling ridges. At 70½ miles I have surveyed the line with a tunnel through range between Two-mile Hollow Creek and Munmurra River. By skirting this range the tunnel could be avoided, but would increase the distance by 1½ miles.

The deviation south of Merriwa (F.G.) passes through country similar to that *via* Merriwa, being 2 miles 56.10 chains shorter, giving a line with similar rate of grades, with slightly easier earthworks.

The mileage by this survey is as follows:—Mr. Burrowes 22 miles continued *via* Merriwa, 74 miles 40.31 chains; 10 miles continued near Denman and *via* Merriwa, 74 miles 54.36 chains; 7 miles 47.44 chains continued *via* Bell's Lane and Merriwa, 73 miles 54.42 chains; by line south of Merriwa, 2 miles 56.10 chains shorter.

The grades noted on section are those to which I have mainly worked. The approximate size of important water ways are also noted.

I discovered a discrepancy in Mr. Burrowes' levels between 7 miles and 22 miles.

As will be seen, the route from Merriwa to Cassilis is circuitous. I thoroughly examined the country to north of road between these two points with a view of obtaining a more direct route by way of Dunlop, Ailsa, and Pembroke, but could see no way of obtaining a line in that direction.

In conclusion I would beg to point out that in view of a possible extension of this line from Cassilis westerly towards Denison Town, Coolah, thence Coonabarrabran, great difficulty would occur from present terminus of this line, it being blocked by range between the Four-mile Creek and Munmurra River.

By altering present line from about 69 miles, and passing within about 2½ miles of Cassilis, this difficulty could I believe be avoided. From present terminus of line an extension could be obtained towards Quirindi.

This survey was commenced September, 1884, and completed May, 1885.

I have, &c.,

CHAS. A. EDWARDES.

No. 101.

Mr. Surveyor Edwardes to The Engineer-in-Chief.

Sir,

Railway Survey Camp, Merriwa, 25 May, 1887.

I have the honor to request that I may be supplied, as early as practicable, with the following:—

Tracing of plan and section showing the deviation of trial line, Muswellbrook to Cassilis, at crossing of the Kouli River.

The level-books containing the levels of the trial survey, Muswellbrook to Cassilis, from 48 miles 22 chains to Cassilis (including the deviation of survey).

25 ft. plan paper (for field plan.)

25 ft. section paper (for field section.)

10 ft. tracing paper.

Three level books.

One field book.

I have, &c.,

CHAS. A. EDWARDES.

Mr. Thomas.—W.H.Q., 28/5/87.
31/5/87.

The above have been forwarded to Mr. Edwardes.—E.R.T.,

No. 102.

Mr. Surveyor Edwardes to The Engineer-in-Chief.

Sir,

Railway Survey Camp, Merriwa, 25 May, 1887.

I have the honor to herewith forward you, under separate cover, three level-books, containing the following levels of the Muswellbrook-Cassilis permanent survey:—

(1.) Through levels, 38 miles 35 chains to 45 miles.

(2.) Cross sections levels, 34 miles 38 chains to 39 miles 46 chains.

(3.) " " 39 miles 47 chains to 43 miles 43 chains.

I have, &c.,

CHAS. A. EDWARDES.

Mr. Thomas. W.H.Q., 30/5/87.

Level books, as above, received.—E.R.T., 31/5/87.

No. 103.

Mr. Surveyor Jamieson to The Engineer-in-Chief.

Sir,

Survey Camp, 2 June, 1887.

I have the honor to forward, under separate cover, per same post, two level books, one containing permanent levels from 45 miles to 49 miles 50 chains, and the other check levels from 37 miles to 48 miles, taken on the centre line of proposed railway, Muswellbrook to Cassilis.

I have, &c.,

JOHN J. JAMIESON.

Mr. Thomas.—W.H.Q., 2/6/87. Level books (two) received.—E.R.T., 2/6/87.

No. 104.

The Acting Assistant Engineer for Trial Surveys to The Engineer-in-Chief.

Department of Public Works, Railway Branch, Engineer-in-Chief's Office.

Sydney, 17 June, 1887.

FORWARDED herewith, for your approval, are field plans and sections of the line, Muswellbrook to Cassilis, showing the line proposed to be permanently staked, from 49 miles to 63 miles.

The grading can be improved on the working section.

E.R.T.

Line shown in pencil may be staked.—J.W., 18/6/87. Mr. Thomas. Instructions forwarded to Messrs. Edwardes and Jamieson.—E.R.T. 22/6/87.

No. 105.

Mr. Surveyor Edwardes to The Engineer-in-Chief.

Sir,

Railway Survey Camp, Merriwa, 18 June, 1887.

In order to expedite the field work of the permanent survey from Muswellbrook to Cassilis, I would request that I may be furnished with instructions regarding the further staking of the line—field plan and section of which was forwarded on the 14th instant—as early as practicable.

I have, &c.,

CHAS. A. EDWARDES.

Mr. Thomas.—W.H.Q., 22/6/87. Instructions with field plan and section forwarded to Mr. Edwardes.—E.R.T., 22/6/87.

No. 106.

Mr. Surveyor Edwardes to The Engineer-in-Chief.

Sir,

Railway Survey Camp, Merriwa, 18 June, 1887.

In reply to your memo., No. 87/745, of 14th June, *re* progress made, length yet to be done, and probable date of completion of the permanent survey from Muswellbrook to Cassilis, I beg to report that the permanent survey of the line is now completed to 49 miles 50 chains, to which point the working plan, part 2, has also been plotted.

There now remains about 25 miles to complete the staking to Cassilis. After consulting with Mr. Jamieson, I beg to state that, in conjunction with him, I hope to be able to complete the field-work of the above by the end of September.

I have, &c.,

CHARLES EDWARDES.

Mr. Thomas.—W.H.Q., 22/6/87. E.R.T., 23/6/87. J.W., 24/6/87. How is this survey progressing?—W.H.Q., 3/8/87. Mr. Thomas. The July journals of Messrs. Edwardes and Jamieson are not to hand; but from the field plans that have been received it appears likely, if the weather remains favourable, that the survey will be completed by the end of September next.—E.R.T., 4/8/87. End of month.—4/8/87. Mr. Thomas.—W.H.Q., 31/8/87. This survey will most likely be completed within a short period of the time stated, unless the weather has interfered considerably with its progress.—E.R.T., 2/9/87. The Engineer-in-Chief. End of month. Mr. Thomas.—W.H.Q., 4/10/87. This survey should be completed within this month.—E.R.T., 5/10/87. The Engineer-in-Chief.

No. 107.

Mr. Surveyor Jamieson to The Engineer-in-Chief.

Sir,

P.O., Merriwa, 20 June, 1887.

I have the honor to reply to your memo, 87/744, *re* the progress, length of survey yet to be made, and date of completion of the permanent staking, Muswellbrook to Cassilis.

I beg to state that the permanent survey is completed to 50 miles, and there now still remains about 25 miles to be set out to Cassilis. After consulting with Mr. Edwardes, I find that the field work will, in all probability, be completed about the end of September.

The plotting and drawing of working plans will then take another month before the work is finally finished.

I have, &c.,

JOHN J. JAMIESON.

Mr. Thomas.—W.H.Q., 22/6/87. E.R.T., 23/6/87.

No. 108.

Mr. Surveyor Jamieson to The Engineer-in-Chief.

Sir,

P. O., Merriwa, 16 July, 1887.

I have the honor to forward by to-day's post (2) two level books, one containing permanent levels from 45 miles to 54 miles 30 chains, and the other cross sections from 43 miles 47 chains to 50 miles 60 chains, taken on the centre line of proposed railway, Muswellbrook to Cassilis. Also, per same post, I am forwarding the parish maps of Collaroy and Borambil, county of Bligh, upon which is shown approximately in black dotted line the position of centre line passing through alienated portions.

Please cause the bearings, lengths of lines, and reference to corner trees to be noted on same, and returned to me as soon as convenient.

I have, &c.,

JOHN J. JAMIESON.

Mr. Thomas.—W.H.Q., 19/7/87. Through level and cross-level books received, and information on parish maps forwarded.—E.R.T., 25/7/87.

No. 109.

Mr. Surveyor Edwardes to The Engineer-in-Chief.

Sir,

Railway Survey Camp, Merriwa, 22 July, 1887.

I have the honor to herewith forward you under separate cover, two level books, containing the following levels of the permanent survey of the line from Muswellbrook to Cassilis, viz. :—

Through levels, 54 miles 30 chains to 59 miles 70 chains. Check levels, 47 miles 75 chains to 59 miles 70 chains. I would request that the book containing the through levels may be returned to me for the insertion of further levels.

I have, &c.,

CHAS. A. EDWARDES.

Mr. Thomas.—W.H.Q., 26/7/87. The level books received. The through level book will be returned to Mr. Edwardes as soon as plotted.—E.R.T., 27/7/87.

No. 110.

Mr. Surveyor Edwardes to The Engineer-in-Chief.

Sir,

Railway Survey Camp, Merriwa, 30 July, 1887.

I have the honor to forward you, under separate cover, the field plan of the permanent staking of the Muswellbrook-Cassilis Railway, previously sent in by me, on which I have now shown additional cross levels, taken to 64 miles 40 chains.

From last tangent permanently staked (shown in blue) I have marked in pencil through the cross levels the remaining straights and curves to 64 miles 40 chains, the staking of which I now submit for your approval :—

The alteration of section, also forwarded, I have in pencil shown.

A lithograph of parish of Collaroy, county of Bligh I also forward for lengths and bearings of portions through which the line passes.

I would request that this plan may be returned to me as early as practicable.

Plan, section, and litho. herewith, under separate cover. I have, &c.,

CHAS. A. EDWARDES.

Mr. Thomas.—W.H.Q., 2/8/87.

Field plan and sections, also lithograph of the parish of Collaroy received. Plan and section forwarded herewith for your approval of that portion beyond the last permanently staked line, shown in blue on plan at 59 miles. The lithograph will be returned to Mr. Edwardes with the information required thereon.—E.R.T., 3/8/87. The Engineer-in-Chief.

Stake out the line so as to give the section shown in pencil.—J.W., 3/8/87. Mr. Thomas,—Instructions with field plan and section forwarded to Mr. Edwardes.—E.R.T., 4/8/87.

No. 111.

The Acting Assistant Engineer for Trial Surveys to Mr. Surveyor Edwardes.

4 August, 1887.

FIELD plan and section forwarded yesterday. The Engineer-in-Chief approves the staking of line shown in pencil on plan.

No. 112.

Mr. Surveyor Jamieson to The Engineer-in-Chief.

Sir,

Post Office, Merriwa, 6 August, 1887.

I have the honor to forward by to-day's post plan and section of portion of the trial survey, Muswellbrook to Cassilis, from about 64 miles to 72 miles.

I have cross-levelled the above length thoroughly, and have shown same on plan; also have struck out a line in pencil, which I submit to you for approval of permanent staking.

The section is tolerably easy from 64 miles to 70 miles, but from that point to the top of dividing ridge between the Two-mile Hollow Creek and the Munmurra River, I had some difficulty in obtaining a good section.

Mr. Edwardes, when making the trial survey, tried several routes, which I also show on my plan and section.

The line recommended by me is shown in blue on plan, and is considerably better than any of the lines run by Mr. Edwardes.

I wish to draw your attention to the crossing of the Two-mile Hollow Creek, which I have shown to be crossed on an (8) eight chain curve and a 1 in 40 grade. Any other curve increasing considerably the embankment across the creek would also reduce the length of the line, consequently the cutting would also be increased. If the line should not meet with your approval, would you kindly suggest the way in which it should be permanently staked.

There

There will, on completing this length, be still about 3 miles to be set out to Cassilis, which will, in all probability be finished the first week in October.

Please return the plan with approved staking at an early date, so that there will be no delay in the field work.

I have, &c.,

JOHN J. JAMIESON.

Mr. Thomas.—W.H.Q., 9/8/87. Plan, section, and tracing herewith.—E.R.T., 11/8/87. The Engineer-in-Chief. Plan, &c., inspected by the Engineer-in-Chief, and returned herewith.—W.H.Q., 23/8/87. Mr. Thomas. Plan and section received. Both forwarded with instructions to Mr. Jamieson.—E.R.T., 24/8/87. The Engineer-in-Chief. J.W., 25/8/87.

No. 113.

Mr. Surveyor Edwardes to The Engineer-in-Chief.

Sir,

Railway Survey Camp, Merriwa, 31 August, 1887.

I beg to herewith forward you under separate cover three (3) level books, containing the following levels of the permanent survey from Muswellbrook to Cassilis:—

- (1.) Through levels—59 miles 70 chains to 63 miles 60 chains.
- (2.) Check levels—59 miles 70 chains to 65 miles 10 chains.
- (3.) Cross-section levels—50 miles 65 chains to 60 miles 38 chains.

I have, &c.,

CHAS. A. EDWARDES.

Mr. Thomas.—W.H.Q., 6/9/87. Level books as above (3) received.—E.R.T., 7/9/87. The Engineer-in-Chief.

No. 114.

Mr. Surveyor Edwardes to The Engineer-in-Chief.

Sir,

Railway Survey Camp, Merriwa, 31 August, 1887.

As the next field plan of the Muswellbrook-Cassilis permanent survey will embrace the staking of the final portion of the survey at Cassilis, I would request that I may be informed before furnishing you with such plan, whether, in determining the line to be permanently staked, any provision is to be made for the extension of the same beyond Cassilis to the Western District, as from the point of present termination of the trial survey adjacent to the township of Cassilis, great difficulty would occur in extending the line in the above direction.

I have, &c.,

CHAS. A. EDWARDES.

Every provision must be made for the extension of this line beyond Cassilis.—J.W., 6/9/87. Mr. Thomas. Noted, and Mr. Edwards informed.—E.R.T., 7/9/87. The Engineer-in-Chief.

No. 115.

The Acting Assistant Engineer for Trial Surveys to Mr. Surveyor Edwardes.

7 September, 1887.

EVERY provision must be made for the extension of the Muswellbrook to Cassilis railway beyond Cassilis.

EDWIN R. THOMAS.

No. 116.

Mr. Surveyor Edwardes to The Engineer-in-Chief.

Sir,

Railway Survey Camp, Cassilis, 23 September, 1887.

I have the honor to herewith forward you under separate cover, field plan and section of the Muswellbrook-Cassilis railway from 70 $\frac{1}{2}$ miles to termination of survey at Cassilis. On this plan I have laid down in pencil the straights and curves, the permanent staking of which I now submit for your approval.

On plan I have shown by rough traverse D F, E F, how the line could be extended from Cassilis, and on district map I have denoted by dotted red line a route I explored to summit of the Great Dividing Range, bearing towards Uarbry.

From Uarbry the Talbragar water could be followed to near Dubbo, or the Mudgee-Coonamble trial survey be connected with near Munderooran.

The country from Cassilis to Coolah is of a very broken nature, being a series of lofty ranges and intervening creeks, to cross which great difficulties would be met with in extending a line in that direction.

I have, &c.,

CHAS. A. EDWARDES.

Mr. Thomas.—W.H.Q., 27/9/87. Plan, section, and map forwarded for your approval. The Engineer-in-Chief.—E.R.T., 27/9/87. The line may be staked as shown in pencil. The line is a heavy one throughout, and I cannot imagine that it will ever be constructed to a private township like Cassilis.—J.W., 29/9/87. Plans returned herewith.—W.H.Q. Mr. Thomas. Plans received, and instructions forwarded to Mr. Edwardes.—E.R.T., 30/9/87. The Engineer-in-Chief.

No. 117.

Mr. Surveyor Jamieson to The Engineer-in-Chief.

Sir,

Post Office, Merriwa, 24 September, 1887.

I have the honor to forward under separate cover, by to-day's post, level book, containing through levels taken on centre line of proposed railway, Muswellbrook to Cassilis, from 63 miles 60 chains to 72 miles 60 chains.

I have, &c.,

JOHN J. JAMIESON.

Mr. Thomas.—W.H.Q., 27/9/87. Level book received.—E.R.T., 27/9/87. The Engineer-in-Chief.

No. 118.

No. 118.

Mr. Surveyor Edwardes to The Engineer-in-Chief.

Sir,

Railway Survey Camp, Cassilis, 3 September, 1887.

I beg to inform you that I hope to be able to complete the permanent survey of the line from Muswellbrook to Cassilis by the 15th instant.

I have, therefore, the honor to request that I may be furnished with your fresh instructions at an early date.

I have, &c.,

CHAS. A. EDWARDES.

May return to head quarters as soon as all the field work has been finished.—J.W., *per* W.H.Q., 5/10/87. Mr. Thomas. Instructions forwarded.—E.R.T., 6/10/87. The Engineer-in-Chief. End of month.—7/10/87. Mr. Thomas.—W.H.Q., 1/11/87. Mr. Edwardes has completed the survey and permanent staking. He returned to office on October 20th, and is engaged completing working plans.—E.R.T., 2/11/87. The Engineer-in-Chief.

No. 119.

The Acting Assistant Engineer for Trial Surveys to Mr. Surveyor Edwardes.

6 October, 1887.

WHEN you have completed the survey, Muswellbrook to Cassilis, and have measured up the trial holes, &c., you are to return to Sydney.

You have given a list of those trial holes that have not been supplied from this office, as proposed in a former memo. 87/47.

EDWIN R. THOMAS.

No. 120.

Mr. Surveyor Jamieson to The Engineer-in-Chief.

Sir,

Post Office, Merriwa, 28 September, 1887.

I beg most respectfully to inform you that I have this day posted a level book, containing cross levels taken on the centre line of proposed railway, Muswellbrook to Cassilis, from 60 miles 39 chains to 69 miles 15 chains.

I have, &c.,

JOHN J. JAMIESON.

Mr. Thomas.—W.H.Q., 1/10/87. Cross level book received.—E.R.T., 1/10/87.

No. 121.

Mr. Surveyor Jamieson to The Engineer-in-Chief.

Sir,

Cassilis, 3 October, 1887.

I have the honor to report the completion of the survey from 65 miles to 72 miles 60 chains.

My camp is now being removed to Cassilis, and will assist in the staking of the final length of (3) three miles, and, with the assistance of Mr. Edwardes, expect to have the whole survey, Muswellbrook to Cassilis, finished on the 15th of October. Please forward at an early date instructions as regards my future movements.

I have, &c.,

JOHN J. JAMIESON.

May return to head quarters as soon as all the field work has been finished.—J.W., *per* W.H.Q., 5/10/87. Mr. Thomas. Instructions forwarded.—E.R.T., 6/10/87. The Engineer-in-Chief. End of month, 7/10/87. Mr. Thomas.—W.H.Q., 1/11/87. Mr. Jamieson has completed the survey and permanent staking. He returned to the Office on 17th October, and is engaged completing working plans.—E.R.T., 2/11/87. The Engineer-in-Chief.

No. 122.

The Acting Assistant Engineer for Trial Surveys to Mr. Surveyor Jamieson.

6 October, 1887.

WHEN you have completed the survey Muswellbrook to Cassilis you are to return to Sydney.

EDWIN R. THOMAS.

No. 123.

Mr. Surveyor Edwardes to The Engineer-in-Chief.

Sir,

Railway Survey Camp, Cassilis, 13 October, 1887.

I have the honor to herewith forward you, under separate cover, one level book containing the permanent levels of the Muswellbrook-Cassilis Railway, from 72 miles 59 chains to 77 miles, being the end of the staking of same.

I have, &c.,

CHAS. A. EDWARDES.

Mr. Thomas.—W.H.Q., 15/10/87. Level book received.—E.R.T., 17/10/87.

Questions and Answers.

LEGISLATIVE ASSEMBLY—TUESDAY, 3RD JULY, 1888.

- (19.) Railway Line from Muswellbrook to Cassilis—*Mr. McElhone*, for *Mr. Fitzgerald*, asked the Secretary for Public Works,—
- (1.) What was the total cost of the trial and final surveys of the proposed railway line from Muswellbrook to Cassilis?
 - (2.) How many surveyors were employed in carrying out these surveys from first to last?
 - (3.) What was the total cost of lock-spitting and trial-holes on the proposed line?
 - (4.) When was the final contract for lock-spitting, &c., completed?
- Mr. Sutherland* answered,—
- (1.) Trial surveys, £1,090 16s. 5d.; permanent surveys, £3,778 13s. 7d.; total, £4,869 10s.
 - (2.) Four.
 - (3.) £185 4s. 11d.
 - (4.) 2nd April, 1888.

LEGISLATIVE ASSEMBLY—TUESDAY, 3RD JULY, 1888.

- (3.) Railway from Muswellbrook to Cassilis :—*Mr. McElhone* asked the Secretary for Public Works,—
- (1.) Are the plans and sections of the railway from Muswellbrook to Cassilis ready?
 - (2.) Did the late Government have the money voted for the above railway; if so, is it the intention of the Government to call for tenders?
 - (3.) If so, when?
- Mr. Sutherland* answered,—
- (1.) The surveys have been finished, and the plans and sections are nearly ready.
 - (2 and 3.) The necessary amount of money has been voted, but tenders cannot be called until plans and sections, &c., have been approved by both Houses of Parliament.

[Two plans.]

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

RAILWAY FROM INVERELL TO GLEN INNES.
(PETITION FROM CERTAIN RESIDENTS IN FAVOUR OF.)

Received by the Legislative Assembly, 20 November, 1888.

To the Honorable the Legislative Assembly of New South Wales.

The humble Petition of the undersigned, residents of the district of Inverell,—

RESPECTFULLY SHOWETH:—

That, in the opinion of your Petitioners, the proposal to connect Inverell with either Guyra, Uralla, or Kentucky, is inimical to the interests of the Colony, of no service to the large and important farming district of Inverell, and a useless expenditure of public money.

That, in the opinion of your Petitioners, the line of railway from Inverell to Glen Innes, already adopted on two different occasions by your honorable House, is the only line that can serve the interests of this district, the ulterior object of your Petitioners being to reach the coast at the nearest practicable point.

Your Petitioners therefore pray that your honorable House will take the foregoing statements into your most favourable consideration, and act as in the wisdom of your honorable House may seem best in the premises.

And your Petitioners, as in duty bound, will ever pray, &c.

[Here follow 2,166 signatures.]

VICTORIA, by the Grace of God, of the United Kingdom of Great Britain and Ireland, Queen, Defender of the Faith, and so forth,—

To Our trusty and well-beloved—

ALEXANDER RICHARDSON, Esquire;
RICHARD WINDEYER THOMPSON, Esquire, M.P.; and
FREDERICK AUNGIER BROCK, Esquire, J.P.,—

Greeting:

Know Ye, that We, reposing great trust and confidence in your ability, zeal, industry, discretion, and integrity, do, by these presents, authorize and appoint you, or any two of you, as hereinafter mentioned, to make a diligent and full inquiry into the recent alleged Tramway Frauds, and to report upon the most efficacious means for securing the Tramway Revenue from misappropriation in the future: And We do, by these presents, grant to you, or any two of you, at any meeting or meetings to which all of you shall have been duly summoned, full power and authority to call before you all such persons as you may judge necessary, by whom you may be better informed of the truth in the premises, and to require the production of all such books, papers, writings, and all other documents as you may deem expedient; and to visit and inspect the same at the offices or places where the same or any of them may be deposited, and to inquire of the premises by all lawful ways and means: And We do give you power at your discretion to procure such clerical and other assistance as you may deem necessary for enabling you duly to execute this Our Commission: And Our further will and pleasure is that you do within one month after the date of this Our Commission, or as soon as the same can be done, using all diligence, certify to Us, in the Office of Our Secretary for Public Works, under your, or any two of your hands and seals, what you shall find touching the premises: And We hereby command all Government Officers and other persons whomsoever within Our said Colony, that they be assistant to you and each of you in the execution of these presents: And We appoint you the said Alexander Richardson, Esquire, to be President of this Our Commission, which said Commission We declare to be a Commission for all purposes of the Act 44 Victoriae No. 1, intituled, "An Act to regulate the taking of Evidence by Commissioners under the Great Seal."

In testimony whereof, We have caused these Our Letters to be made Patent, and the great Seal of Our said Colony of New South Wales to be hereunto affixed.

Witness Our right trusty and well-beloved Councillor, CHARLES ROBERT, BARON CARRINGTON, Knight Grand Cross of Our Most Distinguished Order of Saint Michael and Saint George, Our Governor and Commander-in-Chief of Our Colony of New South Wales and its Dependencies, at Government House, Sydney, in New South Wales aforesaid, this sixteenth day of August, in the fifty-second year of Our Reign, and in the year of Our Lord one thousand eight hundred and eighty-eight.

CARRINGTON.

(SEAL.)

By His Excellency's Command,
JOHN SUTHERLAND.

Entered on record by me, in REGISTER OF PATENTS, No. 13, pages 229-230, this sixteenth day of August, one thousand eight hundred and eighty-eight.

(For the Colonial Secretary and Registrar of Records),

CRITCHETT WALKER,
Principal Under Secretary.

TRAMWAY FRAUDS INQUIRY COMMISSION.

MINUTES OF PROCEEDINGS of the Royal Commission appointed on the 16th August, 1888, to make a diligent and full inquiry into the recent alleged Tramway Frauds, and to report upon the most efficacious means for securing the Tramway Revenue from misappropriation in the future.

THURSDAY, 16 AUGUST, 1888.

MEMBERS PRESENT:—

A. Richardson, Esq., President, in the Chair.

R. W. Thompson, Esq., M.P., | F. Aungier Brock, Esq., J.P.

The Commission met, at 10 a.m., at the office of the Secretary for Public Works.

The Commission was read by the President.

The President announced the receipt from the Commissioner for Railways of papers bearing upon the subject of the inquiry, including the evidence of various witnesses at a previous departmental investigation.

The Commission read the papers and deliberated.

It was resolved that the examination of witnesses should be proceeded with on August 21.

[The meeting adjourned at 11 a.m. until 21st August, at 10 a.m.]

TUESDAY, 21 AUGUST, 1888.

MEMBERS PRESENT:—

A. Richardson, Esq., President.

R. W. Thompson, Esq., M.P. | F. Aungier Brock, Esq., J.P.

The Commission met pursuant to adjournment.

The following witnesses were called in, sworn, and examined:—Pietro Gaspardo, Charles Cook, William Moran, Jules Pierre Rochaix.

[The meeting adjourned at 4.30 p.m. until 22nd August, at 10 a.m.]

WEDNESDAY, 22 AUGUST, 1888.

MEMBERS PRESENT:—

A. Richardson, Esq., President, in the Chair.

R. W. Thompson, Esq., M.P., | F. Aungier Brock, Esq., J.P.

The Commission met pursuant to adjournment.

The following witnesses were called in, sworn, and examined:—George Masoora, John Walsh, Nicholas Johns, John Bremner, Pietro Gaspardo, Marcus Alafousas, John Sotero, George Dummett, John Fountain, and Michael Malsiniotis.

[The meeting adjourned at 4.15 p.m. until 23rd August, at 10 a.m.]

THURSDAY, 23 AUGUST, 1888.

MEMBERS PRESENT:—

A. Richardson, Esq., President, in the Chair.

R. W. Thompson, Esq., M.P., | F. Aungier Brock, Esq., J.P.

The Commission met pursuant to adjournment.

The following witnesses were called in, sworn, and examined:—Michael Malsiniotis, Robert Stove, George Read, John Hoskison, Alfred Martin, George Masoora, Iefteras Epaminondas, Janopolis Vaselli, Marcus Alafousas, Pietro Gaspardo, Frederick Harris, Thomas Mulligan.

[The meeting adjourned at 4.50 p.m. until 24th August, at 10 a.m.]

FRIDAY, 24 AUGUST, 1888.

MEMBERS PRESENT:—

A. Richardson, Esq., President, in the Chair.

R. W. Thompson, Esq., M.P. | F. Aungier Brock, Esq., J.P.

The Commission met pursuant to adjournment.

The following witnesses were called in, sworn, and examined:—Ah Lum, John Graham, Robert Reid, John F. Saunders, Albert Keen.

[The meeting, at 4.30 p.m., adjourned until 28th August, at 10 a.m.]

TUESDAY,

TUESDAY, 28 AUGUST, 1888.

MEMBERS PRESENT:—

A. Richardson, Esq., President in the Chair.

R. W. Thompson, Esq., M.P. | F. Aungier Brock, Esq., J.P.

The Commission met pursuant to adjournment.

The following witnesses were examined:—John Graham, John Charles Frost, John E. Loder, Alfred Weston, Spero Magray, Robert Stove, Walter Bennett, Giacomo Vita, Portrase, Joseph Powell, William Moran.

[The meeting, at 4:20 p.m., adjourned until 29th August, at 10 a.m.]

WEDNESDAY, 29 AUGUST, 1888.

MEMBERS PRESENT:—

A. Richardson, Esq., President, in the Chair.

R. W. Thompson, Esq., M.P., | F. Aungier Brock, Esq., J.P.

The Commission met pursuant to adjournment.

The following witnesses were examined:—Gustave Adolphus Kopsch, Robert Maher, Patrick Greeley, Michael Henry Howard, William Branch, Frederick A. Blackstone, Muir, William Nixon, James Dixon, Helena Dummett.

[The meeting adjourned at 4:15 p.m. until 30th August, at 10 a.m.]

THURSDAY, 30 AUGUST, 1888.

MEMBERS PRESENT:—

A. Richardson, Esq., President, in the Chair.

R. W. Thompson, Esq., M.P., | F. Aungier Brock, Esq., J.P.

The Commission met pursuant to adjournment.

The following witnesses were called in, sworn, and examined:—William Hannam, James Hadwell, Arthur Simpson, Thomas Musgrave.

[The meeting adjourned at 5:10 p.m. until 31st August, at 10 a.m.]

FRIDAY, 31 AUGUST, 1888.

MEMBERS PRESENT:—

A. Richardson, Esq., President, in the Chair.

R. W. Thompson, Esq., M.P., | F. Aungier Brock, Esq., J.P.

The Commission met pursuant to adjournment.

The following witnesses were called in, sworn, and examined:—Daniel Power, Thomas Musgrave, Henry Ferrier.

[The meeting adjourned at 5 p.m. until 1st September, at 10 a.m.]

SATURDAY, 1 SEPTEMBER, 1888.

MEMBERS PRESENT:—

A. Richardson, Esq., President, in the Chair.

R. W. Thompson, Esq., M.P., | F. Aungier Brock, Esq., J.P.

The Commission met pursuant to adjournment.

The following witnesses were called in, sworn, and examined:—Henry Ferrier, Archibald Fraser.

[The meeting adjourned at 12:30 p.m. until 3rd September, at 10 a.m.]

MONDAY, 3 SEPTEMBER, 1888.

MEMBERS PRESENT:—

A. Richardson, Esq., President, in the Chair.

F. Aungier Brock, Esq., J.P.

The Commission met pursuant to adjournment.

The following witnesses were called in, sworn, and examined:—Griffith Jones, William Moran, Henry D. Elliott.

[The meeting adjourned at 5 p.m. until 4th September, at 10 a.m.]

TUESDAY, 4 SEPTEMBER, 1888.

MEMBERS PRESENT:—

A. Richardson, Esq., President, in the Chair.

R. W. Thompson, Esq., M.P., | F. Aungier Brock, Esq., J.P.

The Commission met pursuant to adjournment.

The following witnesses were called in, sworn, and examined:—John Graham, Frank Coll, John Connors, James Siddons, Francis Joseph M'Mahon, William Dolan, Patrick Stack, Ambrose Scott.

[The meeting adjourned at 5:10 p.m. until 5th September, at 10 a.m.]

WEDNESDAY,

WEDNESDAY, 5 SEPTEMBER, 1888.

MEMBERS PRESENT:—

A. Richardson, Esq., President, in the Chair.
 R. W. Thompson, Esq., M.P., | F. Aungier Brock, Esq., J.P.

The Commission met pursuant to adjournment.

The following witnesses were called in, sworn, and examined:—Patrick Quin, James Roberts, Alfred Thomas Collis.

[The meeting adjourned at 4:30 p.m. until 6th September, at 10 a.m.]

THURSDAY, 6 SEPTEMBER, 1888.

MEMBERS PRESENT:—

A. Richardson, Esq., President, in the Chair.
 R. W. Thompson, Esq., M.P., | F. Aungier Brock, Esq., J.P.

The Commission met pursuant to adjournment.

The following witnesses were called in, sworn, and examined:—Gustave Adolphus Kopsch, Alfred Solomon, James Marwood Elton, William Lambert, Elizabeth Elton.

[The meeting adjourned at 4:40 p.m. until 7 September, at 10 a.m.]

FRIDAY, 7 SEPTEMBER, 1888.

MEMBERS PRESENT:—

A. Richardson, Esq., President, in the Chair.
 R. W. Thompson, Esq., M.P., | F. Aungier Brock, Esq., J.P.

The following witnesses were called in, sworn, and examined:—John Bell, George Andrews Bramston, Hugo Dalms, Alfred Solomon.

[The meeting adjourned at 4 p.m. until 11 September, at 10 a.m.]

TUESDAY, 11 SEPTEMBER, 1888.

MEMBERS PRESENT:—

A. Richardson, Esq., President, in the Chair.
 F. Aungier Brock, Esq., J.P.

The Commission met pursuant to adjournment.

It was resolved that examination of witnesses should not be proceeded with in the absence of Mr. R. W. Thompson, M.P., one of the Commissioners.

[The meeting adjourned at 10:30 a.m. until 12 September, at 10 a.m.]

WEDNESDAY, 12 SEPTEMBER, 1888.

MEMBERS PRESENT:—

A. Richardson, Esq., President, in the Chair.
 F. Aungier Brock, Esq., J.P.

The Commission met pursuant to adjournment.

The President read a communication from Mr. R. W. Thompson, M.P., one of the Commissioners, intimating that he might be unable to attend the meetings of the Commission for some days.

It was resolved that the examination of witnesses be proceeded with.

The following witnesses were called in, sworn, and examined:—James Roberts, William Boyd, Patrick Greeley, Frederick Oakes, John William Tyrer, Albert Frederick Primrose, William Lambert.

[The meeting adjourned at 5 p.m. until 13 September, at 10 a.m.]

THURSDAY, 13 SEPTEMBER, 1888.

MEMBERS PRESENT:—

A. Richardson, Esq., President, in the Chair.
 F. Aungier Brock, Esq., J.P.

The Commission met pursuant to adjournment.

The following witnesses were called in, sworn, and examined:—William Hannam, Walter Wigg, Edwin Tatham.

[The meeting adjourned at 4 p.m., until 18 September, at 10 a.m.]

TUESDAY, 18 SEPTEMBER, 1888.

MEMBERS PRESENT:—

A. Richardson, Esq., President, in the Chair.
 F. Aungier Brock, Esq., J.P.

The Commission met pursuant to adjournment.

The President announced the receipt of a communication from Mr. R. W. Thompson, M.P., one of the Commissioners, stating that he could not attend this meeting.

[The meeting adjourned at 10:30 a.m. until 19 September, at 10 a.m.]

WEDNESDAY

WEDNESDAY, 19 SEPTEMBER, 1888.

MEMBERS PRESENT :—

A. Richardson, Esq., President, in the Chair.
F. Aungier Brock, Esq., J.P.

The Commission met pursuant to adjournment.

The President announced the receipt of a communication from Mr. R. W. Thompson, M.P., one of the Commissioners, stating that he would attend the meeting of the Commission on the following day.

The following witnesses were called in, sworn, and examined :—Albert Frederick Primrose, Frank O'Brien, Frederick Oakes, William Hannam.

[The meeting adjourned, at 4 p.m., until 20 September, at 10 a.m.]

THURSDAY, 20 SEPTEMBER, 1888.

MEMBERS PRESENT :—

A. Richardson, Esq., President, in the Chair.
R. W. Thompson, Esq., M.P., | F. Aungier Brock, Esq., J.P.

The Commission met pursuant to adjournment.

The following witnesses were called in, sworn, and examined :—John Walsh, John Martin, Francis Joseph MacMahon, William Lambert.

[The meeting adjourned, at 4.30 p.m., until 21 September, at 10 a.m.]

FRIDAY, 21 SEPTEMBER, 1888.

MEMBERS PRESENT :—

A. Richardson, Esq., President, in the Chair.
R. W. Thompson, Esq., M.P., | F. Aungier Brock, Esq., J.P.

The Commission met pursuant to adjournment.

The following witnesses were called in, sworn, and examined :—Cecil Peters, George Love, George William Macdonald, Matthew Williams, William Tipping, Edwin Stafford, Michael Leaney, John William Tyrer.

[The meeting adjourned, at 5 p.m., until 25 September, at 10 a.m.]

TUESDAY, 25 SEPTEMBER, 1888.

MEMBERS PRESENT :—

A. Richardson, Esq., President, in the Chair.
R. W. Thompson, Esq., M.P., | F. Aungier Brock, Esq., J.P.

The Commission met pursuant to adjournment.

The President submitted a Draft Report.

The Commission deliberated upon and amended the Draft Report.

[The meeting adjourned, at 5 p.m., until 27 September, at 10 a.m.]

THURSDAY, 27 SEPTEMBER, 1888.

MEMBERS PRESENT :—

A. Richardson, Esq., President, in the Chair.
F. Aungier Brock, Esq., J.P.

The Commission met pursuant to adjournment.

The President announced the receipt of a communication from Mr. R. W. Thompson, M.P., one of the Commissioners, stating that he could not attend this meeting.

A witness, Alfred Charles Tomkins, was called in, sworn, and examined.

The Commission deliberated upon and amended the Draft Report.

[The meeting adjourned, at 5 p.m., until 28 September, at 10 a.m.]

FRIDAY, 28 SEPTEMBER, 1888.

MEMBERS PRESENT :—

A. Richardson, Esq., President, in the Chair.
F. Aungier Brock, Esq., J.P.

The Commission met pursuant to adjournment.

The President announced the receipt of a communication from Mr. R. W. Thompson, M.P., one of the Commissioners, stating that he would not be able to attend any further meeting of the Commission this week.

The following witnesses were called in, sworn, and examined :—John Sale, Frederick Oakes, John Allen, and James Roberts.

The Commission deliberated upon and amended the Draft Report.

[The meeting adjourned, at 4.30 p.m., until 1 October, at 10 a.m.]

MONDAY,

MONDAY, 1 OCTOBER, 1888.

MEMBERS PRESENT :—

A. Richardson, Esq., President, in the Chair.

F. Aungier Brock, Esq., J.P.

The Commission met pursuant to adjournment.

The President announced the receipt of a communication from Mr. R. W. Thompson, M.P., one of the Commissioners, stating that he could not attend this meeting.

The Commission deliberated upon and amended the Draft Report.

[The meeting adjourned, at 5 p.m., until 2 October, at 10 a.m.]

TUESDAY, 2 OCTOBER, 1888.

MEMBERS PRESENT :—

A. Richardson, Esq., President, in the Chair.

R. W. Thompson, Esq., M.P.

F. Aungier Brock, Esq., J.P.

The Commission met pursuant to adjournment.

A witness, Edward Warby, was called in, sworn, and examined.

The Commission deliberated upon and amended the Draft Report.

[The meeting adjourned at 5 p.m., until 3 October at 2 p.m.]

WEDNESDAY, 3 OCTOBER, 1888.

MEMBERS PRESENT :—

A. Richardson, Esq., President, in the Chair.

R. W. Thompson, Esq., M.P.

F. Aungier Brock, Esq., J.P.

The Commission met pursuant to adjournment.

The Commission deliberated upon the Draft Report, as amended, and adopted it.

The President, Mr. R. W. Thompson, M.P., and Mr. F. A. Brock, J.P., attached their signatures to the Report.

On the motion of Mr. Thompson, it was resolved :—“That the President be authorized to pay any outstanding accounts not yet sent in, and any petty expenses incurred in connection with the completion of the Commission's labours.”

[The meeting then adjourned *sine die*.]

REPORT.

To His Excellency the Right Honorable CHARLES ROBERT, BARON CARRINGTON, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies.

MAY IT PLEASE YOUR EXCELLENCY,—

We, the undersigned, Members of the Royal Commission appointed on the 16th of August, 1888, to make a diligent and full inquiry into the recent alleged Tramway Frauds, and to report upon the most efficacious means for securing the Tramway revenue from misappropriation in the future, beg, as the result of our inquiries and deliberations, to submit the following Report:—

We desire at the outset to point out that we have had to deal with a number of witnesses of a highly unsatisfactory class, some of whom have manifestly sworn falsely, while others have withheld information which it was evidently in their power to give.

The history of the frauds, so far as the evidence carries us, may be briefly stated as follows:—For some considerable time past—with the conflicting testimony on this point, it is impossible to say for how long—certain conductors have by various means intercepted tickets collected by them, and resold them to vendors, who have in their turn retailed them to the public. In this way large quantities of tickets have realized a second penny, while one penny only, their standard value, has found its way into the Treasury.

It will be apparent on reflection that these frauds have been of a character likely to escape detection, for, owing to the fact that the tickets twice used would only once be legitimately sold, and once only passed into the Receiving Office, no discrepancy would follow upon a comparison between the number of tickets sold by the Department and that collected by it.

In order to indicate to some extent what these frauds may have amounted to, it will be necessary to refer somewhat in detail to the evidence which brings us indisputably to the conclusion that frauds have been perpetrated.

According to the evidence of Driver Graham, pages 24–31 and 36–38, a conductor named Thomas Musgrave, since dismissed, told him that from a fortnight after his appointment to the Tramway service some two years and a half ago he had been more or less engaged in defrauding the Department by one means or another. During the periods in which the system of bell-registers had been in operation this had been effected by the manipulation of a spring inside the register, so that on the insertion of a pin or piece of wire in the slot at the foot, the register when brought into use would cease to indicate, although the bell attached to it would ring as usual. The tickets collected during this process were not placed in the bag provided for the purpose. It is obvious that by this means risk of detection was minimized, because any conductor having brought himself under suspicion, could pass the test of having his register and the contents of his bag compared on any part of his journey, when, owing to the plan adopted, they would be found substantially in agreement, and this appears to have been actually the case with

Musgrave on one occasion. The pin or wire could readily be released, as was done when the register was wanted to discharge its proper function, for it is needless to say the plundering had to be carried on with discrimination, or it would soon have led to detection by a striking deficiency in the returns sent in by the conductors. Although Graham was so far confided in with reference to the fraud which was being carried on by Musgrave, he was unable to gain information from the latter as to the means by which he disposed of the tickets which came fraudulently into his possession. The most Graham was able to learn from him in this direction was that he had an interest, or, to use his own words, a "say" in a shop at Newtown, where tram-tickets were sold, but the locality of this shop, or the name of the person by whom it was kept, did not transpire.

Musgrave's complicity in the matter rests to a large extent upon the evidence of driver Graham; but in estimating the credibility of this witness we find ourselves materially aided by the evidence of Musgrave himself, lying, contradictory, and full of prevarication though most of it unquestionably is. (Pages 57-90.)

Amidst the mass of falsehood and pure invention with which these 33 pages of evidence abound there is sufficient agreement to show one of two things, either that Graham's evidence may be relied on, or that he is an unprincipled scoundrel, who, for no apparent purpose, perverts the confidence of a foolish, misguided, but in the main innocent, youth, into a confession of crime. On his own admission Musgrave was for a considerable period in possession of registers which, with his concurrence, had been tampered with. With these registers he showed Graham the means by which fraud could be perpetrated, and actually demonstrated this by collecting fares without registering them, afterwards showing Graham that the indicator had not moved during the process. If Musgrave had not so evidently sworn falsely we might be in some doubt as to his guilt, but entertaining so strongly this view of the case, and seeing that Graham's statements are largely borne out by the evidence of firemen Reid and Simpson, driver Hadwell and others, we have little difficulty in concluding that driver Graham has spoken the truth, and that his evidence may be relied on, although he should, immediately he became possessed of the information, have reported the matter to his superior officer. Independently of Musgrave's version to Graham of the extent of his malpractices, the fact that frauds of considerable magnitude have been carried on for some time past has come before us in connection with another phase of the frauds, viz., the purchase of tickets from conductors. It is therefore clear to us that Musgrave was systematically defrauding the Government from early in the present year up to the date of his dismissal, and, accepting this view of the case, there seems no reason to doubt the correctness of Musgrave's own statement to Graham (which of course he denies) that he was engaged in this systematic fraud for a much longer period.

We have now to refer to two other persons who, on the statement of Musgrave to Graham, are implicated in this wholesale dishonesty. These are Archibald Fraser, a conductor, and Henry Ferrier, once a conductor, but later employed in the Railway Locomotive Department as a labourer.

We will deal first with Fraser. He still stands on the books as a conductor, but seeing his name in print in connection with the departmental inquiry, which was instituted with regard to these frauds more than two months ago, withdrew from his work, and intimated in writing to the Superintendent that he would not resume duty until his character was cleared. Apart from Musgrave's statement to Graham, there is not much direct evidence of Fraser's complicity in these frauds; but the evidence which is forthcoming with regard to Ferrier—corroborated as it is by the testimony of Graham, which shows that Fraser, like Ferrier, received his instructions from Musgrave—leads us to conclude that Fraser is guilty. A highly suspicious circumstance, and one which appears to us to furnish strong circumstantial evidence of Fraser's complicity in the matter, lies in the discovery of a large velvet pocket placed on the inside of a uniform jacket belonging to this man, and the very unsatisfactory evidence given by Fraser in connection with this pocket (page 102, questions 3300-3613), convinces us that he placed it in the position it occupies for the purpose of holding stolen tickets.

Ferrier, to whom we now direct attention, stands self-convicted to conductor Greeley; and in his case there is a reliable witness in William Moran. Moran's knowledge of what occurred has not, however, the effect of causing Ferrier to confess

confess his share in the transactions, but leads him to adopt the shallow and flimsy pretence that his confidential statements to Greeley were the result of a desire to perpetrate a hoax upon the latter. This may, in the absence of any more direct evidence against him, serve to shield Ferrier from criminal prosecution; but it is altogether too transparent to deceive persons of common sense, coupled as it is with a knowledge of Ferrier's conduct and character during the time he was under surveillance, and other evidence connecting him with the sale of stolen tickets.

We will not at present deal further with the question of the *abstraction of tickets by the employees*, but pass on to the evidence which discloses the second process, viz., *the disposal of the tickets abstracted*.

It is to be regretted that we have not been able to gain any very definite information on this point, still less to trace with certainty the connecting link between the ticket abstractors and the purchasers of the tickets abstracted. We have done our utmost to obtain this; and our opinion is that if one witness—Pietro Gaspardo—could have been induced to reveal all he knows, the information necessary to enable the Government to prove the guilt of many of those concerned in the frauds would have been forthcoming. It may not here be out of place to point out the difficulty with which we have had to contend in eliciting the desired information, the fact being that we have had to rely chiefly upon the testimony of active participators in the frauds, and have further been thwarted by evident collusion on the part of several witnesses.

The evidence of Pietro Gaspardo is of a most unsatisfactory character, so much so (pages 2—5, 6—7, 14—15), that we should be disinclined to give it much credence, were it not supported by the evidence of Michael Malsiniotis, who received his information from one of the ticket receivers, Constantine Pappadocci, and which we have otherwise reason to consider reliable. The gist of the evidence of Gaspardo and Malsiniotis is, that the lessees of an oyster-shop at the corner of Liverpool and Elizabeth streets (Constantine Pappadocci and George Masoora), had been carrying on a large traffic in second-hand tram-tickets, amounting in sixteen months to a sum variously stated, but probably not less than £2,000.

Some three or four months ago Constantine Pappadocci sold his share of the business to his partner Masoora, and left for his native country, Greece, taking with him it is alleged, about £1,000, as his share of the booty. Another Greek, named Nicholas, left for Greece about the same time, and, it is said, received £150 from some of those implicated in the frauds as an inducement to hold his tongue. The partner, George Masoora, who still conducts the business, gave Pappadocci £300 for the good-will. There is unfortunately no evidence beyond that of Gaspardo to implicate Masoora, and, as might be expected, he strenuously denies any knowledge whatever of any irregular transaction. (Pages 8, 9, 10, 11, and 19.)

If Gaspardo's evidence is to be relied on—and so far as it concerns Pappadocci and Nicholas, there is proof in the testimony of Michael Malsiniotis that it is—the fraudulent purchase of second-hand tickets from the conductors is wider spread than any details we have obtained would indicate. According to Detective Rochaix (page 6, question 109), Gaspardo distinctly told him that several of the tramway employees had been engaged in trafficking in these tickets, and that he would be able to identify them. When under examination however, Gaspardo, after much prevarication, stated that there was only one conductor concerned in the sale of these tickets, and this statement he persisted in. Gaspardo informed us that he would be able to identify this person, and this was put to the test by enabling him, unseen himself, to see Musgrave, Fraser, and Ferrier; but he reported that neither of these three men was the one who had been seen by him selling tram-tickets at Pappadocci's shop.

We are of opinion that Gaspardo, in proffering information, was actuated solely by the hope of securing to himself a substantial reward. In fact he made no secret of this, as will be seen by a reference to the evidence of Loder (page 40, q. 1196), whom he first consulted with respect to the matter, and to that of Detective Rochaix (page 6), to whom he subsequently made overtures on the subject. Our impression is that Gaspardo, finding he was likely to fail in his object of securing a reward, has told just as little as possible, and would not have told that little if he could safely have avoided doing so.

Apart from the direct evidence of the purchase of tickets from the tramway employees at Pappadocci's shop in Elizabeth-street, there is nothing which points absolutely

absolutely to the fact that large transactions of this kind have taken place elsewhere, but there is the somewhat indirect statement of Gaspardo that Marcus Alafousas and other Greeks have been engaged in this traffic.

Considerable suspicion has attached to Charles Cook, a man who keeps a barber's shop at 94, Liverpool-street, and who seems to have an interest in some other establishments. He is a man of very questionable character, and has been observed frequently riding short distances with conductors (page 1, q. 1), and according to the statement made by him to one of them, Patrick Greeley, he was engaged in the purchase of tickets in large quantities from some of the tramway conductors. In fact Cook himself admits (page 8, q. 146) that he made offers for the purchase of tickets to several conductors, and that some of them threatened to throw him off the trams. He certainly alleges that he was endeavouring to get up a case for Detective Hoskison. He has been seen by Moran and others leaving the trams after some of these short rides with a black bag in his hand, and according to Greeley, Cook informed him on one occasion that this bag contained 5,000 tram-tickets, and went the length of showing Greeley the contents of the bag, which Greeley declares were tram-tickets, although Cook claims that they were race-tickets. In addition to this we have Mrs. Dummett's statement that Cook offered her, on behalf of her husband, £7 worth of tram-tickets in ones and twos, advancing in explanation of his having so many torn tickets that he had been doing an immense business in tram-tickets, rendering it necessary for him to keep a boxful of loose tickets in order to meet the rush of purchasers which occasionally set in. This is sufficient to prove that Cook has not only been engaged in dealings in tram-tickets, but that he has been guilty in his evidence of two direct falsehoods in denying that he had ever sold tram-tickets, (questions 144 and 145, page 7), or that he had offered the tickets referred to for sale to Mrs. Dummett. We believe that Cook is a man on whose word very little reliance can be placed, but if he is to be believed, the sale by him of £1 worth of tickets at Pappadocci and Masoor's shop for 15s. is another proof that these persons were in the habit of buying used tickets.

There is evidence that such tickets have found a market in other places. We have Elton's statement as to a purchase by his wife at a shop in Darlington, and as to the presence there of a conductor who was evidently selling a considerable number to the keeper of the shop (page 155). We have also evidence by Messrs. Solomon (page 169), Colls (page 144), and Griffith Jones (page 105), all pointing to the same conclusion. We strongly suspect, also, that Siddons, a shop-keeper at Waterloo, has been largely engaged in traffic of this kind.

Having now disposed of the evidence pointing to the existence of frauds, we have to consider the most efficacious means of preventing them in the future.

We are of opinion that the present system of ticket sale by licensed vendors should be abolished. There can be no question whatever that so long as it exists there will be strong inducement to ill-disposed conductors and others through whose hands undefaced tickets pass to make use of them for dishonest purposes.

Reviewing the means of check at present in operation to prevent dishonest manipulation, there is, as far as we can learn, a perfectly satisfactory check upon the ticket transactions up to the point of their sale by the Department to the licensed vendors. From this point, however, in the light of recent events, the checks cannot be said to be so satisfactory as could be desired. The check upon the collector—the tram conductor—is in the form of a bell register, regarding the merits of which even after what has come to light, opinion appears to be somewhat divided. It is without doubt a very rapid process, and on that account well adapted to the seating capacity of the cars and the almost systematic over-crowding to which at some periods of the day they are subjected.

Regarding the bell-register, however, in its most favourable aspect, and under such circumstances as secure it beyond question from fraudulent manipulation at the hands of the conductors, we have no hesitation in condemning it as an unsatisfactory check, and one which can be improved upon. No system can be regarded as satisfactory which cannot be relied upon to indicate that the work which it is designed to check has been accurately performed.

It is clear, apart from the evidence of Messrs. Tyrer, Oakes, Primrose, and others practically conversant with the subject, that these registers cannot, by the most honest and careful conductor, be so worked when the traffic is heavy, that the number

number of tickets indicated shall agree with that actually collected. With this indefiniteness, even under favourable circumstances, such a system can hardly be expected to afford a check of much value upon fraudulent manipulation.

Setting aside altogether the more studied form of fraud which has evidently been practised, the lazy and non-inventive rogue, who wishes to supplement his earnings, may place his hand in the bag, when opportunity serves him, and abstract during the day sufficient to add considerably to his income, trusting to the unreliability of his register to save him from detection. It is imperative that the registration should be such as to give the Department the right to demand from the collector the value indicated, as having been collected by him.

Hitherto the practice has been to read the registers once a day only. In our opinion, whatever system may be adopted, the returns should be handed in and the registers read after every round trip, and in no case should a register be allowed to be in a conductor's possession when off the cars.

Another evil of the present system is that after tickets have been collected and handed in, the danger of misappropriation still exists, for until they have been destroyed, there is always the possibility, even under the strictest supervision, that some of them may a second time be brought into circulation. The Department has shown itself alive to this contingency. Nearly two years ago the system of tearing tickets was adopted, but after a trial for nine months was abandoned as unsatisfactory, and the register reverted to—a step which the evidence unquestionably justifies.

Several very ingenious substitutes for the present system of ticket collection have been brought under our notice. Those introduced by Mr. Tatham and Mr. Bramstone, although varying considerably in detail, are almost identical in their two main features, which consist of the issue of tickets to passengers from a continuous roll, enclosed in a small metal case, and a system of sectional obliteration, under which passengers would be required to hold their tickets until the end of the section on which they had been issued, at the risk of being a second time called upon to pay. Mr. Tatham's invention includes a printing machine for the production of the tickets, but Mr. Bramstone's scheme, with greater ingenuity, provides for the printing and dating of tickets during the process of issue and obliteration—a great safeguard if it could be depended upon to work with accuracy. Mr. Tatham has furnished us with models—Mr. Bramstone with a drawing only. The model register submitted by the former is too flimsy, and the bell too undecided to be satisfactory, but this could probably be improved upon. While recognizing, however, that both of these inventions display considerable ingenuity, and would be applicable to our tramway system, we are inclined to think that their mechanism would be liable to get out of order, and moreover that too much is left in the hands of the conductor with regard to the sectional alterations and obliterations which, if not properly dealt with, might lead to confusion and consequent irregularity instead of furnishing the additional check desired.

We think the New York-Melbourne bell-punch system, as described by Mr. Elliott (page 107), or the Glasgow system, brought under notice by Mr. O'Brien, of the Tramway Department (page 211), would be better than either of these. Both of them may be fairly depended upon for accuracy, and fraudulent manipulation would be a matter of difficulty.

An objectionable feature in connection with the New York-Melbourne system is the sale of tickets by the conductors, which admits of fraud (Page 211, question 7,231); but the fares on our Tramways being so low, the issue of tickets by conductors at a reduced rate would seem to be unnecessary. With this exception the system is really a cash one, the collections being recorded by the conductor by means of a bell-punch, with which he punches a hole in a ticket slip fastened to his coat. The punch registers each fare, and the piece punched out of the slip is retained in the instrument as an additional check. Every passenger is expected to see his fare punched for on the proper ticket slip, according to the price of the section. Another objectionable feature in connection with this system, as applied to our Tramways, would be the necessity for two fare slips of different value, viz., 2d. and 1d., the system being really framed for one rate of fare. It would be simple to have 2d. and 1d. slips, but a sharp conductor, dishonestly inclined, might without much difficulty punch for a 2d. fare on a 1d. slip.

The

The Glasgow system differs only from the New York in that the former provides for the issue and punching of tickets, instead of the punching of slips incidental to the latter.

The system which of those submitted to us we regard with most favour is that of Mr. Bell (page 165). This is in the form of a metal case, which is locked into a bag, and provides for the reception, at several apertures, of fares in the shape of pence only. The pence, in passing through the receptacle, are automatically registered, and then find their way into a portion of the bag accessible to the conductor, who is thus enabled to utilize them in giving change, at the same time lightening his bag. The pence are, in all cases, to be deposited by the passenger. It is unquestionably an ingenious device for the reception of cash-fares, is simple in its operation, and if properly carried out would place the collection and registration of fares out of the hands of the conductor. The chief drawbacks are the time consumed in the process, and the trouble and inconvenience entailed upon the public. Seeing, however, that the public accept uncomplainingly the difficult and often inconvenient method of fare-paying entailed upon them by the Omnibus Co., we fail to see that there would be reasonable ground for complaint on their part.

It is probable that considerable difficulty will be experienced in adopting a slower process of collection and registration, as one of two courses will be necessary: either to get rid of overcrowding, or to make some alteration or modification in the seating of the cars. Whatever may be the form of fare collection and registration, the difficulties will be largely increased when the cars are taxed over their carrying capacity. The collector will then experience great difficulty in reaching the passengers, and receiving from them their fares, and still more in distinguishing those who have paid from those who have not. The cars in connection with our tram-lines are probably, at certain times of the day, more overcrowded than those of any system to be met with elsewhere. This, in our opinion, may be remedied by passing the usual stopping places when the cars are loaded to their full capacity. It will be urged, no doubt, that the passing of an advertised stopping-place will increase the risk to foot and vehicular traffic, but we venture to think that the matter only needs to be systematized to place it upon a safe and satisfactory basis. It must be admitted that if a fully loaded tram pulls up at a stopping place the one or two conductors in charge are absolutely powerless to prevent passengers from getting on at some point or points, and in this way at stopping-place after stopping-place the cars add to their loads until such overcrowding results as to cause great discomfort to the public, and to render it impossible for the ablest and best-disposed official to do his collecting duties and look after the public safety with any degree of satisfaction.

When a tram has become fully loaded, the conductor in charge should acquaint the driver, who should exhibit some signal to be arranged by the Department, which would at once be known by crossing keepers, and would soon be learnt and understood by the general public. The driver would then approach the crossings at reduced speed, and give several short whistles, as provided for by the regulations. This course would, we believe, remove all risk, and a serious abuse would be satisfactorily disposed of. In order that persons wishing to alight should not be carried beyond their destinations, it would be the duty of the conductor to pass along his car calling the name of the street, in sufficient time before approaching it to admit of the tram being brought to a stand.

If overcrowding were prevented almost any system of collection and registration could be applied to our cars; but as it would be necessary, under Mr. Bell's system, for each passenger to deposit the fare, some modification of the seating arrangements of the cars might be deemed advisable.

Under any of these systems ticket selling would be abolished, and it is therefore apparent that a large annual saving in commission and salaries would be effected.

Before proceeding to submit the conclusions to which we have arrived in connection with both branches of our inquiry, we would direct attention to Mr. Elliott's evidence (page 112, question 3901), also to the printed regulations under which the bell punch system is worked (question 3808), as illustrative of the care taken by American Tramway Companies in the selection of men for the responsible position of conductor, as also of the restrictions with which they are surrounded, and the penalties to which they are subject in the event of failure to properly carry out their duties.

We

We are of opinion that no one should in future be appointed to the position of assistant conductor who should not, in addition to finding security and passing the medical and other examination provided by the regulations of the Department, be passed as suitable by the following officials:—the Tramway Superintendent, the Chief Railway Audit Inspector, and the Inspector of the Division in which the necessity for his services may have arisen; and further, that no promotion to the position of senior conductor should be made without a certificate from the same officers. In this way a more select class of men would, we think, be obtained for these positions,—a very important point, seeing that under the best system which can possibly be adopted something must be left to the care and honesty of the officials concerned.

Our inquiry has disclosed a lack of system in connection with the office at which the conductors hand in their takings. It has been customary for the clerks employed in that office when receiving the returns from the various conductors to accept without question the conductor's statement as to the lines upon which he has been working; moreover, there is evidence that a conductor might, without detection, absent himself, and fail to return his register and takings. It is absolutely necessary that a tabulated statement should be furnished to the Receiving Office by the foreman, or other officer dealing with the subject, showing the daily running allotted to each conductor, any variation from which should be specially and promptly reported. This list should be carefully and systematically checked by the receiving clerk with the returns and statement furnished by each conductor, and any irregularity, misstatement, or absence from duty, should be at once reported. In order to prevent fraud in the Receiving Office, each conductor should have a book in which should be entered his return for each round trip, and which should bear the initials of two clerks, one belonging to the Receiving Office, the other to the Audit Branch of the Department, and these books should be audited monthly (books being issued bi-monthly for the purpose) and compared with the returns of cash paid to revenue. In order also that the cash collected during every round trip may be regularly handed in by each conductor, the correctness of the amount ascertained, and a receipt given to the conductor in the book to be carried by him for the purpose, the Receiving Office should be located as near the City terminus as possible, and sufficient time should be afforded to each conductor to discharge satisfactorily this part of his duty before proceeding on another trip. It appears that at present a conductor has, occasionally, no time to do more than shunt his tram before he has to start on another journey. This should be altered, for it is important that the transactions for each round trip should be definitely disposed of before the conductor leaves the Receiving Office, and that the register indicator should be replaced at zero before the conductor proceeds upon his next journey.

A great advantage, arising out of the regular and systematic collection of takings and reading of registers after every round trip, will be the accurate and permanent record which it will give of the earnings of each line, and under a cash system the sum total of all line earnings daily should be balanced with the total cash handed in by the conductors, and the correct amount be paid each day to revenue.

In conclusion, we are of opinion—

- (1) That extensive frauds have unquestionably been perpetrated; but that it is impossible to ascertain to what extent the revenue has suffered.
- (2) That Thomas Musgrave, late assistant conductor, Henry Ferrier, formerly a conductor but lately employed as a labourer in the Railway Locomotive Department, and Archibald Fraser, an assistant conductor, have undoubtedly participated in the said frauds.
- (3) That the action of the Department in dismissing Musgrave and Ferrier was entirely warranted by the circumstances; and that Fraser's withdrawal from the service of the Department should be followed by his dismissal, to date from such withdrawal.
- (4) That the conduct of conductor Greeley is open to such grave suspicion as to warrant his dismissal.
- (5) That the general character of conductors Connors and Hannam, as disclosed by the evidence, unfits them for the position of conductor.

(6)

- (6) That with a view to the better control of the conductors the tramway system should be divided into three districts, and that an inspector should be placed in charge of each, to control and supervise the conductors.
- (7) That the claims of Messrs. Wigg and Moran, special conductors, from whom we have received great assistance in the prosecution of our labours, be considered in connection with these appointments.
- (8) That as soon as arrangements can be made for the introduction of a new system, the use of the present bell registers and the sale of tickets by licensed vendors should be abolished.
- (9) That a trial should be given to Mr. John Bell's automatic cash register, with a view to its being brought into general use.

Certified under our hands and seals this 3rd day of October, 1888,—

A. RICHARDSON, President. . . (L.S.)

TRAMWAY FRAUDS INQUIRY COMMISSION.

MINUTES OF EVIDENCE.

TUESDAY, 21. AUGUST, 1888.

Present:—

A. RICHARDSON, Esq., PRESIDENT.

R. W. THOMPSON, Esq., M.P.,

F. A. BROCK, Esq., J.P.

William Moran called in, sworn, and examined:—

1. *President.*] We want to have from you as briefly as possible your whole knowledge of the frauds in tram tickets, beginning from the earliest period? The first that I heard about it was that some man in the Sailors' Home was selling tram tickets in November, 1887, at the reduced rate of something like 7s. 6d. for 10s. worth. This information was brought by Constable Taylor, about nine or ten months ago. I think this was during the time the tearing of the tickets was being done. I went to see this man, who had been convicted for a swindle at the Sailors' Home. He denied having sold them. I went to this man's house, and looking over an album, saw the portrait of Jessop, a conductor. We asked if he knew this man, and he said he did not know him, and could not account for his portrait being in the album. He denied all knowledge of him. I think he was convicted about this time. He was under suspicion or trial about this time. Next we heard was that Conductor Godby, in the service now, had reported other conductors for carrying passengers free. About the 23rd June, Conductor Greeley came to me and told me some one had made overtures to him about buying tickets. We had watched C. W. Cook, a monte player, jump on and off trams frequently. On June the 23rd we saw him jump on Greeley's tram. Wigg went on with him, and I said I would follow and see what the game was. Coming back I jumped on his tram, and asked Greeley what Cook's little swindle was. He said that Cook had 5,000 tram tickets in the bag, and that he paid a man £10 per week. Cook also said that the bells were faked and he would show how it was done. I told Greeley to make an appointment to meet him and learn how it was done. He arranged to meet Cook but Cook did not turn up. On the 27th June Ferrier told Greeley how the bells were to be faked, and how to make money, and promised to let him into the whole business. I told him to make an appointment with Ferrier and I would secrete myself in the house and watch the proceedings. On the 7th July he came to Greeley's house as arranged, and, whilst Wigg watched outside, I was planted behind the bed. Ferrier had promised to be there at half-past 7. I was in the house at 7 o'clock. Ferrier came and sat on the bed with Greeley. He struck a match and made some remarks about feeling a bit nervous, and he told Greeley things were a bit unsettled and he had better wait a few days. He said that he would take the bells away to some man at Eveleigh who would do what was required. When they are done you can use them and neither Moran, Wigg, nor the Commissioner himself, could know what you are doing. He told Greeley that he had better try them on the Waverley and Coogee lines as there was a better chance of doing business than on the Waterloo lines, as there were generally holiday seekers on these lines, and as they were twopenny sections the tickets would be clean. This would not be the time Musgrave's bells were taken from him. We had the "office" from head-quarters. They went to catch one man but he was "put fly" and knew all about it. I can only account for his knowing all about it in one way, and that is that the clerks in Mr. Roberts' room saw the reports and let him know.

William
Moran.
21 Aug., 1888.

2. *Mr. Brock.*] How do you think the clerks were interested in the matter? The relationship between one of them and Musgrave. Colls is a brother-in-law I think of Musgrave's.

3. *Mr. Thompson.*] Do you think Mr. Roberts himself had anything to do with the matter? I cannot say. I had an opinion that he had, but I have not sufficient ground for that opinion. The only reason that caused me to think that, was on account of the information getting out so quickly.

4. *President.*] I ask you in justice to Mr. Roberts do you say you have no legitimate reason for holding the opinion that it was he who gave the information. We are holding this inquiry for the purpose of getting to the bottom of the whole thing. Now Moran I order you to say whatever you know about it, no matter whom it may affect; be he in a high or low position? Yes, I have no legitimate reason for my opinion, except as I stated the fact of the reports getting known so soon.

5. You have sent several confidential reports to Mr. Roberts, some of which have been sent on to me. Have you any idea that any of those have been made public? No.

6. Then what is the explanation? I think it has been stated in the office that the clerks saw the reports, and there is no doubt whatever about it that the information came direct from the office, but it was not given by Mr. Roberts.

7. Will you now proceed with your narration of the circumstances in connection with Ferrier's visit to Greeley's house? Ferrier told Greeley that he could make £10 per week, if he got a shift. He must get on to the Waverley or Coogee run as they were all too poor a class on the Waterloo line. Greeley could call at Ferrier's mother's place and the bells would be ready after they had been doctored, but he would have to wait a few days as they had to be done by a mechanic. In the meantime Greeley was to get a shift. He then made an appointment in the room to come again on Monday night. On Monday morning Greeley came from the office to see me because I had to get the bells specially from the office, and

William
Moran.
21 Aug., 1888.

was talking rather confidentially to me, when I said, "Look out Musgrave is coming." Greeley, however, followed me and as soon as Musgrave saw me speaking to Greeley he suspected something. About 10 o'clock Colls came to Mr. Roberts, and said Musgrave had something to state to him. Musgrave came in, but what took place I do not know. Mr. Roberts sent for me, and said, "Musgrave has come to make a confession of his guilt." Ferrier on the same evening jumped on Greeley's tram and said, "Things are all up, and I won't touch the bells for 50 quid." This was the same day. I have no knowledge of what took place when Mr. Roberts came over with Musgrave to Mr. Vernon or Mr. Richardson, except that immediately afterwards Ferrier was sent for up to Eveleigh on the following day. He came down with a clerk in a cab, but what took place I do not know. Ferrier was dismissed that day. On the same day after he had been dismissed he met Musgrave at the pointsman's box at Devonshire and George Streets and they had a long conversation. It must have lasted over an hour. Conductor Kenny told me that they were standing there when he passed in and when he passed out again. It would be about an hour to get back. After Musgrave made the confession he went back to work and worked up till the following Monday.

7½. *President.*] How did Musgrave have so much time to spare if he were on duty? It might have been whilst he was off duty or waiting to relieve. I think it was before he came on duty. They have eight-hour shifts. Hickey, I believe, was the pointsman's name. I do not think Hickey heard the conversation. I do not think that Musgrave made the appointment. They may have met by appointment. Ferrier was going about with his eye bad, having got hurt whilst drunk. Musgrave at this time was living at Newtown, and had to come into town to sign on. I came to Mr. Richardson and made a statement of who I suspected. I knew they were spending more money than they could earn, and living a fast life. Ferrier and Musgrave I thought were living much above their means—Scott and Yelland for different reasons. Yelland on one occasion made a statement to one of the conductors how they could fake the bells. Scott had been on the railway, and was dismissed for stealing money. I have seen him frequently with Musgrave and Ferrier; Yelland made a statement to Graham; Greeley can say the same. The report was that Yelland had made £1,800, and had run away with another man's wife. Keen informed me that the Railway Department discharged Scott for thieving. Connors was frequently in Ferrier's and Musgrave's company. This was the only reason for my suspicions of him. I have not seen him spending much money. It was not so much the meeting them but it was the way of meeting—jumping on and off the trams. I told Mr. Roberts, and he came and watched. On four or five occasions I saw Cook jump on trams with Connors. Doolan threatened to throw Cook off the tram for making overtures to buy tickets. Connors made a statement that Ferrier had made overtures to him about buying tickets before the reports appeared in the papers. Beyond this I have no reason to suspect Connors. Connors assured me that he neither knew Cook nor had he spoken to him. The only further reason for my suspecting Connors was that Cook told me that he camped with a "little girl" who told him her husband was a tram conductor named Chuckey Connors. About the latter end of December last Greeley came to me and said that Siddons, who is a tobacconist in Botany Road, had jumped on his tram, and asked if he could sell some tickets, and said he "was in the habit of buying large quantities of tickets from men; that he paid one man £3 10s. per week; the only thing you will have to do will be to see that they are not marked, so that the detectives will not trap you; I will come to your house or you to mine; the trick is done by altering the bell." He also told Greeley that he need not be afraid, it would not be detected, only he must be particular of the marked tickets; he would explain the whole thing and let him into the secret. I reported this to Mr. Roberts. We then purchased tickets at Siddons'. They were all twos and threes, and had evidently been used before. I went one day and sent a little girl for tickets. Siddons came and said, "Who sent you; was it Moran?" The girl said she did not know. He came and had a look outside. He said, "I am a little too fly for you." His license is cancelled now. He then made further overtures to Greeley. I brought Greeley to Mr. Roberts, and suggested that he might be allowed to entrap Siddons by selling tickets, in order that we might find out who were in the swim. Greeley made an appointment with Siddons, and in the meantime I saw Mr. Vernon, who objected to this being done. He said he would cancel his license and have done with him.

8. Mr. Vernon did not like detective work? No; I told Mr. Vernon that we might find out something. He decided to cancel the man's license; previously Siddons had been up on two occasions, charged with receiving stolen property.

9. Was it not thought we had a case for a prosecution? No; we bought the tickets from Siddons. We had repeatedly gone to the different vendors of fruits—Italians, Greeks, and other foreigners—in Elizabeth-street, Belmore Park, and other places. Their answers are that they take them from school children in exchange for lollies and fruit. On one occasion Mr. Badham, in this office, wrote to the Department about a Miss Dunn, of Waverley, buying in ones and twos, and Miss Dunn made the same statement that the children gave their tickets in payment for lollies and fruit. About the time it was decided to cancel Siddons' license, Wigg and I went one day to Waterloo, and though we kept away, and the little girl we sent in put the money on the counter, he asked who sent her, and when she told him two men, he would not serve her. We tried several times to entrap him, but did not succeed. I have a suspicion that even now he sells tickets. After this matter was settled Greeley came again to me, about the 3rd or 4th of March, and said, "What do you think? I have found a lot of tickets in my great-coat pocket. I put my hand into my pocket, and I found a handful of tickets. There were 22." I told him I would have to report it. I made the report about it. James Tunks was his mate on relieving shift. Tunks denied having put the tickets there, and thought they had been placed there by Greeley.

10. *President.*] Was that the way it came out? Yes; this is Greeley's account. Greeley told me he thought it was a trap for him. Frost was with Greeley and saw him pull the tickets out of his pocket.

11. What is your opinion of Greeley's character? I believe Greeley is an honest man.

Pietro Gaspardo called in, sworn, and examined:—

P. Gaspardo. 12. *President.*] What is your name? Pietro Gaspardo.

13. What are you? A Greek.

14. What is your occupation? I was in business, but am looking for work now.

15. We have been told that you can give us valuable information with regard to these frauds, which have been carried on by the Government tram conductors in connection with the tram tickets, and that you are desirous of giving this information? I cannot give you any valuable information.

16.

16. Why can you not give us this information? Because the persons who had these dealings are not here now. Both have left the country and gone to Greece. About three months ago I could have given the information, but I cannot do so now. It is against my principles. P. Gaspardo.
21 Aug., 1888.
17. How do you mean that it is against your principles;—what are your principles? I cannot prove anything.
18. How do you mean that you cannot give us this information now if you could have done so before these persons left the Colony? I can only say what I have already told you.
19. It is a fact, is it not, that you have seen numbers of tickets sold improperly by persons in connection with the Tramway Department. Now give us the information in your own way as clearly and fully as possible? I can prove nothing, and I cannot give you any information.
20. *Mr. Brock.*] Why not. Are you frightened to give the information? The persons who told me about it have gone away.
21. *President.*] The object of this Commission is to get at the bottom of these frauds, and I am able to hold out to you from the Government the promise that you will be protected in case you may have anything to fear as a result of your giving evidence? If you give me time to search, I will be able to give you information.
22. Have you told anything to Detective Rochaix? I have told something to Detective Rochaix.
23. What you told him you must tell us? I cannot tell.
24. *Mr. Thompson.*] What we want to get at is how these things have been managed. Tell us how the conductors have been able to cheat the Government of the money and steal these tickets. Any suggestion you may be able to give of the method adopted to cheat the Government will be kept secret, and you will not have the slightest reason to fear injury? My principles are very strong.
25. *President.*] Have you told Rochaix that you have seen men bring tickets to the keeper of a shop in Elizabeth-street; did you give him the dates on which the tickets were brought and say that you could identify the men who brought them? I was told so.
26. Our information is that you have seen them? I was told so.
27. How then do we come to have been told that you saw them? I do not know.
28. *Mr. Thompson.*] Who kept the shop? Constantine Pappodocci.
29. Where is he now? He has gone away.
30. When did he go away? About three months ago.
31. Were any of your countrymen there also? Nicholas was there. He went away with Constantine.
32. Were you employed in the shop? I was employed in the shop for awhile. I afterwards had my own business. I retailed oysters and fish in the town, and also at my own place in Albion-street.
33. How long were you employed at Elizabeth-street? I was employed about four or five weeks in the shop.
34. *President.*] It was during this time that you saw these stolen tickets sold? I cannot tell you anything about it.
35. I say it was during the time you were employed there that these tickets were sold by the conductors;—is it not a fact? I cannot tell you.
36. You have not denied having seen tickets sold, and naturally it must have been during the time that you were engaged in the shop? I was engaged assisting in the shop. It is against my principles.
37. *Mr. Thompson.*] If you are hesitating under the impression that money will be offered you for your evidence, I must tell you that no such offer will be made, but you will be paid the same as any other witness? I would not have my name put in the papers. Rochaix used to come bothering me every day, and I told him one day in French that some people were making a good deal of money out of tram tickets, and he has made all this bother.
38. *President.*] You have admitted the correctness of the statement to Rochaix that you did see the conductors selling tickets to the owners of the Elizabeth-street shop? If you give me four or five days' time I will give you full information.
39. How long ago is it since you told Rochaix? It is a good while since—four or five weeks. It does not interest me, so I can tell you nothing.
40. *Mr. Thompson.*] Did not some one give Nicholas, who went away, £50 to go away? I cannot tell you. I do not know that he did get £50. He went home with the French mail-boat. I went to see him away.
41. If you give evidence which is really valuable we have made up our minds to recommend you for a special gratuity, but we can only promise to pay you for your attendance otherwise. Tell us what you told Rochaix? Rochaix will tell you more than is necessary.
42. Both Rochaix and Wigg say that you want money for your evidence? No, not at all. What I told Wigg was, that I did not think it worth while coming, as I did not know anything myself.
43. Did they sell tram-tickets at this shop? Yes, and they do so at the present moment. George Masoora keeps the shop now. He bought the business from Constantine. It is a fruit, fish, and oyster business.
44. According to you, Rochaix must have told a great many untruths when he said you told him that you had written down the number of tickets bought, the dates on which they were bought, the price given for them, and that you could recognise the men who sold them? I never said it. I told him I was told who the men were. Nicholas told me who the men were. If you give me time I can get you full information.
45. *Mr. Brock.*] You know just as well now who the men were as you will know in a few days; you know the men's names now—you know the men by sight? I do not. I was told that the men were selling the tickets. I cannot tell you that I could identify the men if I saw them.
46. *President.*] How long is it since you were employed there? I cannot give you exactly. It is three months since he left. It was about three months before that I was in his employ; that is about six months ago.
47. And yet you say you are not prepared to identify them now? No, I cannot identify them now. I could have done so a few days ago. I cannot be an informer. That is my principle.
48. Do we understand then that you distinctly refuse to give us the information which you have in your possession? I cannot be an informer.
49. *Mr. Thompson.*] We want to know in what way you will be made an informer. You will have to give the evidence or take the alternative of going to gaol until you do give it? That is my principles.
50. What price do you put upon the information? I will put no price upon it.

- P. Gaspard. 51. *Mr. Brock.*] Has any one threatened you with harm if you give information? No, I did not say so. I cannot prove anything.
- 21 Aug., 1883. 52. *Mr. Thompson.*] We do not want you to prove anything, What we want is that you should give us anything, even the smallest item of what you have heard or seen. It does not matter whether people have told you lies or not, it may enable us to find out what is of importance to this Commission's inquiry. I cannot identify these men. I shall have to leave the Colony if they get to know that I have given information. I would have my brains blown out.
53. *President.*] You have no reason to fear that anything you say in this room will be known outside. The Commission is sitting with closed doors, and the newspapers will therefore have no opportunity to report the proceedings. The gentleman who is taking down the evidence is Secretary to the Commission, and is recording the proceedings for our information only? They know that I have come here.
54. *Mr. Thompson.*] Then are you frightened? Yes. I would have my brains blown out.
55. You have nothing to fear in that way; you are in an English colony, where such things are not allowed. You never hear of a witness in a Court here being killed because he gives evidence against a man. You had better give us this evidence, for it will have to be given. The Commission is clothed, as are all Royal Commissions, with the same powers as those of the Supreme Court Judges. The Commissioners, through their President, have power to issue a warrant and send to gaol for refusal to give evidence or for telling an untruth. In the case of a witness being sent to gaol he would be taken by a policeman, and everybody would know through the newspapers exactly what he had been sent to gaol for. Did you tell any person but Rochaix about this matter? Only Rochaix; but I did not tell him all he states I did. He used to come bothering me continually, asking me what I knew and, after a long time, I told him the Government was being robbed.
56. You did what was quite right in the matter by telling Rochaix. If you saw a murder committed would you not inform? Yes; but I must not stop in the Colony if I give you evidence.
57. *Mr. Brock.*] Do you believe that the evidence you will give may lead to your being hurt. Do you want to leave the Colony? I do want to leave the Colony.
58. *Mr. Thompson.*] If you want to leave the Colony I think we can arrange for that. Neither Nicholas nor Constantine can be hurt by your evidence, as they are out of the Colony. It is a right and proper thing for you to tell these things, and let us know who are the people that are robbing the Government. You pay rent and taxes, and they are robbing you as well as others, and you should look at it in this light. You understand English quite well? No; not well.
59. Where did you learn to speak English and French? I have been most of my lifetime amongst English people. I picked up French in America, where I was in a restaurant with French boarders and cooks.
60. *President.*] Please tell us exactly what you said to Mr. Rochaix? Rochaix tells lies; I told him nothing. I must not stop in the Colony if I tell you.
61. *Mr. Thompson.*] That can be arranged for, but you must give us full information. Lots of these men have told heaps of things against the conductors, far worse things than you can tell—some of them being up to their necks in it, and yet no one has been hurt. Unless you open your mouth outside this room there will not be a word known outside? If you give me a thorough understanding that I may get out of Sydney, I can tell you something. The people know that I have come here to give information and they will hurt me.
62. *President.*] You are in a worse position now because people believe you have given evidence? I don't know that.
63. *Mr. Thompson.*] Did you tell Rochaix that you could give valuable information with regard to the tram frauds if you were paid for your information? I did.
64. Did you tell him that you had seen large quantities of used tram-tickets sold to a shopkeeper at the corner of Elizabeth and Liverpool streets? Yes.
65. Did you tell him that you had taken the amounts of such stolen tickets, the prices paid for them, the number of times they were bought, and that you could identify the persons who sold them? Yes.
66. Do you know a man named Nicholas Johns, a bootmaker, in Regent-street, Redfern? I do.
67. How many tramway tickets do you think you saw sold altogether by the tramway conductors whilst you were in the shop of Constantine Pappadocci? I cannot tell you the amount.
68. *Mr. Brock.*] Do you think there was £20 or £100 worth? I cannot say. If I told you I cannot remain in the Colony.
69. *President.*] We will promise you that you shall leave the Colony if you wish to do so? I do want to go. This affair went on to my knowledge for about eight months. The tickets were brought in twice a week and once a week. They were sold by one man; always the same man. From £60, sometimes £40, and sometimes £20, were brought once a week and twice a week.
70. *Mr. Thompson.*] What price did Constantine pay for them? I think 10s. in the pound. They were always used, or second-hand tickets.
71. *President.*] Were the tickets in ones, twos, threes, and fours, or were they in large fresh sheets? No, they were all soiled tickets. Once there was a young fellow came to me when I was keeping a shop and wanted to sell cigars or cigarettes and used tram-tickets to me. He said, "I have sold some to such a man and he has made money," and I said, "I do not want tram-tickets; I do not sell them." He said he would sell me £1 worth for 15s. I said I did not want them. He said he had done a good business in them. I thought he was a larrikin, not a tram conductor. I have not seen him since. I think he was a bit of a scamp.
72. Did he show you the tickets? No, he had no tickets with him; he was going to bring them. He said I met two or three men with money. He said he could sell me cigars and tram tickets.
73. *Mr. Thompson.*] Did you know him? I never saw him before. It was about 11:30 p.m. one night as I was shutting up my own shop that he came to me. I do not think he had anything to do with the trams.
74. *President.*] Where are the men who sold tickets to Constantine? I do not know; I have not seen him lately. I do not know his name, but would know him if I saw him. He was a conductor. I cannot tell you what line he was on. He came in citizen's clothes on Sunday morning. I have seen him in Liverpool-street with his bag on going up the street. It is a good while since; about 2½ months ago. He was a man about 30 years of age, clean shaved, with a little fine moustache, full face, moustache between black and white; a big well-built man.
75. *Mr. Thompson.*] Have you seen him since Constantine and Nicholas went away? Yes, but I have not taken the slightest notice of the affair as it does not concern me. 76.

76. *Mr. Brock.*] What line was he on? I cannot tell what line. I think I have seen him on the railway line. I have seen him going on the railway tram I think. I have not taken the slightest notice of where he was on. P. Gasparolo.
21 Aug., 1888.
77. *Mr. Thompson.*] Have you told any person about these people cheating? I never passed any remarks because it did not matter to me. I was going to bring this man so that you could catch him and the tickets as well. He was a friend of mine who had been in the force before. His name is Jack Loder. He has an office in Elizabeth-street. He is a hotel broker, and advised me to have nothing to do with the matter and to say nothing about it as I could prove nothing.
78. *Mr. Brock.*] How much did Constantine and his partner share per week? I believe about £40 per week between them. This was out of the money for the tram-tickets. Loder knew nothing at all about it. I told Loder.
79. *President.*] When did you first give information about this. You saw this going on and you knew it was wrong and yet you did not tell about it? I told Loder who has been in the police force and he told me it was not worth while to take any notice of it as it would cause me a lot of trouble and I would get nothing for it because I could prove nothing.
80. *Mr. Brock.*] When did you first get to know about this cheating? I was told before I went to Constantine's. Nicholas told me before I went there.
81. *President.*] Was he sharing in the profits made out of the stolen tickets? He told me he was not sharing in the affair but it was going on. I do not know that it was going on when I first went to Constantine's. It was a good while afterwards that I told Loder. I told him that there were tremendous robberies being carried on in the Government trams.
82. *Mr. Brock.*] When did you know of these robberies? The last week I was at Constantine's, I knew it. I was not in his service all the time but I used to go back and forwards and then I saw it.
83. *President.*] When did you first tell Loder? I informed Loder when I was in the employ of Constantine.
84. *Mr. Thompson.*] How long after you spoke to Loder did you speak to Rochaix? A good while after.
85. Do you think that Loder told Rochaix? I cannot say. Loder said to me that I would get into trouble, and nothing else.
86. *President.*] Have you seen tram-tickets sold by conductors anywhere else than in Constantine's shop? Nowhere else.
87. *Mr. Brock.*] You take a long time to answer a question;—how is that? I do not want to tell you a lie.
88. *President.*] You have told us that you knew the persons who sold these used or second-hand tickets, and that you could identify them? I can only identify one person, not others.
89. Tell us everything you know—keep nothing back; you have nothing to fear. You have seen far more tickets sold than you have told us about? No, I have not.
90. *Mr. Brock.*] Where is the conductor now? I do not know where he is now; I have not seen him since.
91. *Mr. Thompson.*] What did you do with your memorandum of all the tickets sold to Constantine—the prices given for them, the dates of the sales; where is it now? I have not got it; I destroyed it.
92. Who told you that they divided as much as £40 per week? Nicholas did.
93. *President.*] When Constantine sold out were you in his employ? No, I was in my own shop.
94. Do you remember the circumstances which caused Constantine to sell out? I do not know.
95. If we were told that you were engaged in Constantine's shop when he gave up, would it be true? No; I had left.
96. *Mr. Thompson.*] Did you share the proceeds of this cheating? No; I had nothing whatever to do with it.
97. Do you know a man named Nicholas John, who keeps a shop in Regent-street? I do not know which Nicholas it is. There are two or three living in Redfern. I do know Nicholas Johns the boot-maker right enough.
98. *President.*] Johns says you were employed by Constantine when he gave up business? He tells a lie.
99. *Mr. Brock.*] What do you mean;—had you left him? Yes, I had left him, and was away. I can tell you nothing about why he sold out.
100. *Mr. Thompson.*] Is it not a fact that several of the tramway men have asked you not to say a word against them? Not a single man has come to me about it.
101. *President.*] Do you know a man named Cook, who keeps a shop, and sells tram-tickets? No.
102. As we have positive information of all you can give us, why do you waste so much of our time? I do not know any more; I am telling you all I know about it.
103. You are holding back information; what are you afraid of? I am afraid of the others—shop-keepers and others.
104. *Mr. Thompson.*] You have been told about some other shops where these used tram-tickets have been sold. Tell us the names of the keepers of these shops? I have heard from a person who is not here now that the man at the top of the railway station, in the little fruit-shop—a little fruit-shop opposite the school in Elizabeth-street. I do not know the name of the man near the railway station. I was told by Nicholas that a shop near the railway station, and in Wexford-street, kept by Nicholas Williams, were buying tickets from the tram conductors.
105. Did Nicholas tell you how much they were selling at these little shops? No.
106. *Mr. Brock.*] You told a deliberate untruth when you said you could give us all the information in four or five days. You can tell us now, but you intended going away and not coming back? I was not going away. I came to tell you only what I saw.
107. *President.*] Tell us distinctly before you go, have you no further information to give us. If we find afterwards that you have kept anything back, it may not turn out satisfactory for yourself? I do not know anything more. I will go around the shops and find out for you.

Jules Pierre Rochaix called in, sworn, and examined:—

108. *President.*] Mr. Rochaix, we have sent for you in consequence of the statement of Pietro Gasparolo. We were given to understand that he had given you considerable information on the subject of the tram-ticket frauds; but after a great deal of hesitation, prevarication, and delay, he has given us very little information. J. P. Rochaix.
21 Aug., 1888.

J. P.
Rochaix.
21 Aug., 1888.

information of consequence. Will you be good enough to let us know what he told you? About twelve months ago I was told by a thief that a certain shop in Elizabeth-street was crooked. I watched the place and found that Gaspardo was working there. I believe he was working there more than five weeks. He knew me. About three months ago, one Sunday, I met him in Wexford-street, coming out of a Greek's shop, kept by a man named Nicholas Williams. He beckoned to me, and said he wanted to tell me something. I left Detective Roche, who was with me, and went into the shop. He said "Will you tell me whether I can get any reward if I give information which will save the Government thousands of pounds?" I said, "I cannot give you an assurance, but I think you would get a reward." He said, "I will give every information to the Inspector-General." I said, "If you do not tell me something about it I cannot assist you." I then dropped the matter, but went again several times. On one occasion he said, "It is in reference to the tram-tickets and those who sell them." I said, "Are you ready to give this information?" He said, "Yes, if you will get me an assurance of a sum of money to go away." I said, "I cannot do anything of the kind until you give me the information." I received from the Inspector-General this anonymous letter. [Appendix A.]

109. This is probably Johns' production? I think Johns has written it out of spite. Gaspardo told me he knew of some one writing, but he did not say who it was. I saw Mr. Roberts, Superintendent of the Tramways, about the matter. I went to see Gaspardo often, to try if I could get any information from him. One time he showed me a piece of paper with numbers on it. They represented the sums of money paid to different persons, and amounted to £2,000. He positively said he could point out several men who had received money for these tickets. I made him speak it several times so that I should be quite certain. He laid great stress on it that there were several men, and not only that, but several shops, that bought the used tickets. I know Gaspardo frequents all these shops. I have frequently seen him going into all of them, and he appears to be at home in them. They are all Greeks.

110. Did he make any overtures about payment? He said if he could get a sufficient sum of money he could point out the men, and he would bring others who were in Sydney now. Connin and Peterlein told me some time ago about the writing of the letter.

111. *Mr. Brock.*] Do you know a shop in Stanley-street, nearly opposite the school, where tickets are sold? Yes. Ice-cream men take tram-tickets, postage-stamps, or duty-stamps in payment. Gaspardo told me that they were not sheets which were sold in Constantine's shop. He said he was present when these transactions took place.

P. Gaspardo called in and further examined:—

P. Gaspardo. 112. *President.*] You recollect how strongly I told you that you were keeping back information which you had, and how very persistently you kept it back? I do not know.

21 Aug., 1888. 113. You persisted that only one man came to Constantine's shop when you were pressed, but you repeatedly said that there were several persons. You have also said—if not here, at any rate to others—that you had a memorandum of every sale which took place, the price given for the tickets, number of tickets sold, and that you could identify the men, and state how much each received; that the whole of the fraudulent sales amounted to over £2,000. How was it you did not give us this information this morning. How many men were there? I have only seen one man there.

114. Did you not say to Rochaix that there were four or five conductors bringing these tickets, and that you could point them out? I can point out one. The amount of £2,880 shown is in Loder's writing. I used to take the account to Loder, who made it up from my figures.

115. You are not being straightforward; you knew all the time that the amount was £2,880, and yet you said when asked that it might be only £20? Mr. Loder made up the amount.

116. I asked you very distinctly whether these men brought you single tickets or twos or threes, or large sheets? No sheets whatever.

117. Is it not a fact that some men or the same man came with sheets of tickets rolled round their bodies? I have not seen them.

118. What men came to Constantine's shop? I do not know them.

119. Did you not say to Rochaix that you could give information about these frauds which would be worth thousands of pounds to the country? I did say that I would not give the information unless I was paid for it. I never saw sheets brought in by these people and bought by Constantine.

120. *Mr. Brock.*] Did you and Constantine part good friends when he left? Not exactly good friends—we were neither bad friends nor good friends. We had not fallen out; we did not use bad words when he left.

121. *President.*] Did you not tell Rochaix that when these people came into the shop and sold tickets they used to lock themselves up with the man who was buying so that no one should see what they were doing? No, I do not recollect. I only saw two bundles—no sheets; they hurled the two packets on to the floor; the packages amounted to a pound's worth each; they were made up in parcels of a pound; they were bent up and made (wrapped) up in pieces of paper. I have seen them in paper bags, once in a portmanteau, once in a bag, and once in cases packed in bags.

122. Is this the amount he made or paid? They got it, and divided it between the three of them—between the seller and the buyer.

123. *Mr. Brock.*] Who was the seller? The conductor; I do not know his name; I cannot tell you his name.

124. *President.*] Who reckoned this amount up? Mr. Loder and I reckoned it up. During six months £2,880 was made.

125. Who made the notes of these transactions from which you got this calculation made? I made a rough guess of so much per week.

126. We can understand a rough guess of £2,800, but not of such a sum as £2,880. Tell us exactly the same as you told Mr. Loder, so that we can make our own calculation? I took £20, £40, and £60 per week for twenty-five weeks.

127. *Mr. Thompson.*] This would only make £1,000 for six months. Did you put the figures down? No, I did not put the figures down.

128. *President.*] How did you get the amount per week and the number of weeks? I was told by Nicholas that it had been going on for that length of time, and I saw it myself.

129. *Mr. Brock.*] How long did you notice it? The last week.

130. *President.*] You told us this morning that you were five weeks there, and yet you only noticed this during the last week; now you tell us you were only three weeks there? I do not understand. P. Gaspardo.
131. *Mr. Brock.*] Do you know a shop in Stanley-street where they sell tickets? I do not. 21 Aug., 1888.
132. *President.*] You told me that you heard of other shops where they buy tram-tickets? Nicholas told me, but I did not see them myself. I have been in a shop near the police station, in Wexford-street, in Elizabeth-street, and near Belmore Markets. Nicholas told me of these places. It is sometime last week since I was in Palesi's. They are no friends of mine, none whatever.
133. *Mr. Brock.*] All these men whom you say you only know by sight are intimate friends of yours? No, I only know them by sight. I only know the Greeks. I know Peterlein. I do not know the people living next door to him.
134. *President.*] We want all the information we can get, and if you are keeping anything back you are acting very foolishly, for we mean to have it in some way. Masoora could identify these men equally as well as you can I suppose? Yes, better. He knows everything, and much more than I did. He cannot speak French. Masoora was Pappodocci's partner.
135. How much did Nicholas get when Constantine sold the place? Nicholas got £150 from those people who were selling tram-tickets—I suppose the shopkeepers. Pappodocci gave Nicholas the £150. It was Nicholas who wrote the letter alluded to. I heard that he wrote it. I heard it from Nicholas himself, but I never saw Nicholas get any money.
136. Have you any witness besides yourself that Masoora shared with Constantine? No.
137. Was there any other person in the shop when these men came in to sell the tickets? No; there were no others in the shop when they did this business. They were always inside in the box. I was in the room in the yard. They objected to my being present. I know Nicholas Williams, in Wexford-street. I have heard that he bought tickets from the conductors. Nicholas is a Greek, I think. I was told the conductors were getting the same price at the other shops where they were selling.

Charles Cook called in, sworn, and examined:—

138. *President.*] What is your name and occupation? My name is Charles Cook. I am a hair-dresser, 94, Liverpool-street. C. Cook.
139. We have sent for you because we have been given to understand that you are both able and willing to give us considerable information in connection with these tramway frauds; and we may tell you that any evidence which you may give and desire not to be made public will not be made public, and we will afford you protection if any of your statements implicate yourself? My name was used in connection with Greeley and the tickets. I was going to Randwick one day, and had a bag full of tickets which we use in betting. I gave him 3d. for my fare, and I noticed that he did not ring the bell. I said to him, "You do better than going to the races," and he said, "That is a drink at the other end." I had a large bag about 2 feet long. It was full of betting tickets. 21 Aug., 1888.
140. *Mr. Brock.*] What are they like? They are $1\frac{1}{2}$ inch by 2 inches. If I had had tram-tickets I would not have taken them to the racecourse. This part of my evidence I would not like to be known: I have a friend in the detective force, who said to me, "You know lots of the talent; if you hear anything crooked about tram-tickets let me know. There is a reward, and I want to get promotion, and will try and fathom this tram-ticket business. Try if you can get me information."
141. *President.*] Do you know a man named Ferrier? I had been told that a man named Ferrier had tickets, but I never had anything to do with him. I went one day and bought £1 worth of tickets, and marked them with a lead pencil. I then took them to a shop in Elizabeth-street and sold them, getting 15s. for them. It was an Italian, at the corner of Elizabeth-street. He said this was more than he usually gave; he gave only 12s. 6d. if they were in three's, and 10s. if in two's. I watched the shop for a week, and then I told my friend. Detective Hoskison was the friend. He said afterwards that he could not get a case up. This is about six months ago; but I am not sure, it may have been six, five, or four months ago. The shop was Constantine's, at the corner of Liverpool and Elizabeth streets. Detective Hoskison said I might get a reward if I could give sufficient information.
142. *Mr. Brock.*] Do you not know any other shop where tickets were bought? I do not. I was told of a place in Waterloo, but this person would not buy them except in the usual way when I tried. I told the Italian that the tickets were bought from the guards. I met him twice or three times since, and he asked me when I was going to bring up the other tickets.
143. *President.*] Did you sell tram-tickets in your shop? I never sold tram-tickets. My shop is 94, Liverpool-street; it is one door from George-street. Some relatives of mine about six weeks ago bought a shop in Elizabeth-street; Miss Riley is her name; she is not selling tickets because she has no license. Coll had a license but did not renew it; Coll lives in the Glebe now; I know the house but not the number; his name is Frank Coll; he had the license but did not transfer it to my relatives. She was in bed with a bad leg, and could not get out to see about it; she used to sell tickets, and went to get them herself, but she was told not to sell any more; Coll does not own the place: he will not make it over because she owes him £20 yet; she was told she would be summoned for selling tickets, so she dropped it. I have no other shops now; I had one in King-street a little while ago; George, my younger brother, was in business with me; Henry, the other brother, used to keep a shop in Glebe Point Road two years ago; he is lessee of the Opera House in King-street now; he does not mix up in shops now. I know Dummett of the Glebe; I have bought wood off him; he sells tram-tickets; he bought the shop from Grosvenor, who bought it from my brother; I never had any business with Dummett; he never bought tickets off me; I told Mr. Roberts that I bought tickets for the place Dummett now has. I bought £10 worth for Coll, and £5 for Dummett's shop when my brother was in it.
144. It is said that you made an offer to Dummett to sell him tickets? No; it is a mistake. Dummett has only been in the shop three months; I was never connected with Grosvenor. He bought from my brother; we are not very friendly; he swore he would serve me with a writ for something I did to him. He had a case in the Supreme Court some three years ago. I have not sold tickets in my shop since it has been open.
145. People are prepared to swear that you bought tickets at that shop? It is a mistake. Not to my knowledge have any tickets been sold in the place. I may oblige a man with three tickets, but there are no tickets for sale. I know William Moran; I told him I knew nothing about the affair; the only man

- C. Cook. I knew was Greeley. He told me that they found a lot of used tram-tickets in his pockets; he said if he got the sack he would split on others to save himself; I did not tell Moran.
21 Aug., 1888.
146. Did you say that you had tried several conductors for tickets? I made offers for tickets to several of them, and some of them threatened to throw me off the tram. I saw Ferrier, but he would not sell me any. Hoskison said he would like to get up a case, and I bought tickets and sold them at Constantine's shop. This was the only place at which I succeeded in selling the tickets.
147. Do you know Powell of Devonshire-street? No, I know Mrs. Jeanette in Liverpool-street, I did not try whether she would buy the crooked tram-tickets. I would have no truck with women; When the conversation with Greeley took place I had a boy with me. The betting cards have a number, and my name printed on them.
148. You said you told Greeley it was not worth his while going to the races when he could make money so easily. Did you see him manipulating his register with regard to the fare? I gave him a shilling, and he gave me 9d. without ringing his bell. I intended to see whether he forgot it or not, and he said it was a beer at the other end.
149. Did you not tell Greeley that if he did what others were doing he could make £10 a week? Those are not my words; I said, "I have heard that some of you are making £10 a week. It was only hearsay. When I saw him take 3d. I thought he would take 1s. or £1. I have spoken to several tram men, and asked them to get me some tickets; some of them have cut up rough, and I have had to pass it off as a joke; some have threatened to throw me off the tram if they saw me on it again; it is about five months since I did this; this last three months I have not been very much in Sydney; I have been in the country, in Bourke, Armidale, and other places.
150. You can give us very valuable information if you like? I cannot tell you anything that I do not know. Some men have very elastic consciences and Mr. Roberts is one of them. He told me that anything I said about this affair would not go out of the room, and yet within twenty-four hours he spread it broadcast over the country and my name appeared in the papers in connection with it. The tram authorities have summoned friends of mine for selling tickets; Miss Riley is a step-daughter of mine; I am not interested in the shop; if I had wanted to buy it I could have done so.
151. You know a great deal more than this? Really you make these assertions, but I do not know how you arrive at your conclusions; I cannot tell you more; I have nothing to fear; I suppose there will be no criminal prosecution; I have never had any traffic in second-hand tram-tickets, and I know nobody who has except from hearsay.
152. Who would be the people who told you? Jockeys and others who might want tickets. I have never met a tram conductor to my knowledge in a gambling place; I do not gamble now; I used to do so. The place to which I went would not admit tram conductors; the play would have been far too high for such as they.
153. Do you know a place in Crown and Oxford Streets where gambling has been carried on? Only from the newspapers. The owner was fined £5 for gambling. I know a public-house near Carrington running ground. I have never met tram conductors there. I know the case of gambling, but I do not know the man.
154. Mr. Thompson.] How long were you working in Hoskison's interest for the purpose of trying to get up a case? I was not exactly working in his interests; it was not with his knowledge that I was doing this. I was told that Ferrier had some crooked tickets, and was selling them; but I did not come across him for some time, and I thought that if in the meantime I could find out where the tickets were being bought it might assist me to find out who was selling them. I told Constantine that I could find a good supply every week. I watched the shop for about a week, but made no discovery. I remained there till about 8 or 9 o'clock at night, and saw men go in, but they could not be recognized. I paid 20s. for my tickets, and sold them for 15s.
155. President.] You believe in these frauds thoroughly, do you not? I do not believe there are any honest officers in the Department, and I think it only human to have a drink at each end. Constantine told me that he was doing pretty well out of the tram-tickets. He said he never gave more than 10s. for single tickets, and 12s. 6d. for threes. I tried to get out of him who was selling to him, but he would not tell me. I think a man outside now was one who was in the shop when I went there. There were always five or six in the shop. I had my tickets torn into ones and twos. He made no difficulty, and was evidently accustomed to it.
156. Mr. Thompson.] If you hear anything more you will be good enough to let us know? I know nothing more now, and have not been interested in the sale of the tickets.

WEDNESDAY, 22 AUGUST, 1888.

Present:—

A. RICHARDSON, Esq., PRESIDENT.

R. W. THOMPSON, Esq., M.P.,

F. A. BROCK, Esq., J.P.

George Masoora called in, sworn, and examined:—

- G. Masoora. 157. President.] What is your name? My name is George Masoora.
22 Aug., 1888.
158. Of what nationality are you and what is your occupation? I am a Greek, and I keep a fruit-shop and sell fish, lollies, &c., at the corner of Liverpool and Elizabeth streets. I have been in it some eighteen months. I have been about four years in this country. I have not conducted this business before I bought it. Constantine was my partner about three months ago. I bought Constantine Pappadocci out. We were about fifteen months in partnership. We dealt largely in tram-tickets during that time. We bought tram-tickets of different colours and kinds. I always stayed inside the shop. My partner always did the outside work of buying tram-tickets, fish, fruit, lollies, and other things. He did all the buying, and everything was bought in his name. He had the license to sell tickets, not me. He used to say we want £20 for tram-tickets, and he took it. He then threw the 6s. commission into the till. He would say there is so much expenses for the day's sales.
159. Do you mean to tell us you did not know all the transactions that were going on? I cannot tell you anything else. He used to say so much has been sold to-day, and so much has been expended. I cannot tell you anything else.

160. Have you a license now for the sale of tram-tickets? I have.
161. Let us know how you get them? I buy my tickets from the Post Office, and give my order for £10 or £15 worth. I sometimes buy more and sometimes less, just according to what I want. Sometimes I buy on Tuesday, sometimes on Monday. On Saturday I buy £40 or £50 worth.
162. But you are now buying differently from what Constantine did;—let us know how he bought them? I do not know how Constantine bought them. He used to go out and buy them.
163. Do you mean to say he did not buy second-hand tickets? The tickets were often dirty, because I tore them sometimes after I had been opening oysters.
164. Were they not often bought in ones, twos, and threes? They were always in big sheets, some in fifties, some in twenties. I never saw tickets come in bags or in envelopes myself. I never saw any bags of tickets.
165. We have certain information as to how these tickets came into the shop and what was done with them, so it is useless for you to deny it, and I advise you to let us know all that you know about the matter? I do not understand.
166. You understand quite well what I say? I cannot quite understand. I never went out to buy.
167. Do you mean to tell us that during all the time you were in partnership with Constantine Pappodocci no tickets were sold in the shop to yourself or Constantine Pappodocci? No; I do not. If Pappodocci bought anything outside he would come in and say, "I spent £2, £3, or £4, or any sum," and he would take the money from the till and pay himself. He might steal or buy the tickets when coming from the Post Office. I used to row with him because I had been satisfied that I was not getting my proper division of profits from the business. We were always quarrelling and growling, and I bought him out altogether. I quarrelled with him just before he left. Everything was entered in the book by my partner. I examined the books myself. How do I know that he was paying the right price for anything. If he said he paid 10s. for a case of fruit, I could not leave the shop to go round to the markets and find whether he had paid only 9s.
168. The fruit and oysters you could not check, we are quite aware of that; but every tram-ticket is a penny, and every penny is so much commission to you? I do not know how you mean to check.
169. *Mr. Brock.*] Did no one else bring tickets there except your partner? I will swear that no one else did.
170. *President.*] Did you not see your partner pay other people who came and sold him tickets? No.
171. Were you always on the premises? No; sometimes I went out and left him alone and sometimes I was asleep.
172. Do you know Pietro Gaspardo? I do; he was stopping at my place, and my partner gave him a job to work for him. I gave him work two or three times. He was employed as shopman six or seven months. It might be eight months. He sold tram-tickets. The man who is in the shop now sells them. I saw tram-tickets of different colours—some white, some red. The man serving in the shop sells all fruit, lollies, tram-tickets, and everything. I have only been in the ice-cream line before taking this shop. This is the only business stand I have had.
173. Did you square up accounts with your partner when you dissolved partnership? Yes, I paid him £300 and bought him out. I had £215 of my own, and I borrowed the money to pay the balance. Constantine said he was going to Greece. I cannot say what he made. I made £200 in sixteen months. I borrowed £70 from a Jew to pay the balance of the purchase money.
174. Did you know a man named Nicholas? I know Nicholas who went home with Constantine. I did not speak to him. It is over two years ago since I spoke to him. He was never a partner with us. I would have kicked him out of the shop. He owed me 15s. nearly three years ago, and I had a row with him.
175. Do you mean to say positively that you only made £200 during the sixteen months, and that you paid £300 for the business? Yes.
176. Is it not a fact that during the time you were in partnership you shared about £2,000, and when your partner went away you received a sum of money from him? I gave Nicholas nothing. I gave Constantine £300 for the business right out. It is true. I can bring him back. I have his receipt for the money, and can produce it. I can show you my books, and you can count the money yourselves. Constantine put down the money always and made up the books.
177. Do you know Sotero? I do. I have not been in his place. He came to my place. I know his face, but he is no friend of mine.
178. Do you know what led to your partner giving up business and going to Greece in such a hurry;—what made him do it? I was always quarrelling with him, and sometimes he quarrelled with me, and he did not care too much for me, nor did I care much for him. He said to me that if I wanted to sell he would buy me out, or if you want the place you can take it. I asked him how much he wanted, and he said, "I want £300 for my share, or will give you that sum."
179. Why did he go to Greece? I cannot tell you what made him go.
180. How much money did he take with him? I cannot say. It was his business. I never asked him how much he had in the bank.
181. *Mr. Brock.*] Do you mean to say that you did not know how much he had in the bank, and yet you were partners? I do not know how much he had in the bank.
182. *President.*] You remember very well that little trouble which occurred in the shop just before he left for Greece;—tell us about it? I do not know what you mean.
183. Do you not recollect when a man was in there selling used tram-tickets that one of the officers of the Tramway Department came in, and that a great commotion took place, and the man hurriedly put away his tickets? I do not remember it. I remember a lot of conductors, engineers, and others being in drinking.
184. *Mr. Brock.*] Drinking what—rum? No; sometimes they drink milk, lemonade, or soda, or had cigars. I did not sell rum.
185. *President.*] Pappadocci went away in a great hurry, and there was a very sudden break up, was there not? I cannot say. I do not know.
186. I want you to show the difference between the way you now conduct your tram-ticket business, and the way it was conducted before? I do not know of small tickets. I used to make the small tickets from sheets. I never saw any small tickets.

G. Masóora.
22 Aug, 1888.

G. Masoora. 187. Do you know Johns, a bootmaker in Redfern, who is a brother of Sotero's? Yes; but he is no friend of mine; I have never spoken to him; I do not know if he is a friend of Constantine's; I only know him by sight.

22 Aug., 1888.

188. Was there not a great talk between Johns, Constantine, and this Nicholas before they went away? I do not know; Nicholas never came to my place; Gasparido alone came to my house.

189. *Mr. Thompson.*] We have been told that before Nicholas and Constantine went away, Nicholas said he would split on all of you if you did not give him money to keep his mouth shut, and that you and some others collected about £300 to keep his mouth shut and clear out? I do not know anything about that; it is over two and a half years since I spoke to Nicholas.

190. *President.*] We find it very difficult to believe your evidence; we have the sworn evidence of those who saw tickets purchased in your shop from men who frequently came there to sell them. It is also said that you have been present when these sales have been made. Our object is to get at those persons in the Tramway service who have been guilty of robbing the Government, and we advise you to give us any information in your power, because we are convinced that you know of these fraudulent practices, and we have further knowledge of your complicity in the matter. If however you will give us information which will convict these persons who have been robbing the Government, even though you thereby convict yourself, you have our assurance that no proceedings will be taken against you; if, on the other hand, you do not choose to give us this information, we shall endeavour to punish you. You know that Constantine was buying these tickets at less than market value, and that they were bought in your presence, and that you shared with him the profits. We want to find out the conductors who, while receiving Government pay, have been selling these used tickets, thus robbing the Government. You will not be punished if you tell all the truth? I do not understand.

191. I am quite sure you understand the question I put thoroughly, and if you do not choose to give us the information we will make use of our sworn evidence, and will—if possible—prosecute you? I cannot say what I do not know.

192. *Mr. Thompson.*] If you tell us the truth—no matter whether it makes you a party to the cheating—we will hold you free from harm; but if we find you are telling us a lie we will prosecute you, and put you in gaol. We know that you bought lots of single tickets for 10s. We had a gentleman here who went to your shop out of curiosity and offered 20s. worth for sale, and he received 15s. The man who gave him the 15s. said it was more than the usual sum—they only gave 10s. for single tickets, and 12s. 6d. for tickets in twos? If that man sold the tickets, ask him to whom he sold them—whether to me or to some one else.

193. Do you deny that it is true that on several occasions these used tram-tickets were brought to the shop once in a paper bag, once in a portmanteau, once in a case, and once in something else—and as much as £20, £40, and £60 was paid to the man who brought them? I never saw a man bring them; he never sold them to me—I never saw him selling them.

194. Are you not always in the place? I go to sleep for a couple of hours in the afternoon, and I sometimes go out for a walk.

195. *President.*] It has been sworn that you were present on some of the occasions on which these stolen tickets were brought in for sale. You must know that these risky transactions were not done in the street? I never saw them.

196. *Mr. Thompson.*] What bank did Constantine bank at? I cannot tell you; I bank at the Barrack-street and Post Office Banks.

197. *Mr. Brock.*] Will you swear you do not know where Constantine, your partner, banked? I swear I do not. He was my partner. He had some in the Post Office.

198. *President.*] Do you understand your subpoena. We want your books? Very well; I'll get them.

[Witness left, in company with Wigg, one of the tramway officials, for the purpose of producing his books.]

Nicholas Johns called in, sworn, and examined:—

N. Johns. 199. *President.*] Your name and occupation? My name is Nicholas Johns; I am a bootmaker, residing at 15, Regent-street, Redfern; am a Greek, and belong to the Greek Church.

22 Aug., 1888.

200. We have asked you to attend here because we have been given to understand that you can give us some information bearing upon the tram-ticket frauds—that you have known or know some persons who are suspected in connection with these frauds, and that from them you have obtained certain information? I will tell you what I know. About two months and a half ago a man named Nicholas Lavastosh came to my shop and asked me if I would let my wife write a couple of letters for him. I asked him what sort of letters, and he said one to the Colonial Secretary, and the other for the Minister for Railways or Tramway Department. I asked him what he had to say in his letters. He said it was about the ticket affair. As I could not write in English I asked my wife, who is an English woman, to write it. My wife refused to write it, and said these things have to be written by a man's hand. I told Nicholas that my wife refused to write it, and he said, "Never mind, I will soon get someone else to write it for me." I asked him if he could prove what he was going to write. He said, "Never you mind, that is my business; I want to write that I know something about it." On the second day afterwards I told my brother Sotero. I do not know whether the letter is written yet or not. I asked him no more. That Nicholas is not here now; he went away with Constantine Pappodocci. Constantine went to Suez, and Nicholas to Port Said.

201. *Mr. Thompson.*] Where did they go to? Constantine told me he was going to Suez, and Nicholas to Port Said.

202. *President.*] Had you any conversation with Constantine which led you to believe that he was making a great deal of money? Three years ago I was in Liverpool, England; I saw Constantine there, and he said some bank had failed. I then left for my own country, Salonica, and afterwards came on here. I know Comino who keeps an oyster-shop in Oxford-street. I heard that Constantine and Masoora were making a lot of money. I could not understand how they were making so much from what was being sold in the shop. I have heard that they have cleared over £1,000 each since they started. I know Masoora. I know nothing about him. Masoora did not tell me about tickets being sold in the shop by tram conductors. I was not good friends with Constantine, the partner of Masoora. I have not heard that

that tickets were brought under the man's vest. Comino does not sell tram-tickets. I do not know more than two conductors altogether. I will do all I can to assist, and if I get more information I will let you know.

N. Johns.
22 Aug., 1888.

203. We shall want an interpreter during the day and shall be glad if you remain and act in that capacity? I will.

Geo. Masoora recalled and further examined through interpreter (Mr. Nicholas Johns) :—

204. *President.*] What are these books? The business books of Constantine Pappodocci and George Masoora as partners. There is a day-book, a weekly ledger, and an abstract or journal. Constantine Pappodocci always kept the books. 21st May last was the last entry made by Constantine.

G. Masoora.
22 Aug., 1888.

205. *Mr. Thompson.*] Are there any entries which show the amount of money divided between the partners? None. We started business on 3rd April last year. We paid £4 per week rent. The books show the week's takings and the expenditure, as example—

April 10—	Takings,	£34;	expenses,	£23.
" 17	" "	£31;	" "	£27.
" 24	" "	£29;	" "	£24.
May 1	" "	£25;	" "	£19.

and so on. There are no entries whatever of tram-tickets either bought or sold. Always made over £1 a week profit out of the tickets. We sold between £80 and £90 a week of tram-tickets. We got 1½ per cent. commission.

206. *President.*] When you were in partnership did you have a partnership account? Yes, for myself only, in the Post Office and Barrack-street Saving Bank; Constantine did not have a Bank.

207. *Mr. Brock.*] Did you not draw cheques whilst Constantine was with you as a partner? No.

208. *Mr. Thompson.*] Did you keep a partnership account in any Bank, or what did you do with the money that accumulated all the week? We kept no partnership account in the Bank. Every Sunday we counted the money and halved it and it was done with.

209. *President.*] We see by your books that of the money taken some £30 was paid for wages. Where did you keep the money all this time? We paid the wages every Sunday. We kept the money in the desk up-stairs in a safe. Sometimes we took the till up and put it into the safe with the money for the tram-tickets and the tickets on top. We kept all the money on the premises till it was divided. The money I put in the Banks is my share of the profits. We paid cash for the tram-tickets. We sold over £50 on Sundays and Saturdays. Every second day and sometimes every third day I used to count the tickets and money received for them. I threw the money I received as commission into the till for the tram-tickets. If I buy £20 worth of tickets I got 6s. commission, and this 6s. I threw into the till. I sell £10 of tram-tickets every day, and I put these, 3d., 6d., and 1s., together, every day in the till, and then take this money to buy tickets with. I pay all this small money to the Tramway office for tickets.

210. Selling as you do so many tram-tickets in a day, there is a great chance of mistakes being made, and the profit is very small;—how do you check them; do you never concern yourself as to whether you are making or losing money? The tram-tickets are more trouble than they are worth, and less profit is made than by other things. We sell many more on Sundays when people are going to Coogee and other places than at any other time. People come in for tram-tickets and always buy something else as well.

211. How do you check your ticket accounts and know that you are not losing money, or that your man is not robbing you? I try every second night or so, and notice the number of tickets sold and remaining together, with the amount of money remaining in the till. I did the same during the partnership on Sundays and Fridays. Sometimes we were both counting them, sometimes one and sometimes the other of us.

212. Although you were doing this every second night yet you know nothing of the pounds' worth of tickets which were brought to the shop and sold to Constantine at 10s. and 12s. 6d. for a pounds' worth? No, I do not; my partner always bought the tickets himself. I have never bought them except two or three times in the fifteen months. All the others were bought by my partner during the sixteen months.

213. You remember you said this morning that you did not understand something I then said to you. I am now going to repeat it through Mr. Johns, who will interpret it in Greek, and will translate your answer to us. Tell him clearly, Mr. Johns, that we are in possession of sworn evidence which proves to us that used tram-tickets were sold to his partner—Constantine Pappodocci—and many times these used tickets were sold in his presence, that we have clear evidence of this, and that we have other evidence which makes him an accomplice in the matter of these frauds. If he gives us the information that we want, which will lead to the punishment of those concerned in the frauds, we will guarantee to him that he shall go free so far as any complicity on his part in the matter is concerned; on the other hand if he gives no information, we will, as far as we are able, put the law in force against him. I know nothing about it; it was nothing to do with the expenses. If my partner did these things I knew nothing about it; if I had known anything like that I would not have bought the shop. I cannot do any more.

214. You thoroughly understand the matter. We will give you till to-morrow morning to give us a definite answer to that question? Very well.

John Sotero called in, sworn, and examined :—

215. *President.*] Your name, nationality, and occupation, please? My name is John Sotero. I am a Greek, of the Greek Church. I live at Miller's Point and keep a shop. It is a hairdresser's and tobacconist.

J. Sotero.
22 Aug., 1888.

216. You can give us some information bearing upon the fraudulent sales of tram-tickets by conductors we understand. Will you be good enough to tell us what you know? Some time ago some of our tribe came

J. Sotero.
22 Aug., 1888.

came to my shop and said that Constantine and Masoora were making a great amount of money, and that they had divided about £1,200 between them. I asked how did they make such a large amount of money in fifteen months, for I could not do so in as many years. They said—"Well, they have made it." The next night I went to my brother's place, and we talked about it. I asked how they had made such a great amount. He said, "They are making money out of the tram-tickets." I went up to a shop in Oxford-street the next Sunday night and asked the proprietor if he had heard the news. He asked, "What news?" I said, "The news of the large amount of money Constantine and Masoora are making by selling tram tickets?" He said, "They must be stealing the tickets, or something, and defrauding the Government." I heard afterwards that on one night there was a man selling used tickets in the place. The man who used to bring the tickets was there, and the inspector came in. The man with the tickets took fright and went away. I spoke to Masoora, and asked him why his partner wanted to sell out. He said, "My partner is quarrelling and fighting every day with me, and he insults women who come in to buy. He insulted and pulled one woman about and hurt her. We are going to dissolve partnership." I asked if the shop did not pay, and he said, "It paid very well; we clear £30 to £35 per week." I saw Michael Malsiniotis, and told him. He said he could not pay his expenses, and could not understand how they made £30 to £35 per week clear. Malsiniotis is a doctor, but does not practise here. He was Greek consul. Dr. Malsiniotis told Constantine when he came up next time that if he could not stand it any longer here he had better have a dissolution of partnership—either take or give. The doctor said Constantine told him that Masoora would give £300, and he would take it and clear out. In the morning of the next day Masoora went to the shop of Comino the barber, and wanted to borrow £150; but Comino wanted too much interest, and Masoora left. The next day Masoora got the money he wanted from a Jew at less rate of interest. Masoora says now that they used to make £20, £12, and more, by selling tram-tickets.

217. *Mr. Brock.*] Do you think that Masoora knew how Constantine bought the tickets? Of course; there is no doubt about Masoora knowing all about the matter.

218. *President.*] Is it not strange that Constantine went away when the shop was paying so well? Constantine said he wanted to go home. Gaspardo was the working man in the shop, and knows all about the business. My brother says that you may look over the books and you will not find any tickets entered. There is no trace of tram-tickets in the day-book. Nicholas was bad friends with this man, and so when he found that there was something wrong he tried to make money out of him. They had to give him money to shut his mouth and to go away. They had to pay £22 for his passage money by the Messageries mail. He bought dress-coat, dancing boots, clothes, and other things to use on the road home. They had to give him a sum of money as well. There is an entry in this book (the day-book) of "Something and something, 40/3," on July 15, but no trace of tram-tickets.

Inspector Bremner called in, sworn, and examined:—

Inspector
Bremner.
22 Aug., 1888.

219. *President.*] We have asked you to attend in order to give information about the tram-ticket frauds. The information may perhaps not be very direct, but what you have we shall be glad to receive? My name is John Bremner. On the 11th of the present month, at the request of Mr. Roberts, of the Tramway Department, I went with Wigg and Moran to a public-house in Crown-street, near Oxford-street. Before we went in we heard dice being thrown. I sent Senior-constable Roberts to the back of the house. I went and found the door blocked. I forced it open and found they were playing dice, and there was money on the table. Amongst those present we found Frazer, who gave the name of Jones; and then Wigg said there were present also Ferrier, Sheehan, Brown, Shields, and Turner. The pointsman was not there when we went in. I proceeded against the publican for allowing gambling on his licensed premises. The case comes on next Thursday. One holiday I was at Bondi, shortly after the aquarium was opened. I saw a tram-conductor collect a large number of tickets, but he did not tear them up. I inquired why, but found that a day or two before the bells had again been brought into use. I saw him take either sixteen or eighteen tickets, and I went and asked him. I did not see him ring the bell. I saw him put the tickets into his satchel, but I thought it was into a side-pocket. On opening the clasp I noticed a lot of tickets in the other division. I saw him put his hand down by his side.

220. *Mr. Thompson.*] Did he put his hand into the division where the bulk of the tickets were? No, into another division. I do not know his name. The Inspector can identify him. I pointed him out afterwards.

221. *President.*] How do the conductors generally collect the tickets? With some guards I have noticed that they collect singly all the tickets before ringing, and it is impossible to know whether they ring correctly or not. They hold them all in their hand and then ring them off. I have tried frequently but I could not count them. I have had information of the improper selling of tickets. The matter was published in the newspapers and stopped us doing anything in the matter. A shop in Oxford-street was receiving them. Another shop was down the town. Constable Stove sent in a report on the matter and the very day it was sent on it was known to the tram-guards. The report was sent to the Inspector-General marked "confidential," and sent on to your Tramway Department. The same day Stove was asked on the Waverley tram who was the constable that sent in the report on the tram-tickets. I kept it locked up for a week in order to see if there was anything in it. I then sent it on to Mr. Ryland, who sent it on to the Inspector-General, and he sent it on to the Tramway Department. I cannot say whether it was sent to the Commissioner for Railways or to the Superintendent of Tramways. If the paragraph had not appeared I would have been able to have traced everything. Cook kept a barber's shop in Liverpool-street. I think Cook had several shops. When Stove told me that he had been asked about it I was very much annoyed and went to the Superintendent to complain. This was about the date it first appeared in the papers and I had had it in hand three weeks before. The report was sent along as a confidential report from the Inspector-General. I know the Tramway Superintendent had it at this time. Mr. Roberts said he did not know how it could have become known outside. Constable Stove will tell you that the conductor spoke about one of the constables having given the information. There was a clerk in the office named Colls who was a brother-in-law of Musgrave's. This information is principally to identify him as a man who knew something about the matter. I have often noticed the conductors. Some are as honest as can be, particularly those on Crown-street.

John

John Walsh called in, sworn, and examined:—

222. *President.*] What is your name, and where do you live? My name is John Walsh. I live at 151, Woolloomooloo-street, Sydney. J. Walsh.
22 Aug., 1888.
223. We have been given to understand that some three years ago you saw a tram conductor, in charge of a railway tram, pay a hotel score of £1 5s. by giving £2 worth of tram-tickets? It is so. There were two hands full of tickets, though I cannot say exactly how many there were. I should not like it to be known who gave you this information, as it might cause me trouble, and the man who took the tickets is a friend of mine.
224. *Mr. Thompson.*] You are not likely to get into trouble. We are a secret Commission, and what you say will not be known outside? I went into Harris' Hotel, in Redfern-street, Redfern. It is kept by Fred Harris. Not Belvoir and Elizabeth Streets. Whilst in the hotel I saw a tram conductor, whose name I do not know, come in and pay a score with tram-tickets. He was a man about 45 years of age, stout, full whiskers, very dark complexion, and was on the railway line. I called Mr. Harris' attention to it, and he said he would do it no more. I have not seen the man lately, and do not know whether he is in the Department or not. I do not know the man's number. The tickets were in lots of ones and twos. They were white tickets, and had evidently been used. I do not think Mr. Harris would give any information. I think he would withhold information, because a publican must not take anything in payment for liquor bills except money.
225. At this period of time he would be absolutely blameless? I accidentally caught him receiving these tickets. He must have used the tickets. He had no license to sell tickets. I suppose he found it a difficult job to get his money from the conductor, so he took it in this fashion, as the only chance of getting it. The conductor lived nearly opposite the hotel in Redfern-street, Redfern.

George Dummett called in, sworn, and examined:—

226. *President.*] What is your name and your occupation? My name is George Dummett; I keep a confectionery shop in Glebe Road; I sell tram-tickets. G. Dummett.
22 Aug., 1888.
227. You can tell us of some proposal which was made to you to get rid of tram-tickets which were not properly come by;—will you give the particulars? A personal friend of mine, named Martin, asked me one day whether I would buy some tram-tickets. I asked him who had them, and he told me Charley Cook. He said Cook asked him to see if I would take them off him. He asked Martin if he thought I would buy these tickets, and Martin asked him what he meant. He said he had a lot of tram-tickets for sale. I am under the impression that Martin told me I was to receive 5s. in the pound as commission. When Martin asked me I told him he might tell Cook I would not buy. A day or two elapsed; and on my return home my wife told me that Cook had come up to see me. I told her I did not want to see him, and when he called again I was not in. I told her what was up, and that she was to tell him that I did not want any tickets. He came again and asked my wife if I would take £7 worth of tickets, or any part of them. He told her he would allow 1s. in the pound to her; and said he was in business, but was leaving it and selling it, and having a large number of tickets on hand he wanted to dispose of them. She asked if they were in sheets or torn up. He said we keep them torn up; we have a proper ticket till, where we put them, and we must always have them in readiness, as we sell such a large quantity of them. She told him that she would have none of them. I did not see Cook at all. He spoke to my wife, and to a friend of mine, Martin, Greek-street, Glebe. My wife understood him to say he would allow 1s. in the pound, and Martin, whom I saw last night, is not sure, but he thinks it was only 1s. in the pound. I do not think Martin knows anything of Cook, except seeing him at the racecourses. I do not know any of them personally. I know George and Charley. I hear a good deal of tram talk; in fact it is all tram talk with these gentlemen. About three months ago I told them the Department was being robbed.

John Fountain called in, sworn, and examined:—

228. *President.*] What is your name? My name is John Fountain. J. Fountain.
22 Aug., 1888.
229. You were sometime ago employed as a conductor, I believe? I was in the Tramway service as conductor for four years and a half.
230. You have asked to be allowed to make a statement, be so good as to make it? Mr. Roberts and I had a few words and I tendered my resignation. I gave some information to Mr. Thompson, M.P. Some time ago I heard John M'Gregor, who was killed at Randwick, say that on one occasion when he took his bag into the office he was told by the clerk that he was 5s. short. M'Gregor said, "That, be damned!" The other said, "Yes, you are." M'Gregor said, "Did you get half-a-sovereign in my bag?" The clerk said, "No, I did not get the half-sovereign." M'Gregor said, "If you look you will find the half-sovereign rolled up in a piece of paper." He found the money, and the clerk said, "That makes your account correct." This I stated sometime ago. It occurred at the railway some four or five years ago. I did not hear him say anything about being 5s. over.
231. *Mr. Brock.*] How did he get the half-sovereign? He got it to change. When the trams first started we used to take £4, £5, and £6 in an afternoon. We used to go several times during the day to the office for change. I have taken two or three sovereigns from people coming in from the country.
232. *President.*] If we are to infer that the clerk committed fraud it was a very transparent one? I only tell it to you for what it is worth.
233. Have you no other information to give us. I thought you were going to tell us something of importance as bearing upon the tram-ticket frauds? I know nothing of the conductors selling tickets. As far as I know none of the conductors are anything but honest. I was in the service from its commencement and remained four years and a half.

Michael Malsiniotis called in, sworn, and examined:—

234. What is your name? Michael Malsiniotis. M. Malsiniotis.
22 Aug., 1888.
235. You are prepared to make a statement? I can make no statement without an interpreter.
236. How long have you been in the Colony? I have been twenty years in Australia; can speak Greek and Italian but very little English.
237. *President.*] If you will come to-morrow morning, at 10 o'clock, we will have an interpreter here? Very well; I will come.

Marcus

Marcus Alafousas called in, sworn, and examined :—

M.
Alafousas.
22 Aug., 1888.

238. *President.*] What is your name—Nicholas Williams? No, Marcus Alafousas; Nicholas Williams had the shop before me and his name still appears.
239. What is your nationality and your occupation? I am a Greek. I have a refreshment-room at 194, Elizabeth-street. The other is in Wexford-street. It runs from one street to the other.
240. We want to know something of your business in tram-tickets with Constantine Pappodoci and Masoora? I never had anything to do with Pappodoci and Masoora, and know nothing about their business in tram-tickets. I only sell about £2 or £3 per week. This last eighteen months I have done this small trade. I employ two men—one in one shop and one in the other.
241. How many tickets have you purchased from tram conductors? I know nothing of tram conductors having sold their tickets.
242. You know Pietro Gaspardo? Yes.
243. What have you said to him about tram-tickets? He has never had any conversation with me about the tram-tickets, neither has he been working for me.
244. Do you know Vaselli employed in your shop and that Moran called one day to see him? I have Vaselli in my employ now. I recollect Moran calling. I said I knew him well for years. I told Moran he lived in Wexford-street, but I did not know whether he lives there now. I cannot tell you where he lived. I know Pietro very well. I have never had any conversation with him upon the subject of the soiled tram-tickets. He comes down to me every day to sell oysters. He was keeping an oyster-shop in Albion-street, about four or five months ago. I saw him every day but he had no conversation with me about the tram frauds.
245. Did you know him when he was in the employ of Pappodoci and Masoora? Yes; but I never met him outside. He was six or seven months there. I did meet him sometimes outside and sometimes he came to my shop. He frequently came down to my shop. He never in all these times made any allusion to these tram frauds.
246. Did not a conversation take place between you on the morning the detectives came when he said he was afraid of his life as the frauds were known? No.
247. How long have you known Vaselli? About three months. He came out from the old country about that time. He is a Greek. He comes at 5 o'clock in the morning, and he lives at my shop. He is not working at Masoora's at all. Neither of my men went to Masoora's at all to serve. I have the whole of their services. I change my men often when they do not suit me. One of those I have now has been about two weeks with me, the other about three months. I have never had a man who served partly in my shop and partly in Masoora's, I do not know anything about what they do when they go out of my shop. One is paid 15s. and the other £1 per week. I cannot tell where they go when they go out. If Vaselli was in Masoora's shop on Monday I cannot say. I cannot tell you where he was at 3 o'clock last Monday. I was at my own place on Monday, I might be asleep about 3 o'clock.
248. *Mr. Brock.*] Do you not know that Vaselli was serving in Masoora's shop last Monday? No. I do not know where he was last Monday. I pay the men for their whole service. I sometimes have a sleep about 3 o'clock.
249. *President.*] Have you had tram-tickets offered to you by conductors? Never. I buy my tickets at the office. I have obtained some from Masoora. I always paid him 20s. for the £1 worth. They were sheets and not torn tickets. I used sometimes to buy off Constantine as well. I always paid him 20s. for each pound's worth of tickets. I have made a statement that I was selling between £40 and £50 worth of tickets a week. At the first when I started I used to sell as many; but since the opposition of the other shops I do not sell many. I get tickets from the grocers and other places near me, and also from Masoora. I only sell £2 or £3 per week now; sometimes less. I have had always sheets from Constantine and Masoora's. I do not know Palesi in George-street.
250. *Mr. Brock.*] What do you sell at your shop? I sell lollies, fruit, and confectionery. Sometimes children bring me tram tickets in exchange for lollies and other things, but I do not serve them. I send them away.
251. *President.*] Do you know a man named Cook who keeps a shop? I do not know Cook.

Pietro Gaspardo called in and further examined :—

- P. Gaspardo. 252. *President.*] We understood you very clearly and distinctly to say that Masoora was cognisant of these tram-ticket frauds? Yes.
253. Tell us what Masoora knew about these frauds? He was there when the tickets were sold; he was present when they were sold, and he bought some himself.
254. What was the row about one night? I was not there.
255. Did they not quarrel about something? I heard that they had quarrelled, but I cannot tell what they quarrelled about.
256. What is your opinion of Constantine going away by himself and the other man buying the business? He cleared out with a large sum of money. Masoora must have his half now.
257. *Mr. Brock.*] How long were you at Constantine's place? I was there several weeks. I cannot tell whether they kept books about the tram-ticket transactions. I was not behind the counter. One of them was in the ticket side and I was in the other side. While one of them was in bed the other was in the shop. Constantine used to keep his money in the Australian Joint Stock Bank and the Post Office Savings' Bank. I have not spoken to Johns this last five years. I saw him once in the Wexford-street shop. I have not spoken to Sotero for about five years.
258. *President.*] You are able positively to prove that Masoora was a partner, and knew as much as any one else about these tickets? Yes; I am.
259. We are talking about the partnership in stolen tickets? All the other shops and all his countrymen know that Masoora and Constantine were partners. Nicholas Williams knew it. I don't know of anybody else who can prove it. The man who was in the shop before I went there is now in Melbourne. The man who is there now came after I left. He is still there. He is a tall young man. He sometimes serves in Williams' and sometimes in Masoora's. He is a tall sickly looking young chap.
260. *Mr. Brock.*] Are you sure that Constantine had money in the Australian Joint Stock Bank? Constantine told me that it was the Joint Stock Bank.

261. *President.*] What do you know of a man named George? I only know George Peters by this name. He is a barber near a public-house in Oxford-street. I do not know his surname. I know George Caselli, a barber in Elizabeth-street. I know him because we were mates in a place in George-street. I have not spoken to him since that time. We were mates together, and he was frightened I would get his place because he could not do his work, and we quarrelled. I did not know his surname, only knew him as George. P. Gaspardo.
22 Aug., 1888.
262. *Mr. Thompson.*] All your countrymen believe that you can give information to sheet these thefts home, and you can tell a great deal more than you have told? I can say no more.
263. Who was employed in Constantine's shop at the same time that you were? There was only Epaminondas and myself employed at the same time. A young fellow whose name is Epaminondas.
264. *President.*] What are you doing at the present time? I am at present dealing in fish and oysters.
265. What wages were you getting at Constantine's? I used to get 32s. 6d. per week. These wages did not pay me, and I would not work for it.
266. Did you not tell Constantine that if he did not pay you more you would say what you knew? I did not tell them that I knew anything about it, nor did I ever threaten to give information if they did not increase my wages.
267. You did not try to put the screw on to get more? I never did.
268. What made you tell Loder? I only told Loder in order to find out if it would be worth while giving this information. He said I would only get myself into trouble and bother, and I had better leave it alone.
269. Where does Loder live, and what is he? Near Market-street. He is an hotel broker in Elizabeth-street, near Market-street.
270. *Mr. Thompson.*] What time used these men to come to sell these used tram-tickets? They came about 3.30 p.m. on Saturday, and one Sunday morning, about 9 o'clock. They came singly.
271. *President.*] How many times have they come? I have seen one man come three times. He sold to Masoora once and to Constantine twice. He sold two parcels on one occasion, another occasion a portmanteau full, and on the next time two paper bags. When Constantine was not there Masoora took two bags.
272. Do you know Nicholas Williams? Yes. His real name is Marcus Alafousas. I have known him for seven years. I made his acquaintance whilst he was working in different places. I never told him that Constantine was buying these tickets. As a matter of fact, I have never told him.
273. *Mr. Brock.*] If he says that you told him all about these cheating tricks, is it true? I never told him any such thing. He is more interested in it than I am. He knows more about them than I do, because he could tell me about them. I have heard that he knows more about the tickets than I do. Nicholas who went away with Constantine told me that he knew more than I did about this matter. I knew from another man that he knew much more about them. I never saw Marcus buy tickets at Constantine's. I am not very intimate with him. I am no more intimate with him than any one else who goes in and takes a cup of tea and pays for it. That is the way he is a friend, nothing more.
274. *President.*] Let us know what passed on the morning Moran was looking for you? The morning Moran came to find me I went into Nicholas Williams' shop. I did say to him that I was afraid Nicholas knew that you were detectives.
275. *Mr. Brock.*] Have you and Nicholas never spoken about this matter? Did he know that you could put him away? I have never spoken to him about it since the detectives came round.
276. You spoke to Williams about these tickets being sold to them? Yes, I did.
277. *President.*] Do you recollect a man being drunk in Constantine's place one evening, and they said he was only shamming, and not drunk? Yes; I heard about it. Masoora came into the place and told me about it. Constantine rushed out saying the man was not drunk, but was a detective, and went to Comino's. Masoora said there was a man drunk in the place last night. He was one of the detectives, and was going to summon him. The drunken man told Masoora that he was one of the detectives. I do not know that the man was coming in with tickets. I have not spoken to Comino since I had to pay a £30 fine for drink which I did not sell. I do not know any men who are selling fraudulent tickets. I told Williams that I would give all information, and the least thing he could do was to let out all the information he had. I was speaking to him from here down to George-street.
278. How do you know what he knows about it? I do not know what he knows. He told me he knew nothing about it.
279. *Mr. Brock.*] You say that he knows more than you do;—how is that? He knows more than I do, because I often saw him with them. I cannot say that I saw him buy tram-tickets.
280. Has not Williams told you that he knows more than you do? Of course if I were in the company of a person often I should know something of his business.
281. *Mr. Thompson.*] Do you not know that he was doing a very large business in the shop? I have seen one of Williams' men with a large roll of tickets, bringing them from the Post Office. I saw him twice in Elizabeth-street. It is a good while ago; over twelve months ago. The man is now in a shop in William-street. Johans is his name.

THURSDAY, 23 AUGUST, 1888.

Present:—

A. RICHARDSON, Esq., PRESIDENT.

R. W. THOMPSON, Esq., M.P.,

F. A. BROCK, Esq., J.P.

Dr. Malsiniotis called in, sworn, and examined through interpreter (Mr. John Sotero):—

282. *President.*] You have a statement to make, Dr. Malsiniotis. Will you proceed with it? My name is Michael Malsiniotis. I keep a shop in Oxford-street. Have been in Australia twenty years. I cannot speak sufficient English to make myself understood. Can speak a little French. Can speak Italian and Greek. Keep a refreshment-room in Oxford-street, and sell milk, lemonade, cigars and drinks. Constantine Pappodocci came to my premises, and said he could not stand his partner any more because he could not agree with him. His partner did things which were not fit or proper to be done in the shop.

Dr.
Malsiniotis.
23 Aug., 1888.

Masoora

Dr.
Malsiniotis.
23 Aug., 1888.

Masoora used to insult women and do other improper things, and so Constantine was about to dissolve the partnership. I told him he had better go away and try to settle the differences, and after a few weeks come back and let me know what he had done. After a few weeks he came back and commenced to tell me what his partner did against him. He said he could not bear it any longer, and would sell the place and go home to Greece. I asked him if the shop paid, and if it did pay what was the reason why he would sell out. He said the shop paid very well, but his partner's conduct was so bad that he could stand it no longer. I asked him what he wanted for his share of the business. He said he would take £300, or he would give Masoora £300 and keep the business himself. He went away and told his partner, who said he would give £300. He afterwards came back and said that he had settled the business and his partner had bought it for £300. I asked what was the reason of his partner giving £300 if the business was paying so well? also what was the ticket business a week? He said sometimes £10, sometimes £15, and sometimes £20 each clear was divided. I asked him what was the reason he sold for such a small amount of money; would it not be better for him to remain here and make more money? He said, "I have plenty of money to go and live in my own country." "How much do you make a week?" He said, "Sometimes £25 to £50, and sometimes £60 per week." I said, "What! do you sell fruit and make this amount? Lemon squash, lollies, and milk?" I said, "It is impossible to make such a sum in a week. I am in the same business and I cannot make anything out of it. If you divide that amount between you there must be £350 worth of refreshments sold every week before you can do so. You tell an untruth if you say so, and you must have some other way of making money." He said, "We sell between £70 and £100 per week of tram tickets." I said, "Well, if you sell £50 worth you get 15s. commission; £70, 17s.; and £100 worth, 30s. Where is the remainder got from to make up such a profit?" He could not tell me, and he turned away frightened. I told him, "You must have stolen the tickets and that is how you make the money." The next day he came back to me and went away again shortly. The next time he came I said, "Tell me the truth about the tram-ticket business?" He said that some persons used to bring tickets to him for sale, and he used to buy them. Sometimes he gave 15s. in the £, sometimes 10s., and sometimes 8s. in the £ for tickets. I afterwards told him that if the Government found out about this business he would find himself in trouble. The next morning he came back and bid me good-bye as he was going to his country.

283. *Mr. Brock.*] Have you any idea where he got the tickets? I have no idea of where he got the tickets.

284. *Mr. Thompson.*] Did Constantine tell you when he left who was selling the tickets? No.

285. *President.*] Did Constantine lead you to suppose that his partner was as much in the swindle as himself? Constantine did not give any information. He told me that they divided the money between them.

286. You only took it for granted as a man of common sense? That was so.

287. What would you judge from the fact that Constantine was not particular as to whether he sold out or remained in and bought Masoora out; if Constantine were frightened he would not have made this offer, surely? I think this was a blind in order to deceive his partner and get a better price for the business.

288. *Mr. Thompson.*] Do you know Masoora? I do. I am not on friendly terms with him, but I know him.

289. *President.*] When Constantine made this disclosure to you did you not consider it right to acquaint the authorities? I had no power to report this because I do not belong to the Government.

290. Why do you think it necessary that you should be in the Government service before you could make such a report? Because it is Government business, not mine. In all French and Greek law the Government has to go round and find things out, not the private person; I do not know what the English law is, but the Greek law makes the Government find out these things.

291. *Mr. Thompson.*] Do you know Nicholas who went home with Constantine? Yes.

292. Do you know that before Nicholas went away he got a large sum of money under a threat that he would tell the police what was going on? I never spoke to the man this last six years.

293. Did Constantine tell you how much they had made altogether, in the business? No, he did not.

294. *President.*] Apart from what you have already told us, do you know anything else? No, but if you ask me any questions I will answer them if I can do so.

295. *Mr. Thompson.*] Do you know from any of your countrymen whether any one, besides Constantine and Masoora, were dealing in these tickets? I have never heard of anybody.

Constable Stove called in, sworn, and examined:—

Constable
Stove.
23 Aug., 1888.

296. *President.*] What is your name? Robert Stove.

297. You are a constable in the Police Force? I am a senior-constable, stationed at Waverley.

298. We understand that you have something to communicate to this Commission with regard to the malpractices which have occurred on the tramways in connection with the tickets? My information is only what I have heard—not what I personally know.

299. *Mr. Thompson.*] This may lead us to obtaining a clue to something else which may be of use to us? I shall be glad to give you what I know.

300. *President.*] You are aware that a man named Musgrave tampered with his register? No; I only heard it, and I reported it to my department. I heard, on or about the 11th or 12th July last, that Musgrave was tampering with his bell, and had been doing so for the previous seven or eight months.

301. Can you give us the name of your informant? I cannot tell his name.

302. How is that? Because I have promised not to divulge the man's name who told me.

303. *Mr. Thompson.*] On a Royal Commission, under the Great Seal of the Colony, we can ask you any question? I cannot divulge the name. I am in honor bound not to do so.

304. *President.*] It is useless to say you cannot divulge the name—you will not, you mean? I say I will not.

305. We must press you to give the name? I will not give it. I am in honor bound not to give it.

306. *Mr. Thompson.*] You will have to give it? I should not be pressed to give the name in a Court, and I decline to give it here.

307. *President.*] You say you would not be pressed to give the information in a court of law, and this is probably correct. What was the object of the person in asking you to pass your word not to give his name? Because he does not wish his name to appear in connection with the matter in any way. 308.

308. Is he implicated in the wrong doing? I do not think so.

309. If he is not, what reason has he to fear? He does not want to be known at all. He came to me one day and said he could put me on a good thing if I would not tell who put me up to it. I took some time to consider before I gave him my word, and then I told him I would not give his name. So with all due respect I cannot give the man's name. The evening I got this subpoena I saw and told him I should no doubt be asked to give his name, but he pressed me not to do so, and I again promised him I would not.

310. *Mr. Thompson.*] Is he frightened on his own account? He has nothing to do with it.

311. Was he going to be engaged with these people—with Musgrave? He was going to be connected with him in business. He is a man quite outside of the Department. He had not bought any tickets. He did not buy any.

312. *President.*] We will for the present waive our right to demand his name. Meanwhile let us have particulars of what he told you? He informed me that Musgrave had to take his bells home at night, and somehow or other he came to the conclusion his bells were broken, and he inserted a small nail into it and put a piece of wire about the size of a hair-pin into the bell. He pulled the bell, it rung, but did not register. He studied the arrangement and found that he could ring the bell always without the register moving. He carried this practice on for some time before letting any one else know, and he would never use the pin except on twopenny or threepenny sections. He used to take the pin out when he wanted the bell to register. When he did not want the bell to register he would reinsert it. He got sick and could not make anything whilst sick. Another conductor, a chum of his, called to see him and he instructed this chum in the job.

313. What was this conductor's name? He did not give me the man's name. He did not know either the man or his name. This conductor told someone else, and it went on. According to my informant, he knew of only three in connection with the manipulation. He said they were, Musgrave, on the Waverley line; and I think he said another on the Newtown line; but the location of the third he did not know.

314. By this manipulation whenever he liked he appropriated certain quantities of tram-tickets? Yes. He sold them. I would have found out where in another week if I had had the time, but I was baulked by the newspapers getting hold of the information and spoiling me. I knew that it was in Oxford-street that they were sold. I knew Soper's shop. He is dead now. I do not know the shop in Oxford-street. I have been in Waverley five years. We do not come nearer town than Windmill-road.

315. We are advised that you know the man with whom Musgrave had arranged for the sale of the tickets, and the man has been refused a license? He has been refused a license. When this man gave me the information, I sent in my report to my Department, who forwarded it on—marked "private and confidential"—to the Tramway Department, and that very same night I heard that the policeman at Waverley had sent in a report about the tram frauds. I was asked who was the constable who sent in the report. It was known outside on the same evening as the report was sent in.

316. Have you any idea how it got to be known outside? It came from the Tramway Department. I do not know how it came out, but I know it did come from the Tramway Office, and I was very angry. I went in and saw my superior, and told him it was no use making reports if they were to be known outside immediately they had been sent in. A guard on the tramway told me about it on the same night, a few hours after the report had been sent in. I do not know the guard's name.

317. Would it not have been easy to find out his name? I did not ask.

318. *Mr. Brock.*] On what line was he? I cannot say. He is a great big fellow, and used to go in plain clothes; he used to go with Wigg in plain clothes; he was in possession of the information from the office.

319. *President.*] How long after your report went in was this man in possession of the particulars? The same evening he asked me who was the policeman at Waverley who sent in the report about the tram-tickets. It seemed to me to be pretty generally known.

320. Have you any further information to give? I have none. I did not give the information about the person who had arranged with Musgrave. Soper had bought tickets from conductors. This man applied for a license and has been refused. It is Wigg who gave you the information, I think, and he must have misunderstood me in the matter.

321. *Mr. Thompson.*] Can you tell whether he had applied for a license before? I cannot tell you.

322. Where does he live. You are pledged not to tell his name, but you are not pledged not to tell where he lives? I do not know where he applied for his license. I do not know in what district he applied. If I told you his address I might just as well tell you his name.

323. *Mr. Brock.*] In what district do you think he applied? I cannot say in what district.

324. *President.*] That is no answer. We warn you that we will not allow you to trifle with us? I knew when he gave me the information where he lived and where he lives now.

325. *Mr. Brock.*] If he were living at Waverley is it not likely that he would apply for the Waverley district, and not for Forest Lodge? But he was not always living at Waverley.

326. So far you have been allowed to keep your promise so far as the name is concerned, but you promised nothing else? Mr. Inspector Bremner was here, and he knows the name as well as I do.

327. *Mr. Thompson.*] Perhaps you do not know our powers and their extent, that by the Act we have full power to compel a witness under penalty to answer any question that we may put to him? I do not doubt it.

328. *Mr. Brock.*] What is the man's name who gave you the information? I will not give it. I have given every possible information except the name and address.

329. *President.*] I put it to you plainly, whether this man desired his name to be kept back because there was any complicity between him and Musgrave; if so, it seems to me that in the interests of justice you may fairly forego your promise and give us his name? I cannot.

330. You must know that this man was actually gaining his living by fraud? I only inferred it.

331. *Mr. Brock.*] And you, a police-constable, want to screen him? I do not; and if the Inspector-General advises me I will disclose the person's name. You hardly understand, I think, the motives which impel the police to give promises of this kind. If they did not adopt such a course much crime would go unpunished, for we should not get the valuable information which we get from this class of person. This man has already enabled me to bring several important cases to a successful issue.

Constable
Stove.
23 Aug., 1888.

George Read, Esq., called in and examined :—

- G. Read,
Esq.
23 Aug., 1888.
332. *President.*] Mr. Read, we have asked you, as Inspector-General of Police, to attend on account of the refusal of Constable Stove to give us the name of a person which, in the interests of justice, we think it desirable he should disclose to us? I will see him alone, and find out what his reasons are for declining to disclose the name.
333. *Mr. Thompson.*] The reason, as explained by him to us, is simply that he has made a promise to the person giving him certain information that his name should not be allowed to transpire? I will speak to the constable, and advise him as I think right.
334. *President.*] You have now conferred with the constable, will you favour us with the result, Mr. Read? I have advised him to disclose the name; but as the person in question has been of great use to the police, I shall be glad if you will not make use of his name if you can possibly avoid it.

Constable Stove called in and further examined :—

- Constable
Stove.
23 Aug., 1888.
335. *President.*] You are now prepared to give us this man's name? Yes; the Inspector-General has advised me to give it up, and I will do so if you still press it.
336. It is quite possible we may decide to summon him as a witness? If so he is bound to know exactly who gave you the information and we will get nothing further from him.
337. *Mr. Thompson.*] We will not summon him directly? I can give precisely the same information as he can. His word would go nowhere in a Court of Justice. His name is Dominic Lacerdo; he is a barber. It is a positive fact that he does not know the name of the other conductor. When he applied for a license he applied in the name of Parkes, and it was refused. I have no further information to give at present.

Detective Hoskison called in, sworn, and examined :—

- Detective
Hoskison.
23 Aug., 1888.
338. *President.*] Your name and calling please? My name is John Hoskison, and I am a detective in the police force.
339. We have considered it very probable that you may, in the exercise of your official duties, have come across information with regard to the tram-ticket frauds, and that you will no doubt be willing to impart it to us; and independently of this your name has been mentioned to us by a man of a somewhat questionable character—Charles Cook,—who alleges that you have made use of him to endeavour to obtain for you information as to where tramway-tickets were being fraudulently sold? As regards Cook, some time ago, I cannot recollect the date I met him, and he told me about certain matters in connection with the pilfering of tramway-tickets. He said that pilfering was going on, and told me how it was done. It was done by the guards on the trams. I instructed him to find out if he could where these tickets were being disposed of. He promised to do so, and he asked me if I thought I could get him some reward for doing so. I mentioned the matter to Mr. Roberts, of the Tramway Department, but it came second-hand. The Department had already got the information. It is some two or three months ago. I mentioned it to my superior officer first and then to Mr. Roberts. Mr. Roberts told me they were aware of the fact, and the men were under surveillance at the time. I therefore let the matter drop, as I had plenty other work on hand. I met Cook some time after. I reported the matter, and asked for a reward of £25 if I succeeded in getting up a case for pilfering. I did not succeed in getting the offer, so the negotiations I had with Cook fell through. I think the names of Ferrier and Musgrave were mentioned in connection with the pilfering. Cook did not know where the tickets were being sold at that time, but the mode of manipulating the registers was by using a piece of wire, a pin, or something. I have known Cook for five or six years. He was under committal for a large jewellery robbery in Melbourne, but got out of it. He was in trouble here, and received a sentence for stealing, but he appealed, and the conviction was quashed.
340. Have you any idea whether he has been dealing in these tickets himself? I could not say. I have not gone into the matter.
341. Cook says he did take the matter up, and sold some tickets at an oyster-shop? He was to get some tickets. That was the understanding. He did not do so, because the thing lapsed.
342. Is this all that you know in connection with these frauds;—have you not known others in connection with the matter? No.
343. Have you had no communication with the Greeks, Italians, and other foreigners on the subject—Do you know Pietro Gaspardo? I have known Gaspardo some seven years. He is an associate of thieves and prostitutes. He is no good, but has never been convicted.
344. Do you know Masoora? I noticed Masoora in a shop.
345. *Mr. Brock.*] Did you know Constantine Pappodocci? I did not. I have never been in his shop.
346. *Mr. Thompson.*] Did not Cook tell you that tickets were bought at these shops? Yes, he did.
347. He gave you a list of places where these tickets were being sold? No.
348. We understood him to say that he did so, and that he told you he had sold tickets at Constantine's? No, he did not.
349. What conductors were spoken of as doing the pilfering? Only Ferrier and Musgrave. I have heard since of Fraser. I go a good deal into gambling-houses. I have never met any of these tramway men in the gambling saloons. I have never been in the "Evening Star" hotel, Crown-street; I cannot get into a regular gambling den or gaming-house; they keep men posted on the look-out, and I am well known to every one.
350. *President.*] Do you know a man named Hunt, a tobacconist, in Crown and Devonshire streets? Yes; I know him by sight.
351. Have you seen Fraser in that house? No; I have not been there since I left that district.
352. Do you recollect Cook speaking to you about a man who was keeping his mother and whom he wished you not to follow up? No.
353. Do you know a man living in East-street who is connected with these frauds? No.
354. Do you recollect Cook telling you not to follow up this man? No; I do not think this was mentioned. He said the man had a lot of tram-tickets but did not say how much. He did not mention the man's name. I never met Cook at the corner of Redfern and Elizabeth streets. I met him about the 23rd July coming from the races. I know Marshall's shop in Market-street, near Elizabeth-street. I only

only know Dick Marshall. There is a shop opposite Punch's hotel. I never heard that £10 worth of tickets had been sold there for £8. I did not hear it in an indirect way from Detective Cockingham. I do not know a Chinaman named Ah Ping or Ah Lung. I do not know a jeweller in Waverley named Morgan. Cook has been up several times for welshing. He is no good; he was arrested on a warrant for clearing out his goods without paying his rent, and he had to pay. He was in Lyndhurst-street or Talfourd-street, Glebe.

Detective
Hoskison.
23 Aug., 1888.

Alfred Martin called in, sworn, and examined:—

355. *President.*] What is your name and the nature of your employment? Alfred Martin. I drive a cart. A. Martin.
23 Aug., 1888.
356. Do you know Charles Cook, who keeps a shop in Liverpool-street? I do.
357. Have you had any dealings with him in tramway-tickets? Not as far as I know.
358. Have you never bought tram-tickets from him or sold them to him? No.
359. You had some conversation with him about tram-tickets? I met Cook somewhere about tram-tickets.
360. Where was it, do you recollect? I think it was at the Rosehill Races. Dummett was with me. Cook said to me, "You know Dummett," and I said, "Yes; I am well acquainted with him." "What sort of a fellow is he," asked Cook, "Do you think he would buy any tram-tickets?" I said, "I did not know." I thought nothing more about it until I saw Dummett again. I then told him about it. I told him I had been talking to Cook, and Cook asked me to mention it. Dummett told me he would have nothing whatever to do with Cook.
361. Do you know any of the tram conductors? I know none.
362. *Mr. Thompson.*] Did you not say to Dummett that Cook had some crooked tickets which he wanted Dummett to sell, and did not Dummett say, "Can a duck swim?" No, I did not say so, nor did Dummett use that expression. He said "I would not touch them with a 40-foot pole."
363. How did you know the tickets were fraudulently come by? Knowing the sort of man Cook is, I thought they were crooked tickets. The stables are at Waverley, and I live at the Glebe.
364. Where are the stables? Just opposite the park gates.
365. What did Dummett say when you told him about Cook wanting him to buy these tickets? He said he would not have anything whatever to do with them.
366. Did he not say, "Can a duck swim?" I cannot say whether he did say so or not. I took no notice of it.
367. Do you know a man named Grosvenor? Yes, I do. He kept the shop that Dummett is in now.
368. Do you know whom he was in partnership with in that shop? No.
369. Were you ever in the shop during his time? Yes.
370. Do you know a man named Coll? No, I do not.
371. Have you met Dummett in a gaffing school? I have never seen him in one.
372. Do you know a man named Ferrier, whose name has been mentioned in connection with these frauds? No.
373. Have you been in Cook's company at various places? I have never been in his company.
374. Did not Cook call you on one occasion one of his "ready bucks?" Never.
375. How many of the Cooks do you know? I only know Charley Cook.
376. How did you know him? Because he was fighting one day; I was never in George-street with George Cook; I never stood anywhere with George Cook; I only know Charley; I do not know where he lives.
377. Do you often call in at Dummett's? Sometimes I go up to Dummett's on Sundays; I am out at 5 o'clock to walk to my work, and by the time I get back again at night it is nearly 7 o'clock, and time to go to bed, and I am quite ready for bed; I can play cards, euchre, and cribbage.
378. Can you play poker? I cannot play poker; I cannot play pak-a-pu; I do not know what it is.
379. Do you know Detective Hoskison? I only know him by sight, and have never spoken to him.

George Masoora called in, and further examined through interpreter (Mr. Sotero):—

380. *President.*] We gave you until this morning to consider whether you would make a further statement; what is the result? I cannot tell you anything more than I did yesterday.
381. The information which we advised you yesterday was in our possession has since been strengthened by other evidence? I cannot understand what you want, I have already told you all I can tell you.
382. Do you deny having had any share in the proceeds of the sales of fraudulent tram-tickets? I know nothing at all about it. A lot of engineers, drivers, and conductors used to come in for drinks, but they did not sell me tickets.
383. You persist in denying all knowledge of your late partner Constantine's transactions? Yes, I deny it all.
384. You clearly understand that we have positive evidence that these purchases were made in your presence, and yet you deny it? Yes, I deny it.
385. *Mr. Thompson.*] We were told that you made large profits from stolen tickets and nothing else, and that you and Constantine divided the profits? I know nothing about it.
386. *Mr. Brock.*] How much did you get as your share? I took £200 clear for sixteen months. I paid £300 for one half of the property. I pay £4 per week rent. I built the place myself.
387. *President.*] It would take two years before you could get your money back? How can it take two years? It is only half of this.
388. We shall not give you another opportunity of coming before us? You can do what you like. If you like I will bring Constantine here.
389. How are you to get him? I do not know whether he would come back or not. He might be back in six months, or in three years, or not at all.

G.
Masoorā.
23 Aug., 1888.

Letteras Epaminondas called in, sworn, and examined, through interpreter (Mr. Sotero):—

- L. Epaminondas.
23 Aug., 1888.
390. *President.*] Your name and occupation? Letteras Epaminondas; I work at Comino's shop in Oxford-street.
391. How long have you been working there? About four months.
392. Where did you work before that? At Summer Hill.
393. For how long? Five months.
394. Did you work in Constantine's shop? I worked four days in Constantine's shop, when I pricked my finger with a fish-bone and left.
395. What do you know about the tram-tickets sold there by conductors? I do not know about selling of tram-tickets. I was in the kitchen cooking fish and prawns. I never served in the shop. I never was in where they sold. I never was in the shop when any one came to sell tickets. Masoora used sometimes to go and sell tickets. He has no license now. Have been working at other places. Was sent with £1 to buy sheets. They gave no commission. That is all I have had to do with tram-tickets.
396. Whilst you were at Constantine's or other places did you hear any talk about tram-tickets? Know nothing about it,—never heard it talked about.
397. Do you know Nicholas Williams? I know Marcus, who succeeded Nicholas Williams; I have often been there; I have a cousin living there; they sell tram-tickets; my cousin is there now; he has been there about three weeks.
398. *Mr. Brock.*] Do you know Mr. Sotero's brother? Yes.
399. *President.*] Have you told us all you know? Yes.
400. *Mr. Thompson.*] You will be held harmless if you speak the truth? This is all I know.

Janopolis Vaselli called in, sworn, and examined, through interpreter (Mr. Sotero):—

- J. Vaselli.
23 Aug., 1888.
401. *President.*] Where are you working? Working in Marcus' (Nicholas Williams) shop for three and a half months.
402. Do you work all your time there? Yes, always there; came out from home and went there.
403. Have you not been employed in Constantine and Masoora's shop? I have never worked for either Masoora or for Constantine.
404. Is it not a fact that you are half-time at Masoora's? No.
405. Were you not on Monday last serving behind the counter at Masoora's? A man was leaving Masoora's on that day, and I went up to bid him good-bye, and came away again in my slippers and with my coat off.
406. Where did you buy your tickets on that Monday? Bought no tickets on Monday last,—only went up to see them; used to buy them there before, but since the license was cancelled have not bought any more tickets.
407. *Mr. Brock.*] Where did you buy your tickets? Used to buy tickets from Masoora, paying him £1. Sometimes used to buy from the grocer at the corner of the street; when out to get tobacco used to call round.
408. *President.*] Why pay full price instead of going to the office and getting the discount? Never had time to run to the office; always paid full price (£1) for them.
409. Did you not get a pound's worth at Masoora's for 15s. or 17s. 6d.? I gave a sovereign.
410. You know something about these tickets sold by the conductors—give us the information? Never heard of such a thing.
411. Have you not had many conversations with Marcus about these frauds, or with Gaspardo? I do not know anything at all about it.
412. Did not Marcus find fault with you yesterday for coming into the shop when Moran was there? We know all about it, and you had better tell us, therefore. Do you not know that Marcus denied you to Moran yesterday, and that you just then dropped in? I was in the kitchen when Moran came, and he came in from the kitchen.

Marcus Alafousas called in and further examined:—

- M. Alafousas.
23 Aug., 1888.
413. *President.*] Do you know Wigg and Moran? I know them.
414. For whom did they ask when they came yesterday? For Vaselli first. I told them I had not seen him. It was 5 o'clock.
415. Did you not say that Vaselli had not been near the place all day? I never said so. I could not understand who was wanted. I recollect Moran describing him. I will swear I never said I did not know him. I said nothing to him when he came in.

Janopolis Vaselli called in and further examined:—

- J. Vaselli.
23 Aug., 1888.
416. *President.*] Do you know Gaspardo? I do.
417. Did not Gaspardo tell you all about these tickets being bought from the conductors? He never told me anything about it.
418. Did he not speak about Wigg and Moran? No.
419. Did he not say they were two detectives from the Tramway office? No.
420. Did he never speak to you at all about them? No.
421. Did he tell you he was afraid of his life? No.

Pietro Gaspardo called in and further examined:—

- P. Gaspardo.
23 Aug., 1888.
422. *President.*] What did you tell Vaselli last Monday in Marcus' shop? I do not recollect telling him anything.
423. Did you tell him that Moran and Wigg were detectives from the Tramway Department? I do not recollect.
424. You told him something about these little goings on? I do not recollect.
425. You did or you did not? I am not sure I did nor I did not. I told another man, not this one. This has come through Rochoaix. I told Moran I would come down and see him in a few minutes after I got dressed. I went in Wexford-street.

426. Did you not tell them that Marcus and his man, Vaselli, were watching them, and said that they were detectives? I do not know. P. Gaspardo.
427. Did you not tell them that you were afraid of your life as Marcus and others suspected you of giving information to the detectives, and that if your countrymen knew it you would not be able to stop in Sydney? I cannot say I said it or not. 23 Aug., 1888.
428. What did you tell Rochaix? I told Rochaix that it was a thing I could not prove and I cannot say anything.
429. Do not Vaselli and Marcus know all about these ticket frauds? Marcus knows all—Vaselli nothing.
430. *Mr. Thompson.*] You told us the other day, before you gave us the information fully, that you could give us all the information in three or four days. Can you give us more information now. Tell us what Marcus knows? I told you Marcus knew, because he was always talking about their business with Masoora and Constantine, and Constantine was often at his place.
431. When you were there and they were all talking together what did they talk about? They never talked about this affair in my presence.
432. *President.*] How long were you with Constantine? Five weeks I worked there. I was there more than seven months but not constantly. I slept there at night, but was never there during the day-time. When I had my own shop in Albion-street I was not there at all. I was dealing outside in the day-time after I gave up my shop, and was at Constantine's at night. These fraudulently obtained tickets were brought in in broad daylight—in paper bags, a portmanteau, conductor's bag. The tickets were thrown down under the table.
433. *Mr. Brock.*] What time of day used they to bring these tickets? It was during summer and winter at 3:30 p.m., and at 9:30 a.m. on Sunday. I have seen these times. They came three times.
434. What do you think they divided between them? Constantine, Masoora, and the conductor divided between them £2,880.
435. *Mr. Thompson.*] £20, £40, and £60 per week would make only £1,000 but you made it £2,880? I cannot swear that they come to more than £1,000. It is quite guess work.

Frederick Harris called in, sworn, and examined:—

436. *President.*] Your name, occupation, and residence? Frederick Harris, hotelkeeper, 77 Morehead-street, Redfern. F. Harris.
437. We have been informed, and I may as well tell you at once that our information is of an absolute character, that you some time ago accepted a number of tram-tickets in payment for a grog score. Our desire is not to punish you; in fact after this lapse of time you are not punishable by law, but we want the name of the conductor who paid his score with these tickets? I am not sufficiently acquainted with the tram conductors; I do not know any but Cates, who lives near me. 23 Aug., 1888.
438. The man lived nearly opposite your hotel at that time, three years ago? I do not know any one who lived there then.
439. *Mr. Thompson.*] You recollect receiving the second-hand tram-tickets in payment of your score? I never received any tram-tickets in payment for a grog score.
440. Second-hand tram-tickets? I never received second-hand tram-tickets; it is a lie; it was not done.
441. *President.*] The grog score was 25s., and the payment was 40s. It is really useless to deny it? It is a lie; I never allow more than 2s. to run a week, and I never take tram-tickets.
442. It is very difficult, I expect, sometimes to collect grog scores, and for this reason you were doubtless glad to get paid in any shape? I have now and again taken a tram-ticket in part payment for a drink, but these are the only tram-tickets I have received in my life, and even this I have done against my will; I have no use for tickets; I use the 'bus much oftener than the tram. Will you say who the person was who gave you this information?
443. *Mr. Thompson.*] No; we have exactly the same objection to doing that as we have to giving the conductor your name. How long have you been in your present house? Eleven years.
444. Where were you previously? In Waterloo. I have never allowed a man to run up 25s. for liquor.
445. *President.*] Did you not keep an hotel at the corner of Elizabeth and Belvoir streets, Redfern? No.
446. Do you recollect speaking to Mr. Roberts about a dog? I did not keep that public-house when I spoke to him about the dog.
447. *Mr. Brock.*] Give us the name of the man who gave you the tickets? I never got them.

Thomas Mulligan called in, sworn, and examined:—

448. *President.*] What is your name? Thomas Mulligan. T.
449. How are you employed? I am working for myself. Mulligan.
450. We are given to understand that you know something about these tram frauds? I have heard about them, but I can give you no information. I have told no one that I could give information. 23 Aug., 1888.
451. *Mr. Thompson.*] Who asked you to give information? Mr. Roberts asked me. I have never mentioned to Conductor Laney that I could give information.
452. Do you know Musgrave? No.
453. *President.*] Do you know Marcus? Yes. I have worked for Marcus,—serving in the shop, opening oysters, running messages, or doing anything that was wanted. I left about twelve weeks ago. He got his tickets from Hardy's, the grocer. I do not know why he got them there. I went to get them sometimes. I have never got any at Constantine Pappodocci's. I have never got any tickets from the post office. I always paid full value for the tickets, and got no commission. He simply got them because customers asked for them. I have never heard the Greeks or Italians talking about the frauds. I never saw anything there to lead me to suppose that anything improper was being carried on. I never saw anybody there selling tram-tickets. I left there on some holiday, about thirteen weeks ago. It was about Queen's Birthday. I was there about the early part of April. I never saw any tickets sold there by anybody. I do not know any of the Greek fellows. I never met or associated with the Greeks. I know no language except my own. Marcus kept a lodging house. People paid for beds and went away in the morning. I used to sleep in the shop. I know a lot of the conductors. I have heard several of them talking about it, saying that there was nothing in it. They said, "I have heard so-and-so
- was

Mulligan.
23 Aug., 1888.

was making £10, £9, or £8 per week. These were different conductors whose names I am not acquainted with; I know them by sight on account of my travelling on the trams to solicit orders for wood and coal. I cannot identify any of them. I have never taken any interest in the matter, and I have never noticed any of the conductors humbugging their registers.

454. *Mr. Brock.*] Do you not know anything more about it than you have told us? No.

455. Do you know any conductors who are selling tickets? No.

456. Can you not identify some of those whom you have heard speaking about the frauds? No.

457. *President.*] You have frequently seen conductors at Marcus' shop? I have seen conductors having refreshments in the place and then going away afterwards. I have never seen Musgrave. I know Ferrier; have seen him once. I know Fraser and Greeley; I have seen them on the trams. I have never seen Gaspardo with Ferrier. I saw one man, but I do not know his name; he is a tall, dark man, shaved, about 36 years of age, but I cannot say what line he travels on. I go a good deal on the Waverley line. Ferrier was not on the trams when I saw him in the shop. This was about fourteen days before the 24th May.

Marcus Alafousas called in and further examined:—

M.
Alafousas.
23 Aug., 1888.

458. *President.*] Do you know Pietro Gaspardo? Yes, I know him well; about 11 years.

459. Have you had any conversation with him on the subject of these tickets? None.

460. *Mr. Brock.*] We are told that you spoke a good many times to him about the frauds? Never had any conversation with him nor with Constantine about them.

461. Do you know Constantine? I knew Constantine well but had not been in his shop for some time before he went away.

462. Have you had any conversations with Masoorra about this matter? No.

463. *Mr. Thompson.*] What was your license stopped for? I have my license yet and I do not know that it is stopped.

464. *Mr. Brock.*] Is your name Nicholas Williams? No. My name is Marcus Alafousas. I have no license now. I went by the name of Nicholas Williams, because that was the name on the shop.

465. How long is it since the license was cancelled? About three weeks.

466. Do you know why the license was cancelled? No. I got a paper and I cannot read English. A gentleman who was there said it was to stop the license and I could sell no more tickets.

467. *President.*] It was cancelled because you were selling these improper tickets? You used to buy these tickets from Constantine and Masoorra and you sold a lot of loose tickets? No. I do not remember selling a lot of loose tickets to Moran. I cannot say if he tore the sections or not.

468. Did not conductors come in to your place late at night for coffee and oysters? They might do so but I do not remember them.

469. *President.*] You have made up your mind to tell nothing; now we know exactly what information you can give? I know nothing more.

470. *Mr. Brock.*] We know you have committed perjury, and you may be sent to gaol? I do not.

471. *Mr. Thompson.*] There are no less than two witnesses who deny what he says, and say that he knows all about this matter—and if he does not tell the truth he may be sent to gaol? I know nothing about it.

472. You were very often at Constantine's shop? I only went about once a week.

473. Why did you buy tickets at Constantine's instead of going to the office? Because I sold so few, and lately only about £1 worth a week. Since the other Italian shop in Elizabeth-street and the barber shop came in opposition, I have sold very few.

474. *Mr. Brock.*] How long ago is it since you bought tickets from the Post Office? About eighteen months. I have bought all my other tickets from the shops; the grocer's at the corner, and other shops. I have not sold tickets this last three weeks.

475. *Mr. Thompson.*] We are going to examine all the conductors and guards, and if we find from them that you do know anything and have had anything to do with these frauds, you will surely be prosecuted for perjury? I cannot help it.

FRIDAY, 24 AUGUST, 1888.

Present:—

A. RICHARDSON, Esq., PRESIDENT.

R. W. THOMPSON, Esq., M.P.,

F. A. BROCK, Esq., J.P.

Ah Lum called in, sworn, and examined through interpreter:—

Ah Lum.
24 Aug., 1888.

476. *President.*] Have you been naturalized? Yes.

477. Are you able to understand the nature of the oath you have taken? Yes.

478. What is your occupation? I am a storekeeper.

479. How long have you been in the Colony? It is over twenty years since I first came here, but I have been backwards and forwards.

480. Yet you are unable to speak English? I can speak a few words.

481. Only a few words—yet you have been here twenty years? I understand a little of business language that is all.

482. We have sent for you because we understand that you can give us some information as to tickets having been sold by a tram conductor either to yourself or to others of whom you may know? I do not know of any tickets having been sold to any other Chinaman, but I met a man in the street and bought some off him once.

483. How long ago? About two months ago.

484. Where did you meet this man? In Bathurst-street, near the Park.

485. Will you tell us exactly what took place on the occasion to which you refer? I had come in from Waterloo in the tram, and I got out at Park-street. A man walked up to me and said, "Do you want any tram tickets?"

486. Had the man who spoke to you come in with you in the car from Waterloo? No.

487.

487. Then we are to understand that you saw nothing of this man until you got off the tram at Bathurst-street? Yes.

488. Without any previous conversation or previous knowledge he came up to you and asked you to buy tram-tickets;—is that so? I was not previously acquainted with the man, but no doubt he had often seen me riding in the tram.

489. Why is it likely that he would have seen you so often riding in the tram? Because I have come in and out from Waterloo in the tram very often.

490. Did you know the man who spoke to you to be a conductor of a Waterloo tram? I know that he was on the Waterloo line.

491. You say he asked you to buy some tram-tickets;—did he show you how many; did he ask you how many you wished to buy, or what did he do? He showed me some tram-tickets. I asked him how many there were, and he said 200.

492. Well, what did he want for them? He asked me 18s., and I said that I would not give him more than 12s. I then walked away, but the man came after me and said that he would take the 12s., as he wanted money particularly.

493. Did you conduct the transaction in the street or did you go inside anywhere? We stood by the side of the street.

494. How much money did you hand him? 12s.

495. For the 200 tickets? I do not know exactly how many there were. The man said there were 200, and I took his word for it. I do not think he counted them; I think he guessed the number.

496. Did you not count them afterwards? No; I used them from time to time as I wanted them.

497. Were the tickets single. Were there two together, or how were they? They were in fours at the most, but many were in ones and twos.

498. Do you really mean to tell us that this was the beginning and end of your transactions of this character? I have bought no tickets since then. I have been up the country a good deal.

499. When you got on to this conductor's tram again, did you not have some conversation with him on the subject? No.

500. Did you not even say good morning or good evening to him when you saw him again on the tram? Sometimes; but I may not always have been upon his tram.

501. Did you not remember the man at all. As a matter of fact what did happen when you got on to his tram again? When I got on to his tram I could see of course that he was a conductor.

502. Will you swear that you did not know that before? I did not. He was wearing plain clothes when I bought the tickets from him.

503. What do you imagine led this man to offer you tram-tickets for sale? I suppose he had often seen me riding on the trams.

504. Do you know whether this conductor is still upon the Waterloo run? I have not seen him during the past few days.

505. When did you last see him? A few days ago.

506. Would you have any difficulty in pointing him out to us? It was between 9 and 10 o'clock at night when I bought the tickets, and it is quite possible that I might make a mistake.

507. But was it night time when you saw him a few days ago? A few days ago when I saw him I said to myself, "That is the man who sold me the tickets."

508. Had you not seen this man frequently before you bought the tickets from him? After I had bought the tickets when I first saw the man I imagined that he was the same.

509. You saw him afterwards several times, and the last time a few days ago? He has looked to me to be the same man, but I have never spoken to him.

510. Will you describe him? He is not very stout.

511. What is the color of his hair. Is it brown or black? I could not say what color his hair is.

512. Yet you say that you have often seen him on the tram? Yes; but he has always worn his hat.

513. What was the colour of his beard. Had he a beard? He had no beard. I think he had a moustache, but I forget whether he had any hair on the chin or not.

514. But you say you often saw the man before you bought the tickets. Surely you must have noticed these things? I do not remember the man well before I bought the tickets. I did not remember that it was the same man until I saw him again on the tram. Then I noticed that he looked like the man who had sold me the tickets.

515. I must remind you that you have taken an oath to tell the truth, the whole truth, and nothing but the truth. Now do you not know perfectly well that it was the same man? I have not seen the man during the last few days, but a few days ago I saw a man on the tram whom I thought very like the man of whom I had bought the tickets.

516. That is not answering my question. We expect you to tell us the truth. Do you not know perfectly well that the man you saw on the tram was the man who had sold you the tickets? If I saw the man again I might be able to point him out.

517. Now please describe to us the man you saw a few days ago. Was he tall or short, stout or thin. What was the colour of his beard, and so forth? The man was pretty tall and thin. He had a thin face. I believe he had no hair on the chin, but I am not certain.

518. About what age was he? I should think between 30 and 40.

519. Is he a red-faced man or a pale man? I did not take particular notice.

520. Do you know Gouldtown? Yes.

521. Is he a red-faced man or a pale man? I did not notice.

522. Do you know a man whom Gouldtown summoned? Yes; I might know him.

523. You have not been speaking to him? No.

524. Would you know him if you saw him now? I think I might.

525. Do you know a conductor named Paddy? No; I do not know the name.

526. Do you know Ah Ping? There are a number of Ah Pings. I do not know which one you mean.

527. I mean the one at Pitt Place? There are two Ah Pings at Pitt Place; one a tobacco agent, and the other a storekeeper.

528. With whom do you live at Pitt Place? I sleep at Ah Ping's, the tobacco agent's, and board with Ah Ping, the storekeeper.

529. Are you in the habit of selling tram-tickets to your own countrymen? No; I used all the tickets I bought for myself, and I have bought many sixpence and shilling's worth besides.

- Ah Lum. 530. Have you not been in the habit of buying tickets from three conductors at the rate of 30s. worth for £1? No.
- Aug., 1888. 531. Have you made any overtures to three tram conductors to sell you tickets? No.
532. We are in possession of evidence to the effect that you did do so? Then it is not true.
533. We have also heard that you wanted these tickets in order that you might sell them at fan-tan houses? I used all the tickets I bought for myself.
534. Do you mean to swear that you have bought no tickets at the rate of £1 for 30s. worth? Yes, I do.
535. Is it not rather strange that having made one purchase of tram-tickets in this way you should not have been on the look out for any more? I am often travelling to and from the country on business, and I have not required the tickets.
536. But you said just now that you used a large number of tickets, and that you were constantly buying 6d. and 1s. worth? Yes, that is true; I have bought many tickets from the fruit-shop down below here.
537. When you had found such a convenient market is it not rather strange that you should not make use of it again? I did not want particularly to buy tickets, but they were offered to me cheap and I bought them.
538. The object of this inquiry is not to reach you in any way; it is to bring to light persons who have been robbing the Government? I cannot say that I have bought more tickets than I have bought. I cannot speak of things I know nothing about.
539. Is it true that you are a gambler? I have a store at Mundala, and if you do not believe me you can go to people in Sydney with whom I deal. I can refer you to Sullivan and Norton Bros.
540. Did you ever sell any tickets to Lee Kee? No.
541. What name did you give to Moran at the police court? I understood that he wanted my address and I told him to inquire at Ah Ping's.
542. We want you to identify the man who sold you the tickets? Then it had better be within the next fortnight, because I shall be returning to my business in the country at the end of that time.
543. The Commission are not altogether satisfied with your denial that you speak English. We have every reason to believe that you can speak English very well indeed? I can speak a little.
544. You understand it perfectly well? I understand some of the questions I have been asked to-day but not all.

Driver John Graham called in, sworn, and examined:—

- Driver J. Graham. 545. *President.*] You are not surprised, I presume, that the Commission should have sent for you having in view the evidence which you have already given before the Department? No.
- 24 Aug., 1888. 546. You have already given evidence which goes a long way to convict certain of the employees of malpractices? Yes.
547. By what we have heard from other sources as well as from your own evidence we are of opinion that there is a great deal more that you could tell us. Now I have to request that you will give us the fullest information; that you reserve nothing. If you do so your own chances and your own case will be all the better. As your evidence now stands there can be no doubt whatever that you did not at once and immediately give information to the officers of your department that you knew that frauds were actually going on; that is to say, you knew of frauds going on for a considerable time before you gave any notice of them; and it is not clear that at last you informed the Government detective from the very purest and best of motives. We have an idea that you gave the information to a certain extent, because you thought that if you did not everything would be found out, and that you yourself would be found to be in complicity with others; however that may be, your wisest and best course with us, is to give us all the information you possibly can? I shall be glad to do so.
548. I may also say that if in your information you disclose facts which connect you with the frauds or render you liable for complicity in them, the Commission have power to say that no criminal prosecution will be made against you. We do not say that your position is such, but we think it well to let you know how you stand. We advise you to give us the fullest information in your power. It will be better for you I think to give us the story in your own words, with, if possible, more explicit information than you gave before the departmental inquiry; will you for instance give us the dates? That is what I cannot do; I did not take any particular notice of the dates.
549. Will you tell us what you know? When I first became aware of what was going on I was on the Waverley run.
550. How long ago was that? It might be seven or eight months; I could not say within a short time.
551. What did you then discover or see? Conductor Musgrave came on to my engine and asked me for a piece of wire; I gave it to him, and he put it in the bell-pull. I asked him what it was for; he had put it in a little hole between the pull and the register itself.
552. What is the hole there for? I do not know. It is a little oblong hole, and it is connected with something inside. I think I asked him what the wire was for. He did not altogether tell me then. In a subsequent conversation he told me that it stopped the bell from ringing or registering.
553. How long afterwards was it that he told you? On the same day. He illustrated it to me. He collected a car-full of tickets just to show me how it was done. He put the wire in in my presence and the pull only registered one. When he had collected the car-full of tickets he came up to the engine just to show me that the register had not moved although he had collected all the fares.
554. Did he show you the tickets he had collected? No; but I know that he had them in a separate part of his bag.
555. Did he tell you what he was going to do with them? He told me that they were as good as 16s. for a pound's worth to him.
556. He came to you for this bit of wire because he had not the pin which he had been using? Yes, I suppose so.
557. Not having his piece of wire with him he could not go on with his trade and he wanted you to give him a piece to serve his purpose? Yes.
558. Did he say how long he had been up to this business? He did not tell me then, but afterwards he told me that he commenced to do it after he had been on the tramways a fortnight.
559. Did he say what he had made by it up to that time altogether? He never told me what he had made. At one time he was dismissed with some other hands for a short period, and he told me that during that time his being off was as good as £400 or £500 out of his pocket.
560. When did he tell you that? When he was on again.

Driver
J. Graham.
24 Aug, 1888.

561. Did he tell you of any others in the same thing with him? He never actually told me of others; but I was led to believe from his talk that there were some more in it.
562. Did you never ask him? I did not ask him, but I felt pretty certain that Fraser was in it. I suspected Fraser myself and Musgrave did not say "yes" or "no."
563. You named Fraser to him then? Yes; but he did not give me any answer; he merely smiled.
564. But you were satisfied that your conclusion was correct? Yes.
565. Did you catch Fraser at it? No.
566. Did Musgrave name any other men to you or did you name any others to him? I mentioned none, but Ferrier was named by him.
567. Did he name any one else? Not that I can remember. I think I can say no to that. But he often asked me if I knew of any one else who was doing it.
568. Where are you running now? On the Waverley line.
569. Did Musgrave name O'Donnell to you? No.
570. Do you know him? Yes.
571. What line is he on? He is a spare conductor.
572. Have you ever observed anything of this kind when you have been running with O'Donnell? No.
573. Have you ever had any conversation with O'Donnell on the subject? Only since the frauds have been made public. Hearing that I knew something about them he asked me what I really knew of the matter.
574. Thinking that something might come out about himself, I suppose? That did not occur to me then.
575. Well, what did he tell you? He was talking about the registers. He said that there was a little spring inside and that wanted bending about the 32nd part of an inch, and that if a pin were then put in the hole the machine would ring without registering.
576. You are not referring now to O'Donnell are you? No; I am referring to Musgrave.
577. And can you swear that Musgrave did not mention O'Donnell to you? Yes; I think I can.
578. You knew that this thing had been going on for some months before you mentioned it to one of the detectives? I do not think it was many months.
579. How long do you suppose? Perhaps a month or six weeks; I am not positive.
580. Musgrave gave you his full confidence? Yes.
581. What do you think made him do so? That is what I could not say.
582. Did he make you any offer? No.
583. He did not offer to share any of the takings with you? No.
584. You were never a conductor? No.
585. What do you think caused Musgrave, a conductor, to come to you, a driver, and give you his confidence? I being a young fellow, I suppose, and we being always chums together in the Department.
586. Have you met him outside in the evening? Only on one occasion.
587. You know it could not have been the fact of Musgrave wanting a piece of wire which led him to speak to you, because he could have done this thing as he had done it before, with a pin? I suppose he thought that I would not say anything about the matter.
588. Why? I could not say.
589. Merely because you were friends, you think? I suppose so.
590. You will swear that he never made you any proposal or offer—that he did not, for instance, say to you: "Now, Jack, of course you won't split on this thing"? Not in that way. He may have said: "Mind you never open your mouth about this."
591. He did not go on to say, "You keep this secret, and it will be all the better for you"? He never made any such proposition.
592. You think that this confidence had been going on for about six weeks before you made any disclosures? Something like that.
593. Something then led you to make a disclosure to one of the detectives? Yes.
594. What led you to do it? I had been talking over the affair in spare time.
595. With whom? With other drivers and firemen.
596. Then you broke your confidence almost at once? Well, I did not disclose any names. I was talking to driver Hadwell and his mate one night in the yard. We were talking about one thing and another, and it then came up about the trams not paying. I then said that I knew what was carried on—that I knew all about it.
597. What did Hadwell say? He said that if he knew he would give information.
598. But he did know then? Yes.
599. What did he advise? He advised me to tell someone—to put someone on the track.
600. But you did not do so then? Not at once.
601. You cogitated over the matter for some time longer? Yes.
602. We should like to know what made you decide to take this action after thinking the matter over—had you any quarrel with Musgrave? No.
603. Did you mention the matter to anyone else? I told conductor Keen.
604. What did he say when you told him? He did not believe me.
605. Had you any conversation with other drivers on the subject? Yes, I remember speaking to driver Bennett and to driver Frost.
606. When? About the same time—that is, within a few days.
607. After six weeks or two or three months, as the case may be, you suddenly made up your mind to disclose the matter? Yes.
608. You spoke, I believe, to Mr. Moran? Yes.
609. *Mr. Thompson.*] But something must have pressed upon your mind at that particular time inducing you to break your confidence? I had been talking to some of the men in the department about the trams being placed in the hands of a company because they were not paying. I had often heard Musgrave remark, in conversation with others, "No wonder they don't pay," and I thought I ought to tell.
610. *President.*] When you heard Musgrave make this remark, as you say in conversation with others, did they not prick up their ears and want to know what he meant? They did not seem to take particular notice of it.
611. They did not ask Musgrave why the trams did not pay? No.
612. During these six weeks when you were keeping this matter not altogether to yourself but from official report how often did Musgrave see you and converse with you? Only occasionally.

- Driver
J. Graham.
24 Aug., 1888.
613. He was your conductor? At times. I was then a special driver.
614. How often did he come to you and say, "Now, whatever you do, Jack, don't be pitching?" Not once.
615. Did he himself never appear anxious to know if you were keeping the thing to yourself? No. At different times he told me more in connection with the matter—how they were doing it, and how long they had been doing it, and so forth.
616. Did he tell you in these conversations how much he was making on particular days or how much a week? No; but I remember that he once held up the wire and said that it was as good as a tanner a week to him.
617. This was while you were keeping his confidence? While he thought I was.
618. You have not said how it was that you came to make this statement to Moran? Through talking to so many others about it I knew how the frauds were carried on, and they all advised me to say something about it. My fireman, Reid, and myself were always talking about it. I did not like to take it to the Department myself. I thought to myself, "I will do it quietly. I will put the detectives on the track and let them discover it for themselves, so that I should not be brought into the affair."
619. Why did you not want to be brought into the affair? Because Musgrave had told me about it.
620. Did he tell you about it in this ready manner without making you promise or swear that you would never divulge it? Not then. He has since said to me, "Never, for God's sake, tell anyone." He may often have said that since, and I have said in reply, I dare say, "Oh, that's all right," or "I have nothing to do with it," passing it off in that way.
621. Did it never occur to you that in answering him in that way you were placing yourself in complicity with Musgrave? No.
622. Suppose that a man came up to you and confessed that he had committed a murder or had robbed a bank, what would you do? I should tell somebody about it.
623. If you did not would you not consider that you were liable to be taken up as an accessory? I do not think so. Why should I, because a man told me that he had committed a crime?
624. Perhaps you would not be an accessory in the eye of the law, but in this instance you actually gave Musgrave an instrument, with the aid of which you knew that he was about to commit a fraud? Yes.
625. Knowing that you had done that you did not hesitate an hour or a day, you hesitated weeks, and I think I shall be able to show months, before you considered it necessary to disclose the fact to the authorities? Yes.
626. And you saw Musgrave robbing the Department again and again? I cannot say that.
627. But you knew that he was doing it? Yes.
628. Now, as a matter of fact, did not Moran himself bring up this subject of the frauds in conversation with you, and was it not that which led to you making the disclosures you did? I do not think so. I think I told Moran that there was something crooked going on in the Department, or words to that effect.
629. Did not Moran come to you and say, "Graham, some crooked things are going on in this Department, and I believe you know something about them"? I do not remember.
630. Will you swear that he did not say that? I will not swear it.
631. But you do not think it was so? I do not think so. The conversation to which I am referring occurred in a car when I was on my way out to Waterloo. Moran was going the same way.
632. You perhaps remember that he commenced to talk to you about crooked dealings and frauds in the Department, and did he not afterwards say to you, "Graham, I believe you know something about it"? I do not recollect his saying so.
633. You told Moran, either on his suggestion or on your own suggestion, what you have told us—what happened further, do you remember? Nothing more than that. I knew that the thing was going on just the same as it had been before, that was all.
634. You knew that the frauds were continued? Yes.
635. For how long were they continued to your knowledge? Until the whole thing came out.
636. Seven months ago you were asked for this wire to enable these men to rob the Government? Musgrave did not say that the wire was to enable him to rob the Government.
637. But you knew that he did rob the Government? I found it out afterwards. He showed me what he did with the wire afterwards.
638. About six months afterwards you told Moran? About that.
639. How long after that did these frauds go on to your knowledge? Until it came out.
640. How long ago is that? About a month ago.
641. This was going on about four months after you told Moran about it;—you knew that it was going on? Yes.
642. During that time were you not seized with the feeling that although you had given information, and nothing had come of it, you might have done something more in the matter; did you give any names to Moran? I thought that when I had mentioned the matter to Moran that was all that was necessary.
643. Although you had not given any names? I gave the names afterwards. I first suggested a plan to Moran by which he might find out what he wanted.
644. How long afterwards was it that you told Moran the names? I do not quite remember.
645. Did he ask you for the names in the first instance? I do not think he did.
646. Can't you give us some idea of how long afterwards it was when you gave him names? It might have been a few days or a week afterwards.
647. You still saw this business going on? I did not know that it was going on.
648. But you saw the pins in the registers; you must have known that it was going on? Yes.
649. You saw this repeatedly going on, yet it never occurred to you to press the matter further and see what could be done so that this continual robbery might be stopped? I thought that when I had told Moran that that was all that was necessary.
650. But you saw the robbery still going on, so that it could not have been all that was necessary; you saw the pin used; you saw the different compartments in the bags; you knew that Musgrave was making so much money out of the Government every day of his life, and yet you took no further steps? I thought I had done all that was necessary. At first I suggested to Moran that if he tried some of the bells he would find that they were defective, but he said that the bells would be tried in the office.
651. You being so much in Musgrave's confidence, when did he first know that you had broken that confidence and had split on him? He did not know until my name was published in the papers.

Driver
J. Graham.

24 Aug., 1888.

652. Till you had given your evidence before the Department? No.
653. Do you ever see him now? No.
654. Have you seen him since giving your evidence? No.
655. He never challenged you with meanness or anything of that kind? No one knows what I have said beyond what has been seen in the papers. But one morning, just after the thing came out about Ferrier and Greeley, he came to me on the engine and said, "Ferrier has been making a mess of it."
656. That was before he was dismissed? Yes; he was not dismissed until I had given my evidence.
657. What interval was there between Ferrier's dismissal and Musgrave's dismissal? Musgrave was dismissed about a fortnight afterwards. I think I had not given my evidence.
658. Did he tell you that he had told Mr. Roberts something about the matter? He said he had gone to him about two months ago and had told him that the bells could be rigged. He knew before it was publicly known in the Department—I suppose from someone in the office—that Ferrier had been caught, and, before the matter came to him, he wanted to tell Mr. Roberts. Musgrave must have got the information out of the office—I think he got it from Colls—that is, that Ferrier had got into trouble.
659. And to make himself right, as he imagined, he told a cock-and-bull-story to Mr. Roberts? I have heard him say that he could not get caught, because if anything went wrong he could always get a wink from the office.
660. You have told us of your last interview with Musgrave; he has not been near you since? No; but I have heard that he has been inquiring for me. Since I gave my evidence before the Department I have been away on my holidays.
661. I want to know now from you have you seen Fraser since he left? Several times.
662. What have you conversed about in connection with this business—what have you said together? We have had various conversations about it.
663. Briefly, what has been the purport of those conversations? I never told him that I had told anything about him. He knew that I knew something of the affair, but he did not know that I knew he was implicated in it, and I did not tell him.
664. You are sure he did not guess that you knew? I am almost sure he did not.
665. Did he not ask you to be most careful about what you said of him? No.
666. Will you swear that? I will swear it.
667. Has he sought these interviews with you or have you sought him out? They have been accidental meetings.
668. Where have you met? At the Botany handicap, and at the Crown-street points in Oxford-street on one occasion. Last Saturday night he came to me and asked me a question.
669. What question? He asked me if I had told Moran that I went to a shop with him when he was going to sell some tickets.
670. That was not an accidental meeting? No; he came to me on the engine.
671. What line was Fraser on? He was a spare conductor.
672. He often ran with you? Occasionally.
673. When did he commence this game? That I cannot say. Musgrave told me that he had given him £50, or one half of the first £100 worth of tickets, to know how it was done. Musgrave put Fraser's register so that it would cheat, but he did not give him the cue. He did not give him the secret because if he had done so Fraser would have been able to use it as often as he wanted. Of course Fraser could always have done it with the same bell once the bell had been rigged—that is, if it were not altered at the office.
674. But there was always the risk that the repairer would get the bell into his hands, and would put the spring right? Fraser would then be unable to manipulate the bell until he had been to Musgrave again, so that at last there was an agreement that Fraser was to be put in possession of the same information as Musgrave possessed? Yes.
675. And for this information this payment of £50 worth of tickets was to be made. Is that how the matter stood? Yes; I think so.
676. How long is it since Musgrave rigged Fraser's bell for him? That I could not say.
677. How long is it since Musgrave told you that he had done so? He did not tell me when he did it; but sometime afterwards he told me that Fraser was doing it.
678. You want us to believe that being in the habit of selling this secret for £50 he imparted it to you for nothing? I suppose he did not think that I was sufficiently interested to take any notice. He told me afterwards that he had been to Mr. Roberts' office and had told him; but that Roberts would not believe him.
679. When you yourself told Moran about it did he refuse to believe you? No, I do not think he did.
680. Do you know what steps he took? I do not.
681. You had subsequent conversations with him had you not? Yes. When I told him the names of those whom I knew were implicated, I said that at any time he liked I could point out Musgrave to him with his pocket full of tickets.
682. You told Moran other names than those you have yet mentioned to us; we should like to have those as well? I cannot remember any more at this moment.
683. We have the names of Musgrave, Fraser, and Ferrier. You told Moran of others you suspected;—will you give us the names of those other persons? I could not rest my suspicion on any one in particular.
684. Did you not tell Moran that you suspected certain persons? I do not remember it.
685. Do you often meet Fraser at night? No.
686. Do you know what Fraser frequently does at night? No.
687. Are you not aware that Fraser visits gambling rooms? Yes; I believe he does occasionally.
688. Have you never met him in such places yourself? Never.
689. You are sure of that? Positive.
690. *Mr. Brock.*] Do you know, as a matter of fact, that Fraser has lost large sums of money in gambling rooms? I have heard so.
691. You yourself bet pretty heavily at the Botany handicaps—do you not? No.
692. You are there continually? Yes; but I generally go there with the engine.
693. *President.*] Did you express sorrow to any one with regard to Fraser having heard that he would be implicated? No.
694. Did you not say that you were sorry for Fraser, because he had been dragged into it by Musgrave? I do not remember saying anything of the sort.

- Driver
J. Graham.
24 Aug., 1888.
695. You know pretty well what Musgrave did make out of it? I do not know altogether; I could not say.
696. Did you not say that you thought Fraser had made as much money out of it as Musgrave? I do not remember saying so.
697. How long was it from the time Musgrave was paid off at the reduction of hands until the time he was taken on again? I could not say.
698. Have you any idea of the time? It was some months.
699. You knew that he could make £500 in that period? I did not know that, but he said that his being off during that period was as good as the loss of £500 to him.
700. How long was he altogether at the work? He told me from a fortnight after he joined the Department.
701. Estimating then that he could have made £500 during the period of his dismissal, we can form some idea of the sum he made? He told me at one time that he was thinking of purchasing a public-house at the corner of Regent-street and Parramatta-street, and that there was only £100 or so difference between his offer and the sum wanted.
702. Did he make a cash offer? I think so.
703. Do you know what the price asked was? I could not say. He told me he thought of taking a public-house. This was before he left the Department.
704. Was he not interested in some shop in Newtown? He said so.
705. What shop—do you know? I could not say.
706. Did you never find out? No.
707. In fact you took very little interest in the matter, either as regarded yourself or the Department? I did not think I could be brought into the matter.
708. You knew that the Government were being systematically robbed? Yes.
709. And yet you did not think it any concern of yours? Of course I knew that it was my concern as well as anybody else's concern.
710. You seemed to think that the Government might lose the trams and that you might be thrown out of employment—that was all you cared about the matter? Seeing that the trams were not paying, and thinking of the advice of others, I thought I would tell all that I knew.
711. Did Musgrave ever tell you that a man named Scott had shown him how to rig the bells? No.
712. Did you know Scott? I knew that he was one of the Waverley conductors.
713. Did you not tell Moran that you suspected he was in it as much as any of the others? I do not remember it.
714. You must know what you thought about it. Had you not a good idea that Scott was in the thing—that he was one of those who had been defrauding the Government? No.
715. You had no reason of any kind for thinking so? No.
716. You know a man named Yelland? Yes; I have been told since that he has made a good bit out of it.
717. Who told you? Greeley.
718. How did Greeley know? He said he had seen him off by the boat when he went down to Fiji.
719. Do you know anything of Greeley's connection with this matter? No.
720. Have you any idea that he is connected? I believe that he is not—that is, any further than has been described.
721. Do you remember when the tram-tickets were found in his pocket? Yes.
722. Were you the driver he spoke to? No.
723. But you remember the circumstance? Yes.
724. What was the general opinion—that some one else had put the tickets into his pocket, or that he had put them there himself? I think the general opinion was that he had put them there himself.
725. Do you know of any drivers who saw tickets in his hand? I think one was Jack Frost.
726. Have you now given us all the names you can call to mind? Yes.
727. You are sure you know nothing in regard to Scott? Yes.
728. Have you never been told by anyone that Scott was in the thick of it? Yes; I believe I have.
729. Refresh your memory and see if you can tell us who told you? I was talking in the yard to a shunter (John Saunders), and he mentioned Scott's name. He had heard that he was one of those who were in it.
730. On what line was Scott running then? On the Waverley line.
731. That is your particular line? It was only last month that I went to Waverley permanently.
732. I understood that you were driving upon the Waverley line when the disclosure was made to you by Musgrave? Yes.
733. That is seven months ago? Yes.
734. When was Scott on that line? I do not know, exactly. Saunders mentioned his name to me when the thing first came out.
735. Is that the first time you heard Scott's name mentioned in connection with these frauds? I think it was.
736. Did Musgrave not mention his name to you? No; I am sure of that.
737. Were they friendly? Yes.
738. Were they on the same trams? Well, Musgrave would be working with Scott as an assistant conductor.
739. Could he commit these frauds without Scott knowing it? Yes; I think so.
740. But you could see him doing it from the engine? Yes; but then I knew that he was doing it. How should Scott know?
741. How could you tell, at that distance, that he had the pin in? I could see his bell. He was on the car next to the engine.
742. But at that distance could you see whether the pin was in? Very easily.
743. Yet you say that there was no chance of his fellow-conductor seeing it? Well, he told me one day that he handed his bell to Murray, in the office, with the wire in it, and that the man did not find it out. He found out, afterwards that he had forgotten to take out the wire, and he was telling me how he felt. He said he felt as-if he was going to faint, and that he was in such a state that when Murray asked him on what line he was running he could not answer him,

744. Is it not strange that Musgrave should have been so very confiding with you, and that he should not have confided in Scott, who was on the same line, if he did not think there was any danger in taking a man into his confidence, is it not strange that he did not go to Scott and say, "We will make a nice little haul together?" He was only occasionally with Scott, not regularly.

Driver.
J. Graham.
24 Aug., 1888.

745. Are you sure that you have not heard anything about Scott frequenting gambling-rooms? Not to my knowledge.

746. Do you know a conductor named MacMahon? Yes.

747. Have you heard anything of him in connection with this matter? No.

748. What does he do apart from being a conductor—does he not keep a shop? I do not know him out of the Department.

749. As far as you know, his name has not been mentioned in connection with these frauds? As far as I know.

750. You have not heard it said that he was a receiver of these tickets at his shop? No; I do not know him out of the department.

751. You sometimes go to oyster-shops, do you not? Very seldom.

752. Do you know an oyster-shop at the corner of Elizabeth and Liverpool streets, kept by a man named Masoura? Yes; I have noticed the name.

753. Have you ever been in there? Yes.

754. What have you seen there; have you ever seen anything suspicious going on? No; I have only been in for a plate of oysters after the theatre.

755. Have you not noticed the selling of tickets there? No.

756. Have you ever seen Fraser there? No.

757. Or Musgrave? No.

758. Or any other conductor? No.

759. That you are certain of? Yes.

760. How often have you been in there? Only about three times. On two occasions I was with another driver named Branch.

761. Did you not know that this man was buying their tram-tickets? No.

762. You had not heard that up to the present time? No.

763. Do you mean to say that Musgrave never told you how he was getting rid of the tickets? I asked him, and he evaded the question by saying that he had an interest in a shop at Newtown.

764. And you never found out where that shop was? No.

765. Did he say that he sent tickets out to the shop at Newtown to be sold? No; he did not take me altogether into his confidence. He told me a little, and then I asked him questions.

766. You know that you have not the slightest interest in keeping anything back; you must see that it is to your interest to make the cleanest possible breast of it? I will tell you anything that I absolutely know.

767. Do you know absolutely nothing as to where these tickets were taken, to after they had been dishonestly obtained by the conductors? I do not know where they went to.

768. Have you never heard? I have heard that they are sold at the rate of 16s. for a pound's worth, and that is all I know.

769. Have you never had the curiosity to ascertain? Yes; I have asked Musgrave questions, but he has evaded them.

770. Does not Fraser now know that you knew of his connection with the business? He might know from some one else, but I have never told him that I knew anything about it.

771. You are sure that you have told us the nature of your conversation with him the other night? He asked me if I had told Musgrave that I had gone to a shop at the Glebe with him, and that he had offered to sell tickets there in my presence.

772. What shop was that? He did not mention the shop. I said, "No, I did not tell Musgrave anything of the sort."

773. You were never in a shop with Fraser at the Glebe where he offered to sell tickets? No; I have met him accidentally—that is all. We may have had a drink together.

774. Do you know a conductor named Connors? Yes.

775. What do you know of him in connection with this matter? Nothing at all.

776. Have you ever had a talk with Branch on this subject? Yes.

777. What happened between you and him? I told him, as I had told the others, that I knew what was going on, and that I knew who was carrying it on.

778. Do you think that any of the drivers are pecuniarily interested in this thing? None that I know of; those I have told of it would not credit it.

779. You do not seem to have taken much pains to impress it upon them? I told them exactly how it happened, and explained to them the way in which it was done.

780. You say that what principally led you to make the disclosure was that the trams were not paying, and that the Government were about to hand them over to a company? No; that was not the principal reason.

781. Your fireman put it to you in that way, did he not? Yes; he said that we ought to put them away; that we had a good position here; and that they were only robbing the public.

782. He urged you to tell them? Yes.

783. Have you given us a complete list of those to whom you mentioned the matter? Yes.

784. *Mr. Brock.*] Was Musgrave a drunkard? No.

785. Was he a very sober man? He was a very fly man; a man who never took enough to make himself drunk if he was in company. He often told me that the Department could never get at him, because he never had anything in his own name.

786. Whose name was it in? I could not say.

787. Do you mean to say that he banked the money in someone else's name? Yes. I have often told him that he would be getting caught, and he has said, "There is no fear of that; I have nothing in my own name. The only chance of my being caught is when I take my bag in. They might search me then." I suggested to Moran how he might catch him with his pocket full of tickets.

788. You never heard him say that he took the name of Reegan? No.

789. Did he not tell you several times that he could always get the office from head-quarters, and that he knew

- Driver
J. Graham.
24 Aug., 1888.
- knew all that was going on? Yes. When I have said to him, "You will be getting caught at it, Tommy," he has said, "No fear; I can get the wink from above if ever they move in the matter."
790. *President.*] Do you know a conductor named Doolan on the Waterloo line? Yes.
791. Don't you know that he is connected with this business? No.
792. What do you know of him; is he a gambler? Not to my knowledge.
793. Is he a steady man? Not altogether a steady man.
794. Is he a single or married man? Married.
795. He goes out to the handicaps and bets on them, does he not? Very likely.
796. You have never heard that he manipulated his register in this way? No.
797. But you heard that he got out in his tickets somehow, and that he could not account for it? No.
798. You have no reason to suspect him? None whatever.
799. But, at the same time, you would not be surprised if you heard that he was implicated? I should not.
800. What was your reply with regard to O'Donnell? I never knew anything about him.
801. Did Musgrave ever tell you how he found out how to do it? No, he did not.
802. He told you distinctly that he made Fraser aware of it? Yes, and Ferrier.
803. Was he the one who gave it to Ferrier? Yes.
804. Did Ferrier give him anything, do you know? No; he was a particular mate of Ferrier's.
805. Ferrier was as fly as he was? Yes.
806. You have no idea as to how Musgrave got the information? I think he got it from the office.
807. Can you not explain that further. Did he not tell you who in the office gave it him? He told me that Colls would always put him fly to anything that was going on.
808. And you inferred that he got the way to do this thing from that man? Yes; Colls being his brother-in-law, and they living together.
809. He did not say absolutely that Colls told him. No; but he did say absolutely that he was told by someone in the office? Yes.
810. How would Colls know when a confidential report was sent from the Police Office to the Tramway Department? It is easily found out. Is not Reegan always in Mr. Roberts's office?
811. Who is Reegan? He is Mr. Roberts's messenger.
812. And you think that he knows as much as Mr. Roberts knows? I do not know that; but he is always in Mr. Roberts's office.
813. And you conclude from that that Reegan told Colls, and that Colls told the others? It might be so. Perhaps Colls could find out for himself.
814. We have strong evidence that a confidential report from the Inspector-General of Police was spread all over the town in a few hours. That would have been addressed to the Superintendent of Tramways privately. Colls and Reegan would have no access to it. How could it get out? I do not know; I could not say. But suppose Mr. Roberts opened it and left it on his table.
815. Suppose that he locked it away in his drawer? At any rate it came out of the office, and Musgrave got it before any action was taken, and he went up and confessed to Mr. Roberts.
816. But he did not confess. Did he not affect innocence of his share in the work? He told Mr. Roberts of the matter, so as to put the scent off himself.
817. Did he tell you that he had confessed? No; he told me what he had told Mr. Roberts.
818. *Mr. Thompson.*] Where does the confessing come in then? He confessed that he knew the thing was being done, from what some man had told him two months before.
819. You are perfectly frank in this matter? You really do not know how this thing came out of the office—but you believe that they got it through Reegan and Colls? I would not say they went to Reegan, but I think Colls might have given it.
820. How do you suppose that Colls got the information—would Mr. Roberts tell him? Very likely, he being a man in the office.
821. Don't you know that Reegan is a colleague of Musgrave's? No.
822. Have you any reason to suppose that Reegan knows anything of these frauds? No; no reason whatever.
823. Now I will ask you another question: Do you know anything more of Colls' connection with this matter? No.
824. You know all about this fly business—how he tells Musgrave directly anything happens? Yes; I think from what Musgrave has told me that he gets it from Colls.
825. *President.*] He confided in you and never offered you anything—from Fraser he received £50. What was the nature of his transaction with Colls—that is what we should like to know—how has Colls benefited? I could not say.
826. Did not Musgrave tell you that Colls was paid for giving him the information? No.
827. You are sure of that? Yes.
828. You say that Musgrave was going to purchase the good-will of the "New England Railway Family Hotel"? Yes.
829. Have you any idea that Ferrier is well off? No.
830. He is a great gambler? I believe so.
831. And you think he has lost all he has made? Yes; and perhaps more. That is why he went to Greeley, I suppose. He was getting hard up. Musgrave told me how it was the cat got out of the bag. Ferrier went to Greeley and said, "If you will give me £10 I will show you how to rig your register."
832. What did Greeley say? "All right"—at least so Musgrave told me, and they then made an appointment at Greeley's house.
833. Did he go to Greeley or did Greeley go to him? Musgrave said that Ferrier went to Greeley and said that he would buy the tickets off him.
834. You know Ferrier? Pretty well.
835. You have had frequent conversations with him? Not lately.
836. What has he disclosed to you? He does not know more than Musgrave has told me.
837. You have had conversations with Ferrier about the frauds? None whatever.
838. Has not Ferrier often talked to you generally about the state of his finances—about his want of money and so forth? No.
839. He has not told you that he could get sums of money if he wanted them out of certain conductors to get him to hold his tongue? No.

840. You are sure of that? Positive. All I know of Ferrier was through Musgrave—that is as to the frauds.
841. When did Musgrave tell you that Ferrier was in the business? About the same time that he told me about Fraser.
842. Did he tell you about Yelland at the same time? No; I heard that otherwise.
843. And you are perfectly certain that Musgrave did not tell you about any others besides himself, Ferrier, and Fraser? That is all.
844. Now I dare say there is a good deal more which you can yet tell us? Nothing I can think of. I know that Ferrier could not rig the bell himself, and that Musgrave would never let him know how it was done.
845. Who rigged Ferrier's bell then? Musgrave.
846. But how was he going to tell Greeley how it was done? He must have got Musgrave to do it and Musgrave must have reaped the benefit; Musgrave himself would not have anything to do with Greeley.
847. You think that this teaching as to the manipulation of the registers came from the office? Yes.
848. You are sure of that? I am sure Musgrave told me so.
849. Did you never hear that a man employed in the railway workshops did this thing for them? No.
850. You never heard that? No. Musgrave told me it came out of the office, and from what I learnt afterwards I think it must have come from there.
851. Can you tell us how long ago it was that Fraser paid this £50 for this knowledge? I could not say.
852. How long is it since Musgrave told you? At the beginning.
853. So that Fraser might have been at it further back than nine months ago? Yes. Musgrave often asked me if I knew of anyone else who was carrying on the business.
854. These frauds were committed on the Waverley line chiefly—not on the Coogee line? They happened wherever these particular conductors happened to be. They were not more particularly on the Waverley line than on any other line, but the assistant conductors would be more on that line.
855. On what line was Greeley? On the Waterloo line.
856. Is there anything more you can tell us? Nothing that I can think of at present. Other things might occur to me if you were to ask me questions.
857. If anything further occurs to you will you attend and give the information? I shall be glad to do so.
858. You quite understand that you are not to repeat the evidence which you have given here to-day? I quite understand that.
859. The more you do for this Commission, representing the Government, the better will it be for yourself when your own case comes up for consideration—that is, as to how far you are connected with this matter yourself? I can think of nothing more now. As I told you at first I did not take particular notice of the dates.
860. *Mr. Thompson.*] Can you remember whether it was winter or summer when you first came to know of this thing? I think it was in the summer. I know that it was fine and warm weather at the time.
861. Was it holiday time do you think? I think it was just after some holidays.
862. On what run were you when Musgrave came to you for the pin? I was running between Queen-street and Regent-street. It was in the afternoon.
863. Do you think it was near to the 26th January? I think it was after that. He first asked my fireman for a piece of wire, and the fireman sent him on to me.
864. Did he give your fireman the confidence he gave you? Certainly not.
865. Anything that the fireman might know he would have got from you? Yes.

Robert Reid called in, sworn, and examined:—

866. *President.*] You are employed as a fireman in the Tramway Department? Yes.
867. How long have you been in the Service? Going on for six years.
868. When did you first hear of these irregularities in connection with the tramway-tickets? It must be going on for five months now, as nearly as I can remember.
869. Are you saying that with any degree of certainty? I could not say for certain.
870. Do you not think it is more than five months? It may be; I cannot exactly say.
871. Will you tell the circumstances within your knowledge? I was oiling the engine when someone came on and said, "Have you got a bit of wire, Bob?" I said, "Go round to my mate." I did not look up. Afterwards I said to Graham, "Who was that?" He said, "Musgrave." Graham was my driver.
872. You did not recognize the voice? No, and I did not look up. I am frequently asked questions when I am oiling the engine. People come up and want to know what time the tram goes, and so on. I do not know whether it was on the same day or on the day afterwards that he told me there was a robbery going on. At first I doubted it, and I said, "How?" He said, "By putting a bit of wire in the bell." I said, "Are you sure?" and he said, "Yes." I said, "How do you know?" He said, "Tommy Musgrave can do it." Some time afterwards we spoke about it again. I said, "Why not let it out?"
873. How long was it after Musgrave came for the wire that you said that? It was either on the same or on the next day.
874. It was not on the day that Graham told you that Tommy Musgrave could do it? I am not sure whether it was on that day or on the next.
875. What was his reply to that? He said, "So I will."
876. Did you say anything more to him? I said, "It is taking our living from us. The tramways will go into a company. These men will have got the benefit, and we shall get our wages reduced." Some time afterwards—it might have been two months or more—he told me that he had told Moran.
877. During that two months, or it may be more, how often did you impress upon him the necessity for reporting the matter? We often used to speak about it.
878. Did it not appear to you that apart from Graham altogether you had a duty in the matter? No; on the engines we always leave it to the driver. He is the head man on the engine, the firemen is second.
879. No matter how great a wrong may be going on on the engine it would not be the duty of the fireman to bring it under the notice of the authorities? Oh yes.
880. But don't you look upon this as a great wrong? I do.
881. And you merely advised Graham to report the matter? Yes.

Driver
J. Graham.
24 Aug., 1888.

Fireman
B. Reid.
24 Aug., 1888.

- Fireman
R. Reid.
- 24 Aug., 1888.
882. You found that he did not do so for two months or more? Yes.
883. Did it not seem to be your duty to say to Graham, "If you do not bring this matter up I shall?" He said, "I shall do it." He knew how it was done and was told all about it. All that he told me was that he knew the whole lot of it.
884. Did he not tell you the whole lot of it? He told me that it was done with a bit of wire. He told me no more.
885. You knew that a fraud was being perpetrated by the use of a bit of wire. You could have told that much? I cannot reply to that.
886. How often did you bring this matter under your mate's attention? I may have brought it up more than once. We spoke of it more than once.
887. Did you ever say to him, "Graham, if you do not at once report this I shall"? No, I did not.
888. You did not consider that a part of your duty? In one sense it was a part of my duty, but as he said he would do it I left in his hands. It may have been some days after when I spoke to him again. I did not know whether he had done it or not.
889. But it was over two months, if anything, before Graham told Moran? Yes.
890. Did you not recognise the fact that the Department was being robbed? I could only go by what he told me.
891. Did you not recognise the fact when you made the remark that the trams would be leased. Why did you think they would be leased? Because they were not paying.
892. Why were they not paying? Because if they were being robbed they could not pay.
893. You did recognize the fact, then, that the tramways were being robbed, but you did not deem it important that you should inform the Government, in order that the robberies might be discontinued, until it occurred to you that your wages might be reduced in consequence of the trams being leased to a Company? Well if Graham had not told I would have soon done so. I had made up my mind to that.
894. How many months would you have allowed to pass over? I would not have let it go so long. If he had not have told I would have out with it. I would have told the head of the Department what he told me. At first I was rather doubtful of such a thing being done. I did not believe it could be done. I thought that the bells were made in such way that no one could tamper with them. I had never seen the inside of one of them.
895. During these two months did Graham ever say to you, "There he is; at it again"? I do not recollect that.
896. Are you sure? I would not say for certain, but I do not remember his saying that. He might have said it.
897. Do you mean to say that there was any doubt in your mind as to the thing being actually done after you had had these interviews with Graham? I was doubtful at first, because I did not believe they could tamper with the bells.
898. Then how could you say what you said just now—that you knew the Department was being robbed? Well it was if the thing was being carried on.
899. You said that you knew it? If it was I knew that the country must be getting robbed. My greatest suspicion was that Graham had said, "Musgrave won £40 last night, and went to bank it."
900. In what way did that excite your suspicion? I did not think that Musgrave could so easily win £40.
901. You thought it was the result of the sale of tickets? Yes.
902. Was this after you thought that Graham had informed? I think it was after Graham told me that he had told Moran.
903. You are sure Graham knew how it was done? If he did not show me he told me it could be done.
904. Had you ever told anyone else about this until you told Mr. Vernon? No. I do not remember telling anyone about it.
905. Did you never tell anyone about the thing from the hour you first heard it until that date? I remember being present when Graham was telling Keen.
906. When did you hear Graham tell Keen? I cannot say for certain when it was.
907. Was it after he disclosed the thing to Moran or before? Before.
908. Who is Keen? A conductor.
909. What did Keen say about it? I do not know what remark he made.
910. Did you hear Graham tell anyone else besides Keen? I heard him telling Hadwell the driver.
911. Was that before or after he told Moran? I could not say whether it was before or after.
912. Apart from your conversations with Graham, did you not know something of these frauds otherwise? I know nothing at all except what I have been told.
913. Do you know Musgrave? He has been with us with specials; but he is no particular friend of mine; I have spoken to him in passing, that is all.
914. Are you a married man? Yes; I may say that if Graham had not have told I would have out with it, I did not intend to see the tramways robbed.
915. Still you left it alone for over two months? That is all right, because Graham knew all about it; if I went to give information they may have said, "How is it done?" I could only have referred them to the driver. Of course I did not see anything—nothing was shown to me; Graham was so confident that the thing was being done that it began to dwell in my mind.
916. Did Musgrave never mention the matter to you? I was in the yard one day standing at No. 5 pit. I said, "Why don't you do some Parliamentaries, Tommy?" He laughed, and said, "I do very well without Parliamentaries." We get time and a half for that work; that is, if we do six hours' work we get nine hours' pay.
917. Was it in his power to get Parliamentaries? We all get a turn, but we are never compelled to stop. I took Musgrave to mean that there was something in it; he laughed and winked at Graham; I thought that Graham knew something.
918. Was that after Graham had told Moran? I think it was afterwards; Musgrave did not know that I knew anything about it.
919. As you have mentioned the subject, we should like to know a little more about these Parliamentaries; who arranges who shall stop and who shall not for these trips? It is left to the Traffic.
920. Who is the Traffic? Either Mr. Halliday, or Mr. Saunders the shunter.
921. What would the shunter have to do with it? He is left in charge when Mr. Halliday goes home.
922. He is in charge at night sometimes? Yes.

923. And allots the work? Yes.

924. Does he say, "I have so many Parliamentaries to run, and I want so many men," or how is it arranged so that there shall be no squabbling or anything of that kind? If he tells you to stop and you don't want to, you need not.

Fireman
R. Reid,
24 Aug., 1888.

925. Suppose four men wanted to stop, and he only wanted two? I do not know how he arranges that.

926. Do the men take it in turns? I do not know. A man may stop two nights sometimes; or, if my driver should say, "I have done sufficient work to-day, I want to get home," he is not compelled to stop. Some of the men do not care about stopping.

927. This is all you can tell us about these frauds? I do not remember anything else that I can tell you.

928. I suppose—so far as the Parliamentaries are concerned—that if a man were a friend of the shunter's, and there were only two men required, and four ready to go, he would stand a good chance of getting the work? I cannot say; it all lies with the Traffic—I am only a fireman, and I have to do as I am told. If I am told to stop I have to stop; the driver can object to stopping but I cannot.

John F. Saunders called in, sworn, and examined:—

929. *President.*] You are employed as a shunter in the Bridge-street yard? Yes.

930. How long have you been in the employ? About five years.

Shunter
J. F. Saunders.
24 Aug., 1887.

931. When did you first become aware that there was something wrong in connection with the tickets received by the tram conductors? Only about three weeks ago.

932. At the time that the general public were made aware of it? Yes.

933. Did you become aware of it by the same means as the general public became aware of it? Only through the papers.

934. Have you not had some conversation with driver Graham on the subject? Only after I read it in the press.

935. What conversation had you with driver Graham. Will you give us particulars? When I heard that he had been before the department on the subject, I asked him what he knew. He said that he had been in the company of Musgrave, and that Musgrave had told him that the registers had been manipulated, but how I did not ask.

936. Is that all the conversation that passed between you? That is all.

937. You are quite sure of it? Quite positive.

938. You know the conductors, I suppose? Yes, every one.

939. Did not the name of Scott come up between you and Graham? No.

940. You are quite sure of that? Positive.

941. I may tell you that in Graham's sworn evidence he has said that you told him that Scott, you believed, was in the thick of it? I do not remember saying anything about conductor Scott.

942. Do you know him? Yes.

943. What is his character? I do not know his private life at all. I do not know him out of the Department.

944. There is no reason why, if you had mentioned the matter at all, you should have mentioned his name? I have always respected him as being an honest man. I have never dreamt of him as being in any way concerned in the matter.

945. You are quite sure that you never mentioned Scott's name to Graham? Yes.

946. And on reflection you say that you would have no reason to mention his name? No; because I know nothing of the man except from working with him.

947. Before these disclosures were made public, had you no conversation with any of the men on the subject? No; I never associated with any of them off duty, and on duty only so far as my work was concerned.

948. And up to the time you became aware with the rest of the public that these things were going on, you had no idea of the fact? No.

949. You did not even hear the men talking about them? No.

950. You are never in the conductor's room? No; only when I have to go in to call a conductor out.

951. Have you been all your time in the Bridge-street yard? No.

952. Do you take shift about doing morning work one week, and night work the next? I am down at the bottom of the yard.

953. Were you in the habit of having conversations with Graham when you met him? Never on tramway matters, and we never met outside the Department.

954. I mean in the shunting yard? No; never.

955. Did you not do so occasionally? Well, merely passing remarks.

956. What sort of remarks? General remarks, but not on tramway subjects. Being engaged in shunting I always had to tell them when to go out.

957. How many shunters are there? There is one at the top points, and I am down below.

958. You have said that you did not mention Scott's name to Graham, but you did have a conversation with Graham on the subject of the frauds? I did one day; but only for a few moments. I asked him what he thought of them, and he told me that he knew of them long ago. I asked him who he suspected, and he said "two or three." He mentioned Musgrave's name and Fraser's.

959. Did he mention Ferrier? Yes; and Yelland also. That was all, I believe.

960. That was after the matter had been published in the newspapers? Yes.

961. Did you ever hear of his mentioning it to anyone else before he mentioned it to you? No; I did not.

962. You really gave him no information—he gave it to you? He gave me the information; I knew nothing about the matter until it came out in the papers.

Albert Keen called in, sworn, and examined:—

- Conductor
A. Keen.
24 Aug., 1888.
963. *President.*] You are a conductor? Yes.
964. How long have you been in the Service? About four years and four months.
965. When did it first come to your knowledge that there were irregularities practised in connection with the tramway-tickets? I could not say exactly; but it is about six months ago.
966. Will you tell us how it came to your knowledge? Yes; driver Graham told me.
967. Will you narrate the circumstances under which driver Graham told you—where you were, and so forth? We were coming in from Randwick on a tram; Graham told me that he knew how to fake the bells. I said, "I don't believe you can." He said, "I could show you." I said, "How is it to be done?" He then showed me.
968. How; had he a bell? He used the bell I had. He said that if a pin were put in the little slot you could pull and it would register once, and that you could pull it as many times as you liked afterwards but it would not register again.
969. In what sort of way did he tell you of this? In a very earnest way. He said he thought he would like the Department to know of it. He said he thought it a great shame, and that he knew of two or three men who were robbing the Department.
970. What else passed between you? I said, "I don't believe it can be done." He said, "It is right enough because one of the men showed me how to do it."
971. Did he tell you which man showed him? He said Fraser.
972. Are you sure he said Fraser? I am almost sure; there were three men he mentioned altogether—Ferrier, Musgrave, and Fraser.
973. Which of these three had told him? Fraser. He said again that he saw the same man Fraser at the time of the Centennial celebrations with his pocket crammed full of tram-tickets.
974. Did he say on what run he was? I believe he said the Leichhardt run.
975. Do you know yourself on what run he was? On any run; he was an extra conductor.
976. *Mr. Brock.*] Do you know Musgrave, Ferrier, and Fraser? Yes; they have been fellow conductors of mine at different times. When I went home that day after Graham had spoken to me about the matter, I thought I would see if the thing could be done, and I made up my mind that if it could I would speak to Mr. Roberts. Having tried it I found that it could be done.
977. How did you do it? I did it with a scarf-pin.
978. In what way? By putting the pin in the slot.
979. Without interfering with the inside at all? Yes.
980. How long had you been in possession of the bell with which you succeeded in doing it? I cannot very well remember.
981. *President.*] Cannot you give us any idea of the time? About three months, I believe. I do not think it could have been much more.
982. That is about six months ago? Yes.
983. Do you know who had them before? I could not say; the registers are taken from us, and we are given new ones.
984. I suppose there is an account in the office as to who had the register before you? I suppose there is.
985. This register you had must have been put out of order by some one, and it might have an unfortunate bearing on yourself if we cannot trace the person who previously had it. You succeeded with your register, and you did then—what? I put it in my bag, and I went down to Mr. Roberts on that evening; he was not there. The next day I saw him, and told him, as Graham told me, all about it. I said I had tried it, and had found that it could be done. He then brought in Mr. Tyrer and Mr. Primrose. Then he brought a pair of registers and tried it, and said that it could not very well be done.
986. What about the register with which you had succeeded? He did not ask me for mine, and I did not say a word about it.
987. They did not test the register with which you had succeeded? No. Several days after I had found out who were the men who were doing this, Mr. Tyrer told me he did not believe it because the register had to be out of order very much before it was possible.
988. He had no anxiety to see the register with which you had succeeded? None at all.
989. You say that Mr. Roberts sent for another pair of registers;—what happened then? He tried it on them. He used a piece of copper wire and he could not do it. Mr. Primrose said the registers were new or had just come from the repairer; that they were in good order.
990. Did no one say: "Where is the register you did it with?" No.
991. Did it not suggest itself to you to say: "Here is the register I did it with?" No.
992. Where was it at the time? In the box at the yard or at home.
993. Did it not occur to you to say to Mr. Roberts: "I did it with mine; I will bring them to you and will show them to you?" It did not occur to me; I thought it could be done with every register.
994. When Mr. Primrose said that the register was new you might have told him that you could do it with yours but you did not? No.
995. Did it not suggest itself that if the one register would not do it because it was in good order, the other register did it because it was in bad order? Well it did not.
996. How long did you use your register after you knew it was in this state? A month afterwards.
997. What became of them then? They were put in the office and they gave me a new pair; they failed and they were taken in. Sometimes the conductors have two pairs a day which fail, and they have to be taken into the office. When they fail they do not ring at all.
998. Do you solemnly swear that you did not meddle with the inside of your register? I do.
999. You did no more than put the pin in? I did no more than that.
1000. Did you ever open it at all? I never opened it.
1001. How long were you with Mr. Roberts and Mr. Tyrer when you first spoke to them about it? About a $\frac{1}{4}$ of an hour or 20 minutes.
1002. That, we understand was on the day after you had tried it with your own register? Yes.
1003. Did you tell them from whom you had obtained the information? Yes; I said from Graham.
1004. Did your register ring when you gave it in? No; not when I handed them in to be repaired. The ticket bell had gone wrong.
1005. *Mr. Thompson.*] When was it you exposed those who were playing this game? It was nearly a fortnight before I could get the information out of Graham.
- 1006.

1006. You pumped Graham in the meanwhile and then disclosed the names as he had given them to you? I promised Mr. Roberts that I would tell him if I possibly could who the persons were, and I asked Graham.

Conductor
A. Keen.

24 Aug., 1888.

1007. Whom did you name to Mr. Roberts as being the parties? Musgrave and Fraser.

1008. *President.*] This, you say, is six months ago? About that.

1009. You have some further information which you can give us;—what do you know about Fraser? Some time before Graham spoke to me about this faking of the bells Fraser saw me one day coming out of a shop, and jumping on to one of the Newtown trams, he asked me if I kept the shop. I had been into the shop to pay my rent. He asked me if I had the shop in a kind of joke. He did not say it seriously. I said, "Yes." Of course I told a lie, but it was only in joke; so he said, "Do you?" He added, "Do you sell tram tickets?" I said, "No." I was going to jump off at the next stopping place, and he said, "If you want a pound or two's worth I can let you have them," thinking all the time, I suppose, that I really kept a shop; I then jumped off the tram, and Fraser went on in it.

1010. How long ago is that? I dare say that is about eight months ago.

1011. Did you not press him to know what he meant by selling tickets to you? I did not take much notice of it; there were often jokes like that passed on the runs.

1012. As to selling tickets? Well, not exactly that kind. I did not think much of it until Graham spoke to me.

1013. You did not think that Fraser had the tickets? I did not think he was speaking in earnest; I did not know what he was giving me.

1014. Had you no suspicions of your own before Graham mentioned the matter to you? I had my suspicions of Fraser after Graham had told me that he was one of those who were faking the bells, but not before.

1015. We should like you to try to fix your memory as to the dates. We do not say for a moment that you can remember them, but will you refresh your memory as to when Graham spoke to you coming down from Randwick? It was on a light engine.

1016. What sort of weather was it? It was summer weather. The pocket-book I now have with me I got on the 20th February last; I will look in the book which I previously had, and see if I can find anything there which will enable me to remember the date; there may be some memorandum which will fix the time.

1017. Your opinion is that it was not far from the 20th February when Graham spoke to you? I think it was about that time; I will look in the other book, and let you know if I find anything.

1018. Is this all you absolutely know about this matter? That is all that I know—all that I can possibly tell you.

1019. We must ask you to give us the fullest information in your power? Yes; I understand that.

1020. Any deduction you have drawn from anything you have seen or heard may be of value to us? I can think of nothing at this moment.

1021. *Mr. Thompson.*] If there is anything which you have kept in your own mind in reference to the matter let us know of it, please, so that honest men may get their due, and others may get their deserts? I should be quite willing to tell you anything I knew.

1022. What is your age? I am 24 next birthday.

1023. Are you a married man? Yes.

1024. Do you ever frequent gambling places? No. I remember that I was speaking to Musgrave the other night. I forget the date, but it is since his services have been dispensed with—and he said, "Have you been up at this inquiry yet?" He also said, "They have given me no show yet" and "They won't do anything with it. If they had gone the right way about it at first they might have done something." Then he got off the tram at Simonds-street, Newtown.

1025. That is all Musgrave said to you? That is all.

1026. Have you seen anything of Fraser lately? Not since he has left—the morning I was up before the Department. He took my tram to Marrickville while I was up there, and I have not seen him since.

1027. Are there any other persons you have reason to suspect in connection with these frauds beyond those you have mentioned? None whatever.

1028. Do you know a man named Scott? Yes; well.

1029. What run is he on? Woollahra, Waverley, and Bondi.

1030. On the same line as Musgrave? Yes. I never speak to Scott now. I lent him half a sovereign seven years ago, and he has never repaid me. He was in the ticket office at Ashfield, and some money was missing; I think he got dismissed for it. He said there was £4 missing out of his cash, and that he got dismissed for it. That is what he told me.

1031. But you had no reason to suspect him in connection with these frauds? No.

1032. Have you heard anyone say that they suspected him? No.

1033. Have you any reason to think that he is not honest? I do not think he is honest, or he would have repaid me my half sovereign. He is a flash kind of fellow, and I never speak to him.

1034. Does he frequent gambling saloons and racecourses? I believe he does a bit of betting on the racecourse, but I do not know about his frequenting gambling saloons. I know nothing about them myself.

Ah Lum recalled and further examined:—

1035. *President.*] We understand that you have put this little matter to the test as to the conductor who sold you the tickets on the night to which you have referred? I have pointed out to Mr. Wigg the conductor who sold me the tickets.

Ah Lum.

24 Aug., 1888.

1036. Is there the slightest doubt in your mind that the man you have pointed out is the man? I think I am not mistaken.

1037. You have no doubt in your own mind? No doubt.

1038. Have you had any conversation with Gouldtown about Greeley since you were here this morning? No.

1039. Have you seen Gouldtown since this morning? I saw him over there just now.

1040. Had Gouldtown any connection with your identification of Greeley? I told him how the man I pointed out had sold me tram-tickets.

1041. Did you see Gouldtown before or after you had pointed out Greeley? Afterwards.

Walter

Walter Wigg recalled, and further examined:—

- W. Wigg. 1042. *President.*] You have heard what the last witness said? Yes.
 1043. You did not hear his evidence this morning? No.
 24 Aug., 1888. 1044. You have heard him say that he has pointed out a man as being the conductor who sold him some used tram-tickets some time ago; will you be good enough to name the man pointed out by him? Conductor Greeley.
 1045. You were there when Ah Lum pointed him out? Yes.
 1046. Was there any hesitation in his manner? No.
 1047. What did he say? I do not know; he spoke in Chinese to the interpreter.
 1048. Was he sitting there waiting, or was Greeley there first? He was sitting there waiting. First, conductor Tunks came along in a Waterloo tram, and he said something in Chinese to the interpreter. I then said to the interpreter, "Is that the man?" and he said "No." About a quarter of an hour afterwards Greeley came up to the platform in his tram. I told the interpreter that the Botany tram was pulling up. Ah Lum then looked at Greeley and then spoke to the interpreter in Chinese. I said, "What did he say?" and the interpreter replied, "He says that that is the man."
 1049. Did he wait for you to ask him? Yes.
 1050. He did not say at once "That is the man?" No.
 1051. We have heard of Gouldtown;—is he a Chinaman? Yes.
 1052. When did you see him to-day? About 5 minutes after he had identified Greeley.
 1053. Where did he come from? From the lower part of Bridge-street.
 1054. You are quite sure that Ah Lum could have had no conversation with Gouldtown from the time he saw Greeley until he recognized him? No; I am quite sure that he could not.

TUESDAY, 28 AUGUST, 1888.

Present:—

A. RICHARDSON, Esq., PRESIDENT.

R. W. THOMPSON, Esq., M.P.,

F. A. BROCK, Esq., J.P.

John Graham recalled and further examined:—

- Driver J. Graham. 1055. *President.*] I understand that you have come here to day in order to add to your statement of yesterday something which you had forgotten? Yes, in reference to the reason why I thought Musgrave took me into his confidence in this business. He asked me if I had any friends who could do a few pounds worth of tram-tickets per week. Another thing which I noticed happened on a race-day; Musgrave was conducting on the cars in the morning and I noticed that he was taken off the cars when the rush commenced.
 28 Aug., 1888. 1056. He was taken off the cars as a conductor? Yes, he was taken off as a conductor and placed in the yard car-cleaning. I asked him in a joke was he promoted, and he said, winking his eye, "yes, there is something on the board." The next thing I heard was at Randwick when I was told that they had dropped upon two of the conductors who were caught keeping fares back.
 1057. Who had dropped on them? Two outside detectives.
 1058. Do you know the date when this occurred? I do not know the date, but it was the same day that one of them, Hendy, was dismissed, and O'Donnell was the next.
 1059. What drew your attention to Musgrave's being taken off on that day? Being a very busy day I noticed it, as all the others were doing overtime, and, Musgrave being a smart young fellow, I thought it strange that he should have been put car-cleaning on that day.
 1060. Do you mean to say that the officers put him off the cars so that he might not be caught by the detectives who were at work on that day? Yes, I took it so.
 1061. Were these special trams on which a special charge was made? Yes—Musgrave was always a special or spare conductor.
 1062. Was he in the habit of acting as conductor on the race trams? Yes.
 1063. Was he taken off at any other time? Not that I noticed.
 1064. Had you any conversation with him afterwards about it? I had.
 1065. You had. Well let us know how it came about? It came about in talking about Hendy being caught, and he said he did not think Hendy was such a bloody fool.
 1066. Did he say how he happened to be taken off the trams on that day? No, he did not.
 1067. Did it not seem a strange thing to you? Yes.
 1068. Who could take him off? I can't say.
 1069. Who could arrange that he should be taken off? I do not know.
 1070. Do you think the yard foreman could take him off on a day like that? I do not think so.
 1071. *Mr. Brock.*] Who do you think did it? It must have been some one in authority,—I believe Mr. Roberts did it.
 1072. *President.*] Why do you think Mr. Roberts did it? I think so, because he is always about the yard when anything special is done.
 1073. Had information been given to the Department by the Police which led to Hendy's being taken? Not that I know of. I knew nothing about it until he had been taken.
 1074. *Mr. Brock.*] Might he not have been taken off the cars to prevent his having anything to do with this matter, as they already suspected him? Yes, I think so.
 1075. *Mr. Thompson.*] When was this: was it before Musgrave made his so-called confession? It was some time before that.
 1076. *Mr. Brock.*] I would like to know the exact date on which Hendy was dismissed? I find it was April 7th last.
 1077. *President.*] I am not satisfied yet with this. You, Graham, gave us distinctly to understand that Musgrave was taken off the cars on this particular occasion for the purpose of saving him from the fate which overtook Hendy? Yes, I did.
 1078. And you go on to say that Mr. Roberts took him off to save him? This is assumption on my part.
 1079.

Driver
J. Graham.

28 Aug., 1888.

1079. As far as you know was the Department aware that some one would be caught manipulating the registers on this particular occasion? Yes; I am sure of it.
1080. And you think that Mr. Roberts was moved to take Musgrave off the cars on that day to prevent his being caught? I am positively sure that something moved Mr. Roberts to take Musgrave off to save him from trouble.
1081. How was the swindle done with the wire in the bell which Hendy was using? I do not know how it was done.
1082. Do you know how Musgrave did his swindling? I do.
1083. Do you think he did it often? I believe he did it on every race-tram. It could be done on race-trams just as well and in the same way as on others.
1084. Have you not some certain information which you are not fully giving us as to the way Musgrave was drawn off this particular tram? I presume from the way he was taken off that it was done to save him.
1085. *Mr. Brock.*] Did Musgrave not tell you afterwards what it was done for? No.
1086. Are you sure? Yes.
1087. *President.*] Did he not tell you that if he had not been taken off he would have been caught? No.
1088. You stated positively that Musgrave was taken off by design in order to save him from being caught, and you went further and said that you were sure that he was taken off by Mr. Roberts who had been moved by someone to do it in order to save him? I know that he would most likely have been caught if he had not been taken off.
1089. Do you know anything further of Musgrave on the day Hendy was dismissed? No.
1090. You only know that he was taken off the car and put car cleaning; is that your reason? I put the two things together and formed my opinions.
1091. Was he in charge of a tram again on that day, do you know? Not to my knowledge.
1092. Have you anything else to tell us in the matter? Nothing further.
1093. *Mr. Brock.*] Was there anybody else in the yard on that day who would have the authority to do this? No. I think no one would have the power on these occasions except Mr. Roberts.
1094. Why would it be Mr. Roberts? Mr. Roberts is always in the yard on these occasions.
1095. *President.*] Did not Musgrave confide in you a great deal as to what he was doing? Yes.
1096. Did he tell you that the race-tram was a good thing for him? I believe he did. I remember him remarking that he wanted one day to get off, and he asked the foreman to let him off, and he passed the remark to me that it would be a damned sight better for the Department to let him off altogether. I have made this remark in another place.
1097. *Mr. Brock.*] There is a special tram on which the charge is 3s. 6d., and you must get tickets. Does Musgrave go with this tram? He never was on that tram, and could not defraud in connection with it. It is a special ticket, and there are two men who go regularly with this tram.
1098. Do you think that Musgrave was cheating on the race-trams as well as on other trams? I am sure of it.
1099. Have you any other information to give us? I have told everything that I can think of now.
1100. *President.*] I cannot see what you can gain by suppressing information? I do not know anything more positive than I have stated.
1101. I cannot understand that Musgrave had no conversation with you about this. It is contrary to human nature? He told me afterwards he knew that they knew bloody well in the office that he was carrying on this game.
1102. When was this? This was in the course of a few days afterwards.
1103. When he called out to you and said there was something on the board did he appear angry or sorry? He did not seem to care a bit.
1104. Did he not tell you this was a loss to him? No he never passed any remark. He did not have any opportunity to pass any remarks as I was only passing him coming into the yard.
1105. Do you know Seddons, a barber, at Waterloo? No. One day I was in a barber's shop in Botany Road, and there were two chaps sitting on a chair, reading in the *Evening News* about the tramway frauds. This was in Powell's, 91, Botany Road. They said they thought as much, as whenever you go to Seddon's you always get tickets in ones or twos.
1106. Does Powell sell tram-tickets? No it is a barber's shop and he does not sell tickets.
1107. Did they say anything more? No; the conversation dropped at that with them.
1108. *Mr. Brock.*] Was Musgrave always put on on the race-days? Generally he was.
1109. Was he a conductor or an assistant? He was an assistant conductor; spare conductor is the proper name.
1110. *President.*] Was there any gambling going on at Powell's? Gambling for cigars.
1111. At what time does this gambling generally take place? It goes on at any time there are two or three chaps there.
1112. Have you taken part in it? I have.
1113. How do they gamble—with cards? They play euchre and cribbage for cigars instead of money.
1114. What do you play for if you play euchre? You play for three cigars.
1115. Do you take cigars every time you win? No, it is only to see who pays for them.
1116. *Mr. Brock.*] What do they charge for them? Threepence each and we pay the owner for the cigars.
1117. *President.*] How long do you play? A couple of hours is the longest I have played.
1118. How much have you won in that time? I have gained eight or nine cigars in the time.
1119. Does this gambling as you call it go on late at night? No.
1120. When used you to go to this place? If I were on the evening shift I went in in the morning, and perhaps if there were two or three chaps there we had a game; but perhaps we might not.
1121. Are there any other tramway men who go to this place? James Dixon, fireman, and James Frost, driver.
1122. *Mr. Brock.*] Did Musgrave play there? Not to my knowledge.
1123. *President.*] Have you anything more to tell us? No.
1124. *Mr. Brock.*] Do you not know conductors now in the Service who are carrying on this cheating, or who did carry it on? No. About Scott, Saunders was the first one to say to me, had I heard about Musgrave, Ferrier, Greeley, Scott, and a lot more doing this thing. He said he did not know for certain about Scott.
1125. Was Musgrave the first who spoke to you about manipulating the bells? Yes.

1126.

Driver
J. Graham.
28 Aug., 1888

1126. Any one else? No one.

1127. *President.*] You told us about Yelland. He has gone away with a good sum of money. How did he manage it? He did it by booking his register; then reading it the same as they do in the office and then filling in what was wanting.

1128. *Mr. Brock.*] How do you know that this was the way? Musgrave told me this was the way, but that he was the only one who could do the ringing business. You must recollect I did not get all this information in a day or two. I got snatches of it now and then, and it took very many weeks.

1129. *President.*] Did you ever tell anyone that Musgrave received instructions as to how to do it from the office? I do not recollect it. In conversation I said "I believe it came from the office."

1130. Did you say that the information given to Musgrave as to how to doctor the bells got out from the office? That is what I said. I did not inquire any further into the matter, knowing that Colls is his brother-in-law, and is in the office. I thought he told him how to do it, and from his telling me he knew it and did it from a fortnight after he went on.

1131. Is he a mechanic? He is not a mechanic, neither is Colls.

1132. Did Colls and Musgrave divide the proceeds? I have no information as to this. Colls is married, and is Musgrave's sister's husband. Mr. Oakes is something in the ticket-office. I have not said that he was mixed up in the mess. I have not said so nor have I any reason for supposing it.

1133. What is he? He now reads registers.

1134. Have you any reason to suspect him in any way? I have no reason whatever to suppose that he has in any way interfered with the bells, or shown the conductors how to manipulate them.

1135. You know Mr. Colls, I presume; have you had no conversation with him on the subject of the ticket frauds? I know Colls, but I have never had any conversation with him about these things.

1136. Is it not strange that you did not speak to Musgrave again about being shifted into the yard? That is just the reason that I would not speak to him.

1137. Why? Because it would have told him that I knew.

1138. You are sure you have not spoken to Colls? I did not know Colls sufficiently well to speak to him.

1139. Musgrave was in the Department when the ticket-tearing method was in force was he not? I believe so. If I said anything to Colls I take it for granted he would have told Musgrave.

1140. *Mr. Brock.*] How did they manage when they were tearing the tickets? Just as easy as they do now, only that they did not do it in the day-time.

1141. *President.*] How did they do it? They did not tear them at all, but got them lengthwise, that is how Musgrave gave me to understand he did it.

1142. When he gave the information first the registers had been back for some time? Yes.

1143. *Mr. Brock.*] When did Musgrave tell you about tearing the tickets lengthwise? He told me after the tearing had been abolished. He told me that he had been doing this since he was a fortnight in the service.

John Charles Frost called in, sworn, and examined:—

Driver
J. C. Frost.
28 Aug., 1888.

1144. *President.*] What is your name? My name is John Charles Frost.

1145. How are you employed? I am a motor driver.

1146. We have sent for you to attend because we understand that you are able to give us valuable information in connection with these tramway frauds? I don't think that I can tell you much.

1147. *Mr. Thompson.*] We are given to understand that you have been offered tickets for sale on one occasion, if not on more? No.

1148. Absolutely no? Absolutely no.

1149. *Mr. Brock.*] No one has offered to sell you tickets? No.

1150. *President.*] Is it not a fact that when you were about to buy tickets on one occasion, Graham said you had better buy them from him? No.

1151. Will you swear that? I will swear positively that it did not occur.

1152. Will you swear you did not tell Greeley so? I will swear positively that I did not tell Greeley anything of the kind.

1153. Do you remember tickets being found in Greeley's pocket? Yes; we had been to get a drink, and when walking back he took some tickets out of his pockets, and said he had often heard that swindling was going on, but he had never seen or believed it until now.

1154. How did he bring them out? He dragged them out with his left hand, and showed them to me.

1155. Did he think you saw them first, and, under that impression, show them to you? I do not think he saw me looking at them.

1156. If he had not shown them to you would you not have noticed them? I do not think I would; we were walking alongside each other, and he brought the tickets out of his left-hand pocket, and showed them to me.

1157. Was it not when he came to pay for the drinks in the hotel that he pulled the tickets out of his pocket? No, it was not.

1158. Are you quite sure of that? I am quite sure it was not; it was after we had left the hotel, and as we were walking down.

1159. When did you first hear about these frauds? I was told about them some five or six months ago, when going from a Parliamentary tram.

1160. Who told you? Graham told me.

1161. What did he say? We were walking home; he told me that there were chaps on the job who were making £10 per week.

1162. Did he name them? He would not say who they were.

1163. Did you ask him to give the names? I tried to get the names, but he put it off, and would not say; he did not tell me any of them.

1164. Did you threaten to report the matter if he did not? I did not.

1165. What did you advise him to do? I said, "Well, I would lay somebody on to them," or something to that effect.

1166. When Greeley took the tickets out of his pocket, what did he do with them? He handed them to me to mark, and I did so. I told him to put them into his bag. I told him that he had taken these tickets, and was trying to put the blame on some one else. When he drew them out of his pocket they did

did not come out whole, they were together, as if they had been collected; they came out altogether in his hand. I do not believe that he put them there. If I do not believe that he put them there, somebody must have put them there to trap him. He told me that a man had had his coat for some time, but he did not tell me who it was.

Driver
J. C. Frost.
28 Aug., 1888.

1167. *Mr. Brock.*] Did Graham refuse to give you the names of the persons he said were making £10 per week? He did not actually refuse, but said, "Ah! that's hardly good enough!" or something to that effect. How the conversation came about was about the trams not paying, and then he said about the £10 per week.

1168. *President.*] Is that all you know about the frauds? Yes, I think so.

1169. *Mr. Brock.*] Do you think somebody borrowed Greeley's coat, and put the tickets in the pockets? I have formed no opinion on that matter. I thought it a very mysterious thing, though.

1170. *Mr. Thompson.*] Did you never have any conversation with Graham on the subject of the frauds, except on that one occasion? Not for months. I think it was about two months ago, when the thing was beginning to spread; he then told me that he had told the detectives. This was about five, six, or seven months ago—the night of the Parliamentary tram.

1171. *Mr. Brock.*] What did Greeley mean by the expression he made use of to you when he drew the tickets out of his pocket? I should think it did not mean that he took the tickets himself.

1172. *President.*] When did this occur? It was about three months ago.

1173. When Greeley spoke to you about swindling, did you not tell him what you had already heard from Graham? I did not. Greeley is a great man to talk, and I say very little to him. I did not tell him when he told me about the frauds being perpetrated that I left Graham to do that work.

1174. In connection with the matter of Graham offering tickets to you, the statement made is very clear, and it seems impossible to us that it could have been dreamt by the man who made it. The statement made by Greeley is that you told him that on one occasion when you were going to buy tram-tickets Graham said you might as well purchase them from him; also, that you saw a large number of tickets in Graham's possession at the time? I positively swear that such a thing never took place.

1175. Do you know Powell, a barber? I do. He is also a tobacconist.

1176. Does he sell tram-tickets? I have never seen tram-tickets there. I do not know whether he sells them or not. I went there because I found that he was in the habit of supplying a pot and brush.

1177. What else did you go there for? I have had a game of euchre there. Graham, Dixon, Powell, my father, John Frost, of Botany, and some others, who I do not know, used to go there. I used to be intimate with Graham, but did not knock about with him. I have never been in Powell's at night. It was when I was on my holidays last week that I was there. It was between 10 and 11 o'clock in the morning.

1178. *Mr. Brock.*] Have you never been in the place after dark? No, never. I played for drinks and cigars, never for money.

1179. *President.*] Did you play for tickets? Never for tickets. I do not know whether the man has a license to sell tickets.

1180. *Mr. Brock.*] How long have you been in the Service? About six or seven years.

1181. I cannot understand you not giving information when you knew about this. All you had to do was to have gone to Mr. Roberts and told him. Whatever your information had been worth he would have been the judge? My information was worth very little, and it would have placed me in an awkward position if it had been incorrect.

1182. *President.*] Did you mention it to anyone? I told my father the day after I heard it from Graham.

1183. Is your father, John Frost, lately a railway engine-driver? Yes, my father was about thirty years in the service. I am 32 years of age. My uncle, Charles Frost, has been many years in the Service. I have a young brother in the drawing office. Beyond mentioning to my father, I have never mentioned it to a soul.

1184. Is it not a fact that at first you were going to take the tickets from Greeley and make use of them? No.

1185. But on reflection you considered that it might be a trap and you returned them? No. I marked the tickets. It was not after we thought it might be a trap that I returned them. I did not think about it.

1186. *Mr. Brock.*] How many tickets were there? Twenty-two. I think I marked up to that number.

1187. *Mr. Thompson.*] Why was he to put the tickets in his bag again. What did you tell him to do that for? It is such a foolish thing to be putting tickets into the man's pocket.

1188. Your first impression was that he had stolen the tickets and he was making a profession of innocence to you? I hardly know what I thought.

1189. *Mr. Brock.*] Were you in the habit of buying tram-tickets? No, my wife does generally if we go out any place together.

1190. Were you going to buy tickets when Graham said buy them from me? I have never been out of a holiday with Graham. I have never been in Graham's company in a shop when I was going to buy tram-tickets.

1191. *President.*] Where did you go with Greeley for a drink when the tickets were found in his pocket? It was Gibbons' hotel where we, Greeley and I, went for the drink. After coming out Greeley pulled the tickets from his pocket. It was not his uniform coat from which the tickets were taken. It was a big overcoat.

1192. Is there nothing more that you can tell us? I can assure you on my word as a man, let alone the oath which I have taken, I know no more than I have told you.

1193. *Mr. Brock.*] It is a pity you did not strike sooner? Well it has been published in the papers frequently. No one has made the remark to me that it was no wonder the trams did not pay.

John E Loder called in, sworn, and examined:—

1194. *President.*] Your name and occupation? My name is John Eli Loder. I am a general commission J. E. Loder.
agent at 147, Elizabeth-street.

1195. We have sent for you because we understand that you can give us some information about these 28 Aug., 1888.
tram frauds? I do not come to make any statement about them.

1196. Do you know a man named Caspar or Gaspardo? I know a man named Gaspardo. He came to me
thinking

J. E. Loder. thinking that I could give him some advice as I had been in the police. It was in reference to some business which he termed "coining money." I asked him what he meant and he said robbing the Government. He would not give me the details. He asked me if I knew whether the Government allowed anything to informers. I told him I did not think so. I told him I did not think there was any reward for coining, that is, if they were really false coiners. I took it literally that they were coining money.

28 Aug., 1888.

1197. He gave you certain numbers or figures did he not? He stated how much a week they were making and so many months, and asked me to make up how much it came to. I believe I ran him up some scribble or another. He said that they were robbing the Government of £30 to £40 per week.

1198. *Mr. Brock.*] Coining money would not be robbing the Government? He told me it had been carried on for three or six months. I made a calculation for him, but not carefully.

1199. You made your calculations to the £10, so you worked it out to a nicety? I gave him a rough idea and said that is near enough.

1200. *President.*] When did this occur? In the early part of the year.

1201. Were you not interested, from your previous connection with the Police Force, in finding out what this robbery was; that is, its details? I was not. Living as a citizen I did not think that I should interfere in the duties of the police. I thought they might go on coining money. It had nothing to do with me.

1202. *Mr. Brock.*] Did he not tell you all about it? No, he did not.

1203. Nor where it was going on? No.

1204. *President.*] You did not consider it your duty to take any notice of it? No. He wanted me to give him advice as to how to go, to work to get a reward. I said, "Go to the Inspector-General of Police, and no doubt he will make arrangements for a reward if your information is good enough."

1205. *Mr. Brock.*] I would not call coining money robbing the Government? I thought he meant coining money.

1206. *President.*] You actually told him if he wanted to lead a peaceful life to let it drop? I told him to go to the Inspector-General of Police. I was trying to get the information for myself, and I can prove this by one of the detectives; but I said I was not to be mixed up in it.

1207. *Mr. Thompson.*] What detective? Detective Power.

1208. *Mr. Brock.*] How long were you in the force? About three years.

1209. Why did you leave it? I object to answer that question.

1210. Why did you leave it, sir? I tendered my resignation.

1211. Why did you resign? I resigned to attend private business of my own.

1212. What was your object in not answering my question? There are many unnecessary questions.

1213. I think you must have been a very indifferent sort of constable if your duties were carried out in the same way that you carry out those of a private citizen. I am very anxious to know how you left the Police Force. Why did you not take the man to the Inspector-General of Police? I do not think there is a bad mark against me. What would I have benefited by taking him to the Inspector-General? I told the police and Detective Power that if I could get particulars of the case I would tell them, but I was not to be named in it. I would not be an informer. I reckon a man is an informer who would take the reward as a means of living.

1214. If you saw a man killing another you would not interfere then? I would.

1215. But you would be an informer if you told of him? That's different.

1216. *Mr. Thompson.*] How did you come to know Gaspardo? In my ordinary course of business. He is a man always in little businesses in town, and I have places to let.

1217. *President.*] Where did you first know him? He was in a fish and oyster saloon, and then he came to my office several times to inspect different hotels for a lady. I have seen him in the oyster-saloon; I had the letting of it; it was in Albion-street. I was walking by the shop in Liverpool-street when I saw him, and said, "So you have taken this place." This was a long time before he told me anything about the frauds. I saw him for the first time when he asked me to value the things in the place for him. I did not value them, because it was too far for me to go for so small a job. I believe he and the owner came to arrangements. I have seen Gaspardo in the shop at the corner of Elizabeth and Liverpool streets. I do not know who keeps that shop. I went into it for a cup of tea, and he was serving behind the counter. It was after he had left the Albion-street shop. It was after I saw him in this shop that he came to me for advice. It did not strike me that he was alluding to this shop. He said, "Coining money."

1218. *Mr. Thompson.*] Is it not a fact that you were in that shop continually? It is not. I may have been twice or once a week. I do not know the proprietor of the shop.

1219. *Mr. Brock.*] Was it Gaspardo? I do not know.

1220. *President.*] Did it not occur to you that Gaspardo's statement was in connection with the shop? No; I did not think of it.

1221. *Mr. Brock.*] He came to you for an express purpose? He would not tell me anything. He wanted me to tell him whether there was a reward. He said, "What is the use of me putting any one away without I get something for it?"

1222. *President.*] Do you know the shop of Nicholas Williams, running from Elizabeth-street to Wexford-street? Yes.

1223. Have you been in there? Yes.

1224. In company with Gaspardo? No, not in company with Gaspardo. I met him there; not by appointment. I have been often in Williams'. Early in the morning, about 8 o'clock, or late in the evening, 6 or 7 o'clock.

1225. *Mr. Brock.*] Do you know the lady for whom Gaspardo wanted to inspect the hotel? No.

1226. *Mr. Thompson.*] Did it not strike you that he was rather a peculiar person for a lady to employ as an agent? I knew he was a good business man in an hotel. I knew he was running about with a fish-barrow. I did not go to Elizabeth-street to find the lady for whom he wanted the hotel.

1227. *Mr. Brock.*] Have you seen women in the shop? Yes.

1228. Were they employed in the shop? No.

1229. Who kept this shop? I cannot tell.

1230. *Mr. Thompson.*] Did you not go to these shops much more frequently now than before—were you not

- not often there? I used often to call at Williams' for a cup of tea, because I believe in running a man up to do business if I see a chance of doing it. What I could understand was that the lady was worth money.
1231. *Mr. Brock.*] You have not told us how this money was being coined? I do not know. I only heard for the first time last night from Wigg and Moran what was meant. I had not the slightest idea of where it was being coined. Of course I read the newspapers, but I do not know anything myself.
1232. *President.*] Do you know a shop in Market-street where tickets are being sold? I have obtained tickets from many different shops.
1233. One near Elizabeth-street, into which you went with Gaspardo? Marshalls'! I was not in there with him that I am aware of. I do not know whether they have a license to sell tickets. I have been there for postage stamps, but only about half a dozen times. I think the first time I ever saw Marshall was last night. I was with a person who was going to Marshall's, but said he did not know where it was. Neither did I; but as we went along the street we came to the shop, and Marshall was standing at the door. I asked him if this was Marshall's, and he said "yes." The man then went and did his business. The first tickets I ever saw sold there was last night. I never saw tickets offered to Marshall. I do not know Ferrier who used to be a conductor.
1234. Do you know Charles Cook? I know one of them. I have been in the shop, 94 Liverpool-street. I do not know them except through business transactions. Cook was never in my office in his life; not any of the Cooks. It is not a fact that Cook and Ferrier have been at my office. I do not know Ferrier at all. I know Cook by a transaction in filters, for which I was agent, and as I could not sell them I gave one to Cook to try. He said he had no money, and I said all right. Before this he was living in Elizabeth-street, and is now in Liverpool-street. Cook never had money when I went for it, and I said "The best thing for you to do is to shout cigars and I will make you a present of the filter."
1235. *Mr. Brock.*] What kind of a filter was it? It was a nickel-plated filter for fixing on a tap. I have never seen him outside this transaction. Ferrier I do not know.
1236. *President.*] When did you see Gaspardo last? I have not seen him this last six weeks.
1237. Did you not have a conversation with him last Saturday night? No.
1238. If we are told that you had a conversation with him at that time, is it absolutely untrue? I will swear that I have had no conversation with him during the last ten days.
1239. You have had a conversation with him about this matter? I have not.
1240. I am speaking of this last ten days covering the sitting of this Commission? No.
1241. *Mr. Brock.*] Do you know Constantine Pappodocci? No.
1242. *President.*] Have you had a recent conversation with Nicholas Williams on this matter? No.
1243. But you know him very well, I believe? Yes; I know him very well, but I have had no conversation with him on the subject of this inquiry.
1244. *Mr. Thompson.*] What did you drop off going to Nicholas Williams' in such a sudden manner for? Well, a person can please himself.
1245. *President.*] You know a number of the conductors? Yes; I know a number of them by sight.
1246. Do you know Musgrave? I do not.
1247. Have you not had negotiations about the lease of the "Southern Cross Hotel?" I cannot recollect.
1248. You may be able to give us the probable price of the place? If I knew the length of the lease I could give you an idea of its worth.
1249. *Mr. Thompson.*] If the lease were eight years and the rent £8? It would be about £2,000.
1250. *President.*] What would he be required to pay down? I believe the amount would be about £1,000 or £1,200 to go into it.
1251. *Mr. Brock.*] Do you know Masocra? I do not know him by name, but might know him by sight.
1252. Do you know anything about the tram frauds? No; I know nothing about them.

Alfred Weston called in, sworn, and examined:—

1253. *President.*] What is your name and your occupation? Alfred Weston; I keep a little shop in Stanley-street. A. Weston.
28 Aug., 1888.
1254. How long have you been in business there? I have been in it two and a half years.
1255. Have you a tram-ticket license? I have never had a license to sell tram-tickets.
1256. Have you ever applied for one? I have only applied once for a license—a short time ago.
1257. But you have been selling, have you not? I have been selling tram-tickets in a very small way ever since I have been there.
1258. Are you still selling? I have not sold since I applied for the license. I have always been aware of the law. I am liable to a fine for selling without a license. At first I was selling without the knowledge of the law.
1259. *Mr. Brock.*] Where do you get your tickets from? The schoolboys from the Grammar-school come for biscuits and other things, and give tickets instead of money.
1260. What is the largest number you have ever had in stock? The largest number I have had on hand is two dozen.
1261. Are you certain of this? It might be more—it fluctuates—sometimes it is less.
1262. We want to know the largest number you have ever had? I have had perhaps three or four dozen at one time.
1263. Where do you keep them? I keep them in a small box in the till. The box was there when I went into the shop.
1264. A cigar-box, is it not? It is not so large as a cigar-box. It is a small box and kept in the till.
1265. Will you swear it is not a large cigar-box, and that you keep it on a shelf behind you? I will swear that it is not, and that I do not keep it on a shelf.
1266. How long do you say you have been there? I have been in the shop two and a half years.
1267. On the 22nd September, 1887, I bought tickets from you, and you took them from a box—a 500-cigar-box—and you took it from a shelf at the back and put the box on the counter in front of me. I paid you 1s. I deny that it was a 500-cigar-box. I must have taken the till out.
1268. The box was on the counter, and full of tickets? You make a mistake.
1269. *President.*] Where was the box? I swear that the ticket-box is in the drawer in the till.
1270. *Mr. Brock.*] Do you recollect my coming and buying tickets, the day after a tall, dark lady, had

- A. Weston. had bought tickets at your shop? I do not recollect you. I do not remember a tall, dark lady, coming in and buying tickets.
- 28 Aug., 1888. 1271. The lady was my wife, and she saw the big cigar-box; when she came home she told me; I then came on purpose to see it for myself? I have never bought a ticket from anybody but the boys and I would not tell a lie.
1272. *President.*] My opinion is that there may have been a misunderstanding as to the position, but I cannot see how there can be any mistake as to the large cigar-box? It is a drawer.
1273. *Mr. Brock.*] I went with an object in view. I had heard about the cigar-box, and I went and saw it. The officers of the Department also saw it; the box was nearly full when I saw it? You make a mistake in the size of the box.
1274. *Mr. Thompson.*] Did you take the tram-tickets as money? Yes; as pennies.
1275. *President.*] You have done general dealing with them? They come and buy goods in the shop; I have not done other dealings beside tram-tickets.
1276. It is not a fact that the boys have given you paper—foolscap, writing, cartridge paper, &c., for fruit? No, it is a deliberate falsehood.
1277. Did you give full value for the tickets, that is equal value to a boy who gave you tickets as to one who gave you coppers? Yes; equal value.
1278. *Mr. Thompson.*] You must have taken four or five shillings worth of tickets during the day;—how do you get rid of them? I never take that amount in a day nor half of it. The boys may forget their dinners, and I often give them cakes on trust; I also often give them tram-tickets if they have none.
1279. *Mr. Brock.*] How long have you been doing this? Up till about six weeks ago, but not to the extent I did before.
1280. *President.*] Why did you give up selling? On account of a man being fined.
1281. When you recently applied for a license to sell tram-tickets did you volunteer any information? I told them what a lodger told me, that the conductor did not collect tickets from Camperdown to Bathurst-street. The lodger's name is Barker, and he lives with me at 2, Stanley-street. He works at Westlake's, the harness maker. He said he got off and walked away without paying. All the passengers were wondering why he did not collect the tickets. I gave the information in order that the Department might find out for themselves. I have gone on the trams and have not had my tickets collected, and have got off before I paid. My lodger said he did not pay, but got a cheap ride. It would be an advantage if I had a license, because people now have to cross the line at Liverpool, Bathurst, and Park streets before they can get tickets.

Spero Magray called in, sworn, and examined:—

- Spero Magray. 1282. *President.*] What is your name, and where are you employed? Spero Magray. I am working for Mr. John Black, oyster-shop, Botany Road.
- 28 Aug., 1888. 1283. Were you previously employed at Constantine's shop? I have been sometimes at Constantine Pappodocci's shop, but never worked there.
1284. You know Constantine and his partner? I know both Constantine and Masoorah.
1285. What do you know of their transactions in tram-tickets? I have seen them coming along the street from the office two or three times with tickets.
1286. When? It was last year I saw them fetch them.
1287. How did they bring them? They brought them open in their hands.
1288. Have you not seen them buying loose tickets? I have never seen them buy loose tickets.
1289. Did you not tell anyone you had? I did not tell anybody that I had.
1290. *Mr. Brock.*] Where else have you worked? I worked for Nicholas Williams last year.
1291. *President.*] Did you not see loose tickets bought at his shop? No.
1292. When were you employed there? I was there last year, about three months, and all I know is that he sent me down to the office sometimes to buy tickets; sometimes he gave me £5 to buy them.
1293. You are not telling all you know about this? I know nothing more. I am telling the truth.
1294. Tell all you know, and no harm will come to you, or to anybody belonging to you? I do not know anything. If I knew more I would tell it.
1295. Can you give us the dates on which you went to the office to get the tickets? No; I can get them. Last year, about this time.
1296. We must have the month, if nothing nearer? It was about April, May, June, and July, or between these four months.
1297. *Mr. Brock.*] What name did you give? I suppose Nicholas Williams.
1298. Who wrote it? It was written down for me, and I gave the paper in and got the tickets? I cannot read English. Somebody else wrote it down for me.
1299. *President.*] Did you not tell them at the office that these tickets were for Nicholas Williams? No I never told them; I used to take a form signed by Marcus.
1300. How many times did you go for tickets? I went about ten or twelve times during those four months. It might have been twenty times.
1301. Do you know in what name these orders was signed; was it a long or a short one? I think it was in the name he was called by everybody—Nicholas Williams. I took no notice of the name.
1302. *President.*] We have been told by Gaspardo that you have seen tickets bought by Marcus at his shop; if we find out that you have kept this back from us you may expect to be punished? I am telling the truth. All right, sir; all I say is what I know.

Constable Stove re-called and further examined:—

- Constable Stove. 1303. *President.*] I understand, Constable Stove, that there is something further you wish to communicate to us? The only fresh thing that I have been able to gather from Dominic is that it was during the time Musgrave was out of the Service, having been discharged during reductions, that he told the man on the Newtown Road how to work his register, but Dominic does not know this man's name.
- 28 Aug., 1888. 1304. *Mr. Thompson.*] Do you suggest that Dominic might be of service to us? No; I asked him, and he said he could tell you nothing more than I have told, as he had told me everything.

1305. You might suggest to him that as we know so much about it he might give us evidence which, whilst we will not make use of except to punish the guilty, and which will not be used against him, might be of use to us in connecting other links together. He will be paid for his time; we would not like to force him? I do not think he would be of any service; I put it to him that I had been called and questioned, and that I am likely to be fined if he does not let me give his name, and I asked him if he would let me be fined. He said he would sooner let me tell his name than that I should be fined. Personally I think you would get nothing more from him if you did call him. He said he could sell very few tickets in a week so it was not worth his while getting a license.

Constable
Stove.
28 Aug., 1888.

Walter Bennett called in, sworn, and examined:—

1306. *President.*] What is your name and how are you employed? Walter Bennett; I am a motor-driver.

Driver
W. Bennett.
28 Aug., 1888.

1307. We want to know anything and everything you know about the tramway frauds; when you first heard of them and what you heard? I heard nothing of them until I saw an article in the *Evening Star*.

1308. Did you not hear of them from a less public source? Yes. Graham told me.

1309. When did he tell you. I cannot say when it was that he told me, except that it was about the time that one of the first letters, "Reasons why the trams do not pay" appeared.

1310. When did the letter appear? It was on one Saturday. The article went on to say that there was systematic fraud going on in the Service and the tickets were appropriated and sold. It is about two months ago since these articles appeared. It must be more than a month ago since they appeared, because I went on my holidays and I relieved Graham. I heard a driver was connected with the business and that it was Graham, so I asked him. He said he had no hand in it, and I said you had better be careful or you will be implicated. He then said that he had told Moran some months before.

1311. *President.*] If Graham has sworn that he told you about these frauds some months ago? It would be untrue.

1312. Graham's statement is that he told you and others some months ago, and before he told Moran? He did not tell me. He said he had put the matter in the hands of the Department, and afterwards he was brought up before the Commissioner. He told Keen several months ago, soon after having told Moran. He said he had told Moran that he would give him the tip in time to catch these men at work.

1313. What did he tell you about the frauds? He said he had seen Musgrave go away with his pockets chock-a-block with tickets, and he knew no reason why Moran did not catch this man.

1314. Did he say he had pointed Musgrave out to Moran when the former was going away from a tram with his pockets full of tickets? No; he did not say that. He said that he would show Moran any time the man going away with his plunder.

1315. What more did he tell you? He told me the first time he saw anything was when one day Musgrave was standing on the apron behind, when, on looking back, Graham saw Musgrave with a piece of wire and his bell. He said "Halloo Tommy! are you putting the jigger on?" and time after time he learnt a little bit.

1316. Did he say how Musgrave had learnt to rig his bell? He told me he did not know how Musgrave learnt it, but he thought Coll showed him how to rig the bell. Musgrave told him a little bit at a time; was very cunning; showed no one how to do it, and would do it himself.

1317. Did he tell you how long it was after he had seen this wire business before he told Moran? He did not say.

1318. Did you ask him how long ago it was since Musgrave told him? No, he did not tell me all that I have told you at one time. Sometimes he told me very little, and sometimes nothing for days.

1319. When did he first tell you? He told me nothing about it until it came out in the *Star*. I think it was one Saturday night we read it in the paper. This was the first I heard of it. The chaff went round pretty freely amongst us, and some one said, "I hear that your mate is mixed up in the affair." When I came to relieve him I asked him if it were true that he was in the affair.

1320. You are very confident in saying that when Graham first told you he gave you to understand that he had told Moran several months before? I am particularly sure, for he said he could not understand how it was that Moran did not catch this man.

1321. But you are quite sure that he had not mentioned it to you before? I am perfectly sure that no mention was made, and that no suspicion had crossed my mind until the article appeared in the evening *Star*.

Giacomo Vita called in, sworn, and examined, through interpreter (Pasquale Torzillo):—

1322. *President.*] We understand that you have been selling some tram-tickets to Mr. Elliott. Where did you obtain them? From the boys when they have bought fruit. They get the fruit, throw the tickets into the basket, and run away; they take the fruit first, and then thrown down the tickets; they always do the same thing.

Giacomo Vita.
28 Aug., 1888.

1323. You understand English well enough; we are not going to be hoodwinked by you; we know how many tickets you had and how many you sold. How many have you sold altogether? I do not remember whether it was six or seven; I do not know how many I have sold altogether.

1324. How long have the boys been giving you tickets? About two months.

1325. How many in the day? One or two a day.

1326. How did you resell them or get rid of them? I got rid of them by riding on the trams.

1327. What made you sell them to this gentleman, who has given us information? He happened to be near the tram, and he asked me for them.

1328. How came you to sell eight tickets for 6d.? The gentleman did not give me time to count them, as the tram was coming.

1329. Are you a rich man? No.

1330. Can you afford to lose 2d. on each bargain? No, I could not afford to lose 2d. every time. I was confused on this occasion by seeing the tram so close, and I had not time to count them; this is the first time I have sold tickets—all the others I used myself.

1331. We do not believe the running away part of the proceedings: in parting with the fruit for the ticket.

- Giacomo Vita. ticket did you give full value? Yes, just the same value. I would not know when the boys took the fruit whether they would give money or tickets.
- 28 Aug., 1888. 1332. Your statement is incorrect; this gentleman states that he was not waiting for a tram? That is all I have to say.
1333. Are you sure that you did not get these tickets from the tram conductors? I am quite certain that I did not.
1334. *Mr. Brock.*] Have tram conductors ever given you tickets for fruit? No; I hardly know a tram conductor.
1335. *President.*] If you have not told us the whole truth, and we find out that you have not done so, you will be liable to be punished? I have never bought tickets from conductors, and I am telling you the truth.

Portrase called in, sworn, and examined:—

- Portrase. 1336. *President.*] You are a Hindoo fruit-seller, I believe. We want you to tell us truthfully where you got the tickets you sold to Mr. Elliott? I got them from boys who have no money, and give me tickets for lollies instead of money.
- 28 Aug., 1888. 1337. How do you get rid of them afterwards? Sometimes I go on the tram to the Markets, and use them.
1338. *Mr. Brock.*] How much fruit do you give for 3d. How many apples or oranges? Sometimes a dozen and sometimes two dozen oranges.
1339. *President.*] If I come to you and have a penny or a ticket, will you give me the same quantity of fruit for each? I will give you two bananas for a penny. I will give you the same number for tickets.
1340. How do you manage to sell five tickets for 4d., and twelve tickets for 9d.? When I have no money and I want to get home by the train I sell the tram-tickets.
1341. This gentleman asked you how much you would take for twelve tickets, and you said 9d.? I have none to-day. Sometimes I pick up tickets. I do not know the tram conductors to speak to. One day I picked up a large number.
1342. After you got rid of one lot of tickets you offered another lot? I said, "If you want more tickets you give me the money, and I will go and buy them."

Joseph Powell called in, sworn, and examined:—

- J. Powell. 1343. *President.*] You keep a fruit-shop in Devonshire-street. We understand that you have seen instances of the improper sale of tram-tickets, and can give us particulars of those sales? Yes; they have been principally by women and children. I have taken eight or ten at times from women who wanted money. They were not broken up into ones and twos. I gave full value for the tickets. I have had children offering them in exchange for fruit, but I have never taken them. I have had postage stamps frequently offered me, and at half their value. Persons, generally women, bring twopenny stamps, and offer them for one penny. These women bring them, I think, principally with the intention of going and getting drink. They are mostly of the vagrant or depraved class. At one time it was a frequent occurrence; that is, women coming into the shop and wanting fruit or something in exchange for tram-tickets. I have declined to buy tickets from them, and do not have any dealings with them. I have never had tickets offered to me by conductors, nor by any men. I am not acquainted with any tram-conductors.
- 28 Aug., 1888. 1344. *Mr. Thompson.*] About what would be the outside number of tram-tickets you know to have been offered you? I have never taken them as a sale. I think the ten spoken of before is the greatest number that has been offered. I have not had a license, and I would not begin to sell tickets until I saw whether people would be likely to require them. I, however, bought a few at the railway station, thinking that my having them would tend to increase my trade in other things. I gave full value for them when buying. I had to sell every day, and on holidays I got no rest. My trade did not increase, as people only came in for tickets, and seldom bought anything else; and as I got no rest, and tram-tickets did not pay, I am glad that I have done away with their sale. I used to get about £2 worth at a time, but I got nothing for them, and have given up the sale of tickets altogether, as I thought my rest was worth more to me than tram-tickets.

William Moran recalled and further examined:—

- W. Moran. 1345. *President.*] We left off on the previous day with my question to you of whether you considered Greeley was an honest man? I am inclined to believe that he is honest.
- 28 Aug., 1888. 1346. *Mr. Brock.*] Do you think that the tickets were placed in Greeley's pocket as a trap? I cannot understand it.
1347. *Mr. Thompson.*] What did Greeley say to you about it? He said he had lent the coat to Tunks, who was his relieving mate, and it was after his return that he found the tickets in the pockets.
1348. Do you think Tunks placed them there? I do not think so. I think he is honest, and would not do so. The reason I have for believing Greeley is honest is that he is always fond of giving information.
1349. What first made you think that there was something wrong? The hints of the men themselves; then the information that some man at the Sailors' Home was selling tickets; next the report that a conductor was carrying a man free, but receiving newspapers in return. In the first instance I thought these were only rumours and could not be followed up. My first thought that Cook was doing something wrong was caused by his way of meeting Musgrave and Fraser, coupled with Cook's character, which is by no means good. This led me to watch Cook. I saw him jump on the tram with Greeley, travel as far as White's, the baker, and get off.
1350. *Mr. Brock.*] Do you believe they were tram-tickets Cook had with him on the day at Randwick? He was not going to Randwick this day, but to Waterloo, and he was talking to Greeley on the way down, and Greeley told me he had shown him a lot of tickets made up in twos, fours, and sixes, all ready for use. Greeley's statement was that they were in a bag—that they were all small tickets and separated. This is what Greeley told me after I had asked Cook about them. 1351.

1351. *President.*] With regard to Musgrave: how is it possible to find out whether he was taken off on that particular day in order to save him? My own impression is that he was not taken off for that purpose.

W. Moran.
28 Aug., 1888.

1352. Who is it that arranges the order in which these conductors go out? Yard-foreman Haliiday and Yard-foreman Gamgee.

1353. *Mr. Thompson.*] Is there no record book of the day's work? There is a service book which should show who was in charge of the yard at that particular time.

WEDNESDAY, 29 AUGUST, 1888.

Present:—

A. RICHARDSON, Esq., PRESIDENT.

R. W. THOMPSON, Esq., M.P.,

| F. A. BROCK, Esq., J.P.

Gustave Adolphus Kopsch called in, sworn, and examined:—

1354. *President.*] You are I believe instrument mechanic to the Telegraph Department; we have sent for you because we are anxious to have a practical opinion from a person outside the Railway Department. We are given to understand that the registers of these bells have been tampered with, the springs weakened, and wire inserted in the foot of the bell in such a manner as to prevent the register working though the bell rings. It has been said that the putting of these registers out of order has the same effect as a lengthened period of wear; that the bending of the spring one thirty-second part of an inch is sufficient to put them out of order, and that this is equivalent to the wearing of the springs by constant usage. The tampering with the bells has probably been done by the conductors when at home at night. It has been found impossible, without employing six or seven extra men, to prevent the registers from being taken home? It will be necessary for me to go and bring my tools in order to open the bells and see the inside of them to make the examination.

Gustave A. Kopsch.
29 Aug., 1888.

Robert Maher called in, sworn, and examined:—

1355. *President.*] You are I believe a motor-driver on the Waterloo line; we want you to tell us all you know about these tramway frauds? I know nothing whatever.

1356. Have you had no conversations with anybody about them? Only what Patrick Greeley told me of the night Ferrier was at his house. That is all I have heard about the frauds.

1357. Have you not had a conversation with Graham about these frauds? No.

1358. Did you not tell him that frauds were going on in the Department? No.

1359. Do you know Saunders? Johnny Saunders, the shunter—yes.

1360. Have you spoken to him about the frauds? Not to my knowledge, except to ask him how the frauds were getting on. I know him well. I have had no conversation with him as far as I can remember. I never knew of the frauds until the disclosures in the newspapers. I have been on the Waterloo line since the day after Easter Monday. I was on Crown-street for four years. I have never suspected anything going wrong. I know nothing of Saunders except as a shunter, and I very seldom speak to him, as I have no time to do so. I have never spoken to him about this matter, and I know nothing about him.

Driver R. Maher.
29 Aug., 1888.

1361. *Mr. Thompson.*] Have you never grumbled about certain conduct of his? Not to my knowledge.

1362. But in connection with the overtime for Parliamentary trams? Oh, yes. I have always asked him not to put me down for these. I have had a bad cold this last twelve months, and Frost used to take the Parliamentary tram for me.

1363. Was there never any complaint as to the distribution of this overtime, and the appointment of the particular men to do the duty? I cannot tell; I have heard no complaint to my knowledge. I have heard that he has taken men for overtime whilst others should have had the turn. I was not in Saunders' shift until Easter Monday. I have had no one complaining to me about the overtime. Beyond what I have told you now I know nothing.

1364. Did not Greeley tell you how he managed to let the detectives know? He told me about the night Ferrier was at his house, and the detectives were there also.

1365. *Mr. Brock.*] Did he mention any other name besides Ferrier? He mentioned some one, but I do not recollect who it was, although I think it was Musgrave.

Patrick Greeley called in, sworn, and examined:—

1366. *President.*] Your name is —? Patrick Greeley. I am a tram-conductor on the Botany and Waterloo line. I have been in the Service five years next January.

1367. We want to know from you everything you know in connection with these frauds? The first information I had about it was by a Chinaman wanting to buy tickets. He said he had been buying tickets before from men. He asked me again sometime afterwards, when he was going to Botany. His name is Ah Lum. On December 23rd last, I was in Siddons the barber's shop getting a shave. Howard came in and said he had made a grand harvest. Siddons asked me if I had any tickets or if I could get some. He said he was giving 20s. for 30s. worth of tickets. I said, I would see what I could do on Boxing-Day. He came again to me and asked if I had the tickets. I said that I had not, and that I was a staff-man and had no opportunity of doing anything; but if I had a chance on New Year's Day he could come again. He said, "I am giving a man as much as £3 10s. per week"; I said I could not see how it was done. He said the man used to miss registering the tickets, keep an account, and then take the tickets first thing in the morning. I said I did not think the game worth the candle, but a man might make a few tickets in a day, not a hundred a week. He said, "You have nothing to fear. As long as no third party knows it they can all go to hell. I will take good care not to have too many in the drawer at one time, and I will see that no service tickets are in with them; if I come across any I will destroy them."

Conductor Greeley.
29 Aug., 1888.

Conductor
Greeley.
29 Aug., 1888.

1368. *Mr. Brock.*] Where was the drawer he alluded to? In his shop. He did not tell me who the man was to whom I alluded in the early part of my narrative. I told this to Moran who reported it and I was taken to Mr. Vernon and Mr. Roberts, and was introduced as the man who gave the information about the tickets. Moran tried very hard to get me leave to entrap Siddons, but it was not granted. This was some time at the latter end of January, or the beginning of February. My coat was taken out of the locker in Bridge-street yard and was away about six or seven weeks. On the following Friday, after its return, the weather being very cold I used the coat, and on putting my hand into the pocket I found a lot of tram-tickets. This I also reported.

1369. *President.*] What did you report? I reported having found the tickets in my pocket. I was in company with Driver Frost when I found them. We were coming from the hotel after having a drink. I put my hand in my pocket and found the tickets. I think I said, "Good God! what is this?" When I pulled them out I said, "I am convinced now; this is sufficient proof; there is something wrong about the tram-tickets." I told him the history of the coat. He said, "Give them to me; they will do for the old woman"; I gave them to him at first but then said to myself "This may be a trap," and took them back saying that I would report it.

1370. Will you swear that Frost took them and said they would do for the old woman? Yes. I am prepared to swear it. He put them in his pocket.

1371. Did not Frost say, "I would advise you to put the tickets into your bag?" No, not when I showed them to him. I have some idea that he did advise me afterwards to do so.

1372. You say that he wanted to take the tickets and was going to give them to his wife to use them, and that he actually did take them. How do you reconcile this statement with the statement that he advised you to put them into your bag? I am not sure about the way it occurred. He asked for the tickets first and I gave them to him for the old woman. I think I then said to him that it might be a trap. I am quite sure I took the tickets from him, but I do not perfectly remember his saying "put them in your bag." When I said I would report it he agreed with me that it was the best thing to do. I did give them to him in the first instance.

1373. *Mr. Thompson.*] How many were there? Twenty-two.

1374. *President.*] Was it not in the hotel when you were pulling out money to pay for the drinks that you pulled out the tickets? No, we were walking down the lane.

1375. Are you sure that you were walking down the lane, and that you were not at the time in the bar of the hotel? I am quite sure that it was not in the hotel, and that I did not drag them out to pay for drinks.

1376. Who paid for the drinks? Frost paid for the drink. I gave the tickets to Moran on the same day.

1377. Do you know Cook? Yes. He came on to the tram on two or three occasions and asked me if I knew where he could see Ferrier or Musgrave.

1378. *Mr. Brock.*] Was Musgrave on the Waterloo line then? He was an assistant on any line. On Saturday, the 23rd June, Cook came on my tram at Liverpool-street and rode as far as White's, the baker, at Redfern, and when he got down he asked me where he could see Musgrave or Ferrier. I said, "If it is anything I can tell them I will do so, as I may see them." He said it was something very particular. I said, "Go to the yard at 12:30 in the day and you will see Musgrave. Ferrier is not on the trams now, but Musgrave will be in the yard." He said he could not do that as he was going to the races; and he asked me if I had any "dead birds," and said, "If I were in your place horseracing would trouble me very little; I would make a lot more than you can make going to the races." I asked him what he meant, and he said, "I am giving a man on the place not less than £10 per week." I said, "You are one of those very smart fellows that we hear so much of; I would like to see how this is done; I do not think there is a man on the job making 10s. a year." He said, "I don't care what you think about it." He then promised to meet me at 7 o'clock at night. I met Ferrier and asked him about it, and told him that a man told me he was making £10 per week, and that he might let me into it. Ferrier said, "You do not mean to say that you have been on the job all this time and that you do not know how to do anything." Moran, who had got on at Liverpool-street and ridden to Castlereagh-street, remained there till I returned, and got up again and asked me what the game was. I told him. On the following evening I saw Ferrier again, and he told me he knew men who were making lots of money at the game, and that I could do the same, but that he would advise me to get a change to the Waverley or Randwick line, and he said, "I will take the bells for you." From what he had said I was convinced that there was wholesale fraud being carried on. This was all that took place on that occasion. I afterwards saw Cook again, and said to him, "I wish you would let me know how this thing is done; I would make one in it." He asked me when I should have some slack time. I told him any time after 7 o'clock, as I was on the evening shift; he said "Very well; I will come out and meet you." On the following Monday, the 25th, as I was coming in from Waterloo, Ferrier got on my tram at Boundary-street. As he got on I said, "I thought you had made enough on the trams to keep you from having to go to hard work." He said, "I did not make much." I said, "It is no use you telling me that yarn, for the man who has been asking several times for you tells me that he is giving men on the job not less than £10 per week." He gave me no more information on that evening. On Tuesday evening when he came he said to me, "Do you mean to tell me that you have been all this time on the job, and made nothing out of it?" I said, "Yes; I am not in the secret, and I cannot find out how it is done; you might show me how it is done, if it can be done." He said, "It can be done and it is done to a great extent. £10 a week is nothing to make. It is very 'cronk,' but I will tell you as I know that I can trust you. You have been in trouble with a Chinaman, and they have got you set, so you had better make as much as you can while you are in the department. You had better get off this line and get on to the Randwick and Coogee lines; you get better tickets and more in number, and they are always cleaner." I said, "I believe that it is done by the bells being faked." He said, "Yes, I know how to fake them; when is your Sunday off?" I said, "I never have a Sunday off." He said, "What time do you go to work next Sunday?" I told him—I think I said 1:57. He said, "I will come and get your bells on Saturday night, and take them home with me and fake them, and bring them back by 11 o'clock on Sunday morning." This I communicated to Moran, and we arranged that he should get a pair of extra bells from the office, and that when Moran brought them to my house he should secrete himself under the bed and watch Ferrier when he came. At 7 o'clock Ferrier put in an appearance and I went down to open the door, leaving Moran secreted under the bed. When I opened the door I said, "Come upstairs, Harry." He said, "I won't do it to-night; things are cronk; I got the straight 'griffin' from the office that Moran and Wigg have got hold of it." He also said

said that the other conductors had knocked off doing it for the present. He said, "Let it go for a day or two and I will come some night and get the bells when things have blown over; I will either bring them back or leave them in a basket with my mother, and tell her that a gentleman will call for them." The date of this interview in my bedroom was Saturday 30th. He also told me in the room on this evening that there were others much higher than conductors in it, and that if they did not mind themselves and treat him properly he would round on them. He said, "You have nothing to fear. I always get word from the office when they are going to do anything. When they were going to catch a man some time ago at Randwick I got word about it and went right away and told him, so he was on the alert." I have not the slightest idea to whom he was alluding. I asked him how the business was done and who was doing it. He said he would not tell me who was doing it, but he said that they were parties the Department never would suspect; that there were ten or twelve in the Department who knew about it, but he would not tell me who they were. On the following Tuesday night, 3rd July, Ferrier got on my tram at Park-street. I asked him when he was coming to take the bells. He said, "Not if you gave me £50; I have heard something fresh from the office."

Conductor
Greeley.
29 Aug., 1888.

1379. *President.*] You are quite certain that it was Tuesday on which you met Ferrier again, and when he said he would not have anything to do with it because he had got fresh information from the office? Yes.

1380. Then if you are told positively that July 7th was the date on which Ferrier came to the bedroom when Moran was concealed, the further interview with him must have taken place on the 10th I suppose? Yes; in the morning of that day I was talking with Moran at the office, and Musgrave, when passing, saw us talking. Moran gave me a hint to go away; but I did not understand it, and Musgrave saw us. In the evening Ferrier came to me and said he had heard something fresh and would not touch the bells if I gave him half a hundred.

1381. Do you think Ferrier came to you owing to Musgrave having seen you speaking to Moran? I think Musgrave must have told Ferrier, because Ferrier seemed to have come specially. That is all that has passed between Ferrier and myself.

1382. You know something of a publican at Redfern having been paid a grog score with used tram-tickets? Yes; Walsh told me that he knew a man who had run up a grog score of 25s. and who had paid it with 40s. worth of tram-tickets, and I understood Walsh to say that 15s. change was given, and that full value was given for the tickets. Walsh would not mention the name of the hotel-keeper. He said that he was a friend of his. I think he said it was the "Man of Kent Hotel." He said he could swear to the thing as he had seen it with his own eyes. That is all I can think of in connection with the matter at present.

1383. You have mentioned in your evidence that Ferrier told you there was no occasion for fear as he always got the straight "griffin" from the office? Yes.

1384. Did you ask him what he meant? Yes, I asked him to explain what he meant, but he refused to give me any further information.

1385. Did you ever find out what he meant by the statement that he got the straight "griffin" from the office? I have never found out what was meant.

1386. You remember that they were going to catch somebody at Randwick one race-day? Yes; Ferrier told me that he told the man that he was to be taken off his regular tram at 10 o'clock and be sent to Randwick, and he also told the man that they were going to catch him. The man went on the Randwick tram but took care not to be up to tricks.

1387. Was this the day Hendy was dismissed? I think it was since Hendy's dismissal. I do not know who the man was. I asked him if it was Hendy or Tom O'Donnell, but he would not say anything more. I do not think he alluded to Hendy.

1388. Do you remember when Hendy was dismissed? Yes; I heard that another man was to have been taken, but that he had been "put fly."

1389. Who was that man, do you know? I heard that it was O'Donnell who had been "put fly." O'Donnell was on the tram on that occasion with Hendy. I heard that O'Donnell was a couple of rings short, but that he accounted for them. I never heard that Musgrave was on the run in the forenoon, and was taken off and put into the yard car-cleaning. I do not know what time it was when Hendy was taken.

1390. Ferrier told you that there were men in the Service committing these frauds whom the Department would never suspect? Yes.

1391. Did he give you any names? No, not one.

1392. Did you ever have a conversation with Graham on the subject of the frauds before they were exposed in the newspapers? Not that I can remember.

1393. Ferrier told you that there were others who were higher up in the Department than conductors mixed up with the frauds, and that if they were not very careful he would round on them;—were you not anxious to know who these people were? I was certainly anxious to know, and I made every inquiry, pressing him on every occasion when I could get a chance. He would give me no information as to who they were. He said that he would not tell me who they were, and that he would not tell them that I was in it. He said he would never be short of £5 as he could always get it from those who were in the swim, and that if they did not give it to him he would round on them. He gave me no idea whatever who they were.

1394. Going back to the time when Cook got on to your tram what fare did you collect? He got on at Liverpool-street and rode on a twopenny section. I cannot tell you what money he handed me. I have no recollection whatever of what he said to me.

1395. Do you not remember that the first words he said were, "Halloo! you did not ring that bell?" No.

1396. And you replied, "That is a drink at the other end?" I did not reply.

1397. Did he not give you cash? He never gave me a cash fare in his life.

1398. Was he often on your tram? He has not been on my tram three or four times a week.

1399. Was not the conversation introduced by his calling your attention to your not striking the bell when you received his fare? No; I will positively swear that was not the way the conversation was introduced.

1400. We want to know what money you received from the Chinaman for the 200 tickets you sold to him in Market-street? I never sold any tickets in Market-street.

1401. We have sworn evidence that you sold tickets to a Chinaman named Ah Lum, in Market-street, some time ago, and that you received only 12s. for these 200? I will swear that no such occurrence took place.

- Conductor
Greeley.
29 Aug., 1888.
1402. It is as well to caution you that you have been recognised by the Chinaman as the man who sold him the tickets? I have never sold tickets to any person.
1403. By your own showing you have been mixed up in a curious transaction. Who authorised you to act as a Departmental detective? I was trying to get information for the Department.
1404. You have, by your own showing, led Cook and Ferrier to believe you would fall in with their designs? Were you instructed by the Department to act as a detective, and assume the rôle of a dishonest man? No; but I considered that I should get the information if I could for the Department.
1405. *Mr. Brock.*] Whom did you suspect of having had your coat? My mate, Tunks, took it. I saw him with it on. I do not know who put the tickets in the pocket. He had it about six or seven weeks. I told him that I found the tickets in my pocket. He said he did not put them there.
1406. *President.*] When did you first commence to act as a detective for the Department, Greeley? After I had reported Siddons' affair, in the latter end of December or January. Mr. Roberts called me up and said, "If this can be proved, I will recommend a shilling a day rise to Wigg and Moran." I had no instructions from the Department up to that time. Siddons had been following me about for a fortnight, asking me for tickets.
1407. Had you instructions from the Department that you should dissemble with Siddons; and dangle with his proposals—it was a very dangerous thing to do? No, I had no instructions.
1408. You are quite sure that you never carried the dissembling to the extent of selling tickets? I never sold a ticket in my life to anybody.
1409. Were these conversations which you had with Siddons the first conversations of the kind which you had? No; the Chinaman's was the first. That was about nine months ago. His name is Ah Lum: He wanted to know if I would sell him some tickets. I took no notice of it, as I thought it was only a joke of his. I was not insulted by his asking, because I thought it only a joke, as they and we often pass jokes. He frequently, when he came to ride on the tram, asked me to sell him tickets, but I took no notice of him. Had he not been a Chinaman I should have taken notice of it.
1410. How long was he trying to tamper with you before you told Moran or Mr. Roberts about it? I told Moran about the matter the first time the Chinaman spoke to me about it. Moran was on my tram coming from Waterloo, and I called him and pointed out the Chinaman to him: He followed the Chinaman to Circular Quay. This is about ten or twelve months ago.
1411. You have told us all you know in connection with this matter? All I can recollect at the present time.
1412. *Mr. Thompson.*] Have you never had a talk with Musgrave about this? No: The only conversation I had with him was when he said they were going the wrong way about finding the right man. That was all he said—nothing more. He said, "Somebody will pop it for this lot." I said, "Serve them right." And he said, "They are going the wrong way about finding the right man."
1413. He meant that they might get dismissed, I suppose? Yes, I suppose so.
1414. Did you not find out in all your conversations where these tickets were got rid of? No. Ferrier told me that they were selling as much as £160 worth per week at one place; that they gave sometimes as much as 6s. per hundred; and that if I went in with him I should have half, and that he and the seller would have the other half between them.
1415. *President.*] It is very strange that you have so very little information to give us about this matter, seeing that you were so deeply interested in it? I do not recollect anything else now. Sometimes, when I think of it, I can recollect other matters; but I have had a lot of other things to think of since it occurred. About three or four months ago I got into trouble about a Chinaman, and I had a lot of trouble to get back in the Department, notwithstanding many influential men came to intercede for me. I was told there was a serious charge against me, and it caused me great anxiety, as I thought it might be an accusation of stealing tickets. The gentlemen who came to intercede for me were Mr. Thomas Williamson, Mr. John Williamson, Mr. Wm. Stephen, Mr. Colls, I think, and others. This was before I met Cook, but not before I met Siddons. It is since I gave up the tickets which I found in my pockets.
1416. *Mr. Brock.*] Who did you say came to intercede for you? Messrs. Thomas and John Williamson, J. Bridge, Fletcher, Stephen, Johnson, Colls, and several others whose names I cannot now recollect.
1417. Do you know what was done with the bells to enable the frauds to be carried on? No, I do not.
1418. *Mr. Thompson.*] If you think of anything else which you have omitted, for your own sake put it in writing and send it in to us? I will try.

Michael Henry Howard called in, sworn, and examined:—

- Michael H.
Howard.
29 Aug., 1888.
1419. *President.*] You are an operator in the Telegraph Department? Yes.
1420. We have sent for you because we understand that there is some information which you can give us in connection with the fraudulent manipulation or sale of tram-tickets? There is a man of the name of Nixon who says he has been in the habit of purchasing tram-tickets from a man on two or three occasions, at less than their value, giving 5s. or 7s. 6d. for 10s. worth. He purchased them from a man named Whetton, at the "Royal Hotel." Whetton lived at Waverley. I cannot say what he did at the time. There was a lot of conversation at the time about the frauds, and I asked Nixon if he had bought tickets, and he said he had bought some from Whetton, and that Whetton was unemployed, and knocked about with some tram-guards. Nixon is a glass-blower, living at Balmain. I think he would have no objection to give evidence here. He said he had bought 10s. worth of tickets for 7s. 6d. They were all single tickets. He told me he thought it peculiar at the time, but there was no talk of the tram frauds then. Whetton went to Queensland about a month ago. He had been in the habit of going about with Musgrave. I have seen them often together.
1421. Do you know Musgrave? Musgrave was pointed out to me as having been dismissed from the tram service. I knew Whetton as an *habitué* of billiard-rooms. He was a billiard-marker first at another hotel, and then he used to play billiards at the "Royal." It was in the billiard-room of the "Royal" that Nixon bought the tram-tickets from him. Nixon remarked to me that it was peculiar that Tom Whetton could sell tram-tickets at the price. I cannot say whether Nixon asked Whetton where he got them or not.
1422. You made a statement to Mr. Roberts? Yes; I told Mr. Roberts all that I have now told you about this, and he said, "If the Board of Inquiry send for you will you come down?" I said "Yes."

1423.

1423. Do you know if Nixon bought tickets of anyone else? I do not know. If so he did not tell me. I understood that Whetton was the only one that he bought them off, but I understood that he did so at different times.

Michael H.
Howard.

1424. *Mr. Brock.*] I understood that he had bought from others? He may have done so, but that I do not know. I understood Nixon to say Whetton told him he was hard up, and he had tram-tickets, for which he wanted money. I was never present when Nixon bought them, though I may have been there I did not see the transaction. When I spoke to Nixon he said he supposed the transaction was all right.

29 Aug., 1888.

1425. How do you know he is in Brisbane. Will you try and find out without arousing suspicion? I met a gentleman yesterday who saw him in Brisbane. About two months ago Whetton went away from Sydney, up the country. He was habitually in the billiard-room, and his absence caused inquiries to be made. It was said he was up on some station. About three weeks ago he came down again, and the same afternoon left for Queensland. He said he was going to Rockhampton. A friend of mine, a Mr. Clark, said he saw him in Brisbane last week; Mr. Clark is a commercial man. The morning Whetton came back to Sydney I saw him, and he said he had been on some station near Cunnamulla; he was only in Sydney in the morning, and left for Queensland in the afternoon. It is about three weeks ago, and it was a wet day.

1426. *President.*] Will you give us Nixon's address, and also Whetton's? I think I can find Nixon during this morning, and will try and get Whetton's address.

William Branch called in, sworn, and examined:—

1427. *President.*] I understand that you are a driver in the tram service. We want you to tell us all you know about these frauds? I cannot say I know anything at all about them.

Driver
Branch.

1428. Had you no conversation with anyone about them? I may have spoken to some of the tram people about them.

29 Aug., 1888.

1429. Had you no conversation with anyone prior to the disclosures being made in the newspapers? I cannot say that I had.

1430. Did Graham ever make a statement to you about them? No.

1431. Are we to understand that you were perfectly ignorant of the whole matter until the disclosures in the paper? Yes.

1432. You had not the slightest inkling of the frauds before this article appeared? I might have had an inkling, but it was in my own mind. I could not afford to buy houses and land, although I was steadier than some whom I knew were buying.

1433. What men were these you saw building houses and buying land? Drivers Tommy Lane and Jack Smith.

1434. Whom else had you in your mind when you said this? I cannot say.

1435. Did you think there was anything going wrong when this occurred to you? No I did not, only I could not afford to buy land and build.

1436. You must have had more men in your mind than the two you have mentioned? Well, conductor Tom Godbee was buying ground.

1437. You seem to find some difficulty in remembering them? There are plenty of them who have bought land and built, but I cannot remember them now.

1438. *Mr. Brock.*] Did you not suspect fraud when you saw these people buying land? No, I did not, but I wondered how they could do it on their pay alone.

1439. Why did you mention Lane and Smith? Because they were the two drivers who came into my head, as I live near them.

1440. *Mr. Thompson.*] There are a good many more than Godbee, are not there? There are any amount more.

1441. *President.*] You will make us think directly that there is something in the background, and that you are disinclined to give us the information. You volunteered a statement to us that you thought it strange that these people should be buying land and building houses. We did not drag the statement from you, therefore you can go on with it and tell us all you know. Is Graham one of them? I do not know whether the house he lives in is his own.

1442. Is Greeley one of them? I do not know that he owns his own house.

1443. Although you say there are lots of them, Godbee is the only one you can mention. Can you not recollect some more of the number? I know Jim Cook, and he has just bought a house.

1444. Do you remember the names of the conductors? It appears to us, that if this is all you can remember you have a very slippery memory. Is Charles M'Mahon one of them? I do not know.

1445. Is Keen one of them? I do not know.

1446. Is Musgrave? I cannot say.

1447. Is Ferrier? I do not know.

1448. You have made a most extraordinary statement, and yet when you are pressed you can give us no satisfactory answer, except that Godbee and Cook are two who have been building houses and buying land. Have you any reason for your suspicions of these two men? No, I have no reason for the suspicion that either of them are dishonest.

1449. Yet you mentioned them as being in your mind? I said it was strange that they could afford to build houses whilst I could not.

1450. *Mr. Brock.*] That statement was made by you when the President asked you if you had any other evidence. You said "No; I have not," and you then supplemented it by these names? They were connected in my mind at the time, and I could not think how it was done.

1451. *Mr. Thompson.*] And it put the thought into my mind as well that these men were put in the same category as the others? I know plenty of conductors as well.

1452. *President.*] Give us their names? They may be more frugal than I am, for I believe in having anything I want.

1453. You said you knew absolutely nothing about these frauds, and then you stated that you knew of men building houses and buying land, while you could not afford to do it? I said I could not see how they could do it when I could not.

1454. *Mr. Brock.*] What you led us to believe was that they got money outside their wages, and that you could not do so, and wondered how they did it? I don't think I said that.

1455.

- Driver Branch.
29 Aug., 1888.
1455. *Mr. Thompson.*] Evidently you believe this is the case. You need not be afraid of naming these persons. You have given us a sample of them, and we will find out in spite of you. Your conduct leads us to the conclusion that you are totally unwilling to tell the truth. You have put your foot in it, and you now refuse to put your leg in? There are a lot living in Leichhardt who have bought houses and land—Ravensworth, Tipping, Geo. Cox.
1456. Jessop? Jessop has not a house of his own.
1457. *President.*] What do these houses at Leichhardt cost, £50 or £100? I do not know; I have not seen them; but they are cheap out there.
1458. You have no reason to suspect these men of being dishonest? No.
1459. *Mr. Thompson.*] Why did you give us the reason that the first thing which excited your suspicion was these men building houses, whilst you could not do so? I said I knew that these men were building houses, but I did not suspect them of fraud.
1460. *President.*] Are you positive that Graham made no disclosures to you before the newspapers noticed the matter? I am quite positive he did not.
1461. If he has sworn that he did make a statement about the matter some seven or eight months ago it is untrue? Yes.
1462. *Mr. Thompson.*] Graham never let you understand that there was anything going on? No, there is many a remark passed on the job between us that is simply a joke, and the remark as to how much you have made to-day is often said as a joke.
1463. *President.*] Are we to understand that these jocular remarks were used before the frauds were disclosed? Yes.
1464. *Mr. Thompson.*] How did the remark come up? I believe the shilling tram fares to the races gave rise to it. We simply said it in a joke.
1465. *President.*] Was this not a peculiar joke to apply to a decent honest man? No, we are always passing these jokes to each other without meaning wrong.
1466. You are quite certain that Graham never made a disclosure to you, telling you that there were frauds being carried on to a very large extent, at any time before the matter was made public? No.
1467. Do you know Saunders the shunter? Yes.
1468. Have you had any conversation with him about this matter? I have had no conversation with him at all. I heard that he was to be called as a witness before the Commission—that was all.
1469. Have you ever made any statement regarding Saunders' conduct? Never.
1470. Regarding any impropriety of any kind? No.
1471. Have not complaints been made regarding his conduct? Persons have told me that if they wanted to go to one place he would send them to another.
1472. Would Saunders regulate the Parliamentary trams? I do not know. I have never run one.
1473. *Mr. Thompson.*] Have you not made a complaint that you were not getting a Parliamentary tram? No, I am on the broken shift—getting off at 7 o'clock and going home.

Frederick A. Blackstone called in, sworn, and examined:—

- F. A. Blackstone.
29 Aug., 1888.
1474. *President.*] You are receiving clerk in the Tramway Office? Yes.
1475. We want to see Musgrave's entries on Saturday, April 7th;—what does this book show? It shows the reading of the register.
1476. Where was he on that day? I cannot tell you.
1477. Does he not sign a book when he comes on? I know nothing about that.
1478. Take Thursday's entries;—what does this show? It shows that he was at the racecourse. The number 5,666 is what his register stood at before he went there and 5,753 was the number after he returned. The difference between 5,666 and 5,753 is £4 7s. The next number 5,767 being after he had returned from Leichhardt, represents his takings at 1s. 2d.
1479. What time was this? That was late at night; somewhere about 9 o'clock.
1480. He will not appear again in that day's list I suppose? No.
1481. When was a new register issued to him? On that very Saturday.
1482. *Mr. Brock.*] Is it possible to get a new register in the Colony? I do not think so.
1483. *President.*] You read the register and only know how much they get for the run? That is so. Unless we read a man's register we do not know whether he is on duty or not.
1484. We want somebody to tell us where Musgrave was during that day. We want some one to follow him right through the whole day? I know nothing about Musgrave until after 3·5 p.m. that day, and I would have known nothing of him except for a note I made at the time.
1485. What caused you to make this particular note? I was instructed to do so.
1486. Take these figures you have mentioned—does it follow that after he had come from Leichhardt he started for the races? The reading is going out not coming in.
1487. The question is whether he could have gone out before? He must have gone out after.
1488. *Mr. Thompson.*] It does not follow that he went out at all? Oh yes, he did, because he has a receipt for 1s. 3d.
1489. *President.*] It might have been that morning or the following day that the register was read? The time he read at 1s. 3d. he had 469 tickets on his register and only 468 in his bag. He had rung for one more than he had.
1490. Does not this book show that on the 5th and 6th he was not conducting at all? It shows that we got no money from him.
1491. Do you think he could have retained the money he took after his register had been read on the 4th, and not have put it in for two days? I am under the impression that these were his earnings on the Waverley line after the reading of the register on the 4th. He may have done another trip afterwards but it would not come in till next day, and the money being a small amount he may have kept it in his possession until he came on again. Possibly this entry that we have for him on the 7th is the tickets which he took on the 5th. We cannot tell what time he gave in after 3·5 p.m. He may have taken a run on Thursday morning, and having only a few tickets did not account for them until he was ordered to go to the racecourse on Saturday.
1492. Suppose he did not return his bag for a week? Unless someone put the thing to us we would have

have no knowledge of whether there were any tickets in the bag. We are not called upon to do anything but account for the tickets.

1493. When the man came in on the 7th, and you noticed that he had not been in since the 4th, did it not arouse your suspicion? No; he was not a regular man.

1494. These two entries apply only to the race-day? If the man had been running to any other place beforehand he should have come in and have had his register read so that he might go out with a clear register to the racecourse.

1495. You have heard Mr. Muir say absolutely that he did not run before 2 o'clock on Saturday, or he would have claimed payment for it. How do you explain that? He may have done a trip to any place between 2 o'clock and 3.5 o'clock.

1496. When did you see him first on the 7th? The first time I saw him was at 3.5 p.m.

1497. It appears that this man had the coolness to do a run on the 5th without giving up the tickets he had collected on that day, until the 7th instant? It is possible that he never gave up his tickets which he took at Waverley until the Saturday.

F. A. Blackstone.
29 Aug., 1888.

Timekeeper Muir called in, sworn, and examined:—

1498. *President.*] You are time-keeper in the yard? Yes.

1499. Will you tell us how you take the time of the different conductors? From the time they sign on in the morning till they go off in the evening.

1500. Where do you take this information from? The time-book.

1501. Supposing the name does not appear? The man will be then marked absent.

1502. If he does not sign he will not be paid for it? No.

1503. Take the case of Musgrave. It is evident that he has been running on April 7th, yet he does not sign as a conductor but as a car-cleaner? Did you make any inquiries as to his whereabouts? I did make inquiries and found out that he was returned by me as a conductor.

1504. We are referring to the day Hendy got into trouble, and we find no sign of Musgrave; but we are told that he was at Randwick Racecourse, and we are also told that he was taken off and put car-cleaning? I have him charged as a conductor. Under the new system my books do not show what line the man was running on, but under the old system they did.

1505. When was this new system brought into use? About the 5th or 6th of April.

1506. Do you know the object of the change;—was the old system of no value that it was discontinued? It was never explained to me why the old system was discontinued.

1507. Explain why you entered him as a conductor on that day when he was entered on the book as car-cleaner? Musgrave was a conductor and car-cleaner.

1508. Is it usual for a conductor to be also a car-cleaner? I think about that time he had something wrong with him, and he was put car-cleaning.

1509. Why did you enter him on that particular day as a conductor? I must have asked the foreman, or I would not have charged him. I do not know any further than my book shows.

1510. Is this method the regular one to adopt in these cases? This would not have been the regular way, because he signed at first as a car-cleaner at 2 o'clock.

1511. Are you sure that he did not work before 2 o'clock on that day? I am certain that he did not work before 2 o'clock on that day. There is no overtime charged for on that day.

1512. If we are told that he was on a tram in the morning, would it be untrue? Yes. Assistant conductors come on at 12.30 on Saturday, and if he had been brought on that day as an assistant conductor he would have been paid overtime.

1513. Is it not just possible that he came on at 12.30, did not enter his name in the book, and never said anything about it? He was the wrong man not to say anything about it. I feel very confident that his first duty on that Saturday was 2 p.m.

1514. *Mr. Thompson.*] He signs on here on Thursday, 5th, as a car-cleaner. He came on at 2 o'clock, and signs off at 8 o'clock, having worked short time—the hours being till 10.30 p.m. This shows that he either did not work his full time or he put the remainder of his time in another book. What were his hours as a broken shift-man? He would come on at 7 o'clock in the morning and work two hours; in the afternoon he would come on as a car-cleaner, and finish the remaining six hours.

1515. *President.*] Why on one occasion is it perfectly satisfactory for him to sign in one book and on other occasions in two books? He is brought on as an assistant conductor in this book at 7 o'clock, and signs off again at 9 a.m.

1516. Supposing he does not sign off at all, what would you say then? I am supposed to mark him absent.

1517. He gave in no return that day as a conductor, and does not sign off? He did sign off—there is the entry.

1518. He may not have taken any tickets on that day? It is not possible that he did not collect any tickets.

1519. He comes on in the busy time of the morning, and does not deliver up his tickets? The time would be recorded.

1520. Did you pay him for that day as a conductor? I know that I paid him for that day as a car-cleaner the same money as a conductor.

William Nixon called in, sworn, and examined:—

1521. *President.*] You are a glass-blower, residing at Balmain? Yes.

1522. We have summoned you because we have been given to understand, in fact it has been sworn before us that you have purchased tram-tickets from a person named Whetton on various occasions;—will you be good enough to give us the particulars? I became acquainted with a fellow named Whetton in the "Royal Hotel." He had owed me 5s. for some time, and on one occasion he said to me, "Do you often travel on the trams?" I told him that I did occasionally. He said, "Will you mind taking tram-tickets instead of money?" I said, "It is just the same as money to me," and I took them for the 5s. Some time afterwards he came again to me and said, "Are you out of tickets?—I have some more," and I took another 5s. worth from him.

1523. How many did you get on this occasion? I only got a few over the number.

1524.

Timekeeper Muir.
29 Aug., 1888.

W. Nixon.
29 Aug., 1888.

- W. Nixon, 1524. We are told that you got 7s. 6d. worth for 5s.? I believe that I did receive 7s. 6d. worth on the second occasion.
- 29 Aug., 1888. 1525. If a man is offered 7s. 6d. worth of goods for 5s. he would naturally turn the thing over in his mind? I thought it peculiar.
1526. What were the tickets like? They were all clean—in ones and twos.
1527. Do you think that they had been used? I could not swear positively that they had not been used. They were all very clean, but they might have been used.
1528. If you thought they had been used, were you not doing very wrong in using them again;—how long ago is this? About seven or eight months ago.
1529. Has he come to you since? He has not come to me again wanting me to deal further, except on one occasion, when I refused.
1530. When did you see him last? About two months ago.
1531. Up till about two months ago he was regularly frequenting these hotels, and he offered you more tickets? Yes; and I refused to take them. I then began to think the thing was not straight.
1532. Do you know if he offered tickets to anyone else? I do not know whether he sold them to anyone else.
1533. *Mr. Thompson.*] Did he tell you that he had sold any to any other person? No. He said, "If ever you are out of tickets I can always supply them."
1534. I suppose he could have kept twenty or thirty persons supplied if he had the tickets wrapped up in little parcels? I hardly think he did so.
1535. *President.*] He was owing you 5s. on the first occasion, and he said he would give you it in tram-tickets;—did you see him again, or did he give you them directly? I think he gave them to me directly. I was doubtful whether I would get the 5s., so I thought I had better take the tickets.
1536. When he came to you again, and offered you the 7s. 6d. worth for 5s., it seems to me that you should have said, "I will have nothing to do with you." Was this the last time he offered tickets to you? I am sure it is the last time. It is over four months since he last spoke to me about them.
1537. *Mr. Brock.*] When did you see him last? He had been away for some time, and I saw him about a month ago.
1538. You were pretty intimate with him? I never saw him anywhere else than at the "Royal," and it was two or three months before I knew his name.
1539. *President.*] You did not give him the 5s. before you knew his name? I was backing a man at Botany, and he wanted to go in partnership. This is the way he owed me the 5s.
1540. Have you not heard of conductors selling tickets? No.
1541. Do you know any of the conductors? No.
1542. Do you know Musgrave? No; not even by sight.
1543. We are given to understand that Musgrave was very intimate with Whetton, and was frequently in his company? I do not know him.
1544. *Mr. Thompson.*] Have you heard of anybody else buying tickets from him? No.

Gustave Adolphus Kopsch called in and further examined:—]

- G. A. Kopsch, 1545. *President.*] You have examined some of these registers? Yes; four of them.
- 29 Aug., 1888. 1546. What is the result of your examination? I find that by placing a piece of wire under the lever which pulls the bell in three pairs of them the bell rings but the wire stops the indicator registering. The fourth pair appear to be out of order, but do not appear to have been tampered with. It is always the left-hand bell which has been altered. I will, with your permission, take them to my workshop, examine them more thoroughly still, and report further.

James Dixon called in, sworn, and examined:—

- Fireman 1547. *President.*] You are a fireman in the Tram service? Yes.
- Dixon. 1548. Have you been told anything in connection with these ticket frauds? I have often had a bit of chaff with the conductors about making £10 per week.
- 29 Aug., 1888. 1549. Did you hear anything about this before the disclosures appeared in the papers? No.
1550. You know Driver Graham? Yes.
1551. Have you not had a conversation with him on the subject? I have had no conversation with any man on the job with reference to the frauds.
1552. Who is your mate? Collins is my mate. I knock about with Graham outside.
1553. Is it a fact that Graham had not spoken to you before the disclosures appeared in the papers? It is a fact that he had not spoken to me previously to the report in the newspaper.
1554. Do you know Powell's? Yes. I go there and play for drinks, cigars, &c., and we go to the public-house to get the drinks.
1555. Is it not a gambling-house? I have not seen gambling going on in the place this last ten years.
1556. You say very positively that Graham did not converse with you before the disclosures were made? Yes.
1557. And in point of fact you know nothing about the matter? No.
1558. You never even suspected it? No.

Helena Dummett called in, sworn, and examined:—

- Helena 1559. *President.*] You are the wife of —? George Dummett.
- Dummett. 1560. We have sent for you because we have been informed that you have been asked to purchase tram-tickets in an improper way. We wish you to tell us all about it? About a couple of months ago a man came into the shop and asked if Mr. Dummett was in and I told him no, but I asked him if I could do anything for him, and he said "No." He said he would call again. He did not leave his name. He came again on Sunday and asked if my husband was at home, but I told him he was not. He wanted to know how long he would be but I could not tell him. He then said his name was Cook, and that his brother^s
- 29 Aug., 1888.

brother was married to Mrs. Riley. He left and said he would come again on Monday. When my husband came in I told him Cook had been there and was coming again, and he told me that he was not in at any time to him. He gave me to understand that he had seen Martin and that Martin had told him something of the business Cook wanted. We knew ourselves how he had treated Grosvenor, who had the shop before us. On Monday Cook came again and I told him my husband was not at home. Cook asked if I could do with any tram-tickets? I said I did not think so. I said, "What about them?" He said, "I have £7 worth in twos and threes that I want to sell." I said, "What was your idea of tearing them into twos and threes?" He said that he had been in a very large way of business and used to be rushed by customers, and tore them up into twos and threes for convenience." I said, "We never thought of doing that." He said he kept a box just for these tickets. He said he would allow me 1s. in the £ on what I bought. I think I said, "I did not see how he could do so as the office allowed only 1s. 6d. in £5 worth." Mr. Dummett told me that he knew Cook was crooked and he would have nothing to do with him; besides we had no money as it took all we had to buy the business. Cook told me that Grosvenor and his brother were in partnership, but not in the shop we have now. He also said his brother had it in for Grosvenor for saying that he had served a writ on him when he had never been near him.

Helena
Dummett.
29 Aug., 1888.

1561. Do you know where the shop was? Cook gave me to understand it was somewhere in George-street.
1562. Do you know Cook's Christian name? No, I do not. I only know Mrs. Riley, who is the wife of one of the Cooks. She has a daughter named Margaret.

1563. *Mr. Brock.*] Do you think if you had offered to give him 15s. for the £1 worth that he would have taken it? I do not know. I did not say anything to him about money.

1564. *President.*] Then you know absolutely nothing about the frauds? Nothing; but what I have read in the papers.

1565. Did Cook show you any tickets? No; I never saw any with him.

1566. Which of the Cooks did Mrs. Riley marry? It was Charley Cook she married. I do not know the man. He had a big, heavy moustache, with a dark and light shade and very heavy. It looks as if it had faded at the ends.

1567. What is your shop? It is a confectionery and fruit shop.

1568. Do any tram conductors come in for refreshments? No, none.

THURSDAY, 30 AUGUST, 1888.

Present:—

A. RICHARDSON, Esq., PRESIDENT.

R. W. THOMPSON, Esq., M.P.,

F. A. BROCK, Esq., J.P.

William Hannam called in, sworn, and examined:—

1569. *President.*] How long have you been in the Service? About three years next November.

1570. You are a conductor? Yes; but I have not been so all the time. I have been in the yard about one-half of the time.

1571. What is your position now? I am an assistant conductor.

1572. What do you do in the yard when you are not conducting? I am always conducting now. I was about eighteen months car-cleaning.

1573. On what line are you employed now? On any line; I am an assistant conductor.

1574. We have been given to understand that you can tell us something in connection with these ticket frauds which have taken place? I will tell you all that I know. It is not a great time ago—somewhere about seven or eight months—when Musgrave, who had been an assistant conductor, spoke to me. At the time he spoke to me he was one of the men who had been dismissed at the time of the retrenchment. I had a tram coming in from Newtown, and he got on to one of the cars. As we were coming down he said something to me to this effect:—"How much do you make? Do you make anything out of the trams?" I looked at the man, and thought he was only just having a joke, or something like that. I said, "What are you giving me?" or something to that effect. So he said, "I can tell you how to make something." I said, "How?" He said, "I can tell you." Presently he said, "I can tell you how to rig the bells." I thought at that time that he was joking—that he was trying to take a rise out of me. Nothing more passed between us; he got off the tram then. I do not know whether it was a week or a fortnight afterwards, but it might have been a week afterwards, when he came to me repeating the same thing, and said that if I would meet him at some place he would show me how to do it. I took no more notice of it; I just went on doing my work. He wanted to make an appointment out at Waverley with me.

1575. That was the second time? Yes.

1576. You are sure he wanted you to go to Waverley? Yes. He said that if I would meet him there he would show me how to do it.

1577. What did you say to that? I thought that the man must surely be in earnest. However he got off the tram, and I never spoke to him about it afterwards.

1578. You say that he got on to your tram a second time? Yes.

1579. Was that a Newtown tram again? Yes. I think he was living out at Newtown at that time.

1580. Did you never see him again? Yes; I have seen him since repeatedly.

1581. Did he not refer to the subject again? He was taken into the Service again, and then he seemed to let the matter drop; at least he did not mention it to me again.

1582. You did not broach the subject to him again? No; I never said anything more to him about it.

1583. Is that all the information you have to give us? Yes.

1584. Have you had any conversation with others on the subject? Not that I can recollect.

1585. Have you had any conversation with a man named Keen, another conductor, about it? Yes.

1586. We should like to know what passed between you and Keen on the subject? I believe Keen broached the subject to me, saying something in reference to the frauds. I did not take any notice of it at the time; I did not think there was any truth in it.

1587. How long ago did you have this conversation with Keen which you are going to describe? I could not say exactly; I did not think anything of it at the time.

1588.

Assistant
Conductor
Hannam.

30 Aug., 1888.

Assistant
Conductor
Hannam.
30 Aug., 1888.

1588. Was it before publicity was given to the frauds? Yes; about four or five months ago, I think.
1589. What passed between you? I can hardly recollect the exact nature of the conversation—that is, how it came up. I have known Keen since he was a baby, and he was speaking about these tram frauds; and of course I told him about what Musgrave had said to me.
1590. Well? That is all I have to say.
1591. You told him all that Musgrave had said to you? Yes.
1592. And what did Keen say? He said he was on to watch the man.
1593. That he was watching him? Yes; to catch him.
1594. Did he say that he had been asked to do this by any one? I do not recollect that he did.
1595. Did he not seem surprised when you told him? No; he said that he knew all about it, or he led me to suppose that he did.
1596. And that, in point of fact, he was watching Musgrave? Yes.
1597. Now with regard to your conversation with Musgrave, did he not go much more into detail than you have led us to understand? No; all he said was that he could rig the bells—that was the expression he used—so that you could make the tickets.
1598. Did he not go on to say that he would take all the tickets off you that you made in that way? Yes, of course he did.
1599. You did not tell us that before;—that is an important detail? It is so long ago, and I did not take much notice of the man at the time.
1600. He told you that he would take all the tickets off you that you made in this way? Yes.
1601. Did you still think that he was joking when he went into details of that kind? I did not know what to think—what to make of the man.
1602. But were you not indignant at his proposal? I did not want anything to do with it; therefore it did not trouble me. That is the reason I did not take any notice of the man.
1603. Did you tell anyone else about this? No; Keen is the only man I spoke to about it.
1604. Did it not occur to you as being of sufficient importance for you to report at head-quarters? This man Musgrave was not in the Department at the time. He was not in the Service when he made this proposal to me. I did not take any notice of it; I let it pass.
1605. If I understand you correctly he did not repeat his proposal after he had returned to the Service? No; he never mentioned it.
1606. *Mr. Thompson.*] What did he want you to go to Waverley for;—did he tell you what object he had in meeting you at Waverley? The object was to show me how he did the bells.
1607. As he lived at Newtown why did he wish you to go out to Waverley? He may not have lived at Newtown; and from what I have seen of the man he seems to have lived anywhere-like. He has friends here and there. First he is living at Newtown; then at Waverley; then at other places. That is as far as I can see.
1608. *Mr. Brock.*] Did he name any particular place at Waverley? I cannot recollect that he did.
1609. *President.*] We do not think that you are willingly keeping back any evidence, but you have shown us that your memory will bear a little refreshing;—in the conversations did not Musgrave tell you how much you might make if you adopted his proposal? I do not recollect his saying anything like that.
1610. Did he tell you what he could afford to give you for each pound's worth of tickets? I do not recollect.
1611. Did he not say that he was keeping a number of shops? No.
1612. You are sure he did not? I am positive he did not.
1613. Since these conversations took place, and since Musgrave returned to the Service, have you not been working on the same trams with him? No.
1614. Never? I do not think ever.
1615. You have not been on the same tram? I do not think so—not with him. Of course it would be very hard for me to say. I may have been. Eight months is a good long while.
1616. If you were you had no further conversations on the subject? No.
1617. *Mr. Thompson.*] Have you had an opportunity of seeing Musgrave during this time—of observing whom he was with, and who his mates were? I do not know his mates. The only man he has anything to do with that I know of is Ferrier.
1618. *President.*] Ferrier was particularly intimate with him? He seemed always to be a pal of his.
1619. Had he any other pals, apparently—that is, as far as you know? Not that I know of.
1620. Was he intimate with Fraser? Of course I do not know of anything outside the Department. I have only noticed the man while I have been at work, and we did not know that Fraser was a pal of his.
1621. You noticed him with Ferrier though? Yes.
1622. Did not these conversations take such a hold upon you as to lead you to imagine that there was something wrong going on? Not at that time, because there was a sort of bye-word with conductors on the trams. They would say to one another, "How much are you making?" and so on. You would hear that every day, and it was passed between almost every conductor on the tramways.
1623. Therefore you did not become alive to the fact that fraud was going on? Not till the frauds came out, and then I thought that this man must have been up to it.
1624. *Mr. Brock.*] You said just now that when he asked you to go to Waverley to be shown how the bells were rigged you thought there was something in it? When he asked me to go out I was rather suspicious about it.
1625. The great mistake you made after that was in letting the man come back into the Service. If you had informed the Department Musgrave would not have been readmitted? There was so much of this chaff going on at the time that I did not take much notice of it.
1626. *Mr. Thompson.*] You mean that there was so much chaffing one another? Yes.
1627. *President.*] Did you not have a conversation with Fraser in the corridor just now about these frauds? No.
1628. But you had a conversation with him? About other things but not about the frauds.
1629. You are sure nothing came up about the frauds? No. He simply asked me if I had been examined and I said I had not.
1630. Did he give you no advice as to the evidence you should give? None whatever.
1631. Is he a friend of yours? I never saw the man until he came on to the tramways.
1632. Have you told us everything you know in connection with this matter? Everything I can recollect.

1633. *Mr. Brock.*] Don't you know anything of shopkeepers buying or refusing to buy these tickets? Nothing at all.
1634. *President.*] Do you know Driver Graham well? I know him well.
1635. Did you never have any conversation with him on the subject? Never.
1636. *Mr. Thompson.*] Nor did he approach you on the subject? No.
1637. *Mr. Brock.*] How often do you see him? A great deal when he was on special runs, but not often since he has been on regular runs.
1638. You saw him frequently before? Yes.
1639. Did no one else ever speak to you on this subject except Keen and Musgrave? No one.

Assistant-conductor
Hannam.
30 Aug., 1888.

James Hadwell called in, sworn, and examined:—

1640. *President.*] You are a driver in the Tramway service? Yes.
1641. How long have you been so engaged? I think I entered the Service on the 18th April, 1881.
1642. Seven years ago? Yes.
1643. Are you able to give us any information in connection with these ticket frauds on the tramways? I heard about all I know of it in a conversation which took place in the Bridge-street yard about seven months ago.
1644. Will you tell us what that conversation was? There were four of us sitting in a car—I really cannot tell now what was the cause of the conversation—that is, how the question came up. I think it was first in reference to the trams not paying; we were wondering how it was that they did not pay considering the heavy loading. The four sitting in the car were driver Graham and his fireman, and myself and my fireman. We had been upon special duty about three or four years, and about seven weeks ago the schedule was altered and we were scheduled on to the Waverley line. On this occasion we were standing by and sitting in the car. Graham said, "Well, it is not much wonder that they do not pay." I asked him if he had seen anything queer, and he said there was something which had been troubling his mind ever since he first heard of it. He said, "I do not like to be an informer." I said it was a very unpleasant thing to do, especially among a body of workmen, and that he might cause himself to be victimised through so doing. "Still," I said, "if you have observed any direct fraud I think you ought to adopt some means of letting the Department know of it." I did not make any secret of the matter and I did not hesitate to speak of it. I did not wish to victimise Graham, but I had a number of conversations with different conductors on the subject.
1645. Afterwards? Yes, repeatedly; some of the conductors thought it was hardly possible that it could be done, so one morning, just by way of experiment, we got a piece of wire, and tried it.
1646. *Mr. Thompson.*] Are you not a little bit ahead with your story. You have not told us yet how you came to know that a bit of wire would do the business? I will answer any questions you ask to the best of my ability.
1647. *President.*] You had got to the point in the conversation where Graham said it was no wonder that the trams did not pay? I will go back to that. I think that talk occurred shortly after the Centennial holidays; as is well known, the loading just about that time was very heavy. Graham said, "During the Centennial holidays a certain assistant conductor—he did not mention his name—got on to my engine, and asked me if I had a piece of copper wire I could give him." Of course we nearly always have a piece of copper wire on the engine, and the conductors are aware of the fact. Graham said he gave the man a bit of wire, and he said that the man afterwards took him into his confidence, and doctored his bell in the presence of himself and his fireman, Reid; the conductor requested him to notice the register. I do not know whether they were going to or from Bridge-street. I did not ask him. Graham said that he had a large car on, and what we call a pet; he had an extraordinarily heavy load, and when the tram arrived at the terminus—wherever it was—the conductor came up and opened the register, and showed it to him. Graham said that he heard that the register was continually ringing as the conductor was passing round the cars collecting the fares, but I understood him to say that he noticed that the register had not moved, or, if it had moved, that it had moved but a very little. I think that was about the extent of our conversation. I said I considered that if he did not wish to be the informant direct he should take an indirect course to bring the matter under the notice of the Commissioner. I said I thought it was something monstrous, and that it was to the interest of every employee on the tramways that they should pay, and that if this kind of doing was permitted it was not likely that they would pay. About three or four months after Graham had mentioned the matter to me I was talking to a conductor; I could not say now who the conductor was, but he said he did not believe it could be done.
1648. *Mr. Brock.*] You and the conductor tried it with the wire? Yes.
1649. Try to remember who the conductor was? I have spoken to so many, and I should not like to mention a name unless I was positive; we got a piece of wire, and passed it through the slot, and the conductor rang it, but the register did not move.
1650. You did nothing but put the wire in; you did not open the register? We did not open it at all.
1651. *President.*] You are quite certain of that? Yes.
1652. You are positive that it rang, and did not register? Yes.
1653. *Mr. Brock.*] Where did this take place? At Leichhardt. I am trying to recollect who the conductor was.
1654. We should like to know? I have no idea; we had so many at that time.
1655. *President.*] It would be an important corroboration of your evidence? I have sworn to tell the truth, and I am not going to tell any untruth; whatever questions you ask of me I will answer them truthfully.
1656. It is important because, unless we are much misinformed, this thing cannot be done with a register in good order. That points to the fact that the register which the conductor to whom you were speaking had must have been tampered with? I am afraid I cannot remember the conductor's name.
1657. If we can trace the bell back to any of the men who we know have been guilty of this thing it may be of use in enabling us to detect fraud? I was under the impression that when registers were issued to conductors they kept them as long as they were in working order.
1658. You are sure this happened on the Leichhardt run? Yes.
1659. Quite sure? Yes.
1660. If we could give you a sheet with the names of the conductors, would that help you to remember? Even then I do not think I could remember.

Driver
Hadwell.
30 Aug., 1888.

Driver
Hadwell.
30 Aug., 1888.

1661. *Mr. Brock.*] Would you remember the man's name if you heard it, or if a number of names were written down could you pick it out? I doubt it.
1662. *Mr. Thompson.*] Does it not strike you that possibly this was a man upon whom you felt you could depend—to whom you could talk with some little faith that he would do the right thing. In a matter of this kind you would not go to a good-for-nothing fellow—a gambler or a drunkard—you would go to a man who could be depended upon? As far as that is concerned I know that the man to whom I spoke felt very strongly upon the subject; I, myself, often used to give expression to my feelings, and I did not care whether people liked it or whether they did not. That was the reason I told driver Graham that if I were in his place and did not want to do the thing directly, I would have brought it under the Commissioner's notice in an indirect manner.
1663. *President.*] One thing seems a little strange. You have shown such correct feeling in the matter that it is a little surprising that you yourself did not interfere when you found—as I imagine you did—that Graham did not do what he ought to have done. Did you stir him up occasionally? I stirred someone else up.
1664. You did not report to anyone? I did not wish to. I believe I caused something to be brought before the Commissioner in reference to the matter.
1665. *Mr. Brock.*] Did you take any steps to bring the matter under the Commissioner's notice before you had made the experiment? No; it was after that.
1666. Shortly afterwards? Yes.
1667. It was about four months after Graham spoke to you? Yes.
1668. When did you first hear of the name of the man who took Graham into his confidence? I did not hear it.
1669. You have not heard it yet? I have heard it lately.
1670. Graham never took you into his confidence sufficiently to tell you the name of the man? No; what actuated him I think was that he did not want to make himself a victim.
1671. *President.*] How do you mean make himself a victim? I will tell you how it could be done. Perhaps you have had no experience in the matter. But it would be a very easy thing for collusion to take place between a number of men, and they could worry and harass a certain man until they got him out of the Service.
1672. *Mr. Thompson.*] No matter how rightly he had acted they could band themselves together, and by constantly nagging at him could make his life a burden to him? Yes; and probably they would eventually do something to get him dismissed.
1673. *President.*] Do you know Graham well? I have known him ever since I have been on the road. I came out on to the road on the opening of the Coogee Bay line.
1674. Do you think in your own mind that Graham is above suspicion in the matter? I think so; I do not think he has had any connection with the frauds. This is sufficient to convince me; if he had why should he speak to me about the matter. How did he know but that I would expose it; if he was deriving a benefit it would not be to his interest to mention the matter to anyone.
1675. *Mr. Brock.*] And you say you heard him mention it to three persons? Yes.
1676. You look upon Graham as a thoroughly reliable man? I have never known anything to the contrary. I have always found him a truthful man.
1677. *Mr. Thompson.*] When he spoke to you did he give you the impression that he really was sincerely troubled about the matter, and that he did not know how to act in it? I was under that impression; he said it had troubled him ever since he heard it, and that he believed there were others doing it besides the man who told him. He told me that after this assistant conductor had taken him into his confidence by showing him how he doctored the bells, it troubled him to think that after he had drawn a heavy load from terminus to terminus, he might have done so for nothing so far as the Government were concerned.
1678. *President.*] Do you know the name of Graham's informant? I have heard that it is Ferrier.
1679. Did Graham tell you that Ferrier was the man? No.
1680. You are sure Graham did not tell you? Quite sure; when we used to be conversing about the matter he did not mention who the man was who had told him. I have not mentioned Graham's name. In talking about the matter I have said that a certain driver told me. I did not wish to expose him in any way.
1681. You have never mentioned Graham's name? No.
1682. *Mr. Brock.*] Who told you Ferrier was the man? I would not be positive whether it was Graham who told me after I had heard that Ferrier had been brought before the Commissioner.
1683. *Mr. Thompson.*] The fact of Ferrier being dismissed might have led your mind in that direction? Ferrier was not in the Service at that time.
1684. *Mr. Brock.*] You say you spoke to several conductors about it? Yes; I could not tell you to how many. I spoke also to the loco. men. The conductor with whom I made the experiment spoke very strongly on the subject, and said that if it was possible for it to be done, and if it had been done, the parties who had done it ought to be imprisoned.
1685. Do you remember the names of the others to whom you spoke? No; as I said before, I have spoken to so many I should not like to mention anyone's name unless I was positive.
1686. You made the experiment with only one conductor? That is all.
1687. Was he the only man present when you made the experiment? I think the fireman was there.
1688. The same fireman you have now? I think it was.

Arthur Simpson called in, sworn, and examined:—

A. Simpson.
30 Aug., 1888.

1689. *President.*] We have sent for you to speak to you generally on the subject of the tramway-ticket frauds, but to allow of your mate going away I am going to ask you a question perhaps a little out of order;—were you on the Leichhardt run some four months ago with Hadwell? Yes.
1690. Do you remember a conversation at the Leichhardt terminus between yourself, driver Hadwell, and a conductor, in which the trial of the insertion of a pin in the register was made to see if the register would ring? I remember a conversation, but I cannot say that a pin was used.
1691. Who was the conductor? I could not say who the conductor was. There have been so many talking about these frauds. I could not say who the conductor was on that day.
1692. Do you change about very often on the Leichhardt run? I think the man we had at this time was Matthews.
- 1693.

1693. *Mr. Brock.*] At what time of day was it when this conversation occurred? I could not say. These conversations were a frequent occurrence. Almost every time we sat down to a meal we used to talk about these frauds.

A. Simpson,
30 Aug., 1888.

1694. I mean the conversation as to whether the bells could be rigged by the insertion of a piece of wire? I don't remember trying with a bit of wire, but I remember a great conversation on the subject.

1695. *President.*] Cannot you remember what conductor it was? As nearly as I can remember it would be Connors. I remember a conversation between Connors, Hadwell, and myself, in reference to these frauds. The conductor I remember said that it was a pity that the men could not be caught at it. I would not be positive, now I think of it, that he did not try the bell with a pin.

1696. As Hadwell has told us that the man who did make such a remark was the man who made the experiment with the pin, might it not have been Connors? I could not say. We are placed in this position that we sometimes have five or six conductors in one day.

1697. Did not Connors make this remark? Yes.

1698. And if the driver knows that the man who made the remark and the man who tried with the pin were one and the same it would be Connors? Yes.

1699. We want you to tell us all that has been told you in connection with these ticket frauds before the matter became public property? All that I know is hearsay from driver Graham.

1700. We would like to know something about it;—how long is it since he told you? It was in the presence of my driver and his own fireman.

1701. How long ago? As nearly as I can remember between six and seven months.

1702. Just after the Centennial holidays, was it? Yes; sometime after that.

1703. What happened. What did driver Graham tell you? The four of us were sitting in the car having tea I think. A conversation came up in reference to the trams not paying and there had been great talk in the papers about their being made over to a Company. Graham passed a remark that it was no wonder that the trams did not pay. Then I think my driver or myself asked him why. He then said that they could tamper with the bells. He said that he remembered that on a certain day a certain conductor had come to him and had asked him for a piece of wire. I believe he said that he gave him the wire.

1704. Did he name the conductor? No; he used no names. He gave the wire to the conductor and the conductor wanted him and his fireman to take notice of his register, which they did. He then went away and at the end of the journey he brought the register back to the driver and requested him to notice it again. Graham said he could not notice that the register had shifted, although he had heard the bell going on the journey down.

1705. Then what followed? My mate said that it was a scandalous shame and that it was to the interest of every man in the Department to bring it to light if such a thing existed. Graham said that he would mention no names, but that he had felt very uneasy ever since he heard of the thing. He also said that he would see and report it to someone, which I believe he did. I think that was all the conversation then. I believe one of the shunters called one of us away and that broke up the conversation. At that time we were with special engines.

1706. Did you have after conversations with Graham on the subject? Some months after I spoke to him and he said that he had told someone. He did not tell me who he had told until after the matter was made public. Then he told me that he had told Moran.

1707. Did he not tell you who the man was? He never told me.

1708. When did you first know who he was? I did not know at all.

1709. You do not know now even? I cannot say what man he was referring to. I said that if I were in his place and knew who the man was I most certainly would not wait for anything at all. I myself would have gone to the Department there and then had I known who the man was.

1710. You have heard nothing more from anyone? No.

1711. Have you any other information you can give us? No.

Thomas Musgrave called in, sworn, and examined:—

1712. *President.*] You were a tram conductor? Yes.

1713. For how long? About two years and a half.

1714. Is that including the break? No.

1715. For how long were you employed up to the break, and for how long afterwards? I went on two years last February, and the break was from last August until about the beginning of January.

1716. You were on again from January last up to the time of your dismissal? Yes.

1717. When was that? At the beginning of last month.

1718. We have sent for you, because we wish to have your own statement as to these ticket frauds, which have been committed? I made a statement to Mr. Vernon.

1719. We do not require to know anything about that, nor do we require a repetition of the statement. You have taken your oath to tell the truth, the whole truth, and nothing but the truth. We are in full possession of that truth, but we call you because as I said before we prefer to hear the story from you in your own way, and in your own words. My advice to you is, to tell us all you know about it? Am I a witness in the case, or what am I?

1720. You are here before the Commission to answer the questions you are asked? I am willing to answer what I am asked, and to give a correct statement of anything I know. Of course I want to redeem my character—that is all I want to do.

1721. *Mr. Thompson.*] So far as we are concerned we are in no way anxious to redeem your character. That may be well for you. Our object is to elicit the whole and absolute truth? I understand that very well, but I want to act in my own interest as well as in any other. I thought the Commission was willing to do justice to everyone.

1722. Why do you ask what is your position here? Because I do not know. I was sent for, or subpoenaed, or whatever you call it.

1723. *President.*] You are here as a witness? I know that; I have been dismissed, but on what grounds I do not know.

1724. You are here as a witness to state everything you know? Yes.

1725. And you know that that is a very great deal? I do not know that it is so much. All that I know I have stated before.

T. Musgrave,
30 Aug., 1888.

1726.

- T. Musgrave.** 1726. Don't go back on that; we do not want that. It will not help you in any way whatever? What is it you want to know from me?
- 30 Aug., 1888. 1727. You have told others a great deal; tell us a great deal; tell us all you know of it from first to last. If what you have told others be untrue, tell us that it is so? Now I understand. Of course you must know that anything I have said to anyone else was no secret. As far as that went anything I said to anyone else was to get information for myself. As a matter of fact I mentioned the matter to anyone I might come in connection with—to anyone I might talk to.
1728. Give us a history of your knowledge of the affair. You know that there has been a large amount of cheating in the matter. You know that there has been a large amount of robbery? I do not know. I do not really know.
1729. You do know and we want to know all that you know, beginning from the first hour in which you became in possession of any particulars? It is not so long since I came in possession of any particulars.
1730. When did you join the Service? About two years ago last February.
1731. And within a fortnight of that period this robbery was going on? I beg your pardon, I do not know. I do not know that there was. I could not swear that there was. Like all the public they think there has been, but whether rightly or wrongly has to be proved. I cannot prove it.
1732. I am beginning to think that you are not intending to give us any evidence at all? But you will not wait until I try. I will tell you what I told Mr. Vernon.
1733. We do not require anything of the kind. We know perfectly well that what you told Mr. Vernon, even if there is a smattering of truth in it, is only one hundredth part of what you know of the affair? I do not know about that.
1734. You may beat about the bush as much as you like, that will not do any good. We have got very full information. It was almost a moot point as to whether we should send for you or not? You have sent for me and I will repeat the tale as I told you before. As a matter of fact I knew that the bells could be manipulated. I told Mr. Roberts before I knew anything; well, I told him—there.
1735. How long ago? Well, it might be two months ago.
1736. As a man on your oath that was the first you ever knew of the manipulation of the registers? No it was not; I knew before that.
1737. Now when did you know and what did you know? Before I knew it actually could be done it is about four or five months I daresay. I could not exactly swear how long ago. How I came to know was this: It is about sixteen months ago—nearly two years ago—when a man came to me—a man well known to the men on the tramways; although I could not swear to his name because he gives different names. It might be nearly two years ago when this man came to me.
1738. About two years ago? I don't think it is two years ago. He goes by different names; he has conversations with the different conductors and tries to make himself known among them, and that sort of thing.
1739. Is he in the Service? No; he was living at Parramatta as far as I knew; that is all I could make out about him. He is a mysterious sort of man. I should have thought that he belonged to the Department, and that he was going about trying to find out things and pumping conductors.
1740. Do you mean that you thought he was a detective? Something of that kind. He came to me telling me how he could make money, and how the bells could be manipulated. I did not take much notice of him on that account; I did not know anything before I was knocked off. During that time I did not see anything of him; I was trying to find out if what he had told me was the case.
1741. You have got very quickly down to the time of the break. We want to know a little more of this man's actual conversation? I cannot remember; he first came to me about eighteen months ago. He came to me after my return, when I had been dismissed.
1742. What passed—what did he do—what did he say? He was always trying to make friends with me and taking me into his confidence. I saw him occasionally—not often—and from the time I first saw him I was trying to find out if what he said was the case.
1743. What was the case? Well, as I was saying he came to me about eighteen months ago.
1744. And gave you his confidence. Well what did he say? He told me he could show me a way to make plenty of money out of the trams, and that the bells could be manipulated. I did not take much notice.
1745. Will you swear that you did not say to him, "What is the use of your telling me that; I know more than you do about it"; will you swear that you did not say that? I will. I used to see him once a month. I saw him several times after that, and then after that he said, "What about this thing? You can make something out of it"; and all that kind of talk, I do not remember it exactly, but it was something to that effect. I did not see anything more of him until after my return to the Service. I did not see anything of him all the time I was off, but I was trying to find out if anyone was doing it and who this man was. I was seeing if anyone could give me an idea as to who the man was. I never could see the man or could see anyone who could remember him. I never could make anyone understand who he was. When I had been back awhile on the trams he came to me again, and I asked him to show me how it was done. I would not have anything to do with it, but he used a lot of threats to me, and I thought I would let the matter rest for awhile. I told him that I would not have anything to do with it. He said that he could get rid of the tickets as much as I liked. I said nothing more about it. I thought he thought I would make use of what he had told me, and would have nothing more to do with him; besides, I did not know then that he was not connected with the Department. I do not even know now that he was not, although I have not seen him since. I do not know him now. Well, he showed me how to rig the bells, and a little while after that I thought I would tell Mr. Roberts, so that he could look into the matter and stop the thing from going on.
1746. You did know it was going on then? Well, if what he said was the case. He told me it was. I did not know whether it was or not.
1747. You value your oath a great deal, do you? I do.
1748. You said just now that you did not know whether it was going on;—is not that untrue? It is not.
1749. Are you sure? I did not know the men who bought and sold the tickets, and I did not know any of the conductors who knew that the bells could be manipulated.
1750. You swear that you did not know anything about it until this man showed you? I did not.
1751. You swear to that? I do.
1752. You swear that you had not before this shown two persons how to do it yourself? No, I had not.

1753. *Mr. Brock.*] Will you swear that you never showed anyone how to do it? I told Mr. Roberts. I T. Musgrave. did not tell anyone else.
1754. Will you swear that you never showed anyone but Mr. Roberts how to manipulate these bells? I 30 Aug., 1888. will swear that I did not show another soul. I may have said to the others that it could be done. All that I have said to anyone else would be for the purpose of gaining information.
1755. *President.*] What is the operation of the thing: you have had it shown you? You open the bell.
1756. What happens? When you have opened the bell you push in a brad-awl and touch something inside.
1757. What did you use? I used nothing. This man did it. I never used anything.
1758. Afterwards you knew that your bells would ring without registering? When this man had done it.
1759. Do you mean to say that you never carried the bells? I gave them into the office and they gave me another pair of bells. I had for months before that a pair of bells which are in the office, I suppose, and which can be examined.
1760. When this man had done the thing you took the bells into the office? A few days afterwards.
1761. Tell us what you do to the bells? You take one of the screws out and take the face off. Then there is something at the end that has to be pushed. I could find it if these bells were opened. You push something out of the way, and then, of course, there is a pin put in here. Everybody knew it when this man first talked about it.
1762. Everyone knew it because you were fool enough to show everyone yourself? If anyone spoke to me about it I might have said how it was done. I knew that if a bell had not been opened and a pin were put in it would not ring at all. I found that out by putting a pin in, and I had great difficulty in getting it out again.
1763. Well, what happens when the bell has been opened? The bell rings but it does not register—that is, after they have been properly manipulated.
1764. They do not register although they ring, is that it? Yes.
1765. Therefore a man using a bell of that kind might collect a whole car-load of tickets; it might be at Centennial time when the cars were tremendously crowded; he might ring his bell and there would be no register; he might, in fact, put the whole of the tickets he had collected into a side-bag and rob the Government of the whole lot? Yes.
1766. As you did on the last Centennial holidays? As I did?
1767. Yes, you? I did nothing of the kind.
1768. And you showed others that your register had not moved? I swear I did not show a soul anything of the kind.
1769. *Mr. Thompson.*] You have been talking to us of a man of whom you pretend to know nothing—of a man whom you even now believe to have been connected with the department as a detective;—did you not distinctly tell someone that this man's name was Scott, and that he lived at Granville? I told Mr. Vernon that he told me that his name was Scott. I asked the others, and they gave me different names.
1770. Let us have some of the names, will you? I cannot think of any.
1771. Try and think;—you could not even think of Scott just now? Some one would say that his name was Brown, or it might be any name. I know that he told me his name was Scott.
1772. What was he like? A young man—not old—about 26 or 27. He had a moustache, and a little whisker at the side.
1773. Is he a small man? A medium man.
1774. Smaller than yourself? No; taller than I am I think.
1775. Had he a dark moustache? It was neither dark nor light—between the colours. I suppose you would call it a fair moustache. I think you might call his whiskers at the side, light. He was what you might call a fair man.
1776. This man you say you know nothing of beyond what transpired in these conversations;—thinking him to be a detective of the Department, believing that his name might be Scott or Brown, and that he might live at Parramatta; you say all this in face of the fact that he had previously had such a lot of tickets from you? He did not have any tickets from me.
1777. Will you swear that he never had any tickets from you? I swear that neither he nor anyone else ever had any tickets from me.
1778. Is this man in Queensland do you know? I could not say now.
1779. But he may be? For aught I know I have seen him only once since then.
1780. Since when? Since the time he showed me.
1781. Who are the other men to whom you have seen this man Scott or Brown talking? I have seen him talking to other conductors and to other men outside of the Department.
1782. Who are the conductors with whom you saw him talking? I have seen him talking with several;—with anybody I may have been on the cars with. Perhaps if I saw anyone I knew on the car I would ask them if they knew the man.
1783. But who are the conductors? The conductors are nearly all on the Waverley line.
1784. Name anyone of them, will you? I could not name any of them in particular. I saw him talking to almost anyone of them.
1785. *President.*] There is such a thing as committal for contempt. You are carrying on pretty well but you may go too far. You know these men as well as you know yourself, yet repeatedly when you are asked to give their names you refuse to do so? There are a number of men on the Waverley line and perhaps he would not be talking to them.
1786. But you have just sworn that he was? Perhaps he may have passed a word to them. He generally stood on the platforms of the cars.
1787. Give the names please? There are a lot of them.
1788. Name one? There is Francis. There is Steele. I cannot think of the names now; I almost forget them, and I might not say the names of the men to whom he was talking.
1789. But you have sworn that he talked to all of them? Not all. I could name the men on that line. I have asked these very men if they knew the man. I have pointed him out to them and have asked them if they knew him.
1790. You swear that to these two conductors you have named you have pointed him out? I do not say that I pointed him out to them.
1791. For about eighteen months you seem to have been acting the part of a detective, trying to find out who this detective was? It was not my business but any one I accidentally saw I may have asked about him. He would sometimes get on to my car and stand on the platform.
- 1792.

- T. Musgrave. 1792. From the time he first spoke to you you were continually asking persons to whom you had seen him speaking if they knew who he was, what was his business, what was his name, and so forth? If there was any one alongside of me I knew I may have said "Do you know that man"; or "What is his name."
- 30 Aug., 1888. 1793. Will you name any one single man in the Tramway service to whom you have spoken about this man, and of whom you have asked his name? - I have asked nearly all. I cannot exactly remember now who it was that I did ask.
1794. You know perfectly well that you did not ask any one? That is not right.
1795. You find yourself involved in another untruth and you do not know how to get out of it? No; I am not.
1796. *Mr. Brock.*] Name any one single man whom you asked? I believe to the best of my recollection that I asked Francis and Munro.
1797. You pointed him out to them? I did. He seemed to be continually changing his name. One would say it was so and so; another would say that it was Brown, and so on. I have asked people off the tram his name and they have said different things, perhaps one thing and perhaps another.
1798. *Mr. Thompson.*] There is too much "perhaps" about you. We do not want so much surmise? I cannot swear to it.
1799. But we want you to swear to the things you say because you are sworn? I understand that.
1800. *President.*] You have already sworn that you have pointed out this man to several conductors and that you have asked them who he was. Name one of these conductors? I could not swear but I am almost positive that I asked Munro and Francis. Some said they did not know his name. Others said his name was Brown or something of that kind, giving some other name which I cannot remember.
1801. Some name equally convenient? I do not remember the names they did tell me.
1802. At the time you suppose you asked Munro where was he and where were you? We were on the cars together. He would be collecting one and I would be collecting the other. I would get on to his car probably and would say "Do you see that man there; do you know him?" Perhaps he would then say what he thought his name was. I never knew any one that knew him by the name of Scott, the name he gave me. I have seen him talking to Yelland.
1803. Did you find that any of these men knew who this man was? Not for certain.
1804. What names did they give? They would say —
1805. Well what did they say? They said I suppose whatever name they thought it was.
1806. Come what names did they give you? I cannot think.
1807. Did the name agree with what you had been told? It did not agree with the name he told me, Scott.
1808. What name was given to you as being the man's name? Scott.
1809. But by the others I mean? I cannot think of the names. There were several names. Some would say that they did not know him at all and that would end the matter. I could not find any to say that his name was the same as the one he gave me.
1810. *Mr. Thompson.*] You asked, a little while ago, if you were here as a witness. You might have known that from your having been sworn to tell the whole truth. Now this is our power and your right: "Any witness appearing before such Commissioners shall have the same protection and shall be subject to the same liabilities in any civil or criminal proceeding as a witness giving evidence in any case tried in the Supreme Court." I may as well tell you that for prevarication a witness can be sent to gaol by the Judge before whom he is giving evidence. We have the same power. Any witness refusing to answer straightforwardly can be sent to gaol until he pleases to answer. We have the same right. A witness who, in the opinion of the Judge, is telling an untruth can be committed for perjury. We have the same right? I will answer your questions as best I can. I can't do more.
1811. I think we are all agreed that you are not answering our questions straightforwardly. I am sure that you have hardly told one word of truth since you have sat in that chair. I may tell you that there is yet another punishment beyond those which I have enumerated. Any witness who shall refuse to answer the questions put to him by the Commissioners is liable to a penalty not exceeding £20, to be recovered in a summary way before any two Justices of the Peace; and if the sum is not paid the witness may be imprisoned for six months? I do not see what that has to do with it. I am answering your questions as well as I can.
1812. We have given you plenty of latitude. Knowing what we know about you and this matter, we can understand that you are unwilling to state anything which would hurt yourself? I do not think anything can hurt me.
1813. Don't let us have any such nonsense as that; it is such a transparent absurdity. You surely don't think that when three men have come to our age a comparative boy like yourself can stuff such nonsense as that down our throats? Of course I have not had experience in any kind of law.
1814. But you are quite old enough to know the difference between telling the absolute truth and cock-and-bull-yarns like those which you are trying to stuff down our throats now. Listen to what you have told us. For nearly two years you have been on the track of a man whom you have supposed to be in the Department. You never could find a man who knew his name and business—you say he was going under all sorts of names—and, notwithstanding all your exertions (you having been in the Department all this time) you have been unable to find out anything about him, even his right name? I only used to see him occasionally on the cars; I could not get off the car and follow him to see where he went.
1815. How do you know that he lived at Granville; is it Granville or Parramatta? He said between Granville and Parramatta.
1816. *President.*] When was the first time you handled a pin in connection with your register? When he showed me the way it was done.
1817. When this unknown man showed you? Yes.
1818. And that is how long ago? Not more than a few months back.
1819. A few months may be eight or ten or twelve? It is about three or four months ago; I could not say the exact time.
1820. Up to that time you swear that you never handled a pin or a piece of wire in connection with your register? Not up to that time. I tried if it could be done when he told me that it could. He told me that it could be done with a bit of wire.
1821. When did he tell you? He did not tell me anything at first. He said nothing about the bells when he first met me.

1822. Not very long ago you swore that at the outset he said that the bells could be faked? He made friends with me at first, taking me into his confidence. He did not jump on to the car and tell me right away. He gave me cigars several times, and talked to me, asking me about the working of the trams, and so on. T. Musgrave.
30 Aug., 1888.
1823. Still I am anxious to know when was the first time you made use of a piece of wire in connection with your register—I want a straight answer to that question? I cannot think; it is a good while ago since I first tried it, and it would not strike; that was directly he told me, and I dare say it is over twelve months ago.
1824. You tried it then and it would not answer; how soon did you make it answer? I did not make it answer. He showed me. He opened the bell and pushed something inside with a brad-awl, I think.
1825. When was that? A few months back.
1826. How many? About four months ago—about two months previous to the time when I told Mr. Roberts about it. It might have been more, but I could not swear to the time.
1827. You had your bells rigged in this way for two months before you told anyone about it? Before I told Mr. Roberts I did not have the bells. I gave them in to the office.
1828. When? I could not say.
1829. You carried the bells after they had been rigged for two months? No, not that long.
1830. How long? Not long; they broke. We often have to change the bells for that reason. The last pair I had for some time.
1831. How long did you have these bells after they had been rigged? I could not swear,—but until they broke; until they got out of order.
1832. That might be six months? It was not six weeks.
1833. How long was it from the time they broke down before you got another pair? I got another pair as soon as I got into the yard.
1834. It was not a loss of £500 to you that time? It was not a loss to me.
1835. The same as when you were knocked off in the retrenchment time? That was not a loss to me.
1836. You know that there was a loss of £500 to you when you were off? I beg your pardon.
1837. You know you said it was? There was no loss to me except the pay when I was off.
1838. Why I thought there was a clear loss of £500 when you were off? There was a loss of nothing to me except my wages.
1839. Will you swear that you did not say that there was a loss of £500 to you? I swear that there was no such loss.
1840. Will you swear that you did not tell anyone that there was a loss of £500 to you? I swear that I never said anything of the kind. I never said that on any occasion.
1841. It may have been twelve months ago, you say, since you first tried this business with your register? It may have been that since I tried, but it would not answer. It was not until some time afterwards—when my bell had been opened—that I succeeded.
1842. It is not twelve months ago since your register was put in the condition necessary to the working of this fraud? No.
1843. Well, how long ago? I cannot say. A few months back. It is twelve months since the man first told me that it could be done.
1844. But you say that you tried it at once? And found, as I thought, that it could not be done.
1845. How many months elapsed before the successful experiment was tried? I went off the cars, and did not see him any more of course.
1846. We want no of course? It is twelve months since I left the trams, at the time of the retrenchment. Just before I left he told me that the bells could be manipulated. I saw no more of him then, but I was trying to find out from others if it could be done. I thought the man was sent to me as a sort of trap, to see if I was doing anything of the kind. I did not know till I came back on the cars that it could be done.
1847. You continued to make inquiries about the man when you were off under the supposition that he was a detective? Well, several times I inquired about him when I came back. I did not think somehow that there was anything in it, and I thought it a frivolous thing to go and say anything about it.
1848. Just about that time you said you were £500 out of pocket by this frivolous thing? If anyone has said that it is untrue.
1849. You are sure you said nothing of the kind? Sure. I did not say anything of the kind to anyone. It stands to reason that a man could not make it, however much he tried to do it.
1850. It was not as good as that then? I am sure it could not be.
1851. You can speak because you have had such experience? I have not had experience in that way, but your own common sense would tell you.
1852. How much did you make; you had better tell us all about it? I did not make anything.
1853. How long were you off the cars at the time of the retrenchment? We left the day after eight-hours day, and when I came back to work I did not go on to the cars at once. At first I went into the yard; then I was on the cars again—on and off.
1854. When did you go on to the cars again? I was on and off. They used to send me out when they were short of men. I think I went on permanently again at the beginning of January.
1855. You were off the cars three months, and there was a little drop of £500 in that time? Any one with common sense must know that it is not true.
1856. It does seem almost too startling to be true. We were under the impression that you made only a tenner a week. That is what you told someone else? In the way of joking I may have said so—in trying to find out anything they might know.
1857. You did say something of the sort to someone then—that you were making a tenner a week? I do not remember.
1858. You said it was as good as a tenner a week? I did not.
1859. But you admitted just now that you might have done? I do not admit saying anything about a tenner a week. But I have said to others, “Do you know about the bells?” or, “How much are you making?” That is often said by several conductors—by anybody perhaps; by anybody at all. This kind of talk is always going on—as to what they are making, and that kind of thing. We were often joking down there in the room.
1860. Such a man as Hendy could not make a penny at the work—he was “too big a bloody fool,” was he not? I do not know. He was a conductor. 1861.

- T. Musgrave. 1861. Don't you know what happened to him? Of course I do.
1862. Were you not astonished at it? Yes; I was.
- 30 Aug., 1888. 1863. Did you not say, "He is too big a bloody fool to be at that game?" Yes; I might have said so. Almost any one would agree that he is a thick-headed fellow. I did not think he would be foolish enough to do anything like that.
1864. He was not the kind of man to make a tenner a week, as you said you did for the last two and a half years? It is about two and a half years since I first went on the trams, but altogether I have been employed only about two years.
1865. That would about correspond with the snug little amount you have ready now—between £1,300 and £1,500—ready to buy your public-house? Oh, that is nonsense.
1866. You have not anything? I have not got anything.
1867. *Mr. Thompson.*] Perhaps you blew it all at the gaffing schools? I never visit gaffing schools; I cannot say about them; I never did anything in that way. I gamble a little, but not to any extent; I could name nearly every time I have gambled in my life; I have not done so more than an ordinary man would speculate.
1868. *President.*] You think that you went on to the trams again permanently in January—that is, when you succeeded in getting this thing right? It was sometime after I was on the cars that I succeeded in knowing it.
1869. Just a little while ago you gave us to understand that soon after you came back this successful experiment was made? No; it was not soon after; it was some little time after.
1870. When was it that you made this public exhibition of your skill. Plenty of them saw it? I asked several if they knew anything about it. I told several—not exactly together—that it could be done. That is, I said I had heard that it could be done. In getting conversational with the men I asked them if they knew anything about it. I never found any one who did know anything about it.
1871. Bar yourself? I did not know it could be done at the time of which I was speaking.
1872. Why did you say so often, "No wonder the trams do not pay?" That was when I found out about this.
1873. But you say you did not find any one who did it; still you said to several people, "No wonder the trams do not pay?" Yes; and I have often done that.
1874. Why? Because I had found out that the bells could be manipulated.
1875. What does it matter about that if they never were manipulated? I do not say they were not.
1876. You say you knew that it could be done, but that you did not know any one who was doing it? I thought they must be doing it. If this man came to me I thought he must go to them.
1877. So that you became at last perfectly convinced that others were doing it—just about as convinced as if you had told several how to do it? I did not tell any how to do it.
1878. You swear beyond the possibility of contradiction that you never told anyone how to do it? Bar that it was done with a bit of wire, I never opened the bell and showed it to anyone.
1879. You never opened any of these bells? With my own hands I never opened any of them.
1880. It was done for you? He showed me how it was done. That is the only pair of bells that I saw opened. It was only done once in my presence.
1881. You have already told us that your bells were meddled with twice? You don't call putting a pin in meddling.
1882. You said that twelve months ago this man showed you how it was done? I did not say so any more than putting a bit of wire in the bells. He said that the bells had to be opened.
1883. You said that he stuck a brad-awl in, that your bells broke, and that you returned them to the office? That was sometime afterwards.
1884. When you had another pair of bells then he showed you how to do it? He did not show me how to do the next pair. They were never touched in my possession. They were numbered, and I suppose they can be found now.
1885. When and where was it that this man used a brad-awl to your registers? He jumped on to the cars when we were running through from Bridge-street to the terminus.
1886. What terminus do you mean? Bondi Junction.
1887. Where did he get in? He jumped in at Bridge-street.
1888. Was this a service tram? Yes.
1889. *Mr. Brock.*] You had no passengers on it—except him? None.
1890. *President.*] When did he bring this screw-driver out and do the thing? When we were running through.
1891. Where had you got to when he did it? We were going through the streets.
1892. Where were you standing? I was sitting inside the car with this man with the windows shut. He took hold of the thing and took a screw out. Then he opened the register. I was watching him all the time. He just pushed something with his brad-awl and then closed them up. I put a bit of wire in the slot, and found then that it could be done.
1893. If you got a pair of registers in good order and inserted the pin they would not stop registering? They would not.
1894. The registers must be opened before they can be put in a position in which they can be used to defraud? I believe so.
1895. When this has been done they will ring without registering? Yes.
1896. That is why I am anxious to fix the date of your public exhibition—because it might almost be called so? Yes, I made no secret of it.
1897. I refer to the occasion when you collected a whole car-load of fares without registering them? I do not remember the occasion.
1898. When you showed that your register had not moved? I remember showing that it could not be moved. I showed Graham, the driver.
1899. *Mr. Thompson.*] Who do you say? Graham the driver. It was just directly after this man had done the screw-driving business. I had been talking to Graham. He seemed to know a lot about the conductors. I asked him if he knew anything. He said he did not know anything about it, but he knew there must be something of the kind going on.
1900. *President.*] When was your first conversation with Graham and what was the purport of it? Graham being a driver I have had a lot of conversations with him. I cannot call to mind the days of the month.

1901. *Mr. Thompson.*] Well let us hear what your first conversation with Graham was, if there be such a man? There is such a man as Graham, of course. T: Musgrave.
1902. Why of course? Well I should think so. 30 Aug., 1888.
1903. Are you sure that you are right? That is the name he is known by on the trams.
1904. Well what did you say to Graham? I asked him if he knew anything about it, and he did not know that it could be done, although he felt convinced in his own mind that such a thing was going on, as he knew people made money by it.
1905. What is the date of this conversation? I cannot think. I know he mentioned the names of some conductors who had been dismissed for dishonesty and so on, men I did not know and who were not on the cars then.
1906. What are the names of those he told you had been dismissed? Chandler, I think he said was one of them. I think he said that one of them had taken an hotel somewhere in the country.
1907. *President.*] Have you taken an hotel yet? No.
1908. *Mr. Brock.*] Do you remember making this little speech, holding up a piece of wire at the time: "This is as good as a tenner a week to me"? I do not remember ever saying that.
1909. *President.*] You have some memory and we want you to make the best use of it—to go back to these conversations with Graham, and to give us the probable date of the first one? I never anticipated anything of the kind, or I would have taken notice of it. I can get very near the date though.
1910. That will do for us? I don't think I said anything to Graham before I left at the time of the retrenchment. I do not think it is twelve months ago but I am not quite sure.
1911. Shall we say that date? I do not know whether I first spoke to him twelve months ago or whether it was after I came back.
1912. When did you come back? Early in January.
1913. Perhaps it was about then that you had this conversation, although you do not seem to think it was? I could not be sure. There is nothing definite about it. I am nearly sure that it was not till I came back.
1914. Will you swear that you had no conversation with Graham on this subject before you were dismissed at the time of the retrenchment? I would not swear that I did not, but I do not think I did.
1915. We are anxious to hear the precise details of this conversation? Well, as I have told you, I asked him if he knew anything about it.
1916. Cannot you give us any more details? I only asked him if he knew anything about the bells being manipulated. He said, "No." I said, "I think they can be."
1917. What made you ask Graham this? Well, you see, we were often talking.
1918. He was not like yourself, a conductor? But he seemed to know a lot about the other conductors, and about the conductors who had been dismissed. He said they had made a lot, and there was that kind of talk. I said to myself, "This man must know something about the bells." I thought that he must have been told, so I asked him if anyone had told him that the bells could be manipulated. He said, "No, but he was sure that something could be done with them, as he knew these men must have made money out of them." "Some of them," he said, "had taken hotels, and were in good positions." I never said anything more to Graham then.
1919. What did you say? That is all I can remember. I think I said, "I am nearly sure it can be done."
1920. Was that the time you told him you were doing it? I did not tell him I was doing it.
1921. Will you swear you did not? I said it could be done. I showed Graham how it could be done. I put the pin in and showed him.
1922. Where did you get the wire from; what sort of wire was it? It was a bit of thin wire.
1923. Do you carry it with you? I might have a pin. There is a pin in my waistcoat now.
1924. I said nothing about a pin; I suppose you always carry a pin, and then you always have it ready? I do not always have one.
1925. Did you ever find yourself short of a pin? I don't understand what you mean.
1926. I mean when you wanted one to fix up your register to cheat with? I did not do so.
1927. You never found yourself short of a pin? I never wanted one. I never did anything of the kind.
1928. You never had any need to ask anyone else for anything—for a piece of wire? I believe I asked Graham for a piece of wire at the time I showed him how it was done.
1929. That was after he told you about these fellow-workmen—that is, about the hotels and that sort of thing? No, not at that time; it was on another occasion.
1930. I advise you to be very careful; we have cautioned you two or three times; you will get yourself into such a pit directly that you will find yourself unable to get out again? I am giving you as correct a statement as I possibly can.
1931. Where was this man who told you his name was Scott when you were showing this thing to Graham? I do not know.
1932. You said just now I thought that Scott showed it to Graham? I did not say so.
1933. But you inferred it? I did not.
1934. Who was present when you showed it to Graham? Nobody.
1935. Was no one looking on who could see what you were doing? Not that I saw. I went up to Graham about the first time I found it could be done. Of course I spoke to him before I knew for certain that the bells could be manipulated. I was trying to find out if it was so. After I found that it could be done I got on the motor, and said to him, "It is a fact about these bells, it can be done." Then I showed him how it could be done.
1936. How long after that was it that you borrowed the piece of wire from him? It was about that time.
1937. I thought you led us to suppose just now that you had a pin on that occasion? I could not say whether it was a pin. I do not know whether I got a piece of wire from Graham or not at that time or at any other time. I remember showing Graham how it was done. This man had been saying, "You can do it with a pin or bit of wire," and that sort of thing. Whether I had a pin, or whether I got a piece of wire from Graham, I do not know.
1938. Just now when you were illustrating the matter you took a pin from your waistcoat, and said that you put a pin into the bell; the idea of the piece of wire seemed to dawn upon you when I first mentioned it, and when you saw what a mess you had made of it? Not at all; the man who told me said that it could be done with a pin.
1939. Come back to this bit of wire-borrowing; you say that it was not when Graham was telling you about the hotels and the money-making—that it was after that? Perhaps he repeated the same yarns at that time, because I have often been talking to him and to others. 1940.

- T. Musgrave. 1940. Did you not say just now that it was not at that time? It was not at the time of the first conversation I had with him that I showed him how it could be done. It was after that that I found out that it could be done, and I got on to the motor and told Graham that I knew all about it.
- 30 Aug., 1888.
1941. That was not the time you borrowed this piece of wire from him? I do not remember whether I got a piece of wire from him.
1942. Why, in answer to one of my questions you yourself introduced the bit of wire; I did not say that you had borrowed it from Graham. You yourself suggested the idea. I did not say that you had borrowed a piece of wire from anyone? —
1943. Are we to understand now then that you made a mistake in saying that? I think I did get a bit of wire, I know that when I tried the thing myself I used a pin.
1944. Where you got the bit of wire you are not quite certain about. What did you do with it? I showed Graham how it could be done, and then threw it away again.
1945. Who picked it up? I do not know that it was ever picked up.
1946. You do not know whether anyone was looking on or not? There may have been, but I cannot see how there could be.
1947. Where were you when this happened, when you borrowed this piece of wire? I do not know for certain that I did do so, but to the best of my belief I got a piece of wire from Graham to show him how it could be done.
1948. Were you between stopping places at the time? Yes; we were going along.
1949. You were on the motor? Yes.
1950. What were you doing there in the middle of your business, when the passengers were getting up and down? It was a slack time.
1951. You just jumped on to the motor and said, "Graham lend me a bit of wire; I have dropped my pin?" Nothing of the kind.
1952. You yourself have mentioned both a pin and a piece of wire in connection with the business? I said that it might be done with a pin.
1953. *Mr. Brock.*] How did you come to give this man who showed you a ride on the service car? He jumped on. People often jump on in that way, when we are running through.
1954. *Mr. Thompson.*] During the adjournment for lunch you have had some little time for cool reflection; I hope you have made up your mind to tell us the truth? I never had any intention of doing anything else.
1955. *Mr. Brock.*] You had better begin now in the middle of the street, you have been on both sides of the road, you have been backwards and forwards, and you have almost stood on your head? But you have been asking the same questions again and again. You do not seem to understand the way I answer them.
1956. How can we understand when you say one thing now and another thing 5 minutes afterwards? But I have not done so.
1957. *President.*] We want particularly to get from you what we have not yet got? If you will ask me.
1958. But you don't let me finish. You are constantly stopping me in the middle of my questions. We are anxious to get from you what we have not yet got, and that is, the date on which you had this ride in the service tram from Bridge-street to Bondi with this Mr. Scott, *alias* Brown, or *alias* anything else. When did that ride take place? As far as I can recollect it was from this date about five months ago.
1959. You mean to say that it was after you returned to duty? Some time after I came back, I think.
1960. Do we understand you to say that it was after this ride to Bondi that you made the exhibition to the man you described as Graham? Yes; it was a little time after that.
1961. Which was after? It was after the man showed me, of course.
1962. The ride to Bondi was before this wire business? Before I actually knew that the thing could be done this man told me that it was done with a wire or a pin. This was long before I knew that it could really be done. You don't seem to understand me. This man told me that it could be done with a wire or a pin put in the bell; I tried it and it would not answer. That is as far as I got for some months.
1963. But you did not give what I call the exhibition until you had fixed the thing properly. You did not show these people the trick before it would work? I did not show it to anyone at all. I said that it could be done.
1964. You said this morning that you showed how it could be done? After I had found out that the bells could actually be manipulated.
1965. Not till then? Not till then; I only showed Graham actually.
1966. *Mr. Brock.*] What you really mean to say is that you did not show anyone until you knew how to do it yourself? How could I? I said, as I had been told that it was done with a pin or a bit of wire, I was thinking that if a thing inside required to be moved every time you wanted the bells not to register, it was a foolish thing, and could not be done. He said to me, "It is not that at all; you insert this pin when you don't want them to register. When you want them to register you pull the pin out."
1967. *President.*] How long after this thorough showing in the special ride to Bondi—? It was the same time.
1968. Why do you not allow me to finish my question? I knew what you were going to ask me. It was what you said just now you wanted to get at—what time it was that I showed Graham.
1969. Why I did not even mention Graham's name? Well I knew what you wanted to know.
1970. *Mr. Thompson.*] You are following us with regard to Graham;—is there such a man? That is the name I have known him by; it is the name he has gone by ever since I have known him.
1971. If he is a driver he must have some one helping him;—what is the name of his fireman? His name is Reid.
1972. You are quite certain that is the man? Quite.
1973. *President.*] How does he spell his name? I do not know.
1974. Well how long afterwards was it that you showed Graham? I showed Graham about the same time that I was shown; the same week, I think, or very shortly afterwards.
1975. How long after the Centennial holidays was it? I cannot think; I think it was since then.
1976. *Mr. Brock.*] You are sure it was not before that? It is since then that I found out—that is, that I actually knew.
1977. That you knew how to do it? Yes.
1978. How long after the Centennial was it? I cannot say as regards the Centennial; I cannot remember.
1979. Do you remember when the Centennial holidays were; do you remember the unveiling of the statue? Yes.

1980. You also remember the laying of the foundation-stone of the new Houses of Parliament? I do not recollect the exact dates. T. Musgrave.
1981. *President.*] You were doing so well as a general thing that you cannot remember the enormous amount you made during the Centennial holidays, the whole car-loads of tickets which you manipulated and took away? It is no use asking me that; it is nonsense talking like that. If you have such a belief as that it is of no use asking me questions. If you say I did that it is of no use asking me anything else. 30 Aug., 1888.
1982. I do say that you did it? I can say safely that I never did anything of the kind.
1983. You may discover that you cannot do so safely? I can safely say that I did not do any such thing.
1984. *Mr. Brock.*] Some short time ago you were injured in some way? I was ill.
1985. Where were you stopping then? At Mr. Colls'.
1986. Who is Mr. Colls? He is a brother-in-law of mine.
1987. Is he employed in the tramways? Yes; he is in the office.
1988. *Mr. Thompson.*] Are you a married man? No.
1989. *Mr. Brock.*] Did you ever live at Newtown? I live in Newtown now.
1990. I thought you were living with the Colls? I have been living in Sydney up to a little time ago; I have lived in several places. Up to the time I was sick I was living with the Colls'.
1991. Were you living there the whole time you were sick? Yes.
1992. That you swear? Yes.
1993. Do you know a house in Fitzroy-street, off Crown-street? Yes.
1994. What sort of house were you running there;—were you keeping a woman there? I was not.
1995. Was this during the time you were laid up? I was not on the cars at all then.
1996. I am not talking about the cars;—were you never at that house at night during the time you were on sick leave? What house?
1997. The house in Fitzroy-street? I was not on the cars at the time; it was the time of the retrenchment.
1998. Were you never there during the time you were laid up on sick leave? No.
1999. You never were in that house, then;—you swear that? At the time of the retrenchment —
2000. I am not talking about that; I know where you were living at the time of the retrenchment; you were living with this woman; but when you were on the sick list were you stopping in Fitzroy-street with her? That is not so. At the time I lived in Fitzroy-street I was not on the cars at all. It was the time of the retrenchment; that was the time I lived there.
2001. I know you were there during the time you were ill? I was not.
2002. You may say what you like, but you are making a big mistake? I am doing nothing of the sort. You are mixing up one place with another. The time I was in Fitzroy-street was the time of the retrenchment—from last October until January. That is the only time I lived there. I was there a few weeks.
2003. You have not been in the house since? No.
2004. Not since you returned in January? No; I came back to work in January, but I was not on the cars.
2005. *Mr. Thompson.*] Tell us who was living in Fitzroy-street? A man and his wife—people named Summers. I was boarding there.
2006. Who were there? Other boarders. They were keeping a boarding-house.
2007. Who was the woman you used to sleep with? I do not see that that has anything to do with the matter.
2008. That is just what we happen to want to know? I refuse to tell you anything about it; I understand that I came here to explain what I know about the tram frauds.
2009. And we want to know of your connection with this particular woman? Yes; well?
2010. How long will you take to consider whether you will answer the question or will you go to gaol for refusing to answer. For refusing to answer a question you can be sent to gaol, and be kept there until you answer it? All right.
2011. Then you distinctly refuse to answer the question? Yes.
2012. Were you keeping that woman there? No.
2013. As you will not answer the other question will you give us a description of the woman with whom you used to sleep? Anything you ask me in connection with the tram frauds I will answer, but anything in connection with my private affairs I will not answer. I refuse to answer the question.
2014. Would you sooner go to gaol? I will not answer anything in connection with my private affairs.
2015. *Mr. Brock.*] We will defer that matter until the close of your examination. You have been intimately acquainted for many months with this man who you say showed you how to open the registers? I knew him by the name of Scott.
2016. I know for a positive fact that you do not know him by the name of Scott. You know his name intimately, and you will give it up? I do not know him by any other name.
2017. You know that every time you say you do not know his name you perjure yourself? I only know him by the name of Scott.
2018. You know it is not Scott; you know that you know him intimately. You have been seen with him dozens of times within the last month. You know a friend of his by the name of Scott, but you do not know him by that name? I do not know any friend of his.
2019. You do, sir? I do not.
2020. I know that you do? I do not.
2021. *Mr. Thompson.*] You appear to think that you have kept everything secret; but you have been watched, and everything you have done down to the time of your going to bed with this woman at night has been noted? That has nothing to do with me.
2022. *Mr. Brock.*] I again press you to give up the name of this man; I know for a fact that you are intimately acquainted with him, and that you have been for some time? —
2023. *Mr. Thompson.*] I note that this is the second time you have deliberately refused to answer a question put to you by a member of this Commission. I will pass on to other questions, leaving these two other matters still open to be dealt with. Before the adjournment for luncheon you told us that it was about five months since you showed to this man Graham the method in which the bells were rigged? It was about that time that I showed him the actual way of rigging them. Before that I had conversations with him.

- T. Musgrave, 2024. When you showed him five months ago, did you take the face of a bell off, and show him how it was meddled with inside? No.
- 30 Aug., 1888. 2025. You must be telling us a dreadful untruth now, or else you told us one before. If your bell was correct and had not been meddled with, how could you show him how the thing was done by merely sticking a pin in. You have told us that if a bell is in good condition the mere sticking in of a pin will not do the thing? You do not seem to understand. When once a bell has been opened and a brad-awl has been put in and something moved.
2026. I know about that. You set the ratchet-wheel wrong by running a brad-awl between the two wheels. You put them so that they would not catch—so that they would not travel truly? I only showed Graham how by putting in a pin the bell would not register.
2027. But you said before that putting a pin into a bell that had not been meddled with nothing could be done. Now this bell must have been meddled with, or you must have meddled with it, then, in order to show Graham what you say you did show him? It was just a little while after my bell had been meddled with that I showed Graham. That bell I afterwards gave in.
2028. *Mr. Brock.*] These are the bells you allowed to be meddled with by a man whose name you did not know. You did not even know his name, and yet you allowed him to do this thing to your bells. Is that what you ask us to believe? That is what I did.
2029. *Mr. Thompson.*] Supposing that five months ago this man showed you how this was done, and experimented on your bells for your amusement in this service tram, it is a matter of absolute fact that for three months afterwards you kept these bells in your possession before you handed them in? Not the same bells.
2030. How long was it after this man did this thing for you that you handed in the bells to Mr. Roberts? I could not say; the bells went wrong a little while afterwards, and I handed them in and got another pair.
2031. How long after this Mr. Scott, *alias* Brown, *alias* Perhaps, meddled with your bells did you hand them in? I could not say for certain.
2032. *Mr. Brock.*] But we should like to know something like the time. Was it a month? I do not think it was.
2033. Was it three weeks? I could not say how long it was. It was under a month.
2034. *Mr. Thompson.*] Were you quite convinced, when this man showed you five months ago that he was right, that the thing could be done? Of course I was.
2035. Then if you wanted to hold yourself out as an honest young gentleman, why did you not tell Mr. Roberts or someone else at once? This man used threats to me; I thought I would let it quieten down for a little and then tell Mr. Roberts.
2036. *Mr. Brock.*] He used threats to you you say? He did.
2037. That is not true. You know it is not true. He never used threats? He did.
2038. Why did you not tell your brother-in-law. You lived at his house? I did not see any cause to tell him.
2039. You lived with him, an official in the Tramway Department, for two months. You carried during the whole of that time bells with which the Department was swindled; and you only gave them up when you were compelled to do so? I did not carry the bells for two months and I did not swindle the Department.
2040. There is not a bit of evidence to show that you put the bells right during that time? I never touched the bells afterwards. I gave them in. I should not know what to do if I did touch them afterwards.
2041. Your bells had been tampered with with your permission, under your own eyes, and you kept them until they went so wrong that you could not use them any longer? The bells often get out of order.
2042. Will you tell us how much in the shape of money or tickets you returned to the Department that your bell did not record at all? I did not give in any.
2043. Although your bell was not registering? When one bell goes wrong you ring on the other. For instance, if the ticket bell goes wrong you ring on the cash-bell until you get in; it is only a question of one trip. You might have a bell which would break down on the first trip. That does sometimes happen.
2044. *Mr. Thompson.*] But suppose both bells had been tampered with? Both could not have been tampered with.
2045. Only one bell. Was that the ticket bell? Yes.
2046. *President.*] Do you want to make us believe that during these three or four weeks you had your register in the condition in which this man handed it to you; you never inserted a pin at the foot? Never to defraud the Government.
2047. You put it in several times, but it was only just for a bit of fun? I put the pin in when I showed it to Graham.
2048. How many times did you show Graham? Only once.
2049. *Mr. Thompson.*] How many times did you let Graham—if there is such a man—and his fireman, Reid, see that you were playing this little game? I did not show Reid at all.
2050. *Mr. Brock.*] Who else besides Graham? No one.
2051. You will swear that? I will swear it.
2052. Graham is the only man you ever showed how to do it? Yes.
2053. Did you ever charge £10 to anyone for showing them this secret? Never.
2054. And tell them at the same time that money was to be made out of it and that you would take a tenner out of them to let them know how it was done? Nothing of the kind.
2055. Did you not also say that you would take the bells home and fix them up for them? No I did not.
2056. *President.*] Did you not receive £50 worth of tickets from one conductor whose bells you had fixed up? No.
2057. £50 out of the first £100 worth he took? I swear I did not.
2058. Will you swear that you never told anyone you did? I never remember telling anyone anything of the kind.
2059. Will you swear that you did not tell anyone? I may have said something to some one in conversation when trying to get information from them. I may have said a lot of things.

2060. What more information did you want than you had;—it seems to me that the others wanted information from you? I never gave anyone information. They never asked me for it. T. Musgrave.
30 Aug., 1888.
2061. You offered it to them for a consideration? Before I found out that the bells could be manipulated I asked others if they knew anything about it. I wanted to see who this man was.
2062. *Mr. Brock.*] You knew who the man was? I did not.
2063. It is of no use your going on with the lesson you learnt before you came in here? I learnt no lesson.
2064. Do you remember the 7th April last? No, I do not.
2065. Do you remember the autumn meeting at Randwick;—there were races on the Thursday and races on the Saturday? There may have been.
2066. Do you remember it? I remember that there were races, but I do not recollect the exact time.
2067. Did you go out with a race-tram on that Saturday morning? I may have done.
2068. You cannot recollect if you did? I cannot.
2069. You do not recollect going to the race meeting in the forenoon, and going car-cleaning in the afternoon? I do not remember. I may have done.
2070. *President.*] I think you answered the question this morning;—you know what you said about Hendy being taken? I remember being asked about Hendy.
2071. What were you asked? You asked me if he was fool enough to do such a thing.
2072. *Mr. Brock.*] You remember the day he was sacked? Yes.
2073. Did you go out to the racecourse that afternoon? I went out in the afternoon after Hendy was suspended.
2074. *President.*] How was it that you did not go out in the morning? I think I was car-cleaning.
2075. But you had been out on the Thursday? I think I was car-cleaning. I was only sent out at times when we were short of conductors.
2076. Are you sure you were car-cleaning that morning? At some part of the day I was; I forget about the morning. We had shifts.
2077. Were you on duty at all on the forenoon of the day Hendy was suspended? If it was on Saturday I think I came on at half-past 12.
2078. And went one trip to the races? In the afternoon.
2079. What would you do at half-past 12? Go car-cleaning.
2080. *Mr. Brock.*] Suppose you did not come on until 2, what would you be doing between 2 and half-past 3? The day Hendy was suspended I was car-cleaning in the afternoon for some time.
2081. What did you actually do between 2 and half-past 3? I am almost sure I was car-cleaning.
2082. Is it likely that you would be car-cleaning from 2 until half-past 3, and then be sent out to Randwick? I expect I was sent out in Hendy's place.
2083. You are sure you did not take some other trip to another suburb before you went to Randwick—some other trip between 2 and half-past 3? I was sent out one afternoon, I remember, to help the trams in from the racecourse; but whether it was on that afternoon or not I cannot remember.
2084. Suppose you went out as assistant on a tram some days previously, and were relieved before the tram came into town; that you had your bells and your tickets with you; and that you did not come in on the next day;—what would you do with your tickets; when would you give them up? I should keep them until the next day, or until I went on duty again. We always take some home with us every night.
2085. Suppose you had taken some home on Thursday night, and that you did not come in again until Saturday morning? I should keep the tickets and register at home. We never take home many. We have our bags emptied the trip before we go home, and we generally take home with us what we collect on the last trip going out.
2086. *President.*] What is the longest time you have kept your bag like that with tickets in it? Not more than a day, and then there would be only a few in it.
2087. You have not so kept it for more than a day? No.
2088. Have you never been from Wednesday until Saturday with tickets collected on the Wednesday—that is, not returning your tickets with your register until Saturday? I may not have been at work during the time.
2089. I do not care where you may have been;—the books will show that? I do not remember it.
2090. How often have you done it? I have never done it.
2091. Except at times? I do not remember doing more than the other conductors have done. I did about the same as the others have done. They take the tickets the last trip out, and when they come in again they get their bags emptied.
2092. There is a record of a reading on Wednesday, and then the next reading is on Saturday;—what did you do with your tickets between the Wednesday and the Saturday? Very likely I was car-cleaning.
2093. And you passed the Pitt-street office with your bag and bell? I do not remember doing it. It may have happened. We have lockers down in the yard. If I was car-cleaning my bag and bells would be locked up in the yard.
2094. Do you sometimes lock up your bag and tickets without the register being taken? Sometimes.
2095. Not knowing when you would be put on to a car? We only got our bags emptied once a day.
2096. But in one case you had your bag for three days? There may have been a few tickets in it. I do not remember ever doing it, but if I did I could not swear that there were not a few tickets in it.
2097. You were not in the habit of doing it? No; whenever I have had tickets in my bag I have always got it emptied.
2098. *Mr. Brock.*] You were generally on the race-trams? Sometimes, only sometimes; I do not think I have been on the race-trams more than five times during the year.
2099. *President.*] You remember the day Hendy was suspended? I can remember seeing him go down into the yard and go away; I think I was car-cleaning at the time. In the afternoon I think I was sent out to the race-course.
2100. Fix your mind on that day;—did not someone express surprise to you when he saw you car-cleaning that you were not out at the racecourse? I could not swear it. I do not remember it. I know that such a thing as this might be said to anyone, although it is an untruth. They might say, "Halloo, how is it you are not on the races; it is a bit of a loss to you, isn't it?"

- T. Musgrave. 2101. And when this was said to you did you not wink your eye and say, "Ah, there's something on the board"? I do not remember ever saying it.
- 30 Aug., 1888. 2102. You will swear that it did not take place; you are piling it up you know? That was after Hendy was dismissed.
2103. It was not after? I can swear at all events that I never said anything of the kind. It is not in my option to go to the races. You go down there and you are sent wherever the foreman chooses to send you.
2104. Will you swear that you were not on the berth for these races, and that you were taken off? I swear I was not. No man knows where he is going to on a day like that. I do not know whether anyone else does, but I never did. The foreman comes down and says what trams you are to take on a holiday; on other days you are appointed for trams.
2105. You say you remember the day Hendy was caught distinctly? Yes.
2106. You knew that he was going to be caught, did you not? I did not.
2107. Will you swear that you did not know all about it? I swear it.
2108. Did you not know that the detectives were put on on that occasion? I did not.
2109. *Mr. Brock.*] By whose instruction did you get on to the race-trams that day? I was sent out by the foreman.
2110. Which one; you know their names, do you not? I cannot think now which one it was.
2111. You are sure it was a foreman? Yes.
2112. Will you swear it? Yes; I think I can.
2113. Was not Gamgee away out at Randwick? I remember seeing both of them on that day, but I forget which told me to go.
2114. Was not Gamgee away at the races from early in the forenoon until late in the afternoon? One was at Bridge-street and one was at Randwick. I could not say which one was in the yard and which was out at Randwick. I was not out at Randwick long. It was after 4 I think.
2115. Suppose you went out after 4 would you take passengers out? No; there were no passengers out. I am sure of that.
2116. You would bring a big load in? Yes.
2117. Do you remember what you returned as your whack of the passengers? I cannot remember now.
2118. You ring once for 1s. in cash, and once for a shilling's worth of tickets? Yes.
2119. You cannot remember your return for your tickets and your cash that evening? I have not the slightest idea. I worked only one car; I never work more than one car. I am always helping some one else.
2120. But the car you did work would be pretty well loaded, would it not? Yes; pretty well. The cars are supposed to hold sixty, but there would be some standing about perhaps.
2121. Don't you think there would be more than sixty on a race-day? There are cars that hold more. Of course when overloaded they hold more than sixty. There is standing room. I should think I had sixty on that day coming in from the races. Sixty is the number the smaller cars hold. On this day I think I had a double-decked car. That was the last time I was at the races. I do not remember whether I was out there on the Thursday before; I believe I had only one trip to the course on the Saturday.
2122. You say you do not gamble, but you have spent a good deal of money at foot and horse races at different times? I don't know; I used to do a lot of it myself at one time. When I was lighter I used to ride myself.
2123. That was before you were in the Department. You did not act as a jockey? I was not exactly a jockey at any time. I was well up in horses. I was small and light, and I used to ride well. I used to ride up country, but only for friends; consequently I got to know a lot in connection with horse-racing. Since I have been in Sydney I have known a lot who have been able to tell me when they had a good horse, and something of that kind—to tell me when it has been worth my while to put on what I have had to spare. I have been lucky at times, and at other times I have been unlucky. As to gambling, I have gambled at times, but not to any extent—nothing to speak about. There was a watch raffled once or twice at a certain place. I raffled one myself at a certain place. Then we might start throwing dice, each putting a shilling in—that is the extent of my gambling.
2124. On what tram were you when Mr. Brown introduced himself to your notice? He used to travel up and down the Waverley line, and I was generally on that line. He would generally come down stairs and stand on the platform, and talk away there. When I had collected all my fares we would talk about different things. He would talk about racing and one thing and another. Sometimes he would come to me and say, "What about the races?" Several times I told him of horses I thought would win. Sometimes he told me of what he thought would win. That is how he introduced himself to me.
2125. Have you ridden since you have been down here? No; I have ridden up at the Macleay, where I was born.
2126. *President.*] Do you know Ferrier? Yes.
2127. When did you have your last conversation with him? I was sitting with him this morning.
2128. But before that? I have met him now and again lately.
2129. You have talked over these frauds? Yes; he asked me what I thought of it; I told him what I had told everyone else—that I did not know what to think of it.
2130. Can you tell us how long ago it was that you went to Mr. Roberts and showed him your bells, and told him the whole thing? Yes; it was about the beginning of last month.
2131. It was about the beginning of July? Yes; or about the latter end of June.
2132. Had you met Ferrier the night before? No.
2133. Was it not due to what Ferrier told you that you went to Mr. Roberts with a cock-and-bull-story—a pack of lies? No; nothing of the kind.
2134. You swear that? I had not seen him for I do not know how long before.
2135. You swear that it was not in consequence of a conversation with Ferrier that you went to Mr. Roberts? Yes.
2136. You did not tell any one that? No, I did not.
2137. *Mr. Brock.*] What influenced you to go to Mr. Roberts? I always intended to do so.

2138. Did Mr. Colls say anything to you about going to Mr. Roberts and making a clean breast of it? No; I told Mr. Colls the night before I went to Mr. Roberts that I knew about the bells, and that I thought it could easily be stopped. I then went to Mr. Roberts and asked him what he thought about it. T. Musgrave.
30 Aug., 1888.
2139. Didn't you tell Mr. Colls that you were in a regular fix? Nothing of the kind; I went to him and told him that I intended to tell Mr. Roberts about the bells being manipulated. He said that if he were me he would tell him straight away, or something of that kind.
2140. You said just now that that was the first time you mentioned the matter to Colls. Is not that utterly untrue? No; it is not.
2141. You know that he knew about it all along? Nothing of the kind.
2142. Do you mean to say that Colls did not tell you when anything was going on? He gave me no such intimation.
2143. You will swear that he never warned you? Yes, I will.
2144. *Mr. Thompson.*] He never told you that if you were carrying on this game you had better stop it at once? Nothing of the kind.
2145. *Mr. Brock.*] You were saying that Colls told you you had better see Mr. Roberts? When I told him that I intended to go and see Mr. Roberts he said that that was the best thing I could do. He said, "Go and tell Mr. Roberts at once." That was one Sunday night; I was only there a few minutes.
2146. Did you not tell him how long you knew it? I did not tell him anything about it. I did not think he knew how long I knew it. In fact I am sure he did not.
2147. *Mr. Thompson.*] I want you to bring you memory back to this man Scott. You have told us three different yarns about him? I do not think so.
2148. First of all you told us that it was more than twelve months ago that he came to you and spoke to you about it and showed you about it? He told me about it. He told me it could be done.
2149. You said on one occasion that he showed you then how it could be done. Then you ran away from that and said that it was only a short time before you saw Mr. Roberts about it. Then you said it was a short time before you told driver Graham—about eight or nine months ago. Then you said it was about five months ago. So that in reality you have told us four different yarns about this man Scott? I never mentioned eight or nine months ago since I have been in the room. Eight or nine months ago I was not on the tramways.
2150. Did you not come back in January of the present year? Yes.
2151. You were regularly on as an extra conductor early in the year? Well I was in the yard for about a fortnight. I asked as a favour to be let go car-cleaning as I did not feel well.
2152. What was the matter with you,—had you the mulligrubs? I was not well. I asked the foreman if he would allow me to go car-cleaning for a little while as I was not well. He said "all right."
2153. *Mr. Brock.*] What was the matter with you? I do not know I am sure. I did not feel well.
2154. What doctor was attending you? Dr. Smith—a doctor out at Waverley.
2155. What is his address at Waverley? In the Waverley road I think now.
2156. *Mr. Thompson.*] Have you any objection to tell us what the doctor said was the matter with you? There is the certificate in the office I suppose. I was suffering from a cold or chill. I sent in a certificate to the department.
2157. *President.*] Whose certificate? Dr. Smith's.
2158. What Smith? At Waverley. He certified that I was suffering from a cold or chill which prevented me from going on to the cars.
2159. I should have thought that standing about in cold water would have been worse than standing on the cars travelling? At the time I was first sick I used to go on the cars. I had no doctor at all at that time. I used to get giddy and I asked if I might go car-cleaning.
2160. You said that you had a conversation with Ferrier the night before you told Mr. Roberts? No I did not.
2161. Do you say that you had not? I had not.
2162. Had you or had you not? I had not.
2163. When had you seen Ferrier last before you went to Mr. Roberts? I cannot remember when I saw him the time before that; it was sometime before.
2164. I repeat—when did you see Ferrier before that? It was sometime before that.
2165. You are acting very foolishly; we have the dates? I am telling the truth; if he says he saw me he is telling an untruth.
2166. When you told Mr. Roberts, on the 11th July, did you not know perfectly well that Ferrier had been trapped? No; I knew nothing about Ferrier, or anything of the frauds in connection with anyone else.
2167. Did you not know that Ferrier had arranged with Greeley to rig his bells? No.
2168. You did not know that anything had passed between Ferrier and Greeley? No, I knew nothing about Ferrier's conversations with Greeley.
2169. I had not mentioned that? I know, but was not that the first-outburst of the tram frauds; that is the first I knew about it.
2170. About what? About Ferrier.
2171. What about Ferrier? He was dismissed.
2172. Had I said anything about Ferrier's dismissal? You asked me whether, on this day, I had any conversation with Ferrier.
2173. Which day? The day before I went to Mr. Roberts.
2174. What has that to do with Ferrier's dismissal? You asked me what I knew about it.
2175. I did not; I asked you whether you knew that Ferrier had been trapped—not dismissed? I did not know that; I knew nothing about it.
2176. You know that Ferrier went to Greeley's house? I know it now.
2177. Did not Ferrier tell you? Not till after he had been dismissed.
2178. He did not say that he had an appointment with Greeley? No.
2179. *Mr. Brock.*] You knew nothing about Ferrier in connection with these frauds? No; I only knew him as a conductor.
2180. Did you think when you went to Mr. Roberts that anyone was suspected? No, I did not.
2181. You did not know that Moran and Wigg were endeavouring to find out about the frauds? No.

- T. Musgrave. 2182. *President.*] You did not think there were any frauds even? This man showed me the bells.
 2183. Four months before, you say? Yes.
 30 Aug., 1888. 2184. And after the lapse of four months you suddenly rush to Mr. Roberts to tell him what you know? It was not four months.
 2185. You had no purpose in going to Mr. Roberts? Nothing more than to tell him that such a thing was going on.
 2186. How did you know? I knew it could be done.
 2187. You say you knew it was going on? I did.
 2188. Of course you did; that is just what we want you to tell us? I knew that it could be done.
 2189. *Mr. Thompson.*] You told the truth then by mistake? Not at all; I said I knew it could be done; this man who showed me the bells told me he had shown others; whether that is true or not I do not know, but if he showed me it is likely that he would show others.
 2190. Did he tell you who the others were? He did not.
 2191. *President.*] How long ago is it since you first met Scott? It is about eighteen months ago since I first saw him; he did not say anything about it for a good while after I first knew him.
 2192. When did he first tell you that he could show you the way to make tickets? That was just before I left; just before the retrenchment.
 2193. And you took no notice of it then? No.
 2194. *Mr. Brock.*] Did you go to this man and say that something was wrong with your bells, and that you wanted him to put them right? I did not.
 2195. You did not? I did not. He first told me about twelve months ago, and a little time after that came the retrenchment; I did not see him for a long while after.
 2196. I thought you said you saw him again and again during the time you were away? I did not see him during the time I was away.
 2197. But you said you saw him getting on to the trams constantly? While I was on the cars.
 2198. And not when you were off the cars? No.
 2199. You said you inquired about him during the whole of the time you were away? Not while I was off the cars.
 2200. You said distinctly that you were doing so. You admitted, in effect, that you were interesting yourself in the frauds all the time you were off the cars? I did not interest myself much, but when it occurred to me I may have spoken about it.
 2201. *President.*] Scott only told you how to do the thing; he did not tell you anything else? Of course we had other conversations.
 2202. But nothing of any consequence? No.
 2203. He did not say what he was doing? He said he lived at Parramatta.
 2204. He only told you how to rig the bells and that he lived at Parramatta? Yes.
 2205. You swear that? Yes.
 2206. You swear that he did not tell you what sort of business he was doing? He gave me to understand that he was making a living out of the trams. I took that for granted.
 2207. He did not tell you that? Well, by his conversation I mean.
 2208. What did he actually tell you? He said he could get rid of plenty of tickets. Then I came to the conclusion that he must have shops or something of that kind. I dare say if I had done any business with him I should have known more about it.
 2209. You did not do any business with him? No.
 2210. You did it with the other people? Not with anyone.
 2211. You did it at Masoora's shop. Do you know him? No.
 2212. I mean the oyster-shop at the corner of Liverpool and Elizabeth streets? I did not do it with anyone.
 2213. *Mr. Brock.*] Do you mean to say that you were never in there? I have been in there once or twice to purchase anything I required. I do not think I have been in there more than three times. I recollect that I once jumped off the tram and ran in there for change. The tram stops opposite in Liverpool-street. I remember going into the shop once to get change of 1s. for a passenger. That is not so long ago.
 2213½. What tram were you on then? I cannot say. I was changed about everywhere.
 2214. Is that the only time you were there? I was in there afterwards.
 2215. Who with? By myself.
 2216. How often? I dare say not more than three times.
 2217. Four times in all? I can swear that I have not been in there more than four times in my life.
 2218. And then all alone? Yes; I think so. I think once I had my sister with me; I went in to get some fruit.
 2219. Was that one of the four times? Yes, and I think I was only in there once afterwards.
 2220. You were always alone or with your sister? Yes, I was only there with my sister once.
 2221. You swear you were never there with anyone else? Yes.
 2222. When you say your sister do you mean Mrs. Colls? I do not.
 2223. Is not Mrs. Colls your sister? She is a step-sister. I have only one sister.
 2224. You persist in swearing that you were never in there with anyone else? I can swear I never was. As far as I can recollect, even my sister stood outside while I went in.
 2225. Will you swear that you were never inside with Fraser and another man? I was never there with Fraser or anyone else.
 2226. *President.*] Is that the time you showed your pocket full of tickets? I can swear I did not do anything of the kind.
 2227. Do you know a conductor named Hannam? Yes.
 2228. Let us have the history of your overtures to him? I never had any either with that man, or with anybody else.
 2229. That we can believe? I mean in the course of conversation.
 2230. You several times got on to Hannam's tram and made propositions to him. Let us know what they were? If I did say anything to Hannam, it was to try to get some information out of him.
 2231. What did you say to do that? I asked him if he knew anything about the bells.
 2232. And what else did you say? I said, "I suppose you are making a lot of money out of this." I forget what answer he gave me. In some joking way he said something, but I forget now what he did say.
 2233. You were not satisfied with one time; you repeated it several times. We want to know the several conversations—the appointment at Waverley you made with him? He was coming out on the tram towards Waverley; that is where I met him.

T. Musgrave.
30 Aug., 1888.

2234. You met him on the Newtown tram? Yes; he lives there.
2235. What made you ask him if he made anything? I thought he might know something about it.
2236. How long ago was this? Some few months back, I think.
2237. Did you suspect Hannam? I thought he might know something about it.
2238. *Mr. Brock.*] What do you mean by that? I was not sure that anyone knew; I am not sure now.
2239. Was it while you were off that you got on to his tram at Newtown? No.
2240. Then what were you doing on another man's tram on the Newtown Road making inquiries in this way? When I was disengaged I might be on the trams, but I was not always.
2241. What did you want this information for—were you doing the detective business? I wanted the information. I did not know at that time that it could be done. I saw Scott standing on the same tram as Hannam. That is what made me go to Hannam. I asked him if he knew anything about the bells.
2242. *President.*] You know what you were doing with Scott, and when you saw Hannam talking to Scott you said to yourself, "Here's another in the game;" that is why you went to Hannam? Nothing of the kind.
2243. *Mr. Brock.*] Do you know a man named Constantine? No.
2244. Did you ever hear of him? Never.
2245. Constantine Pappadocci;—you never heard of him? Never.
2246. *President.*] Did you not tell Hannam that you could take tickets from him, and that you could get rid of tickets for him? I do not remember saying that. As far as I can recollect, I might have said this to him, because I was trying to find out what he knew. I said, "Do you know anything about the bells?" and he would be sure to say "No."
2247. We do not want to know that. Did you not tell Hannam that you could dispose of tickets for him? I do not remember it.
2248. Will you swear that you did not say it? I may have said that it would be easy enough to get rid of them. I think I said so because several times when I was speaking to him he said, "You could not get rid of them," and I have said, "It is easy enough to get rid of any number."
2249. You said "any number?" That is what this man told me.
2250. Who do you mean by this man? I mean Scott.
2251. And yet you said just now that you did not know that anything at all was going on? I was not sure—I could not swear it.
2252. Has this man Scott a shop in Sydney? Not that I know of.
2253. You said he had several shops? I thought so, seeing that he could get rid of so many tickets.
2254. *Mr. Thompson.*] Did you not say to Hannam, "I can show you how to rig the bells?" Yes, I told him that; but I did not show him, and I never had any intention of showing him.
2255. Did he not say to you, "How do you do it?" I said, "I will tell you some other time."
2256. I repeat, did he not say to you, "How do you do it?" I could not say for certain.
2257. But you said just now that you had said to him, "I will show you some other time?" Yes.
2258. Did you come to him a second time about a week afterwards and try to make an appointment to meet him at Waverley so that you might show him how to do it? I was living at Waverley at the time, and he said he would be running out there again. I said, "I will see you out there some time, and show you." We had no more conversation.
2259. You are sure that this did not happen while you were out of the Department—while the retrenchment was going on? It was not then; it was while I was on the tank run. When I came back to the Department I went on to the water-tanks.
2260. *President.*] You say you do not know whether Scott had shops or not? I do not.
2261. Have you not met him frequently at various tobacconists' shops in the city? I have never met him off the trams.
2262. You were on the trams in every direction about the city? I believe I was.
2263. Wherever you happened to be this bird of evil omen was hanging about you suggesting this thing to you? I think I only saw him once off the Waverley line, and that once was on the railway tram; all the other times I met him on the Waverley tram.
2264. *Mr. Thompson.*] Did you not ask him how it was that, living, as he said he did, at Parramatta, he was continually on your tram at Waverley? He was not there continually—it was only occasionally that I saw him.
2265. But you said very often just now. What do you really mean? I should say once a week or so. At other times I would not see him for some time. Then again I would see him again within a very few days.
2266. As far as you can gather, what was his business at Waverley when he lived at Parramatta? I could not say, I am sure.
2267. Did you ever suggest to any other conductor or driver that this man was a detective, and that he was continually trying to lay traps for you, and to get you into trouble? No; I do not remember saying anything of the kind.
2268. *Mr. Brock.*] What made you think he was a detective? Because I knew nothing about the man. I was wondering why he came to me. He was rather free in talking to me.
2269. Yet you never knew his name? He said his name was Scott.
2270. Can you remember no other name beside Brown or Scott that he has given to the conductors to whom you have spoken about him? Yes; I think one told me his name was Curran.
2271. *President.*] Do you know Nicholas Williams' shop? No.
2272. You do not know where it is? I do not,—not that I am aware of. I do not know it by that name.
2273. *Mr. Brock.*] Do you know a man named Marcos? No.
2274. *Mr. Thompson.*] Do you know a shop leading from Elizabeth-street into Wexford-street, where the perfect ladies used to congregate at night sometimes? No.
2275. Have you never been there? I do not know where you mean.
2276. Have you never been there in Ferrier's company? I do not know where you mean.
2277. Do you know a man named Mulligan, who used to be an oyster-opener, and who used to live at Yass with you when you were a boy? I do not know the place; I was only several times there.
2278. Where were you brought up as a youngster? At Young.
2279. *President.*] Do you know a tobacconist's shop in the Newtown Road? No.

- T. Musgrave. 2280. Will you swear that you never sold any tickets at a tobacconist's shop in the Newtown Road? I will swear that I never sold tickets at any shop.
- 30 Aug., 1888. 2281. *Mr. Thompson.*] You have sold none in Sydney or its suburbs? Nor anywhere else.
2282. Have you given tickets to anyone else to dispose of for you? No; I have not.
2283. *President.*] Do you mean to say that you never gave any to a man named Whetton? No.
2284. Do you know him? He used to be a billiard-marker near where I used to live. We used to call him Tommy.
2285. Where was he a billiard-marker? At Waverley.
2286. *Mr. Brock.*] Did he never buy tickets from you? No.
2287. *President.*] You admit that you know this man Whetton? Yes.
2288. You do not know him well, I suppose? I do not know anything about him. All I know is that he used to be in his billiard-room.
2289. It was at the billiard-room that you met him? He used to rent the billiard-room. He was there for some time. I used often to go to the billiard-room. There used to be often discussions about the trams, some saying what they thought ought to be made on them.
2290. You had these discussions at Whetton's billiard-rooms? Yes; not only there but at any place.
2291. But it was only at this billiard-room that you used to meet Whetton? That is all. He left there afterwards. I used to see him on the trams and at other places accidentally.
2292. Where else—come now? He used to live out at Waverley. I don't know where he went to afterwards.
2293. *Mr. Thompson.*] You said you saw him at other places? Yes; in crossing in the streets in Sydney.
2294. *President.*] Only in the streets occasionally? Yes.
2295. You know that he had tickets, do you not? No.
2296. Did you never have any conversation with him about tickets, as to how many he got rid of, and so forth? No, not beyond joking over the thing, as with other people. He used to say things to me, but I never took any notice of them.
2297. Did he not talk to you about the chance of getting rid of so many tickets, and so forth,—how many he could manage with and how many he could not? No.
2298. Did he not say that you were giving him too many, and that you would have to stop? No; I swear he never said anything about it.
2299. *Mr. Thompson.*] How much did you give to Whetton to clear out to Queensland? That is nonsense. I could not possibly have given him anything. I never knew whether he went to Queensland, whether he was in Sydney, or where he was.
2300. How many billiard scores did you clear up by giving him tram-tickets for them? I did not have any scores to pay up.
2301. You always used to win? No; but I never lost anything at his room. I was not very often there.
2302. You were making money on the cars and you were losing it on billiards, races at the Carrington Ground, and so forth? No, I was not.
2303. What did your little pleasures in the way of boarding out in Fitzroy-street cost you? I do not know—nothing very extraordinary.
2304. How much a week? I was only there for several weeks.
2305. So that you will remember all the more readily;—how much did you pay to the man keeping the house and how much to the woman you kept? As far as that is concerned that is part of my private affairs, and I refuse to answer any question of the kind.
2306. You have acknowledged that you did keep a woman there? I did nothing of the kind. You asked me how much it cost me to stay there.
2307. These questions entirely bear upon the matter? I do not see it. You said I was here as a witness; you are trying to make me a defendant.
2308. There is no plaintiff or defendant; we want to know the truth of the matter? You have asked me what I know of it, and I have told you all I know of it.
2309. What wages were you receiving from the Department at the time? I was receiving no wages; I was not in the Department—that was, when I was in Fitzroy-street.
2310. You were there only while you were out of the Department? Yes.
2311. You have not been there since? No. When I left there I owed some money for board. I have paid it back since I have been in the Department.
2312. That is, you owed it to the people with whom you were boarding. What did you pay to the woman you used to keep there? If you want to know more, I did not pay any woman anything.
2313. You put this woman forward as your wife on several occasions? Yes.
2314. What were you paying for her and her board? I will not answer such questions.
2315. While you were in the Department what wages were you getting? I was getting 7s. a day.
2316. Including Sundays? Yes; and overtime.
2317. That is, £2 2s. a week? £2 9s., and my overtime made it up to about £5 a fortnight.
2318. As a matter of fact were you not paying to these boarding-house people more than £2 2s. a week for this woman reported to be your wife and yourself? Nothing of the kind.
2319. How much were you paying? When I went to this boarding-house I had some money. I paid some of it to them. In fact I lent them some money—a few pounds. I did not give them any more until after I came back upon the trams.
2320. How much did you lend them? About £3 or £4. I think all the time I was there they got £6 or £7 from me.
2321. How long were you there? A few weeks. I knew the man well; he used to be a reporter for one of the papers. His name was Sumners.
2322. Did you take him in about this woman—did you palm her off as your wife? I did not say anything about passing the woman off as my wife; you suggested that.
2323. You cannot get us to believe that a decent man—a reporter on one of the newspapers—would permit you to keep a prostitute under his very eyes. Did you not sleep with her? You said I was here as a witness. Anything as regards the tramways I will answer. Anything in connection with my private affairs I refuse to answer.
2324. *President.*] Have you had legal advice about this matter? I refuse to answer you.

2325. I insist upon your answering me. Have you had legal advice? I have never spoken to a lawyer about it. T. Musgrave.
2326. Why could you not say so at once? I did not see any occasion for it.
2327. Do you know the Academy of Music? Yes. 30 Aug., 1888.
2328. You have been there pretty often? Once or twice.
2329. How often have you shouted champagne for the Federal Minstrels there? Never.
2330. Never in your life? I swear I have not.
2331. *Mr. Brock.*] Did you shout anything else for them? No.
2332. Nothing at all? No. I have been there once or twice—not more than four times.
2333. *President.*] Were you not there with other conductors? I have met other conductors there.
2334. Were they shouting champagne? No. One was Morris, and the others were Dooney and Carmody.
2335. *Mr. Brock.*] Did you ever see Whetton at the "Royal Hotel"? Yes.
2336. Anyone with him? Not that I know of. He used to go there pretty often.
2337. Did you sell him any tram-tickets one day outside or near the "Royal Hotel"? No.
2338. *President.*] Are you sure that the name of the man with whom you were living at Surry Hills is Sumner? Yes.
2339. Can't you tell us where he is now? I do not know where he is now.
2340. *Mr. Brock.*] He is an old friend of yours? No, I know him—that is all.
2341. You said you lent him £3 or £4 when you first went there? Yes.
2342. *Mr. Thompson.*] Was not the £3 or £4 to furnish a bedroom for yourself and the woman you used to keep there? Nothing of the kind. I can swear to that.
2343. Cannot you remember any of the other names by which this man Scott, *alias* Brown, *alias* Curran, was called by? No; Scott was the only name I knew him by. Some said his name was Brown.
2344. Will you tell me any one man beside yourself who ever said that his name was Scott? No, I do not know anyone who said so.
2345. Can you tell me of anyone who has said that his name is Curran? No, but I can remember someone telling me that that was his name.
2346. Can you remember the person who said that his name was Brown? No; they would say to me that his name was Scott or Brown, or whatever they might think.
2347. When you found that they were in doubt about his name, why did you not tell them; you think that by your giving these names we cannot identify him, but you are giving yourself a lot of trouble for nothing? I do not know his name; Scott is the only name he gave me.
2348. Did you ever tell him, during the eighteen months you had these long conversations with him, what a curious thing it seemed to you that he went by so many names? No. He said, "A very few know me about," or something of that kind.
2349. Yet he was parading himself on the tram continually to you and to others? Not continually to me.
2350. I thought you said he spoke to you often? The man was travelling up and down. There are a lot of men I could pick out who travel about—I should say that I saw them occasionally.
2351. This man, remember, took you to be a thief, and proposed all kinds of dishonest tricks to you, wanting you to rob the Government; therefore you had good reason to be either very suspicious of him or very confiding in him? I was very cautious about him. I took good care not to let him get hold of me in any way. I was not going to be caught by his telling me how the bells were done because I never practised the thing.
2352. When was it he first used the brad-awl or screw-driver in the bell to show you how it was done? I told you that before.
2353. You have told us four different yarns;—which particular yarn do you pin yourself to? I did not tell four different yarns.
2354. Will you tell me again. My memory is faulty? As far as I can recollect it is five months ago.
2355. Since he first showed you how to do it? Yes.
2356. And you showed Graham afterwards, within some weeks? Yes.
2357. If anyone who saw you show Graham tells us that it was eight months ago he must be telling an untruth? Yes. It would be an untruth. I can swear to that.
2358. This man showed you only once, you say, and that once would be four or five months ago? I was speaking to him before about it, but it was only once that he showed me that it could be done.
2359. At the time he put in the brad-awl or screw-driver he showed you the whole method of doing it? Yes.
2360. How long after that did you deliver up the bells? I can't remember how long afterwards it was.
2361. As nearly as you can make it? I may have had them a fortnight or three weeks or so afterwards.
2362. *Mr. Brock.*] They remained in that defective condition all the time? Yes.
2363. They would ring without registering? If you put the pin in or whatever it was.
2364. *Mr. Thompson.*] Then the man showed you most distinctly by the pin or by the wire that the bell would ring, but would not record any more than one ticket? That it would not record any after putting the pin in.
2365. *President.*] Do you remember some months ago being taken off your car at Waverley by Mr. Roberts? Yes.
2366. Will you tell us what happened? He changed my bells.
2367. What did he do that for? I do not know. He took the bells and bags and everything else to see if everything was all right I suppose.
2368. Had it ever been done before? I had heard of it being done.
2369. Did you not know perfectly well that you were suspected when it was done? No; I cannot say that I did.
2370. Although you were taken off your tram in the middle of your trip and your register was examined? I was not taken off. At the Queen-street waiting-room Wigg came and said, "Mr. Roberts wants you." I went and he asked me for my bag and bells and he gave me others. That is all I know about it.
2371. Has such a thing been done to your knowledge before or since? Not to me.
2372. To anyone else? I understood that that was how they caught Hendy and others.
2373. And yet you had no suspicion? I thought he was doing it to all, and Mr. Roberts gave me to understand that he did. He said "Mr. Wigg, that is three we have got now."
2374. At that time had Scott given you your instructions? Yes. 2375.

- T. Musgrave. 2375. Then was not this a good opportunity to make a clean breast of it to Mr. Roberts? It was not long after he had told me; I thought that a man of that kind would have many friends, and I was not going to run myself into danger.
- 30 Aug., 1888. 2376. You thought you were in for it yourself? I did not think I was in for it myself.
2377. When you were told by Ferrier how he had been trapped by Greeley, you thought you would save your own skin by running to Mr. Roberts and telling him a cock-and-bull story. You knew that four months before you had been suspected because your bells and bag had been examined on the road—a thing that would not be done to any man except to find him out in thieving? I understood that Mr. Roberts was going through them all; Mcran and Wigg told me so.
2378. Do you know a shop in Oxford-street that used to be kept by a man named Soper? I do.
2379. You never sold any tickets to him? No.
2380. Do you know Dominic the barber? No, I do not.
2381. Do you mean to say that you do not know him? I cannot call him to mind.
2382. Do you mean to say that you were not in treaty with him for the purchase of tickets from you? Whoever he is, I will swear that.
2383. Does it not strike you that there must be a lot of villains about to tell all these untruths of you? They cannot mean to tell them of me, I think; there must be a lot of supposition about it; they may have seen me talking to this man, but that is all; I may know the man you refer to but I cannot think who you mean.
2384. *Mr. Thompson.*] He was never known except as Dominic Lacerda or Dominic the barber? In Oxford-street, do you mean?
2385. Yes? I do not know him.
2386. That is not the name over his door? If you tell me that I may know him.
2387. *President.*] Do you know Pietro Gaspardo? No.
2388. The man who was to purchase these tickets if he succeeded in getting a license—a man keeping a shop in Waverley. He applied for a license and it was refused, and he could not buy tickets from you? A man keeping a shop there asked me what he had to do about getting a license. I do not know his name, but I believe it is "Don," or something of that kind they call him.
2389. Where is the shop? At Waverley, out near the Bondi junction—about three or four doors from where I was living. He said to me one day when I was there, "Do you think I could get a license?" I said, "You will have to apply for it." He asked me where to apply, and I told him at the office.
2390. *Mr. Thompson.*] What is the name of this young lady with whom you used to live on such intimate terms in Fitzroy-street? I will not tell you.
2391. Is she in Sydney now? I will not tell you anything of the kind. I refuse to answer any questions in connection with my private affairs.
2392. What used you to allow her by way of spending money? I will not tell you anything about her, or anything in connection with my private affairs. Anything you ask me as far as I know about the trams I will tell you, but I do not see that my private affairs have anything to do with the matter at all.
2393. How often used Scott to get up on to the cars when you were conducting? Perhaps I would see him twice a week, and then not again for a fortnight or three weeks.
2394. What made you say that he was always getting up on to the cars? Whenever he got up he would always try to have a yarn.
2395. What made you say he was always getting up on to the cars? Whenever he did get on he used to talk.
2396. What made you say he was always getting up on to the cars? I say so now.
2397. Do you say so now;—come now as a matter of fact? As a matter of fact the man got on two or three times a week. If I happened to be on a car he would get on and have a yarn to me.
2398. *Mr. Brock.*] Does this man go to the races often? I could not say. He seemed to know a good deal about races.
2399. Did you ever see him with a pocket full of race-tickets? No.
2400. *Mr. Thompson.*] Why do you say that he was always getting on to the cars? I was trying to make you understand that he was always trying to make himself familiar. When he did get on he got on for that purpose; at least I supposed so.
2401. *Mr. Brock.*] He was very familiar? Yes. He generally had cigars.
2402. And although you had no transactions together he continued to get on to the trams three or four times a week? Not every week.
- 2403-4. *Mr. Thompson.*] Were you not curious to know what it was he wanted to show you? I thought, as I said before, that he was trying to lead me into a trap.
2405. I want to know whether you were not curious to know what it was wanted to show you? You asked me my opinion about him, and I told you.
2406. Were you not curious to know what it was he was going to show you—yes or no? Most decidedly I was, and I intended to find out. From that time I did not see him any more until I came back just after the time of the retrenchment, when he spoke to me about the manipulation of the bells.
2407. *President.*] Although you had been doing it yourself from a fortnight of the time of your joining the Service, as you told someone else? Nothing of the kind.
2408. *Mr. Thompson.*] Did he not tell you how he found out how to do this thing? Yes. I asked him that question—how he found it out—and he could not answer.
2409. Will you swear that? I asked, and he could not tell me.
2410. Have you ever said anything different to that? No.
2411. Do you remember telling some one that he told you he found it out by examining a gas-meter? I said something about that; I told it to Mr. Roberts. The man said something about a gas-meter. That was nothing to do with the way in which he found it out. He said the registers read like a gas-meter. He said, "Have a look at a gas-meter." He did not say that was the way he found it out.
2412. He did not say that was the way he found it out? He said it could be done with a gas-meter in the same way. He may have said "That is all I took it from" or something like that, or that it was through a gas-meter.
2413. Beyond that he never told you how he found it out? No.
2414. What did you think this man's occupation was? I said "I thought he was making money out of the trams—that is if he was not employed on the trams."
- 2415.

2415. A short time ago you said you thought he was a detective? If he was not in the department. T. Musgrave.
2416. You mean, you thought he must make money by selling tram-tickets? Yes.
2417. Whom was he to get the tram-tickets from? I do not know, I am sure. It struck me that he was 30 Aug., 1888.
a detective first of all.
2418. You were rather alarmed I suppose when he got on to the tram and stood near you? No; this is the only man I ever suspected of trying to lead me into a trap.
2419. It was only at first that you suspected him of being a detective? He may be now for all I know to the contrary.
2420. *Mr. Brock.*] Yet he put you up to the secret? Yes.
2421. And let you carry it on for two years? It is only five months ago since he showed it to me.
2422. *President.*] Did this man tell you that he had been manipulating his gas-meter? He told me that it could be done with a gas-meter.
2423. *Mr. Brock.*] Did you ever try it with a gas-meter? I never tried it.
2424. *Mr. Thompson.*] Did not this man tell you that he had done several of the bells for conductors? Yes; but he did not tell me who they were.
2425. *Mr. Brock.*] And you do not know? No.
2426. You would not be likely to know? No.
2427. Did you think he must have had a good deal to do with it when he talked to you in this way? I did not believe him; I thought he was trying to lead me into a trap; that is what I thought.
2428. You did not think that he was at the head of the whole matter and had been the means by which it was all done? I don't know what he was.
2429. Just imagine your statement: You thought he was a detective; you thought he was leading you into a trap, and yet you carried your manipulated bell for two months? The fact of my having the bell would not mean that I had ever used it.
2430. The fact of your having a bell upon which a fraud could be committed, of your carrying it knowingly;—would that have no effect? I did not think there was any harm in it.
2431. You seem to think that no one knows what you have been doing? I have told a number of it myself, that it could be done.
2432. And a good many you did not tell? That may be.
2433. *Mr. Thompson.*] You did not think he was at the head of the whole matter, that he was carrying on the whole of the fraud, and you never told anyone that you did think that? I most decidedly did think that he was, or that if he was not he was a detective.
2434. *Mr. Brock.*] Who are the other men he told? I do not know.
2435. You do know? I do not.
2436. *Mr. Thompson.*] You have told us of Graham and Reid;—did you tell Reid? No.
2437. Have you told anyone beside Graham? I have said that it could be done in the room when there were twenty or thirty conductors present.
2438. If that may be can you tell us of any man to whom you have told this who could corroborate you? Almost anyone of them.
2439. Can you name a single man who will say that in the presence of twenty or thirty men you said this could be done; was Graham one of those who was present at the time? I made no secret of the thing.
2440. Will you name any single man who was present among the twenty or thirty conductors to whom you said publicly and openly that this thing could be done, and how it could be done? I did not say how it could be done. They were discussing the matter.
2441. Will you name any single man in whose hearing you said it? I cannot remember who was in the room at the time.
2442. Can you name any one single man among the twenty or thirty who were present? I could not swear to anyone. So many are constantly in and out. They have said, "Do you think such a thing could be done?" and I have said, "Yes; I think it could be done."
2443. *Mr. Brock.*] When was it that you only thought so? It is not so long ago I said I thought it could be done.
2444. *Mr. Thompson.*] Was this before you made your confession to Mr. Roberts? Since that.
2445. *President.*] Since Ferrier was dismissed? Yes, Hannam was one of the men I asked if he knew anything about it.
2446. You swear that in the presence of twenty or thirty conductors you said it could be done? That is lately.
2447. Since you confessed to Mr. Roberts? Yes.
2448. We will put all this aside. Before you made this statement to Mr. Roberts did you tell any man besides Graham how this thing could be done? Bar Graham and Mr. Roberts, I did not show any one.
2449. Nor did you tell anyone before you showed Graham? I have asked others if they thought it could be done, but I have not said that I could do it.
2450. *Mr. Brock.*] You never told Mr. Roberts until you knew that the game was up. You said to yourself, "I cannot make any more money—I may as well tell"? That is not so.
2451. What was the use of asking others when you knew of it months ago? I did not. At all events it is not more than five months ago.
2452. Since you knew how this thing was done? Yes.
2453. Will you swear it was not six? I am nearly sure it was not; I cannot exactly remember how long ago it was.
2454. Will you swear it is not eighteen months ago? I will swear it is not eighteen. I will swear it is not eight months ago.
2455. Will you swear it is not seven? I will swear it is not seven.
2456. Will you swear it is not six? I could not exactly swear that it is not six months ago from now, but it is not any more.
2457. Did you tell this man *alias* Scott *alias* Brown that you were frightened to have anything to do with the tickets? I told him I did not think it was safe; I never did intend to have anything to do with it.
2458. You said that? That is the answer I made to him. He said to me, "If you say anything about it you will never live to give any evidence." I told Mr. Roberts quietly, and he promised that my name should never be mentioned in the matter.

- T. Musgrave. 2459. That was only the other day? If it came out sooner I thought this man would suspect me and that I should be putting myself in danger.
- 30 Aug., 1888. 2460. *Mr. Thompson.*] Will you swear, with regard to some man who was on a tram—whether it was Graham, Reid, or M^cMahon—that you did not, on one occasion, take your bell, show it to this man, and collect a car-full of tickets, bringing the bell back to him, and showing him that it had not registered more than one, you, yourself, having bagged the rest? I did not do anything of the kind. Graham is the only man to whom I showed that the bell would not register.
2461. Did you show Graham how you were capable of cheating the Government by going round a car in the way I have described? After I had showed Graham he heard me ring the bell and I came back to him. I had taken only two or three tickets; I put them in the bag and I said to him, "Do you see, the thing has not moved at all;" that is what I was telling you about before.
2462. *Mr. Brock.*] What do you say you did with the tickets? I put them in the bag.
2463. *Mr. Thompson.*] If you came back and showed Graham that you had not registered the tickets you had taken how did you make up for it afterwards. How did you make your register tally with your tickets? There were only four tickets.
2464. And you bagged them? I put them in the bag.
2465. But you bagged them for yourself? I put them in the Government bag.
2466. How did you make your tickets tally with the register then? I did not bother any more about it.
2467. *Mr. Brock.*] You were four tickets over that night? Yes; I do not think anyone can go much nearer than four or five tickets.
2468. *President.*] Will you swear that you did not often tell Graham that you were doing it? In a joking way he has said, "How are you getting on?" and I have said, "Fine; I am going to have a public next week, like those others."
2469. Did you not often show Graham your register with the pin in? No.
2470. You swear that? I swear it.
2471. How often did you say to Graham, "For God's sake don't tell anyone about it"? I did not say that, but at the time I showed him how it was done I may have said, "You need not say anything about it."
2472. How often did you say that? I just said it to him once.
2473. Did you not repeat it during several months when you used to meet him? No.
2474. You swear to that? Yes.
2475. *Mr. Thompson.*] You will swear that you did not say, "For Christ's sake don't say anything about it, or I shall get into a bloody mess"? No.
2476. You said that you put these tickets into the Government bag? I said just now that I put them into the Government bag.
2477. From the way in which you talk of the Government bag one would almost suppose that there was a bag which was not a Government bag? Someone said something about your own bag just now.
2478. I did not. I suggested that you might have bagged them for yourself? You may have said that, and I said, "into the Government bag," as much as to say they went into the office.
2479. *President.*] If Graham and Reid have both positively sworn that over and over again they saw you with your pin in your register, are we to believe that they have sworn falsely? Anyone who says they saw me with it in has sworn falsely.
2480. *Mr. Thompson.*] One thing is clear: At the time you saw Graham your bell had been faked so that you could do this? Yes.
2481. *President.*] Do you mean to tell us that you were not in treaty for a public-house? It was only in a joking way.
2482. Do you swear on your oath that you were not in treaty for a public-house at the corner of Parramatta-street and Regent-street? Graham said, "What house are you going to take?" and I said in joke, "That big one down near the railway—the Railway Hotel." It was only a joke.
2483. Did you not say that there was only £100 or £200 between you? I do not think so.
2484. *Mr. Brock.*] How much was there between you? I never did any business in the matter. It is easily found out if I ever went and made any inquiries about the hotel. None of them know me. I did not even know that it was for sale, and I do not think it is. A man named Smith has been there for a long time.
2485. *Mr. Thompson.*] What were you doing out on the Newtown Road during the time you were under suspension, or even when you were in the Service, and when you got on to the tram to conductor Hannam? I often used to go out that way. I have a sister living there.
2486. Is she married? She is a widow. I used often to stay at her place; in fact I often stay there now.
2487. Is she in business, or has she a private house? She has a private house.
2488. *Mr. Brock.*] Have you had any conversation with conductor Keen since this inquiry commenced? I have come down on the cars with him once or twice.
2489. Did you speak to him? Yes, and he has spoken to me.
2490. What passed in reference to the frauds? Nothing. He asked me what I thought about the tram frauds, and I said I could not make anything out of them.
2491. Did you not tell him that they were going the wrong way about it to find out? I always said they went the wrong way about it. I have said that to any one.
2492. If they had begun properly they would have caught the right ones? I said that they had not got the right ones at all, and that if there was anything in-it they had gone the wrong way about it. They never tried to catch this man who showed me. I thought he was connected with the Department, because no effort was made to catch him or anything else. I said so in my statement to Mr. Vernon.
2493. Did you make any remark to Mr. Graham about the evidence you had given to Mr. Vernon? Not that I know of.
2494. Will you swear you have not? I have only seen Graham once since. It was after he had been up and it was reported that he had said this and that thing about me. I asked him what he had had to say about me, and he said, "Only what you told me about the bells."
2495. Did you say to Graham, "I have pitched Vernon a bloody fairy yarn, and mind you keep quiet over it"? No.

2496. Will you swear that? Yes. I may have said that I had made a statement to Mr. Vernon. He said, "You went up and told Vernon that I knew all about it. I knew nothing more about it than you told me." I said, "That is not true; I did not mention your name." T. Musgrave.
30 Aug., 1888.

2497. Will you swear positively that you did not use the words I have quoted? I never said anything of the kind.

2498. *Mr. Thompson.*] How long is it that Scott first mentioned to you that he could rig the bells, and put you in the way of making tickets? He told me that at once, about twelve months ago. That is when he first told me. I did not see him at all afterwards, because it was the time of retrenchment. It was just before the retrenchment. That was the only time I saw him then. I first saw Scott about eighteen months ago. He did not tell me when he first saw me. He was trying to get me into his confidence all the time.

2499. Was he six months trying to do that? About four months he was travelling about. I used to see him occasionally travelling about.

2500. How long did you know him before he told you that his name was Scott? I could not say how long. It may have been two months or it may have been three. He used to talk to me, and I did not know what his name was. You do not like to ask a man at once what his name is, unless you have something special to talk about.

2501. Then how many times did you see him during the four months before he told you that he could show you the way to rig the bells and to make some tickets? I could not say how many times—once or twice a week or so for four months; then he would disappear for a while, and then I would accidentally meet him again. He never knew on what line I would be on.

2502. He used to find out though? He appeared to me to get on to the cars accidentally. I did not think I was the only one he used to look after.

2503. What makes you think that you were not the only one he used to look after? Well, I do not know; I do not see why he should pick me out.

2504. Do you suppose that he was cheyving after the other men in the way in which he cheyved after you? I have seen him on other cars. He always used to be standing on them as he used to stand on mine.

FRIDAY, 31 AUGUST, 1888.

Present:—

A. RICHARDSON, Esq., PRESIDENT.

R. W. THOMPSON, Esq., M.P., | F. A. BROCK, Esq., J.P.

Daniel Power called in, sworn, and examined:—

2505. *President.*] You are a senior plain-clothes constable? Yes.

2506. I believe that, acting under instructions last night, from your head office, you put a certain person under surveillance? Yes.

2507. Will you tell us what you saw? After I left Mr. Moran and Mr. Wigg I went back to watch a house near Davenport's wool factory. The name of the street I do not know. After waiting there awhile I saw a tall gentleman walking up and down outside. After he had been there a short while he whistled, and a small man came out, a man who I believed to be the person I was watching. I could not get close enough to him without being seen. After they had been talking for a while, the only words I could catch were this tall person saying, "They can't make anything out of that." When they were parting I heard the tall man saying, "I will see you again to-night." He walked down the street and went into the house next to Davenport's wool factory. I saw no more of him. I could not be quite sure that the little fellow was the man I was watching or not, but I am almost sure it was. It was rather dark, and I could not get a good look at him. I did not want to get too close. I was lying on the grass about 30 yards away from him.

2508. You know Musgrave? Yes, well.

2509. *Mr. Brock.*] You knew him before this? Yes.

2510. There is not much doubt in your mind that it was he? I feel sure it was, but I should not like to swear positively that it was. I stayed there last night until half-past 11, and this morning I got out there by the first tram. I watched the house until 15 minutes past 9 and he never came out. I then came into town, as I had to attend the Central Police Court. When I came to the place where I left Moran and Wigg last night I saw Musgrave coming up Simmonds-street towards the Newtown tram. This was at about 20 past 9. I came straight in. Musgrave got out at Market-street. I could not get a good glimpse of him.

2511. *President.*] Did you not follow him then? I did not. It was about 10 minutes to 10. I think he got off to see if I was following him. He turned down Market-street. He looked round at me several times in the tram coming in.

2512. Do you know Mr. Loder in Elizabeth-street, an hotel-broker? Yes.

2513. Did he come to you a few months ago and tell you that he had some kind of information about some coining which was going on? Yes.

2514. Did he ask your advice about it? Yes.

2515. What did you tell him? I told him to see the Inspector-General. A large reward was wanted. I asked Loder if he could bring the man to see me at his office. He said he would do so the next morning, but the man did not come. I instructed Loder to see the Inspector-General and take this man with him, and see what reward would be given.

2516. Do you know if he ever did so? I do not know.

2517. *Mr. Brock.*] Loder is an ex-policeman? Yes.

2518. How did he come to leave the force? I do not know.

2519. *President.*] You understood from him distinctly that this was a coining business? Yes. The reason I came to know him was that I had an inquiry about a partner of his who disappeared mysteriously.

2520. *Mr. Brock.*] Why did you not go to the Inspector-General of Police about this coining? I had no information to go upon. Loder himself could not give me the information.

2521.

Senior
Constable
D. Power.

31 Aug., 1888.

- T. Musgrave. 2606. Did not these men pay you cash for the tickets? What tickets?
 2607. The tickets you collected and sold? I did not collect any tickets., He said, "Didn't you get all your money in?" and I said "No."
 31 Aug, 1888. 2608. Did you not say when you went into the hotel, "This is bad luck for me, this happening there to-day"? Yes.
 2609. What did you say when Moran asked you whether you had all your money in yet? I said "No."
 2610. Did you not say that you had not one-fifth of it in? I do not remember it.
 2611. You do not deny it now so forcibly? I do not remember saying anything of the kind. I remember saying that I had not all my money in. I can swear that.
 2612. Will you swear that you did not say one-fifth of it? Yes. Well I will not swear it.
 2613. *Mr. Brock.*] Will you swear that you can forget a conversation which only took place last night? I do not remember the whole of it. I did not think of this before, because you said there were three conductors who owed me money.
 2614. *Mr. Thompson.*] That is not so. The question asked you was: "Among the men in the Tramway Department who are the three men who owe you money for gambling"? You replied, "I refuse to answer the question"? I did not think of any such amount as this. These men did owe me a little money and they paid me. I did not think of it at the time.
 2615. Was it necessary to say, "I refuse to answer the question"? I do not see that I was bound to give you the names of any of them. What I meant was that I did not think so.
 2616. *President.*] You were asked a plain question and instead of saying that you did not think so you absolutely refused to give the names? I did not think I was bound to give such names.
 2617. But you had the names to give? They have paid me since. Three men owed me money. O'Donnell does not owe me £1 now.
 2618. Yet you absolutely refused to give the names of the men owing you money? I do not know what you mean. They had owed me money, but they had paid me.
 2619. *Mr. Thompson.*] What money were you referring to when you said to Moran, "It has been a bad day for me down there, because I have been unable to collect my money"? I was only joking. Only two men owed me money, and one paid me last night.
 2620. You say that one of these men paid you last night? Yes, Bluey paid me.
 2621. Where did he pay you? I met him in Oxford-street last night.
 2622. At what time? A little before 7.
 2623. Will you swear that you were in Oxford-street a little before 7? It was about half-past 6—between that and 7.
 2624. Were you in Oxford-street at all between 6 and 7 o'clock yesterday evening? Yes, I was.
 2625. At what time did you get to the house in Simmonds-street yesterday evening? I went out in the 10 past 7 Marrickville tram.
 2626. Were you up in Oxford-street before that? Yes.
 2627. *President.*] Explain that? I walked into Oxford-street from Riley-street. I was up to see my mother; I went up there to tea.
 2628. Where is your mother living? She lives up country, but she is staying in Fovcaux-street now. She is staying with Mrs. Colls.
 2629. You went to Mrs. Colls' house last night, did you? Yes.
 2630. How long were you there? About 20 minutes.
 2631. From there where did you go? I came into Oxford-street.
 2632. And from there? I came down to O'Donnell's place.
 2633. Where is that? Just up here—in Phillip-street.
 2634. What is O'Donnell? A conductor.
 2635. Where does he live—in a boarding-house? No; he lives with his wife and family in Phillip-street. He lives just past Bent-street. He is the man who owed me 18s.
 2636. What time did you get there? I came straight from Oxford-street. I could not say the exact time, but I should think it was about 7 o'clock.
 2637. After that did you go down to the Circular Quay? No; I went home. O'Donnell was not at home. He has a gun of mine, and I wanted to get it. I was standing waiting for the tram, and he came along. I asked him about the gun, and then I got off at Liverpool-street and waited for the Marrickville tram. I do not know where O'Donnell's tram was going to. He had empty cars.
 2638. Did you pay your fare? I did not.
 2639. O'Donnell was the conductor? Yes. I wanted to speak to him.
 2640. He allowed you to go from Bent-street to Liverpool-street without paying him anything? Yes.
 2641. Do you travel free on all the trams? No; I do not.
 2642. Did you pay your fare to Marrickville? As far as Enmore.
 2643. Where did you go to from Enmore? I went to Mrs. Johnson's.
 2644. Did you get word at Mrs. Johnson's that Moran wanted to see you? Yes; I waited there until Moran came.
 2645. Where did you get word first? I called at a friend's place, and she told me that Moran had been there and wanted to see me. I went from there to my sister's place.
 2646. This friend's place is the young lady's about whom we were asking you yesterday? I refuse to answer any question of that kind.
 2647. *Mr. Brock.*] We know all about it? I do not see that it has anything to do with the case.
 2648. *President.*] You did not get your money from O'Donnell? No.
 2649. Did you ask him for it? I did not say anything about it, and he said he could not give it to me just then.
 2650. Where did you meet the other man in Oxford-street? At the corner of College-street.
 2651. What did you say to him? I did not say anything; he put his hand in his pocket and asked me how the Commission was getting on.
 2652. He said, "Here, I owe you something?" He had promised to pay me last night.
 2653. What is he? A fireman.
 2654. He was on his motor? Yes; he put his hand in his pocket and gave me 5s.. He said "How is the Commission getting on?" I said, "I do not know much about it." I stood there talking while the motor stopped—only for a minute.
 2655.

2655. *Mr. Thompson.*] Before we take any extreme steps, will you take a few minutes to think whether you will disclose to us what we know you can disclose. We do not want to take any extreme step with you, but you may oblige us to do it in the interests of justice, so that it may not be said that we are here upon an errand which we cannot carry out? I do not know what I have to make up my mind about.
2656. We have now given you an opportunity of saying whether you will do what we think is right, and what we know you can do if you choose to do it. Have you made up your mind to make any statement of your own free will, without any further pressure on our part? I have told you all I know.
2657. *President.*] You know a man named Cook, do you not? I know a conductor named Cook.
2658. I do not mean conductor Cook? That is the only man I know of that name.
2659. You do not know Charles Cook well? I do not.
2660. You do not know him? Not that I am aware of.
2661. So that if we have been told that you have been frequently in his company we have been told another untruth? You have.
2662. You have never heard this man Cook spoken of? I have.
2663. You mean that you have heard the other Cook spoken of? I have heard of a man named Cooke. I have heard of his coming before the Commission.
2664. Before the Commission? So I heard.
2665. As a witness? I do not know how it was I have heard that a man named Cook was implicated. Moran told me a little while back. He described him to me, showing me how he walked; that is all I know about him. I heard that he said different things before the Commission but not about me.
2666. You swear that this man never got on to a tram and spoke to you? Not that I am aware of.
2667. You positively swear that you do not know him? I positively swear that I do not know a man named Charles Cook. I do not think I know the man at all.
2668. You know that he was frequently asking for you, don't you? I don't; I never heard that he was asking.
2669. Did not Greeley tell you that he had been asking for you? I never had any conversation with Greeley about anyone.
2670. It would be much better if you were to say "Yes" or "No." Did not Greeley say that Cook had been asking for you? No.
2671. You know Greeley? I do.
2672. And you never had any conversation with him? No.
2673. You never had? I had conversations with him when others were there, but never by myself.
2674. Never on the subject of the tram frauds? No.
2675. Do you remember seeing him in conversation with Moran on the morning before you made your statement to Mr. Roberts? I have seen him in conversation with Moran often.
2676. Yes or no to my question, please? I think I did see him somewhere a little time before.
2677. Did you see Greeley in conversation with Moran the morning before you made your statement to Mr. Roberts? I could not be sure. I could not positively say that I did not. I remember seeing them get on to my car, but whether it was the morning before or a week before I could not say.
2678. Will you swear that Greeley had not a great deal to do with your making your statement to Mr. Roberts? He had nothing whatever to do with it.
2679. What do you know of O'Donnell? I do not know any more of him any more than that he is a conductor.
2680. Does he not owe you money? Yes.
2681. Under what circumstances did you lend it to him? I lent him £1 one day at Botany.
2682. Is he one of the men you suspect? I do not wish to say who I suspect. I would not like to make an accusation against any man.
2683. You say that O'Donnell is not one of the men you suspect? No; I never suspected him.
2684. You believe that he is perfectly square? I believe he is.
2685. Was he not suspected at the time that Hendy was taken? I do not know at all.
2686. You knew that Hendy was taken? I knew that he was suspended, because I saw him signing and going away.
2687. And you knew that he was going to be suspended? I did not.
2688. You did not know the day before? I did not.
2689. You did not know that certain men were going to be taken? I did not.
2690. Or that certain men were suspected? I did not.
2691. *Mr. Thompson.*] If anyone has told us that you have been repeatedly seen talking to Cook in your travels is that an untruth? He may have been talking to me, but I do not know it. I am not aware who the man was.
2692. You go to the races a good deal do you not? Not very often. I have never been out to the races except when I have been sent on the cars.
2693. Do you go to the Carrington and Botany Handicaps? I have been there a few times.
2694. Betting on them? Sometimes.
2695. Making a book? No.
2696. What is the extreme that you would venture to pledge your oath and conscience that you ever betted on any race or handicap foot-race? Different amounts—I have won and lost.
2697. What is the extreme? Sometimes I am lucky, and win a little.
2698. What is the extreme you have gone to; we are not asking this question without knowing something about it; you have been such a very fishy character that you have been under observation for months; your whole history is known, and we want to see to what extent you are telling us the truth? If I have had the money to lay out, I would bet.
2699. But what is the extreme? I cannot call to mind how much I have bet.
2700. Your memory is like a sieve; you have been into betting again and again, and you cannot remember what sum you have ventured? What I have won you mean; sometimes I have won a good deal.
2701. What is the biggest bet you have ever won? Over at the Melbourne races I won a good bit of money—about £70; that is about the largest I ever won.
2702. When was that? Some time ago—at the time of the Newmarket Handicap.
2703. Was it at the spring or at the autumn races? I think it would be about the beginning of the year.
2704. Was that while you were under suspension? No.

T. Musgrave.
31 Aug., 1888.

- T. Musgrave.** 2705. How did you manage to get a holiday to go over to Melbourne to see the races? I betted here. I did not go over to Melbourne.
- 31 Aug., 1888.** 2706. What horses did you back? I had the double—Cranbrook and Carlyon.
2707. Who did you win the money from? I won £25 from Blakey, a man in the yard.
2708. What odds did you get? He had £200 to £1 about one double, and I had £100 to 10s., and saved £25 with Blakey.
2709. You only staked 10s. and you won £75? Yes.
2710. *Mr. Brock.*] You say you saved £25 with Blakey;—who is the other man you won from? I won from Wakeley.
2711. Is not that one of the things you were telling Moran about last night? Yes; that is what I was referring to.
2712. *Mr. Thompson.*] Where used this man Brown, *alias* Scott, to be talking to you when he was tempting you in the manner you describe? On the cars.
2713. Whereabouts? On the platforms.
2714. That would be under the stairs? Yes.
2715. Did he pay his fare? Yes.
2716. Are you aware that that is the very place where you have been seen talking to Cook? It has been unawares. I do not remember talking to him. I do not know the man's name.
2717. Do you know the people you bet with? Yes.
2718. Have you not bet with Cook again and again? Never, to my knowledge.
2719. Do you mean to say that you bet with people you do not know? I am sure that I never bet with Cook; I do not remember ever meeting him; I do not know him by that name. I do not think Cook would say that I knew him; I do not remember him by that name. In fact I do not know anything about him.
2720. Will you swear that you have not been talking to Cook since he gave evidence before this Commission. I warn you to be careful what you say? I am sure I have not.
2721. What makes you sure? Because no such man ever spoke to me. I did not speak to him about it, knowing that his name was Cook. Plenty of people have asked me questions about the frauds.
2722. I want to ask you about something which cropped up in some evidence which you gave yesterday, as to what took place on the tram when you first showed Graham how to do it. You remember the occasion perfectly well? Yes.
2723. And where it was? Yes.
2724. Will you swear that before you asked Graham for a bit of wire, on that day, you did not ask someone else for a bit—I mean someone on the motor? No; I did not.
2725. You swear that? I do not remember speaking to anybody.
2726. Have you spoken to fireman Reid since you gave your evidence yesterday? No; I have not.
2727. If he tells me that you came to him and asked him for a bit of wire, is it true or is it not? It is not true.
2728. If he says that he told you to go to his mate, Graham, is it true or is it untrue? I am sure it is not true.
2729. You never asked Reid for a bit of wire? Never.
2730. On the occasion that you got it from Graham? I did not.
2731. Will you swear that you did not? I will.
2732. Do you remember what time of the day it was when you were telling driver Graham about this matter? It was in the evening, that is, at night.
2733. Did you ever show Graham how you could flick the pin out of your bell with your thumb or your finger in case you were come upon suddenly, and in order that you might escape detection? I showed him how it was put in and out.
2734. I want to know if you will swear that you never showed Graham how you could flick it out in an instant with the thumb or the finger, so that you might not be detected? I do not know about that, I may have said, "It is simple enough to knock it out" or something to that effect.
2735. Did you ever tell anyone that if the Commissioner himself was standing alongside of you you could do the trick, and he would be none the wiser? I swear I did not.
2736. Did anybody ever caution you that if you did not mind what you were about you would be caught or trapped? No.
2737. Will you swear that you did not say in reply to that, "No bloody fear because I can knock the pin out in a second?" I never had such a conversation.
2738. Did you not give up your bell one night and forget to take the pin out? I never had any pin in it.
2739. Once more I repeat: Did you give your bells up at the office with the pin in them? I never did anything of the kind.
2740. *President.*] You handed your bells to Murray? Often.
2741. *Mr. Brock.*] With the wire in it? Nothing of the kind.
2742. *Mr. Thompson.*] Will you swear that you did not tell anyone that when you had found out that you had handed the bells in in this condition you felt as if you were going to faint, and that you found out the next morning when you got your bells that they were in exactly the same state? Nothing of the kind.
2743. I believe you have stated that Scott has left the country? I did not say he had; I said I thought he might have.
2744. You did not say that he had? Not in my opinion.
2745. You said so within the last twenty-four hours? I said I thought he had, because I had not seen anything of him. I said that there had been such a fuss that he might have left the country.
2746. And he a detective in the department. If he was not a detective? I do not know whether he is or not. I came to the conclusion that he had left the country; anyone naturally would.
2747. Because you did not see him twice a week? Because I had not seen him for such a long while. There had been such a fuss about the matter that I felt sure he had gone.
2748. Do you know a man named Frank Coll? I never heard the name.
2749. *Mr. Brock.*] Do you not know where his place of business is? I do not.
2750. *Mr. Thompson.*] You never supplied anyone with tickets? I did not; I never supplied anyone.

2751. Did you hand your bells to Coll on any occasion to get repaired? I do not know Coll; I gave T. Musgrave, them into the office when they wanted repairing.
2752. Did you ever hand your bells to Coll to get repaired? No; I do not know the man; I never handed them to anyone to get repaired. When they get out of order I hand them in at the office. 31 Aug., 1888.
2753. Just tell me how long after Scott had opened your bells and had put in the brad-awl—how long after that it was they went wrong and would not ring? I cannot think how long it was—some few weeks. It may have been a fortnight, or it may have been three weeks.
2754. I want to know this on your solemn oath: Did not he deal with both of the bells at the same time, and did they not both go wrong at the same time. Did you not hand them both in as being in an imperfect state? No; nothing of the kind ever happened. The bell that was manipulated went wrong.
2755. It was only one bell? Only one bell.
2756. And that was the one that went wrong? Yes.
2757. Now will you give me a definite answer to this question: How long after he manipulated the one bell was it that you handed the bells into the office? I should think about a fortnight or three weeks. I said so before.
2758. You said five minutes ago that you could not remember? I said I could not remember exactly how long, but that I thought it was about a fortnight or three weeks.
2759. How long before this man meddled with your bells was it that he threatened you that if you let out anything about it he would stiffen you? He did not say that. He said that I should never live to give evidence.
2760. How long before he touched your bells was it that he threatened you in this way? It was after he had meddled with the bells and when he found that I would not do anything with them—that is, when I would not let him have tickets.
2761. How long after he had meddled with your bells was it that he threatened you? The next night he met me and asked me how I was getting on. I said, "I will not have anything to do with it." When he heard that he used the words I have described.
2762. It was at night-time in a service tram when he showed you how to do it? Yes.
2763. What light had you to manipulate the bell by? The light of the car.
2764. And where was it, and at what time of night or day was it, that he threatened you? He got on to a car at King-street and went as far as Bathurst-street. He asked me first how I was getting on, and I said that I would not have anything to do with it. He then used this threat to me. I only saw him about twice after that.
2765. And you are absolutely certain that this happened after you had been put off at the time of the retrenchment? Yes.
2766. Then he never did show you before you were put off at the time of the retrenchment how the thing was done? No; we were tearing tickets then.
2767. When was this? Some time ago.
2768. After you came back from your suspension? No.
2769. Were you tearing tickets the whole of the time you were on prior to the retrenchment? Not the whole time.
2770. Were you on during the whole of the time they were tearing tickets? Yes.
2771. How long ago is it? I do not remember how long ago.
2772. Were they tearing tickets when you were suspended? No; the bells came into force the day before I left. When this man heard of the bells coming back to the Department again he came and told me how they could be manipulated.
2773. *President.*] When he heard that the bells were to be in force again he came and told you for the first time how they could be faked? Yes.
2774. Did you not swear before that it was some time before you went off at the time of the retrenchment that this man came to you and spoke to you about the bells being manipulated? No, that is not so. I had several conversations with the man. The bells were taken back on the Eight-hours Day.
2775. Is it not a fact that you were paid off on the night of the 30th September? I could not say about the date.
2776. Will you swear that the registers were in use the day before you were paid off? Yes.
2777. And that that day was Eight-hours Day? Yes.
2778. You swear distinctly that this man Scott, or whatever his name is, spoke to you only on the day before you left with regard to the manipulation of the bells? No, that is not so. It was a week or so before.
2779. How did he come to know that the bells were going to be used again? Everyone knew of it—I did myself.
2780. And you told him? He said to me, "The bells are coming back," and then he told me this thing.
2781. You swear you did not tell him? I will not swear that I did not tell him they were coming back.
2782. *Mr. Brock.*] Is Fraser the man who owes you £50? No one owes me £50.
2783. Did he pay you £50? He never owed it me.
2784. But he paid you £50? He did not owe it me.
2785. Will you swear he did not? Yes.
2786. Not in any shape or form? I swear it.
2787. *Mr. Thompson.*] Did Scott tell you how he had found the trick—that is, how to fake the bells? No; he did not tell me how. I asked him how, and he made some allusion to a gas-meter, and said gas-meters could be done the same.
2788. Did you ever make a statement to anyone that he told you that he knew all about it, and how he had found out how to do it? He knew all about it—he certainly knew all about it, and I asked him how he had found out.
2789. Will you answer the question? Yes; he said that, and I told it to Mr. Vernon.
2790. Was that true, or were you telling an untruth? It was true, of course.
2791. *President.*] Although you told Graham that it was as false as it could be? I did not tell him anything of the kind.
2792. You swear that? I do. Graham said to me, "What have you had to say about me up there?" He said, "You told Mr. Roberts that I knew all about it." I said, "You only knew as much as I told you

T. Musgrave. you myself—what I told you that time.” He said, “You told him I knew all about it.” I said, “I never mentioned your name—it is false; if anyone told you that I told Mr. Roberts that you knew all about it it is false.”

31 Aug., 1888.

2792. If Graham swore that you made the statement I have mentioned to him he swore falsely? He must have misunderstood me. I said, “If anyone said that to Mr. Roberts it is all false—it is all a yarn.”

2793. You do not think that Graham would wilfully swear falsely? I do not know, I am sure.

2794. Do you think he would wilfully swear falsely? I have no idea.

2795. You know the man? I do not know him; I do not know anything about him.

2796. Do you mean to say that you are not intimate with the man to whom you showed the tickets which you had collected and of which you had swindled the Government? I am intimate with him in a way—I am intimate with Moran.

2797. Do you believe that Graham would willingly swear falsely? I could not say that he would not; I should not think he would be the man who would.

2798. Did you not tell Mr. Vernon an absolute untruth when you said that there was no other man you knew of who could do it? No other man I knew of in the service.

2799. Was not that an untruth? No.

2800. Did you not show Graham how to do it? I only showed him how it could be done by putting the pin in; I did not open the bell; I told him the bell would have to be opened.

2801. *Mr. Thompson.*] Did you not deny a short time ago that you had opened the bell? I did not say that it had not been opened.

2802. The man who showed you took the face off? Yes.

2803. He did not push the brad-awl into one of these holes? No; when he got the face off he pushed the brad-awl into some part of the works.

2804. How many have you taken to pieces? I have not taken any to pieces. That is the only time I saw the inside of a bell.

2805. Will you swear that when you gave your bells in they were not both faked in the same way? I swear they were not. The pin would not work in the other part; I tried it.

2806. That is why you got the piece of wire—because the pin would not work? I am sure it is not.

2807. That is why you asked Reid for the wire? I am sure it is not. I do not remember doing so.

2808. Do you know that when you swear that you do not remember a thing which it is absolutely clear that you must remember, and that when you swear two different things with regard to the same matter, both of these swearings are perjury? You have put the questions in such a different way that I do not know sometimes what you are talking about.

2809. Every time you have professed not to understand we have repeated the questions as many as three times, so that you have had every chance? I have no recollection of asking Reid for a piece of wire. On the occasion that I spoke to Graham I never spoke to Reid. I do not remember asking Reid for any wire, and if I did it was not for that purpose.

2810. *President.*] How much money has Ferrier had from you during the past six months? Nothing much.

2811. How much? I do not know. At one time he was sick and I lent him some money.

2812. How much during the last six months? I could not say.

2813. Has he had £100? No.

2814. £50? No.

2815. How much? I do not suppose it would amount to 30s. Now and again he used to borrow a few shillings from me.

2816. Did you ask Graham to say that the occurrence between you, when you showed him how to rig the bells, took place only two months ago? I did not ask him to do anything of the kind.

2817. You swear that you did not do that? I swear that I did not ask him anything about it.

2818. *Mr. Thompson.*] Will you say how long it was after this man had shown you how to do it that you showed Graham? It was a little while after—a very few days afterwards.

2819. Then if Graham has been telling people about it, and if someone has known how to do it for the last six or seven months at the very least, it was not from you that he got the information? No; because it is not more than six months ago since I knew myself.

2820. *President.*] And yet you told Graham that you had been doing it from a fortnight after you first joined the Service? I did not tell him anything of the kind.

2821. *Mr. Thompson.*] Do you say that that is an absolute and unconditional lie—I suppose there is no other way of putting it? If he says so.

2822. What did you do with the car-load of tickets you collected when your register was not working—when you showed Graham that you had collected a car-load? I said, “I will just go along the car and show you,” and I went along and collected four tickets.

2823. That was the car-load? I had been round before. There were two or three persons who had just got in. I forget whether it was on a twopenny or on a penny section.

2824. *President.*] You admit that you faked your bell, and that you collected certain fares without registering them? I collected four tickets.

2825. You had faked your register first, and then you collected certain fares that you did not register;—that you admit? I admit collecting four tickets when the bell was out of order.

2826. Did you put your bell out of order? I put the pin in to show Graham.

2827. You put your register out of order. You inserted a pin, and then you collected fares without registering them? I collected four tickets.

2828. Without registering them? Yes, and I put them in the bag and gave them in at the office.

2829. Yet while you did that for which you might be convicted at any moment, you were under the impression that the man who had shown you how to do it, was a detective, and had only shown you for the purpose of trapping you? I thought so.

2830. Although you thought that a detective showed you for the purpose of trapping you you laid yourself open to a criminal conviction? I do not see that it was so.

2831. You collected fares in a fraudulent manner. I do not care whether it was four or fifty; but we have evidence that it was a car-load? There was nothing of the kind. I held the tickets in my hand, and showed them to Graham.

2832. Why did you collect these tickets without registering them? To show Graham that it could be done.
2833. What occasion was there to collect tickets in order to show Graham? I wanted to show him, and if I had not done so I should have had to ring the bell upon the motor, and people would have wondered what it was.
2834. But without collecting tickets, could you not have convinced Graham that the bells would ring without registering? I did not like to do so on the engine.
2835. *Mr. Thompson.*] Up to what time was it that you still believed that this man was a detective? Well when I did not hear any more about it I came to the conclusion that he was not a detective. He used to approach me, and that kind of thing. He may be a detective for all I know now.
2836. *President.*] You were afraid you would be found out if you rang the bell on the engine? I was not afraid of being found out, but it would cause people to wonder what it was.
2837. You laid yourself open to the whole car, seeing that you were swindling? I do not think I laid myself open. I did not think of it at the time.
2838. I can readily believe that because you had been doing it so long? I had not.
2839. If Graham swears that on that occasion you collected a whole car-load of tickets, does he swear falsely? I am sure he does. He could not tell how many I collected.
2840. He heard the ringing? I only rang four times.
2841. *Mr. Brock.*] He was watching you; he saw you go round the whole car? I only had four tickets, and I held them in my hand.
2842. *Mr. Thompson.*] Where was it that you showed him the tickets in your hand? I got on to the motor.
2843. Upon what part of your journey? Coming from Waverley to Paddington; it was about Queen-street; somewhere about that.
2844. *President.*] You left your work to show him? I just got on to the motor.
2845. Was it on a penny section? Just at the end of a penny section. I was talking to him about the matter while we were at the tanks, and I then went back on to the car, and collected the four tickets. I went all over the car, and there were only four to collect.
2846. It was on a twopenny section? No; on a penny section.
2847. *Mr. Brock.*] You had passed Queen-street before you went round? It was on a twopenny section that I showed him, but I did not go round the car on a twopenny section.
2848. *Mr. Thompson.*] Why did you not wait until the tram reached the terminus before you showed Graham, instead of leaving your work, and crossing from the car to the motor while the tram was moving? I did not do so. The tram stopped for a few minutes.
2849. There were two stopping places then; at the first you showed him how to do it, and at the second you showed him what you had done? Yes; it was while the tram was going that I collected the tickets. I do not know whether I waited until the tram stopped, or whether I crossed from the car on to the motor, while the tram was going.
2850. *President.*] You said just now that you did not like to show Graham on the engine, because you were afraid the passengers would notice something. Yet you were not afraid to step off from your car on to the motor before you arrived at the terminus to show Graham. You did not think that the passengers would see you doing something extraordinary? We often get across to tell the driver something we want him to do.
2851. Why should you have been afraid of doing that before? I was only afraid of ringing my bell upon the motor.
2852. Why were you afraid of that? Because the passengers would hear it and wonder what I was doing.
2853. What would happen then? Well I do not know who would be listening.
2854. And if anyone had been listening? They would perhaps want to know what I was doing and would report me.
2855. You did not care what you did so long as they did not hear you. You did not mind doing the thing in itself but you did not want to be caught? I did not do it with the object of defrauding the Government.
2856. How did it come about that this tram in which you were with Scott, when you faked the bells, ran through to Bondi? It went to Bondi junction.
2857. Without a stoppage? Yes; to bring in passengers.
2858. Is that the usual thing? Yes.
2859. How often does that occur? It is generally done when there is anything going on, or on Saturdays.
2860. How often have you taken out a tram from Bridge-street to Bondi without stopping? Very often.
2861. How long did it take Scott to do the bells? It did not take him any time; not more than 10 minutes altogether.
2862. You gave Scott a free ride? He did not pay on that occasion.
2863. How often did he get on to your tram without paying? He always paid on the passenger trams.
2864. Why did you not when you handed in the bell which had been faked and which went wrong tell the whole truth about the matter; why did you not say that it had been faked, and that it had gone wrong in consequence? I did not know that it had gone wrong in consequence of being tampered with. As I said before I was afraid that I should put myself in danger if a noise were made about the thing.
2865. *Mr. Brock.*] If you were in the habit of taking service trams out to Bondi, would you consider that you were entitled to take people out for nothing? No.
2866. But you took Scott out for nothing? On that occasion.
2867. What time of day was it? It was at night-time.
2868. At what time did you leave Bridge-street? I cannot say exactly.
2869. We should like to know exactly—to a minute? I could not swear to the time.
2870. What was it—within six or seven hours? It was between 6 and 8 o'clock.
2871. You had had your tea? Yes; I think I had.
2872. Where did you have it? In the yard.
2873. *Mr. Thompson.*] What time of the year was it? It was about five or six months ago.
2874. Will you take your memory back and say what month of the year it would be? It would be about February or March.

T. Musgrave,
31 Aug., 1888.

- T. Musgrave. 2875. Were you assistant conductor or conductor of the tram? I was the conductor in charge.
- 31 Aug., 1888. 2876. Were there two of you? I had two cars and there was no other conductor with me.
2877. Who was the driver? I cannot remember.
2878. You can remember all about it? I cannot remember.
2879. Who was the fireman? That I cannot remember.
2880. It being February or March when this man Scott showed you how to do the thing, how long was it after that that you handed in your bells. Be very careful now? I should think it was about a fortnight.
2881. What did you do with the tickets and the money you took after your bell had gone wrong and would not ring? I gave it in at the office.
2882. How did you account for them by your register? I registered all on the one bell—tickets and cash together.
2883. For a whole fortnight you made your returns on your cash-bell? No; only for one trip when the bells went wrong. I gave them in directly.
2884. *Mr. Brock.*] When one would not ring? When one would not ring I registered on the other.
2885. *President.*] Is that the last pair you handed in? I think I had another after that.
2886. What condition were the last bells in? Mr. Roberts tested the last pair. They were right.
2887. Then you had only your bells for one trip after they had gone wrong? Only for one trip; I think I was coming in from Paddington.
2888. *Mr. Thompson.*] Did you not tell Mr. Vernon that you had known of this thing happening only two months before he examined you? I told him I could not think how long it was. It was a few months back I think I said.
2889. Did you not sign this document which I am reading? Yes.
2890. You said, "This was about a couple of months ago. I have seen him since. The last time was about a month ago." That was your statement to Mr. Vernon? That is right; because it is two months since I made that statement.
2891. "The last time I saw him was about a month ago," you said? It may have been longer than a month; but I do not quite remember.
2892. You told us this morning and yesterday that it was only about three months ago since this was done. When I asked you if you could swear that you had not told Graham six or seven months ago you swore that it was five or six months ago since this took place in the cars. How can you reconcile your swearing first of all that it was only three months ago and then five or six months ago—in February or March? I said about that time. I could not swear it was in February or March. I said it was about five or six months ago.
2893. You said about February or March? That is what I have always said.
2894. Do you remember what you told us about this man coming to you after you had been reinstated? About the first time he came to you after you had been reinstated? Do you mean what he said to me?
2895. Yes. And how long was it after your reinstatement that you saw him? I do not remember. It was not very long; not more than a week or so after I had been on the cars.
2896. How was it do you think that he looked upon you as a thief—whether he was a detective or a man who was trying to help you in thieving;—how came he to look upon you as a thief, or at all events as a dishonest man? I have no idea at all. He used to talk pretty freely to me.
2897. Why did you say to Graham about that unfortunate man Hendy that you did not think he was such a fool as to go in for anything of the kind? Such a fool?
2898. Yes? I think I said I thought he was a very foolish fellow. It was well known that he used to miss fares. I said I thought it was neglect. I did not think he would try to rob the Government. Of course we understood that the passengers he had on his car were counted, and that he had not the amount in his bag to correspond with the passengers. I said I did not think he ever collected them, and that he missed them, seeing he was a foolish sort of fellow.
2899. The passengers on the cars were counted, and it was found that Hendy did not return a certain amount, but that he had got some money elsewhere which made up the deficiency? I did not understand that. I understood that Hendy had ninety-three passengers on, and that he had only seventy recorded on his register and 11s. in the bag not recorded. That is why I said I thought it was neglect. I thought he was a foolish kind of man and very neglectful. He was often discussed by the men. Every one used to talk about him, giving their opinion, and I gave mine. They would agree with me and say they thought it was on account of his neglect. The man might have been doing the other thing for all I know.
2900. *Mr. Brock.*] Were your passengers counted that afternoon do you think. I could not say I am sure.
2901. Did you know before you went out what Hendy was suspended for? For not being correct in his bag, I understood.
2902. Who told you? I forget now who told me; some of the conductors who came in.
2903. Who told you that Hendy was sacked because he was short in his tickets? I cannot remember who it was, but anyhow it was some of the conductors who came from the racecourse. Of course it was all over the place.
2904. You remember the facts about Hendy readily enough, but you do not remember your own case? Well, it concerned every one.
2905. Where did you get your information from? I heard it since. I could not say who it was who told me.
2906. You know though? I do not know. I heard it in conversation. Perhaps others were talking about it. Perhaps they would be talking to some one else, or talking together, and one would say, "What was he wrong?" Another would say, "He had so and so in the bag," or "He had so much cash too much or too little."
2907. *Mr. Thompson.*] Now you have not answered my question. How is it that this morning and yesterday you told us that it was only about three months since this man faked your bells for you, and that just before you went away for dinner you told us that it was five or six months ago—that it was February or March;—how do you account for the difference in the two statements? I did not say that it was only three months since the bells were faked.
2908. When you made this statement to Mr. Vernon, how long was it after you had seen Mr. Roberts? About a week.
2909. Did you tell Mr. Roberts exactly what you told Mr. Vernon, or did you tell more to the one than to the other?

to the other? I think I told Mr. Roberts at the beginning of the week, and that I told Mr. Vernon at the end of the week.

2910. Did you not then say to Mr. Vernon that this had happened only two months before you were speaking to him? He asked me how long it was.

2911. Did you or did you not say to Mr. Vernon that it was about two months since the time that you were talking to him that this was done? I said about two months—it might have been more; I see from the document that you have that he put it down two months.

2912. Why did you say two months, or it might be more, when you swear now that it was five or six months from the present time; going back to the 20th July that would be four or five months? Well that is seven months ago; it is almost as good as two months.

2913. When you spoke to Mr. Vernon about it six weeks ago your memory must have been much fresher than it is now—is not that so? It must have been longer ago, I think.

2914. What do you mean? I mean that I could not be positive as to the time, but I told him as near as possible.

2915. How did you come to make such an egregious blunder as to say on the 17th July that it was only two months before. That would have taken you to the middle of May? I meant before that; I must have made a mistake.

2916. Will you swear that this man did not tell you, and show you antecedent to the time of your being put out of work when there was retrenchment? I am sure he could not have done so, because I had no bell; I had the bell for only one day before that.

2917. We asked before whether you were tearing up tickets during the whole of the time before the retrenchment, and you said "No?" When we first had the bells it was a long time ago. I did not know the man then; I had never seen him.

2918. You said on one occasion that you had known him nearly two years? Eighteen months.

2919. Will you swear that you did not say on one occasion that you had known him for two years? I do not think it is that long; I do not remember when I first did see him.

2920. Will you say that you did not, on one occasion, swear that you knew him first of all about two years ago? I may have said it, but on recollection I think it is about eighteen months.

2921. On your oath—before the system of tearing tickets began did you not learn from him that the bells could be faked? I did not.

2922. And you have not said so before? I swear that I have not said so.

2923. Will you swear that you did not here yesterday tell us most distinctly that about eighteen months ago this man came to you and told you that the bells could be faked—that he could show you how to do a lot of tickets, and that he was doing £100 a week? It is nothing of the kind. I did not say it was when he first told me of it. It was when the bells were coming into force again.

2924. Listen to this: "A man came to me about sixteen months ago and told me that he could show me the way to make tickets. He told me his name was Scott. I do not know whether that is his correct name." Did you say that to Mr. Vernon? Yes.

2925. Then why did you say just now that he did not mention this until the bells came into vogue again? That was when I first saw the man. It is sixteen months since I first saw him. When he first made an intimation about the bells, was when he heard that they were coming into force again.

2926. Did you not tell Mr. Vernon that a man came to you about sixteen months ago, and told you he could show you a way to make tickets? That is when I first saw the man.

2927. At one time you say it is eighteen months ago, and at another time you say it is sixteen? It is sixteen months from the time I made that statement.

2928. Did he, or did he not, eighteen months from the present time, tell you that he could show you a way to make tickets? No.

2929. Then why did you say so to Mr. Vernon? He asked me when I first saw the man, and I said about sixteen months ago.

2930. Was this statement read to you? Yes; I was thinking—

2931. Never mind that, you say that you signed it, it had been read to you? Yes.

2932. Did you make the statement of your own free will? Yes.

2933. Did you, or did you not say, "A man came to me about sixteen months ago, and said that he could show me a way to make tickets"? Yes; but he did not tell me at that time.

2934. Did you or did you not tell that to Mr. Vernon? Yes, I think I did.

2935. Was that a lie or not? I do not mean that he told me at that time. Of course he made my acquaintance first. I meant that that was the first I saw of the man. That was what I was asked. After that he told me how to do it. He did not tell me at the time. It was not until the bells came back into force.

2936. What did you tell Mr. Roberts? I told him the same.

2937. Did you not tell him most distinctly that it was about eighteen months ago that this man came to you and first spoke to you about faking the bells? No. I said that he had been going about for that time, and that that was the first I saw of him.

2938. *Mr. Brock.*] When did you first tell Mr. Colls about it? The Sunday night before I went to Mr. Roberts. I think I went to Mr. Roberts on the Tuesday.

2939. Where were you when you told Mr. Colls? At his place. It was Sunday night.

2940. *Mr. Thompson.*] Here is what you said: "A man came to me about sixteen months ago, and told me that he would show me the way to make tickets"? I had had several conversations with the man. He was always getting on to the cars, and offering me cigars and so on. I was curious to know what he had to show me. He told me how to put a pin in the bottom of the bell, which would prevent it from registering. That is exactly what I told Mr. Vernon. I am telling you now just what I told him. I did not state then any more than I do now, that the time he showed me how to do it was the time he first told me about it.

2941. How long back from the present time is it since you last saw him? About three months.

2942. How long after you told Mr. Roberts did you tell Mr. Vernon? It was the end of the week; I think, when I told Mr. Vernon, and I told Mr. Roberts at the beginning of the week.

2943. *Mr. Brock.*] As a matter of fact the 17th was on a Wednesday? I think it was on Saturday that I went to Mr. Vernon.

- T. Musgrave. 2944. *Mr. Thompson.*] Having refreshed your memory, are you certain that it was about February or March that this happened? I am not certain about it, but as far as I can recollect it was about that time. I did not take much notice.
31 Aug., 1888.
2945. May I ask you why, if this thing happened in February or March, you waited until July before you said a word to Mr. Roberts or to anyone else about the matter? I did not want the man to think that it was me who was the cause of the thing being found out. I thought to myself that he must have a lot of friends and that kind of thing, that his people who knew about it, or who knew that he could get tickets. I have thought there were also a lot of people who might be getting tickets from him.
2946. From whom, the detective? I did not know then who he was. I did not know what he was. I at first thought that he was a detective. I did not know what to think about it.
2947. What was the nature of his threats? When I told him that I would have nothing to do with the bells, he said, "If you say anything about it you will never live to give evidence."
2948. Why did you not give him into custody at once for threatening your life? I was on the car at the time, and I could not very well get off. I did not take very much notice of it.
2949. You thought that was the way in which a detective would act? I did not know.
2950. You knew Moran at the time;—did it not occur to you to go to him and ask him whether there was a new detective at work? No, it did not.
2951. Now let us know when it was that you held up this piece of wire or bent pin, which you were constantly using, exhibiting it to Graham, and saying, "This is worth a tenner a week to me"? I never did anything of the kind.
2952. I thought you said it in a joke? I said something to him about a public-house in a joke.
2953. But you swear you never said anything about the tenner a week? I do not remember ever saying it.
2954. It would not have been a strange thing for you to say would it? I might say it in a joke to him. I do not remember holding up a piece of wire.
2955. Did you take the tickets by way of a joke? I did not take any tickets any more than the four I mentioned, and I put those in the bag.
2956. After Ferrier was caught what did you say to Graham when you got on his engine? I asked him what he had to say about it. He had been up at the inquiry at that time.
2957. Where? He had been before Mr. Roberts.
2958. Not at all? He told me that he had, and he said that I had told Mr. Roberts that he knew all about it. I said that it must be only a tale, or something of that kind. I told him that I did not mention his name. We were talking just while he stopped at Bent-street.
2959. Did you not say to him as you got on to the engine before he said a word to you, "Ferrier has been making a nice mess of it"? I swear I did not.
2960. Will you swear that you did not say to Graham when he told you to be careful that you never could get caught, because you always got the wink from the office? I swear I never said anything of the kind.
2961. Will you swear that you did not say to Graham at another time that Colls would put you fly to anything that was going on? I swear I did not. I never mentioned Colls's name.
2962. Will you swear that you did not tell Graham that you put Fraser's bells for him so that they would cheat? I swear I never did.
2963. Do you mean to say that you never said that you had faked Fraser's bells? I do.
2964. Did you not also say that you refused to put him into the way of doing it until he gave you £50 out of the first £100 worth of tickets? Nothing of the kind.
2965. You swear you did not say it? I do.
2966. *President.*] We want to know where the shop is at Newtown, or wherever it may be, of which you told Graham? That is nonsense.
2967. Will you swear that you did not tell Graham several times that you had a say in a shop at Newtown? I may have mentioned it in just the same way that I mentioned the public-house—jokingly.
2968. But you did say when he was pressing you again and again to know what you did with the tickets—you know that he did press you again and again? I believe he asked me what I was doing with the tickets.
2969. I was saying that over and over again he pressed you? No, I do not think he did.
2970. Well, a great many times? Well, he might have said to me, "Do you get rid of any tickets," or something of that kind, as I said just now jokingly.
2971. Did he not press you again and again to know what you were doing with the tickets? No.
2972. You swear that? Anything that passed between me and Graham was a joke. It was said just as we happened to pass one another.
2973. *Mr. Thompson.*] Do you know Murray? Yes.
2974. Do you remember giving your register to Murray with a pin in it? I never did.
2975. Do you remember his asking you what line you were on, and your being in such a state of mind that you could not tell him? I have no recollection of anything of the kind occurring.
2976. Don't you remember that you felt so faint that you could not answer his question? I swear I did not.
2977. Will you swear that you did not tell Graham distinctly that this thing happened? I swear I did not do anything of the kind.
2978. Don't you remember feeling so flabbergasted that you could not tell Murray the name of the line you were on? Nothing of the kind.
2979. Do you swear that no such conversation ever passed between you? No such conversation as that.
2980. What was the conversation that did pass then? Graham used to say to me, "I suppose you are doing very well now, and have a shop or two round about." I said to him at another time, "I am going to take a public-house next week." You see he had been telling me about the other men doing so well. He had also told me that he felt sure that there must be something of the kind going on, as he knew other men who had been sacked, or had left and had gone into business, some of them being able to keep hotels.
2981. Will you tell me what was to be the reward of this man for showing you how to fake the bells—what profit was he to make out of it? I was to give him the tickets.
2982. *Mr. Brock.*] To whom? To Scott; I was to let him have the tickets.
2983. At what price? 10s. for every £1 worth.

2984. Was there not a different value for different tickets; that is to say, were not tickets in twos and threes more valuable than tickets which were single? He never said anything about that. T. Musgrave
2985. Had you an arrangement of that kind with any other people. Did they not give you more money for tickets which were in threes and fours? I do not know anything about it. 31 Aug., 1888.
2986. *Mr. Thompson.*] Have you not three different prices for the tickets, 10s., 12s. 6d., and 15s.? I swear that I never had anything to do with tickets. I never sold anyone any tickets.
2987. Where did you go to during the dinner hour to-day? I went up to my dinner.
2988. Where to? To Mr. Colls'.
2989. We asked you to be here at 2 o'clock, and you did not arrive until a quarter past 2 as you said? I had to walk to Liverpool-street.
2990. Why did you go out of town to your lunch at all? I do not know; I did.
2991. Did you go yesterday to lunch at the same place? I did.
2992. You got here yesterday in time all right? Yes, I caught the tram yesterday; I did not have time to have any dinner at all yesterday; I just caught the tram; to-day I missed it, and had to walk down to Liverpool-street.
2993. And you swear that you went from here straight to Mr. Colls', and back again, and that you did not speak to anyone except the members of his family? I spoke to my sister and mother and the other inmates of the house—that is all.
2994. You did not see your solicitor to-day? No; I have no solicitor.
2995. *President.*] Have you not consulted a solicitor at all? No.
2996. Have you not seen one to-day? No.
2997. *Mr. Brock.*] You mean to say that you did not speak to a solicitor about this matter? No.
2998. Why did you refuse to answer our questions yesterday? I did not see that they had anything to do with the tramways.
2999. *President.*] Having refreshed your memory about this barber living near the Bondi junction, we want to know all you told him? I did not tell him anything.
3000. You swear that of course? Yes. All that passed between us was this: I was in there several times, and he asked me if I thought he could get a license. The man who was there before him had a license to sell tram-tickets. "Tram-tickets" was written up in the window. I told him that he would have to apply down at the office for a license.
3001. Do you remember that night when you took your bells home, and came to the conclusion, after examining them, that they were broken? I do not remember that.
3002. Do you not remember putting in the small nail, or piece of wire about the size of a nail, into the bells, and then finding that you could ring without registering? No.
3003. You never told anyone that, after finding that out, you carried on the cheating for some considerable time before you let anyone else know? No; I never said anything of the kind.
3004. Did you not tell the same person that you invariably used the pin on the twopenny or threepenny section? I never said anything of the kind.
3005. And that when you wanted the bell to register you took the pin out? No.
3006. Do you remember getting sick some time after that? Yes; I was off.
3007. You could not make anything while you were off could you? No.
3008. It was then that you gave the secret to another conductor, a chum of yours, who called to see you at night? No conductor called to see me that I can recollect.
3009. You swear that? Ferrier has been to my place.
3010. Do you remember the first time you put Ferrier up to this? He has not been on the cars since I knew it myself. He has not been on the cars since the retrenchment. I only saw him a few times after the time of my reinstatement.
3011. You absolutely swear that you did not make any treaty with this man for the sale to him of tickets—I refer to Dominick, the barber? I never spoke to him about the sale of tickets.
3012. *Mr. Brock.*] Did he apply for his license? I believe he did.
3013. Did he get it? I did not think so.
3014. Did you put in a word for him? I did not speak to anyone.
3015. Did you not speak to Mr. Colls about it? I think he asked me if I knew anything about it. He said "Your brother-in-law is in the Tramway Department; can't you get him to advise me?" He asked me to ask Mr. Colls where he would have to apply for it.
3016. And he asked you to put in a word for him? I asked Mr. Colls. I said he wanted a license. I think he asked Mr. Colls himself. I forget now.
3017. *President.*] Did you not ask Mr. Colls to put it through for him? No; I do not think so. I do not remember asking him. I was not that much interested in the matter.
3018. Will you swear that you did not ask Mr. Colls to put it through for him? I do not think he could put it through.
3019. Answer the question, please? Well, I would not be sure; he asked me to ask Mr. Colls.
3020. Will you swear that you did not ask Mr. Colls to put it through for him? No; I did not.
3021. Well, to help it through; to get the license granted? I may have said, "You can give him a license;" or, "Can you give him a license?"
3022. Are you in the habit of advising Mr. Colls as to the licenses which should be granted? That is the only time I ever spoke to him on the subject.
3023. *Mr. Thompson.*] Although you were so little interested in the man you did this for him? He asked me to do it as a favour for him. I think he was instructed how to go about it, and that was all.
3024. When was he instructed how to go about it? Mr. Colls told him to apply to the office, and I told him to do so.
3025. *President.*] Do you remember a conversation with him after his license was refused? He told me that he did not get a license.
3026. What else? I do not remember what passed, exactly. I think he expressed surprise that he did not get it. I said that I did not know anything about it.
3027. Will you swear that he did not say something more? I do not remember. I was there talking, and I could not make it out.
3028. Did he not say, "We are off now, then?" I do not know what you mean.
3029. Will you swear he did not say that? I do not remember him saying it.

- T. Musgrave. 3030. Will you swear he did not say that? "We are off." I do not know quite what you mean.
3031. I am merely giving you his phraseology? I do not remember hearing precisely that.
- 31 Aug., 1888. 3032. Will you swear that he did not say so? "We are off"?
3033. Yes? I do not know what you mean. I do not know why he should say so. I cannot quite remember the conversation we had. I never remember anything taking place in that respect.
3034. Will you answer the question or not? I am answering it as best I can.
3035. Will you swear that he did not say that? I do not remember hearing him say it.
3036. Will you swear he did not say it? It is of no use trying to make me swear that he did or that he did not. I cannot swear either way.
3037. Will you swear that he did not say it? I will not swear that he did not use those words, but as to what it was I do not know.
3038. *Mr. Brock.*] When you were asked yesterday if you knew Dominick, the barber, you pretended not to remember that such a man existed? I did not know the man at all by that name.
3039. Then it transpired that you might have gone into his place once or twice to get shaved. Now it appears that you interested yourself in him sufficiently to endeavour to get him a license? I did not know at first who the man was you were referring to. I thought you said he had a barber's shop in Oxford-street.
3040. *President.*] Will you swear that you do not know a barber in Oxford-street? I do not know a barber there personally.
3041. What do you mean by personally? Not to speak to.
3042. Have you never been into a barber's shop in Oxford-street? Yes, several times; but Wigzell is the only barber I know by name. I knew Dominick when you made it clear to me who the man was. At first I did not know who you were referring to; I know that they called him "Dom." I did not know him by the name of Dominick. When you said Dominick it did not strike me about him; I had forgotten all about it.
3043. You say that this man Scott, for showing you how to do it, was to get the tickets which you managed to manipulate? Yes.
3044. Scott appears to have completed his part of the bargain;—how often did he come to you and request you to complete your part? He came to me on the next night, and asked me how I was getting on; if I had made anything, and how the thing was working. I said that I had not tried to do anything with it, and that I would not have anything to do with it.
3045. How long was it after he made this stipulation with you that you took the tickets on the Waverley run with Graham and Reid—when they saw you? I think it was a week or ten days afterwards.
3046. And will you swear that that was the first time after he had shown you that you had put it into operation? That was the first time; when I got home that night, and saw it would answer, I never did anything with it afterwards.
3047. Did you have a meeting with this man Scott on that evening after you had made this trial which was witnessed by Reid and Graham? No, I did not see him that night; I saw him only about once afterwards.
3048. *Mr. Brock.*] Did you tell Scott that you had shown it to Graham? I did not tell him; he asked me, and I told him, "No." He asked me if I had said anything about it to anyone, and I said "No."
3049. That is the time he threatened you? No; the next night after that he saw me and threatened me.
3050. If he showed it to you one night, and saw you the next night and threatened you, you could not have had much opportunity to show it to anyone in the meantime? No.
3051. Scott must have thought you a nice young man to obtain this information upon the understanding that you were to do a certain thing for him, and then throw him over? I suppose he did, and that was the reason he threatened me. I suppose he thought I was going to inform.
3052. *Mr. Thompson.*] You said that after he threatened you you were frightened that he would do you some harm? I was afraid he might.
3053. Then why did you tell Graham all about it, show him everything, and expose the whole thing on the motor in such a way that it could be seen? I had been speaking to Graham before this time.
3054. Before what time? Before this time when I showed it to him; I spoke to him before I knew how it could be done.
3055. How do you mean before you knew? Before I knew that it could actually be done I had conversations with Graham; I asked him if he thought it could be done, and I said I thought it could.
3056. Why, if you were so frightened, and could not tell Mr. Roberts or anyone else in the Department, did you tell Graham? As far as I know he did not say anything about it.
3057. Why did you tell Graham after you had been threatened, and when, according to your own admission, you were too frightened to tell Mr. Roberts? I do not know why I told him exactly; I did not think he would say anything about it; I told him not to do so.
3058. *President.*] Before we dismiss you I may tell you that it is the opinion of the Commission that you have given your evidence in anything but a straightforward manner; that you have been most untruthful throughout; and that, in our opinion, you stand convicted, upon the evidence given to us alone, of wilful perjury; therefore you need expect no mercy at our hands.

Henry Ferrier called in, sworn, and examined:—

- H. Ferrier. 3059. *President.*] You were employed as a conductor in the Tramway Department some time ago? Some time ago.
- 31 Aug., 1888. 3060. Will you give us the date? I do not remember the date.
3061. How long were you a conductor? Nineteen months.
3062. After that you were paid off under a system of retrenchment? Yes.
3063. When were you re-employed? About a week afterwards—some eight days afterwards. I was employed to go away to Junee as repairer, and they put me wool loading. The wages did not pay my expenses. I was afterwards employed in the workshops at Eveleigh.
3064. Until when? I forget the date. I do not remember the date I left there. I did not take particular notice of it.
3065. Was it July 14? That is about it.

3066.

H. Ferrier.

31 Aug., 1888.

3066. What happened then? A communication was sent to me.

3067. You were dismissed? Yes.

3068. Before calling on you, Ferrier, to tell us what you know about these tramway frauds I think it wise, on behalf of the Commission, to give you a caution? All right.

3069. We wish you to know that we are in possession of a very large amount of sworn evidence, which implicates you and others in these tramway frauds. Bear this in mind, that if, in endeavouring to save yourself or in endeavouring to save others you give evidence which can be proved to be false, you will, as surely as you sit in that chair, be prosecuted for perjury. I think it right to give you that caution, and, having done so, I will now ask you to give the Commission every information in your power in connection with the frauds? Well I do not know what information I can possibly give you at all.

3070. *Mr. Thompson.*] Are you going on that line? No. Any questions you like to ask me I will answer.

3071. You will not run the risk of making a statement? I will make a statement—certainly I will.

3072. It will be infinitely better. Make your statement in your own way. Make it as favourable as truth will permit it to be, and it will prevent our asking disagreeable questions, which we do not care to ask if they can be avoided. Make a clean breast of it, and tell us the whole truth, and you will find that in the end it will be the better way. Not that we can hold out any promise to you in any way, but you will find in this, as in all other matters, that truth is the best? Some time ago—I do not remember the date—this man Greeley came to me and spoke to me, and told me that a man going to Rosehill —

3073. *President.*] Give us something near the date; some time ago is of no use to us? I cannot remember the date—I cannot, really. If I knew the date I would tell you.

3074. But give us something about the time? It was about a fortnight before I was dismissed from Eveleigh.

3075. You are bearing in mind the caution I gave you? I am bearing it in mind.

3076. Well, go right back to the first that you knew about the frauds? I tell you I knew nothing about it at first before Greeley spoke to me.

3077. What was the first? The conversation I had with Greeley.

3078. When you said that you did not know anything about it at first what were you alluding to? There is no first so far as I am concerned.

3079. Go back to the first of your connection with the frauds? I am not connected with the frauds in any way.

3080. Well, tell us what happened about a fortnight before you were dismissed? You will not allow me to tell you.

3081. Go on with what you were saying? It is no use my going on.

3082. If you do not go on you will find yourself somewhere else. You will find yourself committed for contempt. Don't think you are coming here to humbug us? I don't think anything of the kind.

3083. Then go on from where you left off? I had a conversation with Greeley and he said that some man going to Rosehill had said that he was paying conductors as much as £10 a week. I said I did not believe it, and he said, "Oh you know something about it." I told him I did not know anything about it. After collecting his fares he came back again. I thought some one had been joking, and we started speaking about it again. I cannot remember all the conversation. I said to myself some one has been joking with him, and I thought I would have a joke with him myself. I said, "How much will you give me if I show you how to do it?" He said, "I will give you £10." I said, "I will show you." He said "When?" I said, "Any time you like." He said, "Saturday night." I said, "All right, Saturday night." He said, "Come down to my house." I said, "All right." I went down to his house on Saturday night; I did not know how to get out of the joke. I did not like to tell him I was joking. I did not know how to get out of it, I said that it was too dangerous, and that we should be getting into trouble. He asked me who the others were who were doing it. I said, "No one is doing it now." He then wanted to know who were the men who bought the tickets. I did not tell him any names at all, because I could not. There were other conversations. I cannot think of all that really did take place. After I left him I never gave the thing a second thought. I promised to meet him again on the Monday night. He said, "Will you see me again." I said, "I will see you on Monday night." I went away and left him. I was coming down town accidentally and got on to his tram at Park-street. I had to come to Hunter-street. When I was getting off he said, "Arn't you going to do these bells for me." I said, "I am not going to do them at all," and I went away. I think that is about all that took place.

3084. On that occasion? It was something to that effect. There may have been other words but I cannot remember them all.

3085. What were you doing riding on different men's cars after you had left the Service? If I wanted to come into town or go out anywhere I would get into a car; that is all.

3086. Without paying? Sometimes I paid and sometimes I did not. Some of the conductors would charge me and others would not.

3087. You were frequently in the habit of getting into the cars? Not frequently; perhaps sometimes; two or three times a day.

3088. On whose cars did you ride? No one's in particular—anyone—the first that came to me.

3089. Will you swear that you were not frequently riding short distances on cars with Musgrave, Fraser, Connors, Yelland, and Scott? I swear that I do not live out of town. I live in town, and I get on to the trams at Belmore and come up to King-street.

3090. Do you know Musgrave? I know Musgrave well. I worked with him for nineteen months. He was conductor at the same time that I was.

3091. Did you ride with him? I have ridden sometimes on cars with him, but not frequently.

3092. With Fraser? I have been on cars he has been in charge of.

3093. With Connors? Yes, I think so.

3094. With Yelland? I may have. I have ridden with all the conductors.

3095. With Scott? Yes.

3096. But you denied this when I put the names to you collectively just now? Denied what.

3097. You swore that you did not frequently get on to cars with these men? You said frequently, and I said that I had not. I swear that I did not frequently ride with any one of these men.

3098. Not with any of them? Not frequently. I have been on their trams.

3099.

- H. Ferrier.
31 Aug., 1888.
3099. Suppose we were to say two or three times a week? I may have been once in a week and perhaps not.
3100. With each of them? Perhaps I would not see any of them for some time.
3101. If there were five of them then perhaps it would be five weeks before you rode a second time with the same man? Perhaps I might ride on one man's tram two or three times a week. If you were to name the whole of the conductors I should have to say yes to your question.
3102. Since you have left the Tramway Department? Yes.
3103. What is the total of your free riding since you left the Department? I could not say.
3104. Would it be worth £5? Not that much.
3105. You said that Greeley came to you on his car? Yes.
3106. What were you doing on the car? I was riding home from my work.
3107. You say he came to you? Yes.
3108. You did not get on to the car to him? Not the first time.
3109. And the second time? I got on then to come to town.
3110. You swear you did not make overtures to Greeley? Not till he spoke to me first.
3111. When you were at Greeley's house you admit that you were there to show him how to put the register wrong? So he thought.
3112. You admit deceiving him? Yes.
3113. Did you not tell him that you would in half-an-hour put his bells so that he might take the money of Moran, Wigg, or the Commissioner himself, without detection. Be careful. You are on your oath? I may have said that. I do not remember saying it. If I said it I did not do anything. Anything I said I will own to; anything I did not say I will deny. I will not swear that I did not say these words because I may have said them.
3114. Did you offer to buy tickets of Greeley? I said that if he had any tickets for sale I would buy them off him.
3115. And pay him 15s. for every £1 worth? Yes.
3116. You remember Musgrave's bells being taken from him on one occasion? I do not know whether he had his bells taken from him or not. I will swear I never mentioned Musgrave's name to him.
3117. And you swear that you did not say to Greeley in his bedroom, that you knew when Musgrave's bells were to be taken away, that you knew it was going to be done?
3118. You will swear that? I will.
3119. I suppose you know who heard you? I know that. I have seen the papers and I know who was there, but I will swear that it is not so.
3120. But how could they hear you if you did not say it? I never said it; I know who heard my conversation, but they did not hear that.
3121. Did you say that they were going for another man but that he was put fly? I may have said it; I said a lot of random things.
3122. You said that they were going for another man, although you did not say that they were going for the first man? I do not remember saying it.
3123. Did you say that Greeley would have no difficulty in making more than £10 a week over his business? I believe I did say that.
3124. What did you gauge that by? Because he told me that he was only making 30s. a week himself.
3125. But whose makings did you gauge it by? By his telling me that this man was paying £10 a week to other conductors.
3126. That made you tell Greeley that he would not be much good if he could not make £10 a week? Yes.
3127. Did you tell him to let the thing blow over before he did anything further? I do not remember ever saying that.
3128. And that he should get shifted to the Coogee and Waverley line? I told him that. How I came to tell him that was that he said that they had a down on him. I said, "Why do you not get shifted off here on to another line?"
3129. You did not tell him to get the shift because on these lines they were mostly twopenny sections, and the traffic was irregular, on account of its being composed of holiday people; also that the tickets were cleaner? I do not think I said that.
3130. After that night you knew perfectly well that your little game was up? I did not; I never had any little game.
3131. You did not know your game was up? No.
3132. You did not know at the time that anyone had heard what you had said, but you knew it afterwards. You knew that what had passed between you and Greeley in that bedroom was known to a third person? I saw it in the papers.
3133. You knew that very night that the conversation which passed between you and Greeley in his bedroom had been communicated to a third person? That night you say.
3134. Yes? I did not.
3135. You did not see Greeley that night in conversation with a third person? That night?
3136. Yes? I did not. I saw him in the hotel. He had a person with him in the hotel after coming from his house. After that I never saw him.
3137. When was it that you told Musgrave that the whole thing was blown. Was it the nextday or the night after? How do you mean that the whole thing was blown?
3138. Answer the question? I did not see Musgrave for some time afterwards.
3139. How long? It may have been a week afterwards.
3140. We do not mean the Saturday, we know all about that; we mean before that? It was very nearly a week afterwards.
3141. That you first saw Musgrave after you were in Greeley's bedroom? Yes.
3142. That you swear? That I swear.
3143. What did you tell him? I'm blest if I know what I told him now. I could not say what conversation we had.
3144. You could not say? I never think of my conversations with people.
3145. Do you mean to tell us that your conversation was not wholly and solely on the subject of these tram frauds? I told him I was dismissed.

3146. Do you mean to tell us that you had no conversation with him till you were dismissed after your night at Greeley's? After that night I had no conversation with him till I was dismissed.
3147. Did you send any message to Musgrave? No message at all.
3148. You had an interview in which you told Musgrave that the game was up. You can deny it as much as you like. It is immaterial to us what you deny. We are going through a matter of form and it will be better for you to go creditably through it rather than discredibly? I saw him after I was dismissed.
3149. But not before? I do not remember seeing him before. I don't think I saw him. I am sure I did not.
3150. You described the whole process to Greeley did you not? He gave me an insight into it first.
3151. What is the process? He told me to work the piece of wire.
3152. Are not you afraid to sit there and perjure yourself? I don't know. I swear I do not know the process.
3153. You don't know it now? I swear it, beyond that it was worked with a piece of wire.
3154. You swear that after doing it for months you do not know now? Doing what for months.
3155. You swear that you do not know how it is done now? I do not know how it is done. I never interfered with the bells in my life. I never saw the inside of a bell in my life. I do not know how it is worked. I swear that.
3156. Do you mean to say that after Musgrave fixed your bells up he did not show you how it was done? Musgrave never put a hand on my bells in his life. He never showed me how it was done.
3157. *Mr. Thompson.*] Will you swear that you did not tell Greeley that you would fix his bells for £10? Yes, I could not have done it if he had given me £1,000. I may have said so but I could not have done it.
3158. What were you going to do with the £10? I was not going to take it.
3159. What were you going to do with the bells? I was not going to take them either.
3160. Did you not tell Greeley that as the Department had a set upon him he was a damned fool if he did not make as much as he could while he had the chance? I believe I did.
3161. And when Greeley told you that he could not do it because he was not up to the way, you told him that you would show him the way? I told him I would show him the way.
3162. Did you tell Greeley that you were in the habit of receiving the straight tip from the office? I told him that but I did not say from the office.
3163. Did you not tell Greeley that there was no chance of a conductor being caught when he was doing this thing because when the bells were fixed the bells and the register always tallied? I do not remember that.
3164. Will you swear that you did not? I will not swear that I did not and I will not swear that I did.
3165. And further that the pin could be easily removed so that if any one should rush the conductor they could not catch him? I do not believe I did. I don't think I said that.
3166. You explained to him this little inside pocket that was used, did you not? No.
3167. Will you swear you did not? I will swear it.
3168. Will you swear that you had not a little inside pocket that you used? I swear it.
3169. Have you all the coats you wore when you were on the tramways? There may be one in the office.
3170. Is there any false pocket in it or in any one of them? There are no false pockets in my coats.
3171. Where used you to put the tickets then? In the bag.
3172. What part of the bag? The bag to receive the tickets.
3173. You put some there? All those I collected.
3174. *President.*] Where did you put those you sold at the oyster-shops? What oyster-shops? I never sold a tram-ticket in my life, unless when I have been riding in a car. I might have sold six pennyworth one day going down to Coogee when I was a passenger.
3175. Do you know the oyster-shop at the corner of Liverpool and Elizabeth streets? Yes.
3176. How often have you been there? Once.
3177. That you swear? That I swear.
3178. Whose company were you in? I was in there with two gentlemen having some oysters.
3179. Who were the gentlemen? Mr. Roberts, the Superintendent, and Regan.
3180. On what occasion was that? About 12 o'clock in the day.
3181. Were you only at this oyster-shop once? Yes.
3182. That is all? Yes.
3183. You swear to that? Yes. That is the only time that I have been in the shop.
3184. Did you go in with Mr. Roberts? He called me over. I was walking past and he called me over and asked me if I would like to go over to Melbourne and try to get on the trams there. I told him that I was there and that I applied for a billet, but that I was too short. He asked me to have a plate of oysters and I went in.
3185. You swear that this is the only occasion on which you went into the shop? That is the only occasion I can remember being in the shop. I think it is the only time.
3186. You do not know the man who kept it? I do not know him. I know nothing about him. I should not know him if I saw him.
3187. *Mr. Thompson.*] You think it safe to swear that, as he has gone away to Greece? I should not know him if I saw him. I know nothing about him.
3188. Is Greeley the only man you have conversed with on this subject? I think he is the only man.
3189. The only man to whom you have made overtures as to fixing the bells? Yes.
3190. Will you swear that you did not go on to another conductor's car and ask him to engage in a traffic of tickets—be careful? I am careful. I do not remember speaking to anyone else about it.
3191. Will you swear you did not go on to Connors' car and make such a proposition to him—to fix the bells? Yes. I swear I did not.
3192. What proposition did you make that time when you went on to Connors' car? I made no proposition to Connors that I can remember. I never remember speaking to Connors.
3193. Have you a good memory? I have not a very bad one. I never think of anything like this.
3194. Are you so continually making propositions to men to be rogues and thieves that it does not stick in your mind;—is that what you mean? I am not continually at it.
3195. When you went in with Mr. Roberts to this oyster-shop do you remember what persons were there? I think only three of us were present. I do not think anyone else was in the shop.
3196. Who was the third person? Regan, a messenger in the Department.

- H. Ferrier. 3197. Were you not frequently seen about this time, when this matter got to be talked about, with Colls on the top of cars in confidential talk? No.
- 31 Aug., 1888. 3198. Have you ever travelled with Colls on the top of the car having a talk with him? I have.
3199. How often? I could not say how often. It may be two or three times. He lives up my way. I take the tram up with him.
3200. What line are you on? I live at Surry Hills and he lives somewhere about there.
3201. Did Greeley when speaking to you name the man who was netting £10 a week out of this job? No. He said some man living at Waterloo was buying the tickets.
3202. And he did not mention his name to you? He said some name; I cannot remember it; I have tried to do so.
3203. Was it Siddons? Some name like that; I would not swear that that is the name.
3204. Had you never heard it before? Not that I know of.
3205. Will you swear that you have not been seen in Siddons' shop a great many times? Where is it situated?
3206. At Waterloo? I swear it.
3207. *President.*] Do you know Nicholas Williams' fruit and oyster shop at the bottom of Elizabeth-street, running into Wexford-street? Yes, I know it.
3208. How many times have you been in there? Several times. I go in there to have oysters or anything I want.
3209. Are you a married man? No.
3210. *Mr. Thompson.*] You know it is a place where there is exceedingly choice company in the way of ladies? I have seen ladies there.
3211. Perfect ladies? Yes, perfect ladies.
3212. Have you betted a good deal on horse-races and foot-races during the last twelve or eighteen months? I bet but to a very small amount.
3213. How much were you and Tommy Musgrave in together in the Newmarket handicap? I did not win much. He won a little and I won about £2 10s.
3214. You were not whacks with him? I was in one wager, but not in that one; I only got £5 off the man and I had to divide it with him.
3215. You and Musgrave were pretty good mates? We were at one time.
3216. Chummy? Yes, we were.
3217. Were you in with him in any of the foot-races? What do you mean?
3218. At the Carrington Grounds or at Botany? I have been out there with him when he has been there.
3219. Were you betting together? No, we have not been in a foot-race together.
3220. Had you no bets with Charles Cook? No, not with him; not that I know of.
3221. How long have you known Charles Cook? I have not known him very long to speak of. I know him by sight, but not very long to speak to.
3222. How long to speak to? Only a few weeks; since this affair started. I have known him longer by sight.
3223. He is a well known betting man about race-courses, is he not? Yes, he is well known. I might have spoken to him several times.
3224. How did you and he get mixed up in this tramway business, that you came to speak to him intimately when these tram frauds came out? I went to a place next to Tattersall's. I was sitting there. It was a billiard-room. There were two detectives there. I was speaking to them. I have known one for many years. I asked one of them to have a game of billiards. We had a game, and while we were doing that Cook came in and sat down. He was speaking to Detective Draper, and was telling him that he was down here about the tram frauds. Draper called me over and said, "You had Cook down there about the tram frauds?" I said, "What has he got to do with it?" Cook said, "They seem to think I know all about it." I heard them speaking together for a while afterwards.
3225. Is that since we began this inquiry? No; soon after it came out in the papers.
3226. Since you were dismissed? Yes.
3227. How many weeks back? Five or six weeks.
3228. Have you not, as a matter of fact, made some bets with Cook on one of the races or at one of the foot handicaps? I might have bet with him. I never take any notice of men I bet with on races out there. I might have bet with him once.
3229. Were you and Musgrave generally together at the races while you were chummy? Once or twice perhaps, that is all.
3230. You cannot remember whether you bet with Cook? No, I cannot.
3231. You cannot remember whether you and Musgrave betted with him or whether you betted with Cook for yourself and Musgrave? I have no one in particular to bet with. I bet with anyone; but I bet a very little.
3232. *President.*] Have you and Musgrave had a talk about this matter since your dismissal? Yes. I have spoken to him about it.
3233. What was the subject of your conversation? I am blest if I know. I could not think of all our conversations. We were speaking about it generally.
3234. We can scarcely believe that you could forget such a thing as that, Ferrier; because, however much you may brazen it out, we cannot help thinking that a man in your position, dismissed summarily, must have felt what happened? I did feel it. I felt it very much. I feel it now.
3235. It is only reasonable to suppose that you got talking about this matter, and you must know what you were talking about, and we need not tell you that Musgrave is as much implicated as you are yourself, because you know it? I know nothing at all about it.
3236. Therefore we naturally conclude that you and he having been talking about the matter you would be able to tell us of the subject of your conversation? I could not tell you, because I cannot think of it. We were talking together.
3237. How long was it from the time you were dismissed till he was also dismissed? I do not know when he was dismissed. I have not the date.
3238. You know he is dismissed? Yes.
3239. How soon did you know it? One of the conductors told me on the day. He told me that he was being dismissed that morning.

H. Ferrier:
31 Aug., 1888.

3240. *Mr. Brock.*] What day was that? I could not say.
3241. *President.*] How long was it before you saw Musgrave from the date of your own dismissal? Very nearly a week.
3242. On what day of the week were you dismissed? On a Thursday.
3243. When did you see Musgrave after that? I do not know on what day it was, but it was nearly a week afterwards.
3244. Was it Saturday or Sunday? I could not say on what day it was.
3245. You swear that? I could not say on what day it was.
3246. You met him on the Saturday, did you not? I met him one Saturday afternoon.
3247. You were dismissed on a Thursday;—was it on the following Saturday? It was the next Saturday. I think I saw him coming to work the next Saturday after I was dismissed.
3248. That is not a week? I saw him waiting for a tram.
3249. Had you then a long conversation with him? He knew it all.
3250. Have you had no long conversations with him since? I have had some, but not long ones.
3251. How many? Three or four, I think.
3252. It might be six, or seven, or a dozen? Not that many.
3253. *Mr. Thompson.*] Tell me this: As you are a great chum of Musgrave's; do you know a man named Scott, *alias* Brown, *alias* Curran; he used to be a good deal on the cars? I do not know him.
3254. You never saw him? I never saw him in my life.
3255. Did Musgrave not tell you that he was intimate with a man of that name? He never did.
3256. Did he never tell you that he knew a man who called himself Scott? No. I only knew one man named Scott, and he was a conductor.
3257. When did you have your first conversation with Musgrave as to the possibility of the bells being faked? I never had any conversation with him on the subject at all.
3258. Are the conversations you have referred to the only ones you are going to admit? They are the only ones I have to admit.
3259. You swear that you have never had a conversation with Musgrave on the subject of manipulating the bells? I do.
3260. *President.*] Do you remember the Saturday following your dismissal? Yes.
3261. Had you a black eye on that day? I had one split clean open.
3262. You saw some conductors? Yes.
3263. How did you account for your black eye? I told them that a detective gave it to me.
3264. Did you mention any names? I said the tram detectives gave it to me.
3265. Did you say they did it because you were too fly for them? I do not remember saying it. I was very tight that night. I had had a lot of drink too much.
3266. Are you in the habit of indulging? Not often. I do drink sometimes. I drink very heavily; too, when I start.
3267. How often have you been with Musgrave in Williams' shop? Never in my life.
3268. You swear that? I swear it.
3269. Do you know a man named Mulligan there? I saw him there one day.
3270. How do you know that his name is Mulligan? He has known my people about twenty years. I do not know him well.
3271. Where do you come from? From Young.
3272. Did you know Musgrave at Young? No, I was born at Young, but I lived at Cootamundra for fourteen years.
3273. You did not know Musgrave in the country then? No.
3274. *Mr. Brock.*] Does your father live at Cootamundra? Yes.
3275. *President.*] You are in the habit of going to gambling rooms? No.
3276. How often have you been? I could not say. I have gambled a bit in my life. Not much.
3277. How often during the last six months have you been gambling? I could not say. About four or five times perhaps.
3278. At what houses were you? I decline to answer that question. I don't see what it has to do with the case.
3279. *Mr. Thompson.*] We think that it has something to do with it? I do not see why I should answer it.
3280. *President.*] I insist on your answering it? I do not see why I should. Anything to do with the case I will tell you about, but this has not.
3281. *Mr. Thompson.*] Do you know that you can be fined £20 and sent to prison for six months in default for refusing to answer? Then I shall have to go to prison.
3282. The Act says: "Any witness shall be subject to the same liabilities in any civil or criminal proceeding as a witness giving evidence in any case tried in the Supreme Court." For refusing to answer the question, you may be sent to gaol until you purge your contempt, that is, until you choose to answer. That is one punishment, and we may double it in this way: "Any person who shall neglect to produce any book or shall refuse to answer any questions put to him by any Commissioner touching the subject of the inquiry shall be liable to a penalty not exceeding £20, to be recovered in a summary way, to be recovered before any two Justices of the Peace." Then in the Justices Act there is a proviso "that in case a fine of £20 is imposed on any person, and that the fine is not paid, it may be recovered by levy and distress, and in default of sufficient distress six months imprisonment may be inflicted"? I do not see what this question has to do with the case.
3283. Were you not actually caught gambling in a public-house somewhere up at the end of Oxford-street not long since? I was caught in an hotel; but I was not gambling.
3284. *President.*] You swear that? I swear I was not gambling.
3285. Do you swear that you were not throwing dice when the seizure took place? I swear it.
3286. *Mr. Thompson.*] Do you know that you were being watched all the time? No, I do not.
3287. You were not subpoenaed as a witness in the case in which the publican was pulled up and fined for allowing it? No, the hotel-keeper did not know my name.
3288. Will you swear that you were not seen by the police and the detectives actually throwing the dice some time before they entered? Yes. I swear they never saw me throw the dice. I never threw a dice that night. I was not taking any part in it. I was sitting down. I had no money to gamble with.
3289. *Mr. Brock.*] Or you would have gambled? I might. If there was any gambling going on I might have gambled.

- H. Ferrier. 3290. *President.*] How often have you actually gambled during the last six months? Not very often.
 3291. How often? Five or six times.
 31 Aug., 1888. 3292. Have you been gambling since you were at Colls' place? I decline to answer that question—I don't see what it has to do with it.
 3293. During this gambling of yours how much did you win, or how much did you lose; how did you come out? I never won much, and I never lost much. If I go gambling I never take much money with me—only a few shillings.
 3294. *Mr. Thompson.*] Are you afraid of being robbed, or are you so good at it that you can scoop the pool? I never lose much money in gambling.
 3295. Who were with you that night in Colls' place? There were five or six there that night—tramway men, firemen, and others.
 3296. Name them? Fraser was there, Turner, Shields, Brown, and Sheehan.
 3297. What were the stakes they were playing for? I do not know what they were playing for, or whether they were playing for stakes at all.
 3298. Do you know that there was a lot of money on the table when the police came in? I did not see a lot of money there.
 3299. Did you see any money there? I saw some money paying for some drinks.
 3300. Was not the money scooped up when the seizure was made? I did not see any seizure made. A policeman rushed in and put his arms over the table. I did not see any money there. He may have got money, but I did not see any.
 3301. *Mr. Brock.*] Do you remember the day when you, Cook, and Musgrave were together in the tram? We were never in the tram together.
 3302. You swear that? Not to my knowledge; not in company.
 3303. Were you not in company on the tram together? Never.
 3304. How often did Cook get up with you? I never saw Cook on my tram.
 3305. You never saw Cook on Musgrave's tram? Never in my life.
 3306. Did you ever see Cook and Musgrave together? I swear I never did.
 3307. Will you swear it? Yes.
 3308. Do you know where Cook's shop is? He has a shop in Liverpool-street.
 3309. You have been there? Yes; I have been shaved there.
 3310. Does he do the barbering himself? No; a boy shaved me when I was there.
 3311. Do you know the other Cook? Yes; there is a George Cook, who used to be in King-street.
 3312. *President.*] A brother? I do not know.
 3313. You do not know this man Cook intimately? Not intimately; I have seen him often enough.
 3314. You have not often met with him in shops and different places? I was never in a shop with him in my life.
 3315. Will you swear positively that he never had any tickets from you? He never had.
 3316. You have seen him with tram-tickets, have you not? Never in my life.
 3317. Did you ever see him in his own shop selling tram-tickets? I never saw any tickets there.
 3318. *Mr. Brock.*] Was Musgrave living at Young? No, about Yass.
 3319. Where do you live now? At Surry Hills.
 3320. *President.*] With your mother? Yes.
 3321. That was where you proposed to leave the registers for Greeley, was it not? Yes.
 3322. How did you propose to leave them there? I said that I would leave them there and that he could call for them.
 3323. You did not say that you would leave them there in a basket? No, I said in a parcel.
 3324. That was after you had rigged them for him? Yes, after I was supposed to have fixed them.
 3325. Where did you see Greeley again after that bedroom scene? I think I saw him on the Monday night.
 3326. When was the bedroom scene? That was on the Saturday.
 3327. What passed on the Monday night? I was speaking to him coming down. I jumped off the tram at Hunter-street. He said, "You are not going to fix those bells?" and I said "No."
 3328. Did you give any reason for not fixing them? No; I ran away up the hill. I had an appointment.
 3329. You did not say, "I would not do them now if you gave me a £50 note?" Something to that effect.
 3330. You did not say when you had that interview in his bedroom that the thing was blown? No; I did not.
 3331. And that he must remain quiet for a bit? I do not remember ever saying that. I cannot think of all the conversation.
 3332. It is important for you to remember? I never gave it a single thought afterwards. I did not think the man was such a fool as to say anything about it.
 3333. *Mr. Thompson.*] What were you dismissed for? I do not know.
 3334. Was there a light in this bedroom where you had the interview? No.
 3335. Was it not a funny thing to go and play in the dark a practical joke such as you say you were playing? I did not know what was up. He asked me to come upstairs, that was all.
 3336. Knowing all that we know about this matter we cannot swallow what you tell us now? I cannot help that. You say you doubt that I am telling you the truth; if so, what is the good of your listening to me at all.
 3337. We listen to you because we are obliged? If I am not telling the truth you are not obliged to listen to me. What is the good of accusing me of not telling the truth.
 3338. Did it not occur to you when you found yourself going into a dark bedroom to turn round and say "Come, we have had enough of this?" I was not afraid of going into a dark room. There was nothing against me that I should be afraid of going into a dark room.
 3339. *President.*] You were in too great earnest to turn back from a dark room? I was not in earnest at all.
 3340. You state that deliberately, and swear it? I swear deliberately that I had no intention of ever touching the bells.
 3341. And that you had no intention of taking them away and getting them done? I swear that too.
 3342. Or that you did not say that you could get them done for £10? I swear it. 3343.

3343. *Mr. Brock.*] What was your object in doing it at all then? Only as a joke. He came to me for information, and I told him I did not know anything about it. H. Ferrier.
3344. *President.*] When you went to Greeley's house and ascended that dark staircase, did you not tell him that you were very nervous about it? I do not remember ever saying it. 31 Aug., 1888.
3345. That is a convenient way of getting out of it? Not at all. If I said so—
3346. And you spoke in whispers? Very likely; not very loudly.
3347. This is the way you carried on your great joke—telling the man that you were very nervous? I do not believe I said so.
3348. Will you swear you did not? I will not swear I did not, but I do not remember saying it.

SATURDAY, 1 SEPTEMBER, 1888.

Present:—

A. RICHARDSON, Esq., PRESIDENT.

R. W. THOMPSON, Esq., M.P., | F. A. BROCK, Esq., J.P.

Henry Ferrier recalled, and further examined:—

3349. *President.*] How long is it since you have been off? Since the 14th July; I think that was the date. H. Ferrier.
3350. About six weeks? Yes. 1 Sept., 1888.
3351. I want to know how much money you have received from Musgrave during that period? I have not received any money from him.
3352. You swear that? Yes.
3353. How much money have you received from him during the past six months? I have not received any money from him.
3354. Do you swear that positively? Yes.
3355. You swear positively that during the last six months you have received none from him? Yes.
3356. Will you swear that you have not said you need never be short of money, because you could always get a fiver when you wanted it, as they knew that if they did not give it to you you would round on them? I swear I did not.
3357. You were almost ready to swear that before I had completed the question? I knew when you started what you were going to ask me.
3358. You are sure you did not say that you could always get a fiver when you wanted it, because if you did not get it they knew you would round upon them? I did not.
3359. Did you say then that you need not be short of a fiver at any time? No.
3360. Not even in joke? No. I am short of money now; I have been short of money for months; I have not a shilling in the world to bless myself with.
3361. *Mr. Brock.*] What is the name of your solicitor? I have none.
3362. What is the name of the solicitor who is acting for the lot of you? There is none acting for me individually.
3363. But acting for you, Musgrave, and two or three others? There is none to my knowledge. I will swear that I know of no solicitor acting for me individually or otherwise.
3364. And you have not consulted any solicitor? None whatever.
3365. *Mr. Thompson.*] Will you swear that with reference to rounding upon people you did not say that there were those high up in the office who had everything to do with the matter, and that if they did not take care you would round on them? I did not say so.
3366. Or anything like it? No.
3367. *Mr. Brock.*] Did your solicitor tell you that you could defy the Commissioners? I have no solicitor, and I have seen no solicitor.
3368. Did not one of your mates tell you that he had seen a solicitor, and that the solicitor said that you could defy the Commissioners, and that you need not answer questions? He did not; I have had no advice at all.

Archibald Fraser called in, sworn, and examined:—

3369. *President.*] You have been a conductor in the tramway service? Yes. A. Fraser.
3370. You occupy a somewhat peculiar position, Fraser; if we understand rightly, on seeing your name mentioned in connection with these tram frauds you were so indignant at such a connection that you took it upon yourself to go away from your office and declined to take up duty until your character was cleared? Yes. 1 Sept., 1888.
3371. Of course if you feel that you are upon that high pedestal of innocence that your name is above mention and so forth, this may have been an exceedingly honourable course for you to adopt. Looking at the matter in that light, I suppose we are not to expect any great information from you in regard to these tram frauds? I know nothing about them.
3372. You know nothing whatever about them? I do not.
3373. Do you know anything of a man named Musgrave? I know him well.
3374. In your opinion is he a man whose word could be relied upon? As far as I know it is.
3375. You would at any time readily accept his word, I suppose? I don't know. I never had any dealings with him in any way.
3376. But you know him well? I know him as a fellow-workman, that is all.
3377. Would you believe him on his oath? I should think so.
3378. If he swore that anything was true, would you believe it? I would.
3379. If he said that such and such a thing was the case, you would believe it? I would believe a man on his oath.
- 3379½. You would only believe him on his oath; would you take his word at any time if he said a thing; would you say, for instance, "Well, Musgrave has said it, and he would not tell a lie," or would you say, "Musgrave has said it, and I do not believe a word he says;" you have said you know him well? As a fellow-workman. 3380.

- A. Fraser. 3380. Then if you know him pretty well, what is his character? I do not know his character. I have only known him since he has been in the Department. I had never known him before.
- 1 Sept., 1888. 3381. Have you met him outside the Department? Yes.
3382. I thought you only knew him in the Department; what is his character outside the Department as far as your knowledge goes? I have met him in several billiard-rooms playing billiards.
3383. Have you met him in gambling-rooms? Never in gambling-rooms.
3384. What is your knowledge of him in billiard-rooms? He is a good billiard-player, that is all.
3385. Does he make bets? Yes.
3386. Does he pay bets at once, or does he refuse to pay them? I never knew him to refuse.
3387. Is he a straight fellow? He is straight.
3388. Would you believe or would you not believe his word? If he made a bet with me and I won, I believe he would pay me.
3389. But if he told you a thing would you believe it? It all depends upon what it was.
3390. If he told you something very extraordinary you would not believe him? I would not.
3391. Why would you not? Because I do not suppose he is bound to tell the truth always.
3392. You don't think he would tell the truth? Not at all times; I don't think he would tell the truth at all times.
3393. Although you have told us that you believe him to be an honorable man, and that you would believe him on his oath, you now say that you would not believe his word as a matter of course? I would not.
3394. In other words you have a very good idea that he would tell a lie when convenient. All this is introductory to this. If Musgrave has stated positively that you are deeply implicated in these tram-frauds has he stated that which is true or that which is false? It is false.
3395. Utterly false? Utterly false.
3396. If he has stated absolutely that he showed you how to rig your register has he stated that which is true or false? False; he never did.
3397. If he has stated that out of the first tickets which you abstracted you gave him £50 worth as a fee for learning the secret, has he stated that which is true or false? It is false, every word of it.
3398. You swear that? It is false every word of it; I swear it.
3399. *Mr. Brock.*] You say that Musgrave is not bound to tell the truth, don't you? Not at all times.
3400. Is no man bound to tell the truth? No man.
3401. Yes? Not in the ordinary course of conversation; I should not think so.
3402. You don't think much of lying then, evidently, to start with? When I am on my oath I tell the truth.
3403. *President.*] And when you are not on your oath you please yourself;—is that what you mean? I say that I am speaking the truth here.
3404. That is not an answer to my question. You say you speak the truth when you are on your oath; I ask you what you do when you are not on your oath; do you speak the truth or falsehood according to circumstances, when you are not on your oath? No; but I do not always speak the truth when I am not on my oath.
3405. *Mr. Brock.*] In other words you acknowledge yourself to be a liar? I do not.
3406. You say that a man in general conversation is not bound to tell the truth;—is that your idea of morality? Yes.
3407. Did it ever strike you that if you were to tell a lie to a man in ordinary conversation by means of which you induced him to commit a murder you would be just as much a murderer as the man himself? Certainly so.
3408. You go about and make it a practice to lie? I do not make it a practice to lie.
3409. *President.*] You are in the habit of frequenting billiard-rooms? Not much; I am not a billiard-player.
3410. You just go to look on and to make small bets on the game? I never made a bet in Sydney on the game.
3411. You are a little fond of gambling, are you not? I do a very little of it. I do not do it twice in twelve months.
3412. Have you ever been in a gambling-room since you retired from the Service? Yes.
3413. Might I venture to ask what your business was? It was a public room in an hotel; we were in there to have a drink.
3414. After you had had your drink how was it that you came to throw the dice and so forth? We were throwing dice for drinks, and not for money.
3415. How was it that there was a pile of money on the table? There was no money on the table whatever.
3416. If it has been sworn by members of the Police Force and others that money was on the table, has falsehood been sworn again? There was no money of mine on the table.
3417. Was there any one else's money there? I could not say if there was or not. I do not think there was.
3418. Have you announced to us your code of morality in order to bear out your action on that particular occasion;—you remember what your action was on that occasion in the gambling-house? What my action was?
3419. Yes; your action when the police came in;—what was it? I was seated at the end of the table when the police came in. I had no dice in my hands nor no money. It was at the other end of the table.
3420. Well what happened; had you any conversation with any one? With any one?
3421. We should like to know what the conversation was after the police came? I had no conversation with any one.
3422. Was any conversation addressed to you? They asked us our names.
3423. Did you make any answer? Yes.
3424. What did you answer? I told them that my name was Jones.
3425. That you considered one of your permissible falsehoods? I did not want to be brought up at the police-court about it.
3426. You thought it a better thing under circumstances of that kind to tell a falsehood; I am not surprised at it after what you have told us? Anyhow that was what I said. 3427.

A. Fraser,
1 Sept., 1888.

3427. You were only throwing for drinks? That was all.
3428. Have you thrown for drinks before? In that house on two or three different occasions.
3429. Have you not thrown for drinks in the open bar? No; never.
3430. Have you never seen people throwing for drinks in the open bar or in the little side bar? In the side bar.
3431. What made you lock the inside of the door;—what made you lock the door if you were only throwing for drinks? I never locked the door.
3432. Was it locked? It was.
3433. Who locked it? I do not know. I did not. I never knew it was locked.
3434. You would have us believe that all that was going on was throwing for drinks? That is all I was in. They started before I did. They were in the parlour a long time before I went in.
3435. You tell us distinctly that you were playing for drinks? Yes.
3436. How many hours were you at it? I was there no hours at all. When I first went into the house it was 9 o'clock.
3437. What time was it when you were taken? About half-past 10 when the police came to the house.
3438. Will you swear that you were not engaged in that room locked up for two hours? I will not swear it. I am not certain to half-an-hour.
3439. Will you swear that there was any drinking in the room at all during that time? I swear that there was none in the room where I was.
3440. And yet you were playing for drinks? In the parlour I mean.
3441. You were playing for drinks in the parlour;—what were you doing in the locked room? We did not have time to have the drinks.
3442. Although you were there two hours or an hour and a half? We were not there two hours.
3443. Were you not in the room for an hour and a half? I will swear that I was not in there for an hour and a half.
3444. Did they open the door for you;—did they unlock it for you? It was not locked when I was in.
3445. For how long was the door locked when the police came? I could not say how long.
3446. Will you swear that it was not locked for at the very least an hour? I swear that I was not in there an hour.
3447. How long? I have no idea; but it was not an hour.
3448. But during the time you were there there was no drinking in that locked room? No.
3449. And yet you were playing for drinks only? We were playing for drinks.
3450. Which never came? We asked for them, but they never came.
3451. I suppose you throw the dice, and whoever is lowest has to pay for drinks? Whoever is lowest has to pay.
3452. How many were there throwing for drinks? I think six or seven.
3453. There were seven;—how long does it take seven to throw to see who has to pay for the seven drinks? Not long.
3454. Would it take more than 5 minutes? It would not.
3455. Then in 5 minutes these seven thirsty men would demand their liquor? I was not thirsty myself.
3456. It seems that they were locked in the room for a whole hour without tasting a drop? Yes; some were in there before I went in.
3457. Is it reasonable to suppose that these men occupied 5 minutes in throwing for drinks, and then waited in a locked room for a whole hour for the drinks to be supplied? We may not have been shaking the dice all the time.
3458. I never mentioned that—answer my question;—do you consider it reasonable or unreasonable? To suppose that we could be locked up there for an hour?
3459. To suppose that you could be locked up there for an hour without a drink, although that is the purpose for which you were there? I do not know what the others might have been doing. I was not locked up there an hour. They may have been drinking before I went in.
3460. Is it not an absolute fact that when the police made the seizure there was only one glass in the room, and that the glass with which the dice were being thrown? That is a fact.
3461. Do you know Ferrier? Yes.
3462. Have you gambled with him? I never gambled with him.
3463. Was he not there this time? Yes, he was there.
3464. Do you mean to tell us that you and Ferrier have not played in that house until early morning? Yes.
3465. It is not a fact? It is not a fact.
3466. You swear that? I swear it.
3467. You swear that you two, after having been in there for several hours, have not come out at 2 o'clock in the morning and walked along Crown-street, half drunk and singing? I swear it.
3468. Will you swear that it is not true? I am quite safe in swearing that.
3469. Were you with Ferrier that night he got a black eye—the night he was so drunk? No, I was not with him.
3470. *Mr. Thompson.*] You know nothing about it? I know that he had a black eye.
3471. Do you know that he was drunk? I did not know that he was drunk.
3472. Do you believe that he was? I believe he was.
3473. *President.*] But it is not a fact that you and he have played together till early in the morning, and that you have gone home together drunk and singing? It is not a fact.
3474. Well, did you go home sober and singing at 2 o'clock in the morning? I never went home with Ferrier at 2 o'clock in the morning. I am never out until that hour in the morning—not more than once in two years.
3475. How long have you been in the Service? A little over two years.
3476. Are you married? I am.
3477. Have you a large family? No, only one.
3478. What are you doing now? I am not doing anything.
3479. You are waiting for the decision of the Commission? That is what I have been waiting for all along.
3480. Will you swear that? I will.

- A. Fraser. 3481. That you are not in business at the present time? My wife is in business.
 1 Sept., 1888. 3482. Was your wife in business while you were working for the trams? No.
 3483. Only since you have retired? Only since I have retired.
 3484. Did you not purchase the business? My wife purchased the business.
 3485. How can she purchase it; I thought that husband and wife were one, and that all the money was the husband's? I am not up in law, but I suppose that what is a man's wife's is his.
 3486. Will you be good enough to say what you gave for the business? £100.
 3487. You managed to save a little then while you were in the tram service? I never saved a shilling while I was in the tram service.
 3488. This was money then that came from other sources? It was money that my wife had when she was married.
 3489. Where is your business? In Cleveland-street.
 3490. What is it? A tobacconist's and hairdressing saloon.
 3491. Do you sell train-tickets? I do not.
 3492. You never sold them? No.
 3493. Never in your life? I never sold any.
 3494. *Mr. Brock.*] Will you tell me what you heard had been said about you inducing you to give yourself a holiday during the past few weeks by putting yourself out of employment and riding the high horse? I have not been riding the high horse.
 3495. Standing on your dignity then? Yes, that is right.
 3496. What did you hear inducing you to take that extraordinary step? I did not hear anything.
 3497. Was anything said to you inducing you to take this step? No, nothing was said to me. What I saw in the papers induced me to take the step.
 3498. *Mr. Thompson.*] You see a mere flam in the newspapers and you cut yourself off from the Department in the way you have done;—is that so? That is so.
 3499. What did you see in the newspapers;—will you tell us the substance of it? I never saw anything about you leading me to suppose you would do such a thing. —
 3500. What was said about you? I have not the paper, and I could not tell you exactly.
 3501. Tell us the substance; how were you spoken about? It said that strong suspicion attached to me in consequence of my somewhat mysterious association with Ferrier and Cook.
 3502. Who is Cook? I do not know the man. I never saw the man that I am aware of.
 3503. *Mr. Brock.*] Is this business settled on your wife? It is not settled at all yet—the money is not paid over yet.
 3504. I thought you got £100 with your wife when you were married? So I did—more than that—but it is not settled yet.
 3505. You said it was out of that money that you bought the business? That is what I meant.
 3506. Is it so settled that you cannot touch it;—has she a separate estate under the Married Women's Property Act? No.
 3507. You have full control over it? Yes.
 3508. And over any money she brought to you? Yes.
 3509. *Mr. Thompson.*] How long have you been in the business? A week last Tuesday.
 3510. *Mr. Brock.*] Whom did you marry? I decline to answer that question.
 3511. But you must answer it? I will not.
 3512. It is only a question of going to the Registrar-General's Office;—whom did you marry? I don't see that it is necessary to say.
 3513. But we do see that it is necessary? Then I decline to tell you.
 3514. Where were you married? In Cowra.
 3515. Where were you born? At Windsor.
 3516. What were you doing up at Cowra? I decline to answer that question. I was a miner at Mount Macdonald for a considerable time. I don't see that your question is necessary.
 3517. *President.*] It looks suspicious when you do not like to answer these questions. Have you had any conversation with Musgrave or Ferrier since they gave evidence? Yes.
 3518. I suppose they told you how finely they baulked the Commission upon certain points when they were pressed to give answers? No, they did not.
 3519. Did they tell you that they had refused to answer certain questions? They told me that they had.
 3520. *Mr. Brock.*] Will you answer this question? I will answer anything in reason.
 3521. It is for us to decide whether it is in reason or not. Whom did you marry? I married a Miss Kerr.
 3522. Where did her parents live? They lived on Howell's Creek, near Burrowa.
 3523. Was he a free selector? No, he was a small squatter; he kept an hotel there on the roadside; he was a dealer as well.
 3524. How many acres had he? Thousands.
 3525. How many? I do not know; he was also a dealer and storekeeper.
 3526. What is your wife's Christian name? Catherine.
 3527. *President.*] I think I understood you to say a little while ago that you did not know a man named Cook? I still maintain that I do not know the man.
 3528. Do you know a shop in Liverpool-street—No. 94? I know two or three shops in Liverpool-street.
 3529. Is there not a tobacconist's and barber's at No. 94? I know where Cook's the tobacconist is, and I think there is a barber in the shop.
 3530. Do you mean to say that you do not know the man? I do not.
 3531. Is it a fact that you have been in the shop since these exposures? Only once since;—that is the only time.
 3532. Have you had any conversation in that shop? I asked the man if Mr. Cook was in, and he said, "Cook does not live here."
 3533. Have you had conversation in that shop? I asked the man if Mr. Cook was in. He said, "Mr. Cook does not live here—he comes in for a shave as well as anyone else." He added afterwards, "I suppose you are from the Tram-Office?—the Cook you want does not live here."
 3534. What did you want there? I wanted to ask him what he had had to say about me. I had heard that he had had a lot to say.

A. Fraser]
1 Sept., 1888.

3535. *Mr. Thompson.*] Well, according to the papers, he must have had a lot to say, or at all events something;—and you were curious to know what it was he said? I was.
3536. Did you not follow him up after you had been to the shop? I never went after him.
3537. You made no attempt to find him? Not the slightest.
3538. *President.*] Do you know an oyster-shop kept by Masoora, at the corner of Liverpool and Elizabeth streets? I do not know the name, but I know the shop at the corner.
3539. You have known it for many months, have you not? I have known it for some time.
3540. Did you ever go into that shop with a portmanteau or bag in your hand;—be very careful how you answer? I may have had a bag in my hand. I have been in and had oysters, in uniform, many a time.
3541. What did you take your bag in for? I could not leave it out in the street.
3542. I am not referring to your tramway-bag. Did you not go into this shop with a sort of travelling bag or portmanteau? No, never.
3543. Be very careful, please? I do not ever remember going in there with a bag.
3544. Did you ever go in there with a box? No; that I will swear. It is not likely that I would be carrying a box about in that way.
3545. You do not remember going in with a bag or bundle? No; I cannot remember what I have been carrying when I have been there.
3546. You have been in there so often? Not often, but at different times.
3547. Scores of times? No, not scores of times.
3548. When did you last see the man who kept it before the present man—I mean the man who went away to Greece? I do not know who kept it before. The same man has always been there since I have been going there.
3549. Will you swear that you did not know the partner who went away to Greece? Would I swear I did not know him?
3550. Yes? I do not think I know anyone who worked there. I might know them if I saw them.
3551. Do you mean to say you have heard from me for the first time that this man went away to Greece? For the first time.
3552. You did not know where he had gone? I never knew he had gone at all.
3553. Will you swear that? Yes.
3554. Do you know a man named Graham in the Department? Yes.
3555. Have you been in there frequently with him? I never was in there with him.
3556. But you have been there frequently with Musgrave? I never was in there with Musgrave.
3557. You swear that? I do.
3558. Now we are on the subject of shops I want to ask you about a few more: Have you been in the habit of frequenting a shop in the Newtown Road where tramway-tickets are sold? No; I never was in a shop in the Newtown Road.
3559. Perhaps I may help you by telling you that it is the shop in which Musgrave has a say, to use his own words? I do not know anything about it. I never was in the shop. I do not know where the shop is.
3560. You have had Musgrave running as assistant with you on the Bondi line, have you not? I think I have been assistant with him, but I will not be certain on what line.
3561. Do you remember a man who used to get on to the tram and converse with Musgrave? No, I do not.
3562. Not getting on as an ordinary passenger, but getting on to the tram and having particular conversations with Musgrave? No, I do not remember it.
3563. You would have us believe that you have not the slightest idea of anything wrong going on in connection with these tickets? No, not the slightest.
3564. Not the slightest? No.
3565. It came upon you as a great surprise? Yes.
3566. It was a perfect shock to you when you saw your name in the paper? When I saw my name in the paper it was.
3567. You had no idea whatever that anything of the kind had been going on? Not the slightest.
3568. *Mr. Thompson.*] You had not even heard it reported publicly? I did not believe it.
3569. And you did not hear it spoken of among the men? Yes; you could hear that and nothing else.
3570. Even before the exposure? Not before it came out in the papers.
3571. Not before? I never heard a word of it.
3572. Was it not common talk among the men? It was common talk in this way: They would say, "How much did you make to-day?" or something like that.
3573. And that arose from nothing you think—that is to say, that no man was making more than his proper earnings? I do not know what they were doing.
3574. And will you absolutely swear that you never put a pin in your register? Yes, I will swear that.
3575. *Mr. Brock.*] Or a piece of wire? Or anything.
3576. *Mr. Thompson.*] Have you done anything in the way of racing? Yes, sometimes I have.
3577. Have you made anything worth speaking about during the last two years? I have not made much.
3578. Were you in with Musgrave in the Newmarket Handicap when he made that lump? No, I was not.
3579. Do you mean to say that you cannot remember as a fact whether you did go out with Musgrave as a conductor? I remember going out with Musgrave as a conductor.
3580. On the Bondi line? Perhaps. I cannot say whether he was assistant or whether I was.
3581. Was he not always junior to you? Yes, I was always senior to him.
3582. Then how came you to be an assistant? That is often the case. We ranked the same, but I was getting more wages than he was.
3583. *Mr. Brock.*] How often did you run together in the same line? Not very often, not more than two or three times at the very outside.
3584. Did he never say anything to you about faking the bells? No.
3585. You never had a conversation with him about it at all? Never.
3586. And you never knew that he knew how to do it? No, I do not.
3587. Do you know now that he knew how to do it? No, I do not.

- A. Fraser. 3588. *Mr. Thompson.*] You do not believe then apparently that anything of this kind ever was done? Not to my knowledge. It could be done and I would know nothing about it.
- 1 Sept., 1888. 3589. Do you think the Government have been defrauded to a very great extent? I do not.
3590. How used you, when you were a conductor, to deal with the tickets that you took? That I took?
3591. Yes? Supposing that as a conductor you went out with your uniform and bag and so on, how used you to deal with the tickets you took, not when you were tearing them up, but when you were recording them with the bells? How used I to take them?
3592. How used you to deal with them? I put them in the bag.
3593. Always? Used you to take your dinner and your other meals with you in the car? Not always.
3594. Suppose you were away at the dinner-hour—you would have your meal on the car, would you not? Certainly.
3595. If not, you would have them in the yard or at the terminus? Yes.
3596. How do you carry your meals with you? I have a can; sometimes I used to have a basket.
3597. Will you swear that you never used to carry your dinner in your pocket? I never carried my dinner in my pocket.
3598. On no occasion? I am quite certain about that.
3599. Not as a blind to something you wanted to hide? I am quite certain I did not.
3600. Did you ever alter your uniform in any way to permit of your carrying an extra weight of any thing? No; I never.
3601. Were you provided with uniform trousers as well as uniform coat? Yes.
3602. Do you understand the question I put to you. Did you ever alter your uniform in any way? No; I never altered it in any way.
3603. Did you allow anyone to alter it for you? No.
3604. Did you lend it to anyone? No; I do not remember lending it to anyone.
3605. Did it ever come back to you from anyone altered in any way? No.
3606. Did you, although you did not alter it, make an addition to it. Now Fraser I will time you, if you are going to take all this time to answer such a simple question. How long are you going to be? You ask me did I ever put any addition to my uniform. No; I do not think I ever did; I would not be certain; I may have put a pocket in.
3607. You swore just now that you had never altered it? That is not altering it much.
3608. *President.*] What did you put a pocket in for? To carry my books; I always had more than I could put in my breast-pocket.
3609. *Mr. Thompson.*] Did you carry a big Bible about with you? No; I do not read it.
3610. What books had you to carry? A pocket-book, a rule-book, and a time-table.
3611. Will you give us some idea of how big your pocket-book would be—your departmental pocket-book I mean. You had no business to carry anything else? I had to carry the time-table and the rule-book. The pocket-book provided is about the same as the one you have in your hand; just the same I think.
3612. And the time-table;—how big is that? I think it is about as thick as that, and a little wider.
3613. You do not mean one of the ABC tables? No, a service time-table.
3614. How many pockets had you in your service coat, that is, how many pockets did you find there when you got your coat? Three.
3615. As you think you added a pocket to your coat will you tell me how big that pocket was? I do not know what sort of pocket I added to it.
3616. What have you done with that coat? I sent my uniform into the office, but I think I have a coat or two yet left at home.
3617. Uniform coats? Yes.
3618. Worn out coats? No, I have a new one. I could not find it when I packed the things up, because we were just moving.
3619. Have you an added pocket in your new coat. Do you invariably put a pocket in your uniform coat? I do not know. I do not think I did.
3620. What particular coat was it that you did put it in as you have some remembrance now about it? I cannot remember what coat I put it in or whether I put it in any or not.
3621. Will you swear that in view of the particulars which you have given us as to the necessity for putting this pocket into your coat in order to permit of your carrying certain books. You swore you know that having taken your oath you would tell the whole truth, although you admitted that you might tell a lie outside your oath, you said that when on your oath you invariably tell the truth. I have not the slightest hesitation in saying that you are shirking the truth if you are not doing something worse. You said you had to alter your uniform because the pockets were not big enough to hold your books. Do you suppose that anyone will believe you when you now say that you do not know whether you did it or whether you did not. Your way of giving evidence makes one very suspicious? I remember that I added a pocket to one coat, but I do not know what coat it was.
3622. On what part of the coat did you put this pocket? It would be in the inside.
3623. In the breast of it? Yes.
3624. Why did you not hand in all your uniform coats? I could not find them just at the time.
3625. How was it that you happened to have this one so handy? I think I sent in two, I would not be sure.
3626. *Mr. Brock.*] Did you send in the one with the pocket in? I will not be sure.
3627. Is this coat yours? Yes, that is mine.
3628. How do you know? I know the pocket.
3629. Which one? This one inside.
3630. *Mr. Thompson.*] That is the pocket you have been speaking about is it? Yes.
3631. That is the pocket you did not know whether you had put in or not? Yes.
3632. It is made of velvet is it not? I think so.
3633. Will you give us an idea what the length of it is? I don't know I am sure.
3634. It is about 8 x 6 is it not? I suppose it is about that.
3635. Will you swear that you put that pocket in for the purpose of carrying a pocket-book and time-table because the pockets already in your coat were insufficient? Yes; I swear that that is why I put it in.

3636. What used you to carry in the other pockets? I could not carry much in one of the pockets. There is a hole in it. A. Fraser.
3637. *President.*] Did you send your memorandum-book into the office? No, I did not. 1 Sept., 1888
3638. Why did you not? I did not think of it at the time. I can send it in though.
3639. You know that it is usual to send anything of the kind in, do you not? I do not know that it is.
3640. Do you know a conductor named Keen? Yes.
3641. What do you know of him? I know nothing of him. I have worked with him once, and that is about the only time.
3642. You are not prepared to certify as to his character? I am not.
3643. I want you to turn your attention to an occasion on which you met Keen coming out of a shop on the Newtown Road. Do you remember it? I do not.
3644. I will try to refresh your memory. When Keen came out of this shop you asked him if it belonged to him. Do you remember that? No; I do not remember it. I do not remember meeting Keen out at all.
3645. You do not remember asking him whether a shop in the Newtown Road belonged to him, and his replying to you in the affirmative. Will you swear that no such conversation happened? I do not remember it.
3646. Will you swear that you did not say to Keen, when he told you that the shop belonged to him, that you could always sell him two quid of tickets if he wanted them? I swear that I never said that.
3647. You swear that you never said it? Yes.
3648. And if Keen has absolutely sworn that that conversation took place between you he has sworn that which is false? It is a deliberate falsehood.
3649. How long had you your bells before you left the Service? How long?
3650. Yes. Did you not give them up when you gave up your coat? Yes.
3651. How long had you had them? Before I left the Service?
3652. Yes? I could not say.
3653. Will you give us an idea of how long? I have not the slightest idea. I have had a good many pairs of bells.
3654. Had you them six months? I do not think I had. I do not think I had them more than three.
3655. You are aware of the fact that the bells you gave up had been tampered with, are you not? No; I am not aware of it.
3656. We can inform you of the fact that the bells you gave up, and which you had had for three months, had been tampered with? Not by me.
3657. Will you swear that they were not tampered with by you? I swear it.
3658. It is awkward that they should have been in your possession for three months in this condition. Are you curious to know what they would do? Yes.
3659. Do you not know very well yourself? No, I do not know.
3660. This register that has been returned by you is in such a condition that when a pin is inserted it rings without registering the fares? I know nothing of that.
3661. That is the awkward condition in which your bells were returned after you had been using them for three months. Have you anything to say to that? I know nothing whatever about it.
3662. And you say you may have had them for six months? I may.
3663. However long you had them you know nothing as to their being in this condition? I know nothing about it.
3664. If the bells therefore had been opened and a portion had been filed away it had been done entirely without your knowledge? Entirely.
3665. Do you know a man named Hunt? Hunt?
3666. Yes? I know several named Hunt.
3667. I mean a man who has a shop in Crown-street? Yes, I know him.
3668. Are you in the habit of frequenting that shop? Yes; I live a few doors from there.
3669. You are pretty often there? Very often.
3670. Do you know that he was fined for selling tickets without a license? I do.
3671. Where did he get those tickets from? That is hard for me to say.
3672. Don't carry on this fool's game any longer? What fool's game?
3673. This game of telling untruths? I am telling the truth.
3674. You have not the slightest idea where he got the tickets? Not the slightest.
3675. You know that these tickets he sold were not in sheets, but were in twos, threes, and fours? I never bought tickets from him.
3676. But you were often there, and therefore, I suppose, have often seen tickets there? I have seen him selling tickets while I have been in the shop.
3677. What did he keep the tickets in? I could not say; I was never behind the man's counter.
3678. Where did he get them from when he sold them? From behind the counter somewhere.
3679. Did he not lift something out from behind the counter? Not in my presence.
3680. And you swear that you never saw the stock of tickets from which he was selling? I have seen him sell tickets.
3681. But the stock? I never saw that.
3682. When was he fined for selling without a license? Not long ago.
3683. Since this blow-up has occurred or before? Since.
3684. Has he ever had a license? Not that I know of.
3685. How long was he selling tickets without it? I do not know. He was selling when I moved into that street.
3686. How long ago was that? Eighteen months.
3687. During the whole of that time, as far as you know, he has been selling tickets? As far as I know.
3688. And he has never had a license? I do not think he ever had one.
3689. Do you know a barber who keeps a shop at Waverley, not far from the Bondi junction? No.
3690. You don't? I don't; I don't know anyone there.
3691. You do not know Dominick the barber? I do not. 3692.

- A. Fraser.
1 Sept., 1888.
3692. You swear that? I swear it.
3693. Or Tom the billiard-marker? No.
3694. We must have been egregiously misinformed, then;—I would like, for your own sake, to refresh your memory about this conversation with Conductor Keen? I cannot bring to mind ever seeing him out. The only time I was ever in his company was at night. We went to North Shore together. It was church-time on Sunday night. I believe that was the only time.
3695. Have you ever been cautioned by anyone about suspicious conduct on your part? No.
3696. You are quite sure? Yes.
3697. So that this conversation sworn to between yourself and Keen is a pure fabrication? I do not remember saying such a thing to Keen.
3698. Were your transactions so multifarious in that way that you do not remember one or two of them? I do not remember being in his company except when we went to North Shore.
3699. Did you ask him then if he had a shop in the Newtown Road? No, I did not.
3700. *Mr. Thompson.*] Do you remember the subject of your conversation with Keen that night? We went over to see the North Shore tram-cars. That is what we went over for.
3701. How did you happen to go with Keen to see the North Shore tram-cars? He asked me to go, and paid my fare over and back.
3702. You had no conversation with him before? Nothing, only what we had in the conductor's room. I do not think I ever worked with him.
3703. Yet he singled you out to join in this little excursion to see the tram-cars? Yes.
3704. And during that little visit no conversation turned up about the tickets? No, none.
3705. *President.*] You did not press him about them, and say, "I have not had any of those from you yet;" will you swear that? I will swear I did not say that.
3706. *Mr. Thompson.*] Did you consider it your duty, while you were in the Department, to behave honestly in all respects by the Department? Yes, I did.
3707. And you did so? I did.
3708. You have already told us something that shows us that you did not? I did as far as I know.
3709. You consider it your duty, and you did it? Yes.
3710. Did you not know that Hunt, in selling tickets without a license, was cheating the Department, and cheating you as one of the public? No; I did not.
3711. And you do not know that it was wrong? I do not know that it was wrong. I think that at that time anyone could sell tickets without a license.
3712. Therefore he ought not to have been fined? There has been an alteration since then.
3713. Do you know when the alteration came in? I could not say how long ago it was.
3714. But roughly? I have not the slightest idea how long ago it was. It might be three or four months, or it might be six months.
3715. What took you so often to Hunt's shop? I used to go in there to pass the time away.
3716. You told us that you betted a little on horse racing; were you concerned in any of these foot handicaps? Yes; I have been to the Botany and the Carrington grounds.
3717. And have betted there? A little.
3718. You were a bit of a runner yourself? I never could run.
3719. Do you know a man named Scott, *alias* Curran, *alias* Brown, a great chum and pal of Musgrave's? I do not. I do not know any of Musgrave's pals.
3720. Do you know a man named Whetton? No; I never heard of the name.
3721. Did it never occur to you to ask Hunt how he came to be selling tickets in the way he was after you knew that he ought not to sell them without a license? No; I never asked him anything about it.
3722. It never occurred to you to ask him? No.
3723. It never occurred to you to inform the Department that he did this thing? No.
3724. You would have thought that that was informing? No.
3725. Has anybody tried you at all, to see whether you would go crooked with regard to selling tickets? No.
3726. No one has suggested it or tried it? No.
3727. Did you never hear of a man going about trying the conductors, a man who nearly got his neck broken on one of the cars one day, asking them if they could sell tickets in the cars? I have heard it lately.
3728. Only since this inquiry? Only since. No man ever came to me about it.
3729. You did not hear it from the conductors long before there was any noise? I heard Grecley say in the room that he had seen a man with a bag full of tickets.
3730. In what room was that? In the conductors' room in the yard.
3731. Do you mean tram-tickets? I do not know what sort of tickets, he said "a bag full of tickets."
3732. Did he mention the man's name? No; he did not.
3733. You are sure? Quite sure.
3734. Was that in the presence of several others besides yourself? Yes; several.
3735. How long ago is that? About five or six weeks ago, or it may be only four weeks.
3736. At any rate it is since you dismissed or suspended yourself? No; it was before.
3737. *Mr. Brock.*] You were awfully indignant at being accused of this? I was.
3738. What would you have done if any of the conductors doing it had suggested it to you? I would have had nothing to do with it whatever.
3739. What would you have done if you got the slightest inkling that such a thing was being done. Since you are such a moral man what course would you have taken? Well I am a bit moral sometimes.
3740. Supposing it had been suggested that you should join them in this game? I would not have joined them.
3741. What would you have done? I would not have done anything.
3742. You would not have gone to the Department and reported it? No; I would not.
3743. But if you had looked at it going on you would have been as guilty as the men who were doing it? But I never looked at it.
3744. *President.*] You told us just now that you had never been cautioned by anyone as to your conduct being under suspicion. I should like you to reconsider that answer? I never was cautioned.
3745. Do you know a gentleman named Finegan in the Department? Yes. 3746.

3746. Will you swear that he never came to you and said, "Fraser, you had better look out what you are doing, because Mr. Roberts is suspicious of your conduct?" He never came to me and said such a thing. A. Fraser,
1 Sept., 1888.
3747. Not in any shape or form? Never.
3748. Have you ever had any conversation with him? Yes; I often see Mr. Finegan.
3749. And never at any one of these conversations did he give you this message, this word of warning? He never did.
3750. That you positively swear? Yes.

MONDAY, 3 SEPTEMBER, 1888.

Present:—

A. RICHARDSON, Esq., PRESIDENT.

F. A. BROCK, Esq., J.P.

Griffith Jones, Esq., called in, sworn, and examined:—

3751. *President.*] You are a solicitor practising in Sydney? Yes.
3752. We have asked you to attend, because we have been given to understand that you have some information to give us in connection with the fraudulent sale of tram-tickets? I decline to mention names, because no good can arise from it. My informant is dead, and he gave me no information as to the parties connected with the transaction. This gentleman said to me one day, not thinking I suppose of what he was saying, "I do pretty well out of tram-tickets." I replied, "How do you do well out of them; the Government allowance is only 1½ per cent.; I should think they were not worth selling. I often wonder that people do not strike and refuse to sell them." He said, "I do better than that." I replied, "How do you do better than that?" He said, "A couple of fellows on the trams dropped in and asked me if I wanted any tram-tickets. I said that I did and I did not. They said they had 20s. worth and that they would take 10s. for them. I took the tickets and asked no questions."
3753. We know the man's name; it was a tobacconist in Oxford-street;—how did you get to know this? It was quite casually.
3754. Why did you not expose the man at once? I did not think it had anything to do with me.
3755. Did you never ask him any questions about it? No; I never thought any more about it. He just said to me, "I asked no questions, and I was told no stories about it."
3756. Did he never speak again about it? No, never.
3757. Did you not actually see him take £10 worth, and give only £8 for them? No; I never saw him either buy or sell tram-tickets.
3758. This was merely a conversation that he did better than under his license;—he had a license, I suppose? That I do not know.
3759. Was that the whole of the conversation? Yes, that was all.
3760. Was that the statement you made to Mr. Roberts? That was the statement I made.
3761. Were you in Mr. Roberts' office on business, or did you go to tell him? I was in on business, and I saw the fraudulent bells on the table. I said, "By Jove, Jim, that brings back to my mind that a fellow said to me some time ago that he could get a pound's worth of tickets for 10s.;" and Mr. Roberts said, "Well, yes, that is how it was done." If I had thought I would have been here I would not have said anything about it.
3762. Is that absolutely all you are able to tell us? Yes, that is the whole.
3763. Did not the same person tell you, mentioning the name of Musgrave, that this individual was making £10 a week selling these tickets? No, and he never mentioned any names. I was standing in the shop, and he simply said what I have told you.
3764. Was he a client of yours? No, he was not a client.
3765. Well why not give his name? It would be a breach of faith, and could do no good.
3766. I cannot understand it being a breach of faith, under ordinary circumstances? Well, when I mean a breach of faith, I thought about his being dead.
3767. And really, at the time, is it not strange that you did not follow it out in your mind? No; I never gave it a thought until I dropped into the office and saw Mr. Roberts explaining to the reporters. I was one of the witnesses as to how the thing was done with the pins.
3768. *Mr. Brock.*] But you do not think that 20s. worth of tickets can be properly sold for 10s.? Certainly not.
3769. Did you not consider it your duty to let the Department know of such a thing being done? No. Supposing a man had twenty boxes of smuggled cigars, do you think I should run down to the Collector of Customs and tell him?
3770. If you saw a man kill another, would it not be your duty to inform of him? That would be a different thing.
3771. *President.*] Do you know a man named Musgrave? I do not to my knowledge.
3772. How long ago is it since this person told you? Eighteen months.
3773. You are quite sure that he did not point out to you any person? How could he? It would be a most singular circumstance if he did show me any person. The whole thing was done in a second.
3774. Was there nothing else? I know nothing more whatever.
3775. It would be very desirable if we could get from this clue some information which would assist us in our work. Do you know if the person who told you had a ticket license? I saw some sheets in the window.
3776. *Mr. Brock.*] In this same shop? Yes.

William Moran recalled, and further examined:—

- W. Moran. 3777. *President.*] You have, I believe, some further information to give us? Yes. On March 29th last I followed Graham on to a Waterloo tram. From seeing him frequently in close conversation with Fraser and Musgrave I suspected there was something wrong. I said to Graham, "You know there is something crooked going on. I know that you know it, and you had better tell me." Graham said, "Well, I know that the Department has been robbed." I said, "How do you know it?" He replied, "I went into either a public-house or oyster-shop with Fraser and Musgrave; they were a bit 'tonicked,' and they had their pockets full of tickets." I asked him how they got them, and he replied, "They faked the bells." Previous to this he had said to me that he did not want his name brought up in this matter, and he would not have it mixed up in the business. Judging from that I thought he might deny having spoken to me.
3778. Did he tell you of the wire then? No not then. I asked him how he knew this and stated he could prove to me that the bells were "faked." I then went to the Superintendent and told him what Graham had said, and asked permission to take a pair of bells out of the office so that Graham might show me how it was done. Mr. Roberts said, "We have heard that yarn before, but I will get you the bells, and see if you can carry it out."
3779. Did you get the bells? Yes. I waited for Graham, and saw him on the top of a tram going home. This would be on the 2nd April. I got into a conversation with him, and he said "Tommy Musgrave is making a punch." I then said, I did not see how it could be done with the bells. He replied, "It is done. They insert a piece of wire in the bell and though it rings it does not register." I then said, "Now Graham, here is a pair of bells; you know how it is done; show me." I pulled the bell out, and he replied, "Well, I do not know how it is done; but I saw it demonstrated to me by Musgrave and Fraser." He told me he could not explain the process of how it was worked, but he knew that something had been done with the inside of them. I had a piece of wire with me, and inserted it in the stock of the bell. He replied, "The inside of the bell has to be faked before it will work with a wire." He told me that things were a bit blown about Greeley's coat, and he said, "I will know when they are doing it again and will let you know. You can then come on them when they have their tickets about them." He said, "Mind you, if my name is mentioned I know nothing about it." I said to him, "Then you know all about it, and it is your duty to assist in exposing it." He replied, "I am not going to be an informer, and if anything happens I know nothing about it." He positively declared that he did not know how it was done, but he admitted that they had proved to him that the bells would ring but not register. I took the bells back to the office, and told Mr. Roberts exactly what Graham had told me, and suggested that the bells should be submitted to examination to see if it were possible to fake them. Wigg and I were told that it could not be done.
3780. By whom? By Mr. Roberts, about three days afterwards—it was an old yarn that it could not be done. This threw me off the scent, and made me think Graham was hoaxing me. After this I kept a watch on Musgrave for some time.
3781. Did you see Graham again? I saw him several times, but he said they were not doing it again yet.
3782. You told him the result of the examination? Yes, and he said it had been done and could be done.
3783. Did you go to see the repairer? No; we have to put in our report or written statement to the Superintendent.
3784. Was Mr. Tyrer there when Mr. Roberts said it could not be done? I do not remember. Wigg was there. I then saw Musgrave collecting tickets just after leaving Bent-street. I jumped on the car to speak to him, but as soon as I stepped on to the car he stepped down on to the foot-board, and as he stepped down I saw in the coat-pocket some tickets.
3785. How many were there? There must have been a good few for me to see them. He hurried along the foot-board and up the opposite stairs. I went up at once, but when I got up I saw that he had removed the tickets and put them into his bag.
3786. Did you challenge him? No; I did not.
3787. Did you see the wire? No; but I was looking for it.
3788. *Mr. Brock.*] It would have been very easy to have taken Musgrave's bell? Very easy, but we have no authority to take bells. I made no remark with reference to it, for I saw that he was "fly," and knew what was up. I went back and told Mr. Roberts what I had seen. I suggested then that he should be pounced upon quickly and quietly.
3789. When did this occur? About the first week in April, just before the Hendy business. Mr. Roberts challenged him when he came back, and he denied it, and denied it indignantly.
3790. Were you present? No, I was not present.
3791. Do you think Musgrave knew who gave Mr. Roberts the information? Certainly he did. Previously to this Wigg and I suspected, from the way he was going around and dodging away from us whenever we got on his tram, that there was something wrong, and Wigg said to me, "If we only had the authority to search that fellow something important would turn up out of it." After this Mr. Roberts arranged to come on him suddenly, and take his bag and bells from him.
3792. Who did he arrange that with? With Wigg. This was about the 23rd April.
3793. Do you think that Colls could get that information? No.
3794. Do you think that Musgrave got it? I do not think so.
3795. Did he know that he was suspected? Yes.
3796. Did they catch him? Yes; they came on him at Queen-street.
3797. Did they search him? No. They took his bells and bag from him.
3798. Were you present? No.
3799. What was the result? The tickets and register were right and square.
3800. Did he show any signs of fear when they took the bag and bells from him? No. He handed them over apparently quite pleased.
3801. *President.*] Is it not a fact that, until Ferrier had told his tale in Greeley's room, the Department was really without definite information as to mode of covering fraud? Yes.
3802. *Mr. Brock.*] But Graham had told you some time before that the bells were faked? Yes; but after he had told me that the bells were faked they were submitted, I was told by Mr. Roberts, to the examiner or repairer of bells, who, Mr. Roberts told me, gave it as his opinion that it could not be done, and this report led me to believe that it was a mistake on the part of Graham.

3803. Was this a professional report? Yes; this was the next step I took,—not yet being satisfied I questioned Graham several times, watched him, and saw him frequently meet Fraser and Musgrave and talk quietly to them. I repeatedly said to him, "Well Graham, are they doing it yet?" and he said, "No, they have given it best; I think they are afraid." On another occasion I met him at Botany and asked him. He then said he did not know—he was having no truck with the other crowd he said. Nothing further turned up for some time beyond our following Cook. We watched him and saw him frequently jump on trams with Musgrave and Fraser, ride to various parts of the run, and then get off. I repeatedly saw Cook coming away from the tram with a bag and followed him. Mr. Roberts sometimes accompanied Wigg and me in order to see this mysterious jumping on and off. The next thing was Greeley's statement about Cook getting on and off, and about Cook's overtures on the day of the Rosehill Races. This took place at (say) 10 or 10.5 a.m. Even at that time, when Greeley told me that Cook said he would show him how to work it, I found it hard to believe that it could be worked in the face of the expert's report that it could not be done. Cook, however, never turned up to show Greeley. After this Ferrier came on the scene, and Greeley told me that Ferrier would show him how it was done. It was on the 27th June. Greeley told me this, and on the 7th July I was in the bedroom when Ferrier came. I had got behind the bed, and Ferrier said when he got up-stairs that he was a bit nervous. He struck a match and blew it out, being apparently satisfied.

W. Moran.
3 Sept., 1888.

3804. He put the match out? Yes; seemingly satisfied.

3805. How did the conversation commence? I forget how it commenced, but it is just what I have said in my examination previously. This now completes the evidence I can give you I think.

Henry D. Elliott called in, sworn, and examined:—

3806. *President.*] What is your name? Henry D. Elliott.

3807. You have been connected with tramways? Yes, I have been on the tramways in San Francisco, and New York, and elsewhere in the United States.

H. D. Elliott,
3 Sept., 1888.

3808. We think it would be to the advantage of the Commission to have detailed to them the system upon which the tramways with which you are acquainted are worked? The system is called the bell punch system. It is used in Edinburgh, Dublin, Melbourne, and all over the States, and the following are the particulars of its working:—

COLLECTION OF FARES UNDER THE BELL PUNCH SYSTEM.

Fares to be collected.

A FARE either in cash or tickets must be collected from every passenger except Inspectors in uniform.

Passenger's luggage.

Passengers may carry personal luggage up to 28 lb. weight, or eighteen inches square, free; but such luggage must be put under the seats or carried in the lap. Full fare must be charged and punched for any article over that weight or size. No article to be taken over that size which cannot be put under the seats, or which would inconvenience other passengers.

Care to be used in taking fares and giving change.

Great care must be used to collect the proper fares, according to the rates shown on the printed notices, from each person who rides, and to give correct change. Conductors are expected to pass away the bulk of the copper coin received by them, but must never try to force passengers to take it against their will. Must never give tickets as change.

Method of collecting fares.

Fares to be collected on each trip as soon as car has passed points fixed by notice, beginning at the front of car and working back to rear platform. As the fare is received the conductor should notice the passenger's face so that he may not ask for it again. The conductor must announce distinctly as he reaches each section of car *Fares ready, please.* After first collection, other fares must be taken immediately after the passengers have entered and seated themselves, but must not be taken while passing cross streets.

Fares to be settled before being punched for.

When collecting fares for more than one person, or for children or luggage, the conductor must state how many he requires, and have a distinct understanding before punching as to how many or for what luggage he is to be paid. He must be especially careful in reference to half-fares and luggage.

Mutilated tickets.

If passengers present mutilated or defaced tickets he must refer them to the head office to exchange them.

Action of conductors if unable to collect fare.

If unable to collect fares from passengers, through inability to give change, or owing to a passenger being without money to pay the fare, the *slip* must *not* be punched, but the name and full address of passenger obtained, and entered on back of day report with particulars, and passenger must be asked to call at head office and leave the fare.

Supply of change.

Conductors must keep themselves supplied with small change to the extent of £1 at least for the purpose of making change for passengers. Failure to exhibit change as above, whenever called upon by inspector, will render the conductor liable to suspension or dismissal.

Outfit to be obtained, &c.

A few minutes before starting the day's work, each conductor must obtain from the receiver a bell punch, a supply of up and down trip slips for each rate of fare, trip reports, tickets for sale, day report form, a pocket-book to hold his papers, and he must replenish his small change. Up trip means towards the suburb, down trip from suburb to city. The above out-fit must be carefully examined at the time of receiving it from the officer, and any mistake must be rectified at once, as no claims will be recognised after conductors have left the office window. The punch must be signed for on the proper sheet by both conductor and receiver, whenever received by them.

Position to wear trip slips.

Before starting from either end of route an up or down trip slip, as the direction may require, for the full or half fare, with the blanks properly filled in, must be attached to the coat in the right position, the full fare slip to the left side and the half fare and penny slips, when used, to the right side.

Fares

H. D. Elliott.

Fares to be registered, and in the presence of the passenger.

3 Sept., 1888.

Each full, half, or other fare received, whether in cash or ticket, must be recorded on the proper trip slip by the punching out of a number for it. The slip being held with the left hand and punched with the right, the lowest numbers being punched first. The slip must be punched and the bell rung in the presence of the passenger who pays the fare and before others are collected. If change has to be made the slip must first be punched. Any wilful violation of this rule will be sufficient to cause the immediate discharge of the offender.

Directions for making up returns.

When within three minutes of the end of each up trip conductors must make up their trip slips for both half trips, first counting the holes that have been punched out, and entering the number as fares in proper place on the trip slip, count their tickets and cash, fill in the blanks in the trip slips, and copy results on the trip and day reports ready for making returns at the Office. If more than one trip slip is used on each up and down trip they must be numbered consecutively in the proper place and returns entered on last slip used.

Fares collected to be paid in each trip.

All fares collected and cash received must be handed in to the receiver's office at the end of each trip with the proper returns.

Tickets to be kept distinct.

The various kinds of tickets received must be kept distinct and fastened with an elastic band and handed to the receiver in neat condition.

Day report.

After the returns of each trip are made up, but before they are handed to the receiver, the totals from the trip report must be entered in the day report distinctly and accurately at the end of the day's work. The day report must be deposited in the Superintendent's letter-box. Before leaving the receiver's office, after finishing day's work, conductors must prove their day report correct.

Punch to be carried on strap, &c.

The punch must always be carried hanging by its strap outside the coat or overcoat at the right side, and when in use must be held with the handle upwards. Must only be put in coat-pocket when shunting.

Punch to be handled with great care.

Great care must be used in handling the punch. Should it be injured from any cause while in the possession of the conductor he will be required to pay the amount of damage. Should the punch be lost conductor will be charged £12 (twelve pounds).

Handling of punch.

Must never allow any person except the punch inspector to handle the punch after taking it from the office, and must never exchange it with other conductors.

All shorts charged to Conductors.

The register of the punch indicates the number of fares collected, and if the punch system is worked correctly will correspond with total shown by the trip slips and day reports. If it does not correspond all shorts will be charged to the conductor at the highest rate of fares, and must be paid by him unless accounted for to the satisfaction of the Superintendent. Errors of any kind will indicate carelessness, and be a sufficient cause for discharge.

Punch to be returned when going off duty.

The punch must be returned to the receiver every time a conductor goes off duty and obtained when he starts again. At the end of the day he must hand over to the receiver his badge, punch, pocket-book, unsold tickets, and all unused trip slips and other forms and reports. The trip slips and other forms must not be defaced unnecessarily or wasted.

3808 $\frac{1}{2}$. *Mr. Brock.*] Are there any cars in use like those in Sydney? No.

3808 $\frac{1}{2}$. None with doors in the sides? No.

3809. *President.*] Those in use here were brought from Philadelphia and were in use there at that time, 1879? I believe there are none in use there now.

3810. Will you now continue with your description please? These punches are made by a New York firm. They establish one general agency in whatever country the system is to be adopted. This is to prevent fraud and to prevent other people using their bells. The punches are simply lent to the parties.

3811. Is it their punches which are used in the cities you have mentioned? Yes, they are all simply rented to the companies.

3812. *Mr. Brock.*] Was this system tried in New Zealand? Yes.

3813. Can you get a punch? Yes, I will get one from Melbourne. In Dublin they are worked on a ticket instead of a slip. The punches are opened by a word or alphabet. There are two alphabets which spell the word and open the punch. These are the slips used in Melbourne. I got them from a friend of mine. The punch is perforated on one side, and when a slip is punched the bell rings so that it can be heard by everybody. The other side contains a register similar to those you use here. The slip is attached to the conductor's coat, and it has one number for every fare taken. By the colour of the slip the amount of the fare is told. The total amount of money taken at each punching is also shown on the slip. Every piece punched out of the slip goes into the rim of the punch, and is retained there. The punch registers one for each time the bell is rung off whether rung on the slip or not.

3814. *President.*] What do you mean by ringing off the slip? The bell may be rung accidentally but it would still register.

3815. *Mr. Brock.*] What would be the total carrying capacity of your car? I do not know. I have seen a great number on it, over the carrying capacity. The sitting accommodation is generally forty-four. The largest number was when there was a load on the platform besides the car and dummy.

3816. *President.*] How does the conductor take the fares then if his slip is limited to forty-four? He can use as many slips as he likes. He receives in the morning as many as will last him all the day. The half-fare slip is on the right side, and the full fare on the left. Then there is a trip report. These trip reports must be made up at the end of every up-trip, and passed into the office. The punch is kept until the evening.

3817. When does he hand in the trip slips? At the end of every journey. He takes the totals from the slips and puts them on the report.

3818. You have had a good deal of experience in tramway work? Yes, and I am confident that this system would answer here.

3819. Let us understand how you would apply this system to our tramways? There is a receiver at the office, who receives all the cash taken by the conductor on each trip, together with the trip-slip and report.

H. D. Elliott

3 Sept., 1888.

3820. *Mr. Brock.*] How does he manage if there are more passengers in the tram than he has on his slip? He would use a second slip, and, if necessary, a third. This could be remedied though by making the slips longer, according to the carrying capacity of the car.

3821. Suppose you run three cars heavily laden, you would be bound to have a conductor on each car? No; I think two would do for the three cars.

3822. Suppose you had two long cars on one occasion and the conductor goes out with these loaded and he comes back with a double car, how would he manage? It does not matter whether the slips are made for the carrying capacity of the car or not. They are usually made so, but it is of no consequence, as when one slip is done with another will replace it. His trip slip will give an account of the number of tickets taken. The punches are sent up to the head office in the evening, or whenever a conductor goes off. When the register is read, if it agrees with the total number of punches in the rim, the tally is right, but if they do not agree the conductor has to pay the deficiency if he cannot account for it satisfactorily.

3823. Do they often show an incorrect return? No; the balance is exact in the majority of cases.

3824. Suppose the man is engaged on the evening or morning trams, when the traffic is very great, would he bring out a perfect balance? Certainly. The rule is made, and should be made here, that the conductor does not start collecting the fares until a certain block or cross street is reached. Then he collects the fares from all the passengers riding on the car. In doing this he has to sell some tickets and give change. At the outset he has six or twelve dozen tickets given him to sell to the public, at the rate here of (say) 2d., or one dozen for 1s. 10d. He is only allowed to sell by the dozen. These tickets are all numbered and lettered. I do not approve of your tickets; they are not numbered or lettered, nor is there any water-line on them.

3825. *President.*] Are you sure of that? Well I cannot see any, and I have looked carefully.

3826. They are water-lined, but I believe the line can be seen only with a glass. What is the object of lettering or numbering them? It is a check to prevent them being imitated. The first sheet of our tickets is numbered A; the next would be B, and so on.

3827. You do not sell to anybody to sell again? There are very few tickets in circulation, except those which are bought from the conductors on the cars.

3828. You think there would be no difficulty in adopting that system here? No. It may not seem so handy at first, but people would soon find the benefit in having it.

3829. You see here tickets are the rule and cash the exception; what is it in New York? The opposite—cash is the rule, tickets the exception, except in the case of regular travellers. You would find if this system was adopted the public would prefer it to the present system.

3830. Say a conductor enters a car going to Waverley, which is crowded from end to end; he commences collecting his tickets from the back of the car he is on;—what is his first process? Conductors always start from the front of the car with us and work backwards.

3831. Under our system he gets rid of each compartment in half a minute; under your system how long would it take? The conductors will take cash just as fast as with your system they take tickets.

3832. Say that one or two out of the ten in the compartment want change for half-a-crown? He will give change as easily as tickets.

3833. I should estimate that it would take three times as long under your system as it does now under ours? Our system can be worked equally as well as yours. Passengers will buy tickets when they get used to the system, especially when they get them cheaper. As regards missing fares here, I have seen several miss their fares. We find that with a full car there are fewer misses than with a light car.

3834. But you do miss fares under your system;—I thought you did not? Well, there are some persons who always make it their object to try and miss paying their fares.

3835. How is your traffic worked? We have first-class and second-class conductors. The first-class conductors work the regular traffic, and are paid regular wages. The second-class conductor we pay by the trip, and he does not do so much work. The first-class are men who have been in the second-class, and have by their conduct received promotion.

3836. When do the second-class conductors work? They work night and day during the busy times.

3837. I want you to consider one of these heavy trips very carefully. We have cars holding ninety, and these when rushed will have 120 packed on them. Our sixty-seat cars will carry eighty on a push. You must remember that you are carrying on the top, and that you have a difficulty in wriggling in and out amongst the passengers, some of whom are jammed on the platform, others on the steps, and who are sitting round the rails. You probably have to sell a dozen or more tickets during your progress round and through this crowd, as well as to give change here and there, besides which you must recognize the fact that the traffic is run with a great deal of danger; you have therefore, at each stopping-place, to look out for passengers getting in and out on the proper side, cross over to the other side to see that everything is clear, and then blow your whistle. How long do you think it would take your conductor to complete his work? Well, say he starts at Market-street, he would complete at Liverpool-street.

3838. You must remember that he has perhaps collected up to a certain point, when he comes to another stopping-place, has to leave the collecting, go through the same performance, looking right and left, before he blows his whistle, then return to the point at which he left off collecting, and begin again. Do you not think he will miss some fares? I do not think he is likely to miss his fares, as he knows from whom he has collected; we miss very few, although we run workmen's trams at about 1½d. each.

3839. Where would you start from to collect an upper-deck load; from the passengers on the stairs? We commence with the passengers who are standing up.

3840. We will say that you have collected all the standing fares, and you have got to the near side of the top deck, when you commence and take four fares; you then come to a stopping-place; you have to look over the side to see passengers getting in and out, then cross to the other side to see that everything is clear, also blow your whistle, and go back to the place where you left off collecting. Do you think you would readily pick up the point where you left off? I think so.

3840½. How do you do with your conductors when they first come on? The conductor is put on trial for a fortnight before we accept him. He is put with an old hand, and when the old hand thinks him fit he is put on by himself. The inspector will then go in the busy time of the day and watch him. He has a good deal of bother at first with his time-card, as he has to be very particular in keeping time. He must collect

- H. D. Elliott,
3 Sept., 1888.
- collect his tickets and get to the time-point at the proper time. If he gets there before the time notified on his card he has to wait till his proper time to start, and to see that everybody is seated before he starts. After two or three trips at different times the inspector makes his report. The inspector very quickly tells whether the man is any good or not, and if he is not he is discharged. During the fortnight he is on trial he receives no pay. Our seats are wider than yours, and there is sufficient room for people to stand between the seats. The conductor has to make entries on his trip report and day report as to the number of fares taken, the amount of cash received, and other items.
3841. When is the man to make these reports? He makes his trip report, and when he gets near the end of the up trip. He commences to fill this in when nearing the end of the journey.
3842. How can he do this and collect his fares at the same time? When nearing the end of the journey there are no passengers getting in, and all the tickets have been collected, so he has nothing to do. He commences making up his trip-report from the trip-slip, by counting the holes punched, and entering their number as fares in the proper place for passengers, employees, &c.
3843. How does he do with Service tickets? He punches for them the same as any ordinary passenger.
3844. You issue Service tickets then? Yes. He then counts all his cash and puts it down, also the number of tickets he has sold. He does the same at the suburban end. He keeps the totals of all his trip-reports, to enter into his day book report.
3845. *Mr. Brock.* What do you mean by up-trip? Up-trip means with us from the city to the suburb; down trip, to the city.
3846. *President.*] Then your terms are the opposite of ours? Yes.
3847. What does he do with these reports? He gives them, together with his cash, to the receiver each trip. If he has rung off accidentally he must report it also.
3848. How do you mean accidentally rung off? By pressing accidentally the lever he rings the bell, and thus registers a fare against him. He must report it, or he will be charged with the amount.
3849. Supposing a man finds himself half a dozen fares wrong? He knows that he will have to pay for them, and will be careful not to make such a mistake. If he does accidentally do so he must report it, and it is an evidence of carelessness. If it occur again the punch is taken from him and he is discharged.
3850. *Mr. Brock.*] The man must know how many there is in the punch from his tickets? Yes; and if he has rung more than that number he makes a report of having rung but not having received any fare for it.
3851. *President.*] Assume a case where a man is about to cheat; he has punched correctly; and he writes on the back of his report: "There was a great crowd on the top, and I was very much pushed and pressed, my bell rung perhaps a dozen times more than it should have done"? We accept this explanation, but if it occur three times he is dismissed as incompetent. We also have private detectives, called "spotters," who receive a certain number of tickets. They travel about on the cars watching the conductors, and they make a report for every ticket used. They take notice of the number of passengers on the trip, and send in a report of the trip in the same way as the conductor. These reports are compared in the office to see if they agree.
3852. How many of these detectives have you? We only have a few of them. They are generally drafted off or discharged.
3853. You must admit that on a crowded car there would be a reasonable chance of the conductor missing a few fares; let us say he is a regular hand and a good careful man; how do you detect him with your "spotters"? He would be called on to make an explanation, which would be considered. Our notices state that it is the duty of the conductor to furnish a fare for every fare received, and the public know this. I have known a case in which a conductor took a fare and did not punch it. The passenger looked up and asked him why he had not punched the fare. The conductor said, "I have punched it with a pencil, my bell is out of order." This may occur, and the passenger not hearing the bell may tell the conductor that he will report him.
3854. *Mr. Brock.*] These trams generally belong to private companies, and they have friends who are always looking after their interests? Yes.
3855. *President.*] When a man is collecting tickets in a crush he may punch only four instead of five? We only allow him to take one fare at a time.
3856. You are still convinced that they could collect correctly with a very crowded car? I am sure they could.
3857. How do they do when the punch breaks down:—what check is there on them then? They must report to the receiver.
3858. A dishonest man may make a harvest on one trip with a broken register? Oh yes, he might, but it seldom occurs that the bells are out of order.
3859. Have you seen any of our crowded cars (say) on the Waverley or Leichhardt line? Yes. When we send out a car that we know will be heavy we send another collector with a bell punch.
3860. How many conductors or collectors would you have on a Botany tram? We would have two—one on the top and one below.
3861. By this means the upper deck man would be free to collect his fares without regard to the safety of passengers getting on and off? Yes; the lower man would attend to that and look after the public safety.
3862. You have a collector on the dummy and one on the car? Yes, and we have inspectors who count all the passengers and then notice how many the conductor's slip shows.
3863. I understood from you a little while ago that this system was so reliable as between the trip-slip and the day report, that they balance exactly;—why then do you require to pay inspectors if that is the case? Yes, providing the conductors are honest, we would not require them, but in order to protect ourselves we keep them, and the conductor does not know the minute one may come. It is a perfect test, and they are employed to prevent fraud.
3864. How much do you pay these inspectors? We pay 6 dollars a day.
3865. How many do you employ? Only a few, say two or three on five or six roads. The head inspector is the only one who handles the punches, opens them, reads the drums, and sees that they correspond with the trip-slips.
3866. In order to make the system perfect with us how many inspectors would you require? About four.
3867. Do they wear uniform? Yes; and they ride free. Spotters get 2 dollars a day.
3868. How many spotters would be required? Two.

3869. What are the duties of the spotters as you call them? They get on a car and count the passengers; then get off. They also notice the number on the conductor's slip, and if satisfactory he says nothing. The next day he jumps on at a different part of the trip, and then possibly does not go on that car again for some days. Of course certain conductors would be followed up repeatedly if they were suspected of being dishonest.
3870. He does not speak to the conductor? No he simply counts the passengers and looks at the slips.
3871. *Mr. Brock.*] Supposing he uses three of these slips how is he to know how many have been taken on this trip? A conductor does not start a second slip until the first is completed or full; that is, you commence at 1 and punch down that side, then turn your slip over and punch down to 44.
3872. *President.*] You seem to think there is some considerable opening for fraud? Oh no if he goes in for fraud he can only make very little. They pay a deposit of £5 when they are put on so they would not make much in a day.
3873. What good is a deposit? If he be found out he loses his deposit and his work.
3874. Supposing his deposit is £10, and he robs to the extent of £1,000; what is the use of the deposit? It cannot possibly be done.
3875. We are bound to say that, in our system, if a conductor comes out with six tickets short or over in a journey he is fairly correct? Yes; but if they do not agree, with our system, he must make up the difference. With us the punch cannot be opened except by a key or alphabet, the only one having it being the head inspector.
3876. How do you do with a heavy load? If we know we are going to have a heavy load we put on an extra conductor.
3877. Recollect that every morning on Marrickville, Paddington, Waverley, and other lines we have very heavy loads? I am convinced that one conductor could collect these fares on the run. Your conductors, after they have collected one lot of tickets simply hang about doing nothing instead of being constantly moving. I have seen them come around twice only in Crown-street. The more a collector is kept going the fewer tickets he misses and we always find that the heavier the load the less the loss of tickets. The fewer the passengers the more fares missed.
3878. You do not use a top deck? No.
3879. How long would it take under your system to collect one of our top deck-cars very much crowded? I think he could collect between Market and Liverpool streets.
3880. He would have to sell some tickets and give change as well. You must bear in mind that your conductor is the only person who can sell the tickets? Yes, certainly he can sell tickets and collect as well.
3881. I can hardly believe that a man would get through his collection with the other business as well between Market and Liverpool Streets with a full car. He would more likely be in Oxford-street before he had completed his work. He might on occasions do it but not as a rule. The looking after tickets, giving change, selling tickets, looking after the safety of the passengers, and blowing his whistle would almost invariably keep him fully occupied until reaching Oxford-street? Well this is the system at work in New York, but there they have no crowded upper-deck cars.
3882. What size are your dummies and cars? They are much larger than those at North Shore, One of our cars carries twenty-two seated inside, and six on each platform, and twenty-two on the dummy.
3883. *Mr. Brock.*] Have you seen your system used on cars similar to our lower deck cars? No; not on these cars. Our cars have a lane through them for the conductors to pass through them, and I would suggest a similar road or track through your cars.
3884. Do you think you could seat four people in each row with, as you suggest, a track through the centre? Yes.
3885. *President.*] But you might find your passage blocked on the busy runs? The way to get over that is to run an extra car at these times, say morning and evening, and it will not occur. We run our cars every 2 minutes, and we can put an extra one on at any time.
3886. If we had cars of the small capacity of those you refer to we should have to run at intervals of half-a-minute on the Paddington line, during the busy times, if we were to prevent overcrowding? I daresay.
3887. *Mr. Brock.*] How do you succeed at night in working your system? We have any amount of light in the car and on the dummy, so that we carry on as well at night as in the day.
3888. Have they double deck cars in Philadelphia? They had, but I believe they have been done away with.
- 3889-90. *President.*] How do you arrange for change? That is another thing in which the inspector's services are needed. The conductor has to find 20s. worth of change himself, and must always have at least that amount of change on him. If an inspector comes on to a car and finds the conductor without 20s. worth of change he reports him, and he may be dismissed or suspended. In our system we entirely depend upon the conductor getting the fare. If he be unable to collect it for any reason he must get the name and address of the person and report it, at the same time asking the passenger to call at the office and pay. There is an office at each suburb and the trip slips are made up, when nearing this office.
3891. You pay a second-class man by the trip; then it is broken pay; a man may make a day to-day, and not make another for two or three days? We have a regular system of pay for them, and sometimes they make more than a regular man.
3892. When does your conductor get fresh tickets? Whenever he gives in his cash he replenishes his tickets. We also allow transfers in our system. In San Francisco you may travel 20 miles for 5 cents, being transferred from one system to another.
3893. How do they arrange the transfer system? A passenger wishes to go to some place not on the line he is entering: he tells the conductor, who gives him a square card with the time at which it is given marked on it; this will carry him on any line he requires to go, the only restriction being that it must be used within the hour in which it has been punched.
3894. There are (say) 300 going to Botany;—could all their fares be readily collected under your system? Yes; I have known conductors who preferred good loads; they would go around the lot and collect, and they never missed a new-comer.
3895. *Mr. Brock.*] People are coming in at Market, Park, and other streets? They would not miss them; every new-comer they would know. Tramways working under this system have paid when they have never paid before.

H. D. Elliott.
3 Sept., 1888.

H. D. Elliott, 3896. *President.*] A great advantage in your system is that you have no commission to pay to people who sell tickets, and therefore you do not run the same risk of fraud as we do? Yes, in our system it is reduced to the conductors, and they can make very little—even if they tried. They pay the money in to the receiver every trip, besides having given a deposit of £5.

3 Sept., 1888.

3897. Are you quite certain after what you have heard about the manipulations here, that no ingenious person could get into the inside of the bell-punch? It is not done.

3898. There will be no such thing as allowing the conductor to take his bell-punch home with him in the evening? No.

3899. And I suppose, even if it cost you the wages of six men to prevent it, you would not allow the punches to be taken home at night? No; they are all handed over to the receiver every evening when the men go off duty, and the men have a sort of reverence for their bell-punch, and they will scarcely allow a person to look at it even.

3900. You can quite understand that under our system you would require some five or six extra men to prevent the bells being taken home? Yes; but we compel the return of every conductor's bell, bag, tickets, slip, and reports at the finish of his day's work.

3901. How do you pick your first and second class conductors? Uniform inspectors note the conductors and men at work, and select the best men. When they find a good man they put in a good word for him; if they find men slack at their work they work them up, and if they do not give satisfaction will discharge them. These inspectors have not only to attend to these duties but they have to attend to everything in connection with the line and the traffic. The men know this, and try to get into the inspector's good graces; and an inspector when he sees a good man will always look after him. With some of the conductors the inspectors seldom or never travel, whilst with others who are slack they will be constantly riding; and if there is no improvement shown the inspector discharges them. The men are usually of a good class. They have to pay £5 deposit, and work fourteen days without pay. They have to find their own uniform. I think in Melbourne gripmen get 52s. and conductors 45s. a week. This is low pay. We pay better in America, because things are dearer all round than here. A conductor of the highest class gets 3 dollars to 3 dollars 50 cents, and a gripman 4 dollars to 4 dollars 50 cents; but they run longer hours than here—say, twelve to thirteen per day.

3902. *Mr. Brock.*] What is the greatest number of cars running together in your system? Two; but we can put on any number, one after the other, at intervals of half a minute between them.

3903. *President.*] You have been on the Botany line, Mr. Elliott, during the interval; what were your experiences? I got on the Botany tram at Bridge-street at 1.6, and at Park-street the first collection was completed, there being twenty or a few over on the top deck. Then thirteen got on and the second collection was made, only seven being collected and six being missed. I counted everybody who came up and out of the thirteen he missed six. Under our system we would have had three conductors. Two people sat on each side of me and did not pay. The conductor was a red-haired man with red whiskers and by his appearance I would have thought him a first-rate conductor. He was a steady looking man. I noticed he said "Any more fares please?" This I think is wrong; he should simply say "Fares please." If these tramways are not handicapped very heavily I would guarantee to collect all the fares. After this he collected the penny sections and got all. There were about 33 on the top deck where I was and only about 22 did he collect. The seats were not anything like full. I stood up to have a view. This was a very ordinary load; there were only a few standing, the majority being seated. I do not think there would be any difficulty in working my system under the present circumstances.

3904. *Mr. Brock.*] Was the lower floor loaded? They were ladies, nearly all,

TUESDAY, 4 SEPTEMBER, 1888.

Present:—

A. RICHARDSON, Esq., PRESIDENT.

R. W. THOMPSON, Esq., M.P., | F. A. BROCK, Esq., J.P.

John Graham recalled and further examined:—

Driver
J. Graham.
4 Sept., 1888.

3905. *President.*] We have recalled you in order to ask you to give some further evidence of importance, and before I do that I may say that, although during your first examination and on several occasions we may have spoken somewhat harshly with regard to your apparent complicity in the matter, and we certainly held considerable doubt as to the genuineness of the transactions on your part, we wish to tell you that, after the evidence we have received from others, we have come to the conclusion that you have acted throughout in good faith; and although you were for some reason or other rather chary in giving information directly to the authorities, still we have corroborative evidence that you did almost immediately make a number of your fellow workmen acquainted with the facts, although you did not give any names. Your evidence, as you may readily imagine, is of a very strong and important character, and I may at once tell you that it has been very strongly contradicted by the person mainly guilty. It is not surprising, perhaps, that the evidence has been contradicted, although the witness was upon oath. But we have sent for you, in order to put these several points to you more strongly again, that you may on reconsideration either confirm, strengthen, or modify them, as may seem to you correct. You remember a conversation which took place between you and Musgrave in the Pitt-street yard on the day on which Hendy was taken off his tram for having tickets unregistered;—I think it was on the 7th April, on a race-day? It was on a race-day; I remember.

3906. You remember telling us distinctly that you observed Musgrave car-cleaning? I observed Musgrave with a broom in his hand, standing in the yard.

3907. And you said to him: "How is it that you are not at the races"? I did not say that. I said, "Tommy, how is it that you are not off to the races?" or something to that effect.

3908. And his reply was — ? That there was something on the board.

3909. I think you said that he accompanied that remark with a wink? Yes.

3910. Now let me ask you, if Musgrave has absolutely sworn that no such conversation ever took place, has he sworn truly or falsely? Falsely.

3911.

Driver
J. Graham.
4 Sept., 1888.

3911. Musgrave has also sworn absolutely that he never said to you on any occasion whatever that he had suffered a loss during the time he was under suspension of some £400 or £500; in fact he swears that he never made any such remark;—has he sworn truly or falsely? Falsely.

3912. Have you the slightest doubt in your mind that he made such a statement to you? Not the slightest. I remember it perfectly well.

3913. Musgrave in his evidence, when he apparently saw that he could not altogether escape from making such a statement, admitted that he went on one occasion and got a piece of wire from you on your engine. He further admits that he put this piece of wire into his register, as you said he did. He admits that he showed you the register number, and then he makes this very important modification in the statement, and swears that it is correct—that instead of collecting a car load of tickets he collected four tickets only—that he was having a bit of a joke with you; and to show you how it was done he collected four tickets, which he put honestly into his bag, showing you afterwards that the register had not moved, and showing you at the same time the four tickets which he had in his hand? I will give you my opinion about it. He got on to the motor between Queen-street and Elizabeth-street, just at the beginning of the twopenny section, and I can solemnly swear that there were more than two passengers in the car that he collected. He went all round the car.

3914. *Mr. Brock.*] You are positive of that? Yes, he went all round the car.

3915. *President.*] Was it a top and bottom car? Yes.

3916. And you heard his bell ringing? Yes; as he went along the side.

3917. Give us an idea of how often his bell rang, speaking within bounds. According to him it rang only four times. He swears that it was on a penny section, and that it happened between the tank and the top of Queen-street? It was between Queen-street and the next stopping-place, and he got off the motor at that place.

3918. Where did he borrow the wire from you? Between Queen-street and Elizabeth-street.

3919. At the commencement of the twopenny section? Yes.

3920. How many cars were there on? Two.

3921. Were they fairly loaded? Yes; I think there were a good few passengers. They were not what you would call loaded. I think we came from Waverley on that trip.

3922. How many passengers do you think there were? I can swear that there were more than twenty in the first car.

3923. And he rang the proper number for the twenty? As far as I could hear.

3924. What is your idea of the number of times he rang? I can say positively that he rang over twenty times.

3925. When he got to Elizabeth-street what did he do? He got off at Elizabeth-street and went along the car. When we got to Regent-street he came on the motor again. He then showed me that the register had not moved.

3926. Did he show you the tickets? He did not.

3927. He did not show you any tickets? No.

3928. He said he showed you four tickets? He did not.

3929. My recollection of your evidence was that he did show you tickets? Not on that occasion. If he did I do not remember. I have seen the tickets that he made on other occasions.

3930. On which you have seen them collected in this improper way? Yes.

3931. Where did this occur? On the Leichhardt line.

3932. In what way did you see them? In his pocket.

3933. Did he show them to you in his pocket? Yes.

3934. How? Putting his hand in, like this.

3935. In what pocket? In his trousers pocket.

3936. You told us in your first evidence that you frequently saw him with the pin inserted? Yes, I have seen him frequently with the pin inserted.

3937. You are positive about that? Yes.

3938. And you are very positive as to his holding the wire up and letting you see it on one occasion? Yes.

3939. And saying, "This is worth a tenner a week to me?" Yes.

3940. You swear to that? Yes.

3941. You frequently saw that the pin was in when Musgrave was collecting his fares? Yes; on several occasions afterwards.

3942. Did he not tell you on several occasions that he was doing it? He did not tell me, but I understood from hints.

3943. What sort of hints would he give you? He would show me his pockets—show me the bulk in his pockets; sometimes in his breast-pocket and sometimes in his other pocket.

3944. Did you ever see that kind of game carried on with a velvet pocket in a coat? No.

3945. Nor anything like it? No.

3946. He swears positively that when he got on to your motor for a piece of wire that was the first occasion he brought the matter under your notice;—is that so? Yes, that is the first time.

3947. When was it that he told you he had been up to this game ever since he had been in the Service a fortnight? That was in a subsequent conversation when we were lying at the cricket ground. On such occasions as that we would have conversations, and they generally turned round to this subject.

3948. He told you distinctly that he had been at this game during the whole of that time? He told me he was at the game from a fortnight after he had been in the Service, and that he was the only man who knew how to do it that way. He was boasting that no other conductor knew how to rig the bells.

3949. *Mr. Brock.*] Did he tell you how he found out to do it? He did not. He told me how he got it out of the office. I asked him, and he said, "I got it out of the office."

3950. *President.*] You are very positive that he told you that he instructed Ferrier, or rigged Ferrier's bells for him? He did not tell me that. He said that Ferrier was at the game too.

3951. In your previous evidence did you not say that Musgrave told you that he had rigged Ferrier's bells for him? If I said that it is correct.

3952. Why do you say now, "If I said that it is correct?" Because I suppose I must have remembered it at the time.

- Driver
J. Graham.
4 Sept., 1888.
3953. Do you remember it now? It is correct. I do not think he mentioned Ferrier exactly, but he told me he had shown others how to rig the bells.
3954. First of all you said, "He never actually told me of others, but I was led to believe from his talk that there were more in it?" Yes; that is so.
3955. Although you said in the early part of your evidence that there was nothing certain given you as to the others; you afterwards said that Musgrave had told you that Fraser had given him £50, or one-half of the first £100 worth of tickets to know how it was done;—do you remember that? Yes; it is a fact. He told me so.
3956. That you swear absolutely? Yes.
3957. What you meant was that Musgrave told you that Fraser gave him £50 worth of tickets to have his bells rigged? That is what I mean.
3958. You have not the slightest doubt about it? I swear that he told me that.
3959. In your previous evidence you also swore distinctly that Musgrave informed you that he gave information as to the manipulation of the registers to Ferrier and Fraser? Yes.
3960. And you still swear positively that he told you so? Yes.
3961. Your evidence is of the highest importance; and it is not satisfactory to hear you say, "If I said so before it is correct?" I do not think I could recollect all that I have said, and I thought you were referring to the first time Musgrave came to me.
3962. Surely you would remember whether Musgrave had told you about Ferrier and Fraser, or whether he had not? I am positive that he did.
3963. But just now you were not. You said, "If I said so the other day it is correct?" I thought you meant at the beginning of the affair. I thought you meant did he tell me about Ferrier and Fraser then.
3964. Have you had any conversation with Musgrave during the last few days? No.
3965. You swear that? I have seen him; but I have not spoken to him.
3966. Did he not try to speak to you? No.
3967. Is he friendly with you now? I do not know. He looked at me. Fraser spoke to me just now in the corridor.
3968. Did Musgrave have any conversation with you after he had given evidence before Mr. Vernon? I don't recollect speaking to him about it.
3969. Did he not say to you, "I have spun a bloody fairy yarn to Mr. Vernon. Mind you say it only happened two months ago?" He did not say that about Mr. Vernon. That was after he had been before Mr. Roberts.
3970. Was that the expression he made use of? Yes; he said he had stuck a fairy tale into Mr. Roberts, and he asked me to say, if I was called upon, that it only happened two months ago; also to say that I spoke from hearsay, and not to say that he told me. He asked me to say that it came from general conversation with other men. He said he did not want me to mention his name in the matter, or something to that effect.
3971. I suppose Musgrave knows the nature of the evidence you have given? If he recollects what he told me he must have a pretty fair idea.
3972. Did your mate, Reid, see Musgrave when he came on to the motor to show you that his register had not moved? My mate told me that he could not swear that it was Musgrave who asked for the wire.
3973. But when he came on after collecting the fares? I could not say whether my mate saw him when he came on then or not.
3974. Is there anyone else who to your knowledge has seen Musgrave with this pin in at any other time? Not to my knowledge, because no one knew positively how it was done.
3975. You do not think he ever showed anyone how it was done. We understand you to say that Musgrave, according to his own statement to you, never showed Ferrier or Fraser how the thing was done, but that he himself did it for them or got it done for them? Yes, that is correct.
3976. There is another important point on which you are utterly contradicted by Musgrave. He was very positive indeed on this point, and said that it must have been a pure fabrication; that is, a conversation which he told you had taken place between him and Murray at the ticket-office. You remember you told us that when he was giving in his register one day he forgot to take out the pin, and that his expression to you was that he was nearly fainting when he discovered that he had made this mistake, and that when Murray asked him on what line he was he was unable to answer? I swear that he told me that.
3977. You say he also told you that he got his register back with the wire in without anyone having noticed it? Yes, that is correct.
3978. There is one point on which you were evidently in error. You told us when you were last here that you were quite certain that Musgrave was on a race tram on the forenoon of the day on which Hendy was taken off, and that Mr. Roberts himself went down to the yard and withdrew him from the run. You were very positive about that; but we have absolute facts from the books and other sources to show that on that day Musgrave did not come on until 2 o'clock, and it is absolutely sworn to us that he did not go out on a race-tram until after 5 minutes past 3 in the afternoon? I know that I saw him, because I was speaking to him.
3979. At what time? In the morning before the races commenced—before the rush commenced to go to the races.
3980. Not on a race-tram? Certainly not.
3981. Where was he? On another tram. I met him in Elizabeth-street.
3982. On duty? He was on the car—whether he was on duty or not I do not know. It was between Market-street and Park-street. I was going out.
3983. Was it after that you saw him with the broom, in the yard, as if he were car-cleaning? Yes.
3984. Can you fix the exact hour when he winked and said that there was something on the board? I could perhaps, if I knew the date. I am sure he was in the yard before 2.
3985. How long before? Some time before.
3986. Before 1? Yes; if I am not doing double shift duty I get relieved before 1 o'clock. I don't know whether I did do double shift duty on that day.
3987. Your main point in this was that he was taken off the race-cars and put car-cleaning, whereas, as a matter of fact, he took a race-tram out at half-past 3 or 4? I saw him on a car when I was going out, and when I came back again he was in the yard with a broom.
- 3988.

3988. It would be between 2 and 3 when you saw him car-cleaning? Before that.
3989. He says he thinks he was put on to take Hendy's place? Very likely. He would be in the yard, and there would be no other spare conductor there. Someone would have to go out with the tram.
3990. There is an exceptional entry in one of the books as to the hour at which Hendy's suspension took place, and it is clear, from this entry, that Musgrave had his trip out to the racecourse after 3'5. It is also certain, from the books, that Musgrave did not come in until 2 o'clock that day, and that if he did he did not get paid for it? I am positive that I saw him in the yard before 1 o'clock.
3991. You went off at 1 that day? I am not sure.
3992. If you are not sure of that you are not sure as to when you saw Musgrave? No.
3993. All you know is that you saw him before you went off? Yes.
3994. Could you have been referring in your own mind to some other race-day—could you have mixed up some other race-day with the race-day on which Hendy was caught? It is possible, but I hardly think so.
3995. Could it have been the Thursday in the same week? I don't think so.
3996. Will you look this up further in your book and let us know? Yes.
3997. *Mr. Brock.*] At what hour was Hendy suspended do you know? I could not say.
3998. *Mr. Thompson.*] In addition to Musgrave saying to you, with a wink, that there was something on the board, he said he had got the straight griffin from the office? Yes; something to that effect.
3999. Has anyone asked you what you had to say about them with regard to this matter? Fraser told me that Tom Musgrave was looking for me, because he wanted to know exactly what I had said.
4000. To whom did he suppose you had been speaking? This was after the inquiry before Mr. Vernon. He wanted to know what I had said to Mr. Vernon, but I was not here. I was in Melbourne at the time they were looking for me.
4001. *Mr. Brock.*] Do you know a man named Dominic, the barber? No; my acquaintance outside the tramway men is very slight indeed.
4002. You said more than once in your first evidence that you knew for a long time that Musgrave was systematically robbing the Government? For a long time.
4003. You are sure of that? Yes; from the time he first told me until I gave information.
4004. You have not a shadow of doubt about it in your own mind? No; because he told me so distinctly that they could not catch him. The only fear he had was that they might catch him with tickets in his pocket after he had given in his bell and bag for the day.
4005. *President.*] And the view of the question that this was shown to you by Musgrave as a joke must be scouted as ridiculous, must it not? Yes.
4006. Do you remember telling anyone that Fraser and Musgrave went into a public-house or an oyster-shop with you, and when there showed you their pockets full of tickets? I do not remember being in Fraser and Musgrave's company.
4007. Do you recollect when Moran got into a Waterloo tram with a pair of bells, and asked you how it was done. You said you did not know, and that it was worked inside. Do you recollect saying that you knew it was done, because Fraser and Musgrave went into an oyster-shop or public-house with you, that they were 'tonicked,' and that they showed you pockets full of tickets? I do not remember saying so.
4008. Do you recollect speaking of Musgrave having his pocket full of tickets in any place? No; I do know that he has done it, because I have seen him with them, but I do not recollect any particular place.
4009. Can you swear that you did not tell Moran that? No; I cannot swear it.
4010. But you do not remember it? I do not; I do not remember being in the company of Musgrave and Fraser together.
4011. You have frequently seen tickets in Musgrave's pockets? Yes; I will give you an instance: He came out late one night; I think it was the last trip to Leichhardt; it was on a Saturday night; he had made a fine old punch that night; he would not come down the Newtown Road; he got off at Leichhardt and ran across Johnson's paddock; he showed me his tickets; he had more than one pocket full of tickets; he showed me the bulk of them.
4012. Do you recollect saying that the thing was blown, and that when he had his pocket full of tickets again, you would tell Moran how to catch him? Yes; something to that effect.
4013. You referred to Musgrave and Fraser? Yes.
4014. Have you ever seen Fraser with tickets? No.
4015. How came you to refer to Fraser? I might not have referred directly to him; I might have mentioned his name, but I know that I mentioned Musgrave's.
4016. Why did you mention Fraser? I knew he was doing it, because Musgrave told me, but I never actually saw Fraser with tickets; I could put my hand on him at any time when he had tickets on him, because I knew—I mean Musgrave.
4017. *Mr. Thompson.*] Did you ever watch to see if Fraser or Ferrier did it? It never cost me a thought; it was only from the hints that Musgrave gave me that I knew that others were doing it. They were completely in the dark about my knowing it.
4018. I should have thought you would have done it from natural curiosity? I took it for granted; Musgrave told me that much about it that I thought they must be doing it.
4019. *President.*] Are you not still very good friends with Fraser? I have been all along up till this morning.
4020. Although you knew that he was robbing the Government? Yes.
4021. You have met him several times since this inquiry has been going on? Not several times.
4022. How often? Once. Last Tuesday.
4023. Have you not told Fraser that you would shield him? No, I never said so.
4024. What did you tell him? Well I did not tell him that, because he did not know that I knew anything about it.
4025. Do you mean to say that in your frequent conversations in Crown-street and elsewhere you have not got on to the subject of the frauds and his dismissal? I have not said anything to that effect.
4026. What do you mean? I have not promised to say nothing which would implicate him.
4027. But since he felt his dismissal so keenly surely he must have spoken to you about the matter? Not about his dismissal. He told me he did not care a damn about that, or something to that effect. I think he told me that if Musgrave got bowled out properly he would tell everything about it.
- That

Driver
J. Graham:
4 Sept., 1888.

- Driver
J. Graham.
4 Sept., 1888.
- That is what he told me at Botany one day. I think he said that Musgrave would tell all that he knew if he were bowled out.
4023. Have you not said that you were sorry for Fraser because Musgrave had dragged him into it? I have said that I was sorry for this reason, that he had a wife and children to look after.
4029. You believe that Musgrave had drawn him into it? I believe he did and I said so.
4030. You still believe it? Yes.
4031. I suppose Fraser is pretty comfortably off, is he not? I could not say.
4032. *Mr. Brock.*] Do you know where his shop is? No; I heard he kept a shop near Crown-street somewhere.
4033. *Mr. Thompson.*] You remember distinctly that Musgrave said this to you: "If they say anything to you about the time, say that it happened two months ago"? Yes; that was after he went to Mr. Roberts.
4034. Can you, by anything you can remember with regard to the holidays, tell us how soon after the holidays it was that he first showed you this thing. You remember that at the Centennial time there was the unveiling of the Queen's statue, the laying of the foundation-stone of the Houses of Parliament, and the exhibition of fireworks on the water; you remember all that? Yes.
4035. Remembering that holiday-time, can you tell us how soon after that, or whether it was before that, that Musgrave showed you how to work this thing? I think it was after that.
4036. If so how soon after;—can you give us any idea? I could not say exactly, but I think it was after January, about the Centennial time. I could not swear that it was not before it.
4037. Your own opinion is that it was shortly after? Yes.
4038. At holiday-time he would make a punch? Well he would never be on a car unless it was loaded, because he was a special conductor.
4039. You did not quite finish telling us about the time he made that punch going out to Leichhardt. What made you think that he had made a punch that day? I saw his pockets. He generally wore a light overcoat over his uniform.
4040. *President.*] I suppose there is no doubt whatever in your own mind that both Fraser and Ferrier have been doing this thing? I have not the slightest doubt about it.
4041. Do you mean to say that you entirely took Musgrave's statement for it? Yes, I did. What was the use of his telling me a lie about the thing? Why should he tell me that Fraser was doing it merely for the sake of saying so?
4042. You have no knowledge of Fraser's and Ferrier's complicity beyond Musgrave's statement? Nothing beyond. He was always asking me if I knew of anybody doing anything in that line.

Frank Coll called in, sworn, and examined:—

- F. Coll.
4 Sept., 1888.
4043. *President.*] What is your occupation or business? I am a watchmaker.
4044. At what residence? I am working at Bathurst-street.
4045. At what establishment? At Mr. Hellyer's.
4046. You have been in business for yourself have you not? Yes.
4047. Will you let us know when you were last in business for yourself, and where? Do you mean in my own trade?
4048. In any business for yourself? About three months ago.
4049. Where was it? In Campbell-street.
4050. That is at the Haymarket? Yes.
4051. Do you know certain premises in Elizabeth-street where tram-tickets have been sold? Yes.
4052. How did you come to take out a license for it? Well I took the place; I gave up my place in Campbell-street to take it.
4053. But you never did take it did you? Yes.
4054. You never were there yourself? Yes, I used to be there at night-time and on Sundays.
4055. What arrangement did you make for the management of the business during the day? I had a girl in the shop.
4056. Margaret Riley? No; another girl.
4057. Who then? I do not know what her name was. Several girls have been in the shop.
4058. Was not Margaret Riley there? Not when I was connected with it myself, but since then. As it stands now it is my business.
4059. I don't quite understand. Is it still your business then? It is and it is not.
4060. Who is working it now? Margaret Riley. Let me explain and then you will understand: I cannot be sure whether it was in June or in July that I came to an arrangement with Margaret Riley that she was to pay me £50 for the business. She paid me £30 down and she was to pay the other during September. I then gave over the business entirely to her.
4061. Don't you know Cook in the matter? No.
4062. Has he nothing to do with the business? Nothing.
4063. You do know Cook very well don't you? Yes, I do.
4064. You have been connected with him in business? There are several Cooks.
4065. Charles Cook I mean? I never had anything to do with him.
4066. What about Henry Cook? Yes, I know him.
4067. Do you know George? No.
4068. You know that Charles Cook is connected with that business apparently managed by Margaret Riley don't you? I don't believe he is connected with it. I don't believe he has anything to do with it either as regards the profits or the management.
4069. *Mr. Thompson.*] Don't you know that Margaret Riley is a step-daughter of Cook's, and was living with him for a long while? I believe she is a relation.
4070. When you first took this place did you not take it in connection with Henry Cook? No, I took the place in my own name.
4071. But was it not in conjunction with Henry Cook? He was to have had something to do with it, but we had a disagreement, and that is why I got out of it.

F Coll,
4 Sept., 1888.

4072. *Mr. Brock.*] He had an interest in it at one time? Yes; I intended to go into the business and work it myself, but in consequence of some disagreement we had I got out of it.
4073. Have you signed orders for tram-tickets required for carrying on that part of the business? Yes.
4074. *President.*] And you continued to do it after you gave it up? Well I signed for Margaret Riley to get the tickets.
4075. Do you mean to say that you signed once and for all for her to get them, or upon every occasion when they were required? I used to sign five or six forms at a time.
4076. The license being always in your name? Yes.
4077. And it is cancelled now? I do not know whether it is cancelled or not; they refused to sell any more tickets; she wanted the license transferred as soon as she went in, but I would not have it done until she settled with me.
4078. You know the mechanism of tramway registers do you not? I never saw one; that is, I never saw the inside.
4079. We are given to understand that you had one to repair once? You must be mistaken, I think.
4080. You are quite certain that you never repaired a broken bell register for any conductor? Positive.
4081. And you never took one to pieces? Never in my life; I have never had one in my hand; I have only seen them in the hands of the conductors.
4082. You have heard a good deal about these frauds, I suppose? Yes.
4083. Are you able to give us any information? No, I cannot; I do not know more than what I have heard casually, and what I have read; what I have heard has merely been a repetition of what has been in the papers.
4084. You have no knowledge of any conductors selling these tickets? No.
4085. You do not know any conductors? No.
4086. *Mr. Brock.*] Don't you know a conductor named Musgrave? I do not know the names of any conductors, not that I know of. I may know them by sight, and they may know me by sight, but I do not know their names.
4087. Do you know Wigg and Moran, two tramway officers? No.
4088. *President.*] Have you not seen them in reference to your license, and as to the way the tickets were being got for you? Yes; now I think of it I have.
4089. Don't you remember telling them, about a month ago, that you had not signed a requisition for the past two months, and that you had given Cook permission to sign your name? I do not remember exactly.
4090. *Mr. Thompson.*] Do you remember what you did say? I don't think I said much at all; they did not say who they were; they did not say that they were upon the tramways, and I said to myself, "Who can they be?"
4091. *President.*] Don't you remember Moran saying to you, "If anyone has signed your name for you it is a forgery, then, is it not," to which you replied, "No, I have given Cook permission to sign my name?" I don't think so.
4092. Is it a fact that that is how the matter stood? No.
4093. You have not signed for several months? When they came to me I had signed some forms for Miss Riley a few days before.
4094. Will you sign your name to this paper? Yes.
4095. This is your signature to the requisitions you have sent in? Yes.
4096. Don't you remember Moran putting it to you about the forgery? Yes; I do remember something about it.
4097. And did you not reply that it was an arrangement between you and Cook, and that you had allowed him to do it? No, I have not given him that power.
4098. Then if we find that any tickets have been obtained upon any signature other than that which you have given us we shall know that it is a forgery. Is not that so? Well my signature might, perhaps, be a little different from that which I have given you.
4099. But suppose we found that it was absolutely in a different handwriting we should know that it was a forgery? Yes.
4100. *Mr. Thompson.*] You never signed yourself "Frank;" in full? Not on these forms.
4101. What do you sign Frank in full to. Have you two different signatures? I sometimes sign my name in different ways, but I signed it in the way I have given you to these forms in order that it might be more legible.
4102. Then your ordinary business signature is different from that? Yes.
4103. *President.*] Will you give us your business signature? Yes.
4104. I observe that there is an additional initial in your business signature? Yes, "A."
4105. *Mr. Brock.*] Why did you not sign "F. A. Coll" when you were signing for the tram-tickets? Sometimes I do not put the "A." in my signature.
4106. You have a lot of signatures then? I have no fixed style of signing my name.
4107. How old are you? Twenty-four.
4108. Are you a married man? No.
4109. *President.*] Do you remember what caused Moran to speak to you about the forgery. When it came to be a question of ascertaining whose signature had been sent in for the tram-tickets did you not say to Moran, "I have not been near the shop for some time," and did not Moran say, "Well then, if this requisition has been signed with your name it must be a forgery." Is not that the way he put it? I remember something about it, but I would not be quite positive.
4110. At the time he went to you you had not been near the shop for some time—you had given it up altogether? I had very likely been at the shop that morning or on the previous night.
4111. Will you swear that you did not tell Moran that you had not been there for months, and if you did tell him that why did you tell him an untruth? Well these men came to me and asked me all sorts of questions. I did not know who they were and I left them to think pretty well as they liked, and to have their own way.
4112. *Mr. Thompson.*] Then you admit that you may have led them to believe an absolute untruth with regard to your being in that shop? Yes.
4113. *President.*] Did you not say distinctly that you had allowed Cook to write your name for you? I had not allowed him.

- F. Coll.
4 Sept., 1888.
4114. Positively you had not? I had not.
4115. You never authorized him to sign your name? No.
4116. Do you remember the day Wigg and Moran were with you? Yes.
4117. Do you remember telling Cook the next day that two tramway detectives had been with you making some statement about a forgery? I may have told him. I daresay I did tell him.
4118. Therefore you knew these two men after all? Well, I guessed who they were.
4119. We understood just now that you bluffed them because you did not know who they were? I never saw them in my life before to my knowledge. I did not know that they were tramway detectives.
4120. Did you hear it afterwards then? I went round to the shop that night. Miss Riley said something about some one having been there and I said then that I thought it must have been the two men I had seen.
4121. Who did they say they were? They did not say anything to my remembrance. They asked about the license and about the shop in Elizabeth-street.
4122. Was it Miss Riley who said that they were detectives? She did not say they were but I at once thought it for myself.
4123. That was after her telling you that two men had been to her making inquiries? Yes.
4124. Did I not understand you to say in commencing your evidence that you did not know Charles Cook? No; I did not say that; I said I had not been in business with him.
4125. Is it not a fact that you know him very well indeed? No, I am not intimate with him.
4126. Will you deny, that on the evening to which I have been referring, you were closeted with him for two whole hours? That evening?
4127. The evening on which you saw Miss Riley? Certainly I do.
4128. Do you mean that seriously? I deny that I was ever closeted with him for two hours in my life.
4129. Was it on the night after you had spoken to Miss Riley that you had this long interview with him? I could not say; I think I saw him the same night at the theatre. I have an idea that I did. I know that I did not see him at the shop. I met him out somewhere.
4130. You went to the shop that evening and you met Cook did you not? No.
4131. You had a long walk down by Farmer's and so on. You had a long slow walk talking until you got back to the shop; you then went in with him, and you were there with him for another hour? Decidedly not. I do not remember walking out with him.
4132. *Mr. Thompson.*] How did you come to meet him at the theatre? By accident. He happened to go to the same theatre that I went to.
4133. And, notwithstanding all this; do you mean to tell us that you had no business transactions with Charles Cook? I had no business transactions with him.
4134. Although all this signing of the name was going on you never had any connection with him in business? No.
4135. Did he ever show you a bag with a lot of tram-tickets in it? No; he did not.
4136. Did he never tell you that he was doing a good deal of business in connection with used tram-tickets? No; he did not.
4137. You are quite certain about that? Quite.
4138. Then there must be a terrible lot of liars about? I am not so intimate with him as to permit of his telling me anything like that.
4139. You would be surprised to hear what people say of your intimacy with Cook. At how many other places have you been in business besides the shop in Campbell-street and the shop in Elizabeth-street? I had a place in Abercrombie-street at one time.
4140. And where else? I was once at Glebe Point.
4141. How far away from that shop at Glebe Point did one of the Cooks have a shop? When I first went there one of the Cooks was next door to me.
4142. Which one was that? Henry Cook.
4143. From being next door to one another at Glebe Point you turned up together in partnership at Elizabeth-street? Yes.
4144. You must have begun business pretty early in life? Well, I don't know.
4145. Where did you serve your apprenticeship? Where I am working now—at Hellyer's.
4146. Is it not a fact that you have been knocking about in various places since you left Hellyer's during the past three years? I can tell you where I have been. When I left Hellyer's I went to a man named Elbert in George-street. I was with him eighteen months, or it may have been a little more. When I left there I took a shop at Glebe Point.
4147. That was the first flutter on your own account? Yes; after that I went to Melbourne.
4148. And you were there about the time of the big jewel robbery, for which Cook was pulled up? I could not say; I have been back from Melbourne about thirteen months; I was over there five months.
4149. Did you ever hear anything of this jewel robbery? Yes, I heard of it. That was before I ever knew the Cooks.
4150. When you came back what did you do? I opened a shop in Abercrombie-street.
4151. From Abercrombie-street you went to Campbell-street, and from Campbell-street to Elizabeth-street? Yes.
4152. How long is it since you saw Dominic Lacerda? I see him when I go to work in the morning; I pass him at the door, and I say "Good morning."
4153. Do you mean the old Dominic or the young Dominic? The old Dominic is the only one I know.
4154. Where do you live now? At Redfern.
4155. And the old man lives near you? He used to have a shop next to mine. He has a shop next to where I used to have one. I don't know where he lives.
4156. How long is it since you and Cook were at Dominic's together? I was never there with Cook.
4157. How long is it since you and Cook were at Dominic's place together? At his shop?
4158. Yes? I cannot remember ever being there with Cook.
4159. Will you swear that you have not been? Let me see. When I had a shop next door I think Cook came to see me once, if that is what you mean. He may have seen Dominic at the same time. That is the only time I remember being at his place with Cook.
4160. And where is that shop—in Liverpool-street or in Campbell-street? In Abercrombie-street.

4161. *President.*] Did you ever go to races with Cook? I was never on a racecourse but once in my life.
4162. And that was with Cook? No.
4163. You were a great friend of Mr. Thomas Walker's once upon a time? Yes, I was on fairly good terms with him.
4164. You used to recite at his seances;—did you not? I used to get paid for reciting at his lectures.
4165. You know that the people at the oyster-shop were in the habit of selling second-hand tickets? At what shop?
4166. In Elizabeth-street? Never to my knowledge did they sell any tickets.
4167. Do you know Pietro Gaspardo? No, I never heard of him.
4168. How long is it since you first took this shop? It was in April, I fancy.
4169. About five months ago? Yes.
4170. *Mr. Thompson.*] What did you and Henry Cook fall out about in connection with that business matter? Well there was an arrangement about fittings. He was to fit the place up, and he did not do what I wanted done, and I said, "I will get out of this as soon as ever I can."
4171. How did you first become acquainted with the Cooks? I do not know exactly.
4172. You do not know? I think I met him one morning about three or four years ago at the Gaiety Theatre.
4173. How do you reconcile that with your evidence that you did not know Cook till you came back from Melbourne thirteen months ago? If that is put down it is a mistake. I have known Cook to speak to for three or four years.
4174. Did you know a Cook in Melbourne, at Emerald Hill? No, I did not know any Cook at all at Melbourne.
4175. *Mr. Brock.*] Did you ever hear that the proprietor of that shop in Elizabeth-street was suspected of selling second-hand tram-tickets? No.
4176. *President.*] Your shop is not an oyster-shop? No, mine is a fruit and confectionery shop.
4177. Have you ever heard it reported that the proprietor of the oyster-shop at the corner of Liverpool and Elizabeth streets was buying tickets from conductors? No.
4178. Have you been there at all? I have been in there to have oysters.
4179. Have you never met Cook there? No, I went in there last Saturday night with several friends.
4180. Do you know a man named Ballard, a watchmaker, living at Waterloo? No, I do not know him. I don't know him by that name; I might know him by sight. A great number come into the shop where I work. I don't remember hearing of the name.
4181. This Ballard has a shop near Siddons' at Waterloo. Do you know Siddons at Waterloo? I am not well acquainted with Waterloo.
4182. But you live there? No, more over towards Darlington; I live at Shepherd-street, Golden Grove.
4183. You do not know Siddons? No, not at all.

John Connors called in, sworn, and examined:—

4184. *President.*] You are a conductor in the tramway service? Yes.
4185. How many years have you been so employed? About four years this month, on and off.
4186. Are you on any particular line? No.
4187. You are what they call an extra conductor? An assistant conductor.
4188. We have sent for you to give us all the information in your power in connection with these tramway-ticket frauds? Yes.
4189. We believe that you have some information you can give us, and we will ask you to give it as fully and clearly as possible. You know a man who was a conductor some time ago—a man named Ferrier? Yes.
4190. Were you intimate with Ferrier? I was always an enemy of his.
4191. You have had some conversation with him, have you not, on the subject of the disposal of tickets, and so forth? No conversation.
4192. What happened? I left Bridge-street one afternoon at 2 o'clock to go to Botany, and as we turned the corner of Devonshire-street into Castlereagh-street Ferrier and another man got on to the car.
4193. Who was the other man? I do not know. I should know him if I saw him.
4194. Was he a conductor? No. I came down the stairs and asked Ferrier where he was living. He told me at Cleveland-street. We had got to Cleveland-street by that time, and he got off.
4195. What made you ask Ferrier where he lived? I had not seen him up that way before, and I knew that he lived somewhere off Oxford-street.
4196. Were you enemies at that time? Yes.
4197. What do you mean by enemies? He was always up to some tricks in the room; and when the men would go to sign on or off duty he would put a pin in them, or pinch them, or something of that sort. On two different occasions he did this to me and I hit him. I knew that he was a notorious liar. I never cared about being with him at any time.
4198. You asked him where he lived;—what did he say when he got off the tram at Cleveland-street? When he got off he said to me, "Can you give me a couple of pounds worth of tickets?" I said, "If you want a couple of pounds worth of tickets you had better go to some ticket-office and get them." He then walked up Cleveland-street, towards Elizabeth-street. I saw Ferrier in the same way about a fortnight afterwards. I did not notice him getting on to the tram on that occasion. I do not know where he got on. The same man was with him. The man who was with Ferrier gave me 6d, and at the same time that he did he gave a bit of a cough. They dropped off as we were going along between Elizabeth and Queen Streets, Paddington.
4199. Did he pay for Ferrier then? Yes.
4200. Was not Ferrier a conductor at that time? No; that was all that ever passed between Ferrier and myself, and that is all I know about him.
4201. These are the only occasions on which you saw Ferrier? Yes.

F. Coll.
4 Sept., 1888.

Conductor
J. Connors.
4 Sept., 1888.

4202.

- Conductor
J. Connors.
4 Sept., 1888.
4202. *Mr. Brock.*] What is the man like who was with Ferrier? He was a man of similar build to Ferrier, only he was dark. He had a little bit of black side-whisker, and a black moustache.
4203. Had you ever seen him before? No.
4204. Have you ever seen him since? No.
4205. You have no idea who he was? Not the slightest. I think it was this which led to its being said that I was in mysterious company with Ferrier and Cook.
4206. You heard it said that you had been spoken about as constantly keeping mysterious company with Ferrier and Cook? Yes.
4207. Did it make you indignant when you read that in the papers? Yes. Cook I have never seen in my life to my knowledge.
4208. *President.*] Have you never had anything against you before that you should have been so indignant about this matter? Not that I know of.
4209. Is it not a fact that you have been charged with being drunk on your car? Yes, I was.
4210. And you were let off? Yes.
4211. Is it not a fact that you frequented racecourses and gambling places, and kept your wife without money? I never did.
4212. You swear that? I swear that I never frequented racecourses or gambling saloons.
4213. If your wife said that she said that which was not true? She did.
4214. How long have you been married? Four years last July.
4215. Are you aware that your wife has complained of your treatment of her? She may have done.
4216. Without any cause whatever? Yes.
4217. Don't you remember an occasion when you were sent for by Mr. Roberts? Yes; he sent for me and asked me if it was a fact.
4218. And you denied at the time that you were in the habit of getting drunk, and squandering your money in gambling? Yes, I did.
4219. You denied that you were in the habit of getting drunk when you were not on duty? Yes.
4220. I cannot understand a man being indignant at seeing his name in the papers in this way when he has such records as these against him? There is no truth in what the wife has stated there, no truth at all.
4221. *Mr. Brock.*] Are you living with her now? Yes.
4222. *Mr. Thompson.*] Is it not a fact that she was obliged to live away from you for some time? It is.
4223. Why? I was living in the house with her people. They were always going on at me, constantly nagging. Her mother told me that the best thing I could do was to live with my people, and let my wife live with her. I went away, and allowed her a pound a week. While I was allowing her this I discovered that she was working in a private bar. The house was kept by a man named Lysaght; I waited there one night till the house was shut up; I saw her get into a cab with two other barmaids and three men. There was a man to each woman. They drove away down to the Circular Quay, and went together to a house at North Shore; I then refused to support her. She summoned me, and there was a verdict with consent, allowing her 15s. a week.
4224. But you are now on good terms with her? Yes; I am now.
4225. You have been steadier lately? Yes; since I found that she had turned over a new leaf as I thought.
4226. It was this disturbance that led you to drink? I do not mean to say that I was ever a drunkard.
4227. Is it not abominable that you should get drunk on your tram, in charge of public property and public life? I was accused of being drunk, and I denied it at the time.
4228. Were you not taken off your tram and another man put in your place? Yes.
4229. What is your age? Twenty-eight.
4230. When had you first any inkling whatever of these tram frauds? I first heard of it when I was in the conductors' room on a Thursday or Friday night.
4231. How long ago? Only a few weeks ago.
4232. Do you mean to tell me that you never heard anything about it before. It all appeared in the papers? Yes.
4233. It appeared in the papers six weeks ago? I heard about it then. I heard it just before the deputation waited on the Minister. There were five or six men in the room talking about it. That was the first I heard of it.
4234. Who were the men? I could not say. Foreman Halliday was one of the men in the room. I told them all that Ferrier got on to my car on one or two occasions and I told them what he had said.
4235. Don't you know Conductor Musgrave? Yes.
4236. Have you had no conversation with him about this matter? Never.
4237. *President.*] And what you have told us is absolutely all that you know? Yes.
4238. We can understand that a young man who was so indignant at the mention of his name in the newspapers in connection with this thing, would be most desirous of giving us the fullest information in his power so that his name might be thoroughly cleared? Certainly.
4239. *Mr. Thompson.*] Were you one of the men who attended the meeting at which the deputation was appointed? I believe I was. There were two meetings; I was at one but I do not know at which.
4240. *Mr. Brock.*] Were you one of the deputation? No.
4241. *President.*] Do you remember who formed the deputation? M'Mahon, Peters, Morgan, Jessop, and I think George Fraser was one.
4242. *Mr. Thompson.*] When you were at this meeting do you mean to say that a great deal more did not come out as between the men than what you have told us of. You met together and you were very indignant—naturally so provided you were all honest—that this kind of thing should be said about the tram conductors generally. You took the matter up to get the thing righted, and the outcome was the appointment of this Commission. Yet not one of you men who moved in the matter have given us one atom of information that would lead to anything definite; you yourself have told us nothing except this little thing about Ferrier? I said nothing at all at the meeting I sat there and listened to the others.
4243. Did they not mention the names of the men who they had reason to suspect were acting dishonestly? I never heard them.
4244. Do you mean to say that talking among yourselves before this noise occurred you never heard of the men who were making money out of the tickets and who were buying houses and land? I have often heard

heard of the joke when men have been running out to the racecourse they may have said, "How much have you made to-day?" That used to be a regular by-word and it was always put down as a joke.

4245. *Mr. Brock.*] Were you ever out there on the same tram as Musgrave? Yes.

4246. How long ago? I could not exactly say how long it was. Something like a month before he got discharged.

4247. Do you mean to say that you never had any conversation with him about faking the bells? No never.

4248. Did he never tell you that he was making a good thing out of it? No.

4249. He never referred to it in any way? Never to me.

4250. And you never knew that it could be done? No I did not.

4251. *President.*] You know driver Hadwell? Yes.

4252. Don't you remember some months ago at the Leichhardt terminus showing Hadwell and Simpson the way in which the bells could be worked by inserting a pin, and telling them how it was said that this game was being carried on? No, never.

4253. Do you swear that? Yes.

4254. Do you remember having any conversation with driver Hadwell on the subject? Yes.

4255. What passed? Well it was not before this thing was spoken of.

4256. Where did the conversation take place? It was not with Hadwell alone; there were five or six others.

4257. That is not the conversation I want you to try and remember; the one I refer to was with Hadwell and Simpson at Leichhardt? I never had it.

4258. Did you never run there with them? Yes.

4259. And you never had any conversation of this kind? Never.

4260. *Mr. Brock.*] Do you know Archibald Fraser? Yes.

4261. Have you had any conversation with him about it? No.

4262. *Mr. Thompson.*] Who are the men among those you know who used to be most conspicuous on the racecourse betting and gambling? I never was at the racecourse further than running out there with the trams.

4263. Did you not go to the Rosehill Races once? It was when ten or eleven of us were discharged. That was when I was up there.

4264. Were you there on the 1st July, 1886? Yes, I think so.

4265. *President.*] Listen to this: "He came to me at 1 p.m. in a drunken state only a short time before he was going on duty, and on the following Saturday he went to the Rosehill Races. If he was on a different run he would not have so much spare time." That is a statement by Mrs. Connors? That is not true. I have been out there only once and that was when we were discharged.

4266. You never have been to any racecourse except when on duty? No, with that exception.

4267. *Mr. Thompson.*] You distinctly deny showing Hadwell at any time the way in which the bells were faked? Yes.

4268. *Mr. Brock.*] Do you know yourself how to rig the bells? No.

4269. Did you ever hear it said that it could be done by inserting a pin in the slot at the bottom? I heard it said one night when Hadwell and Simpson were talking; it was on a Saturday night after the thing had appeared in the papers and they were talking about it.

4270. But you did not hear of it before? No.

4271. And you did not think it was going on? I had not the slightest idea of it.

4272. You did not even suspect Ferrier? No, I did not. When Hadwell was talking he said he believed there were two men who used to put pins in their bells, and collect a couple of car-loads of tickets without any of the fares being registered. That was all that ever passed. That was the only conversation between myself and Hadwell.

4273. *President.*] Don't you remember telling Hadwell at Leichhardt that it was a great shame that these men could not be caught at it. That is a remark I made in the yards. It was not at Leichhardt.

4274. Do you know Cook? Not that I know of. When I was brought down to identify the man who got on to the tram with Ferrier, Cook was brought down to the office with Ferrier, and I said that he was not the man who got on to the tram with him. That is all I know of him. The first I saw of him was on the Friday fixed for the deputation.

4275. You have never seen him on a tram? Not to my knowledge. He may have been on my car at different times, but I should not know him.

4276. You do not know of anyone, with the exception of Ferrier, who got on to your car and made overtures to you about the tickets? Nobody.

4277. If anyone has said that some man was constantly getting on to your car at different places trying to tempt you to defraud the Government that is utterly untrue? It is.

4278. *Mr. Brock.*] Were you not speaking about these frauds some time ago? No. The first time it struck me about the frauds was when they were talking of it in the room. That made me mention the matter about Ferrier in the presence of the others.

4279. Were not your suspicions aroused when Ferrier made overtures to you? I had not the slightest idea then of what he meant, but when I heard them talking about it it struck me that that was what they must mean.

4280. You did not think he did it with any improper motive? No, I did not.

4281. *Mr. Thompson.*] Why did you tell him to go and buy the tram-tickets at a shop? He was always at some sort of trick of this kind, and I said it to put him off.

4282. *Mr. Brock.*] Suppose you had £2 worth of tickets what would he have given you for them? I don't know. He would not have given me 20s. in the pound. They would have been of no use to him at that rate.

4283. You are pretty well convinced now, however, that these frauds were carried on? I suppose I shall have to be convinced now.

Conductor
J. Connors
4 Sept., 1888

James Siddons called in, sworn, and examined:—

J. Siddons.
4 Sept., 1888.

4284. *President.* What business are you in, and where do you reside? At the corner of Botany-road.
4285. And you are in business there as what? I have a general store at the corner and a hairdressing-room along the side.
4286. Do you sell tram-tickets? I have not sold any for five or six months.
4287. Have you ever had a license? Yes.
4288. When did you give up your license? My license was cancelled.
4289. What for? That I do not know.
4290. You have not the slightest idea? No.
4291. Was no reason given to you? No reason at all.
4292. Did you receive any letter from the Department? One informing me that my license was cancelled.
4293. And nothing happened to disclose to you the reason it was cancelled? No.
4294. Had you ever any transactions in tickets with any of the conductors? No.
4295. Do you know a conductor named Greeley? Yes.
4296. Do you mean to say that you have not made overtures to Greeley? No, I have not.
4297. I mean for the purchase of tickets from him? No.
4298. You had better be careful? I have nothing to be careful about that I know of.
4299. I presume you know the object of this inquiry? Yes.
4300. You know that certain frauds have been going on? Yes.
4301. And that this Commission has been appointed to get at the very bottom of them? Yes.
4302. We have sent for you because we believe you have it in your power to give us certain information, and we have it in our power to say to you that we are not seeking you in the matter, and that if you will give us information which may lead to the conviction or finding out of those employees of the Government who have been dishonest, no action shall be taken against you, although what you tell us may connect you with those transactions. It is of the highest importance that we should get to know who these dishonest men are? I know no more than what I have mentioned.
4303. What tramway employees have been in the habit of frequenting your shop in uniform? Several. I could not tell you exactly who. I do not know many by name, but I know a good many by sight.
4304. You know Greeley by name well? Yes. I have heard his name since these frauds came up. I cannot say that I knew his name before.
4305. If Greeley has sworn positively before the Commission that on several occasions you made overtures to him for the purchase from him of tram-tickets has he sworn falsely? Yes, he has.
4306. You absolutely swear that no such thing has ever taken place? I do.
4307. You say you had a license? Yes.
4308. For how long? Upwards of two years.
4309. Do you remember on one occasion a little girl coming into your shop to buy some tickets and your refusing to sell them? There have been several hundreds, I dare say.
4310. To whom you have refused to sell tickets? Yes.
4311. Why? Because at the time I had not a license.
4312. Did many people come when you had no license? They came in dozens. I dare say fifty every day.
4313. When you have had a license have you ever refused to sell tickets? I never refused while I had a license.
4314. I presume you will not deny that you have sold from your shop tickets that have been used before? I am certain I have not. Not to my knowledge; of course I have bought tickets of a man named Gain, on the Botany-road.
4315. Who is he? A storekeeper.
4316. And in what shape have you bought them? In £1 worth, or £2 worth, or 10s. worth.
4317. But in what shape? In sheets.
4318. Have you not purchased tickets from any one which have not been in sheets? No.
4319. You must know perfectly well that you have sold tickets in a very dirty condition, and that you have sold them in ones and twos? Of course I have sold them in ones and twos; I don't deny that at all.
4320. The tickets to which I refer were in a very dirty condition. You sold them frequently and to all appearance they had been used before? Not that I am aware of.
4321. Do you deny again that you refused on one or two occasions to sell some tickets to a little girl or a little boy who came into your shop for them? Did I refuse?
4322. I mean while you had a license? I could not answer that question; I may have done so because several times we have been out of tickets.
4323. Will you deny that on one occasion while you had your license a little girl asked you for tickets and you said, "Who sent you?" and you followed that up by saying, "Was it Moran who sent you?" I deny that.
4324. Do you deny it absolutely? Yes.
4325. Do you deny that on another occasion you asked, "Who sent you?" and followed it up by saying, "Was it two men?" Yes I deny that.
4326. And you followed it up by saying that you would not let her have them because you knew that Wigg and Moran had sent her? No, I cannot say that I knew them by those names.
4327. You did not know Wigg or Moran? Not by name.
4328. Who is Moran? The gentleman sitting over there.
4329. Do you know a conductor who is in the habit of leaving his tram and going to your place for a shave? I could not say that I do.
4330. Do you know Ferrier? No, not that I know of.
4331. Or Musgrave? No.
4332. Or Fraser? Not that I know of.
4333. Greeley then was the only man whose name you have ascertained. Can you explain that? It is since these frauds, since there has been so much talking about it.
4334. Have you not had several conversations with Greeley on the subject of tickets? None whatever.
4335. And we are to believe that Greeley has concocted this story entirely? I cannot say what you are to believe; I do not know anything at all about it.
4336. I will put it in another way: Greeley must have concocted it? If he says I had any conversation with him with regard to tickets he must have been telling lies.
- 4337.

J. Siddons.

4 Sept., 1888.

4337. Have you seen Greeley since this inquiry commenced? Yes.
4338. Have you had any conversation on the subject of the frauds? None at all.
4339. You were not in any way curious on the subject? I cannot say that I was.
4340. Greeley did not tell you that he had been obliged to give evidence with respect to these transactions? No.
4341. If any one states that they bought tickets from you in ones and twos, and that they had evidently been used before, is that true? I could not say about ones or twos.
4342. Or that they had evidently been used before? Not to my knowledge.
4343. Is it not a fact that Greeley frequently left his tram, and remained in your shop till the tram returned? I could not say that.
4344. *Mr. Thompson.*] How long is it since you were up for fencing that stuff? Somewhere about twelve months ago. You must understand that there was no evidence at all.
4345. You were one of the unfortunate ones who got blamed for a thing you did not do? I was unfortunate. I have not got over it yet, I can assure you.
4346. What was it? I took two rings from a young fellow who owed me some money, and in time it came out that these rings were stolen. A party came round and asked me if I bought them, and I gave them to him. About a week afterwards they arrested this young chap, and served me with a summons. I reserved my defence, and got committed for trial. Then I was discharged without any evidence at all; that is to say, the jury discharged me on the evidence of the Crown.
4347. And gave you the benefit of the doubt? Yes.
4348. Is there ever any gambling at your shop? No.
4349. No play of any kind? None whatever.
4350. Don't the conductors make it a sort of lounging-place? No; nobody does. I have nobody there.
4351. *Mr. Brock.*] What did you pay for these tickets that you bought at the other shop? The same price that is paid everywhere—a pound for a pound's worth.
4352. But when you buy from the office you get commission? Yes; $1\frac{1}{2}$ per cent. But I do not always happen to have £5 by me, and that is why I have sent out for them. At another time I should have had to leave my shop to come into town, and should possibly have lost 3s. in custom for the sake of making 1s. 6d.
4353. You never sold tickets which had been used then as far as you know? No.
4354. How could you sell them and not know it? Why do you say "not as far as I know" if you had not done it? I don't know.
4355. You do not appear to be quite sure whether you have or have not sold second-hand tickets? I am sure, as far as that goes, that I have bought them from the shop I mentioned.
4356. But you said just now that as far as you know you had not sold any of these second-hand tickets? Well I could not swear to anything I do not know.
4357. And you don't know whether you have sold second-hand tickets, or whether you have not? You might say that this man of whom I bought them had second-hand tickets. How was I to know?
4358. Then it comes to this, that you cannot swear that you have not sold second-hand tickets? I can swear that I have paid the full price for every ticket I have sold.
4359. But how could tickets which you say you bought in sheets have been used before? I could not say.
4360. You swear that you have never bought them otherwise than in sheets? Yes, I swear that.
4361. And yet you are not able to swear that you have not sold second-hand tickets? Of course I can swear that in one way I have paid the full price for every ticket I have sold, and I have bought them in sheets; but how can I say that they have not been used before? Gain can swear that he sold the tickets to me, and I suppose he knows whether they were second-hand or whether they were not. If you call Gain's tickets second-hand tickets I have bought them; if they are not second-hand tickets I have not bought any.
4362. You swear that you never bought tickets except at that shop and at the office? I never have.
4363. You swear that? Yes.
4364. You also swear that you never tried to buy any second-hand tickets? Yes.
4365. Do you persist in swearing that you do not know Musgrave? Yes.
4366. Do you know Fraser? No.
4367. You have never heard of him? Not that I know of.
4368. Do you mean seriously to say that you do not know Fraser? I do not know him.
4369. You do not even know his name? No.
4370. You might hear a dozen names and yet not know them? Yes.
4371. You do not know a man called Fraser, a conductor in the tram service? No.
4372. Do you know a man named Ferrier in the tram service? No.
4373. *President.*] I must press you to let us know the names of these other men who used to go into your shop; we cannot really credit that you do not know some of their names? There is a young fellow living about a quarter of a mile beyond me who used to be driving a van, but I cannot tell you his name. I might be able to tell you if you mentioned it.
4374. Is he a conductor? Yes.
4375. Describe him? He is a young fellow, rather tall. He shaves all round. He has very light whiskers, and he used to come there regularly.
4376. You say he is a tall man? Not particularly.
4377. What line is he on? He has been on the Waterloo line on several occasions.
4378. How long has he been on the trams? I could not say.
4379. How long is it since he was a van-driver? About six or seven years ago.
4380. And you do not know his name? I know his name, if I can think of it.
4381. You knew this man seven years ago, you know all his movements, and yet you swear that you do not know his name? I know it if I can think of it. A man who is asked a question has not always an answer at his fingers' ends.
4382. What color is his moustache? About the color of my own.
4383. What street does he live in? I think he lives on the new estate. He is the owner of a couple of houses over there.
4384. *Mr. Thompson.*] He lives in one of them himself? Yes.

- J. Siddons. 4385. Think of one or two of the other men who have been in the habit of frequenting your place, coming in to get a shave and so forth? I daresay a thousand come into my shop through the year.
- 4 Sept., 1888. 4386. *President.*] But not all conductors in uniforms? Well, it would be very rude of me if I were to ask the name of every customer who comes into my shop.
4387. We should not expect that, but when men in uniform are in the habit of frequenting your shop you get to know their names; you hear them talking to one another. Greeley, for instance, would say, "Halloa, Connors; how are you this morning?" and so on? Well I cannot think of any names at present.
4388. Did you know conductor Morgan? Not that I know of.
4389. With regard to the man you have been speaking of is his name Clements? Yes.
4390. *Mr. Brock.*] How long is it since you have seen him? About a fortnight ago.
4391. Is Greeley a man who gambles? Not that I know of.
4392. Do you know anything of his private life? No.
4393. Where does he live? I could not tell you.
4394. Is it not strange that this man should come in and swear most positively that he has had all these conversations with you and that he has received these overtures from you making up an absolutely perjured yarn in order to get you into a mess? I look at it in this way: If this man has sworn this and knew that he could get me into a mess, why did he not do so?
4395. Have you seen him since he has given his evidence? I do not know when he gave his evidence.
4396. When did you last see him? I rode down in the same tram with him the other day.
4397. Were you speaking to him? No; I just bade him good morning.
4398. Did he appear friendly? Yes.
4399. He always was very friendly was he not? Yes; as far as saying good morning goes.
4400. When you made these overtures he did not refuse them? I never made any.
4401. *Mr. Thompson.*] Do you go to the races? No.
4402. Nor to foot races? No.
4403. And you do not make a book? No.
4404. *President.*] I think you would have adopted a better course had you been a little more communicative? I could not be.
4405. Do you know Powell the barber? Yes.
4406. Is he near you? Yes.
4407. Do you know that a number of tramway employees are in the habit of frequenting his place? I could not say.
4408. Do you know that there is a little playing going on there? I could not swear it.
4409. And you never thought of getting up a counter-attraction to divert the custom? No; I am in the wrong family for that.
4410. What do you mean? We are a little bit too highly respected for anything of that sort.
4411. *Mr. Thompson.*] Pray who do you belong to that you are disposed to brag of your family in this way? Well I have got my name to look after. I was born within a few yards of where I live, and I have been there all my life.
4412. You do not suggest that anything disreputable went on in Powell's shop? Well, you cannot call playing anything else.
4413. You would condemn it? Yes.
4414. Playing a hand of cards for cigars; you would condemn that as being disreputable? Yes.
4415. In short you are the man we should expect to give us all the information you can? I have none that I know of to give you.
4416. You would not allow card-playing in your own house? My wife would not if I did.
4417. *Mr. Brock.*] Did you never play cards? I have done so.
4418. How long since? Four or five years ago.
4419. Do you know a man named Cook? Yes.
4420. Charles Cook? I could not say whether that is his name.
4421. Were you in partnership with him at one time? No.
4422. What was he? The Cook I mean was on the tramways.
4423. We mean the Cook who is a barber and bookmaker? I do not know him.
4424. He lived close to you at one time did he not? Not that I am aware of.
4425. You remember Cook selling off a barber's shop three or four doors from you, opposite Powell's? There was a barber's shop opposite Powell's, but I did not know that that was the name.
4426. *Mr. Thompson.*] If you heard the name would you remember it? I think it was Turner.
4427. Did you never meet Turner or Cook? I should not know them if I did.

Francis Joseph MacMahon called in, sworn, and examined:—

- Conductor 4428. *President.*] You are a tramway conductor? Yes.
- F. J. 4429. How long have you been in the Service? Eight years on the 11th October next.
- MacMahon. 4430. I will tell you what has led us to send for you: You attended a meeting of the employees, and you were elected as one of a deputation to wait upon the honorable the Minister? Yes.
- 4 Sept., 1888. 4431. Were you the chairman of the deputation? Yes; I was also chairman of one of our meetings previous to the deputation. Mr. Schey introduced the deputation.
4432. You held your meeting because you felt that these frauds affected the whole of the Department—that they indirectly affected every man in the employ? Yes.
4433. It is a matter of some little surprise to the Commission that you, as well as others who formed the deputation have not given us a little more assistance than you have done? I have never been asked to do so up to the present time.
4434. But you took a great interest in the whole affair. You waited upon the Minister as chairman of a deputation, asking that a Commission might be appointed, and therefore it seemed to us that you were very highly interested in the matter? So we were.

4435. And therefore we should look to you for some little information. We should expect that you would rather go out of your way to give us some little information; so far you have given us no help at all? I did not think I could call and ask to be present for the purpose of furnishing information; I thought that if any information was required of me I should be sent for.

Conductor
F. J.
MacMahon.

4 Sept., 1888.

4436. *Mr. Thompson.*] Are you in a position to give us any information that will take us one inch beyond what has already become known? I am in the dark as far as that is concerned; I do not know what has already become known.

4437. *President.*] What do you know of the matter. Just let us know what was the first thing you heard in connection with these frauds. Did you hear nothing before the whole thing was disclosed in the press? I did not know anything until I saw it in the papers—that is, in the *Star*. That was the first I heard of it; that was the first intimation I had in reference to these frauds.

4438. That was the first inkling you had that there was any fraud whatever going on? Yes; that was the first inkling or information I had of any fraud taking place. I saw it stated in the paper that frauds were being committed by conductors; mentioning, I think, ten, and going into certain theories as to how it could be done. Of course I thought it was not feasible.

4439. Did not the papers give any names? I thought it was not feasible that such a thing could be done, and knowing the facilities for fraud in every quarter, I thought that if any fraud was committed, it must be done somewhere else, and that in order to cloak the thing over the odium was cast upon the conductors.

4440. Do you mean to say that you had not heard of conversations constantly taking place among conductors and drivers many months ago? What conversations?

4441. Nothing very definite as to fraud, but conversations in which frauds were suggested, or in which the possibility of frauds was suggested; and that sort of thing—as to how it could be done and what they made, and so forth. Why, we understand it has been a standing joke for months and months, if not years, in connection with race-trams for instance? I have often heard the remark used jocularly, but at this stage you must excuse me if I raise an objection. I don't wish to treat the Commission with any discourtesy, but I think that Moran should not be present at this inquiry, he being an officer of the Department. It would prevent men-speaking perhaps as they otherwise would do. There is always a possibility of these things being carried to the heads of Departments, and so a certain amount of intimidation is exercised.

4442. Is there anything you could state in Moran's absence that you cannot state in his presence? I could not say that there was.

4443. If you would rather that he should not be present we will ask him to go out? I would rather that he should be absent than present. You were just speaking to me about things being said in jokes. I remember some time ago, being in the office, I heard the Superintendent of Tramways remark to some men, "How much have you made to-day?" and I thought it was a very nasty remark.

4444. Do you mean Mr. Roberts? Yes. I heard him say it in a jocular way to the men. I did not like the remark at all. I thought it came from him with very bad grace, although it was in joke. Ever since then it has been a joke among the men.

4445. How long ago is that; is it a matter of two years ago? More than that—four or five or six years ago, when the office was in King-street.

4446. Surely it is not so long ago as that? I think it is nearly six years ago since I heard that remark, and I thought it came with very bad grace from Mr. Roberts. That was the outcome of the remark among the men, "How much have you made to-day?"

4447. You don't think that the outcome of this joke among the men was some knowledge of this kind of thing actually going on? I do not think it was.

4448. *Mr. Thompson.*] You think it began with Mr. Roberts then? In some way like that.

4449. *Mr. Brock.*] Don't you think Mr. Roberts may have meant to ask the conductors their opinion of what business had been done; that is, not what they made for themselves, but what they had made for the Service? I do not think it could be applied in that light at all.

4450. Is it not quite possible that a master—a man having a large factory or some business—might say to one or two of the men, "How much have you made to-day?" meaning not for themselves but for him? Yes, I see what you mean, but I do not think it could be applied in that way. If it was meant in that sense anyone with any sense at all would know it.

4451. *President.*] You think if it had been meant in that way you would have known? Yes; because it would have been impossible for a guard to form an estimate in any case of what he has been doing during the day.

4452. *Mr. Brock.*] But any conductor could form some estimate of what he had taken? They could not do so. They simply have their bells, and they ring and ring away.

4453. But they handle all the tickets? Yes, but they could not tell what they had taken in any one day.

4454. You have been in the Service seven years, and you mean to say that you could not tell any one roughly what you had done for the Department on any particular day? No, I could not, unless I took the trouble of counting as I went along.

4455. I do not mean accurately; I mean roughly or approximately. For instance, you might come home and say to your friends, "We have had a good day to-day; we must have made so many thousand or hundred tickets," as the case may be. Don't you think it is likely that anyone knowing that you could give that information would put the question in that way? If it had been asked of me on that day of course I should consider for a few moments and then reply to the question. If it had been put to me in that way it would have been very different but in the way it was put to me; it had a different bearing altogether.

4456. *President.*] The question is are you not able to form a pretty fair estimate of what your takings are during a day? I never took the trouble to estimate one.

4457. *Mr. Brock.*] I expect the Superintendent met you and said, "Have you had a good day to-day, or have you had a bad day?" Don't you think that is the way in which he meant it, meaning, of course, the Department? Such questions are never put to us, and never have been.

4458. But you say that this question was put to you on one occasion only, and that that was over four years ago? I think I heard it put once, and that is all; that is in the way you describe; but in the other sense I have often heard it said. I think I have heard it many times from Mr. Roberts, himself in a jocular way.

4459. When would it be said by him—when the conductors were going in with their returns? It occurred in this way: We were in the office waiting one day; it was one Sunday morning; Mr. Roberts came through, and as he passed he made that remark.

4460.

- Conductor
F. J.
MacMahon.
4 Sept., 1888.
4460. If he said it to you at that period of the day he could not have expected that you would have made much? When I say the morning I mean about dinner-time, say.
4461. What conductors were present on that occasion? I could not recollect.
4462. *President.*] But you recollect the expression? Yes.
4463. It struck you as being singular? Yes, I thought it was not very pleasant.
4464. Was Mr. Roberts on such terms as those with the conductors. Did it not indicate his being on rather more friendly terms with his subordinates than the head of a branch should be? He did not address me personally—he addressed us all. He is very friendly with all of us—too much so, I think.
4465. You mean that he is what is called free? Yes, too much so for a gentleman occupying the position he does.
4466. You would rather he kept you more at a distance? Yes, I think it would be better for all if that were done.
4467. But still you have no reason to suppose that this remark was anything more than a jocular one? No, I have not.
4468. A bit of chaff? Yes.
4469. *Mr. Thompson.*] You appear to think that it was very misplaced? Yes, the reason it made me think so was this: I came from a position which I had held for a number of years. I had been at Kidman's, managing his shop, and I used to have thousands of pounds passing through my hands. When I came into the Tram Department I thought this was a very nasty remark to make, after I had been in such a responsible position before.
4470. But it was not addressed to you particularly? I do not think so. It was addressed to us in a body.
4471. You think that he had meant to ask you what you had made in an unfair and an improper way, not what you had merely made in the exercise of your duties? Yes.
4472. *Mr. Brock.*] That is the construction you put upon it? Yes.
4473. *President.*] Was any answer made to this by any of the men? I could not remember.
4474. Did you resent it yourself? I did not. I was only new in the Department, and I would not be so impertinent as to resent it.
4475. *Mr. Brock:* How many others were there? There were several.
4476. Cannot you remember the names of any of them? I could not, really.
4477. *President.*] And you think that it gave rise to this chaff among the men. You did not think that the chaff was used from a knowledge on the part of some of them that there were black sheep in the flock who were doing that kind of thing? I do not think that was the origin of it.
4478. Have you any reason to suspect any of the conductors of improper practices? No; I have no reasons whatever.
4479. *Mr. Brock.*] What line are you on? Waverley, Woollahra, and Bondi.
4480. You said that you were a manager at Kidman's, and that thousands of pounds passed through your hands;—I suppose you were in receipt of a good salary? About £2 10s. a week.
4481. Did you consider that being a tram-conductor was a better billet than that? Mr. Kidman gave up the shop at the corner of Harris-street and Parramatta-street. It expired when the lease expired, and he did not renew it. I then went up to Bathurst.
4482. Could not Mr. Kidman have put you in somewhere else? Not very well. Then I took a holiday for a while. I was not very well at the time. The reason I came on to the trams was principally to benefit my health, and to get shorter hours. The hours in a grocery business are very long, from 7 in the morning until 8 o'clock at night.
4483. Do you consider that the work of a tram conductor is very healthy? Yes; I have been very healthy since I have been at the work. Outdoor occupation has agreed with me.
4484. The work is a trifle light, I suppose? The running about and the vibration make you extremely tired in the legs, but there is nothing further than that. Before I was ordered to the country Dr. Sparke advised me to leave the grocery business.
4485. *President.*] Beyond what you have told us there is no information which you can give us? None.
4486. *Mr. Brock.*] You never suspected that any of these frauds were going on? No; I had no suspicions.
4487. Although you were on the Waverley line? I had no suspicions whatever.
4488. Did you never hear any rumours at all about it? No, I never heard any rumours.
4489. *Mr. Thompson.*] Did you never hear what driver Graham has been saying to lots of men about as to what he had seen? I never knew anything about it until the frauds were exposed. Then I heard something in reference to it.
4490. *President.*] Is the paragraph which appeared in the *Star* on the Saturday what you are referring to? That is part of it. In the Monday's issue there was an elaborate display. It was said that men were making £10 a week by putting pins in their registers. The paragraph you have was published on the 14th, and the elaborate description was published on the 16th.
4491. Did you never hear of certain conductors being suspected and having their bells taken off them on the trip for examination? No; I never did.
4492. Do you know Musgrave? Yes, well.
4493. Have you been on the same tram with him? On many occasions.
4494. And he never had any conversations with you about this matter? None whatever.
4495. *Mr. Thompson.*] Did it not strike you that the returns of some men were marvellously small as compared with what they ought to be? No.
4496. Were not these returns noticed when the men came into the office? We never knew anything about the returns of passengers.
4497. Where was the question asked you as to what the traffic had been and so on? It was not asked of us in that sense.
4498. *Mr. Brock.*] Did you never hear anything about the trams not paying? I have repeatedly read about it.
4499. And you know nothing about the matter further? Only what I have read about it.
4500. *Mr. Thompson.*] Were you never told that the returns which you and Musgrave passed in for the same tram were marvellously different—that yours were much the larger number; and that his were comparatively nothing? I never heard so at any time. I never heard it mentioned. I never had any inkling of it—from the number of tickets which one man and another sent in.
- 4501.

Conductor.
F. J.
MacMahon.

4 Sept., 1888.

4501. *President.*] Have you ever sold tram-tickets? No.
4502. It was alleged that you had on one occasion, was it not? Yes; anonymously. I wish they would do it openly, and put their names to it. I would give £10 if they would.
4503. You never had a license? Not to sell tram-tickets.
4504. You have got a shop though? Yes; I keep a shop. The Commissioner gave me permission. My wife keeps it. It is on the Glenmore Road.
4505. *Mr. Thompson.*] Had your wife been in business before you married her; was she a business woman? No.
4506. She had no shop when you married her? No; but she had been accustomed to business.
4507. You bought the business then? I put her in it.
4508. Had it been an established business before you went into it, or did you set it up and start it? There was no shop in the neighbourhood where I went to live, and I took a house and converted it into a shop. My wife carries it on when I am away, and when I am at home I do a little at it myself.
4509. What family have you? Five children. I do not go drinking and gambling at races. I thought I might as well do a little in business, as others were buying and selling houses and land, and all that kind of thing.
4510. Others were doing this, and yet you had no suspicion of them? No.
4511. *Mr. Brock.*] You made rather a strange insinuation just now, when you referred to the buying of houses and land? I think you misunderstood me.
4512. The emphasis you used would certainly lead one to do so? Will you repeat your question?
4513. *President.*] The emphasis you used led me, as well as Mr. Brock, to misunderstand you, if you did not mean to convey an insinuation against others of the tramway men, leading us to suppose that they did this kind of thing? I did not mean that.
4514. I thought you meant to say that those who gambled and bought houses and land could not have done so honestly? I meant that others in Government positions all over the country were buying land and building houses, acting quite honestly. As I could not do that kind of thing I thought I might as well keep a shop.
4515. But you spoke of gambling and horse-racing? Well, sometimes people are successful in gambling.
4516. Then, again, you said that you did not drink? Well, I don't.
4517. But you evidently thought that some one else did? I did not think they did so dishonestly. I had no reason to think so. If I had any reasons I would state them.
4518. You don't even think that they gambled dishonestly? I do not think they do.
4519. Did you ever go in for these vices? No.
4520. Then you do not know much about it? No. The extent of my gambling is an occasional half-crown in a sweep. I don't consider that gambling.
4521. *Mr. Thompson.*] Among those you know in the Department who gamble and go to horse-races, are there any whom you could reasonably suspect of having done so from means outside of their salaries? No; I have no reason to suspect any men at all.
4522. You were, as I understand, one of the main hands in getting up the agitation by means of which this Commission has been called into existence. Am I right? You are.
4523. Why did you take the step which led to this Commission being called into existence if you could not help us further than you have done? Well the statement in the papers implied that ten conductors were doing certain things, and it went on to speak in such a manner, that it threw suspicion over the whole of us, and a lady said that in future she would not pay any more fares in tickets but that she would pay in cash, because she knew very well that if she paid in tickets the Government would not get them. That appeared in the *Star*.
4524. Have you suffered any insult while discharging your duty as a conductor? A few remarks have been passed in a casual way, but they have not been impertinent to me. They all know me very well upon the line. I do not think any of them would say anything to me to hurt my feelings in that way. You asked me just now if I sold tram-tickets; I think that in my own interest it is desirable that I should say a little more on that subject. One of my children had a quarrel with a child of a Jew named Prince who lives opposite to where I do. His children broke my window with a stone; I complained of it, and threatened to summon them for breaking the window; however, I did not do so. A short time afterwards little Prince struck my little boy I threatened to strike Prince's boy, and I told him I would strike his old man too. This is about six months ago, and after that Prince kept throwing off at me about my keeping the shop, and that he would do this, that, and the other. An anonymous letter came to the Department—I think there were two, one to the Commissioner and one to Mr. Roberts—stating that I was keeping a shop and selling tram-tickets, and of course I replied to this and stated that I did not sell tram-tickets and never had. I challenged any inquiry from the Department, or from anyone in reference to this statement.
4525. How long ago is it since that letter was sent in? About six months ago.
4526. That is before the noise of these tram frauds got about? Yes; it was only done from spite to injure me in the shop that was all.
4527. As regards the shop did you build it yourself or are you renting it? I am not renting it now; I rented it for the first eighteen months I was in it. I have purchased it. I have paid a deposit on it and I am paying the balance off. I bought it from Mr. Hart. There were two houses together. The house next door I rent. I borrowed £500. I made a bargain for a piece of land over on the Duxford Estate. I bought it for £7 a foot and sold it for £10.
4528. What price did you give for the house? £800. I bought it of Mr. Hart, a builder, of Redfern. I cannot remember exactly the circumstances of the purchase. I know I borrowed £500 from the bank. I think I put £100 to that. I believe I had to borrow another £50 to make it up. I think I gave £600, and then I gave a promissory note for the remainder, covering the land I held on the Duxford Estate.
4529. I suppose you do well out of this business conducted by your wife? Not much. There is nothing much in grocery. It is not worth bothering about. There is another shop around there now. We take a few pounds a week.

William Dolan called in, sworn, and examined:—

- W. Dolan. 4520. *President.*] You are a conductor? Yes.
4531. How long have you been in the Service? About seven years.
- 4 Sept., 1888. 4532. We have sent for you to see if you are in a position to give us any information whatever bearing upon the tramway frauds? Yes.
4533. Is there anything that has come to your knowledge in connection with them? The only information I can give is that it happened about four or five months ago. I should say it was about four months ago. I was on a Botany trip. I was coming in from Waterloo. A man stood on the front of the back car. I was collecting fares, and I asked him for his fare. He said, "You are a fool to be ringing for tickets; I can show you how to make 30s. or £1 a week." I said, "Do you take me to be a damned rogue as you are yourself? I have two minds to pitch you off the car, and if you do not get off at the next stopping place I will put you off." This was between Belmore and Liverpool Streets, and at Liverpool-street he got off.
4534. Do you know that man? I could not be positive that I could identify him. I know he is a short man.
4535. Have you seen him again? I have not.
4536. Have you heard anything in connection with him? No. It was dark at the time. I think he had a black moustache. I know he was a short built man, with either a black or brown moustache. I will not be certain which.
4537. Beyond that little incident you have nothing to tell us? Excepting this, that a Chinaman said to me, "Do you sell tickets?" I said, "No, I sell no tickets." I thought he was only skylarking, and I took no notice of him. That happened about two or three months ago I suppose.
4538. Still it looked as if this Chinaman had been getting tickets? It looked so. Of course he might not have done. He said it in a laughing kind of a way, and I took no offence at it.
4539. Was he a big Chinaman? Yes.
4540. Was he a man who came in and out pretty frequently? I have not seen him lately. He did at that time come in very frequently.
4541. You do not know what his name is I suppose? No, I do not.
4542. You have no reason to suspect any of the tramway employees? No; I have no reason whatever.
4543. Of course you must be aware that it is exceedingly desirable that we should get at the very bottom of this thing? Yes.
4544. Were you one of those who waited with a deputation upon the Minister? No, I was not; I attended the meeting.
4545. It seems to us that we have hardly received that assistance from the men that we had a right to expect? I am well aware that everybody would be pleased to give any explanation they can.
4546. The men got up an indignation meeting. They waited upon the Minister, and it was certainly understood that they would do all in their power to enable the Commission to get at the bottom of the matter, and we have some reason to complain that not any of them have come forward. You say you were not one of the deputation? No, I was not.
4547. *Mr. Thompson.*] We do not get a trace that we can follow up, no little clue even? No doubt some of them must know something about it.
4548. *President.*] Are you acquainted with Greeley? He has been on the Waterloo line for the last four years. I am on the Waterloo line.
4549. Do you know him well? Not very well. We have not been the best of friends lately.
4550. Have you any reason to suspect him? No, I have no reason to suspect him.
4551. But you do, nevertheless? I do, nevertheless, as you say. I can't say why I do, but I do.
4552. Did nothing more take place between you and this man who made this offensive offer to you? No; I would have thrown him off the car had it not been between two stopping places. He cleared out at Liverpool-street.
4553. *Mr. Thompson.*] At that shop? Well there is a shop on the opposite side. A Greek, I think, keeps it.
4554. I suppose it is difficult for you to understand how honest men could receive overtures of the kind you have described and play with them? I do not think any honest man would play with overtures of that kind. Previous to my being on the trams I was five years in the Artillery. I am a master gunner, and I had the mounting of all the guns at the South Head.
4555. Have you ever had any conversation with other conductors about these frauds? No; I have heard rumours in the conductors' room—just hearsay, that is all; but you cannot take any notice of it.
4556. How long since? This is since the Board has been sitting.
4557. But I mean before the frauds became public? I never heard the slightest mention of it. I never thought there was such a thing going on.
4558. Did you report this offensive offer made to you? I do not think I reported it officially. I think I mentioned it to some one—to Moran, I believe. I never sent in any official correspondence.
4559. *Mr. Brock.*] Did you ever hear of a man named Cook? Yes, I have heard of him since this matter began.
4560. Have you ever seen him? No; not to my knowledge.
4561. He answers your description of this man? The man I told you of was a short, thick fellow. He may have had a little whisker, but he had a black or brown moustache, very heavy.
4562. *Mr. Thompson.*] Was he a sharp speaking man? Yes, he spoke pretty sharply. I think he was at the Botany handicap. I believe I had three cars on at the time.
4563. He was standing under the ladder, I suppose? Yes; I will not be certain whether I had on two or three cars. If I had on three cars it happened on the middle car; if I had on two cars it happened on the back car, underneath the front part.

Patrick Stack called in, sworn, and examined :—

4564. *President.*] You are a conductor? Yes.
4565. How long have you been in the Tramway service? Seven years.
4566. I suppose you have heard a good deal about these frauds? I have.
4567. How long ago did you first hear of them? The first I knew of them was from what I saw in the papers.
4568. Before you saw the paragraph in the *Star* you never had the slightest inkling that there was anything improper going on? I never heard of it. I never thought there was such a thing.
4569. Were you at the public meeting? I was.
4570. What did you say? I said that it looked very bad for a clerk in the Department to be along with a man who had been suspended from the tramways for dishonesty.
4571. Was he suspended at that time? Yes.
4572. Who is the man you mean? Ferrier.
4573. And you saw Ferrier with whom? Mr. Colls.
4574. When and where? I could not give you the date, but I mentioned it at the meeting. I got Ferrier to substantiate what I had said at the meeting.
4575. You saw these two together? Yes.
4576. Where? I was down town on private business in the morning. After I had done it I wanted to catch the man I was to relieve to ask him to do a trip extra for me, because I could not go on. When I came to Market-street I saw Mr. Colls along with Ferrier. The tram upon which I expected to see my mate came along. The two of them got together on the tram. I got up behind them. They went on to the top of the car and stood alongside one another. I was standing close to them. When I came to Crown-street junction I came down, and Ferrier went away with Colls in the direction of Colls' house. Ferrier himself does not live in that direction.
4577. You are sure Ferrier was dismissed at the time? He was dismissed long before that.
4578. You are quite sure of it? It was about four days before the meeting. If Ferrier had not been dismissed I should have had no cause to complain of Colls being seen with him. I should not have noticed the fact of their being together?
4579. *Mr. Thompson.*] It would not have been a matter of observation? No, not at all. But the two of them were talking in the street, and then got up on to the tram. It was dinner-time, and seeing Ferrier go up the hill with Colls it struck me that it did not look well. I would be very sorry to be seen in Ferrier's company myself, or in the company of any one who would be implicated in a thing like that.
4580. Is it not a fact that you said something at the meeting about Colls being a brother-in-law of one of the men who had been stealing? Yes; he is a brother-in-law of Musgrave, and Musgrave himself had been suspended and was implicated in it.
4581. *Mr. Brock.*] What do you suppose Ferrier did walking with Colls? One can draw their own conclusions as to things of that kind, but with due respect to you Colls' brother-in-law was implicated in this matter at the time.
4582. You think that Musgrave being Colls' brother-in-law, and being implicated in the matter, it did not look well for Colls to be seen walking with Ferrier? That is just what I think. Ferrier had been dismissed, and Musgrave had been suspended if not dismissed.
4583. He was not dismissed, was he? But he was up two or three times before he was dismissed. Mr. Roberts had him up several times before this meeting about the bells. Ferrier was dismissed, and the other man had been up before Mr. Roberts, and he was afraid of something coming.
4584. What made you think that? Because he was up once or twice at Mr. Roberts' office about the same thing.
4585. Can you tell us anything more? I knew nothing till I saw it in the papers. I did not dream of anything being wrong with the bells or with the tramways.
4586. You had seen it in the papers before you saw Colls and Ferrier together? Yes; a good bit before that. If I had seen them together before I saw it in the papers I would not have thought anything about it.
4587. *President.*] Did Colls challenge you on the morning after the meeting about having made a misstatement about his connection with Ferrier? Well Colls said that he had never done anything to me that I should say anything about him at the meeting. I told him that I had said nothing except what I had seen.
4588. You made no apology to Colls? I could not do so. He knew it was true. If he did not he could have called upon me for an explanation.
4589. *Mr. Thompson.*] He has not spoken to you about it since? Never since that morning.
4590. *President.*] Could you repeat the statement you made at the meeting? No; but you know the meaning of what I said. Ferrier was in the room at the time.
4591. Were you wrongly reported in the newspapers? I do not know how the report went in.
4592. You saw the newspapers? Yes; but I do not know exactly what they said.
4593. I presume Colls came to you on seeing it in the papers? Yes; or he might have heard of it before he saw the papers at all.
4594. *Mr. Thompson.*] You stuck to what you had said, and you had no apology to offer because you had spoken the truth? Yes; Quin, the guard upon the tram who took Ferrier's ticket, could substantiate what I said.
4595. You do not know whether at that time Musgrave was stopping at Colls'? I did not know he lived there.
4596. *President.*] Do you know where Ferrier lived? I do not know; I think he lived somewhere out at Newtown; he did not live in Crown-street anywhere.
4597. Did he not live in East-street? I don't know; it is not near Crown-street.
4598. *Mr. Thompson.*] How far did the two of them go together? I do not know; I left them at the Crown-street junction.
4599. *President.*] Are you sure that you know Musgrave and Ferrier apart? I am quite sure that I should not confound them; I know them too well; I have known them for years, ever since they have been on the trams.
4600. *Mr. Thompson.*] How far did you see Colls and Ferrier go together? I got down at Crown-street junction, and they went away towards Surry Hills.

Conductor
P. Stack.

4 Sept., 1888.

- Conductor P. Stack.
4 Sept., 1888.
4601. What time was it? It was on the 2 minutes past 1 tram.
4602. You were merely going home to get your dinner? Yes.
4603. That is how conductor Quin came to be taking the tickets? Yes; he is my mate; I went on to the tram to see him.
4604. You did not hear what Colls and Ferrier were saying, did you? No. They were standing at Market-street when I came up; they might have been there half-an-hour before for all I know.
4605. Did you hear their conversation on the top of the car? They were not talking there.
4606. When you told Colls on the morning after the meeting that you had only spoken of what you had seen did he make any reply? No; he did not contradict me; he thought, I suppose, that I had no right to mention his name at all.
4607. He seemed to feel a little hurt? Yes.
4608. You mentioned at the meeting that Musgrave was a brother-in-law of Colls? Yes; I was under that belief; he passes as such.

Ambrose Scott called in, sworn, and examined:—

- Conductor A. Scott.
4 Sept., 1888.
4609. *President.*] What position do you occupy in the Department? I am a full conductor.
4610. How long have you been in the Service? About five years and a half.
4611. Are you able to give us any information in connection with these ticket frauds? None whatever.
4612. What was the first that you heard in connection with the matter? The first information I knew about it was what Greeley gave.
4613. How long ago is that? About two months ago now.
4614. Did you hear it from Greeley? No; it was the talk of the yard.
4615. You mean the meeting between Greeley and Ferrier? Yes.
4616. That was some little time before anything appeared in the Press, was it not? Yes, it was about four or five days before.
4617. Was it before Ferrier was dismissed? Yes, I think it was.
4618. Briefly what did you hear? I heard that Ferrier had met Greeley and had told him about the manipulation of the bells, and that Greeley had invited him to his house, where I was told Moran was at the time, and so the whole bubble was burst. That is all I heard.
4619. You are sure that was before Ferrier was dismissed? I think it was about a day previous—not very long.
4620. Have you never had any conversation with conductors or drivers on the subject of the frauds generally? None whatever.
4621. Have you never heard them talking about it as to how much the conductors made and so forth? No.
4622. Were you ever a party to this joke that seemed to be going the round of the conductors as to what they made when they went to the races in connection with the trams? I do not think so.
4623. Did you never hear it? I may have heard it.
4624. That is to say, one conductor would say to another, "How much did you make to-day?" and so forth? Yes.
4625. Have you any idea of the origin of that? None whatever.
4626. Do you know driver Graham? Yes.
4627. Have you ever had any conversations with him? No.
4628. On what line were you? On the Waverley line.
4629. Do you know Musgrave? Yes.
4630. Very well? As an employee.
4631. Was he not your assistant for some time? I have had him on and off.
4632. Have you ever had any reason to suspect him? None whatever.
4633. You always thought him honest? Yes.
4634. Did you ever see him with his pockets bulged out with tickets? No.
4635. He never told you that he was putting a wire in his register? No.
4636. I suppose you would converse with him frequently? Oh, yes.
4637. He never told you that his life was almost pestered out of him by a man who kept getting on to his tram two or three times a week suggesting, to him that he should defraud the Department? No.
4638. He never mentioned a syllable of it to you? Not one word.
4639. Nor did he ever show you that by fixing a wire at the foot of his register he could defraud the Government? No.
4640. *Mr. Brock.*] He never told you that he knew a namesake of yours? No.
4641. He never told you that a man named Scott used constantly to get on to his tram? No.
4642. Has anyone ever got on to the tram to you and made overtures of an improper character in regard to the tickets? No one.
4643. Are you married? No.
4644. *Mr. Thompson.*] Musgrave has mentioned a man named Scott. He swears that this man was repeatedly trying to get him to sell him tickets at a less price than that at which they are sold to the Government. Are you that man Scott? No.
4645. He said that Scott showed him how to fake the bells. You are not that man? No; not at all.
4646. *President.*] He said that this man Scott was known to all the conductors under various names, Brown and Curran for instance. Did you ever hear of a man going under either of these names? No.
4647. *Mr. Brock.*] Were you always on the Waverley line? Yes.
4648. *President.*] Don't you think it highly probable that if a man such as I have described was constantly getting on to the tram, that this man Musgrave would have mentioned it to you, or that if he had not mentioned it, you seeing that he was always talking to Musgrave would have observed it? Yes; I think I should have observed any one particular man constantly doing so.
4649. I suppose there are particular men getting on to the tram at the present time in the ordinary way whom you notice? Yes.
4650. Does it not seem to you that if this man had been getting on and teasing Musgrave in the way he is represented to have done, that Musgrave, if he had been honest in the matter, would have mentioned to you the trouble he was in, and the way in which he was bothered? Yes; I should think so, certainly.
4651.

Conductor
A. Scott.
4 Sept. 1888.

4651. Especially as the man was a namesake of yours? He never told me that he knew any namesake of mine.
4652. Did he give you any confidence in the matter at all? No.
4653. *Mr. Thompson.*] He never asked your advice or hinted at anything of the kind? No.
4654. *President.*] He never showed you a wire and told you that this certain wire was worth a tanner a week to him? No.
4655. He never gave you an illustration of how he could collect a car-load of passengers and pocket the whole of the tickets? No.
4656. *Mr. Brock.*] Did not Graham ever say anything to you about it? Never.
4657. Was Graham often the driver of the car on which you were conducting? Not often. I might have had him once in six months. He was a special engine-driver, and he might come on in case of a breakdown, or anything of that kind.
4658. He would not be there twice in a fortnight? No.
4659. *President.*] We have very strong proof that Musgrave and Graham were frequently together;—how could that happen if you say that Graham was so seldom on the line? Musgrave was an assistant conductor, and Graham was a special driver. He used to take out special cars anywhere. I think Graham was a special driver for two or three years. If Graham was going out on a special run anywhere he would take the first assistant conductor the foreman could lay his hands on. That is the way they met I suppose.
4660. Permanent drivers and permanent conductors, as a rule, go together I suppose? Yes.
4661. As far as we can understand, Graham has repeatedly observed certain things in connection with Musgrave when riding on the Waverley line in connection with him, and I cannot quite understand how that can be if he met Graham so seldom? On a Saturday's service there was a special run up to Waverley at one time, and they always used to take that one run. It was the 1'4 from Bridge-street.
4662. Yet you say that you and Musgrave were very frequently together? Not frequently. He was an assistant conductor, and might be booked for me now and again. I might have him for a week and then for another six months I would not have him.
4663. *Mr. Brock.*] You were never sufficiently long with him to become a chum of his? Never.
4664. Do you not meet him off the trams in the yard? I have seen him off duty.
4665. Have you often been in conversation with him? No.
4666. *President.*] Where were you before you came into the tramway service? On the railways.
4667. Where were you? I was a booking clerk at Newtown and Ashfield.
4668. How came you to leave? My services were dispensed with.
4669. Why? I cannot say.
4670. Was any charge made against you? None whatever.
4671. Was it owing to retrenchment that your services were dispensed with? That I do not know.
4672. You must know something about it? I wrote to the Department several times, and could get no explanation. I took what papers I had received from the Department, and the copies of the letters I had written, down to Mr. Barton, the ex-Speaker. He wrote a note to say that he was perfectly satisfied with my explanation. I gave that note to Mr. Goodchap, and Mr. Goodchap placed me on the trams.
4673. Who was over you on the railways? Up at Ashfield I was under Mr. Bissett. When I was there there was a sum of £4 missing one day. I was suspended for two or three days. I was then reinstated and sent down to Newtown. I was at Newtown for about two months. I went on my holidays and came back again, and I was there about a week when my services were dispensed with.
4674. And nothing fresh had occurred? Nothing whatever.
4675. Are you in debt at all? No.
4676. You do not owe anything to anyone? I might owe two or three pounds—nothing more.
4677. But only in the ordinary way? Yes.
4678. Therefore if people say that you owe money they say that which is not true? They say that which is not true. I suppose the whole of my indebtedness would not come to £5.
4679. Do you know a man named Keen? Yes.
4680. Do you owe him anything? Not a penny.
4681. You swear that? I swear that.
4682. How long have you known Keen? I knew him at Ashfield first of all.
4683. What was he then? He used to do odd jobs as a painter.
4684. Perhaps a little debt was incurred then, and it has escaped your memory? I never had any monetary transactions with him whatever.
4685. It is only fair to you to say that Keen in his evidence said that you owed him 10s., and that you had owed it to him for seven years, and that he could not get it out of you? I never owed him a penny in my life, and he has never made any application to me for money.
4686. *Mr. Thompson.*] Were you ever examined as a witness in a case at Windsor? Yes.
4687. Did you swear then that you were a married man and a householder? No, I did not.
4688. If I can show to you that you did, what do you expect at our hands? I suppose if you can prove that, you can do what you like with me.
4689. But what do you think ought to be done? Well, you know what perjury is.
4690. Do you speak to Keen? Yes.
4691. If he says, "I never speak to Scott now," is that true? It is a lie.
4692. Have you had any quarrel with him? Not the slightest.
4693. Did you not tell Keen that you were dismissed, because £4 was missing out of your cash at Ashfield? No.
4694. I suppose as a matter of fact it was known that £4 was missing from the cash, and that you were taken to task about it? Certainly, I was in charge of the money.
4695. Were you one of those who attended the meeting out of which the deputation came? No.
4696. Do you attend gambling saloons and racecourses? I attend racecourses now and again. I was never in a gambling saloon in my life.
4697. And you only attended racecourses as any other man would? That is all.
4698. Have you heard nothing at all with regard to all these villains, who have been going about procuring the sale of tram-tickets, faking the bells, and all that kind of thing? I have heard a lot since the inquiry was first started.

- Conductor
A. Scott.
4 Sept., 1888.
4699. But not before that? No, nothing whatever, except the rumour that there were forged tickets. That I heard in the press now and again.
4700. Do you know Dominic the barber? I know Dominic Lacerda.
4701. Where is his shop? At Waverley. This side of the Bondi junction.
4702. What do you know about Dominic? That he has shaved me; that is all.
4703. Do you mean to say that Dominic has not made any mention to you of tram-tickets? None whatever.
4704. Has he never expressed to you an anxiety to get a license? No.
4705. Are you quite sure? Positive.
4706. Have you often met Musgrave there? No.
4707. But you have met him there sometimes? Never.
4708. You know that Dominic is a crooked stick—that he is no good? No, I do not.
4709. *Mr. Brock.*] You are positive you have never met Musgrave there? Quite positive.
4710. *Mr. Thompson.*] How do you know that Dominic Lacerda is the man's name. That is not the name over the shop? I do not think there is any name at all over the shop.
4711. Do you know a jeweller's shop in the same neighbourhood where the conductors congregate a little? I know that there are two or three jewellers' shops there, but I have never seen any conductors congregating there.
4712. Do you know Constable Stove? Yes.
4713. Have you ever had any conversation with him on the subject? No.
4714. Where do you live? At 189, Windsor-street, Paddington.
4715. How old are you? Twenty-six.
4716. You were very young when you were in the Railway Service; how old were you when you joined? Eighteen or nineteen.
4717. How long were you there? Eighteen months.

WEDNESDAY, 5 SEPTEMBER, 1888.

Present:—

A. RICHARDSON, Esq., PRESIDENT.

W. THOMPSON, Esq., M.P.,

F. A. BROCK, Esq., J.P.

Patrick Quin called in, sworn, and examined:—

- Conductor
P. Quin.
5 Sept., 1888.
4718. *President.*] You are a conductor in the Tramway Service? Yes.
4719. How long have you been in the Service? About six years and one month.
4720. We sent for you to ask you more particularly one question;—do you remember on one occasion Mr. Colls riding on your tram in company with Ferrier, who at that time had been dismissed from the Service; it was in the middle of the day, about 1 o'clock? I remember Mr. Colls and Ferrier rode on the same place on the car, but I could not be sure if they were together, that is, if they were in one another's company.
4721. Did they go up together? No. To the best of my recollection Colls got up at Market-street, and Ferrier got up at Liverpool or Bathurst streets.
4722. Where did they both get down? Ferrier got down at College-street, and went along Liverpool-street towards Woolloomooloo. Colls got down at Foveaux-street.
4723. Are you quite certain about that;—are you sure they did not get down together? I am quite certain of that.
4724. You are quite sure they did not pass the Crown-street junction together? Quite sure.
4725. Is there any information you are able to give us in connection with these frauds? None. I know nothing whatever about them.

James Roberts called in, sworn, and examined:—

- Supt.
J. Roberts.
5 Sept., 1888.
4726. *President.*] You are Superintendent of Tramways? Yes.
4727. How long have you held that position? About eight years.
4728. We want you to be good enough to give us as briefly and concisely as possible a history of your knowledge of these frauds;—when you first heard of them; what steps you have taken in regard to them, and so forth? The first inkling of the frauds I had was in reference to conductors sending in reports in connection with Service-tickets, which are supposed to be used only by the officers of the Department. When the tickets were being taken from the passengers they would say from what shop they had purchased them. At first I did not take any notice of it, but when it became so general I took notice of it, and I saw Mr. Vernon immediately.
4729. How long ago is that? I think it is about seven months. Then I took Wigg and Moran into my confidence.
4730. That was about Centennial time? Yes, about that time. Then I began to suspect that something was wrong with the conductors. I then began to think that some of the men were supplying certain shopkeepers with tickets, and among the tickets these men had received some of the Service-tickets that had inadvertently been introduced. They would probably sell them to a low class of people who would not know the meaning of the cross on the tickets.
4731. You thought that these people were getting the Service-tickets, not among tickets which had been properly obtained, but among dishonestly obtained tickets? Yes. There were several reports from private gentlemen, among them, I think, Mr. Brock, to the effect that certain shopkeepers were selling dirty or soiled tickets. I immediately made inquiries about the places reported to me. I watched them myself, and I found that children were taking their tickets there and getting lollies for them; they would probably get about a pennyworth of lollies for three-penny worth of tickets. Then these Service-tickets began to come in much oftener. I spoke to William Moran, and we agreed to watch and see what

Supt.
J. Roberts.
5 Sept., 1888.

what men we thought were doing it. We thought it a bit queer that some of these men we suspected would get off the tram at Liverpool-street, and some at Bathurst-street. There used to be meetings between two or three tram-guards, and this aroused my suspicion as to who the men were.

4732. Who were the men you suspected? The first men were Ferrier, Musgrave, and Fraser; within the last two months I have suspected Connors. I noticed that Ferrier met him on two or three occasions. Wigg and Moran had seen Cook get on to the tram with this man Ferrier. I thought there could be no good in these meetings between Fraser, Ferrier, Cook, and Musgrave; then Ferrier was also in the habit of getting on to several conductors' trams, going short distances, and then getting off again. I tried to block Ferrier from getting into the Service, and I would have done more if I had had my way. I blocked a man named Paulsen who wanted to get back into the Service. I did not give him the reason then. I did not let anything transpire as to why I objected. He was sent up to the railway station, and I took another man from the railways into the Tramway Department, an old conductor, a man named Head. Wigg and Moran were watching, and when they saw Ferrier and Cook meeting, they used to come down and tell me, saying that there was something on on such and such a night with them. I then used to go in their company. These men were just as fly as men who were considered to be thieves would be. Musgrave and Ferrier were very smart, and if they saw me looking about everything would be in the best order.

4733. How long is it since you took Musgrave's bells from him? It was one night, I suppose a couple of months ago; it may be a little more.

4734. You and other witnesses seem to forget the time which has elapsed since the men were dismissed; it is nearly two months now since Ferrier was dismissed? Then it must be four months ago.

4735. Quite two months before there was any *exposé*? Yes.

4736. You suspected him strongly at that time? Yes.

4737. Had he not reason to think that you suspected him by that very act of yours? Of course he had.

4738. Did you not tell him that you were going to do the same thing to all the rest? I could not say. I said I was going to take several of the bags, I think.

4739. This was after you had taken Musgrave's, and had found that things were all right, I suppose you did not want to make him suspicious? I did not want to let him to think that he was the only one marked out; his tickets corresponded with the register, and I gave him a fresh bag and bells.

4740. Did you know at that time of the faked bells? I knew there was something on the board; I did not know that Musgrave was one that was doing it.

4741. When you had his bells in your hand, why did you not try it? I took them off him and put them into the bag.

4742. When he saw you I suppose he put his bells right? He could not see me; I was in the Queen-street waiting-room, and directly the tram drove up I went out and took his bells and bag from him. I came into town with him, and gave the bag up to Mr. Primrose; there was no pin in it.

4743. But he could not always have a pin or a piece of wire in his bells? No; he must register sometimes. I am not saying the pin was in that night.

4744. If you knew how the bells could be faked why did you not see whether they had been tampered with when you took them away from him? The wire would have been in the bag. I came so suddenly on to him that he could never have touched his bells with his hand at all.

4745. *Mr. Thompson.*] That would be when he came off the penny section? He came from Ocean-street, down to Queen-street—a penny section.

4746. He would not be using the pin there? No; it would probably be on a twopenny section.

4747. *President.*] You knew the game which was being played; I suppose you knew that they were putting in this pin when they liked, and that when they did put it in the bells would ring without registering; that they put the tickets they collected elsewhere, so that at the close of the day the bells and bag would agree. Did you understand that? Yes.

4748. Then where was the utility of your taking his bag and bells at all? I might have caught a man with the wire in his bag, or he might have put it in his register; he had no idea that I was going to take his bag that night; probably he did not intend to put the wire in until he got some distance on the twopenny section.

4749. Then you fully understand that the taking of the bells for comparison with the bag was of no use whatever? Not of any use.

4750. Because they would agree? My idea was to see if the piece of wire was in; to see if the bells were faked up then.

4751. But you surely don't imagine that he would have had the wire in his bag; if he hadn't it in his bells, do you seriously think that he would have put it into a bag which he intended to hand into the Department; he would naturally put the piece of wire into his pocket? He might have intended to take it out when he was collecting his fares again; he might have put a piece of wire into his bag just before he came to his stopping-place.

4752. There would be no difficulty in his taking the wire out of his pocket again when he wanted to use it; why should he put it into his bag? Someone might see him.

4753. But he might stand on the top of the stairs or under them? Well my idea of taking the bags and bells was that I thought I might get the pin or piece of wire in them.

4754. I cannot see the object of your taking the things if you did not afterwards try the bells to see if they were faked? I handed the bells over to Mr. Primrose; they were tried in the office and found to be all right. He could not have done it with those bells.

4755. Will you go on with your statement? A man named Keen was the first man who came to me; he told me that he had heard from driver Graham that Fraser and Musgrave were defrauding the Department by using pins in their bells.

4756. Was that after you had taken Musgrave's bells? Before. That was how I first got an inkling about it. I asked Keen if he thought his authority was good, and he told me that it was Graham. I said to him, "You had better see Graham, and ascertain if he has any objection to making a statement." I sent downstairs for a pair of bells and brought them into the room. The way in which Keen illustrated it it could not be done. The bells were in perfect working order.

4757. Did he not tell you that he had taken his own bells home—that he had tried them, and that he had succeeded in doing it with them? Most decidedly not. If he had told me that I would have made him bring the bells to me, and I would have seen for myself. He never showed it to me on his own bells.

4758.

Supt.
J. Roberts.
5 Sept., 1888.

4758. But did he not say that he had tried with his own bells and that he had succeeded? Most decidedly not; he mentioned nothing to me whatever about his having tried it with his own register. He only came to me once, and I showed on another pair of bells that it could not be done. He never said that he had done it.

4759. When you said that it could not be done he did not say "I know that it can be done"? No. I showed him on one or two bells that it could not.

4760. Are you quite positive that he did not say he had done it? Quite. From this time I continued to try the registers time after time.

4761. Whose was the first register with which you did it? I got four or five; and among them were Fraser's, Reece's, and Morgan's. I think there were another pair; one pair were a broken pair. I immediately brought the register over to Mr. Vernon, and showed him how the frauds could be done when the bells were out of order or had been tampered with. Of course it is quite possible that some of the men may have had the registers innocently. Mr. Vernon told me to watch them more closely; and Wigg and Moran have brought up all the evidence they could collect up to the present time. Mr. Vernon took some evidence in the matter and the registers were handed over to Lambert. If Keen had told me that his register would do it I should have had the man who repairs the registers down to see if it had been tampered with. There was another occasion when Moran got a pair of registers for Graham to try; they were also found to be all right. I had Lambert down to examine them and he said that the frauds could not take place if the registers were in good order.

4762. Not in that way? No.

4763. Of course in order to fake the bells they would have to be opened? They would have to be opened.

4764. *Mr. Brock.*] Did you not get a report from H. A. Skinner? A verbal report, not a written one.

4765. What was it about? As to some man not ringing his fares at Market-street I think.

4766. He collected the whole of an upper deck on a crowded car without ringing one? I looked into the case there and then; I watched the man for some while afterwards and found that he was correct.

4767. Did you try his bells? Immediately Mr. Skinner came to me and they were all right.

4768. Mr. Allison, of Her Majesty's Theatre, was there, and they say that the man collected the whole of the upper deck and did not ring once? If I am not mistaken Reece was the man in that case; I looked into the matter directly I put on Wigg and Moran to watch him and see if he rang all his fares and they found that he did so.

4769. *President.*] I understand that on the occasion to which you refer the excuse made was that the bell was broken? It may have been.

4770. Are there papers? Yes, I will let you have them if you want them.

4771. I suppose that this man would be likely to know Wigg and Moran? Yes, but he might not know what they were after. We had no idea of being defrauded then as we have been lately.

4772. How long would that be ago? It is nearly twelve months ago I should think.

4773. Do you remember getting a confidential report from the Inspector-General of Police in connection with Musgrave? Previous to getting it I had suspected Musgrave and I had recommended that he should be prosecuted. Two or three days afterwards I got a communication from the Inspector-General of Police, saying that Constable Stove could give some valuable information about one of the men, I think it was Musgrave, who defrauded the Department by putting a piece of wire in his bell. I then sent up to the Inspector-General and asked that Stove might be sent to me. He came and in the course of conversation he said he had heard two or three things about this matter which he could not say outside of his Department. I wanted him to divulge the person who had given him the information but he would not do it. I sent back to the Inspector-General of Police saying that Stove's evidence was useless and that he would not give me the information I wanted.

4774. A great deal is made of this even by Stove himself, that this confidential report sent to you to enable you to place your hands on these men was sent to you to-day as it were and before the morning was all over the country. Constable Stove had the whole of his plans upset and he wondered that Musgrave should know what he did? When Musgrave came to me he told me that he knew Stove had a down upon him and that some other constables were in the same position towards him.

4775. Can you give us the date of the report? I can give you the report itself.

4776. Have there been two reports? I can only remember one. I brought the report from the Inspector-General to Mr. Vernon in the first instance. No one saw it from my hands.

4777. What date was that? I can't quite remember. Ferrier was dismissed and Musgrave came and made a sort of confession; he told me how the thing could be done, that is how the bells could be faked, but he did not tell me he was doing it. I said to him, "Your report is all second-hand, Musgrave." I came over and told Mr. Vernon and the Commissioner exactly what Musgrave had said.

4778. This report was never out of your hands unless under lock and key? Well it was not under lock and key.

4779. Who could see it besides yourself? I think it was registered; I know it was registered in the office of the Inspector-General; it came through eight or nine hands in his office, and any of those men might have seen it and noticed what it was.

4780. Is there anyone in your office whom you suspect of giving information? No one.

4781. It has been stated positively that Ferrier and Musgrave have said that they have had the "straight griffin" from the office? I have a sort of idea that they refer to Colls; the only time I have heard of it has been since this inquiry has been on.

4782. Don't you know that Ferrier told Greeley in his bedroom that they could not be caught, because whenever anything was up they got the "griffin" from the office? I believe that Ferrier only said that to lead Greeley on so that he might make some money out of him. He saw that Greeley was a bit frightened to comply with his request, and he would naturally turn round and say, "I can give you the 'straight griffin.'"

4783. But he said also that the thing was "being blown?" That was because he had seen Musgrave come to my office. Ferrier was to be caught on the Saturday night with the bells we sent for him to take away, and Musgrave saw himself surrounded by so many difficulties that he came to me on Friday morning.

4784. Was that the date? I am not certain about it.

4785. *Mr. Thompson.*] Have you any entry of it? No.

Supt.
J. Roberts.
5 Sept., 1888.

4786. *President.*] What did you do when Musgrave made his statement? I came over and saw Mr. Vernon and the Commissioner.

4787. The same day? Yes.

4788. You know the time of the meeting in Greeley's bedroom? Yes.

4789. Did Musgrave come to you before or after that? After that.

4790. Is it not a fact that the meeting was on the Saturday night? Yes, I believe it was on a Saturday night.

4791. And there was to be a future meeting between Greeley and Ferrier on the Monday or the Tuesday? On one night early in the week.

4792. It was between these two meetings that Musgrave came to you? Yes.

4793. Therefore when was it that Musgrave came to you? It could not have been Saturday, but it might have been on Monday or Tuesday; early in the week probably.

4794. Was Musgrave suspended on the day on which he made his statement to you? No; I think on the day after.

4795. He was not suspended before he was dismissed? He was suspended and dismissed on the same day.

4796. When Musgrave made his confession to you Ferrier was still in the Loco. department? He was not dismissed. Musgrave was not dismissed for some days afterwards.

4797. With regard to this confidential report can you say on reflection when you received it? I think on the morning of the 17th.

4798. What did you do then do you say? I wrote to the Inspector-General asking him to let Stove call upon me on the following day: Musgrave came to me before Stove's report reached me, I believe.

4799. Which morning was that? On the 19th, I think. Musgrave said then that he knew how the Department was being defrauded.

4800. Then how could that have been before you received the report? Musgrave did not know I had the report. I said to him, "You are too late, all you have told me is known."

4801. It could not have been on the 19th when Musgrave came to you? It might have been earlier; it might have been on the 13th.

4802. You are quite sure that you received the report on the 17th? Yes.

4803. What day of the week was that? It was on a Tuesday.

4804. And you believe it was on that day that Musgrave came to you to make his statement? Yes; I think it was. I was wrong in saying that he came to me before I had the report. I do not quite remember the dates. I know that I came straight over to Mr. Vernon with the report and told him about it; I also told the Commissioner. I find that the report was not registered in my office, although it was registered in the Police Department. I did not register it at all. I put it at the bottom of my basket until Stove arrived. Nobody knew I had it.

4805. It seems that you even mentioned it to Musgrave? Nothing about that report. I had received information about Musgrave before. When I spoke to him what I referred to was Keen's telling me how it was being done. Keen had told me this some time before, and that was why I told Musgrave that I knew all about it.

4806. What time elapsed between your receiving the report and Musgrave's interview with you? It was upon the same day.

4807. You received the report in the morning? Yes.

4808. Musgrave came to you in the forenoon? I think in the morning. Mr. Colls came to me and said Musgrave would like to see me. I believe it was on Monday or on Tuesday morning, at 9 o'clock, Musgrave came in and said that certain things were going on. Now I come to think of it I really think that I saw Musgrave first, but I cannot be sure about the times. I remember that Musgrave came the first thing in the morning. My memory is rather bad. I have been seriously ill lately. I want to keep nothing back, although I am a little mixed up in dates.

4809. You did not mention the report to Musgrave? On my oath I mentioned it to no one except to Wigg and Moran, Mr. Vernon, and the Commissioner. I am almost certain that no one saw it and that no one else knew of it. When I received it I put it at the bottom of my basket with some blank minute-papers on the top of it.

4810. If anyone had seen it it would not have been of much consequence? No, because it was all known.

4811. When were you in possession of information leading you to recommend Musgrave's dismissal on the 20th? I think it was on the 19th that I recommended his dismissal. It was after Graham gave information to Mr. Vernon.

4812. In all probability Graham had given information to Mr. Vernon about the same time that the report reached you? Yes.

4813. *Mr. Thompson.*] With regard to the general statements that have been made with regard to information being given from the office to these rascals, there is no one in the office whom you suspect? No; I do not suspect anyone.

4814. You have no suspicion whatever of Colls? I only spoke to Colls once about Musgrave in my life, and he said to me, "Let him put up with the consequences." That is the only conversation I remember. I took particular care to have no conversation with anyone about it. I made up my mind not to speak about the thing at all. If you mention a thing of this kind to one man a dozen others may be put up to it.

4815. You knew of Colls' relationship to Musgrave? Yes.

4816. About what time was it that you spoke to Colls in the manner you have described to us? I think it was on the morning he told me that Musgrave was coming to see me.

4817. Have you any idea that Colls knew of Musgrave's complicity in these frauds for some time? I do not think he knew. I think he would have told me. I myself have cautioned Musgrave several times. I have had him up in my room and cautioned him.

4818. Was this before you took his registers? Yes; it was not on account of his defrauding the Department but on account of the sluggish way in which he collected his fares and the careless way he had of going about his cars.

4819. Therefore if Musgrave had had anything on his mind for a long time he would have ample opportunity to tell you before he actually did do so? Yes; he knew he was watched too. I am certain he did.

Supt.
J. Roberts.
5 Sept., 1888.

4820. Would you be surprised to hear that these frauds have been going on, as far as Musgrave is concerned, ever since he joined the Department, with the exception of the first fortnight—That would be almost two years ago? Well I could hardly believe that. I have watched nearly all the men.

4821. Without making any discovery in the end? —

4822. *President.*] As far as I can understand, if it had not been for Graham no discovery would have been made up to this hour? That is so. If Graham had not told Keen it might have been going on now.

4823. So that you have no reason for expressing surprise merely because you were watching, because the mere watching, as we have seen, might do no good whatever? It might not.

4824. Apart from these conversations that you have had with Musgrave, do you know the man well; his character outside and so forth? I know very little of him. I mean that I have had no conversation with him and that sort of thing.

4825. Do you remember when he joined the Department; two and a half years ago? Yes.

4826. How soon did you begin to think that he was not one of your best men? I thought so when I had observed his lazy manner.

4827. How soon afterwards was that? Six or seven months afterwards.

4828. He went on pretty well at first? Very well at first. I never liked him as a conductor; he was very careless with the passengers, and he had a flashy, bad way with him; he would never get off to assist people in or out; he was yarning under the stairs continually, and he was always coming late to work, driving it off to the very last minute when he had to go out.

4829. And losing time too I suppose? Yes.

4830. Do you remember how long he has been away ill? He has been away at different times three, four, or five days.

4831. Not longer? I do not think he has.

4832. Have you not inspectors who look after the men and so forth? Harper reports, and Wigg and Moran report.

4833. Who is your inspector who would report upon the conduct and character of the men? O'Brien is supposed to be the inspector.

4834. Does he deal with that kind of thing? He deals with everything.

4835. Does he ever make reports to you about the character of the men, and about suspicious circumstances in connection with them? Sometimes.

4836. Has he ever reported anything in connection with these frauds? In one or two cases he may have said that the conductor had not rang their proper fares.

4837. Has he never made you a report to the effect that certain conductors should be regarded with suspicion? In conversation he has mentioned them to me.

4838. What men has he mentioned? The men we have got off, and several other men at different times.

4839. Has he been able to give you valuable information in regard to the character of the men? I could not say that.

4840. *Mr. Thompson.*] If he cannot do it whose duty would it be to do so, or to whom can you look for the information? I myself can give you the character of any of the men. I have watched nearly every man in the Service. I know them better than they are known by any other man in the Department.

4841. Do you know conductor Ambrose Scott? Yes.

4842. What is your opinion of him? Not of the best.

4843. Have you any reason to think that he is connected with these frauds in any way? It is hard to say. I have watched Ferrier get on to his trams at Liverpool-street and get off at College-street, often riding a short distance in that way. It has seemed to me sometimes, when I have seen him getting off cars in this way, that it looked as if the conductors would have nothing to do with him.

4844. *President.*] He seems to have a good straightforward manner? Yes; but at times I have seen him when I have thought that he was not ringing for his fares.

4845. Did you challenge him? No, because I was not certain.

4846. It is a difficult matter to be positive about it, is it not? Yes, unless you are right in the compartment.

4847. And even then it is difficult, under the plan which some of them adopt, of collecting the whole of the fares at once? Yes; and sometimes one of the passengers will collect the whole of the fares before the conductor arrives.

4848. And then he has to ring them off all at once? Yes; and of course, on a full car on a twopenny section, he would have to give twenty rings.

4849. Do you know anything more definite with reference to these frauds than has already transpired—you know what came out at the Departmental inquiry—have you any information more definite than that? I can give you nothing further except this, that I do not believe Greeley is a straight man. I believe that he had the tickets that were found in his pocket for a dishonest purpose. He came to me, and, in the course of conversation, he said, "I believe Dolan is the man who is selling Siddons tickets." I watched Siddons three or four different nights, and he was the only man (that is, Greeley) whom I saw going into Siddons' shop.

4850. Dolan is the man who had Greeley's coat? No; Tunks is the man.

4851. Did you ever authorize Greeley to act as a sort of detective in addition to Wigg and Moran? Never.

4852. Did he not tell you and others that he was sounding this man Siddons to try and see if he could not catch him? No.

4853. You are aware, I suppose, that he does not make any secret of his dealings with Siddons? I do not know that he had any, excepting those which I knew myself.

4854. Of course it is stated and it is Greeley's own statement that, believing that Siddons was purchasing a lot of tickets from conductors, he, with a view of testing him, made overtures to him; are you sure that you gave him no authority to do so? I am sure, and I would not believe Greeley on his oath.

4855. You gave him no authority? No, none at all.

4856. It is possible that Moran may have asked him to do what he did? I do not think he would have asked him without first asking me.

4857. Did you hear of a transaction that Greeley had with a Chinaman, Ah Lum? Yes, but only lately.

Supt.
J. Roberts.
5 Sept., 1888.

4858. How did you hear and what did you hear? I heard that a Chinaman made some overtures to Greeley to purchase some tickets off him; then again, I heard that this Chinaman said that he bought 30s. worth off him for 10s. One day at the Central Police Court we got what we could out of this Chinaman, and we got it brought here.

4859. Was it not arranged that Greeley should try this Chinaman, and see if he could get anything out of him? I should not give any such instructions unless I gave them in writing.

4860. *Mr. Brock.*] Greeley was not the man to whom you were likely to give such instructions? No; I would not trust him. I believe he told me a lie about Dolan.

4861. *Mr. Thompson.*] You do trust Dolan? I believe he is an honest, straightforward man.

4862. *President.* There is one thing that seemed to us to be very irregular; we have looked at the book in which they enter the receipts, and it was evident from that book that conductor Musgrave was allowed to hold his bag from the Wednesday until the Saturday; that is to say, he made a trip on the Wednesday, and did not return any account of it until the Saturday. When we questioned the clerk he said there was no way of checking this irregularity; that there was no list of the men that were out on a certain day? There is an absentee book kept in the foreman's office. This book has been kept for a considerable time. I go down every morning and look at it myself, and see what men are away. If any particular man is away, who ought not to be away, I send immediately to know why he is away, and call upon him for an explanation for his absence. In the case of Musgrave I think he got hurt and he stayed away a couple of days; it may have been three or four days. It may be four or five months ago. That is the only time I can remember Musgrave has been away under such circumstances.

4863. *Mr. Thompson.*] Could you give us from any document the exact time that he was away; that is, when it was alleged that he had got hurt? I think I can give you the exact date.

4864. *President.*] That would be all very well as far as your own observations would go; you would know what conductors were improperly staying away; but that would not meet the case I am referring to? I think it would, because I give Mr. Primrose the information, and if I am away Mr. Tyrer does it.

4865. Blackstone showed us figures proving beyond doubt that Musgrave made a trip on a Wednesday for which he did not account until the Saturday; we asked Blackstone why he did not call attention to that suspicious circumstance? I think I remember the occasion. I believe Musgrave was taken ill going home.

4866. The matter stands thus, that going home on Wednesday he took tickets which he did not return until the Saturday, or that he took tickets on the Wednesday and returned nothing at all? Going out on the Saturday morning and making a return for the Saturday, he may possibly have taken one run out on the Wednesday and not have come back again. There might be only ten or twelve tickets in his bag.

4867. He should have returned them on the Thursday morning? Yes.

4868. Suppose that at the very time when he was shown to be on duty car-cleaning on a Thursday morning, he was really conducting, and that he did not return his tickets until the Saturday. Suppose he were car cleaning between the Wednesday and the Saturday, would he not return his bag? But he may have had the foreman's bag—he had a spare bag—and Musgrave may have been called from car-cleaning.

4869. It occurred to us that while this practice of allowing conductors to take home their bags was continued, men acting fraudulently would have a splendid chance—a much better chance than if they had to return their bag immediately. It appeared to us that if they could take their registers home they would be able to do away with perhaps a great deal if not the whole of the takings? If we could trust to the registers the man might keep his bag a month.

4870. But once you know that the registers can be manipulated with a pin, the case is altered, and under these circumstances a man has a far better opportunity of making a good haul if he keeps his register more than a day? But he would not be on the cars.

4871. *Mr. Thompson.*] On some occasions the man might go out as an extra, his time would be up and he could get off the car without coming in at all and returning his bag? If he did it he would do it illegally and wrongly. I do not believe Musgrave would have done such a thing, he might have done it, but he was a fly boy, and he might possibly have been up to it.

4872. *President.*] Does it not occur to you as it has occurred to the Commission that the present practice is a very dangerous one, and that it may possibly have led indirectly to these frauds—I refer to the practice of allowing conductors to take their bags away on the night shift? Yes; but a man has to start out from the terminus in the morning; suppose for instance he has to come in from Leichhardt, he has to be there the first thing in the morning.

4873. I am aware that you have given this matter consideration, but does it not occur to you in the light of what has happened, that it would be better to pay a considerable number of extra men to take the bags and registers away at night than to allow the men to take them home? Well the day men are relieved at 2 o'clock, so that they would start in the morning with their bags empty.

4874. But what about the men who were on the other shift, and who take home their bags and registers with them? The bags are emptied about 11 o'clock, so that it would be only a question of the last trip.

4875. The emptying of the bags is not the only point, you surely must readily admit that a conductor, while upon the tram has little opportunity of opening his register and examining the contents of it, but when he gets quietly at home at night it seems a great temptation to him to open the funny thing and see what it is made of. Does it not occur to you that this may have been the way in which the frauds have commenced—the conductors having these things in their leisure, and unprincipled friends coming in and looking at them? It is hard to make all men honest; an honest man would not do that. Look at the difficulty in which you would put the Department if a man on the Leichhardt trams had to come into Sydney the last thing at night to bring in his bag; you know what your life would be the next morning; there would be half a dozen Members of Parliament here the next morning, pointing out the hardship of the thing. You know very well the difficulties under which we have to work.

4876. But in the light of what has happened does it not occur to you that it would be better, in future, to incur considerable expense in the way of having men stationed at the different termini at night, in order to receive the bags and registers and bring them into town? Well then, those men would have to bring the bags in, and the office would have to be kept open very late indeed before all the returns were received.

4877. *Mr. Thompson.*] Have you not to send out a motor to the various termini every morning? Yes.

4878

Supt.
J. Roberts.
5 Sept., 1888.

4878. Then why cannot the bags and bells be sent out to the men by the engine-driver on the following morning? That could be done, but then they would have to meet the men on different portions of the lines.

4879. *President.*] It appears to me that the difficulty lies not so much in sending the bells and registers out in the morning as in getting them in at night? It would be 2 o'clock in the morning before some of the conductors would be done. I should have to send out to each terminus to get the bags in.

4880. But the driver has to bring the motor in? Only to the engine-shed, and if anything went wrong with the bag the conductor would blame the driver.

4881. *Mr. Brock.*] How many bags and bells are left out at night? About five or six, for the early morning trains.

4882. What do you think of the present system of bell registers,—are you satisfied with it? We have had several systems if it could be done. I think it would be well that the ticket should be perforated directly it is collected. The public want some sort of receipt; the present system gives receipt to the public, whereas the tearing up of the tickets gave them no receipt. Very often, instead of the men tearing them up, they used simply to tear them down the perforations on the top of the cars at night; they could easily pretend to tear them. At other times they could bend them back, and tear, perhaps, three instead of six.

4883. You think then that the tearing system is just as bad as the present system? I think it left it more open for the conductors to be dishonest than any check we have had. The first check we had was good if it could be worked on these cars—I refer to the bell punch. Every ticket punched was recorded inside the bell, and the punch could not be interfered with.

4884. You know the Melbourne system; could that be worked here? Not on these cars; they are too much overcrowded; it would take the conductors too long to get through.

4885. Does it take long? It is very slow. One has to do so many things before the ticket is finally taken and punched. Often the conductor will have to sell tickets to the passenger. First he has to receive the ticket, then he has to punch it, and then he has to put it in his pocket. Here we have only one process, and the conductor can work with one hand leaving the other hand free, that is to say, he can collect tickets and go along the car at the same time.

4886. You do not think it could be worked with the upper deck? I do not think so—not with the present staff.

4887. *President.*] Of course you know that the sale of tickets would be only in the hands of the conductor? Yes.

4888. He could sell tickets by dozens? Yes. My report is in reference to that. I believe in the system if it could be worked here.

4889. Why was the bell punch system done away with here? It is too slow. I think with reference to the sale of tickets that it ought to be kept in the Department. In the first place the percentage would be saved. That is one thing in favour of the Melbourne system. The congestion of the traffic between Bridge-street and Liverpool-street makes it very difficult to deal with, the fact being that there are 1,200 cars a day going in and out.

4890. Do you remember the day Hendy was dismissed? Yes.

4891. That was the day that Musgrave had had his bag and bells for three days—that is to say, from the previous Wednesday to the Saturday morning? I will look it up.

4892. *Mr. Thompson.*] Have you ever suspected Connors as being dishonest? Well, I have seen Ferrier get up on the tram with him and meet him lately. Previous to that I had a good opinion of Connors as a conductor. I am not speaking of his private life. Let me say here that Paulsen is one of those I have also suspected.

4893. Why did you suspect Greeley when you knew, as I suppose you did, that he really was being of some service to Moran and Wigg? I believe that Greeley was only of service in trying to crawl out of the blot he had made with reference to the tickets being found in his pocket. If that had not come out Greeley would never have given his assistance.

4894. Do not you know that it is said that Greeley produced the tickets from the off side pocket, and that the man with him would not have known unless Greeley had taken the tickets out and had shown them to him? The information I got was that the man was pulling out his handkerchief and pulled them out by accident.

4895. Do you know Frost? Yes.

4896. Have you any reason to suspect him? I think he is saying this to clear Greeley. I firmly believe that Greeley put these tickets in his pockets for a dishonest purpose.

4897. If Frost wanted to protect Greeley what need was there for him to say a word about it? That is best known to themselves. Perhaps someone else had seen them.

4898. Why do you suspect Greeley? I believe he took the tickets for a dishonest purpose. When I cautioned him he turned round and said to me privately that Doolan was the man who was selling tickets to Siddons. I said, "It is strange that you should come and put your mate away without my asking you." As I have said, I watched Siddons three or four nights, and Greeley was the only man who visited the place. I had Siddons' license cancelled. I knew that if there was nothing in it Siddons was the first man who would put up his back and say, "Why did you cancel my license?" But he has never asked me that question from that day to this. Siddons did not know me at the time, and I don't suppose he knows me now. I went into his shop one night and asked for tram-tickets. He said he had none, and he added, "I must try and get a license. My life is pestered out of me."

4899. *President.*] I suppose he meant by persons applying for tickets? Yes. I knew that if he had been going straight he would have made inquiries as to why his license was cancelled, but he has asked no question about it up to this day.

4900. You say that you suspect Connors merely because you have seen Ferrier getting on to his tram? Yes.

4901. Many times? Yes; five or six times.

4902. Do you suspect Graham? I do not.

4903. With regard to Morgan's case, when the bells came in were they found to be tampered with? No. They were rigged with a pin. He may have got the bells in that state or they may have just gone bad when he got them.

4904. Were they not actually proved to have been tampered with? No. Although they would ring without registering.

4905.

Supt.
J. Roberts.
5 Sept., 1888.

4905. If they would ring without registering surely that was evidence that they had been tampered with? No. They might have been worn away, and they might be ringing without registering, while Morgan knew nothing about it. It would not do to condemn a man simply because he was found with bells which rang without registering.

4906. Has your mechanic, Mr. Lambert, come to the conclusion that the bells may wear so much that the application of a pin in the slot will have the same effect from mere wear as if the bells had been improperly dealt with? Lambert can point out those that have been tampered with, and those that have gone wrong by wear.

4907. Is it not a fact that Lambert pointed out with regard to Morgan's bells that they had actually been filed? He stated that one of the bells, I could not say from memory which it was, had been filed. I could not say whether he mentioned Morgan's or Fraser's bells, or whose bells he mentioned. I remember that Morgan's bell would ring without registering, but then Morgan himself may not have known of it.

4908. *Mr. Thompson.*] When Musgrave came to you what exactly did he tell you;—start from the beginning and tell us, because we want to compare what he told you with what he told us? He called on me and said that he wanted to tell me how the Department was being defrauded by the insertion of a pin in the registers so that they would ring without registering. I asked him if he could show me how, and I believe he said that if I would give him a pair of registers to take home he would show me. I said to him, "Well, Musgrave, the information you have given me I already have from somebody else. It is of no use to me now; you are late." I then came over and told Mr. Vernon and the Commissioner.

4909. *President.*] Is that all he said to you? He did not want to be very communicative.

4910. Did he not say who were doing it? He did not appear to know who were doing it. He had only heard that it had been done.

4911. Did he say how he happened to hear it? He did not tell me anything. He would not tell me.

4912. Why did he want to take home the registers to find out how it was done; did he say whom he was going to in order to find it out? Not that I can remember.

4913. He was going to do it himself? He did not say that anyone was going to do it for him.

4914. Did you hear that he brought his register to the office one night with a piece of wire in it, and that it was there all night? I did hear that he told Graham that.

4915. And that when he was asked what line he was on he was in such a funk that he could not speak? I can hardly believe that it happened.

4916. You don't believe that he left his bells in the office with the wire in? No.

4917. You think it is merely a piece of blow on the part of Musgrave? Yes; because the day after he told me he told Graham that he had bluffed me and had told me a long rigmarole.

4918. Would Musgrave be asked in the morning what line he was on? No; he would be asked on the previous night when he gave his bag in.

4919. *Mr. Brock.*] You have not much doubt about Fraser being guilty I suppose? Not the slightest.

4920. *President.*] What makes you suspicious of Fraser? Seeing him meet Ferrier and Cook so often. I also go by the man ever since he came here. By the whole of his surroundings, by his actions, and by his mode of living.

4921. You do not know anything about Cook? I know him to be a thorough scoundrel in any swindling business which may be going on.

4922. Do you know anything against him in connection with these tramway frauds? My idea is that he would not be meeting these men night after night for nothing. Why should he be so constantly meeting Ferrier and getting on to Fraser's trams.

4923. Have you anything tangible against him? No, only these things that I have seen. I know him to be a bad character, and an infernal liar. The police have been trying to get something tangible against him for years, and they cannot catch him. He is too fly.

4924. After all you only suspect Fraser. You really know nothing about him. You do not know that he has been defrauding the Department? I can't say positively that he has done so. I did not see it myself. I only know from Graham's evidence.

4925. *Mr. Thompson.*] As a matter of fact you have not been able to detect to the proof any swindling? It would be impossible for me to do that. I have done the best I could in every instance.

4926. *President.*] We have a certain something tangible against Musgrave, and a certain something tangible against Ferrier, but it seems to me that we have nothing tangible against Fraser. It only amounts to suspicion? Well, he has been about with these two men, and a pocket you remember was found in his coat. I know that he goes about betting, and that he has plenty of money.

4927. This is all indirect? I should not like to make any statement I was not certain about.

4928. *Mr. Brock.*] He said he married money? Well, I don't know; he was very hard up when he came here.

4929. Was he married then? Yes, he was.

4930. *Mr. Thompson.*] What had he been before? I could not say. He came from Burrowa way.

4931. Do you know how he got on to the trams? He was recommended to me by Mr. Finnigan. I may here say that I have seen him miss ringing his fare several times.

4932. But not to such an extent as to permit of you saying anything definite? To such an extent that I was able to tell his friend that I thought he was a damned thief.

4933. Who did you tell? I told Mr. Finnigan, who told Fraser, I believe, that I thought him a damned rogue, although there was only my word against his. Finnigan has already told another person that I asked him to caution him.

4934. If Fraser swears that Finnigan never cautioned him, he has sworn falsely? I believe he has. I believe Finnigan has told Morau that he cautioned him. With regard to Connors, I desire to say that he always did his work well, and although certain representations were made to me by his wife, I could not take any action so long as he did his work well.

4935. Was he not drunk on his car? I suspended him, but I think I gave him another chance.

4936. *President.*] What do you know about Keen? Any information which Keen has given me I have found to be true in every respect. He gave me information about the men gambling at the "Evening Star Hotel."

4937. Do they know that he gave you the information? No; he also gave me information about Graham knowing this affair.

Supt.
J. Roberts,
5 Sept. 1888

4938. How does Graham get on with his mates now? I have heard no complaints. I do not think there is any feeling in that way in the Department. I think the men are generally pleased with the idea that everything is coming out which can be brought.

4939. Do you know these Greek scoundrels—Pietro Gaspardo, for instance—at the corner of Liverpool and Elizabeth-streets? One Saturday, when I was going home, I saw Ferrier hanging about there. I got out of the tram and I said to myself, "There is something on. I will watch and see what it is." I asked Ferrier to come and have a plate of oysters. I took him into the place and gave him the oysters and paid for them. He said he had an appointment, and he went away. I think he said something about waiting for Musgrave. I walked outside, and just outside the Greek's door there is a place where they put in the shutters. I went in there, pretending to Ferrier that I went in there to pump ship. When I came out, and come along again, there was a regular commotion in the shop apparently between one of the Greeks and some one else. I could not see who it was. Ferrier cleared out and met Musgrave coming along in a tram.

4940. You do not think that Ferrier returned to the place after pretending to leave it? No; I left him at the door. He seemed to be going down Elizabeth-street. I had an idea that there was some commotion in the shop on account of my sitting down at the table there with Ferrier, but I knew my own business, and they could think what they liked.

4941. Did you suspect these people of buying the tickets? I suspected these men of buying the service tickets, because it was reported that they were bought at that shop.

4942. Who would give them to the conductors? Some of the Randwick people. Wigg and Moran also use them. O'Brien uses them. In fact there are a dozen people who use them.

4943. And you are under the impression that this row in the shop was caused through your presence—that you were recognized? Yes.

4944. Constantine was one of the people who kept this place, was he not? Yes.

4945. Have you met this man Gaspardo, who was going to give us so much evidence? Yes.

4946. Has he told you anything? He has told me nothing.

4947. You have given us the whole list of the conductors you suspect? Yes, I think so. There is Paulsen, who has been away for some time. Then there is Ferrier, Fraser, Connors, Musgrave, Greeley, and I might add a man named Ravensworth.

4948. You don't like Ravensworth? No.

4949. What reason have you to suspect him? From his surroundings. From what I have seen of him, and from his bringing in some tickets rolled up in a packet at one time. From the general surroundings of the man I do not believe he is honest.

4950. What do you think of MacMahon. Do you think he has ever sold tickets? I do not believe in MacMahon. He makes a lot of fire, but I think he makes it for his own purpose. It is funny how some of these men get rich so soon.

4951. He was on the Waverley and Woollahra line? Yes, and he is there still.

4952. *Mr. Thompson.*] Are there not several of the men who have got marvellously well off in a short time? Yes, several.

4953. Can you name any of those who you know yourself to have got into apparently affluent circumstances on the wage of 7s. or 8s. a day? I have heard that MacMahon, Godbee, and Tippin are well off. Lots of them have land and buildings.

4954. Still you do not suspect the men you are naming now? No; but I think that MacMahon is a vindictive sort of man.

4955. Why do you think that? Well he likes to have his own way, and to be the boss of the shop.

4956. Is there not a saying among the men of "What have you made to-day?" or something to that effect? In years gone by there was, but I stopped it.

4957. How did it originate? It originated through a man named Chalmers, who was on as a conductor. I put a couple of detectives on the tram. It was going to Botany, and the fares were a shilling, and all the fares were to be collected before they got to Waterloo. I sent Mr. Primrose to Waterloo to take the bells and bag, and I put two men on to count the number of his fares. He had from fifty to sixty fares, and he gave us 30s. I then dismissed him, and recommended that he should be prosecuted. We were advised however that the fares must be seen to have been given to him before we could prosecute him. After I dismissed him he came down to the yard, and he used to say, "Well boys, what did you make on this trip?" and so it came to be a sort of by-word among the men.

4958. Did you ever make use of this by-word yourself. Did you ever say it to several conductors who were standing in the lobby of your office? I might have said, "Don't you be coming Chalmers' game. Don't miss the fares, and stop that saying 'What are you making to day.'"

4959. How long is it since Chalmers was dismissed? Perhaps five or six years ago. This has since been a bye-word among all the men.

4960. You yourself never used it? I do not make that free with the men. Of course in some instances I have to make free with them, but it is for the purpose of getting information for the Department. Sometimes they will stop me in the street to tell me certain things, and I cannot always turn round and say, "Come up into my office and tell me."

4961. *Mr. Brock.*] Have you any idea of Musgrave's financial position. Has he any property? I do not think he has. I do not know anything about his private affairs.

4962. It was said that he was going to buy a public-house? There was some talk about it. I do not know if there was any truth in the rumour.

4963. *President.*] Do you know the circumstances under which Colls got into trouble about Nicholson's cheque? It has been a rule since I have been there that no cheques are to be cashed unless I initial them; no cheques whatever, whether signed by Mr. Vernon or the Commissioner, are cashed without my initials. In one instance Colls cashed a cheque for Nicholson, and I believe it was there a day or so waiting. I heard of it, and I said that it must be paid up at once, and that was done. I do not think there were any papers about it. I gave Colls a reprimand, and said that if he did anything like that again against my orders I would bring the matter before the Commissioner. I have written instructions to check the cash every week. I gave them to Mr. Tyrer.

4964. I suppose that when he was checking the cash he found this cheque? Yes. When it was cashed Nicholson was a contractor for clothes, and the money was supposed to be paid into the Bank, but it did not

not get there in time. I myself never handle the cash or tickets. I gave Tyrer written instructions to examine the tickets and cash once a week. I was absent when the cheque was cashed. This is the explanation that Colls gave me: He said that I was absent and that Mr. Tyrer was absent. He said that Nicholson had a voucher, and took it over to him, showing him that money was due to him.

Supt.
J. Roberts.
5 Sept., 1888.

4965. It would not be in Colls' power to benefit Nicholson in any shape or form? No, not at all. Colls, as far as I know, has never done a similar thing since.

Alfred Thomas Colls called in, sworn, and examined:—

4966. *President.*] You are a clerk in the tramway office? Yes.

A. T. Colls.

4967. How long have you been there? About six years last April.

4968. We have sent for you because during the evidence we have received some very suspicious circumstances have arisen in connection with yourself as connecting you undoubtedly in some way with Musgrave and Ferrier? Indeed.

5 Sept., 1888.

4969. It has been sworn very clearly in evidence that there has been some connection between you and Musgrave on several occasions in reference to this matter. It has moreover been brought out very strongly that information has been given from the office, which has as far as we can judge on more than one occasion defeated the ends of justice. Now we advise you Mr. Colls to let us know everything that you know respecting this matter, everything you can tell us respecting your connection with Musgrave and Ferrier? I shall be happy to tell you what I know about it. In the first place as to giving information out of the office I never gave a soul information for the simple reason that I did not know that there was any information to go to them, and had I received any information I should certainly not have put Musgrave up to it.

4970. I think you are beginning rather early. I should like you to begin with your first knowledge of Musgrave and so forth? I may say that my wife is his step-sister. When he first made application to go on to the trams I tried to get him on. At the first time he could not get on, but I knew he had a mother a sister and a brother to keep. His father died at my place. I tried hard to get him on and I could not do so for the simple reason that there was no vacancy. Two or three years afterwards he sent in an application again and I used what influence I had to get him a billet.

4971. Was he successful then? Yes; the last time I think it was mainly through Mr. John Harris.

4972. And to what position was he appointed? He was assistant conductor at first.

4973. Had you known him well previously? Yes; I took a great interest in the boy. When he came down to Sydney I put him to a school at Paddington for twelve months. I paid for it myself, and then I got him into a shop at Paddington.

4974. Was he in that shop at the time of his going on to the tramways. No; he left.

4975. Do you know why? I could not tell you.

4976. What do you know of his character before he entered the Tramway Department? Before he came there I would have trusted him anywhere, and so would his friends. I and my wife took a great interest in the boy on that account. After he left this place I think he went out to a man named McKenzie, a grocer at Leichhardt; he was living with him. Mr. McKenzie told me that he was one of the best lads he ever had in the place. I know he used to work there up to 11 and even 1 o'clock on Saturday nights.

4977. You just told us that up to the time he joined the tramways you and his other friends would have trusted him to any extent? To any extent.

4978. When did you first alter your opinion? The first thing I could speak of positively was the Sunday night he came to my place.

4979. How long ago? I think only about a month or six weeks ago. It was when he started to tell me about the bells. He has not been living with me for a long while back. He has been with me only about a fortnight during the last eighteen months and then he was sick.

4980. This was the first occasion you had cause to suspect Musgrave or to change your opinion of him? Of course I have known that he has been out at night billiard-playing and so forth. I have heard from him that he gambled a bit. I could never speak about it because I never saw him playing billiards in my life. He was always on the afternoon shift, and when he came home at night I was always in bed. I was away again in the morning before he was up. He did not come into the yard until 2 o'clock. He was with me for about a fortnight when he was sick. My wife sent for the doctor. When he got well he went out to his sister's. His mother was up at Young looking after some business.

4981. Have you really got down to this Sunday night, Mr. Colls? I do not think there is anything more that I could speak about positively. I know he used to go out at night, but there is nothing else that I can think of to tell you.

4982. And you are sure that he never took you into his confidence? Never in his life. He knew that if he did I would have gone straight to the office and that I would not have shielded him more than I would any other man.

4983. Well, come to the Sunday night then? He came to my place after tea. The conversation turned round to the trams not paying. I saw at the time that he was a bit fidgety. I do not know exactly what it was he said. I think he said that he could tell a way in which he could stop a lot of it. I said, "Will you tell me?" He said, "Yes, I will tell you." So he told me how the bells could be altered. About a couple of Saturday nights before that I was going home in one of the trams, and it seemed to me that one of the conductors did not ring for all the tickets. I mentioned this matter to Musgrave, and he said to me "He will ring for them, because he would ring and you would not know anything about the tickets, for the simple reason that the bells could be worked." I said to him, "Do you mean that sometimes when the bell rings it does not register?" He said, "Yes, it will ring and not register." I said, "The best thing you can do is to come down to Mr. Roberts with me at once." This was on Sunday night at half-past 7. On thinking the matter over it occurred to me that, it being Sunday night and church-time, Mr. Roberts probably would not be at the office; so the first thing on Monday morning, directly I came to the office, I walked straight up to Mr. Roberts' room, and asked him if he would send for Musgrave as he had something to tell him. I think Musgrave came in on the Tuesday afternoon. Mr. Roberts, I know, sent for him on the Monday, but I think he was off. I think that is all I can say about the matter. I did not hear any conversation between them. I know that Musgrave went to Mr. Roberts, and I think that it was on the Tuesday. I not only mentioned the matter to Mr. Roberts the first thing on the
Monday

- A. T. Colls. Monday morning, but I tried Musgrave a dozen times afterwards to see if he would give me any more information about it. He said, "If I went to goal to-morrow I could not give any more information." I said, "Can't you give me some idea of any of the conductors who are doing it?" and he said, "No."
- 5 Sept., 1888.
4984. Had he his bells with him on that Sunday night? Yes.
4985. Did he show you how they were worked? No.
4986. Did he not put a piece of wire in? No.
4987. Surely on this Sunday night he told you a great deal more; did he not tell you the details of the thing, how he had learnt it and so forth? No; I never asked him the question.
4988. Did he not say that he had known it for a very long time? He did not tell me.
4989. Did he not say that a certain man had been pestering him for the last twelve months? No; there was very little conversation at all. He had to get back to his tram by half-past 8. As soon as he told me he walked out; and I said, "I will tell Mr. Roberts the first thing in the morning."
4990. Did he not speak of a certain man haunting him for twelve months? I never heard a word about that. The conversation was only about 10 minutes. My wife was sitting in the dining-room, and he called me out into the verandah, just before he went away, and told me there.
4991. When was Musgrave last staying with you? About the Centennial time. He was there a fortnight when he was sick.
4992. Are you sure of the time? It was about that time.
4993. Is that the last time? He has called there to see his sister.
4994. Did he say nothing to you about this matter at that time? No, because he was very bad. He was in bed.
4995. What, during the Centennial week? It was somewhere about February, I think. The first intimation I got about it was on this Sunday night. If he knew before that he kept it to himself.
4996. Was he on sick leave when he was with you? I think so; I could not say.
4997. *Mr. Thompson.*] What was the matter with him? I think he had a strain. It was a strain or a rupture. I know he had something the matter with his testicles.
4998. Did he not get some dirty disease from a girl? Not at this time, I think.
4999. But at some other time? I know that he has had it often. When the doctor came I helped him to bandage up one of his testicles. It was very much swollen, but whether it was from what you speak of or not I do not know.
5000. He was in the Service at the time? Yes.
5001. *President.*] You said just now that he did not tell anyone about the bells? None of our people. He did not say a word to me. I do not know whether he told anyone else.
5002. Is it not strange that he should tell others and not you? If he had said one word about it to me I should have reported it long ago.
5003. It is unquestionable—there is not the shadow of a doubt about it—that information got out of your office. For instance, on one occasion the Inspector-General sent a private communication to your office, which would in all probability have led to the detection of this fraud. Within twelve hours of that private communication being sent to your office it was all over the town? Well it never came from me.
5004. Have you any suggestion to make as to the quarter from which the information came? About the letter?
5005. Yes? No.
5006. It is not a suspicion, it is an absolute certainty, that this private information was spread all over the town in twelve hours, to the great disgust of the police in charge of the case, who threw up their hands at once, and said, "If this kind of thing is to take place it is of no use our trying to help in the detection of the frauds; we shall be thwarted"? It never came from me.
5007. Have you any idea where it came from? Not the least. If I had I would tell you.
5008. *Mr. Brock.*] Did you see this document? No.
5009. You have never seen it? No.
5010. Who would be likely to see it besides Mr. Roberts? I do not know of anybody else.
5011. Are you often in Mr. Roberts' office? Upstairs?
5012. Yes? Not often.
5013. Does any one go to his office when he is out? Yes, they go in and out.
5014. *President.*] Who? Possibly the clerks. I have sometimes gone up to his room to enquire for him.
5015. Does he not lock the door and take the keys with him? No.
5016. You have told us of your limited acquaintance with Musgrave, and the statement has surprised us, because we thought the acquaintance was a very familiar one? No, it is not.
5017. We shall be glad to hear of a man named Ferrier? I have known him as a conductor on the cars.
5018. Nothing more? Nothing more; only that I think that he and Musgrave used to knock about together at times.
5019. How often have Ferrier and Musgrave met at your house? Once.
5020. With Musgrave? Yes. I was not at home; I only know of it from Musgrave.
5021. You know that Ferrier was dismissed? Yes.
5022. On the 14th of July? Yes.
5023. We want to know what took place when he went with you to your house after that? Ferrier went to my house, do you say?
5024. Yes? He never went to my house—never.
5025. Will you carry your memory back to an occasion on which you rode on a tram with Ferrier after his dismissal? I recollect the day well.
5026. It was in the direction of your house? Yes.
5027. You got up on to the tram together, and you got down together? No, we did not.
5028. Without wishing to say anything offensive to you it does seem to us very strange that an officer holding the important position in the Department which you hold, should allow yourself to be, for one moment, in the company of a man who had been dismissed for improper conduct in connection with these frauds? That is likely to occur any day. I will explain the reason I was on the tram, and how it occurred:

- occurred: I got on to a Waverley tram at King-street, and I met inside Mr. Thomas Tout. We both got out at Shalvey's, at Bathurst-street. We were talking there about 5 minutes. It was nearly 1 o'clock, and Mr. Tout asked me to go and have dinner with him. I said I could not go because my wife would be waiting for me, knowing that I generally came home in the 2 minutes past 1 to Crown-street. While I was waiting Ferrier came up. I do not know where he came from. He told me that he had been dismissed. I said that I knew that. The Crown-street tram came up, and I got on to it. Ferrier followed me upstairs, and stood alongside of me. I fancy he got off at Mark Foy's, but I never saw anything more of him after that. When he was standing alongside of me the conductor came up and demanded his ticket. He nodded his head, as much as to say, "Pass me." I heard Quin, the conductor, demand his ticket. The tram on the top was packed. Although we were standing close together I do not think we said two words. I knew perfectly well the position the man was in. I went straight home, and the conductor in charge of the tram can bear out that part of my statement.
5029. You are absolutely certain that on one occasion he did not go to your house? I have never seen him there with my own eyes in my life.
5030. *Mr. Thompson.* You are sure that he did not pass the corner of Crown-street? I could not say whether he did or not; I took no notice of him.
5031. *President.*] Although he was standing alongside of you? I think he got out and went down Brisbane-street, at the corner of Mark Foy's.
5032. Do you remember the occasion on which Ferrier had a meeting with Greeley, in Greeley's bedroom? Only from what I saw in the papers.
5033. Just try to recollect yourself? I do not recollect anything about it. The first thing I knew about it I saw in the papers.
5034. We know that Musgrave's confidence to you on that Sunday night was immediately after Ferrier was with Greeley in his bedroom? Yes; I found that out since.
5035. And immediately after Ferrier knew that he had been detected by the officers of the Department; in other words, immediately after he knew that the game was up; and on the next night Musgrave went to you and made a sort of semi-confession? The chances were that he had heard something and thought it was a good idea to come to me.
5036. The chances are strongly that he had? I do not doubt it for a moment. But as to Greeley and Ferrier meeting, I knew nothing about it.
5037. You were not aware of in any way conveying to Musgrave the risk he was running by still keeping silent on the matter? No, I am not. The first information I got was on that night I have told you about. I tried dozens of times afterwards to get Musgrave to let it out and to tell me all that he knew about it, and I persuaded him to go to Mr. Roberts.
5038. You are quite certain that you are being absolutely candid with us? I am, indeed.
5039. All I can say is, that if you are candid, you are very unlucky to have had your name mixed up with the thing in the way in which it has been? Yes; it has been very unfortunate for me. With regard to what happened on the day I met Ferrier: if you have any doubt about it I can get Mr. Tout to come here as a witness.
5040. But Mr. Tout had no connection with your ride with Ferrier? No; but I was going home to dinner, and Ferrier happened to get on to the same tram.
5041. What we should like to have proof of is that you and Ferrier did not get off the tram together? Quin, the conductor, can prove that.
5042. *Mr. Brock.*] Was there any one else you knew on the tram? Conductor Stack was standing up there; I think he got off at Crown-street.
5043. How is it that you did not see Ferrier after you had passed Mark Foy's? I never took any notice of him.
5044. Were you not standing talking together? We were not talking.
5045. But you were both on the top of the tram together? Yes; I was standing in a corner, and he was standing alongside of me.
5046. Was the car crowded? Yes.
5047. He was not there as your companion? No.
5048. And you did not notice where he went off any more than you noticed where any other passenger went off? No.
5049. *President.*] You remember Stack seeing you with Ferrier;—do you remember Stack making some statement at a meeting of the men in connection with the matter, and do you remember on the next morning taking Stack to task about it? Not the next morning.
5050. But soon after? I saw him on the Sunday morning, and asked him if the statement in the papers was correct. He stated that it was not, and that he did not intend it as it appeared in the papers.
5051. What was said in the papers? It was said that Musgrave had a brother-in-law in the office. This is said what Stack is said to have mentioned; and I asked him what it had to do with this arrangement at all. From the way in which Stack used the words it seemed to convey an imputation that I was mixed up in the affair. That was the way it went into the papers.
5052. And you asked him what it had to do with the frauds? I asked him if they were the words he had used. He said he did not mean it in the way it was put in the papers, and that if I wanted a report to that effect he would give it out.
5053. Did he not say to you, "I told nothing but the truth and I won't go back from it"? I do not recollect his saying a word about it. We were in the office, and it was on Sunday morning.
5054. From what you say it would appear that he offered to go back from what he had said? He said that he did not intend it in that way.
5055. What do you mean when you say "in that way"? He merely stated a fact. It is true that he is my brother-in-law, but as it was in the papers, it conveyed the idea that I was mixed up in the matter, or that Musgrave did not get the sack before he did on account of his being my brother-in-law. The inference being that I had used some influence in his favor.
5056. Was not Musgrave dismissed at the time of the meeting of the men? I do not know whether he was or not. He may have been; I did not take much notice. He was kept on for a week or so after the other men were dismissed. From what I can make out the men had the idea that he should have been dismissed or suspended at the same time as the other men.

- A. T. Colls. 5057. Do you know nothing more about Musgrave in connection with these frauds? I do not know a word. If I did it would have been out long ago. In fact I gave all the information I had to the Department. I knew that some second-hand tickets were being sold.
5058. Where? At a shop in Crown-street. I did not buy them; they were bought by a friend of mine named Osborne. He got four new tickets and two old ones. I asked him to give me the two old ones. He would not take the 2d., but he gave me the tickets. I brought them to the office the next morning.
5059. What was the result of that? I think Mr. Roberts told the men about it.
5060. What shop was that? A little shop at the corner of Foveaux-street. A woman kept it then.
5061. Is it a grocery shop? No; a little fruit-shop.
5062. Had they a license? Yes.
5063. Are you sure that the two tickets had been used? I was almost positive or I would not have asked for them; I gave them to Mr. Roberts.
5064. Could they not have got dirty in the stock? No.
5065. You were certain that they were used tickets? Yes; quite.
5066. Did you send Osborne in for the tickets? No. He was staying at our place, and I happened to see the woman give them to him. I tried the place half-a-dozen times afterwards, and I could not get any more; I tried it at different times of the day.
5067. You got tickets? Yes; but not used ones.
5068. I suppose you were known to be in the Tram Office? I do not think she knew I gave her her license; I do not think she knew me. She may have got the information since I went to live there, but that I can't say.
5069. Talking of licenses;—do you remember Musgrave coming to you to try and get a license for a man named Dominic Lacerda, a barber, at Waverley? I remember something about it. He did not try to get it that I know of. He asked me in what way the man could get it.
5070. What did you say? I told him that the man must send in an application. The man sent in another name, but it was found out afterwards who he was.
5071. Did not Musgrave ask you to try to get that man a license? I do not recollect his asking me; I do not think he did.
5072. Was it not an unusual thing for Musgrave to come to you and ask you how a man could get a license? He had no right to come and ask me about it. I understood that he had been in his shop several times.
5073. Did not Musgrave tell you you would be doing him a good turn at the same time if you helped this man to get a license? I do not see what good turn it could do him.
5074. Will you swear he did not say that to you? I will not swear. I cannot recollect.
5075. Was not your impression that Musgrave was taking an interest in this man getting a license? The chances are that he may have been.
5076. What do you know of this man Dominic yourself? I will tell you: I was talking to a policeman at the corner of a street one Sunday night—at the corner of Newland-street, at the old South Head Road.
5077. What was the man's name;—was it Stove? I can't say. He was a tall sandy-whiskered man. I saw him yesterday in town. We were talking about the robberies there, and he said there are some bad coves about here; that barber is a bad man. I said, "I am glad you told me that he is not a good man, because he was applying for a license."
5078. You said you would take care that he did not get one? Yes.
5079. It is left in your hands to arrange these license matters and to report upon them? Yes, I reported against him.
5080. You said he ought not to have a license? Yes.
5081. Is your report in writing? Yes.
5082. I suppose the records will show it? It is there somewhere. I did not say that I put it on paper that he was a bad man. There was another man with a ticket license alongside of him which prevented him from getting another, but that would not deter me from putting on paper what I thought of the man.
5083. Did you not say to Musgrave, "This man you came to me about trying to get a license for is a good-for-nothing fellow?" I think I did; I think I told him that I thought the man was a rogue.
5084. Did you not tell him to be more careful, seeing that upon his representation you might have given the man a license? Of course I might have got into trouble, because he was a bad man—in fact one of the worst, from what I can make out.
5085. You say that Musgrave gave you no confidence, and that you knew nothing of his complicity with very suspicious characters until the Sunday night when he came to tell you a certain thing? Until he came to tell me.
5086. Did you not know from your position in the office that Musgrave had been a suspected man for a long time? I had an idea that he was suspected.
5087. Don't you know perfectly well that some months ago he had his bells taken from him? I heard it on the next day.
5088. Did you ever warn Musgrave that he was a suspected man? No, I don't think I did.
5089. And that if he did not look out it would end in his dismissal? I did not tell him that. I would not tell him.
5090. With regard to the constable's report, sent in by the Inspector-General of Police in which Musgrave's name was mentioned as having some connection with this very man Dominic;—do you mean to tell us that you did not see him on the day after that report reached the tramway office? I did not.
5091. Now be very careful? I am careful.
5092. Are you sure that you are not making a mistake? I have no recollection of ever seeing him. If I had seen him I would certainly tell you.
5093. That was the case in which the constable heard the next morning that the whole thing was out? Well, it never came through me.
5094. Did you not hear of a report to the effect that Musgrave had been arranging for the sale of tram-tickets to this man Dominic? I never heard a word about it—never.
5095. You are not surprised now when you hear that that was the substance of the report. You can now understand why Musgrave was so anxious that Dominic should get a license? From the look of it, and from what I have been told, I do not wonder at his trying to get the license.

5096. If Dominic had not a license he could not sell any tickets whether obtained honestly or dishonestly? No; he could not sell tickets at all.
5097. And you never saw this police report in which the matter was mentioned? I never saw it.
5098. Did you know about it? I heard of it some time afterwards.
5099. From whom? I heard in the office that some policeman had reported Musgrave.
5100. In the office? Yes, I heard the remark passed there.
5101. Who told you? I could not say. The chances are that I heard it in my room.
5102. Was it Mr. Roberts? No.
5103. Was it Mr. Bowden? No I think it was among the clerks.
5104. It was not Mr. Tyrer? No.
5105. How long ago was it? I could not say. I heard something about it a week or ten days afterwards.
5106. About how many months ago? Only about two months ago I think, is it not?
5107. Why this so-called confession to you on the Sunday night is as nearly two months ago as it can possibly be. You are not noting the progress of time? I do not quite remember.
5108. How long before that time was it that this police report was talked about? I think it was after that.
5109. The police report was after that? I think so.
5110. Why it must have been months before? I do not know anything about that report then. The report you are asking me about is one that was known a couple of days afterwards where my name was mentioned as being a brother-in-law of Musgrave's.
5111. *Mr. Brock.*] Do you know the date of the last report? No.
5112. Do you know what rank the constable who talked to you held? I do not know what rank.
5113. *President.*] We are talking of the report sent in on the 12th July. That report you say you never saw, but you say that you heard it talked about in the office? Towards the latter end of the week.
5114. *Mr. Brock.*] Do ordinary reports generally go to you? I never see a report.
5115. You have nothing to do with the records? No. Only with the cash and tickets.
5116. Who attends to the records? Mr. Bowden. The papers never come down stairs. I am down stairs, and all the papers are sent up stairs. The only papers that come to me are in connection with ticket licenses.
5117. When applications are made for a license you go and make inquiries? Yes.
5118. You visit the places? Yes.
5119. And inquire into the character of the people? Yes. And if there is anyone else selling near.
5120. *President.*] I suppose the fact of the matter is that you have not been sufficiently particular hitherto in inquiring about the character of the people. You have only had in view the fact of there being any one selling tickets near to the place? I generally look to the character of the people.
5121. How do you find it out? The best way I can; I just ask people about what they think of them.
5122. Have you never heard that conductors have been selling tickets? I have heard that they have been selling tickets. At least there was a report about that they had been selling them. Not only that but my wife has bought some.
5123. Where? She told me that she was going to Leichhardt once and that she bought six-pennyworth or a shilling's worth of tickets at the corner of Elizabeth and Liverpool streets.
5124. Had they a license? Yes. When she came home she told me that she thought that two or three of the tickets had been used. I asked her why she did not bring them to me. She said she was almost certain that they were second hand tickets—that they had been used.
5125. These people still have a license have they? I think so.
5126. Have any steps been taken to inquire into the matter further with a view to the stopping of the license? I have not heard anything. I have not been there for the last three months.
5127. When was this purchase made by Mrs. Colls? About twelve months ago.
5128. So long back as that? It must be all that. She said that she was not certain but that she was pretty well sure that they were used tickets.
5129. Did you ever try to buy any of these tickets for yourself at this place? I did but I got good ones. I tried one Saturday night coming from the railway.
5130. Do you know whether you ever brought your suspicions under the notice of the Department? I do not know that I did not bring them under the notice of Mr. Roberts or the detective, or the detectives. I don't remember.
5131. *Mr. Thompson.*] Did you take that course in regard to the shop at the corner of Foveaux-street? Yes; I brought the tickets down to the office the next morning.
5132. *Mr. Brock.*] You said that you were travelling in a tram one night and you said you did not think the conductor rang for all the tickets. Did you take any notice of that? I told Musgrave about it when we were talking as I told you. I said, "I did not think that this conductor when the compartments were full rang for all the tickets."
5133. Did you not notice the conductor? I did not take much notice of him to tell you the truth. The car was crowded and there were several people standing up. I fancy the conductor was Fraser.
5134. *President.*] One would think from your position Mr. Colls that you would take particular notice? The tram was crowded. I was standing up. The conductor got the passengers to collect the tickets, and he stood at the side and rang away. It was on Saturday night at about half-past 10.
5135. Were you confident that the man did not ring? I heard him ring but I do not think he rang the number.
5136. Were you confident that he did not ring sufficiently often? I could not say. I could not be certain.
5137. *Mr. Brock.*] You had not enough to go upon? No, because so many tickets were passed down.
5138. *President.*] You heard these rumours of fraud and you thought that possibly this man might be practising it? I never heard any rumours of frauds before these frauds came out.
5139. *Mr. Brock.*] Do you not know that there were rumours of fraud when Musgrave's bells were taken from him? I heard that frauds were going on. I heard that conductors had been making away with the tickets, and that people were buying tickets which it was known had not come out of the office.
5140. You had heard these rumours, and you thought that the fraud was being done as this man was doing it—that is, by ringing short? Yes; that is the way in which I told Musgrave I thought it was done.

- A. T. Colls. 5141. You suggested this to Musgrave? I told him I did not think this conductor rang often enough. He said that I was wrong, and that if the man wanted to do it he could fix the bells, and then could ring as long as he liked without registering. I said to him, "You do not mean to tell me that they can pull the bells without registering?"
5142. *President.*] Had he his bells with him on that occasion? I fancy he had his bag and bells with him, but I would not be certain.
5143. And he never attempted to show you how the bells could be rung without registering? He did not. My wife was sitting inside, and he could not do it out on the verandah. He said that the bells could be faked in that particular way, although he said that he himself had never done it.
5144. He lived with you for a considerable time, and you have been, to a certain extent, intimate with him. You took an interest in the lad, and so forth. I presume that in your dealings with him you were not severe with him? No.
5145. You knew that he had little failings. You knew that he was not quite regular, and that he had had a disease two or three times? Yes, I knew that he had had that.
5146. You knew that he was frequenting gambling-rooms and so forth. What did you say to the lad: As far as I can understand you looked upon yourself as being to a certain extent responsible? Yes; pretty well, until he got into the tram service and could earn wages.
5147. How did you deal with him when you found out that this kind of thing was going on; that he was diseased and so forth? I never had anything to say to him about that. His sister was the one who talked to him.
5148. *Mr. Thompson.*] Was he diseased when he was in your house? Yes.
5149. Did you allow him to be there in that state? Well the doctor was attending him.
5150. You did not threaten to turn him out? I do not recollect saying a word about that.
5151. *President.*] That leads me to this question: you were very benevolent towards him always? I have always acted well towards him.
5152. And yet you tell us very distinctly that this young man never confided in you in any way with regard to what was going on. For instance, when Mr. Roberts had the bells taken away from him he did not come to you and say, "You have known me since I was a youngster. You have taken a great interest in me. I am suspected of fraud?" He never said a word. He never let me know anything until that Sunday night.
5153. *Mr. Brock.*] Did you never hear of his buying a hansom? No.
5154. Up to the present time you had not heard that? No.
5155. *President.*] Did he confide in you in other matters. Did he tell you about the women he kept, and so forth? He never told me. I knew that he was living with one, and I told him he ought not to do it. He said that he was going to marry the woman.
5156. He did not confide in you at all in these matters? Not at all.
5157. Did he confide in you as to his monetary matters, as to his losses at gambling, and so forth? He never said a word about it. I know that he made some money once over some races at Melbourne. I knew that he was gambling to a certain extent. I heard it from some of the conductors before I heard it from him. That is as to his winnings at Melbourne. I knew that he won forty or fifty pounds, or something like that.
5158. Has he any money now? I do not think so.
5159. You have been already asked if you cautioned Musgrave when you knew that he was suspected—when his bells were taken away from him? I did not. I do not think that if I had known I should have told him. If he was up to the game, why should he not be caught the same as anyone else? I would not shield him any more than I would shield any other man.
5160. What did you think when you heard that his bells had been taken away from him? I thought it was suspected that he had been up to the game.
5161. Did you not suspect him yourself? I did not.
5162. Did you believe him to be honest after all that you knew of him? After all that I heard about him, I could not think that he was very honest. I saw nothing to lead me to change my opinion. It was only what I heard.
5163. Did you never ask Musgrave how he came to have his bells taken away from him? I never asked him.
5164. *Mr. Thompson.*] How long do you suppose there was between the time of his dismissal and the time at which his bells were taken away from him? His bells, I believe, were taken away from him about three or four months ago.
5165. *Mr. Brock.*] Did you ever ask Mr. Roberts why Musgrave's bells were taken away from him? I never asked him.
5166. *President.*] Are you intimate with Mr. Roberts? Well, I know him.
5167. Do you converse with him on subjects of that kind—that is, as to the conduct of conductors, and so forth? No; I have nothing to do with that. I look after the returns, the tickets and cash, and so forth.
5168. Mr. Roberts never consults you in the administration of the tramways? No.
5169. You have no idea as to the way in which these things go out of the office? I have no idea—not the least. I myself have nothing to do with the papers in the office. My room is downstairs and the papers are upstairs.
5170. Do you know that it was a common expression among these rogues to say they could not be caught because they always got the "griffin" from the office? I saw so from the report in the papers. The first I saw of it was in the papers.
5171. You can form no idea, helpful as it would be to yourself, from what quarter these things came out of the office? I have not the least idea.
5172. Everyone is of opinion that the news came from yourself? They are mistaken then.
5173. That is the universal opinion? Well, it is a mistake. I suppose they think that on account of my being related to Musgrave, but I never shielded him. That is a mistake.
5174. You say, in point of fact, that you would be the first to give information? If I saw anything wrong with Musgrave I would be the first to tell of him. In any case where I have found anything wrong with the others I have always done so, and I would do the same to him. In fact I should be the more inclined to do so if he did not know how to behave himself. 5175.

5175. *Mr. Thompson.*] Did it not strike you that there was a double duty on your part to speak to Musgrave, not only as an officer of the Department but as being connected with him by marriage—by a close tie? —
5176. Did you not think it your duty to point out to him that, the way he was going on keeping women, and constantly getting disease, spending money on gambling and at the races, was anything but the conduct which should characterise a young man in his position? He has had plenty of advice from me.
5177. I thought you said that you gave him no advice? Well he was staying out at night. That was all I knew.
5178. You have said that you knew that he was diseased, and that you also knew that he was given to gambling and horse-racing;—how can you say that you did not know what he was about? I did not say that I knew he went with women. What I said was, that I did not know anything I could swear positively about, it was chiefly what I heard.
5179. You must have known that he went with women, and all that kind of thing, because he came home diseased, and was actually nursed in your house? Of course I could tell from that.
5180. I want particularly to draw your attention to the time which you said you believed was February of the present year, when Musgrave was laid up for a fortnight with a swollen testicle;—I wish you to fix your mind as to when that was? About the time?
5181. Yes? I said I could not fix it, but I think I could find out from my wife.
5182. *Mr. Brock.*] Are you sure he was there a fortnight? I do not believe it was so long.
5183. Between a week and a fortnight? Somewhere about that time.
5184. Were his wages going on? I do not think so.
5185. Have you anything to do with the payment of any of the men, or the arrangement as to how much they are to be paid for overtime? No; nothing at all.
5186. You do not know how that is carried on? No. That is a matter for the time-keeper.
5187. Where do the tickets which are brought in by the conductors go to? Into the front room, to Mr. Primrose's room. I have nothing to do with that room. Until about three months ago that front room was under the audit office. We have nothing to do with that room at all. It belonged to the audit of the railways. My room is at the back. When the conductors came in off duty their bags are taken to the window and emptied. The register is read, and the tickets are put into boxes and weighed.
5188. They weigh them? Yes. That is the present check; before, they used to read the register, and throw the tickets into the fire-place to be burnt. Now there is a different system. The bells are read down in the yard by some clerks in the audit office. The cash and tickets are taken at Phillip-street, and the tickets are weighed up there, and then they are burnt.
5189. You know Mrs. Johnson, of course, very well? Yes; she is a sister-in-law of mine.
5190. In what way does Mrs. Johnson provide for herself and for her family? Her husband is dead. He died at sea. He was a surveyor. He left some money beside a life insurance policy for £500. There was a draft upon him coming out for £280. I think under his father's will he was allowed £4 until 1893 or 1894, until one of the youngest children at home came of age; then there is about £16,000 or £17,000 each for them.
5191. How is it under these circumstances that Mrs. Johnson is obliged to keep lodgers? I could not tell about her business, that is, about her keeping lodgers. I seldom see her.
5192. You do not know that she keeps lodgers? No, I do not.
5193. Don't you know that she has a man named Hay living there? I know that he is staying there.
5194. Is he paying for his board? I do not know whether he has any means to pay for it. He is working about the place, digging up the garden, and one thing or another. He came to stay there after they got word about Mr. Johnson's death.
5195. *Mr. Thompson.*] Who is there who would have an opportunity of seeing confidential reports that come into Mr. Roberts? I suppose Mr. Roberts would see them, and that Mr. Tyrer would see them, and that they would then go on to the record clerk.
5196. Would that apply to a confidential report? No, only to general reports.
5197. I was speaking of confidential reports? I could not say about these; I do not know whether they would register them or not; I do not know the rule in regard to papers of that kind, but ordinary papers would go to Mr. Roberts or the chief clerk, and would then be registered.
5198. Then anyone who would care to see the general reports would know their contents? Yes, I suppose so, if they wanted to find out or to see anything.
5199. Where is Reegan employed? He is over at the office.
5200. I suppose that, in the course of his duty, he has to be all over the office? He is generally all over the place.
5201. He is no relation of yours? No; he is in a different family altogether.
5202. *President.*] What does he do in the office? He is a messenger.
5203. *Mr. Thompson.*] Do you know that he is very intimate with Musgrave? I did not know it, if he was.
5204. You really do not know it? I could not say; I never went out at night, so that I should not see them.
5205. You used to live at Waverley; when did you leave there? A little over three or four months ago.
5206. I wish to ask you what you may consider rather an impertinent question. Do you remember a man named Grono? Yes.
5207. Did anything occur to you antecedent to your joining the Tramway Department in which that man was connected? No.
5208. Or since? Not that I know of.
5209. Was it with regard to a cheque—before or since you joined the Department? Regarding a cheque.
5210. What was it? There was a cheque in the cash over there, and it was held over for a few days; it was a cheque of Nicholson's that I cashed, and it was held over for three or four days.
5211. Who is Nicholson? A tailor; a Government contractor.
5212. Who is Grono; what had he to do with it? I think Grono at that time was relieving one of the ticket clerks over at the ticket office.
5213. Well? That is all.
5214. But how was Grono mixed up in the matter? He was the ticket clerk, I believe; I asked him to hold over the cheque for a couple of days.

- A. T. Colls.
5 Sept., 1888.
5215. Was that a cheque which you took in payment of tickets? No; it was a cheque which I cashed out the takings.
5216. You were responsible for it? Yes.
5217. What was the amount? I am blessed if I could say; I think it was about £6 or £7; I do not think it was any more.
5218. Did the man tell you when he gave it to you that it would have to be held over? He asked me if I would hold it over for a couple of days, and the fact is that I had to pay it afterwards myself.
5219. It was dishonoured on presentation? Yes.
5220. Who signed it? Nicholson, the tailor.
5221. Did he not pay you? I got it afterwards, but I paid it myself meanwhile.
5222. He was a Government contractor, you say? I do not know whether he was then, but I know that he does contracts for Government clothes.
5223. He was not contractor for the tram uniforms? I do not believe so.
5224. Did it not strike you that you did rather an improper thing? Yes; it was. I found it out afterwards. It was a very foolish thing on my part, and I was very nearly losing my place over it.
5225. It was not a correct thing to do? I admit that I have had a lot of trouble about it.
5226. Before you came into the Department what business were you employed at? The last thing I was farming up country.
5227. Were you never in the employment of a bank? Yes. The first place I went into was a bank.
5228. How old were you then? I was about seventeen, or younger than that.
5229. How long did you remain in the bank? I was about four and a half years at Yass and Wagga.
5230. Did anything unpleasant take place with regard to your accounts, necessitating your leaving the bank employ? Not at Wagga nor the other place either—nothing in regard to the accounts.
5231. What was it then. Something else occurred? There was a party at the Manager's place one night. I was pretty young, and I came down on to the stairs, where I met one of the servant girls; I put my arm around her, and Mrs. Cottie was looking over the staircase, and saw me. Through that I found out that Mr. Cottie was going to dismiss me, and I resigned.
5232. That was the only matter in regard to your connection with the bank that was at all disagreeable? Yes; there could not be anything else, because I was ledger-keeper there all the time. I had nothing to do with the cash at all.
5233. But where you are now you have everything to do with the cash? Yes; and I have had for the last six years, and with the tickets too.
5234. You sell the tickets in sheets? Yes. We get a supply every week. On an average we take about a thousand pounds' worth a week for our ticket clerks.
5235. And what check is kept upon the quantity that comes in? There is a check in two or three different places. A check is kept by the accountant and the traffic auditor, and then there is the Auditor-General. He comes round three or four times a year, and goes through the accounts.
5236. But who goes through the tickets to show that a pound's worth at a time does not go without being accounted for? They could not very well take them out by the sheet.
5237. Who has the keys of the safe? I have.
5238. How often do you balance your accounts? Nearly every time I get tickets. It does not take me 10 minutes to balance my accounts.
5239. What do you do with your cash? Every morning it is sent to the cashier for Railways.
5240. What did you do with the cheque you have mentioned? I put it in as cash.
5241. Do you mean to say that the cashier took that cheque as cash? It was held over in the cash.
5242. You gave it to the cashier? It did not go to the cashier at all. It went over to the ticket-clerk.
5243. Then your cash must have been wrong. If it was held over and not paid to the cashier you must have sent in an untrue account of what your cash was? I held it over because I knew then that it was no good.
5244. Is it not a fact that to the extent of that amount you made an untrue return to the cashier during the two, three, or four days it was held over? Instead of sending in the cheque it was held over.
5245. You sent in a statement did you not? No.
5246. You did not cook the accounts? No, I did not.
5247. Whose duty is it to send a statement into the cashier with the cash? I send in what they call a remittance-note.
5248. Did your remittance-note not show that you were short by £7 or £8 every day that you held over the cheque? No, it would not show.
5249. Then, as a matter of fact, you sent in an absolutely false remittance-note during the whole time the cheque was held over? Of course the money for the cheque should have gone in, but it was held over. I cannot say that there was a false remittance-note. The remittance-note was correct. Of course if the cheque had not been there the chances are that there would have been £6 more going in.
5250. Do you send in a statement of the tickets you sell every day? Statement of money.
5251. Do you make a statement of the tickets you sell each day representing that cash? No.
5252. Where does the cheque come in then? You are debited with so many tickets? By Mr. Lewis at the stationery office there is a requisition prepared. I make application for £1,000 worth of tickets. That is taken up to Mr. Roberts and signed. Then it is registered. From there it goes to the traffic auditor, who takes a note of it, and puts his initials on, then it comes to Mr. Lewis, the stationery clerk, and it is brought up here for the Secretary's signature; then I am supplied with the tickets.
5253. Who debits it against you;—the traffic auditor? The traffic auditor, Mr. Lewis, and the Auditor-General.
5254. But when do they make a check to find out whether you have accounted for what you have sold? The Auditor-General comes round three or four times during the year.
5255. *President.*] But you send in a return to show how many tickets you have sold surely? Every day there is what they call a statement—there is a daily statement.
5256. Where does that go to? To the traffic auditor with the returns.
5257. You send a statement of your sales to the traffic auditor, and of your cash to the cashier. When does the check take place between these statements to see if they agree? When the cash goes into the cashier there are two dockets with it. He initials one and sends it back to me. I paste it in the book for
my

my own safety down at the office. Then the statement is sent up to the traffic auditor every day from the cashier for railways.

5258. *Mr. Thompson.*] Therefore, on the day on which you accepted Nicholson's cheque and held it over, the traffic auditor must have noticed a discrepancy between your cash and your statement of tickets? He could not notice it.

5259. Why not? When the cheque was left there was £8 taken out.

5260. *President.*] Have you a certain amount of floating cash, a suspense account? No.

5261. Then how could you borrow £8 without showing a discrepancy between your traffic auditor's statement and your cashier's statement? At 1 o'clock, when that cheque was cashed, the boy had £20. I asked him to cash it and hold it over for a couple of days. It was never sent in.

5262. But would it not then appear from your account that £8 worth of tickets had been sold and not accounted for? They were accounted for by the cheque which was held over.

5263. Leaving the statement to the traffic auditor £8 short? No.

5264. But there must have been a discrepancy between the statement of the tickets sold, and the amount paid in? £8 were taken out, representing £8 worth of tickets sold. It did not go into the accounts for days afterwards, when I paid the money in and took the cheque out.

5265. Did not the traffic auditor discover any discrepancy in the statement? He could not find out, because the cheque was held over in the cash.

5266. *Mr. Brock.*] But did not the value of the tickets appear in the statement that day? No. If I had not got the cheque £8 more would have gone through that is all.

5267. *President.*] Suppose you sell £50 worth of tickets to-day? Yes.

5268. But because of a cheque, which you have cashed and are going to hold over, you only send in £42 in cash? Yes.

5269. Does not your statement go to the traffic auditor showing that you have sold £50 worth of tickets? No; for the simple reason that they do not get in all the money.

5270. Then there is a suspense account? Each ticket clerk has a floating account of £50 backwards and forwards.

5271. How often is your floating balance checked? I generally used to go through it once a fortnight.

5272. But you are no check upon yourself? But I am upon them. I am responsible for their money.

5273. Who checks you? Mr. Tyrer.

5274. How often does the traffic auditor do it? About three times a year.

5275. Was this thing not detected? No. It was only a matter of three or four days.

5276. But was it not detected and reported to the Commissioner? I think there was something about it.

5277. But you said something about getting into trouble and nearly losing your place? There are the papers. It was about four years ago.

5278. What happened? I could not say unless I saw the papers.

5279. What papers? There was a row about it.

5280. Who detected it? I could not say who it was.

5281. Was anything done to you? I do not recollect. It must be five years ago.

5282. How did you come to take the cheque from Nicholson;—what did you take it for? I cashed the cheque for him.

5283. And passed it into the Government cash? I held it over.

5284. But where did the money you gave Nicholson come from? That came out of the Government cash of course.

5285. Are you in the habit of cashing cheques for people? Yes; but I am not allowed to cash them now unless I get the Superintendent's signature.

5286. What made you cash Nicholson's cheque on this occasion? I do not know. I had not my instructions then. I could cash any cheques I liked, as long as I thought they were good.

5287. You have had instructions since not to cash cheques? Yes.

5288. You could not have thought that Nicholson's cheque was good, because he asked you to cash it for him as a favour and to hold it over? Well it went out of my hands that day.

5289. You expected that Nicholson would be in funds in two days and that his cheque would then be honoured? That is what I expected.

5290. But that, if it was presented before, it would be dishonoured? Yes.

5291. And you distinctly understood that if it was not paid you would have to pay it? Yes; and I did have to pay it.

5292. When did you pay it? As soon as I got word about it; as soon as it was found out.

5293. Was it not paid into the bank through the office and dishonoured, and was not an inquiry then made? I do not think it went into the bank at all. It was held over in the cash.

5294. How did you find out that the cheque was no good? He told me afterwards that it was of no use, and I said to them it is of no use presenting the cheque, I will pay it.

5295. Did Nicholson come back to you and say so? Yes.

5296. Why had you not sent the cheque up to the cashier? Nicholson told me that it would be no good sending it in.

5297. When was this? Four or five days afterwards.

5298. You held it over without doing anything for four or five days? Yes; then he told me that it was no good, and I had to pay it myself.

5299. Is that the only cheque you have obliged Nicholson by cashing for him? Yes; in that way. I have cashed another cheque for him out of my own money though.

5300. Was that before or after? It is not very long ago.

5301. What was the amount of it? £10.

5302. Is that since he has been a Government contractor? He has been a Government contractor for years.

5303. He had no cash to meet the £10 cheque? No; there was nothing to meet it.

5304. He owes you £10 now then? Yes.

5305. What led you to cash that cheque for him knowing what you did? I happened to have money at the time when he asked me to do it.

5306. How long ago is that? Perhaps three or four months ago.

5307. Do you think you will get the money from him? Yes; I am certain I shall.

5308.

- A. T. Colls. 5308. Have you applied for it? Yes; I saw him yesterday about it.
 5309. *Mr. Thompson.*] Have you and he been very friendly? No.
 5 Sept., 1888. 5310. Why on earth did you do this kind of thing for him a second time after you had got into such a mess the first time? I suppose it was from being too good-natured.
 5311. Have you done the same kind of thing for other people? I have lent other people money.
 5312. *President.*] Have you anything to do with Nicholson's contracts? No.
 5313. In the way of clothing I mean? No.
 5314. Have you had private transactions with him? The Government clothes are not passed at our place; they are passed at Randwick.
 5315. Who passes them? Mr. Dobson I think.
 5316. Who is he? The storekeeper out there.
 5317. *Mr. Thompson.*] Do you deal with Nicholson for your own clothing? I have had clothes from him.
 5317½. But as a matter of general business? No; I do not. He made me a couple of suits and I could not wear them.
 5318. Yet you lent him £10? Yes.
 5319. Did you think that the cheque was valueless when you presented it? He said he was expecting some money from his wife's estate. I did not know for certain that the cheque was valueless, but I never presented it.
 5320. *Mr. Brock.*] What is the relationship between you and Nicholson? There is no relationship.
 5321. I mean in the way of business? Nothing at all. I think I have got two suits of clothes from him since I have been here. That is all.
 5322. But you would not cash valueless cheques for everyone you meet would you? He was a friend.
 5323. I understood you to say that he was not a friend of yours? Well, I am friendly with him.
 5324. Has he done you a good turn? I never asked him to do me a favour.
 5325. *Mr. Thompson.*] Are you in a position to go lending sums of £10 to Nicholson without any prospect of getting the money back? No; I am not in a position to do anything of the kind, but I happened to have £10 at the time and I gave it to him.
 5326. Is it not a fact that you are continually in difficulties about your own money matters—with tradespeople and others? I cannot say that I am. Like other people I am in trouble at times.

THURSDAY, 6 SEPTEMBER, 1888.

Present:—

A. RICHARDSON, ESQ., PRESIDENT.

R. W. THOMPSON, Esq., M.P., | F. A. BROCK, Esq., J.P.

Gustave Adolphus Kopsch called in and further examined:—

G. A.
Kopsch.
6 Sept., 1888

5327. *President.*] Since you were here the other day you have, I understand, made an examination of the bell registers which were then handed you, and you have now a report to make to the Commission upon the condition in which you found them? I examined the four sets thoroughly and carefully, and I found that three of them were in the same condition; that is, that by placing a wire at the bottom of the lever, it would free the ratchet wheel, and ring without moving the register. The fourth set of bells which I received was in good order, and had not been tampered with at all. I contrasted it with the three bells which had been tampered with, and I could see at once that the tension of the spring in the three bells which were out of order had been relaxed. I believe that a spring in continuous use would relax itself in time. The spring is very small, and the ticket side is much more used than the bell side; therefore one of the springs would be liable to slacken from continuous use. There are no marks of any instrument having been used in connection with the springs in any of the bells I examined. I looked at them very closely with a magnifying glass. The bell bore traces of having been opened. Some of the screws had been lost, and the holes had been filled up with sealing-wax. In the three bells which were out of order I found only one screw; the others were missing. The whole of the disorder in connection with the three bells to which I refer lies in the relaxed tension of the spring.
 5328. Was there nothing to show in connection with the spring of these three registers that they had been interfered with in any way? No. By taking a similar pair of bells, opening them, and stretching out the spring so as to relax it, you would produce the same effect as would be produced by continuous wear.
 5329. *Mr. Thompson.*] That is to say, by straining the spring beyond its proper tension? Yes; the least bit will do it. There is a very small margin allowed, because the spring is very short.
 5330. *President.*] But without the introduction of a piece of wire or a pin at the bottom they would register all right? Yes.
 5331. Even though the spring might be weak? The spring might be weak, but they would still act.
 5332. But the insertion of a pin is just sufficient to free the ratchet wheel from the click? Yes.
 5333. Would it not be possible for the wear to become so great that, without the introduction of anything at all at the foot of the bell, it would fail to do its duty? No; it would not. The other springs are heavy enough to overcome as great a resistance as is actually required.
 5334. We have been told that the man who first found this thing out found it necessary to do something to the inside of the register with a screw-driver, or file, or bradawl; what would it be that he would do? I should say that he would carefully bend the spring back with a bradawl or file; almost any tool carefully used would answer the purpose. It could be done even with a match. You do not need any special appliance for it. It is just a matter of bending back the spring so as to weaken it.
 5335. If we were told that the spring would need to be shortened to the extent of a thirty-second of an inch, would that be correct? No; I do not think so.
 5336. *Mr. Thompson.*] Could the effect produced by interference with the spring be produced by putting either instrument between the cogs of the wheel and that part of the machinery which comes against the cogs? No. It could not be done that way.

Alfred

Alfred Solomon called in, sworn, and examined:—

5337. *President.*] What is your occupation? I am a florist.

5338. At what address? Camden-street, Newtown.

5339. We understand you have expressed a desire to come before this Commission in order to give us the benefit of your views in connection with these ticket frauds, and their prevention in the future? I merely wished to make a few suggestions. I have brought a scheme with me, and I will endeavour to explain it to you. It is an arrangement to facilitate the collection of tickets, and the prevention of fraud. I have with me two plans. One plan would necessitate the alteration of the cars to a certain extent. The first plan I will submit to you is also a preventive against passengers riding without paying their fares; it combines these two advantages of preventing fraud and the passengers riding without paying their fares. It is well known that a large number of people do travel without paying when they can—that a large number never pay when they can possibly avoid it. I propose; in the first place, to cancel all licenses, making the sale of tickets entirely under the control of the Department. Then I would have ticket offices established at all waiting-rooms and other convenient places which the Department could ascertain. I would also have free access down the centre of each car, with an entrance at one end and an exit at the other. I propose that the guard should collect the tickets at the exit end.

5340. When the passengers are going out? Yes; he could stand at the exit end, so that the people could deliver up their tickets as they went out.

5341. Supposing they went out at the other end? I will come to that directly. I propose next to have a turn-stile or spring door at the entrance to open inwards only. That would prevent people from going out at that end. I would have a small office or desk inside the car at the entrance end with a small pigeon hole at which passengers could purchase tickets. By this means you would get the entire sale of tickets into your hands.

5342. You would have these offices in each car? Yes.

5343. Who is to sell the tickets? You would have to appoint salesmen.

5344. Then it would be necessary to have a ticket clerk in every car? Certainly.

5345. Then we should have to appoint at least 120 ticket clerks? That would depend upon the number of carriages running on each journey. I do not know how many cars would be in use at the same time. Of course the clerks on returning to the yards would I suppose get into another car ready to go out, but perhaps you may be of opinion that the establishment of ticket offices at all the waiting-rooms would be sufficient, and in that case you could do away with my suggestion that ticket offices should be established in the cars. Then I would post prominent notices in each car prohibiting the sale of tickets under a heavy penalty. This would prevent people from selling tickets to one another. It is by the sale of tickets in this way that the Government are defrauded. If there was no one to purchase tickets there would be no sellers. I would have the upper part of each car arranged the same as the lower part.

5346. You would have upper decks then? Just in the same way as the lower part of the carriage.

5347. You live at Newtown? Yes.

5348. Then you have had some experience of the heavy loading of cars? Yes.

5349. Do you think it is possible to introduce a scheme of this kind limiting the entrance and exit to one door in those heavily-loaded cars? I think so.

5350. Surely you have travelled on the Newtown car when people have been standing not only at each end of the car, on the upper deck, but on the staircase? Yes; I have seen that.

5351. Where would your entrance be for the top of the car? At the top, in the same place as at the lower end.

5352. I will give you a practical illustration of what I mean: You get on to a Newtown car at King-street with the intention of travelling to the Railway Station only. You get on to the top of the car. It is pretty well crowded when you get on to it, but you manage just to push your way into the little entrance gate and stand up by the side of the car. As you know very well there is not much time to spare when you want to get off for the Railway Station, the car does not stop there very long, and there is only one exit for the people who wish to get off there. Even under the present arrangement, with all the means of exit, people who wish to get off at that particular place sometimes have great difficulty in doing so. A person under your scheme wishing to get out would have to push his way along a crowded car. He would have a great battle to squeeze himself down through your exit, and the chances are that before he could get off the car it would be in motion? He would not have to push himself through the exit end, because there would be no turn-stile or spring-door there. That would be at the other end; the exit end would be perfectly free. The conductor would be there to take the tickets as the people go out, and that would act as a preventive of people riding without paying their fares.

5353. Well, let us go downstairs and imagine a loaded car into which a very stout lady has introduced herself, wishing to get down at the Railway Station. She forces her way down to the entrance end, and you can just imagine the difficulty there would be in the crowd of people who would be wanting to get out there. Don't you think there would be great complaints of passengers being carried on beyond their destination? There might be a few complaints, but I am sure they would not balance the frauds.

5354. *Mr. Thompson.*] Just imagine your system in existence when there is a rush of people, as there often is, to get on to a car. At the present time there are five entrances, and there is a double means of getting to the upper deck. It stands to reason that with your system it would take just five times as long to get the people on to a car as it takes at the present time? It would take a little extra time, I admit that.

5355. But would not people necessarily be left behind over and over again? That might be, but would all these things counterbalance the loss of money from which the Government suffer at the present time.

5356. *President.*] Suppose you are in King-street, or in some other place where a great many people are waiting to get up. You have often seen twenty people rush forward to get into a car at one of these places. There are five doors on each side, and even now the trams are delayed by the rush. These twenty people would all rush to the one spot where they would find this spring-door. Can't you imagine that they would be jammed, and that a block would ensue? Well, if you think that would be an insuperable difficulty, you might have the seats in the carriage lengthways, and allow the guard to collect the tickets as he does now. That would permit of the people coming in at either end.

5357. *Mr. Brock.*] You would put the seats in the lower car just the same as they are upstairs? No; I would have them so as to have a passage down the centre.

5358. You would propose to leave both sides open perhaps, and then to have the seats downstairs, just the same as they are on the upper deck? That might be done.

5359. *President.*] Well what more have you to suggest? Well I would dispense with the bells. There need be no bells used according to my plan. 5360:

- A. Solomon. 5360. But how would that be if you abandoned your entrance wicket? You could abolish the bells because you would have the sole control of the sale of tickets.
- 6 Sept., 1888. 5361. To whom would the passengers give their tickets? To the conductor. There could be no harm in that because there would be no people to whom he could sell them if you had the sole control of the sale of tickets.
5362. But he could sell them to the clerks? If you cannot trust your clerks of course that would put an end to the matter.
5363. *Mr. Thompson.*] You must know that, as a rule, when you get a great body of men aggregated, some of them will be dishonest? Well, of course, conduct of that kind would amount to absolute robbery.
5364. But it is absolute robbery against which we have to contend under the present system where the conductors take the tickets and sell them? Yes, of course it is; but I did not imagine that clerks would lend themselves to anything of that kind.
5365. What would you pay the clerks? Well, that is a matter for yourselves. Of course it is no use to start with the idea that almost every one in the Department is dishonest.
5366. Not necessarily so; but still we must guard against it. Your system, it appears to me, would break down if you had one dishonest conductor in collusion with one dishonest clerk? Well that might be possible.
5367. *Mr. Brock.*] Whenever a youth goes into a bank or the Government service, some one has to find a fidelity guarantee for him? For all that I think the present system is more open to fraud. Under this system which I am proposing your only rogues would be in the Department; but at the present time you have two classes of people to deal with. You have the conductors and the clerks in the Department and unprincipled people outside. Besides it might be possible to have the tickets dated so that they could be used only on one day, in the same way as railway-tickets.
5368. Of course if you were to go to the expense of having a clerk in each car there would be nothing to prevent that;—a man might get his ticket stamped with the date and hold it till the conductor took it away, after which it would be so much waste paper? Yes; I think that would be much preferable to the present system.
5369. Might not the tickets be used a second time on the same day? That would not be possible if a bell-punch were used.
5370. But we must take into account the enormous expense and the time occupied in the process? The expense is preferable to the fraud.
5371. The expense would be continuous though? But it would be far more satisfactory to the Department to know that it was doing a genuine business instead of being robbed.
5372. But it is of no good a man running a business which is returning £10,000 and costing £11,000 to work? No, I admit that; but I do not think there would be that disproportion.
5373. *Mr. Thompson.*] Do you think that the frauds are of such magnitude that the extra expense would more than compensate the Government? Well, I don't know to what the frauds amount.
5374. *President.*] You recommend an expenditure right away of £12,000 a year. You save about £4,000 perhaps by getting rid of the licenses. This would be an extra expense of £8,000 a-year; then there would be a great expense in connection with the alteration of the cars. To bring your system into operation we should have to condemn all the cars now in use, or to call them in for alteration. In either case that would represent a very large sum indeed—at the very lowest, another £15,000? I am aware that the scheme would lead to a certain amount of expense; but surely the present cars could be altered and utilized at a comparatively small cost. The great thing in connection with my scheme is getting the whole of the sale of tickets into the hands of the Department. If you did away with the licenses there would be no one to whom tickets could be sold. The alteration in the cars is a matter of small importance compared with that advantage.
5375. I suppose what you mean to say is that if you did away with the present system of selling tickets it would not be at all necessary to alter the cars perhaps? Possibly not. You could leave the carriages almost as they are. You might think that the sale of tickets in the waiting-rooms would be sufficient, and then the tickets could be collected in the same way as at the present time.
5376. Then there is another aspect of the case: You might have too few places for the sale of tickets, and people would go to the omnibuses? Yes, but the 'buses are very much slower.
5377. As a matter of fact they take exactly the same time? I am not aware of that. I may also say that by the method I have suggested you would not require bells.
5378. Would not the bells be necessary, to have some check upon the collection of tickets? If you had the sale of tickets in your own hands what would be the use of manipulating the bells or dishonestly obtaining the tickets?
5379. You seem to lose sight of the fact that there might be collusion between a clerk and a conductor? Of course there would be that danger; but there would be a certain amount of fear on the part of both parties.
5380. They do not seem to have had much fear in the past? No; but I think they would if the sale of tickets were limited in the way I have described.
5381. *Mr. Brock.*] What would you do then;—would you allow the conductors to collect the tickets, and to leave them intact? Of course I would. What would be the use of the conductors keeping them when they could not sell them?
5382. But suppose they were in collusion with the ticket-clerks, they might work it between them, and the tickets might be sold in just the same way as they are sold now? Of course, as I said, that is a danger.
5383. But that is about the only danger at the present time, is it not? Well you have a certain control over the ticket-clerks, whereas you have no control at the present time over the people who sell tickets outside.
5384. We can cancel their licenses? The great thing, to my mind, is to have the sale of tickets in your own hands. If you have a lot of pettifogging people engaged in small trades, in tobacconist-shops and fruit-shops, people who have not £10 worth of stock in their places, it stands to reason that they must do something to defraud you. My wife was telling me that the other night she went into a place near the railway station, and saw two men come in and sell a lot of tickets.
5385. When was this? Some little time ago. I think the shop was kept by an Italian.
5386. Where is the shop? Near Hordern's, at the Haymarket, near Belmore Park.
5387. On which side of the Park? It is a private house. I have been there for tickets sometimes myself. It is a few doors before you come to Hordern's. It is exactly almost opposite the tram-yard in Pitt-street. I think it happened about ten days ago.
5388. Surely it would not have happened so recently as that, with all this noise about the frauds going on? She told me that it was so. I could easily find out when it occurred.

A. Solomon.
6 Sept., 1888

5389. What description of men were selling the tickets? I will find out, and let you know.

5390. *Mr. Thompson.*] Have you been made acquainted by the newspaper reports, and by hearing people talk about it, with the method in which the bells have been dealt with to permit of the frauds? No.

5391. You have no idea of the mechanism of these ticket-recorders? No, I have not. I was going to mention another plan to you.

5392. Have you any idea of the mechanism of these bell-punchers or ticket-recorders? No; I have not. I was going to name another plan to you. I do not know whether you would care to have a lad or young man, anyone you might think best, to go from car to car selling tickets.

5393. *President.*] Carrying them in a bag as the conductors do? Yes.

5394. You would want one lad for every train? Yes.

5395. If a train consisted of several cars one travelling ticket-seller would do? Yes. I think a lad might be better trusted than a man. You would have to have some indication on the lad's uniform that he was a ticket salesman so that the passengers might readily identify him.

5396. Would you make the passengers entirely dependent upon this young lad for the purchase of their tickets? No. I would have the sale at the waiting-rooms as well.

5397. If you were to make the passengers dependent upon this lad and people were to get into a crowded car the lad might not be able to get to the people who were wanting tickets? You might just as well say that a conductor could not collect tickets in a crowded tram.

5398. But then the lad has to give change. All this takes time? Yes; I admit that it would take a little time.

5399. *Mr. Thompson.*] You would have to get respectable boys, boys you could trust? Yes.

5400. What salaries do you suppose you would have to pay them? I suppose a lad of that age would be living with his parents, therefore his salary would not be very heavy. Say £1 a week.

5400½. If the cars were very crowded might you not have the collector wishing to collect tickets from the passengers whom the boy had been unable to reach? I suppose that the majority would get their tickets in the waiting rooms. The lads could not make away with any tickets because they would have to account for them at night. Every night, for instance, they would have to give so many tickets or so much cash.

5401. *Mr. Brock.*] What about the different sections? The guards would collect tickets in just the same way. There would be no alterations in the cars.

5402. You would not have a uniform charge? No; I would have twopenny and one penny sections just as you have now.

5403. *Mr. Thompson.*] Have you thought at all about season tickets? Yes? Yes; and also of the issue of weekly tickets to working classes, travelling at 5 to 6 in the morning by the first trams when it is very difficult for them to get tickets. They cannot get tickets unless they obtain them the night before.

5404. *President.*] Have you really looked into the matter? Yes; I have thought it over.

5405. How would it be possible with such vast crowds as use the tramways to prevent the transfer of season tickets from one person to another thereby defrauding the Government. Of course they could do that as they do it at the present time on the railway, but they are continually detected.

5406. But the season tickets on the railway are sold by the station-master of each station; he has a list of the tickets he sells and if a passenger does not renew his ticket the station-master at once makes inquiries of the ticket collector as to what such and such a person is doing. These persons who do not renew their tickets and endeavour to defraud the Government in that way are carefully watched and almost invariably get into trouble. How on the tramways would you be able to exercise a check of that kind? How could the conductors carry in their heads the hundreds of people who would travel on monthly tickets on the Newtown and Waverley lines? I can quite understand that there is a difficulty.

5407. The matter has been seriously thought over by the Department, and that hitherto has been an insuperable objection. Unless you get quite an army of officers you would not be able to overcome this difficulty. You would have to have station-masters at Waverley, Newtown, and other places with books and everything else? Yes, that is true. But suppose you issue weekly tickets to the working classes, available from 6 until 8 o'clock.

5408. Then I am afraid the same objection would apply, because the conductors would be unable to recognise the workman? Well, of course if you think that difficulty is insuperable, then of course there is an end of the matter. I was going to make a suggestion as to passengers travelling on race-days. Those are days on which the Government are defrauded of more money than at any other time. Suppose there is a four days meeting. That occurs three or four times a year. The guards by manipulating the shillings make a very great deal of money. There are race-days, and other special days, when you might issue an entirely different class of tickets which would entirely prevent fraud.

5409. But at the present time we have special 3s. 6d. tickets for race-days? Yes, I am aware of that, but I see no reason why you should not have a special shilling ticket for the race-course.

5410. Where would you have those tickets purchasable? At two places only, at King-street and at Bridge-street. All those who go out to the races could go out of their way without much loss of time, so far as to go to one of those places.

5411. Are there not many four-horse omnibuses going out to the races? Yes.

5412. If we confine passengers to these two places for the purchase of tickets, do we not run the risk of losing a great many passengers? Yes, but by the time the tram gets to the top of Oxford-street very few passengers get in. The cars are mostly loaded long before they get there. Besides there might be a ticket-office at Liverpool-street. It might be necessary to have a place there for the convenience of people who come in by the railway.

5413. Why not have a ticket-office at the railway station? I see no objection to that. I had no particular object in only suggesting two places.

5414. *Mr. Thompson.*] What is your idea as to carrying out the *minutiae* of the matter. In what form would you have your tickets, for instance, so that they would not be dealt with on the first as on the second day? I am only making suggestions. Of course I leave any alteration you may think fit to make in the details to yourselves. I would issue return tickets only to the racecourse.

5415-6. Why would you only issue return tickets? I was going to suggest that the tram runs right through, and not pick up any passengers after they leave King-street.

- A. Solomon. 5417. What about the railway passengers waiting at Liverpool-street? They would have to get in at King-street. I think that most of them would go to that place, the reason being that if they waited at Liverpool-street they might not succeed in getting a seat.
- 6 Sept., 1888. 5418. *Mr. Brock.*] You talk of having return tickets to the racecourse. In what position would a conductor be at the close of a day when those who had not return tickets rushed the trams? I would suggest that the tickets be collected at the platform in just the same way as they are collected at Rosehill.
5419. But that is a train, and not a tram? The same principle would apply. The trams would deposit the passengers at the platform.
5420. *President.*] I suppose you would have a sort of wicket then? Yes.
5421. Is not the crowd at the racecourse generally very rough? No, they conduct themselves well.
5422. Supposing a big crowd arrived there anxious to see the first race, and the whole crowd had to pass through the wicket gate, do you think they would stand that? They stand it at Rosehill, where there is sometimes an immense crush. A man there once told me that it took him 10 minutes to get on to the course, but he got there in plenty of time and he did not rush. I do not see why you could not have two wicket-gates. A man would stand at each gate collecting one half of the tickets as the crowd arrived, and the other half as they went back.
5423. Don't you think that on a race-day a great many people would feel inclined to jump over the low fence between your two wickets, not because they were anxious to cheat but because they wished to save time? I don't see what difference that makes, because they have their return tickets, and if they had not return tickets they would have to purchase them on their return to town. There is another advantage in my system, and it is this, that there would be no cash collected at all as at the present time.
5424. It seems to me that return tickets are by no means necessary to your scheme, if you are going to collect your tickets at Randwick, and pass your passengers through a wicket-gate. What can be the object of it—it is only a waste of time; you make no reduction; why not have a single ticket? Well, if you had single tickets you would have to have some one at Randwick to sell for the return journey, and the passengers might just as well take a return ticket. If they did so they could not return very well by the omnibuses; they would not be very likely to throw the other half of their ticket away.
5425. But there might be a large number of people who wished to go out to the course in the tram without intending to come home in it, and there might also be a large number of persons going out by some other means who might wish to come home in the tram? The only way in which you could right those cases would be the issue of single tickets. I think that if you sold single tickets on the platform at Randwick you might, perhaps, catch a great many more.
5426. *Mr. Thompson.*] But then you must remember that there would be a number of places in town for the purchase of tickets as against one at Randwick, and if you had only single tickets, look at the rush you would have at the close of the day to that one office; everyone anxious to come away at the same moment? Well of course there would be a difficulty if you had only one office.
5427. *President.*] You might issue single tickets, but people need not take only one; they could take as many as they want and so provide themselves for the return journey? As long as the tickets are dated it is all right; it does not matter how they are used.
5428. I am afraid that you would have a large number of people (say ten or twenty on each car) going back without tickets and chancing it? On the return journey the passengers would have to present their tickets at the wicket-gate before they were allowed on to the platform.
5429. Then you would send back a large number to travel by some other conveyance? Well under the present circumstances the whole of the busses fill.
5430. But the passengers have not to get a ticket before they start? No one will ride in a bus if he can get a tram. I think it is most desirable that you should take the control of the cash out of the hands of the conductors. That is the principal thing. Some plan should be introduced by which the conductors should have no cash in their hands at all.
5431. Do you think the people would stand your wicket-gate arrangement, because it seems to me that on the return journey that would be the only means of preventing a large number of persons from travelling without ticket? I think people like the system at Rosehill, and I see no reason why it should not answer at Randwick.
5432. Is it not a fact that the crowd at Randwick is often largely composed of persons who are entire strangers to the place? Not at Randwick. It is not like Melbourne. At Randwick you will see large numbers of persons who have been following the turf for twenty years or more.
5433. But surely there will be a large number of people from the adjoining colonies? Well, of course there would be some.
5434. Such people as those might go out by the omnibus and might wish to come back by the tram? Most of the people who go out by omnibuses at the present time are strangers to the City.
5435. But then your system would shut them off the tram platform at Randwick when they want to come back? Could you not issue tickets at the Randwick platform for the return journey?
5436. Once that became generally known you would have a great rush and a great deal of inconvenience? You have exactly the same rush now.
5437. But the people do not have to get tickets? No. As I said at first, the issue of return tickets from Sydney would prevent that.
5438. *Mr. Brock.*] Suppose we issued a single ticket for 1s. 6d. and a return ticket for 2s. 6d., could we do that? No, we could not do that, because the busses run for 1s. You could easily prevent the use of the tickets on a second day by having a different colour for each day.
5439. *Mr. Thompson.*] Is there anything more of moment that you can suggest to us? No, I do not think there is anything more. I think I have mentioned all I have thought of. I have given you the outline and I leave it to you to fill in the details. Above all, I would impress upon the Commission the desirableness of cancelling the licenses.

James Marwood Elton called in, sworn, and examined:—

5439½. *President.*] What is your position in the Tramway Department? I am employed at Queen-street as a fuel-man.

5440. We have been given to understand that you can give us some information bearing upon these ticket frauds about which we are inquiring? Yes. My wife bought some tickets in a tobacconist's shop.

5441. When? About twelve months ago. It was in a tobacconist's shop opposite the Sacred Heart, near Darlington. They were all single tickets, and when she brought them home she told me that she had seen a tramway conductor with a bundle of loose tickets on the counter; so she looked at the conductor, and looked at the tram-tickets. The man behind the counter seemed to notice that she knew the conductor, and he swept the tickets down behind the counter with his hands. This was what she told me when she came home. I said that the best thing I could do was to give information straight away; so I saw Mr. Wigg, one of the detectives, and Mr. James. I told them exactly where the tobacconist's shop was. I asked my wife whether she would be able to recognise the conductor if she saw him again, and she said that she would. I asked her what sort of man he was, and I got from her as good a description as I could. I asked her if she saw the man whether she could point him out. She said she had not seen him lately. I went with her once or twice to see whether she could point him out. I could see from her description of the man that it must be Musgrave or Lane.

5442. What Lane? Lane, the conductor.

5443. Is he in the Service now? He was then, I think, but I do not know what he is now doing. I think he is car-cleaning.

5444. Isn't it a fact that he fell off the car and injured his head, and that he is now back car-cleaning? Yes.

5445. If your wife saw Musgrave and Lane together could she recognize which one of them it was? Well I fancy she could.

5446. Is the man in the shop now—the man who had it at that time—and who was receiving these tickets from the conductor? That I do not know.

5447. What was his name? To tell you the truth I never ascertained his name. I did not think it was my duty to do so. I left it in the hands of those who I thought were the right parties to ascertain such matters.

5448. And you did that at once? Yes, directly I heard about it.

5449. I suppose if this man were still in business your wife would be able to identify him? Yes, I believe she could.

5450. Did you hear afterwards that suspicion had attached to Lane? No, I heard of no suspicion attaching to Lane. I suspected Musgrave.

5451. Have you since heard that in consequence of your report suspicion was attached to Lane? No, I have not heard that.

5452. You said just now that, in your own mind, your suspicion was directed against Musgrave rather than against Lane? Yes, by the description.

5453. Do you now remember the description which your wife gave you? She told me that the man was not very tall—a medium height. She said that he was a young chap, rather given to frolicking, and that he had dark eyes and brownish hair.

5454. Was anything said about a light overcoat he wore? Nothing in the way of apparel was mentioned, except that she said he generally used to wear a soft felt hat.

5455. Instead of his uniform hat? Yes, and that he used to draw it right down over his eyes sometimes.

5456. Do you know that as a fact Musgrave used to do that? Oh yes.

5457. When he was on duty? When he was on duty. I used to take particular notice of anything like that.

5458. You constantly saw him then when you were on duty? Of course I did.

5459. I suppose you know Musgrave perfectly well? Yes, perfectly. Of course I do not admire his mode of behaviour.

5460. What do you not admire about him? He is rather loose in his habits as far as gambling and betting go.

5461. How do you know that; by hearsay only? By what I have seen.

5462. What is that? What he says himself. What he owns himself as far as betting goes.

5463. Does he sometimes talk with you at your coaling station? Occasionally.

5464. I suppose he would be there waiting for his tram, sometimes half-an-hour? He used to be assistant-conductor; he had no regular tram.

5465. He would come there to pick up his tram? Yes.

5466. I suppose when he had a quarter or half an hour at his disposal he would chat with you? Yes.

5467. It is from that that you judged that his habits were such as you could not admire? Yes.

5468. What do you suppose your wife meant by the expression frolicksome? I suppose that he was given to winking at the ladies or something of that kind.

5469. As to his gambling, what do you know about that? Only from what he used to say about that.

5470. He is a man who blows a great deal? Yes, I think he says a great deal more than he does.

5471. *Mr. Brock.*] Did he ever say anything to you about faking bells? No.

5472. Did he ever show you a piece of wire which he used to put into his bells? No. I never heard of it until I saw it in the papers.

5473. He did not take you into his confidence in that way at all? No.

5474. He never told you that he was making a lot in addition to his pay? I think he must have thought that I was rather too cute, and he did not care to tell me too much.

5475. *President.*] Did you ever have any conversation with Musgrave after you had given this information? No. He always kept aloof from me. I think he must have suspected me to a certain extent. He never came near me and never spoke to me and that is why I think he must have suspected that I knew something.

5476. That led you all the more strongly to believe that it was Musgrave who had sold the tickets? It made me think that it must have been him.

5477. You did not hear that the Department was on the wrong scent in following up Lane? No.

5478. If you had you would have put them right? I would most decidedly.

J. M. Elton.
6 Sept., 1888.

- J. M. Elton. 5179. *Mr. Brock.*] How long was it after your wife bought these tickets that she told you? She told me as it were in the afternoon and I informed about it on the next day.
- 6 Sept., 1888. 5180. Suppose she bought the tickets in the morning, did your wife tell you on the same day? Yes.
5181. And the next day you gave information? Yes.
5182. *President.*] Was this about the time that a great alteration was made in the time-tables? It was before the alteration.
5183. Therefore it was before the 1st October, 1887? Yes.
5184. Musgrave would have been on then? Yes.
5185. It was before he was paid off? Yes.
5186. He was paid off early in October, was he not? Yes.
5187. And you are certain that this transaction was prior to that? Yes.
5188. Might it have been two or three months prior to the new time-table? I could not say.
5189. You knew when Musgrave was paid off? Yes.
5190. And you are quite sure that this took place before the 1st October? Quite certain.
5191. You remember the time of the reduction of the hands? Yes.
5192. Did not some men in the Locomotive Department have to leave at that time? It was towards the end of October when they went.
5193. But the conductors were paid off on the 3rd or 4th of October, when the new time-table came in? Yes.
5194. Now you are quite sure that this little occurrence was before the new time-table? To the best of my belief it was.
5195. If it was not, Musgrave at the time would not have been a conductor? Yes, I see that. I ought to have told you that this man who had the tram-tickets for sale was in his private clothes.
5196. How did your wife know that he was a conductor? She had seen him on the tram. She knew him perfectly well.
5197. Did she not know him by name? No; she did not know his name.
5198. But she knew that he was one of the conductors whom she often saw? Yes.
5199. *Mr. Thompson.*] If I understand you rightly, it was your wife staring at the man as if she knew him that made the shopkeeper sweep away the tickets? Yes; that is so.

William Lambert called in, sworn, and examined:—

- W. Lambert. 5500. *President.*] You are the repairer of registers in the Tramway Department, are you not? Yes.
- 6 Sept., 1888. 5501. How long have you been in the Service? Between seven and eight years.
5502. You have not been all that time register repairer I suppose? No.
5503. Because, I suppose, you would have to drop out when the system was altered, for instance? In the first place I had to drop out for six months when the system was altered; that was when there were no registers.
5504. Will you give us your experience with regard to registers. Your knowledge of their mechanism, and so forth? I had no experience of registers prior to taking two pair of them to repair.
5505. How did you get those two pair to repair? Mr. Roberts gave them to me.
5506. What position were you in then? I was revenue inspector in the Department.
5507. Where had you been to gain a mechanical knowledge? My mechanical knowledge with regard to this particular thing was gained from a brother-in-law, who is a watchmaker. Besides this I have a general mechanical knowledge. I am a miller by trade, and to be a good miller you must understand mechanical work generally, in wood, iron, brass, and so on.
5508. *Mr. Thompson.*] In calling yourself a miller, do you mean that you are a dresser of stones or a milling engineer? Well, if you take a flour-mill in a country district you have to be able to do anything; to dress stones and to fix the shafts and bearings, and to be able to do different kinds of wood work; it is principally bevel work. It is much more difficult than ordinary carpentering. The tempering of mill-bells and dressing-stones has to be done by a blacksmith. I do it myself, as I do things in general. I have done some turning, and I have a natural mechanical knowledge.
5509. Natural, do you say? I consider it a natural knowledge on account of the different things that I have been able to do. Prior to my gaining any knowledge from my brother-in-law as to watch-making I repaired a mainspring of a Geneva watch.
5510. *President.*] Mr. Roberts, I suppose, hearing of your mechanical turn gave you a couple of registers to repair? Yes.
5511. Was no repairer then employed? Mr. Felton, clock and watch examiner at the railways, used to do the work I think.
5512. How long is it since you were given these two registers to repair? It is about four years ago.
5513. And you repaired them satisfactorily? Yes.
5514. From that date you were appointed to the position of repairer? No; I had the whole of them on trial for six months. I had them for three months in the first place; but I had not time to get the whole of them in a satisfactory state of repair, and I asked for three months longer. I could not say that they were exactly satisfactory previously, but by the six months I had them in good repair.
5515. Then you were permanently appointed repairer and inspector of registers? Yes.
5516. How long had you this particular kind of register under your control? Four years, with the exception of the interval of six months.
5517. What has been your opinion of the present registers from the first time you had anything to do with them? My opinion has been that they are as far as my experience goes, as good a check as you could have for the Sydney tram traffic.
5518. I mean what is your opinion of the registers from your point of view as to their construction and so forth. Not as to their successful use, but to their liability of getting out of order. Their likelihood of their remaining in good order and so on? My opinion is that when properly repaired they will remain in good order as long as could be reasonably expected.
5519. But you don't start repairing a register. You make a register in the first instance and we want your opinion of the new registers, not after they have been repaired but treating them as new registers. Are they well and strongly made for instance, are they liable to get out of order? They are strongly made. They are sufficiently strong for the purpose for which they are employed. 5519½.

- 5519½. How long would a register go without requiring repair under ordinary and fair usage? I should say they would average about three months. W. Lambert.
5520. What would happen by that time? Sometimes a spring might break.
5521. Would that be by ordinary and fair usage? Yes, a spring might break; in fact two or three springs might break. Then again the catch of the hammer might wear, particularly in the first place, when the register came from the maker.
5522. Why? Because there is not as much grip as I put in them; consequently they do not ring so loudly, causing them to get out of order sooner than they do when I repair them.
5523. Are they defective in that respect—in the matter of the grip? I do not consider them so.
5524. Does not that very thing render them more liable to be shifted as they have been lately? The grip I speak of is in reference to the hammer that causes the ring.
5525. You do not mean the grip of the cogs? No, there is no grip to them.
5526. There is a grip when they catch? They are supposed to work perfectly free. I was not referring to the cogs at all; I was referring to the grips on the hammer.
5527. Has it come to your knowledge that these registers have been tampered with? I have heard it generally spoken about in the Department.
5528. Has it not come to your knowledge as a repairer of these instruments that they have been tampered with? Not in the course of repairing them.
5529. You have never seen any sign of tampering on the inside of these registers? No; I have never seen any sign. Let me qualify that by saying that I have seen no marks; no marks showing that they have been tampered with.
5530. I asked you if you saw any evidence on the inside that they had been meddled with, and of course a mark would be the strongest evidence that you would have, but might you not see other evidence? I have seen the appearance or what I should have considered the appearance of something having been done to the ratchet.
5531. When did you first notice it? I have noticed it since this matter has been spoken about.
5532. Since everybody knew of it? Yes.
5533. Since your attention has been directed to it? Yes.
5534. Up to that time when the registers came in for repair there was in your opinion nothing noticeable about them. Is that what we are to understand. Are we to understand that there was nothing which you noticed? There was nothing particularly noticeable.
5535. And nothing which you did notice at any rate? Well there is this, that the ratchet would be off the ratchet wheel.
5536. To me that would indicate nothing; to you what would it indicate? It would simply show me either that it had been worn, or that the spring of the ratchet had been pressed back, or that the ratchet had got stiff.
5537. Did this happen often? Not very often.
5538. What occurred to you when you saw it? That it might be from ordinary wear, or that the ratchet might have stuck from some cause connected with the oil, or the time it had been out.
5539. It never occurred to you that it was the result of improper manipulation? No.
5540. When it was pointed out to you that there had been improper manipulation you were able to see that it might have been the result of that? Unless one suspected something of the kind one would have to look very closely into the instruments before one detected it. It is possible that what one person might consider improper work would be ascribed by another person to the natural consequences of wear and tear.
5541. Therefore until this matter was publicly brought under your notice you had no reason to suspect that these instruments had been tampered with? No, I had not. There was only one thing that occurred to me, and it was this, that I thought they were wearing very quickly. I noticed this with one particular register. I did not detect anything wrong with it, but I thought it had worn very quickly.
5542. Do you know whose it was? I never had the names of the men.
5543. You did not think much of the matter, or you would have brought it under notice? It would have been useless unless there was a proper system.
5544. How do you mean? I mean a system of letting me have the men's names regularly.
5545. These you never have? No.
5546. You do not know whose register you are repairing? No.
5547. Still if you saw that a man obviously ill-treated his register you would mention the matter. Let us suppose that you did not know anything about these frauds, and that a register came into you for repairs in such a condition as to cause you to say to yourself "This breakage is not the result of fair wear and tear; the man has been drunk; he has fallen down and crushed his register?" I think I have reported two cases of wilful breakage. I believe they both apply to one man.
5548. Who was the man? Lane, I believe. They came very close together, and I gave in the number stating that, in my opinion, there must have been wilful breakage.
5549. How were they injured? One of the pulls had been pulled down, but not quite to the centre; consequently it would remain down when caught upon the ratchet; then it had a knock upon something, in one case stripping the screw threads, and so injuring the register.
5550. In the light of what you now know would you conclude that the register had been tampered with for fraudulent purposes? No, not in the cases where I reported it had been wilfully damaged.
5551. Do you think they were merely cases of rough usage? Probably. Perhaps the man wanted to get away.
5552. How do you mean? To get off his trips.
5553. But would he be put off duty? At that time, I believe, there was a scarcity of registers. After I had reported the matter I heard that this man had been saying so himself. He had been reduced to car cleaning because I had reported him for ill-treating the registers.
5554. You know now what has been done with certain other registers? Yes.
5555. You know the means which have been adopted to defraud? Yes.
5556. Starting with this knowledge, is it in your power to at once detect any recurrence of it, or is it still so difficult to detect the manipulation that even now you would be in the dark? It could be detected if my suggestion were carried out in this way: I would have the registers tested once a week, and if any register

6 Sept., 1888.

- W. Lambert. register was found defective, and returned to me, I could then tell in all probability if it had been tampered with. If there had been any filing of the ratchet, I should be able to detect it at once.
- Sept., 1888. 5557. Is it not possible to manipulate the bell without any filing? Yes; by pressing back the spring.
5558. Suppose, then, in one of the bells returned to you in this way there had been no filing, and that the spring had only been pushed back? My idea is, that every man's name should be given to me with the registers. I should make a note of what repairs I had made. If a man's register came in this week with a ratchet not acting on the ratchet-wheel, and weak, I should make a note of it. The register would be tested the following week, and if it was then found to be defective in the same way, I should conclude that the man who had been using it was not as he should be, because in such a short time his register would not get out of order. The spring could not get weakened in that short space of time, and there would not be sufficient wear to account for the injury.
5559. With examination once a week you would know that a spring had no right to weaken in such a short time as that? What I would suggest, that the next register given to the same man should be thoroughly examined in the presence of a third person, and proved to be in proper order.
5560. I do not ask the question so much with a view to improvement in the future as to clearly get from you the difficulties which exist in detecting the thing in any shape or form. It seems to me, according to your evidence, that it would be almost impossible, if the spring bending had been adopted, to find out whether it had been done by the conductor or whether it would be the result of the strain of the register? Yes, that is so. It would be difficult to say whether the conductor had bent the spring.
5561. Then it would be almost impossible to say that the registers had been manipulated? Yes.
5562. After these frauds came out you made a general examination of the registers;—did you? Yes.
5563. How many pairs were submitted to you in all? Four pairs.
5564. Were they not all called in? No; only as they were found defective, and others were given out as soon as I had them in a fit condition.
5565. How many did you find defective? Well, I found a number defective, but as far as this particular defect is concerned, I think there were only three pairs, besides the four pairs Mr. Roberts had; that would be seven pairs in all.
5566. Even if you were told to whom these seven pairs of registers had belonged, you would not like to say, as a matter of fact, that the seven conductors who had used them had manipulated them? No, I should not.
5567. In fact there is no degree of certainty in your mind that such was the case. Of course some of them may have been filed;—how many of them appeared to be filed, as far as you could detect? Five had the points of the ratchet off and two had not. Two, I should say, out of the seven were not manipulated, or, at all events, not necessarily so.
5568. Not necessarily so? Not actually, I should say.
5569. But you would be inclined to think that the other five were manipulated? The other five, I should think, were.
5570. *Mr. Brock.*] Could not the other two have had their springs bent back? No, I do not think so.
5571. But they would ring without registering? Yes; but in one case it could not be so because there was a feather on the ratchet, showing that it had worn down from the point where it had overlapped the ratchet ring.
5572. You say you do not know the names of the conductors who had used these bells? No; when I get registers to repair I do not know who has been using them.
5573. They are all numbered? Yes.
5574. Do you take the numbers of them? Yes.
5575. *President.*] Have you the numbers now, and the dates on which you received them? I can give you something like the dates on which I received them.
5576. I cannot see where the necessity comes in for your knowing the names of the conductors if you have the numbers of the registers and the dates on which you receive them. The Department could tell the name of the conductor who had been using the bells, and by that means we might know, for instance, to whom the two registers you just mentioned belonged? As far as these particular registers are concerned they might.
5577. Then if you make an entry in your book of the number of each register, and you say that such and such a register had such and such the matter with it, the Superintendent of Tramways would be able to tell who had been using it? Yes; but the Department would not keep an index or record in the same way as I should do. Suppose that a month ago a register came in which I thought had been tampered with; if the Department took any action, well and good, but the spring may have become weak. I should have the names of the men in front of me, with an entry on such and such a date a certain man had a particular defect in his register. The Department would not have had this before them in the same sense in which I would have it. They would have no record of the register given out before, that is to say with regard to its particular defect.
5578. A register is handed to you for repair; you go back to the office and say, "Register No. so and so has been tampered with," the Department look up the books and say, "Very well, we will retain this bell and give him a new one, and see what he will do with that"; is not that sufficient;—you could not deal with the man yourself? No.
5579. I see no objection to your seeing the names, but I see no necessity for it? My experience of things is this, that when there are too many people doing a thing it is not so well done as when one person is doing it. When you get two or three people doing one man's work it is not, as a rule, so well done. When I started my record I ruled a book for this particular purpose, but it was never carried out. I wished to get the men's names to see how they were treating their registers, and so forth.
5580. But if you keep your numbers correctly entered up in your book the balance of the information can be obtained from the office, and a comparison can be instituted between the two records? Hunting up these things involves a great deal of trouble. If I had one complete record in front of me a great deal of time would be saved.
5581. Supposing a certain number of registers are given to you to repair, you put down the date and the number of register; that is not any trouble? No, it would not be any trouble to me, but in the office they would have to refer to their book, and then to mine, and so on.
5582. How often do you get the registers in for repair, taking the average of each register. How many do you get every week? I get about thirty a week.
5583. Thirty pairs? Yes.

W. Lambert,
6 Sept., 1888

5584. You enter them under a number, do you? Yes.
5585. How do you keep the book—one entry after another, straight away? Yes.
5586. Would it not be a better system to open a ledger account, giving a separate folio for every number; or, better still under your system, for the man's name, so that if you wanted to see to repairs which had been given to No. 30, you would have only just to turn up your volume at a certain page to see everything which had been done to that register, and the dates on which the repairs were made; for instance, you would see at a glance that No. 30 had been repaired four times within the last three months? I have them in the way you speak of. I have a heading for each pair of registers, so that you could tell at a glance the repairs to each register.
5587. What you require is a history, not only of each number, but of each man? That is my idea.
5588. A history of each man's operations upon his register, so to speak? Yes, if anything suspicious occurred with any man's pair of registers I would put it down. Of course he might not have done anything; possibly the register might be only weak. I might enter a memorandum to the effect that the spring was off the register; if those bells came in the following day with the same defect I would become suspicious.
5589. But it would be quite open to you to follow the number just as you would follow the name, and if you would see anything suspicious about No. 45, and noticed that it had been returned with the same defect after a short interval, you could report 45 in just the same way as you could report Smith, Brown, or Jones? Yes, I have the numbers of the bells.
- 5590-1. And is not the number of the register associated in the books with a particular conductor? The same pair coming in with the same defect may have been used by different men; if I had the man's name to start, I should know the register each man had; it would not be easy for me; it would involve more work, but it would be less trouble for the Department.
5592. *Mr. Thompson.*] And if there was any improper manipulation with the bells it would be more easily found out? Yes.
5593. How many bells are there altogether? There are 154 pairs.
5594. You have thirty a week sent in for repairs? Yes.
5595. Still you think that when repaired they are efficient in every way, although one-fifth of them are always in dock? I do not say that that is always so.
5596. But you have an average of thirty a week? The inside of the bell is not always wrong. In some cases the strap may be broken, or the case may be broken by a knock, or one of the hands may be off, or something of that kind.
5597. *Mr. Brock.*] How can the glass get broken? By the conductors knocking it.
5598. Surely that does not often happen? The glass does get broken.
5599. If it happened often should you not think it was done on purpose, seeing that the register rests upon the man's chest, and the glass has a metal cover? You would be surprised to see the way in which some men treat things. They drop the registers sometimes when they are putting them on or taking them off.
5600. What is the average of broken glasses? I could not say.
5601. Could they alter the indicators if the glasses were broken? No, they could not alter them.
5602. *President.*] I want you to turn your attention to some months ago, when the question was first suggested to you as to whether this thing could be done with the registers, that is, by inserting a pin at the foot, after the preparation in the inside, so that they may ring without registering. Do you remember the question being submitted to you by Mr. Roberts, Mr. Tyrer, or Mr. Primrose, four or five months ago? No, I do not remember it.
5603. It was on an occasion when a man named Keen reported to Mr. Roberts and Mr. Tyrer that this certain thing could be done. The matter was suggested to you, and you gave a certain report. Can you remember what it was? I do not remember anything about a pin being put in the register being submitted.
5604. That is not the question I put to you at all. You were asked as to the practicability of stopping the registering while the ringing continued, by inserting a pin or piece of wire in the slot, after operating in some way on the inside? I was going to refer to that. I have had no registers given to me to examine with a pin inserted. I had not been asked that question prior to my getting the four pair of registers.
5605. How long ago is that? About two months ago.
5606. Do you remember that a man named Keen had reported this thing? No. I am not quite sure, but I think it was about that time that Mr. Roberts called me into his office and showed me a pair of registers, and asked me if they were in working order. He made no further remark. I examined them, and I said that they were in order. As to the circumstances, I do not know whether it was the case I allude to or some other case. That is the only case I remember in which I had anything to do with the registers.
5607. *Mr. Brock.*] Did you take to pieces the registers which were given you? Yes.
5608. And after doing that you said that they were in perfect working order? Yes.
5609. You are quite sure that you were not called to report upon this matter five or six months ago? No, I made no report upon it. The thing happened in Mr. Roberts' room; he simply asked me to examine the registers, and see if they were in proper working order.
5610. Did Tyrer have any conversation with you on the subject? I do not remember speaking to him on the subject at all.
5611. *President.*] You are quite sure that you did not report that this thing was impracticable, and that it could not be done with a pin? I am quite sure that I did not.
5612. You are absolutely certain that you did not report that? Yes.
5613. Who is the watchmaker on the Botany Road to whom you took a pair of bells? I never took a pair of bells to a watchmaker on the Botany Road.
5614. You are quite sure of that? Quite.
5615. *Mr. Thompson.*] Where is your brother-in-law? In New Zealand.
5616. Did you not say that you got some instruction from your brother-in-law about watchmaking? Yes; that was some years ago.
5617. Was he living in Sydney when you were first appointed? He has not been here to my knowledge for the last fifteen years.

- W. Lambert. 5618. *President.*] You are quite clear that you never stated that it was impossible to rig the bells so that they might be rung without registering? No; because I stated that it could be done.
- 6 Sept., 1888. 5619. When did you first discover that? I have known that it could be done ever since I have done the work.
5620. And that is for four years? Yes. The first of my saying anything about it was, as far as I can recollect, three years ago, and the reason was that I understood that a person had applied for the job of register-repairing. He had a pair of bells to try the same as I had. His pair of registers came back for examination, and with them came a box containing certain parts of the register, which were supposed to have been altered. In the box were the ratchets. I then said, "If you allow this they will be able to do what they like with the bells," and I showed that by doing this it was possible to do the very same thing which is now done with the pin.
5621. To whom did you say this, and to whom did you show it? I said it to Mr. Tyrer, and I think to Mr. Primrose and Mr. Knox. That was in the ticket office. Mr. Roberts was also there.
5622. You are quite sure that you showed them how it was done? Yes.
5623. And did Mr. Roberts see this three years ago? Yes.
5624. Who was Mr. Knox? He was a clerk in the office.
5625. In the front room? Yes. He is in the audit office now.
5626. Was Mr. Colls there? No; I think not. I do not remember it.
5627. Do you know him? Yes.
5628. Then you would have known if he was there? It is a long time since. I do not think anyone else was there.
5629. *Mr. Thompson.*] Who was the man to whom this other pair of bells were given to deal with? I do not know.
5630. Have you any means by which you can fix the date at which they were handed to him? I believe he had them for about six months. I know that I received them back about the end of November. That was after he had repaired them. They were then issued to a conductor to try. The ratchets having been removed I thought that the conductors could do what they liked with the bells.
5631. Will they work without the ratchet then? Just as well. The ratchet is simply there to make the dial complete its revolution, and to prevent it from coming back before it has completed it.
5632. If you once meddle with the ratchet everything is out of gear? The machine will work. If the ratchet is not there the revolution may not be completed.
5633. How did it occur to you to put a piece of wire in? I did not use a piece of wire.
5634. I thought you said just now that you had found out three or four years ago that it could be done with a piece of wire? Well I did discover that it would not do to do without the ratchet, but I myself used no wire.
5635. You yourself did not use a piece of wire at that time? No; I did it with my fingers. I showed them exactly the same result as is now obtained by the use of a piece of wire.
5636. Are you sure that it is so long as three years ago since you showed these gentlemen? Yes; it was at the end of November, 1885.
5637. You discovered, I think you said, that five out of the seven bells which you recently examined had had the ratchet filed? That was my opinion, but some might say they had not been filed.
5638. *President.*] Don't you know a watchmaker in the Botany Road? I have since been thinking that I have some recollection of the circumstance to which you allude. There was a watchmaker down there some years ago; I do not know anything further of him than that I took some work to him. He said that he would like to see one of the registers complete—that is, with the extra work on. I took one down. The circumstance had escaped my memory just now when you mentioned it. I showed him the register and brought it away again.
5639. You did not leave it with him? No; nor was it taken to pieces.
5640. You don't know the man's name? It is a small shop near Raglan-street; I paid about three visits to the place; I had three watches repaired by the same man.
5641. Yet you do not know his name? No.
5642. Are you quite sure that from what this man saw of the bells he did not ascertain the secret of their working? He did not take them to pieces. In fact he did not take them out of my sight; they simply laid upon the counter.
5643. Did you not explain the principle to him? No.
5644. Why was he anxious to see them? He said he wondered how they worked; that was all.
5645. I have no doubt he did; Did he continue to wonder or did he find out? He did not find out from me any more than that. I merely showed him the register and took it away from him.
5646. Surely when he expressed wonder as to how they worked you gave him some explanation or what was the use of taking the register there at all? I made no explanation of the registers; I simply showed them to him.
5647. You opened it then? No.
5648. Then how could you show him? It was about the time that the new registers came in. The old ones went gradually out of use and as others were required the new ones were used. In the course of a conversation about these registers this man said, that he would like to see one of the new ones to see how it worked on the face; that must be about four years ago.
5649. You do not know this man? I cannot say that I do.
5650. *Mr. Brock.*] Yet you paid three visits to him and he repaired three watches for you? Yes.
5651. Did it not occur to you that he had some sinister object in getting to see the bells? No.
5652. I am rather inclined to think that he had? You must understand that he did not open them. At the time he asked me the question the registers were as they are now, and he wanted to see one which worked on the face.
5653. What interest could he have had in that unless for some ulterior object? I never dreamt for a moment that he had any object. He could get no information further than seeing the face.
5654. Did he ask you to leave the bells there? He did not ask me and I did not do so.
5655. *Mr. Thompson.*] I suppose there is a sort of freemasonry between you mechanics which would make you accede pretty readily to what he asked? I saw nothing wrong; it was only showing him the same as could be seen on the cars.

5655. The first time you ever had any work of this kind to do for the Department was when the two bells were handed to you? That was the first time. I had done a lot of clocks and watches and such things. W. Lambert.
5657. What were you brought up to be. What was your business as a youngster? I was apprenticed at a mill. 6 Sept., 1888.
5658. What branch was it that you were brought up to; was it a journeyman? Not as a journeyman but I have worked as a journeyman since.
5659. You have to be apprenticed before you can be a journeyman; is not that so? Yes.
5660. When you were out of your apprenticeship what was your journeyman work; was it stone-dressing or what particular part of the work of the mill were you in charge of? I had different parts; the whole of it in turn.
5661. While you were apprenticed? Yes; while I was apprenticed I went through the whole business of a mill.
5662. When you became a journeyman how long did you continue in that business? About two years, at home.
5663. How long here? Five years in New Zealand.
5664. Having done five years in New Zealand you joined the detective police? No, it was prior to that. I left the police to go to New Zealand.
5665. How long were you in New Zealand? Five years.
5666. Having completed that time in New Zealand, what did you do? I came back to Sydney and went on to the trams as a conductor.
5667. You have been a conductor then? I have.
5668. How did it come about that Mr. Roberts knew that you could deal with these bells? I asked to be allowed to try them because they were so badly done at the time. There were constant complaints.
5669. How long ago would that be? Just about four years ago.
5670. Mr. Roberts then handed you the bells and you made the discovery? Yes.
5671. You had been carrying the bells yourself some time previously as a conductor? Yes; but not at that time, because some time previous to my taking my present position I was appointed revenue inspector.
5672. What is a revenue inspector with regard to the Tramway Department? At that time they were called revenue inspectors, now they are called special conductors.
5673. Were you on with Murray? Yes; I and Murray were the first.
5674. Can you assure us on your oath that you never meddled with one of the bells until Mr. Roberts handed you the two bells to repair? I can.
5675. You never opened one? No; nor did I see one opened.
5676. Are many of the conductors who were in the Service then in the Service now; who are they? Warbey, Peters, Steel, Dolan, McMahon.
5677. Was Greeley in the Service then? No, I do not think so; and I am not quite sure about McMahon.
5678. Was Jessop in the Service then? No.
5679. You say you became aware of the possibility of this thing three or four years ago when you gave information to the Department; afterwards the whole matter became exposed through revelations made by some one in the Department. Did you not from the time you first discovered that the thing could be worked in this way press upon Mr. Roberts' attention the fact that an alteration ought to be made? No; I only pointed out that the bells were defective, showing that if they were used in a certain manner a certain thing could be done. I did not point this out with reference to the register generally, and it was not by way of advice to him as to what he should do.
5680. You merely pointed out that it could be done? Yes; if those registers were used. I was not pointing out that the thing could be done or was likely to be done by the conductors generally.
5681. Mr. Brock.] Did you not go and consult a watchmaker when you first got this idea about the internal arrangements of the bells? I never spoke to anyone about the internal working of the registers.
5682. Is the machinery on the same principle as that of a watch or clock? On the same principle as a clock with this exception, that instead of being worked by a spring it is worked by hand.
5683. It is not automatic? No.
5684. You cannot think of the name of the man living on the Botany Road? I cannot.
5685. But you knew his name at one time I suppose? I cannot say that I did.
5686. Is he there still? I do not know; I have not been there for some time. I know nothing of the man any more than that I took several jobs to him.
5687. Did he do them well? I could not say, but I believe so. They were not for myself.
5688. Did you ever recommend anyone to take work to him? No.
5689. Mr. Thompson.] You have told us that over and over again you repaired clocks and watches before you started repairing these bells. Why did you take these three jobs to a watchmaker. Why did you not do them yourself? I was too busy.
5690. Mr. Brock.] You can repair a watch then? Yes.
5691. President.] What was it that you knew about the registers three years ago. Let me understand it more clearly, that if the spring was weak this manipulation could be done? No. The ratchets were removed by the party who took the bells. They were returned with other parts which were said to have been altered. The man remarked, "I think the ratchets are too weak to stand the strain that is upon them."
5692. Who said that? This watchmaker; I don't know who he was who asked for the job.
5693. Was it Felton? No, he had been repairing them previously.
5694. Why do you suppose this man removed the ratchets? I do not know. They were in the box with other parts. He said he had removed and replaced them with something stronger, which I said that he had not done.
5695. Were the bells supposed to be in proper working order without the ratchets? I think I showed that they were not.
5696. Did this man suppose that they were? I suppose so. He delivered them as being correct for work.
5697. What did he put in place of the ratchets. Were they ringing and registering? Yes. When Mr. Roberts took them he said "they are all right," and so they were apparently. I asked him to let me see them and I said, "You see they are not right, because if you have the pull down it will go only part of the way back."

W. Lambert. 5698. You said that under certain circumstances these bells could be fraudulently worked in their then condition? Yes.

6 Sept., 1888. 5699. Did it not make you doubly careful afterwards when they came in for inspection to see that they were not in a condition in which they could be worked? I have always been particular to do that.

5700. Have you not had the least suspicion all along that anything improper was being done to the registers? I have not had any suspicion.

5701. Did not this fact that came to your knowledge cause you to be suspicious. When you saw that under certain circumstances these bells could be rung without registering did it not make you always on the *qui vive* when the registers came in to see if they were in bad order or in a condition in which they could do one service without doing the other? I did see to that.

5702. But I understand from you that so far from being suspicious, you recognized the fact that when they had worn a bit they would become in a condition in which they could be manipulated? Yes.

5703. But when you found that the bells were in that condition, you could not be certain that it was the wear, could you? No, because in some cases, when they had been out some time, they would get stuck up through the oil getting clogged.

5704. But were your suspicions never awakened by the consideration that as you had found out yourself some one else might find out and put to practical use? Anyone else who knew it of course could do so.

5705. You told Mr. Roberts that if the bells were issued in a certain shape the conductors could do what they liked with them? Yes.

5706. Were you not suspicious that the conductors would find out what they could do if the registers were in weak order, and that they would put their knowledge to some use? No; the conductors are not supposed to know anything of that kind. That is why I concluded that the Department would question certain evidence given at the meeting by conductors. They are not supposed to look at the registers and read them, because it could be no advantage to them in any way. Some conductors said that the registers got out of order, and that no one knew anything about it—that they would ring without registering, and that no one would know. He said that no one would have known about it if he had not taken them in and pointed it out. What I wish to draw attention to is this: That if the registers did ring without indicating, the conductor is not supposed to know anything about it, because he is not supposed to read the registers; and in the second place he is not supposed to be able to check it, because of the counting of the tickets.

5707. Still you see how thoroughly it can be done? As I have already said, I knew that it could be done from the first time I took the registers in my hand.

5708. I cannot understand your action. I can understand that good mechanician though you may be, you might be deceived; but I cannot understand that being in full possession three years ago of the knowledge that under certain conditions these registers could be manipulated, you should not have been wide-awake to what was going on when you saw these registers in that condition, and that your suspicions should not have been aroused. There is no doubt that registers improperly manipulated for certain purposes have passed through your hands, and if you have thought anything about the matter at all you must have put it down to simple wear and tear? Yes; that is so.

5709. But how is it that with certain knowledge in your possession you did not say, "I do not believe that all this is the result of wear and tear; I believe that there is some roguery going on?" You must know that when the registers have been out some time they get so worn that you cannot say whether they have been manipulated or not.

5710. I understand that. And if you had said that you did not know that under certain circumstances this thing could be done I should not have been surprised at your being deceived, but knowing as you did that this manipulation could be done, I think it is strange that the registers should have passed through your hands in this condition so frequently without it striking you that there must be something more than wear and tear going on? Unless you looked at it with a glass you could not detect it, and having no suspicion that anything of the kind was going on I did not look specially for any marks of manipulation. Then it was useless for me to do so, because I had not the men's names.

5711. It may have been better that you should have had that information, but that is no reason that you should not point out a wrong? I saw nothing which actually required to be pointed out. I believe that it has been done only lately. There was only one case in which I thought unfair means had been used, and on looking at the register closely I could not say positively whether it was so or not.

5712. How could you expect that these three gentlemen who are not experts, to whom you mentioned the matter two or three years ago, would keep the matter in mind, while you, an expert, had apparently entirely lost sight of it? I had not lost sight of it, because I have on several occasions told Oakes and others in the Department who have the checking of the conductors that it would be necessary to examine the registers before anything was done, in the case of any of the men being incorrect in their tickets, because I knew that this sort of thing was liable to be done. If the ratchet had been in the register the remark I made would not have been called for.

5713. *Mr. Thompson.*] You must remember that you were an apparently unskilled man as far as the Department knew, and did it not occur to you that there might be a number of men employed in the same way, who would have the same means of knowing that you had had, and who perhaps would not be quite so honest as you were. Did it never strike you that this kind of thing was being carried on? I never dreamt that anything of the kind was being carried on. I thought there would be a difficulty in getting rid of the tickets. I still believe that prior to the registers being done away with for six months there was nothing of this kind going on.

5714. Suppose we have the admission of one man in the Department that he knew of it from a fortnight after he joined the Service more than two years ago, and that he has been working at it ever since? Well I would not contradict it.

5714½. Now would it create surprise in your mind? Not now that it has been done at all. The only way to reach them is in my opinion as I have described.

5715. *President.*] Upon one point I do not quite follow you. You say you do not think that action should be taken against a conductor for a wrong return until it has been seen whether his register is in order or not, but it would still ring and register even if it were out of order unless something further were done. Is not that so? Well, the ratchet itself might get fixed up or clogged.

5716. And then the ringing would go on without the registering? Sometimes it would register and sometimes it would not.

5717. I should gather from your answers that this register is a very unreliable check? Not while it is W. Lambert's in order.
5718. How long would elapse, do you suppose, from the time a pair of bells would be placed in the hands of a conductor in perfect order until they would be handed in by him as being out of order? Perhaps a month, and perhaps five months. 6 Sept., 1888.
5719. We understand that Moran had his bells twelve months, and we understood from what you said a little time ago that they would want repairing on an average every three weeks? I cannot say what the average is.
5720. *Mr. Brock.*] How are you paid for making the repairs. Are you paid for the time or for so many pairs? So much per pair per annum.
5721. Then if one pair came back a dozen times you would not be paid for it the second time? No; the better I do them the less trouble I have. There are 156 pairs of bells, and I get 30s. per pair per annum.
5722. You get paid for all in use, whether they come in or not? Yes.
5723. At the outset of your evidence I understood you to say that five out of seven registers which you examined had been tampered with, and that two were out of order from wear and tear; but not long ago you said that it was impossible to tell whether the registers were out of order by foul means or fair means? I would not like to say positively that the five pair to which I referred had been tampered with.
5724. You say now then, that you could not possibly detect whether they had been tampered with or not? I could not say definitely that they had been. Perhaps if you were to ask some people they would tell you that they had not been tampered with at all. Another thing I was going to say was this: that from the time the bells are issued to the conductors originally they are not tried by any other person; therefore if they ring without registering no one knows anything about it.
5725. With regard to the pair of bells which came back without the ratchets; they were sent out, I presume, at the request of a man who wanted to try his hand at it. Did a written report come back from him with regard to the bells? I could not say whether it was from him, but a report came with them suggesting that if they were found satisfactory he should receive the appointment.
5726. That is if the work he had done to them was satisfactory? Yes.
5727. In the course of your investigation and of your examination of the bells, have you detected any other method by means of which the Department could be defrauded besides those of which you have already told us? No, I have not.
5728. That is beside filing the ratchet or meddling with the spring? No.
5729. *Mr. Thompson.*] Is it not a fact that it can be done in another way? I do not think so.
5730. Is there not a method called muffing by which it can be done? Well they could block up the holes and stop the sound of the bell, but it would be against their own interest because attention would at once be called to the fact.
5731. The man to whom you have referred in sending in his report, besides asking for the work if his repairs were satisfactory, also said that there were certain things in the machinery insufficiently strong to carry on the work, did he not? Yes; but he had not substituted anything stronger. I think he had rather damaged the registers by what he had done.
5732. Were you ever told who the man was, what his name was, where he lived, and so forth? No.
5733. Were any of the bells afterwards submitted to him that you know of? Not that I am aware of.
5734. What he did to the bells you consider in connection with the ratchets made his work not only of no use but rather damaging? Well he did not put anything in place of them. He had merely taken them out.
5735. Suppose a man has taken 500 tickets during the day, could he not ring his register until he exhausted it and then start afresh and ring a less number of times than would represent his number of tickets, showing for instance that he had only say 150? Well he could not do so while he was on duty; but it might be done in another way, and that is the only way in which it is likely to be done. A man going upon the last trip at night has his register read, but he takes with him the fares he has collected on that last trip and does not come in again, and while at home he might, perhaps, exhaust his register, and so account for less tickets than he had taken on that trip.
5736. Where do you do your work? At home.
5737. You have no shop? No.
5738. You have no office in the Department? No.
5739. Are you on intimate terms with any of the conductors? No.
5740. Do they ever stroll into your home shop? No.
5741. Not any one of them? No.
5742. I suppose you have friends who occasionally stroll into your shop? No, I do not allow it.
5743. You exclude everyone from your shop? Yes.
5744. That is a fixed rule of yours? Yes.

Elizabeth Elton called in, sworn, and examined:—

5745. *President.*] You are the wife of James Elton, who is employed in the Tramway Department? Yes. Elizabeth Elton.
5746. Some time ago you went to purchase some tickets, and after so doing you made a certain statement to your husband? Yes. 6 Sept., 1888.
5747. This is about twelve months ago, is it not? Nearly two years ago.
5748. Try and fix the date. You told your husband, I presume, on the same day? I do not know.
5749. Well a very short time afterwards? Yes.
5750. Did he not say that he had informed the Department of what you had told him? Yes.
5751. Is it not clear then that the date of your telling him and the date of his informing the Department must come close together? Yes, I suppose so.
5752. Then if we find that the Department was informed not quite twelve months ago instead of two years ago, which would be right—twelve months or two years? I am sure it is more than twelve months ago since it happened.
5753. *Mr. Thompson.*] More than twelve months does not mean two years? I will tell you how I know: My little boy was a baby at the time, and I was carrying him. He is a little over 5 years old now. If it were only twelve months ago I should not have been carrying him.

5754.

- Elizabeth Elton.
6 Sept., 1888.
5754. You are sure you were carrying him at the time? I am; he had been ill, and I remember it perfectly.
5755. What happened? I went into a shop to buy some tram-tickets. When I took them up I saw that some were dirty, and I gave them back again.
5756. In the shop? Yes; I went straight back to the door and gave the tickets up.
5757. What did you remark? I said that the tickets were so dirty that no conductor would take them.
5758. Did you say that they had been used before? I said that I believed they had. They looked as though they had been put inside a glove on the hand, and as if they had been stained by the glove—the glove or the hand had left a mark.
5759. What did the shopkeeper say? He gave me other tickets. He did not say anything that I can remember.
5760. Was anyone else in the shop at the time? Yes, there was a conductor.
5761. How did you know he was a conductor? I knew that he was; I had seen him on the trams.
5762. Was he in uniform? No; but I knew him again.
5763. Do you know his name? No.
5764. Had you any idea as to who he was? No, I never knew the man at all; I had only seen him in one of the trams.
5765. What did the shopkeeper say when he saw that you knew the conductor? He did not say anything; he snatched the tickets off the counter. I noticed that the conductor was very tall. The matter then went out of my mind.
5766. What else did you see—you have not told us all? I noticed that there were some tickets on the counter. I went to the door with the tickets I had bought, and when I turned round I saw him sweep some tickets off the counter.
5767. You say that there were some tickets on the counter;—you think they were second-hand or dirty tickets? I fancy they must have been. There was a piece of paper over them, I think. He served me from the tickets under the paper—at least I think he did; I am not quite sure.
5768. Were there a great number of dirty tickets? I could not say how many there were.
5769. Was there a good pile? There was a pile of about the size of that inkstand.
5770. Have you any idea what led the man to sweep the tickets off the counter? I could not say.
5771. Did you not tell your husband something? I do not know why he did it.
5772. Did you not say you felt sure that the shopkeeper did so because he saw you recognise the conductor? I did not know him by name. I knew that he was a conductor.
5773. Did you not tell your husband that the action of the shopkeeper evidently followed your recognition of the man who was standing at the counter? I would not like to swear that the man knew that I had recognised the conductor.
5774. Did you not tell your husband that that was your opinion? I may have told him that.
5775. But did you tell him? I may have done so, but I could not say for certain. I know it was what I thought myself.
5776. What did you do when you got your dirty tickets exchanged for clean ones? I went and got into a tram without making any further remarks.
5777. That was the afternoon of the day you mentioned the matter to your husband? I am a very poor judge of time. All I go by is what I was telling you about my baby.
5778. If the thing surprised you so much, surely you would mention it to your husband, would you not? I had pretty nearly forgotten all about it until to-day.
5779. But when this thing occurred was it not likely that you would tell your husband the same evening? I do not know. I may have mentioned it at another time. I had previously bought tickets that had been torn asunder and pasted together again, and I can give you the address where I bought them.
5780. Where was that? At the corner of Queen and Ocean streets. When I got them I was afraid to use them, and I gave them to my husband.
5781. Do you mean the shop next door to where the post office was? Yes.
5782. *President.*] Was that during the time when the system of tearing up the tickets obtained? Yes. I do not think it is more than twelve months ago.
5783. You knew that your husband gave information to the proper authorities about the dirty tickets? He told me he had mentioned it to someone. I did not think anything more about it.
5784. But was it not clear to you that the conductor who was standing in the shop had some connection with the tickets which were on the counter? Yes; but I did not see him give the tickets. I do not think I should know who the man was if I saw him.
5785. Did you know that he was in there selling tickets to the shopkeeper? Well, he was in the shop.
5786. What was he doing? He was standing in the shop, leaning over the counter.
5787. And where were the tickets? They were on the counter, covered over with a piece of paper, as far as I can recollect.
5788. You say that the man was a tall man; are you sure of that? Yes; a tall, thin man.
5789. Do you know a conductor named Musgrave? No; I do not.
5790. Has he not been pointed out to you lately? No; I do not know the conductors.
5791. Did you not tell your husband that you had seen this conductor on the trams occasionally; that he was frolicsome, and given to winking at the girls? I do not know.
5792. What was the age of the man you saw in the shop? He would be a man of 30 or 35 I suppose.
5793. Is he in the Service still? I do not know.
5794. How long is it since you saw him last? I think the last time I saw him was in the shop.
5795. How was he dressed? As far as I can recollect he had on a short coat and a hard hat.
5796. Not a soft felt hat? No.
5797. Had he on a uniform coat? No, I do not think so. I cannot recollect what he had on.
5798. We understood your husband distinctly to say that you said you would have no difficulty in recognising him? I could not recognise him at all.
5799. Are you sure that you are not shrinking from a very unpleasant task? No. I have sworn to tell the truth. I quite understand what I have done.
5800. And you are not shrinking from a very unpleasant duty? No; I am not

5801. You do not feel awkwardly situated on being called upon to recognise this man? No. I am telling you what I believe to be the truth. I should not know the man again.
5802. I could understand your saying that you could not be positive? Well I could not swear to him.
5803. But you described him accurately to your husband? I may have remembered him then, but I could not do so now.
5804. *Mr. Brock.*] It is quite possible that if you saw him you might recollect him? I might, perhaps.
5805. Could he not have been younger than 30? He may have. I am not a very good judge of ages.
5806. Did you not tell your husband that he was quite a young fellow? Well I should not consider 30 old.
5807. Do you know a conductor named Lane? No. The man I saw in the shop strongly resembled him—so they say. Lane, I believe was a fair man, and so was this man in the shop.

Elizabeth
Eltón.

6 Sept., 1888.

FRIDAY, 7 SEPTEMBER, 1888.

Present:—

A. RICHARDSON, Esq., PRESIDENT.

R. W. THOMPSON, Esq., M.P.,

F. A. BROCK, Esq., J.P.

John Bell called in, sworn, and examined:—

5808. *President.*] We have sent for you because we understand that you have elaborated a system of cash collection which in your opinion would be successful in doing away with the frauds which have recently occurred. We will ask you to explain this to us, and in so doing to be as brief and concise as possible in justice to the merits of your own invention; would there be any difficulty in putting it upon paper in a descriptive form? None subject to the model being shown. Of course I cannot give any diagrams or explicit details.

J. Bell.

7 Sept., 1888.

5809. Will you give us a brief and concise statement of your scheme? Yes. About ten years ago my attention was first directed to the matter of tramway fares, by the offer of a small bonus for the best system of collection and registration, made by a tramway proprietor in Dunedin, N.Z. As I was connected with the passenger department of the railways at the time I was specially requested to think the matter over, and accordingly I devoted considerable care to the question. After turning over many and various ticket systems, I was forced to the conclusion that tickets were a most objectionable and unsatisfactory medium of payment. Almost every style of tickets left very much room for fraud, by forgery in the first place, then by resale after collection, and also entailed such a cumbrous routine of printing, stockkeeping, and record of issue to vendors, besides being hampered and discounted by commission to intermediate agents between the department and the public. Then again, tickets must be either mutilated at time of inspection by conductor, so as to be invalid in future, or they must be collected, and such collection registered and checked again. Seeing that, under any ticket system, provision must always be made for those ignorant and improvident persons, who will travel occasionally, unprepared with tickets, thinking cash good enough to pay for their journey, I was impelled to conclude that, provided the due collection and registration of cash fares could be guaranteed, tickets were an unnecessary obstruction between the authorities and the traveller. Innumerable schemes presented themselves to my mind, only to be beaten by my inability to provide for a constant supply of change, combined with a limited space, such as a conductor could conveniently carry about with him. On leaving the railway service I gave no more thought to the matter, save in a perfunctory manner, when occasionally aroused by seeing the different styles of fare collection as I travelled the various Colonies. Within four hours however after my arrival in Sydney I was struck by the erratic collection of fares in a tram to Moore Park Cricket Ground, and I have ever since given more or less attention to the subject. From constant observation of non-register or incorrect record by the conductors of the Sydney trams I was more than ever convinced of the insecurity afforded by a ticket system, which left such large opportunities for resale with impunity; as I noticed it was mostly when tickets were paid in unbroken quantities of four, six, or more, on long runs, that the register was incorrect. When, added to the above, I found that cash was at one time refused altogether, and at another charged a premium of 50 or 100 per cent. on ordinary fare, with the multiplied opportunities for dishonesty by the use of an additional register, (as the same one could not be used for cash and tickets), I was stimulated to greater effort to combat the difficulty. Thoroughly satisfied as to the drawbacks to the ticket system, and impressed with the need for a cash medium of travel, I was convinced that no system which left the registration of collections in the power of the collector would ever be satisfactory, and as all our lines are run on practically a penny fare basis, I worked on that and have now, I think, perfected my cash register, which I have submitted to you. By my system the conductor's bag is divided into two compartments, one of which, under special lock and key, contains the cash register with the receptacle sticking out of the top of the bag, while the other part has simply a flap cover with a strap. Communication is provided between the compartments, within the bag, by a space below the centre partition, and the open part of the bag is slightly deeper than that containing the machine. I purpose that every person must pay and deposit his or her own fare, so that the conductor does not handle it. On satisfying himself that the fare is correct, the conductor releases the coin, which passes through the machine into the bag, being automatically registered *en route*. Seeing that the coin has been registered, it is now available and can be used by the conductor for giving change, as he has access to it by the flap part of the bag, thus at once lightening his load and accommodating the traveller, who can always be supplied with change for silver coin. Of course it is at once apparent that this system would be awkward in application to our present styles of cross-seated cars, but this I would suggest could be easily met, by a slight sacrifice of sitting room in cutting a passage equal in width to say one person's sitting room, through the several seats of the car, thereby affording collecting facility for the conductor and distributing passage for the passenger, after the tram was in motion. Again it will be probably objected that the public will take umbrage at, and resent a system, which provides a penny as a *sine qua non* on a tram-car. This difficulty is more imaginary than real, as the public is essentially teachable, and docile, as proved by their submission to the arbitrary rule which at present prevails, compelling them to buy tickets or pay heavily for their neglect. Moreover, the need to carry pence is reduced to a minimum

by

J. Bell.
7 Sept., 1888.

by the fact that the conductor will always have a supply of change available and circulating in his bag. I would instance also all the trams in the principal towns of the old country, almost all of which run penny sections, and where no grumbling is ever heard about the vulgar coin. In fact, substitute any term of fare for the word penny and the objections vanish at once. I have heard suggestions of tokens being used and sold as tickets, but all the objections to ticket systems again apply, while I cannot see any need for coining a medium when we already have one, in the ordinary currency. Some objections may be raised, on the score of weight for the conductor to carry, but when you consider, that pence weigh 3 to 1 oz., or four shillings to the pound weight, one pound value of coppers only weighs 5 lb., and by the process of constantly giving change, the weight would not accumulate very rapidly, and I do not think the conductor would be overburdened. Every machine could be adjusted by the authorised officer at the head office, the normal state being zero, and they would all be interchangeable, so as to fit any bag. Each conductor, on setting out on every journey from principal terminus, would be supplied with a given quantity of change in silver and copper, the amount being duly debited on his machine, and on his return his cash would be taken from him and counted, the machine again being set at zero. Once more the difficulty of seeing fares at night suggests itself, but as nearly all our trams are fairly well lighted up at night, only the top deck need be considered, and here, if the tinkling of the automatic bell be deemed insufficient, the conductor could use a small hand lamp to shine through the glass front of the coin box. As I notice, however, that all the newly-built cars are of one deck only, and are much in favor, I think this difficulty will not prove inseparable. It would be necessary to see that the amount of change furnished to each conductor at the beginning of each journey was sufficient to provide for the contingency of an organised effort being made to obstruct, by a large demand for change on the first few sections of the journey, before time was given to make any collections. In conclusion, gentlemen, while I do not claim as yet, perfection either in design or execution, I think I have attained to such a degree of improvement on all previous modes of collection, as fully warrants me in submitting my scheme to you, and praying for your careful and favourable consideration.

5810. How soon do you think you could have your invention so complete that it would be possible to make a trial of it? I have an idea that I can still decidedly improve it. I might be able to let you have one in four or five days perhaps. This machine cost me £4, but in the event of their being made in large numbers they ought not to cost more than 7s. 6d. The bag attached to the register cost me 32s., but I think you ought to get it made for about 16s.

5811. Do you think that the cost of equipping each conductor with a bag and cash register complete would exceed 40s.? No, I do not think so. You will observe that the machine is intended purely for the collection of pence.

5812. *Mr. Thompson.*] Have you considered the probability of a conductor being robbed when upon the tram? Well, he does not empty his receptacle upon the tram, and nothing but coppers would go into it. He can put the silver for which he gives change in his pocket or in some other receptacle.

5813. Suppose there has been a very busy day and the conductor has taken a lot of coppers which it would be well worth the while of some rogues to take from him; under ordinary circumstances it is not worth while robbing a man of his tickets, but coppers are not identifiable in any way, and if a man had £5 or £6 worth of coppers you can easily understand there would be a great temptation to take them from him? I think it would be only in the case of the last run when there would be any risk whatever. There would be so many of the ordinary travelling public about at any other time that it would not be worth the risk, but the money could be taken out so frequently that the conductor would never be carrying more than the proceeds of one round trip.

5814. *Mr. Brock.*] Have you any idea of the weight of pence? About three to the ounce, I think they go. A pound's worth of coppers would weigh 5 lb. What occurred to me as an objection to the present system was the necessity for dual registers—one for cash, and one for tickets. By introducing the current medium, and having one register, you do away with this awkward system of dual register, thereby minimising labour and ensuring greater accuracy. Moreover in any system of tickets you must either provide a cash register for cash or else exclude cash altogether by an arbitrary rule.

5815. *President.*] I wish now to go into a few objections to your system from our point of view. I presume that having given so much consideration and thought to this admirable invention of yours you have carefully considered it in connection with the present system of tramways. It seems to me that the collection of fares in the way devised by you on the top of the tram would be simple enough; but I want to know how you propose to collect the fares on the lower deck when it is crowded, seeing that you propose that the passengers should place their own fares in the register and that the lower portions of the cars are divided into cross sections? By introducing into the lower portion of the cars the formation of the upper portion. This would leave the conductor perfectly free in the collection of his tickets, and would afford to the public ten times the facilities for re-entry and distribution that they possess at the present time. Let me give you an illustration: Under the present system we have a gentleman and two ladies wishing to get into a crowded car. He has to run along from one door to another in great confusion, ultimately putting one lady in at one door another in at another, and getting in himself where he can, the ladies having no tickets, and he having to tell the conductor that he will pay for the two ladies. By retaining the present side doors, you have the same facilities for exit and entrance that you have at the present time, and in the suggested instance where a gentleman has two ladies with him, they can get on to the car and adjust themselves after the car has started? I would have the doors as at present with this difference, that there might possibly be, as I dare say will be objected, a certain sacrifice of room, but that sacrifice of room I would so minimise that the advantages will be hugely in favour of the Department and of the travelling public. You would have almost a full broadside access to your car, something after the fashion of the North Shore dummies, and you would at the same time have provision for shelter. Instead of having a passage at each end of the seat as you have now, on the upper deck I would have one passage in the centre, which I think would answer every purpose. It would allow people to circulate, and would allow the conductor to pass from one side to the other in the collection of the tickets. The conductor would remain within the car doing the whole of his collection with perfect safety.

5816. What do you suppose would be the cost of altering the cars? Very trifling, I think, if the present sitting accommodation were adapted.

5817. Do you think it would cost £50 a car? No, I think the present seats will do the whole business.

5818. Do you think the conductor would have ample time to get through the whole of his work on a crowded occasion? I think he would have ample time to collect his fares on any particular section.

5819.

J. Bell.
7 Sept., 1888.

5819. Do you not think there would be great objection on the part of the public to the carrying about of so many pence? I cannot see any real objection.
5820. You do not think there is any danger of the public rising in a body and protesting against the use of this currency? They would only require to carry 2d. or 4d. at the outside. Passengers at the present time have to carry a receptacle for tickets. Why should they not carry a few pence?
5821. Do you think there would be a sufficient quantity of coppers in Sydney to answer the purpose? That I do not know.
5822. *Mr. Thompson.*] Would it not do to introduce copper tokens instead of pence? I do not think so.
5823. *President.*] Have you considered the matter in the light of the collection of fares at night? Yes.
5824. You think it would be perfectly safe at night? Yes.
5825. On the upper decks, for instance? Yes.
5826. How could the conductor see whether a man put his penny in or not? By having a bell attached to the machine.
5827. That is something extra then, it is not on the instrument now? No, but it could be easily added.
5828. And in the matter of change what would you do? Well I would supply each conductor with 2s. or 5s. in coppers at starting, and these I think would be sufficient until a certain number of fares had been collected.
5829. Don't you think the necessity for putting into the register so large a number of coppers in the case of a long journey such as Coogee, Bondi, or Randwick, would irritate many passengers, and would add to the prejudice which would probably exist against the new system? Well it might be so for a time, but I think that difficulties of that kind would soon be overcome. There are always some people who complain when a system of this kind is changed.
5830. Will you show us next week the improvements which you intend to make in your register, and at the same time give us any further information in your power to meet some of the difficulties which we have suggested? Yes.

George Andrews Bramston called in, sworn, and examined:—

5831. *President.*] I understand that you have some scheme which you wish to bring under our notice, which will facilitate the collection of tram-fares? Yes.
5832. Will you be good enough to detail to us in your own words what you propose to do? I will do so as briefly as possible. The tram-tickets will be in the form of a roll. They will be printed upon 2-inch lengths, and they will be of the same width as those at present in use, one side will be blank and the other will be numbered from 1 to 1,000, or from 1 to 500, as the case may be. Each roll will be of a different colour, so that the different rolls may be changed from one line to another every week, or if necessary more frequently; I propose that the guard only shall issue the tickets taking cash, for which the ticket will be in reality a sort of printed receipt. The ticket will be stamped while passing through the tell-tale, so that it will be available only for the section upon which it is issued. When the following section is started, the tell-tale will be altered by pressing a spring, which will produce a different number, so that none of the previously issued tickets will be of any use then or at any other time. When the tell-tale is received by the guard, the number of the first ticket will be entered in a book, and when he returns the cash it will have to tally with the number of tickets which have been taken off the roll; for instance, if the first ticket is 200, and when he returns the tell-tale, the number is 600, the conductor will have to account for 400 fares. The amount will be entered in a book kept by the guard, and will be signed or initialled by the person appointed to receive the cash, the book to be audited periodically, but not to pass through the hands of the officers who have received the money. The tell-tale will be so constructed that it will print on the blank side of the ticket the day of the month and the year, also the number of the section then being travelled upon.
5833. You have not a model of your tell-tale? Not a proper model—no; I have a working model which I constructed for my own guidance, that is all, but I can give you a rough drawing. This will give you merely the outline of the tell-tale.
5834. What is done with the ticket which is given when the cash is presented? The passenger keeps it until the end of the section. He can afterwards destroy it or continue to keep it.
5835. *Mr. Thompson.*] But he would naturally keep it until the close of the section, or he might be asked to pay again? Yes.
5836. *President.*] How would you manage with your system under such circumstances as these: Suppose a conductor made a trip to Leichhardt, and that he then worked in the yard until dinner-time, making a trip in the afternoon to some other place? He would not have the tell-tale when he was working in the yard. He would have given it up after the Leichhardt trip, and when he is going out again in the afternoon he would have to say what line he was going on, and he would get a tell-tale for that particular line.
5837. But suppose a man started out to Waterloo and returned as far as the railway station, and was there detached to bring a railway tram into Bridge-street;—how would you manage that? He would still continue with the same tell-tale.
5838. You would allow him to keep the Waterloo tell-tale? Yes; and if he sells tickets from that tell-tale it will register against him all the same.
5839. But would not that upset your plan with regard to your colour? The colours would be frequently changed, and the public will not know what colour is fixed for a particular line.
5840. You have a double check in the printing of the date and the colour of the tickets? Yes.
5841. Reducing the chances of fraud to a minimum? Yes.
5842. Is there any bell? No; and if the passenger cannot show his ticket he must pay again.
5843. But would you not have a bell when he pays in the first instance? I see no necessity for it.
5844. *Mr. Thompson.*] Would you not confuse your takings upon the different lines, if a man was suddenly changed from one line to another, using the same colour on two or three different lines in the same day? I do not think so. The number of tickets issued on the different lines could be ascertained. Moreover, there would be the book initialled by the person appointed to receive the cash, a margin kept by left for memoranda, and an entry could be made something in this way: "Started on Forest Lodge section with ticket 200, finished up with ticket 500. Started on Leichhardt section with ticket 501, finished up with ticket 600." It would be easy to credit to each line the issue of tickets due to it, and

G. A. Bramston.
7 Sept., 1888.

G. A.
Bramston.
7 Sept., 1888.

the tell-tale will still register the aggregate number of tickets. With reference to the section number, if a conductor were to go off the Forest Lodge on to the Leichhardt line it would be necessary for him at the time to change his section number to the number corresponding with that on the section to which he was going. He can do this by simply touching a spring in the tell-tale.

5845. *Mr. Brock.*] He could change the number of the sections without drawing out any tickets? Yes.

5846. Supposing a conductor issues tickets, and then picks them up and pretends to reissue them from the tell-tale? Of course the public will have to see that they do get their tickets from the tell-tale.

5847. But the conductor may appear to be issuing tickets from the tell-tale without doing so at all? He could not do that, because the tickets he would have picked would not correspond in their number with the number of the section.

5848. Is this system in force anywhere? Nowhere. I never travelled on tramways anywhere in my life, except in New South Wales, therefore there is no piracy on my part. I do not think many tickets will be picked up. The conductors would not have an opportunity to do so, and even if they did pick up any they could be used a second time upon the same section only, and upon the same journey only. Even then you assume that the public would not notice that he had not taken the ticket from the tell-tale?

5849. You propose to have a different number for every section? Yes.

5850. Suppose there are four sections upon a line, the first section will be No. 1 on the outward trip and No. 8 on the homeward trip. I am afraid the public would not understand? It is not necessary that they should know the number.

5851. Then if they did not know the number, how could they tell whether the conductor was selling them an improper ticket; then again, the passengers themselves may pick up tickets of the same colour, and may hold them, sitting in a crowded tram, and leading the conductor to suppose that the number of the tickets which they were holding was the number proper to the section, whereas it might belong to a previous section? The examination of the tickets would, I think, be quicker than the present operation, and the guard would have some knowledge as to the person to whom he had issued tickets. He would know who had got in at the tram at the different sections.

5852. But suppose the tram was very crowded; a lot of men will throw away their tickets, and there will be constant rows between people who have not paid and the conductor, who is anxious to make them pay their fares? Yes; but it will soon come to be understood that the passengers must retain their tickets until they reach the end of the section.

5853. The same ticket may do two men for one section, one man getting down at one point and another man at another? But it is not fair to charge twice for the same section. What does the Department lose even if two men do ride on the same ticket. They can travel only upon one section which has been paid for.

5854. But the Government, as you must see, lose at least 2d. by that transaction? Well that is a matter which must be left to the conductor. If he were to do his duty such a thing could not be done. If two or three people got on to the tram together he ought to see that a ticket was issued to each of them.

5855. *President.*] Suppose the conductor found a man with a ticket under the circumstances suggested by *Mr. Brock*, and a dispute occurred, the conductor charging the man with not having paid his fare. The man says, "There is a ticket." The man might have an action against the conductor, even although he might be a swindler, because the ticket would be a receipt for the money? Yes, I admit that; but I do not think it is very likely to occur.

5856. How do you think your system would work at night-time? Of course there would have to be sufficient light upon the cars. The reason I have suggested that blank tickets should be issued is that I think a great number of the tickets now in circulation, instead of being printed at the Government Printing Office, are forgeries.

5857. As to your machine getting out of order, what do you propose? It is very simple. There is only one small spiral spring. The rest is plain roll and tape.

5858. What would you use for marking the tickets? The tell-tale would be self inking. Of course if you thought it necessary to have a bell attached to the tell-tale that could be done without any alteration of existing mechanism.

5859. *Mr. Thompson.*] You say that there is a spring? Only one.

5860. Does that spring touch a ratchet so as to keep the ratchet on the wheel? The spring will remove the ratchet so that the wheel can revolve.

5861. Is it not within the bounds of possibility that a mechanician could take off the face of the machine and alter the ratchet and spring in such a way as to interfere with the whole of the working of the machine, putting out, at the same time, a false row of tickets. He would know the colours, and there would be no difficulty in his issuing the tickets if the machine could be manipulated? It is impossible that this machine can be interfered with inside in that way, so that what you suggest is impossible.

5862. No man could interfere with the machine in such a way as to palm off upon the public forged tickets? No.

5863. But suppose a man were to take off the face of the disc, and were to take out the proper roll of tickets and substitute a false roll? He could not do that.

5864. Does not your plan suppose that the conductor will be perfectly honest, and would not meddle with the machine? He would have to break up the machine to get out the roll of tickets.

5865. But I presume that when the proper roll of tickets is put in at the office the machine is locked. Surely the conductor could get a key to fit the machine. Or, suppose again that the conductor and the man in the office whose duty it was to put in the roll of tickets were in collusion, they might work it between themselves that a certain number should be taken off the proper roll for their mutual benefit? Of course the man who has the handling of the keys could do what he liked with it.

5866. Of course you understand that it is our duty to raise every difficulty which suggests itself to us? Of course I understand that.

5867. It has been proved to our satisfaction that the present registers can be meddled with in two different ways, so that it will ring without registering, permitting the conductor to take as many tickets as he pleases from passengers without accounting for them, no one being any the wiser except himself? I think the present registers are too complicated, and I can quite understand that what you suggest could take place.

5868. Why? If I had a small screw-driver for a few minutes I could so fix up one of the present registers that it would not register unless I wished it to do so.

5869.

5869. Have you any reason for thinking that the present tramway-tickets are forged? No; it is simply my impression.

5870. *President.*] But you say that it can be done? Yes.

5871. And your opinion is that it has been done? Yes. I see no difficulty in it. I could find a man who would cut a stone to do it.

5872. We are satisfied that the frauds are not perpetrated in that way. There is a regular check upon that. If you had a large number of forged tickets there would be corresponding discrepancy between sales and collections? Yes; I see that. If you arrive at the conclusion that my machine is worth a test I shall be very happy of going to the expense of having one made, and if it should prove satisfactory, and should be adopted, I should expect some remuneration in exchange for the idea.

5873. What do you think would be the cost of producing it? I think the cost of a model would be from £10 to £12; but it would not cost anything like that to produce the machine afterwards. It would be composed entirely of light metal.

5874. Would it be as heavy as the two present registers? I do not think so. It would be about the same weight with the roll in it.

5875. Would £10 or £12 include the cost of putting the bell in? Yes.

G. A.
Bramston.

7 Sept., 1888.

Hugo Dahms called in, sworn, and examined:—

5876. *President.*] We understand that you have some proposition to lay before us with regard to the collection of fares on the tramways;—is that so? I am not aware that I have any very definite proposition to make. All that I have to say I think I have said in a letter which I have already addressed to the Commission. I observed in the papers that the Board were desirous of having as many opinions or suggestions as could be offered, in order to enable them to arrive at a proper conclusion. I have been thinking chiefly as to whether some way could not be adopted of avoiding or preventing frauds for the future. A great many different suggestions have been sent to the newspapers, all of which are to my mind more or less impracticable. It seems to me that the principal cause of the present frauds consists in the fact that the conductors have the handling of the tickets all to themselves. They are in an open bag, and a great temptation is thus presented to the conductor. However perfect a tell-tale may be they will put it out of order, in order that they may yield to the temptation. The only way to stop this would be to construct an apparatus into which the tickets could be put, and from which they could not be abstracted, except by an officer appointed for the purpose, who would have the key. I was thinking that two keys might be used simultaneously, so that one man would not be able to pick the lock. I make this suggestion because I think it quite possible that the Commission may have confined their attention to improvement in the tell-tale, without regard to any other plan for the collection of the tickets.

H. Dahms.
7 Sept., 1888.

5877. *Mr. Thompson.*] No fraudulent manipulation of cash has come under your individual notice? No.

5878. Has it not occurred to you that so long as the present registers remain in use your plan would be a failure, because the guard, if he intended to defraud, would take good care not to put the tickets which he wished to keep into your box; he would put them elsewhere, as he has been in the habit of doing in the past? A lot of things could be done to rectify that. You could make them punch a hole in the tickets, so that when they had been once used they would be of no further use.

5879. And then you would find that a large number of tickets would not be punched at all. A man would ring for 500 tickets, whereas he might have taken 700? Where does he put the tickets?

5880. You do not suppose that he puts them into his bag? I have never seen the conductors putting them anywhere else. The best safe is no safe at all to a professional thief, yet safes deter millions of people from committing robberies. It has always seemed to me that there has been a great temptation from the fact that the conductors have the tickets in their hands.

5881. Have you travelled on the trams frequently? Yes.

5882. You appear to think that it would be too risky for the conductor to put the tickets into his pocket? Yes, I should think so, most decidedly.

5883. Then how do you think they have managed to rob the Government in the way in which they have done—one man bringing in a bag with 500 tickets, and another man bringing in a bag containing a comparatively small number? Well I should think the only way they have been able to do that has been by interfering with their registers.

5884. What is your trade? I am a watchmaker.

Alfred Solomon called in, and further examined:—

5885. *President.*] I understand that you wish to make to us a statement with regard to the irregular purchase of certain tram-tickets? Yes. My wife told me that she was standing outside a shop-window, next to the "Cheshire Cheese Hotel." I believe it is a small fruit-shop. She says that she saw two men go in, and she states absolutely that she saw one of the men sell eleven tram-tickets, receiving in exchange for them, 4d. I do not know by whom the shop is kept. If Mrs. Solomons is served with a subpoena she will probably be willing to attend, and give you the information you require. With regard to the suggestion which I made to the Commission yesterday, I hope they will seriously consider the advisableness of cancelling all the present licenses. I think that if the sale of tickets is not confined to the Department fresh licenses should be issued only to old-established business people, of undoubted character. I would supply each of them with a stamp, which would date every ticket as they disposed of it, and I would prohibit them, under a heavy penalty, from purchasing tickets other than from the Department.

A. Solomon.
7 Sept., 1888.

5886. What good do you think the dating would do? It would prevent tickets being used on another day; they would be useful only for that day.

5887. Then the conductors would have to go through an additional check,—instead of only collecting and ringing their bells they would have to be satisfied that the tickets were rightly dated? Yes, they would have to examine the tickets.

5888. *Mr. Brock.*] And every person, instead of buying a shilling's worth, or 2s. 6d. worth of tickets, as they do now, would have to buy only what they might require for a particular day? Yes, that is so. They would have to buy only such tickets as were necessary for their present requirements. Upon the railways people do not purchase a week's supply of tickets.

TUESDAY, 12 SEPTEMBER, 1888.

Present:—

A. RICHARDSON, Esq., PRESIDENT.

F. A. BROCK, Esq., J.P.

James Roberts recalled and further examined:—

Supt.
J. Roberts.
Sept., 1888.

5889. *President.*] We have asked you to attend again because there is a very important discrepancy between your evidence and that given by Mr. Lambert, the register repairer, and also that given by Moran, the special conductor, and it is on a very important point indeed. The statement is that both on the occasion when Keen reported the matter to you that according to Graham the registers could be manipulated, and also on the further occasion when with your consent Moran took a pair of registers to Graham to ask him how the thing could be done, you submitted the registers to Lambert the repairer, and that he informed you that they could not be manipulated with a pin in the manner described? Yes. Keen made his first statement to me on I think about 18th February. Mr. Tyrer brought him into my room somewhere about that date. I am not quite certain as to the day. When Keen first came I was out and he sat in Mr. Tyrer's room. Mr. Tyrer eventually brought him up into my room, and he there made a statement to the effect that he could tell me how the frauds were being carried on. Eventually, however, it seemed that he could not do the thing. Allowing Keen to remain in my room for a few minutes I immediately came over here and saw Mr. Vernon, and after a few words of conversation with I think Moran I sent young Muir out for Lambert, who came to me within I should say two or three hours. Mr. Primrose will be able to tell you about it. He brought up a pair of registers to me for Lambert to try, and Lambert most distinctly told me that no fraud could be perpetrated by a piece of wire or by means of a pin. Mr. Tyrer will remember Lambert coming. He knew perfectly well that he came, and I think both Mr. Primrose and Mr. Tyrer will remember that Lambert said that the thing could not be done. I also told Moran that it could not be done. I did not know anything about the inside of the bells. I am not supposed to know anything about it. I said to Moran, "We must alter our plans. These frauds must be carried on by their not ringing for the proper amount of tickets." I remember saying to Moran at the time, "We are wrong; this is not the way it has been done. If there have been any frauds at all it has been done by their not ringing for a sufficient number of fares." If Lambert had told me that the thing could be done I should have called the registers in immediately and have had them all examined, but he so satisfied me that it could not be done that I abandoned all my plans. I had got Camphin the detective and had brought him down to Mr. Vernon, and we arranged with Mr. Vernon that we were to engage some man, a foreigner, to open a shop. I allowed the matter to remain in Mr. Vernon's hands to decide who should do it. I was so convinced and satisfied in my mind, after my interview with Lambert, that the thing could not be done that I actually went away for a short holiday. If I had been satisfied as to the result of that interview that the bells could be manipulated in the way represented to us I certainly should not have gone away at that time.

5890. You thought when you got this evidence from Lambert, I suppose, that you had been upon an entirely false scent? Yes; as far as committing any fraud with a piece of wire was concerned, because I tried twenty different registers and they were all right.

5891. On what other occasion did you consult Lambert. Did you consult him again? I am not certain. I know that the register Graham had would not work. He found that he could not do it with that pair. I also tried it myself at the time, and found that it could not be done.

5892. I imagine that Lambert having definitely told you once, and as you thought for all, that it could not be done, you did not think that it was of any further use to try the thing any more? No; he never made any report to me about anything going wrong in connection with the other registers, and he had all the other registers to repair for years.

5893. If Lambert has stated and has sworn positively that he has never been asked whether by the insertion of a pin or piece of wire this fraud could be perpetrated until after the whole of the disclosures came out, is he swearing falsely? He is altogether mistaken.

5894. Do you remember some three years ago, after Lambert was appointed to the position of register repairer, that in your presence he stated to Mr. Tyrer (Mr. Primrose being also present, and I think a Mr. Knox) that a register in a certain condition in which it had been returned by a man who was applying for the position of repairer should not be used, because it would be open to conductors to do what they liked with it? Primrose was the first man from whom I heard that. I did not hear it from Lambert. After hearing it from Primrose my impression is that I asked Lambert myself.

5895. What did he say? He said that it would not be safe to allow the conductors to have that particular register, and we never used it.

5896. You understood him then to be referring to some careless act or mistake on the part of the repairer of that particular register? Yes. Some person who sent in an application that he might be allowed to repair the registers.

5897. But you took Lambert's observation to refer to the careless act on the part of this particular man who wished to be employed as repairer? Well of course I did.

5898. And as referring only to that one register? Yes; only to that register.

5899. You did not understand that he referred to the registers as a whole? No; not as a whole. If I had thought that I should have called them in immediately.

5900. If you hear from us that Lambert understood that this particular weakness might apply to the registers as a whole, are you not surprised that he did not make some recommendation on the subject? He should certainly have reported the matter to me. I never heard anything of the kind except in regard to this one pair of registers.

5901. If you had been told by Lambert at that particular time that there was this weakness, and that the registers were liable to be manipulated, would you not yourself have made a special report to the Commissioner, recommending their withdrawal or some modification of them? Most decidedly.

5902. But you are quite positive that Lambert's report on that occasion, which, as I understand, was not made to yourself, had reference only to careless work on the part of a man seeking the office of register repairer? Yes. Lambert has always spoken to me in the highest terms of the safety of the register. He has said that they could not be manipulated, and that he never knew that they could be interfered with

with in this way until the Greeley-Ferrier affair. The only report I have ever received from Lambert as to the manipulation or maltreatment of a pair of registers was with reference to a case which is on record. I refer to Thomas Lane's registers. It is in these terms:—

Supt.
J. Roberts.
12 Sept., 1888.

"I beg to call your attention to the fact that some of the registers are being wilfully damaged. Nos. 5086 and 2990 were both broken, evidently by having the handles drawn down, but not sufficiently far to allow them to go back; they have been driven back by a blow; thus, in the first case, bending the crank-shaft and stripping the screw thread, and in the second place, breaking out the crank-pin. The first occurred in the end of last month and the second last week. You will kindly ascertain who does so that the same may be discontinued."

On the receipt of this report with reference to Lane's register he was taken off the cars altogether. That is the only report Lambert has ever made to me, and it is dated on the 18th June last.

5903. *Mr. Brock.*] Do you remember the man who applied for employment as repairer of registers—the man to whom you have just been referring? No.

5904. *President.*] Lambert seemed to think it hard that he was not supplied with the names of the conductors? He could have had the names if he had asked for them. He knows almost every conductor on the line. He is himself an old conductor.

5905. What I mean is that he seemed to think it hard that he should not know the names of the conductors in connection with the registers sent in to him for repair? That is a matter for the Traffic Auditor. Lambert could have got the name of any man who had had any particular register by asking for it, because every register is booked to the man who is using it.

5906. I don't know but that what Lambert argues is fair. He says that if he had the names of the men in connection with the numbers of the registers he could keep a little ledger against each man, and that if for instance any particular man brought in his register two or three times for repairs within a short period he would then have his suspicion aroused and would be in a better position to know whether anything wrong had been done in connection with that particular register. It is quite true that he has the numbers of the registers, and he admits that he would only have to go to the office to find out the names of the men who had been using them; but he says, to give you an instance, "Smith may have register 89 to-day, and to-morrow he may have 91." And Lambert argues that if he had the information for which he asks, and saw that No. 91 had been treated in the same rough way as No. 89, his suspicions would be at once directed against a particular man, whereas, under the present system, he has not such an account to refer to? He could keep an account of every register he takes away for repairs, and he should do so; and if a particular register came to him several times in succession wanting repair, all that he would have to do would be to go to Mr. Oakes, who deals with the books, and obtain the information from him.

5907. I am afraid you do not quite follow the point. If a man, for instance, had No. 89 it would be easy for the repairer to notice that this same register came in several times running, and even then his suspicion might be aroused; but there are cases in which the men change registers, when, for instance, a man brings in a register for repair another register is issued to him, and there is not the same sequence in Lambert's books as he reports by number; for instance, supposing No. 91 were the next register issued to the man who had held 89, he would not necessarily connect the two numbers, whereas, if he had the names, he might at once say to himself, "Here is the same man again with his register needing repair"? Yes, it might assist matters in that way; but there is at present no obstacle in the way of Lambert getting every information.

5908. Still you think there would be no harm in letting him have the information for which he asks? Well there might be harm in this way: Of course I do not say that it is the case; but suppose Lambert had one or two favourite conductors; these men might be suffered to perpetrate fraud continually, and the repairing of their registers might not be properly brought under the notice of the authorities.

5909. You do not think it desirable that Lambert should have this information? I do not.

5910. You think it is a good thing that Lambert should know the registers by number only? Of course.

5911. And that he should report anything in connection with a particular number, and that it should be then left to the Traffic Auditor to institute a comparison between the number and the names of the men who had been using it, following up any delinquency which might be apparent? Yes.

5912. *Mr. Brock.*] Did not this man who applied for employment as register repairer send in a written application? Not to me.

5913. Was this when Lambert was appointed? No. Lambert was in full work when the application was received; but this other man professed his willingness to do the work much cheaper and much better. I think he wrote to the Secretary about the matter. I know he did not write to me.

5914. You have no idea of the date of the application? No, I have not.

5915. And you do not know the man's name? No, I do not. I was not consulted in the matter at all.

5916. I suppose you still have the register which this man repaired as a sample? I think Mr. Primrose gave them back to Lambert, in order that they might be altered again. I think we were short of bells. I know that they were not used in the way in which they were returned to us by this man.

5917. I thought you said just now that they had not been used? Not in the state in which they were first returned.

5918. You have no new registers at the present time? No. We had to supply Newcastle, and I think we have no new ones left.

5919. Do you consider Lambert a thoroughly efficient man? I consider him a good man, but it is not for me to say whether he is an able mechanic.

5920. But you appointed him? I recommended him. I had seen some of his work. I think I had seen some watches that he had repaired, and which he had done very well.

5921. You had a good opinion of his mechanical genius? I have a good opinion of him now. I believe him to be a straightforward honest man.

5922. You think that possibly in giving his evidence he has made some mistake or forgotten himself; that is, his evidence as to his not being consulted about the possibility of fraudulently manipulating the registers by the use of a pin or a piece of wire? I think he must have forgotten. I am certain that Mr. Tyrer was there, and that he will know all about it. I told Moran about the matter also. There can be no mistake about it.

Supt.
J. Roberts,
12 Sept., 1888.

5923. Lambert admits having been called over to your office to examine a pair of registers, and he says that he reported that these registers were in working order, but he says decidedly that he was never asked anything about a piece of wire or a pin—that is to say, that he was never consulted as to whether fraud could be committed in that way or not, but that he was merely asked if a certain pair of registers were in working order, he telling you that they were? I cannot say about the use of a pin, but I am positive about the piece of wire.

5924. Had you the wire there? Yes, I showed him the thing. We tried it, and we found that it could not be done. He said then, "That proves that the register is in good order."

5925. You are sure that it was not after the whole thing came out that you showed him how the thing was done with the piece of wire? No; I am sure it was at the time that Keen made his statement to me. I remember it distinctly, because I thought at that time of opening a shop and catching the perpetrator of the fraud in another way. I know that it was before the 1st March, because it was that date that I went to Melbourne.

5926. You understand the great importance of this matter, because directly you told Moran that it could not be done in that way he naturally concluded that he had been upon a false scent? Yes; I quite understand that. I remember saying to him, "We must turn our minds to something else; we must look out for the men who do not ring sufficiently for their fares." It put me off my guard altogether. I should never have gone to Melbourne had I thought otherwise. I would have arranged something with Camphin.

5927. In point of fact, Moran was not working outside you, but with you? Ever since Keen made his statement Moran watched him. He watched him that morning at my office until he went away. We brought Keen out privately on to my balcony into Mr. Tyrer's room so that he should not be seen by two other conductors who were there. Then Moran came to my room and asked me a question as to what Lambert had said. I told him Lambert had said that the thing could not be done.

5928. But surely Moran must have seen Lambert go into your room? I did not ask him that question.

5929. Was he on the premises? I could not say for certain.

5930. Did Moran come to ask about it immediately Lambert had gone? It was not a second afterwards.

5931. Then Moran must have known that Lambert was with you? Yes, of course. I presume he was at the door waiting.

5932. *Mr. Brock.*] Have you ever compared Musgrave's receipts with the receipts of other assistant conductors on the same lines? I have not to my recollection.

5933. *President.*] Don't you think it was advisable to have done it? It may have been done. I cannot say. I don't properly recollect.

5934. If there is no marked difference between Musgrave's statement of receipts and the statement of receipts handed in by other men upon the same line, it seems to me that it is very hard to suspect him of wrongdoing? I could furnish you with an account of the whole of his takings.

5935. *Mr. Brock.*] He has been assistant conductor on every line at different times; would not that make it easier to detect him than to detect a man who always has the same line? No; I should think it would make it harder. It would always be harder, I should think, to detect an assistant conductor.

5936. But Musgrave has been on the Waverley line for a week at a stretch? Yes.

5937. Could you not compare his return during that week with the return of another assistant conductor on the same line? Yes.

5938. *President.*] Could you get at the returns for January, February, March, and April, and pick out a week in each of those months, giving us a return of Musgrave's receipts during those periods, and comparing them with the corresponding returns of some other assistant conductor on the same line? Yes; I will do so.

5939. And the same with regard to Ferrier and Fraser, making a comparison between their returns and the returns of some other man of the same rank on the same lines? Yes.

5940. You remember in your previous evidence referring to Musgrave's absence with his bag and bell from a certain Wednesday until the following Saturday? Yes. I found that Musgrave's bag and bells were not given in between a certain Thursday morning and the following Saturday. I have compared the contents of the bag when it was handed in with the contents of the bags of other conductors under similar circumstances, and I find that his return compares favourably with theirs.

5941. *Mr. Brock.*] Speaking roughly, what would a conductor on the Waverley line take in a week—say an assistant conductor? I could not say. There would be an enormous number of tickets. He would make about eight runs in one day. A man might take a round trip from Bridge-street and collect the whole of his fares to Queen-street; that is a 2d. section, and possibly he might not account for them. I should think he might make about 30s. on the round trip. I think it would be quite possible for him to do that.

5942. Without your noticing any perceptible difference in his returns? Yes. I should think a man might easily make 8s. or 10s., or on some days even a £1 without showing much, if any, difference. When there is any bustle, and when there is heavy loading, people would not take much notice of the way in which he collected his fares. This fraud, I am sure, is never done in empty trams. They use their pins when the tram is pretty full. I find that, on a day which has already been referred to in the evidence, when Musgrave was on the Randwick Racecourse trip he brought in £4 7s., and that amount compares favourably with the amounts brought in by the other conductors.

5943. *President.*] Still he may have taken a few shillings? Yes; and it is also necessary to bear in mind that the men were about that day, and that he might therefore have been careful. I should like to say here that I do not think that Hannam is a very good man. About a fortnight ago I received some information about him. I heard of his calling a woman off the street at Market-street. He took her to Forest Lodge. He left his car there and went away with her, and came back again. When I challenged him with the affair he admitted calling the woman out of the street and taking her to Forest Lodge. He does not admit having connection with her, and he says she paid her fare. I am pretty well sure, however, that she did not do so.

5944. Do you not think that would have been sufficient ground for dismissal? I did not know what to do in the matter because this inquiry was proceeding at the time.

5945. *Mr. Brock.*] How long did he leave his tram? Only for a few minutes.

5946. Where could he have gone? He could have gone straight down into Allen's bush.

5947. How long do you suppose that would have taken him? Well I should say it would have taken him at least 10 minutes to go down to Allen's bush and back again.

5948. *President.*] Having regard to Colls' relationship with Musgrave, don't you think it strange that he should not know something more of Musgrave than he appears to know? I don't think Musgrave would trust him. My opinion is that if Colls thought there was anything wrong he should come forward and speak to me about it. I don't see why Colls should suffer because Musgrave happens to be his brother-in-law.

5949. But it is known that Musgrave has stayed with him under very peculiar circumstances? Musgrave used to board with him.

5950. But Colls has been very kind to him, and it seems to us rather strange that under these circumstances he should have not made Colls his confidant, especially when it is borne in mind that he confided in Graham? Men working together would be in an entirely different position. Colls has told me a lot of little things, and I do not believe he would hold anything back from me. I may say that Colls was very much opposed to Musgrave being reinstated. He said he did not care about having any relations on the line, and that Musgrave was a regular nuisance to him, because when he was ill he would be constantly asking Colls to see the traffic foreman, and that sort of thing.

5951. That surely is an argument against what you say. If he was such a nuisance to Colls in this way you would expect that he would have gone to Colls and have made him his confidant in a matter of this kind? I don't think he would have trusted Colls. I think that when Musgrave knew he was suspected he got so disheartened that he did not care what became of him. Colls, I ought to mention, perhaps was the first person who told me about Musgrave. I remember asking Colls when he heard of it, and he said, "I only heard of it last night."

William Boyd called in, sworn, and examined:—

5952. *President.*] You are a conductor in the tramway service? Yes; a full conductor.

5253. How long have you been in the Service? Six years and six months.

5954. On what particular line have you been running? On the Waverley line.

5955. Have you been all the time there? I have been over five years on that line.

5956. You remember the different systems that have been in operation in regard to the collection of tickets? Yes.

5957. You remember that the present system was given up for about nine months, and that the system of tearing up tickets was introduced? Yes.

5958. Have you been running to Bondi? Yes, to Waverley, Bondi, and Woollahra.

5959. Were you running to Bondi on one holiday shortly after the Aquarium was opened? Yes, I think so.

5960. You remember the reintroduction of the bell system? Yes.

5961. It would be about the 1st of October last year? Yes; somewhere about that time.

5962. Do you remember the particular time to which I am referring? I could not say. I know I have lost no time since I have been on.

5963. Do you know Inspector Bremner of the Police Force? No.

5964. Did he speak to you on one occasion when you were at Bondi in reference to the collection of your fares? Not that I am aware of. He may have done so.

5965. Is it a fact or is it not that on one holiday at Bondi you collected a large number of tickets and did not tear them up? No. I always tore up whatever I got.

5966. Have you ever collected a number of tickets at Bondi without tearing them up or ringing your bell when the register system was in force? No. I have always used one process or the other when collecting.

5967. Are you prepared to swear that on one occasion you did not collect a large number of tickets without either tearing them or ringing your bell for them? Yes.

5968. How many divisions have you in your bag? Two.

5969. What are they for? One is for cash and the other is for tickets.

5970. Are you quite certain that you always keep the tickets in one of those divisions? Yes.

5971. You never put them in both? One or two may slip into the cash side when the other side is full.

5972. What did you do when you gave up your bag if by any mistake you put the tickets in the wrong division; it would make no difference would it? No. The tickets would still be in the bag.

5973. Who was your assistant at that time? I could not say, we have so many. Sometimes we have them for only a trip, and sometimes for all day. It is a strange thing that if this thing occurred so long ago it was not reported before, because I was never guilty of anything of the kind. I have always tried to do my best for the Department. I have been on over six years, and I have always tried to do my best in ringing for fares.

5974. Has there ever been any report against you that you know of? I think there has been one report. Inspector O'Brien reported me for undercharging two boys. He said I failed to collect the tickets. We were very busy at the time, and I had not time to ask the boys whether they were under or over 12. I was in charge of both cars. I have a copy of the report at home, and my reply to it.

5975. Is that the only thing reported against you during the whole of the time you have been in the Service? There may have been others, but I have not heard of them.

5976. But you would be sure to hear of them, would you not? I never heard of any, but the one you have mentioned this morning, and that which I myself have referred to. If they had this other thing against me it is strange that they did not bring it under my notice immediately.

5977. As far as we can understand, Inspector Bremner's report has been brought forward only in connection with this inquiry? Well all I can say is that it is strange I have not heard of it before.

5978. *Mr. Brock.*] Inspector Bremner is in charge of the Waverley Police Station. Don't you know anything of him? I know him by name, that is all.

5979. *President.*] As you are here, Boyd, we should like to ask you whether you know anything of these ticket frauds? No; not a word. The first I knew of it was from the *Star*.

5980. You have been on the Waverley line for some time? I have been relieving M'Mahon for five years on the 12th of last month. We have been relieving mates all that time.

5981.

Supt.
J. Roberts.

12 Sept., 1888.

W. Boyd.

12 Sept., 1888

- W. Boyd.
12 Sept., 1888.
5981. Have you had Musgrave frequently running with you? Yes.
5982. Have you had any reason to suspect anything in connection with his conduct? No reason at all. He was always on the first car next to the engine, and I was in the back car, and we were both on different sides.
5983. Did he tell you anything about certain things he was doing in connection with his register? He did not tell me a word.
5984. Do you mean to tell us that you have not had the slightest inkling that anything was going wrong until the matter appeared in the paper? I had no inkling whatever.
5985. You have not shared in any way in this conversation which, we are given to understand, has been taking place pretty generally among the conductors, firemen, and others? No.
5986. I mean as to the trams not paying? Oh yes, I have shared in those conversations.
5987. As to its being no wonder that they did not pay, seeing that certain things were going on; you have not heard that kind of thing spoken of? Never.
5988. Have you ever heard one conductor saying to another, "How much did you make on that run, Bill?" Yes; I have heard that.
5989. When? Repeatedly. I heard it immediately I joined the Service, and I hear it sometimes even now. I thought it was only a lark. I have said it myself sometimes; I admit that.
5990. Didn't that give you some idea that there was something wrong to permit of such a thing being talked about? Well I have heard it said repeatedly, but I thought there was nothing in it.
5991. And you really have no information to give us about the frauds? No.
5992. And you positively deny the charge made against you? Yes. It is not at all likely that I would risk my position for the sake of a few tickets. I have often said that.
5993. *Mr. Brock.*] Were you one of the deputation which waited upon the Minister? No; I took no active part in that whatever.
5994. Are you a married man with a family? Yes, with four children.
5995. Where do you reside? At No. 10, Johnston-terrace, Glenmore Road. I have been there over four years. Anyone will tell you whether I knock about and spend money foolishly.
5996. *President.*] You remember the change in the system of taking fares? Yes.
5997. Are you quite certain that when the change took place you were not for one moment without your register when collecting? I have often torn the tickets in mistake, and have not rung the bell; that was immediately after the change took place. Many of the other conductors did the same thing at the time; but it was done purely by mistake, and it was owing to the change in the system.
5998. That would be shown in your bag, would it not? Yes. Mr. Primrose knows that it was done.
5999. You are quite sure that at no time you have been without your register? I am quite sure of that.
6000. Inspector Bremner says that on the occasion he refers to he asked you about the matter. Don't you remember that? No; I never remember any one asking me about it.
6001. But he would be an inspector, wearing a uniform. Surely if he had spoken to you you would have remembered it? I don't remember anything of the kind.
6002. You have no recollection of any conversation with a police inspector on the subject? Not on any occasion. I know Inspector Lenthall. He used to come in with me, on the Woollahra line, repeatedly; and he could tell you whether there is likely to be anything of this kind against me.

Patrick Greeley recalled and further examined:—

- P. Greeley.
12 Sept., 1888.
6003. *President.*] We have sent for you again because your evidence in certain respects is not been borne out by evidence given by others. In the first place you reported that on one occasion, when Frost wanted to buy tickets, Graham said, "You might as well buy them from me"? I never mentioned anyone's name. I do not think I made any such statement when I was here last; if I did it was an error. I do not remember saying so.
6004. What statement did you make to Moran on that subject? Frost was going to Coogee on one occasion, and he stated that there was a tramway man who had a pocketful of tickets, and he got out to buy some tickets at a shop, when this man who had his pocketful turned round and said, "You might as well have bought them of me."
6005. Who was this man? I do not know.
6006. Frost did not tell you? No.
6007. Was that your statement to Moran? No; I am not sure.
6008. Did Frost say whether this man was a driver or conductor? I could not say, but my opinion is that he said a driver; I am not certain on that point. This was some time ago. It was before there was any exposure in connection with the fraud.
6009. Do you swear that Frost told you what you have just now repeated? I do.
6010. That he was going on one occasion to buy some tickets in a shop, when a man in whose pockets he had seen a lot of tickets said, "You might as well buy them off me"? Yes; I will swear that.
6011. Do you know driver Maher? Yes.
6012. Did you say that after the bedroom scene between you and Ferrier, Maher came to you, and was able to tell you all that took place? I do not know that it was about that time; I think it was some time afterwards—about a fortnight afterwards.
6013. You have not answered my question—it was very plain—as to whether Maher was able to tell you all about this scene? I do not remember saying anything of the sort.
6014. Therefore if Maher has said in his evidence that it was you who first told him all about it, it would be correct? About eight days after the report in the press I did tell him something about it.
6015. But he did not tell you anything? At one time he told me something about an Italian having made £2,800 out of the tickets.
6016. Do you remember what you said about Siddons? Yes.
6017. What made you tell Mr. Roberts, in connection with that matter, that Dolan was the man who was dealing with Siddons? I did not say that. I said that Dolan was the man whom Siddons was inquiring about. He asked where the man lived, and how he was getting on.
6018. Is it not a fact that you frequently went into Siddons' shop in the evening? Never off duty. I think I went in twice to get a shave.

P. Greeley.

12 Sept., 1888.

6019. Do you swear that? I do.

6020. You swear that you never went into Siddons' shop when off duty, and the most you were ever there was about twice? Yes.

6021. You remember when you told Mr. Roberts about Dolan? Yes.

6022. Now be careful about your answer. After that were you ever in Siddons' shop? Never.

6023. You swear that? Yes.

6024. *Mr. Brock.*] How could you go to get shaved when you were on duty? The shop is near the terminus. I think the first time I went there was the day before Christmas eve. I was in late in the evening, and I wanted a shave.

6025. *President.*] You answered my question just now a little quickly. I should like you to take a little time to consider. I will ask you again: Do you remember telling Mr. Roberts that Dolan was the man with whom Siddons was having some dealings? I said that Siddons was inquiring about him.

6026. I ask you again: Will you swear that after that time you were not often in Siddons' shop? Never, that I recollect; in fact I can swear that I have never been in there since.

6027. If it has been sworn to us by a person who was watching you that you were there repeatedly after that time would that be false? It is false. I never remember being in there more than twice in my life. I am sure I have not been in there since the time you mention.

6028. Where did you have these conversations with Siddons about the tickets? The first was when I went in to get a shave, and all the conversations afterwards were on the cars.

6029. And on these occasions he was tempting you to dispose of tickets to him? Yes; he was persistently following me about for about a fortnight trying to get me to sell tickets to him.

6030. Did he tell you that he had had tickets from other conductors? Yes.

6031. Did he name them? No.

6032. Did you ask him to name them? Yes, but he would not tell me the names.

6033. He absolutely refused to name the men? Yes.

6034. Did he give you any information leading you to suspect any conductors as being those who had sold tickets to him? No.

6035. Was it not strange that he did not give you this information? I don't know.

6036. But you say he was persistently trying to get you to take tickets from him. He evidently did not think that you were an honest man, and yet he did not say to you, "Why so-and-so are doing it"? He did not tell me of anyone.

6037. To encourage you to negotiate with him, he did not say, "You need not be afraid; it is all right; such and such a man is doing it"? He never did.

6038. There is no possibility of your making a mistake about your going to Siddons' shop, is there? Not that I am aware of. I do not remember being in there since the time you mention.

6039. But you have gone a great deal further than that in your previous answers; you have sworn that you were not in there since? I do not remember being in there since.

6040. Now you are qualifying your answer? I have been in there only twice altogether. I do not think I have been in there at all since I have reported the matter.

6041. That is qualifying very much what you said before? I might have made a mistake, but to the best of my belief I have not been in there since.

6042. But you could not make a mistake if it were a question of your being in there several times? I have not been in several times.

6043. You are ready to swear that you have not been there several times if at all? Certainly.

6044. Did you ever have anything to say about Saunders, a shunter, in the yard? I reported him once.

6045. For what? Partiality.

6046. Was your report in writing? Yes.

6047. Partiality, in what respect? For not giving me my share in overtime in connection with the Parliamentary trams. I think Saunders' name is mentioned in the report, but I reported the foreman.

6048. In making that report did you attribute unfair dealings to Saunders? Not to him exactly; he has the doing of the thing in the absence of the foreman.

6049. Have you ever attributed to him any unfair dealing in that respect? No; I often used to think, though, that he was more partial to some than to others.

6050. Have you ever said that he took tips for allotting this work? No, I have never said so.

6051. Has anyone ever said that to you? Yes; I heard Maher say so.

6052. In what way did he say it? He was going home in the tram one day when I put this report in. He said he was just after having a row with Saunders, and if Saunders was not very careful he would be "one" with him, and would report him because he knew that he took tips from several drivers for giving them Parliamentary trams.

6053. Did you make use of this information in connection with your further report? No; I did not put that in at all.

6054. How long ago was this report of yours made? It was last November.

6055. When did you first mention what the driver had told you? One of the drivers was standing alongside me, and I drew his attention to it there and then.

6056. When did you report it? I never reported that.

6057. But you reported that Saunders was acting partially? Yes.

6058. Did you not see when the driver told you this that there was a fine chance for you to substantiate your previous report? Yes; but my report was in then.

6059. Did you not also recognise that it was your duty to report such an irregularity? I had reported once or twice before that, but I had never got any satisfaction from my reports.

6060. What were your reports before that? I reported twelve months ago the partiality that was carried on in the Tramway Department in connection with the same thing.

6061. Who was connected with it then? The foreman.

6062. Which foreman? Halliday.

6063. Did anyone else ever tell you that Saunders was taking tips? Not that I recollect.

6064. Have you ever mentioned anything else in connection with it? No, not that I know of.

6065.

- P. Greeley.
12 Sept., 1888.
6065. Who is Branch? He was the driver who was there when Maher was speaking to me about it, and I drew his attention to the matter there and then. I told him at the time that I would put it down in evidence, and that it would strengthen my case.
6066. But you did not do so? No; I did not report any more.
6067. *Mr. Brock.*] You never reported Saunders individually? Well his name is mentioned in my report.
6068. *President.*] Why did you mention his name? He was connected with the working of the thing.

Frederick Oakes called in, sworn, and examined:—

- F. Oakes.
12 Sept., 1888.
6069. *President.*] What is your position in the Department? I issue the registers and check them.
6070. How long have you been in the Department? Eight years. I joined in August, 1880.
6071. How long have you been in your present position? Since the 14th April of this year; but I have been connected with the registers for the last seven years.
6072. Tell us the difference between what you are now doing and what you were doing some years back? There is no difference, only that the offices are separated. I was removed to the railway audit office for a time. Previous to going there we used to rig the registers and receive the cash and tickets in one office. They made fresh arrangements, and now I have the checking of the registers, apart altogether from the receipt of cash and tickets.
6073. To what branch are you responsible? To the traffic audit branch.
6074. Just describe to us briefly what you do. Let us take conductor Smith for example; he is going out to day; describe the process in regard to him for any one day? He has his register in his possession over night. When he brings it in in the morning it is read by one of the clerks or myself, and the figures are entered in the book. The man has a separate account for each day. The register reading yesterday and the reading to-day are subtracted, and the result shows the difference between the two takings.
6075. Do you examine the register at all? Now we do.
6076. Formerly you only read the register, and that was deemed sufficient? Yes.
6077. What do you do now? Now the registers are tested.
6078. Do you put in a piece of wire? We can test them without doing that.
6079. You test them to see whether they can be manipulated? I test them to see if they will ring without registering.
6080. Under certain circumstances? Yes.
6081. Formerly you did not do that? No.
6082. You used then simply to read the register? Yes, and give it back to the conductor. But ever since I have had anything to do with the registers, if we found that a man's account was running much over we have called in the register, and we have frequently found that it would ring without registering. Ever since I have been connected with them that has been the course. We have just mentioned to the conductor that the register was out of order, and it has been given to the repairer to be repaired.
6083. Sometimes you have found that the bell would ring and not register, and that the conductor would have more tickets than he had registered? Yes. Frequently this has been owing to the way the register has been pulled. In these cases the men would not know anything about it. They have brought in a lot of tickets which they had not registered.
6084. You brought these cases under the notice of the repairer? Yes.
6085. And caused the registers to be repaired? Yes.
6086. But your suspicions were not in any way aroused? No.
6087. Is it a fact that Lambert has repeatedly drawn your attention to the circumstance that under certain conditions the registers could be manipulated? No, it is not a fact; at least not to me.
6088. Has he not pointed out to you that it was necessary to be particularly careful on account of this state of things? No, he has never done so.
6089. It would appear from Lambert's evidence that he told you that before you took any action against a man who was incorrect in his returns it would be necessary to have his register carefully examined—that is, before you attributed any wrongdoing to a man? That is so, certainly; but Lambert would not require to tell me that, and I do not remember his ever doing so.
6090. You yourself knew it? Yes.
6091. When did you first have any suspicion that anything was going wrong? Not before it was a matter of public talk.
6092. Had you not ever heard it said that conductors were cheating? Oh, yes; I have known that men have been suspected, but I did not know that it was in connection with manipulating the registers.
6093. You did not know that they were suspected of manipulating their registers? No.
6094. Your impression, I presume, was that they were cheating in the ordinary way? Yes; by not ringing for the full number of fares.
6095. And appropriating tickets to that extent? Yes.
6096. It is only since publicity has been given to the matter that you became aware that they must have opened their registers for the purpose of manipulating them? —
6097. You never had any idea before that any conductor had opened his register? No.
6098. Did it never occur to you from what you evidently knew, that the same knowledge might be possessed by the conductors themselves—that is to say, that they had given in a lot of tickets more than were shown by the register, owing to some defect in the machinery; might they not have obtained that information? Yes; that has struck me often.
6099. And that having gained that information they might use it for their own purposes? Yes; I have thought of that.
6100. Before the frauds came out? Yes, often.
6101. Did you ever bring that phase of the question under notice? No; but I have often said that I did not think the registers were reliable.
6102. You quite understand my question. For instance, a man to day, owing to some hitch in his register, has brought in a lot more tickets than his register shows. He has gained that information. You would mention the matter to him would you not? No; we should not do so, and they are not supposed to open the face of their registers.
6103. Would he not know? No; not until his register was examined.

6104. But he would know that there was something wrong from the fact of his register being taken from him? Not necessarily; the register would ring alright, and he might not know why a fresh pair were issued to him.

F. Oakes.
12 Sept., 1888.

6105. Would he know that it was a fresh pair? Oh, yes; they all know their bells without looking at the number.

6106. Have you any reason to think that this knowledge which you yourself possessed would be pretty generally known—that is, that on occasions, owing to something happening to the register, the conductors would bring in more tickets than were shown by the indicator? No; I do not think so—only in the office.

6107. By how many men would it be known? By all in the office who had to do with the registers at that time.

6108. How many would there be? Four or five.

6109. It would be known to four or five clerks that frequently a surplus number of tickets would be brought in by the conductors, owing to some inaccuracy in the registers? Yes.

6110. Is it not possible that without intending any harm this would be spoken about in such a way that the knowledge might become general? Yes; it is possible.

6111. Without any intention of doing harm? Yes; I quite understand what you mean.

6112. A clerk might say, in talking to another person, "These bells are not as good as they might be, because it often happens that something goes wrong with them, and the account is not right"? Yes, that might be the case.

6113. Supposing this became generally talked about, might it not occur to some conductors, who were not very high-toned in their principles, that there was a chance of making a little capital out of the knowledge? Yes; by manipulating the bells you mean. That would be quite possible.

6114. And even probable? Yes.

6115. But it has not led you to exercise any more caution in your examination of the registers? No, not previous to these disclosures.

6116. Although you yourself had such a bad opinion of the registers? I did not think they were reliable on this account, but I should not like to say because a man was inaccurate in his tickets that he was necessarily cheating.

6117. You felt a great want. You felt that you would have liked to be in a position to say, "Smith, your register shows 325 tickets; I want those 325 tickets—neither more nor less"? Yes; that is just what I should like to be able to say.

6118. Feeling this you thought the registers were not quite as good as they should be? That they were not as good as they should be.

6119. Holding this view did you ever have a talk to Lambert on the subject? Yes, frequently.

6120. You know what Lambert's opinion of the register was? I know that his opinion was that they were perfectly reliable.

6121. Knowing what you did did you not consider it worth your while to combat that view and try and impress upon him that they were the reverse of reliable? Yes.

6122. And did you do so? Yes.

6123. What was the result of your argument. Did you ever move him? No.

6124. He held to his own opinion? Yes.

6125. Although this discrepancy to which you have referred would occasionally happen? He might admit that something might go wrong with them, but he seemed to think that no other check would be better. Of course the registers break in many ways—they stop ringing, and all sorts of things, I have seen registers which would indicate and which would not ring.

6126. You remember the system of tearing tickets? Yes.

6127. What was your opinion of it; did you think it better or worse than the present registers? I thought less of the tearing system than of the present system.

6128. Why? Well if a man were dishonest, or had any idea of being dishonest, he had a better chance of taking the tickets under that system, because he was giving no receipt to the public as he was with the bells. The public naturally listened for the sound of the bells.

6129. And you think very little of the tearing system? In the way that it was carried out. If it had been carried out as it should have been it would have been better.

6130. How do you mean? That the tickets collected from passengers should be torn up in front of them.

6131. That was the intention of the system? But that was not carried out.

6132. How would that answer in the dark? It was not carried out in any way, because a conductor would collect the whole side of a top, and would go to the end before he tore his tickets. There was no check upon him because he might miss tearing half of them.

6133. And there would be the same amount of check from the way the tickets were collected down below? Yes.

6134. And it was common for a conductor to collect a compartment entirely before tearing any tickets? Yes.

6135. You would not condemn the tearing system if it were properly carried out then? Of course the intention was that each ticket should be torn up.

6136. But would it not be difficult to carry that out? It could not possibly be done on some of the trips.

6137. Did Lambert some three years ago have a talk with you about the improper way in which a set of registers had been repaired by a certain man who was seeking the job? Lambert himself did not talk to me about it. I did not happen to be in the room but I heard all the circumstances.

6138. What did you hear? I heard that this man had been given a pair of registers to repair.

6139. What was his name? I do not know. I heard that when the registers were brought back they were given to Lambert, that he might examine them, and he found that this man had made alterations inside of the register which ought not to have been made, and owing to his leaving the ratchet out it would be possible for the registers to be manipulated.

6140. He left out the ratchets? Yes.

6141. He thought he had improved on the ratchet? Yes; he thought he had.

6142. It was ascertained that if that were done the registers would be at the mercy of the conductors? That is what we heard.

6143.

- F. Oakes: 6143. That is some years ago? Yes.
- 12 Sept., 1888. 6144. Lambert laid some stress upon this point. Did it make you at all suspicious of the manipulation of the registers in general. No; not at all. It was not said in that light at all. The only light in which it was mentioned was with regard to the pair which had then been repaired by this man. The effect of it was to show that this man was not capable of repairing registers.
6145. It was not a reflection upon the registers generally? No.
6146. It was in effect this: that this man by clumsy workmanship had rendered a pair of registers inefficient? Yes. That is what we were told. I did not think so at the time.
6147. What did you think? I thought that the registers were splendidly repaired. Of course I could not speak with reference to the work inside; but so far as I could judge, working them as a conductor would work them, they were splendidly repaired.
6148. You found that they rang and registered? Yes. To all outward appearance they had been repaired better than the registers had been repaired previously.
6149. What do you mean by that—were you in a position to judge solely by outside appearance. Could you tell their condition from the way in which they rang? Yes; to a certain extent.
6150. You mean that there was no sluggishness? Yes; and that the sound was clear. They were apparently very accurate.
6151. *Mr. Brock.*] Still they might have been in a condition in which they would ring without registering? Yes.
6152. *President.*] I suppose it was a perfectly legitimate thing on Lambert's part to take this register to pieces again. He was expected to do so? Well the Superintendent gave them to him.
6153. To test the capability of the new man for that work? Yes.
6154. Did this man not send in a sort of tender or offer to repair the registers at a certain rate? Yes. I do not remember what it was.
6155. Was it altogether a right thing for Lambert, under the circumstances, to be made the judge? No, I do not think so.
6156. Was no suggestion made that a third party should report? I do not know that that suggestion was made to Mr. Roberts. I know that the clerks in the office in which I was thought that that should have been done.
6157. Mr. Felton, for instance, had some knowledge of the matter; he might have been asked? Yes.
6158. He repaired the registers at one time? Yes; before Lambert.
6159. How were they repaired under Mr. Felton? Very badly indeed, as badly as they could be done.
6160. Did Mr. Felton do them himself? I do not think he ever did.
6161. Then it does not follow that if a man is a good watchmaker he will be a good repairer of registers? No, it does not. We have had registers returned from Mr. Felton, as repaired, in such a condition that we could not issue them.
6162. You think, perhaps, that he did not understand the work, or that he left it to some inferior person to attend to? I could not say. It would be very difficult to say what person would be competent to report thoroughly upon the condition of these registers, because their machinery is so different to ordinary machinery.
6163. Could these registers be manipulated in any way without putting in the piece of wire. Suppose you got a pair of registers that had been faked, as they call it, would it have been necessary to put in a piece of wire? Certainly not.
6164. How would you do it? I could ring them a hundred times and they would register, and I could ring them another hundred times and they would not register.
6165. Without the use of a piece of wire? Yes.
6166. How would you do it? By not allowing the pull to go right back. I always knew that a register would do that if it were out of order, that is, if the spring were worn or weak.
6167. Would these registers not have been much more perfect if they had been so secured by lock that they could not be opened by anyone but the properly appointed officer? I do not think that one out of every ten persons who had anything to do with the registers could read them. It is a very difficult thing to read them correctly.
6168. But they could see by looking at the register whether it had been manipulated or not? Yes, certainly.
6169. Was it not intended to lock the registers? Yes.
6170. Are they locked? No; there are only some that have locks on.
6171. So that the men who take registers at night can always look at the indicator? Yes.
6172. Can they read them? No, I do not think they can.
6173. Anyone who can read a gas-meter, I suppose, can read them? Not these registers, I think. You have to follow them through before you can read them. Sometimes I could not have read them myself had I not known what the previous reading had been. Of course I should like to say the men could read them; some of them are easier than others, and if a man put his mind to it he could learn how to read them.
6174. Have you ever seen a conductor read his register and make an entry of it in his pocket-book? I have heard of it being done, but I have never seen a conductor do it.
6175. Who told you of it? I could not say; I forget; it is a long time ago.
6176. *Mr. Brock.*] What would be the average discrepancy between a man's return and reading if he were running straight? I should say it would be almost 2 per cent.
6177. Would it come within that as a rule? Yes, as a rule.
6178. Then a man could take two tickets out of every 100 and could say to himself, "That will be all right; it is near enough"? Yes.
6179. *President.*] What is the average number of tickets a man would bring in in a day? I have known them to bring in over 4,000, but that is an exceptional number.
6180. Out of that number a man would be able to take eighty tickets without much, if any notice, being taken of it? Yes.
6181. That is, a man with a perfect reputation could pocket eighty out of that number? Yes.
6182. Does that not go to show that under any circumstances whatever these registers do not give a reliable return? I do not think they do.
6183. It is not a return under which you can fix a man? No; I do not think so. 6184.

6184. No doubt, under a proper system of registration, you would have it in your power to say to a man, "That is the number your register calls for; I want to receive exactly that number from you?" You could not do that with these registers.

F. Oakes.
12 Sept., 1888.

6185. Do you ever get a return exactly right? Yes; especially with the cash. We frequently get the tickets coming out right.

6186. Under the system of examining the registers once a day, how often would the return and the register come out right in regard to tickets? Perhaps twice a month it would be exactly right.

6187. Do you read the registers every trip now? No, the bags are emptied every trip, but the registers are read only once a day. As the bags are emptied the tickets are emptied into the men's boxes.

6188. Would it not be better to read the registers every trip? No; I do not think so.

6189. Would it not be better to have the registers duplicated, so that every trip you could take one register away from a man and give him another? That would not answer. It is possible to make a mistake in reading a man's register; if I read him ten wrong to-day to-morrow it would show him ten short. If the man had that register only once this would not be shown, because another man would have it. The reading is continuous from day to day, and that is a check.

6190. I could understand that if the reading came out right? The cash is generally right.

6191. Is the cash never wrong? There is frequently a penny difference in the cash, but as a rule it is right.

6192. Would it not be better to have a system of cash, by means of a register, which would record to such a nicety that you would be able to say to a man at the end of a day, "Smith, you must give me 45s. 2d.; nothing more nor less?" Yes.

6193. *Mr. Brock.*] You think it would be better to adopt a cash system altogether, and to do away with the tickets, if it would be carried out as accurately as the President suggests.

6194. *President.*] So that if a man were once wrong you could say to him, "You will be let off this time, but if this happens again you will be dismissed?" Yes.

6195. The men don't get punished now? I have heard that the Commissioner punished one man for being systematically short, but I have not heard it officially.

John William Tyrer called in, sworn, and examined:—

6196. *President.*] What is your position in the Tramway Department? I am chief clerk.

6197. How long have you been so employed? Since May, 1880—a little over eight years.

6198. Had you any previous experience in connection with tramways? None.

6199. How were you engaged before? I was in business on my own account in England, but I was in the Tramway Department before May, 1880.

6200. For how long? From February, 1880. Although I was not previously actively engaged on tramways, still I had a knowledge of them in England.

6201. In what way? From daily observation and from taking an interest in them.

6202. You were engaged in business in a city where tramways were a great deal used? Yes; in Birmingham. I was acquainted with tramways in Birmingham, Leicester, and the Black country.

6203. You have charge of the whole clerical administration of the traffic branch of the tramway, I presume? Subject to Mr. Roberts. Of course my rulings are sometimes overruled. I am not left solely to work the thing, supposing it was left to myself.

6204. Apart from that, you are responsible for the general clerical work of the traffic branch? Yes.

6205. The tramways have been worked under different systems as far as the collection of tickets is concerned? Yes.

6206. Are you satisfied with the present system? No.

6207. What have you to advance against it? It is easy for a conductor, if he is dishonest, to manipulate his fare, so as to rob the Government.

6208. We all know that; how long have you known it? I have known that has been possible ever since I have been in the Department, but you have to trust to the honor of men to a certain extent; you must do so.

6209. Why? Because no system of which I know is quite perfect.

6210. What is the defect of the present system? A man can ring short. Suppose that I am a conductor, and you are a passenger; suppose you have your wife and one or two others with you, and that you hand me (say) six tickets; I ring five times, and you say, "conductor, you only rang five." I say, "You are wrong." In such a case as that there is only your word against mine. You cannot prove your case.

6211. But could much be made in that way? Yes, at night, because a conductor could then ring considerably short, especially if the car were loaded.

6212. Why more than at any other time? As a rule the tops of the cars are very crowded, and the conductors take tickets from a number of passengers at a time, and ring very quickly. Besides, the public will not take the trouble to assist the Department to check any wrong which may be going on.

6213. My object in asking you this is to compare the present system with others; are you strongly dissatisfied with it, compared with any other system you know? To go into that question, one would require to go into the whole of the details of working. Our traffic is vastly different to the traffic in England. For instance, the cars here are made with side loading. Our ninety-seat cars have fourteen ways of ingress and egress. Consequently the conductor has not the same command over the car as if it were a single-deck car, similar to those used in London or Birmingham, or the cars used at the North Shore, with the end loading. In such cars as ours the conductor has much greater means of conducting fraud on the part of the public, because the public frequently defraud the Department by not paying their fares.

6214. We do not want to go into those details. We want you to consider the present mode of conducting the traffic. Do you consider the present system a satisfactory one. Answer the question, please, in view of that system? With the means we have at hand I think it is the best we can have in connection with the present cars.

6215. It is not so much a question of what you can do with the cars as of the reliability of the registers. What do you think of them? I think they are only reliable for a time after they are new. They have to be pulled so many times by each conductor that the wearing parts become defective; and when they get defective, as can be shown by the books, they do not always register when they ring.

6216.

J. W. Tyrer.
12 Sept., 1888.

J. W. Tyrer.
12 Sept., 1888.

6216. Is it not a fact that with these registers the fares are never collected so as to balance with the number indicated by the machine. When I say never, I mean hardly ever? As a matter of fact the tickets do not balance, but there are many reasons to be adduced for that. For instance, a man working a heavy car may take it for granted that the passengers would give him the correct number of tickets, and he may ring in anticipation. He may not stop to count each lot of tickets he receives, and as a matter of fact he may not receive all his fares. He may take it for granted that the tickets are correct, and I have no doubt that in some cases that is the reason why the men are short.

6217. You mean that he may ring off according to the passengers rather than the number of tickets collected? Yes, he does not count them. A passenger will hand him the fares for a particular compartment. He notices that there are six persons there, and if it is a 2d. section he gives twelve rings, taking it for granted that the number of tickets given to him is correct.

6218. Is that the result of your own observation? It is. I know the difficulties of the system. You may lay down a rule that the conductor shall take the tickets separately from each passenger, but it cannot be carried out.

6219. I imagine he could not do that from the inside? Well he could do it; at least he could have four handed to him for each individual passenger; but then he would have to go round to the other side, because he could not reach from the near side to the passengers on the off side.

6220. And the carrying out of the rule in the way you suggest would depend in a great measure upon the passengers? Yes, I think that the rule is impracticable with the present traffic.

6221. Would you be surprised to hear that my observation is diametrically opposed to yours? No, but what I say is absolutely correct.

6222. My observation is that the conductors collect the tickets in the compartments, and then count them out before ringing them off? So they have at times, especially when they have seen me near.

6223. You think that they do it when they know that they are under observation? Yes, I think that some men may count the tickets before ringing off without being under observation.

6224. But as a rule you think they ring off without counting the tickets? Yes, when they are very much loaded.

6225. Then you think they over-ring? Yes.

6226. And consequently their tickets are short? Yes.

6227. Do you think they do that often? Yes, the accounts will show who is over and who is short. In the majority of cases they are over, particularly recently.

6228. As to the present registers, you admit that a balance between the tickets and the registers is not to be looked for in common fairness? In common fairness.

6229. You at once admit, therefore, that there is a margin? I do.

6230. In your opinion can any system be said to be satisfactory in which a margin has to be allowed? No; but to go into that question you must take into account not only the method of registering and collecting fares, but the particular kind of vehicles in which you have to collect them. The question must be considered as a whole. These cars of ours are particularly awkward for the men who have to manipulate them on account of their large carrying capacity and the number of sections. If a man is working on the Waverley line he has to manipulate all the Waverley passengers three times. Take the trip to the Bondi Aquarium on Sunday afternoon. The loading is specially heavy; each passenger has to pay three separate different times; then the conductor has to manage all the stoppages, see to the safety of his tram, to start it, and to collect his fares from double-deck cars. That means very heavy work; so that I think, in common justice, that if a man is a few tickets short it might be overlooked.

6231. You are getting altogether outside of my question. Do you consider satisfactory any system which admits a margin? No; I think not.

6232. I did not ask you whether you thought the men were doing the best they could, but whether you considered any system, making this margin a necessity, a perfectly satisfactory one? I meant to say "no" to that question, but to qualify my question by giving you the information I was proceeding to give.

6233. When you admit a margin of this kind is it not almost impossible to take a man to task for a discrepancy between his register and his returns? Yes; if it is just over the line.

6234. If you once admit a margin, is it not difficult to say if it shall stop at ten or twenty; if a man is able to say, "No one is able exactly to balance his tickets with his register," must you not at once admit the difficulty of bringing home to a man the charge of acting fraudulently and of punishing him for his supposed fraud? There would be a difficulty in punishing him in some circumstances, but I think some allowance might be made to cover any cases of fraud.

6235. But if you admit—and it seems to me that you have to do so—that you cannot secure a balance, you admit that there may be an irregularity, and where are you to draw the line in regard to that irregularity? That is a question which remains to be decided.

6236. Do you not think it would be better to have the registers read once a trip instead of once a day? I do not think it would be of much service in preventing them from being dishonest.

6237. Would it not give them a less chance? No; I think not.

6238. Suppose a man does eight trips in a day, and he brings in in that day 2,400 tickets; that brings his tickets on each round trip down to something like 300. If his register were checked at the end of each round trip would it not give him less chance of appropriating tickets, whether few or many? I think not, and I will tell you why. If any of these men were stealing tickets they would not take any large number at any one time for fear of missing count; they would take a certain number at each trip, of which they could easily keep count; consequently, if the registers were taken at each round trip it would not further the desired effect as a check, because they would ring short as many tickets as they had taken on each round trip.

6239. That you consider the real weakness of the present system? I do.

6240. You must surely admit that if it were possible to examine the registers at every street corner you would reduce the possibilities of fraud? Yes.

6241. Then why do you think that, by doing it at every round trip as compared with the whole day, you would not also diminish the possibilities? At the end of each outward journey there is a certain amount of dead time—5, 10, or 15 minutes—and the man would have ample time then, when the tram is lying

lying id.c, to abstract any tickets he may wish to take from his bag. Of course he will take means of doing it which will reduce the detection to a minimum. The public would be out of the car, the driver would be busy with his motor, and he would be left alone to manipulate his bag. J. W. Tyrer.

12 Sept., 1888

6242. You think that nothing short of checking the register at every single trip would effect an improvement then? That might effect an improvement on the short runs, but it would not do so on the long runs. Take Botany, for instance. The distance between Waterloo and Botany is $5\frac{1}{4}$ miles, and there are few stopping places, and a man would have more ample opportunity to manipulate his bag than he would have in running between here and the railway. The only lights he would have would be those on the cars.

6243. But you are taking an exceptional line? Well, take the Waverley—4 miles 16 chains.

6244. But there is population and stopping places all along the route? He would have ample opportunity going from Queen-street along the water reserve.

6245. It seems to me that, if you have no actual check against a man under honest circumstances, you have no check at all? We have not.

6246. At the present time, with these registers, as far as I can make out, we have no satisfactory check upon the men who are doing their very best? We have not.

6247. If a system could be devised by which cash fares alone could be taken, and by which we could get rid of the sale and purchase of tickets; a system under which the cash could be so registered that the clerk could say to a conductor at the end of his journey, "You must hand £3 4s. 9d., nothing more nor less";—would not that be much better? Before you adopt such a system you would have to overcome several difficulties which occur to me.

6248. Suppose the clerk is able to say, "You must give me £3 4s. 9d.," and the register was of such a nature that there could be no get away from it, the conductor having to deliver up exactly that amount of money, or not having it, be regarded as a careless man, who would be dismissed on the recurrence of the discrepancy;—would not such a system as that be infinitely preferable to the present system? Yes; because the man would have to make up the money, whether it were missing through carelessness or misadventure, being dismissed, as you say, if the discrepancy occurred frequently.

6249. You think that would be successful? I think it would be satisfactory, but with cash fares only, bearing in mind the present charges for the sections, would it not be rather awkward for the public. In the first place they would be required to carry a number of coppers. I think you would find that they would make considerable objection to that? If you had a uniform fare of three-pence the difficulty of course would be lessened.

6250. Suppose the cash charges were on the penny principle, and suppose that the registers were such that, when the pence were once in, they would become for the time being the property of the conductor, he being able to give the passengers whatever change they might require, always requiring them to deposit the fares in the register themselves; that is, if a person entering upon a 2d. section had only a three-penny bit, he would require to get change and put in 2d.;—do you not think that such a system could be satisfactorily worked? I do not think it could be worked on our cars.

6251. Why not? On account of the number of passengers we have to carry. A conductor could not get through two cars with sufficient quickness if all the passengers had to pay in cash and he had to give change.

6252. Don't you think that, after such a system had been in vogue for a little time, people would get into the habit of carrying half-a-dozen coins instead of a bundle of tickets. If they were travellers to any extent they would have to carry a large number of copper coins. I do not think that such a scheme would find favour with the public, and I do not think the conductors would get through their work with sufficient quickness.

6253. Suppose they had not to give much change? I am taking that into account. Suppose they had not to give change they could not manipulate the fares so quickly as they could manipulate the tickets with their registers.

6254. But we have a number of penny sections? We have.

6255. Would not the majority of the passengers on those sections have their pence ready? Possibly so, if they were travelling only one section; but if they were travellers of any moment they would require to have a good stock of coppers.

6256. I am thinking of the speed with which the work could be done; take a penny section; the work could be done as quickly as it is done now, could it not;—the conductors would have nothing to do? Although they would not receive the fares in their own hands I imagine that they would have to produce a bag or a box.

6257. But that would be on the conductor's person? How would passengers on the far side of the car reach over to put their fares into the bag.

6258. You are afraid of the inside? Yes.

6259. The suggestion is forthcoming that the cars should be altered to the extent of dividing the seats, making them hold four instead of five as it were, and in fact making them like the railway cars; you know the Strathfield cars, that there is a smoker at each end holding fifteen; the back seat would still be allowed to hold five, and the same would apply to the seat at the end of the other portion of the car, so that there would not actually be so much loss of accommodation? It would decrease the carrying capacity by eight passengers.

6260. With an arrangement like that it would be impossible perhaps to have an upper-deck? Yes; and upper-decks are not desirable.

6261. This system would meet your view in this respect? Yes.

6262. When you say that upper-decks are not desirable, what do you mean? A man cannot have the control over a double-deck car that he has over a single-deck car. He has to be running up and down stairs to collect his fares.

6263. Still you recognise there is a great public convenience in the double-deck cars? They are convenient for smokers; they like to be up from the dust, and all that.

6264. Still you would forego all that? I think so.

6265. You are certainly in favour of single-deck cars? Yes; but I may supplement what I said with regard to the alteration which you propose to make in the Strathfield cars by saying that when they were loaded there would be a great difficulty in the conductor getting along through the central passage to which you refer.

6266.

- J. W. Tyrer. 6266. But bear in mind that there would be all the side openings; could not the conductor at a pinch cross from one side of the car to the other? He would sometimes have difficulty in doing that. He would have his bag or box slung round him; he would have to turn his back to someone and that would not always be pleasant. It may to some extent be unpleasant and inconvenient.
6267. Your idea is that the conductor should work down the centres of the cars to get his fares? Of course he could stretch half-way across from the step, but it is desirable that he should be outside as much as possible so as to look after the safe keeping of his car. The loss of the seating is an important item just now, because if the double deck cars are to be reduced, it stands to reason that we must have more rolling stock, or continue to overcrowd the cars very much.
6268. What is the carrying capacity of the cars in Birmingham? Thirty.
6269. I suppose that in no part of the world is the seating capacity of the cars equal to that of the cars in Sydney? I have never seen it, nor have I heard of it. Then again we have to do exceptional work; it is really railway work.
6270. You are well up in the Melbourne system? I know the system.
6271. Have you ever thought of that system as applied to this Colony? The difficulty is this: that we have two grades of fares. It might be easy to give a man two trip slips than two punches, but there is nothing to prevent him from ringing a twopenny from a penny slip. If the fares were only one grade there would be no difficulty.
6272. Still would there not be a difficulty in regard to the sale of tickets and the giving of change? Yes, in our cars it would be very difficult.
6273. There would be more to do under that system than under a penny cash system, such as I have suggested? Yes. I may say that at the inception of the tramways there was a system under which a piece was taken out of the ticket itself.
6274. What do you think of that system? It is very good providing it is applied to every round trip. We used to take 6,000 a day when the tram went to the railway alone.
6275. It was stopped because it was too slow? No, on account of the registers. Those registers only registered up to 1024. Now we have different values; then there was a 2d. section from Hunter-street to the railway.
6276. What is your opinion of the system of tearing the tickets. Not a good one.
6277. Why? A man could tear the tickets down the perforations and they would have just as good a value as ever.
6278. The conductors could do that easily? Yes, or they could take a number of tickets, put their fingers between them, and tear only a portion of them.
6279. At night on top of the cars that would be easy? Very easy.
6280. You do not think it is an improvement on the bell registers? No, because there the passengers have some audible receipt. They can hear the bell ring, although they may get cheated in the proper number of rings. When the tickets were torn they had nothing in the shape of a receipt. The thing has to be done so quickly; it is not as though the conductor could tear the ticket in front of each passenger and show it to him.
6281. Do you think that any of the conductors can read their registers? I have no doubt they can; it is just like reading a gas-meter. The locks to the registers very soon get out of order. There was a lock and a small key to each of them, but they soon got into such a condition that they could be opened with a penknife.
6282. That is a bad feature? It is.
6283. You think that they ought to have been so constructed that they could not be opened in the ordinary way? Yes, they have been repaired times without number, but the mechanism is small. At one time we had padlocks, but they were useless; the men could easily pick them.
6284. You are now of course well aware, as everyone else is, of this system of manipulating the registers by first putting them out of order inside and then putting a pin in them? Yes.
6285. When did you first hear that such a thing was possible? At the beginning of the year; I think in February.
6286. What were the circumstances? Conductor Keen came to me and informed me that Graham had told him that the registers could be manipulated. At that particular moment Mr. Roberts was out, and for the purpose of having greater privacy I took Keen into his room. A few moments afterwards Mr. Roberts came in and I informed him of the object of Keen's visit. I then left Keen with him. The thing appeared at that time to be a failure; as far as Keen's version went it could not be done; they must evidently have improved upon it. Mr. Primrose brought up a piece of wire in order that the thing might be tried, but it did not work.
6287. Who made the trial; how many were present? Mr. Primrose was there I think. I left the matter in Mr. Roberts's hands. Mr. Roberts sent for Lambert, and as far as I remember said it could not be done.
6288. What could not be done? That they could not manipulate the registers with a piece of wire so that they would not register.
6289. Did Lambert see the wire? I could not say.
6290. You were not present when Lambert was shown the register? Not at that particular moment.
6291. Were you ever present when a register was shown to Lambert in connection with a piece of wire and a pin? Yes; more recently.
6292. That was after the frauds became public? Yes; he showed me where they had filed the ratchets.
6293. As a matter of fact you do not know that this question was put to Lambert at all, that is as to the possibility of doing the thing by the insertion of a wire? No I do not think it was when I was present.
6294. Did Keen say that he had done it, or that Graham had told him that it could be done? They were to find out from Graham I think how it was to be done. Keen did not say that he had done it, as far as I can remember.
6295. Was there any idea in your mind or in the mind of anyone else in the office that Keen had done it? Not in mine.
6296. Would you be surprised to hear that Keen positively states that when Graham told him that it could be done, he being curious took his own register home, tried the thing and succeeded in doing it with it before he reported the matter to you? I should not be surprised because naturally he would not tell me that he had succeeded.

6297. Why not? If it were known that he had done it the question would arise as to how long he had done it for his own benefit. J. W. Tyrer.
6298. And another question which arises is, that in order that the thing might be successfully done the register must first be put out of order by someone? It must have been put out of order, or it must have been worn. 12 Sept., 1888.
6299. But as far as you heard Keen made no suggestion that he could do it himself? No.
6300. He merely carried the story from Graham? He came to give information for the benefit of the Department, at least his action had that appearance.
6301. His statement is that he was told by Graham when riding on the top of a car, and that being interested as soon as he got home he made a trial for himself, and having succeeded, at once went to Mr. Roberts or to yourself and told of the matter? I cannot say that he came immediately after.
6302. Then or the next morning? I know that he came in the morning, but he did not tell me that he had tried it himself.
6303. He does say that he did, although he found that Mr. Roberts, Mr. Primrose, and yourself ridiculed the thing, so to speak. Notwithstanding this it never occurred to him to say, "It can be done; I have done it?" He failed to do it that morning.
6304. He tried to do it? Yes. He got pieces of wire of various thicknesses and it was tried, but we failed to do it on that particular register.
6305. Was Mr. Primrose in the room with Mr. Roberts when Lambert was sent for? That I cannot say. Mr. Primrose could tell you about the wire because he brought it.
6306. Did he bring it to you? No; it was when Lambert was there, I understood.
6307. You saw him going into the room with the wire? No; but he told me he took a piece of wire up; and that they had tried it with pins and with the wire.
6308. Had you ever had any inkling before that that anything of this kind was being done? No.
6309. And you were given to understand at this particular time that it was not to be done? No; I was told that it had been done but that they had failed to do it.
6310. Did you not hear, after the interview between Mr. Roberts and Lambert, that it was all moonshine and that the thing could not be done? If my memory serves me right, Mr. Roberts came over to Mr. Vernon, but I do not know the result of his interview.
6311. Did he not say to you afterwards "It is all moonshine, it cannot be done"? He said it could not be done; but I did not know the result of his interview with Mr. Vernon.
6312. Did he not say that Lambert had reported that it could not be done? Yes; but I was not in the room when he said so; that is simple hearsay.
6313. We had under our notice the other day a case in which a conductor was allowed to hold his register for some time without giving in the return. On our asking the clerk why this was done, his reply was that he had no control over the matter, that he did not know what conductors were running, and that, therefore, he did not look for certain conductors to come up; if they came up, well and good, he took the registers; if not, he left them alone. It was shown that a certain man did not bring in his register between a Wednesday and a Saturday. I believe it has been satisfactorily explained that when he went to work again he was put to car-cleaning. Is not a system which permits of such a state of things a bad one? Well that is a weak point.
6314. Could it not be easily remedied? As soon as I knew of it I gave instructions that a daily list of the men absent should be sent up to both Mr. Primrose and the audit, and that all the men, excepting those on that list, should account for their registers. Then came the question as to whether those who were sick should not be compelled to send down their bells and bags to be kept in the office.
6315. Under proper system a clerk at the end of the day would say "Here is Smith or Jones, who has not come in, and he is not on the absentee list"? The man would be reported in writing and action would be taken. As to the bells and bags being in possession of the men, there are certain runs where, from the necessities of the case, it would appear to be inevitable; for instance, the man doing the last trip to Botany has his bag and bells in his possession until he comes in the next morning.
6316. Don't you think any system which allows a conductor to take his register home at night is an entirely wrong one? Yes, if all men are to be treated as dishonest, but it seems to me that you must place a certain amount of trust in them.
6317. But when you are instituting a check of any kind don't you treat every man as being dishonest; if you wholly trusted men you would have no check at all? Yes, that is so.
6318. Does it not seem to you that this manipulation of the registers would never have been heard of if the men had not had this opportunity at home of seeing how their registers were worked, and of satisfying their curiosity by opening them? Naturally, if the registers were not taken home, there would be much less chance of that being done.
6319. What would be necessary in order to remedy this defect? As far as I can see, one of two things. Either the men must come back to Sydney at night, or a trusted officer must go out and take their registers. Of course it would be expensive for them to come back again. The motor of the last trams to the various outside terminal stations leaves the cars and runs in light.
6320. As a rule the chances of fraud on that last trip are very small, providing the registers were taken up to that point? Yes; they are small.
6321. But would not the chances of loss be sufficient to warrant your having a junior clerk at each place, to take the registers after the last trip and bring them to some central place? I am afraid it would cost more to do that than the trips would earn.
6322. What would it cost? Take Botany for instance. Someone would have to be there at 12.10. How could the man get back to Sydney. At Marrickville a man would be required at 11.55. He would have to travel 5 miles odd. From Coogee he would have to travel 6 miles; and twelve changes at 12 o'clock at night three times a week.
6323. I suppose you do not know of any other place where the men are allowed to have their registers at home? I am not aware that it is allowed anywhere else, but here we have such a different system of tramways. The case of other countries is not at all parallel, as far as I can learn.
6324. But in other places they have terminal stations, have they not? Yes. I forgot just now to mention Waverley, a distance of 4 miles. A man would require to be there at 12.3, and afterwards to travel into town.

- J. W. Tyrer. 6325. Would it not pay us to have at our principal termini a station clerk who would take the registers on every trip, night and day? That would be an extra check during the day as well.
- 12 Sept., 1888. 6326. It would be an extra check. It would not give so much opportunity for fraud, but it seems to me that the men could still perpetrate it.
6327. How? On the journey.
6328. If you bring the manipulation down to the journey you reduce it very considerably? You would reduce it, but I think you would find that the conductors would make a certain number of tickets out of each trip. They would ring that number short, and I do not think you would catch them.
6329. Does the conductor of the last Botany tram come back to Bridge-street? No.
6330. Could you not have a station clerk at Queen-street, and make him take up all the bags on the last trip? Then there would be two sections to Waverley and two to Bondi.
6331. How many persons do you think it would be necessary to employ to prevent the taking of the registers home at night? Twelve; in fact more.
6332. Would you want one at Moore Park? No.
6333. Would you require one at Randwick? Yes, and on three nights a week at Coogee; then you would want two for the Waterloo and Botany line. Of course if the checking were carried out all day you would require a double shift.
6334. *Mr. Brock.*] Could not the clerks at the terminal stations be made ticket-vendors? I do not think that would be advisable, for several reasons.
6335. *President.*] But if it were proposed to abolish the present mode of sale, and to increase the number of Government salesmen, you would have to place salesmen at all the termini and at all the waiting-rooms in town. The men appointed for that purpose would perhaps be able to take this night duty with the bells and bags? They could not do the two duties of reading the registers and selling the tickets, because if there was much traffic, while they were engaged in reading the registers people would be applying for tickets. I do not think they could discharge the dual duty.
6336. I do not mean that they should read the registers all day? Of course it could be done the last thing at night.
6337. Don't you think there would be time to read the registers at the termini. Remember that the trams stop a quarter of an hour at some places? There might be time at an outside termini.
6338. Don't you think that either the American or the Melbourne system, or the cash system, such as that which we have suggested to you, if it could be satisfactorily worked, would be an improvement on the present system? If it could be worked. I have given you my idea as to some of the difficulties which I am afraid would crop up. Of course, with the qualifications I have named, those systems would be better; but there is the difficulty of our sections being of two denominations. That would apply to both of the systems you have named. Before the cash system was withdrawn we were sometimes sadly pushed to get change in coppers even for the men. The withdrawal of the cash system meant a loss of about £10,000 a year. In 1884, the penny sections were a penny cash or a ticket; there was no fine upon a penny section.
6339. Now you put on such a heavy fine on the 1d. sections that the people carry tickets? Yes.
6340. If they had only to pay 1d. on a 1d. section and 3d. on a 2d. section, a number of those who invariably carry tickets would pay cash? Yes, that is so.
6341. At present a man not provided with tickets would have to pay 7d. out to Leichhardt; but under the previous system he could get out to Leichhardt for 5d. cash, and he did not trouble much about the tickets? Exactly.
6342. Now they carry tickets more generally? Yes. You have also to consider the fine attached to the sale of tickets.
6343. *Mr. Brock.*] You are not allowed to buy tickets from anyone now? No; whenever I see it I invariably warn people.
6344. *President.*] You admit that it is a bad thing that the men should be allowed to retain their registers and their takings for any time. Is it not a fact that on the North Shore line the men are sometimes the whole week without giving in their returns? Yes. I do not know whether a man has been for a week there, but I know he has had them for some days. Two men are sent over there at the proper time to collect the tickets, and to read the registers; but the Superintendent tells men to go away, and does not make provision for their registers to be taken. We are not responsible for that. We provide for the reading of the registers and the collection of the fares at the proper schedule time. In the case to which you are referring the man is relieved earlier; he is a spare man.
6345. What would it have been necessary for you to do to secure the collection of his bag? The Superintendent should instruct him to be there at the scheduled time.
6346. But what would you have to do under the circumstances? We should have to be advised of the time the man was leaving duty, and then we should have to send over two men specially.
6347. Is it not a pity that you have anything to do with that line. You have nothing to do with the management; how are you introduced into the collection of the registers? Well we had the traffic and all in the first instance, but the Minister or Commissioner said that as the thing was so small it ought not to be under two heads; and we continued to gather the tickets and read the registers.
6348. You have always done that? Yes.
6349. That is taking the management out of the proper hands? Well, I think it is a debatable point as to who should manage it. I think the loco. should simply provide the machinery for removing the cable, and that we should continue.
6350. I am speaking of what exists. The Locomotive Superintendent is the general manager of the North Shore line? Yes.
6351. Then it is quite irregular for the traffic manager of the city lines to interfere at all. It seems to me that the traffic manager of the city lines should have no interference whatever? If not, expense will be incurred, because a separate officer would have to be told off to do the collection, and for such a small thing it would not be worth while.
6352. Has he not a foreman or leading man over there? No. Mr. Brown, the running foreman, looks after the traffic at the Shore.
6353. So that it is absolutely necessary to find some one from your office to do this work? Yes.
6354. And the complaint is that this officer of yours does not go over sufficiently often? Well there is a scheduled time for the bags to be emptied; the fault lies in the spare man, to whom you refer to, not being there at the appointed time.
- 6355.

6355. Has it not occurred generally with regard to other men? No; I think not. That is the only case J. W. Tyrer, which has been brought under my notice.
6356. In another case, that of conductor Wilson, the relief time being between 2:45 and 3:41 p.m., the ^{12 Sept., 1888.} conductor had leave to go at 12 o'clock;—what did the Loco. Department expect you to do on that occasion. Were you expected to send a clerk over at 12 o'clock to take that one man's register? We did not know that he was away.
6357. What is the position you have taken up. Have you objected to sending over at these wrong hours to collect, or have you said, "You must notify us when a man is being relieved at these irregular hours, and we will then send someone"? I have said that the loco. should make arrangements for our having the register and the bag when they give a man leave. I do not think we should send over to take one man's bag.
6358. It would be a very expensive thing? Of course it would. I think I have reported to that effect.
6359. It would really mean sending one man from the Audit Branch and another man from the Traffic Branch to collect this one man's returns? Yes.
6360. The collection of a return would possibly cost more than the total of the collection itself? Yes.
6361. If it is said therefore that the time at which the men leave and start work does not interfere with this question at all, and if a proper system were introduced they could leave at any time, that would be entirely incorrect? Most decidedly.
6362. Because if the men leave at any time you would require a resident officer from the Traffic Branch, and a resident officer representing the Audit Branch? Yes. If they want their men to be relieved at certain times they must make arrangements accordingly.
6363. There would be no difficulty in making this note against the day's return—that such and such a man had not given in his bag? There was nothing in the case to which you refer to show that the man was on duty. They say that the schedule showing the men on duty is readily accessible every day; but I do not know that it is so.
6364. Do I understand you to say that this irregularity in connection with the North Shore line is not a frequent occurrence, and that it only occurs in reference to spare conductors, for instance? To my knowledge, that is all.
6365. Even if you were to be asked to send over your man for these irregular returns, it would be absolutely necessary that you should be advised by some one when you had to send? Most decidedly.
6366. And you have not had that advice? No; that is what I have said.
6367. What is your opinion of Lambert as a register repairer? The only thing I can say is just by way of comparison. As regards his mechanical abilities I cannot say anything. I think he has repaired them better than we had them repaired by Smart and Felton.
6368. Who is Smart? A watchmaker in Market-street. He was introduced to us by the gentleman who brought us the registers.
6369. What led you to discontinue Smart's services? He repaired the registers so wretchedly. I think they were frequently taken to him and brought back again in their former condition.
6370. What led to Lambert being employed? There were complaints about Felton, and Lambert applied for the position. In support of his application he produced a character from some one in New Zealand for whom he had worked as a machinist.
6371. Do I understand that Felton followed Smart? Yes.
6372. And there was no great improvement? There was for some time. At first there was an improvement as compared with Smart's work; but latterly, whether it was owing to Felton not being so careful, or whether it was due to the extra wear and tear of the registers, I could not say—the work was not so good.
6373. I presume that Mr. Felton having to superintend the watch repairs could not give his personal attention to the registers? I suppose not.
6374. *Mr. Brock.*] Do you know the name of the second applicant at the time Lambert was appointed? I do not remember.
6375. You know that there was a second applicant? Yes; I remember that now, but I do not remember his name. I know that he had one of the registers, and that he made certain supposed improvements.
6376. He took the ratchet out? He took some part of the machinery out—I do not know what it was.
6377. And when it was handed over to you it would ring without registering? It would.
6378. *President.*] Do you remember that when this person sent in his register repaired, as it was alleged to be, it was submitted to Lambert? It was.
6379. Did that not seem to you rather a singular mode of procedure? Personally, I should not have done it. This man was submitting a tender offering to repair the registers at a cut-down price. In any case Lambert was particularly affected if this man's offer should be accepted.
6380. And if it had been Lambert would have been left out in the cold? He would.
6381. Was it not an extraordinary thing, under such circumstances, to submit the register to Lambert? It was.
6382. By whom was it done? By Mr. Roberts.
6383. But apart from all that you have good faith in Lambert? As I said just now, he has repaired the registers better than anyone we have had before, but I cannot speak as to his qualifications as a mechanic.
6384. You find that there are far less complaints now than when the other two men had the repairing? Yes. The registers are better repaired than they were by the other two men.
6385. Has not Oakes ever impressed upon you that these registers were unsatisfactory? I knew that before Oakes had anything to do with them. He has mentioned it.
6386. You have spoken rather favourably of the registers, if I understand you correctly? I have said they were not reliable.
6387. But you said you thought that they were as good as any other system which could be devised? For the particular work on our cars.
6388. Still the objection, we understand, that Oakes has made to them goes further than that; he has considered from the first that they were very unreliable, and very apt to get out of order? I think you will find that I said that they would keep in order for some time after they were new, but that afterwards they were not reliable.
6389. The reports made by Oakes occasionally were not, in your opinion, sufficient to warrant you in recommending a discontinuance of the system? I occupy a somewhat peculiar position. I am simply the Chief Clerk, and I have merely to carry out my orders. 6390.

- J. W. Tyrer, 6390. You have not been called upon for an opinion in the matter? No.
- 12 Sept., 1898. 6391. Do you believe in the tearing of the tickets? No.
6392. Were you consulted in regard to that system? No.
6393. Did Mr. Roberts introduce it, do you know? No, he did not.
6394. When you went back from the tearing of the tickets to the register, were you consulted? No.
6395. If I understand you correctly, if you had been consulted when the tearing system had been introduced you would have been opposed to it? I should.
6396. And if you had been consulted when the proposition to return to the registers was made, would you have been in favour of it? Yes, as between that and the tearing system.
6397. Do the conductors come much in contact with you? Pretty frequently.
6398. Are you well able to judge of their character and efficiency as conductors and so forth? Fairly well.
6399. Are there many men with whom you are dissatisfied? Yes, a fair number.
6400. And in what respect are you dissatisfied with them? Some of them are slovenly, and have not sufficient polish for the position they hold, and some of them I should not like to trust.
6401. Will you tell us of those you would not like to trust? You place me in rather an awkward position. As you are fully aware our men have not to pass any examination by me or by any other officer; we simply have instructions to put on a certain man, and he is put on if there is a vacancy, irrespective of whether he is fit for the position or not. If a man does wrong he is punished. The next thing is, that he goes to half-a-dozen Members of Parliament, and what we have done is to be practically undone. Under these circumstances what is the good of my saying anything about the matter.
6402. You must not argue the matter in that way; you are here to answer questions. I have asked you a question, and I think it is a perfectly fair one? I should prefer to run through the names of the men first, and to give you the information afterwards.
6403. Will you give us further information then as to these men you consider unreliable? Yes. Will you excuse me pressing the point—that the information I give you has to be considered private,
6404. Not altogether private? You see the position in which I am placed. I have to get my living. You know how these things are done. I do not wish to imperil my position. If I were an independent man it would be a very different thing altogether.
6405. I cannot see that. I think it is your bounden duty to give the names. Mind you should have grounds for what you say? I have no proof; that is why the question is difficult to answer; it is only my impression of the men, and if I were in business myself there are certain men whom I would not employ.
6406. Exactly. We should like to have the names of the men whom, if you were in charge of the concern yourself, you would not employ? I said if I were in business myself.
6407. If the concern were yours, then, give us the names of the men whose services you would dispense with? I will give you the information later on. The question is, to my mind, a very important one, and it is one which may affect me. I should prefer, therefore, to be very careful in giving you an answer.
6408. I do not see how it can affect you. It is exceedingly desirable, in view of this Commission having been appointed, that you should give us all the information you can? If I had absolute proof in any case that I might give to you I should be perfectly safe, because I could say, "It is known that so and so did such and such a thing." The cases to which I refer are not those in which I have any proof of that kind. I have formed suspicions only from my own observation, consequently I am not in a position to give you the definite information which I should imagine you would require.
6409. Would your suspicions be sufficient for you to act upon if the service belonged to yourself? Yes, because I should then be free and independent; I should be my own master.
6410. *Mr. Brock.*] What is your opinion of Greeley? I certainly would not employ him. I have put almost as much in writing in connection with the case in which the tickets were found in the pocket.
6411. What is your opinion of that case? I think the tickets were planted there.
6412. Were you disinclined to credit the story that the coat had been borrowed for seven weeks? I do not discredit that, but the statements made to me were of such a nature that I do not think Greeley was telling the truth, and his great reluctance to give his version to me in writing strengthened that impression. I had to tell him that I would give him half an hour, and if he did not do so I would suspend him.
6413. Why did he say anything about the tickets at all—he volunteered the information? No; it was dragged out of him. He makes a mistake; he goes to a public-house while on duty, and takes with him the driver; then he tells one of the special conductors, Moran, that he had been to have this drink, and that he put his hand in his pocket. It was a hot day for a man to be wearing an overcoat at 10 o'clock in the morning. He puts his hand into his pocket and pulls out the tram-tickets.
6414. Why did he pull them out? He did it unthinkingly. He pulled out the tickets, and the driver drew his attention to them, and said, "What have you got in your hand?"
6415. I doubt if I understand your mode of reasoning on this question: you doubt the man's statement about the overcoat? It is strange that he should have had it on on such a warm day.
6416. Do you consider the mode of finding the tickets was invented;—do you think that the whole story as to how they were found was a yarn? Not as to how they were found—there was a witness.
6417. Then it does not seem to me that the overcoat matters very much;—it was not necessary for him to wear an overcoat in order to carry the tickets? No.
6418. At any rate you doubt Greeley's statement in connection with these tickets? Yes.
6419. You think he stole the tickets himself? I do not think the man he charges with putting the tickets there did so.
6420. What is your opinion of Tunks? I think he is a decent fellow.
6421. You do not think he would have done such a thing? I do not think so.
6422. That makes you suspect Greeley? That, combined with the fact that he seemed reluctant to put his statement in writing. As soon as the thing was reported to me verbally I made Moran put his statement in writing, and then I sent for Greeley, and I eventually obtained his statement in writing; then I had the driver, and put the matter privately, without registering it, before Mr. Vernon. Of course we could prove nothing.

6423. *President.*] The way you have spoken about Greeley leads me to suggest an amèndment in the question, which I put to you originally. We want you to mention only such men as you have some cause for suspecting; you had no hesitation in saying what you said about Greeley? No; because I had the case in writing. J. W. Tyrel.
12 Sept., 1888.

6424. In asking you to let us know what men you suspect, I mean you to mention only such men as, from their habits, or something in connection with them, you know that you have good ground for suspecting; I did not mean you to name men under circumstances of such a doubtful character as would possibly jeopardise your position? I understand that.

6425. Now, I will ask you a question about another conductor who is either dishonest or a very ill-used man;—what do you know of Boyd? I know nothing about him.

6426. Do you know him? I do.

6427. Do you know his private character? I do not know his private character. He comes under my observation only when on duty.

6428. What do you know of his official character? I think he is a man who does his work.

6429. Do you think he is perfectly honest? I have no reason to think otherwise.

6430. What do you think of Archibald Fraser? I do not think much of him. I never did.

6431. You never heard of a report made by Inspector Bremner in reference to Boyd some months ago collecting his tickets without tearing them or ringing his bell? No; we have had no charge of that kind. If such were the case why did not Inspector Bremner report it at once.

6432. We do not wish you to give information which will injure yourself, but we should like to know the names of the men you suspect? I will give you any information in my power which I believe to be reliable.

6433. In regard to some of the men whom you suspect, but in connection with whom you have no tangible ground for suspicion, it might be well for you to give the Commission the names in confidence, so that they may be guided in coming to conclusions; we should not act purely upon your report, but it might, with other circumstances, lead us to a conclusion in regard to certain men? Yes; I understand that, and will give you the information.

Albert Frederick Primrose called in, sworn, and examined:—

6434. *President.*] What is your position in the Department? I am in charge of the receiving office.

6435. How long have you been with the Department? I have been in the Tramway Office seven or eight years. A. F.
Primrose.
12 Sept., 1888.

6436. Do you remember some months ago a conductor named Keen coming in with a story about the possibility of manipulating the registers? I do.

6437. What did he say? Mr. Roberts came down and asked me to get him a pair of registers and a piece of wire. I took them up to Mr. Roberts's room. Keen was there. I heard him say that the conductors had been manipulating the registers by inserting a piece of wire. Mr. Roberts gave him the register and a piece of wire and asked him to do it. He put the piece of wire in, but he could not make the registers work.

6438. Did anyone else try it? I saw Mr. Roberts try it.

6439. Did you try it? I believe I did, and I could not make it work.

6440. When you had all failed to make it work, what was the next step taken? Mr. Roberts asked me to leave the register with him, and said he would see Lambert. That is all I know about it.

6441. Was Lambert sent for? That I cannot say. I heard Mr. Roberts say he would send for him, and I am under the impression that he did send.

6442. But you did not see Lambert with him? I do not remember seeing Lambert examining the bells with him—not that day.

6443. Have you ever seen him examining any registers with Mr. Roberts at Mr. Roberts's request? No, I do not think so; not that I remember.

6444. Did not Mr. Roberts tell you subsequently that Lambert had seen the registers you had taken up, and had made a certain statement with regard to them? I heard Mr. Roberts say that Lambert had said that they were all right; then the matter dropped, as far as I was concerned. After Mr. Roberts had said that I thought there was nothing in it.

6445. That is all you know about the matter? I never heard anything more about it until I saw something about the frauds in the papers.

6446. You are quite sure that you did not either go for Lambert, or that you did not see him with Mr. Roberts on that occasion? I am certain that I never went for him, and I am certain that Mr. Roberts said that he would see Lambert.

6447. But as far as you know, did he see him? I only know from what he told me afterwards.

6448. Therefore you cannot say that a piece of wire was exhibited to Lambert, and that he was asked whether this thing could be done or not? No.

William Lambert recalled and further examined:—

6449. *President.*] We have sent for you again in reference to a little discrepancy which exists between your evidence and that of Mr. Roberts's with regard to the possibility of the manipulation of the registers with a pin or a piece of wire. Mr. Roberts positively asserts that on the occasion of a conductor named Keen bringing this thing under his notice—that is, that it was possible under certain circumstances to manipulate the register by the insertion of a piece of wire at the foot—he sent for you, and showed you the register with which he had been endeavouring to do it. He also states that he showed you a piece of wire, and that you reported that it was impossible to do the thing in the way suggested? The only time he mentioned anything to me about a piece of wire was in connection with the four pair of registers. W. Lambert.
12 Sept., 1888.

6450. That was after the disclosures were made? Exactly.

6451. I asked him distinctly upon that point, and he said that it was five months ago when Keen came to him with the statement that the registers could be manipulated. Now, I may tell you that we traced you beyond doubt on that occasion to Mr. Roberts. You were seen going into his office and you were seen

W. Lambert.
12 Sept., 1888.

seen coming out again. His statement is that he introduced the subject to you, that is, as to the possibility of doing the thing with a piece of wire. This is a very important point indeed. Mr. Roberts was very positive about it, and he states in effect that understanding that you said that it could not be done with a piece of wire, he told Moran about the impossibility of the thing, the result being that Moran discontinued any effort to trace that kind of fraud. We want you to remember very particularly what occurred at this interview with Mr. Roberts on the subject of the registers? The first time Mr. Roberts asked me any question with reference to a pair of registers and a piece of wire was when he handed me the four pairs. As I told you before, I did not have any interview with Mr. Roberts with reference to any register and a piece of wire afterwards. I think you asked me if I had had any interview with Mr. Roberts as to a pair of registers. I had almost forgotten it, but it came to my recollection that about the time you mention he did call me into his room. I will not be sure that he did not send for me. I am under the impression that he did do so.

6451½. That is five months ago? It may be. I believe he sent for me because I had my screw-driver with me when I went into his office. He showed me a pair of registers, and I examined them. He said, "Are they in good order?" I said, "Yes." He said nothing about a pin, in fact he said nothing about the circumstances under which they were being examined. That is all that took place. He said, "Are they reliable," and I said, "Yes."

6452. There would be no force or reason in such a communication as that, because the registers submitted to you were only an ordinary pair of registers handed to him by Mr. Primrose with which to make a certain experiment. What object could he have had in asking you simply if the registers were in good order? I cannot say. I know nothing of the circumstances. I did not know where the registers came from.

6453. That was the only question put to you. You were asked to examine the registers and see if they were in good order? That is the only question, I am on my oath, and I say that no word whatever was said in reference to the possibility of the registers being manipulated in the way they apparently had been. There was no question as to a pin or a piece of wire. I have no object in telling you anything but the truth, because it could not affect me in any way.

6454. It is difficult for us to understand that you had this interview with Mr. Roberts which you yourself admit, and to which we are able to trace you, and that the whole conversation should be as to whether that pair of registers was in order or not. We know from what others have told us that there was no question as to those registers being in order or not. The question was whether they could be manipulated with a pin or a piece of wire? I was never asked a question of that kind. The piece of wire was never mentioned to me prior to my receipt of the four pair of registers which I have already mentioned. I know nothing of the circumstances under which this particular pair of registers was submitted to me for examination. I know that I opened them, and that Mr. Roberts said, "Are they in good order? Are they reliable?" I said "Yes," and he said "That is all I want to know."

6455. I cannot conceive what object Mr. Roberts could have had in asking you such a question. After Keen's statement he went over to Mr. Vernon, and concluded to send all the way out to Newtown for you, and you would have us believe that he did so merely to ask you a question which he could have answered perfectly well himself? As far as the manipulation of the registers is concerned I have known of it since I undertook the job of repairing. Anyone who knows anything about mechanism will know that it is so.

6456. And you say you told Mr. Roberts this? Yes.

6457. How long ago is that? At the end of November, 1885. Three years ago. Mr. Tyrer, Mr. Primrose, and I think Mr. Knox were all present.

6458. I think you have already told us that you have a good opinion of those registers? I have.

6459. Is it not a fact that Mr. Oakes and others, officers of the Department, have had a very bad opinion of them? I am not aware of it. I always understood that all except Mr. Primrose thought that they were the best checks we could have.

6460. Is it not true that Mr. Oakes from the first hour has always had a very poor opinion of them, that he often combatted the matter with you; that you have had frequent arguments on the subject; and that you have praised the registers up, while he has run them down? No; I do not remember his arguing against the registers at all.

6461. You are sure that he has never mentioned the subject to you? We have often talked the subject over.

6462. According to Mr. Oakes, you have often had arguments on the subject, in which you have been for the registers and he has been against them? I don't remember his being against them in that way. I know that Mr. Primrose was always against them.

6463. Bearing in mind that Mr. Oakes is bred under Mr. Primrose, as it were, is it not possible that he may have had the same idea? I hardly think that Mr. Primrose and Mr. Oakes would have the same opportunity of judging of the general usefulness of the registers as one in my position would have.

6464. That is not the point. We are rather seeking to get from you a confirmation of the statement that Oakes has repeatedly argued with you against the registers, while you have defended them? I do not remember it. I have heard conversations in which Mr. Oakes has spoken in such a way as would lead me to suppose that he was rather favourable to them. I think I have heard him say that he could not see anything as a substitute for them.

6465. A man may easily think badly of a thing, and at the same time shrug his shoulders and say, "I cannot see any help for it"? I cannot say that I recollect Mr. Oakes arguing against them, but I know that Mr. Primrose did.

6466. But you are absolutely certain as to what passed between yourself and Mr. Roberts, and that he never before the disclosures mentioned to you the possibility of manipulating the registers with a pin or a piece of wire? No; never prior to my taking the four pairs.

THURSDAY, 13 SEPTEMBER, 1888.

Present:—

A. RICHARDSON, Esq., PRESIDENT.

F. A. BROCK, Esq., J.P.

William Hannam recalled and further examined:—

6467. *President.*] We have recalled you because we are not altogether satisfied, from what has since come under our notice, that you gave us fully all that passed between yourself and Musgrave;—when you were here before you told us of certain overtures which Musgrave made to you, and of a meeting at Waverley which had been arranged? Yes, I remember that. W. Hannam.
13 Sept., 1888.
6468. But we think that you could give us further details if you would only do so? I told you all the particulars. Of course I could not recollect the exact words Musgrave made use of. It is seven or eight months ago, and I did not take much notice of the man at the time.
6469. Is it not a fact that you have been or are on very intimate terms with Musgrave? No, it is not.
6470. Have you not repeatedly been in close conversation with him? No.
6471. Never? Well on the two occasions I mentioned—those were the only times.
6472. You were not in the habit of frequently meeting Musgrave outside the work? No.
6473. What is this that we hear about your taking a woman on to your car out to Forest Lodge some time ago; we understand that you took her up in the street, and that you invited her to ride with you? I don't know anything about it further than that this person came on to the car, and paid her fare like an ordinary passenger. She went to Glebe Point. I gave Mr. Roberts the particulars about it when he asked me.
6474. And are you now giving us the particulars? I am not telling you the exact details. All I know is that this young person went out to Glebe Point with me.
6475. Who was she? She is a servant girl in the city.
6476. Do you know her? I don't know her intimately.
6477. Still you knew something of her? Yes.
6478. Did you invite her to get on to the tram? I didn't invite her exactly. I put up my hand.
6479. Was she intending to ride with you before you put up your hand? I could not say.
6480. But when you did that she came on to the tram? Yes; and went out to Glebe Point with me.
6481. And do you mean to tell us that she paid her fare out there? I do.
6482. Although you had to waive her on to the tram? Yes.
6483. What happened when you went to Glebe Point? When we got there we had about 8 minutes. I went on to the side of the road about 50 yards from the tram, and we stopped there talking until a couple of minutes of the time to go. She then got up on to the tram again, and came back to Sydney.
6484. And do you mean to sit there and tell us that she paid her fare both out and in? Yes, I do.
6485. You expect us to believe it? You can please yourselves about that.
6486. You must admit yourself that it is rather an extraordinary story. This woman had no business at Glebe Point, except to take a pleasure-ride with you. According to your own showing, on your arrival at Glebe Point she merely had a chat with you, and then came back again to Sydney; that is, she paid 4d. simply for the pleasure of this few minutes chat with you at Glebe Point? Yes. Do you think she would sit in the tram with other passengers and not pay her fare?
6487. You are asking us questions now? Well, it is rather an insult to offer to a man to say that a young person would get on to his tram and not pay her fare.
6488. You regard that suggestion in the light of an insult? Yes.
6489. Did you allow the general public travelling on your tram to see you waive this young girl on to it? I don't know whether they saw me or not. I didn't make any secret about putting up my hand.
6490. Since you speak about insult, do you think that this was a respectable and reputable thing for you to do—to call a young woman out of a street in Sydney on to your tram, and to take her out with you on your car to Glebe Point, and bring her back again to Sydney? I don't see any harm. I merely put up my hand, that is all I did.
6491. On the journey out and on the journey in where was she sitting? Inside the car.
6492. Did you have any conversation with her during either of the journeys? I don't think so; I may have spoken; I could not say for certain that we had no conversation; perhaps I spoke to her as I passed on, that is all.
6493. Does it stand to reason that a young woman would go out in your tram with you in this way, paying her fare both ways, and having no conversation with you on the journey, merely for the sake of 5 or 8 minutes chat with you at Glebe Point? Yes, I think so. She is a young person I have known for a few months. We had nothing very particular to talk about.
6494. What did you talk about? Not anything connected with the tramways.
6495. I don't suppose you did; but what did you talk about. It must have been something very important for a young woman to waste her time, and to pay 4d. out of her own pocket? I don't recollect what we talked about. It was not very much anyhow.
6496. But you state positively that all you did at Glebe Point was to have this conversation with her? That was all.
6497. Nothing further was done? Nothing further.
6498. Did you not tell Mr. Roberts that she did not pay her fare? I did not.
6499. You are sure of that? I am positive about it.
6500. Where was she when you called her on to your tram? At Market-street.
6501. You are sure it was not at Belmore Park? Positive.
6502. What was she doing there on the footpath? I could not tell you.
6503. Was she standing or walking? She was standing.
6504. She was not going to Glebe Point, I imagine? I could not say. I don't suppose she was.
6505. Is this the first and only time this young woman has ridden on your tram? I think she has done so once or twice before.
6506. In the same way—just taken a trip out and home? I could not say that.

- W. Hannam. 6507. I don't mean riding in the tram in the regular way on these last occasions, but taking a trip as on this occasion just for the sake of a little conversation with you? I think she has done so once before.
 13 Sept., 1888. 6508. On the same line? No.
 6509. You are not permanently on any line? No. I am an assistant conductor.
 6510. You are a married man? Yes.
 6511. Have you not had some little trouble at home about these trips? None whatever.
 6512. Have they not reached your wife's ears in any way? No.
 6513. You don't think this was a very regular proceeding on your part? It may have been irregular as regards my conduct; but not as regards my calling. I admit that I did wrong as regards my own affairs.
 6514. Yet when the suggestion was made to you just now you regarded it in the light of an insult from the Commission? That was about not paying the fare. I would not allow my own wife to travel without paying her fare, to say nothing of anyone else.
 6515. But you told Mr. Roberts I understand that this young woman did not pay her fare? I swear I did nothing of the kind.
 6516. And you are still quite sure that she did pay her fare? I am positive.
 6517. Two pence on each occasion? Two pence on each occasion.
 6518. Did you refund the money to her out of your own purse? I did not.
 6519. She was at the cost of the trip? She was.
 6520. Did you give her anything at all? I did not.
 6521. Have you ever given her any money? I have not.
 6522. Why did you hesitate in answering that question? I had to think about it.
 6523. Are you positive that you have never done so? I am positive. I never gave her sixpence.
 6524. Do I understand you to distinctly deny that neither on nor off duty you have had any frequent or close conversations with Musgrave? Never. I don't think I have ever spoken to Musgrave twice off the job since I have been here.
 6525. If others have told us as positively that you have been seen doing so, they are saying that which is not true? They are telling a falsehood. I may have been once in his company off the trams off duty. I don't quite recollect, but I have never hardly spoken to him off the job. He spoke to me twice on the cars when we were working.
 6526. But only once in your life off duty? Yes.
 6527. What do you do with yourself at night-time? I stop at home.
 6528. You don't frequent any of these betting-rooms? No; I never go out once I get home.
 6529. Or do any gambling or anything of that kind? No; I never gamble.
 6530. Have you never had meetings with this young woman at night? No.
 6531. You must admit that it is a most suspicious circumstance, whether you are inclined to feel insulted or not, your riding with her in the car in this way. You must admit yourself as a man of common sense that the case looks very bad? I don't see it. A young lady gets up on to my car and pays her fare. I cannot see any harm in that.
 6532. Does it not look very suspicious indeed that a young woman should go out to Glebe Point simply for the purpose of having a few minutes conversation with you? Well she did do so.
 6533. I suppose she was disengaged at the time, was she? Yes.
 6534. Is she in a situation? She was in a situation. I suppose she had the night out.
 6535. At what time did this ride take place? Somewhere about 8 o'clock in the evening. I could not be certain within half-an-hour.
 6536. You left Sydney at 8 o'clock? About that.
 6537. Therefore you were at Glebe Point in the dark? Yes.
 6538. But still we are to understand distinctly that during those 8 minutes at Glebe Point nothing further passed between you and this young woman than a conversation on the footpath? Nothing further. I can bring both the driver and the fireman to prove that I was not further away from the tram than I have stated.
 6539. You are quite sure there is no further information you can give us in connection with these frauds? I have told you all I know about them. Musgrave is the only man who ever talked to me about them, and I have told you the substance of what passed between us.

Walter Wigg recalled, and further examined:—

- Walter Wigg. 6540. *President.*] We have sent for you because we believe you are able to give us some information with regard to a rather suspicious circumstance which occurred in connection with conductor Hannam? Yes.
 13 Sept., 1888. 6541. The circumstance referred to is that of a young woman riding with him to and from Glebe Point some time ago? Yes, but I cannot say that she went to Glebe Point. I know that she got on to a Glebe Point tram. I got off at Liverpool-street. It was one Saturday evening. I am not sure about the date, and I think it was between 7 and 8 o'clock. I was standing at the corner of Market-street. I saw a young woman waiting there. She was leaning against a verandah post. I saw the Glebe Point tram with conductor Hannam on it in charge come along. He beckoned to the young woman and she went over and got into the car. I thought there was something suspicious in the circumstance and I went over and got on to the front of the car. She was in the second compartment. I stood and looked through the glass and saw that Hannam collected the other fares and passed this woman by.
 6542. *Mr. Brock.*] You are positive about that? Yes.
 6543. *President.*] What did you do then? I rode with him as far as Liverpool-street and there I got off.
 6544. You did not speak to Hannam? No. I told Mr. Roberts of the circumstance the next morning. I did not report it in writing because I had other suspicions in reference to Hannam at the time, and I did not want to put anything in writing just then.
 6545. What other suspicions had you? I thought that he was one of those who were likely to be mixed up in these frauds.
 6546. What made you think so? Well I had seen him several times knocking about the worse for liquor.
 6547. Off duty? Yes.

6548. Anything else? No. There was nothing else except the appearance of the man. I don't care about his appearance very much. Walter Wigg.
13 Sept., 1888.
6549. But you don't judge by appearances? Sometimes.
6550. Have you known him to be out at night often or anything of that sort? No. I have never come across him.
6551. Where have you seen him the worse for liquor? Once at Newtown, on the Newtown Bridge.
6552. At what time was that? It was in the day-time.
6553. Was he in his uniform? No; he was not.
6554. He was off duty? Yes.
6555. It was not his shift? No.
6556. You have never seen him intoxicated on duty? I can't say that I have.
6557. If you had you would at once have reported him? Certainly.
6558. Have you ever seen Hannam in conversation with Musgrave? No. I can't say that I have.
6559. Or with Cook? I have seen Cook on his tram. That was one of the reasons I thought it would be better for me not to report this other matter.
6560. You have nothing very tangible against Hannam causing you to suspect him? No. I heard that Musgrave had made some overtures to him, and I thought to myself at the time that if that was true it was most likely that he fell in with them.
6561. Is he a man who is reported to be short of cash or anything of that kind? Do you mean in reference to his register?
6562. I mean privately? I don't know.
6563. I ask you these questions because it seems to me that in order to have suspicions one must have some ground for them, and if a man is a married man and keeps to his home at night and so on, it is difficult to entertain any strong suspicions regarding him? Yes; it is. I don't know whether he keeps at home.
6564. You have only seen him this once drunk or the worse for liquor? Now, I think of it, I saw him so a few nights ago.
6565. Was he on duty then? No; he was going off duty. I met him as he was going home. He had just gone off duty.
6566. What did you notice then? I thought that he was the worse for liquor.
6567. Might not his red complexion give you some idea of that kind without anything further? It might, certainly.
6568. Was he staggering? He was.
6569. Did you hear him speak? Yes, I did; and I thought that his voice was very thick.
6570. Is there anything material which you could give us in the way of evidence in connection with these frauds which has not been already elicited from Moran? I might mention one thing. I was under the impression that Moran knew about it, but he tells me that he did not. Just before Mr. Roberts went to Melbourne to the races, on the 1st of last March, he spoke to me in reference to getting a man to take a little shop somewhere on one of the tram routes, and to put all these men we suspected on to that route, and then to let this man become friendly with them without making any overtures to them, in order to see if they would make overtures to him. I brought forward a man I thought suitable for this purpose.
6571. Who was he? Charles Peck.
6572. Is he a straight man? Yes, as far as I know.
6573. What was the result of this? Mr. Roberts went away to Melbourne, and nothing more came of the matter.
6574. It fell through? Yes. Moran knows the man I recommended.
6575. Beyond this there is nothing more you can tell us? No.
6576. In connection with the frauds? No.
6577. You have worked pretty well with Moran throughout in connection with this matter? Yes.
6578. What sort of woman was it who got on to Hannam's tram? She was a disreputable looking character.
6579. You mean by that that you think she was a woman of the unfortunate class? Yes; I think so.
6580. What men do you suspect in connection with these frauds on anything like good grounds? Fraser, Ferrier, Musgrave, Connors, Hannam, and O'Donnell.
6581. We should like to know what reasons you have for suspecting O'Donnell and Connors? I have seen this man Cook on Connors' trams several times, and I know that Connors, before he came on to the trams, was arrested for assault and robbery.
6582. Do you know that for a fact? Well, I did not see him. I believe he was discharged; but I have heard from several different sources that he was arrested on that charge.
6583. Is he a man of known bad character? He has been drunk several times. I had to go myself once and take him off his tram.
6584. That is on record, I believe? Yes. His wife was always coming to the office complaining about his not giving her any money.
6585. What about O'Donnell. What reason have you for suspecting him? I saw him with Ferrier on the evening of the day when Ferrier was brought here to the Commissioner for Railways.
6586. After Ferrier had been here? Yes.
6587. Was he with him in such a way as would excite your suspicion? No; but it seemed to me that he was evidently wanting to know what had been going on.
6588. Were they conversing for any length of time? I saw them in King-street, and they went away together down the street. I did not follow them.
6589. They were evidently in company? Yes. Then after Robertson had been here I saw O'Donnell several times with him with the object, I suppose, of learning any news which might be going, although I do not wish to connect Robertson in any way with the matter.
6590. What is your opinion of Robertson? I think he is a decent man.
6591. You were at Crown-street when he left his duty once or twice? Yes.
6592. You saw him coming out with the gamblers on the first occasion? Yes.
6593. How comes it that you call him a decent man when he was in the company of these men coming out from the hotel? He came out at the same time that they did; but he may not have been in their company; he may have accidentally got mixed up with them.
- 6594.

- Walter Wigg. 6594. Do you think that Robertson's explanation, that he was merely going there to relieve nature, is a genuine one, or that he went there to have a look at these men—to have a chat with them and to look at them gambling? I do not know.
- 13 Sept., 1888. 6595. But you must have formed an opinion one way or the other? My opinion was that he went in to have a drink.
6596. But although that was your opinion you do not connect him in any way with these frauds? No.
6597. Is he a married man? I believe he is, but I am not quite sure.
6598. You have never heard or seen anything against him? Nothing beyond this matter.
6599. Have you ever heard that he left his points before? No.
6600. Or that he was ever drunk? No.
6601. Has he ever been reported for anything? Not that I am aware of. I think not. I think he was put off the cars because he got too heavy. He wished to be put off so that he might not have so much running about. He got too heavy to run up and down stairs. He was a conductor until he went to Crown-street.
6602. *Mr. Brock.*] You think all the other men, except those you have mentioned, are good men—that is, you would keep them in their present positions? I am rather suspicious about Ambrose Scott.
6603. Why? He is always about racecourses, betting, and so on.
6604. *President.*] You have heard the story about the severance of his connection with the railways? Yes, I was told that years ago.
6605. Perhaps it was that which made you suspicious? Yes, a station-master at Ashfield told me that he could not understand how Scott afterwards got on the trams.
6606. Who was the station-master then? Mr. Bissett, I think.
6607. Did he tell you that the case against Scott at Ashfield was very clear. Did he lead you to infer that it was? What he told me was that Scott had said that he left the room to go to the closet, and during his absence some one purloined £5 or thereabouts of his cash. The station-master led me to believe that this was only a got up yarn of Scott's.
6608. Do you know conductor Keen? Yes.
6609. Do you think that he is an honest and well-meaning fellow? I have not a very good opinion of him. Two or three times he has been anxious to run with yarns about his mates.
6610. Have you any reason to believe that these yarns were not genuine? No, I have not.
6611. When you find a man so disposed in the Department you are not inclined to think well of him;—is that it? It is generally the case that they do it in order to find favour for themselves.
6612. Beyond the men you have mentioned, you have a good opinion of the tramway employees generally? Yes.
6613. There has been a great deal said, and perhaps even more insinuated, with regard to Mr. Colls in the office? Yes.
6614. And I think it is really due to Mr. Colls to endeavour to clear the matter up one way or the other. Have you any reason to believe that Colls was in collusion with Musgrave or Ferrier? No.
6615. What is the extent of what you have heard or seen with regard to Colls and his connection with Musgrave? I only know that he is a brother-in-law of Musgrave's, and that Musgrave lived with him for some time.
6616. But with regard to this information going out of the office, have you formed any opinion about that? It would be only natural for Colls if he accidentally saw anything relating to Musgrave to tell him to look out and be on his guard.
6617. Does it not occur to you that there could be no middle course in the matter—that there must be either connivance or exposure? Yes, certainly.
6618. Have you in your own mind any reason to believe that Mr. Colls knew that Musgrave was defrauding the Government? No, I have not any reason for thinking so.
6619. You have nothing at all to go upon except the relationship which you knew existed between Colls and Musgrave; and Colls says that he would no more shield Musgrave than any other man in the service? Well, I think it would be only natural that if, as a relation of Musgrave's, Colls saw any report relating to him he would say, "You had better look out."
6620. If you had a near relation who happened to be a scoundrel, what would be your action in regard to him under similar circumstances? I should kick him out of the house.
6621. You would shun him in every way—perhaps the more strongly from the fact of his being a relation? Yes.
6622. As I have said before, there has been a good deal of talk about information getting out of the office. In one particular case the police have put it strongly that the contents of a certain report from themselves got out of the office. As far as we have been able to see, that was a mare's nest, because the information given by the police did not reach the office until Ferrier's dismissal had taken place. Under these circumstances, do you think it is to be wondered at in any way that the information got abroad? No.
6623. There would be nothing in that matter to connect Colls? No. The policeman, I think, charged me with giving that information because I said something in this room which he did not like.
6624. What was that? It was something I said in reference to an informant of his.
6625. With reference to Dominic? Yes.
6626. What was it? Stove told me that he knew a man who applied for a license, and who was going to get the license, and then take tickets from Musgrave and sell them. Stove at first denied that here, and would not give the name.
6627. He did not deny having the information? He did at first. When I got outside the room he commenced to bully me because I divulged something he had said to me—as he thought—in confidence.
6628. *Mr. Brock.*] What is your opinion of Greeley? My first opinion of him was that if any one was selling tickets it was he. I said so to Mr. Vernon, but Greeley appeared to be so anxious to follow this thing up that I began to think he was genuine. With reference to the tickets in his pocket, I thought he would have said nothing about that unless the other man had seen them.
6629. *President.*] Do you still think that Greeley is genuine? Yes; I fancy he is now.
6630. Are you aware of this, that after he told Mr. Roberts that Dolan was the man who was treating with Siddons, he himself was seen in Siddons' several times at night? No.
6631. Were you aware of that? No.

Walter Wigg.

13 Sept., 1888.

6632. Are you aware that he has positively denied it? I heard that he had done so.
6633. Do you think that any decent man would lend himself almost unasked to this kind of detective business? I believe he was in the police at one time, and he may have gained his wish for it there.
6634. He admits that he was angling with Siddons over the matter? Yes; I think he received instructions to do so.
6635. From whom? From Mr. Roberts, I believe.
6636. If Greeley had been caught during these two or three months, when he was apparently doing the detective business, would you have believed one single syllable of this? No. Perhaps I ought to mention that I was sent to countermand an order which had been given to him in reference to making overtures.
6637. Do you think Mr. Roberts would be likely to give such an authority to a man like Greeley without letting you and Moran know of it? No, I don't think so. I know that at one time he was told to offer tickets or to sell them.
6638. Mr. Vernon, when he heard of it, disapproved of it, did he not? Yes.
6639. He did not approve of a conductor being allowed to simulate the part of a dishonest man? No; of course it would be compounding a felony. I know that Greeley had some instructions, and that I had to go and tell him not to carry them out. I distinctly remember going and telling Greeley to go no further in the matter. Luckily he had not seen Siddons.
6640. You remember when it was first reported to Mr. Roberts that the bells could be rigged by means of a pin or a bit of wire? Yes; I think it was about the end of February.
6641. Who first brought it under notice? Keen, I believe.
6642. Do you know what followed upon Keen coming to see Mr. Roberts with a story about the possibility of this thing being done? Mr. Roberts, I believe, submitted the bells to Lambert.
6643. How do you know that? He told me so.
6644. Did he tell you that he would do it, or that he had done it? I understood him to say that he had done it.
6645. Were you present when Keen went to the office and the registers and the wires were used? Yes; I think I was in the office; I am not sure.
6646. Do you remember Mr. Primrose fetching up a pair of registers and a piece of copper-wire? I saw him with a pair of registers, but I didn't see what was going on.
6647. You distinctly remember Keen making this statement? Yes.
6648. Do you remember following upon that that Lambert came to Mr. Roberts and saw him; do you know that of your own knowledge? Yes.
6649. How? The second time Moran got the bells to submit to driver Graham, and when he brought them back, he spoke to Mr. Roberts in reference to the matter, and Mr. Roberts said, "It is the same old story; it cannot be done; I have just shown it to Lambert."
6650. Was Lambert there at the time? I believe he was. I think he was inside the room then, but I didn't see him.
6651. What led you to believe that he was there? Something Mr. Roberts said, I don't exactly know what it was.
6652. From something Mr. Roberts said you inferred that Lambert was inside the office? Yes, in Mr. Primrose's room.
6653. And that he had just expressed the opinion that the thing could not be done? Yes; and afterwards, when I was speaking to Mr. Primrose, he said, "Do you believe it can be done?" I said, "They say it can be done, but I don't know how."
6654. Did he say anything about Lambert's expression of opinion? Yes; he said that Lambert had said that it could not be done.
6655. From whom did he derive that? From Lambert himself, I suppose.
6656. Or was it through the medium of Mr. Roberts? That I don't know.
6657. There is an important discrepancy between the evidence given by Mr. Roberts and that given by Lambert. Mr. Roberts states positively and distinctly that he consulted Lambert upon this particular point; Lambert says that Mr. Roberts merely submitted a pair of registers to him and said, "Lambert, are these registers in working order?" and that he never once submitted the matter to him in the form of a question as to whether the thing could be done with a piece of wire or not? It would be strange if Mr. Roberts did not do so, seeing that he had just previously been told that it could be done with a piece of wire; that would be the main point under consideration; why otherwise should he submit the registers to Lambert at all? I am sure he gave me to understand that Lambert had told him that it could not be done.
6658. What was the effect of this opinion, or, I should say, this supposed opinion of Lambert's on the operations of yourself and Moran? I thought that we had been had by a hoax or something of that sort.
6659. But what was the effect of the information;—did you in any way lose ground? Yes; certainly. We thought there was nothing in the report which we had heard.
6660. You did not follow the matter up? We did not follow it up any further then.
6661. You let it entirely fall to the ground until when? Sometime in June.
6662. From when? From March.
6663. From March until June you let the matter rest, under the impression that the information emanating from Graham was a mare's nest. You ceased from inquiries in that particular direction? Yes; I was away on my holidays for three weeks.
6664. Otherwise you let the matter entirely drop? Yes; until we saw this man Cook about again.
6665. Where was that? We saw him riding on the trams, and we saw Ferrier riding about a great deal. Ferrier, too, had always plenty of money, and our suspicions were aroused again.
6666. How did Greeley come into the matter again early in June? I saw Cook on his train, and I said to Moran, "There is Cook on the train now; you had better go and see Greeley and see what is up." Moran went on to the tram, and I waited for him.

Edwin Tatham called in, sworn, and examined:—

- E. Tatham. 6667. *Président.*] We understand that you have an invention for the improved collection of tram-fares which you desire to submit to our notice? Yes.
- 13 Sept., 1888. 6668. Will you as briefly as possible explain the operation of your invention? Yes. The checks are printed on a continuous roll or coil of paper by the patent machine, which also counts and records the number printed and winds an arbitrary number upon spools each bearing a distinguishing mark. The printer taking note of the numbers of the spools, and the number of checks thereon, hands them to the chief of the fare department, ready for insertion in the "registers." As required they are inserted in the register, and accompanying each register would be a return sheet, checked by the guard and a clerk, in which all particulars of its use would be summarised, and, if necessary, the number which the register indicated at any certain stage of its journey could easily be written up. If also deemed advisable the check tape or paper might be made of various colours, say a distinguishing colour for each route, or say a distinguishing colour for uncertain periods of time. The guard, being provided with his register, would collect cash-fares and detach checks from his roll to the value of the paid fare, and hand them to the passengers, these checks being cancelled and recorded as they leave the register. The fares for a full journey could thus be collected from the passengers upon entering, and he would at the sections only need to exhibit his checks. For dishonest persons or dishonest guards of course the usual regulations would be required, but in this system they would only be few.
6669. I must compliment you upon the brevity of your statement, but it seems to me that, in the final portion, you have if anything rather erred on the side of brevity; you tell us for instance that dishonest persons or dishonest guards would of course require the usual regulations, but that, under your system, these would be very few;—we should like you to enlarge upon that point? The instrument I have invented will give you two checks against the guard and one against the general public.
6670. What checks do you consider you have? In the first place the tickets are in the form of an endless tape, which is perforated by the machine which prints the tickets into sections. Each one of these sections comes out of a ticket indicator after registration. Then you have the same check that you have at the present time in the shape of a bell. It is impossible for the conductor to take out a ticket without ringing the bell. When the conductor gets to the end of a section he has instructions to move a lever, which will have the effect of loosening a figure and thus altering the obliteration line at the back of the ticket. In one of the machines the same section will alter the date and a letter at the back of the ticket. These alterations can be made at the end of a journey or at the end of a section.
6671. Do you find it necessary to have a printing machine in connection with your invention? Yes. I have had to invent a machine specially to print the tickets used in the ticket indicator. I have here a model of that machine. The tickets can of course be printed upon paper of any thickness you may deem necessary, and there is this further advantage that the machine prints the tickets and perforates them at the same time.
6672. How many tickets can you print in an hour? I will work the model and show you. You see I have printed 300 tickets in 23 seconds. Mr. Lyne, the late Minister for Works, was so satisfied with the machine that he gave the Government Printer instructions to have two machines made from this model.
6673. Are they in the Government Printing Office now? I do not know.
6674. Could you print enough tickets upon one spool to last for a week? Yes.
6675. I see that you transfer the tickets from a big spool to a smaller one? Yes; you can transfer them in any number you please, and the machine is so contrived that it will count the tickets as they are transferred.
6676. I suppose you would keep the tickets in certain numbers after they have been transferred to the small spool? Yes.
6677. You must remember that in this matter it would be necessary to keep the printing department separate from the traffic department; the printer would receive a requisition for so many spools of tickets, each containing the same number—the number I suppose which would be necessary to charge the indicators each time? Yes.
6678. The clerk, whose duty it would be to provide the conductors with tickets, would take these spools and fill up the empty indicators? Yes.
6679. Until the tickets are used by the conductor they do not become numbered? No.
6680. That is, they are not numbered until they are being used? No.
6681. Then they are numbered in that process for the first time? Yes.
6682. Then what check have you as between the printing-office and the traffic office. Suppose the traffic office requisitions for 50 spools of 1,000 each, or 50,000 tickets, what check is there if the tickets are not numbered? There is an indicator on the machine at the printing-office showing you how many are printed.
6683. But how does the traffic clerk know that he has received 50,000 tickets? Each hundred tickets on the spool is shown by a red mark.
6684. Do I understand that the clerk would have to unroll each spool to see if he had 1,000 tickets? No, he could see from the marks whether he had 900 or 1,000.
6685. You think he could take the numbers from the coloured indications of each 100? Yes.
6686. Suppose that this could be satisfactorily arranged, remembering that there would probably be some man intervening between the traffic clerk who acknowledged the tickets from the printer, and the traffic clerk who supplied the indicators;—what would be the next step. Would the clerk who handed the tickets to the conductor be in a position to swear that there were 1,000 tickets on each spool? Yes.
6687. You must remember that if we are to prevent fraud there must be no guesswork about the matter? I quite understand that, but you can make quite sure of the number. Besides that, I do not think it matters whether the conductor has 1,000 tickets or not. He issues a certain number, which are indicated by his machine, and he must account for the number he has issued. He will have to account for the number shown by his register, not for the number taken off the spool.
6688. Suppose a conductor took 100 tickets off a spool of 1,000 and registered away until he got to 900, going then to the office and saying, "I never got 1,000 on that spool. You must give me another 100"? He could not use the 100 tickets he had taken, because his bell must ring every time he issues a ticket, and if the bell did not ring the passengers would know that he was not issuing his tickets properly. Then again, he could not take 100 tickets out of the indicator without opening the instrument, and I think it could be closed up in such a way as to render it difficult for him to do so.

6689. I notice that the bell has not a loud ring. Do you think it would be heard by the passengers? I E. Tatham. think I could improve the bell if you do not think it sufficiently loud.

6690. I think it rings too quickly. If the tickets were withdrawn rapidly it would not show clearly enough the number of tickets abstracted? I think that could be managed. Of course the guard must be instructed when he arrives at the end of a section to shift the obliteration mark, and it can then be seen by the indicator how many tickets have been issued on that section. The passengers must not throw away their tickets until they reach the end of that section, or they will have to pay again. 13 Sept., 1888.

6691. I observe that the obliteration mark on the tickets is very slight, and that the number obliterated is very small. Do you think a conductor would be able to see standing on one side of a car that a passenger sitting on the other side held in his hand a ticket with a number proper to the section obliterated? With tickets of the size now on the spool, it could not be seen at a distance, but, at the same time, you must remember, that the conductor going round the car would have some knowledge of the passengers who had paid their fares. If he had any doubt in regard to a particular passenger he would ask that person to show him his ticket, and he would at once see whether it was the ticket proper to the section.

6692. But don't you think that if the cars were in any way full the conductor would not have the knowledge enabling him to exercise this check? I think it would be easy, under ordinary circumstances.

6693. How many tickets would each indicator hold? That depends upon the thickness of the tickets, but it could be changed at the end of every trip if you thought fit.

6694. Having regard to the thickness of the tram-tickets now used, do you think you would be able to provide a register which would carry enough for a round journey, say 500? Yes; and I do not think that the instrument provided would be much bigger than the present registers.

6695. Now we come to the conclusion of the journey. The man hands in his indicator, and receives another in lieu of it. Supposing he has been running on a light line, such as Forest Lodge or Glebe Point, where the indicator would last for more than one double journey, the clerk would see that there were perhaps 300 tickets left, and he would say to himself, "Those will do for another round trip." He would give the man back the same register, after having dotted down the reading. If, however, the register was exhausted, or nearly so, the man would have another register issued to him? Yes; there would be no difficulty in arranging for the degrees of traffic on the different lines.

6696. Well, the conductor says, "Here is my cash;" the clerk counts it. What does he find? He finds that it agrees with the number on the indicator.

6697. If the conductor hands in 6d. or 3d. short, what does the clerk say to him? He tells him that he is short of cash.

6698. Can he say to him, without any doubt, "You must give me another 6d., and the sooner the better." The conductor, under those circumstances, could not say, "Oh, this register does not show the proper number." Could the clerk call upon the conductor to make up the amount, knowing beyond doubt that, if short, the conductor had lost the money, or that he had given some wrong change? Yes, the clerk could do that without any hesitation. The instrument is absolutely certain in its operation.

6699. Do you urge that it is so accurate that a conductor deficient in this way several times could be dismissed? Yes.

6700. Would there be no difficulty in issuing the tickets from the register? In order that the conductor might be ready he should have a certain number let out of the instrument. He could then give them off the moment they were required.

6701. But in this way a conductor will be almost sure to arrive at the end of a journey with a number of tickets registered, but not issued. Suppose he trades on this by taking several fares just at the end of his journey, tearing the tickets off, but not issuing them, pocketing the cash, and producing the tickets as some he has drawn out without being called on to issue them? Of course that might happen, but that would tell against any machine.

6702. I think it would be unwise to encourage the conductor to draw any tickets from the machine until on the point of issuing them; moreover, if he did so, the passengers would not have the check afforded by the ringing of the bell? Yes; that is so.

6703. Take a tram going to the cricket ground; the conductor has not been able to collect the whole of his fares, and a number of people get off there and say, "Oh hang the tickets, what is the fare," and then go away giving the conductor cash, and receiving no tickets? The conductor has no business to postpone the collection of the fares until so late a period of his journey. A number of passengers under the circumstances you name would leave the conductor altogether, and that might happen under the present system.

6704. Might not a guard pick up some of the tickets belonging to the previous section, and issue them fraudulently on the subsequent section if he were allowed to draw tickets from the indicator, before he was on the point of issuing them? I do not think he would do that, because the passengers might compare their tickets, and would at once detect that one ticket had one number obliterated, while another ticket had another number obliterated. Besides that I would employ an inspector to watch the men.

6705. In such a case as you suppose might not the conductor say to the man who held the ticket, which he had fraudulently issued, "Here you have a ticket belonging to the previous section. You have not paid for this section at all." Under those circumstances some passengers might pay again? That is not very likely to happen.

6706. You referred in your opening remarks to some regulations which you seem to think it would be desirable to have? I think it would be necessary to promulgate regulations imposing penalties on the guard who tendered a passenger a check not detached from his register in the sight of that passenger. Upon any person who exhibited as a receipt for his fare any check not obtained from the guard of the tram on the same journey on which it is so exhibited; upon any person who entered a tram-car with any undestroyed tram-checks in his possession; upon any person who upon leaving a tram-car on demand of any officer of the Department, does not exhibit and give up genuine checks of the value of the journey he has just made, upon any person who barter, sells, gives, presents, buys, purchases, or accepts any undestroyed tram-checks from any other person.

WEDNESDAY, 19 SEPTEMBER, 1888.

Present:—

A. RICHARDSON, Esq., PRESIDENT:

F. A. BROCK, Esq., J.P.

Albert Frederick Primrose called in and further examined:—

A. F.
Primrose.
19 Sept., 1888.

6707. *President.*] When we sent for you the other day we did so merely to ask you a question or two bearing upon the evidence given by others with regard to the manipulation of the registers. We think it is desirable to ask you a few more general questions relating to your position in the Department. What is your position? I am in charge of the receiving-office. When the registers were first introduced I came down with them from the audit office.
6708. You were previously in the audit office, then? Yes.
6709. You came down with the registers, to do what? To read them, and to furnish the returns.
6710. Describe the process of reading? It is simply this: When a conductor brings in his returns the register is read, and the return is placed to his account.
6711. What do you mean by account? Do you mean a book, a sort of ledger, with a heading for each man, or a heading for each line? A heading for each man and each line. The Waverley line, for instance, and the Waverley men are in one place, and the Coogee line and Coogee men in another place.
6712. What do you do with the men who are transferred a good deal from one line to another. Suppose, for instance, a man is on the Waverley line in the morning, and on the Leichhardt line in the afternoon, do you enter his return under two headings? That would be an assistant conductor. We should ask him where he was running, and if he said that he had made so many trips to Leichhardt, and so many trips to Waverley, we should have to apportion the return accordingly.
6713. How would you apportion it? The conductor would be asked how much he thought he had taken.
6714. You read the register only once a day? The register is not read every trip, but the bags are emptied every trip. We continue to read the registers once a day.
6715. Then, when a conductor gives in his register at the end of the day, if he is not a fixed conductor you ask him how much he thinks he has made on the different lines, and you apportion the return between those lines, is that it? Yes.
6716. We should like to know by what process you apportion the earnings? The conductor would tell us what he thought he had taken.
6717. Let me give you an illustration: Suppose a conductor has made two runs to Waverley to and fro in the morning, and that he has made in the afternoon two or three runs to Forest Lodge and back, by what process do you arrive at the earnings of the Waverley line and of the Forest Lodge line, respectively? We go by what the conductor tells us.
6718. What could the conductor tell you? He would have some idea of how many tickets he had taken on each line.
6719. Although his bag had been emptied after each trip during the day, and he had not examined his register, you think he would be able to tell you how many tickets he had taken for the different trips? Yes.
6720. Is that the only way of arriving at a knowledge of what is earned on the different lines? Yes, I think so, under those circumstances.
6721. Do you consider it a satisfactory way? Of course if the men were put on certain lines and finished on those lines it would be better, but they are sent about from line to line.
6722. Are we to understand that this is exceptional, and that the majority of men would be able to say, "This is my register; it represents takings on the Waverley, the Forest Lodge, or the Leichhardt line," as the case may be. Would the majority of the registers represent the takings on one line? Yes.
6723. It would be an exceptional case in which a man would say, "Some of this belongs to Leichhardt, some to Forest Lodge, and some to Glebe Point?" Yes. As a rule, if a man is put on the Leichhardt line we get the whole of his returns from that line. Very few returns are mixed up in the way you suggest.
6724. Therefore they are not material? No, and it sometimes happens that a conductor, after his finish at night on the Leichhardt line, may be put on to the Waverley line, in which case he would start upon the Waverley line with a clear bag.
6725. Is there any reason why the registers should not be read at the end of every round trip? That could be done of course; the bags are emptied.
6726. Where are they emptied? At the office.
6727. Where are the registers read? They are read by Mr. Oakes down in the yard, as an independent check.
6728. As the bags are taken to the office to be read at the close of every trip, is there any reason why the registers should not be read at the same time; would there be time to do so? Yes, there would be time.
6729. The reading of the register is a very short process if a man understands? Very short. The only thing in what you suggest is this, that we should have about a thousand entries in a day.
6730. Would it make the check more difficult? No, I do not think so, but I do not think there would be much check in reading the registers. It might be done to ascertain the earnings of each line on each trip, but I do not think it would be a check against the men taking tickets.
6731. Why? If a man wanted to take a few tickets he could take them at the end of the journey just the same.
6732. Have you any particular reason for thinking so? No.
6733. But you must have a reason for your opinion? That is my private opinion.
6734. But what is your reason for it; why would not the men be caught and found out? Suppose he rang but did not register the tickets you could not find him out; for instance, a man might receive twelve or fourteen tickets, and register only ten; he rings so fast that it would be impossible to detect the difference. How could he be found out under such circumstances as those?
6735. I thought you were driving at another idea; I thought you were going to say that the registers were not much check, because the men's returns were not expected to balance with them exactly? Since I have been in the office I have never expected a man to come out exactly right with his register.
6736. What discrepancy would you consider a fair thing for a perfectly honest and capable man? Do you mean in a big day's takings? 6737.

A. F.
Primrose.
19 Sept., 1888.

6737. In an ordinary day's takings? I think if he came within twenty either way it would be very good.
6738. If you were dealing with a perfectly honest and capable man you would not come to the conclusion that he was not as careful as he ought to be because he came in with twenty tickets wrong? No, I should not.

6739. Do you mean for every trip? No, for the day.

6740. Then if the registers were read for each round trip you would bring out a much nearer balance? Yes.

6741. What should you say would be the discrepancy on every round trip between the register and the actual contents of the bag? In a morning run I should not think it would be more than three or four.

6742. You think there would be that number out on every round trip with a perfectly honest and careful man? I think so.

6743. Why do you think there would be this discrepancy? For many reasons; many of the tickets get close together, and a conductor may receive three tickets for two, or *vice versa*.

6744. Do you think that is likely? Yes.

6745. But the trams ought to be doing much better than they are if many people give three tickets for two or two for one? Well a great many people make mistakes in giving tickets. If the tram is full the conductor has to trust to the passengers a great deal. Of course if he carried out his instructions to the letter he would be all right, because he would receive only one fare at a time; but I do not think he would have time to carry out his instructions consistently. The passengers themselves collect the tickets, and the conductor may very easily be given seven tickets for eight or *vice versa*.

6746. Do not the conductors, as a rule, count the tickets when they are ringing them off at each compartment? I am sure they don't.

6747. What do you think they do? I think they count the passengers and take it for granted that the tickets are right.

6748. My experience is that they count the tickets? I have seen the cars so crowded that I am sure it would be impossible for a conductor to collect the whole of the fares and register each fare separately.

6749. I have noticed particularly that the conductors count the tickets at each compartment before ringing them off? Of course in collecting the tickets in this way they are not carrying out their instructions.

6750. What are their instructions? On the receipt of each fare they are supposed to ring the bell.

6751. They do that when collecting the top, but when collecting the bottom they would not have time? Well that is what they should do in all cases.

6752. *Mr. Brock.*] But the tickets are often collected by the passengers? Yes; and they may often be short of the proper number.

6753. But the conductor should count them? That may be, but how would that be at night when there is hardly any light about.

6754. Under such circumstances you think the conductor counts the number of passengers? Yes.

6755. *President.*] You seem to consider it impossible for the conductors to carry out their instructions. Is it not a pity to give instructions which must be inoperative? Yes; to carry out the instruction I speak of the conductor would have to get inside each compartment.

6756. You recognise that it would be practically impossible for the conductor to say to the passenger who handed him the fares of four other passengers, "I cannot take them that way, I must have them singly?" Yes.

6757. But if he counted the tickets when he got them into his hand and then rung them off, would not a careful man under that system come out right? I am sure he could not come out exact.

6758. Have you any great opinion of these registers that will not balance correctly with the receipts? I have no opinion of them whatever.

6759. You believe in ticket tearing, I suppose? I believe in the tickets being cancelled on receipt.

6760. We have had the ticket-tearing system for several months, what is your opinion of it? I think you would have to trust altogether to the conductor's honesty.

6761. You think that under that system the conductors could do almost anything they liked with the tickets? Yes; they could easily tear them long ways instead of across. On an upper deck at night they could do practically what they liked.

6762. Pretty well what they liked? Yes.

6763. Therefore if you think the register system bad you think the tearing system worse? Yes.

6764. Then what are we to understand. I understand that you approve in some measure of the tearing system;—what tearing system would you advocate? I believe that if we had tickets of different colours the system might answer very well.

6765. You mean that tickets should have two parts? Yes.

6766. And you think that if the tickets were in two parts, and that if the passenger had to give the conductor one part only, retaining the other, there would be no possibility of fraud, because the ticket would be of no use in the way in which it was handed to the conductor? Exactly.

6767. But would you not have any number of passengers giving up their tickets whole—passengers who would not be bothered tearing them up, and so on? I do not know. You will have to trust the public to some extent.

6768. You are advocating a system analogous to the omnibus bonus system. In that case there was some inducement to the public to keep their little butts, because each butt gave a chance of a prize, and three-fourths of the people knowing this used to keep their butts; but even with this inducement it is a fact that a large number used to throw their butts away? Yes; I am aware of that.

6769. But if you had no inducement of that kind, does it not seem to you that the passengers would be giving up whole tickets, leaving it to the conductor to tear them if he thought fit? Possibly.

6770. But if you admit that you admit the possibility of fraud, do you not? Yes; I do not think there is any perfect system if a man wishes to be a rogue.

6771. You know the Melbourne system? I have not seen it, but I have heard about it. I believe the best system that we could have, if we could secure a proper check, would be entirely cash.

6772. A system something like the box system of the omnibuses, if it could only be introduced? Some system of the kind if it could be adopted,

A. F.
Primrose.
19 Sept., 1888.

6773. What do you think of a system by which the cash would be collected as in a box, and under which the cash would, at the time of collection, register itself apart from the manipulation of the conductors? Yes; but who would put the money into the box.

6774. The passengers? But they might put in bad coin.

6775. But supposing the receptacle was arranged for pence only? That would do very well.

6776. And suppose that these pence in passing through registered themselves so that if a conductor at the end of a journey had not the exact number of pence registered, he could be asked at once to make up the difference? Something like that would do.

6777. I gather from your answers that you are dissatisfied with any system which does not impose upon the conductor the necessity for giving in a certain return? Yes.

6778. You see that once you allow a margin you cannot draw any line? Yes, that is quite true.

6779. If you say that you cannot fairly expect a conductor to bring in what his register shows it is difficult to draw a line, and say that the conductor who is ten short to-day is honest, and the conductor who is fifteen short to-morrow is dishonest, and should be punished? That is my view. I should be sorry to punish any man who was fifteen out under the present system, especially if it came on to rain; because from what I have seen of the system I am sure it is not reliable when the registers get wet.

6780. Why? Because the ringing is not perfect. I have seen so much of them in one way and another that I once drew up a report and sent it in to the late traffic auditor. If you look at that report you will discover my opinion of the registers.

6781. What would be the date of that report? I do not know. It was before Lambert had the repairing of the registers.

6782. Long before? No. They were taken away from Mr. Felton just afterwards.

6783. The report was made while Felton had them then? Yes.

6784. What is your opinion of Lambert as a register repairer? I should say that the registers have been better than they were before.

6785. Do you think he has a thorough knowledge of the mechanism of them? Yes; he seems to understand them. They were a perfect nuisance when Felton had them, because they used to ring without registering, and sometimes they would even register without ringing.

6786. They have done that since? I believe they have.

6787. Did it often happen when Felton had them? Often. I have issued several pairs a day which would be wrong, but I am sure that the men did not know of it.

6788. Why? Because when they have had registers which would ring without registering for a whole day they have brought in the usual number of tickets.

6789. Used all the men who had bad registers to do so? Yes; their returns on those days would correspond with their returns on other days.

6790. You have noticed the returns a great deal, I suppose;—have you noticed comparatively the returns of certain conductors, who it is almost certain, have been committing fraud. Have you noticed any particular conductors bringing in small returns for certain lines, in comparison with the returns of other conductors running at the same times on the same lines? I have noticed one conductor's returns, and I have heard of his being suspected; I refer to Archibald Fraser. I have noticed that his returns have compared favourably with the returns of other men. When he was on the Coogee line he always brought in as much cash as, or more cash than, the other men.

6791. Have you examined his returns since? I noticed them at that particular time.

6792. When did you hear that he was suspected? I saw it in the papers.

6793. And you had no opportunity of checking him after that? No; he went away.

6794. Do you mean that, when you saw from the papers that he was suspected, you looked back at some of his old returns? I did so while he was still in the Service.

6795. When and why did you do that? We often singled out a few men and compared their returns.

6796. Was Fraser a suspected man at this time? No, not then. When a new man is put on to a certain line, we sometimes make a comparison of this kind.

6797. You have done it with regard to other men besides Fraser, on that particular line? Yes.

6798. Did it not occur to you to say when you found that Fraser was suspected: "It is strange that he has committed frauds, because his returns came out favourably when compared with the others"? I was looking at his account the other day because Mr. Roberts had asked me to prepare a return for the Commission.

6799. You mean a return showing the takings of Musgrave, Fraser, and Ferrier;—is it ready? Yes.

6800. How did the returns come out? Very well. Musgrave's figures compare favourably with the others. It is very hard to get out a return such as you want, because Musgrave for instance may be told off to run on the Waverley line for a week, and then be changed to another line.

6801. But surely you know the nature of the return for which we asked. If for instance he were on the Leichhardt tram for three days, we wished his returns compared with those of another assistant conductor on the same line at the same time; we did not want the Leichhardt returns set against the Waverley returns, or *vice versa*? I quite understand that. I have got out the return as nearly as I possibly could.

6802. What does the return show on the face of it? It shows what each man has brought in. The easiest way would be to put a certain man on a certain run for a week and then to put another man on to the same run for the same time, but the assistant conductors are shifted about so much that it is hard to make a comparison of that kind.

6803. Would it not be a good plan always to put a conductor on to a line for a short period and then change him to another? Yes; I think so. From what I can understand I think it would be better if the conductor in charge had more power over his assistant conductor.

6804. Ferrier, Fraser, and Musgrave were all assistant conductors? Yes. Fraser for a portion of the time covered by the return was in charge of the Coogee run in place of some one who was away on a holiday.

6805. You think the assistant conductor ought to be more under the control of the conductor;—in what way do you mean? I think that when a man goes out in charge of a tram an assistant conductor should be given to him, and that assistant conductor should not be given up and told to go upon any other line until he had been formally handed over to the foreman by the conductor. That is not the system now adopted.

A. F. Primrose.
19 Sept., 1888.

6806. What is the system now? An assistant conductor gets on to a Waverley tram, he jumps off that tram at a certain street and then gets on to another tram and comes in with that. Suppose a conductor got on at Bridge-street and rode up as far as Begg-street—the heavy loading would be finished there—he would then get off the tram and return to Bridge-street with another conductor.

6807. Still on the same line? Well he may be sent on to Newtown.

6808. But that would be when he got back to Bridge-street; he must finish his service on the same line? Yes.

6809. He would not go with a conductor to Begg-street and on the return journey with another conductor—break off at Liverpool-street and get on with a Newtown conductor? No.

6810. He would have to go back to Bridge-street? Yes.

6811. But if he went to Begg-street he might go out with the Waverley and come back with a Woollahra conductor? He might do that. I think it is hard for the foreman to tell at times where the assistant conductors are.

6812. But do not the foremen allot them to the other men? Yes.

6813. If a man were wanted upon a Newtown run, who would send him there? The foreman. He would know where he started the man, but he would not know exactly where he was at any particular time afterwards.

6814. If it rested with the foreman to say, "Smith, you will have to go with Brown on the Waverley run this morning," he might afterwards find out that Smith was required to help Robinson on the Newtown run, he would take him off the first run accordingly? Yes; but suppose the assistant conductor went to Begg-street with a full tram, and that when the loading became light he got off. Suppose he did not choose to meet another tram, the foreman would not know where he was. The man might slope around a corner and disappear for an hour or two. The foreman would not know whether the assistant conductor was on another tram or whether he had gone on to Waverley.

6815. But what would be the assistant conductor's instructions at starting? That I cannot say.

6816. But if you are giving us an imaginary case, you must have your details ready—you must know what you are talking about? All I know is that I have heard conductors say that it was hard for them to get an assistant, although the assistant was supposed to be somewhere about the line. I have heard them say that it was very hard to get hold of one.

6817. That might be, and yet the foreman would know all about it? Yes.

6818. But it would be very unsatisfactory for the foreman to put a conductor on to the Waverley line for one trip and then know nothing about him all the day;—surely that is not possible? I say that it is possible for an assistant conductor to go as far as Begg-street, and that he may get down there, no one knowing where he is afterwards.

6819. Would not the foreman know that the assistant conductor had been only as far as Begg-street? No, because the man in charge might have had a full load, and might have taken his assistant on to Waverley.

6820. Does the foreman say to the assistant conductor, "You must go with conductor so-and-so until he is done with you?" That is what I should think.

6821. But we want to know the practice, not what you think? I cannot give you the practice.

6822. Then you may be giving a bad reputation to a system without knowing anything about it? I have not followed it up, but I have often heard men in charge say that they have been in want of an assistant and have not been able to find one.

6823. But that would not show the state of things to be such as you imagine it to have been? All I say is this: that I do not think any man should be in want of an assistant under the circumstances I have described, because there are plenty of them.

6824. Let us follow out your line of argument: Supposing that this extraordinary want of system exists. A foreman sends an assistant conductor to work with a conductor until the conductor is done with him;—do you mean to say that the foreman knows nothing about the assistant until he chooses to come in and report himself;—is there no check upon him in connection with his wages or the returns he brings in? Well, he signs on and he signs off.

6825. Take an imaginary case: Let us suppose that an assistant conductor has been handed to a conductor to run on the Waverley route until the conductor has done with him. He goes to Begg-street, beyond which, the loading being light, he is not required; the conductor tells the man that he can get back to Bridge-street. According to you, the assistant can clear out for two or three hours for his own edification, and when he is tired of that can get on to a Waverley or a Woollahra tram and return to Bridge-street? Yes, that is so.

6826. Is there nothing to check him and prevent him from going away for several hours? I cannot see how they can tell, unless there is a sort of running sheet, showing where the assistant was put down and where he started again.

6827. As a matter of fact has not every conductor to give in a running sheet? Not as to his assistant.

6828. But has not the conductor to say, "Assistant so-and-so"? Yes; he could put down his assistant, and you could trace him from one running sheet to another, but that is all.

6829. He would appear in the first sheet as going as far as Begg-street, but if he chose to absent himself for several hours what check would there be when his name appeared upon the next running sheet? None that I know of; I cannot see any.

6830. *Mr. Brock.*] Suppose a man discovers that his assistant has not come back, is nothing asked about it? Not that I know of.

6831. Was the system of reading the registers after each round trip ever adopted? We did it once for a week or a fortnight sometime ago.

6832. Why was it abolished? It was adopted to ascertain the earnings of each trip under some new time-table; they wanted to get at the value of each trip.

6833. Who used to read the registers then? They were read in our office then.

6834. The tickets were taken in the same place? Yes.

6835. *President.*] I have before me the return to which you referred, and it seems to me that it is of very little use, because you are not able to give a comparison between the particular runs but only between the different days;—is that so? Yes, the comparison is not as to the runs.

6836. Let us take one example: On the Waverley run on the 8th July, Musgrave gave in 1,564 tickets; Reece, on the 18th, gave in 1,012 tickets. What runs would they represent? That is just the point; Musgrave's runs may have been very much heavier.

6837.

A. F.
Primrose.
19 Sept., 1888.

6837. While Reece's runs might have been comparatively light? Yes; that is just what I told Mr. Roberts.
6838. So that the return is really worthless? Yes.
6839. We wanted a comparison of the trips, that is, trip against trip, but I understand that under our system that is impossible? Yes; the tickets were not taken each trip as they are now. It is only during the last two months that the tickets have been taken every trip.
6840. Are the tickets counted when they are taken now? No, they are weighed when the conductors have finished. We have boxes with the men's names, and the names of the runs upon them.
6841. It is of no use to count them at the time because you do not read the registers? Quite so; we do not know what the register shows.
6842. How long does it take to read the registers? It would not take a man who knew anything about it any time at all.
6843. Until the frauds were discovered the bags were not emptied at every trip? No.
6844. This return refers to the time when the bags were emptied once a day, and not always then? Yes.
6845. In any one case in this return are you able to say that the runs are identical, or that the men have had the same number of runs? No; not only that, but we could not say whether the men were on the trams all the while. Of course Fraser's case, at the period I have referred to, was exceptional; he was in charge, and he would have to run.
6846. Was Ross in charge? Yes.
6847. The return shows that Fraser, on the Coogee run, was engaged on the 7th, 8th, 9th, 11th, 12th, 13th and 14th, and that Ross was engaged on the same line on the same dates. Fraser gave in a total of 11,358 tickets, while Ross gave in a total of 10,380 tickets; do these numbers refer to the same trips and the same number of trips? No, they refer only to the same days. One man might have been on No. 1 run, and the other might have been on No. 2 run.
6848. Then this return is of no value? Well it is not worth much. A man must be watched and we must understand exactly where he went if we are to compile a return of any use.
6849. Supposing a man had five trips to Waverley and one to Botany on the same day, to what line would you credit the runs? I should pay a portion into the Waverley line, and I should ask him how much he had from the Botany line.
6850. When the man came in would you ask him what line he was on? Yes, certainly.
6851. Supposing the man mentioned the Waverley line and forgot the Botany trip? I suppose we would have to take his word.
6852. Suppose now that a man was committing fraud, and that while running on a very heavy line he wanted to make it appear that he was running on a light line: suppose he had been doing four trips to Waverley and two to Forest Lodge, and that wishing to be cautious he said when he came in that he had been two trips to Waverley and four trips to Forest Lodge, reversing the order of things? Well in that case we should put four trips down to Forest Lodge I suppose.
6853. That would not affect that man's returns if you were making an estimate of his running compared with another man's running? No.
6854. Well is there no check upon that? No, unless the foreman could say where the man had been running.
6855. Have you no running board? We receive a paper from the foreman every week as to where a man should run, but a man might be marked off for Waverley, and on Monday night, when we ask him where he was running, we might find that he was going to Marrickville.
6856. You mean that the board is not adhered to? It is not.
6857. Is it not right and proper that there should be a daily statement of the lines upon which the men are running? Yes, I certainly think that we should have a statement which could be relied upon.
6858. Could that not be done? It certainly ought to be.
6859. Who would do it? The foreman.
6860. Could he not each evening make a statement of the runs? He would have to be certain whether a man had had so many trips.
6861. But could he not determine what he was going to do on the next day? No, I do not think so. A man might be wanted for one line when he was marked off for another.
6862. But could not the foreman say, "As far as I know, that is how the men will be running to-morrow? Yes.
6863. If an alteration took place, would it be a herculean task to let you know that Brown, for instance, had been taken off one line and put on to another? No, I do not think so.
6864. If you had such a statement before you, would it not be a check against the men? A great check.
6865. You would know something about them, whereas now you are entirely dependent upon the truthfulness of the man as to where he has been running? Yes; at present we never go out of the office to know what a man is doing.
6866. If it were only a matter of apportioning the earnings it might not be such a great question, but as far as I can see it would be important for a dishonest man to say that he had been less upon one run than upon another? It would, but suppose a man comes in and his register is right, it would not much matter on what line he had taken the tickets.
6867. But we are assuming that a man's register is not all right, and that he has been cooking? Of course that would be a different matter.
6868. Under such circumstances would it not be important to the man to be able to say, for instance, that he had been running more upon the Forest Lodge than upon the Waverley route, when as a matter of fact he might have been running almost every trip to Waverley? Yes; but if a man was running on the Waverley route and brought in 400 when we knew he ought to have 600, it would be reported.
6869. You seem to lose sight of the fact that the man's register would be faked. How often have you made a report such as you have just suggested? If we thought that a man ought to have more tickets we should make inquiries and see what he had been doing.
6870. Have you done that often? No, I have not.
6871. Is it a fact that you have given much consideration to the matter? Sometimes I have thought that a man ought to have more tickets.

A. F.
Primrose.
19 Sept., 1888.

6872. If we are told as an absolute fact that the conductors are not asked where they are running to, what would you say to that? I know that they are asked. As far as I know they must be asked unless the clerk puts them down in the book by guess-work. They never check an assistant without asking him where he is running.

6873. But as to the conductors-in-charge? They are booked for certain lines and they are always on them.

6874. Are they never taken off? Yes; last night a man on the Leichhardt run was at Waverley as an assistant. He would be booked to Waverley.

6875. For the whole of the day you mean? He came in at 5 o'clock, having finished his day's work at Leichhardt; then he went on to the Waverley line, making a clean start.

6876. Is it a fact that the conductors-in-charge are shifted about? Yes; when they do overtime.

6877. But not as a rule? No.

6878. *Mr. Brock.*] The same conductor would be on the Coogee line for years? Yes.

6879. *President.*] Do you mean to say that a tram never comes in from (say) Leichhardt, changes its board, and then goes out to a different place? No; not that I know of.

6880. Does that not frequently happen? No; not that I know of. I know that there is a conductor on the Leichhardt line who changes about sometimes, but we know of that.

6881. As far as you know the motor always runs to the same place? Well sometimes on Sunday a railway tram will be sent to Coogee or Bondi.

6882. But on ordinary days? They may be changed, but I do not know of it.

6883. You see the object of my question? Under circumstances such as those I indicate a man will be frequently going on to another run. We could not say it was so unless the men told us.

6884. With a tightly worked time-table that might have to be done? Yes; I understand what you mean, but the men should come up and have their bag emptied, and tell us.

6885. But you do not know whether the men do that? No; but when they come up we are always ready to empty their bags. I think it would be better if our office were at the terminus, because we could then keep a better lookout on the men; it would also save two men's wages. There are two conductors bringing the bags in now, and I consider that is very dangerous.

6886. Supposing a man came to the office and told you that he was going to the racecourse, you would read his register; suppose that man did actually five trips to the racecourse, and afterwards came to you and said, "After all I did not go to Randwick, I continued on the Botany run," what check would you have against that? We could check him very easily, because when a man is going out to the race course his register is read, and there are clerks there to receive his earnings. We could easily find out whether the man had been out to the course, or whether he had not.

6887. How? By inquiry.

6888. It would be so exceedingly transparent that the man was obviously telling the truth or perpetrating a great fraud that you would not allow the matter to pass without inquiry? No.

6889. Has it ever happened in your recollection that a man, after coming to you and having his register read and prepared for a race trip, has come back and told you that he did not go upon the race run after all? They have done so.

6890. What means have you taken to verify his statement? The man might say, "I did not go to the race-course; I went to the cricket-ground."

6891. But do you accept his statement? Yes.

6892. You actually say that if a man who had been entered for the race run were to come and tell you that he had been withdrawn from that run and had been put upon another, you would accept his statement? Yes.

6893. Why did you not say that in answer to my other question about the man who might have been running on the Botany line? Well the man could not have had five trips; he might have had one.

6894. But if he could have had one trip you would accept his statement? It might happen in this way: A man would come up and say, "I am going on to the racecourse," he might then go down to the foreman and be asked to go on to the cricket-ground; he would then come back and say, "I have been on to the cricket-ground, I am going on to the racecourse now."

6895. You know that the man might have been ringing one for every shilling, and you accept his statement that he has been ringing one for every penny? Yes.

6896. If you admit the principle—if you say that you would accept such a statement without question—I do not see how you could limit the thing to one trip; why should not the men do five trips as well as one? If it comes to that a man could go to the racecourse five trips, and say that he had been only four.

6897. Don't you see that in that case a man would be ringing one for every shilling, whereas in the other case he would be ringing one for every penny, thus making 11d. for himself? Well of course we have to take the man's statement.

6898. *Mr. Brock.*] Suppose the register is faked? Of course that could be done.

6899. I understand you to say that under the present system you take the earnings every trip? Yes.

6900. Then how is it that you would not know whether a man had made four trips or five trips? The conductor is instructed to come in at every trip, but he might not do so. The bags are emptied at the racecourse during the day, and in the evening here.

6901. *President.*] Does the clerk at the racecourse work in unison with you? Yes.

6902. I suppose you compare your lists at the end of the day? Yes.

6903. He gives you a return of the men's running? He compares the bags emptied here with the bags he has received.

6904. Would not the comparison of the lists act as a check upon the men? Well under certain circumstances, a man acting as you suggest would be bowled out at once, but I suppose that if he wanted to perpetrate a fraud he would not get out of his car at Randwick.

6905. You said just now that you took a man's word in regard to his trips, now you say you compare the two racecourse lists; would not that act as a check? We might make the comparison, but if a man's name were missing from one of the lists, and he said that he had been running on some other line we would have to take his statement.

6906. You enter the men I suppose who come to you to have their registers read for the racecourse? Yes; and we suppose they are going there.

6907.

- A. F. Primrose.
19 Sept., 1888.
6907. Could you not say to your clerk, who was going out to Randwick, "Here is a list of the men that are coming out to you"? The clerk is already at Randwick, he will have gone out at 10 o'clock.
6908. Have you not telephonic communication with Randwick? Not that I know of.
6909. Would it not be very simple for you when you have ascertained the number of men put on to the racecourse, to send that list out to your assistant at Randwick? I should have to send out a lot of lists because a man might come up at any moment to have his register read. The men do not know where they are going to.
6910. Does it not strike you that the present arrangement is wretchedly imperfect? I can see now that it should be different.
6911. Are you not in your position expected to make arrangements for proper collection and for the checking of conductors? Well I am supposed to receive what the men bring in; I am not supposed to know where they have been to.
6912. You do not deal with the registers now? No.
6913. The men in the first instance would have to go to Mr. Oakes to get their registers read for the racecourse, and they would afterwards bring in their returns to you? Yes.
6914. Does Mr. Oakes accept the statement of the men that they have not been to the racecourse? I do not know.
6915. Do you think that Mr. Oakes, having prepared a man's register for the racecourse, accepts his statement that he has not been there? I cannot say.
6916. How often has a man come to you and said, "I have not been to the racecourse, I have been to some other place"; how often in your whole experience has that happened? I should think that there would be about two men on each race-day.
6917. As many as that? Yes.
6918. Out of what number? About twenty.
6919. And you accept the statement of these men without the slightest inquiry as to whether they have been to the racecourse or not? Of course I should see the other returns from the various lines, and I should know whether they were near the mark.
6920. In our opinion this is a case in which cheating of a most exceptional kind could be resorted to. A man is enabled to cheat to the extent of 11d. every time he rings his bell; it is a chance which a man would not get in a whole month of his ordinary time? Yes; I see that.
6921. And yet you have not seen that it is necessary to substantiate the statements which the men have made? Not in the way that you suggest.
6922. You still think that this has happened twice on an average every race-day? Yes; I should think there would be two men on an average.
6923. How often, as far as you can recollect, has Musgrave come to you and told you that having had his register read for the racecourse he has been put on to another line? I cannot remember Musgrave having said so at any time.
6924. Can you remember the names of any of the men who have done so? I think Bartley has done so, but he is a very precise man. I am sure that if he was running only to Liverpool-street, and was going on to another line, he would have his bag emptied; he is so very particular.
6925. Is Ferrier among the number? Not that I know of.
6926. Is Fraser do you think? If I looked over the book I could tell you.
6927. Do you remember O'Donnell having said such a thing? I should like to refresh my memory before giving you any names.
6928. Are you able, from reference to your books, to give us this information reliably,—can you say definitely what men have done this thing and how often they have done it? I could give you an idea. I have known men to have been to the racecourse, who have had their registers read, who have said that they were going on to other lines, and who have come back to the racecourse again. They would go on perhaps till the traffic was light; then the foreman would take them off again; but before going they would come in and have their registers read.
6929. Is it the case that a man might be put on to the racecourse perhaps several times in the course of one day? Yes.
6930. But it would not suit a man to be transferred from the racecourse to the Marrickville line and still to have the racecourse earnings debited to him? Of course that would not suit him. We have an order that a man going to the racecourse shall start with a clear bag, but should I be expected to make inquiries in every case where a man told me of a change?
6931. I think if you did your duty properly you would? Then all I can say is that if I did I should have a great deal of running about to do.
6932. Have you ever expressed an opinion about O'Donnell? Not that I know of.
6933. Have you ever said that you suspected any one of the conductors of fraud? I don't think so.
6934. When did you first become aware that the frauds were going on? When I saw them mentioned in the *Daily Telegraph*.
6935. That is the first inkling you had of the matter? With the exception of Keen's register. I remember that he came to the office, and I saw that he could not do what he said he could do. After that I did not bother any more about the thing.
6936. During all these years you never had a suspicion that anyone was robbing the Department? I did not say that.
6937. You never suspected any one of fraud? I never suspected anyone of stealing the tickets. I concluded that if the Government had suspected that there would have been a different system. I concluded that the conductors were supposed to be all honest men.
6938. You do not know much about the conductors? Only from seeing them at the window. I never had anything else to do with them in any way.
6939. *Mr. Brock*] Did you not suspect anyone at the time they were tearing the tickets? No individual conductor. I thought that if they wanted to make tickets they could do so; but I never dreamt that they were selling them.
6940. *President*.] What check have you in regard to the return of the registers by the men;—suppose that a man, instead of returning his register to be read on any one day, were to keep it for a week? He could not do that.
6941. Why? Because we should ask for it.

A. F.
Primrose
19 Sept., 1888.

6942. When? We should see him at the window.
6943. But he would not come there? What would he do with his returns?
6944. He would keep them? Being a week on the cars?
6945. Yes? That would be impossible.
6946. We have had proof that this has been done from Wednesday until Saturday—that a man did a run on Wednesday and did not bring in the return till Saturday;—what check have you against a man doing that;—I have no great faith in any of your checks? Of course we have to trust to the men to bring in their returns.
6947. If a man chooses to keep his register for a week it gives him greater opportunity for extracting tickets and so forth;—he can do so without any check, except the fear that when he does so someone will notice it? I never knew a man to keep his register a week.
6948. How can you be sure that he does not do so? If a man made no return I should ask if he was still on—I should go and see the time-book and ask the foreman.
6949. Why did you not do so on this particular occasion? I do not know to what you refer.
6950. Musgrave kept his register from Wednesday until Saturday, when he returned a collection for Wednesday, and, for aught we know, other days between? When did it happen?—I was away in March and part of April.
6951. But I suppose the system would continue irrespective of your absence? I could not see how a man could do such a thing.
6952. What systematic check have you against such a thing being done? The only check we have is to take the man's word.
6953. You take that for everything it seems to me? Well for a lot of things.
6954. But if you had a list of the men's runs every day, and were to receive an intimation from the foreman that such and such a man had been changed, you would have a perfect check? Yes, I suppose so.
6955. You would see the list and compare the day's takings with it, and you would at once wonder why (say) Jones's return was not in? Yes.
6956. Has it ever happened that a man has been sent to the racecourse and has brought back Coogee tickets, and that you have been unable to determine to what line the earnings should be credited? I remember a case some two or three years ago where a man went to the Cricket-ground, to the races, and to Coogee.
6957. He had his register set for the races? No, for Coogee.
6958. But he would not come in for a special reading for Coogee? We used to read the registers for the Cricket-ground when the fare was 3d. The man was running to the Cricket-ground and was sent on to Coogee. I think he also did a trip to the racecourse. I know that he had three runs.
6959. What did he return? I do not remember; he credited so much to the racecourse and so much to the other runs.
6960. Supposing he had been a scoundrel he could have taken any amount of the racecourse earnings? Almost the whole lot.
6961. Is that what you call system? No, it is not.
6962. Did you report it? No; it happened some years ago.
6963. If a man did such a thing on that occasion could he not do it again? He could. I think the system is wrong in that way.
6964. Was it not your duty to point it out? I could not stop him; there was no one to read his register.
6965. Could you not have reported the matter, so that someone in authority could have said, "Lee, if you ever do such a thing again you will be dismissed as sure as you are standing there"? The man would have had to disobey the foreman. If the foreman sent a man to Coogee, and he came back and did not have much of a load, and he were told to stop at the racecourse and pick up there, what could he do?
6966. A man is on the Coogee run, and, although he is running within 1d. and 2d. sections, he is told by the foreman to stop at the race platform and collect shillings? Yes.
6967. What foreman told him to do that? I do not know.
6968. If it had been reported the foreman might have been brought before some authority and told that if he did such a thing again he would be dismissed? I only remember one case of the kind, and that is Lee's.
6969. That is the case of an honest man finding himself in a difficulty, and saying truthfully, "I have been on all three of these lines; I do not know what belongs to one, and what belongs to the other"? Yes.
6970. Suppose the man had been dishonest and had kept back all his race earnings, and had come to you with his return, saying, "Coogee;"—would you have been any the wiser? Not a bit; the traffic seems to be regulated by the foreman.
6971. Is it not a fact that racecourse and other tickets are often mixed up in such a way that you cannot tell what has been collected? No; the racecourse tickets are always kept separate.
6972. Are the racecourse tickets the same as the others? Yes; there are twelve of them.
6973. Would it not be better to have shilling tickets? Yes, a great deal better.
6974. Suppose under present circumstances the racecourse tickets got mixed with the tickets of another line, it would not be possible to distinguish them? They never get mixed with another line.
6975. But on one occasion, as you have admitted, they were mixed? Yes; that was one case, but it is some years ago.
6976. You tell us in one moment that the thing has occurred, and then you tell us that it cannot occur? If every man were to bring in his return as he should do it would be credited separately.
6977. Has this mixing of the tickets not occurred more than once? The case I have mentioned is the only one I have heard of. If a man were on the racecourse it is not at all likely that he would allow himself to be put on to the Coogee line, where he would register a 1d. at every ring, without reporting the matter.
6978. Have you not often told Moran that you have had racecourse tickets mixed up with others? I never had much conversation with Moran.
6979. But did you not tell him that? I am almost prepared to swear that I never told him that.
6980. If Moran tells us that he did, he is fabricating? I do not know much about Moran.
6981. That is not the question? I never had any conversations with Moran about the working of the office that I know of. If I had anything to say about the working of the office I should not go to Moran; I should go to Mr. Roberts or to Mr. Tyrer.

Traffic
Inspector
F. O'Brien.
19 Sept., 1888.

Frank O'Brien called in, sworn, and examined:—

6982. *President.*] What is your position in the Tramway Department? Traffic Inspector.
6983. For how many years have you been so employed? Nearly five years.
6984. How are you engaged; what are your duties? They are principally in connection with accidents. I have to keep to record of all accidents—to make a report of them and to collect information. In cases of claim I prepare briefs for the Crown Solicitor.
6985. Who gave you instructions to do that work? The Commissioner in the first instance.
6986. Did he send for you personally and tell you to do it? I have had several personal interviews with the Commissioner.
6987. Had you no instructions from the Secretary? I received instructions afterwards from the Secretary from time to time.
6988. Who gives you your general instructions? The Secretary. Perhaps I had better explain the matter from the beginning: I had several interviews with the Commissioner and the Secretary in connection with tramway management, and especially in connection with the frauds at that time. I was engaged in considerable trouble, owing to different parties each defending themselves against the other. I had to make inquiries in all matters of that kind. I went into the matter of frauds as far as the conductors went; then I had to take up cases of accidents specially; now I continue to do those cases and to make any inquiries sent to me by the Secretary. I have a general supervision over the conductors, and if I see anything wrong I go to Mr. Roberts, or perhaps write to him.
6989. Are you under Mr. Roberts? No; I am specially kept free from the different departments, so as to enable me to make an impartial report of any matter sent to me when disputes arise between the traffic and the loco.
6990. Your duties are now pretty well confined to accidents? Yes, and to North Shore work.
6991. Does it keep you fully employed? Yes; in fact I sometimes have more than I can get through, and there is an order that when I require assistance I am to apply to special conductors.
6992. Where do you get the details of the accidents from? The report is sent in from the conductor to the traffic superintendent, and the fireman and driver send theirs to the loco. They are in turn sent to me, and I make inquiry and report.
6993. Why did you send me in a private note, asking that Moran might be excluded from the room while you were giving your evidence? I did not know the course the inquiry might take, and years ago, when I had more to do with the conductors than I now have, I had to report against Moran. I do not want to bring up these old troubles, but I thought that something might possibly be asked me which, if Moran were here, I should not, perhaps, like to answer.
6994. You thought that if Moran were in the room it might tend to the bringing up of an old trouble, is that it? No, not exactly that, but I thought that I might be asked some question bearing upon the matter. I once got a great deal of abuse through bringing up a number of thieving employees who were then upon the trams. The men banded themselves together in different ways, and subjected me to a great deal of annoyance.
6995. I should have thought that you would be more likely to bring up matters connected with the old grievance if Moran were absent than if he were present? That is what I mean.
6996. But I understood you to say that your object in excluding him was that you might not bring them up? No, it was that I might not offend him.
6997. Is it not a fact that you wanted Moran excluded in order that you might abuse him and bring up this old trouble? Not at all; I have no feeling against Moran now.
6998. Do you think it was very proper on your part to send me in that private note? I did not know what to do.
6999. Do you often write private notes? I have done a great deal in that way.
7000. And is this the way in which you always write them? Not necessarily.
7001. How would you write them otherwise? That would depend upon the circumstances.
7002. Is this the form you always adopt? I cannot say.
7003. Do you always sign your name? I sign my initials commonly.
7004. But always your name or initials? Yes.
7005. You swear that? Yes.
7006. When did you write this anonymous letter I have in my hand? I cannot see to read it without my glasses; if you will excuse me for a moment—I swear I never wrote that. I may explain that my handwriting is not certain. I have been shot through the shoulder, and I write very differently at times.
7007. Then if we were to come to the conclusion that you had written this anonymous letter we should be entirely wrong? Yes; dozens of anonymous letters were written about me at one time, and they went so far as to send to the Commissioner a little model coffin for presentation to me.
7008. I received this letter this morning; you are certain you did not write it? I am certain I never did, but I think I know the man Martin to whom it refers. I had to get up an inquiry over the diamond stud business, and Martin was discharged through it.
7009. You said that you had to get rid of some thieving employees in the Department. What connection had Moran with them? He was one of those who was under supervision at the time.
7010. What was he? He was a conductor on the Botany line and he was reported for having appropriated cash fares.
7011. How did he relieve himself of the odium of such a report? It was never proved against him.
7012. But how came he to be removed from the position of conductor and to be placed in a more responsible position? I do not know; I could never understand it.
7013. Whose doing was that? I could not say.
7014. Would such a step as that be taken without the authority of the head office? I suppose it would be upon the recommendation of the Traffic Superintendent.
7015. Did it ever come under the notice of the Commissioner or the Secretary that Moran was suspected of dishonesty? A number of names were submitted to the Commissioner and the Secretary at the time, and Moran's name was on the list I gave in.
7016. It was you who suspected him then? Yes; but I had another source of information.
7017. What other source? A conductor.
7018. What was his name? He is not on the trams now.

Traffic
Inspector
O'Brien.

19 Sept., 1883.

7019. Never mind that; give us his name? His name is Pierce.
7020. What did he say? He gave me general information; it was necessary to do the side-wind business to get at the matter; it was of no use to go openly to such work.
7021. On the information he gave you did you detect any real fraud? Well, I have watched Moran myself.
7022. But did you detect any real fraud? Yes.
7023. What was its nature? The appropriation of a cash fare.
7024. Were other conductors doing that? Yes.
7025. What was done with them? Some of them were dismissed.
7026. Why were not all of them dismissed? It was thought that if an example were made of five or six of the worst cases it would deter the others and give them a chance of mending their ways.
7027. Although it was ascertained that a certain number of men were actually dishonest, only a few of them were punished? Yes; it was with great difficulty indeed that even those men were punished. An inquiry was held by the Minister of the day, Mr. Wright; papers were called for in the Legislative Assembly, and were ultimately produced. They will enlighten you as to the circumstances.
7028. Have they any reference to fraud in connection with tickets? Yes.
7029. It was absolutely proved against certain men that they had robbed the Government, but it was considered just and wise to dismiss a few of them only and keep the rest on? Yes.
7030. Do you know who suggested that course? We could not prove the matter satisfactorily; we went to the Crown Solicitor and submitted several cases to him; he advised that we should not succeed legally in open court and that we should really expose our own weakness. The recommendation was then made to discharge a number of the men.
7031. Who made the recommendation? Myself and Mr. Roberts.
7032. You have given us some most extraordinary arguments and reasonings. We have heard that a number of men were guilty of fraud, and that a recommendation was made that some of them should be dismissed and that others should go scot free? Mr. Roberts and myself compared notes. His source of information was separate from my own. I mentioned to you the name of Pierce; perhaps I ought to add that he is now in a very good position in the Customs and I should be sorry if his name was dragged into the matter.
7033. Is it not a fact that you had no positive proof against any one of the men? No legal proof.
7034. Were you satisfied in your own mind that every one of these men was dishonest? I was.
7035. Then how did you come to recommend that a few should be picked out for dismissal and that the others should be retained in the Service? I was speaking just now of the men actually dismissed.
7036. Did you not lead us to suppose a little while ago that you were absolutely certain in your own mind that all the men you suspected were dishonest? No, not all of them. If I said so I did not clearly understand your question.
7037. But did you not say that there were a certain number of persons who were dishonest and that you came to the conclusion that it would be better to pick out the ringleaders and dismiss them, and to leave the others in the Department? Yes; we picked out the worst of them.
7038. Do you mean that you picked out those who had stolen pounds and that you left those who had stolen shillings? We picked out those against whom we had proof.
7039. With regard to the others there was merely suspicion? There was some doubt about the others. We were not absolutely sure in every case.
7040. What was the nature of the fraud? There were several descriptions of fraud.
7041. What was the system at that time? It was similar to that now practised. The same registers were in use. They were continually getting out of repair and there were different methods by which the conductors failed to pull them.
7042. The same registers you say? Yes.
7043. Well how was the fraud perpetrated? One way was this: They would get the tickets for one compartment, and then miss ringing for some of them. This was easily done, because they got the tickets in a bunch, and they might, for instance, ring only eight for ten. They would go to another compartment and receive cash; they would then ring the ticket-bell instead of ringing the cash-bell, and would put the cash into their pockets, putting the spare tickets which they had previously collected into their bags. That was one system.
7044. How did you prove that against any of them? I have watched them doing it.
7045. You have absolutely seen a man collect a cash-fare and ring his ticket-register? Yes.
7046. What action did you take? I reported it.
7047. And what was the man's statement in reply? He was never asked to make a statement.
7048. Was he dismissed for doing it once? He was among the dismissed men.
7049. For doing it that once? Not for doing it that time alone; it was a common practice with him.
7050. Do you mean to tell me that the men accused had no opportunity of answering the accusation? Not in particular cases.
7051. Did not the men know you? Not at the time.
7052. You were introduced really as a detective? No; I was known to be employed at the time; but I was not generally well known to the men.
7053. Did the conductors know that you were employed? Not at first.
7054. Therefore you were to them an utter stranger? Yes.
7055. What was your course of action? When I noticed anything wrong with a man I made a point of following him, so to speak, for several trips, riding with him again and again to satisfy myself that I had not been mistaken in the first instance.
7056. After satisfying yourself on that point you would recommend his dismissal? I used to put him down on my list.
7057. Do you remember how many men you put upon your list? I think I named a dozen men, and Mr. Roberts also named some. By order of the Secretary we compared notes, our sources of information being different. I think, if I remember rightly, we each wrote twelve names, and when we came to compare them we found that eight or nine, if not ten, were the same.
7058. That is the same men on both lists? Yes.
7059. How many did you dismiss? Five out of the ten which were contained on both lists.
7060. Was Moran one of the five who was retained? Yes.

7061.

Traffic
Inspector
O'Brien.
19 Sept., 1888.

7061. He was one of your twelve? Yes.
7062. Was he on Mr. Roberts's list? No.
7063. How did you come to strike him out? When we compared notes Mr. Roberts said, "I will give him another show."
7064. Mr. Roberts evidently did not suspect Moran? No.
7065. Did you suspect Moran as strongly as you suspected the other twelve on your list? No.
7066. What did you see in connection with Moran? I saw him put a cash-fare into his pocket on one occasion.
7067. Well, what did he do then? He did not ring for it.
7068. Was he challenged with that? I do not think so.
7069. You reported the matter, I suppose? I made a note of it in my list at the time.
7070. Having noticed that Moran did this thing, I suppose that upon the principle you announced to us just now you followed him up on several trips;—what was the result of it? I followed him up as far as I could.
7071. What was the result? I am not sure.
7072. When a man's character is at stake we should like you to be very sure as to what you actually do know? I think it happened about the time that I compared notes with Mr. Roberts. As Moran's name was not on Mr. Roberts's list I think I left the matter alone.
7073. Although you were perfectly sure in your own mind that Moran had put a cash-fare into his pocket without ringing for it, you gave no special consideration to his case as at all events a suspicious one? The matter dropped, as I just said, and after the men were dismissed I did not follow it up any further.
7074. How long after this did you find Moran changing his position? I do not remember when it was.
7075. Is it not rather strange that you should have lost sight of the fact when Moran's position was changed? I was in no way connected with the changing of his position.
7076. But it was changed? Yes.
7077. When did you know of it first? I could not say.
7078. Did it not strike you as a very extraordinary thing that this man, whom you suspected and whom you had actually seen pocketing coin, should be promoted to a position in which he would supervise others? I might have known of the circumstance, but Mr. Roberts might not have known of it.
7079. Did it not strike you as being exceedingly strange that Moran should be promoted in this way? Yes; I have always been surprised at that.
7080. How soon did you consider it your duty to take it upon yourself to report that this was a thing that should not be done? I never reported in the matter.
7081. You were perfectly satisfied that this man who, by your showing, was a rogue, should be promoted to the position of looking after dishonesty in others? I did not make any report about it.
7082. Has Moran's name never appeared in writing in your reports for any action of the kind? No, excepting the lists that I made at the time.
7083. Moran's name did not appear on the revised list? No; his name was only in my original list when I compared notes with Mr. Roberts.
7084. The original list was seen only by Mr. Roberts; it was not seen by the Commissioner or the Secretary? No.
7085. Knowing this, did it not occur to you to be a duty of the highest importance that you should draw attention to this matter when you saw that Moran was promoted as a specially trusted individual? I had no proof.
7086. *Mr. Brock.*] What do you mean by that, when you said just now that you saw him do the thing? Well, there was only my word against his—that was the awkwardness of the position.
7087. But your word was enough to dismiss five men? Not alone.
7088. Was Mr. Roberts's opinion coupled with yours? Yes; we both initialled the same paper.
7089. *President.*] You considered between you that these five men were not the stamp of men who should be employed as conductors? Yes.
7090. A list of ten went in officially, five were dismissed and five were retained;—with whom did the decision rest? With the Commissioner.
7091. I presume there was a report from some one as to these ten men, pointing out that five were actually dishonest, and that, with regard to the other five, there was mere supposition? Yes, so far as their honesty went; they were unfit in other ways.
7092. You mean that they were certainly careless if they were not dishonest? Some of them were in the habit of drinking, and were careless in collecting.
7093. Those were the five who were not dismissed;—were they disgraced? No, nothing was done after the dismissal of the other five.
7094. What happened in regard to the five men who were retained? I rather think that some of them are yet in the Service.
7095. Could you not give us their names? I might be able to do so by going over the whole list.
7096. You seemed to remember the name of Moran glibly enough? Well, I saw him here, and that put him into my mind.
7097. Is that the first time you have had him in your mind since you saw him taking the 3d.? So far as the other men are concerned I was called here this morning without preparation; I supposed that I should not be called at all. I was under the impression that the inquiry was finished.
7098. You would like to have had a week's notice of our intention to call you, I suppose? Not necessarily, but I cannot remember at a moment's notice all these things that happened years ago.
7099. You remembered Moran's name keenly enough? Yes, some of these matters were brought back to my mind very keenly day by day when I was gibbeted in the Assembly by Members of Parliament as a rogue and a vagabond.
7100. You have no personal ill-will or feeling towards Moran? No.
7101. You have not had any quarrels with him? No.
7102. Have you ever had any conversations with him? Many.
7103. Is it not a fact that you are largely indebted to Moran for almost every work which appears to your credit? No.

Traffic
Inspector
O'Brien.

19 Sept., 1888.

7104. Is it not a fact that although you send in these reports, the bulk of the information is collected for you by Moran? No, it is not—I am quite competent to do it myself. I have had twelve years experience in Sydney in connection with street traffic. In these matters I instruct Moran and Wigg as to what I want; they do not instruct me.

7105. Do they not collect a great part of the information to enable you to make your reports? I have sometimes had more on my hands than I could possibly get through at the time, and on my explaining that state of things to the Secretary a general order was given that when I required assistance it was to be afforded me by Wigg and Moran. They have always done their best for me and have helped me in many cases, but they are not from their experience competent to instruct me in any way about reporting.

7106. You send in the reports and get the credit for doing the work? Not special credit.

7107. But the work is considered to be yours? Yes.

7108. As a matter of fact, is it not largely helped out by these men? No, not lately; sometimes for months I have not had to call upon them for assistance.

7109. You tell us distinctly that this alleged dishonesty on the part of Moran never came into your mind from the time you furnished your confidential list to Mr. Roberts until you sent your private note into me this morning? It has often been in my mind.

7110. I understood you to say in accounting for what I thought singular—that your memory should be so good in the case of Moran, that you never thought of the matter until you came here this morning and knew that Moran was here also? I think you asked me as to when Moran was appointed to his present position, and as to whether I did not think it strange; I think I told you that I did think it strange.

7111. I understood you to say that you did not know when the change took place? I do not remember the exact date.

7112. Although you thought the change an extraordinary circumstance you made no report? No; I was alone so to speak; there was simply my word against his.

7113. Then do you absolutely consider in your own mind that Moran is an improper person to be employed as he is now employed? Years ago I should have said so, but a man is not always bad because he has once been so. It does not follow that a bad man will be everlastingly bad.

7114. You think that at one time he was dishonest? I have no doubt about it.

7115. Perhaps you think that on the principle of setting a thief to catch a thief it was after all not such a foolish thing to put him in his present position? No; Moran knew all that was going on on the cars and was therefore of great advantage to us.

7116. You think on consideration that his action might give him a special fitness for the position? To a certain extent, because knowing how the thing was done he would be better able to detect it in others.

7117. *Mr. Brock.*] There was nothing clever in what he did? No; but he would probably know all the methods. It was proved in evidence in connection with the men who were dismissed that several of them had been seen by officials pocketing cash-fares.

7118. Is it not possible that you are mistaken in regard to Moran? Not in this particular case.

7119. You know that he did not ring? He did not ring; he simply put the cash-fare in his pocket without ringing.

7120. Is it not possible that he may have over-rung before? If he had there was nothing to show that he had done it. I know that such mistakes do sometimes happen.

7121. Is that the only time that you suspected Moran, or had any grounds for suspecting him? Yes.

7122. How soon were you removed from that class of work? I was never actually removed from it; but just after the inquiry to which I have referred we were flooded with claims in connection with accidents, and at an interview with the Commissioner he asked what was the best course to adopt. I had been accustomed to manage such matters in connection with the Omnibus Company. I pointed out to the Commissioner what I thought was the best thing to be done—that we should collect all possible information, and keep a proper record of it, so as to be prepared for these claims. Claims were being made three or four months after the occurrence of the accident, and we were being constantly taken by surprise.

7123. You had been some years with the Omnibus company? Six years.

7124. What caused you to transfer yourself to the tramway service? I left the Omnibus Company to go to Melbourne; Mr. William Cain offered me a better position there. My wife, however, is a confirmed invalid, and the doctor advised us to stay in Sydney rather than go to Melbourne. The directors of the Omnibus Company then spoke on my behalf to the Commissioner; this resulted in an interview, at which the Commissioner put me through a considerable verbal examination, and I finally received an appointment.

7125. How long after that was it before you got these cases against the conductors and got rid of them? About eighteen months altogether.

7126. *President.*] You were at work sometime before you made your report? Yes—sometime before the men were finally disposed of.

7127. Before that you were as well known to them as the Post Office? Yes.

7128. Therefore your usefulness in that particular line was really at an end? Yes, so far as any secret work was concerned.

7129. You were so well known that you might have got into a car fifty times, and a dishonest man would have acted honestly? Yes; if he thought I was there.

7130. For a system of that kind to be of any use you must have strangers coming now and again? Yes; that is where Wigg and Moran are placed at a great disadvantage. Whatever their will and experience may be they are put out of court by being so well known. I may add with regard to myself that for six months after I came into the Service my time was fully occupied in reporting for the Secretary upon various matters occurring between different branches of the Service.

7131. What sort of reports would these be? In the first place the Board of Health were writing in the papers about a supposed pollution of the drainage at the Randwick works. I went out, and, in conjunction with Mr. Howe, I went into the whole matter, and we made a combined report about it. Another matter cropped up in connection with the giving way of the brakes. It was suggested that the brakes opened and separated, and there was a question as to whether this was a source of danger. I had to report upon that and a number of other miscellaneous matters.

7132. I hold in my hand a copy of the Parliamentary paper to which you referred? Perhaps before you proceed further I may be permitted to say that in the part I took in the punishment of the men referred to

Traffic
Inspector.
F. O'Brien.
19 Sept., 1888

to in that paper I made some enemies, and that they have subjected me to continual insult and snubbing. Anonymous letters have been written to the Commissioner, and also to my wife, couched in the most filthy terms. I believe Mr. Roberts also had a number of anonymous letters sent to him. Just after this occurred a model of a coffin, which I hold in my hand, was sent to the Commissioner for presentation to me. The Commissioner joked about the matter, and said it was rather complimentary to me than otherwise, and it showed that I had done my duty. I mention the matter to show that there was a good deal of spite against me. That has continued almost till now. I have never reported against a man unless I thought him deserving of it.

7133. But this kind of treatment may not proceed from men in the Service? I very much doubt as to whether some of the men now in the Service did not do it.

7134. Perhaps some of the suspected five? Very likely.

7135. What are the names of the five suspects who were not dismissed? I suppose I may ask whether I am liable in any way outside for evidence that I may give here. I am not in a position, after all these years, to give you absolute proof, but I think there are documents in the office which will show you something about the matter.

7136. You can do no harm by mentioning the names of the five men who were under suspicion; you need not say anything more than that;—the retention of the men in the Service itself shows that the suspicions were not well founded, so that the mention of the names can do you no harm? Conductor Tipping, who is still in the Service, is one of them; Matthew Williams and Thomas Lane, who are also in the Service, were others.

7137. Lane went a little off his head, and was out of the Service for some time? I know that he has had an accident since then.

7138. He was the man who smashed his register very badly? I did not hear of that.

7139. Are the other two men out of the five not in the Service now? Cavanough and O'Connell were two others; they are not in the Service now.

7140. I presume you have since observed the conduct of the three men, viz., Tipping, Williams, and Lane? Yes.

7141. Have you ever had cause since to suspect them? With Williams I have; but I don't think I can say fairly that I have with the others.

7142. What line is Williams on? He is on the Leichhardt line. He was on the Randwick line for a considerable time.

7143. The stout dark man? Yes.

7144. Was there ever any report about Williams? He was on my list.

7145. But since then? I fancy there have been, but not from me; I think the Superintendent has had many complaints about him. I do not know whether they bear upon the question of dishonesty, but I rather think he is very well known in that connection.

7146. When had you first any knowledge that these frauds were going on? Do you mean the present frauds?

7147. Yes? I have no personal knowledge; I only know of them from what I have heard. The first I heard of them was from a sensational paragraph which appeared in the *Star* about the 14th July. I have rumour of special conductors making inquiries, but I have known nothing about the matter.

7148. Are not these special conductors under you? No; the only time they come to me is when I am pushed with work; then they help me in making inquiries.

7149. I thought they were assistant inspectors, so to speak? No.

7150. But they are properly so? They were called, at one time, revenue inspectors, but the term was afterwards altered to special conductors.

7151. Were they employed at the time these men were dismissed? Wigg just came into the Service at the time these troubles occurred. He was formerly connected with the detective police.

7152. Where was Moran before he was employed upon the trams? I do not know.

7153. Therefore you really have no information to give us about these frauds? No, not about the present frauds.

7154. You have observed from the papers that certain men have been suspected? Yes.

7155. What is your opinion of these men—of Musgrave, Fraser, and Ferrier, for instance? I was not at all surprised to hear what I did about Musgrave; he was knocking about a great deal and living evidently above a conductor's pay; then he was running about on the cars all day, smoking good cigars and dressing in a flash sort of way.

7156. What about Fraser? I did not like his manner, but I am not prepared to say there was anything wrong about him.

7157. And Ferrier, what of him? I had a very bad opinion of Ferrier before he left the cars; in fact I have often spoken to Mr. Roberts about him. He was indirectly the cause of the death of a girl on the Leichhardt line—that is, if he had been in his proper position on the tram the accident might have been averted. In talking that matter over with Mr. Roberts the question of his being a bad specimen of a conductor cropped up.

7158. Not so much as to his being dishonest as negligent and careless? Yes; he would be talking with flash girls rather than looking after his duty and collecting his fares.

7159. I understand that for some years you have not very specially directed your attention to the supervision of the men? No, I have not.

7160. It has rather been handed over to these special conductors? To some extent.

7161. Therefore you are not in as good a position as you formerly were to answer for the men's characters? No; whenever I see anything now I go to Mr. Roberts personally, or write to him, and the same with the locomotive branch. If it is not a matter requiring a special report, I mention it to the heads of the department or to the traffic or running foreman.

7162. Do you remember a conductor named C. S. Wilson? Yes; he is one of the men mentioned in your anonymous letter.

7163. Are his initials C. S.? I am not sure. I used to know him as Charles Wilson. You will find a statement of his case in the Parliamentary paper I handed to you. He was one of the batch who were put down for dismissal.

7164. On what date was he dismissed? About April or May, 1884.

7165.

Traffic
Inspector
F. O'Brien.
19 Sept., 1888.

7165. Have you any idea where he is now? I have not seen him for twelve months; about that time I saw him in Sydney; he had a brother who was at that time driving a motor. He was one of the prime movers in the matter of the diamond studs; he and Cullen were the two principal men who were against Mr. Roberts in that matter.

7166. Did you know Martin? Yes.

7167. What was the matter with him? He confessed at the inquiry that he had used Mr. Roberts's name for the purpose of getting other men to join in a raffle for a set of studs.

7168. *Mr. Brock.*] There is a great similarity between the writing in this anonymous letter and your own handwriting? There may be; I do not always write alike.

7169. *President.*] Do you know the writing on the anonymous letter which introduces my name? No; I am not surprised at your receiving an anonymous letter or at my handwriting being imitated; Mr. Roberts has been deceived by it repeatedly.

7170. Do you not yourself recognise a similarity between the two handwritings? Yes.

7171. Look for instance at the two words "you"? It is a very good imitation, but I am not the writer of the letter.

7172. It is not the writing you generally use, nor is it the writing of the note which you sent in to me this morning; that also appears to be different from your usual handwriting? Whoever did it has done so to place me in a false position—that is, by imitating my handwriting.

7173. We do not think for a moment that any one has attempted to do that;—where is Martin now? I saw him in the Supreme Court in Sydney about a month ago.

7174. What is his history? I only know it since he has been on the trams.

7175. He was dismissed? Yes, for using Mr. Roberts's name in connection with a raffle.

7176. Is he not the man who persisted to the last that he was innocent? He has often told me that he was innocent and that he has had to suffer for it. There was a man on the cars named Earley, and a chief shunter, named Webber, who had the credit of being infatuated with anonymous letter writing. Rightly or wrongly, the anonymous letters written about myself and Mr. Roberts in connection with the diamond stud business were attributed to them. I remember Mr. Roberts getting an anonymous letter about me; the handwriting was a good imitation of mine and similar to that which you have shown me this afternoon.

7177. You are not connected with this letter in any way except in your own mind? Except that I am supposed to have sent it to stir up the old business about the diamond stud business.

7178. But it simply says that two men can give us valuable information about these frauds? No doubt Martin might give you information about what was going on on the cars about that time.

7179. We do not want to hear anything about the diamond studs because that matter was inquired into by the Commissioner at the time and he came to a certain conclusion? Yes, I am aware of that, but some of these men who write anonymous letters think because I was very much abused at the time I have a feeling against the Department, and that I should only be too glad to ventilate a supposed grievance, but I have no sort of grievance in the matter. My one idea is to get the thing right in the future, if possible, and to have a better system of collection, but the way in which they have written anonymous letters to me is dreadful; it is simply because of the action I took in connection with the diamond stud inquiry, which took place about the same time as the other trouble which I have mentioned to you in connection with the conductors.

7180. When did Martin leave the Service? Just after the stud inquiry.

7181. That would be nearly four years ago? Yes; in 1883 or 1884.

7182. Now, as to the system of collection;—you do not think much of the present system of bell registers? I have no faith in the registers, and still less faith in permitting the public to sell tickets. I think that has always been a weakness. In the old days we tried the same thing with the Omnibus Company, the result being that the 3d. tickets were picked out of the receptacle with a pair of tweezers, and were sold by the men for 1½d. to different small shops and hotels, at which they were resold for their full value.

7183. How many years ago would that be? About ten years ago.

7184. You are as much against the system of the sale of tickets by the public as against the bell registers? Yes.

7185. Why are you against the bell registers? Because they can be rung without registering if they are pulled in a certain way, that is, when the works once get weak. At the time of inquiry to which I have referred, I took several pairs of registers up to Mr. Felton, who was then repairing them; we examined them together to see if they were manipulated, and in every case he came to the conclusion that it was mere wear and tear. In some cases the teeth had worn out, and in other cases the spring had run weak; the result of this was that the bell would ring and that the tongue would not go back sharply if it was held by the conductor. The conductor in fact could ring a dozen times without letting the tongue go back at all, the result being that the fares would not be registered.

7186. Therefore this thing was absolutely known years ago? Yes, it was called tricking.

7187. Was the question never considered as to whether the registers ought not to be abandoned? It was known that they were not reliable.

7188. You, at all events, appear to have known it? Yes; Mr. Primrose knew it; he was then under the audit.

7189. Lambert did not know it? This was before Lambert had anything to do with the registers, except as a special conductor. He had not the repairing of the registers at that time. Since Lambert has had them they have been kept in better order; but I suppose that the time I refer to some weakness existed.

7190. Lambert seems to have known the weakness, but strange to say he had the highest opinion of the registers as a system? I cannot imagine that on the part of anyone who has studied them. They were out of use for a time, and when they were about to be brought into use again I wrote to the Secretary about them. You may remember, Sir, that I spoke to you about them, although I did not explain their defect.

7191. Not in the way you now suggest? No.

7192. Were you responsible for the introduction of the ticket-tearing system? No; not in the way it was carried out.

Traffic
Inspector
F. O'Brien.
19 Sept., 1888.

7193. You do not believe in that way? No.

7194. Did you recommend anything at the time? I recommended that a ticket half red and half white should be used.

7195. That is the system you are advocating now and about which you wrote to me? Not exactly. The tickets should have been torn in two in the presence of the passengers and only one ticket should have been taken at a time. The great weakness of the system was that they were taken in a bunch, thus enabling passengers to avoid payment and causing mistakes on the part of the conductors.

7196. Under your system the passenger would tear off a portion of the ticket, handing the remainder to the conductor? Yes, and the portion given to the conductor would be put into a locked bag.

7197. Were you not consulted about this ticket-tearing system;—my impression is that you were? No, I was not. There was a difficulty in getting sufficient bells in good condition and I pointed out to the Secretary that as we used little cash only one bell should be carried. The Secretary remarked that he thought the bells would shortly be taken away altogether; that was all I knew of the system being adopted by the Department.

7198. Is it not your opinion, as a practical man, that the ticket-tearing was less effective than the bell registering? In the way it was carried out, it was. We have badly lighted cars and there is every opportunity for the dishonest conductor to practice up stairs without any possible fear of detection. Of the two systems I should still be almost inclined to favour the registers if they were reliable—that is in preference to the tearing system as it used to be carried out.

7199. I presume you are aware that the registers can be so little relied upon that it is not considered a fair thing to expect that the bag and the register will agree? I am aware of that.

7200. Why cannot that be fairly expected in the case of a careful and honest conductor? He is so liable to miss ringing, and then he may take tickets in a bunch and count the passengers instead of the tickets ringing accordingly. He may often make a mistake in that way. Then we have to deal with great crowds; in fact overcrowding is one of our greatest troubles.

7201. You believe that a careful and honest man put on to a very crowded trip would not be likely to come out right in the end? I believe he would not.

7202. You think it is too much to expect that the bag and the register should agree while these difficulties exist? Yes.

7203. Do you think that they should agree upon a light run? Yes.

7204. But that upon a crowded car a conductor with the best of intentions is very liable to mistakes? Yes, on a holiday you may see men, women, and children, hanging on to the footboards in a most dangerous way. We incur all the extra risk without getting any compensation for it, as the conductor could not possibly tell who had paid or who had not. Take a crowded compartment with a number of people standing up; a conductor receives a handful of tickets and he cannot possibly tell whether they are right or whether they are wrong.

7205. How do you propose to get over the difficulty of the sale of tickets by the public under the system of tearing which you suggest? It would not be overcome; we would still have that weakness.

7206. Therefore you would recommend something different? Yes.

7207. What is your proposal now? It is on the lines of the Glasgow system; there they work three sections, a 2d. and two 1d. sections.

7208. Is not the Glasgow system identical with the Melbourne system? Not quite; in the one case the conductor carries either a loose ticket or a small book with a counter foil; he tears out a ticket and punches it with a bell punch, handing it to the passenger as a receipt for the money he has received; under the Melbourne system the passenger gets no receipt.

7209. But the punch is a receipt? Well he hears the sound and that is all. It is one of the weaknesses of a bell system of any kind that a conductor may carry a bell in his pocket which will sound the same as in his register.

7210. You think that the passengers should have both an ocular and oral demonstration? Yes; the ticket or slip, as the case may be, should be punched; in both cases the piece will be coloured to denote the value, and will fall into a receptacle in the punch; these pieces can be counted to check the conductor.

7211. In our mind there is a serious objection to the Melbourne system—in the greater length of the process; would not the process under the Glasgow system be still longer? Not if the conductors adopted the plan of carrying a little book instead of loose tickets. I propose that they should be allowed to collect through fares, a red ticket representing a 2d. section and a white ticket a 1d. section. Take a book on the Waverley line—the red portion at the top of the ticket would be marked from Bridge-street to Queen-street, and the passenger going that distance would have only to pay 2d. If the passenger were going to the Bondi junction, the conductor could punch the 2d. section and the first of the two succeeding 1d. sections. If the passenger were going to Waverley, the conductor would punch all three sections, handing the whole block to the passenger.

7212. Would not that be a very complicated and long process? It takes some time to describe it, but I do not think it would take much time in operation. Considerable time would be saved in the collection of through fares; it would be of assistance not only to the conductors but to the passengers.

7213. Would you have the sale of the tickets in the hands of the conductors? Yes, solely.

7214. Would you not allow a man to buy a dozen tickets, giving him a small allowance, as in the Melbourne system? No, that is one of the weaknesses of the Melbourne system; it is done to oblige the public; to avoid the bother of getting change.

7215. Under your proposals you would have nothing but cash-fares? No.

7216. The conductor would receive the money and debit himself in two ways—by punching the ticket, and by the record made in his punch by the act of punching? Yes.

7217. Are you satisfied that under this system the punch would show an absolute and reliable balance, as in the Melbourne system? It should do so if the punches were kept in proper repair, but they might go wrong upon wet days.

7218. Why? Because then the tickets might get wet and the punch might get plugged up.

7219. Is not that a fatal objection? Well, assuming that the conductor gives in his account at the end of every round trip, his punch could then be examined.

7220. But if the weather were very wet and the difficulty occurred on every trip, would it not afford a great chance to dishonest conductors? To some extent.

Traffic
Inspector
F. O'Brien.
19 Sept., 1888.

7221. Whenever it is wet a dishonest man might say, with a shrug of his shoulders, "It is wet weather, my punch is plugged up; you cannot expect the two things to agree"? It is not absolutely free from that objection; it is a feature in the San Franciscan system from which the Melbourne system is taken.

7222. We have had this system fully explained to us by a gentleman who has been engaged upon the trams in America, and who assures us that on almost all occasions the punch agrees with the collections, and if it does not agree the man is simply told to pay up? No doubt it is so; it is so in Melbourne.

7223. But in these places where there is perhaps more rain than there is in Sydney, how is it that they have not met with the difficulty you mention? It does not often occur.

7224. What does occur? Merely that the tickets get wet through being carried outside. It would not be so bad in my system, because the tickets would be carried in a book.

7225. What happens to the punch? It gets clogged up so that the piece taken out of the ticket by the punch does not drop into the receptacle.

7226. *Mr. Brock.*] But the books in which your tickets were contained would not get wet? No.

7227. In our cars the men could always be in shelter? Yes.

7228. *President.*] In your system you would have different books for different lines? Yes, and they would be marked from one section to another.

7229. Is this your own system? No, Parkinson, one of the men on the North Shore line, who has worked under the Glasgow system, the San Franciscan system and the Melbourne system, advocates it. About twelve months ago I was trying to get the Melbourne system brought into use on the North Shore line. I had several conversations with Parkinson, and he told me how the whole thing could be done. His opinion is that the Melbourne and Glasgow systems are the two best. He tells me further that in the Melbourne system the selling of the tickets is the one weakness; the conductors sell at 2s. 9d. per dozen, and there is nothing to show whether the conductor is paying in a 3d. fare or one of the tickets at 2s. 9d. per dozen; he punches the slip, and it shows the value for 3d., or one of these tickets, but the ticket itself, and that is the weakness, is not punched.

7230. He punches the slip? For 3d. or for one of these tickets. He gets 3d. in another direction, and instead of paying in the 3d. he can pay in the pay which can represent the same thing.

7231. You mean that a man may withdraw 3s.-worth of cash and substitute tickets for it, thereby putting 3d. into his own pocket? Yes.

7232. *Mr. Brock.*] Is there not a different slip for cashing tickets? No, it is the same.

7233. *President.*] Are we to understand that the system you advocate is the Glasgow system in its entirety? It is substantially the same, except that the book is substituted for the loose tickets.

7234. Your system involves a perforation and a butt? Yes.

7235. Where do the tickets come from in your Glasgow system; where does the conductor hold them? He carries them loose in a bag and puts the cash into his pocket; then there is the double check with the bell punch; he must punch every ticket as he hands it to the passenger.

7236. Do you think the public are so careful that a really dishonest man could not give them tickets without punching them? I daresay he could.

7237. Or on the other hand that he could not pick up some of the tickets and resell them? That is just what they used to do here, and what they are doing now at North Shore.

7238. How do you obviate that under your system? You could not help it to a certain extent. The system is not absolutely perfect; you must necessarily trust to some extent to the conductors. We sadly need some more outside supervision; a conductor can do almost as he likes from the time he leaves Bridge-street until he comes back again. There is no one to jump on to the cars and check him in any way; to watch him, or to look after him. The system which prevails in Melbourne is found to work well in that direction; some of the older and trustworthy conductors get 6d. a day extra, and anything they notice on the road they immediately report. This is known to all the men, and the system works very well.

7239. They have a sort of monitor conductor? Yes. If a man is reported for doing anything wrong you can employ a strange detective and that detective will have a good chance of bringing the thing home to the man.

7240. I suppose they have the same system of uniform inspectors as that which exists in New York? Yes, they can get on to a tram on any part of the journey if they have reason to suspect a man and can count the passengers.

7241. Do you think the system you suggest could be worked well on crowded trams? Not on crowded trams as we understand them, but it would answer on the new 70-passenger cars and on the single-decked 60-passenger cars. One conductor would be required for each car at a busy time, but there would be a considerable saving on the present cost of tickets and that would go far to meet the expense.

7242. You believe in doing away entirely with upper decks? Yes.

7243. Don't you think that a system which would place the registration of the cash received entirely beyond the conductor would be a good one? Undoubtedly.

7244. An automatic system? If such a thing could be done it would be a grand thing.

7245. That is to say that the passenger would have to put the money in for himself, and as it passed through the machine it would register itself so that when the conductor brought in his returns he would have a certain number of pence against him on the inside of the register and that amount he would have to pay up. Any system which would prevent the conductor from handling the cash, which is always a temptation, would be a good thing.

7246. Suppose the conductor were allowed to handle the cash to the extent of giving change out of it; you would not like that? Not if a better system could be arranged. I have heard of a great number, but I do not know of any such as you suggest in existence at the present time.

7247. You understand what I mean about the automatic part of the machine; you understand that every fare will have to be deposited in the machine in the shape of a penny. To follow out your view it would be necessary for a man to carry all these pence about with him; if he had not access to the cash for the purpose of giving change? Yes, I see that.

7248. That would be a serious objection, because a conductor would have such an enormous weight? Yes.

7249. But if a system could be devised in which the automatic registration would be so correct, that you could allow the pence to flow into the conductor's own hands so that he might relieve himself by giving change as he went on, you would approve of it? If such a machine could be got it would be well worth trying.

Traffic
Inspector
F. O'Brien.
19 Sept., 1888.

7250. You like the idea, but you would also like to see if it could be accurately worked? Yes; there is a Berlin system I believe, something like what you have described, but the tickets are printed from a roll carried on the conductor's breast. The tickets are dated and obliterated in one process.

7251. I suppose you are of opinion that the bus system of locked boxes is the best if it could be applied? It is the best check for busses. We tried to get it in bags and boxes, but we could not work it out on account of the rolling stock.

Frederick Oakes recalled, and further examined:—

F. Oakes.
19 Sept., 1888.

7252. *President.*] We have sent for you to ask you one or two questions about the way in which you deal with the registers for the racecourse. When a conductor is going out to the racecourse he brings in his register to have it read so that he may start clear for the shilling collection? Yes.

7253. Does it ever happen that a man after having had his register read for the racecourse has come to you and said, "Oh, I did not go to the racecourse after all—I went on to the Botany line; therefore I can give you only the ordinary fares? It would not occur in that way, but this might happen:—A man would run a trip to the racecourse with a register which we had read, and he would afterwards bring it back, have it read again and return to the racecourse; while lying at the racecourse he might be sent on to Coogee to bring in passengers from there, and in that way the fares would get mixed.

7254. What is the sense of that? There is none at all that I can see.

7255. What would you do in a case of that kind? We have always made the racecourse money right, and have given the surplus to Coogee.

7256. But how could you make the money right? A conductor going out to the course in the afternoon would have only a few passengers. The clerk would have come in from the course, but if he had been there the man would, I suppose, have had his register read before he went on to Coogee.

7257. Do I understand that the registers are read at the course every trip? Yes; at each end on race-days.

7258. You think that if a clerk were at the course all day this mixing of tickets could not occur? Not if the register was read.

7259. What guarantee is there that the conductors who go to the course hand in their returns to the clerk every trip? There is no guarantee at all.

7260. The man need not go near the clerk at all? I do not think he could avoid that because directly a tram arrives we are expecting the conductor.

7261. What is the average number of conductors appointed to the racecourse? About twenty I should think.

7262. And out of that average how many having been appointed would not go to the course but would go upon some other line? I have never known a man to do that.

7263. Is it not a fact that on nearly every race-day after the men have had their registers read for the course at least two of the number are sent somewhere else by the foreman? I do not know that has been the case; I have known them to be sent to pick up at the Agricultural Society's ground, or at the Association Ground.

7264. You prepare a register for a racecourse and the conductor goes away; when he comes back to you you have him booked for the racecourse? I should not book him until the returns were earned, because the man after having his register read might return to the yard, and then be sent somewhere else.

7265. That is just the information I have been endeavouring to obtain. What is the object of the special reading of the register when a man goes to the racecourse? It is read because there is a special fare.

7266. And yet you seem to think that it does not matter two straws whether the conductor who has had his register read goes to the racecourse or somewhere else? I did not say that I think; but after a man leaves my window he may be sent on to another line. If that were the case the only difference would be that his register would be read for pence instead of shillings.

7267. But suppose that the man, in telling you that he had been put on to another line, told a lie;—suppose that after all he had really been to the racecourse, and that he had pocketed 11d. out of every fare? Of course he could do that; that could easily be done.

7268. But have you never drawn attention to such a monstrous state of things? I think attention has been called to it almost every time there have been races.

7269. Still you have continued to take the man's word that, instead of going to the races, he has been sent to Botany, for instance? That is easily proved by the man's takings; his tickets will prove that.

7270. Why? If he went to the racecourse he would not have perhaps forty-eight tickets in his bag, but if he went to Botany, he would have to have about 1,500. Then a man coming from the racecourse would have to have his tickets in larger blocks on account of the number required for the fare.

7271. *Mr. Brock.*] But suppose the man makes a guess at the probable quantity of tickets returned by a Botany run at that particular time of the day, and uses his racecourse cash to make up the deficiency in the tickets, and then puts the tickets into his bag? Of course he could do that.

7272. But he would not make more money on the Botany run than on the racecourse? No; but he would take more tickets.

7273. *President.*] The probability is that at that period of the afternoon the run on any other line would be a light one? Yes.

7274. When men have made this statement to you and have asked you to consider their rings penny-rings instead of shilling-rings, have you not considered it necessary to test the statement? Yes; and I think I have frequently done so. I think that on almost every holiday since I have been in the Department attention has been called to this mixed fare business—that is, to conductors going on to two lines, the racecourse and another line, and getting their fares mixed. The foreman has been instructed, I believe, not to allow it.

7275. But this is not a question of mixed fares. A man comes to you really under the belief that he is going to the racecourse, and when he gets down to the yard the foreman sends him somewhere else. The man goes to Leichhardt, and he says to you later on, "I have not been to the races, I have been to Leichhardt." Would you take that man's word, even supposing you thought he had acted honestly, or would you feel disposed to question the foreman? I might do so.

F. Oakes.
19 Sept., 1888.

7276. Mr. Primrose says that on an average two men would be put in this position on almost every race-day, and that no inquiry would be made into the truth of their story? I think you have misunderstood Mr. Primrose. What he means, I think is, that a conductor would be sent to the racecourse, and that while there he might be sent on to Coogee.

7277. We have had that statement from him as well, but there is this other distinct statement, that out of an average of twenty men on the racecourse every race-day a couple are turned off, and are told to go somewhere else, and that their story is invariably accepted? I cannot remember one case where the thing has occurred exactly in that way, that is when a man has had his register read for the racecourse and has then gone straight away on to another line. I remember dozens of cases where men have been sent to the racecourse and have then been sent on to other lines before their registers were taken.

7278. You have reported cases in which fares have been mixed have you not? Yes.

7279. Can you refer us to any of these reports? I have not reported it in writing.

7280. Whose attention did you call to the matter? Mr. Tyrer's and Mr. Roberts'.

7281. Is Mr. Tyrer aware of this? Yes; he has always endeavoured to obviate it, and has said that we should try to avoid it, but sometimes when a conductor has been lying out at Randwick and all the people almost have come in from the racecourse, there still being a lot of people at Coogee, the foreman has sent him on to Coogee to bring those people home.

7282. Why could not the foreman read the register and afterwards give you the reading? I do not think he could understand the register.

7283. But it would be quite possible to insist that there should be someone there to read the registers to meet cases of that kind? Yes.

7284. The clerk who reads the registers at the racecourse sends in his return? Yes; he brings it in when he comes.

7285. It is said that the men need not go to this clerk, and that he does not look after them? When I am out there, and I am there a great deal, I always see how many conductors there are on the trams, and then I see that their registers are read.

7286. *Mr. Brock.*] We are told that a conductor could sneak about one trip out of five for himself? I do not see how that could possibly be done if he reads his register.

7287. But you have heard of registers being faked? Then he might take the whole lot.

7288. You have read the registers at the racecourse yourself sometimes? Yes; and I have always taken care to ascertain who the conductors were.

7289. *President.*] Mr. Primrose led us to suppose that a man could avoid getting his register read at Randwick, and that he could then come back to the Sydney office and declare that he had been upon another line. Mr. Primrose has admitted that there would be no check against such a thing as that? Mr. Primrose has not been to the course I think and probably does not know the system. The clerk would naturally be expecting a conductor from each tram as it arrived.

7290. But would he make inquiry if the conductor did not come to him? Decidedly.

7291. How many conductors would there be? Well, I should inquire how many there were. Of course if there were two in the swindle one might drop off at Darlinghurst. There are two receiving clerks at Randwick besides myself. All that I do there is to look out for the conductors.

7292. You do only the reading and the other man looks after the money? Yes.

7293. Who takes the cash out at the racecourse? Blackstone and one of the others.

7294. And what about the money which the conductor brings back from the racecourse? He brings back nothing. He runs back empty. If two men come out to Randwick on to a car they would not come so quickly as to render it likely that we should miss them. There are long intervals between the trams, and we are doing nothing but reading.

7295. Then there is no need for reading at the Sydney end? No; except when the people are coming home from the races. I ought, perhaps, to explain, that under ordinary circumstances a man lying at Randwick would have his register read before being sent on to Coogee.

7296. What time do the readers leave? About 2 o'clock.

7297. A man arriving at Randwick after that time and being sent on to Coogee would not have his register read? No.

7298. But at any previous time of the day his register would be read and his cash would be taken? Yes.

7299. So that in point of fact after 2 o'clock the Department is at the mercy of the conductors? Yes.

7300. Would it be a Randwick tram which would go on to Coogee? A tram would be sent out to the races in the afternoon. It might collect a few stragglers, for which, of course, shillings would be collected. The tram would lie at Randwick waiting for the people to come into town. Presently the foreman might find that he had several surplus trams, and hearing that there was a great crowd at Coogee, he would send one of these surplus trams light to that place to bring a Coogee load back to Sydney.

7301. Is there no one at Coogee who could read the register as for the racecourse? No.

7302. Surely on such occasions it would be worth while to have a man there for the purpose? Perhaps.

7303. *Mr. Brock.*] If you saw two loaded cars come to the racecourse would you be satisfied if only one conductor turned up? No; I should ask the conductor if he had a mate, and I could tell immediately from the returns if there was a swindle.

7304. I thought you said that one man might get off at Darlinghurst, leading you to suppose that there was only one conductor on the tram? I do not think that could be done without detection now. I think of it, because I should discover from the returns at Randwick that there was something wrong. What I meant was that the man himself would not be missed if the other conductor said that he had no mate. I have been out at the racecourse a great deal—almost every time there have been races—and I am pretty certain that no man could come out there and return to Sydney without his register being read.

William Hannam recalled and further examined :—

- Conductor
W. Hannam.
19 Sept., 1888.]
7305. *President.*] We have a few more questions to ask you. You remember relating to us the circumstances under which Musgrave made certain overtures to you on his car on one or two occasions? Yes.
7306. We want you to fix the date of those overtures as nearly as you can? I do not know how I could do it. I might, perhaps, come somewhere near it by looking at my book.
7307. Perhaps I can help you. We understood you in giving your first evidence to say very distinctly that it was during the retrenchment period that Musgrave was on your tram? Yes.
7308. Are you absolutely certain of that? I am certain that he was not on the cars.
7309. That he was not at work? I can swear that he was not on the cars at the time.
7310. But he might have been car-cleaning? No, he was not. I would not be quite sure, but I think he may have been on the water-tanks at the time. My impression, however, is that he was not then on the tramways at all.
7311. It would be somewhere about the time that he first came back you think? Yes.
7312. That would be about December, or the end of November? Somewhere about that time, but I think he was off the trains altogether when he spoke to me.
7313. *Mr. Bröck.*] Would it be shortly before he came back? Yes; I know that it could not have been very long before.
7314. *President.*] You remember swearing the other day that you collected a fare from that young woman who made the expedition with you to Glebe Point? Yes.
7315. When did you collect her fare? Soon after she got in the car; she got in at Market-street.
7316. Where would your tram have been when you collected the fare? I do not generally go for a fare directly a passenger takes his seat. Perhaps I might let them go past the first stopping-place.
7317. Had you collected any fares before this young woman got in? Yes.
7318. When did you next go to collect fares? We generally commence at Hunter-street, and then we collect again at King-street. We might go as far as Park-street before collecting again.
7319. You think that is where you collected this young woman's fare? Yes.
7320. You are absolutely certain that when you went to the car to collect other fares after she got in you collected hers? Yes, I do not think there were above half-a-dozen passengers in the car.
7321. And if it has been sworn positively that you went round to collect the fares and that you never attempted to collect one from her, would it be true or false? It would be false. There is a matter I should like to mention, although I do not know that there is anything in it: It was somewhere about the morning after this happened that Mr. Roberts called me off the car and told me about it. He said, moreover, that I had taken this woman out with me; and had had connection with her at Glebe Point. I told him that it was false and that I could bring both the driver and the fireman to prove that it was false. He said that he had got an anonymous letter containing that statement. I said, "Bring your charge against me, and I am prepared to disprove it." I never heard anything more of the matter until now.
7322. Who were your driver and fireman? Rose and Brophy. I may say that we get very little time on the Glebe Point runs.

Present:—

A. RICHARDSON, ESQ., PRESIDENT.

R. W. THOMPSON, Esq., M.P., | F. A. BROCK, Esq., J.P.

John Walsh recalled and further examined :—

- J. Walsh.
2 Sept., 1888.]
7323. *President.*] You are not surprised, I suppose, that we have sent for you again? Well, yes I am.
7324. Did you not see a certain letter in the *Daily Telegraph* on the 12th September last? Yes.
7325. Did you not feel sure that we should require you to confirm the statement which you had made to us? I did not think you would.
7326. Have you seen Mr. Harris since you were here? No.
7327. You have had no conversation on the subject? No.
7328. He has not charged you with having made a certain statement to us? No.
7329. How long ago did this matter to which you previously referred occur? To the best of my knowledge it was about three and a half years ago.
7330. When did you first mention it? The first time I mentioned it was about five weeks ago.
7331. After keeping the matter snugly in your own breast for three and a half years you suddenly bring it out;—what led you to do so? Well, Greeley was telling me and another gentleman about how the tram-guards were defrauding the Government.
7332. Where were you? In an hotel.
7333. Where? At Woolloomooloo.
7334. Greeley was there, you say? Yes, and he was mentioning about certain men, and how he had caught them in the act—something like that. Then I told him about this matter, but I did not mention any name.
7335. You told him that you were not surprised, because you knew all the time that there was something wrong? Yes, and that I saw it on that occasion, anyhow.
7336. *Mr. Thompson.*] You refer now to what you have already related to us? Yes.
7337. *President.*] You are aware that Harris has denied this matter absolutely? Yes.
7338. He says that it is a pure fabrication? So I see.
7339. He is anxious to know who gave the information, so that he may take proceedings against the person? Yes.
7340. Now it seems to us that you ought to be on your mettle to prove the statement you have made? How am I to prove it? There are only these words that I have said; I have told you all I know.
7341. Was no one else there at the time? Yes, there was somebody else in the bar.
7342. Who was it? I do not know.
7343. Under what circumstances were you in Harris' hotel? I went in to have a drink.
7344. In the ordinary way? Yes.

7345.

J. Walsh.

20 Sept., 1888.

7345. But you were out of your beat? No; I was living there, at the time
7346. When did you leave Redfern? About three and a half years ago.
7347. Are you still on friendly terms with Harris? The best of terms.
7348. When did you meet him last? I have not seen him for two or three months. I last met him at the races.
7349. We understood you to say that when you saw Harris doing this thing you gave him a caution? Yes.
7350. What did you say to him? I told him that it was not a right thing to do.
7351. You did not say that before any third party? No.
7352. Not before the conductor? No.
7353. You went into the back parlour? No; I stopped there and the conductor went out.
7354. What did Harris say? I could not exactly tell you now what he did say.
7355. Did he endeavour to make out that the transaction was a straight one? I do not think he remarked anything.
7356. In what shape were the tickets? They were loose.
7357. How did the conductor bring them; were they in a bag? He took them out of his pocket.
7358. They were unmistakably used tickets? Yes.
7359. Harris made no attempt to dispute that point? No; he did not.
7360. You spoke to him again about it did you not? No.
7361. What did Harris say when you gave him this caution? I could not exactly say.
7362. Did he say that you were not to interfere, and that it was no business of yours? No.
7363. He took it kindly? Yes.
7364. Did he say that it was risky, or did he say that he would do it again if he got the chance? No. I do not think he intended to do it again.
7365. Did he say he would not do it again? Since I cautioned him I think he said, "Oh, I do not do this thing." Those as nearly as I can recollect were his words.
7366. On the 22nd of August you said that Harris, in reply to you, said he would not do it any more? Yes; I think those were the words he might have used.
7367. Did you not, when you mentioned this matter to Greeley in the public-house at Woolloomooloo, tell him that the man was still a conductor, and that you could identify him if you saw him? I did not say that he was still a conductor.
7368. But you said that you could identify him if you saw him? I could form a pretty good idea. It was some time back, and the man was in uniform then.
7369. You told Greeley that you yourself had bought tickets from Harris? One occasion I bought three in a tram.
7370. Was that some time after? Some time after.
7371. Some of these very tickets I presume? I could not say. You will often see one person in a tram oblige another with tickets in that way.
7372. You have not had any misunderstanding or quarrel with Harris? No.
7373. I suppose the idea that you dreamt or invented this story is to be ridiculed? Well, I don't know. I don't think myself that I could have invented it.
7374. You are absolutely certain that the thing did take place? Yes. I saw the tram conductor pass the tickets over to him.
7375. Then what was the action taken—was a receipted bill given? No. The other party I referred to in my evidence made the remark that a bill for 25s. was settled by the transaction. This is what the other man told me outside.
7376. He said what? That the conductor paid a bill of 25s. with these tickets.
7377. You had a talk with this other man then? Yes, for about 2 minutes.
7378. Was this after you had warned Harris? I did not warn him then; the man and I came out together, and we stood there talking.
7379. Can you not remember, for your own sake, who this man was? I could not say who he was.
7380. He evidently knew more about the transaction than you did? Yes; he was nearer to Harris than I was.
7381. He was at all events able to give you information as to the amount settled by the tickets? Harris did not tell me that a bill was paid; that was only what the other man told me.
7382. Did it not astonish you when you saw these tram-tickets handed to Harris, and nothing given in return? I saw the conductor take some liquor away.
7383. *Mr. Thompson.*] In his pockets do you mean? Yes, a couple of bottles.
7384. *President.*] Your impression was that he was buying this liquor with the tickets and not paying off his score? I could not say exactly, but I fancied somehow that he was buying grog with the tickets.
7385. When you had your conversation with the other man who was present you were made wiser;—you found out that they were really given to pay off an old score? Well, that is what the man said.
7386. *Mr. Thompson.*] Was it in consequence of your talk outside with this man that you afterwards went to Harris and told him it was a wrong thing to do, and that he ought not to do it again? Yes; it was only what any man would do under the circumstances.
7387. As one friend would act towards another? Yes; this man outside said that the conductor was knocking six or seven quid a week out of the thing.
7388. How long is it since you have seen the man who made this statement to you? I have not seen him since that night.
7389. He was not an acquaintance of yours? No.
7390. *President.*] Do you mean to tell us absolutely that Harris has not challenged you with this matter? He has not.
7391. *Mr. Brock.*] And you do not think he suspects you? No; because if he had suspected me he would have come down to me. I have generally gone into his place on Tuesday, and then he is always asleep.
7392. Are you surprised to hear that the moment the thing was mentioned to him he asked whether you were the informer? Yes; I may say that I hope my name may not to be used, because I am in business and it might injure me very much.

- J. Walsh. 7393. You place us in a false position;—we do not care about having letters of this character in the papers? Of course he ought not to have put it in at all.
- 20 Sept., 1888. 7394. *Mr. Thompson.*] You observe that the writer says, "I trust, as an honorable and upright man, I never gave any person to think differently?" Yes, I saw that.
7395. *President.*] Did you not say that you had not seen Harris for three months? As nearly as I can recollect.
7396. August 19th is just one month ago? Yes.
7397. Do you say positively that you were not with Harris on that day one month ago? Yes; I think I was talking to him then.
7398. That is not three months ago;—you will not do yourself any good by keeping anything back? I am not keeping back anything.
7399. Be as frank as you can in the matter; you see that it is all your own doing; we did not ask you to make the statement; you made it voluntarily to Greeley and to others; you let it sleep for about three years and a half, and then you suddenly came out with it five weeks ago? I am very sorry I ever spoke of it. I have never suffered so much mentally as I have suffered over this matter.
7400. But there could be no utility in bringing up a thing of this kind unless you were prepared to follow it out? Well of course Harris's word is as good as mine as far as that goes.
7401. *Mr. Brock.*] I am surprised that you think that Harris's word is as good as yours after the statements in his letter? Well that is now how the matter stands.
7402. The letter gave to your statements the most absolute and unqualified denial? I am aware of that.
7403. The matter is bound to come out; Harris suspects you, and he is bound to have it out with you; the best thing you can do is to allow the Commission to make use of your name? I do not care to do that.
7404. *President.*] You had a conversation with Harris about the time you gave your evidence here? I recollect that I went to see him just before I gave my evidence.
7405. *Mr. Thompson.*] You have done absolutely the right thing, and not only for your own sake but for the sake of public justice, and in order that right may be done you should do all you could in the matter, even although you were to break friends with Harris? I do not want to be had friends with anyone.
7406. I may tell you, with regard to this Commission, that you are just in the same position as though you were a witness in the Supreme Court; you have precisely the same protection? That may be.
7407. *President.*] If the conductor were brought before you now could you be sure that he was the same man? I might be. I have told you the truth in the matter. It is not at all likely that I should come here with a lie; it would be of no benefit to me.
7408. Did you not say that you could point out the man, because there was no other man on the trams like him? I believe I said I could point him out.
7409. You have often been with Mr. Harris? Yes.
7410. Have you often seen him taking 'bus tickets in part payment for drinks? Not 'bus tickets.
7411. You said in your evidence that a conductor in the case lived nearly opposite the place? I said somewhere about there, I think.
7412. Did you know the conductor well? No; I had seen him only once before that. I could not say where he lived, but it occurred to me that he was living somewhere handy, because it looked as though he had just come off the tram and was getting a drink before going home.
7413. Where did you live when you were at Redfern? 116, Young-street.
7414. What business had you? I had the same grocer's shop, but my private residence was at Redfern.

John Martin called in, sworn, and examined:—

- J. Martin. 7415. *President.*] Where do you reside? 134, Bourke-street, Woolloomooloo.
- 20 Sept., 1888. 7416. What is the nature of your business? I keep an hotel at the present time.
7417. We have received a communication to the effect that you have it in your power to give us some valuable information with regard to the matter of the tram frauds generally;—have we been correctly informed? Quite the reverse. I know nothing whatever about them; it is four years since I left the Department. At that time I considered that the tramways were honestly and straightforwardly conducted. I was in the Service three years.
7418. Did you resign? No.
7419. How did you come to leave? Through no fault of my own; through a raffle I had in the Department.
7420. Was there anyone else concerned in the raffle? No; I was the only one.
7421. But you have no information to give us about the recent frauds? Nothing at all, more than this: that one evening, where I am living now, I heard Mr. Walsh giving some information to one of the conductors about something which had taken place at Redfern.
7422. What was the nature of it? Greeley was at my place, and he was telling us about the tramways, and as to how the tramway frauds were carried on. Mr. Walsh happened to be there, and he said, "I believe there are a lot of crooked things among the conductors," or words to that effect. He said, "On one occasion I myself saw a conductor giving a publican tickets to pay a score." I believe that is what he said. Whoever has told you that I could be of any more information has made a great mistake.
7423. Did you hear Walsh name the publican at whose house this was done? I heard him name the sign of the hotel; but I cannot remember that he made use of the man's name at that time.
7424. Was it the "Man of Kent Hotel"? Yes, that is the name.
7425. Did you see a letter in the *Telegraph* on the 12th of the month from the landlord of that hotel? I believe I did; I think I saw it in the *Evening News*.
7426. When you read it did you connect the two things together? Yes. I took it that it referred to the same thing which had been mentioned at my house.
7427. *Mr. Brock.*] When Walsh mentioned the matter did you know the landlord of the "Man of Kent Hotel"? No.
7428. But you could have found out? Yes, if I had gone up there; but the thing had nothing to do with me.
7429. Walsh was not keeping the thing any secret when he mentioned the name of the hotel? No; he spoke it out openly.

7430. *President.*] Were many others there at the time? No; there were only three of us.
7431. *Mr. Thompson.*] Was your dismissal from the Service in any way connected with a man named Wilson; was he mixed up in the matter of the raffle? Not that I know of.
7432. Did you know Wilson as a conductor? Yes.
7433. Did he not leave the Service about the same time as you did? I fancy before I left it, but I could not be sure; it is four years ago.
7434. You were not mixed up together in the matter? No.
7435. It was said with regard to your dismissal that it had something to do with some studs which it was said belonged to Mr. Roberts? Yes; I believe they did say that.
7436. I should like to know how it is possible you could be dismissed from the Service from the mere fact of your having held a raffle for a set of studs in your own house? It was not in my own house.
7437. Where was it held? In an hotel, George-street West.
7438. Was it the "Hunter River Hotel"? That I could not say.
7439. How could exception be taken to your conduct merely for raffling a set of studs? The matter was not in my jurisdiction or I would not have decided in that way.
7440. How did the inquiry come about? I do not know. Some busybody Member of Parliament brought it up in the House; anyhow I paid the penalty by having to leave the Service.
7441. You were made a sort of scapegoat? Well I know that I suffered.
7442. Suppose we received a communication of this kind: "If you get hold of John Martin, late conductor, he will, if put on his oath, furnish you with some valuable information *re* the suspected frauds and in days gone-by"? I cannot give you any information whatever; I know nothing whatever about any frauds in the Department. Whoever wrote that letter to you made a great mistake.
7443. *President.*] Do you know Mr. O'Brien in the Department? Yes.
7444. Did you know him at the time of the stud matter? He came in the Department a little before that.
7445. Was he connected with the case? I believe he had something to do with it. He did not examine me, but I believe he was gathering all the particulars he could.
7446. *Mr. Thompson.*] How long after you left the Service did you take the hotel? About twelve months afterwards.
7447. And during your tramway conductorship you were not following any business? No. I had been an hotelkeeper before I came into the Department. If I could give you any information which would enlighten you on the subject of the frauds I would consider it my duty to do so, but I cannot.

J. Martin.
20 Sept., 1888.

Francis Joseph McMahon called in and further examined:—

7448. *President.*] We have sent for you again, because you have expressed a wish in writing to one of the Commissioners, Mr. Thompson, to come before us again and make a statement, but before you do so I would direct your attention to the evidence which you gave on a previous occasion. You then told us that you had no information to give, and that you knew absolutely nothing in connection with the frauds? Nothing conclusive.
7449. We are quite prepared to hear any statement you have to make, but do not let it be a long rambling one, having nothing to do with the question at issue? I will be brief and to the point. When I first attended this Commission I thought that, as a matter of etiquette, I should only answer questions, and that I should answer them to the point, and that if I could not state anything conclusively it was no use my stating it at all. I explained that to Mr. Thompson as soon as I could see him afterwards. I said I thought I should not be permitted to make general statements.
7450. *Mr. Thompson.*] When you were here before I asked you whether you were in a position to give us any information which would take us one inch beyond that we already knew, and you said in reply that you were in the dark as far as that was concerned? Possibly.
7451. How is it that since you were here, and were evidently unable to give us any information, you have found yourself in a position to give us some? I had the same information then as I have now, but I did not think I had a right to do what I should like to have done. I was told by one of my fellow workmen, Conductor Reach, that at an inquiry of this character we had only to answer questions.
7452. *President.*] But when you heard me trying to drag things out of you, trying to get any possible information out of you, you did not think it your duty to give that information? Not to make a statement.
7453. *Mr. Thompson.*] I put it to you as broadly as I could in the question to which I have referred; noting that you had taken an active part in the matter; I supposed that you would be able to tell us something of value. I want to do so to-day.
7454. I must confess that I was infinitely disappointed to find that you could not tell us anything beyond what we already knew? Well, I am perfectly willing to make a statement to-day.
7455. *President.*] What is the information you wish to give us now? I do not wish to blame the Board in any way for not stating anything, but as I took such a prominent part in the deputation and in the meetings I thought it was my duty to state my reason for doing so. The reasons I advance now are not conclusive. I can only show you why I took such a part. I would have done so on the previous occasion, but Reach informed me that I had only to answer questions. As soon as we saw the statement in the *Star*, the guards were all very indignant about the matter; several of them spoke to me, and we decided to hold a meeting for the purpose of vindicating our characters. At that meeting some reference was made to some officials in the office. Stack referred to Musgrave being a friend of Colls', and riding about with Colls on some occasions, which he said looked very suspicious.
7456. You are sure he said on some occasions? Yes; I think that is the remark he made. With reference to Ferrier being dismissed in connection with this matter I may say that I knew Ferrier for some time as an assistant guard. At one time, when we had our concerts at the Protestant Hall to inaugurate the fund of the Sick and Accident Society, of which I am the President, I sold Ferrier a ticket, and it was a couple of months before I got the money for it. He was always borrowing money whenever

he could, and when I heard he had been dismissed for doing these frauds I thought some mistake must be made about it. I looked at it in this light, that it was a curious thing that this man should always have been borrowing money when he was making from £10 to £15 a week. Then as to Musgrave, he was very careless about the collection of his tickets; he was not particular at all, and one of the drivers, Batten, told me that when he was on the tram with Musgrave, tickets were frequently given to him. It seemed to me that this did not look like fraud, as I thought that if he was committing a fraud he would be anxious to get as many tickets as he possibly could. That was my own calculation. These are some of the reasons why I took such an interest in elucidating the matter publicly.

7457. We have not seen much elucidation yet? In my remarks at one of the meetings I referred to these matters.

7458. You may have made some remarks at the meetings, but so far we have not seen much elucidation of the matter? I endeavoured to do so at the meeting—to show that it was not possible for the men to make the number of tickets which was alleged in the Press. I am still of that opinion. I do not think it is possible for any man to go ringing his bell and faking it, as it were, in the way it was talked of.

7459. Have you come here as an advocate of the men who have been dismissed? No; I have not seen one of them since I was here.

7460. I did not ask you that. Have you come here simply for the purpose of advocating the cause of the men who have been dismissed from the Department? No. I am sorry that I neglected to state these matters when I came first. I was aware that this matter might get into the House, and that it would be seen that M'Mahon had taken a prominent part in the meetings and had made no reference to it at all at the inquiry.

7461. Although you had such ample opportunity to do so? I will not say that I had not; it was a mistake on my own part. I admit that I had every opportunity.

7462. After having every opportunity for doing so you have heard something important which you have not yet given us? I only wanted to show why I took such an active part in these meetings.

7463. You took an active part in the meetings because you were convinced these men were innocent;—is that it? I thought there was something wrong somewhere—what it was I could not exactly state.

7464. *Mr. Thompson.*] But you decided that Musgrave could not do what it was said that he had been doing—making tickets? I did not think it was feasible that he should do so when he was so neglectful in collecting his tickets. It did not look to me so very suspicious.

7465. A man might be very neglectful and be a thief into the bargain? It might possibly be so; I would not dispute that, but this is one of the reasons why I spoke out at this meeting.

7466. *President.*] Ferrier being a man who was decidedly loose in money matters you at once concluded in your own mind that he could not possibly be a rogue? I would not say that he was not, but it does not look as if he were.

7467. Why so? If a man is a rogue, making £10 a week, he would be able to pay me 2s. 6d. in less than two months, and he would not want to borrow money.

7468. *Mr. Thompson.*] Did not the very fact of his keeping you waiting all that time for the money, when you knew he was getting 7s. a day, show that he was a dishonest man, having regard to his obligation to you as an officer to the society to which he belonged? I should not look at it in that light.

7469. Did you know how much a day he was getting? 7s.

7470. How much did he owe you for the ticket? Half-a-crown or three shillings.

7471. A third of his pay, and yet he kept you waiting how many months? A couple of months.

7472. Where do you think his money used to go to? I do not know. He asked me one night in the room to lend him 2s. 6d. I thought to myself, "I am a married man, and you are a single man; if you do not know how to take care of your money I will not give you any of mine."

7473. Being such a spendthrift that he had not a half-a-crown to bless himself with at the end of the week he was probably a thief into the bargain? There is a possibility of his being so.

7474. *President.*] And a gambler also, perhaps? I was not aware of that. I may have been misled in the matter by my own conclusions, thinking that he had no money. As one who had watched the thing daily, and who was in the habit of coming into contact with the conductors, I advocated that Ferrier should make a statement at the meeting. Someone brought him there, but I do not know who it was.

7475. Did you advise Ferrier to make the statement he did—to say that it was all a joke—all a hoax? No.

7476. Speaking for myself, I do not consider that you have given us any information of any value since you came into the room. You may have something more to say. I think it is rather singular that as an employee you should think fit to express the opinion that these dismissed men have been improperly dismissed? I did not say that; I do not wish to imply that in any way.

7477. Your statement amounts to that or to nothing? It may be utterly worthless as far as its being a statement is concerned. All that I wanted to do was to vindicate my conduct.

7478. *Mr. Thompson.*] You say in your letter, "I beg to state that when I was before the Board I thought I had to answer questions only, as I have since explained to you. If you will recall me I will go into the whole matter before the Board of Inquiry." What has the vindication of your conduct to do with the whole matter. Did you only wish to come here and say that in your opinion Musgrave and Ferrier are not the dishonest men they are supposed to be? No. I came to tell you why I took such a part in these meetings.

7479. We know why the meetings were held. Some of the men who were indisputably honest thought that the reports in the newspapers reflected on the men as a body. That I suppose is the reason for the meetings? Yes.

7480. Cannot you give us any information beyond that which you are giving us? It would be hard to get at the whole of this matter, because there is so much favoritism and cliquism in the Department.

7481. Never mind the favoritism and cliquism. We are a Royal Commission appointed to get at the very root of this matter. I am certain there is something on your mind which you have not let out. Let us know what it is, not only for your own sake but for the sake of your brother conductors. It is entirely through the efforts of yourself and your brother conductors that this Commission has been brought into existence, and you know from what I said to you before that I cannot help thinking that you and the other men have not done your duty by yourselves and by the public unless you tell us down to the very root of the matter all that you know, all that you have heard, and all that you suspect. If you have anything to say say it out now, or for ever after hold your peace? There is nothing I could say.

Conductor
F. J.
McMahon.

20 Sept., 1888.

7482. *President.*] What do you mean by the expression favouritism or cliquism? Well there is a lot of favouritism in the Department.
7483. How—in what respect? Men are favoured in many respects.
7484. Who are favoured? I cannot mention individuals, but some are.
7485. Are you one of the favoured ones? I am not.
7486. You are just the reverse? I do not want favours from anyone; I only want fair play.
7487. You think you are quite the reverse of a favourite one I imagine? Yes.
7488. You think you are an ill-used man? No; I have never been ill-used.
7489. But you think yourself ill-used by others being favored? Others may be favoured and still I may not be ill-used.
7490. Are you getting fair play? I have nothing to complain of.
7491. What kind of favouritism do you mean? There are a regular lot who are favoured. One man gets what they call a soft thing and another does not get it.
7492. *Mr. Thompson.*] Our object is to fairly cleanse this dirty pig-stye if we can, because it is dirty and it is through you men holding your tongues about the matter that the pig-stye has become as dirty as it is. If you had been content to speak when this matter had begun to be blown about it would have been upset three years ago? A man must be very careful before he speaks that he can prove a thing. There is a possibility of this that after I had made statements referring to certain persons they would be refuted and then I should get into it.
7493. *President.*] If you know anything say it. If you know nothing hold your tongue. Do not let us have any more of these innuendoes. If you have even a fair reason for suspicion let us know what that reason is and we will dive into the matter if necessary and see to the bottom of it? At the time the tearing-up system came into force I was in favor of it. I think it was far better than the ringing off of the tickets. I thought the bells were wanting and were no good. I thought that they were an ineffectual system because they could not be depended upon in any way. The first morning we went to tear up tickets it was given out at the office: "How do you like it?"
7494. By whom? By the Superintendent. I said that I liked it very well; that I thought it was a very good system. Others said that they did not like it, and I heard it down in the yard frequently that the boss was against the tearing-up system, and as he was against it it was not likely to be a success. In my opinion the tickets were torn up and strewn about the streets indiscriminately because it was given out that the boss was against the system. At that time, judging from the financial reports which I saw in the papers, I think the trams were paying better than they did when the bells were in use. That is one of my reasons for thinking that there was something wrong somewhere about the bells, and that is why I condemned them. Another reason I thought that the conductors need not go selling the tickets was that the whole transaction was in their own hands.
7495. *Mr. Brock.*] What do you mean when you say that the conductors need not go selling their tickets? Because the whole transaction is in his own keeping as it were. If he makes tickets and it is said that that kind of thing has been going on he can turn them all into money himself.
7496. Turn what into money? Turn the tickets into money without selling them to anyone.
7497. You are referring to the present system? Yes.
7498. *President.*] Go back to the tearing time;—do you mean to say that a man had not two or three times the scope for doing it under the tearing system than he has under the register system? I do not think so.
7499. What is to stop him? His own conscience, if he has got any. The public would also stop him. The public are supposed to watch him.
7500. Suppose you were upon an upper deck, how would you collect the tickets? I would take them singly, and tear them as I collected them.
7501. Did you never collect a whole side and tear them altogether? I am not aware of that ever being done, except from hearsay.
7502. *Mr. Thompson.*] Have you not heard of these torn tickets being pasted together with tissue-paper, and being sold again in shops? I have heard of it.
7503. And have you not heard that, when the tearing ticket system was in force, the tickets were torn along the perforations instead of across? I never heard that. I have heard it said that they put them down their hands in some way, but I do not believe they could do it.
7504. You yourself have heard of the various ways in which this thieving has gone on—now in one way, now in another, and you must know perfectly well, as a man of the world, that where there is smoke there is generally fire? I never got any of the tickets which were said to have been pasted together again. If they had been offered to me I should have refused them.
7505. Have you not received service-tickets? Yes.
7506. Did you not know that they were stolen? No.
7507. Did you not get them from the general public? Not to my knowledge. I would not accept them from the general public if I knew it. Sometimes there would be a Government official sitting on the top of the tram, and he would give me his ticket, and I would not question him in the matter.
7508. *President.*] I was led to understand from your earlier observations that you were very doubtful as to fraud having taken place; in point of fact, that you believed that there had been no fraud;—is that so?—
7509. You take long enough to answer a plain question? Do you want me to answer it from my actual observation?
7510. Will you answer my question? I would answer it at once if I could.
7511. I judged from what you first said that, in your opinion, there had been no frauds? I do not wish to commit myself. You must misunderstand me. I do not wish to say a thing that I do not mean to say.
7512. How long shall I give you to answer the question? I do not know whether any fraud has been committed or not, so far as I am concerned.
7513. But what is your opinion? I do not know how to answer that question.
7514. You have told us pretty clearly that you do not believe that fraud was not committed by Musgrave or Ferrier, two men who have been dismissed? I did not say that I believed that there was no fraud on their part. I said that their action at the time did not look to me as though they had been committing fraud.
7515. Do you believe that they committed fraud or not;—what is your opinion as to these two men? I could not form an opinion.

- Conductor
F. J.
M. Mahon.
20 Sept., 1888.
7516. And you have not formed an opinion in reference to the whole thing? Well, they say the frauds have been committed.
7517. Yet you go out of your way to try to show us that there was no fraud while the ticket-tearing business was on, but that there was fraud at other times? No, I am not saying that.
7518. You led us to infer that just now when you said that if the returns were examined it would be found that the trams paid better when the tearing system was in force? I think so.
7519. Would you not lead us to infer from that that the tearing system was the better check? Yes.
7520. Then what do you mean? I mean that if there were any frauds at all there would be more during the ringing than during the tearing system.
7521. Would you not really lead us to infer therefore that there was fraud of some kind? No.
7522. You gave us by inference this fact. That Mr. Roberts had been instrumental in getting the registers back, and that he was opposed to the tearing system; that he gave the men to understand that he was opposed to it, and that being opposed to it he preferred wrong to right? He may have thought that the registers were better.
7523. I should think he did; I do not know of anyone who would not think so. Do you mean to say that you do not think the registers are better than the tearing system? No; I do not think they are better than the tearing system.
7524. You think the reverse still? I do. I think the tearing up increases the medium of fraud considerably. Under the present system the tickets leave us and go into someone else's hands, that is to those in the office. There are facilities for fraud there; in fact greater facilities than there are with the conductors.
7525. You are of opinion that the frauds have taken place in the office, and not among the conductors? That is my opinion.
7526. We have got it out at last. You said just now that you had not formed any opinion with reference to fraud, but, led by the experience of your opinion as to the innocence of Musgrave and Ferrier, we have discovered your further opinion that those in the office have been committing the frauds? Well I think so.
7527. In what way? I could not tell you in what way, because I do not know further than this —
7528. Further than what? Only that the tickets go in there.
7529. Nothing further than that? No.
7530. You think that because the tickets go in there the fraud must be there? Well there is a possibility of there being frauds. There is every facility for it.
7531. Why; do you know the process in connection with the tickets? I know they are supposed to be burnt.
7532. And you think they are not burnt? I do not think so. When we held our meeting —
7533. *Mr. Thompson.*] You have heard something. I will almost undertake to solemnly swear that you have heard something and you will not tell us. If you do not tell us we shall be under the impression that you have heard something that you are still endeavouring to keep behind and in the dark, merely hinting at what you have heard and know? I will tell you all I know with the greatest of pleasure, candour, and truthfulness. I will assist you as far as I can do in answering any questions straightforwardly and as a man.
7534. Then come back to what you came here to tell us; you must know that even your suspicions may lead us to find out anything that is wrong; I do not refer to vague suspicions, but your letter to the Commission would lead us to believe that you know infinitely more than you have told us yet. Now, let us know the truth. You keep coming to the edge, like a man walking to the edge of a precipice and then retreating. As the matter stands, we may think that you are trying to make good the position of the conductors, and to make bad the position of the people in the office. If you have seen anything which has reasonably aroused your suspicions or doubts, tell it to us, like a man, and do not be fidgeting and humbugging about in this way? Well, when we bring our tickets in we simply give them to the ticket clerks, and we know nothing further about them.
7535. *President.*] Who are the ticket clerks? Sometimes Mr. Primrose, sometimes Mr. Knox, Mr. James, or Mr. Blaxland. Of course, they take the tickets out of the bags, and we do not bother any more about it, as far as the tickets are concerned.
7536. Have you ever given up your tickets to one clerk alone. Are there not two or three there? There are generally two.
7537. Therefore, if there has been fraud in the office there must have been collusion? One might go out to a call of nature, and the other might be left there by himself.
7538. Have you ever given your tickets in to one clerk only? I have not taken particular notice on all occasions. When I have noticed there have been two there, but I have not always taken notice.
7539. *Mr. Thompson.*] But from what you have seen, you believe there is an opportunity for one or the other, under certain circumstances, to deal with some of the tickets in an improper way? That is my opinion.
7540. *Mr. Brock.*] You accuse the three or four men you have named, do you? No, I do not accuse them.
7541. Do you accuse one of them? I say that if there has been fraud the facility for fraud is there.
7542. You distinctly said that you believed fraud had taken place in the office, and you named three or four gentlemen in the office who, in your opinion, had an opportunity for committing the frauds? I did not name them.
7543. You distinctly named three as being in a position in which they were likely to have committed fraud? No; there are four or five men in the office, and I would not say that it is either of them who did it. I referred only to the facilities they had for doing it.
7544. You named Mr. Knox, Mr. Blaxland, and Mr. Primrose. You say there are two more. Name them? I cannot remember two more. Mr. James takes the tickets sometimes.
7545. *President.*] Have you the slightest reason, beyond your own bare imagination, for saying that fraud has been committed in the office? No, I have not.
7546. Your only reason for mentioning it lies in an endeavour to shunt the suspicion from one class to another—from the class you represent to the class you do not represent; is not that a fact. Now be candid? I will be candid. At our meeting, of course, in refuting the statements and allegations made in the papers, I took into consideration the fact that there were facilities in other quarters besides our own, and that is the reason I spoke out at the meeting.

Conductor
F. J.
M'Mahon.

20 Sept., 1888.

7547. *Mr. Brock.*] According to you, conductors have a conscience but other people have none? Some of the conductors, I dare say, are just as bad.
7548. You said that their conscience would stop them from doing this thing? No, I did not.
7549. You would have us believe that the whole of your class are thoroughly honest and conscientious, and the whole of those in the office are rogues, scoundrels, and thieves? I would not say that.
7550. But you have said so in effect? I do not think so.
7551. *President.*] You hardly answered my last question. Is it not a fact that you are, perhaps, naturally from your position, advocating the cause of the conductors *versus* the cause of the office? I advocate the cause of honest conductors.
7552. But you have been advocating the cause of Musgrave and Ferrier since you have been in the room? I am not advocating their cause. You misunderstand me altogether; I would not do such a thing. I am not the advocate of anyone.
7553. *Mr. Thompson.*] You virtually said that neither Musgrave nor Ferrier could be a thief, because in the one instance he was neglectful and in the other he was a spendthrift? As stated at our meeting—
7554. Never mind the meeting; we have heard quite enough about that, but if you wish to refer to it further, give us exactly the facts which you gave them? I have already done so. I said that in consequence of the carelessness of the one man, and of the other in not paying me what he owed me I spoke out at the meeting as I did.
7555. *Mr. Brock.*] You said just now that you advocated the cause of the honest conductors? Yes.
7556. Who are the dishonest ones? I do not know any dishonest ones.
7557. You do not believe that any of them are dishonest? I do not believe they are.
7558. But you believe that all in the office are scoundrels? I did not say so.
7559. No, but you infer it, and it is a great deal worse to blast a man's character by inference than by straightforward talk? I did not say what you say I said.
7560. *President.*] Did you not say that you did not approve of the bell system, and that you did approve of the tearing system, because you thought it a greater check upon the office? A greater check all round.
7561. *Mr. Brock.*] You prefer the tearing system? Yes, I thought it was a better check. It was a check all round.
7562. *President.*] Were you not one of those who appealed against the extraordinary action of the Department in printing on the back of the tickets: "Please see that the ticket is torn up?" No.
7563. You think that was a perfectly legitimate thing to have printed on the back of the tickets? It did not look very nice to have that put on the tickets, but I did not have any objection to it.
7564. You do not think that any honest conductor would object? Some complained. I did not make any complaint.
7565. Do you know who complained? I could not mention anyone in particular.
7566. *Mr. Thompson.*] Did you hear any report of one of the conductors having a bell put up his sleeve which he rang instead of ringing his register bell? I never heard of that.
7567. Never? Never in my life.
7568. Tell us when you first heard of the tickets being dealt with improperly, in any way whatever. When did you first hear among the men that the tickets were being improperly dealt with by the conductors or in the office? I never heard it.
7569. Until when? Until I saw it in the *Star*.
7570. I suppose you heard at that time that the bells were faked? Yes, I saw it in the papers.
7571. You heard that the men were making money, not only by faking the bells but by not ringing at all when they took money or tickets? I saw something like that in the papers.
7572. Coming back for a moment to the receiving-room: where you say that when the tickets are received there is an opportunity for individual clerks to deal improperly with them;—did you ever see any person in that room besides yourself and those who had a right there? I have heard that others have been in there. I have heard that any one could go into the room.
7573. Have you heard who has been there having no right to be there? No, I have not.
7574. From whom did you hear that those who had no right to be in the room had been there? I think I heard it from assistant-conductor Peters. I think he mentioned it to me.
7575. Did Peters tell you who were the people he had seen there? No, he did not. He said that any one could go into the office when they liked. He said it in the same manner that you said it to me this moment.
7576. Do you yourself know personally whether Ferrier and Mr. Colls, who was in the office, were at all friendly? I do not.
7577. Have you heard anything about it? No; I have not heard anything about it; only what I heard that Stack had said.
7578. What was that? It was in reference to Musgrave, I think.
7579. Musgrave and who? Musgrave and Colls being intimate.
7580. You know that they are brothers-in-law? Yes; there is nothing to my mind in their being intimate.
7581. I may tell you once again my individual opinion that there is still something in your mind which you will not bring out, either from fear of consequences to yourself, or because it is something so nasty in the way of suspicion that you do not care to mention it. I do not know whether you have been told of it, but you are absolutely protected in anything you choose to say here, no matter what it is, if it be the truth, or if you have a reasonable foundation for thinking that it is the truth; but for Heaven's sake do not let us have pure ungrounded suspicion for the mere purpose of sheltering yourself or the other men. Do be sufficient of a man to think that you have a right to protect persons in another class as well as persons in your own class. If you have anything to tell us, do tell us for the sake of what is right. I shall make no further appeal to you, and I shall be very disappointed if you do not tell us more than you have already told us? Whatever I have told you, I have told you the truth. The man who tells a story is a coward, and I would rather trust a thief than a liar. I can give you only my suspicion. I cannot give you anything conclusively in connection with these frauds, nothing further than what I have stated to you. I have never seen anything conclusively. I have only mere suspicions.
7582. *Mr. Brock.*] Your suspicions lay only at the office? I don't say that they lay only at the office.
7583. You said you believed the conductors were all honest? I did not say that they were all honest.

- Conductor F. J. M. Mahon. 7584. You said you believed that the frauds had been committed in the office? I said I believed the facilities were there. I did not say that the frauds were there.
- 20 Sept., 1888, 7585. Do you wish to withdraw your statement then? How can I say such a thing when I have never seen it.
7586. *President.*] You said a little while ago that you had not the slightest ground for suspicion, and that you spoke merely as the result of your own bare imagination. You said that the facilities for fraud in the office were equal to, if not greater, than the facilities elsewhere, and that in your opinion frauds had occurred in the office rather than among the conductors;—is that not what you wished us to understand? There is as much likelihood of fraud being committed in the office as among the conductors.
7587. Do you not think that as a body of sensible men we should come to such a conclusion ourselves. What we want from you is information. We do not want your opinions? I was asked before if I could give you any inkling I had.
7588. But you have said that you had no reasonable ground for suspicion beyond the knowledge that there were facilities, and that if fraud had been committed it might have been committed in the office as well as at any other place? Yes; I am not going to say positively when I do not know, and when I have not seen it actually occur.
7589. Is there anything about the character or the surroundings of any of the clerks in the office who have this power in their hands to lead you to suspect them in any way whatever? No. I don't know of anything wrong with their characters at all.
7590. *Mr. Thompson.*] Do you know of any of them who are spendthrifts; who are racing or betting men; who are gamblers or drunkards? No. I do not mix at all with those in the office. When I have done my work I go away home and stop there. I seldom run about unless I go out on a little business. I seldom see the gentlemen in the office; I don't see much of them.
7591. *President.*] I do not know whether it is a matter of any concern to you, but I must say that I am far from satisfied with the evidence you have given us this afternoon. You have made certain injurious innuendos, and when you have been put to the test you have failed utterly. You have not only been unable to give proof, but you have not given the slightest reason for your innuendos; therefore I believe I may say with the concurrence of my brethren that we are dissatisfied to a great extent with the way in which you have given your evidence? I am sorry for that.
7592. *Mr. Brock.*] I think your evidence has been given in a very cruel and unjust manner? I am sorry to hear it.
7593. *Mr. Thompson.*] You have disappointed me, because I did hope that having regard to the knowledge existing among the men, that these frauds had been indisputably committed you as a mouthpiece of the men who brought about this inquiry would have had something more to tell us? You say I have not given you satisfaction—that I have not stated anything in reference to the conductors;—is that what you mean? As the mouthpiece of the men I stated principally at the meeting.
7594. *President.*] Can you not leave the meeting alone? That was one of my reasons for coming here. I told the Minister for Works that I would assist this Commission as far as I could. I did not go into this matter as I have done to day when I was here on the first occasion.
7595. Is there anything further you wish to say? I have nothing to say.
7596. *Mr. Brock.*] Tell us what does your letter mean? I think I have touched upon that matter.
7597. I know why you have come here this afternoon? Why.
7598. To take the blame off your mates and to put it on to your bosses? If you call Peters you will find that it is not so. I have not spoken to one of my fellow workmen in reference to that matter.
7599. *Mr. Thompson.*] Can you tell us of any one of the men who were concerned in these meetings and in procuring this Commission who can tell us any more than you have told us yourself? I know some who have expressed a desire to come here.
7600. I thought you said you had not spoken to your mates since you were here? Not in reference to this particular matter, but a number have told me they want to come here and make a statement.
7601. Can they make any statements which are more than bare suspicions? I do not know.
7602. Will you give us their names? M'Donald, Williams, Tipping, and Peters.
7603. Were they on the deputation? Peters was.
7604. How long is it since you saw these men? I saw M'Donald this morning.
7605. *President.*] Did he speak about it then? Not a word.
7606. When did he do so? Sometime since I was here before. I had been to see Mr. Thompson, and found that he was away in Newcastle. Williams had been to see him too.
7607. What did M'Donald say? Only that he wanted to come here. He did not tell me his business at all.
7608. What did Williams say? Williams told me nothing either, except that he had some statement to make.
7609. In connection with the tram frauds? I could not state. I do not know what it is about.
7610. And Peters, what did he say? I saw Peters last week.
7611. I suppose Peters wants to say he saw people in the receiving-room who ought not to have been there? I do not know what he wants to say.
7612. *Mr. Thompson.*] When you saw me I expressed to you, as I have done to-day, a feeling of bitter disappointment that the men who moved in this matter had not come forward to help the Commission more than they had done; but not one single man concerned in the matter has given us any help in the shape of evidence. You remember my saying that? Yes. The men did not know; they did not like to come here themselves, and they would like to be called.
7613. What is the use of our calling them unless they can put us in a position to know that they know something about the matter. A fair thing for them to do would be to submit to the President in writing what they know or imagine they know. They have had abundance of time to do that? Yes; they have had plenty of time to do it.
7614. We have been sitting six weeks, and, with the exception of yourself, not one of them has put himself in the position of being called as a witness. Some among you men, honest as you may be, must know by hearsay, if you do not know otherwise, that these thefts have been committed. You inferentially led us to believe that you knew of something of the kind occurring long before the reports appeared in the newspapers, because you approved of the alterations made in the mode of collection as a check upon fraud.

fraud. Some of you heard of it as long back as December, 1886, and it is unreasonable for you to say now that you did not hear of the matter until it appeared in the papers? I did not have any conclusive evidence or proof. When the bells were abolished it was said effectually that they were not correct.

Conductor
F. J.
McMahon.

20 Sept., 1888.

7615. *President.*] But they were restored? Yes.

7616. Do you think that was done without consideration or reason? I suppose it had due consideration.

7617. *Mr. Thompson.*] Don't you know as a man of the Department that the change back again was made just because it was said, if not found out, that the men were appropriating tickets by tearing them down the perforations instead of across? I was not aware that that was publicly known.

7618. *Mr. Brock.*] Could not a conductor collect the whole of an upper deck at night without tearing any of the tickets? The passengers would see it.

7619. In the dark? They could see whether he tore the tickets or not.

7620. But could they see him tearing them? If they watched him closely they could. The conductor would not know whether they were watching him or not. He would not know who was watching him in the dark. There might be a detective.

7621. But a detective could not see better than anyone else? He would watch the conductor more closely. Now and again, too, the trams come to a lamp, and then there is a light thrown on to the car.

7622. *Mr. Thompson.*] You know the little shop at the corner of Ocean and Queen streets? Yes.

7623. Did you not hear that people were buying from that shop torn tickets, which had been pasted together? No; I did not hear that.

7624. You were on that line? Yes. I was reported some time ago for selling tram-tickets. The Department sent in the report to you.

7625. Why did you think the Department sent in the report? Because you had it here.

7626. *President.*] How did you know that we had it here? Because you were reading it when you were asking me questions the other day.

7627. Did I read it to you? I do not think you did.

7628. Is there any reason why I should not have known of the complaint at the time it was made? I do not know what your position in the Department may be, but I thought that the Department had sent it in to you against me.

7629. In other words, you thought that Mr. Roberts had sent it in? Yes.

7630. You mean to say that you have no ill-feeling against Mr. Roberts? No.

7631. You will swear that? Yes. He never did me a bad turn in all his life, and I should not like to do him a bad turn either.

7632. The only two scraps of information you have given us are these: In the first instance you said that a very improper term—"How much have you made to-day"—which was being bandied about among the conductors, originated with Mr. Roberts six years ago. You held that in your memory six years, and it only came out in your evidence the other day. Then, with regard to the ticket-tearing system, you report Mr. Roberts as having said, "How do you like this?" and you say that it went abroad that the boss was against the system, the consequence being that it was such a failure that it had to be discontinued. These are the only two scraps of information you have given us in two days, and both of them contain injurious innuendoes against Mr. Roberts? Well, it is the truth.

7633. It is not possible that you have brought out these two matters in consequence of some ill-feeling against Mr. Roberts? I have no ill-feeling against him whatever.

7634. Then what is your object in mentioning these two things? I mentioned both of them in reply to questions which you put to me. I cannot do more than answer you truthfully.

7635. Are you truthful;—it is only a matter of opinion with you that Mr. Roberts' expression lead to this saying becoming general? I have spoken to some more about the matter and they say the same as I do. They say that they have heard the same thing.

7636. Who are they? I think Peters would tell you the same thing.

7637. Did he hear Mr. Roberts say this thing? I think so.

7638. These two references would certainly give one the impression either that you have ill-feeling against Mr. Roberts or that there is something more in the back ground which you will not or dare not bring out? I have no ill-feeling against Mr. Roberts, and there is nothing in the back ground which I will not bring out. I am not afraid to bring out anything I know of.

7639. *Mr. Brock.*] At the commencement of the afternoon you said that there was favouritism in the Department; that is another imputation against the officers? The favouritism might be down at Pitt-street.

7640. Do you mean Mr. Roberts when you refer to favouritism? I do not.

7641. Where does it exist? In our Department.

7642. Who are the men who benefit by the favouritism and who are the men who benefit by the cliquism? I will tell you who they say are favourites. I cannot do more than that. They say Jacob Herman and Harry Dumbrell are two. I should not like to definitely state others.

7643. You say they say these are favourites, but you have not been good enough to tell us of what the favouritism consists. Is that all moonshine too? The conductors as a rule state that these are two favourite men.

7644. *President.*] Favourite in what way? Well, if there is a Mayor's picnic at Botany, they will be sent out there, and stop there all day, and that sort of thing. I do not trouble about them. Let them have their favourites if they wish.

7645. These two men are conductors? Yes.

7646. Have you yourself seen any favouritism? I see that there is a great deal of it in every way.

7647. Well, tell us what it is? You want me to state things definitely and so conclusively that I cannot do it.

7648. We do not want pure imagination. You know that people do imagine things of the kind. They imagine, for instance, that others are better treated than themselves. This occurs in every walk of life, and you must know that? I have often thought it out myself. Men have often said that others are favourites, but I have not seen that there has been much in some of the complaints; still there is a saying in the Department that there are favourite men.

7649. When we ask you to define these things you cannot do it. Surely we do not ask you anything unreasonable if the thing is worth hearing at all? Well, it is not worth hearing.

7650.

- Conductor F. J. McMahon.
20 Sept., 1888.
7650. It is just tittle-tattle, is it not? Well, it may be.
7651. *Mr. Thompson.*] Where does the cliquism come in. That is still worse. There may be favouritism to men who are deserving of a little extra consideration, but where does the cliquism come in;—is it the officers in the office against the officers outside of the office? I do not know.
7652. Is it the conductors against the drivers? They say there is cliquism, but I have not seen any of it.
7653. You have been acknowledged in some way as being a sort of representative of the men, and they have been carrying you a lot of tittle-tattle. In reasoning the matter out for yourself that is apparently the conclusion to which you have arrived. The men have made you the old hen sitting on a mare's nest, and you have hatched nothing. All that you have said to exonerate yourself and the honest men of the Department is not worth a dump? Well, you see there is a lot of tittle-tattle. I go into the room and sign on and off. When I come to do my work I work and when I play I play. I never run about talking to conductors, but they come talking to me on certain matters, telling me this, that, and the other.
7654. It seems to me that you have allowed yourself to be made the mouth-piece of mere tittle-tattle and petty jealousies, which must necessarily exist to some extent in a large body of men. You have not helped us forward one fraction of an inch in our investigation, our object being, as you understand, to get to the bottom of these frauds? I have given you all the assistance I can. The reason I wrote to you was that I thought I had a right to come and make it known to you why I took such an active part in the meetings.

William Lambert recalled and further examined:—

- W. Lambert.
20 Sept., 1888.
7655. *President.*] I understand that you have something to add to your previous evidence, in reference to a conversation which took place between yourself and Mr. Roberts, when he sent for you in connection with the condition of a bell register? Well, as I told you before Mr. Roberts handed me a pair of registers, and after I had examined them, he asked me if they would ring without registering, and I said "No."
7656. You are quite sure when he put it to you in that way he did show you a pin in connection with the registers? He did not. As I stated before there was nothing explained with reference to that, and my opinion was that I was called upon to examine the register to check a conductor who was wrong in his accounts; or for the purpose of the registers being specially issued to someone.
7657. *Mr. Thompson.*] Do you still adhere to what you said when you were first examined—that you became aware that the bells could be tampered with almost directly you obtained your position as register repairer? I knew of course the action of the ratchet, and consequently that if anyone opened the registers they could be tampered with.
7658. You knew that soon after you got them into your possession? Yes.
7659. Your knowledge as a mechanic would tell you that that could be done? Yes.

FRIDAY, 21 SEPTEMBER, 1888.

Present:—

A. RICHARDSON, Esq., PRESIDENT.

R. W. THOMPSON, Esq., M.P., | F. A. BROCK, Esq., J.P.

Cecil Peters called in, sworn, and examined:—

- Conductor C. Peters.
21 Sept., 1888.
7660. *President.*] You are a conductor on the Tramway Department? Yes.
7661. How long have you been in the Department? Seven years on the 1st of August last.
7662. We have sent for you because we have been told by conductor McMahon that you would like to come before us and make a statement;—is that so? I never expressed a wish to come before you to make a statement; I do not know that I could state anything to throw any light upon this matter.
7663. Did you not tell McMahon that you wanted to be called? No; I have expressed no desire whatever to be called, although I am quite willing to give any information in my power, for instance, as to two men being in the room at the office; I certainly must say that I think there are people in that room sometimes who ought not to be there; I do not say that it has anything to do with the frauds.
7664. What men would these be? I saw there on one occasion two New South Wales artillerymen.
7665. Have you any idea what they were doing there? No; except that one of the officials in that room is a member of the corps.
7666. Who is it? Scholey.
7667. He went to the Soudan, did he not? Yes.
7668. Is he one of the clerks employed under Mr. Primrose? Yes.
7669. What would these men be doing in there with him—just having a chat? That is all I suppose.
7670. Have you seen others in there besides these artillerymen? No; I could not say that I have except men belonging to the Department, that is to say, the foremen.
7671. You have seen foremen there? Yes, and Wigg and Moran.
7672. But I suppose the foremen would have to go in there about the traffic? I think not.
7673. Would it not be necessary for the foremen—it would certainly be very desirable—to give information to the receiving clerks as to the conductors on different runs for the day? I do not think they do so.
7674. It has come out in evidence that they do not give the information which they should give as to the different men on the runs for the day, but it seems to us that the clerks should get a list of these men from the foremen, just like a running board, that is to say, that the foremen should give information as to the first arrangements, and then subsequently to the head clerk in the office as to the men who have been taken off particular runs, so that when the registers or bags were received they would know exactly what to do, if, for instance, a man did not bring in his bag at all, they would know that there was something wrong? We are supposed when we come off regular runs to say what lines we have been on.
7675. Would you from your point of view as a conductor argue that the clerk who is supposed to check you should take your word for everything? I think so, so far as that is concerned.
7676. You know that in almost everything it is necessary to have a check? Certainly.
7677. We do hope that people are generally speaking honest? Certainly.

7678. But you do not argue that we should so far consider people honest as to put away all check? For myself I should like to see more checks. Conductor C. Peters.
7679. Does it not seem to you right that clerks in the office should be in a position from an independent source to know on what line certain men are running and to know whether they have been put off those lines or not? Yes, I think so. 21 Sept., 1888.
7680. For instance, no one would doubt your word in the matter, but I presume you do not think that every conductor in the Service is an honest man? I should not like to say that anyone was dishonest.
7681. You have not enough to go upon? No.
7682. But you think it only a reasonable thing that there should be a certain check? Yes.
7683. It has come out in evidence that a certain conductor ran on a Wednesday and did not give in his return until the Saturday. In trying to search for a check upon that we found that the office was unable to check it in the case of an assistant conductor, because it might be thought that he was away car-cleaning, or that he was not running at all? That of course is very wrong.
7684. It would be very wrong on the part of the conductor? Yes.
7685. And is it not wrong that a clerk should be powerless to check a wrong of that kind? Yes.
7686. It would be for that reason we should think that it would be necessary for the foremen to go into the office? I do not think there is anything improper in the foremen being there.
7687. *Mr. Thompson.*] But you do not see any necessity for it? No.
7688. *President.*] When you saw the foremen there they were yarning I suppose? Generally, but I could not say what their conversation has been, because until the present system of emptying bags came in we went up to the window only once a day; in fact it is just the same now, because a conductor takes our bags from the yard to the office; in my opinion the present system is bad in regard to emptying the bags of the tickets every trip and not taking the money.
7689. Why don't you give the money in? They will not take it.
7690. Because of the distance of the office from the yard? I suppose so; but it casts great suspicion upon us when we get to Hunter-street or to Bent-street, because then we have to take the money out of our bags and put it into our pockets; I myself have a purse into which I put the money; the public seeing you do that would naturally think that you were appropriating the money.
7691. You have to do that under the system in order to give your bags in? Yes, they will not take the cash.
7692. Why will they not take the cash? I do not quite know; when the system was first started they did take in the cash for a short time, and then they said that they would not take it in any more until the close of the day.
7693. I fancy the reason of that is this; that the registers are not read at each trip, and they want to be very accurate about the cash, and to compare the registers and the cash at the same time? That is what I believe.
7694. But there would be no difficulty as far as you know in reading the registers every round trip? No; except the short time we have in the yard in many trips.
7695. But the registers would be read down in the yard? Yes, but we are no sooner there than we are shunted and away again sometimes.
7696. Had you any reason whatever to suspect that fraud was going on before you saw it in the papers? No, I had not.
7697. Had you no opinion in the matter? No.
7698. You had no reason to suspect any person or persons in connection with it? No, I had not.
7699. Therefore you are really without information on the point? I have no information to give you on that point.
7700. What led you to mention to M'Mahon the circumstance of these people being in the ticket clerk's room? It is common conversation with regard to people being in that room.
7701. It has been of frequent occurrence then? It has been frequently talked of.
7702. How often did you see these artillerymen there? Only on one occasion.
7703. How often have you seen foremen there? On several occasions.
7704. There has been talk among the conductors about it? Yes.
7705. What has been the character of the talk; have other conductors seen in the room artillerymen or other persons who ought not to be there? I have heard the conductors say so, but I could not say who the people were.
7706. You have heard them say that they saw strangers there? Yes.
7707. Did not M'Mahon put it to you in this way: "They want to make out that the conductors are dishonest, but my belief is that dishonesty is in the office"? I would not say that he put it that way; I have heard so many conversations in regard to the subject, it being such common talk among the men, that I could not say word for word what was said.
7708. But is that the feeling among the conductors? I think it is.
7709. You think the feeling is that the conductors are wrongly charged in this matter, and that the thing has occurred in the office? I do not say that conductors have been wrongly charged; I think the feeling is that there are some conductors who are mixed up in it, and that perhaps some other persons besides are concerned in it.
7710. But as far as you know they have no good ground for suspicion against anyone? Not as far as I know.
7711. Do you know anyone who has more than suspicion in the matter from conversations that you may have had? No, I do not.
7712. The information M'Mahon has given us amounts to nothing, although it has taken us a long time to get it; if you know of any conductor who from your conversation you would think able to give us any real information in the matter, his name would be serviceable to us? I do not know of anyone.
7713. *Mr. Thompson.*] M'Mahon, whether with your knowledge and consent I do not know, wrote to me as follows:—"Sir, I beg to state that when I was before the Board I thought that I had to answer questions only as I have since explained to you. If you will please recall me I will go into the whole of the matter before the Board of Inquiry. I feel that this is a duty I owe to myself on account of the action which I took to bring about this inquiry." We naturally gathered from that letter that M'Mahon really had something to tell us. Do you not think that that is a fair inference? I do.

Conductor
C. Peters.
21 Sept., 1888.

7714. With regard to the meeting which led to the deputation and which ultimately brought about this Commission, was anything said there by any of the men with regard to what had been going on as to the fraudulent taking and sale of tickets in the first instance? I was only at the first meeting, I was not at the second; in fact I was only a portion of the time at the first meeting, I was there at the opening of the meeting, and, as I daresay you saw by the papers, I moved a resolution with regard to an inquiry. The reason I moved it was this: I thought that the matter would be more thoroughly sifted out by an independent Board than by a Departmental inquiry. I thought that the public would be more satisfied, and that, perhaps, we should get more information. So far as I am concerned I was satisfied with the Departmental inquiry. I never had any reason to complain of any injustice being done to me by the Department or any of its officers. While I was at the meeting to which you refer I heard no remarks with regard to what you just mentioned. I saw from the reports in the Press some things which were said at the second meeting. Had I been there I should certainly have objected to a lot of the utterances.

7715. Don't you see that the Commission, having been brought about by the action of the men, the Commissioners are naturally very desirous that the men themselves should help in every direction that they fairly and properly can; don't you see that this is reasonable? Yes.

7716. Don't you admit that, as far as those who actively moved in the matter are concerned, they have been unable or unwilling to help us in any way? Well, those who are connected with the frauds would be unwilling, whereas those who are not connected with them would be unable.

7717. Did you not know that for months before public attention was drawn to the matter by the newspapers, and before your meetings took place there was a public rumour to the effect that there was fraud connected with the Department, in which, almost of necessity, the conductors must be mixed up? There are so many rumours in the guards' room that I take very little notice of them.

7718. Were there not, as a matter of fact, rumours that this fraudulent dealing with the tickets was going on? There were rumours certainly; the papers had rumours of them months ago.

7719. Can you take your memory back, and tell the Commission when it was when you first heard this rumour? I could not name the exact time.

7720. Have you had an opportunity, while you have been conducting, of seeing what has been the conduct of Musgrave, Greeley, and Ferrier? With regard to the three men you mention I cannot say that I ever had a favourable opinion of either of them.

7721. In what way? I always looked on the three of them as thorough blackguards; that is my opinion of them all round. Musgrave I know the least of. I do not know a great deal of Greeley; but I think that Ferrier, from what I have seen of him, is the most foul-mouthed man I ever met.

7722. Was it merely from his being foul-mouthed that you came to the conclusion that he was a blackguard, or did you observe any blackguardism apart from his coarseness of expression? It was from his coarseness of expression chiefly that I judged.

7723. Have you ever seen anything of him at night-time? No.

7724. What made you come to the conclusion that Greeley was a blackguard? His coarseness of expression a great deal.

7725. And although you knew comparatively little of Musgrave, what induced you to come to the same conclusion with regard to him? His obscene talk.

7726. What Church do you belong to? The Church of England.

7727. Are you a regular attendant? No. A tram conductor has not much opportunity for church-going.

7728. Are you a married man? Yes.

7729. Any children? None.

7730. Are you late out at night when you are off duty? I am out a great deal. I am a member of an Oddfellows' and a Masonic Lodge. I am sometimes out two or three nights a week at lodge meetings. I was for nine and a half years treasurer of one of the largest Oddfellows' Societies in the city.

7731. The very fact of your having been treasurer of such a lodge must have made you perfectly well aware how necessary it is that a check should be kept to guard against the misappropriation of small moneys coming in? Yes.

7732. You remember the President asking you as to whether you were aware that in some instances the men have taken away their bags, and have not accounted for them until a day or two afterwards? Yes.

7733. If there is an opportunity for that kind of thing to be done, is it in your opinion an incentive to dishonesty? Well, I think it is; supposing, as we are led to believe, that the bells have been tampered with, and I believe it is no secret that that is the case.

7734. If you have thought the matter out at all, can you suggest to the Commission any means by which the Department could keep a more effectual check upon the taking of tickets by the conductors, and upon the reception and taking of tickets and cash in the office? I have thought the matter over a great deal, but I do not know of any plan which I could suggest. The difficulty of collection in these cars is so great that I do not know what to suggest; it is impossible to keep a perfect check with the bells. I know myself I often ring more fares than I collect. When you are going over a crowded car with perhaps as many as thirteen and fourteen in a compartment, you are handed a quantity of tickets; you have not time to sift these tickets out to see actually what number you have. You take the number at a guess in order to get through the work, and perhaps you register more tickets or less tickets than there really are. For instance, on some of the trips after the theatres at night, the people come on in great crowds; a good many of them are in a half muddled, stupid condition; you ask for their fares, and perhaps you get four or five handed to you; then, after a little more persuasion, you get another lot. The recent tickets are so thin that it is almost impossible to tell how many you have got in your hand, without sifting them out one by one. Then in the day-time there will be school-boys and school-girls. Before you have the tickets in your hand you will think that there are two coming and will ring accordingly. I know that I have got into the habit of ringing for fares before I have got them into my hand, and instead of the boys and girls giving you the two tickets you have expected, they will give you one, and that is a ring lost. Sometimes people will hand you tickets in excess of the proper number, and just as you start ringing for them they will take them back again. By a mere force of habit somehow you generally ring more than the proper number.

7735. Have you at night-time ever been overpaid by people—a man who ought to give you 2d., giving you 3d., for instance? Very often, and in the day-time also; scarcely a trip passes but that I have to return tickets to people who have given me too many.

7736.

Conductor
C. Peters.
21 Sept., 1888.

7736. With regard to your own returns into the office, I do not ask the question offensively, has it been a fact that your register and your returns have shown a difference either one way or the other? Yes; a week or two ago I had some discrepancy papers given to me. I remember that I was twelve short in one day, four short on another, and nineteen short on another; but it afterwards appeared that the nineteen was a mistake in the subtraction, it should have been only nine.

7737. Do you get credit for any number which you may give in over the proper number? No.

7738. Have you been conscious that you have sometimes over-rung, that you ought to have received credit for it and that you have not received it? Yes.

7739. On the three occasions to which you have referred, or on any other of the same character on which you have been debited with a deficiency, can you tell us whether it was right or wrong, that is, whether you were really out the number stated, or whether there was some blunder? I do not think they were all blunders, probably I made some mistakes. The clerk who reads the registers counts the tickets.

7740. *President.*] Where? Over at the office.

7741. Who are the clerks who read the registers? Bates, Beverley, and Oakes.

7742. But the tickets never go near them? The tickets are weighed in the office, but so many boxes are counted every night by the clerks, who read the registers. Between 6 and half-past 7 the audit clerk in charge at Bridge-street goes up and counts the tickets. One day I saw a little boy counting them; it is some few weeks ago. It was a boy who has been taken on in the office since this fraud affair came out.

7743. Was he counting them without any supervision? There were others there besides.

7744. Was Mr. Oakes there? No; the clerks in the receiving room.

7745. *Mr. Thompson.*] Without wishing to throw discredit on anyone in or out of the office does it not seem to you that there are opportunities in both offices of misappropriating tickets? It does.

7746. Without any check? Yes.

7747. *Mr. Brock.*] What was your opinion of the tearing-ticket system? I believe it was a better system if the tickets were torn; but if you have got dishonest men they will not tear the tickets.

7748. *President.*] What you mean by that is, that it confines the dishonesty to the conductor and does not admit of dishonesty afterwards? Yes.

7749. With the registers you have two places in which dishonesty may be perpetrated? Yes.

7750. By the conductors and by the clerks in the office, who afterwards have the tickets in a perfect state? Yes.

7751. When the tickets were torn it was true that the conductors might not tear them, but the tickets sent into the office would always be torn? Yes.

7752. But do not you think that the tearing system afforded greater opportunity to a dishonest conductor than the present system? Yes, I think it did—without proper supervision.

7753. It would not be at all necessary for the dishonest conductor to go to the trouble of manipulating his register;—all that he would have to do on a dark night would be to pretend to tear the tickets? Yes.

7754. *Mr. Brock.*] Is there any by-law or rule in the office that no one except those belonging to the Department shall be admitted into the ticket-office? I do not know what rules they have in the office.

7755. Do you think there was anything improper going on when you saw the two artillerymen there? No, I do not think so; I should not like to say that I thought there was anything of the kind. All that I thought was that it was loose.

7756. *President.*] You thought that no strangers should be allowed in an office of that kind any more than a stranger would be allowed behind a bank counter? Just so.

7757. *Mr. Thompson.*] With regard to the service tickets, have any come to you from the general public? Not that I am aware of, but there are so many people who have service tickets that it is hard to find out whether they belong to the general public or to the Service. Almost the only way in which we could find out anything improper would be by women or children tendering the tickets.

7758. Suppose a number of women and children were in a crowded compartment, and a man handed you a bunch of tickets with three or four service tickets among them, you would not know from whom the Service tickets came? No.

7759. Have you any reason to believe that the service tickets are being improperly used? No, I have not. They are used on the railway tram more than any other, and I am on that line.

7760. Who would have a right to use them particularly on the railway tram? I do not know.

7761. *President.*] You know that there are large numbers employed clerically and otherwise at the railway? Yes.

7762. I suppose that the clerks and workmen in the Permanent-way and Loco. Departments would often have to go down to the head offices and different places? Yes.

7763. I presume that under those circumstances they would use service tickets;—would that not account for a large number of them? Yes.

7764. But you would not have such a knowledge of the men using these tickets that you would feel warranted in any case in saying, "You have no right to use a service ticket?" No, unless I knew the man personally.

7765. Was it not formerly the custom to use ordinary tickets instead of these service tickets—that is, when a messenger or clerk belonging to the Department travelled they bought the ordinary tickets and afterwards debited them to a petty cash account? I am not certain; I know that at one time there was an order that no one was to travel without paying, that every employee was to pay, and I think it was then that the service tickets came out.

7766. Up to that time were the employees of the Department allowed to travel indiscriminately? Not indiscriminately.

7767. What employees were allowed to travel. At the time the order came out the drivers and firemen and conductors were supposed to pay. Do they pay now? No.

7768. The running staff never pay? No; the order came out that all were to pay, except the Commissioner and the two superintendents, and then the service tickets came into use.

7769. *Mr. Thompson.*] With regard to the cash: how much money have you yourself taken in the course of a day—money which, under the present system, you say you are obliged to keep all day? Only a few shillings; the average is about 5s.; of course on race-days the money is taken on every trip.

7770.

- Conductor
C. Peters.
21 Sept., 1888.
7770. *Mr. Brock.*] How do you think a cash system would work? All cash?
7771. Yes, suppose there were an efficient check, or a check as nearly efficient as could be obtained? There would be a great difficulty in regard to the change. I am afraid we could never get through the work.
7772. We will assume that there is an efficient check. Suppose, for instance, that there was a system under which every fare was paid in a copper coin, and that that copper coin on being put into a certain machine would register itself. Suppose too that the coin after registration would slide into a portion of the bag accessible to the conductor for the purpose of giving change? The difficulty would be in giving change. I am afraid it would take too long.
7773. *President.*] But don't you think that after a very short time people would get into the habit of carrying copper coins in the same way that they now carry a certain number of tickets? They might.
7774. Would not the bulk of the people travelling have their 2d. ready? The ordinary passenger would have; but you would have a great deal of trouble with people who were not ordinary passengers.
7775. You mean by ordinary passengers those who are accustomed to travel between their homes and their business places? Yes. For instance, the other night I had two cars loaded from the Rosehill Races; by the time I reached Liverpool-street I had hardly got through the fares, because there was several of the passengers to whom I had to give change.
7776. That was under the present system? Yes.
7777. They were paying cash? Some of them. A lot, for instance, tendered 2s. 6d.
7778. Under the system I have suggested you would always have a quantity of copper coin available. A person wanting to pay for two fares would hand you 6d., and you would give him six coppers, four of which he would put into the machine? Yes, that would be easier. You mean that the passengers would deposit the coins themselves?
7779. Yes? You would find that a great many passengers would refuse to do it. We had the greatest difficulty when we had the cash system in getting people to take tickets for the cash. They would not take the paper; they would throw it away.
7780. But they did not refuse to pay their fares. People do not refuse to do so under the omnibus system. Take the case of a man sitting near the door; he has to scramble along to get his change from the driver, and then put his coin in the box; you never hear people grumbling about that? No; they do not mind the inconvenience when they are travelling with the bus company, but they would not like it if they were travelling under the Government.
7781. I have no doubt that you have taken an intelligent view of matters of this kind. You have already told us that it is not to be expected under the present system that the registers will come out in agreement with the tickets. Is it not a weak point in any system when you are unable to say to a conductor, "That is your return—you must give me so much." If under the system I suggest the register was so unmistakably accurate that the conductor would have to bring in a certain amount, and if he did not do so would have to make up the difference, would not that be very satisfactory? Very satisfactory for the conductors.
7782. And for the Department? And for the Department.
7783. Then there would be no room for dispute; but when you are working under a system, in which there is no balance, it is very difficult to draw a line, and to say that when a man is ten short it is all right, and then when he is twenty short he must be dismissed? Certainly.
7784. If a system such as I suggest could be carried out it would be satisfactory to all parties? Yes. Under the register system two or three weeks afterwards we get a list showing that on certain days we were short, and we cannot after that interval say whether we were short or not.
7785. It would be too far distant for your recollection to serve you in giving an explanation? Yes.
7786. Of course, if the cash is short, there is so little cash that you can generally know the reason why it is so? Quite so. The papers I got the other day were the first of the kind I have received since I have been in the Department. I was once told that in coming from the races I was £1 short, but it turned out afterwards that in balancing the account they found there was more money than they thought there was. It got entered to some one else; but that was a long while ago.
7787. They found the £1? Yes. We get a receipt, as a rule, for all the money we take in a day, but on race-days we get no receipt.
7788. Why is that? Of course on race-days we collect £7 or £8 in coming through from the races, but I do not know why a receipt is not given.
7789. Where do you give it in? In the office here or at Randwick.
7790. When do you count your cash? When we get race-course money we just hand the bag in as it is.
7791. But the clerk at the office might have a little book with a butt and a fly, and when he counts your cash, while you are standing at the window, he could fill in a statement for you? Yes; on ordinary days we have a receipt-book for the cash.
7792. Would there be any difficulty in doing the same thing on a race-day? No. At one time we had no receipt. When the cash system was in force before we used to simply throw our bags in and get them returned to us empty. We never knew what we paid in.

George Love called in, sworn, and examined:—

- G. Love.
21 Sept., 1888.
7793. *President.*] What is your occupation? I am doing nothing at the present time.
7794. You were employed in the Tramway Department some time ago? Yes.
7795. How long ago? About seven or eight months.
7796. We have sent for you on that account. Knowing that you were in the Tramway Department, we think it possible that you have it in your power to give us some information in connection with these irregularities of which you must in some way or other have heard—the irregularities in connection with the sale of tickets and so forth. It occurs to us that in going about some of these things may have come under your notice;—if so, any information which you may be able to give us may be useful? The only thing I ever knew was this: I heard a remark passed by a stranger that there were tickets sold in Waterloo to a tobacconist there.
7797. Who told you that? I heard a bystander say that he had heard of Siddons buying tickets.
7798. Have you ever been in Siddons's shop? Only once to get my hair cut.
7799. Do you know him? Yes, I know him.

G. Love.

21 Sept., 1888.

7800. Does he bear a character for dishonesty or anything of that kind? He got in some trouble some time ago for buying two rings under value!
7801. That is all you know of him? Yes.
7802. Do you live in that neighbourhood? Yes.
7803. Does he pass in the neighbourhood as a decent honest man? Yes; he passes as an honest man.
7804. Have you ever seen conductors going in there? Yes; I have seen conductors going into the shop.
7805. Were you on the Waterloo line? I have been on all the lines.
7806. What made you leave the Service? I had a bit of a row with one of the drivers, and I resigned.
7807. And since you left the Department you have been back to your old occupation of bus driving, I understand? Yes.
7808. *Mr. Thompson.*] Where were you living at the time you were on the trams? At Waterloo.
7809. Were you living near Siddons's place? In Raglan-street.
7810. Have you ever seen any of these tickets going about? No, except that I have had to take them on a bus instead of a fare sometimes.
7811. What do you mean when you say you had to take them? Sometimes people have not had sufficient money, and they have given me two tram-tickets and 2d. for a fare. If I had not taken that I should have had to go without.
7812. *President.*] Do not the 'bus-tickets go about similarly? I have had them just in the same way.
7813. We have heard that 'bus-tickets are frequently offered in hotels—that a man will go for a drink, for instance, and will offer a 'bus-ticket for it? Yes; I have seen people offer a bus ticket for a drink.
7814. Both 'bus and tram tickets have been used within your own experience in a marketable way? Yes, I have seen them given for drinks. I have also seen people give stamps for drinks.
7815. What is the value of a 'bus-ticket? 3d.
7816. But they would want more than that for a drink? I have seen people give a 'bus-ticket and get a glass of rum or a long beer.
7817. *Mr. Thompson.*] Referring to what you said just now, that you had taken 2d. and two tram-tickets for a fare, that would be equivalent to 4d. in cash? Well, we only charge 3d. cash. The company for which I have been driving is a private company; there are no tickets.
7818. Have you ever driven for the Omnibus Company? Yes.
7819. Long ago? Yes, a long while ago.
7820. How long were you with the Omnibus Company? Over five years.
7821. After that you came into the Tramway Service? I went to Peate and Harcourt's for a short time as a driver.
7822. *President.*] As to your seeing these 'bus tickets given for drinks in certain public houses, have you ever seen the drivers of omnibuses giving tickets for drinks in that way? No.
7823. While you were in the Company I suppose you used to go about a good deal with the drivers? Well I was grooming for a good deal of the time.
7824. If we have been told positively that the 'bus drivers have been seen giving tickets for drinks, have we been wrongly informed? They may have done so.
7825. In what way would the drivers have the tickets? I could not tell you that; they may have picked them up in the 'bus. We have often picked up even a dozen 'bus-tickets when we have been washing the 'busses at night time.
7826. That would be 3s. worth? Yes. Sometimes we would not pick up one at all. I have picked them up behind the seats sometimes.
7827. You think that these might be the tickets which would be given for drinks? Yes, sometimes.
7828. Did you yourself ever use any which you have picked up in that way? No.
7829. But you admit that you have picked some up? Yes.
7830. What have you done with them? I have given them to the Mrs. I have seen passengers who have been short of money give tickets for drinks. Of course no trams were running at that time.
7831. You never lived in Redfern? At one time.
7832. Whereabouts? Pitt-street.
7833. *Mr. Thompson.*] Do you know old Dominic Lacerda? Yes.
7834. Used he not to have a tobacconist-shop there? No; it was at the corner of Regent-street and Redfern-street.
7835. *President.*] When you lived in Pitt-street you would not be far from where you live now? No, not very far. It is about twenty years since I lived in Pitt-street.
7836. Have you been living for any considerable time where you are living now? I have been living there for about five months. I live opposite St. Silas's now—that is off Botany-street.
7837. Where did you live before that? In Cooper-street, Waterloo.
7838. How long since is that? About ten or eleven months.
7839. How long have you been living there altogether? About eighteen months.
7840. Previous to that where were you? At Surry Hills—14, Chelsea-street, near Baptist's Gardens.
7841. How long were you a conductor when you were in the Department? About three years and a half.
7842. Did you ever hear that the conductors were making a bit? No, not until I left.
7843. Only recently? Yes.
7844. While you were occupied on the trams did you never hear it said that some of the conductors were making a bit? Yes; I heard something of the kind passed.
7845. You did not pay any attention to it? No.
7846. You did not believe that it was so? No.
7847. Do you know any of these men who have come under suspicion—Musgrave, Ferrier, or Fraser? Yes.
7848. Do you know them well? Only by being in the Service with them.
7849. You never suspected these men? No. One of them is keeping a tobacconist-shop in Cleveland-street now—that is Fraser.
7850. *Mr. Thompson.*] How long ago is it since you heard that man telling about Siddons buying tickets? About eight or nine months ago.
7851. Before you left the Department? Yes.
7852. Did it not strike you then that it was a curious thing that he should be buying loose tickets in this way? Yes; I did not believe it.

7852½.

- G. Love. 7852½. Then you really have no information you can give us about the frauds? No.
 7853. Give it to us quite freely if you have any? That is the only thing I know of. I do not know the man's name. I was standing at the corner of Buckland-street and Botany Road when I heard the thing said.
 7854. What do you think of Dominic Lacerda? I do not care about him. He would be quite likely to be selling tickets. I would not put it past him.
 7855. You know the father? I know the whole lot of them; they are all tarred with the same brush.

George William Macdonald called in, sworn, and examined:—

- Conductor G. W. Macdonald. 7856. *President.*] You are a tram conductor? Yes.
 7857. How long have you been in the Service? Seven years and ten months.
 7858. We have sent for you because we understand from M'Mahon, one of your fellow conductors, that you have expressed a desire to him to come here and give some information; if you have any to give we shall be very glad to receive it; did you express this wish to M'Mahon? Yes.
 7859. What is the nature of your information? Sometime ago I applied, with others, for a certain position in the Service. A Member of Parliament wrote, recommending me to the Commissioner for the position. My application, with the recommendation, was sent on to Mr. Roberts, and in answer to it he said that there was no traffic foreman wanted at North Shore, and that if one was wanted I was the last man in the Department he would recommend. I don't know of anything against me, and I don't know why he should have sent me that report.
 7860. But how does this bear upon the subject of our inquiry? I do not know. That was all I wanted to say.
 7861. How do you know that Mr. Roberts gave this answer? I got his report.
 7862. In writing? Yes.
 7863. Where did you get it from? It was sent to Mr. Cass, the member who wrote to the Commissioner recommending me, and it was sent to me by Mr. Cass.
 7864. *Mr. Thompson.*] Then what you wished to state was that you had a complaint that favouritism had been exercised, or that undue influence had been used against you? Yes.
 7865. *President.*] Was anyone recommended for the position? I do not know.
 7866. Was anyone appointed to the position? No.
 7867. This is only a particular grievance of your own; if you felt that the report of Mr. Roberts was wrong, and that you suffered under a grievance through it, you should have made an appeal for redress to the Commissioner through the Department, but we have nothing to do with anything of that kind; have you taken that course? No.
 7868. How long ago did it happen? Two years ago. To tell the truth, I was afraid to do what you suggest.
 7869. Why? I was afraid that they might bring some charge against me and dismiss me.
 7870. You thought that some charge would be made? Yes.
 7871. What made you think that? I do not know. I have seen so many curious things happen in the Department.
 7872. What are the curious things that have happened? I understood first of all that it was to be given to a man named William Grono.
 7873. Where is he? In the ticket office at Redfern.
 7874. What objection would you have to offer to that? Well, I was an older hand. He considered that he was an older hand, but he was on the permanent way when I came into the traffic.
 7875. But he did not get the appointment? No.
 7876. You said just now that many curious things happened in the Department; we should like to hear of them apart from this particular grievance of your own? I thought that it was likely that they would have made a charge against me if I said anything about it, therefore I left it alone.
 7877. Did you really think they would trump up a charge against you? I did.
 7878. Have you ever known them to do it? I cannot say that I have known them to do it, but I have heard that they have done it.
 7879. Who do you think would be guilty of trumping up a charge against you? I have heard that the Superintendent has done it before to-day.
 7880. Can you give any cases in which he has done it? I could not swear that he has done it. I have only been told so.
 7881. But in what cases? I do not know that I can remember exactly now. There was one man, Cavanaugh. I heard that he did it in his case. I cannot exactly remember the other cases now.
 7882. But if there has been a charge trumped up against Cavanaugh, it will appear in the records, will it not? I expect it will.
 7883. It will not be a verbal charge, it will be a written report against the man? I expect it will.
 7884. And you have been told that this report was a trumped-up one? Yes.
 7885. What happened to Cavanaugh? He was dismissed.
 7886. Who are the persons who told you he was dismissed on a trumped-up charge? I could not remember—it was generally talked about.
 7887. Was Cavanaugh dismissed at the time of the diamond stud robbery? Shortly after.
 7888. Did Cavanaugh give any evidence at that inquiry? I am not sure.
 7889. You are aware that in connection with that diamond stud matter an official inquiry was held before the Minister for Works and the Commissioner for Railways. Had you any reason to be dissatisfied with the decision arrived at? No; I cannot say that I have.
 7890. You are labouring in your own mind under some terrible grievance which you evidently think a great deal of. If you have any grounds let us know all that you think? Well, I saw Cavanaugh after his dismissal, with a lot of money. He was going away then. He showed me a letter from Mr. Roberts to give to Mr. Fletcher, the Minister for Mines, to get him a billet. He said that he had got the money from Mr. Roberts.
 7891. Did he say what he had got it for? Yes; to get rid of him. He said it was a part of £200 or £250 he had to get. He said he had another £100 to get.
 7892. How much money did he show you? I did not count it. He said there was £125. 7893.

7893. Is he to be found now? I do not know where he is now. This happened in the pointsman's box at Redfern. Stafford, the pointsman, was present. Conductor G. W. Macdonald. 21 Sept., 1888.
7894. Is he in the Department now? He is at the Redfern Railway Station, car cleaning, at present.
7895. Did Cavanaugh explain to you why he was to get this £250? It was to hold his tongue. I understood that both he and Martin got so much each.
7896. What did Martin get? I never heard what Martin got.
7897. And you believed this? I believed it; I read the letter myself and saw the man.
7898. What did the letter say? It was addressed to Mr. Fletcher asking him for God's sake to get the man some position, as Mr. Roberts had been ruined by that man Berner. There was a mark in the left-hand corner of the letter, and Cavanaugh asked me if I knew what it meant. He said it was a Masonic sign. He is a Freemason.
7899. Is that all the letter said? I do not remember anything more. I did not take much notice of it at the time. Cavanaugh is a man I do not care about. I happened to have a little business in George-street, and I came to the box when Cavanaugh was there.
7900. Did it not seem to you extraordinary that a letter should be written to Mr. Fletcher asking him to find employment for this man because the writer has been ruined by another person? Yes, I thought it was. I did think it strange.
7901. Could you understand the bearing of the letter according to your own showing if it had been to this effect: "For God's sake find some work for this man—he has been sacrificed to save me"; that would follow on to what you told us would it not? Yes, I did not know what to think of it.
7902. Was there not something more in the letter that would explain what it meant? Yes, there might be; I did not pay any particular attention to what was in the letter any more than what I have already stated.
7903. What did you think. Did you not think it was a most terrible thing—that it was evidence of the most awful dishonesty? I thought at the time it was very strange.
7904. And yet you did not take any notice of it? I did not consider that it concerned me at all. I thought the thing was done with then because Cavanaugh was going away up country.
7905. How long ago is this? About eighteen months ago.
7906. Not more than that? I could not be sure.
7907. How long is it since the diamond stud matter occurred? I do not remember; I did not give evidence on that occasion.
7908. Is it not a fact that the diamond stud business occurred early in 1884—about four and a half years ago? I may be mistaken in the date.
7909. How long is it since Cavanaugh left? I do not know; I cannot remember. I know it was soon after that other matter.
7910. Then it must be about four years ago? I did not think it was so long.
7911. Have you kept this incident locked in your breast for four years without telling anyone? There was a lot of people who knew it—a lot of men at any rate.
7912. You told a lot? They knew it.
7913. How? Stack had told them. I have heard it talked about on different occasions.
7914. When did you apply for this appointment that you did not get? It was just before the North Shore tram was opened.
7915. Was it after you had this communication with Cavanaugh? I do not remember whether it was before or after.
7916. It never occurred to your mind that you ought to report the circumstance? No; I never thought it was any part of my business to report it. I thought it was all settled before by the inquiry.
7917. Had you' connection with the diamond stud transaction yourself? I was in the raffle. I was not there when it took place, but I paid to go in and some one threw for me. The night before the raffle came on Lambert and Murray, who were the two special conductors at the time, came up on to the platform, and Lambert asked me if I had any enmity against the boss. I said, "No." He said, "Do you want to go up to the inquiry?" I said, "No, for God's sake do not mention my name in it."
7918. Why? I said "It is a fishy piece of business and I do not want to have anything to do with it." Lambert said, "Then you do not want to go." I said, "No, unless I am forced."
7919. And you did not go? I did not.
7920. Why did you want to stop away? I did not want to be mixed up in it.
7921. Why? I did not see that I could do any good or harm.
7922. What evidence would you have given? I should have said I was in the raffle.
7923. Whose studs were they? It was said that they were Mr. Roberts'.
7924. Who said so? When Martin asked me to go into the raffle he said that the studs belonged to Mr. Roberts and that he wanted to raffle them, and then I asked him what they were worth. I forget the reply, whether it was £10 or £20.
7925. I am anxious to know why you did not want to give evidence there? I did not want to get mixed up in it.
7926. But four years afterwards when there is an inquiry into quite a different matter you wake up to a sense of your duty and want to give evidence before this Commission. Is that what we are to understand? If I had been pressed to give evidence at the time I would have gone.
7927. Did we press you to come here? No.
7928. Did you not send word that you wanted to come? Only on that particular matter I have spoken about.
7929. Did you not say that you wanted to give us information? No.
7930. Have you any information to give us in connection with these ticket frauds? No.
7931. But you asked M' Mahon particularly to get yourself called? Yes.
7932. In order that you might give information about a thing which was settled four years ago, and in connection with which you particularly asked that you might not be called upon to give evidence because it was so fishy? I did not want my friends to see my name mixed up in it.
7933. But after the lapse of four years, although the matter is not in any way pertinent to this inquiry, you do wish to be mixed up in it. Will you explain that? I understood that that was what the question was asked me for. I had no desire to bring the thing up.

- Conductor
G. W.
Macdonald.
21 Sept., 1888.
7934. You wanted to come here to give the information? That was simply in connection with an appointment in the Department.
7935. But is it any part of our business to enquire into the appointment of foremen and inspectors? I do not know.
7936. Do you not know that this Commission was appointed to inquire into the recent alleged tram frauds, and to devise a means for improving the collection of fares in the future? I do not know.
7937. What can the question of the personal grievances of the men have to do with that? I understood that that was what you were sitting now for and that the inquiry as to the frauds had been closed.
7938. That we were now sitting to go into individual grievances? Yes.
7939. Who told you that? I heard it from a lot of them; I do not remember anyone in particular telling me.
7940. Who pressed you to come forward and give evidence just now? No one.
7941. Was it entirely your own doing? Yes.
7942. It is singular that you should have been unwilling to give evidence at the proper time and that you should be willing to give it four years after the whole had been settled? I was afraid to do so at that time, and I did not want my name to be mixed up in it.
7943. How is it you are not afraid now? If I get dismissed now well and good, I cannot help it.
7944. How do you mean if you get dismissed now? It is likely the Department will have a down upon me because I have come here. I do not know that they will, but they may.
7945. You have no right to say anything of the kind? Perhaps not.
7946. Answer this particular question as to why you are not now afraid to rake up an old matter which was settled four years ago without the benefit of what you appear to think was valuable evidence on your part? I thought that was what your inquiry now was about, and that was what these other men had come for.
7947. Who told you that we were making any inquiry at all into this old matter? I do not remember who told me.
7948. When were you told? About a week or ten days ago.
7949. You were told that we intended to inquire into the diamond stud matter? Yes, that and other matters.
7950. Did you hear at the same time that it was the intention of somebody to write an anonymous letter to the Commission in order that this matter might be very conveniently brought up? No.
7951. But you heard that it was the intention of the Commission to inquire into a matter that had been dead for over four years? I heard that.
7952. That is the reason of your coming forward? Yes.
7953. *Mr. Thompson.*] Did you hear it down in the yard—from any one in any position down there? It was from some of the men, I could not remember who.
7954. Tell me anyone of the men who said it to you, beginning from the foreman and inspector, and coming down to the scrubbers? I heard it casually mentioned, but I could not remember just now who it was who told me.
7955. Do you know Halliday? Yes.
7956. Did he mention it to you? No.
7957. Did Gamgee? No, I do not think he did.
7958. Was it Saunders the shunter? No, he is not in my shift.
7959. Was it Wigg or Moran? No.
7960. Was it Peters? I am not sure whether it was not Peters, in fact I could not swear positively who it was.
7961. Was it M'Mahon? No, it was not M'Mahon, at least I don't think so.
7962. Was it Lambert? I have not seen Lambert for months.
7963. Was it O'Brien? No, it was not O'Brien.
7964. Have you had any conversation with O'Brien on the subject? No. He was talking to me the other morning, but not about this matter.
7965. What about? About Moran and Greeley taking a public-house, but I thought it was only in a jocular way. He said, "Are you going to take a public-house," I said "No, I am not." He told me then that Moran and Greeley were going to take one between them.
7966. That was all that passed? Yes.
7967. He did not mention this inquiry at all? No.
7968. You say that the matter was so fishy at the time that you begged off being called as a witness. In what respect was it fishy; was it fishy as far as you were concerned; as far as Martin was concerned, or how? I heard then that Martin was going to take the blame for the studs, and say that they were his own; and that his wife did not like them.
7969. You did not believe that the studs were Martin's, although he was going to take the blame for it? Exactly.
7970. You are perfectly well aware from your having been at the meetings of the men when these frauds were made public what gave rise to this Commission? Yes.
7971. Are you not in a position from what you have heard while you have been a conductor to give us some information about the very matter into which we are now inquiring, passing over your stale fishy old transaction? The first I ever heard of the frauds was when I was called back on a Saturday afternoon at 5 o'clock for special duty an announcement appeared in the *Star*, and one of the men was reading it. That was the first I ever heard of it.
7972. You know nothing about it beyond that? No.
7973. Did you ever hear of anything of the kind before? That is the first I ever heard of it.
7974. The public knew more than many of you men appear to have known? Very likely. The first I heard of it was what I saw in the *Star*.
7975. Did you not hear that they were making tickets by rigging their bells? No, that was the first I heard of it.
7976. You never heard of the fellow who used to carry a bell up his sleeve and ring that? I never heard anything about that.
7977. *Mr. Brock.*] Do you know if the letter of Cavanaugh's, to which you have referred, ever went to Mr. Fletcher? I do not know that it ever went. I only know that Cavanaugh said that it had.

7978. Where is Cavanaugh now? Up country somewhere; he got some appointment out west.
7979. In the railway service? I do not know. I do not think so.
7980. Is it in the Government service? Yes, but I do not know in what branch.
7981. *President.*] Did you absolutely see in this man's hand a large amount of gold? No, they were notes. There was a roll of notes bigger round than my arm.
7982. There can be no doubt about it? No.
7983. What sort of sign was it on the letter—the sign which you say was masonic? I do not remember what it was like. It was just in the corner.
7984. You are not a mason yourself? No; the sign was in one of the corners, and Cavanaugh asked me what it meant.
7985. Was he a mason do you know? I do not think he was.
7986. What was Cavanaugh dismissed for do you remember? I do not remember.
7987. But you believe it was upon a trumped up charge? I was told so.
7988. Why was it necessary to dismiss the man at all? I do not know what he was dismissed for.
7989. But is it necessary to give a man a certain amount to hold his tongue and dismiss him at the same time? I heard him say that day that he had been dismissed and reinstated within half an hour.
7990. *Mr. Thompson.*] And then dismissed again? Yes.
7991. *President.*] But had the dismissal anything to do with this other matter—the letter and the money? That I could not say.
7992. What made you say you thought it was a trumped up charge? I heard the others talking about it. I do not remember who it was; it is so long ago, and I did not pay much attention to it. I heard it said that some one went to Mr. Abigail, and that the man was dismissed some few weeks afterwards.
7993. Through Mr. Abigail? I think it was through something that Mr. Abigail said. I do not know whether Mr. Abigail reported him or who reported him, that I do not remember.
7994. But at the time he showed you this letter and roll of notes was he a dismissed man? Yes.
7995. For how long had he been dismissed? I think he had been dismissed some time—perhaps a few weeks or a few months—I could not say which.
7996. *Mr. Thompson.*] This letter was virtually begging that he might be re-instated or get some billet under the Government? Yes.
7997. *President.*] Because Mr. Roberts had been ruined by Mr. Berner? Yes.
7998. *Mr. Brock.*] Did Stafford give evidence at the diamond stud inquiry? I do not know; I do not remember.
7999. Did this man Cavanaugh receive this letter from Mr. Roberts unsealed? I could not say; it was open when I saw it.
8000. Was it in an envelope? Yes.
8001. Was the seal broken or was it left open by the writer? I do not remember that. I understood at the time that he had given it to Mr. Fletcher, and that Mr. Fletcher had given it to him back.
8002. Saying anything to him at the time? I do not remember. I cannot remember that he made any remark.
8003. *President.*] Did you notice the date of the letter? No.
8004. You think Stafford took more notice of the thing than you seem to have done? He may have done. I was just walking past when he bade me "good day," and called me into the box. Cavanaugh was there. There was a locker, and the money was on one of the corners of the locker.

Conductor
G. W.
Macdonald.
21 Sept., 1888.

Matthew Williams called in, sworn, and examined:—

8005. *President.*] You are a tramway conductor? Yes.
8006. How long have you been in the service? Nearly seven and a half years.
8007. We have sent for you, because we have been given to understand by M'Mahon, one of your fellow conductors, that you have expressed to him a desire to come before this Commission to give some information, if so, we should like to hear what you have to say? That is perfectly correct.
8008. Will you say what you have come for? I merely came in reference to the way in which I have been treated by the Tramway Department. It happened about three years ago when there was an accident with one of the engines.
8009. If you have come before us on a matter of personal grievance we must decline to hear it, but if you have come to us with any information which, in the most indirect way possible, will throw any light upon the tram-ticket frauds, we shall be very glad to receive it? No; it is more a matter of complaint.
8010. Who told you that we were sitting here to adjudicate grievances? I can hardly remember.
8011. Did not someone suggest to you that you should come and give evidence? No; I came of my own free will and accord.
8012. In connection with this grievance of your own which you were desirous to ventilate here, we should like to know whether it has any bearing whatever upon the tram frauds? Not in the slightest shape or form.
8013. Does it show any sign of any general favoritism or improper treatment of the men? No, only unfair treatment as far as I am concerned.
8014. Have you been told that this Commission of inquiry was sitting to rake up an old matter which was settled four years ago? No.
8015. Are you sure of that? Yes.
8016. Have you heard any conversations in reference to the diamond stud matter during the last week or ten days? I heard that it had been brought up.
8017. Before this Commission? Yes.
8018. When did you hear that? About a week ago.
8019. Who said so? I could not be sure whether it was M'Mahon or who it was. I could not be sure.
8020. Are you sure that the person who mentioned it to you did not say that it was going to be brought up? I would not be positive whether it was said that it was going to be brought up, or that it had been brought up, but I was told for a fact that the conductor who had the selling of the studs had been brought up.

Conductor
M. Williams.
21 Sept., 1888.

- Conductor 8021. When did you hear that? Yesterday.
 M. Williams. 8018 $\frac{1}{2}$. But tell us about the information you received a week ago. Was it M'Mahon who gave it to you? Yes, if I am not mistaken.
 21 Sept., 1888. 8022. Who told you yesterday that the conductor who had the selling of the studs had been brought up and examined? I could not say who it was, there was so much talk. I general manage to keep myself aloof from the men, and mind my own business. I find I have quite sufficient to do.
 8022 $\frac{1}{2}$. You have no information to give us bearing upon the ticket frauds? Not the slightest. There is only one thing I would suggest in reference to the tickets to prevent any fraud in the future. I think we might first ring for the tickets, and then tear them up afterwards. That would prevent all fraud, and be a double check.
 8023. It would prevent fraud either in the office, or on the part of the conductors? Yes; nothing could be done with the tickets by the conductors, or by those in the office.

William Tipping called in, sworn, and examined:—

- Conductor 8023 $\frac{1}{2}$. *President.*] You are a tramway conductor? I am.
 W. Tipping. 8024. How long have you been in the Service? About six years and six months.
 8024 $\frac{1}{2}$. On what line? On various lines—on the Forest Lodge, Glebe Point, and Moore Park lines.
 21 Sept., 1888. 8025. Our sole reason for sending for you is that we have been given to understand by M'Mahon, one of your fellow conductors, that you have expressed a wish to him that you might be called here to give evidence? I did not wish it, but he asked me, being one of the old conductors, whether I would not like to make a statement. I said I had a little grievance I would like to state.
 8025 $\frac{1}{2}$. A personal grievance? Well, yes.
 8026. We are not sitting here to consider such matters? I beg your pardon.
 8026 $\frac{1}{2}$. We are sitting here to inquire into the recent tram frauds, and to devise, if possible, a better mode of collection in future. If you have any information bearing on either of these two phases of the subject we shall be glad to receive it? Well, in the first place, I certainly do not like the bells. I have been many times going through Belmore Park when a gentleman has handed me 3d. or two tickets. By the time I have started to ring my bell the whistle of the engine has been blowing, the bell has not been sufficiently loud to be heard above the whistle, and the gentleman would turn round and say that "Guard is not pulling his bell."
 8027. Have you heard such a thing said? Yes.
 8027 $\frac{1}{2}$. With regard to yourself? Yes.
 8028. You think the bells should be louder? Yes, certainly. The best system I consider would be to use all cash fares, say 2d. I would give the public a chance for travelling for 2d., the same price as tickets, and I would have a small book upon which the guard could give them a receipt. No doubt the bells are the fastest, but at the same time these bells bear a nasty brand upon us.
 8028 $\frac{1}{2}$. Why? In the first place it is disagreeable when we take our bells into the office. I may very often have two heavy cars to manage, not being a favourite with the traffic foreman; these cars would be so packed that I could not get standing room inside, and I would have to stand upon the footboard and collect; then of course I have to take the tickets from the gentlemen who pass them to me; I have to hold on with one hand and to take the tickets with the other. I have only one hand with which to count them; there may be under the number or there may be over the number; then I have to ring with the hand in which I am holding the tickets, hanging on to the car with the other hand. The consequence is, when I come to office, I get a memo. stating that I am so many tickets under or over. Of course I have done my best for the Department; I am not able to do any more. That is my objection to the bells.
 8029. Your objection to the bells is that they cannot be depended upon to bring out an accurate balance? Certainly not. I was coming down this morning with a gentleman—Alderman Meeks;—he thought that he handed me two tickets. I said, "How many are you paying for?" and he said, "One." I said, "You have given me four tickets." If it had been a dark night I should certainly have put them into my bag without seeing that he had given me four.
 8029 $\frac{1}{2}$. That is no fault of the system? No; it is not fault of the system, but, at the same time, if we had all cash fares, or if we had to tear the tickets, we should not be told that we were so many under or so many over when we had done our best.
 8030. Do you think that if you had all cash fares with all copper coins you could get through your work, giving the amount of change necessary? Certainly, if the trams were run in a proper way; for instance, take the run to Newtown road, or to Forest Lodge, or to Glebe Point, you have to wait perhaps half or three-quarters of an hour for a tram; I may be on the Glebe Point tram coming first; perhaps there would be sixty passengers waiting; they would take the first car; the consequence is that the Forest Lodge or Newtown cars following me would be running empty, but if there were an interval of 10 minutes at the Newtown road the trams would not be so crowded.
 8031. Did you ever try to make out a tram time-table? No.
 8032. Do you think you could? Well I could try.
 8033. Do you think you could arrange the time-table so as to get these intervals properly? Well I think I would try.
 8034. Take the trams going to the western suburbs—Forest Lodge and Leichhardt and so on, the distance is unequal is it not; if you get your interval right going out of Sydney does it not follow that you get altogether wrong coming back about the point you are speaking of? Yes, I see that.
 8035. It is right to preserve an interval if you can, but is it not the case that the difference in distance would bring the trams together at this point? Yes. Take Glebe Point; there is a difference of 3 minutes between Glebe Point and Forest Lodge; one of the Glebe Point trams leaves at 8:26 and one leaves Forest Lodge at 8:25; the consequence is if I start to my time I am down at Bridge-street before my time. If I am on the Glebe Point line I leave a minute behind. We generally have 20 minutes spell on that journey; that leaves us plenty of time to get water and for the driver to look round his engine. The tram leaves Forest Lodge at 8:25 as I have said; the consequence is that the two trams are on to one another.
 8036. It is a fact that not only do these two trams get close to one another at the Newtown Road junction, but all the time they are running the one from the Forest Lodge and the other from the Glebe Point terminus.

- terminus, they are so to speak, eating the earnings out of one another, are they not? Yes. Another thing I would like to refer to is this: I have been taken off a Forest Lodge line and put to Waverley to look after a special. I have had two cars to myself. The ordinary tram comes behind me with two cars, the conductor having an assistant; I get all the loading and the ordinary tram behind me will have about forty passengers; the Forest Lodge people meanwhile are depending upon their tram and are disappointed. 8037. Do you mean to say that the regular tram is taken off the regular route? Yes, I have been taken off several times.
8038. Has not some one gone instead of you on the Forest Lodge route? No.
8039. You say that if the trams ran at better intervals you could do the work of collecting under a cash system? Yes.
8040. Your idea would be that the fares should be the rule and as a check upon yourself you should give a receipt? Yes.
8041. What sort of receipt; would you have to fill it in yourself? No, the same as we had when we had the little books some time ago—when we used to carry the tickets; I fancy it is fairer to the conductor and also to the public. A man pays 2d. and he gets a receipt for it.
8042. Suppose you had a cash system with a register which automatically registered the money as it went through so that the conductor at the end of his trip round would by his indicator show the actual amount of money which should be handed in;—would not that be still more satisfactory? Yes.
8043. So that at the end of a journey, without any dispute, the register indicating £1 5s., the conductor would have to give in that amount? Yes.
8044. Instead of giving in tickets sometimes above the register and sometimes below it? Yes; that will be much better.
8045. You see no reason why a system of that kind should not work? It would be a very good idea.
8046. Have you any information at all to give us in connection with these frauds? Not the slightest; no information at all.
8047. *Mr. Brock.*] When did you first hear of them? I heard somebody make the remark in the room about Musgrave and a few more of them going up to the head office in connection with the frauds.
8048. Since this inquiry commenced? Yes.
8049. Is that the first you heard of tickets being sold? Yes.
8050. *President.*] You believe that the work of the tramways up to that time had been carried on with perfect honesty on the part of all concerned? That is what I believed.
8051. Did you not hear of a paragraph in the *Australian Star*? I did not see the *Star*. I saw the *Evening News* commenting upon it. I did not read it, because the paper usually publishes so many funny things about the conductors and the trams that it was hardly worth while reading them.
8052. *Mr. Brock.*] People generally read the papers when the articles concern themselves? It is not only now and again; they are always writing about the trams.
8053. You had some conversation with M'Mahon as to your coming here to give evidence? Yes.
8054. Did he suggest to you that you should give evidence? Yes. He suggested that being one of the oldest hands I should do so.
8055. *President.*] I want to ask you a few questions in connection with that conversation;—did he not suggest to you the channel in which it would be wise to give evidence? No.
8056. Did he say anything like this to you: "You will find that old matter connected with the diamond studs is going to be brought up"? No.
8057. He did not mention that matter to you at all? No.
8058. Have you heard that this Commission was dealing with the matter in any shape or form? A conductor named Leany told me that the Commission was summoning Cavanough. That was all I heard about the diamond stud matter.
8059. Who is Leany? He is a conductor.
8060. And he said the Commission was summoning Cavanough? Yes.
8061. When did he say that? About three weeks ago.
8062. Beyond that you have heard nothing about the diamond stud business? No.
8063. You did not hear that the Commission was busying itself about that matter? No.
8064. You did not hear that the Commission was going to do so? No.
8065. You did not hear that it was intended to bring the matter under the notice of the Commission? No.
8066. What line is Leany on? On the Randwick line.

Edwin Stafford called in, sworn, and examined:—

8067. *President.*] How are you employed in the Tramway Department? I am a pointsman; but I am ill now.
8068. Are you at work? Yes; I am car-cleaning.
8069. How long have you been in the Tramway Department? Since it started.
8070. Do you know a man named Cavanough? I did.
8071. Do you remember being told something very remarkable by Cavanough in the presence of a conductor named Macdonald, some eighteen months ago? Yes; it was in my box that it happened.
8072. Where is your box? Just below the railway platform.
8073. Have you had any recent conversation with Macdonald on the subject? Not that I am aware of.
8074. What do you mean? Not that I am aware of. I have seen him, but I never had any conversation about the like of that. I do not know what I was sent for.
8075. When did you have any conversation with him last? When we were working together, but it was not on this subject.
8076. Has he not spoken to you on this matter of Cavanough's during the last week or ten days? I think he has.
8077. Did he tell you that he was going to give evidence here? No, not on that subject; it was on another subject.
8078. He said he was going to give evidence? Yes.
8079. When did he tell you? About a week ago, I fancy; you hear so many rumours here on the job that you hardly take notice of anything.
8080. Did you bring up the subject? No.

Conductor
W. Tipping.
21 Sept., 1888.

Pointsman
E. Stafford.
21 Sept., 1888.

- Pointsman
E. Stafford.
21 Sept., 1888.
8081. He has not refreshed your memory on the point? Not to-day.
8082. Not during the last hour? I have seen him during the last hour; just after he came up I got notice to come down.
8083. Did he not tell you what you were coming for? He said I was coming down to the inquiry.
8084. He did not tell you what evidence he had given? No.
8085. Are you quite sure of that? I am.
8086. He did not tell you what he said as to Cavanaugh? No, he did not, because he was fetching up a special; he backed up with his special as I was coming down; we just passed one another.
8087. Will you tell us what happened in your box some time ago? To the best of my memory Cavanaugh came up there, and he threw down I think £113; he told me to count the notes. I said; "What for?" He said, "I got them from old Jimmy," meaning the Superintendent. I said, "What is it for?" Of course Cavanaugh was a man you could not take much notice of one way or the other, because he was always skitting about different things.
8088. He was not a truthful man? He used to tell some tremendous lies at times. When he showed me the notes I said, "Go along." He said, "Count them; that is my tip." Macdonald was in the box at the time. I chucked them down and said, "Sure enough it is there"; there were £113 to the best of my belief. I said, "Were did you get it from." He said, "From old Jimmy," meaning Mr. Roberts.
8089. Did you go further into the matter? No, I did not.
8090. Did he show you any letter at the time? I do not think he did.
8091. Did you believe him when he told you he had £113? I hardly credited him.
8092. Did he not tell you how he came to get it? He said it was over some diamond studs, or something similar to that, but whether it was true or not I do not know.
8093. This took place about two and a half years after the diamond stud business? About that time.
8094. And all that time Cavanaugh had been working on the trams? Yes, I think he had.
8095. Did he say he was to receive or had received more money than he showed you, or anything of that kind? No, he did not.
8096. Was he in the Service when he showed you the notes, or had he been dismissed? It was about the time he resigned; when he was going up country on some other occupation I think, but I would not be certain about it.
8097. He showed you no letter? No; I do not think he did, not to the best of my recollection. If I had known I were to be asked about the like of this I should have been better prepared.
8098. Did you tell anyone about this money matter? Let me see; I am blest if I know. I might have mentioned it up in the conductors' room. I would not be certain.
8099. Did you threaten Cavanaugh that you would at once go and tell Mr. Roberts what he had said? No, I did not.
8100. *Mr. Brock.*] Did you hear anything about a letter having been written? No; not that I am aware of.
8101. A letter to the Minister for Mines, Mr. Fletcher? No; I heard nothing about it.
8102. You were not called as a witness at the diamond stud inquiry? No.
8103. *Mr. Thompson.*] Did you have any talk with Cavanaugh about the matter after the time to which you referred? Really I could not say whether I did or not; it is a good while ago now. I have heard Cavanaugh going about a lot of times and saying they could not sack him.
8104. *President.*] That was before he showed you the money? Yes; but I did not take any notice of it.
8105. *Mr. Brock.*] He said they could not sack him? Yes.
8106. But they did sack him? Yes. It seems they did dismiss him after all for being drunk, or something of that kind.
8107. That was Mr. Roberts' act? Yes.
8108. What is your impression about the matter now;—do you believe that Mr. Roberts owned the studs? I should not care to pass any opinion about the matter at all.

Michael Leaney called in, sworn, and examined:—

- Conductor
M. Leaney.
21 Sept., 1888.
8109. *President.*] What is your position in the Tramway Department? Conductor.
8110. How long have you been in the Service? About six years.
8111. We have sent for you more particularly to ask you one question. Did you say to anyone, about a fortnight ago, that a man named Cavanaugh had been served with a summons to appear before this Commission, or that he was about to be served with a summons? I heard it mentioned that Cavanaugh was served with a summons.
8112. Who mentioned it? Really I could not tell you. I did not take much interest in it at the time. It happened when I was going to Randwick.
8113. Have you been attending these meetings of conductors? I only attended one meeting.
8114. Which was that? The second meeting.
8115. Since these meetings have you had any consultations with any of your fellow conductors? No.
8116. With M'Mahon, for instance? No. I do not think I have spoken to M'Mahon since the meetings. I might have seen him and bid him good-day; but that is all.
8117. But you heard that Cavanaugh was to be subpoenaed by this Commission? I heard it as a matter of fact on the cars.
8118. From a conductor? I could not say whether it was from a conductor or from a pointsman.
8119. But it was from a tramway employee? Yes.
8120. *Mr. Brock.*] It seems strange that you should know that it was a conductor or a pointsman who told you; but that you should not remember which? Well, I heard it; that is all I remember. I may have been talking to someone else about it after I heard it.
8121. Do you remember saying it to any particular conductor? No.
8122. *Mr. Thompson.*] How many pointsmen are there between here and Randwick? There is one living at Randwick. It may have been he who told me about Cavanaugh, but I could not swear.
8123. What is his name? Mick Whalan; I think he is pointsman at the Queen-street junction, and he lives at Randwick.

Conductor
M. Leaney.

21 Sept., 1888;

8124. He did not jump up on to your car and give you that solitary piece of information? No.
8125. Well, what were you talking about? We were talking about the frauds, and Cavanaugh's name came up.
8126. How did it come up? The other man, whoever it was, suggested it to me.
8127. And the statement was made, not that Cavanaugh was going to be called before this Commission but that he had received a summons or something to that effect? I could not say the words.
8128. Was anything said in that conversation about the diamond stud matter? Not that I am aware of. If I had time to think the matter over I might be able to remember it better.
8129. Did this man tell you that the attention of the Commission had been drawn to this matter of the diamond studs, and that Cavanaugh was going to be called in consequence? I did hear that about Cavanaugh.
8130. And that he was going to be called? Yes; I believe the man I have named is the man who told me.
8131. You mean the pointsman at the Queen-street junction? Yes.
8132. Are you sure it was he? He is the only man I can remember having had any conversation with about the matter.
8133. Have you any information you can give us in connection with the ticket frauds? I have no facts.
8134. But have you any strong suspicions? I have only hearsay.
8135. *President.*] What is that? It is in reference to the Frenchmen selling the tickets.
8136. Which Frenchmen? The Frenchmen up at Liverpool-street.
8137. What did you hear about that? I heard that Ferrier the conductor offered to sell one of these Frenchmen £50 worth of tickets for £25.
8138. Do you remember where you heard that? I heard it on the cars from a carpenter working now on the North Shore line. I believe he is working there now as a carpenter.
8139. What is his name? Moloney.
8140. Did he appear to be well informed on the subject, or was he talking from hearsay? I believe from what he told me he heard the conversation between the Frenchmen and this conductor.
8141. This happened when? About last May.
8142. Is not Moloney in the permanent-way department? Not that I know of.
8143. By whom would he be employed? By the Government; he is a bridge carpenter.
8144. Then he is in the permanent-way department? Yes? I suppose so.
8145. *Mr. Thompson.*] Have you heard anything more of the same kind? Well there is a man named Mulligan; I have known him for about twenty years; he lived with these Frenchmen for about a month or five weeks. I asked him one day if there was any truth in the statement that the Frenchmen were buying tickets. He told me that he had heard they did so, but that he had never witnessed any transaction taking place.
8146. Was that all? Yes.
8147. Have you heard of any other matter which will in any way assist us in our inquiry? Well, Ferrier and Musgrave were great mates, and I heard that Ferrier used to sell tickets.
8148. From whom did you hear that? From Mulligan; one day when Moloney was in at the Frenchman's having something to eat, the conductor came in with the tickets offering to sell £50 worth for £25. The Frenchmen would not give him £25 and he went away.
8149. *President.*] How long have you known Moloney? Three or four years.
8150. Did you know him at the Redfern Station? No.
8151. Where then? He was working at the Glebe twelve months ago; but he was not in the department; I know that he is at present on the Pearce's Corner line.
8152. Do you know his address? No.
8153. What is his Christian name? Frank.
8154. Have you no further evidence to give us? No; if I knew anything about the tickets I would be only too glad to come forward.
8155. *Mr. Thompson.*] Do you know what has become of Cavanaugh? No.
8156. Is he out of the country, do you know? I heard some time ago that he was up at Bathurst.
8157. Why did you not report to Mr. Roberts what you had heard with reference to these Frenchmen? I did report it to Mr. Roberts.
8158. What information did you give him? I gave him the information Mulligan gave me.
8159. Not Maloney's information? No.
8160. Did Maloney ask you not to mention his name? No; he just came on to the car and asked me if I thought there was any truth in it. I said I thought there was not. I told Mr. Roberts about the £50 worth of tickets being offered for £25.
8161. Do you know Musgrave? Well.
8162. Did you ever hear anything about his selling tickets? I did hear that he used to sell the tickets.
8163. Who told you so? I only know what Mulligan told me. He had only just hearsay—he had no facts.
8164. Did you ever hear of any other conductors selling tickets? No.
8165. Did you hear that Fraser was selling tickets? No.
8166. It was pretty generally spoken of among the conductors that Musgrave and Ferrier were doing this? Yes; another man who might be able to give you information is a photographer named Finn.
8167. Where does he live? In a boarding-house somewhere down in Lower George-street.
8168. In the Chinese quarter? Somewhere near there. He used to get out of the trams and walk down Bent-street. He used to go down to Coogee taking photographs. He was a particular friend of Fraser's.
8169. Has he a shop in Lower George-street? No; he is staying there in a lodging-house. He is a fast man, about 25 years of age. He has a fair moustache.
8170. You think he could give us some information? I think so.
8171. Do you know of any people who used to buy the tickets? No.
8172. What line are you on? On the Coogee line.

John William Tyrer recalled, and further examined :—

- J. W. Tyrer. 8173. *President.*] We desire to ask you one or two further questions. It seems to us that there is a decided lack of system in connection with the way the registers are read and dealt with when men are going to the race-course. For instance, a man will get his register read for the race-course. He will go away, and when he eventually gives in his returns, he will say "After all, they did not send me to the racecourse, They sent me to Bondi or Forest Lodge." Is that possible? It is possible.
- 21 Sept., 1888. 8174. Is it a fact? I do not say that it is a fact, but it is possible.
8175. We are actually told by Mr. Primrose that it happens on an average twice every race-day, and that instead of considering it his duty to make special inquiries to verify the conductor's statement upon such a very important point, he always accepts the statement, and accepts the register-reading as being for pence instead for shillings. Is that a satisfactory state of things? No.
8176. Are you aware that such a state of things has existed? I should say that it did not. The foremen are, of course, in charge of the men, and tell them off for special duty upon race-days. They have a standing order with reference to race-days.
8177. I think the order to which you refer hardly touches the question? I hardly think that such a thing as you suggest would occur. If a man were told off for race-course duty, and did not go to the race-course his bag would not be taken until the end of the shift. That would be before the present arrangement came into force, but Mr. Roberts is always down at this end. For the first six years of the races being served by the trams I always took charge of the race-course. Mr. Roberts would always be in a position to know if anyone told off for race-course duty really performed that duty. I may say that on such occasions as race-days, especially on public holidays, it was a matter of seeing how much work you could do in a stated time, and I should be obliged to admit that there is not the system carried out on such days as would be carried out on ordinary days. It would be either this or working to a complete system, but earning less money. Anyone who has noticed the work down here on a public holiday must have noticed the large amount of traffic which has to be done in an exceedingly small yard.
8178. Now you are branching off. We want you to stick to the subject we have brought under your notice; that is, the extraordinary statement which has been made in regard to the race-trams, and remember that the races are not necessarily held upon public holidays? I only mentioned public holidays and race-days because the two things combined make the traffic difficult.
8179. You admit that the registers having been read, it was an important consideration whether the conductor is going to ring once for 1s. instead of once for 1d.? Yes, of course.
8180. One of the officers in your branch has stated that on an average twice on every race-day the facility for ringing once for every 1s. has been given to conductors who have afterwards gone on to lines on which they would ring once for every 1d.;—it is said that the word of these men as to what they have been doing is accepted without any question? The foreman of the yard would be better able to speak upon that point than I could do. If such an alteration were made in the men's duty it would be from their instructions.
8181. We should have considered it perfectly satisfactory that such a thing should be done, provided Mr. Primrose had taken the trouble to satisfy himself, by reference to the yard authorities, that the statement of the conductor was correct. His version, however, was that he thought it quite unnecessary to do so. But passing from that we are told in connection with these race-trams that a man may be sent out late in the afternoon, and that he may be sent on to Coogee from Randwick without having his register read. Having collected a certain number of 1s. fares, and having them in his bag, the conductor is sent on to Coogee to collect 1d. fares;—is that correct? It has been done; but it would not be done if the order which has been given were carried out. I have been on duty at the course, and a certain order having come out from Sydney, I have had no power to turn the man back again.
8182. What sort of order do you mean? A man is sent on a late run to the race-course, and if there are a large number of people at Coogee his order is not to be put at the sheds, but to go on to Coogee and to bring in passengers from there. I have objected to it, but the reply which has been made to me is, "What is the use of allowing people to stand out there; what is the use of our losing money?"
8183. Do I understand you to say that on such occasions you would be at Randwick, but that you could not set aside an order made in Sydney? I have been there, but I have been in charge of the traffic. The taking of the money and of the tickets I had nothing at all to do with. That is done by separate officers. What I had to do was to work the traffic and to see that the men who came in with the cars delivered up the bags before they entered upon their journey back to Sydney.
8184. You found that a man was under orders from Sydney to do a Coogee run after he had done the racecourse run? Yes.
8185. Was it not competent for you to direct some one to take that man's money? He would have had his money taken if he arrived during the hours the receiving clerks were at the office. But the receiving clerks are obliged to come away from that end to work the Sydney office.
8186. If you were there yourself could you not read the man's register? It would not be part of my duty.
8187. Would it not be your duty to protect the revenue? Yes; but my time was taken up in such a way that I could not possibly read the registers. I had my hands full.
8188. How would you have your hands full. This would happen at slack time? I should be occupied in regulating the traffic and getting the cars all laid back.
8189. But the trams coming in at this period of the afternoon would be in a slack time when the races were half over? No.
8190. Do you mean to say that you would allow your receiving clerks to go away while business was going on? No.
8191. Then it would be a slack time? Comparatively speaking a slack time.
8192. That is to say there would be comparatively few persons going to the race-course? Yes.
8193. So that it was not thought necessary to keep the receiving clerks? No.
8194. Would it not be better to keep a receiving clerk out there until the whole of the business was finished? It certainly would—or rather, we should have a second lot of receiving clerks, because then business would be beginning at this end directly.
8195. Mr. Primrose told us he thought that the orders for the men to go on to Coogee came from the foreman at Randwick, who, he explained, could not read the registers? Well, the orders came from Sydney
8196. Is it not extremely desirable that on occasions of this kind, when a man is transferred from

a shilling to an ordinary run, some arrangement should be made for the reading of his register, and the taking of his cash. If this is not done the Department is entirely at the mercy of the conductor in regard to the returns he gives in? Yes. J. W. Tyrer.
21 Sept., 1888.

8197. Perhaps you will make some little inquiry about this other matter. This statement by Mr. Primrose, the correctness of which I very much doubt myself, as to there being on an average, every race-day, two men told off to the racecourse, and then sent somewhere else. Mr. Oakes' experience is quite the reverse. He remembers several occasions when the mixing up of the tickets has occurred, but he says he cannot remember an occasion on which a man has come back to the window and has said that he has been somewhere else? Neither do I.

8198. *Mr. Brock.*] It seems to be Mr. Oakes' opinion that it could be easily done? Well, it is possible, but it is improbable.

8199. There is nothing to check it? There is a possible check which I think can be reached. If a man was told off for Randwick and did not go, but worked upon another line, of course nothing happens, but if he went to Randwick he would be checked at the other end.

8200. Not according to Mr. Primrose. He said that the work was done so quickly at Randwick that every conductor could avoid having his register read by the receiving clerk, and make at least one trip out of every five? Mr. Primrose has not been there, so how could he tell.

8201. The register reader at Randwick does not go to the conductors? No, he is in the room.

8202. He expects the conductors to go to him? Someone is always watching for them. The first thing I always look to on the arrival of the trams is that the conductors take their bags to the little portion which we have boxed off. The foreman does the same thing now that I used to do. As I said before, I did it for about six years, until I got rather badly hurt. Now it is done by Gamgee or Halliday.

8203. Could they read the registers? I could not say.

8204. But they can see that the conductors do not avoid the check? Yes.

8205. *Mr. Thompson.*] With reference to the incident of Musgrave keeping his register from the Wednesday until the Saturday, and not returning his money or his tickets, does it not seem to you that that was a very glaring irregularity? It certainly was.

8206. And whose fault do you say it was? The foreman in charge. This man was a car-cleaner and occasional conductor.

8207. I think you said that on account of the shift a man could not be put from one line to another? No, I did not say that.

8208. Suppose a man goes out at 5 o'clock in the morning, and is bound to come back at 1.30, is it not a fact that he could be put by the foreman on to three, or even four, different lines all different distances, and that there is no check in the world exercised upon the conductor in regard to the lines he has been on;—is there anything to keep a check on that man, so that the department could know approximately what his returns would be? There is nothing to show beyond his register. He certainly would not be able to leave his car without some other man relieving him.

8209. But we know by this time that there are so many ways of swindling. A man's register might agree with his tickets in his bag, and yet he might have 200 tickets in his pocket and the department would know nothing about it? Of course if we are to assume that the whole body of men we have are thieves, what you suggest would certainly be very feasible.

8210. *President.*] Is it not a fact that when a conductor goes upon several lines he has to name the amount which he thinks he has taken on each line, and that it is apportioned accordingly? Yes.

8211. You consider that satisfactory do you? No, I do not.

8212. Does it not give a man an opportunity for cheating; for instance, suppose he had been four Waverley runs and two Forest Lodge runs; when he was asked about these trips he might reverse the order of things in order to divert attention from the smallness of his return;—is not that a very unsatisfactory state of things? Yes, it is, but there is one thing I would like to ask: Is it to be assumed, from the questions being put to me, that I am to be held personally responsible or that I am supposed to be responsible for what you are now stating in reference to the registers, and more particularly in reference to their not having been read. My reason for asking is this: I started on my holidays and I was sent for. I found this system in vogue. I at once said, "It is no use entering the bags unless you have the registers read also each round trip."

8213. But until these frauds came out is it not a fact that you not only read your registers only once a day but that you also collected the tickets only once a day? Yes.

8214. And that even now you collect your cash only once a day? Yes.

8215. Who is responsible for this state of things? It is not my fault.

8216. *Mr. Thompson.*] It seems that the whole thing is governed by Mr. Roberts? Yes.

8217. *President.*] Did you ever point out, under the old system when the collection was made once a day, that it ought to be made every round trip? I have suggested it, but for other reasons than the supposition that the conductors were dishonest.

8218. Did you make the suggestion in writing? No.

8219. You surprise me by saying so, because the other day you rather ridiculed the idea that the reading of the registers every round trip would be of any service whatever? That is not so. As far as my memory serves me I said that the reading of the registers each round trip would show what they brought in each round trip, but that it would not prevent the conductors from stealing if they were so inclined.

8220. When I asked you before whether you thought the registers were reliable and whether you could expect that the takings would agree with the reading you said no, and that there must be a considerable margin. Then I said, "Would it not bring it much nearer if, instead of reading the registers once a day, you read them every round trip." You said you did not think it would bring the margin closer? I do not think it would. The conductors would still manipulate the tickets if they wished to do so.

8221. How are you to find out the dishonest men if you have not a rule by which you can tell whether the honest men are right or wrong? The only rule we can go by is this: That the register will say so much and that the result will be so much.

8222. But you do not believe that they will agree? I have no faith in the registers.

8223. You still think that it would be absurd to expect a man to balance his day's takings with the register;—does it not follow that if you divide the day into eight parts the men must come out much nearer right? It seems to me that the total would be about the same, whether the earnings are taken separately at different periods of the day or as a whole.

- J. W. Tyrer. 8224. Will not a man be more careful if his register is taken every round trip than he would be if it were taken only once a day? He might be. The mistake all along has been that there has been no limit fixed supposing that we are to take the registers as reliable authority.
- 21 Sept., 1888. 8225. Do you think if you had a test case that a careful man would come out right at the end of the test trip? I think he would be wrong.
8226. *Mr. Brock.*] What is the reason that the registers are read at Randwick and not at any other place? It is only on race days that they are read there.
8227. Why on race-days? To secure the earnings from the men, and I suppose to take a certain amount of temptation out of their reach.
8228. Why on that particular line? Because on that line they get a shilling for each ring.
8229. Is it not done principally because the conductors collect their fares in cash? That is the principal reason.
8230. How is it that the tickets are taken in Sydney on every round journey and that the cash is not taken? The cash is very small in amount. The man gets a receipt for the actual amount of cash he pays in. The tickets of course he does not get a receipt for.
8231. *Mr. Thompson.*] As a mere matter of lightening the labour in the office, would it not be infinitely better that the returns should be made every trip so as to spread the work of entering them up in your books over twelve hours instead of running it into two? It would not lighten the work particularly, because we take the result of the tickets by weight. If an entry had to be made up on account of each journey, seeing that there are about 1,000 trips a day, it would mean considerably more work. We count a certain number of tickets, but we weigh the bulk of them. Every week a certain number of men have their tickets counted and compared with their registers. If there is a deficiency they are called upon to show cause why it exists.

THURSDAY, 27 SEPTEMBER, 1888.

Present:—

A. RICHARDSON, Esq., PRESIDENT.

F. A. BROCK, Esq., J.P.

Alfred Charles Tomkins called in, sworn, and examined:—

- A. C. Tomkins. 8232. *President.*] What is your employment or business? I am a labourer at present. Last summer I got a little camera, and was taking photographs down at Coogee.
- 27 Sept., 1888. 8233. Are you at present in any Department of the Government? No.
8234. Do you know a man named Leaney, a conductor upon the Government tramways? Yes; I think I have heard his name.
8235. You do not know him personally? I know them all by sight;—that is all on the Coogee line, but I cannot say I know their names. I know a man named Warby, and another man named O'Leary.
8236. We have been given to understand that you can give us some information about these frauds that have been going on in connection with the tram-tickets; is that so? No.
8237. None whatever? None whatever. I have been in the habit of riding down to Coogee on the average about four times a week for about six months. That is how I came to know the conductors by sight. All that I know is that I have often been unable to get any tickets down at Coogee, and that I have sometimes ridden home on credit paying the conductor on the following day.
8238. Do you know a man named Ferrier? No; I do not know the name.
8239. Or Frazer? I know a man named Frazer. I know his wife and his wife's sister. I have seen him several times on the Coogee line. He used to be a sort of odd man. He would come down one day, and then you would not see him again for a week or a fortnight.
8240. Have you ever sold any tram-tickets yourself? I have obliged people if I have had them in my possession.
8241. Where have you sold them? I think I have sold sixpenny-worth or a shilling's worth to the doctor at the hotel at Coogee. There might be several people to whom I have sold half-a-dozen sometimes; I would have 4s. or 5s. worth of tickets upon me.
8242. Why did you buy such a large quantity? Sometimes I use as many as 15s. worth in a week on travelling to Botany and Coogee. Then on Saturdays and Sundays I would be down at the Aquarium at Bondi.
8243. Have you never been obliged with tickets by the conductors? Never.
8244. You have never bought any tickets from them? No.
8245. You are quite sure of that? Yes. The only way in which they have obliged me is this; that when I have had no tickets they have sometimes allowed me to go home on credit.
8246. Is it a fact that you have travelled repeatedly with conductor Fraser? No more than would be necessary if he happened to be on the cars when I have been leaving Coogee.
8247. You have never travelled without paying your fare ultimately? No; I have always paid it ultimately.
8248. You are certain of that? Quite certain.
8249. Have you ever sold tickets at the waiting-room at Moore Park? Never.
8250. Did you ever get into any trouble? Yes; once since I have been out here—for fighting.
8251. Where was that? Down at the Circular Quay on a Saturday night a man insulted me.
8252. What happened to you? A constable came along and this man's eye was bleeding. The fight was over. It only lasted about two minutes. The man insulted me. He said that I was a cockney. We had what I call a merry five minutes. The constable seeing the man's eye bleeding asked what was the matter. He said, "That man struck me." The constable said, "Will you give him in charge?" and he said "Yes." The magistrate discharged me on Monday morning, and said that the constable ought not to have done so. I was bailed out by my landlord.
- 8252½. You are sure it was not conductor Leaney? Quite sure. He knows something about it.
8253. Do you know a man named Maloney, a bridge carpenter? No.
8254. Did none of the conductors ever tell you that they were having a little game with the tickets? No; I never was intimate enough with them for them to talk to me in that way. 8255.

8255. Though you travelled with them frequently and you have told us that you sometimes did something rather exceptional—that you travelled upon credit? The conductors knew what I was doing down at Coogee, and they knew that there was only one little bit of a place down there where the tickets could be bought. I have said, "Will you take me home if I give you the tickets to-morrow?" and they have said "Yes."
8256. You know conductors O'Leary and Warby very well? I know O'Leary but I do not know Warby. It is only by accident that I know their names. I know all the conductors by sight.
8257. Have you ever frequented the Greek oyster-shops? No.
8258. Do you know anything of them? No; they are a class of people I have nothing at all to do with.
8259. Perhaps you do not know that they are Greeks? No; I know that they are foreigners.
8260. I mean the people at the shop at the corner of Liverpool and Elizabeth-streets? I do not know any of them.
8261. Do you know a Mr. Charles Cook? No.
8262. *Mr. Brock.*] Do you know a conductor named Musgrave? No; I never saw him to my knowledge. I might know him by sight if I saw him.
8263. What Warby is it that keeps the "Liverpool Arms?" That is a brother to the conductor I have been told.
8264. *President.*] Do you know a man named Gardiner who keeps a shop at Randwick? No; I know very little of Randwick. I pass straight through.

A. C. Tomkins.
27 Sept., 1888.

FRIDAY, 28 SEPTEMBER, 1888.

Present:—

A. RICHARDSON, Esq., IN THE CHAIR.

F. A. BROCK, Esq., J.P.

John Sale called in, sworn, and examined.

8265. *President.*] You are the Chief Inspector of Railway and Tramway Accounts, I believe? Yes.
8266. You were called upon by this Commission, the other day, to make a special examination of tramway accounts and report to us—that you did? Yes.
8267. We should like to know how often an inspection of these accounts is made by an officer of your department? About three times a year.
8268. By yourself personally? Generally. More often than by anyone else.
8269. How long previous to this special examination had an examination been made? Speaking from memory, I should say about five weeks. I could supply you with the exact date if it were of any consequence.
8270. Have you at any time had reason to complain of the state of the accounts? Speaking generally, no.
8271. You have found things, for the most part, as you would wish to find them? Excepting in matters of detail, quite so.
8272. Our chief object in sending for you this morning is to ask you a few questions bearing upon the risk of appropriation which the tickets run in passing through so many hands after they have been handed in by the conductors. I presume that is a branch of the subject upon which you can give us valuable information? Well, I will give you the best I can.
8273. Into what office are the tickets handed by the conductors? Into the Superintendent's office.
8274. Under what circumstances are they handed in—how many clerks are present? There are always two, and generally three, I think.
8275. What do these clerks then do with the tickets? They are weighed and entered in a book against the name of the conductor and the section upon which he has travelled.
8276. Then what is done? They remain in that condition until the following morning.
8277. Are they packed in parcels? They are subsequently. I am speaking subject to correction, but I do not think they are packed into parcels until the following morning.
8278. Do they lie about loose? No; they are placed in separate boxes.
8279. In locked boxes? No; not that I am aware of.
8280. About how many of these would there be? They would of course vary as the traffic varies. The number of boxes would correspond with the number of conductors.
8281. Each conductor's tickets are kept in a separate box? Just so.
8282. Are these boxes labelled? I am not quite sure, but I think they must be. One of our clerks attends to the details of these matters.
8283. Why do the tickets remain there all night? I know of no reason unless it is for the convenience of the work of the checking clerks following upon the work of the receiving clerks.
8284. Should not these tickets be considered in the light of so much money? Certainly the receiving clerk and the clerk who checks should regard them in that light.
8285. Then do we understand that they are left in that office all night without any protection whatever? As far as I know they are, but I cannot say of my own knowledge. This is a matter in which the receiving clerk can speak more positively as to details than I can.
8286. That would be Mr. Oakes? Yes.
8287. Unless some satisfactory explanation can be given, it seems to us that there is a great risk during that period of the tickets being abstracted and misappropriated? Yes.
8288. Have you drawn attention to this matter? No. I do not admit that it is within my knowledge that it is so as a fact, consequently I should not be likely to draw attention to it.
8289. Assuming that the tickets remained there for one night, what does the clerk of your branch then do? The tickets are gathered from several sections and made up into several large parcels, which he weighs, comparing his gross weight with the detailed weighings as entered by the receiving clerk, who is under the Superintendent.
8290. How do these weighings compare with the detailed weighings? I am not ready to give you definite information on that point, but some time ago the discrepancy between the bell-registers and the returns were supposed to average 2 per cent.; anything exceeding 2 per cent. was called attention to at once

Mr. J. Sale.
28 Sept., 1888.

Mr. J. Sale.
28 Sept., 1888.

and a report was made. Now I understand that any discrepancy is called attention to. They do not confine themselves to 2 per cent. as formerly.

8291. Do you mean that when the audit clerk weighs the tickets in bulk and discovers in comparison with the detailed weighings any discrepancy whatever he draws attention to it? Yes.

8292. But they never exactly agree? Never.

8293. It would be almost impossible, would it not? I am afraid I shall have to qualify what I have said on this point. We have, as you know, clerks in the yard who read the registers, and I think it is the returns as compiled by them which are compared with the entries made by the receiving clerks.

8294. Then you do not know whether the bulk weighings are checked with the detailed weighings? Yes, that is done.

8295. But you are not sure what discrepancy between these weighings is generally called attention to? Not in that respect; I was confusing the comparison of the register readings with the detail weighings.

8296. What we wish to ascertain has reference to the safety of the tickets after they have been handed in by the conductors. You say you know, as a matter of fact, that the audit clerk does weigh the gross day's takings and compares the result with that obtained from the detailed weighings made by the receiving clerk? Yes.

8297. Do you know of your own knowledge that the comparison between these two weighings is such as to lead one to fairly suppose that there is no misappropriation of tickets in the office? I have never heard of anything which would lead one to suppose that there was a difference between the two weighings indicating anything of the kind.

8298. As far as you have been informed they come out fairly well? Yes.

8299. It could not be expected that one gross weighing would agree precisely with a number of small weighings? No; but you will quite understand that any reports arising out of this comparison would be made direct to the traffic auditor who would deal with those papers.

8300. The audit clerk having made his weighing of the number of tickets taken during the day and compared it with the detailed weighings, what is then done? The tickets are destroyed.

8301. How? By fire.

8302. Where? In the receiving office. The audit clerk who has a check upon the receiving clerk, is present at the destruction of the tickets which takes place in a large open fire-place.

8303. And we understand that the Traffic Auditor would be better able to give information as to the possible misappropriation of tickets from the receiving office? I think so; but I daresay it is within your own knowledge that papers have been going to and fro discussing the general question of the accuracy of the bell registers, and the system of check generally? He has dealt with these papers so far as our office is concerned.

8304. I do not remember papers bearing upon the question we are now discussing? No, perhaps not, as to the safety of the tickets; but I think it is an important question. As far as I am personally concerned, I took the system as it stood, knowing that there had been correspondence between the Secretary, our office, and the Superintendent, with a view to devise the most efficient system of check. My action has been based upon what they had arranged.

8305. Your inspection has been rather one of accounts than of any general arrangements in the Tramway Department? Yes.

8306. Who has charge of the accounts which you examine from time to time, and which you have recently examined specially at our request? The ticket stock is held by Mr. Colls. He supplies all the sale agencies. There are two clerks at the Railway Station and two in Bridge-street. Mr. Colls supplies the whole of these sale clerks.

8307. Suppose the system of ticket sales were abolished entirely, with how many clerks would the Department be able to dispense. How many are there with Mr. Colls? I am scarcely in a position to answer that question, because I have never been able to very accurately gauge the duties of the respective clerks over there. I could not say who would and who would not be considered ticket clerks with Mr. Colls. The organization of the office does not appear to admit of a very clear definition of duties.

8308. But two clerks in Bridge-street and two clerks at Redfern would be saved? Yes; and I think you could dispense with two of our clerks.

8309. We think that the best system would be to have a united office, where the audit clerk would be a check upon the traffic clerk in the receipt of the conductor's returns, and that in this way the returns could be dealt with more systematically than appears hitherto to have been the case. The conductor would have a book, in which would be entered his takings on every run; he would then get that book initialled by the audit clerk and the traffic clerk combined. Would that not be a good plan? Yes.

8310. Under the system of reading the registers at every trip? Yes; quite so.

8311. Would that not be better than reading the registers once a day? Yes; it would certainly reduce the possibility of manipulation.

8312. Under a cash system, such as I suggest, it would be possible to dispense with half-a-dozen clerks, if not more? Quite; I should think rather more than less.

8313. Have you ever had reason in your position to doubt the integrity of any clerks employed in the Tramway Department? No I have not. Rumors have reached us at times, as they possibly have reached this Commission; but I think we have never had anything more substantial than mere rumour to go upon. They have never been sufficient to produce in my mind an impression of doubt as to the integrity of any man.

8314. And as a matter of fact your examination of the accounts has proved the contrary of the rumours? Quite so.

8315. Have these rumours had distinct reference to the receiving clerks? No; they have been general and indefinite—expressive of doubt—suggestive of something being wrong—shadowy things which we were never able to localise.

8316. Would they be in reference to the office or to the tramway system generally? Sometimes in connection with the office. We have had them sufficiently definite as to hear that a doubt prevailed about the accounts in the Tramway Office. I know that in the days of the late Traffic-Auditor I was sent down at least twice specially on account of rumours which he had picked up in town.

8317. And in each case the result of your examination has been satisfactory? Yes, quite so. It has generally led to special directions being given to keep my visit a secret matter—that is that I should pounce

pounce down upon them as suddenly as I could. Remembering that the Branch Agency in Bridge-street and the Railway Agency got their supplies through the Tram Office in Phillip-street, I had a man at the branch agencies while I was in the city, so that there should be no collusion. Mr. J. Sale.
28 Sept., 1888.

8318. We understand from papers from the office of the Auditor-General that they are very satisfied with the system down to the point at which the Department sells the tickets to licensed vendors. Are you acquainted with the earlier details such as the issue of the tickets from the Government Printing Office, &c. ? No; except in a general way which would be of no value to you. As you are aware, that is looked after by the Accountant's Branch. The basis of our operations is the supply of tickets through the Secretary's Department to the Tramways. We have a general knowledge of the accountant's checks.

8319. But you are advised that a certain quantity of tickets has been issued by the Secretary to the Tramway Office? Yes.

8320. And you take care to see that that number of tickets is accounted for? We never inspect the Tramway Office without applying to the Secretary to know what supply has been sent.

8321. Without going back so far as the Government Printing Office, you are satisfied that as far as the tickets are dealt with in the Railway and Tramway Department, there is a satisfactory check over the operations with the new tickets prior to their being sent away to the salesmen? Yes; I would not like to say off-hand that I could devise any better check.

8322. With regard to the action in which the Government Printing Office is concerned that would be dealt with only by the Auditor-General and his staff, I presume? Yes.

Frederick Oakes recalled and further examined:—

8323. *President.*] Do you supervise the Receiving Office as part of your duty? Yes, to a certain extent F. Oakes.
28 Sept., 1888.

8324. Do you not consider it part of your duty to see that the tickets received are dealt with in a careful manner, so that the revenue may not be affected? Yes.

8325. Is it a fact that after the tickets are weighed they are kept in an unprotected state for the whole night? They are locked in the safe.

8326. In an iron safe do you mean? Yes.

8327. What do the receiving clerks do when they get the tickets from the conductors? There is a box with the conductor's name labelled upon it. Each trip as it is brought in is put into that box. When the man has done his running these tickets are weighed.

8328. From the time the tickets begin to come in until they are locked away in the safe is there any chance, without collusion, for any of them to be abstracted and passed into circulation? Certainly not; the clerks in the office would have to do it.

8329. How many? Two at least.

8330. Two of the clerks would have to be in collusion to enable them to get the tickets into circulation? Yes.

8331. Who are the night clerks? Murray and Scholey.

8332. Are they in responsible positions—are they leading clerks? I think they get about £170 each.

8333. And if these two clerks liked they could make away with a whole lot of tickets? No; because I should detect it in the morning when I weighed them in bulk.

8334. You weigh them in bulk in the morning? Yes; and I compare my bulk weighings with all the separate weighings.

8335. What is the result of that comparison? It differs. It ranges from a hundred tickets downwards.

8336. How many tickets would you have in a day for one bulk weighing? The average would be 130,000.

8337. Have you ever been more than 100 tickets out? Yes, once or twice; but very rarely.

8338. What is the average discrepancy? Twenty-five.

8339. Your book will show that? Yes.

8340. Therefore I imagine that in your own mind you feel perfectly certain that there has been no fraudulent manipulation in the direction to which I refer? Decidedly so. Of course, if the tickets were abstracted and the conductor's returns were altered accordingly, it would not appear in one way, but it would be found out in another, because the conductor's returns would be wrong; his register would show more than he had received.

8341. But suppose these conductors' returns were altered and that tickets were abstracted, there would have to be several clerks in collusion in the Receiving Office? At night two, and in the day-time three or four.

8342. An endeavour has been made on the part of certain conductors to shunt the suspicion from themselves on to the clerks in the Receiving Office. In your own opinion, from what you know of the weighing, &c., is it at all likely that there has been any fraudulent manipulation of the tickets in the office? No; I do not think so; I never did think so.

8343. Is it not a sheer impossibility that tickets have been sold from the office to any extent? Yes.

8344. You not only have your own check in comparison of the weighings, but if the clerks had altered the conductors' returns there would be a check in the register readings? Yes; that, I think, was the reason why the registers were taken away from that office. I think it was to prevent anything occurring in that way.

8345. How long ago is it since that was done? The 14th April.

8346. Why was it done then? I do not know. Mr. Sheridan, the Traffic Auditor, recommended it. The registers were read in the room as well by the receiving clerks.

8347. Were you not present at that time, you were working in the same room? Up to six or nine months previously. I went to the audit office for a time. We were under the auditor at that time.

8348. The receiving room was under the auditor? Yes.

8349. And as an additional check since April last the receiving clerks have been put under the traffic superintendent, and you have made a separate audit branch for the inspection of the registers? Yes; and for the destruction of the tickets. The reason I left the office for a time was that the registers were done away with temporarily. That was when the tickets were being torn.

8350. Apart from the possibility of fraud in the receiving office I suppose you know the characters of the clerks there? Yes; very well.

- F. Oakes.
28 Sept., 1888.
- 8351-2. Is there anything to be advanced against any one of them? I should not think so; I know of nothing nor have I heard of anything.
8353. I believe you have given some attention to the street traffic? Yes.
8354. You were in the traffic branch for some time? I was traffic foreman at Redfern.
8355. In your experience have you found that the overcrowding of cars militates against any system of fare collection? Decidedly so.
8356. Don't you think that if a system of passing crossing places under clearly defined rules as to slowing down and whistling and exhibiting a special signal for the information of the crossing keepers were adopted it would in a great measure tend to put an end to overcrowding? Yes; except on race-days. The class of people who go to races would not be particular as to jumping on the cars when they were in motion, and the arrangement might possibly lead to accidents.
8357. But that would not apply to ordinary traffic? No.
8358. But you think it would apply to a great deal of the holiday cricket and race traffic and so forth? Yes.
8359. Would you permit overcrowding on those occasions? Not if it were possible to do it.
8360. Could you suggest any means? I do not know of any means; people will not be stopped from getting on to the cars. I have kept a tram waiting at the railway station after a race meeting and I have tried every means in my power to get the people off the cars but they would not get off.
8361. Then I understand you to approve of the plan I suggest although you do not think it would apply to public holidays? I think I would apply it all through. The fact of the trams going through might deter some people from getting on.
8362. You would take the risk even on race days and other similar occasions? Yes.
8363. Is it not a fact that for some time that arrangement was carried on without any signal being exhibited, that the conductor would inform the driver, and that the crossings would be crossed at three miles an hour with a snorting whistle? Yes. I do not know that it is not carried out when the trams are loaded.
8364. You believe it is done now? Yes; I have seen it frequently in Oxford-street.
8365. Still it is not done with sufficient regularity to be well-known? No.
8366. It is not done as systematically as it might be done? No.
8367. You think the driver should exhibit a signal to the crossing keepers and the public that a certain tram is going out of its ordinary course? Yes; and I think the public and drivers of vehicles would very soon get to know.
8368. *Mr. Brock.*] What is the arrangement about race trams now. Do they run right through? I think they do after they get full.
8369. Do they slow down at crossings? Yes; they slow down and whistle at crossings. I do not think there is much chance of the cars being rushed after they have passed Liverpool-street.
8370. Is there not a great difference in the weight of the tickets when they are damp? Yes.
8371. The register is then no check at all? Not when the tickets are wet. If the tickets are damp of course they weigh heavier; when I am weighing them in bulk I see how tickets will go to the quarter ounce and weigh them accordingly.
8372. You count so many and see what they will weigh? Yes; we have a standard scale applying to all dry tickets, but when they are wet I generally test them.

John Allen called in, sworn, and examined:—

- J. Allen.
28 Sept., 1888.
8373. *President.*] You are employed in the Government Printing Office? Yes.
8374. We understand that you wish to give us some information bearing upon the tram frauds which are now so much talked about? Yes; it is something which came under my notice last night.
8375. What was it? I had left my work last night and was going through Elizabeth-street at about four minutes after 6; I saw a tram nearing the stopping-place in Elizabeth-street. My attention was drawn to the conductor; he was standing with one foot on the step and the other in the car; I saw him put his hand into a black leather bag; he drew out a leather purse, and I saw him take out some tickets and put them from the bag into the purse.
8376. Are you sure it was not money? I am positive.
8377. You are certain they were tickets? Yes; I saw them between his fingers.
8378. Do you know the man? I think I could swear to him if I saw him; I took the number of the tram—it was No. 5.
8379. Did you notice the destination of the tram? No, I did not; it was coming towards Hunter-street.
8380. If you are told that it is a common practice, which the system appears to necessitate, for a conductor when nearing the end of his journey to take the cash out of his bag and put it into his own private purse, do you not think that that is what this particular conductor may have been doing? I think not, because I saw the tickets.
8381. I understand that you have some further information to give us with reference to the sale of some tickets at Ashfield? I live there and come in every day, and on one or two particular occasions I have thought it was a very loose thing for the Government to allow single tickets to be sold. On one occasion I bought 6d. worth of tickets which were very much worn.
8382. Where did you get them? At the office at the railway station—from one of the boys. As I was holding the tickets one of them came in two; I took it back and said to the lad, "What do you call this?" He said, "I gave you 6d. worth of tram tickets." I said, "You do not call this a tram ticket; if the Government issue tickets of this description it is a very loose way of doing things. It is the first time I have seen such tickets."
8383. What did the boy say to that? He gave me another ticket for the one I returned, and said nothing more. I thought it rather strange at the time, and I happened to mention it at the office to Mr. Chapman. I then heard of the tram frauds.
8384. You are aware that when a man has a large number of tickets to sell he cannot possibly keep them all in sheets? I am well aware of that.
8385. Have you any reason to suppose that the tickets supplied you had been used before? No doubt they had been used, or they must have been in a man's pocket for a long time. 8386.

8386. Do you know the name of the clerk who sold you the tickets? I do not.
8387. Is he in the office now? I think so. There are three or four young fellows there. I did not take particular notice at the time.
8388. Could you not tell us which clerk it was so that we might get him in from the station? I really could not. There are three of them very much alike, and I did not take particular notice of the clerk who sold me the tickets.
8389. But if you thought they were used tickets, is it not strange that you did not go back and have a good look at the clerk? I think there were two lads there at the time; one of them was a sort of half-caste. I got the tickets at the small window, and I could not see very well.
8390. You could not be sufficiently sure of the lad to enable us to get him in? No; I do not think I could.
8391. *Mr. Brock.*] What was the date of your purchase? I think it was about the time the Commission was appointed.
8392. That would be about the middle of last month? I think it was about three months ago.
8393. You say there was a half-caste in the office? Yes; and there is now, and he was sweeping out the place.
8394. Would he have any recollection of your buying the tickets and your going back to the window? He might recollect my bringing the ticket back.
8395. And he might be able to say who served you? Yes.
8396. Perhaps he served you himself? No; I think he was sweeping out the office at the time.
8397. Had the ticket which you returned been torn across and pasted together again? No, it was greatly worn. It seemed to me to have been in a man's pocket for a long time. It had become so ragged with wear that it would not hold together.
8398. You do not think it was one of the tickets which had been torn under the tearing system, and which had been gummed together again? No.
8399. You did not see the receptacle from which the clerk took the ticket? I think he took them from the table; but I would not be positive.
8400. You could not see if there were many? No, I could not.
8401. On which side of the station was this? On the down side. I am sorry that I did not take particular notice of the clerk. I made up my mind at the time if he did not exchange the ticket I would see the authorities about it.
8402. Will you describe the conductor whom you saw on the car last night? He was rather a tall man. He was rather dark, and, if I am not mistaken, he had rather a bushy beard. I am almost positive I could point out the man.
8403. How many cars were there on the tram? I think there were two.
8404. What was the time, as nearly as possible? It could not have been more than four minutes after six. I left the office at six, and went direct to the spot, on my way to the railway station.
8405. It is strange that when you had your suspicions aroused about these tickets at Ashfield three months ago, you did not give some information about the matter? I spoke to Mr. Chapman about it at the time I heard of the frauds. I thought the case looked rather a suspicious one.

James Roberts recalled and further examined:—

8406. *President.*] You are I think convinced, even if you have not already stated so in your evidence, that the overcrowding of cars is one of the greatest evils in connection with our tramway service? Yes.
8407. And I imagine that you recognise that it would be difficult to carry out any system satisfactorily under such overcrowding as occurs at certain hours of the day? Yes.
8408. What means have you devised for stopping this overcrowding? We have been prevented to a great extent by Sir James Martin's ruling that we ought not to pass certain crossings without stopping.
8409. When was that? A considerable time ago. If we were allowed to cross stopping-places without stopping it would be all right. Now in many cases I have to send empty cars from the yard up to King-street, and further ahead, to try and prevent it, and we cannot put more than three cars on to any of our motors.
8410. How long is it since you abandoned the plan of going over crossing-places at a reduced speed and whistling? We have not abandoned it. We risk it; and I generally get into hot water over the thing.
8411. Is it not really the best way to get rid of the overcrowding? There is no doubt about it.
8412. It has occurred to us that if the plan were systematised all risk of accident would be removed. Supposing that a conductor, on finding that his tram was full, communicated with the driver, and that the driver were to exhibit some signal which was decided upon by the Department—something which he could put out on the motor so that it would be at once known by the crossing men, and the public. If that were done, and if the same precautions were taken as to slowing down and whistling, do you not think that the public would soon get accustomed to it, and that risk of accident would be removed? The conductor can do as you suggest now, but no signal is exhibited in front of the motor. I do not think it would be safe to do away with the whistling. When the whistle is blown continuously for three or four seconds the public are, I think, sufficiently warned that the tram is going to pass through, and they are enabled to take the necessary precautions at the different crossing-places.
8413. But do you not think that the exhibition of a signal from the motor would be a good idea? Yes, certainly.
8414. It has occurred to us that before reaching a certain street the conductor should pass along the car calling out the name, and if that were done we think people would not be carried beyond their destinations? That is what is done now; at least that is the instruction which is issued.
8415. I was under the impression that this practice was discontinued at the present time? I discontinued it as much as possible; but I think it would be a great mistake if the trams did not go through on race-days.
8416. You think it would be a great mistake to discontinue the practice in any way? Yes.
8417. Is it not a fact that it would for the most part do away with overcrowding? To some extent it would; but we should always have a certain number of persons trying to get on to the cars whether the trams went through or not.

J. Allen.
28 Sept., 1888.

Supt.
J. Roberts.
28 Sept., 1888.

Supt.
J. Roberts.
28 Sept., 1888.

8417½. That would be on race-days? Yes; chiefly on race-days. I have them under control now. I send empty cars to King-street. The difficulty occurs in this way: There are a number of persons going to Paddington who want to take the first tram in that direction, and if a tram were to go through with a few vacant seats the conductor would be reported. If he stopped, forty or fifty people would get on.

8418. You would not allow a tram to pass a crossing-place while there was room for anyone in it? No, decidedly not; there is a rule against it.

8419. You knew a man named Cavanaugh who was employed in your branch? Yes.

8420. What led to his leaving the service? Drunkenness; he was a regular blackguard fellow.

8421. How long is it since he left? Two or three years ago; I cannot call to mind the exact date.

8422. Is it a fact that you gave him a letter of recommendation to Mr. Fletcher? It is not.

8423. If a man has said that he saw Cavanaugh with a letter in your handwriting addressed to Mr. Fletcher, would it be untrue? He may have taken dozens of letters to Mr. Fletcher in my handwriting. He was hanging about Mr. Fletcher's office for some considerable time. I was in communication with Mr. Fletcher about a case of coal-land down Wollongong way, in which, with Mr. Harris and Mr. Stiles, I had an interest; there was a difficulty about the rent. Cavanaugh was hanging about the office, and he may have taken a letter there.

8424. The letter to which I refer was said to be an open letter; it was said that Cavanaugh was reading it, and that you had recommended Mr. Fletcher to get him a job? I never recommended him in any way.

8425. Was he flush of money? I could not say anything about his private affairs. He was a regular blackguard fellow, and he used to get drunk very often.

8426. It has been sworn positively by two men that they saw him in a certain pointman's box with 113 pound-notes in his hand; where do you suppose he got the money from? He was a gambler; he used to gamble a good deal.

8427. Have you ever known him to be well off—to have a lot of money? I cannot say that I have.

8428. You know that he was afterwards employed by the Mines Department? Yes.

8429. And there was a little trouble about it in the House? There was some trouble in reference to him; he was a tank-repairer, and he got drunk. I think he was dismissed for being drunk.

8430. From the Mines Department? Yes.

8431. Attention was directed to the matter in the House when Mr. Fletcher appointed him? I am not responsible for any action of Mr. Fletcher's.

8432. Mr. Hawthorne said in the House that a man had been appointed on your recommendation, and Mr. Fletcher denied it? I never block anyone unless I have occasion. Cavanaugh is a man with a large family. I think he was dismissed once or twice. On one occasion he had a row in the yard about religion, but he was taken back again.

8433. Was this after the stud business? I dismissed him after that. Martin had a raffle for a set of studs, and Cavanaugh was dismissed some little time afterwards.

8434. Did he return to the Service after that? No.

8435. Then he must have been dismissed about four and a half years ago? He may have been.

8436. Did he ever challenge you to dismiss him? No. I dismissed him immediately. I had grounds for doing so. I think the papers will show that I suspended him and recommended his dismissal.

8437. Will the papers show that he was reported to you by anyone else, or that you yourself dealt with him? I fancy that the matter was reported to me by the foreman.

8438. Then if anyone has advanced the statement that a charge was trumped up against Cavanaugh, it will be utterly untrue? A most infamous lie. He was drunk at the railway station. Half-an-hour after I received the report about him, I took action in the matter.

8439. Had he had any warning before that? I think he had been cautioned once or twice. I generally caution them several times. As soon as they are cautioned they run to their Member, and it was the same in this as in every other case.

8440. Do you know of any reason other than your refusing him as inspectorship, which should cause M'Donald to have any bad feeling towards you? I was never so surprised in all my life as when I heard he had this ill-feeling.

8441. You heard then that there had been some ill-feeling? I have heard about the things the men have been talking about as they have come from here.

8442. *Mr. Brock.*] What is your opinion of Mr. O'Brien? I always have a good opinion of everybody. I live as I like to let live. Mr. O'Brien does not interfere with me.

TUESDAY, 2 OCTOBER, 1888.

Present:—

A. RICHARDSON, Esq., PRESIDENT.

R. W. THOMPSON, Esq., M.P.

F. A. BROCK, Esq., J.P.

Edward Warby called in, sworn, and examined:—

Conductor
E. Warby.
2 Oct., 1888.

8443. *President.*] You are a tramway conductor? Yes.

8444. How long have you been in the service? Eight years.

8445. On what line are you engaged? On the Randwick line.

8446. Do you remember Thursday evening last? Yes.

8447. Were you about six o'clock running in from Randwick and near the corner of Elizabeth and Hunter Streets? Yes.

8448. Were you doing anything extraordinary with your bag and tickets, or anything connected with them? Not that I am aware of. I keep my tickets and cash in my bag, and it is possible that I may have been taking my cash out of my bag and putting it into my purse. This we are obliged to do, because at the end of the trip we hand in only our tickets.

8449. You are quite sure that you did not put any tickets into your purse? Quite.

8450. If anyone has sworn positively that you were seen on Thursday evening last taking tickets from your bag and putting them into your purse has he sworn falsely? Yes. 8451.

8451. *Mr. Thompson.*] I suppose you make no secret of putting your cash into your purse? No.

8452. *Mr. Brock.*] It has been positively sworn that you had tickets in your hand, although it was suggested to the witness that you might have had cash? I can swear positively that I never took a ticket out of my bag and put it into my purse.

8453. *Mr. Thompson.*] I suppose you take out your cash when you find that you are not likely to take any more cash fares? At any time after we have passed King-street.

8454. What do you do with your purse when you have placed the cash in it? I put it into my pocket and restore it to the bag when the tickets have been taken out.

Conductor
E. Warby.
2 Oct., 1888

1888.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

TRAMWAY EMPLOYEES.

(RETURN SHOWING NUMBER OF, DISMISSED FROM TRAFFIC BRANCH.)

Ordered by the Legislative Assembly to be printed, 7 December, 1888.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 19th April, 1888, That there be laid upon the Table of this House,—

“(1.) A Return showing,—(1.) The number of men who have been dismissed from the Traffic Branch of the Tramway Service, with the view to retrenchment, during the six months ending 31st October, 1887, specifying the name of each one dismissed, the date of such dismissal, the length of time in the Service before such dismissal, the offence or offences (if any) for which each one was dismissed, the duties being performed at time of dismissal, and the reasons which guided the Department in the selection for such dismissals; (2.) the names (if any) of those who have been dismissed and who have applied for re-employment, the names of such applicants who have been re-employed, and the names of those who have been refused re-employment; the reasons also for such re-employment and refusal respectively.

“(2.) Copies of all letters, papers, correspondence, and all documents whatever, having reference to, or in any way connected with, such dismissals or re-employments.”

(Mr. Stephen.)

SCHEDULE.

NO.	PAGE.
1. Minute by Secretary for Railways, dated 16/9/87, re number of new hands employed on Plattsburg Tramway	2
2. Minute by Secretary for Railways, re alteration of Tramway time-table and reduction of staff	2
3. Telegram from Assistant Secretary of Railways to Traffic Manager, Newcastle	2
4. Telegram from Assistant Secretary of Railways to Traffic Manager, Newcastle, dated 17/9/87	2
5. Memorial from employees, Newcastle Tramway, to Mr. Joseph Creer, M.P., re transfer from Sydney of dismissed hands, dated 21/9/87, with Commissioner's minute, &c.	3
6. Letter from Secretary of Railways and Tramways Employees Association, dated 27/9/87, re manning of Plattsburg Tramway	6
7. Minute by Assistant Secretary, dated 29/9/87, re insubordinate terms of memorial of employees	5
8. Reply of Locomotive Superintendent, re employees' memorial, with employees' explanations and Commissioner's minute thereon	5
9. Minute, dated 11/10/87, re number of employees dispensed with through retrenchment.....	6
10. Returns, showing employees dispensed with, re-employed, &c., giving length of service, date of dismissal, &c., of each.....	6
11. Notice of discharge to, and correspondence, re case of S. Terrett.....	7
12. Application of J. Connors for re-employment, with minutes thereon	8
13. Minutes, re re-employment of Conductor E. Thomas.....	9
14. Correspondence, re case of Conductor G. A. Paulson; petition, &c.....	9
15. Re case of Conductor E. Head	11
16. Re case of Conductor T. Kenny.....	11
17. Re case of Conductor L. G. Roache	12
18. Re case of Conductor Herbert M'Gee	12
19. Re case of Conductor Thos. Musgrave	13
20. Re case of Conductor H. J. Ferrier	13
21. Re case of Conductor Chas. T. Williams	14
22. Re case of Conductor R. G. Sutherland	14
23. Re case of Conductor J. Downey	14
24. Re case of Car-cleaner John Cornwell	15
25. Re case of Car-cleaners Greer, Islip, Garvan, and England	15

[842 copies—Approximate Cost of Printing (labour and material), £13 8s. 4d.]

TRAMWAY EMPLOYEES.

No. 1.

Minute by The Secretary for Railways.

New Metropolitan Tramway Time-tables.

THESE are to be brought into operation on 1st October.

The Commissioner wishes to be furnished at once with a list of new hands engaged on the Plattsburg line, as by directions previously given, and the Minister's decision just announced, they are to make way for hands dispensed with from the metropolitan service under the new tables.

Notice should now be renewed to suit employees and fixed for the 1st proximo.

Mr. Higgs. Urgent.

D.V., 16/9/87.

There are only two new hands on the tram, viz., Thomas C. Virgo and Joseph Lower. The other men were withdrawn from the Railway staff, and some of them have been five and six years in the Department. Still the notice, as requested, will be given.—J. HIGGS, 17/9/87. Secretary.

No. 2.

Minute by The Secretary for Railways.

Government Railways.

THE new time-tables are to be brought into operation on 1st October. The Commissioner desires to be furnished with a list of the employees with whose services you can dispense.

The Minister has directed that as many as possible are to be drafted to the Newcastle-Plattsburg line to take the places of new hands temporarily employed there, respecting which inquiry will at once be made.

The Minister further directs that, in dispensing with the services of men who may not be required, the preference is to be given to married men with families, irrespective of length of service.

Mr. Roberts. Urgent.

D.V., 16/9/87.

List of men attached.—J.R., 21/9/87. The Secretary.

List of men to be dispensed with.

Conductors—	Time of service.		Rate of pay.	Car-cleaners—	Time of service.		Rate of pay.
	yrs.	ms.	per day. s. d.		yrs.	ms.	per day. s. d.
Paulson, G. A.	3	0	9 0	Keefe, B.S. N.C.	5	2	7 0
Thomas, E.	3	4	9 0	Greer, Joseph	5	1	7 0
Connors, —	3	0	8 6	Cornwell, John	3	8	7 0
Territt, —	3	3	9 0	Islip, Wm.	3	4	7 0
Organ, G. E.	2	9	8 6	Garvan, John	2	9	7 0
Head, E.	2	8	8 6	England, J.	1	6	7 0
Kenny, T.	2	7	8 6	Brown, Caleb	1	3	7 0
Roache, L. G.	2	0	8 6

Williams, C. T.	1	2	7 6				
Sutherland, R. E.	0	2	6 0				

No. 3.

Telegram from The Assistant Secretary for Railways to The Traffic Manager, Newcastle.

NOTICE by newspaper outcry amongst men; is it necessary to undo promotions, &c.? It seems to me that Sydney tramway men should take places of new hands at whatever work latter may be employed. See Mr. Boag. Submit report. Do nothing till advised by Commissioner.

A.R., Assistant Secretary.

I have reported on this. As Mr. Boag is mentioned, I refer the paper to him.—J. HIGGS, 22/9/87. Mr. Boag says he had already sent a report on the subject through Mr. Scott. See my report.—J.H., 23/9/87.

No. 4.

Telegram from The Secretary for Railways to The Traffic Manager at Newcastle.

PLEASE let Mr. Superintendent Tramway Roberts know the vacant positions you will have on Plattsburg tramway, in addition to reporting to this office.

D.V., 17/9/87.

Were the places of the men transferred from railway filled up? If so, by whom, &c.? If by new hands they will have to fall out.—A.R., 19/9/87. Mr. Higgs.

Three

Three telephone operators—D. Cameron, at 20s. per week; H. Blandford, at 15s. per week; G. Fury, 15s. per week—were brought into the coal traffic by the removal of three coal employes to the tramway. Three gatekeepers were also brought into the traffic service, all old men, who had been in the permanent way branch many years (one of them about 28 years) through the opening of the tram system. Attached is a list of the employees on the tramway, showing their respective dates of entering the Service, present position, &c. As I had at the start given all hands notice that appointments and changes were temporary, I did not think it necessary to give operators notice.—J. HIGGS, 23/9/87. Assistant Secretary.

TRAMWAY STAFF.

No. 5.

Memorial.

Joseph Creer, Esq., M.L.A.,—
Sir,

We, the undersigned, employees of the Newcastle Tramway Department, desire to bring under your notice an injustice which is about to be inflicted upon us, and beg to solicit your valuable assistance in preventing the action referred to being taken. A revised tram time-table is about to be introduced in Sydney, the result of which will be that a number of employees, engine-drivers, conductors, &c., now engaged there will be surplus. To find employment for "these surplus hands" the authorities have decided to create vacancies in the Newcastle Tramway Department by removing the men who are now working it, and substituting those drafted from Sydney. This proceeding is too apparent and iniquitous to demand much explanation. In the first place the present staff have been employed since the commencement of tram running here, and with the knowledge that the confusion which first prevails in a new undertaking of this sort can only be ultimately overcome by the exercise of intelligence and energy by the employees, who have tried to act accordingly, and pleased to state, have achieved the desired end. Again, the servitude of the majority being long, most probably longer than those about to succeed us, the greater the injustice appears, and certainly is most discouraging after serving a considerable time in struggling for advancement, which, when attained, is snatched from us. Actions similar to this have a most deterrent effect on the employees as far as the welfare of the Department is involved. Our duties have been discharged to the entire satisfaction of our superiors; what more, we ask, could be desired? And we are unanimous that if the authorities here were afforded an opportunity of protesting against our removal for the substitution of actual strangers, and who, we contend, have really no right to the positions, would do so to the utmost. The course about to be adopted is most unreasonable. Again we ask, why should it be that, because Sydney has a few surplus hands, the Newcastle men should be made the sufferers? In the event of an occurrence of this kind in Newcastle no such thing as drafting men to Sydney would be once thought of. We had an instance some time ago in Newcastle, when drivers were reduced to firemen, firemen were reduced to cleaners, and the surplus cleaners were discharged. The same occurred in the Traffic Department, on account of dull times and very little work doing on the railway; but no men were sent to Sydney. If we are called upon to quit our positions in the tramway and return to the railway, thereby suffering for the welfare of others, it is a matter which we cannot comprehend, and therefore request that you will intercede on our behalf, and prevent, if possible, the enforcement of the intended unjust proceedings upon us, for which we will be ever thankful.

We are, &c.,

W. L. Gordon.
Owen Watt.
John Clayton.
Wm. Jackson.
A. Beaumont.

J. Thompson.

The Commissioner for Railways will please read and deal with this document.—J.S., 29/9/87.

The language used in this letter is most insubordinate, and if I acted upon the regulations, which prohibit employees going outside the Department, I should have to take very severe measures to prevent a repetition of such conduct. I wish to have a statement of the position each man occupies, and what explanation he has to offer for acting in this matter. The men, if they feel aggrieved, have the right of respectful

respectful appeal to the Commissioner. They have made no appeal to me, and yet I receive their communication, which states that a certain line of action which the Department proposes to carry out is iniquitous.—C.A.G., 29/9/87.

A list is enclosed, dealing with nine of these fourteen employees. The other five are, it is presumed, loco. employees. Will Mr. Scott furnish the information and obtain the explanation asked for in connection with these five?—A.R., 29/9/87. Loco. Engineer.

No. 6.

The Secretary for Railways and Tramways Employees Association to The Commissioner for Railways.

N.S.W. Amalgamated Railway and Tramway Association,

Elizabeth and Bathurst streets, Sydney, 27 September, 1887.

Sir,

I do myself the honor, by instruction of the Council of the abovenamed Association, to address you on the subject of the manning of the Newcastle-Plattsburgh tramway. To-day we hear the lamentable intelligence that between twenty and thirty of our tramway employees are to be dispensed with for lack of further need for their services. From the newspapers and other sources we learn that the tramway in question has been manned with men drawn from the Northern Railway system, and that it is now contemplated that these men shall be displaced, and the men dispensed with from the Sydney tramway system sent to fill their places. Hence the position briefly presents itself to us as being that there are some twenty positions to fill, and some forty or more men available to fill them. Under the circumstances both sets of men feel aggrieved, and naturally so, and I sincerely trust a way may be found out of the difficulty, so that no hardship may be entailed on anyone.

We are informed that the men now on the tramway have all been offered their former positions on the northern line, but as many of them have received promotion by the removal, and others again promoted into their vacant places, such a return to their former positions would entail a very considerable amount of hardship, not only on the men themselves but on a large number of others in various places on the northern line. Some of them again relying on their appointment to the tramway have removed their homes and families to Newcastle, at very considerable expense to themselves, and considerable loss will be entailed upon them should they be called upon to remove again, which, under the circumstances, I venture to hope the Department will compensate any such men for in an adequate manner. Nevertheless, any scheme which will prevent any of our men being put out of work in the present very much overstocked condition of the labor market, must commend itself to all men of reasonable minds. Of course we fully recognize that this is a matter of Departmental administration, and that if these men cannot be profitably employed, they must be dispensed with, and we have no wish to interfere in this or any similar matter to prevent such action being carried out; but we venture to offer a suggestion, and trust you will do us the honor to consider the same in the same frank spirit in which it is offered.

As these northern line men have all been offered a return to their former positions, it naturally follows that these positions are available as well as the positions on the tramway. Now, we suggest that seniority of service should determine the appointment in each grade, and that, when passed by this test, those men from the northern line, who are juniors, should return to their former position, and the places be filled by the senior men from Sydney; and where the northern line men are the seniors they should retain their positions on the tramway, and the junior men from Sydney should take up the positions on the northern line, vacated by the other men, but only in each case by seniority, reckoned with the existing staff at any place to which they may be sent. Fearing that perhaps this, at first sight, may not be perfectly intelligible, I give an example to further show our exact meaning: Supposing there were four drivers required and there were eight eligible, four from the northern line and four from the Sydney trams; place them altogether, irrespective of whence they came, and let the four who have been the greatest number of years in the service of the Department have the four positions, the four juniors then to fill the places vacated by the northern men, which, it must be remembered, have been offered to these same men. If any northern men are juniors, they will then return exactly to their former positions; and if there be any Sydney men among the juniors, let them fill the other places, provided always that into whatever staff they may be drafted they must gain their rank by competency, and strictly as to seniority with the then existing staff.

I beg to assure you that this letter is written in no desire to interfere in the duties of the responsible management, but simply to express the views of the men on the subject, and to make a few suggestions which may or may not be of any value in solving the point at issue. In either case I trust you will recognize the purity of our intentions and motives.

Bespeaking your favourable consideration,—

I have, &c.,

WM. F. SCHEY,

General Secretary.

P.S.—I desire to add that I have addressed a similar letter to the Honorable the Secretary for Public Works.

No. 7.

Minute by The Assistant Secretary for Railways.

GOVERNMENT RAILWAYS.

MR. JOSEPH CREER, M.P., left with Commissioner a communication addressed to him from fourteen employees on the Plattsburg Tramway opposed to their services being dispensed with, and their positions allotted to employees dismissed from Sydney tramways, on account of revised time-table.

Nine of the number are under your control, viz. :—

Name.	Joined Service.	Rate of pay.		Present position.	Rate of pay.	
		s.	d.		s.	d.
W. L. Gorton	6 Oct., 1881, porter, Newcastle ...	6	0	Acting pointsman	7	6
Jas. Rice	8 Mar., 1885, porter, W. Creek ...	7	0	„ „	7	0
O. Watt	19 Feb., 1883, porter, Newcastle ...	7	0	„ conductor	7	0
G. Wakely	31 July, 1882, porter, Newcastle ...	6	0	„ „	7	6
J. Yeomans	20 Aug., 1882, assistant conductor, Sydney.	6	0	„ „	7	6
W. Howe	19 March, 1886, loco.	7	0	„ car-cleaner	7	0
J. Thompson	11 Sept., 1884, porter, Newcastle ...	6	0	„ pointsman	7	0
G. A. Whyte	8 Aug., 1881, W. Maitland	7	0	„ „	7	0
C. Willis	8 June, 1885, Newcastle	7	0	„ „	7	0

The Commissioner wrote upon the communication the following :—“The language used in this letter is most insubordinate, and I wish to have from each man any explanation he has to offer for acting in this manner.” Will Mr. Higgs please give attention to this. A.R., 29/9/87.

Traffic Manager, Newcastle.

Re letter to Mr. Creer, M.L.A.—Each of the men named has apologised, and I venture to hope the apologies may be accepted. Most of the men, if not all, I am convinced, did not read the text, but signed the document because others had done so. This was indiscreet, but I am fully of the belief there was no insubordinate or disrespectful intent. Papers enclosed.—J. HIGGS, 7/10/87. Assistant Secretary.

No. 8.

Memo. to Drivers by The Locomotive Superintendent.

Re petition signed by you and other tram employees, addressed to Joseph Creer, Esq., M.L.A., soliciting assistance in preventing the authorities from carrying out the proposed alterations in tramway working staff, 21st September, 1887,—the petition having been referred to the Commissioner to deal with, the Commissioner has minuted as follows :—

“The language used in this letter is most insubordinate, and if I acted upon the regulations which prohibit employees going outside the Department, I should have to take very severe measures to prevent a repetition of such conduct. I wish to have a statement of the position each man occupies and what explanation he has to offer for acting on this matter. The men, if they feel aggrieved, have the right of respectful appeal to the Commissioner. They have made no appeal to me, and yet I receive this communication, which states that a certain line of action which the Department proposes to carry out is iniquitous.”

Please explain in writing at once. Very urgent.

THOS. BOAG

(*Pro* Locomotive Engineer).

30/9/87.

The following explanation was submitted by each of the undermentioned drivers, viz. :—John Clayton, Wm. Jackson, A. Beaumont, G. Matthews, Geo. Brown :—

“Sir,

In answer to the memo. addressed to me, I beg to state, in explanation of my name being on the address to Mr. Creer, M.L.A., that I was asked for my name to be attached, never for a moment thinking it was to be used for the purpose to which it has been applied.

Trusting that the above explanation will be sufficient, and also that no offence was intended on my part in the letter.

Mr. Boag, Loco. Superintendent.”

Re letter to Mr. Creer, M.P., from tramway employees at Newcastle—The men signing the letter, employed in Locomotive Department of the Tramway are Drivers John Clayton, Wm. Jackson, A. Beaumont, George Matthews, George Brown. They are fifth-class drivers, paid at the rate of 11s. per day, and were promoted from the ranks of first-class firemen in the Railway Locomotive Branch, when the tramway was opened up to traffic. I handed each one a copy of the Commissioner's minute of 29/9/87, and requested an immediate explanation in writing. Please see their explanation forwarded herewith.—W. SCOTT, 4/10/87. Commissioner.

Explanations from the fourteen men, five locomotive and nine traffic, are now enclosed. The action of the men would seem to be united, but all express regret.—A.R., 10/10/87.

The decision was that all new hands employed in the Plattsburg line should be made to give way to men who had been a long time in the Service, and who were discharged from the metropolitan tramway. There is no hardship in this, at least no injustice, and the directions must be carried out.—C.A.G., 11/10/87.

No. 9.

The Assistant Secretary for Railways to The Commissioner for Railways.

Tramway traffic employees dismissed through retrenchment on the metropolitan lines, who were, as far as possible, to be provided for in replacing new hands employed on the Plattsburg line.

Mr. HIGGS having transferred railway men to fill the majority of the positions of the Plattsburg line there is little means of providing for the men dismissed from the metropolitan staff.

The number paid off is—conductors, 13; car-cleaners, 7; total, 20.

Four of the car-cleaners have been provided for in connection with the wool traffic at Newcastle, and Mr. Read has by the Commissioner's directions been asked to employ as many men as he may require at the same class of work (wool unloading). There is nothing more now to be done but to carry out the Commissioner's verbal directions to dismiss "Vergo," the only new hand employed in connection with the Plattsburg tramway, and replace him by Thomas, the longest service man (3½ years) dispensed with in metropolitan staff.

No locomotive men have yet been paid off, but Mr. Midelton has been requested to expedite the list of those no longer required, and has been supplied with a list of those newly appointed hands at Newcastle whose services are to be dispensed with to make way for his discharged men.

A.R., 11/10/87.

No. 11.

The Superintendent of Tramways to Conductor Terrett.

In consequence of the alteration in the running your services will not be required, and I am directed to give you seven days' notice, the said notice to expire on the 4th proximo.

I have further to inform you that, as far as possible, employment will be found on the Newcastle tramway for the men whose services are now being dispensed with, and that, in any case, when a vacancy occurs in this branch your claims will have prior consideration to outside applicants.

At the expiration of this notice you will hand to Mr. Muir all Government property in your charge when you will receive docket for pay due.

J. ROBERTS,
Superintendent of Tramways.

27/9/87.

My dear Goodchap,

Reform Club.

Will you kindly see the bearer. He was once waiter here. You put him on the tram line; has got on well; deserving and steady, with a wife and aged mother to support out of his earnings. Now, after working up well in the service, he gets notice to quit. Can you manage to keep him on, and oblige

Yours, &c.,

Commissioner for Railways.

H. H. THORN.

Terrett states that there are single men retained, whose service is less than his. The Commissioner wishes to have a report.—A.R., 28/9/88. Mr. Roberts. Terrett is a married man, and virtually has a family, including a mother and sister, depending upon him. He has been, he says, three years and four months in the Service. Mr. Roberts for report.—D.V., 28/9/87. Let me have all this man's papers, also report from both traffic foremen. I have been pestered with this man over and over again prior to this decision to dispense with his services.—J.R., 29/9/87.

Report of Foreman Halliday.

Sir,

Bridge-street, 4 October, 1887.

In reference to Conductor Sydney Terrett I beg to state that, in consequence of his quarrelsome disposition, I was compelled to remove him from off the Leichhardt line, the drivers there not being able to work harmoniously with him. The traffic would have suffered had I not done so.

I consider that he is unfitted for the post of conductor.

JOHN HALLIDAY,
Traffic Foreman.

To Superintendent of Tramways.

I saw Mr. Vernon *re* this man's case and explained that Terrett is not by a long way one of the best men. It is not true, as far as I can learn, that he is keeping any relative. His wife is living apart and getting into trouble in different ways. Terrett has given me false addresses, and the one he gave last there is no such number or house in the street. He also declined to tell where he was living, and who with. He is one of the last men I should think of retaining to dispense with others who are first-class men. These papers will speak for themselves. He has been one source of trouble to the Department since he came to us.—J.R., 5/10/87. Secretary.

Where is this man now? He seems to have no special claim for retention in our service, and should not be retained to the detriment of a better man.—Cr.A.G., 8/10/87.

Terrett is still about, but I cannot get his correct address. He is a most peculiar man. I have had a deal of trouble with him, and have had to dispense with many men much more worthy of our consideration.—J.R., 10/10/87. Commissioner.

I have seen Terrett, and have referred him to Mr. Read.—A.R., 13/10/87. Mr. Roberts. Terrett was given work at Darling Harbour with the wool, but did not remain at it.—W. V. READ, 26/10/87. Secretary.

Sir,

99, Regent-street, Camperdown, Sydney, 26 October, 1887.

I humbly beg to ask your assistance, under the following circumstances:—In June, 1884, I was in the employ of the Reform Club as clerk, from which position you was kind enough to place me as conductor on the Government tramways, where I rose in course of time from assistant conductor at 7s. to full conductor at 9s. daily, and in which service I remained until three weeks ago, when, through reduction of staff, my services were dispensed with.

I was afterwards offered and accepted temporary employ at Darling Harbour goods-shed at 6s. daily, but after starting I found the work was so laborious and heavy that my physical strength was unable to meet the requirements, and with deep regret was compelled to relinquish the occupation.

I most respectfully beg to state that I am the senior conductor now out of employ, and that if you can assist me to any position within the range of my physical capacity I shall be deeply grateful, and will do my duty faithfully, and in no way give you cause to regret assisting.

Yours, &c.,

SIDNEY TERRETT.

Inform Terrett that nothing further can be done.—A.R., 28/10/87. Terrett informed accordingly, 31/10/87.

Sir,

99, Regent-street, Camperdown, 10 November, 1887.

I most respectfully beg to enclose my address, which I omitted leaving with you at the interview which you kindly granted me this morning; so as to enable you to communicate with me, and thereby avoid wasting your valuable time by my calling upon you.

At the same time I beg to reiterate my statement that in whatever capacity you might be pleased to appoint me I will perform my duty faithfully, and in no way give you any cause to regret assisting.

Yours, &c.,

SIDNEY TERRETT.

Is

Is it possible to find employment for Terrett; he is not strong enough to do the wool lumping?—
 CH.A.G., 11/11/87. Traffic Manager. There is no vacancy at present, but I have noted Terrett's
 name specially.—W.V.R., 16/11/87. Commissioner. Inform.—A.R., 21/11/87.

Sir, Department of Railways, Sydney, 22 November, 1888.
 Referring to your letter of the 10th instant, respecting your application for re-employment in
 this Department, I have the honor, by direction of the Commissioner for Railways, to inform you that
 there is no vacancy at present to which you could be appointed. Your name has, however, been specially
 noted for employment when an opportunity offers.

Yours, &c.,
 A. RICHARDSON,
 Assistant Secretary.

Mr. S. Terrett.

Sir, 99, Regent-street, Camperdown, Sydney, 4 December, 1887.
 I humbly beg to recall to your recollection the interview I had with you on Saturday afternoon
 last & the following circumstances:—After three years and three months service as Government tram
 conductor my services were dispensed with in consequence of retrenchment. My character, given me by
 my late Superintendent (Mr. J. Roberts), I beg to enclose.

After my dismissal I was given temporary employment at Darling Harbour, where the labour was
 so heavy that I was reluctantly compelled to resign.

For the past two months I have been without employment, although I have diligently looked for
 same.

Some time since I received the above memo. from the Railway Department in answer to my
 request for re-employment, but have not since received any further communication.

I humbly beg to state that if you can assist me in obtaining employment on the railway or elsewhere,
 I shall be most thankful, and in no way ever give you cause to regret assisting.

Yours, &c.,
 SIDNEY TERRETT.

T. Garrett, Esq., M.P.

Dear Goodchap,—The writer is one of your late guards, and was previously a waiter at the Club.
 He is a very superior man of his class, and was one of the most efficient guards I have ever come across. I
 have spoken to Mr. Sutherland about him. The busy time is coming on, and I hope you will be able to
 give him a turn again.—THOS. GARRETT, 12/12/87.

He should be offered the first fitter's labourer's position vacant.—A.R., 12/12/87. Locomotive
 Engineer. No vacancy at present. Name noted.—W. SCOTT, 15/12/87.

Sir, 99, Regent-street, Camperdown, Sydney, 13 December, 1887.
 I humbly beg to bring before your notice the following circumstances:—About two months
 and a half ago my services were dispensed with (being a Government tram conductor) in consequence of
 departmental retrenchment. At the same time I was notified that should vacancy arise my services
 would receive prior consideration.

I have been informed that on Saturday next Mr. T. Musgrave, who was one of the tram conductors,
 is receiving a reappointment to the Tram Department.

I most respectfully beg to state that being myself the conductor with the longest service who was
 retrenched (with the exception of one conductor named Thomas, who was transferred to Newcastle) that
 should Mr. Musgrave be reinstated, who was much junior in the Service to myself, it would be unjust.

I left the Service with a good character, a copy of which I beg to enclose, together with copy of
 letter received from Railway Department, in answer to my application for re-employment.

Yours, &c.,
 SIDNEY TERRETT.

The Hon. John Sutherland.

Endorsement by Mr. Garrett, M.P.:—I again take this opportunity strongly pressing Terrett's
 application for re-employment (if there is any vacancy) upon my hon. colleague.—THOS. GARRETT,
 14/12/87.

For report.—J.S., 14/12/87. Nothing it seems, suitable, can be found for Terrett at present.
 Every endeavour has been made to provide for him.—A.R., 19/12/87. Seen.—CH.A.G., 21/12/87.
 Locomotive Branch applied for a fitter's labourer, and I said on application that position should be offered
 to Terrett.—A.R., 21/12/87. Locomotive Engineer. Terrett was employed as labourer at Eveleigh on
 28/12/87; rate of pay, 6s. per day.

No. 12.

Mr. J. Connor to The Commissioner for Railways.

Sir, 20 December, 1887.

I have the honor to apply for a situation on the tramway or railway. I have been employed
 previously as conductor for three years on the tramway, during which time there was no complaints made
 against me. I was discharged on the 4th October, and re-employed at Darling Harbour good's-shed, and
 was compelled to leave through a previous sickness, from which I had not thoroughly recovered up to the
 time I started work at Darling Harbour. I am a married man with one child. Hoping you will give my
 application your most favourable consideration.

J. CONNOR.

John

John Connor, late conductor, discharged on account of reduction in staff. I recommend that John Connor be appointed assistant-conductor at 7s. per diem, in place of Christopher Payne, resigned.—J.R., 10/1/88. The Commissioner.

Approved.—D.V., 10/1/88.

Sir,

Government Tramways, Tramway Office, 3 February, 1888.

I report for your information that in consequence of a report reaching the Bridge-street yard that Conductor Connor was drunk in charge of a Waterloo tram, I proceeded to Waterloo terminus with Conductor Downey to relieve him, if such was the case, taking cab 788 to do so. On arriving at the terminus, Waterloo, I found Connor sitting in his tram, and although he was not helplessly drunk, he was in a muddled state, and in case an accident should happen to him I deemed it advisable to put Conductor Downey in his place, telling him to come down to the yard and see the Superintendent, which he did.

The Superintendent.

W. WIGG.

Connor is one of those men that we lately dispensed with, and took back in Payne's place. Mr. Colls reported the matter to me, and I sent Wigg and a conductor out to relieve Connor. It is useless having men we cannot trust, and Connor's services had better be dispensed with. There are plenty of good men waiting to get back.—J.R., 3/2/88. The Secretary.

Is this his first offence, and what has been his general character?—D.V., 10/2/88. Mr. Roberts.

There is nothing against Connor. The man has called, and promised if I give him another chance he will not offend against rules again. If he does, to be instantly dismissed. Lose pay for the time absent I think will be sufficient punishment. Now will the Secretary please decide at once.—J.R., 13/2/88. The Secretary. Approved.—D.V., 13/2/88.

No. 13.

Minute by The Secretary for Railways.

Re Conductor Edward Thomas.

THREE and a half years in the Service. Has an invalid sister to support, and has never had a fault found with him.

Mr. Roberts, please see me.

D.V., 30/9/87.

Thomas is a first-class man, and I am sorry indeed to lose him. There is no alternative at present that I can see, if I am to do as directed by Minister *re* single men.—J.R., 5/10/87. Secretary.

A vacancy has been found for Conductor E. Thomas on the Plattsburg Tramway, and he will require to commence duty at Newcastle on the 20th instant. Please inform Thomas.—A. RICHARDSON, 11/10/87. Superintendent of Tramways.

Thomas will report himself as directed on the 19th instant, to the Traffic Manager, Newcastle.—J.R., 12/10/87. He will take Virgo's place at 7s. a day.—A.R., 17/10/87.

No. 14.

The Superintendent of Tramways to Conductor G. A. Paulson.

In consequence of the alteration in the running your services will not be required, and I am directed to give you seven days' notice, the said notice to expire on the 4th proximo.

I have further to inform you that, as far as possible, employment will be found on the Newcastle tramway for the men whose services are now being dispensed with, and that, in any case, when a vacancy occurs in this branch, your claims will have prior consideration to outside applicants.

At the expiration of this notice you will hand to Mr. Muir all Government property in your charge, when you will receive docket for pay due.

J.R., 27/9/87.

Re G. A. Paulson's services being dispensed with, Paulson represents he has been over three years in the Service, and although not married he has a family, consisting of a mother, three sisters, and a young brother, to support, in conjunction with another brother. The family has to be kept by the two, and on this ground he thinks he is entitled to the same consideration as any married man, with which view I imagine Commissioner will concur.—D.V., 28/9/87.

Mr. Roberts in the first place for report.—D.V., 28/9/87.

I am sorry to say I do not consider Paulson has any claims to consideration. His conduct since he joined this Department has not been the best. A glance at his papers will convince the Secretary that there are many men with greater claims. Paulson's services are not further required.—J.R., 6/10/87. Secretary.

Inform Paulson that I regret nothing can be done at present for him.—D.V., 8/10/87. Inform Paulson, Mr. Roberts, please.—A.R., 8/10/87. Paulson informed.—J.R., 12/10/87.

Petition.

The Honorable the Minister for Works,—
Sir,

We, the undersigned residents of Leichhardt and district, hearing of the intention to dispense with the services of a number of tramway conductors, most respectfully beg to petition you to retain the services of Conductor George A. Paulson, whom we have always found to be one of the most obliging, civil, and attentive men on the line, he being one of the oldest conductors (regarding service).

We humbly pray that you will kindly reconsider the decision to dispense with his services, and give him the benefit of your most favourable consideration and influence.

The above was signed at ticket vendors without any canvassing whatever.

Signed on behalf of above—

FREDK. EDWARDS,
Short-street, Leichhardt.

I think this case has already been decided.—A.R. (*pro. Commr.*), 12/10/87. Mr. Roberts. Yes, and those signing the petition evidently don't know the man. I consider he is no loss to the Department.—J.R., 13/10/87. Secretary. Please attach the papers, Mr. Roberts.—A.R., 14/10/87. Paulson's papers with this.—J.R., 15/10/87. Secretary. Is Mr. Read able to employ Paulson in connection with the wool?—A.R., 17/10/87. Please send him here.—W.V.R., 18/10/87. Supt. Tramway. Paulson was sent to Mr. Read with the others.—J.R.

No. 15.

The Superintendent of Tramways to Conductor E. Head.

Government Tramways, Tramway Office, 27 September, 1887.

In consequence of the alteration in the running your services will not be required, and I am directed to give you seven days' notice, the said notice to expire on the 4th proximo.

I have further to inform you, that as far as possible employment will be found on the Newcastle tramway for the men whose services are now being dispensed with, and that in any case when a vacancy occurs in this branch your claims will have prior consideration to outside applicants. At the expiration of this notice you will hand to Mr. Muir all Government property in your charge, when you will receive docket for pay due.

J.R.

Dear Sir,

Town Hall, Redfern, 29 September, 1887.

Referring to the dismissal of Conductor E. Head from the Tramway Service, owing to the alteration in the running of same, I take the liberty of asking you to cause his case to be reconsidered, for although he is a single man yet he has to support a widowed mother, and is a most respectable man.

He also has perhaps a prior claim over some of the others, having been in the employ since January, 1885.

The Minister for Works.

Yours, &c.,

EDWIN BERRY.

Mr. Roberts.—D.V., 12/10/87. I have seen Mr. Vernon *re* this man, and explained that there is no alternative at the present time; but this man with others will be first considered should any opening occur.—J.R., 13/10/87.

Sir,

7 November, 1887.

I beg most respectfully to make application to be reinstated as conductor on the Tramway Service, as I have heard that there is to be more hands taken on, through the alteration in the time-table. My service in the Tramway Department has been good. I have been in the Service since January, 1885, and have never been reported unfavourably, or have I lost any time.

Trusting you will give my application a favourable consideration.

The Minister for Works.

E. J. HEAD.

Endorsement of W. Stephen, Esq., M.P.:—I will be glad to hear that this young man has been reinstated.—W.S.

This man has a large charge, and is worse off than many married men. If there are any men required let his claims be recognized.—J.S., 8/11/87. It is not correct that more hands are to be employed, I imagine; but Head's name should be specially noted.—A.R., 23/11/87. Mr. Roberts. It is not correct. I will not require more hands. Head's case will, of course, be considered directly a chance occurs.—J.R., 25/11/87. Secretary. I am under the impression that Head has since been employed. Let me have papers.—A.R., 6/12/87. Has he been employed?—A.R., 7/12/87. Locomotive Engineer. Yes.—C.A.N., 8/12/87.

Sir,

I would respectfully inform you that since the removal of the loco. carpenter's shop to Eveleigh I find I need the service of an extra hand—a labourer. I shall have much work for him to do in a variety of ways. The carpenters are often much delayed, having to lump their materials to and fro, losing much time thereby. In case of cutting our country orders for blocks (engine and tenders) I could not possibly do without another hand.

H. HARRISON,

The Assistant Locomotive Engineer.

11/10/87.

If approved I suggest L. Hammond.—G. DOWNE, 14/10/87. Locomotive Engineer. Recommended for approval.—W.S., 17/10/87. Commissioner. In view of the necessity for retrenchment could not this extra man be done without? There is surely someone already in the Department who could attend to this small matter.—D.M'L., 27/10/87. Locomotive Engineer. The man can be done without, but with loss and inconvenience to the Department.—R.S., 1/11/87. I think we should send for one of the tramway men who were dispensed with.—D.V., 11/11/87. Yes. Perhaps Mr. Roberts can arrange for this.—A.R., 11/11/87. Mr. Roberts. Head will accept this billet if you will please send him there.—J.R., 14/11/87. Head may be employed if Mr. Scott considers him suitable.—D.V., 14/11/87. Locomotive Engineer. Edwin Head will present himself for duty for this work to-morrow morning.—G.D., 14/11/87. Edwin Head commenced work as a labourer yesterday. Proposed rate of pay, 6s. per day.—R.S., 16/11/87. E. Head, applicant for employment, formerly in trams.—H.M'L., 30/1/88. I have ascertained that Head is still employed in the loco. shop at Eveleigh as labourer. I am afraid nothing better can be found for him at present.—A.R., 31/1/88. Seen.—C.A.G., 2/2/88. I would be glad to have Head back on the trams, as I have room for him, and Ferrier could take his place at Head's work at Railways. Will Commissioner please approve.—J.R., 14/3/88. For Commissioner's approval.—D.V., 14/3/88. Approved.—C.A.G., 14/3/88. E. J. Head re-engaged as conductor at 7s. per day from 16th March, 1888.—J.R., 21/3/88. Government Tramways, Tramway Department.

No. 16.

T. Garrett, Esq., M.P., to The Secretary for Railways.

Thomas Kenny, Tramway Conductor—Three years in the Service—No complaints.

Dear Vernon,

Department of Lands, Sydney, 4 October, 1887.

The above is one who has received notice to quit. If you can possibly keep him on I wish you would do so, as he is the son of a very old friend of mine; he has been a very good officer.

Yours, &c.,

THOS. GARRETT.

I understand Kenny is a good man, and, if possible, I should like him retained.—J.S., 7/10/87. Kenny's re-employment was approved this morning. Put this with his paper, please.—D.V., 7/11/87. The Secretary of Railways has notified me that Kenny (late conductor) is, by the express wish of the Minister, to have the first vacancy.—J.W.T., 4/11/87. The Superintendent.

I am recommending the appointment of Beven to the points at Elizabeth-street, in Russell's place. I can therefore take Kenny in Beven's place. Will the Secretary please approve of Kenny being appointed at 7s. a day. The man will be glad to take anything at that rate.—J.R., 6/11/87. Secretary.

Approved.—D.V. (*pro* Commissioner), 7/11/87. Mr. Roberts, B.C. Kenny started work to-day at 7s. per diem.—J.R., 8/11/87. Secretary. Kenny now returns to his old work, and being a first-class man I recommend that he be allowed his old rate of pay, viz., 8s. 6d. a day.—J.R., 1/12/87. Mr. Vernon. Approved.—D.V. (*pro* Commissioner), 1/12/87. Mr. Roberts, B.C.

No. 17.

W. F. Schey, Esq., M.P., to The Commissioner for Railways.

Sir,

29 November, 1887.

I have the honor to draw your attention to the case of L. G. Roache, formerly a conductor in the Tramway Department, and who has made application to be reinstated. Roache, it appears, was in the service of the Department for over three years, and his services, and numbers of other employees, were dispensed with in the beginning of last month (October) on the score of retrenchment, but he was placed at work temporarily at Darling Harbour. He, however, had to cease duty there through the heavy nature of the work coming against him, as he still suffers from the ill-effects of a serious accident that he met with while in the execution of his duty as tram conductor. It seems that one night, about the middle of November, 1886, Roache was sent in charge of a tram to do a special trip to the railway-station, and while the tram was in the act of backing up to the railway platform, Roache, who was standing on the foot-board of the car giving signals, got jammed between the car and a signal-box, and was so severely injured that he was taken to the Sydney Hospital. The injuries he received were of such a serious nature that for some time his life was despaired of, and for three months after he was discharged from the Hospital he was compelled to use crutches, and I enclose a copy of a certificate from Dr. Tarrant, dated 29th September last, certifying that Roache is liable to suffer from the effects of the injuries sustained by him through the accident in question, for a very long period.

Roache received full pay for the time he was off duty, and after resuming work was placed at employment of a light kind until such time as he was able to undertake his usual duties of tram conductor. But in the beginning of last month, as before pointed out, Roache's services, together with other tram employees, were dispensed with, and he was given temporary work at Darling Harbour, with the result that, on account of the heavy work he had to perform, he was disabled from duty, and it is quite evident that Roache has been unfitted to perform any work of a heavy character through injuries he sustained in the accident before alluded to.

Under these circumstances I am of opinion that Roache's application for reinstatement to his former position of tram conductor is deserving of the favourable consideration of the Department, and I shall be glad to hear that you have been pleased to comply with his request, and have reappointed him to some position that he may be capable of filling.

W. F. SCHEY.

[Enclosure.]

I CERTIFY that I attended Mr. Roache in the earliest part of this year for severe injuries received through tram accident, and, though sufficiently recovered to resume his duties as conductor, he is liable to suffer from the effects of those injuries for a very long period.

Macquarie-street, 21 September, 1887.

H. J. TARRANT, 21/9/87.

This is a hard case. If I had known the particulars I think I should have authorized the retention of Roache's services. Is there any opening for him?—CH.A.G., 30/11/87. Mr. Roberts.

W. F. Schey, Esq., to The Commissioner for Railways.

Sir,

12 January, 1888.

Adverting to my letter, dated the 29th November last, and to your acknowledgment thereof, dated the 1st ultimo, having reference to the case of L. G. Roache, formerly a tram conductor, and urging a favourable consideration of the same, with a view to his reinstatement, I now have the honor to ask you to be so good as to advise me whether any decision has yet been arrived in the matter; or, in the event of any determination not having yet been come to, to let me know how it at present stands.

Awaiting the favour of a reply at your early convenience.

W. F. SCHEY.

Mr. Roberts.—A.R., 17/1/88. Roache is now at work in this Department since 3/12/87.—J.R., 17/1/88. Secretary. Mr. Schey informed accordingly, 20/1/88.

No. 18.

Mr. W. M'Gee to The Commissioner for Railways.

Sir,

Marrickville Road, Marrickville, 5 October, 1887.

In consequence of the running of the new tramway time-table my son, Herbert M'Gee, has been one of the unlucky conductors who has been dismissed on account of having too many hands on the Traffic Branch of the Tramway Department. He has been in the Service just on two years. I may state that

that he was placed in the Service by yourself, as a favour to me; you may remember some time ago I gave 15 chains of land to the Government to allow the tramway to pass through my property, and at the opening of the line you promised that at any time you could do me a favour you would willingly do so.

I just write you these few lines to remind you of your promise, and hope you will find him an early vacancy, as he has no trade to depend on.

W. M'GEE.

Mr. Roberts for report, please.—A.R., B.C., 10/10/87. M'Gee is a first-class man, but I would be doing an injustice to other men who have been in the Service if I retained him and sent them away.—J.R., 10/10/87. Secretary.

Wollongong, 3 January, 1888.

MR. HERBERT M'GEE, of Marrickville, was for about two years employed as a conductor on the Sydney tramways under your Department, and about three months back, when some reductions were made in the number of hands employed, he was discharged, and understood at the time that he was to be again employed as a conductor as soon as any vacancy took place on the staff.

The tramway to Marrickville, when constructed, passed through his father's (Mr. W. M'Gee) land for about 16 chains in length by 1 chain wide. The older M'Gee gave this land free to the Government without compensation of any kind. This might be taken into consideration in favour of his son's (Herbert M'Gee) being reappointed to the first vacancy as a conductor on the tramway.

If you can reappoint the applicant I would esteem it as a personal favour. With my respects. Wishing you a happy new year.

The Secretary for Public Works.

J. BIGGAR.

M'Gee could now return to the tram. I have room for him. Will the Secretary please approve.—J.R., 14/3/88. Approved.—D.V. (*pro* Commissioner), 14/3/88. M'Gee started work to-day at 7s.—J.R., 16/3/88. The Secretary.

No. 19.

Minute by The Superintendent of Tramways.

Re Thos. Musgrave, late conductor.

In accordance with the Minister's instructions I have placed Thos. Musgrave in charge of one of the road water-tanks, at 7s. per diem, from 14th December, 1887.

The Secretary.

J.R., 28/12/87.

Seen.—A.R., 29/12/87.

No. 20.

Mr. H. J. Ferrier to The Assistant Secretary for Railways.

Sir,

17 October, 1887.

I most respectfully beg to apply for employment of any kind in the Railway or Tramway Department. I was one of the tramway employees that was put off the time of the retrenchment.

I was given employment, since I left the tramway, on the railway at June Junction, to assist in the wool loading, but I had to travel from station to station, and I was not allowed expenses, and I was only receiving 6s. per day, and it would cost 5s. per day to keep myself, and I have a mother and a large family of young brothers and sisters to support, and they require the money more than I do, so I had to resign and come back to Sydney to see if I could not get employment in Sydney.

Hoping you will give this your kindest consideration.

H. J. FERRIER.

I shall be glad if Mr. Read can give this young fellow a job in Sydney. A family appears to be dependent upon him for support.—A.R., 18/10/87. There is no vacancy at present, but I have noted Ferrier's name.—W.V.R., 23/11/87. Commissioner.

Sir,

3 February, 1888.

I most respectfully wish to lay a matter of vital importance (to me) before you, trusting you will give it your kind consideration.

My son, H. J. Ferrier, who was in the railway service as tram conductor, received notice last September that his services would be dispensed with in consequence of retrenchment in the Service, but when a vacancy occurred he would be reinstated. He is now out of employment four months, which is a severe loss to our family, as he was assisting to support a family of twelve. I had the misfortune to lose a son 19 years old, who was killed by falling from the roof of the Royal Arcade on the day the Contingent returned from the Soudan, which you no doubt remember.

I enclose a copy of a minute made and handed to H. J. Ferrier by the Superintendent of Tramways when he left the Service.

Trusting you will be so good as to reinstate him,
The Secretary for Public Works.

HENRY FERRIER, SEN.

For report, 5/2/88. Papers to Mr. Roberts.—A.R., 7/2/88. No vacancy yet. When there is this man will be considered.—J.R., 8/2/88. The Secretary. Mr. H. Ferrier informed, 14/2/88. (Ferrier was re-employed as labourer in the Locomotive Department on 14/3/88, *vice* Head, transferred to Tramway Department as conductor.)

ABOUT four months ago my son, H. J. Ferrier, received notice from the Tramway Department that in consequence of retrenchment in that department his services would be dispensed with; he has been out of employment since, which is a serious loss to us as he was assisting to support a family of twelve, and the longer he is out of employment the keener we will feel it. You would confer a lasting favour on us if you would impress upon the Hon. the Minister for Works the necessity for his immediate reinstatement.

I felt sure Mr. Want would kindly attend to it for me; but he is so taken up with his professional business that I do not like to trouble him.

I enclose a copy of minute my son got from the Superintendent of Trams. I sent a letter to the Hon. the Minister for Works, and got an answer that there was no vacancy at present, but if you state the urgency of the case to the Minister I feel sure he will take immediate action.

Knowing you will do your best for us in this matter.

Travers Jones, Esq., M.L.A.

HENRY FERRIER, SEN., 27/2/88.

Mr. Roberts.—A.R., 5/3/88. No vacancy at present.—J.R., 9/3/88. The Secretary. Mr. Ferrier informed accordingly, 15/3/88.

No. 21.

Minute by The Superintendent of Tramways.

Chas. T. Williams, late tram conductor—Services dispensed with on account of retrenchment.

Government Tramways, Tramway Office.

CAR-CLEANER Doise having resigned, I recommend that Chas. T. Williams be appointed as car-cleaner from 18/4/88, at 7s. per diem.

The Secretary.

J.R., 18/4/88.

What is Williams doing now? Muir and Unwin are not being again lost sight of, I hope.—A.R., B.C., 20/4/88. Mr. Roberts. Williams is car-cleaning, and assistant conductor when required. Mr. Stephens' man, Unwin, will be attended to very soon.—J.R., 25/4/88. Secretary. Approved.—D.V. (*pro* Commissioner), 28/4/88.

No. 22.

Minute by The Secretary for Railways.

R. G. Sutherland, late tram conductor.

ASK Mr. Tyrer to see me please.

D.V., 7/3/88.

On account of so many men being away sick, the extra train on Leichhardt, men going off on holidays, and the approaching Easter holidays, I can do with Sutherland.—J.R., 14/3/88. Approved.—D.V. (*pro* Commissioner), 14/3/88. Mr. Roberts. Mr. Muir to note. Sutherland commenced work to-day at his old rate, 6s. per day.—J.R., 17/3/88. Secretary.

No. 23.

J. Barling, Esq., to The Secretary for Railways.

Dear Sir,

Please see Mr. Conley from our office—he wishes to be introduced to you. I do not know what he wants, but he is a most deserving officer.

Yours, &c.,

J. BARLING.

Dear Sir,

"Hazelmere," Station-street, Newtown, 7 October, 1887.

I desire to bring under your notice the case of a young man Downey, who for the last three years has been employed as a guard in the Tramway Department, but who, I understand, has recently received notice that his services are to be dispensed with on and after next week. His case is one deserving, I think, of merciful consideration,—a widowed mother and sister depending as they do almost entirely upon him for their support. Mr. Roberts, the Superintendent of Tramways, gives Downey an excellent character, and if you can do anything towards his retainment in the Service it will be an act of great kindness to his family.

Apologising for troubling you in the matter.
Donald Vernon, Esq., Secretary for Railways.

I am, &c.,

JAS. CONLEY.

Downey is a very good man indeed, and I am sorry to lose him. I see no alternative. I have now more men than I think I will be able to retain.—J.R., 10/10/87.

The Mayor of Waterloo to The Secretary for Public Works.

Dear Sir,

Kellick-street, Waterloo, 14 October, 1887.

It is with regret I trouble you, knowing well the number of applicants you must have by virtue of your position, on behalf of a young man (tram-guard) named J. Downey, discharged from the Service last Monday. I know a number of other single men have also been discharged, but the young man in question is the sole support of an aged widowed mother. In addition to being a good son, he is a respectable deserving young fellow. If you will see that he is taken back in the Service again at an early date I shall take it as a personal favour.

Yours, &c.,

WEEKS WHITE,

Mayor.

Was

Was he offered work at Darling Harbour, do you know?—A.R., B.C., 20/10/87. Mr. Roberts. Yes. I sent him there. He told me he could not do the work. I do not require any more hands.—J.R., 21/10/87. Secretary. Was he employed?—J.P., 22/10/87. Mr. Read. Mr. Paull, please say.—W. V. READ, 24/10/87. Mr. Paull. I have only four men out of the Tramway. Some of them never commenced here; they came and looked at the work, and went away again. I do not remember ever seeing Downey, and he is not at work here now.—CHAS. PAULL, 26/10/87. Traffic Manager. Secretary.—W. V. READ, 27/10/87. Inform, and say there are no vacancies at present.—D.C.M'L., 28/10/87. Mr. White, 31/10/87.

Sir,

Department of Railways, Sydney, 31 October, 1887.

In reply to your letter of the 14th instant, relative to the case of John Downey, I am desired by the Commissioner for Railways to inform you that inquiry has been made, but there is no prospect of his obtaining re-employment on the tramway at the present time. I am to add that Downey was offered work at Darling Harbour, but he told the Tramway Superintendent that he was not equal to it.

I have, &c.,

A. RICHARDSON

(For the Secretary of Railways).

Weeks White, Esq., Mayor of Waterloo.

No. 24.

Mr. S. Cornwell to The Commissioner for Railways.

Sir,

32, Lewis-street, Redfern.

John Cornwell having been discharged from the Tram Service through retrenchment, I do ask a favour of you to look into this case, as he is the only support of his widowed mother, who is unable now to support herself through indisposition. Dear sir, his late father was in the Government Service for a period of twenty-eight years, but had the misfortune to lose his life there.

Hoping that you will find him some suitable employment,—

I have, &c.,

S. CORNWELL.

Mr. Roberts.—A.R., B.C., 29/9/87.

Strange this man could absent himself, time after time, through drink. He was then with some friends or relatives. In dispensing with these men I have had to part with some good men; this is not one of those, and I do not see I could keep a man like Cornwell, and dispense with much better men. Cornwell's services are not required.—J.R., 29/9/87. Secretary.

Inform.—D.V., 5/10/87. Mr. Cornwell informed accordingly, 11/10/87.

No. 25.

Telegram from The Traffic Manager, Great Northern Railway, to The Commissioner for Railways.

* * * * *

SHALL require four or five strong able-bodied men for heavy work.

JOHN HIGGS.

Send Greer, Islip, Garvan, England, formerly car-cleaners in tramway, recently discharged.—CH.A.G., 6/10/87. I am very short of hands. Please say when the surplus hands from the tramway are coming. Unless I get them to-morrow or next day I must employ extra hands.—J. HIGGS, 3/10/87. The men named by the Commissioner to see me to-morrow morning at 10 a.m. Halliday instructed.—J.R., 6/10/87. Greer, Garvan, England, Islip, start for Newcastle to-morrow, Saturday morning. I have given them passes for that place. Will you inform Mr. Higgs, please?—J.R., 7/10/87. Secretary.

1888.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

THE TRAMWAYS.

(PETITION FROM PUBLIC MEETING HELD AT LEICHHARDT IN OPPOSITION TO LEASING OF.)

Received by the Legislative Assembly, 12 December, 1888.

To the Honorable the Legislative Assembly of New South Wales.

The humble Petition of the Residents of Leichhardt,—

SHOWETH:—

1. That on the 12th day of November, 1888, a public meeting was held in the Town Hall, Leichhardt, in reference to the leasing of the trams.

2. That the following resolutions were carried by a large majority of that meeting, viz.:—

This meeting is of opinion that the leasing of the trams to any private company or syndicate is impolitic, and will prove detrimental to the best interests of the public.

That the foregoing resolution be embodied in a Petition, to be signed by the Chairman of this meeting, to be entrusted to Mr. Hawthorne, M.L.A., to be presented to Parliament.

Your Petitioners therefore humbly pray that the Honorable the Legislative Assembly of New South Wales will take into its favourable consideration the foregoing resolution.

And your Petitioners, as in duty bound, will ever pray.

Signed, on behalf of the meeting,—

SYDNEY SMITH,
Chairman.
